Petronius did not hold the Government of Egypt long; for in the Year before Christ 18. he was succeeded by Aelius Gallus, of whose Expedition into Arabia we have already given a large Account. This celebrated Governor of Egypt was the Patron and Friend of Strabo the Geographer, whose Work we have already so often quoted, and which we shall be obliged to mention frequently, before we bring this Chapter to a Conclusion. This learned Man was a Native of the City of Amasia in Pontus, a Stoic Philosopher, and justly famous for his excellent Geography; to qualify himself for writing which, he not only studied, as his Book plainly shews, the best Writers on that Science, that were then extant; but had likewise travelled through most of the Countries which he describes: That is to say, Westward, from Armenia to that Part of Italy which is opposite to the Island of Sardinia; and Southward, from the Euxine Sea into Eibiopia. This last Journey he made in the Company of Aelius Gallus, who went to take a View of the Frontiers of Egypt, as far as Syene; all which Circumstances of Strabo's Life we learn from himself; and these serve to shew, that he must have lived to a very great Age, since he published his Work in the Reign of Tiberius, and pretty late in that Reign too. He is also thought to have written some other Books, particularly an History, some Passages of which are cited by Josephus; but this is perished long ago, to the inexpressible Loss of the learned World; for he was so accurate a Writer, and took care to be so perfectly informed as to every Fact he related, that whatever fell from his Pen, must, on that Account, have been extremely valuable and useful. We may likewise see, from this second Expedition of Gallus, how attentive the Romans were to the Concerns of this Province, and how desirous of being acquainted with every thing that belonged to it.

Indeed the securing to Rome all possible Advantages from so great an Accession of Territory, seems to have been one of the principal Objects of the Policy of Augustus; for he took care to establish a regular Commerce between Rome and Alexandria, as well for the Sake of a continual Supply of Corn, as for the bringing thither the Merchandizes that they acquired by their Indian Traffick; so that, as we shall see hereafter, many of the Romans themselves, who hitherto had not been much addicted to Trade, were, with the Sight of these rich Commodities, induced to embark their Fortunes therein, becoming thereby Principals in this Sort of Traffick, and making use of the Egyptian Merchants as their Factors. Thus we have shewn, how this Trade came into the Hands of the Romans, and what Pains were taken by Augustus to settle and secure it, by reducing, if it had been possible, the Nations on the opposite Side of the Arabian Gulph, whose Piracies were the only Evils to which it remained exposed; and how, by this Care, a new Turn was given to the Temper of the Romans, who, in succeeding Times, became as active and vigorous in the Management of this Business, as they had been before unattentive to any thing of this Nature. But it is Time for us to take our Leave of the Reign of Augustus, of which we have already said so much, in order to give the Reader, in as few Words as possible, an Account of such Facts as relate to this Subject, and are recorded in the Histories of succeeding Emperors: After which we shall proceed to an exact Description of the Manner in which this Trade was carried on by the Roman Factors; and give some Account of the immense Profits that annually resulted from it.

Tiberius, who succeeded Augustus in the Possession of the Roman Empire, was not of a Disposition to forget or leave unimproved any Part of his Dominions, much less a Province capable of yielding such Advantages as Egypt, in the Management of which he steadily pursued the Maxims of his Predecessor; for so careful was he to prevent any Danger, that might arise from the sending a Person of considerable Rank to govern that Country, that he made

Choice of one of his Freedmen for that Employment: And when his Nephew *Germanicus* took the Liberty of visiting that Province without asking his Leave, he reprimanded him for it very severely; and it is with good Reason supposed, that it was chiefly from the Suspicion he conceived on account of this Journey of his into *Egypt*, that he caused him to be poisoned; so jealous he was of any Inquiries into the State of a Country that furnished him with so great a Revenue.

Caligula, the Son of *Germanicus*, who succeeded *Tiberius*, tho' in all other things as bad a Prince as he was a Man, yet encouraged and protected Commerce, keeping always a strict Eye to the maritime Force of the Empire, which, under him, was at its greatest Height. With respect to *Egypt*, he understood the Worth of the Country to well, and had so true a Notion of its Strength, that when he had rendered himself universally odious to his Subjects, he had Thoughts of retiring thither, in order to have passed there the Remainder of his Days; but he was cut off by a sudden Conspiracy before he could execute his Intention.

It is uncertain whether *Caligula*, or his Successor *Claudius*, began the Custom of letting the Revenues of *Egypt* to Farm; but, certain it is, that they were let out in this manner under the Reign of the latter; which produced, accidentally, a very extraordinary Discovery. There was one *Amnius Placamus* who farmed the Customs of the *Red Sea*, and who, on that Account, visited the Coast in a Vessel of his own; and being once on the Shore of *Arabia*, on some Business relating to his Office, he was suddenly driven to Sea by a strong North Wind, which blowing for fifteen Days together, he was thrown first on the Coast of *Carnania*, and then on a certain Island, in a Port of which he came to an Anchor; the Name of the Port, as he was informed by the Inhabitants, being *Hippus*: He was there very kindly entertained by the King of the Country for six Months, who furnished him with whatever he wanted, and was extremely delighted with the Accounts he gave him of the *Romans*, and of their Power; but what struck him most was, the Sight of the *Roman* Coin, it appearing to him a very singular thing, that though the several Pieces were of the same Weight and Value, yet, by their different Impressions, they shewed, at first Sight, by whom and on what Occasion they were coined.

This, and the Explications given him by *Placamus*, induced him at last not only to provide for the late Return of the *Roman* into his own Country, but engaged him likewise to send four Embassadors to *Rome*, the chief of whom was one *Rachias*, who was a Man of great Figure in that Country. It seems, from the Account that *Pliny* has given us of this Adventure, that he had seen and conversed with those, who had what he relates from the Mouth of this *Rachias*. The most remarkable Points mentioned by him were these: That the Island he came from contained five hundred great Towns; that it had a spacious Port on the South Side belonging to a City called *Palestimon*, which was the Capital of the Island; and so populous, that it was esteemed to contain not fewer than two hundred thousand Inhabitants. In the Neighbourhood of this City there was a Lake called *Meggha*, two hundred seventy-five Miles in Circumference, in which there were several Islands very fruitful in Pasture. Out of this Lake there ran two Rivers, one to the South called *Palsymondas*, which fell into the Sea by three Mouths, on one of which stood the City called by the same Name, the smallest of these being of the Breadth of five Stadia, and the largest fifteen. The other River ran Northwards towards the Continent of *India*, called *Cybara*. Opposite to the Island there ran a large Promontory of *India*, called *Colaniam*, distant four Days Sail; and in the midst of the Passage there lay an Island sacred to the Sun.

The Sea on the Coast was of a very deep Green, with Trees at the Bottom, the Branches of which were sometimes beaten off by the Heads of their Ships. The Sight of the Northern Constellations surprised the Embassadors at *Rome* very much, and seemed to them like a new Heaven. In their own Country, they said, they observed the Moon only from the eighth to the sixteenth Day, and spoke much

of the bright Star *Canopus*, which was visible in their Hemisphere. But what most amazed them was, the falling of their Shadows to the North; and that the Sun rose to the Left, and set to the Right. They affirmed, that the Coast of their Island, opposite to the Continent of *India*, was ten thousand Stadia in Extent, and that it reached towards the South-east beyond the *Emodian* Mountains. They added, that the Country of the *Seres* lay within Sight of them; and *Rachias* affirmed, that his Father had traded with them. He said that the Country inhabited by that People was much infested by wild Beasts; that the *Seres* were of a gigantic Stature, red-haired, their Eyes blue, and their Voices hoarse and rough, so that they were unintelligible to Strangers; that in other Respects they were like other Men, and traded fairly; for when Commodities were laid down on their Side the River, they came and took them away, if they liked them; and left in Exchange enough to satisfy those who brought them. As to the Island from whence these Embassadors came, *Pliny* tells us, that it was *Laprobana*; and that Gold and Silver was esteemed there, as well as at *Rome*, which he thinks strange; as also precious Stones, and Pearl, especially if they were bright and transparent. He tells us further, that the Embassadors were wont to say, that there was greater Plenty of Riches in their Island, but that the *Romans* made more use of them. They likewise observed, that they had no Slaves amongst them; that they never slept in the Day-time; that their Houses were but low; that they knew not what Law-suits were; and that they worshipped *Bacchus*. They likewise informed the *Romans* that their Country was extremely well cultivated, and that it produced other Fruit-trees in abundance, but that they had no Vines: That on their Coast they had Plenty of Fish; and that the People were much given to Fishing, and especially to the catching of Tortoises, the Shells of which were so large, that they made use of them to cover their Houses: That their Climate was so wholesome, that a Man of 100 Years of Age was no uncommon Sight. The Account they gave of their Government was this; that their King was elected by a Plurality of Voices, and was assisted by a Senate composed of thirty Persons; who were likewise chosen by the People, together with some other Circumstances which have been already taken Notice of in the Account we gave of the Voyage of *Iambulus*.

We shall hereafter have Occasion to inquire more particularly into the Situation of this Island, which makes so great a Figure in the Writings of the Antients; as also of some other Islands, Part real and Part imaginary, which are mentioned in their Works, and which it will be necessary to explain, that the Reader may not be misled into wrong Notions on this Subject, or suppose, that because the Antients speak of prodigious Riches found in these Islands, that we are less knowing than they, since we are not at present acquainted with any Island that produces the Commodities they mention.

The Emperor *Nero*, who succeeded *Claudius*, was very attentive to the Affairs of *Egypt*, and not only took care to maintain his Fleets in perfect good Condition in both Seas, but likewise sent Persons on Purpose thro' *Egypt* into *Ethiopia*, in order to have a clear and distinct Account of its Products and Inhabitants; to which he was very probably incited from the Scheme he had formed of retiring into *Egypt*, in case he found it impossible for him to maintain himself against his Enemies at *Rome*: And it was from the Report of these People, that the Distance was determined between *Syene* or the Frontiers of *Egypt*, and the Island of *Meroe*, to be eight hundred and seventy Miles: And we may judge of the great Commerce carried on to *Arabia*, in the Reign of that Prince, from the vast Quantity of Incense that he is said to have burnt at the Funeral of his Wife *Poppaea*. The Reigns of the three succeeding Emperors, *Galba*, *Otho* and *Vitellius*, were too short to afford us any thing remarkable, and therefore we must pass on to *Flavius Vespasian*, who received the Empire in *Egypt*, where *Tiberius Alexander*, who was then Governor of that Country, declared for him, and *Vespasian*, making haste to *Alexandria*, no sooner found himself in the

Possession of that City, than he ventured to assume the Imperial Ornaments, not doubting that he should now be able to compass his Design, and make himself entirely Master of the whole Roman Empire, which in Effect he did.

His Son *Titus*, who succeeded him, having in the Life-time of his Father made a sudden Journey into Egypt, and being received with great Honours at *Alexandria*, this alone created a Suspicion that he intended to revolt, and set up for himself; which plainly shews the settled Opinion of the Romans at that Time, that the Possession of Egypt was sufficient to give any Prince a Power of making himself Master of the whole Empire.

As we have now conducted the History of this Commerce to a proper Period, it is requisite to give a particular Description of the manner in which it was carried on, and of the extraordinary Changes it produced in the Customs of the Romans, who, till they became acquainted with this Traffick, had never shewn themselves much inclined to Trade, but left it rather to the Greeks and other Foreigners established amongst them.

9. The Navigation to the Indies was prosecuted, when the Romans first became Masters of Egypt, by sailing down the Arabian Gulph, to a Port near the Promontory of *Sagrus*, which *Ptolemy* the Geographer places in the Latitude of fourteen Degrees; which beyond Controversy, is that Point of the Arabian Coast which is now called Cape *Fartak*, and which, in the best modern Maps, is laid down in the Latitude of fourteen Degrees, forty Minutes; which agrees very well with the Situation assigned by *Ptolemy*: And from hence their Vessels sailed to the Mouth of the River *Indus*; that is, to the Island of *Pattala*, so often mentioned in the History of *Alexander* the Great. But afterwards this Navigation was changed; for, under the Reign of the Emperor *Claudius*,

there was one *Hypalus*, who was, probably, a Citizen of *Alexandria*, of Greek Extraction, that found out a shorter and easier Passage: And this by the Observation of the Time when the Trade-wind blew, which enabled him to pass, at once, through the Straights, and across the Indian Ocean, directly to *Pattala*; which was looked upon as so extraordinary a Thing, that the South-west Wind was afterwards called by his Name, and so became a perpetual Monument of his good Fortune, in this respect.

Yet in succeeding Times (but all within this Period) they made still farther Discoveries, with respect to this Indian Voyage; in which, however, they met with perpetual Interruptions, from the Piracies of the *Arabians*, which constrained them to carry, besides their ordinary Complement of Men, a certain Number of Soldiers, or Archers, in each Ship, to defend them from these Robbers. At length, however, the great Profits, arising from this Trade, increasing the Number of such as engaged in it, they conquered all Difficulties, and settled an annual Trade from *Alexandria*, to the Mouth of the River *Indus*, after this manner: The Goods that were intended for the Indian Markets, were embarked at *Alexandria*; from whence they were carried to *Julesopolis*, two Miles from thence; and so up the River *Nile*, to *Coptus*, at the Distance of three hundred and three Miles; which City *Ptolemy* places in the Latitude of twenty-five Degrees twenty Minutes; which agrees very well with the Accounts that modern Travellers give us of the Situation of its Ruins at this Day.

If the Wind was fair, they commonly performed their Voyage in twelve Days. At *Coptus*, the Vessels were unloaded, and the Goods on Camels Backs, were transported, in eight Days, to *Berenice*, which lay at the Distance of two hundred and fifty-eight Miles; and there they remained in Warehouses, till the proper Season of the Year for the Continuance of their Voyage, which was about the Rising of the Dog-star. When they were embarked for the last Time, they steered directly for the Arabian Coast, and in thirty Days arrived at *Ocelis*, which *Ptolemy* lays down in the Latitude of twelve Degrees, tho' undoubtedly, that is too far South. Or else the Fleet sailed to *Cana*, a Port to *Maza*, all Ports on the opposite Coast of *Arabia*; but

the two last were only frequented by the Merchants of the Country; and therefore were not visited but by such as intended to take in Frankincense, and other Arabian Commodities; for which they exchanged Arms, Knives, and Glass Vessels, and other Things.

But *Ocelis* was the principal Place, because there they met with Merchants from the Indies, with all Sorts of Goods; and it likewise lay very commodiously for prosecuting their Voyage to the Continent of India, where they usually made the Port of *Muziris* in forty Days, which *Ptolemy* lays down in the Latitude of fourteen Degrees, if his Tables have not suffered some Alteration. But this Port being found inconvenient, from the continual Depredations of Pirates in its Neighbourhood, it was thought necessary to seek a better Station; and this led them to the Port of *Becara*, where, by the Help of Indian Proes, they transported their Goods up a navigable River, to a great trading Town, called *Madufa*; and, having completed their Affairs, so as to have the Advantage of the Trade-wind back, they usually returned to *Alexandria* towards the latter End of *December*, or the Beginning of *January* at furthest. The Indian Commodities, which were thus brought to Egypt, were again unladen, and carried to *Berenice*; from whence they were transported by Land to *Coptus*, thence by the Nile to *Alexandria*, and so to Rome by the annual Fleet from *Alexandria*, which was settled by *Augustus*.

The Expence, or, properly speaking, the Stock which was annually invetted by the Romans, in the Commodities fit for this Commerce, amounted, in the Time of *Pliny*, to fifty Millions of Sesterces, which makes about four hundred and three thousand Pounds of our Money: And, by the Profit of the Goods returned, they gained one hundred per Cent.

It may not be amiss, to add to this general Account some Particulars as to the Commodities in which these Indian Merchants dealt. In the first place, we ought to reckon Spices, and particularly Cinnamon; of which we have a large Account given us by *Pliny*, wherein there are some Circumstances that deserve to be considered: In the first Place, he observes, that very strange Stories were told by the Antients, in regard to these Spices, on purpose to increase their Value; such as, that they were collected under Trees, in which the Phoenix built her Nest, being pressed down, and broken, by the Prey she brought to feed her Young; or else that they were collected with Lead. To this Story succeed another, no less incredible, viz. that Cinnamon-tree grew in certain Marthes, guarded by frightful Dragons. And when People grew too wise to believe this, it was next said to come from very distant Countries, where it grew in such Abundance, that the Scent of it might be perceived at a great Distance; by which, as they pretended, the Fleet of *Alexander* discerned the Coast of *Arabia*. All these Accounts he declares to be false; and then tells us what, in his Opinion, was the Truth; which is, that Cinnamon grew in *Ethiopia*, and the adjacent Country of the *Trogodytes*, from whom the *Ethiopians* purchased it, that they might keep this Trade intirely in their own Hands. This precious Commodity they exported in small Boats, without either Oars or Sails; and, putting to Sea in the midst of Winter, they, by the Help of the South-east Wind, doubled the Cape of *Argente*, and so arrived at the famous Port of *Ocelis*, where they trafficked with the Merchants from Egypt for Glass, Copper, and Brass Ware, fine Linnen, and Toys. This Navigation was so tedious, that these People very seldom returned in less than five Years; and many of them perished in their dangerous Voyages. At *Ocelis* the King set the Price upon it, which was formerly so high, that a Pound of Cinnamon was sold at Rome for one thousand Sesterces, which was about eight Pounds of our Money: And it even arose to a much higher Price, when it was pretended, that the Woods of Cinnamon in *Ethiopia* were burnt down by the *Trogodytes*: But, at the time *Pliny* wrote, it was much sunk in its Value, and yet remained dear enough, in his Opinion.

^e *Plin. Nat. Hist. lib. vi. cap. 23.*

certain rich Islands in the *Indian Seas*, such as *Taprobana*, *Palisunda*, and *Panchaia*; but they were very confused indeed. As to the first, they have described it so imperfectly, that it is almost impossible to guess where it lies; the second was no other than the Island of *Patala*, long before discovered by *Alexander*; and the other was a mere Invention, or a Story palmed upon them by the *Arabians*, as *Plutarch* very judiciously observes^a.

It is true, that several ancient Writers speak of the *Indian Merchants*, that frequented the Ports of *Arabia*; but they came only from the Coast of *Malacca*, and the Countries bordering upon *Persia*; and were as little acquainted with the Countries from whence the *Arabians* transported their most valuable Merchandize, as the *Greeks* and *Romans* themselves, who also frequented their Coasts, and carried on a considerable Commerce with them; but not in these rich Commodities; for *Pliny* observed, that they came only from *Ochilz*, and that the Price was set by the King of that Country, which other Writers have confirmed^b.

This Account is so much the more probable, as it corresponds exactly, both with ancient and modern Relations; for, with respect to the former, it shews how the Country might of old be as rich and opulent as the *Greek* Writers represent it; and, on the other hand, how it comes to be in so different a Condition at this Day; for that the Air is excessive hot, the Climate near the Coast very unwholesome, the best Part of the Soil sandy and barren, and the Country in general producing nothing but Incense, and rich Gums, of all the valuable Commodities that were formerly brought from thence, are Facts that cannot be now disputed: And, upon a View of what ancient Writers have delivered, we shall easily discover, that many of the wisest of them suspected the very thing that I maintain, that is, that the Wealth of this Country was the Result of Commerce, and not of its natural Fertility; for *Strabo*^c long ago observed, that they obtained vast Quantities of Gold, and precious Stones, in Exchange for their Aromatics; and that these rich Goods were again exchanged for such Commodities and Manufactures of the West, as they stood most in need of, or with which they were most affected: And hence it was, that, in spite of the Difficulties attending its Navigation, the *Arabian* Gulph was one of the most frequented Seas in the then known World. In the second Place, I observed, that this accounts perfectly well for the Mistakes that we meet with in ancient Writers, as to the Places where Spices, and other valuable Commodities, are found. Their Reports as to *Arabia*, and its Fruitfulness in Spices, were so far founded in Truth, as that they knew no Country where they were to be found, but that; and the Desire of possessing so rich and valuable a Place, was what principally moved *Augustus*, and some of the succeeding Emperors, to think of conquering *Arabia*, which had been before in Danger, from the Power of *Alexander*, on the same Account^d.

It was probably the Fear of the *Romans*, that induced the *Arabians* to frame the new Tale of Cinnamon's growing in the Country of the *Ethiopians* and *Trogodytes*, and that it was brought to them with infinite Difficulty; I say, they might very possibly be induced to circulate this Story, in order to engage the *Romans* in a War with those People; which would have been an effectual Means of keeping their Forces on the other Side of the Gulph. It is very plain, from what *Pliny* says, that this Notion of Spices growing in *Ethiopia*, was a very new thing, and that he thought he had made a great Discovery, in publishing it to the World. And what still confirms this the more, is, the Fact he gives us from his own Knowledge; *viz.* that the first Cinnamon-plant that ever was seen at *Rome*, was brought thither in the Reign of *Titus*, and was consecrated in the Temple erected to the Memory of *Flavius Vespasianus*^e.

But I know it may be objected, that abundance of Doubts have been moved about the Cinnamon of the Antients, as if it was quite another thing from the Spice known to us by that Name. In Answer to this, I must remark, that the Objection rises from the Descriptions left us by the Antients, of a thing they had never seen, but took their Ac-

counts upon Trust from the *Sabeans*, who, with respect to them, had the Monopoly of that Commodity; so that, in the first Place, there is no great Credit due to their Descriptions; and the less, because they agree as little with each other, as with our Accounts of that Spice, from those who are best acquainted with it. In the next Place, we are to consider, that in the Island of *Ceylon*, from whence we have all our Cinnamon, they distinguish no less than nine different Sorts, by the Adjunctive of so many different Epithets to the Word *Coronda*, which, in their Language, signifies Cinnamon: The third Sort, for Instance, is called *Cappereon Coronda*, which is as much as to say, the Camphire Cinnamon; and there is a Kind of wild Cinnamon, that grows on the Continent of *India*, near *Goa*, called by the Naturalists in *India*, *Canella Malabarica sylvestris*, or the wild *Malabar* Cinnamon; which so exactly resembles the *Cappereon Coronda*, that it is not to be distinguished but by the Taste: And, in all Probability, it was a Root of this Plant that *Pliny* saw consecrated in a golden Urn, in the Temple of *Augustus*; or, at least, his Description agrees very well with this. In the third Place, if we consider the imperfect and discordant Descriptions which the Antients give of this Spice, and the many Kinds of it that are known to the Moderns, we cannot wonder at the Doubts that have arisen about it; nor can we reasonably believe, that any Argument, drawn from thence, ought to weigh against the positive Matters of Fact, that have been laid down, and are not liable to any Dispute^f.

The third Observation I shall make with regard to the Commerce of the *Romans* in the East, is in relation to the precious Stones they brought from thence; about which as many Doubts and Difficulties have been raised, as about the Spices; and for the very same Reason, because they were not well acquainted with the Subject, but spoke of Things at second-hand, and generally from the Reports of the *Arabian* Merchants, from whom they received them. Thus, for Instance, their Description of the *Opal* does by no means agree with the Stones of that kind that are known amongst us; and as for the *Topaz*, it is impossible to know what to think of it, since they sometimes describe it of a green, as well as at other times of a gold Colour, which is the only one known to us. As to their Emeralds, they distinguish the *Indian* from the *Egyptian*, but we know not now of any *Indian* Emeralds; by which I mean, Emeralds that are actually found in *India*; for the oriental Emerald is a Phrase in Trade, and means no more than a very perfect Stone in point of Colour and Hardness, which the best Judges have esteemed to be the *Egyptian* Emerald; though some say, that the Inhabitants of the *Philippines* actually received them from *Peru*, before that Country was discovered by the *Spaniards*; and that these, coming into *Europe*, from *India*, were, on that account, distinguished by the Name of oriental Emeralds^g.

Before I part with this Subject, I cannot but observe, that the Heat, expressed by *Pliny*, against these Ornaments, and his sarcastic Remark, that if the antient Conquerors of *Rome* could return from the Dead they would regret their Triumphs, when they saw that the sole Effect of them was to deck the fine Ladies, their Descendants, with an infinite Number of Jewels of high Price, is ill-founded. There is, no doubt, a Luxury in Stones, as well as in other Things: But, on the other hand, they are much mistaken, who affirm, there is no intrinsic Worth in them, and that they ought not to be regarded, or valued. The intrinsic Worth of Iron, and other Metals, consists in their Usefulness; the intrinsic Worth of Silver and Gold, in their being proper Measures of the Value of other Things; and the former, with respect to Mankind, is not a Grain more important than the latter: Without useful Metals, we should be much at a Loss at home; and, without these common Standards, as to the Worth of which all Nations are agreed, we could not conveniently carry on any Commerce abroad. It is in this last Light, therefore, that precious Stones are to be considered; they are extremely beautiful to the Eye, which gains them a general Esteem; they are wonderfully firm and durable; and this augments their

Reader: To say, that these Circumstances do not constitute a kind of antient Worth, is to confound, instead of explaining, our Notions. And, therefore, how sparkling was the Thought of *Pliny* may be, it is not, at this Distance, founded in Truth; and I must, for my own Part, confess, that I do not think the Vanity of a Roman Lady, dressed out with Jewels to the Value of forty Millions of their Money, was at all greater, or more worthy the Contempt of a Philosopher, than the Vanity of *Alexander*, in his triumphal Car; since, in the Eye of *Plato*, one Species of Pride is as much, and as truly, a Fault, as another; of which the elder *Joseph* was very sensible, when, being extremely fatigued with the Length of his Triumph, he could not help saying, I suffer, very justly, for being bold enough to delight in such a Spectacle as this at these Years. But it is now time to return from these Remarks to the Prosecution of our Subject; which leads us to show more particularly, what Improvements were made in this kind of Commerce, after the Romans took the Management of it into their Hands.

The antient Egyptians had very early and constant Quarrels with their Neighbours the Ethiopians, which kept them at a great Distance from, and hindered them from engaging in any Commerce with them, at least of great Importance: But, after the Kingdom of Egypt fell under the Dominion of the Greeks, these Disputes subsided, and the Nations began to entertain a friendly Intercourse; & a new Management of which, the City of *Coptus* was originally designed. This Commerce between the Egyptians and Ethiopians was particularly promoted by *Ptolemy Philadelphus*, for the sake of obtaining Elephants; for the Training of which he was very famous: When the Romans came to the Possession of this Country, they were likewise very desirous of penetrating into Ethiopia, for many Reasons; but more especially for the obtaining of Elephants, and their Teeth. And so eager was *Nero* in this Matter, that he sent an Officer, with a Detachment of his own Footguards, into Egypt, on purpose to invade Ethiopia, if they might not have Leave to march through it peacefully. This People performed their Errand, and returned with a fair Account of what they had seen; which did not, by any means, answer the Expectations that were raised by the Descriptions that had been formerly given of that Country. They found it, for the most part, good and barren, the People, on the Frontiers of Egypt, being mostly upon Millet; and those beyond them, upon Milk and Venison. By Degrees, however, there grew a considerable Commerce with this Country, from whence they brought Elephants, Rhinoceroses, and other wild Beasts, Ivory, and particularly that Sort of it which was called wrought into Truggs, Chairs, Thrones, and other Furniture; as also rich Gems and precious Stones, especially Emeralds and Topazes.

At last they proceeded to the very Extremity of the Arabian Gulph, on the Coast of the *Trogodytes*, who had been quoted in such disagreeable Lights by old Writers; and there carried on a very lucrative Commerce with these People, at a Port of their own, called *Adala*, which *Ptolemy* the Geographer places in the Latitude of 14° 20', and must consequently have been in that Part of the Country, which is now in the Hands of the *Turks*, and there they met with very just and honest Usage from these Barbarians, as they were then pleased to call them. Over against this Port of *Adala* lay the Island of *Orino*; and there were some considerable Cities wittenland, from whence the most valuable Commodities were brought down to this Port, which was looked upon as the Staple of the Ivory Trade; and for the Myrrh that was most esteemed, with various Sorts of Gums, and some precious Stones.

It was in consequence of their Possession of Egypt, that the Romans carried on a considerable Traffick into the *Perisian* Gulph, at the Mouth of the River *Euphrates*; as

also along the Coast of *Perfis*, to the Frontiers of the *Indies*; but the Produce of all this Commerce, as it came to *Rome*, the Fleet from *Alexandria*, was generally considered as Egyptian, at least by the common People; as, on the other hand, all the Commerce of Egypt was, at *Rome*, called by the general Name of the Trade of *Alexandria*. This City, which had made for great a Figure from the Time of its first Foundation, and, indeed, in Right of its Founder, which was afterwards made the Capital of their Dominions by the *Ptolemies*, received great Additions, in point of Wealth, under the Romans; inasmuch that *Joseph* reports, that the Romans drew as much from thence in a Month, as from the rest of Egypt in a Year; and this, in point of Riches, it did not only equal, but even *Rome* itself; which is the more probable, since, under the *Ptolemies*, who were remarkably tender of imposing high Duties, and thereby injuring the Commerce of their Subjects, the Customs of the Port of *Alexandria* amounted annually to a Million and an half of our Money. And *Dionysius Siculus* reports, from his own Knowledge, that, at the Time he was there, the Freemen of the City were above three hundred thousand: So that it must have been then as populous as *London* is at present, even upon the lowest Computation, and supposing that the far greater Part of its Inhabitants were wholly supported by Trade.

To say the Truth, *Alexandria*, within this and the Period which will be contained in the next Chapter, seems to have attained to that Grandeur for which its Founder designed it, since it embraced, in a great measure, the whole Trade of the Roman Empire. This was principally owing to the two Causes: First, the Convenience of its Situation, by which it lay open to the *Mediterranean*; and the Care taken by the Romans to preserve, and even to enlarge its Ports: And next, to the *Indian* or *Oriental* Commerce, which has always had an attractive Quality, and drawn, where-ever it was seated, almost all the Trade of the World beside. Thus, for Instance, when the *Phoenicians* and *Greeks* shared that Trade between them, they ingrossed all the rest: Then it was, for a small Time, attached to *Lisbon*; and came afterwards, in consequence chiefly of their *Indian* Commerce, to the *English* and the *Dutch*. This, I think, is the clearest and most satisfactory Answer that can be given to that Objection, which was often hear made to this Commerce, that it carries out vast Quantities of Silver; and which, as I conceive, was first started by *Pliny*, who actually complains, that the *Arabians* received ready Money for their *Indian* Commodities, and had out nothing in Return. This, I say, is the most satisfactory Answer, because it shews, that whatever Loss may attend this Trade in the full Instance, yet those who are possessed of it are sure to have a large Balance in their Favour, in consequence of the general Return on occasions, and the Returns that are made from those Countries which take their *Indian* Commodities of their Hands. How far this Object may lie to the Trade of *Europe*, in general, with the *Indies*, is another Question, and shall be largely considered at the Close of this Chapter; when I hope to demonstrate, that all that has been hitherto said on this Topic, flows from a Misapprehension of the Nature of Commerce; and that, upon the Whole, whatever Country maintains the greatest and most extensive Trade, under proper Regulations, must be the greatest Gainers by Trade, tho', in some particular Branches of it, they may be said to lose. At present, our Business is to pursue this Subject one Step farther, and to shew what additional Improvements the Commerce of the East, by the Way of Egypt, received, while in the Hands of the Romans, till the Seat of the Empire was removed from *Rome* to *Constantinople*, which created a great Alteration in the Face of Affairs in this, as well as in all other respects.

SECTION X.

An Account of the Affairs of Egypt, and of the Commerce carried on by the Romans, through that Country, to the East, till the Seat of the Empire was transferred from Rome to Constantinople.

1. A succinct Account of the Attention paid to Commerce in general, and to this Branch in particular, from the Reign of Trajan, to that of Marcus Aurelius.
2. The State of this Commerce, during that Period, and the Mistakes that have been made about it rectified.
3. A succinct Account of the Roman Emperors, from the Accession of Marcus Aurelius, to the Death of Alexander Severus.
4. This View of their Reigns continued, from Maximin to Aurelian.
5. The History of Tadmor, or Palmyra; and of the Indian Commerce carried on there, from the Rise to the Destruction of that City and Principality.
6. An Account of the succeeding Emperors, from Aurelian to Constantine the Great.
7. The Situation of the Commerce of the Romans, at the Close of this Period.

THE Rest which the Roman Empire had enjoyed under two such excellent Princes as *Flavius* and *Titus Vespasian*, was intirely forgotten under the tyrannical Yoke of *Domitian*, the last Prince of that Family, and one of the worst that ever profaned the Imperial People. As he lived in Blood, so he died by the Hand of an Assassin, who thought he did the World good Service, by removing one who had thrown himself an open Enemy to Mankind. He was succeeded in the Empire by *Corceus Nervus*, who reigned only a Year and four Months; and in that Time, shewed a laudable Intention to have remedied all the Evils introduced by his Predecessor: And that he might secure the Happiness of his Country, in case he should be taken off by an unexpected Death, he, without any Regard to his own Family, chose for his Successor *Ulpianus Trojan*, a Spaniard by Birth, and one who was recommended to him only for his Virtues. The raising this Man to the Empire, was not more fortunate to him, than happy for his Subjects; for he was a Prince endowed with all the Qualities that were necessary to the Support of that high Dignity, and with the Talents that were peculiarly requisite to restore the Reputation of the Roman Name, and the Forces of a Government now sinking under its own Weight.

He was raised to the Empire in *A. D.* ninety-eight; and having first secured all the Provinces on the Side of Germany, he began to turn his Eyes to the opposite Frontier; and having ordered the Governor of Syria to enter Arabia the easy with an Army, he bruck such Terror into the East, that some Indian Princes sent their Embassadors to Rome, where he received them with great Civility and Kindness. He made afterwards an Expedition into the East, where he extended, by his Conquest, the Bounds of the Empire, as far as the River *Tigris*: And, having made himself Master of the City *Cisophon*, he was again proclaimed Emperor, and had the Name of *Paribicus* given him by the Senate. He was a great Admirer of the Fortune of *Alexander*; and in some Things affected to imitate him: For which Reason, as he was now near the Indian Ocean, he determined to visit it; which Design he also put in Execution. While he was at the Mouth of the *Araby*, he saw a Ship there that was bound to the Indies, with which he was exceedingly pleased, and declared that he would have taken that Opportunity of making the Voyage, if he had been a younger Man than he was.

He tendered divine Honours to *Alexander* the Great on the Spot where he died; and often expressed a very high Esteem for his Virtues, and an earnest Desire to imitate his great Designs for the Benefit of Mankind; with which View he directed a large Fleet to be built in the Red Sea for the Defence of the Navigation on that Side; and undertook himself the Reduction of Part of *Araba*, in hopes of securing by that means the Trade of the East to his Subjects, who were extremely harassed by the con-

tinual Piracies of the *Arabians*: With this View he entered the Country of the *Arabians*, which lay on the South Side of the *Persian* Gulph; but found that Region so barren and destitute of Provisions, that he was constrained to retire from before the Capital of their Country, to which he had laid Siege. In this Enterprize, however, he fatigued himself to much, that he fell into a Looseness, of which he died in *Cisophon*, after he had reigned only nineteen Years. He was a Prince careful, in all respects, of the Interests of the Empire, but particularly of what concerned the East; and, therefore, he took care to cause the Canal between the Nile and the Red Sea to be cleaned and repaired, so that it was thenceforward called the Canal of *Trojan*.

He was succeeded, *A. D.* 117, by *Adrian*, who had been his Ward; and to whom, for his constant Fidelity in all the various Scenes of his Life, *Trojan* bequeathed the Empire. There were few of the Roman Princes who had either great Talents for governing, or the Qualities of whose Minds were better suited to the Times in which they lived, than those of *Adrian*, whose Knowledge was extensive, his Temper firm, his Capacity equally great as a Soldier and a Statesman. At his Return to Rome from the East, he remitted at once all the Taxes due to his Predecessor. Then he made a Journey into the Western Provinces, where having restored all things, he returned to Rome with great Glory, and, with the like Diligence, applied himself to settling the Affairs of the East. In the fifteenth Year of his Reign he made a Tour into Egypt, and resided for some Time at *Alexandria*, where he took a great deal of Pains to examine into the Character of its Inhabitants, and has left us in his Letters several curious Remarks; among which we may reckon these two; first that though the *Alexandrians* seemed to live amongst them many Religions, yet, in fact, they all of them worshipped but one God, which was *Gen*: The second, that it was the busiest Place in the World, where there was no Room for Beggars, since they made even blind Men get their own Bread. He found the City labouring under many Difficulties, many of their Privileges being lost by their frequent Seditions; all of which, however, he restored, repaired such Parts of the City as had suffered in their Commotions, restored all the public Foundations of the *Ptolemies*, and made some excellent Regulations for the Security of Commerce. In his Return through Syria he received the submission of the City of *Palmyra*, as we shall hereafter shew more largely: And it was about this time, that *Adrian* undertook, by his Direction, the Examination and Description of the *Euxine* Sea: And, indeed, his Care of the Public was in nothing more remarkable, than in restoring the Sea-laws, and in the Edicts he made in favour of Mariners.

Titus Antonius succeeded in the Empire, by Virtue of his Nomination, *A. D.* 138; and proved as worthy a Prince as ever sat upon the Throne: He is generally called, in or-

der to distinguish him from the Princes of his Family, *Pius*, for his Regard to his Predecessor, and the Purity of his Life, by which he was as illustrious as from his imperial Dignity: He was naturally a Lover of Peace, and strict in the Administration of Justice: His Care of Trade was equal to that of any of his Predecessors; for the promoting it, he caused all the High-roads throughout the Empire to be repaired, and for the Conveniency of such as were engaged in Business, he directed, that the Diversions of the Play-house should begin later on those Days, on which the Merchants met on the Exchange. As the Works of the best Historian of these Times, which regarded his Reign, are long since lost, we have a much worse Account of it than it deserved; and therefore we cannot enter into any Particulars, relating immediately to our Subject; but this we know in general, from an Oration, that has escaped Oblivion, that the Commerce of the *Romans* was never better protected, and consequently, was never more extensive or flourishing, than while the Reins of Government were held by this excellent Prince, whose constant Maxim it was, that the Glory of the Monarch consisted solely in the Happiness of his Subjects; and by the Prosecution of this Maxim he secured to himself the peaceable Possession of his Dominions while living, and the greatest Respect to his Memory after his Decese.

2. It is by no means my Intention to enter here even into a succinct History of the *Roman* Emperors; all I am at is, to give the Reader such an Account of them, as may render what I have to say with regard to this Trade, while in the Hands of the *Romans*, perfectly intelligible; that I may avoid putting him under a Necessity of consulting many other Books, that he may be able to understand this; a Fault which having often observed in other Works of this Nature, rendered me the more careful in avoiding it. We have an ancient Writer who has given us a very complete Description of the *Mare Erythraum*, or *Red Sea*; which has long past, under the Name of *Arrian*, as I have hinted, more than once, before; but is, I think, unanswerably shewn by the learned Mr. *Dobson* to have been written by some other Author. This Writer, whoever he is, has shewn us, that, within the Compass of Time mentioned in this Section, there were very great Improvements made in the Navigation of the *Romans* to this Part of the World: And, therefore, I am not a little surpris'd, that so learned a Man as *Bishop Huet* should suggest, that the Trade to the *Indies* was sunk in some measure till revived by *Trajan* and supported by the Fleet which he caused to be sent into the *Red Sea*. The avowed Design of that Fleet was to crush the Pirates in those Seas: But these Sort of People never trouble any Seas where there is not a great Trade carried on; and, therefore, the building such a Fleet was by no means a Proof, that the Trade of the *Indies* was at that time any way lessened, but rather the contrary. The secret and true Design of *Trajan's* equipping this Fleet was, that it might facilitate a Project he then had of rivalling *Alexander* by the Conquest of the *Indies*: And the Reason he had it aside was, that he began to suspect, that it would be impossible to keep such Conquests, even supposing it possible to make them.

He, therefore, began to turn his Eyes towards *Arabia*, with a Design to establish, and even to enlarge the Conquest that had been made by his Lieutenant *Cornelius Palma*. Of these Conquests we have very indistinct Accounts in History; for they must have been much more considerable than those Accounts make them, since there are yet extant several Medals struck on taking of Towns in that Country. It is likewise very certain, that either *Trajan*, or some of the Emperors who succeeded him, reduced the greatest Part of *Arabia the Happy*, under their Dominion; for the Writer I have before mentioned, who describes the *Red Sea*, speaks of a Port without the Straights of *Babel-mandel*, called *Eudemon*, or the *Happy*, which, he says, was formerly a Place of very great Commerce: But a little before our Time, continues he, it was destroyed by *Cesar*.

Some Writers, indeed, ascribe the Ruin of this Place to *Cæsar*, the Grandson of *Augustus*; for which the *King Juba* wrote a large Work in relation to those Countries: But if we consider what *Pliny* says, that *Cæsar* only looked into *Arabia*, and that *Ælius Galus*, of whose Expedition I have already spoken, penetrated farther than any other *Roman* into *Arabia*, we shall easily see, that this is a Mistake; and that this *Cæsar* lived much later, than to fly, within the Compass of the Period of which we are now writing.

It appears, moreover, from the Description of the *Red Sea*, so often cited, that, by this Time, I mean under the Emperors who succeeded *Trajan*, the *Romans* had extended both their Power and their Trade, very far on this Side and were, in a manner, Masters of all *Arabia*, though when, or how, it was subdued, is a Point not so easily resolv'd; nor do I intend to trouble my Readers with a tedious Inquiry into so perplexed a Subject. It is sufficient for my Purpose, that I have cleared the Matter thus far, and have shewn the true Period within which these Conquests were made; by the Mistake of which, we must be led into many others, capable of misleading us in our Inquiry into the History of the *Indian* Commerce, by inclining us to believe, that it was in a declining State in that Period, when, in Truth, it flourished most.

This Port of *Eudemon*, which I before-mentioned to have been destroyed, was afterwards restored and repaired, and became so famous a Mart for all the Commodities of the East, and, withal, was so much frequented by the Subjects of this Empire, that it was called, by Way of Emphasis, the *Roman* Port; and is the very same which is now called *Aden*, a Name that signifies nearly the same in *Arabic*, that *Eudemon* did in *Greek*, according to the well-known Custom of the *Arabians*, who every where retain the old Names of Places that they become Masters of. It is also very clear, that, at this Time, the *Romans* carried on a great Trade in Countries much beyond the Limits of their Knowledge in former Times, that is to say, along the Coasts of *India*, *Perfia*, *Cambaya*, and the *Peninsula of Malacca*; but they were still as far from being acquainted with the Spice Countries as ever. The Author of the Description of the *Red Sea* does indeed speak of the River *Ganges*, and of the Countries lying on the Gulph of *Bengal*, but not with the same Accuracy that he does of other Places; from whence, I think, it may be justly concluded, that he drew the Accents he had of them from Hearsay, that is, from the Report which the *Roman* Merchants receive at *Barygaza* and *Muziris*, who were Ports of *Malacca*; and the latter is, with great Probability, thought to be that which is now called *Dia*.

It was by the prodigious Profits arising from this Commerce, that, on the one hand, the People of *Assyria* grew so rich, and so motinous, as all the Labours of these Times respect them; and that, on the other hand, the *Roman* Emperors, of whom we have been speaking, and who were by far the best, if we except one or two that enjoyed that Dignity, were engaged to make so many Visions to that City in particular, and to take so much Care as they did of all Things relating to Trade in general, which had an extraordinary Effect on the Manners of the *Romans*, and altered their Notions to such a Degree, that even the most considerable Persons of the Empire, for Birth and Quality, were not at all ashamed of becoming Merchants; and this, in all Probability, was the Cause that their Capitals became larger, and their Trade through *Lypt* much more considerable than in former Times. However this might contribute to the corrupting the Minds of the People, by the increasing Luxury, I shall not pretend to determine; but, most certain it is, that the Manners did not appear to have been worse within this Period, but rather better; and, therefore, it seems more agreeable to Truth, to attribute that Corruption of Manners, which was afterwards visible amongst the *Romans*, and had very near ruined their Empire, to the bad Example of successful

* This Part of the Work of *Dion Cassius*, whose History is here meant, printed, before *Nephtis* made his Abridgment. See the Introduction to the first Volume of *Dr. Hudson's* Collection of ancient Geographers, under the Title of *Arrian's Periplus Maris Erythraei*, where the Editor has used. We have this Circumstance from *Eusebius*; and the Reader, by consulting *Dion Cassius*, will find, that the *Roman* Emperors regarded him as the Conqueror of the *Indies*; which was either a great Flattery, or they must have reckoned *Arabia Felix* as a Part of the *Indies*. See *Pliny's Natural History*, l. 6. c. 14. *Idem ibid.* *Nat. Hist. lib. 6. c. 14.*

Princes, than to their exertion by their exertion; their Conduct, it is in order to preserve the Connection may same time, we shall strain this Section v

3. *M. Aureus* succeeded *Antoninus Pius* in the the *Romans* had been in his Instance, and was fully esteemed; to his Conduct, to his Character, and Respect, which his Greatness, and alone, with the utmost nothing that Character he had and Esteem of his the Eleventh Year was had, a Title which he beheld to their Privileges; doubt, that the Trade was preferred in it.

His Son *Commodus* A.D. 180. was as had been just an Scene of Blood and general, suffered execution, to the Traaged by an Insurrection heard of in *Arabia*, in the last Year murdered by some to remove in it.

Heliogabalus was as his Reign was in it all, but for which he is famous; that the Reader a His Father was a considerable Ports have entered the a Traiter; to which that all his Father best: And from that his Conduct long Series of C Empire: With it People were ple Reign of three M After his Death A.D. 193. *Septimus* however, he had the East, for his Reign, he entered *Asia*, the same *Trajan*, out of a make himself M blood was in the Dols, and forced ever, was to the Time; and had not had not himself was apprehensive would share the fore he would in which they employ dicially, that Assault: So that time. Thus In a Height of Pow

Princes, than to the great Wealth that was poured in upon them by their extensive Trade. Of these Princes, and of their Conduct, it is necessary, that we should say something, in order to preserve the Thread of our History, and that the Connection may be preserved throughout; but, at the same time, we shall use all possible Brevity, in order to restrain this Section within due Bounds.

3. *M. Aurelius Antoninus*, surnamed the *Philosopher*, succeeded *Antoninus Pius*, A. D. 161. and associated *Lucius Verus* in the Government, which was the first Time the Romans had seen two Emperors at once; neither had it, in this Instance, any ill Consequence: For, as *M. Aurelius* was justly esteemed the very best of all the Roman Emperors, so his Colleague *Lucius*, during the nine Years of his Reign, behaved towards him with all that Modesty and Respect, which was due from him to the Author of his Greatness. After his Decease, *M. Aurelius* governed alone, with the utmost Wisdom and Moderation, neglecting nothing that could contribute to maintaining the great Character he had gained, and securing, at once, the Love and Esteem of his Subjects. He made a Visit to *Egypt* in the fifteenth Year of his Reign; and though the Inhabitants had, a little before, shewn an Inclination to revolt, yet he behaved towards them very kindly, and renewed all their Privileges: So that there is not the least Reason to doubt, that the Trade of the Romans through that Country, was preserved in its full Extent.

His Son *Commodus*, who succeeded him in the Empire, A. D. 180. was as wicked and cruel a Prince, as his Father had been just and virtuous: His Reign was a continued Scene of Blood and Debauchery; and as the Empire, in general, suffered exceedingly under his scandalous Administration, so the Trade of the East was particularly endangered by an Invasion of the *Saracens*, who were now first heard of in *Arabia*, where they defeated the Roman Armies, in the last Year of the Reign of this Prince^a, who was murdered by some of his Favourites, that he had intended to remove in the same Way.

Herennius Pertinax was raised to the Empire in A. D. 193. and as his Reign was very short, I should not dwell upon it at all, but for the singular Circumstance of his Name, which sometimes Obliviate, and was given him for a Reason that the Reader may, perhaps, think worth his Notice. His Father was a Woodmonger; but, having acquired a considerable Fortune, he was willing, that his Son should have entered the World in another Character, than that of a Trader; to which, however, he was so strongly inclined, that all his Father's Persuasion, for some time, had no Effect: And from thence he was called *Pertinax*^b. He altered his Conduct afterwards, and rose regularly through a long Series of Civil and Military Employments, to the Empire: With his Piety to which, all Degrees of People were pleased, except the Soldiers, who, after a Reign of three Months, murdered him^c.

After his Death followed many Disturbances; but at last A. D. 193. *Severus* was raised to the Empire, in which, however, he had *Niger*, who was declared Emperor in the East, for his Competitor. In the fifth Year of his Reign, he entered *Arabia* with an Army, and laid Siege to *Dera*, the same Place that had been formerly attacked by *Trojan*, out of a covetous Disposition, and that he might make himself Master of the vast Wealth, that he understood was in the Place; but he was repulsed with great Loss, and forced to retire. His Passion for Money, however, was so strong, that he returned thither a second Time; and had certainly taken the Place, if his Covetousness had not hindered him: For the Breach being made, he was apprehensive, that his Soldiers, if they took it by Storm, would share the Plunder amongst themselves; and therefore he would needs give the Besieged Time to capitulate, which they employed in repairing the Breach; and did it to effectually, that the Roman Army refused to return to the Assault: So that he was obliged to raise the Siege a second time^d. This Instance sufficiently shews us, to how great a Height of Power the Profits of their Trade had, in those

Days, raised the *Arabians*, since a small Principality amongst them, was capable of defending its Liberties against two such Princes as *Trojan* and *Severus*: And we may add to this another great Prince no less powerful, viz. *Artaxerxes*, who re-established the Empire of the *Persians*. In the succeeding Year *Severus* visited *Egypt*, and made some Stay in *Alexandria*, where he repaired the Tomb of *Pompey*, and granted to the City a Senate and publick Council, which hitherto the Romans had constantly refused them^e. This Emperor travelled over all *Egypt*; inquired carefully into every Thing that related either to his Government or Commerce; and, having seen the Body of *Alexander*, he ordered the Tomb to be walled up, that others might not satisfy their Curiosity in like manner^f. His Son *Cara-calla* succeeded him, A. D. 211. and proved as great a Tyrant as any that had hitherto sat upon the Throne. He was, however, extremely fond of *Egypt*; and admitted one *Ceranus*, an *Alexandrian*, into the Senate of *Rome*, contrary to the established Maxim of *Augustus*, that no *Egyptian* should ever enter that August Assembly^g. Towards the End of his Reign he went to *Alexandria* upon a very odd Errand: He had heard, that the People treated his Vices and Follies with Hatred and Contempt: He, under Pretence of visiting it, as his Father had done, entered it with his Troops; and, having directed them to kill, without Distinction, all they met, destroyed an infinite Number of all Ranks and Ages. He afterwards abolished their Privileges; destroyed a great Part of the City; demolished the Museum; banished the learned Men who lived there, and all Strangers, Merchants only excepted, to whom he vouchsafed his special Protection^h. This Tyrant was soon after killed, in an Expedition he made into the East, to the great Joy of the Senate and People of *Rome*.

Macrinus, One of his Officers, and his Murderer also, succeeded him: But we find nothing in his Reign, nor that of his Successor, the execrable *Hellogabalus*, worthy of Notice.

Alexander Severus was raised to the Empire while a Boy, A. D. 222. He proved an excellent Prince, and a great Blessing to the Empire; and, being governed, during his whole Reign, by very wise and prudent Councils, did every Thing that could be expected from him, for promoting the Welfare and Happiness of his Subjects. He was particularly attentive to Trade, and the Ease and Comfort of such as were engaged in it. He took off many of the high Duties imposed by his Predecessors: And it is remarkable, that he was the first of the Roman Emperors who made any Distinction between Merchants and Tradesmen or Mechanics; which he did by dividing them into separate Companies, and appointing Judges to hear and decide the Disputes that might arise amongst the Members of either Company. Towards the End of his Reign, he made an Expedition into the East; from whence he returned victorious, and was honoured with a Triumph. But the Soldiers, who were in a great measure corrupted by the Licence allowed them under former Emperors, being no longer able to bear the Strictness of his Discipline, or endure the Purity of his Manners, took an Opportunity to murder him a little after Dinner, when he was left almost alone, in his Tent, in the twenty-seventh Year of his Age, and fourteenth of his Reignⁱ.

3. The execrable Murder of so good an Emperor was followed by the Soldiers setting up a perfect Monster, both in Body and Mind, called *Maximin*; which obliged the Senate to sit up other Emperors, in order to preserve some Degree of Decency in the Government, which they found very difficult for them to do, the Army being as much bent to maintain their Power, as the Senate were to support their Authority: But at last *Maximin*, on whole Account these Disturbances began, being slain, and *Gordian* and his Nephew, who were exalted to the Empire in the Year 236. being slain also, the People would needs have a Share in making Emperors; and therefore obliged the Senate to declare the younger *Gordian*, who was a Boy of thirteen, and the third of his Name, *Augustus*. It is natu-

ral to suppose, that, in the Midst of these Confusions, the whole Oeconomy of the Empire sull' red; and, indeed, suffered in every Part, by the Ambition of their Governors, who all imagined, that, by courting the People under their Subjection, they might be able to raise themselves to Sovereignty. The Army, disdaining the Youth of *Gordian*, could scarce be persuaded to follow him to the *Perſian* War; and tho' he was there successful against the Enemy, yet he found it impossible to triumph over the Malice of his own Troops, who taking the Opportunity, when he had few of his Friends about him, and being headed by *Philip*, who was the Captain of his Guard, murdered him, when he had held the Empire about six Years.

M. Julius Philippus, who had thus betrayed his Trust, and murdered his Prince, was, by the Army, raised to the Empire. He was an *Arabian* by Birth, and attended, so far as the Disturbances of his Reign would give him Leave, to the Concerns of the Government with great Diligence; but a Sedition rising in his Army, and he sending *Decius* to quiet it, the Soldiers threw an Imperial Mantle over his Shoulders, and, declaring for him against *Philip*, a Battle was soon after fought between them, in which the latter was slain, after a short Reign of four Years. This *Decius*, who was an *Illyrian* by Birth, governed the Empire with Reputation for two Years and an half, and was then slain in a Battle against the *Goths*, by the Treachery of *Vulpius Galus*, who succeeded him in the Empire, and affected his Son *Vulpius*; but they scarce held it long enough to be accounted Emperors: for the *Scythians*, and other barbarous Nations, invading the *Roman* Territories on all Sides, who ever had Courage and Fortune enough to resist these Barbarians, was presently saluted Emperor by his Soldiers: And thus the Misery of the Empire was increased by what ought to have been her Defence, the having many brave Men, and good Officers, in her Service.

It was in this manner that *Similianus*, an *African*, was raised to the Purple, which he held but a few Months; for another Army, having proclaimed *Valerian*, who was a Man of Quality and great Abilities, the Army that had chosen *Similian*, thought proper to dispatch him out of the way, rather than involve themselves in any Danger about a disputed Title. The Emperor *Valerian* assumed the Purple A. D. 253, and having a great Reputation, brought the Affairs of the *Roman* Government into some Order; for, having, repelled the *Germans* on one Side, and the *Goths* on the other, he resolved to march himself against the *Perſians*, who had created new Disturbances in the East. In the Year 258, he was at *Edessa*, in his Way towards the East; and, having spent the next Year in a slow War against the *Perſians*, it came, in the Year following to a decisive Engagement, in which he was beaten, and afterwards taken Prisoner.

He had succeeded his Son *Gallienus* in the Empire, soon after he was raised to it; and this Son now succeeded him in the imperial Dignity, and governed alone near nine Years, but without either Peace or Reputation; for he gave himself up to a luxurious and indolent Life, without taking the least Care to free his Father out of the Hands of the *Perſians*, or to prevent his Dominions from being over-run by the numerous Armies of Barbarians, that tracked them on every Side. While Affairs were in this Posture, almost every great Province gave the Title of Emperor to whoever commanded in it, and *Egypt*, amongst the rest, where the Country was mixed, and the City of *Alexandria* desolated by War, Pestilence, and Famine, all at one Time. These Miseries, however, were not sufficient to hinder them from creating new Disturbances; for in the Year 262, they gave the Title of Emperor to *Aemilian*, who was then Prefect of *Egypt*, against whom *Gallienus* sent *Maximian*, who was an *Egyptian* by Birth, and who having shut up *Aemilian* in the *Bruchian*, or Palace of *Alexandria*, at last made him Prisoner, and in that Condition sent him to *Rome*, where, by the Order of the Emperor, he was beheaded. In this unfortunate Dispute the City of *Alexandria* suffered very severely; for, the *Bruchian*, or royal Quarter, which was very large, and very magnificent,

was intirely destroyed, and rendered desert; so that in succeeding Times the Ruins of it were at some Distance from the City, which, we may hence conclude, began about this Time to decline; and no Wonder that it did, since the whole *Roman* Empire was now visibly sinking under its own Weight, and crumbling into as many Parts as there were Provinces.

The *Roman* People, perceiving that *Gallienus* took but little Care of Affairs, began not only to hate, but to despise him. This created some Insurrections in *Italy*; and *Gallienus* putting himself at the Head of an Army, in order to repress them, he was there murdered; and soon after, his Son and his Brother were cut off at *Rome*. He had for his Successor *Claudius Gothicus*, who received that surname for a great Victory he obtained over the *Goths*, in which he destroyed three hundred thousand of them, and sunk two thousand of their Ships or Barks, for which the Senate decreed him a golden Shield, and ordered his Statue to be set up in the Capitol. The *Romans* began now to conceive Hopes of seeing better Days; and indeed there is no Instance of any Prince, who, during to short a Reign, made himself to much beloved, since he died, at the Age of his second Year, at *Syracusa*.

He recommended, on his Death-bed, *Valerius Arrius*, whom he had sent into *Thrace* against the *Goths*; but the Army, instead of proclaiming him Emperor, set up *Maximian*, the Brother of *Claudius*, in a Fit of Zeal for that Monarch's Memory; but, finding their new Emperor a Man of too severe Morals for those licentious Times, they murdered him in a Fortnight, and proclaimed the Person whom *Claudius* recommended. This *Aurelian*, who was raised to the Empire in 270, was a Person of great military Capacity, a Lover of strict Discipline, and, in every respect, proper to restore the distracted Affairs of the Empire, and to retrieve the ancient Glory of the *Roman* State. He soon freed the Western Provinces from the apprehensions they were under, from their barbarous Neighbours; and, having likewise settled the domestic Oeconomy of the Empire, to the Satisfaction of the Senate, he began to turn his Eyes towards the East, where a new Power was erected, and had assumed the imperial Title: Here his Rile and Progress of this Power has a very close Connection with our Subject, it is necessary, that we should examine it more at large; which will enable us to ascertain many Particulars, that must otherwise have been lost in Obscurity.

5. While the *Roman* Empire was thus torn by intestine Confusions, and while many wore the Title of Emperor, with Power enough to oppress, and too little to protect their Subjects, a new Principality started up, and recovered its Power to the World; of which, as I have already observed, I am necessarily obliged to speak more at large; because it owed that Grandeur, which it possessed in so high a Degree, intirely to the Commerce of the Indies; so that it may serve us for an Instance, that the same Situation to which, as not to be improved and rendered pleasant; no Country is barren, as not to admit of Cultivation; no Spot of Ground is unhappily placed, as not to become the Seat of Pleasure, if, by any Art or Contrivance, any Commerce of Importance can be had there.

The Place, of which I am to speak was originally built by King *Solomon*, after he had conquered the King of the *Arabia Felix*, a little *Syrian* Prince, within whose Dominions the Country lay, upon which this City was afterwards erected. It was called by *Solomon* *Tadmor*, and in that Situation in the midst of a sandy Desert, which surrounded it on all Sides, *Tadmor* in the *Hebrew*; but, as the singularity of its Situation was private to the King, who attentively considered it, from its Position in the Empire in the East, it became a free City, and the Head of a small Principality, under the Name of *Palmyra*, from whence the Country upon its Jurisdiction was called *Palmyrene*. The City and Country are described by *Pliny*.

Herodotus, lib. vii. c. 102. *Strabo*, lib. vii. c. 1. *Pliny*, lib. vi. c. 31. *Ptolemy*, lib. vi. c. 16. *Josephus*, lib. vii. c. 1. *Herodotus*, lib. vii. c. 102. *Strabo*, lib. vii. c. 1. *Pliny*, lib. vi. c. 31. *Ptolemy*, lib. vi. c. 16. *Josephus*, lib. vii. c. 1.

to maintain an Army, which he undertook to raise under Colour of supporting the Cause of *Zenobia*; but, in fact, with a View to have secured to himself the Sovereignty of *Egypt*, where he found the People inclined enough to mutiny; and was soon in a Condition to render himself formidable; the rather, because the first Step he took was to lay an Embargo upon the Fleet that was bound from *Alexandria* to *Rome*. But this, instead of contributing, as he vainly imagined it would, to his Safety, drew upon him immediate Ruin; for *Aurelian*, knowing well the Consequences that this must produce at *Rome*, marched with all imaginable Diligence to *Egypt*; and having easily made himself Master of *Alexandria*, he blocked up *Firmius* in a Castle, and soon after took him Prisoner, and caused him to be put to Death with horrid Torments*.

He likewise settled the Trade of that Country on a new Foot, by the Regulations which he made, and which seem to have been very advantageous to the *Romans*, whatever hardships they might bring upon the *Egyptians*. These Precautions, however, could not have affected the Inhabitants of this Country so deeply, or the Severities exercised by *Aurelian* have depressed them to such a Degree, as History mentions, if they had remained at Peace among themselves, and had been content to enjoy quietly, what was left them after their Misfortunes: But this they could not do; for their mutinous and restless Temper threw the Inhabitants of *Alexandria* into such factious Disputes, as occasioned a kind of civil War amongst them; which produced the Ruin of many of the public Buildings, and finest Edifices, that were yet left standing; so that, with their own Hands, they laboured incessantly to demolish, what had been raised by the Industry and public Spirit of their Ancestors; and thus the Desolation of this great and rich City was increased, and in a manner finished, by the Madness of her Citizens†.

Soon after, this *Aurelian* was murdered by some of the principal Officers of his Army; and the Senate and Soldiers were, for some time, in Suspense, before they proceeded to an Election, which at last fell upon *Tacitus*, who was at the Head of the Senate, and seventy-five Years of Age: For which Reason, he laboured, with the utmost Diligence, to have avoided, had it been possible, the Acceptation of this Dignity; but, finding that his Endeavours were vain, and knowing that it was sometimes as dangerous to refuse the Purple as to accept of it, he yielded at last to the Intreaties of the Senate, and became, as it were, Emperor by Force.

9. The Reign of *Tacitus* began and ended in the Year 276. For, having sent a Relation of his to govern *Syria*, while himself was in the Neighbourhood of that Province, and this Man having discharged his Duty but indifferently, the People first murdered him; and then, fearing they might be punished for this Action, endeavoured to secure to themselves Impunity, by cutting off the Emperor also: He was succeeded by *Probus*, who was a most excellent Prince: For he first settled Peace at home, and then visited the Provinces, where he, likewise, gained great Honour, and secured the Empire from all Apprehensions of Disturbance from any of the barbarous Nations that had hitherto interrupted its Quiet. His Reign, however, was disturbed by an Insurrection in *Egypt*, where the Soldiers and the People made *Saturinus*, a worthy Officer, Emperor against his Will. *Probus* had made him General of the Forces in the East, with a particular Caution, that upon no Account whatever he should enter *Egypt*: But he, being extremely desirous to see the Curiosities of that Country, and, perhaps, not the less so for this Prohibition, made a Journey to *Alexandria*; which City he had scarce entered, when the People, out of that Spirit of Fickleness, of Flattery, and of Folly, for which they were famous, saluted him *Augustus*. He acted right at first, by quitting the Place instantly, and returning to *Palestine*; but, fearing afterwards, that he should be punished for what the People had done, he changed his Conduct, and assumed the Purple. *Probus*, at first, would

not believe the News of his Revolt, so great was his Confidence in this Man's Virtue; but when it was confirmed, he marched against him with an Army; and, after several hard-fought Battles, besieged him in a Castle; which was taken by Storm, and *Saturinus* killed, in spite of all the Care the Emperor took to save him‡.

This Revolt did not hinder *Probus* from labouring to restore the Affairs of *Egypt* to their former flourishing Condition; in order to which, he caused all the Mouths of the Nile to be cleansed and repaired, and enlarged the Ports of that Province: He further declared his Resolution to take the same Care, and employ the same Pains, in all the other Provinces of the Empire. This gracious Disposition, this Desire of establishing universal Peace, this Hope of finding it possible to govern Mankind upon Principles of Humanity, inspired him with an Openness of Heart, and Freedom of Speech, which drew upon him a sudden and violent Death: For tho' it may be a new, a strange, and seemingly absurd Maxim, yet Reason and Experience will shew it a true one, that more Care and Art ought to be employed in covering and concealing good Designs, than bad ones; and that for this plain Cause, the Majority of the World are bad, or, at least, weak Men, who prefer their present Interest, or what they think so, to any future Good, how great soever: And therefore, whoever proposes to act for the Benefit of all, will be sure to provoke the Displeasure of many, and awake the Affections of very few. This was the Case of *Probus*; for his great and good Projects being interrupted by a War with the *Persians*, he was so indiscreet as to sit, in the midst of the Preparations for it, that he hoped would come a Time when Soldiers would be no longer necessary; which, with the hard Labour he put them upon, in draining the Waters about *Syrmium*, irritated his Forces to such a Degree, that they first mutinied, and then murdered him§, when he had reigned six Years in universal Applause, and had restored the Affairs of the Empire miraculously.

After his Death, the Army, A. D. 282, declared *Carus* Emperor, who entered on a Scene of Trouble; and entered only to go off again; for the barbarous Nations began, on every Side, to be in Motion, as soon as the Death of *Probus* was known. And his Successor, advancing with the Army as far as the River *Tigris*, was there founded in his Tent, in the Middle of a Storm of Thunder and Lightning, in the second Year of his Reign. He had nominated his eldest Son *Carinus* in the Empire, and his younger Son *Numerianus*, who was with him, and who was acknowledged by the Army, and continued the War some time after his Father's Death, till by the Fraud of *Iper*, who was Captain of his Guard, and who hoped to succeed him, he was murdered in his Tent: Upon which the Army chose *Dioclesian* Emperor, who revenged the Death of his Predecessor, by killing *Iper* with his own Hands¶.

Dioclesian was raised to the Empire A. D. 284, and as soon as he found himself established, entered into a War with *Carinus*, in which the latter was slain. In 286, *Dioclesian* associated *Maximian* in the Empire, that they might be the more able to act against all the Enemies of the *Romans*; and the Troubles still increasing, the two Emperors named *Constantius Chlorus*, and *Maximian Galerius*, *Cæsars*. At this Time one *Aballus* had drawn *Egypt* to revolt, and assumed there the imperial Ornaments, and maintained himself better than five Years; but when other Parts of the Empire were quieted, *Dioclesian*, in the Year 296, entered *Egypt*, attacked, defeated, and killed *Aballus*, and as some Writers say, suffered his Soldiers to pillage the City of *Alexandria*. But the Nations who inhabited the Country between *Egypt* and *Arabia*, were now become too powerful, and the Affairs of the *Romans* in that Province were in such Contusion, that *Dioclesian* could find no better Expedient for securing the Peace and Safety of the Province, than yielding up a large Part of Country to that Nation, with whom he contracted

perpetual Alliance, and agreed to pay them an annual Tribute for protecting the Frontiers from other Barbarians, which was paid to the Time of *Justinian*. This is sufficient to shew, how far the Power and Credit of the *Romans* was sunk; and it is natural to suppose, that with them, had Things continued in this State, the Commerce of *Egypt* would have sunk likewise. But in succeeding Times, when the Troubles of the Empire were appeas'd, and the Emperor *Constantine*, surmounting the Great, mounted the Throne, Things began to change their Face, and new Measures were taken for restoring and settling the Affairs of *Egypt*, as will be shewn in its proper Place. At present, this Part of our Plan is executed, and the History of this Commerce connected with that of the Princes by whom it was established, and under whom it flourished.

All the Proofs we have of the flourishing State of the *Indian* Commerce, in the latter Part of this Period, are drawn from the Circumstances of Things related in History; which, however, sufficiently demonstrate it in general, tho' they do not enable us to enter into Particulars. The great Attention shewn by many of the Emperors, in regard to the Provinces of the East, and the Victories obtained over the *Parthians*, and other Nations, kept up such an high Idea of the *Roman* Power in all that Part of the World, that we hear of *Indian* Embassadors sent to almost every Emperor, from *Alexander Severus* to *Diocletian*: And therefore we have the greatest Reason that can be to believe, that their Commerce was, at this time, carried on with all the Vigour and Success imaginable.

Another Proof of this, is the Accounts we have of the pious Reigns of *Caracalla*, *Hellogabalus*, and *Carinus*: From which we learn, that there were prodigious Quantities of *Indian* Commodities at *Rome*; and it is particularly taken notice of, that *Hellogabalus* first wore a Robe entirely made of Silk, at that Time one of the dearest and most valuable Commodities they received from the East.

The strongest and clearest Proof we derive from the Laws made in this Period, in favour of Trade in general, and for settling the particular Duties on the Goods imported from the *Indes*, by the Way of *Egypt*: For these plainly shew, that this Commerce was now more extensive than ever. We may add to this the several Seditions and Rebellions which happened in *Egypt*, and which were the pure Effects of the vast Wealth of the Inhabitants of that Country, deriv'd to them from the Progress they made in their own Manufactures, and the Means that within this Period they found out, of vending their Paper, Glass, Linen, and other Goods, throughout the East; by which private Men acquired such immense Fortunes, as enabled them even to maintain Armies at their own Expence; which was the Case of *Marcus Firmus*, whose Riches induced him to attempt making himself Master of the Province, and of bringing, from an *Indian* Merchant, an *Egyptian* Merchant. In short, if the Returns of their Traffick had not been prodigiously great, it would be very difficult to account for the People of *Egypt*'s recovering themselves, after so many Pillagings as they were expos'd to, in consequence of the Disorders and Confusions of those Times, which must have carried immense Wealth out of the Province.

It is impossible to turn one's Thoughts upon this Subject, without remembering, that the City of *Rome* was adorn'd with many of its most costly Ornaments, at the Expence of *Egypt*, and particularly of *Alexandria*, from whence they were transported in Ships that were contriv'd on Purpose, and were of a most extraordinary Size. Thus, for Instance, *Flavius Vespasian* dedicated, in his Temple, a Machine erected to the Goddess of Peace, the largest Statue that had been seen, of *Egyptian* Porphyry; and of that kind that was call'd *Bajales*, of an Iron-colour, which represented the Nile, under the figure of an old Man, with sixteen children playing about him, signifying the Number of Cubits which that River rises, when at the

highest. Innumerable Instances might be given of the same Kind, but that one is sufficient; and it is impossible to conceive how such prodigious Expences could be defray'd, as must have been necessarily occasion'd by the Luxury of those Times, and particularly the Love they had to Building, in a manner which employ'd many more Hands than any that has been practis'd in later Ages. And, to be convinc'd, that ancient Writers have not deceiv'd us in what they have deliver'd upon this Subject, we need only consult what modern Travellers have written, of the Ruins that are still remaining in that Country; which not only come up to, but even very far exceed, all the Accounts we have in Books; So that the Wealth and Splendor of this Country must have been very astonishing, in its flourishing Condition, since the very Remains of *Roman* Magnificence in *Egypt*, are capable of surprising such as behold them; and are observ'd to strike those most, who are best acquainted with the Nature and Value of such Things.

These are all certain and indubitable Signs of immense Riches: And tho' these might fall into the Hands of particular Persons, even in Countries that were not, generally speaking, more opulent than their Neighbours; yet we are sure this could not be the Case in *Egypt*, since it was not *Alexandria* alone, but all the Cities of the Province that were enrich'd with such Ornaments: So that their Wealth seems to have been very equally spread; or rather, there was such an Abundance of it, that not a Corner of the Kingdom remained unimprov'd. The City of *Sisene*, the Ruins of which are yet to be seen, as it stood near the *Arabian* Gulph, and at the Mouth of the Canal that had been cut from the Nile to the Sea, was crowded with fine Works, costly Obelisks, and Pillars of incredible Size; which must have been brought thither with inexpressible Difficulty: And yet to invent were the *Romans*, in what ever might contribute to the Improvement of their Trade to the East, that, finding an Obelisk of exquisite Beauty, that had been set up by *Ptolemy Philadelphus*, in Memory of his Wife and Sister, whose Name the City bore, and which was 120 Feet high, incommoded the Dock, because they were then wont to build larger Ships than were us'd in *Ptolemy's* Reign, *Maximus*, who was then Governor of the Province, caus'd it to be taken down, and remov'd to *Alexandria*.

But if it should be objected, that there is no reasoning, with any Certainty, about things of this Nature, if the Expence, at the Time they were made, cannot be known, it is a very easy Matter to answer this, since, at the Time Time that this Obelisk was hewn out of the Quarries in the *Higher Egypt*, there were six more cut, of the same Size, for which the Workmen received fifty *Egyptian* Talents, which amounts to upwards of thirteen thousand Pounds of our Money; and the Expence of carrying them must have been far larger.

But to sum up all in a Word: Even at the Close of this Period, I mean, when the Emperor *Diocletian* was in *Egypt*, he thought it necessary to burn all the Books of Chymistry that could be collect'd, from a Notion, that it was by this Art the *Egyptians* became possess'd of such prodigious Sums of Gold and Silver, as made them mutinous and ungovernable; which is a clear and certain Sign, that the *Romans* themselves had not a full Notion of the mighty Profits that accrue'd from the Commerce that the *Egyptians* carry'd on.

But it is now high Time to inquire into the Discoveries that were made, in consequence of this Trade, and the Accounts that were from time to time transmitted, of the State and Condition of the Countries, which their Merchants, and other Travellers, visit'd; a Thing extremely requisite, even for the understanding of modern Voyages and Travels, where we often meet with Passages, that either tend to explain the Accounts given by the Antients, or to refute them; the Worth of which we cannot comprehend, unless we are acquainted with the Accounts themselves: And, indeed, in laying these together, consists the

* *Plin. Nat. Hist. lib. 1. cap. 10.*

* *Justinus* tells us, that, in the Reign of *Tiberius*, there was a Law made, that no Man should be allow'd to sell by way of Silk Commodity. But, in order to understand the true Sense of that Law, it is to be observ'd, that the *Romans* had two Sorts of Manufacture: the one, in which the Warp was Silk, and the Woof Thread, which was call'd *Sabotum*, and this was the Cloathing which the Law of *Tiberius* forbid Men to wear: The other Manufacture, which was all Silk, call'd *Holotum*, and was worn only by Women, till the Emperor *Diocletian*, in the Life of *Hologabalus*, that effeminate Emperor wore his Imperial Robe made of purple Silk.

Religion, than as it consisted in the Worship of a Multi-
tude of Divinities; and therefore, in their Reports of the
Indians, they attributed the Ceremonies they saw practised
to Principles like their own. But it is very plain, even
from the Writings of their best Authors, that at the time
Alexander the Great invaded this Country, the *Indians* had
not the Use of Images; and even *Apollonius* confesses,
that the Representation of the Sun was the only one he
saw. It is likewise very certain, that these People made a
great Secret of their religious Opinions; which was another
Cause why the *Greeks* had recourse to their own Inventions,
which were very fertile; and, by this means, represented
the Sentiments of the *Indians* as conformable to their
own. The *Brachmans*, however, who were, for the most
part, their Priests, and, as we shall see hereafter, were
in that respect, in some sort, superior to their Kings, dis-
claimed these superstitious Notions, and either worshipped
in the open Air, turning their Faces to the East, with-
out any regard to the Sun or other heavenly Bodies, or in
Temples that had neither Images nor Ornaments of any
kind. They likewise professed their Belief in One God,
the Author of all Things, the Creator and Sovereign of
the Universe, and the Father of Spirits; conformable to
which, when *Onofritus*, in the Name of *Alexander the Great*,
threatened *Dindamis* with Death if he did not imme-
diately rise, and go and wait upon that Prince, he told
him, smiling, that the King's putting him to Death would
do him no hurt at all: For, said he, when this Head is
divided from this Body, they will return to the Earth from
whence they came; and the Spirit, now included in them,
to Him, by whose Power it was included; for the Body,
said he, is the Clothing of the Soul, and has no more to
do with the Man than his Garments¹.

It is true, that, since these early Times, the *Indians* have
deviated much into Idolatry; but it is no less true, that
the *Brachman*, who are the wiser and better Sort, have al-
ways possessed a different Opinion; and, upon certain Oc-
casions, have ventured to declare, in Confidence, that they
did not believe in Idols; but that they considered them as
fanciful Representations, which were necessary to fix
the Attention, and to exercise the Piety, of the common
People, who were not able to comprehend, or were not
fit to be trusted with, the Secrets of their Religion. This
I will know, and indeed all that can be known, of the
Religion of the ancient *Indians*, except that the very
Barang of themselves proceeded from a Principle of Reli-
gion, and from the Hopes of avoiding, by that kind of
Devotion, the being transfused into any Animal; upon
which Principle, Women, to this Day, burn themselves
with their Husbands Bodies, in hopes that their Souls
shall again enter the World with those of their Husbands
in a happy Condition, and in an human State, that is,
without passing through Plants or Beasts².

As to the Government of the Country, it was, ge-
nerally speaking, monarchical, though there were some Re-
publics amongst them: But the *Cutbeans* had a very singu-
lar Custom; for, amongst them, their Kings were chosen
only on the Score of Beauty; and, therefore, when
their Children were but two Months old, they were examined
by proper Judges, who, if they found them perfect in all
their Limbs, well made, and likely to prove handsome,
considered them to live, otherwise they put them to Death;
and, in virtue of this Precaution, that they were con-
sidered as the handsomest People in the World. It is
worthy of Observation, that the Custom of Women burn-
ing themselves with their Husbands was first introduced
here, which was occasioned by their frequently detesting
the weak sake of younger Men; and, where this could
possibly be done, removing them out of their Way by
Poison. In all the other Countries of the *Indies* the Crown
was hereditary, and the eldest Son constantly succeeded his
Father without any Difficulty or Dispute: But, as to the
several History of these Principalities, there are none that
have been preserved, if we except that of the *Indian*
Emperors, concerning which *Megasthenes* received in the

Indies the following Information: *Bacchus*, when he had
settled a Principality in the Neighbourhood of *Nysa*, de-
volved the Government upon *Spartibebras*, his Friend,
who reigned fifty-two Years, and left the Crown to his
Son *Budyas*, who ruled twenty Years, and was succeeded
by *Crudevas*, his Son; and so, in a continued Descent
from Father to Son, except where a King died without
Issue, and, in that Case, a new Prince was elected; the
Succession in this Order came to the famous *Saudracitus*,
who was the hundred and fifty-third Successor of *Bacchus*³.

But besides this great Monarch, who had a considerable
Territory, and Abundance of tributary Princes, every
Tribe of *Indians* had its particular Prince, who was at
once King and Priest within his own Dominions, according
to the ancient Custom of most Countries; from whence it
came, that the *Hebreus* used the same Word to signify
both Prince and Priest. The *Indian* Monarchs were far
from having absolute Power, or from living in a State of
Luxury and Ease: On the contrary, they were obliged to
hear every Day the Causes that were brought before them,
and to give Audience to such of their Subjects as had any
thing to say to them: Nor were they allowed, by their
Laws, to go into the Bath, or even to dine, before all these
Suits were answered. In Matters of great Consequence,
they could not act without the Advice of their Council;
and, in Points of Religion, they received the Instructions
of the *Brachmans* with implicit Obedience; so that, in
all respects, they were circumscribed, and had it not in
their Power to violate the Constitution⁴. This was very
probably the Reason, that these small Principalities, which
had neither great Power, nor much Wealth, to support
them, subsisted for so many Ages. It is, however, to be
observed, that to prevent the People from being over-
born by the Torrent of a sudden Invasion, there was al-
ways a supreme Monarch over a certain Country, who
could draw together the Forces of all these subordinate
Chiefs on any public Occasion that required it: And thus
it was that the numerous Armies were raised, which in the
foregoing History have been mentioned; and, in this
respect, the ancient Constitution of *India*, was very like the
Gothic Form of Government, and came very near the
Constitution in this Island, before it was invaded by the
Romans.

The Reception which *Apollonius* met with from the
King of *Taxis*, affords us a very agreeable Picture of
the Court of an *Indian* Monarch. When the Philosopher
arrived there, he found the Palace a large and convenient
Structure, but, in every respect, perfectly plain; so that,
if he had not been informed, that it was the Royal Dwel-
ling, he would have taken it for the House of some con-
siderable Citizen. He found there neither Guards nor At-
endants: There were only a few Slaves at the Gate,
and three or four Persons of an ordinary Rank, who de-
sired to speak with the King. *Apollonius* entered with
them into the Royal Apartments, where he found every
Thing plain and neat, disposed, however, in to excellent
an Order, that they struck him with much greater Awe
and Reverence, than the lofty and sumptuous Palace of the
King of *Babylon*, which he had visited before. The Ap-
pearance of the Monarch, whose Name was *Phraortes*, or
Phraotes, was in every respect suitable to the Modesty of
his Palace; a noble and majestic Presence was the sole
Mark of Dignity he bore, and he was attended by a very
slender Retinue; so that *Apollonius*, recollecting what he
had heard of the *Brachmans*, and of their Disciples, con-
cluded that the Princes of *India* were, also, a kind of
Sages; and, therefore, he addressed him by his Interpreter
in these Words: It appears to me, Sir, that Philoso-
phy is your supreme Delight, and the Rule of your Ac-
tions: Permit me, therefore, to have the Honour of
congratulating you thereupon. What you say is true, re-
plied the King; and I am extremely glad, that your Sen-
timents agree with mine. Is it the Laws of our Country,
continued *Apollonius*, or is it your Majesty's particular
Taste, that removes from your Court all that Magnificence
and Pomp, that are usually found in the Dwellings of
Princes? It is both the Law, replied the Prince, and my

⁷ *Pliny*, lib. vii. c. 10.

own private Judgment, that have banished that outside Shew, which is certainly no more than a false Glory, and has no sort of Correspondence with true Merit. I use, with Moderation, the little Splendor that our Laws permit; and, though I may truly say, that there are few Monarchs more powerful than myself, yet, with like Veracity, I can affirm, that I can be content with a little, and leave the rest to my Friends. Happy Economy, cried out *Apollonius*, which teaches you, by despising Wealth, to purchase a Treasure of Superior Nature! But, replied the King, it is not only to my Friends that I part with my Riches; I even bestow some upon my Enemies, that my Subjects may enjoy Rest and Tranquillity. It is in that, and that alone, that I place all my Glory*.

Apollonius, afterwards, inquired into the King's manner of living; to which that Monarch answered very graciously, I never drink Wine, but when I sacrifice to the Sun: What I take in hunting I distribute among my Friends, contenting myself with the Benefit I receive from the Exercise. As for my Food, it consists of Herbs, the Fruit of the Palm-tree, and other Vegetables, which I cultivate with my own Hands. After this he bathed with the King, and was entertained at a sumptuous Dinner, at which no more than five Persons were present; at which were served Fish, Fowl, whole Lions, Kids, the Paws of Tygers, Roots, Fruits, and Bread. Every one rose from his Place, and took at the Table what he thought fit, returning to his Place, and eat it there at his Leisure. Branches of Laurel, Myrtle, and other odoriferous Trees, were scattered in the Room, yielding an agreeable, but not an overcoming Scent. All Dinner-time the Table was surrounded by thirty Musicians; and, at the same time, several young *Indians* diverted the King with Feats of Activity. When every body had done eating, several Cups were brought of a very large Size, out of which every Man drank what he thought fit; his Head, according to the Custom of the Country, being entirely covered by the Cup†.

It is not to be supposed, that in a Country of so large Extent as the *Indies*, all the Princes should pursue the same regular Plan, or preserve a like Severity of Morals: And, indeed, the contrary of this is evident from what History informs us, with respect to the Kingdom of *Musican*, which lay towards the Mouth of the River *Indus*, in that Part of the Country, which, from its Lakens to the *Delta* of *Egypt*, bore the same Name; the Princes of which lived in all the Splendor, and in all the Luxury, of the *Persians*, or rather exceeded them in both. A Multitude of Women were perpetually about the King's Person; to that he was, by their Actions, their Songs, and their Discourse perpetually excited to lascivious Pleasures. Whenever this Monarch appeared in public, his Officers carried silver Incense-Pots before him, to perfume the Air. He lay at full Length in a Litter of Cloth of Gold, garnished with Pearls, long Strings of which hung down on every Side. His Habit was a long Robe of Linen, embroidered with Gold and Purple. His Concubines accompanied him with a Pomp equal to his own; and his Guards carried Branches of sweet-smelling Wood, filled with Birds of every Kind, the wild Notes of which were esteemed by the *Indians* beyond any kind of Music. After his Train followed the Queen, with a Magnificence equal, in all respects, to that of her Consort.

The only Kind of Exercise used by this King, was Hunting: And when he took this Diversion in a Park, he was always in his Chariot, surrounded by his Concubines, who shot at the wild Beasts, as well as he; but if he pursued his Sport in the open Field, he went alone, mounted upon his Elephant. The Entry of his Palace was adorned with a stately Portico, composed of many Pillars richly gilt, on each of which a Vine of Gold twisted itself to the very Top, adorned with the Figures of several kind of Birds, painted of different Colours. This State-Room was open to all the World, at the Hours of Audience especially; but at these Seasons, while the King gave Audience to Embassadors, heard Causes, or did any other kind of Business, he had

several Women about him; some of whom combed his Hair, some perfumed his Hands, and others his Feet: His Face was very closely shaved, except the very Point of the Chin, from whence there hung a long Beard. At Table, and on all other Occasions, he was served by three Ladies; and was so jealous of sinister Designs against his Person, that if any looked upon him too steadily, or came nearer than he thought convenient, he ordered them to be put to Death. So passionately fond this Monarch was of Horrifics, that he commanded Holidays on their Account, as if they had been really Part of the Royal Family. It may not, however, be amiss to caution the Reader as to both these Accounts, which, it must be confessed, are liable to some Objections: And, in my Opinion, an Author has no more a Right to produce a suspicious Witness, and avail himself of his Testimony, than he would have to deceive, in the same manner, a Court of Justice. In both Cases, there is an Injury done to Truth; and tho' it be true, that the latter may have more fatal Consequences than the former, yet the Falsifier of Truth does his utmost, in one Case as well as the other: And so far the Crime is alike in both. The Author of the latter Account is *Orontius*, who was Captain of *Alexander's* Ship, and had, doubtless, Opportunities of knowing the Truth of the Fact, if he could have had Candour enough to have related it; but he had naturally such a Love for the Marvellous, that he could not help exaggerating whatever he reported, as *Strabo*, and other Writers, agree, and as the Facts themselves plainly declare. *Quintus Curtius*, an elegant Writer, but one who was likewise fond of Wonders, copied this Story where-ever he found it; which may, possibly, be true, but has an Air of Improbability, at least.

As to the former, *Apollonius Tyanicus*, I ought to have given the Reader a complete Section of his Travels, if it had not been for the former Objection; which, I must confess, weighed with me so far as to engage me to lay aside that Design. He was a very famous Philosopher of the *Pythagorean* Sect, born about the time of the Commencement of the Christian *Æra*, and who lived to the Age of ninety-six, or thereabouts. He was a Man of very singular Character; for he affected great Purity of Manners, and, at the same time, aimed at two Things, which seem incompatible therewith: The first of these was Magic; in which he pretended to have extraordinary Skill, and took a great deal of Pains to persuade the World, that he had a great Familiarity with the Demons, and was able, by their Helps, to perform mighty Feats. The other great Aim of his Life, was the reasoning and supporting *Polylem*, or Idolatry, which was then very much on the Decline.

To accomplish these Views, he travelled more than any Man of his Time. His principal Disciple was one *Damis*, who followed him in most of his Peregrinations, and particularly into the *Indies*: And this Man it was, that left behind him Memoirs of his Master's Life, which were drawn up in a very confused Way, and in a Style that was very uncouth. *Philostratus* undertook to polish these, and to put them into proper Order; and this Work of his is that which I cite. But whether it be thro' his Fault, or from the Defect of the original Memoirs of *Damis*, it so falls out, that there many Things very punctually related in the Story of his Travels, which, even at this Distance of Time, we know could not be true. One Instance of this may suffice, for the Reader's Satisfaction, which I shall bring within as short a Compass as possible.

In his Way to *India* *Apollonius* passed thro' *Babylon*, which in his Life, is described as a City of twenty-four Leagues in Circuit; and, in short, appears, in every respect, as it stood in the Days of *Nebuchadnezzar*†, tho' it is certain that his City was long before destroyed; and *Pliny*, who was his Contemporary, assures us, and that very truly, that nothing but the Temple of *Belus* remained entire, all the rest being become a perfect Desert. He likewise represents it as the Seat of the *Parthian* Kings, which it never was; for those Princes spent the Winter at *Cisophon*, near *Selucia*, and the Summer at *Ecbatana*. There are many other Slips of the same Kind; by whose Negligence committed, it is not

easy to say; but it abounds with such insert the Travels of to quote him as to des, without giving matter, that so it may dit due to the Mat

It is likewise nothing he proposed U better informed by Practice of Magic; perfectly well: An Cloud of Witnesses the World, the last the Ends at which in point of Opinion without doubt, Ma sisting in nothing Trucks, to amuse a Whole, therefore, I we believe, that it Splendor than he r an ancient Author dent of *Porus* was the *Parthian* Kings be without any Di the Possession of sitates Luxury an Character he has g or improbable, bec the Principles ascrib done no more the smooth Words and the Great, and not iminions, by the W

easy to say; but inasmuch as the Work of *Philestratus* abounds with such Mistakes, it was neither fit for me to insert the Travels of *Apollonius* in this Collection, nor even to quote him as to any particular Facts relating to the *Indies*, without giving the Reader a fair Account of his Character, that so it may be in his Power to judge of the Credit due to the Matter which he relates.

It is likewise necessary to observe, that the principal thing he proposed by this Journey to the *Indies*, was to be better inform'd by the *Brachmans*, as to the Theory and Practice of Magic; in which, it is pretended, he succeeded perfectly well: And yet, as we shall see hereafter, from a Cloud of Witnesses, the *Brachmans* were, of all People in the World, the last that ought to have been applied to for the Ends at which he aimed, since they were strict Deists in point of Opinion, and heartily abhorred Fraud, in which, without doubt, Magic is, and ever was founded, as consisting in nothing more than the Invention of cunning Tricks, to amuse and impose upon the Ignorant. On the Whole, therefore, we may, perhaps, come near the Truth, if we believe, that the *Indian* Princes lived in much greater Splendor than he relates, since we have the Authority of an ancient Author to prove, that the Palace of a Defendant of *Perus* was much more magnificent than those of the *Parthian* Kings at *Susa* and *Ecbatana*; yet this might be without any Diminution of their Virtue; for it is not the Possession of Wealth, but the ill Use of it, that constitutes Luxury and Effeminacy. In other respects, the Character he has given *Piraxotes*, has nothing in it absurd or improbable, because, supposing him to have acted on the Principles ascribed to him by *Apollonius*, he would have done no more than his successor *Taxies* did, who, by smooth Words and rich Gifts, got the better of *Alexander* the Great, and not only preserved, but enlarged his Dominions, by the Wisdom of his Behaviour.

3. The Virtues of Kings are not to be depended upon for the Preservation of States; which is a Maxim taught by the Light of Reason, as well as supported by that of Experience: But perhaps no History furnishes us with any Instance of a Nation, that took such early and effectual Care to secure themselves from the bad Effects of arbitrary Power, as the *Indians*. In every Principality there was a Senate, without whose Advice the King could do nothing of Importance; and in case any Man thought himself injured by the joint Power of the King and Senate, he was not without Remedy, but might, if he pleased, appeal to the People. It was for this Reason, and to facilitate the Preservation of their respective Privileges, that in every *Indian* State the People were divided into seven Classes, Tribes, or whatever else you will please to call them, each of which had a sufficient Number of Heads, vested with a competent Degree of Power, for the Preservation and Protection of their Brethren: And it was the capital Maxim in their Laws, that every Man belonged to some Class or other; so that all were alike free; and there was no such thing as Servitude known amongst them.

The first of these were the *Brachmans*, or Philosophers; of whom we shall speak particularly in the next Section, and shall, therefore, content ourselves with only naming them here, in their Order. The second were the Husbandmen and Farmers, who composed the Body of the State; and the signal Service they rendered to the Public, by cultivating the Land, and securing Plenty, joined to their exemplary Probity, obtained them the highest Respect. It was for this Reason, that in all Wars, whether civil or foreign, they were exempted from taking up Arms: Neither could they be injured or disturbed in their Labours, without a Breach of the Law of Nations; a Crime no *Indian* Prince was ever hardy enough to commit. It was, therefore, no uncommon Sight, to behold a bloody Battle on one Side of a Plain, and on the other, Men sowing or reaping, without the least Apprehension, either from the Fury of the Victor, or the Despair of the Vanquished. They were, likewise, exempted from all publick Offices: For it was held, that their very Profession was a publick Office, since it contributed to the Good of all, by main-

taining a constant and uninterrupted Plenty. The King, however, was acknowledged the sole Proprietor of all the Lands in his Dominions, from which he received a certain Tribute; and besides that, a fourth Part of the net Produce; out of which Revenue, all the Expences of the State were defrayed.

The third Class was composed of *Graffiers*, *Shepherds*, and *Huntmen*: These had the Care of their Herds and Flocks, and had the sole Privilege of breeding, buying, and selling Horses: And as the Country was much infested by *Lions*, *Tygers*, *Elephants*, *Birds of Prey*, and other pernicious Animals, the *Huntsmen* were not only regarded as a Race of People very useful to the State, and allowed to possess, in full Property, the Fruits of their Labour; but received also an annual Proportion of Corn, as an Acknowledgment for their preserving the rest, which could not have been either sown or reaped in Safety, but under their Protection. As these People led a wandering kind of Life, they had no Villages or Settlements; but pitched their Tents, led their Cattle, and pursued their Hunting in the Woods or Mountains: So that they did no Prejudice to any Part of the arable Ground.

Under the fourth Class were comprehended *Artificers* and *Merchants*. They paid the King a certain Tribute, except such as were employed in making Arms, or in the Construction or Service of the Fleet, who were paid for their Labour by the Public.

The fifth Class was composed of *Officers* and *Soldiers*, or, to use a modern Phrase, the fifth Class was the *Militia*. They had no other Business to mind, than the Preservation and Protection of the State, and were obliged to take Arms whenever the King thought fit, for the publick Service. They were lodged and maintained at the King's Expence, who provided for their Families when they were absent in War. At that time, the whole Society contributed to the Support of what was intended for the common Good; some furnished Elephants, some Horses; one Province Forage and Provision, and another Arms. The *Megallians*, who were a People inhabiting on the other Side the *Hyphasis*, supported constantly five hundred Elephants, and a considerable Body of Troops besides. The *Chrysians*, the *Avangians*, and the *Parangians*, who were all Subjects of the same Prince, kept constantly on Foot for his Service, an Army of thirty thousand Men, eight hundred Horses, and three hundred Elephants. The Soldiers, after their Return from the War, were kept constantly to martial Exercises, and a very strict Discipline, tho' at the Close of the Campaign, they delivered up the Arms and the Horses, which were furnished them at the publick Expence.

The sixth Class was composed of the *Inspectors*, who had the Care of examining and looking into the Affairs of Town and Country, and were intrusted with the Superintendance of Arts and Commerce, each Man in his particular District; and these People made from time to time, exact Reports to the Prince, if the Government they lived under was Monarchical, or, if a Republic, to the chief Magistrates, of the Condition that all things were in, within the Limits of their respective Jurisdiction. And if we can give Credit to what the *Historians* report, we must allow the *Indians* to have been the wisest and happiest of Nations, since they positively assert, that before they were conquered by, or intermixed with *Foreigners*, there never was an Instance of an *Inspector's* neglecting or betraying his Trust, to the Prejudice of the Crown, or to the Oppression of the Subject. It is requisite to add, that the Women were under the Care of female *Inspectors*, who had a Power of correcting all Excesses in Dress, in the Luxury of the Table, and Digressions from the strict Rules of Morality.

This Country was subject to Inundations, like that of *Egypt*, and perhaps to those that were more considerable; for the Snow melting on the Hills of *Paropamisus*, *Caucasus*, *Imaus*, and the *Emodian* Mountains, together with the prodigious Quantity of Rain that falls in their Winter-months, of *April*, *May*, and *June*, floods the Country to

^a *Strabo de Asiat. lib. xii. c. 18.*

^e *Diocr. Scul. lib. iii.*

such a degree, that when the Waters are sunk, it is simply impossible, that any Boundaries, Land-marks, or other Signs of Property, should be discerned. To prevent any Disputes that this might occasion, there were, in every District, a certain Number of Inspectors, who were Men of such Skill and Dexterity, that by retracing every Man's Limits, they prevented any Disputes. The same Persons had likewise the Care of the public Reservoirs of Water, and of the Sluices: So that, by their Diligence, the Country never suffered in the driest Summer. Another Branch of their Charge was, to look into the Conduct of the Graiers and Huntmen, such as wrought in the Woods, and in the Mines. They were also Surveyors of the Highways; and in that Quality they appointed Guides, who at every ten Stadia informed the Traveller which Way the Road lay, where he might have Lodging, and how far it was to the next Stage.

The Inspectors that resided in Towns, were divided into six Classes: Of these, some looked into the Management of Tradesmen and Artificers; others had the Care of the Inns, where they examined such Strangers as arrived, in relation to their Business in the Country, and gave Directions, that they should not stay above three Days in one Town. They likewise prevented Strangers, as far as they were able, from committing any thing contrary to good Manners; visited them, if they were sick; examined them as to the Nature of their Distemper, that they might be sure it was not contagious; Took care that they wanted for nothing; and, in case of their Deaths, that their Effects were disposed of pursuant to their Wills. Others kept a Register of Births and Burials, and set down very exactly the Time, the Place, and other Circumstances: These likewise looked into Weights and Measures, and saw that they were agreeable to the Standard: They also prevented the same Man from dealing in different Goods, saw that Manufactures were properly finished, and set their Seal, to prevent Disputes; inquired into Workmen's Wages, and caused them to be regularly paid: They received likewise the King's Revenues, which consisted in Duties on Goods sold, and not on the Stock in Trade; but if any Man was convicted of selling, without bringing it to Account, he suffered Death.

The military Inspectors had many things committed to their Care: As, for Instance, they were charged to keep a certain Number of Boats in constant Readiness, for the Passage of Rivers, and for transporting Forage and Provisions by Water; as also a certain Number of Cattle for Carriages, and for removing Baggage. The Magazines were likewise under their Care; and it was their Duty to look to the Arms that were laid up in them, that they might be constantly in good Order, and fit for Service. Some of them had the Charge of the Elephants, others of the War-chariots, and others again inspected the Conduct of the Soldiers in their Quarters.

It is not a little surprising, that such as composed the Council of the Prince, were thrown into the seventh and last Class: Yet these were nearest the Throne, and had the largest Share both in the Pains and in the Honours of Government. All Affairs relating to the Public were submitted to the Deliberation of the Senate; and their Authority was, in some respects, superior to that of the Crown: For they had the sole Power of Life and Death in their Hands, and possessed all the Dignities of the State. These Senators seemed the more honourable, from the Continuance of their Offices in their Families, from Time immemorial; for by the fundamental Laws of their Constitution, it was forbidden for any Man to pass out of one Class into another, even by Marriage. A Farmer could not become an Artificer, or an Artificer a Merchant or Soldier: By which prudent Provision, all kinds of Professions rose to the highest Perfection, the Lights of the Father being communicated to the Son, and to downwards, every Calling being, in this respect, as it were, one Family. We might very reasonably suspect the Truth of all this, tho' confirmed to us by the concurrent Testimony of ancient Historians, if this Division of the *Indians*

did not subsist even to our Times: For these Clauses are precisely the several *Indian* Casts, of which modern Travellers speak at this Day; so that, as to the Form of the ancient *Indian* Government, it is a Fact out of all Dispute: And one may safely affirm, that there scarce ever existed a better Constitution.

4. The *Indian Bacchus*, whoever he was, has the Honour of being the Author of this wise and wonderful System of Government, which was every where established in the *Indies*, at the time of *Alexander's* Expedition, when the Subjects of every little Principality, the Inhabitants of every free City, lived exactly in the manner as we have described; and were, in all respects, the most civilized, and the best regulated People in the World. All the Writers of those Times, and even such as are the least given to Fables, represent the *Indians* as a very robust People, and of extraordinary Stature; some of them seven Foot high, particularly King *Porus*, who was vanquished by *Alexander*. The Inhabitants of the lower Provinces, lying on the Banks of the River *Indus*, were of as dark Complexions as the *Ethiopsians*: And the only Difference between them was, that the *Indians* had long black Hair, whereas the Hair of the *Ethiopsians* was short and curled. It was a Custom among the *Indians*, to wear long Beards, which they dyed of several Colours; some white, some red, some green, and some of a purple Colour.

Their Habits also differed very much: Some of them wore the Skins of Lions and Tygers; others covered themselves with a single Piece of Cloth, which reached from their Heads to their Knees. As for the Soldiers, their Diets consisted in a Turbant, and a light Coat: All their Cloaths were commonly white, and were made either of Worsted or Cotton; for tho' many Authors speak of the latter, as if they were Linen-Garments; yet it is certain, that Flax is not of the Growth of the *Indies*. The only Show they made of their Riches, was by wearing a sort of Ivory-Pendants in their Ears, now and then a purple Robe, white or striped Shoes, and Umbrellas of several Colours, which the Heat of their Climate rendered necessary, as well as agreeable.

But the *Macedonians*, and other *Greeks*, who were the Remains of *Alexander's* Army, introduced amongst them, by degrees, the Luxury which they had themselves learnt from the *Persians*; and tho' the *Indians* soon shook off their Yoke, yet they found it impossible to quit the Customs these Strangers had brought amongst them: And from this Time it was, that these People began to wear Cloth of Gold and Silver, to embroider with Pearls, and other Stones of Price; and to endeavour to display, to the utmost, the Riches with which their Country furnished them. It is from this Account of the Matter, that we are enabled to judge of the Truth, or, at least, of the Probability, of what Authors report concerning this Nation: for as on the one hand it is certain, that they were a plain, open, and generous People, who despised Pomp and Show, before they were corrupted by Strangers, so it is no less certain, that after they became acquainted with the *Greeks*, and with the *Persians*, by their means, the Courts of our Princes, at least, received considerable Alterations; and they began to affect Pomp and Splendour to almost as high a degree as any of their Neighbours, which was the more easy for them to do, since they were possessed of much greater Riches; and saw too, that this Display of their Wealth had a great Effect upon Strangers, and procured an unusual degree of Reverence and Complaisance: For it is with Nations as with private Families, the only Way to avoid all Customs, is to remain unacquainted with them.

5. It does by no means appear, that, upon their going into this Change in their Habits and Cloaths, they lost all in their Morals; but, on the contrary, maintained the high Reputation they had acquired for their Ready Virtue, and strict Honour, for several Ages. Their Heralds wore a Gold Anchor, embroidered on their Coats, to signify that, in their Alliances, they were unalterable; and that a Treaty concluded with them, held them as fast as an Anchor; a Character they justly deserved. They admired

the Courage, but did not less Justice, taking care constantly to accompany their Sermons to the point, though they were for the *Brachmen's* fabulous Tale, the their own, which

But what a great Regard for the Virtue of which, Spectors were appointed, and Actions, of which, cluding with his either of Partiality, and were declared were very few in number, it was in consequence of any Monuments supposed that this Fame more effectually

They had, naturally, exceedingly attentive to it. They cut Part of their Police have often obtained Ages, any Correction be true, that they visited their Subjects of these Nations of *Indians*, who took Frame of their highest Orders of distinction of their in any respect, to Censure of their nite Consequence the State.

It was in virtue of every one of us to travel so much other manner than for instance, the Elephants, such a lowed four Horses travelled on Came enter on Horses of

the Courage, but more the Clemency of Alexander; and did no less Justice to the Bravery of their own Prince Porus, taking care that the Statue of the one should be constantly accompanied by that of the other. Their Brachmans were continually inculcating Principles of Virtue in their Sermons to the People, which Sermons are still continued, though the Subjects of them were much changed: For the Brachmans, finding their People began to relish the fabulous Theology of the Greeks, invented one of their own, which is now the current Religion of the Indies.

But what must appear an incontestable Proof of their great Regard for Virtue, is, the Law they established, by Virtue of which, when any eminent Person died, Inspectors were appointed to examine strictly into his Life and Actions, of which they composed a Memoir, concluding with his Character; in which, if they were guilty either of Partiality or Prejudice, they lost their Offices, and were declared infamous to all Posterity; but there were very few Instances of their incurring this Punishment. It was in consequence of this Law, that they never erected any Monuments to the Memory of the Dead; for they supposed that this Memorial of their Virtues secured their Fame more effectually.

They had, naturally, a great Love for Order, and were exceedingly attentive to whatever might promote, or preserve it. They could not be said to have borrowed any Part of their Policy from foreign Nations, because, as we have often observed, they had not, for a long Series of Ages, any Correspondence with Strangers: And though it be true, that the Egyptians, Spartans, and Romans, divided their Subjects into Tribes, yet it is certain, that none of these Nations carried this Regulation near so far as the Indians, who took in all sorts of People; so that, by the Frame of their Constitution, the lowest, as well as the highest Orders of Men, were under the immediate Inspection of their Government; and could not be wanting, in any respect, to their Duty, without falling under the Censure of their Superiors; which was a thing of infinite Consequence to the Well-being and Tranquillity of the State.

It was in virtue of this Regulation, that the Government was perfectly acquainted with the Rank and Fortune of every one of its Subjects; so that none were permitted to travel so much as from one Town to another, in any other manner than was suitable to their Characters. Thus, for instance, their Princes and great Lords rode upon Elephants; such as were next to them in Rank were allowed four Horses in their Retinue; the next in Degree travelled on Camels; the ordinary sort of People rode either on Horses or on Asses.

It is easy to conceive, that by adhering strictly to these Rules, Pride and Ambition were hardly known, or, at least, could not gain much Ground amongst them. If at any time, in spite of all the Care that could be taken, Disputes arose about Place or Precedency, they were terminated in a public Audience before the King and Senate. There, also, all Controversies relating to Property were heard and decided almost as soon as they rose; and it was, by this means, that all the Mischiefs arising from Law suits were prevented, and the Peace and Quiet of the Nation effectually preserved.

Their Monarchs, in regard to the Love of Peace, set their Subjects a constant and persuasive Example: For though they had all of them great Armies, and those perfectly well disciplined and provided, perpetually on Foot, yet they very rarely brought them into the Field; though it appears from the Example of Porus, and from the Resistance that Alexander met with from the free Cities of India, they were capable of making a great Figure, as a warlike People, if they had affected it: And this appeared still more clearly from the Conduct of the famous Sandracottus and his Successors, who were content to purchase Peace, though at the Head of Armies, capable of acquiring and maintaining Conquests.

6. In a Country so happily situated as theirs, and which has been, in all Ages, renowned for its Abundance, they might certainly have lived with as much Delicacy as their Neighbours the Persians, who, from the most hardy and frugal, became the most luxurious and profuse People in the East. But, amongst the Indians, the Love of Temperance, insinuated into them as a Principle of Religion by the Brachmans, prevented any Excess of this kind, and restrained them to a very moderate Use of that Plenty which they possessed.

They had not, properly speaking, any Wine of their own Growth; and the Liquor so called by ancient Writers, was drawn either from Rice, or from the Cocoa tree: But, as both Sorts of Liquor were very apt to intoxicate, they were very seldom used but in Sacrifices, public Feasts, and in very small Quantities at the Tables of their Kings. If at any time a Prince so far forgot his Dignity and Character, as to filler himself to be over taken with Liquor, their Laws allowed any Woman who was about him, to put him to Death while he was drunk; and his Successor was obliged to espouse this Woman, and make her the Partner of his Throne. The common Drink of the Indians, in general, was Milk and Water.

As for their Food, the System of the Metempsychosis, which prevailed generally throughout the Indies, kept their Tables within due Bounds, allowing nothing more for their Supply than Corn, Roots, Fruit and Milk-meats; yet some kind of Animal Food they had, such as Tygers, and other wild Beasts; and Fish too; but they were very plainly dressed, without any Sauces, or other Allurements to the Taste, that they might not be tempted to eat more than was necessary for the Support of Nature, and, thereby, render themselves liable to Diseases. As they lived sparingly, they slept not much at their Ease, having nothing but a Mat, or the Skin of a Beast, between them and the Ground. Their Houses were low, composed, for the most part, either of thin Planks, or of Reeds, small, with little Furniture, and no Ornaments at all, unless we should account for such their Roofs being made of Tortoise-shells. Thus, in all respects, they were perfectly uniform, and led their Lives in the quiet Possession of what their Labour and Industry procured; content with what they possessed, and willing rather to part with somewhat of their own, to secure that Peace, which they held their great Blessing, than desirous of employing Force to enrich themselves at others Expence. It was, indeed, the great Felicity of these People, that they acted in every respect upon Principle; and were so addicted, from their Intancy, to a regular Life, and an equal Contempt of Danger and of Pleasure, that they were not liable to the common Failings of Men, but were capable of resisting Temptations, and of despising Threats.

7. If we had no other Proofs of the constant Courage, and magnanimous Spirit of the Indians, we might be convinced of it from that Readiness with which almost every Rank of People not only met, but, if Occasion required it, hastened Death; and, if we may be allowed the Expression, went out to receive him. It was not the Brachmans only, who, from the Maxims of Philosophy, were able to steel themselves against the common Weakness of human Nature; but even Women, who, by Constitution and Education, were in the Indies, as well as every where else, naturally of a more timid Disposition than the Men. The Accounts we have of this differ something from one another; but, by a little Attention, they may be easily reconciled. It was certainly in the Beginning a voluntary Act, arising from an extravagant Affection, which induced them to quit that Life which appeared to them more hateful and terrible, than Death itself: But, afterwards, there were some Reasons which made it requisite to encourage this Practice by Laws; yet still the Spirit and Courage of the Women, who thus devoted themselves to Death, rather than survive their Husbands, deserved Admiration. Strabo. ¹⁴ Philostrat. ¹⁵ In some Copies, when some attribute this to the Laws, and others to the Will of the Women themselves, they may be proved to agree, by shewing that the Law made this honourable, and, in some measure, requisite; and yet without imposing an absolute Necessity, for that could have rendered it not proper to mention it.

In a Word, the *Indian* Constitution was wholly of a Piece; and, if we take it throughout, was the best calculated for the Good of the Whole, of any Form of Government devised by the Wit of Man. By considering it, as we find it stated at large in this Section, we shall easily discern, why the ancient *Indians* were so jealous of Foreigners settling amongst them; since it is very evident, that a mixt People could never be brought to live peaceably under such a Constitution, which required a suitable Education, from their very Infancy, to dispose the Minds of Men to submit to it. It is also no less clear, that they discouraged as long as they found it practicable, all foreign Trade, from the same Principle; on which they reasoned after this manner: The great End of Commerce is to procure and to maintain Plenty; and as this was already well provided for by the Nature of their Constitution, and their Lass, in favour of Husbandmen, it seem'd to them, that there was no foreign Trade requisite for completing the Happiness of their Subjects; but that, on the contrary, it must be attended by Consequences detrimental to that Firm of Government, upon which their Felicity depended; which may be thought therefore justify'd this Prohibition.

Hence, likewise, we discover the true Grounds of that Policy which restrain'd the Ambition of *Indian* Princes, and deterred them from making Conquests. The Prosperity of an *Indian* Kingdom did not depend upon an Extent of Territory, or a Multitude of Subjects; but upon the strict Obedience of those Subjects to the Laws, which never would have been secured by overrunning their Neighbours; for either the conquered Nation must have been incorporated with their own, which would have been a Work difficult, if not impracticable, or these new Subjects must have lived after their old manner, which would have produced numberless Inconveniences. It was therefore the Interest, even of the most powerful of their Monarchs, rather to satisfy the Avarice of foreign Invaders, by costly Gifts, than to run the Hazard of ruining their Dominions, and their Subjects, by long and bloody Wars, which never could produce them any Good, and were, in their Nature, pregnant with Mischiefs.

But what is most wonderful, and best deserves our Notice, was the Care taken by the *Indian* Constitution, to conciliate the Love of Peace with undoubted Courage, and the surprising Expedients they made use of, to inspire their Subjects with a Contempt of Death, at the same time that the great End of all their Laws was, to render their Lives easy and happy. Where People are frequently exposed to Dangers, the Sense of Danger wears off, and they acquire an habitual Courage; but where People lead an easy, regular Life, in the full Possession of all that they desire, they naturally become timorous and effeminate. This, however, was not the Case of the ancient *Indians*, among whom, there were daily Instances of Men dying, because they were not inclin'd to live longer; and of Women that chose to accompany their Husbands in Death, rather than endure Life without them. By these Examples, a Spirit of Heroism was kept up, and the Brachmans, by sealing their Doctrines with their Blood, secured an implicit Belief of all they taught; that is, of all the Principles on which their Religion and Government were founded.

There cannot, therefore, surely, be any thing more instructive, more entertaining, or more worthy of the Reader's Attention, than an ample and distinct Account of these extraordinary Men, their Tenets, Discipline, and manner of Living; by a thorough Examination of which, we shall be able to discover what mighty things the human Understanding is capable of achieving, when it is not dejected by Tyranny, or weakened by a luxurious way of Living. We shall see too, with how much Justice the *Brachmans* held the first Place assigned them in their Calls or Tribes, as Men who spent their Lives in the Study of Truth, and in teaching it to others; whereby they maintained and exercised a Power equal to Kings, in virtue only of the Wisdom of their Words, and the Conformity of their Actions to their Professions; and how the Being of this most excellent Constitution depended on the Maintenance of this Order of Men, in their primitive Integrity.

SECTION XII.

The Learning, Discipline, Offices, Manner of Living, and Privileges of the Brachmans; including also an account of their peculiar Doctrines in Theology and Divinity.

1. The Care taken of the Women, before the Children of the Brachmans were born; and the Pains bestowed on the Education of their Sons, in order to fit them for their Profession.
2. The Discipline in their Schools, and their Exercises, in order to form their Minds, and qualify them for their public Offices.
3. Their Councils, in quality of Priests and Prophets; their Precautions for securing their Authority, and Punctuality in Discharge of their Duties.
4. A rational and distinct Account of their Philosophy; and an Explanation of the Doctrine of the Metempsychosis, as it was taught by them.
5. The Time at which they were allowed to quit this austere Course of Life, to marry and to settle in Families, with their Privileges.
6. Of the Germanians, Sarmatians, or elected Brachmans; the manner of their coming into the Society, their Studies and Employments.
7. Of the Brachmans which Alexander the Great met with in the Indies, with some Conjectures as to their Form of Government.
8. Of the Mistakes, Fables, and improbable Reports, concerning these Sages, and their Philosophy.
9. Of the Proofs derived from the present State of the Brachmans, or Bramins, in the Indies, in support of the foregoing Particulars.
10. Some Remarks on what modern Authors have delivered upon this Subject.
11. The Conversation of Alexander the Great, with Dindamis the Brachman.

THE Brachmans were a Tribe, or Cast of *Indians*, who accustomed themselves to the Study of sublime Things, and were esteemed the first Call, on Account of the Excellence and Importance of their Duty, upon the right Discharge of which depend'd, in a great measure, the Safety and Prosperity of the State, as will more clearly appear, when we come to speak of their civil and sacred Functions: They were divided into *Brachmans* and *Germanians*: The former were *Brachmans* by Descent, the latter by Election, as shall be explained hereafter. Their Attention to their Posterity began very early, and even while their Children were in their Mo-

ther's Womb. As soon as it was known, that one of their Wives was become pregnant, such of their Society as were charged with the bringing up of Children, went to visit the Mother, under colour of giving her the Blessing, but, in Reality, that they might have an Opportunity of bellowing on her good Councils; such as engaging her to abstain, during her Pregnancy, from what might be hurtful to the Child, informing her what Exercises she might use, and what it was fit for her to avoid. According to the Reception she gave to these Admonitions, they regulated their Conjectures, as to the Genius and Disposition of the Child.

1. Descriptions d'un Indien, de l'Esprit, d'Alcandre lib vii. Porphyr. de Abstin. lib iv. Palladius de B. in Ind. S. 1. de l'Inde. de l'Inde. de l'Inde.

As he grew up, he passed gradually from the Care of one Master to another, all watching attentively, not only over his Progress in Learning, but more especially, in regard to the Purity of his Manners; and, in the mean time, the greatest Care was taken, that neither the Abilities of his Mind, or the Strength of his Body, should be weakened by too great Tenderness or Indulgence. If, as he grew up to Years of Discretion, it appeared that he wanted Talents for acquiring their Knowledge, or a Constitution capable of undergoing the Hardships of that Life which these Philosophers led, he was not constrained to pursue their Course of Life, but allowed to follow any other. But, on the contrary, if he was assiduous in his Studies, and exact in the Performance of what was directed by his Superiors, he was initiated into their Mysteries, and brought up to all the Learning of the Sect. Their Schools were kept in a little Grove, at a Distance from the Town to which they belonged, where there was a Throne of Ebony placed for the Superior, from whence he delivered his Lectures, and this with such an Air of Gravity, as made so deep an Impression on the Minds of his Auditors, as that they never presumed to speak, or to say much as to him, during the time of his Discourse. If thro' any Accident, they did either, they were turned out of the School for that Day, as rude and intemperate Persons.

To say the Truth, the Subjects of these Lectures were of so exalted a Nature, and were delivered with such Seriousness and Dignity, that they naturally commanded a most profound Reverence, especially from such as from their tender Years were filled with the highest Respect for their Instructors, and taught to conceive just Notions of the Consequences of what was thus delivered to them. In these Lectures, they inhaled chiefly on the Principles of natural Religion, the Immortality of the Soul, and the Duties of Men towards each other, and to their Creator. They explained the Advantages that arose from a strict Morality, and took Pains to shew, that a Life of Hardships, in which a Man was continually exposed to what the World thought the greatest Evils, such as Abstinence from Meat and Drink, a perpetual Solitude, and the bearing the Intemperance of the Air, and the Inclemency of the Seasons, was, notwithstanding, preferable to any other Course, inasmuch as it led to the Possession of true Wisdom, the obtaining a perfect Command over their Passions, and the Enjoyment of Health; together with an undisturbed Peace of Mind. They likewise set forth the Perfections of the Supreme Being, the Wisdom and Goodness of Providence, the admirable Harmony of the Universe, the Position of Man in the Scale of Beings, the End of his Creation, the Dignity of his Nature, and the Means of exalting it to the highest Degree of Perfection.

It is a thing well known to those who have studied Mankind, that it is not so much for want of Lights, as for want of Will to follow those Lights, that People fall into dangerous Errors, and gross Vices. Amongst the *Brachmans* this was rendered almost impracticable; for being obliged daily, to attend several Hours to the wife Duties of the Chief, their having constantly before their Eyes so many Examples of rigid Virtue, and the Reproaches to which they were exposed, if they, at any time, failed in their Duty, kept them equally firm in their Principles and Practice. We may add to this; the Ambition of obtaining the Rank of their Call, which was the first in the State, and to which the highest Honours were paid by the People, must have contributed not a little to keep up their Spirits, and to encourage them in the Pursuit of those Studies which were attended with so high a Reward.

2. As to their Exercises, they spent a great Part of the Day and Night in Prayer, in singing Hymns to the Deity, in making Vows for the Prosperity of their Prince and People, and for procuring the Blessing of Heaven upon all their Endeavours. When they were not thus occupied, they retired to their Cells, where they meditated on the great Truths of Philosophy, amused themselves with Experiments, or discoursed with such of their Friends as came

to see them: But if, at any time, they were sensible, that they exceeded in this, by talking too much, too freely, or upon improper Subjects, they imposed a voluntary Silence upon themselves, which, continuing in an absolute Silence for a certain Space of Time, made a sufficient Amendment for their former Indiscretion.

It is inconceivable to what Heights of Science and Knowledge of Life conducted them; for their Spirits being constantly active, their Heads perfectly clear, and their Hearts free of that Confusion which is the Result of Innocence, they considered themselves, and were considered by others, as a Race of People superior to common Men. Their Simplicity, this led them to a sort of Behaviour, which looks like Pride; for they never visited any: And when their Friends came to see them, they constantly entertained them with moral or philosophical Discourses, suited to the Capacities of their Hearers; and meddled very little, if at all, with the common Concerns of Life, despising all the Pleasures which other Men sought, and the Difficulties which they complained. They are, on this Account, charged with Haughtiness, Self-conceit, and Vanity, by some of the Antients, and by most of the Moderns. But whoever attentively considers the Necessity of such keeping exalted Ideas of a future State constantly in view, in order to lead such a Life here, as their Gods did, will, at the same time that it was so honourable for themselves, be sensible of the great Confidence to Society, they displayed, that nothing but such a Frame of Spirit and Baconian are said to have possessed, could have enabled them to have gone through to facing a Court of Law, with Satisfaction to themselves, and to the Benefit of their Countrymen.

In a Word, the Abatement of their Pride, as it really must have been attended with an abatement of their Virtue; of which we have an Example in *Alexander*, who was once prevailed upon to visit *Alexander* the Great, and to converse with the *Grecians*, came soon after to his own Compliance for them, as to quit his Country, and to make that Monarch into *Persia*; for which he was ever after despised by his Brethren, as a Reregale; and was the first, unless we can imagine, that the *Manners* and *Mores* of the *Brachmans*, at that time equally free from all Submission and Impunity, were not superior to those of the *Indians*, who were visibly the most ambitious, most unjust, and the cruellest People upon the Earth; who, as it they were to lord it over all other Nations, and to taste the Victories of their Princes, were to leave no other Nation filling their Pockets, and gratifying their Passions. They, unless we can prefer such a Conduct, to the plain, modest, and quiet Behaviour of the *Indians*, would allow his Brethren to have been in the Right, and *Alexander* in the Wrong: And consequently, we must confess, that the Appearance of Pride in the *Brachmans* was really more than the Reflexion of too bright a Virtue, which vulgar Eyes are not able to bear.

3. They were as venerable in their public Characters as blameable in their private Lives; and it was the Reason of the latter, that recommended them to the former. The *Indians*, in the earliest Ages, were thoroughly persuaded, that Sanctity of Manners was the Quality most required of Priests. The *Brachmans* acted, every-where, exactly as the *Indians*, in this Capacity; so that whenever Sacrifices were made to the Gods, either to deprecate some Misfortune, or by way of Thanksgiving for their Favours, the *Brachmans* constantly officiated: It was on such Occasions that they made solemn Sermons to the People, in which they usually inculcated three Things: The first was, Reverence to the Divine Being, from whom they received all Blessings, who was alone capable of granting them what they desired, and of defending them from what they feared; and whom they were accountable for the Use they made of the Benefits he bestowed upon them. The second was, Obedience to the Laws, and a hearty Consent to the Will of the Society. The third regarded the Love of Liberty, and the Obligations they were under to sacrifice themselves

small Distance from Towns, where they eat and slept under the Trees upon the Ground, or in Caves. As to their Dress, Authors differ very widely: It is generally said, that they went naked, and were, from thence, called Gymnosophites; but this must be understood only when they were at home, that is, in their Groves: For, when they were employed in their public Functions, they wore a Turbant on their Heads, a Linen Garment on their Bodies, which was called the sacred Robe; had a Staff in their Right Hand, and a Ring upon one Finger. Some Authors, indeed, speak of very different Clothing; *Heraclitus* mentions a Robe of that kind of Stone, which may be spun into an incomhustible Cloth*. *Megasthenes* asserts, that their Garments were made of the Barks of Trees*, and, very probably, their Customs, in this respect, might vary in different Ages.

After they had spent thirty-seven Years in their Ministry, they were allowed to quit it, to live the Remainder of their Days at Ease in the Towns, dressed like other People; might eat the Flesh of wild Beasts, and take as many Wives as they thought fit, in order to preserve the Race of the *Brachmans*. But it was an essential Rule, to such as entered into the Matrimonial State, that they were not to reveal any of the Secrets of their Philosophy to their Wives; and this for two Reasons: First, because there was great Reason to doubt, whether they would be discreet enough to conceal what they were thus taught: And, secondly, it was no less doubted, if they should, whether this Accession of Knowledge might not incline them to Pride and Disobedience. This is certainly a very plain and probable Account of the Marriages of the *Brachmans*; and we discern therein the same wise Precaution, the same Regard to the particular Interest of this Call, and the same Respect to the Good of the Whole, that is to be manifest in the Provisions made for all other Classes of People, in virtue of the *Indian* Constitution.

Notwithstanding they had quitted their Order, as we may call it, yet they were treated with the utmost Respect, and enjoyed all the Privileges annexed to their Call, as much as if they had still remained in their Groves, and continued to officiate as Priests. That is to say, they were exempted from all Duties, they were permitted to gather Herbs, Fruits, and Puls, when ever they thought fit; and were allowed Oil, for anointing their Bodies, at the public Expence: They were likewise made welcome at the Tables of the Great, where they gave their Advice, and discoursed freely, on public Affairs: And it was commonly out of the Number of these named *Brachmans*, that the Senators were chosen, in whom was vested to large a Share of the Administration. Thus, in every Station, they were attended with Reverence, and found themselves particularly considered both by their Princes and Fellow-Subjects; who treated as they perfectly understood, to they constantly pursued them, and by interposing, when their Princes were inclined to arbitrary Measures, they hindered the Violation of the Laws, and secured the Happiness of the People.

Thus they passed their Days, even to old Age, without any Danger of being neglected, or meeting with Contempt: The Law secured them from this, as an habitual Temperance did from most Diseases; of which they were, generally speaking, so much ashamed, from an Apprehension, that they would be looked upon, especially if of a long Continuance, as the Effects of Excess, that they, generally speaking, chide to die rather than bear them. When the Inconveniences of old Age began to weigh them down, they had certainly recourse to this violent Remedy; and, having ordered a Pile of Wood to be erected in some public Place, they ascended it, dressed in their best Apparel, and with whatever Ornament they possessed. There they sang certain Hymns, setting forth the Vanity of human Life, wherein Men amide themselves with Dreams and Shadows, except the few who are mindful of that heavenly Country, which their Souls are to inhabit; and then laid themselves down upon their Faces, and remained there still and quiet, without to much as a

Groan, till they were consumed to Ashes, leaving the Example of their Death to inspire their Countrymen with Courage to adhere steadfastly to the Principles which they had taught them, in spite of any Checks or Misfortunes that they might meet with. Thus living and dying, they were always useful to Society; and, as their Duty began even before their Entrance into Life, so it ended only with their last Breath; for they were wont compare the Weakness and Infirmities of old Age to the impotent Senses of a Child while in the Womb, and their turning themselves to their being brought to a second Birth to a new Life, being that Action their Re-generation.

6. We are now to speak of the second Sort of *Brachmans*, or of such as became so by Election, and who were taken from different Classes, being such as were to be admitted into the Order: For, as the *Brachmans* professed themselves Lovers of Wisdom, they thought it neither just nor reasonable to exclude those who were desirous of attaining, by voluntary Application, what they, by a regular Education, had acquired. Thus, as *Megasthenes* reports, were called *Germanians*, as they are styled *Sarmatians* by *Clement Alexandrinus*. The Manner in which they were admitted was thus: They went to the Magistrate of the City to which they belonged, and, in the first place, made a clear and distinct Discovery of all their Effects, which they delivered up to them for the Maintenance of their Wives, in case they had any; and, if they had Children, they were taken care of by the King. After this Step they presented themselves to the Person who was at the Head of this Body of Sages, and desired to be admitted amongst them. Upon which they were strictly examined, as to the Sincerity and Steadiness of their Resolution, and the Degree they had to put the Remainder of their Days in the Study and Practice of Philosophy. An Inquiry was next made into the Behaviour of their Ancestors, in which they succeeded as high as their great Grandfathers; and it was found, that any, within these three Degrees, were chargeable with Pride, Intemperance, or Covetousness, such a Candidate was rejected; but if nothing of this sort appeared, then as strict an Inquiry was made into his own Life and Conversation; and if he had a good Memory, had been always remarkable for Modesty, for a peaceable and humble Behaviour throughout his whole Life, and had never given any Marks of a proud, revengeful, or luxurious Disposition, he was admitted.

These differed from the *Brachmans* in this, that they inhabited most of them between the Rivers *Hyphes* and *Ganges*, where they had Houses and Temples not erected and convenient, but also handsomely adorned, at the King's Expence. At a certain Hour they were called to the Temple, by the Sound of a Bell, where they attended at public Prayers; and from whence they were not allowed to stir till the Bell rung again, to inform them, that the Service was over for that Day. The King's Officers then gave each of them a Porringer of boiled Rice, or some sort of Food which was equivalent; and thus they eat before they separated. The Habes they wore were made of the Bark of Trees, or of some Cotton; they pulled all their Days in the strictest Chastity, and never drank any strong Liquor whatever. As they valued the Divinity, Philosophy, and Policy, of the *Brachmans*, they attained, in time, to a great Degree of Wisdom, and were consulted by their Kings; and profited with equal Honour at the Sacrifices that were made by the People. In a Word, it appears that they were received into a full Participation of all their Privileges, except that of quitting the Order, and of marrying, which there was the less Reason they should enjoy, in respect of their own Accord, they had quitted that Society. It was of this kind of *Brachmans* that most of the Stories were told, that we find recorded in the *Life of Alexander*, for, instead of cultivating the high and hard Sciences, they amused themselves chiefly in searching out natural Secrets, which Science, in those Days, was held

Main: They were and took a great interest in this Way; but consisted chiefly, if not entirely, in the Knowledge of certain elementary Calculations.

The Reader, also, to relieve, without delay, which I am not responsible. For that says, that the manner that they were named into the Call, to a Contract of Marriage, as the latter, according to the custom, to marry, to himself likewise be free between being a man, but through the former by consent, and to the own Request, as in a Wo, as a City Collection, or a Village, narrow, to other Public Notions, with Terms methodically, as in a dispute, clear and true Light.

7. The Account following a King's duty: And, from that time, to be a certain that their Philosophy make themselves.

Alexander put to the People; which the *Brachmans*, taken in, apt to think, that it were a Prince, was a Senate, and in that became than or Deputies. It is another of the Kings of King, as in the Account of the River, but that the *Brachmans* was a Case or Court, in a Greek, and a S, shows their King, but the most of the account, in my Opinion we have, in my Book, I will explain another great which happened Kingdom of this, that the King, the *Maedonians* or *Pelousians*, as *Strabo* *Alexander* had been killed, that could be was saved by the, that a cure this

* *Heraclitus* says, that they were made of the Barks of Trees. * *Megasthenes* asserts, that they were made of the Barks of Trees. * *Megasthenes* asserts, that they were made of the Barks of Trees.

Might: They were likewise a kind of itinerant Physicians, and took a great deal of Pains to make themselves successful this Way; but we are informed that their Medicines consisted chiefly, if not wholly, in Draughts, or Fomentions, and we are told by *Strabo*, that they professed the Knowledge of certain Secrets, that were equally extraordinary and ridiculous.

The Reader, after perusing these Accounts, will be able to resolve, without much Trouble, most of those Difficulties, which some modern Critics have represented as insuperable. For Instance, when he is told that one Author says, that the *Brachmans* live always in Woods, and another that they were frequently seen at Courts, and admitted into the Cabinets of Princes; instead of taking this to be a Contradiction, he will perceive, that the former speaks of the *Brachmans* that were still pursuing their Studies, and the latter, of such as had completed their Course; and according to the Rules of the Society, had Liberty to go, to marry, to live in Cities, and to be chosen Senators. It will likewise be able to account for the seeming Difference between being together in a kind of collegiate State, or straggling through the Country like a kind of Doctors; because the former must be understood of the *Brachmans* by the first, and the latter of their Associates, who, at the King's Request, were admitted to the Pursuit of such Studies. In a Word, it is in most other Things, a very Collection of the various Accounts, given by different Authors, thrown together without Order or Method, gives no other Purpose than giving us confused and intricate Notions; whereas when we take the Pains to range them methodically, and under their proper Heads, this Obscurity is dispelled, and we see the whole Matter in a clear and true Light.

The Account we have of *Alexander's* attacking and destroying a Kingdom of the *Brachmans*, is very extraordinary: And, from the Lights afforded us from History, naturally to be accounted for, since we are no-where told, that the Philosophers affected Government, or desired to make themselves Princes. It is likewise related, that *Alexander* perished near fourscore thousand of these People; which cannot, certainly, be understood of the *Brachmans*, taken in a strict Sense. And therefore I am apt to think, that in this Country, upon the Death of some hereditary Prince, without Issue, a *Brachman*, who, perhaps was a Senator, succeeded him in his Throne by Election: And in that Case, it is natural to believe, there might be more than an ordinary Number of his Cast resident in his Dominions. It is true, that *Diodorus* the *Sicilian*, and another of the Writers of Antiquity, called the Sub-king of King *Sambus* expressly the *Brachman* Nation; but from the Account that we have given, the Reader will be apt to receive some Doubt from this Difficulty, from his Knowledge, that the *Brachmans* are not a Nation by themselves, but a Class or Cast in every Nation; tho' it was very natural to a *Greek* Writer when he heard of a *Brachman* Nation, and a Senate of *Brachmans*, to conclude that it was their Kingdom: But there is no Reason, that we should be misled by his Mistake, especially when it can be easily accounted for, and plainly set to Rights, by the Reason we have proposed.

As it is my Business to give the Reader all the Information I can, I will take this Opportunity of inserting and explaining another Passage in the History of *Alexander* the Great, which happened at the time that he destroyed the Kingdom of this *Brachman* Prince *Sambus*. It happened, that the Siege of *Harmathia*, which was the principal City of that Kingdom, the Inhabitants wounded many of the *Macedonians* with poisoned Arrows; amongst the rest *Ptolemy Lagus*, afterwards King of *Egypt*; for whose Misfortune *Alexander* was exceedingly concerned, because all who had been hitherto wounded, died, in spite of all the Care that could be taken of them: But the Life of *Ptolemy* was saved by the King's having a Dream, in which he was informed, that a certain Herb, common in the Country, would cure this Poison; which it did effectually. Now

this Dream was, undoubtedly, no more than an Artifice, and *Alexander* received his Information from some *Brachman*; for, as we have seen before, no such Poison could be used, unless the Remedy was likewise known; and this gives a fair Account of the Performance of this Cure, without a Miracle. This Pretence of the Dream, however, was a well-chosen Stroke of Policy, because it intimated, that *Alexander* was particularly favoured by the Gods; which was an Opinion he always laboured to establish, especially among his own People: For, as to the *Indians*, it can hardly be supposed, that the Tale of the Dream would go down with them, because they knew the Remedy before, and could therefore account for the Discovery of it to the King, without the Interposition of any Divinity.

8. As the *Brachmans* were, in reality, a very extraordinary People, and had amongst them some very strange Customs, it was natural enough for Authors, who delight in relating Wonders, to give us some very improbable Stories about them. It appears from a Passage in *Strabo*, that they insured themselves to Fatigue; for he speaks of two *Brachmans*, one of whom gave a Proof of Patience, by lying on the hard Ground, and there suffering whatever the Sun and the Rain pleased. The other, who was not so far advanced in Years, exhibited his Proofs, by standing a whole Day, sometimes on the Right Foot, sometimes on the Left, while, with both his Hands, he bore up a large Piece of Wood in the Air.

All this is very credible; and the *Greek* Writers tells us something of the same Kind, with regard to their great Philosopher *Socrates*; but *Pliny* carries these Exercises of Patience beyond all Bounds, when he says, that the *Brachmans* gazed upon the Sun with fixed and steadfast Eyes, from his Rising to his Setting; and that they sometimes stood whole Days upon one Foot, in the midst of burning Sands. Yet *Solinus* advances this a Step farther; and for Fear it should be thought, that they did all this to no Purpose, he is so kind as to assure us, that they discovered mighty Secrets by thus surveying the Sun.

We have already given an Account of the Marriages of the *Brachmans*, and have assigned the true Reason why their Caste was less numerous than the rest, notwithstanding that the *Indian* Women are generally very prolific. But *Suidas* hath a very extraordinary Story upon this Subject; He says, that the *Brachmans* dwell in an Island in the Ocean, where the Air is so pure, that they lived one hundred and fifty Years; they are obliged to be contented there, not with Bread and Water, but with Water and a few Apples: They do nothing but pray to God. In the Months of *July* and *August*, the Fruits, being more plentiful warm them with the Line of Love; so that they go to find out their Wives beyond the *Ganges*, and stay with them forty Days, and then repass into their Island. So soon as a Woman hath brought forth two Children, her Husband goes to see her no more: She, on her side, comes not near any Man more; and if any Woman has been barren for five Years together, her Husband makes no farther Trial of her, and repass the Sea no more with the others. This was not the Way to stock the Country greatly; nor was it very populous, as *Suidas* observes: But he should not have forgotten to acquaint us, that these are Stories made at Pleasure, and Romances which idle Scribbles have forged.

But, notwithstanding all these Fables that disfigure their History, we find, in all Ages, the most intelligent and polite Writers extremely favourable to these Sages; and *Apuleius*, who was both an elegant and candid Writer, has it to us such a Character of these Men, as extremely deserves our Notice; and therefore I shall finish my Citations with his judicious Account of our Philosophers: 'There is also, says he, among the *Indians*, a noble sort of Men called *Gymnosophists*. I have a very great Value for them, because they are skilful Men, not, indeed, in laying the Vine, nor in grafting a Tree, nor in tilling the Ground. They do not know how to cultivate a Piece of Land, or to melt Gold, or to break a Horse, or to tame a Bull, or to shear a Sheep or a Goat, or to lead them to the Pasture.

¹ *Strabo*, lib. xv. p. 107. where he says, that by the use of Medicines they could make a Person beget many Children; and those either Boys or Girls, or both the selves. ² See the Article of *Gymnosophists*, in *Bayle's* Dictionary. ³ *Dr. Bar. Sicul. lib. xvii. Strabo*, lib. xv. ⁴ *Strabo*, lib. xv. ⁵ *Plin. Nat. Hist. lib. vii. c. 2.* ⁶ *Solin.*

What is it then? Instead of all this, they know one thing: Both the most ancient Masters, and the youngest Scholars, study Wisdom; nor is there any thing for which I commend them more than for their Aversion to Indolence and Sloth. When the Cloth is laid, before the Meat is brought upon the Table, all the Youths are called together from several Places and Offices; but they are not suffered to sit down, till they have answered the Matters, who ask them, What Good they have done since Break of Day till Dinner-time? One will answer, that having been chosen Arbitrer between two Persons at Variance, he has removed all Subjects of Hatred and Suspicions between them, and reconciled them together. Another will say, That he obeyed his Parents Commands. A third, That he found out some Truth by his own Meditation, or learnt it from another. Thus they all give an Account of the Good they have done. He who has nothing to say why he should be admitted to Table, is sent back to his Work without his Dinner.

I think it necessary to take some Notice here of what has been said by the Moderns upon this Subject; more especially by such as might either be supposed better Judges from their Learning, or better qualified to come at the Truth, by their having travelled in the Indies, and being acquainted with those of this Sort of Sages that still remain there. A learned French Writer observes, that Dr. Hyde, in his most learned Book on the Religion of the Persians, has advanced a new Notion, in supposing, that the Brahmans were so called from Abraham: But he is mistaken in this; for, though Dr. Hyde inclines to this Opinion, yet he did not advance it, since it had been long before maintained by William Puffendorf, who asserts, that the Brahmans were descended from one of the Sons of that Patriarch by Keturah. I agree, however, with this Critic, that the Notion is improbable; and that it is much more likely they were so called from the Word Bram, or Brama, which signifies an enlightened Man, and is also the Name of the reputed Founder of their Sect.

Their fundamental Notions remain so much the same, that it is really wonderful they have not, in the Course of so many Ages, received greater Alteration, especially considering the Revolutions that have happened in their Country, and that they have been now, for many Centuries, under a foreign Yoke; for the Megus is a Tartar by Descent, and a Mohammedan by Religion; and yet it is with the Indians who are his Subjects, that we are best acquainted. Francis Xavier, whom the Papists stile the Apostle of the Indies, says, in one of his Letters, that, having acquired the Friendship of a Brahman, very eminent for his Knowledge and Learning, he opened himself to him in the following Terms: 'The secret of our Religion consists in these two Points; first, in knowing that there is one God, the Creator of Heaven and Earth, and the Author of all Good, who alone is to be worshipped: The second is, that the Idols are the Images only of evil Genii: But Care must be taken not to divulge this to the People; it is a Doctrine quite out of their Reach; and the Principles of good Policy require, that they should not be made acquainted with any Divinity. These were the Principles of our old Philosophy; prosecute your Studies, and pursue Truth; but, if you should be so happy as to reach it, communicate your Discoveries only to a Few. The Many are to be held with a tight Reim, and are to be kept in strict Subjection, which cannot possibly be done, if they are not hindered from seeing to the Bottom of Things, and their Imaginations flattered with pleasing Appearances.'

Our old, and our modern Travellers, agree very well in their Accounts of the modern Bramans, with what I have before delivered: The celebrated Signor Pietro della Valle, a noble Roman, a learned and candid Writer, and whose Travels are justly esteemed as accurate as any that were ever made into this Part of the World, tells us, that though the Sects of the Indians are multiplied to eighty-four, yet they may be reduced to four, viz. the Brahmans, the Soldiers, the Merchants, and the Mechanics,

In the essential Points of Religion, says he, all agree; for all believe the Transmigration of Souls; which, according to their Merits and Demerits, they think, are sent by God into other Bodies, either of Animals, more or less clean, and of more or less painful Life; or else of Men, more or less noble and handsome, and more or less pure of Race, wherein they place not a little of their vain Superstition, accounting all other Nations and Religions, besides themselves, unclean; and some more than others, according as they more or less differ from their Customs: All equally believe, that there is a Paradise in Heaven with God, but that thercinto go only the Souls of their own Nation, more pure, and without any Sin, who have lived piously in this World; or, in case they have sinned, that after diverse Transmigrations into various Bodies of Animals and Men, having, by often returning into the World, undergone many Pains, they are, at length, purged, and at last die in the Body of some Man of Indian and noble Race, as the Brahmans, who amongst them are held the noblest and purest, because their Employment is nothing else but the divine Worship, the Service of Temples and Learning; and they observe their own Religion with more Rigour than any others.

He likewise says, they acknowledge there is a Devil, whom they describe much in the same manner that we do: And they likewise think, that many wretched Souls, unworthy ever to have Pardon from God, as the last of the great Punishments which they deserve, become Devils also; than which they judge there cannot be a greater Mifery. The greatest Sin in the World they a count shedding of Blood, especially that of Men; and then, above all, the eating of human Flesh, as some barbarous Nations do, who are therefore detested by them more than all others. Hence the strictest among them, as the Brahmans, and particularly the Betsi, not only kill not, but eat not, any living thing; and even from Herbs tinctured with any reddish Colour, representing Blood, they wholly abstain. Oxen of a larger Conscience eat only Fish; and the lowest Sort, and such as have scarce any Conscience at all, tho' they will not kill, will nevertheless eat all sorts of Animals fit for Food, except Cows; to kill and eat which, they have an absolute Abhorrence; for they say, that the Cow is their Mother, on account of the Milk she gives them, and the Oxen the breeds, with which they plough, and make use of them, from the Scarcity of other Animals, upon almost all Occasions; so that they think they have Reason to say the World is supported by a Cow, which, from being used as a Proverb, is now converted into a Fable. Moreover, as Cows are well kept in India, and much taken Care of, they believe that the best Souls, to whom God has given little Pain in this World, pass into them, which is a new Motive of Veneration.

The same Author informs us, that the Race of the Germans are still in Being, tho' under another Name. I shall give the Reader the Author's own Words, and leave him to judge of them. 'The Goglus, says he, are not Brahmans by Descent, but by Choice, as our religious Orders are. They go naked; most of them walk with Bodies painted and lined with different Colours; yet some of them are only naked, with the rest of their Bodies smooth, and only their Foreheads dyed with Sanders, and some red, yellow, or white Colour; which is also imitated by many secular Persons, out of Superstition and Gallantry. They live upon Alms, despising Cloaths, and all other worldly Things. They marry not, but make severe Profession of Chastity, at least in Appearance; for in secret it is known, that many of them commit as many Debaucheries as they can. They live in Society, under the Obedience of two superiors, and wander about the World, without having any settled Abode. Their Habitations are the Fields, the Streets, the Porches, the Courts of Temples and Groves, especially under those where any Idol is worshipped by them; and they undergo, with incredible Patience, Day and Night, no less the Rigour of the Air, than the excessive Heat of the Sun, which, in these sultry Countries, is a thing sufficiently to be admi'd.'

Hydrologia, &c. de la Philosophie, p. 95

In Commentaria ad Xenoph.

Cap. xv.

Cap. xvii.

Cap. xviii.

In the Accounts of the Voyage of his Chaplain, we have seen by Bramans: It runs to Creature, what is for the art a Creature, and so is it of any of thy fellows they say, were de about their Devotions; wherein the Falling, and Ho better fitted for their Festivals; Food moderately concerning Charity, Poor, as far as they say, were like the false Tales, not to steal any thing, not to defraud any man's, not to oppress; This Writer farther had told him, that he described with a true and as many Feet Power, as being and all Hand to whereof makes the of all moral Duty Nature in their Dis leaving that Royal what they would be There is a very curious that has been preferred Mr. John Malball, taken a great deal acquainted with the Nature what he says is so satisfied, that what concerning the Religion was strictly true. Travellers have said I cannot tell. It is or Bramins, and Goglus, when they always put a Figure they say, they say, is harmful, that the People, and heathen, Full N I am sorry, they Heaven, and He mystically: They the World, he material; and say the Fire his Mother Water his Seed, of his Legs a God is the Life ther greater or less They hold, that created the World he created several Angels, the second, and the third, neither act Good; but the Spirit scarce any Thing of the Angels, and when they die, they are said to have Pleasure both Late hath a strange, strangely, affairs, Malballan Curiosity.

It is positively insisted on, both by Aristotle and Pliny, that the Bones of the Lion are much firmer, and more solid than those of any other Beast: which some Moderns have

Flesh of this Animal is often eaten, is not at all unwholesome, and is not known to prove unwholesome; but, whether any Part of this Creature be eaten, it is not known to be

In the Accounts that has been published of Sir *Thomas Roe's* Voyage to the *Indies*, which was drawn up by his Chaplain, we have the original Rule delivered to the *Indians* by *Brama*, in relation to sparing the Lives of Animals: It runs thus; 'Thou shalt not kill any living Creature, whatsoever it be, having Life in the same; for thou art a Creature, and so is it, thou art endowed with Life, and so is it; thou shalt not therefore spill the Life of any of thy fellow Creatures that live.' Other precepts, they say, were delivered unto them by their Law-giver, about their Devotions in their Washings and Worshipings; wherein they are commanded to observe Times for Fasting, and Hours for Watching: that they may be the better fitted for them. Other Directions they have about their Festivals; wherein they are required to take their Food moderately, not pampering their Bodies. Concerning Charity, they are farther commanded to help the Poor, as far as they are possibly able. Other Precepts, they say, were likewise given them in Charge, as, *Not to tell false Tales, nor to utter any Thing that is untrue; not to steal any thing from others, be it never so little; not to defraud any by their Cunning in Bargains or Contracts; not to oppress any when they have Power to do it.*

The Writer further informs us, that some of the *Bramins* had told him, 'They acknowledged one God, whom they described with a thousand Eyes, with a thousand Hands, and as many Feet; that thereby they may express his Power, as being all Eye to see, and all Foot to follow, and all Hand to smite Offenders. The Consideration whereof makes that People very exact in the Performance of all moral Duties, following close the Light of Nature in their Dealings with Men; most carefully observing that Royal Law, in doing nothing to others, but what they would be well contented to suffer from others.'

There is a very curious Piece relating to this Subject, that has been preserved by the Royal Society, written by Mr. *John Masball*, who lived long in the *Indies*, and had taken a great deal of Pains to make himself perfectly acquainted with the Notions of the modern *Bramins*; and what he says is so conclusive, that the Reader must be satisfied, that what the Antients have delivered to us concerning the Religion and Philosophy of the *Brachmans*, was strictly true. 'Upon what Ground, says he, some Travellers have stiled these People Polytheists or Atheists, I cannot tell. It is very observable here, that their Priests, or *Bramins*, and holy Men, whom they call *Jogees*, or *Giglis*, when they have Occasion to write any thing, they always put a Figure of One in the first Place, to shew, as they say, they acknowledge but One God, who, they say, is *Burms*, that is, immaterial. When they preach to the People, and instruct them, which is commonly every Feast day, Full Moon, or the Time of an Eclipse of either Luminary, they tell the common People much of God, Heaven, and Hell, but very imperfectly, obscurely, and mystically: They say, that when God thought of making the World, he made it in a Minute. They account this World the Body of God: For all that, they say, he is immaterial; and say, that the highest Heavens are his Head, the Fire his Mouth, the Air his Breath and Breath, the Water his Seed, and the Earth, and the Mountains thereof, his Legs and Feet; but assert, in general, that God is the Life of every Thing; yet is the Thing neither greater or less for him.

They hold, that God dwelt in a Vacuity before that he created the World; and that, as he dwelt in the Vacuity, he created several Beings out of himself: The first were Angels, the second Souls, the third Spirits, all differing in Degrees of Purity: the first being more pure than the second, and the second than the third. The Angels, they say, neither act Good or Evil; the Souls either Good or Evil; but the Spirits, or *Devtas*, as they call them, act scarce any Thing but Evil. They have a good Opinion of the Angels, and think their State mighty happy, hoping, when they die, they shall be made Partakers of the same Bless'd Pleasure. They believe, that every thing that hath Life hath a Soul, but especially Man; and they, accordingly, affirm, that as these Souls behave themselves in

their pre-existent State, so are their Actions in this World either good or bad, by a sort of fatal Necessity, which is very hard to conquer or overcome. Hence it is, say they, that there are so many different Humours and Dispositions of Men; for their Souls, before their Entrance into their Bodies, being tainted with different Affections, cause the like Difference in the Parties, whose Bodies are their Vehicles; so that if a Man happens to have a sudden and unfortunate Death, they immediately ascribe the same to the Party's own Wickedness, or the bad Life that his Soul led, before that it entered into his Body: For, say they, the afore-acted Evil that his Soul did in its other Life, brought these Accidents upon him, by getting the upper Hand of him, and by being too powerful and strong: And these, that die thus, they believe their Souls turn into Devils.

They maintain *Pythagoras's* Transmigration, or *Metempsychosis*, but in a grosser Sense than he did: For they believe that Mens Souls, thus have not lived so well as they ought, so, as soon as the Body dies, not only into the Birds and Beasts, but even into the basest Reptiles, Insects, and Plants; where they suffer a strong sort of Purgation to expiate their former Crimes. But as for the Souls of the *Jogees* or *Giglis*, that is, of religious Men and Saints, they fancy that they go and inhabit with the good *Devtas* or Angels among the Stars. As for the Spirits, or inferior Angels, they believe that they are very evil, and have a hand in all Wickednesses, Murders, Wars, Storms, and Tempells; so that when they solemnize the Funeral of those that are dead, they always present Dishes of Meat as Offerings to those Spirits, and sometimes sacrifice unto them, that they may not hurt the Souls of the Dead.

As they acknowledge the Being of a mighty God, so they hold, that he created the World, and every Thing therein. They believe, that there are almost infinite Numbers of Worlds; and that God has oftentimes annihilated, and re-created the same; but how he came first to create the World and Mankind, they relate to have been thus: Once, on a time (say they) as he was set in Eternity, it came into his Mind to make something; and immediately, no sooner had he thought the same, but the same Minute was a perfect beautiful Woman immediately presented before him, which he called *Alia Suktée*; that is, the first Woman: Then this Figure put into his Mind the Figure of a Man; which he had no sooner conceived in his Mind, but that he also started up, and presented himself before him; this he called *Manapussé*; that is, the first Man: Then, upon a Reflection of these Things, he resolv'd further to create several Places for them to abide in; and, accordingly, assuming a subtil Body, he breathed in a Minute the whole Universe, and every Thing therein, from the least to the greatest.

A Divine of the Church of *Rome*, who had resided long in the *Indies*, and fill'd there with great Dignity a very high Post, in a Relation which is not yet printed, and therefore the more curious, gives us the following Account: 'The *Brachmans* are, at this Day, the only People among the *Indians* that have a Right to cultivate the Sciences; and of this Right they are so jealous, that they suffer scarce any of those Rays to shine upon the World, which might be expected from Perions, boasting themselves in Possession of so much Light. Their Call is the most noble and the most considerable of all, and is even looked upon to be as much superior to Princes, as Wisdom and useful Knowledge are in their Nature preferable to Grandeur and Power, which Kings so rarely abuse.

The Sciences cultivated by these *Brachmans*, and in which they make a greater or less Progress, in proportion to their Parts and Application, may be reduced to eighteen. The first is a kind of Grammar, which contains the Rules necessary for the understanding of that Language, when they call *Grandham*; in which they converse amongst themselves, and wherein all their Books are written: From hence their Sciences attend in a very regular Scale, from the more simple and easy, to

“ those

those which are more difficult and complex. The last, which is esteemed the Perfection of all Sciences, is titled Vedata or Vendata; which is, as much as to say, the Close, or the Sum of all Things. This is a kind of metaphysical Theology, which the Brachmans receive not with a Spirit of Inquiry, but with profound and implicit Submission, as a kind of Divine Doctrine, which is, in its Nature, superior to all Examination or Dispute. Thus, these Men fuller their Wisdom to be bounded by that of their Ancestors, which, as they desire not to transcend, it is very probable they do not equal."

10. I have treated this Subject more largely, because I find many Things omitted by very great Men, who have undertaken to give us Accounts of the Brachmans, their Learning, Manners, and the particular Turn of their Philosophy. The celebrated Bayle has vouchsafed them two Articles in his Dictionary, but seem in both to have aimed more at exposing the Contradictions of such ancient Writers as have mentioned these Philosophers, than to give his Readers any distinct and methodical Account of them from what he had himself read. In one of his Articles indeed he tells us, that the Book, written by Palladius on this Subject, deserves to be consulted; and in his Notes informs us, that this Author was published from a Manuscript in the Royal Library, by Sir Edward Byke, Clericorum King at Arms; and furnishes us with some Remarks on the Fictions of the Book, or rather on the Change of the Title Pages for there never was but one Edition, which I have read with a great deal of Care; and am from thence enabled to give the Reader some Lights, beyond what he can receive from Mr. Bayle.

The Editor of that Book collected every thing that had been written upon this Subject, of which he composed a very curious Miscellany, addressed to the Earl of Clarendon, then Lord High Chancellor of England. The Treatise of Palladius of the Indian Nations, and of the Brachmans, was indeed never published before; yet it contains very little, if any thing, new upon the Subject, since the Discourse of St. Ambrose, of the Manners of the Brachmans, which is addressed to one Palladius, and had been long before published in Latin, contains the Substance of what is related by the other in Greek; but the Letters of Dandamis or Dandamis, which are added to these Two Pieces, are absolutely new, and never were published but by Sir Edward Byke; for which Reason I thought the Substance of them would be acceptable to the Reader, and therefore I inserted it in a former Section.

11. The Author mentions the Application of Alexander to this Philosopher, and to does Plutarch; but both Ambrose and Palladius gives us a large Account of a Conference that Alexander had with this Brachman, which they received from the Indians themselves; which is the more probable, because it is certain they had formerly Books upon this Subject, which, very probably, contained the very same Accounts that are preserved to us in these: They are much more curious, and will afford the inquisitive Reader far greater Satisfaction, than any thing that I know of, that has been written of this kind; and therefore I wonder, that so judicious and so learned a Man as Mr. Bayle did not rather chuse to give us some Quotations from these scarce and valuable Pieces, than from Books that were in every body's Hands, and had been so often quoted before.

The Bounds prescribed to this Work, and the many Things that are to be treated of in this single Chapter, will not allow me to insert the Whole of either of these Pieces: But, after having given such a Character of them, the Reader, perhaps, would not excuse me, if I should chuse that Sections without putting it in his Power to judge for himself, by sending a Specimen from a Book, which, to treat a Man has told us, ought to be consulted by whoever pretends to write upon this Subject. I will therefore subjoin two Discourses between Alexander and the Indian Philosopher, which, I think, will be sufficient to satisfy his Curiosity, and discharge me effectually of this Part of my Task.

1. See the Author's Preface to the second Edition, in Strab., lib. xv. c. 1. 2. See the Author's Preface to the second Edition, in Strab., lib. xv. c. 1. 3. See the Author's Preface to the second Edition, in Strab., lib. xv. c. 1.

11. "When Alexander had heard, from the Report of Onofritus, whom he had sent to him, that neither Promises nor Threats would induce Dandamis to come to him, he was the more desirous of seeing one, who, tho' naked and old, was able to overcome the Conqueror of so many Nations. He went, therefore, with a few of his Friends to the Wood where the Philosopher was; and when he drew near it, alighting from his Horse, bringing aside his Crown, and every thing that had an Appearance of Pomp or Shew, he went alone to the old Brachman, and sat himself down at his Feet. God save you, Dandamis, said he: I am come to you, because you refused to come to me. And to what Purpose do you come? said he: What is there in our Solitudes that you can desire to carry away? What you want, we have; and what we have is not necessary to you. We honour God, love Man, neglect Gold, and in contempt Death. You, on the other hand, fear Death, honour Gold, hate Man, and condemn God. Teach us, replied Alexander, some of your Wisdom: They say, that you are called Divinity; and that you often confer with God himself. Now, I would willingly know in what you excel the Greeks; in what you are better; in what wiser than other Men. And I, returned Dandamis, would willingly bellow on you what I have received from God, but that I know your Hofom affords not Room for such a Gift: Thy Mind is filled with vain Desires, and insatiable Avarice, and a diabolical Thirst of Empire; all which fight against me, who would endeavour to extract them from your Breast. You are desirous of going to the Ocean, and after that would conquer some other Part of the World, to satisfy those Desires which would afflict you with Sadness when you had no more to conquer. How then is it possible I should content you, who all the World were subjected to your Service, would not even then be at Rest? You are made much less than the World; and yet you would conquer all, and obtain whatever Mankind possess; but, after all, you could have no more than you see in living or, or let you sit upon. The case would be exactly the same if we should remove him hence; for you and I would then be still equal in our Possessions. I desire not to use the Elements of Air, Water, and Earth, as other Men use them; and therefore whatever I have I sell; for if you were possessed of all the Rivers of the World, you could only drink Water from them. I do. If you will but learn Wisdom of me, you will want nothing; for he has all who desires no more than he has. For it is Desire that is the Mother of Pain; which, without knowing the proper Remedy, yields to cure; for whoever seeks to possess all Things, never find what he seeks; and, meeting with no Rest what he possesses, but expecting it from what is yet to be possessed, he still excrecates himself more and more. You will have the greatest Wealth possible, and enjoy it with the utmost Pleasure if you would live thus with me; for if you could taste the Wisdom I teach you, you would possess all the Riches I have. The Heavens serve me for a Canopy, the Earth is my Bed, I drink out of the River, and the Field here supplies me with Food; I do not eat other Animals like a Lion, nor do the Remains of other Animals continue in me, as to make my Body their Sepulchre; but I feed sparingly upon Fruits, as on the Milk my Mother gave me. But you are desirous of knowing what it is I possess more than other Men, and how far I am wiser. Tell me, as you see, agreeable to the Manner in which I was created: I live as I came from my Mother's Womb, naked, without Riches, and without Care. I know what God has done, and I know what will be done to him. You, on the other hand, are amazed at the Production of Things to come, because you understand not the Works of God, which he sheweth you every Hour, such as Famine, Plagues, Wars, Droughts, Rains, and fruitful Seasons; all which I know how, whence, and to what End they come: Which Knowledge is com-

communicated to me by Providence, and it rejoices me, that God is pleased to communicate his Works to my Understanding, so that I know, and am persuaded of his Justice. If, at any time, Kings address themselves to me, as to a Messenger of God, under the Apprehensions of War, or any other Evil, I pray to God in their Behalf; and, having restored their Courage by Words of Consolation, I send them back with some comfortable Message. Tell me which is best, to kill and destroy Men, and thereby obtain a Fame for Mischief, or, by preserving them, and doing them good, to acquire that of a Benefactor? And which agrees best with the Character of the Sons of God, to war against and overturn what God hath established, or, rather, peaceably to support, and earnestly endeavour to restore, whatever is decayed, as the Servant of the Deity? It is not, O King, either thy great Power, thy immense Wealth, the Multitude of Elephants, the costly Robes that are about thee, the numerous Armies under thy Command, or what thou hast taken from other Nations in War and Battle, that can assist thee, but a proper Attention to my Words, and a due Regard to the Counsels I give thee. Neither am I afraid of thee, O Alexander, though thou shouldst kill me; for I should go immediately to God, who knows my Cause, and from whom my Life has not been hid: For what can there be hid from him? The Sun, the Moon, the Stars, all serve him for Eyes; and he will judge whoever does an Injury to his Neighbour; neither is there any Place to which thou canst fly, to avoid his Justice in that State of Retribution. Therefore, O Alexander, seek not to overturn what God has established, or to ruin and deface what it hath pleased him to adorn: Neither shed the Blood of Citizens, nor lay waste whole Nations, that they may feel the Weight of thy Power: For, is it not better for thee to live, than to make others die, and thereby render your own Death a Blessing to others? Tell me, why, having but one Soul thyself, thou wouldst destroy whole Nations? Why shouldst thou rejoice at filling the World with Mischief? Why shouldst thou regard the Distresses of others as thy Gain? Why shouldst thou smile, because others weep? Share here with me my naked Solitude, and thereby enrich thyself at once, and others. Heretofore renounce all Wars, and embrace the Peace which Submission to Providence bestows: Hast no longer of your Power of doing Mischief; but enjoy here with us all the real Pleasures of Life: Throw off that Garment made of a Sheep's fleece; I'll be no longer proud of wearing the Spoils of a dead Beast; you will then, by imitating us, do Honour to yourself, and become such a one as you were created to be; for the Soul exercises itself in Virtue, when in this State of Solitude. Prefer therefore, King Alexander, our seemingly savage Life, in which you will be happier than you have hitherto been. Even now your Macedonians expect you to raise new Wars, to slaughter other Nations, and to despoil fresh Countries: for they are sad, if other People be late; unquiet, if they make for the rest of the World; and, having no other View but their own Gain, regard not what is a great Injustice they commit, to they augment it. How happy a Life shouldst thou lead, by doing what God wouldst thou shouldst do, pursuing thy own Good, without the Office to others! Now, while it is yet in your Power what I say, and listen to the good Advice I give you: For, if thou art dead to these Admonitions, I shall hereafter, when we are delivered out of the World, see thee suffering in the Air, and bitterly cursing the Devils, brought upon thyself, by inflicting them upon others. You will then think of my Words; and, in your next Year's Horte and Foot will follow you there, to see how your Clansons of thoub your Meditations, which were wholly employed in the Remembrance of Mischief, done, as thou wilt then feel, to thy ill: For well have the put Punishments which God inflicts upon such Men. You will then say to me, Dandamis gave thee good Counsel: For dead will be present to thy

View all the Murders thou hast committed, or caused to be committed; and of these how canst thou possibly excuse thyself? All this Alexander heard patiently, and without the least Displeasure; but an evil Spirit hindered him from profiting by this good Advice. He answered therefore the Philosopher thus: "I am thoroughly sensible of the Truth of all you have said; for, descending of an holy Race, thou are here conveniently situated, where, without any Trouble, thou enjoyest with the greatest Pleasure the whole Circle of thy Days, and possessest all the Riches of Nature in a perfect and uninterrupted Peace. I, on the other hand, live in the midst of Tumult, and of Toils: For much I fear even those, who by their Office ought to defend me from Fear; and seldom raise the Apprehensions of my Enemies so high, as those I have of my Friends; for I am daily in greater Dread of their Treachery, than of the Force of my Foes. Thus, the Necessity of having Guards for my Safety, and the Dread that these very Guards may deprive me of Safety, I live in perpetual Anxiety. My Days are spent in troubling, distressing, and destroying other People; and in the Nights I am filled with Terrors and Suspensions, lest, by some sudden and secret Enemy, I should be cut off myself. If I put to Death those I fear, I become hateful; if again I am mild and gentle, I am contemned: And how, out of such a Variety of Dangers, I shall be able to snatch myself, I know not; for if I fought to quit the World, and to live with you in the Deserts, it would not be in my Power. It is impossible for me to quit the Station I am in; and therefore I hope that this will excuse me to God, who placed me in this Station, and made me what I am. But thou, O wife and good Man, who have heard my Complaints, and soothed my Grievs by the Wisdom of thy Words, dissuading me from War and Battles, be pleased to accept the Gifts I offer; and do not contemn me so far, as to reject the Tribute I bring to thy Wisdom." As he spake these Words, the Slaves, who waited with the Pretents, brought them in, and spread abroad great Variety of Gold and Silver Vessels, rich in themselves, and exquisitely wrought; together with large Quantities of Oil and Bread. At the Sight of all this, Dandamis could not help smiling. At last he delivered himself thus: "Who do you think could persuade the Birds, that haunt these Woods, to the Use of Gold and Silver, and to sing the better for it? Or, if this you conceive impossible, why should you judge me to be worse than they? Why should I accept from you what I cannot either eat or drink? Why should I take what I can make no Use of? Why retain under my Care what cannot contribute to my Benefit? and to bind and ensnare myself, who have hitherto been free; for I desire not to purchase, in any Shape, what in these Solitudes I cannot sell. God bestows upon me here Fruits on every Side, which I pull and eat freely. God tells Man nothing for Gold; nay, he even bestows his Wisdom freely upon such as are able and qualified to receive it. I am covered with that Garment with which my Mother brought me forth. The Air I freely breathe, and discern my Limbs at Liberty, while unrestrained by any Garment; and Honey cannot be sweeter to the Taste, than whatever from the Relish of Hunger I eat and drink. If these Cakes were good before, why were they exposed to the Fire? For my part, I suffer not that Element to touch what I eat, any more, than in the Flesh of other Animals, I chuse to eat at second-hand what they have eaten before: Take then away these Cakes that are baked; but, that I may not seem to despise every thing you offer me, I am content to accept this Oil." Dandamis having said this immediately rose; and going into the Wood, gathered up a considerable Quantity of dry Sticks, which having railed in an Heap, he set Fire to them; and then, turning to Alexander, said, "The Brachman hath all Things, and enjoys Abundance, because he enjoys all he desires." Then pouring Oil into the Fire, while it burnt up very freely, he sung an

“ those which are more difficult and complex. The last, which is esteemed the Perfection of all Sciences, is styled *Veduta* or *Vendata*; which is, as much as to say, the Close, or the Sum of all Things. This is a kind of metaphysical Theology, which the *Brachmans* receive not with a Spirit of Inquiry, but with profound and implicit Submission, as a kind of Divine Doctrine, which is, in its Nature, superior to all Examination or Dispute. Thus, these Men suffer their Wisdom to be bounded by that of their Ancestors, which, as they desire not to transcend, it is very probable they do not equal.”

10. I have treated this Subject more largely, because I find many Things omitted by very great Men, who have undertaken to give us Accounts of the *Brachmans*, their Learning, Manners, and the particular Turn of their Philosophy. The celebrated *Bayle* has vouchsafed them Two Articles in his Dictionary, but seem in both to have aimed more at exposing the Contradictions of such ancient Writers as have mentioned these Philosophers, than to give his Readers any distinct and methodical Account of them from what he had himself read. In one of his Articles indeed he tells us, that the Book, written by *Palladius* on this Subject, deserves to be consulted; and in his Notes informs us, that this Author was published from a Manuscript in the Royal Library, by Sir *Edward Byke*, a Cleric of King at Arms; and furnishes us with some Remarks on the Fictions of the Book, or rather on the Change of the Title Pages for there never was but one Edition, which I have read with a great deal of Care; and am from thence enabled to give the Reader some Lights, beyond what he can receive from Mr. *Bayle*.

The Editor of that Book collected every thing that had been written upon this Subject, of which he composed a very curious Miscellany, addressed to the Earl of *Clarendon*, then Lord High Chancellor of *England*. The Treatise of *Palladius* of the *Indian Nations*, and of the *Brachmans*, was indeed never published before; yet it contains very little, if any thing, new upon the Subject, since the Discourse of *St. Ambrose*, of the Manners of the *Brachmans*, which is addressed to one *Palladius*, and had been long before published in *Latin*, contains the Substance of what is related by the other in *Greek*; but the Letters of *Dindamis* or *Dandamis*, which are added to these Two Pieces, are absolutely new, and never were published but by Sir *Edward Byke*; for which Reason I thought the Substance of them would be acceptable to the Reader, and therefore I inserted it in a former Section.

Strabo mentions the Application of *Alexander* to this Philosopher, and to does *Plutarch*; but both *Ambrose* and *Palladius* gives us a large Account of a Conference that Monarch had with this *Brachman*, which they received from the *Indians* themselves; which is the more probable, because it is certain they had formerly Books upon this Subject, which, very probably, contained the very same Account that are preserved to us in these: They are much more curious, and will afford the inquisitive Reader far greater Satisfaction, than any thing that I know of, that has been written of this kind; and therefore I wonder, that so judicious and so learned a Man as Mr. *Bayle* did not rather chuse to give us some Quotations from these scarce and valuable Pieces, than from Books that were in every body's Hands, and had been so often quoted before.

The Bounds prescribed to this Work, and the many Things that are to be treated of in this single Chapter, will not allow me to insert the Whole of either of these Pieces: But, after having given such a Character of them, the Reader, perhaps, would not excuse me, if I should close this Section without putting it in his Power to judge for himself, by adding a Specimen from a Book, which, to great Advantage tells us, ought to be consulted by whoever pretends to write upon this Subject. I will therefore subjoin the Dialogue between *Alexander* and the *Indian* Philosopher; which, I think, will be sufficient to satisfy his Curiosity, and discharge me effectually of this Part of my Task.

11. “ When *Alexander* had heard, from the Report of *Onofritus*, whom he had sent to him, that neither Promises nor Threats would induce *Dindamis* to come to him, he was the more desirous of seeing one, who, tho’ naked and old, was able to overcome the Conqueror of so many Nations. He went, therefore, with a few of his Friends to the Wood where the Philosopher was; and when he drew near it, alighting from his Horse, laying aside his Crown, and every thing that had an Appearance of Pomp or Show, he went alone to the old *Brachman*, and sat himself down at his Feet. God save you, *Dindamis*, said he: I am come to you, because you refused to come to me. And to what Purpose do you come? said he: What is there in our Solitudes that you can desire to carry away? What you want, we have; and what we have is not necessary to you. We honour God, love Man, neglect Gold, and condemn Death. You, on the other hand, fear Death, honour Gold, hate Man, and condemn God. Teach us, replied *Alexander*, some of your Wisdom: They say, that you are full of Divinity; and that you often confer with God himself. Now, I would willingly know in what you exceed the *Greeks*; in what you are better; in what wiser than other Men. And I, returned *Dindamis*, would willingly bestow on you what I have received from God; but that I know your Bosom affords not Room for such a Gift: Thy Mind is filled with vast Desires, and insatiable Avarice, and a diabolical Thirst of Empire; all which fight against me, who would endeavour to extract them from your Breast. You are desirous of going to the Ocean, and after that would conquer some other Part of the World, to satisfy those Desires which would afflict you with Sadness when you had no more to conquer. How then is it possible I should content you, while all the World were subjected to your Service, would not even then be at Rest? You are made much less than the World; and yet you would conquer all, and obtain whatever Mankind possess; but, after all you could have no more than you see me lying on, or see you fit upon. The case would be exactly the same if we should remove to me hence; for you and I would then be still equal in our Possessions. I desire only to use the Elements of Air, Water, and Earth, as other Men use them; and therefore whatever I have I sell; possess; for if you were possessed of all the Rivers of the World, you could only drink Water from them as I do. If you will but learn Wisdom of me, you will want nothing; for he has all who desires no more than he has. For it is Desire that is the Mother of Poverty, which, without knowing the proper Remedy, you seek to cure; for whoever seeks to possess all Things never finds what he seeks; and, meeting with no Rest what he possesses, but expecting it from what is yet to be possessed, he still excruciates himself more and more. You will have the greatest Wealth possible, and enjoy it with the utmost Pleasure, if you would live thus with me; for if you could taste the Wisdom I teach you, you would possess all the Riches I have. The Heavens serve me for a Canopy, the Earth is my Bed, I drink out of the River, and the Field here supplies me with Food; I do not eat other Animals like a Lion, neither do the Remains of other Animals continue in me, and so make my Body their Sepulchre; but I feed naturally upon Fruits, as on the Milk my Mother gave me.

“ But you are desirous of knowing what it is I possess more than other Men, and how far I am wiser than you, as you see, agreeable to the Manner in which I was created: I live as I came from my Mother’s Womb, naked, without Riches, and without Care. I know what God has done, and I know what will be done to him. You, on the other hand, are amazed at the Prediction of Things to come, because you understand not the Works of God, which he sheweth you every Year, such as Famine, Plagues, Wars, Droughts, Rains, and fruitful Seasons; all which I know how, whence, and to what End they come: Which Knowledge is com-

 that God is pleased to communicate his Works to my
 Understanding, so that I know, and am persuaded of
 his Justice. If, at any time, Kings address themselves
 to me, as to a Messenger of God, under the Appre-
 hensions of War, or any other Evil, I pray to God in
 their Behalf, and, having restored their Courage by
 Words of Consolation, I send them back with some
 comfortable Message.
 Tell me which is best, to kill and destroy Men, and
 thereby obtain a Fame for Mischief, or, by preserving
 them, and doing them good, to acquire that of a Bene-
 factor? And which agrees best with the Character of
 the Sons of God, to war against and overturn what
 God hath established, or, rather, peaceably to support,
 and earnestly endeavour to restore, whatever is decayed,
 as the Servant of the Deity? It is not, O King, either
 thy great Power, thy immense Wealth, the Multitude
 of Elephants, the costly Robes that are about thee, the
 numerous Armies under thy Command, or what thou
 hast taken from other Nations in War and Battle, that
 can assist thee, but a proper Attention to my Words,
 and a due Regard to the Counsels I give thee. Neither
 am I afraid of thee, O *Alexander*, though thou shouldst
 kill me; for I should go immediately to God, who
 knows my Cause, and from whom my Life has not been
 hid: For what can there be hid from him? The Sun,
 the Moon, the Stars, all serve him for Eyes; and he
 will judge whoever does an Injury to his Neighbour;
 neither is there any Place to which thou canst fly, to
 avoid his Justice in that State of Retribution.
 Therefore, O *Alexander*, seek not to overturn what
 God has established, or to ruin and deface what it hath
 pleased him to adorn: Neither shed the Blood of Ci-
 tizens, nor lay waste whole Nations, that they may feel
 the Weight of thy Power: For, is it not better for
 thee to live, than to make others die, and thereby
 render your own Death a Blessing to others? Tell me
 why, having but one Soul thyself, thou wouldst destroy
 whole Nations? Why shouldst thou rejoice at filling
 the World with Mischief? Why shouldst thou
 regard the Distresses of others as thy Gain? Why
 smile, because others weep? Share here with me my
 naked Solitude, and thereby enrich thyself at once, and
 others. Hecetoward renounce all Wars, and embrace
 the Peace which Submission to Providence be-
 flows: But no longer of your Power of doing Mis-
 chief, but enjoy here with us all the real Pleasures of
 Life: Throw off that Garment made of a Sheep's fleece,
 and be no longer proud of wearing the Spoils of a
 dead Beast: you will then, by imitating us, do Ho-
 neur to yourself, and become such a one as you were
 created to be; for the Soul exults itself in Virtue,
 when in this State of Solitude. Prefer therefore, King
Alexander, our seemingly savage Life, in which you
 will be happier than you have hitherto been. Even
 now your *Macedonians* expect you to raise new Wars,
 to slaughter other Nations, and to despoil fresh Coun-
 tries: but they are sad, if other People be late; uneasily
 they make for the rest of the World; and, having
 no other View but their own Gain, regard not what
 of a great Injustice they commit, to they augment
 their Misery.
 How happy a Life shouldst thou lead, by doing what
 God intended thou shouldst do, pursuing thy own
 Good, without doing any harm to others! Now, while it is
 yet in my power, what I say, and listen to the good Ad-
 vice I give thee: For, if thou art deaf to these Admo-
 nitions, I shall hereafter, when we are delivered out of
 the World, see thee suffering in the Air, and bitterly
 cursing the Evils I brought upon thyself, by inflicting
 Evils on others. You will then think of my Words,
 as you see of an Horse and Foot will follow you there,
 and the same Clansons of flesh your Meditations, which
 are now wholly employed in the Remembrance of Mis-
 chief done, as you will then feel, to thyself: For well
 know the just Punishments which God inflicts upon
 the Wicked. You will then say to me, *Dandamis* gave
 me good Counsel: For men will be present to thy

View all the Murders thou hast committed, or caused
 to be committed; and of these how canst thou possibly
 excuse thyself?
 All this *Alexander* heard patiently, and without the least
 Displeasure; but an evil Spirit hindered him from profiting
 by this good Advice. He answered therefore the Philo-
 sopher thus: "I am thoroughly sensible of the Truth
 of all you have said; for, descending of an holy Race,
 thou are here conveniently situated, where, without any
 Trouble, thou enjoyest with the greatest Pleasure the
 whole Circle of thy Days, and possessest all the Riches
 of Nature in a perfect and uninterrupted Peace. I, on
 the other hand, live in the midst of Tumult, and of
 Toils: For much I fear even those, who by their Of-
 fence ought to defend me from Fear; and seldom raise
 the Apprehensions of my Enemies so high, as those I
 have of my Friends; for I am daily in greater Dread
 of their Treachery, than of the Force of my Foes,
 Thus, between the Necessity of having Guards for my
 Safety, and the Dread that these very Guards may de-
 prive me of Safety, I live in perpetual Anxiety.
 My Days are spent in troubling, distressing, and de-
 stroying other People; and in the Nights I am filled
 with Terrors and Suspensions, lest, by some sudden
 and secret Enemy, I should be cut off myself. If I
 put to Death those I fear, I become hateful; if again
 I am mild and gentle, I am contemned: And how,
 out of such a Variety of Dangers, I shall be able to
 snatch myself, I know not; for if I fought to quit the
 World, and to live with you in the Deserts, it would
 not be in my Power. It is impossible for me to quit
 the Station I am in; and therefore I hope that this will
 excuse me to God, who placed me in this Station, and
 made me what I am. But thou, O wife and good
 Man, who have heard my Complaints, and soothed
 my Grievs by the Wisdom of thy Words, dissuading
 me from War and Battles, be pleased to accept the Gifts
 I offer; and do not condemn me so far, as to reject the
 Tribute I bring to thy Wisdom."
 As he spake these Words, the Slaves, who waited with
 the Presents, brought them in, and spread abroad great
 Variety of Gold and Silver Vessels, rich in themselves, and
 exquisitely wrought; together with large Quantities of
 Oil and Bread.
 At the Sight of all this, *Dandamis* could not help smile-
 ing. At last he delivered himself thus: "Who do you
 think could persuade the Birds, that haunt these Woods,
 to the Use of Gold and Silver, and to sing the better
 for it? Or, if this you conceive impossible, why should
 you judge me to be worse than they? Why should I ac-
 cept from you what I cannot either eat or drink? Why
 should I take what I can make no Use of? Why retain
 under my Care what cannot contribute to my Be-
 nefit? and so bind and mangle myself, who have hitherto
 been free; for I desire not to purchase, in any Shape,
 what in these Solitudes I cannot sell. God bestows upon
 me here Fruits on every Side, which I pull and eat
 freely. God tells Man nothing for Gold; nay, he
 even bestows his Wisdom freely upon such as are able
 and qualified to receive it. I am covered with that
 Garment with which my Mother brought me forth.
 The Air I freely breathe, and esteem my Limbs at Li-
 berty, while unrestrained by any Garment; and Honey
 cannot be sweeter to the Taste, than whatever from the
 Relish of Hunger I eat and drink. If these Cakes were
 good before, why were they exposed to the Fire? For
 my part, I suffer not that Element to touch what I eat,
 any more, than in the Flesh of other Animals, I chuse
 to eat at second-hand what they have eaten before:
 Take then away these Cakes that are baked; but, that
 I may not seem to despise every thing you offer me, I
 am content to accept this Oil."
Dandamis having laid this immediately rose; and go-
 ing into the Wood, gathered up a considerable Quantity
 of dry Sticks, which having raised in an Heap, he
 set Fire to them; and then, turning to *Alexander*, said,
 "The *Brachman* hath all Things, and enjoys Abundance,
 because he enjoys all he desires." Then pouring Oil into
 the Fire, while it burnt up very fiercely, he sung an
 Hymn

Hymn to God, the immortal Giver of all good Things, thanking him for the manifold Gifts he had bestowed. Which Things when *Alexander* had seen and heard, he went away astonished, raving all his Gifts, except the Oil, to be carried back. At the same time, *Dandamis* gave him many other Pieces of sound Advice, desiring him to remember, that the *Brachmans* were such as himself, and not such as *Calanus*, whom they esteemed the worst of Men, for having deserted their Society, to embrace the Manners of the *Greeks*.

There is great Reason to believe, that these Facts are reported but confusedly, and with many Variations, by the Authors I have cited; but as there appears to be a great Certainty of their coming originally from the *Brachmans* themselves, they deserve to be attentively considered, because they very plainly prove, that the Correspondence between *Alexander* and *Dandamis* was very famous amongst those People, and had made a great Impression upon them. As to the modern *Bramins*, it is certain, that they fall very short of their Predecessors in Learning, and have very much corrupted their religious Principles, by the Liberties they have taken; which we need not wonder at, since the same thing has happened to almost every kind of Philology; and, we may likewise add, every kind of Religion.

It is not evident, from any of the Accounts given us by the Antients, that the *Brachmans* had any Book or Writings which contained the Principles of their Science: And the contrary seems probable from the Nature of their Education. The modern *Bramins*, however, tell us, that the first Being created by God was *Brahma*, the Author of their Sect; of whom they have many Images, which have commonly four Heads, because he is said to have been the Author of a Book, containing four Chapters, or Sections; wherein are contained the Principles of the Religion and Philosophy which he taught. This Book is still extant amongst them, and is what we may call their Bible; neither is it absolutely unknown to other Eastern Nations, having been translated out of the Eastern Tongue, by one *Abubacumath a Greget*, who embraced the *Mohammedan* Religion, into *Arabic*, under the Title of *Morat al ma'ini*; that is, *the Mirror of Science*: But they say, that the true Sense of it cannot still be understood, without the Assistance of some learned *Bramin*.

* The Name of this Book, in the *Indian* Language, is *Ashtak*; which is as much as to say, the Elders of Living Waters. It consists of two distinct Treatises, each subdivided into ten Chapters, and in this Book their *Theology*, *Philosophy*, and *Policy*, are contained chiefly in *Fables* and *Legends*, so that ordinary Readers can make little or no Use of it.

All these, however, are Inventions far later than the Times of which we are now speaking; and, as we have hinted before, the old *Brachmans*, tho' they took their Name from the Word *Brahma*, yet they did not consider that as the Name of any particular Person, but as expressive of that Character which they affected; the natural Signification of that Word, in their old Language, being no more than a *Man enlightened*, or one filled with divine Science. As they had no Books, much less had they Images; neither is it clear, that they made Use of any fabulous Theology, in order to amuse the People; but, on the contrary, told them in plain and pathetic Terms, what they conceived fit for them to know and practise.

All the rest came in by Degrees: And this is the true Reason, why it is so difficult for the modern *Bramins* to give any rational Account of that Doctrine which they preach to the People, because it is all invented, and has not the least Relation to that secret and solid Science, which the most learned of them still retain by Tradition from their Ancestors. We may from hence easily apprehend, why the Lectures of some learned *Bramins* are necessary to render the Book before mentioned intelligible: The Purpose of those Lectures, no doubt, must be to explain away the best Part of that celebrated Fable, by shewing that whatever is delivered therein, relating to Idols, Saints, and Demigods, are, in Fact, but Parables relating to the Attributes of the true God, and his Providence; concerning which their Ancestors discoursed clearly, plainly, and without making use of any of these Figures or Fables.

Having thus used my utmost Endeavours to fit this Subject in a clear Light, and to reduce the scattered Fragments of ancient Authors, relating thereto, in such a Method as that they might contribute to illustrate each one, and leave nothing obscure, I shall proceed next to the *Animals* in the *Indies*, as they are described to us by other Authors; and shall fairly shew wherein they deviate from Truth; wherein their Accounts have been mistaken by the Moderns; and in what Cases their Descriptions, though heretofore rejected with Contempt, have of late Years, and upon a stricter Examination, been again admitted as more and more suitable to Truth, than those which had been hastily received in their Read, upon the Credit of those who were not proper Judges of what they saw.

SECTION XIII.

Of the Land-Animals in the East-Indies, as described by ancient Authors, compared with modern Writers: And some Remarks upon both.

1. A Description of the Elephant; with a particular Account of the different Methods of hunting and killing him, as described by the antients. 2. The modern Method of hunting Elephants, described to us by the Authors from Louis XIV. to the King of Siam. 3. The great sagacity, wonderful Memory, and Fidelity of this Creature. 4. Some other singular Properties of the Elephant, from ancient and modern Remarks. 5. The Methods of Elephants, and their Aversion to Indulgences in the manner of eating. 6. The Nature of the Indian Elephant. 7. Some miscellaneous Observations as to the Size, Value, and medicinal Use of the Elephant. 8. An exact Description of the Rhinoceros, from ancient and modern Authors. 9. An Account of his Size, Food, Manner of living in the Woods; and of the Uses of his Horn, Fat, &c. 10. Some extraordinary Passages in modern Travels, relating to this Animal. 11. Of the Lion and the Lynx. 12. Of the Tiger, as described both by the Antients and Moderns. 13. The remarkable Instances of the Strength and Agility of these Creatures. 14. A particular Account of the Leopard and Panther; both from old Authors and new. 15. Of the Camel, its Size, Strength, and other Properties; and the Uses for which it serves in the Indies. 16. Of the Donkey, and its religious Sanctity. 17. An exact Description of the Giraffe, or Camelpard, and what is known of its other Properties; and the Uses for which it serves in the Indies. 18. Of the Dog, and its various and singular Properties. 19. An Account of Apes, Monkeys, &c. with some Conjectures as to the Mistakes of the Antients, and the wild Men, Satyrs, &c. 20. Of the Musk-Cat, and the various Qualities of that Animal. 21. Of the Dragons in the Indies; the strange Reports of the Antients concerning them, how far they are exploded by the Discoveries of the Moderns. 22. Of the Gryphon of the Antients, and the

concerning it. Errors that have they are supported.

I T has, in the Peo- lar in all Re- some Measure due to yet ought to be chief- fusions, since we h- racters given of in- case 'ent Pictures of the Truth, India was really happy in one- carely pressed thro- other Riches, the In- inclination to wander kind of Wants to g- eign Climates. The- and Riches, we nat- urally the Work o- thor too, that preten- remarkable.

concerning it. 23. The Camoleon particularly described; its remarkable Properties, and the Causes of those Errors that have been spread about it. 24. Of the Ants of India, the Wonders related of them, and how far they are supported by Facts. 25. Various Remarks, and curious Observations, on the Subject.

It has, in the foregoing Sections, been fully shewn, that the People of the Indies were very singular in all Respects. This, tho' it might be in some Measure due to Education, and other Accidents, yet ought to be chiefly ascribed to their Nature and Constitutions, since we know by Experience, that the Characters given of most Nations by ancient Authors are excellent Pictures of their even at this Day. To try the Truth, India was alike singular in all Things, and particularly happy in one, that while the rest of the World earnestly pressed through all Obstacles to come at a Share of her Riches, the Inhabitants of India themselves felt no Inclination to wander, and were never compelled by any kind of Wants to go and proclaim their Indigence in foreign Climates. The accurate Description of the Singularities and Riches, with which this Country abounded, was naturally the Work of every Traveler; and of every Author too, that pretended to write any thing of a Region so remarkable.

Amongst these, it is natural to suppose, that, next to the Men, the Animals struck them first; and of these, that Animal most, which of all the rest was, in every Respect, the most extraordinary. This, without Question, was the Elephant, a Creature found only in the Indies, and in the southern Provinces of Africa. The Indian Elephant, however, was in every Respect superior, not only in the Eyes of Men, but even of those Creatures themselves, if we may credit what some Authors relate.

These Creatures are, generally speaking, either of a dark Colour, or of a white; but the latter are very rare.

Their Bodies are heavy and gross, and far enough from being beautiful in their Appearance: Their Eyes are like those of a Hog; their Legs and Feet resemble Columns; yet they bend their Fore legs when they rest themselves or sleep: They cannot bend their Heads or turn their Necks; their Ears lie pretty much behind, and are very close: Their Trunk is as long as their Fore-legs, and hangs down to the Ground; it is strong, tough, and flexible, they can open and shut it, and by the Help of this Couplet, like small Points, they are able to take up every thing, a Pin, for Instance, or a Grain of Mustard-seed: They make use of their Trunks in Eating and Drinking, conveying with them what they take into their Mouths. The whole Force of the Animal chiefly consists in its Member, in which if he be deeply wounded the Creature dies. There lies behind the Ear a little Cavity, covered with a Membrane no thicker than the Head of a Drum, and any Wound in that Part also is mortal. At the two Corners of the Mouth grow two large Teeth, and between these the Trunk is placed, in the Male: These Teeth, or large Teeth, are six or seven Foot long; but in the female Elephants, they rarely exceed a Foot. They feed on Grass, Nuts, Sugar canes, and other Things of a like Nature; and they are chiefly afraid of Smoke or Fire, of a Lion, and of some kind of Serpents.

They are naturally as wild as Tygers, or any other Beasts, and are therefore, like them, caught by Hunting, by the Call of *Indians*, which, as we have before shewn, is the most useful Part of their Profession. The Manner in which they hunted them is very remarkable, and is thus related by good Authors: In the first Place, they inclosed a Plain somewhat less than a Mile over, with a large and deep Ditch, over which, in several Places, there were wooden Bridges; and in the midst there were Cabins erected for the Reception of the Elephants. Into this Inclosure they conducted some female Elephants, to whom the Males were sure to come in the Night: As soon as the Hunters heard them, they withdrew, and took up the Bridges, summoning the Inhabitants of the neighbouring Villages to assist in bringing them away. Some Days

after, when they judged them to be sufficiently weakened by Hunger and Thirst, they returned, mounted upon tame Elephants, with which they pursued and fatigued them, till they were quite spent. Then they bridled them, and gave them some Cuts over their Jaws, and over their Neck, that they might humble them more effectually; and then, mounting them, they forced them by Blows to proceed to their Stables.

They used, besides this, another Method as singular as the former: They hunted them out of the Forest with a great Noise, and drove them before them all Day long: When it was Evening, they drove them back again; but, in the mean time, the Huntsmen had taken care to set the Bruthood on the Skirts of the Forest on Fire. The Elephants, being extremely afraid of that Element, when they drew near the Flames, were so astonished that they stood stock-still, and suffered themselves to be easily taken; and then they beat them till they grew tame. This, however, seldom answered the End at once; and therefore, to complete the Business, they fastened them to Pillars, and there by Hunger and Beating made them perfectly tame. Sometimes, however, the Loss of their Liberty threw them into a deep Melancholy, that they began to pine and languish, refusing all Sustenance, and seeming disposed to seek a Remedy for their ill Usage in Death. Their Keepers, in this Case, had Recourse to Singing and Music; which soon dissipated the Grief of the Animal, and brought it to its Stomach again.

Pliny assures us, that the *Troglodytes*, who live on the Frontiers of *Ethiopia*, and who hunted these Creatures merely for the sake of feeding upon them, did it in quite another Manner: They got up into high Trees, and there they waited the coming of the Elephants in Herds: They suffered all to pass them but the hindmost; upon which he who had the most Courage, and was esteemed most active, leapt down on the Back of this Elephant; and striking his Heels into the Creature's Sides, and laying hold of the Tail with his left Hand, he sat fast: Then bending backwards, with a Hatchet which he held in his right, he hamstringed the Elephant on one Side; and as he grew lame thro' Loss of Blood, and began to slacken his Pace, the Man got down, and took his Leave with another Stroke with his Hatchet at the Sinews on the other Side. He afterwards tracked the Elephant by his Blood; and, having found where the Creature lay, seized him when dying, and cut him to Pieces. Of this Sort of Venison those *Troglodytes* were so fond, that they seldom eat any thing else: Nor would they listen to any Proposals that were made them by *Ptolemy Philadelphus*, to forbear destroying Elephants; for the preserving and taming of which that Monarch had a particular Passion. The Elephants in the *Indies* were never hunted in this barbarous Manner.

2. The modern Method of hunting Elephants is particularly described by the Embassadors sent by the late *Louis XIV.* to the King of *Siam*. They say that it is a Diversion in its Nature truly royal; and from their Account of it the Reader will be probably of the same Opinion. The Ground originally encompassed, say they, is in Extent near twenty Leagues; and this is bounded by a double Row of Fires, which burn all Night. At each Fire, that is to say, at the Distance of about ten Yards, there are two Men posted with Pikes; and the intervening Space is filled up by Elephants trained to War, and small Pieces of Cannon. When the Hunting begins, a Body of armed Men enter the inclosed Space, and by Degrees proceed to frighten the wild Beasts. The Fire, the Elephants, and the small Pieces of Cannon, gradually advance, till such time as they are very near the wild Elephants; and then they begin to attack them with their Lances. When one of them is surrounded and taken, the War Elephants, which are trained for this Purpose, place themselves on each Side of him;

¹ This Description is taken from a Manuscript in the Library of the Royal Academy of Sciences at Paris. ² This Description is taken from a Manuscript in the Library of the Royal Academy of Sciences at Paris. ³ *Pliny* Hist. Nat. lib. viii. c. 37. ⁴ *Pliny* Hist. Nat. lib. viii. c. 37. ⁵ *Pliny* Hist. Nat. lib. viii. c. 37. ⁶ *Pliny* Hist. Nat. lib. viii. c. 37.

and, if he is troublesome, beat him soundly, but without wounding him; while others go behind, and push him along: Then the Men who are employed in this Hunting, fetch the Remainer; in like manner tie them with Ropes; and, mounting them, force them along to a Post, to which they are fastened, till, by Hunger, they are made as tame as Sheep. At this hunting they took twenty. The King of Siam, then reigning, had revived this Method of hunting Elephants, was present himself, mounted on an Elephant of War, and gave his Orders. The Embassadors were informed by his Prime Minister, that this Prince had at this time two thousand Elephants of War, and forty-five thousand Men, in his Service.

Father *Tachard*, who was of this Embassy, tells us farther, that there was a kind of Amphitheatre, which was built in the Form of a long Square, walled on every Side, and a convenient Terrace on the Top, on which the Spectators were placed. On the Inside, there was a kind of Paddock, composed of large wooden Pillars, fixed in the Earth, at the Distance of about two Feet one from another; behind which the Huntsmen retired, when pursued by the enraged Beast. A large Extent of Ground was taken in towards the Country, and over-again it, near the City, a smaller Part; at the End of which there was a long Passage, so narrow that an Elephant could not pass thro' it without Difficulty; which led into a Court where the Elephants were tamed. On the Day appointed for the Chase, the Huntsmen entered the Woods, mounted on female Elephants, properly trained to the Sport, being themselves covered, as not to be seen by the wild Elephants. When they were to far advanced in the Forest, as that they judged them selves near the Haunts of those wild Beasts, they made the female Elephants roar; to which the Males never failed to answer with a most dreadful Noise: By which the Huntsmen judging of the Distance they were from them, began to return, and, leading the Females gently towards the Amphitheatre, the wild Elephants followed them very peaceably, till they entered within the Inclosure, and the Barrier behind them was shut.

The Females continued their March thro' the Amphitheatre, and entered, one after another, the narrow Passage on the opposite Side. The wild Elephant, at the Entrance of that Passage, stopped; and then they put in Practice every Method to force him forward, by making the female Elephants that were on the other Side cry, while the Huntsmen in the Amphitheatre pushed the Elephant forward with loud Cries; and when he turned upon them, they took Shelter behind the Pillars. At last, having got him to the Entrance of the Passage, one ran before him; and the wild Elephant following with all imaginable Fury, his Passage was presently stopped by two sliding Barriers that were let fall, one before, the other behind him. The Animal finding himself in this Situation, not able to get either forward or backward, made prodigious Efforts, and set up a hideous Cry. They then endeavoured to pacify him, by throwing Buckets of Water over him, rubbing him with Leaves, and wetting his Ears with Oil: They likewise brought tame Elephants, both Male and Female, who caressed and made touch of him with their Trunks.

In the mean time, they fastened Ropes under his Belly, and to his hinder Legs: Then an Officer mounted on an Elephant trained for that Purpose, advanced and retired several Times thro' the Passage, to show the wild one how he might come out; and the Barrier before him being removed, he readily followed the other Elephant to the End of the Passage. As soon as he came to the Entrance of the little Paddock, they fastened him, by the Help of the Ropes, to two of the Pillars that waited for him, one on each Side. Another marched before him, and pulled him along by a Rope, while a fourth, that was behind, thrust him on, by pushing him with his Head, till they brought him to a great Post, fixed like the Capstern of a Ship: There they left him till the next Day, to cool himself; and while he was turning round this Pillar, came a *braceman*, dressed in white, mounted on a tame Elephant, who gently sprinkled him with a kind of consecrated Wa-

ter out of a gold Vessel; by which Ceremony they fancy the Elephant is deprived of his Fierceness, and rendered fit for Service. The Day following he went with the rest, and in a Fortnight's Time was quite tame.

The Elephant, tho' the largest of all Beasts, some of them being twenty Feet in Compass, is extremely docile, very industrious, and his Sense is much superior to a Beast, that it seems in some Measure to approach human Reason. It is very certain, that this Creature is capable of Fidelity, deep Affection, and Gratitude; and that to such a Degree, as to be extremely afflicted on the Loss of its Governor: But this Passion rises to a surprising Height, if by any Accident he injures his Keeper; which sometimes falls out, when the Creature is seized with that kind of Fury, which its Species is subject. The Compassion and Tenderness of its Nature appears in various Circumstances: The Loss of its Companion distresses the Elephant more than any thing; for it is reported, that it never makes a second Choice. In some Countries they had a Custom of taking Elephants, by digging deep Pits, and covering them with Hurdles, strewed with Leaves. If a female Elephant beheld her Young one thus caught, she would throw herself into the same Pit, there to remain, at the Hazard of her Life and Liberty. In a Word, she never abandoned it in any Danger, but would rather suffer herself to be killed. In passing a River, the carried it on the Trunk, if the River was fordable; but if they were obliged to swim, the young one passed first, before the Water was raised by the Entrance of so many Creatures of so tall Size, the Elephants going usually in an Herd. If at any time they found one of their own Species wounded in the Woods, they took all imaginable Care to favour and relieve it, by bringing Food to the Place where it lay, and such Remedies as might contribute to its Cure: In a spite of all their Endeavours, it died, they found means to inter and cover it with Leaves, that the Body might not be exposed, and torn to Pieces by wild Beasts.

When they were tamed, they were taught to know the Approach of the Kings, as if they meant to advance, after the Fashion of the East. Some Princes had more than twenty of them belonging to their private Use, which, in their Turns, did Duty before their Temples, and a time of Battle defended them with the utmost Zeal. Some Writers of the Life of *Alexander* agree, that the Elephant on which *Porus* was mounted, took incredible Care of its Prince, sitting him safely down when he was wounded, drawing the Darts out of his Body with its Trunk; and then, gently replacing him in his Seat, carried him safely back to his Quarters. The Reader will observe, that we do not deliver these Facts as either certain or credible: We mention them only as related by ancient Authors, and leave the rest to his own Judgment.

Aelian, in his History of Animals, mentions several Things very curious and remarkable as to these Creatures: He tells us, with respect to their Fidelity, that a young *Indian* Lord, having caught a small white Elephant, brought it up with the utmost Tenderness, and was exceedingly beloved by that Animal. The King of the Country, being a very extraordinary Account of the Beauty and Docility of the Beast, demanded it from its Master for his own Use; but the young Lord not being able to part with it, chose rather to fly to the Mountains. He was protected thro' by the King's Orders, where, from the Top of a Rock, he for a long time defended himself, by throwing Stones, in which he was perfectly well seconded by his Elephant; but at last the Soldiers getting up, and the young Man being much wounded, the Elephant was left alone to sustain the Combat; when the rushing Troop of her Enemies, threw some of them over the Precipice, and having put the rest to Flight, returned, took up her wounded Master, and carried him off. What a Reputation continues that Naturalist, is the Fidelity of this Beast, of the Ingratitude of some Men, who, having received in manner of Favours and Support from others, leave them at last to perish under Misfortunes, or perhaps, to complete their Fortunes, assist in their Ruin.

Plutarch tells us something of the like Kind, that hap-
pened at the Time the City of Argos was taken by Storm
by Perillus: A Soldier of his, mounted on an Elephant,
and received a dangerous Wound, fell from his Back
upon the Ground. The Creature, sensible of the Accident,
lattered with his Trunk all that were about him, till he
found his Master; and then lifted him gently upon his
fore-teeth, and, returning to the Gate by which they had
entered, overturned, without Mercy, all that stood in his
Way.

But if these Creatures were valuable on account of their
Fidelity and Tractableness, they were no less serviceable
in their Courage and Strength: They were disciplined for
War, and placed either in the Front, or in one of the
Flanks, in a general Engagement; and as soon as the
Signal was given, either by the Sound of Trumpets, or
the Sight of Blood, for which Elephants have a natural
Aversion, they rushed on the Enemy with incredible
Furor, overturning whole Battalions, and spreading
Terror, Confusion, and Death, where-ever they came.
The Snell and Cry of the Elephants were enough to dis-
turb the Enemies Cavalry from fighting, the best Horses
flying on their Approach, and running out of the Field, in
steed of all that could be done to restrain them. *Cæsar* had
one in his Army, and yet it proved sufficient to pro-
cure him Victory over the *Gauls*.

The Use of these Creatures in War was common
amongst the *Perjians* and the *Syrjans*; and it was from
them the *Romans* learned the Use of them, which they im-
proved very much. Sometimes they did not truit merely
in the Force of the Elephants, but erected Towers upon
their Backs; from whence their Archers fought with great
Advantage. *Antiochus Epator*, when he invaded *Ju-
daea*, had thirty such Elephants in his Army; on each of
which there were ten Men fought in a Tower; while an *Indian*
shot before conducted the Elephant.

The *Indians* themselves used them in somewhat a dif-
ferent manner, and, perhaps, with greater Advantages than
other Nations; for they made them always the first Line
of the Army, their Foot being drawn up behind them, as
they were intrenched. There was a Space of about one
hundred Yards left, from one Elephant to another, through
which their Infantry might safely advance and retire: But
it was impossible for the Enemy to penetrate through those
Lines, in order to begin the Attack. The Elephants
of *Perus*, to the Number of two hundred, were thus
used in the front Line, when he was attacked by *Alex-
ander the Great*: And it was owing to the long Spears of
the *Macedonians*, and to the invincible Strength of their
Archers, that the Elephants could not bear them down;
which equalled the Fate of the Day: For the *Indians*, being
surprised at a Sight which they had never beheld before,
supposed that these People were invincible; and, therefore,
did not be brought to return again to the Charge, any
more than the Elephants; for it is the Nature of these
Beasts, when once beaten, to turn upon those behind
them.

The *Romans* frequently produced them in Shows,
and on their Amphitheatres. It was in the Year 655,
after the building that City, that this Spectacle appeared
for the first time. They were then opposed to Bulls; but
they were afterwards brought to fight with Men. When
Pompey, in his second Consulship, dedicated the Temple
of *Venus*, he exhibited twenty Elephants, which were to
fight against a Troop of *Gothians*, who were a People of
Scythia, equally remarkable for their natural Courage, and
for their military Skill. This Combat was very singu-
lar, and made a great Impression upon the People: For
most of the Elephants being so wounded in the Fore-feet,
that he could hardly stand, fell upon his Knees; and, run-
ning in upon the *Gothians*, tore from them their Shields,
which he threw into the Air with incredible Agility and
Alacrity, so that they fell down, without hurting any of
his sections. Another Elephant was in the Fight killed
by an Arrow which struck through his Eye into
his Brain: The Elephants, at this Sight, endeavoured to

burst through; but, being repulsed, they feared, with
heavy Mourning, to beseech the Pity of the People; who
were so much affected therewith, that, forgetting the Re-
spect due to *Pompey*, they began to cuff him, and to wish
all those Mischiefs might light upon his Head, which soon
after fell upon him. But this did not hinder *Cæsar* the
Dictator from exhibiting another Shew of Elephants,
when he brought forth twenty, which were opposed to five
hundred Foot: And finding that the People were ex-
tremely pleased with it, he again exhibited twenty Ele-
phants, with Towers upon their Backs; in each of which
were sixty Defendants: And to these he opposed not only
five hundred Foot, but as many Horses. The Emperors
Claudius and *Nero* caused single Elephants to fight with
experienced Fencers; with which the *Roman* People were
exceedingly delighted.

It is to be observed, that, with all their Force, the
Elephants are far from being cruel; so that, unless they
are provoked, they never commit any Violence. We are
told a very remarkable Passage in Support of this natural
Clemency of those Creatures, which is this: A certain
King, whose Name was *Beabus*, having destined thirty
Persons, who had offended him, to be torn to Pieces by
Elephants, they were tied to so many Posts, and the Ele-
phants turned loose upon them, with Soldiers behind, who
pricked and pushed them forward, in order to put them in
a Rage: Which, at last, they did, but to their own De-
struction; for, instead of attacking the naked and defence-
less Men, they fell upon those who injured them; and
could not, by any means, be rendered the Instruments of
this Monarch's Cruelty. It is further asserted, that, in
passing through a Flock of Sheep, they separate them into
two Lines with their Trunks, that they may march through
without treading or trampling upon them.

It is from *Pliny* also we learn, that a certain noble *Rom-
an*, whose Name was *Mutianus*, who had been three
times Consul, taught an Elephant the Knowledge of the
Greek Alphabet; in which, it is said, he wrote these
Words, by placing the Letters in their proper Order, *viz.*
This I wrote, and dedicated the Celtic Spoils. Another
gave a manifest Proof of Memory, by performing in the
Morning, perfectly, certain Lessons, which he had been
beat for not performing over Night. Almost every Ele-
phant understands so much of the *Indian Language* as con-
cerns him, or he hears from his Keeper; and so gentle they
are, that a Child of twelve or thirteen Years old may mount
and guide them as he pleases.

As extraordinary as these Stories may seem, one might
be almost tempted to believe them, considering that *Ariano*,
the most sincere, the least credulous, and by far the most
authentic Writer of the Life of *Alexander the Great*, gives
us the following Story of his own Knowledge: I have
seen, says he, an Elephant, that had two Cymbals fastened
to its Fore-legs, upon which it beat or played a regular
Air with its Trunk; while others danced about it, with
their Steps making a regular Cadence. Yet this Animal
as gentle and as quiet as he seems to be, gives sometimes
Proofs of his Memory, by revenging the Injuries he re-
ceives at some Distance of Time. One Instance of which
we have from an eminent Writer of the last Age; and
this too of his own Knowledge: He was at *Macassar*
in the Year 1658, and there saw the King's Elephant
passing quietly along, with his Driver upon his Back;
But soon after he returned alone; which surprising the
Company, they began to inquire how it happened, and
were told, that, the Day before, his Keeper had a Cocoa-
nut given him, which he threw twice at the Elephant's
Head, with all his Force, in order to break it; and, going
into the Town, when they saw him pass by, it so hap-
pened, that some People were selling Cocoa-nuts in the
Streets; and as soon as the Elephant had Sight of them,
he snatched one out of the Basket with his Trunk, and
beat it to pieces about his Rider's Head; by which he
killed him on the Spot. This, says my Reverend Author,
came of jelling with Elephants.

more than the Signs or Shadows of them; which is as reasonable, as if, upon reading *Aesop's* Fables in French, which, by the way, is only a Translation of the original Writer *Iokan*, we should reproach the *Greeks* with their Folly, in believing that Birds could argue, or that Fishes have Conversation. It was in all Ages, and is to this Day, the Custom of the oriental Nations to wrap up their Wisdom, either in short Sentences or Proverbs, or in short Fables and Parables; which if, for want of sufficient Information, we cannot perfectly understand, it does not follow, either that these People believe these Stories to be true, or that they may not couch under them Truths of great Importance.

It is not at the same time to be confessed, that the Monarchs of the *Indies* sometimes carry their Passions for supposing and giving Credit to these Sort of Fables to a very great Height; of which we have an Instance, in regard to the Animal now under our Consideration; an Elephant, perfectly white, is in itself a great Curiosity, and therefore worthy of being preserved, with peculiar Care, in the Stables of Kings; but this Point is carried much farther; and, as the Reader will see, in four Voyages that follow, very long and bloody Wars have happened in this Quarter of the World on account of the *White Elephant*, the Possession of which is esteemed of so great Consequence, that it finds Place amongst, or, otherwise, comes in the end of, a Prince's Titles. In order to account for this, we are told, by such as have inquired very diligently into the Matter, that the high Priest of the *Indians* have for a while Elephants, is ground'd on a Fable related of *Ishtar* principal Idol, who is the same with *Chaac, Saca*, or *Ishtar*, as he is called by the *Juggesees*, and about whom there is a great and important Service. They say, that *Ishtar* was eight hundred years, in different species, before he was born of a Woman; and that, when he was born, he was nursed through his Mother's sides, through which he gnawed with his Teeth. The Truth is, *Ishtar* was a Sorcerer, who persuaded People of any thing he pleased; his Mother, being big of him, dreamt, that a white Serpent came through her Mouth: Hence it is, that his Elephants are held in Veneration in *India, China, Siam, Pegu, Java, and Pegu*, where they are served in a noble and Nobleman of great Distinction visit them in great Cities, and pay them the same Honour as to Kings. Yet a Man would be exceedingly mistaken, who should from hence conceive, that these Stories are really believed by Kings; the contrary of which is to true, that the *Indians* themselves make no Difficulty of acknowledging to any intelligent Person, that talks to them on the Subject, that all these are Fables, invented at Pleasure, and only to amuse the common People, and keep them from guessing what their Betters do not think it fit for them to understand.

It is now time to leave the Elephant; with respect to which, however, it would be very easy to assemble twice as many curious Relations; But, before we quit it, it will not be amiss to give the Reader a few Particulars about this wonderful Creature, which may be depended upon, and serve, in many respects, to settle his Opinion with regard to the Facts before related. The largest and finest Elephant in the World are those of the Island of *Ceylon*; next to them, those of the Continent of *India*; and, lastly, the Elephant of *Africa*. The Moors, who deal in these Creatures throughout all the *Indies*, have a fixed Price for them, if found and brought. They measure them in the Neck on one of his fore Feet, to the Top of his Shoulder; and for every Cubit he is high, they give a hundred Pardoes, which is, in our Money, about 100*l*. An Elephant of the largest Size, is nine Cubits, or thirteen Feet and a half high; so that the largest Elephant is worth about good, unless he be of the *Ceylon* Breed, for then he will fetch four times that Sum.

The female Elephant goes sixteen or eighteen Months with her Young; which, when brought forth, is as big as

a Calf; They are fifty or sixty Years old before they come to their full Strength, or are fit to have Towers upon their Backs, or Coaches, both as are used in *Cochin China*, where Elephants carry in both Machines twelve Persons, behind him who rules the Elephant, and sits before upon the Shoulders, and a Boy, who belongs to him, and sits upon the Elephant's hinder Part, and who, if the Reader pleases, may be called, the Coachman and Passenger. As to the Age of these Creatures, nothing can be said with Certainty. If we could depend upon what we are told by *Platostratus*, in his Life of *Alexander the Great*, we should believe, that this great Traveller saw the very Elephant upon which *Porus* rode in the Battle he fought against *Alexander the Great*, with two Hoops of Gold on his Teeth, signifying, that *Alexander*, in Election of his Fidelity, had consecrated him to the Sun. At this rate, that Elephant must have been above four hundred Years of Age. That they live but between two and three hundred Years, is not only affirmed by the best Authors of Antiquity, but also by such as are best acquainted with them in the *Indies*; and that they are in full Vigour at much above a hundred, is very certainly known.

They feed, when will, upon Grass, or on the green Boughs of Trees; when they cannot get these, they will eat Roots; if they can get into Corn-fields, they commit terrible Ravages: When time they will eat almost any thing, but are particularly fond of Sugar-canes, or whatever else is sweet; they will likewise drink Wine or Ale; and it is observed, that, when they drink Water, they first stir, and make it thick, with their Feet: The Reason generally assigned for this is, that they hate to see their own Figure in the Water, which is a mere Fancy; and the true Cause, that the Gravel and small Stones which they swallow by this Means, may help to digest their Food; which is likewise practised by Geese, Ducks, and other Water-fowl, but is the more necessary to the Elephant, because this Creature is very much troubled with Indigestion and the Colic.

The famous *Sir Thomas Brown* enforces the Antient, for supposing that the Elephant slept standing; and yet the Fact is really so; and, which is more extraordinary, they shake their Heads continually while they sleep. *Sir Thomas* was, however, thus far right, that this does not proceed from their being unable to lie down, because in Places where they are wild, the Print of them is frequently seen upon the Grass. In all Parts of *India*, but in *China* especially, they make use of almost every Part of this Animal in Medicine. The Broth, made of his Flesh, is excellent for a Looseness; and the Flesh burned, becomes a Specific for the Flux of Urine. The Gall is very good for the Lues; and the Humour of the Elephant's Eye, mixed with Bread-milk, is also held a most excellent Ophthalmic. They likewise use the Gall to take away an offensive Breath. A Powder, made of the Affes of the Skin, burnt, and mixed with Oil, is an excellent Balsam for green Wounds; and the Bone at the Pit of the Stomach, powdered, is a noble Stomachic. I shall speak, in another Place, of the Use and Value of the Elephants Teeth, but it may not be amiss to observe here, that in the *Indies* they reckon three Sorts of Ivory; the best, that which is taken out of the Mouth of the Beast immediately after it is killed; the second sort, when the Teeth are taken out of the Head of an Elephant that has died a natural Death; and the third or worst Sort, what is found in the Woods, where the Elephants have shed or lost their Teeth. The Pace of an Elephant is equal in Speed to that of a Horse on full Trot, and they will travel at this Rate some Hours. The most cautious of our modern Travellers justify to the full what *Pliny* says of this Creature, and what *Cicero* had said before him, that no Animal seems to approach by its Actions, so near to the Reason of Man as this.

The Rhinoceros, next to the Elephant, has been always esteemed the most extraordinary Animal in the *Indies*, both with respect to Size and to Shape. This Creature is com-

mon in the Isle of Java, as also in the Kingdoms of *Bengala* and *Patala*. There is scarce any Creature more frequently mentioned by antient Writers than this; and yet there are very few that have been so imperfectly described. I shall pass by the Sentiments of some learned Men, who conceive this to be the Unicorn of the Scriptures: I say, I shall pass them by, because I do not see how the Question can ever be decided; only thus much seems to be certain, that the Unicorn is there mentioned for his Strength, and for his Strength lying in his Horn, which is exactly true of the Rhinoceros. *Pliny*, who is so fond of Wonders, and so copious in his Recital of most of them, is very short in his Description of this Animal, not having vouchsafed us as many Lines upon the Subject, as he has written Chapters upon the Elephant. All he tells us of it amounts to this, that *Pompey*, in his Shews, exhibited, among other strange Beasts, a Rhinoceros, with one Horn, and no more, and that in his Snout. This, continues he, is by Nature a dreadful Enemy to the Elephant; and, by rubbing his Horn against hard Stones, makes it to very sharp, that he is able to pierce with it the Belly of that Creature; at which Part he aims, because it is tenderer than the rest. In point of Description, he tells us, that he is full as long as the Elephant, but that his Legs are shorter, and his Skin of the Colour of Box. *Aelian*, who insists to largely upon other Animals that are very common, did not think it necessary to describe the Rhinoceros, because all the World has seen it at *Rome*, in the Shews given by the Emperors for the Amusement of the People. *Strabo* is as short in this Description as *Pliny*; though he tells us, that he had seen this Creature at *Alexandria*, and cites *Artemidorus* on the same Subject. *Dion Cassius* contents himself with observing, that this Animal had never been seen at *Rome* before the Triumph of *Augustus*, in which he contradicts *Pliny*.

It would be to no Purpose to collect a great Number of Citations, unless we could meet with some that were larger and fuller in the Description of this Animal; and, therefore, it is necessary, in order to give the Reader a tolerable Idea of it, to have recourse to the Moderns. *Boninus* has described it in his excellent Work, and so has *Father Le Conte*; and, as they agree perfectly well, I shall only relate what we are told by the latter. The Rhinoceros, says he, is one of the most extraordinary Animals in the World: He seems to me to resemble, in many Respects, the wild Boar, except, that he is much bigger, has shorter Legs, and a heavier Body. His Skin is entirely covered with large and thick Scales of a dark Colour, and excessively hard. They are divided into little Squares or Buttons, which arise somewhat above the Skin in a manner not much unlike those of the Crocodile. It is by this means that its Legs seem to be inclosed in a kind of Boots, and its Head wrapped up behind in a sort of Hood or Capuchin; for which Reason the *Portuguese* call this Creature the Monk of the *Indies*. Its Head is very large, but its Mouth is not very big; its Snout long, and armed with a large Horn, which renders it extremely terrible even to Tygers, Buffaloes, and Elephants. But what seems to be the most wonderful in this Animal is its Tongue, which Nature has covered with a Membrane so tough and strong, that in Effect it differs nothing from a File, so that he tears his Prey to pieces barely by licking it. As we see some Animals that delight in feeding on Thistles, the little Points of which, by pricking the Extremities of the Nerves in their Tongues, afford them an agreeable Sensation, so the Rhinoceros feeds with the greatest Pleasure on the Branches of such Trees as are thick set with the toughest and strongest Thorns. I have myself often given this Creature Twigs of such Trees as were thick-set with Briars that were exceedingly sharp and strong; and have been amazed to see how greedily, and with what Address, he chewed and fed upon them, without being at all incommoded by their Points. It is true, that sometimes his Mouth is a little bloody, but that serves only to render the Taste of his Food more agreeable; and

has apparently no other Effect on his Tongue, or Taste, than Salt and Pepper on ours. Some other Authors, as to this Description, that he has under his fore Legs a kind of very ugly loose Skin, that hangs down over his Body of a Texture not unlike that of the Wings of a Bat, which all together, must render this Creature equally fugitive and disagreeable.

The ingenious *Mr. Kolben*, in his excellent Account of the Cape of *Good Hope*, has given us a still more accurate Description of the Rhinoceros; and, indeed, by comparing it with all that I have met with on this Subject, I am thoroughly satisfied, that it is more clear, more diligent, and more agreeable to Truth, because the Author seems to have had more Attention, and less Curiosity, than other Writers. Its Skin, says he, is without Hair, or other Covering; but is of itself so thick and hard, that even the most sharp pointed Knife will hardly pierce it. Painters generally represent this Creature with its Skin full of Scratches and Scabs, that, at a Distance, the most very well taken for Scales, especially as they frequently run over and across each other. His Nose, or Snout, is not unlike that of an Hog; on the End of which he has a Horn of a dark-brown Colour, which, without ceasing by the continual Use he makes of it, is bent back towards his Head, so that in some measure resembles a Pig's snout. This Horn is of very different Sizes, according to the Age of the Animal; but, in Length, never exceeds two Feet. It has another Horn a little above the upper one, towards the Front of its Head, which is of a yellow Colour, but small in a young Rhinoceros, and in an old one, does not exceed six Inches at most. In Figure it resembles a Blow cut in half; the Cavity is directed towards the Head: This lesser Horn hinders the larger from doing all the Mischief that it otherwise might do. His Ears are less, and his Limbs shorter than those of the Elephant: His Eyes are exceedingly small, and it seems to strain straight forward; which is the Reason, that when it pursues its Prey, it is always in a straight Line, fore-seeing, and throwing up, whatever it meets with in its Passage, so that neither Bush, Tree, Thicket, or Hedge, can ever oblige it to quit its Path. With the Horn upon its Nose he tears up Trees by the Roots, throws some of them in his Way over his Head to a great Distance, and with a prodigious Noise. When he is angry, he will frequently to obstruct him, and in a Rage, he will kick, trample in the ground, and throw, from time to time, large Quantities of Earth over his Head. His Grunt is very much like that of an Hog, and not very loud; but, if he is in Pursuit of his Prey, he makes a terrible Noise as may be heard at a great Distance; and he is very dreadful to all kinds of Beasts, by the Sound of it in the utmost Fear.

9. The principal Food of the Rhinoceros are Bushes, Shrubs, Boughs of Trees, and other things of that Nature: For though this Creature be a Beast of Prey, yet one of the most terrible in this Part of the World, yet is both able to subsist, and does subsist for a great part together, without feeding on Flesh. What the Antient report, of the Rhinoceros having a natural Antipathy to the Elephant, is strictly true; and they never meet in the Woods but it is fatal to the latter, if it does not find the Rhinoceros time enough to make its Escape; for the Elephant places all its Safety in Flight; and, if once attacked, is scarce able to make any Defence through Fear. It is very seldom that the Rhinoceros attacks a Man, or that ever, unless he happens to be distressed in Rest; a Case, in which he has a mortal Aversion. When he comes upon the Man whom he pursues, he lifts him by the Neck with his Horn, and throws him directly over his Head with such Force, that he never fails of striking him dead. When he comes to devour him, which he does by licking off the Flesh from the Bones with his Tongue, it is the manner that he destroys other Animals. But, however terrible and however swift, this terrible Creature may be, yet it

far from being difficult to avoid it, provided a Man has a tolerable Pretence of Mind; for the Rhinoceros seeing only straight forward, and turning being very troublesome, making twice or thrice out of the Road, is sufficient to escape all Danger: For the Creature very rarely turns back, or changes his Path, but destroys, without Mercy, whatever he finds in it.

The general Name of this Creature, in the *Indes*, is *Asala*; and in *Persia*, it is called *Kerkeden*, much esteemed for the Virtues of its Horn: And therefore, notwithstanding the Danger of the Exercise, industriously hunted by the Natives of the Country, who, when they are so lucky as to kill it, suffer nothing to be lost, but apply every Part of it to some Use or other. The Flesh is said to be hard and stringy, but, in other respects, wholesome and well-tasted; so that the *Asiatics* eat it readily, and think it no contemptible Venison.

The Horn is extremely precious, and fills at a great Rate, from the Property it is supposed to have, of discharging Poison: The Fact is universally believed in the *Indes*, and a Man would be as much laughed at there for counting it, as he would be here for believing it: Yet some Writers of unquestionable Credit, have asserted the Truth of this from their own Knowledge, particularly Mr. *Kalher*, who assures us, that, at the Cape of *Good Hope*, they make Cups of this Horn, which are finely acorned with Gold or Silver; and that, upon pouring Wine into them, a great Ebullition follows; but, if there be any Poison mixed with the Wine, the Cup infallibly breaks, as it also does, if the Poison be put in unmixed. The Experiment, we are told, has been made so frequently, and with such constant Success, that Thousands of Persons settled at the Cape of *Good Hope*, might be produced, as Witnesses to the Truth of it.

For my own Part, I must confess, that I think it almost as difficult to believe, that Mr. *Kalher* himself, or any other Writer of Reputation, should endeavour to impose upon Mankind by such a Report, as there was no Truth in it, as to believe the Fact. I therefore incline to think, that the Relation is only delivered in too general Terms; and that, instead of asserting, that this Horn breaks, on the pouring into a Cup made of it any kind of Poison, an Inquiry ought to be made, what sort of Poison really breaks it: For I very much suspect, that if we knew what kind of Poison it is, we should be able to account for it from natural Causes: And I am the rather led to this Opinion, from what the same Author tells us, of the boiling or boiling of Wine, when poured into the same Cup.

To the *Indians* therefore, that, in splitting the Horn, they discern, on each Side, the Figure of a Man, marked out by little white Spots; as also Birds of several Kind; as we see in *Egyptian* Pebbles: But, without doubt, this is the Effect of a very strong Fancy, with regard to both. It is, however, highly probable, that, as it serves to raise the Face of its composure, it also serves to support its Credit; for the more Wonders are reported of any thing, the more readily the common People believe them. In the *Island of Java*, where there are many of these Creatures, they are much valued, and the Virtues of their Horns in the highest Esteem; so that when they are sent to be cured, they always order a Person to hold by, to collect the Savings, that no Part may be lost: For of this sort of Horn, they give a certain Quantity, filled with Water, or in other, for Convulsions, Fainting fits, and other Diseases that proceed from Disorders in the Nerves. The Blood likewise, of this Animal, is held to be extremely medicinal: And therefore, when it can be got fresh, they let it drop into a Cup made of the Rhinoceros's Horn, in the Sun, till it grows so hard, when they press it in a Battle cloth-Bag, for the following Uses: They conceive it to be a Specific for Obstructions, and, at the same time, admirable for making and confirming broken Veins; but, above all, it is held an infallible Cure for the Spitting of Blood. The manner of taking it is, by mixing a few Grains of the Horn with a Dish of Tea or Coffee.

It is also certain, that, on the first coming of the *Eu-*

ropeans into these Countries, they found the People universally persuaded of the Efficacy of these Drugs: And we are told by the famous *John Hugo Linfoboten*, one of the most candid Writers on this Subject, that in *Bengal* the Rhinoceros Horn was sold at a very high Price. He tells us likewise some other Circumstances, that deserve to be mentioned: 'These Horns, says he, are much valued throughout all *India*, as effectual Remedies against Venom and Poison; for which, likewise, the Teeth, Claws, Flesh, Skin, Blood, Urine, and Dung, of this Animal, are likewise much valued: And that this is not an idle Notion, but an Opinion founded in Truth, I can, from my own Experience, attest. There is, however, one thing, which is to be remembered, that all these Horns are not of equal Value and Price, because all of them are not of equal Goodness; for some will sell for 200 or 300 Pardoes, while others of the same Size and Colour will not fetch above three or four Pardoes. The Reason which the Natives assign for this Difference, is their feeding in different Places; for they believe, that the Virtue of the Horn is derived from the Herbs by which the Creature is nourished; and therefore, they have almost an equal Esteem for the Horns of the wild Goats that feed in the same Places.'

I shall conclude this Account with the Relation of *Father Berni*, in his Account of *Cochin-China*, as to the Hunting of the *Asala*, which, however, he describes as covered over with Scales; tho' this might, perhaps, arise, from his seeing him only at a Distance. His Account is curious; and therefore I shall give it in the Author's own Words, the rather because it not only confirms many things before related, but furnishes us also with some Particulars that are new. 'When I was at *Nacozan*, a City in the Province of *Panacmiti*, says he, the Governor went out to hunt a Rhinoceros, that was in a Wood near our Dwelling-place: He had with him above an hundred Men, some on Foot, and some on Horseback; and eight or ten Elephants. The Rhinoceros came out of the Wood; and, seeing so many Enemies, was so far from giving any Tokens of Fear, that it bravely encountered them all, who opened and making a Lane, let the Rhinoceros run through, till it came to the Rear, where the Governor was mounted on his Elephant, waiting to kill it. The Elephant endeavoured to lay hold with his Trunk, but could not, by reason of the Rhinoceros's Swiftnes: And leaping, to wound the Elephant with its Horn, the Governor knowing it could receive no Hurt, by reason of the Scales, unless they struck it on the Side, waited till leaping it laid open the naked Place; and, casting a Dart, dexterously struck it thro', from Side to Side; with great Applause, and Satisfaction of all the Multitude of Spectators, who, without any more to do, laid it upon a great Pile of Wood, and setting Fire to it, leapt and danced about, while the Scales were burning, and Flesh roasting; cutting Pieces as it roasted, and eating them. Of the Entrails, that is, the Heart, Liver, and Brain, they made a more dainty Dish, and gave it to the Governor, who was upon a Riding ground, diverting himself with their Merriment. As I was present at the taking of this Creature, I obtained from the Governor the Hoofs; which I esteemed not inferior to his Horn: And this is thought as effectual in expelling Poison, as that of the Unicorn.' This seems to countenance my Sentiment, that these Horns, as Alacis, may serve as Remedies for a certain kind of Poisons.

The Lion, of which to many extraordinary Stories are told us by the Antients, is also a Native of the *Indies*, and more common there than in any other Part of the World, except *Lilya*. The Lion of the true Kind, of full Size, and with a flowing Mane of yellow Hair, is by all Authors acknowledged to be, at once, the most majestic, and the most dreadful Sight, that is furnished by the Animal Creation. The Lioness has no Mane; her Tails are shorter and wider; and she has more Ferociousness, and less Dignity in her Countenance, than the Lion.

from the life

phant

... at London ... London ... Heredit. Biblioth. Orient. p. 659. ...

It is positively insisted on, both by *Aristotle* and *Pliny*, that the Bones of the Lion are much firmer, and more solid than those of any other Beast; which some Moderns have denied: But such as have had the best Opportunities of inquiring into, and being satisfied as to the Matter of Fact, assure us, that the Antients are in the right; and that the Cavity in the Leg-bones of a Lion is not larger than those of a Tobacco-pipe; so that when they are suffered to lie and dry in the Sun, that Cavity is intirely filled up; and they become so smooth, so strong, and perfectly united, that they will strike Fire like Flints. When he falls upon his Prey, he first brings it to the Ground, and then beats its Breath out with his Paw, before he tears or eats it; and generally accompanies this Death-stroke with a loud Roar.

Their Strength is prodigious, and much beyond their Size; which is the Reason, that other Beasts fly at the Sight of them. We are told by *Pliny*, that they never prey upon Men, till they become very old, and cannot provide themselves with other Food; in which time of Distress, they watch about the Skirts of Villages, and even of great Towns, that they may catch and devour such as come out carelessly in a Morning, or are returning in an Evening.

The Romans thought there was something ominous in the manner in which Lions were introduced into their Amphitheatres. *Sylla* the Dictator exhibited one hundred Lions, which fought all at once. After him *Pompey* exposed six hundred; and his Competitor, *Julius Caesar*, exposed four hundred. All which, the Romans observed, happened in Times when their Liberty was declining. But what contributed to spread this Notion the most of all, was the Contrivance of *Mark Antony*, who, after the Defeat of *Brutus* and *Cassius*, caused himself to be drawn through Rome in a Chariot, to which two Lions were yoked, at the same time that there sat with him one *Cyberis* an Actress, his favourite Mistress, before he became acquainted with *Cleopatra*. This, says *Pliny*, seemed to portend, that Men of high Spirit, and noble Courage should be tamed, and brought into Subjection to such as were only remarkable for their Pride and Luxury: And for my Part, continues he, I consider the very Sight of so monstrous a Spectacle, as none of the least of the Calamities of these unhappy Times.

It was not at Rome only, that such Notions prevailed; the Carthaginians seem also to have had the same Sentiments; for when *Hanno*, who was one of their most excellent Citizens, and greatest Generals, had found a Way to tame a Lion, so that he stroked and handled him like a Dog, they took Occasion from thence to drive him into Banishment, believing that the Liberties of a People could not be safe, where that Man had any Power, who had Skill enough to alter the Nature of the fiercest Beast, and make him tame and gentle as a Spaniel.

It is very doubtful, whether there be any Truth in what is reported of the Lions bringing forth but five times in her Life, and having at first five Whelps, then four, and the last time but one: Neither is there much Credit due to what is said, of their living to a great Age; since we know, by Experience, that they are not a very long-lived Animal. But with respect to its Magnanimity, and disdain to eat such as approach in an humble and suppliant manner, it is affirmed as well by modern Travellers, as the Writers of Antiquity: And it is on all hands agreed, that if this Beast does not lash himself with his Tail, or set up his Mane, a Man may safely go by him.

There are a kind of Lions that have no Manes, but are smooth like the Lions: These are said to be a mongrel Breed between the Leopard and the Lions. As to the Antipathy between the Lion and the Cock, and the former's flying, if he hear the latter crow, it is no better than a Fable; of which there are more related of this, than almost any other Animal. And, in Truth, one cannot but wonder how so grave a Writer as *Pliny* could bring himself to set down so many improbable Stories as he did, upon this Subject; which as they could only serve to tire, without instructing the Reader, I think it best to omit. The

Flesh of this Animal is often eaten, is not at all unpleasing, and is not known to prove unwholesome; but, whatever any Part of this Creature be of any Use in Physick, I am not able to say.

12. The Tyger is justly reported by the Antients one of the fiercest, swiftest, and strongest of all wild Beasts. Other Animals, of which we have hitherto spoken, are found in several Countries besides the Indies; but the true Tyger is, in a manner, peculiar to that Part of the World. They differ from the Leopard in Size, and in Shape; for the Tyger is much bigger, having yellow Spots that are very round, with black Hair about them; whereas the Leopard is spotted with black, almost in the Shape of Horse-hoofs. The Female, which is called the Tigress, is even fiercer than the Male, as appears from what *Pliny* tells us of the Manner in which the Huntsmen catch their young ones in those Times. They provided themselves, says he, with a very swift Horse, on which one of the boldest went in Search of the Tyger's Den, while the rest remained with their Boat by the River-side. When he who was on Horseback had an Opportunity, by the absence of their Dam, he carried away the Whelps, and rode as hard as he was able to join his Companions; but the Tygers, mistaking her Young, frequently came up with the Huntsman before he reached the River-side, who, as soon as he found himself in Danger, dropped one of the Whelps, which the Tygers taking up, and carrying back to her Den, gave him Time to escape with the rest to his Companions, who immediately quitted the Place with great Expedition. This Story shews the quick Sense and prodigious Speed, of this Creature; of which, however, *Pliny* does not give us any particular Description.

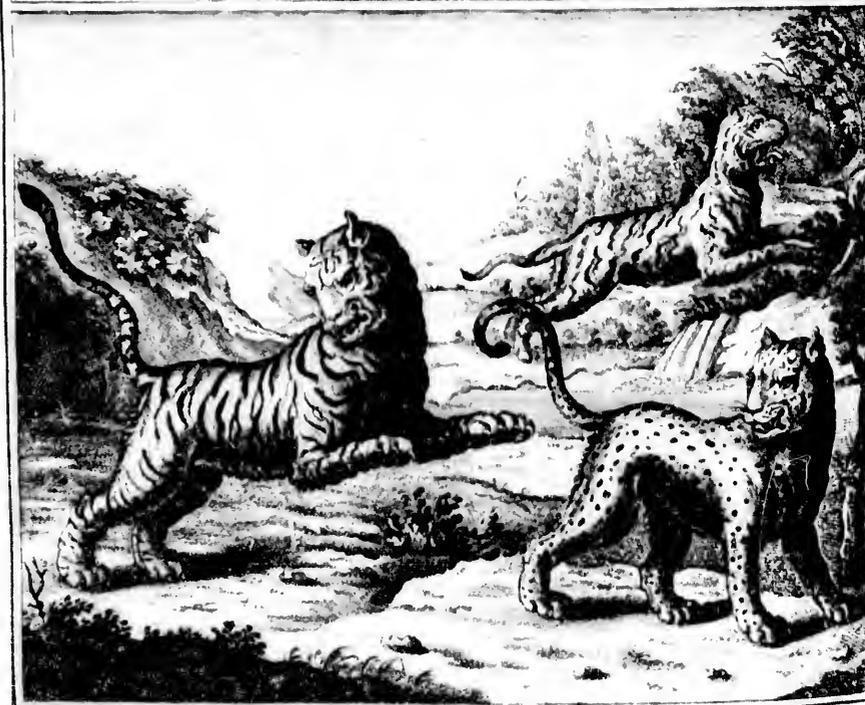

By comparing, however, the several Accounts we have of this Creature in modern Travels, it appears that their Eyes are wonderful bright and shining, their Nostrils and strong, their Teeth and Claws prodigiously long, their tabby Skins of a beautiful Colour, and their hair short and glossy. The Kingdom of Malabar, and others, the most famous for these Animals, I will not distinguish these three Sorts: The first is an animal larger than a wild Cat, makes a frightful Noise, resembling the Lowing of a Cow, and does a great deal of Mischief; the second Sort, which is most common, is of the Size of a small Calf, wonderfully brisk and active, and very cruelly cruel. The third is called the Tiger, and is very near as big as a Horse, for the Skin of one of them will serve for a Coverd for a Bed six Foot long; and for this they are much used in the Indies. The Cubs of all the Species of this Creature are very valuable, and in the Indies, and in Europe. They are used to make Hats for Beds and Palankins; and here for Horse-drawers, and for lining Cloaths in the Winter, especially in the North.

As the Lion never eats any Creature till it is dead, so the Tyger tears his Prey to Pieces, while it is living; and if he meets by chance with a dead Stag, or Horse, he will not touch them: But if, at any time, he comes with a Herd or Flock, where they have a Right of Cattle at their Mercy, they seldom eat them, but content themselves with sucking their Blood; by which it is incredible what Havocs they make. A Lion Tyger, and two of the young ones, have been seen to destroy upwards of an hundred Sheep in a Night, in this manner: They generally lie in hollows, or in Bushes or Hedges, in an inclosed Country, where they leap at once, with almost incredible Force, whatever passes by. Neither are they at all afraid of Man, but, whenever they have an Opportunity, they generally in the Middle, carry them into the Woods, where they tear them to pieces, and devour them. The Flesh of this Creature is remarkably white in the East; some have eat it as if it were as delicate as a Veal, and much better tasted: And the Hebrew Tyger is said to be as tender and sweet as that of Lyons.

The Antients report, that Tygers of a name were wont to carry a certain Number of Bitches with

Woods, where the Tygers frequented, and there left them
 and Trees. By this Contrivance they obtained a Specie
 of Dogs so fierce and Strong, that they were not afraid
 of attacking even a Lion: And it was of this Breed
 that *Scythia*, an *Indian* King, presented some to *Alexander*
 the Great; of which we have a particular Account in the
 History of *Diadorus Siculus*. *Alexander*, having a mind to
 make an Experiment of their Strength and Courage, let
 loose a large Lion upon two of them, which not being
 able to manage him, he ordered two other Dogs to be let
 go: The Lion, being surrounded by these four, was
 very soon over-powered; upon which the *Indian* King
 sent a Person with a Sword, who cut off the Right Thigh
 of one of the Dogs by little and little; and, in spite of all
 the Pain he endured, the Dog neither howled, nor let go;
 but held the Lion fast, till he fell down dead. The Num-
 ber of these Creatures, given to *Alexander* by this *Indian*
 Prince, was one hundred and fifty, which that Hero
 esteemed a very valuable Present.

A *Dutch* Traveller informs us, that in the Kingdom of
Congo the Tygers seldom or never attack white Men;
 and, as a Proof of it, he tells us, that when he was there,
 a Tyger surprized a white Man and a Black afsleep, and
 immediately tore the Negro to-pieces, but left the White
 untouched: And we have the same thing asserted by other
 Writers, but, I think, without any good Grounds, farther
 than as it may be supposed, that the Tygers are better ac-
 quainted with the Blacks in those Countries; and, therefore,
 may be more apt to attack a Prey they have been used
 to.

In the Voyages of *Walter Scaboten* we have a very cu-
 rious Account of these Creatures; and, as that *Dutch*
 Writer is highly esteemed for his strict Regard to Truth,
 the Reader will not, probably, be displeas'd with the Tran-
 slation of what he has given us upon this Subject. 'It
 is very true, says he, that the Tyger thinks as much af-
 ter human blood, as after that of Beasts. He catches
 a Man exactly as a Cat does a Mouse, and carries him
 off with as much Ease. At the first Leap he Ricks his
 fore Paws into the Shoulders, or, rather, a little below
 them; and, having brought the Man down, he strikes
 his Teeth, on both Sides, through his Ribs. One may
 very well say, that a Man is lost, upon whom a Tyger
 sets his Eyes: The Sight of them, and the being at-
 tacked, are, in a manner, instantaneous; so that the
 Fight, and the being past all Flight, is over in two or
 three Minutes. The Defarts of *Bengal* are somewhat
 less dangerous in the Light than in the Dark; for then
 the Tygers quit their Thickets and Caverns, and come
 even into Houses and Villages, where they seize any
 they find abroad, and tear them to-pieces. They have
 even the Boldness to attack Men on Horseback; as
 also the largest and strongest Buffaloes of that Country,
 which are of an extraordinary Size: They, generally,
 leap upon their Shoulders, and tear them to pieces in an
 instant; some Instances of which happened while we
 were there. It is looked upon as a Thing certain among
 the *Indians*, that the Tyger and Rhinoceros live in great
 Harmony together. There are many of both Sorts of
 these Creatures in the Woods of *Bengal*, and it is never
 known, that they attack each other. The Reason which
 the *Indians* give for this is very singular: They say that
 Tygers, after gorging themselves with the Fleth of
 Men or Beasts, grow extremely sick, and find Relief by
 eating the Dung of the Rhinoceros, which, as it feeds
 chiefly upon green Herbs, that are of great Virtue, they
 are still very wholesome, even when they have passed
 through his Body; of which they appear to be very
 thoroughly persuaded, since they frequently make use
 of the same Medicine themselves.' The same Writer
 tells us, that in this Part of the *Indies* they are forced
 to travel in Company, for fear of these merciless Cre-
 atures; and that their Dogs, when they hear the Cry of
 them in the Woods, tremble, and sweat in a most tur-
 bulent Manner. The People, however, at certain
 Seasons of the Year, assemble in great Numbers to

hunt the Tygers, and carry along with them several of
 their Conjurers, who pretend to enchant them; which
 is, at once, a strong Proof both of their Folly and their
 Fear. There are a smaller Sort of Tygers in *Africa*,
 and, it is said, in *America*; but it is very doubtful whe-
 ther the latter are at all of the same Species: And, as to
 the former, though they are very fierce, and do infinite
 Mischief, especially in the *Dutch* Settlements, near the
Cape of Good Hope, yet they are far below the Size of
 an *Indian* Tyger, and are only equal at most to the second
 Sort. This Difference is occasioned, in all Probability,
 by some Mixture in the Breed; for it appears plainly, by
 comparing the Accounts of antient Writers with those of
 modern Travellers, that it was the large *Indian* Tyger
 was known to the former, and not the smaller Sorts,
 which, if then existing, were called by other Names.

13. The Leopard and Panther are the Male and Fe-
 male of the same Species, which, though not equal in
 Size, is very little inferior in Strength, to the Lion, and
 not at all less malicious. It is not, however, very
 common for them to attack Men, at least if they are not
 under the Necessity of doing it; for, in that Case, there is
 no Creature bolder. The Skins of these Animals were
 much valued by the Antients, on account of the Beauty
 and Regularity of their Spots, which, as I before observed,
 were small, and of a semicircular Figure, not unlike an
 Half moon: But on the Shoulder they were supposed
 to have a larger Mark, which not only resembled, but
 was in a manner governed by the Moon, increasing as the
 disk, and decreasing likewise in the same manner; having
 now blunt Points, now sharp, and sometimes a complete
 Orb, like the Full Moon. One would find it more diffi-
 cult to believe, that such Opinions as these would gain
 Credit with Men of Learning and Sense, if there were
 not Instances, even in our Days, of as ridiculous No-
 tions prevailing with Men who pretend to follow no other
 Lights than those of Reason and Experience.

The Antients tell us, that these Creatures had a very
 singular way of hunting. They derive from Nature a
 kind of musky Smell, which being agreeable to Deer,
 Goats, and other Animals, they were wont to frequent
 the Haunts of the Panthers, till at the Sight of her fierce
 Countenance they were frighted, and fled; which this Cre-
 ature observing, she contrived to hide herself behind the
 Bushes, that, when these Animals were attracted by her
 Smell, she might leap on them at once; by which Meth-
 od she easily surprized them. The *Indians* hunt them
 very audaciously, as well for their Fleth, which they esteem
 very wholesome as well as savoury, as for the sake of taking
 their Young, which they breed up tame, and then present
 them to their Kings, who breed them up for hunting;
 and find them not only superior to any kind of Dogs in
 Swiftness and Strength, but in Fidelity also; for they
 constantly bring back what they take without tearing it:
 And, even to this Day, it is found, that they make use
 of the same Method of enticing their Prey that has been
 before described from the Antients. The *Arabians* call
 this Creature *Beber*; the *Turks*, *Joz*; and the *Tartars*,
Jem: But the general Name of them through the East,
 is *Pars*, which is a *Persian* Word; and it signifies, also,
 the Country of *Persia*, properly so called: And hence it
 is, that the *Persian*, who has the Care of these Creatures
 that are kept for the hunting of the Grand Signor, is cal-
 led *Parfisi*: And so jealous they are in the *Indies* of this
 kind of Sport, that no private Man is permitted to hunt
 with Leopards.

When the Panther has young ones, it is reported, that
 the Leopard, though much stronger, will not defend him-
 self against her, but suffers himself to be very ill treated,
 till the young ones are grown up, and able to shift for
 themselves. It is certain, that, however fierce in their Na-
 ture, the Panthers are extremely tender of their Whelps;
 of which *Pliny* gives us a very singular Instance. A
 Panther, by some Accident or other, had her whole Lit-
 ter tumbled into a deep Pit, out of which she was not able
 to deliver them. In this Distress she went to the next

¹ *Pliny*, lib. vii. cap. 49. ² *Pliny*, lib. vii. cap. 49. ³ *Pliny*, lib. vii. cap. 49. ⁴ *Pliny*, lib. vii. cap. 49. ⁵ *Pliny*, lib. vii. cap. 49. ⁶ *Pliny*, lib. vii. cap. 49. ⁷ *Pliny*, lib. vii. cap. 49. ⁸ *Pliny*, lib. vii. cap. 49. ⁹ *Pliny*, lib. vii. cap. 49. ¹⁰ *Pliny*, lib. vii. cap. 49.

Highway, in hopes of finding some Passenger, that might be kind enough to assist her. The first who came by, was the Father of *Philostratus* the Philosopher; about whom the Panther played and tricked, without offering to hurt him. The Man would willingly have escaped from her Carcases, but found it impossible. At last he lay down at his Feet, and seemed to benoan herself; and then taking hold of his Robe, led him gently to the Place where her Offspring lay: By which discovering the Cause of this Change in the Nature of the Beast, he descended into the Pit, and reached up her young ones. When the Whelps were once in Safety, they fell to leaping and playing with their Dam, who, in Company with her young ones, led their Benefactor safely out of the Wilderness.

There are many strange Things reported by the Antients, as to the Amours between the Leopard and the Lioness. The latter, they say, is exceedingly prone to the Company of the former; and fearing that the Lion should detect her Infidelity by the strong Smell of the Leopard, she keeps, for some time, at a Distance from her Consort; but, when she finds herself pregnant, she deserts him entirely, and retires to the Haunts of the Leopard; because, when the Lion finds her young ones spotted, he tears the spurious Breed to pieces, and chastises the Lioness herself severely. In the Travels of *Apollonius Tyanicus*, we meet with many Instances of the Tenderness of Panthers to their Young, and of their Gentleness and Fidelity. *Philostratus* informs us, that from their natural Wantonness the Panthers were held sacred to, and Symbols of, *Bacchus*; but other Authors ascribe this to their Love of Wine, in which they differ extremely from other Beasts. But, whatever the Cause might be, the Fact is certain, that they were held sacred to that Divinity; and that the Chariot of *Bacchus* is frequently represented as drawn by Leopards: But as it is sometimes neither drawn nor attended by Tygers, I am inclined to think, that both were used for the same Reason, viz. to shew that he was the Conqueror of the *Indies*, where these Creatures naturally reside; if there was not a moral Reason for this Representation, which might be intended to shew, that even the heretofore most intractable Natures were softened and civilized by the Charms of social Mirth.

There was an old Law at *Rome*, which forbid the bringing any of these Species into *Italy*; but for what Reason it was made, or why they were more afraid of those than of other wild Creatures, does not appear. However, when *Cneus Aufidius* was Tribune of the People, he procured a Licence, notwithstanding this Law, to bring over Leopards for the *Greenish Games*. *Scorus* was the first Man, who in his *Fidelity* exhibited one hundred and fifty Leopards. *Pompey the Great* exceeded this very far; for he produced four hundred and ten. But, at the Dedication of the Temple of *Marcellus*, *Augustus* exhibited to the People four hundred and twenty Leopards, and a tame Leopard in a Cage, which was never seen before. But the Emperor *Claudius* produced four tame Leopards at once.

But this is now thought no extraordinary thing; for, in the *Indies*, they tame even those of the largest and fiercest Kind, and keep them in their Fables, where they feed as freely and as quietly as Dogs. As to the Age to which these Creatures attain, we meet with nothing certain, either in old Authors, or in new; but it is probable, that as in other respects they resemble, so in their Age they come near the Lion, which is not observed to enjoy a very long Life. Some report, that the Tygers and Leopards mingle; which may be true in *Africa*, but such Conjunctions are not frequently observed in the *Indies*. It may not be amiss to add, that in hunting with these Beasts, when tame, they fit on the Croup of the Huntsman's Horse, with their Eyes covered; and the Game is roused; and then they are let go.

14. The Camel is, at once, as useful and as remarkable a Creature as any that has been yet mentioned; nor is there one that makes a greater Figure in the Works of the An-

tients, who seem to have considered it with greater Attention; and therefore speak of it more accurately than of almost any other Animal in this Part of the World. The Camel is cloven-footed, hath a large fleshy Bunch on his Back, which is peculiar to the Species, another lesser Bunch on the bending of each Knee, which appears to be of Use in supporting his Body: His Tail is like that of an Ass in Shape, but has four Knots in it, like that of the Cow.

This is the Description of *Aristotle*; but a *Change Water* that I have before cited, gives us, in my Judgment, a much better Picture of a Camel: And, therefore, I will submit it to the Reader's Inspection: "This Creature, first he, is a kind of Ship by Land; for he transports vast Quantities of Goods from one Country to another, in a short Space of Time, at small Cost, since he eats little, and scarce ever drinks in his Passage. His Form is singular, and not so beautiful as his Qualities are valuable; for in the Neck and Fore-part of him he is made most like a Sheep. In his Body he resembles a Horse: His Back and Hind-limbs are peculiar to his Species; for scarce any other Creature has any Resemblance to him therein. Nature has furnished this Animal with a Palate, to which Thistles, and such-like harsh Food, are most agreeable, two Stomachs admirably contrived for Digestion, and so fitted, as to receive a Quantity of Water sufficient to maintain his dry Food for many Days. Besides this, he derives from the same bounteous Hand, two Quantities, that the Sagacity of Man could never reach; or by his Sense distinguishes Springs, how deep soever they be: And whoever digs where a Camel stoops, will never find finding Water, let the Soil seem ever to upspring. Their second Property is, to elude venomous and hurring Winds, which fly twofold, and are most in a Moment: A little while before they come, the Camels run together, cry, and hide their Noses in the Lumps; but as soon as they are past, they lift up their heads, and continue their Journey."

Aristotle asserts, that they go twelve Months, and not bring forth more than one Foal. *Pliny* either copies him, or is of the same Opinion: But *Suetonius* holds, that they go but ten Months complete, and bring forth in the beginning of the eleventh. According to *Aristotle*, they are very private in their Copulation, retiring into unrequited Shades, and remaining there whole Days; at which times they are very furious. At other times they are very gentle and tractable Creature, understand their Disrespectfully, and, instead of a Whip, are quickered in their Pace either by a Pipe, or the Driver's Whistling.

Indeed all Authors agree, that, next to the Elephant, they are of all Animals the most gregarious: They sleep like them, to receive their Burdens, and at such times they have their accustomed Load. But, with respect to their very vindictive; and, if beaten, bear Malice long time; and, whenever they have an Opportunity, are full of taking Revenge. The *Arabians*, who are best acquainted with them, reckon two sorts of Camels; the first is called *Hegen*, which are the larger and the strongest; and will carry a thousand or twelve hundred Weights; and Bicks been almost flat. The second are called *Bedouins*; they are less, and cannot carry above half the Load. There are two Lumps upon their Backs; the lower and the *Perfians* make the same Distinction, though by the use of other Terms, for they call the larger of them Camels, because bred, for the most part, in the Desert of *Tartary*: The lesser they call *Sattum*; Camels.

It is certain, that they will travel four or five Days without Water, and some say much longer; and they are pretty round Pace, and at the Rate of thirty or thirty-five a Day, which they will continue, if Occasion require, for thirty or forty Days together. They are very voracious Animals; so that if at any time they are full, they will devour without making the least Resistance, any Quantity of this Creature, as well as of the Leopard, which theyables the Water before it drinks, and will not touch it

the same Reason singular, which and yet it feeds and, perhaps, of an Advantage to

The Smell of the *Cyrus* gains of *Lidia*; for, Superiority in over-against their Scent, than As in the Age *Aristotle* asserts Years; but *Pliny* often approaches, then Writers later.

There are few hable; for, better Hair, which hable; for of figures, are w yields a considerable monac is made. For, which, which lent Life in the Sans at Pains. Fish is well-regg in asthma character, and the ether, especially kind of Snuff in the Note.

The receive Camel preserve by some of the others assert, the capable of holding Holes into the Creature forced with the dry Breath. It is, there, are a Ke-fipped with Trees, on which not proceed like as I have

the same Reason. In one respect this Creature is very singular, which is in having no Teeth in its upper Jaw, and yet it feeds without any Inconvenience from hence; and, perhaps, the want of Teeth is, in some Cases, rather an Advantage to it.

The Smell of this Animal is so disagreeable to Horses, that they will not endure it; and, by the Knowledge of this *Cyrus* gained a complete Victory over *Craesus*, King of *Lidia*; for, knowing the other trusted much to his Superiority in Cavalry, *Cyrus* posted a Body of Camels over-against them, and the Horses no sooner perceived their Scent, than they fell into Confusion, and ran away*. As to the Age of this Creature Authors are much divided. *Agellie* asserts, that they do not live much above fifty Years; but *Pliny* says, that if they escape Accidents, they often approach, and sometimes reach, an hundred[†]. Modern Writers agree rather with the former than the latter.

There are few Creatures that are in all respects so valuable, for, besides the Services they render by Carriage, their Hair, which they shed every Year, is extremely valuable; for of this Hair, Camblers, and other Manufactures, are wrought; and the very Urine of the Beast yields a considerable Profit, since of that the true Sal Armoniac is made. The Lump on the Back is most of it; which, when melted, becomes an Ointment of excellent Use in dissolving hard Swellings, and in curing all Sorts of Pains in the Limbs, from whatever Cause. The Flesh is well-tailed, and the Broth much used by the *Chinês* in almatic Cafes: The Milk of the Camel is thinner, and therefore esteemed more wholesome, than any other, especially in Consumptions. Of the Dung dried a kind of Snuff is made, which is said to cure Bleeding at the Nose.

The received Opinion amongst the Antients, that the Camel preserved Water in its Stomach, has been ridiculed by some of the Moderns as equally foolish and false; but others assert, that, on Dissection, there appear four Ventricles, capable of holding a considerable Quantity of Water, with Holes into the Stomach, by which it is supposed this Creature forces the Water, contained in them, to mix with the dry Food that is in its Stomach, by holding its Breath. It is, on the other Side, asserted, that, in *Arabia*, there are a Race of Camels that never drink at all, but are supplied with Moisture from the Grass, and Tops of green Trees, on which they feed; but, with respect to this, I cannot pretend to decide, desiring only to report fairly such Facts as I have met with.

The Camel is as much the Theme of Modern Travellers, as of the ancient Naturalists, and they agree exceedingly well in their Descriptions with the former; so that we have all the Reason in the World to believe, that both may be depended on. The modern Travellers observe, that there cannot be any thing better suited than the Nature of this Animal to the Commerce of the *Indies*. They tell us, that from the very time the Camel is brought forth, it is accustomed to Burdens; that they take care to place its Legs in their proper Posture under it, and then lay such a Weight upon it as keeps it in that State for a certain time; and, by repeating this Method, they beget such a Habit in the Beast, as renders it tractable and obedient for Life. This appears to be the more necessary, because, naturally, the Camel has a great Degree of Obstinacy; and, though it readily kneels to receive its usual Load, yet, as soon as it feels that Weight upon its Back, it rises at once, and will not suffer any Augmentation[‡].

The Capacity of this Creature to bear Hunger and Fatigue, is very extraordinary; and the Moderns assert more upon this Head than the Antients. We are particularly told, by a Writer eminent for his Candour, that a Camel, on a Piece of Salt, will go forty two Days without eating; during which time, they are so furious, and so mischievous, that there is no going near them, and therefore they take Care to lead them to Places where they can do no hurt. Some assert, that this Creature is enabled to fast longer

than any other, by a sort of gradual Consumption in his own Body, which supplies, for a certain time, to the Stomach, what should be derived from Food; but then it weakens him exceedingly, insomuch that a strong Camel, after the Fit of Lust is over, is scarce able to sustain a tenth Part of his usual Load[§].

These Animals are at all times very sober Feeders, so that they are able to subsist on a very little Matter, which enables them to perform such prodigious Journeys, as, for the Convenience of Commerce, they are put upon all over the East; so that it is visibly the Wisdom of Providence, that destined this Creature to be the Native of Countries where such a Beast was absolutely necessary for the Service of the Inhabitants; and it may be regarded as an additional Proof of this, that the *African* Camel, which fares harder, and has still greater and more uncouth Journeys to take, is larger, stronger, and capable of carrying heavier Burdens, than the Camels of *Asia*. The Moderns have likewise discovered some medicinal Virtues in the Camel, which do not appear to have been known to the Antients: As for Instance; that the Brain of it, when dried, is in a manner a Specific for the Falling Sickness; that its Urine is an excellent Preservative for the Teeth and Gums; and that its Dung is capable of resolving white Swellings, and is an excellent Cure for green Wounds[¶]. It is no wonder, therefore, that the *Arabs* account their Camels their greatest Wealth; and it is the clearest Proof of their Firmness in their Customs, that they are not, in this respect, at all changed from what they were in the Days of *Arystan*, who affirms, that some of them were possessed of 3000 of these Animals^{**}.

15. The Dromedary is, in the Opinion of all the Naturalists, a Species of the Camel; and, though it be weaker, and less capable of carrying Burdens, yet, in other respects, it is of no less Use. Instead of one large Bunch on its Back, as the Camel has, the Dromedary has two Lumps of Fat, so disposed, that the Vacancy between them is a kind of natural Saddle; and, as they are lighter made than the Camel, and serve only to carry a Passenger, so they go much easier, and at a much greater Rate; for whereas the Camel has a shuffling uneasy Pace, in which it goes at the Rate of ten Leagues a-day, or thereabouts; the Dromedary has a regular, brisk, and not very uneasy Trot, in which it will, without Difficulty, perform a Journey of forty Leagues in a Day. The Feet of this Creature are observed to be as soft as a Sponge, so that they are not hurt either by Stones or Sand, but travel on much at the same Rate, let the Road be what it will; they kneel to receive their Riders, as the Camel does for his Load, and rise as soon as a Man is fixed upon their Back^{††}.

They are likewise capable of fasting hard, and will endure Thrust for four or five Days, but are not able to bear altogether so much Fatigue as the Camel. The *Arabians* call them *Ragualil*, or *Elmahari*; and the strongest and best are bred in the Northern Countries: They make use of them in the *Indies* for going Post, and Expresses frequently perform a Journey of eight hundred Miles upon them in the Space of a Week. There is one thing very singular in these Animals, which is, that they go much better, and have greater Spirits in hot Weather, than if there be any Wind stirring; and it is observed, that the slightest Breeze makes them sluggish and lazy^{‡‡}.

We have in the Memoires of the Royal Academy of Sciences a very curious Paper in relation to this Creature; it consists in the Account given by the *Persian* Ambassador to Mr. *Constance*, who, from being a Servant in an *English* Factory, became first Minister to the King of *Siam*; and who, at the Request of Missionaries, took upon him to inquire of that Ambassador what he knew in relation to the Dromedary, which is hardly known to the *Strangers*. He told him, that they were brought originally from *Tuokshan*, which is the only Part of *Asia* where they are bred in Perfection; that they were very much esteemed in *Persia*, on account of their carrying a

much easier than the Camel, by their having two Bunches on their Backs. That, however, these Bunches were not made by any Irregularity of the Spine, which was as flat and even under them as in any other Part of the Back; but that they were a kind of glandulous Substances, about six Inches in Height. He added, that, as to the common Report of their having a Supply of fresh Water in their Stomachs, which, in extreme Necessity, Travellers sometimes were forced to have recourse to in the Deserts for the saving of their Lives, it was absolutely a Fable, without the least Foundation.

The famous *Shah Iben*, who governed the *Indian Empire* with so much Reputation, contrived a Method, by which he made the *Dromedaries* extremely useful to him in time of War; which was a thing unthought of by any of his Predecessors, because they are a torpid Animal, and cannot be brought to charge like a Horse: But this Emperour made them useful in another way: A Rebellion broke out near the City of *Agra* in his Absence, on a Supposition, that it was impossible for him to march back again before the Rebels had assembled Forces enough to make themselves Masters of his Capital. He was no sooner informed of this, than he mounted 12,000 of his choicest Troops upon *Dromedaries*, and, in the Space of nine Days, made a March of seven hundred Miles; which so astonished the Rebels, when they heard that the Emperour was within a few Miles of them, that they dispersed without a Blow, and he had the Honour of suppressing, by the Quickness of his Invention, an Insurrection, that, if the Chiefs of it had gained time to have executed their Purposes, might possibly have deprived him of the Government; for it was afterwards known, that some of the Generals of his Army had secret Intigues with the Malecontents; but this sudden Victory, gained by the Swiftness of his *Dromedaries*, disappointed them entirely, and obliged them to lay aside their Design.

16. The *Guaife*, or *Camelopardus*, as it is called by the Antients, was a Creature better known to them than it is to us. According to the Accounts they give us of it, it resembled the Camel only in its Head and Neck, which it carried more upright; and had from thence a bolder and a fiercer Aspect. The Hair was either red mixed with white, or white mixed with red. It was of the Height of a Horse, and shaggy like it in the Chest; but towards the Reins it was so slender, as to be more like the Ape than any other Creature. All that *Pliny* tells us of it is, that the *Ethiopi*ans called it *Nabis*, and that the first time it was seen at *Rome*, was when the *Circenian* Games were exhibited by *Cæsar* the Dictator. Since that time, says he, this Creature comes now and then to *Rome*, more to be gazed on for the Singularity of its Appearance, than for any Savageness in its Nature; of which, says he, it has so little, that I can stile it a wild Sheep.

The celebrated *Panchymerus*, who was at *Constantinople* when one of these was brought thither, in the Reign of the Emperour *Michael Palæologus*, towards the Cloze of the thirteenth Century, gives us a larger Description of it than is any where to be met with, and therefore I shall transcribe it; the rather because this is an Author not frequently cited. The *Guaife*, says he, is an Animal so rare, and so wonderful, that I have thought it not improper to insert a Description of it, to refresh the Memories of such as saw it, and to make it known to such as, perhaps, have not heard of it before. It is of the Bigness of an Ass, its Colour white, spotted like a Panther, but with red. Its Shape resembles that of those Camels which have a Rising in their Back from their Tails to their Shoulders: Its Fore legs are longer than its Hinder ones; its Neck slender like that of a Crane, with a small Head, shaped like that of a Camel; the Belly white; and a broad Streak of Black down its Back, from the Neck to the Tail, its Legs exceedingly thin, and its Hoofs cloven, like those of the Deer. It was so gentle, that it suffered itself to be touched, and even to be guided, by a Child. The Food of this Animal was Herbs, Meal, and Barley. When attacked, it does not defend itself with its Hoofs, as Horses do, nor with

Horns like Oxen; nor with Tusks, like the wild Boar; nor with its Nails, as Cats; but with its Teeth, which, however, are not very sharp, and serve rather to repell an Injury than to revenge it: Nay, even these Teeth have nothing in them venomous, like those of most other Animals. This Creature was brought from *Ethiopia*, and presented to the Emperour, who ordered it to be led thro' the principal Streets of the City, for several Days, for the Diversion of his Subjects. This is a clear and plain Description from an Eye-witness; so that there is not the least Reason to suspect, as some have done, that this is an imaginary Animal, and a Creature that never had Existence in Nature. I do not indeed pretend to deny, that some such imaginary Animals are to be met with in the Writings of the Antients: On the contrary, I shall give some Instances of this kind hereafter. At present, I think it better to present the Reader with another Description, from an Eye-witness likewise: But it will be necessary to premise, in the first Place, that the Author I am now going to quote, was certainly mistaken as to his Fact; for the Creatures he mentions could not be those described by *Pliny*, and by the Author I have before cited; whose Description agrees very well with what *Pliny* says of them.

Belonius describes them thus: I saw, says he, a Couple of them at *Grand Cairo*, each having two little Horns in the Forehead, about five Inches long; between which appeared a Bunch, like a third Horn, about two Inches high: From the Tail to the Crown of the Head, was about eighteen Feet: His Legs were much of a Length before and behind; but the Upper-joint, or Shoulder-bone, was much longer than the Thigh: His Back sloped, like the Ridge of a Houle; his whole Body firm, strong, in Colour, that of a Deer; but sprinkled all over with large square Spots. His Feet were cloven, like those of an Ox; his Upper-lip hanging over the under: His Tail slender, indifferently thin of Hair, and tufted at the End, his Mane like that of a Horse: And he hopped in moving, first on the right Leg, and then on the left: When he eat, drank, or took any thing from the Ground, he stretched out his Fore-foot, for otherwise they would have hindered him. His Tongue, as *Josephus* writes, is two Feet in Length, of a dark red Colour, long and round like an Elm; which he gathers Herbs, Leaves, and Grains into his Mouth, with wonderful Dexterity.

There is, without doubt, a very wide Difference between these Descriptions, inasmuch that I very much doubt whether they belong to the same Animal: But the Question is, which most resembles the *Camelopardus* of the Antients: And I must confess, that, in my Opinion, it is the first; at least it is certain, that this is the Creature which is called a *Guaife* in the *Indies*, and is frequently found in the Woods of *Bengal*: As for the Creature which *Belonius* saw at *Cairo*, it is an Animal common enough in *Ethiopia*, and is described by *Tadler Alphonso Mendez* under the Name of *Strutho-camelus*, that is, the *Gibbered Camel*, because, says he, it resembles, in its Shape, the *Gibbered*: But this Creature is allowed by all who have seen it to be the tallest Animal to the World: For, though much heavier, it is higher than an Elephant. Its fore Legs are commonly twelve Hands high, so that a Man on Horseback can pass under their Belly, as many who have seen them in *Ethiopia*, positively assert. But it can scarce be believed, that if this Creature had been ever seen at *Rome* by such a Writer as *Pliny*, he would have given us so short and dry a Description of it as that above-mentioned, when it must have been infinitely a greater Curiosity than any that had ever been seen there.

On the other hand, it is very clear, that *Panchymerus* saw the very Creature that *Pliny* describes; and, therefore, we have good Reason to believe, that the Creature *Belonius* saw were by him only stiled *Guaife*, as Mr. *Tadler*, in his History of *Ethiopia*, blames *Francis Mendez* very much for calling the Creature he saw *Strutho-camelus*, and not *Camelopardus*, or *Camelopardus*, which is the Word used by *Pliny*. The Amount of all this Reasoning is no

more, than to shew, that we are in much greater Danger of being imposed on by the Criticisms of the Moderns, than by either the Credulity or the Negligence of the Antients; for, before we can accuse *Pliny* of having passed slightly over to extraordinary a Creature as this *Ethiopian Giraffe* is supposed to be, we must first be sure, that this was really the Creature he saw; whereas, I think, I have made it more than probable, that it was not: All, if there be, as it is certain there is, a Creature called a *Giraffe*, or *Giraffa*, in the *Indies*, which agrees exactly with the Description of the Animal seen at *Constantinople* between four and five hundred Years ago, and which was then allowed to be the *Giraffe* of the Antients, I cannot apprehend why we should not admit this to be the Creature mentioned by *Pliny*, which involves us neither in Absurdity nor Contradiction, rather than agree with *Bellonius* and *Ladef*, in supposing this prodigious Animal, which *Father Monard*, and many other Travellers, have seen in *Ethiopia*, to be the *Camelopardus* of the Antients; though it does not, in any respect, agree with the Descriptions they have given of this Creature.

18. The wild *As*, as we find it described by the Antients, is undoubtedly an imaginary Creature; and the very Description of it, is, in a manner, a sufficient Proof. *Cassius* tells us, that it is of the Size of a Horse; that it has a fine white Front, and on it a Horn, of the Length of a Cubit; the Upper part of which is red, and the lower black: The Head of a purple Colour, the Eye of a bright Blue, and the Body white, but streaked with several Colours, and the Coat of a most exquisite Beauty. When first pursued by the Hunters, it does not move at a very great Rate; but increasing its Speed by degrees, it flies, at last, with such prodigious Swiftness, that no Horse can come near it. The only Method of taking it, is by watching when it goes into the Meadows to feed its Young; of which it is so tender, that it will never abandon them, however distressed; it exposes itself, in their Defence, to all Dangers, with a most desperate Courage, combating the Hunters both with its Horn and Heels, till, in the End being stuck full of Darts, it dies through Loss of Blood: The *Indians*, as soon as it falls, cut off its Horn and its Hoofs, which are of the most bright and beautiful Red; and next, seizing the young ones, they carry them home, and breed them up tame. Experience having taught them, that if this Creature once attains its full Strength, which it does in about two Years, it is impossible, by any Art, to conquer the Swiftness of its Nature. As *Cassius* resided at the *Persian* Court, and wrote all his Account of the *Indies* from Hearsay, we need not wonder that he fell into such Mistakes: Neither is it at all improbable, that some of these Vermilion Horns and Hoofs, which were dyed of this Colour by Art, might be carried to the *Persian* Court; and this Story of the wild *As* invented to make them sell at a dear Rate; since many Instances might be given of Frauds of the like Nature, practised with the same View, in regard to other Commodities.

This Story, however improbable, seems to have kept its Ground for a long time, since *Pliny* tells us, that the *Indians* killed only one Horn; and that no other Creature, that did not divide the Hoof, had Pattern Bones. But he gives us no distinct Description of this Animal. The several Histories speak much of the wild *As*s, and acknowledge it to be the swiftest and most beautiful of all four-footed Animals. In the old *Persian* Language, this Creature was called *Cur*, or *Gour*. And *Babar*, one of the ancient Kings of that Country was surnamed *Babar*, *Cur*, though Authors do not well agree as to the Reason. Some report, that it was because he once shot, when he was hunting, a Lion, and a wild *As*, that were fighting, with the same Arrow: But others affirm, that it was be-

cause he delighted much in the hunting of these Animals, and was at last killed by one of them. The Circumstances however, of this Creature's fighting with a Lion, is very singular, and shews the Opinion entertained in the East of the Courage and Strength of the wild *As*s. We may add to this another Proof of the same Nature, viz. that one, indeed the last of the *Khaliffs*, of the *Omniades*, was called *Mervan Hemar*,⁴ or *Mervan* the *As*, (for the *Arabs* used the Word *Hemar* both for a wild and tame *As*) on account of his great Courage and Strength. This singular Animal is not, however, particularly described by any who have travelled in the *Indies*. But it is also a Native of various Countries in *Africa*. And this affords us an Opportunity of obliging the Reader with an exact Description and Print of it, from an Author of unquestionable Credit. He describes it thus:

The wild *As* is one of the loveliest Animals I have ever seen; he is of the Size of an ordinary Saddle-Horse; his Limbs finely turned, and well proportioned; his Coat very soft, and close; from his Mane to his Tail there runs a large black List, from whence proceed abundance of Streaks, which, falling regularly down on both Sides, meet under his Belly; these Streaks are of different Colours, some white, some yellow, others of a Chestnut, which are blended and mixed on their Sides, so as to strike the Eye exceedingly by their beautiful Mixture: The Head and the Ears are in like manner streaked with very beautiful Colours: The Hair of his Mane and Tail, for the most part, either white or of a Chestnut-colour, with a small Intermixture of Yellow. This Creature is so swift, that no Horse can come near him; so that it is with infinite Difficulty he is overtaken; and whenever they are so lucky as to catch one, it is sold at a very extravagant Rate.

*Father Yellex*⁵ informs us, that the Great *Mogul* gave two thousand Ducats for one of them. Abundance of them have been taken at the Cape of *Good Hope* to tame them, but to no purpose; though they have been taken very young: And it is reported, that, of all Creatures in the World, it has the strongest and most ungovernable Passion for Liberty. The Reader, after reading this Description, which agrees exactly with that given us by another Traveller of great Reputation, will ask why it is called an *As*? and the only Answer that can be given is, that, with all its Beauty, it has the long and large Ears of that Animal, from whence it derives its Name. *Mr. Ludolf* complains of this most heavily, and wishes that, to free the Animal from this Disgrace, it might have its Ears cut off. We owe to this Writer another remarkable Proof of the Beauty and Value of this Creature; who informs us, that an *Abissinian* Ambassador at *Batavia* having made a Present of one of them to the *Dutch* Governor-General of the *Indies*; he, by the next Ship, sent it to the Emperor of *Japan*; who was so charmed with it, that he made the Company Returns in Money and in rich Silks, to the Value one hundred and sixty thousand Crowns.

Mr. Thevenot tells us, that he saw one in its Passage through *Egypt*, which was a Present to the Grand Signor; and was so exquisitely beautiful, that he could not help suspecting there was some Art used in colouring its Coat; for which, however, there does not appear to be any just Foundation. Some of our old Travellers to the *Indies* report, that, near the Mouth of the River *Ganges*, the Natives shewed them abundance of Horns, which they asserted to be the Horns of wild *As*s: Whence it appears, that the Author first-mentioned did not invent the Story he tells us concerning them. There is a very extraordinary Creature, not only described, but expressed in a wooden *Cur*, by *Purchas*: He tells us, that it is bred in the Kingdom of *Congo*, and is there called *Zebra*. It is, says he, of all Creatures the most comely, resembling an

our lower World. They made use of
fables, or rather of Parables, that were
express their Notions about Things that
fall under the Cognizance of the human
will, therefore, appear dark and con-
fused, and by Men of great
with the utmost Care, and by Men of great
Abilities. In Points that more nearly
they were explicit enough. They taught
that as the World had a Beginning,
it must have an End, and that by Fire.
They taught, that all Countries produced
something, and that by Fire, for
making their Inhabitants happy,
Men ought rather to contract their
Wishes, than to augment the Inconveniencies,
than augment the Inconveniencies, to
be content with what Nature, in
Nature is subject, by desiring what is
Lands. As to Spiritual Beings, they
divided them into three Classes, Angels,
Demons, and Devils. They taught
that the first were perfectly good, the
second were perfectly evil, and the
third capable of both, and that by
Death, because they fled from the
the highest Degree of which they to
separation of the Spirit from the Body,
with the Angels.

The Doctrine of the *Metempsychosis*
was common with all the Eastern Philosophers,
and it seems to have been this: That
whatever grew, or had any Faculties
with Spirit, from whence they infer
were the Cases of Spirits, or rather
were confined to, they purged or pur-
so purchased their own Redemption,
cycle they built their Doctrine of
because they thought that all An-
discovered, and that in this especially,
serviceable to Men, rendered those Spirits
pure, had yet Principles of Good
a worse Kind being thrust into the Body,
which, therefore, they permitted to
who were not of their Sect or Class:
that in proportion as Men heighten
animal Faculties in this Life, they shed
that is to say, such as gratified their
into Beasts; and such as cultivated
Mind, rose, by degrees, through
Mankind, till, in the End, they mer-
from Body, and were received into
Angels.

Such, as far as I am able to gather
us by the Artians, were the Opinions
who taught Philosophy. Another
were, who had their Studies principally
of Policy, or the Laws and Constitution
it was to them that, in critical Con-
addressed their Lives for their Advice,
were not at Liberty to act in Dis-
Times the Monarch had not the Power
as he desired to consult, but was
Grove where they resided, and when
to comply with their Ceremonies a-
by laying aside all Marks of Grandeur,
Herb, Fruit, and Pots, and listening
Discourses. They did not permit
last above a Day and a Night, and
the Time in which they gave lectures
were a third Sort, that applied their
Ratality, in which they instructed the
visit them, and to hear their Discour-
sible, that they passed through their
Periods of their Lives; so that
Years before they arrived at the
the School of Philosophy, at the
was always the eldest and gravest
try: But this is what I gather from
counts we have of them, and is not
Author; to that, if the Reader
is at Liberty to reject it.

... who have travelled into

... nance. They suffer their Hair to grow, for the Men

We have formerly mentioned the Animal which produces Musk, the Manner in which it is prepared, and the Value of that rich Perfume. At present we shall only remark, that the best Writers, ancient and modern, agree perfectly with our Author in Opinion, that the richest Musk is that of *Tibet*, or, as others call it, *Amogara*; and this because of the Aromatic Partures in that Land, which are the most

... which they are
... no King, and the
... the Country

... the *Babara*, King of *Wabar*, is the
... the *Babara* is the most illustrious Prince in all the
... and all the other Kings there, though each is Ma
... and independent in his Kingdom, acknowledge thus
... his Pre-eminence. When he sends Embassadors to them
... they receive them with extraordinary Honour, because
... the Respect they bear him. This King makes magnificent
... Presents after the Manner of the *Arabs*, and has Horles and
... Elephants in great Numbers, and great Treasures in Money.
... He has a more Pieces of Silver called *Tartarian Dracs*,
... which weigh half a Dram more than the *Arabian Dracs*.
... They are coined with the Dye of the Prince, and bear
... the Year of his Reign from the fall of the Reign of his
... Predecessor.

They compute not their Years from the Era of *Mohammed*, as the *Arabs* do, but only by the Years of their Kings. Most of these Princes live a long Time, and many of them have reigned above fifty Years, and those of the Country believe, that the Length of their Lives and of their Reigns is granted them in Recompence for their Kindness to the *Arabs*. In Truth, there are no Princes more heartily affectionate to the *Arabs*, and their Subjects prefer the same Friendship for us.

the *Unicorn*, who has but one Horn upon his Forehead, and thereon a round Spot, with the Representation of a Man. The whole Horn is black, except the Spot in the Middle, which is white. The Unicorn is much smaller than the Elephant; from the Neck downwards he pretty much resembles the Buffalo; his strength is very extraordinary, for he excels therein all other Creatures; his Hoof is not cloven, and from his Foot to his Shoulder is all of a Piece. The Elephant fies from the Unicorn, whose Lowing is like that of an Ox, with something of the Cry of the Camel; his Flesh is not forbidden, and we have eaten of it; there are great Numbers of this Creature in the Fens of this Kingdom, as also in all the other Provinces of the *Indies*; but the Horns of these are most esteemed; and upon them are generally seen the Figures of Men, Peacocks, Lions, and other Resemblances. The *Chinese* adorn their Gardens with these sorts of Figures, so that some of their Gardens are worth two or three thousand Pieces of Gold in *China*, and sometimes more, the Price augmenting with the Beauty of the Figure: All the Things we have here enumerated are to be purchased in the Kingdom of *Rabni* for Shells, which are the current Money of the Country.

Babara is not a proper Name, but an Appellative common to all these Kings, as was *Cafoes* and some others. The Country under the Dominion of this Prince begins on the Coast of the Province called *Kamkam*, and reaches by Land to the Confines of *China*. He is surrounded by the Dominions of many Kings, who are at War with him, but yet he never marches against them.

After this Kingdom there is another, which is an inland State distant from the Coast, and called *Kasibbin*; the Inhabitants are white, and bore their Ears; they have Camels, and their Country is for the most part desert, and full of Mountains; farther upon the Coast there is a small Kingdom called *Hitrang*, which is very poor; but it has a Bay, where the Sea throws up great Quantities of Ambergris; they have also Elephants Teeth and Pepper; but the Inhabitants eat it green, because of the Smallness of the Quantity they gather. Beyond these Kingdoms here mentioned there are others of Number unknown, and among the rest that of *Mujer*; the Inhabitants are white, and dwell after the *Chinese* Manner; their Country is full of Mountains, with white Tops, and of very great Extent; here are very great

One of those Kings is the King of *Harez*, who has very numerous Forces, and is stronger in Horle than any other Princes of the *Indies*, but is an Enemy to the *Arabs*, though he at the same Time confests their King to be the greatest of Kings, nor is there a Prince in the *Indies* who has a greater Averision to the *Mohammedan*

the *Rhinoceros*, or *Unicorn*, who has but one Horn upon his Forehead, and thereon a round Spot, with the Representation of a Man. The whole Horn is black, except the Spot in the Middle, which is white. The Unicorn is much smaller than the Elephant; from the Neck downwards he pretty much resembles the Buffalo; his strength is very extraordinary, for he excels therein all other Creatures; his Hoof is not cloven, and from his Foot to his Shoulder is all of a Piece. The Elephant fies from the Unicorn, whose Lowing is like that of an Ox, with something of the Cry of the Camel; his Flesh is not forbidden, and we have eaten of it; there are great Numbers of this Creature in the Fens of this Kingdom, as also in all the other Provinces of the *Indies*; but the Horns of these are most esteemed; and upon them are generally seen the Figures of Men, Peacocks, Lions, and other Resemblances. The *Chinese* adorn their Gardens with these sorts of Figures, so that some of their Gardens are worth two or three thousand Pieces of Gold in *China*, and sometimes more, the Price augmenting with the Beauty of the Figure: All the Things we have here enumerated are to be purchased in the Kingdom of *Rabni* for Shells, which are the current Money of the Country.

It is very highly probable, that this *Babara*, or Monarch of the Nation which have their Ears bored, which is plainly the *Indians*, was no other than the *Assura*, or Emperor of *Calicut*, who, according to the Reports of the most ancient *Portuguese* Historians, was acknowledged as a King of Emperor in the *Indies*, six hundred Years before they discovered the Passage to them by the *Cape of Good Hope*.

It is another good Reason why the Monarch here mentioned should be taken for the Emperor of *Calicut*, since he likewise was not called by the proper Name, but by such an Appellative as this; and it could obtain an Etymology of these Words that could be depended upon, it is very easy to see that *Babara* and *Babar* would be found to mean the same Thing.

It is already given to large an Account of the *Rhinoceros*, that we shall not trouble the Reader with any thing on that Subject here, but only to observe, with amazement, that it is evident this Writer makes the Unicorn and the *Rhinoceros* the same Creature, agreeable to what we have already observed here.

Book I. Chap. II. of the EAST INDIES. 537

But the Musk of *Tibet* is far preferable to that of *China* for two Reasons; first, in *Tibet* this Creature feeds on Aromatic Pastures, while in *China* he has nothing to substitute him but what is common; secondly, the Inhabitants of *Tibet* preserve their Bidders or Cods of Musk in the pure natural State, while the *Chinese* adulterate all that come into their Hands. They dip them also into the Sea, or else expose them to the Dew; and having kept them some time, they take off the outward Membrane, and then close them up; and this Musk passes in the Country of the *Arabs* for Musk of *Tibet*, because of its Excellence.

The most exquisite of all the sorts of Musk is what the *Rohobeks* that yield it leave behind them when they rub themselves against the Rocks on the Mountains; for the Humour whence it is generated, falling down towards the Navel of the Creature, it there gathers into a Quantity of carthy Blood exactly like Biles, and such like Tumours; when this Swelling is ripe, the Creature, sensible of a painful itching, fels out the Swelling, and rubs himself against the same, till he opens his Sore, and the Contents run out. Now, as soon as this Mixture falls from the Creature, it coagulates, the Wound closes, and the same kind of Humour

will not round the Head of a Child when he comes into the World, as the *Arabs* do, for they say it causes a considerable Alteration in the Brain, and that their Senses are very sensibly impaired thereby. They suffer the Head then to be all covered with Hair, which they carefully comb.

As for their Marriages, they observe the Degrees of Consanguinity after this Manner: They are divided among themselves into Families and Tribes, like the *Arabs*, and some other Nations; and they know each other by the Difference of their Descents. No Man ever marries in his own Tribe, just as the Children of *Thummin* among the *Arabs* take not to Wife a Daughter of the same Race of *Thummin*; and a Man of one Family espouses not a Woman of the same. But, for Example, a Man of the Family of *Rebayat* marries into that of *Modzar*, and in like manner a *Modzar* marries with a *Rebayat*; they are of Opinion, that such Alliances add to the Nobility of the Children, by increasing their Alliances, and rendering their Families more powerful.

Here our Author makes, as it were, another Break in his Work, in order to pass once more to the *Indians*,

into the Buzar, or Market-place, as they call a kind of Cangiar they wear, made after a very particular Manner, and seize on the most wealthy Merchant there present, and holding his Kris to his Throat, leading him by the Vest out of the City in the midst of a Throng of People, while not a Soul of them dared attempt his Rescue; for if any Attempt of this kind was made, the *Indian* was sure to kill the Merchant, and make away with himself: When he had got him out of the City, he obliged him to redeem himself with a Sum of Money. This Outrage continuing, the Kings ordained that such *Indians* should be seized; but when they came to execute this Or-

der, they were so terrified by the Sight of the *Indians*, that they were obliged to shake off this evil Habit of Gaming; on the contrary, they sometimes persist in it to obstinately and to long, before they part, they have all their Fingers thus mutilated. Some of them will take a Wick, and dipping it in Oil, apply it to some Member, set Fire to it, and let it burn, to that the Scent of the burnt Flesh is smelt by those who play with them, while the Parties themselves bear not the least Sense of Pain.

There is much Debauchery in this Country, as well among the Women as among the Men, for they are under no Restraint. It is no high, that some men

They are much Debauchery in this Country, as well among the Women as among the Men, for they are under no Restraint. It is no high, that some men

They coin a great deal of Copper Money, like what the *Arabs* call *Falus*: They have Treasures like other Kings; but they have only this sort of small Money, which is current all over the Country; for though they have Gold, Silver, Pearls, Silk, and rich Stuffs in great Abundance, they consider them only as Moveables and Merchandise, and the Copper-Pieces are the only current Coin; from foreign Parts they have Ivory, Frankincense, Copper in Pigs, Tortoise-shells, and Unicorns Horns, which we have mentioned, and with which they adorn their Girls. Of their own Stock, they have Abundance of Beasts of Burden, Horses, Asses, and Dromedaries; but they have no *Arabian* Horses.

17. A Man is not raised to the Dignity of Prince, or Governor of a City, till he has attained to the 40th Year, for then, say they, he hath Experience enough to be his Seat upon a Tribunal, and receives the Ratification or Compliments of the People. Behind this Tribunal there is an Officer called *Lieu*, who keeps Rank, and according to the Order he receives from the Prince, returns his Answer to the Petition, for they never answer otherwise than in Writing, or admit of any Appointments, but what are committed to Paper. Before the Parties present their Petitions to the Prince, they get them examined by an Officer, who, if he discovers any Fault, sends them back again; for no Man may draw up their Writing which are to be presented to the Prince, except a Clerk versed in Business; and at the Bottom of each Writing they put, *Written by such a One, the Son of such a One*. And if in this Case there happen any Blunder or Mistake, the Clerk is bamboozled.

They have an excellent kind of Earth, wherewith they make a Ware of equal Fineness with Glass, and equally transparent. When Merchants arrive here, the *Chinese* seize on their Cargoes, and convey them to Warehouses, where they remain six Months, and till the last Merchant-man has arrived, then they take three in Ten, or thirty per Cent. of each Commodity, and return the Rest to the Merchant. If the Emperor hath a Mind for any particular Thing his Officers have a Right to take it, preferably to any other Persons whatsoever, paying for it to the utmost Value. They dispatch this Business immediately, and without the least Delay; they commonly take Camphire, which they pay for after the Rate of fifty *Falages* per Man, and the *Falage* is worth a thousand *Falus*, or Pieces of Copper. When it happens that the Emperor does not take Camphire, it sells for half as much again.

The Prince never fears himself on his Tribunal till he has eaten and drank, for fear he should be misled in some Thing; and each of these Princes or Governors has his Subsistence from the publick Treasury of the City or Com-mands. The Emperor or *China*, who is above all these Princes or petty Kings, never appears in publick but once in ten Months, saying, that if he showed himself often to the People, they would lose the Veneration they have for him; for he holds it as a Maxim, that Princes cannot subsist but by Force, and that the People know not what Justice is; and that thus Constraint and Violence must be used to maintain amongst them the Majesty of Empire.

16. The *Chinese* do not bury their Dead till the Day Twelvemonth of their Decade. Till the Expiration of this Term they keep them in Coffins, for having previously died them with Quick lime, that they may keep, they place them in some Part of their Houses. The Bodies of their Kings are embalmed with Aloes and Cam-

18. They have no Duty imposed upon their Lands, but are subject to a Poll tax, which is levied upon Men only, and that according to their Condition and Capacity. When any *Arabs*, or other Strangers, are in this Country, the *Chinese* tax them according to their Substance. When any Dearth makes Necessities dear, then the King opens his Store-houses, and sells all Sorts of Provision much

It would be an endless thing to give the Reader with Correctness about these Countries, the Names of which are totally unknown to us; but I have endeavoured to do so far as I could, and I am persuaded that the Names of the Countries, which are mentioned in this Account, correspond to well both with antient and modern Relations, that of the *Chinese* is the same as that of the *Franks* of the East, or of the *Indians*, and that the *Arabs* are the same as the *Arabs* of the West, and that the *Indians* are the same as the *Indians* of the East. I have also endeavoured to give a true and exact Account of the Customs and Manners of these Countries, and I am persuaded that the Reader will find it very interesting and useful. I have also endeavoured to give a true and exact Account of the Customs and Manners of these Countries, and I am persuaded that the Reader will find it very interesting and useful.

538 The Discovery, Settlement, and Commerce Book I.

At last he comes to the Pile, throws himself into it, and is soon reduced to Ashes.

Indians perished: The Merchants therefore sought after other Means to secure themselves, and the *Indians* were no longer apprehended.

55. A certain Person, to whom we give Intire Credit, says, he beheld one of these *Indians* burn himself, and avers, that when he came near to the Pile, he drew out a Cangiar, and with it ripped down his Breast to the Rim of his Belly; and that this done, he with his left Hand pulled out a Flap of his Liver, and with the Cangiar cut a Piece of it, which he gave to one of his Brothers, talking all the time, and discovering an invincible Contempt of Death, and a wonderful Patience under his Torments, till at last he leaped into the Fire in his Passage to Hell.

58. In the Mountain of *Sarandib* they find precious Stones of various Colours, red, green, and yellow, most of which are at certain Times forced out of Caverns and other recesses by Rains and Torrents. In these Places the King has his Officers to keep an Eye over those who pick them up: Many Times also they are dug out of Mines in the same Manner as Metals; and they sometimes find precious Stones in the Ore, which must be broken to get at them.

56. The Person who affirmed this added, that in the Mountains of this Country there are *Indians*, who in Opinions and Manners differ but little from those we call *Kanishians* and *Jehidians*, and who are addicted to all manner of Superstition and Vice. There is a great Emulation between these Mountaineers and the People on the Coast, the latter continually going up to the Mountains to dare the Inhabitants there to do as they do, and the Mountaineers on their Part as frequently coming down to the Coast with Desafians of the same Nature.

The King of this Island makes Laws, which are the Fundamentals of the Religion and Government of the Country; here are Doctors and Assemblies of learned Men, like those of the *Hindus* among the *Arabs*. The *Indians* repair to these Assemblies, and write down what they hear of the Lives of their Prophets, and the various Explications of their Laws. Here is a very great Idol of the finest Gold, but concerning the Weight thereof Travellers are not agreed. Here also are Temples, where great Sums of Money are expended in Incense.

Camels trained up to the Buttns... go in search of it by Moon-light, and purpoe along Shore. These Camels... as soon as they perceive a Piece of Amber their Knees, and their Rider p...

own out and spun, makes the most excellent... of, but they serve well enough in a... of Vinegar, and distilled, it affords a... of Cocca-nut, Cocca Plank, and the Core... of the Indies.

...very great Sin if they should. When they come to Siraf, and are invited by any of the considerable Merchants who are in that City, they must, though they are a hundred in Number, each have a separate Dish, and without the least Communication with the rest. The Kings and Perfumers of high Quality have fresh Tables made for them every Day, together with little Dishes and Plates wove of the Cocca-nut Leaf, in which they eat what is prepared

The Abbé Renaudet, in his Notes upon this Treatise, speaks very lightly of this Story, and seems to think it fabulous. There is however no sort of Doubt in this Opinion; since this sort of Whale is very often found in the Gulf of Persian Seas, and especially on the Coast of Barmader, and still Quarantines are taken out of its Guts. It is also very certain, that the best of this Perfume is found in the Indian Seas, yet Ambergra

...the Indies runs away with a Woman, and they kill both him and the Woman, as it was foretold, then the Man and the Woman consented to the execution, and with Death. It is a way, which the Indies as in China, which is not to be considered, and perhaps some think that has stolen for the Value of a Tunic, or a Tunic of greater Value, and sharp Stakes, which they would thrust it through their throats, and the Chiefs are obliged to take a solemn Oath, that they practice the same custom, as they perform in Honour of their Gods. The Indians are of Wood, with short hair, and a black complexion. The Chinese and Indians are of White, but both Nations marry a great deal, and the common Breed of the two is black, whereas the Chinese are of a blackish Colour. Circumstances is not past in the Chinese. The Chinese women are tall down before them, and depend on the Articles of the Religion. The Indians are of a blackish Colour, and have a beard three Cubits long, they wear a black Chinesse, but the most part have no hair on their heads. The Indians, however, have both Hair and Face. The Indians are called in a Prison they are made to drink for seven Days long, and they never the End of their Days. The Indians are a Confession of the Truth. The Indians are the Governors, who depend on the King and Subject, and the same they have in China and in the Indies there are no

...pying hot Irons or Cauteries. They have also some Smarting of Afrimony, but therein also the Indians surpass the Arabs. I know not that there is to much as one of either Nation that has embraced Mohammedism, or speaks Arabic. The Indians have but few Horses, and there are none in China; but the Chinese have no Elephants, and cannot endure to have them in their Country, for they are not for them. The Indian Dominions furnish a great Number of Soldiers, who are not paid by the King, but when they are rendezvoused for War, take the Pay entirely at their own Expence, and are no Charge to the King; whereas the Chinese allow their Forces much the same Pay as the Arabs. China is a pleasant and fruitful Country; most of the Indian Provinces have no Cities, whereas in China there are many in Number, great in Extent, and well fortified: The Climate of China is more wholesome, and the Country is less fertile. The Air there is also much better, and there is scarce a blind Person to be seen, or any one subject to the Diseases of the Eyes; and the same Advantages are enjoyed by several Provinces of the Indies: The Rivers of those two Countries are large, and furnish great Rivers, much Rain falls in both these Countries. In the Indies are many desert Tracts, but China is inhabited and peopled throughout its whole Extent. The Chinese are handsomer than the Indians, and come near to the Arabs, not only in Countenance but in Dress, in their Way of talking, in their Manners, and in their Ceremonies: They wear long Garments, and Girdles in form of Belts. The Indians wear two short Vests; and the Men, as well as the Women, wear golden Bracelets, adorned with precious Stones.

...injust to condemn it entirely, because, for want of having the Introduction to it, we cannot determine exactly what was his Plan, and consequently cannot say how far he came up to or fell short of it. One Thing I think is manifest, which is, that the Scope of his Undertaking is a Comparison between the Indians and the Chinese; at least he falls into this immediately after he has described the usual Navigation from Siraf to China; and considered in this Light, his Treatise appears regular enough. As to his Style, it is extremely simple and plain, and has nothing of that swelling hyperbolical Eloquence which is generally observed in oriental Writers; upon which, I beg leave to remark, that with regard to the Arabs, as well as other Nations, this was a Vice that prevailed in later Times, after Poetry and Rhetorick had been more cultivated than they were in the first Ages of their Empire, which has been the Case in most other Nations. One cannot possibly do so, that this Piece was extremely well received when it first came abroad, and that it had maintained its Reputation for a considerable Space of Time, appears from the second Treatise, which we are about to give the Reader. It seems, that when the Affairs of China were better known, some Prince, or other Person of Distinction, desired the Author of the following Pages to look over that Discourse, and to inform him, how far the Facts contained therein had been confirmed or contradicted, by succeeding Relations. What Time this happened, we cannot with any Certainty say, from the Comparison of the two Pieces, or from the Lights given us by the learned and accurate Critick who published them. The Manuscript which the Abbé Renaudet made use of, was apparently older than the Year of the Hegira 1169, which answers to the Year of Christ 1773; but the Discourse must certainly have been written long before that Time. In our Notes we have shewn that Elen-Habab travelled into China, A. H. 1285, A. D. 898, and the Author of this last Treatise informs us, that he had conferred with this Man after his Return, and had from him the Facts which he has inserted in his Discourse; so that the Book itself must have been two Centuries older

Of the Decline we have already spoken in our Account of the Philosophy of the Brahmins; and in our Notes upon the subsequent Treatise, we shall be obliged to show when it was first embraced in China, and with what Modifications it is still taught there. We shall take another Opportunity of acquainting the Reader with the History of the ancient Persians, and shall only observe here, that the Notes here mentioned are to be considered as dwelling in their native Persia, before they became famous by their Transport into Persia, which the Country every where meant in this and in the following Treatise by the Name of Ipek, and before they became Mohammedans; which is the more necessary, because from the present State of Things it is very natural to connect the Ideas which we have of the modern Persians with their Accounts of their Ancestors.

Commerce Book I.

Chap II. of the EAST INDIES. 541

...h as it were on the Right of the In-Oman, in the Country of Sibar or Sibar, and grows, and the other Countries of Cedd, Hamyer, Joham, and others in this Country have the Sonra in August Date, but in many Things different the Hands of the Arabs, and containing to us unknown: They have no Villages, and a very miserable Life! they inhabit extends almost as far as the Coast of Yaman or Arabia the Happy; stretches up into the Continent as far as the East ends at Kolcum. The Seas in this Part of Land, which God has fixed as a Line between these two Seas, as it is written in the Koran the Sea stretches along the Coast of the West Coasts, which is opposite to the Coast of Arabia; from the Coast of Arabia the Leopard Skins of Barbary, which are most skilfully dressed; and lastly, of Zeilab, whence you have Amber and

There is another sort, which swim in great Lumps upon the Surface of the Sea, almost like the Body of an Ox, or a little less, and weigh a great deal. When a certain Fish of the Whale-kind, called Tal, sees these floating Lumps, he swallows the same, and is killed thereby: Then they see the Whale floating upon the Surface, and instantly the Men who are accustomed to this kind of Fishery, and know when these Whales have swallowed Amber, go out to him in their Boats, and darting him with Iron Harpoons, they tow him to Shore, where they split him down the Back and take out the Amber; what they find about the Belly of the Creature is commonly spoiled with the Wet, and contracts an unpleasant Scent. You may buy the Bones of this Fish of the Druggists of Bagdad and Bassora. The Amber which has not been infected by the Ordure in the Belly of the Whale, is not inferior: It is usual Thing to make Stools of the Vertebrae of the Back Bone of this Whale, called Tal. They say, that in a Village ten Leagues from Siraf, called Tein, there are old Houles neatly enough built, the Lintels of whose Doors are of the Rib of this Whale. I have heard a Persian say, that formerly one was thrown upon the Coast nor

Oysters are fixed, and move not. When they are loose, the Merchants call them Seed Pearl: God alone knoweth how this Matter is. 68. Now this is the most wonderful Thing we have heard concerning the Subsistence of Oysters. A certain Arab came formerly to Bassora, and brought with him a Pearl worth a great Sum of Money; he shewed it to a Druggist of his Acquaintance, and, ignorant of the Value thereof, asked him what he thought of it? The Merchant telling him it was a Pearl, the Arab asked him what he thought it might be worth? and he valued it at a hundred Pieces of Silver. The Arab much astonished at his Words, asked if any Person would be willing to give him what he had said it was worth: Upon which the Merchant counted him out a hundred Drams, and with this Money the Arab purchased Corn to carry back into his own Country. The Merchant on the other Hand brought the Pearl to Bagdad, and sold it at a very high Rate, which enabled him afterwards to deal very considerably. This same Merchant declared that he had examined the Arab touching the Origin of Pearls, and that he delivered himself to the following Discourse: "I was going along the Coast of the

We may add to this Controversy the Accounts given by our Travellers and the best Chinese Historians, which never could have happened, if the former had not been every Respect agreeable to Truth. All this is not only supported by our Knowledge of many of the Customs of these People, which remain to this Day the same with those reported in these Relations, but they are still more plainly verified by such as are now no longer in Use, because many Chinese Writers, and Christian Missionaries from them, take Notice of such obsolete Customs,

Preparation of these Leaves consists in picking, drying them by a small Fire, rolling them up in a little Mattris, and packing them up in Tin-Creels or Boxes for the sake of preserving them, and the Convenience of transporting them. Such is the Account given us by a learned and accurate Writer, whose Work is not creditably esteemed, after so many later Accents of the contrary. But as it is natural to suppose that every Man will be a Judge of what regards his own Profession, I presume myself that my Readers will not be surpris'd that I have

to, and that this Notion was groundless, as well as what is vulgarly said of the idolatrous Nations, that they imagine their Idols speak to them.

He told us also, that since those Days the Affairs of China wear quite another Face; and since much is related to shew the Reason why the Voyages to China are interrupted, and how the Country has been ruined, many Customs abolished, and the Empire divided, I will here declare the Causes I know of this Revolution.

31. The great Troubles which have embroiled the Affairs of this Empire, which have put a Stop to the Justice and Righteousness there formerly practis'd, and which have in line interrupted the ordinary Navigation from *Siraf* to *China*, flowed from this Source: An Officer who was considerable for his Employment, though not of the Royal Family, revolted some time ago; this Man's Name was *Bachu*, and he began with committing Hostilities in the Country, marching his Armies into many Places, to the great Loss of the Inhabitants, till, winning a Party over to him by his Liberalities, he got together a Multitude of Vagabonds and abandoned People, whom he formed into a considerable Body of Troops.

His Army thus strengthened, and himself in a Condition to undertake any thing, he discovered his Design of subverting the Empire, and marched straight to *Cansu*, one of the most noted Cities in *China*, and at that Time the Port for all the *Arabian* Merchants. This City stands upon a great River some Days Distance from the Entrance, so that the Water there is fresh. But the Citizens shutting their Gates against him, he resolv'd to besiege the Place, and the Siege lasted a great while. This was transacted in the Year of the Hegira CCLXIV. and of Christ 877.

thus were Affairs situated, and the Rebel stood uncombed by any Disadvantage that might abate his Authority.

33. At last the Emperor of *China* wrote to the King of *Tagargaz* in *Turkestan*, with whom, besides the Names of his Dominions, he was, in some Degree, allied by Marriage; and, at the same time, sent an Embassy to him, to implore his Assistance for reducing this Rebel. Upon this, the King of *Tagargaz* dispatched his Son, at the Head of a very numerous Army, to fight the Oppressor; and, after many Battles, and almost continual Skirmishes, he utterly defeated him. It was never known what became of the Rebel: Some believe he fell in Battle, while others thought he ended his Days in another Manor.

The Emperor of *China* returned then to *Canton*, and although he was extremely weakened, and much depressed because of the Embezzlement of his Treasures, and the Loss of his Captains and best Troops, and because of all the late Calamities, he nevertheless made himself Master of all the Provinces which had been conquered from him. However, he never laid Hands on the Goods of his Subjects, but satisfied himself with what was set in his Coffers, and the small Remains of publick Money, his Condition indispensably oblig'd him to take up with what his Subjects would give him, and to require nothing from them but Obedience to his Mandates, for ceasing to squeeze Money from them, because the King's Government had exhaulted them already.

Thus *China* became almost like the Empire of *Avanar* after the Defeat and Death of *Darus*, when he divided the Provinces he took from the *Perfians* amongst so many Chieftains, who erected themselves into so many Kings; but now each of these Chinese Princes joined with some other to

* The Account here given by our Author, very plainly proves, that the Trade to *China* was considered in his Time as very ancient, and of very great Consequence; so much that whatever affected the Peace of that Country, was so held upon as a Thing of common Concern to all the Nations of the East. But till these Travels were published, who could have imagin'd this? Who would have imagin'd that the Affairs of *China* were so well known to the *Arabs*? And therefore when these Things are maturely weigh'd, who can doubt that we had Reason to advance it as a Thing highly probable, that long before this, the Emperors of *China* and the *Arabs* were in the most flourishing Commerce, and in point of foreign Commerce, and of domestic Oeconomy.

† It is a very difficult thing to pretend to settle the Chronology of the Chinese Empire; and the very learned Editor of these Travels, confesses that he is not able to give any satisfactory Account of this Revolution. It is said, however, that *At set us Hade*, in the History of *China*, lately published, has enabled us to set this Matter right, or at least very nearly right. He informs us, that in the Reign of the Emperor *Hian*, who was the eighteenth of the Dynasty of *Tang*, the Affairs of *China* fell into very great Disorder, and in the heavy Load laid upon the People, and a great Famine caused by the Inundation of Rivers, and infinite Numbers of *Arabs* hoppers that deliv'd their Goods, while things were in this Situation, there happened several Revolts in the Provinces, which encouraged a certain Rebel, whose Name was *Wan*, to pretend himself at the Head of the Malcontents, and that with such Success, as to drive the Emperor from the Imperial City, of which he made himself Master, but he was afterwards defeated, and the Emperor restor'd. It will be owned, that there is about twenty Years Difference between the Time mentioned by our Author, and the Date of this Revolution, assign'd by *Farner de Hald*, I shall not take upon me to decide where the Mistake lies, but I leave it to the Reader will be of the same Opinion with me, in concluding this to be the Rebel upon whom mention is made in the Footnote.

‡ All the Oriental Writers agree in giving a different Account of the Division of the Empire of *Avanar* into so many Kingdoms, from that which is given us by the *Greeks*, and that this Notice of theirs was ancient, appears from what we are told by the Author of the first Book of *Marshall*, who

542 The Discovery, Settlement, and Commerce Book I.

for their Subsistence; and their Meal once over, they throw the Table, the Dishes and Plates into the Water, together with the Fragments they have left. Thus at every Meal they have a new Service. To the *Indies* they formerly carried the *Dinars*, called *Sindiat*, or Gold Pieces of the *Sind* and the *Dinar*, which there pass'd for three of ours and even more. Thither also are carried Emeralds from *Egypt*, which are set for Rings.

70. These two authentick Pieces are of very great Use in filling up this Period of *Indian* History, of which, till they appeared, we had no Memoirs at all. It is plain enough from the Account given us by the first Author, that Voyages from *Siraf* to *China* were not very frequent, till about his Time, for otherwise he would not have described that Navigation so particularly. But it appears no less clearly from the second Treatise, that these long Voyages were grown into much greater Use between the Time the first Voyage was made, and this Commentary upon it was drawn up, for otherwise the second Writer would have been but indifferently furnished with Materials, whereas we find that he stood in no sort of Want of them, but was

into Disuse. On the whole therefore we may safely affirm, that these Treatises are free from all just Grounds of Suspicion, and ought to be regarded as the earliest and best Accounts we have of this Empire and its Inhabitants.

They are, considered in this Light, of very great Use in many Respects, but more especially in correcting those Errors that have been introduced by Authors who depended more upon their own Conjectures than on any Light they received from Experience, endeavouring to impose upon their Readers their Notions of Things as being of undoubted Credit, of which it may not be amiss to give a few Instances. Our Author is the oldest, and indeed almost the only *Arabian* Writer that mentions the Chinese Drink, to universally used in our Days all over *Europe*, and known by the Name of *Tea*. He says, that it is an Herb or Sirub, more bushy than the *Pomegranate-tree*, and of a more pleasant Scent, but somewhat bitter to the Taste. That the Chinese boil Water and pour it in scalding hot upon this Leaf, and that this Infusion preserves them from all Distempers. This, to be sure, is an imperfect Description; but it is plain enough

own Abilities. In Things of this Nature, all abstracted Reasoning ought to be laid aside, and we ought to draw our Conclusions from Facts only. If the *Indians* stopped the Progress of the *Aegyrian, Persian, Greek* and *Parthian* Empires, this is a strong, or, to speak fairly, an invincible Argument to prove, that their Government was then in its full Vigour. If we see the *Indians* now for the most part a broken, dispersed, dejected, and despised People; preserving, however, still, in their Manners and Customs, visible Marks of

all suitable to their Merit. *Hakluyt*, our most ancient Collector, whose Pains can never be too much commended, gave such an account of his Travels in the best manner he could, and was therefore very commendable in that respect. *Purchas*, who followed him, complains, however, with Reason, that these ancient Writings were strangely dishigured, and therefore he thought it necessary to revise and reublish them, for which alone he deserves Praise; and there is no doubt he might have succeeded much better than he has done, if he had not

A Chinese Prostitute riding in Publick with a Man going before, who makes known her Place

A View of a large Street in one of the Trading Cities of China, showing how their Signs are placed & Shops disposed

544 *The Discovery, Settlement, and Commerce* Book I.

I have dwelt the longer upon these Instances, and have taken the more Pains to support and confirm the Truth of them, because I am persuaded that an intire Credit is due to the Matters of Fact asserted by both of our Authors, and that consequently we may absolutely depend upon what they have delivered as to the State of *China* and the *Indies*, within this Period of Time; that is to say, from *A. D.* 833, to 950, or thereabouts. This being clearly established, let us see what will follow from it. In the first place, it is most evident that these Eastern Countries were in a very happy and flourishing Condition, were governed by their own Princes, and knew not, generally speaking, what it was to suffer by such sudden and violent Revolutions as have since happened in those Parts. It must, however, be at the same time observed, that though their State was far better than it is now, yet both our Authors agree that it was beginning to decline, that the Dignity of their Princes began to sink, the Severity of their Discipline to relax, and the Manners of their People to become much more corrupt than they had been.

that Policy ascribed to them by the *Greek* and *Roman*, as well as these *Arabian* Writers, we ought to conclude, that this Difference has been owing to mighty Revolutions in these Parts; after the History of which we must enquire, and not pretend to take up with the Assurances given us by fanciful Men, that these People were never in a better Condition.

I do not however pretend by this to establish by any means the Opinions entertained by some very great Men as to the Learning of the *Chinese*; with regard to which our Travellers speak very freely, and I think there is Reason to believe very truly, affirming, that in regard to the Sciences the *Chinese* had very little Knowledge, that is, in comparison of the *Arabs*, who at the time the last of our Authors wrote were very skilful in most Sciences; and though their famous Commander *Muz*, who conquered *Spain*, was the first that delivered it in the Form of a Maxim, yet it is very probable that the *Arabians* had long before his Time those Sentiments of the Progress of Science which he so happily expressed. *Wisdom*, said he, descending from above, settled in the Heads of the *Greeks*, as the Hands of the *Chinele*, and on the Tongues of the *Arabs*. It plainly appears from hence, that what they most admired in *China* was the Industry of its Inhabitants, which was

acquainted with Things, and with all the Circumstances
relating to them, we shall read such original Writers with
much greater Pleasure than those Collections which have
appeared in later Times, and which are frequently no way
comparable to them, either for the Importance of Facts,
or the Accuracy with which they are related.
It fell out in the East, as it fell out before in the West;
that in a Day, the northern Nations poured in upon them as
a Deluge, and bore down all before them. It was this
foundation of the Tartars which overturned, and, in a

ney through several Countries, then in a Manner entirely
and even now, but very imperfectly known, is addressed
to that Prince, and written with a Spirit of Humility and
Modesty, and with such plain Evidence of their Author's
Veracity, as very fully justifies the Esteem that has been
always had of his Work. The third is *Marco Polo*, the
Venetian, who travelled as well as *Rubruquis* in the thir-
teenth Century, whose Work has stood the Test of Time
and the severest Critics, and risen by slow Degrees from
the lowest into the highest Credit. There are indeed very

placed; shops dispo

to be to any body to hold him. This Torture dis-
joints the Neck, makes the Joints start out of their Sock-
ets, and dislocates the Thighs; in short, the Patient is
in so miserable a Condition, that were he to continue there-
in but a few Hours, there would be no need of any thing
else to make an End of him: But when they have bound
him as we have said, they give him so many Strokes with
a bamboo, which they always use upon the like Occasions,
and which alone were sufficient to kill the Criminal, and
leave off when he is at the very last Gasp of Life, abandon-
ing the Body to the People, who eat it.

35. There are Women in *China* who refuse to marry,
and chuse rather to live a dissolute Life of perpetual De-
bauchery. The Custom is for these Women to present
themselves in full Audience before the commanding Offi-
cer of the Garrison in the City, and declare their Aversion
to Marriage, and their Desire to enter into the State of pub-
lick Women; they then desire to be registered in the usual
Form amongst these Prostitutes, and the Form is this;
they write down the Name of the Woman, her Family,
the Number of her Jewels, the several Particulars of her
Attire, and the Place of her Abode; thus she is admitted
a publick Woman: After this, they put about her Neck a
String, at which hangs a Copper Ring with the King's
Signet, and deliver to her a Writing which certifies that
she is received into the List of common Prostitutes, and
entitles her to a yearly Pension of so many *Faluts*, to be
paid her out of the publick Treasury, and threatens with
Death the Person who should take her to Wife. They
every Year give publick Notice of what is to be observed
with regard to those Women, and turn out those who
have worn out their Charms. In the Evening these
Women walk abroad in Dresses of different Colours,
without any Veil, and prostitute themselves to all new
Comers that love Debauchery; but the *Chinese* themselves
find for them to their Houses, whence they depart not till
the next Morning.

having related the Conquest of the Persian Empire by *Alexander* the Great, adds the following remarkable Words *1 Maccab. i. 5, 6.* " And
after these Things, he fell sick and perceived that he should die. Wherefore he called his Servants, such as were honourable, and had been
brought up with him from his Youth, and parted his Kingdom among them, while he was yet alive."
or barbarous as this Custom may appear, and as seemingly inconsiderate as it may be with the Politicians of the *Chinese*, yet it is very certain
that our Authors are not the only Writers that have mentioned it, as will appear hereafter, when we come to give the Reader the Travels of
the famous *Marco Polo*, who asserts the very same thing.
The Account of these publick Women is confirmed by a great Number of Writers ancient and modern, so that there appears to be no
Reason for calling the Truth of it in Question. In the History of the *Dutch* Embassy to the Emperor of *China*, there is a Print of one of these
Women, as she is conducted through the City on an Ass, attended by a Person, who cries her Price, as he would that of any other Commodity.
All these Facts are attested by later Writers, so that notwithstanding they seem at first sight very strange and improbable, yet it must be own-
ed that they afford good Evidence for them as for any other Facts in the several Relations we have had of the Customs and Manners of these People.

run upon Wheels, and which in Case of Fire they can
easily draw from Place to Place without any Hindrance
from Stairs, and so save their things presently.

As for the inferior Officers in the Cities, they com-
monly have the Directions of the Customs and the Keys
of the Treasury: Some of these have been taken on the
Frontiers and castrated, others of them have been cut by
their own Fathers, who have sent them as a Present to
the Emperor. These Officers are at the Head of the
principal Affairs of State, of the Emperor's private Affairs,
and of his Treasures; and those particularly who are sent
to *Cansu* are selected from this Body.

37. It is customary for them, as well as the Kings or
Governors of all the Cities, to appear abroad from time
to time, in solemn Procession; at such Times they are
preceded by Men, who carry great Pieces of Wood like
those the *Christians* of the *Levant* used instead of Bells:
The Noise they make is heard a great Way, and as soon
as it is heard no body stands in the Road of the Eunuch,
or Prince: If a Man is at his Door, he goes into his
House, and keeps his Door shut till the Prince or Eunuch
of the City is gone by; so no Soul is to be seen in the
Way; and this is enjoined, that they may be held in the
greater Veneration, and to strike a Dread, that the People
may not see them often, and that they may not grow so
familiar as to speak to them.

The Eunuch, or Lieutenant, and the principal Officers,
wear very magnificent Dresses of Silk, to show that none
of this Sort is brought into the Country subject to the
Arabs, the *Chinese* keep it up at so high a Rate. One of
the chief Merchants, whose Words cannot be called in
question, relates, that he waited on an Eunuch, whom the
Emperor had sent to *Cansu*, in order to purchase some
Things he wanted out of the Goods carried thither from
the Country of the *Arabs*; and that upon his Breast he
perceived a short Veil, which was under another Silk Veil,
and which seemed to be under two other Veils of the

fame

Chap. II.

of the EAST INDIES.

followed the Humour of the Age in which he wrote, and af-
fected, as he has done, to give a quaint and fanciful Turn
to all that he translated, instead of keeping close to his Au-
thors. This was chiefly owing to a Notion that then pre-
vailed, that there were many Improbabilities and Absur-
dities in their Writings; which, however, the Diligence
of succeeding Times hath, in a great measure, discovered
to have been a groundless and injurious Charge arising
sometimes from their having very bad Copies of the Au-
thors they used, at other Times from the Ignorance of those
who undertook to translate them either in the Languages
in which they were wrote, or as to the Subjects which were
handled in them.

It deserves also to be considered, that the first Voyagers
into any remote Country must lie under great Disadvan-
tages, because they report Things absolutely unknown be-
fore, and which, for that Reason, appear monstrous and
incredible; whereas, in Process of Time, and after vari-
ous Persons have visited the same Place, the Publick be-
gins to grow familiar with their Relations; and having
seen and Touching the same Things, they are not surpris'd

more amazing: To say the Truth, all the great Monarchies
in this Part of the World, large and powerful as they are,
ought, strictly speaking, to be considered as Fragments
only of this enormous Sovereignty, and as the Remains
and Ruins of this prodigious Structure. All the *Tartar*
Principalities in *Europe* and *Asia*, the noble Empire of
China, with so much of *Tartary* as belongs to it, the wide
Dominions of the Great Mogul, some of the Kingdoms
established in the *Indian* Islands, the Kingdom of *Persia*
as it stands at present, together with the best Part of the
Grand Seigneur's Territories, fall under this Description, and
were once but so many Parts of the *Tartar* Empire, and we
may from thence easily discern how much it imports us to
have a competent Knowledge of the Rise, Progress, and
Declension of this over-grown Power.

But that this, however expedient, however necessary,
might not break in too much on the Series of our Voyages,
I have taken Care to select a few out of the many ancient
Travels that may answer both Ends; that is to say, may
preserve the Chain of our Narrations, according to the
natural Order of Time, and at the same time, select such
particulars as are most remarkable, and which may give us
the most exact and complete Idea of the Customs and Manners
of these People.

THERE are few Authors better known to the learned World than our Benjamin, called from the Place of his Birth Benjamin of Tudela, a very pleasant Town in Navarre, on the Confines of the Kingdom of Castile and Aragon. The Jews, who boast very much of our Author's Works, inform us, that he was the Son of Rabbi Tanai, who was settled at Tudela: but

people, we have had of this Book no less than sixteen different Editions, and some of them by the ablest Critics. The first Version of it that appeared in Latin was in 1576, by Benedet Arias Montanus, a Man of great Learning, and in high Reputation, who in his Preface paid great Compliments to the Spanish Nation on account of the Discoveries made by them in the most distant Parts of the

he had to find with this Piece; to which he answered, " Every body knows that a Bird never settles upon an Ear of Corn but it bends under him, whereas this Painter has represented his Ear bolt upright, though he has perched a Bird upon it: this is the Fault I have to find." The Objection was held just, and the Prince bestowed no Reward upon the Artist. They pretend by this, and such other Means, to excite their Workmen to Perfection, by engaging them to be extremely nice and circumspect in what they undertake, and to apply their whole Genius to what is to go out of their Hands.

38. There was formerly a Man of the Tribe of Karkab, whose Name was Ebn Wabab, descended of Hebar the Son of Al Afud, and he dwelt at Bajra; this Man left Bajra when that City was sacked, and came to Siraf, where he saw a Ship ready to sail for China. The Humour took him to go on board of this Ship, and in her he went to Ceina, where in the Sequel he had the Curiosity to travel to the Emperor's Court; and leaving Casfa, he reached Cundam, after a Journey of two Months; he staid a long Time at the Emperor's Court, and presented several Petitions; wherein he signified that he was of the Family of the Prophet of the Arabs. Having waited a considerable while, the Emperor at last ordered him to be lodged in a House appointed for him, and to be supplied with every Thing he wanted. This done, the Emperor wrote to the Governor of Casfa, commanding him carefully to inform himself among the Merchants concerning the Relation this Man pretended to bear to the Prophet of the Arabs; and the Governor, by his Answers, confirming the Truth of what he had said, touching his Extraction, the Emperor gave him Audience, and made him rich Presents, whereupon he returned to Irak.

This Man, when we saw him, was much advanced in Years, but had his Senses perfectly, and told us, that

of all Kings, nor are Cities to compare with them.

Then said Ebn Wabab, he ordered the Interpreter to ask me, " If I knew my Master and my Lord, meaning the Prophet (Mohammed,) and if I had seen him?" I made Answer, " How should I have seen him who is with God?" He replied, " That is not what I mean, ask you, what sort of a Man he was in his Person?" I replied, " That he was very handsome." Then he called for a great Box, and opening it, he took out another contained therein, which he set before him, and said to the Interpreter, " shew him his Master and his Lord;" and I saw in the Box, the Image of the Prophet; whereat I moved my Lips, praying to myself in Honour of their Memory.

The Emperor did not imagine I should know him again, and said to the Interpreter, " Ask him when he moves his Lips?" I answered, " I was praying in Memory of the Prophets." How do you know them, said the Emperor? I replied, that I knew them by the Representation of their Histories; " There said I, a Noah in the Ark, who was saved with those that were with him at the same Time;" and I made the usual Salute to Noah and his Company. Then the Emperor laughed, and said, " Thou art not mistaken in the Name of Noah, as thou hast named him right; but as for the universal Deluge, it is what we knew not. It is true, indeed, that a Flood covered Part of the Earth, but it reached not our Country, nor even the Indies." I made my Answer to this, and endeavoured to remove his Objections the best I could; and then said again to him, " There is Moses with his Rod, and the Children of Israel." He agreed with me, as to the small Extent of their Country, and the Manner how the ancient Inhabitants were destroyed by Moses. I then said to him; " He there, is Jesus, upon an Ass, and here are his Apostles

* There is nothing very surprising in this Account, for the very same Method had been in Use among the Greeks long before, and has been since practised in Asia, and elsewhere, and without Doubt, it is the true Method of coming at the just Knowledge of the Value of such Performances, and therefore something of this sort is annually practised at Paris.

† It seems a little strange, that the learned Abu Rensar did not endeavour to settle the Time when this Arabian Traveller went to Ceina, especially when there is a Circumstance which seems to fix it, viz. the plundering of Bajra, upon which it is to be taken a Remark, as if going to Siraf. In order to supply this Defect, I have consulted Abu Barajim, who informs us, that A. H. 286, was an answer to A. D. 899, there was one He S. S., who rebelled against the Khalif, and ruined Bajra, which occasioned the sailing and settling that City, which was then fourteen or sixteen Years of Age. The Khalif then reigning was Al Mubarak, in whose Time Abu Rensar informs us, Things were in great Confusion, and he likewise takes notice of this Rebellion. The Date agrees very well with the rest of this History, and particularly with the Account given by the Author, of the Reasons which induced him to quit his Country in his Conference with the Emperor of Ceina.

546 The Discovery, Settlement, and Commerce Book I.

lately necessary to the understanding the subsequent Voyages to the East-Indies.

The last of these old Writers taken into our Collection, shall be Sir John Mandeville, our Countryman, who, notwithstanding all the Objections made to his Relation, deserves much better Usage than he has met with. This great Traveller flourished in the fourteenth Century, and spent no less than thirty-three Years in travelling through the Levant, Syria, Tartary, India, Cathay, Egypt, Libya, Ethiopia, and other Countries. He composed the History of these Travels in Latin, French, and English, and yet we have never hitherto had his Work set in such a Light as might bear reading with Pleasure; I had almost said, and it would be no more than Truth, with Patience; and at the same time it has been respected and well esteemed abroad. There are indeed Abundance of strange Stories and incredible Passages in his Work, which we do not pretend to justify or impose upon the Reader, but there are others worth knowing, and to be met with no where else. The Trouble which necessarily attends tracing these

Authors from the Rubbish under which they have been buried, and recovering so much of their personal History as is requisite to give Light and Life, Spirit and Intelligence to their several Labours, has been not a little; but when one considers how pious an Act it is to vindicate the Memory of great Men deceased, who thought no Part too great for the Service of Posterity; and how ready the present Age is to encourage all Attempts of this kind, a Man goes through his Task with Pleasure. It is our Happiness to live in Times more enlightened, in which all the Sciences are better understood than when those Authors lived and wrote; but the Contemplation of our Advantages ought to dispose us to a charitable Condescension, and a Disposition to excuse Infirmities, not so properly in them as in the Ages in which they flourished, and from which therefore they could not be exempt, especially when we reflect, that to their Attempts we owe the Splendor that has succeeded, and that without the Struggles made by them we must have been in the same Region of Darkness still.

are the Disciples of wise Men; and among whom *Abraham the Great*, and *R. Abdias*, and *Aaron Cuspus*, and *Joseph Siarginus*, and *Eliakim the Governor*, have the chief Authority. Amongst these some are Artificers of silken Garments; but there are many Merchants, and those too very rich. No *Jew* is there permitted to be carried on Horse-back, except *Solomon the Egyptian*, the King's Physician, through whose Interest the *Jews* are comforted and ealed in their Captivity, which they feel to be grievous; for all the *Jews* are very much

having neither Markets, Shops, Gardens, nor Orchards. The Sense of their Condition threw them once into an Insurrection, from a Notion that all the Glory and Riches of those on the other Side the River, sprung from no other Cause than their having the Sepulchre of the Prophet *Daniel* on their Side. They demanded therefore that his Tomb should be transferred to their Side; but the others vehemently opposing this, a War began, of which both Sides growing weary, it was agreed, that the Coffin of *Daniel* should

be taken out of the Tomb, and among them the chief City of *Perisa*, within one under the Dominion of the

This pompous Account of it is had out who is of whom about this Time, and therefore it is attributed to the Shah, or Emperor. This Circumstance is not in our Author, and the Reader is not believed before, the *Jewish* Au-

Abode is extremely fertile, and so very populous, that the Towns almost crowd one upon another. A Fable of great Probability relates, that when the Coaks grow at their accustomed Hours, just as with us when at Root, upon Trees, they answer each other a hundred Leagues round, and more, because of the Proximity of the Villages which a mist touch each other; and he adds, that no Part of it is uninhabited, nor any of its Land uncultivated. Those who travel in this Country may stop at every Step, and find Shelter from the Beams of the Noon Day Sun; and if they are tired, they may repose themselves every Day at Noon, go wench Way they will.

45. Yet what follows from the Testimony of several Persians, is the most remarkable Particular we have heard concerning the Island of *Zapage*. There was formerly a King, or, as he is there called, *Mebage*: His Palace is still to be seen on a River as broad as the *Tigris* at *Bagdad*, or as *passara*. The Sea intercepts the course of its Waters, and drives them back again with the Flood; and during the Flood, it carries out fresh Water a good way into the Sea. This River is let into a small Pond close to the King's Palace; and every Morning the Officer, who has Charge of his Household, brings an Ingot of Gold wrought in a peculiar manner, which is thrown into the Pond in the Presence of the King. The Tide rising, covers it with the reed, and quite covers them from Sight. But low Water discovers them, and they appear plain by the Beams of the Sun. The King comes to view them as often as he repairs to an Apartment of State, which looks upon this Pond. This Custom is very scrupulously observed; and thus they every Day throw an Ingot of Gold into this Pond as long as the King lives, not touching them upon any Account, but regarding this as a sacred Treasure.

When the King dies, his Successor cautes them all to be taken out, and not one of them is ever missing. They count them, and melt them down; and this done, the Sums arising out of this great Quantity of Gold are distributed to those of the Royal Household, Men, Women, and Children, to the superior and inferior Officers, each in pro-

portioned. My Lord, what is your Desire? I could wish, replied the King, to see in a Dish the Head of the *Mebage* of *Zapage*. The Minister, well aware it was Justice that inspired him with this impetuous Fury, rejoined, My Lord, I wish you would not disturb your Mind with such Thoughts, since nothing ever fell out between these People and us, to furnish Matter of Complaint; they never offend us by Word or Deed, or ever did us the least Injury. He and she are divided from us, and have no manner of Communication with our Country, nor do they discover any Inclination of making a Conquest of this Kingdom. No one therefore ought to hearken to such Discourse, or make a Word of Answer upon this Head. The King was enraged at this Reply, and had not a Word to return; but without any Regard had to the good Advice of his first Minister, he opened the same thing to the principal Officers of State, and to such of his Courtiers as he thought proper.

47. This Matter being rumoured about, a Prince reached the Ears of the *Mebage*. He, who then reigned, was a wise and an active Prince, of consummate Experience, and in the Flower of his Age. He called for his first Minister, and having acquainted him with what he had heard, said to him, it is by no means proper to punish the Behaviour of this giddy Prince, or to be as forward as we esteem him, because of his Youth and tender Experience; nor is it expedient to divulge what he said against me; for such Speeches cannot but be prejudicial to the Dignity of a King. Having thus rejoined his Minister to content what had passed between them, he commanded him to prepare a thousand Ships of no extraordinary Size, and to equip them with all Things necessary, Arms and Ammunition, and to man them with as many of his best Forces as they could transport. Then he gave out, that he would make a Voyage through the neighbouring Islands under his Dominion, to divert himself. He wrote also to all the tributary Princes of those Islands, to acquaint them, that he designed them a Visit; and thus being a publick Task, each of those Kings prepared for the Reception of the *Mebage*.

It is not easy to see, from our Author's Way of reasoning, that he had no Notion of any Passage by the *Cape of Good Hope*; for if he had, he would not certainly have taken this Opportunity, of insinuating it. At the same time, however, I leave it to the Reader's Consideration, whether this Voyage, supposing it to have been built on the *Empire*, might not have come this Way into the *Mediterranean*, more probably than by the *North Sea* passage. It is likewise clear from what our Author has delivered, that the *Arabians* knew no more of *Japan*, which they called *Sin*, than they learned from the *Chinese*, since by the Testimony of the oldest of our Authors, no *Arab* had yet set Foot there in the Year of the

ample, for the Instruction of you, that none may exceed the each may be contented with have disturbed may be restored. This said, he ordered them then turning to the Minister he good Master could do; I know to your Master, and that he hear felt who may best succeed this Kingdom, and let him immediately, the *Mebage* departed and neither did he or any of Thing in the Kingdom of *Komora* his own Kingdom, he fat do being in the Palace which look mentioned, he caused the Head to be put into a Basin and set the Chiefs of his Kingdom, he had done, and with the Reason the Expedition we have relat Deal with Acclamations and Then he ordered the Head of washed and embalmed, and put it back to the King of *Komora*, the Room of him he had put Time writing a Letter to this Terms: What inclined us to this desellor, and your Lord, was, wars us; and that we might fe we have been so happy as to treated us. But we think it c back to you, having had no I arrogating any Glory to ourself obtained over him. The Ne

This is a very pleasant Story, and with Certainty, and yet this does not a the Islands which are now called *Philippine* Ponds, but leave the Reader to do Caution and Fidelity. This Doctrine of the *Metempsychosis*, which I have met with in the *Indians*. It over *Nobon* in *Tartary* in the Province of *Cochin*, the last Time in the Form of a *Metempsychosis*; but *Sin* pass after Death into other Bodies, and *Metempsychosis*, which is the first in this preceding from Man;

548 The Discovery, Settlement, and Commerce Book I.

there all Sorts of Men in all manner of Habits of the whole World appear before the King and Queen. Lions also, and Bears, Leopards, and wild Asses, are brought forth into the Place where these Spectacles are to be seen, that they may fight together, and Birds also after the same manner: And my Opinion is that in no Country of the World such princely Sports are to be seen.

But this King *Emanuel*, besides that Palace left him by his Ancestors, hath built him another upon the Sea Shore, which they call *Bilderme*, the Pillars and Walls whereof he hath overlaid with beaten Gold and Silver, whereon he hath engraven all the Wars made by him and his Ancestors; and he hath prepared a Throne there for himself of Gold and precious Stones, and hath adorned it with a golden Crown hanging on high by

by the Tanners, who, while they dress their Skins, pour out the filthy Water into the Streets before their Doors. They are general oppressed with a grievous Yoke, and are insulted and beaten in the Streets, and during from every Hand abundance of Injuries. But among the *Jews* themselves, some are rich, as I have said, and good Men, and merciful, and observe the Commandments, who patiently endure the Misery of Captivity. The Place wherein they dwell is called *Pera*.

5. Our Author continued his Journey from *Constantinople* to the City of *Tyre*, from thence to *Jerusalem*, and from thence through the *Holy Land*, of which he gives a very particular Description, to the City of *Damascus*; and from thence to *Balbeck*, which is in the Neighbourhood of the ancient *Palmyra*, which he calls by its old

Chap. II.

time as *Sanigar Shab*, *Sin* fit, who rules over forty is called in *Arabic* Sulta much as to say, great Emperor, from the Mouth of *Sin* *Samarcani*, and to the *Gisbor*, including the City of *Hapton*, and so to Forests of which Counts produce Milk. His Emperor's Journey in Extent Days Journey in Extent When therefore this *Perisa* came to *Hlam*, and *Daniel* from one Side a great Crowd of *Jews* and demanded what they were doing; and being in

and the chief City *Omaria*, pertaining to the King-
dom of *Perfia*, within one Day's Journey; but they are
the Dominion of the King of *Perfia*; to whom they
Kingdom of *Perfia* falling thereupon into great Fear of the

This pompous Account of an Emperor commanding over forty-five Kings is very suitable to the Genius of a *Jewish* Traveller; but the Difficulty
is not out who he is of whom all this is said. We read in *Homerus* of a Prince of this Name, who was the Son of a King of *Perfia*, and flourished
in that Time; and therefore it is very probable, that this Decision is to be ascribed to him in the Late time of his Father, though *Benjamin* seems
to attribute it to the Shah, or Empe or Kunkelt.

His Circumstance is not in itself very considerable; but in so large a Collection as this it was necessary to have a Writer so much talked of as
the Author, and the Reader cannot think his Time thrown away in acquiring by this Influence the Power of judging of such a Performance; for, as
we have seen before, the *Jewish* Authors all write alike.

the Instruction of those who shall come after
one may exceed the Bounds of his Power, that
be contented with his own, and that those you
beed may be restored to perfect Security".

4) he ordered them to strike off his Head, and
ing to the Minister he said, You have done all a
ter could do; I know you offered good Advice
after, and that he harkened not unto you. Con-
may best succeed this Fool for the Good of the
and let him immediately upon the Throne. This
Méridage departed for his own Territories,
did he or any of his lay Hands on the least
the Kingdom of *Komar*. When he arrived in
Kingdom, he sat down upon the Throne, and
the Palace which looked upon the Pond before-
he caused the Head of the King of *Komar*
into a Basin and set before him, and calling in
of his Kingdom, he acquainted them with all he
and with the Reasons which had induced him to
ation we have related, and they approved the
Acclamations and Prayers for his Prosperity.

Ordered the Head of the King of *Komar* to be
d embalmed, and put it into a Coffin, and sent
the King of *Komar*, who had been elected in
of him he had put to Death; at the same
ing a Letter to this new Prince in the following
What inclined us to do what we did to your Pre-
and your Lord, was, his known Malevolence to-
and that we might set an Example to his Equals,
been so happy as to treat him as he would have
But we think it convenient to send his Head
you, having had no Design of detaining it, or of
our Glory to ourselves, from the Advantage we
over him. The News of this Action being re-

... natural for him to follow that Author
in what he says of *China* and the *Chinese*, and indeed it
must be allowed, that notwithstanding these small Inter-
ruptions, there are scarce any Books of Travels of so an-
cient a Date, written in a clearer or better Method than these.

4) The *Chinese* were wonderfully regular in all Things
relating to Government, before the last Revolution destroyed
and reduced them to the State they are in at present.
There was a certain Merchant, a Native of *Chorassan*, who
coming into *Irak*, there dealt to a considerable Amount,
and having brought up a Quantity of Goods went to *China*.
This Man was extremely selfish and of incredible Avarice;
it happened that the Emperor of *China* had sent one of his
Eunuchs to *Cansu*, the City of all the *Arabian* Traders,
there to purchase what he wanted, and was to be had on
board of the Ship that was arrived. This Eunuch was
one of those who had the largest Share in his Master's
good Opinion and Confidence, and was Keeper of his
Treasure and of all that he esteemed precious.

A Dispute arose between this Eunuch and the before-
mentioned Merchant, about some Pieces of Ivory and
other Goods, and it ran so high that the Merchant refused
to deal with him. But this Affair making a great Noise,
the Eunuch pushed it to far, that he forced from him the
Choice of his Goods, despising whatever the other could
say to him. The Merchant withdrawing himself, went
privately to *Cumlan* where the Emperor resides, and
which is two Months Journey from *Cansu*, and being ar-
rived he went to the String of the Bell mentioned in the
former Book. The Custom was, that whoever pulled it was
thereupon sent ten Days Journey from thence, into a kind
of Banishment: it was ordered also that he should be com-
mitted to Prison, there to remain for two whole Months;
which expired, the Vice-King or Governor of the Province
released him, and said you have involved yourself in an

very pleasant Story, and well related; but with respect to the Country in which it happened, I think it very difficult to say any Thing
of it, and yet this does not at all lessen the Credibility of the Fact. It is not impossible however, that this History might relate to some of
the Islands in the Straits of *Sonda*, which are now called *Philippina*; or perhaps some of the Islands in the Straits of *Sonda*. I pretend to determine nothing in this doubt-
ful matter, but leave the Reader to decide for himself, according to the Lights given him by the Author, who appears to have written with great
Fidelity.

Doctrine of the Metempsychosis is generally held among the *Chinese*. Their Histories say, that one *Xekia*, or *Sekia*, an *Indian* Philoso-
pher lived about a thousand Years before Christ, was the first that taught this Doctrine of Transmigration; and our Authors add, that the *Chi-
nese* in the Province of *Chikang*. This *Xekia*, according to the *Chinese* Tradition in *Navarrete*, has been born eight thousand Times
in the Form of a white Elephant. It is he that was called *Fiber* after his Apotheosis. The Sect of *Xekia*, as we are told by *Father*
of the Metempsychosis; but this Sect is divided into two Branches, the one believing the exterior Metempsychosis, or that the Souls of
men pass from one Body to another, and these worship Idols, and obtain from every Thing that has Life, while the other Sect has Faith in the
interior Metempsychosis, which is the principal Foundation of their Morality, which consists in suppressing the Passions, which are as so many differ-
ent Enemies protecting from Man; but neither the one nor the other expect Rewards or dread Punishments in the World to come.

ap. II. of BENJAMIN DE TUDELA. 549

... as *Sanigar Shab*, Son to the great *Shab* of *Per-
sia*, who rules over forty-five Princes, cancelled it. He
is called in *Arabic* Sultan *Phars-Al Chabir*, which is as
much as to say, great Emperor of *Perfia*. His Empire
extends from the Mouth of the River *Samouara* to the City
of *Maracand*, and to the River of *Gozan*, the Province of
Hapton, including the Cities of the *Medes*, the Mountains
of *Hapton*, and so to the Province of *Ybibet*; in the
Mountains of which Country are found the Animals that
produce Musk. His Empire is four Months and four
Days Journey in Extent".

When therefore this great Monarch *Sanigar* King of
Perfia came to *Plam*, and saw them transporting the Coffin
of *Daniel* from one Side of the River to the other, with a
great Crowd of *Jews* and *Ismaelites* upon the Bridge, he
demanded what they were doing, and the Reason of their
being there; and being informed of what has been before
related, he decided the Point thus. It is by no means
probable, said he, that the Remains of *Daniel* should be
found in this manner; measure therefore to a Place
which is at an equal Distance from both Sides, and there
suspend the Coffin of *Daniel* by suspended in a Glass Coffin

pay Tribute; and the Tribute appointed in all the King-
doms of the *Ismaelites*, is for Males above fifteen Years old,
one Golden Amir, which is in Value one *Spanish* Mora-
becine Piece of Gold and an half, or half a Crown of our
Money.

7. It is now twelve Years since a certain Man named
David Elrei arose in the City of *Omaria*, who was the
Disciple of *Chabstai*, the Head of the Captivity, and of
Jacob the honourable Head of the Assembly of *Levi*, in the
Metropolitan City of *Bagdat*; he became very learned in
the Law of *Moses*, and in the Books of Doctrine, and also
in all Wisdom; in the Language of the *Ismaelites*, and in
the Books of the Magicians and Enchanters; he therefore
took it in his Head that he would raise Arms against the
King of *Perfia*, would gather together the *Jews* who dwell
in the Mountains of *Hapton*, would war against the whole
World, and go to *Jerusalem* and win it by Assault; and
that he might persuade the *Jews* thereto, he shewed them
lying and deceitful Signs, affirming that he was sent from
God to *Jerusalem*, and to free them from the Yoke of the
Nations, so that with many of the *Jews* he procured Credit
unto himself, and was owned by them for their Messiah.

wasted Limbs, or such as have had their Sinews shrunk. The Tortoise is exceedingly annoyed by the Sea Eagle, which taking the smaller sort in his Talons, carries them a great way up into the Air, and then letting them fall on a Rock, breaks the Shells, and so feeds upon their Flesh, which, but for this Contrivance, would be secure from his Fury².

5. The Crocodile is another amphibious Creature common to *Africa* and the *Indies*; but the *Indian* Crocodiles are by far the largest, and those that frequent the Marshes near the River *Ganges* are believed to be the biggest in the World. *Aristotle* has given us a very large Description of this Animal, which is withal very accurate and just: He informs us, that the Female Crocodile lays sixty Eggs or upwards at a time, each of the Size of a Goose's Egg, and the Animal, when hatched, is of the same Proportion; but as it grows as long as it lives, it reaches in some Countries a larger, and in others a less Size; *Aristotle* mentions fifteen Cubits, which is two-and-twenty Feet and a half, as the largest Size he had heard of; but in the *Indies* there are Crocodiles of twice that Bigness, for which we shall hereafter assign a probable Reason³.

The Crocodile is of the Lizard kind, and therefore we need not enter into a particular Description of it; it has no Tongue, and moves only the upper Jaw. Its Teeth, which are very strong and sharp, shut into each other like the Teeth of two Combs. It is also armed with terrible Claws; and his Back and Legs are covered with Scales so strong, that they are not to be pierced. He passes the Day mostly on Shore, and retires in the Night mostly into the Water, where having gorged himself with Fish, he comes on Shore when the Sun is up, and sleeps upon the Sand. *Pliny* says, that for four Months in the Winter the Crocodile retires to some Cave or Den, where it sleeps for that Time, without receiving any Sustenance⁴.

As this Creature is only bred in hot Countries, so it seems incapable of living in colder Climates. There was one brought into *France* in 1681, and being landed at *Rocheville* was brought from thence by Land to *Verfailles*; but they were frequently obliged to lay it before the Fire, for otherwise it would not have survived the Journey. It would eat nothing after it left the Ship, and died when it had been kept about a Month at *Verfailles*. When they dissected it, they found in its Stomach a considerable Quantity of Sand, and some Snails with their Shells whole. It appears from hence, that the Accounts of this Creature that are given us by the Ancients are justified by Experience⁵.

Thus far of Crocodiles in general, we will now speak particularly of those in the *Indies*, and compare the Accounts given us of them by the Writers of Antiquity, with the Relations of such modern Travellers as are thought to deserve most Credit. *Strabo* informs us, that when *Alexander* found the River *Hydaspes* much infested with Crocodiles, and *Egyptian* Beans growing on its Banks, he made no sort of Question that he had found the Head of the *Nile* in the *Indies*; nay, to such a Degree was he persuaded of the Truth of this Discovery, that he actually directed a Fleet to be prepared in order to have sailed that way into *Egypt*, from whence it seems highly probable, that before *Alexander's* Expedition the Ancients did not know that there were Crocodiles in the *Indies*⁶.

It is from *Strabo* likewise that we learn that these ravenous Creatures have an Aversion to Swine's Flesh, which, however, is a Point that deserves to be enquired into⁷. *Pélobratus*, in the Life of *Apollonius Tyanus*, enters into an express Comparison between the Rivers *Indus* and *Nilus*, which, he observes, have a great Resemblance, especially in these two Particulars, their overflowing annually, and their being full of Crocodiles; but in this as in many other things, that Writer is plainly mistaken, for the River *Nilus* is not the only River in *Africa*, in which Crocodiles are bred, nor are these Creatures peculiar to the *Indus*, but meet generally most of the large Rivers in the *Indies*, and

particularly the *Ganges*, where are the largest Crocodiles perhaps in the World; and it is observed by *St. Amrose*, that it passed for a kind of Miracle among the *Indians*, that at the Season of the Year when the *Brachmans* passed that River to go to their Wives, they were never infested by these terrible Animals.

If we could confide in what the Missionaries have told us of this Subject, we might add some curious Particulars to the natural History of Crocodiles. *Father Francis Colin* asserts positively, that this Creature voids no Excrement, nor has any Passage for it, which I doubt is not agreeable to Truth. It is likewise affirmed both by him and *Barthelemy Navarrete*, that the Female Crocodile destroys her Young, swallowing them as they run from the Sands, where they are hatched, into the Water, which is another wonderful Circumstance that never occurred to the Ancients, or to any thing I know to any other of the Moderns. As to what both these reverend Writers relate of *Machabes* being found in this Animal, it is singular, but not at all improbable, because almost all Writers agree, that the Flesh of the Crocodile has a very musty Scent, and in the *West-Indies* the Mouths of the Rivers where these Creatures haunt have their Waters so strongly tinged with this smell and Taste, that they are not drinkable.

Gasper Balbi, whose Travels through the *Indes* are extremely curious, in his Description of the City of *Pegu*, which he visited in 1576, has the following extraordinary Passage⁸: "The Inhabitants of the City lead, for the most part, a lazy and scandalous Life; they are very idle in their Houses, in which, generally speaking, they keep Hogs. They drink the Water in their Ditches rather from Superstition or Custom, than from any other Reason, which is the more wonderful, since the Crocodiles in those Ditches are not only numerous, but of an extraordinary Size, inasmuch that many of them exceed thirty Feet in Length, and yet the People, who see more or other devoured by them every Day, are so stupid as to reverence them as they do the Apes, and this from a firm, as well as foolish Persuasion, that the Souls of men as are devoured by the Crocodiles find the direct Road to Heaven. The Subtilty of these Creatures is very extraordinary. When the People come with their Packes to take up Water, they conceal themselves under the grass Weed, or under the Reeds, which grow on the Side of the Ditch, and laying hold of the Person by the Head, or by the Foot, pull them to him. Men and Women have been seen in this manner with their Heads and Hands above Water, running out for Help, to such time as they were dragged to the Hole where the Crocodile lay, and who was distinctly heard to devour them. Remonstrances having been once made to the King on this Subject, he ordered the largest Crocodile, and which was known to have done most Mischief, to be taken and killed. This Creature was of an enormous Size, and of a most terrible Appearance. After his Death there were not so many People killed as before; and it seems not a little wonderful, that they did not pursue the Frustration of these Animals for the Preservation of the Inhabitants. It is observed here, that though the Elephant, which is a very hot Creature, not only drinks out of those Ditches, but frequently goes into them to cool and refresh himself; yet the Crocodiles never venture to attack him, which is supposed to be owing to the Bigness of the Creature; for it is observed, that the Crocodile is as cowardly as it is cruel."

Peter Vanden Broek tells us, that on the Coast of *Ceylon* the Crocodiles are very common in all the Rivers, inasmuch that the People are afraid to pass them, or to go by Water; and this with great Reason, since while he was there, there were several, both Men and Women, devoured by them⁹. In the Island of *Java*, when the Dutch first visited it, the Rivers were full of Crocodiles, and People were often devoured by them; yet the *Chinese*, who had

the same an Eagle on h

in that Island, had the Secret of taming them, fatt'd, and afterwards killed and eat them; which will appear the less strange, when we are told, that *Aristotle* relates the same Thing, as done in his *Time in Egypt*. In the Island of *Ceylon* they are much infested with Crocodiles, which the *Portuguese* call *Lagortas*, they are generally about eighteen feet long, and the Inhabitants of that Country report, that they have a Stone in their Head, which is a Specifick for all gravelly Complaints, and is even capable of dissolving the Stone.

The *Arabians* call this Creature *Temsa*, the *Persians* *Nizenk*, the *Turks* *Lowi*, and the *Chinese* *Telen*; they all agree, that they are as long lived as a Man; and this seems to account for their monstrous Size, since I do not find, that what the Antients relate of their growing as long as they live is disputed by the Moderns; and that in *India* they should be larger than in any other Country, may be accounted for from two Causes, the first is, the Heat of the Climate, which is allowed to have a great Effect on such kind of Animals; the second is, the preposterous Reverence shewn to these destructive Creatures in many Places, by which they are preferred to a greater Age, and consequently arrive at a larger Size than in other Countries, where the People have Willom and Resolution enough to rid themselves of these Monst'rs.

The *Ganges*, and as some antient Writers report, the *River Indus* also nourishes in it a Worm or rather Serpent, of a most singular kind, considering either its Form or its Properties; its Skin is of a dark blue, from whence it receives its Name *Cyoneides*; it is in Length six Cubits; *Pliny* by some Error sure in the transcribing, has sixty Cubits, and is about two Feet round; it has but one Tooth in each Jaw, which is about four Inches long, with which laying hold of whatever Animal comes to drink at the River, whether Horse, Cow, Camel, or Elephant, it pulls them under Water, and there tears to pieces and devours them, the Entrails only excepted.

This dreadful Creature is caught with a Hook hid under the Belly of a Sheep or Goat, and the Ufe made of it when dead, is to the full as singular as what is related of it while living. The Fishermen after it is caught hang it up by the Tail in the open Air, where, by the Heat of the Sun, in the Space of three Weeks it continues into a kind of Oil, which has this singular Quality, that it takes Fire of itself if exposed to the Air, and is absolutely unextinguishable. It was for this Reason, that the Emperors of *Persia*, who were Masters of the Provinces bordering upon the *River Indus*, and the *Indian* Princes, Successors to *Saracens*, who were in Possession of the same Provinces after the Successors of *Alexander* quitted their Claim to them, receiv'd all this Oil for their own Use, and employ'd it in Time of War to set the Gates of any City on Fire, which they intended to take by Storm.

This Serpent appears to have been at least as strong, and at the same time much more fierce, than the Crocodile; which, as we have heard, never ventur'd to attack the Elephant. The original Writer of this strange Story was *Ctesias*, who was sold at the *Persian* Court, where perhaps they had some such Oil brought from the *Indies* with this Fable tack'd to it, to make it esteem'd more valuable; which, from numerous Instances we have shewn, was a common Artifice of these People to fright other Nations from making any Expeditions into their Country. The Reader may perhaps be surpris'd at my supposing it possible, that there should be any such Oil; and therefore I think myself oblig'd to mention my Reason for it: Our Chymists have a Secret of making a black Powder which is called *Pulvis Infernalis*, that will take Fire by being exposed to the open Air; and therefore, I see nothing absurd in admitting, that there might be an oily Composition which had the same Quality. It is also certain, that the *Greeks* had a kind of Wild-fire of the same Nature, which they employ'd in burning the Ships of the *Saracens* when they block'd up the Port of *Constantinople*.

It is certain, that none of our modern Travellers mention any Thing, that has the least Relation to this extraordinary Creature; but in all Probability, the Accounts given us by these antient Writers, took Rise from some of those Water Serpents that are common in the Mouths of most Rivers in the *Indies*, of which we have spoken before under the Head of Dragons, and of these great Numbers are brought down into the Sea on the Coast of *China*, as they are also by the Rivers that run thro' the *Terra Australis*, or the *Southern Continent*, as we observ'd before in the Account given of Captain *Abel Tasman's* Voyage for the Discovery of that Country; and if there be any Probability in the Arguments drawn by *Philostratus*, of the Likeness of *Aethiopia* to the *Indies*, from the Resemblance between the *Nile* and the *Indus*, we might from hence infer, that there is a like Correspondence between the Climates of the *Southern Continent* and the *Indies*.

The same *Philostratus*, differs from other Writers as to this Serpent in several Circumstances; first, he says, it is found in the River *Hyphates*, next he affirms it to be white; and lastly, he says nothing of its Teeth or of its Fierceness. *St. Ambrose* mentions another very singular Worm in the *Ganges*, which he says looks at first like a long Pipe, with the Horns of the Animal appearing at one End; then it changes to a Sort of Worm, rolls itself up soon after in a Ball or Case, like that of the Silk-Worm, and when it comes out from thence, puts on the Appearance of a Butterfly. He adds, that from the Ball they draw a kind of Silk, of which are made the finest Stuffs in the Country; but this too, if any such Creature there be, is not known to the Moderns, which is the more extraordinary, because it is generally believed that we are much better acquainted with the Manufactures of the *Indies* than the Antients; so that upon the whole, I am apt to suspect, that this is no more than a mistaken or erroneous Account of the Silk Worm.

It cannot, however, be amiss, to preserve all these Relations, because however improbable or even incredible they may appear, yet it is not impossible, that there may be something of Truth at the bottom, even of the most extravagant Relations. This at least is certain, that for many Ages the *Indians* concealed not only the Sources of their Riches, but the Secret of their Manufactures, and especially that of Silk, as we shall have Occasion to shew at large; and it is no less certain, that in order to conceal them, they invented a Multitude of Fables, with which for a long Time they impos'd upon the World. One would suspect that something of this Spirit remains still among the *Chinese*, from the improbable Accounts that are given us by the Missionaries of that Country, and every thing in it; but more of this in its proper Place; at present, we have done with the Animals that inhabit the Water, and are next to examine the Volatiles of the *Indies*.

10. The Eagle is generally considered by all Naturalists as the King of Birds, which Title is supposed to have been bestowed on this Creature for its superior Strength, for the natural Terror that it strikes into the whole feather'd Race, and for the Boldness of its Flight, in which it soars higher than any Bird whatever. It was very possibly the Consideration of these Properties, that induced *C. Marius*, when a second Time Consul, in the Year after the Building of *Rome* 650, and the Year before *Christ* 103, to suppress the Figures of the Wolf, the Minotaur, the Horse, and the wild Boar, which hitherto (as well as the Eagle) had been borne on the Roman Ensigns, in order to substitute the Figure of the Eagle, with her Wings half displayed, in their Stead, as an Emblem more significant than any, or than all the former, and more capable of exciting the Ardour, Courage, and Emulation of the Soldiers, than any that could be devised; and this Alteration of his was sufficiently justified by the Event.

Pliny distinguishes six kind of Eagles, among which however he allows only one to be the true Royal Eagle,

" certain time there, finishes its Days. Out of its Flesh
 " when corrupted, there Springs a kind of a Worm, which
 " feeding for some time on the Remains of this Animal,
 " begins at length to be covered with Feathers; and when
 " it becomes stronger it carries away the Nest, which con-
 " tains the Relicks of its deceased Parent, and passing from
 " Arabia into Egypt, bears them to the City of Heliopolis.
 " There in full Day, and in the Sight of a Multitude of
 " Spectators, it flies to the Altar of the Sun, and having
 " thereon deposited its Burden, immediately retires. The
 " Egyptian Priests having consulted their Annals, and
 " having from them made an exact Computation, find, that
 " this happens precisely at the Close of five hundred
 " Years."

This Fable was not only current in Italy, but in Africa,
 as appears from the Writings of Tertullian⁹, who makes
 use of this Example with the same Intention as St. Clement.
 The Ancients, however, differed much about the Manner
 in which the Phœnix died. According to the former Ac-
 counts, it expired in the ordinary way; but a Multitude of
 Writers affirm, that having raised its funeral Pile, it set
 Fire thereto, and fanning that Fire with its Wings, was
 therein consumed to Ashes, out of which Ashes arose the
 new Phœnix thus consecrated to the Sun. The Date of
 its Life was a Point no less controverted. An Ethiopian
 Prince, in a Letter of his to a Pope, cited by Vossius, lays,
 that it lives three hundred Years. Herodotus, Elian, Phi-
 lophanes, and Arctius Visitor, extend the Term of its Life
 to four hundred and forty, or five hundred Years. Pliny,
 on the Authority of Manilius, as we have seen before, to
 six hundred and sixty. Martial and Lactantius to a thou-
 sand; but the Arabian, Egyptian, and Rabbinical Writers,
 far beyond this, in consequence, as they pretend, of its not
 having tasted the forbidden Fruit.

In the midst, however, of these Contradictions, and
 though several of the ancient Authors freely profess their
 Suspicions of the whole Story, yet Tacitus¹⁰ does not seem
 to question the Fact, but rather to admit, that such a Bird
 had been sometimes seen in Egypt; and another Historian
 says, that its coming to Rome was considered as an ill Omen
 by the Augurs, and thought to portend the Death of the
 Emperor Vespasian. Father Martinus, in his Chinese Atlas¹¹,
 assures us, that it was seen in China in the Beginning of the
 Reign of Kaitan IV. and that it was thought to come from
 the Indies. All the Circumstances of the Story are so ap-
 parently fabulous, that it would be losing time to refute
 them. If the curious Reader has a mind to see this done
 effectually he may consult Sir Thomas Browne¹², who has
 handled this, as he does every other Subject, with great
 Learning and Capacity; but I have chosen rather to insist
 on the Facts reported by ancient Writers, than to enter into
 a Detail of Arguments, which would extend this Article to
 an extravagant Length, and be at the same time quite beside
 the Purpose.

It may not be amiss, however, before we conclude, to
 say something of the Origin of this Fable, which some have
 imagined arose, or was at least strengthened by the same
 Word, signifying in Greek both the Phœnix and the Palm-
 tree. Thus much is certain indeed, that a mistake of this
 kind has brought this Bird into the Scriptures, the Autho-
 rity of which can never be brought to justify such Fables,
 though some, to shew their Learnings, are for finding in
 them whatever Facts or Reasons they have a mind to esta-
 blish. The true Source, however, of this Notion, lay like
 that of the Gryphon in the Egyptian Hieroglyphicks. It
 was from the Egyptians that Plato and the rest of the An-
 cients borrowed their Notion of the great Year which they
 never fully understood; and the Reigns of their several
 Gods, which have given so much Trouble to our most
 learned Chronologers, were in truth no more than the Pe-
 riods of the Planets, that is to say, the Spaces of Time in
 which they finished, according to the Egyptian System,
 their Revolutions; and this is the true Cause why, after all

the Pains that have been taken about them, the Accounts we
 have are almost as perplexed as ever.

The true Story of the Phœnix, though applied by the
 Christian Fathers to the Resurrection, was by the ancient
 Egyptians understood of another sort of Resurrection; for
 they conceived, that when the great Year of all was accom-
 plished, the Universe was to be destroyed by Fire, and a
 new System arise out of the Ruins of the old. Thus I con-
 ceive they borrowed from the Indians; at least thus much
 is certain, that this was, and still is, a Principle of their Phi-
 losophy, which, as the learned Dr. Burnet¹³ of the Charter-
 house well observes, they explained by another Symbol, viz.
 that of a Spider, which after spinning various Webs, re-
 sumes them again all into himself, and re-produces the same
 Matter under other Forms; and thus Philosophical Simi-
 litudes, which imperfectly expressed what Reason could
 scarce comprehend, came by the Mistakes of vulgar Minds
 to corrupt natural Philosophy, by introducing imaginary
 Creatures, which never had, or could have, Existence
 according to the Laws of Nature.

13. After the Fable of the Phœnix had been rejected by
 almost all the Learned, it was again in some measure re-
 sumed by the great Julius Caesar Scaliger¹⁴, a Man, whose
 Eminence in all kind of Learning gave him to high a Re-
 putation in the World, that his Opinions were received as
 a kind of Oracles. He thought that the Accounts given
 of a certain Bird found in the Southern Countries of the
 Indies, called Semenda, or Semendal, had some Relation
 to the Phœnix, and that consequently all that had been ad-
 vanced in relation to this Bird was not absolutely false and
 fictitious.

In order to judge the better of this, it will be requisite to
 enter into the Description of this last mentioned Bird, and see
 how far it accords with that of the Phœnix. The Semendal
 is said to have a triple Bill, or three Bills raised one over
 another, by the Help of which, when she is near her Death,
 she makes a most delightful Harmony. Then forming a
 Pile of odoriferous Wood, she sets fire thereto, and fanning
 it with her Wings, suffers herself to be consumed to
 Ashes, out of which a Worm is produced that afterwards
 changes into the same kind of Fowl.

This is visibly nothing more than the old Fable a little
 varied, and yet it is true enough, that there is in the Island
 of Java, and in the Spice Islands belonging to the Dutch,
 a kind of Bird that has two Bills, and therefore is called by
 the Inhabitants the Double Bill; but as to its singing, I find
 no Evidence to that Point. As it is a Native of the Moluc-
 cas, it is very probable that it may make its Nest of Spices;
 but that it consumes itself therein there is no good Testi-
 mony to prove, notwithstanding what the single Traveller,
 on whose Relation the original Fact is grounded, has ad-
 vanced.

It may indeed be alledged, that some Eastern Writers
 have countenanced this Notion by their Relations¹⁵; but
 then we know that such Accounts as these are liable to great
 Suspicions, and especially to that of giving an Air of Mat-
 ter of Fact to Parables. On the whole therefore, there is
 just as little Reason to credit the modern Story of the Se-
 mendal, as to yield any Belief to what the Ancients have
 related concerning the Phœnix, or to express the thing
 plainly, and in few Words, they are both Fables equally
 destitute of Foundation. It is very hard to discover the
 Motive why even the greatest Men are unwilling to give
 up Authority, when it is directly contrary not only to Reason,
 but the Laws of Nature; and yet that this is frequently
 the Case, many Instances might be brought to prove, but
 this before us is more than sufficient; and therefore I shall
 trouble the Reader no farther upon this Subject.

What has been already said was necessary to shew, that
 no Pains have been spared to examine these Points, and to
 set the Truth in a fair Light, which was thought the more
 requisite, because most Writers of Voyages are so much in-
 clined to report strange and wonderful things, and to call

 Works had himself seen some of the Eggs or Beaks of these wonderful Birds, yet he declares against the Notion of the Phœnix. A vulgar Error,
 Esca. lib. 12.

in to their Assistance the Relations of the Ancients, that without the Aid of such clear and explicit Commentaries as we have given, it is simply impossible to cure the Minds of many People of that sort of superstitious Credulity which these kind of Relations naturally induce. And with the Refutation of which, we should have been forced to interrupt the Thread of subsequent Voyages, if we had not once for all dispatched the Subject in this and the foregoing Chapter.

14. The Pelican is a very singular Bird, concerning which the Ancients have written largely, and yet there have been very great Disputes among the Moderns as to the Bird which they have described, the Reason of which, as well as of the Fables current about this Creature, will quickly appear. *Aristotle* and *Eliau*¹ call it by the same Name, viz. Pelican; but *Pliny* describes it under the Name of *Oncrotalus*², yet their Accounts agree so exactly, that there seems to be no Reason to doubt they meant one and the same Bird. The Author last mentioned tells us there is but one thing remarkable in this Creature, which is, that it has a false Stomach, into which it swallows its Prey when first taken, and throws it out again from thence in order to feed upon it.

There are some of these Birds that live mostly on Land, and others that resort constantly to the Waters; yet the Figure of both is the same. There were several of them kept for many Years in France, and in the Memoires of the Royal Academy of Sciences, we have a very distinct Account of them. According to their Description the Pelican is five Foot high from the Beak to its Feet, the Wings when extended eleven Feet from one Extremity to the other. Their Beak about fourteen Inches in Length, and an Inch and an half broad at the End, its Legs fifteen Inches, the longest of its Claws four Inches and a half, the Length of its Neck about ten Inches³.

There is scarce any Bird except the Eagle of so great Strength as the Pelican, which is also a Bird of Prey, and flies to a great Height. *Culmannus*, in a letter of his to *Geiner* the famous Naturalist⁴, tells us of a tame Pelican that soared to high as to appear in the Air no bigger than a Swallow, and which having for a long time attended the Army of the Emperor *Maximilian*, that Prince ordered it to be maintained, and allowed for that Purpose four Crowns a Day, which bird lived in Germany fourscore Years. This Fact is the more credible, because in the Menagery of *Letovs XIV* there were many Pelicans, and it was observed, that they were the only kind of Birds of which there died not one in the Space of twelve Years. Two of them were by Order of that Prince dissected at *Paris*. The first was intirely covered with white Feathers, except the Wings, in which there were some black, and others brown; and in the Feathers on the Body there was a little Mixture of red. The other was altogether of a Flesh Colour, without any Mixture of black or white Feathers. Some of the rest of the Pelicans in the Menagery were all over grey, except the Extremity of their Wings, which was white. Some had a large Tuft of Feathers behind the Head, and some wanted that Tuft, so that it may be affirmed there are few Birds more differently feathered than this.

But there is one Mark which sufficiently distinguishes this Bird from all others: It has under its Beak a large Bag which is quite naked, and hangs down on its Neck. In this Pouch it keeps its Food till it is properly prepared for Digestion, and then if there be nothing hard or undissolved, it swallows the whole at once; but if there be, it discharges it, and picks out what is easiest for Digestion. *Aristotle*⁵ had observed this long ago; for he tells us, that the Water Pelican was wont to swallow Shell-fish, keeping them in her Stomach till they opened, and then threw them up and picked out the Fish. *Eliau*⁶ says the same thing, which sufficiently proves that we are not mistaken as to this Bird, but that the Pelican known to us is the very same Creature which is described by the Ancients.

The old Fathers of the Christian Church exceeded the Greeks themselves in the Fables they reported upon this Sub-

ject; they had heard that the Pelican fed her young ones out of this Pouch, or false Stomach; and this being told them either imperfectly, or with Addition of some fabulous Circumstances, they from thence framed a Parable or Similitude between this and the most solemn Mystery in the Christian Religion; and to render it the more apt, they devised new Circumstances, and enlarged every Part of the Story to make it answer their Intention the better. The Tale then ran thus; that the Female Pelican killed her young ones by caring them too much with her Beak, and then mourned over them for three Days, till the Male Pelican becoming still more sensible, tore his Breast open with his Beak, and by the Effusion of his own Blood, restored the young Pelicans to Life. This, without Question, is very wild and extravagant, and has nothing to countenance it in the Works of any of the Naturalists; whence the learned *Fessius*⁷ very justly concludes, that these Stories were invented by such as were in Love with Allegations and Hieroglyphics.

We find in the Writings of a very learned German Author, whose Name is *John-George Volkamer*⁸ that he saw at the Fair of *Leyden* a Pelican, which the Man who kept it affirmed to have been in his Custody upwards of fifty Years. It was much larger and stronger than an Eagle, but otherwise very like it both in Size and in the Colour of its Feathers, except that from its Head to its Wings it was grown quite white through Age; he assures us, that of all Birds it lives the longest, that it renews its Feathers like the Eagle, and that it often survives to upwards of an hundred. He adds, that its false Stomach, which hangs upon its Neck, is big enough to admit one's Hand, and that he actually thrust his own into the Pouch of the Pelican, where he felt the Food he had taken half dissolved, and so hot that he was not able to endure it. He tells us likewise, that from thence it feeds its young ones. The Ancients having long ago observed the same thing, viz. as I observed, gave the first Rise to the Stories which have been told of this Bird's feeding its young ones with its Blood: yet in Fact there is nothing extraordinary in this, since the same thing has been observed of very many, and perhaps might be observed of most Birds who fill their Gizzards full of whatever they meet with when their Females are hatching, and disgorge it again for the Support of the Hen and her Brood.

It is therefore through want of Attention to the Animals in our own Country, that we are so much struck with the Singularities reported by Travellers of the Animals in other Countries; for without doubt, if we examined carefully what passes every Day under our Eyes, we should not only be less apt to be surprized at such Relations, but be also better able to judge how far they ought or ought not to be believed. It is in this Respect that the Study of natural History is exceedingly useful, not only by guarding us against Credulity, but enabling us to correct the confused and discordant Accounts given us by such as from a superficial View of Foreign Creatures venture to describe them, and often add such Circumstances from Hearsay as are not to be depended upon, but out of which an intelligent Naturalist will be able notwithstanding to pick the Truth.

15. All who have visited the most Southern Islands of the Indies, particularly *Sumatra*, *Banda*, and the rest of the *Moluccas*, agree in relating some extraordinary Particulars of a very large Bird, common in those Islands, and of which it does not appear that the Ancients had any Knowledge. This Bird the Natives call *Emou*, but the *Dutch* usually distinguish it by the Name of the *Calor*. This Creature is thus described by Mr. *John Newhoff*, a *Dutch Traveller*⁹, very justly esteemed for his Fidelity, and the Exactness of his Relations, and therefore I shall set down his Description in his own Words.

This Bird, says he, carries his Head very upright, and then it is about five Foot from the Ground; the Length of his Body, from the Beak to the Tail, is about three, or perhaps a little more. The Head appears smaller in Proportion than the Body, and is very

smooth, and in Colour of a dark Blue; on the Chest there hang two Excrecences like Bags; The Eyes are large and fierce, behind which are the Ear-holes, and almost at the Extremity of the Bill two Nostrils: And from the Midst of the Bill to the Crown of the Head grows a hard yellow Substance like a Cockle-shell, especially in the Males. They have very long and gros Legs, covered with a yellowish Rind; their Feet are thick, knobby, and without Spurs; instead of which they have on the Fore-part three long, horny Claws, in which they differ from the Ostrich, whose Feet are cloven both before and behind. They are covered all over with Feathers, or rather Plumcs of a dark Red, mixed with black: These upon the Breast and Thighs grow two and two together; but those on the Tail are of much greater Length, and stronger; underneath the Feathers which grow on both Sides, are hidden certain Pens, which serve them in running; for these Birds are scarce able to raise themselves from the Ground. They are exceedingly greedy, devouring every Thing they meet with, even to Iron and burning Coals, all which they evacuate backwards without any Alteration; nay, they sometimes do not throw out what they have eat till a Year after, without the least Signs of any Digestion; for the rest they live upon Herbage. Their Strength consists in their Legs and Feet, and they run so fast that no Man can overtake them; and when exasperated, kick with their Feet backwards and sideways like a Horse. They lay greenish Eggs upon the Ground among the Shrubs, scarce so big as our Hen-eggs, speckled with dark green Spots, the Yolks whereof are eaten by the Inhabitants. They have not either Tongue or Tail.

This Bird was first seen in Europe in the Year 1597, when the Dutch brought home one in their Return from their first Voyage to the Indies. It had been given them as a great Curiosity by one of the Javanese Princes, as a Mark of their Friendship; and the Description of it having made a great Noise in the World, Lewis XIV. when he formed his Menagery at Versailles had one sent him in the Year 1671, by the Governor of the Island of St. Lawrence or Madagascar, who bought it of some Merchants who touched at that Island in their Return from the Indies. This was the first of its Kind that had been seen in France, and it lived at Versailles about four Years. The King had afterwards several of these Birds sent him, which gave the Members of the Royal Academy an Opportunity of examining and dissecting some of them: The largest was five Foot and a half high, its Legs two Foot and a half, its Head and Neck a Foot and a half, the largest of its Claws five Inches long, and the Nail of its smallest Claw three Inches and a half. The Wing, which was composed only of five bare Quills, was so small that it was entirely covered by the Feathers on its Back. The Head, Neck, and Chest of this Creature were absolutely bare, and the rest of its Body might be more properly said to be covered with Hair than with Feathers: In all other Respects the Description given by them of this Bird agrees exactly with that which we have before given, and therefore it would be tedious to repeat it, only it may not be amiss to observe, that the Head and Neck are said to have resembled a Turkey-cock's, and to have been spotted with blue, violet, and red, a large Comb behind its Head and its Gills, instead of hanging immediately under its Beak, appeared on the Bottom of its Neck, where it joined the Breast. In its Size it came nearest to the Ostrich, and was, in every Respect, as greedy and voracious.

10. There are, besides these, a great many remarkable Birds in the Indies, of which modern Travellers have given us very exact Accounts; and of these we will mention a few. The *Dromæ* is a very singular Creature, and common in all the Southern Parts of the Indies. In Big-ness it is betwixt an Ostrich and a large Turkey, and has some Resemblance to the last, in his Feathers and Tail. His Head large, not unlike that of a Cuckoo, but

covered all over with a Skin. The Eyes are large and black, the Neck crooked and very thick, the Bill very long, thick, and of a pale Blue, except towards the Extremities; the uppermost thereof is blackish, and the undermost yellowish, but both Shape and Bent of his Body is very thick and round, covered with soft grey Feathers, like those of an Ostrich. The Belly and upper Parts are so thick as almost to touch the Ground, which is the Reason he is very easily caught. On both Sides he has certain Pens instead of Wings, of a pale Yellow Colour, and, instead of a Tail, five curled Plumcs of the same Colour. His Legs short and thick, with four large Claws. The Meat, especially that on the Breast, is fat and pleasant enough, and three or four of these Creatures afford a Meal for one hundred Persons. In his Stomach is sometimes found a certain porous hard Stone.

The Cormorant, which is very common in the Island of Java, and indeed in most Parts of the East Indies, seems to me to be the Water-pelican of the Ancients. They resemble our Geese in Shape, but much exceed them in Size, and have underneath their Beaks a large Bag, which they can extend and draw together at Pleasure, and in it keep such Fish as they have swallowed. Their Feet are like those of the Swan, and their Bills are crooked towards the Extremities. They are so greedy after Prey that they rush out from among the Flags with such Violence, that they are easily taken. They swallow Oysters with their Shells, and keep them in their Bags till they open, when they spew them up again, and pick out the Oyster.

If we could depend upon the Accounts given us by the Missionaries of the Bird's found in *China*, we might venture to yield implicit Credit to whatever the Ancients have delivered, their Stories of the Phoenix not excepted; for to say the Truth, the Missionaries affirm of their own Knowledge Things full as strange; and we must either believe these or renounce their Testimony entirely. The Reader shall have an Instance of this from Father *Nauvette*, and in his own Words, that we may not seem to justify the Truth of this Observation, by giving an extravagant Turn to what he relates.

“ On the Sea-coasts, says he, of the *Chinese* Islands, there is a very singular Bird called *Yaben*; now what I, and many besides me admire is, that being no bigger in Body than an ordinary Chicken, though its Legs are very long, it lays an Egg larger than that of a Goose; so that the Egg is really bigger than the Bird itself; and no Man living would judge that the Egg could be contained within it: In order to lay its Eggs, it digs in the Sand above a Yard in Depth; after laying, it fills up the Hole, and makes it even with the rest; there the Eggs hatch with the Heat of the Sun and Sand. When the Chickens are hatched, by natural Instinct, they break through the Sand upwards; and so get out of that Dungeon their Parent put them into; then they walk directly to the Sea in search of Weeds to feed on. Another Thing in it is wonderful, which is, that they are not stifled when they come out of the Shell with the Heat and Weight of the Sand, how they breathe till they get out, and how they have the Strength to break through so great a Weight. They are Prodiges of the Almighty's making. The *Indians*, to find these Eggs, stick sharp Canes into the Ground; when they find the Sand light, they stop and throw it up something above the Length of a Man's Arm, and there they find them. They are of a pleasant Relish; one of them is enough for a Man who has a good Stomach; the stale the Egg the better. One Morning, having lain on shore, and near the Place where these Birds resorted, we repaired thither carefully, and making a Noise, a great Company of them came out of their Holes, in which we found many Eggs, some hot, some cold, some white, some of the Colour, of the Sand, which were stale ones. I had before eaten of the latter, and now eat of those that were fresh and warm; but, in truth, the stale ones were much better. There were

* *Mémoires de J. le Blanc.** *Mémoires de l'Acad. Tom iii p. 391.** *Voyage aux Indes par J. le Blanc.** *Voyages de** *Histoire de China.*

* among

" among them some which had Chickens, and I observed, that the *Indians* eat them eagerly, and they courted me to eat, but I could not endure to look at them, and it went against my Stomach to see other People eat them. Once they pressed me so much, that at last, not without great Aversion, I resolved to taste one; I did so, and made an End of it, regretting very much that I had not eaten of them before. I must own, that, since I was born, I never eat any thing more pleasant and palatable, and I am convinced, there is nothing in the World to compare to it."

There may be, and doubtless there is, a great deal of Truth in this Relation; that is to say, there is such a Bird, its Eggs are very large, and they are eaten as the Author describes; but then every thing is so much exaggerated, that the whole has the Air of a Fable, which shews plainly to how little Purpose large Collections are made of such kind of Writers, since what they relate cannot either entertain or instruct, because it is impossible to read such Stories without suspecting and disbelieving them. But to return to the remarkable Birds mentioned by the Moderns.

All the Writers that have mentioned *Mascifer* inform us, that no Country in the World produces so many speaking Birds. Amongst these there is none more extraordinary than the *Lory*, which is as big as a Parrot, but infinitely more beautiful in its Plumage; its Breast, which is very large and high, being covered with bright yellow Feathers; the Wings are green, the Head black, and shining with a yellow Bill. The *Indians* give sometimes thirty Crowns for such a Bird, because they will learn and speak several Languages, and are very tame. There is another with large and long Tails, sometimes three quarters of a Yard long; these are blue on the Back, and yellow under the Belly, and commonly called *Kakkataws*, or *Indian Ravens*. Another kind there is which is white all over, except a yellow Tuft on the Head, which they set upright when they are vexed: They have also some Resemblance both in Shape and Bigness to our Magpies, or Black-birds; these imitate a Man's Voice much more distinctly than Parrots, they are of a blueish Colour, mixed with dark purple Spots and Streaks; they have a yellow Tuft on the Head, which is black, and as smooth as Velvet*.

The *Kokoy*, which is common in the *Indies*, is a kind of Heron, but much exceeding ours in Beauty, being yellow before, and green over all the rest of its Body. On the Head he has a delicate Plume spreading all over the Neck; the young ones eat tolerably well, but the old ones eat tough, and taste much of Fish. The *Kohbry* is the least of all Birds, being no bigger than a Horse-Fly, it hath a very sharp Bill, with which it sucks its Sustainance out of the Flowers, though some are of Opinion it feeds upon the Dew; it has all the Colours of the Rainbow, and its Wings are not unlike those of Pigeons or Ducks. It builds a very neat Nest to the South, under the Branches of Orange, Lemon, or Cotton Trees, to defend itself against the Injuries of the North Winds. Its Eggs are no bigger than Pease. There is another which sings exceedingly fine, but

not so beautifully coloured; it weighs no more than 24 Grains*.

17. These Observations plainly discover, that no Part of the World was better stocked with useful, valuable, and beautiful Creatures than the *Indies*. For domestic Service, besides the Horse and the Ass, which are common with us in *Europe*, they had the Elephant, the Camel, and the Dromedary, fitted in every respect for carrying on the inland Commerce of that Country, which was in all Ages very considerable. They had for the Service of Agriculture a very strong Race of black Cattle, and for the Pleasure of Hunting, they had the finest Dogs that we read of in History for Courage, Speed, and Strength. In their Woods were full of wild Beasts, they had it in their Power to lessen the Number of their Enemies; and to turn this to their Profit, as well as to their Diversion, the Sky, Horns, Teeth, or other Animal Productions, sufficiently compensating the Trouble they took, and the Dangers to which they were exposed in the Chase.

The Sea that washed their Coast, and the Rivers that watered their Country, were abundantly provided with Fish, so that no People had either better or greater Plenty, which to the lower sort was a great Relief; they likewise drew a very considerable Profit from their Fisheries, especially those of Purple and Pearl, and from the Sale of Tortoise-Shell, which was highly valued in those Times for its admirable Clearness, and for the Beauty and Variety of its Colours. The Birds and Fowls in the *Indies* were likewise of all sorts, and all of them the largest and finest in their respective kinds. The Birds of Prey, and particularly the Pelican and the Cormorant, were of great Service; for the former feeding naturally upon Snakes, Serpents, and other Vermin, cleared the Country of them in those Months when they were most numerous and most dangerous; and as for the latter, they taught them in *Cchina*, and other Parts of the *Indies*, to catch Fish, and to bring them to such as kept those Creatures, as we shall see hereafter in its proper Place. As for Geese, Ducks, Hens, and other domestic Fowl, they were, and are still as common and as cheap as in any Country in the World; and of the beautiful Feathers of a Multitude of other Birds, they made Hats, Umbrellas, Screens, and other Utensils of exquisite Workmanship, and at the same time of great Price.

There is no great Wonder therefore, that all the ancient Writers, such as *Strabo*, *Pliny*, *Arrian*, *Plutarch*, *Ælian*, and many others, should so highly extol this Country, and speak of every thing found therein with Astonishment. But notwithstanding all this, it must appear somewhat surprising, that the Antients were acquainted with Animals, Trees, Fruits, and precious Stones, of the most distant Parts of the *Indies*, to which without doubt they never penetrated at all, notwithstanding what we find reported in their Writings of the Islands of *Yaprobana*, *Pantasia*, the Country of the *Seres*, and other Places, which renders it necessary for us to give a clear Account of that Point, which shall be done in the two succeeding Sections, which will conclude our Labours with respect to the ancient History of *India*.

SECTION XV.

An Account of the Descriptions left us by the Ancients of the Eastern and Northern Parts of the Indies, the Notions they had of their Riches, together with an Enquiry into the Reasons which hindered the extending their Discoveries on that Side.

1. A brief Description of the Country of the Sinae or Thinae from ancient Authors. 2. Observations on the foregoing Description, proving, that this Country was the Kingdom of Siam. 3. Of the Indian Islands, as described by old Authors; and more particularly of the famous Island of Taprobana, and their Mistakes about it. 4. This Point more particularly inquired into, and the Taprobana of the Ancients shewn to be no other than the Island of Ceylon. 5. Of the Country called Serica, and the Nation of the Seres; from the best Writers of Antiquity. 6. An Objection arising from the Knowledge which the Ancients had of the Chinese fully stated, and clearly refuted. 7. A second Objection taken from the Commerce of the ancient Chinese, stated and examined. 8. A third Objection from the seeming Discordancy of these Accounts, explained and refuted. 9. An Account of the Island of Panchaia, and a full Proof of its being absolutely imaginary. 10. The high Ideas which the Ancients had of the Riches of the undiscovered Indies. 11. Their Errors as to the Possibility of establishing a regular Commerce with those Countries. 12. The Causes which impeded their Discoveries, and occasioned the Decline of that Trade which they actually had to the Indies. 13. The Conclusion of this Part of our Subject, with Observations and Remarks on the principal Passages therein.

IN what has been delivered in the former Sections, we have confined ourselves to such Points as regard the actual Discoveries of the Ancients. But it is no less necessary to give the Reader some Account of another sort of Discoveries, I mean such as were made by their Geographers, who by the Help of such Relations as were, from time to time, published of these distant Countries, and which are long ago lost, compiled a systematical Account of the Regions bordering upon, and even those that lay very far beyond the Ganges. It is however certain, that they were but very indifferently informed as to the Course of this River; and Cellarius^a corrects the Mistake of Arrianus in Strabo, who says that, from the Mountains called Emodi, it runs South as far as the Town of Ganges, and afterwards East, because it is contrary to the Discoveries of our Times.

The first remarkable Town mentioned by Ptolemy beyond the furthest Mouth of the Ganges was Pontopolis, rather this was the Name of a District; next to that lay the Emporium, or Mart of Baracura, beyond the Mouth of the River Tacosanna, then the Country called Argentea, with several Towns; next to that lay the Country of the Bisjageti, who were Man-eaters, their Capital Bejyng, an Emporium. From hence Southward lay the Aurea Chersonesus, or Malacca. On the West Side of it Tacela, an Emporium, and on the East Side the Cape Malei-Colon, with several Towns^b. Many are of Opinion, that this was Solomon's Ophir, which seems to be favoured by Josephus^c, who says, Solomon's Vessels sailed into a Country of India, formerly called Sephira, but then the Golden Land; Strabo says, it was also in India, but calls it an Island.

Bechart^d alleges it was the Island Taprobana, now Ceylon, and founds his Conjecture upon an Etymology. But Cellarius rejects as mere Dreams the modern Disputes about Ophir, and sees no just Cause why the latter Opinions should be better than the former. He says, the Length of the Expedition mentioned in the sacred History shews, that Ophir must have been at a great Distance from Palestine, or the Arabian Gulph; yet he is not displeas'd that Bechart distinguishes betwixt the Indian and Arabian Ophir, because the Gold of Ophir, mentioned in the Book of Job^e, could not, because of the Ignorance of those Times, be easily understood of the Indian Gold. Bechart places the Arabian Ophir near the Country of the Sabaeans, and thinks the Arabs called the Indian Ophir by its Name when they discovered it. Beyond this Chersonesus to the North lay the Country of the Laesse, who were Pirates and Robbers. The River Sobanus runs through it. Next to that lay

Ptolemy's Sinus Magnus, in which were Balonga and Coragaiba, Metropolitan Towns; and here Ptolemy finishes the maritime Coast of India beyond Ganges. The inland Parts were so obscure, that it is needless to insist upon them by the Situation of the Country; these Places last-mentioned seem to have been in that Kingdom which is now called Siam.

2. The next Country described by Ptolemy is that of the Sinae, which he places farthest towards the East of all the Regions mentioned by him, as lying beyond the great Bay or Opening of the Sea, which he styles Sinus Magnus, and says, their Country extended very far to the South. It is well observed by Cellarius, that this Country is not to be confounded with the modern China, although it reaches as far North as Serica^f. Ptolemy calls the Country beyond this to the East and South, Terra Incognita, and bounds it on the West by India beyond the Ganges. He places about the Equator the Ethiopes Ichthyoptagi, or Fish-eating Ethiopians, and beyond the Equator the River Continues and Cattigara, which he calls a Harbour of the Sinae. Martianus Hieracleota^g places the Sinae likewise at the Extremity of the habitable World towards the East, and next to the Terra Incognita, or Country to that time undiscovered.

It must be allowed, that all this is very dark and very perplexed, so that it is extremely difficult to pass any certain Judgment as to the Places mentioned. On the other hand, however, it ought to be considered, that even these dark and obscure Accounts are infinitely better than the Fables that preceded them, and the ridiculous Stories that prevailed of these Countries and their Inhabitants in succeeding Times. If we compare what Ptolemy has written with the confused Accounts that Pliny has collected from ancient Authors, we may easily discern that one contented himself with Fables, and transcribed whatever came to hand, to shew a Variety of Reading, whereas the other examined very carefully such Descriptions as he received from the Merchants that traded in these Countries, and by comparing them with each other, he gathered from them such Lights as enabled him to draw up a short and imperfect Account indeed, but at the same time such an Account as appears very conformable to Truth; and would appear much more so, if the Manuscripts of Ptolemy were not incumbered with so many various Readings, which renders it extremely difficult to come at the true Sense of that learned Writer.

In the following Ages again, when Science once more gave way to Fable, the World was amused with wild and ridiculous Accounts of these Countries, and he who wrote the strangest things was read with the greatest Approbation.

^a Geograph. Antiq. Tom. ii. p. 747. The Passage in Arrianus, which he corrects, is found in Strabo lib. xv. p. 494. ^b Geograph. lib. vii. cap. 3. ^c Job. 22. 24. ^d Geograph. Sacr. ^e Job. xxii. 24. ^f Geograph. Sacr. ^g Martianus Hieracleota. ^h In Periplus Maris Erythraei.

Alexander the Great; and I conceive that the calling of this Island by the Name of *Taprobana*, was the principal Occasion of all the Mistakes and Confusion that have been discovered in subsequent Accounts.

But as for the *Taprobana*, which *Sirabo* mentions very accurately, and as a Writer afraid of offending the Truth, and which *Ptolemy* more largely describes from the Accounts that were current in his Time at *Alexandria*, it is most likely to be the Island of *Ceylon*. I shall not trouble the Reader with a long Account of the Reasons which our Writers have assigned for this Opinion, but content myself with giving him, as succinctly as I can, the Motives which have induced me to believe that the Islands of *Taprobana* and *Ceylon* are the same. In the first Place, the Situation of *Taprobana*, as laid down by *Ptolemy*, agrees very well with that of the Island of *Ceylon*. He mentions four Places in *Taprobana*, and sets down their Latitudes thus. The Mart or Emporium of *Talaceni* 11° 30', *Nagadiba* 8° 30', *Maugrasman*, which was the Metropolis of the Island, 7° 20', the Bay of *Prasodes* 1° 0'. The best modern Maps lay down the Island of *Ceylon* from one to ten Degrees of North Latitude, the Capital of the Island lying very near in the same Position with that which *Ptolemy* has assigned it. In the next Place, the Accounts lay that *Taprobana* was famous for producing the largest Breed of Elephants, which is true of *Ceylon*, where the Elephants are acknowledged to be the largest and strongest in the *Indies*. Thirdly, *Taprobana* was celebrated for its Spices; and in *Ceylon* there are found not only Ginger, Pepper, and Cardamoms, but Cinnamon is the staple Commodity, and is very justly esteemed the richest in the World. Fourthly, there are said to have been an abundance of precious Stones in this Island of *Taprobana*; and, except Diamonds, all Sorts of Jewels are found in *Ceylon*, and particularly Rubies, Topazes, and Sapphires, the best in all the *Indies*. Lastly, *Taprobana* is celebrated for its great Fertility in various Sorts of Corn, and this too may be affirmed of *Ceylon*, where they have not only five Kinds of Rice, which ripen one after another, but also eight other Kinds of Grain, of which they make their Bread or Oil. On the whole, therefore, when we consider that all the Variations in the Accounts given us by the Ancients of the Island of *Taprobana*, may be so easily accounted for; and that this last and clearest Description of *Ptolemy* is so reconcilable to the Accounts we have of *Ceylon*, I see no Reason why we should not acquiesce in the Sentiment of the learned *Vossius*, that the *Taprobana* of the Ancients is the *Ceylon* of the Moderns.

If any indeed be objected, that *Ptolemy* extends the Island of *Taprobana* southward beyond the Line, which does not by any means agree with *Ceylon*; but I answer to this, that *Ptolemy* sometimes uses the plural Number, and mentions the Islands of *Taprobana*; so that it is impossible that he might include some of the *Maldives* under that Name. I do not say that this is certain, but it is possible, and, I might add, probable too; because the Ancients were acquainted with the Sea in which the Island of *Ceylon* lies, and the Coast that is opposite to the Continent, it is not easy to conceive how they could be absolutely ignorant of so considerable an Island, which lay directly in the Way of all the Commerce carried on in this Part of the *Indies*. On the other Hand, the Ancients were really acquainted with *Ceylon*, as it is very improbable that they should not, this furnishes us with a new Argument, and indeed the strongest Argument of all, that their *Taprobana* was our *Ceylon*; for, if

it was not, it is most certain that the Ancients have left us no Account of any Island that resembles it, which is a Piece of Negligence of a Nature directly opposite to their usual Exactness.

5. It is to be observed farther, that, except *Taprobana*, the Ancients do not mention any Islands on the Coast of *India* of any Consequence; and from hence it is plain, that they were not acquainted either with the larger or lesser Islands that lay farther to the East. It is necessary, therefore, that we should return once more to the Continent, in order to mention another eastern Nation, very famous in Antiquity. These were the *Seres*; and their Country is by *Ptolemy* called *Serica*, which he represents as bordering upon *Scythia*; so that, according to his Description, this Country of *Serica* lay thus. On the West it was bounded by *Scythia* beyond Mount *Imaus*. On the North, and on the East, by Countries unknown; on the South by *India* beyond the *Ganges*. *Ptolemy* mentions many Regions into which this Country is divided, and abundance of Cities in them, in all which he has been copied by many succeeding Writers; but it is not easy to say what Part of the higher *Asia* they have described under the Name of *Serica*.

Many of our Critics are of Opinion that *Serica* is the northern Part of *China*, which may possibly be true; but in that Case, it is not very accurately described. But the Accounts they give us of the People are much stronger and better Proofs, that by the *Seres* they meant the *Chinese*, than any that can be drawn from the Description of their Country. The *Seres*, say they, were a People that spoke a Language peculiar to themselves, and very *guttural*, which is exactly true of the *Chinese*. They were very just in their Dealings with Strangers, but had a very odd Way of carrying on Commerce; for they took all the Goods that were brought them, without giving any Thing immediately in Exchange: Yet afterwards they fully satisfied the Strangers for what they had thus taken, in their own Commodities. This, as we shall hereafter see, was likewise the constant Practice of the *Chinese*, as it still is of the *Japanese*. It is also affirmed of the *Seres*, that they were the first Manufacturers of Silk, that they were, generally speaking, clothed in that Manufacture, and that they made their Exchange either in Silk or in Goods made of Silk, which agrees perfectly well with the Practice of the *Chinese*. So that, on the whole, we have no Reason to doubt that the *Seres* and the *Chinese* were the same People; especially as all the ancient Writers agree, that the *Seres* were extremely fond of their own Country, very diffident of Strangers, and not inclined to travel, which are all of them Circumstances very applicable to the Inhabitants of *China*, before their Country was subdued by the *Tartars*.

It must, however, be confessed, that there are some Variations in these ancient Accounts, and that several Writers mention Circumstances that do not so well agree with the *Chinese*; as those that have been related; and yet there seems to be no just Cause from the Consideration of these Mistakes, to reject the Matter of Fact, which, from the foregoing Circumstances, appears to be so well founded; for if we consider the Contradictions met with in modern Writers, and particularly such as have treated of this Country, instead of being surpris'd at the Mistakes of the old Geographers, we may justly wonder, that their Errors were so few, and of so little Consequence; more especially, if we reflect on the prodigious Difference between their Lights and ours.

I have been guided in my Remarks on this Subject, by comparing the Tables of *Ptolemy* with the best modern Maps, and the Particulars proposed of the Island by ancient Writers, with the Remarks made by Mr. Robert Knox, who was many Years on the Island, as well as those of a *Portuguese*, who likewise resided for a great while in *Ceylon*. *Ptolemy's* Catalogue of famous Cities, with their Longitudes and Latitudes, which is very accurately published in the third Volume of Dr. *Bartholinus's* Geographical History, seems to make *Taprobana* the chief of several Islands; and the ancient *Greek* Geographers, *Ptolemy* uses the plural Number, and seems to make *Taprobana* the chief of several Islands; and it is remarkable that our first Voyagers to the *East Indies* assert, that the little Princes of the *Maldives* were subject to the King of *Ceylon*. *Ptolemy* was forced to supply from his own Judgment the Situation of the Regions he mentions, and as all the Maps drawn from his Account are drawn in a great measure on the respective Judgments of those who drew them, the Reader cannot but discern the Reasonableness of what I have asserted in the Text.

As this will be fully justified in our succeeding Collection of Voyages, which, by their being placed in the proper Order of Time, will enable the Reader to understand the Matter perfectly, and to see clearly the Truth of these Observations, which are not intended to lessen the Credit of ancient Authors, but to represent Things as they really are.

The Interest chiefly consists in their Writings from Memoirs picked up by their Merchants, and from the Reports of the *Indians*; whereas our Accounts not only from such as have actually visited these Countries themselves, but from those who have resided there many Years, have had all possible Opportunities of knowing the Facts which they relate.

6. There are, however, some Objections that will naturally occur to the intelligent Reader, and ought not to be pallied over in Silence, because if they cannot be fully answered, they have a direct Tendency to overturn the best Part of what we have delivered, and therefore it is requisite that we should consider them more at large. The first is, that if we suppose the Ancients to have been acquainted with *China* and the *Chinese*, it absolutely contradicts what has been before asserted of their knowing little or nothing of the Countries beyond the *Ganges*, and extends their Knowledge of the East to such a Degree, as is absolutely incompatible with the Sentiments of the most learned Writers upon this Subject, as well as with the foregoing Part of our own Work; so that, instead of clearing this Matter, we should only perplex it the more, and be so far from making it conspicuous to the English Reader, that on the contrary we should entangle him in new Doubts, and leave him upon the whole in at least as great Obscurity as we found him. That this, notwithstanding, is very far from our Intention, appears plainly from the Pains already taken, and from our stating this Objection fully and fairly; and it ought likewise to pass for a strong Testimony of our aiming at Satisfaction in this Point, that we so freely mention the Difficulties that occur in the Execution of this Undertaking.

In order to the clear Solution of this Point, it is necessary to remember, that in this Section we do not handle the actual Discoveries of the Ancients, but the Accounts given by their Geographers, which are very different Things. We suppose, agreeable to the best Lights that Antiquity affords, that the Ancients never actually sailed farther than the Mouths of the *Ganges*, and that they might do by coasting round *Cape Comora*, and following the Coast of *Ceylon*; neither is it very probable that they made many Voyages so far, but rather that the best Part of their Knowledge was derived by Travels made by Land through the Countries that lie between the Rivers *Indus* and *Ganges*.

Upon this Supposition, all that they have written may be very well accounted for, and the seeming Differences between what is related in the foregoing Sections and this very easily reconciled. To make this Matter clearer, we will examine in their natural Order the Seas mentioned by ancient Writers, which will in a great measure enable us to extricate ourselves from these Doubts. In the first place they navigated the *Mare Erythraeum*, which lies between the *Arabian* Gulph, and the opposite Side of *India*; and having in their Commerce often heard of *Taprobana*, they were led into many Mistakes about that Island, till by degrees their Vessels sailing on the Coast of *Malabar* in doubling *Cape Comora*, discovered *Ceylon*, which is the true *Taprobana*. The Gulph of *Bengal* was their *Mare Eoum*, and the upper Part of it towards the Continent *Sinus Gangeticus*, or the Bay of the *Ganges*, because the Mouths of that River fell into this Bay. The Gulph of *Stam* was their *Sinus Magnus*, or *Great Bay*; but this they knew by Hearsay only, their Navigation never extending thither.

But it may be demanded what Proof there is of this? To which I answer, all that the Nature of the Subject will admit affirmative and negative. As to the first, it is plain they never were thoroughly acquainted with the Island of *Taprobana*. *Strabo* makes it of the Size of *Britain*, and writes no Doubt from Information only pretty near the Truth; but *Ptolemy* extends it much beyond its real Bounds, by supposing (at least this is the only way of accounting for it) the *Maldives* belonging thereto, or dependent thereon. Yet the Situation of the principal Places he mentions therein are not repugnant to Truth, so that the West and North Parts of it were to be easily known in his Time, but not the South. The *Maldives* very imperfectly, it at all; and therefore the *Romans* and *Alexandrines* had not pushed their Commerce very far on this Side, much less into the *Sinus Magnus*, or Bay of *Stam*. This appears from the very Name, which undoubtedly was given it from a Notion that it was a very wide spreading Sea, whereas in Fact it is much narrower than the *Sinus Gangeticus*.

As to the negative Proofs, they are stronger and more in Number: For in order to have sailed into the *Sinus Mag-*

nus, they must have passed through the Straights of *Malacca*, which had opened to their View all the *Indies* that are now known, and of which there is not a Word in *Ptolemy*, or even in *Ammianus Marcellinus*, and consequently no Cause for believing they had any other Knowledge of that Bay than from the Relation of the *Indians*, with whom they traded. Their actual Discoveries therefore went no farther than we before mentioned; but by the Help of these Discoveries, the Reports of Travellers, and his own Sagacity, *Ptolemy* formed his Tables, which seem to extend the Knowledge of the Ancients so much farther. We might to verify this Matter, mention a Multitude of Errors in those Tables, and in other Accounts of those Times, which could arise from no other Cause than their Authors being down the Names and Situation of Places from very different Memoirs, and yet from the best they had; but that this is unnecessary, since *Ptolemy* himself ingeniously owns, that beyond the Country of the *Seres*, or *Tartars*, which is certainly the Kingdom of *Stam*, they knew nothing to the East of all.

It is most evident from these Observations, that we have done the strictest Justice to the Ancients, in attributing to the Voyages made by them, and the Part they made of the Knowledge derived from thence, a share in our Ignorance, instead of treating their Geographers as if they had attempted, as some have done on *Alexander's* Account, to take in them, we ought rather to be satisfied in making the best Use of the Matter.

and thereby furnishing to such as are their practiced Readers very plausible Arguments for maintaining, that the Ancients knew almost as much of these Countries as ourselves. Indeed, while they speak in general Terms only, they seem to justify this Opinion; for they assure us, that the Eastern Part of the World is inhabited by the *Indians*, the *Scythians*; that is, in the Language of the Moderns, by the *Indians*, the *Chinese*, and the *Tartars*, which is very true; but when they endeavour to delineate the Bounds of the several Countries which those Nations inhabit, they shew us plainly that they do not understand what they themselves said, by their bringing the *Chinese* almost as far as the *Ganges*, and placing beyond them a Race of Man-eaters in *China* properly so called. To rise up all, and answer this Objection in few Words, these accounts left us by the Ancients do not prove that they visited any Part of the *Indies* beyond the *Ganges*, though the Informations they received in their Commerce enabled their Geographers to lay down Tables of a few other Countries, about which, however, they were much mistaken in their Conjectures.

7. It may very possibly happen, as it very often does in the calculating such perplexed Subjects, that by removing one Objection the Means is afforded of raising another; and that perhaps no less specious than the former. It may in short be said, that from the Account we give of the Knowledge the Ancients had of the *Seres*, which we ascribe to be the *Chinese*, we admit that they had extended their Dominions very much beyond what they possess at this Day; and, as great Conquests are evident Proofs of extraordinary Power, it follows, that the *Seres* could not have been such a dispersed People as they are represented, but must have possessed a very large and flourishing Empire, which, if they had done, it must have been famous through the East, as the other Empires raised in that Part of the World were. The Force of this Objection, therefore, consists in making the Description given us by the Ancients inconsistent with itself, and by overturning that our Answer to the former Objection will be overturned also.

Now to this I answer, that the Matter of Fact, which is that the *Chinese* were known to the Ancients by the Name of the *Seres*, has been clearly made out; and therefore there is no receding from that, let its Consequences be what they will. But it so falls out, that we have not only the Authority of the ancient Writers before cited, to prove that the *Seres* or *Chinese* extended their Lives very far on this Side, but also the Accounts of the *Chinese* themselves, which assert, that they were Masters of *Cocchin China*, and

* The Reader will naturally call to mind on this Occasion what we have already said of *Magellanus* and other Persons, whose Voyages with the *Indian* Fleet gave the Ancients not only the real, but the best Lights they had into the Situation of those Countries, and the Nature of the Inhabitants.

Pigea; that is, in all Proportion and tributary to that that they were Masters of it will follow, that which the Mouth of the river is some such dark and intricate those are which the Ancients Occasion I shall not forget to mention the Imperfection, of Fallhood, ought in being true; for it pliances, which we have not only the *Chinese*, but inclined to let Strangers, or into the Secret, fore it was very natural Enquiries into these Matters imperfectly. We may consider, that it appears published by the extremely populous, a great Number of Seres given amongst themselves, that, however barbarous Strangers, yet within perfectly well governed Word thoroughly civil.

What serves chiefly the *Indians* of those are represented to us we ought not to do; that Light we have in argument, that the Acc Wires burning them; the *Brachy* State, and the whole true, because in a great among the *Indians* as in every respect the floors. On the contrary, we have from flourishing Ages of were absolutely true. *Pigea* was pure and full their full Vigour, the roughly executed, the pulled to the Regulation of imminent Danger Foot Armies to pursue sufficient to teach the as was the Case of *China*. The *Indians*, therefore, People than the *Indians* may still retain in form in private Life, yet furnish us with no Worlds, though the flames, they have lo

It is the same thing no longer what they don of their pre- Exactness with which ought to conceive tion of their Power Accuracy and Regularity are no more than which took place with more glorious than received from the *Chinese* History being complete in only general and have happened in the of its former Proofs not better acquainted yet, as I hinted prove that the *Chinese* Countries that may *Arabian* Traders;

Piza; that is, in all Probability, those Countries were subject and tributary to them. It is likewise very probable, that they were Masters of *Tibet*, or *Tibet*, from whence it will follow, that whoever traded in the Countries near the Mouth of the river *Ganges*, might very well obtain some such dark and imperfect Relations of the *Seres* as those are which the Ancients have left us; and upon this Occasion I shall not scruple to advance, that their Darkness and Imperfection, instead of being considered as Marks of Falshood, ought in reality to pass for Proofs of their being true; for it plainly appears from a Multitude of instances, which we have already given in this Work, that not only the *Chinese*, but the *Indians* also, were very little inclined to let Strangers into the Histories of their Countries, or into the Secrets of their Governments; and therefore it was very natural for such as endeavoured to make Enquiries into these Matters, to report Things slightly and imperfectly. We may be the better satisfied of this, if we consider, that it appears from all the Accounts of the *Indians* published by the Ancients, that these Countries were extremely populous, full of large Cities well fortified, and a great Number of Sea-ports, in which a great Trade was driven amongst themselves; these Particulars plainly prove, that, however barbarous their Customs might appear to Strangers, yet within themselves these Eastern Nations were perfectly well governed, and in the strict Sense of the Word thoroughly civilized.

What serves chiefly to confound us is our considering the *Indians* of those Times in the same View that they are represented to us by modern Travellers, which is what we ought not to do; for though it be reasonable, and in that Light we have made use of it often as a probable Argument, that the Accounts given us by ancient Writers of Wives burning themselves with the dead Bodies of their Husbands, the *Brachmans* living in a kind of Collegiate State, and the whole People being divided into Tribes, are true, because in a great measure we observe the same things amongst the *Indians* at present, yet it does not follow that in every respect the modern *Indians* resemble their Ancestors. On the contrary, we ought to reflect, that the Accounts we have from the Ancients refer to the first and flourishing Ages of the *Indian* Principalities, when they were absolutely free and independent, when their Philosophy was pure and sublime, their political Constitutions in their full Vigour, their Laws well supported, and thoroughly executed, their military Establishments so well adjusted to the Regulation of their civil Affairs, that in Times of imminent Danger they were able suddenly to set on Foot Armies so puissant, that their very Countenance was sufficient to teach the most ambitious Princes Moderation; as was the Case of *Alexander*, and some of his Successors. The *Indians*, therefore, in those Days, were another sort of People than the *Indians* known to us, and though the latter may still retain in some measure the Manners of the former in private Life, yet in their publick Conduct they can furnish us with no Idea of their Progenitors. In few Words, though they have preserved some of their Customs, they have lost all their Spirit.

It is the same thing with respect to the *Chinese*, they are no longer what they have been; and if we admire the Wisdom of their present Government, and the wonderful Exactness with which their Affairs are administered, we ought to conceive much higher and more magnificent Notions of their Power and Splendor in former Times. That Accuracy and Regularity which strikes us so much at present are no more than the Remains of those Institutions which took place when their Empire was much greater and more glorious than at this Day. It is true, that we have received from the Missionaries great Lights with regard to the *Chinese* History; but we are very far from having any thing complete in this kind, even at this Day. We have only general and short Accounts of the Revolutions that have happened in that Country, and of the Conquests made of its frontier Provinces; so wonder therefore that we are not better acquainted with the Conquests made by them, and yet, as I hinted above, we do not want Authority to prove that the *Chinese* actually extended their Power into Countries that might make their Fame known to the *Alexandrian* Traders; and perhaps in its proper Place we shall

be able to account for their relinquishing those Conquests.

Here, however, it is sufficient to observe, that it appears very clearly from what we know of the *Chinese* History, that there was a constant Fluctuation in their Politics, and that sometimes a Spirit of Dominion, and at others a pacifick Disposition, took Place; and there are extant, even in the modern Languages, Discourses addressed to the *Chinese* Emperors by their Ministers, exhorting them to be content with their hereditary Countries, and rather contract their Power than extend it, that they might govern with greater Ease to themselves, and with Effects more beneficial to their Subjects. After these Reflections, it will be easy to understand how the Ancients came to know so much, and, at the same Time, so little of these People. It was their penetrating Southward and Westward, that gave the Ancients an Opportunity of knowing any thing of them at all, since it is very certain, that if they had been always restrained within the Bounds of *China*, strictly so called, they would never have been heard of; and therefore these Accounts, instead of discrediting the Facts before-mentioned, when thoroughly looked into, and coolly considered, carry in them the highest Probability, and the most evident Marks of Truth. That, upon Enquiry, the Ancients being informed that the Country, which is now called *Tibet*, was under the Power of the *Seres*, should from thence conclude it the native Soil of those People, and their Geographers be induced from thence to give it the Name of *Serica*, has nothing in it strange at all, any more than that they should imagine that the Metropolis of this Country was the Capital of the *Seres*, and the chief Seat of their Empire. Thus it is hoped this Difficulty is entirely taken away, the Credibility of the Testimonies before alledged fully established, and the Difference between the ancient and modern Geography of these Countries rationally accounted for, without offering any Injury either to the old Writers or the new, and consequently what is laid down in this Section, perfectly reconciled to all that has been asserted in the former.

8. There is a third Point in reference to this Subject which requires some Attention, and then I think we may safely proceed. As the last Objection respected the Country of the *Seres*, so it is very possible that some Doubts may arise as to the People who are described by *Pliny* and other old Writers, equally removed in their Manners from the rest of Mankind, as separated from them by the great Distance of their Country. It may, I say, be suggested, that the Customs of the *Seres*, as they stand recorded in ancient Writers, have no sort of Resemblance to those of the *Chinese*, if the Accounts I have just now given of them be well founded; for whereas I make them a potent, wise, and polite People, they paint them as a kind of Savages, differing in their Dialect from the rest of Mankind, and shunning, as much as might be, all Conversation with Strangers.

Now, to reconcile these Contradictions, we are to consider, first that the Ancients themselves speak very differently of the *Seres*, sometimes commending them for their strict Justice and Probity, for the Purity of their Manners, and for their having no Desire to injure their Neighbours; and at others, as a Race of intractable People, absolutely bent to conceal themselves in Woods and Fortresses, and trading no other Way than by Exchange, and that too by leaving and taking of Goods without any Intercourse between the Merchants who sold them, and those who purchased. Secondly, it appears from the Diversity of these Accounts, that the Ancients were entirely led in this Matter by Hear-say, and by the Hear-say of a People who were not much inclined to let them into all they knew. Thirdly, it is necessary to remember that the *Indians*, from whom the Ancients had every Title of what they report concerning the *Seres*, might give them such Informations as were grounded on Truth, but were so unintelligible to the *Greeks*, that they were not able to report them without Misrepresentation.

As for Instance, the *Indians* might tell them that the *Seres* made use of a Language very different from that of other Men, and in this they would have told them no

more than has been justified by Experience; but in repeating this, the Ancients have represented the Tongue of the *Chinese* as it had nothing in common with human Speech, which is a manifest Exaggeration. That the ancient *Seres* had a great Aversion to Strangers, and an invincible Reluctance of continuing in their own Country, is another Fact true in itself, but strangely misrepresented. All the *Chinese* Histories agree, that this Nation had, as indeed they still have, a great Jealousy of Foreigners, and by their Laws forbade their settling amongst them; yet the same Histories shew, that notwithstanding this Jealousy and these Laws, they have always had a great many Foreigners in their Country; and these not only *Scythians* or *Tartars*, *Indians*, *Persians*, and *Turks*, who were in some sort their Neighbours, but *Jews*, *Christians*, and *Mohammedans*; and that for such a Length of Time, that it is almost impossible to account for their coming into and settling in *China*, as is evident from the learned Dissertations that have been wrote expressly upon these Subjects. The Amount of all this, therefore, can be stretched to nothing more than our not having very distinct Relations of what passed a long Time ago in a very distant Country, which is not very wonderful. But however obscure, however contradictory, these Accounts may be in other Respects, yet in this they agree perfectly well, that such a Jealousy always subsisted in this Nation, though for particular Reasons, and under particular Circumstances, they were content to dispense with their Laws, which from this Spirit of Jealousy they had enacted.

To make this Matter still plainer, let us consider the *Chinese* in their present Situation, and in regard to the different manner in which they carry on Commerce at home and abroad. Their Junks sail annually to almost all the different Ports in the *Indes*, but particularly to *Batavia*, where they trade as other People do, and comply with all the Regulations that are thought necessary in those Places for the Security and right Management of Commerce, from whence they have acquired very justly the Character of being as active, as industrious, and as general Traders, as any in that Part of the World. This, one would think, might effectually purge them from the Imputation of having a Dislike to Strangers, and an Unwillingness to correspond with other Nations, and, in short, of all Intractability on the Head of Commerce. Yet when we look into their Management at home, we shall find many things that may very well justify such a Charge even at this Day. For there are but one, or at most but two, of their Ports open to Strangers, *viz.* *Canton* and *Amoy*; they do not suffer any *European* Nations to make Settlements in their Dominions, if we except the *Portuguese*, and even they are not only Subjects, but in a manner Slaves to the *Chinese*; their Port Duties are not high only, but very extravagant; the Precautions they take against, and the Hardships they put upon Foreigners, are so many and so inconvenient, that it is plain they only tolerate Trade instead of encouraging it. It is therefore be, as most certainly it is, the Case, why should we accuse the ancient Accounts of Absurdity and Contradiction?

It would be needless and unnecessary to enter into a Digression about the Navigation of the ancient *Seres*, how far it extended, and what the Consequences were that attended it. I say, it would be needless and unnecessary; because, after all the Pains that could be taken, we should find it very difficult, if not impossible, to give a tolerable Account of it; but in general, however, we know, that in very ancient Times they traded to most of the *Indian* Islands, settled Colonies in many of them, and, as there are good Grounds to believe, were the Ancestors of the *Chingaleys*, which are the most powerful Nation in the Island of *Ceylon*. These Circumstances seem absolutely to contradict another Part of their general Character, which is, that they have no Inclination to leave their own Country on any Terms. In all Probability, their Settlements abroad were created by domestic Confusions, when Numbers chose rather to seek new Habitations, than to be exposed to certain Death or Destruction from the Rage of their Adversaries, which, nevertheless, implies no Alteration in the Nature of these People; for it is one thing to be of a roving Disposition, and another to prefer Banishment to Death.

Upon the whole, if there be any thing certain in the *Chinese* History, it is this; that both the People themselves have the most sincere Love for their Country, and desire to remain in it; and that this is nourish'd in them by their Laws, and the Propagation of this Spirit makes a capital Point of their Politicks. On scanning thro' this Matter as strictly as it is possible, we see that, taking all Things together, the oldest Accounts of the *Chinese* are not liable to more Objections, or incumbered with greater Difficulties than the modern; and therefore, if the Ancients have represented the *Seres* as a People of an odd Humour, and their Practice and Principles considered somewhat inconsistent with themselves, we have the more Reason to be positive, that the *Seres* and the *Chinese* are the very same Nation, because from the Knowledge we have of them at present, it is impossible to conceive that any Character given of them in past Ages, should come nearer the Truth than that which from a superficial View seems incompatible therewith. In Cases of this Nature, Nations are to be described as they really are, and of such Temper and Disposition their Actions speak them; other Accounts may be more plausible, and, to such as take up with the first Appearance of Things, more credible; but unquestionably the best way is to write the Truth, because in the end, and after the strictest Examination, it will be found, that Truth will always justify itself.

9. There still remains an Island mentioned in ancient Writers as lying in the *Indian* Ocean, though never discovered by any of the Moderns, of which we promised, and of which it is necessary that we should give a clear Account, the rather, because though surrounded with a Mid of Fables, there is at the Bottom something which deserves our Notice, and which may enable us to detect such kind of Relations when we meet with them elsewhere. The Name of this Island is *Panchana*, and it is supposed to lie between the *Arabian* Gulph and the opposite Coast of *India*. There was but one ample and distinct Relation of this Country, which is still preserved almost entire in the Works of the learned *Diodorus Siculus*, which the Reader shall fairly transcribe for several Reasons. First, that the Nature of such kind of Relations may plainly appear, and the Reader be able to judge for himself of the Difficulty in distinguishing between Facts faithfully related, and Fictions so elegantly dressed out. Secondly, that he may the better understand the Detection of this fabulous History. And, thirdly, that he may be satisfied we do not impose upon him our own Notions and Sense of Things, but admit him freely and fairly to the Sight of our Author's.

There are, says our Author, many Things observable in *Panchana*, or *Panchana*, that deserve to be taken notice of. The natural Inhabitants are those they call *Panchanians*; the Strangers that dwell among them are People of the Western Parts, together with *Indians*, *Cretans*, and *Scythians*. In this Island there is a famous City call'd *Panara*, not far from to any Tor Wealth and Grandeur. The Citizens are call'd the *Suppliants of Jupiter Triphobus*, and are the only People of *Panchana* that live under a Democracy, without a Monarch. They chuse every Year the Presidents or Governors that have all Matters under their Cognizance; but what concerns Life and Death, and the most weighty Matters, they refer to the College of their Priests. The Temple of *Jupiter Triphobus* is about fifty Furlongs distant from the City, in a fair, open Plain. It is in great Veneration for its Antiquity, and the Stairlines of the Structure and Fertility of the Soil. The Fields round about the Temple are planted with all sorts of Trees, not only for Fruit, but for Pleasure and Delight; for they abound with tall Cypress, Plane-Trees, Laurels, and Myrtles. The Place is well furnished with running Water; for near the Temple there is a mighty Spring of sweet Water rushes out of the Earth, so that it very soon becomes a navigable River. The current divides itself into several Currents, and waters all the Fields thereabouts. It produces thick Groves of tall and sturdy Trees, amongst which, in Summer, abundance of People spend their Time, and a Multitude of Birds of all sorts build their Nests, which creates great Delight, both by affecting the Eye with the Variety of their Colours, and charming the Ear with the Sweetness of their Notes. Here are many Gardens, sweet and pleasant Meadows, *Jeke!*

with all sorts of Herbs Profect, that it seems that of the Gods the a Multitude of Vines so curiously interwove exceeding pleasant to Delights of the Place.

The Temple was jointed and cemented, many in Breadth, and curiously adorned with placed huge Statues of ship, and amazing Bulwarks for the Priests by whom every thing All along from the T four Furlongs in Breadth; on either Side Statues, with four-furlong Courte breaks forth mentioned; from Water, the drinking of the Body. This The whole Fountain is the Bottom with Stone both Sides for the Sp for any but the Pri Fountain.

All the Land about is consecrated to the maintaining the public beyond these consecrated dedicated likewise to the of *Celus* and *Tryphobus* *Uranus*, when he diverted himself in served the Motion of was call'd *Tryphobus* composed of three feet and *Dioms*, who were it is said, that he not terly destroyed all eleven with the Ground a sacred Festival in Behind this Mount, there are abundance of Lions, Leopards, De turs, both for Strength there are three chief the whole Country in dation of all sorts of

The Hul is brought into the the most skilful in of the Fruits for a second and the rest ments in the Judg ner the Shepherds a public Stock the Ve ber and Weight, as a not lawful for any except a House and tic, and other Thin by the Priests, and their Necessity requ Proportion.

They wear soft finer here than any knowe deck them lices of Gold, and

with all sorts of Herbs and Flowers, and so glorious is the Prospect, that it seems to be a Paradise worthy the Habitation of the Gods themselves. Besides all these, there are a Multitude of Vines of all sorts springing up on high, and so curiously interwoven one among another, that they are exceeding pleasant to the View, and greatly augment the Delights of the Place.

The Temple was built of white Marble, most artfully jointed and cemented, two hundred Yards in Length, and as much in Breadth, supported with great and thick Pillars, curiously adorned with carved Work. In this Temple were placed huge Statues of the Gods of admirable Workmanship, and amazing Bulk; round the Temple are built Apartments for the Priests that attend the Service of the Gods, by whom every thing in that sacred Place is performed. All along from the Temple is an even Course of Ground, four Furlongs in Length, and one hundred Yards in Breadth; on either Side of which are erected vast brazen Statues, with four-square Pedestals; at the End of the Course breaks forth the River from the Fountain before-mentioned; from whence flows most clear and sweet Water, the drinking of which conduces much to the Health of the Body. This River is called the Water of the Sun. The whole Fountain is lined on both Sides, and lugged at the Bottom with Stone at vast Expence, and runs out on both Sides for the Space of four Furlongs: It is not lawful for any but the Priests to approach the Brink of the Fountain.

All the Land about for two hundred Furlongs round, is consecrated to the Gods, and the Revenues bestowed in maintaining the public Sacrifices and Service of those Gods beyond these consecrated Lands, is an high Mountain dedicated likewise to the Gods, which they call the Throne of *Celus* and *Tryptolius Olympus*; for they report, that *Uranus*, when he governed the whole World, pleasantly directed himself in this Place; and from the Mount observed the Motions of the Heavens and Stars; and that he was called *Tryptolius Olympus*, because the Inhabitants were composed of three several Nations, *Pantheans*, *Oceanites*, and *Deians*, who were afterwards expelled by *Ammon*; for it is said, that he not only rooted out this Nation, but utterly destroyed all the Cities, and laid *Deia* and *Afferusa* even with the Ground. The Priests every Year solemnize a sacred Festival in this Mountain with great Devotion. Behind this Mount, in other Parts of *Panbaia*, they say there are abundance of wild Beasts of all kinds, as Elephants, Lions, Leopards, Deer, and many other wonderful Creatures, both for Strength and Proportion. In this Island there are three chief Cities, *Hipacia*, *Dalis*, and *Oceanis*; the whole Country is very fertile, and especially in the Production of all sorts of Wine in great Plenty.

The Men are warlike, and use Chariots in Battle after the ancient Manner. The whole Nation is divided into three Tribes; the first is composed of the Priests, with whom are joined the Artificers; the second consists of the Husbandmen; and the third of Militia and Shepherds. The Priests govern all, for they give Judgment in all Controversies, and have Authority in all publick Transactions of State. The Husbandmen till the Land; but the Fruit is brought into the common Treasury, and he who is judged the most skilful in Husbandry, receives the largest Share of the Fruits for a Reward in the first Place, and to the second and the rest according to that Rule, as every one merits in the Judgment of the Priests. In the same manner the Shepherds and Herdsmen carefully bring in to the publick Stock the Victims and other Things both by Number and Weight, as the Nature of the Things are; for it is not lawful for any to appropriate any thing to themselves, except a House and Garden for all the young Breed of Cattle, and other Things; and all the Revenues are received by the Priests, and they justly distributed to every one as their Necessity requires, only the Priests have a double Portion.

They wear soft Garments, for their Wool is much finer than any where else; both Men and Women likewise deck themselves with golden Ornaments, Necklaces of Gold, and Bracelets about their Arms, and

like the *Persians*, have Rings hanging at their Ears; their Shoes are such as others wear, and of different Colours. Their Soldiers, who are hired for Pay, defend the Country, and have their proper Posts, and in proper Parts of the Island Fortresses, the Hills being infested with Thieves and Robbers, who often surprize the Husbandmen. To conclude, these Priests, for Delicacy, State, and Purity of Life, far exceed all the rest of the Inhabitants. Their Robes are of white Linen, and sometimes of pure soft Wool. They wear likewise Mitres embroidered with Gold. Their Shoes are Sandals, curiously wrought with exquisite Workmanship; and in their Ears hang golden Ear-rings, like Womens. They attend chiefly upon the Service of the Gods, singing harmonious Songs in their Praise, setting forth their glorious Acts and Benefits bestowed upon Men. The Priests, say they, came originally from *Crete*, and were brought over into *Panbaia* by *Jupiter*, when he was upon Earth, and governed all the World, and alledge their Language for a Confirmation of this Assertion, inasmuch as they retain many Words of the *Cretan* Tongue among them; and moreover say, that they derived from their Ancestors that Civility and Kindness wherewith they entertain the *Cretans*, the Fame and Report of their ancient Conspicuity descending continually in a perpetual Succession to their Posterity; they shew likewise a Record, written, as they say, by *Jupiter's* own Hand, at the Time when he was on Earth, and laid the Foundation of the Temple.

There are in this Island likewise Mines of Gold, Silver, Brass, and Iron, but not lawful for any to export them. Nay, it is not permitted to any of the Priests to go out of the Verge of the consecrated Ground; and if any do, it is lawful for any Person who finds them to kill them. They have, under their Charge, innumerable Vessels, and other consecrated Things, both of Gold and Silver, which have been laid up there in Honour of the Gods for many Ages. The Gates of the Temple are of admirable Workmanship, beautified with Gold, Silver, and Ivory, and Thyme-wood. The Bed of the God is six Cubits long, and four broad, of massy Gold, most curiously wrought in every Part; and near adjoining stands the Table, as large, and of the like Materials and Workmanship with the other in every Respect. In the Middle of the Bed is placed a great golden Pillar, whercon are Letters inscribed in that called by the *Egyptians* sacred Writings, expressing the famous Actions of *Uranus*, *Jupiter*, *Diana*, and *Apollo*, written, as they say, by *Mercury* himself: But this may suffice concerning the Islands lying in the Ocean over-against *Arabia*.

Such is the Account delivered to us of this Island by *Diodorus Siculus*, who had this Account from a more ancient Writer, one *Euemerus*, a *Messenian*; so that he is not to be charged with inventing the Fable, but with giving it a Stamp of Authority, by taking it into his History. But if the Reader should enquire what induced the original Author of the Story to frame so circumstantial a Relation out of his own Head, and attempt therewith to cheat and impose upon Posterity, it falls out very luckily, that we are able to resolve this Question, and to set the Truth in the clearest Light possible; from whence it will appear, that these Fictions of the Ancients were not devised with a malicious Intention of imposing Fables for Matters of Fact upon credulous Readers, tho' undoubtedly they very often had this Effect; but they were contrived chiefly for another and better Purpose, as appears plainly from the Case before us.

Plutarch not only knew that the whole of this Relation was an absolute Fiction, but he likewise knew, and fairly informs his Reader of the End for which it was framed. He says, that the Author of it was an irreligious Man, or an Atheist, who, in delivering this Story of the Island *Panbaia*, aimed chiefly at inculcating his own Opinions, without running the Hazard of being punished by Law. Now those Opinions of *Euemerus* the *Messenian*, which *Plutarch* very prominently tiles atheistical, were no other than these, that most of the Deities worshipp'd

^c *Diodor. Sicul. lib. v. p. 225.*

^a *Plutarch. de Jide & Or.*

the Northern *Indies* on the Frontiers of *Scythia*, and of Diamonds and Precious Stones found there, whereas in all probability, the Gold which the Ancients met with in *India* came from the Peninsula of *Malacca*; the Diamonds were found near Cape *Comorin*, and the Rubies and other colour'd Stones were brought from *Taprobana* or *Ceylon*. We will conclude these Remarks on the Riches of the *Indies* with a few Lines from the Poem of the famous Geographer *Dionysius*, whom some Critics place as high as the Reign of *Alexander*, and which *Prifcoran* has thus rendered into *Latin*. They occur towards the End of the Poem, and contain a most lively and elegant Picture of the Riches of the *Indies*, with as much Accuracy and Correctness as any Prose Writer what ever, and may serve as a Specimen both of the Manner and of this Manner of Writing.

Respicit nunc reliquis Africæ sub finibus oras.
Positas ad pontum Carmani, solis ab ortu;
Littora pars habitant, mediæ pars limina terre.
Gurgis post hos tendunt orientis ad ignes,
Oceanum iuxta: radiis propriis inde
Est Scythiæ Tellus australis, flumen ad Indum,
Qui ports raptius rubro contrarius exit:
Gurgite nam celeri rectus decurrit ad Austrum,
Caucasus orienti primum de montibus altis:
Draconis cujus Patalene cingitur unda.
Serapim muneris & scalo gurgite gentes.
Ad partes rapidi que vergunt lumina Scelis,
Ortus, Arabasque simul, linique Aethiopiis
Ventis lenis, & Sarridas simul omnes.
Parparci Montis sub celsis rupe, Arivos
Namque communi, qui terras ubere nullo
Florantes habitant, squallent nam fontibus aspris;
Caralis lupulem qui rubrum litore carpunt,
Sapphique decus nigri siveque coloris
Decorum cadunt ventis, hæc merce beati.
Indum Terris hæc Teltyos æquora cleulant,
Quo primo Titon adiacens lumine cerunt.
Una color populos niger & flagrantibus ortu,
Alpe genant similes hyacintho fronte Capillos.
Ubi sunt alii teras aurique metallum:
At illa tessent tenuissima tegmina lani:
Uvarum strigunt elephantis ab ore revulsos,
Serapim ripes alii terrentibus mirri
Et stigmam glauci, mirilumque adamanta,
Atque ara viridi legitur que splendet lapidis,
Caralis que decus liquidi, græstique Topazi
Perque amethystos in st. jussusa colore.
Pectus magna sic tellus illi ministrat.
Afflu que rigant hæc telum fontibus amnes:
Abiæque vagat variis, in loque frequenti,
Et sic rubre possidet arundinis illi.
Hæc aut superant proceræ corpore tantum,
Infant equum faciles ut mare Elephantos:
Ipso præstant s. pientis pectore matæ
Laminibusque cedent rectis, mirabile, sclem:
At raves oculis, et sicra mente retentant,
Quæque concipiunt arcana luce futuri.
Ubi sunt hic carnis decetatus torque rubenti
Naxos, lumina simulat qui verbera lingue.

The principal Hindrance that the Commerce of the Ancients met with was owing to the following Causes; first, the over-valuing their own Knowledge, and supposing all Nations at a Distance from them *Barbarians*, and therefore less in proportion to that Distance; the next was their adhering to their old Notions in Cosmography, notwithstanding the Arguments their own Experience furnished to the contrary; and thirdly, their discontinuing long Voyages to distant Countries during domestic Contentions, by which those Routes were lost which were known in former Times, and their Discoveries so confounded, that it was not possible to affirm any thing about them with Certainty.

The two former were voluntary Errors, the last was either a Misfortune or their Fault. We have an Instance in *Strabo* of a very singular Navigation to the *Indies* performed in the Reign of *Ptolemy Ptolemy*, which, if they were persued, might have opened to them a much

shorter and easier Passage to the *Indies* than they had been hitherto acquainted with. The Guards that were appointed to patrol on the Shore of the *Arabian Gulf* found an *Indian* half-dead upon that Shore, and brought him to the King; all they could tell of him was, that he alone had escaped a Shipwreck; but as they understood not his Language, they were not able to say whence he came. The King caused him to be well taken care of, and to be instructed in the *Greek* Language, in which, when he had attained a sufficient Knowledge to discourse, he acquainted him, that in a Voyage from the *Indies*, being driven out of the usual Course, he lost all his Companions by Hunger; and the Ship being stranded, he escaped alone on Shore, where the Guards found him.

This Man offered to pilot a Ship to his own Country, which he did, and carried one *Eudoxus* with him. The Voyage was very happily performed, and they found in the Country to which this *Indian* carried them Aromaticks, and several sorts of Precious Stones, some of which the *Indians* found in their Rivers, and others they dug out of the Earth in the same manner that Chrysolite is found. *Eudoxus* conceiving that he had acquired Experience enough by this Voyage, set up for a great Navigator, and undertook several Voyages to very little Purpose, because he followed his own Notions instead of endeavouring to acquire proper Lights from the *Indians*, notwithstanding it clearly appears from the Accident that lettel this Man, that the *Indians* were much bolder and better Seamen than the *Greeks*.

But these last were so persuaded of their own Skill, and had such a Contempt for the Nations they held *Barbarians*, that nothing could induce them to change their Sentiments, or prevail on them to think of obtaining Lights from those they so much despised. *Bishop Huet*, speaking of this Passage, seems to be of Opinion, that from the Time of *Ptolemy Philadelphus* the *Egyptians* had neglected their *Indian* Commerce, and recovered it by this Accident. I must confess this does not appear at all probable to me, and I am rather inclinable to believe, that this *Indian* carried the Ship he navigated to a Part of the *Indies* with which till then they had never been acquainted; and this by the perfect Knowledge he had of the *Monsoons*, or constant Trade-Winds; for I cannot believe that the *Indians*, in their early Ages, had any other Secret which enabled them to make long Voyages in less Time than other People. This is an Instance of the first Error.

As to the second, one might collect many; but that I may not dwell too long upon this Subject, I will take notice only of one. They had a Notion that the Eastern and unknown Part of the *Indies* was bounded by the Ocean, and that this Ocean communicated with the *Hyrcanian* or *Caspian* Sea; and upon this they grounded the hopes of discovering the most distant Part of the *Indies* by the Navigation of the latter. *Strabo* declares plainly, however, that he believes this Navigation never had been performed; but at the same time admits that it was practicable. This he did on the Credit of *Patrocles*, who was sent to make Discoveries on this Side by the *Seleucide*; and this he labours very earnestly to prove by that kind of Reasoning, which will always affect the Vulgar among the Learned, and which no great Man ever wants, to establish what he thinks probable.

Ptolemy also mentions the Voyages of *Patrocles*, and seems to insinuate that he actually discover'd some such Passage; but what he says is very dark and perplexed; so that after all, one can affirm nothing positively from his Writings. The Opinion however grew common, and passed for current, even upon such obscure Testimonies; and this drew after it, as a necessary Consequence, a Notion that only an inconsiderable Part of the World remained undiscovered; and this, together with the whimsical Apprehension that one Zone was intolerably hot, and two as intolerably cold, damp'd the Spirit of Inquiring, and confined Men to the Spots where they happened to be born, or, at most, to those which their Ancestors had discovered by Accident or good Fortune, rather than Industry. Indeed, this circumcising Scheme is so strong in the Ancients, and even in those Works, which, at first Sight, appear calculated for a different Purpose, as for Instance, the Story of the Blind *Atlantis*, related by *Plato*, and the famous

Expedition of *Hanno*, that they contain much more to affright and terrify, than to allure and invite Men to undertake long Voyages, and endeavour great Discoveries; which had this bad Effect, that it quite dardardized common Minds, and rendered them incapable of being wrought into a Temper fit to go through the Hardships that must be met with in such Undertakings.

The third Disadvantage they laboured under was, the frequent Revolutions their own Countries were exposed to; for this laid them under many and great Difficulties. They had this Method or that prescribed to them by a superior Power, and they were to pursue such Plans only as were agreeable to the Government under which they lived, and those too no longer than they were agreeable. Another Inconvenience was, the Interposition of the State on any Discovery, or furnished Discovery. It was to be cultivated or neglected at the Will of the Government, and not of the Adventurers, for the Spirit of Negotiation was not so free as it is now; but any Attempts out of the ordinary Mode of Commerce gave Jealousies to such as ought to have been best pleased with them.

These Discouragements, at particular Times, and under particular Circumstances, interrupted several kinds of Commerce, and kept the Whole in such a Condition as hindered private Men from turning their Thoughts this Way; for, otherwise, no doubt, they would have thought of settling Colonies, and securing some Footing in the *Indies*, in order to have examined the Whole of it, and putting the Navigation of it into a certain and irreversible Order; so that nothing which happened at home might have affected those Colonies: But after the Time of *Alexander*, or at least of his immediate Successors, we find nothing of this sort thought of, but every thing abandoned to Chance and the Humour of the Times.

12. There were many Impediments besides these already mentioned, which hindered the Progress of Discoveries among the Ancients, and some of them of such a Nature as to be almost invincible. Their Ships were built in such a Manner, as did not, by any means, render them fit for long Voyages; for their Continuance was such, that they could not bear a high Sea, or go safely before the Wind at any great Rate. In the next place, their Ships wanted Room; and though this seems to be contradicted by the Accounts we have of Vessels which carried several hundred Men, yet, when these come to be closely examined, they appear to be no other than a sort of Burges, or rather Gallies, fit for transporting Men across an Arm of the Sea, or for fighting, where this could be done in a few Hours after they were on board; and this will be the more evident, if we reflect on the Scenes of naval Combats mentioned in the *Greek* and *Roman* Histories. The Labour of working their Ships was likewise intolerable in a long Voyage; and these Inconveniences, taken together, appeared in the Eyes of their Seamen so dreadful, that they were more apt to mutiny, especially when employed in Discoveries, than can well be imagined; so that if it had not been for some Accidents, and their being encouraged by the Examples of the *Arabians* and *Indians*, it is scarce credible that they would have made such long Voyages as they really did.

If it should be inquired how the *Arabians* and *Indians* made such frequent Voyages in spite of these Inconveniences, the Answer is easy, they made use of another sort of Vessels, which, though less fit in Appearance, were much better Sailed; nor would it be difficult to prove, even from the Account of *Strabo* and other ancient Writers, that the *Indians* actually made use in those Days of the *Parasol* or *Pree*, which before a Wind are allowed to be the best sailing Vessels in the World. The Ancients wanted likewise the Assistance of Charts, which are so essentially necessary to Navigation, for it appears plainly from the Voyages already mentioned, and from the Accounts we have in *Pliny*, and in other Authors, that they were guided solely by a kind of Table, containing the Names of Places on the Coast, and their Distances from each other; neither had they any Ideas of finding a different manner, because they knew not how to regulate their Course in an open Sea, which forced them upon the Choice of that sort of Navigation which is now with Reason held to be the most

dangerous, and in which they could make use of such Vessels only as had a small Draught of Water; and this was particularly inconvenient in the Navigation of which we are speaking, because the *Indian* Coasts are very low, and by sailing near them, they lost the Advantage of the Trade Winds, which, before the Invention of the Compass, afforded the only means of making long Voyages with Safety.

It must be owned that many of these Facts have been disputed, and that too by very learned Men, who have endeavoured to persuade us, that the Ancients wanted very few of the Conveniences possessed by modern Navigators, as will be largely shewn in another Place; but at present it may be sufficient to observe, that in all of these Arguments are drawn from their own Explanations of proposed and obscure Passages in *Historians* or *Poets*, whereas ours are grounded on the Scope of their general Histories, and on Declarations in our Favour, as expressly as can be desired. For instance, *Vegesius* assures us, that the Seas were shut from *November* to *March*, and that it was not thought proper to undertake any Voyage of Consequence before the Month of *May*. This very plainly proves the Difficulties of that Navigation, and that they lost a great Part of the Year's want of those Helps and Advantages, which, purely from the Spirit of Contradiction, these learned Men would present us they enjoyed.

It may not be amiss to remark, that supposing their Opinion to be true, it is so far from adding to the Credit of the Ancients, that it really does a greater Injury to their Reputation, than the contrary Assertion taken in its strongest Sense; for if the Ancients had the Use of the Compass, and of Sea-Charts, as these learned Men maintain, their not making a better Use of them is altogether inexcusable, and shews such a Want of Spirit, and such a Defect of Genius, as is absolutely irreconcilable to their Performances in other Arts; but what seems to settle the Matter beyond all Question is this, that the *Indians*, becoming Masters of the *Greek* Learning as well as of the Empire, and translating into their own Language the *Greek* Books that were written on these Subjects, did something that at all corroborates this Notion of the great Knowledge of the Ancients, with respect to the Instruments of Navigation necessary in long Voyages.

Sir *John Chardin*, who was a Man of much Reading, as well as of a good Understanding, and withal a great Traveller, has delivered his Sentiments upon this Subject in the following Terms, which I shall cite in this Place, because I shall not hereafter have any Opportunity of returning again on such Reflections in the Course of this Enquiry. "I cannot tell, says he, whether the *Chinese* found out the Art of Navigation and the Compass, as they did the Art of Printing and Artillery; we then dispute whether Men amongst them to be assured of it. But, in other *Asiatics*, I boldly assert, they are behind us for this wonderful Instrument, which they had not in *Europe* by the Hands of the *Arabs*, a long time before the *Portuguese* Conquests: For, first, their Compasses are exactly like ours, and they buy them upon the *Indies* as *repeans* as much as they can, scarce distinguishing them with their Needles themselves. Secondly, it is evident that the *Indians* only coasted it, when I suppose that the Want of this Instrument to guide them, and to assist them in the wide Ocean. We cannot possibly think that they were afraid of venturing far from home, for the *Arabs*, the first Navigators in the World, many of whom at least for the Eastern Seas, have, since out of the East sailed from the Bottom of the *Red Sea*, along the Coast of *Africa*, down to the Tropick of *Cape Horn*, within a Space of fifty Degrees, and the *Chinese* have traded with the Inhabitants of the Islands of *Samatra*, which is also a very considerable Voyage, to many Islands unthought of, and at the same time positive, to many Lands unknown to the People of *Europe*; these are a Proof that the old Navigators had not the least falling on the wide Sea. I have nothing but Arguments and Conjecture to offer touching this Matter, but never met with any body in *Persia*, or the *Indies*, who inform me when the Compass was first known to them, though I made Enquiry of the most learned Men

13. After the progress of the Commerce conclude this Section upon their Endeavour and Labours in the first place then we have in the small flourishing Discoveries did not reach of *Malacca*; for know nothing of it but all the rest of the *Indies*, which were then known on that Side.

know very little with *French* Mountains near both Writers, of the Nations inhabiting. For we have discovered *China*, and all the Coast of *Torkin*, the *Sea of the South*, the *Mediterranean*, and the Country of *North* Light, our Discoveries long since. Towards been discovered by proceeded as high as the East of *Japan*, so that made known to us by all the rest of *Asia* that not therefore at all their much exceeded their Distance.

In the next place, Trade to the *Indies* by *Agassians*, *Thysons*, and made the Subject. *Agassians* for example, of *Indians* in the *Indies* were not our Discoveries two Centuries before the *Case of Good Hope*. A *Chinese* is very

The *Turks* Officers difference how on a *Chinese* how many *Indians* and *Portuguese* found the Part, a Commerce the *Chinese* Successors, *Indians*, after they were Masters of a great part of the *Company* of *Portuguese*, or rather the Power of the *Indies* to the Balance with the *Indians* especially were respect to the Maritime Power is of the most extensive. The *Romans* had the Advantage of the very Mouth of the *Indies* by large Towns of their Nations, and to the *Indians* of the *Indies*, and

Men in each Country, I have sailed from the *Indies* to *Persia* in *Indian Ships* when no *European* has been on Board but myself: The Pilots were all *Indians*, and they used the Foremast and Quadrant for their Observations. These Instruments they have from us, and made by ours, not in the least varying therefrom, except that the Characters are Arabic; and by the way I observed, that the *Arabs* are the most skillful Navigators of all the *Asiatics* and *Africans*; but neither they nor the *Indians* make use of Charts, and indeed they do not much want them; some they have, but they are copied from ours, for they are quite ignorant of Perspective."

13. After the copious Detail we have given of the Progress of the Commerce of the Ancients in the East, we shall conclude this Section with a very succinct Comparison between their Endeavours and Successes in this respect, and the Labours in the same way of the Moderns. In the first place then we have made it highly probable, that even in the most flourishing State of their Trade, their actual Discoveries did not reach farther to the East than the Peninsula of *Malacca*; for as to the *Sinus Magnus*, they could know nothing of it but by I fear say, unless they had known all the rest of the *Indies*. On the Continent again the *Seres*, which were the *Siamese*, were the last People they knew on that Side. In regard to the Northern *Indies*, they knew very little with any sort of Certainty beyond the *Emilian Mountains*; and most evident it is, even from their best Writers, that they had not so much as Reports of the Nations inhabiting beyond the Mountains of *Imaus*. But we have discovered Eastward the Country of *Cochin-China*, and all the Countries dependant upon it, the Kingdom of *Tanquin*, the vast Empire of *China*, all the Islands of the *Sund*, the *Moluccas*, the *Old* and *New Philippines*, and the Country of *New Guinea*, so that considered in this Light, our Discoveries exceed theirs by twenty Degrees of Longitude. Towards the North again, besides what has been discovered by Land, the *Dutch* have most certainly proceeded as high as forty-five Degrees failing to the North-east of *Ypon*, so that without exaggerating, the Part of *Asia* made known to us by our *East-India Voyages* is equal to all the rest of *Asia* that was known to the Ancients. It is not therefore at all strange, that our *India Trade* should so much exceed theirs, though carried on at so much greater Expence.

As the next place, it may be observed, that though the Trade to the *Indies* was never carried to Perfection by the *Egyptians*, *Phoenicians*, or *Romans*, yet it was known to them, and was the subject of their Books for a long Course of Ages. In the first Kingdom of *Tyre* to the Reign of *Antiochus the Great* includes above eight hundred Years, whereas all our Discoveries of the *East Indies* were made within two Centuries after a Passage was found thither by the *Cape of Good Hope*, so that in this respect the Industry of the Ancients is very far surpassed by that of the Moderns.

The last Observation I shall make is with regard to the Difference between a Land Force and a Naval Power. We have seen how many fruitless Attempts were made by the *Grecian* and *Persian* Monarchs to extend their Conquests towards the East; and we have likewise seen of how short Continuance the Conquests were of *Alexander the Great*, and his Successors, together with the Attempt made by the *Siamese*, after they had reduced *Egypt* to a Province, and were Masters of a great Part of *Asia*, which, all of them, are proving in Conjunction of the Empire established by the *Portuguese*, or rather the Comparison fails as far short as the Power of the little Kingdom of *Portugal*, when thrown into the Balance with that of the Empire of *Rome*; and the Discoverments of the *English* and *Dutch* in those Parts, but more especially of the latter, plainly demonstrate, that with respect to the Advantages derived from Conquests, a Maritime Power is infinitely superior to the Strength even of the most extended Empires.

The *Romans* had in this respect in all Appearance the highest Advantages; they were Masters of the Country to the very Mouth of the *Arabian Gulph* on one Side, and possessed a large Tract of Country on the other. The Trade of that Name was so great, that they had hardly any Opportunity to fear by Land or Sea; and if one Expedition failed, they might very soon have repaired the

Loss sustained in it, and have been in a Condition to have undertaken another. Yet we see nothing of this happened; and it was not above twice or thrice thought of, and then to no great Purpose. *Augustus* had formed a Design of reducing the Peninsula of *Arabia*, to which he was excited by many Reasons; such as that the Inhabitants of the Coast between the *Arabian* and *Persian Gulphs* were in Possession of the whole Trade of the East; there were some of the Nations on the Coast opposite to *Egypt* that were extremely addicted to Piracy, and greatly disturbed the Navigation of the *Romans*, which probably happened from their having lighter Vessels, and such as sailed better; so that if at any time they met with Ships of greater Force, they were able to leave them, and make their Escapes; the Situation of the Country also might probably be a strong Inducement to the attempting this Conquest, because it seemed to promise the entire Possession of the Oriental Commerce without Interruption. But we have seen how that Expedition, undertaken with so great Precaution, and with such a Force as was never employed in the East by any modern Potentate, was entirely defeated. The Emperors *Flavian* and *Titus Vespasian* had also some Thoughts of pushing their Conquests on this Side; but History does not inform us, that they ever took any effectual Steps towards putting those Designs in Execution. *Trajan* made the last Attempt upon *Arabia* from the *Persian Side*, with a potent and victorious Army, and this with no other View, than to have made himself Master of the Wealth which the *Arabians* had amassed by their extensive Commerce; but he likewise failed, and from a too quick Sense of his Disappointment broke his Heart.

Let us now consider what Prospect the *Portuguese* had of reaching and making Conquests in the *Indies*. Instead of crossing from the Mouth of the *Arabian Gulph* to the Coast of *Malabar*, which is a Voyage only of a few Days they were to sail round the whole Continent of *Africa*, then a Coast in a great measure unknown; and at the same time the adjacent Seas were remarkable for their being almost constantly subject to Storms and Tempests, in such, that when the utmost Cape was first discovered, the Discoverer called it the *Tempestuous Cape*; but the King of *Portugal* conceiving the Advantages that would result from this Navigation, changed that Name for *The Cape of Good Hope*, and with a few Ships, and a very small Force, attempted and settled not only a Commerce with the *Indies*, but raised a very considerable Empire there in spite of all the Opposition that could be given him. This manifestly shews not only the Superiority of the Moderns over the Ancients in Point of Navigation, but likewise that the most distant Voyages are best suited to the raising a Maritime Power, that is to say, a Power by Sea that is permanent, and not raised and overthrown suddenly, as the Maritime Powers among the Ancients frequently were. It also effectually demonstrates, that it is not a mighty but a well-conducted Force that is proper for establishing distant Conquests; and that when a Nation is once possessed of a considerable Fleet, there is no Country at such a Distance as to be out of her Reach, neither are her Settlements in any Danger of being destroyed, while they are worth keeping, and while the Government at home is sufficiently attentive to their Preservation; so that the Circumstances which seem at first Sight the most discouraging in regard to the attaining Foreign Power and Maritime Force, are, in reality, those which most contribute to the Establishment of it; and to the preserving it when established, by securing a constant Supply of all that is necessary for that Purpose.

It is by long Voyages only, made with Danger and Uncertainty, that People acquire the Means of making long Voyages with Ease and Safety; the Perils they escape once they know how to avoid again; they become acquainted by degrees, and by Experience, with the Nature of Things, which never could have been reached by the Penetration even of the sharpest Understanding; and by thus becoming acquainted with the Laws, or rather with the Course of Nature, they gain intently a kind of Superiority over Nature; so that in some Sense the very Winds and Seas may be said to obey them. When the *Portuguese* first undertook their *Indian Expedition*, they neither had good Ships, nor knew how to build them. It was not

not therefore in Virtue of their great naval Force, that they became Masters of these Countries, but it was their Desire of becoming Masters of them, that put them upon raising one capable of achieving it.

It is very remarkable, that the first Place in the *Indies* at which they arrived, was *Malabar*, a Country which, as we have shewn, was known to the Ancients, and that too for a long Tract of Time, but so imperfectly that they were not so much as able to give us a tolerable Description of it. Whereas in the Space of fifty Years, or less, the *Portuguese* were Lords not only of that, but of all the adjacent Countries, raised and deposed Princes as they thought fit, and disposed of Kingdoms at their Pleasure. The great Island of *Ceylon*, which, as we have proved, was the *Tapebana* of the Ancients, of which, after to many Voyages to the *Indies*, they have given us such lame Accounts, was not only perfectly discovered within the Space of Time before mentioned, but in the Hands of the *Portuguese*, who imposed a Tribute upon the Inhabitants, though all the Force they had then in the *Indies* was not equal to a thousandth Part of their Number.

These Reflections will lead the intelligent Reader into many more upon this Subject, and enable him to comprehend perfectly the Difference between the Attempts made by the Ancients, and the Exploits of the Moderns in this Part of the World, which, at present, is all our Business; and having thus travelled through the darkest and most perplexed Part of our Subject, on which we were obliged to enlarge ourselves, in order to be perfectly understood, and to satisfy the Reader, that though every Thing within this Period of Time was contested and embarras'd enough; yet it was far from being so utterly unintelligible, as it has been hitherto represented; we may have Leave to be more concise for the future, in respect to those Things that are better known, and with regard to which therefore long Digressions are unnecessary.

In order to connect the ancient and modern History of the Commerce between *Europe* and the *East-Indies*, it is requisite that we should give a short Account of the Inter-

course between the Subjects of the *Greek Empire* and the People of the *Indies*; for the Reader must naturally apprehend that after the imperial Seat was transferred from *Rome* to *Constantinople*, *Egypt*, remaining still a Province so useful to the latter than the former, was Commerce which had hitherto been in a manner neglected, the Possession of *Egypt*, must have been not only preserved, but encouraged and extended.

He will likewise, no doubt, be glad to see the Changes that happened in it, the new Routs that were opened, and from the *Indies*, by which the Commodities of those Countries came by so many different Channels into *Europe*, and which by the Riches they derived to the several Nations that intermeddled with this Commerce, excited the Spirit of Discovery which has since laid open the Trade directly to all the modern maritime Powers, and made their Establishments in the *Indies* the most solid Part of their having a just Right to that Title. Thus, God willing, we shall dispatch within the Compass of two short Sections, and then we shall enter on the History of the *Indies*, which first acquainted the northern and western Parts of the World, with the Interior of those Countries, the Nature of their Inhabitants, the Constitutions of their Governments, and the History of the most remarkable Events which had fallen out in them.

A Sort of Travels that, as they appeared strange and surprising in the Times in which they were first published, so when exhibited simply and plainly as their Authors wrote them, and without the whimsical Adornments which they were disfigured in our old Translations, cannot fail of being thought equally curious and instructive even at this Day, the rather because we want many Things to their Beginnings, and to see what Impressions the Sight of Countries, People, and Manners different from their own, made upon the Minds of those who first visited those remote Regions, and that in an Age not altogether so free from Superstition and Prejudice as this in which we live.

SECTION XVI.

A concise History of the Rise, Progress, and Decline of the Constantinopolitan Empire, together with the Commerce of its Subjects in the East; as also a brief Detail of the Rise of the Arabian Empire, the Recovery of the Indian Commerce in Egypt, and the receiving the Trade of Alexandria.

1. A Description of the City of Constantinople, and a short View of the many Advantages deriv'd from its commodious Situation.
2. The great Care taken by the Successors of Constantine, for the Support of maritime Power.
3. The great naval Strength of that Empire, and the Disposition of its Fleets.
4. The Ruin of the Silk-Trade under the Emperor Julliman.
5. Silks-woolms not brought into Europe, and a confounding History of that Manufacture to the present Times.
6. A large Account of the several Indian Commodities that were brought to Constantinople.
7. A concise View of the State of the Empire, from the Reign of Julliman to that of Heraclius.
8. The Victories of Heraclius over the Persians, and the Expulsion of them from the Indies.
9. The Rise and Progress of the Arabian Empire to the Time of the Conquest of Egypt.
10. The Foundation of Grand Cairo, and the Revival of the East-Trade in Egypt.
11. The History of the Arabian Commerce continued, with the Revival of Trade at Alexandria.
12. The State of Constantinople, to the Time of its being taken by the Turks.
13. Chronology and Remarks upon the foregoing History.

THE best Writers of Antiquity differ very much as to the Reasons which induced Constantine the Great to remove the Seat of Empire from *Rome* to the new City, which he called by his own Name. Some ascribe it to his Care of the Eastern Provinces, and others to his being sensible that the *Romans* hated him. Whatever his Reasons were, most certainly the Majesty of *Old Rome* could not have been translated to a City but rated by Empire than this, which the Emperor Constantine called *New Rome*. Its old Name was *Byzantium*, and it had run through a great Variety of Accidents before Constantine, who first thought of re-

building *Troy*, call his Eyes upon it, and upon this subject, that no Place was so fit to become the Metropolis of the *Roman Empire*, and Mistress of the World. It stands on a Point of Land on the ancient *Bosphorus of Thrace*, where there is a narrow Strait which serves to divide *Europe* and *Asia*, and, at the same time, forms a Communication between the *Baltic* and the *Mediterranean*.

The City stretches itself out in the Manner of an Amphitheatre, having on its Right-hand the *Archipelago*, and all the *Mediterranean*; and on the Left, the *Bosporus* up to the *Palus Meotides*, so that it has all the Advan-

Front, and all *Europe* Situation that this City of the Mediterranean Founder, took all its magnificent Place in Churches, Palaces, a provide for its Security practis'd in those Days Situation seems to be it populous, and is from thinking either choosing any other Plans taken by *Congress* commodious.

The spacious Field behind it, furnish'd of *Asia* which was one of the best peopled and most fertile in the World. The *Indies* and Fowl, at the cheast has still a greater Advantage, inasmuch as with one Net. The Winds of the North that in ancient Times continually at the *Bosporus* lie under the *Indies* being restrain'd to this Vice, though As to Timber, collected from the Woods of *Cilicia*, in a Tract of in the Space of so far has never felt the want of it, as he has supplied all the requisite for *Egypt*, *Arabia*, and *India* from her Stores.

But the greatest and distinguishing Port, by Nature the six Miles in Compass so deep that Ships run without Danger. This Harbour is more convenient; for N. W. so that no danger, they bring when they were about to S. E. they bring danger; so that it seems designed by Nature for *Europe*, *Asia*, and *Africa*.

It was very proper for these prodigious Advantages, for a long Series of Endeavours to the latter. The Emperors emptied them from the other Subjects of the Empire in a Manner could affect them. between Merchants and Dates and Impositions extending their Privileges of this was, because of this Commerce to the Manners alone frequent Occasion to and as the Manning of it to Commerce did this Inconvenience that it deserves to be mentioned.

There were certain for this Service; together with the express Condition, they should furnish a certain Number of Men required then

Front, and all Europe behind. It is in Virtue of this Situation that this City is very justly stiled the Key both of the Mediterranean and Black Sea. The Emperor, its Founder, took all imaginable Care to render it the most magnificent Place in all the World, to adorn it with Churches, Palaces, and other publick Buildings; and to provide for its Security, by all the Arts of Fortification practised in those Days. But still the Convenience of its Situation seems to have had a greater Share in rendering it populous, and in preventing succeeding Emperors from thinking either of going back to Rome, or of choosing any other Place of Residence, than all the Plans taken by Constantine to render it equally stately and commodious.

The spacious Fields of Thrace that lay immediately behind it, furnished Corn in Abundance, and that Part of Asia which was over-against it, was, for many Ages, the best peopled and the best cultivated Country in the World. The Markets were always full of Flesh and Fowl, at the cheapest Rates; and for Fish it had, and has still a greater Abundance than any other City in the Universe, inasmuch that twenty Boats have been laden with one Net. The Inhabitants were supplied with Wines of the richest Growth, in the greatest Plenty, so that in ancient Times they were reproached with being continually at the Bottle; and, even to this Day, the Greeks lie under the same Imputation; though the Jews being restrained by their Religion, are less addicted to this Vice, though not wholly exempt from it neither. As to Timber, Constantinople is so plentifully supplied from the Woods which extended from Propontis quite to Colchis, in a Tract of more than forty Days Journey, that in the Space of so many Ages as she has already stood, she has never felt the least Inconvenience, notwithstanding she has supplied all the neighbouring Parts with what was requisite for building Ships and Houses, and even Egypt, Arabia, and Africa, have likewise received Materials from her Stores.

But the greatest Beauty, the greatest Advantage, the most distinguishing Felicity of this imperial City, is her Port, by Nature the most lovely in the World, being six Miles in Compass, a full Mile over, and every where so deep that Ships may lie with their Heads aloft, without Danger. This Harbour is not more safe and spacious than convenient; for when the Winds are N. N. E. or N. W. so that no Ships can come in from the Mediterranean, they bring in those from the black Sea; and when they were about the opposite Points of S. S. W. or S. E. they bring up the Vessels from the Mediterranean; so that considered in this Light, Constantinople seems designed by Nature to be the Centre of Commerce for Europe, Asia, and Africa.

It was very probably the Sense which they had of these prodigious Advantages that induced the Emperors, for a long Series of Time, to bend a great Part of their Endeavours to the Encouragement of Merchants and Mariners. The Emperor Constantius, for Example, exempted them from all Charges and Contributions to which the other Subjects of the Empire were liable; and this in a simple Manner, that no pretended Cases of Necessity could affect them. Succeeding Emperors distinguished between Merchants and Mariners, subjecting the former to Taxes and Impositions, but exempting the latter, and extending their Privileges to a very great Degree. The Reason of this was, because that Merchants reap'd all the Profits of Commerce to all the Hazards and Dangers of which the Mariners alone were exposed. As the Emperors had frequent Occasion to fit out Fleets for the publick Service, and as the Manning of these might have been very prejudicial to Commerce, a Law was provided which remedied this Inconvenience, and that in so singular a Manner, that it deserves to be particularly taken Notice of.

There were certain Lands, in the Nature of Fiefs, granted for this Service; that is to say, the Owners possessed them, together with the Privileges incident to Mariners, upon express Condition, that in Consideration of these Fiefes they should furnish, according to their respective Values, a certain Number of Seamen, whenever the publick Service required them. Thus the Burthen was laid upon

Lands, and not upon Persons; and as the Circumstances of People might change, and this Duty of providing Seamen, become inconvenient, or even impracticable; for the original Possessors of such Fiefes, the Law provided that they might be at Liberty to dispose of them to such as might be more capable of complying with the Terms upon which they were held.

By this Method the Greek Emperors were able to fit out very great Fleets in case of Necessity, as appears by that of the Emperor Leo, in the Middle of the fifth Century, which was intended against the Vandals and consisted of eleven hundred Sail, which, however, were all destroyed on the Coast of Africa by the Treason of him who commanded them. This alone is a strong Proof of the great maritime Power of the Constantinopolitan Empire, while it flourished; but we have a much more signal Proof in the Establishments made by these Emperors for the several Fleets appointed for the Defence and Support of their Empire, which Establishments appear very clearly from the several Bodies of their Laws still remaining, and which prove, beyond all Contradiction, that so long as this Empire continued in a flourishing Condition, the utmost Care was taken for the Encouragement and Protection of Commerce, by a right Application of that maritime Force we have before described.

The Province of Egypt was of no less Importance to the Greek, than to the Roman Empire; and the utmost Care was taken to regulate the annual Fleets from that Province, so that the City of Constantinople might be regularly supplied with whatever Provisions she had Occasion for from thence, and have likewise the most valuable Returns that were made from the Indian Commerce by the way of the Red-Sea. It was by this means that immense Riches were regularly drawn from thence, and the best Part of the Profits of that advantageous Trade constantly conveyed to the Imperial Residence, as appears by a Multitude of Laws yet extant in relation to the Fleet of Alexandria, on board of which these Treasures were carried to Constantinople. The next stationed Fleet was that of Africa, which was chiefly designed for the Benefit of Old Rome; for all the Commerce of Alexandria being diverted to Constantinople, that Supply of Provisions, for which hitherto Rome had depended upon the Fleet of Egypt, was now to be received by this of Africa; and for a long Course of Years this Expedient answered the End very well.

The Third Fleet was that of the East, the principal Station of which at Seleucia, a City of Syria, seated on the River Orontes; and this Fleet seems to have been divided into several Squadrons, and from the many Laws made about it, appears to have been of very great Importance. It was chiefly by the help of this Fleet that the Commerce of Persia and the Siber Asia was carried on, which was very rich, and included some Branches of that of the Indies. Great Care was taken in the regulating this Trade, to prevent the Empire from suffering by the sending of Persian Spies, in the Garb of Merchants, into the Roman Provinces. The Places therefore to which the Persian Merchants might repair, were pointed out, and settled by Law; as also the Seasons at which Fairs were to be held, and the Time they were to last, by which Contrivance a Door was opened for conveying all the Trade of Asia into this Channel, for when the Goods purchased at different Places were brought by the respective Fleets attending the Provinces in which those Fairs were held to Seleucia, they were there embarked on Board the Grand Fleet for Constantinople.

Besides these there was another Fleet in the Pontus Euxinus, or Black Sea, which brought annually vast Quantities of Corn to Constantinople, together with abundance of rich Commodities, and amongst them some from the Indies, which were brought thither by a Rout that will be explained in the next Section. This Fleet served likewise to awe the several barbarous Nations inhabiting the Coasts of that Sea, and thereby contributed exceedingly to the Tranquillity of the Empire. It is very probable from the Laws that we find in the Code of the Emperor Julian, that besides these great Fleets, every maritime Province of the Empire had its peculiar Squadron stationed at a certain Port, which every Year carried the Revenues of the Province to Constantinople. There were likewise vast Numbers of lar-

bottomed Vessels maintained at the publick Expence on all the great Rivers that passed through the Empire for the transporting Troops, and other requisite Services, as Occasion required.

Whoever considers this Distribution of Things attentively, will easily discern that there never was a Government in the World, the Peace and Prosperity of which depended more immediately on the right Management of Manu- facturing Affairs, than that of this Empire. But as it was very extensive, and as an equal Care was necessary for the preserving Order in every Part of it, we need not wonder, that in Pro- ceeds of Time many Errors crept in, and a Multitude of Laws were made necessary for remedying the Inconveniencies they produced, till by degrees the new Regulations (clashing with the old ones) occasioned greater Mischiefs than all the rest, and led to a Depravity of Manners among their Governours, and the Evasions from barbarous Nations, to which they were continually exposed, brought on the Ruin of an Empire, which was grown too bulky to be well managed.

4. It is very certain, and we shall quickly have an Opportunity of making it evident, that so long as the *Greek* Empire was in a late and flourishing Condition, the Subjects thereof had a general Correspondence in the East, and carried on a considerable Commerce to the *Indies* by different Canals. It would take up too much Room to relate a Multitude of Facts from the *Historians* who might establish this Assertion; but that we may not leave this Part of our History less perfect than the rest, it seems reasonable to report some few Instances which may answer this Purpose, and that too in a narrow Compass. The learned *Historian Ptolemy*, who has preserved a Multitude of curious Passages in respect to the History of the *Empire Justinian*, is worth consulting in this respect, as among the rest two very singular Facts that take place in the *Empire*.

The first of these is, that in the Year of our Lord's Birth A. D. 531. the Emperor Justinian, who was then reigning, took the following Method of getting that dye which is called *Tyre*. It seems, this Manufacture was carried on in several Parts of the Cities of *Beirut* and *Tyre* in *Phoenicia*, and Silks were of a red- den gow to a most extraordinary Price, which was laid to arise from the Covetousness of the *Persian* Monarch, who had imposed a heavy Duty upon Silks, so that the *Indian* Merchants were obliged to pay for all they purchased in his Dominions, the Empire of the East considered as a great Hardship, published an Edict, by which he pretended to settle the Price of Silk at eight Crowns of Gold for a Pound, and threatened with Confiscation of their Goods such as should presume to sell it dearer.

This enraged the Merchants who dealt in that Commodity, who found the Lives of some by this Law to sell Silk for less than it cost them, and therefore they quitted Trade, and retired privately to sell their Silks in the City of *Persepolis* for they could not sell there. The Emperor *Justinian*, having Intelligence of this, caused all their Goods to be confiscated, and imposed a heavy Fine on the Merchants. By this Contrivance all the Silk in the *Empire* fell into her Hands, and by the Assistance of one *Justinus*, who was her first Minister, he sold it out privately at the Rate of six Crowns an Ounce for that of a ordinary Dye, and the uppermost Colours were had at it not less than up to twenty-four Crowns an Ounce, all the Manufacturers working for them. By this means he raised the Empire and Emperors to immense Wealth, and *Justinian* their Agent much more; but in the mean time the Merchants of *Constantinople* were ruined and undone, the Manufacturers at *Beirut* and *Tyre* reduced to a solitary Beggary, and Numbers of industrious Persons forced to leave their Wives and Families in order to seek Employment in *Persepolis*.

This is a very curious Passage, inasmuch as it shews us the State of the Silk Trade at that Time, the Places in which Silk was wrought up, and the Value of that Commodity. But the second Article we find in our History that *Justinian* is still more curious, because it shews how the Price of Silk was reduced, not only throughout the *Greek* Empire, but throughout all *Europe*. Before we come to this, however, it is requisite to observe, that even in the midst of this Extortion there had been a Time when Silk was much dearer. For under the Reign of the Emperor

Aurelian Silk had been sold for its Weight in Gold; that is to say, a Pound of one was weighed against a Pound of the other; but as these Gold Crowns, or Aurei, as they are called in old *Historians*, were made by dividing a Pound of Gold into one hundred Parts, it is plain, that the Emperor's Agent sold Silk of common Colours for seventy-two Aurei, and Silk undyed perhaps cheaper. We may conceive from hence the Hardships that the Merchants were laid under by their being obliged to sell their twelve Aurei, which considering that they imported it from *Persepolis*, and the *Persons* at that time probably from *India*, it must have come to them at a much dearer Rate.

5. This excessive Price of Silk, whatever temporary Mischiefs it might produce, had a very good Effect in the main; for the Emperor perceiving that his Subjects were chiefly tied to a continual Trade with *Persepolis*, for want of this Commodity, discovered a great Hell to be found freed from this Inconvenience; upon which two *Indian* Monks, or rather two Monks that had travelled to the *Indies*, went to the Emperor, and told him, that they could very easily settle that Manufacture among his Subjects, so as that they might never be under the Necessity of dealing with any Strangers, much less with the *Indians* for that Commodity. This Silk, said they, which is so precious here, is in *Serinda*, the most populous and most civilized Country in the *Indies*, where we have spent many Years, spun by certain little Worms, which I will not receive from Nature. As for these Worms, it is impossible to transport them; but their Eggs may be brought from thence without any Difficulty, and hatched here, giving them a certain Degree of Heat.

Such were the Proposals made by the Monks to *Justinian*, who readily consented with them, making them great Rewards, in case they were able to bring this Manufacture, which without much Difficulty they did; for returning in the *Indies*, they brought from thence a considerable Quantity of the Eggs, nourishing the Worms with a mixture cut with the Leaves of Mulberries; and thus, says our Author *Ptolemy*, was the Art of making Silk introduced into the *Greek* Empire.

This Transaction fell out A. D. 551, but it was long time before it spread itself much beyond the Bounds of the *Greek* Empire; for we find, that A. D. 1172, *Alphonsus* King of *Spain*, having conquered a Part of *Crete*, brought some from his own Country, the Art of managing Silks which was quickly transferred thence to *Constantinople*, and other Parts of *Italy*, where it flourished for many Years before it was transferred to the Southern Parts of *France*, when the great *Historian Mezeray* tells us, happened in the Reign of *Francis* the First, in which, however, it is ascribed to *Lewis* XI. A. D. 1483, introduced into his Dominions, and first for *Persons* that lived in the *North* among Silks, not only from *Constantinople*, and other Parts, but also from *Crete*; and by his Letters introduced into the Year 1480, granted them a great Privilege. But the Price of this Commodity was still kept up at a high Rate.

Our King *Henry VIII.* who was a very magnificent Prince, wore commonly Woollen Hoop, and by Letters he had a Pair of Silk from *Spain*. His Son *Edward VI.* had a Pair of Silk Stockings presented him by *William* *Grey*, which Present of his was the first taken Notice of. Queen *Elizabeth*, in the third Year of her Majesty's first Part of black knit Silk Stockings given her by *Michael* *Tague*, and she never wore Worsted afterwards. In the Year 1600, Mr. *William Lee*, a Native of *Northampton*, and educated in *St. John's College Cambridge*, invented the Art of frame work Knitting, which has since been much improved. Having thus traced the Silk Manufacture from the *Indies* hither, we will now return to the proper Subject of this Section, and endeavour to discover what we have before asserted, that the *Indians* themselves did not suffer by this Change of the Seat of Empire.

6. It appears clearly from hence, that under the *Indian* Empire, Voyages to the *Indies* were become more common than in former times; but we could scarce have expected that so many different Kinds of *Indian* Commodities should almost from every Part of *India*, were common at *Persepolis*, it were not winted to us by the *Historians*.

Empire, collected into from whence it appears sold upon a Multitude such as Spices of dille which came from the Quantity; for it was *Persepolis* was no other Tree, on which there appear of what Use it perhaps it was used in Woods, in Decoctions, great Antiquity, from sort of milder Cinnamon and *Ceylon*. We hear and who are well acquainted in the *Indies*, noting more than the Tree, which has very curious is the Spice known by the Modern Call a greater Flavour.

Pepper of several Peppers, and black Pepper is very angry to the Sight, the Smell, as a Pepper agreeable to us, what grows wild, with us sold by *Wey* *Ream*, adds her, but Time the long Pepper is a Pound of our *Persepolis*, and black at *Persepolis* to have been a *Persepolis* tells us, that or the Pepper vulgar *Mulberry*, for this Herb, which *Persepolis*, and in the *Persepolis* is likewise described with *Persepolis*. But at the *Persepolis*, or in the *Persepolis*, a kind of Lill was green. It grows *Persepolis*, and over a been transported into of our King: from much especially as a deal of it to *Batavia* to and *Digell* on, among the *Persepolis* above three Shilling is worth so much, in those Days they as from whence it is evidently they in considerable Quantities.

Persepolis Stones of *Persepolis* and *Ceylon*; *Persepolis* to *Orient*: to about the *Persepolis* to be a *Persepolis*, how this Stone, called *Persepolis* in Places where it is and in *Persepolis* is a *Persepolis* Stone he means, it receives Light from the Fire in which it is burned, this Way from that Part of *Persepolis* mention Women, and assistance as if there had been, that either kind of *Persepolis*; for many respect agree

Empire, collected into a Body by the Emperor Justinian, from whence it appears, that there were several Duties imposed upon a Multitude of Goods brought from the Indies, such as Spices of different kinds; for instance, Cinnamon, which came from the Island of *Ceylon*, but not in any great Quantity; for it was always very dear, the *Xilo Cinnamomum* was no other than the Wood of the Cinnamon Tree, on which there was also a Duty; but it does not appear of what Use it was, or whence it grew into Elixirs; perhaps it was used in the same manner that we do other Woods, in Decoctions. *Cassia*, described at large by several ancient Authors, from whom it appears to have been a sort of milder Cinnamon; this likewise comes from *Malabar* and *Ceylon*. We learn from some very judicious Writers, and who are well acquainted with the Manner of collecting Spices in the Indies, that the *Cassia Lignea* is, in truth, nothing more than the thick Bark of the true Cinnamon Tree, which has very little Flavour, by which they mean that this is the Spice known to the Antients by that Name; but the Modern *Cassia* is another thing, and somewhat of a stronger Flavour.

Pepper of several kinds, such as long Pepper, white Pepper, and black Pepper, all of them from the Indies. *Pliny* is very angry that this Spice should be so much admired, for, as he observes, other things are either pleasant to the Sight, the Smell, or the Taste, whereas there is nothing in Pepper agreeable to any of these Senses; and yet, says he, what grows wild, and is of no Value in the Indies, is with us sold by Weight, like Gold or Silver, for no other Reason, adds he, but because it comes from *India*. In his Time the long Pepper was worth about nine or ten Shillings a Pound of our Money, white Pepper was of half that Value, and black about half a Crown a Pound; and it seems to have been as dear at *Constantinople*. *Ginger*, of which *Pliny* tells us, that many in his Time thought it the Root of the Pepper Tree; but he assures us, that was a vulgar Mistake, for that in Reality it was the Root of a little Herb, which grew commonly in the Meadows of *Archa*, and in the Country of the *Trogodites*. This Spice is likewise described by *Dioscorides*, who agrees very well with *Pliny*. But after all, *Ginger* does not grow either in the Manner, or in the Countries they mention. It is, indeed, a kind of Lilly, the Flower of which is red mixed with green. It grows in the most remote Parts of the Indies, and over a great Part of *China*; but since it has been transported into the *West Indies*, we have the best Part of our *Ginger* from thence. The *Chinese* esteem it very much, especially as a wet Sweet-meat, and transport a great deal of it to *Batavia*, where it is generally eat after Meals to assist Digestion. It did not bear a very high Price among the Antients; for in the Time of *Pliny* it was not above three Shillings a Pound; and at *Constantinople* it was not worth so much. It may not be amiss to observe, that before Days they adulterated their Spices very dexterously; from whence it is evident, that they were much in Use, and consequently they must have been brought from the Indies in considerable Quantities.

Precious Stones of all Sorts, such as Diamonds from different Parts of the Indies; Pearls from the Coast of *Persia* and *Ceylon*; Emeralds, which were always held by the Antients for Oriental Stones, though there is great Reason to doubt the Truth of that Fact; but, however, they had good Cause to believe it, because they were brought to them from the East, however they came thither. Another precious Stone, called *Ceraunium*, because it was supposed to be found in Places where Thunder had fallen. *Pliny* mentions it, and indeed gives us a long Account of it, but *Pliny* as does not help us at all in finding out what Stone he means. He says, it is white, like Chrytal, that it conveys Light from the Sun and Moon, and has a sort of Fire in it which seems to change its Place as the Stone is turned this Way or that, and that this Jewel comes from that Part of the Indies which borders upon *Persia*. *Tacitus* mentions it among the Ornaments worn by Women, and assures us, that it had a glittering Appearance as if there had been Fire in it. We may venture to assert, that either this Stone is not known to us, or is a kind of Opal; for, except that, I know of no Stone that in any respect agrees with this Description.

The *Jacinth* or *Jacynth*, which was brought from *Cambala*, or *Cambala*; it received its Name from its Resemblance to the Flower so called, and must therefore have been of a purple Colour, inclining to a blue. The *Jacynth* is known to us under of different Colours, but none of them resemble the Stone known to the Antients; for ours are either of a Flame-Colour, or an amber Colour, almost white, or of a pale Red. It is therefore probable, that the *Jacynth* of the Antients was a kind of Sapphire. They were very much valued for gemming, and was held to have many Virtues, which in reality were never yet to be found in any Stone.

Beryls, which *Pliny* says approach nearly to the Colour of an Emerald, and which owe most of their Beauty to their being cut hexangularly, and he distinguishes many kinds of them; some that had a yellow Call, others of a blueish Colour, and some mixed with white. He assures us, that the *Indians* valued these more than any other Stones, especially when they were long, for that they bored and wore them without setting; and had also a Method of putting a gold Wire through them, which made them appear extremely beautiful at a Distance. One might write a large Dissertation upon this single Stone, since there are many very learned Naturalists that believe what we call the Beryl was the Diamond of the Antients. Certain it is, the Beryls we have from the Indies, do not at all resemble the foregoing Description, except that they are sometimes found very long and large, but rather of a greenish Colour than a blue. They are mostly to be met with in *Cambala*, *Malabar*, or *Pegu*; but the finest and largest, of which sometimes Cups and other small Vessels are made, come from the Island of *Ceylon*. There is, indeed, a Stone which some take to be a kind of Beryl, but which is better known by the Name of *Aqua Marina*, or *Aigue Marine*, from its Resemblance in Colour to the Water of the Sea. Of these some are very hard, and of such Beauty, that many Jewelers have been imposed upon by them, and have taken them for Diamonds.

Sapphires, about which we are more at a Loss than about any other Stone whatever; but this seems to be certain, that whatever the Sapphire of the Antients was, it had no Sort of Resemblance to that Stone known to us by the same Name; for it appears that the Sapphires of the Antients were not transparent, so that possibly they might be a kind of *Lapis Lazuli*. It is not, however, impossible that the Antients might be acquainted with the true Sapphire; tho', if they were, they mentioned it by some other Name, and my Reason for supposing they might know it, is, that our Sapphire comes from *Calicut*, *Cananor*, and the Island of *Ceylon*, from whence they had most of their precious Stones, and especially such as were coloured. We might add to these, many other kinds of precious Stones, of which, at this Day, we no know more than the Names; but that we are afraid of fatiguing the Reader, and therefore we shall only mention one Remark on this Subject, and that is, with regard to the Doubts and Difficulties that attend it. It seems to be a very strange Thing, that we should be more at a Loss about the Jewels mentioned in old Authors than almost about any other Thing; but when we consider what *Pliny* tells us, that the *Indians* were very dextrous in making false Jewels of all Colours; and when we observe that he mentions some true Stones, which, losing their Lustre, recovered it again by being put into Vinegar, in which Salt of Nitre had been dissolved; I say, when we consider, and lay these Circumstances together, with the Addition of their Descriptions, it may very well beget a Doubt in us, whether many of the precious Stones mentioned by the Antients, might not be Compositions; but whatever they were, they came from the Indies, and this is another Proof, that even in the most early Times, the *Indians* were much better skilled in these Matters than any other Nation.

We likewise find amongst the rest of the *Indian* Commodities charged with Duties, all Sorts of Silk and Cotton Manufactures, which they brought as we do from those Countries, and probably for the same Reason, because they found that Method cheaper than bringing the Commodity

dity and working it up at home. Ivory was also brought from thence as well as from *Africa*, and great Quantity of Skins and Furs which are distinguished under the two Heads of *Babylonian* and *Parthian*; and they likewise brought many wild Beasts, such as Lions, Bears, Leopards, Panthers, and some Birds. As to Metals, we find none mentioned except Iron or Steel, under the Title of *Ferrium Indicum*; and this, we are told by *Pliny*, came from the Country of the *Seres*, and was esteemed the very best in the World; and next to it was the *Parthian* Iron, but whether it came wrought or unwrought does not very clearly appear, but the former is the most probable. That they might, under the Reigns of the *Greek* Emperors, have this fine Iron or Steel from *China*, where that Commodity is still met with in the greatest Perfection, I will not deny; but that it came from thence in the Time of *Pliny*, is not easy to comprehend; and therefore I am apt to believe that they received it from the *Siamese*, who might inform them that they had it from the *Seres*.

We find Cotton also, and a Sort of Mohair amongst the Commodities that were brought from the *Indies*, and though the true Purple was to be had in *Egypte*, yet it seems that the *Indies* was most admired, and in the greatest Esteem, otherwise it cannot be imagined that they would have taken the Pains to have brought it from Countries at so great a Distance. It would take up too much Time, should we endeavour to trace out the different Ways by which all these *Indian* Commodities were brought to *Constantinople*. It is sufficient for our Purpose that they were brought thither, since this clearly shows that the Subjects of the *Greek* Empire had a considerable Trade to the *Indies*.

We might allege, to prove this still more largely, the Testimony of *Amianus Marcellinus*, and several of the *Byzantine* Historians, which however would lead us into abundance of critical Disputes, and therefore we shall wave their Authorities, especially since the Account already given of the *Indian* Monk or Monks, who had travelled to the *Indies*, for with respect to our Subject it is much the same Thing which they were, is as clear a Testimony on this Head as we could wish. It is also very certain, and the Reader will meet with the clearest Proof of it in a succeeding Section, that by this Time, or very soon after, the *Syrans* had not only reached *China*, but were even established there, and formed a Christian Church, the Members of which were very numerous in all the Provinces of that extensive Empire; neither can it be imagined that, upon this Establishment, they should immediately relinquish all Correspondence with their Countrymen; though this might, and indeed really did happen in Provinces of Time, and for Reasons that will appear hereafter.

7. We have very different Characters given us of the Emperor *Justinian* by different Writers, according as their Humours led them; but upon the whole, it is very certain that he was one of the best Princes this Empire ever had, took the greatest Pains to settle and support the Government, to regulate the Laws, and to leave every thing in such a Condition that succeeding Princes might be able to govern without Trouble, by adhering to the Rules which he had laid down.

He deceased in the eighty-third Year of his Age, *A. D.* 527, and was succeeded by his Nephew *Justin II.* in whose Time the Empire was to shaken by Domestic Confusions, and towards the latter End of his Reign invaded by the *Persians* on the one Side, and by the *Avars* on the other, that the Weight of Government became absolutely insupportable, inasmuch that he fell distracted. *Tiberius* had thereupon the Administration of the Empire committed to his Care, with the Title of *Cæsar*; and after the Death of *Justin*, he succeeded him in the Empire, which he governed with great Magnanimity, and had such Success against the *Persians*, as reduced their Power very low.

He was succeeded, *A. D.* 527, by *Mauritius*, who married his Daughter *Augusta*, and in the Beginning of his Reign was very prosperous, repelled the Invasion of the *Persians*, and when that Kingdom fell into Confusion, and their King *Chosroes* expelled, he received that Mo-

narch into his Dominions, and treated him with great Generosity and Kindness; he likewise raised a great Army to restore him, which he also performed very happily; and by this Means the Commerce between the *Greeks* and the *Persians* was renewed, to the great Advantage of both Empires. The Close of this Emperor's Reign was not at all unwelcome to his Beginning; for the *Avars*, under the Command of their King *Chosroes*, invaded the Empire, and notwithstanding all the Precautions the Emperor could take to prevent the Progress of their Arms, ravaged all *Thrace*, and were on the Point of besieging *Constantinople*; but in this however they were prevented by a Plague, which swept off most of their Army, upon which their King, who had twelve thousand of *Mauritius's* Subjects Prisoners, offered to ransom them for Half a Crown a piece, which not being granted, he put them all to Death. This too much incited the People of *Constantinople*, that they rebelled, and called the Emperor a cruel, and greedy Tyrant. He, on the other hand, was so afflicted with this unhappy Accident, that he begged the Prayers of all religious People, that this Offence might be pardoned, or that he might receive his Punishment without this World. In this he soon had his Wish, for *Phocas*, who from a common Soldier came to be General of the Army, rebelled against him, was proclaimed Emperor by the Army, and pursued *Mauritius* to *Chalcedon*, where he put him with his Wife and Children to Death, which *Mauritius* suffered with great Patience, uttering these Words, *I bear all just, O Lord, and thy Judgment is righteous*. These Events fell out in the Year 602.

This *Phocas*, as he attained the Empire by Treason and Murder, so he governed with all the Circumstances of Cruelty and Barbarity that could render a Tyrant odious; for being sensible at first that his Title was bad, he endeavoured to secure himself in the Possession of the Empire, by destroying, without Mercy, all who were any way related to the Imperial Family, or who were to distinguished by their Virtues, or their Employments, as to give him any Umbrage; and this leading him to shed the Blood of a Multitude of the Nobility, raised a general Abhorrence of his Government over all the Empire. But besides these domestick Troubles, *Phocas*, almost from the Beginning of his Reign, was pressed by a formidable Foreign Enemy. This was *Chosroes* King of *Persia*, who, in Gratitude for the Kindness shewn him by the Emperor *Mauritius*, was no sooner informed of his Murder, than he invaded the Provinces of the *Greek* Empire bordering upon his Dominions; and this War, as it grievously distressed a great Part of the Empire, served to increase the Hatred of the People against the Monster who had occasioned it. As Matters of this kind seldom come alone, and as it is natural for ambitious Neighbourhoods to take all Advantages over a declining Government, to while the Affairs of *Phocas* were in this Condition, the *Avars*, *Slavians*, and other Barbarous Nations, broke into and ravaged his Dominions. He, in the mean time, instead of reforming, continued his Cruelty and Lewdness, till he was tormented in his Palace by *Heraclius*, whose Wife he had ravished, and delivered to the Soldiers of *Heraclius*, one of his Generals, who had taken Arms against him. *Heraclius*, after upbraiding *Phocas* with his Crimes, cut off his Feet, Hands, and Privities, and at last beheaded him. Such was the End of this barbarous and blood-thirsty Tyrant, who, notwithstanding, was named by the Churchmen of his Time; crowned by the Patriarch of *Constantinople* while the Emperor *Mauritius* was still living, and owned by the *Roman* Pontiff, on whom he bestowed the Title of Universal Bishop.

8. The general Corruption of the People, and a Succession either of Tyrants or weak Princes, had distressed the *Greek* Empire, that when *Heraclius* ascended the Throne, which was *A. D.* 610, he found it necessary to make the necessary Provisions for the Security of the State; and therefore, when he was attacked by *Chosroes* King of *Persia*, he did not behave with that Constancy that might have been expected from a Man of his great Courage; for, instead of arming to oppose them, he endeavoured to purchase Peace; but when this was found impracticable, he compromised Matters with the *Arabs*, who were Enemies no less formidable than the *Persians*.

and addressed himself was so exhausted, that Plate. While he was broke the Peace, and *Constantinople*, which *Heraclius* soon after co Honour to himself, at

It was one of the most in History; for the Consequences proved to the *Persians* were victorious, plundered the People, Commerce, and destroyed *Greece* in their Turn; he revenged their Wrongs, the Forts and Spirits of a greater Misfortune to themselves; for in the Condition, the *Saracens* have over-run their Country, which afterwards, during the most violent

It is very remarkable *Victories* which *Heraclius* the principal Monarch, him upon that Occasion, a considerable Quantity of some Years afterwards, Emperor's Satisfaction, and shews that a Correspondence between the last Influences of *Persia*; for before the Provinces from which he was the *Indies*, we find a Circumstance which is requisite, for the should enter into a more Event.

Mohammed, the new Empire, let up to *Heraclius* began to reign *Meca*, which is the *Temple* when *Mohammed* as being to the best *Mohammed* survived, the reigning the Sovereign; yet before his *Mohammed* was a very powerful Monarch in law *Abdallah* Name only he is mentioned of it in *Arabia* he was called, because *Mohammed's* Wife.

This *Mohammed* was a *Prophet* Word that *figured*, and the *Keble* to *Mohammed*. In the *Prophet*, and in the *Arab* all Commanders, who were the *Greek* Empire, and defeated a great Army.

Omar succeeded *Abdallah* in the first Year of his reign, and in the second *Heraclius*, who came to *Constantinople*. The next *Arab*, and all the *Constantinople* entirely *Constantinople* sent Kingdom the last of their Prince.

After this Conquest, *Omar* demanded *Tribute* from *Constantinople*, knowing that and tearing the *Arab* annual Tribute Years the *Saracens* would have been to fo

and addressed himself to the War, though his Treasury was so exhausted, that he was forced to coin the Church Plate. While he was engaged in this War, the *Avars* broke the Peace, and advanced even to the Gates of Constantinople, which they besieged, but without Success. *Heraclius* soon after concluded the *Persian* War with much Honour to himself, alter it had lasted six Years.

It was one of the most fatal of which we find any mention in History; for it exhausted the Strength, and in its Consequences proved the Ruin of both Empires; for while the *Persians* were victorious at first, they over-ran all *Egypt*, plundered the People without Mercy, interrupted their Commerce, and destroyed their Magazines. When the *Greeks* in their Turn had the better of the *Persians*, they revenged their Wrongs so effectually, that they intirely broke the Force and Spirits of the *Persians*, which scarce proved a greater Misfortune to that Nation than to the *Romans* themselves; for if the *Persians* had not been in so weak a Condition, the *Saracens* would never have been able to have over-run their Country in the manner they did, and which afterwards afforded them an Opportunity of reducing the most valuable Provinces of the *Greek* Empire.

It is very remarkable, that upon the first News of the Victories which *Heraclius* gained over the *Persians*, one of the principal Monarchs of the *Indies* sent to compliment him upon that Occasion, and made him a Present of a considerable Quantity of fine Pearl, and precious Stones, and some Years afterwards repeated his Civility much to the Emperor's Satisfaction. This is a very singular Circumstance, and shews that there must have been some previous Correspondence between these Princes; but it was one of the last Instances of Friendship which passed between these States; for before the Decree of this Emperor, all the Provinces from which any Correspondence could be carried on with the *Indies*, were torn from the *Greeks*; and as this is a Circumstance which very nearly concerns our Subject, it is requisite, for the better understanding it, that we should enter into a more particular Account of this remarkable Event.

Mohammed, the Author of a new Religion, and of a new Empire, set up for a Prophet about two Years before *Heracius* began to reign; but the *Hegira*, or Flight from *Meca*, which is the *Æra* of the *Mohammedans*, and which happens when *Mohammed* was fifty-four Years old, is fixed, according to the best Histories, to July 6. A. D. 622. *Mohammed* survived this ten Years, and though at his first assuming the sovereignty, he had no more than thirty Subjects, yet before his Death he had laid the Foundation of a very powerful Monarchy. He was succeeded by his Son in law *Abdallah*, turnamed *Abubekre*, by which Name only he is mentioned in most Histories. The Meaning of it in *Arabic* is, *The Father of the Virgin*; and he was so called, because his Daughter *Aysha* was the only concubine *Mohammed's* Wives whom he married while a Virgin.

This *Abubekre* was the first *Khaliff*, which is another *Arabic* Word that signifies a *Vicar* or *Substitute*, and a *Successor*, and the *Khaliffs* were esteemed both, with respect to *Mohammed*. In the second Year of his Reign he invaded *India*; and in the third and last he sent *Khaled*, one of his best Commanders, with an Army of 30,000 Men to invade the *Greek* Empire, which he performed with Success, and defeated a great Army which *Heracius* sent against him.

Omar succeeded *Abubekre* in the thirteenth of the *Hegira*, in the first Year of his Reign he became Master of *Damascus*; and in the second he reduced all *Syria*, having forced *Heracius*, who came in Person to its Relief, to retire precipitately. The next Year he made himself Master of *Jerusalem*, and all the Country of *Palestine*, while one of his Successors intirely subdued *Persia*, and put an End to that ancient Kingdom in the Person of *Jezdegerd*, who was the last of their Princes.

After this Conquest the *Saracens*, as they were then called, demanded Tribute of *Egypt*; and *Cyrus* Bishop of *Alexandria*, knowing the distressed Condition of the Empire, and fearing the Consequences of a War, consented to pay an annual Tribute of 200,000 Aurei, with which for two Years the *Saracens* were contented, and very probably would have been to for a long Space of Time, if the Em-

peror *Heracius* had not taken this in ill Part, and treated it as a fleecing of his Subjects to enrich the Infidels. He bestowed therefore the Government of *Egypt* on an *Armenian*, whose Name was *Manuel*, with the Title of *Præfessus Augustalis*, who, when the Tribute was demanded next, answered, that they had formerly a Priest, but now a Soldier to deal with. *Omar* thereupon sent *Amrou* his General with a potent Army into that Country, where, when it was too late, *Heracius* would have renewed the Treaty made by *Cyrus*, and would willingly have paid the former Tribute. But *Amrou*, in the Space of two Years, conquered the best Part of the Country, and laid Siege to *Alexandria*. While he lay before the Place, which held out fourteen Months, the Emperor *Heracius* died, and being succeeded by his Son, who was a Minor, the *Saracens* at their Leisure prosecuted the Conquest of *Egypt*, and soon after annexed thereto all the adjacent Countries.

Omar the second *Khaliff* reigned but ten Years and a half, and in that Space of Time subdued *Syria*, *Chaldea*, *Mesopotamia*, *Persia*, *Egypt*, and Part of *Africa*; that is to say, as far as *Tripoli* in *barbary*. By this Blow the *Romans*, as they styled themselves, or *Greeks*, as they were styled by others, lost all their Eastern Provinces, and the Trade to the *Indies* intirely, which for the present suffered an absolute Interruption, the *Arabs* being at that time intirely addicted to War; and though they were avaricious enough, had no great Notion of Commerce. It is scarce to be conceived how great an Alteration the Rise of this new Empire made in the Face or Affairs, and what prodigious Desolation ensued before these Conquerors came to be softened to such a Degree, as to cultivate the Arts of Peace, and to endeavour, by the Rules of Policy, to establish and maintain the mighty Empire they had acquired, the greatest indeed and most extensive that the World had ever seen, reaching Westward as far as *Spain*, and Eastward to the very Frontiers of the *Indies*. Our Subject obliges us to examine the Progress of their Power in *Egypt*, because it not only opened once again the Trade through the *Red-Sea*, but also that of *Europe*, by the same Canal, to the *East-Indies*.

10. That Impetuosity and Violence which enabled the *Saracens* to make themselves Masters in so short a time of such vast Dominions, was not like to suffer them to continue long under one Head, which, however, was undoubtedly the Design of *Mohammed* their Founder. We have not room to enter here into all the Reasons of that Division which happened among the *Arab* Princes, and therefore shall content ourselves with one, which was the great Distance of their Provinces, that naturally gave an Opportunity to such as were intrusted with the Government of them to set up for themselves.

We have already shewn how all that Part of *Africa*, which had been under the Dominion of the *Romans*, fell into their Hands; and we shall next observe, that *Abulcassim* *Mohammed Ben Abdallah*, being in Possession of Part of *Africa*, set up for himself in the Year of the *Hegira* 206, and took the Title not of *Khaliff*, but of *Mohabdi*, which signifies Director, or Chief Priest. He fixed the Seat of his Government at *Cairo*, which is a Name the *Arabs* bestowed on the ancient City of *Cyrene*, or rather a new City built on the Ruins of the old one. He left the Government to his Son *Casim*, who removed the Seat of Empire to *Makade*, a new City which his Father had erected; and his Grandson *Abou Temim Maad*, better known by his Surname *Moez Ledinillab*, who succeeded in the Year of the *Hegira* 241, prosecuted the Design which his Ancestors had entertained of making himself Master of *Egypt*.

With this View he sent his General *Giaubar*, who was a *Greek* by Birth, to invade that Country, of which he made himself intirely Master; and in the Year of the *Hegira* 258, laid the Foundation of a new City, which *Moez Ledinillab* resolved should be the Capital of his Dominions. As the *Arabs* were exceedingly addicted to Astrology, particular Care was taken that the first Stone of this City should be laid, when the Planet *Mars* was in the Ascendant; and as this Planet is by them called *Cakar*, the new City was called *Cakerab*, or *Al Cakerab*, that is, the Victorious; and is the same which the *Europeans* call *Cairo*, or *Grand Cairo*. I have been the more careful in marking the Date of this City's Foundation, which agrees with the Year of our

our Lord 968, because many, otherwise accurate Writers, have been led into Mistakes about it; particularly the learned Bishop *Huet*, who in the forty eighth Chapter of his History of the Commerce of the Ancients, says, it was built *A. D.* 705; and in the fifty sixth Chapter of the same Work, tells us, it was built *A. D.* 984.

As soon as *Muez Ictinilloh* was informed that this City was finished, he removed, with all his Treasure, from his old Capital, and made his Entry into *Cairo* in the Year of the *Hegira* 362, and there took the Title of *Khaliff*. His Successors were styled *Khaliffs of Egypt*, to distinguish them from the *Khaliffs of Bagdad*, who were esteemed the true Successors of *Mohammed*. This City was very conveniently situated on the *Nile*, and became in Time no less considerable for its Commerce, than for its being the Seat of Empire: and it was by this Means that the old Trade, by the Way of the *Red Sea*, was once more restored to *Egypt*, which flourished exceedingly under this new Race of Princes, as appears by the Revenue which it produced to its *Khaliff*, and which, as *Elmacinus* tells us, amounted to no less than Three hundred Millions of Crowns of Gold.

The *Khaliffs of Egypt* were nine in Number, and the last of them was *Abdaz*, who was deposed by *Saladin* General of *Nouredin*, Sultan of *Damascus*, in the Year of the *Hegira* 567, *A. D.* 1171. *Saladin* entering the Palace of the *Khaliff*, who died immediately after he was deposed, found there prodigious Riches, and amongst the rest a noble Proof of the Commerce of the *Indies*, which was the finest Ruby in the World, perfectly fine and bright, and weighing very near an Ounce and a half. This prodigious Wealth, and the having a great Army absolutely at his Devotion, tempted him to set up for himself; and having made himself Master of *Egypt*, he soon after extended his Dominions over all the Countries of *Damascus*, *Palestine*, and *Syria*. He left, at his Decease, his Kingdom of *Egypt* to his second Son *Othman*, who died in the Year of the *Hegira* 597, and was succeeded by his Brother, who was soon deposed by his Uncle *Malick al Adal*, whose Grandson *Malick Al Salek* succeeded, in the Year of the *Hegira* 647. He enlarged the City of *Cairo*, and fortified it with a strong Wall, and was victorious over *St. Lewis of France*, in the Year of the *Hegira* 698. But this Prince was however the last of his House; for not long after, the *Mamlouks*, or *Mameluks*, as they are generally called, who were a kind of mercenary Soldiers, revolted from him, and forced him to take shelter in a wooden Tower, which hung over the *Nile*. To this Tower the Mutineers set Fire, and thereby compelled the unfortunate Monarch to jump into the *Nile*, where he was drowned.

By this Accident *Egypt* once again changed its Masters; for these *Mameluks* became Sovereigns of the Country, and chose their General, whose Name was *Ibek*, Sultan, who thereupon took the Name of *Almalek Al Azis*. He was the first Prince of the Dynasty of these *Mameluks*, which were distinguished by the Name of *Babaristes*, or *Mamlouks*; but these People were, generally speaking, either young *Slaves of Tartars*, sold into *Egypt* by the Merchants, from whom again they were bought by the Sultan, educated at his Expence, and employed to defend the maritime Places in the Kingdom. The plain Reason of this Institution was, because the native *Egyptians* were found to weak and effeminate, from a long Course of Slavery, that they were unfit for Arms; and perhaps this is the Case of all Nations, when in the State of the *Egyptians*, that is to say, when they have no Property to fight for, are neither so desirous of Victory, nor can be worth by any Defeat. These Foundlings made excellent Soldiers; for, having no Relations or Friends, but amongst their own Corps, they turned all their Thoughts to the excelling in their Profession, as they placed all their Hopes in acquiring the principal Posts in their Militia. This extraordinary Event fell out in the Year of the *Hegira* 648, *A. D.* 1250. They elected, on the Death of a Prince, another out of their own Body, and held the Kingdom without Interruption till the Year of the *Hegira* 784, when they were deposed of it exactly in the same Manner in which they had acquired it.

For, as they found it necessary to keep up a numerous standing Army, because, though they made but a Part of the Sultan's Troops, yet it was impossible for them to trust either the *Arabs* or the *Egyptians*; they therefore had Recourse to the purchasing all the Children they could meet with, but particularly the *Greco-Scythians*, which inhabit a Part of the Coast of the *Black Sea*; and have, in all Ages, had a barbarous Custom of making Merchandise of their Children; and for the better procuring of these Children, the *Mameluks* entered into a Treaty with the *Greek Emperors*, for sending an annual Fleet into the *Black Sea*. These Children they trained up in their own Discipline; but by an unaccountable Blunder in Politicks, never incorporated them into their own Corps, but disposed of them in Garrisons in the Parts of their Country, in a sort of Fortresses, which were called *Berges*; and from thence this new Corps of *Mameluks* took the Name of *Bergites*; and growing more numerous than the old Corps, deprived *Kelann*, who was the last Sultan of the first Dynasty of the Empire, and transferred it to themselves.

It is of this second Dynasty of the *Mameluks*, of which most Authors are to be understood when they speak of the *Mameluks* as the Children of *Abulthans*, for such the *Scythians* were. These *Bergites* remained Masters of *Egypt* to the Year of the *Hegira* 923, *A. D.* 1517, when the last Prince *Tobman Bey* was deposed by *Selim*, the first Emperor of the *Turks*, who caused him to be strangled over one of the Gates of *Grand Cairo*; and to the Year of the *Hegira* 1099, *Egypt* has been a Province ever since. It was under these *Mameluks* that the *East India Trade* was a great measure, restored to its old Channel, but by all sorts of *Indian Commodities* were conveyed by the *Red Sea* to the Coasts of *Egypt*; from thence to *Grand Cairo*, and to by the *Nile* to *Alexandria*, where a great Part of them was purchased by the *Europeans*; and was by this Commerce that *Egypt* was so rich in their Time, that the Predecessors of *Tobman Bey* gave, at his Accession to the Throne, by way of Presents to his Soldiers, ten Millions of Ducats at once. Having thus, as truly as possible, run through the History of *Egypt*, it will be requisite to enter more particularly into the Commerce of the *Arabians* in the East, without which, the largest Part of the Work could not be properly understood; and this likewise we shall do with all imaginable Brevity, in order to preserve a due Proportion between this Section and the rest, as well as that necessary Connection between the several Parts of this History; so that the different Parts which this Trade to the *Indies* hath taken, may the more evidently appear. A Task difficult to accomplish so narrow a Compass, and the more so, because we travel through an unbeaten Road, and are obliged to describe Circles almost at every Stage.

11. One would naturally imagine, from the long Accounts of the *Arabians* and *Mohammedans* in general, that they were not the People in the World best fitted for cultivating Trade, and settling themselves in distant Parts of the World with a View to Commerce; and it will appear plainly in the Course of this Work, that they were actually dispersed into the most distant Countries in the *Indies*, *May*, and through *Ceana* itself, without the Assistance of Force, and where they could not have been led by the Spirit of Ambition, for which we may esteem them hitherto distinguished. It is therefore necessary that we should give the Reader a fair Account of this Matter, and make him acquainted with the Means by which they spread themselves in so extraordinary a Manner, beyond the sole Limits of the *Indian Commerce*, even to establish themselves, and thereby drew it into such Countries as were under their Dominions; from whence it was carried out into other Parts of the World, but still in such a Manner, that the best Part of the prodigious Profit arising from that Trade centered in them. In order to this, and that the whole may be brought into as little Room as possible, we shall, upon this Head observe, that in their own Histories it is clear, the *Arabs* found out several Settlers in four several Ways; by Conquest, by Discovery, by Trade, and by Mission: By the first they possessed themselves of all the Provinces, which made the

vast Empire; by the down to *Cape Corrientes* who had it not in their mind on what Parts of *Mogadono*, *Brava*, &c. Nature of ours in the to maintain, because whence the *Arabs* by two other, they treated more especially by Co

Their Voyages were frequent, and therefore necessity of making a where they took Wives. These new Families being sensible it was the Trade of *Persia*, *Egypt* and *Europe* by these Merchants might they could well imagine in their old Settlement Differences in reality; to they therefore *Mohammedans*, because of the Hope from the Sultan remote Parts of the made Profection of *M* that the *Moors* might they were to multiply, or at least a Part of Religion, which did, by little and little, length received an Assistance being raised *Cambray*, and *Guzerat* those *Islamic Turks* called *Polis*; as *Malic Azim* ment *Dia*, from *Paraguay*.

By Trade and Religion Parts of *Malabar*; and very considerable first as Merchants, a *Aboc*, gained many *ijm*. From *Malacca* and having prevailed together with several *ijm*, they raised great Concerns of Trade give them room to Accord to the *Portuguese* settled in the *Arabs*. Thus, in a out the Assistance of *Arabs* did more than to many Ages; a have pulled Matter been hindered in the Part of the World Progress.

They found, however, their good Fortune, *ijm* with respect to to such a manner navigating those Seas, and some other *ijm*, and some other *ijm*, and the *Arabs* were brought to by *Cadix*, &c. Quarters of the *Arabs*, and by the *Arabs* Trade was carried of the same Places the from the *Arabs* of *ijm*, who traded with them from to *Portuguese* the *Arabs*, th

Empire; by the second, they got footing in *Africa*, down to *Cape Corientes*, among the poor unarmed *Cafes*, who had it not in their Power to prevent them from seizing on what Parts they saw good. Their Colonies of *Mogadono*, *Brava*, and *Quilba*, were somewhat in the Nature of ours in these latter Times, but not so difficult to maintain, because of the Proximity of the *Red Sea*, whence the *Arabs* had all Sorts of Affiance. By the two other, they teared themselves in all other Parts, but more especially by Commerce.

These Voyages were not in those Days so frequent, and therefore the Merchants were under a Necessity of making a long Stay at the principal Ports, where they took Wives, their Religion allowing Plurality. These new Families brought on others, and the Princes being sensible it was greatly for their Advantage to draw the Trade of *Persia*, *Arabia*, and at the same Time of *Egypt* and *Europe* by the *Red Sea*, into their own Ports, these Merchants met every where with the kindest Usage they could wish. The Idolatrous Princes, confirmed in their old Superstitions, were not at all scrupulous about Differences in Religion, but admitted all indifferently: so they readily allowed their Subjects to embrace *Mohammedism*, which they preferred to the rest, because of the Hopes these *Arabs* gave them of Protection from the Sultans, whose Power was known in the remotest Parts of the East. Even Princes themselves made Profession of *Mohammedism* in troublesome Times, that the *Moors* might join them; for, in latter Days, they were so multiplied, that they peopled whole Cities, or at least a Part of the most considerable. Thus this Religion, which has nothing very inconvenient in it, did, by little and little, obtain in many Parts; and at length received an Accession of Power, when some of its Professors being raised to the first Posts in the Courts of *Cambay* and *Guzzarat*, invited a greater Number of *Mohammedan* *Turks* called *Rumis*, and even seized on some Posts, as *Male Aziz*, who raised a considerable Settlement near *Diu*, from whence he a long Time infested the *Portuguese*.

By Trade and Religion, the *Arabs* got footing in some Parts of *Malabar*; and by the same Means they came to be very considerable upon *Malacca*. They first went thither as Merchants, and some of them there fixing their Abode, gained many of the Idolaters over to *Mohammedism*. From *Malacca* they sailed round to the *Moluccas*; and having prevailed on the Kings of *Tidore* and *Ternate*, together with several others to join with them in Religion, they reaped great Benefits from these Princes, whom the Concerns of Trade, and the Protection these *Moors* gave them room to hope, confirmed in *Mohammedism*. According to the *Portuguese* Writers, they had not been discovered in the *Moluccas*, before this Discovery of the *East*. Thus, in a very short Space of Time, and without the Assistance of any considerable maritime Force, the *Arabs* did more than the *Greeks* and *Romans* in the Course of many Ages; and it is highly probable, they would have pushed Matters still farther on this Side, if they had not been hindered by the sailing of the *Portuguese* into that Part of the World, which put an immediate Stop to their Progress.

They found, however, Means to make the most of their good Fortune, and to become the Carriers of *Europe* with respect to the Commerce of the East; and this in such a manner, that they shut out all others from ranging those Seas, and thereby drew an immense Profit to themselves. For the *Indians* brought by Land to *Cambay* and some other Places, and by Sea to *Bassora* and *Suez*, and the Commodities of the *Indies* and *China*. They were brought into *Suez* by the Provinces of *Acherbe*, *Syria*, *Candian*, and other Parts more northerly; great Quantities of the same they also had from the *Barbary* Coast, and by the Way of the *Red Sea*, from whence a Trade was carried on with them all over *Europe*. From the same Places they had Gold-dust; Gold also they had from the Mines of *Syria*, brought to them by the *Nubians*, who traded with *Egypt* by the Way of the *Desart*, or from Port to Port quite to the *Red Sea*; from *Ceylon* and the *Indies*, they by the Trade with the *Chinese* and

Indian Merchants, had Silks, rich Stuff, and many other Manufactures, Drugs, and Spices.

With this Stock of Goods they drove a very considerable Commerce by the Way of *Cakerah*, or *Caire*, with the *Venetians*, the *Genese*, the *Catalans*, and the *Greeks*, which was easily done by reviving the old Mart of *Alexandria*; which Port, though it was far from recovering its former Magnificence, became once more famous in the World, by becoming what it formerly was, the Centre of Commerce between the Eastern Parts of the World and the West. This shews the great Consequence of a right Situation, and is a new Proof of the Wisdom and Penetration of *Alexander the Great*, who foresaw, that whatever became of his Empire, the new City which he erected, and which he honored with his Name, would continue to make a considerable Figure, as long as Trade was capable of giving Credit to any Place. It is true, that the Revolutions which happened in the Government of *Egypt*, after it fell under the Dominion of the *Mohammedans*, and of which we have already given a succinct Account, frequently affected this City to a very great Degree; but still the Excellence of her Port, and the many Conveniences that resulted from the Commerce carried on thereby to the Masters of *Egypt*, whoever they were, preserved her from total Destruction, though in the Hands of the most barbarous Nations; for the Desire of Wealth is so natural to Mankind, that it softens the most rugged Natures, and directs them for the sake of Interest to a kind of counterfeit Humanity.

But it was the *Portuguese*, who by the Discovery of the Passage to the *Indies* by the *Cape of Good Hope*, that gave the last Blow to this Commerce, and inally extinguished the Glory of *Alexandria*; which, as we have shewn, depended upon their Sovereigns preserving the Monopoly of the *Indian* Trade.

It was for this Reason that the *Venetians* assisted privately the *Mohammedans* in their Endeavours to prevent the *Portuguese* from settling in the *Indies*; from whence we may discern, that Interest operates more strongly than Religion, Neighbourhood, or indeed any other Principle whatever. The *Portuguese* were *Christians*, *Europeans*, and good Allies to the State of *Venice*; the *Mohammedans* were none of these, but their Interest and Trade was the same; and whatever affected the Commerce of the one, must necessarily be detrimental to that of the other. In short, the Dispute was, whether the Possessors of *Egypt*, and the *Venetians*, should divide between them the Profits of the *Indian* Commerce, or whether it should remain intirely to the *Portuguese*; and there is no Reason to wonder, that when this was the Question, a State depending so much upon Commerce as that of *Venice* did, should let all Considerations aside, in order to attend more closely to her Interest.

It is not, however, to be understood from hence, that the *Indian* Commerce, by the Way of *Egypt*, is even at this Day entirely destroyed, or that the *Venetians* have no farther Concern therein; neither of which is, strictly speaking, true; but that this Commerce is nothing now to what it was, either with respect to the *Egyptians*, or the *Venetians*, is daily declining, and must decline more and more, the Passage by the *Red Sea*, the Country of *Egypt*, and the Commerce of the Port of *Alexandria*, having now lost those distinguishing Advantages which for so many Ages they possessed, and which enabled them to recover as they did, after such intolerable Devastations as they were exposed to.

We may easily satisfy ourselves as to the Truth of this, by comparing the Revenues of *Egypt*, when in the Hands of the *Arabians*, with what they now produce, to the *Turks*: The former amounted to three hundred Millions of Crowns, and the People were not at all oppressed; the latter are fixed at three Millions, and the People are beggared by the raising that Sum. We may add to this, that formerly there were in *Egypt*, as *Diodorus Siculus* informs us, three thousand Cities, whereas now there are not above three hundred considerable Towns, and none of these can boast any thing of their ancient Splendor. It is now time for us to return to the *Greek* Empire, and to shew in as few Words as possible how it sunk into Ruin.

12. *Constantine* the son of *Heraclius* succeeded his Father; but in the fourth Month of his Reign he was poisoned by his Mother in law *Martina*, a Woman of great

inclined to wonder how, under such Circumstances, this Empire could subsist so long.

On the whole, there is no room to doubt, that the Ruin of the Greek Power was not owing to much of the Force of its barbarous Enemies, as to the Weakness of its Government, and the dissolute Manners of the People. The excellent Situation of its Provinces, and their happy Communication with the Capital of the Empire, rendered the Greeks, in Times of Peace, incredibly rich, as appears from what the Historian Zonaras informs us, with respect to the Treasures of the Emperor Basilus, who reigned in the Middle of the Ninth Century; and who, besides vast Heaps of Silver, was possessed of two Hundred thousand Talents in Gold, which at the lowest Estimation amount to upwards of thirty eight Millions of our Money.

As the Empire diminished, its Trade and Riches must sink of course; but even long after this, they were so considerable, that a Traveller, who will be hereafter mentioned, writes in the thirteenth Century, that the Customs and Taxes of Constantinople amounted to twenty thousand Cases a Day at the very time that it was destroyed; and when the People refused to furnish the Emperor with Money to govern the City and their Lives, they were so immensely rich, that the Fleet, which was fitted with the Flagship, was scarce able to keep the Sea, the Ships being so overburdened with their Riches.

It is not sufficiently shewn what prodigious Wealth had accrued to them by their Commerce. To say the Truth, it is what the Abundance that proved the Ruin of the Greeks; for what Abundance the vast Riches that flowed in upon them from all Parts of the World (for to the very last their City was the Centre of the Trade of Europe), and the fertile Plenty they had of all sorts of Provisions and rich Mines in their own Neighbourhood, they grew so insolent and unwieldy, that the ill Use of their Property rendered the Preservation of it impossible.

The Venetians and the Genoese aggrandized themselves by the Fall of the Greeks, and prevailed for a long time the Principals of that Empire of which they made themselves Masters. By this means likewise the Europeans became better acquainted with the Eastern Nations, and found less Difficulty in visiting their Countries; so that by degrees a Desire of penetrating by Land into the most remote Parts of the East, and which had scarce been thought on in former Ages, came to diffuse itself through all Europe; the Power of the Turks likewise excited great Jealousies in the Christian Princes, who were their Neighbours, and the Wars that their Occasion afforded new Opportunities of looking into the State of these distant Countries; by those who returned long Prisoners amongst them, so that though at first sight may seem a Paradox, yet we may with Reason affirm that the Ruin of the Eastern Empire by the Mohammedans, contributed not a little to the Establishment of that Empire which the several Nations of Europe now possess in the East.

The Observation is of greater Consequence than may at first Sight appear; for whoever looks into almost all the great Events that have fallen out in the several Ages of the World, will very plainly perceive that they have been brought about by the most unlikely Means. The sudden Rise of the Saracen Empire threatened all Europe with an Invasion of barbarous Tyranny; but the Humour of undertaking the Holy War, as it was called, for the Recovery of the City of Jerusalem from the Infidels, proved the most effectual Means of preventing that Misfortune, by compelling the Mohammedans in the Defence of the Countries which they had already acquired, at the same time that it excited such a martial Spirit in almost all the Nations of Europe, as rendered them capable of sustaining that Shock by which otherwise they must have been overpowered.

One may carry this Reflection still farther, if we advert to that maritime Power which has been raised in Europe, by the Discovery of the East and West Indies, and which has visibly set bounds to the Ambition of all the Mohammedan Princes, who, notwithstanding the vast Dominions they possess, and the prodigious Armies they are able to raise, are, notwithstanding, very apprehensive of the Power of the Christians by Sea, who are indeed able to make them extremely uneasy upon any Quarrel, notwithstanding their

seeming Superiority. This sufficiently shews the Solidity of that Maxim, that whoever is Master at Sea, must be likewise Master on Land, or, which is the same thing, have the Power of controlling such as esteem themselves Masters. These Remarks arise naturally from the Subject, and therefore claim the Attention of every Reader, especially in a Country like ours, which has always affected the Dominion of the Sea, and never can be deprived of it but by want of Attention.

13. We have now run through the History of the Commerce between the Western Parts of the World and the East Indies from the earliest Accounts, and this without ever losing the Connection, or leaving the Subject untraced through any Period of Time. The Discussion of this Point has indeed taken up a great deal of Time, and of Room; but in return, it has furnished us with a great deal of useful Knowledge; for the Reader will easily perceive, that in pursuing this Topic, we have been led into a kind of Universal History of Commerce, a thing of far greater Consequence, and infinitely more instructive than the tacking together an incoherent Collection of Voyages, which, however, has been the Scheme of almost all former Writers, who perceiving their Error too late, have endeavoured to mend it by Prefaces, Dissertations, and Extracts from ancient Writers; whereas by pursuing a right Method, and being content to take the Pains of bringing what is scattered, through a Diversity of Authors, into its proper Order, we have furnished the Reader with the Means of understanding this Subject perfectly, and of being able to pronounce, with Certainty, how and by whom this advantageous Commerce was managed at any Time given.

We have indeed insisted somewhat largely on the History of the several Empires, which we were obliged to mention in the Course of this Work; but besides that in doing this we have relieved the Reader from the Fatigue of reading a dry Narration of Facts, unenlivened by Circumstances, it will be found that we have mentioned nothing that does not contribute to the better apprehending the principal Subject, and to the rendering the following Voyages and Travels perfectly intelligible, which never could have been done any other way. A particular Writer who sits down to give the World an Account of what he has seen abroad in a certain Number of Years, never proposes, and indeed it cannot be expected he should propose delivering a general History of the Countries and Kingdoms through which he passed; and yet without a competent Knowledge of these, his Accounts can never be thoroughly understood. But when we undertook to give not only a Series of the best and most authentic Pieces of this kind, but also to furnish the World with a History of the Discovery and Settlement of the East-Indies, it was requisite to provide against all these Inconveniences, which induced us to be more copious in these Sections than otherwise we should have been, that the Reader may come prepared in such a manner for the Perusal of the rest of this Work, as not to be interrupted at every Turn with critical Remarks, which always distract and confound the Narrations with which they are intermixed.

It is with the same View, that after so large a Detail of the Progress of this Commerce in the Hands of its principal Possessors, we have added yet another Section to explain the several Routes by which, when the principal Channel of this Trade was interrupted, it was still in some measure preserved and carried on.

This will be found extremely useful for two very important Purposes; for in the first place, it will explain the Means by which so many different Nations came one way or other to have a Share in the Commerce of the Indies, and by what Accidents they have been deprived of that Share; how far it is, and how far it is not, possible to retrieve the Methods of carrying on this Trade, which have been formerly in Use, or to supply them by striking out new Routes. Secondly, in giving us great Light into the Means by which so many Strangers found their Way into, and settled themselves in the Indies, as were met with there by the most ancient Travellers, whose Writings have reached our Times, and whose Accounts might have been suspected, if from the Knowledge of these Routes the Probability of all that they relate did not manifestly appear.

We may likewise add, that in the Description of these several Routes to and from the *Indies*, we shall have frequent Occasion to examine and compare the Industry of the Antients and Moderns; from whence it will fully appear, that the latter owe their Superiority over the former, rather to their Discoveries in Sciences, and the lucky Improvement of Lights derived by various Accidents, than to any Elevation of Genius, or extraordinary Degree of Virtue or Application. It is true, we might have found means to have inserted many, or indeed, most of these Accounts in the foregoing Part of our Work; but then it would have led us into long and frequent Digressions, which would have obscured the principal Subjects of our several Sections, and

at the same time would have rendered the Account of these Routes much more perplexed; whereas by their following one another in a certain Order, the Reader will be more easily apprehend them, and by comparing of them with each other, will form a better Notion of their Conveniences and Inconveniences, will enter more easily into the Circumstances attending the Rise, and bringing on the Use of them; and in a word, will, with Facility and Pleasure, conquer, in a short Space of Time, those Difficulties, which, if they had occurred to him in the Pursuit of Voyages or Travels, would either have hindered his Progress, or have cost him much Time and Pain to have got over them.

SECTION XVII.

An Account of the several Passages to the Indies both by Sea and Land, that have been attempted, discovered, or practised by the Antients.

1. Of the North-East and North-West Passages, and the Improbability of their being at all known to the Antients, *never landing what some Authors have asserted on this Subject.*
2. Of the Passage by Land from Russia to China, and the Probability of its being antiently practised.
3. Of the Route by Samarcand and the Caspian Sea, and of Pompey's Project for securing the Commerce of the Indies by that Route to the Romans.
4. Of the old Route by Bogar, and of the Alterations that have happened to some of the great Rivers in Tartary.
5. Of the Passage through the Country of the Arians, as described by Ammianus Marcellinus.
6. Of another Route from the Indies through the Country of the Saca, or Saces, described by the same Author.
7. Of the Route by Cabul, and of the great Commerce antiently carried on there between Persia and the Indies.
8. Of the great Route by Candahar, how far it was known to the Antients, and how much it has been improved since.
9. Of the Passage to the Indies, through the Country of Thine, and of the Mistakes of the Antients on that Subject.
10. Of some other Routes to the Indies, and particularly that by Palmyra.
11. Of the several Passages discovered or practised since the Mohammedans became Masters of Egypt.
12. Of the Commerce carried on by the Generals at Caffa to Chin Yama.
13. Remarks and Observations tending to the farther Explanation of this Subject.

THE first Route to the *Indies* which we shall mention is that by the North-East, through those that are styled the Straits of *Wagatz*; a Passage often attempted for Reasons that will be hereafter shewn in their proper Place, but never hitherto performed; though, doubtless, of all others the shortest Passage to that Country, at least from this Part of the World. This Route is supposed to lie through that which is generally called the *Ice-Sea*, steering North-East, along the Coasts of *Laplant*, *Muzoy*, and *Grand Tartary*, till you enter the *Indian Ocean* by the Straits of *Uries*, and so fall on the Coast of *Japan* and *Cilva*. That the Antients never had any Notion of such a Passage is very certain, because they were not at all acquainted with the Navigation of the Northern Seas till the Time of *Augustus*; and even then, the utmost Limits of their Discoveries was the *Cimmerian Bosphorus*, which is the Country now called *Jutland*; and indeed, considering their maritime Skill, this was a very considerable Discovery. The Reason that we take Notice of this Passage, in the first Place is, on Account of a Matter of Fact which has never been disputed, and which some modern Writers consider as an infallible Proof that such a Passage is not only possible, but practicable.

The Fact is this: About the Year before Christ 57, a small Vessel, having several *Indian* Merchants on board, was shipwrecked on the Coast of *Germany*, and all the Persons who escaped that Misfortune were entertained by the King of the *Saxi*, who presented them to *Metellius Celer*, then the *Roman* Proconsul in *Gaul*. The Writers before-mentioned are very positive that these *Indians* came from *Japan*, or the Land of *Jedso*, through the Straits of *Wagatz*, and to into the Northern Ocean, from whence they infer, that, with due Industry and Application, we might be able to discover a Passage the same Way.

But in answer to this it has been said, that these *Indians* might have fallen upon the Coast of *Germany* by another Way, which, like the former, hath never yet been prac-

tised, but differs from it in this, that it is beyond all Possibility practicable; and if ever it should be discovered, might divert a great Part of the *Indian* Commerce from the Southern and Western Parts of *Europe* into those which lie most towards the North. This Passage is most talked down: These *Indians* are supposed to have embarked on the River *Osus*, and so to have passed through the *Caspian-Sea*; thence up the River *Volga*, and to the *Dnieva*, which, falling into the *Black*, might well enough have brought them to the Coast on which they are supposed to have been shipwrecked. It is however very improbable that such a Thing should have happened, because it supposes these *Indians* to have been perfectly acquainted with the Navigation of Rivers, which is a much more likely they never heard of, and it is very possible are unacquainted with so much as their Names to this very Day.

It is one Thing to describe a Passage to a distant Country and to recommend it to Trial, and quite another Thing to insist that such a Trial has been actually made: If therefore any Writer shall insist on the Possibility of carrying on a Commerce to *India*, by the Canal mentioned, it ought to be granted him, that the Thing is feasible, and might turn much to the Advantage of the *Russian* Empire, especially at this Juncture, when it is almost entirely in the Power of the *Arab* Nation to establish such a Commerce, as being possessed of the greatest Part of the Country between the *Caspian-Sea* and the Frontiers of *India*. But whoever would endeavour to persuade us that in those early Ages, when Geography was so little understood as then in the East or in the North, and Men were so timorous in navigating even known Seas, that the Inhabitants of the remotest *Indies* should attempt, not only to sail through the *Caspian-Sea*, for that is not so improbable, but to enter the *Volga*, and pretend to seek a Passage that Way into the *Black*, is to bid us lay aside common Sense and Experience, in order to take up with Improbabilities and Fictions.

* *Plov. Hist. Nat. lib. ii. cap. 67.* He there affirms them positively to be *Indians*, and to have passed from *India* thither.

But it may be said You own that it is were thrown upon by the King of the then should you de when it do's not them to come, at by Sea cannot be shipwrecked? and other learned M People were *Indians* tents very frequen on very remote Na remote. It is true People, who were many, were *Norwegians* fine People that w they were *Indians* nes, as to suppose th Liv, is manifestly and directly and pr probable, appears tr Nature have happen to say, some of the their little fishing-bo Sort happened in the Part of the World test, it is no great town for *Indians*.

While we are upon Conjecture of my own be *Indians*, it is m *Indians*, and that th for's Bay. Yet I do probable, but merit to modern Discover coming from the E ited, I am firmly c and that for thie and they were on Bantam; whereas t to make use of any can manage.

The same Reason the same Nature, Reign of the Emper certain *Indians* were man's, but there v *Indians* than the fo kided, that they w was not understood *Norwegians*, but n that they came eit *Indies*, or through t

I must not how they had some Su and the same has l on the Coast of *the Anna's*; that is to *India*, which is the fore it cannot be for Ships for a V to be believed, it had reached *Europe* some Account of Ports of their Hi in some Places, which we can say and therefore we *Indies*.

2. This was by now commonly kn lost by the *Cesar* failed to the *No*

* There have been *Indians* to *Europe* to prove that found in the *Indies* Sea. He was first visible. It is thought the gene

But it may be said, you have already admitted the Fact. You own that it is not to be disputed, that these *Indians* were thrown upon the Coast of *Germany*, and presented by the King of the *Saxi* to the Proconitil of *Gaul*; why then should you deny their coming either of these Ways, when it does not appear there was any other Way for them to come, at least by Sea (and that they did come by Sea cannot be contested) because you admit they were shipwrecked? All this is true; but with Bishop *Huet*, and other learned Men, I very much doubt whether these People were *Indians*; because it is very certain the Antients very frequently bestowed that Appellation upon very remote Nations, merely because they were very remote. It is therefore much more probable that these People, who were thus cast on shore on the Coast of *Germany*, were *Norwegians*, or *Scythians*, which are the same People that we now stile *Laplanders*; or, it may be, they were *Scythians*: it is to far credit the Northern Histories, as to suppose that Island was so early inhabited. This, they, is infinitely more credible than that they were *Indians* strictly and properly speaking; and that this is more credible, appears from hence, that Accidents of the like Nature have happened in *Scotland*, and elsewhere; that is to say, some of these People have been driven on shore in their little fishing-boats; and when an Accident of this Sort happened in those early Times, before the Northern Parts of the World were so well known as they are at present, it is no great Wonder that such People should be taken for *Indians*.

While we are upon this Subject, I cannot help hinting a Conjecture of my own, which is, that if they must needs be *Indians*, it is much more likely that they were *Highlanders*, and that they came into the *Baltick* through *Hudson's Bay*. Yet I do not lay this down as either certain or probable, but mention it only as a Thing more agreeable to modern Discoveries, than the former Notion of their coming from the *East-Indies*; but with regard to the Fact itself, I am firmly of Opinion that they were *Norwegians*; and that for these Reasons, there were many of them, and they were on board a kind of Bark or Vessel of some Burden; whereas the *Finn* and *Laplanders* are not known to make use of any other than small Boats, which one Man can manage.

The same Reasons may be applied to another Fact of the same Nature, since it is affirmed, that under the Reign of the Emperor *Frederick Barbarossa*, A. D. 1160, certain *Indians* were again cast upon the Coast of *Germany*; but there is no more Proof that these were really *Indians* than the former; for in both Cases it is acknowledged, that they were a strange People, whose Language was not understood, which might be true if they were *Norwegians*, but most certainly is no kind of Evidence, that they came either from the *East* or from the *West-Indies*, or through the North-East or North-West Passage.

I must not however omit, that according to *Pliny*, they had some Suspicion that the first mentioned *Indians*, and the same has been hinted with respect to the last, came to the Coast of *Germany* by surrounding the Continent of *Asia*; that is to say, by the Route of the *Cape of Good Hope*, which is however a Thing absolutely incredible, since it cannot be imagined the *Indians* ever victualled their Ships for a Voyage of such a Length; neither is it to be believed, that if so much as one of their Vessels had reached *Essepe*, and returned, we should have had some Account of this from them, as well as of other Points of their History, which are well enough preserved in some Places. But it is Time to quit a Subject on which we can say little that is either useful or entertaining, and therefore we shall pass on to another Route to the *Indies*.

2. This was by Land, from *Russia* to *China*, a Thing now commonly known, since the History of the Embassy sent by the *Czar* in the Year 1659, when his Minister failed to the North of the Kingdom of *Beulan*, and

through the Defarts of *Great Tartary*. There is no Reason to believe that there is any Thing new in this Passage, or that it had not been as much frequented of old as in the present Times; for as we have heretofore shewn, it was in the most early Ages of the World that the *Chinese* and *Indian* Empires were in their most flourishing Condition, and carried on the most extensive Commerce; whence I conceive it highly probable, that they made use of Caravans on this Side, in the same Manner as they do now; and it is not impossible that, by the Passage of these Caravans through the *Northern Indies*, the Antients came to hear of the *Seres*, since it is very certain that the Country in which they placed them, is not very far distant from the Route these Caravans must have taken*.

That there must have been some Passages on the North appears also from hence, that the Antients were so fully persuaded that the *Indian* Ocean communicated with the *Caspian Sea*, a Thing that could never have come into their Heads if they had not been informed that there was some kind of Commerce carried on between the northern Parts of *Europe* and the *Indies*; and it is not easy to conceive how any Commerce of that Kind should be carried on, unless by the Route which we have mentioned, which was always practicable, and which therefore there is no Improbability in supposing it was formerly practised. The only formidable Objection that can be made to this is, the Fierceness and Barbarity of the Nations inhabiting between *China* and *Russia*; and therefore this Objection deserves some Consideration.

In the first Place then, I observe, that the Antients had no distinct Account of these People at all, and therefore wherever they have advanced ought to make no Impression to the Disadvantage of these Nations. In the next Place, I must put the Reader in mind, that what they have told us of the *Seres* does not appear to agree with the *Chinese* History; and though I am very far from asserting that we ought to give an implicit Credit to all that is advanced in that History, yet I think there is nothing absurd in supposing that the *Indians* or the *Chinese* might be as knowing and as industrious in Commerce, as we know with Certainty, that the *Chaldeans* and the *Ishmaelites* were, in Times much earlier than those in which we conceive this Commerce to have been in use.

Human Nature is every where the same; and it appears even from the Reports of the *Greek* Historians, that the *Indians*, from the earliest Accounts they had of them, were as civilized and as well governed a People as any in the World, which certainly adds some Credit to the *Chinese* History, whether we believe that the *Indians* derived any Part of their Knowledge from the *Chinese*, or which is a Notion more probable in itself, and much better supported by Authority, that the *Chinese* were indebted for the best Part of their Improvements to the Lights they received from the *Indians*. The first Account we had of the *Tartars* represented them as a Race of stupid and ignorant Barbarians; but their own Histories shew quite the contrary, and carry in them this intrinsic Evidence of their own Veracity, that they must have been such a People as their Histories represent them; because, had it been otherwise, those Histories could not have been written†.

To speak my own Opinion freely and fairly, we are but too apt to treat People that have lived at a great Distance of Time, as we do those that live at a great Distance in Point of Place; that is to say, we measure their Wisdom and Civility by their Remoteness from our own Country, and even our own Time, which is particularly hard upon the Eastern Nations, since both Reason and Experience teach us, that as they were first settled, their Governments first formed, and Laws first introduced among them, it is the highest Probability that Knowledge of every kind came earlier to Maturity amongst them than amongst other Nations, though afterwards their Countries might be over-run, their Governments subverted, and

* There have been several *Greenlanders*, in their little Boats, taken up on the Coasts of the *O-Aneva* and *Cathinea's*. † *Espe* *Gomara* in *Hist. Indica* l. 2. c. 10. He too asserts that the People were *Indians*. ‡ It is very plain, that *Pliny* meant this Passage, for he tells us in this Chapter to prove that the Continent of *Asia* had been often surrounded; and asserts in Proof of it, that the Wrecks of *Spanish* Vessels had been found in the *Indian* Seas; which, tho' it proves nothing as to the Matter of Fact, yet it flows clearly that the Antients had a Notion that such a Passage was practicable. § We have considered the Subject of large in the fifteenth Section. ¶ The Reader will find this verified in the genealogical History of the *Tartars*, written by a *Tartar* Prince, and of which we have a very good Translation in *Page* 515.

Yet still the old Rout is, in some measure, preserved
by the Caravans that pass from *Persia* to *Aleppo*; which
shows of how great Consequence it is, to have the Rout of
so advantageous Commerce once laid down through any
Country: For though through the Alterations, and Revo-
lutions to which all Places are, in some measure, liable,
it may be for some Time interrupted or difused, yet sooner
or later it is again revived, tho' perhaps not exactly in the
old Manner, yet so near it, that the Inhabitants are seldom
entirely deprived of the Benefits resulting from it.

It has been of late apprehended, that the present Mon-
arch of *Persia*, *Kouli Khan*, has it in View to ruin this
Commerce entirely, as prejudicial to his Subjects, or rather
detrimental to his Plan of Power, which is to draw
the Commerce Northward, and make himself sole Master
of the Trade to the *Indies* through his Dominions. But
there is good Reason to doubt, whether this be not a
Scheme too large for him to execute in his Life-time;
and whether his Successors may not be brought to alter it,
and to put things again upon their old Foot: Yet thus
much is certain, that if this Monarch and his Successors
should ever compass this Design, and divert the whole
Trade of their Dominions to the *Caspian-Sea*, it will have
great Effects with respect to *Aleppo* and the other Towns on
that Coast, and that in the same Manner, and to as high
a Degree, as the Discovery of the Passage to the *Indies*
has had on the Port of *Alexandria* in *Egypt*.

11. As the *Arabian* Empire took Rise in the Peninsula
of *Arabia*, so as soon as the Princes of that new Power
had any Leisure to form a Scheme of Politics, they be-
gan to frame a Design of attracting the *Indian* Trade from
the Country of *Persia* where it then centered, as near as
possible to the Place of their own Residence. It was with
this View, that *Omar* the Second *Khaliff*, in the 15th
Year of the *Hegira*. A. D. 636, caused the City of *Baf-
sora*, or *Balsora*, to be built a little above the Entrance into
the *Persian* Gulph.

There never was perhaps a City more happily erected,
or which sooner came to answer the End for which it was
erected than this. The *Khaliff* did not indeed make it
the Place of their Residence, and if they had, it is highly
probable it would have been rather disadvantageous than
serviceable to it. But they always sent thither a Person
of Dignity as Governor, and made it the grand Port
of their Dominions. It became by this Means, and by
the Privileges allowed to all Merchants that settled there,
exceedingly rich and very populous; and that too in a sur-
prising short Space of Time.

It was for several Ages a Place of the greatest Com-
merce, and of the greatest Trade in the known World.
The richest Commodities in the East, but more especially
Spices, precious Stones, Drugs, Silk and Cotton Manu-
factures were brought hither, and dispersed from hence
by Caravans, till such Times as the *Portuguese* became
Masters of the City and Island of *Ormuz* on the Coast
of *Persia*; which for a long Time sunk the Commerce
of *Balsora*. But after the *Shah Abbas*, with the Assistance
of the *English*, made himself Master of that Island, and
erected the famous Emporium of *Bander Abassi*, or *Gan-
dawan*, on the opposite Coast of *Persia*, the Trade of *Baf-
sora* began to revive, and has been ever since considered as,
beyond Comparison, the greatest Mart of this Part of the
World, as ingrossing all the Trade of the *Persian* Gulph.

It was, as we have already shewn, originally in the
Hands of the *Arabs*; the *Persians* became afterwards its
Masters: But since the Year 1668 it has belonged to the
Turks.

At the same Time that the *Khaliff*s secured to their
Subjects all the Trade on this Side, by opening so conven-
ient a Port as that of *Balsora*, they took no less Care of
the *Arabian* Gulph, and of the Trade carried on thereby;
for they directed a Canal to be cut from *Cairo* to *Suez*,
which is still visible, though at present choaked up with
Sand, and partly by Shipping, partly by Caravans, esta-

blished such a Trade there, as very near equalled that car-
ried on in the Days of the *Romans*. Thus the Reader sees
that, for a long Tract of Time, the whole Trade of the
Indies was in the Hands of the *Mohammedans*, and carried
on by them with all the Caution and Success imaginable.

It is true, that this is now in a great measure in the
Hands of the *Europeans*, who are established in all the
Ports of this Part of the World, and carry on a prodigious
Trade in their own Bottoms. But notwithstanding this,
perhaps we yet owe the Trade of the *Indies* more to the
Weakness of the *Turkish* Policy, than to any other Cause
whatever; for, notwithstanding our Superiority in Mari-
time Skill and Maritime Force, if the *Turks* were a People
in any degree addicted to Trade, they might still drive a
great Part of that to the *Indies* by the old Rout through
the *Red-Sea*, in spite of all our Power and of all our Set-
tlements.

This will appear clearly to the Reader, if he considers
that *Surat* is to well situated, that it might be very easily
made the Centre of all the Commerce of the *Indies*. From
Surat to *Suez* is not above a Month or five Weeks Sail;
and from *Suez* to *Cairo* is a Journey of no more than three
Days; from *Cairo* to *Alexandria* Goods may be conveyed in
the same Space of Time; and from *Alexandria* to *Mar-
sailles* is a Voyage only of a Fortnight or three Weeks. So
that taking this altogether, it appears far from being an
Impossibility for a Person to go from *Marsailles* to *Surat* in
the Space of two Months, or ten Weeks. It may indeed
be objected, that the Voyage from *Suez* to *Surat*, and con-
sequently that from *Surat* to *Suez*, depends on the *Mon-
soons*; but, notwithstanding this, if proper Magazines were
erected at both Ports, and Fleets went regularly between
them at Spring and Fall, an immense Quantity of *Indian*
Goods might be this Way brought into *Europe* much
fresher, and in much better Condition, than they are at
present.

This is a Project the *French* have often had in their
Heads; and if ever they should prevail with the *Ottoman*
Port to concur with them in carrying it into Execution,
there is no answering for its Consequences. It must be
owned, that an Attempt of this sort might in the Begin-
ning meet with many Obstacles; but if once the *Turks* tasted
the Sweets of this Commerce, or were tempted by the Of-
fer of a large Sum of Money to be paid annuallly at *Con-
stantinople*, as an Equivalent for the Duties with which
Goods coming this Way into *Europe* might be charged, it
is not easy to say how far this might operate; for how in-
dolent and negligent soever they may be with regard to
Trade and Navigation, yet there is no Nation in the World
more avaricious than they, or more ready to do any thing
to which they are prompted for Money.

12. The last Rout we shall mention, is one not very
ancient, and which nevertheless is now, in a manner, abso-
lutely forgot. The *Genoese* had it formerly in their
Hauls, and it is no other than the Port of *Cassa*, in
Crim Tartary. This Country was anciently called the
Cheersonesus Taurica; and this City is very often mentioned
by old Writers under the name of *Tbedostia*. It was taken
from the *Genoese*, who, while they possessed it, were
Masters of the Trade of the *Black-Sea*, by *Mohammed* the
Great, A. D. 1475. It was then in a very flourishing
Condition, and was one of the best-built and richest
Places of its Size in *Europe*.

It stands at the Foot of a small Hill upon the Sea-Shore,
North and South, with long Walls stretching on both
Sides down to the Sea; so that from the Port, which is very
large, very safe, and very commodious, it makes a very
agreeable Appearance: There is a Cattle on the South
Side, in which the *Turkish* *Bashaw* resides, with his Gar-
rison. The Number of Houses in the Place is about
4000; of which 800 belong to Christians, the rest to
Turks and *Tartars*, but the former are Masters here, and
it is the only Place the Grand Signor has in *Tartary*.

After the *Genoese* were driven from hence, they carried
on for a long time a very advantageous Trade with the
Inhabitants, who, by the Way of the *Caspian-Sea*, found means

See the Article *Baltic* in *Hobbes*. All this Commerce has been carried one Way, though not constantly in the Hands of one People.
I take most of these Particulars from the Description of *Egypt*, compiled from the Papers of *M. Belin*, the
French Consul. *Com. Geograph. Ant. v. 1. p. 499.*

means to enter into a considerable Trade in Spices, Drugs, Cotton, Silks, and other *Indian* Commodities. At last the *Turks* grew jealous of the Intercourse of the *Genoese* in these Parts, and absolutely excluded them, as well as all other Nations, from trading to, or even entering into the *Black-Sea*. Yet this did not immediately put an End to the Commerce between this Place and *Genoa*; for the *Tartars* preferred so strong a Sense of the Advantages derived from this Commerce, that for some time they prosecuted it in their own Vessels, and carried the Spices and other *Indian* Goods which they received by Caravans from *Africana*, and which had been brought thither from the opposite Side of the *Caspian-Sea* to *Genoa*; but the *Turks*, equally jealous of this, as they had been of the former Correspondence, soon put an End to this Commerce likewise, and thereby secured themselves from the Fears of seeing a Christian Fleet in those Seas.

Yet *Caffa* still remains a Place of very great Trade, and the Staple of the *Black-Sea*, inasmuch that Sir *John Chardin* tells us, he saw in the Space of forty Day no less than four hundred Ships sail in and out of this Port. The *Venetians*, in hopes perhaps of reviving, in some measure, the old Trade, procured, at a great Expence, in the Year 1672, Leave from the *Porte* to send annually a Cargo of their Manufactures on board a small Squadron of their own into the *Black-Sea*; but this Trade did not last long, for the *Jews* insinuated so many Dangers would arise from permitting this Commerce, that in a Year's time the Licence was retracted; and thus ended all Attempts for retrieving the Commerce of the *Indies* by this Rout. In Propects of Time, however, it is not at all incredible that it may be restored; for since the *Russians* are Masters of *Azoff*, and have a considerable Number of trading Vessels in those Seas, it is not impossible that some such Revolution may happen, as will set the Navigation of the *Black-Sea* entirely open, and thereby restore to the *Europeans* in general, but more especially to the *Italian* States, a Commerce highly profitable in itself, and capable of great Improvements.

13. We have now entirely done with the ancient History of this Commerce, and shall add only a very few Observations on this, as on the former Sections, and those with no other View, than to convince the Reader of the Importance of this History, and to shew what an Effect it has had, and is ever like to have, in favour of those who are possessed of it.

Every one of the four great Empires, which, in past Ages, have had the supreme Dominion, and the History of which still makes to great a Part of that Learning which is most valued, had each of them a large Share, and many of them the entire Monopoly of the Trade to the *Indies*.

The Accounts we have of the *Assyrian* Empire are very short, as well as very obscure; and yet the Attempt made by *Semiramis* to conquer the *Indies*, is the most considerable Event of which, with respect to that Monarchy, we have any Account. The *Persians*, as we have shewn at large, owed a great Part of their Wealth to this Commerce, as it was carried on by Land, while their constant Allies, the *Tyrrians*, derived from it much of their Maritime Power, which was almost all the *Persians* had to depend upon by Sea. The Prospect of ingrossing it was the principal Object which *Alexander the Great* had in View, which afterwards occupied the Thoughts of his principal Commanders, and which was, at length, in a great measure, accomplished by the *Ptolemies* in *Egypt*. The *Romans* acquired it, together with the Dominions of those Princes, and held it as long as they retained any Power answerable to their ancient Reputation. The *Arabians* became Masters of it in consequence of their rapid Victories, and it has since proved the great Source of Maritime Power in the *West*.

This seems to be a very full and convincing Answer to the Objection that has been made, as if the Trade to the

Indies was in itself prejudicial to the *European*. For how is it possible to conceive there can be any Truth in this, when we plainly see that Riches and Empire constantly attended it, and have been as constantly left together with this Trade. This too will the more strongly appear, when we reflect on the Rise and on the Decline of the *Italian* Republicks, which, as they owed their Fame and their Riches, the flourishing State of their Affairs at home, and their great Power by Sea, to the Share they had in this Commerce, so together with that they lost both, and have made a Figure since by Dart chiefly of the Remains of that Wealth and Strength which this Commerce procured them.

It is a Point also extremely worthy of Notice, that all the Routs known to, and practised by, the Ancients, are still in some measure preserved; so that almost all the different Nations in *Europe*, have still, some Way or other, Views upon this Trade. In the North, *Sweden* and *Denmark* carry it on by Sea, with some Pains and Difficulty indeed, but, at the same time, with considerable Profit. The *Russians* have three Ways at coming at the *Indies*, the first is, by sailing North-about from *Archangel* to *Japan*, which though never hitherto accomplished, yet still believed practicable; and if ever that Rout should be brought into Practice, it will be by them; which however could not be done without changing, in a great measure, the Face of Affairs in *Europe*, since the Wealth of the *Indies*, joined to the Force of the *Muscovite* Empire, will raise such a Power in the North, as could not but produce extraordinary Consequences. The second, of Caravans from *Moscow* to *China* directly; and the third, by the *Caspian-Sea*, joined to the Caravans that are continually passing through the *Greater* and *Lesser* *Baltians*. Such of the *German* Hanse Towns as still preserve any Power by Sea, such as *Lubeck*, *Bremen*, and *Hamburg*, keep up a constant Correspondence with *Vence* and *Andania*. *Great Britain*, *Holland*, and *France*, have Settlements in the *East-Indies*, and trade thither by the *Cape of Good-Hope*. The *Spaniards* supply their Empire in the *West-Indies* with the Commodities of the *East-Indies*, from the *Philippines*; but it does not appear that they bring much of the Merchandize of those Parts into *Europe*. The *Portuguese* have yet in their Hands the Remains of those vast Dominions which they once possessed, and consequently have still a Share in this Commerce. The *Venetians* drive yet a very considerable Trade at *Alexandria*, in Spices, Drugs, Perfumes, Cotton, and Silk Manufactures from the *Indies*.

It is easy to discern from this general Account of the past and present State of this important Commerce, that it still ingrosses the Attention of all the Mercantile World, that Projects are continually forming to enlarge it in Countries where it is already settled, and to transfer it into those where at present it is not exercised: And how far any of these Projects are, or may be practicable, the Reader will best judge from what has been said above concerning the several Routs thither in this Section, which we shall conclude with this Remark, That the Oriental Nations have, generally speaking, adhered closely to their own Maxims, and have never once been tempted, by the many Visits made them by the different Nations of *Europe*, to fit out any Fleet, or even to send so much as a single Ship beyond the *Cape of Good-Hope*; though with respect to their Commerce by Land, as the *Indian* Merchants formerly travelled to great Distances in Caravans, they do the same at present; for though Custom be every where a Law, yet among the Eastern Nations it remains most inviolate; and, as the Reader will observe from the subsequent Travels, what was practised Ages ago, is still the Usage in those Parts, or at least Variations have been introduced by Force, and cannot therefore be imputed in any degree to the Genius of the People.

† Sir *John Chardin's* Travels to *Perfu*.

SECTION XVIII.

*An Account of the Travels of Two Mohammedans through India and China, in the Ninth Century.*Translated from the *Arabick* by the Abbé RENAUDOT.

1. *A concise Account of the original Editor of these Voyages, and of the Works which render him famous.* 2. *The Antiquity of these Relations, and of the Manuscript from which they were translated.* 3. *Of the Sea of Merkend, and of the Islands therein.* 4. *Of the Island of Serandib, or Ceylon; the Riches it contains, and the Manners of its Inhabitants.* 5. *Of several other Islands, particularly those of Andaman, the Inhabitants of which eat human Flesh.* 6. *Of an Island in which are Silver Mines, and other extraordinary Things in these Seas.* 7. *Of the Trade of China, and of the Respect shewn there to the Mohammedans.* 8. *A very clear and distinct Account of the Navigation of China, which is probably the first Account of it that was ever published.* 9. *Of an Island in which there are no Women seen.* 10. *Of the Port of Cai fi in China, and of the Irregularity of the Tides there.* 11. *Of many remarkable Things observed in the Countries touch'd at in this Voyage to China.* 12. *The Customs and Manner of the Chinese in Civil and Religious Affairs.* 13. *An Account of the four great Kings, viz. the Khaliff, the Emperor of China, the Emperor of the Greeks, and the Balhara of the Indies.* 14. *A succinct Account of several other Kingdoms in the Indies.* 15. *The Account of China resum'd, the Number of the Cities in that Empire, and the extraordinary Discipline maintained in them.* 16. *Of the Burials of the Chinese, and of their domestic Affairs.* 17. *Of the Power of the Vice-Roy, and of the Emperor of China.* 18. *Of the publick Revenues of the Chinese Empire.* 19. *Of the Punishments requisite for travelling through that Country.* 20. *Of the Administration of Justice in China.* 21. *Their Laws with regard to Bankrupts.* 22. *Other wise Regulations practis'd in that Country.* 23. *Miscellaneous Customs among the Chinese.* 24. *Of the Methods practis'd for discovering Truth in Trials in the Indies.* 25. *Some other extraordinary Customs among the Indians.* 26. *The Vices of the Chinese, and the Punishment of bad Governors among them.* 27. *Several Laws in India and China.* 28. *Strange Customs that prevail among the Inhabitants of both Countries.* 29. *A Comparison between India and China.* 30. *Of other Countries bordering upon China.* 31. *The Preface of the second Author in Confirmation of what the former had deliver'd.* 32. *The History of a great Revolution in China, by the Rebellion of one Baichu.* 33. *The Emperor of China restored, and the Division of that Empire.* 34. *Of various Punishments in use among the Chinese.* 35. *A curious Account of the Maintenance of publick Women in China.* 36. *Of various Regulations in the Chinese Empire.* 37. *Of the Excellence of the Chinese Painters.* 38. *The History of Ibn Wahab, an Arab, who made a Voyage into Persia.* 39. *His Conference with the Emperor.* 40. *Some very singular Passages in relation to the Knowledge of the Emperor, with regard to the Religion in other Countries.* 41. *Conclusion of the Arab's Conference with the Emperor of China.* 42. *Other Circumstances from that Traveller's Relation.* 43. *Of the Communication between the Ocean and the Mediterranean.* 44. *Of the Province of Zapage, and of the Commodities it produces.* 45. *A remarkable Story of an ancient Prince of this Country.* 46. *The War between the King of Komur and the King of Zapage.* 47. *The Conclusion of that War.* 48. *Of the Doctrine of the Metempsychosis, or Transmigration of Souls, with a remarkable Story on that Subject.* 49. *A most singular Act of Justice done by the Emperor of China, on behalf of an Arabian Merchant, against his Pursuivante.* 50. *The great Care taken with respect to the Administration of Justice in China.* 51. *Of the Situation of the Province of Chottan.* 52. *Of the Animal that produces Musk; the Reason why the Musk of Thibet is better than that of China, and of the several Sorts of that Perfume.* 53. *Of certain Customs in China that resemble those of the Arabs.* 54. *The Custom of the Indians to burn themselves on particular Occasions, and of their great Constancy in Acts of this Nature.* 55. *An incredible Story of the desperate Courage of a certain Indian.* 56. *Other Instances of the same Nature.* 57. *Of the immense Riches of Serandib, or Ceylon, and of the Laws of that Country.* 58. *Of the flagrant Vices, and excessive Drunkenness of those People.* 59. *Of the rainy Season in the Indies.* 60. *Of the Indian Brahmans and Penitents.* 61. *Monstrous Errors proceeding from religious Mistakes.* 62. *Ships built, rigg'd, and laden from a Plantation of Cocoa Trees.* 63. *Of the Country of the Zanges, or Negroes, with an Account of their People.* 64. *Of the Island of Socotra, and its Productions.* 65. *Of the different Seas omitted in the former Relation.* 66. *Of the Riches of the Indian Ocean.* 67. *Of the Formation of Pearl, according to the Notion of the Arabs.* 68. *A very singular Story on the foregoing Subject.* 69. *Some farther Particulars as to the Customs of the Indians.* 70. *The Use of this Section with regard to the History of the Indies in the Ninth Century.* 71. *Additional Remarks and Observations.*

THE most natural, easy, and certain Method of attaining a perfect Knowledge of the Discoveries made in the *East-Indies*, is unquestionably that of reading the best Voyages and Travels into those Parts in the Order of Time in which they were made; by which means they illustrate each other, and serve as a Basis of Comparisons, deliver the History of Places and Persons with the least possible Confusion, and show us at once the different State of the Countries mentioned in two different Periods of Time, and the Advances that

were made in perfecting the Knowledge of those Countries by such as undertook to go thither, and to report what they had seen and heard, for the Information of others and of Posterity. Of all the Travellers into these Parts of the World, whose Writings are still preserved, those which are contained in this Section are beyond all doubt the most ancient, and in that respect, as well as in many others, extremely curious. To render these as clear and as intelligible as is possible to our Readers, we shall first give some Memoirs of that eminent French Critick

Men throw Branches of the Coconut Tree into the Sea, and the Shells stick to them. They call them *Kaptaje* in their Language.

Beyond these Islands, in the Sea of *Herkend*, is *Serendib*, or *Ceylon*, the chief of all those Islands, which are called *Delajat*. It is all compassed by the Sea, and on the Coast they fish for Pearl. In this Country there is a Mountain called *Ralam*, to the Top of which it is thought *Adam* ascended, and there left the Print of his Foot in a Rock, which is seventy Cubits in Length; and they say that *Moa* at the same time flood with his other Foot in the Sea. About this Mountain are Mines of Rubies, Opals, and Amethysts. This Island, which is of great Extent, has two Kingdoms; and here are found Lignum Vitæ, Gold, precious Stones, and Pearls, which are not so common on the Coast; as also a Kind of Large Shells, which they use instead of Trumpets, and are much valued. In the same Sea, towards the *Serendib*, there are other Islands, but not so many in Number, though of vast Extent, and unknown. One of these Islands, called *Rum*, is the richest Prince, in which there is great Plenty of Gold. The Inhabitants here have Coconut Trees, which they use them with Food, and therewith also they paint their Bodies, and oil themselves.

The Custom of the Country is, that no one may marry till he has slain an Enemy in Battle, and brought off his Head. If he has killed two, he claims two Wives; and if he has slain fifty, he may marry fifty Wives. This Custom proceeds from the Number of Enemies which surround them; so that he amongst them who kills the greatest Number, is the most considered. These Islands are also abound with Elephants, Red wood, and Trees called *Carbazan*, and the Inhabitants eat human Flesh.

These Islands separate the Sea of *Herkend* from the Sea of *Malabar*, and beyond them are others called *Najab*, which are pretty well peopled; both the Men and the Women there go naked, except that the Women conceal their private Parts with the Leaves of Trees. When Shipping is among these Islands, the Inhabitants consist in Embarkations, and bring with them Ambergris and Coconut-nuts, which they truck for Iron; for they want no Cloathing, being free from the Inconveniences either of Heat or Cold. Beyond these two Islands lies the Sea of *Andaman*: The People on this Coast eat human Flesh quite raw; their Complexion is black, their Hair curled, their Countenance and Eyes frightful, their Feet are very large, and almost a Cubit in Length, and they go quite naked. They have no Sorts of Barks or other Vessels; if they had, they would seize and devour the Passengers they could lay Hands on. When Ships have been kept back by contrary Winds, they are often in that Sea obliged to drop Anchor on this barbarous Coast for the sake of Water, when they have expended their Stocks; and upon these Occasions they commonly lose the Lives of their Men.

Beyond this there is a mountainous and yet inhabited Island, where, it is said, there are Mines of Silver; but as Rocks do not lie in the usual Track of Shipping, many have sought for it in vain, though remarkable for a very lofty Mountain, which is called *Kapbenai*. It once so happened, that a Ship sailing in this Latitude had Sight of the Mountain, and shap'd her Course for it, and falling in with the Land, sent a Boat on shore, with Hands to cut Wood; The Men kindled a Fire, and saw Silver run from it, which plainly indicated there was a Mine of this Metal in that Place; they ship'd therefore as much of the Earth or

Ore as they thought fit; but as they were proceeding on their Voyage they met with such a Storm, that to lighten their Ship, they were under a Necessity of throwing all their Ore over-board.

Since that Time the Mountain has been carefully sought, but it has never since been seen. To conclude, there are many such Islands in the Sea, more in Number than can be set down, some inaccessible by Seamen, and some unknown to them. In these Seas it often happens, that a whitish Cloud at once spreads over a Ship, and lets down a long thin Tongue or Spout, quite to the Surface of the Water, which then is turned round as by a Whirlwind; and if a Vessel happens to be in the Way, she is immediately swallowed up thereby. But at length this Cloud mounts up again, and discharges itself in a prodigious Rain. It is not known whether this Water is sucked up by the Clouds, or how this comes to pass. All these Seas are subject to great Storms, which makes them boil up like Water over a Fire. In it is that the Surt ditches Ships against the Planis, and breaks them to Pieces with unparallelable Violence; and then also it is that Fish of all Sorts are thrown dead ashore upon the Rocks. The Wind, which commonly blows upon the Sea of *Herkend*, is from another Quarter, viz. from the N. W. but the Sea is as to being so to as violent Agitations as those just mentioned, and then Ambergris is torn up from the Bottom, and particularly where it is very deep, and the deeper it is, the more valuable the Ambergris.

It is likewise observed, with respect to that Sea, that when it is thus tossed by the tempestuous Winds, it sparkles like Fire, and that it is infected by a certain Kind of Fish called *Lockham*, which frequently preys upon Men. This is probably no other than the Shark, which is common enough on all the Coasts of the *Indies*. If there is a Part of the Manuscript lost, wherein the Author treated of the Trade to *China*, as it stood in his Time, and of the Causes which had brought it into a declining Condition. He then proceeds thus:

7. Amongst others, the Firs that frequently happen at *Cansu* are not the least. *Cansu* is the Port of all the Ships of the *Arabs*, who trade in *China*, and Firs are there very frequent, because the Houses are built with nothing but Wood, or else with split Cane; besides, Ships are often lost in going and coming, or they are plundered, or obliged to make too long a Stay in Harbours, or to sell their Goods out of the Country subject to the *Arabs*, and there make up their Cargo. In short, Ships are under a Necessity of waiting a considerable Time in retitting, not to speak of any other Causes of Delay.

Solman, the Merchant, relates, that at *Cansu*, which is the principal Resort of Merchants, there is a *Sickammedan* appointed Judge over those of his Religion, by the Authority of the Emperor of *China*; and that he is Judge of all the *Mohammedans* who resort to those Parts. Upon festival Days he performs the publick Service with the *Mohammedans*, and pronounces the Sermon or *Kotbat*, which he concludes in the usual Form, with Prayers for the Sultan of *Mollems* or *Mullemen*. The Merchants of *Irak*, i. e. *Persia*, who trade thither, are no way dissatisfied with his Conduct or Administration in this Post, because his Decisions are just and equitable, and conformable to the *Koran*.

8. As for the Places whence Ships depart, and those they touch at, many Petitions affirm, that the Navigation is performed in the following Order; most of the *Chinese* Ships take in their Cargo at *Siraff*, where also they ship

As we have shewn elsewhere, is the *Tapejans* of the Ancients; and I think scarce any Island has been called by more Names than which have been bestowed on this; but the case in the ancient Work of *Cosmas I. Scythicus*, it is very easy to conjecture that he shew'd that it is only a *Greek* Permutation given to the true Name; for his is often put for *u*, and consequently *Serendib* is the same as *Serendib*, that is, *Serendib*; whence the modern Name as we usually write it, viz. the Island of *Ceylon*.

Some of the *Arabian* Geographers, there are called the Islands of *Rama*; we shall give the Reader for Account of them in a subsequent Chapter.

I cannot but be surpris'd, that upon a strict Enquiry, most of those Stories of *Mansutors* have been found to be Fables void of all Foundation; but I have followed, in regard to our Author's Account, that what he says has never yet been disprov'd; for the very latest Accounts we have of these People do give them the same Character that he does. I have also followed the Merchant, it is very probable that some Account was given of him in the Page that is lost; but as to the *Mansutors*, I have a very extraordinary Particular Notice, because it plainly shews, that the *Mohammedans* had on some Time a Commerce with the East of *India*; and that, as we have seen in what other Accounts we could never have suspected.

I have also followed the same Tradition, at this Instance of Time, the Route laid down by our Author, chiefly by reason of the Change of the Name of the Port; which we have particular Reason to think, that it is not to be met with in any of our Maps, of which however we have many; but other *Arabs* who have been in the *Indies* have shewn us, that it stood in the Time of the *Arabs*, and that it was the Trade, there it was a part of the Island of *Ceylon*.

they have no Store of Palms, they have only a few about some private Houses.

Their Drink is a kind of Wine made of Rice; they have no other Wine in the Country, nor is there any brought to them: They know not what it is, nor do they drink of it. They have Vinegar also, and a kind of Comfit like what the Arabs call *Nates*, and some others.

They are not very nice in point of Cleanliness, and wash not with Water when they ease Nature, but only wipe themselves with Paper; they eat of dead Animals, and practise many other Things like the *Magians*; and in Truth, the Religion of the one and the other is much the same. The *Chinese* Women appear uncovered, and adorn their Heads with small Ivory Combs, of which they wear sometimes a Score together; the Men are covered with Caps of a particular Make. The Law they observe with regard to Thieves is to put them to Death as soon as they are caught.

Our Author seems here to interrupt his Narration, and to take occasion from what he has before reported (and which, in the main, is confirmed by later Writers), to compare the Customs of the *Indians* and *Chinese*, intermixing his Discourse also with other Matters.

13. The *Indians* and *Chinese* agree, that there are four great or principal Kings in the World; they all allow the King of the *Arabs* to be the first, and to be, beyond Dispute, the most powerful of Kings, the most wealthy and the most excellent every way; because he is the Prince and Head of a great Religion, and because no other surpasses him.

The Emperor of *China* reckons himself next after the King of the *Arabs*, and after him the King of the *Greeks*, and lastly the *Barbara*, King of *Mobarmi al Adon*, or of *Eden* who have their Ears bored?

This *Barbara* is the most illustrious Prince in all the *Indies* and all the other Kings there, though each is Master and independent in his Kingdom, acknowledge thus far his Pre-eminence. When he sends Embassadors to them they receive them with extraordinary Honour, because of the Respect they bear him. This King makes magnificent Presents after the Manner of the *Arabs*, and has Horles and Elephants in great Numbers, and great Treasures in Money. He has also two Pieces of Silver called *Barbarian Drams*, which weigh half a Dram more than the *Arabian Dram*. They are coined with the Dye of the Prince, and bear the Year of his Reign from the last of the Reign of his Predecessor.

They compute not their Years from the *Aera of Mohammed*, as the *Arabs* do, but only by the Years of their Kings. Most of these Princes live a long Time, and many of them have reigned above fifty Years, and those of the Country believe, that the Length of their Lives and of their Reigns is granted them in Recompence for their Kindness to the *Arabs*. In Truth, there are no Princes more heartily affectionate to the *Arabs*, and their Subjects prize as the same Friendship for us.

Barbara is not a proper Name, but an Appellative common to all these Kings, as was *Ceibes* and some others. The Country under the Dominion of this Prince begins on the Coast of the Province called *Kambam*, and reaches by Land to the Confines of *China*. He is surrounded by the Dominions of many Kings, who are at War with him, and yet he never marches against them.

14. One of those Kings is the King of *Harez*, who has very numerous Forces, and is stronger in Horle than all other Princes of the *Indies*, but is an Enemy to the *Arabs*, though he at the same Time confides their King to be the greatest of Kings, nor is there a Prince in the *Indies* who has a greater Aversion to the *Mohammedan*

Faith. His Dominions are on a Promontory, where are much Riches, many Camels and other Cattle. The Inhabitants here traffick for Silver, which they watch for, and they lay there are Mines of the same on the Continent. There is no Talk of Robbers in this Country any more than in the Rest of the *Indies*.

On one Side of this Kingdom lies that of *Tafek*, which is not of very great Extent. This King has the finest white Women in all the *Indies*; but he is awed by the Kings about him, his Army being but small. He has a great Affection for the *Arabs*, as well as the *Barbara*.

These Kingdoms border upon the Lands of a King called *Rami*, who is at War with the King of *Harez*, and with the *Barbara* also. This Prince is not much considered either for his Birth, or the Antiquity of his Kingdom; but his Forces are more numerous than those of the *Barbara*, and even than those of the Kings of *Harez* and *Tafek*. They say, that when he takes the Field, he appears at the Head of fifty thousand Elephants, and that he commonly marches in the Winter Season; he aunts the Elephants, not being able to bear Thirst, he can move at another Time. They add likewise, that in his Army there are commonly from ten to fifteen thousand Tents. In this same Country they make Cotton Garments in such extraordinary Perfection, that no where else are the like to be seen: Their Garments are for the most Part round, and wove to that degree of Fineness, that they may be drawn through a Ring of a moderate Size. Shells are current in this Country, and serve for small Money, notwithstanding that they have Gold and Silver, Wood Axes, and Sable skins, of which they make the Furniture for Saddles and Houfings.

In this same Country is the famous *Kirkandani*, that is, the *Rhinoceros*, or Unicorn, who has but one Horn upon his Forehead, and thereon a round Spot, with the Representation of a Man. The whole Horn is black, except the Spot in the Middle, which is white. The Unicorn is much smaller than the Elephant; from the Neck downwards he pretty much resembles the Buffalo; his strength is very extraordinary, for he excels therein all other Creatures; his Hoof is not cloven, and from his Foot to his Shoulder is all of a Piece. The Elephant fliest from the Unicorn, whose Lowing is like that of an Ox, with something of the Cry of the Camel; his Flesh is not forbidden, and we have eaten of it; there are great Numbers of this Creature in the Fens of this Kingdom, as also in all the other Provinces of the *Indies*; but the Horns of these are most esteemed, and upon them are generally seen the Figures of Men, Peacocks, Lilies, and other Resemblances. The *Chinese* adorn their Gardens with these sorts of Figures, so that some of their Gardens are worth two or three thousand Pieces of Gold in *China*, and sometimes more, the Price augmenting with the Beauty of the Figure: All the Things we have here enumerated are to be purchased in the Kingdom of *Rabni* for Shells, which are the current Money of the Country.

After this Kingdom there is another, which is an inland State distant from the Coast, and called *Kaschbin*; the Inhabitants are white, and bore their Ears; they have Camels, and their Country is for the most part desert, and full of Mountains; farther upon the Coast there is a small Kingdom called *Hirange*, which is very poor; but it has a Bay, where the Sea throws up great Quantities of Ambergris; they have also Elephants Teeth and Pepper; but the Inhabitants eat it green, because of the Smallness of the Quantity they gather. Beyond these Kingdoms here mentioned there are others of Number unknown, and among the rest that of *Alajer*; the Inhabitants are white, and dress after the *Chinese* Mode; their Country is full of Mountains, with white Tops, and of very great Extent; here are very great

It is very highly probable, that this *Barbara*, or Monarch of the Nation which have their Ears bored, which is plainly the *Indians*, was no other than the *Samovar*, or Emperor of *Cambat*, who, according to the Reports of the most ancient *Portuguese* Hillitians, was acknowledged as a King of *India* in the *Indies*, six hundred Years before they discovered the Passage to them by the *Cape of Good Hope*.

It is in another good Reason why the Monarch here mentioned should be taken for the Emperor of *Cambat*, since he likewise was not called by his proper Name, but by such an Appellative as this; and if we could obtain an Etymology of these Words that could be depended upon, it is very likely that *Barbar* and *Samovar* would be found to mean the same Thing.

It is also freely given in large an Account of the *Rhinoceros*, that we shall not trouble the Reader with any thing on that Subject here, but shall content ourselves with observing, that it is evident this Writer makes the Unicorn and the *Rhinoceros* the same Creature, agreeable to what we have observed elsewhere.

cheaper than they are to be had at Market: And hence the Death is of any long Continuance among the *Chinese*. The Sums that are gathered from this Capitation-tax, are laid up in the publick Treasury; and I believe, that from this Tax fifty thousand Dinars are paid every Day into the Treasury of *Chefu* alone, although this City is not one of the largest in *China*.

The Emperor reserves likewise to himself the Revenues which arise from the Salt-mines, and from a certain Herb which they drink with hot Water, and of which great Quantities are sold in all the Cities of *China*, to the Amount of great Sums; they call it *Techa*, that is Tea, and it is a Shrub, more bushy than the Pomegranate-tree, and it is a more pleasant Smell, but has a kind of Bitterness with it. Their Way is to boil Water, which they pour upon this Leaf; and this Drink cures all sorts of Diucales. Whatever Sums come into the Treasury, arise from the Poll-tax, the Duties upon Salt, and the Tax upon this Leaf.

In each City there is a small Bell hung to the Wall above the Prince's or Governor's Head; and this Bell may be rung by a String, which reaches about three Miles, and crosses the Highway, to the End that People may get at it; when the String is pulled, the Bell strikes over the Governor's Head, and straight he commands that the Person who thus demands Justice, be brought before him; and accordingly the Complainant sets forth his Case in Person; and the same Practice is in use throughout all other Provinces.

If a Man has a Mind to travel from one Place to another, he must take two Passes with him, the one from the Governor, the other from the Eunuch or Lieutenant. The Governor's Pass permits him to set out on his Journey, and takes Notice of the Name of the Traveller, and of those also of his Company, the Age and Family of the one and the other; for ever Body in *China*, whether a Native, or an *Arab*, or any other Foreigner, is obliged to declare all he knows of himself, nor can he possibly be otherwise.

The Eunuch, or Lieutenant's Pass, specifies the Quantities of Goods or Money which the Traveller and those who go along with them; and this is done for the Examination of the frontier Places, where these two Passes are examined; for whenever a Traveller arrives at any of them it is registered, That such a one, the Son of such a one, of such a Family, passed through this Place on such a Day, in such a Month, in such a Year, and in such Company; and by this Means they prevent any one from carrying off the Money or Effects of other Persons, or their being lost: So that if any Thing has been carried off usually, or the Traveller dies on the Road, they immediately know what is become of the Thing, and they are either restored to the Claimant or to his Heirs.

The *Chinese* administer Justice with great Strictness in all their Tribunals. When any Person commences a Suit against another, he sets down his Claim in Writing, and the Defendant writes down his Defence, which he signs, and holds between his Fingers. These two Writings are delivered in together; and being examined, Sentence is delivered in Writing, and each Party has his Papers returned them; but first they give back to the Defendant his Writing, that he may acknowledge it.

When one Party denies what the other affirms, he is obliged to return his Writing; and if the Defendant thinks himself to be in the wrong, he immediately delivers his Papers a second time, they also call for that of the Plaintiff, and then they try to him who denies what the other affirms, Making appear that your Antagonist has no Right to demand of you what is in Debate; but take Notice, if he makes out what you deny, you shall undergo twenty Strokes of the Bamboo upon the Backside, and pay a Fine

of twenty *Packages*, which make about two hundred *Dinars*. Now this Punishment is such, as the Criminal could not survive; it is so grievous, that no Person in all *China* may, of his own Authority, inflict it upon another, upon pain of Death, and Confiscation of his Goods, and no body is ever so hardy as to expose himself to so certain a Danger; wherefore Justice is well administered to every one. They require no Witnesses, nor do they put the Parties upon Oath.

21. When any Man becomes a Bankrupt in this Country, they throw him into Prison in the Governor's Palace, and he is immediately put upon the Declaration of his Effects. After he has been a Month in Prison, he is released by a Governor's Order, and Proclamation is made, That such a one, the Son of such a one, has consumed the Substance of such a one; and that if he has any Effects in the Hands of any Person, in any Shape whatsoever, it must be made known in the Term of a Month. In the mean time the Bankrupt is bamboosed on the Backside if Discovery is made of any Effects of his; and at the same time is upbraided with having been a Month in Prison eating and drinking, though he had wherewithal to satisfy his Creditors. He is chastised in the same manner, whether he makes any Declaration of his Effects or not. They reproach him, that he has made it his study to get by Fraud the Substance of private Persons into his Hands, and embuzzle it; and that he ought not to defraud those he had Dealings with, by stripping them of their Property. But after all, if they cannot discover him to have been guilty of any Fraud, and it is proved to the Magistrate, that the Man has nothing in the World, the Creditors are called in, and receive a Part of their Debt out of the Treasury of the *Baghun*. This is the ordinary Title of the Emperors of *China*, and signifies the Son of Heaven; but we commonly pronounce it after a different Manner, and call him *Maghun*. Then it is publicly forbidden to buy of or sell to this Man, upon pain of Death, that he may not defraud any of his Creditors by concealing their Money. If Discovery be made that he hath any Sums in the Hands of another, and if the Person he intrusts makes no Declaration within the Time limited, he is bamboosed to Death, and nothing is said to the Proprietor or Bankrupt. The Sums that they discover are divided among the Creditors, and the Debtor or Bankrupt must never more concern himself with Trade.

22. The *Chinese* have a Stone which is ten Cubits high, erected in the publick Squares of their Cities, and on this Stone are engraved the Names of all Sorts of Medicines, with the exact Price of each; and when the Poor stand in need of any Relief from Physick, they go to the Treasury, where they receive the Price each Medicine is rated at. There is in *China* no Tax upon Land; they only levy to much *per* Head, according to the Wealth and Possessions of the Subject. When a Male Child is born his Name is immediately entered in the King's Books; and when this Child has attained his eighteenth Year, he begins to pay for his Head; but they demand it not of the Man who has seen his eightieth Year on the contrary, he receives a Gratification by way of Pension from the publick Treasury; and in doing this, the *Chinese* say, That they make this Provision for him in his old Days, in Acknowledgment for what they received of him when he was young.

23. There are Schools in every Town for teaching the poor Children to write and read, and the Masters are maintained at the publick Charge. The Women wear nothing on their Heads but their Hair, whereas the Men are covered. In *China* there is certain Town called *Taya*, which has a Castle advantageously seated on a Hill, and all the Fortresses in the Kingdom are called by the same Name. The *Chinese* are generally handsome, of

It appears from hence, that the custom of drinking Tea in *China*, is much more ancient then we have generally imagined it, for it must have been so long before our Traveller went into this Country, otherwise a Tax upon it would have been ineffectual. It may not be amiss to observe here, that the Remarks of the Author are equally natural and judicious; for he mentions chiefly on those Things in which the *Chinese* differed most from the *Europeans*, as that they did in circumstances, were not very exact in waiting, and made no Conscience of eating Blood.

The Reader will remember that this was a settled Regulation among the ancient *Indians*, so that it is very probable that the *Chinese* derived a Part of their Policy from the *Indians*.

The Passes likewise consumed by later Travellers; and though there seems to be a great deal of Severity in it, yet it is well adapted to the manners of *China*, who would not fail to become Bankrupts frequently, if they were allowed to trade afterwards; and perhaps the strictness of the Law in other Countries, in case of a second or third Bankruptcy, might be found very effectual.

parts and Wolves, but no Lions. Highway Robbers are punished with Death.

29. Both the Chinese and the Indians imagine the Idols they worship speak to them and give them Answers. Neither the one nor the other kill their Meat by cutting the Throat, as the Mohammedans, but by beating them on the Mouth till they die. They wash not with Well-water; the Chinese wipe themselves with Paper, whereas the Indians wash every Day before they eat.

The Indians touch not their Wives while their Disease is upon them; but turn them out of their Houses, and avoid them; the Chinese behave in a quite contrary Manner. The Indians wash not only the Mouth, but the whole Body also before they eat, which the Chinese observe not. The Country of the Indies is larger in Extent than that of China, and exceeds it by one half; the Number of Kingdoms is greater in the Indies than in China, but China is the more populous of the two.

It is not usual to see Palm-trees either in the Indies or in China, but they have also other Sorts of Fruits and Trees, which they have not. The Indians have no Grapes, and the Chinese have not many, but both abound in other Fruits; though the Pomgranate thrives more plentifully in Java than in China.

The Chinese have no Sciences, and their Religion and most of their Laws are derived from the Indians; nay, they are of Opinion that the Indians taught them the Worship of Idols, and consider them as a very religious Nation; both the one and the other believe the Metempsychosis; but they differ in many Points touching the Precepts of their Religions. Physick and Philosophy are cultivated among the Indians, and the Chinese have some Skill in Medicine; but it almost wholly consists in the Art of applying hot Irons or Cauteries. They have also some Smattering of Astronomy, but therein also the Indians surpass the Chinese. I know not that there is so much as one of either Nation that has embraced Mohanmedichim, or speaks Arabic. The Indians have but few Horses, and there are none in China; but the Chinese have no Elephants, and cannot endure to have them in their Country, for they abhor them. The Indian Dominions furnish a great Number of Soldiers, who are not paid by the King, but when they are rendezvoused for War, take the Field entirely at their own Expence, and are no Charge to the King; whereas the Chinese allow their Forces much the same Pay as the Arabs.

China is a pleasant and fruitful Country; most of the Indian Provinces have no Cities, whereas in China there are many in Number, great in Extent, and well fortified: The Climate of China is more wholesome, and the Country itself less fenny. The Air there is also much better, and there is scarce a blind Person to be seen, or any one subject to the Diseases of the Eyes; and the same Advantages are enjoyed by several Provinces of the Indies: The Rivers of those two Countries are large, and surpass the European Rivers; much Rain falls in both their Countries. In the Indies are many desert Tracks, but China is cultivated and peopled throughout its whole Extent. The Language are handiomer than the Indians, and come near to the Arabs, not only in Countenance but in Dress, in their Way of riding, in their Manners, and in their Ceremonies: They wear long Garmens, and Girdles in form of Belts. The Indians wear two short Vests; and the Men, as well as the Women, wear golden Bracelets, adorned with precious Stones.

Beyond the Continent of China, there is a Country called Tagaragat, from the Name of a Nation of the Turks, who there inhabit, and also the Country of Kalkin, or Ket, which is bordering on the Country of the Turks. The Islands of Sida are inhabited by white People, who send Presents to the Emperor of China, and who are judged, that if they did not send him Presents, the Rain of Heaven would not fall upon their Country. None

of our People have been there to inform us concerning them: They have white Falcons.

As we are now arrived to the End of this Work, it may not be amiss to offer here some Remarks that may tend to enlighten the foregoing Discourse, and prepare us at the same time for that which is to come. We are informed that the Date of this Narration was of the Hegira 237. A. D. 851. which Circumstance, though preferred to us in the ensuing Discourse, was very probably contained in the first Leaf of this, which is wanting in the Manuscript. But though it was written then, yet it seems highly probable, that our Author's first Journey to the Indies was, at least, twenty Years before; because he observes, that he made a second Journey there sixteen Years afterwards; and we may very well allow four Years for the Time spent in the first Journey, and the Space that might intervene between his Return and his composing this Treatise. According to this Calculation, his first Voyage to the Indies was in the Year of the Hegira 217. A. D. 833; and his second *An Heg.* 235. A. D. 849.

As to the Occasion of his Voyages, there is nothing occurs in this Account that can give us the least Light into it; however, it seems most probable that he underwent these Fatigues on the score of Commerce; for it can hardly be supposed, that a Man would have made so long a Journey a second Time purely out of Curiosity, and to satisfy the Desire of being better acquainted with these People, which had been excited by his former Intercourse with them. There is not much to be observed with respect to the Form of this Treatise, or the Style in which it is written; and yet something there is worth mentioning with respect to each of them. We cannot, indeed, boast much of the Regularity of his Method; and yet it would be unjust to condemn it entirely, because, for want of having the Introduction to it, we can not determine exactly what was his Plan, and consequently cannot say how far he came up to or fell short of it. One Thing I think is manifest, which is, that the Scope of his Undertaking is a Comparison between the Indians and the Chinese; at least he falls into this immediately after he has described the usual Navigation from Sraf to China; and considered in this Light, his Treatise appears regular enough. As to his Style, it is extremely simple and plain, and has nothing of that swelling hyperbolical Eloquence which is generally observed in oriental Writers; upon which, I beg leave to remark, that with regard to the Arabs, as well as other Nations, this was a Vice that prevailed in later Times, after Poetry and Rhetorick had been more cultivated than they were in the first Ages of their Empire, which has been the Case in most other Nations.

One cannot possibly doubt, that this Piece was extremely well received when it first came abroad, and that it had maintained its Reputation for a considerable Space of Time, appears from the second Treatise, which we are about to give the Reader. It seems, that when the Affairs of China were better known, some Prince, or other Person of Distinction, desired the Author of the following Pages to look over that Discourse, and to inform him, how far the Facts contained therein had been confirmed or contradicted, by succeeding Relations. What Time this happened, we cannot with any Certainty say, from the Comparison of the two Pieces, or from the Lights given us by the learned and accurate Critick who published them. The Manuscript which the Abbe Renaudot made use of, was apparently older than the Year of the Hegira 819, which answers to the Year of Christ 1173; but the Discourse must certainly have been written long before that Time. In our Notes we have shewn that Elen-Habab travelled into China, A. H. 885. A. D. 898; and the Author of this last Treatise informs us, that he had conversed with this Man after his Return, and had from him the Facts which he has inserted in his Discourse; so that the Book itself must have been two Centuries older

1. In this Distinction we have already given in our Account of the Philosophy of the Mohammedans; and in our Notes upon the subsequent Treatise we shall see Cause to shew when it was first introduced into China, and with what Modifications it is there taught there.

2. We shall take another Opportunity of acquainting the Reader with the History of the ancient Turks, and shall only observe here, that the Mohammedans are entreated to be considered as dwelling in their native Region, before they became famous by their Inroads into Persia, when the Country every where meant in this and in the subsequent Discourse by the Name of Saka, and before they became Mohammedans; for the more necessary, because from the present State of Things it is very natural to connect the Ideas which we have of the modern Turks, with their Accounts of their Ancestors.

than the Manuscript from which the Abbé *Renaudot* published it, and might probably be written sixty or seventy Years after the foregoing Treatise. These are all the Lights which, from an assiduous Study of these valuable Fragments of Antiquity, we have been able to give the Reader, and therefore we shall detain him no longer from the Piece itself, which in the Original bears the following Title.

The Discourse of Abu Zeid at Hasan of Siraf, concerning the Voyage to the Indies and China.

31. Having very carefully examined the Book I was directed to peruse, that I might confirm what the Author relates, when he agrees with what I have heard concerning the Affairs of the Sea, the Kingdoms on the Coast, and the State of the Countries; and that I might add upon this Head, what I have elsewhere collected concerning them, which is not to be found in this Book, I find it was written in the Year of the Hegira CCXXVII. and that the Accounts the Author gives in regard to Things at Sea, were in his Time very true, and agreeable to what I have understood from Merchants, who from *Irak* sailed through those Seas. I find also, that all the Author writes is agreeable to Truth except some few Passages.

Speaking of the Custom of setting Meat before the Dead, which he attributes to the *Chinese*, he says, when they have served up the Meat over Night, and find nothing in the Morning, they cry, The Deceased hath eaten. We had been told the same, and believed it, till we met with a Man of undoubted Credit, who being asked concerning this Custom, he answered, that the Fact was not so, and that this Notion was groundless, as well as what is vulgarly said of the idolatrous Nations, that they imagine their Idols speak to them.

He told us also, that since those Days the Affairs of *China* wear quite another Face; and since much is related to shew the Reason why the Voyages to *China* are interrupted, and how the Country has been ruined, many Customs abolished, and the Empire divided, I will here declare the Causes I know of this Revolution.

32. The great Troubles which have embroiled the Affairs of this Empire, which have put a Stop to the Justice and Righteousness there formerly practised, and which have in fine interrupted the ordinary Navigation from *Siraf* to *China*, flowed from this Source: An Officer who was considerable for his Employment, though not of the Royal Family, revolted some time ago; his Man's Name was *Bachu*, and he began with committing Hostilities in the Country, marching his Armies into many Places, to the great Loss of the Inhabitants, till, winning a Party over to him by his Liberalities, he got together a Multitude of Vagabonds and abandoned People, whom he formed into a considerable Body of Troops.

His Army thus strengthened, and himself in a Condition to undertake any thing, he discovered his Design of subduing the Empire, and marched straight to *Cansu*, one of the most noted Cities in *China*, and at that Time the Port for all the *Arabian* Merchants. This City stands upon a great River some Days Distance from the Entrance, so that the Water there is fresh. But the Citizens shutting their Gates against him, he resolved to besiege the Place, and the Siege lasted a great while. This was transacted in the Year of the Hegira CCLXIV. and of Christ 1777.

At last he became Master of the City, and put all the Inhabitants to the Sword. There are Persons fully acquainted with the Affairs of *China*, who assure us, that besides the *Chinese* who were massacred upon this Occasion, there perished one hundred and twenty thousand *Arabians*, *Jews*, *Christians*, and *Parsees*, who were there on account of Traffick. The Number of the Professors of these four Religions, who thus perished, is exactly known, because the *Chinese* are exceedingly nice in the Accounts they keep of them.

He also cut down the Mulberry trees, and almost all the Trees of other Kinds: But we speak of the Mulberry in particular, because the *Chinese* cultivate it carefully, for the sake of its Leaf, on which their Silkworms subsist. This Devastation is the Cause why Silk has failed, and that the Trade which used to be driven thence through all the Countries under the *Arabs*, is quite at a Stand. Having sacked and destroyed *Cansu*, he possessed himself of many other Cities, which he attacked one after another, the Emperor of *China* not having it in his Power to stop his Progress. He advanced then to the capital City, called *Cumlan*; and the Emperor left this, his royal Seat, making a precipitate Retreat to the City of *Handa*, on the Frontiers, towards the Province of *Tibet*.

The Rebel, pulled up by these great Successes, and perceiving himself Master of the Countries, fell upon the other Cities, which he demolished, having first slain most of the Inhabitants, with a View, in this general Fury, to involve all the several Branches of the Royal Blood, the none might survive to dispute the Empire with him. We had the News of these Revolutions, and of the total Ruin of *China*, which still continues.

Thus were Affairs situated, and the Rebel stood unconcerned by any Disadvantage that might abate his Authority.

33. At last the Emperor of *China* wrote to the King of *Tagaragaz* in *Turkeyan*, with whom, besides the Neices of his Dominions, he was, in some Degree, allied by Marriage; and, at the same time, sent an Embassy to him, to implore his Assistance for reducing this Rebel. Upon this, the King of *Tagaragaz* dispatched his Son, at the Head of a very numerous Army, to fight the Oppressor; and, after many Battles, and almost continual Skirmishes, he utterly defeated him. It was never known what became of the Rebel: Some believe he fell in Battle, while others thought he ended his Days in another Maner.

The Emperor of *China* returned then to *Cumlan*, and although he was extremely weakened, and much distressed because of the Embezzlement of his Treasures, and the Loss of his Captains and best Troops, and because of all the late Calamities, he nevertheless made himself Master of all the Provinces which had been conquered from him. However, he never laid Hands on the Goods of his Subjects, but finished himself with what was yet left in his Coffers, and the small Remainers of publick Money, his Condition indispensably obliged him to take up with what his Subjects would give him, and to require nothing from them but Obedience to his Mandates, for fear to squeeze Money from them, because the King's Covetousness had exhausted them already.

Thus *China* became almost like the Empire of *Alexander* after the Defeat and Death of *Darius*, when he divided the Provinces he took from the *Perrians* amongst to many Kings, who erected themselves into many Kingdoms; but now each of these *Chinese* Princes joined with some other to wage

* The Account here given by our Author, very plainly proves, that the Trade to *China* was considered in his Time as very ancient, and of very great Consequence; inasmuch that whatever affected the Peace of that Country, was looked upon as a Thing of common Concern to all the Nations of the East: but till these Travels were published, who could have imagined this? Who would have suspected that the Affairs of *China* were to well known to the *Arabs*? And therefore when these Things are maturely weighed, who can dispute that we had Reason to advance it as a Thing highly probable, that long before this, the Emperors of *China* and the *Arabs* were in the most flourishing Commerce, and point of foreign Commerce, and domestic Oeconomy.

† It is a very difficult thing to pretend to settle the Chronology of the *Chinese* Empire; and the very learned Editor of these Travels, certainly that he is not able to give any satisfactory Account of this Revolution. It is laid out however, that *Father de Halde*, in his *Etat de la Chine*, lately published, has erred us to set this Matter right, or at least very nearly right. He informs us, that in the Reign of the Emperor *Thang*, who was the eighteenth of the Dynasty of *Tang*, the Affairs of *China* fell into very great Disorder; and the heavy Tax laid upon the People, and a great Famine caused by the Inundation of Rivers, and infinite Numbers of *Arabs* looters that destroyed their caravels. While *Tang* was in this Situation, there happened several Revolts in the Provinces, which encouraged a certain Rebel, whose Name was *Sa Han*, to step himself at the Head of the Malcontents, and that with such Success, as to drive the Emperor from the Imperial City, of which he made himself Master; but he was afterwards defeated, and the Emperor restored. It is not observed, that there is about twenty Years Difference between the Time mentioned by our Author, and the Date of this Revolution, alleged by *Father de Halde*. I did not take upon me to decide where the Mistake lies, but I conceive that the Reader will be of the same Opinion with me, in concluding this to be the Revolution mentioned in the Text.

‡ All the Oriental Writers agree in saying a great Account of the Division of the Empire of *Alexander* the Great, from that which is given us by the *Greeks*, and that this Notion of theirs was ancient, appears from what we are told by the Author of the first Book of *Macchabees*.

was War against a third, without consulting the Emperor; and when the strongest had subdued the weakest, and was become Master of his Province, all was allowed and unmercifully plundered, and the Subjects of the vanquished, since were unnaturally devoured, a Cruelty allowed by the Laws of their Religion, which even permit human Flesh to be exposed to Sale in the publick Markets.

Then arose, as was natural from these Confusions, many unjust Dealings with the Merchants who traded thither, which having gathered the Force of a Precedent, there was no Grievance, no Treatment so bad, but they exerted upon the *Arabs*, and the Masters of Ships; they extorted from the Merchants what was uncustomary, they seized upon their Effects, and behaved towards them in a Manner directly opposite to ancient Usages, and for these Things has God punished them, by withdrawing his Blessing from them in every Respect; and particularly by causing the Navigation to be forsaken, and the Merchants to return in Crouds to *Siraf* and *Oman*; agreeable to the all-ruling Will of the Almighty Master, whose Name be blessed!

34. The Author in his Book notes some Customs and Laws of the *Chinese*, but mentions not the Punishments inflicted on married Persons, when convicted of Adultery; this Crime as well as Homicide and Theft is punished with Death, and they execute the Criminal in this Manner; they bind both the Hands together, and then force them backwards over the Head, till they rest upon the Neck; they then fall on the Right-Foot to the Right-Hand, and the Left-Foot to the Left-Hand, so that both Hands and Feet are strongly bound behind the Back; and thus bundled up, it is impossible for the Criminal to stir, no way to be any Body to hold him. This Torture disjoins the Neck, makes the Joints start out of their Sockets, and dislocates the Thighs; in short, the Patient is in a miserable Condition, that were he to continue therein but a few Hours, there would be no need of any thing else to make an End of him: But when they have bound him as we have said, they give him so many Strokes with a Bamboo, which they always use upon the like Occasions, and which alone were sufficient to kill the Criminal, and leave off when he is at the very last Gasp of Life, abandoning the Body to the People, who eat it.

35. There are Women in *China* who refuse to marry, and chuse rather to live a dissolute Life of perpetual Debauchery. The Custom is for these Women to present themselves in full Audience before the commanding Officer of the Garrison in the City, and declare their Aversion to Marriage, and their Desire to enter into the State of publick Women; they then desire to be registered in the usual Form amongst these Prostitutes, and the Form is this; they write down the Name of the Woman, her Family, the Number of her Jewels, the several Particulars of her Attire, and the Place of her Abode; thus she is admitted a publick Woman: After this, they put about her Neck a String, at which hangs a Copper Ring with the King's Signet, and deliver to her a Writing which certifies that she is received into the List of common Prostitutes, and entitles her to a yearly Pension of so many *Falus*, to be paid her out of the publick Treasury, and threatens with Death the Person who should take her to Wife. They every Year give publick Notice of what is to be observed with regard to those Women, and turn out those who have worn out their Charms. In the Evening these Women walk abroad in Dresses of different Colours, without any Veil, and prostitute themselves to all new Comers that love Debauchery; but the *Chinese* themselves find for them to their Houses, whence they depart not till the next Morning.

Having related the Conquest of the *Peruvian* Empire by *Alexander* the Great, adds the following remarkable Words: *1 Maccab. i. 5, 6.* "And when these Things, he felt sick and perceived that he should die. Wherefore he called his Servants, such as were honourable, and had been brought up with him from his Youth, and parted his Kingdom among them, while he was yet alive."

"It is curious as this Custom may appear, and as seemingly inconsistent as it may be with the Politeness of the *Chinese*, yet it is very certain that our Authors are not the only Writers that have mentioned it, as will appear hereafter, when we come to give the Reader the Travels of the famous *Marcus Polo*, who asserts the very same thing.

"The Account of their publick Women is confirmed by a great Number of Writers ancient and modern, so that there appears to be no Reason for calling the Truth of it in Question. In the History of the *Dutch* Embassy to the Emperor of *China*, there is a Print of one of these Women, while it is conducted through the City on an Ass, attended by a Person, who cries her Price, as he would that of any other Commodity. All these Particulars are attested by later Writers, so that notwithstanding they seem at first sight very strange and improbable, yet it may be owned that there is a good Evidence for them as for any other Part in the several Relations we have had of the Customs and Manners of these People.

JAME

36. The *Chinese* coin no Money, besides the little Pieces of Copper, like those we call *Falus*, nor will they allow Gold or Silver to be coined into Specie, like the *Dinars* and *Drams* that are current with us; for, say they, if a Thief goes, with an evil Intent, into the House of an *Arab*, where is Gold and Silver Coin, he may carry off ten thousand Pieces of Gold, and almost as many Pieces of Silver, and not be much burtened therewith, and so be the Ruin of the Man who should suffer this Loss: Whereas, if a Thief has the same Design on the House of a *Chinese* Artificer, he cannot at most take away above ten thousand *Falus*, or Pieces of Copper, which do not make above ten Meticals or *Dinars* of Gold. These Pieces of Copper are alloyed with something of a different kind, and are of the Size of a Dram, or Piece of Silver called *Baht*; in the Middle they have a pretty large Hole to string them by: A thousand of them are worth a Metical of Gold, or a *Dinar*, and they string them by thousands, with a Knot between every hundred. All their Payments in general are made with this Money, whether they buy or sell Lands, Furniture, Merchandize, or any thing else. There are some of these Pieces at *Siraf* with *Chinese* Characters upon them.

I need say nothing as to the frequent Fires which happen in *China*, or the *Chinese* Manner of Building. The City of *Cansu* is built in the manner he describes, that is, of Wood with Canes interwoven, just like our Works of Split-cane; they wash the whole over with a kind of Varnish, which they make of Hemp-seed, and this becomes as white as Milk; so that when the Walls are covered therewith they have a wonderful Gloss. They have no Stairs in their Houses, nor do they build with different Stories, but put every thing they have into Chests, which run upon Wheels, and which in Case of Fire they can easily draw from Place to Place without any Hindrance from Stairs, and so save their things presently.

As for the inferior Officers in the Cities, they commonly have the Directions of the Customs and the Keys of the Treasury: Some of these have been taken on the Frontiers and castrated, others of them have been cut by their own Fathers, who have sent them as a Present to the Emperor. These Officers are at the Head of the principal Affairs of State, of the Emperor's private Affairs, and of his Treasures; and those particularly who are sent to *Cansu* are selected from this Body.

37. It is customary for them, as well as the Kings or Governors of all the Cities, to appear abroad from time to time, in solemn Procession; at such Times they are preceded by Men, who carry great Pieces of Wood like those the *Christians* of the *Levant* used instead of Bells: The Noise they make is heard a great Way, and as soon as it is heard no body stands in the Road of the Eunuch, or Prince: If a Man is at his Door, he goes into his House, and keeps his Door shut till the Prince or Eunuch of the City is gone by; so no Soul is to be seen in the Way; and this is enjoined, that they may be held in the greater Veneration, and to strike a Dread, that the People may not see them often, and that they may not grow too familiar as to speak to them.

The Eunuch, or Lieutenant, and the principal Officers, wear very magnificent Dresses of Silk, to fine that none of this Sort is brought into the Country subject to the *Arabs*, the *Chinese* keep it up at so high a Rate. One of the chief Merchants, whose Words cannot be called in question, relates, that he waited on an Eunuch, whom the Emperor had sent to *Cansu*, in order to purchase some Things he wanted out of the Goods carried thither from the Country of the *Arabs*; and that upon his Breast he perceived a short Veil, which was under another Silk Veil, and which seemed to be under two other Veils of the

same kind; that the Eunuch observing him to look steadfastly upon his Breath, said, "I see you keep your Eyes fixed upon my Stomach, what may be the Meaning of it?" The Merchant immediately cried out, *I am surpris'd at the Beauty of that little Vest, which appears under your other Garments.* The Eunuch laughed, and held out his Shirt-sleeve to him; Count, says he, how many Vests I have above it: He did so, and counted five, one on another; and the Waitcoat, or short Vest was underneath. These Garments are wove with raw Silk, which has never been washed or tuled; and what is worn by the Princes or Governors, is still more rich, and more exquisitely wrought.

The Chinese surpass all Nations in all Arts, and particularly in Painting; and they perform such perfect Work as others can but faintly imitate. When an Artificer has finished a fine Piece, he carries it to the Prince's Palace to demand the Reward he thinks he deserves for the Beauty of his Performance; and the Custom is, for the Prince to order him to leave his Work at the Palace gate, where it stands a whole Year; it, during that Time, no Person finds a Fault therein, the Artificer is rewarded, and admitted into the Body of Artists; but if the least Fault be found, it is rejected, and the Workman sent away empty.

It happened once, as the Story goes, that one of these Painters drew an Ear of Corn, with a Bird perched on it, upon a Piece of Silk; and his Performance was so admirable, that all who beheld it were astonish'd. This Piece stood expos'd to publick View, till one Day a crooked Fellow passing by the Palace, found fault with the Picture, and was immediately conducted to the Prince or Governor of the City, who at the same Time sent for the Painter. Then he asked this crooked Fellow, what Fault he had to find with this Piece; to which he answered, "Every body knows that a Bird never settles upon an Ear of Corn but it bends under him, whereas this Painter has represented his Ear bolt upright, though he has perched a Bird upon it; this is the Fault I have to find." The Objection was held just, and the Prince bestowed no Reward upon the Artist. They pretend by this, and such other Means, to excite their Workmen to Perfection, by engaging them to be extremely nice and circumspect in what they undertake, and to apply their whole Genius to what is to go out of their Hands.

38. There was formerly a Man of the Tribe of *Korkiz*, whose Name was *Ebn Wabab*, descended of *Hebar* the Son of *Al Ajud*, and he dwelt at *Bajsa*; this Man left *Bajsa* when that City was sacked, and came to *Siraf*, where he saw a Ship ready to sail for *China*. The Humour took him to go on board of this Ship, and in her he went to *Cena*, where in the Sequel he had the Curiosity to travel to the Emperor's Court; and leaving *Cansu*, he reached *Cumdam*, after a Journey of two Months; he staid a long Time at the Emperor's Court, and presented several Petitions; wherein he signified that he was of the Family of the Prophet of the *Arabs*. Having waited a considerable while, the Emperor at last ordered him to be lodged in a House appointed for him, and to be supplied with every Thing he wanted. This done, the Emperor wrote to the Governor of *Cansu*, commanding him carefully to inform himself among the Merchants concerning the Relation this Man pretended to bear to the Prophet of the *Arabs*; and the Governor, by his Answers, confirming the Truth of what he had said, touching his Extraction, the Emperor gave him Audience, and made him receive Presents, whereupon he returned to *Irak*.

This Man, when we saw him, was much advanced in Years, but had his Senses perfectly, and told us, that

* There is nothing very surpris'ing in this Account, for the very same Method had been in Use among the *Greeks* long before, and has been since practis'd in *Italy* and elsewhere, and without doubt, it is the true Method of coming at the just Knowledge of the Value of such Performances; and therefore something of this sort is annually practis'd at *Paris*.

† It seems a little strange, that the learned *Abu Renanot* did not endeavour to settle the Time when the *Arabians* Traveller went to *China*, especially when there is a Circumstance which seems to fix it, viz. the plundering of *Bajfara*, upon which it is said he took a Reward, and going to *Siraf*. In order to supply this Defect, I have consulted *Abu Pharanj*, who informs us, that *A. H. 23*; which answers to *A. D. 845*; there was one *Abu Saif*, who revolted against the *Khalifa*, and rans'd *Bajfara*, which occasioned the sailing and Landing of that Traveller, which cost fourteen thousand Pieces of Gold. The *Khalif* then reigning was *Al Mahadi*, in whose Time *Ebn Wabab* sail'd into us, being a man of great Confidence; and in the same Year he was at the Head of the Army, and particip'd in the Conquest of *China*. The Date agrees very well with the rest of this History, and particularly with the Account given by the *Arabs*, of the Reasons which induced him to quit his Country in his Conference with the Emperor of *China*.

when he had his Audience, the Emperor asked him many Questions about the *Arabs*, and particularly how they had destroyed the Kingdom of the *Perfians*. *Ebn Wabab* made Answer, that they did it by the Assistance of God; and because the *Perfians* were immerse'd in Idolatry, adoring the Stars, the Sun and Moon, instead of worshipping the true God.

To this the Emperor replied, that the *Arabs* had conquered the most illustrious Kingdom of the whole Earth, the best cultivated, the most opulent, the most pregnant of fine Wits, and of the most extensive Fame. Then said he, *What Account do the People in your Parts make of the other Kings of the Earth?* To which the *Arab* replied, that he knew them not. Then said the Emperor to the Interpreter, "Tell him we esteem but five Kings; that he whole Kingdom is of widest Extent, is the Master of *Irak*, for he is in the midst of the World, and surrounded by the Territories of other Kings; and we find he is called the King of Kings. After him we reckon our Emperor here present, and we find that he is stiled the King of Mankind, for no King is invest'd with a more absolute Authority over his Subjects, nor is there a People under the Sun more dutiful and submissive to their Sovereign, than the People of this Country. We therefore, in this respect, are the Kings of the human Race; after us the King of the *Turks*, whole Kingdom borders upon us, and him we call the King of *Laos*. Next is the King of the Elephants, who is the King of the *Indies*, whom we also call the King of *Widdom*, because he derives his Origin from the *Indians*. And last of all the King of *Greece*, whom we stile the King of Men; for upon the Face of the Earth, there are no Men of better Manners, nor of comelier Presence, than his Subjects. These, added he, are the most illustrious of all Kings, nor are others to compare with them."

Then said *Ebn Wabab*, he ordered the Interpreter to ask me, "If I knew my Master and my Lord, meaning the Prophet (*Mohammed*), and if I had seen him?" I made Answer, "How should I have seen him who is with God?" He replied, "That is not what I mean, ask you, what sort of a Man he was in his Person?" I replied, "that he was very handsome." Then he called for a great Box, and opening it, he took out another contained therein, which he set before him, and said to the Interpreter, "shew him his Master and his Lord;" and I saw in the Box, the Image of the Prophet; where I moved my Lips, praying to myself in Honour of their Memory.

The Emperor did not imagine I should know them again, and said to the Interpreter, "Ask him why he moves his Lips?" I answer'd, "I was praying in Memory of the Prophet;" *How do you know them*, said the Emperor? I replied, that I knew them by the Representation of their Histories; "There said I, is *Noah* in the Ark, who was saved with those that were with him at the same Time;" and I made the usual Salute to *Noah* and his Company. Then the Emperor laughed, and said, "Thou art not mistaken in the Name of *Noah*, an I thou hast named him right; but as for the universal Deluge, it is what we knew not. It is true, indeed, that a Flood covered Part of the Earth; but it reach'd not our Country, nor even the *Indies*." I made my Answer to this, and endeavour'd to remove his Objections the best I could; and then said again to him, "There is *Moses* with his Rod, and the Chaldeans of *Babel*." He agreed with me, as to the small Extent of their Country, and the Manner how the ancient Idolatrous were destroyed by *Moses*. I then said to him; "Here there, is *Jesus*, upon an Ass, and here are his Apostles

"with him. He,"
"Earth, seeing that,"
"Space of *Jonewab*."

After this the same other Prophets presently declared; and great Characters; among the Prophets, and Subjects of their P. *Wabab*, I saw the Image, and his Companion, with Shoes of the *Arabs*. Gardles about their I. Person commanded the I. answered, *There is also my Cousin*. He and his People had but that he had not questions, though his S.

I afterwards saw some of them stre with their three Fin and the Fore-finger, to make Oath; other Heavens with their Pictures. The Interpreter's Prophets, and then asked me many their usual Dress, and functions of the M. him the best I could.

21. After this, he concerning the Age of Opinions varied upon thousand Years, and that others reckoned was, at least, as old as the Emperor and his first out into Laughter, and then to what I had "Does your Prophet say as you do?" him that he did.

Hereupon I observed pleasure appeared plentifully the Interpreter's Terms: "Take heed but to be would know. We prior to understand Opinions concerning you, are also has said at the Nations are to be add mounced, all which ble; take heed more."

To this he subjoin Length of Time, but he asked me; "King, to whom of thy Abode, by In Return to which which had happened where I saw a Ship r head of the Glory all Necessaries, Cur into his Country, t

† This plainly shews that their Records must be of this Nature in the

‡ This is one of the with the *Greeks*, or, to Judgment, the *Indian* given from the *Indian* at the Bottom of their Page, yet it is not imp of *China*, we under

§ I very much doubt it is very possible that *Phis* is not a very ex the prie d, however, and had I been

"with him. He," said the Emperor, "was not long upon Earth, seeing that all he did was transfacted within the Space of somewhat better than thirty Months."

After this the same Ebn Wabab saw the Histories of the other Prophets presented in the same Manner we have already declared; and he fancied that what was written in great Characters, under each Figure, might be the Names of the Prophets, the Countries whence they were, and the Subjects of their Prophecies. Then said the same Ebn Wabab, I saw the Image of Molammed riding upon a Camel, and his Companions about him on their Camels, with Shoes of the Arabian Mode on their Feet, and leathern Girdles about their Loins. At this I wept, and the Emperor commanded the Interpreter to ask me, why I wept? I answered, There is our Prophet and our Lord, who is also my Cousin. He said I was right, and added, that he and his People had subdued the finest of all Kingdoms; but that he had not the Satisfaction of enjoying his Conquests, though his Successors had.

I afterwards saw a great Number of other Prophets, some of them stretching forth their Right-hand, and with their three Fingers bent down between the Thumb and the Fore-finger, just like those who hold up the Hand to make Oath; others were standing, and pointed to the Heavens with their Finger, and others were in different Postures. The Interpreter took them to be the Figures of their Prophets, and those of the Indians. The Emperor then asked me many Questions concerning the Khalifis, their usual Drefs, and concerning many Precepts and Injunctions of the Mohammedan Religion, and I answered him the best I could.

41. After this, he said, "What is your Opinion concerning the Age of the World?" I made Answer, that Opinions varied upon that Head; that some were for six thousand Years, and others would not allow so many; and that others reckoned it at a still higher Rate; but that it was, at least, as old as I had said. At this the Emperor and his first Minister, who was near him, broke out into Laughter, and the Emperor made many Objections to what I had advanced. At last, said he, "What does your Prophet teach upon this Subject; does he say as you do?" My Memory failed me, and I assured him that he did.

Hereupon I observed I had displeased him, and his Displeasure appeared plainly in his Countenance. Then he ordered the Interpreter to speak to me in the following Terms: "Take heed of what you say, for Kings never speak but to be informed of the Truth of what they would know. What did you mean by giving the Emperor to understand, that there are among you various Opinions concerning the Age of the World? If so it be, you are also divided upon the Things your Prophet has said at the same time, that no Diversity of Opinions are to be admitted on what the Prophets have pronounced, all which must be revered as sure and infallible; take heed then how you talk at such a Rate any more."

To this he subjoined many other Things, which, through Length of Time, have escaped my Remembrance. At last he asked me; "How is it that thou hast forsaken thy King, to whom thou art nearer, not only by the Place of thy Abode, but by Blood also, than thou art to us?" In Return to which, I informed him of the Revolutions which had happened at Bassora, and how I came to Siraf, where I saw a Ship ready to sail for China; and that having heard of the Glory of his Empire, and its Abundance in all Necessaries, Curiosity excited me to a Desire of coming into his Country, that I might behold it with mine own

Eyes; that I should soon depart for my own Country, and the Kingdom of my Cousin, and that I would make a faithful Report of what I had seen of the Magnificence of the Empire of China, and the vast Extent of the Provinces it contains, and that I would make a grateful Acknowledgment of the kind Usage I there met with, which seemed to please him very much. He then made me rich Presents, and ordered that I should be conducted to Canfu upon Post-horses. He also wrote to the Governor of the City, commanding him to treat me with much Honour, and to furnish me with the like Recommendations to the other Governors of the Provinces, that they might entertain me till the Time of my Departure. I was thus treated every-where during my Stay, plentifully supplied with all Necessaries of Life, and honoured with many Presents till the Time of my Departure from China.

42. We asked Ebn Wabab many Questions concerning the City of Camdan, where the Emperor keeps his Court; he told us that the City was very large and extremely populous, that it was divided into two Parts by a very long and very broad Street; that the Emperor, his chief Ministers, the Soldiery, the supreme Judge, the Eunuchs, and all belonging to the Imperial Household, lived in that Part of the City which is on the Right-hand eastward, that the People had no manner of Communication with them; and that they were not admitted into the Places watered by Canals from different Rivers, the Borders of which were planted with Trees, and adorned with magnificent Palaces. The Part on the Left-hand westward, is inhabited by the ordinary People and the Merchants, where are all the great Squares, and Markets for all the Necessaries of Life. At Break of Day, the Officers of the King's Household, with the inferior Servants, the Purveyors, and the Domesticks of the Grandees of the Court, come some on Foot, others on Horseback, into that Division of the City, where are the publick Markets, and the Habitations of such as deal in all Sorts of Goods, where they buy whatever they want, and return not again to the same Place till their Occasions call them thither next Morning. It is by the same Traveller related, that this City has a very pleasant Situation in the Midst of a moist fertile Soil, watered by several Rivers, and hardly deficient in any thing except Palm-trees, which grow not there.

43. In our Times Discovery has been made of a Thing quite new and unknown to those who lived before us. No body imagined that the great Sea, which extends from the Indies to China, had any Communication with the Sea of Syria, nor could any one apprehend the Possibility of any such Thing. Now behold what has come to pass in our Days, according to what we have heard. In the Sea of Rum, or the Mediterranean, they found the Wreck of an Arabian Ship which had been shattered by Tempests; for all her Men perishing, and the being dashed to Pieces by the Waves, the Remains of her were driven by Wind and Weather into the Sea of Chozars, and from thence to the Canal of the Mediterranean Sea, and at last were thrown on the Shore of Syria.

This renders it evident, that the Sea surrounds all the Country of China and Cila, or Sila, the uttermost Parts of Turkestan, and the Country of the Chozars; and that then it enters at the Straights till it washes the Shore of Syria. The Proof of this is deduced from the Construction of the Ship we are speaking of; for none but the Ships of Siraf are so put together, that the Planks are not nailed or bolted, but joined together in an extraordinary manner, as if they were sewn. Whereas the Planking of all Ships of the Mediterranean Sea, and of the Coast of Syria, are nailed, and not joined together in that Way.

This plainly shews, that the Chinese were formerly well acquainted with the History of other Nations, and affords us good Grounds to believe that their Records must have been destroyed in some subsequent Revolution; for, otherwise, it is impossible to account for their Ignorance in Matters of this Nature in succeeding Times.

This is one of the most curious Passages in this Treatise, inasmuch as it plainly proves, that the Arabians had the same Notions in Geography with the Greeks, or, to speak with greater Propriety, had their Notions of Geography from them. Our Author says plainly, that, according to his Judgment, the Indian Ocean washed the Coast of Great Tartary, and to fell into the Caspian Sea, by which Passage he supposes that this Ship was driven from the Indian Sea into the Mediterranean. The Conjecture was wrong; but there is still something in it very bold, and well imagined, and at the Bottom something of Truth too; for though it was impossible that this Ship should come into the Mediterranean in the Manner our Author imagines, yet it is not impossible but it might have come through the North-East Passage, agreeable to the first Part of his supposition; and if by the Sea of Chozars, we understand that of Alcock, he would be quite right.

I very much doubt, whether the Construction of this Vessel, as our Author describes it, be sufficient Evidence of its coming from the Indies. It is very possible that it might have been a Boat belonging to the Inhabitants of Greenland, or of some other Country bordering upon Hudson's Bay: there is very certain that there are such Vessels in these Parts, and it is not at all impossible that this might have come from thence. I do not dispute, however, absolutely to contradict him, but only to shew that the Argument he uses is not conclusive, though I think, as Things then stood, we had sufficient Grounds to believe it was conclusive.

We have also heard it reported, that Ambergris has been found in the Sea of Syria, which seems hard to believe, and was unknown to former Times. If this be as is said, it is impossible that Amber should have been thrown up in the Sea of Syria, but by the Sea of *Aden*, and of *Kotzum*, which has Communication with the Seas where Amber is found: And because God has put a Separation Between these Seas, if this Story be true, it must necessarily have been, that this Amber was driven first from the *Indian* Sea into the others, and so from the one to the other, till it at last came into the Sea of Syria.

44. We will now begin to speak of the Province of *Zapage*, which is opposite to *China*, and distant from thence a full Month's Sail by Sea, or less, if the Wind be fair. The King of this Country is titled *Mébrage*, and they say his Dominions are nine hundred Leagues in Circumference, and that this King is Master of many Islands which he round about. Thus altogether this Kingdom is above a thousand Leagues in Extent; among those Islands there is one called *Sereza*, which is said to be four hundred Leagues in Circuit; and another called *Rakmi*, which is eight hundred Leagues in Compass, and produces Redwood, Camphire, and many other Commodities. In this same Kingdom is the Island of *Gala*, which is the mid Passage between *China* and the Country of the *Arabs*.

This Island, they say, is fourscore Leagues in Circumference; and thither they bring all sorts of Merchant-Live, Wood-Aloes of several sorts, Camphire, Sandal-Wood, Ivory, the Wood called *Cabishi*, Ebony, Redwood, all sorts of Spice, and many other Things too tedious to enumerate. At present the Commerce is carried on between this Island and that of *Oman*. The *Mébrage* is the Sovereign over all these Islands; and that in which he makes his Abode is extremely fertile, and so very populous, that the Towns almost crowd one upon another. A Person of great Probity relates, that when the Cocks crow at their accustomed Hours, just as with us when at Root, upon Trees, they answer each other a hundred Leagues round, and more, because of the Proximity of the Villages which almost touch each other; and he adds, that no Part of it is uninhabited, nor any of its Land uncultivated. Those who travel in this Country may stop at every Step, and find Shelter from the Beams of the Noon Day Sun; and if they are tired, they may repose themselves every Day at Noon, go which Way they will.

45. Yet what follows from the Testimony of several Persons, is the most remarkable Particular we have heard concerning the Island of *Zapage*. There was formerly a Kingdom, as he is there called, *Mébrage*: His Palace is built to be seen on a River as broad as the *Tygris* at *Bagdad*, or at *Basora*. The Sea intercepts the Course of its Waters, and drives them back again with the Flood; and during the Tide, it brings out fresh Water a good way into the Sea. This River is let into a small Pond close to the King's Palace; and every Morning the Officer, who has Charge of his Household, brings an Ingot of Gold wrought in a particular manner, which is thrown into the Pond in the Presence of the King. The Tide rising, covers it with the salt, and quite conceals them from Sight. But low Water uncovers them, and they appear plain by the Beams of the Sun. The King comes to view them as often as he repairs to an Apartment of State, which looks upon this Pond. This Custom is very scrupulously observed; and thus they every Day throw an Ingot of Gold into this Pond as long as the King lives, not touching them upon any Account, but regarding this as a sacred Treasure.

When the King dies, his Successor causes them all to be taken out, and not one of them is ever missing. They count them, and melt them down; and this done, the Sum arising out of this great Quantity of Gold are distributed to those of the Royal Household, Men, Women, and Children, to the superior and inferior Officers, each in pro-

portion to the Rank he bears; and the Surplus is given away to the Poor and Infirm. Then they reckon up the Number of Ingots, and what they weigh, and lay, so the *Mébrage* reigned for many Years; for he left to many Ingots of Gold in the Pond of the Kings, and they were distributed after his Death to the People. It is accounted a Felicity with them to have reigned a long while, and to have thus multiplied the Number of these Ingots given away at their Death.

46. Their ancient History relates, that one of the Kings of *Komar* would have waged War with him in this Island. This Country of *Komar* is the same from whence they bring the Wood Aloes called *Hud al Komar*, nor is there any Kingdom more populous in proportion than that of *Komar*. The Inhabitants are all very courageous, and the bounds of Commerce with Women, and the Use of Wine, are too hidden among them; nor have they any Wine in their Country. This Kingdom was at Peace with that of *Zapage*, where reigned the *Mébrage*. They are divided from each other by a Passage of ten or twenty Days Sail, with a very easy Gale. They say, that in former Days there was a very young and high-spirited Prince in this Island of *Komar*. This King was one Day in his Palace, which looks upon a River much like the *Euphrates* at the Entrance, and but a Day's Journey from the Sea; his prime Ministers were with him, and in the Discourse they had together, Notice was taken of the Kingdom of the *Mébrage*, and its Glory, how well it was peopled and cultivated, and the Crowd of Islands which depended thereupon.

Then said the King of *Komar* to his Minister, I am seized with a Desire which I earnestly wish to see accomplished. The Minister, who was a wise and a prudent Man, and no Stranger to the Levity of his Master, answered, My Lord, what is your Desire? I could wish, replied the King, to see in a Dish the Head of the *Mébrage* of *Zapage*. The Minister, well aware it was Jealousy that impugned him with this impetuous Fury, rejoined, My Lord, I wish you would not disturb your Mind with such Thoughts, since nothing ever fell out between those People as to furnish Matter of Complaint; they never offended any Word or Deed, or ever did us the least Injury; besides, they are divided from us, and have no manner of Communication with our Country, nor do they discover any Inclination of making a Conquest of this Kingdom. No one therefore ought to hearken to such Discourse, or make a Word of Answer upon this Head. The King was enraged at this Reply, and said not a Word more; but without any Regard had to the good Advice of his first Minister, he opened the same thing to the principal Officer of State, and to such of his Courtiers as he thought proper.

47. This Matter being rumoured about, at length reached the Ears of the *Mébrage*. He, who then reigned, was a wise and an active Prince, of consummate Experience, and in the Flower of his Age. He called for his first Minister, and having acquainted him with what he had heard, said to him, it is by no means proper to punish the Behaviour of this giddy Prince, or to betay how we esteem him, because of his Youth and slender Experience; nor is it expedient to divulge what he said against me; for such Speeches cannot but be prejudicial to the Dignity of a King. Having thus enjoined his Minister to conceal what had passed between them, he commanded him to prepare a thousand Ships of no extraordinary Size, and to equip them with all Things necessary, Arms and Ammunition, and to man them with as many of his best Forces as they could transport. Then he gave out, that he would make a Voyage through the neighbouring Islands under his Dominion, to divert himself. He wrote also to all the tributary Princes of those Islands, to acquaint them, that he designed them a Visit; and this being a publick Task, each of those Kings prepared for the Reception of the *Mébrage*.

* It is not to be doubted, from our Author's Way of reasoning, that he had no Notion of any Passage by the *Cape of Good Hope*, for if he had, he would not have taken this Opportunity of animating it. At the same time, however, I leave it to the Reader's Consideration, whether this Voyage, supposing it to have been built in the *East Indies*, might not have come this Way into the *Mediterranean*, more probably than by the *Strait of Gibraltar*. It is likewise clear from what our Author has delivered, that the *Antients* knew no more of *Jupiter*, which they called *Jove*, than they did of the *Phoenix*, since by the Testimony of the oldest of our Authors, no *Phoenix* had yet set Foot there in the Year of the

When every thing was in readines as he had ordered, he went on board his Ships, and with a powerful Army sailed over to the Kingdom of *Komar*. The King and those belonging to his Court were effeminate Creatures, who all the Day long did nothing but view their Faces and rub their Teeth, with Mirrors and Toothpicks in their Hands, or if they moved, had them carried after them by Slaves. So the King of *Komar* discovered nothing of the *Mebrage's* Purpose, till he appeared in the Mouth of the River, on which stood the Palace of the King of *Komar*, and till he had landed his Troops, who immediately invested the Capital, and there took him. The King was taken in his Palace, and all that belonged to him fled without fighting.

Then the *Mebrage* caused Proclamation to be made, that he granted entire Security of Life and Effects to all the Inhabitants of the Country, and seating himself on the Throne of the King of *Komar*, now a Captive, he ordered him to be brought into his Presence, together with his first Minister. Then addressing himself to the King of *Komar*, he said, Who was it filled your Head with a Project unequal to your Strength, and absolutely impossible for you to compass? What would you have done if you had gured your Post? This Prince, who had nothing to say for himself, made no Answer. Then, continued the *Mebrage*, if you had enjoyed the Pleasure you wished, of seeing my Head in a Dish before you, you would have spoiled my Kingdom, and retained it after you had committed all sorts of Violence. I will not so behave with Regard to you, but yet I will execute upon you what you wished concerning me, and then will I return into my Kingdom, without touching any Thing in your Dominions, and without carrying away ought of great Value or small, desirous only that you may be recorded an Example, for the Instruction of those who shall come after you, that none may exceed the Bounds of his Power, that each may be contented with his own, and that those you have disturbed may be restored to perfect Security.

This said, he ordered them to strike off his Head, and then turning to the Minister he said, You have done all a good Minister could do; I know you offered good Advice to your Master, and that he hearkened not unto you. Consider who may best succeed this Fool for the Good of the Kingdom, and let him immediately upon the Throne. This done, the *Mebrage* departed for his own Territories, and neither did he or any of his lay Hands on the least Thing in the Kingdom of *Komar*. When he arrived in his own Kingdom, he sat down upon the Throne, and being in the Palace which looked upon the Pond before-mentioned, he caused the Head of the King of *Komar* to be put into a Balon and set before him, and calling in the Chiefs of his Kingdom, he acquainted them with all he had done, and with the Reasons which had induced him to the Expedition we have related, and they approved the Deal with Acclamations and Prayers for his Prosperity. Then he ordered the Head of the King of *Komar* to be washed and embalmed, and put it into a Coffin, and sent it back to the King of *Komar*, who had been elected in the Room of him he had put to Death; at the same Time writing a Letter to this new Prince in the following Terms: What inclined us to do what we did to your Predecessor, and your Lord, was, his known Malevolence towards us; and that we might set an Example to his Equals, we have been so happy as to treat him as he would have treated us. But we think it convenient to send his Head back to you, having had no Design of detaining it, or of arrogating any Glory to ourselves, from the Advantage we obtained over him. The News of this Action being re-

ported to the Kings of the *Indies* and of *China*, it added to the Respect they before had for the *Mebrage*, and from that Time it has been a Custom with the Kings of *Komar*, every Morning they rise, to turn towards the Country of *Zapage*, to prostrate themselves on the Ground, and to make the most profound Inclinations in Honour of the *Mebrage*.

48. All the Kings of the *Indies* and of *China* believe the Metempsychosis or Transmigration of Souls, and make it an Article of their Religion. A Person of Credit relates, That one of these Princes being newly recovered of the Small-Pox, and beholding himself in a Glass, was deeply troubled to see how badly his Face was disfigured, and that turning himself towards one of the five Sons of his Brother, he said to him, sure it never happened to any Man as to me, to remain in his Body after such a Change? But this Body is only a Vessel puffed up with Wind, and when the Soul leaves it, she passes instantly into another. Go mount you upon the Throne, for I am about to separate my Body from my Soul, until I return into another Body: At the same Time he called for a sharp and keen *Cangiar*, with which he commanded his Nephew to cut off his Head, which the other did, and he was afterwards burnt, as is the Custom of the Country. Our Author here quits his Subject somewhat abruptly, in order to return again to the Country of *China* and the Manners of its Inhabitants. The Reason of this is not at first Sight very evident, but if we consider that he follows the former Writer, we shall very easily discern that this was the true Cause of his making so sudden a Transition. What he had before said was in Consequence of the Facts delivered by the first Author in Regard to the *Indies*, and having discussed these, it was natural for him to follow that Author in what he says of *China* and the *Chinese*, and indeed it must be allowed, that notwithstanding these small Interruptions, there are scarce any Books of Travels of so ancient a Date, written in a clearer, or better Method than these.

49. The *Chinese* were wonderfully regular in all Things relating to Government, before the last Revolution destroyed and reduced them to the State they are in at present. There was a certain Merchant, a Native of *Chorassan*, who coming into *Irak*, there dealt to a considerable Amount, and having brought up a Quantity of Goods went to *China*. This Man was extremely selfish and of incredible Avarice; it happened that the Emperor of *China* had sent one of his Eunuchs to *Cansu*, the City of all the *Arabian* Traders, there to purchase what he wanted, and was to be had on board of the Ship that was arrived. This Eunuch was one of those who had the largest Share in his Master's good Opinion and Confidence, and was Keeper of his Treasure and of all that he esteemed precious.

A Dispute arose between this Eunuch and the before-mentioned Merchant, about some Pieces of Ivory and other Goods, and it ran so high that the Merchant refused to deal with him. But this Affair making a great Noise, the Eunuch pushed it to far, that he forced from him the Choice of his Goods, despising whatever the other could say to him. The Merchant withdrawing himself, went privately to *Cumdan* where the Emperor resides, and which is two Months Journey from *Cansu*, and being arrived he went to the String of the Bell mentioned in the former Book. The Custom was, that whoever pulled it was thereupon sent ten Days Journey from thence, into a kind of Banishment: it was ordered also that he should be committed to Prison, there to remain for two whole Months; which expired, the Vice-King or Governor of the Province released him, and said you have involved yourself in an

* This is a very pleasant Story, and well related; but with respect to the Country in which it happened, I think it very difficult to say any Thing with Certainty, and yet this does not at all lessen the Credibility of the Fact. It is not impossible however, that this History might relate to some of the Islands which are now called *Philippinas*; or perhaps some of the Islands in the Straits of *Sonda*. I pretend to determine nothing in such doubtful Points, but leave the Reader to decide for himself, according to the Lights given him by the Author, who appears to have written with great Caution and Fidelity.

† The Doctrine of the Metempsychosis is generally held among the *Chinese*. Their Histories say, that one *Xekia*, or *Shokia*, an *Indian* Philosopher, who lived about a thousand Years before Christ, was the first that taught this Doctrine of Transmigration; and our Authors add, that the *Chinese* received it from the *Indians*. It over-ran *China* in the Year of Christ 65, and the Chiefs of this Sect have to this Day their Abode on or near the *Kouma-n-Tsunan* in the Province of *Chek-ang*. This *Xekia*, according to the *Chinese* Tradition in *Navarrette*, has been born eight thousand Times ever, the last Time in the Form of a white Elephant. It is he that was called *Fobes* after his Apotheosis. The Sect of *Xekia*, as we are told by Father *Marsden*, hold the Metempsychosis; but this Sect is divided into two Branches, the one believing the exterior Metempsychosis, or that the Souls of Men pass after Death into other Bodies, and these worship Idols, and obtain from every Thing that has Life, while the other Sect has Faith in an interior Metempsychosis, which is the principal Foundation of their Morality, which consists in suppressing the Passions, which are as so many different and male proceeding from Man; but neither the one nor the other expect Rewards or dread Punishments in the World to come.

But the Musk of *Tibet* is far preferable to that of *China* for two Reasons; first, in *Tibet* this Creature feeds on Aromatic Pastures, while in *China* he has nothing to substitute him but what is common; secondly, the Inhabitants of *Tibet* preserve their Bladders or Coats of Musk in the pure natural State, while the *Chinese* adulterate all that come into their Hands. They dip them also into the Sea, or else expose them to the Dew; and having kept them some time, they take off the outward Membrane, and then close them up; and this Musk passes in the Country of the *Arabs* for Musk of *Tibet*, because of its Excellence.

The most exquisite of all the sorts of Musk is what the *Roebucks* that yield it leave behind them when they rub themselves against the Rocks on the Mountains; for the Humour whence it is generated, falling down towards the Navel of the Creature, it there gathers into a Quantity of tart Blood exactly like Biles, and such like Tumours; when this Swelling is ripe, the Creature, tormented of a painful Itching, feels out the Sores, and rubs himself against the same, till he opens his Sores, and the Contents run out. Now, as soon as this Matter falls from the Creature, it coagulates, the Wound closes, and the same kind of Humour gathers to a Head again as before.

In *Tibet* there are Men who make it their Business to collect this Musk, and are very ready in knowing it; and having found it, they carefully collect it, and put it up in Baskets, and it is carried to their Kings. This Musk is most exquisite, when it has ripened in the Bladder of the Creature which bears it. It surpasses all others in Goodness, just as Fruit is better when it is gathered ripe from the Tree, than when it is pulled green.

There is still another way of getting Musk; they inflame the Creature in Toils, and shoot him with Arrows; but it often happens, that the Hunters cut the Tumours of the Creature before the Musk is elaborated; and in this Case it has at first an ill Scent, that prevails till the Matter is thickened, which sometimes does not happen in a great while; but so soon as it coagulates, it turns to Musk. This Musk is a Creature like our *Roebuck*, his Skin and Colour the same, with slender Legs, a split Horn, smooth, but somewhat bending wishal; on each Side he has two small white Teeth, which are strait, and rise above his Muzzle, each half a Finger, or somewhat less in Length, and in their Form not unlike the Teeth of the Elephant; and this is the Mark which distinguishes this Creature from other *Roebucks*.

The Emperors of *China* write to the Kings or Governors of Cities, to the Eunuchs, or Lieutenants, and their Letters are conveyed by Post-horses, with a Cut Tail, disposed almost like the Poils among the *Arabs*, in such Order as every body knows.

Besides what we have here related concerning the *Chinese* Customs, it is usual for the Princes, and even the People, to make water standing. Persons of Dignity, as the Vice Kings, and the principal Officers, have gilded Canes, a Cubit long, which are bored through; and these they hold as often as they make Water, standing upright all the time, and by this means the Tube carries the Water to a good Distance from them. They are of Opinion, that all Pains in the Kidneys, the Strangury, and even the Stone, are caused by making Water in a sitting Posture; and that the Rens cannot free themselves absolutely of these Humours, but by standing to evacuate, and that thus this Posture contributes exceedingly to the Preservation of Health. They suffer their Hair to grow, for the Men

will not round the Head of a Child when he comes into the World, as the *Arabs* do, for they say it causes a considerable Alteration in the Brain, and that their Senses are very sensibly impaired thereby. They suffer the Head then to be all covered with Hair, which they carefully comb.

As for their Marriages, they observe the Degrees of Consanguinity after this Manner: They are divided among themselves into Families and Tribes, like the *Arabs*, and some other Nations; and they know each other by the Difference of their Descents. No Man ever marries in his own Tribe, just as the Children of *Thummin* among the *Arabs* take not a Wife a Daughter of the same Race of *Thummin*; and a Man of one Family espouses not a Woman of the same. But, for Example, a Man of the Family of *Robayat* marries into that of *Medzar*; and in like manner a *Medzar* marries with a *Robayat*; they are of Opinion, that such Alliances add to the Nobility of the Children, by increasing their Alliances, and rendering their Families more powerful.

Here our Author makes, as it were, another Break in his Work, in order to pass once more to the *Indians*, and their Customs. In speaking of the Method pursued by the first Author, we observed, that the main Design of his Work was, by comparing the Manners of the *Indians* with those of the *Chinese*, to render them both better known to and more fully understood by his Countrymen. His Commentator therefore, with great Propriety, follows the same Track; and as he had consulted both Books and Travellers to illustrate what had been said of *China*, we shall find him as diligent in what regards *India*.

54. In the Kingdom of the *Balkara*, and in all the other Kingdoms of the *Indies*, there are certain Persons who burn themselves. This Custom proceeds from their Notion of a Metempsychosis or Transmigration, which they firmly believe as a Truth never to be disputed. There are Kings, who upon their Accellion, observe the following Ceremony: They dress a great Quantity of Rice, and pour it upon Leaves of the Mousa in Sight of the King; then three or four hundred Persons come of their own Accord without the least Constraint on the Part of the King, and present themselves before him; after he has eaten some of this Rice, he gives a little of it to some of them as fast as they come up to him one after another, and they eat it in his Presence. By eating of this Rice, they all engage to burn themselves on the Day the King dies, or is slain; and they punctually fulfil their Promise, throwing themselves into the Fire from the first to the last, so that not one of them is left behind.

When a Man is determined to burn himself, he first goes to the King's Palace to ask Leave so to do, and having obtained it, he goes round the public Squares of the City, and proceeding afterwards to the Place where the Pile is heaped up with dry Wood, while round about it stand many Persons who feed the Fire, so that it is very violent, and blazes prodigiously. At last the Person comes preceded by a Number of Instruments, and moves round the Place in the midst of his Friends and Relations; during which some put upon his Head a Garland of Straw, or dry Herbs, which they fill with burning Coals, whereon they pour Sandarac, which catches Fire as strongly as Naphtha; nevertheless, he continues the Procession, although the Crown of his Head be all on Fire, and the Stench of his burnt Flesh be smelt, not so much as changing Countenance in the least, or betraying the smallest Sense of Pain:

We have formerly mentioned the Animal which produces Musk, the Manner in which it is prepared, and the Value of that rich Perfume. At present we shall only remark, that the best Writers, ancient and modern, agree perfectly with our Author in Opinion, that the richest and best sort of Musk is that of *Tibet*, or, as others call it, *Sungazer*; and the Scent of the Aromatic Pastures in that Land, such as rose, and other flowers, is so sweet, that the *Indian* Musk comes next in degree of Fineness, or to we may term it, with what was brought to *Cadiz*, and sold there in the name of *India*; by Merchants, who carried it from *China* by Land, and disposed of it there about the Year 1600. The true *Chinese* Musk is not so good, because the *Chinese* adulterate it several ways, but also because what is produced naturally in that Kingdom is not so good as that of *Tibet*. All this is confirmed by the Testimony of the learned *Gualter*, and *Father Martini*; *Devisis* says, the Musk of *Tibet* is not so good as that of *China* is always the best; and that the Reason is, because the *Chinese* cannot find in the Heart to be that or any other thing, but through their Hands escape unadulterated. At present the Kingdom of *Batavia* is the greatest Mart for Musk; and the *Chinese* Merchants fetch the best sort of this Perfume, whether in the Cod, or out of it.

There is also a very old Custom in other Parts of the World, as appears from what *Orzar* tells us of the *Amboyna* among the *Indians*. In the Year 1600, a general Plague prevailed; for in the Island of *Ceylon* the King had always about him certain N. who were bound to attend upon him in the World, and in the next, who whose custom it was to burn themselves when he died. *Post* observes, that the *Indians* were wont to burn a great Number of *Indian* Soldiers, who always perished with their Chief. In the Kingdom of *Java*, we are told, that the King is wont to be buried with him. In a Word, all the *Portuguese* Writers confirm this, and give us many Instances of it, but not that the *Indians* were wont to burn themselves in their Mourning, to express this Act of devoting themselves to a God, in a manner to a God, in a manner to a God.

At last he comes to the Pile, throws himself into it, and is soon reduced to Ashes.

55. A certain Person, to whom we give intire Credit, says, he beheld one of these *Indians* burn himself, and avers, that when he came near to the Pile, he drew out a Cangiar, and with it ripped down his Breast to the Rim of his Belly; and that this done, he with his left Hand pulled out a Flap of his Liver, and with the Cangiar cut a Piece of it, which he gave to one of his Brothers, talking all the time, and discovering an invincible Contempt of Death, and a wonderful Patience under his Torments, till at last he leaped into the Fire in his Passage to Hell.

56. The Person who affirmed this added, that in the Mountains of this Country there are *Indians*, who in Opinions and Manners differ but little from those we call *Kanibians* and *Jehidians*, and who are addicted to all manner of Superstition and Vice. There is a great Emulation between these Mountaineers and the People on the Coast, the latter continually going up to the Mountains to dare the Inhabitants there to do as they do, and the Mountaineers on their Part as frequently coming down to the Coast with Defiances of the same Nature.

Among others, there once came down a Man on this Errand, and having gathered a Number of the Inhabitants of the Coast about him, who came as well out of Curiosity to see the Sight, as with Intent to imitate him, he told them to do what he was about to perform, or if they despaired of doing it, to acknowledge themselves overcome. He sat himself down then in a Place planted with Canes, and directed them to bend one of them down to the Ground. These Canes are like our Sugar Canes, bend like them, and have a very large Stem; when they are pulled down they lie along, but when let go they rise again with prodigious Violence. One of the largest of these he caused to be bowed down to his Height, and fastened his Hair strongly thereto, when taking in his Hand his Cangiar, which sparkled like Fire, he said to those about him, I am going to cut off my Head with this Cangiar. As soon as it is levered from my Body, let go the Cane, and when it flies up with my Head, I will laugh, and you shall hear me. The People of the Coast had not Courage enough to imitate him. The Person who related these Things to us did it without Emotion or Wonder; and in our Times these Facts are very generally known, for this Part of the *Indies* is in the Neighbourhood of the Country of the *Arabs*, and we hear from thence every Day.

57. It is a customary Thing also for Men and Women of the *Indian* Blood, to desire those of their Family to throw them into the Fire, or drown them when they are grown old, or perceive themselves sink under the Weight of their Years, firmly believing that they are to return in other Bodies. They burn their Dead. It has often times happened in the Isle of *Sarandib*, where there is a Mine of precious Stones in a Mountain, a Pearl Fishery, and other rare and extraordinary Things, that an *Indian* would come into the Bazar, or Market-place, with his Kris, as they call a kind of Cangiar they wear, made after a very particular Manner, and seize on the most wealthy Merchant there present, and holding his Kris to his Throat, leading him by the Vest out of the City in the midst of a Throng of People, while not a Soul of them dared attempt his Rescue; for if any Attempt of this kind was made, the *Indian* was sure to kill the Merchant, and make away with himself: When he had got him out of the City, he obliged him to redeem himself with a Sum of Money. This Outrage continuing, the Kings ordained that such *Indians* should be seized; but when they came to execute this Order, the *Indian* killed the Merchant first, and then himself: The same Mistortune befel many other Merchants; and after this Manner a Number both of *Arabs* and *In-*

dians perished: The Merchants therefore sought for other Means to secure themselves, and the *Indians* were no longer apprehended.

58. In the Mountain of *Sarandib* they find precious Stones of various Colours, red, green, and yellow, most of which are at certain Times forced out of Caverns and other Recefles by Rains and Torrents. In these Places the King has his Officers to keep an Eye over those who pick them up: Many Times also they are dug out of Mines in the same Manner as Metals; and they sometimes find precious Stones in the Ore, which must be broken to get at them.

The King of this Island makes Laws, which are the Fundamentals of the Religion and Government of the Country; here are Doctours and Assemblies of learned Men, like those of the *Habitiss* among the *Arabs*. The *Indians* repair to these Assemblies, and write down what they hear of the Lives of their Prophets, and the various Explications of their Laws. Here is a very great Idol of the finest Gold, but concerning the Weight thereof Travellers are not agreed. Here also are Temples, where great Sums of Money are expended in Idleness.

In this same Island there is a very great Multitude of *Jews*, as well as of many other Sects, even *Manichees*, the King permitting the free Exercise of every Religion. At the End of this Island are Valleys of great Length and Breadth, which extend quite to the Sea; here Travellers stay two Months and more in that called *Sarandib*, allured by the Beauty of the Country, chequered with Groves and Plains, Water and Meads, and filled with a wholesome Air. This Valley opens upon the bay called *Harkand*, and is transcendentally pleasant. You may buy a Sheep for half a Dram, and for the same you may purchase as much of their Drink as may suffice many Persons. This Drink is made of Palm-honey, boiled and prepared with *Tari* (*Toddie*) or Juice, which runs from the Tree.

59. Gaming is the usual Diversion of the Inhabitants here; they play at Draughts, and their other principal Pastime is fighting of Cocks, which are very large in this Country, and better provided with Spurs than Cocks commonly are; and, besides this, the *Indians* amuse them with Blades of Iron in the Form of Cangiar. Upon these Combats they bet Gold, Silver, Lands, and Farms, which are won by the Owner of the Cock that beats. They play also at Draughts, and venture great Sums upon this Game, but with such Fury, that those who have no wherewithal, Debauchees and desperate People, often pry away the Ends of their Fingers.

While they are at play, they have a Fire by them, and thereon a Pot of Walnut or Sealame-oil (they have no Oil of Olives) and they place a little, but very sharp Hatchet between them; when one of them has won the Game, the other lays his Hand upon a Stone, and the Winner cuts off the End of the Loser's Finger with the Hatchet, and the Patient dips the injured Part into the boiling Oil to cauterise the Wound, and yet they shake off this evil Habit of Gaming; on the contrary, they sometimes persist in it so obstinately and so long, that before they part, they have all their Fingers thus mutilated. Some of them will take a Wick, and soaking it in Oil, apply it to some Member, set Fire to it, and let it burn, so that the Scent of the burnt Flesh is smelt by those who play with them, while the Parties themselves betray not the least Sense of Pain.

There is much Debauchery in this Country, as well among the Women as among the Men, for they relate under no Restraint. It was to high, that some times a foreign Merchant, just returned from Sea, than he had the Daughter of a King of the Country, and the King came to him to the fishing Grounds, with her Father.

There are many modern Authors who attest every Circumstance mentioned in this Account; but it must be acknowledged, few of them burn themselves; and that the *Bromians*, who were wont to behave with so much Continancy on such Occasions, are now become the same way with other Men; and even the Women, generally speaking, are far enough from that Spirit of Heroism to burn themselves in former Ages. They burn themselves, indeed, with the dead Bodies of their Husbands, as in Times past, but now they would they do it at all, but that the Custom of their Country, and the Power their Relations have over them, obliges them to do so. It appears, that this Island, which is that of *Ceylon*, has been in all Ages famous for its immense Wealth and Riches. The Author mentions, it is not impossible that the Priests of this Country might practise the same Art, which has been used to give a new Dress of Clay and Bricks, very artificially gilt, which was for many Ages supposed to be pure Gold, though now that there are few Countries where such a golden Image might be looked for, with greater Probability, than in this Island, it is a way equally remarkable for their Wealth and Superstition.

Consent and Privilege of *Sir* strictly wa

Consent and Privacy; wherefore the *Mohammedan* Doctors of *Siraf* strictly warn young People not to go that Way.

60. In the *Indies* there are heavy Rains, which the People of the Country call *Jafara*; they last three whole Months during Summer, incessantly, Night and Day, and scarce does the Winter stop them. The *Indians*, to the best of their Abilities, prepare themselves against these Rains some Time before they fall; and no sooner do they come on, than they shut themselves up in their Houses, made of Wood and Cane, interwoven, and thatched with Leaves; they stir not out during all this Time, and no Soul is seen abroad, no, not even the Artificers, who now do their Work at home; and during this Season, they are subject to several Sorts of Ulcers in the Soles of their Feet, caused by the Damps. The Rains are the Life of the *Indians*; were they to fail, they would be reduced to the utmost Want, for their Fields, sown with Rice, are watered only by Rains, and are rendered fruitful thereby; for if great Store of Water lie upon the Rice-grounds, they need no other Help either from Industry or Art; but when the Rains are plentifully poured down, the Rice flourishes abundantly, and even becomes much better in kind. It never Rains in this Country in the Winter.

61. The *Indians* have devout Men, or Doctors, known by the Name of *Bramins*. They have Poets also, who compose Verses, stuffed with Flattery, in Praise of their Kings. They have also Astrologers, Philosophers, Soothsayers, and Men who observe the Flight of Birds; and others who pretend to the Calculation of Nativities, particularly at *Kanuge*, a great City in the Kingdom of *Gezar*.

In the *Indies* there are certain Men called *Bicar*, who go all their Life-time naked, and suffer their Hair to grow till it hides their hinder Parts, and the rest of their Body. They suffer also their Nails to grow so that they become pointed, and sharp as Swords; nor do they ever cut them, but leave them to break and fall off as it happens; and this they observe as a religious Duty: Each of them has a String about his Neck, to which hangs an earthen Porringer, and when they are pressed by Hunger, they stop at the Door of some *Indian* House, and those within immediately, and with much Satisfaction bring out Rice to them, believing there is great Merit in so doing, while they eat out of the Porringer and withdraw, never returning to make the same Request, if not urged thereto by downright Want.

62. The *Indians* have many Laws and religious Precepts, by which they imagine they please God; of such as these it is written in the Koran, *The Wicked are mighty in Kind*. One Part of their Devotion consists in building of *Kuis*, or Inns upon the Highways, for the Accommodation of Travellers, where also they set up a sort of Pedlars, of whom the Passengers may purchase whatever they may happen to want.

They there also settle publick Women, such as are in the *Indies*, who expose themselves to Travellers; all which the *Indians* number among their meritorious Deeds. But they have besides these in the *Indies*, publick Women called *Women of the Idol*, the Origin of whose Institution is this; when a Woman has laid herself under a Vow, that she may have Children, if it happens that she brings forth a handsome Daughter, she carries the Child to the *Idol* (so they call the Idol they worship) and there leaves her. When the Girl has attained a proper Age, she takes an Apartment in this publick Place, and spreads a Curtain before the Door, and waits the Arrival of Strangers, as well *Indians*, or Men of other Sects, to whom this Debauchery is made lawful; she prostitutes herself at a certain Rate, and delivers her Gains into the Hands of the *Idol's* Priest, to be by him disposed of for the Use and Support of the Temple. We praise the almighty and glorious God, who hath chosen us to be free of the Sins which defile the Man involved in Infidelity!

Not very far from *Almansin*, there is a famous Idol called *Multan*, whither they resort in Pilgrimage from the remotest Parts, even from Distances of several Months Journey: Some of the Pilgrims bring with them some of the odoriferous Wood *Hud al Camruni*, so called from the City of *Camrun*; where they have an excellent Wood-Aloe, which they offer to this Idol, delivering it to the Priest of the Temple that he may burn it before his God. Some of this Wood is worth Two hundred *Dinars* the *Man*, and is commonly marked with a Seal to distinguish it from another Sort of the same Wood, but of less Value: It is usual for Merchants to buy it of the Idolatrous Priests.

63. There are likewise among the *Indians* certain Men who make Profession of Piety, and whose Devotion consists in seeking after unknown Islands, or such as are newly discovered, there to plant Cocoa-nut-trees, and to sink Wells of Water for the Use of Ships that sail to those Parts. There are People at *Oman*, who cross over to the Islands that produce Cocoa-nuts, carrying with them Carpenter's Tools, and having felled as much Wood as they want, they let it dry, and then strip off the Leaves, and with the Bark of the Tree they spin a Yarn, wherewith they sew the Planks together, and so build a Ship; of the same Wood they cut and round away a Mast; of the Leaves they weave their Sails, and the Bark they work into Cordage: Having thus completed their Vessel, they load her with Cocoa-nuts, which they bring and sell at *Oman*. Thus it is, that from this Tree alone so many Articles are derived, as suffice not only to build and rig out the Vessel, but to load her also when she is completed, and in a Trim fit to sail.

64. The Country of the *Zinges* or *Negroes* is of vast Extent; they there commonly sow Millet, which is the chief Food of the *Negroes*. Sugar Canes also they have, and other Sorts of Trees, but their Sugar is very black. These

* This is very agreeable to that Severity of Manners, for which the *Mohammedans* were remarkable in these early Ages; and it shews how careful they were to preserve the Morals of the younger sort of People uncorrupted. It was upon the same Principle that the old *Spartans* did not admit of any Commerce at all, as desiring rather to be known to Posterity by the Fame of their Virtues than of their Wealth; and being more assiduous to transmit to their Descendants Freedom, and the Power of maintaining it, than fine Palaces; and that Ability of living laboriously, which ends sooner or later in abject Poverty.

The Reader has been so fully informed of the State of the *Bramins* among the ancient *Indians*, and of the Communities formed by them for the promoting of Science, that there is no Need of insinuating long upon this Settlement of the *Bramins*, which, without doubt, was a Remnant of some ancient University in the same Place. Some of the *Arabian* Geographers assure us, that this City of the *Kanuge* lies between two Branches of the River *Ganger* in the Latitude of 27°, and in the Longitude of 131°. Other Eastern Writers inform us, that *Kanuge* is also a Royal City, the King of which is titled the *Kanuge*, according to the common Custom of the *Indies*. It is very difficult to say when or how this Kingdom and University was ruined; but at present it is very clear, that there is no such Establishment as in the Text is mentioned.

There are no other than the associated *Bramins*, or *Indian* Pilgrims, or Penitents, mentioned by most Travellers, who relate very extraordinary Things with respect to the Austerity of their Manners, and the Severity of their Penances, as the Reader will see in the subsequent Part of this Work.

There are many Foundations of this sort in the *Indies*, as well as in *Turky*, *Perzia*, and *Mogulistan*; not to mention the many Hospitals in the *Isles* for sick Animals. *Abovernot* observes, that the Charity of the *Indians* of *Cabal* consists in digging of Pits, or sinking of Wells, and in erecting a Number of small Receptacles on the Highways, for the Accommodation of Travellers.

This infamous Practice is of old standing in the East. *Herodotus* has a Story of this kind of the Women, who prostituted themselves in Honour of *Mithra*, who, by the Analogy of the *Chalites*, must be *Venus*; and the Tents or Tabernacles of these Women were much like those described by our Author. In *Mores Polo* we read, that the People of the Province of *Caranda* did the same Thing, exposing their Women in Honour of their Idol. *Tavernier* speaks of a *Paged* near *Combaye*, whither most of the Courtizans of the *Indies* repair to make their Offerings, and add, that old Women, who have scraped together a Sum of Money, buy young female Slaves, whom they train up to wanton Songs and Dances, and all the Allurements of their infamous Calling; and that when the Girls have attained their eleventh or twelfth Year, their Mistres conducts them to the *Paged*, under a Notion that it is a Happiness for them to be offered and delivered up to the Idol.

As this kind of Money is very often mentioned, both in the former Treatise and in this, it may not be amiss to say something of its Value: The *Dinar* is of very fine Gold, and according to the Proportion which that Metal bears now to Silver, that Coin ought to be reckoned at about five Shillings; from whence we conceive at once the Value of the Copper Money of *China*, since a thousand of these Copper Pieces were equal to one *Dinar*; from whence it follows, that since these Pieces of Copper Money, called by the *Arabs* *Falus*, were worth about One Penny,

This Passage is very singular, but the Facts contained therein are incontestably true; the Cocoa-Tree furnishes every thing necessary for building and rigging such Ships as are used in the *Indies*, and for a Cargo of considerable Value when built. The Body of the Tree furnishes Plank, Masts, Anchors,

There is another fort, which swim in great Lumps upon the Surface of the Sea, almost like the Body of an Ox, or a little less, and weigh a great deal. When a certain Fish of the Whale-kind, called *Tal*, sees these floating Lumps, he swallows the same, and is killed thereby: Then they see the Whale floating upon the Surface, and instantly the Men who are accustomed to this kind of Fishery, and know when these Whales have swallowed Amber, go out to him in their Boats, and darting him with Iron Harpoons; they tow him to Shore, where they split him down the Back and take out the Amber; what they find about the Belly of the Creature is commonly spoiled with the Wet, and contracts an unpleasant Scent.

You may buy the Bones of this Fish of the Druggists of *Bagdat* and *Hassora*. The Amber which has not been infected by the Ordure in the Belly of the Whale, is perfectly good: It is a usual Thing to make Stools of the *Vertebrae* of the Back Bone of this Whale, called *Tal*. They say, that in a Village ten Leagues from *Siraf*, called *Teyn*, there are old Houses neatly enough built, the Lintels of whose Doors are of the Rib of this Whale. I have heard a Persian say, that formerly one was thrown upon the Coast not very far from *Siraf*, and that going to view him, he saw People getting upon the Back of this Creature with Ladders, and that the Fishermen exposed him to the Sun, and took away his Flesh, and having digged a Pit, gathered up the Grease which was melted by the Sun, and that having drained off all the Oil, they sold it to the Masters of Ships. This Oil mixed up with another kind of Stuff, in use with Seamen, serves for caulking of Ships to secure the Seams of the Planking, and to stop up Leaks. This Whale Oil is a valuable Commodity, and produces great Sums of Money.

Our Author proposing next to speak of Pearls, breaks out first, according to the Custom of the *Arabs*, into the following pious Soliloquy, which I would not omit, because it is a kind of Characteristick in their Manner of Writing, and may enable the Reader to account for such Apophthegms in other Pieces of this Nature. Let us, before we speak of PEARLS, and the Manner of their Formation, magnify the Great GOD, who in Wisdom has created all Things out of Earth, and so fashioned living Creatures, as that they produce their like. Wherefore these Things which we know, and for many more which we know not, all Glory be unto the Almighty, and all Reverence paid unto his most holy and tremendous Name.

Pearls begin to formed of a Substance at first somewhat like the Plant called *Anjedana*, being in Size the same, in Colour and Figure pretty much alike, small, thin, and tender, just like the Leaves of this Plant; at first it swims freely on the Surface and sticks to the Sides of Ships under Water, where in Time it hardens, grows and gets covered with a Shell. When these Oysters become heavy, they fall down to the Bottom of the Sea, where they subsist almost a Year to us unknown. They appear no other than a Piece of red Flesh, like the Tongue towards the Root, without Bones, Sinews, or Veins.

But there are various Opinions touching the Production of Pearls, for some say when it rains the Oysters rise up to the Surface, and that gaping, the Drops of Water they catch turn to Pearls. Others hold, they are generated in the Oysters themselves, which is most likely, and is confirmed by Experience; for most that are found in

Oysters are fixed, and move not. When they are loose, the Merchants call them Seed Pearl: God alone knoweth how this Matter is.

68. Now this is the most wonderful Thing we have heard concerning the Subsistence of Oysters. A certain *Arab* came formerly to *Bassora*, and brought with him a Pearl worth a great Sum of Money; he shewed it to a Druggist of his Acquaintance, and ignorant of the Value thereof, asked him what he thought of it? The Merchant telling him it was a Pearl, the *Arab* asked him what he thought it might be worth? and he valued it at a hundred Pieces of Silver. The *Arab* much astonished at his Words, asked if any Person would be willing to give him what he had said it was worth: Upon which the Merchant counted him out a hundred Drams, and with this Money the *Arab* purchased Corn to carry back into his own Country. The Merchant on the other Hand brought the Pearl to *Bagdat*, and sold it at a very high Rate, which enabled him afterwards to deal very considerably. This same Merchant declared that he had examined the *Arab* touching the Origin of Pearls, and that he delivered himself to the following Effect: "I was going along, said he, by *Saman* in the District of *Babrein*, not very far distant from the Sea, and upon the Sand I saw a dead Fox, with something at his Muzzle that held him fast. I drew near, and saw a white glittering Shell, in which I found the Pearl I took. Hence he gathered, that the Oyster was upon the Shore, driven thither by Tempest, which very often happens. The Fox passing by and leaning at the Meat of the Oyster, as the Shell stood open, jumped thereon, and thrust in his Snout to seize the Fish, which in its Defence closing, locked him fast, as has been said; for it is a Property of theirs never to let go that hold of any thing, except forcibly opened by an Iron Instrument at their Edges."

This is the Oyster that breeds Pearls, which it as carefully keeps as a Mother her Child; when therefore it was sensible of the Fox, it withdrew, as to avoid an Enemy, and the Fox feeling himself squeezed, beat the Ground on each Hand till it was filled, and so died. The *Arab* found the Pearl, and God would have it that he should apply himself to the Merchant; a very happy Thing for him.

69. The Kings of the *Indies* wear Ear-rings of Stones set in precious Gold. They wear also Collars, of great Price, adorned with precious Stones of different Colours, but especially Green and Red; yet Pearls are what they most esteem, and their Value surpasses that of all other Jewels; they at present hoard them up in their Treasures with their most precious Things. The Grandees of their Court, the great Officers and Captains wear the like Jewels in their Collars; they dress in a half Veil, and carry an Umbrella of Peacocks Feathers to shade them from the Sun, and are surrounded by those of their Train.

There are certain *Indians* who never eat two out of the same Dish, or upon the same Table, and would esteem it a very great Sin if they should. When they come to *Siraf*, and are invited by any of the considerable Merchants who are in that City, they must, though they are a hundred in Number, each have a separate Dish, and without the least Communication with the rest. The Kings and Persons of high Quality have fresh Tables made for them every Day, together with little Dishes and Plates wove of the *Cocoo-nut* Leaf, in which they eat what is prepared

The *Abb. Berosus*, in his Notes upon this Treatise, speaks very slightly of this Story, and seems to think it fabulous. There is however no sort of Contradiction in this; since the most of Whales is very often found in the *West-Indian* Seas, and especially on the Coast of *Bermuda*, and vast Quantities of Ambergris are taken out of its Guts. It is also very certain, that the best of this Perfume is found in the *Indian-Sea*, yet Ambergris is frequently found on the Shore even of our own Islands, as well as in some other Parts of *Europe*, and in *America* it is very common. I shall confess this Story seems to me by far the most excellent Passage in the whole Work, and all the Remarks upon Pearls are very low and trifling; but for the same time it must be allowed, that we know very little more about them than either the Ancients or the *Arabs*. What seems most probable, that Pearls are not the natural Produce of any Oysters; by which I mean, that they are an irregular and accidental Production, occasioned by some Intensity or Disease in the Fish. I am led to this Notion from two Reasons: The first is, that when animal Substances begin to corrupt, they commonly stink, which perhaps may be the Effect of some tartare Motion; the other, that Pearl Oysters are not eatable, but tough, indigestible, and very unwholesome. The Prices and the chief Inhabitants of these Countries were by this Time better acquainted with the Nature and Value of all sorts of precious Stones than formerly they had been, and of these they had of all kinds from the Mines of *Ceylon*. It is remarkable that the *Arabs* have but one Word to signify coloured Stones, which is *Yasak*, or *Yasak*, which strictly speaking signifies a Gem, but to vary this, and to render it expressive of Rubies, Emeralds, and Saphires, they add the Name of the Colour to the Stone. It will be proper to make two Remarks upon this before we leave it: The first is, that our Author is perfectly in the right in his Observation, that Pearls are more esteemed in *India* than any other Parts of the World, and that they are more valued there in Proportion than any other kind of Jewels. Our second Observation is, that the best Emeralds thither from *Egypt*, which is a very plain Proof of the Truth of what we have often asserted, viz. that these Stones are not brought from *India*, though they may, and indeed do, very often come to us from the East.

for their Subsistence; and their Meal once over, they throw the Table, the Dishes and Plates into the Water, together with the Fragments they have left. Thus at every Meal they have a new Service. To the Indies they formerly carried the Dinars, called *Sindiat*, or Gold Pieces of the *Sind* and the *Dinar*, which there passed for three of ours and even more. Thither also are carried Emeralds from *Egypt*, which are set for Rings.

70. These two authentick Pieces are of very great Use in filling up this Period of *Indian* History, of which, till they appeared, we had no Memoirs at all. It is plain enough from the Account given us by the first Author, that Voyages from *Siraf* to *China* were not very frequent, till about his Time, for otherwise he would not have described that Navigation so particularly. But it appears no less clearly from the second Treatise, that these long Voyages were grown into much greater Use between the Time the first Voyage was made, and this Commentary upon it was drawn up, for otherwise the second Writer would have been but indifferently furnished with Materials, whereas we find that he stood in no sort of Want of them, but was able to mention the Voyages and Travels of four or five different Persons into *China* and the *Indies*, exclusive of the Author, whose Voyage gave Occasion to this Discourse.

The most remarkable of these was *Eben Wabab*, whose Adventures are equally singular and instructive, since from them it is very evident that the *Chinese* Emperor, to whose Prefence he was admitted, had, as we observed, very perfect Intelligence as to the *Jewish*, *Christian*, and *Mohammedan* Religions, and as to the History of their Founders and Propagators. We might indeed suspect the Truth of this, if there were not some other Circumstances in this Discourse which render them not only probable but certain. I mean the Destruction of the Capital of *China* at that Time, which our Author calls the City of *Cumdan*, and which without Doubt was no other than *Nankin*, and *Cansu* or *Canton*, in which so many Thousand *Jews*, *Christians*, and *Mohammedans* were slain; a clear Demonstration that Multitudes of all these Religions had been long before settled in that Empire, and consequently the *Chinese* Monarch had it fully in his Power to be well acquainted with all the Particulars beforementioned.

Neither does this Fact stand entirely upon the Credit of this Treatise, since an ancient Monument has been discovered in *China*, which plainly proves that Christians from *Syria* were settled there in ancient Times, though none were to be found when the first Travellers from *Europe* went thither, which is as strong a Confirmation of the Truth of what our Author relates, as in the Nature of Things can possibly be expected. The Missionaries also that were first sent to *China* found there visible Marks of Christianity, though they found no Christians. The *Jews* have been settled in that Empire for Time immemorial, and many of them for the Sake of Riches and Preferment have abused their own Religion, and embraced the Opinions of the *Chinese*, which is also an unquestionable Argument of the Truth of these Relations.

We may add to this the Conformity between the Accounts given by our Travellers and the best *Chinese* Histories, which never could have happened, if the former had not been in every Respect agreeable to Truth. All this is not only supported by our Knowledge of many of the Customs of these People, which remain to this Day the same with those reported in these Relations, but they are still more plainly verified by such as are now no longer in Use, because many *Chinese* Writers, and Christian Missionaries from them, take Notice of such obsolete Customs, and inform us when they were laid aside or began to grow

into Disuse. On the whole therefore we may safely affirm, that these Treatises are free from all just Grounds of Suspicion, and ought to be regarded as the earliest and best Accounts we have of this Empire and its Inhabitants.

They are, considered in this Light, of very great Use in many Respects, but more especially in correcting those Errors that have been introduced by Authors who depended more upon their own Conjectures than on any Light they received from Experience, endeavouring to impose upon their Readers their Notions of Things as Facts of undoubted Credit, of which it may not be amiss to give a few Instances. Our Author is the oldest, and indeed almost the only *Arabian* Writer that mentions the *Chinese* Drink, so universally used in our Days all over *Europe*, and known by the Name of *Tea*. He says, that it is an Herb or Shrub, more bushy than the *Pomegranate-tree*, and of a more pleasant Scent, but somewhat bitter to the Taste. That the *Chinese* boil Water and pour it in scalding hot upon this Leaf, and that this Infusion preserves them from all Distempers. This, to be sure, is an imperfect Description; but it is plain enough to evince, that nothing can be meant but the Plant we know by the Name of *Tea*; the same with the *Tis Cytai*, or *Sim* of the Orientals.

The Tree which bears this Leaf is but small, and ought to be reckoned among Shrubs. It has a pleasant kind of violet Scent, is bitter to the Taste, and is common for them who are fond of it to imagine it contains good, and preserveth their Health. It is certain too, that Father *Trigault* is mistaken, when he imagines it a but of late Date among the *Chinese*, because there is not, as he says, any Character in their Tongue to signify a Drink; for by the Testimony of the oldest of our Authors (who does not speak of it as any new Thing, but as an Herb very much in Vogue with them;) nay, some Degree, that the Emperor thought fit to lay a Duty upon it) it appears, that the *Chinese* have been addicted to it above eight hundred Years. Nor is it possible to believe with *Pisot*, that it grew a long Time wild and uncultivated, or that the *Chinese*, or *Japanese*, have been lately acquainted with its Virtues and the Manner of preparing it; which, he says, he was told by some Dutch Commander, who had been a long Time in *China*.

Father *Martini*, who has written more accurately of *China* than almost any other Person, says no less Thing. He assures us, that it grows particularly in the Province of *Kiangnan*, or *Nankin*, where the best of it is. It is, says he, a small Leaf, perfectly like that of the *Kiss-Corarius*, or *Sumac* of the Curriers. It grows not wild, but is domestic, and cultivated; nor is it a Tree, but a shrub, which grows out in little Branches, with a Blossom very much like that of the *Sumac*, except that the former declines more to a Yellow than the latter. It blossoms in Summer, when it emits no great Scent; then it puts out a Berry, which is first green, and afterwards black. In the Spring it is when they gather the Leaf to make their *Tea*, for then it is most succulent and tender. The Preparation of these Leaves consists in gathering them, drying them by a small Fire, rolling them upon a sort of Mattres, and packing them up in Tin-Creels or Boxes for the sake of preserving them, and the Conveyance of transporting them. Such is the Account given us by a learned and accurate Writer, whose Work is not only generally esteemed, after so many later Accounts of *China*.

But as it is natural to suppose that every Man is naturally Judge of what regards his own Profession, I permit myself that my Readers will not be displeas'd at my interttering here a very curious Passage from the *Writings*

* This ancient Monument was first mentioned by the famous Jesuit *Kircher*, who made many Mistakes about it, and from thence has been the Cause of many Questions as to the Matter of Fact, which however upon Enquiry has been since clearly made out, and from thence it is evident that the Religion was settled in *China* in A. D. 636. that is, upwards of two hundred Years before the Massacre at *Chin*, mentioned by *Trigault*. We have no certain Accounts of the Christians in *China* beyond the Tenth Century, and when the *Portuguese* came into the East, *Peter d'Andrada*, which was A. D. 1517, there was no sort of Remembrance of Christian any preserved in that Empire, so that we may discover how this Religion was exterminated there, otherwise than for Want of Patrons.

† *Lib. 1. p. 16.* It is conceivable how differently Writers have represented the Shrub that bears this Herb; for some say it is a Tree, and some like a Currant-bush.

‡ *Hist. de Ind. Malles. Part 1. c. 6.* Of the Credit, perhaps, is another Report current among the *Dutch*, and they say that the *Japanese* set as high a Price as they gave for the *Tea*, and which has been received as an undoubted Truth, that the *Voyage* of *Trigault* to *China*, was a short general History and Consular, one who did not lose to contradict his own, or to contradict the Things upon the Reader's Judgment. This *Chinese* is a valuable Part, once, in which he has explained the *Chinese* Language, and Father *Kircher*, and a formal Catalogue of the printing to the History of *China*, which, and the Publication of the *Chinese* Language.

the celebrated Doctor *Kempfer*, wherein he gives us a very entertaining Account of the Manner in which the Virtues of Tea were first discovered; neither is this at all foreign to my Subject, since it is an additional Proof of the Veracity of our Author, and clearly points out the Time when this Plant came first into Use among the *Chinese*, and, at the same Time, fully refutes the Objection that had been raised from this Herb's not having a proper Character assigned it by the Learned.

" This Herb, *says he*, which the *Japanese* call *Tsjaa*, has as yet no Character assigned it by the *Literati*, but there are several in Use, some expressing only the Sound of the Word, and others alluding to its Virtues. Among the latter, that is to be accounted which gives it the Likeness of the Eyeballs of *Darma*, a holy Man, much famed among them. There is something very witty in this Allusion, and the Exaltation of it deserves the greater Notice, because it very plainly points out the Time when this Herb first came into Use. Thus then the Story is told.

" This *Darma* was the third Son of an *Indian King*, whose Name was *Kogyazo*, and was the Head of a religious Order instituted by a famous *Indian Saint*, called *Sjaka*, who flourished in the Year before Christ 1028, and to whom this *Darma* was the twenty eighth Successor in a regular Order. It so fell out, that in *A. D.* 519, he was driven into *China*, where he applied himself entirely to the teaching of Mankind the Knowledge of God, and, as he called it, of the only true Religion, and the sole Means of acquiring Happiness. He was not content to enlighten the World only by his Doctrines, but studied to do it still more by his Example, striving by the Purity of his Life, the afflicting his Body, and the bringing all his Passions under perfect Subjection, to secure the Assistance of the Divine Grace. He eat nothing but the wild Herbs of the Field, and, which is esteemed the very Perfection of Holiness in Man, spent his Nights without Sleep in the Contemplation of the Supreme Being; for he considered it as the highest Degree of Piety to forego Ease and Rest, that his Thoughts might be wholly employed in meditating upon God.

" It fell out, that after many Years watching, he was so overcome as to fall fast asleep: His Vow thus violated, he was so afflicted when he awaked, that partly to expiate his Crime, and partly to secure himself from falling again into what he esteemed to great Weakness, he cut off his Eyeballs, as the Instruments of his Offence, and threw them in a Fit of holy Zeal upon the Ground. The next Day coming to the Place where he had inflicted this Punishment upon himself, he saw, with Amazement, a most wonderful Transformation, and beheld each of his Eyeballs had taken Root, and had sprung up into the Shrub called *Tja*, which hitherto the World had never seen, or at least Mankind were unacquainted with its Virtues.

" By taking the Leaves of this Herb, but whether by chewing them, or prepared by Infusion, I cannot say, he found a wonderful Clearness of Mind, and a Disposition perfectly suited to his divine Meditations. As he recommended the Use of this Herb to his Disciples, and as the Benefits derived therefrom were every where published, the Custom of drinking Tea grew quickly into Use among all sorts of People; and the

" mighty Virtues of this wonderful Herb became universally known and admired. Hence it is, that as hitherto no certain Character has been assigned for expressing the Herb *Tea*, and its Virtues, the Custom of distinguishing it by the Figure of *Darma's Eyeballs* has grown into Practice." So much says my Author for the Name of this Plant. The Story is plainly fabulous and extravagant; but, like the Extravagancies of the East, full of Fire, and of that sort of enthuasiastick Eloquence which conveys Ideas with such Force as prevents their Impressions from ever wearing out of the Mind.

We learn likewise from the first of our Travellers, that at the Time he visited their Country the *Chinese* were perfectly well versed in the Art of Pottery, and made a kind of Porcelain, as fine, as beautiful, and almost as transparent as Glass. It is certain, that for many Ages after this we had very dark and confused Accounts of this Matter; and the Stories we are told in almost all the Accounts we have of *China* upon this Subject have apparently the Air of Fable; and look as if they were imposed upon their Authors by the *Chinese*, on purpose to conceal from them the Truth. It is a Point now universally agreed, that the Porcelain formerly made in this Country was infinitely better than what has come from thence of late Years; but the *Chinese* themselves carry this much farther, and maintain, that the old *China* we so much admire is very far inferior to what was made in these early Ages.

Doctor *Kempfer* tells us from the *Chinese* Historians, that this most excellent Porcelain was made in a certain Island not far from *Formosa*, or at least of the Earth found in that Island, which, for the same Crimes in its Inhabitants, has long ago shared the Fate of *Sodom*, and lies now buried in the Sea. Yet it seems it is not sunk so deep, but that their Fishermen and Divers frequently bring up Vessels of this old Porcelain, which are sold at a most extravagant Price in *China* and *Japan*, from a Persuasion that they not only keep Tea better, but even heighten its Qualities, and restore its Flavour when lost by long keeping in other Vessels.

I do not pretend to make myself answerable for the Truth of these Facts; but I mention them only to show, that in the Opinion of these People, who are undoubtedly the best Judges of their own Manufactures, the Porcelain made at the Time our Author speaks of was really superior in Quality to any that has been made since. But if it should be demanded, whether any Proof can be had of the Truth of this Fact, exclusive of what our Author delivers, I answer, there is. For in a Manuscript preserved in the *French King's Library*, the Credit of which cannot be doubted among the Articles of a noble Present sent *Nawrelan* by *Saladin*, soon after he became Master of *Egypt*, Mention is made of a Service of *China-ware*, consisting of forty Pieces of several kinds. It is very true, that this Present was not sent till the Year of the *Hegira* 507, which answers to the Year of our Lord 1171, which is some Ages after the Time in which our Author wrote; but then it is to be considered, that this *China-ware* had been long before brought to *Egypt*; and if it had not been much superior in Beauty to what was brought from the same Country, even at that Time when the Trade to *Bassora* was in a flourishing Condition, it would not have been thought worthy the Acceptance of so great a Prince; and therefore when thoroughly considered, this Objection proves, at least in its necessary Consequences, a Confirmation of the Fact.

Amusat. Essai. p. 68. We shall have an Opportunity of inserting this learned Writer's Travels to *Japan* in the second Volume of this Work; but the Passage here cited is from another Work of his, which is excellent in its Kind, notwithstanding what some *French Critics* have said to the contrary.

Enter *Chauvot*, in his History of *Japan*, blames Doctor *Kempfer* for inserting this Story, which he calls a ridiculous Fable; but I beg Leave to say, that he had not well considered the Intention of the Fable, the Use of the Eastern Nation, or the Eastern Language; for if instead, he would probably have been of another Opinion. There is a wide Difference between Fables in foreign and Fables in Native Languages, especially when they are known to be such, and introduced with no other View than to convey useful Knowledge in an easy, familiar, and pleasant Manner, all which were visibly consulted in the framing of this Story or Parable, which declares the Virtues of this Herb, by whom it is used, and when brought into Use.

Amusat. Essai. p. 21. Our learned Author tells us, that the *Japanese* Name of this fine Porcelain is *Matsubo*, and that the Island in which it was made was *Matsubo Sama*. He assures us, that these Vessels are of different Sizes, and consequently of different Prices; the smallest being worth from twenty to one hundred *Thels*; but the large and best, which are generally bought for the Use of the Emperor of *Japan*, cost five, four, or five thousand *Thels* or *Thaels*, of which there are about three in a Pound Sterling. For a very curious Account of these Vessels, we are told by *Mandels*, in his Travels, p. 176, where he says, that the *Japanese* have Tea-pots that are the size of a hand, and contain only two *Thels*. There seem to be two Mistakes in this; the first is as to the Vessel, which was not a Tea-pot, but a Tea-cup, the second, as to the Price, which was not *Thels*, but *Thaels*.

The first of our *Asian* Mandarins is *Makizoo*, which was probably the Surname of his Author; but as to the second, the *Chinese* and *Japanese* both call the Balling I have mentioned from it being related by the *Chinese* *Benard*, in his Notes on the *Chinese* p. 176.

lowed the Honour of the Age in which he wrote, and affected, as he has done, to give a quaint and fanciful Turn to all that he translated, instead of keeping close to his Authors. This was chiefly owing to a Notion that then prevailed, that there were many Improbabilities and Absurdities in their Writings; which, however, the Diligence of succeeding Times hath, in a great measure, discovered to have been a groundless and injurious Charge arising sometimes from their having very bad Copies of the Authors they used, at other Times from the Ignorance of those who undertook to translate them either in the Languages in which they were wrote, or as to the Subjects which were handled in them.

It deserves also to be considered, that the first Voyagers into any remote Country must lie under great Disadvantages, because they report Things absolutely unknown before, and which, for that Reason, appear monstrous and incredible; whereas, in Process of Time, and after various Persons have visited the same Place, the Publick begins to grow familiar with their Relations; and having received repeated Testimonies as to the Truth of strange Facts, renounce the Prejudices that were conceived against them at the Beginning. It is for this Reason that many learned Men abroad, but particularly *Ramusio* in *Italy*, and *Bergeron* in *France*, have taken so much Pains to examine, correct, and set forth in a most perfect Manner, many of these old Writers; which after the Care they have taken about them, appear to us of great Advantage, that they scarce seem to be the same that were known to us formerly in so wretched a Condition.

But if such Treatises are liable to a bad Reception at their first Appearance, their Credit increases with Posterity, and there is very good Reason for recurring to the first Voyagers, as we do to the first Editions of Books, to see how Things stood at the Beginning. Such Writers are, generally speaking, the most curious and the most exact; for being extremely struck with every thing they see and hear, they are more vigilant in their Searches, and more particular in their Relations, than those that follow them, such taking it for granted, that what is common in remote Countries has been already reported by others, and will not give themselves the Trouble of setting down any thing that is not marvellous or extraordinary. We ought not, likewise, to forget that such Travellers as are sent to visit distant Countries, or who go thither purely out of Curiosity, and from a Desire of seeing what others have not seen before, are much more likely to record exactly whatever they meet with, than such as go afterwards into these Countries purely on the Score of Trade; and on their Return, perhaps, are persuaded to oblige the World with an Account of what they have met with, compiled at a considerable Distance of Time, and consequently very liable to Mistakes and other Imperfections.

We may add to all this, that the first Sort of Authors are, generally speaking, Men of better Capacities, and more capable of setting forth their Discoveries, than the latter; so that on the Whole, if we mean to be thoroughly acquainted with Things, and with all the Circumstances relating to them, we shall read such original Writers with much greater Pleasure than those Collections which have appeared in later Times, and which are frequently no way comparable to them, either for the Importance of Facts, or the Accuracy with which they are related.

It fell out in the East, as it fell out before in the West; that is to say, the northern Nations poured in upon them as a Deluge, and bore down all before them. It was this foundation of the *Tartars* which overturned, and, in a great measure, effaced the whole Policy of the East; so that in the thirteenth Century, the Empire established by the Great *Tartar* Monarch *Jenghiz-Khan*, extended as far as *China* on the one Side, and into *Europe* on the other. His Successors augmented his Dominions, and that in such a Manner as to reach as far as the *Nile* one Way, and to the *Danube* and *Vistula* on the other. Such an Extent of Dominion must appear to a considerate Reader a more formidable Empire than any yet spoken of; and the short Space of Time in which it was raised, must render it still

more amazing: To say the Truth, all the great Monarchies in this Part of the World, large and powerful as they are, ought, strictly speaking, to be considered as Fragments only of this enormous Sovereignty, and as the Remains and Ruins of this prodigious Structure. All the *Tartar* Principalities in *Europe* and *Asia*, the noble Empire of *China*, with so much of *Tartary* as belongs to it, the wide Dominions of the Great Mogul, some of the Kingdoms established in the *Indian* Islands, the Kingdom of *Persia* as it stands at present, together with the best Part of the Grand Seigneur's Territories, fall under this Description, and were once but so many Parts of the *Tartar* Empire, and we may from thence easily discern how much it imports us to have a competent Knowledge of the Rise, Progress, and Declension of this over-grown Power.

But that this, however expedient, however necessary, might not break in too much on the Series of our Voyages, I have taken Care to select a few out of the many ancient Travels that may answer both Ends; that is to say, may preserve the Chain of our Narrations, according to the natural Order of Time, and also fulfil what is requisite with respect to explaining the History of these People, so as to bring the Whole into a reasonable Compass, without depriving the Reader of any thing that is necessary for his Information, or curtailing the Authors that are given him, so as to put it out of his Power to judge of the Value of each, or to know what the Writer himself relates, and what has been inserted by his Editors.

The first of these shall be the earliest Traveller next to our *Arabs*; I mean the famous *Jewish* Writer *Benjamin of Tudela*, in the Kingdom of *Navarre*, who travelled through a great Part of *Europe*, *Asia*, and *Africa*, in the twelfth Century, in which we have not one Voyage besides; and though his chief Design, as plainly enough appears, was to aggrandize his own Nation, however dispersed over the Face of the Earth, and to keep up the Hopes of his Brethren, by representing them as a numerous, wealthy, and flourishing People, notwithstanding their Dispersion; yet, in doing this, he has collected so many curious Circumstances with regard to the Eastern Nations, and interspersed his Travels with such a Variety of historical Passages, to be met with no where else, that whatever Faults may be found with him, he will be always thought an Author worthy of Notice; though, to avoid Prolixity, we have inserted only so much of his Work in the next Section, as has relation to the Subject of which we are treating. It will from thence however appear, that what is suggested by *Purchas*, the only Author that has attempted to publish him in our Language, as to the Impossibility of making his Treatise clear and intelligible, is not over-well founded, but that with due Care and diligent Attention, his Travels might be published entire in such a Manner as to satisfy the most critical and inquisitive Reader.

The next of these ancient Travellers shall be *William de Rubruquis*, a Monk sent by the *French* King *St. Lewis*, to the then *Khan* of the *Tartars*, whose History of his Journey through several Countries, then in a Manner entire, and even now, but very imperfectly known, is addressed to that Prince, and written with a Spirit of Humility and Modesty, and with such plain Evidence of their Author's Veracity, as very fully justifies the Esteem that has been always had of his Work. The third is *Marco Polo*, the *Venetian*, who travelled as well as *Rubruquis* in the thirteenth Century, whose Work has stood the Test of Time and the severest Criticks, and risen by slow Degrees from the lowest into the highest Credit. There are indeed very few Books that have borne so many Editions, or have had so much Pains taken about them; and indeed hardly any have deserved it better, since purged from the Errors that had crept into the old Copies, and into the several Translations made into different Languages, it appears to be as well disposed, as well written, as curious, as entertaining, and as correct a Performance as any of its kind: And yet, to avoid the Trouble of comparing so many Copies and Translations, it has been wholly omitted in our modern Collections, though the perusing it is in a Manner abso-

¹ The Quotation in the preceding Note from *Purchas*, will fully prove the Truth of this to the intelligent Reader.

lately necessary to the understanding the subsequent Voyages to the *East-Indies*.

The last of these old Writers taken into our Collection, shall be Sir *John Mandeville*, our Countryman, who, notwithstanding all the Objections made to his Relation, deserves much better Usage than he has met with. This great Traveller flourished in the fourteenth Century, and spent no less than thirty-three Years in travelling through the *Levant, Syria, Tartary, India, Cathay, Egypt, Libya, Ethiopia*, and other Countries. He composed the History of these Travels in *Latin, French, and English*, and yet we have never hitherto had his Work set in such a Light as might bear reading with Pleasure; I had almost said, and it would be no more than Truth, with Patience; and at the same time it has been respected and well esteemed abroad. There are indeed Abundance of strange Stories and incredible Passages in his Work, which we do not pretend to justify or impose upon the Reader, but there are others worth knowing, and to be met with no where else.

The Trouble which necessarily attends freeing these

Authors from the Rubbish under which they have been buried, and recovering so much of their personal History as is requisite to give Light and Life, Spirit and Intelligence to their several Labours, has been not a little; but when one considers how pious an Act it is to vindicate the Memory of great Men deceased, who thought no Place too great for the Service of Posterity; and how ready the present Age is to encourage all Attempts of this kind, a Man goes through his Task with Pleasure. It is our Happiness to live in Times more enlightened, in which all the Sciences are better understood than when those Authors lived and wrote; but the Contemplation of our Advantages ought to dispose us to a charitable Consideration, and a Disposition to excuse Infirmities, not properly in them as in the Ages in which they flourished, and from which therefore they could not be exempt, especially when we reflect, that to their Attempts we owe the Splendor that has succeeded, and that without the Struggles made by them we must have been in the same Region of Darkness still.

SECTION XIX.

The Travels of Rabbi Benjamin, the Son of Jonas of Tudela, through Europe, Asia, and Africa, from Spain to China, from the Year of our Lord 1160 to 1173.

From the Latin Versions of Benedict Arias Montanus, and Constantine l'Empereur, compared with other Translations into different Languages.

1. A succinct Account of Benjamin of Tudela, the several Editions and Translations of his Work, and the Reputation it has acquired.
2. The Objections that have been made to the Credit of our Author, and the true State of that Question.
3. The Manner in which we propose to give the Substance of these Travels to the Reader.
4. The Description of the City of Constantinople, the Court of the Greek Emperor, and other Things remarkable there, in the Words of Benjamin of Tudela.
5. A succinct Account of his Travels from Constantinople to Baffora or Bassora.
6. His Journey from thence to the Frontiers of Persia, to the City of Aria; and his Account of the Tomb of the Prophet Daniel.
7. The History of the celebrated David El Reï, a Native of Aria, who set up for the Messiah, induced the Jews to revolt from the King of Persia; of the Miracles said to be performed by him, and of his deplorable End.
8. The Route from Aria, and the Mountains of Haphton to the Mountains of Nilbon and the River Oxus, by Hamadan and Ispahan.
9. Description of the Mountains of Nilbon, or Nilbor, inhabited by the Tribes of Dan, Zebulon, Aihur, and Naphtali.
10. The History of the War between the Coptical Turks and the Persians, together with an Account of Rabbi Moïse.
11. Return to Chuzestan, Description of the Island of Nekrokis, of the Pearl Fishery, of several Countries in the Indies, of the diabolical Practices of the Natives, and finally of the Frozen Sea, or the Sea of China.
12. Route from Gingala into Ethiopia, and from thence to Grand Cairo.
13. A large Description of the City of Mizraim, or Grand Cairo, the State of the Jews in that Country, of the overflowing of the Nile, of the famous Column for measuring the Rise of that River, the Fertility of the Country of Egypt, the Mouth of the River Nile, and the Situation of the ancient City of Memphis.
14. An Account of many other Cities in Egypt, a large Description of Alexandria, and the principal Things therein, with the State of its Commerce at the Time of our Author's being there.
15. A concise Account of his Return into Europe, and going back into his native Country of Spain.
16. Remarks and Observations on the foregoing Travels.

THERE are few Authors better known to the learned World than our Benjamin, called from the Place of his Birth Benjamin of Tudela, a very pleasant Town in *Navarre*, on the Confines of the Kingdom of *Castile and Arragon*. The Jews, who boast very much of our Author's Work, inform us, that he was the Son of Rabbi *Jonas*, who was settled at *Tudela*; but they do not acquaint us with the Year in which our Author was born, or what Profession he was, or what induced him to travel. In short, all that at this Distance of Time can be discovered on the Subject, amounts to no more than this, that he began his Travels, *A. D.* 1160, and that he ended them in 1173, which was the very Year in which he died.

These Travels of his have been always in great Credit amongst his own Countrymen, who never cite them but with the greatest Applause; neither have there been wanting several very learned Christians, who have been of the same Opinion, to which probably it might be owing, that from *A. D.* 1543, when it was first printed at *Constanti-*

ople, we have had of this Book no less than sixteen different Editions, and some of them by the ablest Critics.

The first Version of it that appeared in *Latin* was in 1575, by *Benedict Arias Montanus*, a Man of great Learning, and in high Reputation, who in his Preface paid great Compliments to the *Spanish* Nation on account of the Discoveries made by them in the most distant Parts of the World.

This, however, did not hinder *Constantine l'Empereur* from making another Translation in 1633, with the *Hebrew* Text in the Margin, and the Addition of very learned Notes; notwithstanding which, many great Critics have testified an earnest Desire to see another and still corrected Version, since, to say the Truth, there are some apparent Errors in this as well as in the former Translation, occasioned, as I conceive, chiefly by the Mistakes that have been made by Transcribers in the Text, where we have many Names of Countries, Cities, and Princes, that never were heard of in any other Author, and therefore are with great

Reason

Reason believed to have come by some such Mistake into this; the rather, because on comparing several Editions, some of these Errors have been detected and amended, which afforded us room to hope that some time or other so judicious a Critick may arise, as will be able to correct them all, and give us this Author in his genuine Purity.

2. But, notwithstanding the great Reputation of our Author, some very considerable Writers, and those too extremely well versed in Hebrew Learning, have attacked this Work of his with much Vivacity. M. *Wagenfeil* for instance, who wrote a very learned Defence of the Christian Religion against the Cavils and Aspersions of the *Jews*, is pleased to lay of this Writer, that whenever he meets with any thing that makes for the Honour of his Nation, he is not only careful to report it in its full Extent, but even ventures sometimes to exceed the Truth.

The famous *Hottinger* deals as freely, or rather more so, with *Benjamin*; his Voyage, says he, is puff'd up with Jewish Fables, and the sole Aim of it is to deceive and mislead the Ignorant into an Opinion, that obscure and unknown Places are full of the Glory of the *Jews*. He adds farther, that there are many Fables and Contradictions in the book, and still more Stories that are reported upon very slender Grounds: Yet after all, he concludes, that our Author has many things in him that are not to be found elsewhere.

The very learned *Spanheim* gives the true Character of the Work in a few Words: It is, says he, pretty highly loaded with Fables; but there are many good Things in it as well as that. This is precisely the Case; the *Jews*, and Men as fond Admirers of Rabbinic Learning, have credit up much beyond its real Merit; and others again have for a particular Reason, run it down beyond all Measure; nay, they have questioned whether our Author ever travelled at all, and would persuade us that he made this Book without stirring out of Spain; but they would have done well to have shewn us how he came by the Materials, when I think a much harder Talk than to answer all their Objections.

His Countrymen, it seems, frequently quote this Book of *Benjamin*'s, to shew, that the *Jews* are not yet totally deprived of Power, but that there is still a kind of Sovereignty exercised by some of their Nation over their Brethren in certain Countries of the East; which being supposed to contradict the famous Prophecy relating to the coming of Christ, these Criticks will have to be a Fable. But if *Benjamin* had never wrote, the *Jews* would be able to prove the Truth of this in stronger Terms than it is asserted by him, and yet without overthrowing the Application of that Prophecy to *Jesus Christ*; and therefore this is no Reason to me for depreciating the Work at all. He has certainly exaggerated some Things, and mistaken many more. What then? we find in him many Things curious and entertaining, which we can find no where else.

3. Our Author in his first Chapter gives us an Account of his Travels by Land from *Saragossa* to *Marseilles*. In his second Chapter, he tells us that he embarked for *Genoa*, and proceeded from thence to *Rome*, of which he gives us a Description. He went from that City through the Kingdom of *Naples* to *Otranto*, and sailed from thence to the Island of *Corfu*, and then passed by Land through

Greece to *Constantinople*, and in his Passage traversed the Country of *Walachia*. This takes up his fourth Chapter, but as there is nothing very extraordinary in this Part of his Work, and as we have no Room to spare, I thought it better to omit these Chapters than to abridge them, because I must have given the Sense of the Author in my own Words, which would not have put it in the Reader's Power to form any Judgment of the Writer's Style or Manner of Writing. In his fifth Chapter he gives a long Account of the City of *Constantinople*, of the Court of the Greek Emperor, and of the State that Things were in at the Time of his being there, with many other curious Particulars, and therefore I have given this Chapter at large, accompanied with such explanatory Notes as were requisite, that I might afford the Reader a proper Specimen of this Performance, without trespassing too much on his Time or my own.

4. From thence we travelled three Days Journey to *Abiro*, seated upon the Sea-Shore; and travelling five Days Journey more among the Mountains, one comes to *Constantinople*, an exceeding great City, and the Head of the Kingdom of *Javanites*, or those called *Greeks*. This is the principal Seat of the Emperor *Emanuel*, whose whole Command twelve Kings obey; for every one whereof there are several Palaces at *Constantinople*, and they have also Fortresses and Governments, and unto these the whole Land is subject. The Principal and Chiefest is called *Aprisus*, the second *Mega Domestick*, the third *Domnos*, the fourth *Mackducus*, the fifth *Ikonomus Megli*, and the rest have Names like unto these. The Compass of the City of *Constantinople* containeth eighteen Miles, one half of it standeth upon the Sea, but the other half on the Continent, and it is seated upon two Arms of the Sea, into one of which the Sea flows out of *Russia*, but into the other from *Spain*, and it is frequented by many Traders from the Provinces and Counties of *Babylon*, *Senaar*, *Media*, *Persia*, and all the Kingdom of *Egypt* and Land of *Canaan*, and the Kingdoms of *Russia*, *Hungary*, and *Pfianki*, *Buria*, *Lombardy*, and *Spain*.

The City itself is excessively populous, unto which Merchants resort out of all Countries, travelling thither both by Sea and Land. It hath none to compare with it in the World, except *Bagdat*, that mighty City of the *Ismaelites*. Here is the most famous Temple of *St. Sophia*, and the Patriarch of the *Grecians* dwelleth here, nor do they agree in Doctrine with the Pope of *Rome*. There are in it also as many Altars in Number as Days in the Year; but it hath an exceeding great Treasure, almost beyond all Estimation, by the Offerings and Riches, yearly brought from divers Countries, Islands, Castles, Forts, and Palaces, so that the Wealth of no Temple in the whole World can be compared with the Riches thereof; and in the Midst of the Temple there are Pillars of Gold and Silver, huge Candlesticks, Lanthorns, Lamps, and other Ornaments of these precious Metals, more than any Man is able to reckon. Next adjoining to the Walls of the Temple, there is a Place built for the Emperor's Diversion, called *Hippodromus*, where yearly, upon the Birth-day of *Jesus* of *Nazareth*, great Spectacles are publickly presented, and

* Not ad *Lysimach* *Carmen Nazareth* in *Trilign. Sat.* pag. 374. This Writer is induced to censure our Author, for the Reasons I have afterwards alleg'd; but he, because he thinks what *Benjamin* has advanced derogatory from the famous Prophecy in the 49th Chapter of *Genes.*

* *Aug. Ed. Sat.* XII. p. 241.

* *Interd. ed. Hist. Ed. Part II. Secl. XII. Secl. XIV. p. 370.*

It appears evidently from the *Koran*, that there were Principalities of the *Jews* in *Arabia* at the Time that *Mohammed* set up for a Prophet, which is certainly as strong as any thing advanced by our Author, and is, notwithstanding, a Fact that cannot be disputed.

The Manner and Style of this Voyage is a proper Specimen of all the *Jewish* Writers, who use exactly the same Terms in their Narration, and by affecting to keep close to the Names of Nations and Cities mentioned in the Holy Scriptures, render their own Writings very perplexed and obscure.

This Term is made use of by the *Jews* to signify the *Greeks*, because they conceive them to be the Descendants of *Javan*; it is their common Writing, and we must be contented with it. It is true we might have given all this a modern Dress, but then it would have been no longer the Travels of *Benjamin* of *Tudela*, which was what we promised.

The Emperor *Emanuel* is *Mmanuel Comnenus*, who ascended the Imperial Throne *A. D.* 1143, and died in 1180. He was famous for his Treachery to the Christian Princes engaged in the Holy War, but it is very certain that the Time of his Reign agrees exactly with the Time of our Author's visiting the City of *Constantinople*.

There cannot well be any thing more confused than this Passage of our Author is at first Sight, and yet it is not impossible to make to it a good Sense of it. *Benjamin* thought that as *Mmanuel* was an Emperor, his Ministers and Governors of Provinces ought to be considered as such in State and Dignity to Kings. There is no doubt great Difficulty in transferring *Greek* Words by *Hebrew* Characters, especially where a Person is not fully Master of both Languages, which was certainly the Case of our Author; and perhaps the Errors of the Work have been heightened as well as multiplied by such as have copied it. *Aprisus* in the Text very probably means *Protoprius*, or Prime Minister. *Mega Domestick* is plainly the Corruption of *Mezozos*, or Great Chamberlain. *Domnos* stands for *Domnos*, *Mackducus* is put for *Mezozos*, or Great Duke, and the last is intended for *Oisozos*, or Lord High Steward.

"there all Sorts of Men in all manner of Habits of the whole World appear before the King and Queen. Lions also, and Bears, Leopards, and wild Asses, are brought forth into the Place where these Spectacles are to be seen, that they may fight together, and Birds also after the same manner: And my Opinion is that in no Country of the World such princely Spots are to be seen.

"But this King *Emannel*, besides that Palace left him by his Ancestors, hath built him another upon the Sea Shore, which they call *Bilberme*, the Pillars and Walls whereof he hath overlaid with beaten Gold and Silver, whereon he hath engraven all the Wars made by him and his Ancestors; and he hath prepared a Throne there for himself of Gold and precious Stones, and hath adorned it with a golden Crown hanging on high by Gold Chains; the Composure whereof is equal with the Throne itself, so enriched with precious Stones and Pearls, that the Price thereof no Man is able to value; of so great a Lustre, that without the Assistance of Light they shine, and may be seen in the Night.

"Moreover there are such valuable Things in the same Place, as were incredible if told; and Tributes are yearly brought into that Palace, wherewith the Towers are filled with scarlet and purple Garments, and Gold; so that the like Example of Building and Riches can no where else be found in the World. And it is affirmed, that the Revenue only of this City itself, gathered from the Markets, Haven, and Tribute of Merchants, amounted to twenty thousand Crowns a Day. Furthermore, the *Grecians* themselves, Inhabitants of the Country, are exceeding rich in Gold, and have Abundance of precious Stones, and are dressed in most sumptuous Apparel, their Garments being made of Crimson intermingled with Gold, or embroidered with Needle-work, and are all carried upon Horses, as if they were the Children of Kings. The Country itself being very large, abounds with all Sorts of Fruits, and hath great Plenty of Corn, Flesh, and Wine; nor is there a finer Spot in the whole World to be found. They are also learned, and skilful in the Discipline of the *Grecians*; but giving themselves wholly to Pleasure, they eat and drink every one under his own Vine and under his own Fig-tree. Of all the Nations which they call *Barbarians*, they have Soldiers to fight with the *Soldan*, King of the Children of *Thegarna*, who are commonly called *Turks*, because they themselves, through Idleness and Luxury, are become quite unfit for the Wars, and seem unto me more like Women than Men, through their excessive Love of Pleasure.

"But no *Jews* dwell within the City, for they are excluded from thence by an Arm of the Sea of *Soppia*; they are not so much as permitted to come into the City but by Boats, and that for the sake of Commerce; and here are about two thousand *Jews Rabbantes*, besides five hundred *Karates* on the other Side. There is a Wall to separate them from the *Rabbantes*, that are the Disciples of wise Men; and among whom *Abulalon* the Great, and *R. Abdias*, and *Aaron Cuspus*, and *Joseph Starginus*, and *Elsakim* the Governor, have the chief Authority. Amongst these some are Artificers of silken Garments; but there are many Merchants, and those too very rich. No *Jew* is there permitted to be carried on Horse-back, except *Solomon the Egyptian*, the King's Physician, through whose Interest the *Jews* are comforted and eased in their Captivity, which they feel to be grievous; for all the *Jews* are very much hated by the *Grecians*, without making any Difference between the good and evil: But they are worst used

"by the Tanners, who, while they dress their Skin, pour out the filthy Water into the Streets before their Doors. They are general oppressed with a grievous Yoke, and are insulted and beaten in the Streets, and during from every Hand abundance of Injuries. But among the *Jews* themselves, some are rich, as I have said, and good Men, and merciful, and observe the Commandments, who patiently endure the Misery of Captivity. The Place wherein they dwell is called *Pera*."

5. Our Author continued his Journey from *Constantinople* to the City of *Tyre*, from thence to *Jerusalem*, and from thence through the *Holy Land*, of which he gives a very particular Description, to the City of *Damascus*, and from thence to *Balbeck*, which is in the Neighbourhood of the ancient *Palmyra*, which he calls by its old Name of *Tadmor*, and assures us, that there were in it, when he passed through, two thousand *Jews*. He gives us next a copious Account of the City of *Bagdat*, of the Court of the *Khaliff*, and of the Condition of the *Jews* in that City. Then he carries us into the Country of *Thema*, where he places a whole Nation of *Jews*, about which there have been great Disputes; and some would have us believe, that the Whole is a Forgerie. However the Matter be, as it no way relates to my Subject, I did not think it requisite to trouble the Reader therewith, especially as there are Stories enough of the same kind in the rest of the Book. In his fiftieth Chapter, he acquaints us, that he proceeded to *Batzra* on the River *Tigris*, which is plainly *Balsora*, or *Bassora*, a Place frequently mentioned in the preceding Part of this Work; and from thence he continued his Journey through *Perfia*, as I shall acquaint the Reader in his own Words.

6. "The River *Samoura* is esteemed the Limits of the Kingdom of *Perfia*, and near it stands a City of the same Name, wherein dwell fifteen hundred *Jews*. There is the Sepulchre of *Esdra* the Scribe and Prophet, who died at this Place in his Return from *Jerusalem* to the Court of *Artaxerxes*. Our People have built before this Sepulchre a great Synagogue; and on the other Side the *Ishmaelites*, i. e. the *Arabians*, or *Mohammedans*, have built a Mosque; so great is their Esteem for *Esdra*, and their Respect for the *Israelites*. It is on this Score also that the *Ishmaelites* resort thither to pray.

"It is four Miles from hence to *Chuzestan*, which is the same with *Elam*, that great City of old; but it is now in some measure ruined and uninhabited. At one End, but in the midst of Ruins, is *Susa*, a Castle, and formerly the Palace of *Abasuerus*; some Remains of which are yet standing. There are here seven thousand *Jews* and fourteen Synagogues, before one of which stands the Tomb of *Daniel*. The River *Tigris* runs through the City, over which there is a Bridge. All the *Jews* that live on one Side are very rich, have Shops extremely well filled, and carry on a great Commerce. Those on the other Side the River are all poor, having neither Markets, Shops, Gardens, nor Orchards. The Sense of their Condition threw them once into an Insurrection, from a Notion that all the Glory and Riches of those on the other Side the River, sprung from no other Cause than their having the Sepulchre of the Prophet *Daniel* on their Side.

"They demanded therefore that his Tomb should be transferred to their Side; but the others vehemently opposing this, a War began, of which both Sides growing weary, it was agreed, that the Coffin of *Daniel* should remain one Year on one Side the River, and the next Year on the other. This Treaty was observed till such

¹ However sharp or severe this Character of the People at *Constantinople* may seem, yet it is beyond all Question very just and well founded, fully imports what we have delivered upon this Subject in the sixteenth Section, and is as once a Mark of Veracity in their Travels, and of the Author's Capacity in judging of what he saw.

² Our Author's Travels, with the Remarks necessary to explain them, would, if delivered entire, take up a great many Sheets; and for this Reason it is, and that we may keep the Subject as much within Bounds as possible, that we take this Method of acquainting the Reader with the Contents of his Work.

³ Our Author is a little out here in his Geography, for the River *Tigris* does not come near this City; the River he means was anciently called *Eubates*, and in the modern Maps we find it described under the Name of *Caron*. It is, in all Probability, the same as before mentioned, which some Critics will have to be a River of our Author's making; but the Truth of the Matter is, that the River *Caron* takes its Rise near a Town called *Samira*, from whence he ought to have called the River of *Samira*, and such an Error, considering the Times in which he lived, is not very considerable.

give as *Sanigar Shab*, Son to the great *Shab* of *Persia*, who rules over forty-five Princes, cancelled it. He is called in *Arabic* Sultan *Pbars-Al Chabir*, which is as much as to say, great Emperor of *Persia*. His Empire extends from the Mouth of the River *Samouara* to the City of *Samarcaud*, and to the River of *Gozan*, the Province of *Gilbor*, including the Cities of the *Medes*, the Mountains of *Haphton*, and so to the Province of *Tibet*, in the Forests of which Country are found the Animals that produce Mulk. His Empire is four Months and four Days Journey in Extent.

When therefore this great Monarch *Sanigar* King of *Persia* came to *Blam*, and law them transporting the Coffin of *Daniel* from one Side of the River to the other, with a great Croud of *Jews* and *Ishmaelites* upon the Bridge, he demanded what they were doing, and the Reason of their doing it; and being informed of what has been before related, he decided the Point thus. It is by no means decent, said he, that the Remains of *Daniel* should be treated in this manner; measure therefore to a Place that is at an equal Distance from both Sides, and there let the Coffin of *Daniel* be suspended in a Glass Case, fastened to the Middle of the Bridge by Chains of Iron, and let there be a spacious Edifice built in the same Place in the Form of a Synagogue, open to all People, whether *Jews*, or of other Nations that incline to come thither to say their Prayers. As a still stronger Mark of his Esteem, that Emperor likewise forbade, by an express Edict, that any Man should take Fish out of the River for one Mile below, and another above, for the Reverence and Honour of *Daniel*.

From hence to *Robid bar* are three Days Journey, where dwell twenty thousand *Ishmaelites*, among whom there are very many Disciples of the wise Men, and also some of them very rich; but they live under the Power and Authority of a strange Prince. In two Days Journey from thence you come to the River *Vantch*, where are four thousand *Jews*, or thereabouts; but four Days Journey from the River to the Country *Molbat*, the Inhabitants whereof believe not the Doctrine of the *Ishmaelites*, but they dwell in very strong Mountains, and they obey an Elder, whose Status in the County is *Ischiffin*; and among these there are four Colleges of the *Ishmaelites*, and they go forth to the Wars with them; nor are they subject to the Dominion of the King of *Persia*, but live in high Mountains, from whence descending they invade the bordering Countries, and drive away Booties, and return again, fearing no Man; but the *Jews*, who dwell among them, are the Disciples of the wise Men, and obey the Head of the Captivity of *Babylon*.

You travel five Days Journey from hence to *Omoria*, where are five and twenty thousand *Ishmaelites*; and it is the Beginning of the Synagogues of the Inhabitants of the Mountains of *Haphton*, which are known to be more than an hundred in Number; and in these Places the Country of *Altha* beginneth; and these are of the first Captivity carried away by King *Salmansar*; but they speak the *Chaldee* Language, and among them are the Disciples of the wise Men, and the chief City *Omoria*, pertaining to the Kingdom of *Persia*, within one Day's Journey; but they are under the Dominion of the King of *Persia*, to whom they

pay Tribute; and the Tribute appointed in all the Kingdoms of the *Ishmaelites*, is for Males above fifteen Years old, one Golden Amir, which is in Value one *Spanish* Morabentine Piece of Gold and an half, or half a Crown of our Money.

7. It is now twelve Years since a certain Man named *David Elroi* arose in the City of *Omoria*, who was the Disciple of *Chafai*, the Head of the Captivity, and of *Jacob* the honourable Head of the Assembly of *Levi*, in the Metropolitan City of *Bagdat*; he became very learned in the Law of *Moses*, and in the Books of Doctrine, and also in all Wisdom; in the Language of the *Ishmaelites*, and in the Books of the Magicians and Inchanters; he therefore took it in his Head that he would raise Arms against the King of *Persia*, would gather together the *Jews* who dwelt in the Mountains of *Haphton*, would war against the whole World, and go to *Jerusalem* and win it by Assault; and that he might persuade the *Jews* thereto, he shewed them lying and deceitful Signs, affirming that he was sent from God to *Jerusalem*, and to free them from the Yoke of the Nations, so that with many of the *Jews* he procured Credit unto himself, and was owned by them for their Messiah.

The King of *Persia* hearing the Report of this Insurrection, sent for him to talk with him, to whom he went without any Fear; and it being demanded whether he was the King of the *Jews*, he boldly answered, that he was; and he was thereupon apprehended and cast into the Gaol in which State Prisoners are kept all their Lives. This Prison is in the City *Dabastan*, nigh the great River *Gozan*. After three Days a Council of the Princes and Ministers being called by the King, in which they consulted as to this Insurrection of the *Jews*, *David* was present there, being escaped out of Prison, no Man knowing thereof. When the King saw him, he demanded, *Who hath brought thee hither, or delivered thee out of Prison?* Mine own Wisdom, answered he, for I am not afraid of thee, or thy Servants. Then the King cried out to those about him, *Seize him! lay Hands on him!* To whom the Princes and Servants answered, that his Voice was heard by all, but he was seen by none.

The King wondering at his Wisdom, was astonished. *David* then cried out aloud, *Lo, I take my Way*; and he began to go before, the King following him, and all the Nobility and their Servants followed the King. When they came to the Bank of the River, *David* spreading abroad his Handkerchief upon the Waters, passed over dry, and at that time was seen of all. They endeavoured to pursue and take him with little Boats, which they attempted in vain; and thence concluded, that no Inchanter in the World might be compared to him. As for *David* he travelled that Day ten Days Journey, coming to *Omoria*; through the Virtue of the ineffable Name, he declared what had befallen unto him to their great Amazement.

But the King of the *Persians* sending Messengers unto *Bagdat*, informed the great Khaliff of the *Ishmaelites* of this Matter, and requested that he would cause *David Elroi* to be restrained from such Enterprizes, by the Head of the Captivity, and the chief Rulers of the Assemblies, otherwise he threatened total Destruction to all the *Jews* living in the Kingdom of *Persia*. All the Synagogues of the Kingdom of *Persia* falling thereupon into great Fear of the

* This pompous Account of an Emperor commanding over forty-five Kings is very suitable to the Genius of a Jewish Traveller; but the Difficulty is to find out who he is of whom all this is said. We read in *Himerius* of a Prince of this Name, who was the Son of a King of *Persia*, and flourished about this Time; and therefore it is very probable, that this Decision is to be ascribed to him in the Late time of his Father, though *Benjamin* seems to attribute it to the Shah, or Empe or himself.

This Circumstance is not in itself very considerable; but in so large a Collection as this it was necessary to have a Writer so much talked of as our Author, and the Reader cannot think his Time thrown away in acquiring by this Injustice the Power of judging of such a Performance; so, as I believed before, the Jewish Authors all write alike.

This Story, as extravagant as it seems, is really a Matter of Fact, and as such is recorded by two Jewish Historians, viz. *R. Salomo Ben Virga*, and *R. David Gora*, who place it in *A. D.* 1135, which, as some Critics have observed, does not agree with the Date assigned by our Author, who says it happened twelve Years before he was there. This, however, is no great Mistake, even if we should admit that it is our Author's Mistake, though my part I should suppose it as easy for the other Writers to err in this particular. The whole, however, may perhaps be solved, by supposing that *Benjamin* copied the Account that he has given us from some History of this Impolur written twelve Years after this Insurrection. However it be, the Thing is of no great Moment, any more than the Difference between the Name mentioned by our Author, and that of *David El David*, which is mentioned in the other Histories.

There are some little Variations in the Manner in which these Facts are told by the other Historians; but they are of no great Consequence, and therefore I shall not trouble the Reader with them neither should I have mentioned these Writers at all, but to convince the Reader, that this is not a Tale invented by *Benjamin*, as he might otherwise very readily imagine.

Both the Latin Translators have mistak the Sense as to this Name, which the *Jews* call ineffable, because they are persuaded that the true Pronunciation of the Name of God is lost, or unknown; and they pretend, that whoever has the Secret of pronouncing it right, is able thereby to work Miracles. They likewise assert, that by this Means our Saviour wrought his; and though this be a very idle Conceit, yet it is worth the knowing, because it shews plainly, that the *Jews* do not pretend to deny the Matters of Fact, but are forced to have Recourse to this Evision, in order to justify their Incredulity.

what Nation it was that had settled in these Mountains, and directed them for this Purpose to pass the River either by Piers, if they found any, or if not, by swimming.

These Men had not proceeded far in their Journey before they met with a Bridge that was very well built, and had a good Barrier; and on the other Side of the Bridge they saw a very large City: They immediately called out, and the Town's People coming to the Gate, demanded who they were, and to whom they belonged; but as they did not understand each other's Language, they were forced to wait till an Interpreter was called, who understood the *Indian* Tongue; he having put the same Question, they answered, We are Servants to the King of *Persia*, and we come to know who you are, and who is your Lord. The Townsmen replied, We are *Jews*, and did not subject to any King or Prince of the *Gentiles*, but we have a Prince of our own. The *Persians* then informed themselves as to the *Captal* *Turks*, and the *Jews* told them, that they were their Allies, and that whoever were their Enemies, they must regard as Enemies to themselves. These two Men returning to the Camp, and having reported to the King what they had discovered, he was very much at a Loss how to proceed. The *Jews* on the next Day collected their Forces, and the Day following offered them Battle.

The King declined fighting, and address'd himself to the *Jewish* Chiefs in the following Words; I do not come to make War against you, but only against the *Captal* *Turks* my Enemies: But if you proceed to commit Hostilities against me, I will revenge myself by putting to death all the *Jews* in my Kingdom; for I know that, as Things stand here, you will be too hard for me: But let me advise you to prefer Peace to War: Suffer me to proceed in my Expedition against the *Captal* *Turks* my Enemies, and supply me and my Army, for ready Money, with what we want. The *Jews* having considered this Proposal among themselves, resolv'd, out of regard to their Brethren, to yield to the King of *Persia's* Proposal. The King therefore being admitt'd with all his Army into that Country, spent fifteen Days there, being honourably entertained among them.

But in the mean time the *Jews* declared the whole Matter by Messengers, and Letters, to their Confederates. The *Turks* thereupon gathering their Forces together, crossed the Enemy at the Passage of the Mountains, and having conven'd Peace for that Purpose they attacked and gave the *Persians* so mighty an Overthrow, that the King's Army being ruin'd, they compell'd him to return into his own Country with a very small Number.

But it happened that a *Jew* of this Province, named *Musa*, being seduced by a certain *Persian* Horseman, followed the King of *Persia*, and when they came into *Persia*, he was made a Slave by the same Horseman. But when a Time of publick Diverfion they executed their Bows in the Presence of the King, this *Musa* appear'd the most excellent Archer in *Persia*; he was thereupon examin'd by an Interpreter, and openly declared to the King the manner of his being seduced, and his Condition, wherein he was presently intrench'd, clothed with purple and Gold Garments, and enrich'd with Royal Gifts; and was pleas'd like a King, if he would embrace their Religion, give a Kingdom, and the Government of the King's House; which when he stoutly deny'd to do, he was plac'd by the King with *R. Mallem*, the Prince of the Synagogue of *Urbaham*, whose Daughter he was married by Consent of the Father. This very *Musa* it was who told me all that I have related.

When I departed out of these Countries I returned by *Cherzhan*, through which the River *Tigris* runs, falling from thence into *Holla*, or the *Indian* Sea; and in

its Passage thither encompasses the Island *Nekrokis*, near the Mouth thereof, which Island is in Extent six Days Journey. There is in it only one Canal of fresh Water; and they drink no other than what is gathered from the Showers, which is the Reason that Land is neither sowed nor till'd; and yet it is very famous through the Commerce of the *Indians* and Islands seated in the *Indian* Sea, and Merchants of the Country of *Senacr*, *Arabia* the *Happy*, and *Persia*, bringing thither all sorts of Silk and purple Manufactures, Hemp, Cotton, Flax, and *Indian* Cloth; Wheat, Barley, Miller, and Rice in great Plenty, which they barter and sell among themselves: But the *Indian* Merchants bring also exceeding great Plenty of Spices thither, and the Natives act as Factors and Interpreters; and by this they live: But in that Place there are not above five hundred *Jews*. Sailing thence with a prosperous Wind in ten Days, I was brought to *Katibpha*, where are five thousand *Jews*.

In these Places Pearls are found, made by the wonderful Artifice of Nature; for on the four-and-twentieth Day of the Month *Nisan*, a certain Dew falleth into the Waters, which being sucked in by the Oysters, they immediately sink to the Bottom of the Sea: Afterwards, about the Middle of the Month of *Tisri*, Men descend to the Bottom of the Sea, and by the Help of Cords these Men bringing up the Oysters in great Quantities from thence, open and take out of them the Pearls.

In seven Days Journey from thence I came to *Oudam*, which is the Entrance of their Kingdom, who worship the Sun, and are prone to the Study of Astrology, being the Children of *Chus*. They are Men of a dark Complexion, sincere Tempers, and of very great Fidelity in all Respects. They have among them this Custom, that such as come to them from remote Countries, when received into the Haven, have their Names set down in Writing by three Secretaries, who carry their Lists to the King, and afterwards bring the Merchants themselves, whose Merchandise being received into his Protection, the King direct's them to be landed, and left on the Shore, where they remain without any Watch to keep them. There is also a Magistrate unto whom all Things that are lost, or casually remov'd, are constantly brought, and of him they are easily received by the Owner, so that certain Tokens be cast whereby the lost Thing may be made known; and this strict Fidelity and honest Dealing is common through all the Kingdom.

In this Country, from *Eagler* to the Beginning of the succeeding Year, the Sun shines with outrageous Heat; and therefore, from the third Hour of the Day until the Evening, all Men remain shut up in their Houses. But about that Time Lamps being lighted, and set in Order throughout all the Streets and Markets, they work and execute their respective Arts and Callings all the Night; for, as I said, they cannot do it in the Day-time by reason of the exceeding Heat. It is in this Country that Pepper grows upon Trees planted by the Inhabitants in the Fields belonging to every City, and their proper Gardens are particularly assigned and known. The Shrub itself is small, and brings forth a white Seed, which being gathered, is put into Basons steeped in hot Water, and is set forth in the Sun, that it may be dried and hardened, acquiring thereby a black Colour. Cinnamon and Ginger are likewise found there, as well as many other kind of Spices.

The Inhabitants of this Country do not bury their Dead, but having embalmed their Bodies with divers sorts of Drugs and Spices, they place them in Niches, and cover them with Nets set in Order according to their several Families; but their Flesh drieth with the Bones, and when grown stiff, they seem as if they were alive, and every one knows their

There is no Passage in the Travels of *Benjamin* more perplexed than this Description of the Island of *Nekrokis*, about which all his Commentaries are divided in their Sentiments. That which most of us has been thought most probable is, that it means the Island of *Osway*, which, with *Cherzhan*, was once a Place of great Trade, and was always destitute of Water. It is however more credible that he meant the City and Country of *Bagdad*, because he places it at the Mouth of the River *Tigris*, makes it the Centre of the *Eastern* Commerce, and mentions precisely the Commodities of which that City was the Staple.

This Description has also given Rise to many of the Commentaries. The Word used in the *Hebrew* is *Balkis*; and in the Description there is no mention of what our Author meant by *Persia*. The Author of the *Relation*, now and then says, that it may appear, to have been that which is understood by the most learned of his Commentaries. Their Opinion, in few Words, is this, they hold, that at a certain Season of the Year the current of the *Tigris*, and *Euphrates*, being in the surface of the Sea, which being swallowed by the Oysters, or rather sucked up, and then expires out, turns afterwards to a Pearl. This is without doubt, if I have Truth on their Side, that such a substance is sometimes to be found on this and other Seas, the Drops of which, at that Sign, resemble liquid Pearl.

the like of Plunder, and what they can carry away; they constantly take with them Bread, Rice, dried Raisins, and Eggs. These they throw in large Quantities among the ill-familied Blacks, whom, while they scramble for them, the Dogs, they seize and carry away Prisoners, and sell them in Egypt and other Countries. These are the Negroes, or black Slaves, the Posterity of Ham. It is twelve Days Journey from *Afsan* to *Cheban*, in which there are about three hundred Jews.

From *Cheban* they go in Caravans fifty Days Journey through the Desert called *Al Tschabra*, or *Zara*, to the Province called *Zula*, which is *Havilah*, in the Land of *Araby*, i. e. *Guiney*. In these Deserts there are vast Mountains of Sand, which, being carried by the Force of violent Tempests, sometimes overwhelm whole Caravans, and bury under them all the Passengers. Such of the Merchants as escape this perilous Journey bring with them from that Country, Iron, Copper, Salt, and all sorts of Fruits and Spices; and they likewise bring Gold and precious Stones. This Country is Part of the Land of *Ceus*, and lies to the West of *Abyssinia*. It is thirteen Days Journey from *Cheban* to the City of *Kous*, which is the first in the Land of Egypt, where there are settled about thirty thousand Jews. The Distance of five Days Journey is *Phim*, anciently called *Phison*. In the Neighbourhood of this City are still to be seen the Ruins of those ancient Structures that were built by our Ancestors during their Captivity in Egypt.

Four Days Journey from thence leads to the great City of *Misraim*, or *Cairo*, situated on the Banks of the River Nile, in which there are settled about two thousand Jews, who have in this City two fair Synagogues, one belonging to the Jews of *Palestine* and *Syria*, the other to those of the Country of *Babylon*. These two Sorts of Jews differ only in the Division of the Law into Sections; for the *Babylonians* every Week read one Parafcha after the Manner which is common throughout all *Spain*; and the *Syrians* once every Year they finish the Law: But the *Syrians* of *Syria* divide every Parafcha into three Sections, or smaller Sections, and so they read over the Law once in Three Years; and both these after a solemn Manner twice in the Year join in their Prayers together, viz. upon the Day of the rejoining of the Law, and on the Festival Day of the Law given. Over all these Matters hath the chief Authority, being the greatest of the Country, and Head of the Assembly, who rules all the Synagogues in Egypt, and appoints Masters and Teachers.

He is also the Minister of the great King, who resides in the Palace of *Zoin* (which is a City of Egypt, wherein the son of *Abstaleo* was once Commander of the *Israhelites*, whose Subjects are still called *Rebels* by the other *Arabs*, because they refuse Obedience to the *Abissinian* Khaliff, whose Seat is *Bagdat*. There is an irreconcilable Enmity between these Princes. This Monarch appears in publick twice in the Year, viz. at the Time of their Feast of *Laster*, when the River Nile overflows.

The Royal City itself is encompassed and fortified with Walls, but *Misraim* is without Walls, surrounded by the River Nile on the one Side. This is a very large City, furnished with many Market-places and publick Buildings; and there are many rich Jews. The Country itself is never troubled with Rain, Ice, or Snow, but is often afflicted with outrageous Heat. It is watered by the Nile, which once every Year swelling in the Month *Chal* covers and refreshes all the Land for fifteen Days Journey, the Waters continuing to rise in the Months of *Ebal* and *Tisri*, and

making the Earth fruitful: And the Policy and Diligence of the old Egyptians was such, that in an Island which the River makes here, a Pillar was by them erected of fine Marble and excellent Workmanship, raised twelve Cubits above the Surface of the River. When therefore the Waters overflow and cover that Column, the Inhabitants are fully satisfied that the whole Extent of their Country for fifteen Days Journey is entirely overpread. If the Water rise but half the Height of the Pillar, they gather from thence that their Country is but half watered. There is a Man stands by the Pillar, and every Day at Noon proclaims in all Parts of the City the Height of the Water in this Form, *Be thankful to God, the River is risen so many Cubits.*

If the Water rises to the Top of the Column, it is a Sign that the Year will be fertile throughout all Egypt. At this Season whoever has any Land, hires Workmen to cut a Trench through his Ground, into which as the Water rises, the Fish are carried, and are left therein; when the River sinks, then the Owners of the Lands take them out, and either spend them in their Families, or sell them to such as salt and export them. These Fish are exceedingly large and fat, and the very best People in the Country make use of the Oil drawn from them to burn in their Lamps. If it falls out, as it frequently does, that People eat too much of these Fish, they have nothing more to do than to drink largely of the Water of the Nile, which immediately removes that Inconvenience. It has been an old Question, and a great Diversity of Opinions there has been concerning the Overflowing of the Nile, but the Egyptians suppose, that at the time when this River overflows, heavy Rains fall in the higher Countries, that is in the Land of *Nabab*, which we call *Havilah*; at the Time the River does not overflow, nothing is sown in Egypt, and hereupon Sterility and Famine follow.

But usually the Fields are sowed in the Month of *September*, the Nile being then retired into its Channel; but Barley is reaped in the Month of *February*, and Wheat the next Month after; and in the same Month Cherries are ripe, as are also Almonds and Cucumbers. Gourds, Pease-cods and Beans, Lentils, &c. and divers kinds of Pot-herbs, as Purslain, Asparagus, and Lettice, Corianders, Succory, Coleworts, and Grapes; but the Gardens and Orchards throughout Egypt are watered, and Trenches filled with the Waters of the River.

This great River, after passing through the City *Misraim* or *Cairo*, is divided into four Heads, one whereof runneth by *Damietta*, sometime called *Captor*, nigh unto which it falleth into the Sea. The second runneth down into the City *Rafis*, not far from *Alexandria*, and there discharging itself into the Sea. The third passeth by *Apnon*, a very great City on the Borders of Egypt, nigh which Heads of the River many Cities, Castles, and Towns, are seated on either Side, and People may travel to them all either by Boat or Land. No Country in the whole World can be compared to this for the Multitude of Inhabitants, and all the Country of Egypt is plain, fruitful, and well stored with good Things. *Old Misraim* is two Leagues distant from the *New Misraim*, but it is walled and desolate; Yet there are many Ruins of the Walls and Houses, and not a few Monuments there of the Treasuries and Storehouses of *Jeseph* yet to be seen. In the same Place there is an artificial Pillar built by *Ait Magic*, like which there is none in all the Land. Without the Compass of the City stands a Synagogue, which bears the Name of *Moses* our Teacher, of ancient Date; to preserve the Ruins that yet remain, a certain

There is not a Passage in all our Author's Work which has been more contested than this with regard to the Khaliff then reigning in Egypt: Some say it was *Abd-el-Kader*, as to produce it as a direct Proof of his never having travelled at all. But I cannot help saying, that tho' the Critics might be said what is said in the Copies of any Author which they publish, yet I cannot conceive they have any Authority to alter or suppress any Part of our Author's Passage, and then produce it to the Prejudice of the Author, whose Credit they would destroy. We had now before us in the present Case there is no Ground for such a suggestion; but that what our Author has delivered may be well reconciled to the History of Egypt, without any Alteration whatever.

In the subsequent Part of the Work, we shall have more than once Occasion to mention most of the Circumstances that our Author hath here to mention; the Reports of later Travellers with his. The Reason of this Note is, to take Notice of a Particular which our Author mentions, and which however the Reader may be glad to know. It is this, The Nile is of so great Consequence to the Egyptians, that they always had a very diligent regard to it, in such that they fancied the Rise and Fall of this River not only portended the Prosperity or Decline of the succeeding Year, but likewise great Revolutions of State. It is certain that it did not overflow in the tenth Year of the Reign of *Salomon*, which might seem to predict the Compass of that Country by the *Roman*, that soon after followed; but then the same Accident happened in the Time of *Isaac*, when nothing remarkable followed it. Besides, we read of no scarcity in *Isaac* before the coming of it by the Debarment of the Khaliff of the Family of *Abu*, which was brought about by *Sindbad*; so that this ought to be considered as a remarkable Circumstance, as well of those Nations as of the

old Minister, a Disciple of the wise Men, is there maintained, who from his Office is styled *Sabeb Albounetzar*, or *The Father of the Watch*. The Ruins of Old Misraim take up a Space of about three Miles.

13. The Land of *Goshen* is no more than eight Leagues from hence, and therein stands *Bosfir Salbis*, a great City, in which there are three thousand *Jews*. From hence you travel half a Day's Journey to *Iksal Lein Al Sames*, which was anciently called *Rameses*, where now are only the Ruins of a City, in which many Works are seen built by our Fathers, and among these certain huge Edifices like Towers made of Brick. From thence you make one whole Day's Journey to *Al-Bayg*, where are two hundred *Jews*; and from hence in half a Day's Journey you come to *Manzifiba*, where are two hundred *Jews*, from which City *Ramira* is four Leagues distant, and in it there are seven hundred *Jews*, from whence it is five Days Journey to *Lambala*, where are 7 hundred *Israelites*.

Two Days Journey more bring you to *Alexandria*, a City called after the Name of *Alexander the Macedonian*, at whose Command we read it was built and strongly fortified, and adorned with Walls admirably finished, Houses uniformly built, and stately Palaces: Without the City a great and beautiful Building is yet to be seen, which is reported to have been the College of *Aristotle*, the Master of *Alexander*, wherein there are almost twenty Schools, which were frequented in former Times by the learned Men of the whole World, who assembled there to learn the Philosophy of *Aristotle*; and his Academy of stately Pottices of Marble Pillars*. The City itself is excellently built, as well from the Pavement of the Ground, as with Vaults and Arches under Ground, through the hidden Passages whereof Men may come into the Market-places and not be seen; of which some are a whole Mile in Length, as from the Gate *Kesid* unto the Gate leading to the Sea, from which Gate a Way was made and paved unto the very Haven of the City of *Alexandria*, which is extended one Mile within the Sea.

In this Place a very high Tower was built, which the Inhabitants call *Hemegarah*, but the *Arabians* *Mogar Alexandria*, that is, the *Pharos of Alexandria*; on the Top of which Tower it is reported that *Alexander* set a curious Mirror, in which all warlike Ships sailing either out of *Greece* or from the West unto *Egypt*, might be seen above the Space of five hundred Leagues off. This continued for a long Time after the Death of *Alexander*. It fell out however that a Ship coming thither under the command of a certain *Greek* Captain, who had a great Knowledge in the Sciences, came and cast Anchor in that Port; and having made Presents to the King of Gold, Silver, and very rich Silks, he thereby obtained his Favour. While he lay in the Port, he took abundance of Pains to ingratiate himself with the Officer, who had the Charge of this Watch-tower and Mirror; and having frequently entertained him on board his Ship, contracted with him at last such an Intimacy, that he was permitted to go into and stay in the Tower as long as he thought fit. One Day having treated the Captain and his Men very magnificently, he doted them at last to plentifully with strong Wine, that they all fell fast asleep. Having thus carried his Point, the Captain and his Crew first broke the Mirror to Pieces, and then weighed Anchor and sailed away in the Night.

Since that time the *Edomites*, i. e. the Christians, have infested the Coasts of *Egypt* with their Ships of War and Privateers, and have deprived the Sovereigns of this Country of the two great Islands of *Crete* and *Cyprus*, which remain at this Day under the Power of the *Greeks*,

from whom the present Possessors of *Egypt* have not been able to recover them. This Watch tower is still used as a Beacon for the Service of such Ships as are bound to *Alexandria*; for they are able to discern it at the Distance of one hundred Miles by Day or Night, in consequence of a vast Fire which is kept continually burning there for that Purpose.

This Country enjoys a large Share of Trade, and is frequented by almost all Nations for the sake of Commerce. The Port of *Alexandria* twarms with Vessels from all Parts of *Idumea*, i. e. *Christendom*; viz. from *Poland*, *Tuscany*, *Lombardy*, *Apulia*, *Malta*, and *Sicily*; others come from the most Northern and some Inland Parts of *Europe*, as from *Cracoe*, *Cordova*, *Spain*, *Russia*, *Germany*, *Sweden*, *Denmark*, *England*, *Holland*, *France*, *Normandy*, *France*, *Petion*, *Angers*, *Gascony*, *Aragon*, and *Navarre*. There come also from the Western Empire of the *Ismaelites*, viz. from *Andalusia*, *Agare*, *Africa*, and even *Arabia*, besides what come by the *Indian Ocean* from *Havilah* and *Abyssinia*, and the rest of *Libyæ*, omitting the *Greeks* and *Turks*. Further are brought the richest Merchandizes of the *Indes*, and all sorts of Perfumes and Spices, which are bought by Christian Merchants.

The City is extremely populous on account of its extensive Trade; and for the greater Convenience in negotiating on their Dealings, every Nation has its Factory built. There is near the Sea-side a Marble Tomb, in which are engraven the Figures of all sorts of Beasts and of Beasts, with an Inscription in Characters to which none now are able to read them; whence it is believed with some Colour of Truth, that it belongs to an old King who governed that Country before the Deluge. The Length of this Sepulchre is fifteen, and the breadth six Spans. To conclude, there are in *Alexandria* about three thousand *Jews*.

14. It is not necessary to give at large the Rumour of our *Jew's* Travels, and therefore I shall repeat the Reader in few Words, that having made a Journey to *Damietta* in *Egypt* to Mount *Sinat*, he returned back to the first-mentioned Place, and thence sailed to Sicily, the Island of *Sicily*, from whence he went to *Palermo*, and crossing the Sea to *Italy*, continued his Journey to *Rome* and *Tuscan*.

He afterwards crossed the *Alps*, and passed through that great Part of *Germany*, from whence he takes Occasion to mention what Multitudes of *Jews* were settled in several great Cities of that extensive Empire. He insinuates on their Wealth, their Civility, and, above all, their Hospitality to their distressed Brethren, and gives a very particular Detail of the Manner in which they receive them. He assures us, that at their Feasts they encourage each other to persist in hoping for the Messiah's Advent, and that when the Times of *Israel* shall be restored, they, and under his Conduct, be led back to their native Land. Until this long-expected Time shall come, he says, he holds it their Duty to persevere in their Obedience to the Law of *Moses*, to lament with *Jerome* the Destruction of *Jerusalem* and *Sion*, to beseech the Almighty to pity them in their Affliction, and to restore them to their appointed Time.

He asserts, that his Countrymen are not only settled in all the Provinces of the Empire, but also through all the Northern Countries to the very Extremity of *Russia*, which he describes as a Country so excellently cold in Winter, that the Inhabitants are not able to stir out of Doors. He tells us next, that the Kingdom of *France*, which, he says, is called by their Rabbins the Land of *Tzorbat*, is likewise

* Our Author had this Notion of the School of *Aristotle* from the *Mohammedans*, so that whether it be wrong or right, he is not answerable for it. But with regard to the fact, it is certain, that it was not *Alexander* but *Ptolemy* that erected this famous School, in which however it is certain that the Philosophy of *Aristotle* was taught, and in which the most famous of his Commentators flourished.

† It must be confessed that this Legend is absolutely false, since, as the Reader has been before informed, the *Pharos of Alexandria* was built by *Ptolemy Philadelphus*, and not by *Alexander the Great*. As to this Mirror, it is mentioned by some other Writers as well as our *Perseus*, but is certainly a Fable, and a Fable ridiculous in itself.

‡ It is very clear from hence, as well as from a Multitude of other Circumstances, that our Author chiefly intended in this Work to recover his own Nation, to preserve an Account of the different Places in which they were settled, and to do all in his Power to keep up their Spirit and their Captivity, by putting them in Mind of the Coming of the *Messiah*. I must confess, I consider this in a different Light from what our Critics, for I do not conceive that a Man loving his Countrymen ought to prejudice him in the Opinion of his Readers, and who is undoubtedly to beget some Doubts as to the Fidelity of his Relations with regard to the *Jews*, yet I do not see how this can with Justice be objected to the other Parts of his Book.

full of the Disciples of *Doctors*, who study extremely kind and He concludes with his Promise to the assemble them from he has dispersed them.

In the several Parts whole 394887 *Jews* Caravans, 1000 *Sans* there will remain 3 *Israelites*, whom he *Cochin*, they will met with in his T considered, will not we have brought to *de Tulela*, which give them in the

15. We have in the 6 page an Account the Reason of our said here. That many Mistakes in can we help confess a Man, and a ruler bestowed upon a Person (whose performance of his is moment these Pramonor the Lights is from him, as from the true state of the pils of this Period) Inhabitants, and the whole half.

His Travels from the Communication been impossible to through the whole did. Some Objections the *Jews* settled in the Relation appears the King (son of *Abraham*) Traveller settled in the Empire member that the them out of all thons to think this true, that *R. M* magnifying the of *Jews* more considerable regard the unjust Grounds, not say it, that he relates of *China*, Country, which is merce carried on but I dark Account.

We are indebted which for any where, I mean the old *Perfians* or *V East Indies*, of w Place. The Account *Jewish* Colonies ancient and modern the best Reason as to the Passage is evident from large Commerce *Egypt*, in Slaves

full of the Disciples of the wise Men, that is, of the *Jewish* Doctors, who study the Law Day and Night, and are extremely kind and charitable to their distressed Brethren. He concludes with an earnest Prayer to God, to remember his Promise to the Children of *Israel*, and to return and assemble them from all Nations, through which in his Wrath he has dispersed them.

In the several Places he mentions, he reckons up in the whole 394087 *Jews*, from which if we subtract 740 *Caraites*, 1000 *Samaritans*, and 2000 other Schismatics, there will remain 390947, to which, if we add 350000 free *Israelites*, whom he found in the Kingdoms of *Thema* and *Cisbar*, they will swell the Account of the *Rabbanites* he met with in his Travels to 740947, which, when duly considered, will not, perhaps, appear very improbable. Thus we have brought to a Conclusion the Travels of *Benjamin de Tudela*, which had never appeared so fully as we have given them in the *English* Language.

15 We have in the Introduction to this Section given a large Account of our Author, of his Performance, and the Reason of our inserting it, that we have not much to add here. That there may be, and indeed that there are, many Mistakes in these Travels, is not to be denied, neither can we help confessing, that the Author was a very credulous Man, and far enough from deserving the high Character bestowed upon him by the *Jews*, who represent him as a Person skilled in all Sciences, and refer us to this Performance of his as a Proof of it. But granting that he did not merit these Praises, yet there is something surely due to him for the Lights he has communicated to the World. It is upon him, as from an impartial Person, that we learn the true State of Affairs at *Constantinople* within the Compas of this Period, the immense Wealth and Luxury of its Inhabitants, and their extensive Commerce throughout the whole East.

His Travels from that City to *Bassora* shew plainly, that the Communication was open, since otherwise it would have been impossible for a private Traveller to have proceeded through the whole Kingdom of *Persia* in the Manner he did. Some Objections have been made to his Account of the *Jews* settled in the Mountains of *Nisbor*, which from his Relation appear to have been upon the Borders of the Kingdom of *Tibet*; yet if we reflect upon what our *Arabian* Travellers have told us of the Number of *Jews* settled in the Empire of *China* before this Time, and remember that the Emperor *Heracius* had long before driven them out of all the *Greek* Empire, we shall see many Reasons to think this Account of his probable enough. It is true, that *R. Moses* and our Author may be suspected of magnifying these Settlements, and of making this Colony of *Jews* more considerable than it really was; but as we should regard the Whole as a Fiction, I must confess I see no solid Grounds. It is very likely, though *Benjamin* does not say it, that he received from the same Person what he relates of *China*, and of the icy Sea to the North of that Country, which shews there had been a considerable Commerce carried on that Way, though *Benjamin* could give but a dark Account of it.

We are indebted to him likewise for a Piece of History, which for any thing I know is not to be met with elsewhere, I mean the Settlement of the *Persees*, who were the old *Perthians* or Worshipers of Fire, in several Islands of the *East Indies*, of which we shall make some Use in another Place. The Account he has given us of *Ethiopia*, and of the *Jewish* Colonies in that Country, is so consistent with the ancient and modern History of that Empire, that there is not the least Reason to doubt the Truth of it, or of what he says as to the Passage of the Caravans through the Deserts. It is evident from thence, that there was by this Means a large Commerce carried on between this Country and *Egypt*, in Slaves, Gold, Ivory, and perhaps also in some

Indian Commodities; and it is likewise clear, that there was a great Trade between that Country and the opposite Coast of *Arabia*. If our Author had travelled as a Merchant, he might very possibly have given us many more curious Particulars on this Subject; but as he did not, we must be content with those he has delivered occasionally, and as they struck him in his Passage.

There are great Exceptions taken at his short Account of the Government of *Egypt*, when he was in it; and some of his Translators have inclined to give him up in this Particular, though without any great Reason. It is plain enough from the rest of his Work, that he did not set up for a great Politician, or pretend to describe the Constitutions of the States through which he passed, but only to mention in general what he understood of such Matters. It is also certain, that without changing his Words, we may give a clear and satisfactory Account of this Matter, which amounts to no more than this: That the then Masters of *Egypt*, though they were *Mohammedans*, were yet treated as Heretics, or Rebels, on account of their disowning the Khaliff at *Bagdat*, and that on this Account there was an inveterate Hatred between the Subjects of the Khaliff of *Babylon*, and the *Mohammedans* in *Egypt*, as to which there can be no doubt at all.

The single Difficulty in this Case is our Author's calling the Commander of the Faithful in *Egypt* *Ali* the Son of *Abitalab*; from whence it is inferred, that he makes him the Monarch then reigning, which would have been a most notorious Absurdity. But the Truth of the Matter is, our Author says no such thing: He only mentions *Ali* the Son of *Abitalab* as having been once Commander of the Faithful in *Egypt*; and the Reason of his mentioning it is very plain, *viz.* in order to account for the Difference between the *Mohammedans* in *Asia* and *Egypt*, and the latter being styled Rebels by the former on account of their taking the Part of this *Ali*.

But the greatest Difficulties that occur in our Author's Work, some of which, it must be owned, are not to be got over, arise from his using scriptural Names for the Countries and Places through which he passed; and these, according to the Notions of the Rabbins, for want of being thoroughly acquainted with which, it is impossible for any Traveller to be perfectly sure as to his Meaning. But if we should be somewhat mistaken in the Names of the several Countries from which Ships came to *Alexandria*, yet we must be right in the main; and the Reader may rest satisfied from thence, that at the Time of our Author's being there, the Port of *Alexandria* was the Centre of Commerce between *Christendom* and the *Indies*. All the Fables that he relates about the magical Mirror there cannot prejudice this Truth; for though our Author might be, as to be sure he was, a very indifferent Historian, a bad Mathematician, and a credulous Writer, yet he could not be mistaken about Things he saw, or be induced to set down the Names of Nations never heard of at *Alexandria*. Besides, he is remarkably accurate in this Account; and the List he has given us is more methodical than any other Passage in his Book, which seems to have been owing to his making an Enquiry at *Alexandria*, as to the several Foreign Lodges or Factories established there.

On the Whole, as these Travels plainly demonstrate that it was both possible and practicable for a Person to travel in the mid of the twelfth Century from *Spain* through *Italy* and *Greece* into the remote Parts of *Asia*, and to return from thence through *Ethiopia* and *Egypt* into *Europe*, it was requisite, that in a Collection of this kind, such a Performance should not be omitted; and if not omitted, it ought surely to appear in the best Dress we could possibly give it, which must be an Apology to the Reader for our having taken so much Pains therewith, and having dwelt upon it so long.

they retained the old Simplicity of living much longer than any other People, and were therefore celebrated by *Homer* and *Hippocrates*, as the justest and most innocent of Mankind. but, in Process of Time, even these vast Countreies became over-peopled; and then being pressed by each other, these barbarous Nations, as they were stiled by the *Greeks* and *Romans*, broke out like an Inundation, and kept all before them.

At present our Concern is with those who broke out first; I mean the *Tartars*, who are generally said to have derived their Name from a River so called; but that is a Mistake. The original Name of this numerous Nation was *Turks*, which they derived from *Turk*, the eldest Son of *Japhet*. But *Alanza Khan*, one of their ancient Princes, leaving his Dominions to his Sons, which were *Tatars*, the one called *Tatars*, and the other *Mogul*, this gave rise to the Distinction of those two Nations, which hath ever since prevailed.

The great Conqueror *Jengbiz Khan*, who in our old Writers is generally called *Zengis*, united both under his Dominion. He was born *A. D.* 1162, and was raised to the Command of his own small Tribe at the Age of thirteen. He by degrees first established his Power in his own Country, then attacked and conquered the northern Parts of *China*, but was never heard of in *Europe* till about the Year 1218, when he entered the *Caucasus*; he extended his Conquests afterwards over a great Part of *Asia*, and died in the Year 1227, at the Age of sixty five, and after having held the Dignity of Khan twenty-five Years. His eldest Son *Zuzi* died six Months after him, and was succeeded by his eldest Son *Batu* or *Batu*, as our Author calls him, who had a great Part of *Tartary* for his Share. *Zagatai*, Son to *Jengbiz Khan*, had that Country which the Ancients call *Transoxiana*, which has been since called *Turkestan*, or the Country of the *Uzbeks*; but by the *Tartars* to this Day *Zagatai*. *Tai*, another Son of this Conqueror, had for his Share *Georgia*, *Persia*, and the *Indies*; and *Ozai* all the rest, which Title of *Khan*. This Prince began his Reign in 1218, and died in 1241. So much as to the State of *Tartary*.

The Christian Princes had been very often put upon the Recovery of the *Holy Land* by the Popes; and *Louis IX* King of *France*, called from thence *St. Louis*, took the Cross, and engaged himself by a Vow to endeavour the Recovery of the City and Kingdom of *Jerusalem* from the *Infidels*. It was with this View that he embarked at *Marseilles*, August 23d. 1248, accompanied by his Queen and two Brothers. He sailed from thence to the Island of *Cyprus*, where he spent the Winter in preparing for the War. There he received Ambassadors from the Khan of the *Tartars*, with an Account that he had embraced Christianity, and was disposed to attack the *Infidels* on one Side, while his Majesty carried on the War on the other. This was an Affair of very great Importance to the King of *France*, who treated the Ambassadors with great Respect, and promised to send an Ambassador to conclude an Alliance with the Emperor their Master.

He was hindered however in the Prosecution of this Design by the unlucky Accidents of the War; for having invaded *Egypt* at first with great Success, he was afterwards, in the Year 1250, taken Prisoner in the Battle of *Majra*, and remained for a long Time in the Hands of the *Infidels*, who treated him very ill, but at last let him at Liberty, upon his surrendering the City of *Damietta*, and paying them a Ransom of 400,000 Livres. This cruel Reverse of Fortune did not hinder the King from pursuing his Design: He passed immediately over into *Syria*, where he put the Affairs of the Christians into as good a Condition, as it was possible, and would very probably have accomplished all that he proposed, if the Death of his Mother, whom he had left Regent of *France*, had not obliged him to return home, which he did in the Year 1254, and reigned very gloriously for many Years, and then undertook a second Expedition in the same Cause, of which we shall hereafter give some Account.

At present our Business is to observe, that while this March was in *Syria*, and these concerted Measures for recovering the Power of the *Mohammadians*, he made Choice

of our Author *Friar William Rubruquis* for his Ambassador to the Khan of the *Tartars*, and that for these three Reasons; first, because he had engaged himself, while in *Cyprus*, to send such an Embassy. Secondly, because the Assistance of so powerful a Prince was a Matter of great Consequence to all *Christendom*. And, thirdly, that he might obtain a distinct and authentick Account of the Policy, Strength, and Interest of a Nation which, in the Space of fifty Years, had obtained an Empire of such an Extent as hitherto the World had never seen.

The Reasons which induced him to make Choice of our Author were many; but we shall content ourselves with mentioning only a few. His Condition, as a religious Man, made him a fit Minister to a Prince lately converted to the Christian Faith: It dispensed likewise with his having any Train of Attendance, with which such an Embassy could not be incumbered; and it put it more into his Power to enquire into all Things that his Master desired to know, than if he had gone with all that Pomp which is usually annexed to a publick Character. But, above all, he depended on the Abilities of the Man, who was looked upon as a Person of admirable Parts, and great Diligence, and whose unaffected Piety and Probity were not to be disputed. After his Return from this Embassy, he compiled this Account, which we now present to the Reader, and sent it to the King. It has been always esteemed the fullest and clearest, as well as the most faithful and exact Description of the *Tartars* that ever was published, and therefore we have given it entire, and in the Author's own Words, together with his Dedication, which follows.

4. To the most excellent and most Christian Lord Louis, by the Grace of God, King of France; Brother William de Rubruquis, of the Order of Friars Minors, wishes Health, and that he may ever triumph in Jesus CHRIST.

"It is written in the Book of *Ecclesiasticus*, that the wise Man shall pass through Countries inhabited by foreign Nations, and that he shall have his Share in all Things good and evil. I have done all this, Sire, and God grant that I have done it as a wise Man, and not as a Fool; for many there are which do those Things which wise Men do, but not wisely, and much I fear that I am of that Number. However that Matter may be, you were pleased to command me, at the Time of my Departure, that I should write to you all I saw, and whatever I could discover among the *Tartars*. You were likewise pleased to add, that I should not be afraid of writing long Letters. I am now about to perform what your Majesty then gave me in Charge; yet not without great Fear and Apprehension that the Simplicities of my Thoughts, and the Homeliness of my Style, may seem unworthy of being addressed unto your Sovereign Majesty."

5. May it please you then, Sire, to understand, that departing from *Constantinople*, on the seventh of *May*, *A. D.* 1253, we entered into the Sea of *Pontus*, now the *Black-Sea*, which the *Bulgarians* call the *Great-Sea*, and which, as I was informed by Merchants who have long traded there, extends in Length from East to West one thousand Miles, and is, as it were, divided into two Parts. About the Middle there are two Provinces, the one on the South, which is called *Sinople*, from a Fortrefs and Port of the same Name, which belongs to the Sultan of the *Turks*: The other towards the North, which the western Christians call *Gazaria*, now *Crimea*, or *Crim-Tartary*; but the *Greeks* who dwell therein *Cassaria*, which I take to be the same as *Cæsaria*. In this Province there are two Promontories, or Capes, which run into the Sea towards the South, and the Country of *Sinople*; the Distance may be about three hundred Miles between *Sinople* and *Cassaria*; so that these Points may be about seven hundred Miles from *Constantinople*, as well towards the South as towards the East, in which Quarter lies *Iberia*, which is a Province of the Country of *Georgia* or *Georgiana*.

We came then into the Country of *Gazaria*, which is in the Shape of a Triangle, having on the most Western Point a City called *Kerjova*, where St. *Clement* Bishop of *Asyria* suffered Martyrdom; and passing in View of this City, we had sight of an Island in which there is a Church said to have been built by Angels. In the Middle, which is also the most Southern Part, stands the City of *Sollata*, which is directly over-against *Sinople*, to which all the Merchants coming from *Turky* resort in their Passage to Northern Countries, as do likewise such as come from *Russia* with Intent to go to *Syrky*.

These last being Famine and other rich Furs; the former deal in Cotton, Cloth, Silks of all sorts, and Spices. Towards the East Part of this Country stands a City called *Mairiga*, at the Mouth of the River *Tanus*, or the great River *Don*, where it falls into the Sea of *Pontus*, being there about two we Miles over. This River, before it falls into the Sea, makes of itself a kind of Sea, which is near seven hundred Miles in Extent, but so shallow, that no Ships of Burthen can sail therein. The Merchants of *Constantinople* however, when they arrive at the City of *Mairiga*, send their Barks up the River *Tanus* to purchase dried Fish, such as Sturgeons, Theoles, Barbels, and many other sorts of Fish. The Province of *Gazaria* before-mentioned has the Sea on three Sides, viz. On the West, where lies the City of *Kerjova*; on the South, where lies the City of *Sollata*, or *Cassa*, where we landed; and on the East, where is the City of *Mairiga*, at the Mouth of the River *Tanus*.

Beyond this Country lies *Zakia*, that is the Country about *Azoph*, which is not subject to the *Tartars*; to the East of which lie the Countries of the *Suetians* and *Derians*, which likewise do not pay Obedience to the *Tartars*. Towards the South again stands the City of *Trebizond*, which belongs to its own Prince, whose Name is *Guido*, and he is descended of the Race of the Emperors of *Constantinople*, but is for all that subject to the *Tartars*. The City of *Smyrne* lies next belonging to the Sultan of *Turky*, who is at present their Vassal likewise.

Beyond his Dominion lies the Country of *Vassacijs*, the Son of whose King is called *Azur*, after his Grandfather by the Mother's Side, and he is not under their Subjection. All the Country from the Mouth of the *Tanus* Westward as far as the *Danube*, is at present under their Dominion, and even beyond the *Danube* towards *Constantinople*, as *Walachia*, which is also called the Country of *Agha*, and the *Legy* *Bugaria*, as far as *Sylvania*, pay Tribute to them: And besides this Tribute, they have of late Years imposed a new Burthen on the *Walachians*; that is by exact from every Family an Axe and a certain Quantity of Corn.

This Introduction of our Author's is in itself very clear, and by adding the modern Names of Places, it is hoped it will be perfectly intelligible to every Reader.

The Author intended to explain the Situation and Commerce of these Countries at the Time he wrote, which was the more necessary, because great Alterations had been made in the Situation of the *Tartars*. It remains therefore to the Situation of Commerce at this Time, as well as the present comprehending his Route to the Camps of the *Tartar* Princes, this explanatory Discourse was very expedient; and as this Writer begins very industriously, to his whole Work is conducted with such Order and Expedition, as is not usual in the Writings of that Time. The Situation is all reducible to his Matter, plain and expressive, without any Flowing, or the least Display of the greatest Wonder which he relates: On the contrary, he every where endeavours to avoid heightening Things beyond Credit, and delivers himself with facility and Simplicity, as gives an immense Value to his Work, that no Fault of Time can ever take away. This in the Particularity was in some measure owing to his Attention to the Instructions given him by his Master, who was a Prince of great Ability, had himself travelled into the East, and was consequently a better Judge of the Particulars than most of our Authors, either of that or any other Age. It was for the same Reason, probably, that our Author thought proper, as the Reader will see, to insert his Account of the *Tartars*, their Habitations, Cul-

toms, Manners, Laws, Government, and whatever else was necessary to give a just Idea of these People, before he proceeds to his Negotiations with them; which is a clear Proof that this Treatise was not composed in a Hurry, or written as Occasion offered while he was actually on his Travels, but after his Return out of *Tartary*, when he had Time to recollect himself, to compare and digest the Notes he had taken during his Stay in that Country, and to bring every Thing into its proper Place. So that we have no Occasion to interrupt his Discourse with Remarks or Corrections, but are able to leave his Work as it lies to the Perusal of the ingenious Reader, who will find therein abundant Proofs of what we have here advanced.

So we arrived, continuing by *Sollata* the twenty fifth of *May*, and several Merchants of *Constantinople* who arrived before us, reported that Ambassadors were coming thither from the Holy Land, who were to travel to *Sartak*. This however I publicly given out on *Friday*, in the Church of St. *Sophia*, That I was not your Ambassador, or the Ambassador of any other Prince, but that I travelled thither only to preach the Gospel to them according to the Rule of our Order; and being arrived, the said Merchants admonished me to be very cautious in what I spoke, because they having reported me to be an Ambassador, it might say the contrary. I could not have free Passage granted unto me. Then I spoke to the Lieutenants of the City, because the Governors themselves were gone to pay Tribute unto *Basak*, and were not as yet returned. "We heard of your Lord *Sartak* in the Holy Land, that he was become a Christian, of which the Christians were exceedingly glad, and especially the most Christian King of *France*, who is there now in Person, to fight against the *Saracens* to redeem the Holy Land out of their Hands. I am determined therefore to go to *Sartak*, and to deliver unto him the Letters of my Lord the King of *France*, wherein he is manifestly concerning the Welfare of all *Christians*."

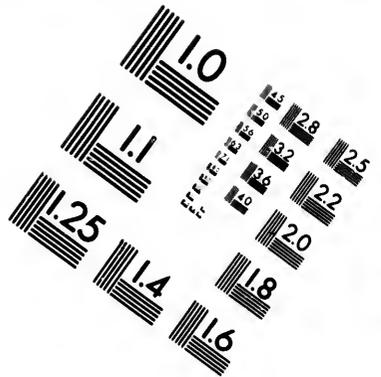

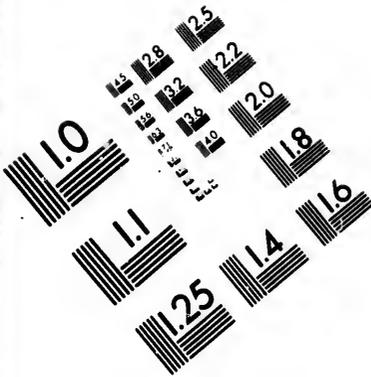

On this they received us with Joy, and gave us Entertainment in the Cathedral Church, the Bishop of which Church had been with *Sartak*, who told me several Things concerning him, which are now to be seen. They then gave us our Choice what we would have Oxen and Oxen, or a Number of Horses, or some other Goods, and the Merchants of *Constantinople* advised me not to take Carts of the Carcases of *Saracens*, but to buy some Carts of my own, such as the *Rossians* carry by Sea, and to put all our Baggage therein, because if I should use Horses, I might be compelled to buy them, and to take down my Things and to lift them up; that is, that I should use a more goodly Place in the City. Wherefore yielding unto their civil Council, I departed travelling to *Sartak* two Months, which I had done in one, if I had gone on Horses back. I went with me from *Constantinople* pleasant Fruits, good Wine, and delicate Bread, to please the Governors of *Sollata*, that I might obtain the Pass, because they look favourably upon no Man who goes with an empty Hand.

All these Things I carried in one of my Carts, the Governors being absent when we came, I left them on; for they told me, I could not go thither, saying that they would be much obliged to me, if I took our Journey therefore about the Beginning of *July*, and that they would cover Carts of our own, and with the Oxen which we borrowed of them, when we were at Bedding to rest on in the Night, as if you would have Horses to ride upon, they would give them to your Company, I from *Bartholomew* of *Constantinople*, the Bearer of their Presents, the Interpreter, and my Servant, whom I brought with me, and with me of the *Alms* bestowed upon me, I carried with me besides two Men, which were of the Company, and our Oxen and Horses, and our Carts, and our Bedding, the Sea Shore, from *Constantinople* to *Mairiga*, and thence to *Sartak*, there are forty Caravans, it is said, which are every one of which at all times are full of Caravans, amongst whom there were many *Arabs* who speak the *Dutch* Tongue.

Wine; they have also Wine brought to them from other Countries. In the Summer Time they care not for any Drink but *Cosmos*. This Liquor stands always at the Entrance of the Door, and next to it a Fidler. I saw there no such Violins as ours; but many other musical Instruments which are not used with us. When the Master of the House begins to drink, one of his Servants crieth out with a loud Voice, Ha! and the Musician plays upon his Fiddle.

When they make a solemn Feast, they all of them clap their Hands and dance to the Noise of Musick, the Men before their Master, and the Women before their Mistress; and when the Master has drunk, then his Servants cry, Ha! as before, and the Fidler stops; then they drink all round both Men and Women, and sometimes they carouse, especially for Victory, till they are drunk. When they invite a Man to drink, they pull him by the Ears to the Vessel, and to lag and draw him strongly to stretch out his Throat, clapping their Hands, and dancing before him.

When they would do Honour to any Person at their solemn Feasting and Rejoicing, one of the Company takes a full Cup, and two others stand, one on his right Hand, and the other on his left, and to they three come singing to the Man, who is to have the Cup presented to him, still singing and dancing before him; and when he stretches his Hand to receive the Cup, they leap suddenly back, returning again as they did before; and so having deluded him three or four Times by drawing back the Cup, until he is eager and very desirous to drink, then they give him the Cup, singing and dancing, and stamping with their Feet, until he hath done drinking.

10. In respect to their Food, give me leave to inform your Highness, that without Difference or Distinction they eat all their Beasts that die of Age or Sickness; and amongst so many Drovers, there must some Cattle die in Summer. However, so long as their *Cosmos*, that is, their Mares Milk lasts, they care not much for any Food; and if they chance to have an Ox or an Horse die, they dry the Flesh, cutting it into thin Slices, and hanging it up against the Sun and the Wind, it is presently dried without Salt, and without ill Savour or Corruption. They make better Puddings of their Horses than their Hogs, which they eat as soon as made, the rest of their Flesh they reserve till Winter. They make of their Ox Skins great Bags, which they dry in the Smoak; of the hinder Part of their Horse Hides they make very fine Sandals. They give fifty or an hundred Men the Flesh of one Ram to eat; for they mince it in a Bowl with Salt and Water, having no other Sauce, and then with the Point of a Knife, or little Fork, which resembles such as we use to take roasted Pears or Apples out of Wine, they reach unto every one of the Company a Mortel or two, according to the Number of Guests. The Master of the House, before the Ram's Flesh is distributed, first takes of it what he pleases; if he giveth unto any of the Company a particular Service, the Receiver thereof must eat it alone, and not impart unto any other; or if he is not able to eat it up all, he carries it with him, and delivers it to his Boy, if he be present, to keep it; if not, he puts it up into his Saptarget, that is to say, his Satchel, or Kraplack, which they carry about with them for such Purposes, and wherein they lay up their Bones, when they have not Time to pick them thoroughly, that they may scrape them at Leisure, and so nothing be lost.

11. Their common Drink *Cosmos*, which is Mares Milk, is prepared after this Manner; they fallen a long Lane to two Potts, standing in the Ground, and to the same Lane they tie the young Foals of those Mares which they intend to milk; then come the Mares to stand by the Foals, suffering themselves to be milked; and if any of them be rude, then one takes her Foal and puts it under her, letting it suck a little while, and presently carrying it away again, there comes another Man to milk the Mare. When they have got a good Quantity of this Milk together, while it is new, they pour it into a great Bag, and they beat the Bag with a piece of Wood made for that Purpose, having a Knot at the lower End like a Man's Head, which is hollow within; and so soon as they beat it, it begins to boil like new Wine, and to be sour, and of a sharp Taste; and they beat it in that manner till Butter comes; then they

caste it, and being indifferently sharp, they drink it, for it bites ones Tongue like the Raspberry Wine. After a Man hath taken a Draught, it leaves a Taste behind it like that of Almond Milk, going down very pleasantly, and intoxicating weak Brains, for it is very heady and powerful.

As for their *Caracosmos*, that is to say, Black *Cosmos*, which is for great Lords to drink, they make it thus; first, they beat the Milk so long that the thickest Part thereof descends down to the Bottom like the Lees of White Wine, and that which is thin and pure remains above like Whey, or White Must; the Lees and Dregs, being very white, are given to Servants, and will make them sleep exceedingly. That which is thin and clear their Masters drink; and indeed it is a wonderful sweet and wholesome Liquor. *Bazra* hath thirty Farms within a Day's Journey of his abiding Place, every one of which serves him daily with *Caracosmos* of an hundred Mares Milk, and so all of them together every Day with the Milk of three thousand Mares, besides white Milk, which the rest of his Subjects bring: For, as the Husbandmen of *Syria* pay the third Part of their Fruits, and carry it unto the Courts of their Lords, so do they their Mares Milk every third Day.

Out of their Cow's Milk they first churn Butter; boiling which Butter unto a perfect Decoction, they put it into Rams Skins, which they reserve for that Purpose; neither do they salt their Butter; and yet by this boiling it never putrefies, and they keep it for Winter; the Churn Milk, which remains of the Butter, they let alone till it be as sour as possible; then they boil it, and in boiling it is turned all into Curds, which Curds they dry in the Sun, making them as hard as the Drofs of Iron; and this kind of Food also they preserve in Satchels against Winter. In that Season when Milk fails them, they put the Curds before-mentioned, which they call *Gra-ut*, into a Bawler, and pouring hot Water upon them, they beat it with a mallet, have dissolved them, and it is thereby made exceedingly good; and this they drink instead of Milk; for it seems a Race with them never to drink fair Water by itself.

12. The great Lords of this Nation have all of them Farms in the South Part of their Country, from whence their Tenants bring them Miller and Meal against Winter. The poorer Sort provide themselves with such Necessaries, by the Exchange of Rams, and other Beasts Sizes. As for their Slaves, they are forced to be content with Water, and that thick and bad enough. The only sort of Animals from which I have known them abstain, are Mice and Rats. There is, however, a little Animal which they call *Sogur*, which in the Winter Time are and sleep twenty or thirty of them together in Caves for six Months, where the *Tartars* find them out, and esteem them excellent Eating; and indeed they are very tender and fat. They have likewise great Plenty of a sort of Rabbits with long Tails, the outside Hair of which is black and white; other small Creatures they have, on which they freely feed. I saw no Deer there, and but a few Hares; but a great Number of Roes.

I saw wild Affes in great Abundance, which are like Mules; I saw also another kind of Beast called *Artak*, resembling in its Body a Ram, with crooked Horns, and are of such Bigness, that I could scarce lift up a Part of them with one Hand; and of these Horns they make drinking Cups. They have Falcons, and other Hawks in great Numbers, which they carry upon their right Hands, and they put always about their Falcons Necks a String of Leather, which hangs down to the mouth of their Gorges; by which String, when they call them off the Hill at the Game with the left Hand, they bow the Head and Breasts of the Hawks to prevent their being tossed up and down in the Wind, or their soaring too high. Being expert in this Art, they gain a great Part of their Provision by Hunting and Hawking. In regard to their Attire, it may please your Majesty to know, that out of *Catava*, and other Regions of the East, out of *Perfia* also, and other Countries to the South, are brought to them Manufactures of silks, Cloth of Gold, and Cotton Cloth, which they wear in the middle of Summer; but out of *Russia*, *Mosell*, *Bulgaria*, *Hungaria*, and out of *Kessis*, all which are Northern Regions, and full of Woods, and also out of many other Countreies of the North, which are subject unto them, the Inhabitants bring

then many rich and costly Skins of divers sorts, such as I never saw, where with they are clothed in Winter, and against which Season they make themselves two Gowns, one with the Fur inward to their Skin, and another with the Fur outward, to defend them from Wind and Snow, which for the most part are made of Wolves Skins, or Foxes Skins.

When they sit in the House they have a finer Gown to wear: The poorer sort make their Gowns of Dogs or of Cats Skins. When they go to hunt wild Beasts they meet in a great Company, and surrounding the Place where they are sure to find Game, by little and little they approach on all Sides, till they have got all the wild Beasts into the midst in a Circle, and then they discharge their Arrows at them. They make themselves Breeches of Skins. The rich *Tartars* sometimes fur their Gowns with Silk Shag, which is exceeding soft, light, and warm: The poorer sort line their Cloaths with Cotton, or Cloth, which is made of the finest Wool they can pick out; and of the coarser Part of the Wool they make Felt to cover their Houses, and their Cloaks, and for their Bedding, also of the same Wool, being mixed with one-third Part of Horse-Hair, they make all their Cordage. They make of this Felt likewise Covering for their Stools, and Caps to defend their Heads from the Weather; for all which they spend a great Quantity of their Wool.

13. The Men shave a four-square Spot upon the Crowns of their Heads, and from the two Corners, they shave, as it were, two Seams down to their Temples. They shave also their Temples, and the hinder Part of their Head, to the Nape of the Neck. They likewise shave the Forepart down to their Fore heads, and upon their Foreheads they have a Lock of Hair, reaching down to their Eyebrows; on the two hinder Corners of their Heads they have two Locks also, which they twine and braid into Knots, and so bind and knit them one under each Ear. The Garments of their Women differ not from the Mens, except they be somewhat longer. But the Day after a Woman is married she shaves from the midst of her Head down to her Forehead, and wears a wide Garment like the Veil of a Nun, but larger and longer in all Parts than a Nun's Veil, being open before, and they girt them under their Side. The *Tartars* differ from the *Turks*, because the *Turks* fasten their Garments to their Bodies on the left Side, but the *Tartars* always on the right Side.

They have always an Ornament for their Heads, which they call *Betta*, which is made of the Bark of a Tree, or of some such Substance as they can find, which by the Thickness and Remanence thereof, cannot be held but in both Hands together; and it hath a square sharp Spire rising from the Top thereof, being almost two Feet in Length, and shaped like a Pinacle. This *Betta* they cover their with a Piece of rich Silk, and it is hollow within; and upon the midst of this same Spire they place a Bunch of Quills, or of other Canes, a Foot and a half long, or more, and the Bunch on the Top thereof they beautify with Peacocks Feathers; and round about the Spire they place a Mass of Gold and Silver, and adorn it with Precious Stones. All the great Ladies wear this kind of Ornament upon their Heads, binding it thongly to a kind of Hat, or Coif, which hath a Piece in the Crown, fit for the Spire to come through; and under this Ornament they comb the Hair of their Heads, which they gather up round together, from the hinder Part thereof to the Crown, and so lap them up in a Knot or Bundle within the *Betta*, which afterwards they bind strongly under their Throats.

As on this Account, that when a great Company of Ladies ride together, and are seen at a Distance, they look like Soldiers with Helmets on their Heads, carrying a Banner upright, for the *Betta* appears like an Helmet with a Lance over it. All their Women sit on Horse back like Men, and they bind their Veils or Gowns about their Waists with a sly-coloured or Silk Scarf, and with another Scarf they gird it about their Breasts; and they also have a Piece of white Silk like a Muller, or Mark, under their Eyes, reaching down to their Breasts. These Ladies are generally speaking, exceeding fat, and the less their Noses, the handsomer they are esteemed. They daub over their Face with Grease too most frightfully, and they

never keep their Beds on account of their bringing forth Children.

14. As to the Employments of their Women, they drive Carts, lay their Houses upon Carts, and take them down again, milk Cattle, make Butter and Griat, dress Skins, and sew them, which they usually do with Thread made of Sinews; for they divide Sinews into slender Threads, and then twine them into one large one. They make Sandals and Socks, and other kind of Apparel; but they never wash any Cloaths, for they say that God is then angry, and that dreadful Thunder will ensue, if washed Garments be hung out to dry. Nay, they beat such as wash, and take their Garments from them. They are wonderfully afraid of Thunder; for in the Time of Thunder they force all Strangers out of their Houses, and then wrapping themselves in black Felt, lie hid therein till the Thunder be over. They never wash their Dishes, or Bowls; yet when the Flesh is boiled they wash their Platter, wherein it must be put, with scalding hot Broth out of the Pot, and then pour the Broth into the Pot again. They make Felt also, and cover the Houses therewith.

The Men are employed to make Bows and Arrows, Stirrups, Bridles and Saddles, to build Houses and Carts, to keep Horses, to milk Mares, to churn Cosinos and Mares Milk, and to make Bags to put it in; they keep Camels also, and lay Burdens upon them. As for Sheep and Goats, they mind and milk them, both Men and Women. With Sheeps Milk thickened and salted they dress and tan their Hides. When they wash their Hands and their Heads they fill their Mouths full of Water, and spouting it into their Hands by little and little, they sprinkle their Hair, and wash their Heads therewith. As to their Marriages, your Highness is to understand, that no Man can have a Wife among them till he hath bought her; therefore sometimes their Maids are very stale before they are married, for their Parents always keep them till they can sell them. They obtain from the first and second Degrees of Consanguinity inviolably as we do; but they have no Regard to the Degrees of Affinity, for they will marry together, or by Succession, two Sisters; their Widows never marry a second time, for this Reason, because they believe that all who have served them in this Life, shall do them Service also in the Life to come. Whereupon they are persuaded, that every Widow after Death shall return to her own Husband; and hence arises an abominable and filthy Custom amongst them, namely, that the Son marrieth sometimes all his Father's Wives, except his own Mother; for the Court, or House of the Father or Mother, falleth by Inheritance always to the youngest Son, whereupon he is to provide for all his Father's Wives, because they are Part of his Inheritance, as well as his Father's Possessions; and then, if he will, he useth them for his own Wives, for he thinks it no Injury or Disparagement to himself, tho' they return unto his Father after Death. Therefore when any Man hath bargained with another for a Maid, the Father of the Maid makes him a Feast; in the mean time she flies away to some of her Kinsfolk to hide herself. Then her Father says to the Bridegroom, my Daughter is yours, take her whereforever you can find her. Then he and his Friends seek her till they find her, and having found her, he takes her by Force, and carries her to his own House.

15. In regard to their Laws, or their Execution of Justice, your Majesty is to be adverted, that when two Men fight, no third Man dare intrude himself to part them: The Father dare not help his own Son; but he that happens to have the worst, must appeal to the Court of his Lord, and whoever else offereth him any Violence after Appeal, is put to death; but he must be taken presently without Delay. They punish no Man with Death, unless he be taken in the Commission of the Fact, or else confess the same: But being accused, they put him to extreme Torture to make him confess the Truth. They punish Murder with Death, and even Fornication with any other besides his own Women. By his own, I mean his Wife or his Maid-Servant; for every Man may use his Slave as he pleases. Heinous Theft also, or Felony, they punish with Death. For a light Theft, as for stealing of a Ram, the Criminal not apprehended in the Fact, but otherwise detected,

Present to be received, and immediately distributed the same amongst his Men, who were met together for that Purpose, to drink and make merry. I delivered also to him the Emperor of *Constantinople's* Letters, eight Days after the Feast of Ascension, and he sent them to *Soldai* to have them interpreted there; for they were written in *Greek*, and he had none about him that was skilled in the *Greek* Tongue.

He asked us if we would drink any *Cosmos*, that is to say Mans Milk, for those that are Christians among them as the *Russians*, *Greeks*, and *Arabs*, who keep their own Law very strictly, will not drink thereof, for they account themselves no Christians after they have once drank of it, and their Priests reconcile them unto the Church as if they had renounced the Christian Faith. I answered, that we had as yet sufficient of our own to drink, and that when it failed us we must be constrained to drink such as should be given us: He enquired also what was contained in the Letters which your Majesty sent to *Sartach*. I answered, that they were sealed up, and that there was nothing contained in them but friendly Words. And he asked what Words we would deliver unto *Sartach*? I answered, the Words of Christian Faith. He asked again what those Words were? For he was very desirous to hear them. Then I expounded unto him as well as I could by my Interpreter, who was a very sorry one, the Apostles Creed, which after he had heard he shook his Head. Then he assigned us two Men to attend upon us, and our Hubs and our Oxen, and he caused us to ride in his Company, till the Messenger he had sent for the Translation of the Emperor's Letters arrived; so we travelled in his Company till the Day after *Wednesday*.

19. There came to us on *Wednesday*, some of the People called *Arabs*, who are the Christians of the *Greek* Church, using *Greek* Books, and were Priests, but they are not so strict as the *Greeks* are, since without Exception or Penalties they honour all Christians; and they brought us some dried Flesh, requesting us to eat of their Meat, and to give for one of their Company who was dead. I answered, because it was the five of the great Feast, we would not eat any Flesh; and I expounded to them the Summary of the Faith, for they were ignorant of all Things relating to the Christian Religion, except the Name of Christ.

They and many other Christians, both *Russians* and *Arabs*, demanded of us whether they might be forced or no, because they were constrained to drink *Cosmos*, and to eat the dead Carcasses of Things slain by the Idols, which even the *Greeks* and *Russian* Priests also esteemed as Things strangled or offered to Idols, because they were ignorant of the Times of Prolonging, neither could they have observed them if they had known them. I instructed them as well as I could, and I strengthened them in their Faith; as for the Flesh which they had brought, we turned it all the Feast-day, for there is nothing sold among the *Tartars* for Gold and Silver, but for Cloth and Garments, of which we had none. When our Servants offered them any of their Coin, called by them *Yper*, they rubbed it with their Fingers and put it to their Noses, to try by the Smell whether it were Copper or no. They do not allow for our Food any Substance but Cows Milk only, which was very four; One Thing most necessary was greatly wanting to us, for the Water was so scarce, mainly by reason of their Horses, that it was not to be drunk; to that had it not been for some Bitcuit which by the Goodness of God was still left us, we had have starved.

On the Feast of *Pentecost* there came to us a *Moslem*, to whom, as he talked with us, we expounded the Christian Faith, who (being informed of God's Goodness in the Incarnation of our Saviour Christ, and the Resurrection of the Dead and the Judgment to come, and the Baptism was a washing away of Sins) said that he would be baptized; but when we prepared to baptize him, he had many mounted on Horseback, saying, that he would come and confute with his Wife: And the next Day he desired us that he durst not receive Baptism, because then he should drink no more *Cosmos*; for the Christians of that Place affirm, that no true Christians ought to drink

it, and that without it he could not live in that Desert; from which Opinion I could not for my Life remove him. It is scarce credible, how many are restrained from becoming Christians from this Opinion, I touched and confuted among them by the *Russians*, of whom there are a great many settled here. The same Day *Zagatai* gave us one Man to conduct us to *Sartach*, and to guide us to the next Stage, which was five Days Journey for Oxen to travel. They gave us also a Goat for Victuals, and a great many Bladders of Cows Milk, and but a little *Cosmos*, because they love it so much themselves; and to taking our Journey directly towards the North, I thought we had passed through one of Hell-Gates.

The Servants who conducted us began to play the bold Thieves, seeing us take little heed to ourselves; at length having lost much by their Thievery, Suffering taught us Wisdom. When we came to the Extremity of that Province, which is fortified with a Ditch from one Sea unto another, without which was their Place of Lodging, into which to soon as we had entered, it appeared to us as if all the Inhabitants were infected with Leprosy, for certain late Fellows were placed there to receive Tribute of Fish as took Salt out of the Salt-Pits. From that Place they told us we must travel fifteen Days Journey before we should find any other Place; with them we drank *Cosmos*, and gave to them a Basket full of Fruits and of *Biscuit*, and they gave unto us eight Oxen and one Goat to maintain us in such a Journey, and I know not how many Bladders of Milk, and to changing our Oxen we proceeded for ten Days, arriving then at another Stage, neither found we any Water all that Way, but only in some Ditches made in the Vallies and in two Rivers. From the Time also that we departed out of the Province of *Gassania*, we travelled directly Eastward, having the Sea on the South-side of us, and a vast Desert on the North, which Desert in some Places reaches twenty Days Journey in Breadth, without Tree, Mountain, or so much as a Stone therein, and is a most excellent Pasture. Here the *Comanians*, which were called *Cepibai*, were wont to feed their Cattle, and were the same the *Tartars* called *Uchani*, and the Province itself *Uchania*. But *Isidore* calleth all the Tract of Land stretching from the River of *Tanais* to the Lake of *Motis*, and so far as the *Danube*, the Country of the *Arabs*. And the same Country extends in Length from the *Danube* to *Tanais* (which divides *Asia* from *Europe*) for the Space of two Months Journey, and it was all inhabited by the *Comanians*, called *Cepibai*, and beyond *Tanais* as far as the River of *Edil* or *Volga*, the Space between which two Rivers is a long Journey to be travelled in ten Days. To the North of the same Province lieth *Russia*, which is full of Wood in all Places, and stretcheth from *Poland* and *Hungary* to the River of *Tanais*, and it likewise hath been walled by the *Tartars*, and is still walled by them.

20. The *Tartars* have more Esteem for the *Saracens* than the *Russians*, because the latter are Christians, and when they are able to give them no more, they drive them and their Children, like Flocks of Sheep, into the Wilderness, constraining them to keep their Cattle there. Beyond *Russia* lieth the Country of *Prussia*, which the *Tartar* Knights of the Order of *St. Mary's* Hospital of *Jerusalem* have of late wholly subdued, and indeed they might easily win *Russia* if they would attempt it vigorously; for if the *Tartars* should once know that the great Priest, for that is the Name they give to the Pope, had caused the Ensign of the Cross to be displayed against them, they would fly into the Deserts. But to proceed.

We went towards the Eastward, seeing nothing but the Sky and the Earth, and sometimes the Sea on our right Hand, called the Sea of *Tanais*, and the Spectacles of the *Comanians*, which appeared unto us two Leagues off, in which their Custom was to buy their Prey another. While we were travelling through the Desert we were continually well with us, but I cannot further expound the Inconveniences of their Place of Abode, for our Guide would have us go to every Captain with a Present, which was an Expence our Circumstances would not bear; for we were eight Persons founding our own Provision, for the *Tartar* Servants would all of them eat of our Victuals.

The Flesh which they gave us was not sufficient for us, neither could we find any thing to be bought for our Money: And as we sat under our Carts in the cool Shadow, on account of the extreme Heat, they would inopportunately and shamefully intrude themselves into our Company, so that they would even tread upon us to see what we had; such Slovens they were, that they would lay their Tails in our Presence while they were yet talking with us: Many other Things they committed, which were most tedious and loathsome unto us.

But above all, it grieved me to the very Heart, that, when I would have spoken what might tend to their Edification, my foolish Interpreter would say, You should not make me become a Preacher now; I tell you I cannot, I will not rehearse any such Words: And true it was which he said, for I perceived afterwards, when I began to have a little Knowledge in the Language, that when I spoke one Thing he would say quite another; that is, whatsoever came next to his witless Tongue's End. Then seeing the Danger I might incur in speaking by such an Interpreter, I resolved rather to hold my Peace; and thus we travelled with great Fatigue from Place to Place, till a few Days before the Feast of St. Mary Magdalen, we arrived at the Banks of the mighty River *Tanais*, which divides *Asia* from *Europe*, even as the River *Nile* of *Egypt* separates *Asia* from *Africa*. At the Place where we arrived, *Baatu* and *Sartach* had caused Cottages to be built upon the Eastern Bank of the River, for a Company of *Russian* to dwell in, that they might transport Ambassadors and Merchants in Ferry boats over that Part of the River; where first they ferried us over, and then our Carts, putting one Wheel into one, and the other into the other Lighter, first binding both the Lighters together, and so they rowed them over.

In this Place our Guide played the fool bravely; for he imagining that the *Russians* dwelling in the Cottage should have provided us Horses, sent home the Beasts we brought with us, in another Cart, that they might return to their own Masters. But when we demanded some Beasts of them, they answered, that they had a Privilege from *Baatu*, whereby they were bound to no other Service but to ferry Goats and Comers; and that they received great Sums from Merchants even for that. We stayed there by the River-side three Days. The first Day they gave us a great fresh Torbot: The second Day they bestowed Rye-bread and a little Flesh upon us, which the Purveyor of the Village had taken up at every House for us: And the third Day dried Fish, which they have there in abundance. The River was as broad in that Place as the River *Seine* is at *Paris*; and before we came there, we passed over many fine Waters all full of Fish, and yet the barbarous and rude *Tartars* know not how to take them; neither do they make any Reckoning of any Fish, except it be so great that they may eat the Flesh of it as they do the Flesh of a Ram.

This River is the Limit of the East Part of *Russia*; it riseth out of the Fens of *Mæotis*, which Fens extend quite to the northern Ocean. It runs southward, and forms a Sea of seven hundred Miles in Extent before it falls into the *Pontus Euxinus*, or the *Black Sea*; and all the Rivers we passed over ran into the same. This River has also great store of Wood growing on the West Side thereof. The *Tartars* remove no farther towards the North: For about the first of *August* they begin to return back to the South; and therefore there is another Cottage somewhat lower, where Passengers are ferried over in Winter-time. And in this Place we were driven to great Extremity, because we could get neither Horses nor Oxen for Money; at length, after I had declared unto them, that my coming was for the common Good of all Christians, they sent us Oxen and Men, but we ourselves were forced to travel on Foot. At this time they were reaping their Rye; as for Wheat, it grows not well in that Soil: They have Millet in great abundance.

The *Russian* Women dress their Heads like our Women: They embroider their Gowns on the outside, from their Feet unto the Knees, with party-coloured or grey Stuff. The *Russian* Men wear Caps like the *Dutchmen*; who they wear upon their Heads certain sharp and high-crowned Hats made of Felt, much like a Sugar-loaf.

We travelled thence three Days together without finding any People; and when ourselves and our Oxen were exceeding weary and faint, not knowing how far it would be to any *Tartars*, on a sudden there came two Horses running towards us, which we caught with great Joy: Our Guide and our Interpreter mounted upon their Backs, to see how far off they could delect any People; and upon the fourth Day of our Journey, having found some Inhabitants, we rejoiced like Seamen who had escaped out of a dangerous Tempest, and had newly recovered the Haven. Then having taken fresh Horses and Oxen, we passed on from Stage to Stage, till at last, the second of *August*, we arrived at the Habitation of *Sartach*, the *Tartar* Prince.

21. All the Country lying beyond *Tanais* is a very beautiful and pleasant Region, abounding with Rivers and Woods. Towards the North Part thereof there are large Forests inhabited by two sorts of People, one of them called *Moxel*, being mere *Pagans*, and without Law; they have neither Towns nor Cities, but only Cottages in the Woods. Their Lord, and a great Part of themselves, were put to the Sword in *Germany*; whereupon they highly commend the brave Courage of the *Alansians*, hoping to be delivered out of the Bondage of the *Tartars* by their Means. If any Merchant come among them, he may provide Things necessary for him with whom he is first entertained all the time of his Abode among them. If applied with another Man's Wife, her Husband, unless he be an Eye-witness thereof, doth not regard it, for they are so jealous of their Wives. They have abundance of Honey and great Store of Honey and Wax, and various sorts of rich and costly Skins, and Plenty of Falcons.

The other People are called *Mereles*, which the *Lans* call *Maridui*, and they are *Mohammedans*. Beyond them is the River of *Etilia*, or *Ielga*, which is the greatest River that ever I saw, and it issues from the North Part of *Elgia* the Greater; and so trending along Southward, discharges itself into a certain Lake, containing in Circumference of four Months' Travel, of which I shall speak hereafter. The two Rivers above-mentioned, *Tanais* and *Elgia*, otherwise called *Volga*, in the North receive, though which we travelled, are not distant above ten Days Journey; but Southward they are divided a great Space one from the other, for *Tanais* descendeth into the Sea of *Persia*. *Elgia* maketh the foresaid Sea or Lake, with the Help of many other Rivers which fall into it out of *Persia*, and we had to the South of us very high Mountains; upon the Sides thereof towards the said Desert, the People called *Gargies*, and the *Alani* or *Arcais* inhabit, who are as yet Christian, and make War against the *Tartars*. Beyond them, next unto the Sea or Lake of *Etilia*, there are certain *Mohammedans* called *Leigh*, who are in Subjection to the *Tartars*. Beyond this is *Porta Ferrea*, or the Iron Gate, concerning the Situation of which your Majesty shall be further informed towards the End of this Treatise, for I travelled in my Return by the very Place between these two Rivers, in the Regions through which we passed the *Comanians* formerly inhabited before they were over run by the *Tartars*.

22. We found *Sartach* lying within three Days Journey of the River *Etilia*, whose Court seemed to us to be very great, for he himself had six Wives, and his eldest Son had three Wives, every one of which Women had a great House, and each of them above two hundred Camels. Our Guide went unto a certain *Nyborian* named *Coiat*, who was a Man of great Authority in *Sartach* Court; he made us go a long way to one *Janna*, for so they call her, who has the Office of entertaining Ambassadors. In the by *Coiat* commanded us to come to him. Then our Guide began to enquire what we would present him with; he was exceedingly offended when he saw we had nothing to present. We stood before him, and he sat making us to have Musick and Dancing in his Presence. The *Prince* came unto him in the Words before recited, telling him our Purpose I was come unto his Lord, and requesting his Favour at his Hands as to bring our Letters unto the Lord of his Lord. I excused myself also, that I was a Merchant, not having, nor receiving nor using, any Gold or Silver, or other precious Thing, save our Books, and the Letters in which, as Priests, we served God.

Cause why I brought no Present to him, or to his Lord; for having abandoned my own Goods, it could not be expected I should become a Carrier for other Men. To all which he answered very courteously, that being a Monk, in so doing I did well, for so I should observe my Vow; neither stood he in need of ought we had, but rather was ready to bestow on us such Things as we stood in need of; and having so said, he caused us to sit down, and to drink of his Milk, and presently after he requested us to say our Devotions for him, and we did so.

He enquired also who was the greatest Prince among the Franks, i. e. the Western Christians? and I said the Emperor, if he could enjoy his own Dominions in Quiet. No, replied he, but the King of France, for he had heard of your Highness by Lord *Baldwin of Hennin*. I found there also one of the Knights Templars, who had been in Cyprus, and had made Report of all Things which he saw there. Then we returned to our Lodging and the next Morning we sent him a Flaggon of Muscadell Wine (which had kept very well in so long a Journey) and a Box full of Biscuit, which was most acceptable unto him, and he detained our Servants for that Evening, and they were well entertained at his Tents. The next Morning he commanded me to come to Court, and to bring the King's Letters, and my Vestments and Books with me, because his Lord was desirous to see them. which we did accordingly, lading one Cart with our Books and Vestments, and another with Biscuit, Wine, and Fruits; then he caused all our Books and Vestments to be spread abroad, and there stood round about us many *Tartars*, *Christians*, and *Saracens*, on Horseback; at the Sight of which he demanded, whether I would bestow all those Things upon his Lord or no? Which saying made me tremble, and threw me into an excessive Fright. Dismembering our Grief as well as we could, we gave him the following Answer: Sir, your humble Request is, that our Lord, your Master, would vouchsafe to accept our Bread, Wine, and Fruits, not as a Present, because it is too mean, but as a Benediction, lest we should come with an empty Hand before him, and he shall see the Letters of my Sovereign Lord the King, and by them he shall understand for what Cause we are come unto him, and then both ourselves and all that we have are at his Pleasure, but for our Vestments they are holy, and it is unlawful for any but Priests to touch them.

Then he commanded us to dress ourselves in the Garments, that we might go before his Lord, and we did so. Then putting on our most precious Ornaments, I took in my Arms a very fair Cushion, and the Bible which your Majesty gave me, and a most beautiful Plalter, which the Queen was pleased to bestow upon me, wherein there were very fine Pictures. My Associate took a Missal and a Cross, and the Clerk having put on his Surplice, took a Censor in his Hand, and so we came to the Presence of his Lord, and they lit d up the Felt hanging before his Door, that he might behold us.

Then they caused the Clerk and the Interpreter three to bow the Knee; but of us they required no such Submission, and they diligently admonished to take care that in going in, and in coming out, we touched not the Threshold of the House, and requested us to sing a Benediction for him. At length we entered singing *Salve Regina*; and in the Entrance of the Door stood a Bench with Cushions, and Drinking-cups thereon, and all his Wives were there assembled; also the Moguls, or, as they pronounce, *Mouals*, or rich *Tartars*, thrust in, and pressed hard upon us. Then *Coiat* carried to his Lord the Censor, with Incense, which he beheld very diligently, holding it in his Hand; afterwards he carried the Plalter onto him, which he looked earnestly upon, and his Wife also that sat by him; after that he carried the Bible; then *Sartaab* asked, if the Gospel were contained therein? Yes, said I, and all the Holy Scriptures besides.

He took the Cross also in his Hand, and asked, as to the Image, whether it were the Image of Christ or no? I said it was. The *Neslorians* and the *Armenians* never make the Figure of Christ upon their Crosses. Wherefore, either they seem not to think well of this Passion, or else they are ashamed of it. Then he caused them that stood about us to stand aside, that he might more fully behold our Ornaments.

Afterwards I delivered unto him your Majesty's Letters, with the Translation thereof in the *Arabick* and *Syriack* Languages, for I caused them to be translated at *Acon* into the Character and Dialect of both the said Tongues. There were certain *Armenian* Priests, who were versed in the *Turkish* and *Arabian* Languages, and the Knight before mentioned also of the Order of the Temple had Knowledge in the *Syriac*, *Turkish*, and *Arabian* Tongues. Then we departed, and put off our Vestments, and there came unto us some Secretaries of the Court, together with the *Coiat*, and caused our Letters to be interpreted, which Letters being heard, he caused our Bread, Wine, and Fruits, to be received; and he permitted us also to carry our Vestments and Books unto our own Lodging.

27. We had the next Morning betimes a Visit from a certain Priest, who was Brother to *Coiat*, requesting to have our Box of Chrifin, because *Sartaab*, as he said, was desirous to see it, and so we gave it him. In the Evening *Coiat* sent for us, saying, my Lord, your King, wrote Kind Words unto my Lord and Master *Sartaab*. There are; however, certain Matters of Difficulty in them, concerning which he dare not determine without the Advice of his Father, and therefore you must depart unto him, leaving behind you the two Carts which you brought hither Yesterday with Vestments and Books in my Custody, because my Lord is desirous to take a more diligent View of them. I presently suspecting what Mischief might ensue from his Covetousness, made him Answer; Sir, We will not only leave those with you, but the two other Carts also, which we have in your Possession. You shall not, said he, leave those behind you; but for the two Carts first named, we will satisfy your Request: I said, that this could not conveniently be done, but we must leave all with him. Then he asked, whether we meant to remain in the Land? I answered, if you have read, and understand the Letters of my Lord the King, you know that we are so determined; then he replied, that he ought to be patient, and so we departed from him that Evening.

The next Morning he sent a *Neslorian* Priest for the Carts, and we caused all the four Carts to be delivered; then came the beforementioned Brother of *Coiat* to meet us, and separated those things, which we had brought the Day before to the Court from the rest, viz. the Books and Vestments, and took them away with him. *Coiat* had, however, commanded, that we should carry these Vestments with us, which we wore in the Presence of *Sartaab*, that we might put them on before *Baatu*, if he should require it; but the Priest took them from us by Violence, using these Words: You brought them to *Sartaab*, and would you carry them to *Baatu*? And when I would have shewn him the Reason, he answered, Come, don't be too talkative, but go your way. Then I saw there was no Remedy but Patience, for we could have no Access unto *Sartaab* himself, neither was there any that would do us Justice. I was afraid also of the Interpreter, that he had spoken other things than I directed him; for his Will was good, that we should have given away all that we had. There was yet one Comfort left to me, for when I once perceived their covetous Intent, I conveyed from among our Books the Bible, and the Sentences, and other Books, which I valued most. I durst not, however, take away the Plalter of my sovereign Lady the Queen, because it was too well known, on account of the golden Pictures therein: So we returned with the two other Carts to our Lodging; then came he that was appointed to be our Guide to the Court of *Baatu*, bidding us provide for our Journey in all haste; to whom I said, that I would in no case have the Carts go with me, which he declared unto *Coiat*.

Then *Coiat* commanded that we should leave them and our Servant with him, and we did as he directed, and so travelled directly Eastwards towards *Baatu*; the third Day we came to *Estilia*, or *Volga*, the Stream of which when I beheld I wondered from what Region of the North such huge and mighty Waters should descend. Before we were departed from *Sartaab*, *Coiat*, with many other Scribes of the Court, said unto us, Do not make Report that our Lord is a Christian, but a *Moual*, because the Name of a Christian seemeth to them to be the Name of some Nation; and so great is their Pride, that though they believe, perhaps,

some things concerning Christ, yet they will not be called Christians, being desirous that their own Name, that is to say, *Mogul Moal*, should be exalted above all other Names: Neither will they be called by the Name of *Tartars*, for the *Tartars* were another Nation, as I was informed by them.

24. At the Time that the *Franks* made themselves Masters of the City of *Antioch*, which was about the Year 1097, there reigned in these Northern Parts a Prince whose Name was *Kon-Khan*, or *Ken Khan*. *Kon* or *Ken* was his proper Name, and *Khan* his Stile of Power or Dignity; for it is to be unde stood, that the Word *Khan* strictly taken, signifies a Diviner, a Man skilled in sublime Sciences, or one who can foretel future Events; and from thence it is transferred to their Princes, as if they held them to be endowed with all these great Qualities. The *Turks*, at the Time of that Siege, demanded Succours of *Kon-Khan* against the Christians, as coming themselves originally out of these Countries. This *Kon-Khan* was siled likewise *Khan*, or Prince of *Cara-Catbay*, which is as much as to say, the *Black Catbay*; for *Cara* in their Language signifies black, and *Catbay* is the Name of a certain Country, which, however, is to be distinguished from that *Catbay* which lies farther towards the East, and is a maritime Country, of which I shall speak hereafter.

As for this *Cara-Catbay*, it lies behind certain Mountains, over which I passed, was also through a plain Country, in which dwelt formerly a certain great *Nestorian* Priest, who was the Sovereign of a Nation called *Naymans*, and who were all Christians of the *Nestorian* Sect. This *Kon-Khan* being dead, the *Nestorian* Priest before mentioned took upon him the Stile and Office of a King, and thence the *Nestorians* called him the King *Presbre Jobn*, i. e. *Jobn* the Priest, and published mighty Things concerning him, and much beyond the Truth; for it is the Custom of the *Nestorians* coming from this Country to magnify every little thing into a great Matter, just as they spread a Report that *Sartaeb* was become a Christian, and that *Mangu-Khan*, and *Ken-Khan*, had also embraced our Religion, only because they were indulgent to those of our Profession, tho' nothing is more certain than that none of them are Christians. So likewise there went abroad a great Report concerning this King and Priest *Jobn*; notwithstanding which, when I travelled through his Territories, there was no body that knew any thing of him, but a few *Nestorians*. In his Pastures or Territories dwelt *Ken-Khan*, at whose Court *Enar Andrew* was, and I myself passed by at my Return. This *Jobn* had a Brother who was powerful also, and a Shepherd like himself called *Unc*, and he inhabited beyond the Mountains of *Cara-Catbay*, distant from his Brother *Jobn* the Space of three Weeks Journey. He was Lord of a certain Village called *Cara-Carum*, having People also for his Subjects named *Prit*, or *Mektit*, who were Christians of the Sect of *Nestorius*; but their Lord abandoning the Worship of Christ, embraced Idolatry, retaining with him Priests of the said Idols, who all of them are Worshipers of Devils, and are Sorcerers themselves.

Beyond his Pastures, about ten or fifteen Days Journey, are the Pastures of *Moal*, who were a poor and beggarly Nation, without Governor and without Law, except their Sorceries and their Divinations, unto which detestable Superstitions all in those Parts apply their Minds. Near unto *Moal* were other poor People called *Tartars*. The aforesaid King *Jobn* died without Issue Male, his Brother *Unc* thereby was greatly enriched, and took himself the Stile of *Khan*, and his Cattle and Herds ranged to the Borders of *Moal*. About the same Time there was one *Zingis* a Farmer among the People of *Moal*; this *Zingis* stole as many Cattle from the *Khan* as he could possibly, so that the Shepherds of *Unc* complained unto their Lord; upon which he raised an Army, and marched up into the Country of *Moal* to seek for *Zingis*: But *Zingis* fled amongst the *Tartars*, and hid himself among them; and *Unc* having taken some Spoils both from *Moal*, and also from the *Tartars*, returned home; then *Zingis* addressed himself to the *Tartars*, and to the People of *Moal*. "Behold Brethren, said he, because we are destitute of a Governor and a Captain, you see how our Neighbour oppresses us;" on which the *Tartars* and *Moals* appointed him to be their Captain.

Then having secretly gathered together an Army, he broke in suddenly upon *Unc*, and overcame him, and *Unc* fled into *Catbaya*. At the same Time his Daughter was taken, which *Zingis* married unto one of his Sons, by whom she conceived and brought forth the *Great Khan*, which now reigneth, called *Mangu-Khan*. Then *Zingis* sent the *Tartars* before him in all Places where he came; and thereupon was their Name published and spread abroad; for in all Places the People call out, *The Tartars come, the Tartars come*. Yet through continual Wars, they are now all of them in a manner consumed and brought to nought. Whereupon the *Moals* endeavour what they can to extinguish the Name of the *Tartars*, that they may exalt their own. The Country wherein they first inhabited, and where the Court of *Zingis-Khan* yet remaineth, is called *Manchenule*. But because *Tartaria* is the Region out of which they have obtained their Conquests, they esteem that the Seat of their Kingdom; and there also, for the most part, do they elect their *Great Khan*.

25. In respect to this *Sartaeb*, whether he believes in Christ or no, I know not; this I am sure of, that he will not be called a Christian: On the contrary, he seems to me to deride and scoff at Christians. His Country is in the Way of the *Christians*, viz. of the *Russians*, the *Wallachians*, the *Bulgarians*, the *Sclavians* the *Kerchians*, and the *Alans*, who all of them pass by him as they are going to the Court of his Father *Baatu* to carry Gifts; and therefore he is more in Friendship with them. If the *Saracens* however come and bring greater Gifts than they, they are dispatched sooner. He hath about him certain *Nestorian* Priests, who tell their Heads and sing their Devotions. There is also another under *Baatu*, called *Beria*, who feeds his Cattle towards the Iron-gate or *Derbent*, where hath the Passage of all the *Saracens* which come out of *Persia* and out of *Turky*, to go unto *Baatu*, and passing by they make him Presents, and he professeth himself to be a *Saracen*, and will not permit Swines Flesh to be eaten in his Dominions. At the Time of our Return, *Baatu* commanded him to remove himself from that Place, and to inhabit upon the East Side of *Volga*, for he was not willing that the *Saracens* Embassadors should pass by the said *Beria*, because he saw it was not for his Profit.

For the Space of four Days, while we remained in the Court of *Sartaeb*, we had not any Victuals allowed us, except once a little Cosmos; and in our Journey between him and his Father, we travelled in great Fear; for certain *Russians*, *Hungarians*, and *Alans*, being Servants to the *Tartars* (of whom they have great Multitudes among them) assembled themselves twenty or thirty in a Company; and secretly in the Night conveying them selves from Home, they take Bows and Arrows with them, and whatsoever they find in the Night Season they put him to Death, hiding themselves in the Day-time; and having tired their Horses, they go in the Night to a Company of other Horses feeding in some Pasture, and change them for new, taking with them also one or two Horses besides to eat them when they stand in need. Our Guide therefore was much afraid, lest we should have met with such Companions.

In this Journey we had perished through Famine, had we not carried some of our Biscuit with us: At length we came to the vast River *Etila*, or the *Volga*, which is four Times greater than the River of *Sein*, and of a wonderful Depth, falling into that which of late they call the *Hircanian-Sea*, according to the name of a certain Country in *Persia*, lying on the Shore thereof. *Isidore* calleth it however the *Caspian-Sea*, for it hath the *Caspian-Mountains* and the Land of *Persia* situate on the South Side thereof, and the Mountains of *Mylbet*; that is to say, of the People called *Assassini*, towards the East, which Mountains are joined unto the *Caspian-Mountains*; but on the North Side thereof, hath the same Defart, wherein the *Tartars* now inhabit; in which heretofore there dwelt a Nation called *Changle*; and on that Side it receives the *Etila*, which River rises in Summer-time like the River *Nile* in *Egypt*. On the West Part thereof it hath the Mountains of *Alan*, and *Lesgi*, and *Derbent*, or the Iron-gate, and the Mountains of *Georgia*. This

Sea therefore is encompassed on three Sides, with Mountains; but on the North Side hath a fine flat Country. Friar *Andrew*, in his Journey, travelled round about two Sides thereof, namely the South and the East Sides, and I myself about the other two; that is to say, the North Side, in going from *Baatu* to *Mangu-Khan*, and in returning likewise; and on the West Side, in coming home from *Baatu* into *Syria*. A Man may travel round about it in four Months; and it is not true which *Isidore* reports, that this Sea is a Bay or Gulph coming out of the Ocean, for in no Part it communicates with the Ocean, but is environed on all Sides with the Land.

26. All the Regions extending from the West Shore of this Sea, where *Alexander's* Iron gate, otherwise called the City of *Derbent*, is situate, and from the Mountains *Alan*, all along by the Fences of *Mæotis*, into which the River of *Scythia* falls, and so to the North Ocean, was of old called *Abania*, of which Country *Isidore* reporteth, that there are in it Dogs of such huge Stature, and so fierce, that they are able, in Fight, to macth Bulls, and to macth Lions, which is true, as I was assured by several, who told me, that towards the North Ocean they make their Dogs draw in Carts like Oxen, on account of their Bigness and Strength. On that Part of *Etília* where we arrived, there is a new Station built, wherein they have placed *Tartars* and *Russians* together to ferry over and transport Messengers going and coming to and from the Court of *Baatu*, for *Baatu* keeps his Court upon the farther Side towards the East; neither ascendeth he in the Summer-time more northward than the Place where we arrived, but was even then descending to the South. From *January* to *August*, he, and all other *Tartars* ascend by the Banks of Rivers towards cold and northerly Regions, and in *August* they begin to return back again.

We passed down the Stream therefore in a Bark from the above-mentioned Station unto his Court, from the same Place unto a Village of *Bulgaria the Greater*, standing towards the North; it is five days Journey. I wonder how the Devil carried the Religion of *Mobammed* thither; for, from *Derbent*, which is upon the extreme Borders of *Persia*, it is above thirty Days Journey to pass over the Desert, and so ascend to the Bank of *Etília* into the Country of *Bulgaria*, in all which Way there is no City, only certain Cottages near unto that Place where *Etília* falleth into the Sea. These *Bulgarians* are more wicked *Mobammedans* than any other Nations whatever. When I beheld the Court of *Baatu*, I was astonish'd at the first sight thereof, for his Houses or Tents are as though they had been some mighty City stretching out a great Way in Length, the People ranging up and down about it for the Space of some three or four Leagues; and even as the People of *Israel* knew every Man on one Side the Tabernacle to pitch his Tent, so every one of them knoweth very well toward which Side of the Court he ought to place his House when he takes it from off the Cart. The Court is called therefore in their Language *Horda*, which signifies the Middl, because the Governor, or chief Captain among them, dwells always in the Middl of his People, except only that directly towards the South no inferior Person places himself, because, towards that Region the Court-gates are set open; but to the Right-hand and the Left-hand they place themselves as far as they will, according to the Conveniency of Places, so that they erect not their Houses directly opposite against the Court. At our Arrival we were conducted to a *Mobammedan*, who provided us Victuals for us at all. The Day following, we were brought to the Court, and *Baatu* caused a large Tent to be erected, because his House or Tent could not contain so many Men and Women as were assembled. Our Guide admonish'd us not to speak till *Baatu* had given us Commandment so to do, and that then we should speak our Minds briefly.

Then *Baatu* demanded whether your Majesty had sent Embassadors unto him or no? I answered, that your Majesty had sent Messengers to *Ken-Khan*, and that you would not have sent Messengers or Letters to *Sartach*, had not your Highness been persuaded that they were become Christians, because you sent not unto them out of any Fear, but only for Congratulation and Courtesy-fake, in

regard that you heard they were converted to Christianity. Then led he us unto his Pavilion, and we were charged not to touch the Cords of the Tent, about which they are as suspicious as about the Threshold of the House. There we stood in our Habits bare-footed, and bare-headed, and were a great and strange Spectacle in their Eyes. Indeed Friar *John Du Plano* (*Carpini*) had been there before my Coming; but because he was the Pope's Embassador, he changed his Habit, that he might not be contemned. Then we were brought into the Middl of the Tent, neither required they of us to do any Reverence, by bowing our Knees as they used to do of other Messengers; we stood therefore before him for the Space wherein a Man might have rehearsed the Psalm *Miserere mei Deus*, and there was a great Silence kept by all.

Baatu himself sat upon a Seat long and broad, like a Bed gilt all over, with three Stairs to ascend, and one of his Ladies sat beside him. The Men there assembled sat down scattering, some on the Right-hand of the said Lady, and some on the Left. These Places on the one Side, which the Women filled not up (for there were only the Wives of *Baatu*) were supplied by the Men. Also at the very Entrance of the Tent stood a Bench furnished with Cosmos, and with stately Cups of Silver and Gold, richly set with precious Stones. *Baatu* beheld us earnestly, and we him, and he seemed to resemble in Personage Monsieur *John de Beaumont*, whose Soul resteth in Peace; for, like him, he had a fresh ruddy Countenance.

At length, he commanded us to speak. Then our Guide gave us Direction that we should bow our Knees and speak; on which I bowed one Knee, then he signified that I should kneel upon both my knees; I did so, being loth to contend about such Circumstances; and again he commanded me to speak. Then I thinking of a Prayer unto GOD, because I kneeled on both my knees, began to pray in these Words; "Sir, we beseech the Lord, from whom all good Things do proceed, and who hath given you these earthly Benefits, that it would please him hereafter to make you Partaker of his heavenly Blessings, because the former, without these, are but vain and unprofitable: And, indeed, further be it known unto you of a certain, that you shall not obtain the Joys of Heaven, unless you become a Christian; for God saith, *Whosoever believeth and is baptized, shall be saved; but he that believeth shall be condemned.*"

At this he modestly smiled, but the other *Möals* began to clap their Hands and to deride us, and my silly Interpreter, of whom especially I should have received Comfort in Time of Need, was himself abashed, and utterly out of Countenance. Then after Silence made, I said to him; "I came to your Son, because we heard that he was become a Christian, and I brought to him Letters on the Behalf of my Sovereign Lord the King of France, and your Son sent me hither unto you; the Cause of my coming therefore is best known unto yourself." Then he caused me to rise up, and he enquired your Majesty's Name, my Name, and the Name of my Associate and Interpreter, and caused them all to be put down in Writing. He demanded also (because he had been informed that you was departed out of your own Countries with an Army) against whom you waged War? I answered against the *Saracens*, who had defiled the House of GOD at *Jerusalem*. He asked also whether your Highness had ever before that Time sent any Embassador unto him or no? To you, Sir, said I, never.

Then he caused us to sit down, and gave us of his Milk to drink, which they account to be a great Favour, especially when any Man is admitted to drink Cosmos with him in his own House; and as I sat looking down on the Ground, he commanded me to lift up my Countenance, being desirous yet to take a more diligent View of us, or else perhaps of a kind of superstitious Observation; for they esteem it a Sign of ill Luck, or a Prognostication of Evil unto them, when any Man sits in their Presence holding down his Head as if he were sad, especially when he leans his Cheek or Chin upon his Hand. Then we departed, and immediately after came our Guide to us, and conducting us to our Lodging, said unto me; "Your Ma-
" iter

“ For the King, requesteth that you may remain in this Kingdom, which Request *Baatu* cannot grant, without the Knowledge and Consent of *Mangu Khan*; wherefore you and your Interpreter must, of Necessity, go to *Mangu Khan*; but, nevertheless, your Associate and the other Man, shall return unto the Court of *Sartach*, and stay there for you till you come back.” Then began my Interpreter to lament, esteeming himself but a dead Man; my Associate also protested he would sooner lose his Head than withdraw out of my Company: I myself said, that without my Associate I could not go, and that we stood in Need of two Servants at least, because if one should chance to fall sick we would not be without another.

Upon this, returning unto the Court, he told this to *Baatu*, and *Baatu* answered, let the two Priests and the Interpreter go together, but let the Clerk return to *Sartach*; and coming again unto us, he told us so; and when I would have spoken for the Clerk to have had him with us, he said, no more Words, for *Baatu* is resolved that so it shall be, and therefore I dare not go to the Court any more. *Gesli*, the Clerk, had the Remainder of the Almshouse Money bestowed upon him, twenty-six *Drapers*, and no more, ten whereof he kept for himself, and the Lad, and sixteen he gave unto the Interpreter for us; and thus were we parted with Tears, he returning unto the Court of *Sartach*, and ourselves remaining still in the same Place.

27. On the Eve of the Feast of *Assumption* our Clerk arrived at the Court of *Sartach*, and the next Day after the *Nestorian* Priests were adorned with our Vestments, in the Presence of the said *Sartach*. Then we ourselves were conducted unto another Host, who was appointed to provide us House-room, Victuals, and Horses, but because we had not any thing to bestow upon him, he did all things unwardly for us: Then we rode on toward with *Baatu*, descending along by the Bank of *Enlia*, or *Volga*, for the Space of five Weeks together. Sometimes my Associate was so extremely hungry, that he would tell me in a manner weeping, that it bared with him as though he had never eaten any thing in all his Life before. There is a Fair or Market following the Court of *Baatu* at all times; but it was so far distant from us, that we could not have Recourse thereto, for we were constrained to walk on Foot for want of Horses. At length certain *Hungarians*, a sort of Clergymen, found us out, and one of them could as yet sing many Songs without Book, and was accounted of other *Hungarians* as Priest, and was sent for unto the Funerals of his deceased Countrymen.

There was another of them also pretty well instructed in his Grammar, for he could understand the Meaning of any thing that we spoke, but could not answer us. These *Hungarians* were a great Help to us, giving us Cofins to drink and sometimes Fish to eat also, who when they requested to have some Books of us, and I had not any to give them (for indeed we had none except a Bible and a Breviary) it grieved me exceedingly, and I said to them bring me some Ink and Paper, and I will write for you so long as we shall remain here; and they did so, and I copied out for them the Hours of the Blessed Virgin, and the Office of the Dead. One Day there was a *Comarian* that accompanied us, that saluted us, saying *Salve Domine*; wondering thereat, and talking him again, I demanded of him who had taught him that kind of Salutation? He said, that he was baptized in *Hungary* by our Priests, and that of them he learned it: He said moreover, that *Baatu* had enquired many things of him concerning us, and that he told him the State of our Order. Afterwards I saw *Baatu* riding with his Company, and all his Subjects that were Masters of Families riding with him, and in my Estimation there were more than five hundred Persons in all.

At length, about the End of *Hely rood*, there came a certain rich *Moul* unto us, whose Father was a Millitary, which is a great Office among them, and told us, I am the Man that must conduct you to *Mangu Khan*, and we have thither a Journey of four Months to travel, and there is such extreme Cold in those Parts, that Stones and Trees burst asunder: Therefore I wish you would advise with yourselves whether you be able to endure it or no? I answered, by God's Help I hope we shall be able to go thro'

that which other Men can endure. Then he said, if you cannot endure it, I will forsake you by the way, and answered, it were not just Dealings for you so to do, for we go not thither upon any Business of our own, but by reason that we are sent thither by our Lord; wherefore since we are committed to your Charge, you ought in no wise to forsake us. Then he said, all shall be well. He caused us to shew him our Garments, and whatsoever he deemed to be less needful for us, he bid us leave behind in the Custody of our Host. On the Morrow they brought unto each of us a turred Gown made all of Ram's Skins, with the Wool still upon them, and Breeches of the same, Boots a-cording to their Fashion, Shoes made of Felt, and Hoods also made of Skins after their Manner. The second Day after *Hely rood* we began to set forward on our Journey, having three Guides to direct us, and we rode continually Eastward till the Feast of *All Saints* throughout all that Region, and beyond also, were the People *Changle* Inhabitants, who were descended from the *Romans*. On the North Side of us we had *Bugaria the Greater*, and on the South the *Cyprian Sea*.

28. When we had travelled twelve Days Journey from *Enlia* we found a mighty River called *Jagac*, which Runneth out of the North from the Land of *Pasfator*, or of the *Hungarians*, which all is one, and they are all of them Shepherd, not having any Cities, and their Country bordereth upon *Bugaria the Greater* on the West Front; from the North East Part of the Country there is no City at all. Out of the said Region of *Pasfator* proceeded the Issues of oil, who after wards were called *Hungarians*. Now unto it is *Bugaria the Greater*. *Isidore* reports concerning the People of this Nation that with few Horses they traversed the impregnable Walls and Bounds of *Aenon*, which together with the Rocks of *Chanaan* were to them made barbarous and blood-thirsty, except from invading the Regions of the South, into which as they had Intention to enter them as far as *Egypt*, and that they walked at Cartrius, even unto *Iranee*: it is to say were more mighty than the *Tartars* as yet are, and unto them the *Arabs* and the *Bugarians*, and the *Turkals* bound themselves; for out of *Bugaria the Greater* came out the *Hungarians*. As for them who inhabit beyond *Constantinople*, and not far from *Pasfator*, are called *Tag*, which having the Pronunciation is all one with us, for the *Tartars* cannot pronounce it. Letter *B*: From whom also descend the People which inhabit the Land of *Tag*, for they are called *Hac* (both these and Letter *B* in the Language of the *Russians*, and *P* in mine, and the *Sclavonians*).

The *Sclavonians* spoke one Language with the *Franks*, all which confederate with the *Hungars*, and now, like most part, they unite themselves to the *Tartars*, whom GOD hath raised up from the utmost Parts of the Earth, according to that which the Lord saith; *Ecce procedo in Eury by a People which is no People, and by a large Nation will I anger them*. This Prophecy is fulfilled, according to the literal Sense thereof, upon all Nations which observe not the Law of GOD. All this which I have written concerning the Land of *Pasfator*, was told me by certain Priests, who travelled thither before ever the *Tartars* came; and from that Time, they were subdued unto their Neighbours the *Bugarians*, being *Saracens*; for which Reason many of them proved *Saracens* also.

Other Matters concerning these People may be known out of History; for it is manifest, that those Provinces beyond *Constantinople*, which are now called *Bugaria*, *Valachi*, and *Sclavonia*, were of old Provinces belonging to the *Greeks*; also *Hungary* was heretofore called *Pannia*, and we were riding over the Land of *Changle* from the Feast of *Hely rood*, until the Feast of *All Saints*, travelling almost every Day, according to my Account, as far as it is from *Paris* to *Orleans*, and sometimes farther, according as we were provided with Post-Horses; for some Days we had Change of Horses twice or thrice in a Day, sometimes we were two or three Days together, not finding any People, and then we were constrained not to ride so fast. Of twenty or thirty Horses we had always the worst, because we were Strangers, for every one took their Choice of the best Horses before us. They provided me always a strong Horse, because

as copulent and heavy; but whether he went a gentle
 or no, I durst not make any Question, neither durst I
 complain, although he trotted very hard; for every Man
 there be contented with his Lot as it falls. We were
 exceedingly troubled, because our Horses tired before
 could come at any People, and then we were constrained
 whip our Horses, and to lay our Garments on other
 Horses, and sometimes two of us to ride upon one Horse.
 Of Hunger and Thirst, Cold and Weariness, there
 no End, for they gave us no Flesh-meat, but in the
 Morning they used to give us a little Drink,
 some boiled Millet; in the Evening they bestowed Flesh
 as a Shoulder and Breast of Ram's Mutton, and
 a Quantity of Broth to drink. When we had
 of the Flesh Broth we were well refreshed, and it
 to me most pleasant, and most nourishing Drink.
 Saturday I remained fasting until Night, without
 of drinking; and when Night came I was constrained,
 great Grief and Sorrow, to eat Flesh: Sometimes
 were compelled to eat Flesh half sodden, or almost raw,
 want of Fuel to boil it, especially when we lay in the
 or were benighted before we came to our Journey's
 because we then could not conveniently gather toge-
 the Dung of Horses and Oxen, for other Fuel we
 did not find, except, perhaps, a few Thorns in some
 places. Upon the Banks of some Rivers there are Woods
 being here and there, but they are very rare: In the
 morning our Guide highly disdained us, and it was testi-
 fied to him to conduct such base Fellows. Afterwards,
 when he began to know us somewhat better, he directed us
 our Way by the Courts of rich *Moabs*, and we were re-
 luctant to pray for them: Wherefore had I carried a good
 interpreter with me, I should have had Opportunities to
 be done much Good.

The before-mentioned *Zingis*, who was the first great Khan
 Emperor of the *Tartars*, had four Sons, of whom prob-
 ably by natural Descent many Children, every one of which
 at this Day enjoy great Possessions, and they are daily
 multiplied and dispersed over that huge and vast Desert,
 which is in Dimensions like the Ocean. Our Guide there-
 fore directed us, as we were going on our Journey, to many
 their Habitations; and they marvelled exceedingly, that
 we should not receive either Gold or Silver, or precious and
 fine Garments at their Hands. They enquired also concern-
 ing the Great Pope, whether he was of so lasting an
 age as they had heard; for there had gone a Report among
 them, that he was five hundred Years old. They enquired
 to enter our Countries, whether there was abundance of
 Sheep, Oxen, and Horses, or no? Concerning the Ocean,
 they could not conceive of it, because it was without Limits
 or Banks. Upon the Eve of the Feast of *All Saints* we
 turned our Course, which hitherto pointed East, because
 the People were now descended very much South, and we
 began our Journey by certain Mountains directly South-
 ward for the Space of eight Days together. In the Desert
 I saw many Asses, which they call *Colan*, being rather
 wild; these did our Guide and his Companions chase
 eagerly, though they did but lose their Labour, for
 the beasts were too swift for them.

Upon the seventh Day there appeared to the South of us
 a high Mountain; and we entered into a Place which
 was well watered, and fresh as a Garden, and found Land
 well manured. The eighth Day after the Feast of *All
 Saints* we arrived at a Town of the *Saracens* named *Kenbat*,
 the Governor whereof met our Guide at the Town's End,
 and Ale and Cups; for it is their Custom, at all Towns
 and Villages subject to them, to meet the Messengers of
Batu and *Mangu Khan*, with Meat and Drink; at this
 time of the Year they went upon the Ice in that Country,
 before the Feast of *Saint Michael* they had Frost in the
 Desert. I enquired the Name of this Province, but being
 in a strange Territory, they could not tell me the
 Name thereof, but only the Name of a small City in the
 same Province; and that there descended a great River
 down from the Mountains, which watered the whole Re-
 gion, according as the Inhabitants would give it Passage,
 by making divers Channels and Sluices; neither did the River
 discharge itself into any Sea, but was swallowed up by a
 chasm into the Bowels of the Earth, and it caused many

Fens or Lakes: Also I saw many Vines, and drank of the
 Wine made from them.

30. The Day following we came unto another Cottage
 near the Mountains, and I enquired what Mountains they
 were, which I understood to be the Mountains of *Caucasus*,
 which are stretched forth and continued on both Sides to
 the Sea from the West unto the East; and on the West
 they are bordering to the *Caspian* Sea, into which the River
Volga discharges its Streams. I enquired also of the City
 of *Talas*, wherein were certain *Germans*, Servants unto
 one *Buri*, of whom Friar *Andrew* makes mention, concern-
 ing whom also I enquired very diligently in the Courts of
Sartaeb and *Baatu*. I could get no Intelligence of them,
 but only that their Lord and Master *Bau* was put to Death
 upon the Occasion following. This *Bau* was not settled in
 good and fertile Pastures; and upon a certain Day being
 drunk, he spoke thus to his Men: *Am not I of the Stock
 and Kindred of Zingis Khan as well as Baatu?* (for indeed
 he was very nearly related to *Baatu*) *Why then do I not
 pass and repass upon the Bank of Etiha, to feed my Cattle
 there as freely as Baatu himself doth?* which Speech of his
 was reported unto *Baatu*; whereupon *Baatu* wrote to his
 Servants to bring their Lord bound unto him, and they
 did so.

Then *Baatu* demanded of him whether he had spoken
 any such Words? and he confessed that he had. But be-
 cause it is the Manner of the *Tartars* to pardon drunken
 Men, he excused himself by saying, *that he was drunk at
 the Time*. How durst you, said *Baatu*, once name me in
 thy Drunkenness; and having said this, he caused his Head
 to be chopped off.

Concerning the aforefaid *Germans*, I could not learn any
 thing till I was come to the Court of *Mangu Khan*, and
 there I was informed that *Mangu Khan* had removed them
 out of the Jurisdiction of *Baatu* for the Space of a Month's
 Journey from *Talas* Eastward to a certain Village called
Bolac, where they are set to dig Gold, and to make Ar-
 mour, so that I could neither go nor come by them. I
 passed very near the said City in going, that is, within
 three Days Journey; but I was ignorant that I did so,
 neither could I have turned out of my Way, if I had known
 so much. From the aforefaid Cottage, we went directly
 Eastward by the Mountains, and from that time we trav-
 elled among the People of *Mangu Khan*, who in all Places
 sang and danced before our Guide, because he was the
 Messenger of *Baatu*; for this Courtey they do to each
 other, namely, the People of *Mangu Khan* receiving the
 Messengers of *Baatu*, and so likewise the People of *Baatu*
 entertaining the People of *Mangu Khan*, notwithstanding
 the People of *Baatu* are more surly, and show not so much
 Courtey to the Subjects of *Mangu Khan*, as in their Turn
 they do to them.

A few Days after we entered upon those Mountains
 where the *Caru Cathayans* were wont to inhabit, and there
 we found a mighty River, inasmuch that we were con-
 strained to embark ourselves, and to sail over it. After-
 wards we came into a Valley, where I saw a Castle de-
 stroyed, the Walls whereof were only of Mud, and in that
 Place the Ground was tilled also; and there we found a cer-
 tain Village named *Equias*, wherein were *Mohammedans*
 speaking the *Persian* Language; but they dwelt a great
 Way off *Persia*. The Day following, having passed over
 the great Mountains Southward, we entered into a most
 beautiful Plain, having high Mountains on our right Hand,
 and on the left Hand of us a certain Sea or Lake, fifteen
 Days Journey in Circuit. All the Plain is most commodi-
 ously watered by Trenches distilling from the said Moun-
 tains; all which fall into the Lake in Summer Time. We
 returned by the North Side of the Lake, and there were
 great Mountains on that Side also. Upon this Plain there
 used to be formerly many Villages; but for the most Part
 they were all wasted in regard of the fertile Pastures, that the
Tartars might feed their Cattle there.

We found one great City there named *Cailac*, which was
 a Market, and great Numbers of Merchants frequented it.
 In this City we remained fifteen Days, staying for a cer-
 tain Scribe or Secretary of *Baatu*, who ought to have ac-
 companied our Guide for the dispatching of certain Affairs
 in the Court of *Mangu*. All this Country was wont to be
 called

called *Organum*, and the People thereof had their proper Language, and their peculiar kind of Writing: But it was now inhabited by the People called *Contemans*. The *Nestorians* likewise in those Parts use the very same kind of Language and Writing; they are called *Organa*, because they were wont to be most skilful in playing upon Organs, as was reported unto me. Here did I first see Worshippers of Idols; concerning whom, let me observe to your Majesty, that there be many Sects of them in these Eastern Countries.

31. The first sort of these Idolaters are called *Jugures*, whose Country borders upon the Land of *Organum*, within the said Mountains Eastward; and in all their Cities *Nestorians* inhabit, and they are dispersed likewise towards *Persia* in the Cities of the *Saracens*. The Citizens of the aforesaid City of *Caslae* had three Idol Temples, and I entered into two of them, and beheld their foolish Superstitions. In the first I found a Man, having a Cross painted with Ink upon his Hand; whereupon I supposed him to be a Christian, for he answered like a Christian unto all Questions which I demanded of him; and I asked him, Why therefore have you not the Cross with the Image of Jesus Christ thereupon? and he answered, We have no such Custom.

I thereupon conjectured, that they were indeed Christians, but that for lack of Instruction they omitted the aforesaid Ceremony; for I saw there behind a certain Chest, which was unto them instead of an Altar, whereon they set Candles and Oblations, an Image having Wings like unto the Image of St. *Michael*, and other Images also, holding their Fingers as if they would bless somebody. That Evening I could not find any thing else, for the *Saracens* only invite Men thither, but will not have them speak of their Religion, and therefore when I required of the *Saracens* concerning such Ceremonies, they were offended thereat.

On the next Day after was the New Moon, and the *Saracens* Feast of Passover, and changing my Inn or Lodging the same Day, I took my Abode near another Idol Temple; for the Citizens of the said City of *Caslae* courteously invite, and lovingly entertain, all Messengers, every Man of them according to his Ability and Station; and entering into the Temple, I found the Priests of the said Idols there, for always at the New Moons they set open their Temples, and the Priests adorn themselves, and offer up the People's Oblations of Bread and Fruits. First, therefore, I will describe to you those Rites and Ceremonies which are common unto all their Idol Temples, and then the Superstitions of the aforesaid *Jugures*, which are, as it were, a Sect distinguished from the rest. They all of them worship towards the North, clapping their Hands together, and prostrating themselves on their Knees on the Earth, holding also their Foreheads in their Hands: Whereupon the *Nestorians* in those Parts will in no case join their Hands together in the Time of Prayer, but they pray, displaying their Hands before their Breasts.

They extend their Temples in Length East and West, and on the North Side they build a Chamber in the Manner of a Vestibule, for themselves to go into, or sometimes it is otherwise. If it be a four-square Temple, in the midst of the Temple towards the North Side thereof, they take in one Chamber in the Place where the Choir should stand, and in the last Chamber they place a Chest long and broad like a Table, and behind the said Chest towards the South, stand their principal Idol, which I saw at *Caracorum*, and it was as big as the Idol of Saint *Corythober*; also a certain *Nestorian* Priest, which had been in *Casbay*, said, that in that Country there is an Idol of such Bignets, that it may be seen two Days journey before a Man came at it; and to they place other Idols round about the principal Idol, being all of them finely gilt over with pure Gold, and upon the Chest, which is in a manner a Table, they set Candles and Oblations. The Doors of their Temple are always open towards the South, contrary to the Custom of *Saracens*: They have also great Bells like us, and that is the Cause, as I think, why the Christians of the East will in no case use great Bells, notwithstanding they are common among the *Russians* and *Greeks* of *Casaria*.

32. All their Priests had their Heads and Beards shaven

quite over, and they are clad in siffron-coloured Garments; and being once shaven, they lead an unmarried Life from that Time forward, and they live an hundred or two hundred of them together in one Cloister. Upon these Days, when they enter into their Temples, they place two long Forms therein, and so sitting upon the Forms, like Singing-men in a Choir, one half of them directly over-against the other, they have certain Books in their Hand, which sometimes they lay down by them upon the Forms, and their Heads are bare so long as they remain in the Temple, and there they rest softly to themselves, not uttering any Voice at all. On my coming among them at the Time of their superstitious Devotions, and finding them all sitting mute in a manner, I attempted several Ways to provoke them unto Speech, and prevailed not by any Means possibly. They have with them also whithersoever they go, a certain string with an hundred or two hundred Nut-shells thereupon, much like to our Beads which we carry about with us; and they do always utter these Words, *Ou mam kallavi; God, thou knowest*, and one of them expounded it unto me. And to often do they expect a Reward at God's Hands as they pronounce these Words in Remembrance of God.

Round about their Temple they always make a fair Court like a Church-yard, which they environ with a good Wall; and upon the South Part thereof, they build a great Portico, wherein they sit and confer together: And upon the Top of the said Portico, they pitch a long pole upright, exalting it if they can, above all the Buildings of the Town; and by the View of the same Pole, *Portians* know that there stands a Temple of the Idols. These Rites and Ceremonies are common to all Idolaters in these Parts. Once I made a Visit to this Idol temple, and found certain Priests sitting in the outward Portico, and those which I saw seemed, by their shaven Beards, as if they had been our Countrymen. They wore certain Ornaments upon their Heads like Mitres, made of Paper. The Priests of the *Jugures* above-mentioned use these Ornaments where-ever they go. They go always in their siffron-coloured Jackets, which are very straight lined or patterned from the Bosom downwards, after the *Irish* Fashion; and they have a Cloak upon their Left-shoulder descending under their Right-arm, like a Deacon carrying the Collector's Box in time of Lent. Their Letters of Writing, the *Tartars* use as well as they. They begin to write at the Top of their Paper, drawing their Lines right down, and so they read and multiply their Lines from the Left-hand to the Right. They use certain little Papers and various Characters in their magicians Charms, and their Temples are full of such short Sermons, which come about them.

Mangu-Klan hath sent me into your Majesty, written in the Language of the *Meads* or *Tartars*; but in the Characters these *Jugures* use, but the Deceit, according to the ancient Custom, and lay up their Advers on the Top of a Pyramid. After I had sat a while with these Priests, and entered into their Temple, and seen many of our Images both great and small, I demanded of them, *What they believed concerning God?* They answered, *We believe that there is only one God; Which do you believe that he is a Spirit or some bodily Substance?* They said, *We believe that he is a Spirit.* Then said I, *do you believe that God ever took Man's Nature upon him?* They answered, *No.* Again, I said, *since you believe that he is a Spirit, to what end do you make so many bodily Images to represent him, since also you believe that he was not made Man? Why do you rather represent him by the Image of a Man than of any other Creature?* Then they answered, *We frame not these Images to represent God; but when any rich Man amongst us, or his Son, or his Wife, or any of his Friends die, he causeth the Image of the dead Person to be made, and to be placed here, and we, in Remembrance of him, do Reverence thereunto.* I replied then, *Do you think Things only for Friendship and out of Flattery to Men?* *No,* said they, *but out of regard to their Memories.*

Then they demanded of me, in *Scour* and *Millans*, where is God? To whom I answered, *Where is your Soul?* They laid in our Bodies: Then said I, *is it not in every Part of our Body, ruling and guiding the whole Body, and yet, notwithstanding, it is not perceived?*

Even so God is every-where, and rules all Things, and yet he is invisible, being Understanding and Wisdom itself. I was very desirous to have had some farther Conference with them, but on account that my Interpreter was weary and not able to express my Meaning, I was constrained to keep Silence. The *Moals*, or *Tartars*, are in this regard of their Sect, that is to say, they believe there is but one God, yet they make Images of Felt, in Remembrance of their deceased Friends, covering them with five most rich and costly Garments, and putting them into one or two Carts, which Caris no Man dare touch; and these are in the Custody of their Soothsayers, who are their Priests, concerning whom I will give your Highness an Account more at large hereafter.

These Soothsayers, or Diviners, always attend upon the Court of *Mangu*, and of other great Personages; as for the poorer, or meaner Sort, they have them not, except such only as are of the Kindred of *Zingis*; and when they are to remove, or take any Journey, the said Diviners go before them, as the cloudy Pillar went before the Children of *Israel*, and they appoint Ground where the Tents must be pitched; and, first of all, they take down their own Houses, and after them the whole Court does the like. Also on their festival Days, or new Moons, they take out these Images, and place them in Order circle-wise within the House; then come the *Moals* or *Tartars* into the same House, bowing themselves before the Images, and worship them. It is not lawful for any Stranger to enter the House. And, on a certain Time, I myself would have gone in, but was very rudely turned out, and obliged to remove, so that I never after attempted to pry any further into this Matter.

3. But it is my Opinion, that these *Jugures*, who live among the Christians and *Saracens*, by frequent Disputes with them, have been brought to believe that there is but one God; and they dwell in certain Cities, which were brought into Subjection to *Zingis-Khan*, and he gave his Daughter in Marriage unto their King; Also the City of *Caracorum* itself is in a manner within their Territories; and the whole Country of King or Presbyter *Jehn*, and of his Brother *Ung*, lieth near to their Dominions, except that they inhabit in certain Pastures Northward, and the said *Jugures* between the Mountains towards the South.

The *Moals* received their Letters or Characters from them; and they are the *Tartars* principal Scribes, and all the *Nestorians* almost can read their Letters. Next unto them, are the aforesaid Mountains Eastward, inhabiteth the Nation *Tanguts*, who are most valiant People, and took *Zingis* in Battle; but after the Conclusion of a Peace it was left at Liberty by them, and afterwards subdued them. These People of *Tangut* have Oxen of great Strength, with Tails like Horses, and with long, sharp Hair upon their Backs and Belles. Their Legs are larger than those of other Oxen, and they are exceeding fierce; these Oxen draw the Houses of the *Moals*; and their Horns are kinder, long, straight, and very sharp-pointed, inasmuch that the Owners are obliged to cut off the Ends of them. A Cow will not suffer herself to be coupled to one of them, unless they whistle or sing unto her. They have also the Qualities of a Buffalo, for if they see a Person clothed in Red, they run upon him immediately to kill him.

Next to this Nation are the People of *Tibet*; Men, who had formerly a Custom to eat the Bodies of their deceased Parents, that they might make no other Sepulchre for them than their own Bowels. But of late they have left off this Custom, because thereby they became odious to all other Nations; notwithstanding which, at this Day, they make fine Cups of the Skulls of their Parents, to this end that when they drink out of them, they may, in the Mouth of all their Jollities and Delights, call their dead Parents to Remembrance: This was told me by one that he saw. The said People of *Tibet* have vast Plenty of Gold in their Land; whosoever therefore wants Gold digs there hath found some, and then taking so much thereof as will serve his Turn, he lays up the Remainder in the Earth, because, if he should put it into his Chest, or Store-house, he is of Opinion that God would withhold from him all other Gold.

I saw some of these People, being very deformed Creatures. In *Tangut* I saw lusty, tall Men, but brown and swarthy in Colour. The *Jugures* are of a middle Stature, like *Frenchmen*. The Language of the *Jugures* is the Original and Root of the *Turkish* and *Comanian* Languages. Next to *Tibet* are the People of *Langa* and *Solanga*, whose Ambassadors I saw in the *Tartars* Court; and they brought ten great Carts with them, every one of which was drawn by six Oxen. They are little brown Men, like *Spaniards*. These People wear Jackets, like the upper Vestment of a Deacon, saving that the Sleeves are somewhat straighter, and they have Mitres upon their Heads like Bishops; but the Fore-part of their Mitre is not so hollow within as the hinder Part, neither is it sharp-pointed, nor cornered at the Top; but there hang down certain square Laps, compacted of a kind of Straw, which is made rough through extreme Heat, and is so trimmed, that it glittereth in the Sun-beams like a Glass, or an Helmet well burnished. On their Brows they have long Bands of the same Manufacture fastened to their Mitres, which hover in the Wind as if two long Horns grew out of their Heads; and when the Wind tosses them up and down too much, they tie them over the Middle of their Mitre, from one Temple to another, and so they lie across their Heads. Their principal Ambassador to the *Tartars* Court, had a Table of Elephants Teeth about him, of a Cubit in Length, and a Handful in Breadth, very smooth; and whensoever he spoke to the Emperor himself, or to any other great Personage, he always looked on that Table, as if he had found therein those Things which he spake; neither did he cast his Eyes to the Right-hand or to the Left of those with whom he talked.

Beyond them, as I was certainly informed, there are other People called *Muc*, having Villages, but no one Man of them appropriates any Cattle to himself, notwithstanding there are many Flocks and Drovers of Cattle in their Country, and nobody appointed to keep them; but when any of them want a Beast, he goes up upon a Hill, and there makes a Shout, and all the Cattle which are within hearing of the Noise, come flocking about him, and suffer themselves to be taken as if they were tame. And when any Messenger, or Stranger, cometh into their Country, they shut him up in a House, allowing him Things necessary, till his Business be dispatched; for if any Stranger should travel through that Country, the Cattle would fly away at the very Scent of him, and so become wild. Beyond *Muc* is the grand *Cathaya*, the Inhabitants of which, as I suppose, were of old called *Seres*, for from them are brought most excellent Stuffs and Silks; and this People are called *Seres* of a certain Town in the same Country. I was credibly informed, that in the said Country there is a Town having Walls of Silver, and Bulwarks of Gold. There are many Provinces in that Land, the greater Part of which are not as yet subdued by the *Tartars*, and the Sea lieth between them and *India*. These *Cathayans* are Men of little Stature, speaking much through the Nose.

This is a general Remark, that all the People of the East have small Eyes. They are excellent Workmen in every Art, and their Physicians are well skilled in the Virtue of Herbs, and judge very exactly of the Pulse, but know not any thing concerning Urine. Some of them I saw, for there are many at *Caracorum*, and they always bring up their Children in the same Trade of their Father, and therefore they pay so much Tribute; for they give the *Moals*, or *Moguls*, every Day, one thousand five hundred Cassino's, or Jascots (Jascot is a Piece of Silver weighing ten Marks) that is to say, every Day, fifty thousand Marks, besides Silks, and a certain Quantity of Victuals, and other Services which they do them. All these Nations are between the Mountains of *Caucasus*; on the North Side of those Mountains to the East Sea, on the South Part of *Scythia*, which the Shepherds of *Moad* inhabit, all are tributary unto them, and all given to Idolatry, and report many Fables of a Multitude of Gods, and certain deified Men, and make a Pedigree of the Gods, as our Poets do.

The *Nestorians* are intermixed with them as Strangers, so are the *Saracens* as far as *Cathay*. The *Nestorians* inhabit fifteen Cities of *Cathay*, and have a Bishop there in a very

a City called *Segin*; but if you proceed further, they are mere Idolaters: The Priests of those Nations have all broad yellow Hoods. There are also among them certain Hermits, living in the Woods and Mountains, of an austere and strange Life. The *Nestorians* there know nothing, for they say their Service, and have holy Books in the *Syrian* Tongue, which they know not; so that they sing as our Monks do, who are ignorant of Grammar; and hence it cometh that they are wholly corrupted. They are great Uterers and Drunkards, and some of them also, who live among the *Tartars*, have many Wives in the same manner as the *Tartars* have.

When they enter into the Church, they wash their lower Parts, as the *Saracens* do; they eat no Flesh on *Friday*, and hold their Feasts on that Day, after the manner of the *Saracens*. The Bishops come seldom into the Countries, perhaps once in fifty Years; then they cause all their little Children to be made Priests, even in the Cradle, so that all their Men almost are Priests, and, after this, they marry Wives, which is directly against the Decrees of the Fathers. They are also Bigamits, for their Priests themselves, when their Wife is dead, marry another. They are all *Simonists*, for they give no holy Thing freely. They are very careful of their Wives and Children, wherefore they apply themselves to Gam, and not to the spreading of the Faith; whence it comes to pass, while some of them bring up the Nobility's Children of *Meal*, although they teach them the Gospel, and the Articles of the Faith, yet by their evil Life and Covetousness, they drive them further from Christianity, because the Life of the *Meals*, or *Moguls*, and *Tuinans*, who are downright Idolaters, is more just and upright than theirs.

34. We departed from the City *Cailac* on *Saint Andrew's* Day, and within three Leagues found a Village of *Nestorians*. Entering into the Church, we sang *Salve Regina*, &c. with Joy, because it was long since we had seen a Church. Departing thence, in three Days we came to the Entrance of that Province, not far from the Sea before-mentioned, which seemed to us as tempestuous as the Ocean, and therein we saw a great Island. My Companions drew near the Shore, and wet a linen Cloth therein, to taste the Water, which was somewhat salt, but however might be drunk. There was a Valley over-against it, between the great Mountains South and East, and between the Hills was another salt Lake or Sea; and there ran a River through that Valley from the other Sea into this, and there came such a continual Wind through the Valley, that Men pass along the Road with great Danger, fearing the Wind should carry them into the Sea.

Therefore we left the Valley, and went towards the North, to the hilly Countries, covered with deep Snow, which then lay upon the Earth, so that upon *Saint Nicholas's* Day we began to hasten our Journey, and because we found no People but the *Jani*, or Men appointed from Day's Journey to Day's Journey, to conduct the Messengers; for in many Places in the hilly Countries the Way is narrow, and there are but few Fields; so that between Day and Night we met with two *Jani*, and therefore of two Days Journey we made one, and travelled more by Night than by Day: It was extremely cold there, so that they lent us their Goat Skins, turning the Hair outward. On the seventh of *December* in the Evening, we passed by a certain Place, between very terrible Rocks, and our Counsel went unto me, intrusting me to pray to God, which I did. Then we sang with loud Voice, *Credo in Deum*, &c. and by the Grace of God, we passed through unhurt.

After that, they began to intreat me that I would write them Papers, and I told them I would teach them Words which they should carry in their Hearts, whereby their Souls and Bodies should be saved; but when I thought to teach them, I wanted an Interpreter, yet I wrote them the Credo and Lord's-Prayer, saying, "Here is written what-ever a Man ought to believe concerning God; here also is that Prayer wherein we beg of God what-ever is needful for a Man; now therefore believe firmly what is written here, although you cannot understand it, and ask God to do that for you which is contained in this written Prayer, to cause with his own Mouth he taught it his Friends, and I hope he will save you." I could

not do any thing else, because it was dangerous to speak by such an Interpreter, nay, almost impossible, because he was ignorant.

35. After this, we entered into the Country where the Court of *Kon Khan* was, which was formerly called the Country of *Naymans*, who were the peculiar Subjects of *Prejire*, that is, *Prebyster John*, but I saw not that Court till my Return; yet here I shall briefly mention what befell his Son and Wives. *Kon Khan* being dead, *Baata* desired that *Mangu* should be *Khan*, but I could not well understand in what manner happened the Death of *Khan*. *Friar Andrew* said, that he died by a certain Medicine given him, and it was suspected that *Baata* caused it to be administered. Yet I heard it otherwise, for he summoned *Baata* to come and do him Homage, and *Baata* took his Journey with great Pomp and Splendor, but he and his Servants were much afraid, and he sent one of his Brothers before called *Stikin*, who, when he came to *Kon*, and ought to have presented him with his Copp, high Words arose between them, insomuch that they flew one another. The Widow of *Stikin* kept us a whole Day, that we might go to her House, and bless her, or pray for her.

Kon being dead, *Mangu* was chosen by the Counsel of *Baata*, and was then chosen while *Friar Andrew* was there. *Kon* had among others a Brother called *Sirenen*, who by the Council of *Kon's* Wife, and her Vassals, went with great Train towards *Mangu*, as if he went to do him homage, and yet in reality he purposed to kill him, and destroy his whole Court; and when he was near *Mangu*, and within one or two Days Journey, one of his Waggoners happened to break in the Way; where the Waggoner endeavoured to mend it, came one of the Servants of *Mangu* who helped him; he was impatientive of their Journey, that the Waggoner revealed unto him what was purposed to do. Then turning out of the Way, and not lightly regarded it, he went unto the Herd of Horses, and took the best Horse he could, and passing Night and Day, came speedily to the Court of *Mangu*, reporting what he had heard.

The Plot being thus discovered, *Mangu* quickly assembled all his Forces, caused four Lines of armed Men to compass his Court, that none might go in or out, and set the rest against *Sirenen*, who took him, and brought him to the Court, with all his Followers, who were all laid to his Charge, so that it was his death. Then he and his eldest Son *Kon Khan* were taken, and five hundred of the Nobility of the *Tartars* were slain. The noble Women also were sent for, who were all taken with burning Firebrands, to make them confess, and confessed, were put to Death. His youngest Son *Mangu* who was not capable of entering in to the Company, was left alive, and his Father's Palace was burnt, and was hanging unto it, and we passed by it in our Return, but could my Gentleman in it, either going or coming. For, the Lady of the Nation, sat in it, and there was none to comfort her.

36. We now went up again into the hilly Countries, steering always towards the North. At *Leignin*, on *Saint Stephen's* Day, we entered into a great Plain, where there was not to much as a Mole-hill, and the next Day, out of the Plain of *Saint John* the Evangelist, we came unto the Plains that great Lord: But when we were near it, we lay, within five Days Journey, our Host where we should have travelled more than fifteen Days, so that we were Reason, as I understood, that we might go by *Daun* the rule, their proper Country where the Court of *Khan* was. Others said, that he did it for this Purpose, that he might make the Way longer, and might draw their Power the more, for they are wont to deal with Men coming from Countries not subject to them; and our Guide obtained with great Difficulty, that we might go the right Way, for they held us debating thus from the Morning till Three o'Clock.

By the Way also the Secret ty told me, that it was contained in the Letters which *Baata* sent to *Mangu*, that we required an Army and Aid of *Saracens*, and that the *Saracens*. Then I began to wonder much, and was greatly troubled, for I knew the Contents of the Letters

ed that no mention of any Army was made therein, on-
you advised him to be a Friend to all Christians, and
that he should exalt the Cross; and bear Enmity to all the
Enemies of the Cross; and because also the Interpreters
were *Armenians*, of the greater *Armenia*, who greatly
hated the *Saracens*, lest perhaps they had interpreted any
thing in evil Part, to make the *Saracens* more odious and
hateful at their Pleasure. I therefore held my Peace, not
speaking a Word for them, or against them; for I feared to
speak the Words of *Baatu*, lest I should incur some
ill Accusation, and without reasonable Cause.

We came therefore the Day after into the said Court,
our Guide had a great Houfe appointed him, and we three
in a little Cottage, wherein we could scarce lay our Baggage,
make our Beds, and have a little Fire. Many came to
visit our Guide and brought him drink made of Rice, in
long straight-mouthed Bottles, in which I could discern no Dif-
ference from the best Wine, except that it had not the
Scent of Wine. We were called soon after, and most
curiously examined upon what Business we came; "I an-
swered, that we having heard *Sariacsb* was a Christian,
we came therefore unto him. The King our Master
sent him a Packet by us, he sent us to *Baatu* his Fa-
ther, and his Father sent us hither, he should have writ-
ten the Cause." Whereupon they demanded, whether
we would make Peace with them? I answered, "He had
sent Letters unto *Sariacsb* as a Christian, and if he had
known he were not a Christian, he would never have
sent him Letters. That as to a Treaty of Peace, there
was no Ground for it, since he has done you no wrong;
If he had not done any, why should you war upon him
or his People? He willingly (as a just Man) would re-
form himself and desire Peace. If ye without Cause
will make War with him or his Nation, we hope that
God (who is just) will help them." At this they
pondered, always repeating, *why came ye not to make Peace*.
For they are now so puffed-up with Pride, that they think
the whole World should desire to make Peace with them;
whereas, if I might be suffered, I would preach War a-
gainst them to the utmost of my Power. But I would not
voluntarily deliver the Cause of my Coming, lest I should
speak any thing against that which *Baatu* commanded; I
told them therefore the sole Cause of my coming thither
was, because he sent me.

The Day following we were brought to the Court, and
I thought I could go barefoot, as I did in our Country,
and therefore I laid aside my Shoes; but such as come to
the Court, alight far from the Houfe, where the great
Stalls, as it were a Bow-shot off, where the Horses re-
main, and a Boy to keep them. When we alighted there,
and our Guide went with us to the Houfe, a *Hungarian*
Boy was present there, who knew our Order; and when
the Men came about us, and stared at us as Monsters, es-
pecially because we were barefooted, and demanded whe-
ther we did not need our Feet, because they supposed we
should by Cold have lost them, that *Hungarian* told them
the Reason, shewing them the Rules and Practice of our
Order. Then the chief Secretary, who was a *Nestorian*, and a
Christian, by whose Council and Advice almost all is done,
came to us to see us, looked earnestly upon us, and called
the *Hungarian*, of whom he asked many Questions.
Then we were directed to return to our Lodging.

37. When we returned, at the End of the Court, to-
wards the East, as far from the Court as a Cross-bow could
shoot at twice, I saw a Houfe, upon which there was a
little Cross, at which I rejoiced much, supposing there was
some Christian there, and I went in boldly, and found an
Altar there, very well furnished; for there, in a golden
Cloth, were the Images of *Christ*, the Blessed *Virgin*, and
Saint *John Baptist*, and two Angels; the Lineaments of
their Bodies and Garments distinguished with Pearl, and a
great silver Cross with precious Stones in the Corners, and
the Middle thereof, and many other Embroiderings, and
a Lamp burning with Oil before the Altar, having eight
Lights; and there sat an *Armenian* Monk, somewhat
black and lean, clad with a rough hairy Coat to the
Mid-leg having upon it a Black Cloak of Bristles, furred
with spotted Skins, girt with Iron under his Hair-cloth.

Presently after we entered in; before we saluted the
Monk, falling flat upon the Ground, we sang *Ave Regina*
Cælorum, &c. and he rising, prayed with us; then salut-
ing him, we sat by him, having a little Fire before him
in a Pan; therefore we told him the Cause of our com-
ing, and he began to comfort us, saying, that we should
boldly speak, because we were the Messengers of God,
who is greater than all Men. Afterwards he told us of his
Coming, saying, he came thither a Month before us, and
that he was a Hermit of the Territories of *Jerusalem*, and
that the Lord appeared unto him three Times, command-
ing him to go to the Prince of the *Tartars*; and when he
deferred to go the third Time, God threatened him, and
over-threw him upon the Ground, saying, he should die,
unless he went; and that he told *Mangu-Khan*, that if he
would become a Christian, the whole World should be o-
bedient to him. Then I answered, "Brother, I will wil-
lingly persuade him to become a Christian; I will pro-
mise him also that the *French* and the Pope will much
rejoice thereat, and account him a Brother and a Friend;
but I will never promise that they shall become his Ser-
vants, and pay him Tribute, as these other Nations,
because in so doing, I should speak against my Consci-
ence." On which he held his Peace. We afterwards
went together to our Lodging, which I found a cold Ha-
bitation.

We had eaten nothing that Day; so we boiled a little
Flesh and Miller, of which we made Broth for our Sup-
pers. Our Guide and his Companions were drunk at the
Court, and little Care was had of us. At that Time the
Messengers of *Vesace* were there, hard by us, which we
knew not, and the Men of the Court made us rise in great
Haite at the Dawning of the Day. I went barefoot with
them a little way unto the Houfe of the said Messengers,
and they demanded of them whether they knew us. Then
that *Grecian* Soldier calling our Order, and my Comp-
panion to remembrance, because he had seen him in the
Court of *Vesace*, with *Friar Thomas*, our Minister, and all
his Fellows, gave great Testimony of us. Then they de-
manded whether we had Peace or War with *Vesace*? We
have, said I, neither War nor Peace; and they demanded
how that might be? Because, said I, their Countries are
far from each other, and meddle not together. Then the
Ambassador of *Vesace* said, we had Peace, giving me a
Caution; so I held my Tongue. That Morning my Toes
Ends were so frozen, that I could no longer go barefoot;
for in these Countries the Cold is extreme sharp, and from
the Time when it beginneth to freeze, it never ceases till
May: Nay, in the Month of *May* it froze every Morn-
ing, but in the Day-time it thawed, through the Heat of the
Sun; but in Winter it never thaws, but the Ice continues
with every Wind. And if there were any Wind there
in Winter, as there is with us, nothing could live there;
but it is always mild Weather till *April*, and then the
Winds rise; and at that Time when we were there (about
Easter) the Cold rising with the Wind, killed Multitudes
of living Creatures.

In the Winter little Snow fell there; but about *Easter*,
which was in the latter End of *April*, there fell so great
a Snow, that all the Streets of *Caracorum* were full;
to that they were forced to carry it out with their Carts.
Then they first brought us (from the Court) Ram-skin Coats,
and Breeches of the same, and Shoes, which my Companion
and Interpreter received; but I thought I had no need of
them, because I supposed my furred Garment, which I
brought from *Baatu*, was sufficient for me. On the 5th
of *January* we were brought to the Court, and there came
Nestorian Priests to me, whom I knew not to be Christi-
ans, demanding which Way we worshipped? I said, to
the East; and this they demanded, because we had shaven
our Beards, by the Advice of our Guide, that we might
appear before the *Khan* according to the Fashion of our
Country, whereupon they thought we had been *Tunians*,
or Idolaters: They made us also expound out of the Bible.
Then they demanded what Reverence we would pay to
the *Khan*, whether after our own Fashion or theirs? To
whom I made Answer, "We are Priests dedicated to the
Service of God; Noblemen in our Country will not ful-
7 G

“fer Priests to bow their Knees before them for the Honour of GOD: Nevertheless we will humble ourselves to all Men for the Lord’s sake. We came from a far Country, if ye please we will first sing Praises unto GOD, who hath brought us safe hither from afar, and afterwards we will do whatsoever pleaseth this Lord, with this Exception, that he command us nothing which may be against the Worship and Honour of GOD.” Then they entering into the House, delivered what we had said; so their Lord was contented, and they set us before the Entrance of the House, hitting up the Felt which hung before the Gate, and because it was Christmas we began to sing. *A Solis ortus carline*, &c.

38. When we had sung this Hymn, they searched our Bolsoms to see we had no Knives about us. They made our Interpreter ungird himself, and leave his Girdle and his Knife without, in the Custody of a Door-keeper. When we came in, there stood in the Entrance a Bench with Cushions, by which they made our Interpreter stand, and caused us to sit upon a Form before the Ladies; the whole House was hung with Cloth of Gold, and on a Hearth, in the Middle of the House, there was a Fire made of Thorns and Wormwood Roots (which grow there very big) and Ox Dung. The Khan sat upon a Bed covered with a spotted Skin, or Fur, bright and shining like a Seal’s Skin: He was a flat nosed Man, of a middle Stature, about the Age of five and forty, and a little pretty young Woman his Wife sat by him, and one of his Daughters, whose Name was *Cerina*, a hard-favoured young Woman, with other Children that were younger, sat next us to them upon a Bed; for that was the House of a certain Christian Lady he loved, by whom he had this Daughter, and he married the young Wife afterwards; yet the Daughter was Mistress of all that Court which was her Mother’s.

Then he made them ask us what we would drink, whether Wine, or Caracina, that is, Drink made of Rice, or Caracofinus, that is, clear Cow’s Milk, or Bull, that is, Mead made of Honey; for they use these four kinds of Liquor in the Winter? Then I answered, Sir, we are not Men who take Pleasure in Drink, what pleaseth you shall content us. Then he commanded Drink of Rice to be given us, clear and good as White-wine; whereof I talked a little for Reverence of him, and our Interpreter, to our Misfortune, stood by the Butlers who gave him much Drink, so that he was quickly drunk; then the Khan caused Falcons and other Birds to be brought unto him, which he took upon his Bill, and looked upon them, and after a long time he commanded us to speak. We were then to bow the Knee; and he had his Interpreter, a certain *Neyterian*, whom I knew not to be a Christian; and we had our Interpreter, such a one as he was, who by this Time was drunk. Then I said, “We first give Thanks and Praise to GOD, who hath brought us from so remote Parts of the World to see *Mangu-Khan*, to whom GOD hath given so great Power upon Earth; and we beseech our Lord, by whose Command we live and die, that he would grant him a long and a prosperous Life.” For this they desire, that Men pay for their Lives, then I told him, “Sir, We have heard of *Sartach*, that he was a Christian, and the Christians who heard it, but especially the *French King*, rejoiced; wherefore we come unto him, and our Lord and King hath sent him Letters by us, wherein were Words of Peace, and amongst other things he testified of us who’re Servants we are, and entreated him to suffer us to abide in his Country; for it is our Office to teach Men to live according to the Law of GOD, and he sent us to *Baatu* his Father, and *Baatu* hath sent us hither unto you; you are they to whom GOD hath given great Donations upon Earth, we therefore intreat your Highness to give us Leave to continue in your Country to do the Service of GOD for you, your Wives, and Children. We have neither Gold, nor Silver, nor Precious Stones, to present unto you, but ourselves, whom we present to serve and pray unto GOD for you: At least give us leave to continue while the Cold be past. My Companion is too weak, that he cannot by any means travel on Horseback without Hazard of his Life,” for my Companion begged me and adjured me to crave leave to stay. Then he began to answer, I was as the sun spread

his Beams every where, so our Power and *Baatu*’s shows itself every where, so that we have no need of your Silver and Gold.

Hitherto I understood my Interpreter, but farther I could not perceive any perfect Sentence, whereby I easily found he was drunk, and *Mangu-Khan* himself was drunk too, at least I thought so; yet he was displeas’d that we came first to *Sartach*, before we came to him. Then seeing the Defect of my Interpreter, I held my Peace, this only excepted; I entreated his Highness not to be displeas’d for that which I spoke of Gold and Silver, because I spoke it, not that he had need of such things, or desired them, but because we would willingly honour him with spiritual things. Then he made us rise, and sit down again, and after some few Words, and paying our Duty to him, we went on, and his Secretaries, and that Interpreter of his (who had been bringing up of one of his Daughters) went with us. They began to be very inquisitive concerning the Kingdom of *France*, whether there were many Rams, Oxen, and Horses there, as it presently they should enter and take all. And oftentimes I was fain to bridle myself much in displeasing Anger and Indignation. I answered, however, there are many good things there which ye shall see if you happen to come thither. Then they appointed us one who should have Care of us, and we went to the Monks; and when we came out again ready to go to our Lodging, the Interpreter came to us, saying, *Mangu-Khan* hath Compassion on you, and gives you two Months Time to stay, then the extrem Cold will be past; and he offers to lend you ten Days Journey, where is a good City called *Cacaram*; if you will go thither he will cause necessary Things to be given you, but if ye will stay here ye may have Necessaries; yet it will be a troublesome thing for you to follow the Court.

I said the Lord preserve *Mangu-Khan*, and grant him a good and long Life. We have found this Monk here, who we think to be a holy Man, and that by the good Pleasure of GOD he came into these Parts; wherefore we would willingly stay with him, and we will pray together for the Life of *Khan*. Then he held his Peace, and departed, and we went to our House, which we found very cold, and without any Fuel, as yet falling, thought it a Night. Then he to whom we were recommended, provided us Fuel, and a little Meat. Our Guide was now to return to *Baatu*, who desired a Carpet of us, which we set in the Court of *Baatu*, which we gave him, and he peaceably departed; so kissing our right Hand, and confessing his Fault, if he suffered us to endure Hunger and Thirst upon the Way, we pardoned him, craving Pardon of him and his whole Family, if we had given them any evil Example.

39. A certain Woman of *Metz* in *Lorraine*, called *Paule*, found us, who made us good Cheer, according to her Power, who belonged to the Court of that Lady who was Christian, of whom I spoke before, who told us of that strange Poverty which she endured before she came into the Court; but now she was well to live, for she had a young Husband, a *Rutenian* (by whom she had three very fat Children) who was skillful in Building, which amongst them is an excellent Art. She told us further, that at *Caracorum* there was a certain Goldsmith call’d *William*, born at *Paris*, whose Surname was *Bouebier*, and his Father’s Name *Lorraine Bouebier*, and she believed he hath a Brother yet living upon the Great Bridge, called *Roger Bouebier*; and she told me that he hath a certain young Man which he thought, whom he accounted as his Son, who was an excellent Interpreter; but *Mangu-Khan* delivered to the fore said Goldsmith three hundred Jafots, that is, three thousand Marks and fifty Workmen, to make a Piece of Wall, towards the East he could not find his Son to me; for the last time I lay in that Court, the Men which came from your Country are good Men, and *Mangu-Khan* well loving your Countrymen, but their Interpreter is good for nothing, therefore she was careful for an Interpreter.

Then I wrote unto the Goldsmith, certifying him of my coming hither, and requesting him, that if he could he would find me his Son, and he wrote me Answer, that he could not that Moon; but the next his Work should be published, and then he would send him unto me. We

played therefore with other Embassadors, and it is otherwise with Embassadors in *Baatu's* Court than in the Court of *Mangu-Khan*: for in the Court of *Baatu* there is one *Jan* on the East Side, who receiveth all such as come from the West, and so of other Countries of the World; but in the Court of *Mangu* they are all together under one *Jani*, and they may see and visit one another. In *Baatu's* Court they know not one another, or whether a Man be a Messenger or no, because they know not one another's Lodgings, nor see one another, but in the Court; and when one is called by Accident, another is not, for they go not to Court unless they be sent for. We found there a certain Christian in *Damascus*, who said he came in the Behalf of the Sultan of *Mons Regalis*, and of *Crax*, who desired to become Friend and Tributary to the *Tartars*.

The Year before I came thither there was a certain Monk of *Antioch* or *Ptolemais*, in *Syria*, who called himself *Theodolus*, but his true Name was *Theodolus*, and he took his Journey from *Cyprus* with Friar *Andrew*, and went with him into *Perfu*, and procured certain Instruments of *Andrew*, then in *Perfu*, who remained after Friar *Andrew* returning, he went forward with his Instruments, and came to *Mangu-Khan*, and being demanded upon what Account he came, said, "That he was with a certain holy Bishop, to whom the Lord sent Letters from Heaven, written in Golden Characters, and commanded him to send them to the Emperor of the *Tartars*, because he should be Lord of the whole Earth, and that he should persuade Men to make Peace with him." Then *Mangu* said unto him, If thou hadst brought these Letters which came from Heaven, and the Letters of thy Lord, thou hadst been welcome. He answered, that he brought Letters, but they were with other Things of his on a wild and unperceived Geding, which escaping, fled from him through the Woods and Mountains, so that he had lost all.

Then *Mangu* demanded the Name of the Bishop; he said he was called *Odo* of *Damascus*, and informed him also Master *William*, who was Clerk of the Lord Legat. The Khan commanded, in whose Kingdom it was? To whom he gave Answer, that it was under a certain King of the *Franks*, called *Males*; for he had heard of that that happened at *Majjora*, and he would have said, that they were your Servants. He also told the Khan, that the *Saracens* were between the *Franks* and him, who hindered his Way; that the Way had been open, he would have sent Embassadors, and willingly have made Peace with him. Then *Mangu-Khan* asked him, if he would bring his Messengers to that King, and that Bishop? He told him he would, and also to the Pope.

Then *Mangu* caused an exceeding strong Bow to be made, which two Men could scarce bend, and two Arrows of Silver, whose Heads were full of Holes, which rings, when they are shot, like a Whistle; and he chose a Maid, whom he should send with the said *Theodolus*, and to whom he said, "Thou shalt go to the King of the *Franks*, to whom this Man shall bring thee, and present him with these on my Behalf; and if he will have Peace with us, we will win the Country from the *Saracens*, even home to him, and will grant him the rest of the Country unto the West; if otherwise, bring back the Bow and Arrows unto us, and tell him we shoot far and strongly with such Bows." Then he caused *Theodolus* to go forth, whose Interpreter Master *William's* Son was, and in his Hearing, he said unto the *Maal*, "Thou shalt go with this Man, mark well the Ways, the Countries, and their Castles, Men and Mountains." For this Reason the young Man blamed *Theodolus*, saying, he had done all in conducting the Messengers of the *Tartars* with him, for they went for no other Cause but to spy.

He answered, that he would let them on the Sea, that they should not know which Way to return. *Mangu* gave him a golden Bull or Tablet, to wit, a Plate of Gold of an Hand breadth and half a Cubit long, wherein his Orders are engraven: Who so carrieth that, may command what he will and it is done without Delay. So then *Theodolus* came to *Veslacijs*, determining to pass over to the Pope, that he might deceive the Pope, as he had deceived *Mangu-Khan*. Then *Veslacijs* demanded of him, whether he had Letters to the Pope, because he was a

Messenger, and should conduct the Messengers of the *Tartars*; but not being able to shew the Letters, he took him and spoiled him of all that he had got, and cast him in Prison, and the *Maal* fell sick and died there.

But *Veslacijs* sent back the golden Tablet to *Mangu-Khan* by the Servants of the *Maal*, whom I met at *Affron* in the Entrance into *Turky*, who told me what had happened to *Theodolus*. Such Sharpers run through the World, whom the *Tartars* kill when they can take them. Now the Epiphany was at hand; and that *Armenian* Monk, *Sergius* by Name, told me that he should baptize *Mangu-Khan* upon that holy Day. I entreated him to labour, by all means, that I might be present, that I might bear Witness that I saw it; and he promised me he would.

41. When this festival Day came, the Monk called me not, but at six of the Clock I was sent for to Court, and I saw the Monk with the Priests returning from the Court with his Cross, and the Priests with the Censor, and the Gospel for that Day. *Mangu-Khan* made a Feast, and his Custom is, that on such Days as his Soothsayers appoint him, or the *Nestorian* Priests make holy Days, he held his Court; and on these Days the Christians come first, with their Furniture, and pray for him and bless his Cup; then they departing, the *Saracen* Priests come and do the like: Next after them come the idolatrous Priests, and do the same. The Monk told me, that he only believes the Christians, yet will have all to pray for him; but in this he lied, for he believes none; yet all follow his Court as Flies do Honey. He giveth to all, and all Men think they are his Familiars, and all prophesy Prosperity to him. Then we sat before the Court a long Space, and they brought us Flesh to eat; to whom I made Answer, that we would not eat there, but if they would provide us Meat, they should provide it for us at our House; to which they answered, Get home to your House, you were invited here for nothing else but to eat: Therefore we returned to the Monk, who blushed at the Lye he had told me, and therefore would not speak a Word of the Matter; yet some of the *Nestorians* affirmed, that he was baptized; to whom I said, that I would never believe it, nor report it to others, seeing I saw it not.

We came at last to our old and empty House, where they provided us Bedding and Coverlids; they brought us also Fuel, and gave us three the Carcass of one little lean Ram, as Meat for six Days, and every Day a little Platterfull of Millet, and lent us a Caldron, and a Trivet to boil our Flesh, which being boiled, we boiled our Millet in the Broth of the Flesh. This was our Meat, and it had well sufficed us, if they had suffered us to eat in Peace; but there were so many starved Fellows, who were not provided with Meat, that as soon as they saw us dress ours, they thrust in upon us, and would eat with us. The Cold began then to prevail, and *Mangu-Khan* sent us three Fur-coats with the Hair outwards, which we thankfully received: They demanded also how we were provided with necessary Food; to whom I answered, that little Meat sufficed us, but we have not an House wherein to pray for *Mangu-Khan*; for our Cottage was so little, that we could scarce stand upright in it, nor open our Books for Smoak after the Fire was lighted. Of this they gave him an Account, and he sent to the Monk, to know if he would be pleased with our Company, who gladly answered that he would. From that Time we were provided with a better House, and we went down with the Monk before the Court, where none lodged but we and their Soothsayers; but they lodged nearer before the Palace of the greatest Lady, and we at the farthest End towards the East, before the Palace of the last Lady; and that was on the Thirtieth of *January*.

On the next Morning, all the *Nestorian* Priests came together before Day at the Chapel, and smote upon a Board instead of ringing a Bell, and sang Matins solemnly, and put on their Ornaments, preparing the Censor and the Incense; and while they were waiting thus, behold, in the Morning the principal Wife, *Cotata-Cuten* by Name (*Cuten* is of the same Import as Lady, and *Cotata* is her proper Name) came into the Chapel with many other Ladies, and with her her eldest Son called *Baltu*, and other Children, and they cast themselves down upon the Earth, the King

alter

after the Manner of the *Nestorians*; and after this, they touched all the Images with their Right-hands, always kissing their Hands after they had touched; and after that they gave their Right-hands to all that stood by them in the Church, for this is the Custom of the *Nestorians* when they come into the Church; then the Priests sang many Things, giving the Lady Incense in her Hand, and she put it upon the Fire; then they perfumed her: After this, when the Day was clear, she began to put off the Ornament from her Head, which is called *Bacca*, and I saw her bare Head; then she commanded us to go forth, and as I went out I saw a Silver Basin brought, whether they baptized her or no, I know not; but I know they celebrate not *Mas* in a Tent, but in a standing Church; and at the Feast of *Easter* I saw them baptize and consecrate a Font with great Solemnity, which now they did not.

While we went into our House, *Mangu-Khan* himself came and went into the Church or Oratory, and a golden Bed was brought, on which he sat by his Queen, over-against the Altar; then we were sent for, who knew not then that *Mangu* was come, and the Door-keeper searched us, lest we should have Knives about us; but coming into the Oratory, having a Bible and a Breviary in my Bosom, I first bowed down to the Altar, and after to *Mangu-Khan*, and so passing by we stood between the Monk and the Altar; then they made us sing a Psalm after our Manner, and chant it; but we sang *Veni Sancte Spiritus*, &c. and *Khan* caused our Books to be brought unto him, the Bible and the Breviary, and diligently enquired concerning the Images, what they signified; the *Nestorians* answered him at their Pleasure, because our Interpreter came not in with us; and when I was first before him, I had the Bible in my Bosom, which he commanded to be brought unto him, and he looked earnestly on it; then he departed, and his Lady remained there, and distributed Gifts to all the Christians there; she gave the Monk a Jaseot, and to the Arch-Deacon of the Priests another; she caused a Nassic to be spread before us, that is, a Piece of Cloth as broad as a Coverlid of a Bed, very large, and a Buckram, which, when I would not receive, they sent them to my Interpreter, who had them to himself. He brought the Nassic to *Cyprus*, which he sold for eighteen Sultanines of *Cyprus*, but it was much the worse for the Carriage. Then Drink was brought us, viz. Drink made of Rice and Red-wine, like a Wine of *Roebelle*, and *Cosmos*; then the Lady holding the Cup full in her Hand, desired a Blessing upon her Knees, and all the Priests sung with a loud Voice, and she drank it up, and I and my Companion were obliged to sing.

Another Time, when all of them were almost drunk, there was brought the Carcass of one Ram, which was presently devoured, and after that great Fishes, which are like our Carp, without Salt or Bread, whereof I eat a little, so they passed the Day till the Evening; and when the Lady herself was drunk, she took her Chariot, the Priests singing, and went her Way. The next Sunday, which was the Twenty-third of *January*, the *Khan's* Son came (whose Mother was a Christian) and did the like, but not with so great Solemnity, for he gave no Gifts, but made the Priests drink, and gave them parched Millet to eat. Before the first Sunday in *Lent*, the *Nestorians* fast three Days, which they call the Fast of *Jonas*, when he preached to the *Ninevites*. And the *Armenians* fast five Days, which they call the Fast of *St. Lorkis*, who is the greatest Saint among them. The *Nestorians* begin their Fast on *Tuesday*, and end it on *Thursday*; so that on *Friday* they eat Flesh: And all that Time I saw the Chancellor, who is there called *Bulgai*, give them small Pieces of Flesh upon the *Friday*, and they blessed the Flesh with great Solemnity, as the *Paschal Lamb* is blessed, but he eat none with them; and thus I learned of the *French Goldsmith*, who was his very familiar Friend.

The Monk lent to *Mangu* to fast that Week, which he did; so that on the *Easter* of the *Armenians* we went in Procession to the House of the *Mangu*, and the Monk and we too went in with the Priests before him; and while we went in, one of the Servants went out, carrying on the Shoulder Bones of Rams burnt as black as Coals. I wondered at this greatly, as not knowing what it should mean; but after I

had enquired, I understood, that the *Khan* never does any thing before he has consulted these Bones, which kind of Divination is thus performed: When the *Khan* undertakes any thing, or rather before he undertakes it, he causes three of these Bones to be brought to him unburnt, and holding them, he considers in his Mind the thing he consults about, and whether he shall do it or not, and then delivers the Bones to be burnt; and there are always two little Rooms by the House where he lies, where these Bones are burnt, which are diligently sought for every Day; and all the *Leshkar* or Camp of the *Tartars*. When they are burnt black, they bring them to him; then he looks upon them, whether the Bones, by the Heat of the Fire, be clef Lengthways, for then he may do it; but if the Bones are cracked athwart, or round Pieces fly out of them, then he doth it not; for the Bones are always clef in the Fire or the thin Skin which covers the Bone; and if one be clef downright, he proceeds in his Design, be it what it will.

When therefore we went in before him, having a Caution to avoid touching the Threshold, the *Nestorian* Priests brought him Incense, and he put it upon the Censur, and they perfumed him; then they sung, blessing his Cups, after the Monk pronounced his Blessing, and we blessed last: And when he saw us holding up the Bible towards our Breasts, he caused it to be brought to him that he might see it, which he earnestly looked upon; then after he had drunk, and the chief Priest had waited on his Cup, they gave the Priests Drink, but we went out; but my Companion staying last, when we were gone, turned his Face to the *Khan*, bowing himself to him, and then hastily following us, he stumbled at the Threshold of the House, while we went in Haste towards the House of *Baltu*, the *Khan's* eldest Son. They that observed the Threshold seized my Companion and made him star, calling one, and commanding him to be carried to the *bagai*, who is the Chancellor, or Secretary of the Court, who judgeth those that are arraigned of Life and Death, but I knew it not; yet, when I looked back, and did not see him coming, I thought they kept him to give him some lighter Garments, for he was weak, and so laden with Felt Garments that he could scarce go.

Then they called our Interpreter, and made him sit with him, but we went to the *Khan's* eldest Son's House, who had two Wives, and was lodged at the right Side of his Father's Court; who, as soon as he saw us coming, leaping from his Bed whereon he sat, cast himself upon the Earth, smiting his Forehead against the Ground, where kissing the Cross, and then arising, caused it to be laid upon a new Cloth, in an high Place by him, very honourably: He hath a Schoolmaster, a *Nestorian* Priest called *David*, a Drunkard, who instructs him. Then he made us sit, and gave the Priests Drink, and he also drank, receiving the blessing from them; then we went to the Court of the second Lady, which was called *Ceta*, who followed Idolaters, whom we found lying sick a-bed; then the Monk made her rise out of her Bed, and worship the Cross, bowing her Knees thrice, and bowing towards the Ground, he standing with the Cross at the West Side of the House, and she on the East; this being done, they changed Places, and the Monk went with the Cross unto the East, and she unto the West, and he boldly commanded her, that she was so weak that she could scarce stand upon her feet, that she should cast herself down thrice, and worship the Cross, towards the East, after the Manner of the Christians, which she did, and he taught her to make the Sign of the Cross upon her Forehead, after she laid down upon her Bed; and praying for her, we went into the third House, where a Christian Lady used to be, who being dead, a young Woman succeeded her, who, together with the Daughter of her Lord, joyfully received us; and all that whole House reverently worshipped the Cross, and he let it upon a Velvet Cloth, in an high Place, and the ordered Meat to be brought, which being set before the Lady, she caused it to be distributed to the Priests; but I and the Monk were very weary of the Meat and Drink, for the Meat being eaten, and much Drink drunk, we were to go to the young Lady *Cerina*, who lodged behind the great House, which was her Mother's, who, at the command of the Cross, cast herself down upon the Earth, and wor-

shipped it very devoutly, because she had been taught so to do, and she set it in a high Place, upon a Piece of Silk, and all those Cloths whereon the Crofs was set, were given to the Monks.

A certain *Armenian* brought his Crofs, who came with the Monk as he said, from *Jerusalem*, and it was of Silver, weighing about some four marks, and it had four precious Stones in the Corners, and one in the Middle. It had not the Image of our Saviour, and he had presented it to *Mangu-Khan*, and *Mangu* demanded of him what he desired? To whom he answered, that he was the Son of an *Armenian* Priest, whose Church the *Saracens* had destroyed, and craved his Help for the Building again that Church. Then he asked him for how much it might be bought again? He answered, for two hundred Jaſcots, that is, for two thousand Marks; and he commanded Letters to be given him, to him who received the Tribute in *Peſia* and *Armenia* the Greater, that they should pay him the said Sum in Silver. This Crofs the Monk carried with him every where, and the Priests seeing the Gain he made thereof, began to envy him. We were therefore in the House of the young Lady, and she gave the Priests much Drink; from hence we went up into the fourth House, which was the last, for he used not to come often unto that Lady, and her Houe was very old, and herself not so gracious; but after *Easter*, the *Khan* made her a new House, and new Chariots. She likewise, as well as the Second, knew little or nothing of Christianity, but followed Sooth-sayers and Idolaters; yet at our coming in, she worshipped the Crofs as the Monk and the Priest taught her. There also the Priests drank again, and from this Place we returned to our Oratory, which was not far from thence, the Priests accompanying us with great howling and Outcries in their Drunkenness, which is not considered there as blameable, either in Man or Woman. A little after, my Companion was brought home, and the Monk sharply rebuked him, because he touched the Threshold. The next Day *Balgai* came (who was a Justice) and diligently enquired whether any had warned us to take Heed or touching the Threshold; and I answered, Sir, We had not our Interpreter with us, and if they did, how could we understand? Then he pardoned him, but would never after suffer him to come into any of the Houses of *Mangu-Khan*.

43. Sometime afterwards, it happened that the Lady was sick, almost to Death, and the Divination by Lots or the Idolaters did her no good at all; then *Mangu* sent unto the Monk, demanding of him what might be done for her, and the Monk modestly answered, that if she were not cured, he should cut off his Head. Having made that answer, the Monk called us, declaring the Matter unto us with Tears, intreating us to watch with him that Night in Prayer, which we did; and he had a certain Root, which is called *Rhubarb*, and he beat it almost to Powder, and put it in Water, with a little Crucifix which he had, whereon the Image of our Saviour was advanced, whereof he reported, that by it he knew whether the Sick would recover or die; for if they should escape, it stuck to the Beak of the Sick, as if it were glued; if otherwise, it stuck not at all; and I still thought that *Rhubarb* had been some holy Relic, which he had brought from the Holy Land of *Jerusalem*. And he gave all Beck Persons of that Water to drink, so that it could not be. But the Devils should be grieved with so bitter a Potion; with Alteration in their Bosells they aounted a Miracle. Then I told him, he should prepare some of that Holy Water which is made in the Church of *Rome*, which had great Virtue to expel Devils, because I understood she was vexed of a Devil; and at his Request, we made him some Holy Water, and he mingled *Rhubarb*, and put his Crucifix all the Night long in the Water to temper it. Had, moreover, that if he were a Priest, that the Order of Priesthood had great Power to expel Devils; and he said, it was very true, and yet he had, because he had no Order, nor knew any one Letter; but was a Weaver, as I understood after, in his Country, when I returned.

The next Morning then fore, I and the Monk, and two *Nestorian* Priests, went unto the Lady, and she was in a high House, behind her greater Houe. When we came to the Chamber, she lay in her Bed, and worshipped the Crofs, and set

it honourably by her, upon a Cloth of Silk, and drank of the Blessed Water with *Rhubarb*, and washed her Breast, and the Monk requested me to read a Gospel over her; so I read the Passion of our Lord according to *Jehus*; at length she was cheered, and felt herself better, and she caused four Jaſcots to be brought, which she first laid at the Feet of the Crofs, and after gave them to the Monk, and reached me one, which I would not receive; then the Monk stretched forth his Hand, took it, and gave each of the Priests one; so that at that Time she gave forty Marks. Then she caused Wine to be brought, and gave it to the Priests to drink, and I was forced to drink thrice from her Hand, in Honour of the Trinity: She began also to teach me the Language, jelling with me, because I was silent, as not having any Interpreter.

The next Day again *Mangu-Khan*, hearing that we came that Way, made us come in to him, because he understood, that the Lady was somewhat better; and we found him with a few Servants, taking a sort of Meat made of Paste, for comforting the Head, and the burnt Shoulder blades of a Ram lay before him, and he took the Crofs in his Hand, but that he worshipped it, I saw not; he looked upon it indeed, and asked some Questions, but I know not what. Then the Monk craved Leave to carry the Crofs aloft, upon a Lance, because I had spoken to the Monk before concerning this, and *Mangu* answered, carry it as you think best; then paying our Duty to him, we went unto the Lady, and we found her strong and cheerful, and she still drank of the Holy Water, and we read the Passion over her, and those miserable Priests never taught her the Faith, nor advised her to be baptized; but I sat there mute, not able to speak any thing, yet she still taught me the Language, the Priests found no fault with any kind of Sorcery; for there I saw four Swords half drawn out of the Sheath, one at the Head of the Lady's Bed, another at the Feet, and two other, on either Side of the Door one. I saw also there one Silver Chalice, of our Chalices, which very probably was taken out of some Church in *Hungary*, and it hung against the Walls full of Ashes, and upon those Ashes there was a black Stone, and concerning such things, the Priests never teach them that they are evil; nay, they themselves do teach such things. We visited her three Days, so that she was restored to perfect Health; after that, the Monk made a Banner full of Crofses, and got a Cane as long as a Lance, and we carried the Crofs aloft.

I honoured him as my Bishop, because he could speak the Language, yet he did many things that did not please me; for he caused a Chair, which may be tolked, to be made for him, such as Bishops used to have, and Gloves, and a Cap of Peacocks Feathers, and upon it a little Crofs of Gold; I was well pleased with the Crofs. He had scabbed Feet, which he endeavoured to palliate with Ornaments, and was very presumptuous in Speech; the *Nestorians* also repeated certain Verses of the Psalter upon two Rods, which were joined together, being held by two Men. The Monk was present at such Things, and many other Vanities appeared in him, which displeased me, yet we joined ourselves to his Society for the Honour of the Crofs, for we carried the Crofs advanced through all the Tents, singing, *Vexilla Regis prodeunt*, &c. Whereupon the *Mohammedans* were much dejected.

44. From the Time we came to the Court of *Mangu-Khan* he made but two Journeys towards the South, and from that time he began to return towards the North which was towards *Caracorum*; whereon I noted all the Way a thing of which *Matthæus Balkhim* of *Hawonia* had spoken to me at *Constantinople*, that he had seen this only wonderful, that he always attended in going, and never descended; for all Rivers came from the East to the West, either directly or indirectly, bending towards the South, or the North, and I enquired of the Priests which came from *Cathaya*, who testified the same. From the Place where I found *Mangu Khan* to *Cathaya* were twenty Days Journey; going towards the South and East to *Oman Kerula*, which is the proper Country of *Atzall*, where the Court of *Zingit* is, were ten Days Journey right East; and in those Parts of the East there was no City, yet there were People which are called *Sa-Azall*, that is to say, *Azall* of the Waters,

for *Su* is Water. These People live upon Fish and Hunting, having neither Flocks or Herds. Towards the North likewise there is no City, but a poor People feeding Cattle, who are called *Kerkis*; the *Orangin* are also there, who bind smooth filed Bones under their Feet, and thrust themselves forward upon the congealed Snow and Ice with such Swiftness, that they take Birds and Beasts; and many other poor People there are on the North-side, so far as they may spread themselves for the Cold; and they join on the West with the Country of *Pactar*, which is *Hungary the Greater*, whereof I have spoken before. The Bound or Summit of the North Corner is not known for the Extremity of the Cold; for in that Place there are continual Mountains of Snow.

I was inquisitive of the Monsters, or monstrous Men, whereof *Igidorus* and *Salmus* make report; they told me they never saw any such, and I therefore doubt whether it be true or no. All these Nations are poor, yet they must serve in some Trade, for it was the Commandment of *Zongis*, that none should be free from Service, till he were so old, that he could labour no longer by any means. Once I remember a certain Priest of *Cathaya* sat with me clothed in a red coloured Cloth, and I demanded of him whence he had such a Colour, and he told me, that in the East Parts of *Cathaya* there were high craggy Rocks, wherein certain Creatures dwell, having in all Parts the Shape of Men; but that they bow not the Knees, but leap instead of walking, which are not above one Cubit long, and their whole Body is covered with Hair, who have their Abode in Caves, which no Man can come unto, and they who hunt them, go to them, and carry strong Drink with them, and make Pits in the Rocks like Wells, which they fill with that strong Drink; for *Cathaya* hitherto has had no Wine, tho' now they begin to plant Vineyards; but the strong Liquor before-mentioned is made of Rice. The Hunters hide themselves, and then these Creatures come out of their Holes and taste the Drink, and cry, Chin-Chin; on this they come together in great Multitudes, and drink till they are made drunk, so that they sleep there. Then the Hunters come and bind them Hand and Feet, while they are sleeping, and afterwards open the Veins in their Neck, and draw forth three or four Drops of Blood from every one, and let them go free, and that Blood, as he told me, is the most precious Purple.

He told us also as a Truth (which, however, I do not believe) that there is a Province beyond *Cathaya*, into which, at whatever Age a Man enters, he continueth in the same Age wherein he entered. *Cathaya* is on the Ocean, and the Goldsmith to often mentioned told me, that there arrived Messengers from a certain People which are called *Zante* and *Manse*, who inhabit Islands, the Sea of which is frozen in the Winter, so that the *Tartars* may invade them, who offered two thousand Turmen or Jalouts yearly, so they would let them live in Peace. Turmen is a Piece of Money containing ten Marks. The common Money of *Cathaya* is Paper made like Pattenboard, the Breadth and Length of an Hand, upon which they imprint Lines like the Seal of *Mangu*; they write with a Pencil, like that with which Painters paint, and in one Figure they make many Letters comprehending one Word. The People of *Tibet* write as we do, and they have Characters very like ours. They of *Tangut* write from the right Hand to the left, as the *Arabians* do, and multiply the Line ascending upwards; the *Jugures*, as I said before, from above to the Bottom of the Line. The common Money of the *Rutenians* are little spotted and grided Skins. When we came with the Monk, he charitably admonished us to abstain from Flesh, and that our Servants should eat Flesh with his Servants; but he would promise us Meal, and Oil, or Butter, which we did, though it much grieved my Companion by reason of his Weakness; wherefore our Food was Millet and Butter, or Pulse boiled in Water, with Butter, or four Milk, and unleavened Bread baked on Ox dung, or Horse dung.

45. When our *Quinquagesima* came, which is the Lent Time of all the People of the East, the great Lady *Cisa*, with all her Company, fasted that Week, who came every Day to our Oratory, and gave Meat to the Priests, and other Christians, of whom a great Multitude flocked thither the first Week to hear their Duty, and she gave me and

my Companion each a Coat and Breeches of grey Semy, furred with coarse Hair, because my Companion complained much of the Weight of his Skins, which I received for his sake, excusing myself nevertheles, that I would not wear such Cloaths; I gave to my Interpreter what belonged to me. Then the Porters of the Court seeing that such a Multitude came daily to the Church, which was within the Bounds of the Keepers of the Court, they sent one of their Attendants to the Monk, to let him know, that they would not have such a Multitude come within the Precincts of the Court; to this the Monk roughly answered, that he would know whether they commanded this from *Mangu-Khan*, and he added certain Speeches, as if he would accuse them to *Mangu-Khan*; but they preventing him, accused him before *Mangu*, that he was too full of Words, and that he gathered together too great a Multitude to hear him speak.

Afterwards being called to the Court, we came in before the *Khan* himself, who having the burnt Shoulder blade of a Ram in his Hand, looked upon it, as it were reading; he began to reprove the Monk severely, telling him, that seeing he was a holy Man, he should pray unto God, and asked why he spoke so much with Men? but I stood behind with my Head bare. Then the *Khan* said to him, Why dost thou not put off thy Cap when thou comest before me, as that *Frank's* did; and commanded me to be called nearer; then the Monk being much abased, put off his Cap contrary to the Custom of the *Greeks* and *Armenians*, and when *Khan* himself had spoken sharply to him, we went out; the Monk then delivered the Cross to bear to the Oratory, because he could not carry it for Shame. After a few Days he was reconciled to him, promising that he would go to the Pope, and that he would bring all the Nations of the West to his Obedience. Whereupon he returning to the Oratory, after that Conference had with the *Khan*, began to enquire of me concerning the Pope, if I believed he would see him, if he came unto him in the B. half of *Mangu*, and if he would furnish him with Horses unto *Saint James in Galia*. He commanded also of your Majesty, if I thought you would send your Son unto *Mangu*? Then I counsell'd him, that he should take heed that he did not promise foolishly to *Mangu*, because the last Error would be worse than the first, and that God needsleth not our Lies, or that we should speak deceitfully for him.

At that time there arose a certain Question between the Monk and a Priest, a learned Man, whose Father was an Archdeacon, and the other Priests accounted him an Archdeacon. For the Monk said, that Man was created before Paradise, and that the Scripture said so; then was I called to be an Arbitrator of the Question, but I being ignorant that they contended about this, answered, that Paradise was made upon *Tuesday*, when the other Trees were made, and that Man was made the sixth Day. Then the Monk began to say, did not the Devil bring Earth the first Day from the four Parts of the World, and making Clay, make the Body of Man therewith, and God inspired his Soul? Then hearing this Heresy of the Monk, and that he had publicly and shamefully recited it, I reprov'd him sharply, saying, he should put his Finger upon his Mouth, because he knew not the Scriptures, and that he should take heed what he said; and he began to scorn me, because I was ignorant of the Language.

I departed therefore from him, going to our House; he fell out afterwards, that he and the Priests went in Protestation to the Court without calling me, because the Monk would no longer speak to me as he was wont; when therefore they came before *Mangu*, he earnestly demanded where I was, and why I came not with them? The Priests being afraid, excused themselves, but, returning they told me the Words of *Mangu*, and murmured at the Monk. After this, the Monk was reconciled to us, and I to him, intreating him, that he would help me with his Language, and I would help him in the Holy Scripture. For a Brother that is helper of a Brother, is as a strong City. After the first Week of Fasting, the Lady desired to come unto the Oratory, and to give Meat and Drink, which we were wont to have; for the Monk suffered it not to be brought, saying, that Mutton fat, or Suet, was put in the Sauce, and she gave no Oil, but very little to

that we had nothing but brown Bread and Paste, boiled in Water, though we had no Water but of dissolved Snow, or Ice, which was exceeding bad. My Companion began to be much grieved; so I acquainted *David*, the Schoolmaster of the Khan's eldest Son, with our Necessity, who made Report thereof to the Khan, and he commanded to give us Wine, Flour, and Oil.

With the *Nestorians* or *Armenians* eat Fish by any means in *Lent*; but the Monk had a Chest by him under the Altar, with Almonds and Raisins, and dried Prunes, and many other Fruits, which he eat all the Day, whenever he was alone. We eat once a Day, and that in great Abstinence; for as soon as they knew that *Mangu* had given us Wine, most impudently they came in upon us like Dogs, both the *Nestorian* Priests, who were drunk all the Day in the Courts, and the *Moals* also, and the Servants of the Monk. The Monk also, when any came unto him to whom he would give Drink, he sent to us for Wine; so that the Wine caused us more Trouble than Comfort, because we could not deny it without Offence. If we gave, we wanted ourselves; nor durst we, that being spent, desire any more from the Court.

After the Middle of *Lent* the *French* Goldsmith's Son came, bringing with him a Silver Cross made after the *French* Fashion, having the Image of Christ all of Silver fastened upon it at the Top, which the Monks and Priests esteem, put it away. This Cross he was to present in the Chapel of his Master to *Bulgai*, who was the chief Secretary of the Court, which when I heard I was offended. The same young Man also declared to *Mangu Khan*, that he had the Work, which he had commanded to be made, was finished, which Work I described unto you. *Mangu* hath in *Caracorum* a great Court hard by the Walls of the City, enclosed with a Brick Wall, as the Priors of Monks are enclosed with us. In that Court there is a great Palace, wherein he held his Feasts twice a Year, once in *Easter*, when he passeth that Way, and once in Summer, when he returneth; but the latter is the greater, because then all the Nobles meet together at his Court, and then he gives unto them Garments, and shews all his Magnificence. There are many other Houses there as large as our Farms, wherein his Victuals and Treasures are stored. In the Entrance of that great Place, because it was indecent to have Stragglers going about, as in a Tavern, *William* the Goldsmith made him a great Silver Tree, at the Root whereof were four Silver Lions, having one Pipe sending forth pure Cows Milk; and the four Pipes were conveyed within the Tree unto the Top thereof, whose Top spread back again downward, and upon every one of them was a Golden Serpent, whose Tail's twined about the Tree; and one of these Pipes run with Wine; another with Caracofmos, that is, clarified Whey; another with Ball, that is, Drink made of Honey; another with Drink made of Rice, called *Yerama*; and every Drink had a Vessel prepared of Silver at the Foot of the Tree to receive it. Between these four Pipes, at the Top, he made an Angel holding a Trumpet; and under the Tree he made an hollow Vault, wherein a Man might be hid, and a Pipe ascending up the Heart of the Tree unto the Angel. He first made Bellows, but they gave not Wind enough. Without the Palace there is a Chamber, wherein the Liquors were laid, and there were Servants ready to pour it out when they heard the Angel sounding the Trumpet; and the Boughs of the Tree are of Silver, and so are the Leaves and Pears that are on it; when therefore they want Drink, the Butler commands the Angel to sound the Trumpet; he who is hid in the Vault, bearing, blows the Pipe strongly, which ascending to the Angel, he sets his Trumpet to his Mouth, and the Trumpet soundeth very shrill; then the Servants hearing, which are in the Chamber, pour Liquor into the proper Pipe, and the Pipes pour it from above, and they are received below into Vessels prepared for that Purpose. Then the Butlers draw them, and carry them through the Palace to Men and Women.

The Palace is like a Church, having the middle Isle and the two Sides beyond two Rows of Pillars, and three Gates on the South; before the middle Gate stands the Tree, and the *Khan* himself sits in the North Front on an high Place, that he may be seen of all; and there are two

Flights of Steps ascending to him; by one he that carries the Cup goes unto him; and by the other he comes down. The Space which is in the Middle, between the Tree and the Steps by which they ascend, is void; for there stands he that waits on his Cup, and the Messengers which bring Presents, the *Khan* sitting there above like a God. On the right Side, towards the West, are the Men; on the left, Women; for the Palace stretched out in Length from North to South: On the right Side are Places full of Seats, on which his Sons and Brethren sit; on the left Side are the like, where his Wives and Daughters sit, one Woman only sits above by him, but not so high as he. When therefore he had heard that the Work was finished, he commanded the chief Workman to set it up in its Place, and make it fit.

About *Passion Sunday*, he went before with his small Houses, leaving his greater Houses behind; and the Monk and we followed him; and he sent us another Bottle of Wine. The *Khan*, in his March, passed between the hilly Countries, where there was great Wind, and extreme Cold, and there fell a great Snow; whereupon he sent about Midnight to the Monk and us, entreating us to pray unto God, that he would mitigate the Wind and Cold, because all the Beasts which were in the Train were in Jeopardy; especially because all that Time they were with Young, and ready to bring forth. Then the Monk sent him Incense, requiring him to put it upon the Coals, and offer it to God; which whether he did, I know not; but the Tempest ceased, which had continued two Days.

On *Palm Sunday* we were near *Caracorum* in the Dawning of the Day we blessed the Willow-boughs, whereon as yet there appeared no Bud; and about Nine we entered the City, carrying the Cross aloft, with the Banner, passing through the Middle of the Street of the *Saracens*, between the Market and Fair are, to the Church, and the *Nestorians* met us in Procession; and, entering into the Church, we found them prepared to celebrate the Mass; which being celebrated, they all communicated; and they asked me whether I would communicate? I answered, that I had drank before, and the Sacrament should not be received but fasting. Mass being said, it was Evening, and Master *William* the Goldsmith brought us with Joy to his Inn to sup with him. He had a Wife who was the Daughter of *Mobammedan* Parents, though born in *Hungary* herself, who could speak *French*, and the Language of *Comania*. We found also there one other Man, called *Bassius*, the Son of an *Englishman*, born in *Hungary*, who also was skilful in the same Languages. Supper being ended, they brought us to our Cottage, which the *Tartars* had appointed in a certain Plat of Ground near the Church, with the Oratory of the Monk.

On the next Morning the *Khan* himself entered into his Palace, and the Monk and I and the Priests went to him; they suffered not my Companion to go, because he stumbled on the Threshold. I much deliberated with myself what I should do, whether I should go or no; and, fearing Offence, if I should depart from other Christians, and because it pleased him, and fearing lest that Good might be hindered, which I hoped to obtain, I chose rather to go, though I saw their Actions full of Idolatry and Sorcery; nor did I any other Thing there but pray for the whole Church with a loud Voice, and also for the *Khan* himself, that GOD would direct him to the Way of eternal Salvation. We therefore went into the Court, which was very neat, for in the Summer Rivers are conveyed into every Place, whereby it is watered. After this we entered into the Palace full of Men and Women, and stood before the *Khan*, having the aforesaid Tree at our Backs, which, with the Vessels thereof, took up a great Part of the Palace. The Priests brought two little Loaves and Fruit in an earthen Dish, which they presented unto him, blessing them; and the Butler brought them to him, sitting above on a very high Place, and he presently began to eat one of the Loaves, and sent the other to his Son and a younger Brother of his, who was brought up by a *Nestorian*, and knew the Gospel, who also sent for my Bible, that he might see it. After the Priests, the Monk said his Prayer, and I after the Monk; then he promised that the next Day he would come unto the Church, which is great enough

enough and fair, and all the Ceiling above was covered with Silk wrought with Gold: The next Day he departed, desiring the Priests to excuse him, that he durst not come to the Church, because he understood the Dead were carried thither: But we and the Monk remained at *Caracorum* with the other Priests of the Court, that we might celebrate *Easter* there.

47. The Feast of *Easter* was now drawing near, and we had not our Vestments; and I likewise considered the Manner how the *Nestorians* made the Sacramental Bread, and was much troubled what I should do, whether I should receive the Sacrament from them, or should celebrate in their Vestments and Chalice, and upon their Altar, or should altogether abstain from the Sacrament. There was a great Multitude of *Christians*, *Hungarians*, *Alans*, *Rutenians*, *Georgians*, and *Armenians*, all which had not seen the Sacrament since they were taken Prisoners, because the *Nestorians* would not admit them into their Church, unless they were baptized by them, as they said; yet they made no Mention of that to us, and they offered their Sacrament freely to us, and made me stand in the Door of the Choir, that I might see their Manner of Consecration. On the Vigil of *Easter* I stood by the Fount, that I might see their Manner of baptizing. They say they have of the Ointment wherewith *Mary Magdalen* anointed the Feet of our Lord; and they pour in as much as they think fit of that Oil, with which they knead their Bread; for all the People of the East put Fat in their Bread instead of Leaven, which Fat is Butter, or Suet out of a Sheep's Tail, or Oil.

They say also, they have of the Flour of which the Bread was made which the Lord consecrated, and always add as much fresh as the Quantity of the Flour they lay aside; and they have a Chamber, hard by their Choir, and an Oven, where they bake their Bread, which they next consecrate with great Reverence. They therefore make one Loaf of an Hand's-breadth, with the before-mentioned Oil, which they first break into twelve Pieces, according to the Number of the Apostles, and after divide those Pieces according to the Multitude of the People, and the Priests give the Body of CHRIST to every one in his Hand; and then every one taketh it out of the Palm of his Hand with Reverence, and stretcheth his Hand to the Top of his Head. The *Christians* I mentioned before, and the Monks, very earnestly entreated us, for God's Sake, that we would celebrate. Then I made them be confessed by an Interpreter as I could, reckoning the ten Commandments, and the seven deadly Sins, and other Things, for which every Man ought to be penitent and confessed; all of them publicly excused themselves, concerning Theft, saying, that without Theft they could not live, because their Masters provided them neither Food nor Raiment. Then considering that they had taken away their Penitents and their Substance without just Cause, I said unto them, that they might lawfully take Necessaries of the Goods of their Masters, and I was ready to maintain it to the Face of *Mangu-Khan*.

Some of them also were Soldiers, who excused themselves, that they must go to the Wars, or else they should be slain: I forbid them to go against the *Christians*, and that they should not hurt them, and that they should rather suffer themselves to be slain, for so they should become Martyrs. And I said, that if any would accuse me of this Doctrine before *Mangu-Khan*, I would be ready to preach the same in his Hearing; for the *Nestorians* themselves of the Court were present when I taught this, of whom I was suspicious they might report ill of us. Then *Master William*, the Goldsmith, caused a Iron to be made for us to make Hosts; and he had certain Vestments which he had made for himself, for he had some Knowledge in Learning, and officiated as a Clerk. He caused the Image of the Blessed Virgin *Mary* to be graven after the *French* Fashion, and engraved the History of the Gospel very fair; and made a silver Box to lay up the Body of CHRIST, and the Relicks in certain little Holes curiously wrought in the Side of the Box.

He made also a certain Oratory upon a Clariot, very fairly painted with Scripture Histories; I therefore took his Vestments and blessed them, and we made Hosts after

our Manner, very fair: And the *Nestorians* assigned me their Fount for Baptism. And their Patriarch sent them from *Baldach* a square Hiele like a portable Altar, made with Chiselm, which they use instead of consecrated Stones; therefore I celebrated on the Day of the Lord's Supper, in their silver Chalice and Dish, which were very great Vessels. I did the like also on *Easter-day*, and we communicated the People with the Blessing of God, as I have; but they baptized in the Vigil of *Easter* more than threescore Persons very orderly. There was great joy for this generally among all *Christians*.

48. After this, it happened that *Master William* the Goldsmith was grievously sick, and when he was upon recovery, the Monk visiting him, gave him *Rhubarb* to drink, so that he had almost killed him. Then visiting him when I found him so ill, I asked him what he had eat or drank? And he told me the Monk had given him the Potion, and he drunk two little Dishes full, thinking it had been Holy Water. Then I went to the Monk, and said to him, either go as an Apostle, doing Miracles indeed by Virtue of Prayer and the Holy Ghost, or as a Physician, according to the Art of Medicine; you give a strong Potion of Physick to drink to Men not prepared, as it were an innocent Thing; for which you will incur a loud Scandal, if it come to the Knowledge of Men. From that Time he began to fear and to be weary of him.

It happened at that Time, that the Priest too was sick, who was as it were the Archdeacon of the rest, and his Friends sent for a certain *Saracen*, who was a Soothsayer, who said unto them, a certain lean Man, who neither eateth or drinketh, nor sleep in a Bed, is angry with him; if he can obtain his Blessing, he may recover; then they understood it was the Monk, and soon Mornight the Priest's Wife, his Sister, and his Son came, uttering that he would come and bless him; they also raised up to intercede with the Monk, who answered us upon this Occasion, Let him alone, because he, with three others, who likewise took evil Courtes, consulted to go to the Court, to procure *Mangu-Khan*, that I and you should be expelled from these Parts; for there arose a Contention among them, because *Mangu* and his Wife sent for jackets, and Pieces of Silk, upon *Easter* Eve, to the Monk and Priests, to distribute among them; and the Monk had kept unto himself one Jacket for his Part, and of the other three one was counterfeit, for it was Copper. The Priests thought therefore that the Monk had kept too great a Share to himself, whence (it might be) that they had some Words among themselves, which were reported to the Monk.

When Day came, I went to the Priest, who had extreme Pain in his Side, and spit Blood, whence I thought it was an Impostume; then I advised him, that if he had any thing that was another's, to restore it; he said he had nothing. I spoke unto him also of the Sacrament of Extreme Unction; who answered, we have no such Custom, neither do our Priests know how to do it. I beseech you, that you would do it for me, as you know best. I advised him also, concerning Confession, which they frequent not; and he shake a little in the Ear of a young Priest, one of his Companions. After this, he grew better, and intreated me to go for the Monk; so I went, but the Monk would not come at first; but when he heard he was somewhat better, he went with his Cross, and I also went, and carried the Body of Christ, which I had reserved upon *Easter* Day, at the Intreaty of *Master William*; then the Monk began to kick him with his Feet, and he most humbly embraced his Feet; then I said unto him, it is the Custom of the Church of *Rome*, that the Sick should receive the Body of Christ, as it is the best Provision for their Journey, and a Defence against all the Benefits of the Enemy, turning next to the sick Man, I said, Behold the Body of Christ, which I consecrated on *Easter* Day, you must be confessed, and desire it. Then said he, with a great Faith, I desire it with all my Heart, which when I had offered to him, he with great Affection said, I believe that this is my Creator, and my Saviour, who gave me Life, and will restore it again unto me after Death in the general Resurrection; and so took the Body of Christ (from my Hand) made after the Manner of the

Church of Rome; the Monk then staid with him, and gave him, in my Absence, I know not what Portions.

The next Day he began to have the Pangs of Death upon him; then taking their Oil which they said was holy, anointed him according to the Manner of the Church of Rome, as they entreated me. I had none of our Oil, because the Priests of *Sartaeb* kept it all. When we should have sung a Dirge, and I would have been present at his End, the Monk sent to me, bidding me depart, because, if I were present, I could not come into the House of *Mangu-Khan* for one whole Year; which, when I had told his Friends, they said it was true, and desired me to depart, lest I might be hindered in that Good which I might promote. As soon as he was dead, the Monk said unto me, *Never mind it, I have killed him with my Prayers; this Man only was learned, and opposed himself against us, and he hath known nothing: Henceforth Mangu-Khan himself, and they all will bow at our Feet.* Then he declared unto me the before-mentioned Answer of the Soothsayer; which, not believing it, I enquired of the Priests who were Friends of the Deceased, whether it were true or no, who said it was; but whether he was pre-instructed or not, they knew not.

Afterwards I found that the Monk called the Soothsayer and his Wife into his Chapel, and caused Dust to be sifted for him to divine to him, for he had a certain Saracene Deacon who divined to him; which, when I understood, I was amazed at his Foolishness, and said to him, Brother, a Man full of the Holy Ghost, which teacheth all Things, should not demand Answers or Counsels from Soothsayers, seeing all such Things are forbidden, and they are excommunicated who follow such Things. When he began to excuse himself, that it was not true that he sought after such Things; but I would not depart from him, because I was placed there by the Commandment of the Khan himself, nor could I remove without his special Command.

As to the City of *Caracorum*, your Highness may be pleased to know this; that, excluding the Palace of the Khan himself, it is not so good as the Castle of *St. Dennis*, and the Monastery of *St. Dennis* is worth ten Times that Palace, and more too. There are two Streets there, one of the *Saracens* or *Mohammedans*, where the Fairs are kept, and many Merchants resort thither, by reason of the Court which is always near, and for the Number of Embassadors. There is another of the *Carakayans*, who are all *Christians*. Without those Streets there are great Palaces, which are the Courts of the *Secretaries*; there are three several Kinds of Idolaters of divers Nations, two Mosques, where the Law of *Mohammed* is proclaimed, and one Church of the *Christians* at the End of the Town. The Town is inclosed with a Mud Wall, and hath four Gates; on the East Part Millet and other Grain is sold, which, as yet, is seldom brought thither; on the West Sheep and Goats, on the South Oxen and Waggon are sold; and on the North Horses.

Following the Court, we came thither on the Sunday before the *Ascension*; the next Day after we were called before *Balgai*, who is their Justice and chief Secretary; both the Monk and all his Family, and we and all the Messengers and Strangers likewise who frequented the House of the Monk, and were called before *Balgai* severally, first the Monk, and after us, and they began diligently to enquire whence we were, and for what Purpose we came, and what our Errand was? and this Enquiry was made because it was told *Mangu-Khan*, that four hundred Assassins or secret Murderers were gone forth in divers Habits to kill him. About that Time the Khan's Lady was restored to Health, and she sent for the Monk, and he not willing to go, answered, She hath sent for Idolaters about her, let them cure her if they can, I will go no more.

Upon *Ascension* Eve, we were all in the House of *Mangu-Khan*: And I saw as often as he was to drink, they cast Coins to their Idols of Velt; then I said to the Monk, *What Fellowship hath Christ with Belial? What Part hath our Cross with those Idols?* *Mangu-Khan* hath eight Brothers, three by the Mother, and five by the Father. One of them, of his Mother's Side, he sent into the Country of *Assaffines*, who are called by them *Mulhet*,

and he commanded him to kill them all. Another went to *Perfia*, and is now entered therein to go, as is thought, into *Turky*, from thence to send Armies to *Baldaeb* and *Vasfacius*. One of the others he sent into *Cathaya* against some that rebelled: His youngest Brother of the same Venter, he kept himself, whose Name was *Arabucha*, who holds his Mother's Court, who was a *Christian*, whose Servant Master *William* is; for one of the Brothers on the Father's Side took him in a certain City called *Belgrade*, where there was a *Norman* Bishop, of *Belle Ville* near *Roan*, with a Nephew of the Bishop's, whom I saw there at *Caracorum*, and he gave Master *William* to *Mangu's* Mother, because she was desirous to have him. But when she was dead, Master *William* came back again to *Arabucha*, with all Things else pertaining to the Court of his Mother; and from him he came to the Knowledge of *Mangu-Khan*, who, on finishing of the aforesaid Work, gave unto Master *William* one hundred *Jakots*, that is, a thousand Marks.

On the Eve of the *Ascension*, *Mangu-Khan* said, he would go to his Mother's Court and visit her, and the Monk said he would go with him, and give his Blessing to his Mother, with which *Khan* was well contented. In the Evening of the Day of the *Ascension*, the aforesaid Lady was very ill, and the Chief of the Soothsayers sent to the Monk, commanding him that the Table should not be smitten. On the Morrow, when the whole Court removed, the Court of the Lady remained still: and when we came to the Place where the Court should stay, the Monk was commanded to depart farther from the Court than he was wont, which he did; then *Arabucha* met his Brother the *Khan*: So the Monk and we, seeing that he was to pass by us, met him with the Cross; and he calling us to Mind, because sometimes he had been at our Oratory, stretching forth his Hand made a Cross unto us like a Bishop; then the Monk taking Horse followed him, bearing certain Fruits; but he alighted before his Brother's Court, waiting while he came from hunting: The Monk alighted there also, and offered him the Fruit, which he received; and hard by him sat two *Saracens* of the Nobility of the Court of *Khan*; but *Arabucha* understanding of the Contention between the *Christians* and the *Saracens*, enquired of the Monk if he knew these *Saracens*, and he answered, *I know they are Dogs, why have you them so near you?* But they replied, *Why, say they, do you Wrong to us, when we do none to you?* To whom the Monk said, I speak the Truth, and ye and your *Mohammed* are vile Dogs: Then they began to blaspheme *CHRIST*, but *Arabucha* forbid them, saying, *Speak not so blasphemously, for we know that the MESSIAH is GOD.* That very Hour there arose a great Wind over all the Street, and after a while there came a Rumour that the Lady was dead.

The next Morning the *Khan* returned towards the Court another Way; for this is a Rule amongst them, that they never return the same Way they come. While the Court remained here, none dare pass that Way (neither Horse-man nor Foot-man) where the Court staid, so long as any Shew of the Fire made there remaineth. That Day certain *Saracens* kept Company with the Monk, upon the Way, provoking him, and disputing with him; and when he could not defend himself with Argument, and they made light of him, he would have lashed them with the Whip which he held in his Hand, and he went so far that his Words were reported at the Court, and we were commanded to depart to the same Place with other Messengers, and not to abide before the Court as we were wont. I hitherto always hoped the King of *Armenia* would come. There came some about *Easter* from *Bolac*, where those *Germans* are, for whose Sake chiefly I went thither, who told me, that the *Dutch* Priest should come to Court; therefore I moved no Questions to *Mangu* concerning our Stay or Departure; for at the Beginning he gave us Leave to stay two Months, and now five Months were past. This was done about the End of *May*, and we had continued there all *February*, *March*, *April*, and *May*; but hearing no News of the King or the said Priest, and fearing lest we should return in the Winter, the Sharpness of which we had experienced, I caused it to be demanded of *Mangu-Khan*, what his Pleasure was concerning us, because we

would stay there, if so he pleased, or if we must return, it were easier for us to return in Summer, than in the Winter.

He presently sent to me, commanding that I should not go far off, because his Pleasure was to speak with me the next Day: To which I answered, if he would speak with me, he should send for Master William's Son, for my Interpreter was not sufficient, and he that brought this Message to me was a *Saracen*, who had been a Messenger to *Falacious*, and, blinded with Rewards, counsell'd *Falacious* to send Embassadors to *Mangu-Khan*, and the mean while the Time passed, for *Falacious* thought he would presently enter their Country, so he sent, and after he knew them, he little regarded them, nor made a Peace with them; neither did they yet enter his Country, nor will they be able to long as they dare defend themselves; nor did they ever take any Country by Force, but by Deceit; and because Men make Peace with them, under Colour of that Peace they circumvent them, and overthrow them. Then he began to be very inquisitive of the Pope, and of the King of the *Franks*, and of the Way to go to them; but the Monks hearing this, advis'd me secretly not to answer him, because he would procure that an Embassador should be sent. I therefore held my Peace, not willing to answer him; and he spake to me I know not what injurious Words, for which the *Nestorian* Priests would have accus'd him, to that he had either been slain or beaten, but I would not agree to it.

50. The very next Day they brought me to the Court, and the chief Secretaries of the Court came to me, one of them a *Mosul*, who watch'd upon the *Khan's* Cup, and the rest *Saracens*, enquiring on the Behalf of the *Khan*, wherefore I came? Then I told him in the very same Words I said before, how I came to *Sartach*, and from *Sartach* to *Baatu*, and how *Baatu* sent me thither. Whereupon I said unto him, I have nothing to speak on the Behalf of any Man, unless I should speak the Words of God unto him, if he would hear them, for the *Khan* should best know what *Baatu* hath written unto him. They flock'd upon this, demanding what Words of God I would speak unto him; thinking I would prophesy unto him some prosperous Thing, as many use to do.

To whom I answered, if ye will that I speak the Words of God unto him, get me an Interpreter, who said we have sent for him, yet speak by this Interpreter as you may, we shall understand you well, and they urg'd me much to speak. Then I said, "This is the Word of God. To whom more is committed, more is required at his Hands. Another also, to whom more is forgiven, he ought to love more. Out of these true Words of God, I said to the *Mangu* himself, this God hath given him much: For the Power and Riches which he hath, the Idols of the *Tuimans* hath not given him, but the Omnipotent God, who hath made Heaven and Earth, in whose Hands all Kingdoms are, and he translate them from Nation to Nation for the Sins of Men, wherefore if he love him, it shall go well with him; if otherwise, let him know that God will require all these things at his Hands, even to the uttermost Parting." Then said one of the *Saracens*, Is there any Man that loveth not God? I answered, "God hath, if any Man love me, he will keep my Commandments, therefore he that keepeth not the Commandments of God, loveth not God." Then said he, have ye been in Heaven, that ye might know the Commandments of God? "No," said I, but he hath given them from Heaven to holy Men, and at the last himself descended from Heaven, teaching us, and we have these Things in the Scriptures, and we see by the Works of Men whether they keep them or no."

Whereupon he replied, Will ye then say that *Mangu-Khan* keeps not the Commandments of God? To whom I said your Interpreter will come as ye say. Then before *Mangu-Khan*, if it please him, I will recite the Commandments of God, and he shall be his own Judge, whether he keep them or not; so they departed and told him, that I said he was an Idolater, or a *Tuiman*, and kept not the Commandments of God. The next Day he sent his Secretaries unto me, saying, our Lord sends us unto you, saying, ye are here, *Christians*, *Saracens*, and *Tuimans*, and every of you saith his Law is better, and his Books are true:

Wherefore he would that ye all come together, and make Comparison that every one write his Words, that he may know the Truth. Then I said, "Blessed be God, that hath put this in the Heart of *Khan*; but our Scripture saith, the Servant of God must not be contentious, but meek unto all. Wherefore I am ready without Strife and Contention to render an Account of the Faith, and Hope of Christians to every one that shall require it." Then they wrote my Words, and brought them unto him.

Then the *Nestorians* were commanded to provide themselves, and write what they would speak, and the *Saracens* likewise, and the *Tuimans* also. On the next Morning he sent the Secretaries again, saying, *Mangu-Khan* would know wherefore ye came to their Parts? To whom I said, he may know by the Letters of *Baatu*: To that they answered, *Baatu's* Letters are lost, and he hath forgotten what *Baatu* hath wrote to him. Wherefore he would know of you.

At this somewhat embolden'd, I said, "The Doctrine of our Religion is to preach the Gospel unto all. Whereupon when I had a d of the Name of the People of *Mosul*, I had a Desire to come unto them, and to be long thus muddled we heard of *Sartach* that he was a *Christian*; then I directed my Journey unto him, and my Sovereign Lord the King of the *Franks* sent him Letters containing good Words, and other Words besides which resty'd unto him what Men we are, when he made Request that he would suffer us to remain with the People of *Mosul*; then he sent us to *Baatu*, and *Baatu* to *Mangu-Khan*; whereupon we intreated, and yet intreat him to suffer us to stay." They wrote all, and made Relation thereof unto him. On the Morrow he sent to me again, saying, the *Khan* knows well enough that ye have no Malice against him, but ye came to pray for him as many other Princes do; but he demandeth whether ever any of your Embassadors were with him, or ours with you. Then I shew'd all unto them concerning *David* and *Friar Andrew*, to say putting all in Writing, reported the same to him.

Then he sent again unto me, saying, our Lord Jesus saith ye have staid long here; his Pleasure is, that ye return unto your own Country, and he farther demandeth, wherefore ye would conduct his Embassadors with you? To whom I made Answer, that I durst not carry his Embassadors beyond his own Country, because there is a worldly Nation between us and you, and the Sea and Mountains, and I am a poor Monk, and therefore dare not take upon me to be their Guide; so they having set down all in Writing, returned, and reported it to the *Khan*. When *Blasius* the *Nestorian* wrote Chronicles from the Creation of the World to the Passion of Christ, and, passing over the Passion, did speak of the Resurrection of the Dead, and of the Assumption of the Coming of Judgment, wherein many Heresies were to be reprehended, which I told them; and we likewise wrote the Symbol or Creed, *Credo unum Deum*. They then demanded of them how they would proceed? They said they would first dispute with the *Saracens*; I shew'd them this was not the proper Method, for the *Saracen* in this agree with us, that they affirm there is but one God, and therefore you may have them to help you against the *Tuimans*, so they were contented. Then I asked them, if they knew how Idolatry had its first Original in the World, and they could not tell? I told them, and they said you shall clear these things to them, and then let us speak; but it is hard to speak by an Interpreter; to whom I said, how you can behave yourselves against them, I will take the *Tuimans* Part, and you the *Christians*.

Suppose I am of that Sect that say there is no God, prove ye there is a God; for there is a Sect there which saith, that every Virtue, in what thing loveth, is the God thereof, and that otherwise there is no God. Then the *Nestorians* knew not how to prove any thing, but only that which their Writing declareth: I said they believe not the Scriptures, if ye shew one, they will shew another. Then I directed them to let me first talk with them, because I should be overcome, they might still have Liberty of Speech; whereas if they should be overcome, I should have no hearing: They agreed unto it.

Wet herefore gathered together at our Oratory, and *Mangu-Khan* sent three Writers to be Judges, one *Christian*, one *Saracen*, and one *Tuinian*, and it was first proclaimed, This is the Commandment of *Mangu-Khan*, and none dare say that the Commandment of God is otherwise. He commandeth that none speak contentious or injurious Words to another, or make any Tumult, whereby this Business may be hindered, upon Pain of his Head." Then all were silent, and there was a great Assembly there, and every Party invited the wisest of their Nation, and many others came flocking thither. Then the Christians set me in the Middle of them, willing the *Tuinians* to speak with me. Then they began to murmur against *Mangu-Khan*, because never any Khan attempted thus to search into their secrets. Then they opposed one to me, who came from *Catbaya*, having his Interpreter, and I had Master *William's* Son. And he first said to me, Friend, if thou be brought to a Nuptus, who must seek a wiser than yourself? But I told my Peace.

Then he demanded whereof I would dispute, either how the World was made, or what becomes of the Soul after Death? To whom I answered, "Friend, this should not be the beginning of our Speech. All things are of God, and he is the Fountain and Head of all, and therefore we ought to speak first of God, of whom ye think otherwise than ye ought to do, and *Mangu* desires to know who believes better?" Then the Arbitrators allowed this to be reasonable, they would willingly have begun with the following Questions; because they hold them for the strongest, for they are all of the Heresy of the *Manichees*, believing two Principles, the one bad, and the other good; and concerning Souls they all think they pass from Body to Body, insomuch that one of the wisest of the *Nestorian* Priests demanded of me concerning the Souls of brute Beasts, whether they could fly to any Place where they should not be compelled to labour after Death? For Consecration also thereof, as the Goldsmith told me a certain Child was brought from *Catbaya*, who by the Size of his Body appeared to be three Years old, yet was capable of any Reason, who affirmed of himself, that he had been three times several Bodies, and knew Letters, and how to write.

I said to the aforesaid *Tuinian*, we firmly believe with the *Hearts*, and confess with the Mouth, that there is a God, and there is but one God, and one in perfect Unity, what believe you? He said, Fools say there is but one God, but wise Men say there are many. Are not there great Lords in your Country, and here is a greater Lord, *Mangu-Khan*? It is of the Gods, because in divers Countries there are Gods. To whom I said, you make a bad Comparison of Men with God; for to every mighty Man in his own Country may be called a God. And when I would have dissolved the Similitude, he prevented me, enquiring what Manner of God is yours, whereof you speak? that he is but one, I answered, "Our God, beside whom there is no other, is Omnipotent, and therefore needeth not the Help of another. Nay, all we have need of his Help, it is not so with Men; no Man can do all things, and therefore there must be many Lords in the Earth, because no one can support all. Again, he knows all things, therefore he needs not a Counsellor: Nay, all Wisdom is from him; moreover he is perfectly good, and needeth not our Good. Nay, in him we live, move, and have our Being: Such is our God, and therefore you must not hold that there is any other." It is not so, said he. Nay, there is one highest in the Heavens, whose Generation we know not yet, and ten are under him, and under them there is one inferior, and in the Earth there are infinite. Then he would have added other Fables: So I asked him of that highest God, whether he thought him Omnipotent? or of any other God? and fearing to answer, he demanded, if your God be such as you say, why made he the half of things evil? It is false, said I, who maketh any Evil is no God, and all things whatsoever are good. At this Word all the *Tuinians* marvelled, and set it down in Writings, as false, or impossible. Then he began to ask, Whence therefore cometh Evil? You ask amiss, said I; for first you should demand what Evil is before you ask whence it is. But to return unto the first Question, whether do you believe that any God is omnipotent? and after I will

answer you to whatsoever you demand. Then he sat a long time and would not answer, insomuch that the Writers on the Behalf of the Khan were forced to command him to answer. At length he answered, that no God was Omnipotent. Then all the *Saracens* broke out into a great Laughter. Silence being made, I said therefore none of your Gods can save you in all Dangers, because such a Chance may happen wherein he hath no Power. Again, no man can serve two Masters. How then can you serve so many Lords in Heaven and in Earth? The Auditory decreed him to answer, but he held his Peace.

Then when I was about to alledge Reasons to prove the Truth of Divine Essence, and the Trinity, in every Man's Hearing, the *Nestorians* of the Country said, that it was enough, because they meant to speak; so I gave them place; and when they would have disputed with the *Saracens*, they answered, we grant that your Law is true, and whatsoever is in the Gospel is Truth, wherefore we will not dispute with you in any thing, and they confessed, that they beg at the Hands of God in their Prayers, that they may die the Death of the Christians. There was there a certain old Priest of the Sect of *Jugures*, who confesses One God, yet they make Idols, with whom they talked much, shewing all till the Coming of Christ to Judgment, declaring the Trinity to him, and the *Saracens* by Similitudes; all of them hearkened without any Contradiction, yet none of them said, I believe, and will become a Christian: The Conference ended, the *Nestorians* and *Saracens* sang together with a loud Voice, the *Tuinians* holding their Peace, and after that, they all drank most plentifully.

51. On *Wednesday*, *Mangu-Khan* called me before him, and the *Tuinian*, with whom I disputed; and before I went in, Master *William's* Son, my Interpreter, said to me, that we must return to our Country, and that I should speak nothing against it, because he understood it for a thing determined. When I came before him, I knelt, and the *Tuinian* by me, with his Interpreter. Then he said unto me, tell me the Truth, whether you said, when I sent my Writers unto you, that I was a *Tuinian*? Then I answered, My Lord, I said not so; but if it please Your Highness, I will tell you the Words I spake; then I recited what I had spoken, and he answered, I thought well you said not so, for it was a Word which you should not speak, but your Interpreter hath ill interpreted it. So he reached forth his Staff towards me whereon he leaned, saying, fear not. I smiling, said softly, if I had feared, I had not come hither; then he demanded of the Interpreter what I said? So he repeated my Words unto him: Afterwards he began to confess his Faith unto me.

"We, *Moabians*, said he, believe that there is but One God, through whom we live and die, and we have an upright Heart towards him;" then said I, God grant you this, for without his Gift it cannot be, and he demanded what I said, so the Interpreter told him; then he added further, that God who hath given to the Hand diverse Fingers, so he hath given many Ways to Men: God hath given the Scriptures to you, and the Christians keep them not: ye find it not in the Scriptures, that one of you shall dispraise another: Do you find it, said he? No, said I; but I signified unto you from the Beginning, that I would not contend with any; I speak it not, said he, touching you. In like manner ye find it not that for Money a Man ought to decline from Justice. No, Sir, said I, and truly neither came I into these Parts to get Money, nay, I refused that which was given me; and there was a Scribe present there, who gave Testimony that I had refused a Jaseot, and certain Pieces of Silk. I speak it not, said he, for that, God hath given you the Scriptures, and ye keep them not; but he hath given us Soothsayers, and we do that which they bid us, and we live in Peace. He drank four times, as I think, before he disclosed these things; and while I hearkened attentively, whether he would confess any thing else concerning this Faith, he began to speak of my Return, saying, you have staid a long time here, my Pleasure is therefore that you return: You said, you durst not carry my Ambassadors with you, will you carry my Messenger, or my Letters? And from that time I could neither have Place nor Time to shew him the Catholic Faith;

Faith; for a Man cannot speak before him, save what he pleaseth, unless he were an Ambassador, but an Ambassador may speak what he will, and they always demand, whether he have any thing else to say.

But he suffered me to speak no more; but I must hear him, and answer as to Interrogatories. Then I answered, that if he would make me understand his Words, and that they were set down in Writing, I would willingly carry them to my Power. Then he asked me, if I would have Gold or Silver, or costly Garments? I answered, we receive no such things; but we have, of wherewith to bear our Expences, and without your Help, we cannot get out of your Country. Then said he, I will provide you all Necessaries throughout my Country, will you have any thing more? I answered, it sufficeth me. Then he demanded how far will you be brought? I said let our País bring me to the *Armenian* Country; if I were there, it were enough. He answered, I will cause you to be conveyed thither, and after look to yourself; and he added, there are two Eyes in one Head, and though they be two, yet there is one Object to both; and whither the one directeth the Sight, the other doth: You came from *Basta*, and therefore you must return by him. When he had thus said, I craved Leave to speak; speak on, said he; then said I, "Sir, we are not Men of War; we desire that they have Dominion of the World, who would most justly govern it according to the Will of God; our Office is to teach Men to live according to the Will of God, for this Purpose came we into these Parts, and would willingly have remained here, if it had pleased you; but seeing it is your Pleasure that we return, it must be so; I will return, and I carry your Letters according to my Power, as ye have commanded. I would request your Magnificence, that when I have carried your Letters, it may be lawful for me to return to you, with your good Liking, chiefly because you have poor Servants of yours at *Balac*, who are of our Language, and they want a Priest to teach them and their Children their Law, and I would willingly stay with them." To this he answered, Know you whether your Lords would send you back to me? I answered, "Sir, I know not the Purpose of my Lords; but I have Licence from them to go whether I will, where it is needful to preach the Word of God; and it seems to me, as if it were very necessary in those Parts: Whereupon, whether they send Ambassadors or no, if it please you, I will return." Then he held his Peace, and sat a long Space, as it were in a Mule, and my Interpreter desired me to speak no more, and I carefully expected what he would answer.

At length, he said, you have a long Way to go, make yourself strong with Food, that you may come lully to your Country, and he caused them to give me Drink; then I departed from his Presence, and returned not again. If I had been endowed with Power to do Wonders, as *Mozs* did, peradventure he had humbled himself.

The Soothsayers therefore, as he confessed, are their Priests, and whatsoever they command to be done, is performed without Delay; whose Office I shall describe unto you, as I could learn of Master *William*, and others, who report it unto me. Things like to be true. They are many, and they lay always one Head, or chief Priest, who always preaches as Hoode before the great House of *Manga Khan*, who is a sort of Court; in his Study are the Counts who sit in the City, the others are behind the Court, in Places appointed for them, and they who have any Confidence in that Art, come unto them from divers Parts of the World. Some of them are skilful in Astronomy, and especially the Chace of them, and they foretell the Rise of the Planets of the Sun and Moon. And when they are to come to pass, all the People prepare their Houses, so that they need not go out of the Door of their Houses, and when there is an Eclipse, they play upon their *Flutes* and *Organs*, and make a great Noise, and set up loud Shouts. When the Eclipse is past, they give themselves to Feasting and Drinkings, and make great Cheer. They foretell fortunate and unlucky Days for all Business, therefore they never levy an Army, or undertake War, without their Direction; and they had long since returned into *Thongra*; but that their Soothsayers will not

suffer them: They make all things that are sent to the Court pass between Fires, and have a due Portion of them.

They also purify the household Stuff of the Dead, drawing them between these Fires; for when any one dieth, all things whatsoever which appertain to him are separated, and not mingled with other things of the Court, all shall be purged by the Fire; so did I see it done to the Court of the Lady who died while we were there; whereupon there was a double Reason why Friar *Andrew* and his Followers should go between the Fires, both because they brought Presents, and also for that they belonged to him who was dead, to wit, *Khen Khan*; no such thing was required of me, because I brought nothing. If any living Creature, or any thing else, fall to the Ground while they thus make them pass between the Fires, that is theirs; they also on the ninth Day of the Month of *May*, gather together all the Mares of the Herd and consecrate them. The Christian Priests also must come together with their Censors; and they call new Cosmos upon the Ground, and make a great Feast that Day, because then they think they drink Cosmos first, as it is the Fashion, in some Places with us, for Wine, on the Feast of Saint *Basiliskoney*, or *John*, and for Fruits, on the Feast of St. *James* and *Christopher*.

They also are invited when any Child is born, to know his Destiny. They are sent for also when any is sick, to use their Charms, and they tell whether it be a natural firmity, or by Sorcery; in regard to which, that good Woman of *Mitz* I mentioned before, told me a wonderful thing. On a certain time, very costly Furs were presented, which were laid down at the Court of her Lady, who was a Christian, as I had before, and the Soothsayers carried them through between the Fires, and took more of them than was their Due, and a certain Woman under whose Custody the Treasure of her Lady was, accused them that they had taken of unto her Lady, whereupon the Lady herself reproved them. It fell out after this, that this Lady herself began to be sick, and to suffer certain sudden Pains in divers Parts of her Body; the Soothsayers were called, and they sitting far off, commanded one of those Maidens to put her Hand upon the Place where the Griet was, and if she found any thing, she should snatch it away; then she sitting, did so, and she found a Piece of Fet in her Hand, or of some other thing: Then they comma'd her to put it upon the Ground, which she had done, it began to creep, as if it had been some living Creature; then they put it into the Water, and it was turned as it were into a Horse leech; and they said some Witch had been with her Sorceries, and they accused her that had accused them of the Furs, who was brought without the Tent into the Fields, and received the Ballinado seven Days together there, and was afterwards tormented with other Punishments to make her confess; and in the meantime her Lady died, which the understanding, said unto them, know my Lady is dead, kill me, that I may go after her for I never did her hurt; and when the confessions were made, *Mangu Khan* commanded she should live.

Then the Sorcerers accused the Lady's Daughter's Name of whom I spake before, who was a Christian, and her Husband was the chief among all the *Nobles* Priests, so she was brought to Punishment, with a Maid of her to make her confess, and the Maid confessed, that the Mistress sent her to speak with a certain Horse to demand Answers. The Woman also herself confessed, touching the child, to be beloved by her Lady, that the might be her Good, but she did no thing that might hurt her. She was demanded also whether her Husband were privy to it, she excused him, for that he had burnt the Characters and Letters which she had made. Then she was put to Death, and *Mangu Khan* sent the Priest her Husband, the Bishop, who was in *Cathaya*, to be judged, although he was not found culpable.

In the mean time it fell out, that the principal Wife of *Mangu Khan* brought forth a Son, and the Soothsayers were called to foretell the Destiny of the Child, who prophesied Prosperity, and said, he should live long, and be a great Lord. After a few Days it happened that the Child died, then the Mother enrag'd, called the Soothsayers, saying, you said my Son should live, and he is dead. Then they said, Madam, behold, we see that so

the Nurse of *Cobrinis*, who the other Day was put to Death, she hath killed your Son, and behold we see he carries him away. Now there remained one Son and Daughter of that Woman, grown to full Age, in the Tents; and the Lady sent presently for them to a Rige, and caused the young Man to be slain by a Man, and the Maid by a Woman, in Revenge of her Son, whom the Souldoyers affirmed to be killed by their Mother. Not long after, *Mangu-Khan* dreamed of these Children, and in the Morning what was become of them? His Servant was afraid to tell him, and he being troubled, the more demanded where they were, because they appeared to him in a Vision by Night: then they told him; after which he, presently sending for his Wife, demanded whence she learned that a Woman should give sentence of Death, without the Privy of her Husband? And he caused her to be shut up seven Days, commanding to give her no Meat; but the Men (who slew the young Man) be caused to be beheaded, and the Head to be put about the Woman's Neck, who had killed the Maid, and ordered her to be cudgelled with burning Firebrands through all the Tents, and after to be put to Death: He also put his Wife to Death, but for the Children he kept by her; and he went out of his Court, and returned at last after one Month.

The Sorcerers also trouble the Air with their Charms; and the Cold is so great naturally, that they cannot apply any Remedy, then they search out some in the Camp, whom they accuse that the Cold comes through their Means; so they are put to Death without inquiry or Delay. After he was departed from thence, one of the Concubines was sick, and languished long, and they mumbled their Charms over a certain *German* Slave of hers, who lay three Days, who, when she came to herself, they demanded what she had seen, and she had seen many Persons of all which she judged they should shortly die; and because she saw not her Mistress there, they judged she should not die of that Sicknels. I saw the Maid, while her Head was yet aching, by reason of that Sleep. Some of them also call upon Devils, and gather them together (who will have Answers from the Devil) in the Night, into their Houses; and they put bald Flesh in the Milk, and that *Khan* who invokes it, beginneth to say his Charms, and having a Tambrel, lautes it strongly against the Ground; at length he begins to rave, and cauleth himself to be bound; then the Devil comes in the Dark, and gives him Flesh to eat, and makes him Answer. Once at such a time, (as *Maller Buzan* told me) a certain *Haggaran* had himself with them, and the Devil being upon the House, cried, that he could not come in, because a certain Christian was with them; he hearing this, fled with Haste, because they began to search for him. These things, and many other they do, which are too long for me to repeat.

After the Feast of Pentecost, they began to prepare our Letters, which they intended to send unto your Majesty, in the mean time, the *Khan* returned to *Caracorum*, and held a great Feast about the fifteenth of *June*, and he desired that all the Ambassadors should be present. The first Day he sent for us, but I went to Church to baptize three Children of a certain poor *German*, who we found there. *Maller William* was chief Butler at that Feast, because he made the Wine which pointed the Drink, and all the Poor and Rich sang and danced, and clapped their Hands before the *Khan*. Then he began to make an Oration unto them, saying, "I have sent my Builders to off, and have put them into Dangers, into foreign Nations; how it shall appear what you will do, when I shall send you that our Commonwealth may be enlarged." Every Day, in those four Days, he changed garments, which he gave them, all of one Colour, every Day, from the Purple to the Ornament of the Head. At that time I saw the Ambassador of the *Khans* of *Beggedai*, who caused him to be taken up upon a Horse-litter, between two Mules, to the Court, of whom some said that he made Peace with them, on Condition that they should give him ten thousand Horses for his Army; others said, that *Sengou* thought he would not make Peace with them, unless they should deliver all their Ammunition; and the *French* Re-

tor answered, when you will pluck off your Horse's Hoofs, we will destroy our Ammunition.

I saw also there the Ambassadors of a *Soldan* of *India*, who brought with him eight Leopards, and ten Harlehounds, taught to sit upon the Horse's Backs, as Leopards do. When I enquired of *India*, which Way it lay from that Place, they showed me towards the West, and these Ambassadors travelled with me almost three Weeks together, always Westward. I saw also the Ambassador of the *Soldan* of *Turky*, who brought him rich Presents; and he answered, as I heard, he needed neither Gold nor Silver, but Men, wherefore he required of him an Army. On the Feast of *St. John*, he held a great Feast, and I caused one hundred and five Caris, and ninety Horses to be numbered, all laden with Cows-milk; and on the Feasts of the Apostles *St. Peter* and *St. Paul*, in like manner. At length, the Letters being dispatched which he sent to you, they called me, and interrupted them, the Substance whereof I wrote, as I could understand them by my Interpreter, which is this: "The Commandment of the Eternal GOD is this: There is but one Eternal GOD in Heaven, or on Earth, let there be but one Lord, *Zengis-Khan*, Son of GOD and *Mangu-Tingis*, that is to say, the Sound of Iron. This is the Word which is spoken to you; whatsoever *Mosses* weare, whatsoever *Nuans*, whatsoever *Marhete*, whatsoever *Muffleme*, wherefore Ears may hear, wherefore Ears may go, cause it to be heard and understood; that such as have heard my Commandment, and would not believe it, and would levy an Army against us, shall be as having Eyes and not seeing; and when they would hold any thing they shall be without Hands; and when they would walk they shall be without Feet. This is the Commandment of the Eternal GOD, by the Virtue of the Eternal GOD, by the great Monarch of the *Mosses*, the Commandment of *Mangu-Khan* is given to the *French* King, King *Ledowick*, and all other Lords and Priests, and to the great World of the *Franks*, that they understand my Words, and the Commandment of the Eternal GOD, made to *Zengis-Khan*; neither but from *Zengis-Khan*, ever came this Commandment unto you. A certain Man called *David* came unto you as an Ambassador of the *Mosses*, he was a *Liar*; and with him you sent your Ambassador to *Khan-Khan*. After *Khan-Khan* was dead, your Ambassador came to his Court; *Charnis*, his Wife, sent you a Cloth, called *Nalick*. But to know Matters appertaining to War and Peace, and to settle the great World in Quiet, and to see to do good, that wicked Woman, more vile than a Dog, how could she know how to do it? Those two Monks which came from you unto *Sartach*, *Sartach* sent them to *Banza*; but *Banza*, because *Mangu-Khan* is the greatest over the World of the *Mosses*, let them unto us. But now, that the great World, and the Priests, and the Monks, might live in Peace and enjoy their Goods, that the Commandment of GOD might be heard among you, we would have sent our Ambassadors of *Mosses* with your Priests; but they answered, that betwixt us and you there was a warlike Nation, and many bad Men and troublesome Ways, so as they were afraid, they could not bring our Ambassadors unto you. But if we would deliver unto them our Letters, containing our Commandments to their King *Ledowick*, they would carry them. For this Cause we sent not our Ambassadors with them; but we have sent the Commandment of the Eternal GOD by your Priest. It is the Commandment of the Eternal GOD which we have given you to understand; and when you shall hear and believe it, if you will, obey us; send your Ambassadors unto us, so shall we be satisfied whether you will have Peace with us or War. When by the Power of the Eternal GOD, the whole World shall be in Unity, Joy, and Peace, from the rising of the Sun unto the going down of the same, then shall it appear what we will do. But if ye shall see and hear the Commandment of the Eternal GOD, and will not hearken to it, or believe it, saying, our Country is far off, our Hills are steep, our Sea is great; and in this Condition we shall lead an Army against us to know what

" we can do; he that made that which was hard easy, and that which was far off near, the Eternal GOD himself knows that alone." And as they called us your Embassadors in the Letters, I said unto them, call us not Embassadors, for I said to the *Khan* that we were not the Embassadors of the King *Leus*: Then they went unto him and told him; but when they returned, they said unto me that he held it much for our good, and that he commanded them to write as I should direct them: Then I told them they should leave out the Name of Embassadors, and call us Monks and Priests. In the mean time, while those Things were doing, my Companion hearing that we must return by the Wilderness to *Bactra*, and that a Man of *Mea* should be our Guide, he ran, without my Knowledge, to *Buiga*, the chief Scribe, signifying to him by Signs, that he should enquire he went that Way; and when the Day came wherein we should have our Pass, viz. a Fortnight after the Death of *St. Yeha*, when we were called to the Court, the Scribe said unto my Companion, *Mangu's* Pleasure is, that your Companion return by *Bactra*; and you say you are sick, and it appeareth so: *Mangu* therefore grants, if you will go with your Companion, go; but let it be your own Fault, because, it is possible, you may remain with some *Jani* that will not provide for you, and it will be a Hindrance to your Companion; but if you will stay here, we will provide Necessaries for you, till some Embassadors come, with whom you may return more easily, and by a Way where there are Villages.

The Friar answered, GOD grant the *Khan* a prosperous Life; I will stay: Then I said to my Companion, Brother, be advised what you do, I will not leave you, You have not me, said he, but I have you, because, if I go with you, I see the Death of my Body and Soul, because I have no Patience under intolerable Labour. Then they brought us three Garments, or Coats, and said unto us, ye will not receive Gold or Silver, and yet ye have stayed long here, and prayed for the *Khan*; he entreats you, that, at the least, every one of you will receive a single Garment, that ye depart not empty from him. Then we were forced to receive them for Reverence of him, for they account it a very evil Thing when their Gifts are contemned. But he caused us to be asked what we would have? and we always answered the same thing; so that the Christians initiated over the Idolaters, who seek nothing but Gifts; and they answered that we were Fools, because, if he would give them his whole Court, they would willingly take it, and would do wily too; receiving therefore the Garments, they entreated us to make our Prayers for the *Khan*, which we did, and afterwards we went to *Caracorum*.

But it happened, while we were with the Monks, far from the Court with other Embassadors, that the Monk caused the Table to be stuck so hard, that *Mangu-Khan* heard it, and demanded what it was; then they told him, Upon which he asked why he was removed so far from the Court; they told him, because it was troublesome to bring him Horses and Oxen every Day to the Court; and said further, that it were better that he should stay at *Caracorum*. Then the *Khan* sent unto him, saying, if he would go to *Caracorum*, and stay there near about the Church, he would give him all Things necessary: But the Monk answered, I came from the Holy Land of *Jerusalem* hither by the Command of GOD, and left that City, wherein are a thousand better Churches than that of *Caracorum*; if he please that I stay here, and pray for him as GOD commanded me, I will stay; if not I will return to the Place from whence I came. So that every Evening Oxen were brought him yoked to the Carts, and in the Morning he was brought to the Place where he used to be before the Court; and a little before we departed thence, a certain *Nestorian* came, who seemed to be a wise Man; *Buiga*, the chief Secretary, placed him before the Court, to whom the *Khan* let his Children that he should bless them.

54. We came therefore to *Caracorum*, and while we were in *Master William* the Goldsmith's Houle, my Guide came to me and brought me ten Jackets, five of which he left in *Master William's* Hands, commanding him to spend

them on the Behalf of the *Khan*, for the *Filial's* Benefit; he remained there; he also left the other five in the Houle of my Interpreter, commanding him to spend them in the Way, for my Subsistence; for *Master William* had given them such Instructions without our Knowledge. I therefore changed one into small Money, and distributed it to the poor Christians which were there, for all their Lives were fixed upon us. We spent another in buying all necessary for us, as Garments and other things, which we wanted. With the third my Interpreter had left bought some things, by which he gained somewhat. We spent the rest, because after we came into *Fajia* sufficient Provisions were no where given us, nor yet among the *Tartars*, amongst whom we seldom found any thing to be sold.

Master William, your Majesty's Ancient Scribe, sends you a certain Griddle set with a precious Stone, which they used to wear against Thunder and Lightning, and most humble salutes you, always commending you to God in his Prayers. We baptized there in all six Souls. When we departed from each other, it was with Tears, my Companion remaining with *Master William*, and returning with my Interpreter, my Guide, and one Servant, who had Directions to take one Mutton in four Days for us here. We came therefore in two Months and ten Days from *Caracorum* to *Bactra*, and never saw a Town, nor the Appearance of any House, but Graves, except one Village, wherein we did not so much as eat Bread, nor did we ever rest in the two Months and ten Days, because we could not get Horses. We returned for the most part by the same kind of People, and yet through other Countries, for we went in the Winter, and returned in the Summer, and by the higher Parts of the North, except that fifteen Days Journey we were obliged to go a Journey by a certain River between the Mountains, wherein there is no Lodging but by the River side. We went two Days, and sometimes three, without taking any other Food, but *Cosmos*. Once we were in great Danger, not because to find any People, our Provision failing us, and our Horses tired.

When I had travelled twenty Days, I heard that the King of *Armenia* had passed by. In the End of August I met with *Sartach*, who went to *Mangu-Khan* with his Wife and Herds, and with his Wives and Children, and the Bulk of his Families remained between *Tanais* and *Erva*. That my Duty to him, saying, I would willingly stay in his Country, but *Mangu-Khan* would have me stand at my Letters. He answered, that I must perform the Will of *Mangu-Khan*. Then I asked *Cosmos* for the Charge? He answered, they were in the Court of *Bactra*, carefully provided for. I also asked him for our Cloaths and Beds again? He answered, did ye not bring them with you? I said I brought them unto *Sartach*, but I did not give them to him, as you know; and I put him in mind what Answer I made when he demanded whether I would give them to *Sartach*? Then he answered, you say that no one can resist Truth. Heit your Goods a little more, who remaineth near *Sartach*, which is a new Town, hath made upon *Etina* on the East Shore; but perhaps have some of the Vestments. If any thing please you, I, keep it, so my Books be referred.

Then he told me he would request my Words to stand. I must have Letters, said I, to your Father, to tell me all. But he was ready to be gone, and said unto me, the Train of the Ladies followeth us, near at Hand, ye had alight there, and I will send you *Sartach's* Answer by the Man. I was very careful he should not deceive me, and dare not contend with him. Late in the Evening the Man came unto me, and brought two Coats with him, which I thought had been all of Silk, and he said unto me, send two Garments, the one *Sartach* hath sent up to you, and the other, if so it please you, you shall prefer to the King on his Behalf; to whom I answered, I wear no such Vestments; I will present them both to my King, a hundred times your Lord. Then said he, do with them what you please; now it pleased me to send them both unto you, and I sent them to you by the Brother of the *Prince*. He desired me Letters also to the Father of *Cosmos* to redress me, which appertained unto me, because he had no need of any thing which was mine, so we came to the Court of *Bactra*.

Some Day I departed thence a Year before, viz. the second Day after the Exaltation of the blessed Crois, and I found our young Men in Health, yet much afflicted with Poverty, as *Gajet* told me; and if the King of *Armenia* had not comforted them, and recommended them to *Sartaeb*, they had perished, for they thought I had been dead. The *Sartars* also demanded of them, if they could keep Oxen, or milk Mares; for if I had not returned, they had been brought into Servitude by those People.

After this *Baatu* ordered me to come to him, and made the Letters which *Mangu Khan* sends unto you to be interpreted unto me; for *to Mangu* wrote unto him, that if it pleased him to add any thing, or leave out, or change, he should do it. Then said he, ye shall carry these Letters, and cause them to be understood. He demanded also what way I would go, whether by Sea or Land? I said, the Sea was more, because it was Winter, and I must go by Land, for I thought you had been still in *Syria*, so I directed my Journey towards *Perfia*, for if I had thought you had passed *France*, I would have gone into *Hungary*; for I should have come into *France*, and by a more easy Way than passing *Syria*; then we travelled a Month with him before we could obtain a Guide; at length they appointed me a certain *Jugure*, who understanding I would give him nothing, and that I would go forthwith into *Armenia*, caused Letters to be made to conduct me to the Soldan of *Turky*, saying he should receive Gifts of the Soldan, and that he should gain more that Way; then we took our Journey about fifteen Days before the Feast of *All Saints* towards *Turky*, going directly Southward, descending near to *Euphrates*, which is there divided into Three Arms, every one of which is almost twice as big as the Branch of the River of *Nile* at *Dometa*.

It divides afterwards into four lesser Arms, so that we crossed the River in seven Places by Boats. Upon the middle Branch is the Village called *Sumerkaut*, without a Wall; but upon the River overflows, it is compassed with Water. The *Tatars* were eight Years about it before they could take it, and the *Alani* and the *Saracens* were nine. There we found the *Germans* with his Wife, a very good Man, with whom I stayed in the Winter; for *Sartaeb* sent him thither to receive a Court. About these Parts was *Baatu* on the one Side of the River, and *Sartaeb* on the other about *Cerjyt*, and they go no farther down; and when it happens that the River is frozen, they pass over. Here is great Store of Grats; and there among the Caves, Thieves hide themselves till the Ice melt. *Coat's* Father receiving *Sartaeb's* Letters, restored my Vestments unto me, except my Aose, and an Almie trimmed with fine Silk, a Stone, a Turke, and a Tuaha, adorned with Golden Embroidery, and a Surplice. He restored also to me all the Silver Plate, except the Censer, and the little Box where the Chirmas, at which the Priest win his with *Sartaeb* had. He returned my Books, except our Lady's Psalter, which he kept with my Leave, because I could not deny it him; for *Sartaeb* took much Delight in it. He also requested me, that if it happen that I return unto those Parts again, I would bring them a Man that knew how to make Parchment, for he had built a great Church by the Command of *Sartaeb* upon the West Side of the River, as he said, and a new Town; yet I knew that *Sartaeb* meant no such Matter. *Sarav* and the Palace of *Baatu* are upon the East Side of the River, and the Valley through which the Arms of the River are spread abroad containeth more than even Leagues in Breadth. There is great Store of Fish there, a Hole also in Verte, and a certain Book in the *Araban* Language worth thirty Sultaines, and many other Things I never recovered.

After our Departure from him on the Feast of *All Saints*, going towards the South until the Feast of *Saint Martin*, we came to the Mountains of the *Alani*, between *Bazra* and *Sarav*. In fifteen Days, we found no People but one of his Sons, who went before him with Falcons and his Falconers, who were many, at one little Village; from the Feast of *All Saints* for five Days we met not with so much as a Man, and we were in great Danger by reason of Thirst, one whole Day and a Night, finding no Water, till about Three of the Clock the next Day. The *Alani* in those Mountains yet hold out, to that of ten of the Subjects

of *Sartaeb* two must come and guard the narrow Passage of the Hills, lest they come forth of the Mountains, and carry away the Cattle in the Plain. Between the *Alani* and *Porta Ferrea*, which is two Days Journey from thence, where the Plain of the *Alani* beginneth, between the *Caspian* Sea and the Mountains, there are certain *Saracens*, called *Legi*, inhabiting the Mountains, who likewise are free; so that those *Tartars* who dwell at the Foot of the Mountains of the *Alani* were obliged to give us twenty Men to bring us beyond the Iron Gate, or *Porta Ferrea*; and I was glad, because I hoped to see them armed, for I could never see their Armour, though I had been very desirous of seeing it; and when we came to this dangerous Passage of the whole twenty, there were but two who had *Hirbergiens*, and I demanded of whom they had them? They said, they had them of the *Alani*, who are able Workmen in such Things, and excellent Smiths. I think they have small Store of Armour, but Quivers and Bows, and Leather Jackets; I saw them presented with Iron Plates, and Iron Skul-caps out of *Perfia*, and saw two also who presented themselves to *Mangu*, armed with Coats made of Horses skins, bent inward, of rough Leather, which were very clammy and unweildy.

Before we came to *Porta Ferrea*, we found one Castle of the *Alans*, which was *Mangu Khan's*, for he had subdued that Country. There we first found Vineyards and drunk Wine; the Day following we came to *Porta Ferrea*, or the Iron-Gate, which *Alexander* the *Macedonian* King made, and it is a City whose East End is upon the Sea Shore: And there is a little Plain between the Sea and the Mountains, through which the City extends in Length to the Top of the Mountain, which bordereth upon it on the West, so that there is no Way above for the Ruggedness of the Mountains, nor below for the Sea, but immediately through the Midst of the City, where there is an Iron-Gate, from whence the City hath its Name. This City is more than a Mile long, and on the Top of a Hill is a strong Cattle; and it is as much in Breadth as a Stone's Call. It hath very strong Walls, without Trenches and Turrets, of large polished Stones. But the *Tartars* have destroyed the Tops of the Turrets and the Bulwarks of the Wall, laying the Turrets even with the Wall. Below that City, the Country was formerly like a Paradise. Two Days Journey from hence we found another City called *Samaron*, wherein there were many *Jews*, and when we passed it we saw Walls descending from the Mountains to the Sea; and leaving the Way by the Sea by thole Walls, because it turns towards the East, we went up into the high Countries towards the South.

The next Day we passed through a certain Valley, wherein the Foundations of Walls appeared from one Mountain to another, and there was no Way through the Tops of the Mountains. These were in times past the Inclosures, or Walls erected by *Alexander* for restraining the fierce Nations, the Shepherds of the Wildernets, that they could not invade the inhabited Countries and Cities. There are also other Walls and Inclosures where *Jews* are. The next Day we came to a certain great City called *Samarob*, and after this we entered into a great Plain called *Moar*, through which the River *Cur* or *Cyrus* runs, from which the *Curgis* or *Cordi* have their Names, whom we call *Georgians*; and it runneth through the Middle of *Teffis*, which is the Metropolis of the *Curgines*, and comes directly from the West, running to the East into the *Caspian* Sea, and in it are excellent Salmon. In that Plain we found *Tartars* again. Also by that Plain runs the River *Araxes*, which cometh from the *Greater Armenia*, from betwixt the South and West, from which it is called the Land of *Ararat*. Whereupon in the Book of the Kings it is said of the Sons of *Sennacherib*, that having slain their Father, they fled into the Land of the *Armenians*. And in *Isaiah* it is said, that they fled into the Land of *Ararat*. To the West then of that most beautiful Plain is *Curgia*. In that Plain the *Cresimiri* were settled formerly. And there is a great City in the Entrance of the Mountains called *Ganger*, which was their Metropolis, stopping the *Georgians*, that they could not come down into the Plain. Then we came to the Bridge of Boats, which was fastened together with a great Iron Chain, stretched forth cross the River, wherein *Cur* and the *Araxes* met together, but the *Cur* loseth its Name there.

56. We proceeded thence, till travelling up the *Araxes*, of which it is said, *Pontem indignatus Araxes*, *Araxes* disdains a Bridge, leaving *Perfia* and the *Caspian* Mountains on the left Hand towards the South, having on the right Hand *Curgia* and the Great Sea towards the West; going all the Way Southward, we pass'd through the Meadows of *Bacchu*, who is General of that Army which is there within the River *Araxes*; he has likewise made the *Curgi*, and *Turks*, and *Perfians*, subject to him. There is likewise another Governor in *Perfia*, at *Tauris*, over the Tribute called *Argon*, both which *Mangu-Khan* hath called home to give Place to his Brother, who is going into those Countries. The Country which I have described to you is not properly *Perfia*, but was sometimes called *Hyrcania*. I was in *Ea-Ceu's* House, and he gave us Wine to drink, and he himself drank *Cofinos*, which I would willingly have drank if he had given it me; yet it was the best new Wine, but *Cofinos* is more wholesome for a half-starved Man as I was. We went up therefore by the River *Araxes* from the Eve of *St. Clement* until the second *Sunday* in *Lent*, till we came to the Head of the River, and beyond the Mountains where it riseth there is a good City called *Arjanon*, which I belong to the *Soldan* of *Turky*, and near theabouts *Euphrates* rises towards the North, at the Foot of the Mountains of *Curgia*, to whose Spring I had gone, but the Snow was so great that no Man could go out of the common Path, and on the other Side of the Mountains of *Caucasus* towards the South riseth the *Tigris*.

When we departed from *Bacchu* my Guide went to *Tauris* to speak with *Argon*, carrying my Interpreter with him; but *Bacchu* came to me to be brought to a certain City called *Naxuam*, which heretofore was the Head or Capital of a great Kingdom, and the greatest and fairest City in those Parts, but the *Tartars* have made it a Wilderness; and there were anciently eight hundred Churches of the *Armenians* there; now there are but two little ones, for the *Saracens* have destroyed them; in one of which I held the Feast of *Christinas* as I could with our Clerk, and the next Day following the Priest of the Church died, to whose Bural came a certain Bishop with twelve Monks from the high Countries, for all the Bishops of the *Armenians* are Monks, and of the *Greeks* likewise for the most part. The Bishop told me that there was a Church near this Place where *St. Barbelemew*, and likewise *St. Juas* *Ybaddeus* were martyred, but there was no Way open for Snow. He told me also that they had two Propheets, the first or chief *Metodus* the Martyr, who was of their Country, and plainly prophesied of the *Umalites*, which Prophecy is fulfilled in the *Saracens*. The other Propheet is called *Macron*, who, when he died, prophesied of a Nation of Archers that should come from the North, saying, "That they should conquer all the Countries of the East, and should spare the Kingdoms of the East, to assist them in obtaining the Kingdoms of the West; and they shall possess the Countries from North to South, and shall come to *Constantinople*, and shall take the Gate of *Constantinople*, and one of them who shall be called a wife Man, shall enter the City, and seeing the Churches and Rites of the *Franks*, shall cause himself to be baptized, and shall counsel the *Franks* how they may kill the Emperor of the *Tartars*, and there they shall be confounded. Hearing this, the *Franks* which shall be in the Middle of the Land, viz. at *Jerusalem*, shall set upon the *Tartars* who shall border upon them, and with the Help of our Nation, that is, the *Armenians*, shall pursue them, so that the *French* King shall place his royal Throne at *Taurinum* in *Perfia*, and then all the East Countries and all the unbelieving Nations shall be converted to the Faith of *Christ*; and there shall be no great Peace in the World, that the Living shall say to the Dead, Wo be unto you Wretches! that lived not until these Times." And I read this Prophecy brought to *Constantinople* by the *Armenians* which remain there, but I made light of it. Yet when I spake with the Bishop, calling it to Mind, I regarded it somewhat the more. But throughout all *Armenia* they as firmly Believe this Prophecy as they do the Gospel.

He said to us also, even as the Souls in *Lumbo* expect

the Coming of *Christ* for their Delivery, so do we look for your Coming, that we may be freed from the Slavery wherein we have so long lived. Near the City *Naxuam* there are Mountains on which they say the Ark of *Moses* rested; and there are two, one greater than the other, and *Araxes* running at the Foot of them; and there is a little Town there called *Comanum*, which is in the Language Eight; for they say it was so called of the Persons which came forth of the Ark, and the first that have attempted to climb the great Hills, and could not, and the Bishop told me that a certain Monk here was much troubled therewith, an Angel appeared to him, and brought him a Piece of the Wood of the Ark, bidding him to trouble himself no more. That Piece of Wood they had in their Church as he told me, but it is thought to high in Appearance but the Monk is well content. A certain old Man gave me however this word, Remember why no one should climb it. They call the Mountain *Abhis*; and as this Word is of the *Perfian* Language, so their Tongue, no Man, but they, shall climb up thence, because it is the Mother of the World.

In the City of *Naxuam*, *Friar Bernard*, a *Catholic* of the Order of the Preaching Friars, came to me, who was in *Georgia*, with a certain *Friar* of the *Sepulchre*, who professeth great Lands there, and he had learned somewhat of the *Tartar* Language; he formerly went with a certain *Hungarian* *Isaac*, who returned with me to *Tiflis*, whence *Servast*; but *Friar Bernard* remained at *Tauris*, with a certain Lay *Friar*, whose Language he understood not. We went out of the City of *Naxuam*, about the *Epiphany*, for we had stayed long there, by reason of the Snow; we came therefore in four Days to the Country of *Cardis*; *Cardis* Prince, heretofore mighty, but now master of the *Tartars*, who destroyed all his Ammunition, was his Father *Zacharias* possessed himself of the Country of the *Armenians*, having delivered them from the hands of the *Saracens*; and there are many fair Villages of the *Armenians*, having Churches like the *Franks*; and *Cardis* hath in his House, in an honorable Place, a Cross in Hand, holding a Cross, and sets a burning Lamp before it; and that which we do with holy Water, spreading it to drive away wicked Spirits, they do with *Cardis* for every Evening, they burn Incense, carrying it through all the Corns of the House, to drive out of the Land of Evillities. I eat with *Salvata*, and he did me great Reverence, both he and his Wife, and his Son *Isidore*, a very comely and wise young Man, who desired of me, whether if he should come to you, you would entertain him; for he is in a way under the Power of the *Tartars*, that though he hath a Plenty of Money, he had rather travel into a strange Country, and cause his violent Exiles. They had orders, that they were true Sons of the Church of *Rome*, and if the Pope would send them any Aid, they would bring all the young Nations unto the Subjection of the Church of *Rome*.

From that Town of his, in fifteen Days, we came to the Country of the *Armenians*, on the first of the *Lent*; and the first Cattle we found is called *Armenians*, all in the Cattle were *Christians*, *Armenians*, *Armenians*, *Greeks*; The *Saracens* only have the Dominion. The Captain of the Cattle said, he had received Commandment, that his Victuals should be given to any *Armenian*, or to the Ambassador of the King of *Armenia*, or of the *Armenians*; so that from the Place where we were the next *Sunday* in *Lent*, quite to *Cyprus*, wading *Armenians* five Days before the Feast of *Saint John* the Baptist, we were forced to buy our own Provision. There was a *Armenian* procured me a Horse, and took Money for the same, and put it in his Purse. When he came into the Country, seeing a Flock, away he went, and without notice took the Sheep, and gave it to his Family to eat; and wondered I would not be the Part of his Reward, and his Provision, I was in a certain City of *Armenia*, called *Cabena*, whose Situation is *Armenians*, and there are many dead *Armenian* Churches, and two Monks of the *Armenians*; The *Tartars* place an Office there.

At this Place five *Preaching* Friars came to me, whose four came from *Provence* in *France*, and the fifth was himself to them in *Syria*. They had but one Book

who could speak the *Turkish* Language, and a little *Levitic*; and they had the Pope's Letters to *Sartach*, and to *Mangu-Khan*, and to *Buri*, such as your Highness gave me Letters of Request, that they would suffer them to continue in their Country, and preach the Word of God, &c. But when I told them what I had seen, and how they sent me back again, they directed their Journey to *Tiflis*, where there are Friars of their Order, to consult what they should do; I answered them, they might well pass by those Letters if they would; but they should be well assured, to endure much Labour, and render an Account of their Coming; for seeing they had no other Message but the Office of Preaching, they would care but little for them, and chiefly because they had no Interpreter: What they did utter, I know not, and cannot therefore report.

58. On the second Sunday in Lent we came to the Head of *Araxes*, and passing beyond the Top of the Mountain, we came to *Euphrates*, by which we descended eight Days going to the West a certain Castle called *Camit*; where *Euphrates* bends to the South towards *Halapia*. But we passing the River went through very high mountainous Countries, and through the deepest Snow to the West. There was to great an Earthquake there that Year, that in one City called *Arsengan*, ten thousand Persons, according to their Register, perished, beside poor Men, of whom there was no Notice taken. Riding three Days together, we saw the gaping of the Earth, as it was cleft by the Earthquake, and the Heaps of Earth that came from the Mountain, and filled the Vallies, so that if but a little more of the Earth had been move'd, that which *Isaiab* speaketh had been literally fulfilled, *Every Valley shall be filled, and every Mountain and little Hill shall be humbled*. We passed through the Valley where the *Soldan* of *Turky* was vanquished by the *Tartars*. It were too long to write how he was overcome; but a certain Servant of my Guide's who was with the *Tartars* said, that the *Tartars* were not above ten thousand in the whole; and a certain Card of the *Soldan's*, said that there were two hundred thousand with the *Soldan's* all Horse-men. In that Plain where the Battle was, there broke out a great Lake at the Time of the Earthquake; and it came into my Mind, that all the Earth opened her Mouth to receive yet more Blood of the *Saracens*. We were in *Sebasta* a Town of the *Lesser Armenia* in Easter Week; here we visited the Tombs of forty Martyrs; there the Church of *St. Blas* standeth, but I could not go thither, because it was above in the Cattle.

On the succeeding Sunday we came to *Cesaria* of *Capadocia*, where there is a Church of *St. Basil the Great*. About fifteen Days after, we came to *Iconium*, making small Journeys, and resting in many Places, because we could not readily procure Horses, and my Guide did this on purpose, taking upon him to solicit his own Business three Days in every Town, at which I was much dissatisfied, but durst not speak, because he might have sold or slain me and our Servants, and there was none to hinder it. I found many *Franks* at *Iconium*, and a certain Merchant called *Nicholas de Sancto Syria*, who with a Companion of his, a *Venetian*, called *Boniface de Melandino*, carried all the Allum out of *Turky*, so that the *Soldan* could not sell any but to those two; and they made it so dear, that what was worth but fifteen *Bizantines*, is now sold for forty. My Guide presented me to *Soldan*; the *Soldan* said he would willingly cause me to be conveyed to the Sea of *Armenia*, or *Cilicia*, though the above-mentioned Merchant, knowing that the *Saracens* made little account of me, and that I was much burthened with the Company of my Guide, caused me to be conveyed to *Carruna*, a Fort belonging to the King of *Armenia*. I came thither before the *Ascension*, and stayed till the Day after *Pentecost*; then I heard that Embassadors came from the King to his Father; then I went privately to the King's Father to demand whether he had heard any News from his Son, and I found him set with all his Sons, one excepted, called *Banan Ufin*, who resided in a certain Castle, and he received News from his Son that he was returned, and that *Mangu-Khan* had much eated his Tribute, and has given him a Privilege that no Embassador should

come into his County; whereupon the old Man himself, with all his Sons, made a Banquet, and he caused me to be conveyed to the Sea, to the Heaven called *Ajax*; and thence I passed over into *Cyprus*; and at *Nicosia* I found our Provincial, who the same Day carried me with him to *Antiochia*, which is in a very weak State. We were there on the Feast of *St. Peter and Paul*, and from thence we came to *Tripolis*, where our Chapter was held on the Assumption of the Blessed Virgin.

59. Our Provincial being determined that I should have my Residence in our Convent at *Acou*, would not suffer me to come to you; but commanding me to write unto you what I would by the Bearer of these Presents, and not daring to resist contrary to my Obedience, I did, according to my Power and Understanding, craving Pardon of your Clemency for my Superfluities or Wants, or for any thing that shall be indiscreetly or foolishly spoken, as for a Man of little Understanding, not accustomed to write long Histories. The Peace of God which passeth all Understanding preserve your Heart and fortify your Mind. I would willingly see your Highness, and certain spiritual Friends, which I have in your Kingdom. Wherefore if it should not be contrary to your Majesty's liking, I would beseech you to write to our Provincial, that he would let me come unto you and return shortly again into the Holy Land. Concerning *Turky*, your Majesty shall understand, that the tenth Man there is not a *Mohammedan*, nay, they are all *Armenians* and *Greeks*, and Children rule over them; for the *Soldan*, who was conquered by the *Tartars*, had a lawful Wife of *Iberia*, by whom he had one feeble Son, concerning whom he charged that he should be the *Soldan*. He had another of a *Greek* Concubine, whom he committed to a certain great Admiral. The third he had by a *Turk*, to whom many *Turks* and *Turcomans* being gathered together, they purposed to have slain all the Sons of the Christians. They had determined also, as I understood, that after they had got the Victory, they would destroy all the Churches, and kill as many as would not become *Mohammedans*; but he was overcome in Battle, and many of his Men slain. He recruited his Army however, a second Time, and then was taken, and is still in Prison. *Pacester* the Son of the *Greek* Concubine, procured soon after that he might be *Soldan*, because the other was weak whom they sent to the *Tartars*; whereupon his Kindred on the Mother's Side, such as the *Iberians* and the *Cards*, were angry; so that, at present, a Child ruleth in *Turky*, having no Treasure, few Soldiers, and many Enemies. The Son of *Vasacius* is weak, and at War with the Son of *Affau*, who likewise was a Child, and worn out with the Servitude of the *Tartars*. If therefore an Army of the Church should come to the Holy Land, it were a very easy Thing to subdue all these Countries, or to pass through them.

The King of *Hungary* hath not above thirty thousand Soldiers. From *Cologne* to *Constantinople*, are not above threescore Days Journey by Waggon; from *Constantinople* are not so many Days Journey to the Country of the King of *Armenia*. In old Time, valiant Men passed through those Countries and prospered; yet they had most valiant Opponents, whom God hath now destroyed out of the Earth, and we need not be in Danger of the Sea, or the Mercy of Sailors; and the Price which we should give for Freight were sufficient for Expences by Land. I speak it confidently, if our Countrymen would go as the King of the *Tartars* go, and be contented with such Victuals, they might win the whole World. It seemeth not expedient, as I think, that any Friar should go to the *Tartars* any more, as I did, or as the preaching Friars do; but if our Lord the Pope would send a Bishop in an honourable Manner, and answer their Folies, about which they have thrice writ to the *Franks*, once to Pope *Innocent* the Fourth, of Sacred Memory, and twice to your Majesty, once by *David*, who deceived you, and now by me, he might speak unto them what he would, and also cause them to put these Things in Writing, for they hear whatsoever an Embassador will speak, and always demand if he will say a y more; but he must have a good Interpreter; nay, many Interpreters, and be at large Expences.

65. Such is the Relation of the Monk *Rubruquis*, who had the best Opportunity that any Man had to that Time, of looking into the Affairs of the *Tartars*, of examining their Force, of enquiring into the Form of their Government, and making himself perfectly acquainted with their Manners and Customs, of which he has given so large, so curious, and so accurate an Account. Before we proceed to our Remarks thereon, it may not be amiss to clear up a few Difficulties that occur in this Relation, and which, for want of being clearly resolved, may occasion some Doubts in the Mind of our inquisitive Reader; and this is the more necessary, because hitherto nothing of this kind has been done, at least in our Language; but the Relation has been left naked and unsupported to the Censure of the Reader, without the least Notice taken of those Facts that must necessarily embarrass him, and in a great Measure affect the Credit of the Author. I am very sensible, that many of my Readers may be of Opinion, that I might spare myself some part of the Trouble I take in illustrating those old Writers; but I beg leave to observe once for all, that it is not either for their Interest, or mine, that I should do so. If I had not been thoroughly satisfied that these Travels were the best in their kind, I should not have inserted them; but with respect to the World, this is not enough; for though I have it in my Power to give them what seems to be most proper for such a Collection, yet I owe it to them, and to myself, to make it as evident as it is possible, that I discharge this Trust as I ought, and that I give them nothing which is not truly worthy of their Perusal; and this can no otherwise be done, than by obviating every Difficulty that may possibly incline them to differ from me in Sentiment, and therefore I hope this will push me in the Point I am still to take with regard to this Author, who, as he was a Writer of great Candour and Sincerity, so he has mentioned many Particulars, which, tho' they were well known in his Time, and more especially to the Prince, to whom this Work was addressed, yet are so imperfectly known to us, that without a strict Search into the Histories of those Times, it is not easy to conceive, how they can be reconciled to the rest of his Narration.

We will state these plainly, and then the Truth of my Observation will be manifest. In the first Place, it seems extraordinary, that the King of *France* should be so much deceived with respect to the Embassy that was sent him from the *Tartars*, which occasioned the whole of this Transaction; but with respect to this, it appears clearly from the Histories that have written the Reign of *Saint Louis*, that these Embassadors came from a *Tartar* Prince called *Erkathay*, and brought with them Letters which we still extant, and which positively assert, that it was the Design of the *Khan* to co-operate with the Christians, in order to reduce the Power of the *Mohammedans*. At the Head of this Embassy was one *David*, who is named in the Letters as one to whom the King of *France* might give entire Credit, to which his Majesty might be more inclined, because he had in his Company *Friar Andrew de Lantani*, whom the Pope had formerly sent into *Tartary*, and who assured the King, that he had known *David* there in a Post of Distinction. This Embassador it was, that positively asserted, that the *Khan* was become a Christian, and that there was no Difficulty in procuring a close Alliance between him and the Christians. Upon this, the King did send *Friar Andrew* with a considerable Number of Persons in his Train, back with the *Tartar* Ambassadors, in the Beginning of the Year 1255, but as to the Success of this Negotiation, we have no Account. There is another particular mark in our Author's Account, and that is with respect to his Character; for tho' I suppose myself, that he was sent by the King his Master with Letters very ready, yet he frequently tells us, that he did not allow himself to be an Embassador, but desired rather to be considered as a Monk, who visited *Tartary* from his Zeal for the Christian Religion.

The Reason of his Pretence, was to preserve the Honour of the King, in case that the *Tartar* Treatment that he should receive, should be such as he would not be obliged to receive as an Embassador. In the first Place, he

to the Conversion of *Sartach* was false; and next, because he was aware the *Tartars* were informed, that the King his Master had been beat in *Egypt*, and taken Prisoner there by the Infidels; whence he concluded, that he should not meet with a very good Reception. He therefore takes great Care to inform the King, that whatever Usage he received, could reflect no Dishonour upon his Majesty, because of the Precaution he had taken to assume no higher Character than that of a Monk, who came to preach the Christian Religion to the *Tartars*. But the Readers may very probably wonder why the *Tartar* Prince *Erkathay*, should take such a Step as this, in order to mislead to great a Monarch, and yet, if he adverts to the Account our Author has given of the Genius and Expectations of the *Tartars*, he will easily perceive, that this was a Stroke of their Policy, and no very bad one. They had a Mind to be perfectly acquainted with the Design of the *Franks*, their Forces, and the Manner in which they intended to carry on the War against the *Saracens*; and could they fall upon a Way more proper than this for accomplishing their Ends. The Character afforded, by our Author to the *Tartars*, is justified by all Writers, both ancient and modern; for their Policy with respect to foreign Countries consists entirely in Cunning and subtilty; for not having the Advantages that other Nations have of free Commerce and constant Intercourse with the Inhabitants of distant Countries, they supply their eyes with Intelligence by such Artifices as these. Sometimes the Prince takes upon him to send Ministers to foreign Courts, whose Business it is, under Colour of a Negotiator, to get the best Accounts they can of the Regiots in which they reside, in order to leave their Countrymen whenever Occasion offers as Harbingers or Guides; and as they depend on these Arts in Time of Peace, to they place their Confidence in War in the Quickness of their Motion, and in that Rapidity with which they overrun great Countries, before the Inhabitants have Time to take proper Measures for their Defence.

It was for these Reasons, and to save the Honour of the King his Master, that our Author denied that any Embassadors had been sent to *Mongu-Khan*, for he confessed *Friar Andrew* as sent only to the Prince, who wrote to the King his Master, and not to the great *Khan*, as he writes; does not appear that the *French* had any justities, as they were denied to them by this Relation. We may add to all this, that our Author was something different as to the Character which *Darien* assumed, by his giving us to understand, that in those Days there was a certain number of People, who in those remote Parts of the World used a Practice of giving themselves out for the Ministers of Princes they scarce knew, and made a Trade of such strange Exports. He likewise tells us, that he observed, that the Eastern Christians in general were always of great Vivacity, and so fertile in the Conception of every thing they saw or heard appeared to them as the Object of a Wonder, and so such they reported it whatever came, to serve their own Purposes.

Upon these Principles he grounds the political Part of his Work, in which he seems to labour, without success, to establish these two Maxims. The first, that it was neither safe or honourable to amuse a Monarch as to the *Tartars*, who were in his Possession of an invincible sort of People, very proud, and extremely warlike, cruel, and who understood all Appointments of War as proceeding from Fear. The second, that the Law was nothing near so strict as it had been reported to be; that there was far less Danger like to a cruel Execution of them as Enemies, than from treating with them as Friends, into which Notion he was led by observing, that the Discipline was not exact, that they were still in some Degree with the regular Art of War, and no way of proceeding upon it, as if it was a Foot upon the Ground, they were prepared to meet them in the Field with disciplined Armies. That which I must take notice of as a remarkable Part of his Work, is his Description of the *Pope*, and his high Notion of his Power, which he justifies, however, as in some measure excusable, as he lived in an Age in which he lived, and the *Conquerors* of those Times, who took upon them to

dispute the greatest Princes in Christendom, as the Case then was with the Emperor, or to send them into the most distant Parts of the World, under Pretences of Religion, as appears from the Expeditions undertaken by his Master King Louis, which were as unfortunate in their Event, as in founded in their Principles.

But it is now Time to add a few Observations with respect to the Usefulness of this Work, as it stands in this Collection, and to show how far the Travels of Rubruquis contributed to make the Western Parts of the World acquainted with the Passages into the East, as well as with what was doing there, and the Force of the several Monarchs that were in Possession of those Countries at the Time he visited them.

1. The Travels of Rubruquis are equally astonishing in whatever Light they are considered. Take them with respect to Length, and they extend to upwards of five thousand Miles one Way, and to near six thousand another. I mean from Constantinople in his going out, and to Acon or Ptolemais in his Return, which is such a Space of Ground as it will not be easy to find any Man that has travelled, and let us to distinct an Account of what he has seen. But his Travels are not to be considered from their Length as from the Nature of the Countries that are travelled through, then here again is a new Proof of the Value of this Performance, since it is certain no European, except John Carpini, ever travelled so far before, neither have we any Accounts of Travels of the same kind since, that, only excepted, which follows in the next Section, and from which we have received here in Europe the first certain Accounts of China, and the first Notice we had of there being in the World such a Country as Japan. We shall apprehend this Matter better, if we take a short View of the Countries through which our Monk passed by the Names they are known to us at present. It is plain, that from Constantinople he sailed coast the Black-Sea to the Port of Cassa, from thence he travelled by Land all the rest of the Way, this is to say, first through Crim Tartary, then crossing the great Rivers Tanais and Volga, he came in the Country of Volgar, and to the Camp of Baata, thence through the vast Country of the Calmucks, and to North-Eastward to the Court of Meng Khan, which, according to his Description, must have lain in the Latitude of fifty Degrees North, or somewhat more, and considerably higher than what is now called the Climate Tartary. In his Return he passed through all the vast Delarts of Great Tartary, through the Country of the Mogols, and so by the Head of the Caspian-Sea, and then along the West Side of it through the Countries of Georgia, Armenia, Kurdistan, Diarbek, and to into Syria; all which Countries then were, and most of them are still, in the Hands of the Tartars, of whom he has given us such an Account as is not only very consistent with itself, and carries the most strong Marks of Veracity, but is very agreeable also to the best Accounts we have since received of those Countries.

As our Author was not acquainted with the Language of the Tartars, and did not remain long enough amongst them to acquire it in that Degree of Perfection which was necessary to read and to understand their Histories, we need not at all wonder at some small Errors that have crept into his Points of no great Consequence. As for Instance, in what he tells us of Zingis-Khan, who he makes a Tartar, as other Writers have done a Backman. I shall not trouble the Reader with Remarks of the right spelling of the Word Zingis, which I have already given him as ought to be spelt, and have since conform'd to our Author's Manner of writing it, that the Reader might find less Difficulty in comparing this with other Books of the same kind. I say, I shall not insist on such Trifles, but shall content myself with observing, that Zingis, however spelt, is a Suffixive, and signifies properly the glittering or shining of Steel, whence springing the Notion, that this Prince was originally of some Trade in which Iron or Steel was employed, because all the Tartars represented him as a Man who from low Beginnings had raised himself to the vast Empire, and expected him at the same Time from the Consideration of his having deprived them of their Liberty and Independence; but among the Tartars themselves this Appellation was taken to an honorable Sense,

Zingis signifying with them illustrious, and Zingis-Khan signifies literally, the most illustrious Monarch.

As to the Religion of this Prince, it was undoubtedly that of his Country, concerning which we have a great deal in Rubruquis agreeable to what he saw or heard, but not so clearly expressed, as that we should be able to say precisely what is the Faith of the Tartars. Our Author is certainly in the Wrong as to Presbyter John, of whom such a Noise has been made in the World, and about whom so little can still be said with any Certainty. What led him into the Mistake was this; Tujan was the Khan of the Naimans, defeated and killed by Zingis-Khan, and it was from the Likeness of his Name to John, that our Author took it for granted he was that John the Priest so well known to the World. But after all, the Presbyter John is still in being, and is no other than the grand Lama, or Supreme Pontiff of the Tartars, who resides, as we have before observed, in the Kingdom of Tangut, and is in the Opinion of the whole Tartar Nation, immortal. The Truth of the Matter is that he is an Ecclesiastical Prince, whose Fame and Credit is very extensive, tho' his Power be very restrained. He resides in a Monastery surrounded by his Monks, who, whenever he dies, supply his Place from among themselves, and keep this Secret so religiously that all the Tartars are as firmly persuaded that their grand Lama lives for ever, as that the Sun always shines. This Krves to explain another Circumstance, that at first Sight might seem very idle and ridiculous to the Reader, I mean the Question put to Rubruquis, whether the Pope was not four or five hundred Years old. It is very plain from hence, that they considered the Pope as the grand Lama of the West, and having heard the Romish Priests insist much on the Perpetuity of the Church, they referred all this to the Person of the Pope, and supposed this spiritual Monarch to be immortal like their own.

If I durst avow my own Sentiments plainly, I should say, that there is no better Evidence of the Idolatry of the Tartars, than of the Papists; and this without intending any high Reflection on the Members of the Romish Church, for both have Images or Idols, both seem to worship them, and yet both when charged with it absolutely deny the Fact. Our Author plainly owns, that Meng Khan told him expressly he worshipp'd but one God, and that the Tartar Priests, whom he charges very freely with Idolatry, disowned it themselves, and affirmed that they reverence their Images only, and did not worship them. But after all, it plainly appears, that they kept the Secret of their Religion so well, that our Author never so much as heard of the Grand Lama, and consequently could know nothing at all of the Grounds of their Religion, which, to deal plainly with the Reader, remains still as great a Mystery to this Day.

It is a Point that the Tartars will never be brought to explain in any manner whatever; and after all the Pains that I have been able to take in order to obtain some sort of Certainty on this Head, I am able to say no more of it than this, that what the Lamas or Priests teach publicly, are restrain'd to these three Points: I. That there is one God the Fountain of Being, the Creator of all things, the Ruler of all things, and the sole Object of Divine Worship. II. That all Men in general are his Creatures, and therefore ought to consider each other as Brethren descended from one common Parent, and all to entitle to all the Blessings he bestows, and that therefore it is great Impiety to abuse those Blessings, or to snare each other. III. That man as such as the common Reason of Mankind hath taught them to establish Property, it is necessary that it should be preserved, and that it is therefore the Duty of every Man to be content with his own, and to be just to his Neighbours. This Religion the Priests not only teach, but practise with inapproachable Exactness; and therefore Rubruquis very fairly owns, that the Regularity of their Manners exceeded the Precepts of the Christian Religion, not because the Doctrines of the latter were in all inferior in Superiority to those of the former, but because in point of Purity of Manners the Aegyptians and other Christians were very defective.

After setting this Subject by the Side of Light we are able, the Reader will not find it at all necessary to supply what a

thing that extremely puzzled, not only our Author, but all who have wrote of the Affairs of the *Tartars*, and it is this; that they are absolutely indifferent as to other Religions, entertaining all with equal Respect, whether *Christians*, *Mohammedans*, or *Jews*, which proceeds from their finding the fundamental Principles of their own Religion taught by them all, and practised by none that come amongst them better than by themselves, or by their Priests.

We find in *Rubrucus*, some mention made of a Nation called *Alkashin*, of whom it will be requisite to give the Reader some Account; they are the same that are mentioned by our ancient Historians, under the several Names of *Hosselins*, *Ajessins*, *Ajassins*, *Ajanites*, and *Chafians*, and were in Truth as odd a Sort of People as ever existed. They possessed a Tract of Country which contained twelve Castles and Villages in the Neighbourhood of *Tyre*, were a mix'd Race of Men, and for a long Time made no Profession of any Religion, but practised a loose Kind of *Mohammedism*, and were Tributaries, first to the Knights Templars, and then to the Christian Earls of *Tripoly*. In the eleventh Century, they would have declared themselves Christians, if they might have been released from that Tribute; but this was refused, and they grew thenceforward the most bitter Enemies the Christians had.

These People were governed by a Prince stiled by our old Historians, the old Man of the Mountain, who finding himself surrounded by States much more powerful than his own, devised a new and strange Way of making himself equally dreadful to his Neighbours and to Strangers. He gave out, that he only was the true Vicar of *Mohammed*, and that he had the Keys of Paradise in his Hands: To support which Notion, he caused a fine Garden to be laid out, in a Valley, near his Palace, adorned in every respect, so as to resemble the Paradise of that Prophet; he likewise provided a sort of Opiate, and whenever he saw a young Man of a daring and resolute Temper, he sent for him, and promised him the perpetual Enjoyment of all sensual Delights, if he would execute boldly whatever he commanded; and by way of earnest,

gave him the Opiate to drink, caused him to be carried while asleep into his Garden, where, when he awoke, he found every thing he could wish for, and many beautiful Women to attend him; when he had remained there a certain time, the Opiate was again administered, and he was conveyed back when asleep, to the Palace, where the old Man of the Mountain promised him, that provided he fulfilled all his Commands during Life, he should dwell after Death perpetually in that Garden.

By this Artifice, he established an Order of Men ready to venture on whatever he commanded, and when any Prince made War upon him, he dispatched three or four of these young Villains to this Court, or Camp, with Instructions to murder him, which they never failed to perform. It was by their Hands that *Louis of Bavaria* was killed in the Year 1231, and in 1251, he dispatched four of them with the like Commission to the Court of *Louis IX.* but suddenly altering his Mind, he dispatched four more with counter Orders, who made such Haite, that they arrived at the *French* Court before the former, and discovering themselves to King *Louis*, remained always near his Person, to preserve him from their Companions, whom they likewise discovered at their Arrival, and for this Service, the *French* Monarch sent them back to their Master, loaded with Presents. By this Means the old Man of the Mountain became terrible, even to the most powerful Monarchs; and from the Practice of his desperate Bravos, we have the Word *Assassins*, and the Phrase of *Assassination*, for Murders of this Nature. This Practice was continued to the Time of which our Author speaks, a little after which, the whole Nation was extirpated by the *Tartars*.

These are all the Facts mentioned in his Writings, that seem to stand in need of Explanation, unless we except what he has delivered concerning the Witchcraft and Sorceries of the *Tartars*. As to these, we can only say, that they are still much addicted to such Superstitions, and are thereby exposed, as he has shewn us, to many Impostures, and abundance of Mischiefs that attend them. But in one Particular he is mistaken, which is in confounding the *Sereres* with the *Lamas*, or *Tartar* Priests, whereas they are quite different Persons. What he relates of the Divination by the Blade-bones, is confirmed by all other Travellers, and is a Sort of Folly practised by all other *Laplanders* and other northern Nations. A Folly ridiculous and absurd indeed, but not more so than the other Arts of Divination, which have prevailed in politer Countries, and which are not perhaps wholly extinguished at this Day. What he says in relation to the sprinkling of Ashes on the Floor, relates to another superstitious Custom of the same kind, which gave Birth to that kind of Fortune-telling called *Geomancy*, which was transferred to *Europe*, and about which several Treatises have been written, and one particularly in our Tongue, not many Years ago, which I mention to shew not only the Probability of what *Rubrucus* has related, but likewise to demonstrate, that the going into such foolish Practices is not peculiar to such Nations as we esteem barbarous; though I shall readily allow, that it is a Mark of Stupidity and Barbarity where ever it appears.

We have no certain Account how this Relation of *Rubrucus* was received by the King his Master, but in all Probability it was very agreeable to him, since, though the Prince, after his Return to *France*, took all imaginable Pains to set the Affairs of his Kingdom in Order, and to reform the Abuses that had crept into it during his Absence, yet he still retained a strong Desire of repairing all the Disgrace he had sustained in his former Expedition, by renewing the War against the Infidels, which determined him to make another Expedition against them, and this, notwithstanding all the Opposition that could be made to it, he undertook in the Spring of the Year 1270. He transported on this Occasion a numerous Army into *Africa*, resolving to begin the Operations of the War with reducing the Kingdom and City of *Tanis*, to which he laid Siege: But before he had made any great Progress towards taking the Place, the Plague broke out in his Army, and the King being infected therewith, died on the Twenty-sixth of August the same Year.

The best *French* Historians, as well as those of other Nations, condemn these Kinds of Expeditions, as idle and romantick; and yet it cannot be denied, that if the Spirit of making War against the Infidels had not been railed at that Time, it is more than probable, that the *Mohammedans* would have over-run the best Part of *Europe*, whereas in consequence of this Spirit, they were driven out of *Portugal* and *Spain*, to which I must here leave to add, that the Travels of *Rubrucus*, and others into different Parts of the East, first inspired that Passion for Discoveries, which has since produced such mighty Effects. Before that Time, we knew little or nothing of this Part of the World of the Situation of distant Countries, and those who affected to be thought great, laboured to discredit whatever was delivered in Relations of this Kind, which prevailed in some Places; and if it had prevailed in all, we had been, at this Day, as ignorant, as poor, and as much Slaves as our Ancestors were before that Spirit of Commerce arose, that has not only discovered both the *Indies*, but has taught Men of Courage, that the whole World is their Country; and that he who improves useful Knowledge, if not properly encouraged at home, will be a welcome Guest where ever he goes.

SECTION XXI.

The curious and remarkable Voyages and Travels of Marco Polo, a Gentleman of Venice, who in the Middle of the XIIIth Century passed through a great Part of Asia, all the Dominions of the Tartars, and returned home by Sea through the Islands of the East-Indies.

Taken chiefly from the accurate Edition of *Ramusio*, compared with an original Manuscript in his Prussian Majesty's Library, and with most of the Translations hitherto published.

1. A succinct Introduction to this Work.
2. An Account of the Author from *Ramusio* and other Writers.
3. The several Editions and principal Translations that have been published of these Travels.
4. An Account of the Objections that have been raised against them.
5. The Characters given of this Performance by several eminent Critics.
6. The Author's introductory Account, containing an Abridgment of his Travels to the Time of his Return to Venice.
7. A Description of Armenia the Lesser, of the Country of the Turks, of Armenia the Greater, of the Province of Zorzanis, the Kingdom of Mosul, of the City of Baldaeh, or Bagdat, of the City of Tauris, with an Account of a remarkable Earthquake.
8. Of the Country of Persia, the City of Jaski, the City of Cermam, of the Town of Camandu, and of the Country where Rhubarb grows.
9. Of several other Countries, and the principal Curiosities in them.
10. The History of the Ajjafin, and of the Manner in which their Prince was killed, together with the Description of many other Countries.
11. Of the City of Samarcand, the Town of Lop, and of the great Desert in its Neighbourhood, with other remarkable Passages.
12. Of the Province of Camul, and several other Countries to the City of Ezina, and another great Desert.
13. Of the City of Caracurum, and of the Tartars, with a complete History of that Nation, and of their Monarchs.
14. Of the vast Countries to the Northward of Tartary, and many other curious Particulars.
15. Of the great Power of Cublai Khan, of his Government, Family, Dominions, &c.
16. Of his Palace in the City of Cambalu, a particular Description of that City, and other remarkable Observations.
17. Of the Magnificence of the Court of the Grand Khan, and of the Manners and Customs of his Subjects.
18. A copious Account of the Countries between the Place of his Residence, and the Country of Thibet.
19. A large Description of the last mentioned Province, and of many others, with an Account of the Observations made by the Author in his Progress through them.
20. Of the Province of Mangi, and of the Manner in which it was reduced under the Power of the Tartars, together with an Account of the Provinces and Cities afterwards reduced under their Dominion.
21. Of the noble City of Quinfai, and of the vast Revenues drawn from thence by the Emperor of the Tartars.
22. Of the Island of Ziquangri, and of the Attempts made by the Tartars to conquer it, and their Misfortune in them.
23. A large Account of various Countries, Provinces, Cities, and Islands in the East Indies.
24. Of the great Island of Ceylon, of the Kingdom of Malabar, and the State of other Countries visited by the Author.
25. Of the Kingdom of Murili, the Diamond Mines there, and other Countries adjacent.
26. Of the Island of Madagascar, the Country of Ethiopia, and other Parts of Africa.
27. Of the Province of Aden, and of several Countries reputed to be inaccessible.
28. Many obscure Passages in this Performance explained.
29. Remarks and Observations.

IT is with ancient Writers as with ancient Coins, such as understand them value them above measure, while few as will not be at sufficient Pains to examine them, not only despite them, but also such as admire them. Thus none are more governed by Prejudice than those who declaim against it, and none greater Bigots than such as are attached to their own Opinions, from a Notion that they think freely. Yet this Zeal for Freedom of Thought ought to be amended rather than discouraged, as being in itself commendable, though sometimes dangerous, by being misapplied. It may, and to say the Truth, to many it does seem a tedious and disagreeable Labour to look so far back as the first Springs and Dawnings of Knowledge; yet, however they may colour this with Pretences to refined Taste, it is in fact no better than an Excuse for Idleness, and a Dislike to the taking those Pains which are requisite to succeed in such Enquiries.

The Travels of *Marco Polo* are indeed very old, and are come into our Hands with considerable Defects; but they are very valuable for all that, and very well worthy of our Attention. He was the *Columbus* of the East-Indies, the first that gave a certain and distinct Account of the Sea beyond China, and of the free Passage thereby through all the Islands of the East-Indies, back into those Countries that are very well known. It is true, that a great Part of what he related, though delivered with much Solemnity, and confirmed by the strongest Affirmations, was much called in Question, and thought in some measure beyond all Belief. But subsequent Discoveries have banished this Incredulity, and what were once esteemed Fables have been

since found true Relations; and the Discourses of *Marco Polo*, that were rejected by the supercilious Wits of his own Time, have been raked out of the Dust of old Libraries, decyphered in a manner from the barbarous Latin of Monkish Translators, and brought into the Form we now have them by the indefatigable Pains of the learned *Ramusio*; a Man whose Countenance alone might be sufficient to give Credit to this, or any other Work; though from the Notes we have added, it will appear that there are intrinsic Marks of its Value in the Performance itself: Yet we owe to *Ramusio* the being able to discover these, and therefore to him we willingly ascribe all the Glory that results from the Vindication of this curious Piece, and the Honour of its illustrious Author. To the same excellent Person is due the Account we have received of several Particulars relating to the personal History of *Marco Polo* and his Family, of which in as few Words as possible we shall give the Reader a Relation; which, though not absolutely necessary to the understanding of the Book, will be found useful and entertaining.

2. Signior *Nicolo Polo*, the Father of our Author, and his Brother Signior *Maffio*, began their Travels from *Constantinople* in the Year 1250, and having proceeded to the Court of the Grand Khan of Tartary, resided there for many Years, and returned, as the Reader will see, to Venice about the Year 1269, where they found the Wife of Signior *Nicolo* deceased, and her Son, of whom she was left big at the Time of their Departure, a well accomplished Youth, of nineteen Years of Age. Him they carried back with them to the Court of the Khan, and after having spent

than Father *Martini*, to whom we owe the best Description of *China*, and who was consequently a better Judge than any other of the Merit or Demerit of this Work. He assures us, that there is not the least Reason to doubt the Truth of our Author's Relations on Account of the Obscurity of the Names of Places; for, says he, he wrote them after the *Tartar* Pronunciation, whereas later Writers flatter to imitate as well as they are able the Pronunciation of the *Chinese*.

I will add to these but one Testimony more, which is that of an Author very able to have detected him, if he had caught him in Untruths, and who was far enough from being tender of Mens Reputations as he thought them to blame. The Author I mean is *Albanus* *Knicker*, who in his Account of *China* confesses, that none of the old Authors have more fully or more accurately delineated the remotest Countries of the East than *Marco Polo* has done; yet he readily admits, that there are many things in him so very dark, that they may be in a manner hid in explicitable; but then, with great good Sense and Candour, he attributes this to the Author's Want of Skill in Geography and Astronomy; and if we consider how young he was when his Father carried him into *Tartary*, and how little Opportunity he had of acquiring that sort of Knowledge that was most necessary for preventing the Mistake, we may easily concur in Opinion with so many eminent and learned Writers, that in Consideration of so many curious and useful Passages in his Writings, these Blemishes, especially as they were in a manner unavoidable, may very well be forgiven. After having thus cleared the Way, we will no longer detain the Reader from the Perusal of these Travels, which their Author has so digested. He first gives a succinct Account of his Father's and Uncle's Progressions, and then of his own; after which, he enters into a more particular Description of the Countries and Places through which they passed, and relates also such remarkable Things as he was informed of in the Course of his Voyages.

At the time that *Baldwin* was Emperor of *Constantinople*, in the Year of our Lord 1250, two Gentlemen of the most illustrious Family of *Paolo* or *Polo*, at *Venice*, embarked on board a Vessel freighted with various kinds of Merchandise on their own Account; and having traversed the *Mediterranean* and the *Bosphorus*, they came with a fair Wind, and the Blessing of God, to *Constantinople*. There they continued for some Time to repose themselves, and then crossing the *Pontus Euxinus*, arrived at a certain Port called *Solinda*, from whence they went to the Court of a great *Tartar* Prince called *Barba*, to whom they shewed the fine Jewels they had brought, and presented them with some of the most valuable. That Monarch was far from being ungrateful; he kindly accepted their Presents, and in return gave them others of greater Value. They remained a full Year at his Court, and then desired all things for their Return to *Venice*. But before they had an Opportunity of departing, there broke out a War between this Prince *Barba* and another *Tartar* King, whose name was *Aon*; and this Dispute being decided by a Battle, the Army of *Barba* was defeated. This unlucky Accident exceedingly embarrassed the *Tartars*, who knew not what Measures to take, or how to get safely back into their own Country. At length, however, they took a Resolution of sleeping, as well as they could, out of the Country where they were; and by several By-roads escaped to a City called *Cashcan*, situate on the River *Tygris*. They continued their Journey from thence through a great Desert, where there were neither Inhabitants nor Villages, till at last they arrived at *Babara*, a considerable City in the Confines of *Persia*. It was at the Time of their Arrival, the Residence of a Prince called *Barach*, in whose Court meeting with a good Reception, and not knowing how otherwise to dispose of themselves, they remained three Years. At that Time a certain Person of Distinction was sent Embassador from the said Prince *Aon* to the Great Khan, who is the Superior Monarch of all the *Tartars*, residing in the remotest Countries of the Earth, betwixt the North-East and the East, called *Cublai Khan*; who coming to *Babara*, and finding there these two Brethren, who were now

well versed in the *Tartarian* Language, he rejoiced exceedingly, and persuaded these Men to go with him to the great Emperor of the *Tartars*, knowing that he should gratify him in this, and that they also should be entertained with great Honour, and rewarded with large Gifts, especially seeing, through the Conference had with them, he perceived their pleasing Behaviour. These Men therefore, considering that they could not easily return home without Danger, consulting together, agreed to go with the said Embassador, and accompany him to the Emperor of the *Tartars*, having certain other Christians in their Company, whom they brought with them from *Venice*, and departing towards the North East and the North, were a whole Year in going to the said Court of the said King.

The Cause of their long Time spent in this Journey, was the Snows and Waters being much increased, so that they were forced in their Travel to stay the washing of the Snow, and decaying of the Floods. Being therefore brought before the Presence of the Great Khan, they were most courteously received by him. He questioned them concerning many things; as of the Countries of the West, the Roman Emperor, and other Kings and Princes, how they carried themselves in Government, and in warlike Affairs; how Peace, Justice, and Concord continued among them; also what Manner of Life and Customs were observed among the *Latins*, and especially of the Pope, of the Christians, of the Church, and of the Religion of the Christian Faith; and *M. Nicolo*, and *M. Alaffi*, as wise Men, told him the Truth, always speaking well to him, and orderly, in the *Tartarian* Tongue; inasmuch that he often commanded they should be brought to his Presence, and they were very acceptable in his Sight; having well understood the Affairs of the *Latins*, and resting satisfied with their Answers.

The Great Khan intending to send them his Embassadors to the Pope, first consulted with his great Lords, and then calling to him the two Brethren, desired them to go to the Pope of the *Romans*, with one of his Barons called *Chogatal*, to pray him to send an hundred Men learned in the Christian Religion unto him, who might shew his wife Men that the Faith of the Christians was to be preferred before all other Sects, and was the only Way of Salvation, and that the Gods of the *Tartars* were Devils, and that they, and others, the People of the East, were deceived in the Worship of their Gods. He gave them also in charge, to bring, in their Return from *Jerusalem*, of the Oil of the Lamp which burneth before the Sepulchre of our Lord Jesus Christ, towards whom he had great Devotion, and held him to be the true God; they therefore yielded due Reverence to the Great Khan, promised that they would faithfully execute the Charge committed unto them, and presented the Letters which they received from him, written in the *Tartarian* Tongue, according to his Command, unto the Bishop of *Rome*.

He, according to the Custom of the Kingdom, commanded a golden Tablet to be given them, engraven and signed with the King's Mark; carrying which with them, throughout his whole Empire, instead of a Passport, they might be every where safely conveyed through dangerous Places, by the Governors of Provinces and Cities, and receive their Expences from them; and lastly, how long soever they would stay in any Place, whatsoever they needed, for them or theirs, should be furnished them. Taking their Leave therefore of the Emperor, they took their Journey, carrying the Letters and golden Tablet with them; and when they had rid twenty Days Journey, the Lord who was associated with them, began to fall grievously sick; whereupon consulting, and leaving him there, they prosecuted their intended Journey, being every where courteously received, by reason of the Emperor's Tablet; yet in many Places they were compelled to stay, occasioned by the Over-flowings of the Rivers, so that they spent three Years before they came unto the Port of the Country of the *Armenians*, named *Giazza*; from *Giazza* they went to *Acre*, about the Year of our Lord 1269, in the Month of *April*.

But having entered into the City of *Acre*, they heard that Pope *Clement* the Fourth was lately dead, and that no other was substituted in his Place, for which they were

not a little grieved. At that Time there was a certain Legate of the Apostolic See at *Are*, viz. *Master Nicolò Nicotri di Piacenza*, to whom they declared all they had in Commission from the Great Khan, and he invited them to expect the Creation of a new Pope: In the mean space they did depart, and *Venice* to visit their Friends, *Master Nicolò* found that his Wife was dead, whom at his Departure he had left with Child, but had left a Son named *Marco*, who was now nineteen Years of Age: This is that *Marco* who composed this Book, who will mention therein all those things that he hath seen. The Election of the Pope of *Rome* was deferred two Years. They fearing the Discontent of the Emperor of the *Tartars*, who expected their Return, went back again to *Are*, to the Legate, carrying with them *Marco* their Child, and having gone to *Jerusalem*, and fetched the Oil with the Legate's Letter, testifying their Fidelity to the great Khan, and that a Pope was not yet chosen, they went again towards *Grazza*.

In the mean time Messengers came from the Cardinal, to the Legate, declaring to him that he was chosen Pope, and he called himself *Gregory*. Hearing this, he presently sent Messengers to call back the *Venetians*, and admonishing them not to depart, prepared other Letters for them, which they should present to the Great Khan of the *Tartars*, with whom he also joined two preaching Friars, Men famous for their holy Conversation and Learning. The one was called *Friar Nicolo D'averza*, the other *Friar Galieno de Tropa*: To these he gave Letters and Privileges, and Authority to ordain Priests and Bishops, and of Absolution in all Cases, as if himself were present, with Presents also of great Value, to present to the Great Khan, together with his Benediction. They came to *Grazza*, a Sea port in *Armenia*, and because *Bent-cobdas* and the Sultan of *Babylon*, leading a great Army, then invaded the *Armenians*, the two Friars above-mentioned began to be afraid of themselves, and delivering the Letters and Presents to Signiors *Nicolo*, *Maffio*, and *Marco*, desiring to avoid the Danger of the Ways and Peril of Wars, remained with the Master of the Temple, and returned with him.

But the three *Venetians* exposing themselves to all Danger, with many Labours, and much Difficulty, travelled many Days always towards the North-East and North, till they after three Years and a half came to the Emperor of the *Tartars* great City of *Cemenixia*: for in the Winter Time their Journey had often long Hindrances by reason of the Snow and extreme Cold, with Foundations of Waters. However, King *Cublan* hearing of their coming, though they were yet very far off, sent Messengers forty Days Journey to meet them, who should conduct them, and furnish all Necessaries for their Journey. Going therefore to the King's Court, and being brought to his Presence, they fell down before him on their Face, yielding the accustomed Reverence, of whom being courteously received, they were ordered to rise, and he commanded them to declare how they passed the many Dangers of the Ways, and what they had treated with the Bishop of *Rome*; then they related it distinctly and at large, and gave the Emperor the Pope's Letters and Presents, which they brought; at which the Khan wonderfully rejoicing, commended their faithful Care. The Oil also brought from the Lord's Sepulchre, and offered unto him, he reverently received, commanded it should be honourably preserved, and asking of *Marco*, who he was? *Master Nicolò* answered, that he was his Majesty's Servant, and his Son; he entertained him with a friendly Countenance, and taught him to write among other of his honourable Courtiers, whereupon he was much esteemed of all the Court, and in a little Space learned the Customs of all the *Tartars*, and four different Languages, being able to write and read them all.

The Great Khan, to make his Wisdom more apparent, committed an Ambassage unto him to be performed in a City called *Cara-kar*, unto which he could scarcely travel in six Months Space; but he carrying himself wily in all things, discharged what he had in Commission with the Commendation and Favour of the Prince, and knowing the Emperor would be delighted with Novelties in the Places which he passed through, he diligently searched the Cu-

stoms and Manners of Men, and the Conditions of the Countrey, making a Memorial of all that he knew and saw to divert the Great Khan; and in six-and-twenty Years which he continued one of his Court, he was so acceptable to him, that he was continually sent through all his Realms and Signories for the Affairs of the Great Khan, and sometimes for his own, but by the Khan's Order; and this is the true Reason that the said *Master Marco* learned and knew so many Particulars relating to the East, which follow in Order in these Memoirs; but these *Venetians* having stayed in that Court many Years, and grown very rich in Jewels of great Value, were inspired with Desire to visit their Country, leaving that if the Khan now old should die, they should not be able to return. One Day *Master Nicolò*, seeing the Khan merry, craved Licence to depart in the Name of all the three; whereat he was moved, and asked why they would put themselves on so dangerous a Journey, and if they wanted Riches, he would give them twice as much as they had, and out of pure Affection would not permit their Departure.

Yet not long after it happened, that a King of the *Indians*, named *Argon*, sent three of his Counsellors unto the Court of the great *Cublan*, whose Names were *Ustai*, *Apuzai*, and *Coza*, to treat with him, that he would deliver him a Wife; for his Wife, named *Belzona*, being lately dead, begged this Favour of the King at the Point of Death, and left in her Will, that he should not marry a Wife of another Family than her own, which was of *Gata*: King *Cublan* therefore yielding to his Request, caused to be brought out for them a fair young Maiden of seventeen Years of Age, named *Cegalin*, descended of the former Queen's Family, to be the Wife of *Argon*. These barbarous departing, rode eight Months the same Way they came, but found bloody Wars among the *Tartars*, so that they were constrained to return, and acquaint the Great Khan with their Proceedings. In the mean time *Master Marco* had returned from those Parts of *India*, where he had been employed with certain Saivies, and declared to the King the Singularities of the Places, and the Society of the same; which reaching the Ears of the Embassadors, they conferred with the *Venetians*, and agreed, that they with the Queen should go to the Great Khan, and desire Licence to return by Sea, and to have the three *Lains*, who ruled in Sea Affairs, with them, to the Country of some Sea: The Great Khan was much displeas'd with the refusal, yet upon their Petition granted it, and caused *Ustai*, *Maffio*, and *Marco* to come into his Presence, and an eminent Demonstration of his Love, would have them present before him after they had spent time in *Armenia*, and in their own Houles; and he caused to be written a Tablet of Gold, in which was written his Consent to their Liberty and Security through his Dominions; that Expenses should be given them for their Passage, and Convey to the *Palace*, according also that they should be his Embassadors to the Pope, the Kings of *France* and *Spain*, and other Christian Princes.

He caused fourteen Ships to be prepared, each having four Masts, and able to bear nine Sails in all; the Length of which is too long here to be related; four of them had from two hundred and fifty to two hundred and sixty Manns in each of them. In these Ships the Embassadors, the Queen, with *Nicolo*, *Maffio*, and *Marco*, set forth, having first taken Leave of the Great Khan, who gave them many Rubies, and other precious Stones, and their Expenses for two Years. After three Months they came unto a certain Island called *Java*, and from thence sailing through the *Indian* Sea, after eighteen Months they came into the Country of King *Argon*: Six hundred Men of the *Murceys*, and others, and but one of the Women, died in the Passage; but only *Coza* of the three Embassadors survived. When they came to the Country of King *Argon*, they found that he was dead, and that one *Cecato* governed the Kingdom for his Son, who was under Age; they went to acquaint him with their Affairs, who answered, that they should give her to *Cafin* the King's son, then in the Parts of *Arbor Secco*, in the Confines of *Pojia*, with five thousand Persons for the Guard of certain *Palaces* against the Enemy. Having done so, *Nicolo*, *Maffio*, and *Marco* returned to *Chincato*, and staid there nine Months.

After this, taking Leave, *Chiacato* give them four Tables of Gold, each a Cubit long, and five Fingers broad, of the Weight of three or four Marks, in which were written, that in the Power of the eternal God the Name of the Great Khan should be honoured and praised many Years, and every one who should not obey should be put to Death, and his Goods confiscated. In them were further contained, that these three Embassadors should be honoured, and Service done them in all Lands and Countries as to his own Person, and that Horses, Convoys, Expences and Necessaries, should be given them; all which was so duly put in Execution, that sometimes they had two hundred Horses for their safe-guard. In this their Travel, they heard that the Great Khan was dead, which took from them all Desire of returning thither.

They rode till they came to *Trebizond*, and from thence to *Constantinople*, and after to *Negropont*, and at last came with great Riches late to *Venice*, A. D. 1295.

Here ends the Historical Introduction of our Author, which shews us how he came to be qualified for writing the following Description of the remotest Countries in the East. The Reader will naturally observe, that our Author wrote under very particular Circumstances, as having no other Knowledge than what he acquired amongst the *Tartars*; and therefore though the harsh and uncouth Names that occur in the subsequent Relation of his Travels may both disguise and perplex them, yet they very plainly prove the Sincerity and Authority of our Author's Writings, since taking Things as he has related them, it was simply impossible that he should have written them any otherwise than as they stand; for 'twas his hard Lot to travel with the *Tartars*, and to pen the History of his Travels in a Prison, so that their Imperfections ought not to be ascribed to the Man, but to his Circumstances.

There are two *Armenia's*, the *Greater* and the *Less*. In the *Less Armenia* the King resides, in a City called *Schibis*, and in all his Country is observed Justice and good Government. The Kingdom itself hath many Cities, Fortresses, and Castles; the Soil also is fertile, and the Country abounds with every thing necessary, nor is there any want of Game, or Wild Fowl; the Air indeed is not very good. The Gentlemen of *Armenia*, in Times past, were free Men, and good Soldiers, but are become now effeminate and nice, giving themselves up to Drunkenness and Riot. There is a certain City in this Kingdom seated near the Sea, which is called *Grizza*, having an excellent Haven, whither Merchants resort from divers Countries, and even from *Venice* and *Genoa*, on account of several sorts of Merchandize brought thither, especially Spices of sundry Kinds, and abundance of other valuable Goods brought thither out of the East Countries; for this Place is, as it were, the settled Mart of all the East.

In *Turcomania* are three Sorts of Nations, viz. the *Turcomans* or *Turkmen*, who observe the Law of *Mohammed*: They are Men illiterate, rude, and savage, inhabiting the Mountains, and inaccessible Places, where they can find Pastures; for they live only by their Cattle. There are good Horses in this Country, which are called *Turkish* Horses; Mules are also in that Country of great Estimation. The other Nations are *Greeks* and *Armenians*, who possess the Cities and Towns, and bestow their Labour on Merchandize and Arts. They make the best Carpets in the World, and they have many Cities, the chief whereof are *Cege*, or *Iconium*, *Cesarea*, and *Selaste*, where *St. Basil* suffered Martyrdom for Christ, and they acknowledged one of the Khans, Kings of the *Tartars*, for their Lord.

Armenia the Greater is a very large Province, tributary to the *Tartars*, and hath many Cities and Towns, the chief City whereof is called *Arzugia*, and the best Buckram in the World is made there. Most wholesome hot Waters also spring there for the washing and curing of Mens Bodies; and the other more famous Cities next to the

Metropolis are *Argiron* and *Darziz*. In the Summer Time many *Tartars* resort there with their Flocks and Herds, drawn thither by the Fatness of their Pastures; and again in the Winter depart for a certain Time, by reason of the abundance of Snow. The Ark of *Noah* remained in the Mountains of this *Armenia*.

This Country hath the Province of *Moxul* and *Meridin* bordering on the East; but on the North is *Zorzania*, in the Confinces of which a Fountain is found, from which a Liquor like Oil flows, and though unprofitable for the seasoning of Meat, yet is very fit for the popping of Lamps, and to anoint other Things; and this natural Oil flows constantly, and that in Plenty enough to lade Camels. In *Zorzania* is a King called *David Melic*, or King *David*; one Part of the Province is subject unto him, the other pays Tribute to a Khan of the *Tartars*; the Woods there are of Box-trees. The Country extends to the two Seas, *Marmaggiore*, or the *Euxine*, and that of *Baccu*, or the *Caspian*, which containeth in Circuit 2800 Miles, and is like a Lake, having no Communication with other Seas. In it are many Islands, Cities, and Castles, some of which are inhabited by those that fled from the *Tartars* out of *Persia*.

The People of *Zorzania* are Christians, observing the same Rites with other Christians. They keep their Hair short like the Western Clergy; the Inhabitants have many Cities, and their Country abounds with Silk, of which they make very fine Manufactures. *Moxul* is a Province in which there are many Sorts of People, some called *Arabians*, are *Mohammedans*, others are *Christians*, some *Nestorians*, others *Jacobites*, and others *Armenians*; and they have a Patriarch called *Jacolet*, who ordains Archbishops, Bishops, and Abbots, and sends them through all Parts of *India*, and to *Cairo* and *Baldack*, or *Bagdat*, and where-ever *Christians* dwell, as is done by the Pope of *Rome*; and all the Stuffs of Gold and Silk called *Muleims* are wrought in *Moxul*.

But in the Mountains of this Kingdom dwell the People called *Curds*, of whom some are *Nestorians*, others *Jacobites*, and some Followers of *Mohammed*; they are wicked Men, and rob Merchants. Near to them is another Province called *Mus*, or *Meridin*, wherein grow great Quantities of Cotton, whereof they make Buckrams, and other Works; they are subject to the *Tartars*. *Baldack*, or *Bagdat*, is a great City, in which resided the great Khaliff, that is the Pope of all the *Saracens*; a River runs through it, from whence to the Sea is accounted seventeen Days Journey. They sail by a City called *Cisfi*; but before they reach the Sea they come to *Balsora*, about which grow the best Dates in the World. In *Baldack*, or *Bagdat*, are many Manufactures of Gold and Silk. There are wrought Damasks and Velvets, with Figures of various Creatures: All the Pearls in Christendom come from thence. In that City is an University, where is studied the Law of *Mohammed*, Physic, Astronomy, and Geomancy. It is the chief City in those Parts.

When the *Tartars* began to extend their Conquests, there were four Brethren, the eldest of which, *Mangu*, reigned in *Seha*. These purposing to subdue the World, went one to the East; another to the North; to the South a third, which was *Ulan*; and the other to the West. In the Year of our Lord 1250, *Ulan* having a great Army of one hundred thousand Horse, besides Foot, used Policy, and having hid a great Part of his Men, brought, by pretending Flight, the Khaliff into his Ambuscade, and took him and the City, in which he found infinite Store of Treasure, in-somuch that he was amazed. He sent for the Khaliff, and reproved him, that in that War he had not provided himself with Soldiers for Defence, and commanded that he should be inclosed in that Tower where his Treasure was, without other Sullenance.

This seemed a just Judgment from our Lord *Jesus Christ* on him; for in the Year 1255, seeking to convert the *Christians* to the *Mohammedan* Religion, and taking Advantage from that Place of the Gospel, *That he which*

* There is nothing obscure in this Description of *Armenia the Less*; and I added this Note only to put the Reader in Mind, that our Author drew that great Part of the Trade from *Europe* to the *India* was carried on this Way by the *Venitians* and *Genoese*. *Arzugia* is indeed a Name not to be met with in any other Author; but the Account given us by *Marco* is so clear and exact, that there can be no doubt about it.

There is nothing gives so much Credit to our Author's Relation as these historical Facts, which are capable of being verified by other Authors. The Prince he mentions was *Ha Ali Khan*, who was Son-ther to *Mangu Khan*; he entered these Countries A. D. 1255, with an Army of *Tartars*, and in 1257, put an end to the Empire of the *Abghian* Khaliffs, by taking *Bagdat*, as our Author relates it.

hath Laick, as the Grain of Mustard-seed, shall be able to remove Mountains. He summoned all the *Christians*, *Nestorians*, and *Jacobites*, and propounded to them in ten Days to remove a certain Mountain, or torn *Mobammedans*, or be slain, as not having one Man amongst them which had the least Faith. They therefore continued eight Days in Prayer; after which a certain Shoemaker, in consequence of a Revelation made to a certain Bishop, was fixed upon to perform it. This Shoemaker, once tempted to Lust by Sight of a young Woman, in putting on her Shoe, zealously had told her that of the Gospel, and literally had put out his right Eye. He now on the Day appointed with other *Christians* followed the Cross, and lifting his Hands to Heaven, prayed to God to have Mercy on his People, and then with a loud Voice commanded the Mountain in the Name of the Holy Trinity to remove; which presently, with great Terror to the *Khaliff* and all his People, was effected, and that Day is since kept holy by fasting also on the Evening betwixt it.

S. Tauris is a great City in the Province of *Irania*, and is a most populous Place. The Inhabitants live by the Exercise of Arts and Merchandize, they make Stuffs of Gold and Silke; foreign Merchants residing there make very great Gain, but the Inhabitants are generally Poor. They are a mixed People of *Nestorians*, *Armenians*, *Jacobites*, *Georgians*, *Parsees*, and *Mobammedans*: Those last are perfidious and treacherous, thinking all well gotten which they steal from Men of other Religions; and the Wickedness of the *Saracens* had converted many *Tartars* thereto. If the *Christians* kill them in their Robbery, they are reputed Martyrs. From *Tauris* into *Persia* are twelve Days Journey. In the Continents is the Monastery of *Saint Barthelemy*, the Monks whereof are like *Carmelites*; they make Cordles, which they lay on the Altar, and give to their Friends, who devoutly esteem them. *Persia* containeth eight Kingdoms, whereof the first is called *Gollan*, the second *Caraghan*, the third *Ler*, the fourth *Sughlan*, the fifth *Spahan*, the sixth *Schiras*, the seventh *Somara*, the eighth *Amerebam*, which is near *Arberjesco* towards the North. They have fine Horses here, when they are sold into *India*; there are also very excellent Asses sold dearer than the Horses, because they eat little, carry much, and travel far. They have Camels, but not to wight. There are necessary in those Countries, which sometimes for a long Way yield no Graze.

The People of those Countries are very wicked, covetous, Thieves, and Murderers, professing the Faith of *Mobammed*. Merchants are every where slain by those Thieves, unless they travel in Caravans. There are excellent Artificers in the Cities, who make wonderful Things in Gold, Silke, and Embroidery. The Countries abound with Silkworms, Wheat, Barley, Malet, and other Kinds of Corn, and Plenty of Wine and Fruits; and though their Law forbids Wine, yet they have a Clois to correct or corrupt the Text, that if they boil it, then it changeth the Taste, and therefore the Name also, of Wine, and may be drunk. *Jah* is a great City in the Continents of *Persia*, where there is great Trade; it hath also many Manufactures in Silke. *Ormus* is a Kingdom in the Continents of *Persia* to the East, subject to the *Tartars*. In Vents of the Mountains Stones are found, commonly called Turquoises, and other Jewels. There also are made all sorts of Arms and Ammunition for War, and by the Women excellent Needleworks in Silks, with all sorts of Creatures very admirably wrought therein. There are the best Falcons in the World, very swift of Flight, red-breasted, and under the Tail less than those of other Countries. Proceeding further, you go through a great Plain, and having ended eight Days Journey, you come to a certain Delcent. In the Plain are many Cattles and Towns, but in that high Delcent are many Trees, and those fruitful, but no Habitation, except a few Shepherds Huts. This Country in Winter Finnes intolerably cold. After this you come into a large open Plain, where a certain City is seated, which is called *Camanda*, heretofore

large and populous, but now destroyed by the *Tartars*, and the Country is called *Reabnle*. There grow *Pomegranates*, *Quinces*, *Peaches*, and other Fruits, which grow not in our cold Countries. It hath also very great Oxen, and all white, thin haired, with thick, short, bunt Horns, and a Camel's Bunch on the Back, accustomed to bear great Burthen; and when the Pack-Saddles are set upon the Bunch, they bow the Knee like Camels, and having received the Burthen, rise again, being so taught. The Sheep of that Country are as big as *Alces*, having so long and broad Tails, that they weigh thirty Pounds Weight. They are very fat, and fat, and good Meat.

Moreover, in the High Walls of this Country are many Cities and Towns, with high Walls of Earth to defend them from the *Caraons*, that is, *Mefozos*, that is, a mixed sort of People between *Indian* Women and *Tartars*, Ten thousand of which are commanded by one *Nagadar*, the Nephew of *Zagatbar*, who formerly ruled in *Turkestan*. This *Nagadar*, hearing of the *Malabars* subject to *Sellan Afian*, without his Uncle's Knowledge, went and took *Doy* with other Cities, erected a new Seignory, and mixing with the *Indian* Women, raised their *Caraons*, which go up and down to rob and spoil in *Rocharle*, and other Countries. The Plain whereof I now speak is five Days Journey extended towards the South; but at the End thereof a Way begins by little and little to descend for twenty Miles together, and the Road itself is very bad, and not without Danger, by reason of Thieves. At length you come to very good Plains, which extend themselves two Days Journey in Length, and the Place itself is called *Ormus*.

That Country abounds with Rivers and Palm-Trees; there is also Plenty of divers Fowls, especially *Pigeons*, *Jays*, which are not like ours. From hence you come unto the Ocean, wherein an Island is seated called *Ormus*, which many Merchants resort, bringing spice, and precious Stones, Cloth of Gold and Silver, Leopards Furs, and all other precious Things from *India*. That is a great Mart, having Cities and Castles under it, and a Head of the Kingdom of *Cheerman*. The King is called *Ruchined Ben Achomach*, who yields Obedience to the King of *Cheerman*. He makes himself Heir, if any dies there. In Summer, by reason of the Heat, they betake themselves to their Summer-Houses, built in the Waters; and from Nine till Noon there blow a Wind with such extreme Heat from the Sands, that it takes away a Man's Breath, and stifles him, which makes them lie in the Water. The King of *Ormus* sent an Army of sixteen hundred Horie, and five thousand Foot, against the Lord of *Ormus*, for not paying his Tribute, which were all surprized, and stilled with that Wind. The Inhabitants of the Place eat no Bread made of Corn or Flax, but feed upon Dates, salt Fish and Onions. They have not very stout Ships, for they do not fasten them with iron Nails, by reason the Wood is brittle, and would cleave; but with wooden Pins, with certain Threads of the Shells of *Indian* Nuts. The *Ormus* is made after the Manner of Leather, cut of whose Threads are cut, of which Threads exceeding strong Cables are made, which are able to endure the Force and Violence of the Waters, and are not easily corrupted thereby. Their Ships have one Mast, one Sail, one Cabin, and are covered but with one Deck. They are not covered with Pitch, but with the Oil and Fat of Fishes; and when they cross the Sea to *India*, carrying Horses and other Things with them, they lose many Ships, because that Salt is very tempestuous, and the Ships are not fit to stand that Iron. The Inhabitants of that Country, who have embraced the Law of *Mobammed*, have a custom of this Country, when any Master of a Ship is dead, the Wife left behind him should mourn for him one Day, once a Day. They have Women who observe the Practice of Mourning, and weep continually to mourn daily for their Dead. R to the

* In the several Parts of this Work, there are great Variations in the Names of this eighth Part, it is which the Description of the Kingdom of *Ormus* is given; but it is very apparent that they are Corruptions only of the Cities, and Provinces of that Kingdom, it is not necessary to give a long Explanation of them.

* It is very evident from the Account, that our Author extends the Name of *Ormus* to the Coast opposite to the Island called *Ormus*; but in other Countries he speaks of it as plainly the Province of *Achomach*.

Castles in the Mountains round about it: A certain great River also flows through the Middle thereof. There are many Porcupines in that Country, which they hunt with Dogs, and they contracting themselves with great Fury, cast their prickly Quills at Men and Dogs, and wound them. That Nation hath a particular Language, and the Shepherds abide in the Mountains, having made Caves for their Habitations. You go hence three Days Journey, without meeting any Inhabitants, to the Province of *Baxiari*, which is inhabited by *Mohammedans*, who have a peculiar Language. Their Kings, who succeed each other hereditarily, are reported to have derived their Descent from *Alexander the Great*, and from the Daughter of *Darius*, and are called *Dulcarten*, that is to say, *Alexandriane*. There are found the *Ballastias*, and other precious Stones, of great Value.

No Man, in pain of Death, dare either dig such Stones, or carry them out of the Country, but with the Licence and Consent of the King; for all those Stones are the King's, and he only lends them to whom he pleases, either as Presents, or in Payment of Tribute: He exchanges also many for Gold and Silver, and this he doth let the Stone, whereof there is so much Plenty, should become too common and cheap. Other Mountains also in this Province yield Stones, called *Lapis Lazuli*, whereof the best Azure is made, the like is not found in the World. These Mines also yield Silver, Brass, and Lead. The Country itself is very cold. There are many Horses, and those excellent, large, strong, and swift, which have to hard and tough Hoofs, that they need no Iron-shoes, although they run over Rocks. It is said, that not many Years ago, there were Hordes of the Race of *Alexander's Bucephalus*, which had the same breeded Mark as he had, in the Possession only of the King's Uncle, who was killed for refusing the King to have some of them; whereupon his Widow, in spite, destroyed the whole Race. There are also excellent Falcons. The Soil of this Country bears excellent Wheat and Barley without Husk, and Oil made of Nuts, and Mustard, which is like Flax-seed, but more savoury than other Oil. There are thought Passages and difficult Places. The Men are good Archers and Huntsmen, clothed in Beasts Skins. The Hills are steep and high, large Plains, fine Rivers; and if any have an Ague, by living two or three Days on the Hills he recovers, which *Marcos* experienced himself after a Year's Sickness. The Women, in the Skirts of their Garments put sixty or eighty Yards of Cotton; the butcher a Woman looks the is in their Eyes the handlamer.

The Province of *Bajara* is ten Days Journey towards the South from the Country of *Balaxam*. The Country itself is very hot, which is the Reason the People are brown. They have a Language of their own, and wear gold and silver Ear-rings, with Pearls and other Stones artificially wrought in them, they eat Fish and Rice, and are Idolaters, crafty and cruel. The Province of *Cheymar* is seven Days Journey distant from *Bajara*, the Inhabitants whereof have also their own Language, and are Idolaters beyond all other, cunning Idolaters, forcing their Idols to speak, and darkening the Day. From hence you may go to the *Indus* River. The Men and Women are brown, not wholly black, their Heat being somewhat tempered. Their Food is Flesh and Rice, yet are they exceeding lean. There are many Cities and Towns in this Country, their King is tributary to none. There are certain Hermits in this Province, whom Monasteries and Cells worship Idols, honouring their Gods with great Abundance of Meat and Drink, and observe great Chastity, are very cautious not to offend their Idols, and live long; of these are many reputed Saints, and the People show them great Reverence. The Men of this Province know no living Creature, and shed no Blood, and if they eat Flesh, it is necessary that the *Saracens*, who live amongst them, kill the Creature. Cereal is here sold dearer than any where. We will leave the Way to *India* now, and return to *Balaxam*, and direct our Way towards *Cajbar*, betwixt the East and North-East. Beyond *Balaxam* is a certain River, whereon stand many Castles and Villages belonging to the King of *Balaxam's* Brothery, and after three Days Journey is the Province of *Kashan*, having in Length and Breadth three Days Jour-

ney, the Inhabitants whereof have a peculiar Language, and worship *Mohammed*. They are however stout Warriors and good Hunters, for the Country abounds with wild Beasts.

If you depart thence betwixt the North-East and the East, you must ascend for three whole Days together, until you come to an exceeding high Mountain, thence which there is said to be none higher in the World. There also betwixt two Mountains is a great Lake, and through a Plain runs a very fine River, near which are excellent Pastures, so that in them a lean Horse or an Ox may be fat in ten Days. There is also Plenty of wild Beasts, especially exceeding great wild Sheep, having Horns, some of them six Spans long, of which they make divers kinds of Vessels. The Plain contains twelve Days Journey in Length, and is called *Pamer*; nor is there any Habitation there; and Travellers must carry Victuals with them: No Bird also appears there, by reason of the Cold; and it is reported, that if Fire be kindled there it is not to be long nor to effectual to boil any thing as in other Places. From hence the Way leadeth forty Days Journey further between the East and the North-East, through the Mountains, Hills, and Valleys, in which many Rivers are found, but no Village or Herbs, and the Country itself is called *Palore*, and some Huts and Cottages of Men are seen on the Tops of those high Mountains, but such as are savage and wicked Idolaters, who live by hunting, and are clothed by the Skins of the Beasts they kill. After this you come to the Province of *Cajbar*, which is tributary to the Great Khan, and the People are *Mohammedans*. There are Vines, pleasant Gardens, fruitful Trees, Cotton, Flax, and Hemp, and a fertile Soil. The Inhabitants have a particular Language, and are Merchants and Artificers, covetous, that they eat that which is bad, and drink wine. Some *Nestorian* Christians are found there, who have their Churches. The Country extends still the Day Journey.

Samarand is a great and famous City in that Country, where are lovely Gardens, and a fertile Plain. It is subject to the Nephew of the Great Khan, and the Christians dwell with the *Saracens*, whence little Agreement betwixt them. It is reported, that on this Account a Miracle happened, the Brother of the Great Khan, *Zagatar*, who governed that Country about an hundred Years ago, being persuaded to become a Christian, the Christians, through his Favour, built a Church in Honour of *St. Peter* the Baptist, with such Cunning that the whole Roof thereof was supported by one Pillar in the midst, under which was set a square Stone, which, by Labour of the King, was taken from a Building of the *Saracens*. *Zagatar's* Son succeeded after his Death in the Kingdom, but in the Faith, from whom the *Saracens* contended that the Christians should be compelled to restore that Stone, and when they offered a sufficient Price, the *Saracens* refused to accept any other Compulsion than the Stone, whereupon the King lifted up himself, that the *Saracens* might take away that Stone, and so continued.

Departing again from this City, you come to the Province of *Charaban*, about five Days Journey distant. This Province hath Plenty of Provender, being subject to the Dominion of the Nephew of the Great Khan. The Inhabitants worship *Mohammed*, yet among them some *Nestorian* Christians dwell. They are near a hundred Years have most of them twelve Days Journey from the Mouth of a Branch in their Throat, by reason of the Warmth of the Water they drink. The Province *Caram* is about five Days Journey from the East and the North-East. It is subject to the Nephew of the Nephew of the Great Khan, and hath many Cities and Towns. The chief City thereof is called *Caram*. The Province extends eight Days Journey in Length. There is no Want there of any thing necessary for the Maintenance of Life. It hath Plenty of Corn, Flax, Hemp, Cotton and Wine, but the People are not so well like, yet good Artificers in various Trades, and are very chaste. They acknowledge *Mohammed* as their Prophet.

Proceeding farther through the same Country, you come to the Province of *Pamer*, extending four Days Journey in Length; it is subject to the Great Khan, and

many Cities and Castles; the chief City thereof is called *Pem*, near which runs a River wherein precious Stones are found, such as Jasper and Chalcedons. The Inhabitants of the Country follow the Law of *Mohammed*, and are Artificers and Merchants. There is a Custom in this Province, that when any married Man goeth into another Place and returneth not home in twenty Days, it becomes lawful for the Wife to marry another Husband; and the Men also, whenever the Women go away for the same time, do the like. All those Provinces, *viz. Cascha, Coton, Piem*, to the City of *Top*, are in the Bounds of *Turkenon*.

Cascha is subject to the *Tartars*; the Name of the Province and chief City is the same: It hath many Cities and Castles; many precious Stones are found there in the Rivers, especially Jaspers and Chalcedons, which Merchants carry quite to *Ouelach* to sell and make great Gain. From *Pem* to this Province, and quite through it also, is a sandy Soil, with many bad Waters, and few good. When an Army passeth through this Province, all the Inhabitants thereof, with their Wives, Children, Cattle, and all their Household Stuff, fly two Days Journey into the Sands, where they know that good Waters are, and stay there, and carry their Corn thither also to hide it in the Sands, after Harvest, from the like Fears. The Wind doth wade their Steps in the Sand, that their Enemies cannot find their Way. Departing from this Province, you are to travel five Days Journey through the Sands, where no clear Water doth than that which is bitter or is any where to be found, until you come to the City called *Top*, which is a great City, from whence is the Entrance of a great Desert, called also the *Wilderness of Top*, seated between the East and the North-East. The Inhabitants are *Mohammedans*, subject to the Great Khan.

In the City of *Top*, Merchants who desire to pass over the Desert, cause all Necessaries to be provided for them; and when Victuals begin to fail in the Desert, they kill their Asses and Camels, and eat them. They make it mostly their Choice to use Camels, because they are furnished with little Meat, and bear great Burthens. They must provide Victuals for a Month to cross it only, for to go thro' it length-ways would require a Year's Time. They go through the Sands and barren Mountains, and daily find Water; yet it is sometimes so little that it will hardly suffice fifty or a hundred Men with their Beasts; and in three or four Places the Water is salt and bitter. The rest of the Road, for eight and twenty Days, is very good. In it there are not either Beasts or Birds; they say, that there dwell many Spirits in this Wilderness, which cause great and marvellous Illusions to Travellers, and make them perish; for if any stay behind, and cannot see his Company, he shall be called by his Name, and to going out of the Way aloft. In the Night they hear as it were the Noise of a Company; which taking to be theirs, they perish likewise. Concerns of musical Instruments are sometimes heard in the Air; likewise Drums, and Noises of Armies. They go therefore close together, hang Bells on their Beasts Necks, and put Marks, if any stay.

Having passed over the Desert, you come into the City *Sachin*, betwixt the East and North-East, subject to the Great Khan, in the Province of *Tangut*, where, as well the Worshipers of *Mohammed*, as new *Nestorian* Christians are found; many Idolaters are also there, who have their proper Language. The Inhabitants of this City live not by Merchandize, but on the Fruits of the Earth. The City hath many Monasteries, consecrated to divers Idols, in which many Sacrifices are offered with great Reverence: And when a Son is born to a Man, he presently consecrates him to some Idol, and in honour thereof, killeth a Sheep that Year in his House, which he presenteth before, together with his Son, the next Festival Day of that Idol, with many Ceremonies, and great Reverence. Afterwards the Flesh of the Sheep is boiled, and left to hang before the Idol till their Prayers are finished, which they make for the Conservation of their Son; and

the Idol hath, as they suppose, sucked the Savour of the Meat; after which, all his Kindred being gathered together, eat the Flesh at home with great Devotion and Joy, but religiously keep the Bones in certain Vessels. The Priests have the Feet, Head, Inwards, Skin, and some Part of the Flesh, for their Share.

In celebrating the Funerals of such as were Men in Esteem, the dead Bodies are buried after this Manner; the Kindred send for the Astrologers, and tell them what Year, Month, Day, and Hour he who died was born, who, having considered the Constellation, assign the Day when he is to be buried; so that when the Planet suits not, they preserve the dead Body sometimes seven Days, and sometimes six Months, preparing a Chest for it at home, and joining the Sides together with such Art, that no noisome Smells issue forth. They also embalm the Body itself with Spices, and cover the Chest, fairly painted, with embroidered Cloth; and every Day that the dead Corpse is kept at home, at the Hour of Dinner a Table is spread near the Chest, Wine and Meat set thereon, for the Space in which one might eat a Meal's Meat, supposing that the Soul of the dead feedeth on the Savour thereof. The Astrologers sometimes forbid to carry it out of the chief Gate, pretending some disastrous Star, and cause them to carry it out another Way, and sometimes break the Wall which is opposite to that Place, which the Planet makes more lucky; for otherwise the Spirits departed would be offended, and hurt those of the House; and if any such Evil happen, they ascribe it to the Dead thus wronged. When the Body is carried through the City to be buried without, wooden Corteges are erected in the Way, with a Porch covered with Silk, in which they place the Body, and set before it Bread, Flesh, and delicate Meats, supposing the Spirit to be refreshed therewith, which is held to be constantly present at the burying of the Body; and when they come to the Place where the Body is to be buried, they diligently and curiously paint upon Papers made of the Bark of Trees the Images of Men and Women, Horses, Camels, Money, and Garments, all the Instruments of the City founding, which are burned together with the dead Body; for they say, that dead Men shall have so many Men-servants, and Maid-servants, Cattle, and Money in another Life, as Pictures were burned with him, and shall perpetually live in that Honour and Riches.

The Province of *Camul* lieth in the wide Country of *Tangut*, subject to the Great Khan, having many Cities and Towns; the chief City is called *Camul*. This Province is bounded by two Deserts, *viz.* the Great Desert, of which we have spoken before, and another that is less, of three Days Journey. It abounds with all Things for the convenient support of Life. The Inhabitants are Idolaters, have a peculiar Language, and seem to be born for no other Purpose but to apply themselves to sporting, singing, dancing, writing and reading, after their Fashion, playing on Instruments, and giving themselves unto Pleasure. When any Traveller passing by goes into any Man's House for Entertainment, the Master of the Family receives him with great Joy, and commands his Wife, and all the Family, that as long as he will abide with them, they obey him in all things. In the mean time he departs, and returns not so long as the Guest remains at his House; and during all this Space the Stranger lies with the Wife, Daughter, and the rest, as with his own Wives. The Women of the Country are beautiful, and ready to obey all these Commandments of their Husbands, who are so besotted with this Folly, that they think it a glorious thing for them, and believe it to be acceptable to their Idols, that, through their Favour thus obtained, they prosper, and enjoy Plenty of all things. *Mangu Khan* having heard of this Folly, commanded them not to observe this detestable Custom any longer, and accordingly they forbore it for about three Years; and then not seeing their wretched Fertility, and troubled with some domestic Crosses, they sent Embassadors to

The Desert mentioned by our Author, still retain the same Name in the most modern Maps. His Description of this and other Wildernesses is very exact; and the Hardships he mentions, arising through them are not at all exaggerated. It is for this Reason that it is so extremely difficult to pass from any Part of the Dominion of the Great Mogul to *China*, without taking a prodigious Company to avoid these Deserts. It is also forty Years ago since a certain Rajah, who had incurred the Mogul's Displeasure, attempted, with a Train of thirty Followers, to pass through these Deserts, in which they all perished by Hunger and Thirst, except the Nellenan himself, and four of his Attendants, who returned in safety to *India*, where he and one of his Men died of the Fatigue a few Days after.

wife, in two Parts, stuck the Pieces by themselves into the Ground, and wrote upon the one *Zingis*, and the other *Uman*: and told to the King, In the mean Space while we read, it shall come to pass, by the Idol's Power, that these two Parts of the Reed shall fight together, and whose Part shall fall on the other, the King shall obtain Victory in the Battle. The Multitude therefore running together to behold that Spectacle, the Astrologers began to mumble their Prayers, and read their Incantments; when presently the Parts of the Reed being moved, fought together, until the Part of *Zingis* ascended upon the Part of *Uman*, which being seen by the *Tartars*, assured of the future Victory, they were encouraged to the Battle, and *Uman* being slain, the Victory and Kingdom, and *Uman's* Daughter, remained to *Zingis*.

Zingis reigned six Years after this, in which he conquered many Provinces; and lastly, when he endeavoured to win a certain Castle called *Tbargin*, and came somewhat too near, being shot in the Knee by an Arrow, he died, and was buried in the Mountain *Altai*. The first King of the *Tartars* was called *Zingis*, the second *Khan-Khan*, the third *Batyn-Khan*, the fourth *Eju-Khan*, the fifth *Mangu-Khan*, the sixth *Kublai-Khan*, whose Power is greater than all his Predecessors, having inherited theirs, and adding by Conquest in a manner the rest of the World; for he lived near sixty Years in his Government. The Name *Khan* signifieth Emperor. All the great *Khans* and Princes of the Blood of *Zingis* are carried to the Mountain of *Altai* to be buried, wherefoever they die, altho' one hundred Days Journey from it; and they which carry the Corpse to the Burial kill all those that they meet in the Way, saying, Go and serve our Lord the King in another Life; they kill also the best Horses. When the Body of the Great *Khan-Mangu*, the Predecessor of *Khan-Kublai*, was brought unto the Mountain *Altai* to be buried, the Soldiers accompanying the Funeral are reported to have slain above ten thousand Men upon the aforesaid Occasion.

The *Tartarian* Women are most faithful to their Husbands. Adultery is the greatest Shame amongst them; yet it is accounted lawful and honest that every one may marry as many Wives as he is able to maintain, altho' the first be looked upon as principal, and more honourable than the rest. These live together in one House, without one ill Word, in a admirable Concord, make their Merchandizes, buy and sell, and procure all things necessary to their Husbands and Household, the Men meddling with nothing but their Hunting, Hawking, and things pertaining to Arms. They have the best Falcons in the World, and also Dogs; they live only on Flesh and Milk, and what they take in Hunting. They eat Horses, Camels, Dogs, if fat; and drink Mares Milk, called *Cosmos*, to be managed, that is like white Wine. If the Father dies, the Son may have all his Wives, except his own Mother and Sisters; if the Brother being dead, it is lawful for the Brother who remaineth alive to marry the Widow of his deceased Brother. The Husbands receive no Dowry of the Wives, but they themselves bring Dowry to the Wives and their Mothers. Through the Multitude of their Wives, the *Tartars* have many Children; for is this Multitude of Wives very beneficial, seeing they gain much through their Labour; besides they are very careful for the Government of the Family, and the Preparation of their Food, and wait no less Care execute the other Duties of the House; but the Men apply themselves wholly to Hunting, Fowling, and the Exercise of Arms.

The *Tartars* feed many Herds of Oxen, Flocks of Sheep, and other Beasts and Cattle, and remain with them in Places of Pasture, in the Summer Time, in the Mountains, and colder Places, where they find Pasture and

Wood; but in the Winter, they remove to the hotter Countries, where they find Pasture for their Cattle, marching forwards two or three Months together. Their Houses are covered with Sticks and Felt, and are commonly round, which they carry with them in Carts or Waggon, with four Wheels; for they can fold and extend them, let them up and take them down; and they turn wherefoever they go the Door of these moveable Houses always to the South. They have also neat Carts of two Wheels, covered with Felt so close that the Rain cannot pierce thro' them, drawn by Oxen and Camels, wherein they carry their Wives, Children, and necessary household Stuff with them, and defend them from the Injury of foul Weather and Rain.

The *Tartars*, if they be rich, are clothed in Sables, Ermins, and Cloth of Gold, and all their Furniture is costly. Their Arms are Bows, Swords, Pole-axes, and some Lances; but they can best use their Bows, to which they are used from their Childhood: They are hardy, active, brave, but somewhat cruel, will continue two Days and Nights on Horseback armed, exceeding patient, and obedient to their Lords; their Cattle also are strong and hardy. The Law and Faith of the *Tartars* is this, they say, that there is one Great God, Supreme in Heaven, of whom with daily Incense, they desire good Understanding and Health. They have another which they call *Natigay*, which is a little Image covered with Felt, or some other thing, which every one hath in his House. To this God they make a Wife and Children, placing the Wife's Image at the Left-hand, and the Representations of the Children before his Face. This they call the God of earthly things, which keeps their Children, and their Beasts, and Corn, and give it great Reverence. Before they eat themselves, they anoint the Mouths of the Images with Fat of the fatted Flesh; and they cast the Broth out of Doors, in Honour of other Spirits, saying, that now their God with his Family has had their Part; and after they eat and drink at Pleasure.

If the Son of a *Tartar* die before he has been married, and the Daughter of another die also unmarried, the Parents of the deceased meet together, and celebrate a Marriage between the Dead, and making a Draught in Writing of that Contract, they paint Men and Women for Servants, Horses, and other Creatures, with Cloaths of all Sorts, and Monies in Paper, and burn them together with the Contract; by the Smoak whereof they say that all these things are carried to their Children in another World, where they are married; and the Fathers and Mothers conceive they are joined together in such a Bond of Affinity, as if these Marriages had been celebrated while the married Couple were still living.

When the *Tartars* go to War, their Prince conducts about a hundred thousand Horses, appointing Heads over Tens, Hundreds, Thousands, and ten Thousands, by which Subordination, Commands are easily maintained; every Hundred is called a *Tuc*, every Ten a *Teman*: When they begin their March, they send out Men every Way as Scouts, that no Enemy assault them unprovided. Of Horses and Mares every Man has about eighteen. They carry also their Felt-houses, under which they shelter themselves in Times of Rain. When there falls out some important Employment, they will ride ten Days together without Victuals dry or boiled, and live on the Blood of their Horses, cutting a Vein, and sucking it. They have Milk dried like Paste, which they make by boiling the Milk, and skimming the Cream, which swims on the Top, into another Vessel, and make Butter; afterwards they set the Milk in the Sun, and dry it, and when they go to the Army, carry with them about ten Pounds thereof, and every Morning a Man takes about half a Pound, and puts it in a

Our Author has been charged with many Mistake in this List of the Princes who succeeded *Zingis-Khan*, but he has been charged by those who knew particulars of the Matter than he did; and therefore to set this Matter right, we will give a short Account of that Succession, from the first track Work of *Mongolus-Batulus-Khan*. Two Years after the Death of *Zingis-Khan*, the *Tartar* Princes, in Compliance with the Emperor's Will, would have elected *Qubai-Khan* to that Dignity, which he absolutely refused, because he had an Uncle and two elder Brothers. This Dispute lasted forty Days, when at a great Council his elder and younger Brother rose up and said, You have heard our Father's Will; your Modesty shall not render us guilty of Impiety, we will execute his Will, if you will not; and taking him, one by one, and the other by the other, they forced him into the Imperial Chair against his Consent, A. D. 1230. This Prince died suddenly in 1245. He was succeeded by his Son *Kojak-Khan*, whom our Author calls *Koon-Khan*, who died in the Year 1247, and was succeeded by *Mongol-Khan*, who held the Empire to the Year 1257, when he was succeeded by *Kipjak-Khan*, the same with whom our Author lived, and whom he calls *Khan-Koon*. He reigned in all thirty five Years, and died in the Year 1292, which agrees very well with Marco Polo's Relation.

Flask, or Leather Bottle, with as much Water as he pleases, which while he rides, mixes together, and this is his Dinner.

When they encounter with their Enemies, they ride here and there shooting, and sometimes make a Shew of Flight, shooting as they fly: and finding the Enemy broken, rejoice their Forces, and pursue the Victory, having their Horses to command, as with a Sign to turn any Way. But now the *Tartars* are mixed and confounded, and so are their Fashions. They punish Malefactors after this Manner: if any steal a Thing of small Value, and is not to be deprived of Life, he is seven Times beaten with a Cudgel, or seventeen, or seven-and-twenty, or thirty-and-seven, or forty-seven, giving the Strokes according to the Measure and Quality of the Offence, and that unto an hundred: Some die through these Strokes. But if any have stolen an Horse, or other Thing, for the which he deserves to die, he is cut asunder with a Sword in the Middle; but if he will redeem his Life he may, by restoring the Theft nine-fold. Such as have Horses, Oxen, or Camels, brand them with their Marks, and send them to feed in the Pastures without a Keeper. Leaving the City of *Caracorum* and the Mountain *Altai*, we come unto the champaign Country of *Bargu*, which extends itself northwards about sixty Days Journey in Length. The Inhabitants of these Places are called *Medates*, and they are subject to the Great Khan, and in Manners like the *Tartars*; they are a sort of savage Men, and eat the Flesh of Beasts which they take by hunting, especially Stags of which they have Plenty, and they make them to tame that they can ride them; they have no Corn or Wine. In the Summer they chiefly practise hunting of wild Beasts and Fowls, or the Flesh whereof they may live in the Winter; for in Winter Fowls as well as other living Things fly from thence on account of the Extremity of the Cold.

12. After forty Days Journey you come to the Ocean, near which is a Mountain, where Storks and fine Falcons breed, which are carried thence unto the Court of the Great Khan. Here we must return unto the City *Campion*; if therefore you proceed farther five Days Journey from the City *Campion* towards the East, you come to the Kingdom of *Erginul*, in the Province of *Tangut*, subject to the Great Khan. In this Kingdom are many Idolaters; there are some *Nestorian* Christians and *Turks*; as also many Cities and Castles, of which *Erginul* is chief. From hence, if you proceed farther to the South-East, you may go to the Parts of *Cathay*. Going South-East towards *Cathay*, there is a certain famous City named *Cingay*, the Name also of the Province, tributary unto the Great Khan contained in *Tangut*; the People are some Christians, some *Mohammedans*, and others Idolaters. There are also found wild Oxen, very near as big as Elephants, very fair, having white and black Hair, short in other Parts, and on the Shoulder three Palms long, fine, white, and in many Respects beyond Silk, of which Hair our Author brought some to *Venice* as a rare Thing. Many also of these Oxen are tamed, and made to couple with tame Kine, and the Breed of them are fitter for Business than any other Creatures, bear great Burthens, are yoked to the Plough, and do twice as much Service as others.

The best Muff in the World is found in this Province, and is taken from a Beak of the Bignets of a Goat, having Hair like a Stag, Feet and Tail like a Gazell, but without Horns. In both four Teeth, two above and two beneath, of the Length of three Fingers, as white as Ivory, and is a very beautiful Creature. When the Moon is at full, near the Navel, under the Belly, there grows to this Beak an Impulse or Bladder, full of Blood, and at the Full Moon they go to hunt them, and take away that Swelling, which is dried in the Sun, and is the best Meek, the Flesh is also good to eat: Master *Marco* brought to *Venice* the Head and Feet of this Beast dried. The Men

live by Merchandize and Arts, and have Abundance of Corn. They are Idolaters, of a fat Body and little Nose, black Hair, having no Beard but four Hairs on their Chin. The Women are wonderfully fair, and what the Men desire to marry Wives, they rather make Choice of the Beautiful than the Noble or Rich. It often happens from hence, that a great Nobleman marries a poor Wife, it being usual, assigning a Dowry to her Mother. This Province extends itself five-and-twenty Days Journey in Length, and is very fertile; in it are exceeding large Pheasants, having Trains eight or ten Handful long; many other Kinds of Birds are also found there, which have very beautiful Feathers of various excellent Colours.

After eight Days Journey further East, you meet with the Province *Egrigala*, in the which are many Cities and Castles; all but this lies still in *Tangut*. The principal City is called *Galacia*, the Inhabitants thereof are *Mohans*; there are three Churches of *Nestorian* Christians, who are subject to the Great Khan. In this City Castles are made, woven with white Wool, and the Hair of Carde, than which there are scarce any better in the World. East from this Province of *Egrigala*, lies that of *Tasach*, in which are many Cities and Castles, and here *Prehyterjan* resides, who now pays Tribute to the Great Khan. The King of that Nation is called *George*, and is a Priest of a Christian, and most of the People are Christians. All the Great Khans after his Death (who was slain in Battle by *Zangis*) give their Daughters to those Kings to Wed. This King *George* holds not all that the Priest *Zen* before held, and is the Fourth of that Family. There is a Nation there called *Jagous*, more fighty Men, and finer Merchandize than the rest, descended of Idolaters and *Mohammedans*. There are also two Regions, where they dwell, which in those Parts are called *Oz* and *Megg*, but they which dwell there call them *Ung* and *Mergu*, being *Geg*, and in *Wangul* the *Tartars*. Riding fifteen Days towards *Cathay* are many Cities peopled with Idolaters, *Mohammedans*, and *Nestorians*. There is one City called *Sindien*, where very excellent Arms are made; divers sorts fit for Armies. In the Mountains of this Province are great Mines of Silver, and much Game, and the Country of the Mountains is called *Utsi*.

Three Days Journey from the City last mentioned stands another City *Jangamur*, that is, *The Little Lake*, where there is a Palace, in which the Great Khan delights, because there are many Lakes and Rivers, many Swans, and in the Plains, Cranes, Pheasants, Partridges, and other Fowls. There are five Sorts of Cranes there, some have black Wings like Crows, others are white and bright, having their Feathers full of Eyes like Parrots, but of a golden Colour, the Neck black and white, very beautiful, and short for Bignets not unlike ours; a fourth Little, and very fair, intermingled with red and blue Colours, the fifth is grizzle, or grey Colour, having red and black Dots, and these are very large, and near to this City lies a Valley where are many Cottages, in which a great Number of Partridges are maintained, which are kept for the King's coming to lodge there in some Time. The Day Journey North-Eastward, is the City *Camde*, which the Great Khan *Kublaj* now resides in; there is a great and marvellous Palace of Marble, and other Stones, which extends to the Wall on the one Side, and to the Middle of the City on the other. The Inclosure is six Miles wide, and the Circuit of the Wall on that Side, which is the Palace, and the City Wall, into which there can enter but by the Gate. In this Inclosure or Park are pleasant Meadows, springs, Rivers, red and yellow Peet, Lawes, and other things, the Hawks, of which are many, which hunt and kill the *Ger-Falcons*, which he gives once a week to the King, who often catch one Leopard or Lion, and a pair of Horses, with which he hunts the Stag and Deer, and having taken the Leopard, gives it to the *Ger-Falcons*, and is holding this

* The Account of this Mammal is very exact, and contains nothing in it liable to Exception, which I see that when I have lately I have seen was told me, and which tall with the Account of his Understanding, he may very well be understood. I have seen one in the Mountains, and in the Relation of *Fabrigius*. The People in *Europe* were extremely curious to know the Name of this Creature, and they would not give him to be, and therefore when our Author heard that the Name was *Utsi*, he took it, and so it is now called. The Priest *Jab*, but as we have already said that Matter in a clear Light, we shall not trouble the Reader with any more of it.

Spectacle, he takes much Delight. In the midst of a fair Wood he hath built a Royal Houfe on Pillars gilded and varnished, on every one of which is a Dragon all gilt, which winds his Tail about the Pillar, with his Head bearing up the Roof, as also with his Wings displayed on both Sides; the Cover also is of Reeds gilt and varnished, so that the Rain can do it no Injury, the Reeds being three Handfuls thick, and ten Yards long, split from Knot to Knot; the Houfe itself also may be pulled in Pieces, and taken down like a Tent, and erected again; for it is sustained, when it is set up, with two hundred silken Cords. The Great Khan useth to dwell there three Months in the Year, viz. *June, July, and August*. On the twenty-eighth Day of *August* he departeth to make a solemn Sacrifice. He hath an Herd of white Horses and white Mares, about ten thousand, of the Milk whereof none may drink, except he be of the Imperial Race of *Zingis-Khan*, and except one Family called *Horiat*, who had this granted by *Zingis* for their Valour; and these Beasts, as they go up and down feedings, are much revered, nor dare any go before them, or hinder them in their Way.

The Astrologers or Sorcerers tell the Khan, that on the twentieth of the Moon of *August*, he shall disperse that Milk here and there for the Honour of all Spirits, and his Idols, that they may be careful Preservers of all Things which he possesseth. There are two sorts of Idolaters called *Chebetb* and *Cegma*, which in the midst of Storms ascend the Palace, and suffer no Rain to fall thereon, which they make the People believe comes to pass by their Sanctity, and therefore they go slovenly and negligent of their Persons, never washing nor combing themselves. They also have a horrible Custom to dress and eat such as are condemned to Death, but not those which die naturally. They are called *Backsi*, which is the Name of their Order, as Friars Preachers or Minors with us; they seem by Magic to do what they list. When the Great Khan in his Hall sits at his Table, it is raised eight Yards high; and in the midst of the Hall, a good Distance from the Table, is a great Cupboard of Plate, from whence these Sorcerers cause Wine or Milk to fill the Goblets, without any Hand touching them; this they do in the Presence of any Man, whenever their Lord commands it. These *Backsi* also, when they have a mind to make Feasts to their Idols, go to the Khan, and address him thus, "Sir, You are to know that if our Idols be not honoured with Sacrifices, they will bring Plagues upon Corn and Beasts, and therefore we intreat you to give us the Flesh of so many Sheep, with black Heads, and so many Pounds of Incentive, and Lignum Aloes, that we may make them due Sacrifice and Honour." This they speak not to him themselves, but by certain Lords deputed to that Office, who speak to the Khan, and obtain it. On the Feast-day they sacrifice these Beasts, and sprinkle the Earth before the Idols.

They have great Monasteries, some of the Bigness of a City, in several of which are about two thousand Monks, who serve an Idol sequestered from the Laity, as appears by their Shaving and Garments; for they shave their Heads and Beards, and wear a religious Garment. These, in the Solemnities of their Idols, sing with solemn Songs, and Lights, some of them may marry. There are some who observe strict Abstinence, called *Sensin*, leading an austere Life; for they eat nothing but Meat mingled with Water, till all the Flour be gone, and eat the Bran without any Sauce. These worship the Fire; and the Men of other Kingdoms say, that these, which are to austere, are Hereticks against their Law, because they worship not Idols as they do; and there are great Differences between them, and therefore not at all. They shave their Head and Beard, wear black hempen Garments, or of a bright yellow. They

sleep on thick Mats, and live the severest Life in the World. In this Book I purpose to write all the great and marvellous Acts of the present Khan called *Cublai-Khan*, which is, if expressed in our Tongue, Lord of Lords, the greatest Prince in People, Cities, and Treasures, that ever was in the World, he being descended from the Progeny of *Zingis*, the first Prince of the *Tartars*, the sixth Emperor of that Country, beginning to reign in the Year of our Lord 1226, being *twenty-seven Years old*, and ruling the People with great Wisdom and Gravity. He is a valiant Man, exercised in Arms, strong of Body, and of a lofty Mind, for the Performance of Matters before he attained to the Dignity of the Empire, which by his Wisdom he did, against the Will of his Brethren. He often shewed himself a valiant Soldier in the Wars, and carried himself like a wiser and bolder Captain than ever the *Tartars* had; yet since he swayed the Kingdom, he went but once into the Field, and sends his Sons and other Captains on Expeditions.

In the Year of our Lord 1286, his Uncle, whose Name was *Naiam*, being thirty Years of Age, and having the Command of many People and Countries, so that he was able easily to bring together four hundred thousand Horse, being puff'd up through youthful Vanity, would no longer be subject, but would needs take away the Kingdom from his Lord *Cublai*, and sent to another great Lord named *Caydu*, Lord of the Parts towards Great *Turky*, who was Nephew of the Emperor *Cublai*, yet hated him, who yielding to his Motion for Rebellion, promised to come in Person with an hundred thousand Horse.

Both of them began to gather Forces, which could not be done so secretly but *Cublai* heard of it, and presently took order to set Guards on the Ways, that no Intelligence might pass, and then assembled all the Forces, within ten Days Journey of *Cambalu*, with great Speed, so that in twenty Days were gathered together three hundred and sixty thousand Horse, and one hundred thousand Foot, a great Part of them Falconers, and Men of his Household; with these he made Haste Day and Night towards *Naiam's* Country, where, at the End of twenty-five Days he arrived, altogether unlooked for, and rested his Men two Days; then he called his Astrologers, and caused them, before all the Army, to divine who should have Victory; a thing they use to encourage their Men, and they promised it to *Cublai*. One Morning whilst *Naiam* was sleeping negligently in his Tent, having not so much as sent out any Scouts to gain Intelligence, *Cublai* made the Head of his Army upon a Hill, himself sat in a certain Castle of Wood, full of Archers and Cross-bow Men, borne by four Elephants, on the Top whereof was the royal Standard, with the Images of the Sun and Moon. He divided his Army into three Bodies, of which he sent that on the Right-hand, and the other on the Left against *Naiam's* Army. To every ten thousand Horse were assigned five hundred Foot, with Lances, taught to leap up behind the Horsemen, if any Occasion of Flight happened, and suddenly, on Advantage, to light and kill the Enemies Horses with their Lances: *Caydu* was not yet come.

The Battles joined, and made a cruel Fight, which continued from Morning till Noon, and then was *Naiam* taken and brought before *Cublai*, who commanded that he should be sewed betwixt two Carpets, which should be tossed up and down till the Breath was out of his Body, that so the Imperial Blood might not be exposed to the Sun or to the Air. The Remainder of his People swore Obedience to *Cublai*, which were four Nations, *Ciazza*, *Carli*, *Barscol*, and *Sitingui*. *Naiam* was secretly baptized, and by Profession a Christian, but no Follower of the Works of Faith, yet he signed his principal Ensign with the

The Year of this Emperor's Age, at the Time of his Accession, is put in a different Character, because none of the MSS. have it at all, and the Author in several of the printed Editions; we cannot therefore fairly charge the Author with the Mistake in it, which consists of ten Years, the Prince at the Time of his Accession being thirty-seven Years old, or rather in the thirty-eighth Year of his Age. There seems also to be a Mistake in the Year of his Reign, but that is easily corrected, since, as that Prince was raised to the Imperial Dignity in the Month of *January*, the *Mo*, who reckons according to the *Tartar* Year, places it in 1226, whereas we, computing from the beginning of the Month of *January*, choose it 1227. The genealogical History of the *Tartars* informs us of the breaking out of a civil War upon the Election of this Emperor; and therefore it is somewhat of a different Account of the Conclusion of it, in which our Author might be easily mistaken, since he owns what he deduced from the *Tartar* History. However, the Exactness as to Dates is truly wonderful, since in the Compass of one hundred Years after these Transactions published, we had no authentic History of the *Tartars* in Europe, and consequently neither *Marco Polo*, nor his Editors, could have any opportunity to correct their Account, so as to make them correspond with the genealogical History before-mentioned. This Remark is the Property of our Author's Veracity, and of the Value of his Work.

Sign of the Cross, having with him infinite Numbers of Christians, who were all slain.

The *Jews* and *Saracens* that were in the Army of *Cublai*, began to upbraid the Christians with this Disaffection of the Cross, who complained of it to *Cublai*; he sharply reprov'd the *Jews* and *Saracens* for this Behaviour, and then turning to the Christians, he said, "Surely, your God and his Cross would not give any Aid to *Naram*; but be not you therefore ashamed, because God being good and just ought not to defend Injustice or Iniquity. " *Naram* was a Traitor to his Lord, and contrary to all Equity rais'd Rebellion, and sought the Help of your God in his mischievous Purposes; but he, as a good and upright God, would not favour his Designs."

He returned after this with great Triumph to *Gambalu*, and staid there till *Easter*. On that Day he called the Christians before him, and killed their Gospels, and made his Barons do the same. He does the like on the great Feasts of the *Saracens*, *Jews*, and *Heathens*, that *Sege-mimber-Khan*, the God of the Idols, *Mokammel*, *Moses*, or who ever is great in Heaven, might help him; yet he made best show of liking to the Christian Faith, but pretended the Ignorance of the *Negherian* Priests, and the mighty Acts of the Sorcerers, hindered his professing it.

For the better rewarding his Soldiers he kept twelve Barons or Counsellors, who gave him Notice of each Captain's Merits; and accordingly he rais'd them from the command of one hundred to a thousand, and from one thousand to ten thousand, and to on, giving them Vessels of Plate and Tablets. The Captain of one hundred hath a Tablet of Silver; and the Captain of a thousand, of Gold or Silver gilded; the Captain of ten thousand has a Tablet of Gold, and a Lyon's Head on it. The Weight of the Tablets differs also according to the Dignity. On the said Tablet is written a Command in this Manner: "By the Strength and Power of the Great God, and by the Grace which he hath given to our Empire, the Name of Khan be blessed, and let them all die and be destroyed which will not obey him." All Officers who have these Tablets have Privileges in Writing of all things, which they are to do and demand; and the Generals when they ride in publick, have a Cloth borne over their Heads, and when they sit, it is on a Chair of Silver. Their Tablet is of three hundred Sagi, which is equal to fifty Ounces of Gold, with the Image of the Sun and Moon; such as have a Tablet with a Ger-Falcon thereon, may take with them for their Guard the whole Army of a great Commander. *Cublai* is a comely handsome Man, of middle Stature, of a very fresh Complexion, black and bright Eyes, well-furnished Nose, and all the Lincaments of his Body consisting of due Proportion. He has four Wives, who are esteemed lawful, and the first born of them is to succeed him in the Kingdom, and every one of them is call'd Empress, and holdeth a peculiar Court, and that in a magnificent Palace, having about three hundred Women to attend her, and many Eunuchs Servants, and at least ten thousand Persons in their Families.

The Grand Khan hath also many Concubines. There is likewise a Nation of war People among the *Yartars* call'd *Virguts*, where every second Year he sends Embassadors to make search for the fairest young Women for him; who returning, bring him four or five hundred more or less, as they see Cause. There are Examiners appointed to take a View of all their Beauties, examining Eyes, Nose, Mouth, &c. apart, and set a Price on them at sixteen, seventeen, eighteen, nineteen, twenty, or more Carats, and they bring those of that Rate which their Commission appoints; these he causes to be received by other Examiners, and of so many perhaps chooses thirty of the chief for his Chamber, which he puts to some of his Barons Wives to see if they find not in their Sleep, if in Smell or Behaviour they be not offensive; those which are approved are by Fives divided, each fifth Part waiting three Days and Nights in his Chamber by cottle, the other in the next Lodgings pre-

paring whatsoever these command them. The less prized are put to Cookery and other Offices; and sometimes the Khan bestows them on Gentlemen, with great Portion. The Men of that Country esteem it a Grace and Credit to have Daughters worthy his Liking; and think themselves born under an ill Planet if they are not kept when sent to Court.

Cublai had two-and-twenty Sons by his four legitimate Wives, and the first-born of his first Wife was call'd *Zingis*, who would have succeeded him in the Empire if he had not died before his Father. He left a Son named *Timur*, a valiant Man, wise, and experienced in Arms, who is to succeed his Grandfather in the Empire, instead of his deceased Father; but by his Concubines he hath five-and-twenty Sons, all which are daily exercised in Acts of Arms, and are great Lords; seven of his Sons by his Wives are Kings of great Provinces, and maintain their States with great Reputation.

16. Three Months of the Year, that is, *December*, *January*, and *February*, *Cublai* resides ordinarily in *Gambalu*, which is at the North-East Corner of *Catboy*; and there, on the South Part by the new City, is seated a great Palace; first there is a great Wall, each Square being eight Miles, with a deep Ditch environing, and a Gate in the Middle of each; after which is the Space of a Mile in Circuit, where Soldiers stand; after this is another Court of six Miles square, with three Gates on the South-square, and three on the North; that which is in the middle being in both the greater, and kept shut, except when the Khan passes that Way; the other is always open to others; in each Corner of this Wall, and in the middle is a fair Palace, eight in all, very large, in which are kept the Khan's Ammunition, and Furniture of all Sorts; Horses in one; in another Boxes and Shooting Artillery; in a third, Carrels, Carriages, and Leather Armour; and so in the rest.

Within this Circuit is another Walk like the former, very thick and ten Paces high, all the Bartlements white, the Walk square, each Square a Mile in Length, with six Gates the former, and eight Palaces also very large, which are the Khan's Provisions; between these two last Walks are also many fair Trees and Meadows, in which are Deer with other Game, and Store of Grains, the Fields being raised two Cubits to spare it; no Ditch or Pools of Water being therein. Within this last Wall is the Palace of the Great Khan, the greatest that hath been seen, standing to the Wall on the North and South, and open with the Barons and Soldiers pass. It hath no Ceiling, but a very high Roof; the Foundation of the Pavement ten Palms high, with a Wall of Marble round about it two Paces wide, as it were a Walk. At the End of the Wall without, is a fair Turret with Pillars. In the Walls of the Hills and Chambers are carved Dragons, Soldiers, Birds, Balls of divers kinds, Histories of Wars gilded; the Roof is so made that nothing is seen but Gold and Imagery; in every Square of the Palace is a great Hall, capable of holding a Multitude of People; the Chambers are disposed the best that may be devised; The Roof is red, green, azure, and of all Colours. Behind the Palace are great Rooms and private Store-houses for his Treasure and Jewels, for his Women, and other private Purposes.

Over-against the said Palace of the Khan is another for *Zingis* his Son, whose Court was in all Things like his Father's. Near this Palace towards the North is a Mount made by Hand, a Mile in Compass, one hundred Paces high, adorned with Trees that are always green, and this Mountain the King commands all the Trees to be brought from remote Parts, lading Elephants with them, for they are taken up with the Roots, and are transplanted in this Mountain; and because this Mountain is always green, it is call'd the *Green Mountain*. And where the East of the Mount was taken away, are two Lakes or winding ditches, other, with a small River supplying them with fresh Fish, and so grated that the Fish cannot get out.

* There have been large Dissertations written upon this Description of our Author, and great Disputes about the City here described, which will have it one Place, some another, because it is a Tartar Appellation; and modern Writers speak of this City by another Name. We cannot either Time or Room to write in this Controversy; and therefore we shall cut it short. *Maria Pava* wrote by the last name, and therefore set down *Gambalu* for *Khan Kalik*, i. e. the Imperial City; and it is allowed, that *Khan Kalik*, is the City of *Peking*, the present Metropolis of China, of which we shall hereafter have Occasion to speak at large in another Place; and shall therein take an Opportunity of giving the true account given us in the Text by *Maria Pava*.

The City of *Cambalu* in the Province of *Catbay*, seated on a great River, was famous, and the Royal Seat in ancient Times; and this Name *Cambalu* signifies the City of the Lord or Prince. This City the Great Khan removed to the other Side of the River where the Palaces are, for he understood by the Astrologers that it would rebel against the Empire. This new-built City is called *Taidu*, and he commanded all the *Catboians* to go out of the Old City into the New; which contains in Compass four-and-twenty Miles, every Side of the Square containing six Miles. It hath Walls of Earth ten Paces thick at the Bottom, and at the Top but three, as growing by little and little thinner. The Battlements are white; every Square of the Wall hath three principal Gates, which are twelve in all, having sumptuous Palaces built over them. There are also certain Pavilions in the Angles of the Walls where the Arms of the Garrison, which are one thousand at each Gate, are kept. The Buildings are iquered, and the Streets laid very straight by Line throughout the City; so that from one Gate a free Prospect opens throughout the City to the opposite Gate; having very stately Houses built on both Sides like Palaces, with Gardens and Courts, divided according to the Heads of Families: In the midst of the City is a certain noble Building, wherein hangeth a very great Bell; after the tolling whereof in the Night, no Man must go out of his House until the Beginning of the Day following, except it be for some extraordinary Cause, as for a Woman in Travail, and then they are compelled to carry Lights with them.

Without the City of *Cambalu* are twelve large Suburbs three or four Miles long, adjoining to each of the twelve Gates, more inhabiting in the Suburbs than in the City; here Merchants and Strangers live, each Nation having several Store-houses, or Buries, in which they lodge. No dead Corpse of any Man is burned within this City, but the Bodies of Idolaters are burned without the Suburbs, where the dead Bodies of other Sects are buried; and because an huge Multitude of *Saracens* inhabit there they have above twenty-five thousand Harlots in the Suburbs and in the City; and these have a chief Captain appointed over every hundred and thousand, and one General, whose Office is, that when Embassadors come, or such as have Business with the Khan, whose Charges he defrays, then this Captain giveth every Embassador, and every Man of his Family, a Change of Women every Night at Free cost, for this is their Tribute. The Guards, every Night, carry such to Prison whom they find walking late; and if they be found guilty, they are beaten with Cudgels, for the *Saracens* tell them, that it is not good to shed Man's Blood; but many die of these Beatings. The Great Khan hath in his Court twelve thousand Horse-men, which they call *Castans*, faithful Soldiers of their Lord, who guard his Person, more for State than Fear; and four Captains have the Charge of these, whereof every one commandeth three thousand. When one Captain, with three thousand Soldiers within the Palace, hath guarded the King for three Days and Nights, another Captain with his Soldiers succeeds; and so, throughout the Year, this Course of watching by Turns is observed.

When on account of any festival Day he keeps a Chamber Court, his Table, which is higher than the rest of the Tables, is set at the North Part of the Hall, his Face is to the South, having the first Queen on his Left-hand, that is, his principal Wife; and his Sons and Nephews, and those of the Royal Blood, on his Right; yet his Table is in a lower Place, so that they scarce touch the King's Feet with their Heads, the Seat of the eldest being higher than the rest; the Princes sit in a lower Place than that; their Wives also observe the like Order: First, the Khan's Sons Wives and his Kinmen sit lower on the Left-hand, and after those of the Lords, and of every Captain and Nobleman, each in their Degree

and Order; and the Emperor himself, while he sits at his Table, may cast his Eyes upon all that seat with him in that Hall. There are not Tables for them all to sit; but the greatest Part of the Soldiers and Barons eat on Carpets. At all the Doors stand two gigantick Fellows with Cudgels, to see that none touch the Threshold, which, if he does, they take his Garments away, which he must redeem by receiving so many Blows as shall be appointed, or else lose them. They who serve the King, and those sitting at the Table, all of them cover their Mouths with Silk, lest their breathing should by any means touch the King's Meat or Drink: And when he hath a Mind to drink, the Damsel who giveth it goes back three Paces and kneels down, and then the Barons and all the People kneel, and the Musicians sound their Instruments. There is no Cause, since I would avoid Prolixity, why I should write any thing concerning the Meats which are brought to the Table, how dainty and delicate they are, and with what Magnificence and Pomp they are served in.

All the *Tartars* observe this Custom, to celebrate the Birth-day of their Lord most honourably. The Birth-day of *Cublai* is kept the twenty-eighth of *September*, and this Day he accounteth more solemn than any in the whole Year, except the first of *February*, on which they begin the Year. The King therefore, on his Birth-day, is clothed in a most precious Garment of Gold, and about two thousand Barons and Soldiers are clothed in the same Colour of Gold, though of Silk Stuff and a Girdle wrought in Gold and Silver, which is given them; with a Pair of Shoes. Some wear Pearls and Garments of great Price, who are next to the Khan; and these Garments are not worn but on thirteen solemn Feasts, according to the thirteen Moons of the Year; all are then clothed like Kings. This Custom is also observed by the *Tartars*, that on the Birth-day of the Great Khan, all the Kings, Princes, and Nobles, who are subject to his Dominions, should send Presents unto him, as to their Emperor; and they who desire to attain any Place of Dignity or Office of him, offer their Petitions unto twelve Barons appointed for that Purpose; and what they decree is all one as if the Emperor himself had answered them. All People also, of what Faith or Sect soever, whether *Christians* or *Jews*, *Saracens* or *Tartars*, and *Pagans*, are bound solemnly to call upon their Gods, for the Life, Safety, and Prosperity of the Great Khan.

On the First of *February*, which is the Beginning of the *Tartar* Year, the Great Khan, and all the *Tartars*, wherefoever they are, celebrate a very solemn Feast, and all, as well Men as Women, desire to be clothed in white Garments as a Token of good Luck; therefore, that Fortune may favour them all the Year, they wear white at the Beginning thereof. The Rulers of Cities, and Governors of Provinces, mindful of their Duty, send unto their Emperor this Day Presents of Gold and Silver, Pearls and precious Stones, many white Cloths, and other white Things, and many Horses of a white Colour. The rest of the *Tartars*, at the Beginning of the Year, send white Presents one to another. It is the Custom of those who bring Presents, if they can, of each to present nine Times nine; as, if they send Horses, to present nine Nines, that is eighty-one; and so of Gold, or Cloths, and other Things; that sometimes he hath, by this reckoning, one hundred thousand Horses. Also, at this happy Season, all the Elephants which the Emperor hath (five thousand in Number) are brought unto the Court, covered with Tapettry, the Similitudes of divers Beasts and Fowls being portrayed thereon, carrying upon their Shoulders Chests full of Gold and Silver Vessels; many Camels are also brought, covered with fine silken Cloths, which bring other Things necessary for the Court.

* This Method of posting Guards and relieving them, was extremely ancient in the East, as appears from the Account given us by the *Greek* Writers of the Oeconomy in this respect of the *Persian* Emperors; and it is still practised by almost all the *Tartar* Princes, and particularly, by the Great Mogul, as we shall have Occasion to show in the second Volume.

† This Account agrees exactly with what is related from Authors of good Credit in Dr. *Hurd's* most learned Treatise of the Religion of the ancient *Persians*, with respect to the Ceremonies observed on the Birth day of the Emperor, and at the Beginning of the new Year. Indeed the Conformity is so great, that one might be tempted to believe there is a nearer Relation between the *Tartars* and the ancient *Persians* than is commonly imagined; and I must confess, that I cannot, for my own Part, help thinking that the Religion of the *Tartars* is very nearly the same with that of the old *Persians*; that is to say, I apprehend the *Lamas* of the one correspond with the *Magi* among the others.

On this Day, in the Morning, all the King's Captains, Barons, Soldiers, Physicians, Astrologers, and Governors of Provinces and Armies, and other Officers of the Empire, assemble in the great Hall before the King, and they who happen to have no Place there, for the Multitude stand in another Place, where they may see them, all being placed in their Order and Degree. One fifth, who is amongst their Clergy as a Prelate, and crieth with a loud Voice, *bow down and adore*, and presently all do Reverence, bending down their Foreheads to the Earth; then he saith, *God preserve our Lord with long Life and Joy*; and all answer, *God grant*; then he saith, *God increase and advance his Empire, and preserve his Subjects in Peace, Concord, and Prosperity*; and all answer, *God grant*; and thus they do four Times; then the Adoration being finished, the same Prelate goes to an Altar, richly adorned, on which is a red Table, whereon is written the Name of the Khan; and taking a Censer, and putting Spices therein, they perfume the Table and the Altar with great Reverence, in Honour of the Great Khan, and return to their Places; after which are offered the Gifts of which we have spoken; and then the Tables are prepared, and a most solemn Dinner held, eating and drinking with great Joy with their Wives, in manner before described. And lastly a tame Lion is brought to the King, which lying at his Feet like a gentle Whelp, acknowledgeth and caresses his Lord.

In those three Months in which we sail before the Emperor resides in the City of *Cambalu*, viz. in *December*, *January*, and *February*, all the Hunters which the Emperor hath in all his Provinces round about the Province of *Cathay*, apply themselves to hunting, and bring all the larger wild Beasts, such as Stags, Bears, Roe-Bucks, Wild Boars, and Deer, to their Governors; who if they be distant from the Emperor's Court less than thirty Days Journey, send such Beasts as are taken by Waggon or Ships to the Emperor; having first bowled them: But such as are forty Days distant from his Court, send only the Skins, which are necessary for making of Armour. He hath many Leopards and Wolves for hunting, and many Lions also greater than those which are in *Calicut*, in the Har whereof certain little Beasts appear of divers Colours, viz. white, Black, and Red, and they are bred to catch Bears, Boars, Stags, Roe-bucks, wild Asses, and wild Oxen, and it is marvelous to see the Lion's fierceness and Dexterity in the Sport of Hunting; two Lions are commonly carried on one Waggon when they go to hunt, and with them a Dog, with which they are tamed; and they carry the skins in their Paws, because of their Fury and Unruliness; and they must carry them contrary to the Wind, for else the Beasts would tear the hand free. He hath also many tame Leopards, which are so taught, that they take Hares, Roe-Bucks, Deer, and Foxes; and so, which some of them tear not to pieces, and Wolves, and vex them to grievously, that without Labour and Danger they may be taken by them.

The Khan hath in his Court two which are Brethren, one called *Lapan*, the other *Mingon*; called in the *Tartar* Language *Guers*, that is, Masters of the Game; each of them hath the Command of ten thousand Men: They which are under one of them are clothed in Red; the others in Sky Colour; when they hunt, these keep diverse Sorts of Dogs, to the Number of five thousand Mallards and others. In hunting they go with their People one on the Right-hand, and the other on the Left; and the King and they take up so great a Length of the Plain, that from one End to the other is a Day's Journey, so that no Beast can escape them; and it is great Pleasure when the Khan goes in the hunt, to see the Dogs follow Hares, Bears, and all other wild Beasts. These Brethren are bound by Covenant from the Beginning of *October* to the End of *March* to bring to the Court our plentiful Herd of Beasts and Birds, be they Quails and Ithies, the best they can, in such Proportion.

The Month of *March* coming in the Great Khan departeth from the City of *Cambalu*, and proceeds northward towards the Ocean, distant thence two Days Journey, bringing with him about ten thousand Falconers, who have Falcons, Hawks, Ger-Falcons, and other kind of Fowls of Prey, fit for Hawking. These Falcons discipline themselves by an hundred or two hundred in a Company, and the Birds that are taken for the most Part are brought unto the King, who by reason of his Court, fitteth a wooden Houfe, which two Elephants carry, covered with a Skins of Lions, and was hung with Cloth of Gold, being with him for his Recreation twelve choice Part and twelve Courtiers; many Noolmen also, who are they who guard the King's Person, who was they that are Falcons or Cranes, or other Birds flying in the Air, prey to the Falconers, who are in the King's Court, they send the same unto the King, and never take the King's, and let their Falcons and Hawks fly, as the King's, sitting on his Bed beholds the Patterns of the Birds. One or two thousand Men go also with the King, some of the Hawks run hither and thither by two or three hundred together the Falcon and Hawks fly, as the King's, that if it need be they may help them, and the *Tartar* Language are called *Jeje*, that is to say, Watchmen, or Marksmen, being Part of a certain kind of White, wherewith they call to the Hawk, that it should, for it is meant that the Falconer, who is the Hawks, should follow them, seeing those of whom I know, when they are employed in taking up the Hawks, and the Hawk that by no means they are lust or lull; and every flying Hawk carrieth a little Table of Silver on her Foot, thereon the Mark of her Master, or Falconer, that if she be all she may be referred to her Owner.

But if the Mark cannot be known the Hawk is delivered to a certain Baron, who for this Cause is called *Es-langazi*, to whom are brought all lost Things, and whose Finder would be punished as a Thief, and to him must return to require of Things lost. He hath a particular Place noted by his Name, that is to say, in which of his People he may always be known. When they are employed in Sporting and Hawking they come into a certain great Plain called *Carzarmain*, where the Emperor King, and all the Courtiers are present, as usual in such a manner.

The Hall is the Khan's Pavilion, in which were a thousand Soldiers stand, and the Pavilion is a square, with the four to the South, and a square Pavilion, which is a square, with the four to the North, and a square Pavilion, which is a square, with the four to the East, and a square Pavilion, which is a square, with the four to the West, and a square Pavilion, which is a square, with the four to the South, and a square Pavilion, which is a square, with the four to the North, and a square Pavilion, which is a square, with the four to the East, and a square Pavilion, which is a square, with the four to the West. These Pavilions are supported by a Square, and other Pavilions erected, where the Wives, Sons, and other Cubines of the King remain. Further east the Hawks, Falcons, and other Birds, which are taken by Hawking, have the Tents, but there is a great multitude of Tents, that to them that come to hunt, and at a Distance as if a famous City was set out there.

The King remains all *March* in that place, and takes innumerable Beasts, and infinite Multitudes of Fowls, so that Man may in this time hunt in all the Provinces of *Cathay*, at the least within five Days Journey of *Ways*, to another, and fifteen a third Way, of the King's Court, nor keep an hunting Dog, or a Hawk, from the Beginning of *March* until the Month of *October*. No Man is permitted to use any Device of Fowls, whether it be Stags, Deer, Roe-Bucks, or Hares, or any other of their Breed; and hence it is, that there is no other Game. It is incredible what Multitudes of People, Men

I have not time to remember the Names of the Pavilions, but the Author confirms what we have before said, that the Pavilion of the King is a square, with the four to the South, and a square Pavilion, which is a square, with the four to the North, and a square Pavilion, which is a square, with the four to the East, and a square Pavilion, which is a square, with the four to the West. These Pavilions are supported by a Square, and other Pavilions erected, where the Wives, Sons, and other Cubines of the King remain. Further east the Hawks, Falcons, and other Birds, which are taken by Hawking, have the Tents, but there is a great multitude of Tents, that to them that come to hunt, and at a Distance as if a famous City was set out there.

because that though they have plenty of Wood, yet is there such frequent Use of Stones and Laths, that the Wood would not serve.

It is not amiss, having spoken of his Provision abroad, to mention his Care for the Poor of *Cambala*. When he hears of any honourable Family decayed by Misfortune, or of any which cannot work, and have no Subsistence, he gives to such Families the whole Year's Expences, each Head of such Families going to the Officer for that Purpose, and shewing their Bill of Allowance, receive Provisions accordingly. There is a Place set apart for those Officers; they are provided also with Garments for Winter and for Summer. The *Khan* having the Tenths of all Wool, Silk, and Herap, which he causes to be made into Cloaths, in a Houie for that Purpose appointed; for all Trades are bound one Day in the Week to work for him. He provides also Apparel for his Amites, and in every City causes Cloth to be made of his Tythe Wool. You must understand, that the *Tartars*, according to their ancient Customs, bestowed no Alms, but rather upbraided those that were in Necessity, as hated of God; but the Idolaters, especially those *Bachis*, have propounded it as a good Work acceptable unto God, and have taught him to be thus bountiful; so that in his Court, Bread is never denied to any who ask it, and there is no Day in which are not given away twenty thousand Crowns in Rice, Millet, and Panike; whence he is esteemed as a God by his Subjects.

There are in *Cambala*, *Christians*, *Saravens*, and *Catayans*, about five thousand Astrologers and Diviners, which the Great *Khan* provideth yearly in Food and Raiment, as he doth those Poor above said. These have an Astro-labe, in which are marked the Signs of the Planets, the Hours and Points of all the Year. Herein all those Astrologers, each Religion apart, view the Course of the Year according to every Moon, observing the Disposition of the Weather, referring always to God to do none or less after his own Pleasure. They write also upon certain Squares they call *Tacuin*, the Things which are to come that Year, which they sell to those that will buy them, and such as speak most Truth are most honoured. If any intend any great Work, or to go a far Journey, and will know the Event beforehand, he has recourse to these Astrologers, to see it with their Eyes in the Heavens, which they pretend to do, comparing the present Constellation with that of his Birth, which they demand of him; so foretelling him the Good or Evil. The *Tartars* reckon the Computation of their Years by Twelve, the first signified by a Lion, the second by an Ox, the third by a Dragon, the fourth by a Dog, and so through the whole Twelve; so that if it be demanded of a Man when he was born, he will answer, such a Point of such an Hour of such a Day, in the Year Lion. Thus their Fathers exactly set down in a Book, and when the Twelve is complete, they go over the same again.

Of their Religion, we have said, that they are Idolaters, and for their Gods, have a Table set aloft in the Wall of their Chamber, on which is written a Name representing the High God of Heaven, and there every Day with a Ceremony of Devotion they adore it in this Manner; they sit up their Hands aloft, and strike their Teeth three, praying it to give them a good Understanding and Health, and receive thereof nothing else. Besides, on the Ground they have another Statue called *Natagan*, the God of earthly Things, with his Wife and Children, whom likewise they worship with License, striking or gnawing the Feet, and stamping upon their Hands; and desire thereof Temperature of the Air, Fruits of the Earth, Children, and the like. They hold the Soul to be immortal, and that when a Man dies, it enters into another Body, better or worse, according to the Merits of the former Life; as of a poor Man to become a Gentleman, and after a Prince or Lord, and to last, till it be absorbed in God; and if it

have ill deserved, to be a poorer Man, after a Dog, always descending to the lowest Rank of Business. They have a solemn Speech, salute cheerfully and honestly, have a graceful Carriage, and feed cleanly. They bear great Reverence to their Parents, and if any be unobedient, or regardless of that Necessity, there is a publick Tatouage assigned for this Particular to punish ungrateful or disobedient Children: Prisoners are released at three Years End, and marked in the Cheek, that they may be known the Malefactors.

The Barons and People which go to the Grand *Khan*, observe these Rights, first, within half a Mile of the Place where the *Khan* is, 'tis still and quiet, without Noise or any loud Speech; that every Baron can continually a little Vessel to spit in, after which he says, none daing to spit in the Hall: They have for walking of white Leather, which they put on when they enter the Hall, putting off the former, and giving them to their servants, lest they should foul the Carpets.

18. Ten Miles off *Cambala* is a certain great River named *Pulifangan*, emptying itself into the Ocean, by which many Ships with much Merchandise are sent; and in that Place there is a very fair Bridge, all of wrought Stone, curiously wrought, containing three hundred Paces in Length, and eight in Breadth, so broad that ten Men may ride abreast; on each Side, it is secured with a Wall of Marble, and Pillars set in a Row, and in the Height of this Arcent is a great and high Pillar, at the Foot whereof is a great Lion, and on the Top another, and to quite through the Bridge: One Pace and a half Distance are Pillars with Lions on the Top, and a far Way with wrought marble Work betwixt, to keep Men from falling. Having passed over the River and Bridge, and proceeding thirty Miles westward (in which Places are continually seen, with Vineyards and terraced Fields you come to the City *Guzer*, both fair and great, having many Monasteries of Idols. Cloth of Gold and Silk are made there, and the purple and finest Cambricks or Lawns, and many common Inns for Strangers or Travellers are used in that City. The Citizens are Architects at *Mongay*, A Mile without this City the Way parting one way West, the other South-East; that to the West leads through the Province of *Cashy*, but the other way the Country of *Mungy*, from the City of *Guzer* to the Kingdom of *Tamju*.

You ride ten Days through *Cashy*, which has many fair Cities, well furnished with Vineyards, and good Fields, from whence Wine is carried to *Cashy*; where there is none: There are many Monasteries of Serpents, the People civil, and Cities very populous. *Tamju* is the Name of the Kingdom, and the chief City, which is great and fair, situated in a plain with Store of Ammunition fit for the whole Army. The Wine about this City travels the whole Province Seven Days further westward is a level Road, beset with many Cattles and Oxen, and is a very great Trade in different Merchandise carried to it, which you come to a City very great, named *Phanzu*, which there is still abundance of Silk and Wool, and Westward from *Phanzu* flows a very pleasant River called *Phagan*, anciently built by a King called *Phagan*, the spacious Palace, where is a fine Hall, where is painted all the famous Kings which ever reigned, and it is a fair Spectacle. Of his Kingdom, he was potent, and was attended only by one Prince of which he had many in his court. He was so wise, that he had a Mind to take his Pleasure, carried in a light Chariot through the City, which was his Art and Nature, that the Governor that ruled him, did not *Uman* his Lord, against whom he had a grudge.

But seven Men, profiting in Art, they had taken, took him at a Disadvantage in his chariot.

The Tartarian Cycle was a very good Contrivance, and is to be seen not only preserved amongst them, but also in the Chinese, who in all their Books have the same explanation of it; and it was taken from the Persian Nations of *Indus*, who in their Books have the same explanation of it. It is not to be wondered, that the Description of this Cycle is so exact, since it is so common in the Persian Books, and that the Author of this Description, who was a Persian, had the opportunity of seeing it. It is not to be wondered, that the Author of this Description, who was a Persian, had the opportunity of seeing it. It is not to be wondered, that the Author of this Description, who was a Persian, had the opportunity of seeing it.

Prisoner to Presbyter *John*, or *Uncan*, who put him on
with Cloaths, and appointed him to keep his Cattle, and set
ever him a strong Guard, till two Years were ended; af-
ter which he commanded him to be brought before him,
and being dressed in princely Apparel, he giving him his
Parole, after a sharp Admonition, sent him well attended to
the Repossession of his Kingdom. About twenty Miles
beyond the Cattle *Taigin* is the River *Caramaran*, which
is the reason of the exceeding Breadth and Depth thereof,
hath no Bridge over it in all the Space from thence, till it
floweth to the Ocean. On the Shore thereof are many
Cities and Castles built, wherein great Trade is carried on.
This Country abounds with Ginger, Silk, and Fowl, ef-
pecially Pheasants, so that three of them are bought for a
Indian Goat. There grow Reeds in vast Plenty, so
that some are a Foot, and others a Foot and a
half in Compass, which are applied to many Uses. Pass-
ing this River, after two Days Journey, is the famous
City called *Carianfu*, where many Cloths of Gold and
Silver are made. Here grow Ginger, Galingale Spike,
and many spices. The People are Idolaters.

Proceeding seven Days Journey westward, many Cities
and Towns, lovely Fields and Gardens are found, and every
where Mulberries for Silk-worms. As for the People, they
are mostly Idolaters; but there are also *Christians*, *Turks*,
Negrians, and some *Saracens*. There is a vast Abundance
of wild Beasts and Fowl. If you proceed seven Days
Journey farther, you shall come to a certain great City, nam-
ed *Quansu*, which is the chief City of the Kingdom, in
which have reigned many famous Kings; and, at this Day,
the Son of the Great Khan, called *Mangala*, hath the Com-
mand thereof. That Country yields great Plenty of Silk,
Gold, and all other Things necessary for furnish-
ing an Army, and for the Preservation of Man's Life.
The Inhabitants worship Idols, and there are some *Christi-
an*, *Turks*, and *Saracens*. Five Miles without this City
stand the Palace of *Mangala*, seated in a Plain, where
are many Springs, Rivolets, and Places of Game. There
is a high Wall encompassing a Park of five Miles, where
are sorts of wild Beasts and Fowls. In the midst is an
imperial Palace, having many Halls and Chambers, great
part of it painted with Gold and Azure, and numberless
Rooms adjoining it. The King, with his Counters, delights
himself in hunting the wild Beasts, and taking of Fowl,
following his Father's Examples in Justice and Equity,
much beloved of his People.

Proceeding three Days Journey westward from the said
City, through a very beautiful Plain, where many Cities
and Castles are, which abound with silk Merchandize and
Mulberries, you come to a Country, where in the Moun-
tains and Vallies are frequent Habitations, and many Vil-
lages of the Province of *Cekian*. The Inhabitants, as to
Religion, are Idolaters; and as to Employment, Hut-
ting. Also in that Country they hunt Lions, Bears,
Tigers, Roe-bucks, Deer, and Wolves. The Plain is two
Days Journey over, and the Country is about twenty
Days Journey westward, well inhabited, being finely di-
vided into Mountains, Vallies, and Woods. After
twenty Days, towards the West, there lies a Province
called *Abaluch Mingi*, that is, the *White City*, on the
River of *Mang*, which is well peopled. This Province,
after two Days Journey, hath a Plain, in which are an infi-
nite Number of Villages; Beyond these lie Mountains,
Hills, and Woods, all well inhabited. It hath Plenty of
Beasts, and of those creatures that yield Mulk. In
this Province Ginger grows in great Plenty, as also Corn
and Rice.

After twenty Days Journey through those Hills is a
Province in the Confines of *Mangi*, named
Pa. The chief City hath the same Name, and is very
rich, exceeding rich, being twenty Miles in Circum-
ference, and hath many rich and mighty Kings; but an old
King, left three Sons Successors in the Kingdom,
and divided the City into three Parts, compassing every
Part with their proper Walls, all which, notwithstanding,
are contained within the former Wall; but the Great
King inhabited nevertheless that City and Kingdom.
This City hath many Rivers, and many Places round
about, but a Mile over, some two hundred Paces,

very deep; on them are many Bridges of Stone, very fair,
eight Paces broad, set on both Sides with Marble Pillars,
which bear up a Timber Frame that covers the Bridge,
each Bridge having Streets and Shops thereupon. When
the Rivers have passed through the City, they become one
great River, called *Quian*, which runs one hundred Days
Journey hence to the Ocean. Near these Rivers are many
Cities and Castles, and on them innumerable Ships for
Merchandize. Proceeding four Days Journey farther,
thru' a very fine Plain, many Cities, Castles, and Villages are
found, in which five Lawns extend in beautiful Order.
There are also many Wild Beasts there. Beyond the Plain,
which we have now mentioned, is the wide Province of
Thebet, which the Great Khan vanquished and wasted; for
in it lie many Cities destroyed, and Castles overthrown, by
the Space of twenty Days Journey; and because it is be-
come a Wilderness, wanting Inhabitants, wild Beasts and
Lions are there increased excessively, and it is requisite
therefore that Travellers carry Victuals with them. Very
large Cane grows in this Country, ten Paces in Length,
and three Palms in Thickness, and as much from Knot
to Knot. When Travellers therefore will rest at Night secure
from Beasts, they take great Bundles of the greener Reeds,
and putting Fire under, kindle them, which make such a
Crackling, and so great a Noise, that it may be heard two
Miles off; which terrible Sound the Wild Beasts hearing,
flee away, but it has sometimes happened, that Lions and
other Beasts, which Merchants use for their Journey, hear-
ing this Noise, and Cracking, have grown too much
afraid, and betaking themselves to Flight have escaped
from their Masters; and therefore wiser Travellers binding
their Feet together, detain them in their proper Places.

19. These twenty Days Journey ended, having passed
over the Province of *Thebet*, we met with Cities, and
many Villages, in which, through the Blindness of Idola-
try, a wicked Custom is used; for no Man there marryeth
a Wife that is a Virgin; whereupon, when Travellers and
Strangers, coming from other Places, pass through this
Country, and pitch their Pavilions, the Women of that
Place having marriageable Daughters, bring them unto
Strangers, desiring them to take them, and enjoy their
Company as long as they remain there. Thus the hand-
somest are chosen, and the rest return home sorrowful, and
when they depart, they are not suffered to carry any away
with them, but faithfully restore them to their Parents.
The Maiden also requireth some Toy, or small Present, of
him who hath deflowered her, which she may shew, as an
Argument and Proof of her Condition; and she that hath
been loved and abused of most Men, and shall have many
such Favours and Toys to shew to her Wooers, is accounted
more noble, and may on that Account be advantageously mar-
ried; and when she would appear most honourably dressed,
she hangs all her Lover's Favours about her Neck, and
the more acceptable she was to many, so much the more
Honour she receives from her Countrymen. But when they
are once married, they are no more suffered to converse
with strange Men, and the Men of this Country are very
cautious never to offend one another in this Matter. They
are Idolaters, and cruel, thinking it no Sin if they rob and
exercise Theft. They live by Hunting and the Fruits of
the Earth: Many Beasts also are found with them, yielding
Mulk, called in this Country *Gadderi*. They have a
Language of their own, and have no Money, not so much
as the Paper-Money of the Khan, but use Corals for Mo-
ney, and are clothed with the Skin of Beasts, or coarse
Hemp. This Country belongs to the Province of *Thebet*,
for *Thebet* is a very large Province, and has been some time
divided into eight Kingdoms, having many Cities and
Towns, with Mountains, Lakes, and Rivers, where Gold
is found. The Women wear Coral about their Necks, and
hang it about the Necks of their Horses, as a precious thing.
In this Country there are very large Dogs, as big as Mules,
which take wild Beasts, especially wild Oxen, called
Tyamni.

There are in this Province many sorts of Spices, which
are never brought into these Parts. This *Thebet* is as yet
the former Province's Subject to the Khan. Outside Wall
of the Province of *Thebet* bordereth the Province of *Cekian*,
which was formerly governed by her own King, now by

Cares to the Women, who are afflicted therein by Slaves, which they buy, or take in War. When a Woman is once delivered, she tortures the Bed, washes the Child, and dresses it, and then the Husband lath down, and keeps the Child with him forty Days, not suffering it to depart; is visited all that Time by Friends and Neighbours, to cheer and comfort him. The Woman looks to the House, and carries the Husband his Broths to the Bed, and gives Suck to the Child by him. Their Wine is made of Rice and Spice; their ordinary Food is Rice, and raw Fleth, dressed as before mentioned. In this Province there are no other Idols, save that every Family adoreth the oldest Man in the House, of whom they say, come themselves and all they have; they dwell for the most part in wild and mountainous Places, but Foreigners come not to those Mountains, because the Air would kill them, being in Summer very corrupt.

They have no Letters, but make their Contracts and Obligations by Talles of Wood, one half whereof one keepeth, and the other the other, which being afterwards paid, the Talley is destroyed. There are no Physicians in this Province, nor in *Candiu*, *Vociam*, and *Caratam*; but when any is sick, they call the Magicians or Idol Priests together, and the sick Person declares his Disease unto them; then the Magicians dance, and sound certain Instruments, and blow forth Soags, in Honour of their Gods, till at length the Devil entereth into one of them, skipping and playing in the Dance. Then leaving the Dance, they come to with him that is possessed, for what Cause that Disease happened unto him, and what is to be done for his Recovery. The Devil answereth by him, because he hath done this or that, or because he hath offended this or that God, therefore he tell unto this Disease. Then the Magicians offer a God to pardon him this Offence, promising, that if the sick Person recovers, he shall offer a Sacrifice of his own Blood; but if the Devil, or the Priest, think the Patient to be sick of such a Disease that he cannot be freed by any means, he useth to answer; This Man hath offended that God, that he cannot by any Sacrifice be recovered; but if he think he shall recover, he commandeth to offer to many Rams, having black Heads, and to prepare so many Magicians with their Wives, by them to offer Sacrifices, and that God may then be appeased towards him; which being heard, his Kinsmen quickly cause those things to be done which the Devil commanded. They kill Rams, and sprinkle their blood in the Air, and the Magicians assemble, light great Candles, and perfume the whole House with Incense, making great Smoke of Lignum Aloes, and sprinkle the Broth of the Fleth in the Air, with the Potion made of Spices; all which being duly performed, they skip about again, and dance in Honour of that Idol, which is supposed to have been favourable to the Sick, singing and making a horrible Noise with their Voices. These Things being performed, they ask the possessed again, whether the Idol be pleased? And if he answer, no, they presently prepare themselves to fulfil any other Command of his; but if he answer that he is satisfied, they sit down at the Table, and eat the Fleth offered to the Idol with great Joy, and drink the Liquors; and Dinner being done, and the Magicians paid, every one returns to his own Home; and when the Sick hath thus escaped the Disease, it is the Providence of God, and hath been referred to Health, they attribute it to the Idol, to whom they sacrificed; but if he die, then they say, the Idol was displeased, and that some of the Sacrificers tasted thereof. This is not done to all, but by the richer, the Devil, or Idols, in his Name, pupping on their Blindness.

The Great Khan, A. D. 1275, sent an Army into the Kingdom of *Tartam* and *Guratan*, to reduce it, his Forces

being to the Number of twelve thousand veteran Troops, under the Conduct of a *Nestorian*, an experienced Officer. As soon as the King of *Mein* and King of *Bengala* heard of their coming, assembling their Forces, they joined Horse and Foot together about threecore thousand, and about a thousand Elephants bearing Castles, and in every Castle twelve or sixteen armed Men were placed; with this Army the King of *Mein* marched speedily towards the City of *Vociam*, where the Army of the *Tartars* lay encamped. *Nestardin*, however, marched forth with invincible Courage to fight the Enemy, and drawing near them, encamped near a certain great Wood, knowing that the Elephants with their Towers on their Backs were not able to enter the Wood. Then the King of *Mein* seeing this, resolved to meet them; but the *Tartarian* Horse perceiving the Elephants which were placed in the Front of the Battle were terrified, so that they could not by any Means be brought to charge the Elephants; the *Tartars* therefore were compelled to alight from their Horses, and tying them to the Trees, they came to fight on Foot against those Beasts, and very wisely shot a Multitude of Arrows against the Elephants, which not able to endure the Wounds received by the Arrows, betook themselves to flight, and went all to the next Wood, broke their Castles, and overthrew the armed Men sitting in them; which the *Tartars* seeing, run to their Horses, and getting upon them, furiously fell upon the King's Army with great Violence, and many of either Army fell. At length the King of *Mein* being put to flight, left the Victory to the *Tartars*, who hastened to the Wood, and taking many Captives, used their Help to seize two hundred of these Elephants, and ever since the Great Khan hath used Elephants in his Army, to which before he was not accustomed; Hereupon also he vanquished the Countreies of the King of *Mein* and *Bengala*, and subjected them to his Empire.

Departing from the Province of *Caratam*, there is a great Desert, which continueth two Days and a half, nor is there any Habitation there, but a very large Plain, in which three Days in the Week Multitudes meet together for Trading. Many descend from the great Mountains of that Country, bringing Gold with them to change for Silver, that is, giving an Ounce of Gold for five Ounces of Silver, and therefore many Merchants from foreign Nations come thither, who bring Silver and carry Gold away, and bring thither Merchandize to sell to these People; for to those high Mountains in which they who gather Gold in the Country dwell, no Stranger can come, because the Way is intricate and unpassable. When you are past that Plain, going toward the South, *Mein* bordereth upon *India*, and the Distance is about fifteen Days Journey through Places uninhabited and woody, in which innumerable Elephants, Unicorns, and other wild Beasts wander.

After that sixteen Days Journey, you come to *Mein*, a great and noble City, the Head of the Kingdom, and subject to the Great Khan. The Inhabitants thereof have a peculiar Language, and are Idolaters. In this City there was a King, who being ready to die, commanded that near to his Sepulchre there should be erected two Towers in the Form of Pyramids, one at the Head, the other at the Feet, both of Marble, of the Height of ten Fathom. On the Top was placed a round Ball; he caused one to be covered all over with Gold, a Finger thick, and the other with Silver; and upon the Top, round about the Balls, many little gold and silver Bells were hanged, which at the blowing of the Wind, gave a certain shrill and pleasant Sound. The Monument or Sepulchre was also covered with Plates, partly of Gold, partly of Silver. He commanded this to be made in Honour of his Soul, and that

The great Captivities made by the *Tartars* in the East, have so overturned all Monuments of Antiquity among the Nations they have subdued, that it is not for their Travels of *Marco Polo*, we should be at a Loss for any of the Particulars relating to them. The *Chinese* Historians, and very truly confirm the Truth of what he has delivered, but in general Terms only, so that they add nothing circumstantial, or that might bring us a clearer or more exact Idea of what he has laid down, in respect to which it is sufficient for us to observe, that most of the Captivities he mentions either happened at the Time when he was actually present in the Court of the Great Khan, or a very little before it; and therefore could not but be well informed as to the Truth of what he asserts. Strange indeed to us, who live at so great a Distance from these Countries, and are so little acquainted with the Manners of their Inhabitants, but at the same Time very agreeable to the best Accounts that have been afforded us of these Countries by modern Travellers, and more especially by the Millionaire, who have been at great Pains to descend and reduce into Order such Passages as they have met with in *Chinese* and other Oriental Writers.

is found such a Market-Place, two Miles, as is said, in Compaſs. There is alſo one large Canal, which runs againſt the ſaid Street behind the Market-places, on the next Bank whereof are erected great Store-houſes of Stone, where the Merchants from *India*, and other Parts, lay up their Merchandize, being at Hand, and commodious for the Market-places. In each of theſe Market-places the People meet three Days in a Week, to the Number of between forty and fifty thouſand, who bring thither all things that can be deſired for Man's Life, Beaſts, Game, and Fowls, that Lake yielding ſuch Advantages for bringing them up, that for a *Venitian* Groat you may have two Geefe, and four Ducks for the ſame. Then follow the Butcher-rows, of Veal, Beef, Kid, and Lamb, which the great and rich Men eat; for the Poor eat all the Offal, and uſe ſuch Meats, without reſpect. There are all ſorts of Herbs and Fruits continually, and amongſt the reſt huge Peas, weighing ten Pounds apiece, white within like Puſe, and very fragrant. Peaches yellow and white, very delicate. Grapes grow not there, but are brought from other Places dried; very good Wine alſo, but it is not eſteemed in thoſe Parts as with us, that of Rice and Spices contenting them. Every Day from the Ocean are brought up the River, which is the Space of five-and-twenty Miles, great Quantities of Fiſh, beſides that of the Lake, ſo much that a Man would think would never be bought, and yet in a few Hours all is gone. All theſe Market-places are encompassed with high Houſes, and underneath are Shops for Artificers, and all ſorts of Merchandize, as Spice, Jewels, Pearls, and in ſome only Rice-Wine. Many Streets answer one to another in the ſaid Market-places; in ſome of them are many cold Baths, accommodated with Attendants of both Sexes, a thing to which from Children they uſe themſelves. There are Chambers alſo in the ſame Baths, with hot Waters for Strangers, which are not accuſtomed to the cold Waters; they waſh every Day, neither do they eat before they have waſhed.

In other Streets are mercenary Proſtitutes, in ſuch Numbers that I dare not report it, and not only near the Market-places, where they have their Places appointed, but through all the City; they ſtand pompouſly adorned with rich ornaments, many Servants, and their Houſes finely furnished. There are very ſkillful in making Sports and Dances, and contriving Pleaſures for raviſhing Men out of themſelves. In other Streets are the Phyſicians, the Astrologers, they which teach to read and write, and infinite other Trades. At each end of every Market-place is a Place, where Lords and Governors are appointed by the King to determine Difficulties which happen betwixt Merchants and others, as alſo to look to the Guards on the Bridges, puniſhing ſuch as are negligent. Along the principal Street on both Sides are great Palaces with Gardens, and near them Houſes of Attitricers, and ſuch Multitudes of People conſtantly going to and fro, that a Man would wonder whence ſuch Multitudes could be provided with Victuals; and Maſter *Moro* learned of an Officer of the Cuſtom-houſe in *Quinſay*, that by a very accurate Computation, it appeared, the daily Expence of Pepper in *Quinſay* was three and forty Soma, and every Soma is two hundred and twenty-three Pounds. Hence may be gueſſed the Quantity of Victuals, Fleſh, Wine, and Spices, were there ſpent. The Inhabitants are Idolaters, ſe none but Paper-Money, are of a very fair Complexion, apparelled for the moſt part in Silk, which grows in all that Territory abundantly, beſides that which is brought from other Places. There are twelve principal Companies or Corporations, each of which have one thouſand Shops, and in each Shop or Stand are ten, fifteen, or twenty Men at Work, and in ſome forty under one Maſter.

The rich Traders do not work with their Hands, but ſtand in their Shops, well, or rather pompouſly dreſſed, eſpecially their Wives, with Jewels invaluable. And altho' their Kings ordained, that the Child ſhould be of the Father's Trade, yet the Rich are permitted not to work at it, but to keep Shop, and Men working in the ſame Trade. Their Houſes are well built, and very richly furniſhed with Pictures and other Ornaments of immense Price. The Natives are peaceable, know not how to manage Arms, nor do they ſeem in their Houſes, neither in their Trade and

Debate among them. They exerciſe their Trades with great Sincerity. They live in ſuch Amity, that one Street ſeems as one Houſe, without Jealouſy among their Wives, which they hold in great Reſpect, and it would be reputed a great Diſgrace to ſpeak a diſhoneſt Word to a married Woman. They entertain foreign Merchants kindly, both in their Houſes, and with beſt Advice for their Affairs; but they are not over fond of the Soldiers, and Guards of the grand Khan, becauſe by them deprived of their natural Lords and Kings. About the Lake are very fair Buildings, and great Palaces of the principal Men, and Temples of their Idols, with Monasteries of many Monks. In the midſt of the Lake are two Iſlands, upon each of which is a Palace, with incredible Numbers of Rooms, whither they reſort upon Occaſion of Marriages, or other Feaſts, where Proviſions of Veffels, Linen, and other things are maintained in common, for ſuch Purpoſes, one Hundred ſometimes accommodated at once, in ſeveral Rooms. In the Lake alſo are Boats and Barges for Pleaſure, adorned with fair Seats and Tables, and other Proviſions for a Banquet, covered above, and flat, upon which Men ſtand with Poles to puſh the Boat on, the Lake being but ſhallow: Within they are painted, without are Windows to open and ſhut at Pleaſure; nor can any thing in the World ſeem more pleaſant than in this Lake to have ſuch various Objects, the City ſo fully preſenting itſelf to the Eye, with ſo many Temples, Monasteries, Palaces, Gardens, with high Trees, and on the Water Barges and People; for their Cuſtom is to work one Part of the Day, and to ſpend ſome Part in this Diſverſion with their Friends, or with Women on the Lake, or eſſe in Chariots, riding through the City, which is alſo another of the *Quinſay* Pleaſures; for all the Streets are paved with Stone, as alſo are all the Highways, in the Province of *Mangi* only for the Foot; Poſts are left on the Side a Space unpaved: The principal Street of *Quinſay* is paved ten paces on each Hand, and in the midſt it is full of Gravel, with Paſſages for the Water, which keep it always clean.

In this Street are innumerable long cloſe Charlots, accommodated with Cloths and Cuſhions of Silk for fix Perſons, who divert themſelves in the Street, or go to the Gardens, and there paſs the Time in Bowers, fine Walks, &c. which are kept for that Purpoſe, and return at Night in the ſame Chariots. When a Child is born, the Father ſets down the exact Point of Time, and with that Note goes to the Astrologer, to conſult of his future Fortunes; of theſe Astrologers are a great Number in every Market-Place. Theſe People will not celebrate a Marriage without ſuch Conſultation. When one dies that is of Note, the Kindred cloath themſelves in Canvas, and ſo both Men and Women accompany him to the Burying-Place, playing on Inſtruments, and ſinging all the Way Prayers to their Idols, and being come to that Place, caſt into the Fire many Papers of Cotton, whereon are painted Slaves, Houſes, Camels, Stuſſs of Gold, and Silk, and Monies, which they think he ſhall really poſſeſs in another World, and make a grand Concert of Muſick, in Conceit of the Joy wherewith the Idols there receive his Soul, where he beginneth, as they fancy, to live anew. In every Street are Towers of Stone, to which, when in Danger of Fire, they uſe to carry their Gods, their Timber-Houſes being very ſubject to ſuch Casualties. The Khan hath ordered, that on the moſt of the Bridges, Day and Night, there ſtand under a Covert, ten Soldiers, five by Day, and five by Night, and in every Guard-room is a Tabernacle of Wood, with a great Balcon, whereby they know the Hours of the Day and Night, which at every Hour's End the Warders ſtrike, to ſignify what Hour, One, Two, &c. beginning at the Sun-riſing; and then again, at the Beginning of the Night. They walk up and down, and if any have a Light or Fire after the appointed Time, they caſt him to answer it before the Juſtices, or Governors aforeſaid, or if any walk later.

If any be not able to work, they carry him to ſome Hoſpital, of which are exceeding many, founded by the old Kings, with great Revenues, through the City: When they are well again, they are compelled to work. If a Fire happen, theſe from divers Places come to and quench it, and to carry the Goods to the Iſlands, or thoſe Towers;

for in the Night none of the Citizens dare go out, but those who are in Danger. The Khan always keeps here a Body of his best and most faithful Soldiery, as being the best and richest Place in the World. Within a Mile of each other, are built Ramparts of Wood, where the same Precautions are used for like Purposes. When the Khan had reduced all *Mangi* to his Obedience, he divided it, being before but one Kingdom, into nine Parts, and set them a Vice-King over each, who there administers Justice. Every Year they give Account to the Khan's Officers of the Revenues, and other Accidents, and every third Year are changed, as all other Officers are. One of these Deputy Kings is resident at *Quinjav*, who is Governor of above one hundred and forty Cities, all rich and great: Nor let this be esteemed a Wonder, seeing in *Mangi* there are twelve thousand Cities, all inhabited by rich and industrious People, in one of which the Khan maintaineth a Garrison, proportionable to the Greatness and Occasions, one thousand, ten, or twenty thousand, not all *Tartars*, but *Catbayans*; for the *Tartars* are Horsemen, and keep in such Places as may be fit to exercise their Hories. Into *Catbay* he sends those of *Mangi*, and *Catbayans* hither, such as are fit for Arms, of which he makes choice every third Year, and sends them for four or five Years together, into Places twenty Days Journey from their own Country, and then suffers them to return Home, a fresh Body succeeding; and most Part of the Khan's Revenues are this Way expended, and if any City rebel, he suddenly from the next Garrison compels an Army to reduce or destroy them. The City of *Quinjav* hath in constant Garrison thirty thousand Soldiers, and that which hath least, hath one thousand regular Troops, Horse and Foot in Garrison.

I come next to speak of the Palace of King *Fanfur*. His Predecessors caused to be inclosed a Place of ten Miles Circuit, with high Walls, and divided it into three Parts. That in the middle was entered by one Gate on the one Side, and on the other were great and large Galleries, the Roof sustained by Pillars, painted and wrought in pure Gold, and fine Azure. These were smaller at the Entry, and the further the greater, the tallest at the End; the Roof richly adorned with Gold, and on the Walls were painted the Stories of the former Kings, done very elegantly. Every Year, on certain Idol Holidays, *Fanfur* keeps his Court, and feasts his principal Lords, the great Merchants, and rich Artificers of *Quinjav*. Ten thousand are at a Time under these Terraces. This feasting endured ten or twelve Days with incredible Magnificence, every Guest endeavouring to present himself in greatest Pomp. Behind this marble Building was a Wall, which divided the Palace, in which were, as it were, a Cloister with Pillars, sustaining the Terrace round about the Cloister, wherein were Chambers for the King and Queen, curiously wrought. From this Cloister was an Entrance into a Gallery six Paces wide, extending in Length to the Lake, all covered. On each Side of this Gallery were ten Courts, answering to each other like Cloisters, each Court having fifty Chambers, with their Gardens, and in them one thousand Concubines abode, which the King kept for his Service, who, sometimes with the Queen, sometimes with them, went in his Royal Barge on the Lake, for Recreation, or to visit his Idol Temples. The other two Parts of the Setaglio were divided into Groves, Lakes, and Gardens, planted with Trees, in which were inclosed all Sorts of Beasts, Roe Bucks, Stags, Hares, Cories, and there the King diverted himself with his Damfels in Chariots, or on Horseback, no Man entering there. There the Ladies hunted with his Dogs, and when weary, they went into those Groves, which answered one another over

the Lake, and there leaving their Garments, came forth naked, and fell to swimming in the King's Presence. Sometimes he would eat a Barquet in those Groves, long served by those Damfels, without once thinking of Arms, which sweet Meat cost him the four Sure ye have heard. All this was told me by a rich old Merchant of *Quinjav*, while I was there, one who had been familiar with King *Fanfur*, and knew all his Life, and had seen that Place flourishing, into which he would needs bring me.

The Viceroy now resides there, and the first Gallies remain as they were, but the Damfels Chambers are gone. The Walls also which encompassed the Woods and Gardens are fallen to the Ground, the Beasts and Trees being gone, and all the other Ornaments destroyed. Twenty-five Miles from *Quinjav* is the Ocean, between the East and North East, near which is a City called *Gangon*, an excellent Port, where arrive the *Indian* Ships with Merchandise. While *Marco Polo* was in *Quinjav*, Account being given to the grand Khan of the Revenues, and the Number of Inhabitants, he hath seen that there have been enrolled one hundred and sixty Toman of Fires, reckoning for a Fire the Family dwelling in one House; every Toman contains ten thousand, which makes sixteen hundred thousand Families, of all which there is but one Church of Christians, and those *Nestorians*. By the Household-books bound to have written over his Door the Names of the whole Household, Males and Females; also the Number of Hories, the Names added or blotted out as the Family increaseth or decreaseth; and this is observed in the Cities of *Mangi* and *Catbay*. Those also that keep here in a Book the Names of their Goods, and the Day and Hour of their Departure, which Books they shew daily to the Lords, or Magistrates, who preside at the Market-places. In *Mangi*, the Poor which are notable bring up their Children, sell them to the Rich. The Revenues which accrue to the Khan from *Quinjav*, and the six Cities pertaining thereto, being the Ninth Part of the Kingdom of *Mangi*, are first of Salt, every Year, eight Toman of Gold, every Toman is eighty thousand *Sassid* Gold, and every *Sassid* is more than one Florin of Gold, which will amount to six Millions and four hundred thousand Ducats. The Cause is, that that Province being nigh the Sea, there are many Lakes, where the Salt in Summer is coagulated into Sals, water with fire of the Kingdoms in that Country a reward. There is great Sugar growing, which pay, as likewise the Spice of the Parts, and a third in the Handled. The best of the Wine. Also those twelve Corns, and wheat, and all twelve thousand Shops, and the Merchants who bring Goods hither, or carry any hence by Sea, pay the Price. They which come from remote Countries, as the *Magians*, as for example, from the *Indies*, pay half *Cent*. Likewise all things there breeding, as Beasts, and growing out of the Earth, and Silks, pay the best King, and the Computation being made in the Presence of Master *Marco*, besides Salt before mentioned, the Revenues amount to two hundred and ten Toman, which is sixteen million eight hundred thousand Ducats in Gold.

A Day's Journey from *Quinjav* to the South, by all the Way Houses, Villages, Fort Gardens, and Forts of Victuaries; at the End whereof is *Lapona*, a fine City, in the Jurisdiction of *Quinjav*. Three Days more South East, is *Ugna*, and two Days farther you will see that Way, finding Cattle, Cows, and well cultivated Places, in such a Neighbourhood of that they tempt Travellers all one City, and are all in the Jurisdiction of *Quinjav*; there are great Cows fifteen Paces high, and Palms thick. Two Days Journey farther is the City of *gus*, far and large; and travelling to the South East

^b The *Tartars* visibly depended upon a military Force for the Preservation of their Empire in *Cassia*, which when they had lost the Police, or a Part of their Government, which they adapted, is uncertain, but it is most probable that they were driven out of it as far enough from answering the End of the *Tartars*, by becoming a mere standing Army, and leaving the Government in the Hands of the *Indians*; that Part of the South which is an extensive one, they soon depopulated, and became a vast and desolate Wilderness; the latter, but had by the *Tartars* conquest, imposed, and by continuing the Burthen of such a numerous Army, and the want of Liberty by the *Kob*, it began to form a new Revolution, which at last they were obliged to give up. The *Indians* were well peopled and regularly settled Countries, beyond the Limits of *Perfa*, and extending to the *Indies*. A third of the World, not what to think of our Manners, when we came first across them to the full New of this Empire, and a great Part of it was admirably governed, and in following a Constitution, that made it not a little. According to the late Account, the Revenues amount to fifty Millions sterling annually.

Places full of People and Trades; and in this Part of *Mangi* are no Sheep, but Beavers, Buffaloes, Goats, and Swine in great Plenty. At the End of four Days Journey farther is the City *Zengian*, built on a Hill in the Middle of a River, which, dividing into two Branches, encompasses it, and then runs one to the South-East, the other to the North-West. This City is in the Jurisdiction of *Quinsay*, and its Inhabitants are Merchants also and Idolaters; this Country abounds with all Sorts of Game. Three Days Journey from thence, through a most pleasant Country, exceeding well inhabited, stands *Gieza*, a great City, which is the last of the *Quinsay* Kingdom; after which you enter into another Kingdom of *Mangi*, called *Concha*; the principal City thereof is *Ingua*, by which you travel six Days Journey South-East, through Hills and Dales, always finding Places inhabited, and Plenty of Game, of Beasts and Fowl; they are Idolaters, Merchants subject to the Khan. There are about Lions; and here grow Ginger and Galingale in great plenty, with other Sorts of Spices; eight Pounds of Ginger are sold for a *Venetian* Groat. There is an Herb, whose Fruit hath the Effect, and gives the Colour and Smell of Saffron, but is not Saffron, which is used in their Meats. They commonly eat Man's Flesh, if the Persons die not of Sickness, as better tailld than others. When they go into the Field they shave to the Hairs, and paint their Faces with Azure; they serve on Foot, except the Captain, who rides, and uses a Sword and Lance; they are very cruel, and when they kill an Enemy presently drink his Blood, and afterwards eat his Flesh.

After six Days Journey is *Quelinsu*, a great City, with three Bridges, each eight Paces broad, and above an hundred long: The Women fair and delicately shap'd. They have abundance of Silk and Cotton, are great Merchants, have Plenty of Ginger and Galingale. I was told, but saw them not, that they have Hens without Feathers, being like Cats, which yet lay Eggs, and are good to eat. There are many Lions, which make the Way very dangerous. After three Days Journey, you arrive in a populous Country, inhabited by Idolaters, who make abundance of Silk Manufactures, the chief City is *Ingua*, where is great Plenty of Sugar, sent thence to *Cambala*, which they know not how to make good till they became subject to the Khan, in whose Court were *Babylonians*, which taught them to refine it with Ashes of certain Trees, they only boiling it before into a black Paste. Fifteen Miles farther lies *Gangua*, still in the Realm of *Concha*, and here the Khan keeps an Army in Readiness for a Guard of the Country. Through this City passes a River a Mile broad, built on both sides, and abounding with Ships carrying Sugar and other Lading. This River discharges from hence five Days Journey South-East at *Zaitum*, a Seaport, from which the rich Ships of *India* come to this pleasant City, as is all the Country betwixt, in which are Trees and Shrubs of Camphire. *Zaitum* is a famous Port, where all the Ships arrive with Merchandize, thence dispersed through all *India*. There is here such a Quantity of Pepper, that what comes by *Alexandria* to the West is sold to it, and, as it were, one of a hundred. The Commerce of Merchants is incredible, it being one of the most commodious Ports in the World, exceeding profitable to the Khan, who receives Custom at the rate of ten in the Hundred of all Merchandize. They pay to much for Hire of Ships also, that there is not above one half of their Merchandize remaining entire to themselves, and yet that thirty yields vast Profit to them. The Citizens are idolatrous, given to Pleasure; in it are many Artificers on embroidered and Arras Work. The River is great, very wide, and swift, and one Arm of it runs to *Pungay*, at the parting of which is *Tringai* situated, where *Porcelaine* Dishes are made. I was told of a certain Earth, which they call *Tringai* Hills, and to let lie exposed to all Weathers for thirty Years without Hurting; after which, returning by Fire, they make Dishes, paint them, and then put them in the Furnace. You may there have eight Dishes for one *Venetian* Groat. In this Kingdom of *Concha*, the

Khan has as great a Revenue almost as that of the Kingdome of *Quinsay*. In these two Master *Marco* was, and in none of the other nine Kingdoms of *Mangi*, in all which one Language is used, with Variety of Dialect, and but one Sort of Writing; and therefore we will speak no more of them, but in the next Book discourse of *India* the Greater; the Middle and the Less, in which he was both in the Service of the Khan, and also in his Return with the Queen to *Sargon*.

22. We will now enter into the Affairs of *India*, and begin with their Ships, which are made of Fir, with one Deck, on which are twenty Cabins, more or less, according to the Bigness of the Ships, each for one Merchant. They have a good Rudder, and four Masts with four Sails, and some two Masts, which they either raise or take down at Pleasure. Some greater Ships have thirteen Divisions on the Inside, made with Boards inclosed, so that if by a Blow of a Whale, or Touch of a Rock, Water gets in, it can go no farther than that Division, and the Leak being found, is soon stopped. They are double, that is, have two Courses of Boards, one within the other, and are well calked with Oakum, and nailed with Iron, but not pitched, for they have no Pitch, but anointed with an Oil of a certain Tree mixed with Lime and Hemp, beaten small, which unnds taster than Pitch or Lime. The greater Ships have three hundred Mariners, the others two hundred, or one hundred and fifty, as they are in Bigness and in Burthen, from five to six thousand Bags of Pepper; and they were wont to be larger than now they are, the Sea having broken into Parts and Islands, that the Defect of Water in some Places cauleth them to build less. They use also Oars in these Ships, four Men to one Oar; and the greater Ships have with them two or three less Ships, able to carry a thousand Bags of Pepper, having sixty Mariners, or upwards, on board; which small Ships serve sometimes to tow the greater. They have also with them ten small Boats for fishing and other Services, fastened to the Sides of the larger Ships, and let down when they please to use them. They leath their Ships also after a Year's Usage, so that then they have three Courses of Boards, and they proceed in this Manner sometimes till there be six Courses, after which they break them up. Having spoken of the Ships, we will speak of *India*, and first, of certain Islands.

Zipangu, i. e. *Japan*, is an Island on the East, one thousand five hundred Miles distant from the Shores of *Mangi*; very great, the People of white Complexion, of gentle Behaviour, in Religion Idolaters, and have a King of their own. They have Gold in great Plenty, for few Merchants come thither, and the King permits no Exportation of it; and they which have carried on Commerce there, speak of the King's House covered with Gold, as Churches here with Lead, gilded Windows, Floors of Gold. There are also many Pearls. Once the Fame of these Riches made *Cublai-Khan* to send to conquer it two of his Barons, with a great Fleet of Ships, one named *Abbaca*, and the other *Venfanfin*, who going from *Zaitum* and *Quinsay*, arrived there, but falling out between themselves, could take but one City, and there beheaded all they took, except eight Persons, which, by an incanted precious Stone, inclosed in the Right-arm between the Skin and Flesh, could not be wounded with Iron; whereupon, with wooden Clubs, at the Command of the two Barons, they were slain. It happened one Day, that a northern Wind blew hard, which was dangerous to the Ships riding there, so that some were lost, some put out farther to Sea, and others, with the two Leaders and a few principal Persons, returned home. Out of many broken Ships some escaped by Boards and swimming to an Island not inhabited, four Miles off *Zipangu*, and were about thirty thousand, without Provisions or Arms, against whom the *Zipanguans*, after the Tempest was calmed, sent out a Fleet of Ships, and an Army. These coming on Land to seek the wrecked *Tartars* without Order, gave Occasion to the *Tartars* to wheel about, the Island being high in the Middle, and to get unteer to their Ships,

A Count of the Ships used in the Trade of the *East-Indies*, agrees exactly with the modern Relations; and though, without doubt, they have a great Part of our Ships for many Purposes, yet I believe, the Nature of these Seas considered, they may be, and very probably are,

which were left unmanned, with the Streamers displayed, and in them they sailed to the chief City of *Zapangu*, where they were admitted without Suspicion, and found few others but Women. The King of *Zapangu* besieged them six Months, and they having no Relief, yielded themselves, and their Lives were saved. This happened A. D. 1264.

The Khan, for the ill Conduct of his two Commanders, cut off the Head of one, and sent the other to a desert Island called *Zerga*, where he caused Offenders to die, by sewing them, their Hands bound in a new slay'd Hide of a Buffaloe, which drying, shrinketh so, as it puts them to vast Tortures, which lead to a miserable Death. The Idols in this and the adjoining Islands are made with Heads of Kine, Swine, Dogs, and in other Fashions more monstrous, as with Faces on their Shoulders, with four, ten, or even an hundred Hands; and to these they ascribe most Power, and do most Reverence, and say, that so they learned of their Progenitors. They sometimes eat their Enemies which they take, with great Joy, and for great Dainties; at least so it is reported of them. The Sea, in which this Island lies, is called the Sea of *Cin*, or *Chin*, that is, the Sea against *Mangi*, and in the Language of that Island *Mangi* is called *Chin*, or *Chint*, which Sea is so large, that there are seven thousand four hundred and forty Islands therein, the most Part of them inhabited; that there grow no Tree which yields not a good Smell, and that there grows many Spices of divers Kinds, especially Lignum Aloe, and Pepper black and white. The Ships of *Zaitum* are a Year in their Voyage, for they go in Winter, and return in Summer, having Winds of two sorts, which keep their Seasons, and this Country is far from *India*; but I will leave them, for I never was there, nor are they subject to the Khan, and return to *Zaitum*; from hence sailing South-westward one thousand five hundred Miles, passing a Gulph called *Chenan*, which continues two Months sailing to the Northward, till confining on the South east of *Mangi*, and elsewhere with *Asia* and *Toloman*, and other Provinces before named. Within it are infinite Islands all in a manner inhabited. In them is found abundance of Gold, and they trade one with another.

22. This Gulph seems like another World; and after one thousand five hundred Miles, sailing across this Gulph, is the County *Zanbar*, rich and great, having a King and a Language of their own, Idolaters, and paying Tribute to the Grand Khan of twenty Elephants, and Lignum Aloe in great Quantities yearly. A. D. 1268, the Khan hearing of the Riches of this Island, sent thither *Sagatu* with an Army to invade it. *Acambate* the King thereof was old, and made his Composition by paying the Tribute, which has been mentioned. There are many Woods of black Ebony there, which are of infinite Value. Sailing thence betwixt the South and South east one thousand five hundred Miles is *Java*, at present supposed by Mariners the greatest Island in the World, being above three thousand Miles in Circuit, under a King who payeth Tribute to none, the Khan not offering to subject it, because of the Length and Danger of the Voyage. The Merchants of *Zaitum* and *Mangi* fetch thence abundance of Gold and Spices. South and South-westward six hundred Miles from *Java*, are two Islands, one *Sondur*, which is the greater, the other *Condur*, less, both desolate.

Fifty Miles South east from them is a Province, or firm Land, very rich and great, named *Lachae*, the People Idolaters, having a Language of their own, as well as a King. There grows Brasil Wood in great Plenty, much Gold, Elephants, wild Beasts, and Fowl, a Fruit called *Berchur*, large as Lemons, very good; the Place is mountainous and savage, and the King permits not any to come thither, lest they should know his Country, and attempt to conquer it. There are abundance of Porcelain Shells for Money transported to other Places. Five hundred Miles Southward from *Lachae* is the Isle *Pentan*, a savage Place, which produceth in all the Woods sweet Trees, sixty Miles in the Way, the Sea is in many Places but four Fathoms, after

which sailing to the South-east thirty Miles farther, is the Island and Kingdom of *Malaur*, which hath a prole King and Language to itself, and here a great Trade carried on in Spices from *Pentan*. One hundred Miles South east is *Java the Less*, in Compass about two thousand Miles, and hath in it eight Kingdoms, and the People many Languages; they are Idolaters, have the same Customs, Spices, Ebony, and Brasil, and are like to the same, that the North Star cannot there be seen. Master *Marco* was in six of those Kingdoms, of which he gives the following Account, leaving the other two which he saw not.

One of these eight Kingdoms is *Felab*, where the Inhabiters, by frequent Trade with *Saracens*, are converted to the Law of *Mokammed*. In the Cities the Mountains are very healthy, eating Man's Flesh, and all kinds of impure Food, and worship all Day what they first see in the Morning. Next to that is *Baima*, which hath a Language by himself; they live without Law like Beasts, and sometimes kill Hawks to the Khan, who lays claim to all the Land; the savage Beasts they have wild Elephants, and Unicorns, smaller than Elephants, like the Buffaloe in *Hind*; their Feet are like Elephant's Feet, they have one Horn in the middle of the Fore-head, and hurt none therewith, but with the Tongue and Knee; for on their Tongue are certain big Prickles, and sharp, and when they hurt any, they raise on him, and press him down with their Knees, and then tear him to Pieces with their Tongue. The Bears like a wild Boar's, which he carries downwards to the Ground. They love to stand in the Mire, and are fit to be used, and not such Unicorns are said to be in our Parts, who suffer themselves to be taken by Maids, but quite contrary. They have many Apes, and of several Kinds, they have God-hawks back as Ravens, great, and good to prey. There are certain small Apes, in their Faces like Men, which they put in Boxes, and preserve with Spices, and sell them to Merchants, who carry them through the Wall, throwing them for Pigmies, or little Men.

Sanare is the next Kingdom, where Master *Marco* lived five Months against his Will, forced by ill Weather. There none of the Stars of *Charles's Wain* are seen. He went out on Shore with two thousand People, and there tarried for those five Months, for fear of those brutish Men cannot trade mean while with them for Victuals. There are excellent Pith, Wine of the Date-Tree, very white, and for Phthisick, Dropsy, Dis-eases of the Spleen, some white, some red, and *Indian Nuts* as big as a Man's Hand, the middle whereof is full of a pleasant Liquor better than Wine; they eat of all sorts of Flesh without any Dis-ease. *Dragonis* is another of these Kingdoms named by the Khan, having a King and Language of their own. The Law of an admirable Custom, that when one is sick, they send to enquire of the Sorcerers whether he shall die. If the Devils answer no, the Kindred tend for him, with Offerings to frange the sick Party, after washing of him in Pines, and the Kindred eat his own goods, and even to the Marrow of the Bones; if they say he shall die, Substance of him should remain, Worms would eat thereof, which would want Food, and to die, to the great Torture of the Soul of the Deceased. The Bores eat afterwards rakes and carry into some Caves in the Hill, that no Beast may touch them. If they take any Strength, they eat him in the same manner.

Lamban is the fifth Kingdom of *Java*, in which is great Plenty of Brasil, of the Seeds whereof Master *Marco* brought to *Venice*, and sowed them, but in vain, the Soil being too cold. They have Unicorns in great abundance, and Choice of Beasts and Fowls. *Fanjur*, the sixth Kingdom, hath the best Camphire, which is sold Weight for Weight with Gold. In that Province they make Mead out of great and long Trees, as thick as two Men can embrace, whence paring off the thin Bark and Wood about three Fingers thick, the Pith within is Mead, which they put in Water, and stir it very well, the lightest Droits swimming, and the finest settling to the Bottom, and then the Water being call away, they make Paite, of which Master *Marco* brought some to *Venice*, talking not much unlike Barley-Bread. The

* This Attempt made by the Tartars to conquer *Java* is a very curious Circumstance, and of great Consequence to the History of that Country, because mentioned by no other Author, which is the Reason that Father *Marco* refers us hither on that Head, in his most accurate and correct the Empire of *China*.

of this Tree thrown into the Water sinks like Iron, which they make Lanets, but short, for it long, they would be too heavy to bear. These they sharpen, and use at the Pops, with which so prepared, they will pierce through Armour sooner than if they were made of Iron. There are one hundred and fifty Miles from *Lambri*, sailing westwards, are two Islands, one called *Nocueran*, in which the Inhabitants live like Beasts, go all naked, both Men and Women, and worship Idols, have excellent Trees, Cloves, Peppers white and red, *Indian Nuts*, Brazil, and other Trees; the other *Angaman*, savage as the former, and where I was told they had Dogs Heads and Teeth.

Sailing hence one thousand Miles to the West, a little to the North-west, is *Zeilan*, two thousand and five hundred Miles in Circuit, and anciently three thousand six hundred Miles, as is seen in the Maps of the Maldives of those Places; but the North Winds have made great Part of it Sea. It is the finest Island in the World; King is called *Sendernaz*. The Men and Women are naked, go naked, save that they cover their Privities with a Cloth, have no Corn, but Rice and Oil of *Sesamum*, Fish, Wine of Trees, abundance of Brazil, the best in the World, Sapphires, Topazes, Amethysts, and other Gems: The King is said to have the very finest Ruby ever seen, as long as one's Hand, and as big as his Arm, without Spot, shining like a Fire, not to be sold for Money. *Cublai-Khan* sent and offered the Value of a City for it; but the King answered, he would not part for the Treasure of the World, nor part with it, unless it had been his Ancestors. The Men are unfit for Labour, and hire others when they have Occasion. From *Zeilan*, sailing sixty Miles to the West, lies the great Province of *Malabar*, which is not an Island, but firm Continent, called *India the Greater*, the richest Province in the World: There are in it four Kingdoms, the chief of which is *Calicut*, in whose Kingdom they fish for Pearls, viz. at *Malabar* and *Zeilan*, in a Bay where the Sea is not more than twelve Fathom; in which Divers descend, in Bags or Nets tied to their Bodies, bring up the Pearls, in which are the Pearls: And because there are many great Fish which kill the Fishermen, they hire certain Magicians to charm them, and these have the twentieth, and thirty the tenth. These Oysters are found through the whole Month of *April*, and till the Middle of *May*, and at any time else. In *September* they find them in a Bay above three hundred Miles off, and till the Middle of *April*. The King goes naked as the rest, save that he wears some honourable Emblems, as a Collar of precious Stones about his Neck, and a Thread of Silk to his Breast, and some hundred and four fair Pearls strung together to his Prayers, of which he makes daily use to many his Idols. A sort of Bracelets he weareth on three Places of his Arms, and likewise on his Legs, on his Fingers, and on his Toes. The Prayers which he says are *Panca*, *panca*, *Panaca*, one hundred and four times. This King has some thousand Concubines, and if it any please him, he will as often he did from his Brother, whence Wars had been kindled; but the Mother threatening to cut off her Breasts, he had not ventured them, if they proceeded, the Quarrel was discontinued. He hath many Horsemen for his Guard, and always accompany him, wags, when the King dies, they throw themselves voluntarily into the Fire when he is dead, to do him Service in the next World.

This Prince and his Brethren, the Kings of *Malabar*, *Malabar*, *Malabar*, *Malabar*, and other Parts, the Country is very rich, and if it sometimes fall out that it does, yet they are bred all favoured and in right. Condemned Persons will offer themselves to die in Honour of such an Idol, and have performed with twelve Knives, and twelve other divers Parts of the Body, at every Blow, saying *Yah-meh* in Honour of that Idol; and the last he says is *Yah-meh*, and is then burnt by his Kindred. Many of them cast themselves into the Fire with their Idols, and the following those who return it. They have many Idols, and in all of them adore Cows, and would not touch any Body's Flesh as Beef for all the World. There are some called *Gans*, who eat such Oxen as die of any Disease, or any other kind, and draw over their backs with Ox dung. These *Gans* are of the Posterity

of those which flew *St. Thomas*, and cannot enter the Place where his Body is. They sit on Carpets on the Ground in this Kingdom; They have no Corn but Rice; are not a martial People; kill no Beasts, but when they will eat any, get the *Saracens* to do it, or other People; wash twice a-day, Morning and Evening, both Men and Women, and will not otherwise eat, which they who observe are accounted Hereticks. They touch not their Meat with their Left hand, but use that Hand only to wipe, and for other unclean Uses. They drink each in his own Pot, and will not touch another Man's Pot, nor suffer their own to touch their Mouth, but hold it over, and pour it in. To Strangers who have no Pot they pour Drink into his Hands, and oblige him to drink with them. Justice is feverely administered for Crimes, and a Creditor may in some Cases encompass his Debtor with a Circle, which he dares not pass till he hath paid the Debt, or given Security; if he does, he is to be put to Death; and Master *Alonso* once saw the King himself on Horseback thus encircled by a Merchant, whom he had long delayed and put off; neither would the King go out of the Circle which the Merchant had drawn, till he had satisfied him, the People applauding the King's Justice. They are very scrupulous of drinking Wine made of the Grape, and they which do it are not thought worthy or honest Men, or admitted to be Witnesses, a Thing denied also to him who falls by Sea, for they say such Men are desperate. They think Lechery no Sin. It is very hot, and they have no Rain but in *June*, *July*, and *August*; without which Refreshing of the Air they could not live. They have many Physiognomists and Southsayers, which observe Beasts and Birds, and have an unlucky Hour every Day in the Week, called *Choiab*, as on *Monday*, betwixt two and three, on *Tuesday* the third Hour, and on *Wednesday* the ninth, &c. through all the Year, set down in their Books. They curiously observe Nativities. At thirteen Years old they put their Boys to get their own Livings, who run up and down to buy and sell, having a small Stock given them to begin, and in Pearl Season they buy a few Pearls, and sell them again to the Merchants, which cannot well endure the Sun, for little Gain; what they get they bring to their Mothers to dress for them, for they may not eat at their Fathers Coll. They have Idols, male and female, to whom they offer their Daughters, who, when the Monks or Priests appoint, sing and dance to the Idols, and very often set Victuals before them, saying that they eat, leaving it the Space of a Meal, singing all the while, and then they fall to eating in earnest; after which they return home. The Cause of these Sacrifices is the Household Quarrels betwixt the God and Goddesses, which, if they should appeate, they should lose their Blessing. The great Men have Letters made of large Canes, which they tatten artificially to some upper Place to prevent Tarantulas biting, and also Fleas and other Vermin, and for fresh Air.

The Place of *St. Thomas's* Sepulchre is a small City, not much frequented by Merchants, but very much by Christians and *Saracens* for Devotion. The *Saracens* hold him a great Prophet, and call him *Ananus*, that is, a holy Man. The Christians take of the Larch where he was slain, which is red, and carry it with them with great Reverence, and give it, mixed with Water, to the Sick. *A. D.* 1288, a great Prince, having more Rice than Room to lay it in, made hold with *St. Thomas's* Church, in the Room where Pilgrims were received; but by a Vision of *St. Thomas* in the Night, was so terrified that he quickly left the Place. The Inhabitants are black, not so born, but became so by often anointing themselves with Jeilame Oil, which is called Beauty. They paint the Devil white, and their Idols black. The Cow-worshippers carry with them to Battle some of the Hair of a wild Ox, as a Preservation against Dangers, and therefore such Hairs are sold at a high Price.

25. Malabar, or *Menjil*, is notward from *Malabar* five hundred Miles; the Inhabitants are Idolaters. They have Diabolism in their Idols, which they search for after great Rains. Westward from *St. Thomas* is *Luce*, whence the *Bramins* have their Original, who are the honestest Merchants in the World, and will not lye for any thing,

and squat, have no Prince, and live like Beasts. The Tartars often rob them of their Cattle in those dark Mountains, and lest they should lose their Way, they ride on Mares which have Colts sucking, which they leave with a Guard at the Entrance of that Country, where the night begins to fall, and when they have taken their Prey, they return to the Mares, which hasten to their Colts. In this long continued Summer, they take many of the finest Mares (on Occasion of the Tartars going to rob them) which I have heard some are brought into *Russia*. *Russia* is a great Country near that Northern Darkness. The People are Greek Christians, the Men and Women fair, they pay Tribute to the King of the Tartars of the West, in whom they border. On the East there is plenty of Wax, and Mines of Silver; it reaches, as I was told, to the Ocean Sea, in which are Islands that abound with Great Lions and Falcons.

We are now arrived at the Close of this Author's Writings, and therefore are the more capable of judging of the Particulars they contain, which was the Reason that I left some Points to be considered here, which I should otherwise have thrown under the Head of Objectives. Some critical Readers have affected to doubt, whether our Author, or rather his Performance, deserves Credit, from the Account that is given of the Manner in which it was wrote, and from the different Stories that we are told of the Original. We have already accounted for the Mistakes that have been made on this Head, and shall only take Notice, that *Francis Pipin*, of the Order of Preachers, who made a Latin Translation of our Author's Work, tells us in his Preface, that from the Report of his Dominicans, he was satisfied that *Mares Polo* was a Man of great Prudence, remarkably honest, and who had the fairest Character that could be. It is not so very inconceivable, that such a Man should expose that Credit which he had been at so much Pains to establish, by sending into the World an indigested Heap of Fictions and Romances. But the same Person informs us farther, that *Signior Nicolo Polo*, the Father of our Author, was the most renowned and best beloved Man of his Time, and that he instantly reported the very same Facts, during his whole Life, which his Son published in his Works; and for his Uncle *Signior Maggi*, who enjoyed some of the principal Offices in the Government at *Venice*, and distinguished himself by his Wisdom and Integrity, when he was on his Death-Bed he took particular Care to assure his Executor, that he had reviewed his Nephew's Work, and that he was fully satisfied that there was nothing in it that was or should be true, and thus he gave him Leave to live for the Satisfaction of the World. Here then are the credible Witnesses to the same Facts, and therefore according to all the Laws of Evidence, they ought to be credited upon as thoroughly established.

We must how ever distinguish between such Facts as our Author reports from his own Knowledge, and those which are grounded only on Hearsay and Information. We may as well be an Author of Credulity or Imprudence, when we relate strange and improbable Things in his Writings, as we can be with Justice charge him with falsity or Falseness on this Head, and we ought not to make some Allowance for the Genius of the Time in which he wrote, but to stand out as presumptuous, that even the wisest and most prudent Man can be totally free from the Errors of the Age in which he flourished: It may not be an illis to give a few Lessons with regard to our Author.

In the twenty fifth Chapter there is an Account of the Mines, in the Kingdom of *Musfil*, where we are told of a Passage that is to be met with in most of the Part of our Author, because it is reported on the Credit of the Inhabitants, and we were willing to examine it by itself, and that the Reader might perceive we had Reason to enquire upon him some Insuperabilities which he might have upon our Author himself. After having observed that Diamonds are found there at the Bottom of a deep Mountain, after the rainy Season is over, he tells us that they are to be found in the Summer Time ascend the Mountain, though with great Difficulty, because the steepness of the Hill, and had aundance of small Stones and Gravel. In this they

are likewise much exposed to Danger from the vast Number of Serpents of enormous Size, which shelter themselves in the Holes and Caverns of these Rocks, where, nevertheless, they find Diamonds in the greatest Abundance. Among other Methods of obtaining them, they make use of this: There are abundance of white Eagles that rest in the upper Part of those Rocks, for the sake of feeding on the Serpents, and in the deep Valleys and Precipices, where Men are afraid to venture themselves, they throw Pieces of raw Meat, which the Eagles perceiving, immediately swoop and seize it, with all the little Stones and Gravel that adhere to these small Pieces of Meat. Such as search for Diamonds, watch the Eagles Nests, and when they leave them, pick up such little Stones, and search likewise for Diamonds among the Eagles Dung. The Kings and great Men in this Country keep the fairest and finest of these Stones to themselves, and suffer the Merchants to sell the rest.

The famous *Julius Caesar Scaliger* was extremely offended with this Relation, which he treats with the most Contempt, and seems to wonder at the Assurance of a Writer that expects Stories of this kind should gain Credit: Yet, after all, I do not see that there is any great Fault in our Author's relating this Tale, however improbable it may seem, since without doubt he received it from the Inhabitants, and what Motives they had to tell him such a Story is not very difficult to guess. The native *Indians*, in all the Revolution that we have experienced in the Countrey where they live, have preserved this Trade in their own Hands, and by Fables of one sort or other kept Strangers from attempting to interfere with them. Our Author was very probably the first *Europæan* that was ever at the Diamond Mines, and therefore we have the best Reason for being surpris'd at his being imposed upon in an Affair of which he could not be a competent Judge.

But to make the Reader some Amends for so imperfect a Relation of the manner in which this valuable Trade is carried on, I shall take this Opportunity of inserting the best Account of the Matter that I believe has been hitherto given by one who was an Eye-witness of it in the Year 1680, and that too in the very Country known to our Author by the Name of the Kingdom of *Musfil*. "The Diamonds are scattered and dispersed in the Earth, and he to this, that in the most plentiful Mine, it is rare to find one in digging, or till they have prepared the Stuff, and searched purposely for them: They are also frequently enclosed in Clods, and some of those of *Malswelled*, and the new Mines in the Kingdom of *Gelandra*, have the Earth so fixed about them, that till they grind them on a rough Stone with Sand, they cannot move it sufficiently to discover they are transparent, or were not for their Shapes, to know the same other Stones. At the last opening of the Mine, the unskilful Labourers sometimes, to try what they have found, lay them on a great Stone, and flaking on them with another, to their costly Expence discover they have broken a Diamond. One I know who had an excellent Stone of eight Mangelans, that is, sixty two Grains, served so by ignorant Miners he employed. Near the Place where they dig they raise a Wall, with such rugged Stones as they find at hand, whereof all the Mines afford Plenty, of about two Feet high, and six Feet over, flooring it well with the same; for the laying of which they have no other Matter than the Earth tempered with Water. To strengthen and make it tight they throw up a Bank against the Side of it, in one Part whereof they leave a small Vent about two Inches from the Bottom, by which it empties itself into a little Pit made in the Earth to receive small Stones, if by chance any should run through. The Vent being stopp'd, they fill the Cavern they have made with Water, taking therein as much of the Earth they dig out of the Mine as it can conveniently receive at a time, breaking the Clods, picking out the great Stones, and stirring it with Shovels till the Water is all muddy, the gravelly Stuff falling to the Bottom; then they open the Vent, letting out the foul Water, and supply it with clean, till all the earthy Substance be washed away, and none but a gravelly one remains at the Bottom. Thus they continue washing till about Ten of the Clock before Noon, when they

“ they take the gravelly Stuff they have washed, and spread it on a Place made plain and smooth for that Purpose near the Cistern, which being so dried by the Heat of the Sun at that Time of the Day, they very curiously look it over, that the smallest Bit of a Stone can hardly escape them. They never examine the Stuff they have washed, but between the Hours of Ten and Three, lest any Cloud, by interposing, intercept the brisk Beams of the Sun, which they hold very necessary to sift them in their Search, the Diamonds constantly reflecting them when they shine on them, rendering themselves thereby the more conspicuous.

“ Some of the expertest Labourers are employed in searching, he that lets them at work usually sitting by, and over-looking; but it is hardly possible, especially where many are employed, to watch them so narrowly, but that they may steal part of what they find, as many times some of them do, and selling it privately, convert it to their own Use. If they find a large Stone, they carry it not presently to their Employer, but keep on looking, having an Eye on him, till they observe he takes notice of it, when with the Turn of their Hand they give him a Glimpse of it, but deliver it not till they have done Work, and then very privately, it being the general Endeavour to conceal what they find, lest it should come to the Knowledge of the Governor of the Place, and he requires a Share, which in the Kingdom of *Golconda* is usually practised, without any Respect to the Agreement made with them. The Miners, those that employ them, and the Merchants that buy the Stones of them, are usually *Pagans*, not a Musselman, that ever I heard of, followed the Employment. These Labourers, and their Employers, are *Telingas*, commonly Natives of or near the Place. The Merchants are the *Bamans* of *Guzerat*, who for some Generations have taken their own Country to take up this Trade in which they have had such Success, that it is now solely engrossed by them, who, corresponding with their Countrymen in *Sarat*, *Goa*, *Golconda*, *Tifapere*, *Agra*, and *Diu*, and other Places in *India*, furnish them all with Diamonds.

“ The Governors of the Mines are also Idolaters. In the King of *Golconda's* Dominions a *Telenga Bramme* rents most of them, whose Agreement with the Adventurer is, that all the Stones found under a *Pagoda* Weight are to be their own; all of that Weight and above is to be his, for the King's Use. But although this Agreement be signed and sealed, he minds not at all the Performance thereof, but endeavours to engross all the Profit to himself, by tyrannically squeezing both Merchants and Miners, who he not only taxes very high, but maintaineth Spies among them of their own People. On the least Suspicion that they have been any ways fortunate, he immediately makes a Demand on them, and raises their Tax; and on a false Pretence they have found a great Stone, drubs them till they surrender what they have, to redeem their Bodies from Torture.

“ Besides, the Price is so high on all sorts of Provisions, Beets, and Tobacco, which with them are esteemed Necessaries, that the Price of all Things is doubled, by which Course there is hardly a Man to be found worth five hundred Pounds amongst them, most of them dealing by Monies taken up at Interest of Usurers, who reside there purposely to furnish them, who with the Governor eat up their Gains, so that one would wonder any of them should stay, and not betake themselves to Places where they might have better Usage, as there are many in other Governments, and some few that have the Scale to remove, but many their Debts, others the Hopes of a great Hit, detain. Both Merchant and Miner go generally naked, only a poor Cloth about their Middle, and their Soles on their Heads; they dare not wear a Coat, lest the Governor should lay they have thriven much, and are rich, and to enlarge his Demands on them. The swift, when they find a great Stone, conceal it till they have an Opportunity, and then with Wife and Children run all away into the *Tifapere* Country, where they are secure. The Government in the *Tifapere* Country is better: Their Agreements observed, Taxes easier, and no such Impositions on Provisions,

“ the Merchants go handsomely clad, among whom are several Persons of considerable Estates, which they are permitted to enjoy peaceably, by reason why not more Mines are much more populous, and better cultivated than those of *Golconda*.”

It is for the same Reason that I have omitted the improbable Story of a Bird called a *Ruc*, of such prodigious Size as to be able to carry an Elephant upon its Back, which Absurdities our Author was probably induced to believe, by the strange Things he daily saw in that Part of the World, and of which the People in *Europe* had not so much as the least Idea. That *Gondius* is a requisite for keeping the World within Bounds, assuming no Inclination to try the Patience of my Reader, by inserting any more of these odd Travels, but is absolutely necessary for connecting the several Parts of the Discourse, and shewing how, in what Manner, and by whom those great Discoveries were made, which unite the different Nations in *Europe* to carry on together a Trade as they do to all Parts of the *East Indies*. This, without doubt, was originally owing to this Work of *Albruzius*, who, though no Geographer or Seaman himself, yet in such clear and evident Proofs of the Possibility of reaching the most distant Parts of *Asia* by Sea, that his Work was more esteemed in *Portugal*, where the full Spirit of Discovery appeared, than in *Italy* itself. It remains, in this Place, to give a short Account of the Names by which he has distinguished the Countries he visited, and promising to answer the great Objection raised against his Work, from his not making any Mention of the famous Wall in *China* for keeping out the *Tartars*, which shall be done in as few Words as possible.

Our Author following exactly the Sentiments of the *Tartars*, distinguishes all this great Country into two Parts, *viz.* *Catbay* and *Mangi*, about which many Doubts have been raised, and many Diatribes let on both sides by just Grounds, since it is very plain, that under the Permutation of *Catbay*, *Murco Polo* comprehends the Northern Provinces of *China*; and under that of *China* the nine Southern Provinces, which are separated from the former by the great River *Yang*, and when we come hither to treat of the present State of the *Empire of China*, we shall take Occasion to shew, that the Description of his agrees very well with the best Account of the *Empire*. This will be the more intelligible to the Reader, when he is informed, that the *Tartars* of *Europe* use very different Names, that is to say, they call *Catbay* to the Northern Parts, and that of *Europe* to the Southern Provinces of *China*. As to the Name of *Catbay*, or *Mangi*, in the *Tartar* Language, it signifies *Barbarians*, and to they called the *Tartars* themselves from the brutality of their Manners, and their extravagant Haughtiness and Pride, and especially the intolerable Hatred and Contempt which they entertain of the *Tartars* themselves. The plain Reason was, that they did not mention the famous Wall in *China*, which he entered it by the Southern Provinces, and that confines himself to the Places he saw, or to those which were in their Neighbourhood, and professes his Distance from the Western Parts of *China* to the Sea, it was not possible he should take Notice of it, or that we should consider this Matter attentively, it is very plain, that in Circumstance, instead of lessening the Credit of *Murco Polo*, ought, in Truth, to strengthen it very much, since it is a convincing Proof of the Truth of what is asserted in relation to his own Travels, and his Description of the Countries through which he passed, and especially that he did not amuse himself with Accounts of Countries and Provinces of which he could have no Information from Report, to which, if he had himself been present, he must have been much more obscure and obscure than we find it at present. But it is now time to return to the Conclusion of this Section, by shewing the Authority of the Subject, that may be obtained by the Perusal of *Murco Polo's* Travels, in order to the thorough Understanding of the Subject. And thus we shall perform a considerable Part of our Duty, and in such a Manner as may demonstrate the Necessity of looking into any one of the most valuable of our

29. As the Inhabitants of Europe received the first distinct Accounts of the vast Country of China from our illustrious Venetians, so from them likewise they had the earliest and best Account of the Revolutions that had happened in that Empire by the Power of the Tartars; a Thing of such Consequence to the right understanding of that subsequent Travellers have related, that I will be bold to say all the Difficulties and Discouragements that have been thrown in our Way, and have so long hindered our making a right Use of the many Collections of Travels that have been published, have arisen in part from a Humour that for some time prevailed, of treating Marco Polo's Relation as a Romance, and partly through the Mistakes of those who, for want of having sufficient Lights, and the Materials that were requisite, undertook to explain the History of the Inruptions of the Tartars into China, and endeavour'd to make the Dates and Facts mentioned in these Travels, fall in with their Accounts, according, at every Turn, the Author of Errors and Faults, of which themselves only were guilty. To remedy these Disorders, and to make the Way plainer for the future, we shall, without running into a long Discussion of what other Writers have advanced, observe, that there have been three distinct Conquests of China made by the Tartars, of each of which we shall give a clear and distinct Account in very few Words. The first of these was by the Eastern Tartar, who, before the Time of Zingis-Khan, made himself Masters of the Northern Provinces of China, and fixed the Seat of their Empire at *Khanbalick*, *Cambalu*, or *Pekin*; and this, as I conceive, gave Rise to what is call'd the Empire of *Catbay*; concerning which, all our ancient Writers in general deliver themselves with so much Confusion, sometimes representing *Catbay* as a Part of Tartary, sometimes again comprehending under that Name the whole Empire of China; and at others, distinguishing from both. But from this Distinction, it clearly appears, that though the ancient Empire of *Catbay* was situated in China, yet it was an Empire rais'd by the Tartars; and that from want of attending to this, so many Mistakes have been introduced.

The Prince who govern'd *Catbay* in the Time of Zingis-Khan was *Alan-Khan*, against whom that great Conqueror made his first Attempt, in the Year 1206, and that with such Success as to oblige this Monarch, after various Designs to shut himself up in the City of *Cambalu*, and to sue for Peace, which, with much Difficulty, he obtained; the Confirmation of which he gave his Daughter in Marriage to Zingis-Khan. This Peace was but of very short Continuance; for *Alan-Khan*, having a Jealousy that some of his Nobility held Intelligence with his Enemy, he put many of them to Death; and finding the northern Parts of his Dominions in a manner wast'd and depopulated by the late Invasion, he retir'd to the City of *Nankin*, which his Father had fortified with three Walls, the chief of which was forty Leagues in Circuit, and left his Son in Possession of *Khanbalick* and of the adjacent Countries. The rest of the Nobility, enraged at the Instances of Severity before-mentioned, and at the same time doubting their own Safety, had immediate Recourse to Zingis-Khan, and drew him a second Time into *Catbay*, where he made himself Master of the Imperial City of *Cambalu*; the News of which Accident affect'd *Alan-Khan* to such a Degree, that he poison'd himself. This happened about the Year 1210; and thus the Tartars became Masters of the northern Parts of China. They continued their Conquests under the Reign of the Successors of Zingis-Khan, till the Emperor, who reign'd when our Author was in these Parts, viz. *Coplai-Khan*, who in the Year 1278 completed the Conquest of *Mangi*, or the southern Parts of China.

The Bounds of Zingis-Khan's Conquests on this Side, was the River *Uiang*; but his Successors annex'd all the Country between that River and the River of *Kiang*. All the rest were subdu'd by *Coplai-Khan*, and his General *Pekin*. This was the second Conquest made by the Tartars, who not only destroy'd the Empire formerly establish'd by their Countrymen in *Catbay*, but also that of the native Chinese, which had subsisted for so many Ages. This short Recapitulation sets this Affair in its true Light,

and not only explains what Marco Polo has told us, and reconciles his Accounts with those of later Authors, but also connects his Relation with that of *Rubruquis*, and even those of the Arabian Travellers; so that taking the Whole together, we have a clear and satisfactory View of the Affairs of China, to that which I call the second Conquest by the Tartars; but as the Affairs of this Country were entirely changed again before the Arrival of the Portuguese by the Way of the *Cape of Good Hope*, I think it will be for the Reader's Ease and Advantage to have this History conducted to its Close before we enter upon the Discoveries and Conquests of the Portuguese; because otherwise, when we come to speak of the Chinese as again in the Possession of their Country, and again driven out and conquer'd by the Tartars, it must necessarily introduce infinite Confusion. It is from the Chinese Writers that we have the Reigns of the Tartar Emperors who succeeded *Coplai-Khan*, and of whom there is very little Mention made in the Histories of the Tartars.

The Chinese, as I before observ'd, call'd this new Imperial Family *Yuen*, and bestow'd the Name of *Chi-Tsu* upon *Copli-Khan*, of whom their Histories speak with the utmost Reverence, and whom they celebrate, for his having opened the great Canal mentioned by our Author, and which has been ever since justly considered as one of the Wonders of China. It is three hundred Leagues in Length, and nine thousand Imperial Barks are constantly employ'd thereon, in transporting the Tributes of the southern Provinces to *Cambalu* or *Pekin*, and in other Services. These Writers place the Death of this Emperor somewhat lower than the Tartar Historians; for the former say, that he lived to the Age of fourscore, and died A. D. 1295, whereas the latter place that Event in 1292. He was succeeded in the Empire by his Grandson, whom our Author calls *Timur*, but in the Chinese Chronicles he is stiled *Teking-Tsong*; and as his Grandfather excelled in Power, so he distinguished himself by his Clemency and the Love of his Subjects. After him reign'd seven other Princes of his Family, all of whom were no less illustrious on the score of their personal Virtues, than glorious from their possessing so large an Empire: And it is very remarkable, that the Chinese History renders to great Justice to this foreign Race of Princes, as to stile the Period in which they ruled over China, the *wise Administration*. The last of them was *Clun-ti*, a Prince of great natural Endowments, but who unfortunately gave himself up to Priests and Women, leaving the Management of the Affairs of the Empire entirely to his Prime Minister. The Tartar Soldiers, through so long a Peace, had lost their original Discipline, and were become slothful and effeminate, which to rais'd the Courage of the Chinese, that they began to shew a Disposition to revolt; and one *Tebou*, an obscure Person, who had been no better than a Footman, having put himself at the Head of a Body of Malecontents, reduced many of the great Cities in the Empire; and became, by Degrees, so powerful, that he twice defeated the Imperial Army, and at last forc'd the Tartars to abandon China, after they had been possess'd of it ninety-nine Years. This Revolution happen'd in 1370; and *Tebou* having by his Success in this War rais'd himself to the Imperial Throne, assum'd the Name of *Tai Tson*, and fix'd his Imperial Residence in the City of *Nankin*. And thus it was that the Chinese, having expell'd their Conquerors, recover'd the Dominion of their own Country.

As for the Emperor *Clun-ti*, he retir'd with his Tartar Subjects northwards, and died of Grief and Vexation about two Years after this Revolution happen'd. The Tartars that were thus expell'd, having a strong Tincture of the Chinese Customs, did not join with the rest of the *Meguls*, but settled themselves in the Country of *Leiston*, and were, from this Time forward, stiled the *Nomades Meguls*, or *Meguls of the East*, to distinguish them from the other *Meguls*, who were call'd *Meguls of the West*.

This desert Country they cultivat'd with the utmost Care, built therein several considerable Cities, and practis'd that Industry which they had learned by conversing so long with the Chinese; yet, in some respects, they still retain'd a Tincture of their ancient Manners; for, instead

of remaining firm and united, which seem'd to be the only Means left for recovering again the Dominions they had lost, they split themselves into several little Principalities, under to many Khans; who, though their Territories were not very wide, maintained nevertheless their Independency. Among the most considerable of those Cities which they erected, were *Kirin*, *Ula*, and *Kenkita*, all three of them seated on the West Bank of the River *Sangere*, which falls into the great River *Amur* about twelve Days Journey above its Mouth. The City of *Kirin* is distant from the Province of *Leaton* about three hundred and sixty Miles. The City of *Ula* is in Latitude 41° 20' N, and was consider'd as the Capital of the *Niuchen Meguls*. The Khan of *Ula* however was far from being a considerable Prince, had no sort of Superiority over the rest of the Khans of the Eastern *Tartars*, was without Allies or Resources beyond the Power of his own Subjects; and yet, as we shall shew hereafter, it was this Khan *Ula*, that had the Courage to undertake, and the good Fortune to accomplish the third Conquest of *China*: But at present we will leave the *Tartars* cultivating their Delays, and return to the new-founded Empire of *Toku*, and his Descendants.

The Dynally, founded by this Prince, was call'd *Ming*, and the Emperor, who, as I have said before, assumed the Name of *Ti Tsou*, reigned thirty-one Years with great Glory, and left the Empire to his Grandson, who perished in a Civil War, and was succeeded by his Uncle, who, having been formerly King of *Peiking*, transferred the Seat of the Empire thither. The sixth Emperor of this Family was *Yng Tjong*, under whose Reign the *Tartars* made new Incursions into *China*, to oppose them, the Emperor march'd at the Head of a great Army, and pursuing them considerably beyond the famous Wall, they suddenly faced about, attacked and defeated the *Chinese*, making the Emperor Prisoner. His Son, who was but two Years old, was advanced to the Empire, and the Brother of the captive Emperor, whose Name was *King Ti*, declared Protector, which Promotion gave him an Opportunity of seizing the Empire. The *Tartars*, some time after, released *Yng Tjong*, who chose however to lead a private Life, and leave his Brother in Possession of the Empire, which he enjoyed to his Death; and then the old Emperor was again seated on the Throne.

The eleventh Emperor of this Race was *Chi Tjong*, who had the good Fortune to defeat the *Tartars* in several Battles; and it was under his Reign that the famous *Francis Xavier* preach'd the Christian Religion in the East, where he died in 1552. The Emperor *Chi Tjong* reigned forty five Years, in the latter Part of which the Government began to decline very sensibly, as it continued to do under all his Successors, down to *Hou Tjong*, who was the sixteenth and last Emperor of the Family of *Ming*. It was under his Reign that *Zungty*, who was Khan of *Ula*, form'd the Design of making himself Master of *China*, notwithstanding that all the Force he was able to raise did not exceed fifteen thousand Horses. He began with entering into private Intrigues with some of the *Chinese* Mandarins, who were exil'd into the Province of *Leaton*, by whose Assistance he soon became Master of a great Part of that Province. The Emperor sent against him an Army more than sufficient to have forc'd him back into his own Country; but he had so much Address, as to prevent the principal Officers of this Army from doing their Duty; so that by degrees he master'd all the rest of that Province, and at last took Possession of its Capital.

While this Scene was transacted in the East, and the whole Force of the *Chinese* Empire employ'd there to fo

little Purpose, new Troubles arose in the Western Provinces, where several Bands of Thieves and Highwaymen committed the most extravagant Outrages; and at last, under the Command of one *Lycoungz*, an obscure and infamous Fellow, plunder'd several Cities, and even whole Provinces, which increasing the Number of the Forces the Rebel had at last sufficient Power to attempt the Subversion of the Empire. It was with this View that he march'd directly to *Peikin*, where in three Days he became Master of the Place, and the Emperor finding himself abandon'd, hang'd himself on a Tree in his Garden. *Lycoungz* immediately took the Title of Emperor, and endeavour'd by all the Methods he could devise, to bring over to his Interest *Oufanguei*, who was General of the Army sent against the *Tartars*, and the only Person capable of disputing with him the Possession of *China*. This General however reject'd all his Offers with Contempt, and oblig'd *Lycoungz* to take the Field once again, and to march against him with his numerous Army: *Oufanguei*, who saw that it was simply in possible for him to take the leading head at once against the Usurper and the *Tartars*, resolv'd to make Terms with the latter Enemy of the Emperor, and then to invite *Zungty* to come to his Assistance.

This was precisely what the *Tartar* Prince desired, and therefore he made no Difficulty of complying with his Demand. He left five thousand of his own Troops in the Province of *Leaton*, and then march'd with ten thousand *Tartars*, and twenty thousand of the Inhabitants of that Country to the Relief of the *Chinese* General, who receiv'd him with great Joy. They march'd together directly towards the Usurper, and when they were upon the Point of giving him Battle, *Zungty* observ'd, in a Conference he had with the *Chinese* General, that, as the best Part of the Forces of the Empire, and especially those of the Southern and Western Provinces, were extirpated by the *Tartars*, it would be very expedient for him to order the Tails of his Horses after their Manner by some Means the Army of the Usurper would take them all the *Tartars*. *Oufanguei* following the Advice of the King, it had so good an Effect, that the Rebels were totally defeated, and *Lycoungz* oblig'd to fly with the Remains of his Army towards *Peikin*. The victorious Allies order'd their Pursuit without the least Intermision, and on one drawing near the City, the *Chinese* General made this motion, that all such as did not take Part with the Usurper should trim their Horses after the Manner of the *Tartars*, that they might the more easily distinguish themselves on all Occasions. This stratagem had a great Effect as a second Victory: *Sa h M* donates declar'd themselves against the Usurper, that finding it absolutely impossible to maintain his Ground, he first plunder'd the Imperial City, and then retir'd with his Army loaded with Booty. When the Allies were in Possession of *Peikin*, it was agreed that *Zungty*, with his Forces, should remain there for the Security of the Place, and that *Oufanguei*, with his Army, should pursue the Usurper till such time as he could be put to the War.

The same Arts, or rather the same Virtues by which the *Tartar* Prince had gain'd the Affections of the Inhabitants of *Leaton*, produced the like Consequences amongst the Inhabitants of *Peikin*; and as, on the one Hand, they were weary of living without the Support and Protection of a Governor, so they flatter'd themselves, on the other, with enjoying all imaginable Happiness under a Prince so much Humanity and so great Abilities as *Zungty*; and therefore, almost of their own Accord, they chose him Emperor in the Absence of the *Chinese* General, and had himself Views upon the Throne, in which he had

¹ At present all the Eastern *Tartars* is subject to the *Chinese* Emperors, and is divid'd into two Parts, the first contains what may be call'd the hereditary Dominions of the Family now reigning in *China*. It is divid'd into three Governments, and the Inhabitants are all subject to the Name of *Mont-tseu*. The Capital of this Country is call'd by the Inhabitants themselves *Mongton* but by the *Europe* People, which is *Day* is a well peopled and well built City, where there is a sovereign Tribunal for deciding all Affairs that relate to the Dominions of *Tartary*. The other Part of this Country is still under the Dominion of its own Princes, who have the Title of Khans, which they receive from, and are Vassals to, the Emperor of *China*. The Inhabitants are call'd simply *Mongols*, or *Mongans*, and the County passes also under the last Denomination.

² As it is not my Intention to give the Reader here a History of *China*, but barely to mention such Facts as may be necessary to explain what has been related before, as I am not yet in the Success of my Voyages, I did not think myself oblig'd to mention all the Emperors of this Family, who therefore have touch'd only on the Reign of such as might best answer my Purpose.

³ These Facts are somewhat differently related by different Historians; but I have given them the Reader from the Collection of a Person who has taken great Pains to make himself Master of the *Chinese* History, which he may probably have prevail'd upon to publish when he had it perfect enough to bear the Inspection of the Critics.

probably succeeded, if he had not been thus out-witted by the Tartar *Zungt-by*, who foreseeing how different a thing might prove for him to maintain himself in Possession of so great an Empire, with such a handful of Forces, as no sooner seated on the Imperial Throne, than he instantly dispatched Advice of his good Fortune to the Khans of *East Tartary*, who were Princes of his own Family, inviting them to come, and share with him in so rich a Conquest. This was certainly a good Expedient for securing himself against the Fickleness or Infidelity of the *Chinese*; but at the same Time it visibly exposed the new Emperor to the Danger of being undone by his Auxiliaries; for the Khans of the *Tartars*, who on the first Summons halted to his Assistance, had certainly in View the dividing the *Chinese* Empire amongst them; but *Zungt-by* was a Prince of such Wisdom and Penetration, that he immediately discovered the Danger to which he stood exposed, and provided against it with a Sagacity equal to his Penetration. He divided these Corps of *Tartars* as soon as they entered his Dominions, sent for several of their Princes to *Pekin*, and in a short Time to separated them from each other, that they became absolutely his Subjects, and were unable to act otherwise than was conducive to his Service. In the Conquest and Settlement of *China*, this Tartar Prince shewed all the Courage and Capacity of *Julius*, all the Policy and Conduct of *Augustus Cæsar*, by which he thoroughly accomplished the third Conquest of *China* by the *Tartars*, which happened in one thousand six hundred forty and four, after the *Chinese* had preserved their Freedom for two hundred sixty-six Years.

This new Race of *Tartar* Princes, which still continue to reign in *China*, for the twenty-second Dynasty of their Monarchs, is distinguished by the Name of *Ying*; it is however very remarkable, that *Zungt-by* is not accounted the first of those Emperors, because he died almost as soon as he was seated on his Throne, and before he was entirely possessed of *China*, leaving the Empire to his Son *Chun-Yehi*, who was then no more than six Years of Age, and to whom his dying Father assigned his Brother *Ama-Van* for his Guardian. So early a Minority, would have imagined, must have been fatal to the new raised Empire; but *Ama-Van*, during the Non-Age of his Nephew, conducted all things with so much Wisdom and Fidelity, that when the young Emperor came to take the Reins of Government into his own Hands, he found himself in as full Possession of his Dominions, as if he had descended to him from a long Line of Ancestors. The Emperor *Chun-Yehi* was himself a Person of extraordinary Abilities, easy and affable amongst his Soldiers, wife and prudent in his Councils, and to refined a Politician, that under Colour of executing the Laws with exactness, he took off all the great Men in *China* that were capable of giving him either Jealousy or Disturbance; so that after a Reign of seventeen Years, he left the Empire perfectly settled to his Son, who was but eight Years of Age.

The Name of this Prince was *Gang-li*, he was raised to the Throne in the Year 1662, and, during his Minority, the Empire was governed by four great Ministers, who executed their Offices with the greatest Wisdom and Integrity, so that this second Minority proved not in the least dangerous to the Empire. It is true, that the famous *Chinese* General *Ousungwei* took the Advantage of this, and endeavoured to shake off the Yoke of the *Tartars*, of whom with equal Wit and Wisdom, he said, that he had called in Lions to assist him in hunting Dogs. He had some Success at the Beginning, and might probably have secured at least some Part of the Empire for himself and his Posterity, if he had not been very old at the Time of his Revolt, and died not long after, which gave the Emperor's Ministers an Opportunity of taking such Mea-

asures, as put it out of the Power of the *Chinese* to rebel for the future. *Gang-li* fell nothing short, either of his Father or his Grandfather, so that it may be reckoned an extraordinary Felicity in this Family, that for three Generations there were as great Princes of it as perhaps of any other in the World. This Emperor was extremely careful with regard to two Points, the encouraging and distinguishing his *Tartar* Subjects, and behaving with the utmost Justice and Moderation towards the *Chinese*.

In the Beginning of his Reign, indeed, he committed some necessary Acts of Severity, but when he found that he had by this Means absolutely broken the mutinous Spirit of the People of *China*, he changed his Conduct entirely, and applied himself wholly to the putting every thing in the best Order possible, for the Benefit of all his Subjects. It was with this View that he obliged the Viceroy and other Governors of Provinces to administer Justice with Impartiality and Mildness, taking from them the Power of punishing capitally, and obliging them to send all such Sentences to the supreme Tribunal of the Empire. In order to take away all Distinctions, and to render his *Tartar* and *Chinese* Subjects but one People, he established this Regulation; he obliged the *Tartars* to wear the *Chinese* Habit and obliged the *Chinese* to cut their Hair, after the Mode of the *Tartars*, and this upon Pain of Death. It may seem strange, but it is nevertheless true, that many refused to comply with this Order, and chose rather to part with their Lives than their Hair, and that many more abandoned their native Country, to fly into Places where they might wear their Hair as long as they were wont. But the Emperor's Edict had notwithstanding the desired Effect, that is to say, freed him from such mutinous Spirits as might have disturbed the Tranquillity of his Reign.

The most important Employments, and the most honourable Offices in the Government, he gave only to the *Tartars*; but then he made a Law, by which the Children of *Tartars* by *Chinese* Women, or of *Chinese* by *Tartarian* Women, who were bred up in the Customs, and were taught to speak the Language of the *Tartars*, were declared capable of the highest Offices in the Empire. He was not more careful of the Domestic than of the Foreign Affairs of his Empire, which almost all his Predecessors had neglected to a great Degree; for he not only reduced all the Eastern *Tartars* intirely under his Obedience, but made two Journeys into that Country, where he admitted all Ranks of People freely to his Presence, and thereby gained the Love of the *Moguls* in the highest Degree. As for the *Tartars* of the West, he forced them to have recourse to his Protection, and not only drove the *Calmuks* from his Frontiers, but entering their Country also in his Turn, took from them the Provinces of *Chamil* and *Tarjan*, which serve as an excellent Barrier on that Side for the *Chinese* Empire.

In his Person, and in his Manners, he had nothing of the *Tartar*, and was to perfectly acquainted with every Government in *Europe*, that he discoursed of them in a manner that surprised even the *Europeans* themselves. The late Czar *Peter* the First sent M. *d'Ismaïloff* with the Character of his Embassador to the *Chinese* Court, whom the Emperor not only received with all imaginable Politeness, but at the first Audience presented his Excellency, a Nobleman who accompanied him, and his Secretary, each with a Gold Cup full of Mead, by which they plainly perceived that he was informed of the Czar's Custom, who when he had a mind to distinguish any Foreigner, was wont to present him with a Glass of Wine with his own Hand. This Emperor *Gang-li* reigned with great Glory sixty-one Years, and died on the 20th of Dec. 1722. He left behind him seventeen Sons, the fourth of which he declared his Successor, who at his Accession to the Imperial Dignity,

The *Chinese* Historians themselves agree, that this Race of Emperors were far inferior to the *Tartars*, as giving themselves up too much to a kind of Intemperance, and to the Pursuit of their Dignities. Some of them were carried away by a vain Desire of finding the Water of Life; others, by a kind of Intemperance, by drinking of which a Man might become immortal; but with little Success, that the Emperor *Chi-Tsong* died immediately after he drank of this pretended Water of Life, at the Age of Fifty eight. Others were possessed with a violent Desire of finding the philosopher's Stone, which induced them to spend too much of their Time in chymical Experiments. The Fate of these Monarchs sufficiently shews, that the Art of Government is the only Science worthy of the Attention of Princes.

This Prince took care to secure the *Moguls* of the East from the ambitious Designs of the *Russians*, and for that Purpose made a very friendly Alliance with the Czar *Peter* the First, for settling the Limits of their respective Empires, in consequence of which the Town and Fort of *Albany* was demolished.

assumed the Name of *Tong-Tebing*, i. e. Peace undisturbed. This Prince, who is said to inherit the Virtues as well as Dominions of his Ancestors, was in quiet Possession of the Empire in the Year 1735, since which we have not had any certain, or at least very important Accounts from *China*.

By this Deduction of the *Chinese* History we learn a Multitude of things necessary for the understanding such of the subsequent Voyages as mention that Country, which was the Reason that I insisted upon it to long; and we likewise discover the Usefulness of this sort of Knowledge, with respect to the Voyages that have gone before. We see that the *Chinese*, with whom our *Arabian* Travellers conversed, were quite another sort of People than those that now inhabit *China*; for they were a pure and unmixed Nation, whereas the modern *Chinese* are in a great measure incorporated with the *Tartars*; from whence it is easy to discern, that great Alterations must have happened in their Manners, especially if we consider the Character that *Rubruquis* gives the *Tartars*, which comes much nearer that of the modern *Chinese* than any thing we meet with in the *Arabian* Writers. It appears likewise from the Comparison of the Facts related by the *Arabians* with those mentioned by *Marco Polo* of the People of *Mangi*, that both these Writers must have reported Things with great Fidelity, since they agree in a Multitude of Particulars. The Conquest of the Northern Part of *China* by the *Tartars*, though not expressly mentioned, yet is plainly alluded to by the second *Arab* Writer; and as to the true Conquest of *China* by the same Nation, we owe the full Account of it to *Marco Polo*; for, without the Assistance of his Relations, it would have been a thing very difficult, if not impossible, to have discovered, that *Chai-Tsea* was the same with *Copli-Khan*, or *Cublai-Khan*, Emperor of the *Tartars*, who before he became Master of their Country was called by the *Chinese* *Hsi-pi-li*.

We likewise learn from this succinct View of the *Chinese* History, that the *Tartars*, who now possess *China*, are the very same Nation that formerly possessed it, contrary to what some very learned Men asserted, and which was generally believed half an Age ago. We likewise see, that the reigning Family in *China* are direct Descendants of *Cublai-Khan*, and consequently of *Zingis-Khan*, that famous Conqueror, whose Empire, as we have elsewhere shewn, was the most extensive that has been hitherto known in the World. These Things are of very great Consequence, if we read Voyages for the sake of improving and enlarging our Knowledge, and not merely for the sake of Amusement, which, however, is rather increased than lessened, by attending to these Circumstances. We can easily apprehend, after a little Reflection, that in the Time of our *Arabian* Travellers, and even in that of *Marco Polo*, the *Chinese* Empire must have been in a much better Condition, and its Trade much more flourishing than when it was first visited by the *Portuguese*, *English* and *Dutch*. Before that Time it had not been exposed to those cruel Ravages that ensued first on the breaking out of their Civil Wars, and next from the last Conquest by the *Tartars*. Besides, we can at any time have Recourse to this short History, when we are at a Loss as to the Facts mentioned in subsequent Voyages, and by comparing the Times in which they happened with the Dates that are therein set down, obtain an easy Solution of Doubts that perhaps we could never otherwise have got over.

It is from this Consideration of these Advantages, and that as far as my Power lies I might remove all Obstacles whatsoever to the perfect understanding of this Subject, that I have determined to give the Reader in the next Section a concise History of the other *Tartar* Empire in the *Indes*, I mean that of the Great Mogul, who was likewise a Descendant from the same Family with the great Con-

queror I have so often mentioned. By pursuing this Method, which I have brought into the narrowest Compais possible, the Reader will gain such a previous Knowledge of a great Number of Facts as never to be at a Loss in perusing any of the Voyages to the *East Indies*, either in this, or in any other Collection, which, without such an Introduction, it would have been absolutely impracticable for him to have understood, and that for many Reasons, of which I will take the Liberty to mention only a few. In the first place then, every Voyage brings us not only into a new Country, but, if I may so speak, introduces us into a new Company, with the Character of which, if we have not some previous Acquaintance, it is impossible for us to bear our Ease, whereas if we know in general who and what they are, we enter immediately into the true Sense of the Relation, and hear all that is told us with Pleasure. In the next place, it often happens, that either from the Force appearing tedious, or from some other Motive, the Writers of Voyages give us only short Hints as to the Government of the Countries through which they pass, or the Characters of Princes that reign in them, which would be utterly unintelligible to such as never heard of them before, and yet may be sufficient for the Information of those who have a general Notion of the Posture of things in that Country at the Time mentioned by the Author. Lastly, we are by this means enabled to rectify the Mistakes of such Writers, to distinguish between the Truth and Faithfulness of what they relate, and to form a clear and certain Judgment of the Merit of their Performances.

It may possibly be objected, that for the same Reason which have been offered in Support of these two Histories of the *Chinese* and of the *Indian* Empires, we might be obliged to write the History of all the other Princes that have reigned in the *Upper Asia*, which Objection, however, is not at all founded in Fact, since in the first place the Histories of all the little Princes in *India* are very far from being so necessary as those of the capital Empires; and in the next, how necessary soever we might make them, it is impossible for us to write any such Histories, because the necessary Materials for them are not to be had. When therefore this Matter is seriously considered, it appears to be a new Argument in favour of our Design, for since there have been but two great Empires in that Part of the World, of which any just and regular Account can be given, and to which all Books of Voyages and Travels through the *East-Indies* must necessarily refer, it would seem very absurd and unreasonable, after all the Pains we have taken in the darker Ages of this History, to declare that Period of it, which is at once the most useful, and will appear by far the most agreeable to a modern Reader, as there is not in the Compaus of Universal History any Branch so full of extraordinary Events, or in which there occur more surprizing Turns and Revolutions than in that which we are about to give.

Add to all this, that however deficient the rest of the Oriental Histories may be, we have abundant Materials for this, and those too as excellent in the kind as can be desired; for besides the particular Relations afforded us by several Writers of Credit, who were actually on the Spot when those Events happened which they record, we have very great Lights given us by such of the Oriental Writers as have undertaken to explain the several Expeditions of the *Tartars*, and especially those of the famous *Tamerlane*, whose Conquests, though less extensive, have, notwithstanding, made a greater Figure in our general Histories than those of his glorious Predecessor *Zingis-Khan*. Besides all which we have the singular Advantage of having a great Part of this History taken from the very Records of that Empire which it concerns, by the Industry of Mr. *Mansoubi*, who was formerly

¹ The Change of Names is a very clear Proof that no sort of Blame ought to be on *Marco Polo* for wanting Places after a different Consistency than what is commonly used, and we have this Advantage from it, that we learn the *Tartar* Appellations, and have thereby an Opportunity of comparing them with the *Chinese*. I cannot help remarking upon this Occasion, that in all Probability *Hsi-pi-li* is no more than the true Name of *Acqui* (for so in that Language it is written) expressed in *Chinese* Characters; but for the Name given him, after he started the Empire of *China*, it may be read the first of his Race, for *Chai* signifies the beginning, and *Tsea* a kind of Violet-coloured Point or tinge which is in the Imperial Diadem.

² Mr. *Mansoubi* was a *Tartar* by Birth, but he wrote his History of *Indostan* in the *Portuguese* Language, which was then and is still common in the East. We owe the Publication of it to the famous Jesuit Father *Castro*, who dedicated his *First* Translation to the Duke of *Bourbon*, the Father of the present *King of Spain*. In his Preface to that Work, he promises some farther Memoirs by the same Hand, but I cannot find that they were ever published, which is the more wonderful, considering the great Reputation that the first Part of the Work acquired. It is therefore very desirable, if possible, that these Papers may fall into other Hands, and yet see the Light.

Years in that Country, in the Quality of Physician to its Emperors, and had thereby an Opportunity of having free Recourse to those Records, which for the Benefit of Posterity,

as well as his own Information, he transcribed, and from which in a great Measure we have taken the Facts that are contained in the following Section.

SECTION XXII.

A succinct History of the Empire of the Great Mogul, from its Foundation by the Great Tartar Conqueror Timur-Bec, or Tamerlane, to the present Times.

Taken chiefly from the Oriental Writers.

1. The History of Timur-Bec, or Tamerlane, from his first Appearance in the World, to his being declared Khan of the Tartars.
2. His Conquests in the Indies, and subsequent Victories, to the Time of his Death.
3. The History of Miracha the Son of Tamerlane, and his Successor in Part of his Dominions.
4. The Reign of Abouchaid the Grandson of Tamerlane.
5. The History of Sheik-Omar, the Seat of whose Empire was at Samarcand.
6. The Life and Reign of Babar, the first of these Monarchs who assumed the Title of Grand Mogul.
7. An Account of the great Revolution which happened under Homayum, his Restoration to the Empire of the Indies, and his Death.
8. The Reign of Akabar, and the Accessions made by him to the Dominion of the Moguls.
9. The Reign of Jehan Guire, and of the Troubles that happened therein.
10. The History of Shah-Jehan, and of the Princes his Sons, to the Time of his Decease.
11. A succinct Account of the Reign of Aurengzebe, and of the several Accessions made by him to the Indian Empire.
12. Of the Disputes that happened after his Decease among the Princes his Sons.
13. Of the Reign of Isadour-Shah, and of the War carried on by him against his Brethren.
14. Of the Troubles that have happened since in that Empire.
15. The History continued to the Expedition of the Shah-Nadir, or Kouli-Khan, with an authentick Account of its most remarkable Particulars.

THE Empire of the Tartars subsisted for near two hundred Years, under the Administration of the direct Descendants of its illustrious Founder *Zingis-Khan*, when a new Conqueror was born of the same Race; for *Timur-Bec*, or, as he is usually called by us, *Tamerlane*, was descended in a direct Line from *Caitu*, who was the Great-Grandfather of *Zingis*. His Family, though not powerful, was very illustrious, since, tho' he was the Vassal or Subject of *Adill-Khan*, yet he was by Birth, Prince or Chieftain of the Tribe of *Burlaqs*. The visible Declension of the Power of *Adill-Khan*, gave him some Hopes of shaking off his Dominion. The Weakness of four Princes had so loosened the Foundation of their Throne, that this *Adill-Khan* had little more left him than the Shadow of supreme Authority. Whole Tribes of the *Mongals* or *Akzals*, withdrew themselves entirely from his Obedience, and set up particular Princes of their own; the Rest, who still acknowledged his Sovereignty, pretended to assign the Measure of their Submission, and to fix the Bounds of that Duty they were content to pay. As for *Tamerlane*, his Design was to throw off the Yoke entirely; but wanting sufficient Strength for to build an Uncertainty, he confederated with *Hugien*, who had exactly the same way of thinking; and when they had joined their Forces together, they declared War against *Adill-Khan*, attacked and defeated his Army, and having taken him Prisoner, tied him Hand and Foot, and threw him into a Torrent, where he was drowned. *Tamerlane*, to give the best Colour possible to so tall a Fact, raised *Caitu*, who was a direct Descendant from the famous *Zagatai-Khan*, to the Throne, from whom in two Descents it came to the Possession of *Mohammed* his Grandson. But he who was now powerful enough to bestow Crowns, had so much of Ambition, as to preserve the Power that attended them in his own Hands, though for certain Purposes he suffered the Title to remain elsewhere. Under the Name of *Mohammed Khan*, he made War on the Rest of the Princes of the Family of *Zingis*, and by his repeated Victories became so famous, that he was quickly considered as the first or principal Khan of the Tartars. This provoked the Jealousy of *Hugien*, who had been his first Companion in Arms, so that of a Friend and Ally he first became a secret Rival, and very soon an open Enemy. Their Armies met in the Plains of *Balk*, where a Bloody Battle ensued, in which *Hugien* was defeated and killed, and *Tamerlane* then saw himself at the Head of the whole Power of the Tartars, without a Competitor, and therefore having sum-

moned all the Princes of the Blood of *Zagatai* to *Samarcand*, there, by a Sort of Election, assumed the Title of Khan, which hitherto he had not done, put on the Imperial Crown of Gold and the Girdle, which was also an Ensign of that Dignity, received the Homage of all who were present, and very rich Presents upon that Occasion. It is from this Election and Coronation, that the Reign of this great Prince is usually dated, because though he had the Power long before, yet his Title was never till now acknowledged, or himself known to the World, as supreme Khan of the Tartars, which Title he ever after bore.

2. This great Event fell out in the Year of the *Hegira* 781, in the Year of our Lord 1379, and in the thirty-fourth Year of the Age of *Timur*. He was no sooner seated on the Throne of *Zingis-Khan*, than he began to form a Design of uniting under his Dominion all the Countries that had formerly paid Obedience to that Conqueror, with which View he instantly attacked the Princes of *Cheeriffan*, *Sigism*, and *Kandabar*, whom he reduced in a short Space of Time, and thereby opened a fair Road into the Indies. It was in the Year of the *Hegira* 800, and *A. D.* 1409, that he undertook the Conquest of that extensive Empire, at the Entrance of which he found Abundance of little Clans of Thieves, that by the Help of the strong Holds which they had erected, maintained a kind of tyrannical Power over the adjacent Country. These he first of all rooted out, and at the same Time destroyed without Mercy a Multitude of Guebres, or Worshipers of Fire, that had settled themselves on the Confines of *Indoistan*, when driven out of their native Country of *Persia*. He next besieged the famous Fortrefs of *Uddagen*, which had hitherto been considered as impregnable; but as this was not a Task that required so great an Army as that under his Command, he employed a Part of it in reducing the adjacent Country, then under the Dominion of Sultan *Mohammed*, who finding himself in such imminent Danger, invited all the neighbouring Princes to join him, in order to defend themselves against a common Enemy, who made no Scruple of declaring that he meant to dispossess them of all their Dominions, in order to annex them to his own. This Application had the desired Effect; *Rajah Rama* and the Rest of those little Princes took care to assemble their Forces, and at the Time appointed joined Sultan *Mohammed*, who immediately marched to give the Invader Battle. The Forces of the Indian Princes surpassed in Number by very far the Army of the *Tartars*, but the Conduct of *Timur*, who had

great Success and Glory; but the Violence of his Temper, joined to a high Opinion of his good Fortune, drew him into another War, which cost him both his Crown and his Life.

He had always a strong Inclination to pass for the great Defender of Justice amongst his Neighbours, and therefore taking Offence at the Proceedings of *Uzun Cossan*, a very potent Monarch of the Family of *Zangis Khan*, who had deprived one of his Relations of his Dominions, he declared War against him, notwithstanding all the Persuasions that Prince could take to terminate the Difference between them by a Negotiation. *Uzun Cossan*, though much inferior in Power, was much better versed in the Art of War, and by running his Country, and keeping his Forces always encamped in Places that were inaccessible, he so weakned the Forces of the *Tartar*, that, at last, he found himself obliged to retreat, in order to save the Remains of a numerous Army, worn out with perpetual Fatigue. But he was not able to conduct them, as he endeavoured, into his own Dominions, but was defeated and taken Prisoner by the Sons of *Uzun Cossan*, who immediately conducted him to the Presence of their Father, who received him at first with great Humanity, but being provoked at the insolent Speeches of *Abouchaid*, who reproached him with not daring to meet him in the Field, at last ordered his Head to be struck off, and put out the Eyes of his three eldest Sons, who were taken with him.

Soga was the Fate of this intolent and vain-glorious Monarch, equally unfortunate in the Beginning and in the Close of his Reign, but in neither more so than he deserved. The Chronicles of the Mogul Empire take Notice, that he left a bad Example to his Successors in these two Points, first, in putting to Death his Brother, and next in his Ingratitude to his most faithful Servants; Circumstances very dishonourable for his Memory, and which shew how unworthy he was of so great an Empire, that in the Course of twenty-eight Years, which he sat upon the Throne, could leave nothing but the shame of his Vices to make him remembered by Posterity. There have been Doubts arisen about the Succession of this Prince, because, in the great Seal of the Mogul, on which the Names of all the Emperors are engraven, there is one *Mirza-Mohammed* mentioned, whom some therefore would have the Son of *Miracha*, and the Father of *Abouchaid*. The first may be true, but not the latter, since it is probable, that this *Mirza-Mohammed* was his Brother, whom he put to death.

Shah-Omar, the fifth Son of *Abouchaid*, succeeded his Father in the Year of the *Hegira* 874. *A. D.* 1460, and was of a quite contrary Disposition: He is recorded to have been a very pious *Mohammedan*, and to have made the Study of the Khoran the Business of his Life, which is the more extraordinary, since his Great-grandfather *Timur* had a Religion of his own, which was a Sort of Deism. His Great-grandfather had very little Religion, and his Father none at all, though he made some Pretences to *Mohammedanism*. The Reign of *Omar* was a continued Peace; he never thought to trouble his Neighbours, was contented with his own Dominions, where he ruled his Subjects with Justice and Moderation, and was neither disturbed by Plots at home or Wars abroad. The only Thing remarkable in the Reign of this Monarch, is the Manner in which he amused himself; for it must appear somewhat singular, that a Prince, who seriously delighted in Peace, should invent a new kind of War for his Diversion.

At the End of his Garden he had a high Terrace, at each Extremity of which was built a Pigeon-house; farther the Emperor daily retired, and as he fed his Pigeons with his own Hand, they looked about him as soon as he appeared. He had taught these Creatures to live in a perpetual State of Enmity; so that as soon as the Emperor lifted up a white Satin Standard, the Pigeons

of one House attacked those of the other, and they with great Resolution defended themselves, and often killed out and drove away the Invaders. It one Day happened that the Emperor, deeply engaged in this Sport, flourishing his Standard in the Air, and having his Eyes fixed on his Pigeons, fell against the wooden Balustrade of his Terrace, which, being rotten, gave way, so that by his Fall he broke his Skull, of which unlucky Accident he died in two Days after, having reigned happily for himself and for his Neighbours twenty-four Years.

6. He was succeeded in the Throne by his Son *Babar*, in the Year of the *Hegira* 899, *A. D.* 1493. This Prince had scarce taken Possession of the Government before he found himself engaged in a War, for which he was every way indifferently provided. The Prince of the *Uzbek Tartars* at that Time was *Schah-Bac-Khan*, who remembering that his Father had been deprived of *Samarcand* by *Abouchaid*, the Grandfather of *Omar*, he determined to lay hold of the Opportunity that offered of recovering his Dominions, knowing that the *Moguls* were much softened by their Inactivity during so long a Peace. He made a right Judgment in this Matter; for, on his Approach, *Babar* found it impossible to make head against him, and therefore retired from Place to Place, till at last he took Shelter in *Cabulistan*, the Governor of which remained faithful to him, and soon assembled an Army capable of recovering what he had lost to the *Uzbeks*.

Babar had hitherto appeared of as peaceable a Disposition as his Father; but now, whether stung with Resentment or roused by Despair, he shewed as great Courage as any of his Ancestors, and seemed impatient to invade that Country which he had so lately abandoned. The Governor of *Cabulistan* however was of quite a different Sentiment, and having shewn his Master that it was infinitely more easy to make himself absolutely Lord of *Indostan* than to recover the Countries he had lost, he brought *Babar* over to his Opinion. In order however to proceed with the greater Security and Success, the Emperor proposed making a Journey through *India*, under the Disguise of *Giogis*, or *Indian Pilgrims*, that they might the better judge of the Strength and Condition of those whom they meant to conquer.

They executed this Resolution almost as soon as they had formed it; and having travelled undiscovered from one Extremity of *India* to the other, they found it inhabited by four Nations. The first were the native *Indians*, who still kept up the Form of the ancient Constitution, though the Spirit of it was in a manner lost. Their Kings shutting themselves up in their Seraglios, thought of nothing but their Pleasures, and left the great Affairs of Government to their Ministers, who were often as indolent as themselves, and left them in their Turn to their Domesticks. The *Bramins* had exchanged the elevated Philosophy of their Ancestors for a Life of Superstition, which amused the Vulgar with a false Religion, and seemed to justify the Men of Sense, in having little or none at all. Their Soldiers kept their Horses, took their Pay, and appeared at their stated Times in Review; but as for Service they knew it not in Practice, and the very Idea of it gave them Disquiet. The common People were sunk in Luxury and Sloth, mistaking the Power of doing Evil for Liberty, and placing all Happiness in the Pursuit of their vicious Appetites, without Danger of Restraint, or Fear of Reproach.

The second Sort of People were the *Pattans*, a Race of *Mohammedans*, who from the opposite Coast of *Arabia* had passed over thither, and having first settled on the South-side of the River, erected there a Town, which still bears the Name of *Muslipatan*; from whence extending themselves still farther and farther, they at last became Masters of the Kingdom of *Dehli*, of which they were possessed when *Famerlane* made his Irruption into the *Indes*.

The Vice, which of all others has most stained the Glory of the Mogul Race, is Ingratitude; the first Imputation of which was derived from the Conduct of this *Abouchaid*. When he was obliged to fly, in order to save his Life, after the Loss of his Crown, two of his Counsellors counselled him to, and shared with him in all his Misfortunes. After he was restored, these two worthy Men expected some Share in his Favour, but *Abouchaid* thought them plain; he was more obliged to them than it was in his Power to repay, and therefore he hated to see them; neither was he contented to banish them his Court, but ordered their Names to be struck out of the Roll of his Servants. Hence the Ingratitude of *Abouchaid* is to this very Day a proverb through the East.

7. This is a famous Province between the *Indes* and the *Tibet*, and his belonged sometimes to one, and sometimes to the other of these Empires, and the origin of the great Consequence to the East, that it is a common Saying, he who is not Master of *Cabul*, is not Master of the *Indes*.

The *Perfians* were the third Sort of People; and these were no other than the Remains of the ancient *Perfians*, who were and are certainly the most innocent People in the World, and perhaps the most pious. As the principal Part of their Religion consists in worshipping the Almighty Author of all Things under the Symbol of Fire, the *Mohammedans*, without taking any Pains to enquire into their Principles, concluded them Idolaters; and when they conquered *Perfia*, forced them to abjure their Religion or to quit their Country. They chose the latter, and this brought Multitudes of them into the *Indes*, where, by a laborious Industry, they procured a bare Subsistence, exposed continually to the Inults of the other Nations, without any thing to sustain them under the Weight of so many and so great Misfortunes, save the Testimony of a good Conscience in this Life, and the Hopes of a Reward in that to come. The fourth Sort of People were his own Subjects the *Moguls*, placed there in Garrisons by his Ancestors, and employed in levying the Tributes imposed by them upon the *Rajahs*.

When *Babar* and his faithful Companion had examined all Things with the utmost Diligence and Attention, they returned to *Cabalistan*, and began to prepare for the Execution of their Project. They had observed, that the Prince of the *Pattans*, who was in Possession of the Kingdom of *Dehli*, was the most powerful of any of the *Rajahs* in the Country of *Indogon*, and therefore they resolved to begin with reducing him. *Babar*, having put himself at the Head of a numerous Army, summoned this Monarch, whose Name was *Amirissa*, to lay aside the Style and Title of a Sovereign, in a Country which belonged to the *Moguls* by Right of Conquest. *Amirissa* answered, that a King, though tributary, was still a King, and that since they disputed his Title, he was determined to pay no more Tribute to one driven out of his Dominions, and who, by his Conduct, seemed unworthy of Respect. *Babar* having received this Answer, prosecuted his March towards *Dehli*, and met with *Amirissa*, at the Head of an Army much greater than his own; but as the *Indians* were Soldiers only in Shew, they were broke and defeated by the first Attack. Their King perished like a brave Man in the Midst of his Enemies; the Remains of his Army took Shelter in the Mountains of *Thebet*. *Babar* remaining Master of the Country, made Choice of *Dehli* for his Capital, which has continued to be the ordinary Residence of his Successors ever since.

The first Care of this Prince, after his Establishment in the *Indes*, was to frame a Body of Laws, or rather to establish a few fundamental Maxims for the Government and Security of his Empire, that his Successors might not be exposed to such Accidents as he had met with, or be obliged, at every turn, to let their whole Dominions on the Hazard of a Battle. The Foundation on which this Structure was raised, was the sole and absolute Right of the Great Mogul, for so *Babar* was first called, to all the Country he had acquired by Conquest; and this was so clearly understood, as that it secured all Property to him, and made even the greatest of his Subjects Tenants at Will, or Tenants for Life at the very utmost. As by this Means the whole Lands in his Dominions were veiled in the Mogul, and all the great Men in the Kingdom made dependant upon his Pleasure, so by another Principle, the Bulk of the People were put as much into his Power, since no written Laws were allowed, but the Judgment of the Emperor established what was right and wrong in his Dominions. In his Capital he gave Judgment himself in all Causes that came before him; in other Cities there were Officers who decided all Things in his Name, and whose Decrees were liable to be reviewed by the Mogul himself.

These Constitutions were devised by the Governor of *Cabalistan*, who, as he had fixed the Emperor upon the Throne by his Fidelity, now secured him thereon by his Wisdom. The Effects of these Settlements very soon ap-

peared by the Change that was perceived in the Fate of *Indians*; for the *Tartars*, who had been the old Masters of *Babar* and his Ancestors, returned to him in few Families Quarters, as did also the *Perfians* and other *Mohammedans*, with whom the Court and the Army were filled, and upon whom all Places of Trust and Profit were bestowed. The great Officers, and in short all who had Professions civil or military, were styled *Omrah*, and the old *Indians* retained their antient Appellation of *Rajahs*. We shall meet with these Words very often, and therefore it may not be amiss to fix the Sense of them effectually. The *Omrah* is the mere Creature of his Prince, and though he enjoys large Tracts of Land by his Favour, as well as considerable Appointments, yet he enjoys both but for Life, and can leave nothing to his Children, all being returned to the Mogul at his Decease, who is the Heir-General of every Man in his Service. The *Rajahs* are hereditary Princes in their own Dominions, which they hold indeed of the Mogul, but by certain Tenures, with which, if they comply, he has no farther Demands upon them. It often happens that these *Rajahs* live at Court, and are honoured with Employments, in Right of which they become *Omrah*; but at their Decease the Mogul retains all that they possess in his Dominions, and nothing but the Principality descends to their Children.

After all the Obligations that *Babar* owed to the Governor of *Cabalistan*, he became as ungrateful to him as his Grandfather had been to the Company of his Misfortunes, and treated him in such a Manner, that for his own Security, turned *Jaquir*, and in that Degree sheltered himself in some distant Part of the *Indes*. After he left the Court all Things ran to Confusion, and it plainly appeared, that none was able to govern the Empire, according to its present Constitution, but him who had framed it. It was so long Time before the Empire discerned this, but at length he found it out, repented of his Ingratitude, and would very willingly have recalled his Minister to Court, if he had known where to have found him. His Endeavours for some Time were fruitless; at last he bethought himself of an Expedient, which was successful as it was singular; he published an Edict, by which he ordered every Market-Town in his Possessions to send its *Bazar* or Market-Place up to *Dehli*, to return a sufficient Reason for not doing it. His Majesty thought this was, that he believed he should be able to catch him, amongst these Returns, the Place where his Minister had taken Shelter. When he came to look over a list of his Finger on the following Answer from a Town at a great Distance from his Residence. The Inhabitants declared, that they were ready, and willing to obey his Imperial Decree, but that their *Bazar* did not naturally belong to *Dehli*, and therefore, if his Majesty would be pleased to send one of the *Bazar's* of his Empire to *Cabalistan*, he should immediately set out. *Babar* ordered the Requester to bring him this Return to send him with a certain Man by whose Advice they made it, which according to they did, and it proved as he expected, his Minister's Servant the Governor of *Cabalistan*, whom he recalled to his former Post, and to his Favour, both which he enjoyed as long as he lived. The rest of his Empire which affords us nothing remarkable, namely his Kingdom in profound Peace, and having lived to a good old Age, he died in the Year of the *Hegira* 933, at *Dehli*, after reigning five Years at *Samarcand*, three in *Cabalistan*, and thirty in the *Indes*.

He was succeeded in his Dominions by his Son *Humayun*, or *Amayun*, who very soon experienced what was difficult a Thing it is for the Successor of a Conqueror to preserve his Dominions. He had the Alliance of his Father's old Counselor, but, like a young Man, he did not put that Confidence in him that he deserved, contrary to his Advice, and in spite of all his Remonstrances, promoted to the highest Employments the Person in the World most capable of doing him Misch-

¹ The Name of this City is sometimes called *Dehli*, and the Reader will meet with a large Description of its Situation. It is very near the Part of the Kingdom of *Perfia*, and it was in the Neighbourhood of this Place, that the great Battle was fought, which put *Amirissa* out of his Dominions. There is said to be still remaining in this City a Column erected in Memory of that Victory, which is thought to be in the *Cherates*, and in a Language now altogether unknown. The *Emrah* *Rajah*, who was defeated by *Babar*, is reported to have been a great Benefactor to King *Perzia*.

The Thing happened thus: A young *Pattan* Lord, named *Chira*, who had been bred up with *Amayum* in his Father's Court, became his principal Favourite, and was advanced to the greatest Posts in the Government. Such a Confidence did this Prince place in him, that he made him his Generalissimo and Commander of the Guards about his Person. But *Chira*, on whom Ambition, or a pretended Love to his Country, had a much greater Influence than all the Favours bestowed on him by *Amayum*, meditated how he might depose his indulgent Master, and restore the *Pattans* to their ancient Sovereignty. This great Minister first discovered his Ambition, it is said, by changing his Name from *Chira*, which signifies a young Lion, to that of *Chircha*, which signifies the Royal or Imperial Lion. And being Commander of all the *Persian*, *Tartar*, and *Mogul* Troops, among whom he had rendered himself very popular, by his obliging Behaviour; and his own People the *Pattans*, as well as the *Indian Rajahs*, being glad of an Opportunity of throwing off the Mogul Yoke, all Things seemed to conspire to raise him to the Throne.

Amayum however being apprised of this universal Disaffection to his Person, occasioned by his Favourite, assembled a small Body of *Tartars* and *Persians*, with whom he gave Battle to *Chira*; but their Numbers being very unequal, *Amayum* was soon compelled to leave the Field, and fled to the Shah of *Persia* for Protection, after he had reigned in *Debly* about eleven Years, almost in continual Trouble and Confusion. The Inhabitants of the East are extremely addicted to Augury, or observing the Flight of Birds, from whence the few Courtiers who attended *Amayum* in his Retreat, predicted his Return to his Empire; for, it fell out one Day, when the Weather was hot, and he was weary with Travel, that Prince lay down to rest, when an Eagle, followed by her young ones, hovered for a considerable Time over his Head, and there by shaded him from the Sun-beams. When he awaked, his Attendants complimented him on the Omen, which served to keep up his Spirits; for it is observed, by all the Writers of his History, that he bore his Misfortunes with great Dignity, and appeared as much a Monarch in his Exile, as he had ever done upon his Throne. The *Persian* Prince received him with all imaginable Kindness and Respect, assigned him a Palace in his Capital, with a competent Revenue, and left nothing untried that might contribute to lessen his Sense of his Disaster, which had to good an Effect, that the *Indian* Monarch forgot his Cares, and passed his Time as comfortably as it is possible for one Prince to do in the Dominions of another.

In the mean time however, *Chircha* employed all his Thoughts in providing for the Welfare of that Nation, who had, in some measure, called him to the Throne. He was a Man of great Parts, and of a benevolent Nature; he saw that the only Means to make his People happy was, to enlarge and facilitate their Trade; and therefore to this he applied his Attention and his Power. He erected, at proper Distances in all the great Roads throughout his Dominions, Caravanseras, or publick Inns, where Merchants might find all Conveniences, and proper Persons to attend them at a very moderate Expence, and where Foot-passengers might be entertained at the publick Expence. His Example had such an Effect on the rest of his Subjects, that they began to imitate him in the like Foundations, which proved of infinite Advantage to the Publick; and has therefore been practised ever since. The founding such Receiptacles for Strangers and Travellers, being accounted the highest Point of Clarity in that and other Eastern Countries to this Day. Another Regulation with the same View did equal Honour to the Administration of this Prince, and contributed no less to-

wards making him the Darling of his Subjects. There was, before his Time, no kind of Certainty in the Weights or Measures of this Country, but all Things were in a manner bought and sold by hand, which was attended with many Inconveniences. This Evil he remedied by a Law, which forbid the selling any thing but by Weight and Measure, and appointed the Standards of both to be kept in the great Towns throughout his Dominions. The Reign of this Prince was but short, and he died without Issue, for otherwise he had, in all Probability, put an End to the Mogul Empire in the *Indies*. He was a very martial, as well as a very wise and prudent Prince in Time of Peace, and had a particular Turn for the Art of Engineering, which, by an Accident, proved fatal to him; for, having a Cannon of an unusual Size sent him from *Bengal*, he would needs make Trial of it himself, and the Piece bursting, he was killed by the Breech of it that struck him on the Head, when he had enjoyed the Empire about nine Years.

All Things upon his Death fell into Confusion; every one of the petty Princes had either Views for himself or for some greater Prince, to whom he was attached; and, in the Midst of his Distraction, the Government remained without a Head, and every *Rejab* acted as an independent Prince in his own Dominions. While Things were in this Situation, a certain *Faquir*, whose Name was *Cbadaula*, went privately to the Court of *Persia*, and informed *Amayum* how Matters stood, assuring him that if he could produce but any Appearance of Force, he might be able to recover his Throne. He applied himself upon this to the Shah of *Persia* his Protector, and offered, if he would assist him, to pay him an annual Tribute, and, as a Compensation for the Expence he must necessarily be at in furnishing him with an Army, he proposed to make a Cession of the principality of *Kandabar*. These Terms were immediately accepted, and with a considerable Body of Foot, and twelve thousand *Persian* Horse, he began his March towards the Frontiers of the *Indies*. The King of *Persia*, at his taking Leave of him, gave him a short Piece of Advice, which contributed no less to the Preservation of his Dominions, than the Army with which he furnished him, did to the regaining them. His Advice was to keep up continual Enmity between the *Pattans* and the *Rashpouts*, or *Indian* Soldiery, by which Means each of them would be weakened, and both of them kept within the Bounds of their Obedience.

On his entering the Confines of *India*, he found the whole Country open except only the Fortrels of *Labor*, in which a *Pattan* Lord was Governor, and had under his Command a numerous Garrison, every way well provided. Of this Place however, he soon became Master by the following Stratagem. An hundred young *Persians*, wholly devoted to his Service, disguised themselves in the Habits of Pilgrims just returned from *Mecca*; of these a Part got into the Fortrels before it was dark, and the rest presented themselves at the Gates just as the Day was shut in, intreating Admittance for that Night only. The Governor looking upon it as an Act of Religion, admitted them: But in the middle of the Night, when the Garrison, weary with Fatigue, were buried in Sleep, the pretended Pilgrims fell upon the Governor and those who were about him, and having massacred them without Mercy, delivered the Fortrels to *Amayum*, who, by this Means, entered *Labor* without the least Resistance. He marched on from thence with the utmost Diligence toward *Debly*. A single Battle fought at the Distance of three Leagues from that City determined the Dispute, and put him once more in Possession of the Dominions of his Ancestors. *Amayum*, upon his Restoration, shewed his Gratitude to the *Faquir Cbadaula*, who first brought him the News of *Chira's*

This, probably, might be, in some Measure, owing to the personal Behaviour of *Amayum*, who astonished the *Persian* Monarch by his Presence of Mind at their first Interview, which happened to be in a Summer-House, where there was but one *Sopha*, and that too small for them to sit on together. The *Indian* Prince saw this with Indignation, but recollecting himself after he had paid his Compliments to the *Sah*, who was standing, he desired him to be seated; and as soon as he had placed himself on the *Sopha*, *Amayum* fate down by him on his Quiver, which, after the *Tartar* Custom, he had hanging at his Back, which Act of Spirit pleased the Shah extremely.

There is one Circumstance of this Prince's Reign which ought not to be passed over. When he took Possession of the Palace of *Amayum*, he treated his Emperors with extraordinary Respect, and being informed that the was with Child, ordered her to be sent to *Persia* to her Husband; but *Amayum*, seized with a fit of Jealousy, refused to see her; of which the informed *Chircha* by Letter. Upon this he wrote to *Amayum*, assuring him there had never to much as seen the Emperess; and to confirm the Truth of this Fact, he swore it upon the *Khoran*; on which the Emperess received her with great Tenderness and Affection; and the Son, with which she was then big, succeeded him in the Empire.

Death, by granting him an Estate in Lands, to be enjoyed by him and his Posterity for ever; and this is the only *Mohammedan* Family in *India*, it is said, who can claim the Property of any Lands at this Day. His Descendants also take Place of all others, and his Tomb has great Honours paid to it; but his Gratitude seems to have been exhausted, by the Returns made to this worthy Man, since in regard to the Shah, to whom he owed all things, he neither shewed Kindness, or Justice, since he never paid him so much as one Year's Tribute, nor yielded to him the Principality he promised. Yet he remembered his Advice, and followed it very exactly, by which Means he took away from future Malecontents all Power of giving him Disturbance, and left it as a Maxim to his Posterity, who have practised it with great Success, and to this has been chiefly owing the Preservation of the Dominions he left them.

Ameyum was in the Flower of his Age when he recovered his Dominions, but whether it was that a settled Melancholy had grown upon him, while under his Misfortunes, or that he had a Mind to shew, that in the Possession of the highest Blessings, he had still the common Fate of Mankind in his Eye, or that he was led thereto by a Custom common among the *Mohammedan* Princes of his Age; so it was, that as soon as his Government was settled, he began to build himself a Tomb, upon which he bestowed incredible Expence. He likewise settled a large Revenue for the Maintenance of a certain Number of Mollas, or Doctors of the *Mohammedan* Law, to reside constantly there, and to spend their Time in praying for his Soul, and reading the *Khoran*, near the Tomb where his Body was to be laid. When this Edifice was in good Forwardness, *Ameyum* went one Day to see it, and having a Carpenter's Rod in his Hand, walked upon the Battlements, and gave the Workmen some Directions, when, either through Weariness, or that he might look about him with great Ease, he clapped the Rod down, and leaning upon it, which being but slender, broke, and the Roof being sloping, the Emperor rolled forwards, and fell from thence to the Ground; by which Accident he was killed upon the spot, and found his Death and his Tomb together, in the Year of the *Hegira* 966, and *A. D.* 1552. The latter was finished by his Successor with the utmost Magnificence, and adorned with a Dome, which is so richly gilt, that it dazzles the Eyes of the Spectator by its Splendor. It stands a little Way without the Gates of *Dehly*, at the End of a fine Bridge, composed of twelve Arches, and is esteemed one of the noblest Monuments in the Empire of *Indostan*. This Monarch survived his Restoration two Years nine Months and fourteen Days, and reigned from his first Accession twenty-two Years.

Ameyum was succeeded by his Son *Akbar*, or *Alber*, then but thirteen, whom all our Historians agree wanted no Accomplishments to adorn a Throne. He had, they tell us, a most penetrating Judgment, an extensive Knowledge, an intrepid Soul, and at the same Time was generous, tender, and compassionate. He soon perceived that the *Moguls* and *Tartars* bore no Proportion with the *Pattans* and *Indians* under his Government, and therefore inviting the neighbouring *Uzbeks* and *Persians* to serve under him, he preferred them to the principal Posts, and gave them Wives, that they might in Time be a Balance for that Part of his Subjects whom Nature and Interest inclined to be addicted to his Government. And the greater Part of those who are called *Moguls*, at this Day, are a Mixture of white People of several Nations, professing the *Mohammedan* Religion; but it being found, that in a short Time they lost their Complexion, and de-

generate into Softness, like the original Natives of the Country, new Supplies of *Persians* and *Tartars* are encouraged to transplant themselves, and these usually fill the greatest Posts in the Government. This Prince also, to strengthen himself against the *Tattans*, whom he dreaded most, took several Bodies of *Rajpoots*, or *Rajpoots*, into his Service. These are the bravest People amongst the native *Indians*, who make Arms their Profession, and are Pagans by Religion; and to endear them the more, it is said, he took the Daughters of the principal Rajs among the Number of his Wives, and suffered the Rajs to match with the *Mogul* Princesses; though I must confess this Part of the History is a little difficult to give Credit to, because no People in the World are so scrupulous of mixing with those of a different Religion, or even with a different Sect, or Employment, as the Generality of the Pagans of *India* are; though there are some Sects, on the other Hand, that admit of very great Liberties.

To proceed, *Akbar* having taken all prudent Measures to render his Government secure at home, began to think of extending his Dominions towards the Sea Coasts, that he might come in for a Share of the Trade and Riches that the maritime Places possessed; and the first Prize of this Nature, that he undertook, was against the Kingdom of *Guzarat*, which extends from the River *Tapie*, upon which the Town of *Surat* stands, to the Mouth of the River *Indus*. This Part of *India*, at that Time, enjoyed a most flourishing Trade, and the *Portuguese* in particular, who had established several Colonies in this Part of the Country, imported immense Trades every Year from *Europe*, in Exchange for the Manufactures of *India*. The Prince who then reigned in *Guzarat*, was Sultan *Bakadar*, a *Mohammedan*. This Sultan *Bakadar* maintained a long War with the *Portuguese*, who had encroached upon his Territories, and lately made themselves Masters of *Diou*, a Town which lies upon an Arm of the Sea, almost opposite to *Surat*; but both the Sultan *Bakadar*, and the *Portuguese*, being alarmed at the Approach of the *Mogul*, united their Forces against him.

It was with some Difficulty, it is said, that *Akbar* prevailed on his Troops to march against the *Portuguese*. They had been repented at *Dehly* as something more than mortal, and those vast Posting Machines armed with Artillery, with which they had heard they fought upon the Water, they were apprehensive might be presently, or at least some time, of the like Nature upon the Land. They dreaded the Encounter thereof to such a Degree, that they were upon the Point of turning their Tails, and quitting the Enterprize, till *Akbar*, who had by this time informed himself of the Numbers and Strength of the Enemy, and their Manner of engaging, convinced his Troops how much inferior this little *Guzarat* Prince, and the *Portuguese*, were to the Forces he brought with him, and putting himself at the Head of his Troops, he brisk Charge he routed both the *Guzarats* and *Portuguese*. Sultan *Bakadar* fled, but his Children were taken Prisoners, and put to Death by the Conqueror, and the whole Kingdom immediately submitted to his Power, except those Towns the *Portuguese* were possessed of, which being fortified after the modern Way, bid Defiance to his Forces, as indeed a very slight Fortification will do this Day. Their Elephants, which are their greatest Strength, are of very little Use in a Siege, because a Battery of great Guns would soon lay them in Ruins, if they could be supposed to intrepid, as not to be shattered by strong Fire, or even the Report of a Cannon.

Akbar finding *Guzarat* to easy a Conquest, he sent his Arms towards *Deccan*, which lies to the South-west of it.

*The intelligent Reader will easily perceive the Reason why this Empire has been more failed to Revolutions than any other in the World; and that he can depend on that *Tartars*, and Strangers, the native *Indians* remaining, and as distinct a Nation as ever, retaining the *Mohammedan* as heartily as the *Mohammedans* contain them; in that this Government still remains what it was at the first, and is to say, Military, the sword giving Law, and being the true Source of Power. This Observation will be found of great Use in understanding the subsequent Part of this History.

†It is a very difficult thing to fix the Manner of Writing this Word, which in all Probability is very incorrectly expressed by the Most of our English Authors; write it, *Fakhars* or *Rajpoots*, they are properly the War Tribe of the ancient *Scythians*, and we find them frequently distinguished by the Name of *Rajpoots*. The Arms they use, are commonly Swords, Pikes and Bows, but when they appear in a yellow Cloak, it is a certain Sign that they have made a View either to conquer or die. On these Occasions, it is common enough for them to be given their Courage; by taking Oath, which inspires them with a sort of Military Fury, that differs no much from Madne. There is a saying in the *Indians*, which is, that before they engage, they embrace each other, as if they were on the Point of being put to death, and thereby their Resolves to rush into another State.

This was divided into several little Sovereignities. *Mustapha*, a Mohammedan Prince, possessed that Part of the Country wherein the Towns of *Brampour* and *Acerare* situated, whose Subjects gave him the Title of *Mélec*, or King. *Amanadagar*, and the Territory belonging to it, was subject to the Queen of *Cande*, and *Aubar* commanded the District of *Dolabed*. These Princes, though at other Times Enemies, united their Forces against *Akebar*, and gave him Battle, but were defeated by him with very little Loss. The Reduction of the Fortresses which these Princes possessed, proved a Work of greater Labour; for now every one being to defend what was their own, exerted their utmost Force, and their utmost Capacity.

The Forces of *Acer* was the first that he attacked, an irregular Fortification, and which could have made no Defence against the European Army, but a Place of great Strength in the *Indies*, and very well provided with Artillery, some of which, it is said, were cast by the *Indians* themselves, before the *Portuguese* visited their Coasts. King *Mustapha* was there in Person, with a very numerous Garrison, composed entirely of his best Troops. The Defence he made was worthy of his Reputation for Conduct, and for Courage, and the Army of the *Mogul* was so fatigued by the Fatigue of this Siege, that the Emperor himself had Thoughts of raising it, when he was informed by some Deserters, that the Garrison began to want Water, which encouraged him to remain before the Place. King *Mustapha* perceiving the Cisterns dry, and knowing the Rainy-Season to be at a Distance, resolved to retire privately out of the Fortress, in order to throw himself into *Brampour*, and there defend himself and the rest of his Dominions.

It was with this Design, that in the middle of the Night he quitted *Acer* in Disguise, and before he had proceeded far, he was seized by the Advance Guards of the *Mogul* Army, who carried him immediately to the Emperor's Tent. When he came into the Presence of *Akebar*, that Monarch asked him who he was, and where he was going? To which, with great Spirit, he answered, that he was King *Mustapha*, and that knowing him to be a wise and generous Prince, he came out to ask his Advice, since they had now no Water left, and he could not bring himself, after living so long as a King, to become the Subject of another. *Akebar* bid him go back to the Place and be satisfied, that if Heaven intended to deliver him, he would meet with a Supply of Water by some unexpected Means. *Mustapha* took his Advice, and returned to his Fortress. It was then about the middle of *May*, and as the rainy Season does not usually commence till the middle of *June*, he had not much Reason to expect what nevertheless fell out the Night following, in which it rained so plentifully, that his Cisterns were all full by the next Morning. *Akebar*, astonished at this Accident, left a sufficient Body of Troops to block up *Acer*, and marched with the rest of his Forces to besiege *Brampour*, which, though a Place of considerable Strength, and well provided with every thing, did not hold out long, and *Mustapha* seeing the best Part of his Dominions lost, resolved to make the best Terms he could for himself, in Consideration of the Surrender of *Acer*. The *Mogul* granted him as good Conditions as he could reasonably expect, and *Mustapha* entering into his Service, had the same Rank as paid him as the other Rajahs.

After the Reduction of *Acer*, the *Mogul* prepared next for the Siege of *Amanadagar*, which the Princess of *Cande* defending with great Courage, kept him two Months before the Place. At length, despairing to hold out, she could all her Treasure to be melted into Bullets, and intreated with the bitterest Curses against her Enemies, that they might be sent into the neighbouring Woods, to prevent his possession. Some of these Gold and Silver Bullets *Muzuchi* shot at her, were found in his Tunic, and he read the Instructions on them with abundance of Delight, and one particularly of Gold, he says, weighed eight Pounds at least. *Amanadagar* hearing the great Dainties that this Princess was resolved to make an Effort for her Deliverance, sent at the same Time to keep the War out of his own Country. The Design was generous in itself, and well contrived, and on the Review of his Forces, it

seemed not altogether impossible to have executed it; for this *Indian* Prince, by compelling all his Subjects to take Arms, had drawn together near fifty-thousand Men. *Akebar* however attacked him suddenly on his March, defeated him without the Loss of a Man, and his own People being discontented with his Conduct, murdered the unfortunate *Amanadagar* in his Flight. The Princess of *Cande* seeing now no Hopes left, yielded her City, and herself, to the victorious *Mogul*, who not only treated her with all the Respect due to her Quality, but soon after received her into the Number of his Wives, and she remained for many Years his principal Favourite. *Akebar* was now Master of the best Part of the South Coast of *Indostan*, and almost all the Rajahs of that Country readily yielded him Obedience.

It was at this Time, that from a Motive hitherto concealed, he took Occasion to destroy the vast and beautiful City of *Dehli*, the ancient Residence of the *Pattan* Kings, and the Capital of *Indostan*. He built a Mosque, and a Palace at *Letipour*, and the Rajahs building also many Palaces near them, it soon became a very considerable City; but the Lustre of this Place lasted not long, since the Emperor himself perceiving that the Air was unwholesome, removed from thence, and returned into the Neighbourhood of *Dehli*, where, out of the Ruins of the old City, he erected a new one on the Banks of the River *Jenna*; but even the Splendor of this new City could not please him long, and therefore proceeding farther on the River, he fixed on the little Town of *Agra*, for the Seat of his Empire. It is seated on a large Plain, and the River *Jenna* making an Elbow therein, the City lies round it in the form of a Half-moon. At one End he erected a noble Palace, round which the Omrahs and Rajahs built theirs; so that in a very short Space of Time, from an inconsiderable Hamlet, it grew to be a large City, of nine Italian Miles in Circumference, and having no fewer than 660,000 settled Inhabitants, exclusive of Strangers.

The Palace of the Emperor, which serves for a kind of Citadel to *Agra*, is one of the finest Structures in the World. The Walls of it, which are about thirty-five Foot high, are of a fine red Stone, little inferior in Hardness and Beauty to Marble, and it is built in such a Manner, that the joining of the Stones does not in the least appear. It is adorned with rich and beautiful Balconies on every Story; and between the Palace and the River, there is a kind of Parade, where the Emperor sees his Guard reviewed, and the Battles of his Elephants. On the other side the River stands another City, as long as *Agra*, and not much inferior to it in bigness. This is entirely inhabited by *Indians*, or, as they are now called, *Banians*, who are either Merchants, or Artificers; so that this City is no less remarkable for its Commerce, than the other for being the Imperial Residence of the Grand *Mogul*, and being the Capital of the *Indies*. When this great Work was accomplished, it plainly appeared, that this Emperor intended it for a Monument of his Glory to latest Posterity, by his bestowing upon it the Name of *Akebarabad*, i. e. the City of *Akebar*; but after his Decree, this new Name was laid aside, and the old one revived; so that this Capital of the *Indian* Empire is still known by the Name of *Agra*.

His Attention to the raising of this new City, did not extinguish that Third of Empire, which had appeared in the first Years of his Reign. On the contrary, having heard of an *Indian* Rajah, who was equally celebrated for his Wisdom and Courage, and who was besides illustrious on the score of his Descent from the famous *Porus*, and whose Dominions lay but twelve Days Journey from his Capital, he immediately formed a Design of reducing them, the rather because they lay between his hereditary Dominions and his new Conquests. This Rajah took the Name of *Rana*, which seems to have been common to all his Family, according to the ancient Custom of the *Indies*. He was a Prince worthy of the Blood of *Porus*, and who, if he had been well seconded, might have restored the Liberty of his Country. As it was he made a noble Attempt, which will be ever remembered in the Chronicles of that Country.

He was soon obliged to quit the Field, and to shut himself up in the Fortrels of *Chitor*, seated on the Top of an high Mountain, and surrounded by a River. The Siege of this Place cost the Mogul two Years, though at the Head of the most numerous and best furnished Army that had ever been seen in that Country, and was endangered by the foulest Piece of Treachery that perhaps was ever committed. *Akbar* pretended to raise the Siege, and desired of *Rana* to have the Liberty only of entering the Place with fifty Attendants, which was granted him by the honest *Indian* without the least Suspicion; but after he had been very kindly entertained, and conducted to the Gates of the Fortrels by the *Rajah* himself, he threw over his Neck a Chain of Pearl, strung upon Mohair for that Purpose, and pulled him without the Place, where a Body of the Mogul's Troops made him Prisoner. He afterwards made his Escape, and the Mogul having renewed the Siege, he was killed on the Walls, and so the Place was forced to capitulate, and thereby all the Dominions of that once powerful *Rajah* were annexed to the Empire of *Akbar*, and proved a very considerable Acquisition.

The Conclusion of this War could not but be very agreeable to the Emperor, who found his Troops sufficiently harassed by a War of such Continuance, and in which at the Beginning so many *Indian* Princes were engaged, who, notwithstanding, retired into their respective Territories as soon as they saw *Chitor* invested; whereas if they had kept the Field, and harassed the Army of the Mogul, it is highly probable they might have preserved the City of *Chitor*, and the Country of *Rajah Rana*, from being thus swallowed up by him, who meant to bring them all under his Subjection. But whether it proceeds from Religion, Humour, or Custom, certain it is, that the *Banians* have an established Principle amongst them, that defensive Wars against Foreigners are only lawful, and that they ought not to march out of their own Dominions, in order even to attack an Enemy that has often attempted their Destruction. This weak Notion has always given the Moguls great Advantages over them, and particularly this poltuck as well as enterprising Prince, who, when he had torn from them a Part of their Dominions, suddenly laid down his Arms, and thereby put an End to the War, till another favourable Opportunity offered.

Akbar therefore, after he had subdued this Province, employed himself for some time in cultivating the Arts of Peace, in enlarging the City of *Agra*, and beautifying his Palaces; and among other great Works, he planted the Road from *Agra* to *Lahor*, and made it one continued Walk of shady Trees, though it be not less than four hundred and fifty *English* Miles from one City to the other. This still remains as a Monument of this Emperor's Grandeur, and is an inconceivable Refreshment to Travellers in so hot a Climate. He was a great Admirer of all robust Exercises, and took a Pleasure in the most hazardous Uses thereof, breaking unruly Horses, and managing the War-Elephants when they fought; an Employment so very dangerous, that the Wives of those who are obliged to do it by their Office, tear off their Cloaths, and the Pendants from their Ears, when their Husbands are thus exposed. Nay, it is reported of him, that the War he had with the Peasants of the Country, the most obstinate he ever engaged in, when some of them had shut themselves up in a Town, and the Conductors of the Elephants were ordered to break open the Gates; upon their expressing some Reluctance to hazard themselves in so desperate an Undertaking, the Emperor commanded one of them to dismount, and clothed in a common Soldier's Coat, mounted the Elephant himself, and managed him with that Dexterity, that he forced open the Gate in the midst of a Shower of Arrows which the besieged poured upon him, and had the good Fortune to come off unhurt. This War with the Peasants, which begun in *Akbar's* Reign, lasted a considerable Time; for being acquainted with all the Defiles and inaccessible Parts of the Forests, it was found exceed-

ing difficult to drive them from their Haunts, and the Government is so severe upon this sort of People to this Day, that if a Peasant be found in Arms, he loses his Head. Nothing is more common than to see the Heads of these Wretches hanging on the Road Sides in terrour.

While *Akbar* was engaged in this War with the Peasants, his eldest Son *Jehan Gaire* broke out in Rebellion against him, but his Party was soon defeated, and the Prince made a Prisoner. However, such was his Father's Tenderness towards him, that he did not keep him long confined; but, to deter him from such Practices for the future, upon his Enlargement, he made the Prince follow him into a Forest, where he shewed him the Heads of the principal Conspirators hanging upon the Branches of the Trees. The Prince being taught, by so tragical a Prospect, the Danger that attended such Enterprises, or moved by a Sense of the Emperor's Indulgence to him, ever after continued unshaken in his Loyalty and Duty to his Father. This Insurrection was no sooner suppressed, but the *Patians*, who had been driven up into the Mountains by *Amayum*, began to make Incurfions into the open Country, and threatened to assume their ancient Sovereignty in the Kingdom of *Debly*. Against these *Akbar* sent an Army of eighty thousand Men, who entered the *Passan* Country, but were all cut in Pieces, or perished in the Deferts.

This Misfortune obliged the Emperor to lay aside all Thoughts of subduing these People, at least for the present, and perceiving that the chief Cause of his Misfortune was, that his Artillery had not been so well played as it might have been, he resolved to take some *Europeans* into his Service, and with this View he sent for some *English* Gunners from on board their Ships that came to trade upon his Coasts; and of one of these Gunners he heard a very wonderful Story, which, as it has nothing in it improbable, I will venture for the Reader's Amusement to relate. This Man was particularly skillful in his Profession, but still had a great Affection for his Bottle, and found himself much at a Loss in a *Mohammedan* Country, where Wine was prohibited. He at last contrived a very singular Method for procuring in this respect a Dispensation for himself. The Emperor being desirous to see a Proof of his Dexterity, ordered a large Carpet to be hung up at a reasonable Distance, and directed him to fire at it, which the Fellow did, but pointed the Gun in such a manner, that the Shot flew extremely wide. The Emperor called him, and gave him a pretty brisk Reproof, telling him, that it was a Shame for a Man to take upon him that Office, who knew so little of the Matter. The Gunner answered with great Humility, that since he had been debared the Use of Wine, his Eyes were grown dim, but that if his Majesty would order him a chipping Cup, he durst engage to hit a smaller Mark. *Akbar* immediately commanded that they should give him a Quart, of which the Gunner made but one Draught, and then applying himself to the Task he had undertaken, he performed it with universal Applause. The Emperor upon this ordered it to be entered in the Annals of his Reign, *That Wine is as natural to Europeans as Water to Fish, and that to deprive them of it, was to rob them of the greatest Comfort of their Lives.*

It was from this Accident that a Law was made, giving Leave to such Foreigners as settled in the Empire to cultivate Vineyards, which they have since done with great Success and Profit. He from this Time forward had a great Kindness for the *Europeans*, and took all imaginable Pains to engage them, as well as all other Strangers, to settle in his Dominions, that they might enlarge the Trade, and perfect the Manufactures of his Subjects. By this Means his Empire became every Day more and more flourishing, and the Inhabitants of it more and more numerous; yet with all these great Properties, and notwithstanding he was certainly one of the ablest Politicians in the East, *Akbar* had something very extravagant, which discovered itself particularly in his Notions about Religion. His own good Sense, assisted by the Lights he received

* The Siege of *Chitor* is almost as famous among the modern *Indians*, as the Siege of *Troy* among the ancient *Greeks*; and in this Number of famous Stories have been thrust into this History. Thus it is said to have had its Beginning from the Character which *Akbar* had received of the beautiful *Pawani*, the Wife of *Rana*, and the most lovely Woman in the *Indies*. All these Embellishments I thought requisite to set out, that we might keep the more within Bounds, and report as near as possible nothing but Matters of Fact to the Reader.

from the Portuguese Missionaries, brought him to discern many Absurdities in the *Mohammedan* Religion, to which he had never been much addicted; but instead of becoming a Christian, as the Portuguese Priests expected, he framed a strange Project of introducing a new Religion, which very plainly shewed that he considered it only as a political Institution, and as an useful Engine of Government. He was sensible of the great Inconveniences that arose from his Subjects being of different Faiths, and therefore he was willing to introduce a System that might reconcile them all, and at the same time place him at the Head of Ecclesiastical, as well as Civil Affairs. This Scheme of his he published at *Lamor*, and it at first it was tolerably well received, at least among his Courtiers, who were really enough to embrace any thing that might please their Master. In this new Religion he flattered to comprehend the principal Doctrines and most remarkable Rites of all the rest. Baptism he borrowed from the Christians, Circumcision from the *Mohammedans*, a profound Reverence for the Sun from the *Perfecs*, and with these he mingled somewhat of the Morality, and even of the Theological Notions of the *Bramins*, assuming, in consequence of this Invention, the Title of *Shah Geladin*, that is, the supreme Pontiff of the sovereign Law.

But in the midst of his Politicks there were certain Circumstances attended these Proceedings, which he had not foreseen, and that was the disgusting all such of his Subjects as were really Men of Principles, and sincerely attached to the Faiths which they professed. The *Mohammedans*, who are, generally speaking, Bigots, were provoked to the highest Degree by what they call his Apostacy. The *Indians* were by no means pleased, and the *Perfecs* remained obstinately fixed to their old Religion, which they thought was grievously profaned by this new Regulation; and thus, instead of pleasing all, he pleased none but such Men of corrupt Intentions as were leas't to be relied on. The Fruit-fruits of his new Religion was a dangerous Revolt begun in the following Manner: *Mustapha*, one of the Dean Princes, whom he had formerly subdued, and who, as has been before observed, had lived peaceably in the Mogul's Court for a considerable Time, about this Time retired from thence, and found means to repossess himself of his Country, where many *Mohammedans*, disgusted at the Rights the Emperor had put upon their Religion, went over to him. The Prince *Pihari*, the Emperor's beloved Son, to whom he had given the Name of *Morad*, was sent with a gallant Army to suppress this Insurrection; he engaged the Rajah in the Province of *Cambaya*, being considerably superior to the Enemy in Numbers, but *Mustapha*, who was an experienced Captain, and perfectly acquainted with the Country, gained an entire Victory over the Emperor's Forces, and the Body of young *Morad* was found in the Field of Battle among the slain. This Stroke of fortune, it is said, pierced *Akebar* to the Heart, and he was so sensible of the Anger of Heaven, that he never after worshipped the Sun, nor suffered, as in consequence of his Scheme he had done, divine Honours to be paid to his own Person.

The Emperor soon after returned from *Cackemire*, by the Way of *Lamor*, and marched Southward till he arrived at *Agra*, where mighty Preparations were made against *Mustapha*. In the mean while the Emperor grew extremely thoughtful, abandoning all sorts of Diversions but Hunting, which he followed chiefly for the Opportunity of retiring alone into the Forest, and unfrequented Places. In one of these Excursions, sitting by himself under a shady Tree, it is said he observed a certain Kind of Caterpillars creeping near him, which he killed with the Point of one of his Arrows, and shooting an Antelope soon after with the same Arrow, the Beast expired in an Instant, tho' the Wound was not in a mortal Part; whereupon the Em-

peror commanded the Antelope to be opened, the Flesh of which appeared black and corrupted, and the Dogs died that eat of it, by which *Akebar* discovered how very subtil the Poison extracted from this Insect was, and caused a Quantity of Pills to be made up with it, which he compelled some disaffected Lords to take in his Presence, and thereby dispatched them out of his Way. He practised the same Conduct towards all whom he esteemed Friends to *Mustapha*, whom he found to have Abundance of Creatures in his Court, and promised himself, by this Contrivance, a safe and happy Reign for the future.

But it so fell out, that this very Art turned upon himself, and shortened his Days in the same Manner that he had done those of his Enemies. The Person to whom he confided the Secret of mixing these Pills, had Orders to supply the Emperor's Box from time to time with a certain Quantity of them. In this Box there were three Partitions, in one of which he kept his Betel, which, according to the Custom of his Country he chewed in the same manner as in *Europe* People chew Tobacco; in the second he had some cordial Pills to help Digestion, and in the third were those Poison Pills. It happened one Day, that either through Hury or Inadvertency, he mistook the Pills in the third Partition for those of the second, and by this means poisoned himself. The Venom operated slowly, but surely, notwithstanding all the Assistance he received from his Physicians, and from the *Portuguese*, to that he ended his Days in great Pain and Misery, after he had reigned sixty-three, and lived sixty-six Years. His Corpse was interred in a very fine Tomb of his own Building, and he left behind him the Character of one of the bravest, wisest, and most fortunate Princes of the Age in which he lived, and seemed to have merited in the Course of his Reign, the Title he assumed at the Beginning of it, *Akebar* in the Language of his Country signifying *invincible*.

9. *Shah-Selim*, i. e. the peaceable King, succeeded his Father *Akebar* on the 21st of October in the Year of the *Hegira* 1014, and in that of our Lord 1605. On his ascending the Throne, he assumed, as the Custom is in the *E. I.*, a new Name or Title, and called himself *Mohammed* *Mohammed Jehanguir*, i. e. the Light of Religion, Mohammed Conqueror of the World. Almost all the *European* Authors call him *Jehan Guire*, and therefore that we may not seem to affect Singularity in Matters of no great Importance, we shall call him so likewise, that the Reader may apply what is here delivered the more readily to what he may read of this Prince in other Authors. As to the Character of this Monarch, we are obliged to speak of it more largely than hitherto we have done of any of these Princes, because the History of his Reign depends in a great measure thereupon. He fell very far short of his Father in Abilities, and at the same time exceeded him very much in his Vices. He loved eating and drinking more than became a King, and the chief Reason why he inclined rather to the Christian than to the *Mohammedan* Religion was, because the former did not restrain him in Meats or Drinks as the latter did. He was very brave in his Person, though he did not affect War so much as some of his Predecessors; but whenever his Affairs forced him to take the Field, he shewed himself as capable of conducting his Armies as any of them. He was naturally fond of the *Franks* or *Europeans*, because he found them more inclined to that manner of Life which he liked best, than the *Mohammedans*, whom he treated with great Harshness and Severity; for he particularly affected Feasting at that Season of the Year, when by the Precepts of their Law they were bound to fast; and if at such times they refused to eat and drink as freely as he would have them, he threatened to throw them out of the Window of his Dining-room, under which two fierce Lions were constantly chained. One would ima-

There are Abundance of strange Stories related of the Conferences between this Monarch and these Missionaries, which, as I cannot believe, I will not relate, but content myself with observing, that in this Court, as well as in most others, the Suppleness of the Clergy did more Honour to Religion than their Preaching could do good. The Truth of the Matter seems to be, that they had one thing in View, and the Emperor another, so that they were continually at Cross purposes, they studying by Artifices, unworthy of the Christian Religion, to convert him, and he labouring all he could to pick out of them such things as might be of most Use to him, in which he succeeded much better than they.

There seems to be something contradictory in this Account of the Poison which *Akebar* discovered, since it is said to have operated suddenly on the Beast, and to slowly in Men; but if we consider the Facts attentively, we shall soon be convinced that they are very consistent. In the first Place the Poison in one Instance was unmix'd, and in the other compounded, which must necessarily make a great Alteration in the manner of its working; and in the next the Poison was very differently applied; for with respect to the Antelope, it was thro' immediately into the Blood and Joints, whereas when administered to Men, it passed first through all the Operations of the Stomach, which, though they could not entirely destroy, must, however, much weaken its Force.

This was *Mohammed-Khan*, his Father's Prime Minister, who had always supported him even at the Hazard of his Interest. The Emperors, who hated that Minister for many Reasons, and especially, because he was the only Rival that her Brother *Ajaph-Khan* had in the Emperor's Favour, placed Things in such a Light to her infatuated Husband, that at last he gave his Consent that this great Man, who had deserved alike well of himself and of his Subject, should be murdered. The Scheme laid for this Purpose, had as much in it of female Management as of Malice. A Company of *Indians*, who were posted in a Hall through which he was to go to the Emperor's Apartment, had Orders to stab him in his Passage. Had this Commission been given to one resolute Man, the Thing had probably been done; but these People behaved in so cowardly a Manner, that they discovered the Design without executing it, and *Mohammed*, who had much personal Bravery, forced his Passage into the Emperor's Apartment, where, finding him surrounded by Officers upon whom he could depend, he seized upon his Weapon, forced him to mount his Elephant, and the tearing himself by him under the same Canopy, with a Dagger drawn in his Hand, he sent the Emperor's Word by one of her own Spies, that the Life of *Jehan Guire* should answer for it, if any Attempt was made to hinder his Passage. In this Manner he conducted the Emperor to his own Palace, where he was very lately guarded, for *Mohammed* was not only General and Commander in Chief of the Army, but had it entirely at a Devotion; so that notwithstanding this surprising Accident, there was not the least Stir among all the Soldiers, nor any Attempt made to rescue the Emperor out of his Hands. While he had him thus in his Custody, he obliged him to continue sober, and presented to him, in very plain Terms, the bad State of his Affairs, and the bad Consequences that must necessarily attend the Intrigues of the Sultana. In the mean time he directed every thing as he was wont to do, in the Emperor's Name; levied Troops, and made open Preparations for War. The young Prince, who was all this Time in the Field, collected also a numerous Body of Men, the best Part of whom however were *Indians*; for having married a Wife of that Nation, and having always thought to oblige the Rajahs, his chief Interest lay among those People, who promised themselves great Things whenever he came to the Crown.

But all these Hopes were dashed by *Mohammed*, who released the Emperor, detested *Cojrou*, and sent him and his Family Prisoners to the Citadel of *Gualtier*. While the Prince remained in the Captivity, *Nour Jehan* made him an Offer not only of his Liberty, but to assure his Succession to the Crown, if he would marry her Daughter, whom she promised to divorce from his younger Brother *Nour Jehan*, as being an inactive Prince, and never likely to maintain himself upon the Throne, if he should be placed upon it. But such was Sultan *Cejrou's* Contempt, or Prejudice to *Nour Jehan's* Family, or as others say, such was his Passion for one of his Wives, that he refused to comply with her, even in those wretched Circumstances. *Ajaph Khan*, Brother to the Sultans, also encouraged the unfortunate *Cejrou* to persist in his Resolution, having an Interest to manage distinct from that of his Sister's; for Sultan *Chorron*, the third Son of the Emperor, as has been observed, had married his Daughter; and if Sultan *Cejrou* and *Nour Jehan* should be reconciled, his Son-in-law could never hope to succeed. But, to make all sure, fell Sultan *Cejrou*, induced by the Hardships he suffered, or the Hopes of a Crown, might, at length, be prevailed on to comply with the Sultans; he procured the Emperor to send for Sultan *Chorron* to Court, where they agreed together to cause Sultan *Cejrou* to be privately murdered in Prison. It was at first attempted by Poison, but the Prince suspected the Design, and would eat nothing but what was ordered by his beloved Wife; whereupon they resolved to take the shortest Way, and ordered the Captain of the Guards to strangle him, which was executed without the Emperor's Knowledge.

However, a Fact of this Nature could not be transacted so privately, but it was at last discovered; and though the Murderers were Perions of that Consequence, that the Emperor could not punish it in the Manner it deserved, yet he, from thenceforward, determined to make his Grandson *Bolaqui*, the Son of Sultan *Cojrou*, his Successor, who appeared to be a Prince of great Expectations, and then about seventeen Years of Age. This Prince therefore was brought to Court, and treated as the presumptive Heir of the Crown, while Sultan *Chorron* was commanded to retire to his Government of *Decan*. Here he spent his Time in making Alliances with the neighbouring Rajahs, and by Presents and Offers of Preferment, brought over most of the best Officers in the Empire to his Party, while the old Emperor spent his Days in the Amusements of the Seraglio, or over a Bottle with his Friends; for either the Sultans now indulged him with it, or he had not that Influence over him, as when her Charms were in their Bloom.

It was while Things remained in this Situation, that *Jehan Guire* enjoyed the pleasantest Part of his Reign. He spent the hot Summer Months in the little Kingdom of *Cachemire*, which all the Eastern Writers represent as incomparably the finest Country in the World. It is the most Northern Part of the Dominions of the Great Mogul, and is, strictly speaking, no more than a Valley surrounded by high Mountains. The Air is temperate and wholesome, the Country rich and fruitful, and the People valiant in War, laborious and industrious in Time of Peace. It was in this beautiful Region that the Emperor indulged himself in all the Pleasures of a rural Life. His Palace was elegant and agreeable, but, at the same time, rather convenient than magnificent; his Gardens large, but irregular, and remarkable, rather for their Resemblance to a Forest, than for the Decorations that are derived from Art. The Emperors, that the might seem to comply with the Humour of so kind a Husband, condescended to share in those rural Delights, and particularly diverted herself with feeding tame Fish in her Canals, some of which were many Years afterwards known by Bills of Gold which she caused to be put round them. In the Winter Season, when the rainy Weather makes it very uncomfortable living in the *Indies*, *Jehan Guire* contrived a singular Method of amusing himself at *Agra* or *Lahor*. He caused a kind of Fair to be kept in the Galleries of his Palace, where the Omrahs and Rajahs kept Shop, and attended them with their Wives and Daughters. The Emperor and the Royal Family were their only Customers, and amused themselves in going from Shop to Shop, cheapening Goods and haggling for them as if they were in earnest concerned about laying out their Money.

But these Kinds of Pleasures were frequently interrupted by untoward Accidents in the Imperial Family, and sometimes too by Causes of another Nature. The wife and potent Shah *Albas* was, at that Time, Monarch of *Perfia*, and a formidable Neighbour to the Mogul. He revived the Pretensions which his Predecessors had on the Principality of *Khandabar*; and one Summer, when *Jehan Guire* was diverting himself in the Kingdom of *Cachemire*, the Shah sent an Ambassador to demand the Restitution of that City and Country, agreeable to the Promise made by his Grandfather *Amayum*. The Emperor sent Orders immediately to the Viceroy of *Multan*, which is the nearest Province to *Khandabar*, to assemble, with the utmost Expedition, an Army for its Relief; but being informed that the Thing was impossible, he sent Instructions to the Governor of the Fortrels of *Khandabar*, which is the strongest Place in the *Indies*, to set a good Face upon the Matter, and to deliver up the City and Castle, as soon as the *Persian* Army appeared. The Governor, however, could not believe his Eyes, and being a better Subject than a Statesman, was unable to comprehend that any Reasons could be strong enough to induce the Emperor to part with a Place of so great Strength, and of so much Importance; he therefore defended it very bravely for six Months, and did not even surrender it then, till the Breach

* This Diversion has been much used by his Successors; but especially by his Grandson: though it has always given great Offence to the Omrahs and Rajahs, because it obliges them to expose their Wives and Concubines, which they do not only to the Imperial Family, but to the People, with infinite Uncleanliness, and the latter, because this has sometimes occasioned the carrying their Wives into the Imperial Haram.

long once more to change the Place of his Residence, and accordingly he set out for *Labor*, and in his Way thither died at *Bimber* on the 2^d of *October*, in the Year of the *Hegira* 1038, *A. D.* 1627, having reigned twenty-two Years and six Days, and lived fifty-eight Years, one Month and twenty-nine Days.

He was much regretted by his Subjects, over whom he reigned with much Justice, and with whom he lived in a manner so familiar, that they loved him as a Father and a Friend, as much as they respected him as a Prince. He was far from wanting great Qualities or good ones; the Softness of his Temper was his greatest Fault.

The Death of the Emperor revived the Commotions in the Empire, and raised them much higher than ever, as the Time was now come, when the Possession of the Crown was the only thing that could give any of the Princes a secure Title to his Life. There were immediately three Parties formed, and in the Space of a very few Days, two Emperors proclaimed. The first of these was *Shabariar*, the deceased Monarch's youngest Son by a Concubine, then twenty-two Years of Age, whose Dominions never extended farther than the Palace, and who owed the Shadow of Empire that attended him for a little while, to the Influence of *Nour-Jehan*, whose Daughter, by her first Husband, he had espoused. Sultan *Bolagu*, the Grandson of the late Emperor, and the true Heir of the Crown, was proclaimed by the Army, and soon after acknowledged by the City of *Agra*, by which Means the Emperors and her Son-in-law fell into his Hands; he imprisoned them both, and to secure himself more effectually, put out the Eyes of the latter; so that his Empire ended almost as soon as it began, and indeed, he was in every respect to weak a Prince, that his Mother-in-law had so great Hopes of him, notwithstanding all the Arts she had practised in his Favour. The Contell seemed now in a Manner over, and Sultan *Bolagu* thought himself so secure of the Empire, that he took little or no Pains to separate himself with the principal Omrahs, or to procure the Affections of the People, which are always a Monarch's firmest Support. *Afaph* and *Mohammed*, notwithstanding, had their Eyes upon Sultan *Chorrom*, but the Treasures and Forces of the Empire being in the Power of *Bolagu*, they did not yet think it a proper Time to declare themselves.

Bolagu resolving to found his Uncle's Intentions, sent to demand a Tribute, and Homage, for the Kingdom of *Dean*, and the other Dominions he held of the Empire. The Omrah, who was dispatched to Sultan *Chorrom* on this Occasion, was acquainted, that he was in so ill a State of Health, that he could not possibly transact any Business; the Omrah still persisted to see him, which, with some Difficulty, he was at length permitted to do, and found the Sultan in a very weak, languishing Condition, as he apprehended, and vomiting Blood in such Quantities, that he did not think it possible he could live many Days. The Omrah thereupon immediately dispatched a Courier to *Agra* with the News, which he knew would be very acceptable to the Court. But this Illness it seems was all counterfeit, and the Blood he seemed to vomit was only the Blood of a Kid he held in his Mouth; However, the Disease was still carried on, Sultan *Chorrom* disappeared on a sudden, and it was not only given out that he was dead, but his whole Court went into Mourning for him.

The eunuch *Mohammed* also prevailed with the Omrah who came from *Bolagu*, to write to his Master, to obtain Leave for the burying the Sultan in the royal Sepulchre at *Agra*, which was readily granted, and upon the Return of the Courier, a pompous funeral Procession began, agreeable to the Quality of so great a Prince. *Mohammed-Khan*, at the Head of a thousand Officers of the deceased, attended the Hearse, and Sultan *Chorrom* himself followed in Disguise. Several Bishops of the *Keypoots*, or *Rashpoots*, Allies of Sultan *Chorrom*, fell in with the Pro-

cession, upon the Road, under Pretence of paying their last Duties to be deceased. *Afaph Khan*, who had not declared himself, but remained of *Bolagu's* Council in *Agra*, treacherously advised the young Emperor to meet his Uncle's Corpse, as they drew near *Agra*, who thereupon marched out with an ordinary Guard, and such an Equipage as was suitable to the Occasion. He was surprized to see so numerous a Body of Troops attending the Hearse, and suspecting he was betrayed, turned short on a sudden, and made his Escape, never attempting to recover *Agra*; and, indeed, he did not stop till he found himself in the *Persian* Dominions. He looked upon the Inflection to be universal, and very well knew, that the Consequence of falling into the Enemies Hands was Death, or the Loss of his Eyes at least. This Transaction shews, that the Statesmen of the East are as able and as refined Politicians as the *Italians* themselves, and within a Title as wicked too. But let that pass, and let us see how the Affairs was conducted after this Flight of the second Emperor, who reigned only a few Months.

10. Sultan *Chorrom* having thrown off his Disguise, mounted the Carriage which was supposed to contain his Body, and which when stripped of its funeral Ornaments, appeared to be a triumphal Car, in which he entered the City of *Agra* in Splendor, where he was received with the loud Acclamations of the People, who began to be afraid of the bloody Disposition shewn in so short a Space by his immediate Predecessor. The first thing he did, was to enquire for *Shabariar*, and the rest of the Princes of the Blood, and being informed, that they were all kept Prisoners in one of the Apartments of the Palace, he instantly gave Orders that the Gates of it should be walled up, and there left a Brother and three Nephews to perish for want of Sustenance. This Piece of Cruelty was the more extraordinary, because he had but the Moment before, and out of the very next Apartment, delivered his own three Sons, who being at Court with their Aunt the Empress, *Nour-Jehan*, had been imprisoned ever since the old Emperor's Death. Whether this Act of Severity displeased the old Minister, *Mohammed-Khan*, or whether he was grown so weary of Courts, as to wish he might breathe his last in a better Air, is uncertain; but so it was, that as soon as this great Revolution was over, he demanded Leave to retire, which was with some Difficulty granted him, and he passed the Remainder of his Days in an honourable Retreat in Peace and Quiet.

The Subjects of this Empire had now all the Reason in the World to hope for an happy Administration; the Prince was in the Flower of his Age, drawing towards his thirty-sixth Year, one who had shewn a martial Disposition, great Intrepidity, and a Soul not to be broken by the Frowns of Fortune. He assumed with the Imperial Diadem, a new Name, and caused himself to be called thenceforward, *Shababuddin Mohammed Shab Jehan*, i. e. *The bright Star*, *Mohammed King of the World*; but our European Historians generally call him by the last Part of this long Name, viz. *Shab Jehan*, and therefore it is by that we shall mention him in the ensuing Account of his Reign. The Dominions he possessed were larger in Extent, and produced much greater Revenues, than any of his Predecessors had enjoyed; for all the vast Extent of Countries between the Principality of *Kandahar* to the River *Indus*, owned him for their Monarch; neither was it barely an Acknowledgment of his Superiority, but they were content likewise to pay him large Tributes, the Quantities of which, as well as the Title thereto, was now, through Length of Time, effectually established.

Yet he had still some Difficulties to struggle with, notwithstanding this fair Outside of his Circumstances. The *Rajahs*, however submissive they might be, were little to be depended on, though Subjects they were Princes, and had Dominions of their own, no way despicable either for their Size or their Situation. In order to understand this Matter clearly, it is necessary to observe, that all the flat

¹ It was not for a long Time known where the Prince took Shelter, and some of the Memoirs of these Times say, that it was *Mohammed-Khan* who prevailed upon him to make his Flight, that he might have no Hand in shedding the Blood of any of his Master's Family.

² The Day on which he mounted the Throne, was the first of *February* 1628, so that the Consecration, after his Death, lasted very little more than six Months. It was believed, that after the Death of *Shabariar*, the old Empress *Nour-Jehan*, was not displeas'd to see him mount the Throne, as he had married her Nephew, and was thereby Son-in-law to *Afaph-Khan* her Brother.

Cells to be made under his Palace, in one of which he kept his Gold, and in the other his Silver, cast into such large Ingots, as could not be easily removed or embezzled; and one great Pleasure of his Life was to visit these Receipts of his Riches, and delight his Eyes with gazing upon them. This single Vice of Covetousness absorbed and swallowed up all the rest of his Desires, inasmuch that though in the first Years of his Reign he had particularly piqued himself upon doing strict Justice to his Subjects, yet now he gave them up to be plundered by all the Governors of Provinces, and other great *Omrahs*; and when he found they were grown excessively rich by such Practices, he turned the Edge of his Resentment suddenly upon them; and, under a Colour of punishing their Oppressions, put them to death and seized their Effects.

His three Sons he sent to govern the most distant Provinces of his Empire, and kept only the eldest Sultan *Dara*, to share with him the Cares of Government, and to be the nearer that Throne which he was one Day to possess. Sultan *Sujab* was made Viceroy of *Bengal*; his youngest Son *Morad*, was established in *Guzerat*; and *Aurengzebe* was Viceroy of *Decan*; all of them were obliged to pay their Tribute exactly; and for their Submissiveness in a manner that became their Rank, were compelled to have Recourse to the same unjust Measures which other Governors practised. It was this, and the earnest Desire of obtaining Possession of the Diamond Mines, that put the last mentioned Prince upon attacking the King of *Golconda*, a very unjust War in itself, but to remarkable for the Issue of it, and for the Consequences attending it, that it is necessary we should enter into a more particular Account of it. It took Rise therefore in the following Manner; *Mirza Mula*, a Person who came into *India* in the Service of a Merchant, entering afterwards into that of the Mogul, was advanced by Degree to the most considerable Commands in the Army; but finding himself slighted by Sultan *Dara*, he went over to the King of *Golconda*, who gave him a Post in the Treaty, and the Direction of the Trade of his Country; in which Employment *Mirza Mula* having amassed together considerable Sums, he endeavoured to distinguish himself at Court by a magnificent Equipage, and the Curiosities he purchased and presented to his Majesty and the Royal Family; and among the rest the King's Mother, the Dowager Queen, who was so blundered with the Gallantry of the *Peperis*, that she denied him no Favours; which the King having an Ear on of, without taking any further Notice of her Majesty's irregular Passion, sent *Mirza Mula* out of the Way, to the Government of *Carnate*, in which were the famous Diamond Mines. Here he took Care to lay by the most curious Stones for his own Use; and one among the rest he happened on, so large and fine, that it was not to be matched in the *Indies*, either for its Size or Lustre, which he afterwards presented to *Aurengzebe*. *Mirza Mula* was not contented with what he found in the Mines, but he forced the People under his Power to bring in their Gold and Jewels, under pretence of the Necessities of the Government. He plundered the very Temples and pulled off the precious Stones with which the Images were adorned; of which the King of *Golconda* being informed, determined to call *Mirza Mula* to a severe Account for his Rapine and Exorbitations; but the good Queen let her Favourite know the Dangers that threatened him: Whereupon *Mirza Mula* immediately dispatched a Courier to *Aurengzebe*, whose Government lay contiguous to *Golconda*, to let him know that if he would march with his Army into that Kingdom, he would join him with a Body of Troops from *Carnate*, and that his Interest was so considerable in the Palace itself, that he might depend upon an easy Conquest; and to convince him of the Advantage of the Enterprize, made him a Present of the large Diamond above-mentioned.

This was the most agreeable Message that *Aurengzebe* could have received; for he did not doubt that if he was

once possessed of the Riches of *Golconda*, he should bid fair for the Empire of *Indostan*; he marched therefore, without Delay, and joined the treacherous *Mirza Mula* with his Army. The King of *Golconda* hereupon retired, in the utmost Consternation, from his Capital of *Bagnagur*, and shut himself up in the Fortrefs of *Golconda*, which stands about three Miles from it. The Confederates plundered *Bagnagur*, and afterwards invested the Fortrefs, of which *Aurengzebe* sent Advice to the Emperor. Sultan *Dara* was alarmed at the Progress of *Aurengzebe*'s Arms, and represented to the Shah *Jehan*, that if his Brother was once Master of the Diamond-Mines, his next Attempt would be infallibly against the Crown; whereupon Orders were immediately dispatched to *Aurengzebe* to desist from the Enterprize, and retire to his Government of *Decan*. As things were not yet ripe for the Execution of his great Design, *Aurengzebe* obeyed the Orders of the Court, and concluded a Treaty with the King of *Golconda*; the principal Articles whereof were, that the Mogul should be reimbursed his Charges in the War; but the King's Daughter should be given in Marriage to the Prince *Mohammed*, *Aurengzebe*'s eldest Son, who should succeed to the Crown of *Golconda*, after the Demise of his Majesty, and that *Mirza Mula* and his Family should be at Liberty to retire, with their Effects, out of the Kingdom. Thus was *Golconda* delivered from the Danger that threatened it at this Time. but *Aurengzebe* had such a Taste of the Riches that Country afforded, that he fully determined to make it a Province of the Empire, if ever he succeeded to the Crown.

Aurengzebe, finding his Friend *Mirza* wanted neither Courage nor Conduct, and that he had a confirmed Aversion to his Brother, the Sultan *Dara*, and above all, that he was Villain enough to execute whatever he should command, without Remorse, looked upon him as a proper Instrument to promote the ambitious Designs he had in View; he took him therefore into his most intimate Confidence, and made him General of the Forces against the Kingdom of *Vishnour*, while he himself spent his Time in amusing the People with extraordinary Shews of Devotion, most exact Justice, and uncommon Benevolence to the Poor, which rendered him exceeding popular. In the mean time the Emperor Shah *Jehan* was taken dangerously ill, and it was reported in *Delhy*, and even in the remotest Provinces of the Empire, that he was dead; whereupon the three youngest Sultans, his Sons, began to make Preparations in their respective Provinces to push for the Empire. Sultan *Sujab*, or *Ghais*, Viceroy of *Bengal*, was the first that appeared in Arms, directing his March towards *Delhy* with an Army of forty thousand Horse. When he first set forward, it is said, he laid his Hand on his Scimitar, crying out, "Now for a Throne, or for a Grave." He gave out, upon the March, that Sultan *Dara* had poisoned the Emperor, and that he was going to revenge his Father's Death: But Shah *Jehan* recovering from his Indisposition, wrote his Son Word with his own Hand, that he was now perfectly in Health, and that his Brother *Dara* had not contributed to his late Illness, and therefore he would do well to return to his Government of *Bengal*, and repair the Oversight his Excess of Zeal had induced him to commit, by a more exact Obedience for the future. But Sultan *Sujab* receiving other Letters from his Friends at the same Time, assuring him that it was not likely that his Father should recover, and that his Fortune depended on his appearing immediately before *Delhy*, the Sultan thought fit to continue his March. Shah *Jehan* thereupon removed his Court to *Agra*, being a Place of much greater Strength. *Dara* followed his Father's Court; but detached his Son *Soliman Chocru*, and with him *Rajah Jaising*, and *Obid-Khan*, two experienced Generals, and a gallant Army to oppose Sultan *Sujab*, whose Forces, in all respects, were easily defeated, and the Sultan himself, with some Difficulty, escaped to *Bengal*, where he endeavoured to recruit his Army.

* The Kingdom of *Golconda* is an inland Country, on the East Coast of the Peninsula of *India*, on this Side the *Ganges*. *Aurengzebe* would have been at a Loss to find out the large Diamond, if he had not been informed of it by the King of *Golconda*, which, as we shall see hereafter, he afterwards sold to the Mogul Empire, under the Name of the Province of *Hyderbad*, which is only another Name for the Capital of that Country, called in the Text by its old Name *Bagnagur*; and that this Country was very well worth acquiring, appears from the great Revenue which it produced to the Great Mogul, of 3,711,000 Pound.

The Confusions in the Empire did not end here. The two younger Sons of the Emperor were also in Arms, in order to dispute the Possession of the Empire with Sultan *Dara*. And now it was that the profound Dissimulation of *Aurangezbe* paved the Way for his mounting the Imperial Throne, while he pretended to assist the Ambition of his youngest Brother. The old Pretence was that of Religion: Sultan *Dara*, he said, was an Infidel, Sultan *Nigab* a Heretic, and therefore the Crown ought to be secured to Sultan *Morad*; for, as to himself, the utmost of his Desire was to spend the Remainder of his Days near the Tomb of *Mohammad* in Acts of Mortification and Devotion. But to shew, that as much a Saint as he was, he understood the Affairs of this World as well as any of them; he assembled a very numerous Army, composed of veteran Troops, that had been employed in his former Wars, extremely well provided with every thing necessary, with which he joined his Brother *Morad*, and his Troops, not far from *Deby*. The first Step he took was, to persuade that Prince to assume the Title of Emperor, in which Quality he received and obeyed his Orders, which, however, were such as himself dictated in his Council. As soon as Sultan *Dara* was informed that the two Brothers had joined their Forces, he sent a Trompet with a Letter from the Emperor, his Father, to each of them, assuring them that he was in perfect Health, and commanding them to retire and disband their Troops, on pain of being treated as Rebels. This surpris'd Sultan *Morad* exceedingly, and he would willingly have attended for his first Order, to attend the Emperor, his Father, immediate Obedience. But *Aurangezbe* prevented his Return to his Duty, by suggesting that Occurrence now came too late; that though the Emperor might be restored, Sultan *Dara* would be revenged, and that to separate their Armies would be doing his Business, and giving themselves up to the Mercy of the Emperor, his Father, and Sultan *Morad*; of which Loyalty, especially when it was farther separated from him that his Father was now superannuated, and that Sultan *Dara* only made use of his Name. *Morad*, conceiving with himself that it was better for him to impose Law upon his Brethren, than be obliged to receive it from them, determined to proceed, and to acquire, if possible, by Arms, a Crown, to which he was not entitled either by the Laws of Nature, or the Custom of his Country.

But as we are now to enter on that War which is made to great a Name in *Europe*, as well as the *Indies*, it will be necessary to say something of the Characters of these Princes; and the rather, because some of them have been much misrepresented, as in *Europe*, generally misunderstood. Sultan *Dara* was always happy in the Enjoyment of his Father's Favour, in consequence of which he received an Education of Royal Dignity, from Nature, a very practical Liberty, and a great Confidence; his Parts were not only high, but his Education speaking, so that before he reached the Flower of his Age, he was Master, not only of all the Sciences which are usually taught in the Universities, but most of the Languages likewise that are used in *Europe*. His liberal Knowledge, and the great Goodness of his Heart, joined to a prodigious Virtue, were the Sources of his Fame. He was, in every Company, the greatest Prince that ever drew Breath in the *Indies*; and the most liberal Master, the wisest Man of the Age, in which he lived, and consequently was in his Country, one of the best Men that ever was bred up in a Court; and withal, the worst qualified to live in one. Several Paradoxes shall be in few Words explained. His Wisdom never upon him the Habit of being ascribed to be in sight with the Quakers, and Persians, on tender of him less capable of being advised by them as were creditable. He did not spend much of his Time in Business, the Duties of every Profession, and expected that Men of every Profession should discharge

those Duties. He had no sort of Craft, and despised it very much; he was to truly virtuous, that he knew too little of bad Designs to guard against them; and he was so open and sincere, that he never suspected any Man of Deceit. He had a great Respect for the Missionaries, and they, in return, had taken a great deal of Pains to persuade the World that he was a Christian in his Heart; and that the Knowledge of this was one great Cause of his Misadventures, which, however, is so far from being true, that I venture to affirm, they flowed from quite a different Fountain. He had, indeed, studied Religion more than became a Prince, and left behind him a Testimony of it, which plainly proves the Truth of what I have asserted; and yet not one of the Missionaries have mentioned it, for Reasons that I cannot assign. In short, he reviv'd the old Scheme of his Ancestors, and had a Mind to reform the Legislature, as well as the Monarch of the *Indies*. It was with this View that he composed a large and learned Work, to prove that the Principles of the old *Indian* Religion were the same with those of Mohammedanism; and, in Support of this, he collected, with great Labour and Care, was worth collecting from the Works of the ancient *Bramins*, and compared these with the principal Passages of the *Khoran*, to demonstrate that these Religions were not so far from each other as those who professed them imagined, and that there wanted nothing but a little Temper and good Sense to bring them to a good Understanding. This alarmed the Bigots against him, as the Strangers of his Conduct, and his Contempt for the Arts of Court, raised him, with those who placed their Hopes and Trust in being well versed in them.

Sultan *Nigab* was the very reverse of his Brother, except that he had a fine Person, a happy Countenance, and great Parts, for he was a finished Courtier, understood the Art of Intriguing perfectly, and proceeded with such Success, that *Aurangezbe*, upon whom *Dara* had chiefly depended, was private and secure, and betrayed the Matter, to which he was engaged all Things. This Prince had Spies in every Part of the Court, knew every thing that was done there, and the Sentiments of all who composed it. He had likewise private Intelligence with the principal *Rajahs* throughout the Empire, and a private Correspondence with the King of *Persia*; and that he might not want any opportunity to execute his Interest, he declared for the Sect of *Shy*, which is the established Part of the *Persian*.

The Character of *Aurangezbe*, though not so capable to rule his Brethren, was very probably better upon them. He had strong Sense, much Application, and a deep Reach of Thought; but he was a little more, and the most profound Diplomatist in the World. He was an Ambitionist, in every respect, exclusively devoted to the highest Degree, and yet affecting to depict himself as a devout Man, without the least Mixture of Faith or Counsel in his Heart. He saw that his Brethren could Men of other Religions, and of various Opinions, his Hopes in the bigotted *Mohammedans*, who were ever to be a powerful Party, and that he could not expect to see the Way that he desired to be taken. He knew very well that if he could not attain his Throne by his own Merit, he was not likely to preserve his State, and therefore he spent his whole Time, and applied all his Thoughts in meditating how to acquire the Empire of *India*, and in hindering the rest of the World from preventing his Design, which he believed, and which Experience showed to be the best Method of preserving it.

Morad, the youngest of Sultan *Jahan's* Sons, was a noble generous Prince, one who possessed *Mercy* more than from his Heart, and was really as much a believer as any of the Clergy could wish him. He loved Hunting, and other Exercises of that Kind, and was not so given to Women. In all other respects he was a very amiable and worthy Prince, and it he appeared from some Parts

There is a great deal of Difference between the *Indians* and the *Persians*; the former are of a more liberal and generous Spirit, and the latter are more reserved and suspicious. The *Indians* are more open and sincere, and the *Persians* are more crafty and deceitful. The *Indians* are more devoted to Religion, and the *Persians* are more devoted to the World. The *Indians* are more liberal and generous, and the *Persians* are more reserved and suspicious. The *Indians* are more open and sincere, and the *Persians* are more crafty and deceitful. The *Indians* are more devoted to Religion, and the *Persians* are more devoted to the World.

of his Conduct in a different Light, it was owing to the Influence that *Aurangzebe* acquired over him, and in which he acted against his own Sentiments. Let us now return to Matters of Fact, and discuss them in as few Words as possible. All the Hopes of *Aurangzebe* lay in making his Brethren destroy each other. His Schemes were in some Measure accomplished with respect to Sultan *Syjah*, and from his Intelligence, he knew very well, that Sultan *Dara* was not an equal Match for the Forces they had in the Field against him, and this gave him as much Delight in one Sense, as it did Pleasure in another; for, as he saw very clearly that his Brother's Safety and Interest depended upon taking him off, to notwithstanding the Difference of their Characters, he was afraid his Brother might see it himself, or at least be shown it by some who were about him, which made him more intent upon his Destruction, towards whom he professed both Duty and Affection, than on that of his elder Brother against whom he was in Arms: Yet he covered his Uneasiness with a Shew of great Tranquillity, and prevented any Suspicion that might have arisen from his Retardness, by ascribing it to a Spirit of Religion; so that while he was plotting the most detestable Villainy, the far greater Part of the Camp beloved him entirely taken up with religious Meditations. He employed the vast Treasures he had reaped up by the most unjustifiable Means, in Practices no less wicked; and by that means had constant Advice of whatever passed in all the Courts; so that if his Hypocrisy had ever been detected, he would have had Leisure sufficient to have secured a Retreat, and at the same time his Officers and his Troops were so devoted to him, that he had not the least Reason to doubt their defending him to the last Man: Such were the Circumstances on his Side.

Dara was not idle in the mean time, but ordered his Generals *Jacentsing* and *Cassam-Khan*, to take a Post upon the River *Ugin*, which might have been maintained against all the Forces of the two Brothers. But *Cassam-Khan*, one of those whom *Dara* had formerly disobligeed, being in the Interest of *Aurangzebe*, withdrew upon the Approach of his Army, and left the Rajah *Jacentsing* to fight it out by himself; whereupon the two Brothers gained an easy Victory, making themselves Masters of all the Enemies Artillery and Baggage, and so did the Partisans of *Aurangzebe* manage this Matter, that all the Glory of the Victory was ascribed to him, which gave a great Disgust to the Ministers and Generals of *Morad's* Army, knowing that their Master's Troops had born all the Burthen of the Day, while *Aurangzebe* seemed to relieve his own Forces for another Occasion. They began now to be convinced of the ambitious Designs of the Dissembler, and had, it is said, without their Master's Knowledge, formed a Design to cut him off next Time he came to *Morad's* Quarters, which *Aurangzebe*, who had his Spies in every Place, had some Intelligence of, and came no more to his Brother's Tent as usual, but sent his Son *Mohammed* to pay his Compliments, without discovering that he was apprized of the Conspiracy against him. While the two Brothers continued their March, the Malecontents at Court came over to them every Day, and many of those who had beheld remained there for an Opportunity of giving Intelligence to the Enemy. *Shah Jehan* finding himself betrayed on every Side, and reflecting on his former Conduct, it is said, in respect to the Omahs, thought this universal Detestation might proceed from a particular Prejudice to his own Person; he made a Cession therefore of the Crown, and devolved all his Authority on his Son *Dara*, who thereupon rated a prodigious Army, and marched to meet the Enemy upon the 14th of June, 1657.

Since this mighty Army, says the Historian, extend itself on the vast Plains of *Agra*, would have inclined any one to believe, that *Dara* must have commanded Victory

where-ever he went; but *Dara's* haughty Carriage, it seems, had raised him as many Enemies as the Vices of *Shah Jehan* the Father, inasmuch that there was hardly a considerable Officer in the Army but had his particular Prejudices. *Dara* continued his March for four Days, till he came to the River *Chamb-I*, where he entrenched himself, and determined to wait the Motions of the two Brothers; for here his Army could be supplied with all Manner of Provisions from *Agra*, and the Enemy, he knew, could not possibly subsist long in that barren Country, which lay to the Southward, especially at this Season of the Year, when the Heats are intolerable. *Aurangzebe* observing the Disposition of the Imperial Army, and that all the Avenues to *Dara's* Camp were fortified with Entrenchments and Batteries of Cannon, concluded it was impossible to face the Enemy in that Post. On the other Hand, he was sensible, that the least Delay was their infallible Ruin. *Dara* would be joined in a little Time by his victorious Son, who was returning from the Pursuit of Sultan *Syjah*, and their own Troops would be disheartened, and dispersed, if their first Heat was a little cooled, as is usual in all Insurrections, where Rebels meet with unforeseen Difficulties. In this Distress, the Rajah *Campet*, a confirmed Enemy to the Court, offered the two Brothers a Passage through his Country, which lay about thirty Miles higher up the River, where it was probable they would meet with no Opposition; for the Rajah's Territories being woody and mountainous, and the Rajah himself a General in the Imperial Army, *Dara* looked upon himself as secure on that Side, when to his Surprise, Intelligence was brought him that a Body of the Enemy had actually passed the River, and was preparing to attack his Rear. *Dara* immediately dispatched the treacherous *Cassim-Khan* to oppose them, but he having a Correspondence with *Aurangzebe*, suffered his whole Army to pass the River, and form themselves in Order of Battle, without giving them any Disturbance; so that now both Armies came to a Battle on equal Terms, which was fought with very great Bravery on that Side, where *Dara* himself commanded; but the other Generals not doing their Duty, and some of them with their whole Bodies going over to the Enemy, the two Brothers, at length, obtained an entire Victory. *Dara* retired with a small Body of Troops, which remained faithful to him, to *Agra*, where he staid but a few Hours to refresh himself, and continued his March to *Delhy*; but the Governor having heard of the Loss of the Battle, refused him Admission, whereupon he was compelled to retire to *Lahor*.

The two Brothers, with their victorious Army, advanced to the Gates of *Agra*, and invested the Place, which was betrayed to them in a few Days, and the old Emperor *Shah Jehan* made Prisoner. The two Brothers possessed themselves of his prodigious Treasures, which they found sufficient to reward their Adherents, and support their Contention; and having refreshed their Troops, and put the Government into such Hands as they could depend on, they left a Garrison in *Agra*, and continued their March towards *Delhy*, *Morad* being treated by *Aurangzebe*, and the whole Army, as their Emperor. They were encamped in the fertile Plains of *Matta*, where stands a noble Mosque or Temple erected by some of the Mogul Emperors, which *Aurangzebe* proposed as a proper Place for the Inauguration of his Brother; whereupon great Preparations were made to perform the Solemnity on the 14th of June 1658. The Evening before *Aurangzebe* sent a most dural Message to his Brother, importing, that he was extremely sorry that a sudden Illness, with which he was seized, would not allow him to wait upon his Imperial Majesty, in order to concert with him and his Attendants the lucky Hour for his Coronation; but that if he would have the Goodness and Condescension to accept of a final Collocation at his

the most very authentic Relation of the Transactions in these Wars, but particularly two, the first by *Mr. Berners*, and the second by *Mr. Ouseley*, who were both upon the Spot, and both Attendants on the unfortunate Sultan *Jehan*. I have, however, chosen to follow the former Reason, first, because he is in the History of the *Mogul's* Studies, and procured the Materials for writing his Account, and secondly, because he wrote at Leisure, and after he had taken Leave to enquire into an extensive Field, which he recorded, and to view the several likely to be deceived by common Report. Thirdly, because he was an *Indian* and a Hindu, and appears to have been much better versed in Affairs of State, and in the Practices of the Court, than the other two, who were very able and faithful, as well as interesting Writers.

Quarters, all things might be regulated there, so as to prevent any Delay in a Matter of so great Importance. Some of the principal Confidants of Sultan *Morad* could not very well digest this Message, but fancied there was something concealed under it which might be prejudicial to their Master, and therefore they advised him to return a very civil Answer to this Compliment, but by all means to decline the Visit. There were, however, others, who were secretly in his Brother's Interest, who persuaded him to go, and as Sultan *Morad* was a Prince of a very open and generous Disposition, he listened to the Advice, and went with his ordinary Guard, and a few of his principal Courtiers, at the Time appointed, to his Brother's Tent, where he was received with such high Marks of Respect, and with so much seeming Affection, that he laid aside all Suspicion, and according to his usual Custom, drank freely of several sorts of excellent Wine, which were provided for him; but as for the pious *Aurengzebe*, he, for a Principle of Conscience, could not taste a Drop of that prohibited Liquor, and therefore drank Water only. At last Sultan *Morad*, having got his full Dose, fell fast asleep, and was, by his Brother's Command, immediately removed into another Tent, attended only by his faithful Eunuch, who could not by any means be persuaded to leave him.

In the mean time the Officers and Courtiers of *Morad* were entertained in another Tent by Persons of equal Rank with themselves, who were known to have strong Heads, and could bear drinking. The Guards all the Time attended round the Tent, and all the Musick of the Camp playing, as if the Brothers had spent the Night together in Feasting. *Aurengzebe* early in the Morning went with six of his Guards into the Tent, where Sultan *Morad* and his Eunuch were still fast asleep, and having cautioned them to be bound before they were well awake, he ordered them to be put into two close Litters, and sent away privately, one to the Citadel of *Dehly*, and the other to that of *Agra*. When all was over, he directed a Message, in his Brother's Name, to such as were to assist at the approaching Coronation, importing, that the solemn Procession to the Mosque was to be made from the Tent of *Aurengzebe* at a certain Hour, and therefore they were to be ready by that Time in the Temple. When the Hour fixed for the Coronation came, the greatest Part of both Armies were drawn up in perfect Order, under Colour of preventing Disturbances, without Arms. On a sudden they were surrounded by several choice Squadrons of Horse from the Army of *Aurengzebe*, who, as soon as the Procession began to move, made the first Declaration of the Charge by brandishing their Swords, and crying out, *May the Emperor Aurengzebe reign forever*. The rest of the Army were exceedingly alarmed at this, but they were too slow to join in the Cry, from an Apprehension that the Troops might trample them down, and put them to Flight; so they discovered the least Sign of Rebellion. As soon as they saw in the Advancements, *Aurengzebe* himself appear, at a distance for a Moment on the Tent prepared for his Brother, and having any other respect with the Effluvia of the Imperial Durry, presently withdrew, the whole Army following him, and leaving a Division, which is a Proof, that a contrary Opinion was there is no such thing as Liberty, for save only *the Right*, and not *Right*, which ought to render Princes absolute, and their Subjects Privileged by the Law. Pretogeevix, because both stand upon the same Foundation.

In the midst of all this Success, *Aurengzebe* ran a great Hazard of being betrayed, or at least of seeing the War revive in a Quarter which, with all his Conquest, he never suspected. He had sent his eldest Son Sultan *Mohammed* to *Agra* to execute his Orders with respect to Shah *Jehan*, who had performed very punctually, since as soon as he entered the Presence of his Grandfather, he told him in a very few Words, that he was now old, and incapable of managing the Empire, and desired the Honour to leave it to him, who would look on it as a great Gift, and left it to explain it;

but at the same time informed him, that his Father intended no Hurt to his Person, but was content to allow him a Palace, his Seraglio, and such Amusements as might content an old Man. The Eunuchs and the Women that were a loud Outcry at this barbarous Message; but *Aurengzebe* bore it calmly, and with great Patience. He did still more, for he gave the strongest Proof of the Falshood of the Pretence, and of his Capacity for governing at a Time when his rebellious Children treated him as a Dwarf. He retired, as Sultan *Mohammed* commanded, and as soon as he was fixed in his new Apartment, he sent to desire another Visit from his Grandson, who, as soon as he was coming at a Distance, he threw himself on his Knees, the young Man coming to lift him up, he addressed him in these Words: "Since it is so, since I must be destroyed by my own Children, I submit to my Fate; but be you courageous enough to match the Crown of the Indies from him, who is made unworthy to wear it. The City of *Agra* is yours, you have in it a power of Arms devoted to your Service, I resign it on my knees, and secure yourself from the Cruelty of a Prince who will never show Affection to his Son after treating a Father as he has done me." Sultan *Mohammed* was struck with this Discourse; but as he knew that the Officers under his Command were entirely devoted to *Aurengzebe*, he did it not pursue his Grandfather's Advice, which, however, made such an Impression on him, that he never forgot it, or obeyed his Father otherwise with Reluctance.

The People however, more sensible of the Privation of Duty, could not help to be discontented at the Resolution of so great a Monarch. *Aurengzebe* was to some informed of it, than he came to a Resolution to be with in his Father's Hand, addressed to Sultan *Dara*, in whose Direction he directed him to march with all the Forces he could gather, towards *Agra*, promising him to engage *Aurengzebe* to make him a viceroy, and to give him to be considered in his Apartment. The next Day he had a Spectacle upon the Stage, who represented the last Days of the Usage of the old Emperor to be what he desired, he admired the Wisdom and Humanity of *Aurengzebe*. The artful Prince, having thus tried all Things behind him, and having, out of the Treasures of his Father, taken away all the Hopes, all who had hitherto courted him in his Enterprises, found himself at Length to use Sultan *Dara*, who had again drawn a fresh Army together in the Night out of *Delahy*. The Time was now happy in a fatal and one General, whose Name was *Jehan Khan*. *Aurengzebe* attempted to intercept him, failed for the first Time upon which cause a Letter to be forged in the Name of *Aurengzebe*, importing a Design to betray his Master, and to send the Matter to, that it led into the Hands of Sultan *Dara*, who, having suffered so much from the Success of *Aurengzebe*, before, became now a reasonable supposer, at the Sight therefore of this Letter, he immediately sent General *Jehan Khan* upon whom the rest of his Officers were after his whole Army a sudden turning, and was ordered to march into the Province of *Razzeem*, from whence he returned to *Peshawar*.

Aurengzebe took this Opportunity of turning his Army against his other Brother *Jehan Khan*, who had been ordered to march northwards, he pursued him, and joined with his Army towards *Agra*. But *Aurengzebe* was not with a surprising Certainty, perceiving that *Jehan Khan* falling into his Hands. However, Sultan *Aurengzebe* posted his Troops to advantage only that he was not to be forced in his Camp, and kept a Communication with several Towns, from whence he was supplied with Provisions, while his Enemies wanted all Necessaries, and even Water, which they were forced to bring to their Camp upon the Backs of Camels from the Springs, which lay at twenty Miles Distance. In this Distress *Aurengzebe* ordered it to be given out, that he would give a present

Morning, and accordingly the Tents were struck, and the Troops actually in Motion; which Sultan *Sujab* observing, prepared to fall upon their Rear. The Troops of *Aurengzebe* were ordered to give Way upon the first Attack, until they had drawn the Advance-guards of Sultan *Sujab* some Distance from their Camp, and then to make a Stand, which Orders were punctually executed; and Sultan *Sujab* observing his Men were over-powered, detached still other Troops to support them; and the Enemy doing the like on the other Side, it came at length to a general Battle. The Generals, mounted on their respective Elephants, advanced with the Bodies under their immediate Commands to engage each other, and the Battle was fought with great Obliquity, till *Aurengzebe* actually drew his Enemy into a Field, where he had ordered Pits to be made the Night before, and covered over with Turf, so that they lay unperceived. Here the brave Sultan *Sujab* was advancing to engage his Brother, and periously decide the Fortune of the Day, when his Elephant floundered into one of these Pits prepared for him, from whence the Sultan found it impossible to disengage himself suddenly; whereupon the Army, not seeing their General, imagined he was killed, and thought of nothing but making their Retreat. Sultan *Sujab* afterwards mounted a Horse that was brought him, and endeavoured to rally his flying Troops, but it was too late; the Rout was too, a panick Fear had seized his Forces, and they could never be brought to make a Stand again; and *Sujab*, with great Difficulty, made his Escape into the Province of *Bengal*. Here he recruited his shattered Army, and, having posted himself in an advantageous Camp, waited the Approach of the Enemy, when he understood that *Muhammed*, the eldest Son of *Aurengzebe*, was in some Distance, and secretly invited him to come over to his Party, which Negotiation was so well managed, that he did not only desert his Father's Court himself, but brought over with him several of his best Officers. Upon this, *Aurengzebe* had Recourse to his old Practice of forging Letters, by which he drew Sultan *Sujab* to believe that *Muhammed* had deserted by his Order, who thereupon treated the young Prince in such a Manner that he was glad to reconcile himself to his Father, who led him with far Promises till he had him in his Power, and then, in a little Time, sent him Prisoner to the Castle of *Gallior*.

Sultan *Dara*, having drawn another Army together, marched, with great Diligence, towards the City of *Amadabad*; but when he was within a few Miles of it, the Governor, who had been corrupted by *Aurengzebe*, shut the Gates of it against him; upon which, the Army he had assembled, seeing him thus betrayed, abandoned him, in order to provide the best they could for their own Safety. The Sultan, now entirely despairing of his Affairs, determined to fly for Refuge to *Persia*; to which he was the rather induced, because, *Green Khan* had the Command of that part upon the Frontiers, who was his Friend, and might favour his Retreat. This Man had received the highest Favours from the Sultan, and particularly once he saved his Life, when the Emperor *Shah Jehan* had commanded him to be trod to Death by Elephants for some Misdemeanour he had committed. This Traitor received the Sultan with the greatest Professions of Gratitude, but immediately gave Intelligence to the General who commanded the Forces of *Aurengzebe* on that Side, that he had *Dara* in his Power, and would deliver him up. The Sultan suspected the Treachery, and was meditating how he might make his Escape from thence, when a Detachment of *Aurengzebe's* Forces surrounded the Palace, and carried *Dara* Prisoner with them to *Bakar*, which was believed by his Brother's Troops, being the only Fortrefs which still held out for *Dara*, they compelled the unfor-

tunate Sultan to send Orders to the Governor to surrender the Fortrefs, who obeyed, on Condition he might be at Liberty to retire into the Kingdom of *Cachemire*. When the captive Prince was brought to *Dehly*, he was set in an open Chair on the Back of an Elephant, with his Feet chained, and his youngest Children about him, which moved the Compassion of the People. His Brother *Aurengzebe* would not see his Face, but ordered him to be secured in a Castle without the Town; and, having assembled a Council of the principal Omrahs, he proposed it as a Matter indifferent to him whether it were most advisable to condemn *Dara* to perpetual Imprisonment, or deprive him of his Life; by which Means he did not doubt but he should discover which of them were in *Dara's* Interest, determining with himself not to spare one of them. But these great Lords were all so wise as to save their own Lives by voting away their Master's, except one, who had been his declared Enemy, which, it is said, gave *Aurengzebe* such an Opinion of the Man, that he afterwards took him into the Number of his Friends. After long waiting the fatal Stroke, Sultan *Dara* met with it from the Hand of a common Executioner, who, with great Brutality, threw him on the Ground, and afterwards cut off his Head. Some of the Missionaries have reported he died a Christian, but as they do not produce any Evidence in Support of it, we can scarce credit the Fact barely on their Assertion.

The personal Hatred of *Aurengzebe* to his Brother, it is reported, was such, that he ordered *Dara's* Head to be brought him, and viewed it with great Satisfaction, and intuling over it, said, "Behold the Remains of a weak Man, who would have wrested a Crown from me he was not able to sustain." He afterwards ordered the Head to be carried to his Father *Shah Jehan*, and his Sister *Ishan Ara Begum*, who were imprisoned in the Castle of *Agra*; at which melancholy Spectacle the old Emperor fell into a Swoon, but it did not break his Heart, as his pious Son *Aurengzebe* expected; nor was the Sight a less Affliction to the Sister, who had always espoused the Interest of Sultan *Dara*, and whom he had promised to marry, it is said, if ever he possessed the Throne. Sultan *Sujab*, the second Son of *Shah Jehan*, still remained in *Bengal*; but upon the Approach of *Aurengzebe's* Army, finding himself in no Condition to oppose so great a Force, he proposed to retire to the Kingdom of *Arracan*, which lies to the South-East of *Bengal*, but separated from it by impassable Mountains and Forests. The Portuguese, who were then possessed of *Chattigan*, a Port near the Mouth of the River *Ganges*, took upon them to transport the Sultan, with his Treasure and Family, thither; but, it is said, they sunk the Vessel in which the Money and Jewels were, and afterwards converted them to their own Use. However that be, Sultan *Sujab* arrived safe at *Arracan*, though it might have been as happy for him if he had perished at Sea with his Treasure; for he had not been long in the Court of *Arracan*, before there happened some Misunderstanding between him and the Prince he fled to for Refuge; and not only himself, but his Wives and Children, were all cut to Pieces in the Year 1658. Thus miserably died the second Son of *Shah Jehan*, who first began the Rebellion against his Father.

Sultan *Chacu*, eldest Son of *Dara*, a Prince of great Expectation, still remained secure from his Uncle's Cruelty in the Territories of the Rajah *Sirmager*, whom neither Threats nor Promises could move to deliver him up. But *Aurengzebe* so insinuated himself into the Favour of *Sirmager's* Son, that he prevailed with him to betray Sultan *Chacu* into his Hands; to which End, a Hunting-Match was appointed, and Intelligence given in what Part of the County they would hunt; whereupon an

¹ The first of the Writers who tell us, that he did not send his Son, Sultan *Muhammed*, immediately to this Prison, but kept him some Time to a Guard, but when he had taken the eldest Son of Sultan *Dara*, he sent them both thither, on the 14th of January, 1661, and kept them in the same Prison, till *Muhammed* died of a natural Death, as most Writers say; but, as some would insinuate, by Poison, which however is improbable, because, with equal Provocation from another of his Sons, the Emperor contented himself with a long Imprisonment, and did not put them to Death before his Death.

² This Execution was performed in the Night, on the 28th of August, 1659. We are told, that a little before his Death, this Prince was asked by *Aurengzebe's* Orders, what he would have done with him or else he had obtained the Victory. As he is a Rebel, and a Murderer, answered him *Dara*, he best knows what he deserves; which answer occasioned his Death. It is highly probable, that *Aurengzebe* invented the Story, as it is said to be inserted in the Chronicles of the Mogul Empire, in order to excuse this Cruelty. At least this is certain, that he did not suffer the Honours of a Royal Burial to be paid in such a Manner as might give the latest Colour possible to the foul Actions of which he was guilty. And as he was a Prince of prodigious Riches, it is very easy to conceive that, by his Abundance, a very plausible Account

which lie to the Eastward of Bengal. Emir Jenla, being a Man of ambitious Spirit, joyfully accepted the Command, proposing to extend his Conquests as far as China; or, however, being at the Head of so powerful an Army, hoped to be in a Condition to give Laws to his Sovereign. The General met with great Success in the Beginning of his Enterprize. The Rajah of *Abam* was defeated, his Capital *Chandara* plundered, and that Prince forced to retire into the Mountains; but the rainy Season coming on sooner than was expected, the Country was immediately overflowed. The Army of Emir Jenla found it very difficult to subsist in their new Conquest, and not less difficult to retreat; however, Emir Jenla did at length find Means to return into Bengal, of which Province he was Governor, proposing the next Year to complete his Conquest of the Kingdom of *Abam*; but his Army having contracted the Bloody-Flux in that wet Season, were most of them swept away, and among the rest, Emir Jenla, to the great Satisfaction of *Aurangzeb*, who hardly looked upon himself to be Emperor while he lived. As this Officer was a Man of a very enterprising Genius, his Master took the properest Method to be rid of him, by feeding his Vanity, and seeming to respect from his Zeal, Activity, and Abilities, the Conquest even of the Empire of *China*, though he was sensible that the Countries which lay between him and that Kingdom were impassable for great Armies, and therefore when Emir Jenla was dead, he made no farther Attempts on that Side; but, to encourage others to serve him, he gave *Mohammed*, the Son of Emir Jenla, all his Father's Estate, which by the Laws of the Empire devolved to the Crown.

The next considerable Expedition in this Reign, was against the Pirates, who infested the Bay of Bengal, and fortified themselves at *Chatagan*, and other Places, on the Mouths of the *Ganges*, and in the Kingdom of *Aran*, which lies contiguous to Bengal. These Pirates consisted of *Europeans*, or *Franks*, of all Nations, but chiefly of *Portuguese*, who frequently made Slaves of the Mogul's Subjects, burnt and plundered the frontier Towns, rendered both the Seas and the Shores very unsafe. Against these, *Aurangzeb* sent another of his Generals, who suppressed the Pirates, and brought that Part of *India* under as peaceable and regular a Government as any other Part of the Empire. About the Beginning of the Year 1666 there happened some Stirs in the Empire, occasioned by the Ambition of some of his own Children, who coloured with the fair Pretences of Zeal for the Conservation of the Empire, and Pity for its lawful Monarch, the unfortunate Shah *Jehan*, which, however, had no other Consequence than making the innocent old Man a Victim to the Terror of his cruel and unnatural Son, who, to secure himself any farther Trouble, and to take away all Pretences for the future, ordered the old Emperor to be poisoned at the Age of Seventy-four.

This, however, did not make him the easier, or dispose his Sons to greater Obedience. Of these, excluding Sultan *Mohammed*, who lived and died in Prison, he had four, viz. *Mohammed Masum*, that is, the *Illustrious*, was extremely ambitious, and began very early to form Designs against his Father's Life: Once he was very near carrying his Point; he caused a Pit to be dug very deep, in the Place where his Father's Tent was to be pitched, which was so well covered, that *Aurangzeb* very narrowly escaped being buried in it, for which Sultan *Mohammed* was for many Years confined in a Dungeon, where he endured not so much as a Ray of Day-light. Shah *Azem*, the *Glorious*, had likewise engaged in Plots of the same Nature, which proving unsuccessful, and he fearing they might come to be detected, fled to the King of *Orissa*, where he remained till the Edge of his Father's

Reformation was worn off. But the greatest Hazard this Emperor ever ran, was from the Ambition of Sultan *Akbar*, whom he trusted with a great Army, in order to reduce one of the Rajahs, who had rebelled; but the first News that the Emperor heard, was, that his Son had joined the Rebel, and that they were marching towards him, with seventy thousand Horse, and a proportionable Number of Foot. The Troops which *Aurangzeb* had about him, were in no Capacity of disputing with him a Force, and therefore he had Recourse to his old Artifice; that is to say, he sent a Letter to the Prince, which he contrived the Rajah should intercept, wherein he commended his Son's Conduct, in drawing the Army of the Idolaters to that Place, assuring him, he would advance the next Day to such a Post, where, having the Rajah's Forces between them, they might charge them on all Sides, and that it was not possible any of them should escape. The Eunuch, by whom this Letter was sent, being brought Prisoner to the Camp by the Rajah's Out-guards, and the Letter read among the Officers of the *Rajpoots*, occasioned a terrible Consternation in the Rajah's Army, and notwithstanding Sultan *Akbar* swore on the Alcoran it was a Contrivance of his Father's, he found it impossible to remove these Jealousies the Letter had created, which gave the Mogul Time to reinforce his Troops. The Rajah was afterwards defeated, and *Akbar* fled with a Body of four thousand Horse to another Pagan Prince; but being closely pursued by his Father's Troops, was forced to fly to the *Portuguese* at *Goa* for Protection, who transported him to *Persia*, where he was very kindly entertained by the Shah, and afterwards, it is said, married his Daughter; nor could the Mogul, either by Threats or Promises, ever procure him to be delivered up. *Aurangzeb*, however, fell upon the Rajah *Seva*, who had assisted *Akbar* in his Rebellion, and, having taken several of his Towns, besieged him in his capital City of *Gingy*, but they held out a Siege of many Years, nor was it taken while *Seva* lived, though the Mogul, in the mean time, subdued both the Kingdoms of *Vishapour* and *Solonda*. The youngest of his Sons was Sultan *Kambukhi*, who had as much Ambition as any of the rest, but he knew better how to conceal it, and therefore never took up Arms against him, but laboured all he could to gain his good Graces by Flattery.

In this Manner the Emperor spent many Years of his Life, without losing any Part of his Authority, which was in a great measure owing to his florid Health, and his retaining the free and perfect Use of his Senses. In order to preserve them, he led a Life as regular as that of a religious Person, restrained by a certain Rule, and kept his Passions under such Restraint, that he was never known to shew any Sign of an Alteration in his Temper; so that there was no guessing, either from his Countenance, the Tone of his Voice, or from his Gestures, at what passed within. He loved Regularity extremely, and observed it himself with such Strictness, that every-body about him knew his Duty, and knew when it was to be performed; and all who had any Petitions to present, or Complaints to make, knew when they might have Admission. To gain Time for going through such a Variety of Business, and that he might be able to converse with another, this was the Emperor's constant Course. Life. Early in the Morning, before Break of Day, he bathed, and spent some Hours in his Devotions; then having eaten a little Rice, or Sweetmeats, shut himself up with his Secretaries, and before Noon he gave publick Audience to his Subjects. After which he prayed again, and then went to Dinner, his Table being furnished only with Rice, Herbs, Fruits, or Sweetmeats; for neither Fichs, or Figs, or any strong Liquors, were ever brought before him. In the Afternoon he gave Audience again; which being over,

* Author does very much in regard to this Part, for some privately assert, that he compelled his Father to drink Poison, and that he had just died of old Age, and these Inimities which he had brought upon himself by his Vices. One Part goes so far, as to charge a *Mohammedan* Religion, expelled *Aurangzeb* to the hatred and Calumnies of the *Mohammedans*. The other says, that the Character of this Prince would make any thing they said of him believed; and, in the Confidence of this, it is very possible they may be charged him with Crime, of which he was never guilty.

The Behaviour of these Princes plainly shews how much Example goes beyond Precept; for most certainly there is a vast deal more to be learnt from the Education of Children, than from the general Censure of the Law. The Emperor's Children were grown Men, in the Haram or Women's Apartment, but took care that they should not only be instructed in the Law, but also be acquainted with the War, and for this Reason called them to Council, and employed them in his private Affairs, so that they were not left to their independent Command. In short, he was a very bad Man, with very good Principles.

These Strangers were, and in what Manner they were answered, that they came from a great City called *Malacca*, and that they were of a certain Kingdom in *Europe* called *Portugal*. At these Words *Nautaquum* appeared more surpris'd than before, and at last, turning to those who were about him, he said, Let me die, if I don't believe there are the *Chinese*, of whom we read in our old Books that they fly upon the Waters, and make themselves Masters of every rich Country they hear of: We shall think ourselves very happy, if they are content to be our Allies. He then called a Woman, who could speak the *Chinese* Language, in which he was but indifferently skilled, and desired her to ask the Captain with what View he brought these Strangers into *Japan*. The Captain answered very candidly, that he found them at *Malacca* much distressed for a Passage to some Port in the *Indies*, and that he, from a Principle of Humanity, took them on board his Vessel, in hopes that Providence would raise him a like Friend, in case he should fall into the same Distress. This satisfied *Nautaquum* perfectly, so that he made no Difficulty of going aboard the *Chinese* Vessel, with some of the principal Persons about him, and asked the *Portuguese* abundance of Questions, whom he also invited to visit him on Shore, promising to entertain them kindly.

They went accordingly, and carried him a Present, which was very graciously received, and *Nautaquum* entered into a long Conversation with them about their Country, and particularly insisted on these three Points, which he said he had been told by the *Chinese* and *Lequians* in his Country. First, that *Portugal* was bigger than *China*, and richer; the second, that the King of *Portugal* had conquered the best Part of the World; and thirdly, that his *Portuguese* Majesty had better than two thousand Houses full of Gold and Silver. *Pinto* ingenuously owns, that he did not stick exactly to Truth in his Answers, but contrived such as were most likely to keep up the high Opinion that *Nautaquum* had conceived of their Monarch. All the Time they staid here, they were treated with the utmost Civility and Respect, being permitted to see every thing they desired, and to go where they would. *Zemoto* had a very fine Gun, with which the *Japanese* were extremely taken, inasmuch that they spoke of it to *Nautaquum*, who

that certain Strangers were come into the *Portugal* by which it was apparent, that the World was greater than they imagined, and that he desired how he might at least one of these Strangers to disengage himself from them because at that Time he was very much distressed, and suffered by repeated Fits of Black Melancholy, which oppressed him to the last Degree. The *Portuguese* did not immediately consent to the Request, but after some time, that the King of *Bungo* was both his Uncle and his Father-in-Law, he most earnestly desired that he would gratify the Request of that Prince. At the last he consented, he declared, that he could not part with his *Zemoto*, but that the Embassador might take either of the other two he pleased, but after a little Reasoning, he fixed upon *Pinto* as the most proper Person to go in his Uncle, because he was of a brisk and lively Temper, and therefore the most likely to divert him; and at the same time made him a Present of two hundred Taels, as Compensation for the Trouble of this Journey.

Things being thus regulated, *Pinto* took his Leave of his Friends, and embarked with the Embassador for the Kingdom of *Bungo*, which lies but at a very small Distance from the Island of *Yacoxima*. They arriv'd, without meeting with any Accident, at the Fortrels of *Agua*, where they remained two Days, and then they set out for the Capital, where they arriv'd the very same Day. The King did not sooner Notice of their coming than he sent for one of his Sons to compliment them, to whom the Embassador delivered a Letter from *Nautaquum* for the King's Father, whose Name was *Origenis*, who, as soon as he received it, desired the *Portuguese* to come to him, whom he received with all the Respect imaginable. The first Question he asked *Pinto* was whether the Goods which he was dreadfully afflicted, was a Distemper known in any of the Countries through which he had pass'd, and whether he had ever heard of any Remedy that would effectually cure it? *Pinto* told him honestly, that he was no Physician, but that he had brought with him from *China* a kind of Wax, which had a Quality of relieving the most violent Pains of their Cause be what it would, but that he had left the Island where he first arriv'd; upon which the King said

* These Islands, of which it seems the *Portuguese* had already some Knowledge, pass under different Names; and even such Days are not able to say much with any Certainty about them. Some Writers call them the Islands of *Laysans*, others the Islands of *Roche*. They lie between the 22d and 23d North Latitude, having the Island of *Formosa* on the South-west, the Continent of *China* on the West, the Islands of *Formosa* on the North, and the Ocean on the East, on which Side they seem to have no Land nearer to them than *America*. The *Japanese* report that these are the most fertile Countries in the World, and that the Inhabitants are the easiest, happiest, and best conditioned of the Human Race. They are subject to the Prince of *Sasuma*, who is one of the principal Lords of the Empire of *Japan*. It may not be amiss to observe, that the only Port formerly Masters of these Islands, and that at present there is some Commerce between them and the *Philippines*.

* This Island, which *Pinto* calls *Jannamoa*, is, undoubtedly, *Javanna*, belonging to the Kingdom of *Franda*. It lies in the 10th North, at a very small Distance from the great Island of *Souma*, which is the second in Size of those three Islands which are known in *Europe* by the common Name of *Japan*, which is not, as we generally apprehend it, the Name of a particular Country, but of a large Archipelago, the most considerable of which is *Nippon*. It is true, that later Authors speak of no such Port as *Pinto* mentions; but that is not surprising, since it is on all Hands allowed, that prodigious Changes have been made in the Name of the principal Ports and Places in these Islands.

* One of the most singular Things in *Pinto's* Relation is this, that, notwithstanding the Abolishment of the People on their first beholding the Gun, which his Companion brought over, they were, however, so ingenious as to comprehend the whole Mechanism of it in a very little Time. I think it is not was first brought to *Japan*, they had made several of them, and in the space of a few Years they became very expert in making them. When they, though very cautiously in secret, is, notwithstanding, collected by later Writers.

fore safely predict, that the Continuance even of that slender Power which the *Portuguese* have still left, cannot continue long, and that for these two plain Reasons: First, because it has been long, and is still in a declining Condition, so that its Force being extremely decayed, and at the same time continually employed in resisting the Efforts of its Enemies, it is impossible, in the Nature of Things, that it should subsist for any Time: Secondly, the Manners of the People are entirely ruined, so that there is not the least Probability that any such Reformation will ever be effected, as might enable them to make such Use of the convenient Ports of which they are still possessed, as is necessary to revive and restore their Commerce in the *Indies*. I venture therefore to pronounce, that in the Compass of twenty or thirty Years, their Establishments in these Parts will be quite lost, and that in all likelihood, *Goa*, *Diu*, and *Daman*,

The advantageous Consequences that arise from such Expeditions, beget in the Bosy of a People a Spirit of Industry and Commerce, which, by giving a new Turn to their Genius, and raising at the same a virtuous Emulation, in a short Space, shorter indeed than can be well imagined, create a naval Force, and thereby establish a new maritime Power. But, on the one hand, the Wealth derived from Commerce, and that wonderful Flow of Success which usually attends a Nation powerful at Sea, very often produces Luxury and Indolence, which naturally lead to the Ruin both of Trade and naval Power. I do not mean, by Luxury, the Possession of all the Pleasures and good Things of this Life, but the affecting nothing else. If it were otherwise, we ought not to desire Commerce at all, because it is the certain Source of Riches and Affluence; but there is a great Difference between possessing and using good Things moderately, and being

...in much that he complained to his Father, and desired he would prevail upon the Stranger to trust him with his Gun, to which the Portuguese yielded, and promised to go a shooting with him the next Day.

The young Man was so impatient that he was up before it was light, and on the fifth of August was at Pinto's Chamber-door before he awoke. He had too much Manners to disturb him, but unluckily trying the Gun, took it out with him into the Court, and resolved to make a Shot. He put in a double or treble Charge of Powder, which giving Fire, the Gun burst, cut his right Thumb so that it hung by a Thread, and at the same time a Piece of the Barrel struck him so violently over the Ear, that he fell flat upon the Ground, and those who were about him thought he was killed. The Noise of this Accident was very soon spread over the whole Town, where it was unanimously agreed, that the Stranger's enchanted Instrument had killed the Heir of the Crown. The Noise made round his Apartment awaked Pinto out of his Sleep, who coming down without knowing what was the Matter, went directly to the Place where the Accident had happened, and seeing the Prince lying on the Ground, whom he took to be dead, he threw himself on the Body in the utmost Anxiety. A Moment after came the King, the Queen, and the two Princesses, all of them in a distracted Condition, and as soon as they saw the Prince swimming in his Blood, and Pinto lying by him, they immediately concluded that the Stranger had killed the Prince, upon which two Soldiers advanced with their Swords drawn, in order to cut off his Head; but the King called out to them to forbear, since he was determined he would first extort from him the Reason that induced him to commit so vile a Fact.

The Reason of this Stay of Execution was, because a little before a Conspiracy had been discovered, for which several Persons had been executed the Day before; and the King apprehended, without any Reason, that this Action might be an Effect of that Conspiracy. It is not necessary for us to dwell upon all the little Circumstances of this Affair; and therefore it will be sufficient to observe, that when they were on the very Point of torturing Pinto, in order to make him confess why he committed this detestable Murder, and who were his Accomplices, the Prince very luckily came to himself, and seeing how Things stood, was filled with great Concern, that he alone was in the Fault, and that the Stranger knew nothing of the Matter; wherefore he supplicated that he might be set at Liberty, and have Leave to come to him, which his Father immediately granted. It was then proposed, that they should send for an old Prince, who lived at seventy Leagues Distance, to dress the Prince's Wounds, and to try if he could save his Life. The young Man declared against this, and said, he should die before he came, and begged that he might be left in the Hands of the Stranger, who knew best how to deal with him. The King thereupon called for him, and asked, if he would undertake his Son's Cure, which, if he refused, he should think his King too small a Re-

While Things were in this Situation, they had Advice that the Chinese Ship was ready to sail; upon which Pinto desired Leave to be gone, to which the King very unwillingly consented; but as the Stranger insisted upon it, he ordered a Vessel to be equipped, in order to carry him back to the Island of *Tanucama*, and sent a Gentleman with him, furnishing him also with all manner of Provisions and Retretments. After his Return to that Island, our Traveller remained there a Fortnight, waiting for a fair Wind, and then embarking, arrived safely at *Lisamps* on the Coast of *China*. This is, in few Words, the Account given us by Pinto himself: Let us now proceed to the other Discovery of this Country made by the Portuguese, according to our Promise.

In the same Year 1542, three of the same Nation came by pure Accident into this Country, their Names were, *Antonio Mata*, *Francisco Zemeto*, and *Antonio Pexeta*, who in a Voyage from the Island of *Macassar* to *China* were thrown upon the Coasts of these Islands, and were exceedingly well received. Amongst other Acquaintance, they entered into a close Conversation with one *Argera*, a Man of a good Family, and considerable Fortune; but who was exceedingly troubled in Mind on account of some Irregularities committed in his Youth, who heard them with Pleasure discourse concerning the Truth of the Christian Religion. About two Years after *Avarez Vaz*, a Portuguese Merchant, came into the same Country, and became very intimate with the same Person, whom he persuaded to go to the Portuguese Settlements in *India*, in order to be converted and consoled by the holy Discourses of the famous *Francis Xavier*; to which at length he yielded, and having received Baptism at *Goa* in the Year 1548, he the next Year accompanied Father *Xavier* and two other Jesuits in their Voyage to *Japan*, where they immediately entered upon their Mission; by the Progress of which, this Country was made so thoroughly known to the Portuguese, that if *Mendez Pinto* had not recorded his own Voyage thither, it is very possible we had never heard any thing of it at all; but that he afterwards visited *Japan* in Company with Father *Xavier*, and after the Decease of that industrious Jesuit, whom the Papists esteem the Apostle of the *Indes*, he went thither again as Ambassador from the Viceroi of the *Indes* to the King of *Bango* in 1536, so that there seems to be no just Grounds for calling any thing that he has written in Question.

The Conventions made in this great Empire contributed not a little to support and extend the Portuguese Trade, which was managed with much Facility, and to a vast Profit: For the Portuguese being established in *China*, carried from thence vast Quantities of Silk into *Japan*, where, as all Ranks of People affect to be clothed in it, There followed a prodigious Consumption, which enriched the Portuguese Merchants very soon to a high Degree, tho' it is scarce credible, that as some Dutch Writers report, they have sometimes carried home in our small Ship one hundred Tons of Gold. But this prodigious Success proved

Consequences that arise from such the Body of a People a Spirit of e, which, by giving a new Turn to ng at the same a virtuous Emula- e, shorter indeed than can be will al Force, and thereby establish a But, on the one hand, the Wealth ee, and that wonderful Flow of attends a Nation powerful at Sea, xury and Indolence, which natu- both of Trade and naval Power. SECTION XXIV.

The Voyage of Francis Pirard de Laval to the East-Indies; his Shipwreck amongst the Mlades, and his copious Account of that Archipelago.

Translated from the Author's Original Voyage, published by himself in French.

1. An Account of the Design of this Voyage, and the Author's Embarkation for the East-Indies, May 18, 1601.
2. The remarkable Accidents which happened in their Passage till their Arrival at the Island of Anibon.
3. They double the Cape of Good Hope, and arrive happily on the Coast of the Island of Madagascar.
4. They meet with a dreadful Storm there, and lose a great many Men by the Scurvy and Sur-

... had two very bad Consequences; for, first, they dis-
gusted such Princes as had embraced the Faith; and, se-
condly, they hardened the Infidels in their Aversion to it.
But it was not only the Corruption of the *Portuguese*
Merchants, Officers, and Seamen, that gave Offence to the
People of this Empire, the Intrigues of the Missionaries
themselves contributed to it as much, or more, by ex-
citing the Jealousy of the Emperor; for where-ever they
had converted any of the Princes of *Japan*, they were
continually at Court, and, instead of minding what was
the proper Business of the Church, engaged at every Turn
in Affairs of State, making the Direction of Conscience
much less their Care than the Direction of Councils, by
which they became the Authors of many Troubles, and
afforded a Handle to their Enemies of charging them
with many more; so that the Emperor of *Japan* began at
last to surmise, that there was more of Hypocrisy than
Sincerity in their Hearts, and that they were endeavouring,
under Colour of saving Mens Souls, to establish a new
Government in that Country.

These Jealousies, which certainly were not altogether
without Foundation, were extremely increased by two
Circumstances; the first was, the Haughtiness and Ill-
conduct of such as were sent Embassadors thither, espe-
cially after the Union of the Crowns of *Spain* and *Portugal*;
for those Masters were wont to boast of the vast Power
of the Catholic King, and of the mighty Extent of his
Dominions, of which they affected to convince the *Japo-
nese*, by shewing the Maps of the *East* and *West Indies*;
and the Impudence of one of these Embassadors is said
to have carried him so far, as that on being asked how his
Master had acquired such vast Territories at so great a
Distance from his hereditary Dominions, he answered, by
sending Missionaries first to convert a Part of the Inhabitants
to Christianity, and then sending Troops to assist the
new Convert in shaking off the Yoke of infidel Princes.

The other Circumstance was the coming of the *Dutch*
Ships up on the Coast of *Japan*; for these People applying
themselves entirely to Commerce, and submitting, for the
like thereof, to whatever Terms were prescribed by the
Japanese, gained thereby such a Degree of Confidence
with their Princes, that it procured implicit Credit to their
Representations, as to the ambitious Designs of the *Span-
iards* and *Portuguese*. These Remarks will give the
Reader to easy a Key to the political Contrivances for first
retraining the *Portuguese* Trade to a particular Port, and
then shutting them up as it were in a Prison during their
Stay in that Empire, as in the first Chapter of this Work
has been largely related, that we need not run here into
any Repeating, for content ourselves with observing,
that notwithstanding the many previous Signs which the
Portuguese had of the approaching Rupture with the *Japo-
nese*, yet were they so far from taking such Steps, as
in common Prudence they ought to have done, for avoid-
ing to great a Mischief, that on the contrary, they behav-

... they professed the utmost Extent of their Knowledge to
that it belonged to the Prince of *Matsuma*, who was de-
pendent on, and a Tributary to, the Emperor of *Japan*.
In the Year 1613, Father *Comanzo*, who first carried
the Christian Religion in *Japan*, hearing that the Prince
of *Matsuma* had sent to *Japan* for a Physician, and that
a Convert to Christianity, a Man of good sense and
quick Parts, was pitched upon to go over into that
Country, he recommended to him the Care of instructing those Peo-
ple, if a favourable Opportunity offered, in the
Faith; which Commission the Physician executed with
much Zeal and Fidelity, that he quickly gave
Comanzo a good Account of his Mission, allying
he had not only made many Converts, but that he had
the People in general better inclined to the Christian Re-
ligion, than could have been expected.

In 1620, Father *Angelis*, who was then at *Tagayudo*,
most Northern Part of the Island of *Nippon*, to which
many Christians had been banished, received Orders there-
from his Superior, to go himself to *Matsuma*, in order
to cultivate the Seeds of Conversion, whence the *Japanese*
Physician had flown, and accordingly thither he went the
same Year by Sea. He arrived very safely in the *Bay*
Tsugo, and from thence travelled through several Rivers
to *Matsuma*, where he found a vast Number of *Japanese*,
and amongst them many Christians. They had been ex-
pelled there but a few Years, and had been driven out
by the Discovery of very rich gold Mines (the *Nippon*
being the neighbourhood of this City, and Mines of that
kind called) of a very singular Kind. There is a River
passes by the City of *Matsuma*, imminently rich in Gold;
those who desire to deal in that Commodity, purchase
from the Prince such a Part of the River, and erect a
semicircular Canal, well secured by strong Beams,
which, by sluices, the River is turned, leaving behind
of its Channel as the Adventurers have agreed to pay
thence they take the Mud, and by frequently raising it
obtain vast Quantities of Gold dust, and sometimes Pieces
of Gold of a considerable Bigness. When they have
finished their Work, and find there is no more Gold to
be got, they fill up the Canal, and by that Means turn
the River back into its old Channel, and in the Space of a
Year or two it is found as rich in Gold as ever.

Father *Angelis* informs us, that the Natives of that
Country, which we call *Yesso*, call it in their own Lan-
guage *Ainomovori*, but were able to give but a very im-
perfect Account of its Extent or Situation. These Peo-
ple were larger, stronger, and had much better Complex-
ions than the *Japanese*, and wore Beards that reached to
their Girdles. They were dressed in long Robes of Silk,
Cotton, or Linnen, according to their Rank, which were
set off with abundance of little Ornaments. Their Arms
were Bows, Arrows, Lances, and short Swords. In Point
of Religion their Notions were very obscure and con-

702 The VOYAGE of FRANCIS PIRAD DE LAVAL, Book I.

ing loaded with Ball, beat the Sail of the *Corbin* to Pieces;
upon which the Vice-Admiral fired two Guns on the Rig-
ging of the Ship that had injured him; and the Admiral
tacking to the Windward of the *Dutch* Admiral, spread all
his Sails, and fired a Gun upon them; the *Dutch* Admi-
ral presently struck, and, having informed himself that
the Mischance was occasioned by the Oversight of a Gun-
ner that was in Drink, delivered up the Gunner to the
French Admiral, in order to condign Punishment, and beg-
ging he would pardon the Mistake. Our Admiral find-
ing how the Matter stood, said, he desired no further Sa-
tisfaction; and having returned the Gunner, entreated the
Dutch to vouchsafe him a Pardon. How the *Dutch*
treated him afterwards I know not; though I do not
much doubt but they hanged him up immediately at the
Yard-arm; for the *Dutch* observe an exact Discipline
among their Ships, and suffer no Mistakes to pass with Im-
punity; and from thence it comes to pass, that their Navi-
gation is more successful than the *French*.

June the 23 we departed the *Canary Islands* in 28, 29,
and 30. At 10 the 23th and 24th we came within

treading upon their Eggs. This Fowl is no bigger than
a Pidgeon, and the Flesh is black, but eats admirably
well.

On the 10th of *October* we put to Sea again, and *Nov-
ember* the 17th we made the Island of *St. Helena*, which
lies in 16° S. Lat. at the Distance of six hundred Leagues
from the *Cape of Good Hope*. Upon the Altar of a Chap-
el in this Island we found several Letters, advising that
the *Dutch* had passed that Way. Here we thought to
have fired our Mizzen-Mast, but found no Wood fit for the
Purpose. The Air, Fruit, Flesh, and Water of that Place
are so healthy, that our Men, who were much oppressed
with the Scurvy, recovered in the Space of Nine Days. On
the 26th we set sail, and stood for the *Cape of Good Hope*,
and three Days after doubled *Arrolles*, which are a Bank
of Shelves upon the Coast of *Brazil*, in 15° S. Lat. and
seventy Leagues long. The doubling of these Sands is
both difficult and dangerous, and in falling to the *East-
Indies*, an expert Pilot ought to be very cautious in keep-
ing to a just Distance from the *Green* Coast, which is
very unhealthy, and incommoded with Calves and Cur-

...ent of their Knowledge to be
...e of *Mitama*, who was con-
...to, the Emperor of *Japan*,
...*onjance*, who then called
...*apan*, hearing that the Prince
...n for a *Physician*, and that
...a Man of good Parts and
...on to go over into that Quality,
...Care of instructing the Pro-
...quity offered, in that the
...the *Physician* gave
...he quickly gave
...s Mission, assuring
...Converts, but that he had
...inclined to the Christian Re-
...a expected.

bounded by the Sea, where the Currents are so violent, that tho' there is a Country on the other Side the Strait, within Sight, and where they are able to distinguish the Horfes feedings, yet hitherto none of the Inhabitants of *Yesso* have passed over thither, because great Quantities of large Canes are driven with prodigious Violence by those Currents, to that it they were to hazard themselves in their small Boats, they must run an apparent Hazard of being overiet and lost. From hence I conclude, that according to all Appearance *Yesso* hath a fourth Sea on the North, which consequently separates it from *Tartary*. From whence should those impetuous Currents come, but from a Sea to the North of *Yesso*, running East and West, or from West to East, and discharging itself to the South, through the Straits, on the West of *Yesso*, with such Rapidity, as renders them impassable to the People of the Country.

"The second Reason is, that the Inhabitants of *Yesso* are not under the Dominion of any one Prince, nor have they amongst them any Chief that has a Tract of Country of any great Consequence, that is Subject to him; they are likewise far from acknowledging the Supremacy of any Khan of the *Tartars*, or seem to be acquainted with that Title, or with any thing of the like Import; but every Family, or at least every little Village, has a Chief who governs it absolutely, and without acknowledging any Superior, which appears to me a strong Proof, that they are separated by a Sea from all other Countries, since if it were otherwise, they would undoubtedly be governed as those Countries are. I am sensible, that it may be objected against the first Proof I offer, that the Currents of which I am speaking, may possibly be occasioned by the Opening of some great River, which discharges itself into the Sea, somewhat farther to the North, and thereby occasions such an Accession of Water, as in passing through those Streights, form such terrible Currents. But after all, I cannot help esteeming it more reasonable to believe that this Country is bounded on that Side, as well as on the rest, by an Arm of the Sea. At least this is the most common Opinion, and I remember to have seen in *Sicily* an old Map of the World, in which the Land of *Yesso* is laid down as an Island. As to what the Inhabitants of the Country say, I have examined those that came from the East, and others who came from the West, but found them all alike ignorant of Geography.

Thus far this Missionary, who is the only *Portuguese* that has wrote sensibly upon this Matter. He does not, however, seem to have been acquainted with one Thing, which he might have learned in *Japan*, and that is, that those People distinguish between the Island of *Yesso* and *Otu Yesso*, that is, the higher or upper *Yesso*; from whence it is very plain, that there is both an Island and a

in that Country, the other, that through the Emperors of that Country have granted several Licences to *Europeans*, and particularly to our Countryman Captain *William Saris*, for making Discoveries to the West and North, yet they have always been extremely cautious of permitting any Strangers to examine their Coasts on the East.

24. The new *Philippine* Islands are a late Discovery, of which we have an Account in the Philosophical Transactions, in a Letter from a Missionary at *Mindanao*, who tells us, that being accidentally at the Town of *Gurvam*, in the Island of *Sima*, he there found twenty nine Palatos or Inhabitants of certain new-discovered Islands, who were driven thither by the Easterly Winds, which blew in those Seas from *December* to *May*. They had run before the Wind for seventy Days together, according to their own Relation, without being able to make any Land till they came in Sight of the Town of *Gurvam*, an Inhabitant of which being on the Shore, perceived them, and judging from the Make and Size of their Vessels they were Strangers, and out of their Course, took a Piece of Cloth and made them a Signal of entering the Road he directed; to avoid the Shoals and Banks of Sand they would otherwise have run upon. These poor People were so frightened at the Sight of this Stranger, that they began to put to Sea again; yet the Wind forced them back a second time towards the Shore; when they came near, the *Gurvanese* made the same Signal as before; but seeing they would not mind it, but would unavoidably be lost, he threw himself into the Sea, and swam to one of the little Vessels, on purpose to bring them late into Shore. He was no sooner got to them, but the Women with their Children on their Backs, and all that were in that Vessel, threw themselves overboard, and swam to the other. He seeing himself alone in the Vessel, resolved to follow them, and getting aboard the second, shewed them how to avoid the Shoals, and brought them safe to Land; in the mean time they stood immoveable, and resigned themselves up intirely to the Conduct of this Stranger, as so many Prisoners.

The Inhabitants of *Gurvam* running to Shore, received them very kindly, and brought them Wine and other Provisions; they eat *Cocoas* very freely, which are the Fruit of the Palm-trees of this Country. Their Pulp is something like that of Chestnuts, only that it is more oily, and it supplies them with a sort of sweet Water, very pleasant to drink; they gave them Rice boiled in Water, which is eat there and all over *Asia* as Bread is in *Europe*; they looked on it with Surprise, and taking up some Grains of it, threw them on the Ground, imagining them to be Worms; upon bringing them large Koots called *Polarum*, they eat greedily of them. In the mean time they brought them two Women that had formerly been driven on Shore on the Coast of *Gurvam*, and who understood a little of the Language of this Country; one of the Women found among these Strangers one of her Relations, and as soon as they knew each other, they fell a weeping. The In-

This Fowl is no bigger than a Pheasant, but eats admirably well. We put to Sea again, and made the Island of *St. Helena*, which is distant of six hundred Leagues from the Cape of Good Hope. Upon the Altar of a Church we wrote several Letters, advising that they should return the same Way. Here we thought to land, but found no Wood or fresh Fish, and Water of that Place was very scarce. The Natives, who were much oppressed in the Space of Nine Days. On the Coast of the Cape of Good Hope, we were told of a Bank of *Arrollos*, which are a Bank of *Brazil*, in 15° S. Lat. and the doubling of these Banks is very dangerous, and in sailing to the Cape it is to be very cautious in keeping the *Greeney* Coast, which is a very dangerous Coast, and Commodore's Bay, which is a very dangerous Bay.

The Seamen being scorbutick, we marked out a Place on the Shore for the Sick, and at the same time a *Dutch* Ship was forced into the same Harbour by Stress of Weather, which had not one sick Hand on Board. The Natives gave us Cattle, Fowls, Honey, and Fruit, in Exchange for Knives, Scissars, and Trinkets of little Value; but the Place was so unhealthy, that many of our Men died, partly by the Scurvy, and partly by a Pleuriticke Fever. We lay directly under the Tropicke of *Capricorn*, and the Sun-beams darted upon us almost in a perpendicular Line; some had their Legs scorched, and ulcerated through their Stockings; nay, the extreme Heat would have incommoded us more, if it had not been for the Convenience of a fine River to bathe in, and the Shades of a large Wood. We were possed at the Foot of a great Mountain, which was covered with Infinity of large Lizards that offered no Hurt to any body. The Wood was replenished with an innumerable Quantity of little Monkeys and Apes, which entertained us with a continual Shew of dancing a rout, and skipping from Tree to Tree. Parrots are there very numerous, and make an agreeable Harmony, with their various and warbling Notes.

these Islands are *Mohammedans*, being a Medley of several Nations, viz. *Ethiopiens*, *Caffres*, *Arabians*, and *Perfians*. They are true Friends to the *Portuguese*, and a cunning, sharp sort of People, that are not fit to be confided in.

When our Men offered to land at a little Village to take in Water, the Inhabitants rose up in Arms, and opposed their Landing, till they sent them five or six Crowns, after which they allowed them to take as much Water as they pleased. All these Islands are extremely fertile in Oranges, Citrons, *Cocoas*, Honey, Betel, and Rice, which we bought up at the easy Purchase of a few Iron Trinkets and *Flanders* Ware; Flesh, indeed, is as dear there as here, though they have plenty of Oxen, Cows, and Sheep. They have Bark made altogether out of the Body of one Tree, in which they keep their Fruit to *Mozambique* to be exchanged for Cotton, Cloth, Gold, Ivory, &c. One Day we saw a monstrous Fish rise above the Water, which had the Form and Figure of a Man, with a sort of Beard towards the Chin that seemed to be his Pins, and a long scaly Head, terminating in a Point: when we offered to come near

Vessel, that a Storm had driven out of its Course, and got it from hence to *Marianna*. These Strangers added, that of the thirty two Islands three of them were uninhabited, unless with Wild-fowl, but all the rest were well peopled. Upon asking them the Number of Inhabitants, they pointed to a Heap of Sand, to shew that their Number was very great. The Names of these Islands are *Pais Lammilatup, Sarason, Turapie, Pahyay, &c.*

The three Islands that have nothing on them but Wild-fowl, are *Pisact, Huatan, Pagan*. The most considerable of all these Islands is *Lamuree*, where the King of the Country keeps his Court, and to him the Governors of all the other Islands are subject. Among these Strangers, there was one of the Governors and his Wife who was the King's Daughter; though they went half naked, yet their Carriage, and a peculiar Air of Greatness, sufficiently distinguished them from the rest. The Husband had his Body painted all over with certain Lines, in such a manner, that they formed several Figures: The rest of the People were also painted in like manner more or less. The Women and Children were not painted at all; there were nineteen Men and ten Women of different Ages, the Make and Colour of their Faces were much like that of the *Philippine*. The Men had no other sort of Cloaths than a Sash wrapped several times round their Bodies, and covering their Reins and Thighs; they wore on their Shoulders about an Ell and an Half of coarse Linen Cloth, like a Coat, tied before, and hanging loose behind. Both Men and Women dressed much alike, only that the Women had a Piece of Cloth somewhat longer, that hung from their Waist down to their Knees. Their Language is different from that of the *Philippine* and *Mariannese*; their Manner of pronouncing comes nearest that of the *Arabs*, and some who understood the Language observed the Women that learned the most considerable amongst them, had several Rings and Necklaces of Tortoise-shell, called here *Carey*; and others made of a Substance much like Amethyst, but not transparent. The Manner of their living at Sea, which was for seventy Days together, continually driven by the Wind, was thus. They cast out a sort of Net made of a great many Twigs or Trees tied together, with a large Mouth for the Fish to enter in at, and terminating in a Point, to prevent their getting out. The Fish they took after this manner was all the Nourishment they had, and Ram Water saved in Coco shells, which is the Fruit of the Palm-trees, and of the Figure and Size of a Human Skull.

They have no Cows in their Islands, and at the Sight of them they ran away, as they did likewise at the Barking of a Dog; neither have they Cats, Stags, Horses, nor, in general, any Quadruped, nor any Fowl, but Sea-fowl, excepting Hens, which they breed up, but never eat their Eggs. Notwithstanding this their Want of every thing, they are very cheerful, and contented with their Condition. Their Songs and Dances are exact and regular; when they sing, it is all in Concert, every one observing the

uted in building a Merchant-Ship at *Caragan*. I saw no Metals in their Country. The Father-Mother made each of them a Present of a Large Piece of Bar, which they received with as much Joy as if it had been made of Gold; and for fear it should be lost, they fastened it under their Heads, when they went to sleep. They have no other Arms than Lances of Darts, made of human Bones, very well sharpened, and fixed in a Piece of naturally very pebble; but if any Quarrel happens amongst them, it is decided with some Piece of the Head, which yet very rarely happens; for when they would come to a close Fight, they first throw their Spears, they are soon reconciled again. They value their Spears heavy, but, on the contrary, have a great deal of Lightness and Courage. They are not so fully as the Inhabitants of the *Mariannas*; yet they are well proportioned, and shaped much like those of the *Philippine*. Both Men and Women let their Hair grow long, and hang down to their Shoulders. When they understood that they were to be conducted to the Presence of the Father-Mother, they painted their Bodies all over with a yellow Colour, which is looked upon by them as a great Ornament.

The oldest of these Strangers was once the Captain of the Coat of *Caragan*. They are very expert in catching Shells, but threw them into the Sea, as if they valued their Value. The New *Philippine* is situated in the Number, and form one of the Islands of the North-East, being enclosed on the North and South by the Tropic Line and the Tropic of Cancer, on the East by the Strait between the *Mariannas* and *Ponapoo*. The Inhabitants of the Islands never offer any Violence to each other; Murder and Homicide are unknown to them; they have a Prove amongst them, that no Man may kill another. It is probable these Islands may contain Gold, Amber, and Drugs, being situated nearly under the same Degree of Longitude as the *Andaman*, which we have Nutmegs, and other valuable Spices.

Though these People seem to live in a very happy and amongst them a sort of Potentates and total Government; every Island obeys his Chief, who is subject to the King of the Country. The first of these Islands is the Island of *Fau*, called likewise *Tau*. Though these Islands were never heard of in any of the Voyages made very few Years, it is a long Time since they were discovered. Mountains of *Santal*, thick Smokes were often seen on the Coast, which commonly happens in some of the Islands; when the Inhabitants let Fire to their Woods on the Mountains of the Ground: These Smokes the *Federer*, *Ulan*, *Ulan*, and other Islands, had also observed when they were out at Sea.

There have been some Opinions made to this Account by some of our Writers, who have reported inaccurately, and thereby entertained themselves

704 The VOYAGE of FRANCIS PIRARD DE LAVAL. Book I.

immediately the King sent for his Brother-in law to save what was on Board our Ship, though the Flats were such that no Boat could come near it; yet they found a Way of getting at it by Means of a Rope fastened at one End to the Ship, and at the other to the Rock; for tho' the Waves washed over them, they had fast hold by the Rope, and to get to the Ship; nay, they are so ingenious, that they took out the very Cannon and the heaviest Goods, and laughed at any Advice we could give them. When we left the Ship, we brought with us about a thousand Crowns in several Grids, and buried it ashore for a common Relieve, to supply our Necessities; but some of our Men being in want of Subsilience, digged up the Place, and offered the Natives Pieces of Money for Food, after which the Natives would never allow us Sustainance without Pieces of Money, and in regard that the least Piece in the Bank was worth Twenty pence, their Provisions were much over-valued; Every Seam in had from his Neighbour what he had got, and would not assist him even at the Point of starving; nay, when any lay very sick, the rest came and nursed him, before he died.

geon, with black and white Feathers, and is excellent Meat, though the Natives do not eat it. The uninhabited family Islands appear at a Distance as if they were covered with Snow; for the Sand, which is as fine as that of an Hour Glass, is extrem white, and white to very but as to hate the Penguins Eggs. These sandy Islands afford little or no fresh Water, but the covered Islands, whether inhabited or not, enjoy that Benefit, altho' for a very few, the Inhabitants of which are forced to have Recourse to the neighbouring Islands for Water, and make use of certain Inventions for the receiving of Rain-Water.

The Water of some Islands is better than that of others; their Well-Water is neither very sweet nor very wholesome, but is very plentiful, and very fresh, every within four Pieces of the Sea Side; for they dig not above three or four Feet, and where the Sea makes frequent Inundations. This Water is very hot in the Night-Time, and extreme cold in the Day, especially about Noon. To return to the thirteen *Italons*, the first, being nearest from the North, is called *Tal Pon Mata*, i. e. *the high Peak*; in this lies the Head or Cape of the same Name, called

the Fourteenth of *November*, in the Year 1710, that I sailed from the *Philippine* Islands, in order to find the Islands of *Palaos*, supposing my Departure to be from the Lat. of 13° 0', and from the Long. of 143° 22', I navigated fifteen Days, as I have marked in my Chart; and, on the Thirtieth of *November*, we discovered Land to the North-East 3° towards the North, having observed a 1/2 Variation to the East in this Course, the Land lying from us about three Leagues.

" We made Sail again in order to approach nearer, when it appeared, that there were two Islands, which our Father *Duroon* thought fit to call the Islands of *St. Andrew*, because, on the Day that we discovered them, the Church celebrated the Feast of that great Apostle. When we were very near these Islands, we perceived a dog coming to us, in which were some of the Inhabitants, who stood out, when they were within Hearing, *Mipin*, *Mipin*, which is as much as to say, Good People. A *Palaos*, who had been baptized at *Manila*, and whom we carried with us, shewed himself then, and spake to them: As soon as they came on Board, they informed us, that these Islands were called *Sonforol*, and that they were Part of the *Archipelago* we sought for. They expressed a great deal of Satisfaction and Joy at the Sight of us, which they testified by kissing our Hands, and embracing us.

" These People are extremely well shaped, and of a very robust Constitution; they were naked, except that about the Middle they wore a Piece of Mat. Their Hair was curled; they had very little Beard, and, to defend themselves from the Rain, they wore upon their Shoulders a kind of Mantle, made of a thick Sort of Mat, and, on their Heads, Hats of the same Sort of Stuff, round which they stuck Birds Feathers upright. They were extremely surpris'd to see our People smoke Tobacco; and, of all things, seem'd most to esteem Iron; and whenever they saw it, they gaz'd on it in such a manner as visibly betray'd how much they covet'd it: And in case we did not understand their dumb Signs, they made no Difficulty of earnestly and frequently demanding it. In the Afternoon there came off two other Boats, in each of which there were eight Men; as soon as they came near us, they began to sing, beating Time with their Hands upon their Thighs. When they were on Board, some of them began to measure the Length of the Ship, taking it for granted, that it was made of a single Tree, while others counted our Number of Men. They brought us some Leaves, some Fish, and some Herbs.

" These Islands were all covered with Trees to the Sea-Shore. Their Boats appeared to us very neatly made, in which they made use of Smack-Sails, having a Lee-Board on the other Side the Boat, in order to prevent it from going over. We desired them to shew us what was the Course to the largest of their Islands, or *Pansaque*, and

direction, and taught them to pronounce plainly the holy Names *Jesus* and *Maria*. We asked them several Questions as to the Bigness of the Island, and the Number of its Inhabitants. They answer'd, that the Island was about two Leagues and a half in Circumference, and that very probably there might be eight hundred People, who lived chiefly on Cocoa, Fish and Sails. I observed the Height of the Sun at Noon, and found, that we were in the Latitude of five Degrees fifteen Minutes North, the Variation of the Compass at Sunrise being about 5° to the N. E.

" The Currents carried us away to the South-East with great Violence, we were not able to recover the Land till the fourth, about Six in the Morning. We then found ourselves at the Mouth of the Channel, betwixt the two Islands. I then sent the *Shallop* once more to look for an Anchorage; it was to no Purpose, for about 4 in the Afternoon they returned with an Account, that the Coast was an entire Rock, and that it was to no Purpose to let go an Anchor. On the 5th, about 7 in the Morning, the two Fathers came to a Resolution of going ashore, and setting up a Cross. *Don Padilla*, and myself, represented to them the Dangers to which they would be exposed, and how much they had to fear from these Islanders, with whose Temper we were but little acquainted, and how much they might be embarrassed, in case the Currents carried us to such a Distance as might put it out of our Power to send a Boat to bring them off, or to afford them any Assistance. Their Zeal was so warm, that they made little Account of these Difficulties, but persisted firmly in their Resolution, in spite of all we could say. At last, therefore, leaving Brother *Danlon* on Board the *Ship*, they went into the *Shallop*, taking with them the Quarter-Master of the Vessel, and the Ensign of the Land Forces we had on Board: They likewise carried with them the *Palaos* I have before mentioned, together with his Wife and Children.

" The two Missionaries being gone, we kept near the Island all Day, by the Favour of the Wind, notwithstanding the Force of the Current; but towards the Evening, the Wind sunk, and we were driven out to Sea. We put out Lights from the Time it was dark, on the Bolt-sprit, and also on the Mizzen-mast, that they might see where we were. During the Night, we had some Gulls of Wind from the North-East, the North-West, the West and South-East, so that in the Morning at Break of Day, we found the largest of the two Islands bore from us, N. N. W. distant about 5 Leagues. We endeavour'd from that Time to the 6th at Noon, to get as near the Land as we could, but without Effect; nay, the Current drove us still farther and farther, so that I found myself in the Latitude of 5° 28' N.

" We

to West, we cannot cross directly from Entrance to Entrance, but set out from the East Coast, which is then the Head of the Current, and taking it sideways, steer for the West Entry of the other *Atollon*. In order to return, we set out from the East Entrance, and over-thwarting the Current, make to the West Entry of the other *Atollon*. When the Current changes its Course, we observed the same Contrivance in setting out from the Head of the Current, and entering the other *Atollon* at the Place which lies under the Current of these Entrances. Some are broad, and some narrow, but the widest is not above two hundred Paces over, and some of them are less than thirty; each Entrance hath an Island on each Side, and if Cannon were planted on these Islands, it would be easy to hinder any Ships to enter.

" Of the Channels that part the *Atollons*, there are only four broad ones, which are navigable by great Ships, and frequently visited by Strangers, when the Currents carry them in against their Will. To begin from the North Side, the first of the four washes the *Atollon* called *Malos Malos*, and it was in this that we were first seen. The

ment, and in order to turn it extremely black, several Women keep their Daughters Heads shaved till they are eight or nine Years old, leaving only a little Hair on the Forehead, to distinguish them from Boys, who have none at all: I have seen some Children have half flaxen Hair, which has turned very black by being shaved every eight Days. Both Sexes affect black Hair, but the Women take a Pride in having theirs thick and long, which they wash and dress very frequently. They wash their Head and Hair with Water and Lye made for that Purpose; after which their Hair hangs dishevel'd in the Wind, till it dries, and then they rub and perfume it with an odoriferous Oil, which renders their Head always moist and oily. Both Sexes anoint their Bodies after washing; but the Women wash their Bodies more than once in a Day, their Hair is not washed above twice or thrice a Week. They may wash their Hair when they please, but they are oblig'd to do it on *Fridays*, which is their Sabbath for the Women, and Festival for the Men. After the Women have washed, rubb'd and perfum'd, they stretch all the

at their going off, let fly a Shower of Arrows, four of which fell on Board our Ship. Don *Padilla* then thought fit to order a general Discharge of our Fire-Arms; upon which the *Indians* jumped over-board, leaving their Vessels, and swimming towards the Shore at a prodigious Rate, but when they found that we gave over firing, they returned to their Boats, re-embarked, and made for the Land as fast as they were able. These *Indians* were all of them naked, and some had painted their Bodies of different Colours. Their Skin is generally of an Olive Colour; but some were darker skinned than others; they had nothing with them that we saw, but a few Coconas. On the 12th we had little or no Wind, so that it was as much as we could do to continue in our Station, which we did all that Day without approaching near the Land. About four in the Afternoon there came off two Boats, who made Signs, and spoke to us; but as we had no Interpreter, we were not able to learn what they said. About Nine at Night the Wind blew South-South East, and the Currents setting strongly to the North, carried us away at a great Rate. I then thought the most prudent thing I could do was to sail between two of these Islands, the Chanel being very open and fair, and about a League over. On the 13th, being to the West of these two Islands, we held a Council, in order to consider what Measures we were to take, and it was very soon resolved to bear away for *Sanjoral*, in order to learn some News of our Missionaries, and of our Shallop. On the 14th, I found myself abreast of that Island. We lay there the whole Day without so much as seeing a Boat, though we were within Cannon-shot of the Shore. We coasted round the West Side of the Island till the 20th, when a high Gull of Wind from the South-East drove us out to Sea.

On the 21st we again drew near the Coast, and by Two in the Afternoon were within three Quarters of a League of the Shore, without perceiving any Boat. In the Evening we were driven to Sea again by an East-North-East Wind, upon which we held another Council, in which, after mature Deliberation on the Circumstances we were in, without a Shallop, in some want of Water, without knowing where to get any, it was resolved to return to *Manila*, which we did with some Difficulty, being forced to make the Tour of *Mindanao*, carrying nothing back but the melancholy News of the Lots of the two worthy Fathers we carried out.

It appears clearly from this Relation, that it was penned by the Captain of the Vessel, though he has not thought fit to inform us of his Name. Better Evidence than this of there being such an Archipelago cannot be desired, tho' at the same time it must be confessed, that this Account gives us a very different Notion of those People from that suggested by the former Narratives. In 1711 another Attempt was made of this kind, which ended as unluckily, some of the Jesuits intended for the Mission dying at Sea, and

the Year 1756 were let off Shore by the Commodore for Mutiny, in a Voyage from *New Spain* to the *Filipinas*.

While these People were on Shore at *Guam*, they had some Silver Plate, and after considering it over, declared that they had a great deal of the Metals of the Islands, which gave Occasion for the fitting out some from *Guam*, for the Discovery of those Lands, in the Year 1722; but what the Fate of that Expedition was, is not come to our Knowledge. It is certain, that a very great Discovery might be made on this Side, because, what is already known, it is very clear, that there is a continued Chain of Islands in the Longitude of our Station from the Line, or rather from the Continent of *Neu-Hevey*, which lies in the Latitude of 8° S. to the Islands, that make a Part of the Archipelago of *Japan*, in the Latitude of 32° N. and as it is certain, that the Inhabitants of the last mentioned Archipelago acknowledge they need great Quantities of Silver from an Island which lies to the East of them, it is not at all improbable, that many rich Metals might be found in some of the many Islands which form the Chain before mentioned.

But this, however, is not the Discovery that I mean, and therefore I shall explain myself a little farther. If a Settlement was made on any of these Islands, to the East of them, it might afford a Opportunity of visiting the great Continent, if it had been any Continent between *America* and *Asia*, or if it might lead to the Discovery of some continental Land between *America* and *Asia*, which, from their Situation, might well be expected to abound in rich Commodities, but particularly in silver Mines, since it is confessed, that the richest of those hitherto discovered are in the Northern Parts of *Japan* and of *America*. If it should be shown, that the rich silver Mines of *Pacifique* are not the only answer to that, this makes rather for than against my Opinion, because they are very near the same Parallel South Latitude that the rich Mines of *New Mexico* are to the N. that is, a little within forty Degrees. But this is not all, for if any such Islands could be discovered, they would afford us an Opportunity of reaching a very good East for a Passage either to the N. E. or N. W. which is a Point of very great Importance, and is not to be treated very judiciously by Mr. *Delle*, in our former Pieces, which, sooner or later, may very probably produce some such Discovery.

We have now gone through all that we prepared us with respect to this Part of our Subject. I shall now say a few Words by the Expeditions of the *Portuguese* and *Spanish* on this Side. It next remains to shew how that Portuguese Power which those Nations had acquired in the East crumbled, and broke to pieces, notwithstanding the many Advantages they had for preserving it, and what remains in these *Indes* under the Dominions of the *Crown of Portugal*: Which, when we have perused, we shall

706 The VOYAGE of FRANCIS PIRARD DE LAVAL. Book I.

which they make Pottage, with Milk, Cocoa, Honey, as well as Cakes and Fritters. The Country produces likewise several sorts of Roots, which the Inhabitants feed upon, particularly one called *Nelipeu*, which grows wild, being round, and as big as one's two Fists. They bruise it upon a rough Stone, and then expose it to the Sun, upon which it turns to a white sort of Meal that eats admirably well in Pottage or Cakes, only it must be very fresh, or it is apt to be heavy upon the Stomach. Another Root that grows there plentifully, and eats well, is called *Alau*, which must be sown and cultivated, and is commonly as big as a Man's Thigh. Some of these sorts of Roots are red, and others white; the Inhabitants boil them several Ways, and make them the most of their Food, keeping them for a whole Year, for they come to Maturity only once a Year, viz. in *September*. They have no Rice but what is exported from the Continent, however they have it pretty cheap, and use much thereof, either boiling it with Water or mixed with Spices, boiled with Milk and Sugar of Coconas, with Peppers Fish, or turned into Meal after drying and

frequent the Sea. Cats, Pole-cats, and Ferrits, are likewise found there; but there are no great Herds, either wild or tame, save a few Sheep, and some three or four hundred Cows and Bulls in the Island of *Male*, which belong to the King, and of which they never eat but on Festival-Days, and solemn Occasions, for these Kine are imported from the Continent. They have no Dogs, nay, they abhor them so much, that when the King of *Portugal* sent two as a Present to the King, he ordered them to be drowned immediately. The Sea affords Plenty of all sorts of Fish, especially between the *Atollons*, where the Sea is shallow and calm; the Fishery is the most constant Exercise of the Natives, who feed mostly upon Fish, when fresh, with Rice, or other Meat fried with the Oil of Coconas, or boiled in Salt water, and dried for keeping. They send every Day Ships loaded with Fish to *Manila*, *Achen*, and other Places. Many of the Fishermen have lost Arms and Legs that have been bit off by a sort of great Fish frequent in those Seas. This great Plenty of all Necessaries causes an easy Purchase: four hundred Co-

in cruel Wars against each other, and the *Mohammedans* taking Advantage of this War, endeavouring to make themselves Masters of every Country in which they were permitted to trade; so that it must be admitted, the *Portuguese* had, at first, some Reason for making Use of Arms, and insisting on a Fortress where ever they established a Factor, because the one was necessary for the Security of the other; but in this they were blamable, that they affected to govern with an absolute and uncontrollable Power every Country into which they came, instead of cherishing and supporting the *Indians*, as they might have done, to their own great Profit, as well as that of those unhappy People, who, from their own Difficulties and ill Management, became the Prey of every new Invader.

If the *Portuguese* had taken this Step, they had undoubtedly secured this rich Commerce to themselves; whereas by their Tyranny they made the Inhabitants way of them to the last Degree, and ready, whenever an Opportunity offered, to change their Masters. It must, however, be allowed, that the Method they pursued served to gratify their Vanity exceedingly, inasmuch as for above a Century they governed the *Indies* at their Will, and were the sole Lords of that rich and extensive Trade, none of the *Indian* Nations being allowed to carry on any Trade at all but by their Permission, and under the Sanction of their Passports. They carried this Matter still farther; for with respect to the richest Commodities, they reserved the Privilege of dealing in them to their own Subjects entirely, such as in the Cinnamon of *Ceylon*, the wild Cinnamon of *Cambay*, Ginger, Iron, Steel, Lead, Tin, Copper, Plaster, Timber for building, all Sorts of Arms, Honey, and Pepper. These Regulations, both with respect to *Slaves* and reserved Commodities, together with a Power of visiting such Ships as put into any of the Ports under their immediate Dominion, continued in Force for a long Series of Time, and was not totally abolished till the Year 1700, which was One hundred and fourscore Years after their first Establishment in those Parts.

During the best Part of this Time, they disposed, as the supreme Lords of *India*, of all the rich Commodities it afforded, sending home annually fifteen or twenty large Ships laden with the most precious Merchandize of the East, exclusive of the Profits they made of their Commerce in the *Indies* themselves, and the adjacent Coasts of *Africa*, viz. to *China*, *Japan*, *Persia*, *Arabia*, *Melinda*, *Malabar*, and *Sofala*. *London* became, by this Means,

As I have pursued a brief chronological Method in relating the Loss of the Settlements made by this Nation in the *East-Indies*, we must have started from one Part of this Country to another, which would have occasioned great Confusion, without yielding any considerable Advantages; whereas the Method we have now taken by proceeding from West to East, will show the Reader, as he goes along, how these Settlements were lost in the very same Order in which we have before shewn they were acquired.

Chap. II. to the EAST-INDIES.

Upon other Occasions they take five or six large Pieces of Wood, and having ranged them all in a Line, raise Planks on them of the same Wood, to fit upon, and so pass from one Island to another: and it is by this Contrivance they generally manage their Fishery. In the Canals that run between the *Atollons* one Man can work these Instruments of Navigation, though they are not proper for the Sea; for they know how to trim their Decks so well, that there is no Fear of overtilting; and if that happens, their Plank will always swim: all the Danger lies in disjoining the Pieces; and this sort of Float is called *Candou-patis*, from the Wood of which it consists. The *Candou-tree* has yet another strange Property, namely, that when one Piece of it is struck against another they will extract Fire; and this serves them in the Place of Tinder-boxes.

13. Our Method directs us, in the next Place, to speak of their Language, which lies in two Channels; the first is the *Maldivan*, properly so called, which is very copious; the second is the *Arabick*, of the same Use as *Latin* in a Popish Country, being the Language of their

Sun-set, and at ten o'Clock at Night, remaining each Time half an Hour. Those that have no mind to go to Church may say their Prayers at home, or none at all if they please; but if it be known that any Person neglects their Duty of Prayer altogether, nobody will eat or converse with him; from whence it comes to pass, that almost all of them, whether Tradesmen or others, spend a great Part of their Time in publick Service. They make use of Beads as well as the Papists; but they have no Crosses. Before they enter the Temple they wash their Feet, Hands, Ears, Mouth and Eyes, observing at the same time certain Ceremonies, and pronouncing Prayers suitable to the Sin they repent of.

They are so scrupulous, that no Temptation in the World can oblige them to forbear this solemn Way of washing, upon the Apprehension that it certainly purges them of all Sin and Pollution. The greatest Indecency of their Worship is, that they wash and bathe publickly and promiscuously, and offer their penitential Prayers with a loud Voice, and to discover to all the World all the secret Transgressions of their Lives. At this Rate all the secret Adventures of Man and Wife are laid open to the World by the publick

with great Care, and rendered it in every respect very considerable; but after the Dutch had deprived them of the Island of Ceylon, they did not long let them rest here, but by the Assistance of an Indian Prince, besieged and became Masters of that Place in 1655.

From thence all along the Coast, quite up to Bengal, the Portuguese have lost all Power; and as for Settlements they had none of any great Consequence to lose, having in the Time of their greatest Power contented themselves with a small Establishment at Meliapour, or St. Thomas, restraining all the rest of the Coast by their Squadrons, which were continually cruising in the Bay of Bengal. On the opposite Side of the Gulph the Portuguese had once very great Power in the Kingdom of Pegu, in consequence of their assisting the Monarch of that Country against the King of Siam, who had invaded his Territories, and would very probably have made him his Tributary, if a Body of Portuguese had not come to his Assistance, by whom he was enabled not only to defend himself effectually against his Enemy, but even to pursue him into his own Country.

It is very easy to discern what mighty Advantages might have accrued to the Portuguese from this favourable Turn, if they had known how to improve it; but we learn from a late Author, that what might have turned so much to their Benefit, proved, by their own ill Management, the Cause of their Ruin, and that in a very short Space of Time. The King of Pegu, it seems, was so sensible of the Service they had done him, in driving the King of Siam out of his Country, that in pure Gratitude, he made one Senbor Thomas Pereyra, who commanded the Portuguese in the War, Generalissimo of all his Forces, which Preferment made the Portuguese so insolent, that in a few Years they became intolerable to all Ranks and Degrees of Persons in Pegu. Both Kings grew tired of War, but both were too proud to make Advances towards Peace, so that for many Years they had Skirmishes with small Parties, though not set Battles; and where-ever the Portuguese Arms went, they had Victory to accompany them. The King of Pegu, to have his Forces nearer the Borders of Siam, settled his Court at Martaban, and kept the Portuguese near him, to be ready upon all Occasions, either to repel or assault the Siam Forces, as Opportunity served; and Thomas Pereyra was the great Favourite at Court: He had his Elephants of State, and a Guard of his own Countrymen to attend him.

* This City of *Du* stands in the Latitude of 11° 27', and is by many supposed to be the *Barygaza* of the Ancients. It is about a League in Length, and not a third Part of a League in Breadth. The Country about it abounds with all the Necessaries of Life, and the City itself is well built, and well fortified, as any in the Indies. It is very famous for the Siege it sustained in the Year 1605, before given some Account. At present it is in a worse Condition than formerly, both with regard to Wealth and Strength, and is in some measure, it is in less Danger of being attacked.

† It is very remarkable, that the Portuguese are best respected in those Countries where they had no Fortresses, which show that the *Mahomedans* had not established their Power, the Europeans were under no Necessity of building Forts, but might have carried on their Trade as well without them. There are a great Number of Portuguese, or rather Descendants of Portuguese, settled in the Country, who are poor, but pious, and are treated with great Indignity, both by the Natives and by other Europeans, which can be attributed to their having lived so long in the Indies, as to have lost all Spirit, and to become as degenerate as the *Stamens* themselves. When they were first sent out for the *Indies*, they were in a better Condition than they are now, and were much respected by the Natives, who esteem them very much. After their long stay in the Indies, they were so much out of Order that he could not attend to his Majesty till he was better; which Answer provoked the King, that he ordered the whole Nation to take up Arms, and to make a general Massacre of the Portuguese, wherever they should be found, in City or Country. The King's Orders were put in Execution in a few Days, and in a few Hours all the Portuguese were slaughtered, and the guilty Criminal was taken alive, and made to tread the Heels to an Elephant's Feet, which dragged him through the Streets till there was no Skin nor Flesh left to cover his Bones; which Spectacle appeared the entire Day. There were only three Portuguese slaves, who were accidentally in the Suburbs, near the River, who saved themselves till Night favoured their Escape in a small Boat, in which they crawled along the Shore, till they arrived at the Woods and Rocks afforded them, and then returned to Malacca, to give an Account of this dreadful Transaction.

The Kingdom, or as some called it, the Empire of Siam, lies next to Pegu, and is a Country of vast Extent, the Monarch of which was too powerful for the Portuguese to think of making any great Conquest in his Dominions, and therefore they chose to live with him upon equal Terms, for the sake of the vast Trade carried on in his Dominions, which are extremely well situated for Commerce, having on one Side the Kingdoms of *Lan*, *Cambaya*, and *Cochin China*, and on the other, the Kingdoms bordering on the Gulph of Bengal. Besides, there usually resorted thither a Fleet of Merchant Ships from *India*, laden with all the rich Goods of that Empire. They continued to hold a fair Correspondence with the Monarch and his Subjects as long as their Power subsisted in the Indies; but by Degrees the Dutch have in a great Measure excluded them from their Influence here, since they, when they erected their Factory here, and have since wrought themselves so effectually into the Confidence of this Prince, that he has granted them an exclusive Privilege of purchasing all the Tin in his Dominion, which is a Branch of Commerce of prodigious Importance, yet the Portuguese are not wholly ejected, though their Trade is much fallen from what it was. There are several small Principalities on the Isthmus, which were formerly under the Power of the Portuguese, except the

Prayers; after which the Catibe being mounted on a raised Place at one end of the Temple, takes a naked Sword in his Hand with the Point downward, and flourishing it about, recites his Prayers. In the mean time the People pray without ceasing, putting themselves in various Postures, and observing several apish Gestures.

The Catibe has a new Prayer for every Friday in the Year, and when that Year is expired, makes use of the same Prayers for the next. He repeats all without Book, and if he happens to be out in one Word, Syllable, or Letter, the Moudins reprimand him publicly, and the Feast is thought to be ineffectual. This Service lasts about two Hours, and after it is over, the People saluting one another, and the King returning in great State to his Palace, entertains them at his own Expence. They observe the like Solemnity on the Day of every new Moon, and rejoice when they see it. Upon this Occasion they clean their Houses, Courts and Streets, garnishing the Entries of the Churches, and the Gates of their Houses with Cocoa Shells cut in the middle, and filled with white Sand, and burning Coals, upon which they burn almost all Night sweet-scented Gums and Woods, at the same time the Infidels of their Houses, their Beds, &c. are perfumed after the same manner.

the Courtship consists in sending to one another Songs and Verses, inscribed with Bodkins on Cocoa Leaves, which are as white as Paper.

The Youths likewise present their Mistresses with Garlands of sweet smelling Flowers, and receive in return Presents of Betel nicely dressed. In fine, they take all possible Measures to heighten their Mirth and Divisions. Three Days before it ends the Bellman and the Trumpeters go round the Island, requiring all the Inhabitants, whether Men or Boys, Women or Girls, to send their Names in Writing to the Naybo of their respective *Atellen*, and to pay an Offering of half a Lirin a Head, which the People pay very willingly as a Tribute to God and Mankind. For they imagine that without the paying of that Tribute their Falling would not avail them. In this Law the Parents pay for the unmarried Children, and for their servants and Slaves; and if any poor Person has not the Money to lay down, the King, or any rich Person, pays for them very willingly. The Money arising from this Law is divided in the Hands of four Receivers, one on the Behalf of the King, a second for the Clergy, a third for the new converts, and a fourth for the Poor. One third of it goes to each spiritual Person, another to the Priestesses, and the remaining third to the Poor. About August and September

...Account...

In 1602, the Dutch, who were then become very powerful in the Indies, attacked and destroyed the Fleet of the Portuguese here, consisting of thirty-four Sail, on board of which were three thousand Men; but they were not able to take the Place. The next Year the King of Johore invested it with an Army of sixty thousand Men, in Revenge of what the Portuguese had done against him three Years before, when they took and destroyed his Capital; but, however, he was obliged to raise the Siege with great Loss. But the Dutch, well knowing the Importance of the Place, and the vast Advantages accruing to the Portuguese from its Situation and Commerce, the former affording them an Opportunity of levying 10 per Cent. upon all Vessels passing through the Streights, and the latter producing annually a large Revenue, they attacked it in the Year 1640 so vigorously, that they became Masters of it after a Siege of six Months. The Walls and Fortifications they preserved, as also the Church of St. Paul; but most of the other Churches they were destroyed, and the great Hospital they have turned into a Warehouse. The Language spoken here is esteemed the most copious and polite in the Indies, and therefore serves as a kind of general Tongue through all the Islands and Provinces further towards the East. In the Kingdom of Cambodia, or Comboya, the Portuguese have still a considerable Trade, and they are likewise well received in Tonquin. As to their Settlements in the several Islands of the East-Indies, in China, and in the Empire of Japan, we have spoke of them sufficiently already under the Head of Discoveries, and there is therefore no need of our insiling farther upon them here, as our View, at present, is no more than to shew how their principal Settlements were lost, and to whom, which having done, it may not be amiss to say somewhat of the Wars carried on against them in these Parts by the Dutch, and the Pretences they made use of for carrying them on.

28. The Troubles in the Low Countries, which produced a War between the Crown of Spain and the Republick of the United Provinces, began about 1570, and

...opportunity of retaining these Countries, both in which
in a singular Degree they from this Accident obtained. For
as on the one hand, his Catholic Majesty had enough to do
in defending his hereditary Dominions before this Accession
of the Territories of Portugal, so he was tempted to apply
the Revenues of that Crown to the immediate Wants of
the Spanish Government, which we may conclude were
very great, since on his Death-bed he owned, that the
Wars of the Low-Countries had cost him five hundred and
sixty-four Millions of Ducats, which is upwards of one
hundred and twelve Millions of our Money; whence it is
easy to perceive, that he could not spare as much as was
 requisite for the Defence of the Portuguese Territories. On
the other hand, the Portuguese themselves, though they
had been always distinguished for their Loyalty to their
natural Princes, were far enough from shewing so much
Zeal in the Service of the King of Spain; and it is very
natural, when the Minds of private Men are entirely de-
spoiled of publick Spirit, for the Affairs of the State to fall
into Confusion.

But one would have imagined, that after the Separation of Portugal from Spain, which happened in the Year 1640, Things would have taken another Turn; because, with King John IV. the Dutch had no Pretence of making War. To give the Reader a clear Idea of this Matter we must remember, that the Dutch had taken Brazil from the King of Spain, or rather from the Portuguese, while they were his Subjects; but afterwards that Nation considering this as an Injury not to be borne, attempted to drive the Dutch out, notwithstanding the Treaty concluded between the States and the King of Portugal in 1641, which, to say the Truth, had been but indifferently observed on both Sides; that is to say, the Dutch had encroached upon the Portuguese in the East-Indies, and they, on the other hand, gave the Dutch little or no Respite in Brazil, out of which, in ten Years Time, they drove them entirely.

About this Time died King John IV. and left his Son Alphonso VI. a Minor, which Advantage the Dutch took to declare War against the Crown of Portugal, from a Persuasion that this Opportunity of regaining what they had lost in the West, and prosecuted their Conquests in the East-Indies, was not to be lost, and the rather, because Portugal was at that Time engaged in a dangerous War with Spain, and the Dutch had lately concluded a Peace with that Crown. It was in consequence of this new War that

* At the Time the Portuguese delivered themselves from the Spanish Yoke, the Dutch were employed, as we have already shewn, in reducing the Island of Ceylon, and made use of Abundance of Artifices, in order to prosecute the Advantages they had gained, notwithstanding the Peace concluded between the States General and the Crown of Portugal in Europe; neither did they desist from their Hostilities, even after the Peace was proclaimed in the Indies, but continued to give the Portuguese almost as much Trouble as while the War continued. This they did, under Pretence of being Allies, or Auxiliaries to fetch Indian Princes as were at War with the Portuguese; and where this Pretence was wanting, they took Care by their Familiarities to stir up new Wars, and under Pretence of restoring the Indians to their Freedom, contrived Things to as to engage them in long and bloody Wars, which had no other End than to oblige them to change their Masters, with this Difference only, that whereas the Portuguese endeavoured to keep large Countries, and to oblige the Indian Princes to pay Homage to the King of Portugal, the Dutch contented themselves with the Sea-Coasts, and forbidding those Princes to trade with any other Nation; so that their Slavery was equally great, though not always equally apparent, which ever Side prevailed.

the

new-married Queen, A Man may have three Wives if he can maintain them, but not more; and if all three live in one Island, he is obliged by Law to bestow as many Nights upon one as upon the other. Tho' after all this Law is not observed, and indeed it is a hard Law in that Country, where the Women are so lascivious.

The Bridegroom receives no Dowry with his Wife, and is obliged, not only to be at the Charge of the nuptial Solemnity, and to maintain her, but to settle upon her a Jointure equal to what her Mother and other Ancestors had. They are so nice on this last Condition, that if the Priest apprehends the Husband cannot afford such a Jointure, he refuses to marry them, notwithstanding both Parties require it; but after all, the Bride may renounce either whole, or Part of the Jointure, after Marriage, and indeed that is frequently practised. Brothers and Sisters, and god Cousins, and those who by way of Friendship and Intimacy have used to call one another by the Names of Son or Daughter, Father or Mother, Brother or Sister, these, I say, are prohibited to marry. The Males may marry when they will, but a female Orphan cannot marry till she is fifteen Years of Age, instead of her Father by

deceased Person. The Priests sing continually during the whole Course of the Ceremony, and in the Procession a Person of Quality sprinkles the Assistants with Water made of sweet Flowers.

The Grave is covered with a large Piece of Silk, or Cotton, which, on the Interment, goes to the Priests of the Temple. When the Couple is laid in the Grave, they turn the Face of the deceased Person to the Quarter they face Mohammed's Tomb, and then fill up the Grave with fine white Sand, sprinkling it with Water. When the Ceremony is over, the Relations entertain all the Company with Victuals, and the three following Fridays they pray over the Grave, where the Priests sing, eat and pray every Day, till the third Friday passes, after which, a general Feast is prepared for the Relations, Friends, and Priests, who pretend, that the Soul of the deceased Person is then conveyed to Paradise. This Feast is prepared every Year, and on All-Souls Day they throw fresh white Sand on the Grave, and perfume it with burnt Incense: The Grave is surrounded with wooden Pales, for they reckon it a great Sin to walk over it. They never bury a dead Person in the same Place, but they bury the

In the *East-Indies* Things were to remain as they then stood, and both Parties were to keep what, at the Conclusion of this Peace, should be in their respective Possessions; but the *Dutch* kept this no better than they did the former Treaty; but, on the contrary, in 1663, attacked all the Places which the *Portuguese* held on the Coast of *Malabar*, particularly *Cochin*, which they had no sooner taken, than they destroyed all the Wild or Bastard Cinnamon, which, after the Loss of *Ceylon*, had proved an advantageous Branch of Commerce to the *Portuguese*. There were high Complaints made of this in *Europe* to the States-General, who were either deceived by the plausible Accounts given them by their *East-India* Company, or pretended to be deceived, that they might, with a better Grace, protract the Negotiation relating to this Affair, till their Subjects in the *East-Indies* had so fortified the Places they had taken, as to put it intirely out of the Power of the *Portuguese* to attempt the Recovery of them*.

These Proceedings gave the finishing Blow to the Ruin of the *Portuguese*, who have never since been able to undertake any thing of Consequence; but, on the contrary, have exhausted much of their remaining Strength in defending themselves against their *Indian* Neighbours, who encouraged by the Progress of the *Dutch*, and excited thereto by some of their Agents, have been since endeavouring to tear from them the small Remains of their Possessions in *India*, and have often kept *Goa* itself blocked up for many Months together; in which, perhaps, they have as much mistaken their own Interest as prejudiced that of this Nation, the Power of which has already so much broken, as not to afford any just Ground of Jealousy either to *Indians* or *Europeans*.

29. We have already, in the Course of this History, pointed out many of the Causes of the Declension of that mighty Power which, in so short a Space of Time, the Crown of *Portugal* acquired in the East; but as this is perhaps the most useful Part of the present Section, it may not be amiss to add a few farther Observations on this Subject, the rather, because the *Portuguese* Authors, who have treated so largely of the Conquests made by their Nation, have been, in a great measure, silent on the Means by which they were lost. One great Cause of their Ruin was the Circumstances of their Government at home, where, for many Years together, they were engaged in a long, expensive, and dangerous War against the Crown of *Spain*,

* The *Dutch*, though their *East India* Company gained sufficiently by these Practices, suffered very severely, as a State, from the Jealousies excited in their Neighbours. The *English* had some Experience of a like Disposition towards them; and though the *French* had not, they were not less ready to join in a War to humble them, as they phrased it, which was that of 1672; and how far the Cause of that War were connected with the Conduct of the *Dutch* in the *Indies*, may appear from a Fact charged upon them by Mr. Tavernier, who in his Travels writes, that the *Dutch* Factor at *Gambra* in *Perfia* publicly burnt the Picture of King *Charles II.* in a Fire, partly made of Cinnamon, which cost him a great deal of Money, and which gave a very bad Impression of the *Dutch* to the *Perfians*, who laboured all they could to undo the Trouble the *Jesuits* gave them in *China*, discovered this Practice to the Governor of the Diamond Mines at *Sijapan*, who caught the Factor, and executed the *Faquirs*, with Stones about them to the Value of twenty five thousand Pounds, which he took from them, and then was taken publicly for punishing the Habit of thofenoly Men, took such Measures as prevented their carrying on that Trade.

We owe this Circumstance to the History of *Holland*, by M. De La Nouville, who tells us, that the *Dutch* being extremely jealous of the Trade of the *Faquirs*, with Stones about them to the Value of twenty five thousand Pounds, which he took from them, and then was taken publicly for punishing the Habit of thofenoly Men, took such Measures as prevented their carrying on that Trade.

three Years, Five hundred thousand Crowns; from whence we may form some Notion of the Profit of the *Voyage*. Now as it is impossible such exorbitant Sums should be made any other Way than by oppressing the *Indians*, and taking large Sums from the Merchants, we may easily perceive, that all these private Fortunes were made at the Expence of the public Interest.

The bad Examples of the *Government* had a very great Effect on all the subordinate Officers; so that *Pride*, *Innerness*, *Luxury*, and a pompous Display of Wealth, attended by illicit Means, took place of that generous Avarice, that laudable Ambition, that disinterested Zeal, which enabled their Ancestors to lay the Foundation of a large an Empire, with a very inconfutable Part of that Power which was in the Possession of those who succeeded. The Clergy too followed the Example of the Lay, instead of promoting, as at the *Reign* of the *Portuguese*, the Conversion of the Natives to the Christian Faith, from a religious View of saving their Souls, they now proceeded that Work from the meaner Motive of making themselves servient to their own Purposes, and enabling them to acquire vast Riches. This Corruption prevailed to such a Degree, that not only many of the *Jesuits* at *Goa* engaged in Trade, contrary to the Rules of their Order, and not Duty as Missionaries, but even descended to so low a Trade as to disguise themselves in the Habits of *Faquirs*, or *Mahomedan* Monks, that they might have an Opportunity of visiting the Diamond Mines, and purchasing Stones of an extraordinary Value*.

But what most of all contributed to corrupt the Missionaries of the *Portuguese* Settlements, was the little Care taken to prevent their leaving all Things to the Care of the *Negroes* and other Slaves, and their intermingling with the People of the Country, Practices which have been so often proved to be fatal to all *European* Establishments, because it not only softens and effeminates the Minds of such Settlers in this Way of living, but also changes their Views, and makes them lose all Regard for their Country, and induces them to take such Measures as are most likely to preserve them in the Enjoyment of such servile Pleasures. The *Portuguese* at *Goa* have been for more than a Century past so much addicted to this grovelling and sensual kind of Life, that provided they might enjoy their fine Houses at the City, and their Country Palaces in its Neighbourhood, they gave themselves no Pain about what happened elsewhere.

710 The VOYAGE of FRANCIS PIRARD DE LAVAL Book 1

like ours, they could not have the free Use of their Arms. Persons of Quality commonly wear such Coats; but some have a Custom of covering their Skin from the Girdle upwards, with an odoriferous Paste, made of the Powder of Camphire and Sanders, beaten upon a smooth Stone, and incorporated with the distilled Water of sweet-scented Flowers. They make their Wives or Friends anoint their Backs, &c. with this Paste, and draw various Figures upon them; however, they must not appear with that Piece of Foppery before the King, or be seen in his Palace. The Men of this Country wear upon their Heads red or party-coloured Turbans, some of which are of Cotton, for the meaner sort of People, and others of Silk, for the Persons of Quality. The King's Officers and Soldiers have frequently embroidered Handkerchiefs on their Heads, which other Subjects are not allowed to wear. Their Feet are always naked, excepting that within Doors they use wooden Sandals, which they pull off when visited by a Person of superior Rank; oftentimes their Legs are likewise naked.

The Women wear a Coat of Cotton, or Silk, which

Drop of Water, though they wash their Moulds before and after. Instead of Table-cloths and Napkins they use Banane-Leaves. Their Dishes are made of Earth, or *China* Porcelaine, which is very common in that Country, gold or silver Vessels being prohibited by Law. They use all round like Boxes, with an earthen Cover, over which they put a Piece of Silk, for the *Pisanes* are there so numerous and troublesome, that it would be impossible to keep Meat without a Cover upon it, and the People are so nice, that they will not taste any Meat that has been touched by a Fly, Plume, or any Insect or noxious Thing, but give it to the Fowls. As for the *Pisanes*, whom they look upon as the Servants of God, they are to offer them what they will not eat themselves, and to entertain them with the best Victuals they have. If there be the least Crack in a Dish, they eat no more out of it, holding it polluted.

All Spoon-meat they eat with their Fingers, and wash it nicely, that they let nothing fall, that being accounted a very natural Piece of Decency. If they have Occasion to cough or spit at Time of eating, they rise from

* There is a very wide Difference between these total Preferences and the Governments formerly in the City of the Viceroy of Goa, which were first the first was that of *Mombasa*, which still is in their Hands, and the only one of the old Government that is so; the second was that of *Mojoa*, on the Arabian Coast, which was of very great Importance, and brought in large Revenue; the third was that of *Ormuz*, on the Coast of *India*; the Captain General of the Island of *Goa* was the fourth, and the Governor of the important Forts of *Macao* the fifth. Upon each of these General Governments there depended many others of less Consequence, of which these Generals had the absolute Disposal; but as one would think them were continued in them for no longer than three Years. And it was for this Reason they were guilty of so much Extortion, looking upon their Governments as Leases for many Years, in which they were to make their Fortune.

... sion of any other kind of
... they eat no more out of it, than

... turn them adrift, so that they float upon down till they are
... quite burnt; and this they take for a Sacrifice that is ac-
... ceptable to the King of the Winds. But when they can-
... not easily set their Boats and Gallies afloat, they kill Hens
... and Cocks, and throw them into the Sea right afore the
... Ship they mean to sail in. They likewise pay a superstiti-
... ous Deference to the imaginary King of the Sea, and dare
... not spit to the windward of the Ship, nor look behind
... them.
... All their Boats and Ships are devoted to the Prince of
... the Winds and Seas, and they keep them as neat and
... clean as Temples. They place a wonderful Virtue in cer-
... tain Characters called *Catide*, which they wear under their
... Garments in little Boxes, and sometimes under their Arms,
... Necks, Girdles, or Feet, according to the Seat of the Dis-
... temper; for, their imaginary Virtue is said to consist in
... curing or easing Diseases, procuring Love, Hatred, Safety,
... or Danger, &c. These they buy of the Magicians, who
... are their only Physicians. They impute Death, Sickness,
... and all Affliction to the Devil, and, in order to pacify
... him, make him Offerings of Flowers and Banquets in a
... dish, which they burn in a custom, which some

... and when they are nine Years old, they commence the Stud-
... ies and Exercises of the Country.
... Their Studies consist in learning to read and write, to
... understand the *Alcoran*, and to know their Duty. They
... have three sorts of Letters, *viz.* the *Arabick*, the *Maldivean*,
... and a third sort, which is commonly made use of in
... most Parts of the *East-Indies*. Their Lessons are wrote
... down on white Tables of Wood, which they clean and
... whiten again after they have got their Lessons by Heart;
... for durable Writings are on Paper made of the Leaf of a
... Tree called *Mavate Quatan*, that Leaf being a Fathom and
... a half long, and a Foot broad. To teach the Children to
... write, they make use of no Paper, but make Draughts of
... Letters with a Budkin upon smooth, plain Boards of Wood,
... covered with fine white Sand. The Children have such a
... profound Veneration for their Masters, that they cannot
... marry them any more than their own Parents. Some of
... them, especially the *Moudans*, *Naybey*, and *Catines*, carry
... their Studies a great length, and acquire great Skill in the
... *Alcoran*, and other Treatises of the Law. The Mathe-
... matics are much esteemed in this Country, and especially
... the Art called *Almagest*, which is a

Moss, and by that means maintain their Masters, instead of being kept by them.

About fifteen Days Journey from hence lies *Sofala*, where the *Portuguese* have likewise an Establishment, subject however to the General of *Mozambique*, and here a prodigious Trade is driven on, at which the *Portuguese* are, or might be, Masters. It consists chiefly in Gold, of which there are greater Quantities here than in any other Country in the World, since the annual Produce of this Market is computed, by the best Judges, at Forty-six thousand Ounces. There are vast Quantities of *Sponges* and *Canary Wines*, *Oils*, *Silks*, *Linens*, *Cottons*, *Coral*, and other *European Goods* sold here, which are carried by the Inhabitants of the little Kingdom of *Sofala*, through all the great Empire of *Movometopa*, which the *Portuguese* stile the Empire of Gold, from the prodigious Quantities of that precious Metal which are brought to them from thence. There are, likewise, some other very rich Commodities brought hither by the Negroes, such as the most excellent Ivory in the World, great Quantities of Ivory, abundance of fine Mats, which are much esteemed in the *Indies*, and a great Number of Slaves, so that *Goa*, and all the rest of the *Portuguese Settlements*, are furnished from hence. One may justly wonder that, considering the Value of this Settlement, and its convenient Situation, the *Dutch* had not made themselves Masters of it long ago, as well as of all the other Places belonging to the Crown of *Portugal* in this Coast.

In the Year 1607, they attempted *Mozambique* with very little Success, which, however, did not discourage them; as it must be allowed, that where there is a Prospect of Gain, the *Dutch* are not easily discouraged: And, therefore, in 1608, they attacked it a second Time with greater Force, but with the same Success as before, except that they made themselves Masters of a rich *Portuguese Fleet*, which, in some measure, paid the Expence of the Expedition. This year *Dutch*, however, is much fallen off by the *Dutch* making themselves Masters of *Mombasa*, and other Places, which gives them an Opportunity of supplying the *Africans* with *European Goods*, which they purchase in different Part of the *Indies*.

As for the Slave which the *Portuguese* still retain, the Gold obtained thereby is sent to *Goa* and to *Dna*, where it is coined into small Pieces, called *St. Thomas's*, which are not worth above Half a Crown of our Money; and it is observed that this Coin is of a woful Fourth, that is, of a bad Alloy, than any other in the *Indies*, which is another Sign of a declining Trade; for the *Sarabins*, which were formerly coined at *Orma*, when in the *Portuguese Hands*, were esteemed the best Gold in the *Indies*; but they are now become extremely scarce; and the *St. Thomas's* are said to be coined in this Quantity every Year.

31. Their Possessions are said to produce so little to the King of *Portugal*, that it has has been more than once de-

the Preservation and promoting of Trade, which he who understand that Subject best agree together in Ruin. This is an exclusive Company, which has the Right to the Commerce of *Mozambique* and *Alagoa*, which Company has taken upon itself the Payment of the Royal Officers, who are also Two-thirds concerned therein, which has given such a Blow to the natural Commerce of *Goa*, that the best Part of the *Indian Merchants* of the *Indies* are now retired from thence. To say the least, it was the great Share the Viceroy, Governors, and other Officers, always took in Commerce, without doing any thing thereto, except protecting the Merchants from the Violence committed by themselves on such as did not give them to a Share in their Trade, that first destroyed their extensive Commerce they enjoyed. And, upon this subject, the Wits of the *Indies* have framed a very witty Verse. They say, that when the *Portuguese* came into the *Indies*, they had a Sword in one Hand, and a Compass in the other; but that they might fill their Pockets with Gold, they quickly dispensed with the first, and sold it for the second, the last, by which they have lost all. But to see their Power and their Commerce are to make it seem, that it is as great as ever, inasmuch that there is a great Number of the Country, who are called *Cannons*, the Portuguese wearing stockings, though they employ them as *Indians*, Lawyers, and Merchants; by which many of them are so rich that they keep a *Dzoo* or *House of Lions*, and are in much better Circumstances than the *Portuguese* themselves.

The Revenues of the Church have suffered very much by this surprizing Change in the State; there is now a Monastery that does not receive four or five hundred Crowns out of the Treasury, at the same time, the Soldiers starve and mutiny for want of Pay, which is so much the harder upon the Government, that the Reverend Fathers know very well how to take care of themselves, inasmuch that it is affirmed, that the *King of Goa* have a better Revenue than the Crown of *Portugal*. It is not easy to know what becomes of the Money of the Churchmen here; but it is very evident, that the Wealth they possess, together with the Establishment of the Mission at *Goa*, is such a dead Weight on the State, that it must sooner or later destroy it. The Wits of the *Portuguese* in *Europe* understand this very well, and would be glad to see some proper Remedy applied, to remove the Prejudice against the Church or Churchmen, and to get enough from being the Vice of that Nation, but out of pure Regard to the Crown, and to the Nation, they would think, that the Clergy themselves, shall be contributing at more, ought to be willing to part with some Inportion of what is already in their Hands, in order to reduce the State more able to protect them in the Possession of the Remainder. Besides, there is nothing clearer, than that the erecting of religious Houses is directly opposite to

712 The VOYAGE of FRANCIS PIRARD DE LAVAL Book I.

ing. Upon the Flats near the Shore they catch small Fish like Pileard's with Casting-nets.

At the two Equinoxes they have a general Fishing, which is very remarkable. At these two Periods of the Year, as the Tides flow beyond their wonted Bounds, so they ebb more than usual, and discover several Rocks and Flats, which at other times continue under Water. Upon this Occasion the *Maldivians* pitch upon several dry Corners, which they encompass with Stones raised like a Wall to a great Height, being forty Paces in Circumference, with a Door or Entrance left that is three Paces wide. This done, thirty or forty of them stretch out, all round the Flats, a large wide Circle of the great *Coccolards*, at each Fathom of which they tie a Piece of *Coccolard* shell dried, and that supplies the Place of Cork, making the Line float. Now the Fish enclosed within the Circle are so scared with the Shadow of the Floating-line, as if it had a Net underneath it, that instead of making their Escape by swimming, they fly from it, and, by the gradual Contraction of the Line, are brought into the Inclosure, the Entry of which is therupon Ropp'd with all Expedition with Faggots of the *Maldivian* and *Portuguese* *Coccolard* together.

proaching to the Door of the Houses, which is always open, and spread with Tapestry of Cotton Cloth, or some other Stuff, they cough once, upon which the People of the House come out. In the Island of *Mala* the King's Officers and Soldiers cough frequently, to give Notice to another in the dark Streets, for fear of receiving mortal Wounds from their Arms, which are always naked in these Hands.

22. We shall in the next place take a View of the Government, which is an absolute Monarchy, for the King is feared and revered by all, and every thing depends upon his Pleasure under him. Each *Attollor* has a *Naybe* or Governor, who is a Priest, and Doctor of the Law. The *Naybes* govern the inferior Priests, and are assist'd in the Administration of Justice, and the Management of religious Concerns. The *Cantons* or *Attollors* being divided into many Islands, each of these Islands, that contain above forty-one Men, is allotted a *Postor* or *Attollor*, who presides there in religious Matters, and one of the particular Priests of the *Molques*. All the *Postors* are employed in instructing the People in the Law, and in giving a certain Portion of Fruits collected from every Island

This gallant Man, Don Antonio Mocha de Brito, was General of the North, and afterwards Admiral of the Gulph of Ormuz, in which Character he gained immortal Reputation. In the Month of June, 1621, he with three Ships only fought fourteen Arabian Vessels of the same Size, in the Bay of Muscat, for a whole Day; and when he might have retired safely into the Port of Dou, he anchored close by them all Night, in order to have renewed the Fight next Morning; but the Arabian Vessels being enough the Day before, stole away in the dark, and recovered their own Coast. Several Boats full of Merchants, went from Muscat to see this Battle, and afterwards complimented the Portuguese Admiral on his Victory, little suspecting, that before the End of that Year, a Man, who had done such eminent Service to the Publick, would fall, and a Victim to private Revenge.

Ilands, and himself made Prisoner. 7. A general Description of these Islands, their Product, and the People who inhabit them. 8. The Description of these Islands into several Provinces, with an Account of the Sea that furcunbs them. 9. Of the Original Inhabitants of this Country, their Complexions, Stature, Temper, and Manners. 10. The vast Fertility of the Maldives, and the Nature of the several kinds of Corn and Fruits produced there. 11. Of the Birds, Fowl, Fish, and other sorts of Provisions, and of their prodigious Plenty and excessive Cheapness. 12. A very singular Method in use among the Inhabitants for weighing whatever is lost in the Sea. 13. Their Language, Religion, Temples, Priests, and Form of publick Worship, with occasional Remarks on them. 14. Other Ceremonies of their Religion, together with their Feasts and Fasts, and Diversions at sea. 15. A large Account of their Marriages, the Manner of their settling Jointures, and their frequent and voluntary Divorces. 16. Their funeral Ceremonies, Profits accruing thereby to the Priests, and other curious Particulars relating to that Subject. 17. A Description of the Dress of Men and Women in these Islands, and of the Laws in relation thereto, and other Circumstances. 18. Their Customs in eating and drinking, Laws for prohibiting of Luxury, and generous Concern for the Poor. 19. Superstitious Customs among them in relation to the Killing of Beasts, Use of Baths, Sails, and other oddities. 20. An Account of the Diseases which prevail among the Inhabitants, their Skill in Physick, and other Sciences. 21. The Virtues and Vices of the Maldivians, with some curious Particulars relating to their Women. 22. A large Account of the Nature of their Civil Government, Power of the King, his Privy Council, Judges, &c. 23. Criminal Punishments in Use among them; together with the Estate of their Military Establishments. 24. A Description of the King's Palace, Habits, Manner of Living, and other Circumstances relating to his Court. 25. His State when he appears in Publick, the Queen's Court, and the great Respect paid them by their Subjects. 26. The Particulars of the Royal Revenue, the Nature of the Coinage here, and of the Value of their Commerce. 27. The Manner of the Author's Escape out of this Country, after he had remained a Prisoner there for several Years. 28. The Author's Journey to Bengal, and Return out of the Indies. 29. Remarks and Observations on the foregoing Particulars.

HERE are some Voyages and Discoveries which never lose their Value, because never superceded by any thing more excellent in their kind; and this we may truly affirm to be the Case of that Voyage which we now present to the View of the Reader. It contains a very curious, accurate, and circumstantial Account of Countries and People, who, tho' they lie at the very Entrance of the Inds. were never described before, nor has any subsequent Account of them appeared capable of entering into any Degree of Comparison with this which we before us. Our Author appears to have been a Man of good Sense, and great Observation. He was led to travel from a Humour common enough in Youth; but, at the same time, this Humour of his was regulated by a Disposition not very common in young People, which was that of looking to the Bottom of whatever appeared worthy of Notice, and of labouring to acquire whatever Talents were necessary to make so thorough an Inquisition. It was from these Principles that he derived that Constancy and Resolution which are so conspicuous in the following Relation.

He was, doubtless, in hopes, when he undertook this Expedition, that all Things would have fallen out favourably, and that he should have been entertained with the Sight of all the Curiosities in the Indies, with little Hazard, and some Gain to himself. But when it fell out otherwise, and he found all these Resolutions overturned by the unlucky Accident of a Shipwreck, he did not lose either his Reason or his Spirits; but, on the contrary, determined to make use of this Accident to further his Design of obtaining a distinct Knowledge of the Places and

People whom it was his Fortune to visit. It was in consequence of these Notions, that he examined carefully, and recorded faithfully whatever came within the Compass of his Notice; And that he might enlarge the Circle of his Understanding, he applied himself with Diligence, first to learn the Tongue of the Country, and next to enter into a free Conversation with regard to their own Affairs of every kind with the People themselves; so that his Judgment always went along with his Curiosity; and we may rest satisfied that he has not reported Things barely as they appeared, but as they were.

After this Account of our Author, it is requisite we should say somewhat of the Time and Manner in which this Voyage was undertaken, and afterwards we shall leave him to speak for himself. The Fame of the East-India Commerce in the Beginning of the seventeenth Century, provoked some French Merchants of St. Malo, Laval, and Vitré, to think of sending two Ships into that Part of the World, which Project they executed in the Spring of the Year 1601. The biggest of these Vessels was of the Burthen of three hundred Tons, called the *Cressant*; the lesser of two hundred Tons, called the *Corbon*: The former of these was under the Command of the Sieur de *Bardeveze*, the other under that of *François Grant*, Countable of St. Malo. They sailed from the last-mentioned Port on the Eighteenth of May, 1601, and had not proceeded above ten Leagues out to Sea before their Mizen-Mast split and broke in the Middle, which, says our Author, was the Beginning of our Misfortunes: And their History he continues thus.

2. On the 21st we fell in with nine great Dutch Hoys, each of which saluted us with a Gun, but one of them being

... and *Pinto* lying by him, they immediately concluded that the Stranger had killed the Prince; upon which two Soldiers advanced with their Swords drawn, in order to cut off his Head; but the King called out to them to forbear, since he was determined he would first extort from him the Reason that induced him to commit it to vile a Fact.

The Reason of this Stay of Execution was, because a little before a Conspiracy had been discovered, for which several Persons had been executed the Day before; and the King apprehended, with our Reason, that this Action might be an Effect of that Conspiracy. It is not necessary for us to dwell upon all the little Circumstances of this Affair, and therefore it will be sufficient to observe, that when they were on the very Point of torturing *Pinto*, in order to make him confess why he committed this detestable Murder, and who were his Accomplices, the Prince very luckily came to himself, and seeing how Things stood, he cried with great Concern, that he alone was in the Fault, and that the Stranger knew nothing of the Matter; wherefore he intreated; that he might be set at Liberty, and have Leave to come to him, which his Father immediately granted. It was then proposed, that they should tend for an old Boy, who lived at twenty Leagues Distance, to

... *Porto* Merchant, came into the same Country, and became very intimate with the same Person, whom he persuaded to go to the Portuguese Settlements in India, in order to be converted and consoled by the holy Discourses of the famous *Francis Xavier*; to which at length he yielded, and having received Baptism at Goa in the Year 1548, he the next Year accompanied Father *Xavier* and two other Jesuits in their Voyage to Japan, where they immediately entered upon their Mission; by the Progress of which, this Country was made so thoroughly known to the Portuguese, that if *Mendez Pinto* had not recorded his own Voyage thither, it is very possible we had never heard any thing of it at all; but that he afterwards visited Japan in Company with Father *Xavier*, and after the Decease of that indolent Jesuit, whom the Papists esteem the Apostle of the Indies, he went thither again as Ambassador from the Viceroy of the Indies to the King of *Borgo* in 1536, so that there seems to be no just Grounds for calling any thing that he has written in Question.

The Conventions made in this great Empire contributed not a little to support and extend the Portuguese Trade, which was managed with much Facility, and to a vast Profit: For the Portuguese being established in *China*,

both Amicable and dangerous, and in sailing to the
Indies, an expert Pilot ought to be very cautious in keep-
ing to a just Distance from the *Green Coast*, which is
very unhealthy, and incummoded with Calms and Cur-
rents, and, at the same time, standing off from the *Is-
lands*, for the doing of which there is Sea Room enough,
since we reckon a thousand Leagues from the Coast of
Africa to that of *Brazil*. Having doubled the Cape, we
continued our Course for the *Cape of Good Hope*, and in a
few Days we knew that we approached it by the Appear-
ance of the Reeds called *Trombas*, and wate speckled
Fowls. Having weathered the *Cape of Good Hope*, we
came in Sight of that of *Aguillas or Needles*, which thows
fifteen Leagues further into the Sea, and lies in 34° S. L.
This Cape derives its Name from the Observation, that
when a Ship comes before it, the Needle of the Compass
points directly northward, without declining to the East
or West.

We met *January* the 6th, 1702, with a violent Storm,
in which one of our Seamen fell overboard, and his
Companion would have jumped after him if we had not
prevented him; though, after all, I took his Offer to be
the Effect of Wine rather than true Affection; for there
is but little Friendship among sea-faring Men, although
our Course, we steered by the Country of *Narraganset*,
Coast of *Ethiopia*, without any Storm, which was uncon-
mon in those Seas; for between the 33d and 35th there
are never, almost, without violent Storms. After that
we mistook our Course, thro' the Equator, and went
and, on the 4th of *February*, finding ourselves on the
Land-side of *St. Laurence*, tacked about, in order to
make the other Side.

4. *February* the 7th, having passed that Land, accord-
ing to our Wishes, we were surprized all on a sudden by
a violent Storm from the South-West, being less acquainted
with those Seas than the *Portuguese*, who make many
Provisions for such Accidents. In the Storm it was so
dark at Noon-Day, that we could not see the Heads of
one another; our two ships were separated, and our Sails
were tore to Rags, such was the Force of the Rain and
Wind, that they wounded our Faces like to many Lines
of Whipped. The Waves swelled so high, and whelmed
in upon the Ship, that we could not stand up on the Deck.
In this Place we continued four Days and four Nights, and
some of the Men that were on board, applied themselves
to devout Exercises, while the Sailors redoubted the Oath
and Blasphemies. Our ancientest Pilots and Captains pre-
tended they never encounter'd such a Tempest, but the
Business was, they never had been in those Seas, which
swell higher than elsewhere.

On the 11th the Storm being over, we found ourselves
Laurence, being much disabled. All our Men were now
nearly half dead, and we had not a Man or Boy, but a
Gunner, that had ever been in the *Indies* before; whereas
came within forty or fifty Leagues of the Land, the Sea
appeared yellowish and frothy, and was covered with
floating Corpses, which continued to appear on us, so
far till the 15th, that we arrived at last at Anchor in
Augustin's Bay, in 35° 30' South Latitude. This Bay is large
and very convenient, having an excellent Ground of
and Sand. The same Day the *Cross* parted from us, and
twelve Days Separation, and was more than 1100 Leagues

from us.

for the Catholic King, and of the mighty Extent of his
Dominions, of which they affected to convince the *Japo-
nese*, by shewing the Map of the *East and West Indies*;
and the Impudence of one of these Embassadors is said
to have carried him so far, as that on being asked how his
Majesty had acquired such vast Territories at so great a
Distance from his hereditary Dominions, he answered, by
sending Missions at first to convert a Part of the Inhabitants
to Christianity, and then sending Troops to assist the
new Converts in shaking off the Yoke of infidel Princes.

The other Circumstance was the coming of the *Dutch*
Ships upon the Coast of *Japan*, for these People applying
themselves entirely to Commerce, and submitting, for the
like there is, to whatever Terms were prescribed by the
Japanese, gained thereby such a Degree of Confidence
with their Princes, that it procured implicit Credit to their
Representatives, as in the ambitious Designs of the *Span-
iards and Portuguese*. These Remarks will give the
Reader to carry a Key to the political Contrivances for first
restraining the *Portuguese* Trade to a particular Port, and
then shutting them up as it were in a Prison during their
Stay in that Empire, as in the first Chapter of this Work
is shewn.

and amongst them many Christians. They were dis-
tinct there but a few Years, and had been discovered
by the Discovery of very rich gold Mines in the Neigh-
bourhood of this City, and Mines of this kind are
called, of a very singular Kind. There is a River
passes by the City of *Masjuma*, in which many
those who desire to deal in that Commodity, pass
from the Prince such a Part of the River, and the
semicircular Canal, well secured by strong Banks,
which, by Sines, the River is turned, leaving some
of its Channel as the Adventurers have agreed to do,
thence they take the Mud, and by frequently digging
obtain vast Quantities of Gold dust, and sometimes Pieces
of Gold of a considerable Bigness. When they have
finished their Work, and find there is no more to be
got, they fill up the Canal, and by that Means shut
the River back into its old Channel, and in the space of
Year or two it is found as rich in Gold as ever.

Father *Angelis* informs us, that the Natives of that
Country, which we call *Yesso*, call it in their own Lan-
guage *Anemoxori*, but were able to give but a very im-
perfect Account of its Extent or Situation. These Peo-
ple were larger, stronger, and had much better Complex-
ions than those of the *Indies*.

Quantity of little Insects, which enter'd near us
with a continual Shew of dancing about, and skipping
from Tree to Tree. Parrots are there very numerous, and
make an agreeable Harmony, with their various and warb-
ling Notes. Not to mention the Indolence of our Men in
ceeding in so hot a Climate, and the pernicious Con-
sequences that attend'd it, I shall only take Notice farther
of the unspeakable Uncleanliness from the Flies by Day, and
the Gasts that pestered us by Night, in piercing the Fleets
with the Blood Cancer, and an Inflammation of Blood. This
Inconvenience was so cutting, that some crept into Sacks
and Bags, leaving only a small Hole to breathe through,
and all of us were forced to make Fires, and lie down in
the midst of the Smoke.

The Island of *St. Lawrence* is seven hundred Leaguers
in Circumference. It lies between 26 and 1. South Lat-
itude. It abounds in Cattle, especially Sheep, which
bring forth three or four Lambs at a time; the Cattle are
not appropriated, but common to all that catch them; for
the Inhabitants, and indeed most of the other *Indians*,
chiefly rather to feed on Fish, Fowl, and Milk. It is com-
mon there to see two or three hundred Bulls and Cows in
one Herd, and when they come to cross a broad deep Riv-
er, the Cows raise their Heads upon the Bulls Rumps,
and so get over. We anchored at the Mouth of a River
that afforded great Plenty of Fish and Crocodiles, and
when we killed a Crocodile, and took out its Entrails, we
observed, that like Milk they made a very agreeable Per-
fume in the Air. The Natives are of a tawny olive Col-
our, inclining to red; they are tall, frail, well made, and
not only of a ready Apprehension, but wiser; their Hair is
long, and weather'd into Strands. They are naked all over,
excepting that their Privities are covered with Cotton Cloth.
The Women wear one Piece of Cloth, that covers them
from under their Breast to their Girdle, and another that
reaches from thence to the Knees, their Heads being bare,
and shaved. Their Arms are Bows and Javelins, called
Arroyas, for the Noise of a Gun might them exceedingly.
This said that this Island was formerly peopled by the
Chinese, upon the Occasion of a Ship's being cast away upon
that Coast; and indeed they resemble the *Chinese* very
much, being that their Complexion is not near so white,
which perhaps in my Proceed from their going naked, and
living in the *Torrid Zone*. At present the Island is very
populous, and governed by several Kings that wage War
with one another: Some of the Inhabitants are *Mohammedans*,
and circumcised, and the rest are *Pagans*. The in-
habited Parts of the Island are in great Want of Water.

On the 14th of May, having refitted our Ships as
well as we could, and provided ourselves with Water,
Wool, and Fleth, which after all would not take Salt to
us, as what we have in *Europe*, we I think, and steer'd for
the *Carnaria* Islands, from the Consideration that our Com-
plement of Men was very short and sickly. The 2d made
the Islands, which lie in 12° 35' South Latitude between
St. Lawrence and the Continent of *Africa*, at the Distance
of twenty Leagues from *Moscambique*. There are five of them,
each of which has a peculiar King, and one of them call'd
Milailil, being surrounded by the other four. We chose to
anchor in its Road; we saw several Villages ashore, the
Inhabitants of which used us kindly, and gave us Fruits in
Exchange for Trinkets made of Iron. The Inhabitants of

a mountainous Run nie above the Water, with in the
Form and Figure of a Man, with a sort of Beard towards
the Chin that seem'd to be its Pins, and a long scaly Head,
terminating in a Point: when we offer'd to come near
him he plung'd his Head under Water, and to discover'd
Part of his Back, which was scaly. We find a Fort-
night in this Road, and the Goodness of the Fruit and the
Air cured our Men of the Scurvy to a Miracle; and in-
deed I have always observ'd that Citrons and Oranges,
and their Juices, are of sovereign Use in scorbatick
Cafes.

On June the 17th we set sail, and the 24th repass'd the
Equinoctial Line, standing to the Northward in the Lat-
of 5°. We perceived some great Shelves surrounding
little Islands, which were the *Maldives*, though most of our
Matters and Pilots mistook them for the Islands call'd *De
digo des Koer*, which we had left eighty Leagues a Stern to
the North West. Our Admiral design'd to pass to the
North of the *Maldives*, between them and the Coast of
India; but, on the contrary, we run directly upon them,
whereas we ought to have flood an hundred Leagues off
them, if we had a Mind to be safe. In fine, such was
our Misfortune, that the *Corbin*, which sail'd a-head, truck
thrice upon a Rock, at the Distance of five or six Leagues
from the Coast of the *Maldives*. In this Disaster we saw a
Bark belonging to the Islands, which would not come near
us on account of a strict Prohibition in that Country to
approach any Ship in Distress without the King's Leave.
In the mean time the Sailors eat and drank heartily, and
treated their Commanders with Insolence, insulting all
those who shew'd any Regard for Religion, and loudly
proclaiming that, since Death was so certain, they were
resolv'd to render its Approaches easy and soft. This
fill'd me with Horror, and convinc'd me that most Sailors
leave their Souls and Consciences ashore. In fine, after
continuing two Days in this deplorable and desperate Con-
dition, we made a shift to reft our Gallion, and had it
cover'd the Flats, and, with infinite Labour and Difficulty,
arriv'd on board of it at one of the Islands call'd *Poulaion*,
which is not a League in Circumference. We had car-
ried some Arms along with us, but the Inhabitants disput-
ed our Landing till we had given up our Arms, and sur-
render'd ourselves at Discretion. There were not above
twenty or twenty-five Inhabitants in the Island, but they
conceiv'd their Measures so wisely, that they lent off our
Boat and all their own to the other Islands: to prevent
any Insurrection from us, they carried us to a Lodge in
the Middle of the Island, where they entertain'd us with
some Fruit, Cocos, and Lemons, and treat'd us of all we
had, alledging that it belonged to their King, as being a
Wreck. We had a Piece of Scarlet Cloth with us,
which we pretended was design'd for a Present to the
King of the Islands, affirming at the same time, that the
whole Cargo of our Ship was for a Compliment to him.

Upon this nobody dar'd to touch the Scarlet;
but, after all, we cut off a Piece of two or three Ells of it,
and present'd it to the Governor of this little Island,
in order to oblige him, and he, who was a very old Man,
took it very kindly, conjuring us not to speak of it.
Soon after the Governor sent the Master and two Sailors
to the King, who resid'd in the Capital Island call'd *Atile*,
and the Master present'd him with the Piece of Scarlet.

without acknowledging any Superior, which appears to
me a strong Proof, that they are separated by a Sea
from all other Countries, since if it were otherwise,
they would undoubtedly be governed as those Countries
are. I am sensible, that it may be objected against the
first Proof I offer, that the Currents of which I am
speaking, may possibly be occasion'd by the Opening
of some great River, which discharges itself into the
Sea, somewhat farther to the North, and thereby occa-
sions such an Accession of Water, as in passing through
those Straights, form such terrible Currents. But after
all, I cannot help esteeming it more reasonable to believe
that this Country is bounded on that Side, as well as
on the rest, by an Arm of the Sea. At least this is
the most common Opinion, and I remember to have
seen in *Sicily* an old Map of the World, in which the
Land of *Yesso* is laid down as an Island. As to what
the Inhabitants of the Country say, I have examin'd
those that came from the East, and others who came
from the West, but found them all alike ignorant of
Geography.

be lost, he threw himself into the Sea, and swim to one
of the little Vessels, on purpose to bring them safe into
Shore. He was no sooner got to them, but the Women
with their Children on their Backs, and all that were in
that Vessel, threw themselves overboard, and swim to the
other. He seeing himself alone in the Vessel, resolv'd to
follow them, and getting aboard the second, shew'd them
how to avoid the Shoals, and brought them safe to Land;
in the mean time they stood immoveable, and resign'd
themselves up intirely to the Conduct of this Stranger, as
so many Prisoners.

The Inhabitants of *Guizam* running to Shore, received
them very kindly, and brought them Wine and other Pro-
visions; they eat Cocos very freely, which are the Fruit of
the Palm-trees of this Country. Their Pulp is something
like that of Chestnuts, only that it is more oily, and sup-
plies them with a sort of sweet Water, very pleasant to
drink; they gave them Rice boiled in Water, which is
eat there and all over *Asia* as Bread is in *Europe*; they
looked on it with Surprise, and taking up some Grains of
it, threw them on the Ground, imagining them to be
Worms; upon bringing them large Roots call'd *Palmus*,
they eat greedily of them. In the mean time they brought

reducing such a vast Abundance of Materials, as the *Portugueze* Historians, and those of other Nations, who have treated on different Parts of this Subject, have amassed, within the Bounds of one Section, and that too of no great Size, will require great Diligence, and put me under the Necessity of laying aside many Things which those Writers thought worthy of transmitting to Posterity. But this will be so far from proving in any respect prejudicial to the Reader, that it will on the contrary turn to his Advantage, because it will free him from the Trouble of running through a long Course of trifling Circumstances that have had or nothing to do with the main Point.

For as to the copious and swelling Panegyrics on particular Captains, the long Accounts of the Travels and Labours of Missionaries, and that pompous Detail of Church History, which makes up at least two-thirds of what these Authors have delivered, they are certainly Matters that an *English* Reader would be tempted to hurry over as fast as possible, and therefore the Omission of them must contribute not only to the Elegance, but to the Usefulness of this Performance. Indeed, when freed from these and other cumbersome Circumstances, there cannot be any thing more pleasant or instructive, and at the same time more curious and instructive, than this Part of our History, in which we see what mighty Things may be performed by Courage, Industry, and Application, and how soon even the smallest States, by cultivating a maritime Power, become potent and considerable.

The little Kingdom of *Portugal* is bounded on the North and on the East by several Provinces of *Spain*, and on the South and West by the *Atlantick* Ocean. It extends from 32° to 42° of North Latitude, and lies between the 7° and 10° Longitude West from *London*. It is in Length from North to South about three hundred Miles, and in Breadth from East to West about one hundred. The Climate is pleasant and wholesome, the Soil fertile in some Places, but not in many, so that they are supplied with Corn by us and by the *Dutch*. This Country was formerly famous for Gold, but for many Ages there has been none, or at least but little of that precious Metal found there. There is, indeed, a very rich Silver Mine at *Guacaldana*, still wrought with considerable Profit; but the principal Advantage of *Portugal* is its Situation on the Sea, and the Excellence of its Harbours. That of *Lisbon*, if we extend it from *St. Benez's* above it, to the Bay of *Cascais* at the Mouth of the River, is four or five Leagues long; but if we only take in that Part of it about the Town, where Ships ride in the greatest Security from Storms and Enemies fifteen Fathom Water, it will contain several thousand Sail, the Entry of it indeed is hazardous without a Pilot, but on the other hand, Ships ride securely when they are in it, being covered by the Hills on which the City stands on one Side, and by the opposite Banks, which are very high, on the other. There are, besides this, several other good Ports in this Kingdom, the Subjects of which have been always famous for their Application to Maritime Affairs, and after they had driven the *Moors* out of their Country, followed them into their own, and, under the Reign of King *John the First*, defeated them in a great Battle, and took from them the Forts of *Ceuta*, which still remains in the Power of the Crown of *Spain*.

It was to the Zeal and Magnanimity of the Infant Don *Henry*, the Fifth Son of this King *John*, that the *Portugueze* are indebted for all that Glory which they have acquired by their Discoveries and Conquests in the East, and we may justly consider the Attempts made by them at this Justice as the more extraordinary, since their Country was but just recovered from a long and dangerous Civil War, the Power of their Prince very far from being great, his Finances very low, and the Country to indifferently peopled, that he was obliged to have recourse to other Nations for Men to recruit his Armies, and to serve on Board his Fleets, which were very far from being considerable; I

do not mean in Comparison of the Fleets fitted out in our Times, but of those that were then employed by the Crown of *Spain*, and the Republicks of *Italy*. Yet under these Discouragements this Spirit of Trade and Navigation not only sprung up, but prospered; and this too, notwithstanding that many of their Statesmen were very averse to such Undertakings, from the Danger and Difficulties that attended them; nor could they in all Probability have been carried into Execution, but from the Zeal of the Clergy, who, out of a Desire of propagating the Christian Faith, promoted them to the utmost of their Power.

2. The Infant Don *Henry* Count *de Viseo* was a Prince endowed with all the great Qualities that distinguish Heroes from other Men. He had shewn his Courage in his Youth in the Wars against the *Moors*; but he was far from valuing himself on the Power of destroying or making miserable his Fellow-creatures, and therefore thought the proper Object of Valour was the facing those Dangers that hindered the Prosecution of such Designs as might be beneficial to the human Species. He resolved therefore to make himself Master of the *Cannaries*, which were then in the Hands of *Maoi de Bethanceart*, who held them under a Grant from the King of *Castile*, and who for a valuable Consideration made over his Right to Prince *Henry* about the Year 1406. He sent *Ferdinand de Castro*, who was at that time Master of his Household, to take Possession of them, and receiving that they might be of great Use in the Discovery of the Coasts of the great Continent of *Africa*, which were then very little known, he began about the Year 1410, to fit out Ships for that Purpose, and took *Spamoras*, and others who were skilled in Navigation, into his Service for that Purpose.

The utmost Limits of the South-west Part of *Africa*, then known to the *Portugueze*, was a Cape running out from the Foot of Mount *Atlas*, the proper Name of which was *Chaunar*, but called by the Seamen Cape *Non*, situated in the Latitude of 28° 10' North; and these Vessels proceeded along the Coast to Cape *Bojadore*, in 26° North Latitude, but they had not the Courage to double it. In 1418 *Tristan Vaz* discovered the Island of *Porto-Santo*, and gave it that Name, because the first saw it on the Feast of *All Saints*. The next Year the *Portugueze* discovered the Island of *Madeira*, to which they gave that Name, on account of its being covered with Wood. In 1439, a *Portugueze* Captain doubled Cape *Bojadore*, which some think is the same that in the Writing of *Ptolemy* is called Cape *Cannier*. The next Year they sailed as high as Cape *Blanca*, in the Latitude of 20°, and soon after discovered the *Rio del Oro*, with several small Islands upon the Coast. In 1446, *Nuno Tristram* doubled Cape *Verd*, in the Latitude of 17° 45'. In 1448, in the Spring, Don *Gonzalo Albo* sailed to the Islands called *Apories*, or the *Hawk-Islands*, from the Word *Agor*, which in the *Spanish* Language signifies a Hawk. They were at that Time uninhabited, and were settled by this Commander, who did not, however, visit at this Time the Islands of *Flores* and *Corvo*, which were settled, as we have elsewhere observed, by some *Hemings*, and from thence were called the *Hemish* Islands.

In the Year 1449, the Islands of Cape *Verd* were discovered on the Behalf of the Infant Don *Henry*; the first of these was called the Island of *May*, because they came thither on *May day*, and at the same time they bestowed the Names of *St. James* and *St. Philip* on two of those Islands, the Rest remaining undiscovered till the Year 1460. The progress made by the Infant Don *Henry* gave great Satisfaction to the Princes that possessed the Crown of *Portugal*, inasmuch that King *Alphonso IV.* or rather the Infant Don *Peter*, who governed the Kingdom during his Minority, made him a Grant of the Islands of *Porto-Santo* and *Madeira*. The Infant, however, judged it requisite, according to the Custom of those Times, to obtain the Sanction of the Holy See, and for that Reason sent Don *Fernand Lopez d'Azavedo* as his Embassador to Pope *Martin V.* who, as the

I was very far from being my Intention to give the Reader either a Description of the Kingdom of *Portugal*, or the History of it: for both being to the succeeding Volume. What I have said in the Text was purely to render the subsequent Part of this Section as perfect as I could, and well connected. By comparing the Force of the Kingdom of *Portugal* with the Conquests gained by the *Portugueze* since *John the First*, he will be made fully sensible of the Truth of my Remarks, and by attending to the Situation of this Country, he will be furnished, even there was no long time more than a Nation's turning their Thoughts to that for which Nature designed them, for with respect to the *Portugueze*, as to the Possession then had, the *Portugueze* were better treated than any other People in *Europe*.

...ing it in such a Manner as might be most honourable to himself and advantageous for his Subjects, the great Ruler of all Things disposed of him otherwise, by calling him out of this Life. In his last Sickness he appointed his Cousin *Don Emanuel*, who also married his Sister, his Heir. This Prince who succeeded to the Throne of *Portugal*, 1497, was in the Flower of his Age, being then about Twenty seven, and possessed, in an eminent Degree, those Qualities that are most worthy of a Monarch. He had great Parts, much Penetration, and an excellent Judgment, yet he was so confident of his own Abilities, that, foreseeing the Execution of his Predecessor's Projects would be attended with a larger Expence than the Discoveries hitherto made had induced, he declined entering upon them, without taking the Advice of his Council, before whom he laid all the Informations that either himself or his Cousin King *John* had received. The *Portugueze* Statesmen were extremely divided in their Opinions, for some pressed the King warmly to tread in the Footsteps of his Ancestors, and, to comply with *Glozy*, who with so much Reputation they had begun; while others as vehemently opposed his Pursuit of this Design, each Party supporting their Opinion by very plausible Arguments.

Such as were desirous that this new Navigation might be attempted, observed, that the Trade to the *Indes* had been the great Source of Power and Riches to every Empire that had been possessed of it, that Providence seemed to have thrown it into the Hands of their Nation, in such a manner that it would not only be disadvantageous but dishonourable to refuse it; that all Difficulties now were in a manner overcome, so that there remained scarce any thing but the going to take Possession of those fine Countries, and that vast Wealth which all the World thirsted after, though none but themselves knew how to reach; that the engrossing to rich a Trade to *Portugal* would balance their small Extent of Territory, and enable his Subjects to make as great or greater Figure than the Inhabitants of Kingdoms much more potent in Appearance; that, in fine, there was no less Danger to be apprehended from abandoning this Design, than Benefit to be expected by pursuing it, since, in all Probability, their ambitious Neighbours, the *Spaniards*, would pursue and accomplish this great Work, which would enable them to execute, with Ease, whatever they might be prompted to by their boundless Ambition.

On the other Side it was alledged, that there were many Things more apparently necessary to the Kingdom than such large, such expensive, and such uncertain Expeditions, since there were several large Tracts of Land, and particularly that spacious Plain betwixt the *River* and the *Zagas*, that were not properly cultivated, the Improvement of which would free them from the Necessity of depending for their daily Bread upon Strangers; that their Country was but thinly peopled, at least, in proportion to the Number it might be able to maintain, it, instead of nature Expeditious they turned their Thoughts towards making the most of what was in their Powers so that it was very unreasonable to squander away Men that might be immediately useful to their Country, for the sake of distant, and perhaps fallacious Expectations; that all their Discoveries and Conquests hitherto, had furnished him only with a few Negroes, Elephants, Teeth, strange Birds, and other Curiosities, in procuring which they had suffered many Sore weeks, and run the Hazard of many more; that, for a Cento y together, they had been amused with these golden Dreams, and therefore it was high Time to

awake from this Delusion; that the Kings his Predecessors had been at vast Expences, to very little Purpose, in Pursuit of the like Designs, and that this ought to render him not only the more cautious in following their Example, but oblige him also to consider the Consequence of running an exhausted Nation into Expences she was unable to bear; that besides the Success of the Undertaking, might bring such Demands upon the Crown of *Portugal*, as would greatly exceed her Forces; so that perhaps her Interests at home might come to be sacrificed to those abroad. I have dwelt the longer upon these Arguments, to show that the greatest and most salutary Designs are liable to as many Objections as the most dangerous and the most destructive.

4. The Deliberations into which the King entered upon this important Affair, though they did not absolutely carry him from his Purpose, or engage him to abandon a Design which was, in some measure, recommended to him, with his last Breath, by that great Prince to whom he owed his Throne, yet they, for a long Time, retarded his Preparations, and hindered him from undertaking that Project in the Manner he had first intended: At last, however, fearing that his Neighbours might take Advantage of a longer Neglect, especially as he understood that the *Spaniards* very vigorously pushed toward their Discoveries, he came to a final Resolution to wait no longer, but to make a Trial of what might be done in this Way, by sending a few Ships only with a small Number of Men, in which he endeavoured to avoid Extremes, and to steer as it were in the Middle, between the Opinions of such as were of his Council. It was in consequence of this Determination, that in the Spring of the Year 1497, he ordered four Ships to be equipped for his Expedition, of these, three were armed Vessels, with some Pieces of Cannon on board, and the fourth a small Store-ship. We may be sure that their Force was not very great, since, in the whole, it consisted in no more than an hundred and sixty Soldiers and Seamen.

The Person chosen to command was *Don Vasquez de Gama*, a Man of Quality, who possessed all the Talents necessary for such an Employment. On the 9th of *July*, 1497, he embarked on board the *Gabriel*, which was the Admiral of this little Fleet, of the Burthen of One hundred and twenty Tons, and the same Day put to Sea: On the Third of *August* he left the Island of *St. Augustin*, on the Twentieth of *November* he doubled the Cape of *Good Hope*, in the Beginning of the Month of *January* he put into a Port of *Ethiopia*; and, on the first of *March*, he entered the Port of *Mozambique*, where the Savages destroyed many of their People, and where they were in great Danger of being betrayed, as soon as they were known to be Christians. His Artillery, however, preserved him, and from thence he continued his Voyage to *Mombaza*, where he again met with very perfidious Peasants. He sailed from thence to *Melinda*, the Prince of which Country received him with great Civility, and promised to send an Ambassador by them when they returned into *Portugal*.

Don Vasquez, in Obedience to his Instructions sailed from thence for the Coast of *Malabar*, and arriving happily at *Calicut*, there first heard of a puissant Monarch in those Parts, styled the *Sumerin*, which is a Dignity comparable to that of Emperor; there he met, very unexpectedly, with an extraordinary Act of Friendship; for, on the first going of his Officers on Shore, they were met by a *Moor* of *Tunis*, who knew them, by their Dress, to be *Portugueze*; and though both on the shore of his Country

* It is clear from hence, that if any Accident or Shipwreck had attended this Voyage, there had been an End of the Design for ever, though it would have remained just as reasonable and fit to have been undertaken as before, which I mention to show how probable a Thing it is, that in a great and glorious Discoveries have been prevented by such groundless Oppositions.

The Reader will easily perceive, from this Discourse, that it is not a great Force, or a vast Expence, that is necessary to the Execution of an important Design, but the Choice of a good Officer, one who knows what he is to do, and goes with a Resolution to do what he is sent to do. All the famous Expeditions, from the Beginning of the World to this Period of Time, are not comparable to what was performed in the narrow Compass of one Year. Time by *Columbus* and *Vasquez de Gama*; for the former sailed on the 11th of *October*, 1492, and the other on the 12th of *July*, 1497, so that as I observed before, the Discovery of the *East Indies* and the *West*, were completed in seven Years, at a small Part of the Expence that attended our last *East India* Expedition, and with a Force that would be scarce thought sufficient for equipping, at this Day, *Three* *Portugueze* Ships. I must say this with any View of making invidious Comparisons, because I am persuaded that our *Antients*, who commanded the *West India* Expeditions, had he used in those Times, and been assisted with other of those Commands, would have done as much as *Columbus* or *Gama*. But I have not this System with this View, that our Countrymen may be taught, that as great Things as these may yet be done, whenever our Undertakings are conducted by *Politic* Officers, and the Execution of them entrusted to Officers who are known to have a greater Regard to *Glory* than *Fortune*.

and his Religion, it was natural for him to hate them, yet he very generously offered them his Service, and very faithfully fulfilled all that he promised. He acquainted the *Samorin*, that a certain rich, powerful, and warlike Nation, were come from the farthest Parts of the Earth to seek his Friendship, and to desire Leave to trade with his Subjects: This Representation had its Effects, *Gama* was allowed not only to anchor in that Port with his Ships, but was also admitted to an Audience, in which he was treated with all the Honours and Respect imaginable.

But things however did not remain long in this Posture, for the *Mohammedans*, who were settled in great Numbers in the Dominions of this Prince, being that their Commerce must be destroyed by the coming of the *Europeans*, took incredible Pains to misrepresent them, as ambitious, fraudulent, and cruel People, who meant nothing but to depole the *Samorin* himself, and to conquer his Country; which Stories had such an Effect on the *Indian* Monarch, that he began to form Schemes for the Destruction of *Gama* and his People. Don *Vasquez* however, had very early Intelligence of his Design, and therefore hastened on Board his Ships, and quitted the Coast. He wrote, however, a Letter to the *Samorin*, in which he very gently complained of this Breach of Faith, justified himself from the Imputations thrown out against him, and advised the *Samorin* to return to his former Sentiments, assuring him that he would not as Account in changing his Commerce with the *Mohammedans* for that of the Subjects of the King his Master. The *Samorin* wrote him a very polite Answer, in which he threw the Blame upon his Ministers and the *Mohammedans*, promising to punish in him as well guilty, advising him, that for the Time to come, his Nation should meet with no Reason to complain. He added to these Compliments a very respectful Letter to the King of *Portugal*, in which he accepted the Propositions made him on his Majesty's Behalf, and promised a free Trade to his Subjects, without further Answer to his former Allies.

Don *Vasquez* having received the Letters, proceeded to the Island of *Angedive*, at the Distance of fifty Leagues from *Calicut*, where having repaired his Vessels, and refreshed his People, he set sail from thence in order to return to *Europe*. In his Passage, he took Care to put into *Mozambique*, where he was received with great Friendship, and according to his Promise, sent with him an Ambassador to the *King*. He sailed thence to the Island of *Zanzibar*, but finding by the Way, that his Crew was much diminished, he burnt the *S. Raphael*, which was commanded by his Brother *Paul Gama*, and took the Men on Board his own Ship. From *Zanzibar* he sailed to *Mozambique*, where he took in a Supply of Provisions.

On the 25th of March following, he doubled the Cape of Good Hope, proceeded thence to the *Islands of Swaziland*, and in the Month of September, 1497, arrived late at *Calicut*, having spent two Years and two Months in his Voyage, and being lost by Sickness and Fatigue about one third of his Crew, and amongst them his Brother. The Captain of his first Ship directed him in his Passage Home, with a View to give to *Calicut* before him, in which he succeeded, and employed rather advantageous than profitable to Don *Vasquez*, for King *Emmanuel* sent him of his private Nobility to meet him, receiving him, on his coming to Court, with all imaginable Marks of Favour and Esteem, and rewarded him beyond every thing but his Merit. He created him *Count of Indiguera*, gave him the royal Arms of *Portugal*, charged with two Lions, in Addition to his Name of *Gama*, which signifies a *Vice*; and though he brought in great Riches home, bestowed upon him these Appointments. He made also great Presents to all his Officers, but was there to much as a private Man on Board the Ship, that did not receive the personal Thank of this Prince, and with it considerable Marks of his Bounty.

So happy a Conclusion of the first Attempt, paved the Way to a second Expedition, for which the King caused immediate Preparations to be made, but at the same Time declared, that Don *Vasquez* should enjoy in Peace that Glory he had acquired, and not be obliged to hazard his Person in a second dangerous Voyage. It may not be amiss to observe, that this second Expedition met with no Success, much more powerful is Success than Reason, and the greater Authority of Experience, than all Arguments in the World. All Experiments were but trifling, and those who before had treated the *Indies* as a Chimeræ, were now fully convinced, that it was impossible to perform.

The Fleet therefore intended for this Expedition, consisting of thirteen Sail, some of which were Ships, was to effectually vindicate, in arms and blood, as to fill Strangely with a full Liberty of the Courage, Power, and Wealth of the People inhabiting that Coast, from which it came. Don *Pedro Alvarez Cabral*, appointed General and Commander in Chief, and assisted by him Proofs to instruct the Natives, if they were to be had; but it not, and determined to a select of his most experienced hundred chosen Men on Board, when he set sail with Force sufficient to support him. In the Month of June, in the Year 1500, he sailed from the River of *Travancore* having thence, that was much the proper Season of the Year for sailing to the *Indies*. In his Passage, keeping out to Sea, in order to avoid the Storms which therto had been met with, he coasted the Cape, he had himself near an unknown Coast, which he called *Africa*, and as the Coast made no appearance, he thought fit to make a Stop, and to land some of it on the behalf of his King his Master, who he accordingly called the *Island of the Holy Cross*, that is to say, since known by the Name of *Brazil*.

This Discovery appeared to him of great Importance, notwithstanding he had already seen it, and was ready, he thought fit to send *Captain Tomaz* to *Portugal* with the News, and one of the Nobles on Board, as a Proof of this Discovery, and he himself with twenty condemned Persons who were put on board him for such desperate Service, in that new found Country, and then prosecuted his Voyage.

In a short Time after he left *Brazil*, he was seized by a most dreadful Storm, which lasted twenty Days together, in which he lost many of his Crew, and some of his Ships, on Board of which was the *Captain* *Diago Diaz*, who still doubled the Cape of Good Hope, and who, by this unlucky Accident, paid the Penalty of that which were on Board that Ship. The Government of this Island, this Misfortune, continued till he was distressed at *Mozambique*, where he arrived with only six Sail, and those to in a very shattered Condition. He labouring remembering the Difficulties of his Voyage, his Predecessor, received him, if not with Honour, at least with Respect, and furnished him with what was demanded; he sailed from thence to *Malinda*, where he continued his Route to *Melinda*, where he had the Honour to see the Ambassador of that Prince, whom he had previously brought over.

He proceeded from thence with a fair Gale of Wind to the *Angedive* Islands, where he refreshed himself, and his Crew. The *Samorin* having Intelligence of his Arrival, sent certain Persons of Education to congratulate him thereupon, and to invite him to *Calicut*, which Invitation he accepted, provided he had the Liberty of his own Security. This was not felt a pretty boy. He thought, when he came to explain himself as to the Illness he expected, it appeared of a much more extensive Nature. He demanded the Cause, or Continuation of the Court, and some other of the *Samorin's* Ministers, to which that Prince listened at first, but at last yielded to

It is not to be observed, that *Francis and Isabella* had not sent *Columbus* to discover *America*, at the Time they did, because they were not yet married, and it was not till the Year 1494, that they were joined in Marriage. It is also to be observed, that *Columbus* was not the first Discoverer, worth it they do not immediately succeed, are necessarily attended with their usual Success. It is also to be observed, that *Columbus* was not the first Discoverer, worth it they do not immediately succeed, are necessarily attended with their usual Success. It is also to be observed, that *Columbus* was not the first Discoverer, worth it they do not immediately succeed, are necessarily attended with their usual Success.

to, and to all the other Demands made by the Portuguese General. On his Landing, he was received with all imaginable Civility, and immediately admitted to an Audience of the Emperor, at which *Capral*, who was naturally vain, made a pompous Display of his Magnificence. The *Samorin*, to demonstrate the Sincerity of his Professions, made him a present of a Houfe, by a Deed of Gift, which was ingroffed in Letters of Gold; he permitted him alfo to fet up the Standard of *Portugal*, to appoint a Factor, or Conful for his Nation, and to open Magazines for the effectual carrying on of Commerce, but all this fair Shew of good Intelligence and reciprocal Friendship soon came to nothing.

The Portuguese Historians assure us, that it happened through the Imprudence of their new Factor, or Conful, whose Name was *Correa*, and who, on fome flight Information, acquainted *Capral*, that the *Samorin* intended him fome foul Play. The Portuguese General, upon this, began to fize the Ships of the *Indians*, and to commit other Acts of Hostility; upon which the Inhabitants, as might be reasonably expected, attacked the Portuguese Factory, forced open the Gates, pillaged and burnt the Houfe, and of fixty-fix People that were in it, murdered fifty, the rest faving themselves with great Difficulty on Board their Ships. The Portuguese General took a very fevere Revenge, by burning ten rich Ships that were in the Port, making Slaves of Part of their Crews, and beating down a great many Houfes about their Houses; alfo which he filled away for *Cochin*, which lies thirty Leagues from *Cicut*.

The Prince then on the Throne of *Cochin*, was called *Trimumpara*, who having Reasons to be offended with the *Samorin*, received him very kindly and concluded a Treaty with him, into which the Kings of *Coulan* and *Cananor* desired to be admitted. *Capral* taking great State upon him, did not immediately listen to this Proposal, but offered to carry their Ambassadors, if they thought fit to fend any with him, into *Portugal*, assuring them, that his Master would fend them speedy and powerful Assistance against the *Samorin*. They readily accepted his Offer, and the General having taken on Board a rich Cargo, paid a Visit to the King of *Cananor*, and having received the Ambassadors of all the three Princes on Board, he in the Month of *January* sailed from *Cochin*, in order to return to *Europe*.

The *Samorin* fitted out a great Fleet, on Board of which were two thousand Men, and sent it in Pursuit of them, but the Portuguese being better Sailors, easily escaped this Danger. In his Passage home, one of his Ships unluckily ran ashore on the Coast of *Melinda*, and *Capral*, to prevent the *Mohammadians* from making any Advantage of this Accident, first nailed his Cannon, and then set the Ship on Fire; notwithstanding which, the King of *Melinda* found Means to weigh the Artillery, and to render them serviceable, to the great Prejudice of the Christians.

The Portuguese General continued his Voyage, doubled the Cape without any great Difficulty, and arrived safely at *Lybon*, on the 2.d of *July*, 1501. He brought Home with him a very rich Cargo, the Ambassadors of three Princes, and a pompous Account of the great Exploits he had performed against the *Samorin*. All which, however, did not procure him a very favourable Reception from his Master, on account of the great Loss he had sustained in this Voyage, and the Number of gallant Men who had perished in it, and who were not to be replaced or replaced, by all the Wealth of the *Indies*.

It seems, Don *Emmanuel* had some Forefight of what might happen from the haughty Disposition of this Officer, and therefore had dispatched a Squadron of four Sail to the *Indies*, under the Command of Don *Juan Nova* *Cabeza*, a Man of great Prudence and Courage. He sailed of *Capral* in his Passage, but arriving at *Melinda*, and there learning what had passed at *Cicut* and *Cochin*,

he continued his Voyage to *Cananor*, and having complimented the King on the Part of his Master, failed for thence for *Cochin*. He met in his Voyage, a Fleet of upwards of four score Sail, which the *Samorin* had sent to attack and destroy him in the Port of *Cananor*. Don *Juan*, notwithstanding the great Inequality of their Force, fought them for a whole Day, and having sunk ten of the *Enemy*'s Ships, four Barks, and other small Vessels, and killed upwards of four hundred Men, forced them to return with Shame to *Cicut*. After this Victory, he was received with all imaginable Mark of Kindness and Gratitude at *Cochin*, where having at Leisure reinvailed his Ships, and taken in a very rich Cargo, he failed for *Europe*.

He doubled the Cape without any Difficulty, and in his Passage from thence touched at the Island of *St. Helena*, of which he made such a Report on his Return to *Lybon*, as engaged the King of *Portugal* to intrust his Admirals to touch for Refreshments there for the future. But a Squadron of six Sail that were sent to *Brazil* at the same Time Don *Juan* was dispatched to the *Indies*, had not the like good Fortune, four of them being lost at Sea, and the two that returned brought little with them except Monkeys and Parrots.

6. The Necessity of sending a greater Force into the *Indies* than had been hitherto employed, was now very apparent, and therefore King *Emmanuel* ordered twenty sail of stout Ships to be equipped for that Purpose, neither did he find it more difficult to furnish so large a Force with every thing necessary, than to fit out the small Fleets he had sent before; for now that there was a Prospect of great Riches being got by this Commerce, he had not only the Command of the Wealth of his own Subjects, but Foreigners also resorted in Crowds to *Lybon*, some in search of Employment, and others to employ their Money. The Bunnels was next to find a Person fit to be intrusted with so great a Command, and the King, after mature Reflection, determined to engage *Vasquez de Gama* to go thither a second Time. That great Officer was in every Respect as easy and as happy as he could wish; his Reputation was well established, his Fortune larger than his Desires, and the Affairs of his Family in the fairest Situation. But the present Posture of things made his Presents necessary abroad, and from a Sense of this he readily quitted his Retreat, and sacrificed all the Blessings of Life, as became a Man of Honour, to the Service of his Country.

In the Spring of the Year 1503, he sailed from *Lybon*, doubled the Cape without any remarkable Accident, and arriving at *Quilao*, forced the King thereof to become tributary to his Master, and to agree to the annual Payment of two thousand Crowns of Gold. He failed from thence to *Cananor*, where he let the Embassador on Shore, made several rich Presents to the King in the Name of his Master, renewed the Alliance made with him, and then sailed for *Cochin*. While he was there, he received a Deputation from the Christians of *India*, or, as they are commonly called, Christians of *St. Thomas*, to whom he promised all the Assistance in his Power, and that he would leave, as indeed he did, a strong Squadron behind him to protect them. The *Samorin* in the mean Time neglected nothing in the Power of a great Politician, or of a puissant Monarch, to destroy his Enemies. He laboured all he could to engage *Trimumpara* to betray Don *Vasquez* into his Hands; but that Prince answered, that hitherto the Portuguese had behaved towards him with great Honour and Generosity, and that while they continued so to act, he would never abandon them.

The *Samorin* had next Recourse to open Force, and assembling a Fleet of twenty-nine Sail, resolved to attack Don *Vasquez*, when he was ready to return with his Fleet heavy laden, and consequently in a Condition less able to oppose him. When therefore he had Intelligence that the Portuguese Admiral was preparing for his Departure, he sent this mighty Force against him. Don *Vasquez de Gama* suffered them to come as near him as they thought fit, and

I think it requisite to add a Note here, in order to inform the Reader, that this is no Remark of mine, but taken from the Portuguese Writers, who in an Argument, that in those Days, when a true Spirit of Virtue prevailed, it was held more honourable for a great Officer to serve his Country in such a manner, and that *Capral* was blamed, not for his want of Zeal or Courage, for he does not seem to have been defective in either, but for not being in command of his People as he ought to have been; for it is, and will be, a Maxim in all well governed States, that he is no Friend to his Country, who is careless of his People.

then attacking two of their largest Ships with great Vigor, the Seamen and Soldiers, after a short Resistance, in which they lost three hundred Men, jumped over-board, which struck such a Terror into their Companions, that they immediately spread all the Sail they could, and bore away in the utmost Confusion. In these two Ships that were taken, Don Vaquez found immense Riches; for besides Gold and Silver Plate to a great Value, there was on board one of them an Idol of a most horrid Shape, which weighed sixty Pounds in Gold. In the Head there were two Emeralds for Eyes, more perfect than any that had been seen in *Europe*; and in the Breast there was fixed a Ruby of the Size of a Chestnut, these and other valuable things being taken out, together with a Robe designed for the Idol, embroidered with Pearls, Topazes, and Diamonds, the Ships were set on Fire.

Vaquez proceeded from thence to *Cananor*, conferred with the King on the Measures necessary to be taken in his Absence, and then leaving behind him six large Ships under the Command of *Vincent Sodrez*, he sailed for *Mozambique*, where having taken in some necessary Refreshments, he continued his Voyage without the least unlucky Accident, till he arrived at *Lisbon*, where he was received with the utmost Joy, and the Tribute of the King of *Qyloa*, in a Silver Basin, was carried in Triumph before him.

As soon as *Gama* left the *Indies*, the *Samorin* assembled an Army of 20,000 Men, and marched to attack the King of *Cochin* by Land. The News of this Invasion so frightened the Subjects of that Monarch, that they began to curse the *Portuguese*, and to treat their King to make his Peace with the *Samorin*, by delivering up such of them as were in his Hands, and renouncing his Alliance with them. *Trinumpara* behaved on this Occasion with extraordinary Firmness, he gave the *Portuguese* that were at *Cochin* a strong Guard, and notwithstanding the Cowardice of his Subjects, resolved to put all to the Hazard, rather than break his Faith.

At this Juncture *Vincent Sodrez* arrived with the Ships under his Command, to whom the King applied himself for Relief, and desired he would land a Part of his Force to assist him in this Extremity. The *Portuguese* Officer was a very brave Man, and understood his Business perfectly; but he loved Money, and had found a very easy way of acquiring it, by plundering the *Mohammedan* Traders. He therefore found out, that by his Instructions he was to act by Sea, and not on Shore, and therefore would not consent to land to much as a single Man. This amazed the King, and enraged the *Portuguese* that were at *Cochin* to the last Degree; but *Sodrez*, without putting himself to any Pain about their Repentments, sailed to the *Red Sea*, in order to make Prizes, where his own Ship was lost, and he and his Brother drowned.

In the mean Time the *Samorin* marched with his Army into the Territories of *Cochin*, where the King being betrayed, they forced a Pass that led to his Capital, by which they imagined they had him intirely at their Mercy. As soon as *Trinumpara* was informed of this unlucky Accident, his first Care was to secure the *Portuguese*, and in order to this, he directed that they should be sent over to the Island of *Viapan*, which lies over-against *Cochin*. This Island was considered to be the most solemn Mysteries of the *Indian* Religion, and had therefore been hitherto accounted sacred in all the Disputes between Monarchs of that Faith; but it was now a Place of extraordinary Strength, and that not only from its being inaccessible by Nature, but from the great number of Art, and in this Island there were con-

siderable Magazines, and a very numerous Garrison of good Troops.

The *Samorin* carrying all before him, and a great Part of *Trinumpara's* Subjects have deserted their Master, and submitted to that Tyrant, the King of *Cochin* found himself at last obliged to follow the *Portuguese*, and take Shelter in the same Place. The Governor of *Viapan* remained firm to his Master's Interest, and thereby preferred him from the Rage of his Enemy; for the *Samorin* having burnt the Town of *Cochin*, several Times attacked the Island of *Viapan*, and was as often repulsed with great Loss, and at last obliged to abandon his Design, and to return again into his own Dominions, the Winter Season coming on, in which it is impossible for an *Indian* Army to keep the Field, but he left a considerable Garrison in *Cochin*, and ordered several Forts to be erected, resolving to return thither again in the Spring.

7. It was now become a settled Maxim in *Portugal* to send annually a Fleet to the *Indies*, and according to *Francis Albuquerque* coming with a strong Force into those Seas, and having joined at the *Angedive* Islands the Ships under the Command of *Pedro Alvares*, he sailed directly to *Viapan*, where he comforted the King of *Cochin* on the Part of Don *Emanuel* his Master, and assured him that he should receive all the Assistance from him that lay in his Power, which he performed with as much Sincerity as with Readiness he promised. In the first place, he drove the Garrison, which the *Samorin* had left in *Cochin* from thence, and having demolished their Forts, brought the King back again in Triumph to his Capital. As this Victory, and the Use he made of it, gave the *Portuguese* Admiral a good Title to the King's Favour, he took Occasion from thence to desire the Liberty of erecting a Place of Strength for the Security of his Countrymen, that they might not be exposed to such Dangers as they had lately gone through for the future; the Proposal was very kindly accepted, and the King of *Cochin* gave him leave to build a Fort where-ever he thought fit. In Consequence of this Permission, *Francis Albuquerque* made Choice of an Eminence, which commanded both the Town and the Fort, and the King having allowed him to cut down all the fine Palm Trees that were planted round his Palace, he quickly finished the Fortress he had marked out in the best manner that such Materials would permit. He likewise built a Chapel for the Performance of Divine Service; and thus as the *Portuguese* Writers themselves express it, their Nation became possessed of the Dominion both in Spirituall and Temporals of the *Indies*, and the King of *Cochin* without perceiving it, contributed all that lay in his Power to the introducing Strangers as Lords over himself and his Neighbours.

Under pretence of reducing such as had rebelled against the King of *Cochin*, they made themselves Masters of their Countries, pillaged all their Towns and Villages at Pleasure, and committed greater Devastations than the *Samorin* himself had done during the late Invasion. In the midst of these Proceedings *Alfonso Albuquerque* arrived from *Portugal* with an additional Force, he soon added both to the Conquests and Alliances of the *Portuguese*. The Factors or Guardians of the King of *Colan*, a very rich and potent Prince, whose Capital lay twenty four Leagues South of *Cochin*, demanded the Protection and Friendship of *Portugal*, which was immediately granted, and a Factory settled there. The King of *Zanzibar* was soon after compelled to submit to the Crown of *Portugal*, and the free City of *Brava*, which was a kind of Common wealth, was obliged to pay an annual Tribute. The King of *Melinda*

7. This Man has a very good Character given him by the famous *Portuguese* Historian *John de Barros*, at least in Point of Courage; but a very bad one in Point of Policy and his Understanding. He had heard of a rich Fleet of Ships in the *Red Sea*, and he would needs intercept it, and take the Spoil. In vain the People of the Country repented to him, that it was dangerous; he was not to be deterred by the Reproof of the People, or the Advice of his Friends. He was so possessed with the Delusion of being rich, that he had no regard to the Safety of his own People, and his Brother's Death, *Pedro Alvares*, upon whom the Command devolved, endeavoured to return with the remaining Ship to *Coimbra*, but in vain; he was taken, and was forced to retire to the *Angedive* Islands, where he wintered.

8. It is not easy to conceive how in such a Situation the King of *Cochin* could refuse the *Portuguese* leave to build a Fort in his Dominions, and yet not be obliged to do so. The *Portuguese* Writers, without any Ceremony, and without any regard to the Honour of their Nation, or the Liberty of the People, have asserted, that it was a Prince's Policy not to be justified. He was pressed by two Difficulties equally great, but the Danger from whom these Difficulties arose were not equally pressing, and therefore he chose, as indeed any other Prince would in his Circumstances, to raise the Island of *Viapan* to be the great Dungeon. The *Portuguese* Writers, without any Ceremony, and without any regard to the Honour of their Nation, or the Liberty of the People, have asserted, that it was a Prince's Policy not to be justified. He was pressed by two Difficulties equally great, but the Danger from whom these Difficulties arose were not equally pressing, and therefore he chose, as indeed any other Prince would in his Circumstances, to raise the Island of *Viapan* to be the great Dungeon. The *Portuguese* Writers, without any Ceremony, and without any regard to the Honour of their Nation, or the Liberty of the People, have asserted, that it was a Prince's Policy not to be justified. He was pressed by two Difficulties equally great, but the Danger from whom these Difficulties arose were not equally pressing, and therefore he chose, as indeed any other Prince would in his Circumstances, to raise the Island of *Viapan* to be the great Dungeon.

9. It is not easy to conceive how in such a Situation the King of *Cochin* could refuse the *Portuguese* leave to build a Fort in his Dominions, and yet not be obliged to do so. The *Portuguese* Writers, without any Ceremony, and without any regard to the Honour of their Nation, or the Liberty of the People, have asserted, that it was a Prince's Policy not to be justified. He was pressed by two Difficulties equally great, but the Danger from whom these Difficulties arose were not equally pressing, and therefore he chose, as indeed any other Prince would in his Circumstances, to raise the Island of *Viapan* to be the great Dungeon.

had Recourse to the Portuguese for Assistance against his Neighbour the King of *Amboyna*, which ended in the Reduction of them both. Those great Successes terrified the *Samorin* to such a degree, that in the most humble manner he sought for Peace; and in order to obtain it, entered into such Conditions as seemed satisfactory to the Portuguese, made them Reparation for the Losses they had sustained when formerly settled at *Cochin*, and did every thing for them that they insisted upon.

But as great Prosperity is apt to corrupt the Minds of Men, so the Portuguese made a very ill Use of this extraordinary Turn of Affairs in their Favour, since not long after this Peace concluded with the *Samorin*, they took a Ship of his richly laden; and notwithstanding he applied by his Embassadors for Satisfaction, *Francis Albuquerque*, who then acted with supreme Authority in the *Indies*, not only refused him Satisfaction, but treated him with Scorn and Disrespect. This irritated that Monarch to such a Degree, that he determined to renew the War, in order to revenge himself upon these Strangers, and to destroy the King of *Cochin*, who had sacrificed the Freedom of the *Indians* by his indiscreet Concessions to these foreign Invaders.

He kept, however, his Design to himself, and made secret Preparations for War, in order to be ready to fall upon his Enemies as soon as the Portuguese Fleet should return to *Europe*. But all the Precautions he used could not hinder *Trimaupara* from gaining early Intelligence of his Intentions, who thereupon applied himself to the *Albuquerque*, intreating them to leave a sufficient Force behind to protect their Countrymen and Allies in the *Indies*. The Request was Reasonable in itself, and the King of *Cochin* had the justest Grounds to expect it should have been complied with; but notwithstanding what he could say, *Francis Albuquerque* would not be persuaded to leave him any more than three Ships, and one hundred and fifty Men, under the Command of *Edward Pacheco*, a Man of great Courage and Conduct, and of such Steadiness and Abilities, that he was an Army in himself. This Step once taken, the *Albuquerque* sailed with a rich Cargo for *Europe*, but met with very different Fates in their Voyage, since *Francis Albuquerque* the Uncle perished, with all who were on Board his Ship, none knew where, or how; but *Alphonso*, the most fortunate Commander of his Time, arrived safely at *Lisbon*, with all the Ships under his Command, having acquired as great Fame and Riches as any that had been hitherto employed in the East.

As soon as the Portuguese Fleet quitted *India*, the *Samorin* assembled an Army of sixty thousand Men, and a great Fleet, in order to attack *Trimaupara*; and the Portuguese in his Dominions. The Subjects of that Prince acted as ill on this, as they had done on the former Invasion; that is to say, they abandoned their Prince, and endeavoured to save themselves without thinking of their Country. The King behaved with his usual Firmness and Constancy, disposed all things to the best Advantage, and left the rest to Providence. *Pacheco* and his Portuguese gained great Reputation by this War; and it was chiefly by his Assistance, that the vast Preparations made by the *Samorin* produced nothing but Confusion and Shame to their Author. This Commander built another Fort for the Defence of the Haven, acted with the greatest Alacrity and Courage by Sea or Land, where-ever the common Interest called him; so that when a new Fleet arrived from *Portugal*, and the Danger being over, he testified a Desire of returning home: The King of *Cochin* gave him Letters, testifying how well he had behaved, and how much they were indebted to him for their Security.

At his Return King *Emanuel* paid him the highest Honours, ordered one of the most eloquent Prelates in the Kingdom to write the History of this War, which he transmitted to the Pope, and other Christian Princes, telling them at the same time, that it was as great a Satisfaction to him to have such a Man his Subject, as to be Master of the *Indies*; and to show that he did not mean to reward the

important Services with Fame only, he bestowed on *Pacheco* some of the richest Governments in *Africa*. Such was the nobility of this Prince, to whose sublime Virtues *Portugal* owes her Glory, and her *Indies*; a Prince, who knew how to suit the Abilities of Men to the Designs in the Execution of which he employed them, who judged impartially of their Behaviour, never punished with any degree of Severity, or suffered Envy to mix with the Rewards he bestowed on Men of Merit. Such a Prince was remarkably well served at home, and highly esteemed abroad: His Fortune made him the Deight of his Subjects; his Power rendered him the Terror of his Enemies; his Fidelity gained him the perpetual Confidence of his Allies. But it is now time to pursue our History, and to speak of the first Viceroy sent by the Crown of *Portugal* to direct the Affairs of the *Indies*.

8. The immediate Acquisition of Wealth and Power did not take up the Mind of this great Prince, as to engage him in an Opinion that all Difficulties were overcome, and that there was nothing now to be thought on but making use of what was already in the Hands of his Subjects; on the contrary, the great things they had performed, inclined him to extend his Plan, and to think of driving the *Mohammedans* entirely out of the *Indies*. It was undoubtedly a great and glorious Design, but at the same time it seemed, the Strength of his Kingdom considered, absolutely impracticable. Don *Emanuel* had been informed that there were three great Ports in the East, in which the *Mohammedans* were established, and from whence they carried on all their Commerce to the most distant Parts of the *Indies*. These Ports were *Aden* in *Arabia*, *Ormuz*, in an Island of the same Name on the Coast of *Persia*, and *Malacca*, near the Streights of *Singapour*. As their Strength was divided, Don *Emanuel* judged it not impossible to make himself Master of all these Places in their Turns, and with this View it was that he began to fit out a larger and better appointed Fleet than hitherto he had sent to the *Indies*.

While he was employed in these Preparations, there happened a new Scene of Affairs in the East, where the *Brammins*, who were about the *Samorin*, shewed themselves able Politicians, by giving him the best Advice that the Posture of his Affairs would admit. They observed to him, that the *Christians* and *Mohammedans* were equally Enemies, and that therefore the wisest thing he could do was to call in the one to combat the other, that by thus wasting their Forces, they might be so reduced, as that he might be a Match for both. He, listening to their Request, sent for Aid from the Sultan of the *Mannalukes*, who were at that time in Possession of *Egypt*; the News of which greatly terrified all the *Christians* in the *Indies*, and occasioned their sending immediate Advice of it into *Portugal*.

This obliged King *Emanuel* to dispatch his Fleet sooner than he intended, and with a less Force, though it was even now very considerable, consisting of thirteen large Ships, and six Carvels, with a great Body of Soldiers on Board. He made choice of Don *Francis Almeida Count de Abrantes* to command it, who had served King *Ferdinand* of *Castile* in his Wars with Great Reputation, and gave him the Title of Vice-King, and Governor-general of the *Indies*. He likewise assigned him Guards for his Person, a certain Number of Chaplains, and whatever else could be thought necessary to give an Air of Grandeur to his Office. On the 25th of *March* 1505, the Fleet sailed from the River of *Lisbon*, and on the 11th of *April* following reached the Islands of *Cape Verd*; from whence stretching too far to the South, in hopes of doubling the Cape with great Ease, the Fleet ran into such high Latitudes, as that the Seamen had many of them their Fingers frozen; but varying their Course a Point or two to the East, they arrived safely at *Quiloa*, where *Abraham*, the Tyrant of that Country, refusing to pay his Tribute any longer, the Viceroy drove him out, and settled *Mohammed Anconin* in his Place, building a Fort there to keep the People the better in Subjection.

* This Scheme of Don *Emanuel's* was actually executed in every Branch of it by Don *Alphonso Albuquerque*; but I think it is very questionable, whether the Portuguese would not have found their Account much better in making two or three good Settlements in the *Indies*, without endeavouring to distress the Inhabitants, or to deprive them of their Liberty: In prosecuting of which Design, their own Success ruined them, as in the succeeding Part of this Work we shall have Occasion to shew.

Then he sailed to *Mombaza*, which is a small City, in an Island well fortified with two Citadels, furnished with some Pieces of Cannon, which engaged the King to retake *Almeida* Entrance. This, however, he forced, by beating their Forts to the Ground, and afterwards took the City by Storm, and made Slaves of a great Part of the Inhabitants. He continued his Voyage to the *Ange-dive* Islands, which are five in Number, not far from *Goa*, where, according to his Instructions, he built a Fort. He proceeded thence to *Canonor*, where, with the Consent of the King, he built another Fort, and put a strong Garrison into it. On his Arrival at *Cochin*, he found things in a very unsettled Condition; for *Trimumpara*, worn out with Years, had resigned the Crown to his Sister's younger Son *Neubador*, rejecting the elder, because he had deserted him on the last Invasion by the *Samarin*, which occasioned great Troubles; but the Viceroy put an End to them, and fixed *Neubador* firmly on his Uncle's Throne.

About this Time a Squadron of eight Ships was sent out to discover new Lands, by which was found the Island of *Madagafcar*, otherwise called *St. Lawrence*, because it was first seen on the Day dedicated by the Church of *Rome* to that Saint. *Almeida* also detached a Squadron under his Son *Laurence de Almeida* on the same Service, who repaired to the *Maldivæ* Islands, from whence he was driven by a mighty Tempest to the Isle of *Ceylon*, thought to be the *Taprobana* of the Ancients; where landing, he took the Inhabitants into the Protection of *Portugal*, and imposed a Tribute on their King; nor was the Viceroy in the mean Time less employed, but defeated the *Calicutians* in a great Battle at Sea; then dividing his victorious Fleet, he committed one Part of it to *Emanuel Pazagno*, and the other to his Son, upon his Return from *Ceylon*, appointing the first to accompany the trading Ships of *Cochin* to *Cape Comoris*, for their Security against the *Rovers* in those Seas, and the other to cruise at large about the Coast, for the Defence of the Islands and Ports. It became now an established Rule among those new Inhabitants of the *Indies*, that whoever came into those Parts, without a Pass from some *Portuguese* Admiral, or Governor of a Fort, should be esteemed as Enemies, and lose both Ship and Goods, whereby they engrossed all the Wealth of the *East* to themselves; and the better to maintain their Authority, King *Emanuel* lent out yearly new Reinforcements and Supplies.

In the Year 1508, fifteen Ships were fitted out, under the Command of *Arstian de Cunha*, with which, repairing to the Coast of *Zanguebar*, he assisted the King of *Melinda* against his rebellious Subjects, and burning the Cities of *Nosa* and *Brava*, sailed to *Zocotara*, where, reducing the chief Town of the Island, he left a Garrison in it, and made the best of his Way to *Malabar*, where, joining the Fleet of *Almeida*, they repaired against the People of *Calicut*, who were now assisted by a Fleet from *Arabia*, and before *Panan*, one of their Towns, gave them a final Defeat. Not long after they engaged off of *Cboal*, near *Bombay*, the Fleet of *Campson* Sultan of *Egypt*, coming to the Assistance of the Enemy, which they entirely routed, and every where came off Conquerors, excepting that the aforementioned Son of *Almeida* falling in with a Squadron of *Cambayan* and *Egyptian* Ships, was unfortunately slain with an Arrow, as he bravely defended himself against them. The Body of this young Hero could not be found, but the Fleet returned with the melancholy News, which the Viceroy received with great Constancy of Mind, saying no more, than that his Son could not end his Days more gloriously than in the Service of his Country.

Alphonso Albuquerque was now arrived in the *East* with a strong Squadron from *Portugal*, with which, deluging to subdue the Isle of *Ormuz*, at the Mouth of the *Persian*

Gulph, he first reduced the Cities *Curiate*, *Majaze*, *Sabar*, and *Orfacan*, lying along the Coasts of *Arabia*, then subject to the King of *Ormuz*; after which, defeating the Enemy in an Engagement in the Port of that City, he landed in the Island, and prepared to invest the Place, when the King (called *Zarfadin* II.) gave leave that the *Portuguese* should build a Fort on the Sea-Coast, and engaged not only to pay them an annual Tribute but to defray the Charges of the War. The Time of *Almeida's* Viceroyship being now on the Point of expiring, he resolved to revenge the Death of his Son, and going on with a Squadron of nineteen Sail, attacked off *Diu* a great Fleet of *Cambayans*, *Egyptians*, *Canattars*, and other of the Enemies of the *Portuguese*, by whose Hands his Son fell, and entirely routed them with great slaughter, subdued all the Coast from *Diu* to *Cochin*, forcing the several Princes to yield themselves tributary to *Portugal*.

His Commission being now expired, he delivered the Government with great Reluctance to *Albuquerque*, and having passed the Cape of *Good Hope*, in his Way homewards, was, with his Companions, unfortunately slain by some Barbarians on the Coast of *Africa*, through his own Imprudence; for he would needs go on Storming a Country of Provisions and Refreshments, in a Country almost unknown; and there some of his Attendants having quarrelled about the Price of Provisions with the Natives, with more Courage than Prudence, ran to their Assistance; but when he saw the whole Country pouring down upon them, he would have retired, and called his great Endeavour to make a Retreat to his Ship. But it was too late, the Barbarians discharging on him, and there were with him, a Shower of Arrows, by which he fell, and twelve experienced Officers were killed upon the Spot; so that he lost not only the Rewards which he most reasonably have expected from his Master, but even would a decent Funeral, which, in the Opinion of those who survived him, was a much heavier Misfortune.

g. He was succeeded in his Command by *Alfonso Albuquerque*, whose Services had already merited much from his Master, and whose Character seemed him the fittest of all others to be entrusted with *Portugal* this Time; yet he had not the Title of Viceroy, but that of General only, though his Authority was as extensive as that of *Almeida*, and his Success in his Admiralty an extraordinary, that it acquired him the Surname of Great. *Vernand Coutinho*, Grand Marshal of *Portugal*, who was come with a Fleet of fifteen Sail, and with three thousand Men on Board, to put him in Possession of the Government, engaged *Albuquerque* to begin the Evacuation of his Authority with the Destruction of *Calicut*, which had given them so much Trouble, and which was likely to give them still more, as long as it stood. This Expedition was very honourable for the new General, though it proved fatal to its Author; for while *Albuquerque* took the Field that commanded the Place, and left him to the Power of the Grand Marshal made himself Master of the Revenue of the, where finding immense Riches, his People fell to pillaging, and the *Indians*, taking Advantage of the Disorder they were in, fell upon them, and cut them off to a Man. *Albuquerque* did all that in his Power lay to prevent the Mischief, but without Effect, and in endeavouring to get another he ran a great Risk of being destroyed himself; for in his Passage towards the Palace, he received two dangerous Wounds, and immediately after was almost crushed to Pieces, by a great Stone thrown upon him from the Top of one of the publick Buildings. In this Constitution his Soldiers took him up, and carried him on Board his Ship, and then they made a good Retreat, navigating at this unfortunate Undertaking the Grand Marshal, and fourteen Men, and about three hundred wounded.

¹ This was a very deep Question in Politics, viz. Whether Rebellion in the next Heir deprives him of his Right of Succession. But it may be said that ever the *Portuguese* considered the thing in this Light, the youngest of the two Nephews seemed to them most deserving, and therefore it was very natural for them to be in his.

² We learn from some of the *Portuguese* Historians, that *Almeida* suffered his Jealousy of *Albuquerque* to carry him to the City of *Canonor*, where he kept him Prisoner, and was obliged to send Servants to attend him; and though it was impossible they should have Intelligence of this in *Portugal*, yet it seems they suspected the Master, and therefore sent a Man of great Quality, and a strong Fleet, to regulate Affairs in that Part of the World, without which, it is probable, there might have been some Difficulty in persuading the Viceroy to part with a Power of which he was so fond.

As soon as *Albuquerque* recovered, he formed a Design of making himself Master of *Ormuz*; and for that Purpose assembled a great Fleet, and a considerable Body of Troops, amongst which were two thousand veteran Portuguese that had served long in the *Indies*. But when he was on the Point of sailing, he received such Intelligence as engaged him to alter his Design, and to resolve upon attacking *Goa*, a large and rich City in the Island of *Tiwarin*, with one of the best Ports in the *Indies*. This Island, which is about nine or ten Leagues in Circumference, was esteemed, from its Situation, the most important Post on the Coast of *Malabar*. The King of *Decan* was the natural Lord of it, and the Person who commanded for him therein was one *Idaleon*, a Moor by Birth, and a Man of great Courage and Experience. He took all imaginable Care to put the Place into the best Posture of Defence possible; notwithstanding which, the Island was reduced, and the City of *Goa* taken by Storm by the Portuguese, assisted by a Fleet and Army of an *Indian* Prince, called the King of *Onor*, under the Command of *Tinicia*, his General. Don *Alphonso Albuquerque* made his publick Entry into it on the 17th of *February*, 1510, with great Magnificence; and having settled every thing there, in the best Order possible, he appointed his Nephew *Antonio de Norogna* Governor of the City; *Gasper de Payva* General Director of the Commerce, and *Tinicia* had the Charge of the Revenues, which amounted to Eighty-two thousand Pieces of Gold per Annum. This Conquest was not easily maintained, for *Idaleon* returned with such a Force as recovered the Place, and the new Governor *Antonio de Norogna* was slain in the Dispute, which, however, served only to increase the Desire of *Albuquerque* to raise the Credit of his Nation, by securing a Country and City of such Consequence, which, after a War of long Continuance, he accomplished; and this City became afterwards, viz. in 1519, the Seat of the Governor, and the See of an Archbishop, and Primate of the *Indies*.

The Conquest of *Goa*, though in itself of vast Importance, was far from satisfying the Ambition of *Albuquerque*, whose Mind was continually agitated with the Desires of extending the Power of his Prince and his Reputation. It was with this View that he sailed with a great Fleet to the Road of *Malacca*, where he demanded the Portuguese Prisoners the King had in his Hands. The *Indian* Monarch put him off with fair Words and Promises, and the General being afraid that he might put the Prisoners to death, bore with this Treatment for some Time; but, at last, was so provoked, that he made an Attempt on the Place, and actually set it on Fire; upon which the King of *Malacca* immediately sent the before-mentioned Prisoners, and offered to make Peace with the Portuguese upon their own Terms. Those prescribed by *Albuquerque* were extremely hard, for he demanded Leave to build a Fort where he thought fit, a Reparation of Damages done to the Portuguese, and a Sum of Money equivalent to the Expence of this Expedition.

The *Indian* Monarch, having consulted with his Council, absolutely refused to yield to them; and thereupon Hostilities were again begun on both Sides, which ended in *Albuquerque's* attacking the City of *Malacca* by Sea and Land with great Fury, and, after an obstinate Resistance, it was taken by Storm, and given up to the Pillage of the Portuguese Soldiers; and we may guess at the Riches of the Place by the clear Fifth, which was referred to the King; and which was bought on the Spot by the Merchants for two hundred thousand Pieces of Gold. The General immediately caused a Fort to be erected for the

Security of the Place, and putting a good Garrison into it he gave the Command thereof to *Rodriguez Patalino*: He raised one *Utinut*, an *Indian* Lord, who, by deserting the King of *Malacca*, had been very useful to him, to the Post of supreme Magistrate of the *Indians* and *Mohammedans*; and, having received the Compliments of several *Indian* Princes upon his Victory, he prepared to return to *Goa*. Before he quitted the Place a Conspiracy was discovered, in which *Utinut* was principally concerned, who thought to have made himself Master of the Place. As his Letters were intercepted, the Proof against him was clear, and the General ordered him and his Son to be executed, notwithstanding his great Age, and an Offer made him of an hundred thousand Pieces of Gold to spare their Lives. After this, and staying there near a Year, he determined to leave a very brave Man and experienced Officer Commander of the Forces at *Malacca* with a sufficient Number of Ships and Men. These Precautions being taken, he sailed for the Coast of *Malabar*; but, in his Passage met with such a Storm, as destroyed the greatest Part of his Fleet, with all the Riches on Board, and it was with very great Difficulty that the General himself escaped.

After a short Stay at *Cochin*, and putting every thing there in the best Order they could, Don *Alphonso Albuquerque* retired to *Goa*, where Things were in some Confusion; but he soon restored them, and humbled all the *Indians* in his Neighbourhood to such a Degree, that the *Samorin* himself sent Embassadors to implore Peace, and to offer him Permission to build a Fort at *Cabut*, wherever he thought fit. The Emperor of *Ethiopia* also sent an Embassador to *Goa*, and from thence to *Portugal*; and, in short, the Terror of the Portuguese Arms was now so great, that *Idaleon* and the Princes that had given the greatest Opposition to the Settlement of that Nation in the *Indies*, were glad now to atone for their Insurrection, by offering to accept whatever Terms Don *Alphonso* thought fit to prescribe. Such a long Train of Successes, and so splendid a Scene of Prosperity, would certainly have turned the Head of a Man of less Abilities than the Great *Albuquerque*, to whose Capacity the Portuguese were more indebted for their Conquests, than to the Arms and Fleets which he commanded.

He had, indeed, all the Talents requisite for a Man in his Station, and with these such a Degree of Diligence and Application, as would have enabled him to have performed great Things, if his Parts had been less shining.

He loved the ancient Frugality of his Country, and never suffered himself to be corrupted by the Power or Wealth that he possessed; and indeed he made no Use of either, but for the Service of the Crown. When he saw the Disposition of the *Indians* to measure every thing by outward Pomp, he seemed to give into their Notion, and affected, upon publick Days, prodigious Magnificence; But in the midst of all this he relaxed nothing of his former Severity, but lived, in the midst of all his publick Splendor, as coarsely, in respect to his Person, as any private Man. In exacting the Dues of the Crown, he was somewhat severe; but, with regard to his own Fortune, he took so little Care of it, that, except his publick Appointments, he had scarce any thing he could call his own. His Officers were his Children, and he took as much Pains in teaching them their Duty as an affectionate Parent in the Education of his Sons. He overlooked Misdemeanors, but punished Treachery, or Neglect of Duty, with inexorable Severity. He was extremely ready to reward, and all his Discouragements at his Table was of the great Actions performed by his Officers, while he was not only silent as to his own,

* While these Disputes lasted, *Sequeria*, a Portuguese Officer, had the Command of a considerable Squadron given him, which was to be sent in order to make Discoveries, and as he had taken part with the Victor against the General, he no longer knew that the latter was intended with a French Command, than he immediately abandoned his *D. pastaraz*; sailing from *Cochin* on the 19th of *August*, 1509, he arrived on the Coast of *Malacca* on the 11th of *September*, and was entertained with a Shew of Friendship by the King, who received him to a grand Entertainment, with five thousand Men, and all who came with him, which *Sequeria* availed, by pretending Sickness, the King then attempted to surprise the Portuguese as they landed to carry on their Commerce, in which he succeeded better, killing some, and making a considerable Number of Prisoners; *Sequeria* revenged himself by attacking and plundering several rich Vessels that met with on the Coast, and then he continued his Voyage to *Portugal*. It was this Act of Treachery that induced Don *Alphonso Albuquerque* to make his Attempt on *Malacca*.

* This Storm happened on the Coast of the Island of *Somatra*, in which *Albuquerque* found a new Opportunity of raising his Reputation. The Ship on which he was on board striking on a Rock, the Crew hurried him into his Long Boat, and just as they were putting out in the Wake, the General saw a young Man fall from one of the Masts into the Sea, near his Boat. He sprung himself to his Assistance, caught him in his Arms, and thereby preserved his Life at the Hazard of his own.

but would not permit others to commend them. It was a common Saying of his, that he was afraid of nothing but Flattery; and it was observed, that he never preferred any who attempted to gain his good Graces that way. Let them serve their King and Country, said he, if they would be beloved by *Albuquerque*; and his Actions were agreeable to his Words, for he distinguished none but Men of Merit. It has been well observed by some of the *Portuguese* Historians, that the Vanity of *Ameida* made him affect the State of a Prince, when the Power of the *Portuguese* was but indifferently established; whereas the Modesty of *Albuquerque* was most conspicuous when his Victories had left him nothing to fear, and when the greatest Princes of the East sent their Embassadors to beg his Friendship.

Yet, with all these Qualities, this Hero had his Faults. His Ambition was boundless, and carried away by an extravagant Desire of extending the Dominions of the Crown of *Portugal*, he very little regarded whether the Measures he took for that Purpose were just or unjust. In his private Life, he was a Man of the strictest Honour; in his public Character, Regard to Truth will not permit us to say so much. What we have farther to relate of his Actions, will fully justify this Remark. He made himself Master of *Goa* without any other Pretence than that it was necessary to the Crown of *Portugal*. He had seized *Malacca* for the same Reason: And now he meditated the Conquest of *Ormuz* from the like Motive, and he effected it in the following manner: He had formerly, that is, before he was declared General of the *Indies*, attempted to raise a Citadel there, without being able to effect his Design; but the Power of the *Portuguese* being now so much increased, that all the Commerce of the East depended upon them, the King of *Ormuz* had been obliged to become tributary, because his City and Nation depended upon Trade; other Places could not be rich, but his Dominions could not subsist without it.

The then King of *Ormuz* was *Torun Shab*, a young Prince of no great Abilities, and of a weak and timorous Spirit. In the Beginning of his Reign, he was entirely governed, as all Princes must be, who have not Parts enough to govern themselves, by an old Minister, whose Name was *Noradin*, a Man of great Cunning, but of no enterprising Genius, and who, to support himself, and secure the Administration to his Family, brought three of his Nephews to Court, and gave them great Parts in the Government and in the Army. *Hamed*, the youngest of these, in a short Time gained, by his Intrigues, a Share of Power, that neither the King nor his Uncle had any more than a Shadow of Authority left. Don *Afonso Albuquerque* being informed of this, assembled his Army, and gave it out that his Design was to attack *Aden*; but, when at Sea, he directed his Course to the Coast of *Persia*, and appeared before *Ormuz* when he was least expected. He demanded that the Citadel should be immediately put into his Hands, *Portuguese* Factories settled in the Place, and that the King should absolutely acknowledge himself dependant on the Crown of *Portugal*.

Torun Shab, thinking it better to be the Vassal of a foreign Prince, than the Slave of his own Minister, exerted his Authority to lessen his own Dignity, admitted the General into the Citadel, assigned the *Portuguese* some of the best Houses in the Town for their Factory, and ordered their Flag to be displayed upon the Palace. *Hamed* could not help but overting his Impatience at a Change so sudden and unexpected, to prevent the Effects of which, he formed some Designs against the General's Life; of which Don *Afonso* was no sooner informed, than he gave Orders to some of his Soldiers to cut him off, which they with a Ceremony performed. If the General had stopped here, it had been well enough, but his Projects

were not of a Nature to be bounded by any thing but the absolute Possession of what he aimed at, and therefore, under Pretence that a Fleet was coming from *Egypt*, to make a Descent upon the Island, he demanded all the Artillery of the Place, which, he said, was necessary for his preserving it from the Enemy.

Torun Shab assembled his Council, who declared, that in the first Place they knew nothing of any such Design; and in the next, that they thought it very imprudent to comply with the General's Design. The Cowardice of the King, however, got the better of the good Sense of his Ministers, the Artillery was put on board for the present Service, which the General would never restore; he having made *Pedro d' Albuquerque* Governor of the Citadel, he seized sixteen of the Princes of the Blood, with their Wives and Children, and carried them away with him to *Goa*, that he might have sufficient Hostages for that good Behaviour to him, who, he was conscious, was Reason enough to be displeas'd with his Conduct towards them; and thus, for the present, *Ormuz* was ingested to the *Portuguese*.

A little before the Return of *Albuquerque*, he received a magnificent Embassy from the King of *Persia*, who, finding himself in danger of suffering by the new Empire, erected by this General in the East, resolved to prevent it if he could, by offering him his Friendship. The General received him with all the Respect due to the Minister of so great a Prince, and caused him to be entertained during the Time he staid at the publick Expence, and that too with as great Magnificence as the Circumstances of Time and Place would allow. He likewise made the *Persian* March very valuable Presents, and such as he very much expected; for he sent him some very fine Pieces of Brass Cannon, and various other Utensils of War, together with some able Engineers to manage them, which he did for two Reasons; first, that he might secure the sincere Friendship of so great a Monarch, which he knew would be of prodigious Consequence, as Things then stood to the Affairs of *Portugal*, and next, because he was perfectly sensible that the Advantages gained over the *Persians* by the Artillery were entirely owing to their Artillery; and this great Politician very rightly judged, that nothing could be more for Purposes better than keeping the Force of these two Empires on an Equality.

A short time after the Return of Don *Afonso Albuquerque* to *Goa*, he was seized with an Illness, which a few Days carried him off at the Age of sixty three. He was called by the *Mohammedans* *Mohammed Shab*, because he was born at *Messida* in *Aravia*, which in the Eastern Tongues is called *Malanda*, but by the *Portuguese* he was stiled, and that very justly, *Albuquerque*. He was the ablest Statesman, and by far the most illustrious General they ever had in the *Indies*, and in these Affairs in the best Situation; and yet he performed some great Actions of his Life with very mean Equipments. For with thirty Ships he took *Calicut*, with twenty one he became Master of *Goa*, with twenty four he seized *Malacca*, and had no more than twenty two in his Expedition against *Ormuz*. At the time of his Death his Reputation still higher, if he had lived to execute them; and they are both of them worthy the Character of an illustrious Person, and such as perhaps would have oversteered any other Head than his own.

He had so firmly established the Power of the *Portuguese* in the *Indies*, that he saw no Possibility of the Trade being diverted into another Channel, but that *Aden*, who he suspected would make themselves Masters of *Aden*, and he very well knew, that by a right Management of the old Channel of Commerce, by the Way of *Aden*, might be restored, and would then become more profitable than ever. To prevent this, he instituted a Fleet of

If we consider what Sentiments the *Indians* must have of the Behaviour of the *Portuguese*, we must naturally conclude, that they think as freely, and as barbarous as the *Tartars*; and, therefore, when we hear what the *Portuguese* will do to the *Indians*, we are not surpris'd to find them so cruel, and wicked Disposition of the *Indians*, but to their Cruelty and Apprehension of the *Portuguese*.

It is true, that *Aden* owed both its Being and its Grandeur to its Trade, and therefore we often hear it mentioned, to show that the *Indians* were not so miserable by Situation, that may not be rendered agreeable by Commerce and the Wealth that it brings in, the *Indians* were never to accompany this Abundance, and it was to the *Factions* that took Rise from their Wealth and Corruption, that the *Indians* owed their Destruction.

of Ethiopia, that for his own Security against such bad Neighbours as the *Turks*, the best Step he could take would be to divert the Channel of the Nile, by cutting a Passage for it into the Arabian Sea before it reached Egypt. If this Design had taken Effect, it must undoubtedly have rendered the greatest Part of Egypt uninhabitable, and without doubt would have rendered it impracticable to renew the Method of transporting East-India Commodities from the Red-Sea to Alexandria, which was the principal thing he had in View. His other Project was to transport three hundred Horse from the Island of Ormuz to the opposite Coast of Arabia, which is but seventeen Leagues, and this Party he thought sufficient to plunder the Tomb of *Mohammed* at Mecca, and to burn the Relicks of that false Prophet, which he imagined would have various good Consequences. One of which would certainly have had, that is, it would have struck all the *Mohammedans* in the East with Terror and Amazement, and have diverted that Concourse of People thither; I mean to Mecca, which made the Commerce of Arabia famous, and consequently would have promoted in a great Degree another Design of resuming the Trade of the East out of the Hand of the *Turks*, and other *Mohammedan* Nations.

The Death of this excellent Commander, though at so great an Age, proved some Inconvenience to the Portugueze Affairs, and would have proved a much greater, if his Successor had not been at that time at *Cochin* with a Squadron of ten Sail, which he had just brought from *Persepolis*. This General *Albuquerque* left all the Settlements then made in the Indies in perfect Peace, and in admirable Order, and he likewise left such a Body of regular Troops as were capable not only of maintaining what was already acquired, but also of adding such Conquests as the King or his Successors should judge necessary. His Funeral was performed with great Solemnity, and his Body interred in a Chapel dedicated to the Blessed *Virgin*, which himself had built at *Goa*, and which was much enlarged by his Son *Alonso Albuquerque*, who lived to the Age of fourscore, and gave considerable Assistance to such Historians as have recorded his Father's Actions.

The Person chosen to replace this great General was *Lopez Suarez*, who was come for that Purpose with a Squadron of Men of War from *Portugal* to *Cochin*, where he received the News of *Albuquerque's* Death. It seems to have been a Maxim, and indeed it was a very right one, not to leave the same Officer too long in the Possession of so great a Power as it was necessary to vest in the Viceroy or General of the Indies; and without doubt it was owing to this Method, that some of these great Officers were prevented from making an ill Use of their great Authority, and from setting up for themselves, which all things considered, it is a Wonder they did not, since with a little Management any enterprising Commander might have leured the *Javan* Island to himself, and have brought the Inhabitants to think it their Interest to defend him. *Suarez* was no sooner entered upon his Administration, but the People of *Aden* sent Ambassadors to him, to let him know they were ready to comply with his Demands, but he took no notice of their Submission; and having a Design on the Egyptian Fleet, which he heard was coming down the Red-Sea, he, to keep his People employed till their Arrival, near the Straights of *Babel-mandel*, attacked *Zeila*, a Town on the Coast of *Africa*, opposite to *Aden*, and gave the Plunder to his Soldiers and Seamen.

But *Suarez* too late repented him of his Neglect of the People of *Aden's* Offers, for the expected Fleet of *Egypt*

never appeared, and that City changed soon after its Resolution of submitting to *Portugal*. To the Loss of this happy Opportunity succeeded another Misfortune; for *Campson* the Sultan of *Egypt* being overcome by the Emperor *Selm*, and his Dominions becoming Part of the *Turkish* Empire, the Coasts of *Egypt* and the Red-Sea were much better guarded than before, several new Forts being erected there, and supplied with good Garrisons. In the mean time *Andrada*, who commanded in chief at *Malacca*, made an Expedition for settling of Trade to the Coast of *China*, where he was hospitably entertained for some Months, but his People growing insolent upon his kind Reception, committed several Violences, and he was forced to quit the County with the Loss of a great Number of his Followers. The Portugueze of *India* were now but in an indifferent State, and the new Forts lately finished in *Ceylon*, and the Kingdom of *Coulan*, were scarce sufficient to keep the Inhabitants in their Duty, so that *Suarez* being looked upon as unequal to so great a Charge as the Government of those Acquisitions, was recalled, and *James Lopez* appointed his Successor.

He, on his Arrival in *India*, having quelled some Insurrections there, and overcome the King of *Bintam*, whom he forced to accept a Peace on his Terms, repaired to *Ormuz*, and defeating *Moeri* King of *Bobarim*, an Island in the *Persian* Gulph, reduced it to the Obedience of *Portugal*. *Lopez* was succeeded by *Edward de Menezes* in 1521, who restored the King of *Pacem*, in the Island of *Sumatra*, to his Dominions, on condition of his paying a Tribute, and giving Leave for the erecting a Fort upon his Coast. In the first Year of this Viceroy's Administration died *Emanuel* King of *Portugal*, the greatest Prince that ever sat on the Throne of that Kingdom, who, having reduced to his Obedience not only the Coasts of all *India*, both within and without the *Ganges*, but of the Gulph of *Persepolis*, and of the Red-Sea, and covering with his Fleets the *Ethiopian* and *Atlantic* Oceans, shut up the Navigation to those Countries from all others, thereby totally excluding the *Venetians* from the Commerce of the East, whose Merchants had ever since the Year 1269, to that Time, wholly engrossed that Trade. He also subdued great Part of the Coast of *Barbary*, making himself Master of *Ajofia*, *Tita*, and *Azamora*, near *Cape Cantin*, and defeated the Forces of the Emperor of *Morocco* in several Rencontres.

He was succeeded by his Son *John III.* about which Time the Viceroy of *India* appointed *Lewis de Menezes*, with a strong Squadron, to keep the People of *Ormuz* in Obedience, and sent *Garcias Henriquez* with another to the Eastward to make farther Acquisitions, which latter failed round the Islands *Banda Mira* and *Gumanapy*, and proceeding thence to *Andore*, there fell in with one of the Ships that had been sent out under *Magellan* by the Emperor *Charles V.* to make new Discoveries, which *Henriquez* attacked, and made himself Master of, putting to Death or making Slaves of all the *Spaniards* on board. This done, he erected a Fort in the neighbouring Island *Ternate*, and strictly enjoined the Inhabitants not to vend their Spices to any other than the Portugueze.

The next Year *Hellor Silveria* being appointed Admiral of the Indies, was joyfully received by the Viceroy of *Goa*, from whence he proceeded to *Malacca*, then besieged by *Laquezimenes* the King of *Bintam's* Admiral, and having happily raised the Siege, detached *Alonso de Sousa* to the Coast of *Bintam*, which having ravaged, he gained a great Victory over the Shores of *Pabang*, *Patana*, and *Java*, killing great Numbers of the Enemy, and taking several Pri-

son. The Fleet with which this Commander sailed into the Red Sea was by much superior to any thing the Portugueze had ever been able to put to Sea before that time, and was entirely the Effect of Don *Alphonso d'Albuquerque's* Prudence and Diligence. It consisted of thirty seven large Ships, and at the same time he arrived before *Aden*, there was no Force in the Indies capable of disputing with him. The Reason that the Inhabitants of that City would then have submitted was, because a great Part of their Walls remained unrepaired, so that they were not in a Condition to make any Defence; but when they observed the Slowly of the Portugueze General, and that he did not embrace an Offer of such Importance with the Readiness that he ought to have done, they lost no Time in repairing their Fortifications, and putting their City in a Posture of Defence, so as to be no longer under Apprehensions of his Power, and then they treated him with Contempt.

It appears from hence, that the Portugueze were the first who attempted to monopolize the Trade of Spices; at which the Reader may be the more surpris'd, since we do not hear at this time of any other East-India Nations that traded in those Parts, and therefore this forbidding the Inhabitants to sell Spices, might appear an unnecessary Precaution. To let this Matter in a true Light, the three following Points must be observed. In the first place, there was a great Trade for Spices carried on throughout all *Asia*, and thus the Portugueze were desirous of keeping it in their own Hands. In the next place, they were very apprehensive of their being carried into the Red-Sea, and to through *Egypt* to *Alexandria*, to their great Rivals in Trade the *Venetians*; to prevent which, they kept a Squadron cruising at the Mouth of the Red-Sea. Thirdly, they were afraid of the *Spaniards* from the West-Indies, the Governors in *America* making frequent Attempts on this Side, in hopes of establishing a regular Commerce between the Kingdom of *Mexico* and the *Moluccas*; so that it is very plain the Portugueze Viceroy had Reason enough to apprehend their having this valuable Commerce taken out of their Hands.

soners; after which, proceeding to *Machian* and *Bachian*, two of the *Molucca* Islands near *Tidor*, he plundered them, and carried off a great Booty. The next Year *Vasquez de Gama* was appointed Viceroy of the *Indies*; but as he was in a very advanced Age, it being improbable he should live long, a Commission was made out for *Henry de Meneses* to succeed, in case of his Decease before the three Years of his Viceroyalty should be expired. There was a third Commission to *Pedro Mascarenbas*, appointing him Viceroy, if *Meneses* should die; and a fourth to *Lopez de Sampayo* to succeed, in case of the Death of *Mascarenbas*. The *Portuguese* by this means were almost secure of providing, that their Acquisitions in *India* should not remain without a Head, and the Event shewed the good Effects of their Care; for *Gama* did not long enjoy his new Honour; but having first defeated the People of *Calicut* in an Engagement at Sea, died within a few Months after his Arrival at *Goa*, so that the Viceroyalty devolved upon *Henry de Meneses*.

The Commission by which he was to succeed was sealed up with this Supercription, *Not to be opened till (which God forbid) Vasquez de Gama, Viceroy and high Admiral of the Indies, shall be departed this Life*. This being now opened by the next commanding Officers in the great Church at *Cochin*, *Meneses*, who was then absent from the Place, was proclaimed Viceroy, whose Administration was likewise of a short Date, and diversified with both good and bad Fortune; for after several Engagements with the *Calicutans* with various Success, he defeated their Fleet in the Port of *Guleta*, and made himself Master of most of their Ships; soon after which he destroyed a Fleet of *Turkish* Ships off *Dabal*, another of *Moers* off *Zella*, worsted that of the Prince of *Patana* and *Laquesimenes* the Admiral of *Bintam*, and then advancing to relieve the *Portuguese*, besieged by the Enemy in the Fortrefs of *Calicut*, he performed the same, but died of a Wound he had received in his Leg by an Arrow, in the Year 1526.

This unlucky Accident had very bad Effects on the Affairs of the *Portuguese*, and as there were the Retult of the very Precautions that were taken to avoid them, it may not be amiss to examine them more at large. As soon as it was known at *Goa* that *Henry de Meneses* was dead, all the great Officers assembled, in order to open the Billets by which the Successor was appointed; and in opening these, the Authority of Viceroy devolved upon *Pedro Mascarenbas*, who was then at *Malacca*. One of the Officers present, who took upon him to have more Wit than his Neighbours, thought proper to distinguish upon this Occasion between a General present, and a General at a Distance; he said, that the Intent and Meaning of these Substitutions was plainly, that the Government in the *Indies* might never want a Head; and that an absent Head being in Effect no Head at all, it was necessary to open another Billet, in order to procure a Viceroy for the present, till *Pedro Mascarenbas* should arrive from *Malacca*.

This Proposal was far enough from being universally approved by all who were present, because many of them foresaw, that under Pretence of providing against a slight Evil, or rather an Inconvenience, they were on the Point of running into a much greater Mischief. However, *Alphonso Mexias*, who first proposed the opening the other Billet, pressed it with such Earnestness, that at last it was complied with, and the Billet being opened, *Lopez de Sampayo* the Fourth, substituted Viceroy, took upon him that Charge, and gave the *Malabarians* a signal Defeat in an Engagement at the Mouth of the *Bucanor*: But *Mascarenbas* highly resenting it, that *Sampayo* should usurp the Viceroyalty out of his Turn, would by no means acquiesce with that Proceeding, but assumed to himself the Title and Office of Viceroy, and being forced to wait the proper season for coming down to *Goa*, took that Opportunity to repair with a Fleet of nineteen Sail to the Coast of *Bintam*, where he defeated *Laquesimenes*, the Enemies Admiral, together with the Fleet of *Pabang*, which came to their Assistance, when taking the City of *Bintam* by Storm, he burnt it; and the King, dying with Grief at his ill Success, *Mascarenbas* ap-

pointed another in his Room, on condition that he should maintain no Army nor Fleet without Leave from the *Portuguese*, but commit himself wholly to their Protection. This done, he went with his Fleet to *Goa*, where he desired a Number of Arbitrators might be appointed to judge whether he or *Sampayo* was the proper Viceroy; but the latter at first refused to submit to any Arbitration: Instead of which, contrary to all Reason and Justice, he seized and imprisoned him, supposing that this would put an End to the Controversy, by frightening the Friends of his Competitor into Silence; but in this he took his Measures quite wrong, for this Viceroy, instead of lessening the Interest of *Don Pedro*, increased it, so that at last he found himself under a Necessity of yielding to this Proposition, and thirteen Judges were chosen to decide this difficult Question, which by an Accident that happened in the mean time was made still more difficult.

For, a fresh Squadron arriving from *Portugal*, brought more of these Billets, with an Order that such of the old ones as were not opened, should be suppressed and sent back, and that the Government should be determined by the new Billets: the first of which, by the Advice of *Alphonso Mexias*, the first Mover of all these Billets, was opened, contrary to the Opinion of the wisest and best Men at *Goa*, who foresaw, that instead of lessening, it would augment the Doubts and Suspicions that had grown them into Factions already. This Billet being in Favour of *Lopez*, he affirmed, before the Judges, that both the former Nominations were void, and therefore he insisted only upon this last; and they being, for the most Part of his Faction, or else corrupted by *Mexias*, came into it at once, declared him Viceroy, and, to put an End to all Disputes, ordered *Don Pedro Mascarenbas* to return immediately to *Portugal*; with which Arbitration he complied, as plainly perceiving that he could hope for nothing by continuing in the *Indies*, when Things were in this Situation. On his Return to *Lisbon*, he laid the whole Proceedings before the King, together with a Memorial, in which he represented, that as all these Disputes had been occasioned from their not knowing certainly his Majesty's Pleasure, he humbly desired that it might be declared, who it was his Majesty intended to have named Viceroy, that Accusers of this Kind might be prevented for the future. The King accordingly heard and decided this Matter with great Justice and Wisdom; for, in the first place, he executed the Decree of the Arbitrators, and ordered that the present Viceroy, *Lopez*, should pay to *Don Pedro* twenty thousand Crowns, as the Profits of his two Years Government; and at the same time, made a Regulation for the future to this Effect, that, on the Opening of these Billets, should be the Absence of the Person nominated should not prejudice him in any Degree, provided the Person nominated was a Part of the *Indies* between *Cape Horn* and *Senegal*; and in the best Part of the *Indies*, rendered it impossible for any such Accident should hereafter fall out, which might have occasioned all this Confusion.

But as *Don Lopez* had, in other Respects, behaved well, it was judged the reasonablest Course to give him the Possession of the Government, more especially since he was obliged to part with all the *Indies* he had acquired in it. As soon as the King's Orders were received in the *Indies*, *Don Lopez* executed them as every King would have done himself to the Friends of *Don Pedro*; and he behaved in every other Circumstance, as becoming a worthy Man and a good Subject. But no sooner were his Troubles over, than new Disturbances broke out, which occasioned fresh Confusions in the *Indies*.

Henry Garcia, who was at that Time Governor of the *Moluccas*, finding Affairs extremely troubled by the Wars which his Predecessor had begun against the King of *Tidor*, with very little Advantage, thought fit, on his first coming to his Government, to make Peace with *Amanzor*, who was then King of that Island, on Condition that he should restore the *Portuguese* Prisons he had taken from the *Portuguese*, which in the Space of six Months, he undertook to do. But the

¹ This was the Beginning of those Factions which proved afterwards so fatal to the *Portuguese*; for it is certain, that if the Government began to improve each other, and take many such Steps for their private Advantage, at the Expense of the public Good of the Country, we need not wonder at the unlucky Accidents that followed, their Commerce, by bringing Strangers of all Nations into those Seas.

Face of Affairs in those Parts altering soon after, *Garcias* repented him of the Peace, and resolv'd to renew the War, believing, that if he could reduce this Island, it would very much raise his Reputation; to furnish himself therefore with some Pretence for breaking with the King of *Tidor*, he, before the Time limited was expired, sent to demand the Cannon and Prisoners; to which *Alonzo* modestly reply'd, that he would have deliver'd them up when the Treaty was made, if it had been in his Power; but that having lent the Cannon to a Prince who was his Neighbour, it required some Time to get them back. He had so little Suspicion however of the Governor's bad Design, that, being at this Time extremely indispos'd, he requested him to send a Physician, whose Advice he might make use of in his Recovery. *Garcias* accordingly sent one, under whose Direction the King put himself, without the least Reserve, and was by him most balefully poisoned. Immediately after the King's Death, *Garcias* sent again to demand the Cannon and Prisoners, and because the People desired a Delay till the King's Funeral was performed, he having all Things ready, expecting the Event, made a Descent upon the Island, attacked the capital City, took it, and plundered it, and treated the People with the utmost Inhumanity.

As this was done without the least Provocation, in a Time of full Peace, and when there was not the least Intention on the Side of the Natives to renew the War against the Portugueze, it caus'd among the People of that Island, and of most of the rest of the *Moluccas*, an insupportable Hatred against them; soon after which, a Squadron of the Emperor *Charles V.* arriving there, was welcomed by the People of *Tidor*, with all the Marks of Kindness, on account of the *Spaniards* equal Enmity with them to the Portugueze, and being received into their Port, they rais'd Works for the Defence of it, in case of an Attack from the Enemy. The *Spaniards*, who were under the Command of *Igniguzza*, alledged, that the *Moluccas* belonged of Right to them, as being first discovered by *Magellan*, with a Commission from the King of *Spain*, and that the Dispute having been submitted to Arbitration, was determined in their Favour.

On the other Hand, the Portugueze, under the Command of *Henriquez*, said, that the unjust Sentence of the *Castilian* Arbitration had been reverber'd by the Judges in *Portugal*, and that those Islands were discovered ten Years before the Voyage of *Magellan* in the *Spanish* Service by *Alonso Alvarez*, who was sent out to make Discoveries by *Alonso Albuquerque*, in whose Company was *Magellan* himself, before he had desert'd his Country. Thus they disput'd with Words for a while, but soon after came to Blows, the People of *Ternate* taking Part with the Portugueze, and those of *Tidor* and *Gilolo* with the *Spaniards*. The latter struck the first Stroke, by besieging the Portugueze Fortrets in *Ternate*, where, at the first Attack, they took one of the Enemies Ships, and now the *Spaniards* and Portugueze had gone near to have atoned for the Mistakes they had done to the *Indians* by the Destruction of each other, but that the Emperor being engag'd in other Wars in *Europe*, neglected to remove an Acquisition, and for a certain Sum of Money yielded up his Right in the *Moluccas* to the King of *Portugal*.

This was look'd upon at that Time as very indifferent Policy, and as the Effects of his not considering attentively the Advantages that might have been deriv'd to him in *Europe*, by the prudent Management of his Affairs in

America, and this because his Thoughts were entirely turn'd on the vain Project of raising an universal Monarchy by Force of Arms, whereas the Portugueze wisely contented themselves with pushing on their Conquests in the *Indies*, and employ'd their Riches they deriv'd from thence to secure themselves against their ambitious Neighbours in *Europe*; from which Plan, if she had never varied, she might have escap'd becoming a Province to *Spain*, as she afterwards did, and all the unlucky Consequences that follow'd from that Conjunction. But it is now time to return from these Reflections to the Thread of our History. Matters being settled in those Islands, the Viceroy *Sampayo*, sent out *John Deza* with a Squadron, to cruise off *Cananor*, and at the same Time, dispatched *Alphonso Melia* to the *Sunda* Islands, who, just as he had doubled the Cape of *Comorin*, met with some Deputies coming to *Goa*, from the Prince of *Calecura*, on the Pearl-fishing Coast, with Offers of Tribute and Submission, upon Promise of Assistance against his Enemies the *Calecutians*.

In the mean time, *Deza*, upon his Station, intercepted all Ships passing between *Calecut* and *Cambaya*, to the incredible Loss of the People of both those Places, and landing at *Mangalor*, the Inhabitants deserted the Town, which he plundered and set on Fire; after which, falling in with *Cutial* the Admiral of *Cilicut*, he engag'd and defeated him, and carried him Prisoner to *Cananor*; and about the same Time *Anthony Alranza* sailing to the *Red-Sea*, took great Numbers of the *Arabian* Ships, and burnt several along the Shore; *Sampayo* himself, off *Cananor*, destroyed the greatest Part of a Fleet of one hundred and thirty Sail of *Moorish* Ships, bound to *Mecca* with Spices, and then repairing to *Porca* (the Prince whereof was a formidable Sea Rover) he landed there, and took the Town, forcing the Prince to betake himself to Flight, who left such a vast Booty to the Portugueze, that the Share of the meanest Sailor came to a thousand Dollars. From thence he sail'd to the Northward, and near the Island of *Bombay*, fell in with a Fleet of the Enemies, under the Command of *Haliffa*, Admiral of *Cambaya*; whereupon proffering a Reward of one hundred Dollars to the first Man who board'd one of the Enemies Ships, he immediately engag'd, and having entirely routed them, committed the Fleet to the Command of *Miranda*, who, soon after the Viceroy's Departure, came to another Engagement with the *Mahabarians*, before the Town of *Chaul*, and gave them a signal Defeat, killing great Numbers, and carrying off a rich Booty in Spices to *Cochin*; soon after which, the Portugueze reduced the Town of *Tamor*, made the Prince of the neighbouring Country their Tributary, and again routed *Haliffa*, the *Cambayan* Admiral.

In the mean Time, *Nunbo de Cunha* set out from *Portugal* with a Commission to be Governor, accompanied by his Brother *Simon de Cunha*, who was constituted Admiral of the *Indies*, and in his Way thither, attempting to put in at *Mombaza*, in order to pass the Winter-Season there, was refus'd Entrance by the King, but forced a Passage into the Port, and making himself Master of the Town, gave the Plunder to the Mariners, and set it on Fire. Departing thence early in the Spring, he made the best of his Way to *India*, where he resolv'd to make himself Master of the Town and Fortrets of *Diu*, situate in an Island of the same Name, near the Entrance of the Gulph of *Cambaya*; to which Purpose, repairing thither with the Fleet, upon his Appearance off the Place, he received an

* As soon as this was known to the Viceroy, he sent a new Governor to the *Moluccas*, one *George Mendez*, between whom and *Garcias* there appear'd a long Dispute, in which the latter was still made Prisoner, and afterward the former. And this, notwithstanding the *Spaniards* were actually possess'd of *Tidor*, and were endeavoring to get the rest of the Islands into their Hands, which shews the Infatuation of the Portugueze, who could not avoid quarrelling at that very Juncture, when Union was most necessary, and when not only the Extension of their Commerce, but the very being of it depended thereon, and could not be secured without it.

* We have a clear Account of this Matter, and a very good one, in *Sir William Monks's* Naval Treatise. The Controversy, says he, to whom the *Moluccas* should belong, continued between the two Crowns of *Spain* and *Portugal*, and the *Spaniards* made sundry Attempts by Way of the *Indies*, but ever more with unprosperous Success. At last *Don John III.* of *Portugal*, and Brother-in-Law to the Emperor, who longly lent him three hundred and fifty thousand Ducats, when he went into *Italy* to be crown'd Emperor, upon Condition the King of *Portugal* should no Way be molested in his Possession of the *Molucca* Islands, till that Money was repaid; which being never done, the *Spaniards* never since pretended to those Islands.

* I mean by this, that if the Portugueze had cultivated Manufactures at home, in order to support and supply their Commerce in the *Indies*, without engaging, as *Don Sebastian* unfortunately did, in Wars on the Continent, and in *Bombay*, they must have become one of the principal maritime Powers in *Europe*, and have attained to such Wealth and Strength, as would effectually have secured them for ever against the Attempts of *Spain*, in launching out into wild and fruitless Expeditions, to gratify the Humours of ambitious Princes, will prove fatal to any, but to itself, and most to a trading Nation.

Envoy from *Badur* King of *Cambaya*, with Offers of yielding the Fortrels into his Hands, which being accordingly performed, it was committed to the Custody of *Anthony Siceira*.

Not long after the King of *Cambaya*, at the Instigation of the *Turks*, who were very desirous of getting *Du* into their Hands, made an Attempt to dispossess the *Portuguese*, and recover the Place; but with an unfortunate Event he, with his *Turkish* Auxiliaries, being entirely routed, most of his Fleet sunk, and himself received his Death's Wound in the Engagement. Soon after this, *Soliman*, the *Turkish* Emperor, sent the *Paisha* of *Cairo* to besiege it, with a Fleet of sixty-two Gallies, six Gallions, and other smaller Vessels, having on Board four thousand *Jamzaries*, sixteen thousand other Soldiers, besides Gunners, Seamen and Pilots, which on their Arrival before the Town, were joined by eighty Sail of Ships at *Cambaya*.

The *Turkish* *Paisha* landing his Forces, battered the Fortre's with sixty Pieces of Cannon; but the Governor with great Bravery sustained his Attack till the Arrival of *Garcias de Noronha*, the new Viceroy from *Goa*, to his Assistance, who, by a Stratagem passing thro' the Enemies Fleet with Drums beating and Trumpets sounding, as if they had been some of their *Indian* Allies, the *Turks*, upon Discovery of their Mistake, raised the Siege in the utmost Confusion, leaving behind them their Tents, Ammunition, Artillery, and above a thousand wounded Men, besides the like Number that were out on Foraging; all which fell into the Hands of the *Portuguese*. After the Death of *Badur* before mentioned, *Mamud* became King of the *Cambayans*, and *John de Castro* succeeded *Noronha* as the *Portuguese* Viceroy, in which Time the *Cambayans* and *Turks* made another Attempt on *Du*, but with the like Success as before, *de Castro* routing them both by Sea and Land, with a very great Slaughter; after which, he added several Works to the Place, and raised a new Cuttel, in a more advantageous Situation, and of much better Materials than the former.

11. In this prosperous Manner did the *Portuguese* carry all before them in *India*, during the Reign of *John III.* who dying *A. D.* 1557, was succeeded by *Sebastian*, then an Infant. That Prince growing up, was to intent upon his *Indian* Acquisitions, that he resolved on a Voyage thither himself; and it was with Difficulty his Council found Means to dissuade him from it. They did at length prevail on that Point, but could not prevent his undertaking a Design more hazardous than the former, *viz.* an Expedition against the Emperor of *Morocco*; and he embarking for that Purpose with a great Army, and the Flower of the *Portuguese* Nobility, on Board a numerous Fleet, landed at *Tangier*, and unadvisedly marching up into the Country, gave the *Moor*s Battle near *Alcazer*, where he was cut off with the whole Army.

He was succeeded by *Henry* his Uncle, then in advanced Age, whose Reign is remarkable for nothing but the Disputes about a Successor to him. he dying *A. D.* 1578, *Philip II.* King of *Spain*, who had Pretensions to the Crown, thought it most expedient to end all Disputes by the Point of the Sword; and understanding the great Inclination the *Portuguese* had through Hatred of a *Castilian* Government, to set *Antonio*, a natural Son of *John III.* upon the Throne, he ordered the Duke of *Alva* to march at the Head of a powerful Army into the Kingdom, who soon reduced it to his Obedience, forcing *Antonio* to withdraw to *England*; from whence, after some unsuccessful Attempts to recover his lost Dominions, he retired to *Paris* and died there *A. D.* 1595. The rest of the Territories of that Crown fell, at the same time, into the Hands of the Conqueror, except the *Azores*, or western Islands, which

were, at length, subdued to *Spain* by a great Victory obtained over a Fleet of *French* Ships sent thither to maintain them in the Obedience to *Anthony*.

As this Subjection of the *Portuguese* to the *Castilians*, was very arksome and odious to them, so was it attended with Consequences very fatal to their Interests; for, upon the first Commotions in the Low Countries, *Philip* being that one of the best Expedients to quell them, would be, to deprive the Inhabitants of the Advantages they received by Trade with *Portugal* and *Spain*, he prohibited all Commerce between them; for, in those Times, the *Dutch* Ships made no longer Voyages than to these Countries, for the Commodities of *India*, with which they afterwards supplied the Northern Nations of *Europe*. By *Philip's* Designs met with an Event very contrary to his Expectations, though they were laid very deeply, as was followed with the utmost Success, as well as Expedition. The Conquest of *Portugal*, indeed, carried along with it the Conquest of the Dominions of the *Portuguese* in the *East-Indies*, and seemed to promise the *Spaniards* the same quiet Possession of both *Indies*; But this Project began very soon to fail, for, in the first Place, the *Portuguese* Governors paid no more than a forced Obedience to the Crown of *Spain*; and in proportion to the Distance of their Settlements, the Governors were, more or less, contempt as to their Conduct. On the other hand, the *Spaniards* having many Affairs of their own to mind, and very little, if any, Concern for the Interest of *Portugal*, the annual Fleets and regular Supplies were neglected, or, when sent, proved very inferior to what they ought to have been. A too quick Sense of this Relaxation of Government, induced many who were vested with Authority in the *Indies* to make Use of their Power to serve their private Purposes, without regard to the publick Welfare of their Country or the private Benefit of such as were under their Protection.

But what contributed most to the speedy Ruin of their Affairs was, this Act of Policy, by which *Philip II.* prohibited, on their Rebellion, his Subjects in the Low Countries from trading to any Part of his Dominions, by which he absolutely forced them on the *Netherlands*, he might have secured his *Indies*, and all their Wealth, which well minded, and their Produce properly applied, would, in a short Space of Time, have enabled him to put all his ambitious Projects into Execution. As to the *Dutch* finding an absolute Stop put to the possible Trade in *India* Commodities, which had they had bought in the Ports of *Spain* and *Portugal*, was immediately, to try it was not possible to procure directly from the *Indies* directly; whereas, had they been permitted to have purchased them in their own Country, this Design had never been thought of, but the Commerce of *India* had continued in its usual Channel, without Envy or Disturbance.

We have now concluded to its Close, the first Part of this Section, and have shewn how this Navigation was opened, improved, and monopoliz'd by the *Portuguese*, how their Conquests in this Part of the World were made, and maintained, and how by entertaining and pursuing this Scheme of distant Expeditions, the industry and wealth of considerable of all the Kingdoms of *Europe* are one of the richest and most potent, having by this means their own Power to have increased her in all her Parts, and have had no Cause to dread the Ambition of the *Netherlands*, or their united Endeavours to get Possession of the Point we now to as clear an Explication of the Cause, which within the Compass of this Section we proposed.

* This was one of the greatest and most honourable Victories ever gain'd by the Arms of the *Portuguese*. It was a Campaign of six or seven Months, and cost the King of *France* a great deal of Money, but he was oblig'd to give up the Siege, and to retire to *Paris*. The Reputation of this Victory was not only great, but it was also a great Victory over the *French* King, *Francis I.* sent into *Portugal* to obtain the Peace, and who had made the *Portuguese* Detour in order to bring it up in his Cabinet of continuant Officers.

† The *Count* *Du*, *Sebastian* was so fatal to the *Portuguese*, and the personal Virtues of that Prince rendered him so much beloved, that they could not bring themselves to believe especially as his Body was never found, that he perished in this Action. Next to the death of him of that Nation to this Hour, that he escaped, and it is certain, that a Person who called himself *Sebastian*, appeared afterwards in *France*, where, at the Request of the King of *Spain*, he was seized, then examined in a full Senate, and defended himself in so well, that he was not only H. at a new trial, but into the Hands of the *Spaniards*, who imprisoned him first at *Alcala*, and afterwards carried him to *Madrid*, where he died. Conducted, according to the very fact, that he was no Impostor, but the true King of *Portugal*.

12. It would require much Room, and add very little to the Reader's Satisfaction, should we prosecute the History of the Portuguese Empire in the East, through all the Changes and Revolutions to which it was subjected, from the Causes before-mentioned; the rather, because as soon as Dominions increased, they were obliged to carry on Wars in different Places at the same time, with several Nations, and with great Variety of Success. In order therefore to separate these Subjects, so as to represent to the Reader what is of Importance to be known, and that in the easiest and clearest Method possible, we will consider the most remarkable Discoveries and Settlements of this Nation in the Indies, according to the Order in which they were made; the principal Events that happened in them during the Time they remained in their Hands, and the Manner in which they lost them, whether to the Indians or Europeans. By this Division, that Confusion which would necessarily attend the Abridgment of a general History, so pregnant with Events, will be avoided; all the Particulars relating to the same Places and Persons, will be ranged together, so as to give Light to each other, and render the Perusal of them easy and entertaining; at the same time, that by being thus digested, every Colony, every Country will have its History preserved in such a Manner, as that it may be easily compared with whatever has been said before, and be with like Facility turned to, when what is hereafter said may make it necessary.

Before we proceed to these Discoveries and Settlements, it will be necessary to fix the Place from which they were made. Calicut, as we have before shewn at large, proved the first Place they visited in the Indies, though the first Settlement they built was at Cochin, which lies South of it. They were sole Masters of the Commerce on the Coast of Malabar from the Gulf of Cambaya to Cape Comorin for about one hundred and fifty Years, which determined them to fix the Capital of their Dominions as near as possible to the Centre of this Coast, which was one principal Inducement to their fixing Goa in the manner before-mentioned. It stands at an equal Distance from Surat and Cape Comorin, in a little Island made by the Rivers Mandoa and Ghara, about six or seven Leagues in Circumference, and at the Distance of about three Leagues from the Fall of these Rivers into the Sea. The Name of the Peninsula forming is Salsette, and the Soil is extremely rich and fertile. In the hot Season the Waters are very low, sometimes scarce two Feet in Depth; but the rest of the Year they rise so high as to afford the largest Vessels an Opportunity of entering the Port of Goa, which is one of the safest and most commodious in the Universe.

All the Territories adjacent to this City are held by a Treaty with the King of Decan, who, by yielding these, retained a free Trade for his Subjects throughout the Indies in all Commodities except Pepper, with which they were to furnish the Portuguese alone. Since this Agreement many Disputes have happened, and when their Power has been great, particularly in 1603, the Viceroy of Goa treated their Neighbours with great Severity. At the same time before-mentioned, they had Intelligence of four Indian Vessels bound with Pepper to Malaba and Persia, which they seized and took. Their Cargoes, pursuant to the Treaty, were confiscated; yet not satisfied with that, they murdered all who were on board them in cold Blood, in order to strike a Terror into the Natives. This Behaviour, as it might well be expected it would, raised a violent Aversion in the Indians against them, which they never fail to discover when any Opportunity offers. There are in Goa many superb Edifices, such as the Viceregal, the Archbishop's, and Inquisitor General's Palaces; and throughout the Churches are exceedingly numerous, and many of them wonderfully rich. In Extent it contains about

ten Miles, taking in all the Fortifications raised round it for its Security, which bend according to the Course of the River, and are so well furnished with Cannon, that hitherto they have rendered it impregnable, though it has been very hard pressed, both by Indians and by the Dutch. It was from this City, in the Latitude of 15° 20' North, that the Portuguese made their Discoveries, and sent most of their Colonies; and having given this short Account of it, we shall next proceed to describe them.

13. The Maldives are so situated, that it was impossible the Europeans should make many Voyages to, or be long settled in the Indies, without being acquainted with them, since the most northern of them lie but fifty Leagues from Cape Comorin. They extend from 8° of North Latitude to 4° of South, stretching in Length consequently near two hundred Leagues; but they are not above thirty or thirty-five Leagues in Breadth in any Part of the Archipelago. Within this Space are contained a prodigious Number of Islands, so that even in the Time of Ptolemy, that is, in the second Century, they were accounted 1278; but the Inhabitants maintain, that a small Part of them only were then known, for their Sovereign takes the Title of Sultan of the Maldives, King of thirteen Provinces, and of twelve thousand Isles. There is in this, without doubt, a Mixture of that Pomp and Ostentation which is so common in the East; but for all that, there are, unquestionably, many more than the Antients knew any thing of under this Monarch's Dominion. Admiral Suarez discovered them in 1505, and he made an Alliance with their King, which was confirmed by Sequeria, who demanded Leave to build a Fort upon the Island of Male, which is the largest of them, and the chief City of the same Name is the Capital of their Monarch.

John Gomez, who was sent thither for this Purpose, met with a favourable Reception, and by dint of Presents prevailed upon the King to agree to his Demand. He built this Fort of Wood, there being neither Stone nor Lime in the Island. It was extremely well situated, and in some measure commanded the Port, so that it might have been of great Service to the Portuguese, if he had behaved as became him; but no sooner was the Fort finished, than presuming on the Terror of the Portuguese Name, he began to lord it over all the Strangers that traded thither, though his Garrison consisted but of seventeen Men, which occasioned a Conspiracy of the Mohammedans against him, who attacked him when he least expected it, and cut off him and all his People to a Man, levelling the Fort with the Ground. The Portuguese were never afterwards able to obtain any Establishment in the Maldives, which is the Reason that several of their Authors treat them as pitiful Places, and their Inhabitants as a base and barbarous People, contrary, however, as we shall see, to all Reason and Evidence.

It was impossible for them to double Cape Comorin, without taking Notice of the noble Island of Ceylon, Ceylan, or Ceilon, called by the Inhabitants Lamma, which in their Language signifies the Terrestrial Paradise, or Holy Land, a Name given it by its first King, Viga Rajah, who is supposed to have flourished five hundred Years before Christ: It was afterwards called Ilanara, or Iranate, which is as much as to say the Island Kingdom; it was also called Uthenava, or the Fertile Land, and Venafson, or the Country of Delight. The Arabians call it Serendib, or rather Srendive. It is by many held to be the largest, and is, beyond Controversy, in itself, the richest and finest Island in the World. The Portuguese settled here in 1506, under the Conduct of Lawrence Almeida, who erected a Column with an Inscription, testifying that he took Possession of that Country on Behalf of Emanuel King of Portugal, because it had no Master, though at the same time he treated with the Emperor, and promised him the Protection of his

The East Indies in general are very properly divided into the Dominions of the Great Mogul, and the adjacent Kingdoms on the Continent. The Portuguese, being as they did at first confined to the Coast of Malabar, which made the West Point of the Peninsula without the Ganges, acquired the happiest Station that could be desired, sending their Commerce, and their Conquests on every Side; and there is Reason to believe, that their being as they did the only Europeans on this Side, contributed greatly to the Preservation of their Dominions, notwithstanding all the Efforts made by the Mohammedans to dispossess them. There is but one good Description of this prodigious Archipelago written by Francis Pissard de La Val, a Frenchman, who was a long time in some of these Islands, and which, as it is a Work equally curious and instructive, and at the same time exactly within our Plan, we shall have it at large in the next Section, which will give him an Opportunity of observing how little Cause the Portuguese had to treat the Inhabitants of the Maldives with Contempt, since it is certain that they are one of the bravest and one of the most polite Nations of the East.

of Orange, by which they fixed themselves so well, that no European Nation has been able to dislodge them.

Tior is larger than *Ternate*, is also a particular Kingdom, and produces the same Fruits: It lies a little South of *Ternate*, near the Line. The *Spaniards* assailed the Inhabitants against the *Ternate* at first, but had War with them at last, and treated them barbarously, till expelled by the League above-mentioned. The *Dutch* attacked the *Spaniards* here in 1107, and afterwards without Success. But, at last, to kill by the Assistance of the King of *Ternate*, after an obstinate Resistance, and were finally received by the King, who allowed them to settle Fisheries here. The Capital is of the same Name, and has an Harbour about a Stone's Throw from the Shore, dry at Low water, and defended by a Chain of narrow Rocks, over which the Tide rises from three to six Foot. The Town is very strong by Nature.

Maur, Mohl, or Ymor, lies between *Tilor* and *Maclean*. It was laid waste during the intestine Wars; but the *Dutch* built a Fort at the North End of it, which encouraged the Inhabitants to return from *Glolo*, continuing from the *Dutch*; the *Spaniards* durst not attack it. *Maclean* lies just under the Line South from *Mohr*. The *Dutch* took it from the *Spaniards* in 1609, and built three Forts here. It is seven Leagues in Compass, and has several little Towns; the Inhabitants were then about Nine thousand: It was reckoned the fruitfullest of the *Moluccas*, and produced the best Cloves. The Inhabitants were more industrious than their Neighbours. *Buckian*, the last of the proper *Moluccas*, lies South from *Maclean*, and was a Kingdom. The Country is large and desert; it abounds with Sago, Fruits, Fish, and, many other Sorts of Provisions. It was formerly very potent, and had the best Cloves in the *Moluccas*, but was ruined by the Idleness of the Inhabitants. They had an Alliance with the *Portuguese* and *Spaniards*, who planted Garrisons there, but were dispossessed by the *Dutch* in 1610, who built other Ports, and obtained a Liberty to trade without paying Custom. The Isle of *Labeva* lies to near it that they frequently go by the same Name, though each had their particular King. The latter is very pleasant, and abounds in Cloves. The Inhabitants rebelled against the *Dutch*, but were forced to submit, and have been since kept in Awe by Fort *Barneseli*.

The Island of *Beavo* was formerly subject to the King of *Amate*; it is not very considerable; but while in the Hands of the *Portuguese*, was more considerable than it is at present. But the Island they chiefly depended upon was that of *Ymor*, which is much larger than the other of the same Name before mentioned, and was extremely fruitful, so that it supplied most of the *Moluccas* with Provisions. West from thence lies the Island of *Sabor*, in which was a strong Fortrefs, wherein the *Portuguese* Garrison held out a Siege of two Months against the *Dutch* Fleet and Army, and, when they surrendered, marched out near one thousand strong. There are many other Islands, which are commonly, since the *Dutch* Conquest, called the *Moluccas*, because they make that Word synonymous with the Spice-Islands; whereas the *Moluccas*, strictly speaking, are no more than the five Islands first described. It was with the Spices they produced, that the *Portuguese* traded throughout the whole Extent of the *Indies*, that is to say, from *Cina* to the Coasts of *Egypt*.

The Viceroy *Lopez Suarez*, Successor to the famous Don *Alphonso d' Albuquerque*, was the first who thought of establishing a Commerce with *Cina*; and in the Year 1511, sent forth that Purpose *Ferdinand Andrada*, with a Squadron of eight Ships, laden with Merchandise,

together with *Thomas Perera*, with the Character of Embassador from *Imanuel, King of Portugal*. On their Arrival at the Mouth of the River *Canton*, the *Portuguese* Ships were stopped by the *Chinese*, and only two suffered to proceed up the River, on board one of which was the Embassador, and the *Portuguese* Commadore *Andrada*, who was a Man of Quality and of strict Honour, so that he soon gained very much on the *Chinese*, notwithstanding their natural Aversion to Strangers. By his Civility and polite Behaviour, he first drew them to trade with him, and then, by his Exactness and Probity, brought them to have a Confidence in him; but what had the greatest Effect of all, and might have established the Commerce of the *Portuguese* to the Exclusion of all other *European* Nations was, his giving Notice a little before his Departure, that at such a Time he meant to sail, and that if any body had Demands upon him, or any who belonged to him, they might, before that Time, apply and receive Satisfaction.

This, it seems, was a Thing new to the *Chinese*, but withal so agreeable, as they made him the highest Protections of Friendship, and assured him that they would willingly trade with his Nation, in hopes of meeting with the like just Usage: But this fair Prospect did not continue long; and, as this was the first, it had also very near proved the last Voyage of the *Portuguese* thither. The Captains of the Ships that were left at Anchor at the Mouth of the River, were the Occasion of this, for they landed and fell into Trade with the Natives; but presuming on their Power in the *Indies*, they began to treat the *Chinese* in the same Manner they had done other People; that is to say, they landed several Pieces of Cannon, and then took what Goods they pleased, and at what Rates they thought fit, committing many other Insolences, such as ravishing Women, and trading with Pirates for such Persons as they had taken Prisoners, of whom the *Portuguese* made Slaves. The Viceroy of the Province quickly assembled a great naval Force, with which he surrounded the *Portuguese* Squadron, and had infallibly taken every Ship, if a Storm had not risen, which scattered the *Chinese* Fleet, and gave them an Opportunity of returning to *Malacca* with more Profit than Honour. As for the Embassador, *Thomas Perera*, he, though perfectly innocent, proved the Victim of his Countrymens bad Behaviour; for the *Chinese* Court having received Advice of what had passed before his Arrival, not only refused him Audience, but sent him back to *Canton* in Chains, where he was put into the common Prison with the lowest and vilest Criminals, and there spent his miserable Life for several Years; till, at length, worn out with Hardships, he expired in such wretched Circumstances, that he did not leave wherewith to bury him.

It was many Years before the *Chinese* would suffer the *Portuguese* to have any Trade with them at all; but, at last, permitted them to send annually some Ships to the Island of *Sanchan*, where they were allowed to erect Tents on Shore, for a very small Space of Time, in which they disposed of their Merchandize. At length, in the Beginning of the Sixteenth Century, a favourable Opportunity offered, not only of restoring their Commerce, but of procuring an Establishment in *Cina*, which is what no other Nation ever had to boast. The Thing fell out thus; A certain Pirate, whose Name was *Tschang si Lao*, committed prodigious Ravages upon the Coasts, and having at last acquired a great Force, he made himself Master of the little Island of *Malacca*, and from thence not only blocked up the Port of *Canton*, but proceeded to far as to besiege the City. The *Mandarines*, in this Distress, had Recourse to the *Portuguese*, whose Ships were then at the Island of

*The King of *Portugal* likewise maintained a Gallion for bringing the Tributes of the *Moluccas*, officered in the same Manner as that mentioned in the text, but inasmuch as the Voyage was longer, and there were more Seamen employed, the yearly Expence amounted to 3,292,09 Reys, which is 100,000 l. which shows that the public Revenue was diminished there with great Economy in those Times.

The famous *Portuguese* Historian, *José de Barros*, though, otherwise, a very candid Writer, endeavours, as far as he is able, to cover and disguise the Fact, but other Writers, even that Nation, confess it ingenuously, and speak of it as it deserves. It proved, without doubt, of infinite Prejudice to the Nation, as indeed they Paid and ever bear up Tempered in many other Places. It may be justly wondered that they never employed Force while their Affairs in the *Indies* were in so flourishing a Condition; but they were restrained from this, by their Fear that the *Chinese* might revenge any Injuries they did them upon the *Christians*, which is very probable; and therefore they were in the right to proceed as they did. To the Truth, the *Portuguese* seem, of all the Nations in the World, the least fit to have any Correspondence with the *Chinese*, because of their Ignorance of the Language, and of the natural Suspicion of the Natives of that Empire.

"Henceforward, so long as the Sun shall shine upon the Earth, let not any Christian be so hardy as to set his Foot in Japan; and be it known to all the World, that if King Philip in Person, the God of the Christians, or the great Aata, one of the first Deities of Japan, shall presume to break this Ordinance, he shall pay for it with his Head." They then gave these poor People an old Ship to return in to Macao, which they chose rather than to be put on board any of the five Dutch Ships that were then on the Coast, and offered to let them sale on Shore in that Port.

In the Year 1641, arrived at Macao from Europe Don Antonio Terreyra, with the News of the Revolution in Portugal, and that Don Juan Duke of Bragança, had mounted the Throne, and assumed the Title of John the Fourth, to whose Obedience they readily returned, and as a Mark of their Loyalty, presented him with two hundred Bra's Cannon, and a vast Quantity of Ammunition. This Monarch, in the Year 1646, thought fit to make another Attempt in Favour of the City of Macao, and sent Don Gonzalo Segueyra as his Ambassador to the Emperor of Japan, to inform him, that Portugal no longer continued subject to the Crown of Spain, which as it was the principal Occasion of the Nation's being prohibited all Commerce with the Japanese, he hoped that a good Intelligence would now be restored between the Citizens of Macao and the Subjects of his Imperial Majesty. The Ambassador was very civilly received, and an Express sent to Court with the News of his Arrival. About a Month afterwards a Courier arrived with the Emperor's Answer, which was to this Effect: That his Request could not be granted, but that he and all that belonged to him had free Liberty to depart.

In the Year 1682, another favourable Opportunity offered, which the Portugueze, with great Alacrity, embraced: A Japanese Vessel being driven by a Storm from their own Coast, was forced to take Shelter in the Port of Macao, where those who were on board it met with a very kind Reception, and having been entertained at the publick Expence, till they were recovered from the Hardships they met with at Sea, and were then put on board one of the best Vessels belonging to the Port of Macao, and sent back to their own Country. On their coming to an Anchor in the Road of Nangazaqui, and sending the Japanese on Shore, they received a Message from the Magistrates, importing, that they were obliged to them for this kind and generous Return, but that for the future they would advise them not to give themselves the Trouble of sending home any more of their People, since it would not answer their Ends. Since that Time the City of Macao has declined very much, and though it is at present in a better Condition than it has been, yet it is far from being so considerable as in the sixteenth Century, as we have already shewn the Reader in another Place. But that it may possibly make a better Figure than it does, we shall hereafter render probable, when we come to speak of the present State of the Portugueze Dominions in this Part of the World.

In the Year 1521, Magellan discovered the Ladrone Islands, near those which he called the Archipelago of Saint Lazarus, because he discovered them on the Feast of that Saint. The Portugueze arrogate to themselves this Discovery, because he was their Countryman, though in the Service of the Crown of Spain; and on the other hand, the Spaniards challenge the Discovery of the Moluccas, because Magellan went to them from America in their Service, but without doubt this Title was wrongfully laid, since, as we have shewn, the Portugueze had discovered them long before. It cannot indeed be affirmed, on any good Authority, that the Portugueze had before this time visited the Ladrone Islands; but it is very certain, they made several

Voyages thither afterwards, and did not think them to be despicable as they are now esteemed; but on the contrary, drew from thence Things of great Value; and the Reason I have mentioned here is, that I might have an Opportunity of acquainting the Reader, that when this Nation first settled in the Moluccas, they were informed by the Inhabitants, that from these little Islands they were wont to receive considerable Sums in Silver, and the very finest Emeralds they had in Exchange for Spices.

The Portugueze were in Hope of finding, according to this Information, Mines of Silver and precious Stones amongst them; but on the closest Search, could meet with neither, which was the true Reason they never made any Settlements there. But this Account affords us room to conjecture, that before the Portugueze penetrated thus far into the East, there had been some Commerce between these People and the Americans, from whom they might receive both Silver and Emeralds. This is a Point that deserves mature Consideration, because, if there be any Truth in this Conjecture, it will give some Light into the Means of poppling America, which hitherto has perplexed the ablest Enquirers into such Subjects. It is true, that at first Sight there seems to be no great Authority for this Conjecture, since it is founded on the Report of the Inhabitants of the Moluccas, who were, according to the best Accounts we have of them, a rude and barbarous People. Yet let them be ever so rude and barbarous they could not be mistaken as to a Matter of Fact; they had Emeralds amongst them, and as their Count y did not produce them, they must know from whence they had them; and since this could be learned no other way but from these People, there seems to be no Reason why we should not accept of their Account.

The Conjecture, however, does not rest upon this alone, but upon another Fact, which cannot be disputed; and it is this, that there are no Emeralds to be found in any of the Countries in the East-Indies, and yet they were so common there, when the Portugueze came first into those Parts, that they brought considerable Quantities into Europe, from whence grew the Distinction of Oriental and Occidental Emeralds; whereas in Truth there never were any that could be strictly and properly called Oriental, because, as I observe, they are not the natural Produce of any Country in the East; and yet in another Sense they might be very well so called, because they came first to us from the East. I cannot help adding to this Observation another, which is, that there is some Reason to doubt, whether the Inhabitants of the Ladrone Islands were always so rude and barbarous as the Portugueze and Spaniards found them; and my Reason for advancing this, because I find the best Portugueze Writers agree, that the Chinese had been Masters of the Moluccas, and very probably of these Islands also, as they certainly were of some of the Philippines; and if so, that very probably they were more civilized while under their Dominion, and grew rude and barbarous by their being deserted by them, and left to themselves.

This will appear still the more probable, if we consider on the one hand what the Chinese Writers tell us of their Emperors contracting their Dominions from Maxims of Policy; and on the other, what appears very clear to us from what we know with Certainty of their History, which is, that the Empire had been overturned by the Tartars, and consequently their Economy totally disturbed before the Portugueze came into the Indies at all. What I would conclude from hence is, that possibly we may be mistaken in our Notions of these Countries, and that theretore it may be worth while to enquire more narrowly into this Matter, which may possibly lead us to some kind of Evidence of an Intercourse between the East and West-Indies,

It seems a little extraordinary, that the Emperor of Japan should treat these People with so much Severity, when it appears from this very Account, that Justice is as regularly administered in his Dominion, as in any Part of the World; but in all human Probability, he was induced to do them in this Manner by the Representations of the Dutch, as to the Power of the King of Spain, and his Intentions of reducing both the Indies.

This Fact, that no such thing as a true and perfect Emerald is to be found in any of the Countries on the Continent, or in any of the Islands of the East Indies, is maintained by the famous M. de la Roche, than whom I think a better Authority cannot be produced. He was indubitably as well skilled in Jewels as any Man of his Time, and had travelled more in the Indies than almost any other Writer, so that to controvert his Authority in this Head, is to refute the best Evidence that can be produced, in order to conclude, without any Evidence at all, that the Thing is otherwise. It may, and indeed it has been said, that to support this Opinion, we ought to shew that there has been such a Commerce with America but there is a Difference between proving a thing, and rendering it probable; and yet in the next Chapter something further shall be said in Defence of this Opinion, which will approach very near a Proof.

before either were known to us by the Passages now in Use. But let us for the present return to the Discoveries of the *Portuguese*.

In the Year 1522, *Antonio Britto* and *Garcias Henriquez* being sent from the *Moluccas*, discovered the great Island of *Celebes*. This *Antonio Britto* was the very Person that had taken one of *Magellan's* Ships, and put all the People that were in her to Death, which had gained him the Reputation of a bold and able Seaman; nor did he lose it by this Expedition, since he actually discovered what he was sent to look for. Other *Portuguese* Writers say, that he did not go himself, but fitted out Ships for that Discovery, and that they in their Return to the *Moluccas* saw certain Islands which they could not reach, to which they gave the Name of the Islands of *Mey*. But when *Antonio Galvano* was Governor of the *Moluccas*, he sent over two of the Natives, who were baptized, into that Country, who converted several of the Princes thereof from Paganism to Christianity, and established a good Correspondence between them and the Inhabitants of the *Portuguese* settled in the *Moluccas*.

This Island of *Celebes* is divided from *Borneo* by the Straights of *Macaassar*, and lies at a great Distance from the *Moluccas*. *Angelus* tells us, the Natives are of a white Complexion, and that they were formerly much given to Piracy. That Writer, and some others, give us an odd Account of the ancient Form of Government in this Country, and which seems to confirm what I have before suggested, that there had been great Revolutions in these Parts before they were discovered by the *Europeans*. What they say on this Subject, reduced into a narrow Compass, amounts to this; that there were originally seven Kingdoms or Principalities in this Island, the Princes of which met together and chose a Monarch, who had a limited Power over the whole Island, and whom, in case of Tyranny, they who elected him deposed. This does not look like Rudeness or Barbarity, but seems to have been a very rational kind of Policy, instituted for the Sake of preserving the Peace of the several Nations inhabiting that Country, and preventing those Wars that most otherwise have kept them in continual Confusion, and into which they actually relapsed, when by some Accident or other this salutary Form of Government fell into Disuse.

The Discovery of so considerable a Country was looked upon by the *Portuguese* as a Matter of great Consequence, and Measures were taken to secure the Affections of those whom it was not found easy to conquer; but, on the other hand, capable of being obliged, or rendered useful, as their Allies, by good Usage. The People were much blaver, and withal much better Sense than most of the *Indies*; and therefore, after a little Conversation with the *Europeans*, they began, in general, to discern that there was no Sense or Meaning in their own Religion; and the few of them who had been made Christians by the Care of *Don Inacio Garcia*, were not so thoroughly instructed themselves as to be able to teach them a new Faith. The whole People in general, however, distinguished themselves by their Spirituality, and became Devils at once; but, not content with that, they determined to send, at the same Time, a *Messenger* to *Meina*, to desire from the King, Count or Prince, and from the other, Doctors of the *Moluccan* Law, to come to embrace the Religion of those Princes who came to embrace them. The *Portuguese* have likewise been very zealous enough for their Religion; but it seems that *Don Raul Pereira*, who was then Governor of *Meina*, was a little deficient in his

Concern for the Faith, since he made a great and very unnecessary Delay in sending the Priests that were desired.

On the other hand, the Queen of *Achin* being a furious *Mohammedan*, no sooner received an Account of this Disposition in the People of the Island of *Celebes*, than she immediately dispatched a Vessel full of Doctors of the Law, who, in a short Time, established their Religion effectually among the Inhabitants. Some Time after came the Christian Priests, and inveighed bitterly against the Law of *Mohammed*, but to no Purpose; the People of *Celebes* had made their Choice, and there was no Possibility of bringing them to alter it. One of the Kings of this Island, indeed, who had before embraced Christianity, persisted in the Faith, and most of his Subjects were converted to it; but still, the Bulk of the People of *Achin* continued *Mohammedans*, and are to this Day, and the greatest Zealots for their Religion of any in the *Indies*. This was one of the greatest Fruits in Policy that ever the *Portuguese* committed; for if all the Inhabitants of that Island had been made, as they very easily might have been, zealous Christians, the *Dutch* had never become so absolute in the *Indies* as they now are.

But this Difference in Religion did not hinder them from living on very good Terms with the *Portuguese*, who established a better Trade here than in any other Part of the *Indies*; for, finding few rich Commodities, and no Opportunity of encroaching on the Liberties of the Nation, they were glad to treat them as a free People, and the Situation of the Country being extremely easy for that Purpose, made it very soon the Centre of Commerce. The great Island of *Borneo*, abounding in Gold, Spices, Pepper, and other rich Commodities, lay but a Day's Sail from them; *Amboyna* and the Spice-Island, are no more than three or four; the Kingdoms of *Siam*, *Cambaya*, *Calicut*, and *Tanquin*, the Empire of *China*, and the *Philippine* Islands, none of them above three hundred Leagues. We need not wonder therefore, that the *Portuguese*, who had the best Part of the World, should be so full of Ships, and the great Towns on the Coast were Places of great Trade, when it was to much the Interest of the *Portuguese* to promote it. The People themselves were very capable of managing it, being very ingenious, and as well skilled in Navigation as any of their Neighbours, and though they had not any very rich Commodities, except Gold, and that in great Quantities, they had wherewithal to purchase those of the great *Indies*, since the Rice of this Country is often the chief of the *Indies*, as their Cotton is held the best, with the other traded to the *Moluccas*, and from thence brought to such Quantities of Spices, that they drove a very considerable Trade in them with the *Europeans*.

The Reason that this Island is sometimes called *Meina*, and at others *Macaassar*, is, because the former, which lies in the North-West Part of the Island, and the latter, which takes up all the South, were the principal Kingdoms of the Island, and especially the last, the Monarchs of which were very powerful, and frequently made many Masters of the best Part of the whole Island. The People are allowed to be the tallest and bravest of the *Indies*, and are likewise remarkable for having a great deal of Knowledge in all Sorts of Poisons, which is a great deal of them of too deadly a Nature, that the very least of such of them, is instantly and irreparably mortal. The Men make use of them to tinge the Hair of their Wives, or rather Harts, which they blow through hollow Trunks, and that with such Force and Dexterity, that

As the *Portuguese* were declared by the best Authors on this Subject, it may not be amiss to set it in the clearest Light of which it is capable. Two Brothers, Sons of the King of *Meina*, going over to the Island of *Lorabate*, saw there the Ceremonies of the Christian Worship, and being desirous to see the Rites of the Church of *Rome*. They were extremely pleased with the Show, and desired therefore to know more of the Substance, and desired them to apply to the Governor, in order to be informed as to the Notions the *Portuguese* had of God, the Reasons why they were so religious, and how themselves might be made so. He readily complied with them on their Heads; they were quickly convinced of the Truth of what he said, and to were baptized to the Names of *Isidoro* and *Michael*, which, it seems, the Governor made no Scruple of performing with his own Hands, there being, at that Time, no Priest in the *Moluccas*. It is easy to conceive, that these Men, returning into their own Country, might be able to show the King and a Council of the Idolatry, without being capable of demonstrating the Truth of the Christian Faith. The ancient Kings of this Country desired to be taken Notice of, because we shall then evidently see that the People had good Reason to do as they did. *Isidoro* and *Michael* told them, that the Heavens were eternal, and the Sun a God and Goddess, from whose Influence all Things proceed, that there had once a great Flood, and the Sun flung the Moon, the Capon interceded with the World, and that it was unlawful to kill any living Creature, except Swine, and that the former was too badly, and the latter too good for a human Soul to dwell in. But they did not think it reasonable to believe in the *Moluccas*, and, if they had none of these, they themselves made free with their Conscience. No wonder therefore, that they were so much affected with a Religion of such Practices.

they will hit a small Mark at the Distance of fourscore Yards. They likewise dip the Points of their Daggers in the same poisonous Drugs, and the very Scratch of it, either Dart or Dagger, kills without Remedy¹. The Women likewise make use of these Poisons to gratify their Revenge; for as they are generally allowed to be extremely constant themselves, so they have very quick Repentments in Cases of Infidelity, especially in regard to *Europeans*, who frequently cohabit with them, and sometimes marry them.

As they were rather the Allies than the Subjects of the *Portugueze*, so they were much more attached to that Nation than any other *Indians*, and gave a very hospitable Reception to such of them, as on the Declension and Ruin of their Colonies fled thither for Protection, which was one Reason that the *Dutch* made such a Point of reducing the King of *Macassar*, which they did after a long War in 1667, and prescribed to him very hard Terms; particularly these, that he should deliver up to them the Harbour of *Jampakan*, as too good for any but the *Dutch* to be possessed of; next he was obliged to turn all the *Portugueze* out of his Dominions, which was the more reasonable, because it was intended that he should never trade with them or any other *European* for the future; and lastly, he was to renounce all Commerce with the Spice-Islands, without which his Conquerors could not have monopolized them².

This fully proves what has been before observed, that if the *Portugueze* had taken Care to have converted these People to Christianity, and had taught them the Sciences, they would have been of more use to the Crown of *Portugal*, than all the *Indian* Nations that were subjected to it; for they had very right Notions of the Consequences of falling under the Dominion of the *Dutch*, and struggled against their whole Power in the *Indies*, when at its greatest Height, for many Years; and since their Country has been subdued, Multitudes of the *Macassars* have quitted it, and transported themselves to other Places, where they are entertained as Soldiers, particularly at *Batavia*, where they are esteemed by far the best *Indian* Troops in the Service of the States, and some of them likewise are in the Pay of the *Portugueze* Viceroy at *Goa*.

The *Sunda* Islands were now entirely open, and it is not easy to conceive how the *Portugueze* could be so long travelling those Seas, without gaining a proper Knowledge of them; yet it does not appear, that before the Year 1527, they were acquainted with any thing more than the Name of the Island of *Borneo*, and with its Situation, by reason of their frequently passing by its Coasts. About that Time, Captain *Edward Cunt* had Orders to examine it more narrowly, and being once acquainted with the Worth of the Country, they made frequent Visits thither. This Island, which is almost of a circular Figure, lies immediately under the Equator; it is about five hundred Leagues in Circumference, and abounds with the richest Commodities, the Hills well stored with Gold, and the finest Diamonds in *India* are found in its Rivers, washed down into them probably from the Hills by the Torrents that pour into them.

All the Coasts they found inhabited by *Malayan Moors*, who certainly had established themselves there by Conquest; but the original Inhabitants still remain in the Mountains, and are called *Bajans*, which in the *Malayan* Tongue signifies a wild Man, and the *Moors* use the very same Word for the largest Sort of Apes, that are likewise common in this Country, as if they meant to signify,

that the one had as little of Humanity about them as the other, which however is far from being true. The *Moors* are governed by several Kings, the chief of which are those of *Manjar-Maffen*, of *Succadon* (in one of whose Rivers there are excellent Diamonds found) of *Borneo*, and others. The *Beajufes* have no Kings, but only Princes and other Chiefs. Those that are Subjects to the King of *Manjar*, or border upon him, pay a Tribute; but such as live farther up in the Country, and in Places inaccessible to the *Moors*, are absolutely independent, and live according to their own Customs. The *Beajufes* are generally very superstitious, being much addicted to Augury. They do not adore Idols, but their Sacrifices of Sweet-wood and Perfumes are offered to one only God, who they believe rewards the Just in Heaven, and punishes the Wicked in Hell. They marry but one Wife, and look upon any Breach of conjugal Faith, either in the Man or in the Woman, as so heinous an Offence, that every one contrives the Death of the Person transgressing, either by themselves or their Friends; and therefore the Women are very modest and reserved, especially the Maidens, who are not seen by their Husbands till the Wedding-day, when the Women receive their Portion.

They are Enemies to Fraud and Theft, and grateful for Benefits received. Among themselves they live lovingly and friendly, and therefore when every Man has gathered what he towed for his own Use, the rest on the Mountains and Vallies is in common, without any Distinction of particular Right. They are also well inclined in their Pleasurs, and seek Honour in Hunting, at which Sport they endeavour to get some sharp Horns to polish, and wear them as an Ornament at their Girdle. This Girdle is no other than a long Slip of Linnen, which turns between their Thighs to cover their Privities, one End of which hangs down before, and the other behind. The Peasants make a sort of Cloth of the Barks of Trees, which being afterwards washed and beaten, are as soft as Cotton, and those Trees being within the Dominions of the *Malay Moors*, they expose themselves for the Bark to their Tyranny and Intolerance. Some of them go naked, and the rest wear a small Doublet made of the same Bark, which they dye of any Colour. On their Heads, to keep off the Heat of the Sun or Rain, they wear a Cap of the Palm-Tree Leaves, shaped above like a Sugar-Loaf, long, and with Flaps hanging down.

The Weapons they use are Knives, made like the Canklers of the *Moors*, and Zampettes, that is, Trunks about six Opans long, out of which they shoot little wooden Darts, with an iron Head at the one End, and a Cartouch, or hollow Paper at the other, blowing into which they shoot it out with a vast Force, and sometimes the Point being poisoned, the Wound is mortal. They also shoot Birds with Pellets through them. The *Beajufes*, as to their Persons, are of a dark Complexion, well countenanced and strong. Such is the Account given of them by the *Portugueze* Writers, who, for any thing I know, are the only Authors that can be depended upon in this Particular. Their Countrymen carried on their Trade chiefly with the *Moors*, whom they could never subdue; nor have their Successors, the *Dutch*, been able to do any thing considerable against them, as we have already shewn at large in another Place.

The noble Island of *Java* was sooner visited by the *Portugueze*, on account of the Trouble given them by the Pirates, or Privateers, issued out from *Bantam*, or as they call it *Bintan*, and other Place in the same Island, which

¹ When our Royal Society was first founded, they sent some Queries to Sir *Pl. Marto Fannetti*, who resided at *Batavia*, the sixteenth of which ran in these Words: "What Poison is the King of *Macassar* in *Chilbo* said to have particula-ly himself, which not only kills a Man immediately, that hath received the slightest Wound by a Dart dipped therein, but also within half an Hour's Time makes the Flesh touched therewith to rotten, that it will fall like Snow from the Bones, and whose poisonous Steam will soon fly up to a Wound made with an unpoisoned Dart, if the Blood be only in the slightest Manner touched with a Dart infected with the Poison?" To which he gave the following Answer: "That there is such a Poison in this King's Possession, is not certain, but what it is, no Christian ever knew; some say it is the Gall of a venomous Fish, others say it is a Tree, which is so venomous, that those who are condemned to die fetch the Poison, but not one in a Hundred escapes Death. The Roots of this Tree are held an Antidote against the Poison; but our People, when we had War with *Macassar*, found no Antidote like to their own or other Excrements. As soon as they felt themselves wounded, they instantly took a Dose of the same, which presently provoked to vomit, and so by Repulsion (as I conceive) and sweat, freed themselves from further Infection."

² I should not have advanced these Facts on the Authority of Report of any Writer whatever, but the Treaty dated the 18th of *November 1667*, is before my Eyes, and the sixth Article of it begins thus: "They, that is the Regents of *Macassar*, shall turn out the *Portugueze*, and all belonging to them, without Exception; and because we are obliged to believe that the *English* are great Mischief-makers, and the Authors of the present War, the said Regents shall turn them out also the first Opportunity, and shall never permit either of these Nations, or their Creatures, to negotiate or trade in *Macassar* hereafter, &c."

induced *Pedro Mascarenhas* to attack *Bantam*, which he took and plundered, though *George Albuquerque* had attempted it in vain. *Java Major* lies South-East from the *Peninsula of Malacca*, having *Sumatra*, *Borneo*, and *Celebes*, lying before it. Authors vary as to its Dimensions; but the most moderate allow it nine hundred Miles in Circumference. The Air is generally esteemed more wholesome than in any of the Isles before mentioned, the Country exceedingly fruitful, and the Coast abounding with good Ports. It is not intended here to enter farther into the Description of Places, than to render what we have to say as to the History of them clear and intelligible.

The *Javanese* pretend, that they are descended from the pure and unmixed Race of the old Inhabitants of *China*, who retired thither when their Country was over-run by the *Tartars*; and on this they very much value themselves; but before the *Portuguese* came there, they had not only mixed with other neighbouring Nations, but were also become *Mohammedans*. The whole Island at that Time was canted out among a Number of little Princes, some more, some less powerful; but most of them Masters of some Force by Sea. All this corroborates what has been before so often observed, that these Nations did not grow better by their Commerce with the *Europeans*, but were actually declining from what they had been when first visited by them, and have been sinking lower and lower ever since.

The *Portuguese* Generals saw plainly enough, that they had not Force sufficient to keep this Island, and therefore they contented themselves with making a new King of *Bantam*, when they had taken it, and accepted from him an annual Tribute. *Panarucan*, a small City, the Capital of a little Principality of the same Name, and withal a commodious Port, owed much to their Protection, and was raised to one of the principal Marts of the whole Country, where they not only dealt in Rice, Pepper, and other Commodities of the Island, but also in Gold, precious Stones, and Spices brought from other Places, and more especially from the adjacent Islands. But since the *Dutch* became Masters of *Batavia*, and the Emperor of *Materan* and the King of *Bantam* have divided the Island between them, this Place is become a Fishing Village, and all its Trade is entirely lost.

20. There is some Dispute as to the Time, and even as to the Person who first visited the Coast of *New Guinea*: Some say that this Coast was first discovered by *Alvare de Saavedra* in the Month of *May* 1520, as he was returning to *New Spain* from a Voyage he had made for Discoveries. He fell in with this Continent in the Latitude of two Degrees South, and ran East along by it above five hundred Leagues to the End of the Month of *August*. The Coast was clean, and of good Anchorage: The People black, with curled Hair, naked to the Waist, and covered from thence to their Feet. *Saavedra* having sailed four or five Degrees to the South, returned again unto the Equinoctial, and having passed it, discovered towards the North an Island, on which he bestowed the Name of *Isla de los Pintados*, that is, *The Island of painted People*; for he found the Inhabitants white, and each of them marked in his Body with an Iron. They could not understand the Language they spoke, which was very guttural; but by the Signs they made, they apprehended that they came from *China*.

There came off a Boat full of these People in a hostile manner, threatening the *Spaniards*, and throwing Stones at them; but *Saavedra* would not suffer his People to fire upon them by any means. A little beyond this Island they discovered many others low and flat, covered with Palm-Trees and Grass, so that they made a very pleasant Appearance, and therefore *Saavedra* called them *Los Jardines*, or the Gardens; they were very full of People, who seemed to them by their Countenances, and the Manner of wearing their Hair, to be descended from the *Chinese*; but by their long Continuance there were become barbarous, and even brutish, living without Law, that they may live without Labour, and clothed only with a whiteland of Stuff, which they make of Grass. They eat Cocons instead of Bread, pulling them before they are ripe, and burying them in the sand, from whence, after some Days, they take them out,

and lay them in the Sun, where they ripen of themselves. They likewise eat Fish, which they take in a kind of Boats, called *Parasos*, made of Pine-wood, which is driven on that Coast at certain Times of the Year, they know not from whence or how. The Tools with which they make these Boats are made of Shells. What appeared to *Saavedra* the most strange was, that these People had never seen, nor had any Notion of Fire, till they came upon their Coast, and then they shewed the utmost Terror and Apprehension at the Sight. *Saavedra* would have returned from hence to *New Spain*, but met with so many Difficulties in his Passage, that worn out with Grief and Care, he died, and his People brought his Ship back to the *Moluccas*.

This gave an Opportunity to the Author we have taken this Account from to learn all those Particulars, and the Writer deserves the more Credit, as he was a Man of Distinction, and Governor of the *Spice Islands* for the *Portuguese*. His Name was *Antonio Galvano*, the first who took so much Pains to introduce Christianity into the East of *Celebes*, and who has written an exact Account of the Discoveries made by the *Spaniards* and *Portuguese* in the *East-Indies* and in the *West*. But we must not apprehend from his Account, that this Southern Continent was absolutely unknown till this Discovery of it by *Saavedra*, because it is certain from his own Account, that the Inhabitants of the *Moluccas* were very well acquainted with it before the *Portuguese* came amongst them, and carried on a considerable Trade thither; but this Part of the Coast on which *Saavedra* sailed was unknown to the *Europeans* before. While thus *Antonio Galvano* commanded at *Torres*, there was a famous Pirate, who with a Squadron of *Javans* did a great deal of Mischief on the Coast of the Land of *Papua*, which is the Country since called *New Guinea*, and at last began to threaten the Subjects of the *Portuguese* in the *Moluccas*. To repress the Violences committed by this Rover, *Galvano* fitted out some Barks that were sent him by the King of *Tidor*, and having manned them with a few *Portuguese*, and with the Auxiliaries from the neighbouring Islands, he sent them under the Command of *Johann Vinagrez*, a Priest, in Quest of this Pirate, who when they came up, and after a smart Engagement, in which the Pirate and his Brother were both killed, destroyed and dispersed the rest of his Squadron.

After obtaining this Victory, he was sent to the Country of *Papua*, where he was kindly received by several Princes, and converted some of them and their Subjects to the Christian Faith, which was so great a Satisfaction to the worthy Governor, that he instituted a kind of Seminary, in which he bred up Abundance of young Men brought from those Countries, instructing them himself in the Christian Religion, and in all sorts of Literature that were at that Time studied in *Portugal*.

It is observed by the *Portuguese* Historians, that while other Governors increased their Fortunes, this Man died only to increase his Reputation, and the Number of his Master's Subjects, by his wife and gentle Government, which had so good an Effect, that Multitudes of *Christians*, expelled and banished by *Mohammedan* Princes throughout the *Indies*, repaired to him in the *Moluccas*, where he was so entirely beloved by all the Inhabitants of those Islands, that they joined together in a Representation to the King of *Portugal*, setting forth the many Advantages that would accrue to the *Portuguese*, as well as to themselves, if *Antonio Galvano* was continued in his Government for Life; but before this Representation was framed, the Governor of the *Indies* left *George Cabral* to succeed him, which, in the Space of a few Years, produced such a Change in their Affairs on this Side, that *Maffeus*, and other of their Historians, have deemed it worth our Account of them.

It was the removing this worthy Man that hindered all the Southern Continent from being thoroughly known, for by his Candour, Humanity, and wise Government, he established a new Face in that Part of the World, of which the *Portuguese* never had an Idea, either before or since; and if he had remained there but a few Years, would have done more towards the Conversion of these Nations by his own Virtue and Piety, than ever could be effected by an Army of Millionaires. But what he was

where they open of themselves, which they take in a kind of Bark, or wood, which is drawn on that Year, they know not from what Trees which they make use of. What appeared to Saenz de Gama these People had never seen, nor will they come upon their Coast, outmost Terror and Apprehension could have returned from hence to so many Difficulties in his Voyage and Care, he died, and was carried back to the Moluccas.

As to the Author we have taken in all those Particulars; and this Credit, as he was a Man of the Spice Islands for the Portuguese, Antonio Galvano, the first who introduced Christianity into the East, has written an exact Account of the Spaniards and Portuguese in the West. But we must not suppose that this Southern Continent was his Discovery of it by Saenz de Gama, his own Account, that the Indians were very well acquainted with the same amongst them, and carried on; but this Part of the Coast is unknown to the Europeans before. He commanded at Ternate, there was a Squadron of Portuguese in the Coast of the Land of Papua, he called New-Guinea, and at the Effects of the Portuguese were the Violences committed by the Royal Barks that were sent from the King, he manned them with a few Portuguese Auxiliaries from the neighbouring Kingdoms under the Command of Antonio de Siquiera, this Pirate, who when he was in a final Engagement, in which he was both killed, destroyed the whole Squadron.

Antonio de Siquiera, he was sent to the Country, kindly received by several Princes, and their Subjects to the Christian Religion, and a Satisfaction to the worthy King, a kind of Serenity, in which some young Men brought from a three day hunt in the Coast in the Land of Ternate that were at that Time.

The Portuguese Historians, that relate their Fortunes, this Man's Reputation, and the Number of his wife and gentle Government, the Effect, that Multitudes of Christians, by the Assistance of the Portuguese, repaired to him in the Moluccas, and were beloved by all the Princes, and joined together in a Republic, and setting forth the many Advantages to the Portuguese, as well as the same was continued in his own Country. This Republic was what the Indies left George of Aragon in the Space of a few Years, upon their Affairs on this Side, that their Historians, have declared themselves.

This worthy Man that first led out from being thoroughly known, humanity, and wise Government, he in that Part of the World, if never had an Idea, either before or remained there but a few Years, towards the Conversion of the People and Priests, than ever could be of Millions. But what he was

not permitted to effect by his Actions, he has sketched forth in his Writings; so that, from them we learn, this great Southern Continent was, in his Time, well inhabited; and though their Inhabitants might, in some Parts of it, be absolute Barbarians, yet in others, they were as much civilized as their Neighbours, and had, as we have before seen, not only the Use of Vessels, but some kind of naval Force.

2. The Discovery of the Philippine Islands, as they are now called, was, undoubtedly, made by Francis Magellan in the Year 1521; and the first Island in which he landed was Hummuna, which is now barren and uninhabited. He took possession of the Island of Butuan, by erecting a Cross, as we have elsewhere shewn, on the Wednesday in Easter-Week, in the same Year. But these Islands were not settled on the Behalf of the Spaniards till the Year 1565, by Michael Lopez de Legaspi, a Native of Mexico, acting under a Commission from King Philip II. in honour of whom they were called Philippines. But with this Conquest and Settlement I have, at present, nothing to do, as intending to speak only of the Discoveries made in these Parts by the Portuguese, on whose behalf Don Antonio de Galvano, in the Year 1538, sent Francis de Castro to the Island of Mindanao, where he persuaded six of the petty Princes to receive Baptism, with all their Families. This Island of Mindanao is the most southern of all the Philippines, and the largest of them all, except Manila; it extends from 6° of N. L. to 10° 30', and is enclosed three hundred Leagues in compass. There are few Countries in the World better watered; for there are in it twenty navigable Rivers, and near two hundred Rivulets, besides large Lakes, one of which is called Mindanao, and gives its Name to the whole Island.

The Portuguese found it inhabited by several different Nations, of which the true original Lords of the Country possessed then only the Hills and inaccessible Places; being Negroes, with crisp and curled Hair, like those in New-Guinea; and by the way those were the original Inhabitants of all the Philippines. The Portuguese and Spaniards call them Negrillos, a Nation who have sacrificed all the Blessings of Life, and all the Advantages of human Nature, to an enthusiastick Love of Liberty. Those who inhabit one Mountain will have no Intercourse with those who inhabit the next; nay those that inhabit the Middle of a Hill will murder such as live at the Top or the Bottom of it, if they find them in their District. They have neither Lords nor Laws, but live like Brutes, for the sole Satisfaction of being free. This silly Humour induced them to abandon the Sea-Coasts on the first Appearance of Strangers, which have been since settled by several Nations, some Mohammedans from Borneo, others a white People, no body can well say from whence, only the most civilized Inhabitants own, when the Portuguese came amongst them first, that these Islands had formerly been under the Dominion of the Chinese; and, upon their abandoning them, were left a Prey to any Nation that thought fit to settle in them, and were able to defend themselves from the Blacks in the Mountains.

The Island Solo lies South West from Mindanao, and is governed by a King of its own; it is far from being large, but its Situation between Mindanao and Borneo makes it the Mart of all the Moorish Kingdoms. I do not find that the Portuguese ever pretended to settle, much less to conquer these Islands; but they visited them frequently for the sake of Trade, and in those Days there was a greater Commerce in these Parts than can be well imagined; for while the Trade was open to Japan, there came annually two or three Ships laden with Silver, Amber, Silks, Cloths, Cabinets, and other Curiosities, made of sweet Scented Woods, with vast Quantities of Silks, Mullins, Calicoes, Quilts, and Earthen-ware from China. For these the Merchants of Galeonda exchanged their Diamonds; those of Ceylon their Rubies, Topazes and Sapphires; from Java and Sumatra came Pepper, and Cloves, and Nutmegs from the Moluccas.

The native Commodities of these Islands were as valuable as any of the rest, since no Country in the World,

Peru not excepted, abounds with more Gold. In the Mountains they dig but Three Feet deep, before they meet with it in red Sand, and while they cannot come at the Mountains for the Blacks, they dig Trenches in the flat Country, and after the rainy Season, they pick the Gold out of the Mud that is left in them. Cinnamon they have as good as any in Ceylon, but nobody having any Property in the Trees, they tear and destroy the Bark at all Seasons, which is the Reason the World is so little acquainted with the Cinnamon of Mindanao. In the Sea, between this Island and Solo, there is a Pearl-Fishery, inferior to none in the Indies, either in point of Colour or Shape. Ambergris they have in great Plenty and Perfection on their Coast, and Lumps are very often found of twenty or thirty Pounds Weight; nay and sometimes larger.

It was from their Commerce with Mindanao, and the Respect, or, as they call it, Homage, paid to the King of Portugal by some of the petty Monarchs of that Country, that the Portuguese pretended to maintain their Claim to these Islands against the Spaniards, who assume to themselves an exclusive Right over all the Philippines; because Luzon, or Manila, which is the biggest of them, is in their Possession; yet they have to manage their Affairs, that, though they keep these Settlements merely for the sake of Trade, their Government is so ordered as to lessen that Commerce which those Islands had before they became Masters of them; and at the same time the royal Revenue is so indifferently managed, as not to defray above Two-thirds of the Expenses of the Government; though the People are so much harassed, that they fly to all Parts of India to avoid the Hardships imposed on them at home.

Father Navarrete, who was himself a Spaniard, and who in his History of China shews a manifest Partiality for his Country, confesses the Truth of this, and that he never was in any Country of the Indies but he found Manila Indians, either carried away or run away from thence; and of this, he says, the Spanish Government complained, as being extremely detrimental to that Settlement: But he observes very justly upon that Occasion, that Complaints lie only against themselves and their own Conduct: Let them, says he, use the Indians well, and they will not run away; let them protect those People as they ought, and no body will be able to steal them. The Negligence of the Portuguese, the Tyranny of the Spaniards, and the intrenching Disposition of the Dutch, hinder these Islands from being, what they otherwise must be, the Centre of Commerce between the East and West Indies; and if a free Trade were allowed to them, each of these Nations would get ten times as much, and that too with ten times the Ease with which they get what little they do get by their Commerce here at present.

22. There is not any Passage relating to the Discoveries made by the Portuguese in the East more curious or more extraordinary than what relates to the finding the Islands of Japan, which were discovered about the same time by two different Sets of Adventurers, both, in all Appearance, the pure Effects of Chance. And though, in the Account we have received of both these Discoveries, very little Notice is taken of Dates; yet, from Comparison of Facts, it is pretty evident, that the Persons we shall first speak of arrived in that Country some time in the Month of May, A. D. 1542. Of the first of these, we have a very large Account written by Mendez Pinto, who was himself the Discoverer; but for many Reasons we have found it necessary to contract that Account into as few Words as possible, that we may have Room to give the Reader both the Discoveries, and thereby enable him to judge for himself, as to the Controversy that has been raised concerning them.

Ferdinand Mendez Pinto tells us himself, that being in Company with two of his Countrymen, whose Names were Diego Zeimoto and Christopher Borelle, at Lampacao, which is the same with Macao, they there endeavoured to get a Passage to some other Part in the Indies, and found it very difficult to do: At last a Chinese Corsair offered his

promising to conduct them to the Islands of *Leguina*, but when they were at Sea, the Weather proved so stormy, and the *Chinese* Captain's Ship so leaky, that there was an absolute Necessity of putting into some Port to rest; and accordingly the Captain bore away for a certain Port in the Island of *Japan*, which our Author tells us was that of *Niagima* in the Island of *Tanaisima*, where they safely arrived. Before they enter'd the Port, two Barks came from the Shore to know who they were, and what they wanted? The Captain answer'd, that they were come from *China*, that his Ship was full of Goods, and that his Intention was to trade, if they might obtain Permission; to which the principal Person in the Barks answer'd, that the Lord of the Island was call'd *Nautaquim*, and that if they paid the Port Duties, they might have Leave to trade. The *Chinese* Captain instantly complied with this Demand; the Patron of the Barks us'd him thereupon with great Civility, and conducted him immediately into the Harbour.

About two Hours after the Lord of the Island came thither, accompanied by several Persons of Distinction, and some Merchants. At the Sight of the three *Portuguese* he was very much astonish'd, and demanded immediately who those Strangers were, and of what Nation? The Captain answer'd, that they came from a great City call'd *Malacca*, and that they were of a certain Kingdom in *Europe* call'd *Portugal*. At these Words *Nautaquim* appear'd more surpris'd than before, and at last, turning to those who were about him, he said, Let me die, if I don't believe there are the *Chinese*, of whom we read in our old Books that they fly upon the Waters, and make themselves Masters of every rich Country they hear of: We shall think ourselves very happy, if they are content to be our Allies. He then call'd a Woman, who could speak the *Chinese* Language, in which he was but indifferently skil'd, and desired her to ask the Captain with what View he brought these Strangers into *Japan*. The Captain answer'd very candidly, that he found them at *Malacca* much distress'd for a Passage to some Port in the *Indies*, and that he, from a Principle of Humanity, took them on board his Vessel, in hopes that Providence would raise him a like Friend, in case he should fall into the same Distress. This satisfied *Nautaquim* perfectly, so that he made no Difficulty of going aboard the *Chinese* Vessel, with some of the principal Persons about him, and ask'd the *Portuguese* abundance of Questions, whom he also invited to visit him on Shore, promising to entertain them kindly.

They went accordingly, and carried him a Present, which was very graciously received, and *Nautaquim* enter'd into a long Conversation with them about their Country, and particularly insist'd on these three Points, which he said he had been told by the *Chinese* and *Leguins* in his Country. First, that *Portugal* was bigger than *China*, and richer; the second, that the King of *Portugal* had conquered the best Part of the World; and thirdly, that his *Portuguese* Majesty had better than two thousand Houses full of Gold and Silver. *Pinto* ingeniously owns, that he did not stick exactly to Truth in his Answers, but contriv'd such as were most likely to keep up the high Opinion that *Nautaquim* had conceived of their Monarch. All the Time they stay'd here, they were treated with the utmost Civility and Respect, being permitted to see every thing they desired, and to go where they would. *Zemolo* had a very fine Gun, with which the *Japanese* were extremely taken, inasmuch that they spoke of it to *Nautaquim*, who

desir'd to see it, and how it was us'd, which Request of his being complied with, he thought himself to much oblig'd thereby, that he set the *Portuguese* upon one of his own Horses, and oblig'd him to ride through the Town with a Crier before him, who proclaim'd him *Zemolo's* Cousin, and admonish'd the People to confide in such: At his Return he had an Apartment assign'd him in the Palace; upon which he made a Present to *Nautaquim* of his Fowling-piece, in return for which, he receiv'd ready Money a thousand Taels, which makes near Money three hundred and thirty-three Pounds.

The People imitated the Generosity of their Prince, and bought all the Captain's Goods at such round Rates, that for a Cargo which cost him two thousand three hundred Taels, they gave him to the Value of thirty thousand. We need not doubt that People so well-interr'd, pass their Days there very agreeably, and were not in a great Hurry about their Departure. After a Month or more, however, the *Chinese* Captain having desired his Ship to be repaired to put to Sea; but before he was ready, a Storm happened, which changed the Face of their Island. A Boat arriv'd in the Harbour, having on Board a Gentleman charged with a Letter from the King of *Bungo*, the Lord of the Island, signifying that he was pleas'd that certain Strangers were come into his Dominion, which it was apparent, that the World was not more than they imagin'd, and that he desired he would speak to at least one of these Strangers to discourse with him, whether because at that Time he was very much oppress'd, and suffer'd by repeated Fits of Black Mould, which oppress'd him to the last Degree. The Lord of the Island sent immediately for the *Portuguese*, and having order'd them, that the King of *Bungo* was both his Uncle and his Father-in-Law, he most earnestly desired that they would gratify the Request of that Prince. At the same time, however, he declar'd, that he could not part with *Zemolo*, but that the Ambassador might take with him whomever he pleas'd, but after a little Reflection, he fix'd upon *Pinto* as the most proper Person to satisfy Uncle, because he was of a brisk and lively Temper, and therefore the most likely to divert him; and at the same time made him a Present of two hundred Taels, as Compensation for the Trouble of this Journey.

Things being thus regulated, *Pinto* took his Leave of his Friends, and embark'd with the Ambassador to the Kingdom of *Bungo*, which lies but at a very small Distance from the Island of *Tanaisima*. They arriv'd, without meeting with any Accident, at the Fort of *Sipapo*, where they remained two Days, and then they set out for the Capital, where they arriv'd the very same Day. The King receiv'd Notice of their coming, than he immediately sent out one of his Sons to compliment them, to whom the Ambassador deliver'd a Letter from *Nautaquim* to the King's Father, whose Name was *Origenza*, who, as soon as he receiv'd it, desired the *Portuguese* to come to him, which he receiv'd with all the Respect imaginable. The first Question he ask'd *Pinto* was whether the *Goats* were scarce; he was dreadfully afflict'd, was a Dilemma known in many of the Countries through which he had pass'd, whether he had ever heard of any Remedy that would effect his Cure? *Pinto* told him honestly, that he was no Physician, but that he had brought with him from *China* a kind of Weed, which had a Quality of relieving the most violent Pains of their Cause; he said that he had heard of this Remedy in the Island where he first arriv'd, upon which the King

* These Islands, of which it seems the *Portuguese* had already some Knowledge, pass under different Names; and even our Dutch Writers are not very exact in their Certainty about them. Some Writers call them the Islands of *Laguans*, others the Islands of *Relais*. They lie in the North-east part of North Latitude, having the Island of *Pinnas* to the South-west, the Continent of *China* to the West, the Islands of *Formosa* to the North, and the Ocean on the East, on which Side they seem to have no Land nearer to them than *America*. The *Japanese* report that there are no more fertile Countries in the World, and that the Inhabitants are the easiest, happiest, and best condition'd of the Human Race. The principal Prince of *Soracima*, who is one of the principal Lords of the Empire of *Japan*. It may not be amiss to observe, that the Islands are entirely Master of these Islands, and that at present there is some Commerce between them and the *Philippines*.

* This Island, which *Pinto* calls *Tanaisima*, is undoubtedly, *Tanaisima*, belonging to the Kingdom of *Formosa*. It lies in the East of the Continent, at a very small Distance on the great Island of *Mina*, which is the second in Size of those three Islands which are known in *Portugal* by the common Name of *Japan*, which is now, as we generally apprehend, the Name of a particular Country, but of a large Archipelago, which the most considerable of which is *Nippon*. It is true, that later Authors speak of no such Port as *Pinto* mentions; but that is not surprising, since it is on all Hands allow'd, that prodigious Changes have been made in the Name of the principal Port and Place in these Islands.

* One of the most singular Things in *Pinto's* Relation is this, that, notwithstanding the Admiration of the People of that Island, he being a European, was not in any Manner brought over to their way of thinking, however, inasmuch as to comprehend the whole Mechanism of *China* was a very great Part of his Business, and that he had a great Deal to say in the several Parts of the Empire, and in the course of a few Years they became very well acquainted with the Language, though they still retain'd, in several Instances, the old Customs, which they had brought over from their own Country.

directly dispatched a Messenger thither to fetch it. As soon as it arrived, *Pinto* caused it to be steeped in Water, which he gave the King to drink, and in the Space of a few Days he found himself so well, that he was able to rise and walk about, which he had not done for two Years.

It is easy to imagine what high Effects so extraordinary a Circumstance as this must necessarily produce, and what Careless were naturally bestowed on a Stranger, who had so suddenly and so unexpectedly performed so great a Cure. The King ordered all the Care imaginable to be taken of him, and the whole Court was employed in contriving how to entertain and divert him; but in the midst of all this Joy and Satisfaction, there happened an unlucky Accident, which had like to have been attended with very bad Consequences. *Pinto* had with him his Gun, which was mightily admired by every Body that saw it, and the Operations of which filled them with Astonishment. The hereditary Prince was so taken with it, that he would needs try to shoot himself, to which *Pinto* would by no means consent, telling him, it was an Instrument to be managed with great Caution, and might do unexpected Mischief in the Hands of a Person who knew not how to manage it. This, instead of satisfying the Prince, made him only the more eager, inasmuch that he complained to his Father, and desired he would prevail upon the Stranger to trust him with his Gun; to which the *Portugueze* yielded, and promised to go a shooting with him the next Day.

The young Man was so impatient that he was up before it was light, and on the fifth of August was at *Pinto's* Chamber-door before he awoke. He had too much Manners to disturb him, but unluckily spying the Gun, took it out with him into the Court, and resolved to make a Shot. He put in a double or treble Charge of Powder, to which giving Fire, the Gun burst, cut his right Thumb so that it hung by a Thread, and at the same time a Piece of the Barrel struck him so violently over the Ear, that he fell flat upon the Ground, and those who were about him thought he was killed. The Noise of this Accident was soon spread over the whole Town, where it was unanimously agreed, that the Stranger's enchanted Instrument had killed the Heir of the Crown. The Noise made round his Apartment awaked *Pinto* out of his Sleep, who coming down without knowing what was the Matter, went directly to the Place where the Accident had happened, and seeing the Prince lying on the Ground, whom he took to be dead, he threw himself on the Body in the utmost Agony. A Moment after came the King, the Queen, and the two Princes, all of them in a distracted Condition, and as soon as they saw the Prince swimming in his Blood, and *Pinto* lying by him, they immediately concluded that the Stranger had killed the Prince; upon which two Soldiers advanced with their Swords drawn, in order to cut off his Head; but the King called out to them to forbear, since he was determined he would first extort from him the Reason that induced him to commit so vile a Fact.

The Reason of this Stay of Execution was, because a little before a Conspiracy had been discovered, for which several Persons had been executed the Day before; and the King apprehended, without any Reason, that this Action might be an Effect of that Conspiracy. It is not necessary for us to dwell upon all the little Circumstances of this Affair, and therefore it will be sufficient to observe, that when they were on the very Point of torturing *Pinto*, in order to make him confess why he committed this detestable Murder, and who were his Accomplices, the Prince very luckily came to himself, and seeing how Things stood, he shewed with great Concern, that he alone was in the Fault, and that the Stranger knew nothing of the Matter; wherefore he intreated that he might be set at Liberty, and give Leave to come to him, which his Father immediately granted. It was then proposed, that they should send for an old *Portugeze*, who lived at seventy Leagues Distance, to dress the Prince's Wounds, and to try if he could save his Life. The young Man declared against this, and said, he should be before he came, and begged that he might be left in the Hands of the Stranger, who knew best how to deal with him. The King thereupon called for him, and asked, if he would undertake this Shock Cure, which, it is probably, he should think the King too small a Re-

ward. *Pinto* declared he could promise for nothing, but that he was willing to do all that lay in his Power, and that he had great Hopes of succeeding.

Upon this the Prince was left in his Hands, but not without a great Struggle on the Part of the *Portugezes*, who declared, that if the Stranger touched his Wounds, he would die that Night; and that the best thing the King could do was to offer up *Pinto* as a Sacrifice to the Gods, and to send an Express immediately for the old *Portugeze* before-mentioned. The Prince interposed, however, so warmly in Favour of the Stranger, and some of the oldest and wisest Men about the Court thought the young Man's Desire so reasonable, that the King consented to it, and the Prince being carried to *Pinto's* Lodgings, he dressed him as he had seen the *European* Surgeons do, and in one Month's Time there was no other Sign of the Wounds than the Scars they had left, and a little Deadness in his Thumb. The King and the whole Court were quite ravished with Joy at his unexpected Recovery, and besides a thousand Blessings and Thanks, made the *Portugueze* abundance of magnificent Presents, besides fifteen hundred Taels in ready Money, which the King bestowed upon him as soon as the Prince was able to go abroad.

While Things were in this Situation, they had Advice that the *Chinese* Ship was ready to sail; upon which *Pinto* desired Leave to be gone, to which the King very unwillingly consented; but as the Stranger insisted upon it, he ordered a Vessel to be equipped, in order to carry him back to the Island of *Yacuzima*, and sent a Gentleman with him, furnishing him also with all manner of Provisions and Refreshments. After his Return to that Island, our Traveller remained there a Fortnight, waiting for a fair Wind, and then embarking, arrived safely at *Lisbopo* on the Coast of *China*. This is, in few Words, the Account given us by *Pinto* himself: Let us now proceed to the other Discovery of this Country made by the *Portugueze*, according to our Promise.

In the same Year 1542, three of the same Nation came by pure Accident into this Country, their Names were, *Antonio Mota*, *Francisco Zeimoto*, and *Antonio Pexota*, who in a Voyage from the Island of *Macassar* to *China* were thrown upon the Coasts of these Islands, and were exceedingly well received. Amongst other Acquaintance, they entered into a close Conversation with one *Angero*, a Man of a good Family, and considerable Fortune; but who was exceedingly troubled in Mind on account of some Irregularities committed in his Youth, who heard them with Pleasure discourse concerning the Truth of the Christian Religion. About two Years after *Azarez Paz*, a *Portugueze* Merchant, came into the same Country, and became very intimate with the same Person, whom he persuaded to go to the *Portugueze* Settlements in *India*, in order to be converted and consoled by the holy Discourses of the famous *Francis Xavier*; to which at length he yielded, and having received Baptism at *Goa* in the Year 1548, he the next Year accompanied Father *Xavier* and two other Jesuits in their Voyage to *Japan*, where they immediately entered upon their Mission; by the Progress of which, this Country was made so thoroughly known to the *Portugueze*, that if *Mendez Pinto* had not recorded his own Voyage thither, it is very possible we had never heard any thing of it at all; but that he afterwards visited *Japan* in Company with Father *Xavier*, and after the Decease of that industrious Jesuit, whom the Papists esteem the Apostle of the *Indies*, he went thither again as Embassador from the Viceroy of the *Indies* to the King of *Bango* in 1576, so that there seems to be no just Grounds for calling any thing that he has written in Question.

The Conventions made in this great Empire contributed not a little to support and extend the *Portugueze* Trade, which was managed with much Facility, and to a vast Profit: For the *Portugueze* being established in *China*, carried from thence vast Quantities of Silk into *Japan*, where, as all Ranks of People affect to be clothed in it, there followed a prodigious Consumption, which enriched the *Portugueze* Merchants very soon to a high Degree, tho' it is scarce credible, that as some *Dutch* Writers report, they have sometimes carried home in one small Ship one hundred Tons of Gold. But this prodigious Success proved

the Cause of their being at last deprived of this lucrative Commerce.

It is not to be expected that we should enter here into a long and particular Relation of the several Facts which drew upon them, from the Government of *Japan*, that Prohibition of which we have spoken so largely in the Article of *Macao*, and therefore we shall only report in general Terms, and in as few Words as possible, the principal Causes of that Exclusion. The vast Wealth they had acquired corrupting the Manners of the *Portuguese*, made them less cautious than they ought to have been, in their Behaviour towards the *Japoneſe*, inſomuch that, inſtead of the Moderation, Sobriety, and exact Conduct which they at firſt purſued, they grew proud, intolent, and diſſolute. This prompted them to change the Places where they were wont to trade, and to prefer ſuch Ports as were in the Dominions of infidel Princes, to thoſe in the Territories of theſe *Japoneſe* Lords, that had embraced the Chriſtian Religion, that they might live as they thought fit, and without being under the Controul of the Miſſionaries, who took all the Pains they could to oblige their Countrymen to advance the Credit of the Chriſtian Religion by the Regularity of their Lives. Theſe Errors had two very bad Conſequences; for, firſt, they diſpleaſed ſuch Princes as had embraced the Faith; and, ſecondly, they hardened the Infidels in their Averſion to it.

But it was not only the Corruption of the *Portuguese* Merchants, Officers, and Seamen, that gave Offence to the People of this Empire, the Intrigues of the Miſſionaries themſelves contributed to it as much, or more, by exciting the Jealouſy of the Emperor; for where-ever they had converted any of the Princes of *Japan*, they were continually at Court, and, inſtead of minding what was the proper Buſineſs of the Church, engaged at every Turn in Affairs of State, making the Direction of Conſcience much leſs their Care than the Direction of Councils, by which they became the Authors of many Troubles, and afforded a Handle to their Enemies of charging them with many more; ſo that the Emperor of *Japan* began at laſt to ſuſpect, that there was more of Hypocriſy than Sincerity in their Hearts, and that they were endeavouring, under Colour of ſaving Mens Souls, to eſtabliſh a new Government in that Country.

Theſe Jealouſies, which certainly were not altogether without Foundation, were extremely increaſed by two Circumſtances; the firſt was, the Haughtineſs and Ill-conduct of ſuch as were ſent Embaſſadors thither, eſpecially after the Union of the Crowns of *Spain* and *Portugal*; for theſe Miſters were wont to boaſt of the vaſt Power of the Catholic King, and of the mighty Extent of his Dominions, of which they affected to convince the *Japoneſe*, by ſhowing the Maps of the *East* and *Weſt Indies*; and the Impudence of one of theſe Embaſſadors is ſaid to have carried him ſo far, as that on being aſked how his Maſter had acquired ſuch vaſt Territories at ſo great a Diſtance from his hereditary Dominions, he answered, by ſending Miſſionaries firſt to convert a Part of the Inhabitants to Chriſtianity, and then ſending Troops to aſſiſt the new Converts in ſhaking off the Yoke of infidel Princes.

The other Circumſtance was the coming of the *Dutch* Ships up on the Coaſt of *Japan*; for theſe People applying themſelves entirely to Commerce, and ſometimes, for the ſake thereof, to whatever Terms were preſcribed by the *Japoneſe*, gained thereby ſuch a Degree of Confidence with their Princes, that they procured imple of Credit to their Requeſts, as to the ambitious Deſires of the *Spaniards* and *Portuguese*. Theſe Remarks will give the Reader to eaſy a Key to the political Contrivances for firſt reſtraining the *Portuguese* Trade to a particular Port, and then ſhutting them up as it were in a Priſon during their Stay in that Empire, as in the laſt Chapter of this Work has been largely ſhewed, that we need not run here into any Repeating, but content ourſelves with obſerving, that notwithſtanding the many previous Signs which the *Portuguese* had of the approaching Rupture with the *Japoneſe*, yet were they lo far from taking ſuch Steps, as in common Prudence they ought to have done, for avoiding to great a Miſchief, that on the contrary, they behav-

ed daily worſe and worſe, till the Storm came upon them with ſuch a Force as was not to be reſiſted.

The particular Relation of the Subverſion of Chriſtianity in this Empire will be found in the ſucceeding Volume, when we come to treat of the Deſcription of *Japan*; at preſent we have only to obſerve, that the *Portuguese* have been deprived of this rich Commerce ever ſince the Year 1620, and that all the Attempts they have hitherto made to recover it have proved abſolutely inefficual, nor is it probable that any they may hereafter make will be attended with any better Succeſs.

23. The Country, or Countrey, lying beyond *Japan*, to the North-Eaſt, or North-Weſt, have been always regarded, at leaſt ſince Geography has been tolerably underſtood, as the very Cornices of the World, and the Extremitities of the Earth, which Countreys the *Japoneſe* themſelves called *Yeſo*, or *Yeſſo*, the *Chinese*, *Yeſo*, from whence we have the word *Yeſſo*, or *Yeſo*, by which in the *Engliſh* and *Dutch* Maps they are diſtinguiſhed. The firſt Accounts that were received of theſe Countreys were from the *Japoneſe* themſelves, but according to their Skill in ſuch Sciences, extremely dark and incorrect. They were not able to ſay abſolutely, whether their own Countrey was an Iſland or not; and as for the Land of *Yeſo*, they profeſſed the utmoſt Extent of their Knowledge to be, that it belonged to the Prince of *Matſuma*, who was dependent on, and a Tributary to, the Emperor of *Japan*. In the Year 1613, Father *Conſarzo*, who then preached the Chriſtian Religion in *Japan*, hearing that the Prince of *Matſuma* had ſent to *Japan* for a Phyſician, and that a Convert to Chriſtianity, a Man of good ſpirit and quick Parts, was pitched upon to go over in that Quality, he recommended to him the Care of inſtructing thoſe People, if a favourable Opportunity offered, in the true Faith; which Commiſſion the Phyſician executed with much Zeal and Fidelity, that he quickly gave Father *Conſarzo* a good Account of his Miſſion, ſhewing he had not only made many Converts, but that he ſaw the People in general better inclined to the Chriſtian Religion, than could have been expected.

In 1620, Father *Angeliſ*, who was then at *Yagrad*, the moſt Northern Part of the Iſland of *Nippon*, to whom many Chriſtians had been baniſhed, received Orders from his Superior, to go himſelf to *Matſuma*, in order to cultivate the Seeds of Converſion, which the *Japoneſe* Phyſician had ſown, and accordingly that he went the ſame Year by Sea. He arrived very ſafely in the Port of *Yagrad*, and from thence travelled through very many Rivers to *Matſuma*, where he found a vaſt Number of *Japoneſe*, and amongſt them many Chriſtians. They had been ſettled there but a few Years, and had been drawn thither by the Diſcovery of very rich gold Mines in the Neighbourhood of this City, and Mines of it may be called, of a very ſingular Kind. There is a River that paſſes by the City of *Matſuma*, immently rich in Gold; thoſe who deſire to deal in that Commodity, purchaſe from the Prince ſuch a Part of the River, and dig out a ſemicircular Canal, well ſecured by ſtrong Banks, into which, by Shutes, the River is turned, leaving ſome Part of its Channel as the Adventurers have agreed, for the ſpace of ſome ſcore Days, ſo that they take the Mud, and by frequently turning obtain vaſt Quantities of Gold duſt, and ſometimes Pieces of Gold of a conſiderable Bignets. When they have finiſhed their Work, and find there is no more to be got, they fill up the Canal, and by that Means raiſe the River back into its old Channel, and in the ſpace of a Year or two it is found as rich in Gold as ever.

Father *Angeliſ* informs us, that the Native of that Country, which we call *Yeſſo*, call it in their own Language *Ainomocori*, but were able to give but a very different Account of its Extent or Situation. Theſe People were larger, ſtronger, and had much better Complexions than the *Japoneſe*, and wore Bands that reached to their Girdles. They were dreſſed in long Robes of Silk, Cotton, or Linnen, according to their Rank, which were ſet off with abundance of little Ornaments. Their Arms were Bows, Arrows, Lances, and ſhort Swords. In Point of Religion their Notions were very obſcure and con-

raised, but the great Objects of their Worship were the Sun and Moon. They talk'd likewise of an invincible King of the Mountains, Forests, Seas and Rivers, but they did not worship him. Their Government was very regular and exact, and themselves the best-natured and best-behaved People the Missionary had ever seen. Their Commerce consisted chiefly in dried Fish, and in a sort of Seal-skins, which they exchanged for Rice, Cotton, Thread, and other Necessaries; for as for Gold and Silver, they made little account of them, but left the Trade in them to the *Japoneze*. On his first going over, Father *Angelis* was inclined to believe, that this Country was the southern Part of *Tartary*; but after he had made a longer Stay there, he in some measure altered his Sentiments, as appears by the following Letter he wrote upon this Subject, which is very curious and entertaining, and is, without the doubt that can be said on this Subject, from the Lights given us by the *Portugueze*.

"I am at present persuaded, that the Opinion entertained as to the Country of *Yesso's* being an Island, is not without Probability, and the Reasons upon which I go, are these: In the first Place, it is very certain, that this Country is bounded on the East, and on the South, by the Sea. On the other Hand, the Land of *Tesso*, which is the western Extremity of *Yesso*, is likewise bounded by the Sea, where the Currents are so violent, that tho' there is a Country on the other Side the Strait, within Sight, and where they are able to distinguish the Horses feeding, yet hitherto none of the Inhabitants of *Yesso* have passed over thither, because great Quantities of large Canes are driven with prodigious Violence by those Currents, so that if they were to hazard themselves in their small Boats, they must run an apparent Hazard of being overfet and lost. From hence I conclude, that according to all Appearance *Yesso* hath a fourth Sea on the North, which consequently separates it from *Tartary*. From whence should those impetuous Currents come, but from a Sea to the North of *Yesso*, running East and West, or from West to East, and discharging itself to the South, through the Straits, on the West of *Yesso*, with such Rapidity, as renders them impassable to the People of the Country.

"The second Reason is, that the Inhabitants of *Yesso* are not under the Dominion of any one Prince, nor have they amongst them any Chief that has a Tract of Country of any great Consequence, that is subject to him; they are likewise far from acknowledging the Supremacy of any Khan of the *Tartars*, or seem to be acquainted with that Title, or with any thing of the like Import; but every Family, or at least every little Village, has a Chief who governs it absolutely, and without acknowledging any Superior, which appears to me a strong Proof, that they are separated by a Sea from all other Countries, since if it were otherwise, they would undoubtedly be governed as those Countries are. I am sensible, that it may be objected against the first Proof I offer, that the Currents of which I am speaking, may possibly be occasioned by the Opening of some great River, which discharges itself into the Sea, somewhat farther to the North, and thereby occasions such an Accession of Water, as in passing through those Straights, forms such terrible Currents. But after all, I cannot help esteeming it more reasonable to believe that this Country is bounded on that Side, as well as on the rest, by an Arm of the Sea. At least this is the most common Opinion, and I remember to have seen in *Sicily* an old Map of the World, in which the Land of *Yesso* is laid down as an Island. As to what the Inhabitants of the Country say, I have examined those that came from the East, and others who came from the West, but found them all alike ignorant of Geography."

Thus far this Missionary, who is the only *Portugueze* that has wrote sensibly upon this Matter. He does not, however, seem to have been acquainted with one Thing, which he might have learned in *Japan*, and that is, that those People distinguish between the Island of *Yesso* and *Oku Yesso*, that is, the higher or upper *Yesso*; from whence it is very plain, that there is both an Island and a

Continent of *Yesso*; but we shall have Occasion to resume this Subject, when we come to speak of the Discoveries made by the *Dutch* on this Side, who were both more capable of making such Discoveries, and more industrious in making them than the *Portugueze*. It may not be amiss to observe here, that the *Japoneze* informed the Missionaries, that there lay North-East from their Country, and to the East of that of *Yesso*, two Islands, of which the smallest, and that at the greatest Distance, they call *Yensima*, that is, the silver Island; and that which is nearest their Continent, *Kinsima*, or the golden Island; but as they have been always very cautious of explaining themselves as to the Situation of these Countries, some Doubts have arisen, whether there were really any such Islands or not.

However, in the Year 1620 a Ship was sent by Order of *Philip II.* of *Spain*, to discover them, but without Success; and the *Dutch* have likewise made an Expedition with the same View, to as little Purpose. This may seem to justify the Supposition of their being fabulous; but then on the other hand, there are two Circumstances equally strong, that seem to prove the contrary: The first is, that there is such a Plenty of Gold and Silver in *Japan*, as cannot be accounted for from the Mines known to be wrought in that Country; the other, that though the Emperors of that Country have granted several Licences to *Europeans*, and particularly to our Countryman Captain *William Saris*, for making Discoveries to the West and North, yet they have always been extremely cautious of permitting any Strangers to examine their Coasts on the East.

24. The new *Philippine* Islands are a late Discovery, of which we have an Account in the Philosophical Transactions, in a Letter from a Missionary at *Manila*, who tells us, that being accidentally at the Town of *Gurwam*, in the Island of *Suma*, he there found twenty nine Palaces of Inhabitants of certain new-discovered Islands, who were driven thither by the Easterly Winds, which blew in those Seas from *December* to *May*. They had run before the Wind for seventy Days together, according to their own Relation, without being able to make any Land till they came in Sight of the Town of *Gurwam*, an Inhabitant of which being on the Shore, perceived them, and judging from the Make and Size of their Vessels they were Strangers, and out of their Courte, took a Piece of Cloth and made them a Signal of entering the Road he directed; to avoid the Shoals and Banks of Sand they would otherwise have run upon. These poor People were so frightened at the Sight of this Stranger, that they began to put to Sea again; yet the Wind forced them back a second time towards the Shore; when they came near, the *Gurwameze* made the same Signal as before; but seeing they would not mind it, but would unavoidably be lost, he threw himself into the Sea, and swam to one of the little Vessels, on purpose to bring them safe into Shore. He was no sooner got to them, but the Women with their Children on their Backs, and all that were in that Vessel, threw themselves overboard, and swam to the other. He seeing himself alone in the Vessel, resolved to follow them, and getting aboard the second, shewed them how to avoid the Shoals, and brought them safe to Land; in the mean time they stood immovable, and resigned themselves up intirely to the Conduct of this Stranger, as to many Prisoners.

The Inhabitants of *Gurwam* running to Shore, received them very kindly, and brought them Wine and other Provisions; they eat *Cocoas* very freely, which are the Fruit of the Palm-trees of this Country. Their Pulp is something like that of *Chestnuts*, only that it is more oily, and it supplies them with a sort of sweet Water, very pleasant to drink; they gave them Rice boiled in Water, which is eat there and all over *Asia* as Bread is in *Europe*; they looked on it with Surprize, and taking up some Grains of it, threw them on the Ground, imagining them to be Worms; upon bringing them large Roots called *Palm-tree*, they eat greedily of them. In the mean time they brought them two Women that had formerly been driven on Shore on the Coast of *Gurwam*, and who understood a little of the Language of this Country; one of the Women found among these Strangers one of her Relations, and, as soon as they knew each other, they fell a weeping. The Inhabitants

bitants of *Guriam* strove with each other who should entertain these Strangers at their Houses, and furnish them with Provisions and Cloaths, and other Necessaries. Of thirty-five Persons that embarked there remained but thirty, five dying through Want of Provisions and other Hardships, in so long a Voyage, and some time after their Arrival another died.

They related, that their Country consisted of thirty-two Islands, which cannot be far distant from the *Mariannns*, as may be judged by the Smallness of their Vessels, and the Form of their Sails, which are very like those of the *Mariannese*. It is likely that these Islands may be in eleven or twelve Degrees of North Latitude, more Southerly than the *Mariannns*, and under the same Degree of Longitude as *Guriam*; for, sailing directly from East to West, they came ashore at this Town. It is likewise probable, that it was one of these Islands that was discovered some Years ago at a Distance, when a Ship belonging to the *Philippines* leaving the common Course, which is from East to West, under the third Degree of Longitude, and running farther to the South-East, first perceived it. Some called this Island *Caviana* from *Charles II.* of *Spain*, and others the Island of *Saint Barnaby*, because discovered on that Apostle's Day; and it was again seen in 1696, by another Vessel, that a Storm had driven out of its Course in going from hence to *Mariannns*. These Strangers added, that of the thirty-two Islands three of them were uninhabited, unless with Wild-towls, but all the rest were well peopled. Upon asking them the Number of Inhabitants, they pointed to a Heap of Sand, to shew that their Number was very great. The Names of these Islands are *Pais Lamuluutur*, *Saraon*, *Tarope*, *Taluyay*, &c.

The three Islands that have nothing on them but Wild-towls, are *Pracet*, *Haustin*, *Pagian*. The most considerable of all these Islands is *Lamuree*, where the King of the Country keeps his Court, and to him the Governors of all the other Islands are subject. Among these Strangers, there was one of the Governors and his Wife who was the King's Daughter; though they went half naked, yet their Carriage, and a peculiar Air of Greatness, sufficiently distinguished them from the rest. The Husband had his Body painted all over with certain Lines, in such a manner, that they formed several Figures: The rest of the People were also painted in like manner more or less. The Women and Children were not painted at all; there were nineteen Men and ten Women of different Ages; the Make and Colour of their Faces were much like that of the *Philippineje*. The Men had no other sort of Cloaths than a Sash wrapped several times round their Bodies, and covering their Knees and Thighs; they wore on their Shoulders about an Ell and an Half of coarse Linen Cloth, like a Cowl, tied before, and hanging loose behind. Both Men and Women dressed much alike, only that the Women had a Piece of Cloth somewhat longer, that hung from their Waist down to their Knees. Their Language is different from that of the *Philippineje* and *Mariannese*; their Manner of pronouncing is more like that of the *Arabs*, and some who understood the Language observed the Women that seemed the most comely amongst them, had several Rings and Necklaces of Tortoise Shells, called here *Lary*; and others made of a Substance much like Amethysts, but not transparent. The Manner of their living at Sea, which was for seventy Days together, continually driven by the Wind, was thus: They cast out a sort of Net made of a great many Twigs of Trees put together, with a large Mouth for the Fish to enter in at, and terminating in a Point, to prevent their getting out. The Fish they took after this manner was all the Nourishment they had, and Rain Water saved in Coconut Shells, which is the Fruit of the Palm trees, and of the Figure and Size of a Human Skull.

They have no Cows in their Islands, and at the Sight of them they ran away, as they did likewise at the Barkening of a Dog; neither have they Cats, Stags, Horses, nor, in general, any Quadruped, nor any Fowl, but Sea-towls, excepting Hens, which they breed up, but never eat their Eggs. Notwithstanding this their Want of every thing, they are very cheerful, and contented with their Condition. Their Song, and Dances are exact and regular; when they sing, it is all in Concert, every one observing the

same Humour and Gestures, which makes it very agreeable. They were surpris'd at the Government, Politics, and Manners of the *Europeans*. They admir'd especially the Solemnities and Ceremonies of the Church in celebrating the Divine Service, but also the Music, Instruments, Dances, and Arms of the *Spaniards*, whose powder was what surpris'd them most. They wonder'd at the Whiteness of the *Europeans*, in respect of whom they were perfectly tawny, as well as the Inhabitants of this Country. It did not then appear that they had any Knowledge either of a Deity, or that they worshipp'd Idols. Their Life is perfectly frugal, they never eat, but eating and drinking, in which they observe no Order or Place, when hungry or dry, and when they have any thing to satisfy Nature: Yet they eat but a little at a Time, and never enough to last for a whole Day. They shew much Respect and Deference to the Kings, and the Governors of Towns, and obey them very particularly. Their Civility and Respect consists in taking hold of the Hand or Foot of the Person they would honour, and gently rubbing his Face.

Amongst their Utensils they had some Saws, not made of Iron, but of a large Shell, called here *Lary*, which they rub and whet upon a certain kind of Stone. They were surpris'd to see the Number of Cannon Balls used in building a Merchant-Ship at *Guriam*. They had no Metals in their Country. The Father Missionary made each of them a Present of a large Piece of Iron, which they received with as much Joy as if it had been made of Gold; and for fear it should be lost, they fasten'd it under their Heads, when they went to sleep. They have no other Arms than Lances of *Dart*, and human Bones, very well sharpened, and six darts. They are naturally very peaceable; but if any Quarrel happens amongst them, it is decided with some sort of Cassowary Head, which yet very rarely happens; for when they would come to a close Fight, they separate, and till they are soon reconcil'd again. In any great dispute, and heavy, but, on the contrary, have a great deal of Firmness and Courage. They are not so bold as the Inhabitants of the *Mariannns*; yet they are well provided with all shaped much like those of the *Philippineje*. Both Men and Women let their Hair grow long, and hang down their Shoulders. When they us'd to be shaved, they used to be conducted to the Presence of the Father Missionary, they painted their Bodies all over with a white Colour, which is looked upon by them as a great Ornament.

The oldest of these Strangers was once seen eating the Coals of *Caragan*. They are very voracious, and they said, that in fishing they took two or three other Shells, but threw them into the Sea, as being unworthy their Value. The New *Philippineje* consist of a great Number, and form one of the most considerable Kingdoms in the East, being enclosed on the North and South by the Tropic Lane and the Tropic of *Cancer*; on the East by the Strait between the *Mariannns* and *Posseppone*. The Natives of the Islands never offer any Violence to one another; Murder and Homicide are unknown to them, and they bear a great Respect to one another. It is probable these Islands are rich in Gold, Amber, and Drugs, being situated under the same Degree of Longitude as the *Mariannns*, where we have Nutmegs, and other valuable Spices.

Though these People seem to be very ignorant amongst them a sort of Politics and Government; every Island obeys his Chief, who is subject to the King of the Country. The most considerable is the Island of *Faua*, called likewise *Lamuree*. Though these Islands were never heard of till the year 1686, yet in these few Years, it is a long Time since they have had Mountains of *Samal*, thick smokes were seen in the Coast, which commonly happens in the Islands of *Samal* and *Faua* when they set Fire to their Woods and Forests to clear the Ground: These Smokes the *Philippineje* call *Samal*, and other Islands, had also observed when they were at Sea.

There have been four Observations made of this kind by some of our Writers, who have been successful, and thereby unaccountably surpris'd.

founding their own Sense of Things with that of their Authors. It has, for example, been questioned, whether there be not Inconfinities in these Accounts of the *Indians*? It is suggested that, as no *European* ever was in that Country, so the Belief of such an *Archipelago* of Islands cannot be established on any rational Foundation; and that there is a visible Absurdity in the *Indians* being seventy Days in passing from a Country, the Smoak of which was seen from the Mountains of *Mindano*. This Humour of Reasoning away Facts, is so strong at present, that though I have already taken up more Room than I intended, yet I cannot forbear a lifting another Relation, with respect to these Islands, of a much later Date, viz. in the Year 1710, because I think it will put this Matter out of Dispute, and because, hitherto, it has never appeared in our Language.

The Vessel in which we embarked, in order to prosecute the Discovery of the Islands of *Palaoos*, was called the *Holy Trinity*, and her Crew consisted of eighty-six Persons: She was commanded by Serjeant-Major Don *Francis Padilla*, who carried with him the Reverend Fathers *Daberon* and *Cortiz*, Jesuits, accompanied by Brother *Stephen Baulin*, who were made Choice of to propagate the Faith among these Islanders. It was on the Fourteenth of *November*, in the Year 1710, that I sailed from the *Philippine* Islands, in order to find the Islands of *Palaoos*, supposing my Departure to be from the Lat. of 13° 9', and from the Long. of 144° 22', I navigated fifteen Days, as I have marked in my Chart; and, on the Thirtieth of *November*, we discovered Land to the North-East 3° towards the North, having observed 4 or 5° Variation to the East in this Course, the Land lying from us about three Leagues.

We made Sail again in order to approach nearer, when it appeared, that there were two Islands, which Father *Daberon* thought fit to call the Islands of *St. Andrew*, because, on the Day that we discovered them, the Church celebrated the Feast of that great Apostle. When we were very near these Islands, we perceived a descending to us, in which were some of the Inhabitants, who stood out, when they were within Hearing, *Muga Muga*, which is as much as to say, Good People: A *Palaoos*, who had been baptized at *Mandila*, and whom we carried with us, shewed himself to us, and spake to them: As soon as they came on Board, they informed us, that these Islands were called *Sonforal*, and that they were Part of the *Archipelago* we sought for. They expressed a great deal of Satisfaction and Joy at the Sight of us, which they testified by kissing our Hands, and embracing us.

Their People are extremely well shaped, and of a very robust Constitution; they were naked, except that at the Middle they wore a Piece of Mat. Their Hair was curled; they had very little Beard, and, to defend themselves from the Rain, they wore upon their Shoulders a kind of Mantle, made of a thick sort of Mat, and, on their Heads, Hats of the same sort of Stuff, round which they stuck Birds Feathers upright. They were extremely surprized to see our People smoke Tobacco: and, of all things, seemed most to esteem Iron; and whenever they saw it, they gazed on it in such a manner, as visibly betrayed how much they coveted it: And in case we did not understand their dumb Signs, they made no Difficulty of earnestly and frequently demanding it. In the Afternoon there came off two other Boats, in each of which there were eight Men, as soon as they came near us, they began to sing, beating Time with their Hands upon their Thighs. When they were on Board, some of them began to measure the Length of the Sloop, taking it for granted, that it was made of a single Tree, while others counted the Number of Men. They brought us some Leaves, some Fish, and some Herbs.

These Islands were all covered with Trees to the Sea-Shore. Their Boats appeared to us very neatly made, in which they made use of Snake-Sails, having a Lees-Board on the other Side the Boat, in order to prevent it from going over. We desired them to shew us what was the Course to the largest of their Islands, or *Fanque*, and

they pointed to the N. N. E. They added, that to the S. S. W. and to the S. S. E. there lay two other Islands, one of which was called *Merieres*, and the other *Paulo*. When we were very near the Land, I sent my under Pilot to sound, that I might bring the Ship to an Anchor. The Shallop being arrived within a quarter of a League of the Island, there came off three Boats full of People, and some of them going on Board our Shallop, one of the *Indians* took notice there of a Sabre, which, after he had, for some time, considered attentively, he jumped into the Sea, and took it with him. My under Pilot reported, at his Return, that there was no fit Ground for Anchorage, inasmuch as there was a great Depth of Water, and a rocky Bottom all along the Shore. I afterwards sent another Man on the same Errand, who quickly returned with the same Answer.

All this Time I had made a shift, by keeping under Sail, to stem the Current which ran very strongly to the South-East, but the Wind falling in the Evening, we began to drive at large; the *Indians* then got into their Boats to go ashore. Our Missionaries laboured all they could to keep them on board, but could not prevail upon them by any Means. They talked with them, however, some Time, on the first Principles of our Religion, and taught them to pronounce plainly the holy Names *Jesus* and *Maria*. We asked them several Questions as to the Bigness of the Island, and the Number of its Inhabitants. They answered, that the Island was about two Leagues and a half in Circumference, and that very probably there might be eight hundred People, who lived chiefly on Coconut, Fish and Sails. I observed the Height of the Sun at Noon, and found, that we were in the Latitude of five Degrees fifteen Minutes North, the Variation of the Compass at Sunrise being about 5° to the N. E.

The Currents carrying us away to the South-East with great Violence, we were not able to recover the Land till the fourth, about Six in the Morning. We then found ourselves at the Mouth of the Channel, betwixt the two Islands. I then sent the Shallop once more to look for an Anchorage; it was to no Purpose, for about 4 in the Afternoon they returned with an Account, that the Coast was an entire Rock, and that it was to no Purpose to let go an Anchor. On the 5th, about 7 in the Morning, the two Fathers came to a Resolution of going ashore, and setting up a Cross. Don *Padilla*, and myself, represented to them the Dangers to which they would be exposed, and how much they had to fear from these Islanders, with whose Temper we were so little acquainted, and how much they might be embarrassed, in case the Currents carried us to such a Distance as might put it out of our Power to send a Boat to bring them off, or to afford them any Assistance. Their Zeal was so warm, that they made little Account of these Difficulties, but persisted firmly in their Resolution, in spite of all we could say. At last, therefore, leaving Brother *Banan* on Board the Sloop, they went into the Shallop, taking with them the Quarter-Master of the Vessel, and the English of the Land Forces we had on Board: They likewise carried with them the *Palaoos* I have before mentioned, together with his Wife and Children.

The two Missionaries being gone, we kept near the Island all Day, by the Favour of the Wind, notwithstanding the Force of the Current; but towards the Evening, the Wind sunk, and we were driven out to Sea. We put out Lights from the Time it was dark, on the Bolt-sprit, and also on the Mizzen-mast, that they might see where we were. During the Night, we had some Gulls of Wind from the North-East, the North-West, the West and South-East, so that in the Morning at Break of Day, we found the largest of the two Islands bore from us, N. N. W. distant about 8 Leagues. We endeavoured from that Time to the 10th at Noon, to get as near the Land as we could, but without Effect; my, the Current drove us still farther and farther, so that I found myself in the Latitude of 5° 28' N.

We

“ We then held a Council of War, in order to consider what Course we should take. Don *Padilla*, the Lay-Jesuit, my Sub Pilot, and myself, were of Opinion, that the wisest thing we could do was to steer for the Island of *Panloque*, the largest of these Isles, and which was distant from that we had quitted about fifty Leagues. It was about nine o’Clock in the Morning of the 11th, that we discovered that Island; at Noon we were in the Latitude of $7^{\circ} 14'$ North, the Land being about a League off. At Four in the Afternoon came off four Boats, which kept at the Distance of about half a Cable’s Length, and were soon after followed by two other Boats; at last some of the People jumped over-board into the Sea, and swam on Board of us, with Intent, as it appeared, to steal any thing they could lay their Hands on. One of them laid hold of an Iron Chain, and pulled at it, in hopes of breaking it: another caught hold of a Hammock that was hung out to dry, and a third was endeavouring to get in at a Port-hole. Don *Padilla* considering the Behaviour of these People, thought proper to put the Soldiers under Arms, there being at least four-score Men in these six Boats, and at the same time made a Sign to the Islanders to keep at a Distance.

“ Upon this they began to row towards the Shore; but at their going off, let fly a Shower of Arrows, four of which fell on Board our Ship. Don *Padilla* then thought fit to order a general Discharge of our Fire-Arms; upon which the *Indians* jumped over-board, leaving their Vessels, and swimming towards the Shore at a prodigious Rate. but when they found that we gave over firing, they returned to their Boats, reembarked, and made for the Land as fast as they were able. These *Indians* were all of them naked, and some had painted their Bodies of different Colours. Their Skin is generally of an Olive Colour; but some were darker skinned than others; they had nothing with them that we saw, but a few Coconas. On the 12th we had little or no Wind, so that it was as much as we could do to continue in our Station, which we did all that Day without approaching near the Land. About four in the Afternoon there came off two Boats, who made Signs, and spoke to us; but as we had no Interpreter, we were not able to learn what they said. About Nine at Night the Wind blew South-South-East, and the Currents setting strongly to the North, carried us away at a great Rate. I then thought the most prudent thing I could do was to sail between two of these Islands, the Chanel being very open and fair, and about a League over. On the 13th, being to the West of these two Islands, we held a Council, in order to consider what Measures we were to take, and it was very soon resolved to bear away for *Sonferal*, in order to learn some News of our Millionaries, and of our Shallop. On the 14th, I found myself abreast of that Island. We lay there the whole Day without so much as seeing a Boat, though we were within Cannon-shot of the Shore. We coasted round the West Side of the Island till the 20th, when a high Gull of Wind from the South-East drove us out to Sea.

“ On the 21st we again drew near the Coast, and by Two in the Afternoon were within three Quarters of a League of the Shore, without perceiving any Boat. In the Evening we were driven to Sea again by an East-North-East Wind, upon which we held another Council, in which, after mature Deliberation on the Circumstances we were in, without a Shallop, in some want of Water, without knowing where to get any, it was resolved to return to *Mantla*, which we did with some Difficulty, being forced to make the Tour of *Mindanao*, carrying nothing back but the melancholy News of the Loss of the two worthy Fathers we carried out.”

It appears clearly from this Relation, that it was penned by the Captain of the Vessel, though he has not thought fit to inform us of his Name. Better Evidence than this of there being such an Archipelago cannot be desired, tho’ at the same time it must be confessed, that this Account gives us a very different Notion of those People from that suggested by the former Narratives. In 1711 another Attempt was made of this kind, which ended as unluckily, some of the Jesuits intended for the Mission dying at Sea, and

others perishing in these Islands, as very probably these and that are mentioned in the foregoing Voyages.

25. It has been generally believed, that these Islands of *Palaos* are near the *Philippines*, and the same with those which were discovered by a Spanish Captain in the Year 1681, and who in Honour of *Charles* the Second of Spain, called them the *Caroline* Islands; but I think these lay more to the South. On the 19th, and on the 21st of *June* 1722, there arrived in the Island of *Guam* the largest of the Archipelago called the *Marianne* Islands, two Boats full of *Indians*, who said they embarked from an Island called *Savaflop*, in order to go to another at a small Distance from it called *Uly*, and were driven thither by a Storm. A Vessel was fitted out to carry them home, and from the Accounts given by those who were on Board that Vessel, it very clearly appeared, that the last named Island was one of those called the *Caroline* Islands, lying in the Latitude of 6° North. It is fact, that these Islands belong to a large Archipelago divided like the *Mildoves* into five Provinces, and inhabited by various Nations of very different Colors: Some Negroes, supposed to be of the same Race with the Inhabitants of *New Guinea*, others tawny, like the *Islanders* in the *Philippines*, and a third sort perfectly white, supposed to be the Descendants of certain Spaniards who in the Year 1566 were set on Shore by their Commanders for Mutiny, in a Voyage from *New Spain* to the *Papixes*.

While these People were on Shore at *Guam*, they found some Silver Plate, and after considering attentively, declared that they had a great deal of that Metal in other Islands, which gave Occasion for the fitting out some Ships from *Guam*, for the Discovery of those Isles, in the Year 1722; but what the Fate of that Expedition was, is not come to our Knowledge. It is certain, that a very great Discovery might be made on this Side, because, though what is already known, it is very clear, that there is a continued Chain of Islands in the Longitude of 150° East from the Line, or rather from the Continent of *Neu-Heu*, which lies in the Latitude of 8° S. to the Islands, which make a Part of the Archipelago of *Japan*, in the Latitude of 32° N. and as it is certain, that the Inhabitants of the last mentioned Archipelago acknowledge they received great Quantities of Silver from an Island which lies to the East of them, it is not at all improbable, that many rich Metals might be found in some of the many Islands which form the Chain before mentioned.
