But this, however, is not the Discovery that I mean, and therefore I shall explain myself a little farther. If a Settlement was made on any of these Islands, in a very small Island to the East of them, it might afford an Opportunity of visiting the great Continent, if in that Archipelago any Continent between *America* and *Asia*, or if any might lead to the Discovery of some considerable Islands between *America* and *Asia*, which, from their Situation, might well be expected to abound in rich Commodities, but particularly in silver Mines, since it is confessed, that the richest of those hitherto discovered are in the Northern Parts of *Japan* and of *America*. If it should be found, that the rich silver Mines of *Pofofue* in *Japan* were the answer to that, this makes rather for than against my Opinion, because they are very near the same Degree of South Latitude that the rich Mines of *New Guinea* are to the N. that is, a little within forty Degrees. If this is not all, for if any such Islands could be discovered, they would afford us an Opportunity of reaching such a Point of very great Importance, and so we might be treated very judiciously by Mr. *Dobson*, in our return to *Pieces*, which, sooner or later, may very probably produce some such Discovery.

We have now gone through all that we proposed with respect to this Part of our Subject. It is to be regretted, that by the Expeditions of the *Porifue* and *Uly*, we have not seen this Side. It next remains to shew how that proposed Power which those Nations had assumed, and which has crumbled, and broke to pieces, notwithstanding the many Advantages they had for preserving it, and what their aims in these *Indies* under the Dominions of the Crown of *Portugal*. Which, when we have perused, shall be

 not preserving it, and
 under the Dominions of
 when we have perfected, and

der will have a much more compleat History of the *Portugueze Indies*, and that too in a much narrower Compass than is any where else to be met with. In treating of this Subject, I have, to the utmost of my Power, laboured to draw together such Circumstances as were most likely to contribute to the Reader's Information, and to connect, with the greatest Propriety, the ancient and modern Commerce in this Part of the World; and, at the same time, I have been very careful to omit nothing that might entertain or divert him. As to the particular Memoirs of the *Portugueze* Governors, their Disputes with the *Indian* Princes, and with each other, they would have swelled this Section to an enormous Length to a very little Purpose; and besides, the Reader will meet with enough on this Head in other Places. I shall pursue the same Method in the subsequent Articles, and shall endeavour to point out briefly, and truly the Causes of that strange Revolution which has happened in the *Portugueze* Trade; the rather, because I am convinced the same Causes will produce like Effects, in regard to the Trade of all other Nations.

26. The Care taken by the *Portuguese* to establish themselves firmly in all the principal Ports of the *Indies*, was of great Consequence to them, considering the Circumstances under which they began their Commerce in these Parts; for at that Time the *Indian* Princes were engaged in cruel Wars against each other, and the *Mohammedans* taking Advantage of this War, endeavouring to make themselves Masters of every Country in which they were permitted to trade; so that it must be admitted, the *Portuguese* had, at first, some Reason for making Use of Arms, and insisting on a Fortrefs where ever they established a Fact^y, because the one was necessary for the Security of the other; but in this they were blameable, that they affected to govern with an absolute and uncontrollable Power every Country into which they came, instead of cherishing and supporting the *Indians*, as they might have done, to their own great Profit, as well as that of those unhappy People, who, from their own Difficulties and ill Management, became the Prey of every new Invader.

If the *Portuguese* had taken this Step, they had undoubtedly secured this rich Commerce to themselves; whereas by their Tyranny they made the Inhabitants weary of them to the last Degree, and ready, whenever an Opportunity offered, to change their Masters. It must, however, be allowed, that the Method they pursued served to gratify their Vanity exceedingly, inasmuch as for above a Century they governed the *Indies* at their Will, and were the sole Lords of that rich and extensive Trade, none of the *Indian* Nations being allowed to carry on any Trade at all but by their Permission, and under the Sanction of their Passports. They carried this Matter still farther; for with respect to the richest Commodities, they reserved the Privilege of dealing in them to their own Subjects entirely, such as in the Cinnamon of *Ceylon*, the wild Cinnamon of *Coron*, Ginger, Iron, Steel, Lead, Tin, Copper, Plants, Timber for building, all Sorts of Arms, Honey, and Pepper. These Regulations, both with respect to Passports and reserved Commodities, together with a Power of visiting such Ships as put into any of the Ports under their immediate Dominion, continued in Force for a long Series of Time; and was not totally abolished till the Year 1700, which was One hundred and fourscore Years after their first Establishment in those Parts.

During the best Part of this Time, they disposed, as the supreme Lords of *India*, of all the rich Commodities that afforded, sending home annually fifteen or twenty large Ships laden with the most precious Merchandise of the East, exclusive of the Profits they made of their Commerce in the *Indies* themselves, and the adjacent Coasts of *China*, *Japan*, *Perseus*, *Arabia*, *Melinda*, *Mafambique*, and *Sofala*. *Japan* became, by this Means,

the greatest Port for Trade in *Europe*, to which the Ships of all Nations resorted for the Commodities and Manufactures of these distant Countries, the best Part of which were paid for in Gold and Silver, and, for the rest, the most valuable Products of these Nations were exchanged; so that the whole of this Commerce was in the Hands of the *Portuguese*, who set whatever Price they thought fit upon what they imported, and sold at exorbitant Rates to other *Europeans*, what they had purchased in the *Indies* for coarse Stuffs, Needles, Knives, Glass-Ware, and other Things of very little Value. In consequence of which, they became, by far, the richest trading Nation, and, at the same Time, the most potent maritime Power in this Part of the World; and so for a long Time they might have continued, if from their own Mistakes, and the bad Use they made of their Power and Riches, they had not excited other Nations to a Resolution of taking, at all Events, this rich Commerce out of their Hands; a Point that it will become every Nation to consider, that finds itself in the like Circumstances; for Trade is not to be constrained or monopolized: And though the contrary of this may, for some Time, appear true, yet sooner or later every Nation that acts as the *Portuguese* did, will be sensible of the same Effects which happened to them in the *Indies*.

27. It was towards the latter End of the sixteenth Century that the *English* and *Dutch* began, as we have before shewn, to interfere with the *Portuguese* in these Parts, but they very soon, by the Assistance of the Natives, took from them the most considerable Places they possessed, and some of them they abandoned themselves. It would take up a great deal of Room, and perhaps answer the Purpose but indifferently, if we should attempt to give a large History of the Manner in which these Places were reduced, and therefore we shall rather take them in the Course of their Situation, by which the Reader will clearly perceive how the Empire of this Nation in the East was broken and dissolved.

We have already shewn how the *Portuguese* became Masters of *Ormuz* on the Coast of *Perseus*; which Settlement they greatly improved, though the Island itself is one of the most uncomfortable Places in the World, the Country being without Water, and situated in a Climate where the Heats are in a manner intolerable: Yet in spite of all these Difficulties the *Portuguese* built there a very fine Town, in which the Streets were straight and regular, their Houses very high, finely adorned without, and within richly furnished, their Exchange rich and beautiful, their Churches splendid, and their Castle regular, well fortified, and excellently provided with Artillery. *Shah Abbas*, when Monarch of *Perseus*, had an earnest Desire to rid himself of those ill Neighbours; but he wanted a maritime Force sufficient to accomplish his Design, and therefore he applied himself to the *English*, who had likewise suffered much by the Pride and Avarice of the *Portuguese*, and by their Assistance Part of his Forces were transported into the Island of *Ormuz*, which was attacked both by Land and Sea on the 20th of January 1622. The Defendants behaved with great Bravery, and good Conduct, and made a noble Resistance; but the *English* having destroyed their Fleet, which consisted of five Gallies and twenty-five Frigates, and having also sprung a Mine which opened a fair Passage into the Castle, the Garrison thought fit, about the Middle of April, to surrender; which let all the neighbouring Coasts at Liberty, and destroyed the Power of the *Portuguese* on that Side.

The rich City of *Surat*, formerly a Place of the greatest Trade in the *Indies*, suffered severely from the *Portuguese*, who burnt it down to the Ground on purpose to favour the Commerce of their own City of *Diu*, which stands at the Entry of the Gulph of *Cambaya*, and which they had ordered one of the strongest and finest Places in the East, keeping the Monarch of that Country in the most absolute

28. If we had pursued a third chronological Method in relating the Loss of the Settlements made by this Nation in the *East-Indies*, we must have started from one Part of this Country to another, which would have occasioned great Confusion, without yielding any considerable Advantage: whereas the Method we have now taken by proceeding from West to East, will show the Reader, as he goes along, how these Settlements were lost in the very same Order in which we have before shewn they were acquired.

Subjection. But notwithstanding their Policy in this respect, and that they still remained Masters of *Diu*, yet the *Indian* Princes in the Neighbourhood trade freely with all *Europeans*, and *Surat*, which they took so much Pains to destroy in 1520, is now in as flourishing a Condition as ever, and the *Portuguese* are almost the only Nation that are not benefited by its Traffick. On this Coast they were possessed of several strong Places, and is a Place of pretty good Trade. *Bagaim* is lately fallen into the Hands of the *Indians*. *Bombay* they yielded to the *English* on the Marriage of *Queen Catherine* with *King Charles II.* and has continued in our Hands ever since. From *Goa* to *Cape Comorin* they had also very considerable Settlements, of most of which they have been dispossessed by the *Dutch*, who in the Year 1663 becoming Masters of *Cranganor*, *Cochin*, and *Caulan*, soon after deprived them of *Cannor*, which was the first Place they had settled at; and thus we see the State of their Power greatly reduced on the Coast of *Malabar*. Doubling this famous Cape, and proceeding along the Coast of *Coromandel*, we meet first with the Port and Forts of *Nagapatan*, which, when the *Portuguese* came first into the *Indies*, was no more than a Village; but they considering the Importance of the Place, fortified it with great Care, and rendered it in every respect very considerable; but after the *Dutch* had deprived them of the Island of *Ceylon*, they did not long let them rest here, but by the Assistance of an *Indian* Prince, besieged and became Masters of that Place in 1655.

From thence all along the Coast, quite up to *Bengal*, the *Portuguese* have lost all Power; and as for Settlements they had none of any great Consequence to lose, having in the Time of their greatest Power contented themselves with a small Establishment at *Meliapour*, or *St. Thomas*, restraining all the rest of the Coast by their Squadrons, which were continually cruising in the Bay of *Bengal*. On the opposite Side of the Gulph the *Portuguese* had once very great Power in the Kingdom of *Pegu*, in consequence of their assisting the Monarch of that Country against the King of *Siam*, who had invaded his Territories, and would very probably have made him his Tributary, if a Body of *Portuguese* had not come to his Assistance, by whom he was enabled not only to defend himself effectually against his Enemy, but even to pursue him into his own Country.

It is very easy to discern what mighty Advantages might have accrued to the *Portuguese* from this favourable Turn, if they had known how to improve it; but we learn from a late Author, that what might have turned so much to their Benefit, proved, by their own ill Management, the Cause of their Ruin, and that in a very short Space of Time. The King of *Pegu*, it seems, was so sensible of the Service they had done him, in driving the King of *Siam* out of his Country, that in pure Gratitude, he made one *Señor Thomas Pereira*, who commanded the *Portuguese* in the War, Generalissimo of all his Forces, which Preterment made the *Portuguese* so insolent, that in a few Years they became intolerable to all Ranks and Degrees of Persons in *Pegu*. Both Kings grew tired of War, but both were too proud to make Advances towards Peace, so that for many Years they had Skirmishes with small Parties, though not set Battles; and where ever the *Portuguese* Arms went, they had Victory to accompany them. The King of *Pegu*, to have his Forces nearer the Borders of *Siam*, settled his Court at *Martaban*, and kept the *Portuguese* near him, to be ready upon all Occasions, either to repel or assault the *Siam* Forces, as Opportunity served; and *Thomas Pereira* was the great Favourite at Court: He had his Elephants of State, and a Guard of his own Countrymen to attend him.

¹ This City of *Diu* stands in the Latitude of 21° 20', and is by many supposed to be the *Barygaza* of the Ancients. It is about a League in Length, and not a third Part of a League in Breadth. The Country about it abounds with Salt, and the City itself is as well built, and as well fortified, as any in the *Indies*. It is very famous for the Siege it sustained, which is before given some Account. At present it is in a worse Condition than formerly, both with regard to Wealth and Strength. In some measure, it is in less Danger of being attacked.

² It is very remarkable, that the *Portuguese* are best respected in those Countries where they had no Fortresses, which themselves, as well without them. There are a great Number of *Portuguese*, or rather Descendants of *Portuguese*, settled in those Countries, but poor, and are treated with great Indignity, both by the Natives and by other *Europeans*, which can be attributed to their having lived so long in the *Indies*, as to have lost all Spirit, and to become as degenerate as the *Siam* themselves. who are as yet a People as a yonder Sea.

One Day, as he was coming from Court in State, on a large Elephant, towards his own Palace, he happened to hear Musick in a Burgher's House, whose Daughter being a very beautiful Virgin, had been married that Morning to a young Man of that Neighbourhood. The General went to the House, wished them Joy, and desired to see the Bride. The Parents took the General's Visit for a great Honour done them, and brought their Daughter to his Elephant's Side. He being furnished with his Beasts, ordered his Guard to seize her, and carry her to his House. His Orders were but too readily obeyed, and the poor Bridegroom, not able to bear his Loss, cut his own Throat; and the disconsolate Parents rent their Clothes, and went crying through the Streets towards the King's Palace, imploring their Countrymen to avenge the insolent *Portuguese*, the common Oppressor of their Country. Crowds of People came from all Parts of the City to hear and see the Tragedy; their Numbers grew so great that the Streets were hardly large enough for them, and their Noise so loud that it reached the King's Ears, who sent to know the Cause of their Uproar. The Messenger returning, acquainted the King with what had been transacted, and he, to appease the Tumult, sent them Word, that he would punish the Criminal, and accordingly sent for his General: But he made an Excuse, that he was so much out of Order that he could not wait on his Majesty till he was better; which Answer provoked the King, that he ordered the whole Nation to take up Arms, and to make a general Massacre of the *Portuguese*, wherever they should be found, in City or Country. The King's Orders were put in Execution so speedily, that in a few Hours all the *Portuguese* were slaughtered, and the guilty Criminal was taken alive, and miserably tortured. Heels to an Elephant's Feet, which dragged him through the Streets till there was no Skin nor Flesh left to cover his Bones; which Spectacle appeared the strange Place. There were only three *Portuguese* left, who were accidentally in the Suburbs, near the River, who hid themselves till Night favoured their Escape in a small Boat, in which they coasted along the Shore, till a what the Woods and Rocks afforded them, and then arrived at *Malacca*, to give an Account of this amazing Transaction.

The Kingdom, or as some called it, the Empire of *Siam*, lies next to *Pegu*, and is a Country of vast Extent, the Monarch of which was too powerful for the *Portuguese* to think of making any great Comprehensions in its Frontiers, and therefore they chose to live with him upon good Terms, for the sake of the vast Trade carried on in his Dominions, which are extremely well situated for Commerce, having on one Side the Kingdoms of *Lan*, *Cochin*, and *Cochin China*, and on the other, the Countries bordering on the Gulph of *Bengal*. Besides, there usually resorted thither a Fleet of Merchant Ships from *China*, laden with all the rich Goods of that Empire. They continued to hold a fair Correspondence with the Monarch and his Subjects as long as their Power subsisted in the *Indies*; but by Degrees the *Dutch* have in a great Measure excluded them from their Influence here, since 1613 when they erected their Factory here, and have since wrought themselves so effectually into the Confidence of this Prince, that he has granted them an exclusive Privilege of purchasing all the Tin in his Dominions, which is a Branch of Commerce of prodigious Importance; yet the *Portuguese* are not wholly ejected, though their Trade is much fallen from what it was. There are several small Principalities on the Isthmus, that were formerly under the Power of the *Portuguese*.

their retaining still a Mixture of that Language with their own. The chief of these Principalities are those of *Ligor* on one Side, and *Qyadab* on the other; but the People are so barbarous and perfidious, that the *Europeans* carry on scarce any Trade on their Coasts.

The great Peninsula of *Malacca*, at the Time the *Portugueze* came thither, was subject to the King of *Jobora*, and by what Means the *Viceroys* of the Crown of *Portugal* were led to attack, and make themselves Masters of that City, we have already shewn. After it came into their Hands, it changed its Condition entirely, and from being a Place of small Account, in a short Time became famous all over *India* and *Europe*, lying almost in the Centre of Trade, brought thither by Shipping from the rich Kingdoms of *Japan*, *China*, *Formosa*, *Luconia*, *Tonquin*, *Cochin-China*, *Cambodia*, and *Siam*, besides what *Jobora* produced, and *Sunatra*, *Java*, *Borneo*, *Macassar*, *Banda*, *Amboina*, and *Ternate* Islands, that abound in valuable Commodities. After *Goa* and *Ormuz* this was by very far the richest City in the *Indies*, and a great Market for all the different Commodities that these Countries produced. It was the Seat of a Bishop, and the Cathedral Church of *St. Paul* was extremely fine. They had besides five other Parish-Churches, and a noble College for the *Jesuits*, together with a Seminary, in which all new Converts to the Faith were instructed. The Whole was encompassed with a strong stone Wall, regularly fortified with Bastions, the Place extremely well peopled, and the Garrison numerous, and well supplied, because the *Portugueze* considered it as the Eastern Frontier of their Dominions.

In 1605, the *Dutch*, who were then become very potent in the *Indies*, attacked and destroyed the Fleet of the *Portugueze* here, consisting of thirty-four Sail, on board of which were three thousand Men; but they were not able to take the Place. The next Year the King of *Jobora* invested it with an Army of sixty thousand Men, in Revenge of what the *Portugueze* had done against him three Years before, when they took and destroyed his Capital; but, however, he was obliged to raise the Siege with great Loss. But the *Dutch*, well knowing the Importance of the Place, and the vast Advantages accruing to the *Portugueze* from its Situation and Commerce, the former affording them an Opportunity of levying 10 per Cent. upon all Vessels passing through the Streets, and the latter producing annually a large Revenue, they attacked it in the Year 1640 so vigorously, that they became Masters of it after a Siege of six Months. The Walls and Fortifications they preserved, as also the Church of *St. Paul*, but most of the other Churches they have destroyed, and the great Hospital they have turned into a Warehouse. The Language spoken here is esteemed the most copious and polite in the *Indies*, and therefore serves as a kind of general Tongue through all the Islands and Provinces farther towards the East. In the Kingdom of *Cambodia*, or *Cambaya*, the *Portugueze* have still a considerable Trade, and they are likewise well received in *Tonquin*. As to their Settlements in the several Islands of the *East-Indies*, in *China*, and in the Empire of *Japan*, we have spoke of them sufficiently already under the Head of Discoveries, and there is therefore no need of our insiting farther upon them here, as our View, at present, is no more than to shew how their principal Settlements were lost, and to whom, which having done, it may not be amiss to say somewhat of the Wars carried on against them in these Parts by the *Dutch*, and the Pretences they made use of for carrying them on.

28. The Troubles in the Low Countries, which produced a War between the Crown of *Spain* and the Republick of the United Provinces, began about 1570, and

England interposing in Favour of the States, their Power increased to such a Degree, that they were not only able to defend themselves against *Spain* by Land, but to give that potent Monarchy inexpressible Trouble by Sea. But this War seems to have no Relation to *Portugal*, and we do not hear of their attacking any but the *Portugueze* Settlements in the *East-Indies*. In order to resolve this Difficulty we must remember, that the Crown of *Portugal* was united to that of *Spain* in 1579, by which Means Philip II. became Master of both the *Indies*, and consequently the States of the United Provinces were as much at War with the *Portugueze*, who were Subjects to the King of *Spain*, as with any of the rest of his Subjects; and consequently this gave them a Right to attack the *Portugueze* Settlements both in the *East* and *West-Indies*; which they prosecuted with such Vigour, that they bid fair for becoming Masters of all that the *Portugueze* had possessed in either *Indies*.

We have seen what mighty Acquisitions they made in the East; but it is necessary to our Subject to observe likewise, that their *West-India* Company became in that Space of Time so powerful, as to make almost an intire Conquest of *Brazil*. It is very evident from hence, that nothing but the Union of the Crowns of *Spain* and *Portugal* could have afforded the *Dutch* either a Pretence for attacking, or an Opportunity of reducing these Countries, both of which in a singular Degree they from this Accident obtained. For as on the one hand, his Catholic Majesty had enough to do in defending his hereditary Dominions before this Accession of the Territories of *Portugal*, so he was tempted to apply the Revenues of that Crown to the immediate Wants of the *Spanish* Government, which we may conclude were very great, since on his Death-bed he owned, that the Wars of the Low-Countries had cost him five hundred and sixty-four Millions of Ducats, which is upwards of one hundred and twelve Millions of our Money; whence it is easy to perceive, that he could not spare as much as was requisite for the Defence of the *Portugueze* Territories. On the other hand, the *Portugueze* themselves, though they had been always distinguished for their Loyalty to their natural Princes, were far enough from shewing so much Zeal in the Service of the King of *Spain*; and it is very natural, when the Minds of private Men are entirely despoiled of publick Spirit, for the Affairs of the State to fall into Confusion.

But one would have imagined, that after the Separation of *Portugal* from *Spain*, which happened in the Year 1640, Things would have taken another Turn; because, with King *John IV.* the *Dutch* had no Pretence of making War. To give the Reader a clear Idea of this Matter we must remember, that the *Dutch* had taken *Brazil* from the King of *Spain*, or rather from the *Portugueze*, while they were his Subjects; but afterwards that Nation considering this as an Injury not to be borne, attempted to drive the *Dutch* out, notwithstanding the Treaty concluded between the States and the King of *Portugal* in 1641, which, to lay the Truth, had been but indifferently observed on both Sides; that is to say, the *Dutch* had encroached upon the *Portugueze* in the *East-Indies*, and they, on the other hand, gave the *Dutch* little or no Respite in *Brazil*, out of which, in ten Years Time, they drove them entirely.

About this Time died King *John IV.* and left his Son *Alphonso VI.* a Minor, which Advantage the *Dutch* took to declare War against the Crown of *Portugal*, from a Persuasion that this Opportunity of regaining what they had lost in the West, and prosecuted their Conquests in the *East-Indies*, was not to be lost, the rather, because *Portugal* was at that Time engaged in a dangerous War with *Spain*, and the *Dutch* had lately concluded a Peace with that Crown. It was in consequence of this new War that

* At the Time the *Portugueze* delivered themselves from the *Spanish* Yoke, the *Dutch* were employed, as we have already shewn, in reducing the Island of *Ceylon*, and made use of Abundance of Artifices, in order to prosecute the Advantages they had gained, notwithstanding the Peace concluded between the States General and the Crown of *Portugal* in *Europe*; neither did they desert from their Hostilities, even after the Peace was proclaimed in the *Indies*, but continued to give the *Portugueze* almost as much Trouble as while the War continued. Thus they did, under Pretence of being Allies, or Auxiliaries to such *Indian* Princes as were at War with the *Portugueze*; and where this Pretence was wanting, they took Care by their Familiarities to stir up new Wars, and under Pretence of restoring the *Indians* to their Freedom, contrived Things to as to engage them in long and bloody Wars, which had no other End than to oblige them to change their Masters, with this Difference only, that whereas the *Portugueze* endeavoured to keep large Countries, and to oblige the *Indian* Princes to pay Homage to the King of *Portugal*, the *Dutch* contented themselves with the Sea-Coasts, and forbidding those Princes to trade with any other Nation; so that their Slavery was equally great, though not always equally apparent, which ever Side prevailed.

the Dutch attacked the Portuguese again in the East-Indies, and even endeavoured to deprive them of Goa; but in this they did not succeed: And, on the other hand, the Portuguese found Means to traverse all the Attempts that the Dutch made to establish a Trade in China, as also to raise such a Storm as deprived them of the Island of Formosa, which they had conquered, and which was of prodigious Consequence to them.

But, in the mean time, the great Fleets they sent to the East-Indies enabled them not only to extend their Conquests, but in the Year 1661 to defeat the whole naval Power of the Portuguese in two general Engagements. But while the Publick suffered excessively from the Consequences of this fatal War, some private Merchants in Lisbon and in the East-Indies fitted out so many Privateers, and of such Strength, that the Dutch suffered excessively in their Trade, and therefore both Nations began to be weary of the War, and inclined to a Negotiation. The Crown of Great-Britain interposed its Mediation, in consequence of the Marriage between King Charles II. and the Infanta of Portugal, by which Peace was brought about in the Year 1661, and thereby the Portuguese were left in Possession of Brazil, and the Dutch accepted a Sum of Money as a Satisfaction for their Pretensions.

In the East-Indies Things were to remain as they then stood, and both Parties were to keep what, at the Conclusion of this Peace, should be in their respective Possessions; but the Dutch kept this no better than they did the former Treaty; but, on the contrary, in 1663, attacked all the Places which the Portuguese held on the Coast of Malabar, particularly Cochin, which they had no sooner taken, than they destroyed all the Wild or Bastard Cinnamon, which, after the Loss of Ceylon, had proved an advantageous Branch of Commerce to the Portuguese. There were high Complaints made of this in Europe to the States-General, who were either deceived by the plausible Accounts given them by their East-India Company, or pretended to be deceived, that they might, with a better Grace, protract the Negotiation relating to this Affair, till their Subjects in the East-Indies had so fortified the Places they had taken, as to put it intirely out of the Power of the Portuguese to attempt the Recovery of them.

These Proceedings gave the finishing Blow to the Ruin of the Portuguese, who have never since been able to undertake any thing of Consequence; but, on the contrary, have exhausted much of their remaining Strength in defending themselves against their Indian Neighbours, who encouraged by the Progress of the Dutch, and excited thereto by some of their Agents, have been since endeavouring to tear from them the small Remains of their Possessions in India, and have often kept Goa itself blocked up for many Months together; in which, perhaps, they have as much mistaken their own Interest as prejudiced that of this Nation, the Power of which has already so much broken, as not to afford any just Ground of Jealousy either to Indians or Europeans.

29. We have already, in the Course of this History, pointed out many of the Causes of the Declension of that mighty Power which, in so short a Space of Time, the Crown of Portugal acquired in the East; but as this is perhaps the most useful Part of the present Section, it may not be amiss to add a few farther Observations on this Subject, the rather, because the Portuguese Authors, who have treated so largely of the Conquests made by their Nation, have been, in a great measure, silent on the Means by which they were lost. One great Cause of their Ruin was the Circumstances of their Government at home, where, for many Years together, they were engaged in a long, expensive, and dangerous War against the Crown of Spain,

in Defence of their Independency, which at once employed their whole Force, and exhausted their whole Revenue. It is true indeed, that this was rather the Misfortune than the Fault of the Portuguese, since it was what they could not avoid; but it was, nevertheless, the great Cause of their Losses in the Indies.

We may add to this their sending over Men of too great Quality, as Viceroy's to Goa, with a View rather to better their Fortunes than the publick Service; which is the Reason that, of late Years, we hear nothing more of the Gamas, the Albuquerque's, the Pereyros, or the Gonsalves, but are forced to search for the Names of their Viceroy's in the private Registers of the Palace, instead of the publick Records of History: Besides, as these Men have been, generally speaking, too poor to mind any thing in much as mending their own Estates, so they have been too well allied to be called to any Account on their Return for their Mal-administration in the Indies. Whence their Affairs began first to decline in this Part of the World, it was a common Thing for the Viceroy to bestow not only the Government of Mozambique, which was elected next in Consequence after the Viceroyship, but all the latter Governments in his Power, on whom he pleased. Nay, it has been common for such Viceroy's to make, in the Space of three Years, Five hundred thousand Crowns, from whence we may form some Notion of the Profits of the Viceroy. Now as it is impossible such exorbitant Sums should be made any other Way than by oppressing the Indians, and taking large Sums from the Merchants, we may easily perceive, that all these private Fortunes were made at the Expence of the publick Interest.

The bad Examples of the Governour's had a very bad Effect on all the subordinate Officers; so that Pride, Vanity, Luxury, and a pompous Display of Wealth, attained by illicit Means, took place of that generous Valour, that laudable Ambition, that disinterested publick Spirit, which enabled their Antecessors to lay the Foundation of so large an Empire, with a very inconsideable Part of that Power which was in the Possession of those who sold it. The Clergy too followed the Example of the Laity, and instead of promoting, as at the Beginning, the Conversion of the Natives to the Christian Faith, from the generous View of saving their Souls, they now protracted that Work from the meaner Motive of making themselves servient to their own Purposes, and enabling them to acquire vast Riches. This Corruption proceeded double Degrees, that not only many of the Jesuits at Goa engaged in Trade, contrary to the Rules of their Order, and their Duty as Missionaries, but even defended to now as to disguise themselves in the Habits of Faquirs, or Madamadon Monks, that they might have an Opportunity of visiting the Diamond Mines, and purchasing Stones of an extraordinary Value.

But what most of all contributed to corrupt the Inhabitants of the Portuguese Settlements, was the little Care taken to prevent their leaving all Things to the Care of their Negroes and other Slaves, and their inter-marrying with the People of the Country, Practices which have been and ever will be fatal to all European Establishments, because it not only softens and effeminates the Minds of such as follow this Way of living, but also changes their Views, and makes them lose all Regard for their Country, and induces them to take such Measures as are most likely to preserve them in the Enjoyment of such servile Pleasures. The Portuguese at Goa have been for more than a Century past so much addicted to this gross and sensual kind of Life, and provided they might enjoy their fine Houses in the City, and their Country Palaces in its Neighbourhood, they gave themselves no Pain about what happened elsewhere.

* The Dutch, though their East-India Company gained sufficiently by these Practices, suffered very severely, as a State, from the Jealousies excited in their Neighbours. The English had some Experience of a like Disposition towards them; and thought the French had a just Cause of Complaint in the Indies, yet they were far enough from being pleased with the growth of the Dutch naval Power, and were ready joined in a War to humble them, as they phrased it, which was that of 1672; and how far the Cause of that War was concerned in the Conduct of the Dutch in the Indies, may appear from a Fact charged upon them by Mr. Tavernier, who in his Travels relates, that the Dutch Factory at Gambrin in Persia publicly burnt the Picture of King Charles II. in a Fire, partly made of Cinnamon, when it was considered as that Prince never forgot, and which gave a very bad Impression of the Dutch to the Persians, who laboured all their Lives to hinder it. We owe this Circumstance to the History of Holland, by M. De La Newville, who tells us, that the Dutch being extremely poor, and in Trouble the Jesuits gave them in China, discovered this Practice to the Governour of the Esmond Mines at Siam, who caught them, and ordered the Faquirs, with Stones about them to the Value of twenty five thousand Pounds, which he took from them, and then sold them publicly for profaning the Habit of those holy Men, took such Measures as prevented their carrying on that Trade.

of how great Progress the *Dutch* made in subduing their distant Settlements. The natural Consequence of this was, that when such Settlements were lost, those who were driven from their Habitations, instead of repairing to *Goa*, and taking Arms in the King's Service for the Recovery of any Part of his Dominions, went into the Territories of some *Indian* Prince, and there, for a pitiful Subsistence, entered into his Pay, or accepted of some low Office in his Courts; so that while the Fleets and Armies of *Portugal* grew thin and contemptible, for want of Soldiers and Seamen, there were many thousands of that Nation scattered all over the *Indies*, disgracing their Country by the manner in which they got their Bread, when by a proper Behaviour they might have restored the Affairs of their Prince, as well as their own Fortunes.

One may safely affirm, that all these Mischiefs were at the Bottom owing to the Want of a right Administration in *Portugal*, where, if a Council for the *Indies* had been settled, composed of Men of real Abilities and competent Experience, who had been entrusted with the sole Power of bestowing Places in that Country, and had been charged to look carefully into the Conduct of such as were employed by them, might, before things had gone too far, have restored Discipline in their Colonies, and recalled such as from Diligence or Diligence in their former Governments had taken Refuge in other Places. But their Attention to other things, and more especially to their Settlements in *Brazil*, which have, indeed, accidentally compensated in some measure their Losses on this Side, hindered them from thinking of their Affairs in the East, till they became past all Hopes, as well as past Recovery. In this distressed and dejected State they lie at present, which, however, must not excite us from giving the Reader a View of them even in this Condition, because the *Portugueze* are still considered as having some Interest in the *Indies*, though it be in a manner nothing in Comparison of what it was, and is daily growing from bad to worse, so that they really owe what little they still enjoy to the Want of any Inclination, at least in *European* Nations, to take it from them, which they might otherwise do almost at Pleasure.

The Dominions subject to the *Portugueze* Viceroy of the *Indies* are very easily described. The City of *Goa*, of which we have spoken before, is still the Capital, the Seat of the Viceroy, the Archbishop, and the Inquisition, which are heavy Burthens on so exhausted an Establishment. In the Neighbourhood of this City, they preserve the Islands of *Safette*, *Bardes*, *Aguedice*, and some others of no great Consequence, farther than that they supply the City of *Goa* plentifully with Provisions, which is hard to say, whether it be an Advantage to that Place or not; and because this may seem a kind of Paradox, I will explain it. As Rice comes in great Quantities, and very cheap, to *Goa*, it encourages the Citizens to keep a vast Number of Servants, especially Negroes, who are content with one Dish of this Food at Noon, and another at Night. If these were kept for any kind of Labour or Manufactures, there would be no great Objection to it; but almost every House-keeper has six, most of them twelve, some thirty or forty, that have no other Business than carrying their Master's Palankin and Umbrella; so that in Reality they are not kept so much for Service as for State; and thus they rather exhaust than increase the Riches of the Inhabitants.

Diu, which formerly belonged to the Kingdom of *Guzerat*, is the strongest Place they have, and is indeed very well situated for Commerce. It has a very good Port, and while the *Portugueze* had any Fleets of Consequence, they were generally laid up here, and at this City the *Moors* and other Traders in these Seas were obliged to take out their Passports before they proceeded any farther to the East. At present all the Trade, or at least almost all the Trade which was carried on here, is removed to *Surat*, and what little still remains at *Diu*, is in the Hands of the *Portugueze*, is carried on under *Gentil* Colours, that is to say,

the *Portugueze* think themselves safer under them than under the Flag of *Portugal*, formerly so much respected in the *Indies*. The Port of *Daman*, on the Gulph of *Cambaya*, is yet in tolerable good Condition, though nothing in Comparison of what it was, the old Town being in a manner deserted, and the new not near so well peopled as might be expected from its Extent. There are, however, still some Manufactures carried on here, particularly in Silk, with which they furnish the Market of *Goa*, and thereby enable the Merchants settled there to carry on what small Commerce they have left. *Chaul* stands behind the Mountains on the same Coast, and has a very safe and good Port.

These are all the Places that they have on the *Malabar* Coast, and in other Parts of the *Indies* they have few Factories, and no Establishments at all, except it be in the Islands of *Timor* and *Solor*, not far from the *Moluccas*, which they possess jointly with the *Dutch*, and of which we have already given a large Account in the History of Captain *Dampier's* Expedition to the South. Once in two or three Years they send a Ship from *Goa* to these Islands, the chief Commodities of which are *Sandal* Wood, much esteemed in *China*, very good Wax, and a sort of Medicine called *Solor* Stones, which have very little, if at all, inferior to the best *Bezoar*. On the Coast of *China* they have the Island and Port of *Macao*, from whence they carry on a considerable Trade to *China* and the *Philippines*.

All that remains under the *Portugueze* Dominion from the *Cape of Good Hope* in *Africa* to the City of *Macao* in *China* is governed by a Viceroy, with the Title of *Capitain General*, who resides at *Goa*, as the Metropolis of *India*. There are six, and sometimes eight *Delembargadores* or Judges that attend the Government as a Sovereign Court or Council, who wear a Gown down to their Heels over a Caslock of the same Length, the Gown with wide Sleeves down half way their Arms. They wear Golds, and huge Perukes of the *Trench* Fashion. The chief Court these Gown-men sit in is called a *Relacao*, which administers Justice in civil and criminal Cases, having Power over all Ministers, and tries all Appeals brought from all Parts of their Dominions. The Viceroy sits as Chief of this Court, under a Canopy. The Gown-men sit on Benches placed on the plain Floor. The Council *De facada* is like the Court of *Eschequer*, where one of the Gown-men sits as the Viceroy's Deputy. Thus the Pomp and Splendor of this Government is still kept up, though the Extent of it is much lessened, and the Power and Credit of it in a manner decayed. There are still as many Governments as ever, that is, in Title; for otherwise they are of no great Consequence, and those on whom they are bestowed, have the Characters of Generals. There is, for instance, a General of the Gulph of *Ormuz*, who has four Ships under his Command; a General of the North, who directs the small Towns on the Coast of *Malabar*; a General of *Safette*, who has a Territory of about fifteen Miles; a General of *Chaul*, who is, properly speaking, Governor of *Macao*, and an absolute Vassal to the *Chinese*. There is another General in the Islands of *Timor* and *Solor*, to whom even the *Portugueze* there scarce pay any Obedience, and who lives in a miserable Fort, the Guns of which are in no Condition for Service. There is likewise a General of *Goa*, whose Business it is to take Care of the Channels between the Islands, and to restrain Smugglers.

But the best of all the Governments that still belong to the *Indies*, is that of *Mofambique*, which is an Island situated near the Coast of *Africa*, in the Lat. of 15° South, within half a League of the Continent. They have a strong Fort there, with four good Battions, which commands the Channel, and in which there are seventy Pieces of Brass-Cannon; and here there is always kept a good Garrison, and in tolerable Order. The Governor is honoured with the Title of General of the River of *Senna*, where he has his Lieutenant, which Employment was worth to him several hundred thousand Crowns a Year. There

There is a very wide Difference between these total Performances and the Governments formerly in the Gift of the Viceroy of *Goa*, which were five; the first was that of *Mofambique*, which is still in the Hands, and the only one of the old Government that is so; the second was that of *Mafat*, on the *Arabian* Coast, which was of very great Importance, and brought in a large Revenue; the third was that of *Ormuz*, on the Coast of *Persia*; the Capitain General of the Island of *Goa* was the fourth, and the Governor of the important Forts of *Malacca* the fifth. Upon each of these General Governments there depended many others of less Consequence, of which these Generals had the absolute Disposal; but the whole held them were continued in them for no longer than three Years. And it was for this Reason they were guilty of so much Extortion, looking upon their Governments as Leases for so many Years, in which they were to make their Fortune.

are but a few Houses about the Fort, the Inhabitants keeping their Effects on the neighbouring Continent: But notwithstanding the Narrowness of the Place, there are Monasteries of Jesuits, Dominicans of St. *John De Dios*, besides the chief Church and that of the *Misericordia*. The Merchandize brought to this Place by the Ships of the Company are bought at a set Price by the Royal Factory, which afterwards send them to *Cochin*, the Mouth of the River of *Senna* running three hundred Miles along the Coast, in Gallies and small Vessels, because of the Flats from *Cochin*; the Goods are sent up the River, against the Stream, in Almudies or little Boats, which are ten Days going up, and about five coming down. It is very difficult going up for those who are not well acquainted with the Shallows and Windings of the River. *Cajates*, or *Blacks*, resort to this Port from Provinces and Kingdoms three or four Months Journey distant, to buy or take up Goods upon Trill for so much Gold, which they never fail to bring punctually the next Year, unless Death prevents them. This Trade yields above *Cent. per Cent.* so that the *Portuguese* may be said to have another *India in Africa*. *Senna* is a little Town on the Right-hand of the River, inhabited by fifty *Portuguese* Families, who make it populous enough, by the great Number of *Blacks* they keep. There till the Ground, and dig in the Mines, and by that means maintain their Masters, instead of being kept by them.

About fifteen Days Journey from hence lies *Sesala*, where the *Portuguese* have likewise an Establishment, subject however to the General of *Mozambique*, and here a prodigious Trade is driven on, of which the *Portuguese* are, or might be, Masters. It consists chiefly in Gold, of which there are greater Quantities here than in any other Country in the World, since the annual Produce of this Market is computed, by the best Judges, at Forty-six thousand Ounces. There are vast Quantities of *Spanish* and *Canary* Wines, Oils, Silks, Lannens, Cottons, Coral, and other *European* Goods sold here, which are carried by the Inhabitants of the little Kingdom of *Sesala*, through all the great Empire of *Monomotapa*, which the *Portuguese* stile the Empire of Gold, from the prodigious Quantities of that precious Metal which are brought to them from thence. There are, likewise, some other very rich Commodities brought hither by the Negroes, such as the most excellent Ebony in the World; great Quantities of Ivory, abundance of fine Mats, which are much esteemed in the *Indies*, and a great Number of Slaves; so that *Goa*, and all the rest of the *Portuguese* Settlements, are furnished from hence. One may justly wonder that, considering the Value of this Settlement, and its convenient Situation, the *Dutch* had not made themselves Masters of it long ago, as well as of all the other Places belonging to the Crown of *Portugal* on this Coast.

In the Year 1602, they attempted *Mozambique* with very little Success, which, however, did not discourage them; as it must be allowed, that where there is a Prospect of Gain, the *Dutch* are not easily discouraged: And, therefore, in 1605, they attacked it a second Time with greater Force, but with the same Illuck as before, except that they made themselves Masters of a rich *Portuguese* Fleet, which, in some measure, paid the Expence of the Expedition. This new Trade, however, is much fallen off by the *Arahs* making themselves Masters of *Mombaza*, and other Places, which gives them an Opportunity of supplying the *Arahs* with *European* Goods, which they purchase in diverse Part of the *Indies*.

As for the Share which the *Portuguese* still retain, the Gold obtained thereby is sent to *Goa* and to *Diu*, where it is coined into small Pieces, called *St. Thomas's*, which are not worth above Half a Crown of our Money; and it is observed that this Coin is of a white Touch, that is, of a bare Alloy, or an any other in the *Indies*, which is another Sign of a declining Trade; for the *Sarahs*, which were formerly coined at *Orma*, when in the *Portuguese* Hands, were esteemed the best Gold in the *Indies*; but they are now become extremely scarce; and the *St. Thomas's* are said to be coined in less Quantities every Year.

31. Their Possessions are said to produce so little to the King of *Portugal*, that it has been more than once de-

bated in the Council of that Prince, whether it would not be for the Interest of the Crown to abandon them altogether, withdrawing their Artillery and Effects; and we are likewise told, that it is not any political, but purely a religious Motive, that has hindered this Measure from being taken, the Priests having suggested, that in that Case a Multitude of Souls would be lost to the Church. We shall the less wonder at this, if we consider, that such as are best acquainted with the *East India* Trade assure us, that a single Merchant and a single Ship of a reasonable Burthen, may carry on as great a Commerce as what, at present, subsists between *Ision* and *Goa*. This Matter however deserves some Explanation. There are yet a great many Ships employed from *Goa*, *Pin*, and *Panna*, to the Coasts of *Persia*, *Pegu*, *Manila*, and *China*, but they are mostly on the Account of *Indian* Merchants, there being scarce a *Portuguese* Trader at *Goa* able to turn in a Cargo of the Value of Ten thousand Crowns; and it is very much doubted, whether, in the whole of the Trade, they employ above Two hundred the said Crown, so that it is not at all strange, that one Year with another, there are not above two Ships sent directly from *Goa* to *Ision*, and those not a fourth Part so rich as what they annually sent twenty.

Yet there has been a late Regulation made at *Goa* for the Preservation and promoting of Trade, which some who understand that Subject best agree complacently to Ruin. This is an exclusive Company, which has the sole Right to the Commerce of *Mozambique* and *Maury*, which Company has taken upon itself the Payment of the Royal Officers, who are also Two-thirds concerned therein, which has given such a Blow to the natural Commerce of *Goa*, that the best Part of the *Indian* Merchants that were left, are now retired from thence. To say the Truth, it was the great Share the Viceroy, Government, and other Officers, always took in Commerce, without contributing any thing thereto, except protecting the Merchants from the Violence committed by themselves on such as did not share them to a Share in their Trade, that first destroyed the extensive Commerce they enjoyed. And, upon this Subject, the Wits of the *Indies*, have framed a very pretty Allegory. They say, that when the *Portuguese* came first to this, they had a Sword in one Hand, and a Crucifix in the other; but that they might fill their Pockets with Silver, they quickly dispented with the first, and soon after lost the last, by which they have lost all. But their great Power and their Commerce are to much diminished, that it is as great as ever, inasmuch that they retain the Names of the Country, who are called *Canaries*, the Pay of wearing stockings, though they employ them as Physicians, Lawyers, and Merchants; by which many of them are so rich that they keep a Dozen or Fourteen Servants, and are in much better Circumstances than the *Portuguese* themselves.

The Revenues of the Church have suffered very little by this surprizing Change in the State; there is hardly a Monastery that does not receive four or five thousand Crowns out of the Treasury, at the same time the Soldiers Rave and mutiny for want of Pay, which is so much the harder upon the Government, because the Reverend Fathers know very well how to tax the People themselves, inasmuch that it is affirmed, the Priests at *Goa* have a better Revenue than the Crown of *Portugal*. It is not easy to know what becomes of the Money these Churchmen raise; but it is very evident, that the Wealth they possess, together with the Establishment of the Inhabitation at *Goa*, is such a dead Weight on the Settlement, that it must sooner or later destroy it. The wits of the *Portuguese* in *Europe* understand this very well, and would be glad to see some proper Remedy applied to prevent the Prejudice against the Church or Churchmen, so as not enough from being the Vice of that Nation, but that pure Regard to the Crown, and to the Nation, they would think, that the Clergy themselves, instead of complaining at more, ought to be willing to part with some Propriety of what is already in their Hands, in order to render the State more able to protect them in the Possession of the Remainder. Besides, there is nothing clearer, than that the erecting of religious Houses is directly opposite to the

Prince, whether it would not
 own to abandon them all to
 Artillery and Efforts; and we
 not any political, but purely
 ndered this Measure to be
 ag suggested, that in that Case
 be left to the Church. We

very Scheme of planting, and must always ruin the Settlements where it prevails, and consequently the religious Houses themselves, which is certainly an Argument that ought to prevail even with Popish Princes to lay some Restraint on the Missionaries that are sent abroad, unless they prefer the Reputation of Zeal among such as are no competent Judges, but to Maxims of Policy and good Government, not to the Principles of true Religion. For, if there be any Piety in converting Pagans to the Christian Faith, it follows, that there is still greater Piety in doing this effectually, and in maintaining for ever the Establishments necessary to support them, which Reason and Experience shews, the building Monasteries, and maintaining Numbers of idle People in them, will not do, but on the contrary will bring on in Time the Destruction of those Colonies, in which this Humour is suffered to prevail.

The very last Advices from this Part of the World inform us, that several Indian Princes were driven from before Goa, which they had blocked up with a numerous Army, by the powerful Succours sent by the present King of Portugal, and by the excellent Conduct of the late Viceroy, who was the Count de *Laurocal*, and who, if I mistake not, was twice in the Indies, and behaved there with great Reputation. Such Expeditions, however, are to be considered as Expedients only, which may for a time preserve that Settlement, but can never restore it, or bring the Affairs of this Nation in these Parts into good Order, so to make them worth the Attention of a Prince, who has the Honour of his Crown, and the Good of his People, at Heart. It may not therefore be amiss, before we conclude this Section, to consider what is like to be the future Fate of the Portugueze in the Indies, in which, if our Conjectures should be justified by Events, they cannot but do Honour to this Performance.

It is morally certain, that the Establishments which the Crown of Portugal still has in the East-Indies might, in the Hands of an active and industrious Nation, turn to considerable Account; for it has been long ago observed by *M. Tavernier*, that the Port of *Diu* is as well situated for Trade, and as capable of Improvement, as any in that Part of the World, or more so; and if put under proper Regulations, that is, if made in some measure a free Port, it must necessarily come in for a large Share of that Commerce now carried on at *Surat*, and, in all probability, retrieve much of the Arabian and Persian Commerce that has been so long left to the Portugueze. On the other hand, as they have still some Factories at *Bisnagar* and other Places on that Coast, it would be no difficult Matter to re-establish their Commerce in the Heart of India, at the same time that the Port of *Masco* would furnish them with the Means of supplying the China Market as cheap or cheaper than any other European Nation, because their Colony at *Mojambique* is so situated, as to leave them for the large Purposes that the Cape of Good Hope does the Dutch, or the Island of *St. Helena* the English.

But all these Advantages signify nothing in the Hands of those who are so far from possessing the Virtues requisite to such Improvements, that, on the contrary, they are not only tainted with, but over-run by their Vices, as must unquestionably overturn the best Establishment in the World. It is necessary to support a Charge of this Nature by Facts, that it may not appear to be the Effects of Fancy, Prejudice, or Misinformation. I shall mention but one, which, as it is very singular in its kind, will at once answer my Purpose, and serve to enlighten the Subject. The Portugueze had, in the Close of the last Century, an Officer capable of doing much towards the Execution of such a Plan as this, inasmuch as he was a Man of great Prudence and Virtue; but withal, he had too high a Spirit, which led him to treat the Vices of his Countrymen with such Austerity as drew upon him a disastrous Death, and thereby defeated all the Hopes that had been raised from the great Victories he obtained over the *Shahs* and *Moors*, and that

noble Zeal he had upon all Occasions shewn for the Welfare of his Country.

His sharp Tongue, says my Author, had gair'd him the Ill-will of almost all the Gentry of Goa, and along the Coast; but more particularly of the Family of *Melo*, which was powerful in kindred, and great by Birth. His Affronts becoming insupportable, they conspired, to the Number of fifty, to murder him; and having agreed on the Time, Place, and Manner of executing their Design, they made several Loop-holes in the Houles of the Quarter and Parish of *St. Peter*, that they might shoot him with more Safety. The General, or rather Admiral, persuading himself that Gentlemen could not harbour Thoughts of taking an ungenerous Revenge, tho' warned to be upon his Guard, because there were treacherous Practices against him, would never admit any Soldiers to attend him, and particularly two Captains that were willing to share in his Dangers. Thus being carried in a Palankin alone, only with one Black that carried his Umbrella, a Shot was made at him from a Houle, which giving him a slight Wound, he leaped out of the Palankin, and taking the Staff he held between his Fingers, said, *He is it seu aim at? Trifstan de Melo* at these Words coming out of his Houle, answered, *et you*, and fired a Blunderbuss at him. He, with an undaunted Courage, defended it with his Cloak; and bowing his Body, then drawing his Sword, and falling on his Enemy, he struck him five times, but to no Purpose, because he had on a Coat of Mail; whereupon he cleft his Head, and with a back Stroke cut him over the Face, which made him fall; then taking him by the Hair, he let his Feet upon him, and was going to run his Sword into his Breast, but *Trifstan* begging his Life, he graciously granted it, saying, he would not embroil his Hands in such base Blood. In the mean while out came *Trifstan's* son, and a Mulatto, (so they call those that are got between Blacks and Whites) and these two Blunderbusses, lodged several Bullets in the Admiral's Breast, breaking in Pieces the Cross he wore as a Badge of Knighthood; but *Trifstan* stood and defended himself, when a Slave came up and run him into the side with a Javelin; nor did he go unpunished, for the General, with a back-stroke, ripped open his Belly, whereof he died at Night. *Macacho* being ready to expire, drew near to the Palankin, and setting his Peruke to rights the best he could, laid himself in it. The Murderers fearing he might yet live, one of them, who was a Priest, came with a Blunderbuss in his Hand to make an end of him; but seeing him ready to breathe out his Soul, asked, whether he would make his Confession? The Admiral called him Jew, and bid him go about his Business: Afterwards a Dominican coming to him, he gave Signs of Repentance, and grasping his Hands, died with these Words: The Blood of Christ save me. They found in his Breast about thirty Bullets; whereupon People admiring his Valour, said, he must needs have more vital Spirits than other Mortals, since there must go so much to the killing him?

This Murder, foul and detestable as it was, could never be punished, so powerful was the Family concerned in it, and so weak the Authority of the Viceroy, in Matters relating to Justice. It is true, this strange Fact happened fifty Years ago, but Things are far from being mended since. Assassinations are still common in this Country, and such as would not expose their own Lives for the Preservation of the Colony, are ready, on the slightest Provocation, to command their Slaves to take away the Life of another Man, let his Worth or Dignity be what it will, even at the Altar, and this without the least Apprehension of Justice. We need no clearer Proof than this, that the Affairs of these People are totally enervated and corrupted, and as Cowards, they are cruel and revengeful, which wicked Dispositions arise from a lazy and luxurious Life. We may there-

This gallant Man, Don Antonio Macha, a Priest, was General of the North, and afterwards Admiral of the Gulph of *Omeze*, in which Character he gained immortal Reputation. In the Month of *July*, 1681, he with three Ships only fought fourteen Arabian Vessels of the same Size, in the Bay of *Socatra*, for a whole Day; and when he might have retired safely into the Port of *Diu*, he anchored close by them all Night, in order to have renewed the Pilot next Morning; but the *Arabians* having had Fighting enough the Day before, stole away in the dark, and recovered their own Coast. Several Boats full of *Portugueze*, *French*, and *Dutch* Mercenaries, went from *Surat* to see this Battle, and afterwards complimented the Portugueze Admiral on his Victory, little suspecting, that before the End of that Year, a Man, who had done such eminent Service to the *Portugueze*, would fall, at he did, a Victim to private Revenge.

fore safely predict, that the Continuance even of that slender Power which the *Portuguese* have still left, cannot continue long, and that for these two plain Reasons: First, because it has been long, and is still in a declining Condition, so that its Force being extremely decayed, and at the same time continually employed in resisting the Efforts of its Enemies, it is impossible, in the Nature of Things, that it should subsist for any Time: Secondly, the Manners of the People are entirely ruined, so that there is not the least Probability that any such Reformation will ever be effected, as might enable them to make such Use of the convenient Ports of which they are still possessed, as is necessary to revive and restore their Commerce in the *Indies*. I venture therefore to pronounce, that in the Compsals of twenty or thirty Years, their Establishments in these Parts will be quite lost, and that in all likelihood, *Goa, Duu,* and *Daman,* will be lost first, which will necessarily draw after them the Desertion of *Macao*, which cannot long subsist by its own Force, and lies at much too great a Distance to receive any effectual Succour or Support from *Portugal* directly.*

It is indeed possible, that Accidents out of the Reach of human Foresight, may prevent, at least for a Time, the Completion of what I have predicted; but without the Intervention of some such Accidents, it will certainly come to pass, and when it does, perhaps it may not be much to the Disadvantage of *Portugal*; for when Colonies contribute little to the Benefit of a State, and are of no Use in promoting its naval Power, the Loss of them cannot be considered as very detrimental, except to such as are settled in them, which is a Consideration well worthy the Attention of every Colony, since it shews that the Relation between it, and its Mother-Country, is the sole Source of the Welfare of both, and cannot therefore be taken away without hazarding the Destruction of the Colony.

§ 3. The History of the Rise, Progress, and Declension of the *Portuguese* Commerce in the *Indies* was never written before, and therefore I hope will appear the more agreeable and entertaining now. We have here, in a very narrow Compals, presented the whole of it to the View of the *English* Reader, with all the Accuracy and Impartiality that lay within the Reach of our Power; and as we have, throughout the whole Section, intermixed our Remarks with the Matters of Fact, we shall be very short in our Observations here. It may not, however, be amiss to suggest, by way of Conclusion, that though this, with respect to the Circumstances attending Facts, is a particular History, yet the intelligent and judicious Reader will very easily perceive, that, at the Bottom, it contains a general View of the Rise, Progress, and Decay of all Commerce and naval Power, which are at first (at least, generally speaking) the Effects of private Virtues, and in other Words, are produced by the extraordinary Abilities and unwearied Labours of particular Men in Seasons proper for such Undertakings, and with due Assistance from that State in which such Genii appear.

* It is very remarkable, that *Vasquez de Gama*, whose Statue is over one of the Gates of *Goa*, was not only the Discoverer of the Passage to the *Indies* by the *Coast of Good Hope*, but lived to see the Establishments made by his Countrymen in those Parts carried to their greatest Height, and at the Time of his Demise the *Portuguese* Empire in the East was in its most flourishing Condition. It is likewise remarkable, that the son of the great Don *Albuanz de Albuquerque*, who was the Conqueror of *Goa*, lived to see the Declension of their Affairs in the *Indies*, and the prodigious Progress of the *Dutch* at their Expence. The whole Circle therefore of the Discoveries, Acquisitions, and Losses of this Nation, take in no greater Compass than two hundred and fifty Years, which is very little in Comparison to the Time this Trade was held by the *Tyrants*, or the *Romans*.

The advantageous Consequences that arise from such Expeditions, beget in the Bosom of a People a Spirit of Industry and Commerce, which, by giving a new Turn to their Genius, and raising at the same a virtuous Emulation, in a short Space, flatter indeed than can be well imagined, create a naval Force, and thereby establish a new maritime Power. But, on the one hand, the Wealth derived from Commerce, and that wonderful Flow of Success which usually attends a Nation powerful at Sea, very often produces Luxury and Indolence, which naturally lead to the Ruin both of Trade and naval Power. I do not mean, by Luxury, the Possession of all the Pleasures and good Things of this Life, but the affecting nothing else. If it were otherwise, we ought not to desire Commerce at all, because it is the certain Source of Riches and Affluence; but there is a great Difference between possessing and using good Things moderately, and being so bewitched with them as to dedicate our whole Time to their Enjoyment; because, if there were no other Argument to prove this wrong, the Thing proves itself, since it is impossible to preserve Pleasure, supposing Happiness to consist therein, if we do not spend a great Part of our Time in thinking of somewhat else.

It was for want of attending to this plain Truth, that the *Portuguese* despised and contemned the *Dutch* on their first Appearance in the *Indies*; they considered their own Force as so much superior to that of their Enemies, that they never reflected on the Means by which that Force was raised; I mean the Valour, Industry, Patience, Prudence, and publick Spirit of the first Adventurers; all which Qualities being now on the Side of their Competitors, and wanting in themselves, ought to have awakened them to a Sense of their Condition, and to a Return to those Virtues which originally procured, and were alone able to preserve, their extensive Possessions. But continuing as they did to provoke on one hand the Natives, and to neglect on the other the necessary Precautions against the *Dutch*, they did the Business of their Enemies, and drew upon themselves that Destruction which could never otherwise have been brought upon them.

I have before observed, that like Causes will, in all Cases, be attended with the like Effects, and therefore there will be no Occasion to repeat these Remarks in the Progress of this Work; though it would have been a great Oversight to have omitted them here, inasmuch as they contribute chiefly to render our Labour useful and important, which otherwise would be no more than an agreeable Amusement. To relieve the Reader, however, from so serious a Course of Study, we have, in the next Section, given him the Travels at large of a very curious Discoverer, and the only one who has given us a tolerable Account of that *Archipelago*, which is the Subject of his Performance.

SECTION XXIV.

The Voyage of Francis Pirard de Laval to the East-Indies; his Shipwreck amongst the Maldives, and his copious Account of that Archipelago.

Translated from the Author's Original Voyage, published by himself in French.

1. *An Account of the Design of this Voyage, and the Author's Embarkation for the East-Indies, May 18, 1601.* 2. *The remarkable Accidents which happened in their Passage till their Arrival at the Island of Anabon.* 3. *They double the Cape of Good Hope, and arrive happily on the Coast of the Island of Madagascar.* 4. *They meet with a dreadful Storm there, and lose a great many Men by the Scurvy and Surfeits.* 5. *Proceed from thence to the Comoro Islands on the Coast of Africa, near Mosambique, where they refresh and rest.* 6. *The Ship on board of which our Author was, wrecked amongst the Maldive-Islands, and himself made Prisoner.* 7. *A general Description of these Islands, their Product, and the People who inhabit them.* 8. *The Division of these Islands into several Provinces, with an Account of the Sea that surrounds them.* 9. *Of the Original Inhabitants of this Country, their Complexions, Stature, Temper, and Manners.* 10. *The vast Fertility of the Maldives, and the Nature of the several kinds of Corn and Fruits produced there.* 11. *Of the Birds, Fowl, Fish, and other sorts of Provisions, and of their prodigious Plenty and excessive Cheapness.* 12. *A very singular Method in use among the Inhabitants for weighing whatever is lost in the Sea.* 13. *Their Language, Religion, Temples, Priests, and Form of publick Worship, with occasional Remarks on them.* 14. *Other Ceremonies of their Religion, together with their Feasts and Fasts, and Diversions at sea.* 15. *A large Account of their Marriages, the Manner of their settling Spenturs, and their frequent and voluntary Divorces.* 16. *Their funeral Ceremonies, Profits accruing thereby to the Priests, and other curious Particulars relating to that Subject.* 17. *A Description of the Dress of Men and Women in those Islands, and of the Laws in relation thereto, and other Circumstances.* 18. *Their Customs in eating and drinking, Laws for prohibiting of Luxury, and generous Concerns for the Poor.* 19. *Superstitious Customs among them in relation to the Killing of Beasts, Use of Baths, Sails, &c. and other Cases.* 20. *An Account of the Diseases which prevail among the Inhabitants; their Skill in Physick, and other Sciences.* 21. *The Virtues and Vices of the Maldivians, with some curious Particulars relating to their Women.* 22. *A large Account of the Nature of their Civil Government, Power of the King, his Privy Council, Judges, &c.* 23. *Criminal Punishments in Use amongst them; together with the Estate of their Military Establishments.* 24. *A Description of the King's Palace, Habit, Manner of Living, and other Circumstances relating to his Court.* 25. *His State when he appears in Publick, the Queen's Court, and the great Respect paid them by their Subjects.* 26. *The Particulars of the Royal Revenue, the Nature of the Coinage here, and of the Value of their Commerce.* 27. *The Manner of the Author's Escape out of this Country, after he had remained a Prisoner there for several Years.* 28. *The Author's Journey to Bengal, and Return out of the Indies.* 29. *Remarks and Observations on the foregoing Particulars.*

THERE are some Voyages and Discoveries which never lose their Value, because never superseded by any thing more excellent in their kind; and this we may truly affirm to be the Case of that Voyage which we now present to the View of the Reader. It contains a very curious, accurate, and circumstantial Account of Countries and People, who tho' they lie at the very Entrance of the Indies, were never described before, nor has any subsequent Account of them appeared capable of entering into any Degree of Comparison with this which we have before us. Our Author appears to have been a Man of good Sense, and great Observation. He was led to travel from a Humour common enough in Youth; I mean a Desire of seeing new and strange Things; but, at the same time, this Humour of his was regulated by a Disposition not very common in young People, which was that of looking to the Bottom of whatever appeared worthy of Notice, and of labouring to acquire whatever Talents were necessary to make a thorough an Inquisition. It was from these Principles that he received that Constancy and Resolution which are so conspicuous in the following Relation.

He was, doubtless, in hopes, when he undertook this Expedition, that all Things would have fallen out favourably, and that he should have been entertained with the Sight of all the Curiosities in the Indies, with little Hazard, and some Gain to himself. But when it fell out otherwise, and he found all these Resolutions overturned by the unlucky Accident of a Shipwreck, he did not lose either his Reason or his Spirits, but, on the contrary, determined to make use of this Accident to further his Design of obtaining a distinct Knowledge of the Places and

People whom it was his Fortune to visit. It was in consequence of these Notions, that he examined carefully, and recorded faithfully whatever came within the Compass of his Notice: And that he might enlarge the Circle of his Understanding, he applied himself with Diligence, first to learn the Tongue of the Country, and next to enter into a free Conversation with regard to their own Affairs of every kind with the People themselves; so that his Judgment always went along with his Curiosity; and we may rest satisfied that he has not reported Things barely as they appeared, but as they were.

After this Account of our Author, it is requisite we should say somewhat of the Time and Manner in which this Voyage was undertaken, and afterwards we shall leave him to speak for himself. The Fame of the East-India Commerce in the Beginning of the seventeenth Century, provoked some French Merchants at *St. Malo, Laval, and Vitré*, to think of sending two ships into that Part of the World, which Project they executed in the Spring of the Year 1601. The biggest of these Vessels was of the Burthen of three hundred Tons, called the *Crossant*; the lesser of two hundred Tons, called the *Corbin*: The former of these was under the Command of the *Sieur de Bardeheve*, the other under that of *Francis Grant*, Countable of *St. Malo*. They sailed from the last-mentioned Port on the Eighteenth of May, 1601, and had not proceeded above ten Leagues out to Sea before their Mizen-Mast split and broke in the Middle, which, says our Author, was the Beginning of our Misfortunes: And their History he continues thus.

2. On the 21st we fell in with nine great Dutch Hoys, each of which saluted us with a Gun, but one of them be-

quences that arise from such
 body of a People a Spirit of
 which, by giving a new Turn to
 the same a virtuous Emula-
 tor indeed than can be well
 force, and thereby establish a
 on the one hand, the Wealth
 and that wonderful Flow of
 is a Nation powerful at Sea,

 Indies, and the prodigious Progress
 nation, take in no greater Compass than
 Syrians, or the Romans.

ing loaded with Ball, beat the Sail of the *Corbin* to Pieces; upon which the Vice-Admiral fired two Guns on the Rigging of the Ship that had injured him; and the Admiral tacking to the Windward of the *Dutch* Admiral, spread all his Sails, and fired a Gun upon them; the *Dutch* Admiral presently struck, and, having informed himself that the Mischance was occasioned by the Oversight of a Gunner that was in Drink, delivered up the Gunner to the *French* Admiral, in order to condign Punishment, and begged he would pardon the Mistake. Our Admiral finding how the Matter stood, said, he desired no further Satisfaction; and having returned the Gunner, entreated the *Dutch* to vouchsafe him a Pardon. How the *Dutch* treated him afterwards I know not; though I do not much doubt but they hanged him up immediately at the Yard-arm; for the *Dutch* observe an exact Discipline among their Sails, and suffer no Mistakes to pass with Impunity; and from thence it comes to pass, that their Navigation is more successful than the *French*.

June the 3d we departed the *Canary Islands* in 28, 29, and 30° N. Lat. The 12th and 13th we came within Sight of the Islands of *Cape Verde*, which run from 20 to 14° N. Lat. On the 29th we were in 5° Lat. and discovered the South-Star, call'd the *Cross*; at the same time we saw a prodigious Quantity of Flying-Fish, with Wings like those of Bats, which are very plentiful near the Equinoctial Line, whether on the North or South-side. On the 14th of *July* we discovered the unhealthy Coast of *Guinea*, being carried out of our Course in a Calm by the Strength of the Currents. *August* the 24th we crossed the Equator, on both Sides of which, for the Extent of 10 or 8 Degrees, we had very unconstant Weather; the greatest Calms were commonly turned into Thunder and Lightnings (especially when the Sun is near the Equinoxes) and with boisterous Winds, which surprised us so suddenly, that we could scarce get our Sails down in time. The Heat was so great that it melted our Candles and Butter, corrupted our Water, and spoiled our Meat and Fish, though never to well tasted.

We frequently saw great Whirlwinds rising at a Distance, call'd by the Seamen *Dragons*, which shatter and overturn any Ship that falls in their Way. When these appear the Sailors have a superstitious Custom of repairing to the Prow, or the Side that lies next the Storm, and beating naked Swords against one another crosswise, from a vain Apprehension of preventing their Approach by that Means. In this Climate the Rains are very dangerous, for if one is wet and does not immediately shift himself, his Body is soon covered over with Blisters, and his Cloaths with Worms. In the Time of a Calm Ships roll prodigiously in those Seas, but when they run with a fresh Gale they are more steady.

4. August the 20th our Pilot, who was an *Englishman*, discovered Land ten Leagues off; for though we endeavoured to stand one hundred Leagues off to Sea, the Currents drove us towards the Shore. This we found to be the Isle of *Anabon*, possessed by the *Portuguese*, where we took in Fresh Water and Fruit, and the Inhabitants, after a Shew of Civility at first, treacherously slew one of our Men, and took five Prisoners. This Island is governed by a *Portuguese* Lord, who had the Gift of it from the King of *Spain*, the other *Portuguese* who inhabit it being only his Factors and Commissioners. The Natives who are all his Slaves, are Negroes, and go naked, covering their Privities with Cotton. Their Women carry their Children upon their Backs, and suckle them over their Shoulders, their Breasts being very long. The Island is situated in 1° 30' S. Lat. and is five or six Leagues in Circumference. It is high, mountainous, and always green. The Road is on the North West Side, and is very dangerous, by reason of Hills and Rocks. We lay there six or seven Weeks, and, during that Time, it rained every Day, more or less. The Country produces great Plants of Indigo and Cotton, in which all the Revenues to the Lord are paid. Their Fish is extraordinary good and very plentiful. At the Distance of a League and a half from *Anabon*, there is a little torched Island, which appears to be a *Volcano*, but is covered with Fowl call'd *Penguins*, that one cannot walk any where without

treading upon their Eggs. This Fowl is no bigger than a Pidgeon, and the Flesh is black, but eats admirably well.

On the 16th of *October* we put to Sea again, and *November* the 17th we made the Island of *St. Helena*, which lies in 16° S. Lat. at the Distance of six hundred Leagues from the *Cape of Good Hope*. Upon the Altar of a Chapel in this Island we found several Letters, advising that the *Dutch* had passed that Way. Here we thought to have fitted our Mizen-Mast, but found no Wood fit for the Purpose. The Air, Fruit, Flesh, and Water of that Place are so healthy, that our Men, who were much opprest with the Scurvy, recovered in the Space of Nine Days. On the 26th we set sail, and stood for the *Cape of Good Hope*, and three Days after doubled *Arrolas*, which are a Bank of Shelves upon the Coast of *Brazil*, in 18° S. Lat. and seventy Leagues long. The doubling of these Seas is both difficult and dangerous, and in sailing to the *East-Indies*, an expert Pilot ought to be very cautious in keeping to a just Distance from the *Gateway*, which is very unhealthy, and incumbered with Calms and Currents, and, at the same time, standing off from its *Breaks*, for the danger of which there is Sea Room enough, since we reckon a thousand Leagues from the Coast of *Africa* to that of *Brazil*. Having doubled this Cape we continued our Course for the *Cape of Good Hope*, and in a few Days we knew that we approached it by the Appearance of the Reeds call'd *Trombas*, and white speckled Fowls. Having weathered the *Cape of Good Hope*, we came in Sight of that of *Aguillas* or *Needles*, which lies fifteen Leagues farther into the Sea, at 21° S. Lat. This Cape derives its Name from the Observation, that when a Ship comes before it, the Needle of the Compass points directly northward, without declining to the East or West.

We met *January* the 6th, 1702, with a violent Storm, in which one of our Seamen fell overboard, and his Companion would have jumped after him if we had not prevented him; though, after all, I took his Gift to be the Effect of Wine rather than true Affection, for there is but little Friendship among sea-faring Men. During our Course, we steered by the Country of *Nam*, upon the Coast of *Ethiopia*, without any Storm, which was uncommon in those Seas; for between the 3d and 10th there are never, almost, without violent Storms. And, that we mistook our Course, thro' the Ignorance of our Pilot; and, on the 4th of *February*, finding ourselves on the Land-side of *St. Laurence*, tacked about, in order to make the other Side.

4. February the 7th, having passed that Coast, according to our Wishes, we were surpris'd all on a sudden by a violent Storm from the South-West, being thus acquainted with those Seas than the *Portuguese*, who make great Provisions for such Accidents. In the Storm it was so dark at Noon-Day, that we could not see the Heavens, one another; our two Ships were separated, and our Sails were tore to Rags, such was the Force of the Rain and Wind, that they wounded our Faces like to many Strokes of Whiptoad. The Waves swelled so high, and swam upon the Ship, that we could not stand up on the Deck. In this Place we continued four Days, and our Numbers of some of the Men that were on board, applied their Lives to devout Exercises, while the Sailors redoubled their Curses and Blasphemies. Our ancient Pilots and experienced Men, who they never encounter such a Tempest, but the Business was, they never had been in those Seas, swell higher than elsewhere.

On the 11th the Storm being over, we stood on for *St. Laurence*, being much distressed. All our Men were almost half dead, and we had lost a Man or Board, but a Gunner, that had ever been in the *Indies* before. When we came within forty or fifty Leagues of the Island the Sea appeared yellowish and frothy, and was covered with Reeds and floating Fishes, which continued to appear on the 12th till the 14th, that we arrived and call'd *Aschar* in *St. Augustin's Bay*, in 3° 30' South Lat. tide. The Days were very short, and very convenient, having an excellent Ground of Anchorage and Sand. The same Day the *Cross* interposed, and twelve Days Separation, and was more than 1000

to West, we cannot cross directly from Entrance to Entrance, but set out from the East Coast, which is then the Head of the Current, and taking it sideway, steer for the West Entry of the other *Atollon*. In order to return, we set out from the East Entrance, and over-thwarting the Current, make to the West Entry of the other *Atollon*. When the Current changes its Course, we observed the same Contrivance in setting out from the Head of the Current, and entering the other *Atollon* at the Place which lies under the Current of these Entrances. Some are broad, and some narrow, but the widest is not above two hundred Paces over, and some of them are less than thirty; each Entrance hath an Island on each Side, and if Cannon were planted on these Islands, it would be easy to hinder any Ships to enter.

Of the Channels that part the *Atollons*, there are only four broad ones, which are navigable by great Ships, and frequently visited by Strangers, when the Currents carry them in against their Will. To begin from the North Side, the first of the four washes the *Atollon* called *Malos Madou*, and it was in this that we were cast away. The second, called *Caridou*, has *Male*, the greatest of all these Islands in the middle of it. The third, called *Aldou*, lies to the South of *Male*. The Fourth, called *Souadon*, lies directly under the equinoctial Line, and in regard that it is the broadest of them all, being twenty Leagues over, the Natives do not fall upon it without a Compass, though they never use any in the Channels. Besides these, there is a narrow Channel, which separates *Male* and *Pouilou*, in which the Sea appears as black as Ink, but the Water taken into a Vessel, looks like other Water. That Sea boils like Water over a Fire. It swells into great black Surges, but is not moved from one Side to the other, which renders it very terrible. The *Maldives* lie so near the Equinoctial, on both Sides, that their Climate is extremely hot. Their Day and Night are always equal, and their Nights are very cool and dewy, which renders the Heat of the Sun more tolerable, and nourishes exceedingly their Herbs and Trees. Their Winter commences in *April*, and continues till *October*, at which time the Summer begins, and lasts likewise six Months. In Winter they have perpetual Rains, but no Frost, and the westerly Winds are very boisterous. In Summer their Winds are easterly, with an excessive Heat and no Rain.

It is said, that the *Maldives* were in former Times peopled by the *Cingala*, or Inhabitants of *Ceylon*; but it is observable, that the *Cingalans* are black and ugly, whereas the Inhabitants of the *Maldives* are handsome, well made, and of an Olive Complexion, though, after all, 'tis possible, that the Climate and Length of Time may have altered the Complexion and Shape to their Advantage, besides, that a great many Foreigners being cast away on their Coast, are blended with them by Intermarriages, and by this Means it comes, that those who live about *Male*, between it and the North Cape, where most Shipwrecks happen, are more polished and civilized than those on the South Coast, who are not only blacker, but much coarser in their Language, Customs, and Shape of the Body; nay, many of their Women, especially such as are poor, go naked, with only a small Cover for their Privities. The North Side of the Island is not only richer, and more civilized, as being the common Passage for all Ships; but the Seat of all the Nobility and Men of Fortune, and when the King punishes a Criminal with Banishment, he only sends him to the South Parts. The Soldiers are all raised in the North Parts; but after all this Difference, I must say, that the Inhabitants of the South Parts are naturally as lively and quick witted as those of the North. In general, the *Maldivans* are very ingenious, they apply themselves with great Industry and Success to all sorts of Manufactures, and also to Letters and Sciences, after this Manner, especially to Astrology, which they hold in great Esteem. They are a very wife, industrious People, and very sharp in their Merchandize and Way of Living; they are brave, and well skilled in Arms, and their Policy is very regular.

Their Women are very handsome, abating for their Olive Colour, and some of them as white as the *Europeans*. Their Hair is black, which is reckoned a great Or-

nament, and in order to turn it extremely black, several Women keep their Daughters Heads shaved till they are eight or nine Years old, leaving only a little Hair on the Forehead, to distinguish them from Boys, who have none at all: I have seen some Children have half flaxen Hair, which has turned very black by being shaved every eight Days. Both Sexes affect black Hair, but the Women take a Pride in having theirs thick and long, which they wash and dress very frequently. They wash their Head and Hair with Water and Lye made for that Purpose; after which their Hair hangs dishevel'd in the Wind, till it dries, and then they rub and perfume it with an odoriferous Oil, which renders their Head always moist and oily. Both Sexes anoint their Bodies after washing; but tho' they wash their Bodies more than once in a Day, their Hair is not washed above twice or thrice a Week. They may wash their Hair when they please, but they are obliged to do it on *Fridays*, which is their Sabbath for the Women, and Festival for the Men. After the Women have washed, rubbed and perfumed, they stretch all the Hair from before backwards, without leaving so much as one straggling Hair, and tie it behind, in a great Tuft, or Knot, which they enlarge by a Perriwig of Man's Hair, made in the Form of a Horse's Tail; nay, some of them have two such Perriwigs; besides which, they add odoriferous Flowers.

As for the Men, none but Gentlemen, and the King's Officers and Soldiers, are allowed to wear long Hair, and these, indeed, wash, perfume, and dress their Hair after the same Manner with the Women, excepting that they make the Tuft not behind, but on the Crown of the Head, or on one Side, and they wear no Perriwigs. Their Hair grows much faster than ours, by reason partly of the Washing and Perfuming, and partly of the excessive Heat which occasions thick and strong Hair, and for the same Reason their Hair is black. They have no Combs, but they have Scissors of cast Copper, and copper Looking-Glasses, which they make use of in shaving themselves, with Steel Razors made after another Fashion than ours. There are no Barbers in the Country, every one therefore shaves himself, excepting the King, and some Lords, who are served by Persons who are proud of that Honour, without any Prospect of Gain; so that in all these Islands both Men and Women are provided with Utensils for shaving, and are very nice in taking off their Hair, when it begins to be uneasy to them.

The Girls have their Heads shaved once a Week, from their Infancy, to the eighth Year of their Age, at which Time their Hair is suffered to grow to its full Length and Dress, for then is the Season here of looking out for Husbands. Before that Age they have no Cloaths, but only a Cloth that hangs down from the Middle to the Knees; and the Occasion of their being clothed afterwards proceeds from the Riting of their Breasts, before which, they are looked upon as Children, and it is not allowable to discourse to them of Love Matters. The Cloth hangs down from their Middle to the Knees as soon as they begin to go, but the Boys have none till they are seven Years old and circumcised. Their Beards are of two sorts; ecclesiastical Persons, and those who have performed Pilgrimage to *Mecca*, wear long Beards, shaving under the Throat, and upon the upper and lower Lips, all round their Mouth. The other sort of People have little Beards, without Mustaches, being shaved round the Mouth, and under the Chin. They are very careful in saving the Parings of their Nails, and the Shavings of their Hair, which they wrap up in Cotton, and bury in their Church-Yards, with a little Water, from a Notion that they being Parts of the Body, require Interment as well as the Whole, and for that Reason many of them chuse to be shaved in the Porch of the Temples, for they would not for any thing in the World either trample upon these Excrements, or see them thrown in the Fire.

In order to give a particular Description of the *Maldives*, we shall begin with their Fertility. It produces great Plenty of *Millet*, called there *Pura*, and another little Grain called *Bimby*, which resembles *Millet*, but is black like Rape-seed. These two sorts of Grain they sow, and reap twice a Year; they make a sort of Meal of them, of

which they make Pottage, with Milk, Cocoa, Honey, as well as Cakes and Fritters. The Country produces likewise several sorts of Roots, which the Inhabitants feed upon, particularly one called *Nellou*, which grows wild, being round, and as big as one's two Fists. They bruise it upon a rough Stone, and then expose it to the Sun, upon which it turns to a white sort of Meal that eats admirably well in Pottage or Cakes, only it must be very fresh, or it is apt to lie heavy upon the Stomach. Another Root that grows there plentifully, and eats well, is called *Alas*, which must be sown and cultivated, and is commonly as big as a Man's Thigh. Some of these sorts of Roots are red, and others white; the Inhabitants boil them several Ways, and make them the most of their Food, keeping them for a whole Year, for they come to Maturity only once a Year, viz. in *September*. They have no Rice but what is exported from the Continent, however they have it pretty cheap, and use much thereof, either boiling it with Water or mixed with Spices, boiled with Milk and Sugar of Cocoa, with Peas, Fish, or turned into Meal after drying and bruising, and then made into Cakes and Fritters, with Eggs, Honey, Milk, and the Butter of Cochoas.

This Country is likewise furnished with Herbs and Trees, some of which bear Fruit, and others not; though the Natives eat their Leaves, they being sweet and well tasted. As for Fruit, they have infinite Plenty of Citrons, Pomegranate, and Oranges of *Bananas*, called by the *Portuguese* *Indian* Figs, and by the *Maldives* *Quella*, which is a large, delicious, and nourishing Fruit, inasmuch that it serves their Children instead of Bread. The most profitable Fruit is the Cocoa, or *Indian* Fruit, called by them *Coal*, which is more plentiful in the *Maldives* than any other Part of the World; so that the Inhabitants know how to manage it better than others. This Tree alone might supply all the Necessaries of Life, for it affords Wine, Honey, Sugar, Milk, and Butter; besides that its Kernel may be eat as Bread, of which they have none in that Country. Further, most of their Utensils are made of the Wood, Bark, Leaves, and Nut-shells of this Tree. In fine, the whole Country is shaded, and refreshed with Trees, many of which serve for no other Use but burning; so that there is no Occasion to buy Fire-wood. Besides that, there are whole Islands covered with Trees, from whence they fetch what Fire-wood they please.

11. It is very remarkable, that though all the thirteen *Attellons* are in the same Climate, and all very fertile, yet they produce such different Commodities that one cannot live without another; for what is plentiful in one, is scarce in another, or, at least, is not so good. This occasions a Necessity of mutual Commerce, and the Inhabitants have likewise divided themselves, that one Province cannot live without another; for the Weavers repair all to one Island, the Goldsmiths to another, and so on. Now, to render the Communication easy, these Artificers have little Boats with Checks, where they work, sleep, and eat, while they are sailing from one Island to another to vend their Manufactures; and sometimes they are a Year out before they return to their fixed Habitation. As for Animals, they have prodigious Numbers of wild Pigeons, which are sold for a Penny a Piece, and the same Price will fetch three Dozen of Eggs; next to Fish, this is the most of their Food. They have a great Plenty of Wild Pigeons, Ducks, Rays, Birds resembling Sparrow-Hawks, black and grey Muskets, living not upon Prey, but upon Fruit, &c. As for domestick Fowl they have none. The Crows are here very troublesome, for they are so numerous and so bold, as to take Things out of their very Houses before the Peoples Faces. Their Bats are as big as Ravens, and their Gnats, or Musketoos, bite more severely than in any other Part of the *Indies*.

But they are most incommoded by Rats, Dormice, Pigmies, and other sorts of Vermin, which over run all their Houses, and spoil their Grain, Provisions, Fruit, and portable Commodities. To obviate this Inconvenience, they build Granaries and Warehouses on Piles, or Stakes in the Sea, at the Distance of two or three hundred Paces from the Land; and most of the King's Magazines are built after the same Manner. They have no poisonous Animals, except Snakes, of which a very dangerous kind

frequent the Sea. Cats, Pole-cats, and Ferrits, are likewise found there; but there are no great Beasts, either wild or tame, save a few Sheep, and some three or four hundred Cows and Bulls in the Island of *Male*, which belong to the King, and of which they never eat but on Festival-Days, and solemn Occasions, for these have been imported from the Continent. They have no Dogs, say they abhor them so much, that when the King of *Portugal* sent two as a Present to the King, he ordered them to be drowned immediately. The Sea affords Plenty of all sorts of Fish, especially between the *Attellons*, where the Sea is shallow and calm; the Fishery is the most constant Exercise of the Natives, who feed mostly upon Fish when fresh, with Rice, or other Meat fried with the Oil of Cochoas, or boiled in Salt water, and dried in the Sun. They send every Day Ships loaded with Fish for *Manila*, *Sidon*, and other Places. Many of the Fishermen are lost Arms and Legs that have been bit off by a sort of great Fish frequent in those Seas. This great Plenty of all Necessaries causes an easy Purchase. Four hundred Cochoas cost but a *Larin*, which is Eight pence; the same Price will purchase five hundred Bananas, a dozen of Fowls, or three hundred Weight of Roots, of a hundred large Fish, &c.

In fine, there is no Part of the *Indies* where a Stranger can get an Estate so soon as here, for it lies only in duty for Trade, and requires but an inconsiderable Charge for Maintenance. The Natives, it is true, do not sow, and that I take to proceed from their idleness and easy Living, which encourages them to Negligence and Idleness. *Male*, the principal Island, gives Name to all the rest, *Dives* signifying a Cluster of Islands. This Island stands almost in the Middle, and is on the East and a half in Circumference; it is the most fertile of all, the Staple-port and Magazine of all the rest, and the Residence of the King and the Court. By this Means it is better peopled, but, at the same time, it is not so happy, for which the Natives give this Reason, viz. The King and the Court having resided there Time out of Mind, and the Corpses of all that died being interred apart, the whole Surface of the Island becomes a continued series of Graves, from whence the perpendicular Rays of the Sun extract pernicious Vapours; and accordingly the War is here so bad, that the King and Persons of great Quality send for Water to other Islands.

12. In all the Islands, even in *Male* itself, there is no such Thing as inclosed Towns, but the Houses scattered here and there, though not without some Order and Distinction of Streets. The common People's Houses are built of Cocoa Wood, and covered with Cocoa Leaves sewed double one within another. Persons of Quality and Fortune have Houses built of Stone taken out of the Mountains under the Plains and Rocks. This sort of Stones are black and white, and somewhat hard to cut, but when wet with Rain, or fresh Water, it becomes as hard as Iron; and if left in the Sun, it becomes all over black. The Murrain, which they draw out of the Sea is very remarkable. There is in that Country a sort of Tree called *Candou*, which is as our Walnut-Tree, and resembles the Apple-tree, having long Leaves and Whiteness, but is extremely bitter, and has no Fruit, and is not proper for burning, yet the Natives saw it into Planks like our Fir-Tree, and which is lighter than Cork. This premised, we observed that they draw out the Stone. Being the expiated substance that can be, they dive under Water, and lay themselves upon a Stone fit for their Purpose, fastening a Cable round it, then they take a Piece of the Cannon wood, and boring it, run it along the Cable quite to the Stone; after this, they run on such a Number of Pieces of Cannon wood as they have Occasion for, till the Light and Boarding is set up along with it, a Stone of 100, 200, or 300 Pounds Weight, it was by this Contrivance the Natives to fix up the Cannon and Anchors of our Ship that was cast away; and it was by the Eye witnesses to their clearing, by the same means, the Space of fifteen Days, the Harbour of *Male*, which was choaked with great Rocks, inasmuch that no Ship could come in. When the Cannon-wood is on the Shore, and Water, it must be dried in the Sun before it is used, otherwise it will not float.

the Sun before it is used, otherwise

Upon other Occasions they take five or six large Pieces
of Wood, and having ranged them all in a Line, raise
Planks on them of the same Wood, to sit upon, and so
pass from one Island to another: and it is by this Con-
trivance they generally manage their Fishery. In the Can-
als that run between the *Atollons* one Man can work
these Instruments of Navigation, though they are not pro-
per for the Sea; for they know how to trim their Deal-
ers so well, that there is no Fear of overfetting; and if
that happens, their Plank will always swim: all the Dan-
ger lies in disjoining the Pieces; and this sort of Float is
called *Candou-patis*, from the Wood of which it consists.
The *Candou*-tree has yet another strange Property, name-
ly, that when one Piece of it is struck against another they
will extract Fire; and this serves them in the Place of
Tinder-boxes.

13. Our Method directs us, in the next Place, to speak
of their Language, which lies in two Channels; the
first is the *Maldivan*, properly so called, which is very
copious; the second is the *Arabick*, of the same Use as
Latin in a Popish Country, being the Language of their
devout Advertisers. I pass over the *Cambaya*, *Cuzaretta*,
and *Portuguese* Tongues, which are derived from their
Commerce, and shall only take Notice that in the Southern
Parts they speak a coarse unpolite Language, which, after
all, is the common Tongue of these Islands. Their Reli-
gion and Ceremonies come next to be considered. All the
Inhabitants are *Mohammedans*, and the greatest Part of
the Foreigners, viz. *Arabians*, *Malabars*, and *Sumatrans*,
are the same. Their Temples, or Mosques, are built of
good Stone, well cemented, and have a thick Wall.
They stand in the Middle of a square walled Inclosure,
where they bury their Dead, except those who desire a
separate Sepulchre. Their Temples are square, and face
the West, as pointing to *Mohammed's* Tomb. They have
three Doors, each of which is faced by a broad Wall with
Steps, the Bottom and Sides of which are lined with pol-
ished and flat Stones, the Floor of the Temple being cov-
ered with Mats and Tapestry; whereas the Church-Yard
is nothing but Sand. Their Temples are kept so clean,
that if they want to spit or blow their Nose, they must
either do it in their Handkerchief or get out of Doors.

The Roof or Ceiling of the Temples is of Wood, ad-
mirably well polished, and the Walls are wainscotted, both
of them being firmly joined without Nails, Pegs, or any
other visible Artifice. Upon the Walls of the Temples we
meet with large Tables of Stone, or of Wood, with *Ar-*
abic Inscriptions. They have a particular Place for the
King and his Court, and Galleries for the Guards, and
separate Apartments for certain Dignities, Qualities, and
Ages, inasmuch that any Person who takes up an improp-
er Place, is fined accordingly. They constantly burn
Lamps, for which End certain low Trees are consecrated.
Some of the Islands have more or ten Temples; but that
is which they solemnize a general Festival is built and sup-
ported at the common Charge, under the Name of *Oucura*
Mosque. Each Mosque has its Priest called *Moudin*, and
each Island that has forty Persons above the 15th Year of
their King's Age is dignified with a Curate or Curate, who
acts as Principal at all publick Ex-rates, and governs the
interior Priests. He pronounces the publick Prayers, and
by Sermons and Exhortations explains and recommends the
Law of *Mohammed*; under him the *Moudins* teach Chil-
dren to read and write their Mother Tongue, and that of
Arabic, for which Service their Parents give them a Re-
ward. Every Day in the Week all above fifteen Years of
Age repair, before Break of Day, to the Temple, and de-
clare their Creed, &c. That the World is flat, and not
round, that it is surrounded with a Wall of Brass, which
prevents it being drowned in the Waters that encompass it:
That the Devil, the general Enemy of Mankind, endeav-
ours every Night to break through and undermine this
Wall, and that he is not much short of compassing his
End when the Day-light arrives. Upon this belief they
all join in Prayer, at the Break of Day, to prevent the De-
struction of the World, which, as they believe, would
otherwise ensue.

They repair to the Temple four Times a Day besides,
viz. at Noon, at Three o'Clock in the Afternoon, at

Sun-set, and at ten o'Clock at Night, remaining each Time
half an Hour. Those that have no mind to go to Church
may say their Prayers at home, or none at all if they please;
but if it be known that any Person neglects their Duty of
Prayer altogether, nobody will eat or converse with him;
from whence it comes to pass, that almost all of them, whe-
ther Tradesmen or others, spend a great Part of their Time
in publick Service. They make use of Beads as well as the
Papists; but they have no Crosses. Before they enter the
Temple they wash their Feet, Hands, Ears, Mouth and
Eyes, observing at the same time certain Ceremonies, and
pronouncing Prayers suitable to the Sin they repent of.
They are so scrupulous, that no Temptation in the World
can oblige them to forbear this solemn Way of washing,
upon the Apprehension that it certainly purges them of all
Sin and Pollution. The greatest Indecency of their Wor-
ship is, that they wash and bathe publickly and promiscu-
ously, and offer their penitential Prayers with a loud Voice,
and so discover to all the World all the secret Transactions
of their Lives. At this Rate all the secret Adventures of
Man and Wife are laid open to the World by the publick
Prayers of both Parties; for the Women pray aloud as
well as the Men, only they do it in their Houses, in regard
that they never go to Church.

14. The Male Children are circumcised when they are
seven Years of Age, and upon that Occasion the Parents
and Relations divert themselves with Musick and publick
Feasting fourteen Days. They have particular Operators
for Circumcisions, who apply themselves to nothing else,
and the Ceremony is after this Manner: For six or seven
Hours before the Circumcision the Child is bathed in the
Sea, in order to make the Yard shrink, and to render the
Skin soft and tender. When the Hour comes the Child is
brought to a Lodge built on purpose, and held by two or
three Moudins or Priests, who in the mean time chant Verses
and Prayers suitable to the Occasion. Then the Operator
having drawn over the Prepuce, and tied it with a String,
cuts it with a Razor, after which he heals it in fifteen
Days; before Circumcision they alledge that the Child is
innocent, and cannot sin, and for the same Reason they do
not cover the Privities of the uncircumcised Children. As
for the Girls, their Circumcision consists in drawing two or
three Drops of Blood, when they are two Years of Age;
but it is attended with no Solemnity. When the Children
are grown up, they pay a profound Deference to the Oper-
ator that circumcised them, and call him Master.

They celebrate several Festivals in the Course of the Year,
particularly every *Friday* with them is a Day of Feasting,
at which all the Males above fifteen Years of Age are pre-
sent, but no Females. On the preceding Eve they pray in
their Houses, some for their Health, others for the dead,
and for that End lend for the Priests to their Houses, where
an Entertainment is provided; and as the Priests have no
Stomach for eating, they chuse rather to be absent, for if
they come they must eat, though against their Appetite. On
Friday Morning the publick Crier goes round the Island,
with a sort of Bell in his Hand, and a Hammer of Wood
to beat it withal: He is assisted by three Trumpeters, who
found often to give the People Notice of their Duty. Upon
this Warning the People throw aside all Work for that
Day, and after washing and bathing, and putting on their
best Cloaths, repair to the Temple. In the mean time the
King's Musicians play before his Palace on divers Instru-
ments, and soon after the King's four Priests, who are Men
of Quality and Learning, and never assist but at publick
Solemnities, ascend an high Stone Edifice adjoining to the
Temple, where they clap their Hands upon their Ears, and
with a loud and fearful Voice cry thrice, *Alla, Alla, Ague-*
bar i. e. Great God, and then they add something of *Mo-*
ammed. This done, they repair to the King's Palace, and
pronounce the same Words after the same manner. Upon
which, if the King has a Mind to be seen, as he commonly
is, he sends a Carpet of Silk to be spread on the Place where
he means to sit. Then the Moudins do the like at the
Curate's House, and he comes and waits upon the King,
who walks in great Magnificence to the Temple, his Head
being covered with a white Veil above a great Turban, so
that he cannot see, but is led by one of the Moudins. The
King comes last to the Church, and immediately says his
Prayers;

Prayers; after which the Caribs being mounted on a raised Place at one end of the Temple, takes a naked Sword in his Hand with the Point downward, and flourishing it about, recites his Prayers. In the mean time the People pray without ceasing, putting themselves in various Postures, and observing several apish Gestures.

The Carib has a new Prayer for every Friday in the Year, and when that Year is expired, makes use of the same Prayers for the next. He repeats all without Book, and it he happens to be out in one Word, Syllable, or Letter, the Moudins reprimand him publicly, and the Feast is thought to be ineffectual. This Service lasts about two Hours, and after it is over, the People saluting one another, and the King returning in great State to his Palace, entertains them at his own Expence. They observe the like Solemnity on the Day of every new Moon, and rejoice when they see it. Upon this Occasion they clean their Houses, Courts and Streets, garning the Entries of the Churches, and the Gates of their Houses with Cocoa Shells cut in the middle, and filed with white Sand, and burning Coals, upon which they burn almost all Night sweet-scented Gums and Woods, at the same time the Infidels of their Houses, and Beds, &c. are perfumed after the same manner.

Though the *Maurians* celebrate every new Moon, yet they observe four beyond the rest. Particularly in December, or thereabouts, they have a Fast called *Kamedan*, which commences at the new Moon, and lasts till the next new Moon. They take their Measures not from the real Change, but from the Appearance of the new Moon; by which Means it so falls out, that some Islands begin the Fast sooner than others. The first Night of the *Kamedan* Fast the Men and Women visit one another apart, and divert themselves with Feasting, Dancing, &c. till it is near Day, having prepared themselves for eating by fasting the preceding Day, in which Custom they are in superstitious, that for that Day they will not only avoid the talking of any, but even the washing their Mouth, or putting their Fingers therein, or swallowing their Spit.

The Prohibition of swallowing their Spit puts them to a great Inconvenience when they are in the Church, because it is not allowed to spit there, and so upon every Turn they are forced to run out of Doors. Nay, such is their Superstition upon the Fast-day, that the Men, who are allowed to bathe, are prohibited to plunge their Heads in the Water, lest some Drop of it should enter their Mouth or Ears, and the Women are forbid to bathe at all. Half an Hour before Sunset, all above fifteen Years of Age repair to the Temple, and in the Space of that half Hour clean their Mouths, and pick their Teeth very nicely, being furnished by the Moudins with Pick-tooths, and other cleaning Instruments made of Cocoa wood. This done, the Moudin makes his Cry three times, and enters the Temple at the Head of the People, who then say their Prayers, the Women at the same time being employed in saying theirs at home. When that Service is over they feast and make merry with one another. During the *Kamedan* the King entertains all the People at several times, inviting only Persons of the same Quality at a time; for they are Eclésiastical Observers of their Quality, that they will not eat with any Person of a different Rank. The Nobles, Courtiers, and their Friends in like manner; and thus do the Men and Boys feast, but the Women, who are not allowed to go to these Feasts, and only Presents at Night one to another.

The Women bathe themselves in the Evening, at which Time the Men are enjoined to avoid Bathing; during the whole Course of the *Kamedan* they fast after the above-mentioned manner in the Day-time, and avoid Sin and Pollution as much as they can. If any one breaks any one of the Rules, he is obliged to fast as many more after the End of the *Kamedan*. In this Month no body will work but they ever labour. The Pandare preaches every Day at Three in the Afternoon in the King's Palace, or in the Church, or in his own House. After the Sermon is over they divert themselves with the Exercise of Arms, and several sorts of Play, particularly at Foot ball. At the same time the Women and Girls visit one another, and have particular sorts of Plays and Diversions suitable to their Sex. Intrigues run larger in this Month than in any other, and

the Courtship consists in sending to one another Songs and Verses, inscribed with Boddkins on Cocoa Leaves, which are as white as Paper.

The Youths likewise present their Mistresses with Girdles of sweet smelling Flowers, and receive in return Presents of Betel nicely dressed. In fine, they take all possible Measures to heighten their Mirth and Diversion. Three Days before it ends the Bellman and the Trumpeter go round the Island, requiring all the Inhabitants, whether Men or Boys, Women or Girls, to send their Names in Writing to the Naybo of their respective *Atollon*, and to pay an Offering of half a Lirin a Head, which the People pay very willingly as a Tribute to God and *Mohammed*. For they imagine that without the paying of this Tribute their Falling would not avail them. In this Tax the Parents pay for the unmarried Children, and for their Servants and Slaves; and if any poor Person has not the Money to lay down, the King, or any rich Person, pays for them very willingly. The Money arising from this Tax is laid in the Hands of four Receivers, one on the Behalf of the King, a second for the Clergy, a third for the new Converts, and a fourth for the Poor. One third of it goes to Ecclesiastical Persons, another to the Pious, and the remaining third to the Poor. About August and September they have a Solemnity of Two Days, in which they feed about to one another boiled Wine, with Honey and Cocoa Milk. This Festival is said to take its Rise from a Miracle that *Mohammed* wrought on that Day.

There remains yet another very solemn Night-Festival called *Maulade*, which happens about the Middle of October, being the Night on which *Mohammed* died. Upon this Occasion they have a huge Houffe, or Ha of Wood, in several Parts of the Island, which is hung with the finest and richest Tapellry, the Floor of which is covered with white Sand, and Mats above it, and the Ceiling adorned with white Cotton Cloth, supported with thick Strings, that run along it like Stripes. In this great Hall hang up to many Lamps, that it is as light as Day, a rare Smell and Smoke of the Perfumes that they burn in the Air. In the middle of the Hall there is a Table covered with several sorts of Meat and mixed Liquors. The Women do not assist at this Solemnity, but the Men repair about eight o'Clock at Night, and sit down in Order according to their respective Stations, there being Officers appointed to rank them. All the Night long the several other Ecclesiastical Persons sing what they call the *Songs of David*. When Midnight approaches, the wood of the Hall fall down flat upon the Ground, as in an Earthquake, some time in that Posture for some time; after which the Carib and the Caribes start up at a sudden, and following their Examples, they all start up, and salute one another as they were men.

The People are served with Beer, which is not drunk, by fifty Persons chosen into that Office, and reckoned very honourable, when the Night is over the Priests give over singing, and say Prayers, at which they all go to the Middle of the Hall, where they sit in Bands, and every one takes a Plate of Meats, and mack Liquors, which they carry home with them, and esteem very much. After their religious Ceremonies are over, they are proper to solemnize the Ceremony of Marriage. Upon a Design of Marriage, they assemble in the Pandare or Naybo, who, after he has seen the Parties, that things really are as they are represented by the Hand, and asks if any one of the Parties is a Woman on the Condition's proposed, which is always being absent, he leaves the Parties to their Consent. If they all agree, he then calls the By-standers to witness their Consent. The Pandare's Company waits upon the Woman, and she is accompanied by the Priest, who is always present. All the Visitors, and the Priest, Feasting, Musick, Dancing, &c. are invited, and makes Presents to the King, and the Priest, who the Bride pays the like Compliments to the King, and other Ladies; both make Presents with the King's Gifts; but when the King is married, he receives Presents from all his Subjects, and the Priest, Turbans, Vittuals, Fruits, &c. and these Presents, which arise to a great Sum, are

new-married Queen, A Man may have three Wives if he can maintain them, but not more; and if all three live in one Island, he is obliged by Law to bestow as many Nights upon one as upon the other. Tho' after all this Law is not observed, and indeed it is a hard Law in that Country, where the Women are so lascivious.

The Bridegroom receives no Dowry with his Wife, and is obliged, not only to be at the Charge of the nuptial Solemnity, and to maintain her, but to settle upon her a Jointure equal to what her Mother and other Ancestors had. They are so nice on this last Condition, that if the Priest apprehends the Husband cannot afford such a Jointure, he refuses to marry them, notwithstanding both Parties require it; but after all, the Bride may renounce either whole, or Part of the Jointure, after Marriage, and indeed that is frequently practis'd. Brothers and Sisters, first Cousins, and those who by way of Friendship and Intimacy have used to call one another by the Names of Son or Daughter, Father or Mother, Brother or Sister, Uncle, Nephew, &c. are prohibited to marry. The Males may marry when they will, but a female Orphan cannot marry till she is fifteen Years of Age; indeed, if her Father be alive (for the Mother has no Power) he marries her at ten or eleven Years of Age, and that to the first Suitor, whether old or young, provided his Quality is in some Measure suitable to hers; for they reckon it a great Sin to keep the Daughters unmarried. A Man may turn away his Wife, but unless she consents to the Separation, he may demand her Jointure: Tho' after all, that Demand is seldom made, as being reckoned a mean Action, and a Sign that the Woman fears that her Merit will never procure her another Husband.

On the other Hand, the Woman cannot part from the Husband without his Consent. This sort of Divorce, which is very frequent, must be attested by Witnesses, or they cannot receive the Benefit of a second Marriage. The Divorced Parties frequently repent of their Separation, and marry again a second, third, or fourth Time; but after that Divorce, such a Remarriage is not allowed; tho' it is the Liberty of the People, that they frequently desire them, and in order to evade the Law, they have a common Trick of getting some profligate Fellow to marry the divorced Woman, and to wish her one Night with her in each Bed; after which he quits her before Wedlock is consummated, and she is married a second time to her former Husband. Such is the Liberty of this Divorce, that a Man shall have a second Wife, and the Woman look upon the Multitude of former Husbands as a Privilege, when she comes to take a new one. When a Woman is separated from her Husband by Death, she must remain four Months and ten Days before she can marry again; and if the Separation be made by Divorce, she must remain three Months single before she is to marry. This Caution is used, lest she should prove with Child by her former Husband.

Their funeral Ceremonies are superstitious to a great Degree; in the last Place, the Corpse is washed by Priests of the female Sex, who buy an Office of the King, and are paid for their Service; then they are wrapped up in Cotton, and covered with fine white Cotton Cloth, which goes afterwards to the Priest, the Right-hand of the deceased Person being laid up in his Hair, and the Left upon his Thigh. This done, the Corpse is laid upon the Right-side in a Coffin of *Candiu* Wood, and carried to the Burying place, by six Relations and Friends, attended by the Women-washers, who cry and howl most hideously. Every Man in his Lifetime provides for his last Burying place, and all the other Necessaries; nay, they are so superstitious, that they will rather starve than touch the Money they have laid up for this Purpose. Besides the principal Mourners, the other Relations and Neighbours are present with our Invention, and upon the March to the House of the deceased Person to the Grave, they carry Shovels for the Benefit of the Poor, to whom they bestow all these Sacks of Rice and Millet, at the same Time they give to the Priest Pieces of Gold and Silver, the Number of which is proportionable to the Estate of the deceased Person, and these Pieces are distributed by the Priest to those who have assisted in praying for the

deceased Person. The Priests sing continually during the whole Course of the Ceremony, and in the Procession a Person of Quality sprinkles the Assistants with Water made of sweet Flowers.

The Grave is covered with a large Piece of Silk, or Cotton, which, on the Interment, goes to the Priests of the Temple. When the Corpse is laid in the Grave, they turn the Face of the deceased Person to the Quarter that faces *Mohammed's* Tomb, and then fill up the Grave with fine white Sand, sprinkling it with Water. When the Ceremony is over, the Relations entertain all the Company with Victuals, and the three following *Friday's* they pray over the Grave, where the Priests sing, eat and pray every Day, till the third *Friday* passes, after which, a general Feast is prepared for the Relations, Friends, and Priests, who pretend, that the Soul of the deceased Person is then conveyed to Paradise. This Feast is prepared every Year, and on *All-Souls* Day they throw fresh white Sand on the Grave, and perfume it with burnt Incense: The Grave is surrounded with wooden Pales, for they reckon it a great Sin to walk over it. They never bury two Corpses in the same Place; for they have such a Reverence for the Bones of the Dead, that even the Priests dare not touch them. If a great Lord dies, the Priests sing for him a whole Year, and are entertained every Day with Dishes of Meat and Beer; but if a King or Queen dies, the Ceremony is continued to the Death of the next Successor.

In this Country, the Mourners make no Alteration in their Habit, only they go bare-headed to the Grave, and continue so for a few Days after the Interment. Those who die fighting with Persons of a contrary Religion are buried up in the Spot where they fall, without any Ceremony; and in regard that they are accounted holy and happy, neither the Priests, nor their Friends, pray for them. They never transport Corpses from one Island to another, and even the King himself is buried where he happens to die. If any Person dies at Sea, they wash the Corpse, and put it into a Coffin, which they place upon a Float of *Candiu* Wood; within the Coffin they put Silver, in Proportion to his Circumstances, and a written Paper, describing his Religion, and usually praying those who meet with the Corpse to take the Money, and bury it handsomely.

17. We come near to their Apparel: The Men tie about their Privities a great Swathe of Cloth, which comes round about, to prevent any Discovery in working, or walking about; next that they have a Piece of blue, or red Cotton Cloth that reaches to their Knees, and then a larger Piece of Cotton, or Silk, reaching to their Ancles, and girded with a square Handkerchiefe, embroidered with Gold and Silver, which is spread upon their Backs, and tied before. Above these they have a little Piece of party-coloured Silk, which reaches only to the middle of their Thighs. At last they gird themselves with a great fringed silk Girdle, the Ends of which hang down before; within this Girdle, on the Left-side, they keep their Money and Bezel, and on the Right-side a Knife. These Knives are made of excellent Steel, the Sheaths being of Wood, and the Shirts of Fish-bone, for the Bane of a Land-creature they will not wear. The richer Sort have both their Hats and Sheaths of wrought Silver. Every one wears a Knife, and esteems it much, as being his only Arms, for none but the King's Officers and Soldiers are allowed to wear any other. These, indeed, have a wrought Dagger at their Side, and when they walk along the Street, a drawn Sword in one Hand, with a Buckler, or Jambon, in the other. The *Mullans* place their chief Ornaments in their silver Chains, which hang about their Girdle, and of which every Boy or Girl has more or less, in Proportion to their Means; but 'tis only Persons of Quality and Fortune that show them openly. In these they place their chief Treasure, and commonly they appropriate them for the Charge of their Funeral.

The common People are naked from the Girdle upwards, except on the Festival-Days, on which they wear Cotton and silk Jerkins and Wastcoats with gilt copper Buttons; the Sleeves of their Coats reach only to their Elbow; for they alledge, that if their Wrists were tied up

like ours, they could not have the free Use of their Arms. Persons of Quality commonly wear such Coats, but some have a Custom of covering their Skins from the Girdle upwards, with an odoriferous Paste, made of the Powder of Camphire and Sanders, beaten upon a smooth Stone, and incorporated with the distilled Water of sweet-scented Flowers. They make their Wives or Friends anoint their Backs, &c. with this Paint, and draw various Figures upon them; however, they must not appear with that Piece of Foppery before the King, or be seen in his Palace. The Men of this Country wear upon their Heads red or party-coloured Turbans, some of which are of Cotton, for the meaner sort of People, and others of Silk, for the Persons of Quality. The King's Officers and Soldiers have frequently embroidered Handkerchiefs on their Heads, which other Subjects are not allowed to wear. Their Feet are always naked, excepting that within Doors they use wooden Sandals, which they pull off when visited by a Person of superior Rank; oftentimes their Legs are likewise naked.

The Women wear a Coat of Cotton, or Silk, which reaches to their Middle to their Ancles; above that they have a long Robe of Taffety, or fine Cotton, reaching to their Feet, without any Slit besides the Neck, where it is fastened with two little gilded Buttons. This Robe they pull quite up to fuddle their Children. Their Arms are loaded from their Wrist to the Elbow with Bracelets of Silver, inasmuch that sometimes they have three or four Pounds of fine Silver upon them, though indeed the poor sort alloy the Silver with Brass. The Women of Quality have many Chains of Gold, or Strings with little Pieces of Gold about their Necks, and rich Pendants in their Ears. They have their Ears pierced when they are young, not only in the Cap, upon which there hangs an Ear-ring, but in twenty four Places up the Gristle, in which they put as many gilded Nails, with precious Stones or Pearls on the Heads of them. When the Women walk in the Streets they cover their Heads with a Veil, and are very cautious in showing their Faces before Men, though in the Presence of Women of superior Rank they take off their Veil. They are not allowed to wear Rings, Ewels, Bracelets, or Ear-rings, or Chains of Gold, till they ask and obtain Leave of the Queen, as the Men do of the King; for the same Privilege, which commonly cost them Money.

The different Quality of the Women is distinguished by the Nature of their Ornaments; for none but Queens and Princesses are allowed to wear Gold Bracelets, or Gold-Rings on their Arms or Legs; besides, the Queen puts Rings on their Fore-finger, the Princesses and Persons of the first Quality upon their Middle-fingers; so that all other Women have their Rings up in the Ring-finger and Little-fingers, and the Men have theirs upon their Thumb only. If a Man's Wife begins to wear richer Ornaments than she used to do in former Times, the Man's Taxes are increased; and he becomes of the King's Officers, or an Infant of the *Mare*, for she is exempted from all Taxes on Apparel; Foreigners and their Wives are also free, for they may wear what they please, as well as the Clergy. The Women place a great Part of Beauty in painting the Nails of their Fingers and Toes, which they effect with the Juice of a certain Tree. In a Word, they are very handsome, and are very careful in setting themselves off with a genteel Habit, and with frequent washing and perfume; Generally speaking, their Complexion is an Olive Colour, though some of them are brown, and others very fair.

18. The People of this Country have many peculiar Customs with reference to eating; they reckon it is very dishonourable for a Person of superior Rank to eat with his Intercourse; and indeed the *vile* (sic) repale one another, unless it be at solemn Festivals. If they mean to compliment a Friend, they send a covered Table with several Dishes of Meat to that Friend's House, who is thereby much honoured; but in their own Houses they are cautious of eating in the Presence of others. Before and after eating, they say Prayers, and their Table is the Floor, covered with a fine Mat, upon which they sit or kneel; they feed to nicely, that they will not drop one Crumb, nay, not so much as a

Drop of Water, though they wash their Mouths before and after. Instead of Table-cloths and Napkins they use Banane-Leaves. Their Dishes are made of Earth, or China Porcelain, which is very common in that Country, gold or silver Vessels being prohibited by Law. They are all round like Boxes, with an earthen Cover, over which they put a Piece of Silk, for the Pisines are there to numerous and troublesome, that it would be impossible to keep Meat without a Cover upon it, and the People are so nice, that they will not taste any Meat that has been touched by a Fly, Pisine, or any Insect or unclean Thing, but give it to the Fowls. As for the Fowls, whom they look upon as the Servants of God, they are to offer them what they will not eat themselves, and entertain them with the best Victuals they have. If they see the least Crack in a Dish, they eat no more out of it, being it polluted.

All Spoon-meat they eat with their Fingers, but would so nicely, that they let nothing fall, that being accounted a very natural Piece of Decency. If they have Occasion to cough or spit at Time of eating, they rise from the Table, and walk out; they never feed themselves with their Left-hand, because they make use of it in Washing their Privities. They choose to begin their Meals with eating a Cocoa-nut half-ripe, and drinking the Water of it, which they say loosens the Body. While they eat they are all silent, and make quick Dispatch, for with them it is an unmanly Thing to be long eating. They take care for a Piece of Rudeness and Inability to drink before they have done eating, and even then they drink but once, either Water or Cocoa wine fresh drawn. They drink out of Copper-cups well wrought, with Covers to the Rim; after eating and washing, they give up a Piece of Bitter Indulgence of Sweet-meats, for the Fruit is scarce with the Men. They have no set Meal-times, but eat a great Appetite provokes them; and Vices is not only the Women, for the Men despite the Custom of a Cook in such a Manner, that they will not converse with a Man-cook, or admit him to a Share of their Food, but being doomed by his Trade to the Company of the Men.

19. When they kill a Beast for Food, they offer their Faces towards *Mohammet's* Sepulchre, and then spit in a particular Place; after which they begin to wash, and the touching of it till it is quite clean. The washing must be ancient, and the Father of the Nation. When they awake out of their Sleep they prefer to wash their Eyes and Faces, and rub them with Oil, and wash their Lips, Lids and Eye-Brows; for before the Performance of this Duty, they must not speak, or bid anyone else to speak. They are very careful in washing, and are so exact, that to the end that the Body and Arms may be more nicely impressed their red Colour upon them, when they are very fond of. They are always chewing Betel, which they continually carry about with them in a Pouch of their Girdle, and mutually present to each other upon occasional Salutations. They bathe before they enter the Temple, and wash with their Left-hand after natural Evacuations. When they bathe at home, they plunge their Feet three Times under the Water, and afterward that they always bathe and pray in publick, and that the separate Crimes have peculiar Ceremonies calculated for them, every Man's Crimes or Misdemeanors are they expose to the public View; When they set out upon a Voyage, they avoid touching or meeting any body, for the least Accident betrays them, they impute it to the Person that touched them. When they go a-hunting they must not handle any, or bid them *Good-morrow*. This is not done on *Thursday*, till three or four o'Clock; every Morning they suffer nothing to be carried out of their Houses, but receive all that is brought in.

If they fall out one with another, they never rally, for if they did all the World would fall upon them. When crossed at Sea, they address themselves to the King of the Winds (for they do not call him a God), and in every Island there is a detestable Bye place, called *Sin*, where those who have escaped Dinger make Offerings of little Boats and Ships, made on purpose, and loaded with Guns, Perfumes, Flowers, and odoriferous Woods. They burn the Perfumes, and having set fire to the Boats and Ships,

turn them adrift, so that they float upon down till they are quite burnt; and this they take for a Sacrifice that is acceptable to the King of the Winds. But when they cannot easily set their Boats and Gallies afloat, they kill Hens and Cocks, and throw them into the Sea right afore the Ship they mean to sail in. They likewise pay a superstitious Devotion to the imaginary King of the Sea, and dare not spit to the windward of the Ship, nor look behind them.

All their Boats and Ships are devoted to the Prince of the Winds and Seas, and they keep them as neat and clean as Temples. They place a wonderful Virtue in certain Characters called *Catide*, which they wear under their Garments in little Boxes, and sometimes under their Arms, Necks, Girdles, or Feet, according to the Seat of the Distemper; for, their imaginary Virtue is said to consist in curing or easing Diseases, procuring Love, Hatred, Safety, or Danger, &c. These they buy of the Magicians, who are their only Physicians. They impute Death, Sickness, and all Affliction to the Devil, and in order to pacify him, make him Offerings of Flowers and Banquets in a certain Place, where they let them consume, unless some poor Body has the Sense to take them. With the same View they offer him Cocks and Hens, which they kill with their Faces directed toward *Mohammed's Tomb*.

To give a short Account of their most common Distempers; the first is a Fever, which is dangerous to Strangers. An epidemic and contagious Disease called *Carrion*, and not unlike the Small-pox, visits them once in ten Years, and sweeps off a great many. They are liable to Disorders of the Eyes; many of them are quite blind, and most of them have little Eyes. When they have Occasion to be long in the Sun, in the Height of the Day, they sometimes use the right light when the Sun goes down, and for a Cure of that Infirmity, they take the Liver of a Cock boiled, and after the writing of certain Words and incenses upon it, swallow it just before Sunset; by this Remedy both I and my Companions received a considerable Benefit, through we omitted the magical Part. They are very subject to the Itch, which they heal with the Oil of Coccos, and some of them are covered all over with insupportable Letters, which is owing to their feeding mostly upon Salt fish, and their pouring salt Water upon their salt Meat.

In the Winter, as they go barefoot, notwithstanding that it rains continually, a sort of Worm breeding in the Mud seizes upon the Soles of their Feet, and the Intervals of their Toes, where they raise Whists that penetrate into Ulcers, so that they cannot walk; then when the body is likewise infected with these Worms. Commonly their Splens are large, and liable to Obstructions, and their Breasts are apt to swell, and be hard, when they believe proceed from their unhealthy Water. In all external Infirmities, such as Sores, or Aches, they apply Fire, which raises a Scar, and upon that they lay Cotton steeped in Castor Oil, which proves very successful; their Ulcers, which happen chiefly in their Legs, are perfectly cured by the Application of Plates of Copper. As for their Wounds, they cure them very dexterously, by the Application of Ointments, without any Bandages or Tents; they are sometimes troubled with Catarrhs, Dislocations, and Pains in the Bones. Venereal Diseases are frequent among them; however, they cure them with China-wood without Swearing, and those Distempers are communicated to them from the *Euopians*. They are altogether unacquainted with the Venereal, which they owe to continual chewing of Beil, for many of them use Guano. As soon as the Children come into the World, they wash them for a considerable space of Time, sometimes a Day in cold Water, and anoint them with Oil. When they void their Excrement, they wash their Privies with Water. All Mothers, even the Queens themselves, suckle their own Children, and besides the Breast-Milk, feed them with a sort of Papp made of Millet broiled, and steeped in Water, and afterwards mixed in Milk and Sugar of Coccos. I thought they never suckle their Children, yet I never saw any of them do so; they rock them in Hammocks of Cord, or of Little Charms hung up in the Air, which they swing to and fro. At the Age of nine Months the Children begin to go

and when they are nine Years old, they commence the Studies and Exercises of the Country.

Their Studies consist in learning to read and write, to understand the *Acoran*, and to know their Duty. They have three sorts of Letters, *viz.* the *Arabick*, the *Maldivean*, and a third sort, which is commonly made use of in most Parts of the *East-Indies*. Their Lessons are wrote down on white Tables of Wood, which they clean and whiten again after they have got their Lessons by Heart; for durable Writings are on Paper made of the Leaf of a Tree called *Marsae Quau*, that Leaf being a Fathom and a half long, and a Foot broad. To teach the Children to write, they make use of no Paper, but make Draughts of Letters with a Bodkin upon smooth, plain Boards of Wood, covered with fine white Sand. The Children have such a profound Veneration for their Masters, that they cannot marry them any more than their own Parents. Some of them, especially the *Moudans*, *Naybys*, and *Cabines*, carry their Studies a great Length, and acquire great Skill in the *Acoran*, and other Treatises of the Law. The Mathematicks are much esteemed in this Country, and especially that Part called Astrology; for they always consult Astrologers, not only upon Nativities and Births, but upon all Undertakings whatsoever, as Travelling, Building, &c.

As for their Exercises, they have Schools for learning the right Use of a Sword and Buckler, of a Bow, of a Gun, and of a Pike; and the Masters who teach them are much respected. They have no sort of Diversions but that of the Foot-ball, which they toils very dextrously. Many of them apply themselves to Manufactures for Household-stuffs and other Commodities, which they make very ingeniously; but the most universal and the most considerable Exercise they have, is that of Fishing, which is so common an Exercise all over the *Maldives*, that there is no such thing as a particular Trade of that Nature; for Gentlemen, and even their Kings, pursue Fishing as we do Hunting in this Part of the World. Every Man there enjoys the natural Liberty of fishing where and for what he pleases. The Fish which are taken in the deep Sea about six or seven Leagues off the Bars of the *Atollons* are large, and of seven or eight sorts, such as *Bonios*, *Abacores*, *Guilt-beads*, &c. which are all much of the same Taste, and have to more Scales than a Mackerel. The Instruments with which they catch them are a Line of a Fathom and an half of great Cotton Thread tied to a Cane, together with its Hook, that in Form resembles the Letter h. The Bait is not fastened upon the Hook, but thrown about into the Sea; for they drag after their Boat a Quantity of small Fish like our Roaches, which are very numerous among the Rocks and Sands, and which are perceived alive in Pursuits of Cotton-thread; and when they come to the deep Sea they call these little Fishes about, and throw in their Line; upon which the great Fishes perceiving an unwonted Quantity of little Fish crowd upon them in Shoals, greedily swallow the whitened Hook, taking it for one of the little Fish. The Fish that swallows the Hook takes off as soon as the Line is brought into the Boat, and so the Line is thrown in again. As this are they will fill their Boat with Fish in three or four Hours Time, and, which is very strange, the Boat is all along under Sail. The Fish thus taken are all black, from whence they are called *Coboly Maff*, i.e. the *Black-fish*. They have another Way of fishing to the Night time upon the Banks that surround the *Atollons*. At every full moon every new Moon they convey themselves to the Banks upon Hurdles, and the Fishing lasts three Days every time. 'Tis performed by Lines of hard, coarse Cotton Thread, some of which are fifty or sixty Fathom long, and are backed over with the Bark of a Tree that serves instead of Pitch, in order to preserve it from Corruption. At the End of this Line they have a Hook with a Bar fastened upon it, after the same manner as is usual among us. By this means they catch a prodigious Quantity of large cod Fish, such as I never saw elsewhere, which catch it dexterously, and is by them called *The King of the Sea*. In time, they have been Plenty of several sorts of Fish, and different Ways of taking them unknown to us, that 'tis impossible to distinguish many; for besides the Lines above-mentioned, they have also sorts of Nets of Cotton, Twine, White, and other Instruments for Fish-

ing. Upon the Flats near the Shore they catch small Fish like Pilchards with Calling-nets.

At the two Equinoxes they have a general Filling, which is very remarkable. At these two Periods of the Year, as the Tides flow beyond their wonted Bounds, so they ebb more than usual, and discover several Rocks and Flats, which at other times continue under Water. Upon this Occasion the *Maldivians* pitch upon several dry Corners, which they encompass with Stones raised like a Wall to a great Height, being forty Paces in Circumference, with a Door or Entrance left that is three Paces wide. This done, thirty or forty of them stretch out, all round the Flats, a large wide Circle of the great Cocoa shells dried, and that supplies the Place of Cork, making the Line float. Now the Fish enclosed within the Circle are so scared with the Shadow of the Floating-line, as if it had a Net underneath it, that instead of making their Escape by swimming, they fly from it, and, by the gradual Contraction of the Line, are brought into the Inclosure, the Entry of which is thereupon stopp'd with all Expedition with Faggots of the Boughs and Leaves of Cocoa compacted together of the Bignets of a Man; after all, the Sea runs out, and leaves the Fish on the dry Land. This Fishery, which continues fifteen Days together, produces commonly ten or twelve thousand Fish. To conclude, I know of no Place in all the *East-Indies* that can vie with the *Maldives* for a rich and plentiful Fishery.

21. After having thus disput'ed the Learning and Exercises of the *Maldivians*, it will now be my Repet to take a View of their Temper and Inclinations. They are a lively, buik, and at the same time a sober and wife People, and very discreet in most of their Actions. They love Arms and Exercise, and are not destitute of Courage. They display a great deal of Industry in Arts and Manufactures, and are polite enough in their Manners. They are religious to a very high degree, and superstitious beyond measure, tho' at the same time they are extremely given to Wantonness and Debauchery. Adultery, Incest, and Sodomy, are their common Actions. Notwithstanding the Severity of their Laws, Fornication is accounted no Crime, and a young Woman sufers no Abroad for obliging a Friend before Marriage. The Impudence of the Women is unparalleled, and the Men are as vicious as they, though indeed they are not so, on the first Spurring of Nature, and would give their whole Estates for a Receipt to corroborate drooping Lust. Their amorous Ecstasies enflam all their Discourses, and their Wives or Wives are their inseparable Companions.

Those they are so addicted to the said Degree, yet the Regard they have for their Parity and Relations shales it in their Presence; and if a Man talks a little jeocularly to a Woman before any of her Relations, they will relect it to her as a reproach, and oblig her to own in Court that she takes room for Persons of Honour, unless he declares he does not know of their Affinity to the Lady. A Man must not enter where a Woman luthes, or is present without her Consent; tho' she never takes off the Cloth that supplies the Place of a Petticoat. When a Man is in Company with a woman, if another Man meets them, he must not ask if she be his Daughter or Wife, but if she be his Kinswoman, and what Degree of Affinity or Contiguity she has to him; for if the Woman be really the Man's Daughter, and the other ask if she be his Wife, he will take it for a Question for an Indication of Incest.

As I am walking with the Women seldom stir abroad in the Days but they make all their Visits at Night, being accompanied with a Man who walks before, and when he sees any one approaching, calls out three *Gas*, i. e. take care. Upon this Notice the Man betakes himself to the entrance of the Court without seeming to see or know the Woman; Nay, if one Woman meets another, she takes to the other Side of the Way, and does not salute her unless she be very intimately acquainted with her; the outer Gate of the Houses being always open till eleven o'Clock at Night, at which Time every body is at home. The Visitors have on Occasion to knock, and indeed the Gates have no Key; but when entering the Outer-gate, and ap-

proaching to the Door of the Houses, which is always open, and spread with Tapellry of Cotton Cloth, or some other Stuff, they cough once, upon which the Post of the House come out. In the Island of *Male* the King's Officers and Soldiers cough frequently, to give Notice to another in the dark Streets, for fear of receiving mortal Wounds from their Arms, which are always raised in their Hands.

22. We shall in the next place take a View of their Government, which is an absolute Monarchy, for the King is feared and revered by all, and every thing is done according to his Pleasure under him. Each *Atollon* has a *Naybe* or Governor, who is a Priest, and Doctor of the Law. The *Naybes* govern the inferior Priests, and are also assistants in the Administration of Justice, and the Management of religious Concerns. The *Cantons* or *Atollons* being divided into many Islands, each of these Islands, which are above forty-one Men, is allotted a Doctor of the Law, who presides there in religious Matters, and is assisted by particular Priests of the *Motques*. All these are employed in instructing the People in the Law, and in opening a certain Portion of Fruits collected from several Islands, and a Salary allowed them by the King, in proportion to their Dignity.

The *Naybes* indeed are likewise employed in the Administration of Justice; nay, they are the only Judges in civil and criminal Cases; and it is for to take Justice, as well as the promoting of Religion, that they make four Circuits in the Year through all Parts within their Jurisdiction. When they go these Circuits they gather their Dues, and receive Presents from a great Number of Persons, to that Circuits furnish by this means a Part of their Incomes. The *Naybes*, or *Naybes*, as they are called under the Direction of a superior called the *Pandare*, and in *Ababek* the Cady, who resides in the Isle of *Maldive*, not only the supreme Judge in all Causes, but also the Head of the national Church. He receives from the *Naybes*, but does not pay a Salary, who, though the Advice of four or five Monarchs, i. e. Doctors of the Law, and divers other Sciences, who are usually honoured and respected, there being only three of the *Maldivians*. The Judgment pronounced by the *Pandare* may be reversed by appealing to the King, who upon such Occasions sits in Justice to the *Naybes*, and the *Pandare* Officers, of whom there are six in each Island.

The *Pandares* make a Circuit once a Year through the Isle of *Male*, as every *Naybe* does in his own Island, and condemns all to be whipped, or to be put to death, and Prayers in the *Arabick* Tongue, at the same time, to the *Maldivians*. When he goes alone, the *Naybes* must not show themselves; but if he is accompanied, he orders their Hair to be shaven, and he shaves the *Naybe*, a Collector of the King's Revenue. Justice is dispensed in the House of the *Naybe*, or the *Pandare's* House in *Male*, and in the same Manner, in the King's Palace. The *Pandare* is accompanied by Sergeants called *Detendants* to assist the *Naybe*, by Virtue of a special Letter of Writ from the *Naybe*; but if he lives out of the *Naybe's* Jurisdiction, he is summoned by Letters from the *Pandare* to come to him to come from any Part of the Realm to the *Male*.

The *Pandare's* Writ is served publickly on the Defendant by the *Calbe*, or Superior, of the *Naybe*, if he does not appear at the Place appointed for the Cause to be communicated, and is excluded from the Cause, and with his Neighbourhood, or coming to Court, he is a Party of Soldiers. If either Plaintiff or Defendant protests the Partiality of the *Naybe*, they lay an Oath to the King, who orders the Cause to be tried by the *Naybe's* Judges. The contending Parties present themselves in the Business of Right of the *Maldivians* by the Law; and in Allegations of Matter of Fact, the Plaintiff must have them attested by three Witnesses. The Defendant's own Oath will bring him out of the Law, and the Evidence is obliged to be taken in the Island, and that not superficially, but to the bottom of the

King without one. The Chambers and inner Apartments are hung with silk Tapettry, and enriched with gold Flowers and Branches of several Colours. The Beds of the Palaces, and those of the great Men, are hung with Cords upon a Beam, supported by two Pillars, and to the Pillon is rocked to Sleep. It is usual among the better Sort of People, to make the Servants rub and chide their Bodies when they lie down, and to give them little Slaps, or gentle Blows, with both their Hands, from an Apprehension that it promotes Sleep, and expels the Splen.

The King is generally clothed in a fine white Robe, or Coat of Cotton, reaching to the Girdle, or a little lower, with white and blue Edgings, and made fast before with many gold Buttons. Then he has a Piece of red emeralded Tapettry reaching from the Girdle to the Heels, and fastened with a long large Girdle of Silk, fringed with Gold, and a great Chain of Gold before, upon which there hangs a large Jewel, as big as one's Fist, composed of the finest precious Stones; he wears likewise a Knife, made after the Fashion of the Country, and it is richer than ordinary. Upon his Head he has a Cloth of Scarlet, that Cloth being to much esteemed in that Country, that none but the King presumes to wear it. This Cap is faced with Gold, and has on the Top of it a great gold Button, with a precious Stone. The Grantees and Soldiers wear their Hair long, but the King has his Head shaved every Week. His Legs are naked, after the Fashion of the Country, and his Feet are covered with Slippers of gilt Copper, imported from *Abaha*, and made like Simials, which none besides are allowed to wear, but the Queen and the Princesses of the Royal Blood.

When the King goes abroad, the chief Mark of his Dignity is a white Umbrella, which none are allowed to use but Strangers, who may have what they will. Upon the same Occasion he has three Pages near his Person, one carry a Fan, another his Sword and Buckler, and a third a Box full of Betel and Arequa, which he chews every Hour. He is likewise attended by a Doctor of Law, who reads in his Presence, and puts him in Mind of Religion. This King does not pursue the Diversions of going Abroad, and Fishing, as his Predecessors were wont to do, but sits himself up in his Palace, and spends his Time in conversing his Queen, giving Audience to his Counselors, and in seeing what any Mechanicks and Artificers work for; he keeps in his Palace Painters, Goldsmiths, Jewellers, Carvers, Joiners, Turners, Armourers, and all sorts of Workmen; nay, he works frequently with his own Hands, and looks on it as a Sin to neglect it. He is a Man of a lively quick Apprehension, and very curious to learn mechanic Trades. He entertains a great number of practick Arts unknown to his People, and makes Enquiry after those that excel in their Way.

When he goes in great Pomp to the Temple, being attended by his Guards, consisting of an hundred Men, and a Company of Officers, with a complete Band of Musick of Drums, and other Instruments. After Service is over, he returns with the same Retinue, the Soldiers leaving all the Way at the sound of March, and blowing their Swords on one another's Backs, and that in such a buccive Manner is to avoid Contusion. He is likewise attended, in all his Proceedings, by all the People of the Island, and carries with him a Prince, Panane, Nyles, Cuttes, Moutche, Guadanes, and a hundred. After Dinner he holds a Court, and with others Justice. These Islands attend on the Hope of a Bark, and therefore the King will be carried in a Chair upon his own Shoulders, which is a business but tedious, for he is a big, and strong Man, and is rather to go in Foot. In going to the King, or Queen, or Princess of the Royal Blood, and especially of them, they have peculiar Expressions, and they do not apply to others, as when they say to another Man, he is worthy to take up of the King, they say, he is worthy of the King.

The Queens wear the same sort of Habits with the other Ladies of the Court, only their Cloaths are richer. The Nobles, and the Plebeians are obliged to wait on the Queens, and to attend them when the Queens go abroad, and to be ready to attend them all the Women in the

Island run to meet them in their respective Districts with Presents of Flowers and Fruits, the Slave-Boys going Notice, at a great Distance before them, for all Men to get out of the Way upon that Occasion. Four great Ladies carry over the Queen's Head a Ven of white silk, reaching to the Ground, to that she is not seen. The Queens bathe frequently in the Sea, as well as other Women, such being the Custom of the Country, which they reckon very conducive to Health. For as soon as they have an Inclosure in the Sea, covered with Cotton-Tree, and upon the Shore a little Houle, with a Fresh-water Bath, which they use as they come out of the Sea. Day-light is never seen in the Queen's Chambers, or those of the Ladies of Quality, for their only Light is Lamp burning continually; and the Place of the Room where they usually retire is blocked up with four or five Rows of Tapettry, the innermost of which neither Man or Woman dares to pull up without coughing or becoming sick, and telling who they are. When they undress, they pull off only their Robe, for neither Men nor Women in the *Maldives* dare to throw off the Cloth that is tied round their Middle.

As for the King's Revenue, he has many Lands, which are Crown Lands, besides a fifth Part of all the Grain and Fruits of the Country, and a Tax on dried Fish, Shell called Bely, and Cords of Cocons, which he lays upon them according to their Circumstances, for he has no Taxes paid him in Money, abating what is paid a Purchase for Titles and Offices, or for Licences to wear one Apparel. He obliges his People to make him every Year as much Cotton Cloth as cloaths his Soldiers, and he gives them Cloaths as well as Pay. This Revenue is somewhat enlarged by his Claim to the Goods imported by Shipping, for a Ship no sooner arrives, than the Owners call to him, and give him an Account of their Cargo, out of which he takes what he pleases, at low Rates, and obliges his Subjects to take them of him again at what price he pleases, by way of Exchange, for such Things as he wants, and often first out Ships laden with the Commodities of his own Country.

All Wrecks found on the Sea-Shore are immediately brought to the King, for no Subject dare keep any; the same is done with Ambergris, especially by the *Maldives* Women, which is more plentiful here than any Part of the *Indies*, and which is so narrowly looked after, that whoever appropriates it to his own Use, dies a hard Death. In a word, whatever the Sea calls upon the Shore is the King's, particularly a sort of Sea-nuts, called *Lana*, are as big as a Man's Head, which they fancy to grow on Trees under Water. The *Portuguese* call them Cocons of the *Maldives*; they are used in Physick, and very dear. Their Money is Silver only, and but of one sort, called *Lana*; however, all Gold and Silver is current here by Weight, and it is all over the *Indies*. Before they take it, it is melted in the Fire, and every Man keeps Weights for that Purpose. There is a sort of Metal called *Calin*, containing very much esteemed in the *Indies*, but not current here. This Money passes to where in the *Indies*, but in the Kingdom of the Prince that comes it, having but one sort of Coins, they are forced to cut it, by which they save a fourth Part. Instead of small Coins they use a sort of small pieces of which make a Larn, and a Larn is worth about eight Shells, being long, like only Eggs, and folded; the King's Name is set upon them, by way of Letters. Their Gold and Silver is all brought home abroad, but in their own Markets they change it for a Ling for another. The *Maldives* are well supplied with Merchants, and the Commodities that are sold are chiefly the Cocons, with which they carry out one hundred Ships yearly. Of this the *Portuguese* have long since discovered all the Ships of *Abaha*, *Maldive*, and other Islands. They make also Oil and Honey of the Leaves of a Tree, which they weave the Leaves of the Tree into a Sort of Mats, and also little Shells, that contain a Quantity of a certain Bignets of the End of one's Finger, which they use in tooth, and glittering. They fish for a certain sort of Moon, and before and after the full Moon, they dig for them in the Sands and Flats of the Sea.

ing up to their Middle in Water. These go only to *Bengal*, the Inhabitants of which esteem them so much, that I have seen thirty or forty Ships laden, without any other Commodity, bound thither. Though in *Bengal* they have enough of other Metals, yet these Shells pass there as Money, and the King and Noblemen hoard up prodigious Quantities of them, accounting them their Treasure. They give twenty Measures of Rice for a Fardel of Shells, each Fardel containing 12000. They have, besides these, a sort of Tortoise-shell, called *Cambe*, which is black and smooth, and has many natural Figures; it is found no where but there, and in the *Philippines*, and goes off best in *Cambaya*. Here they make fine Red-mats, and Cloths of Cotton and Silk; in Exchange the Merchants export some Cotton and Silk Cloths, a sort of Oil, Arac, Iron, Steel, Pieces of Porcelain, and, in short, all the Necessaries of Life; yet every thing is cheap, because of the Number and Frequency of Ships. They import all their Gold and Silver, which they never lend out again, but lay it up among their Wives Jewels as their chief Treasure.

27. After following our Author through his large Description of the *Maldives*, we are next to recur to his personal Adventures, in order to acquaint the Reader how he recovered his Freedom, and escap'd from thence to the Continent of *India*, from whence he returned to his native Country. The Fact, as he relates it, runs thus: He says, That in the Beginning of the Month of *February*, 1607, he dream'd that he was set at Liberty, and found a Passage home to *Europe*, which made a very great Impression on his Mind, inasmuch that it induc'd him to make a Vow of going in Pilgrimage to the Shrine of *St James of Galicia*, in order to return God Thanks, if this Dream should prove true; at the same time he was exceedingly perplex'd in his Mind, and endeavor'd to discover how this could be brought about. All his Conjectures prov'd vain and fruitless; but two Nights after the Thing discover'd itself, by the unexpected News that the King of *Bengal* was prepar'd to invade the *Maldives* with a Fleet of fifteen Sail of large Gallies. On the first receiving of this Intelligence, the King of *Male* issued his Orders for fitting out, with all imaginable Expedition, the large Ships, and all the Gallies, Barks, and Vessels in his Dominions; but before this could be accomplished, the Enemy's Fleet appear'd in Sight; upon which the King suddenly alter'd his Resolution, and determin'd to fly to the Southern Islands, in Hopes of taking Shelter there, till such Time as he could assemble a Force sufficient to expel the Invaders. His best Goods were immediately embark'd, as also his three Queens, each of whom was carry'd by a Gentleman in his Arms, as if they had been Children, covered with Veils of Taffety of different Colours; as soon as they were on Board the King followed them, leaving his Capital altogether defenceless, and the Streets full of Women, crying and lamenting the Danger to which they were expos'd. The Enemy no sooner arriv'd than they divid'd their Forces, sending eight of their Gallies in Pursuit of the King, with whom the Wind falling, they very speedily came up, engag'd his small Fleet, and having killed the unfortunate Monarch of the *Maldives*, who fought very bravely in his own Defence, and kill'd himself Masters of his Ships, Wives, and Relations. As soon as these People land'd in *Male*, our Author surrendered, and was bound to their Hands, declaring to them in what manner he came thither, and how he had remain'd Prisoner there for several Years. They treat'd him very kindly, as soon as they were satisfied that he was not a *Portuguese*; for had he been of that Nation, they would, without any Ceremony, have put him to Death. The Commodore remain'd about ten Days on the Island, in which time they cur'd on Board this Veil is all the Pleas'd of the King's Palace, with every Thing of Value they could find, particularly one hundred and twenty Pieces of Cannon, and then prepar'd for their Departure, leaving only a Party at Liberty, excepting only the King's Brother-in-Law, whom they carried with them, and our Author, who went off in his own Accord, and with some Difficulty to *Bengal*, where he had Letters to contrive, the Means of finding a Passage back to *Europe*. While he remained in *Bengal*, the *Angul* deserv'dly punish'd that Prince, who completely dispos'd

a prodigious Army, in order to withstand him, amounting, as our Author was inform'd, to several hundred thousand Men, and some thousands of armed Elephants; which military Preparations did not incline him to remain any longer than till he found an Opportunity of withdrawing himself, and this in a short Time he obtained.

28. He retir'd from *Bengal* to the *Malabar Coast*, inhabited at that Time for the most Part by Pirates, from whence he proceeded to *Calicut*, where he remained eight Months, waiting for a *Dutch Ship*; but at last was persuaded by the Jesuits to go to *Cochin*, where, on his first Arrival, he was imprison'd as a Spy, and suffer'd great Hardships. At *Goa* also he was a Prisoner with those who remained of seventeen *English* taken at the *Bay of Surat*. The Jesuits had brought one Master *Nicholas*, and four other *Englishmen*, from the *Mogul's Court*; so the *Hollanders* also were there, and they were all Prisoners together; but the Jesuits undertook for them, and procur'd their Liberty, viz. *Thomas Stevens* an *Englishman*, and Lectur of *Mayson College* in *Saljete*, *Nicolas Triguant* a *Hollander*, *Stephen Cross* a *Frenchman* of *Rouen*, with *G. Juan Alvarez* a *Spaniard*. This *Thomas Stevens* procur'd the Liberty of the *Englishmen* also, four of which became Catholics, and two of them die'd there. Don *Luis Lopez d'Hydrabla* arriv'd at *Goa* with the Title of Viceroy to the People's great Grief, who the more desir'd Don *Andreo Paratado*; Ten Months after his coming four great Gallies arriv'd, each about two thousand Tons; five had departed from a *Lipson*, but they knew not what was become of the sixth, which was separated by a Tempest at the *Cape*, in each were embark'd a thousand Persons, Soldiers, Mariners, Jesuits, and other Churchmen, with Merchants and Gentlemen; but when they arriv'd at *Goa*, there were not above three hundred in each, by reason of the Sicknets and Mirens they endur'd in eight Months at Sea without Sight of Land. These brought an Edict from the King, forbidding the *English, French, or Dutch* Commerce in his Dominions; and if there were any such there, to send them away, upon Pain of their Lives. On the 27th of *December* 1607, he embark'd for *Lipson*, and on the 15th of *March* 1610, they arriv'd at the Isle of *Piogo Rodriguez* in 20°, about forty Leagues East from *Saint Lamerre*. After a cruel Storm there five Days together, they reach'd the *Cape*, *St Helena*, *Braffa*, the *Isore*, the *Bringing*, and having paid his Vow to *St James of Galicia*, he arriv'd at *Kochelle* the 16th of *February* 1611. Thus we have brought this Voyage to a Conclusion without taking in the Author's Travels through the Rest of *India*, which would have swell'd the Section to a great Extent, and would have contriuted little to the Reader's Satisfaction, as containing nothing which may not be met with elsewhere, in as good, or in a better Description, as the Reader will perceive in the next Section, wherein we shall give you of the exactest and best written Voyages to the *East-Indies* that is any where extant. But with regard to the *Maldives*, *Pierard's Account* is beyond a Question preferable to any, for the Readers we have a signed at the Beginning of the Voyage. It may not, however, be amiss to inform our Author went farther one hundred and fifty Years ago, to conclude the present Section with him. Remarks on the State those Islands are now in, that we may give the Reader, as near as possible, a complete View of the Subject at once, without fatiguing him with needless and redundant Repetitions; for want of which Caution, most of our old Collections of Voyages swell to such bulky Volumes, and at the same time are in many material Points extremely defective.

29. One would imagine, from the Account given us by this Writer, that in the Course of so many Years as have elapsed since his being shipwreck'd on those Islands, many of them must have been swallow'd up entirely, and thereby more render'd uninhabitable and desart, when, how very does not appear to be the Case. On the contrary, the Island of *Male*, according to the last Accounts we have, is in a better Condition than ever, and the *Dutch* carry on there a very considerable Commerce, the Natives themselves also trading in their own Vessels to *Ceylon*, where they are well us'd by the *Dutch*, and take a very great Profit of those little Shells which are call'd *Cambe*, *Coin*, and *Eye*, or *Seaman's Coins*; for that there are prodigious Quantities

ties, not only on the Shore of the *Maldives*, washed thither by the Waves of the Sea, but also dug up in the very Heart of some of the Islands, as being very probably left there at the Time these Lands were deserted by the Ocean. As the Measure of Things, which we call Money, is altogether arbitrary, and depends solely on an Agreement amongst Men, that this or that shall stand for and be regarded as a common Measure, so in many Countries, both of *Asia* and *Africa*, these Shells, by a certain tacit Agreement, are fixed as such a common Measure, and are consequently esteemed, and have the Currency of Money. It is that gives them a Value even with such as despise those who trade with and receive them as Money, without reflecting, that Shells are to the full as capable of being constituted Money as either Gold or Silver, and without remembering that they are compelled to practise what they themselves so much condemn, and to take these paltry Shells for Money. At *Bengal* two thousand four hundred Cowries were, in the Year 1740, valued at a Rupee, or about half a Crown of our Money.

But the great Use of them is on the Coasts of *Africa*, and particularly on those of *Guinea*, where the Negroes esteem them to the full as much as Gold and Silver, and where they pass under the Denomination of *Bongies*. We may guess at the vast Contumption of this Commodity or Money, by the *French* Merchants in the Kingdom of *Fiddah*, who give for a Piece of the common Cloth made by the Natives, commonly eighty Pound Weight of Cowries, and so in proportion for the richer Commodities of that Country, such as Wax, Ivory, Gold, &c. The *Dutch* usually furnish other *European* Nations with this kind of Negro Coin, if I may be allowed that Expression, and the Reader will easily conceive from thence how beneficial that Trade is which they drive with the *Maldives*. It might be wondered how this Demand for these Shells is kept up upon the Coast of *Guinea*; but in order to account for this, we are to understand that, like Gold and Silver, these are not only the Measures of Commerce among the Negroes, but likewise the highest Mark of their Finery, since they wear them as Necklaces, Collars, and Bracelets, strung upon Hair or Silk, either in single or double Rows, which indeed make an odd, but at the same time no disagreeable Figure on the Necks and Arms of the Natives, the snowy Whiteness of the Shell appearing to great Advantage, when compared with their jet-black Skins.

Heretofore about twelve thousand Pound Weight of Cowries was sufficient to purchase a Cargo of five or six hundred Negroes, but at present the Market is raised, and the Proportion between Man's Flesh and Baubles is altered, that a Ship Load of Slaves cannot be bought for less than twelve or fourteen Ton of Cowries. As there would be a great deal of Trouble in adjusting Payments made in this kind of Money, the Negroes, though to stupid as to sell themselves for Shells, have invented a kind of Copper Baton of such Size and Shape, as to hold about one hundred and eight Pounds of these Shells, which is a great Ease to the Merchants. We must not, however, imagine, that these Shells are not to be found any where else but in these Islands, since it is certain that they are likewise met with on the Coast of the *Isippines*, but these are of an inferior Nature, and much below the Cowries of the *Maldives* in Whiteness and Lustre. The principal Mart in *Europe* for these Shells is *Amsterdam*, where they have of them large Magazines, and where they are purchased both by *French* and *English* Merchants, for the Convenience of exporting them to *Africa*.

But to return to the Trade of the *Maldives*, which is far from being to be considered as some of our modern Writers would have us believe, and that for no better Reason than that the *Europeans* have not settled amongst them; whereas from this Account, it is most evident, that it is in possible for them to be the most profitable of Realms, which must naturally be so to every judicious Reader. But the chief Motive that has kept a great Trade carried on there, inasmuch that some hundred Sailors are taken annually with the Produce of their Colonies, that is, with the Oil, Honey, Cordage, and Spices made from the kind of Palm Tree, which grows to white either in both Abundance, or to such Perfection, as on these Islands; neither

do they want other valuable Commodities, particularly the finest Tortoise Shells in the World, flamed naturally with very beautiful Figures, and wrought up by them in Cabinets, Combs, and other Curiousities. But what plainly proves the Riches and Industry of the People is, on the one hand, the Cheapness of Cotton, Silk, Oil, Iron, Steel, Spices, and *China* Ware, with other Foreign Goods, which could not be brought about, if their own Manufactures did not enable them to balance the Account with the Foreigners, who import them; and, on the other hand, that Plenty of Gold and Silver which is always visible in those Islands, and which must have been very soon carried away, if ever the Balance of Trade had been against them.

It seems also to be no small Honour to the Country, that neither the Force of the *Portuguese*, the Ambition of the *English* on their first coming into the *Indies*, nor the Frauds of the *Dutch*, have deprived the Inhabitants of these Islands of their Liberty. It is true, that to settle an Account our Author has given, this does not appear to be a very difficult Matter, since the King of *India* was able to make so great an Impression with so few Men; but at the same time we ought to reflect, that the Conqueror thought fit to abandon the Island of *Madagascar* as he had reduced it, which appears to us a very good Proof that he thought it impracticable to keep it, and indeed, where a whole Nation is to be ruled over a great Sea, as well as on Shore, it will be always found a very difficult, if not impossible Matter, to retain it. The great Policy of the Legislator of their Island, however he was, very plainly appears in his adjusting the Liberty he has done, the Nature of their Constitution, the Situation of their Country, and that Course of Life which from thence they are obliged to follow. To this we may justly ascribe the long Continuance of their Liberty, the Freedom of which does not seem to be at all impaired by the Settlements made by the *Europeans* in those Countries; but, on the contrary, the People have creased in Riches, and the King has extended his Power, by increasing his Trade with them, which is more than can be said of any other Country in the *Indies*.

It must, however, be allowed, that very few Voyagers or Voyage-Writers have taken the Pains to search for the *Maldives*; so that if we had not this Account, we should scarce be able to lay any claim to the Discovery of a Reason of which is very easily found, that the People have no Mines, either of rich Metals or precious Stones; nor do they abound with Spices, any of the most valuable Commodities; but it appears very evident, that notwithstanding the Want of these Advantages, they are much more populous, and happy, free, and independent, more Liberty than those People in whose Countries are consequently more esteemed. But as to the Discovery only in the Entrance of the *Indies*, it might be profitable to furnish some Descriptions of the people and the Country mentioned in the foregoing History, by which we might have visited them in Person, and that too with the least Expence of Time as may afford the greatest Light into the History of the *Indies*; from which Consideration we have been led to make Choice rather of Voyages than of Travels, which latter belongs strictly and properly to the History of the *Indies*, in which the most curious and best Observations that have been made of the *Indies* shall be included. At present we have only a general Voyage to the *Indies* by the *French* Commodore, Commander in Chief, who has been distinguished and esteemed more accurate in his Knowledge of the *Indies*, than by that Officer himself, who, like our Author, was capable of performing every thing that was necessary of whom his own Pilot or Landman, who was a most skillful and the most exact Surveyor, and who was whom he was ever a great Admirer, had been a most judicious and was not founded by any other Discoverer. The contrary, was every Way a most judicious and judicious Branches of Science, in that he was a most judicious and the Discovery of a History of the *Indies*, by which we have of carrying his Vessel to the *Indies*.

These singular Properties, and the Liberty which we have not room for a Multitude of Observations, and the Choice of this, which may have instead of it.

which the original Publisher, the celebrated Mr. Thevenot declared he made publick with no other View, than that it might serve as a Model to his Countrymen, not in Point of Science only, but of Method also, esteeming the Author as considerable in that Character as in the Quality of a Commander. This Apology I thought necessary, that the Reader might not suspect me of Partiality, and in the succeeding Sections we shall put that Point farther out of Dispute, by doing the like Justice to English, Dutch, and the eminent Sea-Officers of other Nations, who have not only benefited those they served, but have likewise transmitted Testimonies of their Skill to Posterity.

I cannot dismiss this Subject without observing that it

is to be wished our own Countrymen would be more careful in this Particular, since, as there are not better Seamen, or better Officers in the World, it is very hard their great Actions should not be communicated to the Publick, with all the Advantages that may be derived from Method and Language; both which might be acquired with as little Labour as is requisite to get over the Difficulties in keeping a Sea-Journal; and therefore we may well hope, that in an Age which discovers greater Curiosity in regard to these Subjects, than has been shewn in any other; Gentlemen will have that regard to their own, and their Officers Characters, as not to let them suffer for want of a candid Representation.

SECTION XXV.

The Expedition of Commodore Beaulieu to the East-Indies; containing a curious and accurate Description of the Sea-Coasts and Commerce; as also Abundance of curious Observations on the Manners of the Peple, the Nature of their Governments, and the Means of establishing Colonies amongst them.

Written by M. Beaulieu himself, and published by M. Thevenot, in his large Collection of Voyages.

1. An Introduction to the Voyage, with an historical Account of its Author and his Work. 2. Their Departure Octob. the 2d 1619, and Occurrences in their Voyage to Cape Verd, on the Coast of Africa. 3. Remarkable Accidents and Proceedings at Cape Sierra Lione, where they touch'd for Refreshments. 4. Remarkable Observations in those Seas, with the Sentiments of the Author concerning them. 5. A very curious and accurate Description of Table-Bay, under the Cape of Good-Hope. 6. A very candid and circumstantial Account of the Hottentots, their Customs, &c. 7. An Account of some remarkable Letters found there, and the Author's Resolution on reading of them. 8. A Description of several remarkable Animals, and other Curiosities met with here. 9. A very entertaining Relation of what pass'd between Commodore Beaulieu and the Negroes in the Bay of S. Augustine, during his Stay there. 10. A farther Account of this Matter, and of the Close of his Transactions with those People. 11. A succinct History of the Government, Language, Manners, &c. of this Negro Nation. 12. The Author sails along the Coast of Africa, and observes several notorious Errors in the Sea Charts. 13. A large and curious Description of the Comoro Islands, and their Inhabitants, with his Reception there. 14. Remarkable Occurrences at the Island of Nangalija, and some Remarks on the Arabian Shipping. 15. The Author projects his Voyage for the Cape of Guardafu, and meets with a great Storm in his Passage. 16. An exact Description of this Coast, and of the Difficulties met with in procuring Refreshments. 17. A very singular Method of obtaining fresh Water, which may be of great Use in long Voyages. 18. An Account of the Country about Cape Guardafu, and the Author's Resolution to steer directly for the Coast of Malabar. 19. Their Arrival upon that Coast, and their taking a Moorish Ship richly laden. 20. They double Cape Comorin, and obtain a Pilot, who conducts them to Ticow. 21. Their Arrival there, and the News they received of their Vice-Admiral, and other Transactions. 22. A large Relation of what pass'd during their Stay in that Port, and of the Behaviour of the Inhabitants. 23. A Description of the Country, its Product, and the Nature of the Commerce there, with other Observations. 24. The Author's Arrival at Achen, with a copious Description of that Country and its Commerce. 25. The Author's Audience of the King of Achen, and of what pass'd upon that Occasion. 26. A very curious and exact Account of the State of that Country, the Character of its King and his Subjects. 27. A farther Account of our Author's Proceedings there, and of the many Difficulties he met with. 28. Obtains a Licence to buy Pepper, and yet finds it extremely difficult to procure his Lading. 29. Our Author obtains a Letter from the King of Achen to the King of France, in Answer to one he presented. 30. Other Transactions during the Time of his Stay in that Country, and his Resolution to sail to Queda. 31. Occurrences in his Voyage thither, and his Proceeding there, in order to obtain a Lading of Pepper. 32. A Description of the Island of Pulo Lada, or Pepper-Land, on the Malacca Coast. 33. A very curious and exact Description of the Manner of cultivating Pepper, and of the Value of that Commodity. 34. A succinct History of the Revolutions of Queda, and of the Reduction of that Kingdom by the Monarch of Achen. 35. The Author's Return to that Country, and the Reception he met with there the second Time. 36. A large Account of what happen'd to the Vice-Admiral, and of the Difficulties the French met with in establishing a Trade in these Parts. 37. The Author presents a rich Diamond to the King of Achen, and obtains from him a Licence to trade at Ticow. 38. A Description of the Island of Sumatra, its Climate, Soil and Produce, with other Particulars. 39. The Islands upon the Coast of Sumatra, and their respective Products, together with an Account of the different Kingdoms in Samatra. 40. The Character of the People of Achen, their Government, Customs, Laws, &c. as observed by the Author. 41. The Military State of that Kingdom, and of the Forces and Power of the Monarch then on the Throne. 42. The Nature of his main Establishments, and of the Means made use of by him to support them. 43. Of the Riches of the King of Achen, his Houses, Slaves, Revenues, and several Methods of raising Money. 44. The ancient State of the Kingdom of Achen to the Accession of the reigning King's Grandfather. 45. The civil Wars that hap-

send from that Time, and the dreadful Consequences attending them. 46. The Manner in which the King of Achen mounted the Throne, and his Character. 47. The Author sails for Europe, a Journey with a pleasant Passage as far as the Island of St. Helena. 48. A Description of the Island of Achen, and a further Account of the Voyage to their Arrival at St. Vincent. 49. An exact Description of the Island, its Climates, Soil, Products, and other Particulars. 50. Continuation of the Voyage, and the Author's safe Arrival at Havre de Grace, Dec. the 17. 1622. 51. Some further Memoirs of Commodore Beaulieu, to the Time of his Decese.

THE following Voyage was not only undertaken, but written also by one of the best Officers that ever was in the French Service, of whole Character and Adventures we shall say somewhat at present, and supply the rest at the Conclusion of the Section. *Augustin de Beaulieu* was descended of a good Family at *Rouen*, which has been always considered as one of the principal Ports in *France*. He addicted himself from his Youth to the Sea, and studied with great Application all the Sciences necessary to make him an able Man in his Profession, and more especially Geography, Astronomy, and Navigation. His first Expedition was to the River *Gambia*, on the Coast of *Africa*, under the Command of the Chevalier de *Bragueville* of *Normandy* in 1712. The Design upon which the went was to erect a Fort, and establish a Colony; but failing unluckily a little too late in the Year, they lost the best Part of the Men before they were able to accomplish any thing, and were therefore obliged to return home, *scilicet*, after a vast Expence, to very little Purpose.

In this Expedition our Author commanded a Sloop, and tho' he got nothing by the Voyage in Point of Profit, yet he improved himself exceedingly, and established a just Reputation for Courage, Diligence and Application. About the Year 1706, the *French* formed the first Notion of trading to the *East-Indies*, and some Merchants at *Paris* and *Rouen* agreed to turn the Joint-Stock for that Purpose. They fitted out two good Ships, the Command of the biggest of which, with the Title of General, was given to Captain *de Nis*, who at that Time served the King in the Marine. The latter Ship was bestowed upon our Author, who had no other Recommendation than his Merit. The Voyage was in all Respects fortunate, and well conducted, though in the End it did not turn to any great Account; for the Dutch President in the *Indies* having published an Order, requiring all the Subjects of the States General that were on board those Ships to quit them immediately, which Order they obeyed, the two Captains found themselves out of their Power to bring home both the Vessels, and therefore that which had been commanded by Captain *Beaulieu* was sold to a little Prince of the Island of *Java*, and all their Effects brought home on Board the largest, notwithstanding which Misfortune, and the great Expence with which this Undertaking was attended, they managed so prudently, as to make a saving Voyage.

It was his Care and Diligence in this Expedition, that recommended him to that Command of which he has written the following Account. He was extremely careful in the Choice of his Men, that he might not run the risque of failing in this, as he had done in his former Voyage; and that Poverty might be the better for the Pays he was bound to make, he provided, before he left *France*, that the Officers and Soldiers of Navigation in the highest Degree of the Army, and constantly observed the Variation of the Needle every Morning and Evening, on four or five different Compasses, that he might be the less liable to Mistake, and that his Return home, he not only translated into French, but which is still preserved, but computed likewise the following History of the Voyage from his Papers, with a Design to have committed them to the Press, but by some unforeseen Accidents, and by his premature Death, of which more shall be said hereafter, this was prevented, and the Papers remained for twenty Years in a dusty and private Place, till such Time as the famous M. *Delisle*, a *Hereset* turned his noble Design of publishing a curious Collection of the best Voyages, when these Papers were put into his Hands by M. *Doin*, to whom they had been committed by the Relations of the

That great Man was charmed with the Preface, and so Wonder, since he seriously professes it appeared to him as perfect a Performance as ever came to his Notice, notwithstanding the Multitude of Particulars, *English* and *Dutch* Memoirs that he had occasion to see, while employed in making that curious and excellent Collection. The principal Reason of his valuing it so much, was the high Character the Author had born in point of Integrity, as well as Abilities; so that as he related every thing that was worth relating in the Course of his long Expedition, all he relates may be very safely depended upon, as being exactly agreeable to Truth, and to the Lights which he received. One may safely affirm, that the Work might circulate along with it enough to justify all that has been said in its Favour, since there are so many who have Masses of the Writer's Sincerity, in those Passages which regard his own Conduct, that the most scrupulous Critic could be obliged to confess, there is not the least Room to suspect he could entertain any Design of deceiving his Reader. The Variety of Events, the variety of Circumstances, the just and weighty Remarks with which they are interspersed, and the elegant and judicious Manner in which they are presented, enhance the Value of this Relation, and therefore we have given the Reader a just Idea of it, and must at the same Time own, that it would be very difficult to make Choice of better, than this which is so fully suited to his Subject; and he relates it with so much Modesty and Freedom, that it is not possible to determine whether his Memoirs are more a Pleasure or a Warning.

2. I sailed *Oct. 21. 1629*, from *Havre de Grace* with three Ships; the *Montourney* of 450 Tons carrying 20 Men, 22 Guns, and 20 Patroes; the *Albatros* of 200 Tons, 17 Men, 20 Guns, and 20 Patroes; and the *Herminette*, an Advice-Boat, of 70 Tons, 12 Men, 10 Guns, and 8 Patroes, all victualled for six Months, and an half. The seventeenth we came in Sight of *Madagascar*, and at Night its western Point lay about 10 Leagues off to the S. E. and a quarter East. The next day we set South with the Wind at East, expecting by that way to delect the Island of *Palma*. *Madera* lies very near to the Weather was, as it is commonly, so I gave out that could scarce delect it. The Commodore's Ship being so laden, and embarrassed with an unwieldy crew, that two or three Men could scarce manage, we resolved to make the best of our Way to *Cape Verde*, in order to see a new one made, or to put the old one to rights, which was encumbered with too much Wood.

On the first of *November* we made the Coast of *Senegal*, between the River *Senegal* and *Cape Verde*, where the Sea was very low, running N. E. and S. W. a little to the S. E. a sandy Sea. Next Day, about Eight in the Morning, we doubled *Cape Verde*, and coasted some time to the N. E. to get into *Ruffique Roads*, at which Place, at 11 o'clock in the Afternoon, we saw three *French* Ships at Anchor, and a small Bark, which had Captain *Drac's* Voyage to the *Indies*, and lay off of that Place waiting for the *French* Fleet, being I call Anchor within a Cannon Shot of the *French* Fleet, for the Wind being contrary, I could not get near them, and the rainy Season in that Country had set in, and over

On the fifteenth, having resolved to send the *Albatros* to the *Island*, to buy up Provisions, I sent the *Albatros*, with a Kallade and Knives, which were prepared for the *French* Fleet, and reinforced his Complement with *French* Men, *Neger* and six Soldiers, ordering Captain *Drac* to command the *Albatros*, not to treat with the *Natives* about Hostages, and without not to stay there more than ten Days at most, but to come with all possible Expedition to rejoin us at *Tegon*. When the *Albatros* parted from us, we were

the Lat. of 10° 30'. From the Time we pass'd Cape Verd, we had but little Wind, and the Tides run against us W. N. W.

The nineteenth about Noon, we descried the Idol Islands, about eight Leagues off to the E. N. E. and our own Pinnace making into the Shore. These Islands lie in 10° 30' N. L. They are covered with Wood, and bating *Tegrin*, are the highest Land between Cape Verd and Cape Sierra Liõna. *Great Idol* being the largest and most fruitful of those Islands, affords Water, and several Sorts of Fruits and Fowls; but its Inhabitants, who are very numerous, are not to be dealt with without Hostages. The *Lesser Idol* affords likewise Water: Besides these two, there are other smaller Islands, which are so inconsiderable, that they are not distinguished by any Name. The Names of these two are taken from a River to called in the Continent, the Mouth of which lies opposite to them about three or four Leagues off. The King of this Country resides up that River; the Natives are Negroes, Idolaters, great Hunters, and Eaters of Elephants. They have no Commerce with the Continent, and it is hard to get ashore upon them, because their Coast lies very high: I believe they put off their Elephants Teeth in the River of *Tegrin*. At Night we lost Sight of these Islands, which are distant 27 Leagues from Cape *Sierra Liõna*, or *Tegrin*. Next Day we lay, about a Quarter of a League off, several Spouts, or Guts of Wind, whirling about upon the Sea, and forcing up the Water with great Violence, two of which were very formidable. As soon as we perceived them, we forced all our Sails, for fear of any Mischiefs from them.

We arriv'd November the 23d at Cape *Sierra Liõna*, and call Anchor at *Tegrin*, where several Negroes coming on Board, gave me to understand, that there was an *Englsh* Vessel about four Leagues off at *Safina*, the Residence of the King of *Tegrin*. On the 25th I cauled the Rudder to be taken off the Stern post, and hauled ashore, where having posted a strong Guard, and fortified the Place with felled Trees, I set the Carpenters to work. Having walked a little further into the Country, I found it very pleasant. At the Bottom of the Creek there was a small Brook of sweet and clear Water, the Banks of which towards the Sea were decked with great Quantities of Citron Trees, Willows, and pretty thick Woods. I likewise found some Plants good for Pasture; but the Soil is nothing but Stone, or Iron coloured Rock. Their Houles are infinitely better than those at Cape Verd. The Natives, who are Negroes, worship little horrible Images resembling Devils, and small Lumps of black Earth in the Form of Sugar Becons, which Understood to be the Nests of Ants. To these they offer Fruits, the Heads of Monkeys, Baboons, and other beasts.

They call the Idols *Gigins*, which Name I take to be derived from the *French*; for they commonly falute one another in these Words, *Tout, Haut*; but when they falute a White, they cry, *Tu*. As Men, they are a much better sort of People than the other Negroes, though they begin now to improve their Cunning, by converting with the People of several Nations that touch there. The Place where we lay being the third Creek from Cape *Sierra Liõna*, is very convenient for taking in Water, Wood, Citrons, Oranges, and Hoops for Water-Casks, which are all to be had for little or nothing. There we had very good Rice in Exchange for equal Quantities of Salt. It affords no Fish unless Pulletts, which are very scarce, and has little Accommodation for Hunting; but all its Creeks are well stored with several sorts of Fish.

The Cape lies in 8° of North-Latitude, and the Needle varies there 2° 45' North East. One of our Trumpeters that could not swim was unfortunately drowned in a little River near this Place, which was nine or ten Feet deep. 'Tis presumed he was deceived by the extream Clearness of the Water, which represented the Bottom of the River to be nearer the Surface than it was, and that thereupon going to wash himself, but not meeting with the expected Ground, was so frightened with the Surprise, that he neglected taking hold of the Banks of the River, which was not above ten Foot broad. December the 3d two Negroes came on Board, one of whom was armed with a Bow, Arrows, Sword, and Knife; the other, who was the Interpreter, told me, that he who bore the Arms was sent by the King to

acquaint me that the *Portuguezze* up the River had murdered the Captain and the whole Crew of a *St. Malo's* Bark: That his Master was sorry such a thing should happen near his Territories, and that if I had a mind to relent it, he would furnish me with Negroes to conduct me to the Place where the *Portuguezze* had lodged the Bark. This I understood to be about seven or eight Leagues above the *Safina*, whether the *St. Malo's* Captain had gone to buy a fort of Wood not unlike that of *St. Mariba*, which in *France* might be worth eight or nine Livres a hundred Weight.

When I first heard the News, I suspected, that the *Portuguezze*, understanding that my Rudder and many of my Men were ashore, had contrived the Message to induce me to send a Detachment out of the Land Guard, and to give them an Opportunity of possessing themselves of the Rudder and Water-Casks that were ashore; but upon second Thoughts, calling to mind the Humour of the *Portuguezze* in that Country, and the Weakness of the *St. Malo's* Ship, I concluded the Account not improbable, and withal saw that the fighting such Intelligence might lessen the Reputation of the *French* in that County. At last, having resolved to send out a Detachment, pursuant to the King's Messag, the Interpreter with several other Negroes offered to go along with my Men to the Place, saying, they would go any where to have an Opportunity of killing *Portuguezze*. To carry on this Affair with more Security, I ordered the Rudder to be brought aboard, for the Carpenter's Work being then finished, there wanted nothing but the Iron work, which might be done on Board, by setting up a Forge in the Ship.

I reinforced the Land Guard with ten Men, ordering them to plant Barricades of Water-Casks before the principal Avenues of the Place where they lay, and to suffer neither white nor black to come near them in the Night-time, and got Captain *Pile* to accompany my Men in the Expedition. Accordingly, the next Day I sent up the River our Sloop, with an Addition of ten Men to her Complement, together with Captain *Pile's* Bark manned with his own Men, and the *Hope's* Long-boat, with twenty Men and four Patereroes, all under the Command of Monsieur *Montevier*. December the 5th Captain *Datel* of *Dieppe* arriv'd in the Bay, and told me, that at the Isle of *St. Vincent* he met a *Dutch* Ship of four hundred Tons, manned with *Dutch* and *Englsh*, bound for *Buntam*, in order to convey thither the News of the Agreement between those two Nations. At Three of the Clock in the Afternoon M. *Montevier* returned with the *Hope's* Long-boat, and Captain *Pile's* Bark, our Pinnace not being able to keep up with their Oars, and reported that he had been ten or twelve Leagues up the River, where, finding the River very narrow and rocky, inasmuch that the Bark struck several times, and having no Commission from me to venture the Lots of the Bark, he returned back without meeting any *Portuguezze*, or then Vessels.

On the 31st we were in 3° 25' North-Latitude; after our Departure from *Tegrin* the Weather was various, sometimes stormy, and sometimes very calm, as it used to be in those Seas, and we found our Rudder much more serviceable than before. January 1st, 1620, at Sun-rising we found the Needle 3° 30' North-East, and the Latitude 3° 5' North. The orb we crossed the Equinoctial Line, and celebrated the usual Custom of the wing Sea-Water upon those who had never padd it. From the third of this Month we had the Wind at South-East and South-South-East, and sailed close to the Wind, in order to ride the South Pole, pursuant to the common Courie of Navigation. The 24th we were under the Tropic of Capricorn, and the Needle varied 13° to the North-East from our passing the Line; we had the Wind at East and East-South-East. On the 1st of February we began to have the westerly and other variable Winds, being then in 13° South Latitude, and the Needle varying 13° 25' North East.

The 3d, being becalmed, I observed at the Sun-rising that the Needle was 13° N. E. whereas at my last Observation, when I was almost a Degree farther from the antarctic Pole, it was 13° 30'; so that instead of increasing it decreased, upon which I concluded its Variation to be irregular, and that it is not fixed on two Meridians cutting the World in four Parts, as the *Portuguezze* and others imagined. During

During this Calm we saw two great Fish with long Snouts, or Beaks, which seem'd to be of that sort that are known to pierce lined Ships. I could scarce have credited the Story of their penetrating through Ships, if the Governor of *Dieppe* had not shew'd me a Piece of the Beak or Horn of such a Fish found in the Side of a *Dieppe* Ship, when it was laid up to be caulk'd after an *East-India* Voyage; the Captain of which had found something strike against his Ship, as he sail'd from the Coast of *Brazil* to the *Cape*, but did not know what it was till that Discovery happen'd. This Piece of Horn resembled the Tooth of a Sea-Horse, only it was straight all along, and of the Colour of Ivory. Its Thickness was an Inch and a half Diameter. It had run five Inches into the Wood, and was broke off where the Lining join'd the Wood, probably by the struggling of the Fish, which could not recover it without breaking. Several Persons have met with the same Adventure in their Voyages: But I shall only mention one more of a *Dieppe* Captain, who upon a Voyage to those Parts had his Boat flung to Pieces by a Blow from one of these Fishes; for the Fish endeavour'd to withdraw its Horn, disjointed all the Planks. Those which I saw on this Occasion seem'd to be of the smallest sort, one of them that came just under me appear'd to be ten Foot long, besides its Beak. It was a fleshy Fish, though not so big proportionably to its Length as a Porpoise. Its Colour was a dark blue, and its Fins and Tail, which were very large, represented a bright Azure in the Sea. It had a pretty high Lump upon its Back, resembling that of a Rechen, or *Indian* Sea-Cat, which four times rises above Water. Its Head was not unlike a Porpoise, only it was longer, and instead of a Snout had this Horn, or Bill, which was very sharp at the Point, and almost two Foot long, and as thick as a Boy's Wrists. It is a very stiff and swift Fish, for I have seen it fly at Bonitoes, with which it wages continual War. I have often observed Bonitoes and Albacores wounded by this sort of Fish, and the Sea muddied with the Blood. I am certain there are some of this sort much greater than those I saw this Day, which attack the Whales, and probably it is their mistaking a Ship for a Whale that occasions their encountering with a Ship. However, I doubt not but a great Ship may be endangered by the splitting and gashing of its Planks, occasioned by this Fish endeavouring to withdraw its Horn after it has struck.

While the Calm and the excessive Heat continued, we saw a certain white thing about the Bigness of an Ostrich-Egg floating upon the Water, which sunk when the Ship came within fifty or sixty Paces of it; our Pinnace's Crew said they saw a great many of them. It resembled a Man's Head without Hair, and some say they observed two black Eyes and a Mouth upon it. We likewise saw a strange sort of Fish, about as large as an ordinary Lamprey, and equally round, with a large Fin or Crest, which seem'd to be above a Foot high over its Head, and sloped in a continued Series down to its Tail. It swims upon one Side, so that the Fin, together with the Body, represents a large Fish in a triangular Form, and it makes its Way by shutting from one Side to the other; but when it catches its Prey, the Fin is straight, and appears above the Water to be of an ashy Colour, though the Body of the Fish is as white and as round as a Tallow-candle.

5. On the Tenth we were in $31^{\circ} 45'$ S. Lat. the Needle varying $12^{\circ} 20'$ N. E. The Twentieth our Lat. was 24° , and the Variation $9^{\circ} 30'$. Here we saw a great deal of Wreck, or Sea-grass, of a reddish Colour, which some say comes from the *Tribian de Aunns-Ilands*. The next Day there happen'd a violent Storm, the Wind at West, which had almost broke down our Masts, our Topmast-Sails being then out. Such Storms are common, and very violent in those Seas in Winter; but it was then Summer there, and the Autumn was just approaching. On the 5th of *March* our Lat. was 31° , and the Variation no more than $20'$, which I took for a certain Sign that we were not above Seventy or seventy-six Leagues off of the *Cape of Good Hope*.

The 11th we saw Tramps, or Sea-weeds, about three or four Fathoms long, Cormorants, Sea-Bears, and the Jew-stailed by the *Portuguese* Alcatraz, which are white

all over, only the Tips of their Wings are black; and these were certain Signs of our approaching to the Land. We likewise saw innumerable Shoals of Porpoises, and a great many Whales; towards Night we discovered Land, and found the common Navigation to be very good, being then in 33° Lat. which is over against the Bay of *St. daigna*. We resolv'd to steer our Course towards the Land, which lay from us about twenty Leagues S. E. at 34° Lat. in order to take in fresh-Water: but the Wind being contrary, that is, S. and the Tides being N. N. W. we did not arrive at the *Table Bay* till the 15th at Night at which Time we cast Anchor there, having lost only one Boy in the Voyage. The next Day I sent fifty Men on Shore with Sails to make Tents of; when the Boat return'd, they told me they had found several Corpses of dead Men and others fasten'd up and down, on a small Fortification of Earth, which we guess'd to be built by the *Danes*, for one of the Natives that spoke a sort of Jargon or broken *English*, gave us to understand, though more by his Signs than his Language, that five Ships had sail'd from thence to the Eastward about three Months before.

The 17th it continued to be very stormy, with a North East Wind. Some Mulquetters, whom we had sent in Quest of a Soldier who had straggled from us, report, that they had pass'd along the South Side of an Island Mountain, joining to the *Table* Mountain, where they saw an Infinity of very large Baboons and Monkeys; and from thence continued their Course along the declining Part of the Mountains that bound the Western Shore, till they descend'd the Sea about half a League off, when they to be another Bay between this and the *Cape of Good Hope*, thence they turned back, and when they were upon the Mountains, descried the Sea to the Southward, and came thence to the Eastward of the *Cape of Good Hope*. That they had a plain View of other Mountains, between which and these they were upon, there lay an open Plain about ten or twelve Leagues broad, the Soil of which was very good, and capable of producing several Fruits, the Mountains terminating upon the Sea, without any Mountains between *Cape Falso* and the *Cape of Good Hope*. First at the Foot of the Western Mountains they met with Woods and large Trees, like Apple-trees, which bore no Fruit, but were very hard Woods; and in the same Place were very pleasant Pastures, and some Cattle, and excellent clear Water.

This Report inspir'd me with a Curiosity to see the Country: accordingly, the next Day, I walk'd out by the Back of the *Table* Mountain, and when I was got ten Leagues into the Country, observed very good Greens, sprinkled with Grains and pleasant Flowers, with a small Rivulet of fresh Water gliding along the Plain, and being itself in the Sea at the Foot of the Bay, at a Place where there is no great Confluence of Water, which we call the River. This Rivulet rises out of the Mountains that lie between the Point of the *Cape* and this Bay, and serve for Boundaries to the Western Sea. I likewise observ'd that this Rivulet makes several Fens to the Southward, along the Downs or Banks of the Land, that terminate the Bay and to that Place which we call the River, where Banks of fifty or sixty Tun may enter at high Water. I earned along the Mountain, and at the Foot of the *Table* Mountain to the Southward, met with a great many Trees, some of which afford Planks a Foot broad, and eighteen or twenty Foot long, their Trunks being straight like that of a Pear-tree, their Leaves whitish and finally their Bark about two Inches thick and reddish; the Heart of the Wood white and hard, and the whole Tree full of Sap.

I likewise observ'd Herbs of the same Nature with those in our Country, such as Sorrel, Fern, Broom, &c. From this Mountain I saw *Cape Falso*, and the Sea that washes the East Side of the *Cape*, which forms a large Bay as far as the *Cape*, where a great many Rocks shoot out into the Sea, that must needs be dangerous to Ships on a Southern Wind. Upon the Side of the Mountains of *Cape Falso* there runs either a great River, or an Arm of the Sea, that shoals very far up; and I observ'd the like upon the inland Side of the Mountains upon the *Cape of Good Hope*. Upon all these Mountains there are great Quantities of Goats Follow Deer as big as Hares, Partridges, and all sorts of Fowls; Baboons, Monkeys, Lions, white Wolves, Foxes,

their Wings are black; and as our approaching to the Land, the Shoals of Porpoises, and at Night we discovered Land, our Navigation to be very long, over against the Bay of Bantam, our Course to the Point of the Leagues South of the Bay, but the Wind being contrary, we being N. N. W. would not be able to go on till the 15th at Night at which Time we lost only one Boy in the Boat, fifty Men of our own, and the Boat returned, they for the most part of dead Men and others a small Fortification of Earth, built by the *Daves*, for one of the Jargon or broken *Englisb*, gave us some by his Signs than his Language, from thence to the Bay before.

The Bay was very stormy, with a North West Wind, whom we had seen in the Bay, and from us, reported to be the South Side of an Island, the *Table Mountain*, where they were the *Biskoons* and *Monkeys*, and our Course along the declining Side of the Western Shore, till we had a League off, which was this and the *Cape of Good Hope*, and when they were upon the Point of the Southward, which is the *Cape of Good Hope*. That they were Mountains, between which there lay an open Plain about ten Leagues long, the Soil of which was very fertile, producing several Fruits, but without any Mountains between the *Cape of Good Hope*. That at the Foot of the Mountains they met with Woods and large Rivers, which bore no Fruit, but were the same Place were very fertile and excellent clear Water. We were with a Curiosity to see the Bay, the next Day, I walked out to the Point, and when I was got there, I observed very good Greens, and several Flowers, with a small Plain along the Plain, and being out of the Bay, at a Place where there was a great quantity of Water, which we call the *Table Mountain*, that the Cape and this Bay, and the Western Sea. Thus we observed several Rivers to the southward, and some of them, that terminate the Bay, and call the River, which is Banks of Water, at high Water, I counted about the Foot of the *Table Mountain*, with a great many Trees, some of them broad, and eighteen or twenty being straight like that of a Pear, and finally, their Bark about two Leagues, the Heart of the Wood white, and the Tree full of Sap.

The Mountains of the same Nature with those of the *Table*, Fern, Broom, &c. From the *Table*, and the Sea that washes the Foot of it, which forms a large Bay, as far as the many Rocks shoot out into the Sea, dangerous to Ships on a Southward, or an Arm of the Sea, that is observed the like upon the Mountains upon the *Cape of Good Hope*. There are great Quantities of *Harts*, *Partridges*, and all other Birds, *Lions*, white *Wolves*, *Foxes*, &c.

Porcupines, *Ostriches*, and other Animals, unknown to me. In this Day's Journey I saw one of the Natives, they having retired for fear of us.

6. Those who lived towards the Point of the Cape, are the most miserable Savages yet discovered, for they neither sow nor cultivate the Ground: neither do they fish, or venture themselves two Steps into the Sea. They are of a very low Stature, especially their Women, and are so meagre, that they always look as if they were dying for Hunger. Their common Food is some white Roots, about the Bigness of Chestnuts, which have a Stalk like a Leek, only a little narrower, and not indented, that bear a white Flower. If they find any Cockle-fish, or Whales, or any other dead Fish upon the Shore, tho' never so much putrid, they throw them upon a Fire, and then feed heartily upon them; nay, when the very Skins, Heads, and Entrails of the Sea-Bears and Penguins, which our Men fed upon, were thrown out of the Tents, and had lain for seven or eight Days, till their Stench obliged our Men to remove their Tents, and scared the Wolves and other wild Beasts from touching them, even then, I say, the Savages would take them up; and after having put them upon the Ashes, and squeezed them between two Stones, would eat up every Bit of them.

When they meet an *European*, the first Thing they do is to shew their Stomach, which they throw into their Body, so that it makes a Hollow, or great Pit upon their Breast. They have Wars one with another, probably upon account of their Cattle, which they do not eat, unless they are ready to die through Leanness, Age, or any other Accident. They cover their Privities with Sheep's Tails, and wear the Skin of a Sheep, or some other Animal, over one Shoulder, like a Scarf. The better sort have dried Tripe about their Necks, upon which there hangs a little Knife, shaped like a Lance, in a wooden Sheath; and this I take to be the Instrument with which they cut off one of their Testicles at ten or twelve Years of Age, that being a Custom among them, perhaps to qualify themselves for running, in which Exercise they outdo all the Nations that ever I saw.

Some hang upon their Necks a Plate of Copper, as thin as a Teitoon, and about a Hand long, and four or five Inches broad; others wear Bracelets, being Pieces of Copper or Iron, with a Hole in the Middle. Those who seem to have some Command over the rest, have commonly a Stick in their Hands, with a Fox's Tail at the End of it. I could not perceive any Religion among them. They marry indeed, and dance, and their common Salutation to us is dancing to a Song, which, from the Beginning to the End, is nothing else but *Hautiou*. Their Arms are an *Aslagay*, with a weak sort of a Bow and a Quiver, which they hide under some Bushes when they come to our Tents. They are very apt to steal any thing of Iron or Copper, but Linen or Cloaths they do not covet.

They are Negroes, and have frizzled Hair, as well as those in *Guinea*; but they wear no Ornament upon it. They have no Cottages to live in that I could perceive; but in the Night-Time they shelter themselves, with their Wives and Children, with Bushes, and have some Skins, stretched like an Umbrella, upon two Sticks laid across, with one in the Middle to fasten it in the Ground, under which they lie buried in the Sand quite up to their Belly. They are altogether ignorant of Agriculture, and the making of Canoes; whereas could they but tack some Pieces of Wood together to convey them to the Islands just by the Continent, they would find vast Quantities of Penguins and Sea-Bears which to them are most delicious Food, not only for their own Solenance, but for Sale among their Neighbours.

This *Table-Bay* lies in 33° Lat. the Needle varying 1° 45' N. W. Its Air is very wholesome. Sometimes you may treat here with the Natives for Beef and Mutton, but that is very uncertain. It is a secure Road to anchor in, and has about six or eight Fathom Water: There is more Rain and Wind in the Bay than ahoze, for the high Mountains stop the Clouds and Vapours, which being driven by the Wind, break and fall down in Hurricanes upon

the Bay. The Height of the *Table-Mountain*, from the Sea: Side to the Top, is 1350 Foot perpendicular.

7. Some of our Men going ahoze, happened to light upon a great Stone, with two little Packs of pitched Canvas, underneath which we afterwards found some *Dutch* Letters. When we opened them, we found, first, a Piece of pitched Canvas, then a Plate of Lead wrapped round the Packet, under that two Pieces of fresh Cloth, then a Piece of red Frize, all wrapped round a Bag of coarse Linen, in which were the Letters very safe and dry. They contained an Account of several Ships that had passed by that Way, particularly of an *Englisb* Advice-Boat that was gone to *England* to acquaint the Company with the Injuries the *Dutch* had done them in the *East-Indies*. They also gave Notice to all Ships that passed that Way, to take care of the Natives who had murdered several of their Crew, and stole some of their Water-casks. Farther, they contained Advice that the *Dutch* had besieged *Bantam* with thirty-five Ships, and that the *Englisb* were forced to abandon it for want of Provisions; that the King of *Bantam* and the *Dutch* committed several Acts of Hostilities, and many other Things too long to be inferted.

Having read this Letter, I was at a Loss whether I should go to *Bantam* or not, for I readily imagined that *Bantam* being blocked up by the *Dutch*, they would not suffer us to enter, and far less to traffick there, since they always endeavoured there to keep the Trade out of our Hands: Besides, I was apprehensive they might carry the Place, in regard that Prince *Matarau*, who called himself Emperor of all *Java*, and alledges, that the King of *Bantam* revolted from him, would readily join with the *Dutch* in reducing the Rebel King. Upon these Considerations I resolved to steer my Course to the Coast of *Coromandel*, to put off some Goods that were proper for that Coast, and buy up others that should be saleable at *Achen*, and upon the Coasts of *Sumatra* and *Java*; and, after all, to take in at *Java* a Ship's Loading of Pepper; after which, if the Siege continued, to leave there a Factory with the Pinnace to trade up and down the Coast; but, if the Siege was raised, I designed not to settle any Factory at *Achen*, but to send one of the Ships back to *France*, and the other, together with the Pinnace, to *Bantam*, where we might get two or three hundred per Cent. upon the Coast-Goods, and there to load the Ship, and leave a Factory, together with the Pinnace.

In the mean time I called to mind that the Directors intended I should go straight to *Bantam*, and send at least one of their Ships back to *France* that Year, which I could not do if I touched upon the Coast of *Coromandel*: Besides, if the Siege should happen to be raised, I was apprehensive the Company would blame me for not following their Orders; but even that Consideration was counterpoised by this, that I could not at any rate send back one of their Ships that Year, since I could not reach the Coast of *Sunda* till *August*, nor get out from thence till *October* or *November*, by reason of contrary Winds, and upon that Score I should be obliged to spend the whole Year without doing any thing, and eat up all my Provisions, which in that Country are so scarce, that the *Englisb* are forced to spread themselves along the Coast to be supplied; not to mention that I should be exposed to the Discretion of the *Dutch*, who never meant us well. Having maturely weighed all these Considerations, I asked Advice of the principal Deputies, some of which said they would submit to my Judgment, and others told me, that since I had a positive Commission for *Bantam*, and since *Bantam* was a Place of too great Importance to the *Dutch* to be long at Variance with the King, I had best steer my Course thither. These different Opinions put me upon another Expedient of sending the *Hope* to *Bantam*, and giving her Captain, Mr. *Grave*, an ample Commission.

8. On the 3d of *April* we weighed Anchor, and being becalmed, about two Leagues off from the Bay, were driven by the great Waves coming from the South, and the Tides running North upon a little Island, and cast Anchor within a League of it in twenty Fathom Water, the Ground being muddy Sand. The Isle lay from us North one Quar-

into the Country, and the Sea on the opposite Side cuts to deep within the Land, that the Isle is very near divided into two, there being only a small Isthmus of a hundred and twenty Fathoms left, by which it is joined together. The lesser Part of the Isle, wherein is the Castle of *Ambona*, contains about a hundred and twenty small Towns, and the greater but four Towns and about seven Villages. The Inhabitants were heretofore Savages and Cannibals, and applied themselves to no kind of Agriculture, which made the Country appear a Wilderness; but of late Years they have applied themselves to cultivating the Ground, which being very fertile produces great Plenty of Oranges, Lemons, Coconuts, Bananas, Sugar-Canes, besides Cloves. They continue still to be ignorant People, the only Skill they shew being in the Management of a Dart, which they use with so much Dexterity, that at sixty Paces Distance they will hit a Crow's-piece. They are famed for their Cakes made of Rice, Almonds, and Sugar, which the Inhabitants of the adjacent Islands take against the

which, contrary to their Agreement, were carrying Paper to *Mecca* and *Persia*, they came again to *Haiti*, &c. The King of *Decan* is famous for his great Artillery, he has more than any of the *Indian* Princes; and amongst the rest one great Piece of Brass Cannon, the Ball would weigh eight hundred Weight, and requires five hundred and forty Pounds of fine Powder. The Engineer who built it was an *Italian*.

7. But to return to our Voyage, early in the Morning, *January* the 7th, we came before the City of *Goa*, belonging to the *Portuguese*, where we found some Fleets in expectation of a certain *Jesus* we were to carry to *India*, but he not coming, we continued our Course, but were long got a League before we saw a *Portuguese* Frigate come after us; we backed our Sails till she came near us, and found her to be a Vessel that came on purpose to go along with us under *English* Colours, for fear of being interrupted by the *Dutch*, she brought us some Presents, viz. three Oxen, some Sheep, Oranges, Citrons, and Bread from the Governor. The 9th we tided with another Wind by the Isles of *Bandera* and *Bombay*, which stretched along the Coast from *Bacem* to *Vishapour*; the latter has a good Road for Anchorage, and is of a pretty large Extent. On the 10th we tided by *Rassapour* within twenty one Leagues of *Goa*, and in the Afternoon by the City of *Vingaria*, where the *Dutch* have a Settlement four Leagues from *Goa*, and in the Evening came in Sight of the Isles about *Goa*, and of two Isles that secure the Harbour. On the 11th we came to an Anchor under the Fort de *Guarda*, which lies not above a Mile from the City of *Goa*; we saw six Gallies and a Cruizer in the Haven: soon after came aboard us a *Portuguese* Captain to compliment the *English* President in the *Viceroy's* Name, and immediately after the Commodore of the Gallies. The Harbour of *Goa* was then blocked up by twelve *Dutch* Ships, notwithstanding which we saw coming to a *Caravan*, consisting of three hundred small Coasting Vessels, laden with Pepper, Ginger, Cinnamon, Sugar, Rice, Fruits, and Preserves, besides Abundance of Provisions.

come to the River is very late riding for Ships, though the Road, in the Bay of *Zanzizara*, four Leagues thence, is incomparably better. The Harbour of *Cetapour*, the most excellent on all that Coast, lies twelve Leagues thence, the Vessel being sheltered here by an adjacent Island against all Winds. It lies in 17° 10', and twenty Leagues from *Goa*. Three Leagues from the said Harbour lies the City of *Rassapour*, one of the best maritime Towns of the Kingdom of *Decan*; and nineteen Leagues thence is the Bay of *Wingaria*, a very convenient Haven. It lies three Leagues from the *Isle* *Quemada*. We will now come to its Inhabitants, which are either *Banjans* or *Mohammedans*.

The chief Trade of the City of *Dabul* is in Salt and Pepper brought thither from *Oranubammara*. They used formerly to drive a considerable Traffick to *Persia*, and the *Red-Sea*; but they send but few Ships thither now. The ordinary Custom paid here is 3l. 10s. per Cent. but the *Dutch* pay only one Moyer of it. Though the greatest Part of the Inhabitants of the Kingdom of *Decan* or *Cuncan* are *Banjans*, yet are they not so averse to Flesh as the others in the *Indies*, for they will feed upon any Flesh, except that of an Ox, Cow, Buffalo, and Swine; for the last they have an absolute Abomination, and the Ox and Cow are in great Veneration with them. In their Life and Conversation, Marriages, Purifications, and other Ceremonies, they follow the Footsteps of the other *Banjans*.

Their Habitations are only Cottages of Straw, the Doors being so low that one cannot go in without stooping. Their Furniture amounts to no more than a Mat to sleep upon, and in the midst of the Hut you see a Hole in the Ground, wherein they beat the Rice. They do not differ in their Habit from the other *Banjans*, except that they wear mostly wooden Shoes tied up over the Insteps with Leather Straps; but their Children go naked till they are seven or eight Years of Age. Their Arms are the same with the *Indojans*; most of them are Goldsmiths by Trade, though some also profess Physick and Surgery; they have also some Carpenters, Malons, and Barbers among them.

The chief Commerce of the Kingdom of *Decan* consists in Pepper and Provisions. The first is transported thence

to *Mecca* and *Persia*, they came again to *Haiti*, &c. The King of *Decan* is famous for his great Artillery, he has more than any of the *Indian* Princes; and amongst the rest one great Piece of Brass Cannon, the Ball would weigh eight hundred Weight, and requires five hundred and forty Pounds of fine Powder. The Engineer who built it was an *Italian*.

7. But to return to our Voyage, early in the Morning, *January* the 7th, we came before the City of *Goa*, belonging to the *Portuguese*, where we found some Fleets in expectation of a certain *Jesus* we were to carry to *India*, but he not coming, we continued our Course, but were long got a League before we saw a *Portuguese* Frigate come after us; we backed our Sails till she came near us, and found her to be a Vessel that came on purpose to go along with us under *English* Colours, for fear of being interrupted by the *Dutch*, she brought us some Presents, viz. three Oxen, some Sheep, Oranges, Citrons, and Bread from the Governor. The 9th we tided with another Wind by the Isles of *Bandera* and *Bombay*, which stretched along the Coast from *Bacem* to *Vishapour*; the latter has a good Road for Anchorage, and is of a pretty large Extent. On the 10th we tided by *Rassapour* within twenty one Leagues of *Goa*, and in the Afternoon by the City of *Vingaria*, where the *Dutch* have a Settlement four Leagues from *Goa*, and in the Evening came in Sight of the Isles about *Goa*, and of two Isles that secure the Harbour. On the 11th we came to an Anchor under the Fort de *Guarda*, which lies not above a Mile from the City of *Goa*; we saw six Gallies and a Cruizer in the Haven: soon after came aboard us a *Portuguese* Captain to compliment the *English* President in the *Viceroy's* Name, and immediately after the Commodore of the Gallies. The Harbour of *Goa* was then blocked up by twelve *Dutch* Ships, notwithstanding which we saw coming to a *Caravan*, consisting of three hundred small Coasting Vessels, laden with Pepper, Ginger, Cinnamon, Sugar, Rice, Fruits, and Preserves, besides Abundance of Provisions.

788 The Voyages and Observations of J. A. de Mandelløe, Book I.

Gold, and Pezary, which Stone breeds in a Maw of a Sheep, or Goat, within the Substance of which is also found a Tuft of Grass. It is smooth, inclining to a greenish Colour, its Goodness being to be tried by its Weight. In the Country of *Pan*, near *Malacca*, is a certain smooth and slippery Stone found in the Gall of certain Hogs, of a reddish Colour and bitterish Taste, which being steeped only in cold Water affords a most effectual Remedy against all Poison and infectious Distempers. The Isle of *Borneo* furnishes also Diamonds, Sapan-wood, used by the Dyers, Brazil-wood, Wax, Pepper, Frankincense, Mastich, and divers other Gums. The Isle is not destitute of good Harbours, among which that of *Borneo*, at the Mouth of a very good River, is the largest and most commodious. Their Cities are not very populous, and their wooden Houles so slightly built that they remove them at Pleasure. They are accounted very ingenious, but will rather live by Piracy than Industry, unto which they are so much addicted that their Vessels are seen upon the Coast of *Pegu* four hundred Leagues thence. They use Swords, Bucklers, Lances, Darts, and

merce, set upon five *Dutch* Vessels in the Port of *Banda*, but being repulsed with Loss, revenged their Disgrace upon the *Ambonyans*, who were suspected to favour the *Dutch* in those Parts. *Stephen Verboegen*, two Years after, viz. on the 21st of *February* 1603, landed a certain Number of Soldiers near *Ambonya*, in order to attack the Castle; but whilst he was landing his Artillery the *Portuguese* Governor, not daring to stand the Shock, surrendered the Place without a Cannon being shot, though the Garrison consisted of six hundred Men. Before *Mohammedanism* was introduced in the Isles of *Java*, *Ambonya*, and the *Moluccas*, by the *Persians* and *Arabians* trading thither, they were all *Pagans*; some of them continue to still; others, though circumcised, yet persevere in their *Pagan* Superstitions.

Nothing is more frequent here than to worship the Devil, though they are not able to tell you what he is. They affirm him to be an Aereal Demon; whence they give him the Name of *Lanithe*, i. e. Air, yet make him subordinate to another called *Lanikila*, as well as to him they call *Tatay*, who is a Degree lower than *Lanikila*. They give him the general Name of *Tito*, i. e. Evil Spirits, &c.

become both fairer and larger than the first. They lay
have also the best white Sand-wood, and those Birds
called *Paseras del Cielo* by the *Spaniards*, and by us Birds
of *Paradise*. After they have caught them, they cut off
first the Feathers to the Body, so that when the Flesh dries
the Skin and Feathers join indifferently together, so that many
have been of Opinion these Birds are without Feet.

The *Dutch* are Masters of *Malaya*, a well fortified
Town of *Ternate*, as also of the Fort of *Taiuco*, and that
of *Murice* and *Lidar*, of the Fort *de neveld* in *Bachiam*,
and three more in the Isle of *Machiam*, at *Taffao*, *Lau-
caie*, and *Geshpua*; they have also a Stone-Fort in *Moor*.
The King of *Malayam*, which is governed by its own
Sovereign, being so well stocked with *Sago* that the Inhi-
bitants have sufficient wherewith to subsist without Labour,
has made them so idle and careless, that they are scarce able
to raise 200 fighting Men. The Isle of *Machiam*, which
is subject to the King of *Ternate*, is about seven Leagues
in Circumference; the *Dutch* made the *Dutch* Masters of

China, and vast Numbers of the same. They visit
their every Year for the Convenience of *Trade*, and
from *Pe-cho* to *April* you may see in the *Harbour*
is defended by two wooden Forts, and
Japan. This Place is also much frequented by
Japan, but not in near so great Number as
China. Notwithstanding which, the *Spaniards*
most jealous of the rest than the last.

The *Japan* is composed of many Parts, and
several Arms of the Sea, extending from the
to *Long Pleurs* scarce ten, or thirteenth
Wealth. On the East Side it hath *Nippon*,
North *Tartary*, on the West *China*, and
South, with Part of the *Terra Australis*.
Empire consists of sixty six lesser Kingdoms, and
fifty-three whereof are comprehend'd in the two
Kingdoms of *Meca* and *Amagance*, and the
great Kingdom of *Yma*, and the remaining
According to the *Japanese*

it is so shallow, that in a dry Season there is not above two
Foot Water.

The Island of *Goa* is so barren, that it produces nothing
fit for the Subsistence of Men or Beasts, except a few Fruits
in the Gardens, and a slender Share of Grains for Lambs
and Goats; notwithstanding which, they are so plentifully
furnished with Provisions from the two before-mentioned
Islands, and the Continent, that in Sight of the Blockade
of the *Dutch*, a Hog was then sold for a Crown, six suck-
ling Pigs, ten Pullets, or eight Wild-ducks, for the same
Price; but Beef and Mutton is a great Rarity here. There
is a Fountain representing *Lucretia*, out of whose Wound
issues forth as much fresh Water as supplies the whole City.
The Ships provide themselves with fresh Water out of a
Rivulet, which coming out of a Rock falls into the other
River near the Castle. The City has no other Defence
but the River, having neither Gates nor Walls; the Build-
ings are generally very handsome, and Persons of Note
show a great deal of Magnificence here both in their Build-
ings and Furniture.

The Inhabitants are of two Sorts, either *Cassizes*, or
Melizes; the first are such as are born here of *Portuguese*
Father and Mother; the second, those who were begotten
by a *Portuguese* and an *Indian*. The last are inclining to an
olive Colour, and in the third Generation becomes as black
as the Natives of the Country, which is also observable in
the fourth Generation of the *Melizes*, though there is not
the least Mixture among them. The *Portuguese* are distin-
guished into several Ranks; *Tituladoes* are those in pub-
lick Employments; *Tidalgoes da casa del Rey*, are Gentlemen
in ordinary to the King's Household; *Mocas Fidalgoes* are
the Sons of the *Tituladoes*, admitted to Gentility by the
King; the *Cavaleros Fidalgoes*, and *Escuderos Fidalgoes*,
are simple Gentlemen; those called *Mocas da Camra*, or
Grooms of the King's Chamber, paid also for Gentlemen.
All the rest are *Homeres*, *Honrados*, and *Soldados*; the first
of which are Merchants, and appear as well as any Gentle-
men, there being scarce any thing here, except Tailors
and Shoemakers, but what are served by Slaves; no Person
of Quality ever goes on Foot, but either on Horseback, in

night to Mid-day, but do not reach above ten Leagues into
the Sea; whereas the Sea-Winds coming from the West
(call *Viracons*) blow all the rest of the Day.

This so sudden Change of the Seasons, as well as that
Variation of the Winds, prove the Occasion of many dis-
tempers, especially that called *Mordexen*, which is not
without Delay, besides Fevers and Bloody Fluxes, that
Remedy against which here is *Blasphemy*. The Remedy
is not so much as known in the *East*; but the *Portu-
guese* use a great Number, and above all an ointment called
Remedies against this Dilemper, yet the *Indians* use
twixt the Sexes are so strong and violent, that they
will afford themselves a proper Time for the Cure of this
Disease, which is thus propagated by the *Portu-
guese*. The Women in these Parts have an excessive Beauty
white Men, and are always kept in great Captivity; they
will venture very hard to encompass their Liberty, so
to pursue this End, frequently make use of the Herb *Datura*,
Datura, or *Datura* (as it is called by the *Portuguese*) to supply
their Husband's Senses to get an Opportunity of fleeing
what they so much delight in. This Herb, called by the
Turks and *Persians* *Datura*, is a kind of Scorpion, and ac-
cording to the *Portuguese* and *Indians* being
somewhat like our Bear's Foot, and grows in the *East*
shady Places; of this they extract the Juice, which is
green, or only take the Seed beaten to Powder, and mix
it either with Preserves, or in the Juice of *Orange*; they
tend to stupidity, which it does effectually to destroy in
Hours after he has taken it, being deprived of all Sense or
Motion, though with his Eyes open, and his face red
Water be applied to the Soles of his Feet, which revives
him, as it were, out of a sound Sleep.

Scarce any *Portuguese* or *Melize* Women are seen to
walk in the Streets; but if they go abroad upon necessary
Occasions, they are carried in Palanquins, or Litters, and
so closely guarded, that it is impossible to speak to them.
They appear abroad richly dressed, in Velvets, Silks, and
Brocades, adorned with Jewels, though at the same time

790 The Voyages and Observations of J. A. de Mandelsloe Book I.

Fruit the eighth Year, and lasts one hundred Years. The
Fruit of it is gathered but once every other Year, because
the Inhabitants break off the Buds the first, that they may
have a more plentiful Crop the second Year. The Fruit
is ripe from *August* to *January*. This Tree affords no
Gum, by reason of its excellent Heart, the Fruit being too
dry that the Inhabitants, to increase its Weight, put a
Pitcher with Water, within ten Feet of their Clove-Bigs,
which is ticked up within two or three Days Time. The
Chinese do the same with their raw Silk.

As the *Meluccas* yield more Cloves than any other
Islands hereabouts, this has misled some to affirm that they
grow only here, it being certain they yield yearly Six
thousand Barrels of Cloves, allowing Five hundred and
an Half to a Barrel; though, at the same time, the Isles
of *Ires*, *Moyarna*, *Cavaly*, *Sabugo*, *Maringon*, *Gamoco-
nora*, *Ambeyna*, but especially the Isle of *Faranula*, pro-
duce considerable Quantities, but not so good as those of
the *Meluccas*. In the Middle of the Island of *Ternate* is
a Mountain full of Palms and other Trees,

about seventy-two more, subject to the King of *Ternate*,
from *Mindanao* on the North Side, and *Bina* and *Coron* on
the South, and between the Continent of *New-Guinea* to
the East.

14. The *Philippine* Islands, which lie to the North of
the *Meluccas*, were discovered by *Ferdinand Magellan*
in 1520, but no Establishment was made there till 1565,
when they got the Name of *Philippines* from *Philip II.*
then King of *Spain*. The first Settlement of the *Spaniards*
was made in the Isle of *Zebu*, and about six Years after that
in the Isle of *Manila*, now called *Manilla*, from its chief City,
which is situate in an Isle made by an Arm of the Sea, in
the most Southern Part of the Isle, the whole Compass of
which is three hundred and fifty Leagues, it is twenty
Leagues from *China* to the North, and two hundred and
seventy Leagues to the North-East from *Japan* to the East;
it is encompassed by the Ocean, and to the South of the
great *Archipelago*, which is divided into five Seas, and
stocked with a vast Number of Islands. The People of
the Soil, joined to the Industry of its Inhabitants, makes

publick Cook's Shop, it being their Custom to make their good Cheer in their Houses, where, among other things, they entertain one another with their Musick, the chief of which is a kind of Lute, with four silk Strings, which they strike with a Peg of Ivory. Their Wine, or rather Hydromell, is made of Rice, Sugar, and Honey, and is as strong as any Wine whatever. Their Marriages are contracted in consequence of the Agreement of the Relations. The Bride and Bridegroom being not permitted to see one another till it is to be consummated, those of a common Rank may soon be divorced, and if they dislike the Wife, lend her back to her Relations; but People of Quality, notwithstanding any Disagreement, maintain them in their Houses.

Their Children they educate with all imaginable Mildness, without any beating, as well at home as at School, whether they are not sent till they be seven or eight Years of Age, and when they come to Man's Estate, the Father allows to his Son a certain Part of the Houle, and of his

of the *Indians*, as the *Indians*, and the *Indians* of *Sumatra*, or *Indians* of *Cananor* and *Calicut*. The *Nayers* are the Gentlemen of the Country, who by their Brackets and Rings are distinguished from the *Peña's*, or vulgar Sort, the latter being obliged to go out of their Way, and pay them a peculiar Respect as they pass by. I was told, that at the Time of the first Settlement of the *Portuguese* in those Parts, the *Nayers* pretended to have the same Honours from the *Portuguese*, which these (who were no less proud than the other) refusing to comply with, it was agreed, the Difference should be decided by a single Combat between a *Portuguese* and a *Nayer*, in which the latter having got the better, the *Nayers* ever since pay the same Respect to the *Portuguese* as the *Peña's* do to them.

They have among other Privileges this, that they may freely enter the Houses of their Comrades, and please themselves with their Wives and Daughters, the Signal being to leave their Swords and Buckler at the Door; when a *Nayer* comes to his, not even the Master of the House, will enter to disturb them; but a *Nayer* will never degrade himself so far as to have any Commerce with the Wife of a *Peña*. The *Muabars* use Barkins, with which they write upon the Bark of Cocoa trees, their Characters being quite different from those of the other *Indians*, are understood only by the *Indians*. The King of *Calicut* never eats or drinks any thing but what has been presented before to his *Pagod*, or *Idol*. The Inheritance to the Crown does not fall to the Son, but his Sister's Son, since, as the *Brahmins* here have the first-fruits of the Bride's Virginity, the Children are supposed to be begotten by them. As to the City of *Cocoin*, Notice must be taken, that there are two of that Name in the same Kingdom of *Cochin*, one where I was inhabited by *Muabars*, and lies upon a great River, the last, of which we now speak, lies upon the Coast, and is under the Subjection of the *Portuguese*, having the Sea to the West, and being surrounded on the East side with a Forest of certain black Trees, which the Inhabitants burn out, and make Boats of, and will go with them as far as *Goa*.

The Entrance of the Harbour is rocky and dangerous. The Rivers of the Water Season, which swell the neigh-

bouring Rivers, as the *Indians*, and the *Indians* of *Sumatra*, or *Indians* of *Cananor* and *Calicut*. The *Nayers* are the Gentlemen of the Country, who by their Brackets and Rings are distinguished from the *Peña's*, or vulgar Sort, the latter being obliged to go out of their Way, and pay them a peculiar Respect as they pass by. I was told, that at the Time of the first Settlement of the *Portuguese* in those Parts, the *Nayers* pretended to have the same Honours from the *Portuguese*, which these (who were no less proud than the other) refusing to comply with, it was agreed, the Difference should be decided by a single Combat between a *Portuguese* and a *Nayer*, in which the latter having got the better, the *Nayers* ever since pay the same Respect to the *Portuguese* as the *Peña's* do to them.

The 20th we came within Sight of the *Malabar* at the very Point of which we were bound. It was the 20th of the Month of *June*. This Isle extends from the South North-East, between the two Capes of *Comagapan*, about ten Leagues from the Coast. Its Length being sixty Leagues, and its Breadth being Circumference two hundred and fifty; and in the Report of the Inhabitants, its Commodities are greater before the Violence of the Sea carried a Part of Land on the Side toward *Comagapan*, which is the most fertile of all the *Indian* Islands, I suppose to be the *Tapobana* of the *Antients*. I am not ignorant that some of our moderns make it the Isle of *Sumatra*, of which I am not so did not with out Reason call the Isle of *Comagapan* and most fertile of all the *Indian* Islands, it is not able that it has not only great Plenty of the other Islands produce, but, besides, this *Orange*, *Leimon*, and *Cinnamon* tree, which has a fragrant Smell at a great Distance into the Air, that there is no precious Stone but what is found there; Diamonds; Pearls they take there in abundance; together to fine as those of *Babarum*; and which it affords the finest Ivory in the World. The Discovery of it is owing to the *Portuguese* *Laurence*, Son of *Francisco Almeida*, who was one of the Kings of the Island, into which he took Care to fortify themselves in the Fort, but were chased thence, and consequently the Island, by the *Dutch*, in 1607.

The *Dutch* did not trade here till the 17th of the *Regn* of *Femila Perma Sarada*, King of *Comagapan*, most potent, and in a manner the only Lord of the whole Island, who a century ago, in a very extraordinary manner; for the Throne being become vacant by the Death of

792 The Voyages and Observations of J. A. de Mandellhoe

Marriage is punished here with the utmost Cruelty; so that if a Husband finds his Wife locked up in a Room with another Man, he may, without any farther Enquiry, kill them both. The better to allay the Heat of Youth, and the Danger arising from thence in respect of Adultery, they have in the Cities, nay, even in most of the Inns upon the Road, certain Prostitutes, who are most of them Slaves, and expose themselves to Travellers for Money; and if a Man is to stay for any Time in a Place, he may hire one of these Concubines from their Masters at a certain easy Rate, and keep her for his own Use.

As for their Devotion, it may be said, that they have scarce any at all, the most devout among them seldom praying in publick above once a Month before their *Klols*, which stand in their Temples; near them are their Sepulchres covered with great Tomb-stones two or three Feet high, and those of Persons of Quality have a little Pillar erected near them, containing their Names, and certain other Inscriptions, in the Nature of an Epitaph. The Ecclesiasticks are divided into twelve different Sects, eleven

Family, than break his Promise to his Friends, the Reason most of their Delinquents will rather endure most exquisite Tortures than discover their Accusers. The *Japanese* having such vast Quantities of Commodities, seldom deal in any foreign Commodities, but confine their Commerce to Strangers, especially to the *Chinese*, thither the Product and Manufactures of their Country, though ever since the ancient good Correspondence between those two Empires has been interrupted, they are forbidden by their Kings to send Goods into Europe, and therefore are obliged to carry on this Commerce in the Pretence of transporting their Commodities to the Parts of the *Indies*, unto which they are encouraged by the vast Hopes of Gain. All Commodities imported or exported out of *Japan*, passing thro' the hands of the *Chinese*, paying the least Duty or Custom.

The whole Empire of *Japan* uses but one Language, which is quite different from the *Chinese*, as well as their Characters; as they always use but one Pen, they write every thing with Pencils in certain

... every of it is owing to the
... *ence*, Son of *Francisco Almeyda*,
... of the Kings of the Island,
... Care to fortify themselves in
... were chased thence, and
... lly, by the *Dutch*, in 1637.
... the *Dutch* did not trade here
... n of *Amala Derma Surada*, King
... potent, and in a manner the
... the whole Island, who a
... extraordinary manner; for
... become vacant by the Death

... of the Flesh of which is a great
... Creature, not unlike our Bears, but of a very large
... the Skin of which is much esteemed in those Parts,
... Their Grounds are very fertile, but neglected, which
... make them very fertile, and, what they have, not very
... grateful to the Palate. It produces also some Ginger and
... Cassava, and, as the *Chinese* relate, Gold and Silver;
... to the *Dutch* have hitherto found none of these Mines
... worth being after. The Places in which the *Dutch* have
... Settlements are, for the most part, along the Sea-
...
... Its Inhabitants appear like Savages, being of a more than
... ordinary Size, black and hairy all over their Bodies, but in
... their Conversation obliging, honest, and good-natured;
... ter Women are not so strong and lit, but inclining to
... Hands, and yet not ill shaped. They wear a sort of Garment
... round the Middle; but when they bathe themselves
... as they commonly do twice a day in warm Water)
... as well as the Men, strip themselves stark naked,

... *Nipando*, they began to establish themselves there, and at
... all accomplished it by taking of *Celombo* from the *Portu-*
... *guese*. The King of *Candy* is the most potent and most
... potent of all the other Princes in the Isle of *Ceylon*. He
... takes great Delight, as well in the *European* Way of
... Building, as in their Fortifications. The Kingdom is situated
... along upon that River, upon which lies the City of
... *Polonnaruwa*, which serves for an Harbour to the King's Ships.
... The Inhabitants resemble the *Malabars*, but that they are
... asque to black. They wear long hair, except that
... some of the *Portuguese* Doctors. They all wear Pendants
... in their Ears and Points at their Sides. The Women
... likewise go with their Breasts uncovered; but for the rest,
... they are very modest both in their Clothing and Conver-
... sation, dressing their Heads much like the *European* Wo-
... men, with their Hair close behind, and tied in Tresses.
... They appear in gold and silver Garments with Rings up in
... their Hands, Feet, and Legs, set with precious Stones.
... They live conveniently enough in their Houses, their
... Wives being good Housewives, and especially well skilled
... in Cookery. The *Gingivale* are so much addicted to an idle
... Life and Effeminacy, that they are neither fit for War nor
... any thing else.
... 7. *Ceylon* is, as I said before, beyond all Dispute, the
... most plentiful Isle of all the *Indies*; nothing can be named
... either of Provisions or Fruits, but what is very cheap here;
... though they are *Pagans* they eat of every thing in general,
... even Pork (abstaining only from the Flesh of an Ox or
... Cow). The *Mohammedans* enjoy a full Liberty among them;
... and the *Pagan* Inhabitants abstain from Wine as well as
... they. They have a great Veneration for their Brahmans; they
... marry their Maids at ten or twelve Years of Age, and burn
... their Dead. *Fimala Derma*, whom we spoke of before,
... had got as much Christianity as could be expected among
... the *Indian* *Portuguese*, which he soon laid aside; so that
... his Successors continued in their Idolatry. Some of the
... Inhabitants worship the Head of an Elephant cut in Wood
... or Stone, who, they say, out-do Mankind in Judgment,
... and therefore pray for Wilkom to them.
... They lay up every Day a certain Share of their Provi-
... sions in a Basket kept for that Purpose for their Pagods,

... When one Village happens to be at War with another,
... they first declare it openly against one another, which
... being the Signal to be upon their Guard, they do not attack
... by open Force, but dividing themselves into small Troops,
... perhaps of twenty-five or thirty Men, lie in Ambush near
... the Village; they intend to attack till Night, when they lie
... upon the Hills, which lie dispersed in the open Country,
... till perhaps they can light upon an aged Man: They kill
... him, cut off his Head, Hands, and Feet; nay, if they
... have Time enough, cut the whole Body into small Pieces,
... that every one of them may take home a Piece of it along
... with him as a Mark of his Bravery; but if the next Vil-
... lage happens to take the Alarm, they are glad to be con-
... tented with the Head alone, or perhaps a good Lock of
... the Hair, which they carry home in Triumph, as an un-
... doubted Sign of their Victory; when they intend to make a
... very bold Attack, they enter the Village by Night, force open
... a House, kill all they meet with, and to betake themselves
... to their Beds, for fear of being pursued. When they en-

... some *Jesuits*, who were on Board us, and had spent most of
... their Days in the *Indies*, concerning those Parts I had not
... seen, according to whose Relation I thought fit to insert
... the following Account. Near the Cape of *Comorin*, along
... the Coast of *Malabar*, for a Tract of near an hundred and
... forty Leagues by Sea, extended the Isles, by some account-
... ed One thousand, called *Maldives* by the *Portuguese*, lying
... along the Cape to the North. Some of which being very low
... that they are often fit to be inundated, are not inhabi-
... ted, others are. The *Malabars* are of Opinion that they
... were torn from the Continent by the Violence of the tem-
... petuous Waves of the Sea, which, in four Places, is at
... so slender a Distance from the Continent, that a bank ac-
... tive Fellow might leap over it. The capital City, which
... has given its Name of *Maldiva* to all the Islands, is built
... upon four small Isles, being the Residence of the King,
... who commands over all the rest, and a Place of good
... Trade, though they produce naturally scarce any thing
... but Coconuts, but the Industry of the Inhabitants supplies,
... in some measure, the Defect of Nature here, there being
... not any Nation in the *Indies* more ingenious in making
... Garments of Silk and Thread than they. The Coast of
... *Coromandel* being in the most Eastern Part of the *Indies*
... on this Side of the *Ganges*, is divided from the *Malabar* Coast
... by the Mountains of *Balagatta*, its Extent being one hun-
... dred Leagues along the Coast from *Cape Comorin*, or ra-
... ther the Point of *Negapatam*, as far as the River *Nizand*
... and the Town of *Mysapatan*, which, as it has excellent Har-
... bours, and the best Roads for Anchorage in the *Indies*, so
... it serves for a safe Retreat for such Vessels as are by the
... tempestuous Winter-season forced from the Coast of *Ca-*
... *zzerat* thither, where the Climate and Weather is very clean
... at that Time.
... The *Portuguese* are Masters of the Town of *St. Thomaz*.
... On this Coast, they say, that when they first discovered
... themselves of *Celanon* and *Cranganor*, the Inhabitants of this
... Coast, who were Christians of the *Greek* Religion, implor'd
... the Protection of the King of *Portugal*. To back this
... Tradition, they affirm, that *St. Thomas*, one of the twelve
... Apostles, after he had taught the Gospel in the Kingdom of
... *Nosfogga*, petitioned the King to give him Leave to build a
... Chape.

Chap. II. through the greatest Part of the EAST-INDIES. 703

... than break his Promise to his Friends, which is
... in most of their Delinquents will rather endure the
... misse Tortures than discover their Accomplices.
... *Chinese* having such vast Quantities of all things,
... deal in any foreign Commodities, but leave that
... to Strangers, especially to the *Chinese*, who bring
... the Product and Manufactures of their Country;
... never face the ancient good Correspondence be-
... tween these two Empires has been interrupted, the *Chinese*
... laden by their Kings to send Goods into *Japan*,
... are obliged to carry on this Commerce, in order
... of transporting their Commodities to some other
... the *Indies*, unto which they are the more inclin'd
... the vast Hopes of Gain. All Commodities, either
... or exported out of *Japan*, passing free, without
... the least Duty or Custom.
... whole Empire of *Japan* uses but one and the same
... which is quite different from the *Chinese*, in
... their Characters; as they always use but few Words
... to every thing with Pencils in certain flourish'd

... consider as Part of the Blood and the Receiptacle of the
... Souls of Beasts. They will not feed upon the Flesh of
... any Beasts, but are great Lovers of all sorts of Wild-
... Fowl and Venison. Their Cedars are so big here that they
... make Mills of them for Ships. The Complexion of the
... Natives is inclining to brown; and for the rest, they are
... litly and strong limbed, hardy, and patient to undergo any
... Labour, as well as the Injury of the Seasons, never changing
... their Cloaths either Winter or Summer, and very mode-
... rate in their Diet. The *Japanese* are distinguished into five
... several Ranks; the first is that of the Prince, Lords, and
... great Officers, both Civil and Military; the second of the
... Clergy; the third of the Gentlemen and Merchants; the
... fourth of Tradefmen and Seamen; and the fifth of La-
... bourers. Once in five Years the Emperor of *Japan* has
... an Interview with the Dairō at *Macao*, which is very re-
... markable for its Magnificence, and the great Pretens made
... to the Dairō, an ample Account of which being to be
... found in the *Dutch* Relation of the Director of the said
... Company in *Japan*, we will pass by the Particulars of it
... here, our Intention being only to give the Reader a short

... being very docile in any thing they apply themselves to.
... Though their Grounds be very fertile, and able to produce
... much more than they do, they are contented to live up-
... on their small Quantity of Rice, which is raised by the
... Industry of their Wives, who, instead of Ploughs, culti-
... vate and dig the Ground with Spades, transplant and cut
... the Rice, and after having dried as much of it every
... Night in the Chimney-Corner as will suffice the Family
... the next Day, heat it early in the Morning in a Mortar;
... the Mens Minds being wholly taken up with hunting, ef-
... specially till they are forty Years of Age, before which
... Time they seldom mind any thing relating to Agri-
... culture.
... They sow also three sorts of Fruits, called by them
... *Ptingh*, *Quack*, and *Taragan*, not unlike Millet; and a cer-
... tain sort of Pulse, resembling our French bean; some
... Roots they have likewise, which might serve them instead
... of Bread, if they were not furnished sufficiently in that
... respect with Rice. Besides this, they have Ginger, Cin-
... namon, Sugar-canes, Bananas, Lemons, and a great Store
... of Arca, not to mention several sorts of other Fruits.

Men to improve a Nation, they ought not to suffer
 upon a Government, or make any Con-
 quist, but with Reason it is, that, to avoid an O. all in
 of Council with the Members, the *Chinese* are bound to go
 out of the Kingdom without Leave from the Emperor, or
 the Governor of the Province where they dwell.

The *Chinese* are always forced, the Father in the Throne,
 the yettself *Son* having received an Appenage, with
 the Title of King, allowed them, but have not the full
 State of the Administration of the Government, being
 under the Jurisdiction of other Officers of the Govern-
 ment of the Province where they dwell, who pays them their
 Allowance quarterly. The great Council of State consists
 of twelve Officers, at a Publick; however, with three
 or four more of the great Officers, by Commandment. The
 bill for the Administration of Justice, is prepared by the
 Lawyers, the same to be presented to the Senate for

the City of *Amoy*, who have a great number of
 their respective Members. They make
 and keep to their Confut. Matt is a
 the Monks in *Harpe*. The *Chinese* *Monks*
nefe are not permitted to enter into resolu-
 tions, which may upon them in Publick, and
 all the rest who have embraced a non-
 their Funeral Rites, the *Chinese* walk
 them in a Cabin of Sweet Wood, which
 them upon a Table like in Days, during

 try.

their Probation, and many widowers they think
 Each Temple has a kind of a Convent to it, for the En-
 tertainment of a certain Number of Priests who attend the
 Service every Day Morning and Evening.

They live for the most part upon Alms, like our Men-
 dicant Friars. They have also a kind of religious old
 Women, but these are not bound by any particular Disci-
 pline. They believe one Creator of the Universe, who
 governs the World by divers inferior Gods. They say
 that the Soul is immortal, and after it is purified by passing
 through several Bodies, is either condemned to eternal
 Torments, or enjoys Beatitude. They tell you, that this
 has been transmitted to them by Tradition, Time out of
 Mind; for the rest, they hold that good Deeds, and espe-
 cially Charity, are the chief Means to attain Salvation,
 which is the Reason they extend their Charity even to the
 Beasts, such as Birds and Fish, which they buy to set
 them at Liberty, as believing the Transmigration of the
 Soul. This is the Reason why they never condemn any
 other Religion, or dispute with them: But their Ecclesi-
 asticks preach without Intermision against the old Custom
 of invoking the Devil, which is still retained among the
 vulgar Sort. They have abundance of Lamps hanging
 before their Idols in the Time of Service. These they set
 out with Garlands of Flowers, and in some of them they
 have certain Days, each Quarter of the Moon, appointed
 for their general Devotions, and a Lent of three Months.

Their dead Corps they have, wash and perfume, and
 afterwards burn them near a Temple, where the Ashes
 are buried under a Tomb, or Pyramid. The Relations
 mourn for their Friends by shaving themselves, by giving
 Alms and Benevolences to the Priests, to pray for them at
 their Obsequies. The Corpse is attended with Musick and
 Fireworks. The *Siamese* are strong limbed, and well pro-
 portioned, but thir Courage is not answerable to it, which
 makes them use their Victims with a great deal of In-
 tolerance. They are base, and very crafty in their Dealings.
 They are so much addicted to Idleness, that they leave all
 Tools to their Wives and Slaves. They wear a painted
 Piece of Callico from the Middle down to the Knees, tho'
 the Men have also Shirts with Sleeves hanging down to
 the Elbows. The Women cover their Breasts with a Piece

Stones, Gold, Benjamin, Wax, Copper, Lead, Iron,
 Calamba-wood, Bialil Wood, Cotton, and Deer-Skin,
 of which they export fifty thousand every Year to *Japan*,
 and their Rice is transported in vast Quantities to the
 neighbouring Countries. The King himself is a Monarch
 here, and has his Factories at *Pegu*, *Poa*, *Jangama*, and the
 Coast of *Coromandel*, and in *China* itself. The Money is
 very good, being of three different sorts, viz. *Miao*,
Majas, and *Teanges*; two *Teanges* make a *Miao*, and ten
Majas a *Tical*, which is equivalent to a *Trelo* Hat-
 Crown, four of these *Ticals* go to a *Tical*, twenty of which
 make a *Cattia* in Silver. Their smallest Silver Money is
 the *Teang*; but Provisions being very cheap, they
 make use of certain Shells brought thither from *Manila*,
 eight or nine hundred of which go to a *Teang*.

The *Portuguese* being sufficiently sensible what pro-
 gious Advantage they were able to reap from this Kingdom
 for supporting their Traffick to the *Moluccas* and *Indies*
fine Isles, the Viceroys of *Goa* were always very careful
 cultivate a good Correspondence with the King of *Siam*,
 who in Return granted them many Privileges, in fact
 time that the *Dutch* got Footing there at the Beginning
 of this Age. The *Portuguese* were so alarmed hereat,
 that they not only obstructed the Trade of the same to
St. Thomas and *Negapatan*, but also attacked a *Dutch* Ve-
 sel in the River *Mecum*, which, with some other Obstruc-
 tions, served only to incense the King of *Siam* against them, who
 ever after encouraged the *Dutch* in their Settlement and
 Commerce, which is very advantageous to them in respect
 of the Isles of *Java* and *Sumatra*, of which they are now
 in Possession.

The Kingdom of *Cambodia* borders to the North-
 West upon the Kingdom of *Siam*, being inclosed by the
 Sea on the other Side; the capital City is seated upon a
 River sixty Leagues from the Sea-shore, which rises out
 of a Lake, as do all the other Rivers of this Kingdom.
 That which runs by *Cambodia* overflows every Year like
 the *Nile*; its first Rise is in the Beginning of *June*, increas-
 ing by degrees to ten or twelve Feet, and in *July* of *Aug*
 it overflows the Country to that degree, that it is quite
 unnavigable, for which Reason it is that the City of *Can-*
 1774

796 The Voyages and Observations of J. A. de Mandelkoe Book I.

wear Silk. The Women are very magnificent in their
 Apparel, and wear Abundance of Jewels and Pearls. They
 are very remarkable for their little Feet. They seldom
 appear abroad; and whenever they visit their Relations,
 it is done in close *Palanquins*, or Litters. The *Chinese* are
 so quick, not only in all sorts of Manufactures, but also
 in their Way of Trading, that scarce any body is able to
 over reach them. Their Money is Gold and Silver, which
 passes altogether by Weight. They are so careful in pro-
 viding for the Poor, that in each City a Judge is appointed
 to provide for the Relief of such as are unable to provide
 for themselves, and set to work such as are in a Capacity
 to get their Bread.

As there are Books extant in *China*, which have been
 printed above seven hundred Years ago, it is certain that
 they invented the Myllery of Printing before us, since it
 was not discovered in *Europe* till 1470. Their Characters
 are rather Figures signifying certain Words, than Letters,
 which they write from the Top downward, not with
 Pens, but with Pensils, and that on one Side only, their
 Books, who have made out the Part of *Rombee* Cases, being

an Account of their Transactions, make a faithful Report
 to the King, who changes the Officers of the Province
 every three Years, with this Circumspection, that he
 never any Officer of Note is sent, but into a Province remote
 from the Place of his Birth. Debtors are punished by most
 cruel Drubbings, which makes them rather choose to
 themselves to their Creditors, than to undergo this
 Punishment.

The Prisons, wherewith all the great Cities are provided,
 are very nicely kept, but at the same time want many
 Conveniencies, such as Courts, Gardens, Pots, Windows,
 &c. for the Divertisement of the Prisoners, and Dining-
 houses and Cooks-shops for their Conveniencies. No
 Sentence of Death is executed without a Warrant from the
 Emperor, and this must be done in the Presence of the
 Judges, who are so nice in this Point, that they allow
 very considerable Time betwixt the Condemnation and
 Execution, to make divers Visits to the Prisoners, and ex-
 amine them whether they have any thing to allege in their
 Behalf; by which Delays it happens, that many of the
 Prisoners die in Prison than are executed. Their execution

Anchor at seven Fathom Water.

10. This Cape of the Continent of *Africa*, extending to the South into the Sea, in 29° beyond the Line, received the Name of *Cabo de Boa Esperanza* in 1487, from *John H. King of Portugal*, when the *Portuguese* first went in Quest of the Passage by Sea to the *Indies*, lying as it were at a nearer Distance of about 250 Leagues, betwixt *Europe* and the most Eastern Coasts of the *Indies*; ever since which Time this has been the Place where Ships bound to those Parts take in their Refreshments, Water being very excellent here, and Cattle very cheap, their Oxen being very large, with Branches on their Backs like those of the *Indies*, and their Sheep very good, with long hanging Ears, and Tails as big and weighty as a good Quarter of Mutton: Neither do they want Wild Fowl, Deer, Wild Beasts, Fattypigs, Quans, and, among the rest, a kind of Geese, with Stumps instead of Wings,

that feeding our Ship was not in a Month to come; that the Voyage to *England* without mankind had been made into the Isle of *Madagascar*: Pursuant to this Resolution we tacked about at Two in the Afternoon, the Weather, and a very rough Sea, which continued till next Day till about Noon. *June* the 1st we were 200 Leagues in twenty four Hours, with a West Wind blowing our Course to the East. The 2d. about 12 o'clock at Night, the Wind veering about to the S.W. by the Wind we could wish for the Protection of our Voyage to *England*, we resolved to return to the Coast of *India*, and to take in fresh Water at the Isle of *Madagascar*: The third we got with the same Wind to the Coast of *India*, the Abundance of Birds, called *Mox*, *Tomias*, and *Canes*, floating upon the Sea, gave us Hopes that we were not far from the Coast.

small Heads, having four round Leaves, each Head produces five Flowers in a Cluster, the fifth being exactly in the Middle; they are as white as Snow, of the Bigness of an Orange flower, and blow in the Twinkling of an Eye, as soon as the Sun is set; and when it rises again the next Morning, the Flowers, which have continued all Night, drop in an Instant. Thus the Tree continues till Sun-set again, when it opens, and produces the Flowers in the same manner as before, and casts them again at the first Appearance of that Planet, which invigorates all other Vegetables. The Coconuts, of which there are four Kinds, are very common in this Island. The Tree which bears the Coconuts grows very high, but not above a Foot Diameter in Bulk. It has not a Branch but at the Top, where it spreads like a Date-tree, and these don't produce the Fruits, which grow ten or twelve in a Cluster out of the Body of the Tree. The Flower resembles that of a Chestnut. This Tree is of universal Use in the *Indies*. In the *Maldives* Islands they build whole Ships without any thing but what is furnished by the Cocoa-tree; the outward Rind affording them a kind of Hemp for their Cordage and Cables, and the Leaves with Materials for Sails, and the Covering of their Houfes; besides that, they use them for the making of Umbrella's, Fans, Tents, Mats and Hats. The Fruit is of the Bigness of an Ostrich's Egg, and the outward Rind, which resembles that of our Walnuts when dried, affords the Hemp we spoke of before. If they gather it before the Nut is come to full Maturity, it affords about a Quart of very pleasant Liqueur, which, if kept in the Shell, by degrees turns to a kind of a Kernel, which becomes yellow, and is of a very good Taste, and exceeding wholesome.

Their Toddy, or Palm Wine, they draw from the Tree whilst it is in Blossom, and, pulling off the Flower, they tatten it to an Earthen Vessel well stopp'd, into which runs a Liqueur, resembling in Taste and Colour our Whey: This when boiled is called Toddy, and, set in the Sun, turns to Vinegar immediately; and, if distilled, makes a kind of *Aqua Vitæ*. The Pith of the Tree, as it is very white, furnishes the *Indians* with Paper. The second Kind is called by the *Portuguese* *Arrequeira*, from the *Araucaria* it pro-

duces, commonly called *Arrequeira*, which grows in the Wrong of it when he called it the Epitome of the World; it being certain that there is no Animal, Plant, Metal, or Drug, but what is found here in greater Plenty than in any Part of the Universe.

The Inhabitants deduce their Origin from the *Chuji* and, to speak Truth, their large Foreheads and Brows, and little Eyes, resemble much that Nation. Each Town or Note in *Java* has its peculiar Prince, and now they are all Sovereigns independent one of another. The Kings of *Bantam* and *Pallambum* are at present the most potent, the latter of which has given the Name to the Strait that divides the Isles of *Java* and *Bala*. Ten Leagues to the North is the City of *Panarucan*, near which is a burning Mountain. The King of *Panarucan* and *Palambum* are *Pagans*; but the King of the City of *Passaracan*, six Leagues from *Panarucan*, is a *Mohammedan*. Ten Leagues to the West is the City of *Joardam*, noted for its convenient Harbour upon a River, where the Ships going from the *Moluccas* to *Bantam* commonly touch, to take in fresh Water and Provisions. Upon the same River lies the City of *Giriati*. The City of *Surabara* has its proper King, under whose Jurisdiction is also the City of *Brandam*, six Leagues thence to the West. He keeps his Court at *Sidaya*, which is well fortified, but destitute of a safe Harbour. Ten Leagues more to the West lies the City of *Taboan*, next to *Bantam* the most considerable of the Isle, and five Leagues farther to the North-West the City of *Cajaw*. *Mandalicao* is inhabited only by Fishermen. Five Leagues farther to the West is the City of *Japara*, upon a Neck of Land, which runs out three Leagues into the Sea. Twenty five Leagues hence, and forty-five from *Bantam*, lies *Matram*, or *Mataravan*, a great City, and the Residence of a powerful King, who once pretended to the Sovereignty over all the rest of the Island, and still styles himself Emperor of *Java*.

Five Leagues to the West of *Japara* lies the City of *Pata*, and three Leagues farther that of *Dauwa*, both under the Jurisdiction of the King of *Matram*, as well as that of *Tagal* in the same Bay. The next is the fair and strong City of *Charabon*, seated upon a River, by which you pass to the Cities of *Dauwa* and *Muccador*, and so thro' the

798 A Supplemental Account of the Commodities, &c. Book I.

ance of Black-Birds, with a small Spot of white on their Breasts: These, according to the Opinion of the *English* Seamen, always forebode a Tempest, which proved true; for, before Night, a Storm arose from the W. N. W. with a very rough Sea, which took our Carpenter from the Deck, but he was saved by means of a Rope. The Ground which stuck to the Plummet being black at eight Fathom Depth, we concluded we were not far from the *Cape d'Agulhas*, which is sixty Leagues distant from that of *Good Hope*. The 20th the Tempest increasing in 30° 20' beyond the Line, we were in great Danger of being lost, being forced by the Currents towards the Shore; but the Tempest being somewhat allayed, we escaped the Danger, but were soon after threatened by another, occasioned by a Lamp in the President's Room, which had set Fire to the Waincot. The 20th the Storm continued till two in the Afternoon, when the Pelicupereos coming in great Numbers about our Ships, were the Forerunners of fair Weather, and the N. W. Wind which ensued. On the 27th, in the Morning, it was calm; but, in the Afternoon, we made two Leagues an Hour with a N. W. Wind, taking

The Inhabitants are savage, uncouth, and ill-shap'd: They grease their Bodies with Train-Oil, and eat their Flesh raw; nay, they seldom kill any Beast, but feed upon them when they die of any Disease. Both Men and Women go naked, covering their privy Parts only with a Piece of Skin fastened round their Waist with a Leather-Girdle, some wrap a Lion's Skin or Ox's Hide round their Buttocks, drawing their Tail between their Legs, some wear them over their Shoulders down to their Waist only, exposing all the rest to publick View, and disfiguring their Arms, Thighs, and Legs, by making Characters upon them by way of Incision. The Women adorn themselves with Legs with broad Rings of Iron or Brass. Those living farther up in the Country are no less savage than the rest, with this Difference only, that they live a little nearer the Sea-side living upon Oysters, Fish, and especially Whales; for they know not what it is to sow, though their Grounds are excellent. They live in rude Huts with their Cattle, and scarce ever come to the shore, except when upon the Arrival of some Ship, they are to truck their Commodities, which are the

Year driven upon that Coast by Distress of Weather, sent a certain African Negro, who had some Knowledge of their Language, to signify unto them, that he was come thither to settle a good Correspondence and Commerce with them. They seemed to approve of this Proposal, but were no sooner got at some Distance from the *Pestuguez*, than they fell upon the *Moors*, with Intention to kill him, which they had certainly done if the *Portuguez* had not discharged their Fire-Arms upon them, which obliged them to leave the Negro, and to betake themselves to their Heels, leaving several of their Companions dead upon the Spot.

Perera sailed thence to another Place upon the same Coast, where having surpris'd one of their Princes, he carried him on Board, and gave him such kind Entertainment, that in Requital for his Courtesy, he offered to shew him a very good Harbour, accordingly he conducted them

bought, August the 19th, of Prince Augustus, and other neighbouring Lords, twenty-five Oxen and a hundred Sheep, we embarked our Baggage the 21st, and the 21st fell out of the Bay of *Saint Augustine* with a South-west Wind, which proving favourable all that Night we soon lost Sight of *Madagafcar*.

The 22d being rejoined by the Monsoon, or Wind of the Season, which happened sooner than ordinary, we briskly pursued our Course to West-South West, and the 23d the Wind blowing a brisk Gale from the East in our Stern, we sail'd briskly a little more to the South, with an Intention to avoid the *Cape of Good Hope*. The 25th and 26th the Wind was not so brisk, but being croic'd by a fresh Gale, the 26th we advanced bravely, and found ourselves that Day in 27° 27' Latitude, and on the 28th in 28° 12'. The 29th we were surpris'd by the *Travados*, or Whirlwinds, in 31° 15'; but they did not con-

Plenty, but are not easy to be catch'd, by reason of the Unpassableness of the Woods, and the Unskillfulness of the *Javanese* in the Use of Fire-Arms. The Rivers feed also Abundance of Crocodiles; the *Chinese* tame, fat, and eat them for a peculiar Dainty. Their Civet is not so white nor well scented as that of *Guangy*. They have two sorts of tame Fowls, one like those of *Europe*, the other of the *Indian* Breed, wild and furious; some have black Flesh, but notwithstanding this they are very good Food. The *Rhinoceros* is in the same Esteem with them now-a-days, as the Unicorn was with the Ancients, his Flesh, Horn, Blood, and Teeth, may even his Dung, being applied to medicinal Uses.

They have also Ants here of a much larger Size than ours, they spoil every thing they come at. They have a certain kind of these Creatures reddish, and of the Length of a Man's Finger, but these live in the Fields upon the Barks of Trees. Among the Fruit trees of *Java* the *Arrequeco*, which bears the *Cocoa*, but less in Bulk, and with narrower Leaves. The Fruit resembles a Date inclosed in a Husk, which falls off when it ripens; it is without Taste, but taints the Lips and Teeth of a black Colour. The *Indians*, after they have mix'd it with a little Lime, wrap it up in a Petal Leaf, and so chew it, looking upon it as a good Remedy against the Scurvy. It will cause in such as are not used to it a Dizziness in the Head, but it soon passes over. The *Mango* is a Fruit growing upon a Tree not unlike our Walnut-trees; it is something like our Peaches in Bigness and Colour, being of a grateful Taste when roasted in the Ashes; they pickle them whillt green, and they are accounted a good Remedy against the Worms and Looisels; the wild ones are rank Poison, which kill without a present Antidote.

The *Ananas* grow on a Shrub with Leaves like a *Semper-vivum*; is green at first, but when ripe turns to the Orange Colour. Its Shape is like a Pine-apple, yellow within, but they are dangerous if used in excess, tho' the Taste is very pleasant; they are not much larger than a good Lemon. The Stalk is like a Thistle, every one bearing but one at the

upon a Tree not unlike the Pepper, and in *Patavia*. The *Javanese* hold them in such Esteem that they will not sell them unbruis'd, nor will allow so much as one Plant to be transported into other Places. The *Magda* is one of the Taste of our Sloes, and grows wild in the High ways of *Java*, and the *Heib-Jalaffe*, bearing many round nor Fruit, is used green in Sauces, it is used to fortify the Stomach. The Fruit *Java* is of the *Bigness* of a *Citrus*, having a rough Rind, without which are some Nuts, the Kernels thereof being roas'ted, is a pleasant Remedy against a Looisels. It is observable that the Fruit often changes its Taste, sometimes it resembles a Melon, sometimes a Peach, and at other Times a good Lemon. The Nut is as big as a Date, but is not to be used raw, because it occasions vomiting and griping of the Guts; but roas'ted, it is both pleasant and good, and reckoned a great Restorative.

On the Side of the Island towards the Strait of *Sunda*, you meet with Abundance of wild Cinnamon, but it is never transported into foreign Parts. The *Carecap* are a sort of *Indian* Cherries, white, dark, red, and of a Greenish Colour; the Trees and Fruit are like those in *Europe*. The *Cajus Indicus*, called *Packo* by the *Malays*, resembles in every respect, both in Height and Flower, the *European* Elder-tree, wherewith the *Perfians* and *Arabs* drive a considerable Trade, as they do also with the *Cinnamon Aromaticus*. There is a yellow and spongy Mast in its Stalk, which some Women make use of to stopple Firs. The *Zerumbet*, called *Canla* by the *Malays*, is like Ginger, except that it has somewhat larger Leaves, it is preserved or dried like Ginger, but valued above it. Of *Galanga* there are two Kinds, the lesser is brought from *China*, and is preferable to that of *Java*. The Herb grows wild, about two Feet high, with a white Flower and pointed Leaves; the *Javanese* use both the Root and Herb in their Salads; the first are knotted like Cress, and of a biting Taste, and good Scent. *Benjamin* is a Gum of a Tree resembling a Lemon-tree; whilst they are young, the Gum is white, but as they grow old it changes black. It is by the *Moors* called *Levan* *Java* is the

800 The Voyages and Observations of J. A. de Mandelsloe Book I.

to our Tent, unto one of whom the President presented one of my Shirts, desiring her to wear it for my Sake. She made not the least Difficulty to receive it, and wore it two Days, after which, she tore it to Pieces, for some other Use. Their Men are brave, addicted to martial Exercises, and very dextrous in the Management of their Lances, Darts, and Pikes, which always lie near them, even when they are at work in the Field, being trained up to the Use of Arms in their Infancy; Persons of Note seldom stir abroad without having twenty-five or thirty Darts, or small Pikes, carried after them, tied up in a Bundle. Their Bows are four or five Feet long, and the Strings loose. They have a Sleight of Shooting with great Strength and Activity; and as to their Javelins, they dart them with so miraculous a Dexterity, that they will hit a Bird at forty Paces Distance.

They are divided into several Tribes or Clans, of one hundred, two hundred, or three hundred, each under his own Lord, whom they call *Jebick*. Two of these had their Residence in a Wood not far from our Tent. Their Wars among themselves are commonly occasioned by the

ants, desiring them to return to their Habitations, the Occasion of their coming thither being only to settle a good Correspondence with them. Upon this mozt of them returned, and as a Mark of their Good-will, presented *Perera* with fifty Oxen and twenty Goats; but being nevertheless willing to be rid of the Strangers, they tempted the Captain with the Hopes of great Riches, which they said he might meet with in the Port of *Matatona*; which was so well approved by him, that he was preparing to go thither, but one of his Ships being soon after forced upon the Coast of the Isle, he retired with the other to *Mazambique*: Another Ship of the same Fleet being driven by tempestuous Weather into the Port of *Matatona*, a Boat of the Country came immediately aboard them, in which the Captain sent the Master of the Vessel, who was well versed in the *African* Language.

The *Moors* making more than ordinary Haste to get ashore with the Master, and the *Portuguez* conceiving some Jealousy at their Behaviour, they pursued them with eighty Men in their Shallop, but too late, the Negroes having reached the Shore before them. However, after they were landed, they got Sight again of the *Moku-*

unto which they are so much addicted that their Veiells
are seen upon the Coast of *Pegu* four hundred Leagues
thence. They use Swords, Bucklers, Lances, Darts, and
Pikes. The King and most of the Inhabitants near the
Sea-side are *Mohammedans*, but deeper in the Island they
are *Pagans*. They are black, and well let, wear Calico
wrapped about their Loins, like most of the other *Indians*,
and Turbans on their Heads.

The Isle of *Celbes* lies betwixt that of *Borneo* and
Mauecas, under the Equinoctial Lane. *Mercator* would
have it to be one of these Islands called *Sindus* by *Ptolemy*.
Its capital City is called *Macassar*, which lies in the most
Southern Part of the whole Isle, 5° 17' beyond the Lane.
The Inhabitants are so industrious, that they leave not an
Inch of Ground unmanured, and sow with Rice what they
stand not in Need of for their Cattle and Cocoa-trees. It is
not long since they embraced *Mohammedism*. They
much resemble the *Siamese* and those of *Pegu*, especially in
their Faces, and are of a comely Stature. The Women
dress their Heads like those of *Malacca*, and in the Street
have their Breasts open, and Breches reaching down to
the Knees. The North-west Winds, which blow here
from *November* to *March*, make the Shore very unsafe
during that Time, and the continual Rains overflow the
flat Country, which is the Reason that most of their Houses
are built upon Piles, nine or ten Feet above the Ground.
There are two Kings more, viz. one of *Telbo*, and the
other of *Battergoa*, in this Island.

The Isle of *Gilolo*, by the *Portuguese* called *Bato China*
de Moro, produces Plenty of Rice and *Sagu*, Tortoises,
&c. The Inhabitants are very well limbed, but barbarous,
and not many Years ago were *Cambals*. The Island of
Ambuyna is near the *Moluccas* that some have accounted
it among their Number; its Circuit is twenty-four Leagues.
The chief City lies to the North-west of it a very fair Bay
of six Leagues, where there is safe Anchorage, and good
Shelter for Ships against the Winds; the Bay enters so deep
into the Country, and the Sea on the opposite Side cuts to
creep within the Land, that the Isle is very near divided
into two, there being only a small Isthmus of a hundred
and twenty Fathom left, by which it is joined together.
The lesser Part of the Isle, wherein is the Cattle of
Ambuyna, contains about a hundred and twenty small
Towns, and the greater but four Towns and about seven
Villages. The Inhabitants were heretofore Savages and
Cannibals, and applied themselves to no kind of Agriculture,
which made the Country appear a Wilderness; but of late
Years they have applied themselves to cultivating the
Ground, which being very fertile produces great Plenty of
Oranges, Lemons, Cocons, Bananas, Sugar-Canes, besides
Cloves. They continue still to be ignorant People, the
only Skill they shew being in the Management of a Dart,
which they use with so much Dexterity, that at sixty Paces
Distance they will hit a Crown-piece. They are famed
for their Cakes made of Rice, Almonds, and Sugar, which
the Inhabitants of the adjacent Islands take against the
Bloody-flux; for their Rice-Bread, made in the Shape of
our Sugar-Loaves; and for their small Gallies, which
in swiftness exceed any in *Europe*.

It was first discovered by the *Portuguese* in the Year
1513; but the *Dutch* having afterwards also got Footing
there, the *Portuguese* being resolved to spoil their Com-

me the Name of *Lankila*, i. e. Evil, yet make him subordinate
to another called *Lankila*, as well as to him they call *Ta-
tay*, who is a Degree lower than *Lankila*. They give
them one general Name, viz. *Tito*, i. e. Evil Spirits, and say
that they appear to them in human Shape, when they are to
produce their Oracles, and reveal unknown Things to them.
To do this twenty or thirty of them assemble, and by the
Help of a small Drum called *Tifa*, some Wax Candles, and
certain Conjurations, as also a Sacrifice of Meat and Drink,
make them appear before them. As they are of Opinion
that what ill befalls them comes from the Devil, they are
very careful not to neglect his Worship; for which Pur-
poses they have Wax Candles lighted in their Houses, where
they sacrifice Meat and Drink to these phantastick Beings.

Their Circumcision is also different from that of the
Jews or *Mohammedans*; for instead of cutting off the Pre-
puce, they only slit it, and that not till they are twelve or
thirteen Years of Age. Their Marriages are soon made,
and as soon dissolved; for every thing being agreed upon
they use no farther Ceremonies, except that the Bride-
groom's Father gives a small Present to the Bride, in lieu
of which her Father makes the Wedding Feast, where
they have their Musick and Dancing. If a Wife have a
mind to part from her Husband, she has no more to do
than restore the Present; which done, she puts Water
on her Husband's Feet, to intimate, that thereby they are
both cleansed from all Impurities they have contracted dur-
ing their Marriage, which is thence dissolved, and either
Party at liberty to provide themselves another Spouse as soon
as they please. When they are to take a solemn Oath
Water is put into a Dish, into which having cast Salt,
Earth, and a Leaven Brier, they dip into it the Extre-
mity of a Turkey-Barrel, the Point of a Halberd, Sword,
Knife, &c. some other Weapon, and to give the Dish with
Water unto him who is to take the Oath, to put him in re-
mord that all which has been cast or dipped into the Water,
will be instrumental to his Destruction if he forswear him-
self. They have among them a certain Gang, who under
Pretence of Witchcraft do Mischief to their Neighbours,
either by Poison or other Means; they are called *Witch-
craft*; but whenever they are found out, they are sure to meet
with very severe Punishment.

The Natives of *Ambuyna* are naturally shy, laborious,
and void of Understanding; they commonly bury their
Riches for fear of being robbed; and such is their simplici-
ty that they are not to be brought up to any Trade. They
are so far from any Knowledge that they have not so much
as any Characters among them. All they apply themselves
to is Fishing, and cultivating their Gardens, upon the Fruit
of which they live very moderately, though it is observable
that they are generally strong and well-proportioned. The
Dutch have three Forts in this Isle, viz. the Fort *Cantona*
or *Villora*, and those of *Hiten* and *Laura*.

The Isle of *Banda*, which is three Leagues in Length
and one in Breadth, lies twenty-four Leagues from *Ambuyna*,
extending from North to South. It has some new Towns,
the chief of which is *Nira*. The Inhabitants are very ferocious
Mohammedans; as they are always at War with some
of their Neighbours, so they keep a constant Guard along
their Coasts. Their Arms are a Seyntar and wooden
Buckler, four Feet long, in the managing of which they
are very expert, as being trained up to it in their Youth.

formerly to drive a considerable Traffick to *Perfa*, and the
Red-Sea; but they send but few Ships thither now. The
ordinary Custom paid here is 4l. 10s. per Cent. but the
English pay only one Moiety of it. Though the greatest Part
of the Inhabitants of the Kingdom of *Deccan* or *Cannom* are
Banjans, yet are they not so averse to Flesh as the others
in the *India*; for they will feed upon any Flesh, except
that of an Ox, Cow, Buffalo, and Swine; for the last
they have an absolute Abomination, and the Ox and Cow
are in great Veneration with them. In their Life and Con-
versation, Marriages, Purifications, and other Ceremonies,
they follow the Footsteps of the other *Banjans*.

Their Habitations are only Cottages of Straw, the Doors
being so low that one cannot go in without stooping. Their
Furniture amounts to no more than a Mat to sleep upon,
and in the middle of the Hut you see a Hole in the Ground,
wherein they beat the Rice. They do not differ in their
Habit from the other *Banjans*, except that they wear
nearly wooden Slaves tied up over the Shoulders with Leather
Straps; but their Children go naked till they are seven or

get a League before we saw a *Portuguese* Vessel, which
alter us; we backed our Sails till the came near us, and found
her to be a Vessel that came on purpose to us, sailing with
us under *English* Colours, for fear of being interrupted by
the *Dutch*, she brought us some Presents, viz. three Ovens,
some Sheep, Oranges, Citrons, and Bread from the Governor.
The 9th we sailed with a southerly Wind to the Isles of
Bandera and *Bombay*, which stretched along the Coast from
Bacoum to *Vishapour*; the last has a good Road for Anchor-
age, and is of a pretty large extent. On the 10th we sailed
by *Rohapour* within twenty one Leagues of *Goa*, and in the
Afternoon by the City of *Vingorli*, where the *Dutch* have
a Settlement four Leagues from *Goa*, and in the Evening
came in Sight of the Isles about *Goa*, and of two Isles that
fence the Harbour. On the 11th we came to an Anchor
under the Fort de *Guarda*, which lies not above a Mile from
the City of *Goa*; we saw six Gallies in a Creek in the
Haven; soon after came aboard us a *Portuguese* Captain to
complement the *English* President in the *Viceroy's* Name,
and immediately after the Commodore of the Gallies.
The Harbour of *Goa* was then backed up by twelve

covered with Calicoe, the Men first, and the Women follow-
 ing it; after it is buried, they return to the House of
 the deceased, where they feast together, order Incense to
 be burnt over the Grave for twenty-four Hours, and set up
 a burning Lamp at Night in a Hut made for that Purpose.
 The Men lead a very idle Life, leaving all Business to the
 Management of the Women, who are employed in break-
 ing the Nutmeg-shells, and drying the Nut and Mace,
 the chief Thing they rely on for their Maintenance. As
 far as ever I could learn, the most excellent Spice grows
 no where but in the Isle of *Banda*, and the six following
 adjacent Islands, which make up the Archipelago called
Banda, by the Inhabitants, viz. *Gunaxi*, *Pera*, and *Lan-
 tar* (which is the best Road for Vessels), *Puloway*, *Palam*,
 and *Bayfingin*.
 It is next to a Paradox to believe that these six small Islands
 should be able to produce such prodigious Quantities of
 Nutmegs as are sufficient for the whole World, unless it be
 considered, that besides a few Durions, Bananas, Oranges,
 and Cocoa-trees, the Islands are covered all over with them.
 The one continued Forest, the Trees of which are loaded
 with Flowers and Fruits, which are gathered three times a
 Year, viz. in *April*, *August*, and *December*; but the best
 are gathered in *April*. The Tree itself resembles our Peach-
 tree, the Leaves whereof are somewhat leis and round.
 The Fruit is enclosed within a Husk as thick as that of our
 Walnuts, which, being opened, you see a Leaf very thin
 upon a hard Shell, which may be discovered through it.
 This Leaf is the Flower of Nutmeg or Mace; and to
 come to the Fruit, you must break the Shell. While the
 Nut is green, the Flower is of a Carnation Colour, which,
 after it is parted from the Shell, turns to an Orange Col-
 our. It makes a most excellent Preserve, if done with
 Salt and Sugar. The Inhabitants make a good stomachick
 Ointment of Nutmegs or Mace, powdered and mixed
 with the Oil of Roses. The Inhabitants don't amount to
 above 12000 in all, amongst them not above 500 fit to
 bear Arms; yet are they so mutinous and stubborn, that
 to bridle them the *Dutch* have two Forts here, called *Naf-
 ja* and *Belgica*, where Vessels may anchor at nine or ten
 Fathom Water within Musket-shot, and that without the
 least Danger.
 The *Moluccas*, properly so called, are no more than
 five in Number, viz. the Isles of *Ternate*, *Tidor*, *Mol-
 tel*, *Mabiam*, and *Bachiam*, known to the ancient *Pagans*
 by the Names of *Cape*, *Douco*, *Mentil*, *Muca*, and *Sa-
 que*, and situated all together within the Space of 25
 Leagues. The Sun-beams are so penetrating here that
 they render the Earth as dry as a Pumice-stone, which not
 only sucks in all the Rains that fall, but also swallows the
 very Torrents near their Sources; but as they are not able
 to penetrate through the thick Forests, to the Ground here
 produces both Trees and Herbs; whence it is that those
 Islands are sufficiently stored with Bananas, Coconuts, Lem-
 mons, Oranges, Sandal, and Callamba, besides Spices of
 all sorts; but they produce neither Rice, nor any other sort
 of Grain; the Defect of which is supplied by the Tree,
 called by the Natives *Laudan*, and *sequiro* by the *Por-
 tugez*, the Pith of which furnishes them with a kind of
 Meal for Bread, as the Leaves, when come to their full
 Growth, serve them for the Covering of their Houses,
 and the better Vents for Rattlers, as the lesser make good

Liquor called Thorack, which tastes like Wine.
 The Islanders, though not destitute of Cattle, yet live,
 for the most part, upon Fish. They have no Gold, Silver,
 or any other Mines, being furnished with Iron from the
 Island of *Ambeyna*. They are generally black, though the
 Women not so black as the Men, with black shining
 Hair, large Eyes and Eyebrows, and strong Limbs. They
 soon become grey, yet live to a great Age; are active ra-
 ther than laborious, and very sociable in Conversation, but
 somewhat inclining to Boldness and Insolence, and in their
 Dealings crafty and deceitful: The Men wear generally
 Turbans, like the *Turks*, covered with Plumes. The
 King is distinguished from his Subjects by a kind of Mitre,
 clad in Drawers only of Blue, red, green, or yellow Sar-
 tin. Some of these Islanders make use of a close-bodied
 Coat, fastened round the Shoulders, and cut below like
 the military Garment of the ancient *Romans*. The Wo-
 men wear no Head-dresses, but lay their Hair smooth over
 their Heads, which they tie behind, and cover it with
 Plumes, or Flowers. Their Garments are of *China* Silk;
 but their chief Ornaments are their Bracelets, Rings, and
 Necklaces of Pearls, Diamonds, Rubies, and Emeralds.
 The *Chinese* were the first that made themselves Masters of
 those Islands, and after the *Persians* and *Arabians*, who
 introduced *Mohammedism* here. Their ancient Customs
 are their only Law: They allow Polygamy, yet don't
 punish Adultery; but Stealing is a capital Crime.
 At Break of Day certain Persons who are appointed for
 that Purpose, beat the Drum about the Streets to excite the
 People to the Performance of their matrimonial Duty.
 They use generally the *Malayan* Language, though every
 one of these Islands has its peculiar Tongue, which shews
 them to be descended from divers Nations. The Isle of
Ternate, the biggest of the *Moluccas*, is situated in 45
 23 Leagues from the Isle of *Banda*. Its Compa's is
 about eight Leagues. It affords but little Provisions, ex-
 cept Goats and some Poultry; but the Almonds here
 are most excellent, the Shells being so hard that the Smiths
 use them instead of Coal. It produces also some Tob-
 acco, but much inferior in Goodness to that brought
 from the *West-Indies*. The Town of *Gamma Lamma*,
 the Capital of the whole Island, consists only of one Street,
 2,500 Paces long, built along the Sea-side, the Houses be-
 ing all of Cane or Timber; the Road is not fit for An-
 chorage, the Bottom being all rocky, which makes the
Dutch Vessels always lie at Anchor near the Village of
Tellingamma, within two Miles of *Malay*, betwixt the
 Islands of *Ternate* and *Tidor*.
 But the chief Product of these Islands is the Clove, call'd
Clavus by the modern *Spaniards*, by reason of its Resem-
 blance to an ordinary Nail. The Tree that bears it is by
 those of the *Moluccas* called *Sigar*, the Leaf *Vacaqua*,
 and the Fruit itself *Chamque*. The Tree resembles the
 Laurel, its Leaves being however somewhat narrower,
 like those of the Almond-tree, shooting forth its Branches
 at the Top, not unlike the Myrtle. The Fruit is white at
 first, grows green by degrees, and brown when it comes
 to Maturity, but does not turn black till it be dried in the
 Sun, which is done in two or three Days. The Tree
 grows naturally without planting or cultivating, bears

... law a Portuguese...
 ... Sails till the came near us, and found
 ... came on purpose to go along with
 ... us, for fear of being interrupted by
 ... us some Presents, and these were
 ... Citrons, and Brew from the Govern-
 ... d with another Wind by the Merit
 ... which stretched along, the Coast from
 ... but has a good Road for Anchor-
 ... ge-hovent. On the 10th we sail'd
 ... nty one League to sea, and on the
 ... of *Vingerta*, where the *Dutch* have
 ... ges from *Goa*, and in the Evening
 ... es about *Goa*, and of two Isles that
 ... On the 11th we came to an Anchor
 ... *la*, which lies not above a Mile from
 ... w fix Gallies and a Corack at the
 ... board us a Portuguese Captain
 ... b President in the Viceroy's Name,
 ... the Commo'rr of the Gallies,
 ... was then blacked up by twelve

... as well as the Delect. After Dinner we were
 brought into several Chambers to take our Repose, accord-
 ing to the Custom of the Country; after which we pass'd
 into another spacious Hall, where we had the Diversion of
 Dancing, by certain *Indian* Children brought up in the
 Roman Catholick Religion; there were among other Shews
 an Entry made by fifteen Persons, having in their Hands
 some Pieces of a broken Pillar, and covers Garlands of
 Flowers, wherewith they adorned the Pillar, after they had
 with exact Observance of the Cadence, each in their several
 Turns put it together; and soon after we saw at the Top
 of the Pillar came out a Tulp, which opening of itself by
 Doors, produced the Image of the Blessed Virgin, with
 our Saviour in her Arms; besides which, the Pillar opened
 in several other Places, and call forth perfum'd Waters;
 after which the Dancers took the Pillar to Pieces again, and
 carried it off dancing as they had brought it in. We had
 another Entry of twelve young Lads, each playing upon a
 peculiar Instrument, some Morris-dancers, and the Ball
 was concluded with another Entry of twelve Boys dressed
 like Apes, who imitated those Creatures in their Actions

the Fathers came to our Lodgings to shew us the Hospital
 which is under the Inspection of the Jesuits. It is a very
 large and noble Structure, containing as many Chambers,
 Halls, and Galleries as will conveniently lodge and accom-
 modate one thousand sick Persons; each Bed is marked
 with a particular Number, and such as are not taken up are
 distinguished by a particular Mark. The Kitchen and
 Apothecary's Shop are well worth Observation. I found
 the chief Distempers of the Sick here to be the Bloody-flux
 and the Pox. They have this Custom, that as soon as any
 Patient is past all Hopes of Recovery, he is shut up in a
 private Room with a Priest, that the rest may not be dis-
 turbed by the Groans of the dying Person.
 Hence we went to the Convent of our Lady belonging
 to the *Augustinians*, which, being built upon rising Ground,
 makes a most glorious Shew at a Distance. I delivered to
 them the Letters of Recommendation I had received from
 their Brethren at *Ispahan*, which made them treat me with
 more than ordinary Civilities, shewing me all the rich
 Capes and Vestments belonging to the Monasteries, and
 offering me all other things that they had

of *Ires*, *Meyana*, *Cavaly*, *Mangeron*, *Gamaconora*, *Ambenna*, but especially the Isle of *Furanulo*, produce considerable Quantities, but not so good as those of the *Moluccas*. In the Middle of the Island of *Ternate* is a very high Mountain, full of Palms and other Trees, which has a most miraculous Well on the Top, which is so deep that 500 Fathom of Rope did not reach the Bottom, but to a very fair Spring, the Water of which no Body hitherto has ventured to taste, by reason of the sulphurous Exhalations, which, especially about the Equinoxes, issue from the Mountain, and sometimes cast red Stones at twenty Leagues Distance. This Mountain is covered with Wood near half its Height, but afterwards is excessive cold, having on the Top a very cold Spring, and a Lake of fresh Water, surrounded by Trees. They know not of any certain Difference of Season in these Islands, except that it generally rains more with the North than with the South Wind.

Serpents they have of thirty Feet long, but not venomous, living for the most part upon Fish. This Island has also a peculiar Creature, called by the Inhabitants *Cafes*, which, as it feeds on Fruits, so it is always seen upon the Trees, its Tail being of such Strength, that it will hang by it to a Branch of the Tree, the better to come at the Fruit; it is in Shape not unlike our Rabbits; its Colour betwixt a Grey and a Red, with thick, curling, and soft Hair, round and hence Eyes, and very small Feet. As they have scarce any domestic Bird except the Parrot, so their Forests are full of wild ones. The *Moluccas* produce a certain Wood which burns, sparkles, and flames like common Wood, but contains not, though you may rub it to Powder with your Fingers. Not far from the Fort of *Ternate* grows a certain Sarub, called *Caopa* by the Inhabitants, from which falls a Leaf, which, by degrees, is supposed to turn to a Butterfly. The Isle of *Tider* is at least as large and fruitful as *Ternate*, the Inhabitants here being so industrious as to improve the Fruit of the Clove-tree, by pruning and watering it, which, by this means, becomes both larger and larger than the rest. Here they have also the best white Sandal-wood, and those Birds called *Paseras del Cielo* by the *Spaniards*, and by us Birds of *Paradise*. After they have caught them, they cut off near Foot close to the Body, so that when the Flesh dries the Skin and Feathers run indelibly together, so that many have been of Opinion these Birds are without Feet.

The *Dutch* are Masters of *Malaya*, a well fortified Town of *Ternate*, as also of the Fort of *Tauco*, and that of *Morice* and *Tider*, of the Fort *Sanneville* in *Bachram*, and three more in the Isle of *Machram*, at *Tassaco*, *Auracana*, and *Gehama*, they have also a Stone-Cast in *Maur*. The King born of *Maciam*, which is governed by its own Sovereign, being so well stocked with Sapo that the Inhabitants have sufficient where with to subsist without Labour, has made them so idle and careless, that they are scarce able to raise 200 fighting Men. The Isle of *Machram*, which is subject to the King of *Ternate*, is about seven Leagues in Circumference; the *Dutch* made themselves Masters of it in 1601, since which Time they have erected three Forts, the first at *Gueghuan*, situate upon an Eminence, and strengthened by four Ballions of Stone; as is also the Fort of *Tassaco* built likewise upon an Mount at an hundred and fifty Leagues from the Sea shore; it is bigger than the first. The Fort of *Tobambah* Bay only two Ballions. Besides these three Forts, properly called the *Moluccas*, there are

seventy Leagues to the North-East from *Japan* to the East, it is encompassed by the Ocean, and to the South by the great *Archipelago*, which is divided into five Seas, and stocked with a vast Number of Islands. The People of the Soil, joined to the Industry of its Inhabitants, makes this Island abound in Corn, Rice, Fruits of all sorts, and Drugs; as likewise in Beef, Buffaloes, Deer, Goats, and Hogs. Their Cocoa Wine they keep till it ferments as strong as *Spanish* Wine; their Lemons, Oranges, Peas, and Pears, are the best in the World, and they abound both in domestic and wild Fowl, and Birds. They have a peculiar Way here of killing the Crocodiles, to wit, they have great Numbers: He who is to engage with this Creature, gantlets his left Arm to his Elbow, having in the same Hand a Truncheon of a Foot long, placed at both Ends, with a Dagger in the other: Thus armed, he goes into the Water up to the Waist, and while the Crocodile is making at him with his Jaws open, he thrusts his left Hand down his Throat, so as to keep them from shutting, and in the mean while stabs him with the Dagger in the Throat, till he drops down dead.

The *Philippine* Islands produce more Tygers, Lions, Bears, and such-like wild Beasts, than *Africa* does, and abound in Algalia, which are the Creatures that produce Milk, and Civet Cats. The *Chinese* dive with Trunks, this Country with the *Spaniards*, who buy fine Cloths, Silks, Porcelain, Gun-powder, Sulphur, Iron, Quick-silver, Copper, Meal, Nuts, &c. and carry them to the *Indies*, where these Things are sold at a very dear rate. In the City of *Manilla* resides a *Spanish* Archbishop, who has three Bishops under his Jurisdiction, for the Spanish Government of the *Philippine* Islands; and he is assisted in the Management of all publick Affairs, in Consilium, by the King's Council appointed in that City, who is very large, and its Houses built of Stone, with a very good Way. Within and about it live above 200,000 *Chinese*, and vast Numbers of the same Nation, who gather every Year for the Convenience of Trade, 8000 Sail from *Peking* to *April* you may see in the Harbour, which is bordered by two wooden Forts, one for the *Chinese* and *Japanese* Junks. This Place is also much frequented by *Japanese*, but not in near so great Numbers as the *Chinese*: Notwithstanding which, the *Spaniards* are more jealous of the first than the last.

The *Japan* is composed of many Islands, with a several Army of the Sea, extended from one to the other in some Places scarce ten, in others very large, and in Wealth. On the East Side it hath Neighbourhood with *Tartary*, on the West *China*, and to the South, with Part of the *Terra Australis*. The whole Empire consists of sixty-six lesser Kingdoms, and Province, fifty-three whereof are comprehended within the two Kingdoms of *Meca* and *Amagance*, the other within the great Kingdom of *Miwo*, and the remaining Part of the called *Xiowm*. According to the *Japanese*, they are uncertain, whether the whole Empire be an Island annexed to the Continent, inasmuch as in the Province of *Quanto* to the Borders of the Province of *Long*, it is a twenty-seven Days Journey to the East of *Tadama*, then they cross an Arm of the Sea of 1000 Leagues, which brings them into the Province of *Quanto*.

Rivulet, which coming out of a Rock falls into the other River near the Castle. The City has no other Defence but the River, having neither Gates nor Walls; the Buildings are generally very handsome, and Persons of Note shew a great deal of Magnificence here both in their Buildings and Furniture.

The Inhabitants are of two Sorts, either *Castizes*, or *Melizes*; the first are such as are born here of *Portuguese* Father and Mother; the second, who were begotten by a *Portuguese*, or an *Indian*. The last are inclining to a olive Colour, and in the third Generation becomes as black as the Natives of the Country, which is also observable in the fourth Generation of the *Melizes*, though there is not the least mixture among them. The *Portuguese* are distinguished into several ranks; *Titulados* are those in publick Employments; *Fidalgos da casa del Rey*, are Gentlemen in ordinary to the King's Household; *Mocas Fidalgos* are the Sons of the *Titulados*, admitted to Gentility by the King; the *Cavaleiros Fidalgos*, and *Escuderos Fidalgos*, are simply Gentlemen; those called *Mocas da Camra*, or

worst afford themselves a poor Education, which is thus propagated by the *Portuguese* Women in these Parts, who are extremely fond of white Men, and are always kept in great constraint, they will venture very hard to encompass their Liberty, and to pursue this End, frequently make use of the most filthy *Dauby*, or *Datura* (as it is called by the *Portuguese*) to supply their Husband's Senses to get an Opportunity of escaping what they so much delight in. This Herbs, called *Bybit*, *Turks* and *Persians* *Datura*, is a kind of *Stramonium*, according to the *Geoplin* *de Herbo*, and *Cur Joseph de Herbo*, being somewhat like our Bear's Foot, and grows in the Parts in shady Places; of this they extract the Juice, which is green, or only take the Seed beaten to Powder, and mix it either with Preserves, or in the Juice of *Peber* they pretend to sludy, which it does effectually to wit, in 24 Hours after he has taken it, being deprived of all Sense of Motion, though with his Eyes open, unless some cold Water be applied to the Soles of his Feet, which revives him, as it were, out of a sound Sleep.

...Ocean, and to the South, the

...to amount twenty Foot, and two
...the Emperor is able to raise an Army of three hun-
...dred and sixty-eight thousand Foot, and thirty eight thou-
...sind eight hundred Horse; besides the hundred thousand
...Foot and twenty thousand Horse he keeps up as a standing
...Force, which is so much the less to be admired at, since
...some of these Lords have such vast annual Revenues, that,
...according to the before-mentioned Proportion, they are
...obliged to furnish one thousand two hundred Foot, and a
...hundred and twenty Horse.

All the great Lords of *Japan* have three Names, *viz.*
...their proper Name, that of the Family, and a Surname,
...which they commonly take from the Province, City, or
...Castle they govern. They have also a Custom of chang-
...ing their Names twice in their Life-time, the first, given
...men in their Infancy, being altered at the Age of twenty-
...six, and that again at fifty or sixty Years of Age. They
...have another Custom in *Japan* for the Slaves to offer them-
...selves a voluntary Sacrifice to their Masters whenever they
...die, which is done by a solemn Engagement, and con-
...firmed by a Bottle of Wine. As this is chiefly done by
...those Slaves, to put an End to the Miseries they endure in
...their Life-time, so there have been some who have desired
...their Masters to bury them under the Foundation they
...were going to lay for some considerable Edifice. Their
...Pagods or Temples are of Wood, about seven or eight
...Fathom square, and raised three or four Feet from the
...Ground. They have small Turrets, with Lights in them
...on all Sides, and within certain Statues, unto whom they
...address their Prayers. The King and great Lords have
...many fair Castles belonging to them, among which those
...that are fortified are garrisoned by the Emperor; but their
...Cities are generally without any Fortifications, and if some
...few of them have any, they are only single Walls. Their
...Cities are built after the same manner, each Street having
...two Gates, which are shut up, and guarded in the Night-
...time. They have no Revenues belonging to them, neither
...pay they any Impositions, except a very inconsiderable Rent
...for their Dwellings to the Governor, for whose Use they
...are also obliged to keep a man at work at certain Times;
...but this does not happen very often. The Governors having
...certain Demesnes allotted them for their Revenues, and
...among others the Advantage of Fishing, especially of the
...Whale, of which there are taken yearly near three hundred
...upon the Coast of *Japan*; but they are neither so big, nor
...so fat as those in the Northern Parts.

Every *Japane*, of what Condition he is, is absolute
...Master of the Fate of his slave. They are so cruel in their
...Punishments, that the least Trespass is punished with Death,
...Gambling for Money, or killing any Person, though in his
...own Defence, is capital, and so is Theft, though it were
...but for a Penny; and in Offences of a more heinous Na-
...ture, the Fathers, Brethren, and Children, are put to
...Death for the Crime of a single Person; nay, the Wives
...and Daughters, though ever so innocent, are also involved
...in the same Misfortune; for they are made Slaves, and
...their whole Substance is confiscated. Thieves are fastened
...with a Rope of Straw to a Cross, and then the Executioner
...runs a Pike into the right Side up to the left Shoulder, and
...again from the left Side up to the right Shoulder; other
...Malefactors are fastened only to a Post, with their Hands
...stretched out, and held up by two Persons, and so the
...Executioner runs them with a Pike through the Neck

...five Millions of Rooksins, and five Millions
...more for his Governors and military Officers. His ordinary
...Residence is in the Castle of *Yeddo*, which is two Leagues in
...Circumference, and strengthened with a triple Wall, and
...as many Mounts all of Free-stone. The Gates are covered
...with strong Iron Bars, and Lodges over them, which con-
...tain three hundred Soldiers, for a Guard to each Gate; his
...own Palace, with the Apartments for the Women, stand
...in the Centre, and round about it the Houses of the Princes,
...and other great Lords, all richly gilt, and sumptuously fur-
...nished, their chief Emulation being to outvie one another
...in this kind of Magnificence, which is amongst them
...looked upon as the greatest Mark of Respect they can pay
...the Emperor, who never stirs abroad but in the Company
...of a great Number of those Lords, and their young Kin-
...dred, who are the Guard of his Body; and by applying
...themselves to Music, Payick, Writing, Painting, or the
...Management of publick Affairs, render themselves qual-
...ified for higher Employments. They are all clad in Luck,
...and as they march along the Streets, do not to much as
...utter a Word.

As the Revenues of the Emperor of *Japan* are so great,
...that his ordinary Income of two Months is sufficient to de-
...fray his whole Year's Expence, his Treasure must be im-
...mense, most of which consisting in Gold and Silver, is laid
...up in vast Chests, inclosed in several Towers belonging to
...the Castle, besides what is disposed of in the Country. Their
...Horse are armed with Croquets, Fire-lock, not much
...longer than our Pistols, with Pikes, Bows, Arrows, and
...Cyments. The Foot have only Head Pieces, two Cymentars,
...each a Mucker, Pike, Half-pik, and broad Knives:
...Each Company consists of fifty Soldiers, a Captain, a Lieut-
...enant, and ten Corporals; five of these Companies make a
...Battalion, commanded by a peculiar Officer, and ten bat-
...talions a Brigade.

The Emperor of *Japan* has a numerous Council, tho'
...only four are charged with the Management of all impor-
...tant Affairs, and are to attend daily at Court: Some of
...these have two Millions of Crowns, others three or four hun-
...dred thousand Crowns, others four or five hundred thousand
...Crowns yearly Revenue; but their Expences are propor-
...tionable to their Revenues, being obliged to live at least
...half the Year at Court in vast Splendor, maintaining per-
...haps a Retinue of three hundred Persons, and above a thou-
...sand in their Families, and that in a Place where Provi-
...sions are excessive dear; not to mention the vast Expences
...they are at in their Buildings, and the Entertainments they
...are obliged to give the Emperor whenever he is pleased
...to honour them with a Present, perhaps of a Crane, which
...he has taken in Hunting. As great Persons are not to
...marry any Wife but what is presented to them by the Em-
...peror himself, so they are put to vast Charge in giving
...them all the magnificent Entertainment, and all the Entertain-
...ments they can, except their Liberty, which they must
...relinquish to their Husbands, and are not permitted to go
...abroad above once a Year to visit their nearest Relations;
...notwithstanding the Wives in *Japan* have the Reputation
...of great Reverendness, and being, beyond all others faith-
...ful to their Husbands, of which many Instances might be
...alleged, which for Brevity's sake I omit. There are,
...however, those who ascribe this Reverendness rather to the
...Severity of their Laws, than their Inclinations, it being
...certain, that even the least Suspicion of Dishonesty after
...Marriage

...propagated here. About
...ways have an excellent sense, and
...ways kept in the constant
...to compare their Light, and to
...is made use of the *Ind* *D* *ist*
...is called by the *Japane* *Ind* *D* *ist*
...to get an Opportunity of
...it. This Herd, once by the
...is a kind of *Spaniard*, and the
...is *Ceryphes de de de de de*
...Foot, and grows in the *Ind* *D* *ist*
...they extract the Juice, which is
...is used beaten to Powder, and mix-
...or in the Dish of *Ind* *D* *ist*
...it does effectually to try
...is, being deprived of all benefit
...his Eyes open, and his face red-
...the soles of his Feet, when he
...a round Sleep.

...any hurt or Custom. They have also a Way of entering
...the Commodities they buy at *Goa* under the Seller's Name,
...and to the pay Custom free.

The Vice-roy was there at our Time was one *Don*
Pedro de Silva, who was of no great Ability, but was for
...the self served in the same Office as a King. This Office is
...never continued above three Years in one Person, which is
...sufficient to enrich him even to a very high Degree; for
...he has the Management of the King's whole Revenue, is
...at the Charge of keeping his Court, and in the Provinces
...he makes once a Year, for sixty or eighty Leagues round,
...he receives vast Presents from the neighbouring Princes
...and Governors; for though he has his Council of State,
...and Courts of Law and Equity, yet is he the sole Judge
...of all civil Causes, unless they be of very great Con-
...sequence, when an Appeal lies to the King; but in criminal
...Cases no Appeal is admitted, if the Person be of a
...Degree of a Gentleman; for these must be put under
...Information brought against them to *Portugal*. The Vice-
...roy at his Arrival always first sits in the *Ind* *D* *ist*
...from whence he sends his Deputies to his Provinces.

...They keep them at a very easy Rate, their
...bed being inferable, and their Cloathing being only a
...piece of Calico to cover their private Parts. The In-
...habitants of the neighbouring Country are *Pagans*, and
...generally *Barbans*, who dwell in Straw Huts, with Fele
...Bows, which serve also for Windows. Their whole Fur-
...niture consists of little Mats made of Rushes, which serve
...for Beds and Tables, a Drinking-Cup and Pitcher
...made of Fig-leaves, their daily Food being Rice. They
...are superstitious, that if after they have laid their Prayers,
...they go abroad and meet with a Crow, they return home,
...to be more abroad that Day. Upon the Roads
...the *Portuguese* connive at, their Inquisition going no far-
...ther than to Christians, or such as have been so.

Their Ceremonies and Manner of Living are the same
...with those of *Decca*. One Thing is remarkable among
...them, that their Physicians are in so great a Reem at *Goa*,
...that they are generally preferred before the *Portuguese*
...Physicians, and are permitted to have their Umbrella's

and note of Persons of Quality have been erected near them, containing their Names, and certain other Inscriptions, in the Nature of an Epitaph. The Ecclesiasticks are divided into twelve different Sects, eleven of which obtain from living Creatures, and from Women. If they break their Vow they are punished with Death. Those of the twelfth Sect are allowed to marry, and eat all sorts of Provisions; the Chief of this Sect is the Head of all their Clergy, and their Temples are endowed with many Privileges and settled Revenues; whereas those of the other Sects are maintained only by Alms. Some among the *Japanese* believe the Immortality of the Soul, and the Rewards and Punishments of another Life for ever; but the most have so little sense of Religion that they meet in their Temples to drink, and commit other Delinquencies; whence it is also, that never any such thing is heard of as Controversy about Religion, though they are such irreconcilable Enemies to the *Christians*, that finding Death not to be sufficient to shake their Constancy, they invented many cruel Methods to make them renounce their Faith, which, however, at last they were not satisfied with, unless they could discover another *Christian* to release them from their Torments, which are so various, as would almost fill a Volume.

Their Houses are slightly built, and seldom above one Story high, because the Country is much subject to Earthquakes; they are raised three or four Feet from the Ground, and convenient enough within, being divided into several Apartments, some of which are for the Men, the rest only for the Use of the Women, where the best Part of the Furniture is bestowed; they are also very nice in their Gardens and Orchards; they are very obliging in their Conversation, especially in their Visits, when they present their Guests with Tobacco, Tiffue, or Tea, and with Wine, of the last of which they will take a very plentiful Share; but are sure never to quarrel over their Liquors. Except at the Inns, for the Convenience of Travellers, no Drinking-houses are allowed in *Japan*; nay, not so much as a publick Cook's Shop, it being their Custom to make their good Cheer in their Houses, where, among other things, they entertain one another with their Musick, the chief of which is a kind of Lute, with four silk Strings, which they strike with a Peg of Ivory. Their Wine, or rather Hydromell, is made of Rice, Sugar, and Honey, and is as strong as any Wine whatever. Their Marriages are contracted in consequence of the Agreement of the Relations. The Bride and Bridegroom being not permitted to see one another till it is to be consummated, those of a common Rank may soon be divorced, and if they dislike the Wife, send her back to her Relations; but People of Quality, notwithstanding any Disagreement, maintain them in their Houses.

Their Children they educate with all imaginable Mildness, without any beating, as well at home as at School, wether they are not sent till they be seven or eight Years of Age, and when they come to Man's Estate, the Father assigns to his Son a certain Part of the Houles, and of his Employment, nay, perhaps the whole, reserving only a certain Allowance for his Subsistence to himself; but their Daughters have neither Dowry, nor the least Share in their Father's Estates. They are so nice in Point of Honour, that they will rather die than receive an Inch from it; and a *Japanese* will rather run the Hazard of the Ruin of his

Language, which is quite different from the *Chinese*, as well as their Characters; as they always use but few Words, they write every thing with Pencils in certain short-hand Notes in a very little time, their Accounts they keep by the means of certain small Beads, which they thread upon little Stocks like a square Board. They are not defensible of Books nor Libraries, the *Dairo* (who formerly was the Sovereign of the Country, and still retains the Supremacy over the Clergy) keeps the publick Accounts, and writes the Chronicles of the Country; neither are any other Persons, except the Gentlemen of his Houle, and such Lords and Ladies as are descended from his Family, allowed to write Books, which makes them constantly apply themselves to Learning. They have but one kind of Money, fair Gold is of the best kind, but their Silver none of the finest. Of Gold Coin they have three Sorts, one where tis valued at forty-eight Taals, each of which being worth five Crowns Sterling, amounts to twelve Pounds Sterling. The second sort are worth each one Taal, and a fifth Part, and the third one Taal, and a sixth Part. Their Silver Coin goes by Weight, being in the Form of Ingots, to be divided, and each Piece commonly amounts to fifty Taals. They have also a lesser Silver Coin made in the Shape of a French Escu, which goes likewise by Weight.

The *Japanese* do not geld any Creature, wether they be well stored with all sorts of Cattle, as well as Horses, and small Birds. They also abound in mineral and hot Waters: There is a certain hot Spring here which issues from its Waters duly twice every twenty four Hours, without Violence, that though the Water rises above the Surface, which are laid on the Top of the Hills to the height of twenty or twenty-four Feet, it is so hot that it raises the Heat of boiling Water, and burns every thing it touches at its first coming out; but being conveyed by certain Pipes into the adjacent Houles, it is used to such a Degree of Heat, that it is convenient for Bathing. These Mineral Waters are sufficient Proofs that there is a great deal of good Mines of all Sorts; and Experience convinces us for they have Gold, Silver, Copper, Tin, Iron, and Lead of their own, as well as Cotton, Flax, Hemp, Silk, and all manner of Provisions in great Plenty. Their Physicians have singular Reputation as to their Ability, but Chirurgery is uncommon among them as yet. They make frequent Use of China Root and Rhubarb, which, as well as most of their other Medicines, they make use of. The *Portuguese* and *Spaniards* found it no hard Matter to settle themselves in *Japan*, and their religious enterprises took so well with the Inhabitants, that they were permitted to build divers Churches in the Kingdom, but the *Spaniards* not being able to contain themselves within the Bounds of Modesty, their domineering Temper cost them such a Jealousy and Aversion in the *Japanese*, that they set upon them, burnt their Ships, and, in 1639, banished them the Island under Pain of Death. The *Japans* began to trade there in 1611. Some of their Relations affirm the City of *Miaco* to be twenty-one Leagues in Compass, and that the City of *Offack* and *Burao* are but their Wealth not inferior to any of the *Indies*.

The Air of *Japan* is very moderate and healthy, but changing rather to Cold than Heat. They sow in *May*, but do not reap till *September*. They have neither Oil nor Butter, and have an Aversion to Milk, which they

to their

They have among other Privileges this, that they may freely enter the Houses of their Comrades, and please themselves with their Wives and Daughters, the Signal being, to leave their Sword and Buckler at the Door; wether it be to buy, not even the Master of the House, will enter to disturb them; but a *Nayer* will never degrade himself so far as to have any Commerce with the Wife of a *Page*. The *Malabars* use Baskins, with which they write upon the Bark of Cocoa trees, their Characters being quite different from those of the other *Indians*, are understood only by the *Bramans*. The King of *Cabint* never eats or drinks any thing but what has been presented before to his Paged, or Idol. The Inheritance to the Crown does not pass to the Son, but his Sister's Son, since, as the *Bramans* here have the First-fruits of the Bride's Virginity, the Children are supposed to be begotten by them. As to the City of *Cabint*, Notice must be taken, that there are two of that Name in the same Kingdom of *Cochin*, one where tis inhabited by *Malabars*, and lies upon a great

greater before the Violence of the Sea cuts off a great Part of Land on the Side towards *Cambay*. The *Indians* are rich and most fertile of all the *Indian* Countries, and suppose to be the *Tapobans* of the *Antients*. They are not ignorant that some of our modern Philosophers make it the Isle of *Sumatra*, of which it is said that it did not with our Reason call the Isle of *Sumatra*, and most fertile of all the *Indian* Islands, is so considerable that it has not only great Plenty of all sorts of other Islands produce, but, besides, this wether it be Orange, Lemon, and Cinnamon trees, which it has a fragrant Smell at a great Distance into the Sea. It is said that, there is no precious Stone but what it has, wether Diamonds: Pearls they take there in abundance, and altogether so fine as those of *Babaron*, a Kingdom in the East, which it affords the finest Ivory in the World. The Discovery of it is owing to the *Portuguese* Captain *Alfonso* *Laurence*, Son of *Francisco* *Limca*, made in the Year 1512, one of the Kings of the Island, here which *Laurence* took Care to fortify themselves in the Year 1512.

to the *China*, the *Company* Account of which being to be
to the *Dutch* Relation of the Director of the said
Company in *Japan*, we will pass by the Particulars of it
here, our Intention being only to give the Reader a short
Reason of what we have received from very good Hands,
and leaving the rest to be completed by those who have
since had the Opportunity of taking a View in Person of
that Country.
16. After the Banishment of the *Japans* out of *China*,
the *Clungs*, to avoid the Penalties inflicted on such as
should trade with them, made use of the Isle of *Yayo-*
yang, whether they carried their Commodities, in order
to continue their Commerce with those of *Japan*. The
Dutch being excluded from the Commerce of *China*, fol-
lowed their Foot-steps, and, in 1632, settled themselves
in the said Island, as the most convenient Place in all the
Isles for carrying on Trade both with *China* and *Japan*,
there being a free Passage here all the Year, without being
obliged to stay for the Months, which in most other
Places last for six Months. The *Dutch*, I say, being sensible
of this Convenience, built immediately a Stone-Port
of four Battions on the Downs, within half a League of
the great Isle of *Formosa*, which is divided from this Isle
by a Channel only, which, though not very deep, yet at-
tacks a safe Harbour for Ships against any Winds.
For the better Defence of the Entrance of this Channel,
the *Dutch* have built a strong Redoubt called *Zesland*.
The Isle of *Formosa* itself is about thirty-two Leagues
long in the River of *Chinchen*, and the *Chinese* Island
called *Phueny*, extending from S. W. to the N. E. in
Compass are hundred and thirty Leagues. It is full of Vil-
lages and Inhabitants, which are not governed by any
single Lord, but such as they choose themselves for their
Magistrates. It has many Rivers full of the best Fish;
their Fields are well stocked with Wild-Fowl and Veni-
son, and their Meadows with Cattle, besides Deer, Wild-
bores, Hares, and Rabbits. Their Forests produce a kind
of Hides, with Hams like a Deer, called *Olawang* in their
language, the Flesh of which is a great Delicacy; as also
another Creature, not unlike our Bears, but of a very large
Size, the Skin of which is much esteemed in those Parts.
Their Grounds are very fertile, but neglected, which
make them very scarce, and, what they have, not very
granted to the Plate. It produces also some Ginger and
Ginseng, and, as the *Chinese* relate, Gold and Silver;
but the *Dutch* have hitherto found none of these Mines
worth looking after. The Places in which the *Dutch* have
their Settlements are, for the most part, along the Sea-
coast.
The Inhabitants appear like Savages, being of a more than
ordinary Size, black and hairy all over their Bodies, but in
their Conversation obliging, honest, and good-natured;
their Women are not so strong and fit, but much inclined to
Laziness, and yet not ill shaped. They wear a sort of Gar-
ment round the Middle; but when they bathe themselves
as they commonly do twice a day in warm Water)
as well as the Men, strip themselves stark naked,
and make no great Account whether they are seen by one
sex or not; for the rest, they are very constant Friends,
and religiously observe the Axioms that they make
with Strangers, Fraternity being a Thing abundant
among them. They neither want Industry or Memory,

of Bread, if they were not furnished sufficiently in that
respect with Rice. Besides this, they have Ginger, Cin-
namon, Sugar-canes, Bananas, Lemons, and a great Store
of Areca, not to mention several sorts of Fruits and Pul'e
not known in *Europe*. Instead of Cocoa-Wine, of which
they are destitute, they make a certain Mixture of Rice,
which, being soaked in warm Water, they beat it in a
Mortar till reduced to a Paste; this they mix with Rice-
meal chewed instead of Leaven; and having put it into an
earthen Vessel, fill it up with Water, which, after it has
fermented and stood two Months, affords a very pleasant
Liquor, which is stronger or weaker, according as it is
kept, and the older the sweeter it is, and may be kept
good thirty or thirty-five Years. When they go abroad a
hunting they make use of Snares, small Pikes, Bows, and
Arrows; their Nets they spread in the open Fields, or
cross the Highways, and then drive the Wild-Beasts into
them.
Sometimes the Inhabitants of several Villages make a
Hunting-Match, and dividing themselves into divers Par-
ties, armed with Staff-pikes and Lances, send their Dogs
into the Woods; by which means having forced the Wild-
Beasts into the Fields, they encompass them on all Sides,
sometimes for a whole League, and so with their Pikes
kill all those that come within the Ring. These Lances, or
rather Darts, are of Cane, six or seven Feet long, with fe-
veral Hooks, which, being fastened into the Flesh of the
Beasts, are not to be pulled out; but as the Iron is not well
fastened to the Wood, but that with the running of the
Beasts through the Bashes it comes off, a Cord is tied to
both, and a little Bell to the Iron, so that the Lance annoys
the Beast, and the Bell discovers its Passage wherever it
runs. By this means they catch vast Numbers of Deer,
the Skins of which they exchange with the *Chinese* for
their Commodities, they seldom relieving any thing for
their own Use but the Umbles and the Entrails, which
they file and carver corrupted, being not cleaned of the
Flesh before they were salted.
When one Village happens to be at War with another,
they first declare it openly against one another, which
being the Signal to be upon their Guard, they do not attack
by open Force, but dividing themselves into small Troops,
perhaps of twenty-five or thirty Men, lie in Ambush near
the Village they intend to attack till Night, when they rise
upon the Hills, which lie dispersed in the open Country,
till perhaps they can light upon an aged Man; they kill
him, cut off his Head, Hands, and Feet; nay, if they
have Time enough, cut the whole Body into small Pieces,
that every one of them may take home a Piece of it along
with him as a Mink of his Bravery; but if the next Vil-
lage happens to take the Alarm, they are glad to be con-
tented with the Head alone, or perhaps a good Lock of
the Hair, which they carry home in Triumph, as an un-
doubted Sign of their Victory; when they intend to make a
very bold Attack, they enter the Village by Night, force open
a House, kill all they meet with, and to betake themselves
to their Heels, for fear of being pushed. When they en-
gage in the open Field, their chief Aim is to draw one an-
other into an Ambush; but the Death of one Man com-
monly decides the Quarrel, that Side which has lost him
returning immediately. Their Arms are Pikes, but without
Hooks, their Backs are so large, that they shelter their

ton, dressing their Heads much like the *European* Wo-
men, with their Hair close behind, and tied in Tresses.
They appear in gold and silver Garments with Rings up in
their Hands, Feet, and Legs, set with precious Stones.
They live conveniently enough in their Houses, their
Wives being good Housewives, and especially well skilled
in Cookery. The *Gingangs* are so much a Dicted to an idle
Life and Effeminacy, that they are neither fit for War nor
any thing else.
The *Ceylon* is, as I said before, beyond all Dispute, the
most fruitful Isle of all the *Indies*; nothing can be named
either of Provisions or Fruits, but what is very cheap here;
though they are *Pagans* they eat of every thing in general,
even Pork (abstaining only from the Flesh of an Ox or
Cow). The *Mohammellans* enjoy a full Liberty among them;
and the *Pagan* Inhabitants obtain from Wine as well as
they. They have a great Veneration for their Banians; they
bury their Muds at ten or twelve Years of Age, and burn
their Dead. *Finala Derma*, whom we spoke of before,
has got as much Christianity as could be expected among

has given its Name of *Madives* to all the Islands, is built
upon four small Isles, being the Residence of the King,
who commands over all the rest, and a Place of good
Trade, though they produce naturally scarce any thing
but Cocones, but the Industry of the Inhabitants supplies,
in some measure, the Defect of Nature here, there being
not any Nation in the *Indies* more ingenious in making
Garments of Silk and Thread than they. The Coast of
Ceylon being in the most Eastern Part of the *Indies* on
this Side of the *Ganges*, is divided from the *Malabar* Coast
by the Mountains of *Balagatta*, its Extent being one hun-
dred Leagues along the Coast from *Cape Comoron*, or ra-
ther the Point of *Negapatana*, as far as the River *Nagand*
and the Town of *Mishapatan*, which, as it has excellent Har-
bours, and the best Roads for Anchorage in the *Indies*, so
it serves for a safe Retreat for such Vessels as are by the
tempestuous Winter-season forced from the Coast of *Ca-*
zerat thither, where the Climate and Weather is very good
at that Time.
The *Portuguese* are Masters of the Town of *St. Thomas*

my's Head, or perhaps only a Lock of his Hair, or a Pike, they carry it in Triumph, as a Sign of their Victory, appoint a pulbeck Thank-giving-day, sing Hymns, and offer Sacrifices to their Gods. He who has done the Expedition, is looked upon ever after as an extraordinary Man, has particular Reverence paid him by all the rest, and he receives the Head, or Pike of his Enemy, as a most precious Relick in his Family, which they value beyond any Gold or Silver. Nobody here claims any Preference above another more than what is allowed to Age. Each Village being governed by twelve Senators, chosen every two Years out of the most aged Persons, who are not invested with any other Power or Authority, than that of calling together the whole Village in one of their Temples, and proposing to them what they think necessary to be done, making use of all their Eloquence (in which they have sufficient Share bestowed upon them by Nature, to persuade the Chiefs of the Families there present to a Compliance with what has been proposed to them, which they are at Liberty to accept of or reject according as they think fit.

The only Power these Senators are invested with, consists in this, that they see the Commands of their female Priests put in Execution, take care that Satisfaction may be given to such as are injured, not by any corporal Punishments, but by enjoining them to give a Piece of Cloth, Deer skin, some Rice, or Perhaps a Pot of strong Liquor, as an Atonement to their Adversaries; for those Magistrates have no Power to punish Murder, Theft, or Adultery. In the last case the Matter is commonly composed by the Mediation of the Relations on both Sides. If any can be robbed, he goes, accompanied by his Friends, to the House of him who has Robbed his Goods, and with their Assistance forces him to make an immediate Reparation; and what is agreed upon betwixt them, he carries away with him to his own House. In case of Adultery, the injured Husband goes, without any farther Ceremony, to the Deceased's place, and with his Wife's Consent, takes from him two or three Eggs, in Satisfaction of the Affront put upon him. We read you might, that there is no Difference of Condition among them, which is so absolutely true, that the very Names of Masters and Servants are not to be used among them. All the Respect they pay one to another is, that the old Age, which is in so high Esteem among them, that a young Man merrily an old one, goes about on his Knees, and turns his Back to him to show his respect, which is the Respect the young People show to their Parents, that they will not salute them easily in the ordinary way, though it should be to go three or four Days more in their Baniets. Men are forbid to marry till they are twenty Years of Age. They do not let their Hair grow below their Ears till after twenty, and instead of Scissors, or Razors, make use of a Camp-sword, with which they cut it upon a Piece of Wood, the Hair of their Beards they draw out with their Fingers.

Men always let their Hair grow, and may marry as soon as they will. The Courtship is performed by the young Man's Relations, or Friends, to show them what interest they willow upon his Mistress, which if it is accepted of, the Match is made, and he may continue

his's House, in the Evening he stays till he is weary, and never see one another by Day, unless he happens to beat Home alone, or else in the Field. The Women are obliged not to bring any Children into the World, they are thirty-five, or thirty-six Years of Age, but before their Children in the Womb, by causing one of their Priestesses to kneel upon their Bellies till they cause an Abortion.

As their Marriages are soon made, so they are soon dissolved; for if they grow weary of one another, they may divorce; which Liberty is equally allowed to both Parties, with this Difference only, that if the Husband sends away his Wife without any Cause, she loses the Presents he has given her before Marriage; but if the Wife, or any other Affront offered to her, she is obliged to make Restitution. No Marriages are contracted among them within the fourth Degree of Contanguity or Affinity. Their Houses are generally large, and better built than is common in the Indies, with four Doors to each Quarter of the Havens: Some have two Doors on a Side; they are commonly raised five or six Feet from the Ground, and three or four Stories high. Their Furniture consists in some wild Boars and Deers Heads, some other Relicks taken from their Enemies, which are the chief Ornaments; the rest consists in Deer-skins, which serve instead of Feather-beds, certain Stuffs with which they cover themselves, a Spade, Pike, Bow, Arrows, with a Trough instead of our Dishes, or wooden Plates, and a Pot to hold their Rice in, which is their chief Food, and this is all. Though they have many Priests appointed for Devotion, yet they meet together to make good Cheer, especially every Quarter of a Year, where the Women also appear, and wear a wreath made of Dog's Hair; for here, as in the West Indies, they pull off the Dog's Hair once a Year, and then they pull it off, and make certain Stuffs of it, which they value as much as we do our own Fan Veils.

Their Ceremonies after the Death of their Parents are scarce to be paralleled in the World, for neither bury our dead, but by Bat of Drum, near the trunk of a great Tree, they give Notice thereof to the People upon which all the People repair, and sing a psalm of the deceased, and among the rest, they give notice that they have plentifully drunk of Arrack, and then they sit very slowly, upon great empty Chells, with their heads to the North, to expect their sorrow at the Departure of their deceased Friend. Eight or ten Women of the same kind for some Time, with their Backs to the deceased, and they give Way to others, who continue till the deceased's Soul falls in all two Hours. The next Ceremony is made for the Funeral Rites, which are performed by burying, or burning the Corpse, as is usual among them, but by drying it in the following Manner. They erect a Scaffold of Canes, five or six Feet high, upon which they fasten the Body by the Hands and Feet, and then they lay a good Fire round about it, and continue it whole Days, during which Time they sing psalms, and feast upon the Flesh, with all the Fat, and Bones. After the Expiration of the first Day, they erect another Scaffold, wrapped in Canes, and lay the Corpse there, where it remains till the third Year, when they pull it out of the Bones, and bury them in the same Place.

Kingdom, and territories at *Norsinga*. The Kingdom of *Coromandel* lies above the Town of *Muslipatan*, extending from the River of the same Name to that of *Guenga*, the *States* include this in the Coast of *Coromandel*. *Muslipatan* and *Guenda* are its two chief Cities; the first is celebrated for its Commerce, the last for being the ordinary Residence of its Kings. It produces abundance of Salt, and some Diamonds, among which all that weigh above five Carats belong to the King. To the North of *Orissa* lies the Kingdom of *Bengal*, whence the Gulph, known to the Ancients by the *Sinus Gangeticus*, has got its Name. The chief Traffick is Rice, Sugar, Cottons, Calicoes, but especially in Saks, which for Goodness exceeds all others of the Indies. Hence also are brought the finest Canes; and they have another sort of Canes, out of which they make Drinking vessels, and being lacquered, will hold any Liquid as well as Cups of Metal. Here grows a certain Herb, the Stick of which is of the Thickness of a Man's Thumb, laying on the Top a large Button like a Fattel, round upon one end, and furnishes Materials for an excellent kind

Magnificence. The second, called *Sapan*, is a kind of Wood, valued in Honour of the Statues in the Kingdom; and is also the third, called *Sapan Gratoma*, is a kind of Wood, called *Sapan Duple*, is celebrated by the King's Court, by calling Role-water at one another, but the fourth, called *Sapan Donon*, is a kind of Race of Beasts, upon which is the Preference of the King and Queen.

When the King dies, they join two Baniets together, and putting a Table in the Middle of one, they lay upon it upon the Table, under which they mixe a kind of Wine of Wood, Storax, Benjamin, and other sweet smelling Oils, and Gumy, which being lent down the Streets, the King attending, rejoice and sing, till the Flesh is consumed, which they mix with Milk into a Pattle, and then they carry it to the Sea at the Mouth of the River, but the King's Wife preferre and lay up in a Chapel built for that purpose. The Priests carry an empty Bottle at their sides, and wear red Vestments, coming down to their Heels, and a Cloak reaching to their Hams, and wear a Hat which they themselves against the Sun-beams, that they may not

and their Figures signifying certain Vices, that signify, which they write from the Top downward, not with Pens, but with Pencils, and that on one Side only, their Paper, which they make of the Bark of *Bambee* Canes, being very thin. The Emperor maintains at his own Charge many Schools and Academies, the Oversight of which is committed to Visitors, who at certain Times not only examine the Professors and Scholars, and expel such as are not qualified for Studies, but also promote such as have made a sufficient Progress in Learning to the Degree of a *Ludia*, a Dignity like our Doctors. They are very ceremonious and obsequious in their Conversation, in which Point they are so nice, that the first Rudiments of Learning given to their Youths are certain Books of Compliments. Their Entertainments are very magnificent, in which Point they are so nice, that the first Rudiments of Learning given to their Youths are certain Books of Compliments. Their Entertainments are very magnificent, in which Point they are so nice, that the first Rudiments of Learning given to their Youths are certain Books of Compliments. Their Entertainments are very magnificent, in which Point they are so nice, that the first Rudiments of Learning given to their Youths are certain Books of Compliments.

They allow Polygamy, but punish severely the first, which is forbidden in a direct Line to Infinity, and in the Collateral Line to Sisters and Nieces. The first, however, is the only lawful Wife, whose eldest Son inherits half of the Estate of his Father, but on his Demise, the eldest Son of the next Wife has the same Pre-eminency. Adultery, though it be a capital Crime here, yet is seldom heard of, partly by reason of the great Restraint the Women are kept under, partly because the *Chingee* are so wary, as rather to make the best of such an Adventure, by an advantageous Agreement, than to expose themselves, by pushing their own Dignities. Though the Government of *China* be not only monarchical, but also despotic, yet it is so wisely, that even rude Nations who esteem the greatest Degree of Liberty in *Europe*, are much more fastened with Taxes than the *Chingee*, when every Province from this fundamental Maxim imprinted in their Kings, that as Wars are destructive, and the chief Means to impoverish a Nation, they ought not to enter upon them, in order to extend the Limits, or make any Conquests, or when Reason it self, that to avoid all Objection of Contest with Foreigners, the *Chingee* are forbidden to go out of the Kingdom without Licence from the Emperor, or the Governor of the Province where they dwell.

The eldest Son always succeeds to the Father in the Throne, the youngest Sons having only certain Appointments, with the Title of Kings allowed them, but have not the least Share in the Administration of the Government, being under the Jurisdiction or rather Inspection of the Governor of the Province where they reside, who pays to him their Allowance quarterly. The great Council of the Councils consists of twelve Counsellors, and a President, besides which there are a number of the great Cities by Commissions. The first is for the Administration of Justice, the second for the Revenue, the third for the Ceremonies, the fourth for Foreign Affairs, the fifth for surveying the publick Treasure, and the last for criminal Cases. To prevent the Mismanagement of the Governour, and the Corruption of Justice, every Officer of the King's Court, every three Years is obliged to retire to his Family, and to continue therein

three or four Years, and to be recalled by the Emperor, to determine them whether they have any thing to do in the Emperor's Behalf; by which Delays it happens, that most of the Affairs in the Prison than are executed. Their chief Punishments are Hanging, Impaling, and Banishment, the last is only in Cases of High Treason. They commonly lay upon their Bellies with their Hands tied, and commonly the Executioners beat them with Canes moisten'd with Water upon the Call of their Legs with their Hands, which they frequently expire under their Hands.

The *Chingee* are *Pagans*, though some have taken a great deal of Pains to persuade the Westerners to find some Remnants of Christianity, as if they were introduced there by the Apostles. They acknowledge the Heavens for the Cause of the Governor of the Universe, which is more properly the great Spirit called *Tayzean Tzantey*, unto whom they pay the greatest Veneration next to the Sun. They also pay to the Gods called *Camoy*, unto whom they attribute the Cause of all sublunary Things. They ascribe to the Gods as many great Miracles, viz. *Tangwan*, who presides over the Air, *Yeynam*, whose Business is to preserve the Generation of Men, and all living Creatures, and the Products of the Earth; and *Tzangwan* the God of the Sea. They have also three famous Saints, the first is called *Yehba*, Founder of all the religions Orders, the other two are Females, called *Yezna* and *Yehba*. The *Chingee* are also much addicted to the Worship of the Devil. They believe the Demons to be a Spirit, which is communicated to it by Heat, and is either enjoy eternal Felicity or Torment, according to good or bad Actions done in this World, but it is that they assign a certain Place of Abode for the Purgatory for the Soul, after its Departure from the Body. There it is purged from its Sins, and after that its Relations and Friends, may be certain of the Salvation of the Soul, which they desire to be done.

Their Orders of religious Men have their chief Seat in the City of *Yanton*, who has under his Jurisdiction the Monks, and these under them the Superiors of their respective Monasteries. They make a great deal of Money, and keep to their custom Mattias and *Orde*, the Monks in *Europe*. The eldest Sons of the *Chingee* are not permitted to enter into any of these Orders, but all the rest who have embraced a monastic Life, at their Funeral Rites, the *Chingee* walk round about them in a Car of sweet Wood walk round about them upon a Table like in *Days*, during which the Priests, who come there to help, pray for them, and are feasted with Wine and Food, and then they enter them after the Expiration of their Lives, which is commonly done in the Country near *Yanton*, that he not to be found, they put one of their Feet in Mourning, a very close, in course Country, and then a Cord tied about their Middle, suspended from the top of a Tree, and the other End fasten'd upon a post, and so they hang till they are dead.

The first Law the *Chingee* have is that they shall not build a Wall within a City, when they build a Wall, they shall build all the Country, and to be ready to receive the

Charity, are the chief Means to attain Salvation, which is the Reason they extend their Charity even to the Beasts, such as Birds and Fish, which they buy to set them at Liberty, as believing the Transmigration of the Soul. This is the Reason why they never condemn any other Religion, or dispute with them: But their Ecclesiasticks preach without Intermision against the old Custom of invoking the Devil, which is still retained among the vulgar Sort. They have abundance of Lamps hanging before their Idols in the Time of Service. These they set out with Garland's of Flowers, and in some of them they have certain Days, each Quarter of the Moon, appointed for their general Devotions, and a Lent of three Months.

Their dead Corpses they shave, wash and perfume, and afterwards burn them near a Temple, where the Ashes are buried under a Tomb, or Pyramid. The Relations mourn for their Friends by shaving themselves, by giving Alms and Benevolences to the Priests, to pray for them at their Obsequies. The Corpse is attended with Music and Fireworks. The *Siamese* are stronglimbed, and well pro-

vide me id certain South Ocean Islands, which go to a *Tuan*, eight or nine hundred of which go to a *Tuan*.

The *Portuguese* being sufficiently sensible what prodigious Advantage they were able to reap from this Kingdom for supporting their Traffick to the *Molucca* and *Tappene* Isles, the Viceroy's of *Goa* were always very desirous to cultivate a good Correspondence with the King of *Siam*, who in Return granted them many Privileges, till at last the *Dutch* got Footing there at the beginning of this Age. The *Portuguese* were so alarmed thereby, that they not only obstructed the Trade of the *Siam* to *St. Thomas* and *Negapatan*, but also attacked a *Dutch* Vessel in the River *Menam*, which, with some other Outrages, served only to incense the King of *Siam* against them, who ever after encouraged the *Dutch* in their Settlement and Commerce, which is very advantageous to them in respect of the Isles of *Java* and *Sumatra*, of which they are now in Possession.

The Kingdom of *Cambodia* borders to the North- West upon the Kingdom of *Siam*, being inclosed by the

have any thing to do with it, it happens, that some of them are executed. Their names are Insulating, and Baran, who are of High Treason. They are put into their Hands to be carried to them with Cans of Wine, and their Legs with Red Wax, and under their Heads.

18. We told you how we were becalmed in the Sight of the Isle of Ceylon, where we continued till the 20th of February, when the North-West Wind obliged us to steer our Course to the South-East. We found ourselves then 1° beyond the Equinoctial Line. I took this Opportunity to ask the Master of the Ship, whether (according to the vulgar Opinion) I might discover both the Poles here; but he sufficiently convinced me, that the Arctick Pole was not to be seen till about six Degrees, and the Antarctic not till eight beyond the Line, and that when you come to 8 or 10° the North-West Wind reigns there constantly for six Months, as the South-East does the other Months of the Year. We saw abundance of Birds, some white like Pigeons, others like wild Ducks, and vast Quantities of certain Birds, called by the Portuguese *Garys*, being black and white, but larger than our Magpies. Their Tails are divided like a Pair of Taylor's Sheers: All these live upon the flying Fish, who, to avoid the Pursuit of the *Alicores*, *Bonitos*, and *Dorados*, betake themselves to the Air. The *Alicores* are white, and without Scales, and loose the *Bonitos*; but the first exceed the others in Bigness, and have but one Bone from the Head to the Tail, but are not extraordinary Meat. The *Dorado* is like a Salmon, but more delicious, and has smaller Scales. We also took a Sea-Hog (so called from its Snout, which is like that of a Pig) which are seen in great Shoals near the Vessel, and are looked upon by the Seamen as the Forerunners of a Storm, which may naturally be accounted for.

The *Dutch*, in their first Voyage into these Parts, opened one of these Fish, and found a great deal of Fat, and a young Pig in the Belly of it. There is another great Fish in those Seas called *Lager* by the *Dutch*, and Shark by the *English*; their Teeth are very close and sharp, and as they delight in Man's Flesh, it often happens that they snatch a Lamb of an unwary Seaman. Their Mouth being below their Heads, they lie upon their Backs when they are to catch a Prey. That we took had the Heart in the Head, and lived a good while after it was taken. Their Flesh is not fit to be eaten. There are also abundance of that sort of Fish hereabouts called by the Portuguese *Paspaparo*, because they make a Noise like Pigs, and are of the Bigness of a Bream. Tortoises (the Meat of which is as fine as Veal) are in such Plenty here, that the Seamen draw them at Pleasure into the Ship with Hooks. February the 21st we found ourselves in 19° 20' of the Line, with very rainy and unconstant Weather, which is common hereabouts. On the 23d one of our Seamen died of the Pox; the 24th we were becalmed; but the next Night there arose a Tempest, which made us continually upon our Guard, for fear of the *Travados*, or Whirlwinds, which are so sudden here, that the Seamen have scarce Leisure to lurl their Sails. We could not make any Observation by the Sun till the 5th of *March*, when we were in 8° 6' Lat. and the 10th in 10° 12', the Wind West.

The 11th and 13th it blew a great Storm, with Thunder and Lightning; but what most surprized us was, that though we were in 13°, we found not the least Effects of the Moonsoon, or ordinary Wind of the Season, which is

Winds, two Leagues an Hour, which continued the 23d, 24th, and 25th. On the 26th the Wind fell still fair; but, for fear of a Change, and Want of fresh Water, we resolv'd to direct our Course to *Maurice* Island, to take in Refreshments there. We discovered the same Night the Isle of *Diego Rodriguez* in 20° 48', which lies sixty Leagues from the said Island of *Maurice*, so called by the *Dutch* from the Prince of *Orange*, who was Admiral of the United Provinces at the Time of their first Voyage to the *Indies*. Its Harbour is very spacious, being able to contain fifty large Vessels, and commodious by reason of its Depth, which is a hundred Fathom at the Entrance. The high Mountains, which are covered with Trees, may be seen at a great Distance at Sea. The Vallies produce some Fruit, and Abundance of other Trees, some of which are those that afford the best Ebony in the World, black, red, and yellow; but the two last are in the greatest Esteem, and the Sea abounds in Fish. The *Dutch* in their Relations speak of a Thornback they catch'd near this Isle, which found two good Meals for the whole Ship, and Tortoises of such a Bigness, that ten Men might sit on one Shell. The Isle was quite destitute of Inhabitants at that time; but since 1040, the *Dutch* have erected a Fort there. It abounds in Birds; but is destitute of four-footed Beasts; but as for Fruits and Water, it affords sufficient Refreshment to Ships that are passing that Way.

The Wind continuing fair, when we came within Sight of this Island a Council was call'd, in which it was agreed not to lose any Time by putting into this Island, but to continue our Voyage with all possible Speed to the *Cape of Good Hope*, to avoid the Danger of being obliged to winter in the Island of *Madagascar*. Accordingly we lost Sight of this Isle the same Day, and call'd the Tropic of Capricorn *March* the 30th, steering our Course West-South-West. April the 1st we found ourselves in 26° 3', and after having made forty Leagues, were becalmed before Night. We saw the next Day divers Whales; and the Weather becoming very stormy, carried us to the West-South-West, our Business being to steer to the South, and consequently to the *Cape of Good Hope*. On the 5th the Compsals still varying, we held our Course still to the West, and though we had not much Wind, made seventy-three Leagues in three two Days. From the 9th (when we were about three hundred Leagues from the *Cape*) we advanced tolerably well, but the 15th it blew very hard, and those Birds called by the Portuguese *Pintados*, which keep within forty Leagues of the Land, and several other Birds, came near our Ship. On the sixteenth these Signs persuaded our Seamen that we were not far from the Shore; the 17th we continued our Voyage with a fresh Gale; but the 18th and 19th we had scarce any Wind, through the Roughness of the Sea, which proved an insupportable Omen of the Tempest that overtook us the same Night from the South-West in 35° Latitude. As these Storms are unavoidable about the *Cape of Good Hope*, we took in our Sails.

On the 20th, perceiving the Water somewhat more inclinable to white than before, and a great many Sea-weeds, called *Mingas de Valados* by the Portuguese, round our Ships, we concluded that there was Ground within an hundred, or an hundred and fifty Fathom, and, upon Trial, found it at eighty Fathom. We saw also the same Day Abun-

of which go to a Town, sufficiently fertile what produce were able to export from this Kingdom. Traffick to the *Malacca* is a Trade of God were always very dependent upon the King of *Siam*, and them many Privileges, which not Footing here at the Beginning, Portuguese were so alarmed, that they refused the Trade of the *Indies* to *Siam*, but also attacked a *Dutch* Vessel, which, with some other Outrages, the King of *Siam* against them, who the *Dutch* in their Settlement and cry advantageous to them in respect *Sumatra*, of which they are now

and the *Iles de Noes* for the Vessels of a middle Size; the small Barks may enter the River. In the City of *Malacca*, its Suburbs, and adjacent Towns, under the Jurisdiction of the Portuguese, are computed to be about 1200 Inhabitants, and, among them, not above 300 fighting Men, and scarce 200 Portuguese, the rest being either *Mellicers* or *Malayans*. The Portuguese are in Possession only of the City of *Malacca*, and its Suburbs, to the Town of *Sijora Solora de Guadalupe*, five Leagues thence upon the same River, the Territories of the King of *Jolore* beginning half a League thence. This City being so commodiously situated for the Trade of *China* and the *Moluccas*, the Portuguese had, in all Probability, made this one of the chief trading Places in the *Indies*; if the *Dutch*, who possessed it in 1606, and laid great Part of it desolate, had not prevented them; and being by their Settlements in *China* and *Java* become Masters of these Seas, quite closed the Commerce of the Portuguese to *China* and the *Moluccas*. The Kingdom of *Portuguese* is a Kingdom of *Sumatra*, which is the chief Town of the *Malayans*, that they learn to cultivate them. The *Malacca*, or *Malayan* Language, as it is the most elegant of any in the *Indies*, so it has gained as much Reputation there, and is generally used, as the *French* is in *Europe*; and having no Inflections in either Nouns or Verbs, it is not very difficult to learn.

11. We will now look over the Continent to the Isle of *Sumatra*, ten Leagues distant from the *Malacca* Shore; it extends from about 5° on this Side to 6° beyond the Line, containing 165 Leagues in Length, and about 60 in Breadth; so that those who inhabit the Middle of the Island have the Equinoctial Line just over their Heads; whence it may be easily conjectured, that the Heats are excessive here, which, together with the vast Multitude of Lakes, makes the Air very unwholesome: This Defect is recompened by its vast Riches in Gold, Silver, Copper, Iron, and Brals (whereof they make as good Artillery here as in any Part of *Europe*) besides Rice, Millet, and Fruits in prodigious Quantities, even in the very Forests. Add to this its Wealth in Diamonds and other precious Stones, and its Trade of Silk, Silver, Wax, Honey,

...take their Masters Trees, and other Commodities, at a cer-
...tain Rate, which they sell to the best Advantage they can;
...others walk abroad for their Master's Profit at a set Rate
...per *Diem*. Others maintain themselves, and work alter-
...nately, six Days for their Masters, and as many for them-
...selves. They commonly adulterate their *Pepper* with black
...Gravel, as they do all other Commodities they sell to
...Strangers, being very crafty in their Commerce; though
...very few rich Merchants venture their *Perions* on any long
...Voyage, but traffick, like our *European* Merchants, by the
...Assistance of *Factors*. Bonds and other Securities are
...written upon the Bark of Trees, the Characters being en-
...graven with a sort of *Bodkin*, which is either rolled up af-
...terwards, or laid together four-square, betwixt two Boards,
...which they have a Way to tie neatly together with Pack-
...thread; sometimes they use *Chinese* Paper.
...They have a Language peculiar to themselves, but the
...*Mulayan* is most in Use here, and the *Arabian* is used by the
...*Mohammedans*. The Traffick of the *Persians* that live

hundred, two hundred, or three hundred, each under his own Lord, whom they call *Tjebick*. Two of these had their Residence in a Wood not far from our Tent. Their Wars among themselves are commonly occasioned by the want of Pasture for their Cattle, and the Prince *Maffar* told us, that he had joined with two neighbouring Lords, and that they intended to attack some on the other Side the Mountains with five hundred Men, to drive them from their Pasture Grounds, which they stood in need of for their Cattle. This Dignity is not hereditary, but they govern, whilst they are in the Possession of it, with an absolute Authority. It is not easily determined what Religion they profess. As far as I was able to learn, they believe one God, Creator of Heaven and Earth, who will reward their good, and punish their bad Actions. I remember I saw one among them, whom I supposed to be their Priest, getting up on a Tree, and making his Oration to the People; but as I had not the least Knowledge of their Language, I could not be satisfied of what he said, neither what Difference there was in the outward Appearance of their Priests and Laicks, except that I observed some of them to carry a Piece of a Cow's Tail at the End of a Cane; and I saw one whose Nails on the two Fore-fingers of his Right-hand were as long as the Talons of an Eagle. Each Tribe has its own Priest, who pretends also to Incantations.

21. The Isle of *Mozambique* is not above half a League from the Continent of *Africa*, and remains in the Possession of the *Portuguese*. This small Island is so beneficial to the Governor thereof, that what with the Trade to *Madagascar*, and that of *Soffalo*, he commonly amasses a Treasure of 150,000 Pounds Sterling during his three Years Government. This Island was first discovered by the *Portuguese* in 1506, when a whole Boat of Negroes coming on board the *Portuguese* Vessels, they were very civilly entertained by the Captain, who also gave them divers little Presents, but they requited his Kindness with a Shower of Arrows as soon as they were got into their Boat, till the Captain by a Volley of small Shot, and some Cannon Ball, made them soon give over that Sport. Another *Portuguese* Captain, named *Rodriguez Pereira*, being in the same Year driven upon that Coast by Distress of Weather, sent a certain *African* Negro, who had some Knowledge of their Language, to signify unto them, that he was come thither to settle a good Correspondence and Commerce with them. They seemed to approve of this Proposal, but were no sooner got at some Distance from the *Portuguese*, than they fell upon the *Moor*, with Intention to kill him, which they had certainly done if the *Portuguese* had not discharged their Fire-Arms upon them, which obliged them to leave the Negro, and to betake themselves to their Heels, leaving several of their Companions dead upon the Spot.

Pereira sailed thence to another Place upon the same Coast, where having surprized one of their Princes, he carried him on Board, and gave him such kind Entertainment, that in Requital for his Courtesy, he offered to shew him a very good Harbour; accordingly he conducted them to a great Bay, at the Entrance of which was a small but populous Island, but the Inhabitants being terrified at the Sight of these Foreigners, fled into another adjacent Island; so that the *Portuguese*, being become Masters of the small Isle without the least Opposition, they sent to the Inhabitants,

alshore with the *Maffar*, and the *Portuguese* concerning some Jealousy at their Behaviour, they pursued them with eighty Men in their Shallop, but too late, the Negroes having reached the Shore before them. However, after they were landed, they got Sight again of the *Maffar*, who told them he had been treated with much Kindness by their Prince, who was desirous to see the Captain himself, in order to enter into a strict Correspondence with him; which the Captain being not unwilling to comply with, went accordingly ashore, where he was kindly received, and magnificently treated by the Prince, according to the Fashion of that Country; but in the Evening, being ready to return aboard in the Shallop, there arose a violent Tempest, that he durst not venture to commit himself to the merciless Waves in so small a Boat, which continued for four Days successively; and there being no Possibility to get on board, his Ship's Crew imagining that he had been mastered by these Barbarians, thought it most advisable to save themselves, and to return to *Mozambique*, which they did accordingly. The Captain finding the ship gone was so discontented that he died not long after, as did eight others of his Retinue. The rest thinking it better to run the Risque of the Sea than to perish without the least Hope of Relief, embarked in the Shallop, and having by good Fortune met with a *Portuguese* Vessel, commanded by *John Tonseca*, he carried them to the next *Portuguese* Port in *Africa*. The first Time of the Landing of the *Dutch* in the Isle of *Madagascar* happened rather by Chance than any Design, for their Seamen being miserably infected with the Scurvy, so that they were no longer able to manage the Ship, they were forced to seek for Reliefment in the Island, but lost seventy Men out of the four Vessels, of which their Fleet consisted, before they could get ashore. These Men were buried in a small Island, which to this Day is called the *Dutch* Church-yard. Some will have the *Madagascanians* to be *Mohammedans*; but certain it is, that in their outward Demeanour they do not shew the least Sign of it.

22. The Winter Season being pretty well over we began to think of our Voyage; for which Purpose having bought, August the 19th, of Prince *Maffar*, and some other neighbouring Lords, twenty five Oxen and a hundred Sheep, we embarked our Baggage the 21st, and the 21st set sail out of the Bay of *Saint Augustine* with a South-west Wind, which proving favourable all that Night we soon lost Sight of *Madagascar*.

The 22d being rejoined by the Monsoon, or Wind of the Season, which happened sooner than ordinary, we briskly pursued our Course to West-South West, and the 23d the Wind blowing a brisk Gale from the East in our Stern, we sailed briskly a little more to the South, with an Intention to avoid the *Cape of Good Hope*. The 24th and 25th the Wind was not so brisk, but being seconded by a fresh Gale, the 26th we advanced bravely, and found ourselves that Day in 27° 27' Latitude, and on the 28th in 28° 12'. The 29th we were surprized by the *Traualos*, or Whirlwinds, in 31° 15'; but they did not continue long. The 30th it blew again; notwithstanding which we made the best of our way, and the 1st of *Sept* found ourselves in 33° 34'. On the 11th of *September* we made fifty Leagues in twenty-four Hours, the Wind blew very hard; and the 2d we got to the 34th

ours, they have every thing they come at. They have a certain kind of these Creatures reddish, and of the Length of a Man's Finger; but these live in the Fields upon the Barks of Trees. Among the Fruit-trees of *Java* the *Striquera*, which bears the *Strera*, is none of the worst; it is a Species of the *Cocoa*, but less in Bulk, and with narrower Leaves. The Fruit resembles a Date included in a Husk, which falls off when it ripens; it is without Taste, but taints the Lips and Teeth of a black Colour. The *Indians*, after they have mixed it with a little Lime, wrap it up in a Betel Leaf, and so chew it, looking upon it as a good Remedy against the Scurvy. It will cause in such as are not used to it a Dizziness in the Head, but it soon passes over. The *Mango* is a Fruit growing upon a Tree not unlike our Walnut-tree; it is something like our Peaches in Bigness and Colour, being of a red and green. The Shell incloses an Almond, which is of a grateful Taste when roasted in the Ashes; they pickle them whilst green, and they are accounted a good Remedy against the *Morue*, and *Luxations*; the wild ones are rank Poison,

London. The best is that which is used raw, because it occasions vomiting and purging the Guts; but roasted, it is both pleasant and good, and reckoned a great Restorative.

On the Side of the Island towards the Strait of *Sunda* you meet with Abundance of wild Cinnamon, which is transported into foreign Parts. The *Carappa* is a kind of *Indian* Cherries, white, dark, red, and of a greenish Colour; the Trees and Fruit are like those in *Europe*. The *Cajus* *Indians*, called *Pakki* by the *Malays*, resembles in every respect, both in Height and Flower, the *European* Elder tree, wherewith the *Peijous* and *Malays* drive a considerable Trade, as they do also with the *Cinnamomum aromaticum*. There is a yellow and spongy Matter in its Stalk, which some Women make use of to appease Fits. The *Zerumbet*, called *Canlar* by the *Malays*, is like Ginger, except that it has somewhat larger Leaves; it is preserved or dried like Ginger, but valued absent. Of *Galanga* there are two Kinds, the lesser is brought from *China*, and is preferable to that of *Java*. The Herb

and the Portuguese concerning Behaviour, they pursued them with Shallop, but too late, the Negroes were before them. However, after they got Sight again of the Ship, they were treated with much Kindness, as desirous to see the Captain himself, into a strict Correspondence with him, being not unwilling to comply with him, where he was kindly received, and led by the Prince, according to the custom; but in the Evening, being ready to depart, there arose a violent tempest, which obliged him to retire to a small Boat, which continued for some time, and there being no Possibility of getting the Crew imagining that he had been killed, the Mariners, thought it most advisable to return to Mozambique, which they did, the Captain finding the Ship gone was obliged to die not long after, as did eight of the Crew. The rest thinking it better to run than to perish without the least Hope in the Shallop, and having by good Fortune a Portuguese Vessel, commanded by a Captain, who carried them to the next Portuguese Port, where the Landing of the Dutch Ship happened rather by Chance than Design, the Seamen being miserably infected with the Plague, they were no longer able to manage the Ship, and were forced to seek for Retirement in some remote Place, where they left only twenty Men out of the four Vessels, of which they were all filled, before they could get to the Land, where they landed in a small Island, which is called *St. Helena*, near the Church-yard. Some will have the Name of this Island to be *St. Mohammedani*; but concerning this, I have no means to enquire, but meanly they do not shew the least

Season being pretty well over we began our Voyage; for which Purpose being on the 19th, of Prince Masfen, and some other Lords, twenty-five Oxen, and a hundred Sheep, were packed our Baggage, and then we departed from the Bay of *Saint Augustine* with a South-Easting favourable all that Night we sailed as fast as we could, and being rejoiced by the Monsoon, or Wind of the East, which happened sooner than ordinary, we proceeded on our Course to West-South West, and the 21st, a brisk Gale from the East in our favour, blew us a little more to the South, with an increase of the *Cape of Good Hope*. The 23rd and 24th we continued to brisk, but being it counted by a Council of War, we advanced bravely, and found ourselves on the 27th, in 27° 27' Latitude, and on the 28th in 28° 15' Latitude, and on the 29th we were surprized by the Trade Winds, in 31° 15'; but they did not continue long, for on the 30th it blew again; notwithstanding which, we continued our Course, and on the 31st, we were in 33° 34'. On the 1st of September we were in twenty-four Hours, from the Cape, and on the 2d we got to the Bay of *St. Helena*.

we were near the *Cape of Aquilas*. The 12th we were forced to make the best of our Way, sometimes with a North-North-West, sometimes with a South-West Wind, which continuing in the Afternoon, we continued our Course to the West-North-West, and in the Evening found a yellow Sand at a hundred and ninety Fathom Water. The 13th, the Wind being at South-East, we continued our Course to the West-North-West, and finding a Whale floating upon the Water in the Latitude of 35°, we believed ourselves to be in the Height of the *Cape of Good-Hope*, where abundance of Whales are commonly seen. The 14th, at Sun-rising, finding the Declination of the Needle 4° 50', we concluded that we had compassed the *Cape of Good-Hope*; the 15th we had a fair Wind and Weather, and found the Declination of the Compass to be 1° 5', and presently after the Declination of it, near the *Cape of Good-Hope*, is 4°, though sometimes it does not decline so much; and as soon as you have passed the *Cape*, you find the Compass to vary to the East. At 33° 15' Lat. lies the Isle of *St. Elizabeth*, not above twenty Leagues on this Side of the *Cape of Good-Hope*, being not above two Leagues from the *African Coast*, on which Side it has a very good Harbour at sixteen Fathom Water.

The whole Coast is but one continued Rock; but the Country is so fertile in several sorts of the best Herbs, that there is sufficient Reason to believe, that if it were cultivated, it would not in its Products be behind the Isle of *St. Helena*, or any other in those Parts. The work is, that it wants fresh Water, except what is supplied by the Skies when it rains, which makes this Isle not to be much frequented; though they have such vast Numbers of Sea-Wolves here, that in a few Days they may catch as many, that the Fat would freight a Vessel of six hundred Tons. They call these Creatures Sea-Wolves, though both in Colour and Shape of their Heads they rather resemble our Bears, except that their Snout is not so sharp. They have only two Paws beneath the Breast, by which means they draw the other Part of their Body after them, and that with so much Swiftness, that the nimblest Man can scarce overtake them. This Beast is very fierce, its Teeth being so close and strong, that it will bite through the Handle of a Partisan. This Isle also produces a kind of Badger, the Flesh whereof is very delicious. The 16th we made the best of our Way with a small Wind at 32°, and the 17th and 18th made sixty-four Leagues with a North-North-West and a South-West Wind, and came the 19th into 29° 16', when with a South-South-West Wind we made forty Leagues to the North-West, and in the Evening found ourselves in 28° Latitude. The 6th of October a South-East Wind carried us fifteen Leagues farther to the Isle of *St. Helens*.

23. The Situation of this Island, called *St. Helens* by the Portuguese, is in 16° 12'. It is distant from the Cape of *Angola* 350 Leagues; from that of *Good-Hope* 550; and from *Brazil* 510. It being very surprizing, that an Island of no more than seven Leagues in Compass should be found at so great a Distance from the Continent. It is so plentiful in most excellent Fruits, and all sorts of Creatures, that it surpasses most of the Provinces of *Europe*. Some were of Opinion, that there were neither to be seen when the Portuguese first discovered it, and that those

Parts, which its vast Distance from the Continent would make it very difficult to keep; whereas its being free would afford a certain Retreat to all Vessels; and those Refreshments, especially of fresh Water, which they would be obliged to seek for as far as the Coast of *Guinea*, where they must be forced to stay for the Rains, to the great Inconvenience of the Seamen, many of whom must in the mean while perish for want of it. The Fertility of the Isle ought chiefly to be attributed to the daily Showers of Rain which fall there, which, being animated by the Sun-Beams, shining presently after by Intervals, incredibly advances the Maturity of Things in a Climate like this. It has also three Places where Ships may provide themselves with fresh Water, *viz.* where the three Rivers, which have their Sources among the Mountains, discharge themselves into the Sea. These produce abundance of Snakes, which are eaten by the Dutch, who prefer them to Eels. At 190 Leagues to the N. W. of the Island of *St. Helens*, you see the Island of *Afcenson*, so called from its being discovered upon *Afcenson-Day* by the Portuguese, lying 8° 30' S. of the Line. It is a very mountainous Island, affording neither fresh Water, nor any other Provisions, except Fish, of which there is great Store on that Coast. October the 17th, the same Wind carried us forty Leagues forward; and the 18th forty-two to the 5th Degree.

The Heats were almost insupportable this Day, and we saw Millions of Flying-fish, and great Numbers of the Birds called *Mangas de Valada*. The 19th, the Wind blowing from the S. E. we made 40 Leagues to 3° 19' Lat. and the 20th the same Wind continued us 40 Leagues farther to 1° 18' Lat. The same Wind carried us the 21st 35 Leagues, when we passed the Equinoctial Line. At 1° beyond the Line, we discovered the *Cape de Lopez Gonzales*, upon the Coast of *Guinea*, which has a safe Harbour for Ships, which sometimes provide themselves with Provisions here. The Isle of *St. Thomas* is situate under the Line, the Air of which is so unwholesome, and the Heats so excessive, that few Europeans live there to fifty Years of Age, though some of the Natives arrive to an hundred. Here is a constant Equality of Day and Night throughout the whole Year, and it never rains, except in *March* and *September*; the Defect of which is supplied by the Dew, which falls constantly every Night, moistens the Ground, and renders it very fruitful. When it was first discovered, a certain kind of Tree was found here, the Branches whereof were exactly Straite. And, formerly, this Isle produced such vast Quantities of Sugar, that above forty Ship Loads might be transported thence every Year; but the Worm, being got among the Canes, has ever since made such Havock among them, that it scarce affords now Loading for six Ships. Besides which, this Island produces Wheat, Wine, Millet, Rye, Barley, Melons, Cucumbers, Figs, Ginger, red Parsnips, Cabbages, Navens, Lettuce, Parsley, and all sorts of Roots, Pulse, and Pot-herbs; and amongst the rest, a certain kind of Must-rooms, the Rind whereof is black, but the Meat white, and shoots forth divers Branches below. The Inhabitants look upon it as a great Dainty, and, when baked in the Embers, eat them as we do Chestnuts, but they have a better Flavour. The Spaniards have planted some Olive, Peach,

occasions vomiting and ... it is both pleasant and ... Island towards the Strait ... of wild Cinnamon, but ... Parts. The *Cassava* is a ... red, and of a ... 24. The Herb *Parasita* is cooling, but scarce and *Cera Tomopate* is a Root used against the Inflammation of the Spleen. The *Condura* are poisonous Berries, but are used to weigh Gold and Silver. The *Jasurase* being exasperated by the ill Usage they often received from the Portuguese, would not for a long time permit any Strangers to have any Settlements there, till at last the Hopes of Gain engaged the Kings of *Bantam* and *Jacatra* to let the *English* and *Dutch* let up their Factories there under certain Conditions; which being but disobeyed by the *Indians*, the *Dutch* took this Opportunity of fortifying their Settlements at *Jacatra*, and that with so much Expedition, that the *Indians*, finding themselves not in a Condition to force them thence, engaged with the *English* to assist them in the Expulsion of these bold Strangers. In the first Sea Engagement, *January* the 2d, 1619, near *Bantam*, the *Dutch* had the worst; upon which the King of *Jacatra*, in Conjunction with the *English*, besieged and attacked their Forts for six Months, till the *Dutch* Fleet being reinforced, obliged the *English* to quit both the *Coast*

in small Vessels to the Isle of *Java*. In this Road most Ships bound for the *Moluccas* take in fresh Water and Provisions, which are to be bought here at a very low Rate. They have Iron, Copper, and Gold Mines; but the last are not broke up or wrought, for fear the Fame of their Riches should draw thither some foreign Nation or other that would without Question reap the Fruits of their Labour. Their King, whose Title is *Quilor*, i. e. High-Countable, is in great Veneration among his Subjects, and governs his Dominions by certain Governors appointed for each Province. They persist very obstinately in Paganism, as also in that diabolical Custom of Women burning themselves with their Husbands. The Isle of *Borneo* lies farther North than *Java*, one of the largest in those Seas, extending six Degrees to the North, though its greatest Part lies on this Side of the Equinoctial Line. Some make it four hundred Leagues in Compass; but the *Dutch* with more Probability assign it no more than two hundred and fifty Leagues in Circumference; its chief Places are *Borneo*, *Seridage*, *Sanga*, *Samban*, and *Boro*.

among the principal Orankays, and threatens the Cady, who corrupted to crown him.

In fine, he managed the Intrigue so happily, that he was proclaimed King that very Night, to the great Joy of all the People who had conceived great Hopes of his Liberality, Courtezy, and Familiarity, as well as his Valour. *Paik* being twelve Miles from *Achen*, the King of that Place was quickly acquainted with his Brother's Death, and came the next Day to receive the Investiture of his Patrimony; but as he approached the Castle with a small Retinue, he fell into the Hands of his Nephew the King of *Achen*, who, forgetting his former Favours, kept him a Month Prisoner in the Castle, and then, pretending to send him to a more agreeable Retreat at a Distance from the City, caused his Throat to be cut by the Way. Those who put the Crown upon his Head were not better used; for he began with the Maraja, or Governor of the Castle, who had taken most of his Money, and ended with those that received the least. In a Year's Time they found a great Alteration; for instead of being humane, he was very cruel. Instead of Liberality, he played an extreme Avarice, and his familiar meek Emperor became austere and inexorable.

In fine, he has shed more Blood than his Grandfather did in his whole Reign. He has dispeopled the whole Territory of *Achen*, and drained not only the Natives, but the Foreigners that reside there, of all their Money. It is true, he endeavoured to re-peopel this City with his Conquests, or rather Ravages (properly speaking) for having ruined the Kingdoms of *Jer*, *Debb*, *Paban*, *Queda*, and *Pera*, he transported from thence to *Achen* about twenty-two thousand Persons; but at present there are scarce one thousand five hundred of them left: So that this Policy served rather for an Instance of his Cruelty, than any other Thing; for the People being brought naked to *Achen*, and allowed not a Grain of Rice for their Maintenance, died of Hunger in the Streets. Hitherto this King hath been successful in all his Enterprizes, insomuch that some take him for a Sorcerer.

For my part I regard him as a Man of great Judgment, one that undertakes nothing rashly, or unreasonably, but after a mature Deliberation, and upon very probable Conjectures. He never assaulted one of his Neighbours, but when they were reduced to some Extremity. All his preparatory Measures are incomprehensible, till the Design is put in Execution; for he never asks or receives Advice of any, and being invested with an absolute Authority, his Commands are immediately put in Execution; so that all that may be done without the Assistance of Devils. Besides, I have often heard that Sorcerers are poor, sorry Wretches, but I am certain that this King is by far greater and richer than any of his Neighbours.

27. *February* the 3d we were in Sight of the Island of *Mintaby*; the 4th we came to an inhabited Isle that lies between *Nagay* and *Mintaby*; the 6th we passed between *Nagay* and another Island not marked in the Charts. This Channel is four or five Leagues broad, all these Islands lie very low, whereas the opposite Coast of *Sumatra* is very high and conspicuous. I would advise all Sailors rather to pass to *Sumatra*, than thro' any of these little Islands; for the Harbours are peopled all along the Shore with Persons acquainted with the Conversation of Strangers, whereas the Inhabitants of these are barbarous Savages, that have no Commerce or Dealings with any other People, and consequently not to be trusted.

March the 1st at 4th Latitude, the Needle varying 3rd North-West, withered a In both and uniform, but very great, upon the 1st we flew to Sea, and next Day came to *Table-Island* in Morning, that lasted to the 2nd of *May*; that it was produced by a Cold between *Cape Anguilles* and *Cape Table*, and that it was we came to an Anchor in *Table-Island*, and here Men did not recover at this Place, as I expected, either by reason of that extreme Cold, or because the Air was not so fresh Provizous as I had a Mind to have seen, as in *Paik* Ships in the Bay that I mentioned. I observed the Cold was the great Cause of it, for the *Table-Island* is as cold as mine. The Wind continued West North-West from my first Arrival in this Bay to the 23rd, that I weighed Anchor, and passing

by the North-East, was becalmed within Cannon Shot. The 30th we set Sail, the Wind at South-South-East.

On the 21st of *June* we departed *St. Helena*, about fifteen Leagues West-North-West of us: Next Day I came to an Anchor over-against it, and sent our sick Men on Shore, who were something benefited by the Air. This is a very convenient Place for the refreshing Men, not only in regard to the Temperance of the Air, but by reason of the Plenty of young Kids and Hogs, the Facility of coming at good Water, the Convenience of Fishing in the Road, and upon the Shore, the Abundance of Oranges and Citrons, which are excellent Remedies against the Scurvy, besides several good Herbs, such as Purslain, a sort of Tarragon, in large Quantities, some Fenugreek, Tobacco, and the Herb Mayoe: Not to mention the Partridges, Pigeons, and, as some say, Oxen, that this Island abounds with; for though the Country be mountainous, and very steep, and the Grass withered-like, yet on the Top there is a great deal of Moisture, and there is not a Valley without a Brook or Rivulet, the greatest of which runs in the large Valley, where a large Chapel is built, though it is set above a hundred and fifty Paces broad, and one thousand long. At the End of this Valley there is a ragged Cleit Ridge of Rocks, upon which there falls down a Stream of Water from a very high Mountain, insomuch that it is beat as small as Rain before it falls. This Isle lies in 10° South Latitude, the Needle varying 5th 45 North-East, and always has the Wind South-East.

28. On the 16th of *July*, we saw the Isle of *St. Paul*, about twelve Leagues North East of us. It is very high, and its Anchorage lies over-against a sandy Cove. This Island has neither Wood, nor Fresh-Water, nor any Herbs, being nothing but a hard Rock; yet it affords some Hogs, and a great many Fowls, but it can live without Fresh-Water, upon the Rocks, and in the Road it has Abundance of Fish and Tortoise. Its Circumference may make about eight Leagues, which is as much as that of *St. Helena's*. It lies in 5° S. Lat. After we had crossed the Equinoctial, we had such Calms, and drizzling Rains, that most of our Men were teized with Dropsies and Tumours, upon which there ensued great Mortality in the Ship.

August the 6th the Calms and drizzling Rains continuing, there came a sudden Whirlwind that lasted some Minutes, and broke all our Sails, carrying the Main-Sail quite off. The next Day we saw some Swallow-tail Butterflies, which signified that we were near Land. The 17th we saw an Island to the North, in 1st Lat. we knew to be *Saint Nicholas*, one of the *Caroline* Islands. The 18th we made the Isle of *Saint Paul*, and cast Anchor at five Fathom Water. There I had my sick Men ashore, who were very numerous, in a forty Condition; but, when they came upon Land, they recovered again.

29. The ordinary Anchorage of this Island is in 20° Lat. the Needle varying 2nd 15 N. E. It produces this Season great Plenty of Tortoises, which they call *Tortuises*, and are distinguished from the others, by the Smoothness, Plainness, and great Colour of the Shell, the Largeness of their Body, and the Smallness of their Head, and the Form of their Feet, which resembles the Teeth of a Saw. The Fish that are eaten as well as that of a young Heifer, and part of them are so large that they weigh 300 Pounds. They come out in the Night Time, and lay their Eggs upon the Sand, which they bury a Foot deep. The hole which they make to catch them watch them at that Time, and putting a net behind them turn them upon their Back, after which they cannot turn themselves to get upon their Feet, and so they die there till the Morning. Most of them lay, and lay shelled, and as many unshelled in their Bellies, which is very good.

In this Island we met with an Herb that in some measure resembles Spinnage, but it is infinitely better; we used it both in Salad and Soup, and both it and the Tortoise-shell kept our Bellies open, and cured us of great Dropsies, without any other Purgatives, in about Days, which perhaps could not be cured in *France* in 4

ned within Cannon Shot at South-South-East. *St. Helena*, about fifteen Miles: Next Day I came to anchor our sick Men on Shore, by the Air. This is a very strong Men, not only in the Air, but by reason of the Facility of coming at of Fishing in the Road, and of Oranges and Citrons, against the Scurvy, besides Urflain, a sort of Larragon, Suggreek, Tobacco, and the on the Partridges, Pigeons, and this Island abounds with antinous, and very deep, and the Top there is a great deal or a Valley without a Brook which runs in the large Valley, though it is not above a hundred and one thousand long. A ragged Cleft Ridge of Rocks, Stream of Water runs a very at it is but as small as Rain in 17° South Latitude, the North-East, and always has the

we saw the Isle of *St. Paul* East of us. It is very high, against a sandy Creek. This nor Fresh-Water, nor any hard Rock; yet it abounds many Fowls, such as on the Rocks, and in the Road Tortoise. Its Circumference, which is as much as it S. Lat. After we had had Calms, and driving Rain, were seized with Dropsies and ensued great Mortality

s and drizzling Rain, the Windward that had the Sails, carrying the Mast, lay we saw some Swallow that we were near *St. Paul* the North, in 17° Lat. *St. Paul*, one of the Islands of the Isle of *St. Paul*, from Water. The Islands were very numerous, and they came upon *St. Paul*

orage of this Island, in 20° 1', N. E. It was of Tortoises, which they call described from the chestnut shells, Plannets, and the Genets of their Body, and the and the Point of that of a Saw. The Fishes were ang Heiter, and some of them 300 Pounds. They caught by their Eggs upon the South. The hole was in a small at that Time, and getting their Backs, a few would get upon their Feet, and the Moll of them have 200 Eggs in their Bellies, which at th an Herb that in some need but it is inwardly better, we d Soup, and both it and the shells open, and cured out any other Part, that it could not be cured in *St. Paul*

Mountain. It is also well stocked with young Kites, but you are not sure of catching them, unless you have Dogs. We saw no Fruit in it but wild Figs, which were all spoiled with Worms. To the Eastward, under a high Mountain, there are vast Quantities of Porcelain. Commonly the Water of this Isle is brackish; but upon the S.W. Part of the Bay, where the Anchorage is, there is a small Spring, that if it was cleaned and dug deep, would afford pretty good Water.

It is furnished with a considerable Quantity of wild Pines, which may serve for Firing; besides which it has no Wood, except some Shrubs, that cast forth a white milky Juice, that is very dangerous and painful to the Eyes if it touches them. There is very good Fishing; along the Rocks, and especially at a little Rock at the S.W. Part of the Bay, about a Quarter of a League from the Anchorage. In two Hours Time seven or eight may there catch Fish enough for two hundred Men. In fine, it is not inferior to *St. Helena* for a Place of Retirement, except that its Water is not so good. In Compensation of which Defect, it is all over accessible, and furnished with pleasant Walks; whereas the other is the most inaccessible Country I ever saw. This Isle is about nine Leagues in Circumference, and while we were there the Wind was at N. E. it has several pleasant Bays; but that towards the Isle of *St. Anthony* is the best Road for Ships that can be, for we rode at five Fathom Water, on an excellent sandy Ground, and were sheltered from all Winds. We saw neither Men nor Houles, though we travelled over most Part of the Island.

50. After our Departure from *St. Vincent* (which happened September the 14th) we had several violent Storms. October the 10th we defiered the *Scores-Islands*, but it was the 11th before we could weather them. The 14th we had a violent Storm from N. W. that broke our Mizzen-Mast, and obliged us to bring our Main-Top-Mast upon the Deck. The 30th we were 52° Lat. and had several Fathom Water, upon which most of our Pilots agreed that the *Sorlingues-Islands* lay about twenty Leagues to the West of us. November the 3d we defiered the *Lizard-Point* in England; and December the 1st came safe to *Harre de Grace*, having been out thirty-eight Months.

51. The Difficulties our Author met with, and the

Misfortune of losing two of his Ships, did not hinder his making a saving Voyage even of this, which would have proved highly advantageous to his Owners, if the *Hope* had not been lost, since it is computed that five, at the Time of her being burnt, had on Board a Cargo worth twenty-five or thirty thousand Pounds Sterling. There are few Pieces that let us more effectually into the Secret of Trade than this, which shews us perfectly the Methods made use of by the *Dutch* to exclude all other Nations from the Commerce of the *Indies*, and very fully illustrates what we have occasionally delivered upon that Subject. It is really wonderful that the Subjects of the States-General should venture, at that Time of Day, to treat the *French* in such a Manner, to whom they had not only considerable Obligations for the Countenance they had given them in the Infancy of their Commonwealth, but were also in great Danger from their Power in *Europe*. But however this might affect the States, the *East-India Company*, it seems, was themselves very little Concerned about it; which shews how dangerous it is to leave the absolute Administration of their Affairs in these distant Parts of the World to any Company, without having some Check upon them from the State, which must be answerable to other Powers for the Excesses committed by the Agents of such a Company.

As for Commodore *Bombay*, after his Return to France, he was taken into the King's Service, and behaved extremely well in the Affair of the Island of *Rhe*, when the *English*, under the Command of the Duke of *Burlingham*, made a Descent upon that Island, and during the long War against the Protestants. This recommended him to effectually to the famous Cardinal *Richieu*, that he intrusted him with the Command of one of the best Ships employed in the Squadron commanded by the Count de *Harcourt* against the Islands of *St. Margaret*, and *St. Jernat*, in which he likewise behaved with Reputation; as also in the Expedition against *Saravina*, at his Return from which to the Port of *Toulon*, he was unfortunately seized with a burning Fever, which carried him off in the Month of September, 1637, at the Age of 48; so that he may be said to have died in that Season of Life when he was most capable of serving himself and his Country.

SECTION XXVI.

The Remarks and Observations made by John Albert de Mandelstoe, in his Passage from the Kingdom of Persia through several Countries of the Indies.

Translated from the Original, written by himself.

1. An introductory Account of the Author, and of the Design of this Section.
2. His Departure from *Bipahan*, in order to go to *Gambron*, or *Bandar Abull*.
3. A curious Description of the Ruins of the ancient *Persepolis*, now called *Echelmimar*.
4. The Author continues his Journey to *Laar*, and from thence to *Gambron*.
5. His kind Reception, and generous Entertainment, by the *English Merchants* there.
6. A curious Description of the City and Port of *Gambron*, with the Country adjacent.
7. A concise History of the City and Kingdom of *Ormur*, and of the Manner of its being annexed to the Empire of *Persia*.
8. An Account of the Author's Passage from *Gambron* to *Surat*, with Remarks.
9. His Arrival at the last mentioned City, and the Reception he met with there.
10. A factual View of the Dominions of the Great *Mogul*, as they stood at that Time.
11. A Description of the City of *Surat*, with a large Account of the Commerce carried on there.
12. The Author's Journey from thence to *Amadabat*, with his Adventures by the Way.
13. A View of that City, and of the Country adjacent, with various Remarks and Observations.
14. An Account of some memorable Transactions which happened during the Author's stay there.
15. His Passage from thence to *Cambaya*, with a Description of that City, and its Inhabitants.
16. His Journey to *Agra*, with a large Account of that Capital of the *Mogul Empire*.
17. A very full Relation of the *Mogul's Court*, and of the State of the Empire of *Indostan*.
18. The Author's Journey from *Agra* to *Surat*, with many curious Particulars.
19. A factual History and Description of the Kingdom of *Guzrat*, and Provinces adjacent.
20. A complete View of the Religion, Customs, Manners, &c. of the *Banjans*, or native *Indians*.
21. A Continuation of that Account, together with a Description of the various Nations that now inhabit the Indies.
22. Of the Commodities, Manufactures, and Commerce of the various Countries.
23. Of the great Plenty of all Sorts of Provisions, and of the peculiar Manner of Dressing.
24. Of their Ships, their Trade to the Red-Sea, *Persian Gulf*, and Coast of *Malabar*.
25. Remarks upon the foregoing Section.

was the general Opinion of the Learned, that this was the Place where the ancient *Persepolis* had stood, and that these were the Ruins of that famous Palace built by *Cyrus*. The Foundation or Ground-Work on which this vast Structure was erected, is raised twenty-two Geometrical Feet, having at each of its four Corners a Pair of Stairs of white Marble of ninety-five Steps, so flat and broad, that twelve Horses may go up together a-breast. Before you come to the main Body of the Structure itself, you pass through a Square, where you see the Ruins of a Wall, and the Remains of two great Gates, each of which have a Horse garnished and faded, after a very antique Manner, carved on one Side, and on the other two Creatures resembling a Horse, except that they have Wings on each Side, and the Head is crowned like that of a Lion.

On the one Side you see the Ruins of nine Pillars of white and black Marble, the least of which are eight, and some ten Bills high, without the Gates; but whether they had been intended for the Support of some large Hall, or were built in the open Air, is not to be distinguished at this Time. The Inhabitants themselves told me, that not many Years before, there were forty of these Pillars standing. As you go on further, you meet with the Ruins of two Rooms indifferently large, as may be judged by the Doors and Windows, but every Thing is of the finest Marble. Several Figures of Men of an extraordinary Size are to be seen on both Sides the Doors, some in a sitting, others in a standing Posture, their Hair falling down carelessly over their Shoulders, and their Garments reaching down to their Heels, with very wide Sleeves, and a Giraffe round their Waists. They had very long Beards, and round Caps on their Heads. Not far from thence are two other Chambers much of the same Bigness with the former, but so ruined, that nothing but the Doors and Cross Bars of the Windows are left.

This Structure seems to have had this in common with most of the Buildings of a modern Date in *Persia*, that it had many Doors, which is done here to give the more free Passage to the Wind to cool the Rooms. Hard by these two last Chambers, you find unknown Characters engraved upon a square Pillar, which have no Resemblance to the Greek, Hebrew, Arabick, or any other Language, being triangular, or rather pyramidal, not unlike Obelisks. There are twelve Lines of them, so well proportioned, and nicely engraven, that they have not the smallest Sign in them of Barbarism. Some believe them to be Teletus, and to contain certain Mysteries; besides these before-mentioned Rooms, there is, upon the same Ground-Work, a large Court of ninety Paces square, with two Gates on each Side, some of which are six, others only three Paces wide. They are of the finest Marble; each of the Pieces are eight Feet long, and three in Breadth; you see also in another Court, very curious carved Work in Marble; Battles, Triumphs, Olympick Games, every thing in its due Proportion.

Upon each of the Gates you find a graceful Person carved sitting with a Globe in the one, and a Scepter in the other Hand, tho' it is certain that the Kings of *Persia* never sat in that Posture. My Curiosity led me to get up on high, where I saw a King represented paying his Devotions to the Sun, Fire, and a Serpent. As the Inhabitants at this Day carry from thence a great Quantity of Marble to carry on their private Buildings thereabouts, tho' with the Length of Time, has to be decayed, or rather gone; this noble Structure, that it is impossible to determine whether its Architecture was of the Ionick, Dorick, or Corinthian Order; notwithstanding which, even its Ruins are so surprising, that they would find Work for a skilful Painter for above six Months.

When we came the ancient *Persian* History, we find, that according to *Elian*, the Grand *Cyrus* had himself the Foundation, and built a most magnificent Palace at *Persepolis*, as *Darius* did at *Susa*. Perhaps the Ruins belong to the famous Palace mentioned by *Dionysius Halicarnassus*, being encompassed with three Walls of Marble, the first Wall was 19, the second 32, and the third 105 Ells high; in the first Gate and Balconies of Brass, all which, together with the inestimable Treasure it contained, was in a few Hours reduced to Ashes by *Alexander* the Great, at

the Request of a Harlot. Having spent a whole Day in viewing these Antiquities, I continued my Journey the 28th of *January*, and travelled that Day ten Leagues to the City of *Schiras*. Here I met with four *Carmelite* Friars, *Italians*, who were possessed of a goodly Monastery, and had the free Exercise of their Religion allowed them. Not many Years before, the *Portuguese* had there likewise a Convent of *Austrian* Monks, but they were forced thence, as well as all the other *Portuguese*, after the taking of the City of *Omuz* by the *Persians*.

Schiras is the Capital City of the Province of *Fars*, situate at the Foot of a most pleasant Mountain, upon the River *Endomer* (heretofore called *Araxes*) which discharges itself into the *Persian* Gulph. This City lies in 29° 36'. It contains about 10,000 Houses; but the Ruins of a great Wall, at two Miles Distance from the City, shew its Extent to have been much larger than it is at this Time. It may be truly said, that whatever Nature is able to produce either for Conveniency or Pleasure, is centered in this Place, and that in great Plenty; as Wheat, Oranges, Lemons, Pomegranates, Almonds, Dates, Pistachoes, &c. The Wine which grows hereabouts is the best in all *Persia*; which being transported hence all over the Kingdom, and looked upon as the best Entertainment they can give to their Friends: This makes it to be sold at a dear Rate at *Ispahan*, where you cannot have a Bottle of good *Schiras* Wine under Half-a-Crown. Its Taste is not unlike that of *Canary*, but is more sprightly, and has a more pleasant Flavour; this City being so much celebrated through all *Persia* for Wine and Women.

The *Persians* are wont to say, that if *Mohammed* had been sensible of the Pleasures of *Schiras*, he would have begged of God Almighty to make him immortal there.

The Sheep hereabouts are of an ash-grey Colour, with one white Eye, their Wool curled, and their Tails or fish a Bigness as to weigh sometimes eighteen or twenty Pounds. The Woods hereabouts afford great Store of Muttick, which is gathered in Dishes fastened to the Tree, and is green at first, but afterwards turns brown. After a Stay of eight Days at *Schiras*, I left it the fifth of *February*, and proceeded ten Leagues that Day to a Caravanera: the sixth I traveled seven Leagues, through very bad Roads; but the Prospect I had of the many Villages, and a vast Number of Date-trees, made me some Amends for the Toil of the Day.

The 7th I traveled ten Leagues to the little City of *Schazim*, seated in the Middle of a Date-Wood. The 8th we could make no more than five Leagues, the Ways betwixt the steep Rocks on the one Side, and the Precipices on the other Side, being so rough and narrow that one cannot pass them without great Danger, of which I had an Instance in my Passage, for my Horse's Hoof (which I was leading by the Bridle, being filled with Snow, he slipped and tumbled upon me, which forcing me out of the Way, I had infallibly tumbled down the Precipice, had I not by good Luck caught hold of a wild Almond-tree which stood there. I was forced to take up my Quarters that Night at a Caravanera, where there was not any Provision either for Man or Beast.

The 9th, after I had travelled three Leagues, I came to a Caravanera, where we had the Opportunity of refreshing our Horses, and having gone five Leagues more in the Afternoon, I overtook the *Imman* Caravan; as I in their Company, rode two Leagues farther to the Village of *Berry*, near which I lodged in one of the best Caravanteras I met with in my whole Journey.

The 10th I traveled through several bad Ways, and I came late at Night to the City of *Laur*, situate in a spacious Plain at the Foot of a Mountain. There is no Wine hereabouts, but Dates in abundance. The Air is very wholesome here, and the Water very muddy, which renders it more than drink it certain Worms, betwixt the Kidney and Lungs, of which we shall have Occasion to speak more at large hereafter. They say that this City owes to its Founder *Palas*, the Son of *Scorus*, whose Successor was *Gogran Melick*, the first King of *Laur*, and that the thirty second Successor was one *Abas Khan*, who was deprived of the Kingdom in 1024, by Smith *Abas* King of *Persia*. It contains about 10,000 Houses, and is

baked in the Sun, but is without any Walls or Gates. The Citadel, which is built by the *Perfians* since their Conquest, and advantageously seated upon a steep Rock, is very well fortified with a Rampart of Free-stone, and commands the whole City.

The Garrison at that Time consisted of no more than 100 Men, a sufficient Number to defend it against any sudden Attack. The Way which leads to it being cut out of a Rock, and so narrow, that scarce two Horses can go abreast, but they have a Magazine of Arms for 3000 Men: The walls, that the Water within the Fort being brackish, they must in case of a Siege, live upon Run-Water, which falls plentifully there at certain Seasons, and is preserved in Cisterns. After a Stay of twenty-four Hours at *Luar*, I was going to leave it the twelfth, but was stopped by the Custom-house Officers, who demanded of a *Terrain*, twenty-five Shillings for my Baggage, and having sent my Letter of Recommendation from the *SSS* to the Governor of *Gambren*, or Commandant of the Citadel, he ordered my Departure without paying any thing; and I went that Day no less than fourteen Leagues, which great Day's Journey, together with the muddy Wars I had used, and the excessive Heat, put me into a violent Coughing and Loochings, which made me continue in this idle Village, in hopes of getting a Letter; but no such thing being to be had, I was forced to get upon the Sumpter-Horse, where I had a Convenience made to rest my Back, and so continued my Journey the 13th to a large Village within twelve Leagues of *Gambren*.

The same Evening we met here with two *English* Merchants, one of whom was to succeed the *English* Director at *Ispahan*, who not only recruited my almost lost Spirits with some *Spanish* Wine, and other Refreshments, but also gave me Letters of Recommendation to an *English* Merchant at *Gambren*, desiring him to receive me into the House of their Company there, and to assist me in every Thing that might conduce towards the Prosecution of my Journey to *Surat*. They continued their Journey the same Evening, whereas my Indisposition detained me till the 20th, when I proceeded six Leagues to a Caravan-tera, where having rested myself a little, till the Heat of the Day was somewhat abated, I travelled three Leagues farther to another Caravan-tera, and found myself all that Night almost sleeping; leaving but little to stay for me here, I made the best of my Way to *Gambren*, where we arrived the 23d of *February*.

The *French*, *English*, and *Dutch* there took such special Care of me, that I was cured of my Distemper, which was by this Time grown into a Bloody Flux, and accompanied by a violent Fever, so that I was pretty well restored in four Days, and then went on a Commission to pay a Visit to the Governor, and when I had seen *Shah Seff*'s Letters of Recommendation, he immediately attended my Affairs. He took notice of my Recovery, but he insisted me to Dinner, and continued me very courteously, in Company of several *Dutch* Merchants. The same Evening arrived at *Gambren* a *Voyageur* consist of six hundred Loaves, belonging to the *Company*, and that he should have a certain Passage-Order, Money to the King of *Ormus*, who falling in Love with the *Princess*, his own Sister, would have married her, but the *Princess* refusing to consent to such an unequal Match, she fled to the King, and with her Daughter fled to the King of *Ormus*, and as it was reported, she was married either to the King of *Perfia* himself, or to his eldest Son, or to the King's Son.

The 24th of *February*, being the Nativity of New Year of the *Perfians*, they invited me to Dinner upon this great Festival, with several *English* and *Dutch* Merchants. The next Day returned to *Gambren* Mr. *Comenius*, who had just returned from *Perfia* now Prelate of *Prague*, and was accompanied with him, another *English* Merchant, with whom I had contracted a third Voyage to *Perfia*, and I was extremely pleased to meet him. The 25th of *February*, the *English* outward-bound *Ship* arrived, and I departed our Navigation to *Perfia* the 26th of *February*. I was invited by the *English* Merchant, who was to accompany me, to the Harbour, to see

Mr. *Hale*, an *English* Merchant, arrived at *Gambren* with two hundred and thirty-three Bales of Silk, valued at 150,000 Pistoles, which he had received on Account of the Moiety of the Custom at *Gambren* due to the *English*, of which I shall give a particular Account hereafter.

The same Day my Surgeon died of a Fever, the 13th of whom was no small Affliction to me, he having been a great Traveller, and attained the Knowledge of the *Perfian*, *Indian*, *Pelish*, and some *East-India* Languages. As I was walking abroad one Day to amuse myself a little with the *English*, I met with one of those Trees mentioned by *Curtius*, the Branches of which spring out of the Trunk of the Tree, and by wing down to the Earth, but take Root there, and growing up atreth, had produced a wide fifteen or twenty Foot high, which casting forth of Branches in the same Manner as below, made rather a small Forest than a Tree; that which I saw being two hundred and fourteen Paces in Circumference, and affording Shelter for two thousand Persons. The *Perfians* call it *Al de Rey*, and it is generally known by the Name of the *India Fig-tree*, by reason of its Fruit, which in Bigness, and the Abundance of its Grains, resembles the Fruit; but its Taste is more unfavoury, being of a red Colour; the Leaves of the Tree are like those of Quince Trees.

Near the Head Trunk of this Tree we saw a small Chapel, and within the Sepulchre of a certain *Perfian*, we found the Tomb strewed all over with Beans of various Colours, and several Lumps, which burn Night and Day, hanging over it under a Canopy. These *Banjans* according to the Opinion of *Psychogerat*, that the Souls of the deceased retreat into Beans, which Opinions are received among the *Pagans* both in the *Indes* and in *China*. Of the Religion of these *Banjans* we shall have Occasion to say more hereafter. The Guardian of the Sepulchre treated us with some Almonds, Nuts, and Dates. A *Merchant* from *Shah Seff* being come to *Gambren* to assist the Governor of the Continuance of his Voyage, I in Company with several *English* and *Dutch* Merchants, went to the Purpose by the Khan, saw him go unarm'd a Mile out of the City, where meeting with the said *Merchant*, he showed the King's Letter, the Garment, and Terment, with a great deal of Submission.

The City of *Gambren*, or rather *Bandar*, is by the *Perfians* put at 25°, but erroneously; its true Latitude is 27°, the Computation of the *Hollanders*, who have followed in this Point being 27°, most of the Maps being hitherto very defective, which proceeds from that by placing the *Caspian* Sea too high, so that the Breadth of *Perfia* from North to South, by the Bounds; for they put the City *Rebat* at 40° in 32°, so that the whole Breadth of *Perfia* from *Rebat* to *Rebat* is no more than ten Degrees, whereas the Mistake of *Beteuz*, who makes the Latitude eight Degrees, whereas it according to the Computation we should grant *Ormus* to be 27°, the Breadth of *Perfia* would amount to more than 22 Degrees.

It is not many Years since this City was almost inhabited by a few Fishermen, but since the *Perfians*, *Ormus*, the *English*, *Dutch*, and *Indian* Ships, out of the Convenience of this Harbour, have brought out the Manufactures, which they exchange for *Indian* Commodities. Its Situation is upon a narrow Gulph. The Entrance of the Harbour is naturally ride at Anchor without the Help of any six Fathom Water, being defended by two Islands, and a square Redoubt. The Cattle is bred in several round Pastures, but well provided with Flowers of *Gambren* are of Brick, and of a red Soil, and of a red Clay, and chipped Straw, and the Houses being set one Layer, they cover it with a Layer of Faggots, and to alternate, fill it with a Layer of seven Feet high, then they fit it with a Layer of Brick. Their Mortar is a Compound of Ingredients, mixed with Salt-water, and the very soon becomes as hard as the Dutch Mortar. A Note are the Sultan's Palace, and the

where the English and Dutch are lodged, which are so near the Sea-side, that at High-Tide the Water comes up to the very Walls of them. The lower Rooms being employed for the laying up of their Merchandize, and the upper for Lodgings, being the most convenient for the free Passage of the Air. The poorer fort cover their Houses only with the Sprigs and Leaves of Date-Trees.

The Streets of this City are very narrow, irregular, and not kept clean, which, together with the excessive Heat of the Climate, and the Changeableness of the Winds, renders the Air very pernicious here: For, in the Morning they are fully sensible of a cold East Wind, which towards Noon changes to the other Extreme, viz. a very hot South Wind. The West Wind, which blows towards Night from the Sides of Arabia, continues the Heat of the Day till Midnight, when a cold North Wind coming from the Mountains, introduces a sudden Alteration. Besides this, it rains so seldom here, that in 1622 they ordered a public Thanksgiving for a plentiful Shower of Rain, after a continual Drought for three Years.

This is the Reason that all about the City you see no Grains, or other Herbs, except what is produced with incredible Labour in some Gardens, where they have Garlick, Onions, Chibbols, Radishes, and Cucumbers; but these must be watered twice or thrice a Day. It is the Nile of *Kimjib* which chiefly furnishes this City with Pulse and Fruits; it lies three Leagues from *Gambron*, being fifteen Leagues in Length, and three in Breadth. In June, and the end of the Summer Months, this Island produces Grapes, Damascins, Peaches, Mangoes, Quinces, Oranges, Lemons, and Pomegranates, both red and white: And in October, Melons, Citrons, Cucumbers, Radishes, Onions, Turneps, Ammons, Pulafrise, Apples, Pears, and divers other Fruits, and that in such Quantities, that they are sold here at an easier Rate than at any other Place in *Perfia*; whence it comes, that the Inhabitants feed for the most part on Pulse, Fruits, and what Fish the neighbouring Sea furnishes them with, the Meat hereabouts being, by reason of the excessive Heat, not very well tasted, and of little Nourishment, though otherwise they have sufficient Store of Cattle, such as Oxen, Cows, Sheep, but especially of Goats, which are sold at the rate of six or eight Shillings apiece. They have here also a kind of Rains with four Horns, but no wild Fowl. Amongst other Fish, Pilcones, Smelts, Oysters and Crabs are catch'd here in vast Quantities. Their ordinary Drink is fair Water, which being brought to the City two Leagues Distance, is very dear and precious; they drink also Arack, or strong Water, made of Rice or Dates.

Reasons of Note, and the best Merchants, have their Counters made after the *Perjian* Manner, but the common People take no more Care than to cover their Privities. The Women look upon it as their chief Ornament to have many Rings of Silver, Brass, or Iron, according to their Richness; and about their Arms and Legs. To their Hair, which hangs down over their Foreheads, they fasten a Knot of Boskin of Silver gilt, or Brass, and wear in their Nostrils of ten Note a gold Ring, with a Turquoise or Garnet, or perhaps only a gold Knob on a milled Ring. Their Pendants are so weighty, as to draw their Heads down, and to strain their Neck. Their winter Season is from *October* to *May*, when the Heats are less; but in the summer chief Trade for trading, when the *Perfians*, *Arabs*, *Banyans*, *Armenians*, *Turks*, and *Portugals*, come to trade with the *Guayans*, which lie out at certain Distances, *Bagdat*, *Appaban*, *Sbiras*, *Labor*, *Helland*, *Alphata*, and the Convoy of certain Guards.

The *Perfians* and *Dutch* commonly come hither by Sea, and carry their ready Money, being divers Commodities brought out of *Europe* and the *Indies*, which they exchange for *Perfian* Capities, raw Silk, Cotton, Rhubarb, and a kind of Role-water, which is made in vast Quantities, either by Infusion, which they call *Guliah*, and which is used as the Tincture, or by Distillation, and this they call *Role-water*; the Sweat of Roles: Both Kinds are brought over the *Indies*, where they mix it with *Perfian* Musk, and they use it to sweeten their Rooms with. Here also the Amusement of Calicoes made in portable Rooms, and the Weaver, taken to a Tree, or some other Place

without the City, and having finished their Day's Work, carry it Home again, without any Trouble, being composed only of Canes fastened to the Woof of the Cloth.

They have here a certain copper Coin which they call *Behorg*, six whereof make a *Pays*, ten *Pays* a *Chay*, which is equivalent to Five pence English; two *Chays* make a *Mamudy*, two whereof make an *Abas*, and three *Abas* a *French Crown*; an hundred *Mamudys* make a *Tumain*, which is worth five French Pistoles; but Spanish Rials and Six-dollars are preferred before all the other Coins in *Perfia*, by reason of the vast Advantage they make of them in melting them down. As to their Weights, a *Man* is six Pounds, a *Mancha* twelve, and the *Manfurats* thirty Pounds.

The Pearl Trade is also one of the greatest in *Gambron*, and is carried on near the Isle of *Babian*, six Leagues from the City. The Fisherman's Head is inclosed in a Bag of oiled Leather, which has a Pipe reaching up above the Water to fetch Breath through; he rakes together all the Shells he can meet with at the Bottom, and having filled his Bag, which hangs about his Neck, at a certain Signal given by him, he is drawn up into the Boat, which is waiting for that Purpose.

The Governour of *Gambron* has the Dignity of a *Sultan* annexed to his Office, and has under him a *Vizier*, or Secretary, and a *Couteval*, or Captain of his Guards; besides these, there is a *Sabandar*, or a Receiver of the Customs; too the *Hollanders*, pursuant to a Privilege granted them by *Shah Abbas*, pay none, and the *English* are so far from paying any Duty here, that they ought to have a *Money* of all that is received, but are forced to be contented with about a tenth Part, the *Perfians* themselves being no Crime to defraud Strangers, especially if they be *Christians*, when their Prince's Interest is concerned. As the *Perfians* here are more generally better than the *Indians*, the *English*, as well as the *Dutch*, pay six Crowns a Tonne for every Horse they export. However, the *English* have the Privilege of transporting twelve Horses yearly, without paying any Custom for them, an insufficient *Perfian* Horse being worth 400 Crowns in the *Indies*. The Inhabitants of *Gambron* are, generally speaking, *Perfians*, *Arabs*, and *Indians*, who all speak the *Portuguese* Language, which was introduced into these Parts whilst the *Portugals* were Masters of *Ormuz*; tho' ever since the Conquest of it by the *Perfians*, they are not permitted to come to *Gambron*, which is open to all other Nations, *Christians*, *Jews*, *Pagans*, and *Mohometans*, being permitted to trade here, which is the Occasion they live in open Hostility with the *Perfians*; take their ships as Prizes, and frequently land in the neighbouring Islands: Unto one, which is about three Leagues off the Continent, the King of *Spain's* Subjects are permitted to come and traffick, paying certain Duties to the Governour of the Cattle that commands the Island.

The City of *Ormuz* was seated in an Island of the same Name, about two Leagues from the Continent, and five Leagues in Circumference, being composed of nothing but salt Rocks, not producing the least fresh Water, but it was the Advantage and Goodness of its Harbour and Situation, which made it so famous for Commerce, that it was a Proverb among the *Arabians*, that in the World were a Ring, *Ormuz* ought to be considered as the Diamond. According to *Leopold*, *Shah Abbas*, a native of *Araby*, having in the tenth Century made himself Master of the Provinces bordering upon the *Arabian* Gulph, passed over to the Island, where he built the City of *Ormuz*. *Shah Ismail* *Mohammed*, of the Posterity of *Shah Ismail* the sixth King of *Ormus*, died 1228, and he who reigned in 1500, when it was conquered by the *Portugals*, was named *Ismael*, a Tributary to the King of *Perfia*.

For *Albuquerque* having been sent to visit the Coasts of *Araby*, being informed that the People of *Ormus* had been in no good Understanding with the King, by reason of the Mismanagement of his chief Ministers, came the sixth of September before the City, and after having defeated them in Fleet, obliged the King of *Ormus* to acknowledge the King of *Portugal* for his Sovereign, to pay a certain Tribute, and permit *Albuquerque* to build a Citadel where he should think it most proper, which was performed accordingly.

of Cattle, such as Camels, and Goats, the Hair of which is our Satyrs are painted. The Governor is called *Yamary*, because a Cannon-shot from the Broad-swords with large Their Poinards, which they use, have Blades of near three but very sharp towards the end and the Management of Firewell; and are very expert in fairs, wherewith they defend themselves. They have no other attomed Fishing-boats. The on the Mountains into the Sea, the Slaps that come into the cities of fresh Water. They are more than other *Mohammedan*, by other publick Places of Pelfly in adorning the Sun even and setting of the Sun, whome times a Day, besides mauling make their Reverence.

We were in 23^o 24, the 10th at 2^o 40; the 11th at 21 30, of a Fever. The 12th at 18 the 20th at 20 30; the 21 and 28, and the 17th arrived safely we cast Anchor with two because the Captain not intending e of the Conveniency of going besides, that from 15 to 20, at Anchor in the Rain, by puffs; whereas on the Eastern Gulph of Bengal, the season is at Time; for, it is now ob- has only three Seasons, *January, April, and May*; and *August, and September*, there is with Thunder and Lightning; *November, December*, are inconsistent with that Climate.

The Captain having sent a vessel of Director of the *English* Company at merchants on board, to be sent on having told me, that there are many Civilities, *January, February*, and so forth, and the on which *great* Festivals are held, to many pleasant Games, and in sum, that the at the Entrance, that is, or eighty Furlongs. We from thence went first to our Camps, and then to or here, that they had what is worth, the Officers, have a Custom, by that they accordingly the Sea, a Diamond about the size of a Nut, but I have succeeded not to find one of those who had it, and, but he would give it him with a Year, *English* Governor, I went to Oxen, I went to the Entrance, and his P... or underfoot *Dutch* language, telling me, that all Christians were another; but that particularly in return, to some of his Court, and the Company, I was here a Collation was ready

we were no sooner sat down, but having underlood my Intention was to return to *Germany* within twelve Months, he invited me very engagingly to stay with him five or six Months, because no more Ships would come into that Road this Year, advising me to spend what Time I had in viewing the Country, and offering his Recommendation to the *English* Merchants living in those Places thro' which I was to pass.

His engaging Expressions obliged me to choose my Chamber in the same House next to that of the Deputy's; in the Evening several Merchants came thither to conduct me to Supper in a spacious Hall, where I found the Minister and about twelve Merchants more. After Supper the Minister brought me into an open Gallery, where we found the Director and his Deputy taking the Benefit of the cool Breezes of the Sea-Air, which was our ordinary Rendezvous after Supper. At Dinner we had commonly sixteen Dishes, besides the Desert. Every thing was ordered on in this House with extraordinary good Order and Decorum. We had Prayers every Day twice, and three Times on *Sundays*. On *Fridays*, after Evening-Prayers, we had a certain Club, where we drank our Wives and Families Healths beyond the Seas in Sack or Punch, being a Mixture of *Aqua Vitæ*, Rose-water, Juice of Citrons and Sugar. At our ordinary Meeting we, as well as the *Dutch*, were entertained with Tea, instead of which the *Perjians* use Coffee.

The *English* have a very fair Garden without the City, where we used to take a Walk on *Sundays* after Sermon, and sometimes on other Days. Our Exercise was Shooting at the Batt; and I made a Shift to get near five Pounds Sterling a Week among them. We seldom went away without a good Collation, and often bathed ourselves in a Cistern which had five Feet Water. My chief Affliction was, that not understanding the *English* Tongue, I could not converse with any of them to my Satisfaction, except with the President, who spoke *Dutch*. But before I proceed to give you any further Account of what I observed at *Surat*, and in my Voyage, it will not be beyond my Scope to give you a short View of the Mogul's Country.

The Country which properly challenges the Name of *India* (called *Indostan* by the *Persians* and *Arabians*) begins on the West-side from the River *Indus* or *Hindu*, and reaches to the River *Ganges*. It was known among the Ancients by the Name of *Cannani*, and it hath a River called *Gudar* in 23^o. The *Persians* and *Indians* themselves have given the Name of *Pangab*, i. e. five Waters, to the River *Indus*, because it is joined by so many Rivers before it discharges itself into the Sea. The first is the River *Jugal* or *Begul*, whose Source is near *Kabul*, and the second is called *Ghamb*, which rises in the Province of *Quera* or *Cashmir*, fifteen Days Journey to the North of *Lahor*; the third is that of *Ravy* or *Ravie*, which rises near *Lahor*, and runs by it; the two others, the Rivers *Sut* and *Quind*, have their Sources at a vast Distance, their Confluence being near *Bakar*, which has an equal Balance betwixt *Lahor* and the Sea. Some Authors have confounded this River with that of *Dial*, the fourth is that of *Pein*, the South-Sea; on the North-side it is included by *Nisid*, *Cannas*, and *Great* *Sarany*; and to the South it has the Kingdom of *Deora*, the fifth is that of *Begul*. It comprehends in all thirty-seven Provinces, which anciently were as many Kingdoms; the Province of *Candabar*, which has given its Name to its Capital City, borders upon *Peshawar* the Province of *Cand* has received its Name from its Metropolis, and borders upon *Great Tartary*. Here rises the River *Indus* as I said before.

The Province of *Madhan*, with its chief City of the same Name, extends along the River *Indus* to the East, the Province of *Haca-Cban*, or *Hang-Cban*, has the same River to the West. *Bachar*, or *Bachar*, lies on both Sides of the River *Indus*. The Province of *Tatta* is a Congress of many Islands made by the same River. *Ser* is a small Province extending from the Sea side to the East, as far as the Province of *Guarat*. The Province of *Chandee* is included betwixt the Provinces of *Ser*, *Ba-*

char, and *Tatta*. The Province of *Attach* is seated upon the River *Nibal*, and is by it divided from the Province of *Haca-Cban*; that of *Pangab* is the Chief of all the Kingdoms: Its Capital City is *Labor*. The Province of *Chifmer*, or *Quexmer*, lies upon the River *Bezai*, or *Pad*, which after it has made a vast Number of Islands in this Province, joins its Current with the River *Ganges*. The Province of *Bankiseb* borders to the East upon that of *Chifmer*, and the Province of *Jengopar*, or *Jemipar*, lies between the Cities *Labor* and *Agra*. The hilly Province of *Jenba*, or *Jamba*, borders to the West upon that of *Pangab*. The Province *Delly* lies between that of *Jenba* and *Agra* on the River of *Gemini*, which falls into the *Ganges*; the Capital City bearing the same Name with the Province, was formerly the Metropolis of all *Indostan*. The Province of *Rando* lies on the West side of the City of *Agra*.

The Province of *Malwa*, or *Malwa*, has for its Capital City *Ratapore*, within half a League of the River *Cepra*, which falls into the Sea in the Gulph of *Cambaja*. The Province of *Chitor* borders to the East upon that of *Candiseb*, and to the South upon that of *Guarat*. It was formerly a very flourishing Kingdom, its Metropolis bearing the same Name with the Province, being sixty Leagues in Compass, which was laid desolate by the Great Mogul *Alabar*, Great-grandfather of *Shah Osrann*. The Province of *Guarat* (called *Cambaja* by the *Portuguese*, from its Capital City) where they drive a considerable Trade, is one of the noblest and most powerful Provinces in all the Mogul's Country. The Province of *Gandiseb*, the Metropolis whereof is *Eurampour*, or *Brampour*, is divided into the Country of the Prince of *Parisapha*, a Vassal of the Great Mogul, by the River *Tebet*, or *Tepie*, which disembogues in the Gulph of *Cambaja*. The Province of *Beera* extends to the South to *Guarat*, and the Mountain of *Rana*.

The Province of *Guator*, or *Guallar*, is famous for the Tower, or Cattle, whither the Mogul commonly sends his Prisoners of State, and lays up part of his Treasure. The Province of *Agra*, and its Metropolis, claims now the Precedency before all the rest. The Province of *Sambel*, or *Sambel*, is divided by the River *Gemini*, which falls into the *Ganges* from that of *Narwar*. At the Confluence of these two Rivers, near the City of *Halebar*, they make a kind of Isle, which has given the Name of *Doab*, i. e. *inter aquas* to this Province. The Province of *Baker* extends along the western Bank of the *Ganges*, as that of *Narwar* is divided by a very large River, which joins its Current with the *Ganges*. The Province of *Nagaraut*, or *Narkarkut*, is one of the most northern Provinces in the Mogul's Dominions; its chief City bears the same Name, where in a sumptuous Chapel, the Floor covered with Plates of Gold, is kept the Figure of a Monster called *Matta*, unto which the *Indians*, who flock thither from all Parts, offer a little Snip which they cut out of their Tongues. Near the City of *Kalamaka*, belonging to the same Province, issues a certain Spring out of the Rocks, which casts forth Flames, and for that Reason is revered by the *Pilgrims* that come thither from all Parts. The Province of *Sila* is famous for the Source of the River *Ganges*. Both this and the Province of *Markarkut* are very mountainous, as well as that of *Kalanes*, which is divided from *Great Tartary* by the Mountain *Caucasus*.

The Province of *Gor*, which is also very mountainous, gives its Rise from the River *Persjels*, which joins its Current with the *Ganges*, as does the River *Kandak*, which divides the Province of *Pitan*, or *Patan*, bordering upon the West upon that of *Jamba*. The Province of *Kandak*, which, together with that of *Gor*, are the most northern Provinces of the Mogul's Dominions, stands on both Sides of the River *Indarall*, the Province of *Porena* being included between the four Rivers of *Chingee*, *Persjels*, *Cannas*, and *Kandak*, is very fruitful. That of *Jehan* is famous only for its City called *Rajpore*, or *Rajpore*. The Province of *Manar*, a barren Country, extends from the *Ganges* to the East. That of *Laha*, or *Laha*, is the uttermost Province in the East. The Province of *Bengal*, which imparts its Name to the Gulph in which the *Ganges* communicates its Waters, challenges the full Share among all the rest under the Mogul's Jurisdiction.

dition. It is subdivided into several Provinces, the chiefest of which are *Pala*, and *Palan*, which have formerly been dignified with the Title of Kingdoms. *Texeira* mentions a certain Province called *Unat*, but gives us no more than the bare Name; and what he says of the Kingdom of *Coeche*, viz. that lies near *Cambaya* to the North, and is famous for the excellent Breed of Race-horses it produces, can be understood of no other than the Province of *Candisib*.

The whole Extent of the Mogul's Territories is from East to West 600 *French* Leagues, and from North to South 700, its uttermost Frontiers to the South being at 20°, and to the North 43°. The Province of *Guzarat* lies Westward along the Sea-side, in the Form of a Peninsula, having on each Side a Gulph, or Bay, one whereof is eight Leagues broad at the Entrance, and grows narrower and narrower for forty Leagues. Thence it is bounded to the North by the Provinces of *Seret*, *Quisner*, and *Bando*, to the East by those of *Cobtor* and *Bando*, and to the South by the Kingdom of *Deccan*; tho' its Extent was much larger formerly, yet does it comprehend above 20,000 Cities, Towns and Villages, the chiefest whereof lying near the Sea-side, are *Surat*, *Brotisbia*, *Gandee*, *Goga*, *Cambaya*, *Diu*, *Patapatan*, *Mangisor*, *Gondere*, *Nassary*, *Gandzi*, and *Bayera*. It has three noted Rivers, viz. the *Nadabar*, which passes near *Brotisbia*, the *Tapta*, and the *Wafet*; two of the best Harbours of the *Indies*, viz. that of *Surat*, and of *Cambaya*. For Fertility this Province may also challenge the Precedency before any of the *Indies*, most of the adjacent Provinces being supplied thence with Fruits and Provisions. Tho' the great Drought in 1040, and the ensuing Rains did almost lay this Province desolate, which however it has sufficiently recovered since; but it is Time to return to our Relation.

11. The *Persian* Servant, whom I had brought along with me from *Ispahan*, being born of Christian *Georgian* Parents, had given me some Hopes of returning to the Christian Faith, which was the Reason that I treated him with more than ordinary Civility, and allowed him four Crowns Wages per Month; but I was much surpris'd to understand that the young Fellow, in hopes of getting better Preferment by the Assistance of an Uncle of his, who was Master of the Horse to the Great Mogul, was gone to *Agra*, and could not but be persuaded that his Intention of leaving me thus on a sudden, was in part to betray me into the Hands of the *Indians*, he being not ignorant of what had happened betwixt them and our People at *Ispahan*; but I had afterwards great Reason to admire God's Providence in sending him, as it were, on purpose thither to save me; for without him I had certainly been lost at *Agra*, as will appear by the Sequel of this Relation.

In *May* we received News that the Khan of *Candabar* had revolted, and surrendered the Place to the Mogul, who had sent five hundred thousand Crowns as a Reward for him and the Garrison. *June* the 10th we went a hunting with a *Lutch* Merchant, and another *Englishman*, cross the River to a Place called *Reneat*, where the *Dutch* have a Warehouse, and being nobly treated there that Night, went the next day to a Village called *Banick*, where we killed divers wild Ducks, and a Heron, we also saw a great Number of Deer with grey Skins, but chequered all over with white Spots. Their Horns were very fair, and had several Brow Antlers; some were inclining to a dark brown, chequered blew, with white Spots, with very fine Horns, and of the Bigness of our Roe-backs; some are of Opium, that they are of the kind which produce the Bezoar.

All the Field says a small Duke raised about them here to keep in the Water, the Race requiring Abundance of Moisture. Thus we also drank some Liquor they draw out of the Palm-tree, by making an Incision in the Bark on the Top of the Tree, unto which they fasten an Earthen Vessel; to which the Sap or Oil is, it is very sweet, but soon turns sour.

The City of *Surat* lies in 21° 50' upon the River *Tapta*, which arising near *Barampour*, falls into the Sea four Leagues below *Surat*, which is but four Leagues upon the very Banks of the River. It has no Fortifications on the River Side, but is provided with a good Stone Rampart on the Land-side, and the Castle is all of Free-stone. It has three

Gates, one leading to the Village of *Briau*, the second to *Barampour*, and the third to *Nassary*. All the Houses are flat on the Top, and have generally good Gardens. The Castle has no more than one Gate, which looks into the Great Market-place; not far thence is the Governor's Palace, and the Custom-house. The Governor of the Castle has not the least Dependence on the Sultan, whose Business is the Administration of Justice, and to look after the Customs. All Merchandizes exported or imported pay three and an half per Cent. here, except Silver coined or uncoined, which pays no more than two per Cent. Both the *English* and *Dutch* have very fair Houses called Lodges, well provided with Chambers, Halls, and Galleries.

The Harbour of *Surat* is about two Leagues from the City, near the Village of *Subaly*, where Ships are unladen, and Commodities brought thence to *Surat* by Land Carriage. The Haven lies in 21° 50' upon the Coast of North-East and South-West; the Entrance is narrow, and at high Water not above seven Fathom deep, at low but five; the Harbour itself being not above five hundred Paces broad, a sandy Bottom, with sharp and steep Banks, which are almost dry at low Water; it is, however, safe anchoring here, there being no Danger but from the South-West Wind, except from *May* to *September*, when there is no staying here by reason of the furious Tempests. Most of the Inhabitants of *Surat* are either *Banjars*, *Bramans*, or *Moguls*; the last are more respected than the rest, as being *Mohammadians*, and because they always supply themselves to Atms, as on the contrary, the *Banjars* make Traffick their chief Business, and are much addicted to Religion, of whom we shall have occasion to say more hereafter.

Besides these, some *Arabians*, *Persians*, *Armenians*, *Turks*, and *Jews*, are Inhabitants here, but the most considerable of all Foreigners here are the *English* and *Dutch*, who have their Settlements, Directors, Merchants, and Clerks; especially the *English*, who have made this the chief Place of their Trade in the *Indies*. All the other factories they have at *Agra*, *Ispahan*, *Mussipatan*, *Cambay*, *Amadabat*, *Brodera*, and *Brotisbia*, having a Dependence on that of *Surat*, and are obliged to be accountable to their chief Director residing in this City; and there is scarce an *English* Ship, which either going or coming into these Parts, does not touch at *Surat*. The Country round about this City is very delightful, being adorned with a vast Number of Gardens and Fruit-trees, and among the rest I observed hereabouts one of those Trees, the Branches of which take Root afresh in the Ground mentioned in the Description of *Gambrou*. Among other things, I saw a large Cistern of Free-stone, eight square, having at each Angle a Pair of Stairs, and in the middle of it a most sumptuous Sepulchre, in which the Founder's hand, this Cistern is so large, that it supplies the whole City with Water.

About the 12th of *September* when the Tempest began to cease, two *English* Ships arrived in the Port of *Surat*, called the *Discovery* and the *Mary*, the first 120 Tons Burthen, 28 Guns, and 190 Men; and the second 120 Tons, carrying 48 Guns. We were very graciously entertained aboard them for eight Days together, our constant Employment being to go ashore every Day a Hunting, and to return on Board at Night. The 24th of the same Month arrived two other Ships, one a *Dutch* man of 100 Tons, bound from *Batavia* to *Holland*, the other an *English* Vessel called the *Swan*. We were likewise very graciously entertained on Board them, the *Lutch* Vessel being both the biggest and the best contrived of any I had ever came out of *Holland*; with these, and being the Provosts, I paid my Time pleasantly until the 1st of *October*: But understanding, it would be several Months before the *English* would be ready for their Departure, I resolved to take the Opportunity of a certain Caravan, sent by the *English* to *Amadabat*, under a Convoy of some *English* Soldiers, to take a View of the Great Mogul's Court.

12. Thinking myself thus sufficiently provided against the *Risquers*, I left *Surat* the last of *September*, and journeying with the Caravan, we took our Way towards *Brotisbia*, crossing the River at the Village of *Briau*. Four Leagues thence, we pass'd by *Cattorena*, and afterwards by *Latrasiffor*, where we killed abundance of wild Ducks,

and other Water-fowl, as also Roe-bucks, Deer, and wild Boars being in such Plenty thereabouts, that one need not be long in want of Provisions, especially at this Time, when we had a good Cook along with us. Before we came to Broitschia we crossed a deep but narrow River, and were no sooner arrived, but the English Secretary invited us to Dinner. The City of Broitschia lies in 21° 12' twelve Leagues from Surat, and eight from the Seaside, upon a River, which coming out of the Mountains, is the common Boundary betwixt the Kingdom of Decan and that of Baldagat.

As it is situate upon a steep Hill, and provided with Walls of Free-stone, it is accounted one of the strongest Fortresses in the Indies. It has two large Gates to the Land-side, and as many lesser ones upon the River. All Merchandizes that pass through it pay two per Cent. It is a very well peopled, but for the most Part with Callicoe Weavers, who make the best here of any in the whole Province. The Fields for six or seven Leagues round the City are very flat, which, as well as the Mountains beyond them to the South-West, called Pindasche, are fertile in Rice, Burley, and Cotton. These Mountains produce Abundance of Agate, which is so celebrated in Europe. Four Leagues below the City the River divideth itself into two Branches, which after they have made an Island of two Miles in Circumference, fall into the Sea by two different Channels, eight Leagues beyond Broitschia. Upon the Way leading to Cambaya is the Village of Jankasfar, or Jambowfar, famous for the great Quantity of Indigo it produces. And in the Way to Amadabat, is to be seen the Sepulchre of a certain Mobammedan Saint, whither they come in Pilgrimage with Padlocks on their Mouths, and Chains on their Arms, till they have performed their Vows.

We left Broitschia in the Evening, and travelled all that Night, and Part of the next Day, till the excessive Heat obliged us to seek Refreshment near a standing Pool, where we passed the Remainder of that Day, and Part of the Night following. The 17th of October we came to Brodra, where the English Merchants that belonged to our Caravan, and myself, were lodged, and most nobly entertained in the English House, and among the Rest, had the Diversion of Women Dancers, who being very curious to see my Cloaths made after the German Fashion, would fain have had me stripped myself naked, offering to do the same, which I refusing to do, they went away discontented at it. The City of Brodra is seated in a large sandy Plain, upon a small River called Wassef, about 15 Leagues from Broitschia. It was built of late Years by Rajab-gy, descended from Sultan Mobammed Bergeran, the last King of Guzarat, out of the Ruins of the old Brodra. It is indifferently well fortified after the old Way, and has five Gates, one whereof is dammed up. The City, but especially the western Suburbs, are for the most Part inhabited by Callicoe Weavers, Dyers, and other Workmen belonging to that Manufacture, which are made somewhat narrower here, and the Pieces shorter than at Broitschia. The Governor of Brodra has no less than 120 Villages under his Jurisdiction, sixty-five of which are assigned for the Payment of the Garrison, and the other 135 allotted for Pensions to certain Officers belonging to the Mogul's Court, and by these Assignments his Officers are maintained.

Among these there is a Village called Sindickra, which produces every Year 25,000 Pounds of Lacque: This Lacque is a red Gum, which comes from a Tree resembling our Plum-tree, which, being dried and beaten to Powder, they give it what Colour they please, and make it into Sticks to seal Letters with, or for lacquering of Cabinets, &c. This Country affords also Abundance of Indigo. I went the same Day to rejoin the Caravan, which I found at a Corner of a Grove of Cocoa-Trees, without the City, and one of the English Merchants of Brodra would needs accompany us as far as Wassef, an old ruined Castle, upon a very high Mountain, where is kept a Garrison of 100 Horse, who are maintained out of the Customs paid there; but we having a Pass from the Mogul, and consequently not thinking ourselves obliged to pay it, this occasioned a Contest between them and us,

which was very likely to have ended in a bloody Engagement; for we forcing our Way, and having crossed the River, where we staid that Night, they would have attacked us, but a Dutch Caravan coming to our Assistance, after the Exchange of some small Shot, the Matter was composed, and the Garrison forced to be contented with a Present of three Crowns. Thence we passed two Leagues and a half further through the Village of Ammenoygi, and three Leagues and a half further through that of Sejuntra, and to the small City of Nirriad, or Nirriand, nine Leagues from Brodra.

13. October the 12th, after we had travelled five Leagues, and passed in our Way by Canis, Basova, and Jassampour, got safe to Amadu; but we were met in a Garden within half a League from that City by Mr. Benjamin Roberts, the chief Merchant of the Factory there, who carried me in his Coach drawn, after the Indian Fashion, by two white Oxen, which were as full of Mettle as the best Horses, into the City, ordering the two English Merchants, that were my Fellow-travellers, to wait there for the coming up of the Caravan. The English Factory is a very fair Structure, in the very Heart of the City, fitted with very convenient Apartments, and several Courts for the Disposal of Merchandize. Mr. Roberts gave me a Collation in his own Chamber, which looked into a Flower-Garden, and was very richly furnished. We supped in a spacious Hall, where the Dutch Head Factor, with some of his Merchants, came to pay us a Visit.

After he was gone, I was conducted by the whole Company into my Lodging-room, which I had chosen myself. Mr. Roberts kept me Company there till Midnight, and to give me all imaginable Diversion, sent for six Women Dancers of the Country, telling me, if I liked any Thing in them besides their Singing and Activity, I might command it; which Civility I refused with a Compliment. They were mightily taken with my Cloaths and Hair, and would scarce be persuaded that I was not a Woman in Disguise. Two Days after my noble Host carried me in his Coach to view the City. The Market-place is called Meydan-shah, or the Royal-market; it is at least 1600 Feet long, and above 800 broad, planted all round with Palm and Date-trees, intermixed with Orange and Citron-trees, of which there is great Plenty in the Streets, the Sight, Smell, and Shadow whereof are very desirable and pleasant. There are, besides these, four Basars, or publick Places for the Sale of Merchandizes. Not far from the Meydan we saw a House built of Brick, which is the King's Palace, the Apartments whereof were sumptuously furnished and adorned with many Pictures, more remarkable for their Diversity of Colours, than any Exactness of Proportion, according to the Indian Way. Over the Gate of this Palace was a large Balcony for the Musick, consisting of Violins, Hautboys, and Bagpipes, to play there three Times a Day, viz. in the Morning, at Noon, and Night, a Custom observed in most of the Mobammedan Countries.

The Walls of the City were tolerably well built, with twelve Gates, and many Towers; but the Ditch, which is 16 Fathom broad, was ruined and dry in several Places. We took also a View of the Castle, which is very large, and built altogether of Free-stone. The chief Temple of the Banjars is one of the finest Structures that ever I saw, it being but lately built, and stands in the Centre of a vast Court, surrounded with a very high Wall of Free-stone, about which are Piazzas, divided into Cells, in each of which stands a Statue, either white or black, representing a naked Woman sitting with her Legs under her, according to the Eastern Fashion. Some of these Cells have three Statues, viz. a great one betwixt two little ones. As soon as you enter the Temple, you see two Elephants of black Marble, done to the Life, and upon one of them the Effigies of the Founder, a rich Banjar Merchant, whose Name is Santider.

The Temple is vaulted, and the Walls adorned with Figures of Men and other living Creatures. There was not the least Thing to be seen within this Edifice, except three Chapels, which were very dark, and were divided only by wooden Rails, wherein were placed Statues of Marble, like those in the Cells, the Middlemost having a

Lamp hanging before it. We saw the Priest busy in receiving from such as were performing their Devotions, and who presented him with Flowers, Oil, Wheat and Salt; with the first he adorned the Images, his Mouth and Nose being covered with a Piece of Callicoe, for fear of profaning the Mystery by the Impurity of his Breath; the Oil was intended for the Lamps; and the Wheat and the Salt for the Sacrifice. He muttered out certain Prayers over the Lamp, and ever and anon put his Hands in the Smoke of the Flame, out of an Opinion they have that Fire having a greater Power of purifying than Water, they may, after this Cleansing, without Offence, lift up their Hands to God.

Amadabat, the Capital City of the Province of *Guzurat*, is seated upon a small River, which, not far from thence, joins its Current with the River *Indus* at $23^{\circ} 32'$, eighteen Leagues from *Cambaya*, and forty-five from *Surat*. It comprehends in its Circuit (including the Suburbs) near seven Leagues. Its Streets are very spacious, its private Buildings and Mosques very noble, especially the Governor's House. The Mogul keeps constantly a good Garrison here to bridle the *Radares*, a sort of People living not above twenty-five Leagues distant thence, who make frequent Incursions into the Country. It may be safely said, that there is scarce any Nation in the World, or any Commodity in *Afia*, but may be seen in this City, where there is also a vast Manufacture of Silk and Callicoes, as also of Gold and Silver Brocades, but they are slight and dear, which is the Reason the Inhabitants consume mostly *China* Silks, which are both finer and cheaper. At the Time of my being here they had invented a new Kind of Stool of Silk and Cotton with gold Flowers, which was sold at five Crowns per Eil. They also deal much here in Satins and Velvets, Taffeties, Carpets, Sugar candied, or in Powder, Cummin, Honey, Lacque, Opium, Botax, Ginger, Myrobalans, or *Indian* Plums dried and preserved, Preserves of all Sorts, Salt Petre, Sal Armoniac, and Indico. They also sell Diamonds here, which are brought thither from *Vishapour*, and *Ambergis* and *Musk*, which they have from *Pegn*, *Fengal*, *Mofambique*, and *Cabo Verde*, and is sold here for eight Crowns per Ounce.

Some would have the *Ambergis* to be the Seed of the Whale congealed, but without the least Probability; others would make it the Product of certain natural Mines like the *Naphte*, but with as little Likelihood of Truth, it being certain it is found no where but by the Sea-side, and grows like our Mushrooms in the Bottom of the Sea, whence it is torn off and cast ashore. *Peter Van Breuk* assures us, that, in his Time, there was found a Piece of *Ambergis* at *Cabo Verde*, near the Mouth of the River *Gambis*, which weighed eighty Pounds, of which he brought a Piece. The *Musk* is, by the joint Opinion of all Naturalists, the Product of a certain Protuberance or Swelling, rising about the Navel of a certain Animal, which some make only of the *Bigness* of a Fox, others like a *Reebuck*. Some call this Creature a *Gazel*. But the greatest Conveniency of Traffick at *Amadabat* is, that the *Bengal* have a general Correspondence in all Parts of *Afia*, even to *Constantinople* itself, which makes Trading, by way of Exchange, both very easy and very advantageous. And, as for the Exception from all Customs of Merchandizes exported or imported, the King's Receiver taking no more than fifteen-pence by way of Present for every Waggon, and the Liberty allowed to all Strangers to sell or buy Commodities they please, except that of the Exportation of Lead and Salt Petre, without the Governor's Licence, is forbidden, which, however, is obtained by a small Present.

The City of *Amadabat* having under its Jurisdiction twenty five large Towns and 2098 Villages, its yearly Revenue amounts to above six Millions of Crowns, which the Governor disposes of in maintaining a certain Number of Troops for the King's Service, and for clearing the Highways, which are very unsafe hereabouts. The Country, or his Deputy, commands under him, and has the Administration, as well of the Government, as of the Courts of Justice, in Consensus with the Kadi, or Judge of the Place. Among rivers and Sepulchres which are near the City, is that of a certain Kadi, built by a King of *Guzurat*, in

the Village *Zirkets*, a League and an half from the City. The whole Structure is of Marble, being sustained by an hundred and forty Pillars thirty Foot high, without which are to be seen the Tombs of three Kings that were buried there: At the Entrance of it is a large Cistern full of Water, the Wall about it having several Windows on all Sides; and about a League thence there is a large Garden and House, the Work of the Mogul, built in Memory of a Victory obtained by him over the last King of *Guzurat*. About a League and an half on the other Side the City, we were shewed another Sepulchre, erected in Memory of a certain *Moor*, a rich Merchant, named *Hajjan Manan*, who, being in Love with his own Daughter, and having by fraudulent Means obtained the Kadi's Consent, would have married his Daughter; but the refusing to comply, he ravished her, for which he had his Head cut off; whence it is called to this Day *Betti Chuit*, i. e. the Daughter's Shame discovered.

A little Way without the City of *Amadabat*, you may discover the vast Mountains of *Marwa*, extending above seventy Leagues towards *Aggra*, and above an hundred towards *Otoyau*, where the Rajah *Rana* had his Residence in the Cattle of *Gurckitto* among the inaccessible Rocks; so that the joint Forces of the Mogul and the King of *Patan* were scarce able to reduce it. The *Pagan Indians* retain still a great Veneration for that Prince, who, as they say, was able to bring 120,000 Horse into the Field. In the Mountain betwixt *Amadabat* and *Trappe* lives such another Prince, who, by reason of the Inaccessibility of the Woods and Mountains, maintains his Sovereignty against the Mogul; and the Rajah *Indar*, tho' he is his Vassal, yet oftentimes refuses to execute his Commands. Among many noble Gardens which are about this City, that of *Shab-bag*, or the King's Gardens in the Suburbs, called *Bogampour*, claims the Precedency, being enclosed with a noble Wall, within which stands a most beautiful Summer-house richly furnished.

I passed thence over a very fine Stone-Bridge, four hundred Paces in Length, into another Garden called *Nicoinechog*, i. e. the Jewel, which, they say, is the Work of a beautiful rich Lady. The House is not so remarkable for its Bigness, as for the most admirable Prospect it has from the Decent on which it lies into a fine champagne Country. It has a very large Fish-pond, which, during the Winter-season, is supplied with Water by the Rains; but, in the Summer, it is filled out of certain deep Wells, the Water of which is drawn up by Engines turned by Oxen. You can scarce ever come into the Garden, but you will find some Ladies bathing themselves there: They would not allow the *Indians* to see them, but gave us the Liberty to come in and talk with them. The whole Country round *Amadabat*, and the City itself, is so full of Gardens and Trees, that at a Distance it resembles a great Forest. There is among other remarkable Things here, a Walk planted with a double Row of *Cecropies* on each Side, which reaches to a Village six Leagues from the City; but that which reaches from *Aggra* to *Barrampour* is an hundred and fifty Leagues in Length, and surpasses this beyond all Comparison.

These vast Numbers of Trees are the Receipts of Multitudes of Apes, some of which are as big as Grey-hounds, yet will rarely assault any body and is provoked. They are generally of a brown Colour, inclining to green, having white long Beards and Eyebrows. They multiply beyond what can be imagined; because the *Bamans*, who are more numerous than the *Mohammedans*, believing the Transmigration of the Soul, and looking upon these Creatures as having the greatest Resemblance in all Respects to Mankind, are so far from killing them, that they cherish them. Hence it is that you shall see the Apes come in great Numbers into Peoples Houses; for at one Time I remember, I counted no less than fifty in the *English* Lodge, and I used to give some Almonds and Dates to two or three of them, which made them duly attend every Morning at my Chamber-door, in Expectation of their Breakfast, which they would take out of my Hand; sometimes I used to catch hold of one, which made the rest snarl till I had let go their Companion.

The Trees also harbour Abundance of Wild Fowl, and an incredible Number of Parrots of all Kinds, the largest

and an half from the City, being suffamed by an y Foot high, within which three Kings that were buried is a large Cistern full of several Windows on all nence there is a fair Garden Mogul, built in Memory of r the last King of *Guzerat*, the other Side the City, we s, erected in Memory of a ent, named *Hajam Manon*, n Daughter, and having by Kadi's Consent, would have refusing to comply, he rais his Head cut off; whence it *Chuit*, i. e. the Daughter's

Abundance of Wild-Fowl, and Parrots of all Kinds, the most

of which are called *Indian Crows*, being all white, or of a Cream-colour, with a Tuft of Feathers of a Carnation-colour on the Head: They are so common all over the *Indies*, that they build their Nests under the Eaves of the Houses, as our Swallows do: But the lesser sort of Parrots build their Nests in the Woods on the Extremity of the Top-branches of the Trees; and tho' they do much Mischief to the Fruits and Rice, the *Banjans* look upon it as a Crime to hinder them from eating it. They do the like as to the Wild Ducks, Herons, and Cormorants, of which there are Abundance in the River. Having had occasion to speak of them before, I will only add in this Place, that they swallow Mussels till they open through the Heat of the Stomach, and cast them out again to eat the Fish. This Country likewise abounds in all kinds of Wild-Fowl and Venison, but Fallow-Deer, Roe-Bucks, Wild-Asies, Wild-Bears, and Hares, are in vast Plenty here. And as they are sufficiently stored with tame Creatures, such as Buffaloes, Oxen, Cows, and Sheep, and the River furnishes them with Fish in Abundance, I scarce know any Place in the World where a Man may indulge himself with more Ease than here.

The only Thing they want is Wine, instead of which they generally make use of the Liquor of the Cocoa-tree; and their Water is most excellent; besides that, out of Rice, Sugars, and Dates, they make a kind of *Aqua Vitæ*, which exceeds that made in *Europe*. But as they are sufficiently furnished with beneficial Creatures, so they have their Share of others that are as mischievous. Crocodiles are found here in Abundance, which often surprize Men in the River, where they lie lurking among the high Grass. I am positive; that those in the Ditches of *Pegu* were of above thirty Foot long; they did so much Mischief, that scarce a Day passed but some or other were killed by them; notwithstanding which, the *Banjans*, who believe that such as are devoured by them go straightway to Paradise, will not destroy them. The King having ordered one in particular, which did more Mischief than all the rest, to be killed, they found a Woman with all her Cloaths in his Belly. They lay about thirty Eggs, which they cover in the Sand, where being hatched, they kill most of their young ones, without which they would multiply infinitely.

Jansson tells us, that near *Panama*, in the *West-Indies*, are Crocodiles of an hundred Foot in Length; but I will ingenuously confess, I saw none that were above twelve or fifteen Foot long; the Scales on their Back being Mistle-Proof, they must be wounded in the Belly. This Country produces also Abundance of Serpents and Snakes, and, among the rest, some with two Heads, as they told me, though, I must confess, I never saw any of them, which has induced me to believe that this Error has been introduced by such as have seen Serpents, that, contrary to the Nature of Reptiles, were as big towards the Tail as towards the Head. The Woods are likewise full of Lions, Leopards, Tigers, and Elephants; but the most troublesome Creatures all over the *Indies*, are a certain kind of Bats, as big as our Crows, nay, some of our Hens, which oblige the Country People to keep constant Watch in their Gardens.

The City of *Amadabat* is obliged to maintain out of its Revenues 1200 Horse, and fifty Elephants, under the Command of their Sultan, who has the Quality of *Rajah*, or Prince, annexed to his Dignity. *Arul-Khan*, a Person of fifty Years of Age, was Governor of this City at that Time, and, as I was credibly informed, had amassed a Treasure equal in Value to fifty Millions of Crowns. Not long before my Arrival his Daughter was married to the Mogul's second Son, when her Father, at her Departure, sent her with an Equipage of twenty Elephants, and one thousand Horse to Court, besides six thousand Waggons laden with Riches. His Attendants consisted of five hundred Persians, four hundred of which were his Slaves: The Expence of his House-keeping amounted to five hundred Crowns a Month, not including his Stables, where he maintained constantly five hundred Horses and fifty Elephants for his own Use. The chief of his Attendants were generally sumptuously clad, though himself seldom wore any thing but Calicoe, except when he appear-

ed in publick, when he was carried in a rich Chair of State upon an Elephant, and attended by a Guard of two hundred Men, with many *Persian* Led-Horses, and Standards, and Banners before him.

14. *October* the 15th I went with an *English* Merchant to pay a Visit to the Khan, whom we found in a Tent looking into a Garden. Having understood from the Merchant that Curiosity only had led me into that Country, he asked my Age, and I having told him that I was twenty-four Years old, three of which I had already spent in travelling, he wondered at my going Abroad so young, as well as at my Habit, which I still wore after the *German* Fashion. After an Hour's Discourse, I was entertained with a very noble Dinner, served up after the *Persian* Way, and at parting, he was pleased to tell me in the *Turkish* Language, which I had told him I understood pretty well, *Senni dake kurum*, i. e. *We shall see you again*. Being encouraged by this obliging Invitation, we went the 20th a second Time, when having changed my Cloaths to the Mode of the Country, I found him very well pleased with it. We found him in the same Place, busy in dispatching some Orders, and taking a View of certain Companies of Horse and Foot, which made us take our Leave of him; but he would needs make us stay to Dinner with him.

His Discourse ran much upon *Shah Sefi*, concerning whom he asked me several Questions, and especially whether he still continued his Cruelties? Unto which I having answered, that his Age had moderated much of his youthful extravagant Temper, he replied, that Tyranny and Cruelty was an Inheritance derived from his Grandfather *Abbas*, and that was the only Reason why lately the Khan of *Candabar* had put himself under the Mogul's Protection. He then was for exaggerating the prodigious Wealth of the Mogul, in Comparison with that of *Persia*, asking my Sentiments upon that Score. Unto which I replied, that it must be confessed, that the Wealth I had seen in the Great Mogul's Country was, without Comparison, much greater than what could be expected in *Persia*; but that, on the other hand, it must be acknowledged that *Persia* had one Thing which was to be valued above all the Riches of the World, viz. that great Number of brave *Kisilbachs*, with whose Assistance he might be able to conquer all *Asia*. Knowing the Khan to be a *Kisilbach* by Descent, out of the Province of *Sibirvas*, I said this on Purpose to please his Fancy, which took so well with him, that he not only agreed to what I said, but also told some of his Officers that stood hard by him, I believe this young Gentleman is brave, because he speaks so advantageously of those that are so.

After Dinner we took our Leave of the Khan, who would have staid us, and given us the Entertainment of the Women Dancers; but he being called aside about earnest Business, and we not very eager to see more of what we had seen so often before, we returned his Offers with a Compliment. For the rest, the Governor was a Person of extraordinary Judgment, but very rigorous in his Government. One Day, having invited the two chief Directors of the *English* and *Dutch* Factories to Dinner, and desirous to give them the Diversion of the Women Dancers, they came accordingly, who, according to the Cadence of the Harps and Tambrels, danced with great Activity through Hoops, with great Variety of Postures; which done, he sent for another Band; but these being employed elsewhere in the City, sent an Excuse, that being sick they could not come; but the Khan, not thus contented, sent a second Time, ordering his Servants to bring them along with him, who returning without them, upon the same Pretence, he ordered them to be cudgelled immediately. Their poor Wretches, finding themselves in such Danger, cast themselves at the Khan's Feet, acknowledging, that it was not any Sickness, but the Hopes of Lucre, that had made these Women refuse to obey his Commands, at which he laughed; but instantly sent some of his Guards to fetch them, who no sooner had brought them into the Room, but he ordered their Heads to be cut off immediately, which was executed in an Instant. The Governor, perceiving that the Strangers were startled at his Severity, fell a laughing, and told them, that if he did not

not by such Examples maintain his Authority, he should not be long Governor of *Amadabat*.

15. *October* the 21st I left *Amadabat*, in the Company of a young *English* Merchant, and travelled that Day to the Garden of *Tschibabag*. The 22d we made seven Leagues to the Village of *Sarguntra*; and the 23d five Leagues further to *Cambaya*, where I was very well accommodated at the House of a certain *Mohammedan*, the *English* Head Factor being from home. The City of *Cambaya* lies sixteen Leagues from *Broitschia*, upon sandy Grounds near the River, which makes there a very great Bay, into which the River *May* discharges itself. The Haven is none of the best; for though at high Water there be seven Fathom Depth, yet at low Tide the Ships are almost swallowed up in Sand and Mud. It has a Wall of Free Stone, with twelve Gates, large Houses, strait and very broad Streets, and is ten Leagues in Compass. The Inhabitants are *Pagans*, *Banjans*, and *Rashpoots*, the last of whom apply themselves to the Exercise of Arms, as the *Banjans* do to Commerce. Their chief Trade is at *Athen*, *Dia*, *Goa*, *Mecca*, and into *Persia*.

Taking a Walk out of the City, I saw there, among several other very curious Gardens, one, that for its Situation and Prospect to the Sea, and into the fairest campaign Country that could be to the Land-side, deserves the Precedency of any that ever I saw before. It was surrounded by a very high Wall, which had within its Compass two very fine Structures, and in the midst of the Garden was a Sepulchre of a *Mohammedan*, who was the Founder of it. Whilst I was contemplating the Tomb, some *English* Merchants came in to reprove me for the Alliance I had put upon them, as they interpreted it, of preferring a *Mohammedan* House before theirs to lodge in; and as a Reparator, asked me to go along with them the next Morning to a Place where an *Indian* Widow was to burn herself, her Husband, who was a *Rashpoot*, having been killed two hundred Leagues from thence.

We went accordingly to the Place of this voluntary Execution near the River-side, where we saw the Woman, who was scarce twenty Years of Age, coming up with so cheerful a Countenance as is scarce to be imagined. It is to be observed, that the Governor, who was a *Mohammedan*, and consequently would willingly abolish this barbarous Custom of the *Pagans*, had for a long Time opposed her Resolution, under a Pretence that her Husband's Death might be uncertain at so great a Distance, in hopes that Time might have changed her Resolution; but finding her immovable, he gave at last his Consent. In the Front of the Procession marched the Musick, consisting of Hautboys and Tambrels; these were followed by a great Number of Maids and Women dancing and singing before the Widow, who was dressed in her best Apparel, and had many Rings and Bracelets on her Fingers, Arms and Legs: In the Rear came a confused Multitude of Men, Women, and Children. She had walked herself before in the River, and coming near the Funeral Place, which was made of the Wood of Apricot-trees mixed with some Sanders and Cinamon, she stopped a little, and looking over it with a great deal of Carelessness, took her last Farewel of her Kindred and Friends. I was very near on Horseback, and the perceiving perhaps by my Countenance that I had Compassion of her, she cast me one of her Bracelets, which I keep to this Day, distributing the rest among her Friends. So soon as she had placed herself on the Pile, and perceiving that they had set Fire to it, she poured a Vessel full of perfumed Oil over her Head, which the Fire taking hold of, burnt her to Ashes momentary, without shewing the least Sign of Reluctancy, whilst all these pretent filled the Air with their Shouts and Acclamations.

This Custom, it seems, was first introduced into the *Indes*, to prevent the Jealousy of the Women created by Polygamy, which had this dismal Effect, that they used frequently to poison their Husbands, it having been found by Experience, that in one Year there used to be four Men killed to one Woman; to prevent which, it was thought convenient, that a certain Law should be introduced for all Women that would be accounted honest, to accompany their

Husbands at their Deaths, as the only Way to make them careful of their Lives; yet was no Punishment inflicted upon such as did not think to comply with this rigorous Imposition, except that they were looked upon as infamous ever after.

This Ceremony being over, I paid a Visit to *Mysabeg*, one of the chief *Mohammedan* Merchants in that City, unto whom I delivered the Letter of Recommendation from the Director of the *English* at *Amadabat*. As he understood that Language, so he complimented me with all imaginable Expressions of Civility, endeavouring to persuade me to remain for some time at *Cambaya*, and proferring his Service in every thing that might tend to my Satisfaction. Whilst I was returning his Civilities, came up to us the King's Lieutenant, or Deputy-Governor, who, with a very engaging Air, entreated me to make him a Visit, which I promised to do. I went home, and had scarce eat my Dinner, when the before-mentioned Merchant sent me two Sheep, twelve Capons and Pullets, besides some Fruits, and a fine Vessel of *Agat*. I sent back the Bearer with a small Present, telling him, that I would return my hearty Thanks to his Master the next Day; but I was scarce got out of my Bed, when he came and told me, that the Fear of parting with me without taking his Leave, had made him come so early. I thanked him, and as a Pledge of the good Will I bore him, presented him with a very fine *English* Pocket Pistol, which he at first refused to accept, excusing himself, that it was not handsome to receive a Present from a Stranger, were it not that his Refusal might be misinterpreted by me to his Disadvantage; upon which Score he could not forbear to accept of what I had been pleased to bestow upon him with so much Kindness.

I thought fit to make particular mention in this Place of these Civilities, to convince the World that Barbarism, which the *Indians* are so often branded with by some Authors, is not so deeply rooted among them, but that they understand and practise Civility as well as some other Nations, who challenge the Preference upon that Account before all others, but fall short in that Sincerity which is natural to the *Indostans*, who are as good Friends to those to whom they have promised their Friendships, as they are irreconcilable to their Enemies. I caused a Box of Bees to be presented to the Merchant, a Drug as commonly used in the *Indies*, as Snuff is in *Europe*, of which he having taken a little, took his Leave. Soon after, as I was going to call at the Deputy-Governor's House, I met him in the Street in his Coach, and he no sooner espied me, but he obliged me to go back with him to his House, but in one of the most pleasant Parts of the City; he treated me with some Beetle, and some Palm-Wine, and sent one of his Servants to give Orders at the Gates to let me pass unmolested, without paying any Customs.

I staid not above half an Hour, and immediately proceeded on my Journey; but being pretty late before I could reach *Sarguntra*, the *Banjans*, who burn no Lights for fear of hurting the Flies, or other Insects, would not open the Shops to sell us Forrage for our Beasts, being a certain Paste of Sugar, Meal, and some Butter, which is used here for want of Oats and Hay; but at last were prevailed on to let us have some, because we threatened to break open their Shops. We travelled five Leagues the next Day before Noon to a great Village, where having baited our Beasts, we continued our Journey to the Garden of *Tschibabag*.

This Garden, which we had occasion to mention before, is looked upon as one of the most considerable of all the Empire, not only in respect of its noble Buildings, and the vast Quantity of excellent Fruits, but especially for the Conquest of *Guzarat*, in Memory of which it was founded; and thence has got the Name of *Tschibabag*, i. e. the Garden of Victory. The Walks of this Garden are planted with Fruit-trees, such as Oranges, Citrons, Pomegranates, Dates, Almonds, and Mulberry-trees; besides many of these that bear Mangoes, Coconuts, and some that were unknown to us. Having taken a short View of it whilst our Beasts were baiting, we continued our Journey, and came that Night to *Amadabat*. We were not a little troubled in the Way by Apes, of whom I shot two with my Pistol, which so incensed the rest, that about twenty of the largest

Civilities, came up to us the
y-Governor, who, with a very
to make him a Visit, which I
ome, and had scarce eat my
tioned Merchant sent me two
Pullets, besides some Fruits,
I sent back the Bearer with a
that I would return my hearty
Day; but I was scarce eat
me and told me, that the Fear
taking his Leave, had made
ked him, and as a Pledge of
presented him with a very fine
he at first refused to accept,
as not handsome to receive a
re it not that his Refusal might
his Disadvantage; upon which
to accept of what I had been
with so much Kindness.

particular mention in this Place of
the World that Barbarian,
been branded with by some Au-
ded among them, but that they
ility as well as some other Na-
reference upon that Account to
it in that Sincerity which is re-
are as good Friends to those
their Friendship, as they are
emies. I caud a Box of Bees
merchant, a Drug as common
is in *Europe*, of which he tak-
s Leave. Soon after, as I was
y-Governor's House, I met him
and he no sooner espied me,
ack with him to his House, but
Parts of the City; he treated me
e Palm-Wine, and sent one of
s at the Gates to let me pass
any Customs.

n Hour, and immediately pro-
it being pretty late before I could
ns, who burn no Lights for fear
her Insects, would not open the
our Beasts, being a certain Paste
the Butter, which is used here for
but at last were prevailed on to
we threatened to break open their
ve Leagues the next Day before
where having baited our Beasts,
to the Garden of *Tschirbag*.
e had occasion to mention before,
the most considerable of all the
ct of its noble Buildings, and the
ut Fruits, but especially for the
Memory of which it was founded;
ame of *Tschirbag*, i. e. the Gar-
walks of this Garden are planted
Oranges, Citrons, Pomegranates,
Tulberry-trees; besides many of
Cocoas, and some that were wa-
aken a short View of it whilst our
continued our Journey, and came

We were not a little troubled in
whom I shot two with my Pistol,
that about twenty of the largest

See pursued us about half a League, and by their odd
looks gave us to understand that they were ready to do us
any Mischief, if they durst approach us.

At *Amadabat* I met with a Caravan of *English* and
Portuguese Merchants bound for *Agra*, and being recommended
them by the Director of the *English* Factory of *Amadabat*,
I set out with them the 28th of *October*. We met in
the Days Journey with no more than one Village worth
mention, called *Pangot*, and came the 6th Day after
our setting out of *Amadabat* to the small City of *Heriath*,
the Leagues thence; it is without Walls or Gates, which
has been destroyed by the famous Conqueror *Tamerlane*,
as well as the adjacent Castle, the Ruins of which are to be
seen near a high Mountain.

Between this City and that of *Dumtigel*, which is fifty
Leagues from *Heriath*, we met a Caravan of *Bengian* Mer-
chants, who told us, that they had been set upon by two
hundred *Rahiboots*, who had forced them to pay a hundred
Ruppes; upon which we ordered our Waggon to be laden
with them, and disposed our Guards in such a manner
as we thought might make them most serviceable; neither
did we mention to them we got sight of any of the same Gang
that were sent without. Question to view us; but finding us
too well guarded, let us go unmolested. We travelled fifty
Leagues farther before we came to the Village of *Suedeck*,
which has a strong old Castle. As we were travelling in a
Barricade of *Rahiboots* surprised some of our Waggoners that
were got about six hundred Paces before the rest, and
wounded two *Bengians*; but two of our Guards being sent
to their Relief, the Robbers were forced to betake them-
selves to their Heels, and to leave the Booty behind them.

After this Rencontre we met with no farther Disaster,
and arrived lately at *Agra*, where I was received with the
same Civility by the *English* as I had been in all other Places
through which I had passed. The City of *Agra* is, with-
out Comparison, the noblest of all *Indostan*, and the ordi-
nary Residence of the Great Mogul. It is seated in 25°
on this Side of the Line, in the Province of *Indostan*, upon
the River *Gemni*, which joins its Waters with the *Ganges*,
upon the Kingdom of *Bengal*. It being twice as big as
Ispahan, a Man can scarce ride round it on Horseback in
a whole Day. Its Fortifications are of red Free-stone, and the
Ditch is above thirty Fathom broad; the Streets are
large and large, there being some vaulted, which are a Mile
in Length, and are furnished with Shops of all Sorts of
Trades, each of which have their peculiar Streets and Quar-
ters assigned them. It contains fifteen Meydans and Bar-
tains, the most spacious of which is before the Castle; in the
middle of it stands a high Pole, where the Mogul himself
sits sometimes at a Wooden Parrot fastened to the Top
of it; his Caravan eras are appointed for the Recep-
tion of Foreign Merchants and their Merchandize; they
are provided with noble Apartments, and convenient
Shops, Vaunts, Stables, and other Conveniences.

As the Mogul and the chiefest of his Court are *Moham-
medans*, so there are a vast Number of Mosques throughout
the City, of which twenty are remarkable for their Splen-
dour, and six of them appointed for their Devotions on
Holidays; these last they call *Masjed-aline*. In one of
them they show you the Sepulchre of a certain Saint named
Savran, of the Posterity of *Ally*, and in another the Tomb
of a Giant Saint, being thirty Feet in Length, and fifteen
in Breadth. This Tomb is surrounded on all Sides with
Iron-Rings, or Flags, as many Tokens of his heroick
Atchievements; where it is, that his Sepulchre is fre-
quently visited by a vast Number of Pilgrims, who bring thither
daily their Offerings, out of which, and the ordinary Re-
venue belonging to it, are maintained such a vast Number
of Paup, that in those Respects, it is not inferior to the Sepul-
chre of *Abuick Sefi* at *Ardebil*.

These Mosques, with their adjacent Courts, are so many
Sinetaries both in criminal and civil Cases, the Mogul

himself never presuming to take any Criminal, though never
so great an Offender, thence, out of a Veneration to the
Mohammedan have for their Saints. In the City of *Agra*
are above eight hundred publick Baths, which pay a con-
siderable Sum yearly to the Mogul, for as Purification is
one of the main Ingredients of the *Mohammedan* Religion,
so these Baths are daily frequented by a vast Number of
People. The great Lords of the Court, who bear the
Title of Rajas, or Princes, have many of them, very fine
magnificent Houses both within and without the City,
where the King also has many Gardens and Summer-houses
to retire to upon Occasion, with the Women Dancers, who
dance before him that risk d.

17. But his Palace, which stands upon the River *Ge-
mni*, and is four Leagues in Compass, surpasses all that I
ever saw of that Kind before or since. It is surrounded
with a Wall of Free-stone, and a broad Ditch, having a
Draw-bridge at each Gate; the Gate at the West Side lead-
ing to the *Bazar* is called *Chebi*; under this Gate is kept the
Court of Judicature, and in an adjoining spacious Hall the
Prime Vizeer, or Lord-Chancellor, dispatches all Mat-
ters relating to Civil Affairs, where the Original Records are
kept. Immediately within this Gate you come into a very
spacious Street, with Shops on both Sides, leading directly
to the Mogul's Palace, the Gate of which is called *Abu-
barke Desjunge*, i. e. King *Abubar's* Gate, through which
all the great Lords of the Court, except the King's Sons,
are obliged to go in on Foot; this being the Quarter where
the dancing and singing Women are lodged.

There is another Gate leading to the River, where the
Mogul every Morning pays his Devours to the Sun at his
Rising. It is on that Side that great Men pay their Re-
spects to the King from a certain Eminency, where the
King can take particular Notice of them. The Com-
manders of Horse also stand on that Side, but at a great
Distance, at a Place where the Mogul sees the Engage-
ments every Day betwixt Lions, Elephants, Bulls, &c.
except *Fridays*, a Day dedicated to their Devotions. There
is also another Gate, which brings you into the Guard-
Hall; through this Hall is a Passage into a paved Court,
at the farther End of which you see a Row of Silver Pil-
lars under a Piazza, where is kept another Guard to prevent
the common People from entering. Here I met with my
Persian Servant who had left me at *Serat*, he offered me
all the Service he was able to do me, and would fain have
brought me within these Pillars, but that the Guards would
not permit it; this being the ready Way to the Mogul's
Apartment, where is a Row of Golden Pillars of a lesser
Size, and within them the Royal Throne of massy Gold,
enriched with Diamonds, Pearls, and precious Stones; and
above it a Gallery, where the Mogul appears every Day at
a certain time to hear and determine the Complaints of his
Subjects: But this Trial is so dangerous, that if you do
not prove the Matter of Fact by undeniable Evidence, you
run the Hazard of your Life.

None but the King's Sons, who fan him, and keep off
the Flies, are admitted within the Compass of those Golden
Pillars; neither is any other Person admitted into the
innermost Parts of the Mogul's Lodgings, except the Eunu-
chs, who being one thousand two hundred in Number,
wait on the Ladies of the Seraglio. There is another
Apartment in the Castle very remarkable for its Tower,
which is covered with Gold, and the Treasure it contains,
having eight large Vaults filled with Gold, Silver, and pre-
cious Stones, the Value of which is incalculable. I had it from
very knowing and very worthy Persons, that *Shah Ocran*,
who reigned in my Time, had a Treasure which amounted
to one thousand five hundred Millions of Crowns. I had
from the same Hands an exact Inventory communicated to
me of the Treasure which was found at the Death of *Shah
Akbar* his Grandfather, which I will faithfully communi-
cate to the Reader.

An Inventory of the Treasure of Achebar (See Achebar in the History of the Mogul Emperors) at the Time of his Decease.

	Crowns.	Pence.
In certain Sorts of Money coined by the special Order of the said Achebar	148,790,000	
In another Kind of Money, called from his Name, Achebar Kapes	50,000,000	
In another Sort of Money, called Paytes, sixty whereof make a Crown	383,333	10
In Diamonds, Rubies, Emeralds, Saphires, Pearls, and other precious Stones	30,026,026	
In Statues of Gold and divers Creatures	9,503,370	30
In Household-stuff, Gold-Plate, as Dishes, Cups, &c.	5,866,895	5
In Bras and Copper Utensils	23,612	30
In Porcelain or China Ware, and other Earthen-Vessels, to the Value of	1,253,973	30
In Brocades, and other Gold and Silver Stufts, and in Silk and Calices	7,654,989	30
In Woollen-Cloths	254,619	
In Tents, Hangings, and Tapestry	4,902,772	
Twenty-four thousand Manuscripts richly bound, valued at	3,231,865	3
In Artillery and Ammunition	4,257,985	30
His Magazine of Small-Arms, Swords, Bucklers, Pikes, Bows, Arrows, &c.	3,777,752	30
In Saddles, Bridles, and other Gold and Silver Accoutrements, to the Value of	1,262,824	
In Covering Cloths for Horses and Elephants, embroidered with Gold, and Silver, and Pearls	2,500,000	
All which together amounts to	274,113,793	15

This, though in itself an immense Sum, yet falls very short of fifteen hundred Millions, which is esteemed the Amount of the Mogul's Treasure at present. Neither is it at all improbable that it may be so, for though it may be true, that the ordinary Revenue of the Crown is not considerably increased, yet by the rich Presents made annually at stated Times by his Grandees, and his being Heir-general to all the Officers in his Service throughout his extensive Empire, there is no Doubt that the gross Amount of his Revenues must be exceedingly augmented since that Time.

As there is no Inheritance of Estates belonging to the Children of great Persons, so they can claim no Share in their Father's Dignity. The Title of Rajah being no more inheritable there than that of the Khans in Persia; the only Advantage they have is, that they are entrusted with lesser Charges by the Mogul, till by their Merits they can raise themselves to the highest Dignity. The chiefest Officers of the Court are the Vizir, or Prime Minister, the chief of the Eunuchs, or Lord High Steward of the Treasury, Principal Secretary of State, General of the Elephants, and Surveyor of the Household-stuff, Tents, and Jewels. There are also Members of the Mogul's Privy Council, and a Council of Ministers called the Chateval, who is chief of the Palace and Court, and a chief of the Mogul's Guards. The Councils consist only six in the Night and four in the Day.

The Mogul pays every Year at Sunnisi, and the Emperor pay their Tribute to him about Noon, when he comes to the Fairing of the wild Beasts, and about Evening when he appears at a certain Place to see the shooting. As for his to the Rail of

the Kingdom, the Provinces of Candahar, Delhi, Bengal, Orissa, and some others, bring in a yearly Revenue of eighty-seven Millions two hundred and fifty thousand Crowns. The Province of Guzerat is able to raise Ninety thousand Horse, Cambaya Twelve thousand, and Cassar as many; Orissa Eighty thousand, and Delhi One hundred and fifty thousand; besides those of the other Provinces, of which I could learn no Certainty. His Majesty is divided into certain Brigades of twelve or fifteen hundred Horse, commanded either by the King's Sons, or the chiefest Lords in the Empire, some of whom have under their Command certain Regiments of 20,000, 30,000, and 4000 Horse. Certain it is, that when the great Mogul went in Person into the Field against Khanahar in 1630, his Army consisted of 144,800 Horse, divided into four Brigades, besides a vast Number of Elephants, Camels, Mules, and Artillery Horses. The Army in their Camp were mostly Bows and Arrows, a Javelin, which they dart with great Dexterity, a Cymia, a Pionard, and Buckler, which hang about their Necks. The Ho-femen use no Fire-arms, but their Infantry use Musquet tolerably well; their Pikenen have Pikes of ten or twelve Feet long, which they dart at the Enemy, instead of opposing the Horse with them as we do in Europe: Some use Coats of Mail, reaching down to their Knees, but are without Head pieces. They use nothing of martial Exercises; the Van or Rear, Front or File, being Things never heard of among them, to say without any Method or Order. Their chief Troops consist of Elephants, on the Backs of which are fixed wooden Towers, carrying three or four Hangings, with as many Men to them, and the Elephants have a great deal of Bulwarks, to hinder the Enemy from bringing in upon them: But the worst is, that their Battalions are terrified by artificial Fire-works, or some other such Means, make a greater Havock among themselves, than the Enemy. They commonly have a great Quantity of Artillery, and some very large Pieces. They use Gunpowder, but not so good as ours. Their Cornets, trumpets and Timbrels make a Noise that is not so pleasant in the Field. Their Armies never march above five Leagues in a Day. As in their Encampments they set up a vast Circumference of Ground, so they observe every good Order in them, every thing being as well regulated there as in a City; and it is observable, that the Mogul and the General of the Army always have their Tents pitched without the Reach of Musquet from the rest.

His ordinary Guard is 12,000 Men, besides those that have the Title of the Guard of his Majesty, and always attending his Person. The Mogul's nobles, who have the Dignity of Rajah or Prince upon them, are those who have the supreme Management of all civil and military Affairs throughout the Kingdom: He is not permitted to take the least Present, but his Clerks are a little covetous in this Point, that for Money a Man may buy any thing that passes through their Hands. The Rajahs and other great Men pay a most profound Veneration to their Monarch; they never approach or speak to him without many Bows and Reverences, and when they are going away they do it backward, bowing their Heads down to the Ground, putting their Hands over their Eyes, and afterwards upon their Breasts, to shew their Humility. The Mogul never stirs abroad out of the City or otherwise without a Guard of ten thousand Men, at the Head of which march one hundred Elephants covered with Scarlet Cloth, and Brocades, each having two Men upon their Backs, one who guides the Beast, the other carries a Bag of Silk; upon seven or eight of the foremo Elephants are mounted Musicians, who play upon the Tambore. The Mogul is either mounted upon a fine Persian Horse, or a Coach drawn by two white Oxen, or carried on a Palanquin. The chief Men of the Court follow immediately after him, after them the Baggages. He commonly is pleased to be in a Field, the better to enjoy the Concoction of cool Air in the Summer, and he is not so warm in the Winter, which is the Reason that he commonly goes to Agra in April, and passes the Months of May, June, and July, at Lahore, or in some other northern Part of

The City of *Agra* is so populous, that it is able to raise two hundred thousand fighting Men. Most of the Inhabitants are *Mohammedans*, but there is scarce any Nation in the World but what trade exports, and all Commodities, whether imported or exported, pay 10 per Cent. Custom. This City has under its Jurisdiction forty small Cities, and three thousand five hundred Villages, its Territories extending above sixty Leagues about. The adjacent Country is very fertile in Indigo, Cotton, Salt petre, and several other Commodities. The Festival of the Naurus, or New-years's Day, is celebrated in this City with a great deal of Ceremony. Before the King's Palace a Theatre, or Scaffold, richly adorned, is erected, surrounded with small Pillars in the Nature of a Balcony, where the King is seated upon richly embroidered Velvet Cushions, being attended by his seven Ministers of State, the Emperess being not far off in a Gallery where she can see the whole Ceremony, but cannot be seen by any body. Near the King's Scaffold is another erected, painted and embellished with Mother of Pearl, whither the principal Lords come out of their Tents, pitched and furnished with their most precious Moveables, in the innermost Court in the Palace, to pay their Veneration to the King; which done, he leaves the Theatre, and being seated on his Throne, he receives the Presents of his Subjects, and this he continues for eighteen Days successively. Towards the Conclusion of these eighteen Days, the King, in return of the Presents the Lords and others have made him, bestows upon them his Presents, which are certain Employments and Honours proportionable to the Gifts he has received from their Hands.

The Mogul's Birth-day is also celebrated here after a peculiar Manner. The Day is begun with all manner of Diversions, which done, he shews himself to the Queen-Mother, if living, in her own Apartments, where the great Lords are obliged to appear, and to bring along with them considerable Presents. After Dinner he puts on the richest Apparel that can be contrived, laden all over with Gold, and precious Stones. Thus he goes into a Tent, and in the Presence of the chief Lords, weighs himself in a pair of Scales of massy Gold, the Chains whereof being of the same Metal, are set with precious Stones. He is set in one of the Scales, and in the other are put several Bags of Silver, one of Gold, some precious Stones, certain Pieces of Silk, Stuffs, Calicoes, Pepper, Cloves, Nutmegs, Cinnamon, Wheat, Pulse, and Herbs, and an exact Account is kept of the Difference of his Weight from one Year to the other. This done, the King gives the Money with his own Hands to the Poor *Mohammedans*, and the rest is distributed among certain *Babajans*. Then being seated on his Throne, he orders to be call among the Lords of his Court, Nuss, Pistaches, Almonds, and divers other sorts of Fruit of Gold, but so slightly made, that one thousand of them scarce weigh thirty Crowns, which tho' it may seem incredible, yet it is certain that it has been tried by Experience, that a whole large Basket full of this kind of wrought things, have not amounted to above ten Crowns, and it is computed, that all this great Monarch bestows upon this Occasion, would not amount to above the Value of one hundred Crowns. The Day is concluded with a great Feast at Court, unto which are invited all the principal Lords in waiting, who pass the Night with the Mogul in drinking.

They also celebrate another Festival, which begins ten Days after the New-moon of the Month of *July*. This is celebrated to perpetuate the Memory of two Brothers named *Jamse* and *Jawze*, who being holy Men or Saints, went on Pilgrimage to the Court of *Coromandel*, and were there killed by the *Brahmans*, and other Pagans. They carry Coffins covered with Bows, Arrows, Turbans, Cymtars, and Garments of Silk, through the City, the People following in whole Troops with great Lamentation, some shaking their Arms till the Blood issues forth plentifully. In the Evening they make diversie Figures of Straw representing the Persons who murdered them; at these they show their Arrows, and at last burn them to Ashes. They perform this with so much Amovility, that no *Pagan* dares to appear about that Time in the Streets. The *Mohammedans* also celebrate the Feast of the Sacri-

fice of *Abraham*. It is held in *June*, when they kill a He-goat, which serves them to entertain their Friends with that Day. The Great Mogul deduces his Offspring from the famous *Timur*, or *Tamerlane*, in a direct Line, the said *Tamerlane* being descended from the Family of *Zingis-Khan* of *Tartary*. *Shah Cheram*, who reigned at the Time of my Travels into these Parts, usurped the Crown from his Nephew Prince *Polog*, whom, as we told you, we saw at *Gassnis*.

The Mogul was then about sixty Years of Age. He had three Sons, the eldest was about twenty-five; but his Affections being most for the youngest, he intended to bestow the Crown upon him, and to make the other two contented with the Government of certain Provinces. The Beginning of his Reign had favoured not a little of Cruelty, and even afterwards he could not but betray his Inclination, by putting such as were guilty of High Treason to onheard of Torments; for the rest, he was of a pleasant Humour enough, taking much Delight of Music, and the Women Dancers dance naked before him. Of these I heard the *King's* relate a pleasant Story, that a certain Petion of Note belonging to the Court, in whose Conversation the Mogul took particular Delight, being missing at Court, the Mogul asked the reason of his Absence, and being answered, that he had taken Physick, the Mogul ordered his Woman Dancers to go to his House, to strip themselves naked, and to eat themselves before him. The Gentleman hearing of their coming, and having got some Scent of what their Errand was, asked them immediately after their coming into the Room, what the King had commanded them to do, and being answered, that they were to eat themselves there, he told them, that they might put the King's Commands in Execution as soon as they pleased; but asking them at the same Time, whether they had any further Commands, they having answered no, he bid them have a special Care not to transgress the Orders laid upon them; for, said he, if any of you piss but one Drop, I will have you all soundly whippel, which put them into such a Fright, that not daring to run the Hazard of the Lash, they returned to the Mogul, who understanding by what Invention the Gentleman had diverted them from what they were ordered to do, laughed very heartily at his Ingenuity.

His daily Diversions were to see the Lions, Elephants, Tigers, Leopards, and other wild Beasts fight one with another. He also often delighted in seeing Men engage with those savage Creatures, but never forced them against their Will, there being not wanting those, who in Hopes of obtaining thereby the Mogul's Favour, would hazard their Lives upon that Score. I remember the Mogul on his Son's Birth-day being present at the Combat between a Lion and a Tiger, which were both very much hurt, he ordered Proclamation to be made upon the Spot, that whoever had so much Courage as to fight with one of those Beasts with Sword and Buckler only, should be, if he vanquished, honoured with the Title of *Khan*. It was not long before three *Indians* appeared to accept the Challenge, and having laid by their Coats of Mail, one engaged with a furious Lion, and for some Time made his Party good very courageously, but the Beast pressing very hard upon his left Hand, in which he held his Buckler, the Weight whereof at last forced the Buckler out of his Hand; so that seeing himself in an unavoidable Danger of his Life, he thrust a Dagger which he wore in his Girdle into the Lion's Jaws, who thereupon let go his Hold, and was mauling off; but the *Indian* followed him, and with a Blow cross his Head, laid him dead upon the Ground. The Acclamations of the People were loud upon this Occasion, but the Mogul was so far from being pleased with the Action, that on the contrary, being highly incensed at his having made use of any other Arms except his Sword and Buckler, he commanded the Fellow's Body to be tipped up, and the Body to be exposed to the View of the whole City. The second *Indian* made up with to his Courage than the former, to a Tiger, brought in for that Purpose, but this fierce Creature was so extensive and terrible, as to terrify him by the Throat, and to bite him. The third *Indian*, though a Petion of a mean Estate, and worse Aspect, nothing dismayed at the Misfortune of his

Comrade, engaged the fine Tyger with unspeakable Bravery, who was for playing the same Game with this, that he had done with the other: But as he was going to fasten on the *Indians*'s Throat, he cut off both his Fore-paws at one Blow, and soon after dispatched him; at which the Mogul was so well pleas'd, that he presented this Man (whose Name was *Cazy*) with a Garment of Brocade with his own Hands, and bestowed the Dignity of a *Khan* upon him.

As I should not have left *Agra* so soon, had not an unhappy Accident made me alter my first Resolution; for as I was talking one Day in the Streets with my *Persian* Servant who lent me at *Surat*, an *Indian*, of a very goodly Aspect, came up to me, asking me what I had to do in those Parts? to whom I made Answer, that I was a Native of *Germany*, whom Curiosity had brought thither. He told me, that unless he was very much mistaken, I was the Person that had killed his Kinsman in the Engagement at *Ipaan*, betwixt the *Indians* and *German*s. As I was convinc'd in my Conscience that he spoke Truth, so I was not a little amaz'd at it. But two *English* Merchants that were along with him, pretending that I was lately come from *England* by Sea to *Surat*, made me persist patiently in it, that I had never set Foot in *Persia*. This would, perhaps, however, have hoodwink'd me but in time I clearly had not the same Story declared, and sworn by his *Mohammed* and *Hajetan*, that he knew me, and that I had nothing but Truth: So that with much ado we got rid of the *Indian* at that Time.

But as his Sight was not very agreeable to me, so I made it my Business to take the next Opportunity of leaving *Agra*, which I did accordingly, taking the Advantage of a Caravan that was going thence to *Lahor*, 60 Leagues further into the Country, all which Way we travelled through one continued Visto of Palm, Date, Cocoa, and other Fruit trees, which, with the Company of two *Dutch* Merchants, and some *Banyans*, made this Journey very pleasant, tho' the Heat we met very well pleas'd with the Diversity I took in shooting at the Apes, Parrots, and some other Creatures, and among the rest at a Serpent, a thing never seen by them. The City of *Lahor* is seated upon the River *Raby*, one of those that with four more join their Waters with the *Indus*. It lies in $32^{\circ} 30'$ having many fair Gardens on the River-side, and the Country about it being fertile in Fruits of all sorts, but especially in Wheat and Rice. The Royal Palace, which lies in the middle of the City, is surrounded by a very high Wall, besides that, it contains many other Palaces, belonging to such Persons of Note as generally attend the Mogul, where-ever he goes, and a great many Mosques and publick Baths. I had the Curiosity to go into one of these Baths, which I found to be exactly after the *Persian* Fashion, with several Partitions made half round, within narrow at the Entrance, and wide at the Bottom, each having its peculiar Door, and two Cisterns for receiving the Water, which is let in by brazen Cocks, more or less, according as those who bathe are pleas'd to order it. After bathing, I was oblig'd to lie down upon a Stone seven or eight Feet long, and four broad, where being soundly rubb'd first upon my Belly, and afterwards all along the Back, some, as it was the Side, the Fellow would have rubb'd the soles of my Feet also, with some Sand, which I not being able to endure, he ask'd me immediately whether I was a Christian, and I having told him that I was, he gave me the Hair Cloth to rub them myself.

In this Journey to *Lahor* I rode upon four several Creatures, that is to say, a Camel, a Mule, an Elephant, and an Ox, which were so loaden, that they carried me six or seven Leagues without stopping. Having received Letters from *Agra*, that the *English* Factor was preparing to depart from that Place, I took the Convenience of leaving *Lahor* with some *Merchants*, that were going to *Benares*, where I was sooner arriv'd, but I could not stay there long, thro' the coming of the Caravan of *Benares*, which oblig'd me to return to his Voyage to *Benares*, which I could not make, unless I could find *Surat*, which I could not find, until I was oblig'd to return to *Agra*, where I was oblig'd to stay, until I could find out at the Relinquishment of *Persia*, which was to be performed in a few

Days. Whilst I was at *Amadabat*, I saw the *Mohammedans* celebrate a Feast. All the Windows of the Houses round the great Market-place were filled with Lamps, before which stood glass Vessels full of Water, of all sorts of Colours, which afforded a very delightful Prospect at a Distance, and the Night was concluded with Feasting and fine Fire works, composed of Squibs, Crackers, and many ingenious Inventions of that kind; among the rest, they had fasten'd certain Lamps to Wheels, which being turn'd round with great Violence, made a pleasant Show.

The Caravan of *Agra* was no sooner arriv'd at *Amadabat*, but I prepar'd to go along with them to *Surat*. The first Day we travel'd six Leagues to *Amadabat*, on the next Day the *English* Factor and his Deputy, being oblig'd to be at *Surat*, at the Relinquishment of the chief *Dutch* Factor, myself and another left the Caravan, taking twenty four Soldiers along with us for Guards. We cross'd the *River* *Wafet* with our Banners, a cording to the *Indians* Custom, who like our Corns, carried before them. At Night we took our Quarters in the Fort of *Sisalpur*, where in the Evening with the *English* Factor of *Bordu*, we staid in that Place all the next Day, but continu'd our Journey in the Evening, and were lodg'd next Night in a City, where we proceeded the next Day to a noted City, on the River Water call'd *Sambord*, which being at that Time pass'd by a Troop of Country People, who pretended to quarrel from fetching the Water we had Occasion for, a dispute arose betwixt them and some of our Soldiers, who was at last came to Blows; for whilst our People were drawing up their Water, the Country Fellows w. under the pretence of with their Arrows, which exasperated the rest, they kill'd three of the Country People.

But before next Day appear'd, we met with another Encounter, which was likely to have prov'd fatal to some of us; for the *Dutch* Caravan (which we had overtaken on the Road) going away about Midnight, we follow'd soon after, but were not gone far before we heard one of those Trumpeters, who in the *Indies* commonly run a before the Caravans found his Instrument in an adjacent Wood; as we had been already forewarn'd of the *Rabbits*, who had committed several Robberies, and had covers Persons hereabouts the Day before, so we made the least question, that this was the Signal of our coming given to those Rogues; neither was it long before we found our Guess verified by their coming out of the Wood with Pikes, Bucklers, Bows and Arrows; but tho' we were not they had no Fear-Arms. We had here the same custom put ourselves in a Posture of Defence; but the *Dutch* Merchants and I getting on Horseback, we saw the four *Dutch*locks we had among those of our Company, who were in a Coach, reserving three Cases of Pistol, and our own Ule on Horseback. Our Agreement was that we should all were sure of doing good Execution, and the *Dutch*locks gave us a fair Opportunity to employ our Pistols to the best Advantage; for as they were coming towards us in a very close Body, we discharged our Pistols, which were charged with Iquate Pieces of Iron, and the *Dutch*locks which made three drop at once, but that first of *November*, they pull'd forward, kill'd two of our Soldiers, and an Arrow into the Punnel of my Saddle, and the *Dutch*locks the Turban of the *English* Merchant. Next Day we were near us that I received two Thrusts with a Pistol upon my Buff Collar, which I was oblig'd to receive for my Life at that Time. Nay, two of our *Dutch*locks of my Horse's Saddle, and were just going to kill me, when the *English* Merchant came in very opportunely to my Relief, so that I made shift to kill one of our Enemies Shot, and to get clear of the other. By the assistance of the *Dutch* Caravan, we were oblig'd to stay at *Sisalpur*, and the Caravan itself brought of us some *Dutch*locks, but I did not think it convenient to stay there, but to make the best of my Way to the *English* Factor of their Contrary Rel. Upon the *English* Factor's return, others desperately wounded, who were oblig'd to be carried had only two of our Soldiers kill'd, and one of our *Dutch*locks ed Persons. We expect to see the *English* Factor, and we brand no more of them, and so we are oblig'd to return to *Amadabat* and travel'd eight Leagues

olive or yellowish Complexion, though those to the North are not quite so dark as those living more to the South.

The Men are commonly strong and well made, with large Faces and black Eyes. They have their Heads and Beards, excepting only the *Mustachoes*, like the *Persians*; and the *Mohammedans* are clad after the same Way, except that they plait their Turbans in a different Fashion; and the *Indians* wear the Opening of their Garments under the Left-arm; whereas the *Persians* wear it under the Right. The former tie their Girdle before with the Ends hanging down, and the latter wrap it several Times round the Waist, and twill the Ends within it: To those they fasten their Daggers, which are about a Foot long, broad towards the Handle, and very narrow towards the Point. Some Swords there are worn here, but the Soldiers generally wear Cymtars.

As the *Indian* Horses are not very valuable, and yet very scarce, so their Oxen are frequently used instead of them, which are as swift as Horses; I have seen whole Bodies of these Ox-Treepers. Their Women are short, but well-shaped; they wear their Hair hanging down over their Shoulders, and on their Heads a kind of a Cap of Lawn, interwoven with Gold, the Ends of which come down quite to their Knees. The richer sort are very sumptuous in their Apparel, have Pendants of Pearls and Diamonds in their Ears, and very fine Necklaces of Pearls, which make the fairer Show upon their Necks, which are of a brown Complexion. They sometimes also wear Rings in their Nails. Breeches and Drawers are common to both Sexes, and are generally made of Taffaty or Calicoe, and that of such a Length, as they would cover all the Body, were it not for certain Strings that are fastened to them, that they can draw them together in Plains like Mens Boots, though above the Ham they be close to the Body without any Pads: Over these they wear their Shirts, which, however, reach scarce to the Navel; and over these again a Fetterscoat of Taffaty or Calicoe, but so thin that you may see through it. Their Shoes are flat soled and narrow towards the Toe, and commonly of red *Spanish* Leather. Their Breasts and Arms, as far as their Elbows, are bare, but covered with Bracelets. Women that value their Reputation here, never appear abroad with their Faces uncovered; and those of Quality scarce ever go out of Doors.

The Women of the *Banjans* are clad after a quite different Manner, for they, as they don't have their Heads, so they don't wear their Hair very long, neither do they cover their Faces, but wear Pendants and very rich Jewels, especially in their Ears. Black Teeth are a singular Ornament among them, which is the Reason they call us *Europeans*, in Persian, *Borani*, i. e. Apes. They also wear no Breeches, but, instead of them, a Piece of Silk, reaching down to their Hams, over which they put their Smocks, and over them their upper Garments, which are fastened round their Waist with a kind of Girdle: Some of them wear loose Wallecoats, the Sleeves of which come no farther than the Elbow, being naked from the Breast down to the Navel. During the Summer-season their Shoes are made of Wood, only tapersed with Straps to their Feet; but in the Winter they have shoes of Velvet, Brocade, or silk Leather, the Quarters of which are very low, that they may put them off and on with more Conveniency, when they are going in, or coming out of a Room, the Throat of which is covered with Tapestry. Children of both Sexes are kept naked till they are five Years old. For the rest, the *Banjans* live with a great deal of Circumference, as do the *Mohammedans*, who treat them contemptuously, and much after the same Manner as the *Jews* are looked upon with us, in those Places where they are suffered to live. Notwithstanding which they are more ingenious and crafty than the *Mohammedans*, which is the Reason both the *English* and *Dutch* employ them as their *Bakers*, it being next to an Impossibility that any Stranger should be able to buy out all their Impurities without the Assistance of some of their own Gaug.

Their Children, especially their Daughters, they marry at seven, eight, nine, or ten Years of Age, it being very rare that they delay till the twelfth; for as the *Indians* arrive sooner at Maturity than other Nations, they are of Course, that at a Man's days any Time beyond that Age,

he must be subject to some Infirmity. The Day for the Consummation of the Marriage being come, the Parents of both Parties sit round a good Fire in a spacious Room, the Bride and Bridegroom take three Turns about them, whilst the Braman gives them his Benediction. If a *Banjans* Bridegroom happens to die before he has taken his three Turns thus, the Bride may challenge the Privilege of marrying another, the Widows of the *Banjans* being not allowed a second Marriage upon any Account, though their Husbands should chance to die before the Consummation of the Marriage: So that those who cannot comply with a single Life, associate themselves to the Women-Dancers. The *Banjans* Women are not obliged to burn themselves with their dead Husbands, as the Wives of the *Bramans* and *Rishpoots* are, unless they will do it voluntarily. The Men are permitted not only to marry a second or third Time, but may have two or three Wives at a Time, provided the first or second prove barren; but the first challenges, and retains the Precedency. The Sons only inherit the Father's Estates, but are to maintain the Mother, and are to provide Husbands for the Sisters. As they use neither Baptism or Circumcision, they must be numbered among the *Pagans*. And though they acknowledge one supreme Being, the Creator and Preserver of all Things, yet they pay worship to the Devil, for this Reason, because that God having constituted him to govern the World, he ought to be appeased by Offerings.

The Figure under which they adore him, is to be seen in all their Pagodas or Temples, some of Gold and Silver, some of Ivory, Ebony, and Marble, and other of Wood, or common Stone. The Head, which has four Horns, besides a Triple-crown in the Shape of a Crown, or Mitre, with a grim Countenance, and two great Teeth coming out of the Mouth, like the Folds of a Wild Bear, and a great rough Beard all over the Chin. The Arms hang down carelessly on both Sides, and the Breasts are extended as low as the Navel, under which, betwixt his Thighs, you see another Head, with two Horns more deformed than the first, thrusting out of the Mouth a very ugly large Tongue: The Feet are like Paws of ravenous Creatures, and behind a Cow's Tail. This Statue is always fixed upon a Stone-table, which is the Altar where the Offerings are made to the Idol. On the Right side of it stands a Cistern, in which these that come to sacrifice purify themselves beforehand; and on the left-hand a Chest, into which they put their Offerings, which are always made in Money. There is another Vestment far from the Cistern, out of which the Braman, or Priest, takes a certain yellow Mixture, made of Water and several-wood, and therewith marks the Foreheads of such as have performed their Devotions. The Braman's ordinary Place is at the Foot of the Altar, but he sits upon a seat frequently to say his Prayers, and before he goes away, he is sure to purify his Hands, by rubbing them over in the Flame of the Lamps, which are placed before and about the Altar, and furnish their Pagodas with Light, and consequently are kept continually burning, being the chiefest, if not the only Ornaments of these Temples, which look more like Caves and Holes of Darkness than Places of Devotion, there being nothing to be seen on the Walls of them but the Figures of Beasts and Devils. Notwithstanding which these poor Wretches pay their Devotions with more Respect and Zeal than is observed in most Christian Churches.

They are, like the *Mohammedans*, much addicted to corporal Purifications, which they seldom fail to perform Morning before Sun rising. The Braman, who is their Original immediately from their God *Braman*, says that they are the Product of his Head, whereas the rest are caught of his Thighs, Feet, and other more remote Parts. Mr. *Arakam Rogers*, who lived ten Years in the *East*, Service, on the Coast of *Ceramanda*, says, that the *Bramans* acknowledged for their Supreme God, one *Braman*, called *Tamara*, which produced *Braman*, the first of all Men who had Power given him, not only to create the World, but also to settle what Order and Government he thought best. They further say, that this *Braman*, being

what Order and Government he
her say, that this *Braman*, being

God's Vicegerent, has distributed the Administration of the
Universe among eight Lieutenants, the chief of whom
they stile *Divendra*, and say he commands all the rest of
the Governours, who govern eight distinct Worlds, such
as cuts are. all which they are of Opinion swim upon the
Surface of the Water like to many Eggs.
They say farther, that there have been divers Worlds
before that which is now in being, and others will be after
it; though, they tell us, that the World we live in, is
to continue a Million of Ages, since that in the Year
1693, there were no more than 4739 Years of the fourth
Age of the World elapsed; and that the first Age had
lasted 17200 Years. That in the first Age of the World
all Men were just and good to such a Degree, that the
Devil, who was then created, had no Power to injure
them; that in the next following Age, the fourth Part
of Mankind became depraved; that in the third there was an
equal Mixture of good and bad; and that in this last Age
of the World, the Number of the good amount only to one
fourth of the whole. But let this suffice concerning the The-
ology of these *Pagans*; we will only add here, that the *Bra-*
mans have, by their Austerity of Life and Abstinence, gained
a great Ascendant over the *Pagans*, who look upon their Ex-
periments of the Mysteries of their Religion as so many fa-
voured Oracles; for which Reason also, generally, they entrust
them with the Education of their Children. They are
distinguished from the other *Banjans* by a peculiar kind of
Linen Cloath; besides that, they never cut their Hair, and
wear three Strings of Packthread next their Skins coming
from their Shoulders cross their Breast to the Waist; and
as this is the Badge of their Order, so they never lay
it aside: They believe the Immortality of the Soul, and
its Transmigration from the Bodies of Men into those of
Beasts, before they can be capable of the Enjoyment of
the Blessings of the other World; for which Reason it is
that the *Banjans* will not allow the killing of any living
Creatures, even down to the Insects; and they are so care-
ful in this Point, that they will not keep any Fire, or
lighted Candles in the Night-time, for fear the Flies should
burn themselves; and when they do at other Times, they
make it in Pots under Ground. Their charitable Inclina-
tions to all living Creatures are so great, that they redeem
ken birds as are catch'd by the *Mohammedans* to be killed;
so, they have certain Hospitals appointed for sick and
wounded Birds.
Among the *Malabars* these *Bramans* are in such Vene-
ration, that they have the Full-trusts of all the Brides,
and by the richer Sort are invited to perform this Task
with very considerable Presents; nay, there is scarce any
Boy of Note there, when he is to be absent from Home
for any Time, but recommends his Family, especially his
Wife, to the Care of a *Braman*, to supply his Place.
The *Banjans* are acointed to have thirty-eight prin-
cipal Caste among them, not to speak here of the lesser
ones, which are not to be numbered; they have four ge-
neral Sects, under which all the rest are included, viz.
the *Conaravars*, *Samarab*, *Bimote*, and *Godgoy*. Those
three first Sects are very precise in the Preservation of
living Creatures, for which reason their *Bramans* have their
Shoes covered with a Piece of Calicoe, for fear any In-
sects should get into and perish in their Mouths; they for-
bear to sleep their Rooms continually, and will
not sit down before they have looked, for fear of sitting
down on any matter they keep any Fire or Candle in
the Houses. They are distinguished from the others by
a white Staff they carry in their Hands, and walk always
bare-footed and bare-headed. Their Cloathing is only a
Piece of Calicoe coming down from the Waist to the
Knee, the upper Part of their Bodies being covered only
with a wollen Cloth. They don't believe an infinite Be-
ing, and the rest do, but attribute the Events of all Things
to Chance, and know of no other good Deeds but Fast-
ing and Giving of Alms. In Consequence of this Op-
inion, they acknowledge in the Sun, Moon, Stars, the
Elements, and Creatures, nay, in Trees, and in Metals, and
in all Things, the inherent Causes of their Production.
They show two Suns, and as many Moons, which they
say move each other alternately every Day. They be-
lieve nothing of Heaven, or any Mansion of the Blessed,

tho' at the same Time they acknowledge the Immortality
of the Soul, and its Transmigration, which they say does,
after the Separation from the first Body, go into another,
either of Man or Beast, according to the Behaviour of the
Deceased in this World; they say it always makes Choice
of a Female, that it may return into the World, tho'
in another Body. Their Temples are all four-square, with
flat Roofs open to the East-side, under which are the
Chapels of their Pagods, or Idols, raised ten Feet from
the Ground, in the Form of a Pyramid, with Stairs leading
up to them, on which you see certain Figures of Wood,
Stone, or Paper, representing some Persons among them,
who have rendered themselves famous by their extraordinary
good Fortune. The chiefest Time of their Devotion is
in *Augst*, when they mortify themselves, especially by
Abstinence, to such a Degree as would pass for fabulous,
were it not that even their professed Enemies in the *Indies*
have unanimously born Testimony to the Truth of it, that
some have been known for the Space of fifteen or twenty-
one Days, nay, some for a Month, or six Weeks, not to take
any other Nourishment than Water mixed with the Shaving
of a certain bitter Wood. In this Month they have their
general Assemblies in their Temples, whither they resort
to hear the *Braman*, who sits in the Center of them, and
reads certain Legends of the Lives of their Saints. Im-
mediately after they come into the Temple they put their
Offerings of Money into a Copper Basin, placed there for
that Purpose, in return of which the *Braman* bestows upon
them the yellow Mark, either on their Foreheads, or Cloaths;
Whilst they are hearkening to the *Braman* they are enter-
tained with Music.
If any aged Person dies, they burn the Carcase; but
Children, which die before they come to three Years of Age,
are buried. Their Wives are not obliged to burn them-
selves with their deceased Husbands, but must live in per-
petual Widowhood, and there is none belonging to this
Sect, but what is capable of being received into Priest-
hood, to reach which he has no more to do, than to change
his Habit, vow Chastity, and follow the same Austerity of
Life prescribed to their Order. Women are not even ex-
cluded from this Function, but they must be above twenty
Years of Age, whereas Males may come in at seven, eight,
or nine Years of Age; nay, if either of the married Couple
embraces Priesthood, the other is engaged to Celibacy for
Life. Some of them make a Vow of Chastity in Mar-
riage, but this is not so well kept as made. This Sect is
an Abomination to the other *Banjans*, to such a Degree,
that they will not eat, drink, or converse with them;
Nay, if they happen to touch them, they are obliged to
a very strict Penance.
The second Sort among the *Banjans*, which consists of
the most Part in Blacksmiths, Farriers, Carpenters, Tay-
lors, and most other sorts of handicraft Men, as also some
Soldiers, Officers, and Clerks, have scarce any thing in com-
mon with the first, except that they allow not the killing
and eating of any living Creature, believing for the rest,
that the Universe owes its Origin to a first Cause, which
also preserves it by certain and unchangeable Rules. They
give the Name of *Permisser* to this Supreme Ruling, and
affirm, that it governs the World by three Deputies; the
first they call *Braman*, and attribute to him the Manage-
ment of Souls according to the Direction of *Permisser*,
in order to their Transmigration into the Body of Men
or Beasts. The second, named *Buffiana*, is appointed to
instruct the World in their Duty to God, and manages the
Wheat, Herbs, and Pulse, in the Fields and Gardens.
The third, called *Alis*, is the chief Manager of the Dead,
being *Permisser's* Secretary, who, after having taken an
Account of the good and bad Actions of the Deceased,
makes a Report of it to his Master, who, according to
every one's Deserts, lends the Soul into the Bodies of cer-
tain Beasts, where they must do more or less Penance,
before they can be purified from their Sins. In this kind
they look upon the Cow as one of the best, having some-
thing divine in it above all the rest. They burn the dead
Bodies of their Friends, except those of their Children
under three Years of Age, whom they bury near some
River or Brook, none of the *Indian* Women accompany-
ing their Husbands with so much Cheerfulness in their

last Journey, as those of the Sect of *Samaritans*: for as they are persuaded, that such as die with their Husbands shall live with them in the other World seven Times as long, and enjoy with him seven Times more Pleasure there, they are ready to forgo all to plentiful a Blessing, of which they have to garner a Share in this World, that they are ready to forsake their Lives in order to attain it.

The Sect of *Bijras* agrees with the two preceding in this Point, that they do not feed upon any thing that hath Life. They are also much addicted to Abstinence, and keep their general Assemblies in their Temples in *Shugul*, where they sing and dance to a Concert of Musick, consisting of Drums, Pipes, and Copper Basons, before their Idol called *Ramoon*, singing Hymns in his Praise.

They represent him with his Wife in Stripes, adorned on their Fetters with Gold Chains, and Coils of Pearl and precious Stones, with many Lamps, and lighted Wax Candles before them. This God acts without any Deputies; they feed upon nothing but Herbs, Pulse, Fresh Butter, Milk and Cream, and are great Admirers of a Pickle made of Ginger, Mangoes, Citrons, Gara K, and Mustard-seed; and their Drink is Water. None but Women or Priests cleanse their Nests, and the House-dung mixed with Straw, and made up into a kind of Fuel instead of Wood, for fear some small Worms, or other Insects, should be burnt with it. Most of this Sect are Merchants, Factors, or Brokers. They have this Custom peculiar to themselves, that they will not permit their Widows to burn themselves with their deceased Husbands, but oblige them to continue Widows. Not many Years ago the younger Brothers among them were obliged to marry their elder Brother's Widows, to raise up Seed to him; but this is now abolished.

They commonly wash themselves every Morning in some Coltery, or River, if any be near them, where they wallow and swim in it, whilst the Braman, who stands hard by, mutters out certain Words, and imparts to them his Benediction, and at their coming out gives them the Mark in their Foreheads, or in some other Place; for which he is paid with Wheat, Rice, or Pulse. Those belonging to the Sect of *Gorgy* are a kind of Hermits, neglecting all public or private Affairs, and dwelling in solitary Places, and tamed Herbs, or Woods, than the Conversation of others, that worship a God whom they call *Biam*, and his seven Angels, but have no particular Temples, or any other publick Buildings, to perform their Devotions in. A Priest is chosen to have any Possessions of their own, they have no money, but a Piece of Calice to cover their Privy, and never speak to any body, or will give an Answer to any, or ask for any thing, though they were in the most distress; but will take what is given them, they maintain theirs all ever with Alms, and especially rice-Hay, which makes them look very strangely. They are of a Veneration among all the other *Banjans*, except the Sect of *Comacath*, who abhor them.

They believe that our God is the Creator of all Things, who has created by his own infinite Power, by which he is able to reduce all to nothing; that he is not to be deceived, nor is any thing capable of a Light, which, as it is the Cause of the Sun, his Brightness is not to be taken by our Eyes. They differ from all the other *Banjans* in this; that they do not believe the Transmigration of Souls; but that they are immortally, after they have left their Bodies, to rise up to a new Body, and united to that in one Light. They are Deists, as to the Ceremonies, that they admit no *Adoration* of their Gods, or adore such of their own as may be considered among the *Nebammelans* and *Cherians*, and do not eaten Meat without a most severe Penance, which is that the six Months together Cow-dung mixed with water and Vinegar can be conceived, more or less, but they are in general; they never stir up before they have paid their Devotions, and in going out of their Houses, they never wish any thing which they look upon as necessary, to yarning, and undertake nothing unless that Duty.

The *Keshrees* are by long reckoned among the Number of *Hermits*, who allow them a Place with those of the Sect of *Comacath*, as believing the Transmigration of the Souls, but differ from other Hermits affirmed and maintained by that Sect, they are of better Opinion, that the Souls of

Men transmigrate particularly into Birds. Their Widows are obliged to burn themselves, unless the contrary be provided for in the Marriage-Contract; for the rest, they are not of that reserved Temper as most of the *Banjans* are, who abhor the Effusion of Blood, even of that of irrational Creatures; whereas these live upon Rapine, and Death, and addeth themselves altogether to warlike Excesses, and as they are a daring Generation, so they are employed by the Mogul in his Armies. Some Compassion is to be shewn to Birds, which they will feed and cherish. They take other *Banjans*, marry their Children very young, which, as I have mentioned before, proceeds from hence; that the *Indians* of both Sexes come sooner to Perfection in respect than any other Nation in the World. There resides these another sort of *Pagans* in *Guzerat* called *Cherians*, descended from the *Persians* of *Fars* and *Armenia*, who left their native Countries in the seventh Century, to avoid the Persecution of the *Nebammelans*. The Jewell of the most part along the Sea-Coast, and live upon parties of Tobacco, and making of Arrack or Aquavit out of Honey, though many of them addit themselves also to Trade. They believe one God, the Creator and Preserver of the Universe, who acts by his own Power, but has committed the Administration thereof to his seven Servants, whom they represent thus: The first, named *Hamaing*, has the Government of Men; the second, called *Biam*, the sovereignty over all Beasts and living Creatures; the third, *Arduhosh*, takes care of the Fire; the fourth, named *Cherian*, has the Charge of Metals; the fifth, who is named *Iphawder*, takes care of the Faith, as *Cherian* is of the sixth, doth of the Water; and the seventh, called *Cherian*, hath the Precedency over Fruit trees. He is to be worshipp'd yet under God's Direction, unto whom they are oblig'd for their Transactions.

Besides these seven Head Servants, God has appointed the use of twenty-six others, each of which is oblig'd to the Function assigned him. The Business of the first, to take Possession of the Soul immediately after he is taken out of the Body, which he carries before him, is called *Meer Reses* and *Sares*, who, taking care to have good and evil Works put into two Scales, presents them to the according to their Weight, and delivers the lighter to the good Angels to be carried to Paradise, and the heavier to the evil Spirits to drag them to Hell, where they are committed to the End of the World, which, according to the Opinion, will be renewed in one thousand Years. The fourth, called *Berom*, has the Administration of the Affairs. The fifth, *Carrafals*, is the Spirit of the Wind, and the Water. The seventh, *Meer*, manages the Fire. The eighth, *Maba*, is the Moon. The ninth, called *Rain*. The tenth, named *Gar*, has the Management of Cattle. The eleventh, *Laxwardy*, the Government of the Wind in Paradise. The twelfth, *Sham*, imparts Life to all Mankind. The thirteenth, *Cherian*, is the Spirit of the Winds. *Dien*, the fourteenth, is he who is oblig'd to and to advise unto Mankind the Law of God. The sixteenth, *Apresnick*, is the Giver of Rewards, and the sixteenth, has the Disposal of Unemployment and Memory. The seventeenth, called *Cherian*, is the President of Commerce; and *Gomgat*, the President of the Government of the Earth. The eighteenth, called *Marrigan*, is Goodness itself. And the nineteenth, called *Ameya* the Manager of ready Money. The twentieth, called *Heem*, has the Management of Cattle, and Fruits. The twenty-fourth, called *Dima* and *Bese*, are looked upon as Deputies appointed to watch all Men; and the twenty-fifth, *Depkader*, *Dejbmer*, and *Dipladen*, are their Attendants, who employ them to watch all Men without Distinction. As the *Parsi* are oblig'd to God has left the Administration of the Universe to relate to the Relation to their Deputies, who are oblig'd in case of Necessity. Their Transactions and Administration among them, some of whom employ themselves in Traffick and other Employments.

They have no publick Places of Devotion, but worship the same in their Houses, sitting without any other than their Bodies. They have no particular Worships, but their religious Worships, except that they

that they would starve themselves to preserve them. Most Persons of Note are very careful to build themselves Houses in very handsome Gardens, which serve them and their Families for Sepulchres; these Houses have many small Windows on all Sides. They use the following Ceremonies at their Burials; immediately after the Decease of the Patient, the Kindred with great Lamentations come to ask him what made him die; whether he wanted such and such Conveniences, which they name to him. This done, whilst the Couple is washed and put into a Coffin, the Friends divert their Sorrow by making good Cheer. Three or four *Mollas* remain constantly near the Body (which is wrapped in a perfumed Sheet) to pray for the Soul, till it be carried to the Burial-place, whether the Coffin with the Corpse covered with Callico, Velvet, or some other precious Stuff, is carried by ten or twelve Men, the *Mollas* singing all the while their Hymns, and the Kindred accompanying it to the Grave. Here the Body is laid down upon the Right-side, with the Face to the West, the Feet to the South, and Head to the North, the Coffin being covered with a Board, for fear the Earth should defile the Corpse. It is let down smoothly into the Grave, whilst the Kindred utter out certain Prayers, and to return to the House of the Deceased, where the same *Mollas* continue their Prayers for several Days after, during which Time not a Spark of Fire must be seen in the House. They stile themselves *Muslimans*, or true Believers, looking upon all other Religions as heretical and damnable; but as they have a singular Aversion to Images, to they themselves more Hatred to the *Roman Catholics*, than *Protestants*, on the score of their Images.

They are generally of a good Stature, without any natural Defects. They have all lank black Hair, tho' those they call *Moguls* have a clearer Complexion than the rest. They don't admire flaxen Hair, but hate red-haired People, out of an Opinion they have, that they are leprous, a Distemper very common here; one Reason of which is, that the Pox being seldom cured as it ought to be, by Degrees affects the Blood afresh, and turns to a Leprosy. The *Mollas* let their Beards grow, but all the rest shave their Beards as well as their Heads, leaving only a Lock on the Crown, by which, they say, *Mohammed* is to pull them up to Heaven. There is no Distinction in the Drets of Men and Women. They make their Garments of Callico, Silk, or Brocade, according to the Abilities of those that wear them. They lie close to their Bodies above their Waist, like ours, but grow wider and wider downwards to the Small of their Leg, whereabouts their Breeches, which reach to their Shoes, are gathered by a Strug into many Platts. Their Shoes are of *Spanish* Leather, Silk, or Brocade, with very low Quarters, because they have frequent Occasion to pull them off when they go into Rooms, where the Floors are covered with rich Tapestry. Their Head-dress comes nearer to that of the *Turks* than the *Persians*, being commonly of thin Callico, or Silk, interwoven with gold and silver Thread. They lay it by when they go to Bed. They have over their Garments a kind of Cloak to defend themselves against the Injaries of the Season. Their Garments are tied round their Waist with a silk Girdle wrought with Gold, and over this they have a kind of a Sash of fine Callico. In these, Persons of Quality wear their Daggers, the Handle and Sheath of which are generally of Gold, and set with precious Stones.

Their Houses are but slightly built, the Walls being nothing but Plaster-work made of a Mixture of Tree-bone powdered, some Lime, Gum and Sugar, which being very white and smooth, makes no disagreeable Shew at a Distance. They are also indifferently furnished, especially the Kitchens, where, besides a few Dishes and Stoves, you see very few other Utensils; tho' for the rest, the Houses of Persons of Quality are very large, and divided into convenient Halls, Apartments, Chambers and Closets; in the two last of which the Women take great Delight to let them out with their gold and silver Plate. When they are to receive Visits, they place themselves in the Hall, upon Pieces of Tapestry. They salute each other at their first coming in with their Salam, and an Inclination of the Head, and if the Persons be of greater

Quality, they put their Right-hand to their Heads, to shew their Readiness to submit to them. If they are of an equal Condition, no further Ceremony is observed, but a mutual Inclination with their Bodies. Sometimes they touch one another's Locks, adding these Words, *Grass and meat*, be it to you according to the Prayers of the Poor. He who receives the Visit, never sits in his Place, the Visitors being set on his Right and Left-side. Their Visits are made with a great deal of Reserve, no such thing as the least loud Discourse being to be heard, or any Gestures made with their Hands or Heads. If they whisper to any body, they are sure to hold to their Mouths a Napkin, or some such thing, for fear of offending with their Breath him to whom they speak.

Their greatest Expense is in Cloaths, being all Women; for as by the *Mohammedan* Law they are allowed to pursue their sensual Pleasures to the utmost, as far as may be done without Detriment to their Souls, they indulge themselves in this Point to the utmost of their Power. They keep a numerous Retinue of Servants, each of which hath his Business assigned him; the Footmen have great Plumes of Feathers on their Heads, and two little Bells on their Breasts, as sure tokens, that they will travel fifteen or sixteen Leagues a Day without much Difficulty. They have all their bare Heads, and some Veils, but both are so small, that they scarce keep themselves from starving. The many women the *Mohammedans* marry, are very chargeable to them, together with their hunches, for they are very extravagant in their Cloathing, Jewels, and Furnishing; the Arguments they have for this is, that each Woman can do as by all imaginable Art to gain her Husband's Affection and Enjoyment before the rest, there being nothing to be contrived, but what they will make use of to excite his Voluptuousness. The common handicraft People are in a very poor Condition here, for as every Piece of Work passes through several Hands before it is finished, they can scarce get Six pence a Day, and the work of the Children must be bound to no other Trade than that of their Fathers.

Hence it is that they are forced to Live upon Bread and a little Rice boiled in Water, in the Nature of a Hash-pudding, into which they put a little Salt, and their poor Houses are suitable to their Way of Living. Merchants live here in Plenty enough, and would be sufficiently happy, were it not for the Danger of their Trade, or being seduced by the covetous Toy of a new World, in which they live, under some Pretence of Religion, as they begin to discover their Wealth, they take the easy Way to keep any thing, is to appear to have none.

21. Though all the *Mohammedans* profess the same Religion, yet are they differing into many Sects, such as the *Patans*, *Moguls*, and *Indians*, and several others, which, as well as their different Complexions, arises more from the different Dispositions of the Natures from whence they came, than from any other Account. Thus the *Patans*, or *Padars*, are a very cruel, and barbarous Generation, who with a great Consideration will thrust themselves into any kind of Wars. The *Moguls*, or *Mogulies*, on the other Hand, are of a more pleasant and discreet, which gains them a Reputation among the other *Mohammedans*. The *Indians*, or *Industans*, are somewhat barbarous, and though they are yet are not cratty enough to deceive with their small out. They are the true ancient Inhabitants of the Country, and may be easily distinguished from the other by their Complexion, which is much more the colour of the Sun than the two former.

There is another sort of People in the Province of *Khan*, who, as they are very hardy and bold, they are employed chiefly in carrying Merchandise, and are called *Blottians*, their chief Employment is to buy and sell Camels, and to conduct the Caravans, who are very faithful to much Fidelity, that they would rather let themselves, than suffer any thing to be lost. All over the *Mogul's* Country, as well as in this Province, there is nothing to be seen as publick Inns, except that in the City, and some Villages, are erected certain publick Buildings, which

Charity for the Conveniency of Travellers, and these Caravans have no other Accommodations but four bare Walls and a Covering over Head. They travel with Camels, Horses, Mules, and Oxen. They make use also of a certain kind of Coaches, drawn by Oxen, which will travel ten or twelve Leagues a Day; they are covered with Velvet on the upper Part, but those for the Women are so covered on all Sides. Persons of Quality travel for the most part on the Elephants, or are carried in Palanquins, or Litters, carried by two Men upon their Shoulders, with a Bar. They are very careful in breeding up their Elephants. Hawking and Hunting is their chief Sport. Their Greyhounds are less than ours, but they make use of tame Leopards and Tygers in Hunting, which are the best in the World at surprizing a wild Beast, but never pursue it. They catch Water fowl by the Skin of a wild Duck, filled with Hay, which being tied to the decoy Duck, they swim up the Water till they get insensibly among the rest without frightening them. Their Bows are made of wild Ox Horns, and their Arrows of Cane, and they manage them with so much Dexterity, that they kill Birds flying. Their Games are Chess, and some at Cards. They are great Lovers of Musick, though theirs be so rough; but Judicial Astrology has got such an Ascendant among them, that nothing of Moment is to be undertaken here without first consulting those who profess it. They are not quite destitute of Books. Aristotle's Works, or at least most of them, are to be met with here, translated into the Arabic Tongue, as likewise certain Treatises of Avicenna, who is in great Request with them, as being born at Samarcand, under the Jurisdiction of Timur, or Tamerlane: Their Writings are not despicable, and have something of Rhetorick in them; and their Arithmicks are so well and exactly kept, as to furnish sufficient Matter for a good History.

Though their Language be divided into several Dialects, yet it is to be learnt without much Difficulty; they write from the left-hand to the right; the Persian is the Court Language in *Indostan*, and some have likewise a Taste of the *Arabic*, which is the learned Language. The Bloody-flux and Fevers are the most common Diseases in the *Indies*, against which they use scarce any other Remedy but Abstinence. They don't want Physicians, but have no Surgeons. Their Barbers let Blood, and apply Leeches, which is all the Operations they use. The Winter reigns in *Guzarat* in *June*, and holds till *September*; but the Rains are not as at *Goa*. There are but two Winds which reign on this Coast, viz. the North and South Winds, which blow each for six Months without Interruption. Their greatest Heat is in *April* and *May*, and the Beginning of *June*, but the Sultriness of the Season is somewhat tempered by the frequent Breezes, which, however, bring this Inconveniency along with them, that they raise the Dust to such a Degree, as robs you of the very Sight of the Sun at Noon day.

The chief Commodities at *Guzarat* are Calicoes, and silk Stuffs, as Sattins, Taffeties, Potalas, Comerbands, Orns of Gold and Silver, used for Veils for Women, Brocades, Tapstry, striped Carpets, Quilts, Tents, Bedsteads, and Cabinets, Lacque Beds, Chains, Buttons, and Rings, of Ivory, Amber, Rock Chrytal, and Agate.

A valuable Herb called *Cheribees*, near *Amadabat*, is the best that is made. The Herb is like that of a yellow Parsnip, but somewhat shorter and more bitter. It sprouts forth into Branches like a Reed, and sometimes rises six or seven Feet high. Its Flower is like that of a Thistle, and resembles Penugreek; they sow it in *June*, and it ripens in *November* or *December*. It is sown but once every three Years; the first Year they cut off the Leaves with a Foot of the Ground, and after they have cleared them from the Stalk, dry them in the Sun, and afterwards lay them on a baking in a Stone Trough, which has six or seven Holes for Water in it, stirring it very frequently, till they find the Water has sufficiently extracted all the Colour and Virtue of the Herb; then they draw that Water off into another Vessel, which being well settled all Night, they take it off the next Day, and the Detriment in the Bottom is strained through a coarse Cloth, and dried in the Sun. This is the best Indigo, which is adulterated by the

Inhabitants by the Mixture of a certain Earth of the same Colour, and some Oil, to make it swim upon the Water, the Goodness of this Drug being commonly judged by its Lightness.

The Stalks left the first Year produce Leaves the next; but these are not to be compared in Goodness to those of the first, tho' they exceed those of the wild Indigo. The second Year is that which produces the Seed; the Product is never transported beyond the Seas, but kept by the Country People for their own Dying. The best Indigo, which they call *Anil*, is inclining to a Violet Colour, and has somewhat of that Smell if burnt. They always let the Ground lie fallow after the three Years are expired, for twelve Months.

There is also a great deal of Salt-petre vend'd at *Sarat*, which is made at *Ajmer*, sixty Leagues from *Ajgra*, out of the barren Ground. After it has lain fallow for a considerable Time they dig certain Trenches, which after they have filled with salt Earth, they let in as much Water as is sufficient to reduce into the Consistency of thick Mud, and to soak it the better, they frequently tread it with their Feet. When they judge the Water has dissolved all the saline Substance that was in the Earth, they draw up the Water into another Trench, where in some time it thickens, when they boil it like Salt, skimming it continually, and afterwards put it into earthen Pots, where the Dregs settle to the Bottom; they take it out again, and dry it to a hard Substance in the Sun. Borax, well known for its Usefulness in refining of Gold and Silver, is found near a Mountain in the Province of *Parbet*, upon the Borders of *Great Tartary*, which Country also produces Spikenard, Quicksilver, Mulk, and Copper, and a certain Colour which dyes the most beautiful Brown in the World. The Borax grows like Coral, in the Bottom of the River *Zanckenkar*, which coming down from the Mountain, joins its Stream with the River *Majnuor*, which passes through the said Province, and furnishes it with this Drug. The *Indians* call it *Zanckenkar*, from the best-mentioned River, and keep it for its Preservation in Bags, made of Sheep-skins, filled with Oil.

The greatest Part of our *Alliacetida* is brought from *Persia*; but that which is brought from the Province of *Utrad*, in the *Indes*, is preferred before it. There are two kinds of this Plant; one grows like a Shrub, with small Leaves like Rue, the other has Leaves as big as Turnips, and in Colour resembling Fig-tree Leaves. It grows commonly in sandy and stony Ground. Its Gum comes forth in the latter End of Summer, and is gathered in Autumn. The *Banjans* in *Guzarat* are such Admirers of it, that they use it in their Sauces, and rob their eating and drinking Vessels with it. There is abundance of Amphion, or Opium, brought from *Caro* into *Europe*; that which comes from the Province of *Gualer* in *Indostan*, and is vend'd all over the *Indies*, is only the coagulated Juice of Poppy, which is gathered by making an Incision therein, when it begins to be ripe. All the Eastern Nations are so addicted to the Use of it, that those who cannot come at the Juice, will make and use the Decoction of Poppy. The *Persians* boast themselves to be the first Inventors of it. They take every Day the Quantity of a small Pea of it, made up into a little Pill, not so much with an Intention to make themselves sleep, as to raise Vigour in them, more especially in the Exercise of venereal Acts, for which Purpose it is chiefly used by the *Indians*. They use themselves to it by taking a little and a little by Degrees, without attending to which it is mortal. It draws this Inconvenience after it, that it quite stupefies the Senses, unless they continue it for ever.

Of Lacque we have said something before, and shall say more hereafter. The Province of *Guzarat* produces abundance of Cummin, Ginger, and Mustards, which they preserve with brown Sugar, besides which they have several physical Drugs. Diamonds are likewise one of the chief Drugs of this Province, but not many, yet they have abundance of Pearls, Emeralds, Garnets, Yvres, Malbatter, red Marble, and Jasper Stone, which a better polished here than any where else.

They use but one kind of Weight all over *Guzarat*, which is called *Mien*, and contains forty *Cera*, in the

right-hand to their Heads, to omit to them. If they are of Ceremonies is observed, but their Bodies. Sometimes they adding these Words, *Gras* according to the Prayers of the Visit, never this from his Right and Left hand, a great deal of Refuse, and Dificourts being to be heard, their Heads or Hade. whole thirty Pounds and an half, at the Rate of sixteen Ounces in the Pound, a *Cer* containing ten *Peyjes*, a kind of Brats Money weighing twelve Ounces. Their Ells are of two kinds, the lesser amounts to no more than half a French Ell, and a sixteenth Part, and nineteen of their large Ells make thirteen Ells and three Quarters of the true Measure. They have also no more than two sorts of Money, viz. the *Mammedies*, and *Roupees*; the *Mammedies* being coined of Silver, of a base Alloy, go no farther than *Surat*, *Brodra*, *Brotsjena*, *Cambaya*, and those Parts, and are worth about one Shilling Sterling; but the *Roupees Chagans*, which are worth about a French Half-Crown, and made of very good Silver, pass current all over the *Indies*. The *Peyjes* we spoke of are their Copper Money, twenty-six of which make a *Mamondy*, and forty-five a *Roupee*. They count also with Almonds, thirty-six whereof make a *Peyje*, and with certain Shells, found by the Sea-side, eighty whereof make a *Peyje*. They account Spanish Pieces of Eight and Rixdollars equivalent to five *Mammedies*, because they make great Advantage of them in their Mints. The *Persian Larris*, which are very good Silver, are also much esteemed here. They have a golden Coin called *Xaraphins*, worth about thirteen *Roupees*. The *Chequins* and *Levantine Ducats* are current here, and were reckoned to be worth eight and a half, or nine *Roupees*, according to the Rising or the Falling of the Change.

As there is abundance of counterfeit Money here, and all over the *Indies*, so scarce any Sum is received but in the Shops of the Chargers called *Xaraphas*, which are at the Corners of every Street. These secure the Receipt of the Money for a small Matter, and are so expert, that no counterfeit Money can escape their Hands undiscovered. Their Way of computing Sums is by *Lacs*, which consist of a *Roupee*, and two of these *Lacs* make a *Crore*, or *Carea*, and ten *Careas* an *Arab*; a *Theal* of Silver makes eleven, twelve, or thirteen *Roupees*, one *Maffas* and an half a *Theal* of Silver, and ten of these a *Theal* of Gold. No Coin, whether Gold, Silver, or Brats, must be exported out of the Kingdom, on pain of Death. Besides what we have said of the Products of *Guzarat*, it is very fertile in Wheat, Rice, Pease, Beans, Barley, Millet, Tasty Wheat, Flax, Mustard-seed, Oil, Butter and Cheese, the last of which is fit in what salt and dry. Their Wheat is larger than ours. They don't bake their Bread in Ovens, but upon iron Plates, and the *Benjamins* in Frying-pans.

Their Beans and Pease are less, but much more delicate than ours, especially their red Chiches, where with in many Places they feed their Horses, Oxen, and Buffaloes, instead of Oats, a Grain not much used in the Eastern Parts. They sow in May, and their Harvest is in September and November: They cut no Grass, but consume it green. As the Nigral is the sole Proprietor of all the Lands in his Empire, so the Peasants, when Seeding-time appears, must make their Application to the Governor of the Province, and agree with him for so much Ground as he thinks fit to sow for that Year, for the Use of which he pays a third Part, and sometimes an half, whereas the Reason that most of the Grounds lie fallow, is because but few that think it worth their while to make them, do so at so expensive a Rate. Their Gardens are well stocked with Pot-herbs of all sorts, as Lettuce, Succory, Parsley, Radishes, Cabbages, Cucumbers, Cress, Garlick, Onions, Parsnips, and above all, with the most delicious Melons in the World.

They don't value their Flowers here so much for their sweet and fair Colour, the Rose only excepted, the Scent of which is much admired. The Flowers called Mogaci and Scamper, have also a very agreeable Smell; notwithstanding which they are admired by the Women for their colour, the first being a delicious white, and the latter yellow. They not fall the Year round, as does the Grals here, unless it be dried up by the excessive Heat of the Summer-tide. Besides their Lemons, Citrons, Pomegranates, and other Trees, which are known in *Europe*, they have those called *Anana*, *Bananees*, *Jacobs*, *Cocos*, and *Indian Fig* trees. They have also a kind of Vines about *Surat*, the Grapes of which are not so big as those of *Persia*, and are sold at a dear Rate.

Their Forests in these Parts harbour, among other Creatures, a kind of wild Dogs called *Javals*; no body dares hurt them no more than any other Beasts that are white or black, under Pain of Death, they being reserved to the King's Spoil, or the Governour's of the Province. The *Indian Horses* are in no wise comparable to those of *Persia* and *Arabia*, yet they are very careful in keeping them; they commonly feed them with that which they call *Chiches*, which they bruise and boil every Morning and Evening, and give them a Palle made of two Parts of Barley-meal, half a Pound of Butter, and as much Sugar.

Their Oxen are not different from ours in any respect that they have a large Bunch betwixt their Ears. The poorer sort of *Mohammedans* eat about a Quarter and Motion; but the better sort feed upon what is first roused with a Pudding of Rice, Almonds, and Dates in the Belly, or stew them with Barley-meal. They also have *Persian Sheep* with fat Tails, which are very rare and used seldom; but at great Feasts, which they have Fowls, Capons, Geese, wild Ducks, Quails, Teal, Partridges, Pigeons, Sparrows, and many more, they add Eagles, Falcons, Hawks, and other Birds of prey. They are not destitute of River-fish, such as *Sardines*, &c. but their Salt-fish is extraordinary good, except there, because the *Mohammedans* prohibit the eating of it, and the *Pagans* don't eat it at all. They have also Fishes, Crabs, and Prawns. It is observable that whereas in *Europe* all sorts of Shell-fish are better than in *India*, here they are best at the New-moon, and worst at the Full-moon.

Their Vessels are generally light, and hold their great Guns kept above Deck. They sail no farther than *Java* and *Sumatra*, or farther than *Mocha* upon the Red-Sea, whither they go to receive a Number of Pilgrims in the Beginning of May, and return not till the Middle of September, for that time they sail, which from June till that Month are very much in demand, whereas otherwise this Voyage might be performed in two Months. They carry to the Coast of the *Callicoes*, *Indico*, *Camphire*, *Tolacco*, *Amber*, *Benjamin*, *Pepper*, and many other Spices, *Musk*, and many other Preserves; in lieu of which they bring back Coral, Amber, a certain red Dyestuff, Coffee-berries and Opium, but their best Return is ready Cash.

Their Coasting Vessels, which go to *Cambaya* and *Brotsjena*, and sometimes to *Persia*, go away in January and February, and return in April or May, bringing with them Brocades, Silk, Stuffs, Velvet, and other Pearls, Almonds, Raisins, Nuts and Dates, especially Rose-water. Their Ships that go to the Coast of *Sumatra*, are of two or three hundred Tons, and carry thither the Products of the Coast, some of which they bring back Bismolne, Borneo, *Camphire*, *Porcelain*, *Tin*, and *Pepper*: They return in October or November. The *Muzars* carry a good quantity of Bark of *Coco*-trees, which is used for making Cordage, the Pith of the same Tree, *Arizac*, and a kind of Wool which dyes Red, called *Wool of the Harpus*, which they use for caulking their Ships, and Rice and other Provisions. Their Voyages to *India*, *Opium*, *Satiron*, *Coal*, *Calices*, and many others, they come to the Coast of *Surat* in December, and return in April. Formerly the *Portugueses* ruled over the Masters of the Trade of *Guzarat*, by means of their Posts at *Daman*, *Diu*, and *Goa*; but since the *Dutch* have made their Settlement in these Parts, they have been forced to confine their Trade to *India*.

These Travels and Voyages will be very useful to the Character we have given of the Nature of the Country at the same time that they will bring a great deal of Light in affording a clear, instructive, and interesting Description of one of the finest Countries in *Asia*, as well as the several Nations that inhabit it. I have been obliged to Plagiate in our Author's Style, that is, to borrow from, to they are the furest and most reasonable of Truth, which, in Works of this Nature, is the

Works of this

Value than any other Quality whatever. As the Writer often refers to the ancient History of India, and the Customs of the People before they were at all intermixed with Foreigners, the former Part of this Work will enable even the unlearned Reader to understand all these Things perfectly, and to reap a new Pleasure from perusing this Performance, as we have placed it, since he is already possessed of all the Lights that are necessary to illustrate it. By comparing the historical Passages that occur in relation to the Mogul Empire with the succinct History we have already given of that Government, these Travels will become a Supplement to that Reign in which the Author visited *Indostan*.

We cannot have a better Account of the general Situation of Trade, or of the particular Circumstances of the fe-

veral European Nations concerned in the Commerce of the Indies, for the Time in which he wrote, than our Author has given; and, therefore, as his Work is elucidated by what is contained in the preceding Sections, so his Accounts will serve to throw Light upon the following Sections, and deliver the Reader from the Toil of running through a dry Discussion of Facts, which, though tedious in itself, would otherwise make a necessary Part of this Performance. As to the References that occur in these and in the subsequent Relation to our Author's Travels through *Persia*, they will be cleared up by recurring to those Travels in the subsequent Volume. At present we shall proceed with his Voyages through and Remarks on the Rest of the Indies, which will be found no less curious and improving than those we have already perused.

SECTION XXVII.

The remaining Voyages of John Albert de Mandelloe through the Indies, including, his Descriptions of Countries, historical Remarks upon several Nations, and his Observations on the Commerce of the Portuguese, English, and Dutch at that Time.

Translated from the Author's original Voyage, written by himself.

1. An introductory Account of the Design of this Section.
2. The Author's Departure from Surat in the Year 1679.
3. He arrives in the Port of Goa, and gives us a particular Account of that City, and of the Reception he met with there.
4. A complete View of the Government, Manners, Customs, and Commerce of the Portuguese.
5. Continuation of his Voyage, including an Account of the Malabar Coast, and its Inhabitants.
6. A succinct History of the Island of Ceylon.
7. A particular Description of that Island, and the Commodities it produces.
8. The Informations he received from the Portuguese Jesuits as to the Countries he did not visit.
9. A very large and particular Description of the Coast of Coromandel, together with the Kingdoms of Pegu and Siam.
10. The Kingdoms of Cambodia, Malacca, Patapan, and Johore described.
11. A View of the great Island of Sumatra, and its Inhabitants.
12. A distinct Account of the Island of Java, its several Principalities and their Inhabitants.
13. Of the Islands of Celebes and Amboyna; together with an Account of the Spice-Islands, and their Commerce.
14. An Account of the Philippines, and of the Spanish Government there.
15. The History of Japan, and the adjacent Islands, as delivered to the Author by the Missionaries.
16. A very singular Description of the Island of Formosa, and its Inhabitants.
17. A succinct Account of the mighty Empire of China.
18. The Author's Voyage to the Cape of Good-Hope.
19. Observations made there, and in his Passage to Madagascar.
20. A very full Relation of the Island of Madagascar, and its Inhabitants.
21. An Account of the Portuguese Settlement in the Island of Motambique.
22. The Author prosecutes his Voyage to the Island of St. Helena.
23. The Author's Observations upon that Island, the Island of St. Thomas, and other adjacent Islands.
24. An historical Account, together with the Author's Remarks on the Portuguese Settlements in Africa.
25. That Subject continued, with a succinct Description of these Colonies at that Time.
26. An Account of Cape Verd and the adjacent Islands.
27. Remarks on the Azores, Madeira, and Canary-Islands.
28. Occurrences in their Voyage from the Azores to the Port of London.
29. Observations made by the Author during his stay in England.
30. His Return through Holland to Holstein.
31. Remarks and Observations on the before-mentioned Voyages.

THE great Kindness and many Civilities shewn to Mr. Mandelloe by the chief Director of the English Commerce at Surat, naturally inclined him to lay hold of the Offer that Gentleman made him of returning to Europe in an English Ship, which he more readily accepted, because it put it in his Power to execute his Commission fully of gaining the best Intelligence he could as to the Commerce of the East. The English Director was to make a trading Voyage, which particularly required his visiting the Portuguese Ports, where he had many Affairs to settle; and this could not but be agreeable to a Man who travelled from such Views as our Author had, inasmuch as it gave him an Opportunity of seeing whatever he wished to behold, and afforded at the same time the fairest Occasions for examining all he saw. We shall discern, from the subsequent Section, that he improved these Advantages to the utmost, and that he carried back with him to his Master the clearest and most circumstantial Account of the Indies that had till that Time appeared in Europe.

I cannot but observe, with respect to this Detail of Facts, that he is, of all Writers, the most unsuspected, and therefore the most worthy of Credit. An English, a French,

or a Dutch Writer, can never divest himself entirely of the Prejudices imparted to him by his Country; but this Gentleman could have none of those Prejudices, and therefore we may safely rely upon what he says of any, or of all these Nations. He had not only an Inclination, but an Interest also in pursuing Truth. It was this, and this only, that could recommend him to his Master, and therefore of this he never lost Sight. The German Probity appears nowhere with greater Lustre than in his Writings; and it was the singular Felicity of this great Traveller, that with a Capacity equal to his Undertaking, he joined a Candour altogether unblemished. Let us then resume the Thread of his Narration, and after travelling with him through *Indostan*, embark with him at Surat for the Voyage of the Indies.

2. The English chief Director having taken Leave of the Governor of Surat the First of January 1679, who received him with extraordinary Civility, and presented him with a Garment of Brocade, besides many other Rarities; and having spent two Days more in taking our Leaves of our Friends, we went on board the Third, in Company with the new President, and all the other English Merchants, where we tarried for three Days, and at

last sailed the Fifth in the *Mary*, and came the same Night in Sight of the City of *Daman*, where we met with one of our Ships that had sailed for a Portuguese Vessel that was to go with us to *Goa*. The Governor of the City sent us a large Vessel with Wine, and divers Refreshments; for though the City was then besieged by the King of *Decan*, yet the Harbour being open, they had sufficient Supplies brought them by Sea. The Kingdom of *Decan*, or *Cannam*, by some called *Vishapour*, from its capital City, extends all along that Coast from *Indediva*, which is within twelve Leagues of *Goa* to the South, as far as *Siffardo*. The chief maritime Places belonging to it are *Gasapour*, *Rossapour*, *Carrapatar*, and *Dabul*; but *Vishapour*, the capital City, lies eighty Leagues from *Dabul*, and eighty-four from *Goa*. This City is about eight Leagues in Circumference, being encompassed with a very high Wall of Freestone, and a broad Ditch, and many Out-works, provided with a thousand Pieces of Iron and Brass Cannon. The Royal Palace is in the very Centre of the City, three thousand five hundred Paces in Compass, being divided from the Body of the City by two Walls, and as many Ditches. The City has no less than five Suburbs, where most of the Merchants live; and in the Suburb *Champour* most of the Jewellers have their Habitations. The Inhabitants are for the most part Natives of the Kingdom of *Decan*, the rest are *Banjans*, *Moguls*, and *Gentiles*.

The City of *Dabul* is seated on the River *Helweacko*, in $17^{\circ} 40'$ on this Side of the Line, being one of the most ancient Cities in the Kingdom of *Decan*; but is without either Gates or Walls, defended only on the River side by two Batteries. As you enter the River, you see to the left Hand a Wood, and near it a Castle, as also a white Tower, which serves for a Pagod; but is a good Direction for Pilots. Its Entrance being none of the best, by reason of a long Sand Bank at the very Mouth of it, which at low Water is quite dry, the only safe Way to escape it is to keep to the South Side; there, at low Water, you have five or six Fathom Water, though at the very Mouth you have not above twelve or fourteen Feet; within a League before you come to the River is very safe riding for Ships, though the Road, in the Bay of *Zanquizaro*, four Leagues thence, is incomparably better. The Harbour of *Gasapour*, the most excellent on all that Coast, lies twelve Leagues thence, the Vessel being sheltered here by an adjacent Island against all Winds. It lies in $17^{\circ} 10'$, and twenty Leagues from *Goa*. Three Leagues from the said Harbour lies the City of *Rossapour*, one of the best maritime Towns of the Kingdom of *Decan*; and nineteen Leagues thence is the Bay of *Wingarla*, a very convenient Haven. It lies three Leagues from the *Istet Quemedas*. We will now come to its Inhabitants, which are either *Banjans* or *Mohammedans*.

The chief Trade of the City of *Dabul* is in Salt and Pepper brought thither from *Oranubammara*. They used formerly to drive a considerable Traffick to *Persia*, and the *Red-Sea*; but they send but few Ships thither now. The ordinary Custom paid here is $1/2$ *per Cent*. but the *English* pay only one Moiety of it. Though the greatest Part of the Inhabitants of the Kingdom of *Decan* or *Cannam* are *Banjans*, yet are they not so averse to Flesh as the others in the *Indies*, for they will feed upon any Flesh, except that of an Ox, Cow, Buffalo, and Swine; for the last they have an absolute Abomination, and the Ox and Cow are in great Veneration with them. In their Life and Conversation, Marriages, Purifications, and other Ceremonies, they follow the Footsteps of the other *Banjans*.

Their Habitations are only Cottages of Straw, the Doors being so low that one cannot go in without stooping. Their Furniture amounts to no more than a Mat to sleep upon, and in the most of the Hut you see a Hole in the Ground, wherein they beat the Rice. They do not differ in their Habit from the other *Banjans*, except that they wear mostly wooden Shoes tied up over the Insteps with Leather Straps; but their Children go naked till they are seven or eight Years of Age. Their Arms are the same with the *Indians*; most of them are Godsmiths by Trade, though some also profess Physick and Surgery; they have also some Carpenters, Masons, and Barbers among them.

The chief Commerce of the Kingdom of *Decan* consists in Pepper and Cloves. The first is transported thence

into *Persia*, *Surat*, and *Europe*, as also Abundance of Callico; with the latter they furnish the Provinces of *Assam*, *Colconda*, and *Ceromanlel*, who fetch good Quantities of Stuffs there. In the Mountains of *Balagatta* much Lacque is made, but does not approach in Goodness to that of *Guzerat*. At *Vishapour* are Abundance of Jewellers that deal in Pearls; but they are not so cheap here as in some other Places. The Portuguese have a considerable Trade in this Kingdom, its Frontiers reaching within four Leagues of *Goa*. There are a Sort of People called *Venjars* in *Decan*, whose chief Business is to buy up vast Quantities of Wheat and Rice here, and then carry it in great Caravans of one thousand Beasts at a time to *Indostan*, and other neighbouring Countries. They carry their Families along with them, their Wives being to expert in managing of the Bow, that they serve them for a Guard against the *Rajpouts*, and other Robbers.

Two Sorts of Money are current in *Decan*, the *Laris*, or *Laris*, which come from *Persia*, and the *Pagodas*; eight of the first make a *Pagod*, which is equivalent to ten *Laris* of *Dabul*; their Copper Coin is called *Barbarimans*, and whereof go to a *Piece*, and eighteen of these to a *Laris*; besides which, each City, nay, each Village (of Note) has its peculiar Coin, which, together with the common *Laris* Coin, breeds no small Confusion. Their Weights are the same with those of *Guzerat*, except that twenty *Maens* at *Surat* make twenty-seven in *Decan*, the ordinary *Maens* consisting of forty *Cerres*, and one *Cerres* make twenty-seven Pounds, each of which has two Marks; they have a particular Weight for Pepper called *Geom*, weighing twelve *Maens*, four of which make an hundred Weight, and twenty a *Quintary*.

The King of *Decan*, or *Vishapour*, is tributary to the Great Mogul, though it be supposed he cannot number hundred thousand Men; and these Kings have had considerable Wars with the Portuguese, from whom they took twice the City of *Goa* in 1586; but at last, finding the War destructive to their Commerce, came to a Composition with them, which lasted till 1638, when the Portuguese having seized some of the King of *Decan's* Ships, which, contrary to their Agreement, were carrying Pepper to *Mecca* and *Persia*, they came again to Hostilities. The King of *Decan* is famous for his great Artillery, so much he has more than any of the *Indian* Princes; and amongst the rest one great Piece of Brass Cannon, the Ball whereof weigheth eight hundred Weight, and requires five hundred and forty Pounds of Fine Powder. The Engineer who call it was an *Italian*.

3. But to return to our Voyage, early in the Morning, *January* the 7th, we came before the City of *Goa*, belonging to the Portuguese, where we found some Letters of Expectation of a certain Jesuit we were bound to *Goa*; but he not coming, we continued our Course; but were here got a League before we saw a Portuguese Frigate come after us; we backed our Sails till she came near us, and found her to be a Vessel that came on purpose to go along with us under *English* Colours, for fear of being interrupted by the *Dutch*; she brought us some Presents, such as three Oxen, some sheep, Oranges, Citrons, and Bread from the Governor. The 9th we sailed with another Wind by the Isles of *Bandera* and *Bombay*, which I treaded along, for I sail from *Bacon* to *Vishapour*; the last has a good Road for Anchorage, and is of a pretty large Extent. On the 10th we sailed by *Rossapour* within twenty one Leagues of *Goa*, and in the Afternoon by the City of *Vingarla*, where the *Dutch* have a Settlement four Leagues from *Goa*, and in the Evening came in Sight of the Isles about *Goa*, and of two Isles that secure the Harbour. On the 11th we came to an Anchor under the Fort de *Gaonda*, which lies not above a Mile from the City of *Goa*; we saw six Gallions in a Carrack in the Haven; soon after came aboard us a Portuguese Captain to compliment the *English* President in the *Viceroy's* Name, and immediately after the Commode of the Gallion. The Harbour of *Goa* was then blocked up by twelve *Dutch* Ships, notwithstanding which we saw coming in a Caravan, consisting of three hundred and eighty Vessels, laden with Pepper, Ginger, Cinnamon, Sugar, Raisins, and I Presumes, besides Abundance of Fish, and

as also Abundance of Cal
with the Provinces of *Goa*

he Command of the *Galleons*
was then blocked up by twelve
along which we lay, consisting of
three hundred in all consisting
Ginger, *Cinnamon*, *Spice*, *Rice*,
hills Abundance of *Plum*.

The *English* President, whose Business here was chiefly
with the Director of the *Exchequer*, went to pay him a
Visit, his Trumpets sounding all the Way as he went up
the River, who received him with great Demonstrations
of Friendship, because they had known one another long
before; being carried thence to his Lodgings, he desired
and had Audience given him immediately by the *Viceroy*.
His Palace lying on the River-side, we found divers of his
Gentlemen there to receive and conduct us into the Hall of
Audience, in the Anti-chamber of which Palace we saw his
Guards standing in two Files. The *Viceroy* himself was
dressed in black, and so were all his Courtiers, and at the
coming in of the President rose out of his Chair till the other
was sat down; After some Stay the President was re-con-
ducted to the Water-side by the same Gentleman that
brought us thither; as we passed along we were shewn
twelve of the *Viceroy's* Horses, richly accoutred, and a
Battel, a Creature much about the Bigness and Colour of a
Rein-deer. Its Head like an Horse, its Mane like an
Ass, with black cloven Feet, and two black Horns on his
Head.

We had since dined when we were crowded with *Visi-*
ants, most of the Persons of Quality among the *Portu-*
guezze, and the Deputies of all the Monasteries coming to
compliment us, the ten Days we staid at *Goa* being spent
in nothing but Feasts and Visits. The most magnificent
Entertainment of all we received from a certain *Portuguese*
Lord, who was then Governor of *Mozambique*; each Course
consisted of four Dishes, but we had so many of them, and
such Variety of Meats, Fruits, and Preserves, that I scarce
ever saw the like in my Life; and to add to the rest, we
were served at the Table by four very handsome *Malacca*
Maids. The 16th we were invited to the professed Hou-
se of the *Jesuits*; it consisted of an hundred-and-fifty Fathers,
and as many Students; but the Structure, which was four
Story high, and very spacious, could have contained a
much greater Number. We passed through the Hall,
where we found Tables set all along the Walls with *Trench-*
ers, Drinking-Cups, and Earthen Pots. In the midst of
the Hall we saw another square Table, intended for such
of their Society as were bound over to Penance, upon the
Account of some Delinquency or other. Towards the
Entry stood a Pillar, from whence issued out a Spout of
Water for the Convenience of washing their Hands; we
were thence conducted into a noble Apartment, richly fur-
nished, and adorned with *Tapettry*, where a Table stood
ready prepared for us in the midst of the Room, covered
with Fruits and Bread in *Porcelain* Dishes, which is here
preferred before *Silver*.

The Father Provincial having placed the *English* Presi-
dent on his right Hand, let down, and so did the Rest of
the Company; so that betwixt every two sat two *Jesuits* to
entertain us. The Meat was likewise served up in *Porce-*
lain Vessels, as well as the Dessert. After Dinner we were
brought into several Chambers to take our Repose, accord-
ing to the Custom of the Country; after which we passed
into another spacious Hall, where we had the Diversion of
Dancing, by certain *Indian* Children brought up in the *Rom-*
an Catholic Religion; there were among other Shews
an Entry made by fifteen Persons, having in their Hands
some Pieces of a broken Pillar, and divers Garlands of
Flowers, wherewith they adorned the Pillar, after they had
with exact Observance of the Cadence, each in their several
Turnings put it together; and soon after we saw at the Top
of the Pillar came out a Tulip, which opening of Itself by
Door, produced the Image of the Blessed *Virgin*, with
our Saviour in her Arms: besides which, the Pillar opened
in several other Places, and cast forth perfumed Waters;
after which the Dancers took the Pillar to Pieces again, and
danced it off dancing as they had brought it in. We had
another Entry of twelve young Lads, each playing upon a
peculiar Instrument, some *Morris*-dancers, and the Ball
was concluded with another Entry of twelve Boys dressed
like *Aper*, who imitated those Creatures in their Leapings
and Gestures to the Life. They farther told us, that they
desired these Incitements to bring over the *Pagans* and *Moham-*
medans to the Church, and to divert their Displeas'd
their Studies.

January the 18th we dined with the *Jesuits* at their Col-
lege called *Bon Jesus*. The first Thing we observed in their
Halls were the Pictures of many Princes and Persons of
Quality that had been of this Society, and the History of
their Martyrs; among whom we found those of that Fra-
ternity that were engaged in the Gunpowder Plot in *Eng-*
land; upon which Account they made us an ample Re-
lation of the Sufferings of their Brethren in *Japan*, and the
unheard-of Cruelties exercised against them, as well as the
Japanese Christians. Thence they brought us into their
Church, which for its Greatness and Sumptuousness may,
without all Comparison, challenge the Preference before any
Church the *Jesuits* are Masters of in *Asia*. The high Altar
was one of the most magnificent that ever I beheld of that
kind; but that which was dedicated to *Saint Francis Xavier*,
whom they stile the Apostle of the *Indies*, exceeds the other
in Riches.

Here we saw his Image drawn to the Life upon Wood;
and they were pleased to tell us, that his Body was yet to be
seen in the same Church as intire as it was the first Minute
after his Death; nay, they farther told us, that the Body of
this *Saint* being hid in the Isle of *Ceylon*, was discovered by
its odoriferous Scent, which was perceived many Leagues at
Sea; in which the good Fathers were not a little deceived,
since the Scent, which is smelled at a great Distance from
the Island of *Ceylon*, proceeds from the vast Number of
Cinnamon-Trees which are all over that Island. Besides,
that this Story does not agree with what *Maffeus*, one of
their Authors, tells us concerning this *Saint*, viz. that
having preached the Gospel in the *Indes*, he came to
Uzina, where he died immediately after his Landing; and
that the Master of the Vessel having put his Body into un-
flacked Lime, in order to carry his Bones away, this cor-
roding Matter did not exert its Virtue upon it, but the
Body remained entire and uncorrupted, and had a very
odoriferous Smell; whereupon it was resolved to carry it
to *Goa*, which was done accordingly. As we were going
from the Church to the Relectory, they forgot not to en-
tertain us with the Miracles of this *Saint*, of his raising the
Dead, commanding the Sea and Winds, as well as the
Sun, the last of which he brought back an Hour after
Sun-set.

We saw in the Hall here Tables for above two hundred
Persons, but only the most considerable dined with us, the
rest waited: Our Entertainment was much the same as in
the other College, but we had most excellent Canary given
us; and though these Fathers have the Reputation of ex-
traordinary Sobriety, yet out of Complaisance to our Com-
pany, they were not backward in making the Cup go
round when they perceived we liked the Wine. They also
carried us up into the Steeple, whence we had a full View
of all the City, the Sea, the River, and the adjacent Coun-
try, as far as the Mountains. The next Morning two of
the Fathers came to our Lodgings to shew us the Hospital
which is under the Inspection of the *Jesuits*. It is a very
large and noble Structure, containing as many Chambers,
Halls, and Galleries as will conveniently lodge and accom-
modate one thousand sick Persons; each Bed is marked
with a particular Number, and such as are not taken up are
distinguished by a particular Mark. The Kitchen and
Apothecary's Shop are well worth Observation. I found
the chief Distempers of the Sick here to be the Bloody-flux
and the Pox. They have this Custom, that as soon as any
Patient is past all Hopes of Recovery, he is shut up in a
private Room with a Priest, that the rest may not be dis-
turbed by the Groans of the dying Person.

Hence we went to the Convent of our Lady belonging
to the *Augustinians*, which, being built upon rising Ground,
makes a most glorious Shew at a Distance. I delivered to
them the Letters of Recommendation I had received from
their Brethren at *Ispahan*, which made them treat me with
more than ordinary Civilities, shewing me all the rich
Capes and Vestments belonging to the Monasteries, and
offering me all that lay in their Power for my Service.
The President having by this Time received nine thousand
Pounds due, and a Promise of the Payment of the Rest to
such of the *English* Merchants as were to fly behind at
Goa, he gave a splendid Entertainment to all such as had
shewed

showed us any Civilities, and after having taken his Leave, the Governor and Commodore of the Galeons sent him a Present of Cinnamon, Canary, Sheep, Fruits, and among the rest a Bottle of Oil made of the Flowers of Cinnamon.

4. On the 20th we left *Goa*, and upon the River met with an hundred small Vessels which came from the Coast of *Malabar*; we were no sooner got out of the River, but we made it our Course to the *Portuguese* Fleet, and went aboard the Flag Galeon called *San Jesus*, carrying sixty-four Guns, and six hundred Men; she was a very noble Ship, and we were entertained with extraordinary Civility by the Commodore, who showed us likewise all the other Ships; at parting we had the usual Salute from the whole *Portuguese* Fleet, as also from the Fort de *Guarda*. As soon as the President was come on board, he returned them twenty Guns, which the Commodore answered with as many, and so came to an Anchor in the Road betwixt the *Portuguese* and the *Dutch*.

But before we take our Leave of *Goa*, it will not be amiss to say something of what we found most remarkable in a Place which is the Capital of all belonging to the *Portuguese* in the *Indies*. It lies in the Kingdom of *Decan*, 15° on this Side the Line, in an Island of the same Name, which is divided from the Continent only by a River. The *Portuguese* conquered it the 14th of *February* 1510, but lost it again the 30th of *May* following, and regained it once more the 12th of *November* in the same Year, when they took it by Storm. It was at that Time a very considerable Place of Trade, though it has much increased since the *Portuguese* have been Masters of it. On the South Side is the Island of *Salsette*, likewise divided from the Continent by a small River, as is the Isle of *Bardes* to the North, where there is safe Anchorage for Ships with all Winds. The Fort de *Guarda* is built at the Foot of a Rock, upon which is erected a Tower in Form of a Redoubt, which in the Night-time serves for a Beacon to Mariners; from the Mouth of the River to the Harbour is about two Leagues, but it has the same Breadth all along, though in some Places it is so shallow, that in a dry Season there is not above two Foot Water.

The Island of *Goa* is so barren, that it produces nothing fit for the Substance of Men or Beasts, except a few Fruits in the Gardens, and a slender Share of Grains for Lambs and Goats; notwithstanding which, they are so plentifully furnished with Provisions from the two before-mentioned Islands, and the Continent, that in Spight of the Blockade of the *Dutch*, a Hog was then sold for a Crown, six sucking Pigs, ten Pullets, or eight Wild-ducks, for the same Price; but Beef and Mutton is a great Rarity here. There is a Fountain representing *Lucretia*, out of whose Wound issues forth as much fresh Water as supplies the whole City. The Ships provide themselves with fresh Water out of a Rivolet, which coming out of a Rock falls into the other River near the Cattle. The City has no other Defence but the River, having neither Gates nor Walls; the Buildings are generally very handsome, and Persons of Note bring a great deal of Magnificence here both in their Buildings and Furniture.

The Inhabitants are of two Sorts, either *Castiles*, or *Mestizes*; the first are such as are born here of *Portuguese* Father and Mother; the second, those who were begotten by a *Portuguese*, or an *Indian*. The last are inclining to an olive Colour, and in the third Generation becomes as black as the Natives of the Country, which is also observable in the fourth Generation of the *Mestizes*, though there is not the least Mixture among them. The *Portuguese* are distinguished into several Ranks; *Titulados* are those in publick Employments, *Idalgos da Casa del Rey*, are Gentlemen in ordinary to the King's Household; *Mocas Idalgos* are the Sons of the *Titulados*, admitted to Gentility by the King; the *Cavaleros Idalgos*, and *Esfueros Idalgos*, are simply Gentlemen; those called *Mocas da Camra*, or Grooms of the King's Chamber, pass also for Gentlemen. All the rest are *Hombres*, *Honrados*, and *Soldados*; the first or which are Merchants, and appear as well as any Gentlemen, there being scarce any thing here, except Tailors and Shoemakers, but what are served by Slaves; no Person of Quality ever goes on Foot, but either on Horseback, in

a Litter, or Gondola, one Slave among the rest constantly attending him with an Umbrella.

The *Portuguese* have always had the Reputation of being a very proud Nation; but those of *Goa* are so to such an Excess both in their Gestures and Actions, as is scarce to be expressed; however, they are very courteous to one another, to such a Point, that if, for Instance, in a Visit any thing should be omitted that is judged customary, and belonging to the Person that requires it, such a Person could not be wiped off without a Cudgeling, or Blood-fight; with the first they are very liberal towards a free Person, if they think them to have been wanting in Respect due to those of a better Rank.

The South-west Winds, which begin to blow here towards the End of *June*, bring the Winter Season along with them, which continues for four Months all along the Coast, from *Diu* as far as the *Cape Comorin*, at which Time the frequent Tempests make the Sea so turbulent, that there are but few Havens where Ships can ride with Safety. This is the more to be admired, inasmuch as in the same Months the Coasts of *Coremandel*, which extend along the same Peninsula on the other Side, and lies under the same Degree of Latitude, nay, in some Places are not above twenty Leagues distant from the Coast of *Malabar*, are filled with the most pleasant Season of all the Year.

This is manifest to those who travel from *Goa* by Land to *St. Thomas*, when they must cross the Mountain of *Taligatta*, which divides this *Demarcation* (as the *Portuguese* call *Italy*) and no sooner come to the Top of the Mountain, but they see on one Side a most clear and serene Sky, and the Country on the other Side covered with a thick and continual Rains and Fogs. The *Portuguese* from *Ormuz* to the Cape of *Keppelgate* have made great Observations; for no sooner have they pulled the Anchor, but the Weather that has attended them thither changes so suddenly into dreadful Tempests, so that it is scarce that there are but two Seasons in this Country, and the East and West Winds rule alternately once a Day; for the first six, or Land-winds coming from the East, blow from Mid-night to Mid-day, but do not reach above ten Leagues to the Sea; whereas the Sea-Winds coming from the West (call *Virafons*) blow all the rest of the Day.

This so sudden Change of the Season, as well as the Variation of the Winds, prove the Occasion of many Distempers, especially that called *Morleya*, which kills without Delay, besides Fevers and Bloody Flux, for the Remedy against which here is Bleeding. The Plague is not so much as known in the *Indies*; but the *Portuguese* bring a great Number, and above all in the *Portuguese*; for though the Country here is full of many Remedies against this Distemper, yet the Inhabitants betwixt the Sexes are so strong, and so hot tempered, that they will afford themselves a proper Time to cure themselves of this Disease, which is thus propagated beyond all Bounds. As the Women in these Parts have an exceeding Inclination to white Men, and are always kept under Constraint, they will venture very hard to contravert their Liberty, in order to pursue this End, frequently make use of the *Phylidone*, *Datura*, or *Datura* (as it is called by the *Indians*) to supply their Husband's Senses to see an Opportunity of doing what they so much desire in. This Herbs is a kind of *Turkey* and *Perfians* *Datura*, is a kind of *Sagittaria*, and being sown to the *Goats* of *India*, and *Cis* *Joseph* *de* *India*, being somewhat like our Bear's Foot, and grows in the *Indies* in shady Places; of this they extract the Juice, which is green, or only take the Seed beaten to Powder, and mix it either with Preterives, or in the Juice of *Oranges*; they pretend to sludy, which it does effectually in twenty or thirty Hours after he has taken it, being deprived of all Sense of Motion, though with his Eyes open, and his Tongue out; Water be applied to the soles of his Feet, was recovered him, as it were, out of a sound Sleep.

Scarce any *Portuguese* or *Mestize* Women are seen to walk in the Streets; but if they go abroad upon necessary Occasions, they are carried in Palanquins or Litters, and so closely guarded, that it is impossible to speak to them. They appear abroad richly dressed, in Velvet, Silks, and Brocades, adorned with Jewels, though at the same Time

he would, but we lost Sight of them by Night. On the 23d we had Sight of them again, and supposed that they steered their Course towards *Ceylon*, to assist the King against the *Portuguese*. About Noon we found ourselves out of Sight of the Land, in 13° Lat. We intended to steer for the Coast of *Malabar*, upon Information that an *English* Ship, richly Laden, coming from *Bantam*, was taken by force, after a brave Defence, in which it had blown up above 1200 of the *Moors*, after they were entered the Ship. Our Intent was to redeem the Master and the Mate, with fourteen Prisoners that were taken aboard her; but coming to an Anchor the same Night in the Harbour of *Cananor*, we found three *English* Ships, the *Dragon*, the *Chickens*, and the *Sonsour*, commanded by Captain *Hodde*, a very experienced Sea Officer, who had served at the taking of *Ormu*, by whom being informed, that most of those Prisoners were set at Liberty, we resolved to leave the Coast of *Malabar*. The City of *Cananor* is inhabited by *Malabars*, a People that inhabit that Coast from the City of *Goa* as far as the Cape of *Comorin*, but the *Portuguese* have a good Fleet at *Cananor*.

As that Tract of Land is very fertile in Spices, but especially in Pepper, which is esteemed better even than that which is brought from *Sumatra* and *Java*. They go for the most part naked, except that they cover their privy Parts, have Holes in their Laps, and are like the *African* *Moors*, except that their Laps are not quite so thick. Their Hair they tie in a Knot upon the Crown of their Heads, and let the Beard grow without any trimming, which makes them appear more like Monsters than Men; neither is their internal Disposition unalterable to their external Appearance, being in effect a very uncivilized and brutish Generation, and making for the most part Protection either of Pravity or Solitary. They are rather fierce than brave, handle their Bows and Arrows, and use of Swords and Bucklers, with sufficient Dexterity. They have their particular King, who being of the Sect of the *Isamans*, is another high Priest, and rules himself *Zonari*, or Emperor of *Cananor* and *Calicut*. The *Nayers* are the Gentlemen of the Country, who by their Brackets and Rings are distinguished from the *Pehals*, or vulgar Sort, the last being obliged to go out of their Way, and pay them a pecuniar Respect as they pass by. I was told, that at the Time of the first Settlement of the *Portuguese* in those Parts, the *Nayers* pretended to have the same Honours from the *Portuguese*, which their (who were no less proud than the other) refusing to comply with, it was agreed, the Difference should be decided by a single Combat between a *Portuguese* and a *Nayer*, in which the last having got the better, the *Nayers* ever since pay the same Respect to the *Portuguese* as the *Pehals* do to them.

They have among other Privileges this, that they may freely enter the Houses of their Comrades, and please themselves with their Wives and Daughters, the Signal being to have their Sword and Buckler at the Door; which is not to be done, not even the Master of the House, will enter to disturb them, but a *Nayer* will never degrade himself so far as to have any Commerce with the Wife of a *Pehal*. The *Malabars* use Botkins, with which they write upon the Bark of Cocoa trees; their Characters being quite different from those of the other *Indians*, are understood only by the *franciscans*. The King of *Calicut* never eats or drinks any thing but what has been presented before to his Page, or Fool. The Inheritance to the Crown does not fall to the Son, but his Sister's Son, since, as the *Bramans* here have the First-fruits of the Bride's Virginity, the Children are supposed to be begotten by them. As to the City of *Goa*, Notice must be taken, that there are two of that Name in the same Kingdom of *Cochin*, one whereof is situated by *Malabars*, and lies upon a great River, the last of which we now speak, lies upon the Coast, and is under the Protection of the *Portuguese*, having the Sea to the West, and being surrounded on the East-side with a Forest of certain black Trees, which the *Indians* call *Goa*, and make Boats of, and will go with the Rays of *Goa*.

The Entrance of the Harbour is rocky and dangerous. The Coast of the Water Season, which twell the neigh-

bouring Brooks, force so much Earth during the Time into the Mouth of the Harbour, that it is stopped up and quite unpassable, till the Wind, which changes with the Season, carries the same into the Sea. The *Portuguese* buy the Pepper here from the King at a certain Rate, who is one of the most potent Princes of all those Parts, being able to bring into the Field 100,000 Men, mostly *Nayers*, who are obliged to appear in Arms at their own Charge. His Subjects are something more civilized than the other *Malabars*, but observe the same Rule in their Marriages concerning the *Bramans*, and consequently in respect of their Succession. The chief Trade of *Cochin* is in Pepper, Ginger, and Cinnamon. The *Malabars* had formerly but one King, till *Sarima Perimal*, who after commanded on all that Coast from *Goa* to *Comorin*, having embraced the *Mohammedan* Religion, and reigned upwards of his Days near the Sepulchre of the Prophet, divided his Dominions among his new-found Friends, to wit, the *Coast* that the Kings of *Cananor*, *Cochin*, and *Comorin* should pay Homage to the King of *Calicut*, upon which they that Reason he bestowed the Title of *Zamora*, or Emperor, but notwithstanding this the King of *Cochin* is more potent than he.

On the 26th we left *Cananor*, and the next Day we covered eighteen Sail of Ships, which making up towards us, we began to suspect them for Pirates, as indeed they proved. We had just Time enough to put ourselves in a Posture of Defence, when they began to come pretty near us, but did not think fit to attack us till Morning, when the Moon shining very bright, they launched out on all Sides, but were to warmly received, that we killed two and disabled three or four more, who were almost sick of retreating. We passed that Night at anchor in the Fort of *Cochin*, and the 27th saw a Fleet of thirteen of these Pirates following us at a Distance; we continued our Course with a fair Gale in Sight of the Cape of *Comorin*, to the S. E. of us, being the most southern Part of the *Indies*, known among the Ancients by the Name of *India*, on this Side the *Ganges*. The next Morning the *Malabars* made a Shew as if they intended to attack us, but the other British with us, but a Volley of Shot, that sent out Bullets, sent them a going, so that we were free of them.

The 29th we came within Sight of the Island of *Cochin*, at the very Point of which we were being chased three Weeks. This Isle extends from the South to the North-East, between the two Capes of *Comorin* and *Mogapatin*, about ten Leagues from the Coast, its Length being sixty Leagues, and its Breadth about Circumference two hundred and fifty, and according to the Report of the Inhabitants, its Commerce was much greater before the Violence of the Sea carried away a great Part of Land on the Side towards *Comorin*, which is the richest and most fertile of all the *Indian* Islands, and is supposed to be the *Tropics* of the Ancients, though I am not ignorant that some of our modern Travellers make it the Isle of *Sumatra*, of which it is not far distant, did not with us Reason call the Isle of *Cochin* the richest and most fertile of all the *Indian* Islands, it is not reasonable that it has not only great Plenty of various other Islands produce, but, besides, that which is the Orange, Lemon, and Cinnamon trees, which send forth a fragrant Smell at a great Distance into the Sea, that that there is no precious Stone but what it affords, Diamonds; Pearls they take there in abundance, and altogether to fine as those of *Babarum*; and Reason, which it affords the finest Ivory in the World, the Discovery of it is owing to the *Portuguese*, who *Lawrence*, Son of *Franco* *Almeida*, in the first Voyage, was one of the Kings of the Island, since which the Dutch took Care to fortify themselves in the Island, and were chafed thence, and consequently left the Island, by the *Dutch*, in 1637.

The *Dutch* did not trade here till the Death of the Regent of *Tomala Perma Sarada*, King of *Comorin*, the most potent, and in a manner the only potent Prince of the whole Island, who a century ago died in a very extraordinary manner, for the Effects of his being become vacant by the Death of a young Prince,

from a Bastard, was advanced to that high Dignity, the *Portuguese* took this Opportunity to establish themselves in *Ceylon*; but *Fimala Derma Suriada*, Son of one of the chief Men in the Kingdom, who had been educated among the *Portuguese* and baptized, and by their Interest advanced to the Dignity of High-Constable, disliking the Encroachments of a Nation whom he knew would be in a little Time for grasping at all, had so gained the Affection of the Soldiery, that he prevailed with them to kill all the *Portuguese* in the Town of *Candy*, and to declare open War against them; which being done, he was by the *Cingalese* declared King. The *Portuguese* had among them a certain Prince, the next Heir to the Crown, who was baptized, and named *Catharina*. *Pedro Lopez de Sousa* being the General of *Malacca* for the *Portuguese*, resolving to enter the Country with a good Army, strengthening his Interest, brought the said *D. Catharina* along with him, and having caused her to be declared lawful Heiress to the Kingdom of *Candy*, made himself Master of the capital City of the same Name; but being closely blocked up by *Fimala Derma*, who intercepted his Foragers, and cut off his Provisions, found himself constrained to come to a Battle in 1505, in which he was put to the Rout, himself killed upon the spot, and *D. Catharina* taken Prisoner by *Fimala*; who afterwards, to strengthen his Title to the Crown, married her. Four Years after the *Portuguese* made a second Attempt against *Candy*, but not with much better Success; for though they were not absolutely routed, yet were they so harried that they did not think fit any longer to continue the War with him.

The *Dutch*, at their first Settlement, had not much better Fortune; for though the King received in the Year 1602 their Admiral with a great deal of Civility, yet in the next following Year, having commanded their Vice-Admiral with fifty of his Men to be put to Death, the *Dutch* laid aside their Design of trading there, till having found an Opportunity of gaining the Fort of *Punto de Gallo* from the *Portuguese*, and fortifying the Harbour of *Negambo*, they began to establish themselves there, and at last accomplished it by taking of *Colombo* from the *Portuguese*. The King of *Candy* is the most potent and most absolute of all the other Princes in the Isle of *Ceylon*. He takes great Delight, as well in the *European* Way of Building, as in their Fortifications. The Kingdom is situated all along upon that River, upon which the City of *Joanna*, which serves for an Harbour to the King's Ships. The Inhabitants resemble the *Malabars*, but that they are not quite so black. They generally go naked, except that some use *Portuguese* Doublets. They all wear Pendants in their Ears and Pontils at their Sides. The Women likewise go with their Breasts uncovered; but for the rest, they are very modest both in their Clothing and Conversation, dressing their Heads much like the *European* Women, with their Hair close behind, and tied in Tresses. They appear in Gold and silver Garments with Rings upon their Hands, Feet, and Legs, set with precious Stones. They live conveniently enough in their Houses, their Ways being good Housetwives, and especially well skilled in Cookery. The *Gingayes* are so much addicted to an idle Life and Inefficiency, that they are neither fit for War nor any thing else.

Ceylon is, as I said before, beyond all Dispute, the most plentiful Isle of all the *Indies*, nothing can be named either of Provisions or Fruits, but what is very cheap here; though they are *Pagans* they eat of every thing in general, even Pork (abstaining only from the Flesh of an Ox or Cow). The *Mohammadians* enjoy a full Liberty among them; and the *Pagan* Inhabitants abstain from Wine as well as they. They have a great Veneration for their Brahmans; they marry their Males at ten or twelve Years of Age, and burn their Dead. *Fimala Derma*, whom we spoke of before, had got it as much Christianity as could be expected among the *Indian Portuguese*, which he soon laid aside; so that his Successors continued in their Idolatry. Some of the Inhabitants worship the Head of an Elephant cut in Wood or Stone, who, they say, out-do Mankind in Judgment, and therefore pray for Willdom to them.

They lay up every Day a certain Share of their Provisions in a Basket kept for that Purpose for their Pagods,

and hold it as a Point of Faith, that the World will not perish as long as their grand Temples, which may be discovered at a great Distance at Sea betwixt *Punto de Gallo* and *Monte Callo*, shall remain standing. They have another Opinion concerning a certain Mountain in this Island, named *Pico d'Adam*, where they say the first Man was created, and that the Spring on the Top of the Mountain arose from the Tears that *Eve* shed for *Abel*; and that the Isle of *Ceylon* was the terrestrial Paradise. This Tincture of Christianity gives us sufficient Hopes, that among a People, docile enough in themselves, the Christian Religion might be established, if People were as forward in the Work of Salvation as to gain Riches. There is scarce any other King in the Isle of *Ceylon*, except him of *Candy*, but what pays some small Tribute by way of Acknowledgment to the *Portuguese*, of which the King of *Matucala* pays no more than fifty Ducats per Annum.

Ceylon affords very good Pepper, but their staple Commodity is Cinnamon. The Kingdom of *Flaply* hath certainly both Gold and Silver Mines, but are not wrought by an express Inhibition from the King; neither must their precious Stones be sold to any but the King; but, as they have such Plenty of them that they are found among the Gravel that is washed down from the adjacent Mountains, and carried along with the Current of the Water; so it is impossible to prevent their being sold underhand to Strangers. This Isle also furnishes sufficient Store of Timber and Stone for Building; of Corn, Oil, and Wine, if they would take the Pains to cultivate the Vines, Cotton, divers Roots for the Use of Dyers, Ginger, Cardamum, Mircobolans, Corcoona, Nutmegs, and divers medicinal Drugs, and of Rice they have such Store that they furnish the whole Coast of *Coromandel* with that Commodity. The *Dutch* buy the Cinnamon here at the rate of an hundred and twenty-eight Livres the Hundred Weigh.

8. While we were becalmed near this Isle, I had the Opportunity of making an Enquiry of our President and some Jesuits, who were on Board us, and had spent most of their Days in the *Indies*, concerning those Parts I had not seen, according to whole Relation I thought fit to insert the following Account. Near the Cape of *Comorin*, along the Coast of *Malabar*, for a Tract of near an hundred and fifty Leagues by Sea, extended the Isles (by some accounted One thousand) called *Maldives* by the *Portuguese*, having the Cape to the North. Some of which being by my Law that they are often full of Inhabitants are not inhabited, others are. The *Malabars* are of Opinion that they were torn from the Continent by the Violence of the tempestuous Waves of the Sea, which, in some Places, is at so slender a Distance from the Continent, that a bulk active Fellow might leap over it. The capital City, which has given its Name of *Maldives* to all the Islands, is built upon four small Isles, being the Residence of the King, who commands over all the rest, and a Place of good Trade, though they produce naturally scarce any thing but Coconos, but the Industry of the Inhabitants supplies, in some measure, the Defect of Nature here, there being not any Nation in the *Indies* more ingenious in making Garments of Silk and Thread than they. The Coast of *Coromandel* being in the most Eastern Part of the *Indies* on this Side of the *Ganges*, is divided from the *Malabar* Coast by the Mountains of *Balagatta*, its Extent being one hundred Leagues along the Coast from *Cape Comorin*, or rather the Point of *Negapatan*, as far as the River *Nagard* and the Town of *Mullapatan*, which, as it has excellent Harbours, and the best Roads for Anchorage in the *Indies*, so it serves for a late Retreat for such Vessels as are by the tempestuous Winter-season forced from the Coast of *Angeratz* thither, where the Climate and Weather is very good at that Time.

The *Portuguese* are Masters of the Town of *St. Thomas*. On this Coast, they say, that went by the *Indies* themselves of *Ceylon* and *Cranganor*, the Inhabitants of this Coast, who were Christians of the *Church* Kingdom, expelled the Protection of the King of *Portugal*. To each this Tradition, they affirm, that *St. Thomas*, one of the twelve Apostles, after he had taught the Gospel in the Kingdom of *Nabonga*, petitioned the King to give him Leave to build a

Chapel for the performing of Devotion, which being strongly opposed by the *Pagan* Priests, it happened that a prodigious Piece of Timber being lodged at the very Entrance of the Harbour of the City of *Mahapour*, which hindered the free Passage of all the Ships, a Trial was made by Elephants, and all other Ways, even by consulting the Magicians themselves, to remove it thence, but in vain; whereupon the King issued his Proclamation, by which he offered a considerable Reward to such as would undertake to clear the Harbour. *St. Thomas* offered his Service, reserving to himself no other Reward than the Piece of Timber. The Day appointed for this Purpose being come, and the Saint appearing without any other Instrument to effect it than his Girdle, which he fastened to the Beam, all there present laughed at his Endeavours; but he no sooner began to pull, than the vast Piece of Timber, which could not be moved before by the Strength of so many Elephants, followed without the least Difficulty; at which the King being surprized to the highest Degree, permitted him to build the Chapel according to his Request; which to incen'd the *Brahmins*, that they set certain People to murder him whilst he was at his Devotions in the said Chapel. *Maffeus* says, that by the special Command of *John* King of *Portugal*, the Bones of this Saint were searched for, and found on the Coast of *Coromandel*, and thence transferred to *Goa*, where a very fine Church was erected to his Memory.

On the other hand, both *Rufinus* and *Socrates* affirm, that *St. Thomas* suffered Martyrdom at *Malissa* in *Megopotamia*, and that they used to go on Pilgrimage to his Sepulchre there. The Town of *St. Thomas*, though none of the biggest, yet is well built, most of the Houses being of Stone. The Church has no Steeple; it contains about six or seven hundred Inhabitants, *Portuguese*, and *Melizes*, and some *Armenian* Merchants; the *Indians*, *Pagans*, and *Mohammedans* living at a Place called *Mahapour*, seated upon a Rivulet two Leagues to the North of *St. Thomas*, which was formerly the capital City of the Kingdom, but is now reduced to a very indifferent Condition.

From *April* to *September*, whilst the S. and S. W. Winds blow upon this Coast, the Road here is very safe, but all the remaining Part of the Year small Vessels are obliged to shelter themselves within the River of *Palaicaste*, and the greater in the Harbour of *Negapatian*; there is five Fathom Water within Cannon-shot of the Town, but makes a very good Landing-place, by reason of the Roughness of the Sea. The *Dutch* have considerable Traffick on this Coast, but especially at *Pelapouli*, or *Negapatian*, and at *Palaicaste*, where they have the Fort *Gutharia*. This whole Country was formerly divided into three separate Kingdoms, *i. e.* of *Coromandel*, *Narfinga*, and *Bijnagar*, which is now subject to one Prince, whose Residence is at *Aranga*, and sometimes at *Narfinga*. The Kingdom of *Orissa* lies above the Town of *Muslipatan*, extending to the River of the same Name to that of *Guenga*; the *Dutch* include this in the Coast of *Coromandel*. *Muslipatan* and *Gowenda* are its two chief Cities; the first is considerable for its Commerce, the last for being the ordinary Residence of its Kings. It produces abundance of Salt, and some Diamonds, among which all that weigh above five Carats belong to the King. To the North of *Orissa* lies the Kingdom of *Bengal*, whence the Gulph, known to the Ancients by the *Sinus Gangeticus*, has got its Name. The chief Traffick is Rice, Sugar, Cottons, Calicoes, but especially in Silk, which for Goodness exceeds all other in the Indies. Hence also are brought the finest Canes; and they have another sort of Canes out of which they make Drinking vessels, and being lacquered, will hold any Liquid as well as cups of Metal. Here grows a certain Herb, the Stalk of which is of the Thickness of a Man's Thumb, having on the Top a large Button like a Tassel, that ripens out, and furnishes Materials for an excellent kind of Sugar, much esteemed by the *Portuguese*, who call this *Saccharum de Bengala*.

The Inhabitants are *Pagans*, leading a very barbarous Kind of Life, Thieving and Adultery being their ordinary Vices, though severely punished. They worship the *Genies*, out of an Opinion that its Water cleanses them from all their Iniquities, which is the Reason that the King

of *Narfinga* sends for the Water he washes himself with from that River. The Kingdom of *Pegu* borders to the East upon *Bengal*, owing its Name to its Metropolis; there the King keeps his constant Residence. *Gaspard Balbi* tells us Wonders of this Kingdom, which I had not the Opportunity to see; and since others also have given us an Account of what they themselves have observed, I will only add, that the City is divided into two Parts, *viz.* the new and old City; the first of which is inhabited by Merchants, the second is properly the Residence of the King and his Court, which is exactly four square, surrounded with a broad Moat, in which Crocodiles are kept for its better Security. The Palace Royal is far taller than *Venice*, and separated from the City by its regular Fortifications, which have no more than two Gates; the King keeps above eight hundred Elephants within the City, among which those for his own Use pay him Ransom, being trained to it.

If we may rely on *Balbi's* Testimony, the King is next to the Emperor of *China* the most potent upon Earth, being able to bring 1,300,000 Men into the Field, eight hundred Elephants, who are for the most part employed at the Charge of his Lords. Among other Curiosities in their Temples, there is one of nearly Golden, and placed within the Palace, with a Crown set with precious Stones on his Head, and one only of the Bigness of a Palm on his Forehead, with Pendants of an immense Value, as Ears, a Scarf about the Waist, and a Crown on each Shoulder, and under the left Arm a Chain of small Diamonds, and other precious Stones. The Chapel has two Silver Idols of the same Shape, but two Inches higher than the former, with Crowns set with Gems, and a fourth, which exceeds all the rest, besides a five or six Copper and Brass, valued at more than the other two. *Pegu* affords more Elephants than all the rest of the East; they are taken by means of the Females, who catch them out of the Woods into the Stables, where they live until that hold but one of these Beasts, while they are kept till they are tamed. The Arms of the *Peguans* are generally Half-pikes made of Canes, short and broad Swords and Bucklers, and Helmets made of bodd Leather, lacquered, and gummed over with a certain Gum called *Aharan*. The People are *Pagans*, believe one supreme God, whom a great many Vicegerents under him, whom they acknowledge for Gods, and that they are the Authors of all Good that happens to Mankind; as on the other side the Devil is the Author of all Evil, whom they adore in many worship, to appease his Wrath. The Day on which they hold their Devotions is *Monday*; they celebrate New Year in a Year, called by them *Sapan*. The first, called *Sapan Graceli*, is celebrated by a Pilgrimage, by the King and whole Court, twelve Leagues out of Town, with great Magnificence. The second, called *Sapan Graceli*, is celebrated in Honour of the Statues in the Royal Court, and is also the third, called *Sapan Graceli*, is celebrated by the King and Court, by eating Rote-water at one another, and the third, called *Sapan Donon*, is a kind of Race of Boats upon the River in the Presence of the King and Queen.

When the King dies, they join two Boats together, and putting a Table in the Middle of one, they lay themselves upon the Table, under which they make a Fire of Wood, Storax, Benzoin, and other sweet-smelling Woods and Gums, which being lent down the River, the King attending, rejoice and sing, till the Boats are burnt, which they mix with Milk into a Paste, and cast it into the Sea at the Mouth of the River; after this they preserve and lay up in a Chapel built to that purpose. The Priests carry an empty Battle at their Heads, and in red Vellments, coming down to their Heads, a Cloak reaching to their Hams, and wear their Hairs about themselves against the Sun-beams, their Heads being shaved. They go bare-footed, live by Mischance, and Mendicant Prayers, eat Fuz once a Day, and sleep in the Forests in hanging Mats fastened to the Branches of Trees. They lead a very exemplary Life, and in many Mornings early go about to visit the People, and to exhort them, and in their Sermons they exhort their Auditors to Modesty. They have no Aversion to their women, who are

Water he washes himself with
glom of Pegu borders to the

ans, but exclaim against the worshipping the Devil, a Cuf-
tom so deeply rooted among the *Peguans*, that with all
their Arguments they are not able to dissuade them
from it.

They are in great Veneration among the most sensible
Men of the Nation. Their Corpses are burnt like their
Kings, with sweet Woods, the Ashes cast into the River,
and their Bones preserved. *Pegu* has no other Corn but
Rice, which it produces in such Plenty, that great Part
of it is sent to the neighbouring Provinces. Sodomy was
heretofore grown so general here, that one of the Queens
of *Pegu*, to obviate this Vice, ordered a small Pin to be
fastened betwixt the Skin and the Flesh, by way of Inci-
sion; she commanded also, that all the Boys, whilst young,
should be painted of a blue Colour on their Posteriors,
thereby to create an Aversion to them; as, on the other
Side, the Women take all imaginable Pains to provoke the
Men to Venery. Men and Women delight in black Teeth.
The King is sole Heir to all that leave no Children behind
them, and even One-third Part of the Estates of those that
have Children belongs to him. *Pegu* affords no other Spice
but Ginger, and scarce any other Commodity is exported,
except Rice and Silver, in Exchange for which they bring
other Stuffs and Callicoes, Pepper, Cinnamon, Nutmegs,
Opium, and sandal Wood. They will pledge their Child-
ren to borrow Money; but if the Creditor enjoys them
annually, they are free, and the Debt is paid.

Siam, one of the next considerable States in the *Indies*,
termines to the North upon *Pegu* and *Ava*, to the West
upon *Bengal*, to the East upon *Pana*; whence the Coast
(in which I comprehend the Gulf of *Siam*) runs North to
13° 30', and turning to the South to twelve Degrees, ex-
tends at a great Distance from the Sea, making a Semi-
circle of four hundred and fifty Leagues. The Country is
both very woody and mountainous, except towards the
Sea-side, where it is very fertile, and has several convenient
Rivers and Harbours, besides some Islands in the Gulphs.
The River *Menam* may vie for Largeness with any other
River of the *Indies*; for though its Breadth is not very
great, its Length is such, that hitherto its Source has re-
mained undiscovered. It runs from North to South through
the Kingdoms of *Pegu* and *Ava*, and afterwards through
Siam, where it falls by three several Channels into the Gulf
of *Siam*: It yearly, like the *Nile*, overflows the adjacent
Country for five Months, which renders the Rice-fields
very fruitful. Its Eastern Channel, which lies in 13° 30'
Latitude, is most proper for Navigation, were it not for a
Shelf a League in Length, which lying just at the Entrance
of it, has five or six Feet Water at low Tide; but at
high Water, fifteen or sixteen; and in *September*, *October*,
and *November*, seventeen or eighteen Feet; for which
Reason it is that Vessels of any Burthen anchor in the Road
two Leagues from the Shelf; but such as may venture
over the Shelf with a high Tide, may go freely up the
River as far as the Castle of *Banckock*, six Leagues from
the Sea, and thence as far as the City of *Judda*, twenty-
four Leagues from the Mouth of the River, except in
the before-mentioned Months, when the River is unna-
vigable.

This Kingdom is very populous, especially those Pro-
vinces bordering upon the Seas. The most considerable
Cities are *Judda*, or *Ody*, the Metropolis of the whole
Kingdom; next *Cambaya*, *Camsad*, *Sincapura*, *Pitelouck*,
Ligor, *Bordalong*, and *Tanaserim*, where the *Portugueze*
drive a considerable Trade; *Banckock*, *Pippy*, *Mertgy*, &c.
The City of *Judda* is built upon an Island in the River
Manam. It is the ordinary Residence of the King of *Siam*,
having several very fair Streets, with spacious Chanels regularly
cut. The Suburbs are on both Sides of the River, which,
as well as the City itself, are adorned with many Temples
and Palaces; of the first of which there are above three
hundred within the City, distinguished by their gilt Stee-
ples, or rather Pyramids, and afford a glorious Prospect
at a Distance. The Houses are, as all over the *Indies*, but
indifferently built, and covered with Tiles: The royal
Palace is equal to a large City. *Ferdinando Mendez Pinto*
makes the Number of Inhabitants of this City amount, im-
probably, to 400,000 Families. It is looked upon as im-
pregnable, by reason of the Overflowing of the River at

six Months End. The King of *Siam*, who takes amongst
his other Titles that of *Precan Salsu*, i. e. sacred Member
of God, has this to boast of, that, next to the Mogul, he
can deduce his Descent from more Kings than any other
in the *Indies*. He is absolute, his Privy Counsellors, call-
ed *Mandarins*, being chosen and deposed barely at his
Pleasure. When he appears in Publick, it is done with
so much Pomp and Magnificence as is scarce to be imag-
ined, which draws such a Veneration to his Person from
the common People, that even in the Streets, as he passes
by, they give him god-like Titles and Worship. He mar-
ries no more than One Wife at a time, but has an infi-
nite Number of Concubines. He feeds very high, but his
Drink is Water only, the Use of strong Liquors being
severely forbidden, by their Ecclesiastical Law, to Persons
of Quality in *Siam*. As the Thirds of all the Estates of
the Kingdom fall to his Exchequer, so his Riches must be
very great; but what makes them almost immense is, that
he is the chief Merchant in the Kingdom, having his
Factors in all Places of Trade, to sell Rice, Copper, Lead,
Salt-petre, &c. to Foreigners. *Mendez Pinto* makes his
yearly Revenue rise to twelve Millions of Ducats, the
greatest Part of which being laid up in his Treasury, must
needs swell to an Infinity in Process of Time.

Each City has its peculiar Court of Justice, from whence
an Appeal lies to the chief Court in the City of *Judda*,
consisting of a Lord Chief Justice and twelve Judges, and
sometimes to the Privy Council itself, if the Parties will
be at the Charge of it. They have their Counsellors, At-
tornies, and Solicitors, and the Causes are pleaded in the
Presence of both Parties. In criminal Cases they proceed
much after the *French* Way; for, upon an Information
given, the Party accused is committed and examined after-
wards, and for want of sufficient Evidence put to the
Rack, if there be very strong Circumstances; after which
the Judges, either upon Confession of the Fact, or suffi-
cient Evidence, give Sentence, which is confirmed by the
King, unless he is pleased to pardon the Offender. Their
Punishments are so severe, or rather cruel, that such as are
used among us are not so much as known here, for the
slightest Crime is thought to deserve Banishment. Theft
is punished with the Amputation of Hands or Feet. The
common Way of executing Criminals, is to cast them alive
into boiling Oil.

They have three Sorts of Trials for want of sufficient
Evidence, by Fire, Water, and Oil. In the Water Trial
both Parties are let down to the Bottom of the River,
along a great Pole, and he who can stay longest under
Water obtains thereby his Justification, as does he who
can hold his Head longest in boiling Oil, in the Trial of
Oil. In the fiery Trial they are to make five or six Steps
through a great Fire, very slowly, two Men leaning very
hard upon their Shoulders. But that which they look
upon as the most dreadful of all is, when, in order to their
Justification, they take a Pill of Rice only, over which
the Priest has pronounced a certain Malediction: If the
Culprit swallow it without spitting, he clears himself to all
Intents and Purposes, and his Friends carry him off in
Triumph.

The Forces of *Siam* consist chiefly of the Militia of the
Country, all Subjects being obliged to take Arms when
called upon; so that as Occasion requires, he can summon
the 100th, the 20th, the 30th, the 40th, or 5th Man,
who, as well as the Noblemen with their Attendants, serve
at their own Charge as long as the War lasts. The Infantry
are pretty well disciplined, but want the Use of Fire-
Arms, being provided only with Bows, Arrows, Swords,
Pikes, and Bucklers; their Horse are also but indifferently
mounted. Their chief Strength consists in their Elephants,
which are very well trained to the Wars, and carry each
three armed Men. They are not destitute of Cannon, but
have but little Skill to manage them to the best Advan-
tage. They have also great Numbers of Frigates and Gal-
lies, well provided with Guns, but the Gunners and Ma-
rines are so unexpert in the Management of them, that
they cannot encounter any *European* Fleet with the least
Hopes of Advantage; for which Reason, since of late
Years the *Siamese* have lived in continual Enmity with the
Portugueze, they have highly courted the Friendship of

the *Dutch*, who were always ready to give them Assistance against their Enemies. The King of *Siam*, knowing that his chief Strength consists in his Elephants, keeps a greater Number than any other *Indian* Prince, the Elephants of *Siam* being both for their Strength and Quickness of Apprehension esteemed above all the rest. They take them after the same Manner as they do in *Pegu*, by sending divers Females into the Forests, who decoy them into the Stables, where they are tamed, either by putting them into Pens exactly fitted to the Bunks of their Bodies, or by tying their Legs to three or four tame Elephants.

It is to be observed, that sometimes they meet with white Elephants in *Siam*, but they are so rare, and so much admired in those Parts, that in 1668, the King of *Pegu* being informed that the King of *Siam* had two white Elephants, he sent an Ambassador to desire he might have one of them, at what Price he would be pleased to set upon it; which the King of *Siam* refusing to accept, the King of *Pegu* entered *Siam* with a vast Army, and conquered it, making the King his Tributary, tho' with the Loss of no less than 500,000 Men. The *Siamese* call the white ones the Kings of the Elephants, and attribute to them something of Divinity, for which Reason also the King of *Siam*, when he meets with one, causes him to be served in Vessels of Gold, allows him a good Attendance, and a Canopy to be borne over his Body. The King and his Subjects are Pagans, and have an infinite Number of Idols, of Gold, Silver, Stone, Wood, and other Materials, some twenty, some thirty, and others forty Feet high. Their Temples have got Towers, or Pyramids. Their Ecclesiasticks are composed of a kind of Hierarchy, under the Direction of a High-Priest, residing in the City of *Tuada*, where are at least 30,000 Ecclesiasticks, that wear Garments of yellow Callico, and have their Crowns shaved. The most learned among them are chosen for Priests to preach in their Temples, and to sacrifice. They are under a Vow of Chastity, upon Pain of Death, but may change their Professions, and marry whenever they think fit. Each Temple has a kind of a Convent to it, for the Entertainment of a certain Number of Priests who attend the Service every Day Morning and Evening.

They live for the most part upon Alms, like our Mendicant Friars. They have also a kind of religious old Women, but these are not bound by any particular Discipline. They believe one Creator of the Universe, who governs the World by divers inferior Gods. They say that the Soul is immortal, and after it is purified by passing through several Bashes, is either condemned to eternal Torments, or enjoys Beatitude. They tell you, that this has been transmitted to them by Tradition, 'Time out of Mind'; but the rest, they hold that good Deeds, and especially Charity, are the chief Means to attain Salvation, which is the Reason they extend their Charity even to the Beasts, such as Birds and Fish, which they buy to set them at Liberty, as believing the Transmigration of the Soul. This is the Reason why they never condemn any other Religion, or dispute with them: But their Ecclesiasticks preach without Intermision against the old Custom of invoking the Devil, which is still retained among the vulgar sort. They have abundance of Lamps hanging before their Idols in the Time of Service. These they set out with Garland of Flowers, and in some of them they have certain Days, each Quarter of the Moon, appointed for their general Devotions, and a Lent of three Months.

Their dead Corpses they shave, wash and perfume, and afterwards bury them near a Temple, where the Athes are buried under a Tomb, or Pyramid. The Relations mourn for their Friends by shaving themselves, by giving Alms and Benevolences to the Priests, to pray for them at their Obsequies. The Corpses are attended with Musick and Fireworks. The *Siamese* are strong limbed, and well proportioned, but their Courage is not answerable to it, which makes them use their Victims with a great deal of Intolerance. They are so much addicted to Idleness, that they leave all Toils to their Wives and Slaves. They wear a painted Piece of Callico from the Middle down to the Knees, tho' the Men have also Shirts with Sleeves hanging down to the Elbows. The Women cover their Breasts with a Piece

of Callico fastened about their Necks; there is so little Difference in the Cloathing of the People of Quality and those of the inferior Rank, that they are not to be distinguished but by their Train of Slaves. Their Houses are built either of Timber, or Canes, covered with the Leaves of Cocoa-tree, and raised three or four Feet from the Ground; each Apartment has several Windows for the more commodious Passage of the Air; they know of no other Furniture but what is absolutely necessary for their Conveniency in the Chambers and Kitchen.

They feed commonly upon Rice, Fish, and Pulse; their ordinary Drink is Water; but they don't abuse strong Liquors, if they are invited to them. Penitents of any Condition here make no use of Priests for the Confirmation of their Marriages, which, after the Parents Consent is obtained, and Agreement made, they consummate, and live together as long as they like one another; and in case of Separation, all the Goods and Children are divided between them, and both Parties are at liberty to marry again; but the Concubines are tied to the Pleasure of their Masters, who consider them no other wise than as Slaves, their Children having but a slender Share of their Fathers Estates, when, since their Death, are divided into three Parts; one goes to the King, the second to the Priests, who are to bear the funeral Charges, which are very great, and the third to the Children, who have an equal Share, except that the eldest is allowed some small Advantage. People of an inferior Rank purchase their Wives, notwithstanding which, both Parties are at liberty to be divorced. They don't take the least Care for the Education of their Children, and they are six Years old, when they put them to their Ecclesiasticks to be instructed in Reading and Writing, afterwards breed them either to manual Arts, Commerce, or the Court.

The Peasants lead a miserable Life, by reason that Provisions are so cheap here, that they can't gain any thing by their Labour. The chief Trade of the City of *Judda* lies in Stuffs, brought thither from *Sumat* and the Coast of *Coromandel*, in all sorts of China Commodities, precious Stones, Gold, Benjamin, Wax, Copper, Lead, Indigo, Calamba-Wood, Brasil Wood, Cotton, and Deer-Skins, of which they export fifty thousand every Year to *Japan*; and their Rice is transported in vast Quantities to all the neighbouring Countries. The King himself is a Merchant here, and has his Factors at *Pegu*, *Java*, *Japan*, on the Coast of *Coromandel*, and in *China* itself. The Money is a very good, being of three different sorts, viz. *Maes*, *Majas*, and *Teangs*; two *Teangs* make a *Maja*, and four *Majas* a *Tical*, which is equivalent to a *British* Half-Crown; four of these *Ticals* go to a *Nuel*, twenty of which make a *Catta* in Silver. Their smallest Silver Money is the *Teang*; but Provisions being to very cheap, they make use of certain Shells brought thither from *Malacca*, eight or nine hundred of which go to a *Teang*.

The *Portuguese* being sufficiently sensible what prodigious Advantage they were able to reap from this Kingdom for supporting their Traffick to the *Moluccas*, *Tempone* Isles, the Viceroy of *Goa* were always very careful to cultivate a good Correspondence with the King of *Siam*, who in Return granted them many Privileges, till such time that the *Dutch* got Footing there at the Beginning of this Age. The *Portuguese* were so alarmed hereat, that they not only obstructed the Trade of the *Siamese* to *St. Thomas* and *Negapatan*, but also attacked a *Dutch* Vessel in the River *Menam*, which, with some other Outrages, served only to incense the King of *Siam* against them, who ever after encouraged the *Dutch* in their settlement and Commerce, which is very advantageous to them in respect of the Isles of *Java* and *Sumatra*, of which they are now in Possession.

The Kingdom of *Cambodia* borders to the North-West upon the Kingdom of *Siam*, being inclosed by the Sea on the other Side; the capital City is seated upon a River sixty Leagues from the Sea-Shore, which rises out of a Lake, as do all the other Rivers of this Kingdom. That which runs by *Cambodia* overflows every Year like the *Nile*; its first Rise is in the Beginning of *June*, increasing by degrees to ten or twelve Feet, and in *July* or *August* it overflows the Country to that degree, that it is quite unavigable, for which Reason it is that the City of *Cam-*

 twelve Feet, and in *July* or *Aug-*
 ntry to that degree, that it is quite
 Reason it is that the City of *Can-*

India is built upon a rising Ground, having but one large
 Street. The Trade of the *Portugueze* here consists chiefly
 in *Malacca* Stuffs, which they exchange for Benjamin,
 Lacquer, Wax, Rice, Brafs Vessels, and Bars of *China*
 Iron.
 The King of *Cambodia* is only a Vassal of the King of
Siam, being not able to bring above thirty-five thousand
 Men into the Field. The Nobility or Officers of the
 Court are divided into four several Ranks, viz. into *Ocki-*
na, Tenimas, Tenimms, and *Nampres*; the first of which
 are the only Men of Consideration, they being admitted
 into the King's Prefence, and he confers with them con-
 cerning the Management of public Affairs. The *Portu-*
guese are so firmly settled here, that the *Dutch* have never
 been able to get any Footing. Provisions of all sorts, Veni-
 son, Beef, Pork, Goats, Kids, Hares, Cranes, Herons,
 and, in short, all manner of Poultry, as likewise Oranges,
 Citrons, Mangoes, and Cocones, are sold excessively cheap;
 there being such Plenty here of every thing, and especially
 of Rice, that those of *Quinam* alone export yearly two
 thousand Copans of Rice, five of which make eight Tons,
 a seventeen or eighteen *Taels* the Copang.
 That Neck of Land which extends in the Form of a
 Peninsula, from the Kingdom of *Siam* to the S. E. to the
 N. W. of the Equinoctial Line, betwixt the Gulf of *Bengal*
 and *Siam*, is called the Isthmus of *Malacca*, and contains
 the Kingdoms of *Jobore* and *Patapan*. This Country was
 first discovered by the *Portugueze* in 1511, who established
 themselves there to that degree that nobody hath been
 able hitherto to dislodge them. The City of *Malacca* is
 situated upon the Straite which separates the Isle of *Suma-*
tra from the Continent, at two Degrees thirty Minutes
 on this Side of the Line, at the Foot of a Mountain, which
 is wholly taken up by the Town, and is about 1800 Paces
 in Compass, 600 whereof extend along the Sea-Coast, forti-
 fied with a good Wall, as likewise to the River-side,
 which incloses another third Part of the Town, being
 strengthened to the Land-side by four regular-Bastions;
 that of *St. Domingo* on the Point of the River side, that
 of *St. Joao* on the Sea-shore, and those called *Madre de*
Dau, and of *Eleven thousand Virgins*. Betwixt those two
 the *Jesuits* College, called *St. Paul's*, stands upon the Hill,
 and upon rising Ground, in the Plain without the City, a
 Convent of *Jacobins*. The River runs N. W. is very
 broad, and brackish at High-water, but fresh at Low-
 Tide, there is a Bridge over it.
 It rains constantly here two or three Times a Week, ex-
 cept in the Months of *January, February* and *March*; the
 Shore is so muddy that there is no landing at Low-water.
 The two Isles called *Illa de Noos* and *Illa de Pedra* lie
 one much above a Cannon-shot from the City, the Chan-
 nel betwixt these two Islands affording a safe Harbour for
 the Gallions and bigger Vessels, as that betwixt the City
 and the *Illa de Noos* for the Vessels of a middle Size;
 but small Barks may enter the River. In the City of *Ma-*
laca, its Suburbs, and adjacent Towns, under the Juris-
 diction of the *Portugueze*, are computed to be about 1200
 Inhabitants, and, among them, not above 100 fighting Men,
 and scarce 200 *Portugueze*, the rest being either *Mestizes*
 or *Malayans*. The *Portugueze* are in Possession only of
 the City of *Malacca*, and its Suburbs, to the Town of
Ngira Senhora de Guadalupe, five Leagues thence upon
 the same River, the Territories of the King of *Jobore* be-
 ginning half a League thence. This City being so con-
 veniently situated for the Trade of *China* and the *Moluc-*
cas, the *Portugueze* had, in all Probability, made this one of
 the chief trading Places in the *Indies*, if the *Dutch*, who
 dislodge it in 1606, and laid great Part of it desolate, had
 not prevented them; and being by their Settlements in
Pegu and *Java* become Masters of these Seas, quite
 ruined the Commerce of the *Portugueze* to *China* and the
Malaccas.
 The Kingdom of *Patapan* is not of so large an Extent,
 but much more populous than that of *Jobore*, the King of
Patapan being, according to the Computation of the *Hollan-*
ders, able to raise 180,000 Men; the capital City bearing
 the same Name, is seated upon the Sea-side, though its Har-
 bour be above 2000 Paces thence. The Houses are hand-
 some enough, being built of Timber and Canes. The Royal

Palace is fortified only with Palisadoes, their great Temples
 are of Brick. The City is able to raise 10,000 fighting
 Men. The Inhabitants are rather inclining to a brown than
 olive Colour, generally well shaped, and proud in their
 outward Deportment, but obliging enough in their Con-
 versation with their Friends. The Natives are, for the
 most part, employed in Husbandry and Fishing, and
 drink nothing but Water; Wine, and strong Laqu
 being odious to them. The only Pleasure they delight in
 is that of Women; so that each Man, besides four or five
 Wives, maintains as many Concubines as he is able. As
 they look upon Fornication as a slender Trespass, so they
 punish Adultery with the utmost Severity, though nothing
 be more common among them than this Crime.
 Their chief Wealth consists in their Slaves, whom they
 feed at a small Charge upon Rice and Fish. The Foreign-
 ers are the only People here who apply themselves to Traf-
 fick and Navigation. The Air of *Patapan*, though ex-
 ceeding hot, as lying near the Equinoctial, yet is not un-
 wholesome. They have but three Months Winter, viz.
November, December, and *January*, when it rains without
 Intermision: The rest, from *February* to *October*, is their
 Summer. They sow nothing but Rice, and all the Ground
 with Buffaloes. Fruits are here in such Plenty that every
 Month produces a new kind. Hens lay twice a-day; and
 Provisions are in such Quantities as cannot be imagined, as
 Rice, Oxen, Goats, Deer, Geese, Ducks, Hens, Capons,
 Peacocks, Hares, and all sorts of Venison. Hogs they
 breed none; but the Forests are full of Wild-Boars, and
 though they eat them nor, they kill them, because they are
 so pernicious to the Rice. The Tigers, and great
 Apes, which are in the Forests here, do also considerable
 Mischief; but the wild Elephants do no Damage at all;
 they hunt them with tame Elephants, and whilst they are
 engaged with them, find Means to tie their hinder Feet
 together, and afterwards tame them by Hunger.
 The King of *Patapan* is a Vassal to the King of *Siam*.
Jobore is the utmost Point of Land of that Peninsula called
 by the Ancients *Aura Chersonesus*, reaching to the Straights
 of *Sincopura*. Its chief Towns are *Linga, Bintam*, and
Carymon, and its Metropolis is named *Batusabar*, which
 is however divided into two Cities, situate upon the River
Jobore, six Leagues from the Sea, the first of which is
 called *Batusabar*; the second *Cottasabrang*; one having
 about 1300 Paces, the other 500 in Compass. As the
 Houses are all built of Free-stone along the River-side, and
 raised on Piles eight or ten Feet from the Ground, they
 make a glorious Prospect as you come up the River; for
 this City contains at least 4000 Inhabitants fit for Service
 in the Army. The King of *Jobore* is Proprietor of all
 the Grounds, which he bestows on any that desire them, to
 be manured: But tho' the Grounds are extremely fertile,
 such is the Slothfulness of the *Malayans*, that they seldom
 cultivate them. The *Malacca*, or *Malayan* Language, as
 it is the most elegant of any in the *Indies*, so it has gained
 as much Reputation there, and is as generally used, as
 the *French* is in *Europe*; and having no Inflections in ei-
 ther Nouns or Verbs, it is not very difficult to learn.
 11. We will now look over the Continent to the Isle of
Sumatra, ten Leagues distant from the *Malacca* Shore;
 it extends from about 5° on this Side to 6° beyond the
 Line, containing 165 Leagues in Length, and about 60
 in Breadth; so that those who inhabit the Middle of the
 Island have the Equinoctial Line just over their Heads;
 whence it may be easily conjectured, that the Heats are
 excessive here, which, together with the vast Multitude of
 Lakes, makes the Air very unwholesome: This Defect is
 recompensed by its vast Riches in Gold, Silver, Copper,
 Iron, and Brafs (whereof they make as good Artillery
 here as in any Part of *Europe*) besides Rice, Millet, and
 Fruits in prodigious Quantities, even in the very Forests.
 Add to this its Wealth in Diamonds and other precious
 Stones, and its Product of Silk, Spices, Wax, Honey,
 Cotton, Camphire, Cassia, and divers other medicinal
 Drugs. Of white Sandal they have whole Woods, and in
 the Centre of the Isle is a burning Mountain, like that of
Vesuvius, which they say is constantly supplied by a River
 of Pitch.

The whole Island is divided into ten Kingdoms, of which those of *Atben*, *Peder*, *Pacem*, *Camparam*, *Zande*, and *Manambe*, lying on the Sea-side on this Side the Line, are only known to Foreigners. Those who have travelled thither, more for Profit than Curiosity, having made but little Search into its inland Provinces, of which the *Portuguese* give us an Account only of two, viz. that of *Andigidan* and *Arunan*. The *Dutch* have also discovered the Kingdom of *Polydam* beyond the Line, where they have settled themselves at present. The Kings of *Atben* are also Masters of *Peder* and *Pacem*, which includes all the Northern Coasts of the Isle. The City of *Atben* is seated in a spacious Plain, upon a broad but shallow River, being scarce passable by small Boats. It has neither Fortification nor Gates; their Houses are built upon Piles, and covered with the Leaves of Cocoa-trees. The Royal Palace stands in the Centre of the City, which, being well palisaded and flanked, commands the whole Town, and has seven Gates. The Natives are of an olive Colour, and very flat faced; their Garments are only a Callico Gown, a Silk Shirt, and a Turban on their Heads of the same Stoff. The King is served by Women and Eunuchs, and is a *Mohammedan*, as well as all the rest of the Inhabitants near the Coast of *Sumatra*. They begin their *Leis* at the New-moon in the twelfth Month, which ends at the same Time in the next. They have no Corn, but Rice in great Plenty, as also Beeves, Buffaloes, Goats, and Sheep; the last of which nobody has the Privilege to breed except the King. They also abound in Oranges, Lemons, Bananas, Tamarinds, Batatas, Radishes, Spinnage, and Lettuces. Their ordinary Drink is Water, but they make a kind of *Aqua Vita*, or Arrack of Coconuts.

The Isle of *Sumatra* produces a peculiar Tree called *Singadi* by the *Malayans*, and *Arbor tripe de Dio* by the *Portuguese*. It is full of Branches with Knots, and sprouts forth two Leaves like Plum leaves, except that they are small like Sage, and are covered with a whitish Down: Each of these Leaves hath its Bud, which thrusts forth small Heads, having four round Leaves; each Head produces five Flowers in a Cluster, the fifth being exactly in the Middle; they are as white as Snow, of the Bigness of an Orange flower, and blow in the Twinkling of an Eye, as soon as the Sun is set; and when it rises again the next Morning, the Flowers, which have continued all Night, drop in an Instant. Thus the Tree continues till Sun-set again, when it opens, and produces the Flowers in the same manner as before, and casts them again at the first Appearance of that Planet, which invigorates all other Vegetables. The Coconuts, of which there are four Kinds, are very common in this Island. The Tree which bears the Coconuts grows very high, but not above a Foot Diameter in Bulk. It has not a Branch but at the Top, where it spreads like a Date-tree, and these don't produce the Fruits, which grow ten or twelve in a Cluster out of the Body of the Tree. The Flower resembles that of a Chestnut. This Tree is of universal Use in the *Indies*. In the *Maldives* Islands they build whole Ships without any thing but what is furnished by the Cocoa-tree; the outward Rind affording them a kind of Hemp for their Cordage and Cables, and the Leaves with Materials for Sails, and the Covering of their Houses; besides that, they use them for the making of Umbrella's, Fans, Tents, Mats and Hats. The Fruit is of the Bigness of an Ostrich's Egg, and the outward Rind, which resembles that of our Walnuts when dried, affords the Hemp we spoke of before. If they gather it before the Nut is come to full Maturity, it affords about a Quart of very pleasant Liquor, which, if kept in the Shell, by degrees turns to a kind of a Kernel, which becomes yellow, and is of a very good Taste, and exceeding wholesome.

Their Toddy, or Palm Wine, they draw from the Tree whilst it is in Blossom, and, pulling off the Flower, they fasten it to an Earthen Vessel well stopp'd, into which runs a Liquor, resembling in Taste and Colour our Whey: This when boiled is called Toddy, and, set in the Sun, turns to Vinegar immediately; and, if distilled, makes a kind of *Aqua Vita*. The Pith of the Tree, as it is very white, furnishes the *Indians* with Paper. The second Kind is called by the *Portuguese* *Arrequeira*, from the *Araca* it pro-

duces. The Bananas, or *Indian* Fig-tree, is also very common in this Isle; it may rather be called a Shrub than a Tree, as having no Body, but grows to a Man's Height. It brings forth Leaves before it comes to a Foot high, but these wither and fall, and others sprout forth in their stead, till such time the Plant arrives at its full Growth, and the Fruit to its Maturity, which is in Shape and Colour like our Figs, being of a yellow green, which being gathered, and hung on a Nail, will ripen in four or five Days. In the Middle of the Leaves comes a Flower of a Violet Colour, of the Bigness of an Ostrich's Egg, whence sprouts forth a kind of a Branch not unlike a Cabbage-Stalk, laden with a Bunch of Figs: One Stalk produces no more than one Bunch (but of near an hundred Figs) at a Time; but being cut close to the Ground, another springs out, and bears Fruit in one Month, and continues to do so through the whole Year. The Leaves of the Tree are six Feet long, and a Foot and a half broad, and the Fruit seven or eight Inches long, and as big as a good Cucumber; the Figs are inclosed in Husks, which are very nourishing, and eat instead of Bread.

The Pepper of *Sumatra* is, next to that of *Cashin*, the best of all the *Indies*; it is commonly planted at the Root of Trees, or propped up with Canes as we do our Hops; the Leaves are not unlike that of the Orange-tree, but somewhat less. The Fruit grows in little Bunches like Juniper-berries. It is green whilst upon the Tree, but grows black after it is dried, which is done in *December* and *January*. The white Pepper does not grow in such abundance here, and *Bengal* is the only County that produces long Pepper. It is certain there is more Pepper consumed in the *Indies* than in *Europe*, because the *Indians* put Handfuls of it in their Sauces, but not beaten or ground.

The Island of *Java Major* is divided from *Sumatra* to the South-East only by the narrow Strait of *Sunda*. Its Length is fifty Leagues, and some fancied it Part of the Continent which extends to the Straights of *Magellan*, commonly called *Terra Australis*. *Julius Scaliger* was once in the Wrong of it when he called it the Epitome of the World; it being certain that there is no Animal, Fruit, Metal, or Drug, but what is found here in greater Plenty than in any Part of the Universe.

The Inhabitants deduce their Origin from the *Chinese*, and, to speak Truth, their large Foreheads and Brows, and little Eyes, resemble much that Nation. Each Town or Note in *Java* has its peculiar Prince, and now they are all Sovereigns independent one of another. The Kings of *Bantam* and *Pallambum* are at present the most potent, the last of which has given the Name to the Strait that divides the Isles of *Java* and *Bala*. Ten Leagues to the North is the City of *Panarucan*, near which is a burning Mountain. The King of *Panarucan* and *Pallambum* are *Pagans*; but the King of the City of *Passaracan*, six Leagues from *Panarucan*, is a *Mohammedan*. Ten Leagues to the West is the City of *Jartam*, noted for its convenient Harbour upon a River, where the Ships going from the *Moluccas* to *Bantam* commonly touch, to take in fresh Water and Provisions. Upon the same River lies the City of *Gorin*. The City of *Surabaca* has its proper King, under whose Jurisdiction is also the City of *Brandam*, six Leagues thence to the West. He keeps his Court at *Sidayu*, which is well fortified, but destitute of a safe Harbour. Ten Leagues more to the West lies the City of *Jabaan*, next to *Bantam* the most considerable of the Isle, and five Leagues farther to the North-West the City of *Cajam*. *Manduluan* is inhabited only by Fishermen. Five Leagues farther to the West is the City of *Japara*, upon a Neck of Land, which runs out three Leagues into the Sea. Twenty-five Leagues hence, and forty-five from *Bantam*, lies *Matram*, or *Martavam*, a great City, and the Residence of a powerful King, who once pretended to the Sovereignty over all the rest of the Island, and still styles himself Emperor of *Java*.

Five Leagues to the West of *Japara* lies the City of *Pata*, and three Leagues farther that of *Dauma*, both under the Jurisdiction of the King of *Matram*, as well as that of *Yagal* in the same Bay. The next is the fair and strong City of *Charabson*, seated upon a River, by which you pass to the Cities of *Daungeo* and *Momacaton*, and so thro' the

Indian Fig-tree, is also very common, rather be called a Shrub than a Tree, but grows to a Man's Height, before it comes to a Foot high, but others sprout forth in their stead, arrives at its full Growth, and the which is in Shape and Colour like a green, which being gathered, ripens in four or five Days. It comes a Flower of a Violet or an Ostrich's Egg, whence sprouts, which not unlike a Cabbage-Stalk, grows: One Stalk produces no more than an hundred Figs; at a Time, it grows on a hundred Springs out, and continues to do so through the Leaves of the Tree are six Feet long, and half broad, and the Fruit seven or eight times as big as a good Cucumber; the which are very nourishing, and

is next to that of *Cashin*, the which is commonly planted at the Root with Canes as we do our Hops, like that of the Orange-tree, but which grows in little Bunches like green whist upon the Tree, but dried, which is done in *December*, the Pepper does not grow in such a manner as in *Sumatra*, which is the only Country that produces certain there is more Pepper common in *Europe*, because the *Indians* use their Sauces, but not beaten or

Sumatra Major is divided from *Sumatra Minor* by the narrow Streight of *Sunda*, and some fancied it Part of the Straits to the Straights of *Magellan*, *Australia*. *Julius Scaliger* was called in he called it the Epitome of the World, that there is no Animal, Fruit, or Plant that is found here in greater Plenty than in *Sumatra*.

their Origin from the *Chinese*, their large Foreheads and Brows, and each that Nation. Each Town of peculiar Prince, and now they are all one of another. The Kings of *Bantam* at present the most potent, the last Name to the Streight that divides *Sumatra*. Ten Leagues to the North in which is a burning Mountain, and *Palambuan* are *Pagans*; but *Passaracan*, six Leagues from *Palambuan*. Ten Leagues to the West is called for its convenient Harbour upon which is going from the *Moluccas* to *Batavia* to take in fresh Water and Provisions. The River lies the City of *Gorin*. The proper King, under whose Jurisdiction *Brandam*, six Leagues thence to the Court at *Sidaya*, which is well fortified safe Harbour. Ten Leagues more to the City of *Tabaan*, next to *Bantam* the same Isle, and five Leagues farther to the City of *Cajam*. *Manduluan* is inhabited. Five Leagues farther to the City of *Nara*, upon a Neck of Land, which is open into the Sea. Twenty-five Leagues from *Bantam*, lies *Matram*, or *Mataram*, the Residence of a powerful King, who has the Sovereignty over all the rest of the Country, himself Emperor of *Java*. To the West of *Japara* lies the City of *Dama*, farther than that of *Dama*, both under the Jurisdiction of the King of *Matram*, as well as that of *Sumatra*.

The next is the River, by which you pass to *Sumatra* and *Moucadon*, and so to the Village

Village of *Gaeon* to the City of *Jacatra*, and thence to *Bantam*, the most considerable in the whole Island, seated at the Foot of a Mountain about twenty-five Leagues from the opposite Coast of the Island of *Sumatra*. Three Rivers rise out of this Mountain, two surrounding its Walls, and the third passing through the Middle of it. The Houses are miserably built, and the Walls very wretched, as well as the Gates, though at every hundred Paces provided with a great Piece of Cannon, which are of little Use in a Place where the Curtains are not defensible, and have, instead of Towers, only Scaffolds. The whole City has only three principal Streets, which are not paved, but sandy, the Channels which run through them being very stinking and foul, which send forth a very nauseous Smell all over the City. At each Corner of the Streets stand Guards, as also at the Prison Gate near the Palace, and each Person of Note keeps a Guard of ten or twelve, for his own Security, in his House. Their Houses are meanly built upon Piles; they are commonly of Reeds and Canes, and the Partitions all of Bamboos, or Canes slit very thin. All the Foreigners here live without the City, and the Merchants meet daily in one or other of the three great Market-places belonging to this City.

The Bazar, or Exchange, is chiefly frequented by Foreigners, who meet there at Break of Day, and continue till Nine of the Clock. The second Market-place faces the grand Mosque, where the Women buy and sell Pepper, Betel, Areca, Bananas, Melons, Chiches, &c. and white and yellow Sandal wood. The Armourers, who sell Arms, Guns, Pistols, Swords, &c. standing higher up to the Right; and to the Left the Confectioners with their Sweetmeats: Near them is the Place where they sell all sorts of Beans; and next to that the Onion Market, where the Cloth-sellers and Uffurers have their Meeting. Hard by this you see the Poulterers, who deal in Geese, Kids, Pigeons, Parrots, and all sorts of tame Fowl. Thence you see three several Ways, one leading to the *Chinese* Shops, the second to the Herb-market, the third to the Shambles. Among the *Chinese*, to the Right, the Jewellers, who deal in precious Stones, have their Station; and the *Bengalians* with their Toy-shops on the Left. The Site of all these Things lasts only till Nine o'Clock, when the Markets for all sorts of Provisions are opened before the Palace, and about Noon the *Chinese* Market begins. The City of *Taban*, or *Tabatan*, challenges the next Place after *Bantam* in the Isle of *Java*, being stronger than all the rest, and though not so large yet better built than *Bantam*. Its Palace is very spacious, and remarkable for the many Apartments made here for divers sorts of Beasts that are kept with more than ordinary Care; such as Elephants, Fighting-cocks, and Parrots, the last of which are much more beautiful than those transported into *Europe*, because they are too tender to endure the Fatigues of so long a Voyage. Their chief Traffick lies in Pepper, which they exchange in the Isle of *Baly* for Calico, Cotton, and Silk, and carry those Commodities to *Banda*, *Ternate*, and the *Philippine* Isles, to truck for Cloves, Mace, and Nutmegs.

The Natives live mostly upon Fish. They have no other Arms but a Piece of Calico wrapped round their Loins, except that the better Sort wear a kind of loose Camblet Coats, reaching only to their Thighs. They are great Lovers of Horses, their Saddles being made like our great Saddles. The Natives inhabiting the inland Countries of *Java* are all *Pagans*, and believing the Transmigration of the Soul, eat neither Fish nor Flesh. To the South there are a few *Mohammedans* of the *Turkish* Sect. They have two great Fairs, the Chief of which is upon the 5th of *August*. There are few among the *Javans* but what have three or four, nay, sometimes ten or twelve Wives, besides their Concubines, who are obliged to wait upon the Wives, though their Children have the same Prerogative as the legitimate Offspring. Their Children go naked, the Girls having only a Plate of Silver or Gold to cover their Privities. They marry at eight, nine, or ten Years of Age. In their Marriages they use but few Ceremonies; certain Poles are stuck on the Wedding-Day before the House of the Bride and Bridegroom, with Taffels of white and red Cotton, and

after Dinner the Bridegroom goes on Horseback through the Town, where the Slaves, who are Part of his Dowry, go to meet him, and bring him some Presents.

Women of Fashion are kept under such Restraint that they are not permitted so much as to see their own Sons in their Chambers; neither does a Man speak, or approach a Woman of Rank when she goes abroad, but every body gives her Way, even the King himself. They are known only by their Retinue, being for the rest clad after the common Fashion, viz in a kind of Calico or silk Petticoat, reaching down from the Breast to the Middle of the Leg. They wear neither Stockings nor Head Ornaments, but tie their Hair upon the Crown, except it be at Weddings, or any other Solemnity, when they have Coronets on their Heads, and Rings and Bracelets upon their Fingers, and about their Arms. They are so much addicted to Cleanliness, that they never do any thing without washing and bathing themselves, which is one of their chief Employments, and which they look upon as a proper Means to entice their Husbands to Venerie, in which they strive to outvie one another.

In their Courts of Judicature, the Plaintiff and Defendant are obliged to plead both their own Causes. Their Punishment of Criminals is to tie them to a Post, and stab them with a Dagger. Foreigners have this Advantage, that provided they can make their Peace with the Party complaining, they may redeem themselves from Death, except in the Case of premeditated Murder. The King's Council, which consists sometimes of five hundred Persons, meet by Moon-light under a great Tree, where they continue till the Moon sets. The King, when present, sits in the Middle. The Natives of *Java* are a proud, perfidious, and cruel Generation, and so stubborn, that such as know they have deserved Death will rather be killed than taken. Their Hair, which is very long, is generally of a Chestnut Colour. They have broad flat Faces, and large Jaw-bones and Eye-brows, little Eyes and thin Beards, are for the rest middle-sized, but very strong Limbs. They seem not to want Courage were they bred up to all the Advantages of our modern Arms, but they are contented with their Pike, Battle-ax, Broad-swords, and a Dagger. Their Bucklers are of Wood, and sometimes of boiled Leather. They wear also Armour, the Pieces of which are joined together with iron Rings. Their Soldiers receive no Pay in Time of Peace. They have a Way of blowing small poisoned Arrows through Trunks, by which the Wound is made incurable.

But those inhabiting upon the Strait of *Sunda*, being transplanted thither from *Passaracan*, and living under their own King, are much more honest and open-hearted. The Grounds of *Java* are either farmed out by the King, or Lords, to certain free People, or cultivated by Slaves, and produce Rice, Pepper, and Cocoa. Some Slaves here take their Masters Trees, and other Commodities, at a certain Rate, which they sell to the best Advantage they can; others walk abroad for their Master's Profit at a set Rate per Diem. Others maintain themselves, and work alternately, six Days for their Masters, and as many for themselves. They commonly adulterate their Pepper with black Gravel, as they do all other Commodities they sell to Strangers, being very crafty in their Commerce; though very few rich Merchants venture their Persons on any long Voyage, but traffick, like our *European* Merchants, by the Assistance of Factors. Bonds and other Securities are written upon the Bark of Trees, the Characters being engraven with a sort of Bodkin, which is either rolled up afterwards, or laid together four-square, betwix two Boards, which they have a Way to tie neatly together with Pack-thread; sometimes they use *Chinese* Paper.

They have a Language peculiar to themselves, but the *Malayan* is most in Use here, and the *Arabian* is used by the *Mohammedans*. The Traffick of the *Persians* that live here is precious Stones, Stuffs, and Drugs, and the *Arabians* and *Banjans* exchange their Commodities chiefly for *China* Ware. Those of *Guzerat* live for the most Part upon Fishing; all those Foreigners are clad after the same Fashion, in a Calico Garment, with a Turban of the same Stuff. At their Arrival they purchase a Woman, who is to serve for all Uses. At their Departure they dis-

pose of her again, but must make Provision for the Children, if they leave any behind. But the *Chinese* are of all Foreigners here the most industrious in their Trading, being looked upon in the same Light as the *Jews* in *Europe*. Their main Business is to forestal and buy up the Pepper in the Country, against the coming of their Fleet to *Bantam* (which consists commonly in ten Ships of 50 Tuns each) in *January*. These bring in a sort of wretched Money called *Piy* by the *Javanese*, and *Cas* in the *Malayan* Language, being a Mixture of Lead and Brass, so brittle, that if they fall upon the Ground they certainly break. They are made in the City of *Chincoo* in *China*, having each a four square Hole in the Middle, through which they string them upon Straw. It passed at first very current in *Java*, but since this Business has been discovered it goes at a very low Rate. The *Chinese* sell their Purcellan here at cheap Rates, and bring also Silk, Sattin, and Damasks of their own Manufactory, which they exchange for Pepper, Lacque, Indigo, Sandal Wood, Nutmegs, Cloves, Tortoiseshells, and Ivory. They have neither Temples nor Priests at *Bantam*, but they have both at *Panapaean*.

Java abounds both in wild and tame Beasts. The Forests are filled with Elephants, Rhinoceroses, Leopards, and Tygers, which make them very unsafe, and is the Reason why Frankincense, Mastic, Myrrh, and Benjamin (which is better here than in any other Place) are not gathered in so great Quantities, the before-mentioned Beasts, as well as the Serpents, Lizards, and Salamanders, making the Forests to very dangerous to pass. The Hogs here are without Bristles, but their Bellies hang down to the Ground. The Rivers are very well stocked with Fish, there having been Oysters seen in those Parts that weighed 300 Pounds, which would seem incredible if there were not to be seen to this Day two Oyker-shells in the Duke of *Holslein* *Gottorp's* Cabinet, which *Olearius*, in 1675, bought of a Sea-Captain's Wife at *Embuisen*, and weighed 462 Pounds. Deer, wild Goats, and Boars, are likewise here in vast Plenty, but are not easily to be taken, by reason of the Unpassableness of the Woods, and the Unskillfulness of the *Javanese* in the Use of Fire-arms. The Rivers feed also Abundance of Crocodiles; the *Chinese* tame, fat, and eat them for a peculiar Dainty. Their Civet is not so white nor well scented as that of *Guinea*. They have two sorts of tame Fowls, one like those of *Europe*, the other of the *Indian* Breed, wild and furious; some have black Flesh, but notwithstanding this they are very good Food: The Rhinoceros is in the same Esteem with them now-a-days, as the Unicorn was with the Ancients, his Flesh, Horn, Blood, and Teeth, may even his Dung, being applied to medicinal Uses.

They have also Ants here of a much larger Size than ours, they spoil every thing they come at. They have a certain kind of these Creatures reddish, and of the Length of a Man's Finger; but these live in the Fields upon the Barks of Trees. Among the Fruit-trees of *Java* the *Arrequea*, which bears the *Araca*, is none of the worst; it is a Species of the Cocoa, but less in Bulk, and with narrower Leaves. The Fruit resembles a Date inclosed in a Husk, which falls off when it ripens; it is without Taste, but taints the Lips and Teeth of a black Colour. The *Indians*, after they have mixed it with a little Lime, wrap it up in a Betel Leaf, and so chew it, looking upon it as a good Remedy against the Scurvy. It will cause in such as are not used to it a Dizziness in the Head, but it soon passes over. The *Mango* is a Fruit growing upon a Tree not unlike our Walnut-trees; it is something like our Peaches in bigness and Colour, being of a red and green. The Shell incloses an Almond, which is of a grateful Taste when roasted in the Ashes; they pickle them whitt green, and they are accounted a good Remedy against the Worms and Lutenels; the wild ones are rank Poison, which kill without a present Antidote.

The *Ananas* grow on a Shrub with Leaves like a *Semper-vivum*; is green at first, but when ripe turns to the Orange Colour. Its Shape is like a Pine-apple, yellow within, but they are dangerous if used in Excess, tho' the Taste is very pleasant; they are not much larger than a good Lemon. The Stalk is like a Thistle, every one bearing but one at the

Top; it is very apt to over-heat, and occasion Fevers. The Fruit called *Samaca* is also of the bigness of a Citron, juicy and tart, with black Kernels; the Leaves, which are like to but something less than the Lemon-tree, pickled with Salt and Sugar, are accounted a good Remedy in Fevers and Inflammations, as we do our *Tamarinds*, which also grow in great Plenty here. The *Tabasir*, i. e. a white frozen Liquor, is found in the Knots of certain Canes, of the bigness of a Poplar, with flat Branches and Leaves not unlike those of the Olive-tree, but somewhat longer; it is like Starch, and in such Esteem with the *Persians* and *Arabians* for the Virtues they attribute to it in the Cure of Fevers and Bloody-fluxes, that they buy it at a very dear Rate. These Canes are so big that the *Indians* cleave them asunder, and make Boats of them, leaving a Knot on each End. The Isle of *Java* produces also another Fruit called *Durians*, not to be met with any where except here and in the *Moluccas*.

The Tree called *Batum* is of the Size of our Apple-tree; the Blossom of a pale yellow Colour, the Leaves half a Foot long, and three Inches broad, of a very lively green on the inside. The Fruit, both for its Colour, bigness, and outward Division, resembles our Melons, but within is divided into four Partitions, which being again subdivided into two or three lesser Cells, contain the Fruit, which is as big as a Puller's Egg, and of the most delicious Taste in the World. Its Stone is rough, and as big as that of a Peach. It will not keep, and therefore must be used as soon as the outward Husk opens. One thing is very observable, that if you lay but a few Betel Leaves near a whole Room full of *Durians*, they will all rot immediately; and if you have surfeited yourself with the excessive eating of this Fruit, two or three Betel Leaves applied to your Breast, or one of the same Leaves eaten, will give you Ease, and you may digest them without any farther Danger. A *Lanor* Tree, another Species of Coconuts, has Leaves five or six Feet long, and so smooth that the *Javanese* use them instead of Paper. *Cocoas* are found no where in the *Indies* but in the Isle of *Java*. They grow upon a Tree not unlike the Pepper, and in Bundles. The *Javanese* hold them in such Esteem that they will not sell them unboiled, nor will allow to much as one Plant to be transported into other Places. The *Mogiana's* much of the Taste of our Stoes, and grows wild in the Highways of *Java*; and the Herb *Zalasse*, bearing neither Flower nor Fruit, is used green in Sauces, its Virtue being to fortify the Stomach: The Fruit *Java* is of the bigness of a *Citrus*, having a rough Rind, within which are certain Nuts, the Kernels thereof being roasted, are a perfect Remedy against a Lutenel. It is observable that this Fruit often changes its Taste; sometimes it resembles a Melon, sometimes a Peach, and at other Times a sweet Lemon. The Nut is as big as a Date, but is not to be used raw, because it occasions vomiting and griping in the Guts; but roasted, it is both pleasant and good, and reckoned a great Restorative.

On the Side of the Island towards the Strait of *Sunda*, you meet with Abundance of wild Cinnamon, but it is never transported into foreign Parts. The *Caracapa* are a kind of *Indian* Cherries, white, dark, red, and of a Citron Colour; the Trees and Fruit are like those in *Europe*. The *Cofus Indicus*, called *Puko* by the *Moluccans*, resembles in every respect, both in Height and Flower, the *European* Elder-tree, wherewith the *Persians* and *Indians* drive a considerable Trade, as they do also with the *Calanus Aromaticus*. There is a yellow and spungy Market in its Stalk, which some Women make use of to appease Fits. The *Zerumbet*, called *Cantur* by the *Moluccans*, is like Ginger, except that it has somewhat larger Leaves; it is preserved or dried like Ginger, but valued above it. Of *Galanga* there are two Kinds, the lesser is brought from *China*, and is preferable to that of *Java*. The Herb grows wild, about two Feet high, with a white Flower and pointed Leaves; the *Javanese* use both the Root and Herb in their Salads; the first are knotted like Ceres, and of a biting Taste, and good Scent. *Penjamm* is a Gum of a Tree resembling a Lemon-tree, whilst they are young, the Gum is white, but as they grow old it changes black. It is by the *Moores* called *Lazar* (*Java* i. e. the

Gold, and Pearls, which Stone breeds in a Maw of a Sheep, or Goat, within the Substance of which is also found a Tuft of Grass. It is smooth, inclining to a greenish Colour, its Goodness being to be tried by its Weight. In the Country of *Pan*, near *Malacca*, is a certain smooth and slippery Stone found in the Gall of certain Hogs, of a reddish Colour and bitterish Taste, which being steeped only in Cold Water affords a most effectual Remedy against all Poison and infectious Distempers. The Isle of *Borneo* furnishes also Diamonds, Sapan-wood, used by the Dyers, Brazil-wood, Wax, Pepper, Frankincense, Mastich, and divers other Gums. The Isle is not destitute of good Harbours, among which that of *Borneo*, at the Mouth of a very good River, is the largest and most commodious. Their Cities are not very populous, and their wooden Houses so slightly built that they remove them at Pleasure. They are accounted very ingenious, but will rather live by Piracy than Industry, unto which they are so much addicted that their Vessels are seen upon the Coast of *Pegu* four hundred Leagues thence. They use Swords, Bucklers, Lances, Darts, and Pike. The King and most of the Inhabitants near the Sea-side are *Mohammedans*, but deeper in the Island they are *Pagans*. They are black, and well set, wear Calico wrapped about their Loin, like most of the other *Indians*, and Turbans on their Heads.

The Isle of *Celebes* lies betwixt that of *Borneo* and *Moluccas*, under the Equinoctial Line. *Mercator* would have it to be one of these Islands called *Sindus* by *Ptolemy*. Its capital City is called *Macassar*, which lies in the most Southern Part of the whole Isle, $5^{\circ} 17'$ beyond the Line. The Inhabitants are so indolent, that they leave not an Inch of Ground unmanured, and sow with Rice what they stand not in Need of for their Cattle and Cocoa-trees. It is not long since they embraced *Mohammedism*. They much resemble the *Siamese* and those of *Pegu*, especially in their Faces, and are of a comely Stature. The Women dress their Heads like those of *Malacca*, and in the Street have their Breasts open, and Breches reaching down to their Knees. The North-west Winds, which blow here from *November* to *March*, make the Shore very unsafe during that Time, and the continual Rains overflow the flat Country, which is the Reason that most of their Houses are built upon Piles, nine or ten Feet above the Ground. There are two Kings more, viz. one of *Telle*, and the other of *Battergon*, in this Island.

The Isle of *Gilolo*, by the *Portuguese* called *Bato Clara de Moro*, produces Plenty of Rice and *Sagu*, Tortoises, &c. The Inhabitants are very well limbed, but barbarous, and not many Years ago were Cannibals. The Island of *Ambony* is to near the *Moluccas* that some have accounted it among their Number, its Circuit is twenty-four Leagues. The chief City has to the North-west of it a very fair Bay of six Leagues, where there is safe Anchorage, and good Shelter for Ships against the Wind; the Bay enters so deep into the Country, and the Sea on the opposite Side cuts so deep within the Land, that the Isle is very near divided into two, there being only a small Isthmus of a hundred and twenty Fathom left, by which it is joined together. The lesser Part of the Isle, wherein is the Castle of *Ambony*, contains about a hundred and twenty small Towns, and the greater but four Towns and about seven Villages. The Inhabitants were heretofore Savages and Cannibals, and applied themselves to no kind of Agriculture, which made the Country appear a Wilderness; but of late Years they have applied themselves to cultivating the Ground, which being very fertile produces great Plenty of Oranges, Lemons, Cocons, Bananas, Sugar-Canes, besides Cloves. They continue still to be ignorant People, the only Skill they show being in the Management of a Dart, which they use with so much Dexterity, that at sixty Paces Distance they will hit a Crown-piece. They are famed for their Cakes made of Rice, Almonds, and Sugar, which the Inhabitants of the adjacent Islands take against the Bloody Flux; for their Rice-Bread, made in the Shape of our Sugar-Loaves; and for their small Gallies, which in Swiftnets exceed any in *Europe*.

It was first discovered by the *Portuguese* in the Year 1511; but the *Dutch* having afterwards also got Footing there, the *Portuguese* being retolved to spoil their Coun-

merce, set upon five *Dutch* Vessels in the Port of *Banda*; but being repulsed with Loss, revenged their Disgrace upon the *Ambonyans*, who were suspected to favour the *Dutch* in those Parts. *Stephen Farbgren*, two Years after, viz. on the 21st of *February* 1603, landed a certain Number of Soldiers near *Ambony*, in order to attack the Castle; but whilst he was landing his Artillery the *Portuguese* Governor, not daring to stand the Shock, surrendered the Place without a Cannon being shot, though the Garrison consisted of six hundred Men. Before *Mohammedism* was introduced in the Isles of *Java*, *Ambony*, and the *Moluccas*, by the *Persians* and *Arabians* trading thither, they were all *Pagans*; some of them continue to this; others, though circumcised, yet persevere in their *Pagan* Superstitions.

Nothing is more frequent here than to worship the Devil, though they are not able to tell you what he is. They affirm him to be an Aerial Demon, whence they give him the Name of *Lanibé*, i. e. Air, yet make him subordinate to another called *Lanibula*, as well as to him they call *Tatay*, who is a Degree lower than *Lanibula*. They give them one general Name, viz. *Tito*, i. e. Evil Spirits, and say that they appear to them in human Shape, when they are to produce their Oracles, and reveal unknown Things to them. To do this twenty or thirty of them assemble, and by the Help of a small Drum called *Tifa*, some Wax Candles, and certain Conjurings, as also a Sacrifice of Meat and Drink, make them appear before them. As they are of Opinion that what Ill befalls them comes from the Devil, they are very careful not to neglect his Worship; for which Purposes they have Wax Candles lighted in their Houses, where they sacrifice Meat and Drink to these phantastick Beings.

Their Circumcision is also different from that of the *Jews* or *Mohammedans*; for instead of cutting off the Prepuce, they only slit it, and that not till they are twelve or thirteen Years of Age. Their Marriages are soon made, and as soon dissolved; for every thing being agreed upon they use no farther Ceremonies, except that the Bridegroom's Father gives a small Present to the Bride, in lieu of which her Father makes the Wedding Feast, where they have their Music and Dancing. If a Wife have a mind to part from her Husband, she has no more to do than restore the Present; which done, she pours Water on her Husband's Feet, to intimate, that thereby they are both cleansed from all Impurities they have contracted during their Marriage, which is then dissolved, and either Party at Liberty to provide themselves another Spouse as they please. When they are to take a solemn Oath Water is put into a Dish, into which having cast Gun, Earth, and a Leaden Bullet, they dip into it the Point of a Halbert, Sword, Knife, or some other Weapon, and jogge the Dish with Water unto him who is to take the Oath, to put some in mind that all which has been cast or dipped into the Water, will be instrumental to his Destruction if he forswear himself. They have among them a certain Gang, who under Pretence of Witchcraft do Mischief to their Neighbours, either by Poison or other Means; they are called *Swang*; but whenever they are found out, they are sure to meet with very severe Punishment.

The Natives of *Ambony* are naturally itty, covetous, and void of Understanding; they commonly bury their Riches for fear of being robbed; and such their Supersticity that they are not to be brought up to any Trade. They are so far from any Knowledge that they have a notion such as any Characters among them. All they apply themselves to is Fishing, and cultivating their Gardens, upon the Fruit of which they live very miserably, though it is observable that they are generally strong and well-proportioned. The *Dutch* have three Ports in this Isle, viz. the Port *Cantora* or *Victoria*, and those of *Hiten* and *Laura*.

The Isle of *Banda*, which is three Leagues in Length and one in Breadth, lies twenty-four Leagues from *Ambony*, extending from North to South. It has some new Towns, the chief of which is *Nero*. The Inhabitants are very zealous *Mohammedans*; as they are always at War with some of their Neighbours, so they keep a constant Guard along their Coasts. Their Arms are a Scymitar and wooden Buckler, four Feet long, in the managing of which they are very expert, as being trained up to it in their Infancy.

Vessels in the Port of *Londa*, revenged their Disgrace upon Spectators to favour the *Dutch* in *gen*, two Years after, viz. on a certain Number of Soldiers to attack the Castle, but whilst the *Portuguese* Governor, not rendered the Place without a Garrison consisted of six hundred, was introduced in the *Moluccas*, by the *Persians* they were all *Pagans*; some others, though circumcised, Superstitious.

here than to worship the Deity, to tell you what he is. They believe in a Demon, whence they give him Air, yet make him subordinate as well as to him they call *Tar* than *Lantikila*. They give to *Tito*, i. e. Evil Spirits, and say them in human Shape, when they are to reveal unknown Things to them. Some of them assemble, and by the use of *Tifa*, some Wax Candles, and a Sacrifice of Meat and Drink, perform their Rites. As they are of Opinion comes from the Devil, they are his Worship; for which Purposes lighted in their Houses, where they think to these phantasmal Beings, also different from that of the Devil, or instead of cutting off the Prepuce, that not till they are twelve or thirteen their Marriages are soon made, every thing being agreed upon by the Women, except that the Bride shall Present to the Bride, in which she makes the Wedding Feast, where and Dancing. If a Wife have a husband, she has no more to do than which done, she pours Water into intimate, that thereby they are punished they have contracted with is then by dissolved, and each of themselves another Spouse as soon as they are to take a solemn Oath, into which having cast Gold, Silver, they dip into it the Extremity of a Halberd, Sword, Rapier, and give the Dish with which to take the Oaths, to put them in a golden cast or dipped into the Water, is Destruction if the former form them a certain Gang, who under the name of *Mitchel* to their Neighbours. Means; they are called *Mangas* found out, they are sure to meet their end.

Moluccas are naturally stupid, without any Religion; they commonly bury their dead, and such is their Superstition brought up to any Iride. They have no knowledge that they have not such of them. All they apply themselves to is in tending their Gardens, upon the Fruit of which they live, though it is observable that they are strong and well-proportioned. The most famous is, viz. the Port *Cannara*, *Uten* and *Lauro*.

There are three Leagues in Length, and twenty-four Leagues in *Ambon*, and South. It has some new Towns, viz. *Ta*. The Inhabitants are very idle; they are always at War with some of their Neighbours, and they keep a constant Guard, they are a Scythian and wooden, in the managing of which they are trained up to it in their Youth.

They make use also sometimes of Fire-arms, but what they put their chief Trust in is the Lance, being eight or ten Feet long, which they cast with such Dexterity and Strength, that they will run a Man through with it: Of these they commonly have two, which, after they have cast, they betake themselves to their Swords. They make use of a kind of light Gallies, having on each Side, just above the Surface of the Water, two Seats like Wings, where the Slaves are set to row. There are two allotted for each Seat, every one with his Oar, which being made like a hollow wooden Shovel, they thrust it as far as they can into the Sea, and in drawing it back, turn it about their Heads with such a Slight and Swiftness, that there are but few Ships that can overtake them with all the Sail they can make.

The Natives of *Banda* live very often to one hundred and twenty Years of Age. When they inter their Corps they are carried by twelve Persons upon a Bier or Coffin, covered with Calicoe, the Men first, and the Women following it; after it is buried, they return to the House of the deceased, where they feast together, order Incense to be burnt over the Grave for twenty-four Hours, and set up a burning Lamp at Night in a Hut made for that Purpose. The Men lead a very idle Life, leaving all Business to the Management of the Women, who are employed in breaking the Nutmeg-shells, and drying the Nut and Mace, the chief Thing they rely on for their Maintenance. As far as ever I could learn, the most excellent Spice grows no where but in the Isle of *Banda*, and the six following adjacent Islands, which make up the Archipelago called *Banda*, by the Inhabitants, viz. *Gunasi*, *Pera*, and *Lanter* (which is the best Road for Vessels), *Falowo*, *Pulam*, and *Basyngin*.

It is next to a Paradox to believe that these six small Islands should be able to produce such prodigious Quantities of Nutmegs as are sufficient for the whole World, unless it be considered, that besides a few Durians, Bananas, Oranges, and Cocoa-trees, the Islands are covered all over with them in one continued Forest, the Trees of which are loaded with Flowers and Fruits, which are gathered three times a Year, viz. in *April*, *August*, and *December*; but the best is gathered in *April*. The Tree itself resembles our Peach-tree, the Leaves whereof are somewhat lets and round. The Fruit is enclosed within a Husk as thick as that of our Walnuts, which, being opened, you see a Leaf very thin upon a hard Shell, which may be discovered through it. This Leaf is the Flower of Nutmeg or Mace; and to come to the Fruit, you must break the Shell. While the Nut is green, the Flower is of a Carnation Colour, which, after it is parted from the Shell, turns to an Orange Colour. It makes a most excellent Preserve, if done with Salt and Sugar. The Inhabitants make a good stomachick Ointment of Nutmegs or Mace, powdered and mixed with the Oil of Roses. The Inhabitants don't amount to above 12000 in all, amongst them not above 500 fit to bear Arms; yet are they so mucous and stubborn, that to bridle them the *Dutch* have two Forts here, called *Nafsu* and *Belgica*, where Vessels may anchor at nine or ten Fathom Water within Musket-shot, and that without the least Danger.

The *Moluccas*, properly so called, are no more than five in Number, viz. the Isles of *Ternate*, *Tidor*, *Motel*, *Mubiam*, and *Rachiam*, known to the ancient *Pagans* by the Names of *Cape*, *Douco*, *Montal*, *Maca*, and *Sague*, and situated all together within the Space of 25 Leagues. The Sun-beams are to penetrating here that they render the Earth as dry as a Pumice-stone, which not only sucks in all the Rains that fall, but also swallows the very Torrents near their Sources; but as they are not able to penetrate through the thick Forests, to the Ground here produces both Trees and Herbs; whence it is that those Islands are sufficiently stored with Bananas, Coconuts, Lemons, Oranges, Sandal, and Callumba, besides Spices of all sorts; but they produce neither Rice, nor any other sort of Grain; the Defect of which is supplied by the Tree, called by the Natives *Laudan*, and *Seguico* by the *Portuguese*, the Pith of which furnishes them with a kind of Meal for Bread, as the Leaves, when come to their full Growth, serve them for the Covering of their Houses, and the bigger Veins for Rattlers, as the lesser make good

Cordage: While these Leaves are young, they are covered with a Kind of woolly Substance, which affords Materials for Stuffs. They are not unlike the Cocoa-leaves, the Tree which bears them being commonly twenty Feet high, and the Trunk a Fathom in Compass; but being composed only of the Bark and Pith, is easily cut down, the first not exceeding one Inch in Thickness. The Pith is very white, and may be eaten without any farther Preparation, after the Strings of the Wood, which are mixed with it, are removed; but if they intend to make Meal of it, they beat the Pith to Powder, put it in a Sieve, made of the Bark of the same Tree, over a Tub, made of its Leaves, and by pouring a sufficient Quantity of Water upon it, separate the Strings from the mealy Part, which settles to the Bottom of the Tub, and being separated from the Water and dried, affords the Meal they call *Saga*. This they bake in certain Moulds of Earth, made red-hot, with incredible Dispatch. This Tree, which grows also in *Ambon* and some other Places, affords also a certain Liquor called *Thorack*, which tastes like Wine.

The Islanders, though not destitute of Cattle, yet live, for the most part, upon Fish. They have no Gold, Silver, or any other Mines, being furnished with Iron from the Island of *Ambon*. They are generally black, though the Women not so black as the Men, with black shining Hair, large Eyes and Eyebrows, and strong Limbs. They soon become grey, yet live to a great Age; are active rather than laborious, and very sociable in Conversation, but somewhat inclining to Boldness and Insolence, and in their Dealings crafty and deceitful: The Men wear generally Turbans, like the *Turks*, covered with Plumes. The King is distinguished from his Subjects by a kind of Mitre, clad in Drawers only of Blue, red, green, or yellow Sirtin. Some of these Islanders make use of a close-bodied Coat, fastened round the Shoulders, and cut below like the military Garment of the ancient *Romans*. The Women wear no Head-dresses, but lay their Hair smooth over their Heads, which they tie behind, and cover it with Plumes, or Flowers. Their Garments are of *China* Silk; but their chief Ornaments are their Bracelets, Rings, and Necklaces of Pearls, Diamonds, Rubies, and Emerals. The *Chinese* were the first that made themselves Masters of those Islands, and after, the *Persians* and *Arabians*, who introduced *Mohammedanism* here. Their ancient Customs are their only Law: They allow Polygamy, yet don't punish Adultery; but Stealing is a capital Crime.

At Break of Day certain Persons who are appointed for that Purpose, beat the Drum about the Streets to excite the People to the Performance of their matrimonial Duty. They use generally the *Malayan* Language, though every one of these Islands has its peculiar Tongue, which shews them to be defended from divers Nations. The Isle of *Ternate*, the biggest of the *Moluccas*, is situated in 489 25 Leagues from the Isle of *Banda*. Its Compass is about eight Leagues. It affords but little Provisions, except Goats and some Poultry; but the Almonds here are most excellent, the Shells being so hard that the Smiths use them instead of Coal. It produces also some Tobacco, but much inferior in Goodness to that brought from the *West-Indies*. The Town of *Ganma Lamna*, the Capital of the whole Island, consists only of one Street, 2500 Paces long, built along the Sea-side, the Houses being all of Cane or Timber; the Road is not fit for Anchorage, the Bottom being all rocky, which makes the *Dutch* Vessels always lie at Anchor near the Village of *Tellingamma*, within two Miles of *Malay*, betwixt the Islands of *Ternate* and *Tidor*.

But the chief Product of these Islands is the Clove, called *Clavus* by the modern *Spaniards*, by reason of its Resemblance to an ordinary Nail. The Tree that bears it is by those of the *Moluccas* called *Sigar*, the Leaf *Vacaqua*, and the Fruit itself *Chamque*. The Tree resembles the Laurel, its Leaves being however somewhat narrower, like those of the Almond-tree, shooting forth its Branches at the Top, not unlike the Myrtle. The Fruit is white at first, grows green by degrees, and brown when it comes to Maturity, but does not turn black till it be dried in the Sun, which is done in two or three Days. The Tree grows naturally without planting or cultivating, bears

Fruit the eighth Year, and lasts one hundred Years. The Fruit of it is gathered but once every other Year, because the Inhabitants break off the Buds the first, that they may have a more plentiful Crop the second Year. The Fruit is ripe from August to January. This Tree affords no Gum, by reason of its excessive Heat, the Fruit being so dry that the Inhabitants, to increase its Weight, put a Pitcher with Water, within ten Feet of their Clove-Bags, which is ticked up within two or three Days Time. The Chinese do the same with their raw Silk.

As the *Moluccas* yield more Cloves than any other Islands herabouts, this has misled some to affirm that they grow only here, it being certain they yield yearly Six thousand Barrels of Cloves, allowing Five hundred and an Half to a Barrel; though, at the same time, the Isles of *Ires*, *Moytarna*, *Cavaly*, *Sabugo*, *Margeron*, *Gamocora*, *Ambeyna*, but especially the Isle of *Varanula*, produce considerable Quantities, but not so good as those of the *Moluccas*. In the Midst of the Island of *Ternate* is a very high Mountain, full of Palms and other Trees, which has a most miraculous Well on the Top, which is so deep that 500 Fathom of Rope did not reach the Bottom, but to a very fair Spring, the Water of which no Body hitherto has ventured to taste, by reason of the sulphurous Exhalations, which, especially about the Equinoxes, issue from the Mountain, and sometimes cast red Stones at twenty Leagues Distance. This Mountain is covered with Wood near half its Height, but afterwards is excessive cold, having on the Top a very cold Spring, and a Lake of fresh Water, surrounded by Trees. They know not of any certain Difference of Season in these Islands, except that it generally rains more with the North than with the South Wind.

Serpents they have of thirty Feet long, but not venomous, living for the most part upon Fish. This Island has also a peculiar Creature, called by the Inhabitants *Cages*, which, as it feeds on Fruits, so it is always seen upon the Trees, its Tail being of such Strength, that it will hang by it to a Branch of the Tree, the better to come at the Fruit; it is in Shape not unlike our Rabbits; its Colour betwixt a Grey and a Red, with thick, curling, and soft Hair, round and serene Eyes, and very small Feet. As they have scarce any domestick Bird except the Parrot, so their Fowls are full of wild ones. The *Moluccas* produce a certain Wood when Lumps, sparkles, and flames like common Wood, but consumes not, though you may rub it to Powder with your Fingers. Not far from the Port of *Ternate* grows a certain Sorub, called *Calopa* by the Inhabitants, from which falls a Leaf, which, by degrees, is supposed to turn to a Butterfly. The Isle of *Tidor* is at least as large and fruitful as *Ternate*, the Inhabitants here being so industrious as to improve the Fruit of the Clove-tree, by pruning and watering it, which, by this means, becomes both rarer and larger than the rest. Here they have also the best white Saual-wood, and those Birds called *Paveras del Catio* by the *Spaniards*, and by us Brit's of *Paradise*. After they have caught them, they cut off their Feet close to the Body, so that when the Flesh dries the Skin and Feathers join indissolubly together, so that many have been of Opinion these Birds are without Feet.

The *Dutch* are Masters of *Malaya*, a well fortified Town of *Ternate*, as also of the Port of *Tanuco*, and that of *Mertas* on *Har*, of the Port *Baneculd* in *Bachiam*, and three more in the Isle of *Machiam*, at *Tassaco*, *Tavaco*, and *Goghata*; they have also a Strong-Fort in *Mohr*. The Kingdom of *Machiam*, which is governed by its own Sovereign, being so well stocked with Sago that the Inhabitants have sufficient wherewith to subsist without Labour, has made them so idle and careless, that they are scarce able to raise 200 fighting Men. The Isle of *Machiam*, which is subject to the King of *Ternate*, is about seven Leagues in Circumference; the *Dutch* made their first Voyages in it in the year 1606, which Time they have raised three Forts, the first at *Guethpas*, situate upon an Eminence, and the second at *Tour* Ballows of Stone; as is also the Fort of *Tassaco* Fort situated upon an Akrot at an hundred and fifty Leagues from the South shore, it is bigger than the first. The Fort of *Baneculd* has only two Battions. Besides these three, there are properly called the *Moluccas*, there are

about seventy-two more, subject to the King of *Ternate*, from *Abindano* on the North Side, and *Bina* and *Cerao* on the South, and between the Continent of *New-Guinea* to the East.

14. The *Philippine* Islands, which lie to the North of the *Moluccas*, were discovered by *Ferdinand Magallanes* in 1520, but no Establishment was made there till 1565, when they got the Name of *Philippines* from *Philip II.* then King of *Spain*. The first Settlement of the *Spaniards* was made in the Isle of *Zebu*, and about six Years after that in the Isle of *Lucon*, now called *Manilla*, from its chief City, which is situate in an Isle made by an Arm of the sea in the most Southern Part of the Isle, the whole Circuit of which is three hundred and fifty Leagues; it is seven Leagues from *China* to the North, and two hundred and seventy Leagues to the North-East from *Japan* to the East; it is encompassed by the Ocean, and to the South of it a great Archipelago, which is divided into five Seas, and floored with a vast Number of Islands. The Fertility of the Soil, joined to the Industry of its Inhabitants, makes this Island abound in Corn, Rice, Fruits of all sorts, and Drugs; as likewise in Beef, Swiffoes, Peat, Goats, and Hogs. Their Cocoa Wine they keep till it becomes as strong as *Spanish* Wine; their Lemons, Oranges, Figs, and Peas, are the best in the World, and they breed both in domestick and wild Fowl, and Birds. They have a peculiar Way here of killing the Crocodiles, which they have great Numbers: He who is to engage with this Creature, gantlets his left Arm to his Elbow, having in the same Hand a Truncheon of a Foot long, play at both Ends, with a Dagger in the other: Thus armed he goes into the Water up to the Waist, and while the Crocodile is making at him with his Jaws open, he thrusts his left Hand down his Throat, so as to keep them from shutting, and in the mean while stabs him with the Dagger in the Throat, till he drops down dead.

The *Philippine* Islands produce more Tygers, Lions, Bears, and such-like wild Beasts, than *Africa* does; and abounds in *Algalias*, which are the Creatures that produce Musk, and Civet Cats. The *Chinese* drive a vast Trade this Country with the *Spaniards*, who buy their Cloves, Silks, Porcelain, Gun-powder, Sulphur, Iron, Steel, Copper, Meal, Nuts, &c. and carry them to the *Indies*, where these Things are sold at a very dear Rate. In the City of *Manilla* resides a *Spanish* Archbishop, who has three Bishops under his Jurisdiction, for the better Government of the *Philippine* Islands; and these Bishops, since they have over these ignorant Wilds, that they keep them in Subjection without any Punishment. The Archbishop is also Viceroy of those Islands, and has the Management of all publick Affairs, in Consultation with the King's Council appointed in that City, who is very large, and its Houses built of Stone, as are the most of the Way. Within and about it live above a hundred thousand *Chinese*, and vast Numbers of the same Nation, who come there every Year for the Convenience of Trade. From *December* to *April* you may see in the Harbour which is defended by two wooden Forts, several *Japanese* and *Chinese* Junks. This Place is also much frequented by the *Japanese*, but not in near so great Numbers as *Manilla*. *Manilla* is notwithstanding which, the *Spaniards* are very much more jealous of the first than the last.

15. *Japan* is composed of many Islands, and is a very large Army of the Sea, extended to a great Distance in some Places scarce ten, in others thirty Leagues in Breadth. On the East Side it hath Neighbourhood to the North *Tartary*, on the West *China*, and to the South, with Part of the *Terris Australis*. The present Empire consists of sixty-six lesser Kingdoms, and of two hundred and fifty-three whereof are comprehended under the two Kingdoms of *Meca* and *Amagance*, and of the seven great Kingdoms of *Mimo*, and the remaining Part in that called *Xinonm*. According to the *Japanese*, they are not sure Day uncertain, whether the whole Empire be an Island annexed to the Continent, so far as it is in the Province of *Quanto* to the Borders of the Province of *Tsingin*, a twenty-seven Days Journey to the East North East, and then they cross an Arm of the Sea of eleven Leagues, which brings them into the Province of *Yamato*.

to the King of Ternate, Bido, and Coroon, continent of New-Guinea.

which lie to the North of I by Ferdinand Magellanus was made there till 1606, Philippines from Philip II. Settlement of the Spaniards and about six Years after that Manila, from use of a City, by an Arm of the Sea, the whole Country is thirty Leagues, it is twenty-fourth, and two hundred East from Japan to the East, and to the South, the divided into five Sorts, and of Islands, the King of try of its Inhabitants, makes Rice, Fruits of all sorts, and Buffaloes, Peac, Geat, and they keep till it becomes as Lemons, Oranges, Fish, the World, and the, and Fowl, and Birds. They have the Crucifixes, it was he who is to cry go with him to his Elbow, saying the a Foot long, plain both other: Thus and he goes faint, and while the mouth is aw open, he thrusts his hat is to keep them from striking him with the Dagger in the dead.

produce more Tygers, Hirs, Belts, than Africa, and are the Creatures that produce the Chinese drive vast Islands, who buy the Camber, Sulphur, Iron, Cloves, and carry them to the are sold at a very dear rate, by a Spanish Arch-bishop, who is a fiction, but he is the of Islands, and has the of War, that he not any thing else. The of those Islands, and the Affairs, in certain, and in that City, where a of Store, and the live above the of the same Nation, the veniency of Trade, that may be in the Harbour, a Ports, are very, also much, to great Numbers, which, the Spaniards, in the last

of many Part, extended from a, in others they, it hath not, it hath not, Terr: And the lesser Kingdoms, pretend of what the two Magance, and the and the remaining that to the Spaniards, they the whole Empire be an, forasmuch as in the Province of the Province of Ternate, by to the East, and the Sea of even, the Province of

by inaccessible Mountains, that nobody hitherto has been able to discover the Extent of them. The whole Empire of Japan being divided into many Provinces, the same are committed to the Government of many Princes and Lords, who have their Secretaries assigned them by the Emperor himself, whole Business it is to have a watchful Eye over them, and to give an Account of their Transactions, and especially concerning their Revenues, which are very great, and according to the Computation of the Japanese, amount yearly to eighteen Millions four hundred thousand Kockins, each of which make four French Crowns, out of which they are obliged to maintain a certain Number of Forces, both Horse and Foot, for the Emperor's Service, in proportion to their Revenues, which consist chiefly in Lordships and Demesnes. They have Mines of all Sorts, &c. so that he who has a thousand Kockins per Annum is obliged to maintain twenty Foot, and two Horsemen; by which means the Emperor is able to raise an Army of three hundred and sixty-eight thousand Foot, and thirty eight thousand eight hundred Horse; besides the hundred thousand Foot and twenty thousand Horse he keeps up as a standing Force, which is to much the less to be admired at, since some of these Lords have such vast annual Revenues, that, according to the before-mentioned Proportion, they are obliged to furnish one thousand two hundred Foot, and a hundred and twenty Horse.

All the great Lords of Japan have three Names, viz. their proper Name, that of the Family, and a Surname, which they commonly take from the Province, City, or Castle they govern. They have also a Custom of changing their Names twice in their Life-time, the first, given them in their Infancy, being altered at the Age of twenty-six, and that again at fifty or sixty Years of Age. They have another Custom in Japan for the Slaves to offer themselves a voluntary Sacrifice to their Masters whenever they die, which is done by a solemn Engagement, and confirmed by a Bottle of Wine. As this is chiefly done by those Slaves, to put an End to the Miseries they endure in their Life-time, to there have been some who have desired their Masters to bury them under the Foundation they were going to lay for some considerable Edifice. Their Pagods or Temples are of Wood, about seven or eight Fathom square, and raised three or four Feet from the Ground. They have small Towers, with Lights in them on all Sides, and within certain Statues, unto whom they address their Prayers. The King and great Lords have many fair Castles belonging to them, among which those that are fortified are garrisoned by the Emperor; but their Cities are generally without any Fortifications, and if some few of them have any, they are only single Walls. Their Cities are built after the same manner, each Street having two Gates, which are shut up, and guarded in the Night-time. They have no Revenues belonging to them, neither pay they any Impostions, except a very inconsiderable Rent for their Dwellings to the Governor, for whose Use they are also obliged to keep a man at work at certain Times; but this does not happen very often. The Governors having certain Demesnes allotted them for their Revenues, and among others the Advantage of Fishing, especially of the Whale, of which there are taken yearly near three hundred upon the Coast of Japan; but they are neither so big, nor so fat as those in the Northern Parts.

Every Japanese, of what Condition soever, is absolute Master of the Life of his Slave. They are so cruel in their Punishments, that the least Trespass is punished with Death. Gaming for Money, or killing any Person, though in his own Defence, is capital, and so is Theft, though it were but for a Penny; and in Offences of a more heinous Nature, the Fathers, Brethren, and Children, are put to Death for the Crime of a single Person; nay, the Wives and Daughters, though ever so innocent, are also involved in the same Misfortune; for they are made Slaves, and their whole Substance is confiscated. Thieves are fastened with a Rope of Straw to a Cross, and then the Executioner runs a Pike into the right Side up to the left Shoulder, and again from the left Side up to the right Shoulder; other Malefactors are fastened only to a Post, with their Hands stretched out, and held up by two Persons, and so the Executioner runs them with a Pike through the Neck

into the Heart. These Crimes which involve the whole Family in the same Punishment, are Extortion, Coning, Firing of Houses, willful Murder, and Ravishing of Women, and are punished by crucifying with the Head downwards, by boiling in Oil or Water, tearing them to Pieces by four Horses, &c. Lying is also capital here, especially if told before a Judge.

Their Princes and great Lords, if guilty of any Crimes, are banished into the Isle of *Yatsen Sma*, lying four or five Leagues from the Province of *Yeddo*. It is all Rocks, without any Road or Harbour, producing nothing but Mulberry-trees and Silk-worms, which furnish those miserable Prisoners with Materials for the making of Stuffs, in which they employ their Lives, and are relieved from time to time with most miserable Food. It is computed that the Expence the Emperor of Japan is at yearly in his Court, amounts to four Millions of Kockins, and five Millions more for his Governors and military Officers. His ordinary Residence is in the Castle of *Yeddo*, which is two Leagues in Circumference, and strengthened with a triple Wall, and as many Mounts all of Free-stone. The Gates are covered with strong Iron Bars, and Lodges over them, which contain three hundred Soldiers, for a Guard to each Gate; his own Palace, with the Apartments for the Women, stand in the Centre, and round about it the Houses of the Princes, and other great Lords, all richly gilt, and sumptuously furnished, their chief Emulation being to outvie one another in this kind of Magnificence, which is amongst them looked upon as the greatest Mark of Respect they can pay the Emperor, who never flies abroad but in the Company of a great Number of those Lords, and their young Kinred, who are the Guard of his Body; and by applying themselves to Music, Play, Writing, Painting, or the Management of publick Affairs, render themselves qualified for higher Employments. They are all clad in Black, and as they march along the Streets, do not to much as utter a Word.

As the Revenues of the Emperor of Japan are so great, that the ordinary Income of two Months is sufficient to defray his whole Year's Expence, his Treasure must be immense, most of which consisting in Gold and Silver, is laid up in vast Chests, inclosed in several Towers belonging to the Castle, besides what is disposed of in the Country. Their Horse are armed with Croffets, Fire-locks, not much longer than our Pistols, with Pikes, Bows, Arrows, and Cymars. The Foot have only Head Pieces, and Cymars, each a Musket, Pike, Half-pik, and broad Simitar: Each Company consists of fifty Soldiers, a Captain, a Lieutenant, and ten Corporals; five of these Companies make a Battalion, commanded by a peculiar Officer, and ten Battalions a Brigade.

The Emperor of Japan has a numerous Council, tho' only four are charged with the Management of all important Affairs, and are to attend daily at Court: Some of these have two Millions of Crowns, others three or four hundred thousand Crowns, others four or five hundred thousand Crowns yearly Revenue; but their Expences are proportionable to their Revenues, being obliged to live at least half the Year at Court in vast Splendor, maintaining perhaps a Retinue of three hundred Persons, and above a thousand in their Families, and that in a Place where Provisions are excessive dear; not to mention the vast Expences they are at in their Buildings, and the Entertainments they are obliged to give the Emperor whenever he is pleased to honour them with a Present, perhaps of a Crane, which he has taken in Hunting. As great Persons are not to marry any Wife but what is presented to them by the Emperor himself, so they are put to vast Charge in giving them all the magnificent Entertainment, and all the Equipments they can, except their Liberty, which they must resign to their Husbands, and are not permitted to go abroad above once a Year to visit their nearest Relations; notwithstanding the Wives in Japan have the Reputation of great Retervedness, and being, beyond all others faithful to their Husbands, of which many Instances might be alledged, which for Brevity's sake I omit. There are, however, those who ascribe this Retervedness rather to the Severity of their Laws, than their Inclinations, it being certain, that even the least Suspicion of Dishonesty or Marriage

Marriage is punished here with the utmost Cruelty; so that if a Husband finds his Wife locked up in a Room with another Man, he may, without any farther Enquiry, kill them both. The better to allay the Heat of Youth, and the Danger arising from thence in respect of Adultery, they have in the Cities, nay, even in most of the Inns upon the Road, certain Prostitutes, who are most of them Slaves, and expose themselves to Travellers for Money; and if a Man is to stay for any Time in a Place, he may hire one of these Concubines from their Masters at a certain easy Rate, and keep her for his own Use.

As for their Devotion, it may be said, that they have scarce any at all, the most devout among them seldom praying in publick above once a Month before their Idols, which stand in their Temples; near them are their Sepulchres covered with great Tomb-stones two or three Feet high, and those of Persons of Quality have a little Pillar erected near them, containing their Names, and certain other Inscriptions, in the Nature of an Epitaph. The Ecclesiasticks are divided into twelve different Sects, eleven of which obtain from living Creatures, and from Women. If they break their Vow they are punished with Death. Those of the twelfth Sect are allowed to marry, and eat all sorts of Provisions; the Chief of this Sect is the Head of all their Clergy, and their Temples are endowed with many Privileges and settled Revenues; whereas those of the other Sects are maintained only by Alms. Some among the *Japanese* believe the Immortality of the Soul, and the Rewards and Punishments of another Life for ever; but the most have so little sense of Religion that they meet in their Temples to drink, and commit other Debaucheries; whence it is also, that never any such thing is heard of as Controversy about Religion, though they are such irreconcilable Enemies to the *Christians*, that finding Death not to be sufficient to shake their Constancy, they invented many cruel Methods to make them renounce their Faith, which, however, at last they were not satisfied with, unless they could discover another *Christian* to release them from their Torments, which are so various, as would almost fill a Volume.

Their Houses are slightly built, and seldom above one Story high, because the Country is much subject to Earthquakes; they are raised three or four Feet from the Ground, and convenient enough within, being divided into several Apartments, some of which are for the Men, the rest only for the Use of the Women, where the best Part of the Furniture is bestowed; they are also very nice in their Gardens and Orchards; they are very obliging in their Conversation, especially in their Visits, when they present their Guests with Tobacco, Tissue, or Tea, and with Wine, of the last of which they will take a very plentiful Share; but are sure never to quarrel over their Liquors. Except at the Inns, for the Convenience of Travellers, no Drinking-houses are allowed in *Japan*; nay, not so much as a publick Cook's Shop, it being their Custom to make their good Cheer in their Houses, where, among other things, they entertain one another with their Musick, the chief of which is a kind of Lute, with four silk Strings, which they strike with a Peg of Ivory. Their Wine, or rather Hydromell, is made of Rice, Sugar, and Honey, and is as strong as any Wine whatever. Their Marriages are contracted in consequence of the Agreement of the Relations. The Bride and Bridegroom being not permitted to see one another till it is to be consummated, those of a common Rank may soon be divorced, and if they dislike the Wife, send her back to her Relations; but People of Quality, notwithstanding any Disagreement, maintain them in their Houses.

Their Children they educate with all imaginable Mildness, without any beating, as well at home as at School, wouther they are not sent till they be seven or eight Years of Age, and when they come to Man's Estate, the Father assigns to his Son a certain Part of the Houle, and of his Employment, nay, perhaps the whole, relieving only a certain Allowance for his Subsistence to himself; but their Daughters have neither Dowry, nor the least Share in their Father's Estate. They are to meet in Point of Honour, that they will rather die than receive an Inch from it; and a *Japanese* will rather run the Hazard of the Ruin of his

Family, than break his Promise to his Friends, which is the Reason most of their Delinquents will rather endure the most exquisite Tortures than discover their Accomplish. The *Japanese* having such vast Quantities of all things, seldom deal in any foreign Commodities, but leave that Commerce to Strangers, especially to the *Chinese*, who bring thither the Product and Manufactures of their Country; though ever since the ancient good Correspondence between those two Empires has been interrupted, the *Chinese* are forbidden by their Kings to send Goods into *Japan*, and therefore are obliged to carry on this Commerce, under Pretence of transporting their Commodities to some other Parts of the *Indies*, unto which they are the more encouraged by the vast Hopes of Gain. All Commodities, either imported or exported out of *Japan*, passing free, without paying the least Duty or Custom.

The whole Empire of *Japan* uses but one and the same Language, which is quite different from the *Chinese*, as well as their Characters; as they always use but few Words, they write every thing with Pencils in certain short-hand Notes in a very little time; their Accounts they keep by the means of certain small Beads, which they thread upon little Sticks like a square Board. They are not deficient of Books nor Libraries, the *Dairo* (who formerly was the Sovereign of the Country, and still retains the Supremacy over the Clergy) keeps the publick Accounts, and writes the Chronicles of the Country; neither are any other Lords, except the Gentlemen of his Houle, and such Lords and Ladies as are descended from his Family, allowed to write Books, which makes them constantly apply themselves to Learning. They have but one kind of Money; our Gold is of the best kind, but their Silver none of the best; Of Gold Coin they have three Sorts, one where is valued at forty-eight Taals, each of which being worth five Crowns Sterling, amounts to twelve Pounds Sterling. The second sort are worth each one Taal, and a fifth Part, and the third one Taal, and a sixth Part. Their Silver Coin goes by Weight, being in the Form of Ingots, to divide a certain Piece commonly amounts to fifty Taals. They have also a lesser Silver Coin made in the Shape of a *Trom*, but which goes likewise by Weight.

The *Japanese* do not geld any Creature, so that there are well stored with all sorts of Cattle, as well as horses and small birds. They also abound in mineral and hot Waters: There is a certain hot Spring here which issues into its Waters duly twice every twenty four Hours, without Violence, that though the Water rises and falls several times, which are laid on the Top of the Hole to the height of twenty or twenty-four Feet, it is so hot that it will burn the Heat of boiling Water, and burns every man it touches at its first coming out; but being received into certain Pipes into the adjacent Houses, it is reduced to such a Degree of Heat, that it is convenient for Bathing. These Mineral Waters are sufficient Proofs that there are great stores of good Mines of all Sorts; and Experience has shewn, that for they have Gold, Silver, Copper, Tin, Iron, and Lead of their own, as well as Cotton, Flax, Hemp, Silk, and all manner of Provisions in great Plenty. Their Physicians have singular Reputation as to their Ability in Chirurgery is uncommon among them as yet. They make frequent Use of *China* Root and Rhubarb, which, as well as most of their other Medicines, they make into Pills. The *Portuguese* and *Spaniards* found it no hard Matter to settle themselves in *Japan*, and their religious opinions took so well with the Inhabitants, that they were permitted to build divers Churches in the Kingdom, but the *Spaniards* not being able to contain themselves within the Bounds of Modesty, their domineering Temper, and such a Jealousy and Aversion in the *Japanese*, that they set upon them, burnt their Ships, and, in it, banished them the Island under Pain of Death. The *Dutch* began to trade there in 1611. Some of their Relations affirm the City of *Macao* to be twenty-one Leagues from *Compa*, and that the City of *Offack* and *Burg* are but their Wealth not inferior to any of the *Indies*.

The Air of *Japan* is very moderate and healthy, but changing rather to Cold than Heat. They sow in *May*, but do not reap till *September*. They have neither Oil nor Butter, and have an Aversion to Milk, which they

 try moderate and healthy, but
 than Heat. They sow in *Ma-*
rice. They have a rather Old
 Avulsion to Milk, which they

consider as Part of the Blood and the Receptacle of the
 Souls of Beasts. They will not feed upon the Flesh of
 any Beasts, but are great Lovers of all sorts of Wild-
 Fowl and Venison. Their Cedars are so big here that they
 make Masts of them for Ships. The Complexion of the
 Natives is inclining to brown; and for the rest, they are
 lily and strong limbed, hardy, and patient to undergo any
 Labour, as well as the Injury of the Seasons, never changing
 their Cloaths either Winter or Summer, and very mode-
 rate in their Diet. The *Japanese* are distinguished into five
 several Ranks; the first is that of the Prince, Lords, and
 great Officers, both Civil and Military; the second of the
 Clergy; the third of the Gentlemen and Merchants; the
 fourth of the Tradesmen and Seamen; and the fifth of La-
 bourers. Once in five Years the Emperor of *Japan* has
 an Interview with the Dairi at *Mezco*, which is very re-
 markable for its Magnificence, and the great Presents made
 to the Dairi, an ample Account of which being to be
 found in the *Dutch* Relation of the Director of the said
 Company in *Japan*, we will pass by the Particulars of it
 here, our Intention being only to give the Reader a short
 Relation of what we have received from very good Hands,
 and leaving the rest to be completed by those who have
 since had the Opportunity of taking a View in Person of
 that Country.

16. After the Banishment of the *Japanese* out of *China*,
 the *Chinese*, to avoid the Penalties inflicted on such as
 should trade with them, made use of the Isle of *Yayo-*
oyang, whether they carried their Commodities, in order
 to continue their Commerce with those of *Japan*. The
Dutch being excluded from the Commerce of *China*, fol-
 lowed their Foot-Steps, and, in 1632, settled themselves
 in the said Island, as the most convenient Place in all the
Indes for carrying on Trade both with *China* and *Japan*,
 there being a free Passage here all the Year, without being
 obliged to stay for the Monsoons, which in most other
 Places last for six Months. The *Dutch*, to lay, being sen-
 sible of this Convenience, built immediately a Stone-Fort
 of four Battions on the Downs, within half a League of
 the great Isle of *Formosa*, which is divided from this Isle
 by a Channel only, which, though not very deep, yet af-
 fords a safe Harbour for Ships against any Winds.

For the better Defence of the Entrance of this Channel,
 the *Dutch* have built a strong Redoubt called *Zeeland*.
 The Isle of *Formosa* itself is about thirty-two Leagues
 distant from the River of *Canton*, and the *Chinese* Island
 called *Phoenix*, extending from S. W. to the N. E. in
 Compass an hundred and thirty Leagues. It is full of Vil-
 lages and Inhabitants, which are not governed by any
 single Prince, but such as they choose themselves for their
 Magistrates. It has many Rivers full of the best Fish;
 their Forests are well stocked with Wild-Fowl and Veni-
 son, and their Meadows with Cattle, besides Deer, Wild-
 Boar, Hares, and Rabbits. Their Forests produce a kind
 of Horfes, with Hams like a Deer, called *Obawang* in their
 Language, the Flesh of which is a great Delicacy; as also
 another Creature, not unlike our Bears, but of a very large
 Size, the Skin of which is much esteemed in those Parts.
 Their Grounds are very fertile, but neglected, which
 make Fruit very scarce, and what they have, not very
 grateful to the Taste. It produces also some Ginger and
 Creamer, and, as the *Chinese* relate, Gold and Silver;
 but the *Dutch* have hitherto found none of these Mines
 worth working after. The Places in which the *Dutch* have
 their Settlements are, for the most part, along the Sea-
 shore.

The Inhabitants appear like Savages, being of a more than
 ordinary Size, black and hairy all over their Bodies, but in
 their Conversation obliging, honest, and good-natured;
 their Women are not so strong an Hair, but inclining to
 Ruffs, and yet not ill shaped. They wear a sort of Gar-
 ment round the Middle; but when they bathe themselves
 which they commonly do twice a day in warm Water)
 they, as well as the Men, strip themselves stark naked,
 and make no great Account whether they are seen by one
 or not; for the rest, they are very constant Friends,
 and religiously observe the Arguments that they make
 with Strangers, Treachery being a Thing abominable
 among them. They neither want Industry or Money,

being very docile in any thing they apply themselves to.
 Though their Grounds be very fertile, and able to produce
 much more than they do, they are contented to live up-
 on their small Quantity of Rice, which is raised by the
 Industry of their Wives, who, instead of Ploughs, culti-
 vate and dig the Ground with Spades, transplant and cut
 the Rice, and after having dried as much of it every
 Night in the Chimney-Corner as will suffice the Family
 the next Day, heat it early in the Morning in a Mortar;
 the Mens Minds being wholly taken up with hunting, es-
 pecially till they are forty Years of Age, before which
 Time they seldom mind any thing relating to Agri-
 culture.

They sow also three sorts of Fruits, called by them
Pingb, *Quach*, and *Taraun*, not unlike Millet; and a cer-
 tain sort of Pulse, resembling our French bean; some
 Roots they have likewise, which might serve them instead
 of Bread, if they were not furnished sufficiently in that
 respect with Rice. Besides this, they have Ginger, Cin-
 namon, Sugar-canes, Bananas, Lemons, and a great Store
 of Areca, not to mention several sorts of Fruits and Pulse
 not known in *Europe*. Instead of Cocoa-Wine, of which
 they are destitute, they make a certain Mixture of Rice,
 which, being soaked in warm Water, they beat it in a
 Mortar till reduced to a Paste; this they mix with Rice-
 meal chewed instead of Leaven; and having put it into an
 earthen Vessel, fill it up with Water, which, after it has
 fermented and stood two Months, affords a very pleasant
 Liquor, which is stronger or weaker, according as it is
 kept, and the older the sweeter it is, and may be kept
 good thirty or thirty-five Years. When they go abroad a
 hunting they make use of Snares, small Pikes, Bows, and
 Arrows; their Nets they spread in the open Fields, or
 cross the Highways, and then drive the Wild-Beasts into
 them.

Sometimes the Inhabitants of several Villages make a
 Hunting-Match, and dividing themselves into divers Par-
 ties, armed with Half-pikes and Lances, send their Dogs
 into the Woods; by which means having forced the Wild-
 Beasts into the Fields, they encompass them on all Sides,
 sometimes for a whole League, and so with their Pikes
 kill all those that come within the Ring. These Lances, or
 rather Darts, are of Cane, six or seven Feet long, with se-
 veral Hooks, which, being fastened into the Flesh of the
 Beasts, are not to be pulled out; but as the Iron is not well
 fastened to the Wood, but that with the running of the
 Beasts through the Bashes it comes off, a Cord is tied to
 both, and a little Bell to the Iron, so that the Lance annoys
 the Beast, and the Bell discovers its Passage wherever it
 runs. By this means they catch vast Numbers of Deer,
 the Skins of which they exchange with the *Chinese* for
 their Commodities, they seldom relerving any thing for
 their own Use but the Umbles and the Entrails, which
 they eat and eat half corrupted, being not cleaned of the
 Filth before they were tasted.

When one Village happens to be at War with another,
 they first declare it openly against one another, which
 being the Signal to be upon their Guard, they do not attack
 by open Force, but dividing themselves into small Troops,
 perhaps of twenty-five or thirty Men, lie in Ambush near
 the Village they intend to attack till Night, when they fit
 upon the Houses, which lie dispersed in the open Country,
 till perhaps they can light upon an aged Man; they kill
 him, cut off his Head, Hands, and Feet; nay, if they
 have Time enough, cut the whole Body into small Pieces,
 that every one of them may take home a Piece of it along
 with him as a Mark of his Bravery; but if the next Vil-
 lage happens to take the Alarm, they are glad to be con-
 tented with the Head alone, or perhaps a good Lock of
 the Hair, which they carry home in Triumph, as an un-
 doubted Sign of their Victory; when they intend to make a
 very bold Attack, they enter the Village by Night, force open
 a House, kill all they meet with, and to betake themselves
 to their Heels, for fear of being pursued. When they en-
 gage in the open Field, their chief Aim is to draw one an-
 other into an Ambush; but the Death of one Man com-
 monly decides the Quarrel, that Side which has lost him
 retreating immediately. Their Arms are Pikes, but without
 Hooks; their Backs are so large, that they shelter their
 whole

whole Body; but their Swords short and broad. Besides which, they also make use of Knives, or Bayonets, like those of the *Japaneſe*. Sometimes certain Villages enter into a Confederacy againſt divers other Villages, in which caſe they do not chooſe a General, or any Commander in Chief, but ſuch among them as have acquired ſome Reputation of Courage, by having cut off ſome of their Enemies Heads, are followed by a certain Number of Volunteers, who go abroad in Parties, and ſurprize their Enemies.

They commonly engage in War againſt the Island of *Saſon*; the Inhabitants thereof are ſo ſuſpicious, that they will not let a Foreigner or others ſet a Foot on Shore, not the *Chonge* themſelves, who come thither to trade with them, but are forced to remain on board their Veſſels, whither the Planters come to exchange Commodities with them. If they are fo happy as to carry off an Enemy's Head, or perhaps only a Lock of his Hair, or a Pike, they carry it in Triumph, as a Sign of their Victory, appoint a publick Thankſgiving-day, ſing Hymns, and offer Sacrifices to their Gods. He who has done the Expedition, is looked upon ever after as an extraordinary Man, has particular Reverence paid him by all the reſt, and he receives the Head, or Pike of his Enemy, as a moſt precious Relick in his Family, which they value beyond any Gold or Silver. No body here claims any Preference above another more than what is allowed to Age. Each Village being governed by twelve Senators, choſen every two Years out of the moſt aged Perſons, who are not inveſted with any other Power or Authority, than that of calling together the whole Village in one of their Temples, and propoſing to them what they think neceſſary to be done, making uſe of all their Eloquence (or which they have ſufficient Share beſtowed upon them by Nature) to perſuade the Choice of the Fanatics there preſent to a Compliance with what has been propoſed to them, which they are at Liberty to accept of or reject according as they think fit.

The only Power thoſe Senators are inveſted with, conſiſts in this, that they ſee the Commands of their female Preſts put in Execution, take care that Satisfaction may be given to ſuch as are injured, not by any corporal Punishments, but by enjoining them to give a Piece of Cloth, Deer ſkin, ſome Rice, or Perhaps a Pot of Brong Liquor, as an Attonement to their Adverſaries; for thoſe Magiſtrates have no Power to puniſh Murder, Theft, or Adultery. In the laſt caſe the Matter is commonly compoſed by the Mediation of the Relations on both Sides. If any can be robbed, he muſt, accompanied by his Friends, to the Houſe of him who has ſtole his Goods, and with their Aſſiſtance forces him to make an immediate Reparation; and what is agreed upon betwixt them, he carries away with him to his own Houſe. In caſe of Adultery, the injured Husband goes, without any farther Ceremony, to the Houſe of the guilty Man's Caſe, takes from him two or three Eggs, in the ſection of the Affront put upon him. We may ſay here, that there is no Difference of Conſcience among them, which is ſo abſolutely true, that the very Names of Maſters and Servants are not to much as known among them. All the Reſpect they pay one to another is owing to old Age, which is in ſo high Eſteem among them, that a young Man meeting an old one, goes out of his Way, and turns his Back to him till he is paſt by; ſuch is the Reſpect the young People ſhow to their Elders, that they will not reſuſe them calling and ſaying to them, though it ſhould be to go three or four Leagues, to their Hairnets. Men are forbid to marry till they are at leaſt twenty Years of Age. They do not let their Hair grow below their Ears till after beards are grown; and inſtead of Sciffes, or Razors, make uſe of a Crooked Knife, with which they cut it upon a Piece of Wood. The Hair of their Bards they draw out with their Fingers.

Men always let their Hair grow, and may marry as ſoon as they pleaſe. The Courtſhip is performed by the young Man's ſending Relations, whom he lends to the young Woman's Relations, or Friends, to ſhow them ſome little Preſent, ſuch as willow upon his Mother, which if it is accepted of, the Match is made, and he may confe-

mate the Marriage the next Day if he pleaſe. The Preſents commonly offered to the Bride conſiſt in ſome Silk or Callico Scarfs the Women wear round the Waſte ſome Waitcoats, Bracelets of Cane, ten or twelve Rings of Deers Horn, four or five coarſe Cloth Garters, ſome little Veilments made of Dog's Hair, ſome *Chonge* Garments, a Bag of Dog's Hair, and four or five pair of Stockings of Deer-ſkin, amounting perhaps in all to about 140 Crowns; the poorer Sort are content with a Prefent of a few Bracelets, and two or three Garments, not amounting to above three or four Crowns. When the Marriage is to be conſummed, the Bridegroom gets into his Mother's Father's Houſe by ſtealth at Night, and without being ſeen by any body, and ſo creeps into her Bed. He continues thus for many Years after, always coming into the Houſe at Night, and going thence in the Morning before Day-light, the Wife living all this while in the Father's Houſe, till her Husband be forty Years of Age, and never ſee one another by Day, unleſs ſhe happens to be at Home alone, or elſe in the Field. The Women are obliged not to bring any Children into the World, if they are thirty-five, or thirty-fix Years of Age, but deliver their Children in the Womb, by calling the Mother Preſticeſs to kneel upon their Belies till they come in Abortion.

As their Marriages are ſoon made, ſo they are ſoon diſſolved; for if they grow weary of one another, they may divorce; which Liberty is equally uſed by both Parties, with this Difference only, that if the Husband lends away his Wife without any Cause, he muſt give the Preſents he has given her before Marriage; but if the Wife, or any other Affront offered to her, ſhe is obliged to make Reſtitution. No Marriages are contracted among them within the fourth Degree of Conſanguinity, or Affinity. Their Houſes are generally large, and ſteter than is common in the *Indies*, with four Doors to each Quarter of the Heavens: Some have two Doors on a Side; they are commonly raiſed five or fix Feet from the Ground, and three or four Stories high. Their Furniture conſiſts in ſome wild Boars and Deers Hides, or ſome other Relicks taken from their Enemies, which are the chief Ornaments; the reſt conſiſts in Deer-ſkins, which are uſed inſtead of Feather-beds, certain Stuffs with which they cover themſelves, a Spade, Pike, Bow, Arrows, a wooden Trough inſtead of our Dishes, or a wooden Tray, and a Pot to boil their Rice in, with ſome other ſmall Food, and this is all. Though they have no Clergy appointed for Divinity, yet they make uſe of ſome to make good Cheer, eſpecially every Morning in their Temples, where the Women alſo appear, and ſome of them made of Dog's Hair; for here, as in the *Indies*, they cut off the Dog's Hair once a Year, or ſometimes twice, if it red, make certain Stuffs of it, which they value as much as we do our curling Veils.

Their Ceremonies uſed after the Death of their Friends are ſcarce to be paralleled in the World, for if there be any one dead, but by Beat of Drums, marching round a great Tree, they give Notice thereof to the People upon which all the People repair, ſome to ſee the Houſe of the deceaſed, and among the reſt ſome who ſay that they have plentifully drunk of Arrack, they ſit very ſlowly, upon great empty Chetſes, with their heads full of Noſe, to expreſs their ſorrow at the Death of their deceaſed Friend. Eight or ten Women ſit round for ſome Time, with their Belies turned to the dead, they ſay ſome Way, to others, who continue ſitting ſuch ſits in all two Hours. The next Ceremony is made for the Funeral Rites, which are performed by burying, or burning the Corpſe, as ſometimes is done; but by drying it in the following Manner. They take it of a Scaffold of Cane, five or fix Feet high, where they ſuſtain the Body by the Hands and Feet, and ſuſtain it, by making a good Fire round about it, ſo that it may be dried in whole Days, during which Time, they ſit round about it, and eat upon the Fleſh, when they are ſatisfied. After the Expiration of the nine Days, they take it of another Scaffold, wrapped in a Mat, and ſuſtain it where it remains till the third Year, when they take the Bones, and bury them in the ſame Manner.

face of their Friends, who make merry again with Feasting and Dancing.

They have scarce any Religion; for as they can neither write nor read, whatever they have of this kind is founded merely upon Tradition; hence it is that they believe the Immortality of the Soul, and the Immortality of the Soul, which they affirm shall find Good or Evil in the latter Life, according to their Merits in this. What Actions are accounted amongst us the most criminal, are taken for slender Treppasses among them, viz. Murder, Theft, and Adultery; for as for Fornication, it is not so much as looked upon as a Sin; and if a young Man can get a Favour of his Neighbour's Wife, it is considered but as a very slight Offence, because they are not permitted to marry till they are twenty, or twenty-one Years of Age. The greatest Crimes among them, and of which the Magistrates take Notice, are to cover their privy Parts, at certain Times of the Year, when they should not; to wear at certain Times silk Garments, when only Callico are allowed them, and not to destroy the Fruit in the Mother's Womb, before she arrives to the Age of thirty-five. Among several Deities, they have two that have the Pre-eminency over the rest, viz. one *Tamigafinbach*, and the other called *Sarialjingb*. The first, whose Residence they place in the South, is the Giver of all good and profitable Things to Mankind; the other, unto whom they ascribe the North, they say, destroys all what the former is pleased to bestow on Man; for which Reason they worship both one for doing them Good, the other, that he may do them no Harm.

They have amongst others two Gods named *Zahshlas* and *Yapucupe*, who, as they are accounted the Patrons of Warriors, are adored only by those Men. They have the Peculiar, that their religious Ceremonies are performed by Women, when they call *Jurac*. Their Worship consists in Prayers and Sacrifices of Hogs, Atoci, Deer and Wild-Boars Heads, as also some of their Liquors. After they have feasted very well, the Priestess's wife, and muttering certain Prayers, turn up their eyes, as if at last laid to the Ground, with dreadful Cries. Sometimes after they lie immovable, like one in a Trance, for an Hour; during which Time, they say, they have an Interview with their Gods. This being over, they climb up to the Top of the Temple, walk from one End to the other, and after they have said their Prayers again, strip themselves naked, and expose their naked Bodies, and wash them in the Presence of all the standers by, of both Sexes, to which but few Men assist at this kind of Devotion, and the Women have generally taken to much strong Liquor, that they scarce perceive what passes. Their *Juracs* do pretend to banish Devils to come, and to banish the evil Spirits. For the rest, each House has a peculiar Place for the private Devotions of the Family, which are performed for the most Part by Women, who make Offerings to their Gods of what is spent every Day in the House, as they do upon certain Altars erected for that Purpose upon the great Roads.

17. The Chinese Empire being of so vast an Extent, that a moderate Account of it would take up a large Volume, we will content ourselves to give only a Scheme of it here, leaving a more ample Description to those who of late Years have had the Opportunity of taking a full View of it. It is certain, that this vast Kingdom of *China* (called *Cathay* by the *Tartars*, and *Chin, ben, or Chouque*, in a middle Kingdom, by the *Chinese*) is the utmost Province of all *Asia* to the East, having beyond it no other Borders but the Sea, for this Reason called by the *Chinese* *Tang, the* of the East. To the North its Frontiers extend along the *Great Tartary*, from which it is divided by a Range of great Mountains; a Tiber that falls, by the famous *Chinese* Wall, which begins upon the Confines of the Province of *Leautung*, and extends to the yellow Sea upon the Frontiers of the Kingdom of *Tibet*, 3000 Chinese Leagues in Length to the West. Its Borders upon the East touch of *Kiane* and *Bongai*, and to the S. and S.W. touch *Cakou-Chi-a*, and the Sea, comprehending more Length all the Southern Parts betwixt the 130th and the 170th, making 4000 Spanish Leagues in Length, and two thousand in Com- p-
18. It is divided into fifteen great Provinces, among which, six, viz. those of *Peking, Nancung, Kiangnan, or Nanking, Chekian, Tokien, and Quantung*, extend along the Sea side, the other nine being inland Provinces, five of which, viz. those of *Quangfi, Kwangfi, Huquing, Honan, he* to the East, *Xamfi, Szechuan, Yucoban, and Juannan*, to the West. The Provinces of *Leautung* and *Cerea*, which are on the East-side, do not properly belong to *China*; all which contain one hundred and forty-five great Cities, and 1263 others, which would pass for considerable Cities elsewhere. Their Cities are for the most Part built after the same Fashion, square, with two large Streets, dividing the whole into four Quarters, like a perfect Cross; so that from the Centre of each Place you may view the four Gates of it. They are fortified with broad brick Walls, and flanked with Towers, after the ancient *Roman* Fashion, plastered over with the fine Earth they make their Porcelain of, which in Time grows as hard as Stone, and they always the Walls against the Impire of the Air. It has been supposed that some of them have stood 500 Years, without any considerable Change. Their Houses are very neatly and conveniently built, with Gardens, Orchards, Groves, Fountains, and all other Conveniences and Ornaments, their Architecture exceeding that of the best Masters of *Europe*. They are, of all Nations of the World, the most careful in Paving, and keeping their Highways, and providing all Necessaries for the Accommodation of Travellers throughout.

The whole Empire is of so vast an Extent, that the Inhabitants of the Province of *Quantung*, lying on the Torrid Zone, are as black as the *African Moors*; whereas those of the Province of *Peking*, which is most northerly, are as white as the *Germans*; which Difference is also observable in their Fruits, the southern Provinces producing all such Fruits as the *Indies* afford; whereas the more northerly Parts have Plenty of *European* Fruits. Besides this, *China* abounds in Gold, Silver, precious Stones, Muls, Silk, Salt, rich Gums, and Drugs, Rice, and Corn, for most of which they are beholden to Nature, yet must it be withal confessed, that the Industry of the Inhabitants, and the easy Government they live under, is a vast Addition to what they are obliged to Nature for, there being not a Fen, Marsh, Bay, nor a Mountain, but what is planted, cultivated, or put to some Use or other, no Count being more heinous in *China* than Idleness. The Country of *China* does not only produce all sorts of living Creatures, but also all the Fruits and Simples we have in *Europe*, but much better, and in greater Plenty, and consequently sold at a very cheap Rate, so that Spices are so cheap here, that you may buy a hundred of these Rings for a Crown, and two Pounds of the best *China* Crown; and the vast Quantities of Silk produced may be gathered in from what is exported to the most remote Countries. As the Country is full of Fish, so they abound in Fish, which they catch by the Help of 400000 rants, of which they have vast Numbers. They tie a String round their Necks above their shoulders; so that after they have filled their Bags, which hang under their Throats, with Fish, they are forced to disgorge what they have taken into the Boat unto which they are fastened.

They have also a peculiar Way of breeding Ducks in prodigious Quantities, of these they keep three or four thousand in Cages of Canes, set at the Stears of great Boats, and let them out every Day to go ashore, and pick the Weeds from amongst the Rice, and towards Evening call them to their Cages by a Whistle, the Sound of which brings them back to the very Boat unto which they belong. Their Duck Eggs they hatch in Dung, and afterwards put the young ones under the Wings of the old Duck in the Cages: This Way of Breeding makes them so cheap, that they sell five or six for Two pence.

The *Chinese* Women are generally well proportioned of a good Size; but the Men are the most ugly with large Faces, small Eyes, and very little on their Heads. They do not either their Hair, or their Noses, as the *Tartars* do. Their Clothing is altogether of the same Kind with this Difference only, that in the northern Provinces they use Furs; whereas in the southern they use Cotton.

war Silk. The Women are very magnificent in their Apparel, and wear Abundance of Jewels and Pearls. They are very remarkable for their little Feet. They seldom appear abroad; and whenever they visit their Relations, they are in cloths of *Palangours*, or Linens. The *Chinese* are especially not only in all sorts of Manufactures, but also in their Way of Trading, that scarce any body is able to overmatch them. Their Money is Gold and Silver, which is usually sold by Weight. They are so careful in providing for the Poor, that in each City a Judge is appointed to provide for the Relief of such as are unable to provide for themselves, and let to work such as are in a Capacity to get their Bread.

As there are Books extant in *China*, which have been printed above even hundred Years ago, it is certain that they invented the Mystery of Printing before us, since it was not discovered in *Europe* till 1476. Their Characters are rather Figures signifying certain Words, than Letters, which they write from the Top downward, not with Pen, but with Pencil, and that on one Side only, their Paper, which they make of the Bark of *Bambee* Canes, being very thin. The Emperor maintains at his own Charge many Schools and Academies, the Oversight of which is committed to Visitors, who at certain Times not only examine the Professors and Scholars, and expel such as are not qualified for Studies, but also promote such as have made a sufficient Progress in Learning to the Degree of a *Tutor*, a Dignity like our Doctors. They are very ceremonious and occupying in their Conversation, in which Point they are to note, that the first Rudiments of Learning given to their Youths are certain Books of Compliments. Their Entertainments are very magnificent, in which they have this Peculiar, that they set as many Tables as they have Guests. Their Meats are served up either in Plates, or Porcelain. They have small Cups, because they drink often, but no Napkins, and they frequently lend home to their Guests what Meats are left untouched upon the Tables, and are especially careful in entertaining Ambassadors with more than ordinary Respect.

They allow Polygamy, but punish severely Excess, which is forbidden by a direct Law to Immunity, and in the Collateral Laws to Inters and Noces. The Fall, however, is the only legal War, whose eldest Son inherits half of the Estate of his Father; but on his Death, the eldest Son of the next Wife has the same Privilege. A very singular Custom is a capital Crime here, yet is seldom punished, partly by reason of the great Restraint the Women are kept under, partly because the *Chinese* are so wary, as rather to make the best of such an Accident, than to advantage themselves, or to expose themselves, by pulling down their own Dignity. Though the Government of *China* be not only in a monarchial, but also in a despotic, yet it is to be noted, that even these Nations who are by the great Degree of Liberty in *Europe*, are not more fastened with Taxes than the *Chinese*, who every year send from this Imperial Majesty in printed Letters Kings, that as Wars are destructive, and the chief Means to impoverish a Nation, they ought not to enter upon them, in order to extend their Frontiers, or make any Conquests, for which Reason it is that, to avoid all Occasion of Contest with their Neighbours, the *Chinese* are forbidden to go out of the Kingdom without Licence from the Emperor, or the Governor of the Province where they dwell.

The eldest Son always succeeds the Father in the Throne, the youngest Son having some certain Appanage, with the Title of King, showed that they have not the least Share in the Administration of the Government, being under the Jurisdiction of either the Emperor, or the Governor of the Province where they dwell, who pay them their Appanage quarterly. The chief Council of the Councils of twelve Counsellors, and the President, besides which, there are a number of the great Council, by Council Officers. The first is for the Administration of Justice, the second for the Revenue, the third for the Ordnance, the fourth for the War, the fifth for the Affairs of the Publick Structures, and the last for criminal Causes. To prevent the Abuse of the Government, and the Corruption of Justice, the Officers of the great Council every three Years send a Viceroy into the Provinces, who, after having taken

an Account of their Transactions, make a solemn Report to the King, who changes the Officers of the Province every three Years, with this Circumposition, that there is never any Officer of Note is sent, but into a Province whose cruel Drubbings, which makes them rather to cast themselves to their Creditors, than to undergo this Punishment.

The Prisons, wherewith all the great Cities are provided, are very nicely kept, but at the same time want many Conveniences, such as Courts, Gardens, Parks, Walks, &c. for the Divertement of the Prisoners, and Dining-houses and Cooks-shops for their Convenience. No Sentence of Death is executed without a Warrant from the Emperor, and this must be done in the Presence of the Judges, who are to nice in this Point, that they allow a very considerable Time betwixt the Condemnation and Execution, make divers Visits to the Prisoners, to determine them whether they have any thing to say for their Behalf; by which Delays it happens, that more die in Prison than are executed. Their chief punishments are Hanging, Impaling, and Burning, and the last is only in Cases of High Treason. These may lay upon their Belies with their Hands tied back, and the Executioners beat them with Canes in the same Water upon the Call of their Legs with a Yellow Flag, that they frequently expire under their Harsh.

The *Chinese* are *Pagans*, though some Authors have taken a great deal of Pains to persuade the Westerners they found some Remains of Christianity, and that some of them they lay were introduced there by the Apostles. They acknowledge the Heavens to be the Dwelling-Place of the Governor of the Universe, who is named by the Emperor, a great Reverence next to the Sun. They have a God called *Canyay*, unto whom they attribute the Cause of all salutary Things. They ascribe to the same Deities as many great Ministers, *viz. Yarnan*, who presides over the Air, *Yeziam*, whose Business is to watch over the Generation of Men, and all living Creatures, and the Products of the Earth, and *Yeziam* the God of the Sea. They have also three famous Saints, called *Indis*, Founder of all the Religions of the World, of which there are great Numbers, and of which other two are Females, called *Quana* and *Yan*. The *Chinese* are also much addicted to the Religion of the Devil. They believe the Demons to be those which is communicated to it by Hell, and that they either enjoy eternal Felicity or Torment, according to good or bad Actions done in this World. They think it is that they assign a certain Place of Abode for the Pagatory to the Soul, after its Departure from the Body. Here it is purged from its Sins, and is admitted into its Relations and Friends, may be either saved or damned. Many of them also ascribe to the Opinion of the Transmigration of the Soul, which they derive from the Pagans.

Their Orders of religious Men have a great Name in the City of *Antion*, who have entered into a Society of Nuns, and these under them the Superior, who have their respective Monasteries. They make a great Account, and keep to their constant Mattos and Orders, and the Monks in *Europe*. The chief Superior of the *Chinese* are not permitted to enter into any other Order, but such as have may quit their present Order, and enter into any other, which they have established a number of Years ago. Their Funeral Rites, the *Chinese* walk with their Feet in a Cloud of Sweet Wood with their Feet, and sit upon a Table till it is dark, and then they eat and drink, and pray, and are called with Wine and Food, and then they enter them after the Expatriation of the Soul, which is commonly done in the Country near a Mountain, that he set to be found, they put one of the Mountains is very high, in some Countries, they have a good deal of their Mountains, some of which are 1000 Years, and the other Rites are proportionable to the same.

The last Item the *Chinese* have a great Wall wall in every what it is that they have built all the Country, and it is very high, and is built

when they were not only forced from thence, but also obliged to acknowledge the Sovereignty of the Emperor of China. About the Year 1600, seven powerful Colonies of the Tartars were joined into one Kingdom under the Name of *Niube*, whose King entered China, in 1616, with a powerful Army. Many bloody Engagements happened among the Chinese and Tartars, especially in 1618, 1619, 1620, 1625, 1627, till at last in 1630 the Tartars were once more forced to quit the Possession of China, and to content themselves with making Incursions, as they found Opportunity. But in 1641 no less than eight Armies of Robbers appearing at once in the Chinese Empire, and the Granules being divided into Factions, some of them called in the Tartars to their Aid, and at last betrayed the capital City and the Emperor to them, who was strangled in 1644. Upon which the Tartars, having spent some Years in reducing other Provinces, made themselves absolute Masters of the whole Empire, by the Conquest of the City of *Quangbeu*, in the Province of *Quangfi*, Nov. 14. 1650. But it is now Time to proceed with our Voyage regularly and circumstantially.

18. We told you how we were becalmed in the Sight of the Isle of *Ceylon*, where we continued till the 20th of February, when the North-West Wind obliged us to steer our Course to the South-East. We found ourselves then 2° beyond the Equinoctial Line. I took this Opportunity to ask the Master of the Ship, whether (according to the vulgar Opinion) I might discover both the Poles here; but he sufficiently convinced me, that the Arctic Pole was not to be seen till about six Degrees, and the Antarctic not till eight beyond the Line, and that when you come to 8 or 10° the North-West Wind reigns there constantly for six Months, as the South-East does the other Months of the Year. We saw abundance of Birds, some white like Pigeons, others like wild Ducks, and vast Quantities of certain Birds, called by the Portuguese *Gaiyas*, being black and white, but larger than our Magpies. Their Tails are divided like a Pair of Taylor's Sheers: All these live upon the flying Fish, who, to avoid the Pursuit of the *Albicores*, *Bonitos*, and *Dorados*, break themselves to the Air. The *Albicores* are white, and without Scales, and so are the *Bonitos*; but the first exceed the others in Bigness, and have but one Bone from the Head to the Tail, but are not extraordinary Meat. The *Dorado* is like a Salmon, but more luscious, and has smaller Scales. We also took a Sea-Hog (so called from its Snout, which is like that of a Pig) which are seen in great Shoals near the Vessel, and are looked upon by the Seamen as the Forerunners of a Storm, which may naturally be accounted for.

The *Dutch*, in their first Voyage into these Parts, opened one of these Fish, and found a great deal of Fat, and a young Pig in the Belly of it. There is another great Fish in these Seas called *Hayer* by the *Dutch*, and *Snark* by the *English*; their Teeth are very close and sharp, and as they delight in Man's Flesh, it often happens that they snatch a Lamb of an unwary Seaman. Their Mouth being below their Heads, they lie upon their Backs when they are to catch a Prey. That we took had the Heart in the Head, and lived a good while after it was taken. Their Flesh is not fit to be eaten. There are also abundance of that sort of Fish hereabouts called by the Portuguese *Pisseguares*, because they make a Noise like Pigs, and are of the Bigness of a Bream. Tortoises (the Meat of which is as fine as Veal) are in such Plenty here, that the Seamen draw them at Pleasure into the Ship with Hooks. February the 21st we found ourselves in 1° 20' of the Line, with very rainy and unconstant Weather, which is common hereabouts. On the 23d one of our Seamen died of the Pox; the 25th we were becalmed; but the next Night there arose a Tempest, which made us continually upon our Guard, for fear of the *Travados*, or Whirlwinds, which are so sudden here, that the Seamen have scarce Leisure to furl their Sails. We could not make any Observation by the Sun till the 5th of March, when we were in 8° 6' Lat. and the 10th in 10° 14', the Wind West.

The 14th and 15th it blew a great Storm, with Thunder and Lightning; but what most surprized us was, that though we were in 13°, we found not the least Effects of the Moon, or ordinary Wind of the Season, which is

commonly perceived at 8 or 9°, the South Wind blowing so hard, that we were in fear of being forced back to the *Indian Coast*. It was not till March the 15th that we found the Wind changed to the South; when putting out all our Sail, we made two Leagues in an Hour, and took several Dolphins that swam near our Ship. On the 20th we were becalmed in 16°, where we found the Compsals declin'd 30° to the West, and so it continued till the 24th; but as soon as the *Cape of Good Hope* doubled, the Loadstone draws towards the East. As we were floating thus up and down, the 21st of March our Ship took Fire, by the Carelessness of the Butler, who set Fire to a Barrel of *Aqua Vitæ* as he was removing it. Our fresh Water beginning to be scarce, we made use of an Engine to draw fresh Water out of the Sea; but its Taste being somewhat naukous, it served only for the dressing of Meat.

On the 22d we made, by the Help of the Moonsoon Winds, two Leagues an Hour, which continued the 23d, 24th, and 25th. On the 26th the Wind held still fair; but, for fear of a Change, and Want of fresh Water, we resolv'd to direct our Course to *Maurice Island*, to take in Refreshments there. We discovered the same Night the Isle of *Diego Rodriguez* in 20° 48', which lies sixty Leagues from the said Island of *Maurice*, so called by the *Dutch* from the Prince of *Orange*, who was Admiral of the United Provinces at the Time of their first Voyage to the *Indies*. Its Harbour is very spacious, being able to contain fifty large Vessels, and commodious by reason of its Depth, which is a hundred Fathom at the Entrance. The high Mountains, which are covered with Trees, may be seen at a great Distance at Sea. The Vallies produce some Fruit, and abundance of other Trees, some of which are those that afford the best Ebony in the World, black, red, and yellow; but the two last are in the greatest Esteem, and the Sea abounds in Fish. The *Dutch* in their Relations speak of a Thornback they caught near this Isle, which found two good Meals for the whole Ship, and Tortoises of such a Bigness, that ten Men might sit on one Shell. The Isle was quite destitute of Inhabitants at that time; but since 1640, the *Dutch* have erected a Fort there. It abounds in Birds; but is destitute of four-footed Beasts; but as for Fruits and Water, it affords sufficient Refreshment to Ships that are passing that Way.

The Wind continuing fair, when we came within Sight of this Island a Council was called, in which it was agreed not to lose any Time by putting into this Island, but to continue our Voyage with all possible Speed to the *Cape of Good Hope*, to avoid the Danger of being obliged to winter in the Island of *Madagascar*. Accordingly we lost Sight of this Isle the same Day, and pass'd the Tropick of Capricorn March the 30th, bearing our Course West-South-West. April the 1st we found ourselves in 20° 3', and after having made forty Leagues, were becalmed before Night. We saw the next Day divers Whales; and the Weather becoming very stormy, carried us to the West-South-West, our Business being to steer to the South, and consequently to the *Cape of Good Hope*. On the 5th the Compsals still varying, we held our Course still to the West, and though we had not much Wind, made seventy-three Leagues in these two Days. From the 9th (when we were about three hundred Leagues from the *Cape*) we advanced tolerably well, but the 15th it blew very hard, and those Birds called by the Portuguese *Pintados*, which keep within forty Leagues of the Land, and several other Birds, came near our Ship. On the sixteenth these Signs persuaded our Seamen that we were not far from the Shore; the 17th we continued our Voyage with a fresh Gale; but the 18th and 19th we had scarce any Wind, through the Roughness of the Sea, which proved an infallible Omen of the Tempest that overtook us the same Night from the South-West in 35° Latitude. As these Storms are unavoidable about the *Cape of Good Hope*, we took in our Sails.

On the 20th, perceiving the Water somewhat more inclinable to white than before, and a great many Sea-weeds, called *Mangas de Paludos* by the Portuguese, round our Ships, we concluded that there was Ground within an hundred, or an hundred and fifty Fathom, and, upon Trial, found it at eighty Fathom. We saw also the same Day Abundance

ance of Black-Birds, with a small Spot of white on their Breasts: These, according to the Opinion of the *English* Seamen, always forebode a Tempest, which proved true; for, before Night, a Storm arose from the W. N. W. with a very rough Sea, which took our Carpenter from the Deck, but he was saved by means of a Rope. The Ground which stuck to the Plummet being black at eight Fathom Depth, we concluded we were not far from the *Cape d'Agulhas*, which is sixty Leagues distant from that of *Good Hope*. The 25th the Tempest increasing in 30° 20' beyond the Lane, we were in great Danger of being lost, being forced by the Currents towards the Shore; but the Tempest being somewhat allayed, we escaped the Danger, but were soon after threatened by another, occasioned by a Lamp in the President's Room, which had set Fire to the Wanton. The 26th the Storm continued till two in the Afternoon, when the Pelcepuetes coming in great Numbers about our Ships, were the Fore-runners of fair Weather, and the N. W. Wind which ensued. On the 27th, in the Morning, it was calm; but, in the Afternoon, we made two Leagues an Hour with a N. W. Wind, taking our Course to the N. N. W. As we saw that Day abundance of Trombas, or a kind of Canes, three or four Feet long, and of the Bignets of a Man's Arm, which float upon the Water, and are met with no where but near this Cape, we concluded that we were not far from the *Cape of Good Hope*; and the 28th discovering the Coast from N. to W. some thought it had been the Cape; but finding Ground at forty Fathom, and in 30° 40', we were soon convinced it must be the *Cape d'Agulhas*.

The 29th the Wind turning S. E. we steered our Course N. W. along the Coast, and the Wind turning to the N. W. we could advance but a little: We then found ourselves in 34° 27', and consequently twenty-four Leagues from *Cape d'Agulhas*. On the 30th the Wind continued against us, but the next Day the Wind turning to the N. E. by E. we sailed along the Coast, and at last discovered the high Shore known by the Name of *Cabo Falso* (because it resembles a Promontory) within seven Leagues of the *Cape of Good Hope*. May the 2d the N. E. Wind continued, we got Sight of the *Cape of Good Hope*; but soon after turning about to the N. W. we could not get into the Bay, so were forced to stand out to Sea, steering our Course to the South. The 3d the Wind fell at N. W. brought along with it a most furious Tempest, notwithstanding which we made the best of our Way to the Coast; the 4th double'd one of the Points of the *Cape of Good Hope*. Ten Leagues distant from the Bay we discovered the Mountain, called by the *Dutch* the *Sable Mountain*, from its Flatness and square Figure, in 34° 22', within fifteen Leagues of the Cape. Our Intention was to have got in there, but the Wind proving contrary we kept along the Coast as well as we could: But the 5th, at Sun rising, we were out of Sight of the Shore, which made us change our Course to the N. E. so that we discovered Land again about Noon, and in two Hours after, by passing the Isle of *St. Elizabeth*, got into the Bay by Night, where we cast Anchor at seven Fathom Water.

16. This Cape of the Continent of *Africa*, extending to the South into the Sea, in 30° beyond the Lane, received the Name of *Cabo de Boa Esperanza* in 1482, from *John II. King of Portugal*, when the *Portuguese* first went in Quest of the Passage by Sea to the *Indies*, lying as it were at a nearer Distance of about 250 Leagues, betwixt *Europe* and the most Eastern Coast of the *Indies*; ever since which Time this has been the Place where Ships bound to those Parts take in their Refreshments, Water being very excellent here, and Cattle very cheap, their Oxen being very large, with Bunches on their Backs like those of the *Indies*, and their Sheep very good, with long hanging Ears, and Tails as big and weighty as a good Quarter of Mutton: Neither do they want Wild-Fowl, Deer, Wild-Birds, Fat-Turkeys, Quans, and, among the rest, a kind of Oxe, with Stumps instead of Hoofs, but their Fleish is not eatable. They have also Dogs, or rather Sea Bears, Cats, Tigers, Lions, and Leasvs. The *Dutch* are oblig'd to leave Letters here under a certain Stone near the Harbour, a sprouting their Countrymen that come after them with all the remarkable Passages in their Voyages, and some of these Letters are as follows.

The Inhabitants are savage, uncouth, and ill-fav'd: They graze their Bodies with Train-Oil, and eat their Fleish raw; nay, they seldom kill any Beast, but eat upon them when they die of any Disease. Both Men and Women go naked, covering their privy Parts only with a Piece of Skin fasten'd round their Waist with a Leather-Girdle, some wrap a Lion's Skin or Ox's Hide round their Buttocks, drawing their Tail between their Legs: They wear them over their Shoulders down to their Waist, exposing all the rest to publick View, and disbanding their Arms, Thighs, and Legs, by making Cnarrats, or Bands, by way of Incision. The Women adorn their Anks with Legs with broad Rings of Iron or Bras. They live farther up in the Country are no less savage than they, with this Difference only, that they live a little better, those near the Sea-side living upon Oysters, Fish, especially Whales; for they know not what Herbs are, though their Grounds are excellent. They live in small Huts with their Cattle, and scarce ever come to the Shore, except when upon the Arrival of a Ship, which they are to truck their Commodities, which are Oxen, Lions, Leopards, Tigers, Skins, and Ostriches Feathers, for Knives, Looking Glasses, Nails, Hammers, and other Tools of Iron. They know not what Reason is, and God and the Devil being equally beyond their Conception.

On the 10th we were ready to set sail again for the Bay; but the Wind proving contrary we could not get to Sea till the 12th, with a N. E. Wind, steering our Course to the West; but the Wind varying that Day through most of the Points of the Compass we could not get out of Sight of the Coast, and at Night were surpris'd by a Tempest, which continued till the 17th with a Violence that our Ship had much ado to resist it. From that Day began to clear up, and the Fury of the Wind abating, we found ourselves in 30° 40'; whence we sail'd out of the Tempest had forced us back 25 or 30 Leagues to the *Cape Falso* and the *Cape of Good Hope*. The 18th a Storm there arose such a dreadful Hurricane that we were forced to stand over for lost, being by the contrary Winds driven to Sea. The 19th were not much better; and the 20th the same, but little Alteration, though we hoped for some Change of the Moon, which happen'd that Day, but the Storm continued till the 22d, when the Rain abated, and what abated the Fury of the Winds, we made our Way to Sea, steering our Course to the West, as was our Intention. On the 23d we were becalm'd in Sight of the *Cape of Good Hope*, N. E. of us, and finding ourselves in 37° 20' we sail'd out ourselves on the Coast between *Cabo Falso* and the *Cape d'Agulhas*; but another Tempest arising the 24th we were driven from the W. N. W. we were forced back again to Sea.

The 24th the Wind held till 3 o'clock, when it was most tempestuous at Night. The 25th, 26th, 27th, and 28th we were out of the S. W. Wind to the S. The 29th the Wind blowing N. E. we made all the Sail we could to the W. but in the Evening the Wind turning to the N. W. we were brought along with it a most violent Storm, which continued the 29th and 30th; so on the 31st we were out of that being our Sail was not in a Condition to give us the Voyage to *England* with our intended Passage, we went into the Isle of *Madagascar*: Pursuant to a Letter we were tacked about at Two in the Afternoon, by reason of the Weather, and a very rough Sea, which continued the next Day till about Noon. June the 1d we sail'd out of the Bay in twenty-four Hours, with a West Wind, steering our Course to the East. The 2d, at about 10 o'clock at Night, the Wind veering about to the S. S. E. we could not get on for the Protection of our selves, and of *England*, we resolv'd to return to the *Cape of Good Hope*, and to take in fresh Water at the Isle of *St. Elizabeth*: The 3d we got with the same Wind to the *Cape of Good Hope*, the Abundance of Birds, called *Mans*, being very great, Trombas or Canes, floating upon the Water, and the Hopes that we were not far from the *Cape of Good Hope*. The 4th we were becalm'd at forty fathom Water, and the Evening the Wind was N. W. but the 5th it veer'd to the W. which, by Night, turned to the S. W. and continued the 6th till Midnight, when it veer'd to the N. W. to the Coast of the *Cape of Good Hope*.

Winds being much abated, we found ourselves in 33° 30'; but in the Afternoon, we were surprized by another Tempest, which putting us in imminent Danger of running upon the Shore, the Matter of the Ship, who hitherto had been the chief Instrument of our turning this Way, seeing himself under the Necessity of changing his Resolution, declared that there was no other Way left to save the Ship, than to endeavour to put in at *Madagascar*; accordingly we changed our Course the 11th with fair Weather; but about Midnight were overtaken with another dreadful Storm, which lasted the 12th, 13th, and 14th. It ceased the 15th, and the Wind being W. N. W. we sailed 33 Leagues in 24 Hours, to the N. E. The 23d at Break of Day we descried an *English* Vessel, found to be the *East-Indies*, Captain *Hall* Commander, Burthen 500 Tuns, and it was resolv'd that we should make jointly all the Sail we could for *Madagascar*, Captain *Hall's* Ship being much less than ours, with a S. E. Wind.

The first of July he was got out of Sight, and the same Evening we discovered the Coast of *Madagascar*, so that we were forced to keep continual Watch all the Night, for fear we might come too near the Coast, which is very rocky and dangerous, especially on the Point of the Isle, or might go beyond it, it being almost impossible to make the Bay if you pass beyond the true Altitude. The second we arriv'd in the Bay of *St. Augustin*, where there is no Bottom till within a Mile of the Shore, where we cast Anchor at twenty-five Fathom Water. The Day after our Arrival, having escap'd many Dangers, our Joy was redoubled by meeting here, besides Captain *Hall's* Ship, an *English East-Indiaman*, called the *London*, Burthen 1400 Tuns, command'd by Captain *Wiles*, bound for *England*. The third the Captains of these Ships came on board ours, to consult the best Methods to prevent the being impos'd upon by the Inhabitants, in the Trucking of what Commodities they had, for their Cattle; accordingly, these Commodities being produced by joint Consent, and committed to the Management of the three Super cargoes, they bought, or rather exchanged every Day four Oxen for forty Pair of brass Bracelets, a Sheep for two, and a Cal for three Pair; and for a brass Ring of ten or twelve Inches about, a fat Ox, worth six or seven Pounds in *England*. The fourth the President and the two Captains went up the River to discover what Cattle was coming down towards the Bay. The sixth the President treated the two Captains and all the Officers of the three Ships aboard ours, and Captain *Wiles* did the same some Days after. The 14th Captain *Hall* profecuted his Voyage to the *East Indies*, as Captain *Wiles* did two Days after for *England*, having supplied us with what we stood in need of for the Prosecution of our Voyage.

The twenty-first a certain Tent with Huts being set up for the President and Soldiers near the Sea side, he took up his Lodgings there. About four Leagues from the Harbour lived a certain Lord, who had three Sons, the eldest of whom was named *Maffar*: They came all three to pay us a Visit, with a Retinue of one hundred Persons, well arm'd with Javelins, bringing along with them three hundred Oxen, besides some Sheep, Goats, Poultry, Citrons, and Oranges, in order to exchange them for some of our Toys. After having made a little Halt, the eldest of the three Brothers present'd the President with twelve Oxen, and his two Wives each with a fat Capon; in return of which, the President made a Present of three Strings of glass Coral to himself, two to each Brother, and a Bracelet to each of his Wives, which they esteem'd to value at a great Rate. After having fix'd a great Pile of the Ground, as a Token of the Amity they intended to preserve with us, which they desired us to maintain all from our Side, they told us, or rather truck'd with us for ten fat Oxen, some Sheep, and Poultry; and amongst the rest, we had a fat Sheep, the Head of which weigh'd twenty, or twenty four Pounds, for seven or eight Grains of Coral, or Agat, and a Capon for three or four Grains of counterfeit Coral. We staid here six Weeks, which were spent for the most part in shooting at Pigs, and Fishing with Angle-rods. We had great Store of Fish, and among the rest Oyfters, as large and delicious as any in *England*. From the fifth to the eighth of July, we saw

such prodigious Numbers of Grasshoppers as darkened the Skies, but one small Shower of Rain dispersed them all. The Inhabitants eat them.

The Isle of *Madagascar*, called the Isle of *St. Laurence* by the *French*, lies in the torrid Zone, extending from North to South from the 10° to the 26°. its Length being one hundred and fifty, and Breadth one hundred and eighty Leagues, and consequently one of the greatest Islands in the World. It has the Conveniency of divers good Harbours, such as the Bay of *St. Augustin*, where we lay at Anchor, *St. Jago*, *Anton*, *Gil*, *Ant-pera*, *St. Julian's*, *St. Mary's*, *St. Sebastian*, *St. Romanus*, and *Manatengi*. Most of their Mountains are covered with Orange and Citron Trees, and the Rocks themselves are a pure white Marble, from whence spring the clearest Fountains in the known World. They have also Ebony, and Date Trees, and a certain Kind not unlike the *Brazil* Wood, of which they make their Darts and Lances. These Trees shelter vast Numbers of Apes and Birds, and among the rest, a kind of Poultry, resembling our Turkeys, being black all over the Bodies, with little white Spots. Their Heads are of a Mixture of blue and red, with yellow Horns on their Foreheads. They feed by hundreds together in the Woods. Here you meet also with that Gum call'd *Dragon's Blood*, which they draw out of the Flower of a Tree no bigger than our common Pear-trees, but more branching, and not so full of Leaves, which are longer, but not so broad as those of the Laurel.

This Isle also produces some Alces, but not so good as those of the Island of *Secetra*. They have also Cotton, and some Indigo, but they underland not reducing it into Paste, as the *Indians* and *Indians* do. As they do not apply themselves to Tillage, except it be for a little Rice, Beans, Pumpions, and Melons, to they abound in most excellent Pasture, and consequently in Cattle, in which their chief Riches consist. They have also Citron and Orange trees, which bear Fruit twice a Year, Date-trees, Cocoa-trees, and Bananas; and there is scarce a House but has its own Bee-hives; for though they are ignorant as yet of the Advantages of making Honey and Wax, they make a certain Drink of it, with the Addition of Rice, which serve them instead of Wine. It yields also a Sale and Salt-petre, and near the Sea side Ambergris. Some will have it to be rich in Gold and Silver Mines, but as the Inhabitants value Tin beyond those Metals, they neglect to search after them.

The Isle is very full of Inhabitants, who are well shaped, for the most part Negroes; they wear no other Garments but a Piece of printed Calico, which they wrap about their Middle, so that one End of it hangs down before to the knee, the other to the Ham. Their Hairs, except the little Boutes of their Princes, which are of Wood, are only made of the Branches of Trees, wherein they have no other Beds or Quilts, but some few Mats to lie upon. They used to make their Fires round about them, to disperse the Vapours which are very pernicious here. Their chief Ornaments are certain Strings of Glass-beads of different Colours round the Waist, and Bracelets of the same about their Necks, Arms, and Legs. Both Sexes have Hoops in their Ears, in which they put large Copper or Brass Rings. They have all Black Hair, some very much curled, others not, but it is seldom very long; notwithstanding which they dress it up in several Trifles. There is no considerable Difference betwixt the Cloathing of the Men and Women; the last wear sometimes a fleecy Coat, and the Calico which covers their middle Parts is somewhat longer than those of the Men.

The Women are very famous for their Fidelity to their Husbands, who place to great a Value upon them, that they will scarce undertake any Thing of Moment without their Advice. They have two Wives at least, each of which hath her peculiar Hut, and though the Husband is very compliant with both, the eldest of the two always claims the Preference. They purchase their Wives from their Parents, or Relations, for ten Oxen, Pigs, Dates, or other Am's. Adultery and Fornication are capital Crimes, but as there is no Familiarity to great which is able to create a Jealousy in them, these Things are frequently heard of. Some of the younger Women are very remarkably

to our Tent, unto one of whom the President presented one of my Shirts, desiring her to wear it for my Sake. She made not the least Difficulty to receive it, and wore it two Days, after which, she tore it to Pieces, for some other Use. Their Men are brave, addicted to martial Exercises, and very dextrous in the Management of their Lances, Darts, and Pikes, which always lie near them, even when they are at work in the Field, being trained up to the Use of Arms in their Infancy; Persons of Note seldom stir abroad without having twenty-five or thirty Darts, or small Pikes, carried after them, tied up in a Bundle. Their Bows are four or five Feet long, and the Strings loose. They have a Sleight of Shooting with great Strength and Activity; and as to their Javelins, they dart them with so miraculous a Dexterity, that they will hit a Bird at forty Paces Distance.

They are divided into several Tribes or Clans, of one hundred, two hundred, or three hundred, each under his own Lord, whom they call *Tjebick*. Two of these had their Residence in a Wood not far from our Tent. Their Wars among themselves are commonly occasioned by the want of Pasturage for their Cattle, and the Prince *Maffar* told us, that he had joined with two neighbouring Lords, and that they intended to attack some on the other Side the Mountains with five hundred Men, to drive them from their Pasture Grounds, which they stood in need of for their Cattle. This Dignity is not hereditary, but they govern, whilst they are in the Possession of it, with an absolute Authority. It is not easily determined what Religion they profess. As far as I was able to learn, they believe one God, Creator of Heaven and Earth, who will reward their good, and punish their bad Actions. I remember I saw one among them, whom I supposed to be their Priest, getting up on a Tree, and making his Oration to the People; but as I had not the least Knowledge of their Language, I could not be satisfied of what he said, neither what Difference there was in the outward Appearance of their Priests and Laicks, except that I observed some of them to carry a Piece of a Cow's Tail at the End of a Cane; and I saw one whose Nails on the two Fore-fingers of his Right-hand were as long as the Talons of an Eagle. Each Tribe has its own Priest, who pretends also to Incantations.

21. The Isle of *Mozambique* is not above half a League from the Continent of *Africa*, and remains in the Possession of the *Portuguese*. This small Island is so beneficial to the Governor thereof, that what with the Trade to *Madagascar*, and that of *Soffala*, he commonly amasses a Treasure of 150,000 Pounds Sterling during his three Years Government. This Island was first discovered by the *Portuguese* in 1508, when a whole Boat of Negroes coming on board the *Portuguese* Vessels, they were very civilly entertained by the Captain, who also gave them divers little Presents, but they requited his Kindness with a Shower of Arrows as soon as they were got into their Boat, till the Captain by a Volley of small Shot, and some Cannon Ball, made them soon give over that Sport. Another *Portuguese* Captain, named *Rodriguez Perera*, being in the same Year driven upon that Coast by Distress of Weather, sent a certain *African* Negro, who had some Knowledge of their Language, to signify unto them, that he was come thither to settle a good Correspondence and Commerce with them. They seemed to approve of this Proposal, but were no sooner got at some Distance from the *Portuguese*, than they fell upon the *Moors*, with Intention to kill him, which they had certainly done if the *Portuguese* had not discharged their Fire-Arms upon them, which obliged them to leave the Negro, and to betake themselves to their Heels, leaving several of their Companions dead upon the Spot.

Perera sailed thence to another Place upon the same Coast, where having surprized one of their Princes, he carried him on Board, and gave him such kind Entertainment, that in Requital for his Courtly, he offered to shew him a very good Harbour; accordingly he conducted them to a great Bay, at the Entrance of which was a small but populous Island, but the Inhabitants being terrified at the Sight of their Foreigners, fled into another adjacent Island; so that the *Portuguese*, being become Masters of the small Isle without the least Opposition, they sent to the Inhabitants,

desiring them to return to their Habitations, the Occasion of their coming thither being only to settle a good Correspondence with them. Upon this most of them returned, and as a Mark of their Good-will, presented *Perera* with fifty Oxen and twenty Goats; but being nevertheless willing to be rid of the Strangers, they tempted the Captain with the Hopes of great Riches, which they said he might meet with in the Port of *Matatana*, which was so well approved by him, that he was preparing to go thither, but one of his Ships being soon after forced upon the Coast of the Isle, he retired with the other to *Mozambique*: Another Ship of the same Fleet being driven by tempestuous Weather into the Port of *Matatana*, a Boat of the Country came immediately aboard them, in which the Captain sent the Master of the Vessel, who was well versed in the *African* Language.

The *Moors* making more than ordinary Haste to get ashore with the Master, and the *Portuguese* conceiving some Jealousy at their Behaviour, they pursued them with eighty Men in their Shallop, but too late, the Negroes having reached the Shore before them. However, after they were landed, they got Sight again of the Master, who told them he had been treated with much Kindness by their Prince, who was desirous to see the Captain himself, in order to enter into a strict Correspondence with him, which the Captain being not unwilling to comply with, went accordingly ashore, where he was kindly received, and magnificently treated by the Prince, according to the Fashion of that Country; but in the Evening, being ready to return aboard in the Shallop, there arose a violent Tempest, that he durst not venture to commit himself to the merciless Waves in so small a Boat, which continued for four Days successively; and there being no Possibility to get on board, his Ship's Crew imagining that he had been mastered by these Barbarians, thought it most adviseable to save themselves, and to return to *Mozambique*, which they did accordingly. The Captain finding the Ship gone was so discontented that he did not long after, as did eight others of his Retinue. The rest thinking it better to run the Risk of the Sea than to perish without the least Hope of Relief, embarked in the Shallop, and having by good Fortune met with a *Portuguese* Vessel, commanded by *John Tonjeca*, he carried them to the next *Portuguese* Port in *Africa*. The first Time of the Landing of the *Dutch* in the Isle of *Madagascar* happened rather by Chance than any Design, for their Seamen being miserably infected with the Scurvy, so that they were no longer able to manage the Ship, they were forced to seek for Refreshment in the Island, but lost seventy Men out of the four Vessels, of which their Fleet consisted, before they could get ashore. These Men were buried in a small Island, which to this Day is called the *Dutch Church-yard*. Some will have *Madagascanians* to be *Mohammedans*; but certain it is, that in their outward Demeanour they do not shew the least Sign of it.

22. The Winter Season being pretty well over we began to think of our Voyage; for which Purpose having bought, *August* the 19th, of Prince *Misfar*, and some other neighbouring Lords, twenty-five Oxen and a hundred Sheep, we embarked our Baggage the 21st and the 21st fell out of the Bay of *Saint Augustine* with a South-west Wind, which proving favourable all that Night we soon lost Sight of *Madagascar*.

The 22d being rejoined by the Monsoon, or Wind of the Season, which happened sooner than ordinary, we briskly pursued our Course to West-South West, and the 23d the Wind blowing a brisk Gale from the East in our Stern, we sailed briskly a little more to the South, with an Intention to avoid the *Cape of Good Hope*. The 24th and 25th the Wind was not so brisk, but being recoiled by a fresh Gale, the 26th we advanced bravely, and found ourselves that Day in 27° 27' Latitude, and on the 28th in 28° 12'. The 29th we were surprized by the *Travaldos*, or Whirlwinds, in 31° 15'; but they did not continue long. The 30th it blew again; notwithstanding which we made the best of our way, and the last of *August* found ourselves in 33° 34'. On the 11th of September we made fifty Leagues in twenty-four Hours, and the Wind blew very hard; and the 2d we got to the 11th of September.

to their Habitations, the other being only to fetch a good Upon this most of them prefer Good-will, preferred Plenty Goats; but being never the Strangers, they tempted of great Riches, which they the Port of *Matatana*; which, that he was preparing to go being soon after forced upon ed with the other to *Mozambique* Fleet being driven by the Port of *Matatana*, a Boat lately aboard them, in which of the Vessel, who was well

than ordinary Haste to get and the *Portuguese* concerning viour, they pursued them with op, but too late, the Negroes before them. However, after Sight again of the Master, treated with much Kindness, sifrous to see the Captain him- a strict Correspondence with g not unwilling to comply with, here he was kindly received, y the Prince, according to the ut in the Evening, being ready lop, there arose a violent Tem- tore to commit himself to the ill a Boat, which continued for there being no Possibility to get imagining that he had been ins, thought it most advisable return to *Mozambique*, which they ptain finding the Ship gone was not long alter, as did eight he rest thinking it better to run to perish without the least Hope: Shallop, and having by good *Portuguese* Vessel, commanded by them to the next *Portuguese* Port of the Landing of the *Dutch* happened rather by Chance than men being miserably distressed with were no longer able to manage to seek for Refreshment in the ven out of the four Vessels, d l, before they could get at an in a small Island, which in this church-yard. Some will have the *Sammedani*; but certain it is, that hour they do not shew the least

on being pretty well over we be- page: for which Purpose having s, of Prince *Misfar*, and some s, twenty-five Oxen and a wood our Baggage the 2. the said the of *Saint Augustine* with a south- ing favourable all that Night re

ed by the Monsoon, or Wind of ened sooner than ordinary, we ed to West-South-West, and the brisk Gale from the East in our little more to the South, with an *Cape of Good Hope*. The 24th and to brisk, but being reconciled by advanced bravely, and found our- 7' Latitude, and on the 25th in e were surprized by the Pa- n 31° 15'; but they did not con- it blew stern; notwithstanding of our way, and the last of *August* 4. On the 11th of *September* we nty-four Hours, the Wind ed we not many Leagues

ther, with a South-west Wind. The 3d being becalmed, we killed a Cow we bought at *Madagascar*, and a Goat. In the Belly of the first we found three Calves, and in the last four Kids, from which a Judgment may be made of the Fruitfulness of this Country. On the 6th we were terribly shaken by a most dreadful Tempest, so that our Ship beginning to be leaky, we were forced to pump without Intermission. We found ourselves in 35° Latitude. On the 7th the Wind being tolerably fair, we steered our Course to the West-North-West; though the Sea continued very rough. The 8th and 9th we had abundance of Rain, with a South-West Wind, with which we made four Leagues with a moderate Gale, and seeing many of the Birds called *Mangas de Valudo*, concluded that we were not far from the *Cape of Aquilas*.

The 11th the East Wind hindered us from making any considerable Progress, and finding a sandy Bottom at twelve Fathom of Water, we were more and more persuaded that we were near the *Cape of Aquilas*. The 12th we were forced to make the best of our Way, sometimes with a North-North-West, sometimes with a South-West Wind, which continuing in the Afternoon, we continued our Course to the West-North-West, and in the Evening found a yellow Sand at a hundred and ninety Fathom Water. The 13th, the Wind being at South-East, we continued our Course to the West-North-West, and finding a Whale floating upon the Water in the Latitude of 35°, we believed ourselves to be in the Height of the *Cape of Good-Hope*, where abundance of Whales are commonly seen. The 14th, at Sun-rising, finding the Declination of the Needle 4° 50', we concluded that we had compassed the *Cape of Good-Hope*; the 15th we had a fair Wind and Weather, and found the Declination of the Compass to be 1° 5', and presently after the Declination of it, near the *Cape of Good-Hope*, is 4°, though sometimes it does not decline so much; and as soon as you have passed the *Cape*, you find the Compass to vary to the East. At 33° 15' Lat. lies the Isle of *St. Elizabeth*, not above twenty Leagues on this Side of the *Cape of Good-Hope*, being not above two Leagues from the *African Coast*, on which Side it has a very good Harbour at sixteen Fathom Water.

The whole Coast is but one continued Rock; but the Country is so fertile in several sorts of the best Herbs, that there is sufficient Reason to believe, that if it were cultivated, it would not in its Products be behind the Isle of *St. Helens*, or any other in those Parts. The worst is, that it wants fresh Water, except what is supplied by the Skies when it rains, which makes this Isle not to be much frequented; though they have such vast Numbers of Sea-Wolves here, that in a few Days they may catch as many, that the Fat would freight a Vessel of six hundred Tons. They call these Creatures Sea-Wolves, though both in Colour and Shape of their Heads they rather resemble our Bears, except that their Snout is not so sharp. They have only two Paws beneath the Breast, by which means they draw the other Part of their Body after them, and that with so much Swiftness, that the nimblest Man can scarce overtake them. This Beast is very fierce, its Teeth being so close and strong, that it will bite through the Handle of a Partisan. This Isle also produces a kind of Badger, the Flesh whereof is very delicious. The 16th we made the best of our Way with a small Wind at 32°, and the 17th and 18th made sixty-four Leagues with a North-North-West and a South-West Wind, and came the 19th into 29° 16', when with a South-South-West Wind we made forty Leagues to the North-West, and in the Evening found ourselves in 28° Latitude. The 6th of *October* a South-East Wind carried us fifteen Leagues farther to the Isle of *St. Helens*.

23. The Situation of this Island, called *St. Helens* by the *Portuguese*, is in 16° 12'. It is distant from the *Cape of Angola* 350 Leagues; from that of *Good-Hope* 550; from *Brazil* 510. It being very surprizing, that an Island of no more than seven Leagues in Compass should be found at so great a Distance from the Continent. It is so plentiful in most excellent Fruits, and all sorts of Creatures, that it surpasses most of the Provinces of *Europe*. Some were of Opinion, that there were neither to be seen when the *Portuguese* first discovered it, and that those

few Trees and Cattle they brought thither, have received such vast Improvements from the natural good Constitution of the Ground, that, at present, it is able to supply whole Fleets with Refreshments. Figs, Pomegranates, Citrons, Oranges, Goats, Hogs, *Barbary Hens*, Pheasants, Partridges, Quails, Peacocks, and Pigeons, being to be had here at all the Seasons of the Year; not to mention the Fish which are found here in vast Quantities, and Salt sufficient for the Curing them. The Ground naturally produces so many wholesome Herbs, that the *Portuguese* frequently leave there their sick Men, which are sure to recover against their coming back again that Way the next Year.

The Mountains of this Isle are so high, that they are discovered fourteen Leagues off at Sea. The *Portuguese* thought it a Piece of Prudence not to make any Establishment in this Island, considering the Jealousy which its Possession might raise in other Nations trading into these Parts, which its vast Distance from the Continent would make it very difficult to keep; whereas its being free would afford a certain Retreat to all Vessels; and those Refreshments, especially of fresh Water, which they would be obliged to seek for as far as the Coast of *Guinea*, where they must be forced to stay for the Rains, to the great Inconvenience of the Seamen, many of whom must in the mean while perish for want of it. The Fertility of the Isle ought chiefly to be attributed to the daily Showers of Rain which fall there, which, being animated by the Sun-Beams, shining presently after by Intervals, incredibly advances the Maturity of Things in a Climate like this. It has also three Places where Ships may provide themselves with fresh Water, viz. where the three Rivers, which have their Sources among the Mountains, discharge themselves into the Sea. These produce abundance of Snakes, which are eaten by the *Dutch*, who prefer them to Eels. At 190 Leagues to the N. W. of the Island of *St. Helens*, you see the Island of *Ascension*, so called from its being discovered upon *Ascension-Day* by the *Portuguese*, lying 8° 30' S. of the Line. It is a very mountainous Island, affording neither fresh Water, nor any other Provisions, except Fish, of which there is great Store on that Coast. *October* the 17th, the same Wind carried us forty Leagues forward; and the 18th forty-two to the 5th Degree.

The Heats were almost insupportable this Day, and we saw Millions of Flying-fish, and great Numbers of the Birds called *Mangas de Valudo*. The 19th, the Wind blowing from the S. E. we made 40 Leagues to 3° 19' Lat. and the 20th the same Wind continued us 40 Leagues farther to 1° 18' Lat. The same Wind carried us the 21st 35 Leagues, when we passed the Equinoctial Line. At 1° beyond the Line, we discovered the *Cape de Lopez Gonzales*, upon the Coast of *Guinea*, which has a fine Harbour for Ships, which sometimes provide themselves with Provisions here. The Isle of *St. Thomas* is situate under the Line, the Air of which is so unwholesome, and the Heats so excessive, that few *Europeans* live there to fifty Years of Age, though some of the Natives arrive to an hundred. Here is a constant Equality of Day and Night throughout the whole Year, and it never rains, except in *March* and *September*; the Defect of which is supplied by the Dew, which falls constantly every Night, moistens the Ground, and renders it very fruitful. When it was first discovered, a certain kind of Tree was found here, the Branches whereof were exactly straight. And, formerly, this Isle produced such vast Quantities of Sugar, that above forty Ship Loads might be transported thence every Year; but the Worm, being got among the Canes, has ever since made such Havock among them, that it scarce affords now Loading for six Ships. Besides which, this Island produces Wheat, Wine, Millet, Rye, Barley, Melons, Cucumbers, Figs, Ginger, red Parsnips, Cabbages, Nawses, Lettuce, Parsley, and all sorts of Roots, Pulse, and Pot-herbs; and amongst the rest, a certain kind of Must-rooms, the Rind whereof is black, but the Meat white, and shoots forth divers Branches below. The Inhabitants look upon it as a great Dainty, and, when baked in the Embers, eat them as we do Chestnuts, but they have a better Flavour. The *Spaniards* have planted some Olive, Peach,

and Almond-trees here: They thrive well enough, but bear no Fruit.

This Isle also affords a sort of Land Crabs, which live under Ground, and work like Moles; Partridges, Quails, Black-birds, Parrots, and other Birds in abundance. The Sea produces vast Quantities of most excellent Fish, and, among the rest, Whales of a vast Bulk. In the very Centre of the Isle is a Mountain, covered on the Top with a Cloud, which furnishes Water sufficient for the constant watering the Sugar-Canes; and what is most observable is, that the higher the Sun comes above the Horizon, the more Water falls from the Cloud. The Natives are Negroes, but such Foreigners as settle there continue their natural Colour to the third and fourth Generation. They affirm, that Lice and Fleas, wherewith the Negroes are much pestered, never afflict any Stranger. At thirty five Leagues Distance from the Island of *St. Thomas* to the South, you see another Island, called *Rolles* Isle by the *Portuguese*. It produces such Plenty of Oranges, Citrons, Bananas, Ananas, Ginger, Poultry, Hogs, and other fresh Provisions, that it is one of the most convenient Places for Ships to refresh themselves in; its Haven being very commodious at ten Fathom Water.

The Isle of *Caryfo* lies close to the Continent, and affords nothing but fresh Water. The 25th a S. E. Wind advanced us thirty-two Leagues on our Course to the N. N. W. It was very rainy, and we were frequently troubled with the *Travados*, or Whirlwinds, which are so often met with on the Coast of *Guinea*, from whence we might be an hundred and fifty Leagues distant. The 26th the Wind continued the same, and we made twenty-five Leagues to the 7° Lat. N. We observed here the Heats to be more intense than we had felt them on the other Side of the Equinoctial, notwithstanding the Sun was 10° farther from our Hemisphere, the Reason of which I conceived to be, that the Sun-beams, which had so lately warmed the Septentrional Hemisphere, had not had sufficient Time to produce the same Effect in the Meridional. The 27th the Wind changing to the N. and by E. we were also obliged to alter our Course, and made only thirteen Leagues that Day. About Noon we found ourselves at 7° 50' Latitude, and it was observable, that the further we steered from the Coast of *Guinea*, the less we were troubled with bad Weather, which had sufficiently afflicted us for some Days past. The 28th the Wind turned to the N. E. which is the ordinary Wind between the 10 and 20°, which afterwards changes, as it does in our Seas. We made thirty Leagues that Day; and on the 29th thirty Leagues more with the same Wind, in 10 Lat. about Noon. On the 30th we made twenty-eight Leagues with the same Wind and Course to 11° 13' Lat. and the 31st twenty-three Leagues with the same Wind, and rainy Weather.

On the 1st of *November* the Wind continued the same, and carried us twenty-six Leagues forward; the 2d we made twenty-four Leagues with the same Wind, steering our Course to the N. W. The 3d we continued our Course with the same Wind, which brought us about Noon to 12° 41', and consequently near the *Cape Verde*, being a Point of Land stretching out into the Sea from the *African* Continent between the Rivers of *Gambia* and *Senega*: *Senega* calls it *Promontorium Arfarium*. The Inhabitants here are *Moor*, large sized, and not ill shaped, but very malicious and treacherous. They are *Pagans*, worshipping the Moon and the Devil; some among them call themselves *Mohammedans*; but setting aside Circumcision, they have no Marks of that Religion, or any other. They are cultivated in continual Wars with their Neighbours, and very good Horsemen, their Horses, which are very swift, being brought thither from *Barbary*. Their Arms are only Bows and Arrows, and a kind of Lance or Pike, which they manage with marvellous Dexterity. The Privy-Parts of their Enemies are the Trophies they most esteem; those they present to their Wives, who make Necklaces of them, and wear them as the greatest Ornament. They show Polygamy, and their Wives are forced to do all their Work, both at home and abroad.

When the Husband is in his Hat he is attended by his Wives, and then goes a hunting, or about some other Sport, at his own Pleasure. Their Women are very hardy; they

are no sooner delivered, but they wash their Children themselves in the Sea or next River. The Men are generally addicted to Drunkenness to such a Degree, that some of them will take off a whole Quart of *Aqua Vita* at a Draught. Their chief Times of Merriment are at the Funerals of their Friends and Relations, where they drink and howl by Turns, and that for four or five Days together, to the Sound of the Drum and Pipe. They believe the Resurrection of the Dead, and say they shall then be white, like the *Europeans*. They have a considerable Trade with the *French*, *Spaniards*, and *Dutch*, in Ox-Hides, Buffaloes, Ekes, Elephants Teeth, Wax, Rice, and Ambergris, which is to be found in its Perfection; for here one *Mr. Peter Van Brouck*, a *Dutch* Merchant, bought 1600 Pieces of Ambergris of eighty Pound Weight.

The Discovery of this Coast is likewise owing to the *Portuguese* in the Year 1482; but this first Voyage means; but with indifferent Success, *Anthony Goncalves*, in 1482, having discovered the *Cape del Cavellero*, caused one certain Negroes, who being sent by the Infant of *Portugal* to Pope *Martin V.* he was willing enough, under the specious Pretence of planting Christianity in those Parts, to grant him all what he should discover on the *African* Coast, under Condition, that after his Death it should be annexed to the Crown of *Portugal*. The Infant having already discovered the whole Coast betwixt *Cabo de Nago*, and 100 Leagues beyond the *Cabo Verde*, happened to die in 1483; but King *Alphonso*, in 1487, granted all those Conquests to *D. Ferand*, Duke of *Viseo*, Heir apparent of the Infant, and in 1461, ordered a Fort to be built in the Isle of *Argosin*, for the Security of Commerce. It was in the same Year farmed out to one *Fernand Gomes*, under Condition that he should be obliged to discover every Year one hundred Leagues on this Coast; by which means the *Portuguese* had in 1497 discovered the *Isle of Fernando del Po*, *St. Thomas*, *Anno Bueno*, that of *del Principe*, and the *Cape of St. Katharine's*. King *Joh. II.* was no sooner come to the Crown, but he sent, in 1481, *Diego d'Azambuja*, who, on the 19th of *January* 1482, made the first Discovery of *Mina*, calling Anchor near a Place called *Aldea de dos Portes*, then under the Command of a certain Prince named *Coramansa*.

This Place, unto which the *Portuguese* gave the Name of *Mina*, from the great Quantity of Gold found there, is situate upon the Coast of *Guinea*, in 5° 30' S. of the Equinoctial Line, between the two Rivers of *Nago* and *Cara*, bordering to the N. W. upon *Camara*, and the N. E. upon *Ayto*, small Countries under the Jurisdiction of those of *Abramides*. Hereabouts too, is within the Compass of fifty Leagues, is made the chief Trade of all this Coast. They have built a Fort here, upon an Akent, on a Point of Land, which runs out into the Sea, like a *Denil* Isle, having on one Side access to the North, the *Ethiopian* Sea, and to the South, the *Nago* River. The Town, which is situate but below the Fort of the Fort, has about 800 Inhabitants, and its Strength is such, that 150 Men may maintain it against a considerable Force, being leeny all about, and without whom the Inhabitants are forced to be supplied with Provisions from *Camara* and *Afate*. The Natives here are indigenous enough, and much more pliable than the Negroes, but are extremely ignorant in Matters of Religion; for they adore every thing they see, that is the least resembling to them. At that Time they offered their wives sacrifices of Water and Meit by their Piety to a certain Tree, of an extraordinary Bigness, inclosed in a Temple with a high Wall. They adored the Bones of a Whale, and paid Divine Worship to a certain Rock, because it exceeded all the rest in Height. They are extremely addicted to Divination, and therefore it was of Effect upon those who professed themselves Sorcerers, but in Effect are nothing else but Charats, who make use of the Weakness of those ignorant Wretches to their Advantage. They are the most religious People in the World in the Observance of their Oaths, it being their Opinion, that such as violate them, will be treated as if by a sudden Death. And hence it is, that their Lives and Souls are determined in a few Hours, upon a breach of the Oath, or Denial of either of the Parties. *AMC*

they wash their Children
River. The Men are gene-
to such a Degree, that some
le Quart of *Aqua Vita* in a
es of Mercurium are at the
Relations, where they drink
or four or five Days together,
Pipe. They believe the Relics
they shall then be white, like
considerable Trade with the
in Ox-Hides, Buffaloes, Elks,

even capital ones, may be commuted with Money, unless
the same be reiterated several Times by the same Person.
They have no other Cloathing but a Piece of Cloth, or
an Ape's Skin, wherewith they cover their Privy Parts,
all the rest of their Bodies being naked. For Ornament
like they wear Bracelets of Gold about their Arms and
Legs, and twilt their Hair and Beards with golden
Chains. They constantly rob their Bodies with Oil, or
Fat, to make them shine. Their Wars are no more than
confused Skirmishes, without the least Order or Disci-
pline. They make use of Darts and short Lances; and
for their Defence cover themselves with the Skins of
Tygers, Lions, or Leopards. Their *Hidalgo's*, or chief
Men, are attended by two Pages when they are going to
the Wars, and one carries the Buckler, the other a Stool
for his Master to rest himself upon, as Occasion serves.
They marry as many Wives as they are able to buy and
maintain, the Purchase of a Wife being commonly ten
Rials, which paid, the Marriage is consummated without
any further Ceremony, except that they get heartily drunk.
The *Dutch* have erected a Fort called *Beavris*, within four
Leagues of *Minna*, besides which they have their Factories
at *Cara*, *Caramantin*, and *Aldea del Puerto*, whence they
return vast Quantities of Gold yearly, having much un-
dermined the *Portuguese* Traffick with the *Ethiopians*, by
their mild Way of Dealing, and being contented with a
much less Profit than the other.

25. King *Joh. the 11th of Portugal*, having refused the
Offer made him by *Christophor Columbus*, of discovering
the *West-Indies*, bent all his Thoughts upon the Conquests
of the *East*; for which Purpose he sent *Diego Can*, and
Juan Alonso de Aviero, to those Parts. The first, direct-
ing his Course towards *Minna*, came to the *Cape Lopez
Gonfalo*; and having afterwards doubled the *Cape of St.
Catherine*, entered the River *Zaire*, in 7° S. of the Line
into the Kingdom of *Congo*, this Kingdom extending from
the *Cape of St. Catherine* to the South of the *Cape de
Lelo*, is inclosed on the West Side by the *Ethiopian Sea*,
to the South by the Mountains of the Moon, and the
Cape, as it is to the East by *Alantaria*, and borders to
the North upon the Kingdom of *Beny*, reaching in Length
from 20° to the 13° beyond the Line, and consequent-
ly near 160 Leagues. It is divided into six great Pro-
vinces, *viz.* *Bamba*, *Seango*, *Sunda*, *Pango*, *Betta*, and
Pamba. The Province of *Bamba* extends along the Sea-
side betwixt the two Rivers of *Ambrixi* and *Coanfo*, its
chief City bearing the same Name of the Province, lying
twenty Leagues from the Sea-side, betwixt the Rivers of
Lopani and *Ambrixi*. The Province of *Seango* is inclosed be-
twixt the two Rivers of *Zaire* and *Seango*, reaching from
the River *Ambrixi* to the Foot of the Mountains, which
separates it from the Kingdom of *Seango*.

The Province of *Sunda* is only eight Leagues in Com-
pass, comprehending all the Country about the City of
Congo, named *St. Salvador* by the *Portuguese*, to the River
Zaire. Its Metropolis has given its Name to the Pro-
vince. The Province of *Pango*, formerly under the Ju-
ridiction of its own Kings, borders to the North upon
the Island of *Sunda*, and to the South upon that of *Batta*;
to the West it has the City of *Congo*, and on the East side
is surrounded by the Mountain of the Sun. The Province
of *Batta* lies to the North-East, betwixt that of *Pango*
and the River *Barbella*, extending to the burnt Mountains.
The Province of *Pamba* has for its Metropolis the City of
Cago, which is built upon a Mountain, at least fifty
Leagues from the Sea-side. Another Mountain belong-
ing to this Province, which is above six Leagues in length,
is so well stocked with Villages, that its Inhabitants are
computed to amount to near one hundred thousand Per-
sons. *Dante Lopez*, who lived several Years in those
Parts, declares, that the Climate here is as agreeable in
Winter, as it is in *Italy* in *October*; and that the greatest
inconvenience they are subject to here, are the hot Rains
which fall every Day two Hours before, and as many
Hours in the Afternoon, during the Months of *April*,
May, *June*, *July*, and *August*, being their Winter, which
begins the 15th of *March*, and ends the 15th of *Septem-
ber*. The Days and Nights here are of a Length, both
Winter and Summer.

The River *Zaire* arises out of the same Lake whence
the *Nile* derives its Rise; it is beyond all Question the
largest River in all *Africa*; for being joined with the Rivers
Fambo and *Barbella*, as it passes through the Country, it
is at the Mouth, where it disembogues into the Sea, at least
twenty-eight Leagues broad. The River *Gouaze* is the
common Boundary betwixt the two Kingdoms of *Congo*
and *Angola*, and the River *Lelonda* abounds in Crocodiles
and Sea-horses. This Creature is of a dusky Colour, with
very little Hair; its Head is without Ears, broad Nostrils,
and in his Jaw two Teeth like the Tulks of a wild Boar;
its Hoof has the Shape of a three-leaved Grass; it neighs
like a Horse, and will run a great Pace. The hot Rains,
which fall in the wet Season, rendering the Grounds very
fertile, they produce Herbs, Corn, and Fruit, in prodigi-
ous Quantities. The Province of *Pamba* has divers Gold
Mines. All the Forests are full of Elephants of an extra-
ordinary Size, the Teeth having been found to weigh two
hundred Pound Weight. They produce also a peculiar
Creature called *Zebra*, in Shape not unlike a Mule, but is
capable of engendering; it is marked with three Lists
round the Back, reaching down to the Belly, of about three
Fingers Breadth; of which one is black, the other white,
and the third yellow. This Beast is famous for its mar-
vellous Swiftnes. They have also a kind of Oxen called
Empalenges, but somewhat less than ours. Wolves, Foxes,
Wild-Buffaloes, Wild-Goats, Deer, and Rabbits, being
never fought after here, they are seen in prodigious Quan-
tities, the only Thing they hunt being the Civet-Cat, by
reason of the great Advantages it affords to the Owner.
They abound also with Birds, such as Pheasants, Partridge,
Hens, Turkeys, Ducks, Geese, Turtles, Pigeons, Hawks
of all sorts, and Eagles. Serpents they have of fifteen Feet
long, which will swallow a Sheep at once; and some am-
phibious Creatures, the Flesh of which is eaten by the In-
habitants; whereas some others are so venomous, that such
as are bitten by them intalibly die within twenty-four
Hours.

The Mountains of *Pamba* are abundantly productive of
Citrons, Oranges, Bananas, and divers other Fruits, as
plentifully as in most Parts of the *Indies*; and the Vallies
produce a kind of Wheat called *Seuco*, not much bigger
than Mustard-seed, which makes better Bread than any com-
mon Wheat, and is reserved for the Use of the better sort,
the Poor being here fed with Rice, and *Turky* Wheat.
Of *Cocoa*-Trees they have two sorts; some are Date-Trees,
the other produce *Cocoas*, and a certain Juice, which is
accounted an extraordinary Cleaver of the Reins, and con-
sequently a sovereign Remedy against the Gravel. Their
Fruits, as well as Pulse and Herbs, are, without Compa-
rison, more excellent here than in other Countries. Their
Mountains, which for the most part are covered with Fruit-
Trees, are green all the Year round; and the Rocks pro-
duce white Marble, Alabaster, Jasper, Porphyry, and some-
times Hyacinths.

The Inhabitants are black; but the Women are not so
dark as the Men; they have neither such thick Lips, nor
flat Noses, as commonly the Negroes have, and their Hair
curls naturally. Those of *Bombay* are famous for their
Strength. As every Man here is his own Architect and
Physician, to their Houses are small, low, and slightly
built; they cure Fevers with Powder of Sandal Wood, and
Head-ach by Bleeding; and when they are to procure an
Evacuation by Purging, they do it with a certain Bark of
a Tree beat to Powder; they generally appear bare-headed,
but such as do not, wear a kind of Hats made of the Barks
of Trees, or Nut-shells. Some have a Way of listening
with Pack thread Plumes to their Hair, and both Sexes
have Holes in their Ears, in which hang very weighty
Rings of Gold set with Stones. About their Arms and
Legs they wear Rings, or rather Plates of Iron, Tin, or
Brass; but the better sort are clad after the *Portuguese* fa-
shion. They sleep and eat upon Mats spread upon the
Ground. Besides the vast Wealth in Gold, Silver, Copper,
Crystal, Iron, and other Metals this Country produces, a
great Traffick is carried on here in Ivory, Civet, and
Slaves, whom the *Spaniards* and *Portuguese* employ in
their Mines and Sugar Mills of *Brazil*. They use certain
Snells, which they fish out of the Sea near the Isle of
Lwonda.

Lunda, instead of Money, there being a particular Governor appointed there for that Purpose, who has the Oversight of it.

The King of *Congo* governs with an arbitrary and uncontrollable Power, both the Lives and Estates of his Subjects being at his own Disposal; the Provinces are under the Jurisdiction of certain Governors, among whom the *Batta* is the head and constant chief Minister of State, being of the Blood-Royal, which is the Reason he sometimes eats at the King's Table (a Thing not allowed even to the King's Sons) but never sits down, but stands all the Time. He has alone the Privilege of having the same Pipers and Musicians the King has, and of the Use of the Fire-arms for his Guard, of whom he keeps a good Number, to bridle the Insolence of a certain People living upon the *Nile*, called *Giaquer*, who make frequent Inroads into the Territories, of which Notice is given into the Country by the discharging of a Musket. The Province of *Bombay*, however, is accounted the Bulwark of this Kingdom; for though the Province of *Batta* is able to raise above seventy thousand fighting Men, whereas that of *Bombay* is only able to raise 40,000, yet are the first not to be compared to the last. They use great broad Swords like the *Scuffs*, and handle them with as much Activity as we do our Rapiers. They make use also of Darts, and Bucklers, the last of which are made of the Barks of Trees. They have no Cavalry; their Armies, which are divided into Brigades, consist only of Foot, who engage all at a Time. The General keeps in the Centre, and by the Help of their warlike Instruments, called *Manjio*, gives the Signals to the Commanders when to attack, to retreat, to close, or to open. Their Trumpets are of Wood, and make a most dreadful Noise. Their Drums are made of the Barks of Trees, and are covered with Skin, and are beat with great Ivory Sticks; besides these, they have another kind of Instrument, being only an iron Plate of a triangular Form, which they beat with Sticks; they have also a Way of hollowing the Elephant's Teeth, and then blow them as we do our Bugle Horns; with those Instruments the Commanders of the Army answer the Signal given them by the General.

The Portuguese were the first who introduced the Christian Religion here, under the Reign of *John II.* the King, who, as we told you, sent *Diego Can* and *John Alonso d'Avoro* into those Parts. It was about that Time that *Caramanjo*, King of *Congo*, sent *Casua* his Ambassador to the King of *Portugal*, who, being baptized there, was sent back with three Portuguese Ships, commanded by *Gonjo de Senjo*; but in touching at *Cape de Verde*, both died there of the Plague. *Roy de Senjo*, who succeeded in the Command, being forced into the Port of *Lunda*, in the Province of *Songo*, the Governor of the Place, who was Uncle to the King of *Congo*, was baptized with all his Family, whose Footsteps were followed by the King and Queen, being named *John* and *Elianer*. *Immanuel*, King of *Portugal*, sent another Squadron thither in 1504; but, soon after, the Discovery of the *Indies*, and Prospect of greater Advantages to be reaped from thence, occasioned the Discontinuance of those Voyages to the African Coast; the Foundations of Religion were also neglected by the Portuguese, which the *Dutch* improving to their Advantage, introduced their Traffick, and with it the Protestant Religion.

We told you before, that *Diego Can* discovered *Congo*; let us now see what became of his Comrade *John Alonso d'Avoro*. He, about the same Time, made a Discovery of the Kingdom of *Bony*, betwixt *Mina* and *Congo*. Its Length is eighty Leagues, and its Breadth forty. The City of *Angate* is at twelve Leagues Distance from the Sea, and somewhat further in the Country, upon the River called *Rio Tomoso* by the Portuguese, its capital City bearing the same Name with the Kingdom. The King of *Bony*, having engaged in a Treaty with *Alonso*, was also baptized; but this Conversion being not founded upon any real Knowledge of the Principles of the Christian Religion, was of no longer Continuance than the Traffick of the Portuguese in those Parts, which was neglected as soon as they had made a Discovery of the Passage by Sea to the *Indies*.

26. *Cape de Verde* is by *Ptolemy* called *Promontorium Abyssinarum*, and put in $10^{\circ} 40'$ on this Side of the Line; whereas, by our own Observation, we can positively affirm it to be in $14^{\circ} 20'$, betwixt the two Rivers of *Senega* and *Gambra*, or *Gambia*, called by *Ptolemy* *Durago*, and *Staburis*, and which, according to his Opinion, are very small ones, the Sources of which are unknown; whereas it is beyond all Question, that they arise out of two Lakes, one of which is by the said *Ptolemy* called *Palus Chelonae*, now the Lake of *Goaga*, and the other that of *Naba*, though some of the Inhabitants are of Opinion, that they have their Rise from the *Nile*. It is called the *Cape de Verde* from the many Trees near it, and their constant Verdure. *Ptolemy* also mentions nothing of these two Rivers falling into the Sea; whereas it has been found since, that the River *Senega*, after being joined by the Waters of divers other Rivers in the Province of *Mandiga*, discharges into the Ocean in $13^{\circ} 30'$, and that the River *Senega* running due East to West falls in $15^{\circ} 30'$ into the River *Goaga*, which has imparted its Name to that Country we call *Cape Verde*. It is certain that *Ptolemy* had no Knowledge of the Inhabitants betwixt those two Rivers, so we must resort to the Credit of those modern Authors, who have given us their Relations concerning them.

They tell us, that a certain People called the *Bambos* inhabit the Eastern Part of it as far as the *Cape de Verde*. The *Fosles* and *Berbecines* they place deeper in the Country, upon the River *Banaga* to the North of the former, some of which are subject to the *Fosles*, others to the *Berbecines*. It is a plain Country, producing abundance of Cattle, Wine, Cotton, Wild-Fowl, Ivory, and Hides; Gold and Silver they have none, but Iron in vast Quantities: The Air is accounted very wholesome, and the Inhabitants near the *Cape de Verde* good Horticulturists. They are *Pagans*, and very famous for admittling Justice in publick Affairs, with a great deal of Equity, Justice, and Secrecy, those that are admitted into the Council, or Courts of Judicature, being generally chosen by their Age and Experience. Though they are ignorant what belongs to martial Discipline, such as is practised in *Europe*, yet is their Manner of disposing and ordering their Forces not to be passed by in Silence; for they are not able to bear Arms, being divided into certain Regiments under their respective Commanders, having a considerable Number of Divisions or Quarters allotted them, and in case of Necessity, their Orders for appearing to fight, and being dispatched from one Division to another, being ready in a little Time to be at the Rendezvous appointed, without the Trouble of any new Levies, the Sons succeeding constantly in their Father's Places, if they do not die, so that their Number is always complete. They are not altogether ignorant of the Degree of Nobility of the Peasantry; for their Grandees they call *Thos*, whom they pay more than ordinary Respects, and are being always chosen out of their Number, and are of thirty Years of Age at least.

Not long after the Discovery of the Country of *Senega* by the Portuguese, one *Benjo* was chosen King, but being got into the Throne by force, was afterwards taken by most of his Subjects, brought to *Alonso*, King of *Portugal*, who had him instructed in the Christian Religion, and baptized, and sent him with a good Squadron of Ships, under the Command of *Faz de Coanha*, who had positive Orders to penetrate to the Entrance of the River *Senega*, to search for Penetration deeper into the Country. *Faz* did so accordingly, but was by the said *Benjo* killed, and his Son is unknownly demolished again, and the Country upbraided upon this Account by King *Alonso*, who sent him with his own Hands, and a great Squadron of Ships, where he was never to return an Account of his Proceedings.

Those Islands which the Portuguese call the *Ilhas de Verde*, yet to that the nearest of them is only about the most remote one hundred and fifty Leagues from the Continent, which makes me imagine that they who would have them to be the *Gorgendes* of *Ptolemy*, were under a Mistake, since it is not very probable that

was so terribly shaken by an Earthquake, on the 16th of June 1628, that at some small Distance from the Shore, the Sea opened in a Place where was 150 Fathom Water, and thence thrust forth a small Isle of a League and an half in Length, at least 60 Fathom above the Water. These two Islands have also certain hot Springs, whence, and at some Distance from them, arise sulphurous Vapours. About three Leagues from *Angra*, is a Spring which turns Wood to Stone, as is evidently to be seen by a certain Tree, the Root whereof, as far it hath been under Water, is absolutely petrified, whereas the Trunk, and all the rest, are not the least changed. The Isle of *Pico* has a peculiar sort of Wood as hard as Iron, red as Scarlet, in which, when cut, appear certain Veins like the Watering of a Camblet, of which are made very fine Cabinets, which are highly esteemed in *Portugal*. Cedar is so common among them, that they do not only use it for their ordinary household Stuffs, but also for Fuel; nay, they make whole Waggon and Boats of it. They have hence any Commodities except Provisions, which they sell to the Ships that touch here to take in Refreshments, as they are going to the *East-Indies*.

The Isle of *St. Michael* is about 20 Leagues long, lying 28 Leagues S. E. from that of *Tercera*. Its capital City is called *Punta Delgada*, its Soil very fruitful, producing more Wheat than they are able to consume. The worst is, that they have no safe Road for Ships to ride in. The Isle of *St. Mary*, being not above twelve Leagues in Compass, lies twelve Leagues South from that of *St. Michael*, its Products are Provisions and Porters Earth. The Isle of *Gratia* lies seven or eight Leagues N. E. from that of *Tercera*, its Compass being not above five or six Leagues. It has got its Name from its Pleasants, and vast Plenty of all sorts of Fruits. The Isle of *St. George*, which is twelve Leagues long and broad, lies eight or nine Leagues to the N. W. from that of *Tercera*. It is well stocked with Provisions, though it be full of Mountains, which furnish them with vast Store of Cedar, which they sell to those of *Tercera*, where it is made into Joiners and Cabinet-makers Works, and transported thence to other Places.

The Isle of *Laysa*, being at least seventeen or eighteen Leagues in Circumference, lies seven Leagues to the S. W. out of that of *St. George*, being the best of all the *Isles* next to that of *Tercera* and *St. Michael*. Its capital City is called *Punta Delgada*, inhabited chiefly by the Posterity of the *Spaniards* we had Occasion to mention before. They have hence abundance of Provisions, but especially Fish to the other Islands. The Isle of *Pico* has its Name from the high Peak or Neighbourly mountain called *Pico*, supposed to be as high as the Peak of the great *Canary Island*, of which I shall here to speak. It lies included betwixt the Isles of *Laysa*, whence it is distant three Leagues to the S. E. of *St. George* and *Tercera*, from the first of which it lies four Leagues to the S. W. and from the latter twelve Leagues to the W. S. W. Their Lands are accounted more fertile here than those of any of the other Isles.

The Isle of *Laysa*, as we told you, we got Sight of the 20th of November, being seventy Leagues to the West of *Tercera*. *Laysa* is twenty Leagues in Circumference, and the Isle of *Gratia* is no more than two Leagues Distance to the North. They are both under the *Portuguese*, but their Distance from the *Isles* thence them not to be of their Number. As the *Laysa* are very convenient for the Refreshment of the *Portuguese* Ships bound to the *East-Indies* and *Brazil*, they are very careful of their Protection; whence it is they will allow no Foreigners to view the Coast of the Isle of *Tercera*, for fear they should, by its Weakness, be invited to land and settle there. The Air is very clear and wholesome, but without very sharp, so that it cools of Iron, and several times in a few Years, which is the Reason they use Flint Stones in their Buildings, which having lain for a considerable Time under Water near the Sea-side, are better quenched than other Stones to resist the Sharpness of the Air.

But before we leave the *African* Coast, it will not be amiss to say some thing of the *Canary Islands* which lie upon the Coast opposite to *Calcutta*. The Wind-blown seeds of the Air, and the Heat of the Sun, procured them the Name of the *Islands of Fortuna* among the *Ancients*, though one

of them is also called *Canaria* by *Pliny*, *Solinus*, and *Philemy*, which contradicts the Opinion of those who affirm that those who discovered them in the Year 1482 gave them the Name of *Canaries*, from the many *Canaries* there. They are seven in Number, viz. *Lanzarotta*, *Puntaventura*, the great *Canary*, *Teneriffa*, *Gomera*, and *Pico*, extending from East to West, in a manner in a direct Line. *Lewis* Count *Clermont* having, in 1248, got a Grant from the Pope of these Islands, sent out a Fleet to endeavour the Conquest of them, which was perfected accordingly under the Protection of the King of *Aragon*; but the same being afterwards relinquished by *D. Lewis de la Cerda*, the *Spaniards* and *Andalusians* having lent out some Vessels to invade the Isle of *Lanzarotta*, whence they brought back some Wealth, that the King of *Castile* then reigned upon the Conquest of these Islands, which, doubtless, he would have effected, had not the more pressing Wars he was engaged in with his Neighbours diverted him from that Purpose.

Not many Years after, a *French* Gentleman, named *John de Bethuncourt*, having obtained a Commission from *Henry III.* then King of *Spain*, to conquer the *Islands*, under the Condition that he and his Posterity should acknowledge the Sovereignty of the Crown of *Castile*, he was so fortunate as to make himself soon Master of the lesser Islands, but could not bring the two great ones under Subjection. However, the King of *Castile*, being dead, having sent thither a Bishop, this occasioned such a Difference between him and *Bethuncourt's* Nephew, who succeeded his Uncle, that the King of *Castile* was obliged to send thither one *Peira Barba*, who having married the *Frenchman's* daughter, gave the Islands, as a *Dowry* to his Daughter, to one *Perera*, who assuming the Name of King of the *Canaries*, left no Stone unturned to make himself Master of them all by the Conquest of them in England; but finding his Endeavours to prove fruitless, he sold the right of these Islands to *Ferdinand*, who named the *Canaries* King of *Aragon*, reserving to himself only that of *Almeria*, with the Quality of an Earl. King *Ferdinand* had no good Fortune to reduce the two great Islands also, which he gave, as well as the rest, have remained under the *Spanish* Possession.

The great *Canary* Isle is computed to contain above a thousand Inhabitants, being the Residence of the Bishop, Inquisitor, and Great Council, was made the chief Seat of Affairs of all the other Isles. Besides that, it is famous for its well known and esteemed in *Europe*, it produces Corn, Barley, Honey, Wax, and Sugar-Cane, and that they have a great number of Cattle makes them trade in Commerce with the *Spaniards*, *English*, *Dutch*, and *Portuguese*, who furnish, in their Voyages to the *West-Indies*, with some of the best Provisions in here. The Isle of *Pico* is famous for its Mountain called *El Pico*, being accounted the highest in the World, to that it may be discovered above a year, and seen at Sea, and on the Top a Man may see the whole of the *Canary Islands*, though some of them are very high, and distant from this; but it requires three Day's Journey to go to it, which must be either in July or August, if it be not covered with Snow all the rest of the Year, though it is not so high as any of those Islands.

The Isle of *Teneriffa* claims the next Place to that of *Teneriffa*, among the *Canary Islands*; it has got a Name from the Drought of the Ground, which being without Water, seems to be of Iron; For, except a few Springs near the shore, this whole Island is without a Rivulet, Brook, Well, or Spring, again which Default prevent Nature has blessed this Island with a certain Tree, whose Wood is so like the resemblance to any other I ever saw, either in *Europe*, or the *Indies*, and stands in the very Centre of the Island; its Leaves are very long, but narrow, and never or seldom green, neither in Winter or Summer. Betwixt the *Islands* and *Clouds*, which are never dispelled, but are constantly dissolved in a liquid Substance, when hanging to the Clouds, fall from thence as clear as Water into the *Canaries*; and are made under the Tree on purpose to receive it, and in such great Quantities, that they are not only sufficient to provide sufficient Quantities to supply each Man's Burden.

It is the Opinion of the Inhabitants, and is also frequently said in these Parts, that a hundred Years ago, West of the *Canaries* there lay a certain Island, which

called *St. Borondon*, very pleasant and fruitful, and inhabited by Christians; but are not able to tell you how it came to be peopled, and what Language is in Use there. The Spaniards inhabiting the *Canaries* have made several Attempts to find it out; but whether the thick Fogs which surround it, or the Current of the Sea, which keeps Ships from the Shore, is the Occasion that it has not been discovered, certain it is, that nobody hitherto has been able to give a satisfactory Account of it.

28. But to return to our Voyage; the Wind turning to the South the 29th of *November*, we took our Course to the North, leaving the *Ile of Flores* to the East of us, and soon lost Sight of that as well as of the *Ile of Corvo*. The 30th of *November* we made thirty-one Leagues to the North with a South-South-west Wind, and at Noon found ourselves in 40° 32' Latitude. *December* the 3d we made thirty-four Leagues with the same Wind and Course; and the 4th, a North-east Wind advanced us twenty-seven Leagues to East-North-east. The 5th the Wind coming to the South-west, we continued the same Course, and got thirty seven Leagues. It was this Day exactly eleven Months since we had been tossed up and down the Sea, though our Voyage had been tolerable enough ever since our Departure from *Madagascar*. The 6th it blew a Storm out of the East, but the Wind being for us, we advanced five Leagues. It is observable, that as soon as you are past the *Azores* Islands, you may assure yourself of a West Wind, let it be what Season of the Year it will, till you come to the Coast of *England*; it being very well known that it turns either directly to the South or North, the 7th it may change a few Points to the Comers.

The 8th the Wind turning to the West, we made thirteenth Leagues to the East-North-east. The 9th we made thirty-seven Leagues, with a very brisk Gale to the South-east, keeping the same Course; and the 10th, with a South-South-west Wind, made thirty-one Leagues to the North-North-east. We found ourselves in 49° 18', the Weather being very cold, and a lanly white Bottom of forty-eight Fathom, and in the Evening sounding again, found but fifty-three Fathom, the Sand not so pure as in the Morning. The Wind hopping about to the North-East in the Night, was directly 1400 Feet all the night about Noon, when coming to the South-west we made twenty-two Leagues. The 11th we elapsed at Break of Day, two English Ships, an hour or two after, that Point of Cornwall called the *Land's End*, we endeavour'd to double the Point, the Wind being contrary, and with much ado made three Leagues. The 12th, the Wind being fall against us, we continued lowering, and at a Distance we saw another English Vessel, but could not come near it. The 13th the Wind being at South-west and South-South-west, we steer'd our Course to the East-South-east, and to the East, with a Point to the South. We made sixty-four Leagues to 49° Latitude the 14th, after having chosen our Course to the East-North-east, in order to make the Channel which divides *England* from *France*.

We saw two Dutch Vessels and a *Dunkirk* not far from us, but the Roaring of the Sea prevented our hearing one another. The 15th we steer'd the same Course, and met with three Dutch Ships bound for *Brussels*, not far from the *Ile of Wight*, which lies in 50° 20' Latitude, and 19° 4' Longitude. The 16th, by Ten in the Morning, we pull'd in Sight of *Dover* Castle, and about Noon came to an Anchor in the *Desons*, and this completed our Voyage in the 12th Month after our Departure from *Sarat*. We saw there near a hundred Ships riding at Anchor, in Expectation of the Weather, it being so boisterous, that for two Days we could not stir out of our Ship. The English Admiral, who was then with some Men of War in the *Bay*, invited the 19th (when the Wind was somewhat abated) the President to Dinner, who taking me along with him, I had my share in the Entertainment, which was to consist both for Meat, and the great Quantity of Plate, that the King's Table could scarce have been better served in *London*.

As we were extremely well pleas'd with our Entertainment, it was near Night before we got out of our Boat, but I shou'd not have a Member of the Admiralty's Boat to better were we got into it, than a broken Storm

forced us to Sea, the Waves continually coming over our Boat, so that we were oblig'd to make the best Shift we could to call out the Water, without Intermision, with our Hats. We now began to reflect, how that, alter we had surmounted so many Dangers during this tedious Voyage, we should at last be shipwrecked in Sight of our dear Country, and in that very Part whither we were come with so much Danger to seek for Safety; but, to be short, we were for four Hours thus betwixt Hope and Despair, when at last we got Sight of a small Veisel, but so miserably torn by the Tempest, that it had lost all its Anchors but one, which was not strong enough to keep it from being forced out to Sea. However, we betook ourselves to our Oars, sitting up to our Waists in Water, and with much ado reached the Veisel, in which in effect we were not much safer than in our Boat, as being in Danger to be flayed against a dangerous Sand-bank, which was not far off; but the Cold we had endur'd in the Ship had so disabled us in all respects, that we were not apprehensive of our Condition, being in a manner half-dead the next Day, when we were brought to our Veisel, where they had given us over for lost, and bewail'd our Death.

On the 24th another Tempest arose, which was so violent, that twenty four Ships were forced to cut their Masts, among the Number of which was also our Veisel, not to much by the Tempest, as for two Men of War being forced from their Anchors, which would else have run foul upon us. The 26th we got at last to the long-with-dar *English* Shore, and by the same Night at *Conterbury*, the Cathedral of which claims the Pre-erence before any other in *England*, and is not inferior to some of the best Structures in the World. The 27th we came to *Gravesend*, and the 28th to *London*, being met in our Way by certain Directors of the *East India* Company, who paid for the President's coming at *Blackwall*, with eight Coaches.

29. On the 30th I view'd the *English* House, and took that Opportunity to return Thanks to the Directors for the many Civilities I had receiv'd at the President's Hands; and they having made a splendid Entertainment for him that Day, I was also invited. The 31st, and the 1st of *January*, we were splendidly treated by some English Merchants, and the 2d by Sir *Edmund Wright*, the then Lord-Mayor of *London*. As he was much delighted in the Relation of the many Adventures that had befallen us during our Voyage, so he would needs invite the President and me again the next Day, our Discourse running upon the many Dangers we had escap'd.

The Lord Mayor, to shew us that Sea-faring People were subject to such, and often escap'd much greater Danger, related to us a Story of a certain Dutch Seaman, who, being taken by some Cruisers condemn'd to Death, his Punishment was chang'd into that of Banishment into the *Ile of St. Helena*, near which they were, which was done accordingly. This poor Wretch, thinking this Solitude insupportable to him, resolv'd rather to hazard his Life at any Rate, than to endure it; and having met with a Coffin, in which a Sea Officer had been interred the Day before, he, without more ado, took out the dead Corpse, and having cut out the upper Board of the Coffin, made a kind of Rudder, put himself into it, and to went out to Sea: A good Chance would have it, the Ship unto which he had belonged, was become at a League and an half Distance from the Shore; and the Ship's Crew obliging to odd a kind of Veisel floating on the Surface of the Water, thought it had been an Apparition, till coming nearer and seeing the Ship they stood amazed at this unaccountable Boldness of the Man, who had ventured to far in two or three Pieces of Boards, without being assur'd whether he should be received or not. It being put to the Question, it was at last resolv'd he should be taken on board, which was done accordingly; and he return'd to *London*, where he liv'd afterwards in the Town of *Horn*.

He gave us another Instance of this kind, of an Englishman, who, being taken by a French Privateer in the *Parquet* Boat going from *England* to *Dublin*, was held from the Privateer by a sudden Storm, which put them, but soon after (for the *Parquet* Boat) to admit a Rack on the Coast of *Scotland*, oblig'd to that of *Isle-ard*. The Englishman, with another of the Crew, happen'd to be cast away

away upon the Rocks, where they made a Shift to erect a Hut out of some Boards belonging to their Ship. They lived upon the Sea-mews they caught, which they dried in the Sun, and so they eat them raw; as also upon certain Eggs they found in the Crevices of the Rocks, which kept them from starving: But their greatest Want was fresh Water, of which they had none but what the Rain helped them to. They continued in this Condition six Weeks; at the Expiration of which the *Englishman*, waking in the Morning, missed his Companion (whom he supposed to be fallen from the Rock through Carelessness) the only Comfort of his Life. In this Solitude, which almost threw him into Despair, especially when the approaching Winter made every thing appear with a more doleful Aspect than before, his Hut being covered with Snow, he made the hardest Shift in the World to sustain himself, till after a miserable Life of eleven Months, some Seamen belonging to a *Flemish* Ship, commanded by Captain *Peckman*, famous for his Art in getting out the great Guns of the *Spanish Armada*, forced upon the Coast of *Scotland* and *Ireland* in 1588, by Tempest, as they were looking for Eggs, discovered this poor Wretch, whom, at last, with many Entreaties, they took into their Vessel, being all black, hairy, and meagre, more like a Spectre than a Man; and having given him what Refreshments the Ship afforded, set him down at *Derry* in *Ireland*, from whence he afterwards returned to *England*.

A third Relation he was pleased to give us of a most singular Resolution of four Seamen, who, being taken by the *Algerines*, and one of them being a Carpenter, they resolved to make a small Boat, and venture in it in the open Sea, in order to their Deliverance; accordingly, having made what Preparation they could for the Execution of this Design, they took off five Boards from the Fore-Room, two whereof were employed for the Bottom of the Boat, two more for the Sides, and the fifth for the Prow and Poop, their Quill serving for Tow. The Boat being well pitched, and the appointed Time come, they found that their Boat was so little as not to contain above two, so that two of the Confederates were obliged to stay behind, the other two, being an *Englishman* and a *Dutchman*, persisting in their Resolution to go forward, let it cost what it would: accordingly, having found Means to provide a Pair of Oars, a Piece of a Sail, and a slender Portion of Bread and fresh Water, they boldly put to Sea, having neither Compass nor Astrolabe, so that being overtaken by a Storm, they were forced to go where the Wind would carry them, their chief Business being to cut out the Water which continually came into the Boat, and soon spoiled what little Bread they had; which, together with the Want of Rest, had brought them to low, that they were scarce able to stand on their Legs. In this miserable Condition Chance brought them to the Coast of *Barbary*, where lighting on some Wood, that served them to rest and enlarge their Boat, which they did no sooner done, but being in manifest Danger of being killed by the Inhabitants, were forced to climb the main Mast, from whence, at last, after being rolled up and down in the Sea ten Days, were cast upon the *Spanish* Coast near the Cape of *St. Martin*, between *Alicanti* and *Valencia*, where, being civilly entertained by the Inhabitants, they afterwards returned to *England*.

On the 11th I lay the King of *England* touch many Privileges that were adhered with the *ETA*, and the Ceremony being over, my Lord *Strafford* did me the Honour to introduce me to his Majesty to kiss his Hand, and afterwards to the Queens; both their Majesties, at several Times, were pleased to bestow some Time in hearing my Relations of my Travels, especially of those into *Peria* and *Mugely*. During my Stay of three Months in *England*, I spent Part of my Time at Court, and the rest in taking a View of what was most worthy of Observation in *London*, and the adjacent Places, such as *White Hall*, *St. James's*, *Hampton Court*, *Westminster-Hall*, and the *Abbey*, *Greenwich*, the *Tower*, &c. And having by this Time honestly recovered myself of the Fatigue of a tedious Voyage, and received the Money I expected from my native Country, I left *London* on the 20th of *March*, and taking Water for *Gravesend*, went

thence for *Rocheſter*, and coming the 24th to *Deer*, embarked the 28th for *Dunkirk*, where I arrived the same Day. The 26th I continued my Journey thence to *Newport*, where I stayed that Night, and came the next Day to *Bruges*, and the 29th to *Ghent*, where I stayed only to the 21st of *April*, when I prosecuted my Journey to *Brussels*, the Capital City of the Province of *Brabant*. After a Stay of two Days at *Brussels*, I came the 5th to *Louvain*, and travelled the same Day four Leagues farther to *Middelburg*; thence I prosecuted my Journey the 6th to *Antwerp*, where I stayed two Days, and the 9th and 10th travelled to *Breda*, where, having spent the Remainder of that Day, I made five Leagues the next Day to *Bassendun*, or *Bilddun*.

The 12th I set forward again for *Gravendam*, whence I took Boat the same Day for *Rotterdam*, where I arrived the 13th, and continued my Journey the same Day for *Delft*, and so farther through the *Hague*, by the Way of *Leiden* to *Harlem*. This City, which is the biggest next to *Amsterdam* in the Province of *Holland*, discharged the Glory of the Invention of the Mystery of Printing by one of its Inhabitants, named *Laurence Costar*, who, in the Year 1420, first made the Characters of Black-wood, and afterwards having also found out the Ink that to this Day is used by Printers, he changed the wooden Characters into leaden ones; and having at last made them of Tin, he brought the whole to Perfection in 1474, a Memory of which the Senate of *Harlem* have caused the following Inscription to be set over the House of his

Memorie Sacrum, Typographia, Ars Inventionis, Inventrix, nunc primum inventa circa annum 1474.

Leaving *Harlem* in the Evening, I came the same Night to *Amsterdam*, of which Place having heard so much in the *Indies*, I resolved to spend some Time in taking a View of it. The first Thing that surpris'd me the next Morning was, that vast Number of People whom I found the Streets, that a Man could very hardly pass; that when I came to the Port, I stood amazed at the prodigious Number of Ships, which appeared at a Distance, as if more than one continued Foreill, especially when I was informed how many Ships were abroad at that Time, and to all Parts of the World; and that I saw every Day a considerable Number go to their own, and to other distant Coasts. The vast Stores brought thither every Year from the most remote Parts of the World, especially at the House of the *East India* Company, made me imagine, that I was in the Globe, was centered in this Place, and that such prodigious Quantities of Spices, only to be found here, that *China*, and all the rest of the *Indies*, were so exhausted their Store-houses, to lay them up in this City.

It was in the Year 1595, that the *Dutch*, by the encouragement of a certain Merchant, whose Name was *Willemus Houtman*, and who had lived a considerable Time in *Portugal*, undertook the first Voyage to the *Indies* along the *African* Coast; their Design of finding out the Northern Passage having proved abortive. Their Voyage did not answer the Expectation of the Merchants, who had flattered themselves they had discovered a new Passage, and 1597, they sent another Squadron, and by the 1602, to that, for fear of destroying this too powerful Company, a Charter was granted to all the Persons concerned therein for twenty Years, and six Chambers erected at *Amsterdam*, consisting of twenty Directors, *Amsterdam* and *Zealand*, twelve Directors at *Delft*, and *Rotterdam*, *Maaſſe*, at *Horn*, and *Enkhuysen* for *Holland*; and a fourth last consisting each of Seven Directors. According to the same Charter the City of *Amsterdam* was to be the Hall of all the Charges, and to send eight Deputies to the general Meetings, and those of the *Maaſſe* and *Zealand* and one Half Quarter each, and to lend the Company

their original Stock amounted to 600,000 *Florins*, which was improved to that Degree, that in the Year 1613 the Persons concerned had gained 300,000 *Florins* and sixty upon the hundred, and the next Year Profits were more considerable. The Regulation

Streets and Water-channels, and the Neatness and Splendor of the Bridges and Houses of *Amsterdam* is not to be imagined, except by those who have been Eye-witnesses of it, especially those in the new Town, and many of which ought rather to be called Palaces than the Houses of private Persons. Among the publick Structures the old and new Churches are worth Observation, and if the Town-houle be completed, according to the Draught I saw of it, it will, beyond Question, vie with any of the noblest Structures in the World, and the Exchange of *Amsterdam* surpasses that of *London*, in the Number of People that daily resort thither, as it does that of *Antwerp* in Magnificence; not to mention here the Gates of the City, and its three Sluices, which cannot be matched in the World, the publick School, College, Arsenal, a Play-houle, Anatomy-hall, and other publick Edifices, which deserve the Travellers peculiar Observation. But to come to a Conclusion of my Voyage; after a Stay of eight Days at *Amsterdam*, I took Shipping for *Hamburg* the 23d of *April*, where I arrived safely the 28th, and after I had rested myself there for one Day and Night, continued my Journey to *Gottorp*, which I reached the 1st of *May*, and had the Honour to be admitted to their Highnesses the Duke and Duchess of *Holstein*, unto whom I gave a short Account of the Success of my long and toilsome Travels.

31. The Observations published by our Author are of a mixed Nature, Part of them from his own Knowledge, and Part from Information. It may be necessary therefore to say somewhat as to the Reasons which induced us to prefer these Observations to those of other Men, who might be Eye-witnesses of all they wrote. In the first place, let it be considered, that it is necessary to give the Reader the most Matter possible in the least Room, and therefore concise and well-wrote Voyage answers this End better than several, and at the same time avoids useless and tedious Repetitions. The merit of the Writer was another great Consideration. It is manifest from the Commission with which he was intrusted, that he was a Man of Abilities, or otherwise he would not have been chosen. It appears from the foregoing Part of his Travels, that his Conduct justified their Choice, and that he made it his Business to bring back into *Germany* the clearest and best Intelligence that could be had, with regard to the Design which his Master had then in View and that was the Opening a new Channel of Trade between *Europe* and the *Indies*. The same Reasons therefore that recommended him to, and procured him the Approbation of, his Master, gave his Works a Title to a place in this Collection, notwithstanding the Objections to which they may seem liable at the first Sight. But farther still; he was not only a Man of great Judgment himself, but of great Experience also; and as he was very capable of distinguishing upon Information what was fit for him to report, and what not, so he was no less careful in seeking his Information from such as had it most in their Power to instruct, and at the same time were least likely to impose upon him. The Advantage he had of consulting the *English* President upon what he was told by the *Spaniards* and *Portuguese* must have been of infinite Service, by enabling him to correct and explain whatever he received from them; therefore taking all these Advantages together, we may very safely conclude, that there hardly ever was a Voyage Writer better qualified to deliver what was fit for the Publick to see than our Author.

It remains to give some Account of that Prince by whose Direction these Voyages were undertaken, the Views he had in causing them to be undertaken, and the Consequences of such extraordinary and hazardous Undertakings so well and happily performed. *Frederick* the third, Duke of *Holsten Gottorp*, was the Son of *John Frederick*, Sovereign of that Country, and the Princess *Augusta*, Daughter to *Frederick* the second, King of *Denmark*. He succeeded his Father in his Dominions in the Year 1610, and having spent a great Part of his Time in improving his Country, setting new Manufactures there, and opening a free Commerce to *Sweden*, *Poland*, and *Russia*, he began about the Year 1630 to think of putting in Execution a Project which had long employed his Thoughts, by which he hoped to begeth a new City, and greatly to enrich his new City of *Frederickshadt*. He was led to this by the Increment of

some Merchants whom he had drawn to settle in his Country by the great Encouragements he gave them, and who suggested the Possibility of bringing into and settling the Silk Trade in his Dominions. At first Sight this must appear a very strange and almost impracticable Project; but when attentively considered it will appear in quite another Light.

We must in the first place consider, that the Northern Countries of *Europe* were at that Time entirely supplied with all Kinds of Silk Manufactures from the Southern Countries, and these at the greatest Distance from them, which was attended with many and great Inconveniences; besides the capital Mischief of sending annually vast Sums of Money in return for those Manufactures. The only Remedy that could be applied to these Mischiefs was the establishing this Commodity in the North by breeding and managing Silk-worms there, which was indeed a tedious, hazardous, and in all human Appearance, impracticable Undertaking, or else to sink a Step lower, and be content to import the Silk in the most reasonable Method, and at the lowest Price, so that the manufacturing it might prove sufficiently profitable to the People engaged therein. This Design too, though less difficult than the other, seemed hard enough to compass, since a Voyage from the *Baltick* to the *Mediterranean*, which was the only means whereby either *French*, *Spanish*, or *Italian* Silks could be brought to *Holstein*, had been necessarily attended with such an Expence, and the Silks imported would have come at so dear a Rate, that it would have been impossible, for many Years at least, to have manufactured them to any Advantage. The Commerce of the *Levant*, and the importing Silk from *Alippo*, or *Smyrna*, must have been attended with still greater Difficulties and Expence, so that on this Side there seemed to be no Hopes of compassing such a Design.

But *Philip Crusius*, who first engaged the Duke to think of this Scheme, immediately obviated these Objections by shewing that the *Persian* Silks might be had sooner, and at a cheaper Rate in *Holstein* than in any of the Countries where they were then manufactured. The Way he proposed was through *Muscovy*, the Frontiers of which are divided from those of *Persia* by the *Caspian* Sea, the Silk Provinces of *Persia* lying on the Coasts of that Sea; so that the transporting them cross the *Russian* Empire could scarce be esteemed a more laborious or difficult Undertaking than the conveying them by Caravans from *Persia* through the *Turkish* Empire to *Smyrna* or *Alippo*; and consequently, if this Scheme could be executed, the Ports of *Russia*, which were very near, would serve as effectually for the Silk Manufacture in *Holstein*, as the Ports of the *Levant* for the Southern Parts of *Europe*. These were the Principles upon which *Crusius* went, and on which the Embassy, which Duke *Frederick* sent into *Persia*, was undertaken. Our Author's Journey from *Persia* into the *Indies* was, as we have before represented it, an additional Project to this, of establishing a Silk Manufacture; and the Grounds upon which the Duke went in this were likewise very just and reasonable, as in a very few Words we shall be able to shew. He was informed that a great Trade was carried on between *Persia* and *India* by Land, and therefore he very rightly conceived, that if his first Scheme took place, it might be very practicable to bring the *Indian* Commodities and Manufactures from *Persia* to the Coast of the *Caspian* Sea, and consequently, together with the Silks, through *Russia* into his own Dominions.

This, I say, was that Prince's Design, and I thought it more necessary to insist upon it at large, because there is not a Word dropped about it by our Author; on the contrary, his Observations look all another Way, and he seems to have employed himself chiefly in remarking on the *Portuguese*, *English*, and *Dutch* Commerce in the *Indies*; which Observations, as they were fitted to be published to the World, were likewise best suited to conceal the true Design of his Voyages. I must take this Opportunity of remarking, that all the Civilities shewn him by Strangers in those Parts of the World, may be accounted for from hence, I mean from their being morally certain, that the better he was acquainted, and the more thoroughly he was informed of the Nature of their Trade, the more impracticable his Master's Design would appear

of interfering therein, by a direct Navigation to the *Indies*, which they all along apprehended to be the Duke of *Holstein's* Design; and therefore thought, and very justly too, that a better Method than this could not be devised to defeat it. This likewise accounts for the rendering the Ambassadors and our Author's Accounts publick, in which, though all the Transactions are in themselves equally curious and entertaining, yet they make known little or nothing that relates to the Duke's real Project, and are therefore considered in this Light as nothing more than political Amusements.

It must, however, be acknowledged, that all these fine Schemes, though built upon just Principles, and pursued with great Wisdom and Prudence, proved in the End absolutely ineffectual, which was owing to the Wars and other Confusions that fell out soon after, both in *Germany* and *Russia*; in the first of which the Duke of *Holstein* himself had his Share, so that the Event ought not in the least to prejudice our Opinion against the Duke's Design, which has been since revived by other great Princes, and will be some Time or other effectually executed, and thereby a new Turn given to the Commerce of the *Indies*. The *Czar Alexis Michael*, in the Year 1698, revived this Project, which was then disappointed by the Rebellion of the *Cossacks*, who made themselves Masters of the City of *Astrakhan*, and thereby cut off for a Time the Correspondence between *Russia* and *Persia*. It was with this View also, that

the late *Czar Peter the Great*, who understood all these Points better than any of his Predecessors, and perhaps better than any other Prince of his Time in *Europe*, made himself Master of all the Provinces bordering on his Side the *Caspian* Sea, and thereby laid very fair for engrossing the whole *Silk Trade*, that is, so far as it depends upon *Persia*.

I might here put the Reader in mind, that we too have very lately proceeded upon this Plan, and have very busily begun to establish, by the Means of our *Russian* Company, this very Commerce with *Persia* through the *Mosscovite* Empire, which is more than sufficient to show, that the Duke of *Holstein's* Scheme, though it actually failed by unforeseen and unavoidable Accidents, was in its Nature perfectly just and well founded, since, if it can be rendered useful and practicable to us, it must not only have been more useful, and more practicable to him, who was so near a Neighbour to *Russia*, but all Circumstances considered, the wisest and best laid Scheme for the Improvement of his Dominions that perhaps was within the Compass of the human Understanding to invent or contrive.

Thus I have done all that lies in my Power to render these Voyages intelligible to the *English* Reader in their utmost Extent, by explaining many Things that have hitherto slept in Obscurity, and might possibly have been lost therein for ever, if these Voyages had not been made a Part of this Collection.

SECTION XXVIII.

*A Supplemental Account of the Commodities, Manufactures, and Produce of the several Countries of the Indies, together with Remarks on the Nature and Value of that Trade in respect to Europe.*From the Works of *John Baptist Tavernier*.

1. An Introductory Account of the Contents of the Section. 2. A succinct View of the *Silk*, *Cotton*, *Indigo*, *Spice* and *Drug Trade* in the *Indies*. 3. The Nature of the *Diamond Mines*, the Manner of their working them, and the Value of their Produce. 4. The Mines in the Island of *Borneo*, the Nature of the Stones found there, and an Account of the largest *Diamonds* in the World. 5. Of coloured Stones, such as *Rubies*, *Opals*, *Sapphires*, *Turquoises*, and *Emeralds*. 6. Of the *Pearl Fisheries* in the East and West-Indies, and of the Differences in point of *Size*, *Shape*, and *Colour* of these Jewels. 7. Of *Coral Fisheries*, and of the Value of this Commodity in the *Indies*. 8. Of *Amber*, *Ambergris*, *Musk*, and other *Perfumes*. 9. Of the *Beasts*, such as *Goats*, and *Apes*, their different Virtues and Values, and of the *Porcupine* and *Serpent* dresses. 10. Of the *Gold*, *Silver*, and *Tin Mines* of the *Indies*. 11. A Description of the Kingdom of *Kachemir*, and of the *Paradise* of the *Indies*, and its Produce. 12. Of the Provinces of *Multan*, *Candahar*, *Cabulistan*, and *Lahor*. 13. Of the Provinces of *Haoud* and *Varad*, and of the Fruits and Manufactures which they produce. 14. Of other Provinces of the *Mogul Empire*, and of what is most remarkable in each of them. 15. A Description of the Country of *Bengal*, one of the pleasantest and most fruitful Countries of the *Indies*. 16. Of the rich Kingdom of *Boutan*, its Inhabitants, Commodities, and Manufactures. 17. Of the Power, Splendor, and Magnificence of the Monarch of that Country. 18. Of the Kingdom of *Yupa*, and of the *Gold* and *Silk Trade* carried on there. 19. Of the noble Kingdom of *Alam*, and of the rich Mines in that Country; as also of *Gum Lac* and other valuable Commodities which it produces. 20. Of *Yampin*, and its Products. 21. A concise History of that famous Kingdom.

As we have in the foregoing Sections given great Particulars into the Commerce of the *Indies* from the best acquainted with them, and of the most Reputable, so, by way of Supplement to these, we shall add the Chapters of Mr. *Tavernier's* Travels as are first to be printed at *Delhi*, relieving the Rest of his Work for the present being a Volume, to which it properly belongs. His Character is so well known and established in the World, that it may seem very unnecessary to say any thing of it in this Place, and therefore we shall content ourselves with a very few Observations that seem more immediately requisite, in order to connect what we have taken from him with what we have given before on the same Subject from others. He was not only a Traveller, but a Merchant also, and therefore spoke from a perfect Knowledge and Experience in the Matters of which he writes, and more particularly with regard to the Commodities and

Manufactures of these Countries, in which he dealt for many Years with great Success.

He is more copious, and at the same time more exact than any of the Authors who have attempted to point out the Advantages derived from our Commerce in the *Indies*, by which I mean in general the Commerce of the *Europeans*. We discover in his Writings a greater Compass of Thought, and a more masterly Turn in his Observations, than in almost any other Book of the kind, which is owing to his having considered these things over and over, in consequence of the several Voyages he had made to the *Indies*, and the Pains he had taken to make himself Master of every thing that had any Relation to the Disposition of our Commodities after they were brought to *Europe*. It will be allowed, that this sometimes tempts him to digress a little from his Subject, and run into a general Representation of the State of the same Sort of Commerce in

at, who undertook all these
his Predecessors, and perhaps
of his Time in Europe, made
provinces bordering on his

might possibly have been done
Voyages had not been made a

Parts of the World; but still this proves so far from being tedious and unpleasant, that we may safely affirm, there are no Passages in his Writings, either more curious or more instructive. It was for this Reason that we judged it requisite to give them entire, without venturing to abridge, or interpolate them, which would only detract the Author's Sense, without answering any good Purpose. After an accurate Account of the State of *Mogulistan*, at the Time he travelled through it, he proceeds thus:

2. *Kasimbajar*, a Village in the Kingdom of *Pengal*, sends abroad every Year twenty-two thousand Bales of Silk, every Bale being a hundred Weight, which are bought up, either by the *Dutch*, or Merchants of *Tartary* and *Mogulistan*, to make up their Carpets; some all Silk, and others mixed with Silver and Gold, which being for the most part made in the Province of *Guzerat*, are sold either at *Amadabat*, or *Surat*. The worst Carpets are made at *Vetapour*, twelve Leagues from *Agra*; Satins, some plain, others streaked with Gold; Taffeties of the same Fashion; Putes, a very thin Silk Stuff, painted with all sorts of Flowers. The raw Silk of *Kasimbajar* is yellowish, as that of *Italy* and that of *Persia* is; but they can whiten it with a Lye made of the Ashes of a Tree called *Adam's* Fig-tree, that it shall be like that of *Palestine*. In the Kingdom of *Golconda* are made the painted Calicoes (Calicots) called *Camizes* by the Merchants, but Calmender by the Natives, because they are painted with a Peircel

There are Chintzes made in *Mogulistan*, but they are all printed, and nothing to line or beautiful as the former. These serve for Coverlets of Beds, Table-cloths, Pillow-bags, Handkerchiefs, but especially for Waistcoats both for Men and Women. The fine Calicut Chintzes made at *Bampour* are used all over *Asia* for Ornaments, or Womens Vests; the *Ballas*, or Calicots, painted red, blue, and black, are carried white to *Agra* and *Amadabat* to be dyed; some they dye like watered Camblets, which increase their Price. The white Calicots are woven in several Places in *Bengal* and *Mogulistan*, and are carried to *Raschary* and *Barcebe* to be whitened, because of the large Meadows and Plains of Lemons that grow thereabouts, for they are never so white as they should be till they are dipped in Lemon-Water: They are of two sorts, wide and narrow, but of various Lengths; some Calicots are made so fine, you can hardly feel them in your Hand, and the Thread when spun is scarce discernible. Cotton twined and untwined comes from the Provinces of *Brampour* and *Guzerat*; but the latter is seldom exported, unless it be to *Ormuz*, *Bassora*, or the *Philippine* Isles.

Indigo comes from several Parts of the *Mogul's* Country, but differs in Quality; the best comes from the Territories of *Barru*, *Amoora*, and *Cosje*, a Day or two's Journey from *Agra*: That which is made far of this sort comes from *Sargueffe*, a Day's Journey from *Surat*: The Indigo which is made in *Golconda* is inferior in Goodness; as also that which is made up at *Barcebe* and *Agra*, although this last is most sought for, because it is made up in half Bales. The worst sort is that made at *Pengal*, *Brampour*, and *Amadabat*. It is made of an Herb much like our Hemp, which is sown every Year at the Rains. They cut it three Times every Year; but the first Cutting makes the best Indigo, and the second better than the third: It is known by the Brilleness of the Colour. When they have cut it, they cast it into Pits half full of Water, which they raise to the Brim, with the Herb put into it, and then pound it about till it becomes as thick as Mud; then they let it settle for some Days, and afterwards drain the Water out of it, which done, they take it up in Baskets, and making it up flat at the Bottom, and sharp at the Top like an Egg, set it in the Sun to dry. Great Quantities of Saltpetre come from *Agra* to *Patna*; but that which is refined is three Times the Value of that which is not.

Cardamum, which is the most excellent of all Spices, grows in the Territories of *Vetapour*, and because there is no great Store of it where it grows, it is only made use of in *India* at the Tables of the greatest Princes. Ginger grows in the Dominions of the Great *Mogul*, and is brought in great Quantities from *Amadabat*, where it

grows more than in any other Part of *Asia*, and it is hardly to be imagined how much is transported candied into other Parts. Pepper is of two Sorts, the small and the great; the small comes from *Bantam*, *Achen*, and some other Parts of the East; it is seldom or never carried out of *Asia*, where it is spent in great Quantities, especially among the *Mohammedans*; for there is double the Grain of this small Pepper in one Pound to what is in the great; besides, it is not to rot in the Mouth. The great Pepper comes from the Coast of *Malabar*, and some from *Vijapour*. Nutmegs come from the *Molucca* Islands, as also from the Islands of *Randa*; but the biggest grow in the Island of *Damne*. It is observable of the Nutmeg-tree, it is never planted; but, when the Nutmegs are ripe, certain Creatures come from the Islands towards the South, and devour them whole, but are forced to throw them up again before they be digested; the Nutmeg then beset with a viscid Matter falling to the Ground, takes Root, and produces a Tree, which would never thrive if planted. Cloves grow at *Amborn*, *Elliat*, *Serem*, and *Petava*. Cinnamon comes at present from the Island of *Ceylon*; the Tree that bears it is like a Willow, and has three Barks; the two outermost may be taken off, and is the best Cinnamon; the third must not be meddled with, because when the Tree will die, and therefore great Art must be used to take off the two uppermost, lest the third should be hurt with the Knife. The *Hollanders* are at a vast Expence at *Ceylon* to gather their Cinnamon, because the King lends his Forces upon them when they are gathering to surprize them, and take it from them; so that they are forced to have a Guard upon their Workmen of seven or eight hundred Men; and this makes Cinnamon dearer, and so much the more because the *Dutch* have spoiled the Trade for it from the Countries of the *Rajahs* about *Ceylon*.

The Drugs brought to *Surat* from all Parts of the *Indies* are Sil-Armoniac, Borax, Gum-Lac, Gum-Lac washed, Gum-Lac in Sticks of Wax, Saffron, Cummin, white and black, Arlet, Frankincense, Myrrh, Gilet, and Bolti; Callia, Sugar-Candy, Alfitinat, Anni-seed both great and small, Oupelot, Cointre, Auzorout, Aloes-Succotrine, Lignum-Aloes, some in great and others in small Pieces; Liguorice, Vez Cabouli, out of Gum-Lac the Natives extract that lively Scarlet-Colour with which they paint their Calicoes; and for that end it is carried into *Persia*. That which remains after the Colour is drawn out, is fit only to make Sealing wax of; and the Women of *Surat* get their Living by cleansing and colouring it for that Use. Powdered Sugar is brought in great Quantities from the Kingdom of *Bengal*, and there is a great Trade for it at *Ouzes*, *Patna*, *Dacca*, and other Places. The People of *Bengal* say, that there is no Poison more dangerous than Sugar kept thirty Years. Loaf-Sugar is made at *Amadabat*, where they have the perfect Art of refining it. Opium comes from *Brampour*, where Tobacco also grows in great Quantities, so that the Inhabitants having no Vent for it, let it rot upon the Ground.

3. Diamonds, which are the most precious of all Stones, are found partly in Mines, partly in Rivers. At *Rascoonza*, a Town five Leagues distant from *Golconda*, and eight or nine from *Vijapour*, in the Province of *Cannatica*, is a Diamond-Mine, discovered not above two hundred Years ago: In it are found the cleanest Stones, with the whitest Water; but being forced to fetch them out of the Rocks with a great Iron-leaver and many Blows, they often flaw the Diamonds, and make them look like Crystal: And this is the Reason there are so many flawed Stones found in this Mine, though they make a great Shew. If a Stone be clean, they give it only a Turn or two upon the Wheel, that it may lose as little as possible of the Weight; but if it has any Flaws, Points, or black Specks, they cut it into Facets, and work the Flaw into a Ridge to hide it. The Trade at the Mines is free and just, and transacted without any talking on either Side, the Buyer and Seller expressing themselves by taking each other by the Hands; and so, in the same Place where there are many People, a Parcel of Goods shall be sold seven or eight Times, and no Man know it. At *Gani*, or *Colbar*, seven Days Journey from *Golconda* Eastwards, is another Diamond-Mine: It

l Produce of the several and Value of that Trade

ew of the Silk, Cotton, Indigo, es, the Manner of their Work- orneo, the Nature of the Stones coloured Stones, such as Rubies, the East and West-Indies, and Of Coral Fisheries, and Pearls, and other Pearls. 9. Of and of the Porcupine and Sea Description of the Kingdoms of the Provinces of Multan, Cabul, and of the Fruits and Minerals, and of what is most valuable the plentiful and most profitable Commodity, and Minerals of that Country. 10. Of the Of the noble Kingdom of Mem valuable Commodity and that famous Kingdom.

Countries, in which he dealt his Successes, and at the same time to those who have attempted to part with from our Commerce in the East, the Commerce of the *Indies* in his Writings a greater Compass of Masterly Turn in his Observations, Book of the kind, which will these things over and over again, Voyages he had made to the East, to make him of Masterly Observations to the Disposition of those who were brought to Europe. It sometimes tempts him to digress and run into a general Repetition of the same Sort of Commerce in

lies between the Town and a Mountain, and the nearer they dig to the Mountain, the larger Stones they find; but there is none at the Top.

This Mine was found not above an hundred Years ago by a Countryman, who digging his Ground to sow Millet, found a large Diamond twenty-five Carats Weight: Upon this, the rich Men in the Town fell to digging in the Place, and found, as they do still, bigger Stones than in any other Mines, viz. some above forty Carats, and one of 600, which *Margimola* presented to *Aureug-Zebé*: But the Mischief of these Stones is, they partake of the Quality of the Soil, and are few of them clean; but some are black, and others red, and others green and yellow. Near *Soumeipour*, in the Kingdom of *Bengal*, is a River called *Gouel*, where there are Diamonds found mixed with the Sand. The Way from *Agra* to this Town lies through *Halahas*, *Banarous*, and *Saffaren*, from whence you pass to the Island of *Rhodas*, which is one of the strongest Places in all *Asia*, being seated upon a Mountain, fortified with six Balistons, twenty-five Pieces of Cannon, and three Motes full of Water, in which are good Fish, to *Soumeipour*, which is a great Town, but the Houses are built of Earth, covered with Branches of Cocoa-trees. The Road from the Fort lies through dangerous Woods, because much pestered with Robbers. The Rajah, in whose Jurisdiction it is, lives half a League from the Town in Tents set upon a rising Ground, at the Foot whereof runs the River *Gouel*, where Diamonds are found. This River descends from the Southern Mountains, and being filled with the great Rains, brings down, in *December*, vast Quantities of Sand, which the People in great Multitudes search for fifty Leagues together, and find all those Points which are called natural Points in it, but seldom find any large Stones.

4. In the Island of *Borneo*, which is the largest Island in the World, is another River, called *Succadan*, in the Sand whereof they find Diamonds as hard as any in the other Mines; but the Queen of the Mine will permit none to be carried out of it; so that all that come from thence are conveyed out by Stealth. In this Island it is remarkable that the Queen, and not the King, has the Sovereign Command; as have also the inferior Women the Rule over the Men, for the People are so desirous always to have a lawful Heir upon the Throne, that the Husband not being certain that the Children he bears are his own, they rather chuse to be governed by a Woman, to whom they give the Title of Queen, her Husband being only her Subject, and having no Power but what she permits him.

At the Mine of *Revelenda* they weigh by Mangolins, which are each a Carat and three Quarters, and pay in new Pagods; as they do also at *Coleur*. At the Mine of *Soumeipour*, in *Bengal*, they weigh by Rabs, which are each Seven Eighths of a Carat, and pay in Roupées. The Roads to the Mines, though some fabulous Relations had made them very dangerous, full of Tygers, Lions, and cruel People, are not only free from all wild Beasts, but the People are very loving and courteous. The Price of Diamonds are thus to be known: If it be a thick Stone, well squared, and have all its Corners, and the Water be white and lively, without Specks or Flaw, such a Stone is worth an hundred and fifty Livres, or ten Pounds fifteen Shillings Sterling; or of the same Value if it is cut in Facets, which they call a Rose-Diamond, if it be a fair Breadth, and of the same Perfection; and if a Stone weighs more Carats it is rated in Price. Imperfect Diamonds are not above half the Value as perfect. The two biggest Diamonds in the World, for cut Stones, belong, the one to the Mogul, which weighs two hundred and seventy-nine Carats and nine sixteenths of a Carat; and the other to the Duke of *Tuscany*, which weighs an hundred and thirty-nine Carats, both clean and well shaped. The Miners call a Diamond *Iri*, and the *Turks*, *Persians*, and *Arabians*, *Awas*.

5. There are but two Places in all the East where coloured Stones are found, and they are in the Kingdom of *Pegu*, and Island of *Ceylon*; the first is a Mountain twelve Days Journey or thereabouts from *Sireri*, towards the N. E. it is called *Capelan*. In this Mine are found great

Quantities of Rubies, and Espenels, or Mothers of Rubies, yellow Topazes, blue and white Saphires, Jacinth, Amethysts, and other Stones of different Colours. Among those Stones which are hard other Stones are found of different Colours, but being soft they are of no Esteem. All these sorts of Stones the Natives call Rubies, and they are the only Commodity of the Country, which makes it very poor. From *Ava*, which is the chief Fort of *Pegu*, you must go by Water to *Sireri*, because the Roads by Land are almost impassable, by reason of the Tygers, Lions, and Elephants, which abound in the adjacent Woods.

The King of *Pegu* keeps all the choice Stones for himself and Subjects, and suffers few of them more than of three Carats Weight, that are clean, to be exported. Rubies are sold by Rabs, and the Payment is made for them in Pagods. A Ruby of above six Rabs Weight is almost invaluable. There are some Rubies, but most of them are Ballies Rubies, and Abundance of Ballard Rubies, Saphires, and Topazes, found in the Mountains that run from *Pegu* to the Kingdom of *Cambaya*. The other Place where Rubies are found is in a River in the Island of *Ceylon*, which descends from certain high Mountains in the Middle of the Island; it swells very high when the Rains fall, and when it becomes low again the People make it their Business to search among the Sands for Rubies, Saphires, and Topazes. All the Stones that are found in this River are generally fairer and clearer than those in *Pegu*. In *Hungary* is a Mine of Opals, a Stone no where to be found in the whole World but there. Turquoises are of two sorts, viz. the old Rocks, and the new, and are only found in *Persia*. The old Rock lies near a great Town called *Micabourg*, and is reserved only for the King's Use, to adorn Hirts of Swords, Knives, and Daggers, instead of enamelling. The new Rock is of a pale Blue, inclining to White, and little esteemed. Emerakds, though said to be Oriental, are not found in any Part of the Eastern Countries, but are brought from *Peru* to the *Philippine* Islands, and to transported into *Europe*.

6. The Fishery for Pearls is in divers Places, as in the *Persian* Gulph, round about the Island of *Bachran*: It belongs to the King of *Persia*, who has a Fort there, and in it a Garrison of three hundred Men. Every one that fishes here pays to the King five Abasis, whether he gets any thing or no; and the Merchants pay at a certain Rate every thousand of Oylers. There is a Pearl-fishery likewise upon the Coast of *Arabia-Felix*, right against *Ezberan*, near the City of *Califa*, which, together with all the Country, is under the Jurisdiction of *Ahas* Prince. The Pearls that are taken here are by the *Indians*, who will give a good Price for all, as they are uneven as round ones. All over *Asia* they distinguish are of a yellowish Water, inclining to white being the pure white; because, they say, they will never change the Colour as the white will, both by Time and constant Wearing. There is a wondrous Pearl in the Possession of *Alonzo Hez*, Prince of *Mascate*, which is the best in the World, not so much for its Bigness, for it weighs not above twelve Carats and one sixteenth, nor for its perfect Roundness, but for its transparent Clearness, for you may see almost through it: The Great Mogul, by a *Banyan*, offered forty thousand Crowns for it, but it was not accepted. There is another Fishery for Pearls in the Sea that washes the Walls of *Manar*, in the Island of *Ceylon*, and the Roundness and Water they are the fairest that are found, but rarely weigh above three or four Carats. There are excellent Pearls of a very good Water, and large, found on the Coast of *Japan*, but are rarely fished for, because Jewels are of no Esteem among the Inhabitants.

In the *West-Indies* there are several Places for Pearl-fishing, viz. all along the Island of *Cubagna*; but the Pearls are small, seldom weighing above five Carats. In the Island of *Margarita*, a League from *Cubagna*, but a larger Island, the Pearls are not found here so plentifully, but are of an excellent Water and very big, some weighing fifty-five Carats. *Camogatte*, near the Continent, *Ro de la Habia*, and *St. Mariba*, produce weighty Pearls, but ill-shaped, and inclining to a Lead Colour. Some Pearls and *Bavarian*, though a Necklace of them is of Value, yet they

penels, or Mothers of Rubies, white Sapphires, Jacintus, And different Colours. Among other Stones are found of soft they are of no Effem. Natives call Rubies, and they the Country, which makes it is the chief Fort of Pegu, and because the Roads by Land of the Pyggs, Lions, and in the adjacent Woods.

All the choice Stones for Gems few of them more than of clean, to be exported. Rubies Payment is made for them in six Rals Weight is almost Rubies, but most of them abundance of Bastard Rubies, and in the Mountains that run of *Cambaya*. The other Place is in a River in the Land of certain high Mountains in it, it swells very high when it becomes low again the People search among the Banks for opazes. All the Stones that are generally fairest and purest than is a Mire of Opas, a Stone the whole World but there, viz. the old Rock and the *Perfa*. The old Rock lies *Micabourg*, and is extract only from Hilts of Swords, Knives, enamelling. The new Rock is to White, and little esteemed. be Oriental, are not found in Countries, but are brought from Lands, and so transported into

is in divers Places, as in the out the Island of *Babran*: It *Asia*, who has a Fort there, and in red Men. Every one that fishes the Aballs, whether he gets any merchants pay at a certain Rate. There is a Pearl-Fishery in *Arabia-Felix*, right against *Babaisa*, which, together with all the Jurisdiction of *Arabia* are taken here and sold at a good Price for all, as is the All over *Asia* they choose a day, inclining to white being the day, they will never change the both by Time and constant Wars. Pearls in the Possession of *China*, which is the best in the World, for it weighs not above twelve, nor for its perfect Roundness, earnest, for you may see small *Logol*, by a *Banjan*, offered forty but it was not accepted. These pearls in the Sea that washes the Island of *Ceylon*, for they are the fairest that are found, three or four Carats. There are good Water, and large, found but are rarely fished for, because among the Inhabitants.

There are several Places for Pearl-fishing and of *Cubagna*; but the Pearls are above five Carats. In the Island of *Cubagna*, but a night found here to plentifully, but are very big, some weighing fifty near the Continent, *Rio de* produce weighty Pearls, but a Lead Colour. Some Pearls and necklace of them is of Value, yet they

they are not to be compared with the *Eastern* or *West-Indian* Pearl. These sorts of Pearl do all grow in an Oyster, like Eggs in the Belly of a Pullet, and there are many in some, but none in many others. They fish in the Eastern Seas twice a Year; the first Time in *March* and *April*, and the second Time in *August* and *September*, and the Fairs are kept in *June*, and *November*. Before they fish in any Place, they measure the Land whether it will turn to any Account by letting five or six Oysters, which are to bring them each a thousand Oysters, which they open, and if the Oyster prove and yield five Laves, or above, as soon will send away, then they know the Fishing will turn to an Account. They fish in twelve Fathoms Water, and five or six Leagues off at Sea: They are pursued by some small Men of War, to defend them from the *Malabars*, to whom every Diver pays eight Piasters for their Attendance. The more Rals fall the more profitable the Fishery generally happens to be.

7. Coral, though of little Esteem in *Europe*, yet is much valued in the other three Parts of the World. There are three Places where they fish for it upon the Coast of *India*, viz. *Agurr*, *Boza*, and the Isle of *St. Peter*. On the Coasts of *Africa* and they fish for it at the Bay of *France*, and *Tabarca*, and on the Coasts of *Syaly*, near *Tepans*, but the Corals small, and of little Value. Near *Cape de Queres*, on the Coast of *Cataluna*, the Coral is large, and of an excellent Colour, but the Bank is shallow. At *Algeria* and *Corsica* there is a Fishery for it. These Places are all in the Mediterranean-Sea, or there is none at all in the Main-Ocean. Some think that Coral is sown in the Sea, but it is really hardy, though it is true, that in certain Months in the Year there is a milky Juice which comes from it, and if it falls upon any hard, produces Coral; and there are certain Worms in the Sea that eat it.

They fish for Coral from the Beginning of *April* to the End of *July*, but never above forty Miles from Land, and that in such swift Burks, that no Gallies can overtake them. In *Japan* they value nothing so much as a good Gram of Coral, wherewith they pull the String that shuts their Putes; and in this they seek to excel one another; for a Piece of Coral as big as an Egg, fair and clean, without any Flaw, will produce as much as a Man can, in reason, ask for it. The *Portuguese* have sold such Pieces for 200 Crowns. All over *Asia*, and especially all over the Northern Parts of the *Moor*'s Dominions, and all along the Mountains, as you go to the Kingdoms of *Chen* and *Castan*, the meaner sort of People wear it for Bracelets and Necklaces.

8. Yellow Amber is only found upon the Coast of *Prussia* in the Baltic Sea, for the Sea throws it upon the Sand, when certain Winds blow. The Elector of *Brandenburgh* lets it out for 20, and sometimes for 2200 Crowns a Year; and the Farmers keep a continual Guard on both Sides of the Sea, that it be not stoln. It is nothing else but a certain Congelation made in the Sea like Gum; for sometimes Flies and Gnats are congealed in it. In *China* it is a Custom for the great Lords, at their Feasts, to command and Magnificence, to set three or four dulle thousands of Persuading Loris on the Table, and to throw into every one of them a vail Quantity of Amber, and the bigger the Pieces the more magnificent is the Entertainment accounted. The Walls of Amber makes it the best Commodity that can be carried into *China*; but the *Belandars* have engrossed it.

As for Ambergris, no Man knows what it is, or where, or how it is produced. It is most probable that it should be in the Eastern Sea, though some have been found on the Coasts of *England*, and other Nations of *Europe*. The greatest Quantity of it is found upon the Coast of *Arabia*, at the Mouth of the *Rio de Sena*. A *Portuguese*, sailing from *Croa* to the *Marianas*, after he had pass'd the Straights of *Yachaca*, found a Piece of thirty-three pound Weight, and a *Malleburgher* a Piece of forty-two pound upon the Coast of the Island of *St. Maurice*.

The best sort, and greatest Quantity of Mulk, comes from the Kingdom of *Aracan*; and from thence it is brought to *Petra*, the chief City of *Bengal*, where the Nawab takes it away with the Merchants for Coral, Yel-

low Amber, and other Commodity, rather than Gold or Silver. It grows in a Bladder on the Belly of a certain Creature, between the Venitals and the Navel, which the People who kill it cut off after it is killed. It looks like clotted Blood when it is new cut off. None of these Creatures have above one Bladder, which is not bigger than an Hen's Egg, and will not yield above half an Ounce of Mulk; and sometimes three or four will not yield an Ounce. The Sense of the Beast is so strong, that it makes one's Hand to come near it. These Creatures multiply very much, so that the Quantity of Mulk that is to be had.

9. Bezoar comes from a Province of *Colenda*, towards the N. E. It is found in the Paunch of a Wild Goat, which breeds in a certain Shrub; and having eaten the Buds or Tops of the Boughs, the Bezoar is produced by turn in the Maw of the Goat, and is of divers Shapes, according to the Form of the Food. The Natives, by feeling on the Belly of the Goat, know how many Stones he has within him. The Excellency of the Bezoar is in the Bigness, although the small have the same Virtue with the large; for five or six Stones weigh an Ounce, they are worth no more than seventeen or eighteen *Frank*; but one Stone weigh an Ounce, it is worth an hundred *Frank*; and one of four Ounces a Man will sell for two hundred Livres. In what Part of the Body the Bezoar is bred, is not known. As well in the *East* as *West-Indies*, there are great Quantities of Bezoars that breed in Cows, and of a greater kind, viz. twelve or eighteen Ounces, but they are little esteemed, for the Grains of the former working more powerfully than thirty of this.

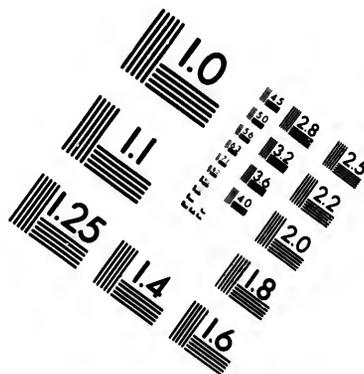

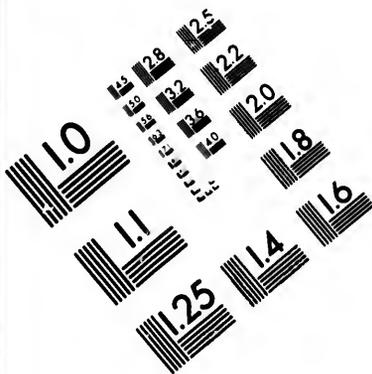

The Bezoar that breeds in Apes is so strong, that two Grains will work as powerfully as six Grains of Goat's Bezoar; but it is very scarce, as being found only in the Apes of the Island of *Malabar*. The Scarcity as well as Strength makes it dear, so that a Piece as big as a Nut is worth a hundred Crowns.

The Porcupine-Stone, which is bred in the Head of that Creature, is more precious than Bezoar against Poison: It is steeped in Water a Quarter of an Hour; it makes the Water as bitter as possible. There is another Stone taken out of the Belly of the same Creature, as good as the other; but being steeped in Water, it loses nothing of its Weight or Bulk, as the other does.

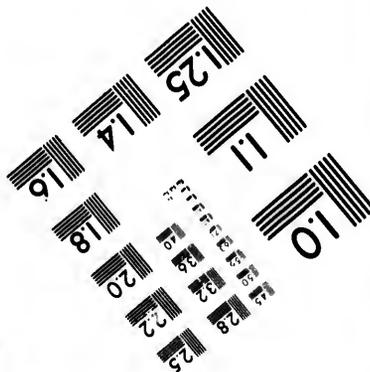

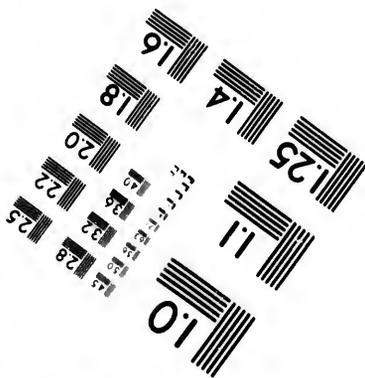

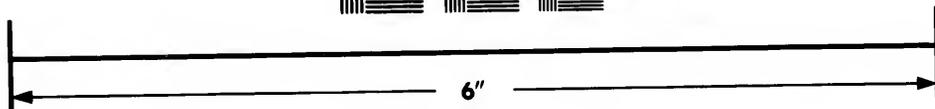

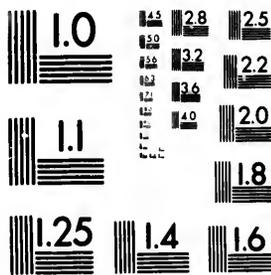

The Serpent-Stone, which is about the Bigness of a Peacock's Egg, is almost oval, thick in the Middle, and thin about the Sides. The *Indians* say, it is bred in the Head of certain Serpents; but it is more probably a Congelation of certain Drois, because they are to be had of the *Arabs* only. But, however it be, it is of excellent Virtue to drive away Venom from such as are bitten with venomous Beasts, for being laid to the Wound, it will not come off till it has drawn out all the Poison; and being steeped in Womens or Cows Milk, it recovers its former Virtue, and cures the Milk like Corruption. There is another Stone, called the Serpent's Stone with the Hood, because that kind of Serpent has an Hood hanging down behind the Head, in which this stone is found. It is often found as big as a Pinks Egg, but it is not found in any less Serpent than of two Foot length: This Stone being rubbed against another Stone, yields a Juice, which, being drunk in Water by the Person that is poisoned, powerfully expels the Venom. These Serpents are found only on the Coasts of *Malinda*; but the Stones are bought of the *Portuguese* Mariners and Soldiers that come from *Malabar*.

10. Gold is found in the greatest Quantities in the Islands of *Japan*, which the *Ballward* of *Ceylon* though some think it is brought from *Ternosa* thither. The *Carve* also has hanging a sort of Gold, produced in that Country, for Silver Weight for Weight, because they, having no Silver Mines, prefer it before Gold, but it is the least of all the Gold. In *Japan*, in the Island of *Cebu*, or *Misoffar*, there is found Gold among the Sand of their Rivers. In *Aracan*, or *Sonata*, after the rainy Season, when the Torrents are washed, they find Plants washed down from the Mountains with Vans of Gold in them; and the Inhabitants of the Wilderness of the same Isle,

bring the *Dutch*, when they lade their Pepper, great Store of Gold, but as bad, if not worse, than their *China* Gold. Towards *Tibet*, which is the ancient *Caucasus*, in the Territories of a *Rajah*, beyond the Kingdom of *Kacchemire*, there are three Mountains close by each other, one of which produces excellent Gold, the other *Granats*, and the third *Lapis Lazuli*. There is also Gold which comes from *Tippa*, but is as coarse as the *Chinese* Gold; and these are all the Places in *Asia* that yield Gold. In *Africa* Gold is more plentiful than in *Asia*. Out of the Empire of *Monomotapa*, which extends itself as far as *Prester John's* Country, comes the purest Gold in all *Africa*, where they dig it with Ease out of the Earth, not being constrained to dig above two or three Foot deep. And in some Places not inhabited for want of Water, the People find Lumps of Gold upon the Surface of the Earth of an Ounce Weight or more.

The King of the *Abyssins* sent the Mogul a natural Tree all of Gold, two Foot four Inches high, and six Inches about in the Stock, with ten or twelve Branches, some half a Foot long, and an Inch about, and some smaller; In some Branches appeared Bunches like Buds, and the Roots were thick and short. The Province where the River *Sena* has its Head, called *Monkaran*, has a King of its own, and is very healthy: There the People find great Plenty of Gold-Dust in the Rivers that fall into the *Sena*, but it is much coarser than the other. The Cafres also of the other Provinces bring great Store of Gold yearly to *Sofala* and *Ceapen Goura*, which are under the *Portuguese*, to buy such Commodities as they want, when the Ships come. Some Years there are Cafres that come from the *Cape of Good Hope* to *Sofala*, which is four Months Journey, and bring very fine Gold in Pieces, like that of *Monomotapa*, which, they say, they find in the Mountains by digging ten or twelve Foot deep.

They also bring great Quantities of Elephants Teeth; for they abound so in Elephants, that the Palisadoes of their Forts, and Pales of their Parks, are all made of Elephants Teeth. Their usual Diet is Elephants Flesh. In the Kingdom of *Beroe* grows a Root of a yellow Colour, very bitter, and about an Inch thick, which cures all sorts of Fevers by vomiting. There are no Silver-Mines in *Asia*, unless it be in *Japan*. But a few Years since there have been discovered plentiful Mines of Tin at *Deegera*, *Sangora*, *Bordelen*, and *Bata*, which have spiced the Trade of the *English* thither for that Commodity.

11. The great Extent of the vast Empire of the Mogul, as well as the various Temperature and Productions of the Soil and Climate, makes as much Difference between one Province and another, as if they were several Kingdoms; and therefore there can be no way to give an exact Account of all Things remarkable; but, by considering the several Provinces distinctly, and what's peculiarly observable in them. We will begin with the Kingdom of *Kacchemire*, commonly called the *Paradise of Indostan*; a Country, tho' mountainous, yet so fruitful, that you would take it for an ever-green Garden, being full of Trees, and Pastures with all sorts of Cattle, as Cows, Goats, Sheep, Horses, Partridges, Hares, Gazels, and the Musk-Animals. There are Abundance of Bees, but no Serpents, Tygers, Bears and Lions. The Fields produce Rice, Corn, Pulse of divers sorts, Hemp, and Saffron, being intersected with Ditches, Lakes, and Rivulets, to advance their Plenty. Up and down every where also are seen some of our *European* Trees, Flowers, and all sorts of Plants, as Apples, Pears, Prunes, Apricots, Nuts, and Vines; and their Gardens are full of Melons, Water-Melons, Skeerets, Beets, Radishes, and all sorts of our Pot-herbs, and some that we have not; But their Fruits are not so many, nor so good as ours.

The People are very industrious as well as intelligent, and make Palletries, Trunks, Baskets, Standishes, Boxes, and Spoons, with many other Pieces of handiome Workmanship, sending them all over the rest of the *Indies*; and to some of these they give such a Varnish, with counterfeited Veins and gold Streaks, that nothing is finer. They make also a kind of a Stuff an Ell and an half long, and about an Ell wide, called *Chalts*, and embroidered at

each End, for about a Foot, so soft and fine, as is inimitable, though it is attempted at *Patna*, *Agra*, and *Lahor*. The *Moguls* and *Indians*, both Men and Women, wear of them in Winter upon their Heads, and bring them over their Shoulders like a Mantle: They are made of their own Wool, which is finer than *Spanish*, or of the Hair taken from the Breck of a wild Goat in *Great Tibet*, called *Touze*: Some of these are sold for a hundred and fifty Ruppes to the great Omrahs.

The People are of a fair Complexion, and especially the Women are very beautiful, and of as fair Faces as in *Europe*. Between *Funbor* and *Kacchemire* are some Mountains that seem to part two Worlds rather than two Provinces; for on the one Side it was scorching and hot, as in the *Terrid Zone*, and full of *Indian* Plants proper to it; on the other Side it enjoys a temperate fresh Air, and the Soil produced Hyssop, Thyme, Marjoram, and *Rodemary*, Oaks, Elms, Pines, and Plane Trees. Between these Rocks are admirable Cascades of Water, and among others one not to be paralleled, which running in a Channel between the Trees, on a sudden precipitates itself into the Bottom of a steep Rock, with a Noise able to make one deaf like a Cataract. In the Month of *May* here is a Fountain that for fifteen Days regularly flows, and stops thrice a Day, viz. at Break of Day, Noon, and Night: Its flowing fills a Square ten or twelve Foot broad, and as many deep, and then it flows by degrees till about the End of the Month, and then quite stops for the rest of the Year. By it the *Gentiles* have a Temple of the Idol *Brara*, and from thence the Fountain is called *Sand Brari*, i. e. the Water of *Brara*, and hither many Pilgrims come to bathe and sanctify themselves.

In the Royal Garden at *Ahazel* in this Province is a Pond, where are Fishes that will come when they are called, and when you call Bread to them; the biggest of which have also Rings in their Noses, with Iron, pins on them. At *Baramoulay* is a Monk, in which is a Tomb of one of their Friars or Saints, where 'tis used the Sock which flock thither every Day are cured, and eleven Moulahs, who one Finger each, hit a huge Stone, which the strongest Man can hardly rattle easily: But the things are miraculous only to the credulous and careles; but the bubbling fountain, which rises gently, and with some little Force, making some small Bubbles, and banging up Sand with it, soon goes away with it again, and the Water becomes still, and to remain awhile without Bubbles, and then rises again in certain. In the Mountains near this Fountain is a Lake that hath Ice in Summer, and looks like an *Icy* Sea, and a little farther is a Place, where making a great Noise will presently cause a Shower of Rain. Among these Mountains live a People which eat no Flesh, counting it unclean, yet they have no Religion.

The City of *Azemer* is famous for the Tomb of *Ogra Mamh*, who was in great Reputation for his Sanctity, and therefore they come from all Places a Pilgrimage to it. It is a fair Building, with three Courts, paved with Marble, and hath in it a Reservatory of Water, walled about, and in the Province adjoining there is a Beast like a Fox in the Snout, but no bigger than a Hare, of the Colour of a Stag, and Teeth like a Dog: It yields most excellent Milk for at the Belly is a Bladder full of Murr, the corrupt Blood, which is the Milk. They cut off the Bladder for it, but the Beast never lives long after it. There are also Pullets, whose Skin is all over black, as are also their Hens; but the Flesh is white, and their Feathers of another Colour. The Women of this Country are marriageable at eight or nine Years old, and bear Children at ten; the Children go naked, only with a Bit of Cloth round their Privities. The People are mild and uncivil, and are Men great Clowns, and impudent, when they quarrel they make a great bawling, but never come to Blow. There are venomous Scorpions in this Country, and the People have several Remedies to cure the Stinging; but the best of all is Fire; for by applying a burning Coal to it, they draw the Venom out, and perfectly cure it.

The Roas thro' this Country being very heavy, they shut their Oxen, and bridle and saddle them like Horses; and if they be but a little tired, they go as fast as a good Horse, with them also they draw their Carts and Coach.

their white Oxen are extraordinary dear. The chief Trade of this Province is Saltpetre, for the Soil being black, affords it plentifully. When it is made they carry it to *Surat* to sell it to the *Europeans*, and others, who buy it to ballast their Ships, and sell elsewhere.

12. In the Province of *Sinde*, which was anciently the Kingdom of *Diu*, the Inhabitants are wonderfully ingenious in all kinds of Arts, and make abundance of Curiosities, for which they have a great Trade; the finest Pallanquins in *India* are made at *Tata* in this Province, and there is nothing neater, nor more convenient, than the Carriages made here; but their Waggon-Wheels are one Piece of solid Timber, like a Mill-stone.

The Province of *Multan* yields Plenty of Cotton, Sugar, Opium, Brimstone, Galls, Store of Camels, which are transported into *Persia*, and other Parts of the *Indies*. It furnishes also all *India* with the finest Bows that are to be seen in it, and nimblest Dancers; the chief Town of it, of the same Name, is the Rendezvous of the *Banjans*, because of the great Trade managed there, which cannot be carried on without them; for though it is known that they make their Profit of every thing, yet most Merchants chuse rather to use them, than do their Business themselves, because they will buy their Goods much cheaper, and they refuse no Service, be it ever so bale or vile. The Country of *Candabar* produces abundantly all sorts of Provisions that are necessary for human Life, unless it be on the Side next *Persia*, where it is barren. The Inhabitants are great Lovers of Wine, though they are prohibited to drink it; and if any be found drunk, or doing any scandalous Action in Drinking, they are set upon an Ass, with their Face to the Tail, and led about the Town, and attended by the Officer of the Controul, who beats a little Drum, and all the Children follow him, whooping and hallooing. There are many *Persians* in this Province, but they are poor, and employed by the *Mohammedans* in the meanest Offices. The King of *Persia* will not allow the *Gentiles* Wives to burn themselves in that Part of his Dominions.

In the Mountains of *Cabouljian* grow Mirabolans, and many other sorts of Drugs. The Country also is full of aromatick Trees, which turn to a good Account to the Inhabitants; as do also the Mines of a certain sort of Iron fit for all Uses. Out of this Province come most of those large Canes, of which are made Halberds and Lances, for they have many Grounds planted with them. They reckon their Months by Moons, and with great Devotion celebrate a Feast called *Houli*, which lasts two Days, first in praying, and making Oblations, and then in dancing in the Streets in Companies to the Sound of Trumpets, making Bonfires, and destroying the Figure of a Giant. Their Charity consists chiefly in digging Wells, and building little Houses on the Roads for Travellers, and by them is a Place for such as are heavy laden, to put off and take up their Burdens without any body's Help. This Country supplies the whole *Indies* with Physicians, which are all *Banjans*, and some of them very skilful in Medicines, and among other Remedies make great Use of Burning.

In the City of *Labor* the Great Mogul has a Palace, on one Gate of which is a Crucifix, and on the other the Picture of the Virgin *Mary*. Some have thought them Marks of Christianity, which was anciently professed in these Countries; but it is really nothing but a Piece of Flattery and Hypocrisy of the King *Ibrahim Guire*, to oblige the *Portuguese* to be his Friends. There are many *Gentiles* in this City, who have several Pagods all raised seven or eight Steps from the Ground, and some of them are well adorned. This is one of the largest and most fruitful Provinces in the *Indies*, the five Rivers, which make up the River *Indus*, from whence the Moguls call it *Pangab*, making it very fruitful; for it yields all sorts of Provisions necessary for Life, as Rice, Corn, and several sorts of Fruits. The Wines made here are pretty good, and in the Towns are not only all sorts of painted Cloths wrought, but all the other Manufactures usually made in the *Indies*.

13. In the Province of *Aloud*, or *Haoud*, and *Parad*, or *Parad*, there are many Rajahs that own not the Authority of the Mogul: At *Hagazat* in this Province is the Pagod of the Idol *Matta*, to which the *Gentiles* that come to pay their Devotions to her are said to sacrifice always some Part

of their own Bodies. At *Calamac*, where the *Gentiles* have also another famous Pagod, there is a Spring of very cold Water, which issues out of a Rock that continually belches out Flames, and the *Bramins* make great Advantage of the People who come to see the Miracle. In the Province of *Onleser* is the famous Temple of *Jarganate*, where one of the *Brajans* undertook to measure the whole Kingdom of the Mogul with his own Body, and being about to perform it, was loaded with Clarity, and had much Respect given him.

The People of this Country, as well *Mohammedans* as *Gentiles*, are extraordinary voluptuous, have a captious and subtil Wit, and are much addicted to stealing. The Women are very bold and lascivious, and use all Arts to corrupt and debauch young Men, especially Strangers, whom they easily trepan, because they are handsome, and well dressed. In this Province are above twenty thousand Christians, who lived in great Unity under potent Kings; but the Mogul becoming Maller of it, and bringing in *Mohammedism*, a general Disorder and Corruption of Manners invaded them.

The Country is full of Torrents, and the People live in much Ease, because it is very fruitful, producing Corn, Rice, Sugar, Ginger, Long-pepper, Cotton, and Silk, with several other Commodities; as also Fruits, especially Ananas as big as Melons, and pleasant to the Taste, having something of the Flavour of the Apricot. In this Province the Mogul hath a Cattle, whither he sends such Traitors as are condemned to perpetual Imprisonment, and to that End 'tis always strictly guarded.

14. In the Province of *Miloz* are the Territories of *Raja Rana*, who deduces his Pedegree from *Porus*, tho' he is now tributary to the Mogul. *Ratiffore* is the capital City of it, and a Place of great Trade; it stands upon a Mountain, and hath a Cattle belonging to it, to which the Grand Mogul sends such Traitors as are condemned to die. They are kept Prisoners for some Time, and always somebody is present with them, and the Day they are to die they make them drink a great Quantity of Milk, and then throw them down from the Top of the Cattle upon the declining Side of the Hill, which is full of sharp-pointed craggy Stones, that tear the Bodies of the Wretches to Pieces before they can reach the Bottom of the Precipice.

At *Chitor*, once a famous Town, but now almost ruined, are the Remains of an hundred Temples, or Pagods, and many antique Statues, to be seen. In this Country are two kinds of Bats, one like ours in *Europe*, but the other is much different: It is eight Inches long, and the Body is covered with yellowish Hair. The Body round, and as big as a Duck's, the Head and Eyes like a Cat's, a sharp Snout like a Rat, pricked black Ears, without Hair, no Tail, two Teats as big as the End of one's little Finger; under the Wings four Legs, Wings almost two Foot long, and seven or eight Inches broad, of a black Skin, like wet Parchment; the two Fore-Legs end in five Talons, like a Man's Hand, and black, and without Hair; but it has Claws instead of Nails, with which it hangs upon the Branches of the Trees. They fly high, and are said to be good Meats.

The Province of *Candish* is the most plentiful for Cotton of any Part of *Indostan*, and of it the People make abundance of Cloth. They plant some, but the white are most valued for the lovely Mixture of Gold and Silver that is in them; for the Rich make their Veils, Scarfs, Handkerchiefs and Coverings of them, but they are dear. Here is also Plenty of Rice and Indigo growing. In the Country of *Belgate* are a great many Wairs, Mangroves, Bahova, Quitau, Caboul, and other sorts of rare Trees. Here are vast Numbers of Antiques, Hires, Partridges, and towards the Mountains are Merops, or wild Cows. Towards *Nagpata* grow the best Rice in all the *Indies*; for it has an odorous Taste, which that of other Countries has not. Cotton abounds here also, and in many Places they have Sugar-Canes, with Mills and Furnaces to make the Sugar. The Ways here are always safely guarded. The Pagods of *Alera* in this Province are so numerous, and so full of Pillars and Pilasters, and have so many thousand Figures all cut out of the natural Rock, that they may be said to be Works almost surpassing human Force.

In the Province of *Daltabat* are bred the most active Tumblers in the World, who do all the Tricks of ours in *Europe*, and many more; they are as supple as an Eel, and will turn their whole Body into a Bowl, which others may roll about with their Hands; but the most active are Girls, in the Province of *Chitanagar*, which is diversified with Hills and Plains. The Hills afford Iron, of which, at the Town of *Indibear* chiefly, the People make a great many Swords, Daggers, and Lances, which are vended all over the *Indies*. All the Plains are good Ground, some sowed with Rice, and the rest planted with Cotton-Trees, Tamarinds, Warts, Cadjours, Mangiours, Quiesan, and others, and all watered with several Rivers, which turn and wind every Way with fair Tanques, out of which they draw the Water with Oxen; but those Parts are much troubled with Thunder, Lightning, Whirlwinds, Rain, and Hail-stones, as big as Pullets Eggs.

In the Province of *Telenga*, as there are many *Gentiles*, so there are none more superstitious than they. They have abundance of Pagods, with Figures of Monsters, which can excite nothing but Horror instead of Devotion, unless in such deluded Souls. They use frequent Washings; for Men, Women, and Children, as soon as they are out of their Beds in the Morning, go to the River to wash, and the Rich have Water brought them, and so again as often as they eat. Women, who have lost their Husbands, are conducted to the River by their Friends that comfort them, to wash, and so are Women as soon as they were brought to Bed; for in no Country are Women so easily delivered as here. They will eat nothing but what is dressed by themselves, or their own Cast or Tribe, and buy all their Food of the *Banjans*. They drink nothing but Water, wherein they put Tea or Coffee, nor use any Dishes, but Leaves of Trees, for fear any Person of another Religion should have eaten out of it. They eat no Flesh, except it be on a certain Day of the Year, and that very privately; but the *Rajpoots* eat any Fish, or Flesh, except the Cow; they use Fasting very much, their ordinary Fast is twenty-four Hours; and there are a great many that will fast, especially Women, six or seven Days, and some will fast a Month, eating no more than a Handful of Rice a Day, and others will eat nothing at all, only drink Water, in which the Root of Crata has been boiled, which is good for many Distempers, and strengthens the Stomach. When the Fast is at an End, the Bramin goes with a Drum to the House of the Penitent, and gives him or her Leave to eat. Lastly, in the Province of *Baglana*, and also the People on the Seacoast, who are much given to Sea Luring, the *Gentiles* offer many Sacrifices to the Sea, especially when any of their Relations are abroad upon a Voyage. The manner of sacrificing is thus: They make a Vessel of Straw about three Foot long, and cover it with a Veil, and carry it down to the Shore, with a Basket or two of Meat and Fruits; there they throw it to the Sea, and having made some Prayers, leave the Basket on Shore, that the Poor and others may come and eat what it contains.

At the End also of *September*, when the Sea, after the tempestuous Season from *May*, becomes again navigable, they offer another Sacrifice, but with no great Ceremonies; for they only throw Cocoa-nuts into the Sea, and every one throws one, the Boys plunging themselves into the Sea to catch them, and shewing many Tricks in the Water, which are pleasant to behold. In this Province the *Indians* marry their Children very young, and make them cohabit sooner than in any other Part of the *Indies*; they marry them at four, five, and six Years old, and suffer them to bed together when the Boy is ten, and the Girl eight, but they have bearing by thirty, and grow extremely full of Winkles; and therefore in some Parts of the *Indies* they do not marry till fourteen Years of Age. The Women are very fruitful, because they live very long; for, as well as their Husbands, and their Children, at eight or nine Years old, and when they are about two or three Months old, they let them crawl about till they are able to go, and when they are dirty, they wash them; and to they come to be as frant as out, without the Torture of Swallowing Bawls, or Stays.

15. *Bengal* is one of the most fruitful Countries in the World, superior even to *Egypt* itself. It bears Rice in its abundance, that it not only furnishes its Neighbours, but very remote Countries, such as *Ceylon*, and the *Maldives*; it abounds so in Sugar, that it supplies the King of *Goconda* with it, as also *Arabat* and *Mesopotamia*, by the Way of *Araba* and *Bajora*, and *Perfia* itself, by *Babulbassi*. The *Portuguese* make excellent Sweet-meats, with which they crive a great Trade, and the People preserve and candy Pomme Citrons, a Root which is long, *Sariaparilla*, very delicate Ambats, Anards, *Mrotala*, Lemons and Ginger, great Quantities of which are for us in *Europe*. It is true, it does not produce much Gold, because the People tend to much upon Rice; but its products sufficient for their Use, and to accommodate the *Sinns of Europe* with excellent Biscuits very cheap, and four Sorts of Pulse, which, together with Rice, Butter, are the usual Food of the poor People, who should be had almost for nothing; for a Rupee, which is the Half a Crown, you may buy twenty good Pounds more, and Geese and Ducks in Proportion. *Kows* and Sheep are very plentiful; and there is such Store of Potatoes, that the *Portuguese* live on nothing else almost, and the *English* and *Dutch* victual their Ships with it. There is a Plenty of all sorts of Fish, both in the fresh and the Water, and Want of nothing; for this Reason, together with the Liberty that all Men enjoy for the Exercise of their Religion there, all the Christians are fled thither from Ports taken by the *Dutch*; to that in *Alecut*, to which are eight or nine thousand Christians, and in other parts the Kingdom above twenty-five thousand more, in a general Magazine for Cotton Cloths and Silks, for *Indostan*, but all the neighbouring Kingdoms, and *Araba* itself.

The *Hollanders* transport vast Quantities of both the fine, and others coarse, both eyed and white, to *Europe*, and other Places, besides what the *English*, *English*, and other Merchants sell elsewhere: This true Silks are not so fine as those of *Perfia*, *Syria*, *Araba*, *Bampt*; but then they are cheaper, and very good at Price. Saltpetre is found in such Quantities in this Country, that the *English* and *Dutch* load whole Ships to carry it to many Places of the *Indies*, and into *Europe*; from *Bengal* also there comes Iac, Opium, Wax, Cloves, and Long-Pepper; and even their Butter is transported into other Places. The Air, indeed, is not so sweet, especially near the Sea, for Strangers, to that of the *English* and *Dutch* many of them died at their first coming; but now by restraining their Intemperance, and drinking *Burdian* Wine, Canary, or Sherry, they preserve themselves tolerably healthy among them. The whole Country is well watered by Channels cut out of the *Ganges*, which contributes as much to their Corn and Plenty; it is well peopled, and has aundance of a full of *Gentiles*, and the Fields produce, besides Sugar, Corn, and Pulse above-mentioned, Serapunt, *Mulberries* to feed Silk worms, Anards, and other bearing Trees. In the *Ganges* also are many that are filled covered with continual Verdure; but two or three Mouths some of them are abandoned, leaving them much infested by the *Crocods*, and the *Tracods*; so that they have no other Inhabitants but *Pygms*, *Crocods*, and Poultry. Nature in this Country, performs Miracles, as they seem to us far distant. It is common in rainy Seasons to see Rainbows of the Moon at Night, when the Moon is at the full, and in other Seasons the Bathes will be covered to such a height, that they seem to be covered with a great many burning Fires, that they seem almost to be covered with great Flames in great Globes, which the ignorant call as Devils.

16. The Kingdom of *Bentan* is of a hard Soil; it is hard to come to a perfect Knowledge of it, because the Merchants that trade from thence into the *Indies* have not given us a very imperfect Account of it. The *Dutch* have three Months travelling to *Patawa*, being out of it in the Month of *December*, and in eight Days arriving at *Ceylon*, which is the last Town in the Great *Indies*; *Dutch* and there is a heavy Culture of *Sugar*, *Cinnamon*, and

of War. The People are as subject to Wens on their Throats as those of *Boutan*, inasmuch that some of their Women have them hanging down to their Breast, which proceed from the Balbels of the Waters. There is nothing in *Tipra* which is fit for Strangers.

There is a Mine of Gold, but the Metal is very coarse; and there is a sort of coarse Silk, which is all the Revenue the King has, for he exacts no Subsidies from his Subjects. Only they who are not of the prime Nobility work six Days in the Year in the Mine or Silk-Works. He sends his Gold and Silk into *China*, and for them they bring him back Silver, which he coins into Pieces of the Value of eighteen *Sous*, and others of twenty-two *Sous*. In the Language of this Country he is called *Dien-Aragari*, which is stamped upon one Side of the Money, and on the other *Chattermani Roy de Tipoura*; he also makes thin Pieces of Gold, like the *Affers* of *Turky*, of which he has two Sorts, four of one making a Crown, and two of the other.

19. The Kingdom of *Asem* is one of the best Countries in all *Afia*, for it produces all Things necessary for human Subsistence, without any Need of foreign Supply. There are in it Mines of Gold, Silver, Steel, Lead, Iron, and great Store of Silk, but coarse. There is a Sort of Silk found under the Trees, which is spun by a Creature like our Silk-worms, but rounder, and which lives all the Year long under the Trees. The Stuffs that are made of this Silk glitter very much, but they fret presently. This Country also produces all sorts of Gum-Lac, of which there are two sorts; one grows under the Trees of a red Colour, with which they paint their Linnen and Stuffs; and when they have drawn out the red Juice, the remaining Subtilance serves to varnish Cabinets, and make Wax, being the best Lac in *Afia* for those Uses. As for the Gold, they never suffer it to be transported out of the Kingdom; nor do they make any Money of it, but preserve it in Ingots, which pass in Trade among the Inhabitants; but the Silver the King coins into Money of three Drams four Grains Weight, which make twenty-three *Sous*. Tho' their Country is very plentiful in all Things, yet there is no Flesh they esteem so much as Dogs Flesh, which is the greatest Delicacy at their Feasts, and is sold every Month in every City of the Kingdom upon their Market-Days. They have also great Store of Vines and very good Grapes, but they never make any Wine, but dry their Grapes to make *Aqua Vite*.

They have no Salt but what is artificial, which is made two Ways; first, they raise great Heaps of that green Stuff that swims on the Top of the standing Waters, which the Ducks and Frogs eat; this they dry and burn, and the Ashes thereof being boiled in a Cloth in Water, become very good Salt; but the most usual Way is to take the Leaves of *Adam's Fig-tree*, which, being burnt, the Ashes thereof make a Salt so tart that it is impossible to eat it till the Strength be taken away, which they do by putting the Ashes into the Water, and stirring them up and down ten or twelve Days together, and then they strain the Subtilance through a Cloth and boil it, for, as the Water is dry away, the Bottom thickens, and when the Water is all boiled away, they find at the Bottom very good and white Salt. Of the Ashes of the Fig Leaves they also make a Lye with which they wash their Silks, which makes them as white as Snow; but they have not Leaves enough to whiten half the Silk that grows in their Country.

In the City of *Kemmeres* the King of *Asem* keeps his Court. This King requires no Subsidies of his People, for all the Mines in the Kingdom are his own, and, for his Subjects Land, he has none but Slaves that work in them; so that all the Natives of *Asem* live at their Ease; and every one has his Houle to himself, and in the Middle of his Ground a Fountain encompassed with Trees, and most commonly every one an Elephant to carry their Wives; for they have four Wives, and when they marry them, they lay to them, *I take thee to serve me in such a Thing*, and to another, *I take thee to do such a Business*: So that every one of their Wives knowing what she has to do in the Houle, there is no Difference among them. The Men and Women are generally well complexioned,

only those that live more southerly are swarthy, and subject to Wens in their Throats; nor are they so well feathered, and the Women are something flat nosed. In the Southern Parts the People go stark naked, only covering their Privy-Parts, with a Bonnet upon their Heads like a Blue Cap, hung about with Swines Teeth.

They make large Holes in their Ears, that you may run your Thumb in, and hang in them Pieces of Gold and Silver; Bracelets also of Tortoise-Shells and Sea Shells, as long as an Egg, which they saw into Circles, are in great Esteem among the meaner sort, as Bra-clets of Coral and yellow Amber are among the richer. When they bury a Man, all his Friends and Relations must come to the Burial, and when they lay the Body in the Ground, they all take off their Bracelets from their Arms and Legs, and bury them with the Corpse. In the City of *Azer* are the Tombs of the Kings of *Asem* and all the Royal Family; for though they are Idolaters, they never turn their dead Bodies, but bury them. They believe that the Dead go all of them into another World, and that they that have lived well in this have Plenty of all Things; but they who have been ill Lovers, suffer the Want of all Things, being in a more especial Manner afflicted with Hunger and Drought; and that therefore it is good to bury something with them to serve them in their Necessity. For this Reason their Kings build themselves, in their Life-times, Chapels in the great Pagods to be buried in, wherein they store up great Sums of Gold and Silver, and other Moveables of Value; besides, when they bury any of their Kings, they bury with him likewise whatever he esteemed most precious in his Life-time, whether it be an Idol of Gold or Silver, or whatever else, that being needful in this, is also as they think necessary in the Lite to come.

But that which favours most of Barbarism is this; that when any King dies, all his best-beloved Wives, and the principal Officers of his Houle, poison themselves to be buried with him, and to wait upon him in the other World; and they also bury one Elephant, twelve Camels, six Horses, and a good Number of Hounds, believing that all these Creatures rise again to serve the King. It is thought these were the People that first invented Gun, and Powder, and that the Invention spreading itself into *Pegu*, and then into *China*, it from thence became known in the World, and so the *Chinese* were thought to be the Inventors of them. Their Powder is very small and round, like ours in *Europe*, and very strong. As for the Kingdom of *Siam*, and that of *Macassar*, the Accounts already given of them dispense us from the Necessity of inserting what this Author has written about them. But with regard to that of the Kingdom of *Tunquin*, or *Tonquin*, it is so concise and so curious, that it would be unjust to conceal it from the Reader's Notice; and therefore with this Description we shall conclude this Part of the Travels of *Mr. Tavernier*.

20. The Kingdom of *Tonquin* is bounded on the East by *Canton*, a Province of *China*, on the West by the Kingdom of *Brama*, on the North by *Yunan* and *Quina*, two other Provinces of *China*, and on the South by *Chin-China*. The Air is mild and temperate, though it lies in the Torrid Zone, and the Ground is so fertile that there is a continual Spring; Fruit and Snow are never seen here, and the Gout, Stone, and Pestilence are strangers in it. The North and South Winds, which continually blow, and divide the Year between them, serve to moderate the Heats that they are not troubled with, yet, once in seven Years, they have hideous and terrible Tempests, which make strange Detolations, pulling up Trees, and blowing down Houles. Their Earths are thought, by their Astrologers, to proceed from six Mines, as is also believed in *Japan*.

The whole Kingdom is divided into several Provinces, which together contain, as it is said, 20000 Cities and Towns, though many Families, with their Castles, live always upon the Water in Boats, after the Manner of the *Cochin Chinese*. The Country is for the most part level; save that in the North there are some Hills. It is watered with several Rivers, some of which carry Vessels of a good Burthen, and so are commodious for Trade. In all this Country grow neither Corn nor Vines, because they never

erly are swarthy, and subject
are they to well featured,
flat nosed. In the South-
naked, only covering their
on their Heads like a large
teeth.
their Ears, that you may
in them Pieces of Gold
ortoise-Shells and Sea shells,
y few into Circles, are in
er fort, as Branches of Coral
g the richer. When they
and Relations must come to
the Body to the Ground,
from their Arms and Legs,
ple. In the City of *Asoo*
of *Ason* and all the Royal
Idolaters, they never turn
nem. They believe that the
er World, and that they can
enty of all Things; but they
ffer the Want of all Things,
er afflicted with Hunger and
it is good to bury something
eir Necessity. For this Rea-
ves, in their Life-times, Cha-
be buried in, whereas they
and Silver, and other Move-
they bury any of their Kings,
whatsoever he esteem'd most
whether it be an Idol or Gold
that being needful in this, is
in the Life to come.
off of Barbarism is that
bell-beloved Wives, and the
ouse, poison themselves to
wait upon him in the other
one Elephant, twelve Camels,
umber of Hounds, following
again to serve the King. It is

corn nor Vines, because they
never

never have any Rain but in *June* and *July*; but Rice is produced in vast Quantities, which supplies the People both with Meat and Drunk: They have also good *Aqua Vita*, or Strong-Waters. Their Fruits are excellent, but all different from ours. Their Palms bear larger Nuts than in any Part of *Affa*; they are as big as a Man's Hand, and shaped like a Cocoa, the Pulp is as white as Snow, and taste like our Almonds, and every one yields a considerable Quantity of Liquor very pleasing to the Palate. The Gogovier, which resembles our Laurel, is of two sorts, the one bears a Plum, green without and red within; but the other a yellower Fruit, which is much more esteemed. The Papager bears a Fruit like a small Melon, and the Taste is very delicious. The Arraga, which grows upright and tall, like the Mast of a Ship, bears Branches only at the Top, and the Fruit is like a Nutmeg; they bruise it with Beesle and Chalk, which they chew to make their Teeth white, Lips vermilion, and breath sweet. They have Figs of two sorts, the one like ours, the other like those called *Adam's* Figs, as long as a Man's Finger. They have a Tree like our Willow, called the Powder-tree, because of the Wood burnt into Charcoal they make Gun-powder. The Janbagels grow very high, and bear a Fruit resembling a Citrus-Cucumber, which has a Pulp like a Pomegranate, and is very pleasant in the hot Seasons. Their Highways are planted with War-trees, which are a great Convenience for Travellers; for some of them are so big that two or three thousand Men might shelter themselves under them, some of their Branches being three hundred Paces long, and supported every twelve Feet with under Branches, which, having taken Root, support them like so many Pillars: the Nuts of them, which are no bigger than a Walnut, have a Kernel like Miller, which serves only for Food for the Rere-Mice, which make their Nests there. They have Bodies as big as a Pullet, and the *Portuguese* prefer them before it. They have a certain sort of Birds-Nests, as big as a Swallow's, which they dissolve in Water for Sauces to all their Delicacies; they give a Flavour above all the Spices of the *East-Indies* put together; they are found only in the four Islands belonging to *Cocchin-China*. The *Tunquin* also catch abundance of Tortoises in their Seas, which they not only esteem excellent Food, and think they cannot treat their Friends as they ought to do without them, but pickle them up, and send them abroad, which causes a Trade among them. *Tunquin* affords a mighty Store of Ananas, and Orange-trees, which are of two sorts, the one no bigger than Apricots, the other bigger than *Portugale* Oranges, both well tasted alike, and plentiful for six Months. Their Citrons, which are both green and yellow, are too tart to be eaten, but the Juice is made use of to cleanse Copper, Tin, and Iron, for gilding, as also to scour Silk, whiten Lincos, and take out Spots. In *Mogadishan* they will make their Calicuts so white with the Juice of these Citrons, as to dazzle your Eyes. Great Quantities of Silk are made in this Country, of which both Rich and Poor in ke their Garments; and the *Hollanders* transport many into *China*. They have but one sweet-smelling Flower, called the Bague, which grows like a Nofegay. They have abundance of Sugar, and eat very much after their Meals for Digestion, but they eat it cut of the Cane, not having the true Art to refine it. In the whole Kingdom there are neither Lions, Alks, nor Sheep, but their Forests are full of Tygers, Harts, and Apes, and their Fields of Oxen, Cows, and Hogs, Hens, Ducks, and Turtles, which are the general Provisions of the People, are numberless. Their Horses are well bred, and the King always keeps five or six hundred of them in his Stables. Their Elephants are of a prodigious Bigness; there are none so tall and nimble in all *Affa*. The King keeps five or six hundred of them for his Service in his Palace, and Wars. They have no Cats, but the Dogs destroy the Rats and Mice, which are very big and mischievous. They have very few Birds, but the Multitudes of Geese, that they are very troublesome to the Kings, as well by their Noise as Stinging; they drive them away by the Smell of Rice Chaff. But the greatest Treasure of the Country are the white Emitts, whose

Biting raises Blisters on the Skin; for their Teeth are so sharp, that they will gnaw a Pull in two in a little Time, and eat a Bale of Silk in twenty-four Hours, as if it were cut in two. They have no Mines of Gold or Silver in *Tunquin*, neither do they coin any Money. The chief Commodities of this Country are, besides the Silk above-mentioned, Lignum-Aloes, of which there are some worth a thousand Crowns the Pound, being oily and good: All the *Mohamedans* use it to perfume their Boards and Rooms at Visits, and therefore the *Portuguese* of *Goa* sent, as a rare Present to the Emperor of *Japan*, a piece of Lignum-Aloes six Foot Long and round, worth 50000 Livres. The *Tunquinese* are very faithful in their Dealings, very unlike their Neighbours the *Chinese*, who will cheat you if they can; and if they are at any Time over-reached, will pay in light Money, for they are blunt and plain. Having no Money, they make use in Trade of Ingots of Gold, and Bars of Silver, which they have from *China* and *Japan* for their Silks. They are worth from three to six hundred Livres, and therefore in small Payments they either cut them in Pieces, or pay in *Spanishe* Reals. The Forces of this King for War is prodigious; his usual Army is 12000 Horse, 2000 Elephants, as well to carry the King's and Nobilities Tents and Baggage as for the Service of the Wars, 300,000 Foot and 300 Gallies, and sometimes the Amount is 500,000 Men. The Constitution of the Soldiers is very tough and laborious; they are always upon the Guard, or attending their Captains in looking after the King's Elephants, and to breeding them that they need not be afraid of Fire, or in building Places of Shelter for the King's Gallies in Winter; yet their Wages are so small that they cannot maintain their Wives and Families, but their Wives are forced to follow some Trade to support them. Their Companies consist of an hundred, or an hundred and thirty Men, and the Soldiers are obliged to keep all their Arms very neat and bright. The People of *Tunquin* are naturally mild and peaceable, submitting easily to Reason, and condemning the Transports of Anger, and other Passions. They esteem the Manufactures of other Countries more than their own, yet love to live at home, and honour the Memories of their Ancestors: Their Speech is soft and pleasing, they have good Memories, and are fluent in their Discourse. They have good Poets among them, and their People generally love Learning; both Men and Women are well proportioned, but of an olive Complexion, and therefore much admire the Whiteness of the *Europeans*. Their Hair is black, and they wear it very long, and well combed and tied upon the Crown of their Heads, or about their Necks, to keep it from fluttering in their Eyes. The blackest Teeth, and longest Nails, they account the most beautiful. Their Habit is grave and modest, being a long Robe for both Sexes, girt about with a silken Girdle, mixed with Gold and Silver. The Soldiers wear an upper Garment, which reaches no farther than the Knees, and Breeches that go down to the middle; but have neither Hats nor Shoes. The common People, except where the King's Court is, work three Months at the King's Palace, and two Months for the Mandarins, or great Lords, the rest of the Year is left to work for their Clves and Families. One Day in the Year they are obliged to lop Trees to feed the Elephants. Their Rivers are free from Crocodiles, and other dangerous Animals, which haunt the Waters of the *Nile* and *Ganges*; but yet once a Year they overflow their Banks, after the Rains, with that terrible Violence, that they carry away whole Towns and Villages along with them. The *Tunquinese* cannot marry without the Consent of their Parents; and if they be dead, the Permission of their next Kindred, and the Allowance of the Governour of the Place where the Marriage is made; for which the Man must pay a certain Sum limited by Law. The People are very industrious here, and all the Money the Maids get before Marriage is to buy them two or three handsome Gowns, a Necklace of Coral, or yellow Amber, and Beads to garnish their Locks, and for their Portions. There is no Wedding without a great Feast, the poorer sort for three Days at least, if they are able, and others for nine. The

Laws of the Land permit the Man to divorce his Wife whenever he pleases, which they many times do for slight Causes; but the Woman has not the same Privilege; and if she desires it, obtains it with Difficulty; but the Man is bound to restore the Woman what she brought with her, and keep the Children begotten between them; but now Divorces are not half so frequent as formerly. Adulteresses are punished here very severely, the Offender being cast to an Elephant bred up for that Purpose, who throws them up into the Air, and then tramples them under Feet, till they are dead.

Of all the Eastern People the *Tunquinese* are the most sociable, and most frequently visit each other; generally they make their Visits about Noon, with a Train suitable to their Condition; the Princes and Mandarins ride on Elephants, or are carried on Pallekies, and their Train is of fifty or sixty Persons; the ordinary Gentry, and Officers of the Court, ride on Horseback, and are not allowed above seven or eight Servants to attend them. They chew Beetle continually, where it is to be had, and at their Visits always present their Friends with some at taking Leave; and the richer the Box is, the greater the Present is esteemed. Among the *Tunquinese*, it is a great Dishonour to have the Head bare, for they shave all Criminals, and if any Person be found without Hair, they apprehend him, and carry him to the Governor, who causes him to be nailed to a Cross immediately. They sit cross-legged, as the rest of the *Affairs*; but instead of Carpets, they use Mats made of Reeds, as fine as Thread, and as soft as Velvet, which they lay upon Beds, not on the Ground, as the *Persians* and other *Indians* do. They are not curious in their Diet, but very neat in dressing it.

The common People are contented with Rice boiled in Water, dry Fish and Eggs (for they eat Flesh only at their Festivals) but the great Lords are served every Day with Flesh and Fish; but they know not how to bake any thing. All their Meat is cut in little Pieces, and served up in little lackered Plates less than our Trenchers. They use no Napkins or Table-cloths, Knives, Forks, or Spoons; but only two Sticks to take up their Meat; for they never touch it with their Hands. They wash their Hands, Mouths, and Faces, before they sit down to Meat; but never after their Meals. They are usually silent at Table; but if they have a Mind to Discourse, the eldest begins first; for they pay much Honour to Age. When they would know whether any Person has eaten sufficiently, they ask him whether he has eaten his Rice, meaning thereby the whole Repast, as the Scripture does by Bread. They never ask any Man how he does, but how he eat his Dinner; for the more a Man eats, the better they suppose him to be in Health. They take much Delight in Comedies, which are usually acted upon the new Moon, and last all Night.

They set up their Theatres in great Halls, and adorn their Stages with beautiful Machines and Scenes. They have custom more Actors than eight, either Men or Women, and they are very magnificently clad; they act their Parts perfectly well, and observe an exact Time in their Dancing. Their ordinary Pastimes, and especially for the Lords and Mandarins, are Fishing and Hunting; in the former they take the greater Pleasure, because their Rivers are full of Fish; but they never follow their Sport but upon certain Days, when they may be spared from their Business. The *Tunquinese* are Lovers of Learning, and apply themselves to their Studies with Diligence. Their Learning consists in the Knowledge of the Laws of their Country, Mathematics, and Astronomy. They are Admirers of Poetry and Musick, and are accounted the greatest Artists in them of all the People of the East.

To acquire Nobility by Learning, they study hard for eight Years in the Office of a Notary, Professor, or Advocate; and if upon a strict Examination they are found to understand their Office so well as to answer all Questions about it, their Names are presented to the King, who grants them a Title of the Synde. Having arrived at this Degree, they are ordered to study Musick, Astrology, Poetry, and Mathematics, five Years; and if upon a second Examination they answer all Questions put to them in those Sciences, they are raised to the Dignity of Doucan; after this they must spend four Years more to write and read the *Chinese* Characters to such Number of Words, for

to know or write it fully is almost impossible, it is so copious, and to understand the Laws and Customs of the *Chinese*; and after a strict Examination by all the Mandarins of Learning, and Tanzi's, or Noblemen, for eight Days, if they answer well, they arrive at the Degree of a Tanzi, and are received into the Rank of the Nobility, and the King gives them certain Towns to take the Rents; but to some more, and others less, according to their Merit, or the Prince's Favour; and the King gives them a Vest of Satin.

Then they go to visit their Towns given them by the King, where they are received in a gilded Branguar, with Musick, and they stay three Months for their Recreation, and then they return to Court to instruct them selves in the Affairs of the Kingdom and Palace, and arrive at the Dignity of Mandarin. In the mean time their Names being written under large Tables, are set upon the Gate of the King's Palace eight Days, that all the People may know who are received into the Rank of the Nobility.

The Physicians of *Tunquin* study Books but little, but spend their Youth in searching into the Virtues of Roots and Simples, and how to apply them to every Distemper, which they judge of by the beating of the Pulse, and its Diversity of Measure, as by the Pulse of the Right Hand they guess at the Condition of the Lungs, and by that of the Arm of the Distemper of the Stomach and Kidney; by the Pulse of the left Hand they judge of the Condition of the Heart; and by that of the Arm of the State of the Liver; and by the Pulse of the Temple, both Right and Left, they give a most exquisite Judgment of the Kidneys. They carefully count how many times the Pulse of a sick Person beats in the Space of one Breathing, and according to these several Pulses they will tell you which Part of the Body is particularly distempered, whether the Heart, Liver, or Lungs, or whether it proceeds from any outward Cause. They generally give Decoctions of Herbs and Roots, with a little Ginger. They use *China* Ink to stop a Dysentery, and for the Cure of Wounds, and give Powder of Crabs in Dysenteries and Fevers, often in Water, sometimes in Brandy.

They prescribe Tea, which comes to them from *China* and *Japan*, as an excellent Remedy against the Head-ach and Gravel, and with a little Ginger for the Gripping of the Guts. That is accounted the best Tea which colours the Water green; for that which colours it red is little accounted of. Against the Afflictions which proceed from bad Airs, and cold Wines, they use a Counter-poison mixed with *Aqua Vita*, in which also they dip a Cloth, and rub the Patient well; but in this they boil a little Ginger, and for a more speedy Cure they sweat the Patient in a Cloud of Frankincense; they never use Blood-letting, and in the Purple Fever they use Fire, and sometimes picking every Spot. The Spot being burnt will give a Whirl like a Squaw, which is an infallible Sign that the Venom is gone out of the Body; but the Physician must take Care that it does not enter his own, for then Death certainly follows. If the Spot be prickled to let out the pestiferous Blood, they burn it, and then rub it with Ginger, not permitting the Patient to take the Air in twenty Days, or eat any Flesh or Butter. These Remedies are effectual to a Wonder, and cure in a short Time.

The Kingdom of *Tunquin* was anciently a Part of *China*, but has been for six hundred Years governed by its own Kings. The first that assumed the Title of King was a Robber, whose Name was *Din*, who leading a great Number of Malecontents, gained many bloody Battles over the *Chinese*, and seized the Province for his Kingdom. The People did not permit him to reign long in Peace; but rising against him, slew him; though he left two Sons, yet they reigned but a few Years successively, and died without Issue. The Kingdom after their Death was mightily distressed with Civil Wars, till the *Chinese* being called in to assist the weaker Party, brought things to a Settlement, and a Mandarin, of the Family of *Lalouel*, was advanced to the Throne.

He being a valiant and prudent Prince, restored Peace and Order to the Kingdom; and after he was established, built an admirable Palace of Marble of divers Colours, and very large, he left one Daughter to succeed him, and this to secure herself, married a powerful Mandarin, of the House of *Trau*, but she being deposed, and slain by her

It impossible, it is so copious and Customs of the *Chingese*; by all the Mandarins of Clemens, for eight Days, of the Degree of a Tani, and the Nobility, and the King like the Reints; but to some ing to their Merit, or the gives them a Veil of Sattin. in was anciently a Part of *China*, ed Years governed by its own ed the Title of King was a *Din*, who leading a great Num- many bloody Battles over the vince for his Kingdom. He o to reign long in Peace; but s; though he left two Sons, ye- s successively, and died without er their Death was mighty B. ill the *Chingese* being called to tought things to a Settlement, anity of *Lelequel*, was advanced

prudent Prince, restored Peace 11, and after he was established, a Marble of divers Colours, and daughter to succeed him, as the t a powerful Mandarin, of the being deposed, and then by

rebellious Subjects, the *Chinese* again seized the Govern- ment, and held it twenty Years. They set Governors over every Province, and laid heavy Tributes upon the People; so that being weary of the Oppression, they joined under a valiant Captain of the House of *Lee*, and vanquished the *Chingese* in three Battles, seated him on the Throne, and in his Family the Government continued above eighty Years, the last of this Race having given an Affront to a great Lord of the House of *Marr*, which had formerly enjoyed the Scepter, he being assisted by a great Number of Male-contents, fought to regain the Kingdom, and in one bloody Battle became Master of it.

But he enjoyed it not above two Years, being deposed by one of the Family of *Trin*, who refusing to ascend the Throne, restored it to the Family of *Lee*, yet reserving to himself and Family the whole Command of the Army, and Disposal of all the Revenues of the State, and all publick Affairs; so that the King, whom they call *Boua*, has the Name, Title, and State; but the General, whom they call *Cboua*, has the Power. The King hears Causes almost every Day, but makes no publick Edict which is of any Effect, till it is signed by the *Cboua*: He lives shut up in his Palace, and sits not out but upon certain Days; he has generally two thousand Soldiers for his Guard, and keeps sometimes twenty thousand quartered upon his Fron- tiers, especially towards *Cochin-China*, and with them fifty Elephants upon the Rivers also of the Kingdom, where any Enemy can endanger him; he keeps usually one hundred great Gallies, with a vast Company of small Gallies.

The eldest Sons here do not always succeed their Fathers in the Throne, but by the Influence of the *Cboua* and Counsellors, his Creatures, he is obliged to name which of his Sons he will have to reign after him, if he has many, and him they promise to establish, shutting up all the rest in the Palace, as in a Prison, and not suffering them to meddle with Affairs of State; yet four Times a Year they are allowed to go out under an Officer appointed by the *Cboua*, and have Leave to stay out six Days. On the first they are to visit the Temples and Priests, and give them large Alms, the next two Days they hunt, and the three last fish.

The Kingdom of *Tunquin* is divided into eight large Pro- vinces, every one of which has its Governor and Magi- strates; but there lies an Appeal from their Sentence to the King, his thirty two Counsellors, and one hundred Assis- tants. Their Nobility attain that Degree by Merit only, viz. by their Valour in the Wars, and Learning; and as these latter go through a long Course of Studies, and strict Examinations, as is before shewn, for the former are instructed in warlike Exercises betimes, viz. to handle their Swords, to aim with their Bows, to fire a Mullet, to ride the great Horse, to shoot running, to manage their Zagays, which are long Staves checked with Iron like a Hall pike, and make all sorts of artificial Fire-works, which they use against Elephants in War; for though some Elephants may be taught not to regard them, though they go off under their Noses or Bellies, yet one in ten cannot be brought to it, so that unless their Governors take great Care, instead of running upon the Enemy, they will turn upon their Friends, and put a whole Army into a dismal Confusion, if not de- stroy it, as they did *Aungzeb's* at the Siege of *Daman*.

21. The Kingdom of *Tunquin* paid a Tribute to the *Chinese* till the Year 1667, when the *Tartars* invaded their Country, and then they concluded a Peace, on Condition that they should send every Year an Embassador to *Pequin* to do Homage to the Emperor of *China*. They observe an exact Order in administering Justice, and regulating Affairs all over the Kingdom; they are very exact in punishing Murder, and none can escape, but such as have killed one that has no Relations to revenge his Death; for the King can pardon no Man for this Crime, and all the Favour he can shew, is to leave him to the Kindred of the Slain.

They take great Care for the publick Good, to repair Bridges and Highways, and every Quarter of a League there is Water and Fire provided for those Travellers who may want them. Though the King has not much Power in his Kingdom, yet he is highly honoured by his Subjects, and keeps a very splendid Court the first and sixteenth Day of every Month: All the Mandarins, except the Ge-

neral, who is allowed to send his Deputy, come in their *Chinese* Habits to kiss the King's Hand, as the inferior Mandarins, who are Governors of Provinces, Justices, and military Officers, do the *Choua's* on the first Day of the Year. All that desire to see the King, are obliged to put on violet Robes, both themselves and their Servants, and if they beg any Favour, must carry a Present. On the first Day of every new Year the King distributes several Largesses and Gifts to his Courtiers, and the Children of such as have done him any important Services, which are Panes of Gold worth six hundred Livres each, and Bars of Silver, which are worth forty-six Livres each; He also releases all Prisoners, both Criminals and Debtors, provided their Crimes do not deserve Death, and the Debts do not exceed two Bars of Silver.

The three last Days of the Year the four Mandarins, who are the chief Counsellors of the State, take Oaths of all the Lords and Officers of the Court, and their Wives, to be faithful to the King, and discover any Treason against his Person and Government, and the Governors of Cities and Countries do the same to the Lords, Gentlemen, Citi- zens, and Inhabitants of their Jurisdictions, and every one that discovers any Treason, never fails of a Reward, accord- ing to his Quality; and mean People are gratified with a Reward of fifty Panes of Gold, and five hundred Bars of Silver, which amounts to 53,000 Livres; but they esteem Nobility above Money. They have a Muster of the Youth every Year, and all such as are found not to be of the Nobility, or not to have learnt a Trade, are immedi- ately enrolled for the King's Service, to be of his Guards, or defend his Frontiers. Some will endeavour to get off by Money; but if they are discovered, both Officers and Soldiers are punished without Mercy; for they hang a little Bell about their Necks, and fetter their Arms, and send them to the General, who presently orders their Heads to be stricken off, or upon Intercession of Friends they are to be hanged, because they are very averse to Bloodshed, and believe the Death most honourable that is free from it. When the King goes at any time out of his Palace to take his Pleasure, he is seated upon a most magnificent Pallan- quin, carried by eight Men, where he is seen by all the People, the Lords and Officers of the Court attending on Foot, if he goes no farther than the City; but if he goes in the Country, he rides on an Elephant, and the Lords attend him on Horseback. When the Queen-Mother, or his first Wife goes abroad, they are likewise carried upon a close Pallanquin, with Lattice Windows, that they may see, and not be seen, and the Maids of Honour follow it on Foot.

The Mandarins, and great Princes, solemnize their Birth-days every Year with great Feasting, Pastimes, Com- edies, and Fire-works, and at the same time give large Alms, especially to poor Widows and Prisoners. When the King dies, and leaves several Sons, he is set up whom the King has appointed his Successor; and on the third Day of his Decale the General, with all the military Mandar- ins, Lords of the Council, and Governors of Provin- ces, repair to the Prince's Apartment, where they present him with a *Chinese* Habit, and mounting him on an Elephant, bring him into one of the great Courts of the Palace, which is covered with Cloth of Gold and Silver as a Tent, and place him upon a magnificent Throne, where being seated, all the Mandarins prostrate themselves to him upon the Earth with their Heads downward; in which Posture, having lain some time, they rise, and closing their Hands together, with their Arms and Eyes lifted up towards Hea- ven, they swear to be faithful to him till Death.

The new King, to requite this Loyalty, orders four Panes of Gold, and six Bars of Silver, to be given to every one; but to the Contable, or General, he gives two Panes of Gold, and forty Bars of Silver; and to the President of the Council half as many: After these Presents are given, several Pieces of Artillery are fired about the Palace, with some Volleys of small Shot, by the Soldiers then in Arms, which are 30,000 Horse and Foot, the King set upon a magnificent Pallanquin, carried by eight military Mandar- ins, and eight of the Council, the Contable and chief of the Council riding before upon very fine Horses, is carried to the Apartments of the deceased King, when the Lords are retired, the Princesses, Ladies of the Court, and chief

Wives of the Mandarins come to kiss the King's Hand, and congratulate him upon his Advancement to the Throne; which done, the Lords return to a noble Feast prepared for them after the Manner of the Country. Colt's Flesh, and Dogs, are in most Esteem with them; and the Bird's Nests, which give their Meat a Taste of almost all sorts of Spices, are their chief Sauce. The Festival is concluded with Comedies, and Fire-works, which last all Night.

The next Day the 30,000 Soldiers are drawn up in the Field, and the King appearing on his War Elephant, in the midst of his Troops, takes an Oath of Fidelity of all the Officers, and then bestows his Gifts upon them, viz. to every Colonel two Panes of Gold, and forty Bars of Silver; to every Captain half as much, and to every Soldier a Month's Pay, which being received, the whole Army discharge three Volleys, and then they retreat to their Huts, where they have a Feast prepared, as the King has also, in a wooden Palace erected for the same Purpose; and so they spend the Night in Feasting, Dancing, and letting off Fire-works. This Ceremony being ended, they set on Fire the Palace and Huts, and the King returning to his Palace, bestows his Liberality on the Comedians and Dancers; then he gives Access to all his People by their Commissioners, viz. to the Merchants and Traders, People of *Chees*, who assure him that their City acknowledge him for their King, and will be faithful to him unto Death; and he gives fifty Panes of Gold, and three hundred Bars of Silver, to the Tradesmen, and then to the Commonalty of the whole Kingdom, whom he discharges from Taxes a whole Year, if they have never taken up Arms against their King, and but six Months, if they have; all Prisoners for Debt, after they have compounded with the Creditors for half, he freely paying the rest.

'Tis said, that the King upon this Occasion sends above 100,000 Beasts to the Temples of the false Gods to be sacrificed for him, besides the Value of one Million of Panes of Gold in Tissues and Silks to adorn the Idols, orange-coloured Calicuts for the Bonzes, and blue Calicuts for the Poor that are kept in the Pagods, as Hospitals. Sometimes after the Ceremony is over, the King, at the New of the Moon, goes to give his Deities Thanks for his coming to the Crown, and remains for a Week with the Bonzes, living in common with them, visiting the Hospitals, to see how the Poor, and especially the Ament, are used; and to them he gives new Alms, and orders the building of a new Pagod in some fair Situation, which he dedicates to some Idol. The second Part of the Moon is spent in seeing the Gallies row one against another, the King and Court having Houses built on the Plains by the River for that Purpose; which Diversions being over, the Captains come ashore to kiss the King's Hand, and they that have behaved most Routly and nimbly, receive the Marks of his Bounty, and he gives all the Soldiers two Months Pay extraordinary. During seven Days, there are such vast Numbers of Fire-works thrown about, that you would think the Air and Water all on Fire. Then the King returns to his Palace, and spends the other half of the Month with his Princesses, diversing himself and his Ladies with Fire-works, Comedies, and Mummings.

When the King of *Tunquin* dies, he is presently embalmed, and laid in State sixty-five Days; all which Time his Table is levee as if he were alive; and when the Meat is taken from before the Body, half is given to the Bonzes, and the other half given to the Poor. So soon as the King has breathed out his last Gasp, the Constable gives Notice to the Governors of Provinces, and orders them how long they shall mourn. The military Mandarins mourn generally three Years; the King's Household nine Months; the Nobility six, and meaner sort three; and all the three Years there is a Cessation from Diversions, except those that are used at the King's Elevation to the Throne. All the Meats that are served up to the new King are varnished with black, and his Train is cut off, and his Head covered with a Straw Bonnet, as are also the Heads of all his Princes and Counsellors of State; nor do they leave this Habit till the deceased King's Body is put into the Galley to be carried to the Interment, and the three Bells, which hang in one of the Towers of the Palace, never cease tolling all that Time. The third Day after his Decease all the

Mandarins repair to Court, to testify their Sorrow for the deceased King; and ten Days after all the People are allowed to see the Body lie in State, till it be put into the Galley. During the sixty-five Days which the King's Body lies in State, the Constable prepares for the Funerals, which is thus performed: The King and all the Court march on Foot to the Gallies, which they make seventeen Days March, though it is not really above two Days Journey, and all the Way is spread with Violet-coloured Calicuts, which is the King's Colour. The Order of their March is thus: First go the two Uffers of the King's Bed-chamber, with Maces of Arms, the Heads of them being full of Fire-works; these proclaim the Name of the deceased King; next go twelve Officers of the Gallies drawing a Tomb, whereon the King's Name is written; then proceeded twelve Elephants, of which four carry the King's Standards; four six-armed Men apiece in Turrets; and four of those the King rode on in his Wars: After them rides the Master of the Horse, with two Pages after him on Horseback; then are led twelve Horses richly harnessed, with Bras, Bridles and Saddles; after follows the Mausoleum, or Harie, drawn by eight Stags, trained up for that Service, every one of them being led by a Captain of the Guard; then goes the new King with his Brothers, if he have any, and the Princes of the Blood, all clad in white Sattin, which is their Mourning Colour; they are attended by Musicians, who play upon Hautboys, and other Instruments: After them go six Princesses in white Sattin, carrying Meat and Drink for the deceased King; these are attended by as many Ladies of Honour in purple Garments; then go eight Princes of the Royal Blood in purple Garments, with Straw Hats; next proceed four Governors of the chief Provinces of the Kingdom, carrying on their Shoulders certain Bags full of Gold, and Perfumes hung on Sticks, which are Presents made by their Provinces to be burnt with their King's Body, for his Use in the other World; they follow two Chariots drawn by eight Horses apiece, led by a Groom each, in which are two Coffers full of Panes of Gold, Bars of Silver, rich Tissues, and other Riches, to be buried with the King's Body, for his Use in the other Life. Lastly, come a great Crowd of the King's Officers, and other Nobility, some on Foot, others on Horseback, according to their Offices and Qualities. When the deceased King's Body is put into the Galley, the new King and the Company return home, and the Calicut being taken up, is given to the Bonzes.

The Galley, wherein is the King's Body, is committed to six of the chief Eunuchs, who are sworn never to reveal the Place where the King is buried. It is attended by three other Gallies; one carries the Lords, and another the Ladies, who are to be buried alive with the King to attend him into the other World, and the third carries the Treasure that is to be buried with the King, for his Use. The King is buried in inaccessible Mountains and Deserts. As for the ordinary Funerals of the *Tunquese*, they are more or less pompous, according to the Quality of the Person deceased. At their Interments they use great store of artificial Fire-works, which they use also in their Feast of Joy, as well as Grief. They also set upon the Tables good Store of Victuals, and Sweet-meats, believing that the Deities better for them; and the Priests, who trace blame up to the Error, dispose of them before the next Morning. The *Dutch* Soldiers at *Batavia* robbed the Priests of these Dainties several times, but at length paid dear for their Impiety; for the Priests finding no Redress by complaining to the Governor, poisoned the Meat and Drink, and so destroyed many of them.

The Religion of the *Tunquese* is divided into three Sects; the first is derived from an ancient Philosopher, called *Confucius*, whose Memory is famous over all *China* and the neighbouring Countries. Their Doctrine is, that Men are composed of two Parts, one fine and subtle, and the other material and gross. When a Man dies, the subtle Part vanishesth into the Air, and the gross returns to Earth. They use Sacrifices, and worship the seven Planets. Their chief Idols are *Rouma*, *Reich*, *Kemem*, and *Brama*. The Women chiefly worship the Goddesses *Sattiana*, and the King, Mandarins, and learned Men, adore the Heavens. The second Sect was founded by one *Chia*

testify their Sorrow for the after all the People are alternate, till it be put into the Days which the King's Body prepares for the Funeral, which and all the Court march on they make fourteen Days above two Days Journey, with Violet-coloured Calices, The Order of their March is of the King's Bed-chamber, of them being full of Fire-ame of the deceased King, Gallies drawing a Tomb, is written; then proceeded or carry the King's Standards; Turrets; and four of more: After these rides the Master after him on Horseback, fully harnessed, with Bus, Brins the Mausoleum, or Hearse, d up for that Service, every Captain of the Guard; then Brothers, if he have any, and clad in white Satin, which is attended by Musicians, and other Instruments: After ing Satin, attended Mea and these are carried by as purple Garments; then go eight purple Garments, with Straw Governors of the chief Proving on their Shoulders certain fumes hung on Sticks, which provinces to be burnt with the other World; then follow Horfes apiece, led by a Groom; Horses full of Pans of Gold, Bars of other Riches, to be burnt with the other Life lastly, King's Officers, as other Nobles on Horseback, according to When the deceased King's the new King and the Com- Calicut being taken up, a given

the King's Body, is committed who are two never to several is buried. It is attended by the Lords, and another the d alive with the King attended and the third carries the Tra- the King, to his Use. The Mountains and Delays. As the *Tunquin*, they are more to the Quality of the Kingdoms they are capable of. In their first Day, set upon the *Panagoo* Stone, believing that the Deafest Priest, who made them up to before the next Morning. The ded the Path of their Dangeh paid dear to their Ignor- ing no Redrels by comparing the Meat and Drink, and so

*quin*ese is divided into three from an ancient Philosopher, more is famous over all Countries. Their Deities, that Part, one fine and subtle, and Air, and the gross returns to, and worship the seven *Pan- Kouma, Betek, Kamom, and* by worship the Gods of the Sorc- armins, and learned Men, adore Sect was founded by one *Ch- abent*,

about, an Hermit, and the most of the common People are of this Sect. He taught his Followers the Transmigration of Souls, and enjoined these ten Commands, viz. 1. That they should not kill. 2. That they should not steal. 3. That they should not defile their Bodies. 4. That they should not be unfaithful to their Words. 5. That they should refrain their inordinate Desires. 7. That they should do no Injury to any Man. 8. That they should not be great Talkers. 9. That they should not give Way to their Anger. 10. That they should labour to their utmost to acquire Knowledge.

As for such as design to lead a religious Life, they must renounce the Delights of this Life, be charitable to the Poor, overcome their Passions, and give themselves up to Meditation. He taught also, that, after this Life, there were ten distinct Places of Joy and Torment, and that the Contemners of his Law should feel Torments proportionable to their Offences, without any End. That if they endeavoured to fulfil his Law, and failed in any Point, they should wander in divers Bodies for 3000 Years, before they entered into Happiness; but such as had perfectly fulfilled his Law, should be rewarded without suffering any Change of Body. He says of himself, that he was born ten Times before he came to Bliss, because, in his Youth, he, for want of Knowledge, had sinned. His Impostor's Opinions are spread all over the Kingdom of *Siam*, several Provinces of *Japan*, and all *Tunquin*, where he died. The third Sect is that of *Lambu*, a great Magician: He gave out, that his Mother carried him in her Womb seventy Years without losing her Virginity. That by this Miracle, he might gain Credit to his Impostures, he taught most of *Chaabont's* Doctrine; and, to gain the People's Hearts, enjoined the Grantees to build Hospitals in all Cities where there were none before to look after the Sick in them. The *Tunquin*ese adore three Things in their Houses, viz. the Hearth of their Chimneys, made of three Stones. 2. The Idol *Ticusa*, who is the Patroness of all Handicrafts-Men; and to her they sacrifice when they put a Child to any Trade, that she may infuse an Aptness to learn it. 3. The Idol *Buabin*, to which they pray, and sacrifice when they build an House, that he may not suffer any Misfortune to befall the House they are going to build; but they send for the Bonzes, and they pay to offer it, for whom they make great Preparations.

There are some among them that adore the Heavens, others the Moon, and others the Stars. Some adore the Earth in five Parts, and that in five several Colours, viz. the Northern in black, the Southern in red, the Eastern in green, the West in white, and Middle in yellow; and others sacrifice to Trees, Elephants, Horses, Cows, and almost all other sorts of Animals. They that study the *Cosmo* Characters, sacrifice every five Months to the Souls of the Dead that were never buried, believing that their Understanding shall be more enlightened to apprehend Things. At the Beginning of every Year they have a great Solemnity in Honour of the Dead, who were in their Lives renowned for their noble Actions and Valour, reckoning Rebels among them. They set up several Altars, some for Sacrificers, others for the Names of the Persons they design to honour; and the King, Princes, and Mandarins, are present at them, and make three profound Reverences to the Altars when the Sacrifices are finished; but the King shoots five Times against the Altars where the Rebels Names are; then the great Guns are let off, and the Soldiers give Volleys of small Shot, to put the Souls to Flight. The Altars and Papers made use of at the Sacrifices are burnt, and the Bonzes and Sages go to eat the Meat made use of at the Sacrifice.

The first and fifteenth Days of every Month are more especially Holy-days for the Worship of their Gods, and the Bonzes and Sages redouble their Prayers, and repeat a kind of Charm six Times. The People on these Days bring Meat and Drink to the Sepulchres of their Kindred, to sacrifice for the Good of their Souls, to eat. The Bonzes, when they have paid their Worship, fall to, and what they cannot eat give the Poor; for this Greediness the King and Mandarins make no Account of the Bonzes and Sages, though they lead austere Lives, and to they are in

Credit only with the common People. In *Tunquin* the great Cities have several Pagods, and every Village and Town almost have one: Every Pagod has, at least, two Bonzes and two Sages; but some maintain forty Pagods, and as many Sages, or Sages, who live in common under a Superior, and keep to the Doctrine of *Chaabont*, and a Goat is the Idol which they adore. They wear about their Necks a Necklace of an hundred great Beads made of Wood: They beg for their Living with great Modesty and Humility, taking no more than is needful; and if they have any thing to spare, they give it to the poor Widows and Orphans that cannot get their Living. Their Orders permit them to marry, but then they must leave their Monastery. They assist at the Funerals of great Men, where they make a kind of Oration, sounding their Trumpets and Cornets, while the Bells at their Pagods go at the same time. They have a great Veneration for two Magicians and one Witch.

The first Magician is called *Tay-bow*, who pretends to know the Events of all Things to come; so that when any are about to marry their Children, build an House, buy Land, or undertake any Business of Consequence, they consult him, who, inspecting his Book, makes them believe what he pleases. The other is *Tay-Pou-Theny*, to whom they have Recourse in their Sickness: When he is consulted, after several apish Tricks which he acts before the sick Person, to amuse him, he sometimes affirms that the Distemper comes from the Devil, and then he himself and the sick Person, and his Friends that thought him, do Homage to the Devil; but, if he does not recover, all the Friends and Kindred of the sick Party, with as many Soldiers as they can get, surround the sick Person's House, and shoot off their Muskets three Times to drive the Devil away. If the sick Person be a Waterman, or other Person belonging to the Water, then he tells them it is the God of the Waters that is the Cause of the Distemper, and then he orders him to spread Carpets, and furnish Tables in Huts, with all sorts of Meat, on the Banks of the next River, to invite him to his Habitation.

If these Things fail, he sends him to *Tay-bow*, the chief Magician, to enquire if the Souls of the Dead have caused the Distemper, and if he answers Yes, then the Magician employs his Tricks to get the mischievous Soul into a Bottle, where he keeps it till the Party is cured. The Magicianess is called *Baceti*, she keeps a great Correspondence with the Devil, and to oblige him, offers her own Daughter, if she has one, as soon as she is born. Mothers who have lost their Children, and desire to know the Condition of the Soul, consult her, and thereupon she, by beating of a Drum, pretends to summon the Soul before her, and causes it to tell her the Condition of it. She generally tells them that the Soul is happy, and bids them be of good Cheer. They have innumerable Superstitions, but the most remarkable are these: The more Ruchous People foretel Things that are to come, by looking in a Mirrour. Others sprinkle the Ashes of their dead Ancestors with *Aqua Vite*, and beg of them Health, Honour, and Riches. Others, upon their New-Year's Day, make divers Figures upon the Steps and Thresholds of their Doors to drive away evil Spirits. Others, in travelling, if they freeze but once, will return back, and if they freeze twice, pursue their Journey without Fear of Danger. Some, if at going out of their Houses they meet a Woman, retire again for two or three Hours; but, if a Man, it is a good Omen. The first Fruit which they gather in the Beginning of the Year, is the *Araquer*, and then they position one, and give it to a Child, believing, that in taking away the Child's Life, they shall thrive the better all the Year after.

When the Moon is eclipsed, they try a certain Dragon endeavours to devour her, and, therefore, to assist the Moon, and put the Dragon to Flight, they discharge their Muskets, ring their Bells, beat all their Drums, and make a prodigious Noise till the Eclipse be over, and then they think they have rescued the Moon, and rejoice as much as if they had obtained a great Victory. They divide the natural Day into twelve Hours, and give them the Name of some Beast, as a Tyger, Lion, Bear, Horse, &c. and to the Months and Days have their particular Names. When a Child

Child is born, presently the Father and Kindred go to see the Name of the Beast by which the Hour was called when the Child was born, believing that Animal will prove fatal to it. The present King of *Tanquin* was born in the Hour of the Horie, and he would never give Audience, nor stir out of the House, for fear some Mischief should befall him at that Time. And the same Prince having a Child that died in the fifth Month, which is called by the Name of the Horie, would not suffer him to be buried, but caused him to be burnt, and scattered his Ashes in the Air.

Thus far our Author, whose consummate Knowledge of the Country, People, and Commerce of the *Indies*, enabled him to enter more thoroughly into these Points than it was in the Power of any other Writer to do. His Travels through *Persia*, his several Journeys by Land through the best Part of *Asia*, are no less excellent in themselves, but are reserved to furnish another Part of this Work.

But there remains however a Portion of his Labours, which indisputably claim our Notice here, inasmuch as they contain whatever is necessary towards understanding the Oeconomy of all the Nations that inhabit *India*, their Manner of Living among themselves, and, with respect to others, the Nature of their Manufactures, the Method of the carrying on domestick Commerce, and, above all, that Relation which the Trades of *India* have to each other; the Routes from their great Cities, the Nature of their Carriages and Caravans; and, in a Word, the Detail of that Industry, which, if I may be allowed the Expression, originally established, and has still preserved the Trade of the *Indies*. I know the Phrase is hard, but I know too that it is not in my Power to explain it better; for it is not the natural Wealth alone of these Countries that has rendered them famous, who have in all Ages attracted the Trade of the whole World to them, and thereby made the Commerce of the *Indies* the great Commerce of the Universe.

It is not, I say, the Wealth alone of these Countries, but the Industry, the Labour, and Address of the Inhabitants, by which we must understand the native Inhabitants, now called *Banjians*; for, as to the *Turks* and *Tartars*, they have been so far from contributing thereto, that, in fact, they seem to have made it their Business to oppress and cramp this Spirit, by their tyrannical Government. But, it seems, this Spirit of Industry has been too hard, even for their Cruelty, and still subsists to such a Degree, as to excite the Wonder of the best Judges, as well as in outdo every thing of the same kind in other Parts of the World, *China* only excepted. This will manifestly appear from the subsequent Section, from which we may sufficiently gather what a mighty Figure the *Indians* must have made in ancient Times, before the People were under the Oppression of a foreign Yoke, before their Spirits were broken by the Tyranny of their cruel Masters, and before their Manners were corrupted by the Slavery under which they groan at present.

It is from hence that we are able to distinguish how different a Figure they must have made in those early Times, when their Religion was pure, when their Government, the most exact, and best contrived that ever was established in any Country, was in its full Vigour; when their Laws had their free Courts, and the People were made happy, by a constant Obedience, to an excellent Constitution; when every Monarch considered himself as

the Father of his Subjects, and when Subjects obeyed as Children, from a perfect Sense of their own Happiness, flowing from this Obedience; when, in short, every Principality was no other than one large Family well regulated; and when even the minutest Matters fell under the Notice of the Laws, and under the Care of the Magistrates.

For if even now, when all these Advantages are lost, the Industry of the Inhabitants is so great, their Manufactures so many, and carried on with such Spirit and Diligence, their Trade so extensive and well managed, as not only to employ and enrich themselves, but to draw likewise the Attention of other Nations, and a Concourse of Merchants from the most distant Corners of the World, what must it have been in its former flourishing Condition? What must it have been in the Times before described, when they wrought for themselves, and when their Industry procured Happiness; whereas now it purchases a bare Subsistence? This will sufficiently demonstrate to the intelligent Reader, the Truth of an Observation we have so often made, that however Things may have gone in the rest of the World, and how much soever Man and may have improved elsewhere, they must have necessarily decayed here, and the modern *Indies* must, in the Nature of Things, fall as far short of the *Indies* in the ancient and primitive State, as from the vast Advantages which they enjoy above other Countries, they seem still to exceed the rest of the World.

We may from hence gather, what solid, what mighty Benefits are derived from a wise and well-settled Constitution, since even the Relicks and Remains of it are able to produce such mighty Effects, as we see amongst the *Indians*; and from thence we may be taught that all Dangers ought to be dared, all Hardships undergone, all Fatigues patiently endured to prevent the Ruin, and avert the Fall of such a Constitution. It is true, these Lessons may be learned nearer home, and there is no Necessity to travel to the *Indies*, in order to acquire this useful Knowledge; but, in the mean time, since we have a natural Propensity to travel, since Books of Voyages are so much read, and so justly esteemed, it is surely right to make them as useful as possible, by inculcating these Lessons, which ought to be perpetually in our Minds, because, on our Attention to them, depends our Freedom and Felicity. To what Ends do our Merchants visit the most distant Countries, expose themselves to such a Variety of Dangers, and cheerily undergo such innumerable Fatigues, but that they may bring back sufficient Wealth to live at home in Peace? And, if they act reasonably in this Way, why should we not read to the same Purpose? Why should we not gain, by Experience and Reflection, the true Principles of Patriotism, and a settled Resolution to profit by other Peoples Misfortunes, and avoid, by a timely Consideration of their Miseries, what must, some time or other, make their Case our own. We have, what the *Indians* once had, an excellent Constitution, equally capable of bestowing Freedom and Felicity: It is to this we owe whatever distinguishes us from other Nations, our Liberty, our Industry, our Manufactures at home, our Commerce abroad, and, in short, whatever can render Life desirable, or this World valuable. I cannot help thinking, therefore, that every Opportunity should be sought, or, at least, every Occasion taken for setting these important Points in their proper Light, and thereby recommending, in the strongest Manner possible, inviolable Duty to this our beneficent Constitution.

SECTION XXIX.

An Account of the different Routes to all the great Cities and chief Marts in the Indies, the Manner in which the Domestick Commerce of that Country is carried on, the State of its Manufactures, and other curious Particulars.

Taken from the Works of Mr. Tavernier.

1. The End and Design of this Section explained.
2. A Description of the City and Port of Surat, with a large Account of its Commerce.
3. That Subject continued and concluded.
4. Of the several Methods of travelling in the East-Indies, of Land-Carriage for Merchandize, and the Expences of both.
5. Of the Road from Surat to Agra, by the City of Brampour, with a Description of the last-mentioned City.
6. Of several remarkable Curiosities that lie in the Way.
7. Of the Road from Surat to Agra by Amadabat, and of what is worth Notice on that Road.
8. A compleat Description of Amadabat, and of the Trade carried on there.
9. Of the Road from Candahar to Agra, and of the Jew-Brokers in the Indies.
10. Of the City of Caboul, and the Trade of the Provinces depending thereupon.
11. Of the Royal City of Delhi, and of the Road from thence to Agra.
12. A Description of the last-mentioned City, and of the Trade carried on there.
13. Of the Road from thence to Malabas, once esteemed the Capital of India, including a Description of the River Ganges.
14. The Road from Malabas to Patna and Dacca in the Kingdom of Bengal, with a Description of these Cities.
15. Of the Passage from Surat to Goa, with some Remarks upon the last-mentioned City.
16. Of the noble City of Viliapour, and the Principality of which it was Capital.
17. A large Account of the Royal City of Bagnagar, and of the Country round it.
18. A particular History of the Kingdom of Golkonda.
19. The Road from thence to the Port of Malicapatan, now known by the Name of Fort St. George.
20. A Digression concerning Elephants, which contains many curious Circumstances.
21. A Description of the Kingdom of Carnate, and of the principal Places therein.
22. A Description of the Kingdom of Carnate, and of the principal Places therein.
23. Remarks upon the foregoing Section.

THERE is no Occasion for a long Introduction to this Section, the Subject of it has been already pointed out, and therefore it is only requisite to say, that the Design of the Author therein, was to explain the interior State of the Indies, to shew where Manufactures were settled, how carried on, and after what Manner the domestick and inland Commerce of this Country is managed. In treating of this Subject every Paragraph presents us with something new, and something useful. This Discourse transports us as it were into the very Country itself; and when we have read it, we can no longer consider ourselves as Strangers in the Indies. It would be very happy if we had as clear and as authentic Accounts of every Country in Europe, we should know much more of them than what we do now; we should enter into all the Particulars of their Constitution, and understand perfectly whatever Relations came from thence. It was for this Reason that I judged it proper, before I proceeded to the last Part of this Chapter, the History of the East India Companies, to close with this the Series of Voyages and Travels unto and through this Part of the World, and, it is hoped, this Method will be approved.

Notwithstanding the Indians stretch themselves beyond the Coast of Persia for the Space of above four hundred Leagues together, from the Ocean to Mount Caucasus, or Taurus, yet there are not so many Ways into the Indies out of Persia, as there are of travelling into and out of Turky, because that between Persia and the Indies are nothing but vast Sands and Deserts, where there is no Water to be found; so that you have but two Roads to chuse in going between *Isapahan* to *Agra*, the one by Land through *Candahar*, and the other partly by Land partly by Sea, taking Ships at *Bander Bahli*, or *Cambay*. Both these I have described as far as the Limits of Persia reach, and shall only add concerning this latter, that Sailing is not safe at all Times upon the Indian, as it is upon the European Coast; you must observe the proper Winds, which being past there is no venturing. The Months of *November*, *December*, *January*, *February*, and *March*, are the only Times in the Year to embark for Surat from *Ormuz*, but from *Surat* you must not stir until the end of *February*, for then the Western Winds that blow from *Ram Adig* with them into *India* begin to blow, blowing that four Months there flows a N. E. Wind,

which carries the Ships from *Surat* to *Ormuz* in fifteen or twenty Days; and this Wind veering a little to the North, serves also for those that are bound for *Surat*; but it takes them up thirty, or thirty-five Days for which they are made Amends in *March* and the Beginning of *April*, for then the Western Winds blowing full in their Stern, carry them thither in fourteen or fifteen Days.

The Vessels that sail to *Surat*, which is the only Port in the Empire of the Great Mogul, pass within Sight of *Diu*, and the Point of *St. Jelen*, and come to an Anchor in the Road of *Souali*, which is four Leagues from the Town, and two from the Mouth of the River called the *Bar of Surat*; for the greater Vessels cannot get into the River of *Surat* till they have unladen a great part of the Goods that choke it up; and the Wares so unladen are carried to the Town, either by Waggons or Boats, because the Customs were often stolen when the Ships unladen generally at *Sevali*; therefore there is now a Prohibition that none shall come to anchor there but the *English* and *Dutch* who, indeed, lay many Goods Custom free; yet it is made up by the Vessels that come to the *Bar* from *Persia*, *Arabs*, *Indes*, and all Parts of the *Indies*. When any Commodities are unladen at *Surat* you must carry them to the Custom-house, adjoining to the Fort, where the Merchants pay for all Sorts of Wares from 4 to 5 per Cent. unless it be the *English* and *Dutch*, who indeed pay less, but are forced to make it up in Presents to the Court and Deputations; and lest any valuable Goods should be concealed, they search every Person in the Ship exactly. Gold and Silver pays but two in the Hundred, and when it is brought into the Custom-house, the Master of the Mint comes and takes it, and coins it into the Money of the Country, which, though it be to the Loss of the Merchant, yet cannot be avoided as to the Silver; but the Merchants have many Ways to hide their Gold, that it seldom comes to the Knowledge of the Customers.

If they bring any Money ready coined out of other Countries, as *Pistols*, or *Abolis*, out of *Persia*, they are melted down and refined, to make *Rupies*, because the Silver-Money of the Great Mogul is more than any other. The Indian Money is the Silver *Rupie*, the best Quarter, the sixteenth, and sixteenth Part. The *Rupies* are as big as the *Pistols* of *Persia*, but much thicker; it passes commonly for thirty *Trench Sols*, or 12. 3d. Sterling. This Money is coined every Year, and the new ones destroy the

Year they are coined in, are valued at a *Pecha* more than those of the foregoing Year, because the Coiners pretend that the Silver wears daily. They have also another Silver Coin called *Mahmoudi*, which is ten, or about ten Sols and an half, or eight pence Halfpenny Sterling; but it goes no where but in *Surat*, and in the Province of *Guzerat*. *Abiss* brought out of *Persia* go also in the *Indies*, but for less than in their own Country, viz. at nineteen *Pechas* or sixteen *French Sols*, which is one Shilling and Two-pence. The *Pecha* (of which they have half, double, and four fold) is a Piece of Copper Money as big and thick as a *Rupce*, but in Value about half a *Sous*, or something less than half a Penny *English*. A *Rupce* is worth more or less of those *Pechas*, according as you are nearer or farther from the Copper Mines. At *Agia* and *Gebanabat* they are worth fifty-five or sixty five *Pechas*, and at *Surat* sometimes but forty-six, and sometimes fifty, because it is at a small Distance from the Copper Mines.

Instead of small Money, they use certain Shells, which they call *Ceris*, brought from the *Maldives*, of which they give fifty or more for a *Pecha*, or if they are near the Seashore, where they are brought in, sixty. In the Province of *Guzerat*, and the chief Cities whereof *Guzerat*, *Cambaya*, *Boutra*, and *Amudabat*, *Mahmoudis*, half *Mahmoudis*, and *Almonds*, are accounted current Money: A *Mahmoudi* is about nine Sols, three Deniers, or eight-pence *English* in Value. The *Almonds*, which they call *Baden*, are brought from *Orenaz*, and grow in the Deserts of the Kingdom of *Lar*. They give sixty-eight *Almonds* for a *Pecha*, and twenty *Pechas* for a *Mahmoudi*. There is no fear that the Children should crack these *Almonds*, and so destroy their Money, for they are as bitter as *Colloquintida*. Some Years the *Almond* trees do not bear, and then their Price is much raised; for then you will not have above forty or forty four for a *Pecha*. The *Rupce* of Gold is valued in the Country at fourteen *Rupces* of Silver, and the half and quarter *Rupce* proportionably. Great Sums of Money are reckoned by *Lacks*, *Crores*, or *Couvers*, *Padans*, and *Nils*: 100,000 *Rupces* make a *Lack*, 100,00 *Lacks* a *Courer*, 100,00 *Couvers* a *Padan*, 100,000 *Padans* a *Nil*. If you bring Gold into the *Indies* in Ingots, or *European* Ducats, you shall always have seven and an half Profit, if you can escape paying the Customs; but if you pay them, your Gain is lost.

3. The City of *Surat* lies in twenty-one Degrees and a few Minutes Northern Latitude, and is watered by the River *Tapti*. It is inhabited by three Nations, as they distinguish themselves, viz. *Meers*, under which Name they comprehend all *Mohammedans*, though they differ in their Opinions, being some *Sunnis*, and others *Chians*, viz. *Mohis*, *Persians*, *Arabians*, and *Turks*; 2. *Heathens*, who adore Idols, of whom there are several Sorts; 3. *Perses*, who are also called *Gauis*, or *Atsch-perses*, i. e. Adorers of the Fire, which was the Worship of the ancient *Persians*. These Men retreated into the *Indies* when the Khaliff *Omair* reduced the Kingdom of *Persia* under the Power of *Mohammedans*: Among these, indeed, there are some *Tranks*, and other *Christians*, but they are not accounted among the Inhabitants, because their Number is inconsiderable in Comparison of the other Parts. There are some Merchants in *Surat* vastly rich. One *Pergawia*, a *Banyan*, was reckoned worth at least eight Millions.

The City is not of an indifferently Bigness, and it is hard to know the Number of the Inhabitants, because the Sea-breezes are not unequal. There are a great many of the Yearly Fairs, but in the Time of the Moorfoo, i. e. the Indian New Year, viz. in *January*, *February*, and *March*, it is so full of People that Lodgings can hardly be had either in the City or the Suburbs. The Generality of the House is a sort of Reeds plastered over with Cow-dung, but that there is not above five or ten good Houses, of which the Chamberlains, or that of the Merchants, are two or three, the *English* and *Dutch* have a few of them, and the rest belong to the *Mohammedan* Merchants; but the *Tranks* are only allowed to hire Houses, lest they should have a City of their own, they do not build a House.

The *Capitall* has built them a very convenient Governour, according to the Model of the *Hollanders* *Liege*,

and a fair Church by it; but they purchased the Ground in the Name of one *Chelebie*, a *Maronite* Merchant of *Aleppo*. The Walls of the Town were formerly of Brick, and that very ruinous; but of late they have built them of Brick, a Fathom and an half thick, and fortified them better, to secure it from the Irruptions of the neighbouring *Rajahs*. The Castle is built upon the Side of the River, at the South End of the Town, and is so placed that you must pass by it at your entering into the Town, whether you go by Land or Water; it is a Fort of a regular Bigness, square, and flanked at each Corner with a large Tower. The Ditches on three Sides are filled with Sea-water, and the fourth is washed by the River. There are several Pieces of Cannon; but because there are no Platforms on each Wall, they are planted upon wooden scaffolds. The Governour of it can only command his Soldiers within the Fort; for he has no Power in the City, which has a distinct Governour, who receives the King's Customs, and his Revenues in his Provinces; but he sends them up in the Vessels till they are sent for by express Orders from Court.

The Streets of *Surat* are large and even, but not paved, and there is no considerable Building in it. The *Indians* and *Mohammedans* there commonly eat Cow Meat, not only because it is better, but because it is more plentiful than Ox Beef, their Oxen being almost all employed in Plowing and carrying Burthens. They have also plenty of good Store of Mutton, and Abundance of Pullets, Chickens, Pigeons, Pigs, and all Sorts of wild Fowl. They use two Sorts of Oil with their Food, viz. of *Crocus* and *Saffron*, or wild *Saffron*, and *Seffamum*. This last is very common, but the first much the best. They eat grapes from the Beginning of *February* to the End of *April*; but they have no good Taste, and the Wine made of them is sour. They have several Sorts of strong Waters, which they draw from *Jagery*, and the Bark of the Tree which is steeped in Water. They have two Sorts of Palm-trees, the one called *Cadigour*, and the other the *Coccol-tree*, *Rice*, and *Dates*; but they are not of them so good as *Brandy*. Their Vinegar is made of *Jagery*, and of the *Raisins*, and to their best they put in a little *Tan*, which is the Juice of the *Palm-tree* above-mentioned.

At *Surat* are sold all Sorts of Stuffs and Cottons that are made in the *Indies*: All the Commodities also of *India* and *China*, as *Porcelain*, *Cabinets*, and *Ceramics*, with *Tonquies*, *Agats*, *Cornelians*, *Ivory*, and other Embellishments. Here are also sold *Diamants*, *Rubies*, *Pearls*, and all other precious Stones which are found in the East; as also *Musk*, *Amber*, *Myrrh*, *Incense*, *Mastic*, *Sal Armoniac*, *Lack*, *Quicksilver*, *Indigo*, and other Drugs, which are produced in the *Indies* and the *East*, and are bought up by Foreign Merchants to transport to all Parts of the World. There are several sorts of *Chit* at *Surat*, viz. a *Muti*, who inspects and regulates the Affairs of Religion among the *Mohammedans*, and a *Chit* of all civil Matters, a *Vaca Nevis*, or Secretary, who keeps a Register of all that happens to his Highness, and gives the Great Mogul Notice of all Things that are of Importance, two Governours, or *Nababs*, who command one the City, the other the Castle, and have a Jurisdiction upon each other, nor increase of offices, or Offices of Duties.

The Governour of the Town judges in all Matters commonly renders speedy Justice, but he may be appealed to in all Causes, for they belong to an Officer of the same purpose, called *Cetana*, who is much to be feared in *Soudaish* in *Turky*, and *Doreg* in *Persia*. He is usually to be punished in his Pretences, by *Whipping*, *Imprisoning*, and this he does, either in his own House, or in the Street, near the Place where the *Palace* stands. When he goes abroad, he rides on *Horseback*, and is attended by Officers who attend him, carrying *Bacon*, *Meat*, *Bread*, *Wine*, *Tea*, *Coffee*, &c. before him, but neither of them is allowed to lay a Hand on him, or to put him to Death. The King receives the *Palace* from himself; and therefore when any Matter of Importance is dispatched to know his Pleasure, the Governour is not to put his Orders in Execution, till he has received the Return. prevent all Disorders, and if he finds any Man abroad at
 unseasonable Times, he commits him to Prison, and rarely
 dismisses him without being bastinadoed or whipped.
 This Officer is to answer for all the Robberies committed
 in the Town; but by their Cunning they usually evade
 it. When any one is robbed this Officer apprehends all
 the People of the House, both young and old, where the
 Robbery has been committed, and causes them to be beaten
 severely. They are stretched out upon their Bellies, and
 two Men lash the Patient with long Whips, till he has
 received two or three hundred Lashes, and is all in a Gore
 Blood. If at first he confesses not the Fact, they whip
 him the next Day, and so for several Days, till he confesses
 all, or the Thing stolen be recovered again; but he never
 touches the Houses or Goods of Robbers.

There is also a *Tearjedar*, or *Provost*, who is bound to
 secure the Country round about the Town, and to answer
 for all the Robberies committed there. The Burying places
 of *Surat* are without the Town, about forty-three Paces
 from the *Barack* Gate. The Catholics have theirs apart,
 and so have the *English* and *Dutch*, as well as some religious
Indians. The *English* and *Dutch* adorn their Graves with
 Pyramids of Brick, whitened over with Lime. The reli-
 gious *Gentiles* make their Tombs square, and of Plaster,
 covering some with a Dome, and others with a Pyramid, a
 little more than three Feet high. The *Bajjans* burn their
 dead Bodies by the River Side, and leave the Ashes there
 to be washed away by it, because they account it sacred.
 They believe that it contrIBUTES much to the Soul's Ease of
 the Deceased, to burn his Body immediately after his Death,
 because they say his Soul suffers after the Separation from
 the Body, unless it be burnt; but they burn not the Bodies
 of Children under two Years old, because they hold them
 innocent; nor of the *Varnis*, or *Jogies*, who are a kind
 of *Dervises*, because they follow the Right of *Madeo*, who
 is one of their great Saints, and who ordered their Bodies
 to be interred.

The Things most observable about *Surat* are a large
 Wall built by a *Banjan*, with divers thin Arches over it,
 to which they go down by certain Stairs; on the Outside
 is a Figure of a red Face, but the Features are not discerni-
 ble. The *Gentiles* say, it is the *Pagod* of *Madeo*, and pay
 great Devotion to it. Towards *Daman-Gate* begins the
 loveliest walk in all the Country, and by it is a great Reser-
 vatory of Water called the *Yank*. It has six Angles, and
 every one of them an hundred Paces long, and it is at least
 a Mullet-shot in Diameter. The Bottom is paved with
 white Free-stone, and there are Steps all round it in Form
 of an Amphitheatre, from the Brim to the Bottom, of
 lovely Free-stone, admirably wrought, brought from
Cambray. It was made at the Charge of a rich *Banjan*,
 whose Name was *Copy*, to catch the Run-water to supply
 the Town, and is certainly a Work worthy of a King, be-
 ing equal to the best of the *Roman* Squaredets made for
 publick Use.

About a Quarter of a League from the Reservoirary is the
 Prince's Garden, so called, because it belongs to the Great
 Mogul's Sister. It is a Large Plantation of Trees of several
 kinds, as Mangares, Pains, Mirobalans, Wares, Maha-
 trees, and many other Plants and Shrubs, some of them
 are set in a direct Line, and it is cut into many long and
 very large Walks. In the midst is a Building, with four
 Rooms, having each of them a *Divan*, and a square *Baton*
 full of Water before it, from whence run several little
 Brooks through the Walks, which make it delightful, but
 when about the Royal Gardens in *Europe*.

About a hundred and fifty Paces from the Garden is a
 Walk, or Tree, which the *Portuguese* call the Tree of
Rays; it is very large, and high, being eighty Paces in
 Diameter; the Branches which have taken Root are to
 be cut out, that one may walk every where under it.
 The *Indians* account it sacred, and the *Banjans* have
 painted Banners on the Top, and higher Branches of it;
 but is a *Pagod*, dedicated to an Idol called *Manneva*,
 which is thought to be *Ive*. The Soil about *Surat* is
 low, and so rich that they never dung it, but low their
 Cattle the Rains in *September*, and reap it in *February*.
 There are also Sugar-Canes, Rice, Mangroers, Palm trees,
 and many other Sorts of Trees, which yield great Profit.

They water their Gardens, but the great Dews yield suf-
 ficient Moisture for their Corn-Land. The River *Tapy*
 is always brackish at *Surat*, so that they use it only for
 washing their Bodies, which they do every Morning, from
 a Principle of Religion.

4. In travelling up and down *India*, there are divers
 Sorts of Carriages both for Merchandize and Travellers,
 and when you leave *Surat*, you must make use of these.
 For Goods, they make use of Oxen, Camels, or Waggon's,
 upon their Oxen they will lay three hundred or three hun-
 dred and fifty Pounds Weight; and it is no wonderful
 thing to see ten or twelve thousand Oxen at a time laden
 with Rice, Corn, and Salt, carrying the Rice to the
 Place where Corn grows, and Corn where the Rice is,
 and Salt to Places where there are none. Those numerous
 Caravans are very inconvenient to Travellers, because when
 they meet them they are forced to stay two or three
 Days till they pass by. This is the most speedy Carriage
 for Merchants Goods, and they commonly make use of it
 when they are in haste to ship them off at *Surat*. They
 that drive those Oxen follow no other Calling, nor have
 any Houses, but carry their Wives and Children along
 with them.

Some of them have an hundred Oxen of their own, and
 they have a Captain of the Caravan, who wears a Chain of
 Pearls about his Neck, and takes as much State upon him
 as a Prince. All that follow this Trade of Carrying, are
 divided into four Tribes, called *Manaris*, and consist each
 of them of an hundred thousand Souls. They live always in
 Tents, and are maintained by transporting of Merchandize
 from Country to Country. The first of them carries no-
 thing but Corn; the second Rice; the third Pulse; and
 the fourth Salt; and they are distinguished by certain
 Marks made by the Priests in the Face of every one of
 three of the Tribes, by a different-coloured Gum, and some
 Grains of the Thing they carry portrayed in it; the fourth
 carries a Bag of Salt about their Necks, of eight or ten
 Pounds, and with it they thump their Breasts every
 Morning before they say their Prayers, in token of Repent-
 ance. They love their Oxen and Cattle as tenderly as
 Children, especially if they have none.

Their Women wear only a Piece of Calicut painted, or
 white, five or six times double, from their Waist down-
 ward, and upwards they cut their Bodies into several Forms
 of Flowers, which they paint in various Colours with
 Grapes. They have Priests that go along with them, who
 every Morning sets up an Image of a Serpent in Wreaths
 upon a Pole six or seven Feet high, and when every one
 has paid his Adoration to it, their Women going three
 times about it, they load it upon an Ox appointed for that
 Purpose for carrying it, and accompany the Caravan; they
 use Camels sometimes, but very rarely, they being appoint-
 ed to carry the Luggage of great Persons. The Caravan,
 or Waggon, seldom exceeds two hundred, and is most
 commonly not above an hundred. Every Waggon is drawn
 by ten or twelve Oxen, and attended by four Soldiers,
 which the *Perion* that owns the Merchandize is obliged to
 pay; two of them march on each Side of the Waggon,
 over which there are two Ropes thrown across, the Ends
 whereof they hold in their Hands, that if the Waggon leans
 too much to either Side in the bad Way, those on the con-
 trary Side may keep it from overturning, by pulling the
 Ropes with all their Strength. The Manner of travelling
 in *India* is upon Oxen instead of Horses, so that if any
 Merchant carries an Horse out of *Perfia*, it is only for show,
 or to walk in his Hand, or to sell to some *Indian* Prince.
 Some of those Oxen will pace as fast as our Horses.

They manage them as Horses; but instead of a Bit,
 they have a Rope drawn through the middle part of the
 Nose, only that in riding them you must take care that the
 Horns be not above a Foot long; for if they be longer,
 when the Horses begin to fling, he will cast, and toss back
 his Horns, and sometimes stick them into the Stomach of
 his Rider. They never thore them out in rough Places,
 where the Stones and Heat are apt to wade and chop the
 Hoofs. They use also little Coaches for travelling, which
 will hold two Persons; but generally they ride but one in
 them, when they carry their necessary Cloak-Bag and Pro-
 visions, for which there is a proper Place under the Coach;
 they

they are drawn by two Oxen, and some of them are so strong, that they will travel upon the Trot twelve or fifteen Leagues a Day, for sixty Days together. When they have got half their Day's Journey, they give them two or three Balls, as big as one of our Twopenny Loaves, of Wheat Flour, kneaded up with Butter and black Sugar.

The Hire of one of these Coaches is a *Rupée* a Day, or a little more; for from *Surat* to *Agra* is forty Days Journey, and you pay for the whole not above forty-five *Rupes*. They, who have more to spend, may make use of a Palanquin for their Ease, wherein they travel very commodiously; it is a little Sort of a Coach, six or seven Feet long, and three broad, with Ballisters round about it. It has a kind of Covering over it, of Satin, or Cloth of Gold, and when the Sun lies upon either Side, there is a Slave goes by the Side to pull down the Covering, and another carries a Targot of Officers, covered with some genteel Stuff, to keep the Traveller from the Heat of the Sun. Three Men, for the most part, apply themselves to each of the Ends, to carry the Palanquin upon their Shoulders, and they go swifter than our Sedan-men, and with more Ease, because they practise it from their Youth: You give to every one four *Rupes* a Month, but if the Journey exceeds sixty Days they will have five.

Whether it be in a Coach, or a Palanquin, he that will travel honourably in the *Indies* must take along with him twenty or thirty armed Men, some with Bows and Arrows, others with Muskets, who have every one the same Pay as those that carry the Palanquin. Sometimes, for more Magnificence, they carry a Banner, as the *English* and *Hollanders* do, for the Honour of their Companies. These Soldiers watch and keep Centinel for your Defence, and are mighty careful to give Content, that they may deserve the good Word of the Chief of the Town where you take them; for he is responsible for their Fidelity, and has two *Rupes* apiece of them for his Recommendation. In the Villages where a *Mohammedan* commands, you may have Mutton, Pullets, or Pigeons; but where there are only *Banyans*, there is nothing to be had but Flour, Rice, Horses, and Milk Meats. In the *Indies*, where the Heats are excessive, it is more commodious to travel by Night than Day; and therefore, when you come into any fortified Town, you must be gone before the Sun be set, if you intend to travel the Night following; for the Rates being shut, the Commander of the Place is to answer for all the Robberies committed within his Jurisdiction, and will suffer you to go out, telling them it is the King's Order, to which he must be obedient. The Measure of Distances in *India* is by Coils, which is a League, and Cos, which is four of our common Leagues.

In traveling from *Surat* to *Agra* there are two Roads, one through *Brampour* and *Seconge*, and the other through *Amnatat*. In the first of these you go through *Barnoby*, a great Borough Town, where you ford a great River; this first Day's Journey lies through a Country somewhat woody, yet having many Fields of Rice and Wheat. From *Barnoby* you travel altogether through Woods to *Babor*, a large Village upon a Lake, about a League in Compass. Three Quarters of a League before you come at this Town you must ford a small River, but with great Difficulty, because it is full of Rocks and Stones, which are ready to overturn the Coach.

From *Babor* the next Stage is through a woody Country to the *Inn* near *Seconge*, because it was built by the Charity of *Bequm Saheb*, the Daughter of the Shah *Behan*, for the Ease of Travellers, who before were forced to travel to *Nasapoura*, which, besides that it was too great a Journey, being upon the Frontiers of those *Raja's* who often revolt from the Great Mogul, the Caravans were generally avoided. This Inn, or Caravanera, is large, and very commodious. In the Road from hence to *Nasapoura* you ford two Rivers.

Nasapoura was a great Town, full of Weavers; but Rice is the greatest Commodity there; for not only the River that runs through the Country makes it very fruitful in that Grain, which requires Moisture, but the Rice that grows there has a peculiar Excellency, for which it is much esteemed. It is, indeed, less by half than the Grain of the common Rice; but when it is boiled new, Snow is not

whiter, and it smells like Musk. This Property makes the *Indian* Graciles fond of it, that they will eat no other, and when they would make an acceptable Present to any one in *Persia*, they send them a Sack of this Rice. From *Nasapoura* you pass through *Nasfarbar*, *Delmedra*, and *Senquera*, to *Tollener*: Here you pass the River that runs through *Barock*, where it grows very large, and empties itself into the Gulph of *Cambaya*.

From *Tollener* your Way lies by *Choupre*, *Senqule*, and *Nabir*, to *Badelpoura*; here the loaded Waggons pay the Duties of *Brampour*, but the Waggons that carry nothing but Passengers pay nothing: And, when this is done, you go on to *Brampour*, which was a great City, but is now very much ruined, and most of the Houles are thatched with Straw. In the midst of it is the Castle, where the Governor lives. The Government of this Province is a very considerable Command, and is only conferred upon the King's Son or Uncle; but, since they have thus lost the Strength of the Province of *Bengal*, which was formerly a Kingdom, that Province is thought the most considerable in all the Mogul's Country at this Day. There is a great Trade in this City, as well as in the Provinces adjoining, in Calcuts, of which there are prodigious Quantities made here, clear and white, which are transported into *Persia*, *Turky*, *Muscovy*, *Poland*, *Armenia*, *Grand Cairo*, and other Places. Some of them are put up with Flowers of various Colours, and the Women use the Veils and Scarfs of them, and of some Coverlets to Beds, and Handkerchiefs. They make another Sort of Cotton, which they never dye, and hath a Stripe of Gold or Silver quite through the whole Piece, and at each End from the Breadth of one Inch to twelve or fifteen, being a Tissue of Gold, Silver, and Silk, intermixed with Linens; both Sides are alike. Some of these Linens are made on Purpose for Sashes, and are called *Cris*, and contain from fifteen to twenty Folds: Some are of two Sorts only, and serve the Ladies of Quality for Veils and Scarfs, and vast Quantities of these Goods are vendid in *India* and *Turky*. They make also other Sorts of Cotton Cloths at *Brampour*, because there is no other Province in the *Indies* which has greater Quantities of Cotton.

Leaving this City there is a small River, which is shallow, is forded, and, if swelled by the Rain, is not always Boats attending to take over Travellers; but when you come to *Perinbelera*, which is an Indian Word, and Hedges, in which are fifty or sixty Huts covered with Straw, where live certain Men and Women that sell Bread, Flour, Butter, and Herbs, and make the People buy the bake Bread, and boil Rice to sell to the Travellers; these Persons cleanse the Hut, take and put up a Bedstead, with Gortils to lay a Mattress of Cotton, which the Travellers usually carry about with them. This is signified by the Word *Sara*, which signifies to touch Places. If any Traveller have a Mind to buy a Piece of Mutton, any *Mohammedan* in the Place will go to the City and buy it for him. From hence you go forward through *Pander*, *Balkijera*, *Conjamba*, *Cherava*, *Cbarava*, and *Bishola* to *Andy*, where you ford a River that falls into the *Ganges*, between *Banazon* and *Andy*, and so take the Way by *Onguenas*, *Angery*, *Angery*, *Nevasera*, *Jebavour*, *Signor*, *Clekuseur*, *Tankur*, *Tankur*, *Teler*, and *Sankaira* to *Seconge*.

This City is large, and most of its Inhabitants are *Jan* Merchants and Handicrafts, the Trade of the Country is from Father to Son; and, for that Reason, there are many Houles of Stone and Brick. Here is also a great Trade for painted Calcuts, called *Chintes*, of which the making of all the meaner Sort of People in *Persia* and *Armenia* are made: And the time are used in other Countries for Coverlets for Beds and Table Napkins. The Calcuts of Calcuty are made in other Countries, but the Calcuts neither so lively nor lasting, but wear out with the washing; whereas those made at *Seconge*, grow the more you wash them. This arises from a peculiar Virtue of the River that runs by the City when the Rain is for the Workmen having made such Prints upon the Cottons as the foreign Merchants give them, they wash the Patterns, dip them into the River often, and then they fix the Colours that they will always hold.

also made at *Secong* a sort of Calicut, so fine, that when a Man puts it on, his Skin shall appear as plainly thro' it as if he was quit naked; but the Merchants are not permitted to transport it, for the Governor is obliged to send it all to the Great Mogul's Seraglio, and the principal Lords of the Court, to make the Sultaneſſes and Noblemens Wives Shifts and Garments for the hot Weather; and the King and the Lords take great Pleasure to behold them in these Shifts, and see them dance with nothing else upon them. From *Secong* you go to *Madalki-ſera*, and passing thro' *Paulki-ſera* and *Chaldalki-ſera*, you come to *Callabas*.

6. There is a great Town, which was the Residence of a Rajah formerly, who paid Tribute to the Mogul; but the late Emperor *Aurengzeb*, when he came to the Crown, not only cut off his Head, but the Heads of many of his Subjects, which he caused to be set up in so many Holes dug in the Ground, about the two Towers which stand upon the High-way near the Town. From hence the Way lies to *Ackmate*, and from thence to *Col'efar*, whose Inhabitants are all Idolaters. Without the Town, upon the High-way, grows a vast Number of great Trees, which they call *Mangues*, and in many Places near the Trees are many Pagods, with every one an Idol at the Door: They belong to the *Banjans*. From this Town you travel through *Sansell* and *Dengry to Gate*. This is a Strait Passage of a Quarter of a League long between the Mountains, and is unavoidable by all that come from the South, as *Surat*; *Goa*, *Vijapur*, *Colenda*, *Milipatan*, and other Places, to *Agra*; for there is no other Road but this. At the Entry of it are the Ruins of two or three old Castles, and the Passage is so narrow that two Waggons can hardly go a-breast: Formerly there was a Gate at each End of the Strait, and at the End, next *Agra*, there are five or six Shops of *Banjans* that sell Flour, Butter, Rice, Herbs, and Pulse. Not far from thence is a Magazine of Rice and Corn, kept by Serpents of thirteen or fourteen Feet long, and of a proportionable Bigness.

The People hereabouts get their Living by Passengers, from whom they extort as much as they can, for shewing them the Way, there being none but them that know it, because it lies through intricate Rocks, till they come at the River, which, being tormented, the Road leads to *Nadar*, which is a great City upon the Declent of a Mountain, upon whose Top there is a Fortrefs, and all the Mountain is encompassed with Walls. The great Part of the Houses, as in all other Cities of *India*, are thatched with Straw, one Story high; but the rich Mens Houses are two Stories high, and terraced. Round about the City are several Ponds to be seen, which were formerly encompassed with hewn Stone, but are now decayed for want of looking after; but there are still very fair Monuments about them. The River which you pass before you come at this City, encompasses the Mountain like a Peninsula, and after a long winding Course, falls into the *Ganges*. At *Nadar* are made a great Number of quilted Coats, some white, others embroidered with Flowers of Gold, Silk, and Satin. From *Nadar* you go to *Bargajera*, and so by *Trie* to *Ceualcor*. This is a great City, but ill built, as all the other *Indian* Cities are. It is built on the Side of a Mountain that lies on the West-side of it, and at the Top is encompassed with Walls and a Tower. In the Inclosure are several Ponds made by the Rains, with which they water their Grounds, sown with Rice, and to raise Corn enough to maintain their Garrison; and, upon that Account, it is esteemed the best in the *Indies*. Upon the Declent of this Hill, which looks towards the North-East, *Cha-Ieban* built an House of Pleasure, from which there is a delightful Prospect all over the City: It is to be contrived that it may serve for a Garrison. Beneath the House are to be seen several Idols, cut out of the Rocks, representing the Shapes of their Gods; and one of them is of an extraordinary Height.

The *Mohammedan* Princes make this Fortrefs of *Goualcor* a Prison for their great Princes and Noblemen that offend them. *Cha-Ieban*, who came to the Crown by foul Play, imprisoned all the Princes and Lords he suspected to be Male contents, in this Castle, but suffered them all to

enjoy their Estates. But *Aureng-Zeb* his Son takes contrary Measures; for when he imprisons any great Lords, he orders them to be poisoned within ten or twelve Days after; that he may be rid of his Enemies, and yet not be thought a cruel Prince for his bloody Executions. Leaving *Ceualcor*, you ford a River called *Lanke*, and come to *Paterki-ſera*, where passing over a Bridge, containing six wide Arches, and which carries you over the River *Quarinado*, you arrive at *Quarraqui-ſera*, and so to *Doipoura*, where there is a River called *Chamel-nadi*, to which there belongs a Ferry-boat. The River falls into the *Gemena*, between *Agra* and *Hallebas*. From hence you pass to *Minasqui-ſera*, where there is a River called *Jogounagi*, but you do not pass it till you come eight Leagues farther, and then there is a long Bridge built with Stone, called *Quaoulcapoul*. Not far from this Bridge they view the Merchants Goods, that when they come to *Agra* they may not be cheated of their Duties; and more particularly observe whether there be any Flasks of Wine among the Casks of pickled Fruits. From this Bridge you come to *Agra*, which, from *Surat*, is 339 Leagues, viz. from *Surat* to *Brampour* 132 Leagues, from thence to *Secong* 101 Leagues, and from thence to *Agra* 100 Leagues. In these two last Stages the Country is full of fine Fields of Corn and Rice, being a lovely Champain, where you meet with very little Wood, and the Villages so thick that you may rest when you please.

7. The other Road from *Surat* to *Agra*, through *Amanabad* lies, first, through a Country full of Corn, Rice, Millet, and Sugar-Canes; where, having ferried over the River which runs to *Cambaya* and falls into the Gulph, you come to *Baroche*, which is a great City, and has a Fortrefs belonging to it, but there is no Use made of it at present. This City is very famous for Trade, on account of the River, which has a peculiar Quality to whiten their Cottons, and which are therefore brought from all Parts of the Mogul's Territories (nether for that End; besides, here are made great Quantities of Baffia, or long and large Pieces of Cotton, very fine and close woven; the Price of them is from four to an hundred *Ruppes*. You must pay Custom at *Baroche* for all Goods carried in and out. The *English* President has a very fair House in this City.

In this City are a sort of Mountebanks, who do strange Tricks, viz. They will heat a Chain red-hot, and wind it about their naked Bodies several Times, and though they make as if they felt a great deal of Pain, yet, in truth, they receive no Harm at all: But, what is more miraculous, they will thrust a dry Stick into the Ground, and, in less than half an Hour's Time, make it a Tree of four or five Foot high, bearing Leaves and Flowers as in the Spring-time. An *English* Minister seeing this Witchcraft, declared it unlawful to be a Spectator of such Delusions, and protested he would not give the Communion to any that should hereafter do it. These Mountebanks wander up and down the Country to shew these Tricks, with their Wives and Children, and get a Livelihood by it.

Those who are curious to see *Cambaya*, leave the direct Road, which goes to *Broadra*, and pass through that City, which is not above four or five Leagues out of the Way, and is the later Road. *Cambaya* is a great City at the Bottom of the Gulph, on the South of it; it lies in the Province of *Guzerat*, and though it be not so popular as *Surat*, it is as big again. It has very fair Walls about it four Fathoms high, and Towers standing at a certain Distance. The Streets of it are large, and have all Gates at each End, which are shut every Night. The Houses are very high, and built of Bricks, dried in the Sun, and were once furnished very richly after the *Portuguese* Manner, but now many of them fall to Decay. It is to be seen that they shape thok fair Agates, that come from *India*, into Cups, Hats of Knives, Beads, and other Workmanship. These Agates are fetched out of a Quarry, by a Village called *Minodra*, four Leagues from *Cambaya*, in Pieces as big as a Man's Fist. The Shops here are stored with aromatick Perfumes, Spices, silken and other Stuffs. Most Part of the Inhabitants are *Banjans* and *Rajpents*. The Castle, where the Governor resides, is large, but not

very beautiful. There are so many Monkeys in the Town, that sometimes the Houses are covered with them, and they often do Mischief in the Streets, by throwing down such Things as they find upon the Roofs. The Outfides of the Town are beautified by a great many fair publick Gardens. Here is a marble Sepulchre, raised by a King of *Guzerate*, in Honour of a Governor of this City, but it is decayed: It contains three Courts, and in one of them are several Porphyry Pillars.

Anciently, in this City, there was an Hospital for sick Beasts, but there are only Ruins of it now. The Suburbs are almost as big as the Town, and in them they make Indigo of the same Nature as that of *Sarquesse*. It was famous for Traffick when the *Portugueze* flourished in *India*, but now the Trade is almost lost, because the Sea, that once came up so near the Town that little Vessels could anchor by it, is now become half a League distant from it, and near the Coast is so shallow, that great Ships can come no nearer than three or four Leagues. There are great Numbers of Peacocks in the *Indies*, especially in the Territories of *Barcelo*, *Cambaya*, and *Breada*; and in the Day-time they walk about the Fields, but at Night roost upon the Trees: The Flesh of the young ones is white, and well-tasted. In those Parts where the *Mohammedans* govern, you may catch them without Difficulty; but in those Places where there are idolatrous Rājās Masters, it is very dangerous to kill them, or any other Bird or Animal; for the *Banjans* count it Sacrilege, and will severely punish any they can seize: They whipped a *Persian* Merchant to Death, and took all his Money, to the Value of 30,000 Rupees, for shooting a Peacock.

From *Cambaya* you go through a little Village, where there is a Pagod, where the *Indian* Courtizans make their Offerings; and amongst divers naked Images, there is one that resembles *Apollo*, with his Privy-parts uncovered. The young Girls, who are trained up to this wicked Art by the old Courtizans, when they are eleven or twelve Years old, surrender themselves up to this Idol, believing that it will bring them good Fortune. And about six Leagues farther you come to *Chidabad*, which is one of the fairest Houses of the Great Mogul, being in a wide Inebdure, wherein he has vast Gardens and large Ponds, with all the Pleasures and Curiosities whereof the Genius of the *Indians* was capable. And from this Place you travel to *Amadabat*, to which City you come from *Breada* by *Neratie*.

Amadabat, which is probably the *Amadarijlo* of *Arrian*, is eighty-two Leagues from *Surat*, and lies in 23 Degrees and some Minutes of N. Lat. It is built in a lovely Plain, watered by a little River, called *Sabrametty*, which is not very deep, but swells prodigiously by the Rains. Without the Town are many large Gardens inclosed with Brick walls, and every one of them have a kind of Pavilion at the Entry: By them there is a Reservoir of Water, which has in the Middle of it a lovely Garden, eighty Paces square, into which one enters over a Bridge of four hundred Paces long; at the End of the Garden are pretty convenient Lodgings. Near these you see many Houses, which make a kind of large Village, and a great many Tombs, indifferently well built. From hence you pass through a Street, which leads you into the Town, which is inclosed with Stone and Brick walls, which, at certain Distances, are flanked with great round Towers and Butlements all over: It hath twelve Gates, and is about a League and an half in Length, if you take in the Suburbs.

All the Streets are wide, and the Meidan is four hundred Paces in Breadth, and seven hundred in Length, with Trees planted on all Sides. The Gate of the Castle is on the West side, and there are six or seven Pieces of Cannon mounted. In the Market-place are the Tribunals for the Civill, or criminal Judges; and in the Middle is a very high Tire, which has a Ball fixed to the Top of it, for those to hit who exercise themselves by shooting with Bows and Arrows. This Castle is walled about with good Walls of Free-Stone, and is as spacious as a little Town. Near the Meidan is a large Palace belonging to the King, which has over the Gate a large Balcony for the *Maharajahs*, who play there every six Hours. The Apart-

ments are adorned with Gold Paintings. The *English* Factory is in the Middle of the Town, is well furnished, and hath very fair Courts. Their Warehouses are commonly full of Cloths from *Labor* and *Deby*, with which they drive a great Trade.

But the Trade of the City is in Silk Stuffs, Hangings of Gold, Silver, and Silk, but with woollen Grounds, *Salt-petre*, Ginger candied and raw; *Lac*, *Cummin*, *Opium*, *Tamarinds*, *Mirabolans*, and flat *Indigo*: There are many Mosques great and small in it, but that which is called *Juma-mesjid*, or *Friday's* Mosque, because all the devout People of the Town flock together on that Day, is the chiefest and fairest. It hath a large square Cloister, two fine Gates, with high Steeples, from whence the *Muezzans*, or Beattles of the Mosques, call the People to Prayers. It hath several Domes, and two Minarets, and it is paved with Marble, so that all together it is a pleasant Sight. It is inhabited by many Heathens, as well as *Mohammedans*, who have their Pagods, or Idol Temples there.

The Pagod of *Santidas* was the chief before *Aurengzeb* converted it into a Mosque. It hath three Courts, paved with Marble, and encompassed with Galleries; and into the third none must enter, till they have pulled off their Shoes; the Inside is adorned with *Mosaic* Work, and Agates of divers Colours. In it are several Sepulchres of the ancient Idolatrous Kings, of *Mosick* Work, which look like little Chapels; but the Tomb of *Chastan*, whom the *Indians* report to have been a Magician, but the *Mohammedans* believe him to have been a great Saint, is most honoured, being daily visited by a great many out of Devotion. The *Banjans* have a great Veneration for Apes, and there are some that breed them up in their Pagods to worship, and if any one kill any of them, count him of it as a great Injustice. There are three or four Hospitals for Cows, Oxen, Camels, Apes, and Birds, and other sick and maimed Beasts, where they are looked after, and well fed. They buy them from *Christians* and *Mers*, to deliver them as they say from the Cruelty of Infidels, and if they are incurable, they keep them there as long as they live; but if they recover, they sell them to *Gentils*, and none else. This is also very remarkable, that every *Tuesday* and *Friday*, all the Apes in the Country adjoining come into the City, and lie upon the Tops of Houses, during the excessive Heats. Upon these Days the People never fail to set ready in their Terraces, Rice, Millet, Sugar canes, and such-like things; for if they do not find Provisions, they will break their Tiles, and do a great deal of Mischief.

About *Amadabat* are a great many Forests, where they catch Panthers, which they tame, and send to the King for his hunting. From hence you go to *Panar*, and thence by the *Mossana* to *Chitpour*, a very good Town, so called from a Sort of painted Calcutts, called *Chinzos*, made and sold here. They have an Art here of taming Lions, by tying them in a large Plain, and making them a Sport to the People. It reabouts it is common to meet the Companies of *Paquars*, or *Mohammedan* Dervises. They have a Superior, and some Assistants, who have some Cloaths better than the rest, viz. some Hills of Calcutt about their Middle, to cover their privy Parts, and a Tyger's Skin about their Shoulders; but the rest have only a Cord for their Girdle, and a little Bit of Calcutt fastened to it to cover their Privities. Their Hair is tied about their Head like a Turbant, and they are armed with Bows, Arrows, and Muskets, Half-pikes, &c. When they travel, they carry their Luggage, which is some Household stuff, and a pretty many *Arabian* and *Persian* Books on Oxen. When they come to any Place, the Superior sends some of his Crew a begging into the Towns and Villages, and what Alms they get is presently distributed equally among them, every one of them taking Care to buy his own Rice, and what is over and above, they give to the Poor in the Evening; for they relieve nothing for next Day. From *Chitpour* you pass through *Balampour*, and to through *Dantear* and *Burgant*.

This Town is in the Territories of a Rājā, to whom you must pay some Duties, and all the Way through these Countries is dangerous to be travelled, because the *Rajahs* live altogether upon Robberies, and therefore unless you

hire many People for a Guard, you will go near to have your Throat cut; for there is no Likelihood of escaping these Free-booters. From thence the Way lies through *Bimal* and *Modra* to *Chalacour*, an ancient Town upon a Mountain, encompassed with Walls, and very difficult to come to. There is a Lake upon the Top of the Mountain, and another below, and between them lies the Road to the Town. From *Chalacour* you pass on to *Cantap*, *Satlana*, *Palavafancy*, and *Pipas*, to *Dantiver*, from whence to *Mirda* is three Days Journey, being a mountainous Country, and belongs to Rajahs, or petty Princes, who pay Tribute to the Great Mogul; but in Recompence of it, the Great Mogul gives them Commands in his Army, which affords them large Appointments. *Mirda* is a great City, but ill built.

This City having offended the King's Sister *Begum*, the Wife of *Cha-Est-Kan*, in not waiting on her, and making her a Present on her Journey through that Place, when she went to marry her Daughter to Sultan *Sujab*, she let loose two hundred Elephants, who tore down their Trees, and did them incredible Mischief. From *Mirda* the Road lies through *Borendo*, *Cotcheil*, *Bandar*, *Sonery*, *Ladona*, *Chajou*, *Nouaii*, and *Hindoo*, to *Baniana*. These two last Towns are famous for Indigo Cake, which is round, and being the best of all the Indigos, is double the Price. *Vetrapour*, a Town famous for weaving Woollen Hangings, is the next Town, and from thence you go directly to *Agra*, to which from *Surat* is four hundred and fifteen Leagues, and thirty-three Days Journey, it they could be equally divided; but because you stay in some Places, it usually takes up thirty-five or forty Days.

From *Candabar* there are two Ways to *Agra*, either through *Caboul* or *Multan*; the latter is the shorter by ten Days Journey; but the Caravan never goes that Way, because it lies almost all through the Desarts, where there is no Water to be met with for three or four Days together, so that their most ordinary and beaten Road is through *Caloul*. Now from *Candabar* to *Caboul* is twenty-four Days Journey, and from thence to *Labor* twenty-two; from *Labor* to *Debby*, or *Gibanabat*, eighteen, and from thence to *Agra* six, which with the sixty Days Journey from *Ispahan* to *Errata*, and twenty from *Errata* to *Candabar*, makes in all from *Ispahan* to *Agra* one hundred and fifty Days Journey; but the Merchants that are in haste ride three or four in a Company upon Horses, and finish it in sixty or sixty-four Days at most.

Multan lies in 29° 40' North Latitude, and is the capital Town of the Province of the same Name, tho' some Geographers place it in the Province of *Sinde*. It hath many Towns dependant upon it, as *Cazdar*, or *Cordar*, *Candavil*, *Sandur*, and others. In this City are made a vast Quantity of Linnen Calicuts, for which heretofore there was a very great Trade, because it not being far from the River *Indus*, they could easily transport them to *Tata*, where the Merchants of several Countries bought them up; but because of late the Channel of the River is spoiled in some Places, and the Mouth is quite stopped up with Sands, they are forced to send all their Goods to *Agra*, and to *Surat*, which so increases the Price by the Carriage, that the Merchants do not care to deal in them; by which means the Trade is much lessened there, and the Workmen have deserted the City, so that the King's Revenues are much lessened in those Provinces: Yet there is a small Trade for Sugar, Opium, Hrimstone, Galls, and Camels, which are transported into *Perfia*, *Gazna*, *Candabar*, and the *Indies*, by *Labor*. It furnishes *Indofan* with the finest Bows that are to be seen in it; and here are bred the great Number of Dancers of both Sexes that spread themselves all over *Perfia*.

The Commander and Officers of this Town are *Mobamedans*, and consequently it may be supposed that most Parts of the Inhabitants are of the same Religion; yet there are a great many *Banyans*, who come to trade, and exercise their Arts, and Brokage, and Utury, in which they much outdo the *Jews*; for they are so watchful and cunning, that no Opportunity of Gain slips them; and they have to wound themselves in all Business, that hardly any body can be without them. They take Commissions of all Kinds, and though it be known that they make a Profit of every

thing, yet the Merchants chuse to make use of them, rather than do their Business themselves; for they will buy cheaper and better than any Man can for himself. They are of a pleasant Humour, and refuse no Service, whether honourable or base, and are always ready to satisfy those that employ them; and therefore every one has his *Banyan* in the *Indies*, and some Persons of Quality intrust them with all they have, though they are no ignorant of their Hypocrisy and Avarice. The richest Merchants of the *Indies* are of this Clais or Tribe. They are commonly very jealous of their Wives, who are fairer than the Men, though of a brown Complexion, and love to paint. They have a particular Law amongst them, which permits them to eat Fowl upon certain Days of the Year, and to have one Wife among two or three Brothers, and the eldest of them is accounted the Father of the Children begotten among them.

9. From *Candabar* you travel to *Charisafar*, and then through *Zealate*, *Retzay*, *Mezzur*, and *Garabat*, to *Chakencouze*, which is a frontier Town of the *Indies*, and the Country about it under the Command of several Princes that acknowledge the *Perfian* Emperor. From this City to *Caboul* is forty Leagues, and in the whole Journey there is but three pitiful Villages, where you can rarely get Bread and Barley for your Horses, and therefore you must carry Provisions for yourself.

In the Months of *July* and *August* there blows an hot Wind in these Parts, that takes away a Man's Breath, and kills him upon the Place. It is the same with that which blows about *Babylon* and *Moufful* at certain Seasons. In this Road dwells a certain People called *Augans*, towards the Mountains of *Balob*; they are a sturdy sort of People, and great Robbers in the Night-time. These People, as the rest of the *Indians*, have a Custom to cleanse and scrape their Tongues every Morning with a crooked Piece of a Root, which causes them to void a great Quantity of Phlegm and Rheum, but not to vomit, as it doth the other *Indians*; nevertheless, when they come to eat, as soon as they have swallowed two or three Bits, their Lungs begin to swell, and they are constrained to go forth and vomit; after which they return again to their Victuals with a very good Appetit; should they not do so, they would not live above thirty Years, and besides would be troubled with a Dropsy.

Caboul is a large City, the Metropolis of the Province of *Caboulijtan*, or *Caboul*, and hath two Castles well fortified; and because several Kings have held their Courts there, and many Princes have had it successively for their Portion, there are a great many Palaces in it. It lies in 33° of North Latitude, the Mountains about it produce Plenty of Mirabolans, which from thence the Eastern People called *Cabouy*, several Sorts of Drugs, and some Spices, with which the Iron Mines in them yield a great Profit to the Inhabitants. In this Town they maintain a great Trade with *Tartary*, the Country of the *Ujbecks*, and the *Indies*. The *Ujbecks* alone sell yearly in this Town above sixty thousand Horses, and the *Perfians* bring hither great Numbers of Sheep, and other Cattle, by which means they are much enriched. Wine is to be had, and Provisions are cheap, though the Country about it is but cold and barren, unless in some Places, which are sheltered by the Mountains, being rendered a little more fruitful, by the two Rivers that water it, and which have their Source in the Mountains.

From this Province especially come the large Canes, of which they make Halberds and Lances, and they have many Grounds planted with them. The Inhabitants of the City and Province are most of them Heathens, and therefore in all Towns and Villages are many Pagods. They reckon the Months by the Moons, and with great Devotion celebrate the Feast called *Houly*, which lasts two Days, at the full Moon in *February*. At this Feast, they are all clothed in a dark red, and after they have prayed in the Temple, and made Oblations, they spend the rest of the Time in Dancing, by Companies, in the Streets, to the Sound of Trumpets, visiting their Friends, and eating together, every Tribe by itself. The Great Mogul's Revenue from this Country is four or five Millions yearly.

From

From *Caboul* the Road lies through *Bariabe*, *Nimela*, *Aibrua*, *Taka*, *Kiamri*, *Chsour*, and *Nozechaar*, to *Ateck*, a City situate upon a Point of Land, where two Rivers meet together. It is one of the best and strongest Garrisons the Great Mogul has, and no stranger is permitted to enter into it without a Passport from the King. From hence you pass to *Calapane*, and so to *Reupate*, *Toulapcca*, *Keralay*, *Zerabad*, and *Imabad*, to *Labor*. This City is the Metropolis of a Kingdom, built upon the River *Rava*, which is one of the Five Rivers, which descending from the Mountains, swell the River *Indus*, and give the Name of *Peniab*, or *Five Rivers*, to all the Region they run through.

It lies in 31° 50', the River having a very flat Channel, is fallen off from the Town above a League, and being subject to overflow, does a great deal of Mischief in the Country. The City is large, and extends itself above a League in Length. It was a very pretty Place when the Kings kept their Courts there, having many Mosques, publick Baths, Caravanferas's, Squares, Tanques, Palaces and Gardens; but all these, with the greatest Part of the Houses, are fallen to Ruin, by reason of the excessive Rains, which have washed down many of them. The Castle remains still, for it is strongly built. It hath twelve Gates, three towards the City, and nine towards the Country, and the Palace which is within it has not yet lost its Beauty. There are a great many Pictures upon the Walls, representing the Actions of the Great Mogul, and his Forefathers, all promiseously painted; and on one Gate is the Picture of a Crocifix, and on another the Virgin *Mary*, not out of any Kindness to the Christian Religion, but to flatter the *Portuguese*.

The Inhabitants are most of them *Gentiles*, and so there are many Pagods in the Town, of which some are adorned well, and all are raised even or eight Steps from the Ground. The Province about it is one of the largest and most plentiful in the *Indies*, the Rivers that run through it rendering it most fertile in Rice, Corn, and Fruits. The Wine also is pretty good, and the Sugars the best of all *Indian*. All sorts of painted Cloths, and other *Indian* Manufactures, are wrought here, and it is said that this Province yields the Mogul a Revenue of thirty-seven Millions yearly, which is a Proof of its great Trade and Fruitfulness. From *Labor* to *Agra* there is one continued Walk of Trees, called *Achy* Trees, which have long and thick Branches, which cover the whole Way, though these Cities be one hundred and fifty Leagues distant one from the other. It was planted by King *Gebanguss*, but is not kept up.

At *Tanajoor*, a Town in this Province, is a Convent of *Gentiles*, who are called *Nartias*; they have a General, Provincial, and other Superiors, and say, that it is above two thousand Years since they were founded; they vow Obedience, Chastity, and Poverty. They obey the least Signal of their Superiors, and will not look a Maid or Woman in the Face. They live on Alms, which is begged for them every Day at the Houses of the *Gentiles* of their Tribes, and will leave nothing till the Morrow. They make but one Meal a Day, and that is about Noon; and though they are never to thirst or hungry, must not eat nor drink till the same time the next Day.

They wear nothing on their Bodies, but a Cloth to cover their privy Parts, which they bring up over their Heads, like a Woman's Coat. The main Point of their Institution is, not to do to others what they would not have others to do to them; and they observe it even to the Beasts, which they will never kill. If any body beat them, they do not resist, and if they are reviled, they make no Answer. They employ themselves wholly in Prayers, and Reading; but conclude the Day with the Sun-set; for they never light a Candle. If any break their Orders, he is severely punished; and if they break their Vow of Chastity, they are expelled. They have above ten thousand Monasteries in the *Indies*. Some of them think it sufficient to worship God in Spirit, and have no Idols, or Pagods. There are also religious Nuns of the same Order, who live very exemplary.

10. From *Labor* the Way lies by *Menat-kan*, *Tatyabad*, *Sera-dukan*, *Sera-balour*, *Sera-dowrai*, *Serinde*, *Sera-Mogul*, *Sera-Clabas*, *Duauriel*, *Sera-Crindul*, and *Guema-*

our, to *Debly*, or *Gebanabad*. This City is a large Place, and stands near the River *Gemma*, which runs on both Sides of it, and after it has passed *Agra* and *Kadiene*, empties itself into the *Ganges*. It is divided into three Parts or Towns. The first is almost intirely destroyed. The *Indians* say it is very ancient, and that it was the capital City of the States of King *Porus*, who opposed *Alexander the Great*. The *Indians* say it had fifty-two Gates, and there are still remaining a long Stone Bridge, and a Way, with lovely Trees leading to the second Town, by the Sepulchre of *Cha-Humayen*. The second Town was at the Conquest of it beautified with many lately Sepulchres of the *Patan* Kings, and other Monuments, which rendered it a very lovely Place; but *Cha-Jehan*, the Father of *Aurengzeb* the present King demolished it, and left nothing but a Pyramid, or Obelisk of Stone, which, by its unknown Characters, shews a great Antiquity.

The third Town is joined to the Ruins of the second, and was built by *Cha-Jehan* out of the Ruins of it, and from him it had its Name of *Gebanabad*. This City lies in an open Champain, upon the Bank of the River *Gemma*, and is encompassed with a single Wall. All the Houses even of private Men consist of great Inclosures, in the midst of which is a Place for Lodgings. The greatest Part of the Lords have their Houses without the City, for the Convenience of Water; for the King chooseth to keep his Court here rather than at *Agra*, for the same Convenience. As you enter into *Gebanabad* from *Debly*, you come into a long and broad Street, which has Vaults on each Side, where the Merchants keep their Shops. This Street ends in the great Piazza, where the King's Palace stands. There is another Street which leads up to the King's Palace, where the Merchants live, who keep no Shops. The Fortrefs of it is half a League in Circuit, and has good Walls, with round Towers in them, and Ditches about them full of Water. The King's Palace, where are all the Emblems of Royalty, is in this Fort. There is a Place by the Water-side for the fighting of Elephants, and other Exercises. The King's Palace is encompassed with Walls of fair red-cut Stone, with Battlements.

The Gate and first Court have nothing of Magnificence, for the great Lords may enter into with their Elephants. Out of this Court you go through a long and large Passage, with fair Portico's on both Sides, into a great Court, where the Omrahs, i. e. the great Lords of the Kingdom, keep Guard in Person, having their Lodgings round about the Court, and their Horses tied at the Doors. From the second Court you pass into a third, through a great Piazza, where on the one Side is the Mogul's Wardrobe, out of which he bestows the Calaat, or whole Habit of a Man, which he gives to any Stranger, or Subject, in Honor to them. The next is the Place where the Drums, Trumpets, and Hautboys are laid, which are founded when the King goes upon the Judgment Seat, and right forward into the Divan, where the King gives Audience and Sentence. In the Middle of the Hall is the Throne, where the King sits, erected upon a Kind of Theatre. It has a little Bed, with four Columns, a Canopy, Back-piece, Bolster, and Counterpoint, all embroidered with Diamonds, and covered with a Cloth of Gold when the King sits on it. Below the Throne is a Place twenty-four Foot square, encompassed with Balusters, sometimes of Silver, and at other Times Gold Plates. At the four Corners of it sit the four Secretaries of State, who are the only Advocates in all Causes.

Many Lords stand by the Balustrade, and some of the greatest, with his Children, stand by the Throne. While the King is on his Throne, none may stir out of the Palace, nor any that have Business come nearer than the Channel in the Middle of the Court, till they are called, and not Embassadors themselves. From the Divan the King passes over a Terrace, where the River is to be seen, into the *Ilaram*. Upon the left Hand of the Court stands a fine Mosque newly built, with a Cupola covered with Lead perfectly gilt. Either the King goes every Day to hear Prayers, except *Fridays*, when he goes to the great Mosque, which is a very fair one, and raised above the Houses of the City. On the right Side of the Court are the King's Stables, which are full of stately Horses, the worst of which stands the King in three thousand Crowns, and some of

This City is a large Place, which runs on both Sides *Agra* and *Kadiens*, empties divided into three Parts or entirely destroyed. The *Indians* that it was the capital *Porus*, who opposed *Alexis* had fifty-two Gates, a long Stone Bridge, and ending to the second Town *mayen*. The second Town beautified with many stately *Palaces*, and other Monuments, *Palace*; but *Cha-Jehan*, the King demolished it, and for Obelisk of Stone, which, news a great Antiquity. to the Ruins of the second, to the Ruins of it, and from *abad*. This City lies in an ank of the River *Genna*, and Wall. All the Houses even of Inclosures, in the midst of s. The greatest Part of the out the City, for the Conve- chuteth to keep his Court the same Convenience. As om *Debby*, you come into ach has Vaults on each Side, near Shops. This Street ends King's Palace: there is up to the King's Palace, who keep no Shops. The ue in Circuit, and has good s in them, and Dishes about King's Palace, where are all the s his Fort. There is a Place by ting of Elephants, and other ace is encompassed with Walls Battlements. have nothing of Magnificence, enter into with their Elephants ough a long and large Passage. Sides, into a great Court, where Lords of the Kingdom, keep their Lodgings round about the ried at the Doors. From a third, through a great Gate, the Mogul's Wardrobe, and of at, or whole Habit of a Man, ger, or Subject, in Honour to e where the Drums, Trumpets, ch are founded when the King seat, and right forward is the es Audience and Sentence. In the Throne, where the King sits, eatre. It has a little Bed, with Back-piece, Bolster, and Cush- ith Diamonds, and covered with e King sits on it. Below the four Foot square, encompassed of Silver, and at other Times Corners of it fit the four secret only Advocates in all Causes, the Balustrade, and some of the stand by the Throne. While none may stir out of the Pa- Business come nearer than the Court, till they are called, es. From the *Divan* the King e the River is to be seen, into the and of the Court stands a Cupola covered with Lead, the King goes every Day to see when he goes to the great Mosque, and tailed above the House. Side of the Court are the King's stately Houses, the worst of which thousand Crowns, and some of

an thousand. On the River the King has several small Brigantines to take his Pleasure in.

From *Debby* you travel to *Badelpoura*, and so by *Pelcelki-fera* and *Catki-fura*, where is one of the greatest Pagods of the *Indians*, together with an Hospital for Apes, as well for those that are bred thereabout, as for those that come from the neighbouring Parts, which the *Banjans* are very careful to feed. The Pagod is called *Matura*. It was formerly in greater Veneration than now it is, and the Reason is this, because the River washing the Walls thereof, was convenient for the washing the *Banjans* before they went to their Devotions; but since the River has left it above a League, many have deserted; but still it wants not some Resort of the *Indians*, who always bring with them some Food for the Apes.

12. Between this Place and *Goodisera* is but five Leagues, and then you come to *Agra*. This City lies in 27° 31' of Latitude, and in a sandy Soil, which causes extreme Heat. It is the biggest City in *India*, and was formerly the Residence of their Kings, till *Cha-Jehan* fearing the great Heats, usually sought a more temperate Air, and so removed to *Geban-abad*. The Houses of great Persons are large, and well built; but the Houses of the meaner sort are as plain as in other Parts of *India*, being low and thatched. It is not very populous, unless it be when the Court is there; but at that Time it is thronged, the King being attended with an Army for his Guards, and a great Number of *Rajahs*, *Omrabs*, *Maulapdars*, and other Nobles, with their Retinues, besides Merchants and Tradesmen that follow the Court for Trade. The People are most of them *Mohammedans*, and these have all the Power in their Hands, though there are a considerable Number of *Christians*, some few *Hindus* and *Parsees*.

The *Dutch* have a Factory here, but the *English* have left theirs, because it did not turn to Account. The most remarkable Things in *Agra* are the King's Palace, and some Monuments near and about the City. The King's Palace is in the Castle, which is begirt with a Wall of Stone and Brick, terrassed in several Places, which is twenty Cubits high. Between the Castle and the River is a large Place left on purpose for the fighting of Elephants for the King's Diversion. It is near the Water, to allay the Fury of the conquering Elephant, who presently comes to his Temper, like a bull or three Feet deep in the Water. Before the Place is a wide Piazza, it contains three Courts, adorned with Porches and Galleries, that are painted and gilt; nay, some Things are covered with Plates of Gold. Under the Galleries of the first Court are the Lodgings for the King's Guards; in the second is the Officers' Lodgings; and in the third stately Apartments for the King and his Ladies: Out of these the King goes commonly to a lovely *Divan*, which looks to the River, to please himself in seeing Elephants fight. His Troops exercise and play upon the Water, or in the open Place. By this Palace stand twenty-five or thirty very large ones, in a direct Line, which belong to the Princes, and other great Lords of the Court, and all together afford a most delightful Prospect to those who are on the other Side of the River. Besides these Palaces, the Beauty of *Agra* consists in the *Caravaneras*, which are about sixty in Number, and of some of them have six large Courts, with their Portico's which lead to very commodious Apartments, where the Merchants Strangers have their Lodgings.

There are above eight hundred Baths in the Town, and a great Number of Mosques, some of which are Sanctuaries. There are many magnificent and stately Monuments near about *Agra* for several great Men, and especially the rich Eunuuchs, belonging to the King's Harem, are ambitious to build their own in their Life-time, and to erect Monuments to the Memories of their Forefathers; and as the Great Mogul encourages them in, that he may keep his Money in his own Kingdom, and divert them from going to *Mecca*, whether their blind Devotions often leads them to spend it. The two most eminent Monuments are that which King *Gebangur* caused to be built for *Ishar* his Father upon an Eminence in the Town. It surpasses the Magnificence of all those of the Grand Signors; but the fairest of all is that which *Cha-Jehan* erected in Honour of one of his Wives called *Zage-Mebal*, whom

he tenderly loved, and whose Death had almost cost him his Life. It was built by the most able Architects of the *Indes*, whom the King called together in a Council to contrive it, and having built stately Galleries upon them, ordered them to spare no Cost to make it the finest Mausoleum in the World, if they could.

The *Indians* say it was twenty Years in building, that twenty thousand Men were always employed about it, and it was finished at length to Satisfaction. It stands on the East Side of the City, by the River Side. It is a kind of a Garden, with Compartments, like our Garden Plots; but the Walks, instead of Gravel, are black and white Marble: You enter into it through a large Portal, and on the left Hand is a fair Gallery, which looks towards *Mecca*, and in which are three or four Niches, wherein the *Mufts* comes at certain Hours to pray. About the Middle of the Garden are three great Platforms, one raised above another, with four Towers at the Corners of each. On the Top is a Cupola covered with and without with black Marble; under it is an empty Tomb (for the Sultan is buried under the lowest Platform) adorned with Tapestries, Candles, and other Ornaments, where there are always *Moullahs* attending to pray. The Sepulchres of the Eunuuchs have only one Platform, with four little Chambers at the four Corners.

The *Indians* are pretty uniform in their Apparel, only the *Mohammedans* and the *Moors* distinguish themselves by a particular kind of Coat, or Head Attire; but in all things else they are clothed as the rest. Their Breeches are commonly of Cotton Cloth, and sometimes of Silk, and come down to the Leg or Ankle. Their Shirts hang over their Breeches, as the Fashion is all over the *Levant*, and open before. In cold Weather they wear over their Shirts an Arcaick, or Waistcoat, of painted Stuff, quilted with Cotton, and pinked; and over that a Caba of white Cotton Cloth, for Lightness and Neateness; but if it be hot, they lay aside their Arcaick. They use but one Girdle, and that is of white Cotton Cloth. None use the lovely Girdles of *Perfia* but the most wealthy Persons of Quality; in cold Weather they wear a Vest called *Cadeby*, lined with Sables. At all times, when they go abroad, they wear a Chal, which is like a Scarf, of several Colours. Their Turban is commonly little, and the *Mohammedans* wear it always white. The Rich have them of soft Cloth, that twenty-five or thirty Ells of it, put into a Turban, will not weigh four Ounces. They are made at *Bengal*, and are dear. They wear their Hair for Ornament, contrary to other *Mohammedans*, who all have their Hair's. They use no Stockings, and on their naked Feet Slippers, which are of *Morocco*, or *Turkey* Leather; only the *Langurs* wear Heels to their Shoes, that they may stir more freely about their Business.

The rich *Banjans* cover theirs with Velvet, embroidered with Silk Flowers; but the Poor are satisfied with red Leather. The *Mogul* Women are clothed almost like the Men, but the Sleeves of their Smocks reach no lower than the Elbow, that they may have Room to adorn their Arms with Catkanets, and Bracelets of Gold, Silver, and Ivory, or set with precious Stones, as they do also the Small of their Legs. The Smocks of the *Indian* *Mohorous* Women reach down only to the Middle, as doth the Waistcoat of Sam, or Cloth, which they wear over it, because from the Waist downward they wrap themselves up in a Piece of Cloth, or Stuff, that covers them to the Feet like a Petticoat: For Shoes they have high Pattens; they wear little flat Rings of Gold or silver in their Ears, with Filagree upon them, and adorn their Noes with Rings put through their Nostrils. They wear also Rings on their Fingers for Ornaments, and have generally one with a Looking-glass set in it an Inch Diameter, to see themselves. If the *Indian* Women are Idolaters, they go bare-faced; if *Mohammedans*, they are veiled.

In some Countries both Men and Women go naked to the Waist, and cover themselves from thence to the Heels. At *Agra* they are curious in breeding up Beasts to fight for Pleasure, viz. He-goats, Weathers, Rams, Cocks, Quails, Stags, and Antilopes; for such as cannot reach Lions and Elephants, are dextrous Fowls and Hunters. Fishes also in this City are drawn with Air; but being for the

most part lascivious, are rarely bought up by *Europeans*. They have a Way in this Town of working in Gold, upon Agate, Crystal, and other base Metals, which our Goldsmiths and Lapidaries have not.

13. In your Journey from *Agra* to *Bengal* you come first to *Beruzabad*, then to *Serail Humal* and *Serail-Sokan-ârti*: to *Sauqual*: A League from thence you pass over the River *Sangur* upon a Stone Bridge, where those that are passing from *Bengal* to *Sarat* may leave the Road to *Agra*, and ferrying over the *Gemna*, shorten their Journey ten Days: But, since some of that Way is very stony, Travellers generally chuse to go by the Way of *Agra*. From this Bridge you go on by the *Cheourabad* and the Town *Serail Chagnada*, and *Serail* leaning to *Auren-abad*. This is a great Town, and the Capital of a Province, but it has no Walls. The Governor, who is a Prince, has his Residence there; and *Aureng-Zeb* commanded there, as he did at *Candiah* in the Reign of his Father: His first Wife, whom he loved dearly, died in this Town, and as a Monument to her, he erected a lovely Mosque, covered with a Dome, and beautified it with four Minarets, or Steeples. It is built of white polished Stone, which looks almost like Marble.

It hath several pretty Mosques, Inns, and Baths. The Buildings are, for the most part, of Free-Stone, and pretty high: Before the Doors grow a great many Trees in the Streets, and the Gardens are well cultivated and pleasant, affording the Refreshments of the Fruits, Grapes, and Grafs-plats. They have Sheep without Horns, that are so strong, that being bridled and saddled, they will carry Children of ten or twelve Years of Age. It is a good trading Town, and well peopled, with excellent Ground about it. It took its Name, by which it is now called, from the present Monarch *Aureng Zeb*, who overcame Sultan *Sajah*, his Brother, who was Governor of all the Provinces of *Bengal*, in that Place. From thence you pass to *Amaban*, and two Leagues farther pass the *Ganges*, which, though famous in History, is so shallow from *March* to *June* or *July*, when the Rains fall, that it will not bear a Boat.

The Water being drank causeth the Gripes, and therefore the *Hollanders* that live upon the Banks of it, never drink thereof till they have boiled it; but the Natives are so accustomed to it, that the King and Court drink no other, because they account it lighter than any other Water. The Heathen *Indians* account the Water of this River to be sacred, and have many Pagods by it, the fairest in the *Indies*; so that it may be said, that here Idolatry is most triumphant. The two chief Pagods are at the Towns of *Jagarnat* and *Benerou*: Nothing can be more magnificent than they are, by reason of the great Quantity of Gold and many Jewels with which they are adorned. In these Pagods they keep their Festivals many Days together, and many People repair thither from all Parts of the *Indies*, where they carry their Idols in Triumph, and act all Manner of Superstitions by the Encouragement of the *Bramins*, who are numerous thereabouts, and draw much Profit by it. The *Ganges* is full of pleasant Islands, covered with lovely Trees, so that it is most delicious Sailing upon it. In these Islands and some other Places of *Bengal* is a Bird called *Meina*, whose Colour is like a Black-bird, but as big as a Raven, it will speak like a Starling, and imitates the Neighing of a Horse exactly. This River has received an infinite Number of Brooks and Rivers from the N. E. and W. into it, and discharges itself by several Mouths into the Gulph of *Bengal*, which is eight hundred Miles over, and reaches from the 15 to the 22° of Latitude.

14. Having passed the *Ganges*, you arrive at *Hallabas*, a great City, built upon the Point of Land where the *Ganges* and *Gemna* meet, it is the chief Town of a Province that bears the same Name. It was, for a long Time, one of the Bulwarks of the Kingdom of *Patans*, and is the same Town which *Pliny* calls *Chrysobara*. It was subdued to the Kingdom of the Mogul by King *Eibar*, who built a strong Citadel in it strengthened with three Walls, of which the outermost is of a very hard red Stone. It is adorned with a very ancient Obelisk, above sixty Feet high, that has many Inscriptions, but the Letters are not

legible. The Mogul has a fair Palace here, and under it are certain arched Places where the Pagods of *Adam* and *Eve* are kept, whose Religion they pretend to follow. Hither, at certain Times, come an incredible Number of Pilgrims from all Parts of the *Indies* to visit those Pagods, because they say *Adam* and *Eve* were created here; but, before they approach the Place, which they esteem holy, they all wash themselves in the *Ganges*. The Province of *Hallabas* pays the Mogul yearly fourteen Millions.

At *Hallabas* there are usually Troops of *Faquirs*, who call themselves a religious Order among the *Indians*, and many of them practise the Life of Penitents, forbearing to eat many Days, standing constantly upon a Stone for several Weeks or Months, holding their Arms across over their Heads as long as they live, or bury themselves in a Pit for a certain Time; but others wander up and down the Country like Gypsies, committing Robberies and all sorts of Rogueries; some of them will threaten to kill themselves, and some of them have done it, unless the *Banjans* would give them what they demand, and to obtain considerable Sums of them; for the *Banjans* abhor Murder, and will give any thing to prevent it. The Penitents are extremely honoured by the *Gentiles*, and the *Rajahs*, who they draw down Blessings upon themselves when they give to them.

From *Hallabas* you pass over a River, where stands a Detoga on each Side, to take Notice of what Goods are transported, there being due for every Waggon load four *Ruppes*, and every Coach one, and they stop at that travel without a Pass; and then go through *Tok del jera*, *salaw*, *Saracel*, and *Bourab-fera* to *Benarou*. This is a large City, and handsomely built, most of the Houses being of Brick or Stone, and higher than in any other *Indian* City, but the Streets are narrow. There are many Inns in the Town, and among the rest one very large and handsomely built. In the midst of the Court are two Galleries, where are to be sold Calicuts, Silk, and other Merchandise, and under them are Cellars where the Workmen live. All the Goods are stamped with the King's Seal, before they are exposed to Sale.

The *Ganges* runs by the Walls on the South Side, and in it is one of the principal Pagods of the Idolaters. About five hundred Paces from the City northward, there is a Mosque, where are many *Mohammedan* Sepulchres, inclosed with a Garden; but there are Holes through the Walls half a Foot square for Travellers to look into them. The most considerable is said to be that of one of the Kings of *Bhentan*. It is a four-square Pedestal, forty Paces wide, and in the Midst of it a Pyramid thirty-two, or thirty-five Feet high, with a great Wall at the Top. All the Fronts are full of the Figures of Animals cut in Stone. It was once very high, but within fifty Years it is sunk above thirty Feet into the Earth. From *Banarou* you pass on to *Baterpour*, and so by *Satragy-fera* to *Mama-fera*, in the Road from thence you ford two Rivers called *Garnafajou* and *Saol-fou*, and come to *Courmaed*, which stands upon the River *Gouderfajou*. The City stands at the Foot of certain Mountains, near which is great Lake, and in the Midst of it a small Island, with a fair Mosque built upon it, wherein is the Sepulchre of a *Nawab* Governor, called *Selim-Khan*, who built it for himself when he was Governor of the Province. There is a fair Free-stone Bridge to cross over into the Island; and on the Side of the Lake is a great Garden, in the Middle of which is a fair Sepulchre of the Governor's Son, who succeeded his Father in the Government of that Province. To visit *Sancrou* you ferry over the River *Son-fou*, which flows from the Northern Mountains; Here all Merchants pay certain Toll; and so you go on to *Dutib*, *Sang-fera*, and so by *Palva-fera* and *Aga-fera* to *Paina*. This is one of the biggest Cities in *India*, being two Leagues long, and standing on the Banks of the *Ganges* westward, but the Houses are no better than in the greatest Part of the other Cities, being covered with Bamboo, or Straw. The *Dutib* Company have an House there, because of the Trade in Salt-petre, which they buy up here and reneat at *Cleoupar*, a great Town upon the *Ganges*, ten Leagues distant from *Paina*.

Palace here, and under it
re the Pagods of *Adm*
gion they pretend to fol-
come an incredible Num-
of the *Indies* to visit those
am and *Jee* were created
ach the Place, which they
selves in the *Ganges*. The

t within fifty Years it is work
arth. From *Banarac* you pass
atraguy-jera to *Mamadher-jera*,
ou ford two Rivers called *bar*
come to *Gourmand*, which
derja-jou. The City stands at
ins, near which is a great Lake,
all Island, with a fair *Mosque*
Sepulchre of a *Nawab* *Ga-*
who built it for himself when
ovince. There is a fair Brea-
to the Island; and on the Side
len, in the Middle of which is
ernor's Son, who is the pre-
ent of that Province. Leaving
River *Son-jou*, which is a large
eams: Here all *Meronadite*
you go on to *Dhat*, *Nargat*,
and *Aga-jera* to *Patna*. These
s in *India*, being two Leagues
Banks of the *Ganges* well water-
er than in the greatest Part
ered with Bamboos, or *Sraw*,
an Houfe there, because of that
they buy up here and reneat
on the *Ganges*, ten Leagues do

The People of this Town having a *Mim Cacbi*, or Co-
lonel of a thousand Foot, slain for Sodomy by his Boy,
whom he had forced, he justified the Fact against the Go-
vernor, so that he durst not punish him for the Murder,
but dismissed him after six Months Imprisonment. From
Patna you sail down the River to *Deca*, passing by several
Towns where you lodge at Night; viz. *Sera Beconour*,
which is beyond the River *Pomporjou*, which comes from
the South, falls into the *Ganges*, *Sera-Enjab*, between which
and the City *Monger* four Rivers, viz. the *Raoa*, *Chanan*,
Erguga, and *Aquera*, fall into the *Ganges* on both Sides.
Leaving *Monger*, you sail by the Mouth of the *Ganges* at a
large River, and arrive at *Zangira*, beyond which the *Ro-*
nova, *Tea*, and *Cbanon*, empty themselves into the *Ganges*.
And after you arrive at *Baquelapour*, and passing by the
River *Catave*, you come to *Pongangel*, which lies at the
Foot of certain Mountains which come down to the *Gan-*
ges. Beyond this Place you meet with the River *Mart-*
Nardi, and by it sail to *Roge-Mebale*, a City upon the
Right-hand of the *Ganges*; if you go by Land to it, the
Highway is paved with Brick for a League or two before
the Town. Formerly the Governor of *Bengal* resided here,
partly because it was a Place of great Trade, and partly be-
cause it is an excellent Country for hunting, as well as to
keep the King of *Aracan* in Awe, and suppress the *Por-*
tuguese Banditti, who have retired to the Mouths of the
Ganges, and make Excursions as far as *Decu* itself.

But the River having left the City above half a League,
the Governor and Merchants are removed to *Decu*, which
at present is a large City and full of Trade. From this
Town, you come first by Water to *Dnapour*, then to
Tautipour, where there are abundance of Crocodiles in the
River; as also at *Aerat*, which is in the Way. The
vulgar Report is, that a Musket-Shot will not pierce the
Skins of the Crocodiles; but, upon Trial, it is found false.
Then you sail to *Daloudia*, and passing the Mouth of the
River *Cbativer*, you come to *Dampour*, and so to *Jatra-*
pour, near which the *Ganges* divides itself into three Arms,
and then by *Baga*, *Maga*, and *Kafata*; having passed the
Mouth of the River *Lapicia* two Leagues, you arrive
at *Decu*. This Town runs in a straight Line; besides
every one strives to have his Dwelling by the Side of the
Ganges. It is two Leagues long, but the Houses are but
ttery Huts, made of Bamboos, and daubed over with
Earth. The Governor's Palace is a Place inclosed with
high Walls, in the Middle of which is a pitiful Houfe, built
of Wood: He generally lodges in Tents, which he cautes
to be set up in a great Court of that Inclosure. The *Hol-*
landers have here a very fair Houfe, which they have
built for the Safety of their Goods, and the *English* have
another, but not so handomely. The Church of the *Au-*
gustin Friars is also of Brick, and is a very stately Pile.

15. There are several Roads from *Surat* to *Golconda*:
As by *Surat*, by *Goa* and *Vijapour*, and by *Agra*. These
two Roads by Land meet at *Dulhabat*, and therefore I will
speak first of the Road from *Surat*, as the most common,
and then of that by *Goa* and *Vijapour*. From *Surat* you
travel by *Cambari*, *Barnoli*, *Beira*, *Navepour*, *Rinkuli*,
Pipener, *Nainpour*, *Patant*, *Secoura*, *Requola*, and *Difcon*
to *Dulhabat*. This Town is one of the best Fortresses in
the Dominions of the Great Mogul, being seated upon a
Mountain every Way steep, the only Way being so nar-
row, that but one Horse, or one Camel, can go at a Time.
This Town stands at the Foot of the Mountain, very well
walled, with a natural smooth Rock, and has Battlements
and Towers mounted with Cannon; but it is the Citadel
on the Top of the Hill that is accounted the main Strength
of it; for in it are a great many excellent Pieces of Can-
non, and the Cannoners are generally *English* or *Hol-*
landers.

From *Dulhabat* you go to *Aurenabat*, before described,
and so through *Pipeli*, *Aubar*, *Gufonner*, *Alin*, *Sarzer*,
and *Lejona*, to *Nadour*. Here you cross a River, which
runs into the *Ganges*, and must pay for every Waggon-
load of Goods four *Rupees*, and have a Pals from the Go-
vernor. From *Nadour* you travel to *Patonta*, and so by
Kabri, *Satapour*, *Satanig*, or *Satanagar*, where you be-
gin to enter upon the Territories of the King of *Golconda*.
The other Road through *Goa* and *Vijapour* to *Golconda*

lies thus; you may go from *Surat* to *Goa*, partly by Land
and partly by Sea; but the Road being very bad by Land,
Travellers generally go by Sea, and hiring an Almadire,
which is a Bark with Oars, sail by the Shore to *Goa*, and
so they pass by these Towns (which are convenient to
lodge in, or victual at, viz. *Daman*, *Bassain*, *Cbacul*, *Da-*
boul, *Rejapour*, and *Mingrela*) to *Goa*. From *Surat* to
Goa is two hundred and forty Leagues. The great Dan-
ger in this coasting Voyage, is falling into the Hands of
the *Malabars*, or *Indian* Pirates, who are furious *Moham-*
medans, and very cruel to the Christians, whom they put
to barbarous Tortures if they take them, to make them
seek their Ranom the sooner. The *Malabars* sometimes
carry two hundred, and sometimes two hundred and forty
Men, and sail together in Squadrons of ten or fifteen Barks
to attack a great Ship, for they care not a Rush for the
great Guns: They come on Board of a sudden, and cast
such a great Quantity of Pots of artificial Fire upon the
Decks, that if there be not a speedy Remedy applied,
they do a world of Mischief. Our Seamen, generally know-
ing the Custom of these Pirates, when they come within
Sight, shut up the Skuttles, and fill the Deck with Water,
to hinder the Fire-pots from doing Execution.

Goa lies in an Island six or seven Leagues about, upon
the River *Mandoua*, ten Leagues from the Mouth of the
River. This Island abounds in Corn, Rice, and several
sorts of Fruit, as *Mangas*, *Ananas*, *Adam's* Figs, and *Co-*
coas, but all of them are inferior to a Pippin. The Port
of *Goa* is very commodious, the City is very large, and
the Walls are of good Stone; the Houses for the most
part are very magnificently built, especially the Viceroy's
Palace; but being closely environed with Hills, the Air is
made unwholesome, and so excessively hot, that the Inha-
bitants are not so many as otherwise they would be. Beef
and Pork are the ordinary Diet, and they have Plenty of
Poultry and Pigeons; but Fish is scarce, though they are
near the Sea: They have abundance of all sorts of Sweet-
meats, and great Plenty of good Water. Before the
Dutch brought down the Power of the *Portuguese* in *Ind-*
ia, there was nothing to be seen at *Goa* but Magnificence
and Riches: They made vast Profits without any Loss,
and every Man was a Trader except the Governor. But
now the *Dutch* having got the Trade every where out of
their Hands (tho' they are still Masters of *Goa*) they have
lost their Mines of Silver and Gold, and are fallen from
their Splendor. The Natives of the Country, whom they
call *Canarins*, or *Blacks*, are not permitted to bear any
Offices among the *Portuguese*, but only in reference to the
Law, viz. As Advocates, Solicitors, and Scriveners; and
they keep them very much under. If one of them hap-
pen to strike a white Man, or *European*, there is no Par-
don for him, but his Head must be cut off. The *Spaniards*
and *Portuguese* make use of them to transact their Busi-
ness, and receive their Money; and many of them by that
means are grown very rich, and have many Slaves to at-
tend them in good Habits; but they all, both Masters
and Servants, go barefoot; for the *Portuguese*, though
they have been offered great Sums to suffer them to wear
Hose and Shoes, yet will not allow it. They are very
courageous and good Soldiers, and quick and ingenious
at learning of Sciences, but they are Idolaters, and wor-
ship several Sorts of Idols, which, they say, are the Re-
semblance of several that have done good Works, to
whom they give Honour by adoring their Portrait.

There are some of these Idolaters who worship Apes, and
have built Pagods to those Beasts. In the Island of *Safts*
there was a Pagod, where the Idolaters keep in a Chest
the Bones and Nails of an Ape, that had been serviceable
to their Ancestors, by bringing Intelligence when any Prince
their Enemy sought their Ruin. The *Indians* came in Pro-
cession from several Places to this Pagod, and made Offer-
ings to it; and when the Clergy of *Goa* took away their
Tomb, they offered a great Sum of Money for their Re-
licks; but the Clergy not thinking such gross Idolatry suf-
ferable, caused it to be thrown into the Depth of the Sea.
The River of *Mandoua* also is had in as great Veneration
by the *Brahmins* and the other *Gentiles* as the *Ganges*, and at
certain Times, and upon certain Festivals, they flock thither
from their several Parts to perform their Purification. The
Town

Town hath good Walls, with Towers, and great Guns, and the Isle is walled round with Gates towards the Land, to hinder the Slaves from running away. The Portuguese have a Viceroy residing here, with an Archbishop, Inquisitor General, and Abundance of Clergymen, as Dominicans, Austin-Friars, Franciscans, bare-foot Carmelites, Jesuits, and Capuchins. The Carmelites are seated in a fine Air, and healthy Ground; the Jesuits have a College, which being dedicated to St. Paul, gives them the Name of *Paulists*, with a Seminary, Professor's House, Novitiate, and an House called the *Good Jesus*, where they paint admirably. There are also many fair Churches, and beautiful Palaces.

In this City lies buried *F. Allerquerque*, who conquered it for the Portuguese, and *Saint Francis Xavier*, the famous Indian Missionary. The Hospital of *Goa* was formerly the most famous in all *India*, both in regard that the Revenues were very great, and the sick Persons were very carefully looked after; but since the Change of Government, there is but very bad Accommodations, and several Europeans, who have been put in, have never come out but in their Coffins; but of late they have found out a Way to save some, by frequent Blood-letting, spare Diet, and drinking Cow's Milk.

16. From *Goa* you go to *Bicobly*, which is upon the Continent, and so to *Vijapour*. This City is the Metropolis of a Kingdom of the same Name, whose King is the most potent of all the Kings of *Decan*, and is therefore called King of *Decan*, having under him the two Naques of *Madura*, whose Territories reach to Cape *Comuro* and *Tanjabar*, who has several Towns on the Coasts of *Coromandel* tributary to him. It is a great straggling City, above five Leagues in Circumference, fortified with a double Wall, and a great many Cannons mounted, and a flat-bottomed Ditch. The King's Palace is very large, but ill built, and the Access to it is very dangerous, in regard there are an Abundance of Crocodiles in the Ditch, with which it is encompassed; but in the City itself there is nothing remarkable as to the publick Edifices or Trade, tho' in the Suburbs, which are large, there are several Goldsmiths and Jewellers. The King of *Vijapour* hath three good Ports in his Dominions, *Rajapour*, *Daboul*, and *Carapatan*. This last is the best, having fourteen or fifteen Fathom Water near the Land, and upon the Top of the Mountain adjoining a Fort with a Spring of Water in it.

It lies about five Days Journey to the North of *Goa*. The Kings of *Vijapour* and *Golconda* were formerly tributary to the Great Mogul, but now they are absolute of themselves. The present King of *Vijapour*, was only the adopted Child of the former King, who died without Children, he succeeded in his Minority under the Regency of the Queen, but being disturbed by the Revolt of *Rajah Setagi*, the Son of the late King's Captain of his Guards, he was forced to come to a Composition with him to establish himself, and so lost all the Coasts of *Malabar*.

The great Market, where the King of *Vijapour* sells his Pepper, is at *Rebeque*. In the Territories of *Vijapour* is *Mingrea*, a large Town, extended half a League in Length upon the Sea-coast; it is one of the best Roads in all *India*, where all the Vessels that come from *Batavia*, *Japan*, *Bengal*, *Ceylon*, and those that are bound for *Surat*, *Ormuz*, the *Red Sea*, *Bahora*, &c. both coming and going, anchor and take in Provisions, because there is both excellent Water and Rice. This Town is also very famous for Carcanons, which the Eastern People esteem above all spices, but not being to be had in any other Country, is very scarce and dear. There is also made great Store of coarse Canons that are spent in the Country, and great Quantities of coarse Matting, which serves for packing up of Goods. The *Dutch* have a Factory for Trade and Provisions here, to victual their Ships when they block up *Goa*, which is eight Months in the Year.

17. From *Vijapour* you pass to *Golconda*, which is four hundred Leagues from the Promontory. The most powerful of the Kings of *Decan* next to the King of *Vijapour*, is the King of *Golconda*; his Kingdom is bounded on the East by the Sea of *Bengal*, on the West by the Mountains of *Orissa*, on the South by *Bijanager* and *Narysagar*, which belongs to the King of *Vijapour*, and on the West by the

Empire of the Great Mogul. This whole Kingdom, take it in general, is a good Country, abounding in Corn, Rice, Cattle, Sheep, Poultry, and other Necessaries for human Life; and because there are many Lakes, there are also many Fish, and among others a sort of Snails, which has but one Bone in the Middle, which is most delicious Food. The Lakes being caused by Nature, and lying in Places somewhat raised, contribute much to the Fertility of the Country, because after the rainy Seasons they let them down by Sluices into the adjacent Fields. The Capital City of the Kingdom is *Banagar*; the *Persians* call it *Shiraz*, but the most common Name is *Golconda*. It is about fourteen or fifteen Leagues from *Vijapour*, situated in 10th Latitude, in a very long Plain, hemmed in with little Hills at some Distance from it. The Air is very wholesome, and a great River washes the Wall of it on the South-west Side, which, near to *Massulipatan*, falls into the Gulf of *Bengal*.

The City is well built, and full of Windows. Entering into it, you must first pass through a large Suburb, but the Houses are only built of Earth, and thatched with Straw, so low and ill contrived that they can be rook'd and little better than Huts. It is at least a League of Town, and in it dwell all the Merchants, Brokers, Hinderers, and all the meanest sort of People. The Men are allowed to go into the City from ten or eleven in the Morning till four or five o'Clock in the Afternoon with the foreign Merchants, and then they return to their Houses. In those Suburbs are two or three fair Mosques, which serve for Inns for Travellers, and several Pagods in the Neighbourhood. The Way to the Forts of *Golconda* is through those Suburbs; out of them you go to the City over a most beautiful Stone Bridge, and enter into a large Street that leads to the King's Palace. On the right Hand are some Houses of the Lords of the Court, about four or five Inns two Stories high, with fair Halls and large Chambers to let in the Irish Air.

At the End of this Street is a large Piazza on which the Palace fronts, and in the Middle of the Piazza is the Balcony wherein the King sits when he pleases to give Audience to the People. The Gate of the Palace leads not upon this Piazza, but upon another place adjoining. Through it you enter into a large Court, fronted with Porticos, under which lie the King's Guards. Out of this Court you pass into another, built after the same manner, and surrounded with several Apartments, with several Gardens, on which are very fair Gardens, and a great number of a great Bignets. The whole Palace is about half a League and eighty Paces in Length, and encompassed with a wall-villion. The Walls are built of great Stones, and have certain Distances half Towers. It is very pleasant water, and the Water rises up to the highest Apartments. No Man enters into the Palace without an express Command from the King, who grants it very seldom, so that nobody body comes near it.

At the End of the Palace is a Building, called the *Fort Towers*, which has the most lovely Outlook of any thing in the Town, being adorned with Roofs and Towers, and is well out. In each Tower are four Galleries, which serve to make the Water mount into a Reservoir, and so to pass from whence it is conveyed into the City, and into the Palace of the King's Palace through Pipes. In one of these Galleries of the King's Palace, but the tallest is that which is in the Palace. It hath two Divans, which serve for the King, who has his Prisons under them. The Pleas are held North of it, and there is a Portico over the Court, where the Physicians play several Times a Day, which is done in the Town in the Middle of it, and in the Court of the Palace is a Space for the fighting of Elephants, and for the most part is inhabited by *Persians*, who are the officers of the King's Court of Justice, and the Judges, and their Houses are pretty enough. The most famous of the City stands a very fair Mosque, where the Prayers of the Kings of *Golconda*, and about four or five hundred Men, Affliction there is a Dole of Bread and Rice, which is given to the Poor that come. Upon Festival Days a great many are hung with rich Tapelry, and then they are set to work in the Court Sight. There are many fair Gardens in the Town, and near it; but their beauty counts not in *India*, where the

Book I.

works, but in long Walks, lovely Fruit-trees, and large Balcons of Water.

When a Stranger comes to the Gates, a Soldier searches him, to see whether he has any Salt and Tobacco about him, that the King may not be defrauded of the Duties, and then sends to the Deroga about his Admission, which causes a Delay of a Day or two. Sometimes when the King sits to do Justice, all that have Business stand below, just against the Balcony; but the People are kept back with a Row of Poles about the Height of a Half pike. Every Monday the Nobility mount Guard, and continue eight Days, some of them have five or six thousand Men under their Command, with ten or twelve Elephants, and thirty or forty Camels. The Soldiers have no Cloaths, but three or four Ells of Calicut, with which they cover their Bodies half Way behind and before. They wear their Hair long, and tie it in a Knot on the Crown, as the Women do. They wear Broad-swords like the *Switzers*, which serve as well for a Throat, as a Blow, and hang them in a Girdle. Their Musket Barrels are neater and better than ours, because their Iron is better. Their Cavalry carry Bows and Arrows, a Bow-knife, and a Battle-Ax, and a Head-piece, and Jacket of Mail, which hangs down from their Head-piece to their Shoulders. There are twenty thousand common Women allowed by the Deroga; they pay no Tax, but are a Means of spending much Tari, which is a sweet Dink, on which the King lays a severe Impott. They are encouraged in their Practices. They are to dance every Friday before the King's Balcony, if the King be present; if not, an Eunuch dances them. They stand well dressed at their Doors in the Day time, and set up a Candle or Lamp for a Signal in the Night to draw in Men, who are not exposed to Scandal by conversing with them.

The common People give their Wives great Liberty, being obliged by Promise, at their Marriage, to let them walk in the Streets, visit their Neighbours, and drink Tea, a Liquor which the *Indians* love very much. When any one is found guilty of Theft, he is punished by cutting off both his Hands, which is a Punishment used almost all over the *Indies*. The Craftsmen of the Town, and Husbandmen that cultivate the Lands, are Natives; but the Trade is chiefly maintained by the *English* and *Dutch* Factories, who buy up for the Companies Chats, and other Cloths, which they vend in other Parts of the *Indies*. They bring also from *Musipatan*, upon Oxen, Cloves, Pepper, Cinnamon, Silver, Copper, Tin, Lead, and some Goods, which they know to be most marketable. All the Men and Women at *Goleonda* are well proportioned, and of comely Stature, and fair enough in their Countenances; but the Country People are swarthy. The most current Monies of this Kingdom are the Pagos, Rupes, and Pechas, of the Mogul; The Pagos are Pieces of Gold of which there are two sorts, the old and the new; the one are worth five Rupes, and the new not above four.

The Rupes and Pechas are also worth more at *Goleonda* than in *Mogulistan*. The greatest Plenty of Diamonds is in this Kingdom, and therefore it may be called the Country of Diamonds. The Cattle of *Goleonda* is two Leagues from the City; is of a large Compass, and the Walls of it are built of Stones, three Feet in Length, and as many in Breadth, and is surrounded with deep Ditches, divided into Canals, which are filled with fair and good Water. All the Strength it has consists in five round Towers, which have a great many Cannon mounted upon them for their Defence. It has several Gates, but two only are opened, and these are guarded by *Indians*. No Strangers may go without a Permission from the Governor, unless he be accompanied with some Officer of the Court. The King has a large Palace in it, and well situated for the good Air and lovely Prospect, and most Part of the Lords have Houses near it. There are several Bazars in it, where all Things readily for Sale may be had.

The King of *Goleonda*, who now reigns, is a Shiahs by Religion, and bears the Name of *Abdool Coston Shah*. He was the Son of a *Brahmin* Lay, and succeeded his Father, though not the eldest Son, because he was more loved by the Queen, who cauled his Brothers to be imprisoned, and at last poisoned. He keeps five hundred thousand Soldiers in Pay, yet is tributary to the Great Mogul. He

hath only three Daughters, the eldest of which is married to one of the Kinsmen of the Grand Chick of *Mecca*, the second to Sultan *Mobammed*, eldest Son of *Aurang Zeb*, and the third to *Mirza-abdul Cossing*, the King's Cousin, who has Male Children by her. The King of *Goleonda* has vast Revenues, for he is Proprietor of all the Lands of his Kingdom, which he leases out to those that offer the most, excepts such as he gives to his Favourites for a certain Time. The Customs on Merchants Goods that pass through his Country, and of the Ports of *Musipatan* and *Madrapsatan*, yield him much, and there is hardly any sort of Provisions in his Kingdom, from whence he hath not some considerable Duties by Way of Excise.

The Diamond Mines raise him a great Revenue, and all such as he allows to dig in them. These that are toward *Musipatan* pay him a Pagod every Hour they work there, whether they find any Diamonds or not; but his chief Mines are in divers Places in *Cannate* towards *Musipatan*, where he has six thousand Men continually at work, who daily find near three Pounds Weight, and no body digs there but for the King. This Prince wears on the Crown of his Head a Jewel almost a Foot long, which is said to be of inestimable Value. It is a Row of great Diamonds, three or four Inches Diameter, on the Top of which there is a little Crown, out of which issues a Branch fashioned like that of a Palm-tree; but it is round, and the Palm Branch, which is crooked at the Top, is a good Inch in Diameter, and about half a Foot long. It is made up of Sprigs, which are, as it were, the Leaves of it, and each of them have at the End a lovely long Pearl shaped like a Pear. At the Foot of this Poety there are two Bands of Gold in the Fashion of Talk-Baskets, in which are inclosed large Diamonds, set round with Rubies, which, with great Pearls that hang dangling on all Sides, make an exceeding fair Show; and these Bands have Calps of Diamonds to fasten the Jewels to the Head. Besides this Jewel, he hath other considerable Treasures, and such Numbers of precious Stones, that if there were Merchants who could give him the Worth of them, he would have prodigious Sums of Money, and be the richest King in the *Indies*.

The Omrahs are the great Lords of the Kingdom, who are *Persians*, and all rich; for they have not only great Pay of the King yearly, but large Gifts of Lands and Villages from him, besides the Advantages of the Soldiery; for they do not hit halt the Number they have Pay to maintain. They generally make a very high Figure; for when they go through the Town, an Elephant or two goes before them, on which three Men carrying Banners are mounted; fifty or sixty Troopers, well mounted and accoutered, follow them; and after these Trumpeters and others playing on Pipes on Horseback, after these comes the Omrah on Horseback, with thirty or forty Footmen about him, and his Palanquin carried by four Men, with other Porters for Charge; and all this Pomp is brought up with a Camel or two, with Men beating on Umbrels on their Backs. Sometimes the Omrah will take his Palanquin, and then his Horse is led.

The Palanquins are sometimes covered with Silver, and the Bamboos are tipped with Silver at both Ends. They lie at ease in them, smoking Tobacco, or chewing Beetle, or Areca, according to the Custom of the *Indians*, who hold them to be excellent for the Stomach, and the Sweetness of the Breath. The lesser Omrahs have not so great an Equipage, but all have a Train proportionable to their Revenue. The Winter in *Goleonda* begins in *June* with Rain, and some Thunder and great Winds, and lasts to the End of *October*, in which Time the Air is cold only in the Night and Morning. The Days are as warm as it is in *May* in *France*; but the Rains cause prodigious Floods, which break down the Houses, and destroy many People. The hot Season begins in *February*. The Rains make the Land very fertile; they have abundance of Fruits and Vines, and two Crops of Rice and other Grains every Year. The Wines they make are usually white.

From *Goleonda* there are two Roads to *Musipatan*, one more direct, which the Merchants usually take, and the other by the Diamond-Mines, called *Goleonda*, or *Gant*, which such Merchants generally travel, when they go to *Balim* to lead them thither, though it be the further Way

by twelve Leagues. In the more direct Road you meet with not above four Towns, besides fifteen or sixteen Villages. *viz. Elmas-kepanich, Panguel, Sarabel, and Pengur-cherpoul.* You pass also several Rivers, the most considerable of which are *Karbna* and *Mucky.* All the Country as you pass this Way is always green and pleasant to the Eye, though the Road be bad, and there grow all kinds of Trees that are in the *Indies,* even Cassia-trees, though they be scarce in other Countries: This Way you come to *Masipatan* in ten Days. The other Way, by the Diamond-Mines, lies, first, to *Tenara,* where the King has a stately Palace, consisting of four large Piles of Stone-Building, to every one of which belongs a large Garden. One of them, on the Left-hand, along the Highway, is much more beautiful than the other three; it is built of Free-stone, two Story high, and has in it several fair Galleries, Halls, Parlours, and Lodging-rooms, which are the Royal Apartments. Before this Building is a large square Piazza, and in the other three Fronts is a great Portal, with a fair large Platform, raised four or five Feet high, and well arched, where Travellers of Fortune are lodged, and over each Portal is a strong Baluster, and a little Chamber for the Ladies.

One of these Buildings belongs entirely to the Queen, and though no body may lodge in it in the Queen's Absence, yet any one may see it, and walk in the Garden, which is a lovely Place, and is well supplied with Water. The whole Piazza is encompassed with several Chambers for the Lodgings of poor Travellers, who, every Day, towards Evenings, have an Alms bestowed upon them of Rice and Pulse ready boiled; and for this there are alienable Rents settled: But for the Idolaters, who will eat nothing that is powdered by other Hands, they give them Flour to make Bread, and a little Butter to dip in it when it is baked, like a thin Bread-Cake. From *Tenara* the Road lies through *Jatenager, Patengi, Penguai, Nagelpar, and Lakabaran,* to *Coulour, or Gani.* This last Part of the Way is very rocky, and among these Rocks, where there is any good Earth, you find the Cassia-trees, that bear the best and most laxative Cassia of any in the *Indies.* By *Coulour* runs a River which falls into the Gulph of *Bengal,* near *Masipatan.* From hence the Road lies through *Kab Kaly, Bazour,* where you pass the River of *Coulour, Pochir, Nilmer,* where they must cross a great River upon a flat Boat of Timber, and so by *Nimol* to *Masipatan.* This is a great City on the Coast of *Coromandel,* lying in 16° 30 North Lat. It stands upon the Gulph of *Bengal* E. S. E. from *Golconda;* and though it be but small, yet it is well peopled. The Streets are narrow, and it is intolerably hot there from *March* till *July.* The Houses are built of Wood, and all separated one from another, and the Water is brackish, because the Tide comes up to it. There is great Trading in Cloths, because, besides those that are made there, a great many are brought from *St. Thomas,* which are much finer, and better Colours than those from other Parts of *India.* The Coast is excellent, and the Road for Ships is the best in all the Gulph of *Bengal,* and therefore Ships come hither from all Nations, and go from thence to *Pegu, Siam, Aracon, Bengal, Cochin-China, Mecca* and *Ormuz,* and for the Islands of *Madagascar, Sumatra,* and the *Manillas.* This Country of *Masipatan,* as well as the Coasts, is full of Idolaters; and the Pagods are so full of lascivious Figures of Monsters, that one cannot go into them without Horror. It is exceeding fruitful, and Provisions are very cheap there: A Sheep is bought for Twelve-pence, a Partridge for a Half-penny, and a Fowl for Two-pence; and it is the same almost every where upon the Coasts of *Coromandel.* From *Masipatan* to *Gandicut* the Way lies thus; you pass *Nimel, Wechir,* and *Patemet,* three small Villages, and the last of them a very pitiful one, to *Bezzuart,* a great Town, where all the Inhabitants, except the Governor and some of his Domesticks, are Idolaters.

In this Town is a very large Pagod without Walls, consisting of fifty two Pillars of twenty Feet high, which uphold a flat Roof of Free-Stone. They are adorned with several embossed Figures of very ugly Devils, and several sorts of Creatures, some with four Horns, others with many Legs and Tails, others loling out their

Tongues, and others in several other ridiculous Postures: And between the Pillars stand the Statues of their Gods upon Pedestals. The Pagod is built in the Middle of a Court encompassed with Walls, adorned within and without with the same Figures as the Pagod, and a Gallery, sustained by sixty Pillars, runs round the Wall. You enter into this Court through a Portal, with Niches one above another, supported with Pillars, which have certain *Indian* Characters upon them; but the Priests themselves hardly know the Meaning. By this Town is another Pagod, built upon an Hill, to which there is an Ascent of 194 Steps, every one a Foot high: It is four-square, with a Cupola at the Top, adorned with Figures, as that at *Bezzourat.* In the Middle is an Idol sitting cross-legged, after the Manner of the Country; and in that Posture, about four Feet high, upon the Head is a triple Crown, from which four Horns extend themselves, and it has the Face of a Man turned towards the East. The Pilgrims that come out of Devotion to these Pagods, when they enter, clasp their Hands together, and raise them up to their Foreheads, and then advancing to the Idol, cry out, *Ram, Ram, i. e. God, God:* Then having anointed it with Oil, or besmeared the Face with Paintings, they ring a little Bell that hangs upon the Idol; after which they make their Offerings of Sugar, Oil, and other Articles, the richer Sort adding Pieces of Silver.

These Offerings, though the People are made to believe the Idol takes them, yet maintain the Priests, their Wives, and Children, except that they relieve the poor Pilgrims with them. There is a great Feast made in this Pagod in *October,* for three Days together, at which time there is a great Concourse of People from all Parts. Leaving *Bezzourat,* you cross the River that runs to it, and three Leagues farther come to a Pagod, that stands on a large Platform, with an Ascent of fifteen or twenty Steps; in it is the Figure of a Cow of black Marble, and several other deformed Idols four or five Feet high, some with many Heads, and others with many Arms and Legs; and the most ugly are most adored, and receive the most Offerings.

20. The next Town in the Road is *Kad Kidi,* near to which is a small Pagod, wherein are five or six Idols, well made. And having passed that, you come to *Canzeir,* a great City, closed in with strong Walls, with a Ditch and a Moat paved at the Bottom with Free-stone. Eastward it stretches out to a Mountain about a League in Compass, and surrounded with Walls with Battlements: Within them are three Fortresses. From hence you go to *Capanour,* and so to *Adanunge,* a very small Town, where there is a very large Pagod, with an Ascent of Chambers for the Priests, and several Idols, but they are fallen to decay, yet are superstitiously adored by the People. You go on to *Nesdrepar,* and so to a large River, which is dry in Summer, to *Condiscour, Diego Near,* where there are many Pagods; and to crossing a River to *Gandiron, Serepe, Ponte,* and *Senegond,* to *Parra,* to which the Way lies for a League through the Sea.

It is a Fort that belongs to the *Dutch,* that lies upon the Coast of *Coromandel,* and within it are usually two hundred Soldiers. It is the chief Factory they have in the *Indies,* where lives the Superintendent of all the rest which are in the Territories of the King of *Golconda.* The Trade managed there by the *Dutch* is in Cotton-Cloth, of which they have large Warehouses. Here also they refine their Salt-petre, which they bring from *Bengal,* and make Gunpowder, with which they furnish their other Factories. The Fort of *Palaute,* called *Andanoria,* is at a good Distance from the Town, but it may not be annoyed by Shot from thence. The Ballows are well stored with good Guns, and the Sea comes up to the Walls of it. The Governor has fifty Crown-pieces for his Pay, and as many for his Tabac and Comestibles: The current Money here are *Rupes* and *Pagods,* which are four Times the Value of the former, *raonys* which are half Gold and half Silver, with the same Statute of *Pagods,* but the seventh Part of a *Rupe* in Value, and *Gazars,* which are Pieces of Copper as big as a *denier;* forty of them are but the Worth of it. The *Dutch* in this Money. The Water of this Town is fetched out of

Holes dug in the Sand, when the Sea is quite out, and it is tolerably fresh.

From hence you go to *Madrespatan*, or *Fort St. George*, which belongs to the *English* (here is a Convent of *Capuchins*) and so to *Miliapur*, or *St. Thomas's Town* (where, they say, *St. Thomas* was martyred; and the *Austin Friars* here pretend to have the Iron Lance which killed him, the *Jesuits* also have a Church there) *Serraveroon*, and then to *Ondicut*. The Way between those two Towns is through a flat, sandy Country, and on both Sides of it are Copes of Bamboos, very high and thick, which breed prodigious Numbers of Apes. Those on one Side are inveterate Enemies to those on the other; and it is very good Sport to Travellers to set some Baskets of Rice between them, with Cudgels in them, to make them fight for it, and batter one another with the Cudgels. The Road holds the name to *Naravacon* and *Gazzal*. Hereabouts there are Gates and strong Guards at them at every two or three Leagues, who examine all Passengers, whence they come, and whither they go; so that Men may travel there with their Money in their Hands.

21. The next Place you arrive at is *Courva*, a celebrated Pagod, where there is little to be had for Man or Beast; but the Country about it being full of Elephants, the King's Officers come hither often to take them. The Manner of hunting them is thus; they cut several Alleys or Walks in the Woods where they are, and having dugged them full of Pits, which they cover with Hurdles and Earth, scare them by hallooing, beating of Drums, and putting them with Pikes with Wild-fire tied to the Ends, into those Walks, where, being tumbled into the Holes, the Hunters bind their Feet and Trunks with Ropes and Chains, and to take them; yet some will escape the Snare, and are ever after to misftrullful, that with a Bough they will examine every Step they take, whether there is not a Hole in the Way; and it is almost impossible to take them again. Such as they catch, they couple to two tame ones on each Side, and let six Men about them with lighted Torches at the End of an Half-pike, to talk to them, and give them Meat, which is brown Sugar, baked Rice, and Hay.

If the wild Elephant will not eat, the Men order the tame ones to beat him with their Trunks, and so constrain him to learn Obedience. After an Elephant is tamed, he never meddles with the Female, yet is sometimes taken with a lustful Rage, which never ends but with some Mischief, as the Death of his Rider, or somebody else. Though the Elephant's Skin be very hard while he is alive, it is all melted like Glue when he is dead. There are Elephants in several Parts of the *Indies*, as in the Islands of *Ceylon* and *Sumatra*; the Kingdoms of *Cochin*, *Sam*, and *Bantam*, on the Frontiers near the *Great Tartary*; but they are said to be of the greatest Numbers on the Coast of *Melinda*, Eastward of *Africa*, where the *Baaks* of the Countries hunt them to eat their Fleish, but are obliged to give the Lord of the Place their Teeth, inasmuch that there are several Parks impaled with Elephants Teeth a League round.

It is observable of the female Elephant, when she grows hot, that she makes herself a great Bed of Herbs and Weeds, four or five Feet high from the Ground, on which, contrary to the Custom of all other Creatures, she lies upon her Back, in Expectation of the Male, whom she calls to her by a peculiar Cry: And thus they take the Male in *Ceylon* by a tame Female. This is also observable to the Elephants in *Ceylon*, which, though the smallest is the most courageous, yet only the first Elephant which the Female produces has any Tuks. And it is also observable, that the Ivory from *Achen*, when it is wrought, never grows yellow, as that does which comes out of the Continent and the *East-Indies*, which makes it more esteemed than any other. It is hard to find how long an Elephant will live; nor can the Keepers or Governors of them tell you more than that such an Elephant was their Great-Grandfather's; so that it may be conjectured that they have lived an hundred and twenty, or an hundred and thirty Years. The Great Mogul keeps five hundred for his Household, to carry his Women, their Tents and Luggage,

and about eighty or ninety for his Wars; and to the Chief of them he allows five hundred *Rupies* a Month; but, to the rest, from fifty to twenty. The chief have Men to attend them, and fan them, and they are maintained out of it.

22. From *Courva* you pass through *Rgia-Peta*, a large Town, and *Ondicut* to *Oudemela*, where there is one of the greatest Pagods in *India*. It is built of large Freestone, and has three Towers, where there are several deformed Figures of embossed Work. It is encompassed with many little Chambers for the Priests Lodgings. Hard by it is a wide Lake, upon the Banks of which are built several Pagods, eight or ten Feet square, and in every one of them an Idol, representing some Devil, with a Bramin, who takes Care that no Stranger that is not of their Superstition shall come to wash in, or take any Water out of the Lake: But if any Stranger desires Water, they give it him in an earthen Pot; but if it touches the Stranger's Vessel, they break it; and say, if a Stranger should wash in it, it must be drained. They are very charitable, and will give any Thing they have to eat or drink to Persons in Necessity. There are several Women among them, who, having made a Vow to do Acts of Charity for seven or eight Years, more or less, sit upon the Road continually for that End, with Fire, Tobacco, Rice boiled with Quicken, a sort of Grain like Hempseed, and Beans, and to every Traveller they give some of their Bears, Rice-water, an Handful of Rice, Tobacco, if they have none, and Fire. Other Women live continually on the Highways and Fields, having made a Vow to eat nothing but what they find ungruelled in the Dung of Oxen, Cows, and Horses, which they feed with an hard sort of crooked Pease; and these feed the Cattle with Grass all the Day.

From *Oudemela* you travel through *Golypale* and *Gageron* to *Janicut*. This Place is one of the strongest Cities in the Kingdom of *Carnate*, being situate upon the Top of an high Mountain or Rock, to which there is but one Access, not above twenty-five or thirty Feet broad at most, and in some Places not above seven or eight Feet wide at the most. At the Right-hand of it there is a most hideous Precipice, and at the Bottom of it runs a wide River. Upon the Top of the Mountain is a small Plain, but a Quarter of a League broad, and about half a League long. This is sowed with Rice and Millet, and watered with many little Springs.

The City stands on the South side of this Plain, and is so encompassed with Precipices, at the Bottom of which run two Rivers, that it is but one Gate to the Plain-side, and that too fortified with two good Walls of Freestone. Here is a Pagod, which is said to be the fairest in all *India*, wherein are several Idols, some of Gold, others Silver, and six very large ones of Brass, of which three are set upon their Heels, and three stood, and yet were ten Feet high a piece. These Statues, when the Nabab of the King of *Golconda* took the Cities from its own Raiah, he took out of the Pagod to make him some Cannon; but with all the Art the Artificer had, who was a *Frenchman*, he could not melt them, and so he was forced to leave his Work unfinished. It is a Custom in this City never to put any Man in Prison, but as soon as the Offender is taken he is examined, and Sentence is pronounced upon him according to his Crime, which is immediate Execution; and, if he be innocent, he is as soon acquitted and discharged.

The Punishment is generally inflicted at the Discretion of the Nabab, or Governor: One that had broken into an House, and killed the Mother and three Children, was condemned upon the Spot to have his Hands and Feet cut off, and to be cast into the Highway, there to end his Days in Misery; another, who had robbed upon the Highway, had his Belly ripped up, and was ordered to be cast upon the Dunghill. In these Parts of *India* they have a very quick Way of sending Letters by Foot Posts, which are more speedy than Horsemens; and the Reason is, because at the End of every two Leagues, there are little Huts, where there are Men always ready to run as soon as any Letter comes.

Middle of every Skain something to add to the Weight; the second is, by not giving good Weight, when the Broker receives it from the Workmen, or Merchant that delivers it. There is but one Cheat in the Quality; that is, by putting three or four Skains of a coarser Commodity than that which is uppermost, into one Mein, which in a great Quantity, mounts high, for there are some Cottons that are worth an hundred Crowns the Mein. These two Cheats being often used by the Dutch Company, there is no Way but to weigh your Commodity in the Presence of the Dutch Commander, and his Council, and to examine every Mein Skain by Skain; when this is done, they who are ordered to be at this Examination, are obliged to fix to every Bail a Ticket of the Weight and Quality; for if there be a Failure, they who fix the Ticket are obliged to make good what is wanting. I have told you, that when the Workmen have made up the Indigo Palle into Lumps, with their Fingers dipped in Oil, they lay them in the Sun drying. Now those that have a Design to cheat the Merchants, dry them in the Sand, to the End, that the Sand sticking to the Indigo, may increase the Weight. Sometimes they lay up their Palle in moist Places, which makes it give, and consequently renders it more heavy; but if the Governor of the Place discovers the Cheat, he makes them severely pay for it; and the best way of Discovery is, to burn some Pieces of Indigo, for the Sand will remain.

The Brokers are, as it were, the Masters of the Indian Families, for they have all Goods at their Disposal. The Workmen chuse the most aged, and most experienced, who are to endeavour equal Advantages for the whole Tribe they undertake for; every Evening that they return from their Business, and that, according to the Custom of the Indians, who make no Suppers, they have eaten some little Pieces of Sweet-meats, and drank a Glass of Water, the eldest of the Tribe meet at the Broker's House, who gives them an Account of what he has done that Day, and then they consult what he is to do next. Above all things they caution him to look to his Hiss, and to cheat, rather than be cheated.

We will close this Section with a remarkable Passage relating to our Author's personal History, which is very worthy the Reader's Notice, though it does not immediately relate to Trade, the rather, because the Translation that has been published of his Travels, gives us but a very indifferent Account of it, notwithstanding the Author has taken great Pains to relate it very circumstantially, as he thought it would give a true Picture of the Nation it concerns. In the Month of April 1665, he embarked at *Gambron* in *Perfia*, for *Surat* in the Indies, on Board a Dutch Packet Boat, which Opportunity the English Agent took to charge him with a large Packet of Letters for the English President at *Surat*, in which also were included such as belonged to private Persons in that Factory, and in other Places of the Indies. This Circumstance was taken Notice of by one Mr. *Casembrot*, a Dutchman, who had travelled through *Perfia* by Land, and was to go in the same Vessel with our Author to *Surat*, and he communicated this Piece of Intelligence to Mr. *Henry Van-Wuck*, who was then the Dutch Chief at *Gambron*, and he immediately formed a Project for Reading this Packet, in order to discover the State of the English Affairs; but in the first place went on Board the Ship, and enquired of our Author, if he had any such Packet, who very innocently told him the Truth. After having thus opened the Matter, and observed that the Dutch Captain and Pilot were in the Secret, we shall pursue the Account in the Author's own Words: Mr. *Casembrot*, says he, having seen the Size of the Packet, gave *Van-Wuck* a Description of it, and to begin together they contrived another of the same Form and Bigness, as near as they could. When I came on Board, I took the English Packet, and locked it up in my Boucha, which is a sort of Cloak-bag that is used in that Country, and laid it behind my Bolster. There were two Shallops sent on Board us, wherein there were sixty Bags of Silver, containing some fifty, some an hundred Tomans apiece. These Bags they unladed very leisurely to get Time, watching when I should be gone to Bed; but when they saw that I did not go to rest, the Dutch con-

sulted together, and agreed to let fall a Bag of Tomans into the Sea, and so came all aboard, sending away a Shallop to *Gambron* for a Diver. When I found that the Vessel would not set sail, till two or three Hours after Day-light, I went to rest, my Boucha lying in the same Place half out; and half withinside of my Bolster; but when my Servants were gone, and I alone, and asleep in the Cabin; they cunningly stole my Boucha, took out the English Packet, and left the other, which they had counterfeited, in the Place, being only so many Letters of blank Paper. Coming to *Surat* the 5th of May following, I gave the Packet, as I thought, which I had received from the English Agent at *Gambron*, to two Capuchin Priars, to deliver to the President at *Surat*; but when the President came to open the Packet before several of the Company, there was nothing but white Paper made up in the Form of Letters, which when I heard, too much to my Sorrow, I understood the villainous Trick that *Van-Wuck* had put upon me.

I wrote a smart Letter of Complaint to the Dutch General in *Batavia*, but finding no Redress, I was forced to undergo the hard Censure of the English, who would not permit me to justify myself. However, as it is rare to see Treachery go unpunished, the Complotters all died miserably. *Van-Wuck* fell into a violent Fever, and being charged with the Theft, thinking to defend himself with an Equivocation, said, that if he took the Cloak-bag, he wished he might die without speaking a Word. In three Days ended his Life, just in the same manner, and at the same time that he had imprecated upon himself; *Boson*, his Lieutenant, after a great Debauch, going to sleep upon the Terrass of the Cabin, where he lay for Coolness (there being no Balusters) rolling and tumbling in his Sleep, fell down, and the next Day was found dead in the Sea. The Captain, four or five Days after his Arrival at *Surat*, being met in the Streets by a *Mohammedan*, who was jealous of his Wife, and being mistaken by him for one among several Franks that had parted them, and kept him from correcting his Wife some few Days before, was stabbed by him in three or four Places with a Dagger, which killed him outright; and this was the End of these treacherous People.

27. We may gather from this remarkable Passage the Reason why our Author had always a strong Dislike to the Dutch; for it is not probable, that after such a Transaction, they could either forget him, or he them; but it seems not a little strange, that this Account should be so much softened in the English Translation, and no Notice taken that the Person who did him this Injury was the Dutch Chief at *Gambron*, to whom he was particularly recommended, and a long Letter likewise omitted, which he wrote to the Dutch Governor at *Batavia*. In a Work like this, where we profess to make a Collection of Voyages and Travels, such Pieces ought to be left out, as refer only to particular Men; but the Rule is certainly otherwise, in reference to Books that are given to the World as express Translations; for which Reason I am inclined to think, that there is something mysterious in this Omission, and that the Author of the English Translation was a better Friend to the Dutch than M. *Tavernier*, and therefore did not think fit to trust such an unlucky Story as this with an English Reader, especially at that Juncture; for this Version of our Author's Travels was published in the Reign of King *Charles II.* not long after the Close of the last Dutch War.

I am the rather inclined to think this, because at the End of the fifth Book of M. *Tavernier's* Travels, there is a very curious Relation of a great Adventure offered to King *Charles II.* by the Dutch Factory at *Gambron*, who burnt his Picture in the most ignominious Manner, which is also left out in the English Translation, and of which the Reader shall, God willing, have an exact Version in the succeeding Volume of this Work. At present, it is sufficient that we mention these things, because they will serve to explain several Passages in the succeeding Section, which contains the Remainder of our Author's Indian Observations, together with an Account of his Return by *Batavia* in a Dutch Ship to *Europe*, in which occur a Multitude of curious Circumstances, and many remarkable Passages, in respect to the History and Trade of the Indies, that are nowhere else to be found.

SECTION XXX.

The Conclusion of the Remarks and Observations of Mr. J. Baptist Tavernier in his Travels through the Indies, together with his Account of the Dutch Settlements, and of his Voyage on Board a Dutch Ship from Batavia to Europe.

Written by himself soon after his Return.

WE have before given a large Account of our Author's Observations on the Kingdoms in the East Indies to the very Frontiers of China, of which Empire, it seems, he had likewise collected some very curious Memoirs, though his Modesty would not suffer him to publish them, because there were already several general Histories of that Country written by such as had resided there for many Years, and were therefore likely to be better acquainted with it than he. In order, however, to preserve the best Method possible in his Relations, he passes from the Kingdom of Siam, on the Continent, to the great Island of Celebes, of which he has given us a very copious and very curious Account, much superior to any thing we meet with in the general Histories of the Indies by Portuguese Writers, and therefore it comes in here very properly, as a Supplement to what we have before transcribed from those Writers in the former Sections, and at the same time serves for an Introduction to what the Author says of the Reduction of that Island, or at least of the principal Kingdom therein by the Dutch, who are still Masters thereof, and derive from thence very great Advantages. We may reckon amongst these their excluding all other Nations from any Commerce here. But to proceed now to our Author's Narration, in his own Words.

The Kingdom of Macassar, which is in the Isle of Celebes, begins at the 15° of Southern Latitude; the Heats are excessive all the Day, but the Nights are temperate enough; and for the Soil, it is very fertile; but the People have not the Art of Building. The capital City bears the Name of the Kingdom, and is situated upon the Sea. The Port is free; for the Vessels that bring great Quantities of Goods from the adjacent Islands pay no Customs. The Islanders have a Custom to poison their Arrows; and the most dangerous Poison which they use is the Juice of certain Trees, in the Island of Borneo, which they will temper so as to work swift or slow, as they please. They hold, that the King has only the secret Receipt to take away the Force of it, who boasts that he has the most effectual Poison in the World, which there is no Remedy can prevent.

One Day an Englishman, in the Heat of Blood, had killed one of the King of Macassar's Subjects, and though the King had pardoned him, yet both English, Hollanders, and Portuguese feared, if the Englishman should go unpunished, lest the Islanders should revenge themselves upon some of them, besought the King to put him to Death, which with much ado being consented to, the King, unwilling to put him to a lingering Death, and desirous to show the Effect of his Poisons, resolved to shoot the Criminal himself; whereupon he took a long Trunk and shot him exactly into the great Toe of the right Foot, the Place particular of which was Two Burgoms, one an Englishman,

and the other a Dutchman, provided on purpose, immediately cut off the Member; but for all that the Poison had dispersed itself so speedily, that the Englishman died at the same time. All the Kings and Princes of the East are very diligent in their Enquiry after Strung Poisons; and I remember, that the Chief of the Dutch Factory and I tried several poisoned Arrows, with which the King of Achen had presented him, by shooting at Squirrels, who told down dead as soon as ever they were touched.

The King of Macassar is a Mohammedan, and will not suffer his Subjects to embrace Christianity; yet, in the Year 1656, the Christians found a Way to get Leave to build a fair Church in Macassar; but the next Year the King caused it to be pulled down, as also that of the Dominican Friars, which the Portuguese made use of. The Parish-Church, which was under the Government of the Secular Priests, stood still till the Dutch attacked Macassar, and compelled him to turn all the Portuguese out of his Dominions. The ill Conduct of that Prince was, in part, the Occasion of that War to which the Dutch were moved to revenge themselves upon the Portuguese Jesuits, who had crossed their Embassy to China. Besides that, they offered great Affronts to the Dutch at Macassar, especially when they trod under Foot the Hat of one of the Dutch Envoys, who was sent to treat with the King in Behalf of the Company. Thereupon the Dutch refused to unite their Forces with the Macassarians that were in Rebellion against their Sovereign, and to revenge themselves at any Rate.

2. Now, as to the Business of China, it happened that, towards the End of the Year 1658, the General of Batavia and his Council, sent one of the Chief of the Dutch Company with Presents to the King of China, who, arriving at Court, laboured to obtain the Friendship of the Mandarins, who are the Nobility of the Kingdom; but the Jesuits, by reason of their long Abode in the Country, understood the Language, and were acquainted with the Lords of the Court, left the Dutch Company should get footing to the Prejudice of the Portuguese, represented several Things to the King's Council, to the Detriment of the Dutch, more especially charging them with Breach of Faith in all the Places where they came.

Upon this, the Dutch Agent was dismissed, and departed out of China without doing any Good. Afterwards, coming to understand what a Trick the Portuguese Jesuits had put upon him, he made Report thereof to the Governor and his Council at Batavia, which to incense them, that they resolved to be revenged; for, by the Deputy's Account, the Embassy had cost them above thirty thousand Crowns; for which they could not have the Portuguese pay double. Unpleasantly it reflects

Trade which the Jesuits drove in *Macao* and to the King-
 dom of *Macassar*, whither, upon their own Account,
 they sent several Vessels, laden with all sorts of Commo-
 dities, as well of *India* as *China*. They took this Oppor-
 tunity, and on the 7th of June, 1660, appeared with a
 Fleet of thirty Sail before the Port of *Macassar*.

The King, thinking himself obliged to make Defence
 against so potent an Enemy, endeavoured to sustain the
 Brunt of the *Dutch*, with the *Portuguez* Ships in the
 Road; but the *Dutch* dividing their Fleet, Part of them
 fought the *Portuguez*, the other battered the Royal For-
 tress so furiously, that they carried it in a short Time,
 which so terrified the King, that he commanded the *Por-
 tuguez* not to fire any more for fear of farther provoking
 his Enemies. The Prince *Patinfalva* was slain in the
 Fight, which was a great Loss to the King of *Macassar*,
 who was become formidable to his Neighbours, by the
 good Conduct of that Minister. As for the *Dutch*,
 they took, burnt, and sunk all the *Portuguez* Vessels, and
 sufficiently reimbursed themselves for their *Chinese* Expences.
 The Thirteenth of June the King of *Macassar*, whose
 Name was *Sambow*, hung out a white Flag from another
 Tower, whence he beheld the Fight, environed by his
 Wives. During the Truce, he sent one of the Grandees
 of his Court to the *Dutch* Admiral, to desire Peace;
 which was granted, upon Condition, he should send an
 Embassador to *Batavia*, expel the *Portuguez*, out of the
 Island, and not to permit his Subjects to have any more
 to do with them.

Thereupon the King of *Macassar* sent eleven of the
 greatest Lords of his Court, with a Train of seven hun-
 dred Men; the Chief of the Embassy being the Prince of
 Pinfalva. The first Thing they did, was to pay two
 hundred Loves of Gold to redeem the Royal Fortress
 again, and the next, submitting to the Conditions which the
 Dutch Admiral had proposed. The General of *Batavia*
 signed the Articles, which were punctually observed; for
 the *Portuguez* immediately quitted the Country, some
 departing for *Siam* and *Cambaya*, others for *Macao* and
 Goa. *Macao*, formerly one of the most famous and rich-
 est Cities of the Orient, was the principal Motive that
 inclined the *Dutch* to send an Embassador into *China*; for,
 being the best Station which the *Portuguez* had in all these
 Parts, the *Dutch* had a Design to win it wholly now.
 This City lying in 22° of N. Lat. in a small Island, next
 to the Province of *Canton*, which is a Part of *China*, has
 very much lost its former Lustre.

3. But this was not all which the Jesuits and *Portuguez*
 Merchants suffered. The Chief of the *Dutch* Factory at
 Mingrela, which is but eight Leagues from this City, un-
 derstanding the bad Success of the *Dutch* in *China*, had a
 Contrivance by himself to be revenged: He heard that
 the Jesuits of *Goa*, and other Places, drove a great
 Trade in rough Diamonds, which they sent into *Eu-
 rope*, or else carried along with them when they re-
 turned; and that for the more private carrying on of
 their Trade, they were wont to send one or two of their
 Order, that knew the Language, in the Habit of *Faquers*,
 which consists of a Tyger's Skin, to cover their back Parts,
 and a Goat's Skin to cover their Breast, reaching down to
 the Knees. Thereupon the Chief of the Factory of *Min-
 grela*, taking this Opportunity, and having Notice that
 two of the supposed *Faquers* were gone to the *Mines*,
 to lay out 400,000 Pardos in Diamonds, gave Orders to
 two Men, which he had bribed for that Purpose, that as
 soon as the Fathers had made their Purchase, he should
 give Notice to the Officer of the Custom-house at *Bickoli*,
 which is a great Town on the Frontiers of those Lands
 that part the Kingdom of *Vissapour* from the Territories
 of the *Portuguez*, there being no other Way to pass the
 River which encompasses the Island where the City of *Goa*
 is built. The Fathers believing that the Customier knew
 nothing of their Purchase, went into the Boat to go over
 the River; but, as soon as they were in, they were strictly
 searched, and all the Diamonds confiscated.

To return to the King of *Macassar*. You must know
 that the Jesuits once offered to convert him, and perhaps
 they might have brought it to pass, had they not ne-
 glected one Proposal which he made them; for, at the
 same time the Jesuits laboured to bring him to Christia-

nity, the *Mohammedans* used all their Endeavours to
 oblige him to take up with their Law: The King, willing
 to leave his Idolatry, yet, not knowing what Part to take,
 commanded the *Mohammedans* to send for two or three of
 their most able Moullas, or Doctors, from *Meca*; and the
 Jesuits he ordered to send as many of the most Learned
 among them, that he might be instructed in both Relig-
 ions, which they both promised to do: But the *Mohamme-
 dans* were more diligent than the Christians; for in eight
 Months, they fetched from *Meca* two learned Moullas;
 whereupon, the King seeing that the Jesuits sent no body
 to him, embraced the *Mohammedan* Law. True it is,
 that three Years after, there came three *Portuguez* Je-
 suits, but then it was too late. The King of *Macassar*
 being thus become a *Mohammedan*, the Prince, his Bro-
 ther, was so mad at it, that when the Mosque, which the
 King had caused to be built, was finished, he got into it
 one Night, and causing the Throats of two Pigs to be
 cut, he all besmeared the Walls of the new Mosques,
 and the Place which was appointed for the Moulla to
 perform divine Service, with the Blood; so that the King
 was forced to pull down that, and build another. After
 which the Prince, with some idolatrous Lords, stole out of
 the Island, and never since appeared at Court.

4. I departed from *Mingrela*, a great Town in the
 Kingdom of *Vissapour*, eight Leagues from *Goa*, the 14th
 of April, 1648, and embarked in a *Dutch* Vessel bound
 for *Batavia*. The Ship had Orders to touch at *Bokanour*,
 to take in Rice; whereupon I went ashore with the Cap-
 tain, to obtain Leave of the King to buy Rice: We
 found him upon the Shore, where he had about a Dozen
 Huts set up, which were covered with Palm-Leaves.
 In his own Hut there was a Piece of Tapestry spread un-
 der him; and there we saw five or six Women, some fan-
 ning him with Peacock-Feathers, others giving him Bee-
 tle, others filling him his Pipes with Tobacco.

The most considerable Persons in the Country were in
 the other Huts; and we counted about two hundred Men
 that were upon the Guard, armed only with Bows and Ar-
 rows: They had also two Elephants among them. 'Tis very
 probable that his Palace was not far off, and that he only
 came thither to take the fresh Air. There we were pre-
 sented with Tari, or Palan-wine, but very new, and not
 boiled: It caused the Head-ach in all that drank it, inso-
 much that we were two Days before we could recover it.
 I asked the Reason why the Wine came to do us so much
 Prejudice; to which they answered me, that it was plant-
 ing Pepper about the Palm trees that gave such a Strength
 to the Wine.

We were no sooner got aboard, but a mighty Tempest
 arose, wherein the Ship, Men, and Goods, had all like to have
 been cast away, being near the Shore; but, at length, the
 Wind changing, we found ourselves, by the Break of Day,
 three or four Leagues at Sea, having lost all our Anchors;
 and, at length, came safe to Port in the Haven of *Ponté*
 de Gallé, the Twelfth of May. I found nothing remark-
 able in that City, there being nothing but the Ruins made
 by the Underminings and Cannon-Shot, when the *Dutch*
 besieged it, and chased the *Portuguez* from thence.
 The Company allowed Ground to build upon, to them
 that would inhabit there, and Land to till; and had then
 raised two Bulwarks, which commanded the Port. It
 they have finished their Design which they undertook, the
 Place cannot but be very considerable. The *Dutch* had
 made an Agreement with the King of *Candy*, that he
 should be always ready, with twenty thousand Men,
 to keep the Passages that hinder the *Portuguez* from bring-
 ing any Succours from *Calante*, *Negemie*, *Manar*, or
 any other Places, which they possessed upon the Coast:
 In Consideration whereof, the *Dutch*, when they had ta-
 ken *Ponté de Gallé*, was to restore it to the King of *Candy*;
 which, they not performing, the King sent to know why
 they did not give him Possession of the Town; to which
 they returned Answer, that they were ready to do it, pro-
 vided he could defray the Expences of the War.

But they knew, that if he had three Kingdoms more,
 such as his own, he could never have paid so great a
 Sum. I must confess, indeed, th Country is very poor,
 for, I do not believe that the King ever saw fifty thou-
 sand Crowns together in his Life, his Trade being all in
 Cin.

Cinnamon and Elephants. As for his Cinnamon, he has no Profit since the *Portuguese* coming into the *East-Indies*; and for his Elephants, he makes but little of them, for they take not above five or six in a Year; but they are more esteemed than any other Country Elephants, as being the most courageous in War. One thing I will tell you hardly to be believed, but that which is a certain Truth, which is that when any other King or Rajah has one of these Elephants of *Ceylon*, if they bring them among any other Breed in any other Place whatever, so soon as the other Elephants behold the *Ceylon* Elephants, by an Instinct of Nature, they do them Reverence, by laying their Trunks upon the Ground, and raising them up again.

The King of *Achen*, with whom the *Dutch* also broke their Word, had more Opportunity to be revenged upon them than the King of *Candy*; for he denied them the Transportation of Pepper out of his Country, without which their Trade was worth little; his Pepper being that which is most coveted thro' the East, so that they were forced to make a Composition with him. The King of *Achen's* Embassador coming to *Batavia*, was strangely surprized to see Women sitting at a Table; but much more, when after a Health drank to the Queen of *Achen*; the General of *Batavia* commanded his Wife to go and kiss the Embassador. Nor was the King behind-hand with the *Dutch* Embassador another Way, whom the King beholding in a languishing Dilemper, asked him, whether he had never any Familiarity with any of the Natives? Yes, replied the Embassador; however I left her, to marry in my own Country: Upon that the King commanded three of his Physicians to cure him in fifteen Days, upon the Forfeiture of their Lives. Thereupon they gave him a certain Potion every Morning, and a little Pill at Night: and at the End of nine Days he took a great Vomit; every body thought he would have died with the working of it; but at length it brought up a Stopple of coarse Hair as big as a Nur, after which he presently recovered. At his Departure the King gave him a Flint, about the Bigness of a Goose-Egg, with Veins of Gold in it, like the Veins of a Man's Hand, as the Gold grows in that Country.

5. On the 24th of *May* we set sail from *Ponte Galle*. The second of *June* we passed the Line. The sixth we saw the Island called *Nuzacas*. The 17th we discovered the Coast of *Sumatra*. The eighteenth the Island of *Ingamra*; and the nineteenth the Island *Lortana*. The twentieth we were in ken of certain little Islands on the Coast of *Java*, among which Islands there are three called the Islands of the Prince. The twenty-first we discovered *Bantam*; and the twenty-second we anchored in the Road of *Batavia*. There are two Councils in *Batavia*, the Council of the Court, where the General presides, and where all the Affairs of the Company are managed: The other, which is held in a House in the City, and relates to Civil Government, and remedies the petty Differences amongst the Citizens. All the Kindness I had shewn me here, was to be prosecuted by the City Council, for being suspected to have bought a Parcel of Diamonds for Monsieur *Constant*, my very good Friend, and President of the *Dutch* Factory at *Gambony*; but when they could make nothing of it, they ceased their Suit, ashamed of what they had done.

Being thus treated at *Batavia*, I resolved to visit the King of *Bantam*; to which purpose I took my own Brother along with me, because he spake the *Malayan* Language, which in the East is as universal as *Latin* among us. Being arrived at *Bantam*, in a small Bark, which we hired for ourselves, we went first and visited the *English* President, who kindly entertained and lodged us. The next Day I sent my Brother to the Palace, to know when it would be feasible for me to kiss the King's Hands. When the King saw him (for he was well known unto him) he would not suffer him to return, but sent Orders to fetch me, and to tell me what, that if I had any rare Jewels, I should do him a Kindness to bring them along with me.

When I saw my Brother returned with the Persons which the King sent, I was almost in the mind not to have gone, remembering how the King of *Achen* had served the *Steur Renald*, for the *French* having set up an *East India* Company, sent away four Vessels, three great ones, and one of eight Guns, for the Service of the Company. Their

Voyage was the shortest that ever was heard of, arriving at *Bantam* in less than four Months. The King also courteously received them, and let them have as much Pepper as they desired, and cheaper by twenty in a hundred than he sold it to the *Dutch*; but the *French* not coming only for Pepper, sent away the small Ship, with the greatest Part of their Money to *Macassar*, to try the Market for Cloves, Nutmegs, and Mace. The *French* being so soon dispatched at *Bantam*, had not Patience to stay till the Return of the small Vessel which they had sent to *Macassar*; but to pass the Time, most needs run over to *Batavia*, being not above fourteen Leagues off; so that you may be at *Batavia* from *Bantam* in a Tide, with a good Wind.

When they came to an Anchor, the General of the *French* Fleet sent to complement the General of *Batavia*, who failed not to answer his Civility, and invited the *French* ashore. Moreover, he sent to those that stay'd aboard, a Store of excellent Cheer, and a good Quantity of *Port* and *Rhenish* Wine, with a particular Order to them to carry it, to make the *French* drunk. This Order was well followed, that it was easy to set the Ships on Fire. According to the private Instructions which they carry'd, soon as the Flame was discovered from the General's Window, which overlooked all the Road, there was a wonderful extended Astonishment amongst the *Dutch*; but the *French* Admiral, too truly conjecturing the Ground and Motives of the Treachery, beholding the Company with an undaunted Courage, Come, come, cried he, lets drink on; they that set the Ships on Fire shall pay for them. However, the *French* Ships were all burnt, though the Men were all saved in Boats, which were sent forthwith to their Relief. After that the General of *Batavia* made them great Offers, which they refused, and returned to *Batavia*, in Expectation of their small Vessel. When it returned, they could find out no better Way than to sell Ship, Goods and all, to the *English*, and to share the Money among themselves, every one according to their Condition.

7. But the Trick which they put upon the *English* was far more bloody. The *English* were the first that found out the Danger of sailing from *Surat*, *Mashapatan*, or any other distant Parts to *Japan*, without touching by the Way: Whereupon they thought it convenient to build a Fort on the Island of *Formosa*, which not only saved the Loss of several Vessels, but also brought them in great Gain. The *Dutch*, mad that the *English* were possessed of such an advantageous Situation, being the only Place in all the Island where Vessels could ride with Safety, and finding they could not carry it by Force, bethought them of a Stratagem, to which Purpose they sent away two Ships, whereon they stord the bell of their Soldiers, who pretending they had been in a Storm at Sea, put into the Harbour of *Formosa*, with some of their Masts by the Boards, their Sails scattered, and their Seamen seemingly sick.

The *English*, compassionating their Misfortunes, which was only in outward Appearance, invited the *Dutch* to come on shore to refresh themselves, which they were ready to do, carrying as many Men as possible to be ready under Pretence of Sicknefs. While the *Dutch* were at Dinner with the chief of the *English*, they drank out Cups, and when the cruel *Dutch* saw that the *English* had drunk hard enough, taking their Opportunity, they took a Quarrel with the Commander of the Fort, and snatched their Swords, which they had hidden under the Counters: that Purpose, they easily surprized, and cut off the Limbs of all the Soldiers in the Garrison, and being two Masts by the Fort, they kept it from that Time, till they were routed out by the *Chinese*.

8. Now for the Trick that the King of *Achen* served the *Steur Renald*, he having got a good Estate by Trade, arrived at length at *Achen*, and as it is the Custom for the Merchants to shew the King what Jewels they have, the King had no sooner cast his Eye upon his Jewels, when the *Steur Renald* shewed him, but he had had them in the hand Crowns for them, but *Renald* would not at all eighteen thousand. Now, because they could not get the *Steur Renald* carried them away with him, which was much displeas'd the King; however, he set for on the next Day, whereupon *Renald* returned; when the King paid him his eight thousand Crowns, but he was not

King, however, he set for
Renard returning to him, the King
housand Crowns, but he was

seen after that, and it is thought he was secretly murdered
in the Palace. This Story came to my Remembrance,
when I found my Brother did not come along with them
that were sent to fetch me. However, I resolved to go,
taking with me twelve or thirteen thousand Rupes Worth
of Jewels, the greatest Part being in Rose Diamond Rings,
some consisting of seven, some of nine, and some of eleven
Stones, with some small Bracelets of Diamonds and Rubies.
I found the King with three of his Captains, and my Bro-
ther, sitting together, after the Manner of the East, with
five great Plates of Rice before them of different Colours.
For their Drink they had Spanish Wine, Strong Waters,
and several sorts of Sherbets. After I had complimented
the King, and presented him with a Diamond Ring, a blue
Sapphire Ring, and a little Bracelet of Diamonds, Rubies,
and blue Sapphires, he commanded me to sit down, and
ordered me a Glass of Strong Water, to whet my Appetite.
The Gals held a Quarter of a Pint, and therefore I refused
it, which the King very much wondered at; but being told,
by my Brother, that I never drank any Strong Water, he
ordered me a Glass of Sack. After that he rose up and
seated himself in a Chair, the Elbows of which were gilded;
his Feet and Legs were bare, having a Persian Carpet of
Gold and Silk to tread upon. He was clad with a Piece
of Calicut, part whereof covered his Body from his Waist
to his Knees, the rest being wound about his Back and
Shoulders like a Scarf. Instead of Shoes he had a Pair of
Sandals that stood by the Chair-side, the Straps whereof
were embroidered with Gold, and small Pearl. About his
Head he had a thing like a Handkerchief, with three Cor-
ners, bound about his Head like a Turban. His Hair also,
which was very long, was twisted, and tied together over
his Head; two Persons stood behind him with Fans of
King Peacock Feathers, the Handles of which were five or
six Foot in Length. Upon his right Hand stood an old
black Woman, holding in her Hand a little Mortar and
Pelle of Gold to beat his Beete in, wherewith he mixed
the Kernel of the Nut of Araque, and Seed of Pearl dis-
solved. When it was all beaten together, the old Woman
gave it the King over his Shoulders, who, opening his
Mouth, the old Woman fed him, as our Women do their
Children; for the King had chewed too much Beete, and
taken too much Tobacco, that his Teeth were all taken out
of his Head.

o. The King of *Bantam*'s Palace was never built by any
curious Architect: It is a square Place, encompassed with
a great many Pillars, varnished over with several sorts of
Colours, against which the King leans when he sits down.
At the four Corners there are four great Pillars set in the
Earth, at forty Foot Distance one from another, but with
a Mat made of the certain Kind of a Tree, for that, that it
looks like a Piece of Linnen, which neither I nor our Panes
was come near. The Roof was covered with Cocoa Bran-
ches. Not far off, under another Roof, supported by
four great Pillars, he hath sixteen Elephants, the number of
soldiers that are in the King's Service, for he has a far
greater Number trained up for War, that are not afraid of
Wind-fire. For his Guard he might not have above two
thousand Men that were drawn up in Companies under the
Shade of the next Trees. They are good Soldiers, as well
on Sea as by Land, but *Mcammedans*, and find not at
all Fear of Death. His Haram, or the Womens Apart-
ment, was certainly a very small Place; for when he had
viewed what I brought him, he sent for two of his Women,
to whom he gave some of the Jewels to go and show them
to his Wives. The two Women returned back through
a little pitiful Door, the Entrance being nothing but a
kind of a Wall made up of Earth and Cow-dung made
together. Whatever he sent to the Women, they never
brought any thing again, which made me believe they
would bear a good Piece, and indeed, whatever I told to
him, I had to good Profit, and had my Money well paid

After this we took our Leaves; but the King obliged us
to come next Day in the Evening, because he had a Desire
to show us a Turkey Dagger, the Hilt whereof being thin
of Diamonds, he had a mind to enrich with more Stones.
Coming to the *English* House with our Money, they won-
dered at the King had laid out twenty thousand Rupes,

telling me, they believed it was the best Part of his Treas-
ure. The next Day my Brother and I went to wait upon
him at the appointed Hour, and we found him sitting in
the same Place where he sat before. There was a Moulla
then read to him, who seemed to interpret to him some-
thing of the *Alcoran* in the *Arabic* Language.
The Lecture being ended, they both rose and went to
Prayers, which being concluded, the King sent for the
Dagger, and the Hilt, which was of Gold; the Top of
the Handle was already set with Diamonds, and the upper Part
of the Cross-bar was cut in Facets, which could not be less
worth than fifteen or sixteen thousand Crowns. They told
me it was presented to him by the Queen of *Borneo*, and
that it was cut at *Goa*, but that he put a far higher Value
upon it than I esteemed it to be worth. The Dagger, as
well as the Sheath, was full of Beazells or Collects, and
therefore desired me to help him to some that might come
at an easy rate. I told him it was impossible to find Stones
that would fit the Beazells, and therefore it was better, when
he had got Stones enough, to fix other Beazells according
to the Proportion of the Stones; to which Purpose he must
be forced to range all his Stones in Wax, and I showed
him how to do it at the same time; but that was above his
Skill, and therefore do what I could to excuse myself from
the Truth, he would needs oblige me to carry the Dagger
to *Batavia*; wherupon I took my Leave of the King,
and departed.

10. About eleven o'Clock at Night we embarked for
Batavia, for the Night Winds blowing from the Land,
are the only Winds to serve our Turn, so that we were at
Batavia between ten and eleven the next Morning. There
I stayed twenty Days for the King of *Bantam*'s sake,
to make him believe I had fought for that which I knew was
impossible to be found. I had nothing to do all the while,
for in *Batavia* there is no other Recreation but Gaming and
Drinking, which was none of my Business; at that Time
the *Seur Com* died, one of the *Indian* Counsellors, who
was sumptuously buried for his good Services done to the
Company; but the People complained heavily of the In-
justice which he had done, as well to the Soldiers, as the
Mariners.

Having stayed twenty Days at *Batavia*, I resolved to go
and return to the King of *Bantam* his Dagger again, for that
it was impossible to meet with Stones to fit his Beazells.
However, I took along with me some other Stones, which
he had not seen. Coming to *Bantam*, the King caused us
to be lodged in one of his own Houses in the City, which
was made of Bambous; thicker, in less than a Quarter of
an Hour, the King sent us some Pateches, or sweet Water
Melons, red within like Scarlet. We had also Mangoes,
and a certain large Fruit called Pompons, red also within,
the Meat of it being soft and spongy, but of an excellent
Taste. Having stayed our Stomachs, we went to wait
upon the King, whom we found in the same Place with his
old Mortar beater, who every Minute fed him with Beete
with her Fingers. There were sitting about the Hall five
or six of his Captain, viewing a certain Piece of Fireworks,
as Gramadoes, Rocket, and other Devices, to run upon
the Water, which the *Chinese* had brought, who are the
most exquisite at these Works of any People in the World.
When the King was at leisure, I returned him his Dag-
ger, telling him, *Batavia* was no Place to meet with Stone,
and that such as were to be found were valued at double
the Price they were worth; and that there was no Place
where he could fit himself, but at *Gokonda*, or *Goa*, or the
Diamond Mines. Therupon the old Woman took the
Dagger, and carried it into his Haram, where she the King
spoke a Word more about it, after that I had showed him
what other Stones I had brought, a Parcel whereof I sold
him for good Profit.

The King ordered us to come the next Day for Pay-
ment. The next Day, about six in the Morning, my Bro-
ther, and I, and a *Dutch* Chirurgian, were going along a
narrow Way between a River on the one Hand, and the
Pales of a great Garden on the other. Behind the Pales a
rally *Bantam*'s had hid himself, one of those that was
newly come from *Meca*, and was upon the Dagger of
Meca; that is, in their Language, when the Rascality
of the *Mcammedans* returned from *Meca*, they presently
take

take their Cris in their Hands, which is a kind of Poinard, the Blade whereof is halt poisoned, with which they run through the Streets, and kill all those that are not of the *Mohammedan* Law, till they are killed themselves.

These Furies think, in so doing, they do God and *Mohammed* good Service, and shall be saved thereby. If any of these Madmen be killed, the Rabble of *Mohammedans* bury them as Saints, and every one contributes towards making them a fair Tomb. Sometimes you shall have an idle Rogue, in the Habit of a Dervich, that will build him a Hut near the Tomb, which he undertakes to look to, and strews with Flowers; and, as his Alms increase, he adds some other Ornaments to it; for the larger and better set out the Tomb is, the more devoutly it is worshipped, and the more what it brings in.

I remember in the Year 1642, that at *Szualli*, which is the Port of *Surat*, it happened, that a Vessel of the great Mogul's returned from *Meca* with a great Number of Faquirs or Derviches, for every Year the King sends two Vessels to carry and bring back the Pilgrims, who have their Passage free, and when these Vessels are to go, the Faquirs come from all Parts of *India* to embark. These Vessels are laden with very good Commodities, which are sold at *Meca*, and the Profit is distributed among the poor Pilgrims; but the Principal is brought back for the next Year, amounting to six hundred thousand Rupers at least. 'Tis an ill Market wood they do not gain thirty or forty per Cent. by their Commodities; nay, there are some that produce *Cent per Cent.* besides that the principal Persons of the Mogul's House, and other particular Persons, find very large Gains at *Meca*.

11. One of these Faquirs returning from *Meca* in the Year 1643, and being landed at *Surat*, had no sooner said his Prayers, but he took his Dagger, and ran among several *Dutch* Mariners that were unloading Goods upon the Shore, and before they were aware, this mad Faquir had wounded fifteen of them, of which thirteen died. The Cause, which he had in his Hand, was a kind of Dagger, the Blade whereof, towards the Handle, was three Fingers broad, and is a very dangerous Weapon. At length the Captain cut it in two at the End of the Tent, where the Governor and the Merchants were, shot him through the Body, so that he fell down dead. Immediately all the other Faquirs and *Mohammedans* that were upon the Place took up the Body, and buried it, and at the End of fifteen Days they put him up a fair Monument. Every Year the *English* and *Dutch* pull it down; but when they are gone the Faquirs set it up again, and plant banners every where. Nay, some there are that perform their Devotions to it. But to return to the *Bantam* Faquir, that villain lying, as I said, behind the Pales, as my Brother, and I, and the *Dutch* Chargeant, came towards him, all three a breath, he thrust his Pike between the Pales, thinking to have established it into one of our Breasts. The *Dutchman* being next the River, and somewhat before the rest, the Head of his Pike ran into his Breach, whereupon we both laid hold of the Staff, but my Brother being next the Pales, presently leaped over, and ran the Faquir through.

Whereupon several *Chingis*, and other Idolators, came and gave my Brother Thanks for killing him; after that we waited upon the King, and told him what my Brother had done, who was so far from being displeas'd, that he gave my Brother a reward. For, the King and his Governors are glad when these Rogues are killed, knowing them to be Disorderous, not fit to live. The next Day coming to take my Leave of the *English* President, he shewed me two Strings of Diamonds, and two Services of Silver, which came from *England*; he would have sold them, but I only bought one of the Strings of Diamonds, the other being false; and for the Silver I would have bought it, had they come to *Silver* in *Java*, as they were wont to do. Formerly the *Dutch* count Reals, Half Reals, and Quarter Reals, bearing on the one Side the Stamp of a Ship, on the other V. O. C. like a Character, signifying in *Dutch*, for the East India Company, which they did for the sake of the *Comptroler*, who having Silver better than Gold, carried away all the Silver that was coined at *Batavia* at good Rates; but at length they left it off, binding to few People that made use of Silver.

12. Having taken my Leave of the *English* President, I returned to *Batavia*, where, having little to do, I resolved to give a Visit to the King of *Japara*, otherwise called the Emperor of *Java*. This King was formerly the King of all the Island, till the King of *Bantam*, who was only Governor of a Province, rebelled against him, the *Lutch* being made by the Division of these two Princes; for when the King of *Japara* besieged *Matara*, the King of *Bantam* relieved the *Dutch*; and when they were attacked by the King of *Bantam*, the King of *Japara* came to their Assistance; and when both two Kings were together by the Ears, the *Dutch* being the weakest. The King of *Japara* keeps his Capital City of the same Name, distant from *Batavia* about five Leagues. You may coast along the Shore to it by Sea, but the City stands above eight Leagues up the Land. From the City there is a fine Walk to the Sea, where there is a handsome Park, and three Houses than any in the City, and the King would live there if he thought fit.

The Day before I departed, I went to take a Piece of one of the *Indian* Councils, and telling him that I was going to wait upon the King of *Japara*, he told me, in regard the King and the *Dutch* were mutually at War, which he gave me this Account. The late King, Father to the King that now reigns, since the *Dutch* besieged their Fort of *Batavia*, would never have a Peace with them; and though that, during the War, he took ten of his Subjects for one of the *Dutch*, and gave them one in Exchange, yet he would never exchange with any Condition whatsoever, and carried off his *Dutch* Soldiers, never to recede from it. The *Dutch* were very much troubled the *Dutch* General, and sent him to *Batavia*, and obliged them how to comfort themselves. Now it is the Custom when a *Java* King dies, that his Successor, on his returning, sends his Court to *Meca*, with Presents, as well as to come to pray for the Soul of the deceased, and to give Thanks to God and *Mohammed* for the coming of a new King to the Throne, without any Impediment to pray for the Blessing of Victory over all his Enemies. But the new King and his Council were at a Loss how to accomplish this Voyage; for, first, the King had but little Vessels, that were wont only to be used by the Shore, by reason of the Inexperience of the *Indians*; and, in the next Place, the *Dutch* were always pressing and troubling the Mouths of his Haven, so much so that they durst not go. For the sake of his Pilgrims, the King, at last, concludes a Peace and Agreement with the *English*; for which is sent the present day an Envoy to *Batavia* to the *English* President and his Council, who proposed to him to send a *Dutch* Vessel, and the best mounted when the *Indians* in the *Indies*, in lieu whereof the *English* would have Custom for all Commodities exported out of his Country; which Treaty being concluded, the *English* furnished him with three stout Vessels, and a small one beyond an ordinary Rate.

Thereupon one of the principal *Indians* of the Court, and most of the Wood Royal, with a thousand or more hundred Persons, embarked themselves in the *English* Vessel. But all these Preparations could not be accomplished, save by but that the *Dutch* had Intelligence of the *English* Spies. The King, the General of the *Dutch* Ships, and three Ships, and being full in the Strait of *Batavia*, as soon as the *English* came up (for they had no other way to let fly at them so roundly, that the *English* Vessels should be sunk, struck full, and the *English* Lords being, called them *English* Traitors, and showed their poisoned Darts, cried a *Mora* upon the *Dutch*, killing a great Number of them before they could put themselves into a Posture of Defence, and others there would not have one of them escape, had not the *Dutch* come on board as they did: Some of the *English* Lords, and about twenty of their Attendants, would have no Quarter, so that the *Dutch* were forced to retreat, and, at last, they got the better, with the Loss of six or eight Men.

The *English* Vessel being carried into *Batavia*, the General very civilly sent both the Prisoners and the

leave of the English President, here, having little to do, I re-
 ceive of the King of Japara, otherwise

home again, withal giving Notice to the King, that he was ready to make an Exchange of Prisoners with him; but the King would not so much as hearken to any such Proposition, returning for Answer, that though the Dutch had three times as many of his Subjects, he would not so much as release one of the Dutch; so that the poor Dutch were kept Slaves in Java, and the Javaese died miserably in Batavia. As to the Javaese, they are good Soldiers; and it is reported, that while Batavia was besieged by the King of Bantam in the Year 1659, a Dutch Soldier lying in Ambuscade in a March, a Javaese, little dreaming that any Body had been there, came to this same Place to discover the Enemy, and was by the Dutchman thrust with his Pike into the Body; upon which the Javaese finding himself wounded, did not strive to quit the Pike out of the Body, but thrust himself farther upon it, to the End he might come at his Enemy, whom he stabbed to the Heart as soon as he came within his Reach.

13. Whilst I stayed at Batavia, my Brother died, and it was pretty to consider what the Dutch made me pay for his Funeral. The first Expence is for the Fees of those that buy Leave for the Corps to be buried, of whom the more there are, the more honourable the Funeral is cleaned, I sent six, and, to my Wonder, paid for that twenty-two Crowns. The Fee for the Poor is a Right belonging to the Poor, for which I paid two Crowns. There was a Vessel of Spanish Wine drank out that cost me two hundred Pistoles; I gave twenty-six more for three Hogsheads of Ham and Neats-tongues, and twenty two for three Measures, to the Bearers, I gave twenty Crowns, and sixteen for a Place in the Church-Yard, for they asked me an hundred to bury him in the Church. And all these are Fees demanded; so that my Brother's Funeral cost me twelve hundred and twenty three Livres of French Money. Being thus put off the two Voyages which I intended to Japara, and Samarang, I was advised to lay out my Money in Debentures, or Debetures, of the Servants of the Dutch Company, which they say that have no mind to return into their own Country, as being settled in the Indies, will sell at an easy Rate, in-tantum that for sixty or seventy, you may buy an hundred Pistoles, the Act and Acquittance of the Seller being made and registered by the publick Notary.

Thereupon I bought of one of the publick Notaries, who had Bills in his Hands to the Value of about eleven hundred Guilders, at fourscore and two for the hundred. After that I bought, by means of the Advocate of the Treasury, six thousand Guilders more at seventy nine for the hundred. But some few Days after, meeting with the same Advocate again, he passed a Complaint upon me, and told me he was very much troubled for that: that had bought Debetures, in regard that the General and the Council had commanded him to recall all Debetures that had been sold; for they had considered how bad a Thing it would be for the poor Men to lose so much of their Estates; I answered him, that, for my Part, I was willing to return mine, provided I might have my Money again.

About six or seven Hours after, I was sent for by the General and the Council, when I came there they asked me why I had not returned my Debetures which I had to the Advocate, who had demanded them, by their Order? I answered them, that they were at Bantam, which I had sent them in order to my Palace home, in regard that the English President had offered me a Commission to go along with him. The Council answered me, that the Dutch Ships were as good as the English, and very certainly assured me, that they would give Orders for a Cabin to myself in the Vice-Admiral; but withal told me, I must deliver up my Debetures before I should, at- tending me they would give me a Bill to reimburse my Money in Holland. I thought it very hard, not knowing how to trust them, but seeing the Merchants, Commanders, and all other Persons, clapp'd up, and their Papers taken from them by Force that had bought Debetures, I thought it the best Way to deliver mine, and stand to their Counte-y. I often pressed the General and the Council for my Bill; but, after many Days, the General ac- quainted me, that my Bill should be in Holland as soon as I. Thereupon desiring the Vice-Admiral, and some others, to

be my Witnesses of what the General promised, I took my Leave of him, very much repenting my going to Batavia.

14. The next Day I went on board the Vice-Admiral; and, the third Day after, we set sail, and as soon as we were out of the Streights, we discovered the Island of the Prince, from thence, being in the Altitude of the Cocoa Islands, we beat about two Days to discover them, but all to no Purpose; thereupon we made directly for the Cape of Good Hope. The twenty fifth Day after we departed from Batavia, our Vice-Admiral neglected to put out his Lights, believing all the Fleet had been before at the Cape; so that it happened one of the Fleet being behind, and not carrying any Lights out neither, it being a dark Night, fell foul upon us, which put every Man to his Prayers, all the People believing the Vessel had been lost; and indeed had the not been a board staunch Ship (as she was esteemed to be) she could never have endured so terrible a Shock. At length we cleared ourselves by cutting off the Yard of the *Magistrate* that hung in our Cor- dage. The thirty fifth Day we came within Sight of the Cape of Good Hope, but were forced to keep the Sea, be- cause the Waves roiled so that we were not able to come to an Anchor; not that the Wind was extremely high, but because the South wind, which had blown, had forced the Water to that Part; when the Sea grew calm we came to an Anchor.

But of all the People that ever I saw in all my Travels, I never met with any so hideous, nor so brutish, as the Com- macks, of which I have spoken in my *Person Travels*, and those of the Cape of Good Hope, whom they call *Crozes*, or *Isotrozes*. When they speak, they make a Noise with their Tongues like the Roaring of Wind-bellwinds, and though they hardly speak articulately, yet they easily understand one another. They cover their Faces with the Skins of wild Beasts which they kill in the Woods, in the Winter wear the hairy Skins immediately, and in the Summer out-side; But there are none but the best fort among them who are thus clad; the rest wear nothing but a naked Rag about their Privy-parts. The Men and the Women are lean and short, and when they bring forth a child, their Mothers cut out the Right-flone, and presently give him Water to drink, and Tobacco to eat. They cut out the Right-flone, because they say, it makes them twister to run. There are some of them that will catch a Roe-back running. They neither know what belongs to God nor Devil; and, for Religion, they have none among them.

15. So soon as we call Anchor, four Women came on board of us, and brought four young Oulrichs, which were boiled for some Black People we had aboard of us; after that they brought great Store of Tortoise-shells, and Oulrichs-Eggs, and other Eggs, as big as Geese-Eggs, which, tho' they had no Yolk, tasted very well. The Birds that lay these Eggs are a sort of Geese, and so fat that they are hardy to be eaten, to begeth a five Fish than I do. The Women being our Cook throw away the Guts of two or three Foxes, which he was aniling, took them up, and, repeating out the Order, put them as they were, being so highly pleased with the *Levee* which the Captain gave them. Neither Men nor Women are ashamed to show their Nakedness; indeed, they are but a sort of two-legged Beasts.

So soon as a Ship arrives, they bring their Beavers to the Shore, with what other Commodities they have, to barter for Strong-water, and Tobacco, Cryll, or Agit Balls, or any sort of old Iron-work. If they are not satisfied with what you offer them, away they fly, and then giving a Whistle, all their Cattle to buy, and nor shall you ever see them run. Some, when they buy them, they would shoot and kill their Cattle; but, after that, for many Years, they would not bring any more. 'Tis a very great Convenience for the Vessels that touch there, to take in fresh Victuals, and the Dutch did well to build a Fort there. It is now a good hand-some Town, inhabited by all sorts of People that live with the Dutch; and all sorts of Grain which are brought out of *Indy*, or *Java*, and sowed there, come to greater Perfection than in other Parts. The Country lies in 35° and some few Minutes over, to that

It cannot be said that either the Heat, or the Situation of the Climate, make these *Cafres* to black. Being desirous to know the Reason, and why they stunk so terribly, I learnt it from a Girl, that was bred up in the Fort, who was taken from her Mother as soon as she was born, and was white, like our Women in *Europe*: She told me, that the Reason was, because the *Cafres* rub themselves with a Grease, or Ointment, composed of several sorts of Drugs, wherewith should they not anoint themselves very often, and to soon as they were born, they would become hydroptical, as the *Black* of *Africa* and the *Abyssinians* are, or like the People of *Saba*, that never live above forty Years, and are always troubled with one Leg twice as long as the other. These *Cafres*, as brutish as they are, have yet some Knowledge of Surples, when they know how to apply to several Diseases, which the *Dutch* have several times experienced. Of nineteen sick Persons that we had in our Ship, fifteen were committed to the *Cafres*, being troubled with Ulcers in their Legs, and old Wounds which they had received in the Wars; and, in less than fifteen Days, they were perfectly cured. Every one of these had two *Cafres* to look after him, and according to the Generation of the Wound or Ulcer, they went and rubbed Sopses, which they bruised between two Stones, and applied to the Sore. As for the other four, they were to far gone with the Poix, that they would not trust the *Cafres* with them, having been given over at *Batavia*, and so they all died between the Cape and *Saint Helena*.

In the Year 1691, a Gentleman of *Britanny*, being at *Batavia*, was taken by the *Comas* in the Night, that his Leg was cut off presently, in such a Manner as to puzzle all the Art and Skill of the Chirurgeons of that Town. When he came to the Cape of Good Hope, the Captain of the Ship, knowing him on Shore, the *Cafres* came about him, and after they had beheld him, they told him, if he would trust to them, they would cure him; the Captain therefore committed him to their Care, who cured him, and made him a sound Man in less than fifteen Days. When a Ship comes to an Anchor in the Cape, it is the Custom for him that commands the Ship, to give Leave to some Part of the Mariners and Soldiers to go ashore to refresh themselves. The sickly have first Leave by Turns, and go to the Town, where they are dieted and lodged for seven or eight Sours a Day, and are very well used. It is the Custom of the *Dutch*, when they stay here, to send out Parties of Soldiers upon the Discovery of the up land Country, and they that go farthest are best rewarded. With this Design a Party of Soldiers, under the Command of a Sergeant, far advanced in the Country, and Night coming on, they made a great Fire, as well to keep themselves from the Lions, as to warm themselves, and to lay down to sleep to and about it; being asleep, a Lion perceived the Soldier's Arms, which the Sergeant perceived, immediately shot the Lion with his Carbine; but, when he was dead, they had much ado to open the Lion's Mouth to get out the Soldier's Arm.

This it appears a very great Error, to think that Lions will not come near the Fort. As for the Soldier, the *Cafres* cured him in twice Days. There are in the Fort abundance of Lions and Tygers Skins; among the rest, there was the Skin of a Horse, which the *Cafres* had killed; it was white, or of a black and white Streak, spotted like a Leopard, without a Tail. Two or three Leagues from the *Dutch* Fort, there was a Lion found dead, with four Portuguese Quills in his Mouth, the third Part whereof had pierced his Belly; so that it was judged that the Portuguese had killed the Lion. The Skin, with the Quills in it, are kept at the Fort. A League from this Fort is a fair Town, but grows upger every Day.

When the *Dutch* Company arrive there with their Ships, if any Soldier or Munner will live there, they are glad of it. They have as much Ground as they can manage, where they have all sorts of Herbs and Pulse, and as much Rice, and as many Grapes, as they can desire. They have also young Oulches, Beef, Sea-tith, and sweet Water to catch the Oulches when they please; they get their Nells when they are young, and driving a Stake in the Ground, viz. the Birds by one Leg to the Stake, and when they are old

enough, they come and take them out of the Nest, from whence it is impossible to fly away. When the *Dutch* began to inhabit the Cape, they took a young Girl from her Mother as soon as she was born; she is white, only her Nose is a little flat. A *Frenchman* got her with Child, and would have married her; but the Company were so far from permitting him, that they took away above one hundred Lwys of the Maid's Wages from her, to punish her for the Misdemeanor, which was somewhat hard.

There are great Numbers of Lions and Tygers, which the *Dutch* have a pretty Invention to take; they taking a Carbine to a Stake driven into the Earth, and lay Meat round about the Gun, which Meat is fastened with a String to the Trigger, so that when the Beast touches the Meat, the String pulls the Trigger, and the Gun goes off, and the Lion either in the Throat or Breast. The *Cafres* feed upon a Root like our Carrots, which they roast, and make Bread of. Sometimes they grind it into Flour, and then it tastes like a Walnut; for their Food they eat the same Root raw, with raw Flesh, and with the Bones of Beasts, out of which they only squeeze the Ordure. As for the Bowels of the wild Beasts, the Women wear them round about their Legs, especially the Bowels of those Beasts whose Husbands kill, which they look upon as a kind of Ornament.

They also feed upon Tortoules, when they have fore heated them at the Fire, as to make the Shell come out. They are very expert in darting their Arrows, and make that have none make use of pointed Sticks, which they will lance a great way; with these they pass over to the Sea side, and as soon as ever they spy a Fish in the Top of the Water, they will not fail to strike him. As for our Birds, which are like our Ducks, whose Eggs are without any Yolk, they breed in such great Quantities in the Country, that in a Bay, about eighteen Leagues from the Cape, you may knock them on the Head with a Stick. The *Dutch* once carried a young *Cafre* to the General at *Batavia*, who bred him carefully up, teaching him to understand the *Dutch* and *Portuguese* Languages pretty well. At length, being desirous to return to his own Country, the General gave him very good Cloaths, and good Money, hoping that he would have lived among the *Dutch*, and have been serviceable to them in the Discovery of the Country; but to soon as he got home, he flung his Cloaths into the Sea, and returned wild among his fellow Natives, eating raw Flesh as he did before, and quite forgetting his *Batavian* Days.

When the *Cafres* go a-hunting, they go in great Numbers together, and make such a prodigious Noise, as to yell, that they fright the very Beasts themselves, so that although with hale desirous, and a well assured, that their Cries terrify the Lions, and that the Women are of to put a Constitution of Blood, and of the Times, their monthly Customs are upon them, they happen to make Water, and that an *European* who had bet his Leg upon it, it causes an immediate Fever, which many times turns to the Stone.

16. Having Stayed twenty-two Days at the Cape of Good Hope, being that the Wind was favourable, we set our Anchor, and departed for *Saint Helena*, when we were with Sail, the Mariners cried out, they would not go to the Cape into *Saint Helena* Road, for the Wind is very variable, and carries you in sixteen or eighteen Days to the Cape of Good Hope. All the Trouble that our Mariners had was, that in sixteen Days after our Departure from the Cape, they were often forced to the Top-mast Head, and that the Wind of the Land, as soon as you discover the Island, the Pilot must take care to Bear to the North, and to the West, because there is no calling Anchor but on the South side of the Island, and that very near the Shore too, for the great Depths of the Water; for if the Anchors come to the Bottom, they take hold, the Current of the Water, and the Wind comes to the Ship quite out of the Road, which there is no recovering again, because the Wind never changes.

So soon as the Ship came to an Anchor, Part of the Sailmen were sent on Shore to get wild Hogs, of which there are great Plenty, and to gather Sorrel, which grows in great abundance; and indeed they not only got the Sorrel, but all the Pigs, Sheep, Geese, Ducks, and Pullets,

them out of the Nest, from way. When the *Dutch* began a young Girl from her Mother is white, only her Nose got her with Child, and would Company were far from prying above one hundred Livres, to punish her for the Mistake hard.

of Lions and Tygers, which intention to take; they take a to the Earth, and lay Meat Meat is fattened with a strong the Beast catches the Meat, and the Gun gives him hit or Breast. The *Cafres* feed, which they roast, and make grind it into Flour, and then their Food they eat the bread with the Embras of Beans, the Ordure. As for the Women wear turn round the Bowels of their Baskets look upon as a kind of Ornaments, when they have for to make the *Sun* come on, and their Azarwas, and note painted Sticks, which they with these they proceed to do they spy all the night, and to strike him. As for our necks, whose Fingers are without great Quantities in the Counteeen Leagues from the Cape, the Head with a Stick. The *Cafre* to the General at *Madagascar* up, teaching him to understand Languages perfectly without return to his own Country, good Cloaths, and good Land, lived among the *Dutch*, and them in the Discovery of the got home, he found his Cloath wild among his fellow Natives before, and quite forgetting us

unting, they go in great Numbers a prodigious Hunt, and the very Beasts they kill they destroy them; and I have seen many of the Lions themselves, and the multitude of Beasts, the Customs are upon the Island that an *Europe*an is an immediate Execution turns to the Prisoners, and by two Days after the Wind was favourable, when *St. Helena*, when they were there, they would sleep, and the Wind is very favourable, and eight Days to the *Dutch*, and our Mariners were ready to Departure to a *Crab*, and a small Head, upon which as you did recover the *Island* to the North, and the *Anchor* but on the morning the shore too, and we got out for it the Anchors come from the Water and the *Yankee* Row, which there is to recover the Wind never changes, and to an Anchor, Part of the Sea get wild Hogs, of which they gather Sorrel, which grows, and feed they not only eat the *Star* rep, Geese, Ducks, and Pullets

board, to feed upon this Sorrel, which purged them in such a manner, that in a few Days they became so fat, that by that Time we came to *Holland* they were hardly to be eaten. That Sorrel has the same Operation upon the Men, who boiling their wild Swines-Flesh, Rice and Sorrel together, make thereof a kind of Potrage, so excellent, that it keeps their Bodies open, by an insensible Purgation. There are two Places upon the Coast of *St. Helena* where Sips may come to an Anchor; but the best is that where we lay, by reason the Ground is very good, and because the Water that falls from the Mountains is the best in the Island. In this Part of the Island there is no Plain, for the Mountain descends to the very Shore of the Sea. It is not so good anchoring in the other Road; but there is a very handsome Plain, where you may tow or reap whatever you please. There are great Store of Citrons, and some Oranges, which the *Portuguese* had formerly planted there; for that Nation have that Virtue, that wherever they come they make the Place the better for those that come after them, whereas the *Dutch* endeavour to destroy all things wherever they set Footing. I confess the Commanders are not of that Humour; but the Seamen and Soldiers are, who cry one to another, we shall never come here any more, and, out of Greediness, will cut down a whole Tree instead of gathering the Fruit.

Some Days after their Arrival, came in a *Portuguese* Vessel from *Guinea*, full of Slaves, who were bound for the Mines of *Pera*, some of the *Dutch* that understood the Language of the Negroes, told them how miserably they would be used, and thereupon the next Night two hundred and fifty of them threw themselves into the Sea; and indeed, it is a miserable Slavery; for sometimes after they have undressed some Places for some Days together, the Earth being loose, falls down, and kills four or five hundred at a time; besides that, when they have been nining a-while, their Faces, their Eyes, and their Skins change Colour, which proceeds from the Vapours that arise from those Concavities; nor could they subsist in those Places, but from the Quantity of strong Water which they give both to the Men and Women. There are some that are made free by their Masters, who labour, however, for their Living; but between *Saturday* Night and *Monday* Morning, they spend all their Wages in strong Water, which is very dear, so that they always live miserably.

Being ready to depart the Island of *St. Helena*, the Admiral called a Council, to advise which Way to steer; the greater Part were for steering more to the West than to the South, because the Season for sailing was far spent; and for that, if we steered towards the *North*, we should find the Wind more proper to carry us into *Holland*; but we had no sooner passed the Line, but we found the Wind quite contrary to what the Mariners expected, so that we were forced to steer to the sixty fourth Degree of Altitude with the Island, and to return by the North into *Holland*.

The next Day after the Admiral had called a Council, we weighed Anchor, and set Sail about ten o'clock at Night. Three Days after our Departure from *St. Helena*, the Seamen were called very duly to Prayers Morning and Evening, though all the Time we layed in the Road they never minded any such Matters, which made me wonder to find they should be more devout when they were out of Danger than when they were in Jeopardy. After several Days sailing, we discovered the Coast of *Island*, and then the Island of *Yotella*, where we joined with the *Dutch* Fleet that layed for us. Here it is that the Commander in chief calls to an Account all the Mariners for their Misdemeanors during the whole Voyage. Our Ship was bound for *Batavia*, but we were forced to lie out to Sea seven Days before we could get into *Amboyna*, before the Sand had changed its Place.

Coming to an Anchor before *Amboyna*, two of the Directors of the Company came aboard to welcome us home, and to advise us to lock our Chests, and put our Marks upon them; for all Chests are carried into the *Dutch-India* House, where when the Owners come for them, they are ordered to open them, lest they should have any contraband Goods therein; thereupon I set a Mark upon my Chests, and went ashore, after I had given a good Character of the Captain,

and his Civility to me all the Voyage, and thence proceeded by Land to *Middleburgh*.

Four Days after I came to *Middleburgh* I went to fetch my Chests, and finding the two Directors there, one a *Zealander*, the other of *Horn*, who came first aboard us, I produced my Keys, and offered the Chests to be opened; but the *Zealander*, more civil than the *Horn*, delivered me my Keys again, and taking my Word, told me, I was free to take away my Goods; and indeed, I have ever observed that the Northern People are always more rude and ungentle than the Southern. As for the seventeen thousand five hundred Florins which the General of *Batavia* promised me should be paid me upon my Arrival in *Holland*, I received so many Delays and Put-offs, that I was at length forced to commence a Suit that lasted two Years; nor could I get a publick Notary, either at *Amsterdam*, or the *Hague*, that would make me out a Protest, every one fearing the Directors, who were both Judges and Parties. At length, after five Years wrangling and jangling, the Director wrote to my Brother at *Batavia* (for I was then again returned to the *Indies*) that if I would accept of ten thousand Livres, he might receive it for me, which he did, and I was forced to give an Acquittance for the whole.

This is the Return which I made from the *Indies* in the Year 1649, and the only time that ever I returned by Sea, having performed all the rest of my Travels by Land, not counting my short Voyages through the *Mediterranean* for any thing; and as for my first Travels, I performed them all by Land from *Paris* through *Germany* and *Hungary*, as far as *Constantinople*, whither I returned again in the Year 1660. From *Constantinople* I went to *Smyrna*, thence I sailed for *Leghorn*; from *Leghorn*, I travelled by Land to *Genoa*, thence to *Turin*, and so to *Paris*.

The perfect Acquittance which our Author had with all the Customs of the *Indians*, exposed him to a great Number of Enquiries on his return home; and he was very often pressed, not only by the most considerable of the *French* Ministers, but even by the King himself, to put the Answers he gave to those Enquiries into Writing; and these were afterwards reduced under several Heads, and now make the several Chapters in his Travels; and this Account of them may serve to reconcile the Reader to the seeming Incoherency of those Discourses. Among these there is one more remarkably curious in relation to the Custom that still prevails in the *Indies*, of Women burning themselves on the Demise of their Husbands, and also of Mens submitting voluntarily to Death, upon extraordinary Occasions. This Dissertation, as I judged it, could not but be very agreeable to the Reader, and at the same time instructive. I thought it not amiss to add here at the End of his Travels, the rather, because it has no sort of Connection with any Part of his Relation, but is, as I observed before, a separate Discourse upon that particular Subject, in which he has related what occurred to him thereon during his long Stay in the *Indies*, which renders it more perfect in its kind than any thing I have ever met with on the Subject; and therefore I have given it at large, and entirely in the Words of our Author, which are as follows.

It has been a Custom Time immemorial, among the *Indians*, that a Woman should only marry one Husband, and in case of his Decease, continue a Widow to the Time of her Death. As soon, therefore, as the Master of a Family is dead, his Wife returns to bewail her Husband some Days; after which they have her Head, and she lays aside all the Ornaments which she had worn during the Time of her Marriage, taking off at the same time from her Arms and Legs the Bracelets which her Husband put on when he espoused her, in token of her Submission, and her being chained to him, and all the rest of her Life she Eyes bright and despaired, and in a worse Condition than a Slave, in the very House where she was Married before. This unfortunate Condition causes them to hate Life, so that they rather chuse to be buried alive with the Body of their deceased Husband, than to live the Scorn and Contempt of all the World; besides that, the *Indians* make them believe, that in dying after that manner, they shall revive again with him in another World, with more Honour

nour and more Advantages than they enjoyed before.

These are the Motives that cause the Women to burn with their Husbands; besides that, the Priests flatter them with Hopes, that while they are in the midst of the Flame, before they expire, *Ram* will appear, and reveal wonderful Visions to them; and that after their Souls have transmigrated into various Bodies, they shall at length obtain a high Degree of Honour to Eternity. However, there is no Woman that can burn with her Husband's Body, till she has the Leave of the Governor of the Place where she inhabits, who being a *Mohammedan*, and abhorring the execrable Crime of Self-murder, is very shy to permit them. Besides, there are none but Widows that have no Children that lie under the Reproach that forces them to violent Deaths: For, as for the Widows that have Children, they are by no means permitted to burn themselves, but quite the contrary. They are commanded to live for the Education of the Children. These Women, whom the Governor will not permit to burn themselves, spend the rest of their Lives in doing Penance, and performing Works of Charity. Some make it their Business to sit upon the Road to boil certain Pulse in Water, and to give the Liquor to Travellers to drink; others sit with Fire always ready for them to light their Tobacco; others make Vows to eat nothing but the ungrounded Grains which they find in Cowdung.

The Governor, finding no Persuasion will alter the Womens Resolution, let more especially, perceiving by the Sign which his Secretary makes him, that he has received the Coin, in a bold manner gives the Woman Leave, bidding the Devil take her and all her Kindred. When they have got this Leave, their Music begins to strike up, and away they march to the House of the Deceased, with Drums beating, and Flutes playing before them, and in that manner they accompany the Person that is to be burnt to the Place appointed. All the Kindred and Friends of the Widow that is to die come to her and congratulate her on the Happiness she is to enjoy in the other World, and for the Honour which the Cast she is to receive by her generous Resolution. She dresses herself as if she were going to be married, and the is conducted in Triumph to the Place of Execution, for the Noise is loud of musical Instruments, and Womens Voices, that follow her, singing Songs in Honour of the miserable Creature that is going to die. The Bramins also accompany her, to give publick Testimonies of her Constancy and Courage, and many of our *Europeans* are of Opinion, that to take away the Fears of Death, which naturally terrify Humanity, the Priests give her a certain Beverage to stupify and disorder the Senses, which takes from her all Apprehensions of her approaching Death. As for the Bramin's Intereſt that the poor miserable Creatures should continue in their Resolutions, for an their Bracelets, as well about their Legs as their Arms, the Pendants in their Ears, sometimes of Gold, sometimes of Silver (for the Poor wear only of Copper and Tin) which belong to the Bramins, who take for them among the Allies when the Party is burned.

I have seen Women burned after three different Manner, according to the Difference of the Country. In the Kingdom of *Cakharat*, as far as *Agra* and *Delhi*, they sit upon a Hut, about twelve Feet square, upon the Back of a Tree or Kiver, it is made of Reeds and all sorts of small Wood, with many a many certain Pots of Oil, and other Drugs, to make it burn more vehemently. The Woman is pushed in the middle of the Hut, in a half by a Pillow Posture, raising her Head upon a kind of a wooden Sallet, and resting her Back against a Pillar, to which the Bramin ties her about the Middle, for fear she should run away when she feels the Fire. In this Posture she binds the Body of her deceased Husband upon her Knees, chewing Beetel all the while; and when she has continued in this Posture about half an Hour, the Bramin goes out, and the Woman bids them set Fire to the Hut, which is immediately done by the Bramins, and the Kindred and Friends of the Woman, who call also several Pots of Oil and Ointment into the Fire, to put the Woman the sooner out of her Pain. After the Woman is burnt, the Bramin fetch the Allies for the Bracelets, Pendants,

and Rings, whether Gold, Silver, Copper, or Tin, which is all free Booty to themselves.

In *Benegal* they burn the Women after another Fashion. In that Country a Woman must be very poor, that does not accompany the Body of her deceased Husband to the *Ganges*, to wash his Body, and to be washed herself before she is burnt. I have seen dead Carcasses brought to the *Ganges* above twenty Days Journey off from the Place, and smelt them to noot; for the Scent of them has been intolerably noisom. There was one that came from the northern Mountains, near the Frontiers of the Kingdom of *Boutan*, with the Body of her Husband carried in a Waggon. She travelled twenty Days on Foot, and never eat nor drank for fifteen or sixteen Days together, till she came to the *Ganges*, where, after she had washed the Body that stank abominably, and had at last washed herself, she was burnt with him with admirable Constancy.

Before the Woman that is to be burnt goes the Music, consisting of Drums, Flutes, and Hautboys, when the Woman, in her best Accoutrements, follows, dancing up to the very funeral Pile, upon which she gets, and puts herself as if she were sitting up in Bed; and then she lay a cross her the Body of her Husband, and when this is done, her Kindred and Friends, some bring her a Basket, some Pieces of Calicut, and others Pieces of Silver and Copper, and desire her to deliver them to her Mother, or Brother, or some of her Kindred, as she pleases. When the Woman sees they have all done, she stands by, three Times, if they have not commanded Services to command her, if they make no other Duties up all she has got in a Piece of Tuffin, which she puts between her own Belly and the Body of her Husband, bidding them set Fire to the Pile, which is immediately done by the Bramins and her Kindred. I have observed, because there is Scarcity of Wood in *Benegal*, when those poor Creatures are half griled, they cast their Bodies into the *Ganges*, where the Remains are devoured by the Crocodiles. I must not forget a wicked Custom practised by the Idolaters of *Benegal*.

When a Woman is brought to Bed, and the Child is not taken, they carry it out of the Village, and putting it into a Linen cloth, which they fasten by the four Corners to the Boughs of a Tree, they leave it from Morning till Evening; by this Means the poor Infant is expell'd to be tormented by the Crows, so that there are some who have their Eyes peck'd out of their Heads; which is the Reason, that in *Benegal* and *Bahar* many of those Idolaters that have cut off by Child some that have lost both. In the Evening some of the Child away, to try whether he will suck the Milk of a Cow, and, if he still refuses the Teat, they then carry him to the same Place the next Morning, where they stay for three Days together. After which, if the Child will not suck, they believe him to be a Devil, and cast him into the *Ganges*, or any the next Place of Rivers, or the Places where the Apes breed, that he may be devoured by the Crows; for where the Apes breed, they catch a Net of the Birds, the Crows the Tree, and the Devil is not one Way, and the Eggs another. Some of the People among the *English*, *Dutch*, and *Portuguese* are so passionately the Mistresses of these Custom, that they run away from the Tree, and give the poor Infant a good beating.

As for the Coast of *Ceylon*, and the Western Parts, they are to be burnt with their Husbands, they sit upon a Hut in the Ground made of a Tree, about five or six Feet or thirty Foot square, into which they put a great Quantity of Wood and Drugs, to make it burn more violently; when the Fire is kindled, the Body of the Man upon the Back, and the Woman upon the Front, the Woman dancing, and crying out with her Friends and Kinsmen, who bring her Flutes sounding; then the Women take the Fire round the Hut, and every Time they pass by the Hut she kisses her Friends and Kinsmen, and then the Bramins call on the Casuals of her Husband, who stand round the Hut, and every Time they pass by the Woman standing with her Back to the Fire, they kiss her. The Bramins also, as I have said before,

red and Friends cast Oil, and other combustible Drugs upon the Fire, to make it burn more vehemently, that the Bodies may be the sooner consumed. In most Places upon the Coast of *Corromandel*, the Women are not burnt with their deceased Husbands, but they are buried alive with them, in Holes which the Bramins make a Foot deeper than the tallest of them, Man or Woman.

Usually they chuse a sandy Place; so that when the Man and Woman are both let down together, all the Company, with Baskets of Sand, fill up the Hole above half a Foot higher than the Surface of the Ground, after which they jump and dance upon it till they believe the Woman to be stifled. When some of the Idolaters upon the Coast of *Corromandel* are upon the Point of Death, their Friends do not carry them to the Side of a River, or Lake, to cleanse their Souls, but they carry them to the fattest Cow they can find, and laying the sick Party just behind the Cow, they lift up her Tail, and provoke her to piss; if she pisses so that it falls upon the Face of the diseased Person, all the Company are overjoyed, saying, that his Soul is happy; but if the Cow does not piss to wash the sick Party's Face, they burn him with a great deal of Sadrnets. If a Cow be sick, the Owner must be careful to lead her to a Pond, or River; for, should she die at his House, the Bramins would fine him.

The Rajah of *Patna* having lost this City, and his Life, through the Loss of a Bitte gured against him by the King of *Vishnapour's* General, he was extremely lamented at Court; eleven of his Wives also were no less concerned for his Death, and resolved to burn themselves when he was burned. The General of *Vishnapour's* Army understanding their Resolution, thought at first to divert them by promising them a kind Usage; but finding Persuasion would not prevail, he ordered them to be shut up in a Room. He who had the Order, going to put it in Execution, the Women, in a Rage, told him, that it was too late to keep them Prisoners; for, if they might not have Leave to do what they had resolved, in three Hours there would not be one of them alive. The Person controuled, laughed at their Threats; but the Keeper of those Women, opening the Door at the End of the three Hours, found them all stretched out dead upon the Place, without any Munk in the World to be seen that they had any way hastened their own Deaths.

Two of the most potent Rajahs of *India* came to *Agra* in the Year 1642, to do Homage to *Shah-Jehan*, who then reigned; who, not having acquitted themselves as they ought to have done in the Judgment of the Grand-Master of the King's Household, he told one of the Rajahs one Day, in the Presence of the King, that they had not done well to behave themselves in such a manner towards a great Monarch as was the King his Master. The Rajah, looking upon himself to be a great King, and a great Prince, he and his Brother having brought along with them a Train of fifteen or sixteen thousand Horse, was nettled at the bold Reproof which the Grand-Master gave him, and drawing out his Dagger, flew upon the Place, in the Presence of the King, the Grand-Master falling at the Feet of his Brother, who stood close by him, he was going about to revenge his Death, but was prevented by the Rajah's Brother, who flabbed him, and laid him about his Brother's Body. The King, who beheld these Murders, one on the Neck of another, retired into his Haram for fear, but presently the Omrahs, and other People, fell upon the Rajahs, and cut them to Pieces.

The King, incensed at such an Attempt committed in his House, and in his Presence, commanded the Rajahs Bodies to be thrown into the River, which their Troops as they had left about *Agra* understanding, threatened to enter the City, and pillage it; so that, rather than hazard the City, the King was adviced to deliver them the Bodies of their Princes. When they were to be burned, thirteen Women belonging to the two Rajahs Houses came dancing and leaping, and presently got upon the funeral Pile, holding one another by the Hands, and being presently afterwards by the Smaok, fell together into the Fire; presently the Bramins threw great Heaps of Wood, Pots of Oil, and other combustible Matter upon them, to dispatch them the sooner.

...reed a strange Passage at *Patna*, being then with the Governor, a young Gentleman about twenty four Years of Age, in a Cow House. While I was with him, in came a young Woman, very handsome, and not above twenty two Years old, who desired Leave of the Governor to be burnt with the Body of her deceased Husband. The Governor, compassionating her Youth and Beauty, endeavoured to divert her from her Resolution, but finding he could not prevail, went to my Court, to see he asked her whether she understood that the Torment of Fire was, and whether she had ever burnt her Fingers? No, no, answered she more stoutly than before, I do not fear Fire; and to let you know as much, lend for a lighted Torch hither. The Governor abominating her Answer, in a great Passion, bid her go to the Devil. Some young Lords that were with the Governor, desired him to try the Woman, and entreated him to call for a Torch, which, with much ado, he did, and a lighted Torch was brought; So soon as the Woman saw the lighted Torch coming, she ran to meet it, and held her Hand in the Flame, not altering her Countenance in the least, still holding her Arm along quite up to the Elbow, till her Hand looked as it had been broiled; whereupon the Governor commanded her out of his Sight.

A Bramin coming to *Patna*, and assembling all his Tribe together, told them, that they must give him two thousand *Ruppes*, and twenty five Pils of Callicut, to which the Chant among them answered, that they were poor, and could not possibly raise such a Sum; however, he persisted in his Demand, positively assuring unto them, that he would stay there without eating or drinking, till they brought him the Money and the Cloth. With this Resolution, he climbed a Tree, and sitting in the Fork between the Boughs, remained there without eating or drinking for several Days. The Noise of this Extravagance coming to the Ears of the *Dutch* House, where we lay, we let Sentinels to watch whether it was true, that a Man could sit so long without Victuals, which he did for thirty Days together. The thirty and Day of this extraordinary Fast, the Idolaters tearing to kill one of their Priests for want of granting him his Demand, clabbed together, and brought him his twenty-seven Pils of Callicut, and two thousand *Ruppes*. So soon as the Bramin saw the Money and Cloth, he came down from the Tree, and after he had upbraided those of his Tribe for want of Charity, he distributed all the *Ruppes* among the Poor, reserving only five or six for himself. The Cloth he cut into little Pieces, and gave away, keeping only to himself as much as would just cover his Nakedness; and having made his Distribution, he disappeared on a sudden, and no body knows what became of him, though diligent Search was made for him.

When a *Change* lies at the Point of Death, all his Kin-Red and Friends gather about him, and ask him whether he intends to go. They tell him, allow that if he wants any thing, he may buy it, but all he has, let it be Gold, Silver, or a Woman. When they are dead, they perform many Ceremonies at their Funerals, which consist chiefly in artificial Fires, where the *Change* are the most expert in all the World; so that he must be a very poor Man that has no Fire-work at his Funeral. Besides that, they put Money in a little Bag, and lay it by the Deceased, and leave good Store of Victuals upon the Grave, out of an Opinion that they rise and eat; which the Soldiers of *Batavia* a good many times used to till their Belies at these Graves every Time they marched their Rounds. But when the *Change* perceived that they poisoned the Victuals, to spoil the *Dutchmen's* Feeding. The Townsmen of *Batavia* taking the Soldiers Party, accused the *Change* of poisoning several of the *Dutch*; but the *Change* pleaded, that if the Soldiers had over-eaten themselves, or mistaken themselves upon what was laid for the Dead to eat, it was none of their Fault; for that they did not leave this Victuals for their Soldiers; And besides that, among all the Multitudes that they had buried, they never had heard the least Complaint before of any one that ever came to any Harm by eating their Food. Thus the Bramins was hushed up, nor did the Soldiers dare to push any more.

These are certainly very surprizing and entertaining Passages, which carry in them strong Marks of that Enthusiasm, which is the Characteristick of the Eastern Genius; and which, however wild and extravagant it may appear to us in this Part of the World, has in it, nevertheless, something so striking to such as behold it, even tho' Europeans, that they fall into it by Degrees, and are content to adopt the Honour of the *Indians*, under another Name, and for many pretended Reasons. As a Proof of this, we need only remark, that the *Mohammedan* Lords of the Mogul's Court, not only allow, but encourage their Women to die with them, as a Mark of Affection. It is true, that they don't do this publicly, and in the Sight of the Sun, as the *Indians* do; but when a *Mohammedan* Lord dies, his Women, the Night after they have paid their Duty at the Funeral of the Deceased, assemble together in some private Part of his Palace at a Distance from the rest of the Building, and out of the Hearing, as much as may be, of the Servants; and there they set Fire to the Room, having first secured the Doors, and so perish in the Flames. In all Probability, this Custom has been introduced amongst the *Mohammedans* from a Principle of Vanity, flowing from a Desire to shew that they are not less beloved by their *Indian* Wives, than the *Indians* themselves, of which, indeed, it is not easy for them to obtain a stronger Proof than this.

It is likewise indisputably clear, from our Author's Discourse, that the high Spirit and invincible Courage of the *Indians*, both Men and Women, is far enough from being extinguished; but then we ought to make a right Judgment of the Motive from whence this proceeds. In the Men it still rises from Principle and from the Dictates of Reason, whether well or ill employed, I shall not pretend to say: But, in the Women, it is, in some measure, the Effect of Habit, and, in some measure, the Consequence of Despair. They see frequent Examples of Women who end their Lives in this Manner, and are highly applauded for it. This draws them on to merit the same Praises, by shewing the same Intrepidity. On the other hand, they see Numbers of their Sex, who declare a dreadful Trial, reduced to Want and Infamy, and see no Road open for them to escape both; when, as it were, drives them to this desperate Resolution of deliv'ring themselves; since they seem thereby, of two great Evils to chuse the least, which is a glorious Death, rather than a Life of Misery and Contempt. We may from hence fairly conclude, that if the true and genuine Doctrine of the Christian Faith were infused into the Minds of these People, they might be brought to make a good Figure in the World as ever their Ancestors did; and as great that was, we have in the preceding Section, from the Memorials left us in several Languages, very fully and

SECTION XXXI.

Observations and Remarks made during his Residence on the Island of Chufan, on the Coast of China, by Doctor James Cunningham, Physician to the English Factory in that Place.

From his own Accounts.

1. An introductory Account of the Author, and of the Opportunities he had to come to a true Knowledge of the Facts he mentions.
2. An Account of the Voyage to, and a distinct Description of the Island of Chufan.
3. Of the ancient and modern State of the Country, and the coming of the English to reside there.
4. Of their Manner of cultivating Tea in that Island, and of several Mistakes made by F. le Comte, and F. Martini.
5. Of the Chinese Agriculture, and the Manner in which the Inhabitants make Salt in Chufan.
6. Of the famous medicinal Root Hu-chu-n, which prolongs Life, and retards old Age.
7. Dr. Cunningham's Removal to Pulo Condore, with the Rise, Progress, and Ruin of that Factory.
8. A Description of establishing a new Factory at Pulolout, of which Dr. Cunningham became Chief.
9. The Causes of the total Overthrow of that Factory, and the English Trade to Borneo.

IN the Accounts we have hitherto given of the Discovery, of the past, and present Situation of the *India*, we have made use chiefly of foreign Writers, not that we prefer them to our own Countrymen, who have travelled into those Parts; but because, in a Collection of this Nature, it seemed reasonable to include the Works of such Authors as were least known to the Bulk of our Readers. But, to avoid all Suspicion of Partiality, and that, at the same time, we may shew that we have not been at all negligent in consulting either the old Travellers or the new, of such of the *British* Nation as have visited these distant Climates, we will add a few Instances of their Care and Diligence, in observing and recording what appeared to them most worthy of Notice in the Countries into which they were led, either to satisfy their Curiosity, or in Pursuit of Business.

We will begin with the Remarks made by Doctor *James Cunningham*, Fellow of the *Royal Society*, and Physician to the *English Factory* settled at *Chufan* in *China*. He was a Man distinguished both by his natural Parts, and by the Accomplishments he had acquired, being equally well versed in ancient and modern Learning; and, at the same time, a Person, who, from his own Diligence, had obtained all the Lights that are afforded by Experience. Of these great Qualities he has left us sufficient Testimony in two Letters of his writing during his Employment in the Service of the *East-India Company*; and which are so much the more valuable, as they plainly manifest an In-

attention not to copy what others had written, but to set down his own Observations, and to describe Things as they appeared to him, in his own Words, not only to, but to examine and correct the Mistakes of others, in which he was the more capable of doing, for two Reasons; first, because he considered him self as being brought under his immediate Inspection; and secondly, because he writes on such Subjects only as belonged to his Profession, in which he must, of Necessity, be a more diligent than another Man, however learned or industrious, had not made those Things his Study. In the first of these Letters, indeed, I must affirm, that the Writings of our Countrymen are very much to be preferred to those of the Foreigners, because, if their Relations be Discreetly managed, they are not only more interesting; yet they are written with greater Care and Circumspection, as well as with a more ordinary Regard to Truth. But I lay in this, not as a Rule, and not with any View to injure or raise the Credit of particular Persons. But, to come to the Point of this Letter, these Letters were written in the Month of September, 1702, to a Member of the *Royal Society*, and I follow in the Author's own Words.

2. My last to you was from the Head of *Borneo*, which I gave you an Account of our Arrival there, on the 17th of *July*, where we staid but two Days, the rest of the Year being so far past, and from thence we set out on our best of our Way through the Straits of *Borneo*, with the most favourable Winds and Weather, for we came on the 17th

of China the 13th of August, then we had variable Winds which carried us a-bread of Emoy, the 19th following, at which Time the North-east Wind setting in fresh, put us in great Fears of losing our Passage; whereupon we were forced to turn it up against Wind and Current all the Way, the Weather for favouring us that we were never but by our Top-sails, else we should have lost more Ground in one Day than we could have gained in eight. The last of August we came to an Anchor under the *Crocodile Islands*, both to shelter us from the bad Weather which is generally expected on this Coast at New and Full Moon, and has been fatal to a great many Ships) and also to look for fresh Water, which was now grown scarce with us, not having recruited since we came from the Cape of Good-Hope. These are three small Islands, lying in the L. of 26° about six Leagues from the River of *Hakien*, on two whereof we found very good fresh Water, with a convenient watering Place on the S. W. Side of the innermost of the three; and by the Assistance of a few *Chinese* Fishermen, who procured some fresh Provisions from the Main-Land, because we did not think it safe to adventure ourselves thither, lest we should have been brought into Trouble by the Government there.

While we lay here, on the 2th of September, we had a sudden short Shift of the Monsoon to the S. W. the Fury whereof others felt coming upon the Coast of *China*, at the same Time. The 15th of September we put to Sea again, running to windward Night and Day without all the Islands, which are very numerous along this Coast, to which we were altogether Strangers beyond *Emoy*; and the Hydrography thereof is hitherto imperfect, that there was no trusting to our Charts, which made our Navigation somewhat more dangerous: However, on the 11th of October we got into *So*, where we came to an Anchor near the Land, until we found the Way by Boat to *Chufan*, about twelve Leagues within the Islands, from whence we had a Pilot, who carried us safe thither on the 14th. Upon this Island the *Chinese* have granted us a Settlement and Liberty of Trade, but not to *Ning-po*, which is six or eight Hours Sail to the westward, all the Way among Islands; this being the largest, is eight or nine Leagues from East to West, and four or five Leagues in Breadth.

About three Leagues from that Point of the Main-land, called *Cape-Laampo* by the *Portuguese*, but *Ki-tu* by the *Chinese*, at the West-End of this Island, is the Harbour, very safe and convenient, where the Ships ride within Call of the Factory, which is built close by the Shore, on a low plain Valley, with near two hundred Houses about it, for the Benefit of Trade, inhabited by Men whose Jealousy has not, as yet, permitted them to let their Wives dwell here; for the Town where they are is three Quarters of a Mile farther from the Shore, environed with a fine Stone-wall, about three Miles in Circumference, defended by twenty-two square Batteries, placed at irregular Distances, besides four great Gates, to which are planted a few old iron Guns, seldom or never used; The Houses within are very meanly built. Here the *Chumpien*, or Governor of the Island lives, and betwixt three and four thousand beggarly Inhabitants, most part Soldiers and Fishermen; for the Trade of this Place being newly granted, has not, as yet, brought any considerable Merchants thither. The Island in general abounds with all sorts of Provisions, such as Cows, Buffaloes, Goats, Deer, Hogs, wild and tame Veal, Ducks, and Hens, Rice, Wheat, Calavances, Coleworts, Turnips, Potatoes, Carrots, Lettich, and Spruce; but, for Merchandize, there is none, except what comes from *Ning-po*, *Sing-chew*, *Nansen*, and the inland Towns, some of which I hope to see when I have acquired a little of the *Chinese* Language.

Here also the Tea grows in great Plenty, on the Tops of the Hills, but it is not in such Likeness as that which grows on more mountainous Lands. Although this Island is pretty well stored with People, yet it is far from what it was in *P. Martini's* Time, where he describes *Chufan*. And this puts me in mind, that the superstitious Pilgrimages there mentioned by him, must be

meant of the Island *Pou-to*, which lies nine Leagues from hence: And three Miles to the Eastward of this Island, whither, they say, the Emperor designs, in the Month of *May* next (being his Birth-day, and the fortieth Year of his Age) to come to worship in an ancient Pagod there, famous for Sanctity, having sent one of his Bonzes already thither to get all Things in Order. The second Letter, somewhat more copious, and no less curious than the first, our Author wrote to the same Person from *Chufan*, dated *November 22, 1701*, according to his Promise, and to supply the Defects of the first.

I formerly told you that the Emperor designed to have come to the Island of *Pou-to* (a Place of great Devotion) to worship in the Month of *May* last, being the fortieth Year of his Age, I should have said of his Reign. But all Things being prepared there for his Reception, he was dissuaded from his Purpose by some of his Mandarines, who made him believe that the Thunder there was very dangerous. This *Pou-to* is a small Island, about five Leagues round. At the East-End of this Island, famous for the superstitious Pilgrimages made thither for the Space of eleven hundred Years, it is inhabited only by Bonzes, to the Number of three thousand, all of the Sect called *Heshing*, or unmarried Bonzes, who live a *Pythagorean* Life; and there they have built four hundred Pagods, two whereof are considerable for their Greatness and Finery, being lately covered with green and yellow Tiles, brought from the Emperor's Palace at *Nansen*, and inwardly adorned with stately Idols, finely carved and gilded, and the chief whereof is the Idol *Quanum*. To these two great Pagods belong two chief Priests, who govern all the rest. They have several Ways and Avenues cut through the Island, some whereof are paved with Flag Stones, and over-shaded with Trees planted on each Side.

Their Dwellings are the best I have seen in these Parts, all which are maintained by charitable Donations; and their Junk, which go from *Ning-po* and this Place to *Japan*, run here both going and coming, to make their Offerings for their good Success. There is another Island called *Kin-Tong*, five Leagues hence, in the Way to *Ning-po*, whither, they say, a great many Mandarins retire to live a quiet Life, after they have given over their Employments. On that Island also are said to be Silver-mines, but prohibited to be opened.

The rest of the circumjacent Islands are either desert, or meanly inhabited by a few People, but all of them stored with abundance of Deer; for it is not long since this Island of *Chufan* began to be peopled. 'Tis true, in *Martin's* Days, about fifty Years ago, it was very populous for the Space of three or four Years; at which Time the Fury of the *Tartarian* Conquest was so great, that they left it desolate, not sparing so much as the Mulberry-trees; for then they made a great deal of Raw-Silk here. And in this Condition it continued till about eighteen Years ago; that the Walls of the Port, or Town, which now is, were built by the Governor of *Ting-lai* for a Garrison, to expel some Pirates, who had taken Shelter there.

About forty or fifty Years ago, the Island beginning to be peopled, there was a *Chumpien*, or Governor, sent to govern it for three Years, to whom succeeded the late *Chumpien*, who procured the Opening of this Port to Strangers; whose Government continued till April last, being translated to be *Chumpien* of *Tien-ching-see*, near *Tai-son*, and was succeeded by the present *Chumpien*, who is sent to the old *Chumpien* of *Emoy*. They have no Arts, or Manufactures here but lackered Ware, a particular Account whereof I cannot, as yet, send you. They begin to plant Mulberry-trees to breed up Worms for the Production of Raw-Silk; and they make some Tea, but chiefly for their own Use.

The three Sorts of Tea commonly carried to *England*, are all from the same Plant, only the Season of the Year and the Soil make the Difference. The *Bohea* (or *Tea*, as called of some Mountains in the Province of *Tolun*, where it is chiefly made, is the very Bud gathered in the Beginning of *March*, and dried in the Shade. The

ly clear, from our Author's spirit and invincible Courage of Women, is far enough from men we ought to make a tiger from whence this proceeds. In principle and from the Dictates ill employed, I shall not pronounce, it is, in some measure, in some measure, the Consider frequent Examples of Women in this Manner, and are highly was them on to merit the same Intrepidity. On the other their Sex, who declaimed Want and Infamy, and tried to escape both; while, and desperate Resolution of death seem thereby, of two great which is a glorious Death, after and Contempt. We may think if the true and genuine Blood were infused into the Men, it be brought to make a greater their Ancestors did, and now the preceding Section, from the d Languages, very famous.

of Chufan, or the Coast English Factory at our

o come to a true Knowledge of the Island of Chufan English to reside there, made by F. le Comte, and the Inhabitants make, and retards old Age, 7. Description of that Factory, 8. Ours became Chief. 9. Language

others had written, Observations, appeared to him, and capable of doing, confined him to the Indigence, and only as belonged to Necessity, yet learned of his Study. In the Writers of our preferred to trade of Relations, be it as mine, yet they were as freedom, as well as. This Day in the figure of the, come to the Port, in the Month of September, and follows in to

as from the Hand of B. Account of our Arrival, travel but two Days, part, and from thence by the Straits of *Banc*, rather, for we came out of

Bing Tea is the second Growth in *April*, and *Singlo* the last in *May* and *June*, both dried a little in Taches or Pans over the Fire. The Tea Shrub being an Ever-green, is in Flower from *October* to *January*, and the Seed is ripe in *September* and *October* following, so that one may gather both Flower and Seed at the same time; and for one fresh and full Seed, there are one hundred nouglt. These make up the two Sorts of Fruit in *Le Compe's* Description of Tea; as for his other Sort, which he calls *Symie Peafe*, they were nothing but the young Bud: of the Flowers not yet open. Its Seed Vessels are really tricapsular, each Capsula containing one Nut or Seed; and although two or one Capsula only comes to Perfection, yet the Vestiges of the rest may be discerned. It grows in a dry gravelly Soil on the Sides of Hills, in several Places of this Island, without any Cultivation.

Le Compe is mistaken in saying that the *Chinese* are wholly Strangers to the Art of Grafting; for I have seen a great many of his paradoxical Fallow Trees ingrafted here, besides some other Trees. When they ingraft, they do not slit the Stock, as we do, but cut a small Slice off the Outside of the Stock, to which they apply the Graft (being cut sloping on one Side agreeable to the Slice cut from the Stock, bringing the Bark of the Slice up on the Outside of the Graft, they tie all together, covering with Straw and Mud as we do. The Commentator, on *Maga-ben*, seems doubtful in the Length of the *Chinese* Che or Cubits. Here they have two Sorts, one of thirteen Inches and seven Tenths of an *English* Inch, which the Merchants commonly use; the other is of eleven Inches used by Carpenters, and also in Geographical Measures. Though *F. Martini* is censured by *F. Maga-ben* for spelling a great many *Chinese* Words with *ng*, which the *Portuguese* and others have done with *m*, yet his Way is more agreeable to *English* Pronunciation, only in some Words the *g* may be left out, as in *Pekin*, *Nankin*, &c.

Having made Enquiry about *Martini's* Account of Sowing their Fields at *Van-cku* with Oyster Shells, to make new ones grow, I was told, that after they have taken out the Oyster, they sprinkle the Shell with Urine; then putting them into the Water again, there grows new Oysters on the foresaid Shells. *Martini* says, he could never find a *Latin* Name for the *Tula Mogarin* of the *Portuguese*; I am sure it is the same with the *Syrena Arabica fere plena* *Albo* in *Parkinense*. He says also, that the *Kieu-yeu*, or Tallow-tree, bears a white Flower like a Cherry-tree; but all that I have seen here, bear a Spike of small yellow Flowers, like the *Lulus* of a *Saxa*. The Bean, or Mandarin Broth, so frequently mentioned in the *Dutch* Embassy, and other Authors, is only an Emulsion made of the Seed of *Safarum* and hot Water.

Their chief Employments here are Fishing and Agriculture. In Fishing they use several sorts of Nets and Lanes, as we do; but because they have large Banks of Mud in some Places, the Fisherman, to go more easily thereon, have contriv'd a small Frame, about three or four Feet long, not much larger than a Hen trough, elevated a little at each End, in which he sits upon one Knee, leaning his Arms on a cross Stick, raised so high as his Breast, and putting out the other Foot often upon the Mud, he pushes forward by Frame thereon, and so carries himself along in it.

As to their Agriculture, all their Fields (where any thing is planted) whether high or low, are made into such Plots, as may retain the Water over them when they please. They plow up their Ground with one Bull-dog, or Cow. Where they are to sow Rice, they prepare the Field very well, by clearing it of all manner of Weeds, mowing to a Pulp, and smoothing it with a Frame drawn across, on which they sow the Rice very thick, and cover it only with Water, for two or three Inches high; and when it has grown six or eight Inches long, they pull it up by the Roots, and transplant it (by Tufts in a straight Lane) to Fields overflown with Water; and where a Field is subject to Weeds, when the Water grows up, they prevent the Growth, by overturning the Mud with their Hands, in the Interstices where the Rice is planted. When they sow Wheat, Barley, Pulse, and other Grains, they grub up some superficial Earth, Grats,

and Roots, and with some Straw, they burn all together; this Earth being sifted fine, they mix with the Seed, which they sow in Holes, made with a straight Lane, and so grows up in Tufts, as the Rice does, the Field being divided into Beds, and harrowed over both before and after the Seed is sown; this makes them somewhat resemble Gardens. Altho' they meliorate their Fields, where they sow Rice only, by letting the Water on them, yet for other Grains, where Grounds require it, they make use of Dung, hur in Excrements, Ashes, &c. In watering their Fields here, they use the same Instrument mentioned by *Martini*, in the Preface to his *Atlas*, being all Wood, and the Contrivances the same with that of a Chain-pump.

Their Method of making Silt is this: all the Shore, here being Mud instead of Sand, in the Summer-Season, they pare off the superficial Earth, which has been overflown with the Salt-water, and lay it up in Heaps for use. When they are to use it, they dry it in the Sun, rubbing it small, then digging a Pit, they cover the Bottom of it with Straw, at which, through the Side of the Pit, they pass a hollow Cane that leads into a Jar, that stands below the Level of the Pit's Bottom. They fill the Pit almost full of the foresaid Earth, and pour Salt-water on, until it be covered two or three Inches with Water, which drains through into the foresaid Jar, and is afterwards boil'd into a Salt.

6. If I had not found Notice taken in a printed Newspaper last Year of a sing'lar Root brought from *China* by Father *Fontaney*, I should not have told you, that I have seen this Root since I came here, and which is called by the *Chinese* *Hu-chu-u*, to which they ascribe wonderful Virtues, such as prolonging Life, and turning gray Hair black by the Use of its Tea, or an Infusion made of it, which occasions its being sold at a very high Price, inasmuch that they say, that it is to be had from ten Lel to one thousand or two thousand a single Root, for the larger it is, the more is its Value and Efficacy, which is too much Money here to try the Experiment. You have it mentioned in *Cleyer's Medicina Sinica*, Number LXXXIV. under the Name of *He-xeu-u*, according to the *Portuguese* spelling. It is likewise painted in the 27th Table of those Plants Mr. *Petterer* had of me. If you will have the Story of its Discovery, which I will not warrant for Gospel, it runs thus:

Upon a time a certain Person going a Sampling among the Mountains, fell by Accident into such a steep Vale, that he could by no means get out of it again, whereupon looking about for something to sustain his Life, in this melancholy Condition, he eisted this Root, of which he made Trial, and found that in eating thereof it saved him both for Provision and Cloathing, by keeping his Body in such a Temperature, that the Injuries of the Weather had no Influence upon him during his Stay there, which was some hundreds of Years; till at last an Earthquake happened in that Place, whereby the Mountains were rent, and he found a Passage out to his Houle, from whence he had been so long absent. But the many Alterations that came to pass there in such a Space of Time would not permit them to give Credit to his Story, till consulting the Annals of his Family, which gave an Account of one of them lost in that Time, they were confirm'd as to the Truth of his Relation. With the Leave of our Author, this is no more Gospel with the *Chinese* than with him. It is a Fable invented for the sake of giving such an Account of the Virtues of this Root, as may make them dwell on the Memory, and that is all.

7. It will be very natural for the Reader to enquire how it came to pass, that from so intelligent and industrious a Person as this Doctor *Cunningham* appears to have been, we have received nothing farther than what has been already set down in relation to the Affairs of *China*; and as I have it in my Power to answer that Question very fully, I think it will not be amiss to add some very curious Circumstances relating to her worthy a Man at the Close of this Section; the rather, because if they be not added here, it is very possible they may be for ever lost. We are therefore to observe, that the Factory established at *Chusan* was brought up in the Year 1702, and therefore the Doctor had not

straw, they burn all together; they mix with the Seed, made with a Braight Line, and the Rice does, the Field being sowed over both before and after, makes them somewhat more meliorate their Fields, where the Water on them, yet grounds require it, they make Excrements, Ashes, &c. In they use the same Instrument the Preface to his *Atlas*, being the same with that of a

g Salt is this; all the Shore Sand, in the Summer-Season, Earth, which has been over-land lay it up in Heaps for use, they dry it in the Sun, rubbing it, they cover the Bottom of ough the Side of the Pit, they als into a Jar, that stands below. They fill the Jar almost and pour Salt-water on, until three Inches with Water, which is afterwards

Notice taken in a printed News- lar Root brought from *China* could not have told you, that I came here, and which is called to which they ascribe wonder-working Life, and turning gray its Tea, or an Infusion made of ing sold at a very high Price, in it is to be had from tea-Dealers for a single Root, for the Value and Efficacy, which is too the Experiment. You have it *China Sinica*, Number LXXXIV. u u, according to the *Portuguese* printed in the 27th Table of those of me. If you will have the which I will not warrant for Goff-

much Time to compleat the Observations he was inclined to make. He removed afterwards to another new Settlement at *Pulo condore*, which is a small Cluster of Islands, four or five in Number, lying about fifteen Leagues South of the West Channel of the River of *Cambodia*; what Advantages were proposed from this Factory I cannot say; but the Memoirs I have, very positively affirm, that the Place, in which it was seated, was very ill chosen.

The Person who had the Direction of the *East-India* Company's Affairs in those Parts was one Mr. *Katchpole*, and he, according to the usual Custom of the *Indies*, took a certain Number of *Maccassars*, or Soldiers, Natives of that County, into his Service, by whose Assistance he quickly built a little Fort for the Protection of his People, and procured the Necessaries of Life, such as Wood, Water, and Fish, which, as far as I could ever learn, is all that these Islands ever afforded. The *Maccassars* are a brave, industrious, and faithful People, to such as deal well by them; and for these Reasons they are highly esteemed in the East, more especially by the *Dutch*. It must, however, be allowed, that they are daring, cruel, and revengeful, if once they are provoked. Mr. *Katchpole* had contracted with them for three Years, at the End of which Term they were, if they pleased, to receive their Wages and depart. This Agreement, though strictly performed on their Side, was broke by our Director, who kept them beyond their Time, and against their Wills. As this was a great Breach in Morality, he added to it as great an Error in Politicks; for after provoking these People in such a manner, he continued to trust them with the Guard of his own Person, and the Custody of the Factory, which gave them an Opportunity of revenging the ill Usage they had endured with that Severity, which is natural to barbarous Minds. In short, they rose in the Night, and cut the Throats of the Director, and all that were with him in the Factory, not one escaping.

But some who lodged without, hearing the Cries of those who were murdered within, fled out of their Beds to the Sea-shore, where, by a very singular Providence, they met with a Bark completely equipped, in which, tho' half naked themselves, they put to Sea, and in so good Time, that they escaped the Rage of the *Maccassars*, who came in Search of them to the Shore just as they weighed Anchor. Their Navigation was extremely difficult, inasmuch as they were expost at once to incredible Fatigue, and which was harder still to the utmost Extremities of Hunger and Thirst; but with much ado they completed their tedious Course of one hundred Leagues in this wretched Condition, and came at last into a small Creek in the King of *Jobore's* Dominions, where they were civilly received, and kindly treated.

8. A Year or two after the *East-India* Company thought fit to settle another new Factory on the Coast of the great Island of *Borneo*. On the South End of this Island lies another smaller one called *Puvelout*, which has an excellent Harbour. The Country, however, is but very thinly peopled, as yielding not much Rice; but lying at the Mouth of the Rivers, coming out of the Pepper Countries, it is extremely well suited for Trade. There is a Channel of the Sea between this Island and that of *Borneo*, about two Miles broad in most Places, in some narrower, and in some wider, having from five to five Fathom Water all the Way; and on the Shore there are several rising Grounds fit to build on, which made it one of the proposed Places in this Part of the World for a Factory; and therefore it is to be presumed, such as had the Direction of the Company's Affairs made Choice of it.

One Captain *Bary*, a very ingenious Gentleman, had

the Care of settling this little Colony, in which he acted with much Skill and Prudence; but before the Work was completed, he died, and the Direction of the Factory fell to Dr. *Cunningham*, who, after the Ruin of the Factory of *Pulo condore*, came thither. He is said to have minded his Studies to entirely, that he left the Care of the Company's Concerns too much to those that were under him, and it fell out very unluckily both for the Company and himself, that they happened to be People altogether unequal to such a Trust, which proved the Ruin of him, and of the Factory too, which fell out in the following manner.

9. Before the Fort which they were erecting was half finished, they began to insult the People of the Country, as they passed up and down the River, and among many other Acts of Folly and Weakness, they very imprudently took it into their Heads to search one of the King's Boats, which was carrying a Lady of Quality down the River, which provoked the *Indian* Monarch, that he vowed the utter Destruction of the *English*; and to effect it, gathered all his Forces, and embarked them on board his Fleet of *Praws*. The Company had then two Ships in the River, and there were besides two Merchantmen of inconsiderable Force; but, however, this was all they had to trust to, and therefore the People of the Factory receiving Advice of the King's Design, and the Preparations he had made, left their Factory, and went on Board their Shipping, thinking themselves more secure there than ashore.

When all things were in Readiness, the Army came in the Night with above an hundred *Praws*, and no less than three thousand desperate Fellows; some landed and burnt the Factory and Fortifications, while others attacked the Ships which were prepared to receive them. The *English* had made fast Nettings from the Mizzen to the Fore-Sheets, about two Fathoms high above the Gunnel, that they might not be suddenly boarded by the Enemy, and to have the Opportunity of using their Blunderbusses and Lances before the Enemy could get on their Decks. As soon as they in the Ships saw the Fleet approaching them, they plied their Guns with double Round and Partridge, and made a great Carnage; but all did not deter the Assaultants from boarding, who, when they got as high as the Gun Wall, or Gunnel, were at a Loss how to get over the Nettings, and so were killed with great Ease. Some got in at one of the head Doors of one of the Ships, and killed some *English* in the Fore-castle; but they were soon destroyed. The two great Ships, though in Danger, beat off the Enemy with small Loss; but the little Ships were both burnt, with most of their Men, and one *Dutch* Gentleman, who was obliged to fly from *Batavia* on board one of the small Vessels was also burnt in her. His Name was *Heigh Gamber*, and had been the Ambassador of the King of *Persia*.

Some say, who were there at the Time of the Engagement, that the *English* killed in two Hours that the Army was hot) above one thousand five hundred, besides many wounded and maimed; but the *English* were forced to be gone from their Settlement. The King thought his Revenge had gone far enough, in driving them from their Settlement; and finding the Loss of the *English* Trade affected his Revenue, he let all *English*, who traded to *Jobore*, and other circumjacent Nations, know, that he would still continue a free Trade with the *English* on the old Footing, but would never suffer them, or any other Nation, to build Ports in his Country. Several *English* have been there since, and loaded Pepper, and have been civilly treated; and the *Dutch* sent a Ship from *Batavia* in *June* 1712, to trade with them; but the Natives refused Commerce with them.

SECTION XXXII.

A succinct Account of the Adventures of Mr. William Adams, an Englishman, who resided many Years in the Empire of Japan, and was the Person who introduced both the English and Dutch to trade thither.

Collected, as well from his own Letters, as Portuguese and Dutch Writers.

1. An Introduction, in which is contained a View of the Trade to Japan before Mr. Adams went thither.
2. He is entertained as a Pilot on Board a Dutch Fleet intended for the East-Indies, through the Straits of Magellan.
3. His Passage through those Straits into the South-Seas.
4. The great Miseries endured by their Seamen on the Coasts of Chili and Peru, and their Resolution to bear away for Japan.
5. The many and great Difficulties they met with in their Passage.
6. Arrival on the North Coast of Japan, and the Usage they met with from the Reports spread concerning them by the Portuguese.
7. Mr. Adams sent for, and introduced to the Emperor, who examined him as to his Voyage, and the Design of it.
8. He grows into great Favour with the Emperor, and is very happily established in that Country.
9. He builds a Ship for the Emperor, and becomes a kind of Minister of State in his Court.
10. The Account given by him of the Climate, Soil, Produce, People, &c. of Japan.
11. Observations upon this Account, including farther Remarks.
12. The History of Mr. Adams, continued from Foreign Authors.
13. Influence of his great Power and admirable Conduct during his Residence at the Court of Japan.
14. The Turn given to his Management to the commercial Affairs of that Empire.
15. Conclusion of this History, with Observations and Remarks tending to explain the Obscurities in this Account, and to set the Author's Conduct in their proper Light, for the Honour of this Man in particular, and of our Nation in general.

IT is necessary, at our first Entrance on this Section, to put the Reader in mind of the Method we have pursued through the Course of this Chapter, which has been to speak, as Occasion offered, of those Parts of the *Japan* which were nearest to us first, and so to proceed gradually to the most distant. In regard to Time, it is with me only a secondary Consideration, and this is sufficient to account for what might otherwise pass for a Mistake, which is the placing here the History of Mr. Adams's Proceedings, tho' in Point of Time, before that of the Gentlemen last mentioned, near one hundred Years. Now, as it was impossible to report both these Accounts without trespassing on the natural Order, either of Time or Place, we chose to dispense with the former rather than the latter, and that for this plain Reason, because it occasions but one Alteration, whereas had we taken the other Method, it would have produced many. We have already, in speaking of the Discoveries made by the Portuguese, mentioned their first coming to *Japan*, and have likewise taken notice of the great Plans they took to prevent other Nations from having a Share in the rich Commerce of that new found Country, which, though visited by them so early as *Anno Domini* 1542, yet had they preserved it entirely in their own Hands, till after the Arrival of the Person, whose Memoirs we propose to give in this Section, and who ought therefore to be considered as the Discoverer of *Japan* to all the rest of *Europe*, as we shall have a large at the Close of this Section.

At present it is our Business to observe, that there was nothing the Dutch coveted so much as an Opportunity of visiting the Islands of *Japan*, which from the Reports they had received from *Portugal* in *Spain*, as well as from their own Settlements, appeared to them a kind of *India* in the *Indies*. There are some Dutch Memoirs in Extant, which say, that the first Ships employed by their East *India* Company, obtained a brief Account of the Profits of the Trade from *Malaca* to *Japan*, from the Year 1595 to 1600, from which Memoirs it appeared, that they cleared one Year with almost one hundred Tons of Gold, which was sufficient to put the *Dutch* upon resolving by all means to gain a Share in the richest Commerce. It may not be amiss, however, to prevent Mistakes, to explain this Term of a Tonn of Gold, which I take to be entirely Dutch, and therefore, when literally translated into *English*, is in danger of remaining as in the Dutch as it was before. In the first place, a Tonn of Gold is not restrained at all to that Metal, for if it had, it would not have been used here, most of the Return from *Japan* to *Malaca* being made in Silver, neither has it any Reference to the Value of a Tonn of Gold, which amounts to ten times the Value of what

is meant by this Expression; for by a Tonn of Gold the Dutch Merchants mean one hundred thousand Guilders, and consequently the annual Value of the Trade to *Japan* might be ten Millions of Guilders, or, to keep it to round Numbers, one Million Sterling, a vast Sum indeed, and yet said to be much short of the Advantages drawn from thence in the first forty Years, after the Portuguese settled in that Country.

But, though the Trade of *Japan* was a thing so considerable of itself, yet the acquiring any Share thereof appeared even to the Dutch themselves, though they were in those Days equally enterprising, and indelicate, a Design thwarted by almost insuperable Difficulties. In the first place, the Navigation was difficult and dangerous to the last Degree, of which they were made sensible, not only by repeated Accounts from the *Indies*, which represented the Commerce with *Japan* as a thing almost impracticable on that Account only, but were in a manner convinced of it from Experience, since they had sent a Ship thither *Anno Domini* 1584, with little or no Success. They were in hopes, however, of getting the better of this Evil, by making use of Portuguese Pilots, and accordingly in 1591 they sent another Ship, which was entrusted to the Care of one *Francisco Pais*, a Native of *Portugal*, who laboured however, much better Fortune, which distressed them very much, and was probably the Reason that they did not farther Attempts for ten Years afterwards.

But this was far from being all, for they very well knew that when this Difficulty was got over, there would be many others, and some of them still greater, that were not so soon surmounted. As for example, they knew that the *Portuguese* were a very powerful and a very brave People, the former from Report, but the latter from Experience, since at the Time they besieged *Malaca*, then in the Hands of the Portuguese, there was in the Place a small Company of *Japanese*, who came thither to trade, and who, when the Place was invested, finding it impossible to get their Goods, assisted their Friends in the Defence of it, against the Dutch, so that it was chiefly by the bold Success of the *Japanese* that the Dutch were at that Time compelled to quit *Malaca*, which they did with great Loss. They also well knew, that the *Spaniards*, who were at that Time Masters of *Portugal*, and consequently the sole Possessors of the *Japan* Trade, had rejected the Inhabitants of that Country against them to the last Degree, by representing them not only as Rebels to that Crown, but as a dangerous Enemy to Mankind in general, and indeed, such Beliefs in the *Indies* had been such as gave but too Ground to that Report. Add to this, that a very great Part of the

Japanese Nation were become Converts to the Popish Religion, and consequently hated them no less as Heretics, than if they had been Infidels.

Taking these Circumstances therefore together, we need not much wonder that the *Dutch* in some measure despaired of ever carrying their Point, and establishing themselves as a trading Nation in *Japan*; yet so frail and feeble a thing is human Policy, and so little Certainty there is in the Foresight even of the wisest Man, that notwithstanding all these Obstacles, and contrary to all Appearance, they not only carried their Point, but after contributing as much as in their Power lay, to the Ruin of their Competitors the *Portuguese*, they have secured the whole of this rich Trade to themselves, and that too in such a manner, as that it is not very likely it should be ever taken out of their Hands. All this we may safely affirm, on the Credit of the *Dutch* Writers themselves, is intirely owing, and was absolutely brought about by the Interest and Conduct of one poor *Englishman*, this very *William Adams*, whose Memoirs of this Country, collected from his own Writings, we are now to give the Reader.

The Thing in itself is indeed wonderful, and if it was not supported by the most authentick Evidence, would, to the present Age at least, appear incredible; but as it is supported, it cannot be denied, or even disputed, and therefore it ought to convince us, that there is nothing of this Nature impossible, or impracticable, if Men once set heartily about it; so that we have no Reason to doubt, that if the same Spirit of extending Commerce, which prevailed in this Man's Days, should revive in ours, it would produce like Effects, and discover to us such new Routs, such unexpected and unlooked for Means of employing our industrious Poor at home, by procuring a Vent for their Manufactures abroad, as would raise this Age as high in the Opinion of Posterity, as the last Age appears, or ought to appear, in ours. But it is now Time to return to our Author, and to attend to those Accounts of *Japan* which have been left us by so able and so experienced a Person, than which there are not perhaps any better to be met with in any Language whatever.

2. In this Business, as we have seen, he was not the Servant of his own native Country, but of *Holland*, being an able Pilot, and very skillful in all Points of marine Knowledge. He was hired by that People to go to Sea with them; his Post was that of Master Pilot, the Management of the whole Fleet (which consisted of five Sails) being left principally to his Care and Prudence. They set sail from the *Texel* June the 24th, and made it the 21st of *August* by that Time they reached *St. Jago*, one of the *Cape de Verde* Isles. Here they stayed almost a Month, so long, that a good Part of the Fleet was sick with the unhealthy Air of that Place; and they found it too true by Experience (which before the *Dutch* would not believe) that it was a very barren Place as to any manner of good Refreshment. *September* the 15th they passed the Line, though with Trouble, because of the contrary southerly Winds that then distressed them, and this was the Effect of having loitered away too much Time before they came to attempt it.

They were now carried away to the Coast of *Guinea*, and coming up with *Cape de Lopez Gonsalves*, they landed their sick Company there; but this Place denied Relief, as well as the former, and the sick Men were forced to carry their several Wants and Distempers aboard with them again. At the Isle of *Annobon* they met with a little better Entertainment. Here were Beeves, Oranges, and other Fruits; but the Plague of having an unhealthy Climate embittered the Comforts of this Refreshment, and the bad Air made them sick, as fast as the good Provisions made them well. The *Dutch* landed a Party of Men, and took the Town, a small thing consisting of eighty Houses, and like to be of as little Profit to the Conquerors, as it was Honour to them. 'Twas towards the Middle of *November* before they got away from thence, so hard is it to leave a good baiting Place, especially when the next is so very uncertain, as it is in the Case of Seamen between *Annobon* and 4° S. L. they had the Winds perpetually at S, by E. and S. S. E. but about that Parallel they came up by S. E. and E. S. E. and E.

Their Courte was now for the *Magellanic Straits*, and they made it five Months sailing between them and the

Island of *Annobon*; but the Miseries they endured by Hunger in that Time were extreme, and in the highest degree dreadful: According to Mr. *Adams's* Relation, for a good while they had each Man but a Quarter of a Pound of Bread a Day, with a proportionally small Quantity of Wine and Water; but it came at last to that pass, that they eat the very Skins that covered the Ropes of the Ships, and by this unnatural sort of Diet brought on strange Disorders and Feebleness of Body upon themselves; through all these Difficulties, they made a Shift at last to reach the *Magellanic Straits*, coming into the first Narrow of that Passage *April* the 6th; but this was but still out of one Difficulty into another; 'twas only altering the Scene of their Misfortunes, and coming to be miserable in another Place; for the Winter was coming on here apace, the Cold began to be severe and pinching, and the great Snows began too. To make their Circumstances more completely dismal, many a time would the Wind have served to have carried them through the *Straits*, but the obstinate General would not embrace the Opportunity, at the Advice of those that persuaded it, and so was the Occasion of the miserable Confinement of the Fleet all the Winter Season.

Here was Firing, indeed, enough for them all about the *Straits*, every Place abounding with Wood; but there was a worse Necessity amongst them, which this would never supply, and the Cravings of the Belly were to be satisfied by another sort of Provision. Here they continued conflicting with Hunger, Distempers, and bad Weather, till *September*, so that they stood the Shock of the whole Winter at this Place, and endured the Extremities of all the very worst Months of the Year. Abundance of their Men died, being downright starved, and the rest were as near it as they could well be; and now the General, having had enough of the Winter Pleasures of the *Magellanic Straits*, very politely concluded, 'twas time to go away. His Men were half dead, and the Remainder were almost famished; the dismal Winter spent and gone, and the cheerful Spring coming on with the returning Sun, he thought it high time to put out to Sea again before the Comforts of the approaching Season took them.

3. So the latter End of *September* they set sail out of the *Straits*, and being got into the *South-Sea*, were wretchedly tossed and beaten about in that turbulent Ocean: In short, a furious Storm scattered the whole Fleet, and drove them to seek their Fortunes, every one by themselves; they had agreed before, in case of any such Disaster, that they would stay for one another at some Place upon the Coast of *Chili*, in the Latitude of 46°, and if the rest came not in a Month, then those that were there should go on. Hither Mr. *Adams's* Ship came, according to the Agreement, and stayed the appointed Time. The Natives were civil and friendly to them at first, and bartered Sheep and Potatoes for little Toys, which they gave them; but at last they fell off, removed up into the Country, and came no more to them. Their Company not coming, they went away, touching, as they passed, at the Bay of *Baldivia*, and the Isle of *Mocha*; but not coming to Anchor any where, till they did at the *Cape Santa Maria*, which is about twenty Leagues from the Island of that Name to the Southward.

Here they found a convenient Bay, and good Ground for anchoring; there were considerable Numbers of People that appeared upon the Shore, but their Temper and Dispositions, as they were unknown, so they were now to be tried; but they proved very cross and untoward; for at their first Attempt to land the *Indians* looking upon them as Invaders of the Country, set themselves to oppose them, and poured in a Shower of Darts and Arrows upon the Boats that came up to the Shore; but they being under the Pinch of Hunger, and driven by an absolute Necessity to endeavour some Means for the getting a Refreshment, broke through the Weapons of the *Barbarians*, and landed their Men. Now they made Signs of Peace on both Sides, and a Cessation of Arms being, as it were, agreed on, they came to a Parley in that Language of Signs, and the *Indians* understanding what they meant, brought them Wine and Fruits for the little Commodities the others shewed them, and then signified to them, that they should now return aboard again; and if they came a Shore again the next Day, they should have a farther Supply of Victuals.

Accordingly, the next Day the Captain landed, with a Score or more of Musketeers, and they had not marched far before a Party of *Indians*, to the Number of a thousand, that lay cunningly intrenched, fell upon them, and cut them all off.

4. This was a terrible Misfortune upon all Accounts, particularly in that this Execution had scarce left them Men enough to do the necessary Office of the Ship. With this Loss they went away from the inhospitable Cape, and came to the Isle of *Saint Mary* itself; here they found their Admiral, but in much the same distressed Condition as themselves, the Natives of the Island of *Mocha* having given his Crew the same rude Treatment that those at the Cape had given the other, only of the two the Admiral had the worst on it, for he had lost more Men by the Darts of the *Indians*, and over and above that, their General himself. Now, to get some Refreshment at this Place was the great Difficulty; 'twas hard to lie still, and famish on Ship-board, and 'twas as hard to venture on Shore, because they had not Men for it. In short, these two Wants were so great, and so unhappily complicated in their present Circumstance, that for all that appears, if an Accident had not relieved them, they must have concluded upon dying here without any more ado.

But a Couple of *Spaniards* that had a Design to betray them, came aboard (in a seeming friendly manner) for that Purpose, and were so well as to do it without Pledges, or making any Provision for their safe Return. So when they had seen the Ship, and would have gone back again, they told them no, they were sensible of their ill Design, and would keep them Prisoners (especially since they came of their own Heads too) unless they would promise to furnish the Ship with so much Provisions. One may easily imagine the *Spaniards* were out of Humour upon it, to find themselves taken in such a Trap; but 'twas all one, 'twas to no Purpose to be in a Passion there, and they were forced to submit to those Terms of Deliverance, and glad to escape so too. The *Spaniards* brought in their Provisions according to the Agreement, and now they were once more reprieved from a miserable Death.

After this the two Ships set sail in Company for *Japon*, the rest of the Fleet were given over for lost, and one of them they afterwards heard fell into the Hands of the *Spaniards* at *St. Yago*. Besides this, the King of *Spain's* Fleet waited for them upon the Coast of *Peru*, and had they lighted on them, 'tis very probable they had both followed their Companion in her Fate, since they were in so very weak and shattered a Condition.

5. It was *November* the 29th that they left the Island of *Saint Mary* upon the Coast of *Chili*, and having passed the Line, had a good Wind, and fair Weather for a good while, without any Interruption by Storms and Tempests. In the Latitude of fifteen or sixteen Degrees North, they fell in with some Islands of *Cambals*, or *Men-eaters*, as Mr. *Adams* calls them, without any Scruple, since eight or nine of their Men he believes were devoured by them. These fellows, it seems, being weary of so long a Voyage, and willing to take up at the next resting Place, put themselves into the Pinnace, and so ran away; but which Way soever the *Cambals* disposed of them, 'tis certain, they never came aboard more. In the Latitude of 27 and 28° the Weather began to change upon them, the Winds that had lain still and quiet so long roused, and blew with a prodigious Fury. They had such a Storm of Wind and Rain, that equalled or exceeded the most violent any Manner among them had seen.

In this horrible Confusion they lost one another, and the Admiral never came up to them more; but they followed on their Course for *Japon* alone, being still in hopes to meet her in one Part or other of that Island. Certainly, hardly ever any Man performed a Voyage in more Distress. Our Pilot tells us, that they had of all their Number but nine or ten left, that were able to stand, or creep upon their Knees. As for the Captain, and all the rest, they were all at their last Gasps, as it were, and expected to die every Hour: And this was a very dismal Case: for Storms will make the poor Seamen bestir and work themselves to the Purpose. But how shall Nature be supported in the mean time, and where shall Men have Strength to do these toil-

some Works, that have not Food to keep Life and Soul together?

6. It was *April* the 19th before they had Sight of the Coast of *Japon*, and by that Time there were but five of their Company that could go, Providence ordering the Matter so for them, that they had then a Prospect of Relief, when Things were run up to the highest Extremity. 'twas near to *Bungo* that they saw this first Island, and were then in about 35° 32'; but Mr. *Adams*, by the way, assures us, that that Coast of *Japon* is fallily placed in all our Maps, Charts, and Globes; for he says, it lies in 35° 33', which makes a considerable Difference from the common Account given by them of its Position. At *Bungo* several Boats of the Natives came up to them, and aboard them too, as they had a mind themselves, and it could be no otherwise, for there was no body to make any Resistance.

The Sailors were all quite spent, and if the *Japones* would have plundered them, or knocked them on the Head, they might have done it without any Trouble; yet they did them no manner of Harm, as to any Violence, or any sort of Assault; but they pillaged and stole all that they could lay Hands on; for which some of them paid very dear afterwards. The Vice-King of the Place proved very kind to them, took them into his Protection, and sent a Guard (as soon as they were come to an Anchor in the Port, to see that none of the Merchants Goods were stolen. This would have done very well had it come in good Time; but the Thieves were there before them. However, here they had good Store of Provisions sent them, and a House provided on purpose for them, and, in short, were made very much of, and began in some measure to enjoy themselves, after all the Dangers and Fatigues of the Sea.

But 'twas their ill Luck to meet with *Portuguese* and *Jesuits* here; they were forced to make use of them for Interpreters indeed; but they had far better been without any, and rather to have made use of the silent Language of Gestures and Signs, than have made use of such Interpreters as they were: For, these Men gave the Character of them, that they commonly give of their *European* Neighbours (in all Parts of the World where they meet them) that they were Spies or Pirates, and not trading Men, as they themselves pretended; and this let the *Japones* see against them, that Mr. *Adams* tells us he was apprehensive at one time that they should have had the Fate of Pirates in that Country, which is to be set up upon Crosses.

Now, when a Company of poor Seamen came to them themselves upon their Mercy, as it were, in a strange Country, where they were not able to speak for themselves, and where their Liberties and Lives depended entirely upon the Peoples good Opinion of them, to go and leave them at that rate, was an unpardonable Piece of Villany, and an Action so very inhuman and base, as was only fit for *Portuguese* and *Jesuits* to be guilty of; but it was not long before the Emperor, hearing of this Ship, sent for Mr. *Adams*, being the Pilot, to come to him. The Court was then at *Osnia*, which is about eighteen Leagues from *Bungo*. Hither came our *Englishman*, not knowing whether 'twas for Life or Death, to Prison and Punishment, or for their Favour and Enlargement.

7. The Emperor viewed him, he says, with a wonderful deal of Attention; but yet with his mind and favourable Aspect took off, in a great measure, from the Dread his Countenance might otherwise have impressed. He asked, by his Interpreters, a world of Questions about the Country Mr. *Adams* came from, the People, their Manners, their Affairs both as to War and Peace, and Proofs of it in Beasts, Fish, and Fowl, the Trade and Business, and Laws and Government; and, in short, the whole natural and civil History of it. More than this, he urged him as to his Religion too, and would needs examine his Faith, asking him what 'twas he believed in? a Question, that if a Man had not known the Emperor's Religion, would almost have made him afraid the *Jesuits* had set up an Inquisition here, and that he was one of the Tributaries.

But Mr. *Adams* puzzled him ten times worse, when he shewed him the *Magellanick Straits* in his Chart, that which he sailed to *Japon*. The Emperor perhaps had a pretty good Opinion of him before, but now he showed him a downright Liar, the Mystery of such a Voyage was

Food to keep Life and Soul

of him before, but now he declar'd
the Mystery of such a Voyage was

so incomprehensible, that he had no Faith to bestow upon
it; yet since Mr. Adams affirmed it, and he could not con-
fute him, he entertained it as a Man does all Points of pure
Mystery, with silent Admiration, and humble Submission
of their Reason to the Difficulty, though cramped and tor-
tured with it at the same time. Though his Understanding
was affronted by it, yet his good Nature was not, and he
was very good Friends with Mr. Adams afterwards, as ap-
peared by his holding him in talk till Midnight: He had
several other Conferences with the Emperor after this, but
was for a considerable Time notwithstanding kept in Pri-
son, though he had all Necessaries allowed him, and nothing
like a Punishment, but a large Confinement. The *Portu-
guzze* made all the Interest at Court they could possibly
against him, and, by their Agents, were continually in-
fusing some scandalous Reports of him and his Country in
the Emperor's Ears; but all would not do, and the Prince
was so just and generous as to tell them, that the *English*,
having done him no Mischief, it would not be fair for him
to see them suffer from any in his Country; and that it
would be contrary to all the Laws of Justice and Reason,
for him to suffer an innocent Man to be executed, merely
because his Country and theirs were at War.

8. Mr. Adams's Circumstances now began to mend, and
grew more favourable; his Enemies were quite dishearten-
ed, and the Emperor express'd every Day more and more
good Liking to him. In the first place, he freed him
from his Imprisonment, and gave him leave to see his old
Ship's Company, who were surpris'd with no small Joy at
this, having heard 'tis probable from the *Portuguez*, who
intended it should be so) that he had been executed some
time before: But here he found the Ship absolutely plun-
der'd, and all his Goods and Instruments gone, and all the
rest had lost what they had as well as he; for being all sick
and weak ashore, the Goods lay ready for a Prey to those
that could be unjust enough to seize them.

When this came to the Emperor's Ear, a Search was
made, in order to the Recovery of them; but being gone
too far out of Reach, he commanded fifty thousand Rials
of Eight to be given them in part of Satisfaction; and to
make sure that this Money should not be either fraudulently
detain'd by his Treasurers, or converted to any other
Use, he saw the Payment of it himself into the Hands of
one who was appointed to have the Management of their
Affairs, and to give it out to them in Parcels as they
wanted. After this the Court removed to *Edo*, about a
hundred and twenty-two Leagues from *Ojacca*.

The Emperor ordered Mr. Adams to move thitherwards
with his Ship, and here they took the Liberty to petition
him, that they might be perfectly free, and pursue the Design
of their Voyage, in going to trade in some other Parts;
but this would not take, and the Emperor was not dispos'd
to part with them yet; so they got the Money into their
own Hands, and divided it amongst themselves, every Man
his Share, and then they disper'd themselves about the
Country, chusing those Places to settle in that best pleas'd
their Fancies; but the Emperor order'd them, besides an
Allowance of Rice, two Pound a Day for every Man, and
over and above, so much yearly as came to eleven or twelve
Ducats: There was no Distinction made between Captains,
Pilots, and common Sailors; but they all fared alike.

9. Thus four or five Years went over their Heads, and
they followed every Man his Business in the Country for a
Livelihood, since 'twas determin'd that there they must
live and die; but when the Term of Years was expired,
the Emperor sent for Mr. Adams to Court, and the Business
was to make him a Ship. This was not his Trade, as he
told the Emperor; and though he knew how to guide a
Ship at Sea, yet he was not used to the making of them;
but he was so very urgent and pressing to have it done,
that Mr. Adams undertook the Work, and built him a
Ship of about eighty Tun.

When he came aboard it he express'd a wonderful deal
of Pleasure in it, and 'twas a Piece of Service he valued
so much, that the Maker of it role mightily in his Favour,
by this very Means; besides several very good Presents, his
Pension was increased too, being made such as came to 70
Ducats per Annum, over and above the former Allowance
of Rice; and these well managed, were a tolerable Liveli-

hood for a single Person in that Country: But that which
recommended him most effectually to the Emperor's Esteem
was his Skill in Mathematical Learning; Mr. Adams had
a good Share of Knowledge in the practical Parts, and was
now honoured with having to great a Prince for his Scholar.
He instructed him in several Points of these useful Arts,
and made him capable of solving to himself that mysterious
Problem of sailing to *Japon* by the *Magellanick Straits*.
He could please him at any time with describing Geomet-
rical Figures.

The Emperor was plung'd in the Study, charmed and
conjur'd within the Circles Mr. Adams drew him. This lat-
ter used his Geometry to such good Purposes, that he dis-
covered the true Method of managing his Royal Pupil by
it, and got, as he says, the exact Length of his Foot. His
Word was all in all in any Point of Dispute and Contro-
versy, and which Side soever Mr. Adams took, the Em-
peror was always of the same. He had so great a Stroke
now at Court, that even the Jesuits themselves were will-
ing to make use of his Interest there, and courted him to be
their Patron; and he declares, that by his means both *Span-
iards* and *Portuguez* received several Favours from the
Emperor, which they were otherwise in no likely Way of
obtaining. Being in these Circumstances, he thought it not
impossible to win upon the Emperor, so far as to return
into his own Country, and for that Purpose renew'd his old
Request, promising to do his utmost for the bringing both
an *English* and a *Dutch Trade* to *Japon*, if he might be
suffer'd to go home.

But the Emperor was too much pleas'd with his Com-
pany to hearken to any Proposal about the losing of it.
Mr. Adams should have conceal'd his Skill in Mathema-
ticks, kept his Geometry and Navigation to himself, if he
had intended to have seen his own Country again; he was
too useful a Man to be parted with, and there was no Hopes
of his Liberty, till he had quite lost the Knowledge of all
those Arts that had so charmed the Emperor. In short,
there was no going from him, and his Wife and Children
must be contented without him; yet he procur'd Leave for
the Captain of the *Dutch Ship* he came in to go; and,
to make his Life as easy and pleasant as might be, the Em-
peror settl'd a Lordship upon him, in which he had a Com-
pals of Land to manage, and a Parcel of Slaves, to the
Number of eighty or ninety, appointed to do his Country
Work; and this was the Court of our *Englishman's* For-
tune in that Part of the World, as he himself has describ'd
them.

10. As to the State of the Country, and its Affairs, he
does not tell us much; he commends the *Japones* largely
for their Courtesy and good Humour, Valour in War,
Justice in their civil Concerns, and the happy Constitution
of the Government. He believes no People to be Matters
of better Politicks than they in their civil Government, nor
have more Superstition in their Religion. They have va-
rious Sects and Opinions amongst them, and some of them
had embrac'd Christianity at the Time the Friars and Jes-
uits were very diligently at work to propagate it in several
Parts of the Island. So far had they gone in Mr. Adams's
Time, as to have some Churches, and Prospect of a con-
siderable Number of Convents.

The Character he gives of Trade is, that Silks and Cloths
are very vendable Commodities, and that for ready Money;
and, according to his Relation, the *Japones* have where-
withal to be very good Paymasters, and can afford to give
the best Rates for a Commodity, having Gold and Silver
enough in their own Country; a very happy People surely,
in the common Acceptation of Things, since they live in a
pleasant Country, enjoy the Benefit of a rich Soil, and have
besides Mines, which yield them vast Quantities of Gold
and Silver. If any thing could have contented this Man
out of the Limits of his own Country, and without the
Enjoyment of the Conversation of his Family and Friends,
he might assuredly have met with it in *Japon*, where the
King of *Surunga*, whom he call'd Emperor, treated him
with extraordinary Kindness, and reward'd the Pains taken
in his Service with a Magnificence truly royal.

He employ'd Mr. Adams to sail in the Vessel he had built
for him as far as *Edo*, which our Author tells us was as
far as from *London* to the *Lizard*, or Land's End. As he
succeeded

succeeded happily in this, as well as in other Affairs, he was directed to build a larger Vessel after the *European* Manner, which accordingly he did, with the Assistance of such as were under him, and who, following his Instructions, finished a very good Ship, of the Burden of one hundred Tuns; and that she was in every respect a very compleat Vessel, appears from the Use that was afterwards made of her; for it so fell out, *Annus Domini 1609*, that the *Spanish* Governor of the *Manilas*, going in a large Galeon of one thousand Tun to *New Spain*, was driven out of his Course by a violent Storm, which threw him upon the Coast of *Japan*, where arriving in the Night, the Crew, through Ignorance, ran the Vessel on Shore in the Latitude of $35^{\circ} 50'$ North, by which unfortunate Accident one hundred and thirty-six Men were drowned; but the Governor with three hundred and fifty more escaped, and applied themselves to the Emperor, beseeching him to have Compassion upon them in their Distress, and to assist them in their Design of proceeding to *New Spain*.

As the *Japoneze*, from the Maxims of their Government, were never very desirous of having many Strangers in their Dominions, this Request of the *Spanish* Governor was very readily complied with; and as soon as Provisions and other Necessaries could be got together, the Governor and his Men were embarked on board the Ship which Mr. *Adams* last built, in which they safely proceeded to *Acapulco*. In Gratitude for this Favour, this Governor, in the Year 1611, sent another Ship in Exchange, with a great Present, and an Embassador on board, who had Instructions to thank the Emperor for his Civility, and also to make him a large Present.

It was in this Year also that our Author had an Opportunity, by the Arrival of a *Dutch* Ship, to give his Countrymen in *England* some Account of his Adventures, and of the Condition he was then in. This Letter he addressed to his unknown Friends and Countrymen, desiring it might be carried either to *Lincolne* near *London*, or to *Gillingham* in *Kent*; and in the Beginning of it he takes notice, that he was born at that Town; that at twelve Years old he was bound Apprentice to Mr. *Nicholas Diggins*, whom he served twelve Years, and was afterwards in her Majesty Queen *Elizabeth's* Service, and then spent eleven or twelve Years in serving the Merchants who traded to *Barbary*, till being desirous of visiting the *East-Indies*, he went over to *Holland*, and there entered into the Service of the *Dutch*.

The Conclusion of his Letter is extremely curious, and therefore I shall give it my Readers in his own Words, that they may better judge of the Genius and Capacity of this Man, who made such a Change in the Affairs of *Japan*, and procured that Settlement for the *Dutch*, which without his Assistance, it is very probable they had never attained.

" Now, whether I shall come out of this Land I know not; until this present there hath been no Means, but now through the Trade of the *Hollanders* there is Means. In the Year of our Lord 1600, two *Holland* Ships came to *Japan*; their Intention was to take the Carrack that yearly came from *Macao*, and being some five or six Days too late, nevertheless they came to *Yerando*, and came to the Court to the Emperor, where they were in great Friendship received, conditioning with the Emperor yearly to lend a Ship or two, and so they departed, with the Emperor's Paise. Now, this Year 1611, there is a small Ship arrived with Cloth, Lead, Elephants Teeth, Damask, and black Taffates, raw Silk, Pepper, and other Commodities; and they have shewed Cause why they missed the former Year 1610, according to Promise yearly to come.

" This Ship is well received, and with great Kindness entertained: You shall understand, that the *Hollanders* have here an *Indies* of Money; for they need not to bring Silver out of *Holland* to the *East Indies*; for in *Japan* there is much Silver and Gold to serve their Turns in other Places, where Need requireth in the *East-Indies*; but the Merchandize, which is here vendible for ready Money, is raw Silk, Damask, black Taffates, black and red Cloth of the best, Lead, and such-like Goods. So now understanding by this *Holland* Ship lately arrived here, there is a settled Trade driven by my Countrymen

" in the *East-Indies*, I presume some amongst them, either Merchants, Masters, or Mariners, must needs know me. Therefore I have emboldened myself to write these few Lines, in short, being desirous not to be over tedious to the Reader.

" This Island of *Japan* is a great Land, and lieth to the Northward in 48° , and the southermost Part of it in 33° , and the Length of it E. by N. and W. by S. (for so it lies) is two hundred and twenty-eight Leagues. The Breadth South and North of it, thirteen Degrees, twenty Leagues to the Degree, is two hundred sixty Leagues, and is almost square. The People of this Island of *Japan* are good of Nature, courteous above Measure, and valiant in War. Their Justice is severely executed, without any Partiality, upon Transgressors of the Law. They are governed in great Civility, I think no Land better governed in the World by civil Policy. The People are very superstitious in their Religion, and are of diverse Opinions. There are many *Jesuits* and *Franciscan* Friars in this Land, and they converted many to be Christians, and have many Churches in the Island.

" Thus, in short, I am constrained to write, hoping by one Means or other, in Procees of Time, I shall hear of my Wife and Children, and so with Patience I wait the good Will of God Almighty, desiring all these to whom this my Letter shall come, to use the Means, to acquaint my good Friends with it, that so my Wife and Children may hear of me; by which Means there may be Hope that I may hear of my Wife and Children before my Death. The which the Lord grant to his Glory and my Comfort. Amen. Dated in *Japan* the twenty-second of *October*, 1611."

11. As short as our Author's Description of *Japan* may appear, it deserves some Notice and Explication. There is no doubt, that he extends the Latitude of this Country too high, when he tells us, it reaches to forty-eight Degrees; but perhaps he took what he wrote from the Information of the Inhabitantes, and might, by his Enquiries, as to the Distance they had sailed and travelled North, be led to take the Land of *Tedes* into his Computation; and if so, we may very easily account for his extending the Bounds of *Japan* into so high a Latitude; but it is to be blamed; for supposing that Country a Part of the Continent, and of the Empire of *Japan*, since the Natives were at that Time persuaded of both, and consequently in his Circumstances he was not likely to obtain any better Information. The rest of his Account is excellent enough, and the whole of it is apparently calculated to invite the *English* thither, by affording them Possibility of an advantageous Commerce. It is plain likewise, that Mr. *Adams* meant by this all the Service possible to his Country; and if it should be enquired why he introduced the *Dutch* there first, the Answer is very clear, and very evident, because he had no Means of writing to, or corresponding with the *English*, how much soever he desired it.

It is also very evident, that by his Introduction of the *Dutch* he meant to find out some Means of corresponding with his own Countrymen; and indeed it was a very natural Method, since he came to *Japan* in the *Dutch* Service, and had no other Way of working his own Deliverance, but by their Means. Another natural and just Observation upon his Letter is, that he speaks very briefly of Facts, and without mentioning any thing to his own Praise; in which, without doubt, he acted very prudently, and this for two Reasons. In the first place, if he had given a large and full Account of the *Dutch* Settlement, and of the many it cost him to establish it, it would certainly have hindered his Letter from coming at all to the Ears of his Countrymen, by raising the Jealousy of the *Dutch*, who were extremely tender of having their Affairs known. This is the more certain, since the latter Part of a Letter which he wrote to his Wife, and which contained a larger and more full Account of the Affairs of *Japan*, was actually torn off, and destroyed by those who were entrusted with it. In the second place, supposing his Epistle had been more fortunate, and had come directly to the Ears of the *English*, it would not have recommended him to

me some amongst them, either Mariners, mult needs know me. I need myself to write these few serious not to be over tedious

is a great Land, and lieth to the Southward of the southernmost Part of it, is of it E. by N. and W. by S. and twenty-eight Leagues. constrained to write, hoping in Proccs of Time, I shall children, and so with Patience I God Almighty, desiring all these shall come, to use the Means, friends with it, that so my Wife of me; by which Means there hear of my Wife and Children which the Lord grant to his Amen. Dated in Japan the 17, 1611."

Author's Description of Japan may Notice and Explication. There is the Latitude of this Country, it reaches to forty-eight Degrees, what he wrote from the North and night, by his Enquiries, sailed and travelled North, he also into his Computation; and account for his extending to high a Latitude; not easy to be that Country a Part of the Empire of Japan, since the Natives persuaded of both, and therefore he was not likely to obtain The rest of his Account is exact, if it is apparently calculated to, by affording them a Point of mere. It is plain likewise, that all the Service possible to him be enquired why he introduced Answer is very clear, and very Means of writing to, or correction, how much soever he desired

by his Introduction of the Dutch Means of corresponding with his need it was a very natural Method, the Dutch Service, and had to his own Deliverance, but by just and just Observation upon his every briefly of Facts, and with to his own Pride, in which very prudently, and thus for two ce, if he had given a large and Settlement, and of the latter it would certainly have hindered it all to the Hands of his Countrymen of the Dutch, who were the latter Part of a Letter, and which contained a large the Affairs of Japan, was actually by those who were entrusted place, supposing his Justice had had come directly to the Hands not have recommended him to

them, had he insisted on the Pains and Trouble he had taken in procuring the Dutch a Settlement in that Country; and therefore the longer and the more actively we consider his Manner of Proceeding, the more certain we may be, that he acted in this Respect with all the Care and Precaution, and, at the same time, with all the Uprightness and publick Spirit that it was possible.

It is from a just Sense of this, and because I find nothing said of him by any of our Historians, or Collectors of Voyages, besides what they have taken out of his own Works, that I judged it reasonable in itself, and a thing that could not but be agreeable to the judicious and intelligent Reader, to pursue the Thread of this Man's History, by the Help of Foreign Writers; for Dutch, Portuguese, and Spanish Authors have thought the Actions of this Man worthy of being recorded, though there is no little said of them by our own; and, in itself, the Affairs in which he was engaged were of such a Nature, and his Conduct so extraordinary, that we need not wonder at their taking to much Pains, the rather, if we consider, that in their Turns they all felt the Effects of his Management, and of the Credit he acquired at the Imperial Court.

In order to set this History in a clear Light, it is requisite to go back a little, in order to show the Reader what Mr. Adams has concealed, which is, that it was by his means that Dutch Ships were brought thither in the Year 1600, and the Thing happened thus: When he found there was no Hopes of procuring his own Liberty, he not only applied, as he tells us, for the Discharge of his Captivity, but of another Dutch Officer, supposing that two Lives were better than one, in which he judged very right; for his Captain was soon afterwards killed, and it was the other Officer who carried the News of Mr. Adams's Establishment in Japan to the Dutch Settlements in the East Indies.

It was in Consequence of this, that a Yacht, called the *Ton*, was sent in the Spring of the Year 1603, from the River of *Jokore* to Japan. This Vessel arrived on the Coast of *Firando* on the 11th of July, and two Commissioners being sent to the Emperor's Court, they, by the Intreaty of Mr. Adams, procured all they could desire; and having free Liberty given them to trade, sailed on the 3d of October, arrived at *Bantam* on the 1st of November, and from thence continuing their Voyage home, arrived safely in the *End* on the 20th of July, 1613. It was on the Report they made, that another small Yacht was sent, which arrived at *Firando* on the 11th of July, 1611.

The first thing they did was to have Recourse to Mr. Adams; for at their Arrival they found all things went very unwisely, at least in their Opinion, who were not at all used to that sort of Behaviour which was practised by the *Japanese*; and therefore they absolutely refused to comply with what was demanded of them, in giving a List of the Merchandize which they brought to the Royal Factor. On the other hand, the *Japanese* were but indifferently satisfied with them; for, whereas they expected an annual Ship should have been sent, as there was, from *Macao*, there were now two Years elapsed, and but a very small Vessel, and a Cargo of very moderate Value sent at last, which did not at all agree with the Humours of the *Japanese*, who, as most of the Eastern Nations, are exceedingly caught by Pomp and Show.

To heal these Breaches, the principal Persons on board the Ship went to make Mr. Adams a Visit, following to be guided by his Instructions, because, as the Dutch Viceroy of this Voyage informs us, they were very well satisfied he had as much or more Interest with the Emperor than with his Ministers or Nobility; and it was purely in Respect to him, that after their first Differences with the Emperor at the Court, they had obtained Licence to make their Application to the Emperor. On this condition, that Mr. Adams consented to them, that though their Cause was small, it would be respected to make satisfaction to them, since it depended upon their Behaviour, on the Occasion, whether the Licence which he had procured should be continued, should be continued, or suspended. The Effect of this was, that the Commodore and Ministers of the Country, and the vast Profits that must be made by their trading themselves there, were ordered to persuade their Ministry, that they came immediately upon all

that he proposed, and very wisely resolved not to heed the Loss they might sustain by their first Cargo, provided they might secure thereby a second Licence to send an annual Ship thither.

On the other hand, Mr. Adams had such an Interest with the principal Persons, and great Ministers at the Court of Japan, that he soon brought them to consider the Dutch in that Light in which it was most for their Interest that they should be considered. There was at that time a Spanish Ambassador at the Court of Japan, who had a great Train, made a splendid Appearance, and took great State upon him; for which Reason the Dutch Super-cargoes were very apprehensive that he would get the better of them in their Negotiation; but Mr. Adams having taken the Affair entirely into his own Hands, turned this very Incident to their Advantage. He represented to the Japanese Ministers, that this Spanish Ambassador treated them with an Air of Haughtiness and Superiority, and rather called to them his Demands, than applied to them for their Favour; whereas the Dutch were absolutely a trading People, no way formidable to them in any respect, who desired to have the Honour of furnishing the Emperor and his Subjects with such foreign Commodities as they wanted, and were ready to submit to such Regulations, and to carry on their Trade under such Restrictions, as for the Safety and Welfare of the Empire they, in their great Wisdom, should think fit to prescribe.

By this means, as the Dutch Writers themselves confess, Mr. Adams wrought to effectually in their Favour, that they were every where received, not only with Civility and Kindness, but with the greatest Candor and Complaisance, while the Spanish Ambassador, notwithstanding the great Figure he made, was not only very coldly treated, and made little Progress in his Negotiation, but was likewise exposed to Injuries and Murther.

The Portuguese Writers attribute also to our Countryman Adams the evil Impressions that about this Time the Emperor began to entertain of their Nation, and particularly of the Millionaires; of which, however, we find not the least Footstep in either Dutch or English Author: But, to say the Truth, it is probable enough, and what they report is very consistent with the Notions that are ascribed to Mr. Adams by the Dutch Writers. In short, he did express some Dislike to the Jesuits, and when asked concerning them by the Emperor, he said very freely, that they were the Authors of all the Disturbances in Europe, and that they had expelled not only Great Britain, but France, for their Reason. It is highly probable, that the Emperor might from hence take a Resolution of treating them in the same manner, for the Security of his own Dominions; but then it must be allowed, he would not have thought of taking this Measure, if he had not found their Behaviour in Japan justly the Character which Mr. Adams had given him of them: But the Portuguese Writers say not a Word of the Calumnies spread by their Priests, and the Japanese Nobility in their Interest, against the English and the Dutch, representing both Nations as a sort of Pirates and Free-booters, which might not only provoke Mr. Adams to make such Returns, but likewise lay him under a kind of Necessity of clearing up these Points to the Emperor's Satisfaction. But to return to our Subject:

About the latter End of August 1611, the Dutch, thro' Mr. Adams's Interest only, obtained a Licence to trade in Japan under the Emperor's Seal, in which, however, that Court was wanting, which chiefly induced them to make this long Journey to Court, and that was an Exemption from being visited by the Inspector of Commerce, by whom they had been greatly aggrieved. This Officer, tho' a very bad Man, had a very great Interest at Court, his Sister being one of the Emperor's Wives; and the Dutch stood upon Application to the prime Minister, that he was to march and of offending her, that he durst not to march as people that Chute to the Emperor, which gave them an great Concern, since, without obtaining it, they were not much inclined to make use of the Licence.

To obviate this Difficulty, the prime Minister proposed, that Mr. Adams should draw up a Petition for meeting of this Court, with such Reasons as he thought proper, and should take an Opportunity of presenting it to the Emperor

when he was in a good Humour, promising that he would do all in his Power to support it; and assuring him at the same time, that he had written such a Letter to the Inspector, as would prevent their meeting with any Difficulties for the present, advising them to leave the whole Affair to the Management of Mr. Adams, for whose Success he would be answerable; but all he could say had no Effect upon the Dutch, they were resolv'd to trust no body, and not to stir from Court, till they had this Clause inserted in their Licence.

To satisfy them therefore, if it was possible, Mr. Adams drew up a proper Petition, and the very next Day presented it to the Emperor himself, whose Consent and Seal he procur'd; so that by his Interest the Dutch obtained, on their first Application, what the Portuguese were never able to obtain in the Course of so many Years as they had been intreated in Japan, which is such a Proof of Mr. Adams's Interest at that Court, as, if it was not reported by the Dutch Writers themselves, would scarce deserve Credit; but, as it is, I think there can be no sort of Doubt rais'd about it. All Things being thus settled to their Satisfaction, and every thing done for them that they could desire, they return'd to Firando; and having loaded their Goods, and settled a Factory there, they sail'd from thence on the 28th of September 1611.

14. It is of this Dutch Ship, and her Reception, that our Author speaks, at the Close of his Letter, in Terms which seem particularly design'd to shew his Countrymen how easy a matter it would be for them to establish a Factory likewise in that Empire. I have taken all the Pains I could to discover how the Letters of Mr. Adams were convey'd to the English, but to very little Purpose; for all that I can say upon this Subject is, that they were brought to Bantam in the Island of Java, in the Month of October the next Year; that is, Anno Domini 1612. There were then there a considerable Number of English Ships and Merchants, to whom these Letters were read, and it was presently agreed, that such an Opportunity was not to be lost; whereupon Captain John Saris, whom the Portuguese are pleas'd to call Sir William Saris, was order'd to sail in the *Clove*, a large East-Indiaman, from thence for Japan.

He had on board him seventy-four English, one Spaniard, one Japanese, and five Indians; and on the 14th of January 1613, he proceeded on his Voyage. On the last of that Month he had Sight of the great Island of Celebes, pass'd happily thro' the Streights of Bantam, and towards the End of the Month of February reach'd the Moluccas: He made some Stay there, though he was but indifferently treated by the Dutch. On the 24th of April, he observ'd an extraordinary Eclipse of the Moon, about Seven in the Morning, which, he says, lasted three Hours and an half. On the first of June he pass'd the Tropick of Cancer, and on the ninth of the same Month had Sight of the Island of Xime, which is one of the Islands of Japan. On the eleventh he arriv'd at Firando, and was very well received; but found it, however, impossible to do any thing, till the King had sent to acquaint Mr. Adams with his Arrival, who was then at *Edde*, three hundred Leagues from thence. The Messenger, it seems, did not make so much Hastie as he ought to have done, and therefore the King, upon his Return, sent him into Banishment.

On the 20th of July Mr. Adams arriv'd, and Captain Saris confes'd was not about the Means of settling a Trade, and the Prospect there was of making it worth their while. He was told upon this Subject, that the Commerce of Japan, like that of the rest of the World, was sometimes more, sometimes less profitable; but that, however, it would be always found worth the seeking, and worth the keeping too. He could not but observe, that in Captain Saris's Opinion, Mr. Adams had a great Affection for that Country, in which he had now spent near twelve Years. There was a Remark natural enough to make, for one who was not acquainted, either with him, or with the Country; for the Dutch and Portuguese Writers, who, for what Reason I know not, always stile him Sir William Adams, report him to have been a Person of great Probity, and unblemish'd Character, and one whose Candour and Sincerity made him highly esteem'd, even by such as considered him as their Enemy: But Captain Saris seems to

have look'd upon him as a mere English Pilot, and therefore much his Inferior, without considering that his Circumstances were now very much chang'd, and that therefore he might to have been look'd upon as a kind of Minister to the Emperor of Japan.

He took his Advice, however, and agreed to go with him to the Emperor's Court, to which he was the more readily inclin'd by the King of Firando's offering him all kind of Conveniencies for his Journey. He arriv'd with him Presents for the Emperor, the Emperor's Son, the prime Ministers, for the Judge at *Meaco*, for the Admiral, and for the Treasurer; all of which amounted together to the Value of one hundred and eighty Pieces, which was no mighty Sum to expend for procuring the Privilege which he expected; but it will be more than sufficient to Defign of this Work, and at the same time, will be a more Entertaining to the Reader, to give the History of this Journey, as near as may be, in German and English Words, which I the more readily do, because he has always consider'd, and I think with good Reason, one of the most terrible of our old Writings, and who has always to be found the fewest Mistakes. This is the true Story of his Journey.

We first sail from Firando, and pass'd thro' the Straights, the most part are very well inhabited, and are full of Fish; upon them; but the fish of Note that we met with, was *Luccate*, a very large and considerable Fish, which is not to be seen in *London*; within the Walls very well known, and uniform, that one might see from one part of the Coast to another. It has a strong Stone Cartilage, a small Bone, and a Draw bridge, all kept in very good Order, and the Soldiers, or Ordnance, are not to much wonder to find none, since there is not much thing at *Firando*; and it is a sort of military Discipline, that the Japanese are wholly without. All the good Fish, and to up to *Osaca*, we found Women that live with their whole Families upon the Water, getting their Food, and by Fishing, at which they were very great Masters; for they had two Strings to their Bow, and 'twas not possible for the Fish to escape them; for what they could not with their Lines and Nets, they would dive for, and catch that Way without fail; and this they would do, whether to the Depth of eight Fathom. These Women are very easy to be known from all others; for, by contracting, their Eyes were strangely altered, and look'd as if it were Blood; and by this Token the diving Women are distinguished in Japan.

When we pass'd the Streights of *Xemina-Sapa*, the next Town of note we came to was *Osaca*, nothing is known to the former in Compals and Dimensions, and one of the principal Sea-ports of the Empire. There is a great Port comes up to it as wide as the *Baynes*, and is full of fine Timber-bridges laid over it. It has a Castle very extraordinary for Bigness and Strength, with very deep Trenches about it, and several Draw-bridges without made, and Grates so strongly plated with Iron, as they seem to bid Detiance to any Battery in the World. The whole Building of the Castle is of Free-stone, and the Walls are of the same; but a matter of seven Barrels of Gun, and put together without any Mortar, or Cement, the Stones being so nicely cut, as to lie perfectly close together, and needs no other Binding; only, if there should be to be a void Space any where, they throw a great Stone to fill up the Crevice, and that's all they do. It is very contriv'd, strengthened with Bulwarks and Batteries, with good Store of Loop-holes for small Shot, and Rows, and various Passages for the throwing of Cannon upon those that should come to attempt it, and it is not easily believ'd to be a mighty thing as it is, without having a particular Account of it, which we shall hear what use the Emperor puts it to, and what importance the Jewel is here kept in late Custody.

In short, here lives a lock'd up in the Castle, a young and genuine Heir of Japan, here, I say, he lives as happy as to be ignorant of his real Quality, his Power, and just Pretensions; though, at the same time, he is so fortunate as to be excluded from them all. The Issue of the Matter is, the present Emperor is an Usurper, who has stepped into the Throne, in a way not only contrary to

law of that Kingdom, but the more sacred ones of eternal Justice and Reason. The old Emperor, when he died, left this Son, then an Infant, under the Care and Tutorage of four principal Noblemen; whereof *Ogofojamma*, the present Emperor, was one, and the chief. The other three Governours, Men of Intrigue and ill Principles, and longer by far of flattering their own Pride, and Ambition, than discharging their Duties of a sacred Trust committed to them, made Pretensions to the Sovereignty, and put in for the Crown themselves.

In opposition to whom, as also to assert the Rights of the royal Pupil, *Ogofojamma* took up Arms; and having secretly routed the other Pretenders, had the supreme Power, suddenly clapped all into his own Hands; and now the charming Opportunity told him, he had as good be Emperor himself. All his Competitors were removed out of the Way. The true Heir was incapable of understanding and redressing his Case. All the Power was his own; and he want only the Name of an Emperor, which was to vary him all a thing, that he resolv'd not to be without that any longer. The young Prince he kept always about him, and in perfect Ignorance of himself, and his Relation to the Crown, suffering him to know no other, but that he was his Son; all that are about him being such as he prefer'd the Emperor has brought up from their Cradles, and so not able to give him any true Information. And to make all sure, when he was grown to Years, he married him to his own Daughter, and so confid'd in him to the Castle of *Ofiaca*, where they live like the Children of an Emperor, as to all Points of State and Grandeur, only Ignorance, that sweetens all the rest, civil Policy is plac'd to smother them.

Over against *Ofiaca*, on the other Side of the River, lies another great Town, call'd *Sacay*, a Place of very great Trade for all the Isles therabouts. At *Fogomi*, to which we came next, we found a Garrison of three thousand Soldiers, appointed for the keeping some of the Prizes in good Order. This Garrison is flatted every three Years; and the Change happening when we came thither, we had the Advantage of seeing to nothing of the Rules of their military Discipline: They generally march no more than five abreast, and to every ten Files there's an Officer deputed, who regulates the March, and keeps all in perfect Order. Their Discipline, according to the Quantity of their Arms, is thus. First of all march their Shot, that is, Calivers, Baynquets, or Muskets they have none, neither will they use any; then follow Pikes, then Cuttans and Fargets, Bows and Arrows, Waggadathes or Hooks, and lastly Calivers again close the March; and among all these they have no Colours, Drums, Trumpets, nor any sort of warlike Musick.

The *Japon's* Horses are not large; or high, but of the Size of our maddling Horses, small headed, and extremely full of Mettle; and, in my Opinion, far beyond Spanish Ginnets, both in Blatery Carriage and Spirit. Their Soldiers observe very good Order upon the Road, and are so exactly govern'd, that they are as welcome at the publick Houses as any Guests whatever; no Man is in the least disturb'd or incommoded by them; they take what they find, as other People do, and pay for it without any quarrelling: The Roads are very well furnished with Houses of Entertainment; and when there are Soldiers upon the March, they provide Victuals for them; so that they have, at an Indian's Warning, what they want, and at very cheap Rates; a Dinner of good, wholesome Food, and enough of it, from two Shillings downward, to one Penny.

The Diet generally used through the Country is Rice of several Sorts, the white being counted the best; Fish, both salted and fresh; Rabbits, Beans, Duck, Feal, Pheasant, Partridge, Quail, and Fowls: Of Beasts they have all sorts; of Beasts, wild Boars, Goats, and Black Cats; these also in great Plenty; but but they make none; neither will they eat any thing, because they esteem it the Blood of the Animal; and, for what Reason I know not, they will not touch a Bit of any tame Beasts, tho' they have them in abundance. Their Wheat might not to be forgotten, which is as plump, and as good as any. But all of the red Colour. We did in our Travels buy Rice at a Half-penny per Pound; Beans and Pheasant, the best and

fattest, for three Pence a piece; Pigs, very large, for a Shilling; a fat Hog for five Shillings; a good Ox for sixteen Shillings; and a Goat at three Shillings. The Drinks in request in this Country are only the Spirits distilled from the Rice, very strong, and of the Colour of Canary, and common Water, which is the common Drink of the poorer sort of People, that can't reach to the Price of other Liquor. They always drink their Water warm, and say that 'tis good to kill the Worms in the Maw.

Our Motions being directed to *Suranga*, where the Emperor then kept his Court, by the latter End of this Month we had gone as far as our Way lay by Water; and now being to finish the Remainder of our Journey by Land, we were furnished with Horses, and all Conveniences for that Purpose, at the Emperor's Charge. I had also a Palankin, or one of their Sedans, provided for me, and a fresh Supply of Men drawn out of every Place for the carrying me therein, when I was tired of my Horse; and, for the greater State, a Slave appointed to run with a Pike before the Palankin. The King's Harbingers also went before, and took up our Lodging upon the Road. This Part of the Journey was very pleasant and easy; the Way, for the most part, is exceeding even and plain; and wherever there was any rugged, mountainous Ground, a smooth level Passage was cut through it. This Road is all along good Sand and Gravel; it is divided into Leagues for the Benefit of Travellers; and at every League's End are two small Hills raised, on either Side one, and upon each a fair Pine-Tree plant'd. The Design of which Mark is to make Travellers competent Judges of the Length of their own Journeys, that they may not be abused by the Hacknysmen, and those that let out Horses, and so pay for a greater Number of Miles than they have rode.

All along the Road you meet with Multitudes of People passing and repassing, and Towns and pleasant Villages, Farms and Country-houses; and sometimes Temples, standing at a little Distance, in shady Groves, with the Habitations of the Priests round about them. The most unpleasant Sight we had, was the Sight of the Malefactors, fasten'd upon Crosses, near all the great Towns where those Executions had been performed. Crucifying is a very common Punishment among them at *Japon*; and, as they manage it, it is some sort of Punishment to Travellers too, to pass by a Multitude of noisome, putrifying Carcasses and Bodies; besides the Horror of the Sight, to have the Disturbance of the Smell those Bodies yield: And we had the worst Trial of all when we came to *Suranga*; there were Crosses, Scaffold, and Gibbets, Heads, Carcasses, and Limbs, hanging about in so many Places without the City, that our Pleasure in going along was greatly lessened. *Suranga* seems to be as big as *Landon*, even taking in the whole Compass of the Suburbs: The outer Parts of it we found entirely taken up by Mechanicks and Artificers of all sorts, who are plac'd there for the Ease and Quiet of the genteeler People, that don't care to be disturb'd with the Noise and Bustle the others make in their Trades.

After a Repose of a Day or two, I went, with all my Company in a Body, to the Castle, to have Audience of the Emperor, and to deliver the Presents intended for that Court; I was introduced by two of the greatest Men then in Attendance, the Emperor's Secretary and his Admiral. They led me first into a very fine matted Room, where we sat down for some time, according to their Custom, upon Mats; then they brought me into a Chamber of Presence, where stood an empty Chair of State, to which I was oblig'd to do Reverence. After some short time, Word was brought, that the Emperor was come into the Room of Audience, to the Door of which these Courtiers I brought me, but I durst not presume to look in themselves. The Custom is, for all the Presents that are brought to be plac'd in order upon the Mats of that Room into which the Emperor comes; and accordingly, when I came in, I found them all in a very orderly Manner laid before him. He received his Majesty's Letter with the Civility of that Country, lifting it up towards his Forehead, and then, by his Interpreter, bid me welcome: He desired me to go

mere *Englis* Pilot, and thro' out considering that his Contract changed, and that was looked upon as a kind of *Mis* ever, and agreed to go with it, to which he was the more oblig'd by the offering of all his Journey. He carried with him, the Emperor's Sign, a *Meaco*, for the *Ar*, which amounted together to and eighty Pounds, were for providing the *Phy* will be more *at the same time*, and Reader, to give the *Phy* may be, a *Phy* ready, or, *Phy* ank with good *Phy* and *Phy* alikes. The *Phy* as I pass'd by *Phy* inability, *Phy* of *Phy* consider the *Phy* hills very *Phy* hit the *Phy* Stone *Phy* in very *Phy* for *Phy* none, since *Phy* a sort of *Phy* about. All *Phy* Women that *Phy* Water, getting *Phy* were very *Phy* their Bow, and *Phy* shape them; for *Phy* they would *Phy* and thus they *Phy* whom. These *Phy* others; for, *Phy* altered, and *Phy* in the *Phy*

rights of *Phy*, the *Phy* was *Phy* and *Phy* the *Phy* the *Phy* over it. It *Phy* and *Phy* several *Phy* singly *Phy* by *Phy* the *Phy* it a *Phy* any *Phy*, as *Phy* Binding; *Phy* here, they *Phy* that's *Phy* with *Phy* holes *Phy* for *Phy* to *Phy* might *Phy* particular *Phy* or *Phy* kept *Phy* up *Phy* here, I *Phy* of *Phy* enough, *Phy* from *Phy* The *Phy* Emperor *Phy* in a *Phy*

and see the King his Son at *Edo*, (with all the Necessaries, for which Journey he would take care to furnish me) and by that time I returned, his Letters should be ready for our King.

The Articles relating to Trade and Privilege, which we requested his Majesty's Confirmation of, were all easily granted by him, one only excepted, respecting the *Charge*: It was to this Purpose, That whereas the *Comme* had refused all Trade and Commerce with the *English*, it might be lawful for us to bring them into *Japon*, and make sale of the Goods, so taken, in his Majesty's Dominions. This the Emperor granted at first; but his Mind was altered afterwards by a Conference with the Ambassador of *China*, and he refused to allow it. The rest all passed under his Great Seal, which is not of Wax, like ours, but stamped like a Print, and coloured red. The Secretary would take no Present, nor any thing like a Gratuity from us; the Emperor, it seems, had commanded the contrary, and 'twas as much as his Life was worth to do it.

Having seen this Business done, we set out from *Suranga* for the great City of *Edo*, where the Emperor's Son, the young King, keeps his Court: The Country is well inhabited between these two Cities; the Towns and Villages lie thick, and the *Totoques*, or Temples, scattering up and down in good Numbers too. There's one mighty Image, (which they call *Dabiz*) that stands in this Road, at which all the *Japong* stop to pay their Devotions, when they go this Way. It is made of Copper, all hollow within, tho' very thick: 'Tis in the Shape of a Man kneeling on the Ground, with his Buttocks resting on his Heels, and his Arms extended: He is represented wearing a Gown, and notwithstanding that bending Posture, is twenty two Foot from the Level of the Ground, and all the Body proportionably large. Some of our Men went into the Belly of it, and then fell a-hooping and whooping; the Noise of which, out of the wide Mouth of the Image, was much such agreeable sort of Musick as, I believe, was made by *Petalari's* brazen Bull. It stands conveniently to entertain the Devotion of Pilgrims in their Passage to the celebrated Temple of *Tenobday*; for they always make a Pause at *Dabiz*; but this is but a slight Ceremony.

It is at *Tenobday's* Temple the great Work is to be done, and the Pilgrims expect to receive the Reward of their Travel. And here one may meet all sorts of People, rich and poor, sound and disordered, continually coming and going thither, and that by Night, as well as by Day, and all the Year round. About the Middle of this Month we came to *Edo*, a City much larger than *Suranga*, no less in its Buildings, and every way more glorious in its Appearance. The very Tiles of the Houses are gilded, and the Posts of the Doors set off with shining Varnish. They have no Glass-windows, but all of Board, which opens in Leaves, and are very delicately painted: There's a Causeway runs thro' the chief Street in the City; which Street is as broad as any in *England*, and a fine River runs along by, or rather underneath the Causeway: A City full of Wells, and provided with Buckets for the People, in case of any Danger by Fire. The Castle of this City is much stronger and nobler Building than that of *Suranga*; and the young King lives in much greater State, and has a more pompous Attendance, than the Emperor's Father.

He received us in a very obliging Manner, taking the King's Letters and Presents with a wonderful Satisfaction and Content, and giving us all the Welcome imaginable. He gave us Letters for our King, and a Present of two fine Suits of *Japon* Armour, finely varnished, and a long Sword for my self: 'Tis to be noted, that the Cutters are a common Wear; but the Falahes, or long Swords, are worn only by great Soldiers, and Persons of the best Account. It is had to be no less than twenty two Days Journey, on Horseback, from this City of *Edo* to the most northern Part of *Japon*, which makes it a Country of a vast Extent. Our Business here being no more than paying a Compliment; which, being done, we had no farther Occasion of staying; and having got this Prince's

Letters and Presents for the King of *England*, we went back to *Suranga*, where we arrived again at the least this Month.

We were not obliged to wait long in this City, for the Dispatches, the Emperor's Letters, and the Instruments containing our Privileges, and the Terms upon which we were to establish a Factory in *Japon*, being all ready, and the Industry, and Interest of Mr. *Adams*, both of them so effectually dispatched; so that we had no Reason to complain either of the Delays or Disappointments, which are usually met with at Courts; and of which we were informed by Report, that of *Japon* is not more free than that of any one has not a good Agent, as luckily for us we had.

A Translation of the Emperor's Letters, and the Instrument containing our Privileges, is here annexed to the end of the Reader, annexed; and will furnish you with the same, and will regulate a Government in that Country, if they were granted. It is necessary to observe, that this Version is not literal, yet it is very like the true Meaning of the Original very exactly, and the Force and Spirit of these *Japong* Papers may be easily comprehended thereby.

To the King of GREAT BRITAIN

YOUR Majesty's kind Letter sent me by your valiant Captain *John Saris*, (who is now returned) have known to arrive in any Part of my Kingdom, I most heartily embrace, being not a little glad to see that of your great Wisdom and Power, is had notice of your most illustrious and mighty Kingdoms under your Majesty's Command. I acknowledge your Majesty's goodness in sending me to understand a Present of my Land, as much as my Land affordeth not, neither can I be before seen; which I receive not as from a stranger, but as from your Majesty, whom I esteem as a Father, and the Continuance of Friendship with your Majesty, and that it may stand with your good liking to receive my Subjects to any Part or Part of my Dominions, they shall be most heartily welcome, especially their Worthiness in the Admiral's Knowledge, and Navigation, having with much Facility directed to remote; being no whit amazed with the greatness of my mighty a Gulph, nor Greatness of my Kingdoms, and Storms from prosecuting honourable Enterprises, Discoveries and Merchandizing, wherein I desire to see me to further them, according to their Desires, and unto your Majesty a small Token of my Love, and a true Subject, desiring you to accept of the same, and him that much rejoiceth in your Majesty's Success; whereas your Majesty's Subjects have desired your Privileges for Trade, and settling of a Factory in my Dominions, I have not only granted what they desired, but have confirmed the same unto your Majesty, with a Broad Seal, for better establishing the same, and Cattle in *Suranga*, this fourth Day of the Month of June, in the eighteenth Year of our Day's Majesty's happy Computation. Referring your Majesty's High and mightiest Commander in this Kingdom of *Japon*, to be named *Mina Muttono*, to be the

Privileges granted by Ogohosonno, Emperor of *Japon*, unto the Right Worshipful Sir *John Saris*, Governor, and others, the Honourable *East India Company*, Adventurers to the East-Indies.

I. *Inverness*. We give free Liberty unto the King of Great-Britain, and his Majesty's Governor and Company of the *East India*, and Adventurers, for ever, fully to trade, and the Parts of our Empire of *Japon*, without any Hindrance, or Interruption, by any of the said Company; and to allow, buy, sell, and to carry to their own Mansions, without any Tax, or to tarry here as long as they think proper, at their Pleasures.

II. *Leu Wen* grant us to them Liberty, for all such Merchants, as shall be thought, or hereafter shall be thought, to

" shall from hence transport to any foreign Part; and do
 " authorize those Ships that hereafter shall arrive and come
 " from *England*, to proceed to present Sale of their Com-
 " modities, without coming or tending up to our Court.
 " III. *Item*. If any of their Ships shall happen to be in
 " danger of Shipwreck, we will our Subjects, not only to
 " assist them, but that such Part of Ship and Goods, as
 " shall be saved, be returned to their Captain, or Cape-
 " Merchant, or their Assigns; and that they shall, or may
 " build one House, or more, for themselves, in any Part
 " of our Empire, where they shall think fittest; and at
 " their Departure make Sale thereof at their Pleasure.
 " IV. *Item*. If any of the *Englisb* Merchants, or other,
 " shall depart this Life within our Dominions, the Goods
 " of the Deceased shall remain at the Disposal of the
 " Cape-Merchant; and that all Offences committed by
 " them shall be punished by the said Cape Merchant, ac-
 " cording to his Discretion, and our Law to take no hold
 " of their Persons or Goods.
 " V. *Item*. We will, that ye our Subjects trading with
 " them for any of their Commodities, pay them for the
 " same, according to Agreement, without Delay, or Retur-
 " n of their Wares again unto them.
 " VI. *Item*. For such Commodities as they have now
 " brought, or shall hereafter bring, fitting for our Service
 " and proper Use, we will, that no Arrest be made there-
 " of, but that the Price be made with the Cape-Merchant,
 " according as they may sell to others, and present Pay-
 " ment upon the Delivery of the Goods.
 " VII. *Item*. If in Discovery of other Countries for
 " Trade, or Return of their Ships, they shall need Men
 " or Victuals, we will, that ye our Subjects furnish them,
 " for their Money, as their Need shall require.
 " VIII. *Item*. And that without other Passport, they
 " shall, and may, set out upon the Discovery of *Pezzo*,
 " or any other Part in or about our Empire.
 " From our Cattle in *Suranga*, this first Day of the
 " ninth Month, and in the eighteenth Year of our Day,
 " according to our Computation. Sealed with our Broad
 " Seal, &c. Underwritten
 " *Minna Mauttano Yei Te Year.*"

The *Japanese* Language seems to agree with the *Chinese*
 in this, that they express whole Words compendiously,
 by their several proper Characters, not compounding them
 of distinct Letters and Syllables, as 'tis in other Languages.
 The Character is very different from that of the *Chinese*;
 and they read, beginning at the Right Hand, to down-
 wards, perpendicular-wis in the several Lines. They take
 abundance of care to speak and write in the shortest and
 comeliest manner that can be; they are not given to floun-
 rish and enlarge upon a Subject, but deliver their Minds
 in very pertinent, exact, and comprehensive Terms, con-
 tracting a great deal of Sense into a little Compass: The
 Letters, and the Instrument, were both written in a very
 far, after their Manner; and the first Ranties of that
 kind that our Nation, I believe, ever had.

This was all our Business at *Suranga* finished too.
 Upon which we took Leave of the Emperor and Court,
 and set out for *Irandu*. Our Way lay by Land as far as
Osaka; and in passing thither, we took *Meaco* in our Way.
 This is absolutely the greatest City in *Japan*, and a Place
 of mighty Trade. All the Tradesmen dwell in a Part of
 this City by themselves; and all of such an Employment
 in such a Street by themselves. The *Japanese* think it
 very unevenly and irregular, to have Men of so many
 Professions and Businesses mix'd and huddled together in
 such a confused manner, as they are in other Places. They
 are for making all of the same Trade (who are fittell to
 converse together) Neighbours to one another; Birds of the
 same Feather to be all in a cawnt; flock by them-
 selves, that a Man that looks may know where to find
 them. And the plain Truth can't be, this Order is not
 without its Beauty and Conveniency; and it adored, men-
 tion'd, a peculiar Grace to the city, which all its other
 Advantages could not have given it.

The most magnificent Temple of the whole Country is
 here at *Meaco*, built of Fire-stone, and as low as St.
 Paul's in *London* from the Quire, arched, adorned with

mighty Pillars, and as lofty as that. It has one peculiar
 Altar, at which they make their Offerings of Rice, and
 small Money (call'd *Candries*, twenty of which make a
 Stilling) for the Maintenance of the Bonzes belonging to
 it: And by this Altar stands the great Idol *Minnad*, made
 of Copper, and of the same Form with *Dab*, as men-
 tion'd, but much bigger, reaching up to the very Arch.
 The Temple stands advantageously upon the Top of a very
 high Hill, and upon each Side the Altar you see a long
 Row of Columns, of Fire-stone, about forty in each Side,
 ten Paces distant one from another, and in the Top of
 every Pillar is a Lantern, the Light of which is lighted
 every Night, and make a very pleasant View. There are
 several other Temples build'd, but thus farly exceed'd, all
 the rest in all Points of Beauty and Concord. It was
 just finish'd at our being there, the Foundation being laid
 by the famed *Tacotama*, whose House was kept in an
 Apartment hard by, and is to be maintained here in a
 state of perfect Ease and Rest, as long as Nature will
 allow him to hold it out.

The *Portuguese* Jesuits have a flatly Cell on the
 City, very well furnish'd with Men of Letters. They
 breed up abundance of *Japanese* Youth, teaching Philoso-
 phy, and the Fourth Divinity to them, making many of
 them Preachers, and High-pole, Jesuits too. There's no
 doubt but they endeavour to make them as good as they
 can; and, amongst other Arts, teach some of those that
 are peculiar to their Order. They have the New Testa-
 ment translated into the *Japanese* Language; and, besides
 this hospital Fry breeding up in the College, there are
 reckon'd five or six thousand that profess Christianity in
Meaco.

While we lay'd here, we received the Emperor's Pre-
 sents for our King, which were sent after us, viz. ten
 Books, or large Pictures, to hang a Room of State with.
 From hence we travelled to *Osaka*, where the Gally that
 set us down before was attending our Return, to transport
 us to *Irandu*, and this at the Charge of the brave and
 generous King of that Place. This Prince was extremely
 glad at our Return to his Island, as also of the Success of
 our Affairs at Court, and had caus'd it with that ready
 and even Hand of Kindness to our Company left there,
 as he did to all of us, when top-sick; but yet the Trade
 amount'd to little or nothing. In our Absence the *Japane-
 se* had been no good Customers, tho' we had come from
 the other End of the World to take their Money. One
 Reason of this was, because it was not yet certain that we
 were to be allow'd in the Country; and the Trade has
 its publick Warrant from the Emperour, as no Stranger
 may offer to sell, to no Native may dare to buy. But
 another thing was this, that most Part of our Commodities
 we intend for that Place were bro't Cloths, (which
 had not long before been sold here for twenty Reals of
 Eight per Mar, which is two yards a foot of) and the
Japanese were now almost out of Count it with, becau-
 we did not take care to recommend the Goodness of it
 by our own Wearing. You, my Gally, say up your broad
 Cloths to us, and at the same time hardly wear a Racket
 of yourselv's; but are all for your Suits, and Stuffs, and
 any thing in the World, except just what you would have
 us buy of you. And the Truth on this, the *Japanese* were
 in the right, so that our Objections not easy to be answer'd.
 We ought to be more fond of our own Country Commo-
 dities, and tell other Nations they are valuable, by the
 Use we make of them ourselv's. Foreigners won't be so
 ready to believe us, as they are we don't order our Ladies
 to as to give a Reputation to what we recommend abroad
 in the World; and, for ought I know, other Nations
 may tell us, as well as the *Japanese*, of not wearing our
 own broad Cloths; may reproach us with the Neglect of
 our own Commodities, and detest them till they be as
 do otherwise ourselv's.

This *Irandu* is a very good Place for our Ships to pur-
 in at, with respect to the Point of Anchoring, and all
 that; but it is not so proper for Trade, because it is distant
 from the main Island of *Japan*, where are not only the
 but the most considerable People, capable of giving Encou-
 ragement to Trade, which, in this little bye Island,
 is not to be expected. We might, I don't question, be

welcome at any of them all; and the Kings of two of these petty Islands gave us a formal Invitation. But there's few of them can afford Buſineſs that will turn to account, and defray the Charges of a Settlement: Therefore my Advice is, that our Ships that come to trade here, would not fail to *Firando*, but to *Oringaivo*, upon the main Island, and about fifteen Leagues diſtant from *Eddo*, where they will find very good Riding, and a much greater Proſpect of Advantage. This Place indeed is not capable of affording to good an Entertainment as may be deſired: Proviſions are not altogether plentiful there as at *Firando*; but that Want may be ſupplied by a Correſpondence with the circumjacent Country.

Chriſtianity makes no conſiderable Progreſs comparatively any where in this Empire, but at *Mieco* and *Langeſique*, a Town ſituated upon the Sea-coaſt, about eight Leagues from *Firando*. It had, it's true, gotten footing at *Eddo*; but the Emperor, upon ſome Pique taken againſt the Chriſtians, baniſhed them all from thence, and confined them to *Langeſique*; and as a Prevention of its creeping into the Court, and rooting itſelf any where near him, he made it Death to any who ſhould offer to build a Church, or ſay Maſs, within ten Leagues of the Place where he reſided. This Change was but a very little before our going to *Eddo*; notwithſtanding which, the Chriſtian Religion is otherwiſe indulg'd. The Chriſtian *Japoneſe* at preſent have, as far as I ſee, the ſame Protection and Privilege with others; and the Jeſuits ſeem to enjoy an unreſtrained Liberty in the making of Proſelytes. The Foundation of a Factory being now firmly laid in the Emperor's full Grant to that Purpoſe, we proceeded to build upon it, being the rather encouraged to it, in that we were now aſſured that *Engliſh* Factories were actually ſettled at *Siam* and *Potana*; as alſo, that the *Dutch* had made ſomething of their Buſineſs here; and we had Reaſon to believe we had not a leſs Share in the Good-will and Favour of this Country than they. We therefore appointed ſome of our Company to reſide here upon this Affair, with Inſtructions alſo to make what Discoveries they could upon the Coaſt of *Cocin*, *Tulmas*, and other Parts adjoining, againſt the next Return of the Ships. By exact Observations we made, during our Stay here, we determine the Latitude of *Firando* to be 33° 14' N. and the varying of the Compaſs 2° to Paſſer 5.

Thus far we have followed exactly the Memoirs of Captain *Saru*, who farther reports abundance of Civilities received from the King of *Firando*; together with a Letter, written by that Prince, to our King *James*, expreſſing a very earneſt Deſire to render all the Service in his Power to the *Engliſh* Nation, and highly commending their Deſign of eſtabliſhing a Correſpondence between their own Country and the *Japoneſe*, for the promoting of which, he profeſſes himſelf ready to do whatever lay in his Power. Captain *Saru* proſecuted his Voyage to *Bantam*, in the *Island of Java*, without any remarkable Accident; and he commends *Lambert's* Voyages as very ſincere, and his Charts as very exact. He arrived at *Bantam* on the 11th of *January* 1614, and found things there in a very indifferent Condition, owing, as he conceived, to their having too many Factories; however, he got his Loading, and in the latter End of the Month of *May* proceeded for *England*, and arrived ſafe y on the 27th of *September* following at *Brumſey*. He does not appear to have been very languid in the Affair of ſettling a Factory in *Japon*, but ſeems to have been oblig'd thereto by his Inſtructions; yet as he was a Man of great Obſervation and Reflection, he took an admirable Pain to have a diſtinct Account of what Goods were to be ſent there, and what ought to be expected in return. I apprehend, that the true Reaſon of his Diſtance was, our not having, at that time, an open Trade with *China*, the greateſt Probit relating to our *Japon* Trade being made on *Cineje* Goods; but however, Time and Patience might have overcome all theſe Difficulties, and have eſtabliſhed us as effectually as the *Dutch*. But the Truth of the Matter was, that our People were ſet under Command, and conſequently ſet in for living in that Country, and eſtabliſhing a Trade there.

As a Proof of Captain *Saru's* great Meaſure in examining

every thing carefully, and recording from time to time what Notices he received, I think it may not be amiſs to annex to this Account of his Voyage the Report he received concerning the Iſland of *Jyſo*, or *Deazo*, which was then, and ſtill is, a Place very imperceptibly known, and on the abſolute Discovery of which hang many Things of Importance, but more particularly the Deciſion of the great Point, whether there be, or be not a Paſſage to the Eaſt Sea by the North Eaſt. I the rather enter the Account here, becauſe, for any thing I can perceive, it was not before true as only we have yet received, only I ſuppoſe that our *Japoneſe* Traveller was miſtaken in calling this Country an Iſland, or elſe there is both an Iſland and a Continent of the ſame Name, which is indeed agreed to by ſome; we find relating to this Country in the ſame Account we have received from *Japon*. I muſt however ſubſcribe to add, that if we reflect on the *Statute* and *Compacts* of the Northern *Tartars*, the *Japlanders* and *Senſenſes* we ſhall have the leaſt Cauſe to ſuſpect this Water, either of Credulity or Ficklen.

Intelligence concerning *Yedzo*, received at *Edo*, from a *Japoneſe* that had been ſent to

" This ingenious Traveller ſays, that *Yedzo* ſituate
" lying on the North-weſt Side of *Japon*, and about

and flatter, that they may not cut deep into the Mire, and have also Sails like a Ship; by which Contrivance, observing proper Winds, they pass all these Bogs easily. The Country affords Damask, Satins, Taffeties, and other Silks, as *China* does; but they carry most of their Goods up and down in these Sailing Waggons.

We have likewise some other Letters of a later Date from the same Factory, but very immaterial, and containing scarce any Circumstances worthy of Notice, except that the *Japanese* were very importunate in demanding a Promise, that the *English* would bring no Padres, that is, Priests, among them; for the Persecution being, at this time, very hot, the common People did not care to run any Hazards, as not knowing how to distinguish between one sort of Christian Priests and another. But the *English* did not give them any Trouble upon that Head; but, on the contrary, seemed to bend all their Endeavours towards the adding the Trade of *China* to that of *Japan*, in which, perhaps, they went too far, and might have done for themselves, and their Country more, if they had pushed this Point less; for the *Japanese*, who are a very sensible People, considered this extending their Commerce in a bad Light; and, as they were naturally suspicious of Strangers, could not help fearing they would at last employ Force, in case fair Means did not succeed. In these Notions they were confirmed by the News they received, from time to time, of the great Disputes between the *Portuguese*, the *English*, and *Dutch*, in the *East-Indies*; and, esteeming their Force at home, by their Actions abroad, and supposing that they wanted nothing but a specious Pretence to attack the two great Empires of *China* and *Japan*. The last Letter we have is dated from *Irando*, *March* the 10th 1619, and in that there are some Particulars worthy the Attention of the Reader.

The Persecution in this Country, which before proceeded no farther than Banishment, and Lots of civil and religious Liberties, has since (as this Letter tells us) run up to all the Severities of corporal Punishment. The Christians suffered as many sorts of Deaths and Torments as those in the primitive Persecutions; and such was their Constancy, that their Adversaries were looser weary of inflicting Punishments, than they of enduring the Effects of their Rage: Very few, if any at all, renounced their Profession. The most hideous Torment, in which Death appeared, by the Contrivance of their Adversaries, would not leave them, nor all the Torments of a solemn Execution overpower that Strength of Mind with which they seemed to go through their Sufferings. They made their very Children Martyrs with them, and carried them in their Arms to the Stake, preferring rather to resign them to the Flames, than leave them to the Boozers to be educated in the Pagan Religion. All the Churches which the last Storm left standing, this had entirely blown down, and demolished, and Heathen Pagods were erected upon their Ruins.

The Dead were persecuted too, as well as the Living, and the Graves were torn open, and the Bodies there interred thrown out into some base Receivings; so that now, wherever Christianity flourishes again in *Japan*, it must be upon a second Plantation, the first Stock being at this time almost completely pulled up by the Roots. There were other Troubles and Strife besides these in *Japan*: At this Time another dangerous Rebellion was rising at *Utsushima*, but the Prince of that Place happening to be at that Time in the Court, the Emperor commanded him, either to write to his Subjects to lay down their Arms, or immediately to lay open his own Body. He chose rather to do the former, and so the Tumult was at an End; but he was turned out of that Government, and sent into a Corner of the northern Part of *Japan*, and the great Castle of *Utsushima* (bigger, by Report, than the City of *Rochester* levelled with the Ground, all the Stones being carried away to *Ojiza* to rebuild that noble Piece, which the last Emperor *Ogoshimam* destroyed after his routing the Army of the Prince *Idana*; for it must be noted (though our Author does not expressly tell us of it) that the Emperor spoken of in this Letter was not *Ogoshimam*, but some other his Successor, of whom we have no other Account than these Actions of his given us. It is said also, that this Prince *Idana* was gotten life out of the great Battle, and lay *incognito* somewhere about

Meaco; but this our Author hardly credits, it having been often reported so before.

Lastly, he gives us an Account of the horrid, barbarous, and cruel Deportment of the *Dutch* towards the *English* then residing in *Irando*: Without any manner of Provocation they openly declared War against them, declared they would burn their Ships and Effects, and destroy their Persons where-ever they could meet them; and that they did solemnly by Sound of Trumpet both ashore and aboard all their Ships; and to be as good as their Word, they broke into the *English* House with all their Force, and had actually sacrificed every Person there, if the *English* had not come in and fought vigorously in their Defence; for the Odds were vastly great, and one *English* man slew one hundred *Dutch* to deal with. All this year and more of this kind, they did; but for what Reason it cannot be imagined, unless because they would be Masters everywhere, and have the whole World to themselves. One Passage only, which shews their Modesty in such Parts of the World, is not to be forgotten; and that is, how late it was in the Presence of the great Emperor of *Japan* himself, and all his Court. Our Author reports that it was his Duty to the Emperor, upon the coming of the *English* Ships, found in the Fleet (see a certain bill of *Japan*), that told the Emperor strange Stories of his own Country, and extolled his King of *Holland* to the Skies, as the greatest and most potent Prince in a great Part of the World, together with a vast deal of such like flattery.

But he, who understood the *Japan* Language, and the *Dutch* man thought he had not, told him that the Emperor, he need not have told his Majesty that he was thus, since all the World knew they had a King in *Holland*, but only a Stadtholder, who did not so much govern the People, as the People govern him; and who was he had the Forehead to say, that his King, as he called him, held all other Princes in Christendom in Subjection, as was well known the King of *England* had been his Country's Protector, or they had never been in a Condition to come and make a Noise abroad in the World. The *Dutch* man was, it seems, pretty much confounded to see a King so all of a sudden; but there was no Help for it, for the *Spaniards* and *Portuguese* that were there at that time, well knew the Truth of what was said. In this Discourse, our Author adds, that the Company were very much displeas'd with this Passage, and that there was a great deal of especially among the *Portuguese*, to be that they should know he could never do.

All these Transactions happened during the stay of Mr. *Adams*, who spent the Remainder of his Days with Honour in *Japan*, where he died in the 16th Year of his respect to any of the subsequent Ages. The Particulars are not recorded in any of the Writers I have mentioned, but though there be something very strange in what I have said, I think it much more strange, that we have not any Account of the Time that the *English* were driven out from the Country, or of the Reasons why they were so to take that Step; but I think it is probable, that they were reduced thereto, either by the Force of the Power of the *Dutch*, for it is true, that the *Dutch* Writers which the Reader has already seen, have said, that these two Nations being at that time at War with each other as soon as they found that the *English* were at *Irando* for the *Portuguese*. It was also said, that this last mentioned Nation, that the *Portuguese* had given not a little hurt by their own Force, and that they taught the *Japanese* how to lie on their backs against Foreign Nations, this drew upon them a great deal of which they have laboured ever since, and which they have not spared any Passages to mention, and which we already in-filled sufficiently upon our *Portuguese* Writers; we shall not dwell upon it any longer here.

Before we conclude this Section, we will say a few words proper to take notice of a Tradition, which is very commonly known, and that is, of an Attempt made to recover the Commerce of *Japan* in the Year 1600. It is said to have been first made by the *Portuguese*, who were for the Ship sent for that Purpose, but was never

Factory at *Bantam*, and arrived before the Haven of *Nangazaki*, which is the only one the *Dutch* are permitted to resort to, on the 20th of *June*. As soon as the Ship appeared in Sight of the Port, there came off two Vessels, one carrying a *Japonefe*, and the other a *Dutch* Flag; but on their coming up to the *Englisb* Ship, they hailed them in *Portugueze*, and demanded whence they came? The Captain answered in *Englisb*, and in *Dutch*. that he came from *England*; upon which the *Japonefe* Officer directed him to let go his Anchor, to forbid his Trumpet to play, and to forbear firing his Guns; to all which Demands he readily submitted.

After remaining at Anchor about two Hours, there came off two Boats, in one of which was the Governor, and his Secretary, accompanied by an Interpreter, who spoke *Portugueze*; and in the other Boat there were four Interpreters, who all of them spoke *Dutch*. As soon as they came on Board, the Captain conducted them to his Cabin, and when all had taken their proper Places, the Governor asked him very gravely, if he was an *Englisbman*, and what his Business was there? He answered, that he was an *Englisbman*, that he was charged with a Commission from the King his Master to re-establish the Trade settled by his Subjects fifty Years before in *Japan*. He added, that he was charged with a Letter from his *Britannick* Majesty, and another from the *East-India* Company, addressed to the Emperor of *Japan*; and at the same time that he said this, he produced a Copy of the Privileges granted to the *Englisb* by the Emperor, written in *Japonefe* Characters, which the Governor having read, was very importunate for the Original under the Emperor's Seal. The *Englisb* Captain, however, told him ingenuously, it was not in his Power to produce that, because the Emperor had demanded it should be delivered up at the Time the *Englisb* quitted *Japan*, with which they could not refuse to comply. The Governor then put up the Copy of the Privileges, but promised the *Englisb* Captain, that as soon as an Answer came from Court to his Request, he would deliver it up.

After a short Silence, the Governor asked him, if *England* was at Peace with *Spain* and *Portugal*? What Religion the *Englisb* were of? If it was a long time since King *Charles* had married the Daughter of the King of *Portugal*? and how many Children he had by her? This very plainly shewed, that the *Japonefe* were very inquisitive, and at the same time very well informed as to the Affairs of *Europe*. The Captain answered, without Hesitation, that the *Englisb* were at Peace with all the World, that it was true King *Charles* had married the Daughter of the King of *Portugal*, but that he had no Children by his Queen; and that as to Religion, the *Englisb* were such sort of Christians as the *Dutch*, and not such sort of Christians as the *Portugueze*, or *Spaniards*; that the Custom of *Europe* required Kings to marry Persons of like Rank with themselves, and never the Daughters of their Subjects. To all this he added farther, that he had Presents of great Value for his Imperial Majesty; at which the Governor seemed to be very much pleased, and soon after retired. In about two Hours Time he returned again, and then told the Captain, that if the *Englisb* would be satisfied with such a Trade as the *Dutch* enjoyed, very possibly they might obtain it; but then, according to the Custom of the Country, it would be fit for them to send their Cannon and their Ammunition ashore; after which he would inform the Emperor of every thing, and that after receiving his Imperial Majesty's Answer, it it proved favourable, he was willing to furnish them with a House. The Captain took all this in good Part; he delivered up his Arms and Ammunition, and suffered the Governor, who brought with him a great Number of armed Boats, to station them as he thought fit; which he did, by ranging some a-head, some a-stern, and causing a double Line to anchor on each Side of the Vessel, and all within half Cannon Shot.

This being done, the Governor came aboard again, attended by his Interpreter, who was a *Dutchman*, and in whom he had great Confidence, and examined every one of the Ship's Company, particularly first as to his Country, whether he was an *Englisbman*, and not a *Portugueze*? whether he had ever been in *Portugal*, or could speak the Language of that Country? and whether he was a *Chri-*

stian after the *Dutch* Form; or the *Portugueze*? These Questions being all answered, they proceeded next to take an exact Account of all the Bales of Merchandize on board the Ship, and drew up a kind of Bill of Lading with great Exactness. After this the Governor asked, if other Ships did not sail with them from *England*? what was become of them? how long they stayed at *Bantam*? and what other Places they had been at in the *East-Indies*? These Questions being answered to his Satisfaction, the Governor retired for good and all, and carried away with him what had been delivered up to him. On the 30th of the same Month he came on board again, attended by his Secretary and Interpreters. He was received with all imaginable Civility and Ceremony by the Captain, and after they were seated together in his Cabin, he proceeded to make a kind of Discourse to this Effect: That it was true, there had been formerly an *Englisb* Factory in *Japan*, that those who composed it had been very well treated, and never had expressed any sort of Dissatisfaction; notwithstanding which, it was now forty-nine Years since any *Englisb* Ship had entered their Ports, and therefore he would be glad to know the Cause of so long an Absence, as also the Cause of their coming thither again. If we depend upon this Governor's Calculation, it would fix the Time of withdrawing the *Englisb* Factory to the Year 1624, and then it would appear, that Mr. *Adams* survived that Event near seven Years; but if that were the Case, it may seem somewhat difficult to account for the *Englisb* knowing when his Decese happened, unless we suppose that they received the News from the *Dutch*, which, as it is very probable they might, we may look upon this as a Point settled.

But to return to the Captain, who in answer to the Speech made him by the *Japonefe* Governor, told him, that as to the Cause why the Factory broke up, he could say nothing to it at all, as being totally unacquainted therewith. That as to their long Absence, he conceived it might be produced by that Confusion into which his Country had been thrown by the Civil Wars that happened not long after; that since that Time they had been likewise engaged in two very long and bloody Wars with the *Dutch*, and that after so long an Intermittion, it was a thing extremely difficult to find a Pilot capable of conducting a Ship to their Coast, which in *Europe* was represented as a very difficult and perilous Voyage. The Governor heard him with great Attention, and asked him, when he had done speaking, whether he had not on Board his Vessel some Person who had made that Voyage before? the Captain answered, that he had not: Why then, replied the Governor, How came you hither? the Captain answered him, that they had some old Charts, which were exact enough for that Purpose, as they had found by Experience.

The Governor seemed mighty well satisfied with so fair and so distinct an Account, and when he returned to the Town, left his Secretary on Board to receive all the rest of the Arms and Ammunition they had, in which he was to exact, that he took away with him some double barrell'd Fowling-pieces, that were part of the Present intended for the Emperor; but he made a very curious and exact Inventory of every thing that he got into his Hands, and gave a Copy of it, signed by way of Security, to the Captain. After all was over, they parted very good Friends, and the Secretary told him, that so far as depended upon him, nothing should be wanting that might procure him a favourable Answer from his Court; for which the Captain thanked him, assuring him at the same time, that his Nation had an entire Confidence in the *Japonefe*.

On the first of *July* the Governor and his Interpreters came on Board again, and asked several Questions; and upon this Occasion there happened a Dispute between the Captain and the *Dutch* Interpreter, who confidently asserted, that the Captain had told him several things which that Gentleman affirmed never entered into his Head. The Governor upon this took a fresh Account of every Man that was aboard, setting down his Name, his Age, his Employment; and when he had done this, he desired the Captain to prepare an exact List of what Commodities every Man had to dispose of, as also of what belonged to the Company; and then took the Dimensions of the Ship, of the Masts, Yards, &c. At his Departure, he charged

the Captain, if he wanted any thing, to make certain Signals, which he mentioned; and at the same time told him, that in case any of his People died, he should make two Signals, and should not throw the Body over till they came and examined it. The Day following the Interpreters, and some Gentlemen of the Emperor's Court, came on Board in the Morning, and asked abundance of Questions, to all which the Captain gave such clear and distinct Answers, that they seemed perfectly satisfied.

They returned again after Dinner, and brought a great Quantity of Refreshments, which had been bought by the Captain of the *Dutch* Ships, and at a very high Price, which, however, the *English* Captain received with much Complaisance, and testified his Thanks for them, as if it had been a great Favour; and at the same time desired leave to hoist his Flag, and to found his Trumpets, which Demands were granted. The following Days were spent much in the same manner; that is to say, the same Persons came on Board, and still asked abundance of Questions, which turned chiefly upon Religion, and the Difference between the Faith professed by the *Portuguese* and *Spaniards*, and that held by the *English* and *Dutch*, which, it may be easily supposed, gave them a good deal of Trouble on both Sides.

At last, on the 28th of *July*, about Ten in the Morning, the principal Secretaries, with abundance of Interpreters, and a large Train of Attendants, came on Board the Ship, in order to inform the Captain that they had received an Answer from Court, and that it was by no means favourable. It amounted, in short, to this, that his Imperial Majesty had declared he could not permit any Commerce in his Dominions to the Subjects of a Prince who had espoused the Daughter of the King of *Portugal*, the principal Enemy of him and his Empire, and that therefore he was to prepare himself for sailing as soon as it was possible.

The Captain represented upon this, that the Season of the Year considered, it was simply impossible for him to stir, and therefore he hoped they would allow him to stay till the proper Season, and the Return of the Trade-Winds, gave him an Opportunity of proceeding thence with Safety. To which reasonable Demand they, without any great Difficulty, consented: The Captain from this took occasion to propose another thing, which, he believed, would have been as readily granted, from the Sorrow and Concern which these good People expressed. In short, the second Favour he asked was this, that since he had spent two Years in his Voyage, and since it was not probable they should ever have an Opportunity of purchasing *English* Commodities again, he might have Leave given him to dispose of his present Cargo. But the Reception given to this Proposition was very different from what he expected; he was told, that none in the Empire durst either adventure to purchase any of the Goods he had on Board, nor so much as to request a Licence for that Purpose from Court, where, when once a Resolution was taken, it was absolutely final, and there was no getting it either reverted or reviewed. To testify, however, their own good Will to the Captain, and to show him how ready they were to do any thing they could oblige him in, they consented that he should purchase Provisions, and whatever other Necessaries he wanted, with Merchandize, and not with Money.

In the whole Course of these Proceedings the Captain met with many things that surprized him, there was one tell out more strange than all the rest, and it was this, that the *Japanese* Governor acquainted him with more of the Affairs of *Europe* than he was Master of; for discoursing of the *Dutch* Wars, he enquired how long the *English* had been at Peace with that Nation? and upon the Captain's giving him a clear Answer, and mentioning also the Time of his own Departure from *England*, the Governor enquired, then you know nothing of the Attempt made to conquer the *Dutch* by your Master, in Confederacy with the King of *France*, and the Bishop of *Munster*, and that they are already Masters of three of the seven Provinces? The Captain assured him, that he did not, and that the News very much surprized him. However, he very easily understood from thence, that he was very little obliged to the *Dutch* for their good Offices in this Negotiation.

Before his Departure, he resolved to make another Trial as to what might be done hereafter; and with this View, he enquired of the Governor, whether, after the Death of the Queen of *England*, it might not be possible for his Majesty's Subjects to obtain Leave to trade in *Japon*? To which the *Japanese* Officer made him this remarkable Answer, that he would not advise the *English* to make such an Attempt; for that as the Sweat once expelled, never found an Entrance again into the human Body, so the Orders of the Emperor once issued, the Matters which occasioned them never more found Admittance into his Mind. All the Time they remained in the Port, the Governor, his Secretary, and other Officers, made them frequent Visits, and fatigued them with an infinite Number of intricate, and some of them very impertinent Questions, which gave them a great deal of Trouble; but if we except this, they were in all other things used with as much Kindness and Civility as it was possible. When the Season came that they might depart with Safety, the Governor came on Board, and brought with him all that he had taken from them, except their Powder, which he declared it was not in his Power to put on Board till they were ready to sail; but at the same time he told the Captain, that he would take care none of the *Dutch* Ships should stir out of Port, till he had time to get safe to *Bantam*, because, as he was informed, there was a War broke out between the two Nations.

On the 28th of *August* 1673, the Wind being fair, the Captain received positive Orders to sail without Delay, which accordingly he did, fully persuaded in himself, that if it had not been for the Intrigues of the *Dutch*, he might have succeeded in his Design, and have raised his Reputation by the effectual Execution of his Commission. This is certainly the last Attempt made in our Favour, and in all probability, it is the last that will be ever made, unless a more enterprising Spirit should rise in succeeding Generations than seems to actuate the present Race of them. In the succeeding Volume we shall insert some particulars of the accounts of this Country; but before we dismiss this Country, it cannot but be agreeable to the Reader to see the great Maxim of the *Japanese*, upon which our Exclusion is partly built, viz. *The Resolution of admitting no Strangers into their Country on any Terms*, explained, and set in a clear Light, the rather, because the Examination of this Point will naturally lead us to explain some others that will render the Connection of this Discourse more easy and obvious than it would otherwise be.

The original Government of *Japon* was by an absolute Monarch, in whose Person were united all those Characters that naturally give a Lustre to a Man in the Eyes of his own Species. He had besides the Regal Dignity, that of head Priest, Supreme Legislator and Director of the Forces of the Empire all invested in him; but as here and elsewhere Ability is not always annexed to Blood, so it fell out, that some of these supreme Monarchs, who in their own Language are styled *Dairi*, which signifies dearest Lord, were in some measure governed by those to whom they intrusted the Command of their Forces, and the prime Minister, and General in chief, had the Title of *Cubo-Sama*, which has very near the same Signification with the *Turkish* Title of *Vizir-Azem*, that is, *the chief*, or *most resplendent Lord*; and at length the *Cubo-Sama* came in fact the Master of the Empire, and the *Dairi* only the Title only, or at the most an empty Shadow of Authority, or rather of Sovereignty.

This Usurpation in the *Cubo-Sama's* began about the twelfth Century, and occasioned great Wars and Disturbances in *Japon*, from whence arose that Multitude of the Kingdoms and Principalities into which this Country was divided, when first it was visited by the *Europeans*. It was when the Governors of Provinces law that the *Cubo-Sama* had made to free with their Lords and Masters the *Dairi's* who were, and still are, treated with divine Honours, that thought there might be less Crime in tributing their Law to Ministers, and to let themselves up for Kings and Princes, than to *Tairo Sama*, which is another Title of Honour, that is ascribed by most Writers, and particularly by such as have formed a Design of making the *Cubo-Sama* a real Monarch.

resolved to make another one hereafter; and with this Governor, whether, after the end, it might not be possible to obtain Leave to trade in safe Officer made him this request not advise the English, that as the Sweat once expelled, n into the human Body, so the issued, the Matters which occur, Admittance into his Mind. All the Port, the Governor, his Secretary made them frequent Visits, and a great Number of intricate, and difficult Questions, which gave them it if we except this, they were as much Kindnets and Civility the Season came that they might Governor came on Board, and had taken from them, except declared it was not in his Power ere ready to sail; but at the aim, that he would take care could stir out of Port, till he had, because, as he was informed, between the two Nations, 673, the Wind being fair, the Orders to sail without Delay, fully persuaded in his mind, that intrigues of the Dutch, he might, and have raised his Reputation of his Commission. This of it made in our Favor, and in it that will be ever made, unless should rise in success, to equate the present Race of we shall infer some fact, but before we dismiss this Subject, let the Reader to see the reason which our Exclusion is partly of admitting no Strangers to be blamed, and let in a clear light, examination of this Part will make some others that will render the more easy and obvious than a

ent of Japan was by an absolute were united all these Characters to a Man in the Eyes of his Subjects the Regal Dignity, that of a Father and Director of the People in him; but as here and elsewhere annexed to Blood, to the first Monarchs, who, as the Dairy, which dignities elevated were governed by a sole to whom and of their Forces, and the general in chief, had the Presence near the same Signification with Azem, that is, in the same manner, and at length the *Cubo-Sama* of the Empire, an Title of the most an empty Shadow of Authority.

The *Cubo-Sama's* begin about mentioned great Wars and Differences arose that Multitude of Cities into which this Country was visited by the *Europeans*. The provinces law that the *Cubo-Sama's* our Lords and Masters the *Japan* entered with divine Honours, that Crime in relating their law, and set up for King and Father, other Title of Honor, that particularly by such as I have a proper Name, was then of signing the *Cubo-Sama's* Authority.

ever the *Dairy* had been; but he suffered himself to be diverted from this Scheme by the Invasion of *Corea*.

His Son, whose Name, according to the *Japanese* Chronicles, was *Fide-Jori*, succeeded him, and is the young Prince mentioned by Captain *Saris*, whose Tutors rebelled against him, and who was at last deprived of his Empire by that Monarch, who granted the Privilege of settling in *Japan* to the *English*, and whose Name, according to the Chronicles before-mentioned, was *Jefi-Jas*, which explains the signing of his Letter, and of the Articles; for as to the Title at the Head of them (*Ogobosamma*) it is a Corruption of the Words *Cubo-Sama*. After the Defeat of the young Prince, who in the Letters herein cited is called *Fidas*, he reigned without any farther Dispute; and all the succeeding *Cubo-Sama's*, whom our modern Writers call Emperors of *Japan*, are his direct Descendants. He was the greatest Politician that ever this Country produced, and his Maxims have been readily followed by all his Successors.

These Maxims were to reduce all the little Kingdoms into Provinces of his Empire, which he effected; to extirpate the Christian Religion from a Principle of Policy, that the People might not be induced to take up Arms against their Emperors from a Notion of Religion; and upon the same Principle his Successors expelled all Foreigners, and restrained the *Japanese* from going out of their own Country: For, it was the settled Opinion of this new Legislator, that the only Way for him and his Family to reign in Peace, was to exclude all Thoughts of Novelty, and to keep the People closely to their old Laws and Customs, which he thought were best adapted to the Maintenance of the Imperial Dignity, and to their own Happiness. It, in Exception to this general Rule, the *Chinese*, the *Siamese*, and the *Dutch*, are allowed some kind of Commerce in this Empire, yet it is against the Grain, and contrary to the Maxims of their Policy, as appears plainly by the severe Restrictions under which these Nations are allowed to carry on their Commerce. It is no less certain, that the *Japanese* hate and despise those very Nations with whom they trade, for submitting to these Regulations, which were no less intended to exercise, and even to wear out their Patience, who were to be subjected to them, than for their Security and Preservation, by whom, and for whose sakes, they were imposed.

For it is to be observed, that the Inhabitants of this Empire, considered freely, and without Prejudice, are as wise, as quick-witted, as sensible, as generous, and as well bred a People as there are upon the Face of the Earth. They love Freedom, and understand it much better than all other Nations; they consider their Laws as Fences to that Freedom, and therefore never repine at the Severity with which they are executed; but call that Tyranny, which exceeds the Measure of those Laws, because this proceeds from the Prince himself; whereas Severity, in the Execution of Justice proceeds from the common Depravity of a Nation. In one thing their Law is very remarkable; they have Attainders as well as we; but if a Man expiates his Offence by voluntary Death, his Family suffers nothing in Honour, Person, or Property. This passionate Love of Freedom, joined to their natural Boldness and Contempt of Death, made them love the *English* extremely, of which I can give the Reader a very singular Proof, which at the same time will resolve a Difficulty, that I must confess, when I first entered upon this Section, I thought absolutely beyond the Reach of Solution.

They have amongst them a Title of Honour, which they call *Cami*, which the *Spanish* and *Portuguese* Writers thought equivalent to Knighthood; and the *French*, who only transcribe those Authors, render it by the Word Chevalier. This Honour they conferred upon our Countrymen *Adams* and Captain *Saris*; and from hence, beyond Question, they came to be titled the Chevaliers *Adams* and *Saris*; and, I conceive, that it was a Distinction no other Foreigners ever attained. It likewise appears by the Questions put to the last *English* Captain that was there, that these People were not a little chagrined at the Loss of the *English* Factory, for which they could never account; but probably understood it to have risen from their Affection to their Enemies the *Portuguese*, in which Error they were.

without doubt, confirmed by the *Dutch*, who have left no Method untried; and, indeed, who can blame them for it? to keep this profitable Commerce entirely to themselves.

These Observations and Remarks have cost me a great deal of Pains and Trouble; but if they prove entertaining and satisfactory to those judicious Persons, who have hitherto expressed a Regard for this Work, I shall think they are fully repaid; and it is from the Hopes of this that I shall adventure to close this Section with some Thoughts on the Means of recovering this long lost Trade. As we are excluded at present from *Japan*, upon a Principle of Policy only, and not from any actual Misdemeanour, as was the Case of the *Portuguese*, who, under Colour of propagating the Christian Religion, interfered with the civil Concerns of that Nation, and gave their Government a great deal of Trouble, so, I conceive, that the only way to obtain Admittance again into *Japan*, is to remove the Prejudices that have been conceived against us.

This too, I apprehend, might be very easily done, if the Government of that Country were apprized of the Change that has happened in our Constitution, by which it is become impossible that any of our Princes should ally themselves by Marriage, either to the Crowns of *France*, *Spain*, or any other Popish Power. I do not pretend to say, that this would afford them any real Security, or that they would be at all in less Danger from us now than they were before; but then, if it be considered, that they were in no Danger then, and are in no Danger now, but that their Apprehensions flow entirely from an ill-grounded Prejudice, the removing that Prejudice, however ill-grounded, may be of Use to us. In the next place, if the *Dutch* have a great Commerce with the *Chinese* at *Batavia*, and are thereby enabled to furnish a proper Cargo for *Japan*; we have a direct Trade to *China*, and consequently lie under no Impediment that Way, as we did at the Time our former Factory was settled there. But it will be said, How shall the *Japanese* be informed of this? Can it be expected that the *Dutch* will acquaint them? and if they will not, how are they to be informed? Why, truly, that is the very Question; for, I conceive, that if they were once satisfied in that Point, the rest would very easily follow.

The Means therefore that I would propose, should be the landing in the Northern Part of the great Island of *Nippon*, two or three Persons properly instructed, who, under pretence of Shipwreck, might desire and obtain a Passage to the *Dutch* Port; and as this is the biggest of the three Islands that compose the Empire of *Japan*, I conceive, that in their Passage across it, they might have many Opportunities, especially if they took Pains to learn the Language, to inform a People to inquisitive as these are, of the Particulars which it concerns us most that they should know; and it at a proper Season a Ship should be sent from the Coast of *China* to the Port of *Nagazaki*, to enquire after these People, it might afford us an Opportunity of seeing the Passes at least of the *Japanese* once more.

I foresee a Multitude of Objections that may be made to this Scheme, such as, that it will be found extremely hard, if not impossible, to meet with Persons, either capable, or willing to undertake it. But I have considered these Objections, and I do not think they have much Weight. There are to many People, who at this Juncture, slip themselves for the *East-Indies* in the most low and laborious Stations, in hopes of bettering their Fortunes, that I am persuaded, if a Reward of three thousand Pounds, or some such Sum, was proposed to be paid immediately on their coming back, there would not want some who would offer themselves for this Service; and then as to their Capacities, they might be made, and even improved, before they were sent; and they might have such Instructions given them, though not in Writing, for that might hazard all by being found upon them, as might enable them to execute this Commission with great Probability of Success.

That they should at once obtain a Privilege and settled Trade there, is what I am not sanguine enough to expect, nor is it what I mean by the Probability of executing their Commission with Success; but that they might be able to learn some News of the *Japanese*, and carry them some News of us, which to come, and with proper Helps, might

come to somewhat, is what I cannot help thinking very probable; at least it is apparent, that if some Attempt of this kind be not made, we can never hope for any thing; and to depend in a Matter of Trade, is incompatible with the true Spirit of a trading Nation, and with ours more especially. For after all, what is there in this more extraordinary than what was actually performed by Mr. Adams? He came to *Japan* helpless, and without Friends; his own Merit recommended him, and made him Friends, such Friends as enabled him to do the great Things that he did; Things to the full as great or greater than those we expect from the Persons that should be now sent; and therefore, whoever will have this Method set aside, for want of Probability, is bound to offer a Method more probable, and in that Case I shall most readily submit.

But if, while we consider all Attempts of this sort as chimerical or impracticable, any other Nation should step in, and either expel the *Dutch*, or share with them in that Commerce, it will be a very high Reflection upon us, who may pretend to it with at least as great, if not greater Hopes than any other. That this Conjecture of some other Nation's making an Attempt of this Nature is not absolutely wild or groundless, may appear from the Endeavours of the *Russians*, who have actually reached in their Discoveries some Islands, the Inhabitants of which make use of Money Ranped with *Japanese* Characters; from whence it is with great Probability conjectured, that they are Vassals at least, if not Subjects, to that Empire. There are other Nations too, as will appear by the succeeding Sections, which have taken their Way to the *East-Indies*, and the Coasts of *Corea*, though it was thought they laboured under insuperable Difficulties, and why they should not be able to extend their Commerce farther, and even reach *Japan*, is what to good Reason can be assigned to prove, any more than I apprehend any solid Cause can be shewn why we should not endeavour to be before hand with them in a Point of such Consequence.

But, perhaps, some Critick may demand, how do you know it is of such Consequence? How can you take upon you to assert so confidently things relating to a Place and People at such a Distance? How can you tell that all these Points have not been long ago considered by better Judges than yourself, and such Projects as you propose upon sublimated Motives rejected? or what Reason is there that you should expect the Schemes you form in your Closet should have for Rules for such as are better acquainted with these Matters than yourself? I am very sensible, that there are a vast number of People in the World very capable of throwing out such Reflections as these, and I know too, that many of them do it against the Conviction of their own Minds, and merely from a Spirit of Envy. But, however, as to a Question may have a bad Effect on the Minds of a better sort of People, by which I mean Persons of liberal Dispositions, and who really wish well to the *British*, and yet are led away by such idle Animadversions, for want of a due Measure of Attention, I think it may not be amiss, for their sakes, to examine such Notions as are here advanced; that however specious they may appear at first Sight, they have in reality no Foundation.

In the first Place I must observe, that the Theory of Trade in any way was acquired from Books and Enquiries, and not from actual Experience; and that Experience is the only true Guide to Property; and such as have been successful in the pursuit, have been formed by frequent Mistakes, and by reason of upon Facts, have been able to draw juster Judgments, with respect to Commerce, than those who, without receiving the Facts upon which to reason, are led to conjecture to the Point, and to answer the Question, so far as they regard this Subject, by a Report of their Dispute, since the same Advantages are not to be had from any other Cause. If we know the Situation, and Extent of a Country, the Nature of her Soil, Products, and Manufactures, we can with Certainty, and with the utmost Certainty determine, whether it is a Country worth visiting, and what kind of Commodities are like to have vent there. In this there is nothing strange or wonderful, nothing that requires a very extraordinary Degree of Penetration or Sagacity. For, in wintery Climates, Men live, they must have Food and Rai-

ment, and in proportion, as they are civilized, they will not only desire the Necessaries, but aspire also to the Conveniences of Life, and what we call the Instruments of Luxury, which may also be suited to their Humours, if we have a tolerable Account of the Manners and Customs of the People.

We know very well what Commodities and Manufactures of ours are taken off in *Spain*, *Portugal*, and Part of *France*; and therefore, when we know that the best Part of the Empire of *Japan* lies in pretty near the same Situation, we cannot be much at a Loss for the Goods the Inhabitants of that Country are like to take off our Hands, in case we had an open Trade with them; but, to be more certain in this Case, we have it in our Power to learn what the *Dutch* carry thither; and upon Enquiry, we shall find, that they are chiefly Scarlet, and other fine Cloths, Cambrics, Serges, and our own Kerseys, together with some silk Manufactures, such as rich Damasks, Brocades, and Night-Gowns, and in general, a great Variety of Linen, Wool-len, and Cotton Cloths, together with Glass and Stone-Wares, Coral, and many other things. We may therefore with great Confidence pronounce, that if the Way were once opened to us, we might be able to vend a vast Quantity of the natural Commodities and Manufactures of our Country there.

Besides, since the Discoveries made by the *Russians*, it is very certain, that the Countries to the North of *Japan*, particularly the great Peninsula of *Kamtschatka*, which perhaps is the Continent of *Yeddo*, is very thickly peopled by Inhabitants that are much inclined to Trade, and who, from the Coldness of their Climate, must necessarily stand in need of our coarser Cloths, and other Manufactures of the like kind.

If the vast Distance between us and them be objected, let us consider how the *Dutch* carry on this Trade, who are not at all nearer them than we; for if they can manage it with Ease, the same Method surely will be as practicable for us. They fit out their Ships from their Settlements in the *Indies*, viz. *Batavia* and *Manila*, and as we have Settlements in the *Indies* too, our Ships may be fitted out from thence; and if even our Settlements are at too great a Distance, this is no insuperable Objection, since there seems to be no Cause why we should not attempt at least to open this Trade from the Coast of *China*, where we had formerly a Factory in the Island of *Cheusan*, of which I have given some Account, and there is no doubt, but that we might either obtain that, or another more convenient again, if we apply for it.

As to the Sentiments of People who are prejudiced by the *East-Indies*, and resisted a considerable Time, there is no Reason, suppose their Notions are as to mine (which however is not the Fact) to give any Weight to them. They may have other Motives for their Opinions, than those which they think fit to discover; and if after all, there should be ever so good Reasons advanced why the *East-India* Company should not endeavour to acquire this Trade; yet I cannot apprehend, that what I have offered, ought to be at all affected thereby. It is very certain, that if the Commodities and Manufactures of this Country are exported, that Exportation will turn to the general Benefit of the Nation. This was the great Intent of the great *De Witt*, with respect to the *East-India* Company in *Holland*. He made no Difficulty in declaring, that how useful soever that Company might be to the Republick in its Infancy, there might nevertheless be a Time when the Interests of the Company might conflict with those of the State; and it thus might be the Case, that what may be to elicit here.

It is very easy to conceive there may be good Reasons to induce even the greatest Companies to quit the Commerce, because this will put it in their Power to make it the better, and to render it more advantageous; and there never can be any Reason assigned, that will prevent the Commerce of any Nation. The more of her Commodities and Manufactures a Nation can vend, the more People she must necessarily employ at Home; and the more her Shipping must increase, and the more her Trade flourish, it will never fail to multiply her Wealth.

SECTION XXXIII.

An historical Account of the Intercourse between the Inhabitants of Great-Britain, and the People in the East-Indies: Containing likewise a compleat History of the East-India Company, from its Erection under Queen Elizabeth of glorious Memory, and of the several Alterations that have been made therein down to the present Reign.

- 1. An Account of the Voyage of Sigheimus, Bishop of Shireburn, his Voyage to the East-Indies in the Reign of King Alfred, and of some other ancient Travellers. 2. Of the Manner in which the Venetians imported Indian Commodities into this Kingdom, to the Time of Queen Elizabeth. 3. Of several Matters previous to the erecting the East-India Company in her Reign, with a large Account of her Charter to that Company, 4. A succinct History of the several Voyages undertaken under that Charter, in the Reigns of Queen Elizabeth and King James. 5. Of the Transactions of the English East-India Company, from their obtaining a new Charter from King James I. to the Time of the unfortunate Business at Amboyna. 6. The Account published of that Tragedy by the English East-India Company. 7. The Dutch Relation of the same bloody Business. 8. Remarks made by Order of the East-India Company upon this Account of the Dutch. 9. The History of the East-India Company, continued to the End of the Reign of Charles I. 10. The Prosecution of the same Subject to the Close of the Civil Wars. 11. An Account of the new Charter granted to the Company by King Charles II. and of the Progress of their Affairs during his Reign. 12. Of the Charter granted by King James II. and of what followed to the Time of his Exclusion. 13. A brief View of the State of the two East-India Companies, and the Disputes between them under the Reign of King William III. 14. The Conclusion of those Disputes, and the Settlement of the present East-India Company. 15. The Affairs of the Company, from the Time of this new Settlement to the Close of the Reign of Queen Anne. 16. The same History pursued down to the present Time. 17. A clear Prospect of the present State of the Affairs of the English in the East-Indies.

AS we have now passed through the greatest Part of those Subjects, which it was proposed should be handled in this Chapter, we come regularly, and in that Order which was originally laid down, to speak of the several Companies that have been formed in Europe, for the Management of the Commerce of the East Indies, which Method, as I conceive, sooner or later, has been followed by every Nation, that since the Discovery of the Passage by the Cape of Good Hope, hath been concerned therein. We will begin with the English, and with all the Accuracy that is in our Power, trace the History of their Commerce into these distant Parts from the earliest Accounts we have of them down to the present times. But it will be requisite first of all to observe, that there is good Reason to believe our first Knowledge of these Countries was derived to us from the Romans, at such Time as this Island made a Part of their extensive Empire; but I do not find any Evidence to prove, or indeed to much as a Hint to suggest, that as Commerce was attempted with that Country from hence before the Close of the ninth Century.

At that Time there sat upon the English Throne (as it is a Truth, I hope I may speak it without Offence) the greatest and wisest Prince that was ever placed thereon; I mean the famous Alfred, the Glory of whose Reign, even the Confusion of succeeding Times, and the Obscurity of our ancient Histories, have not buried in Oblivion. He, Anno Domini 853, as the Saxon Chronicle informs us, sent one of his favourite Ecclesiasticks, whose Name was Sigheimus, to carry his Arms to the poor distressed Christians of Saint Thomas and Saint Bartholomew in the Indies. The Fact is, indeed, pretty extraordinary; and if we had not as clear

and distinct Evidence to support it, as any one Point in our ancient History, I should not have mentioned it; but as the Saxon Annals, which have been always allowed to contain as fair and as authentic an Account of Facts as any History whatever, sets down this as a Passage, which certainly fell out in that Year; and as this Sigheimus did not only perform that Voyage, according to the Instructions of his Royal Master, but afterwards returned home, and became Bishop of Sherburn, or Sherburn, in Dorsetshire, and left in the Treasury of his Church, as William of Malmshburgh hath recorded, both Spices and Jewels, which he brought back with him out of that Country; I see no Reason at all to doubt or question a Fact for which we have all the Evidence that the most scrupulous Critick can desire.

But it must, however, be confessed, that though this Intercourse was so early begun, yet the most diligent Enquirers into Subjects of this Nature, such as Eden and Hickoy, have been able to find no Footsteps of Continuance, since they immediately descend to much later Times, and speak particularly of the Travels of an Englishman, whose Name is not mentioned, through the Country of the Tartars; and of Sir John Mandeville. But, however, though no such Footsteps appear as to the Voyages or Travels of particular Persons, yet beyond a Question, there was not in those Days an entire Stop put to the Commerce between the West and East Parts of the World, or the English Nation entirely deprived of Indian Commodities.

2. If it be enquired how any Certainty can be had of this, or by what Channel such a Trade could be carried on, I must take leave to remind them, that when the Goths and Vandals overturned the Roman Empire, that Commerce through

through the Red Sea by *Alexandria* crested, and was afterwards carried on by the Way of *Trebezon*, *Damascus*, and *Aleppo*, which encreased the Trade of the free Cities or States of *Venice*, *Genoa*, *Pisa*, &c. And those Goods were not only vendid in all the Countries bordering upon the *Mediterranean*, but were sent to *England*, *Germany*, and the *Netherlands*, and all over the *Baltick*, which gave Encouragement to the Traffick of *Bruges*, where the Commodities of the North, as Corn, Naval Stores, &c. were lodged in the Summer, and where those Ships took in the Commodities from the *Levant* back again to the *Hans-Towns*; and those Ships that came from the *Levant*, transported the Northern Goods from *Bruges* into the *Mediterranean*.

Such was the Course of the Trade then, and it is very clear to most old Writers, that Spices and other *Indian* Commodities were never totally Strangers in this Island, nor indeed could they, since we had an annual Vessel, and ten times more from *Venice*, well supplied with such rich Goods; and by this means, though such Commodities might be dear, since it was in the Power of the State of *Venice* to raise them almost to what Prices she would, yet we had them regularly, and in considerable Plenty, by this Method, down to the Reign of Queen *Elizabeth*, when the last great Carack, which came from that Country, was lost upon our Coast, of which Sir *William Monson* was an Eye-witness; and has given of it, as he does of all things, a most clear, entertaining, and instructive Account, which I shall not trouble the Reader's Information, and my own Justification, I shall not trouble, as it gives a clearer, fuller, and more authentick Account of these Points, than is any where else to be met with.

The *Venetians* engrossed the whole Trade upon those Seas, and furnished us with the rich Merchandize of *Turky*, *Persia*, and *India*, at what Rate they pleased themselves; and yet this was not all, for they laboured to make us Strangers to the *Great Turke*, the *Egyptians*, and bordering Countries, and brought them to that Ignorance of our Nation, that they thought *England* to be a Town in the Kingdom of *London*. The *Venetians* sent yearly their *Argelles* to *Southampton*, which Town enjoyed a Charter from the Kings of this Land, which was wrested out of their Hands by the Earl of *Leicester*, to the utter Decay of that Town; and the *Argelles* since then have become Strangers in *England*, the last whereat took her leave with an unfortunate End, which my Eyes were Witnesses to in the Month of *October*, 1557.

The Spanish Ship of no more than one hundred Tuns, being richly Laden with the accustomed Commodities they used to serve the Kingdom with, and being come in the Channel, as high as the *Isle of Wight*, which I and the *English* Pilot visibly made; this Pilot, called *Ferrier*, who with his excellent Skill, was not long before redeemed out of the *Turkish* Captivity, by the *Venetians*, to serve in this Voyage. Upon this good Land-fall the Pilot put the *English* in hopes, many of them being of great Courage and Eager, the next Morning to harbour themselves with the Shore that Evening; but the Gentleman being impatient of Delays, and the Land appearing unto them, they thought themselves free from all Delays, which is the common Ignorance of many that know not the Seas.

But to be short, they compelled the Pilot by Force to put in at the *Needle*, the westernmost Part of the *Isle of Wight*. When the poor Man, neither with Persecution nor Tears, could prevail, he did his best to enter the Channel of the *Needle*; but such was the Greatness of the Waves, and the Unwieldiness of the Ship, not answering her Helm, that she struck upon the Shingles, where she, her Goods, and Company, except even poor Creatures, perished. The Sea betwixt the Island and the main Land was crusted, by her Loss, with several Swarms of Merchandize. What was saved, was not worth speaking of. I had the Fortune to light on two Butts of Mustardine floating on the Sea, for then was I riding at *Coventry*.

In the first Ship I ever went Captain of, I found these two Butts of Mustardine a great Help to us in our Voy-

age, when we were reduced to Extremity for want of Victuals. About this Time our Merchants of *London* began to take into Consideration these great and inestimable Riches brought into the Land by the *Venetians* and *French*, who absolutely enjoyed the Trade of *India*; and a great Part of the Wealth which came out of *India* and *Indra* was retained from them to us. They desired how such Commodities might come to our Hands by a more direct Way than to be served as we were at second hand, and therefore resolved to make an Overture by Favour of the Queen, and her Letters to the *Great Turke*, for an immediate Traffick from *England* to *Turky*, and his Dominions, and so home again, with *Smugglers* and Subjects, without being beholden to others.

These Letters were sent by her Majesty, and received with great Humanity and Courtey by the *Grand Signior*, as appears by his Letters yet extant. He could not give more Respect and Honour to her Majesty, than by shewing a Willingness to embrace her great Propositions of Trade; and in Conclusion, Articles were agreed upon, and a Grant of great Privileges and Immunities to her Majesty's Subjects, which have since continued, and been peaceably enjoyed. We may reckon from this Time the Decay of State in *Mary*, of the *Venetian* Trade: For *Argelles*, which were wont to visit us, are now unknown to us, and we are the Wealth they were wont to reap. The Commodities of *Persia*, and the *East Indies*, are brought by ourselves in our own Vessels directly out of *Turky*, where we have obtained as great a Freedom as we can desire. Such Places as the *Venetians* were wont to visit, as in their Ships to transport from Port to Port, we now absolutely enjoy that Privilege; for as *Strangers* are more desirous to put their Goods into *English* bottoms, than theirs.

Thus from the Conclusion of this Trade, we may conceive both the Nature and the Importance of it, and the prodigious Change it made, as well in the Affairs of the *Venetians*, as in our own, when it came to be managed on by the Subjects of *Great-Britain*: Yet here it is necessary to distinguish between this and the Trade of the *Indies*; for, though we found a Way to ourselves from this Dependance upon the *Venetians*, yet was it by breaking in upon their *Levant* Trade at first, and then by failing directly to these Eastern Parts, which was a Work of great Time and Labour, and brought about by a great Variety of Accidents, with the Progress of which the *English* Reader cannot but be extremely surprised, since it will show him the great and speedy Progress of our Maritime Strength and Power at Sea.

The first Person, so far as I have been able to learn, that ever proposed the establishing the *East-India* Trade in *England*, was one Mr. *Robert Thorne*, a Merchant of *London*, who settled at *Seville* in *Spain*, and resided there many Years, gained a peculiar Knowledge of the Majesty which both the *East* and *West Indies* were discovered. This very judicious Gentleman, who from his *Voyages* and constant, appears to have drawn his Knowledge, in a great Degree, from Books and Experience, applied himself about the Year 1527, to his Majesty King *Henry VIII*, to whom he represented very fully, yet in few Words, the vast Advantages that would accrue to his Subjects by a free Commerce to the *East Indies*; and to suit his Propositions, the great Genius and high Spirit of that Prince, he made them not only to encourage this new Navigation, but to support it by a new Rout, for as the *Portuguese* had yielded the Discoveries to the *Falls*, and the *Spaniards* to the *West*, he was ambitious that the *English* Nation should find a Way to the *Indies* of their own, and that by their own.

But it is worthy of observation, that there is a remarkable Instance to be seen in the *Portuguese* Discoveries, that they were so early aware of the insuperable Difficulties that lay in the way of finding a Passage to the North East, and therefore proposed very feebly, and for good Reason, sailing directly North, or at least very near it, from which he thought many Advantages might be gained, as many Inconveniences avoided. As for instance, he conceived that this might be undertaken at such a Season of the Year as to enjoy the Benefit of the half Year's Pay in that Climate, and he thought it absurd and ridiculous to attempt

As for instance, he conceived
taken at such a Season of the Year,
a half Year's Time in that
absurd and ridiculous to suppose

that the Seas were frozen under the North Pole, at a Time
when the Sun, from its long Continuance on the Horizon,
must have such prodigious Force. He likewise judged,
that whatever Difficulties might occur in the Beginning of
such a Passage, they must be quickly and certainly got over,
and be fully recompensed, by coming soon on the Coast of
Tartary and *Japan*, and so to *China* and the *Manilas*. To
say the Truth, if we consider the Time when this Propo-
sal was made, the Sagacity and Penetration of this Gentle-
man can scarce be enough commended or admired, since
it is very certain, that if ever any Discovery is made on
this Side, it must be made by this Method.

But, how wise or how practicable soever Mr. *Thorn's*
Scheme might be, I do not find that it was ever considered
in any other Light, than as a Project too bold to be put in
Execution; and to say the Truth, the first Person that
gave us any Light into this Navigation was Sir *Francis*
Drake, in the Year 1578. The very next Year Mr. *Stevens*
went from *Lisbon* to *Goa* by the Cape of *Good Hope*,
and wrote a large Account of his Voyage while he resided
at *Goa*. A. D. 1586, the famous *Candish* made his Voyage
round the World, which having clearly opened a Pas-
sage to these Parts, Captain *George Raymond*, in a Ship of
his own, called the *Penelope*, accompanied by two others,
called the *Merchant-Royal*, and the *Edward Bonaventure*,
sailed in the Year 1591 for the *East-Indies*, not with a
View to trade, but to cruise upon the *Portuguese*. His
Voyage was extremely unfortunate; for Captain *Raymond*
found himself obliged, at the Cape of *Good Hope*, to send
home the *Merchant-Royal*, with the sick Men that had
in the three Ships. Having doubled that Cape, and sailed
about sixty Leagues, he was lost in the *Penelope*; so that
Captain *Jes Lanchester*, in the *Edward Bonaventure*, was
the only one that performed this Voyage, and that too
with very indifferent Fortune; for after a dangerous Voyage
to the *East-Indies*, where he was obliged to pass through the
West-Indies, where having lost his Ship, he with much Dif-
ficulty, by the Assistance of a French Privateer he met with
in those Parts, returned home.

But in this Space of Time, though no *English* Ships had
been sent to the *Indies* for Commerce, abundance of *Eng-*
lishmen had been there in different Services, and on their
Return home, gave such an Account of those Countries, and
of the Ease with which the *English* might settle Factories,
and establish a regular Trade thither, that many great Men,
and rich Merchants, began to entertain a Desire of estab-
lishing such a Commerce; and that they might do this ef-
fectually, they applied themselves to Queen *Elizabeth* for
a Charter, and she accordingly granted them one, which was
dated the 31st of December 1600, in the forty-third Year
of her Reign. By this Charter she created them a Body
Corporate, by the Title of the Governor and Company of
Merchants of *London* trading to the *East-Indies*; granted
them a common Seal, appointed *Thomas Smyth*, Esq.
Alderman of *London*, their first Governor, and established
a Court of twenty Directors to be chosen annually on the
21st of July, or within six Days after. She likewise granted
them Authority to make Bye-laws, allowed them to export
Goods Custom free for four Years, permitted them to
export thirty thousand Pounds in Foreign Coin, with Li-
cense to do the same in every Voyage, provided they
brought that Sum by their Trade out of Foreign Countries
into this Kingdom. This Charter was exclusive, and the
Queen bound herself not to grant any Charter to other
Merchants for the Space of fifteen Years; but with this
Proviso, that if within that Space this Charter should ap-
pear to be in any respect detrimental to the Publick, it
should, upon two Years Warning, under the Privy-Seal
become void; but if from Experience it should appear,
that this new Corporation was a publick Benefit, then she
promised to renew their Charter, with such additional
Grants in their Favour, as should appear requisite.

I have been the more particular with respect to this Point,
because I look upon it that there never was any publick
Act of this Nature better considered, or drawn with greater
Wisdom and Foresight, both for the Benefit of the Adventur-
ers, and the publick Good; by which I mean the In-
terest of the whole Nation, Circumstances which ought to
be equally considered in all such Cases, since whatever the

Design may be of the Persons concerned in such Adven-
tures, it ought to be the Care of the Government, that
even these exclusive Companies should be calculated for
the common Advantage, and be so guarded, as that Per-
sons concerned therein may never have it in their Power
to sacrifice the general Interest of a People to their parti-
cular Profit, and private Advantage.

It was in Consequence of this Charter that the Com-
pany immediately began to raise a joint Stock for carrying
their Project into Execution; and this with such Industry,
that in a very short Space their Treasurer had in his Hands
seventy-two thousand Pounds; upon which it was resolved
to fit out five able Ships to begin their Correspondence in
that Part of the World. These were the *Dragon* of six
hundred Tuns, Admiral of the Squadron: The *Hector*,
Vice-Admiral, of three hundred Tuns: The *Suffolk*, of
two hundred Tuns: The *Swallow*, of the same Burthen:
The *Gash*, a Store Ship, of a hundred and thirty Tuns.
The Complement of Men in all their Ships were four hun-
dred and eighty, and the Expence of equipping them
amounted to forty-five thousand Pounds, and their Cargo
took up the other twenty-seven thousand Pounds. On the
2d of May 1601, they sailed from *Torrey*, and without any
considerable Accident continued their Voyage to the *Indies*,
where Captain *James Lancaster*, who commanded with the
Title of Admiral, made a Treaty with the King of *Alber*,
sent a Pinnace to the *Moluccas*, and erected a Factory in
the Island of *Java*; after which the Admiral returned
safely, and with good Profit, into *England*.

This was the only Voyage that was undertaken by the
Company in the Reign of Queen *Elizabeth*; but upon her
Death, they found a very kind Master, as well as power-
ful Protector in her Successor King *James*, who from his
Accession to the Throne, shewed them all the Countenance,
and afforded them all the Assistance that they could desire,
which, with the Profits of their first Voyage, engaged them
to undertake a second in the Year 1603, Sir *Henry*
Middleton, in the *Red Dragon*, having the Title of Admiral,
the *Hector* Vice-Admiral, the *Swallow*, and the *Swallow*.
These Ships visited the *Moluccas*, and the Island of *Java*,
were well received by all the *Indian* Princes, but met with
very indifferent Usage from the *Dutch*, who by an already
to lose all Sense of Gratitude to the Nation that had pre-
ferred them, endeavoured all that in them lay to misrepre-
sent the *English* to the *Indians*, as a cruel, unjust, and am-
bitious People, who meant not to trade with them fairly
for their Commodities, but to seize their Country, and to
take them by Force. That this Disposition in the *Dutch*
did not take Rise, either from their Hatred or Contempt
of King *James*, but was bred in them by their own Self-
love, and Aversion to all other Nations, appears most
clearly from the Letter of the King of *Ternate* to King
James by Sir *Henry Middleton*, in which he expressly al-
erts, that the *Dutch* had used their utmost Endeavours to
root out the good Opinion which himself and his Subjects
entertained of the *English* from the Time that Sir *Francis*
Drake had visited their Island; and thus those Disputes
began, of which we shall have so much to say in the Course
of this Section.

When Sir *Henry Middleton* sailed from *Bantam*, he re-
ceived from the King a Letter for his *British* Majesty,
and a Present of Bazar Stones. In their Passage home
they met with the *Hector* bearing off of the Cape of
Good Hope, with only one Man alive, by whom they
were informed of the Loss of the *Swallow*, and a Com-
pany with this Ship they arrived safely in the *Dutch*,
May 6, 1606. The very next Year the Company under-
took a third Voyage, in which three Ships only were em-
ployed, viz. the *Dragon*, the *Hector*, and the *Swallow*,
under the Command of Captain *William Keeling*. Their
Voyage was very successful, especially in the *Indies*,
where they were, notwithstanding, extremely troubled by the
Dutch. This did not hinder them, however, from bring-
ing home a very valuable Cargo of all Sorts of Spices, with
which they arrived in the *Dutch*, May 15, 1607, with
this extraordinary Mark of good Fortune, that their
whole Voyage out and home, they lost not so much as a
single Man. With this Captain *Keeling* went out the
Hulian Hawkin, with the Title of the King's Envoy, and for

to the Great Mogul, by whom he was very kindly received, and by his prudent Management a good Correspondence was established between the two Courts.

In the Spring of the Year 1607, the Company sent the *Ascension* and the *Union* to the *Red-Sea*, and the Coast of *Arabia*, which, however, proved but indifferent in their Success. In April 1609, Captain *David Middleton*, in the *i expedition*, was sent by the Company to the *Moluccas*, where the *Dutch* now began to act as Masters, and had a Design of seizing the Captain's Ship, which by his good Management he prevented, and brought home with him a hundred and thirty-nine Tuns of Nutmegs, and the like Quantity of Mace, besides Pepper and other valuable Goods, which I conceive to have been the most prosperous Voyage that had been undertaken by the Company.

5. The *East-India* Company now began to make a great Figure, to employ a vast Number of Men, and to export large Quantities of *English* Goods and Manufactures, so that they conceived, that though their former Charter was not expired, yet upon due Application his Majesty might be prevailed upon to fulfil the Promise of his Royal Predecessor, inasmuch as they had already fulfilled the Terms upon which that Promise was made, and had rendered it manifest, that the continuing this Corporation would be for the common Benefit of the whole *English* Nation. Upon a Representation to this Purpose, his Majesty was graciously pleased, in the Month of *May* 1609, to enlarge their first Charter, in the Manner they desired, and to make it perpetual; upon which the Company began to build a very large fine Ship, of the Burthen of one thousand two hundred Tuns, which is taken Notice of even by our general Historians, because this was the first great Ship that had been built in this Kingdom, the Custom having hitherto been to buy them ready built in some of the *Hanse-Towns*; and it is farther observed both by *John Stowe* and *Sir William Monson*, that the *Jesus* of *Lubeck*, which *Sir John Hawkins* took in the *West-Indies*, was the last great Ship which was either builded or bought beyond the Seas. They likewise built a new Pinnace of two hundred and fifty Tuns to attend the great Ship; and when both were ready to be launched, the King, the Prince of *Wales*, and a great Number of the principal Nobility of the Kingdom, went down to *Deptford*, where they dined on Board the great Ship, and were all entertained in *China*; the Dishes and Plates, after the Dinner was over, though then great Curiosities, and of high Price were left to be taken away by the Servants, or whoever else had a mind to them.

His Majesty, at the Time of launching the Ship, called it the *Trade's Increase*, and gave the Pinnace the Name of the *Pepper Horn*. In the succeeding Spring the Company fitted out for their sixth Voyage this new Ship and Pinnace, together with two others, under the Command of *Sir Henry Middleton*, Knight, at the Expence of eighty thousand Pounds. In 1611, they sent a single Ship, and the succeeding Spring three Ships, under the Command of Captain *John Davis*, at the Expence of threescore thousand Pounds.

The *Portuguese* at this Time endeavoured to hinder the *English* from trading on the Coast of *India*, which obliged the Company to be at more than usual Pains and Expence in equipping out their next Squadron, which sailed in the Year 1611, and consisted of four large Ships, of which the biggest was the *Pragen*, commanded by Captain *Thomas Best*, who arrived safely at *Surat* in six Months, and settled a Factory there, which he had hardly done before the Viceroy at *Goa* fitted out a large Fleet to destroy him. It consisted of four great Gallies, and twenty-six Gallies, in which were five thousand Men, and one hundred and thirty Pieces of Cannon; but Captain *Best*, though he had with him only a small Pinnace, resolved to maintain his Factory, and in Defence of it, engaged and defeated this *Portuguese Armada*, in which Action they lost twelve hundred Men. After this the *Portuguese* never more disturbed the *English* upon that Coast; and as for Captain *Best*, when he had settled every thing to his good liking at *Surat*, he sailed to *Java*, and having taken a valuable Cargo on Board there, returned safely to *London* in the Month of *July* 1614.

In this Year Captain *Saris* also returned with a very rich Lading, and *Sir Thomas Smith*, Governor of the *East-India* Company, having represented to the King, that they had left *Mr. Paul Canning*, as their Agent, at the Court of the Great Mogul; but that they conceived it would be for the Benefit of the Company, and for the Honour of the Nation, if his Majesty would be pleased to send a Person of Distinction, with the Title of his Ambassador, to that great Prince; to this his Majesty consented, and appointed *Sir Thomas Kece*, Knight, his Ambassador. The Company also, to shew their Gratitude, fitted out a fine Squadron of four large Ships, under the Command of Captain *Keeling*, who carried *Sir Thomas Roe* late to *India*, where he prosecuted his Affairs with great Success. The *English* and *Dutch* Companies in the *Indies* were now grown so powerful, that they began to extend the Sovereignty of their respective Countries over several Places in the *Indies*, and the *English* particularly procured from the Inhabitants of the Island of *Banda* a Surrender of themselves to the Crown of *England*, which they did by a formal Instrument, which, however, did not hinder the *Dutch*, who alledged, that they had prior Claims upon those Countries, from endeavouring to make themselves Masters of them. The *English* on the other hand proceeded in extending their Dominions in the *East-Indies*, without considering that they wanted a Force to maintain them, and procured likewise the Surrender of *Lanore* by another solemn Instrument, under the Hands of the Natives, dated the 24th of *November* 1620.

It is very certain that all this was very well designed, and that the *English* Company, if they had been strong enough, would by this means have procured to themselves a very large Share of the Spice Trade; but as it was, they only opened a Way to their own Destruction. While this was doing in the *Indies*, there was a Trade carried on in *Europe* for the settling all the Differences between the two Companies, of which, as there is nothing said in any of our general Histories, it is requisite that we should give a distinct Account here.

There had been two Commissions issued by King *James* for Treaties, for the Regulation of these Differences, the one in the Year 1613, when the Conferences were held at *London*, the second in 1615, when the Negotiation was carried on at the *Hague*; but both these proved ineffectual, and therefore a new Treaty was had in the Year 1618, between Commissioners appointed by each of the *East-India* Companies, *English* and *Dutch*, under the Inspection and Direction of Ministers Plenipotentiaries from the King of *Great-Britain*, and the States General. The Treaty between the two Companies was concluded on the 17th of *July*, by which it was agreed, that all past Offences on either Side should be buried in Oblivion, that both Companies should trade freely upon their own Stocks, to their own Benefit, but with a mutual Regard to each other. Herein it was agreed, that the Price of Pepper, and other Spices, should be amicably settled between them; that the *Molucca* Islands, together with those of *Banda* and *Amboyna*, should belong to the *English* and *Dutch*; but in such a Manner, that the *English* should have but one third of the *Indies*, and the *Dutch* two-thirds.

That the Expence of the Fortifications in those Parts should be defrayed by a Duty or Imposition on the Spices exported from them; that a Council of Defence should be erected, composed of Members of both Companies, who should provide such Ships of War as are mentioned in the Treaty, for the joint Defence of both Companies; that the Fortresses erected in those Parts should remain in the Hands of those who are possessed of them; and that such as had been acquired by both Companies, should remain to be possessed by them both, and be garrisoned by *Dutch* and *Dutch* Troops, according as this Matter should be settled and adjusted by the Council of Defence before mentioned; that for the future the whole Trade of the *Indies* should be free to both Nations, and that neither should attempt to shut out the other by Fortifications, or Treaties, with the Natives; that to render this Treaty more effectual, his *Britannick* Majesty, and the States General should be most humbly desired not to erect any other Com-

panies during the Time fixed for the Continuance of this Treaty.

That if in any of the Factories of the *Indies* belonging either to the *English* or *Dutch*, it should fall out by Death or other Accidents, that none should be left to take care of the Effects in the Factory, that then they should be preserved by, and justly accounted for by the Members of the other Factory; that this Treaty shall endure for twenty Years, and in case any Disputes shall arise notwithstanding thereof, which cannot be either decided or accommodated by the Councils of the said Companies, or *Britannick* Majesty, and the States-General, are humbly desired to take the same under their Cognizance, and finally, to adjust and determine them. All those Articles were to be faithfully and inviolably observed on both Sides, according to the Intention of the said Treaty, and the same to be ratified by his Majesty in one Month. This Treaty was accordingly ratified by King *James*, on the 16th of *July* 1619, under his own Hand, and sealed with his Broad-Seal: In this Ratification his Majesty promised not to grant any Charter or Powers to any other Company during the Continuance of this Treaty.

One would have imagined that all Things must now have gone on harmoniously and peaceably, and that an End had been put to all the Disputes between the *English* and *Dutch* Companies for twenty Years at least: But it fell out quite otherwise; for the *Dutch* General of the *East-India* Company having a Fleet of large Ships under his Command, attacked *Lanore*, and having defeated the Natives, fired the Town, plundered the *English* Factory, took away the Cloth, Money, and Bullion, belonging to the *East-India* Company, together with twenty-three thousand Pounds Weight of Mace, and one hundred and sixty thousand Pounds of Nutmegs. The *English* Factors that were settled there, were stripp'd naked, bound, beaten, thrown over the Town-Wall, and afterwards dragged through the Streets in Chains. The Factory of *Poslaroon* had the same Fate; and thus all things were in a worse State after this Treaty than they were before, in the *Indies*. What seems to be most extraordinary and astonishing is, that the *Dutch East-India* Company published in *Holland* a Defence or Vindication of these Proceedings, in which they alledge, that having a prior Right to these Islands, this could not be taken away by any subsequent Act of the Inhabitants, who were no longer their own Masters; that this War was prosecuted against the Natives as Principals, and against the *English* as Auxiliaries only. To this the *English* published an Answer, in which they absolutely denied, that the Inhabitants of the Island of *Banda* ever submitted themselves to the *Dutch*, and insisted on their legal Title to that Country.

But it does not appear, that the Government ever interfered properly in this Affair, or demanded just Satisfaction from the States of *Holland*, which might perhaps be owing to the perplexed Circumstances of our Administration, and the Differences that had risen between King *James* and his Parliament. But if this ill Usage was hard to be born, were followed soon after much worse, when, to take from the *English* the small Remains of the Spice Trade, and to monopolize entirely a Commerce of such Importance into their own Hands, the *Dutch* were guilty of such unheard-of Barbarities in *Amboyna*, as tho' they may be forgiven, yet ought never to be forgot, and we find them very tightly paid over, even in those Works where we might reasonably expect the truest Accounts of them, which is probably owing to the Inclination some Writers have to hide the Faults of their Neighbours, and to publish the Excesses of no Government but their own.

Yet as at the very Time it happened, the *East-India* Company here took care to give a full and large Account of the whole Transaction, from such Authorities as cannot be questioned, it seems but reasonable that for the sake of Truth, and the perpetual Preservation of so authentick and curious a Piece, which otherwise as a Pamphlet may be in Danger of being lost, as well as for other Reasons which shall be expell'd hereafter, we should insert it intire. It is indeed of some Length, and delivered in an uncouth and antiquated Style; but however, it is better it should stand so, than that we should run any

Risque of altering the Facts, by endeavouring to amend the Language in which they are expressed.

Amboyna is an Island lying near *Seran*, of the Com-pals of forty Leagues, and giveth Name also to some other small Islands adjacent. It beareth Cloves; for gathering and buying in whereof, the *English* Company, for their part, had planted five several Factories: The Head and Rendezvous of all at the Town of *Amboyna*, and therein first Master *George Muschamp*, and afterward Master *Gabriel Taverner*, their Agents, with Directions over the smaller Factories at *Hitto* and *Larica* upon the same Island, and at *Labo* and *Cambello* upon a Point of their neighbouring Island of *Seran*. Upon these Islands of *Amboyna*, and the Point of *Seran*, the *Dutch* have four Forts; the chief of all is at the said Town of *Amboyna*, and is very strong, having four Points, or Bulwarks, with their Curtains; and upon each of these Points fix great Pieces of Ordnance mounted, most of them of Brals. The one Side of this Castle is washed by the Sea, and the other is divided by the Land, with a Ditch of four or five Fathom broad, very deep, and filled with the Sea. The Garrison of this City consisteth of about two hundred *Dutch* Soldiers, and a Company of free Burghers. Besides these, there is always a matter of three or four hundred Mardikers in the Town, ready to serve the Castle at an Hour's Warning. There lie also in the Road, diverse good Ships belonging to the *Dutch*, as well for the Guard of the Place by Sea, as for the Occasion of Traffick, this being the chief Rendezvous as well for the Island of *Banda*, as for the rest of *Amboyna*. Here the *English* lived not in the Castle, but under Protection thereof, in a House of their own, in the Town, holding themselves safe, as well in respect of the ancient Bonds of Amity between both Nations, as of the strict Conjunction made by the late Treaty before mentioned.

They continued here two Years converting and trading together, with the *Dutch*, by virtue of the said Treaty, in which Time there fell out several Differences and Debates betwixt them; the *English* complaining, that the *Dutch* did not only lavish away much Money in Building and unnecessary Expences upon the Forts, and otherwise, and bring large and unreasonable Reckonings thereof to the common Account, but also did, for their Part, pay the Garrison with Victuals and Cloth of *Coromondal*, which they put off to the Soldiers at three or four times the Value it cost them, yet would not allow of the *English* Company's Part of the same Charge, but only in ready Money, thereby drawing from the *English* more than two Thirds of the whole true Charge. Hereupon, and upon the like Occasions, grew some Discontents and Disputes, and the Complaints were sent to *Jaccatra*, in the Island of *Java Major*, to the Council of Defence of both Nations there residing, who altho' not agreeing upon the Points in Difference, sent the same hither over into *Europe*, to be decided by both Companies here, or in default of their Agreement, by the King's Majesty, and the Lords the States-General, according to an Article of the Treaty of the Year 1619 on this Behalf. In the mean time, the Discontent between the *English* and the *Dutch* about these and other Differences continued, and daily increased, until at last there was a Sword found to cut in funder that Knot at once which the tedious Disputes of *Amboyna* and *Jaccatra* could not untie; and this was used in the Manner as followeth.

About the 11th of *February* 1622, O. S. a *Japanese* Soldier of the *Dutch* in their Castle of *Amboyna*, walking in the Night upon the Wall, came to the Centinel, and there, among other Talk, asked him some Questions touching the Strength of the Castle, and the People that were therein. It is here to be observed, that these *Japanese* did for the most Part serve the *Dutch* as Soldiers, yet were not of their truly Bands always lodged in the Castle, but upon Occasion called out of the Town to assist the Watch. This *Japanese* aforesaid, was, for his bad Conference with the Centinel, apprehended upon Suspicion of Treason, and put to the Torture; thereby he was brought to confess himself and sundry others of his Countrymen there, to have contrived the taking of the Castle. Hereupon other *Japanese* were examined and tortured, as also a *Portuguese*, the Guardian of the Slaves under the *Dutch*.

During

During this Examination, which continued three or four Days, some of the *Englishmen* went to and from the Castle, upon their Business, saw the Prisoners, heard of their Tortures, and of the Crime laid to their Charge, but all this while suspected not that this Matter did any whit concern themselves, having never had any Conversation with the *Japanese*, nor with the *Portuguese* aforesaid.

At the same Time, there was one *Abel Price*, Chirurgion to the *English*, Prisoner in the Castle, for offering in his Drunkenness, to set a *Dutchman's* House on Fire. This Fellow the *Dutch* took, and shewed him some of the *Japanese*, whom they had first most grievously tortured, and told him, they had confessed the *English* to have been of their Confederacy for the taking of the Castle, and that if he would not confess the same, they would use him even as they had done the *Japanese*, and worse also. Having given him the Torture, they soon made him confess whatever they asked him. This was on the 15th of February 1622, O. S. Forthwith, about Nine of the Clock the same Morning, they sent for Captain *Towerjon*, and the rest of the *English* that were in the Town, to come to speak with the Governor in the Castle. They all went, save one that was left to keep the House. Being come to the Governor, he told Captain *Towerjon*, that himself and others of his Nation, were accused of a Conspiracy to surprize the Castle, and therefore, until further Trial, were to remain Prisoners. Instantly also they attacked him that was left at home in the House, took the Merchandise of the *English* Company there into their own Custody, by an Inventory, and seized all the Chests, Boxes, Books, Writings and other things in the *English* House.

Captain *Towerjon* was committed to his Chamber, with a Guard of *Dutch* Soldiers. *Emmanuel Thomjon* was kept Prisoner in the Castle; the rest, *viz.* *John Beament*, *Edward Collins*, *William Webber*, *Ephraim Ramjay*, *Timothy Johnson*, *John Harbo*, and *Robert Brown*, were sent aboard the *Dutch* Ships then riding in Harbour; some to one Ship, and some to another, and all made fast in Irons. The same Day also the Governor sent to the two other Factories in the same Island, to apprehend the rest of the *English* there; to that *Samuel Colson*, *John Clark*, *George Sbarroek*, that were found in the Factory at *Hitto*, and *Edward Collins*, *William Webber*, and *John Sadler*, at *Larica*, were all brought Prisoners to *Ampoyna*, the 16th of February; upon which Day also *John Peool*, *John Werberel*, and *Thomas Ladbesek*, were apprehended at *Camoelle*, and *John Beament*, *William Griggs*, and *Ephraim Ramjay* at *Lobo*, and brought in Irons to *Ampoyna*, the 20th of the same Month. In the mean time, the Governor and Fiscal went to work with the Prisoners that were already here; and first, they sent for *John Beament* and *Timothy Johnson*, from on Board the Unicorn, who being come into the Castle, *Beament* was left with a Guard in the Hall, and *Johnson* went into another Room, where, by and by, *Beament* heard him cry out very pitifully, then to be quiet a little while, and then loud again.

After Taste of the Torture, then *Abel Price* the Chirurgion that first was examined and tortured, was brought in to confront and accuse him; but *Johnson* not yet confessing any thing, *Price* was quickly carried out, and *Johnson* brought again to the Torture, where *Beament* heard him sometimes cry aloud, then quiet again, then roar afresh. At last, after he had been about an Hour in this second Examination, he was brought forth wailing and lamenting, all wet, and cruelly burnt in diverse Parts of his Body, and so laid aside, in a Bye-place in the Hall, with a Soldier to watch him, that he should speak to nobody. Then was *Emmanuel Thomjon* brought to Examination, not in the Room where *Johnson* had been, but in another somewhat farther from the Hall; yet *Beament* being in the Hall, heard him roar most lamentably, and many times; At last, after an Hour and half spent in torturing him, he was carried away into another Room another Way, so that he came not by *Beament* thro' the Hall. Next was *Beament* called in, and being demanded many things, all which he denied with Oaths and Protestations, was made fast to a post, and a Cloth tied about his Neck, and two Men ready with their Jars of Water to be poured on his Head; but yet for this Time the Governor had look'd him, he

would spare him a Day or two, because he was an old Man; this was all *Saturday's* Work, the 15th of February aforesaid.

On the 16th *William Webber*, *Edward Collins*, *Ephraim Ramjay*, and *Robert Brown*, were fetched from aboard the *Rotterdam* to be examined: At the same time came *Samuel Colson*, *William Griggs*, and *John Clark*, *George Sbarroek*, and *John Sadler*, from *Hitto* and *Larica*, and were immediately upon their Arrival, brought into the Castle Hall. *Robert Brown*, Taylor, was first called in, and being tormented with Water, confessed all in order as the Fiscal asked him. Then was *Edward Collins* called in, and told that those that were formerly examined had confessed him as accessory to the Plot of taking the Castle, when, when he denied with great Oaths and Execrations they made his Hands and his Feet fast to the Rack, bound a Cloth about his Throat ready to be put to the Torture of the Water. Thus prepared he prayed to be respited, and he would confess all. Being let down, he again vowed and protested his Innocency; yet said, that because he knew they would, by Torture, make him confess any thing, though never so false, they would do him a great favour to tell him what they would have him say, and he would speak it, to avoid the Torture. The Fiscal hereupon said, What, do you mock us? And bad up with him again, and so gave him the Torment of Water, which he not able long to endure, desired to be let down again to his Confession: Then he devised with himself and told them, That about two Months and half ago, himself, *Ybomew*, *Johnson*, *Brown*, and *Fardo*, had plotted, with the Help of the *Japanese*, to surprize the Castle. Here he was interrupted by the Fiscal, and asked whether Captain *Towerjon* were not of that Conspiracy? He answered, No; you lye, said the Fiscal, did not he call you all to him, and tell you, that those daily Abuses of the *Dutch* had caused him to think of a Plot, and that he wanted nothing but your Consent and Secrecy? Then said a *Dutch* Merchant, one *John Igeest*, that stood by, Did not you all swear upon a Bible to be secret to him? *Collins* answered with great Oaths, that he knew nothing of any such Matter: Then they bade make him fast again; whereupon he then said, all was true that they had spoken. Then the Fiscal asked him whether the *English* in the rest of the Factories were not consenting to this Plot? He answered, No; the Fiscal then asked him whether the President of the *English* at *Jaccatra*, or Master *Weiden*, Agent in *Banda*, was not Plotters, or privy to this Business? Again he answered No: Then the Fiscal asked him by what Means the *Japanese* should have executed their Purpose? Whereat, when *Collins* stood staggering and devising of some probable Fiction, the Fiscal helped him, and said, Should not the *Japanese* have gone to each Point of the Castle, and two to the Governor's Chamber-door; and when the Huronary had been without, and the Governor coming to see what was the Matter, the *Japanese* to have killed him? Here one that stood by said to the Fiscal, Do not tell him what he should say, but let him speak of himself; whereon the Fiscal, without attending the Answer to his former Question, asked what the *Japanese* were to have had for their Reward? *Collins* answered 1000 Rials a piece. Lastly, he asked him when this Plot should have been effected? Whereupon, although he answered him nothing, not knowing what to devise upon the sudden, yet he was dismissed, and very glad to come clear off the Torture, though with certain Belief that he should die for this his Confession.

Next was *Samuel Colson* brought in, being newly arrived from *Hitto*, as is before touched, and was the same Day brought to the Torture, who, for fear of the Pain, where-with he saw *Collins* come out, in such a Gale, that his Eyes were almost blown out of his Head with the Force of the Water, chose rather to confess all they asked him, and he was quickly dismissed, coming out weeping, lamenting, protesting his Innocency. Then was *John Clark*, that came with *Colson* from *Hitto* fetched in, and a little after was heard to cry out again. They tortured him with Water and with Fire, by the Space of two Hours. The Manner of his Torture, which was likewise that of *Johnson's* and *Thomjon's*, was as followeth: First, they bound

The condition of the English in the Dungeon & their Execution

Amboyna

Execution

him up by the Hands with a Cord, on a large Door, where they made him fast, upon two Staples of Iron fixed on both Sides, at the Top of the Door-Polls, halting his Hands one from the other as wide as they could stretch. Being thus made to fast, his Feet hung two Foot from the ground, which all they stretched asunder as far as they could stretch, and so made them fast beneath, under the Door-Trees on each Side. Then they bound a Cloth about his Neck and Face so close, that little or no Water could go by; that done, they poured the Water softly upon his Head, until the Cloth was full up to the Mouth and Noftrils, and somewhat higher, so that he could not draw Breath but he must withal suck in the Water; which being till continued to be poured in softly, forced all his inward Parts to come out of his Nofe, Ears, and Eyes, and often, as it were, stifling or choking him; at length took away his Breath, and brought him to a Swoon, or Fainting: Then they took him quickly down, and made him vomit up the Water; being a little recovered, they set him up again, and poured in the Water as before, then taking him down as he seemed to be fished. In this Manner they handled him three or four several Times with Water, till his Body was swollen twice or thrice as big as before; his Cheeks like great Bladders, and his Eyes swelling and strutting out beyond his Forehead; yet all this he bore without confessing any thing, inasmuch that the Fiscal and Tormentors reviled him, saying, that he was a Devil, and no Man, or surely he was a Witch, at least had some Charm about him, or was enchanted, that he could bear so much; wherefore they cut off his Hair very short, as supposing he had some Witchcraft hidden therein. Afterwards they bound him up again, as before, and then burnt him with lighted Candles in the Bottom of his Feet until the Fat dropped out on the Candles, so they applied fresh Lights unto him; they burnt him also under the Elbows, and in the Palms of his Hands, likewise under the Arm-pits, until his Inwards might evidently be seen.

At last, when they saw he could of himself make no handsome Confession, then they led him along with Questions of particular Circumstances by themselves framed. Being thus wearied and overcome by the Torment, he answered, Yea, to whatever they asked, whereby they drew from him a Host of Confession to this Effect; to wit, That Captain *Towerjon* had, upon *New-Year's-Day* then last past, sworn all the *English* at *Amboyna* to be secret and assistant in a Plot that he had projected, with the Help of the *Japanese*, to surprise the Castle, and to put the Governor and the rest of the *Dutch* to Death. Having thus martyred this poor Man, they sent him out by four Blacks, who carried him between them to a Dungeon, where he lay five or six Days, without any Chirurgion to dress him, until his Flesh being putrified, great Maggots dropped out and crept about him in a most loathsome and noisome Manner. Thus they finished their Sabbath-Day's Work; and in evening now dark, sent the rest of the *English* that came that Day from *Amboyna*, and 'til then attended in the Hall, to the Smith's Shop, where they were loaded with Irons, and then to the same loathsome Dungeon, where *Clark* and the rest were accompanied with the poor *Japanese*, lying in the Putrefaction of their Tortures.

The next Morning, being *Monday*, the Seventeenth of *January*, *O. S. William Grogges* and *John Fards*, with certain *Japanese*, were brought into the Place of Examination. The *Japanese* were first cruelly tortured to accuse *Grogges*, which, at last, they did; and *Grogges*, to avoid the Torture, confessed all that the Fiscal demanded. By the like was also done by *John Fards* and other *Japanese*: But *Fards* himself endured the Torture of Water, and at last confessed whatsoever the Fiscal asked him, and so was sent back to Prison. The same Day another *Beaman* was brought the second Time to the Fiscal's Chamber, where one Captain *Newport*, a *Dutchman's* Prisoner in *England*, was used as an Interpreter. *William Beaman* was also brought in to accuse him, who said, That the same Consultation was held for taking the Castle, he and *Beaman* were then present; *Beaman* denied it with many Oaths, and deep Curses; at last, being stretched and drenched with Water, his Inwards were ready

to crack, he answered affirmatively to all the Fiscal's Interrogatories. Yet, as soon as he was let down, he clearly demonstrated to Captain *Newport*, and *Johnson*, a *Dutch* Merchant, then also present, that these Things could not be so; nevertheless he was forced to put his Hand to the Confession, or else he must to the Torture again, which, to avoid, he subscribed, and so had a great Iron-bolt, and two Shackles riveted to his Legs, and then was carried back to Prison.

After this *George Sharreck*, Assistant at *Hills*, was called in Question, who seeing how grievously others were martyr'd, made his earnest Prayer to God, as since upon his Oath he hath acknowledged, that he would suffer him to make some such probable Lies against himself, as the *Dutch* might believe, and so he might escape the Torment. Being brought to the Rack, the Water provided, and the Candles lighted, he was by the Governor and Fiscal examined, and charged with the Conspiracy. He fell upon his Knees, and protested his Innocence; then they commanded him to the Rack, and told him, unless he would confess he should be torment'd with Fire and Water to Death, and then should be drawn by the Knees to the Gallows, and there hanged up. He still persisting in his Innocence, the Fiscal bid him be hoisted up; then he craved Respite a while, and told them, that he was at *Hills*, and now in *Amboyna* upon *New-Year's-Day*, when the Consultation was pretended, neither had he been there since *November* before, as was well known to sundry of the *Dutchmen* themselves that resided there also with him.

Hereupon they commanded him again to the Rack; but he craving Respite, as before, now told them that he had many Times heard *John Clark* say, that the *Dutch* had done them many unfeatherable Wrongs, and that he would be revenged on them; to which End he had once been in with Captain *Towerjon*, in a brave Plot; at which Word the Fiscal and the rest were attentive, encouraging him to proceed; so he went on, saying, that *John Clark* had entreated Captain *Towerjon* that he might go to *Maccassar*, there to consult and advise with the *Spaniards* to come with Gallies, and rob the small Factories of *Amboyna* and *Sacan*, when no Ships were there. Here they asked him what Captain *Towerjon* said to this? To which he answered, that Captain *Towerjon* was very much offended with *Clark* for the Motion, and from thenceforth could never abide him. Hereupon the Fiscal called him Rogue, and said he pres'd all from the Matter, and should go to the Torture: He craved Favour again, and began another Tale, to wit, That upon *Yvesday*, then last past, *John Clark* told him at *Hills*, that there was a Practice to take the Castle of *Amboyna*, and ask'd him whether he would consent thereto; whereupon he demanded of *Clark* whether Captain *Towerjon* knew of any such Matter, which *Clark* affirming; then the said *Sharreck* said, he would do as the rest did. Then the Fiscal asked him what Time the Consultation was held? He answered in *November* last: The Fiscal said that could not be, for the Consultation was on *New-Year's-Day*. The Prisoner said as before in the Beginning, that he had not been in *Amboyna* since the First of *December* till now, that he was brought thither; why then, quoth the Fiscal, have you belied yourself? Whereunto the Prisoner resolutely answered, that all that he had spoken touching *Clark* was false, and resigned only to avoid Torment. Then went the Fiscal out into another Room to the Governour, and anon returned and sent *Sharreck* unto the Prison again.

The next Day he was called again, and a Writing presented him, wherein was framed a formal Confession of his last Conference with *Clark* at *Hills*, touching the Plot to take the Castle of *Amboyna*, which being read over to him, the Fiscal asked him, whether it was true or no? He answered no: Why then, said the Fiscal, did you assents it? he answered, for fear of Torment. The Fiscal and the rest, in a great Rage, told him he lied, his Mouth had spoken it; and it was true, and therefore he should subscribe it, which, as soon as he had done, he fell presently into a great Passion, charging them bitterly to be guilty of the innocent Blood of himself and the rest, which they should look to answer for at the Day of Judgment.

ment; which he grappled with the Fiscal, and would have stopped him from carrying in the Confession to the Governor, with whom he also craved to speak, but was instantly laid hold on, and carried away to Prison. *William Webber* being next examined, was told by the Fiscal, that *John Clark* had confessed him to have been at *Ambony* on *New-Year's-Day*, and sworn to *Captain Tower's* Plot, &c. all which he denied, alledging he was that Day at *Larica*; yet, being brought to the Torture, he then confessed he had been at the Consultation at *Ambony* upon *New-Year's-Day*, with all the rest of the Circumstances in order as he was asked.

He also further told them, he had received a Letter from *John Clark*, after which was a Postscript, excusing his brief Writing at that Time, for that there was then great Business in hand. But one *Kender*, a *Dutch* Merchant, then standing by, told the Governor, that upon *New-Year's-Day*, the Time of this pretended Consultation, *Webber* and he were merry at *Larica*; so the Governor left him and went out: But the Fiscal held out upon the other Point, touching the Postscript of *Clark's* Letter, urging him to shew the same, which, when he could not do, though often terrified with the Torture, he gave him Respite, promising to save his Life, if he would produce the Letter. Then was *Captain Tower* brought to the Examination, and shewed what others had confessed of him; he deeply protested his Innocency. *Samuel Colen* was brought to confront him, who being told, that unless he would now make good his former Confession against *Captain Tower*, he should go to the Torture, coldly reaffirmed the same, and so was sent away. They also brought *William Griggs* and *John Fardo* to justify their former Confessions to his Face. *Captain Tower* seriously charged, that as they would answer it at the dreadful Day of Judgment, they should speak nothing but the Truth: Both of them instantly fell down upon their Knees before him, praying him, for God's Sake, to forgive them; and saying further openly, before them all, that whatsoever they had formerly confessed, was most false, and spoken only to avoid Torment. With that the Fiscal and the rest ordered them again to the Torture, which they would not endure, but then affirmed their former Confessions to be true. When *Colen*, who had accused the Captain before, was required to set his Hand to his Confession; he asked the Fiscal upon whose Head he thought the Sin would lie, whether upon his, who was constrained to confess what was false, or upon the Con- strainer?

The Fiscal, after a little Pause upon this Question, went in to the Governor, then in another Room; but another turning, said he must subscribe it, which he did, yet would make this Protestation; Well, quoth he, you make me to accuse myself and others, of that which is as false as God is true; for God is my Witness, I am as innocent as the Child new born. Thus have they examined all that belong to the *English* Company in the several Factories of the Island of *Ambony*. February the Twenty-first they examined *John Weibrel*, Factor at *Cambello*, in the Island of *Seran*. He confessed he was at *Ambony* upon *New-Year's-Day*, but for the Consultation whereof he was demanded, he said he knew of no other but touching certain Cloth of the *English* Company that lay in the Factories rotting and worm-eaten, which they advised together how to put off to the best Avail of their Employers. The Governor said, he questioned him not about Cloth, but of Treason, whereof, when he had protested his Innocency, he was for that Time dismissed; but the next Day he was sent for again, and *Captain Tower* brought to confront and accuse him, having before confessed somewhat against him; but Mr. *Tower* spoke these Words only, O Mr. *Weibrel*, Mr. *Weibrel*, speak the Truth, and nothing but the Truth, as God shall put it in your Heart; so *Captain Tower* was put out again, and Mr. *Weibrel* brought to the Torture of Water, with great Threats, if Water would not make him confess, Fire should. He prayed them to tell him what he should say, or to write down what they would, he would subscribe it. They said, he needed no Tutor, they would make him confess himself; but when they had hoisted him up four several Times, and

saw he knew not what to say; then they read him other Mens Confessions, and asked him from Point to Point, as they had done others, and he still answered, *Yes*, to all.

Next was called in *John Pewel*, *Weibrel's* Assistant at *Cambello*; but he proving that he was not at *Ambony* since *November*, save now, when he was brought thither Prisoner, and being spoken for by one *John Joost*, who had long been well acquainted with him, was dismissed without Torture. Then was *Thomas Ludbrook*, Servant to *Weibrel* and *Pewel* at *Cambello*, at the Time of the pretended Consultation, and serving in such Quality, as that he was never acquainted with any of the Letters from the Agent of *Ambony*, he was easily and quickly dismissed. *Ephraim Ramsey* was also examined upon the whole Conspiracy, and particularly questioned concerning *Captain Weldon*, the *English* Agent in *Banda* but denying all, and proving that he was not at *Ambony* at *New-year's-tide*, being also spoken for by *John Joost*, was dismissed, after he had hanged in the Rack a good while, with Irons about his Legs, and the Cloth about his Mouth. Lastly, *John Sadler*, Servant to *William Griggs* at *Larica*, was examined, and being found to have been absent from *Ambony* at *New-year's-tide*, when *Griggs* and others were there, was dismissed.

Thus have we all their Examinations, Tortures, and Confessions, being the Work of eight Days, from the 12th to the 23d of *February*, after which was two Days respite before the Sentence. *John Pewel* being himself acquitted as aforesaid, went to the Prison to visit *John Fardo*, one of these that had accused *Captain Tower*, to him *Fardo* religiously protested his Innocency, but expressing his sorrow for accusing *Master Tower*; for, said he, the Fear of Death doth nothing dismay me; for God, I trust, will be merciful to my Soul, according to the Innocency of my Cause. The only Matter that troubles me is, that through Fear of Torment I have accused that honest and godly Man *Captain Tower*, whom, I think in my Conscience, was so upright towards all Men, that he harboured no ill-will to any Man; much less would attempt any such Business as he is accused of. He further said, he would before his Death receive the Sacrament, in Acknowledgment, that he had accused *Captain Tower* falsely and wrongfully, only through Fear of Torment.

On the 25th, O. S. all the Prisoners, as well the *English* as the *Portuguese* and *Japanese*, were brought into the great Hall of the Castle, and there were solemnly condemned, except, *John Pewel*, *Ephraim Ramsey*, *John Sadler*, and *Thomas Ludbrook*, formerly acquitted as aforesaid; *Captain Tower*, during all his Imprisonment, having been kept from the rest, so that none could come to speak with him, writ much in his Chamber; but all was suppressed, save only a Bill of Debt, which one *Thomas Johnson*, a free Burgher, got of him, by Favour of his Keepers, for an Acknowledgment, that the *English* Company owed him a certain Sum of Money. In the End of this Bill he writ these Words, Firm'd by the Form of me *Gabriel Tower*, now appointed to die guiltless of any thing that can be truly laid to my Charge. God forgive them their Guilt, and receive me to his Mercy. Amen. This Bill being brought to *M. Weldon*, the *English* Agent at *Banda*, he paid the Money, and received in the Acknowledgment. *William Griggs*, who had before accused *Captain Tower*, writ the following Words in his Table Book: We whose Names are here specified, *John Beament*, Merchant of *Lave*, *William Griggs*, Merchant of *Larica*, *Alc. F. de*, *Cultur*, of *Ambony*, *Robert Brown*, Taylor, which of here be Prisoners in the Ship *Ketterdam*, being apprehended for Conspiracy, for blowing up the Island of *Ambony*, we being judged to Death this fifth of *March*, 1624. we, through Torment, were constrained to speak that which we never meant, nor once imagined, the which we take upon our Deaths and Salvation. They tortured us with that extrem Torment of Fire and Water, that Flesh and Blood could not endure; and thus we take upon our Deaths, that they have put us to Death gainst us; I say of our Accusation: So therefore that we desire that they that shall understand this, that our Imprisonment shall understand these Wrongs, and that yourselves shall

"fessed you also, and so farewell; written in the dark."

This Table-Book was afterwards delivered to *M. Waldon*
before mentioned, by one that served the *Dutch*. *Samuel*
Colson also, another that accused Captain *Towerjon*, writ
as followeth in the waste Leaves of a Book, wherein were
bound together the Common-Prayers, the Psalms, and the
Catechism. In one Page thus: "*Marck* the fifth, N. S.
"being *Sunday*, on board the *Rotterdam*, lying in Irons,
"understand, that I *Samuel Colson*, late Factor of *Hitto*,
"was apprehended for Suspicion of Conspiracy, and for
"any thing I know must die for it; wherefore, having no
"better means to make my Innocency known, have writ
"this in this Book, hoping some good *Englis*men will
"see it. I do here upon my Salvation, as I hope by his
"Death and Passion to have Redemption for my Sins, that
"I am clear of all such Conspiracy; neither do I know any
"Englisman guilty thereof, nor other Creature in the
"World. As this is true, God blefs me, *Samuel Colson*."

On the other Side, upon the first Page of the Catechism,
is thus written; In another Leaf you shall understand more,
which I have written in this Book. *Samuel Colson*. In
the Beginning of the Psalms, and in the Leaf so referred
unto, is thus written, viz. "The *Japonefe* were taken with
"some Villany, and brought to Examination; being most
"tyrannously tortured, were asked, if the *Engli*sh had any
"hand in the Plor, which Torture made them say yea.
"Then was *Master Thomson*, and *Mr. Johnson*, *Mr. Col-*
lins, *John Clark*, brought to Execution, and were
"burned under the Arm-pits, the Hands and Soals of the
"Feet, with another most miserable Torment, to drink
"Water; some of them almost tortured to Death, and
"were forced to confess that which they never knew, by
"reason of the Torment which Flesh and Blood is not able
"to endure. Then were the rest of the *Englis*men called
"one by one, amongst which I was one, being wished to
"confess, or else I must go to Torment; withal, called
"M. *Johnson*, who was before tormented, to witness
"against me, or else he should be tormented again; which,
"rather than he would endure, he said what they would
"have him speak. Then must I confess that I never knew,
"or else go to Torment, which, rather than I would suf-
"fer, I did confess that which, as I shall be saved before
"God Almighty, is not true, being forced, for fear of
"Torment. Then did they make us witness against Cap-
"tain *Towerjon*; and at last made Captain *Towerjon* con-
"fess all, being for fear of most cruel Torment, for which
"we must all die. As I mean and hope to have Pardon
"for my Sins, I know no more than the Child unborn of
"this Business; written with my own Hand, the first of
"*Marck*, N. S. *Sam. Colson*."

Yet in another Page were these Words; *I was born in*
New-Castle upon *Tyne*, where I desire this Book may come,
that my Friends may know of my Innocency. *Samuel Colson*.
This Book he delivered to one that served the *Dutch*, who
sowed it up in his Bed, and afterwards, at his Opportunity,
delivered it to *Mr. Waldon* beforementioned. All these said
Writings are yet extant, under the Hands of the several
Parties well known to their Friends here in *England*.

The twenty-sixth Day of *February*, O. S. the Prisoners
were all brought into the great Hall of the Castle, except
Captain *Towerjon*, and *Emanuel Thomson*, to be prepared
for Death by the Ministers. The *Japonefe* now all in gene-
ral, as some of them had done before in particular, cried
out unto the *Engli*sh, saying, Oh! you *Engli*shmen, where
did we ever in our Lives eat with you, talk with you, or,
to our Remembrance, see you? The *Engli*sh answered,
why then have you accused us? The poor Men perceiving
they were made believe each had accused others, before
they had done, indeed, shewed them their tortured Bo-
dies, and said, if a Stone were thus burnt, would it not
change its Nature? How much more then we that are
Flesh and Blood? Whilt they were all in the Hall, Cap-
tain *Towerjon* was brought up into the Place of Examina-
tion, and two great Jars of Water carried after him; what
he there did, or suffered, is unknown to the *Engli*sh; but
at length, they made him then to underwrite his Confes-

sion. After Supper, *John Powel*, *Ephraim Ramsay*, *Tho-*
mas Ladbrook, and *John Sadler*, who were found not guilty,
as aforesaid, were taken from the rest, and put into another
Room; by and by also were *Samuel Colson* and *Edward*
Collins brought from the rest, into the Room where *Ema-*
nuel Thomson lay: The Fiscal told them, it was the Gover-
nor's Mercy to save one of those three; and it being indif-
ferent to him which of them were the Man, it was his Plea-
sure they should draw Lots for it, which they did, and the
free Lot fell to *Edward Collins*, who then was carried away
to the Chamber, where *John Powel*, and the rest that were
quit, lodged; and *Samuel Colson* back into the Hall. Anon
also *John Beaumont* was brought out of the Hall into the
Chamber, where *John Powel*, and the rest of the acquitted
Persons were, and was told, that he was beholden to *Peter*
Johnson, the *Dutch* Merchant of *Lube*, and to the Secre-
tary, for they two had begged his Life. So then there
remained in the Hall ten of the *Engli*sh; for Captain *Tower-*
jon and *Emanuel Thomson* were kept in several Rooms apart
from the rest. To these that remained in the Hall came
the *Dutch* Ministers, who telling them how short a time
they had to live, admonished and exhorted them to make
their true Confessions; for it was a dangerous and desperate
thing to dissemble at such a Time.

The *Engli*sh still professed their Innocency, and prayed
the Ministers that they might all receive the Sacrament,
as a Seal of the Forgiveness of their Sins; and withal,
thereby to confirm their last Profession of their Innocency;
but this would by no means be granted: Whereupon
Samuel Colson said thus unto the Ministers, You manifest
unto us the Danger of Dissimulation in this Case; but tell
us, if we suffer guiltless, being otherwise also true Believers
in *Jesus Christ*, what shall be our Reward. The Preacher
answered, by how much the clearer you are, so much the
more glorious shall be your Resurrection. With that Word
Colson started up, embraced the Preacher, and gave him
his Purse, with such Money as he had in it, saying, *Domine*,
God blefs you: Tell the Governor I freely forgive him,
and I intreat you to exhort him to repent him of his bloody
Tragedy wrought upon us poor innocent Souls. Here all
the rest of the *Engli*sh signified their Consent to this Speech.
Then spake *John Fardo* to the rest, in the Presence of the
Ministers, as followeth: My Countrymen and Brethren,
that are here with me, condemned to die, I charge you all,
as you will answer it at God's Judgment Seat, if any of
you be guilty of this Matter, whereof we are condemned,
discharge your Consciences, and confess the Truth, for Sa-
tisfaction of the World. Hereupon *Samuel Colson* spake
with a loud Voice, saying, according to my Innocency in
this Treason, so, Lord, pardon all the rest of my Sins, and
if I be guilty thereof, more or less, let me never be Par-
taker of thy heavenly Joys; at which Words every one of
the rest cried out, Amen; for me, Amen; for me, good
Lord. This done, each of them knowing whom he had
accused, went one to another, begging Forgiveness for
their false Accusation, being wrung from them by the
Pains or Fear of Torture; and they all freely forgave one
another; for none had been so falsely accused, but he him-
self had accused another as falsely; in particular, *George*
Sharrock, who survived to relate this Night's Passage,
kneeled down to *John Clark*, whom he had accused of the
Tale at *Hitto* abovementioned, and craved Forgiveness at
his Hands: *Clark* freely forgave him, saying, How shall
I look to be forgiven of God, if I should not forgive you,
having myself so falsely accused Captain *Towerjon* and
others? After this they spent the rest of the doleful Night
in Prayer, singing of Psalms, and comforting one another,
though the *Dutch* that guarded them offered them Wine,
bidding them drink lustily, and drive away the Sorrow,
according to the Custom of their own Country in the like
Cases, but contrary to the Nature of the *Engli*sh.

Upon the Morrow Morning, being the Execution Day,
the 27th of *February*, O. S. *John Powel* being freed, as
before recited, came into the Room where the condemned
Persons were, and found them at Prayers. They all re-
quested him to relate unto their Friends in *England* the
Innocency of their Cause, taking it upon their Deaths,
that what they had confessed against themselves and others,
touching this Crime, was all false, and forced by fear of

Torture. The same Morning *William Webber* was called again into the Fiscal's Room, and there pressed to produce the Letter which he had before confessed to have received from *John Clark*, in the Postscript whereof some great Business was intimated: They promised him his Life, if he would deliver, or produce to them that Letter, which, tho' he did not, nor indeed could, yet at last they pardoned him, and sent him to the rest that were saved, and *Sbarroek* with him. That Morning *Emanuel Thomson*, understanding that *John Beaumont* was pardoned, made Means to have him come and speak with him, which with much ado he obtained. *Beaumont* found him sitting in a Chamber all alone, in a most miserable Fashion, the Wounds of his Torture bound up, but the Matter and gore Blood issuing through the Rollers: He took *M. Beaumont* by the Hand, and prayed him, when he came into England, to do his Duty to the honourable Company his Masters, to *M. Robinson*, and to his Brother *Billingfleet*, and to certify them of his Innocence, which, said he, you yourself know well enough.

All Things being prepared for the Execution, the condemned were brought forth of the Hall along by the Chamber, where the quit and pardoned were, who stood in the Door to give and take the Farewell of their Countrymen now going to Execution; staying a little for this Purpose, they prayed, and charged those that were saved, to bear witness to their Friends in England of their Innocence, and that they did not Traitors, but so many Innocents merely murdered by the *Dutch*, whom they prayed God to forgive their Blood-thirstiness, and to have Mercy upon their own Souls. Being brought into the Yard, their Sentence was read unto them from a Gallery, and then they were thence carried into the Place of Execution, together with nine *Japoneze* and a *Portuguese*, not the ordinary and short Way, but round about, in a long Procession through the Town, the Way guarded by five Companies of Soldiers, *Dutch* and *Ambeynese*, and thronged with the Natives of the Island, that upon the Sammons given the Day before by the Sound of the Drum, flocked together to behold this Triumph of the *Dutch* over the *English*. *Samuel Colson* had conceived a Prayer in Writing, in the End whereof he protested his Innocence, which Prayer he read to his Fellows the Night before; and now also at the Place of Execution, devoutly pronounced the same; then threw away the Paper, which the Governor caused to be brought to him, and kept it. *Emanuel Thomson* told the rest, he did not doubt but God would shew a Sign of their Innocence; and every one of the rest took it severely upon their Death, that they were utterly guiltless; and lo one by one, with great Chearfulness, suffered the fatal Stroke. The *Portuguese* prayed over his Beads very devoutly, and often kissed the Cross, swearing thereupon, that he was utterly innocent of this Treason, yet confessed, that God had justly brought this Punishment upon him; for that having a Wife in his own Country, he had, by the Persuasion of the *Dutch* Governor, taken another in that Country, his first being yet living.

The *Japoneze*, likewise, according to their Religion, shut up their last Act with the like Profession of their Innocence; to these suffered ten *Englishmen*, viz. Captain *Tewerison*, the Agent for the *English* at *Amboyna*; *Samuel Colson*, Factor at *Hitto*; *Emanuel Thomson*, Assistant at *Amboyna*; *Timothy Johnson*, Assistant there also; *John Hildes*, Assistant at *Cambello*; *John Clark*, Assistant at *Hitto*; *William Griggs*, Factor at *Larica*; *John Fardo*,eward of the Hoole; *Abel Price*, Chirurgion, and *Robert Brown*, Taylor. The *Portuguese* also suffered with them; his Name was *Augustin Perez*, he was born at *Bengal*. The Names of the *Japoneze* that suffered were as following: *Hito*, *Ishis*, *Amo*, all born at *Firando*; *Sidney Magon*, *Itaro Congie*, *Ikomo Coroa*, born at *Naganisique*; *Quandane*, Native of *Coract*; *Tjuhinda*, of *Tjunchitigo*; *Zantibae*, of *Bison*. Besides these there were two other *Japoneze*, the one named *Soxime*, born at *Firando*, and the other *Acante*, of the same Place, the former of which being tortured, confessed both to have been privy to this private Treason, and to have offered his Service to the *English* to aid them in taking of the Castle, and the latter confessed to have had Knowledge of the Consultation of

the other *Japoneze* to this Purpose; but neither of them was executed, or so much as condemned; the Reason whereof was not known to the *English* that were saved. They had prepared a Cloth of black Velvet for Captain *Tewerison's* Body to fall upon, which being stained and defaced with his Blood, they afterwards put to Account of the *English* Company. At the Instance of the Execution there arose a great Darkness, with a sudden and violent Gull of Wind and Tempest, whereby two of the *Dutch* Ships riding in the Harbour were driven from their Anchors, and with great Labour and Difficulty saved from the Rocks. Within a few Days after one *William Duncken*, who had told the Governor, that *Robert Brown* the *English* Taylor, had a few Months before told him, he hoped that within six Months the *English* should have as much to do in the Castle of *Amboyna* as the *Dutch*; this News coming upon an Evening to the Grave, where the *English* were buried, being all, except Captain *Tewerison*, in one Pit, fell down upon the Grave; and having lain there awhile, rose up again stark mad, and so continued two or three Days together, and then died. Forthwith also fell a new Sickness at *Amboyna*, which swept away above one thousand People, *Dutch* and *Ambeynese*, in the Space wherein were usually died not thirty at other Seasons. These Signs were, by the surviving *English*, referred to the confident Prediction of *Emanuel Thomson* above named, and were by the *Ambeynese* interpreted as a Token of the Wrath of God for this barbarous Tyranny of the *Dutch*.

The next Day after the Execution, being the 25th of February, O. S. was spent in Triumph for the new General of the *Dutch* then proclaimed, and in public Rejoicing for the Deliverance from this pretended Treason. On the 1st of March, *John Beaumont*, *George Skarrek*, *Edward Collins*, and *William Webber*, were brought to the Governor, who told *Beaumont* and *Sbarroek*, that they were pardoned in Honour of the new General; and *Collins*, that he was to go to *Jaccatra*, there to stand to the Favour of the Governor; so the Governor made them drink Wine with him, and courteously dismissed them, willing them to go and consult with the rest that were saved, who were fit to be placed in the several Factories; which done, and their Opinions reported to the Governor, he accordingly commanded each to his Place, adding, that he would thenceforth take upon him the Patronage and Government of the *English* Company's Business, to which Purpose he had within a few Days past opened a Letter that came from the *English* President at *Jaccatra*, directed to Captain *Tewerison*, being the first *English* Letter he ever intercepted; farther saying, that he was glad that he found by the Letter that the *English* at *Jaccatra* were innocent touching this Business. The Governor and Fiscal having just made an End at *Amboyna*, dispatched themselves for *Banda*, where they made very diligent Enquiry against Captain *Weldon*, the *English* Agent there, yet found no Colour or Shadow of Guilt to lay hold on; but at last entertained him with courteous Speeches, professing to be very glad that they found him as well as the *English* at *Jaccatra* to be without Suspicion of this Treason.

Captain *Weldon* perceiving the Disorder and Confusion of the *English* Company's Affairs at *Amboyna*, by means of this Dealing of the *Dutch*, forthwith hired a *Dutch* Privateer at *Banda*, and passed to *Amboyna*, where, instantly upon his Arrival, he recalled the Company's Servants, who were sent by the *Dutch* Governor to the upper Factories. Having inquired of them, and the rest that were left at *Amboyna*, of the whole Proceeding lately passed, he found by the constant and agreeing Relation of them all, that there was no such Treason of the *English* as was pretended; as also understanding what strict Command the Governor had given to the surviving *English* not once to talk, or confer with the Country People concerning this bloody Business, although the said Country People every Day reproached them with Treason, and a bloody Intention to have massacred the Natives, and to have ripped up the Bellies of Women with Child, and such like Stuff, which with the *Dutch* had possessed the poor Vulgar, to make the *English* odious unto them; the said *M. Weldon* concluded finding it to suit neither with the Honour nor Profit of the *English* Company, his Masters, to hold any more

Purpose; but neither of them was condemned; the Reason to the English that were saved, of black Velvet for Captain Don, which being stained and afterwards put to Account of the Instance of the Execution, with a sudden and violent, whereby two of the Dutch were driven from their Honour and Difficulty saved from Days after one *William Dacken*, that *Robert Breen* the English before told him, he hoped that should have as much to do as the Dutch; this being to the Grave, where the English Captain *Townson*, in one Place, and having lain there awhile, and so continued two or three Days. Forthwith also fell a new swept away above one thousand fese, in the Space wherein there were other Seasons. These Signs were referred to the confident Prediction above named, and were by the Token of the Wrath of God for the Dutch.

The Execution, being the 28th of in Triumph for the new Government, and in publick Relation from this pretended Treatise. *Beaumont*, *George Starbuck*, *Ed-Webber*, were brought to the *ons* and *Starbuck*, that they were new General; and *Collins*, that there to stand to the Favour of Governor made them drink Wine y dismissed them, willing them rest that were saved, who were al Factories; which done, and the Governor, he accordingly Place, adding, that he would the Patronage and Government Bofnets, to which Purpose he opened a Letter that came from *Jacatra*, directed to Captain *Townson*, that he ever intercepted; further that he found by the Letter *ra* were innocent touching the said Fiscal having made an d themselves for *Banda*, where iniquity against Captain *Belden*, et found no Colour of Sinaw but at last entertained him with fling to be very glad that they English at *Jacatra* to be without

ing the Disorder and Confusion Affairs at *Ambogna*, by means of forthwith hired a Dutch Pinnace *Ambogna*, where, instant upon the Company's Servants, which Governor to the upper Factory, and the rest that were there succeed. At lastly passed, he found being the English as was pretended, e strict Command the Governour ng English not once to stir, of People concerning this bloody d Country People every Day tion, and a bloody Intention to yes, and to have ripped up the bid, and such like Stuff, where- fessed the poor Vulgar, to make nem; the last *M. Belden* was licy with the Honour not Profit las Masters, to hold any more R. A. c

Residence in *Ambogna*, he took the poor Remnant of the English along with him in the said hired Pinnace for *Jacatra*, whither the Governor had sent *John Beaumont* and *Edward Collins* before, as Men condemned, and left to the Mercy of the Governor. When this heavy News of *Ambogna* came to *Jacatra*, and the English there, the President sent forthwith to the General of the Dutch, to know by what Authority the Governor of *Ambogna* had thus proceeded against the English, and how he and the rest of the Dutch there at *Jacatra* did approve these Proceedings. The Governor returned for Answer, that the Governor of *Ambogna's* Authority was derived from the Lords States-General of the United Netherlands, under whom he had lawful Jurisdiction both in criminal and civil Causes, within the District of *Ambogna*; further, that such Proceeding was necessary against Traitors, such as the English executed at *Ambogna* might appear to be by their own Confessions, a Copy whereof he therewith sent to the English President, who sent the same back to be authentickly certified, but received it not again. Hitherto hath been recited the bare and naked Narration of the Progress and Passage of this Action, as it is taken out of the Depositions of six several English Factors, whereof four were condemned, and the other two acquitted, in this Process of *Ambogna*. All since their Return into England, examined upon their Oaths in the Admiralty-Court. The Particulars of Captain *Townson's*, as also of *Emanuel Thomjon's* Examinations and Answers, are not yet come to Light, by reason that these two were kept a-part from all the rest, and each alone by himself, nor any other of the English suffered to speak with them, except only that short Farewel which *John Beaumont* took of *Thomjon*, the Morning before the Execution before mentioned. The like Obscurity is yet touching the Examinations and Answers of diverse of the rest that are executed, being, during their Imprisonment, so strictly looked to, and watched by the Dutch, that they might not talk together, nor mutually relate their Mite-ries; but because the Dutch defend their own Proceedings by the Confessions of the Parties executed, acknowledging severally under their Hands, that they were guilty of the pretended Crime:

It will not be amiss to recollect and recal unto this Place, as it were unto one Sum and Total, certain Circumstances dispersed in several Parts of this Narration, whereby as well the Innocence of the English, as the unlawful Proceeding against them, may be manifested.

First, therefore, it is to be remembered, that the Japanese were apprehended, examined, and tortured three or four Days before the English were attacked, and the same as well of their Apprehension as Torture was rief and notorious in the Town of *Ambogna*, and the Parts adjoining. *Thomjon* in this Interim, and the very first Day of the Examination of the Japanese, went to the Castle, to ask Leave of the Governor to land some Rice, and brought back the News with him to the English House of the cruel Handling of these poor Japanese. This had been Item enough to the English, if they had been guilty, to fluit for themselves, were to also they had ready Means by the Curranties, or small Boats of the *Ambogyners*, which lie along the Strand, in that Number wherewith they might easily have transported themselves to *Seran*, to *Batavia*, or *Miscassar*, out of the Reach and Jurisdiction of the Dutch; but in that they fled not, in this Case, it is a very strong Presumption, that they were as little privy to any Treason of their own, as suspicious of any treacherous Train laid for their Bloods.

In the next Place, let it be considered, how impossible it was for the English to achieve this pretended Enterprise. The Castle of *Ambogna* is of a very great Strength, the Garrison therein two or three hundred Men, besides as many more of their free Burglers in the Town. What ten Care and Circumspection in all their Forts is, may appear, not only from the quick Alarm they took at the foolish selling of the poor Japanese, made to the Content above recited, but also by that which a little before had happened at *Jacatra*, where one of their Soldiers was shot to Death for sleeping on the Watch. Duff ten Englishmen, whereof not one Soldier, attempt any thing upon such a Strength and Vigilance? As for the Assistance of the Japanese, they were but ten neither, and all unarm-

ed, as well as the English: For, as at the Seizure at the English House, all the Provision there found, was but three Swords, two Muskets, and half a Pound of Powder; so the Japanese, except when they are in Service of the Castle, and there armed by the Dutch, are allowed to have no Arms, but only a Catan, a kind of short Sword; and it is forbidden to all the Dutch, upon great Penalty, to sell any Hand-gun, Powder or Bullets to the Japanese or *Ambogyners*.

But let it be imagined these twenty Persons, English and Japanese, were so desperate as to adventure the Exploit, how should they be able to master the Dutch in the Castle, or to keep Possession when they had gotten it? What Second had they? There was neither Ship nor Pinnace of the English in Harbour. All the rest of the Japanese in the Island were not twenty Persons, and not one English more. The nearest of the rest of the English were at *Banda*, forty Leagues from *Ambogna*, and those but nine Persons, all afterwards cleared by the Governor and Fiscal themselves, from all Suspicion of this pretended Crime, as were also the rest of the English at *Jacatra*.

On the other Side, besides the Strength of the Castle, and Town of *Ambogna*, the Dutch have three other strong Castles, well furnished with Soldiers, in the same Island, and at *Cambello*, near adjoining. They had then also in the Road of *Ambogna* eight Ships and Vessels, namely, the *Rottterdam* of 1200 Tuns, the *Unicorn* of 300 Tuns, the *Freemans* Vessel of 100 Tuns, the *Calk* of 60 Tuns, Captain *Gamal's Junck*, of 40 Tuns, the *Flute* of 300 Tuns, the *Amsterdam* of 1400 Tuns, and a small Pinnace of about 60 Tuns, and all these well furnished with Men and Ammunition. It is true, that the Stories do record sundry valiant and hardy Enterprises of the English Nation, and the Dutch are Witnesses of some of them; yet, have reaped the Froit of the English Resolution, yet no Story, no Legend, scarcely reporteth any such Hardiness either of the English or others, that so few Persons, so naked of all Provisions and Supplies, should undertake such an Adventure upon a Counter-Party, so well and abundantly fitted at all Points. But let it be further granted, that they might possibly have overcome all those Difficulties, yet to what End and Purpose should they have put themselves into such a Jeopardy? They knew well enough, that it was agreed between both Companies at home, that the Forts in the Indies should remain respectively in the Hands of such as had Possession of them at the Date of the Treaty Anno 1619, and that the same was ratified by the King's Majesty and the Lords States-General. They knew likewise, and all the World takes Knowledge of his Majesty's religious Oblervation of Peace and Treaty with all his Neighbours, yea, with all the World. What Reward therefore could these English hope for of their Valour and Danger? Certainly none other than that which is expressly provided by the Treaty itself, that is, to be punished as the Disturbers of the common Peace and Amity of both Nations.

But let these Englishmen have been as foolish as they will in this Plot, as the Dutch will have them, is it also to be imagined, that they were so graceless, as when they were condemned, and seriously examined, and admonished by the Ministers to discharge their Consciences, yet then to persist in their Dissimulation, being otherwise of such godly Behaviour, as to spend the Time in Prayer, Singing of Psalms, and spiritually comforting one another, which the Dutch would have had them bestow in Drinking to drive away their Sorrow? Let *Collins's* Question to the Minister be considered, his, and the rests, Offer and Desire to receive the Sacrament in Sign and Token of their Innocence, their mutually asking Forgiveness for their like false Accusations of one another forced by the Torture.

Thomjon's last Farewel to *Beaumont*, *Celson's* Prayer, and his writing in his Prayer-Book; *Farlo's* Farewel to *Pozze*, also his conjuring Exhortation to his Fellows to discharge their Consciences, and all their Answers thereunto, craving God's Mercy or Judgment, according to their Innocency in this Cause; their general and religious Profession of their Innocence to their Countrymen at their last parting with them, and finally, their sealing this Profession with their last Breath and Blood, even in the very Article

of Death, and in the Stroke of the Executioner. What horrible and unexampled Dissimulation was this? If some one or more of them had been so fearfully desperate, yet would there not one amongst ten be found to think of the Judgment to come, wherunto he was then instantly summoned, without Effrain, Bail or Mainprize? What! Had they hope of Reprieve and Life, if they kept their Countenance to the last? Yet what Hope had *Thomson* and the rest when Captain *Tewerson's* Head was off? Nay, what desire had *Thomson* and *Clark* to live, being so mangled and martyred by the Torture? They were executed one by one, and every one feverally, took it upon his Death, that he was guiltless.

Now to blanch and smooth over all this rough and barbarous Proceeding, it is here given out, that the Governor and Fiscal found such Evidence of the Plot, and dealt so evenly in the Process, that they spared not their own People, having used some of their native *Dutchmen*, Partakers of this Treason, in the same Manner as they did the *English*; but this, as well by the Relation here truly and faithfully set down, grounded upon the sworn Testimony of six credible Witnesses, as also by other sufficient Reports of diverse lately come out of those Parts, appeareth to be a meer Tale, not one alleged by any in the *Indies* in many Months after the Execution, but only invented and dispersed here for a Fucus, and a fair Colour upon the whole Cause, and to make the World believe, that the Ground of this barbarous and tyrannous Proceeding was a true Crime, and not the unattainable Covetousness of the *Hollanders*, by this cruel Treachery, to gain the sole Trade of the *Moluccas*, *Banda*, and *Amboyna*, which is already become the Event of this bloody Process. To add herunto by way of Aggravation, will be needless, the Fact is so full of odious and barbarous Inhumanity, executed by the *Dutch*, upon the *English* Nation, in a Place where both lived under Terms of Partnership and great Amity, confirmed by a most solemn Treaty.

It must be confessed, that this in all respects a most astonishing and surprizing Relation. That the *Dutch* should be desirous of ingrossing the Spice-Trade, had nothing in it but what might be easily accounted for, because of the former Injunctances they had given us of their Avarice, that they should make no scruple of attacking and destroying the *English* that were settled in the Spice-Islands, and consequently stood in the Way of their Design, is what might have been expected from their boundless Ambition, by which they were become formidable, even to their own States, but that they should take this Method, which was at once the most barbarous, the most provoking, and the most contrary to the solemn Treaty they had made, is strange in the highest Degree. But perhaps it may be accounted still stranger, that, when they had done it, they durst justify it, and justify it even here, which however they did, which produced the Account we have given the Reader, as appears from that very Account which the *East-India* Company were not at Liberty to publish till the *Dutch* made this Appeal to the Publick themselves.

Alter this, indeed, the publishing of their Case could be no longer refused them, especially as what they offered was supported by the fullest Proofs upon Oath, registered in the Court of Chancery. We see from hence, the great Consequence of the Liberty of the Press: Had it been open at that Time, it had been impossible to have hindered the Nation from receiving ample Satisfaction for such a flagrant Injury, such an intolerable Insult. But as it was, we are told, there was a Party in King *James's* Court, that if they did not justify it, at least excused this horrid Fact, from the *Dutch* Account of it before mentioned, which renders it absolutely necessary, that this *Dutch* Account should be likewise given to the Reader, not only to prevent any Suspicion of Partiality, but that all the Circumstances of this Tragedy may appear in the clearest Light, there being some of them which could only be set forth by the *Dutch* themselves.

It may not be amiss, however, to observe, previous to the transcribing this *Dutch* Account, that at this Juncture the States were actually demanding and receiving Assistance from the Crown of *Great Britain*, and that too as large in its Nature, and as effectual in its Consequences, as any

which they had received in the Time of Queen *Elizabeth*, and for which the States expressed as much Gratitude and Thankfulness to that Monarch, as ever they did to the Queen, and, as it clearly appears, with just as much Sincerity. I would not, however, be understood to mean, that the Tragedy of *Amboyna* was acted in consequence of any Instructions from *Holland*, since that would not only be unfair, but untrue; but then the Reason of this ought to be attended to, which was, that the Prince of *Orange* was at the Head of their Affairs, and they could not, under the Eye of their Stadtholder, take any such bloody Resolutions. But in the *Indies* they were at full Liberty, and there therefore the true Genius of the Nation displayed itself; and the *Dutch* Writers, in those very Times, boast, that the General of the *East-India* Company kept as great a Court, and made in every respect as magnificent an Appearance as the Prince of *Orange* himself, which plainly proves, that as they hated the Government of the Princes of *Orange*, so they were willing that Strangers should take notice of their Independency and Power in another Part of the World, where the Government was in such Harshes as they best approved.

These Things being remembered, let us now proceed to the *Dutch* Account of the pretended Conspiracy at *Amboyna*, addressed in a Letter to a Friend of the *Indies*, under the Title of a true Detail of the News that came out of the *Indies*.

7. "The very Causes and Beginnings through which the Governor and Council, established in the Name of the United *Netherlands* in *Amboyna*, came into Submission, that something was plotted against the Province, and that flow from the great Licentiousness of the *Tarnatanes* in *Molague* and *Amboyna*, who, contrary to the Convention Alliance 1606, made with the High and Mighty Princes the States without our Consent and Knowledge, broke Peace with the King of *Fidore*, as also a Truce with the *Spaniards*, their and our ancient Adversaries, by which the said *Tarnatanes* had too much cast off all Restraints, which they, both in regard of our Condemnations and manifold Assistance, did owe to this State. The *Tarnatan* also was Master enough at Sea in the *Moluccas*, because the *English* Merchants there in the *East-India* were unwilling to furnish us with Ships of War, wars, the common Detence, as they were bound to do, according to the Treaties 1619, to the Number of ten, through which the Voyages to *Moluccas* could not be made, the Enemy traded there without any Interruption, and procured Power to lend Gallies, Ships and Pinnaces to *Molucca*, with great Succours of People and Provisions, and that because again through the same Defect of the *English* Merchants, there were no Ships of War kept as they should have been. The Subjects of the King of *Tarnate* began to commit great Insolencies against our Nation, having outrageously assaulted divers of our vessels, ways, and also slain some, and we, notwithstanding, would not obtain any Punishment upon them, as by one Outrage unpunished provokes more, through the want of the like Impunity, or other Considerations, toward the said *Tarnatanes* of *Amboyna* dwelling at *Lobo*, *Cambello*, and those near adjoining Places, proceeded farther, and have armed themselves at Sea, and invading divers Islands and Places standing under the *Netherlands* Government in *Amboyna*, spoiling them, and killing our Subjects, and taking others, and carrying them away for Slaves; and, notwithstanding the instant Request of the *Netherlands* Governor, no Satisfaction or Justice hath followed; but the said *Tarnatanes* are yet gone farther, and openly threatened to murder the *Dutch* Merchants, and to spoil and burn the Lodge, or Factory, which our People have many Years there enjoyed, to that our Merchants have taken out the *Dutch* Goods to save themselves from Damage; and the *Tarnatanes* at *Lobo* did actually burn on fire and ruin the said *Netherlands* Factory.

In the *Mansbelli*, an Island being under the Province of *Amboyna*, they have in like manner shortly ago burned the *Netherlands* Lodge, with the Lots of all the Goods therein. The *Netherlands* Governor, that by his Presence and Authority he might cause such Rebellions to cease, and to give Order for Time to come, and

" alio to seek Satisfaction and Punishment upon the afore-
 " said Intolerencies, went towards *Lobo*, with a small Power
 " of Sloops; and coming thereabout, was met, otherwise
 " than was wont, by a Navy of Sloops of the *Tarnatans*
 " of *Lobo*, stronger than his were; those by their Confe-
 " rences gave him well to know, how little Reverence
 " they gave the *Dutch* Governor: They braved him with-
 " out any hope of Reconciliation of any thing to come, so
 " that he was lain to return to his Cattle of *Ambogna*. By
 " reason of these things, the said *Tarnatans* became so stout
 " and daring, that they gave out openly, that they would
 " come and spoil our Subjects, by a general Army, with
 " above an hundred Frigates: With these, they said, they
 " would come against *Ambogna*, to make an universal Spoil
 " of our People, through which there came a great Fear
 " upon the *Indians*, standing under the Subjection of the
 " High and Mighty Lords the States, as also over the
 " *Neiberlanders*. In the Islands lying far Eastward of
 " *Banda*, it was also said, and the News went currently
 " there, that the *Dutch* were sure enough quit of the
 " Cattle of *Ambogna*; and at that Time there was divers
 " secret Correspondencies between the *Indians* and others,
 " which gave us great Suspicion.

" By this means the *Neiberlands* Governor and Council
 " of *Ambogna* were moved to have special Regard, and
 " look narrowly into all things, seeing that it might thence
 " be clearly gathered, that something might be plotted
 " against the State in *Ambogna*, and that the *Indians* of
 " themselves durst not offer to undertake any such great
 " Design without some great Help of some of *Europe*,
 " either of *Spaniards*, *Portuguese*, or some others; and also
 " they understood, that those at *Lobo*, *Cambello*, &c. had
 " great secret Correspondence with the *English* Merchants.
 " When things were in such a State at *Ambogna*, there
 " came forth, and was wonderfully discovered in *February*
 " 1623, a horrible Conspiracy against the Cattle and Per-
 " son of the *Dutch* Governor, the whole State of *Ambogna*,
 " and first by the Apprehension of a certain *Japanese*,
 " who, at an unreasonable Time, was often seen upon the
 " Wall of the Cattle, where he also over-curiously enquired
 " of the most unskilful and silliest Soldiers, touching the
 " Setting and Change of the Watch, and what Number
 " of People might be in the Cattle, and many other
 " things: Whereupon in the very Act the said *Japanese*
 " was apprehended, and being examined of many Circum-
 " stances, he confessed, that the *Japanese* Soldiers under
 " our Service, had determined to make themselves Masters
 " of the Cattle, and that they should have set upon this by
 " the Help of the *English*, who had solicited them unto
 " it; and that he, with all the other *Japanese* in the *Eng-
 " lish* Hoale, oftentimes, within three Months before, had
 " conferred with the *English*, touching the Manner where-
 " by they should bring this Treachery to pass. Then all
 " the *Japanese* Soldiers, who were in our Service, were
 " disarmed and imprisoned; and by Examination of them,
 " all, it appeared plainly, by an orderly and joint Confes-
 " sion, that all the said *Japanese*, upon the Treaty of *Ga-
 " briel Towerjon*, and other *English* Merchants and Officers,
 " agreed to assist the said *English* to betray the said Cattle,
 " and to give it over into the *English* Power; and that
 " *Gabriel Towerjon*, and *Abel Price*, an *English* Chirurgi-
 " geon, and other *English*, dealt often with them, on the
 " Ways and Means how they should work it.

" The said *Abel Price* being before imprisoned for a foul
 " and execrable Fact, and yet remaining so confined, and
 " although it appeared sufficiently to the Governor and
 " Council of *Ambogna*, out of the Confession of the *Japo-
 " nese*, what the said *Gabriel Towerjon*, with his Merchants
 " and other Accomplices, had before resolved to do, and
 " that the Council had sufficient Information to imprison
 " them all, yet the General Council would not precipitate,
 " but commanded the said *Abel Price*, then a Prisoner, to
 " come before the Council; and after the Places, Persons,
 " and Time nominated to him, where and when he had
 " dealt with the *Japanese* and other *English* about the said
 " Treachery; it was also from him well understood, how
 " he and another *Japanese* had persuaded all the *Japanese*
 " to consent to this Villany; and that consequently the
 " said *Towerjon*, as the first Author, and all the other

" *English* Merchants, had also Knowledge of the said Treachery. Upon this full and uniform Examination and
 " Confession of twelve Persons, as well of the eleven *Japo-
 " nese* as one *English*, the said *Gabriel Towerjon* was called
 " to the Council, and there appearing, the said *Towerjon*
 " called together all his People unto the Cattle, upon the
 " Request of the General Council, who were then taken and
 " imprisoned, except the said *Gabriel Towerjon* himself, and
 " whom, at his Request, and in regard of his Quality, being
 " chief Merchant in *Ambogna*, in the Name of the *English*
 " Company, his own House was allotted him for his safe-
 " keeping and forth-coming; and the said Prisoners were
 " all lawfully and orderly examined; and it appeared by
 " them jointly, according to their own Confession, every one
 " having underwritten it with his own Hand as followeth:
 " *Gabriel Towerjon*, about New year's-day 1623; having
 " with him almost all the *English* Merchants of the For-
 " eign Cantore in *Ambogna*, assembled them in his Chain-
 " ber, and propounded to them, that he had something
 " of great Moment to impart unto them under the Fide-
 " lity of an Oath to be taken before, for the keeping secret
 " thereof, and being trully therein, saying, it is necessary
 " so to be; for if the thing should come abroad which I
 " shall make known unto you, it will cost all our Lives:
 " Whereupon the holy Gospel was produced, upon which
 " every one who was present did swear Secretly and Fide-
 " lity, as was required. Then *Towerjon* opened to the Con-
 " spirators, how he had a Way and Means to make him-
 " self Master of the Cattle of *Ambogna*; and whereas some
 " present made it difficult to do, being too weak for it;
 " the said *Towerjon* answered, that he had already won to
 " his Purpose the *Japanese* Soldiers, who were in the Cattle,
 " and that they should execute his Purpose, when the
 " *Dutch*, who were in the Cattle, were in their greatest
 " Weakness, and worst provided, or when the Governor
 " should be absent about some Exploit; and that they
 " should wait till some *English* Ship or Ships were in *Amb-
 " ognia*, whose People he might employ in this Attempt;
 " as also, when all other the *English* Merchants and Slaves
 " of the Foreign Cantore in *Ambogna* should be sent for to
 " the Cattle; and said farther, that he knew how to get
 " Men enough, and they should leave this to his Care, and
 " themselves do their best; and that they of *Lobo* should
 " also come to help him, with certain *Correcurrences*, &c.

" Upon which Inducements, all that were present swore
 " to assist *Towerjon* herein, and concerning the Manner of
 " Execution; the said *Towerjon* had prescribed to the *Japo-
 " nese*, who were in the Cattle, that they should send to
 " every Point of the Bulwarks two Men, and the rest in
 " the Court should attend the Governor, and murder him;
 " and that at the Sign which should be given to the *Eng-
 " lish*, they should make themselves Masters of every Point
 " of the Bulwark, and kill all who should resist, and impris-
 " on the rest; and further, should take and divide be-
 " tween themselves and the *Japanese* the Goods of the
 " *East-India* Company, except one thousand Rials of
 " Eight, which every *Japan* should have before; and
 " that they should kill the Citizens, who would not con-
 " sent with them, and do them all the Mischief they could;
 " and touching the Time, he had not yet certainly set it;
 " but that there should suddenly be another Assembly of
 " the Conspirators, when *Gabriel Towerjon* would give Or-
 " ders for all things, and would give a Sign to the *Japo-
 " nese*, whereupon, when they shewed it, they should be-
 " gin the Work within.

" The said *Gabriel Towerjon* being asked in particular,
 " what moved him to such a wicked Fact? He answered,
 " the Desire of Honour and Profit: Being further de-
 " manded, who should enjoy the Honour and Profit, and
 " for whom he would have taken the Cattle? he answered,
 " that if he did obtain his Desire, he should presently have
 " advertised those of his Nation being in *Batavia*, and
 " called for their Help, who, if they had lent him Suc-
 " cour, he would have kept the Cattle for his own Com-
 " pany, viz. the *English East-India* Company; and if not,
 " he would have held it for himself, and have endeavoured
 " a Peace with the *Indians*; that so, by the one Means,
 " and the other, he might attain his Purpose. After the
 " Examination of *Towerjon* was ended, the *Dutch* Gover-

“ nor in *Amboyna* upbraided him of his cruel Intention,
 “ and asked if this should have been the Recompence of
 “ the manifold Honours and Kindnesses he had done to
 “ him? Whereunto *Towerfen* answered with a deep
 “ Sigh, Oh! if it were to be begun it should not be
 “ done.

“ This voluntary Confession and penitent Acknow-
 “ ledgment, with much Sorrow, was made the Ninth of
 “ *March*, being the Day when the Execution should
 “ have been done; but the Examination of *Towerfen*
 “ was ended the thirteenth of *February*, to many Days
 “ before. This is the Substance of the Confession of
 “ the ten *Japanese*, of fourteen *English*, and of a *Nether-*
 “ *landish* *Merinno*, or Captain of the Slaves, who all
 “ confirmed their intended Promission with their own Hands.
 “ What Crime was intended Promission was, is hence
 “ very manifest, and undoubted; what Punish-
 “ ment is due to Treachery, according to the Law and
 “ Customs of all Nations, is also well known; no true
 “ Christian Man will patronage any such horrible At-
 “ tempt; but will engage it worthy of Death, as it was
 “ determined upon the Accomplishers of the Conspiracy,
 “ according to the Order of Justice, as there in *Amboyna*
 “ is expressed, according to Delect, by the Governor
 “ and Council, in the Name of the High and Mighty
 “ *British* States. Here you have, Sir, the very Sub-
 “ stance of the Truth, both of the Fact and Punish-
 “ ment, other than which many Trings are spread
 “ abroad in *England*, but upon what Pretence or In-
 “ strument I know not; let the Matter itself speak for
 “ itself.

“ The first Point which is objected against this Justice
 “ done in *Amboyna*, is concerning the Proceedings which
 “ are said to be holden without Formality, and with
 “ Extremity, against the Conspirators: Your Worthip,
 “ and each reasonable Man, knoweth that every Land
 “ hath their Laws, and Ordinances, and their particular
 “ Manner of Proceedings, as well in Civil, as in Crimi-
 “ nal Causes, *England* hers, *France*, *Spain*, *Dutchland*,
 “ and all other Kingdoms and Governments have also
 “ theirs, which are just and lawful to every one in their
 “ Dominion, so that when any one will judge of the
 “ Equity or Justice of a Proceeding used in any Land,
 “ he must examine the same according to the Laws and
 “ Customs of that Kingdom, or Dominion, where the
 “ Justice and Proceedings were holden. These Pro-
 “ ceedings were holden before the Governor of the *Ne-*
 “ *therlands*, in the Name of the Illustrious Lords the
 “ States, having supreme Power, many Years since, in
 “ the City of *Amboyna*, which were conquered in the
 “ Name of the said Illustrious Lords the States, from
 “ the *Spaniards* of *Portuguese*, who held the Cattle in
 “ the Name of the King of *Spain*, our hereditary Pre-
 “ tending; therefore they are now possessed in the Name
 “ of the *British* States, and are under their Domi-
 “ nion, by a just and lawful Title of War, according to
 “ the Law of Nations. These Justices administered ac-
 “ cording to the Law of the *Netherlands*, in that Man-
 “ ner as was used in the Proceedings against those Con-
 “ spirators. I know that the Laws of *England* are diverse
 “ from ours in criminal Causes; yea, and from all the
 “ Nations in *Europe*.

“ However therefore no Man hath any Ground of
 “ Reason to say that the Proceedings of the *English*
 “ *Japanese* and *Dutch* are not legitimate, tho’
 “ the said *English* Proceedings do vary in the Manner
 “ from the Proceedings of *France*, *Spain*, &c. where
 “ other Customs are; for that is lawful which agreeth
 “ with the Laws of the Land where the Fact is com-
 “ mitted. Now then, the *Japanese* Soldiers being in
 “ the Service of the *Netherlands* Company in *Amboyna*,
 “ are discovered to have conspired against the Cattle and
 “ the Governor there, under whose Oath and Pay they
 “ were; they were apprehended, examined, and con-
 “ victed of the said Conspiracy. This Proceeding is
 “ lawful, and toucheth no Man, because the said *Japo-*
 “ *nese* knew no other Matter than the *Netherlanders*, un-
 “ der whose Oath, Service and Pay they stand. All
 “ these Conspirators, with the said *Merinno*, a Captain

“ of the *Netherlands* Slaves, confessed with one Mouth,
 “ that they were moved and induced to this Conspiracy
 “ by the *English* Merchants resident in *Amboyna*, whose
 “ Names they named. Now, not only the Right of the
 “ *Netherlands*, but *England*, and of the whole World,
 “ requireth that the Authors, Abettors, and Accomplish-
 “ ers of Murder and Treason, should be punished with
 “ Death.

“ Whereunto, according to the Common Law, as also
 “ the particular Laws of every Kingdom or Dominion,
 “ the suspected Persons first, and before all, should be
 “ imprisoned, not only for preventing the Effect of their
 “ evil Purposes, but that they might also receive their
 “ deserved Punishment; which Apprehensions could not
 “ be done of any other Man than by the Command of
 “ the *Netherlands* Governor, to whom it belonged to
 “ take care to see every Act concerning supreme Power
 “ to be there observed; and especially the highest *Eng-*
 “ *lish* Officer there could not apprehend these *Eng-*
 “ *lish* Conspirators, because all the chief of the *English* Mer-
 “ chants at *Amboyna* were themselves of the Conspiracy,
 “ and Accomplishers of the Fact upon which the App-
 “ prehension was made; therefore the Apprehensions of
 “ the *English* Accomplishers must be done by the *Dutch*
 “ Governor, who therefore hath therein proceeded ac-
 “ cording to the Custom of all Nations of the World.
 “ And that these Apprehensions may be holden more
 “ lawful, it appearing out of the written Process, that
 “ the said *English* Accomplishers were not imprisoned upon
 “ the first Suspicions and gross Evidences which were
 “ had against them; but then, at last, when all the *Jap-*
 “ *onese* Soldiers were taken, examined, and convicted,
 “ and had discovered, by the uniform Confession of all
 “ the eleven.

“ The Names, and Surnames of such *English* as had
 “ persuaded, and hired them to this Fact, of which *Eng-*
 “ *lish*, viz. one *Abel Price*, Barber, was before appre-
 “ hended as an Incendiary, for burning, and other Vi-
 “ lences done upon other Houses, who also was not ex-
 “ amined, and first confessed; as the other eleven *Japone-*
 “ *se* that he, by Name *Gabriel Towerfen*, and other *Eng-*
 “ *lish* Merchants, in the foreign Countries of *Amboyna*,
 “ had Knowledge of this Conspiracy, &c. to that time
 “ he had been out of that which went before, that the *Dutch*
 “ Governor dealt no otherwise in the Apprehensions and
 “ Examinations of the *English* than according to his
 “ Place and Power, and that with great Direction, ac-
 “ cording to the Laws of the United Provinces. The
 “ second Point, which is absolutely disputed in *En-*
 “ *land* against this Execution is, that it is said, that it
 “ did not appertain to the *Netherlands* in *Amboyna*, to
 “ imprison the said *English*, and to proceed against them,
 “ or to punish them; but that it did belong to the
 “ Council of Defence, resident at *Jacatra*, consisting
 “ half of *English* and half of *Netherlands*, according
 “ to the Treaty of the Year 1619, made between the
 “ *Dutch* and the Lords the States, between the said
 “ *East India* Companies.

“ That I might the better inform myself thereof, I
 “ took in Hand, and perused the general Treaty of
 “ 1619, with the Application following thereupon; but
 “ I protest, as I think, that every unerring Man
 “ must confess, that neither in the said Treaty, nor in
 “ the Enlargement, any one Article or Word can be
 “ perceived, whereby, according to that which is al-
 “ truly said in *England*, either this, or any such thing, is
 “ ordained or decided by the said Treaty, as it ought to
 “ have been in so great and important a Point as the Place
 “ of Jurisdiction is, I appeal to all wise Men, who I
 “ fire may judge of this, whether this Speech of some
 “ in *England*, to wit, that the said Council of Defence
 “ should alone have judged these Conspirators, be agree-
 “ able to the said Treaty, or contrary to the same. I
 “ find many Arguments for my negative Opinion, to
 “ wit, that before the Treaty of 1619, the *Dutch* in
 “ *Amboyna* administered Jurisdiction and Judicature to
 “ all, and every one, who dwelt in, or under the Juris-
 “ diction of the Cattle, as well Inhabitants as Strangers,
 “ without Difference; and that, in the said Treaty,

s, confessed with one Mouth, and induced to this Conspiracy, is resident in *Ambeyna*, whole now, not only the Right of the Land, and of the whole World, but the Abettors, and Accomplices, should be punished with

g to the Common Law, as also every Kingdom or Dominion, first, and before all, should be preventing the Effect of their they might also receive their which Apprehensions could not Man than by the Command of or, to whom it belonged to Act concerning Supreme Power and especially the highest Eng- I not apprehend that Eng- I the chief of the *English* Mer- themselves of the Conspiracy, the Fact upon which the App- therefore the Apprehensions s must be done by the *Dutch* ore hath therein proceeded ac- of all Nations of the World. refections may be hold to ma- of the written Process, but ices were not inquired upon I gross Evidences which were then, at last, when all the Pa- ren, examined, and reviewed, e the uniform Confession of all

urnames of such Eng- as had em to this Fact, of which *Ja- ce, Harbor, was before ap- ury, for burning, and other Heuses, who also was witness- as the other eleven *Japone- ired Towerfon, and other Ex- foreign Countries of *Ambeyna*, Conspiracy, &c. so that it may ch went before, that the *Dutch* rive in the Apprehensions and *English* than according to his that with great Direction, a- of the United Provinces. I is absolutely dispersed in I- tion is, that it is said, that the *Netherlands* in *Ambeyna*, to y, and to proceed against them, but that it did belong to the resident at *Jacava*, consisting of *Netherlands*, according to Year 1619, made between the States, between the said**

better inform myself thereon. I perused the general Treaty of anion following thereupon, but that every unreasoning Man- ther in the said Treaty, is in one Article or Word, could be according to that which I say: either this, or any such thing, is the said Treaty, as it ought to be important a Part as a Pre- sential to all wise Men, who I whether this Species of Torture at the said Council of Deten- ed these Conspirators, be agree- y, or contrary to the same. I for my negative Opinion, of Treaty of 1619, the *Dutch* Jurisdiction and Judicature, who dwell in, or under the Jur- is well Inhabitants as Strangers, and that, in the said Treaty,

" the *Dutch*, with the *English* Merchants, made only a
" League in the Manner of Commerce and Negotiati-
" ons of Nutmegs, Mace, Cloves, and Pepper, in some
" Quantities, without having any further Treaty or
" Communication in the Land. So that without the
" Bounds of this common Negotiation, every one re-
" main'd free and unhindered in the Land by the Right
" and Possession which either Company enjoyed and ex-
" ercised severally, according as the same appeareth out
" of the twenty-third Article of the Treaty, where it is
" expressly said, that Castles and Forts shall remain in
" their Hands who do at present possess them: And
" out of the thirteenth, fourteenth, and fifteenth Arti-
" cles of the Treaty, all may see that this Common Coun-
" cil of Defence hath no more Power, save only over
" the Fellowship of the Treaty, that is, over the Navy
" of Defence in the Sea, to the Defence of common
" Merchandize and Liberty of Commerce. And, lastly,
" to tax the Charges for the Provision of Ammunition in
" the Forts; neither can any other Thing be sincerely
" collected out of the said Treaty, so far as I can con-
" ceive.

" Therefore, this second Point is found to be untrue
" and abusive, being not founded upon the said Treaty,
" which Treaty, notwithstanding, ought to be the only
" Rule both of the one and the other Company. Finally,
" it is given out in *England*, that in the Examination of
" the Conspirators, there was Excess in the *Netherlands*
" Judges in the Point of Torture. I acknowledge, that
" no Argument or Pretext against the Justice of this Ex-
" ecution, hath more moved me in the Beginning, than
" this Pretence of Excess aforesaid; because this stretch
" Christian Compassion; although I also judge, that wise
" Men will not suffer themselves to be too much trans-
" ported thereby, before the true Reasons do fully appear
" which should move us thereunto; for I well remember
" yet, that in the Time of former Mistaking in the
" Indies, many Things were pretended on both Parts; up-
" on which Pretence were great Out cries on either Side,
" which yet, by due Examination, were found to be false
" Pretexes of some Ill-willers, and Men desirous to wran-
" gle; which Pretences, being thoroughly sifted by the
" high and much-admired Wisdom of his Majesty, and
" the Lords the States, were well discovered to be no
" such Matters as they were made; as it is also undoubt-
" edly believed, that his Majesty and the States will yet
" further do in this Affair, and to the Cause of the *Dutch*
" Company may be rightly justified, of which I under-
" stand, that the Lords the States have special Regard;
" and that they have been thoroughly informed what is
" the very Truth of the Things there past, and of the
" Execution in *Ambeyna* of the *English* Conspirators; un-
" to which End the Lords the States resolved to see and
" peruse all the Papers and Letters touching the said Pro-
" ceedings. And now, thereupon, Men speak far other-
" wise than heretofore; for Pretences and Cavils cannot
" stand with Truth. And it doth plainly appear, that
" there is little Truth in the Matter of Torture, reported
" to be most cruelly inflicted upon the *English* Conspirators,
" as in *England* it is said; and I have ever suspect-
" ed this for a Slander; for, I know the *Dutch* Nation
" doth naturally abhor this kind of Cruelty, and are as
" much moved to Commiseration as any other People.
" But whether these evil-minded Men, who have feat-
" tered this great Slander in *England*, and have so foully
" defaced a just Cause, have done it by Occasion of an
" Use of Tortures in their Lands in some weighty Causes,
" according to the Custom of most Dominions in *Europe*,
" I can not judge.

" But is that to be censured and judged to be unjust of
" the whole World, which is repugnant to the Laws of
" *England* (or any one Nation) where Torture is really
" used? Nothing so but the Justice or Injustice of a Cause
" must be determined according to the Laws where it is
" done, and not of other Lands. If this were not so,
" why then should not the whole World much more judge
" that as hard, and a thing unheard of, which in some Cau-
" ses is used in *England*, according to the Laws there, when
" they proceeded against some guilty Persons, who being

" once, and again asked of the Judge, and utterly refu-
" sing to be legally tried, is adjudged to be dumb, that
" is, by Contumacy, whose Condemnation then accord-
" ingly followeth, that he is laid upon a Table, or Plank,
" and another Plank upon him, that his Body is miser-
" ably bruised, and so pressed violently to Death. The
" which, according to the Confession of all Nations, and
" by the *English* Writers, is judged to be one of the most
" sharp and severe kinds of Deaths that can be invented;
" yet cannot such an Execution be called cruel and un-
" lawful, when it is done in *England*, because it is done
" according to the Laws of that Land, though Strangers
" shall judge otherwise of it; and in like Manner the *En-
" glish* Nation cannot complain of the Torture which
" Evil-willers say was used upon these *English* Conspira-
" tors in *Ambeyna*, because it was done according to the
" Laws of this Government, and is not unusual in Cases
" of Treason, neither with us, nor with any Nation in
" *Europe*.

" And for *England* itself, it is well known, and his
" most excellent Majesty doth acknowledge, by his own
" princely Pen, that the Rack and the Manicles are the
" only Tortures that are exercised upon Traitors, to force
" them to confess what they know to be dangerous to
" the State; and to say the Truth, without taking Pains,
" the *English* Conspirators being affronted with the uni-
" form and written Confessions of the eleven *Japoneses*,
" their Accomplices, which would convince them suffici-
" ently, according to the Laws, and find them guilty of
" the same Conspiracy, and consequence of Death; if
" now notwithstanding this, they had persisted in the
" stout Denial of the Fact, were not this enough to judge
" them dumb by Contumacy, and so to esteem them
" worthy of this sore Punishment of pressing to Death as
" aforesaid? But this Torture of ours, is to be judged far
" less than that pressing where the Malefactor doth suffer
" such extream Misery as cannot be imagined, and which
" is not to be lenient or eased at all, but ended by
" Death.

" But to the sufficient Satisfaction of myself, and your
" Worship, and all Men, and not to speak according to
" the Sentences and Consciences of others, I have used
" all Diligence to get into my Hands the written Process
" concerning the Conspirators in *Ambeyna*, which I ob-
" tained authentically, and read carefully, and I find, that
" all by me above said is confirmed, to wit, that the
" *Japonesse* Accomplices were examined and made their
" Confessions as aforesaid, for three Days, viz. the 23^d,
" 24th and 25th of *February* 1623; and that all this be-
" ing done and consummated before, then at last is *Ga-
" briel Towerfon*, first with the rest of the *English* Accom-
" plices, imprisoned the said 2th of *February*, when
" their Examination and Confession began, and contin-
" ued divers Days, without ever halting till the 3^d of
" *March*; and the said Examinations and Confessions be-
" ing so finished, the *Netherlands* Governor and Council
" deliberated whether the Punishment might be deferred
" to any long Time, or referred to any other Place; but
" it was so concluded, by joint Consent of all, that the
" said Punishment there deferred, must be executed in
" the same Place for Example; and that it could not in
" any wise be delayed without extream Danger, for Rea-
" sons there related: And, among others, because the
" *Japoneses* and *Indians* about *Ambeyna* had, otherwise
" than they were wont, rebelled; neither could it be fur-
" ther known what great Confederacy these Conspirators
" had made with them and others.

" And touching any extraordinary and cruel Torture,
" I have accurately looked over every one's Confession;
" but I find not one Word in any one, which maketh any
" Mention of such Torture, as is unjustly spoken of in
" *England*; nay, scarce find any Mention of that ordi-
" nary Torture which is in Use, save only these Words;
" in one Act of the 25th of *February* 1623, viz. the
" Council being gathered together, have thought meet
" that all the *English* should be presently examined, one
" after another, as accordingly it was instantly done, and
" some of them before any Torture, others, after a little,
" or rather a Touch of it, confessed as followeth. Unto
" which

“ which followeth presently, the particular Confession of every one, subscribed with his own Hand, as aforesaid. So that hence it is manifest, that no extraordinary Torture was used in such Manner as is given out there by those that with us evil; nay, that those few that felt any, were only touched (not punished) with ordinary Torture.

“ And thus your Worship hath the upright and impartial Truth of this Business, touching the whole Passage as it proceeded, and the Punishment as it was inflicted, from which some of the *English* were exempted by Favour, that the *English* Goods should not be lost, according as Order had been given to that End. And I find that the Sentence had been given the 9th of *March*, 1623, by a competent Assembly of fourteen Judges, who, as it appeareth in the Sentence, in the doing thereof, did before earnestly call upon the Name of the Lord, that he would please to be President, and predominant in every one of their Hearts, in this sorrowful Assembly, and that he would inspire them only with that which might be judged to be expedient and just, &c. So that out of all that is above-said, nothing else can appear, but that this Business was managed lawfully and orderly, by Men of Honesty and Conscience, against such as had undertaken against the State, against the Wealth, and Advantage of this *East-India* Company, the Lives of their Officers there placed, against the State and Welfare of many, who as little deserved, and as little expected such Wickedness from their friendly Confederates in the same Society of Merchants there residing with them.

“ And now (considering the Premises) I hope it shall be far from every Christian, in anywise, to protect, or excuse this wicked Fact; but rather to mourn and grieve, as we do, for this Conspiracy, and for the Evil the Conspirators have so deservedly drawn upon their own Heads, and to honour them who, in Justice, have punished Villainy according to the true Merit thereof; for, we all know, that, without Justice, without Reward of that which is good, and Punishment of that which is evil, no Society of Mankind can consist.

“ And for this Information, which I send in Love and Honour to your Worship, as unto a Lover of Truth, and a Hater of Treachery, you may make such Use as to you shall seem good in any Place where you come, both for Refutation of any thing already reported contrary thereunto, and for Prevention of any farther false Rumours or Clamours. And, finally, for the Propagation of that undoubted Truth, which here, to my best, I have endeavoured to discover.

“ And if you shall meet with any thing of Worth, which can be truly avowed to be contradictory unto any thing I have written, I desire to understand it from you, and you to suspend your wise and impartial Judgment, till I have cleared it unto you: Truth remaineth ever the same. So I commend you to the God of Truth, desiring him to give us Minds, not to judge according to outward Appearance, but to judge with righteous Judgment.”

8. It is evident enough, from the Style and Composition of this extraordinary Piece, that it was penned at the Request, and for the Use of some Person of Credit here, who was a great Friend to the *Dutch*, and highly instrumental in preventing the Government from interposing, as they ought to have done, in favour of the *East-India* Company, and obtaining the *best*; for a full Satisfaction could not be had, for the safe and barbarous Usage of Captain *Towerfen*, and the rest of the *Englishmen*, who were thus cruelly murdered at *Ambeyna*. But it is not so easy to say who this Person was. The Writers of Scandal in those Times, charged this, dissuading the King from interposing, upon two Persons, by Name, viz. the Great Duke of *Buckingham*, and the then Secretary of State Sir *Ralph Winwood*. And I have met with a Book, printed in 1651, in which it is affirmed, that the Secretary received a Bribe from the *Dutch* of 30 or 40000 Pounds for that Service only. I take this to be a horrid Calumny; for having taken some Pains in examining the History of

those Times, of which indeed I once intended to have written, I have met with so many Proofs of the Candour, Integrity, and publick Spirit of that worthy Secretary, that I make not the least Scruple of affirming, that this must be a prodigious Falshood.

As to the Duke of *Buckingham*, his Interest with King *James* was so great, that if he had not been some way or other appeased, I cannot but think the Massacre at *Ambeyna* would not have passed as it did; but, at the same time, I must profess, that I do not believe he was capable of being bribed to such a Behaviour: I rather think he was misled and imposed upon; and I make no question that this very Paper was transmitted to some Person in his Confidence for that Purpose. It is an easy matter to speak in the Dead, and too common a Practice to tear those Characters to pieces which are least like to be defended; but this I dare not do: Though, to shew that it is not without Reason, that I suspect the Duke of *Buckingham* to have had a large Share in preventing King *James* from testifying a becoming Repentment upon this Occasion, I will relate a particular Fact that led me into this Opinion. The *East-India* Company, to perpetuate the Memory of its barbarous Transactions, caused the Tortures and Sufferings of the *English* at *Ambeyna*, to be very exactly painted, and hung up in their Hall; which Picture, by the Direction of *Buckingham*, was taken down; for which this Reason was assigned, that, as it had not been thought proper to involve the Nation in a War on this Account, it was, by no Means, decent, that such a Picture should remain to the publick View; since, at the same time that it expressed the Cruelty of the *Dutch*, it threw some kind of Odium on the *English* Administration.

But tho' these Paintings in Oil were removed, the *East-India* Company could not be drawn, either to forget this Affair, or to suffer the Account that this *Dutch* Agent had published of it, to pass unanswered; and therefore they employed a very good Pen, to shew the Inconsistencies of this Relation, and furnished him with all the Materias that were requisite for that Purpose. This Design of his he executed with great Spirit and Diligence, and the Piece itself is so clear a Vindication of the Innocency of the *English*, and so full a Proof of the Cruelty and Barbarity of the *Dutch*, that I have thought fit to insert it for the same Reasons, which induced me to give Place to the other Papers; and I persuade myself that it will be very agreeable to my Readers, to see, at one View, and in a narrow Compass, all the authentick Evidence that remains of this cruel, arbitrary, and unjust Proceeding, by which so many brave Men were, at that Time, deprived of their Lives in so ignominious a Manner, and the *English* Nation for ever deprived of so important and valuable a Commerce. This Reply of the *English* Company was conceived in the following Terms.

“ The Compiler of this Relation, perceiving that he had an hard Task to make it probable, that the *Englishmen*, Merchants, and their Servants, who were seduced, should, with the Assistance of ten *Japanezen*, wife unaimed, undertake the Slaughter of a Company, provided every Way as that of *Ambeyna*, and that the Relation of the *English* truly contained the Truth, also the same Author well weighed the Matter, and that he was to write of this pretended Conspiracy, which he was to be taken for true; yet the Fact would not be so easy to bear so rigorous a Punishment, as that which is here set forth. Quality, and of that Relation to the *Dutch*, which provides more skillfully than that of the *English*. Points, in the Preamble of this Relation, which he rakes and heaps together all the *Japanezen* together, and says that the *Dutch* had in the *Japans*, a more than they truly had at, or about the *Japans*, intended Conspiracy, and applies them to the Commission of this Business, as if all their Endeavours were to conspire with the *English*; and that they were under Colour whereof they were constrained to be executed, were possible and probable, as if the *Japans* of the Time had been then so dangerous to the *Dutch*, that a Conspiracy was to be expected, and the least Offence to be severely punished.”

ed I once intended to have many Proofs of the Candour, wit of that worthy Secretary, in accepting of affirming, that this

gham, his Interest with King, he had not been some way or think the Maffice at Ambona did; but, at the same time, believe he was capable of being I rather think he was made take no question of this very e Person in his Commission, rather matter to speak ill of the Deat, e to rear those Characters to be defended; but this I dare that it is not without Reason, uckingsb. to have had a large mes from testifying a second- ecalation, I will relate a partic- his Opinion. The *East India* the Memory of this *East India* tortures and Sufferings of the very exactly pointed, and long Picture, by the Direction of n; for which this Reason was not been thought proper to mention this Account, it was, I do Picture should r main, I presume time that it expects, I presume some kind of Omission

Oil were removed, the *East-India* be drawn, either to forget this point that this *Dutch* Agent had manifested; and therefore they to shew the Inconsistencies of him with all the Mater as Purpose. This Design of his spirit and Diligence, and the indication of the Innocence of the of the Cruelty and Barbarity of ought fit to insert it for the same me to give Place to the other self that it will be very agreea- at one View, and in many w lack Evidence that it remains and unjust Proceed, by which at that Time, depar of our Manner, and the *Dutch* so important a Part of the of the *East-India* Company was Terms.

s Relation, precisely that make it probable, that and their Services, and the Silence of ten *Years*, since the Surprise of *Amboyna*, that of *Amboyna*, and the *English* truly ed, and that well we go, and that his pretence of being the Fact would be Punishment in Relation to these than to any other of this Relation, ther all the *Journal* ed in the *Journal*, or about it. This applies them, and if all our *English* and *Dutch* they were necessary, and probable, as in the *Journal* to be dangerous, that is, to be exposed to the be *English* and *Dutch*.

fore, although this be no direct Charge of the *English*, but used by the Author to supply the Want of Probabilities in the Proceed itself.

It will not be amiss to examine the several Circumstances, and how far they may yield any Suspicion against the said *English*. Now, this Author taketh the many Grounds of this Suspicion of some great Plot against the Province of *Ambona*, from the unwonted Boldness and Insolence of the *Tarnatanes*, first in the *Moluccas*, and then in *Ambona*: For those in the *Moluccas*, he saith, they had lately before the pretended Conspiracy of the *English*, gone about, contrary to the Treaty, Anno 1606, between them and the *Dutch*, to make Peace with the King of *Tidore*, and a Truce with the *Spaniards*, without the Consent or Knowledge of them the *Dutch*; which, how honestly and conscientiously it is alledged to this Purpose, may appear by the Journals of those Parts; which, evidently shew, that this Treaty between those of *Ternate* and *Tidore*, was in *November*, 1621; that is to say, fifteen Months before this forged Conspiracy, and that with the Knowledge of *Houtman*, the Governor of the *Dutch*, who, upon the 19th of *November*, the Year aforesaid, acquainted *M. Nicols*, the Agent of the *English* in those Parts, with the Preparations of this Treaty, which was actually holden at *Ternate* the 24th of the same Month. But the Matter was to well handled by the *Dutch* to keep those neighbour Islands in perpetual War, that the Treaty was dissolved *re infecta*; and the 7th of *December* following an Edict was published by the King of *Ternate*, commanding all the *Tidorens* forthwith to depart the Island of *Ternate*, upon Pain to be made Slaves.

Alter this, the Correspondence between the *Dutch* and *Tarnatanes* in the *Moluccas*, returned into as firm a State as ever. The *Tarnatanes*, performing daily Exploits against the *Spaniards*, and communicating the Triumph with the *Dutch*: as the 17th of *February*, 1622, being a full Year before the signed Treaty of the *English*, the King of *Ternate*, with twenty Curricuries, took a *Spanish* Gally, flew forty in Fight, and took one hundred and fifty Prisoners, whom they sold to the *Dutch* for Cloth and Rice; and coming by the *Hollanders* Cattle of *Maalro*, the 18th of the same Month, with the Heads of divers *Spaniards* at his Stern, the *Dutch* saluted him from their said Cattle with nine Shot of great Ordnance. The 25th of *April* following, the Admiral of the King of *Ternate*, took a Prow of the *Spaniards*, flew some, and sold the rest to the *Dutch*; the 28th of the same Month, both *Dutch* and *English* were feasted by the King of *Ternate*; the 28th of *May* next ensuing, the King of *Ternate* went forth to *Macban* with six Curricuries, and at his Departure, was honoured with thirty Shot of great Ordnance from the *Dutch* Cattle; the 15th of *June* the Admiral of the King of *Ternate* made a Voyage towards *Mindanes*, carrying diverse of the *Dutch* with him to assist him; the 3d of *July* the *Tarnatanes* took their Prisoners and sold them to the *Dutch*; the 27th of *August* the King of *Ternate* made one *Yegler*, a *Dutch* Merchant, his Treasurer, at whose Inflantment in his new Office, the *Dutch* gave seven great Shot from the Cattle. And this good Correspondence between the *Tarnatanes* and the *Dutch* in the *Moluccas*, continued even until, and after the Execution of the *English* at *Ambona*, which was, as has been shewed, in *February* 1623, N. S. upon the 14th of which Month the *Dutch* gave the King of *Ternate*, and other Blacks, two hundred Bales of *Japan* Rice, with other Presents; at the Delivery whereof there were shot off from the Cattle seven Pieces of Ordnance, and three Volleys of Small-Shot: By all which may appear how sincerely this Author applieth the Difference between the *Dutch* and the King of *Ternate*, which was none at all, to this Business at *Ambona*.

The next Point is, that the *Tarnatanes* in the *Moluccas* went about also to make Truce with the *Spaniards*, without Consent or Knowledge of the *Dutch*, which this Dealing of the Author is worse than the former; for this Treaty of Truce appeareth by the Journals to

have been holden the 19th of *July* 1623, which was five Months alter the Execution of the *English* at *Ambona*, and to came too late to move Suspicion against them; and yet this pretended Fear and Jealousy of the *Moluccas* is further amplified by the Strength of the *Spaniards*, being then, as this Author affirmeth, Master of the Sea there; and that by default of the *English*, who, contrary to the Treaty of the Year 1619, had deserted the Defence, and sent no more Ships, neither to the *Moluccas*, nor to the *Manillas*; whence now the *Spaniards* had Means to send Ships, Gallies, and Pinnaces to the *Moluccas*. What the Strength of the *Spaniards* in the *Moluccas* by Sea was at the Time of this pretended Fear, may appear, by the Exploits before-mentioned, done upon them by the Curricuries of the *Tarnatanes*, without the Help of the *Dutch*.

But for the Default of the *English*, which is here audiously alledged, it will be requisite to sit down the true Cause wherefore the *English* relinquished the Action of Defence, as well at the *Manillas* as elsewhere, being a Matter much aggravated upon all Occasions by the *Dutch*, albeit themselves have given the Cause thereof. Wherefore shortly, the true Motives of the *English* their desisting from the Action of Defence is as followeth. The *English* had, by Agreement of the Council of Defence, two Years together maintained a Fleet of five tall and warlike Ships to join with the like Strength of the *Dutch* for the Action of the *Manillas*, and the Profit of the Voyage, as well as the Charge to be common to both Companies. The *Dutch* prepared another Fleet of seven Ships all of their own for *Macao*, bordering upon *Cebu* near the *Manillas*, without giving Knowledge thereof to the *English* at *Jacatra*, until their Fleet was ready to depart thence, well knowing, that upon such Warning, it would be impossible for the *English* to prepare a like Force to join with them: To these they appointed eight Pinnaces that were then abroad to join them, and afterwards sent another Ship with Provisions to them. This Fleet passing by two of the *English* Ships which were appointed for that Quarter of the *Manillas*, the *English* welcomed them, and offered to join them in their Exploit, which the *Dutch* refused, saying, that this being an Exploit of their own, the *English* should neither participate of the Profit, nor of the Benefit that might arise thereby. Likewise by Agreement of the Council of Defence of both Nations, there was another Fleet of ten Ships set forth at the Charge of the *English* and *Dutch*, for the Coast of *Mallabar*, to secure the Trade in that Part.

Of the *Dutch* Ships, about a Month after they set sail, two were found to be so weak and leaky, that they were fain to return to *Jacatra*, the rest being come to their Quarter: Two of the best of the *Dutch* Ships were sent away by the *Dutch* Admiral for the *Red-Sea*, contrary to their Instructions and Commission at *Jacatra* from the Council of Defence; and notwithstanding the Prohibitions, Obstructions, and Exclamations of the *English* against this Prevarication; so that four Carracks of the *Portuguese* coming that Way, the rest of the Fleet of the *English* and *Dutch* being thus weakened by the Default of the four *Dutch* Ships aforesaid, the first Opportunity that happened, either before or since the joining of the *English* and *Dutch* Companies, or is ever likely to offer itself in the future, was lost, and utterly defeated: By this it appeareth what Cause the *Dutch* have to complain of the *English* for deserting the Action of Defence, and what Reason and Encouragement the *English* have to continue the joint Action and Charge with those that use so little Sincerity, ever contriving the common Action and Charge to their private Advantage; that when the joint Forces are employed to give the Enemy Work in one Part, the *Dutch* might with Ease oppress them in another, and appropriate the whole Benefit to themselves.

The next Suspicion that this Author gathereth is from the Involucres of the *Tarnatanes* of *Ambona* dwelling at *L. Is* and *Cambello*, and thereabout, who, as this Author saith, peritum a now, beyond former Example, to outrage the Subjects of the *Dutch*, slaying them, and

“ carrying them away for Slaves; yea, burning two of
 “ their Houses, one at *Lobo*, and another at *Manickels*;
 “ for which, when the Governor went out with a Fleet to
 “ crave Justice and Reparation, he was braved by the
 “ *Tarnatanes* with a stronger Fleet than his own; yea,
 “ they threatened to come with a hundred Curricurries
 “ against *Ambogna*.

“ This Dealing of the Author is like the former about
 “ the Treaty of Peace with the *Tidorians*, and Truce with
 “ the *Spaniards*; for when the Governor of *Ambogna* set
 “ forth the Fleet of Curricurries, before the Apprehension
 “ of the *English*, he stood in good Terms with the *Tarna-*
 “ *tanates* at *Lobo*, neither of the Factories here mentioned
 “ being then burnt, or injured; the Governor then went
 “ only, according to his yearly Custom, to visit the Skirts
 “ and Out parts of *Ambogna*, and had no Affront offered
 “ him. After that upon occasion of a Slave of the *English*
 “ that ran away; and being afterwards laid hold on, was
 “ rescued by a reputed holy Man of or near that Part;
 “ the *English* craved Assistance of the *Dutch* Governor,
 “ who did his best, but was therein abused by those of
 “ *Lobo*; and not only some of his Men outraged, but the
 “ *English* Factor, *M. Beaumont*, to whom this Slave
 “ belonged, was way-laid by the People of the holy
 “ Man; and instead of him one of the Servants of the
 “ *Dutch* was slain between *Cambello* and *Lobo*. The next
 “ Day also was *Beaumont* himself assailed, and shot in the
 “ Hand by the same holy Man's People, who also a little
 “ before did their best to kill *William Griggs*, another of
 “ the *English* Factors, that finding the said Slave at *Lobo*,
 “ laid hold on him there. Upon this Occasion both the
 “ *English* and *Dutch* left their Factory at *Lobo*, which was
 “ shortly after burnt by the *Tarnatanes*.

“ That other, touching the burning the Factory at *Ma-*
 “ *nickels*, is more grossly applied than the former; for
 “ that Factory was burnt after the *English* were appre-
 “ hended; besides that, this Author dissembleth, that
 “ there was a vehement and common Suspicion at *Amb-*
 “ *ogna*, that this Factory at *Manickels* was burnt, not by
 “ the *Tarnatanes*, but by the *Dutch* Factor himself, who
 “ being there alone, was first said to have conveyed away
 “ the Goods of the *Dutch* and *English* there for his own
 “ Use, and then to have burnt the Factory, laying the
 “ Fault upon the *Tarnatanes*. After this ended, the Go-
 “ vernor of *Ambogna* made out a Fleet of Curricurries to
 “ procure Reparations of these Excesses, and therein, not
 “ going so strong as he might, was braved by these *Tar-*
 “ *natanes* of *Ambogna*; but this was after the Apprehen-
 “ sion and Execution of the *English*, and so is as honestly
 “ applied to move Suspicion in this Place, as the joint
 “ Quarrel of the *English* and *Dutch* with those of *Lobo*,
 “ beginning upon occasion of the *English*; and as the
 “ Burning of the Factory at *Manickels*, done after the
 “ *English* were apprehended and imprisoned. As for the
 “ Threats of the *Tarnatanes* here mentioned, that they
 “ would come with an hundred Curricurries against *Amb-*
 “ *ogna*, it is, for aught any of the *English* ever heard, a
 “ mere Fiction; at most, it was a vain Brag, and such as
 “ could not allright the Governor, that knoweth well that
 “ the *Tarnatanes* have no Gun-powder, nor other Provi-
 “ sions, for such an Exploit; and yet are far behind the
 “ Governor of *Ambogna* for Number of Curricurries, be-
 “ sides the *Dutch* Ships and Cattle.

“ The next Cause of Suspicion this Author makes to be
 “ an idle Report in the Last Parts beyond *Banda*, uncer-
 “ tain which, or by whom, that the *Dutch* were already
 “ quit of their Cattle at *Ambogna*: A poor Pretence, and
 “ not worthy to be answered, yet still farther discover-
 “ ing what Penalty of good Matter this Author had, that
 “ he was to borrow such crazy Stuff. But the last,
 “ and that which is expressly applied to the *English*, is, that
 “ about this time the *Dutch* understood that those of *Lobo*
 “ and *Cambello* held great and secret Correspondence with
 “ the *English*. How did the *Dutch* understand this? or
 “ why does not this Author express the particular Proof
 “ in a Matter so pertinent? It is true, the *English* had
 “ their Factories at *Lobo* and *Cambello*, but in the same
 “ Houses with the *Dutch*, and for their joint Account, and
 “ had Traffick with the Country People as the *Dutch*

“ had; but what secret Correspondence is this? or what
 “ Danger to the *Dutch*? Was the Burning of the Facto-
 “ ries, which belonged to the *English* as well as to the
 “ *Dutch*, a Note of good Intelligence between the *Eng-*
 “ *lish* and the Incendiaries? What was that for Correspon-
 “ dency with those of *Lobo*, when at one time they way-
 “ laid *M. Beaumont* to kill him, and at another time shut
 “ him in the Hand with an Arrow; offered to kill *W-*
 “ *lam Griggs*, and from Time to Time outraged our
 “ People equally with, and as the *Dutch*? Further, our
 “ People, as well as the *Dutch*, now dissolve their Fac-
 “ tory at *Lobo*, and were come all thence; What Letters
 “ or Messages did they ever send thither afterwards? or
 “ how, or by what means maintained they this Correspon-
 “ dence? Yet this was understood, perhaps, by the Go-
 “ vernor's Dreams; for that, as he afterwards told *Mr.*
 “ *Walden*, *Hill*, and *Cartwright*, that came into *Man-*
 “ *Banda*, was a Motive to him to examine the said *Jap-
 “* which was the Beginning of the whole Process.

“ The Author having thus quietted himself in his Pre-
 “ face, proceedeth to the Matter itself, first he sheweth
 “ the Occasion and Manner of the Discovery of this pre-
 “ tended Plot, and then the Confessions of the *Jap-
 “* and of the *English*; but he maketh no mention of any
 “ Torture used upon the *Japoneze* that first confessed, nor
 “ of any other Inducement or Pretension to torture or
 “ examine that *Japoneze*; but only in curious questions,
 “ touching the firing and changing of the Watch, and of
 “ the Number of the Soldiers in the Cattle, was checked
 “ what sufficient Inducement and Cause it was to torture a
 “ Soldier of their own that served them, but *Ratana*;
 “ understand the Course of their Watches, and the strength
 “ of the Aid he might expect, if any such an Attempt
 “ should happen in his Quarter, is easily to be judged;
 “ and how this poor Man, and the rest of his Countrymen
 “ were tortured, appeareth in the *English* Relation. Here
 “ also is concealed, by what manner and kind of questions
 “ this and the other *Japoneze* were led along in their Con-
 “ fessions, to make up the Plot just as the *Dutch* have
 “ vilified it; and also what other Answers they gave, when
 “ they were thus directed: That they and the *Japoneze* con-
 “ fessed what the *Dutch* would have them, without
 “ nor Wonder, being so tormented, and in such a man-
 “ ner, *nam Innocentes cogit mentes dicitur*. But what
 “ Likelihood or Possibility there is of the *Japoneze* con-
 “ fessions, if yet they contended, as they are said, may
 “ appear by that which hath already been examined in
 “ this Point towards the End of the *English* Relation;
 “ which, for Brevity sake, is here forbore to repeat;
 “ yet some Circumstances, which the *Dutch* Relation hath
 “ more than the *English*, deserve here to be examined.

“ And first, that of *Abel Price*, the *English* Butler,
 “ who is made the Messenger and Negotiator betwixt
 “ Practice with the *Japoneze*: It is true, that *Price* was
 “ alone, of all the *English*, had some kind of Conversa-
 “ tion with some of the *Japoneze*; that is, would eat and
 “ drink with them, as he likewise did with other *Jap-
 “* and with the *Dutch* also: But is it credible, that *Mr.*
 “ *Towerson* would commit any thing of *Mr. Price's* nature,
 “ dangerous a Matter as this, to a drunken, unlearned Man,
 “ who also, as the *English* that were there could testify,
 “ port, threatened to cut his, the said *Towerson's* Throat;
 “ for that he had punished him for his Misdeeds?
 “ Further, this Relation maketh this *Abel Price* to be
 “ that all the *English* Merchants in the Out-factory were
 “ privy and accessory to this pretended Treason, viz. the
 “ Governor and Pilcal, in their own Process, and the
 “ *Powel*, *Ephraim Ramsey*, and two other, gentlemen.
 “ After *Price's* Confession, he sets down the general
 “ Substance of all the Confessions in one Body, which
 “ first, having assigned *Mr. Towerson* a Promise to be
 “ to induce them to the Exploit, he sheweth that they
 “ made doubt of the Point of Possibility, as well they
 “ might, knowing the Weakness of their own Party, and
 “ impregnable Strength of the *Dutch*, in Comparison
 “ theirs; for Satisfaction of which their Doubts he said
 “ *Mr. Towerson* told them, that he had already won
 “ *Japoneze* within the Cattle to his Purpose, and that
 “ would attempt this Matter, not when the *Dutch* were

correspondence is this? or what as the Burning of the Factor the English as well as to the Intelligence between the English that was that for Correspondence when at one time they way him, and at another time they Arrow; offered to kill him Time to Time out-raged our as the Dutch? Further, our atch, now dissolved their Facome all thence. What Letters or send thither afterwards? maintained they this Correspondence, perhaps, by the Captain, as he afterwards told Mr. Riggs, that came tailor from him to examine the first Japone of the whole Process.

quitted himself in this Pre-Matter itself, first being avarer of the Discovery of his prethe Confessions of the Japone, he maketh no mention of any Japone that first confessed, or or Pardon upon a Point, or only by curious questions, changing of the Party, and others in the Castle, was the Cause it was to raise a served them, but rather their Watches, and the strength spect, if any such Article matter, is easily to be judged; and the rest of the Contrivance in the English Relation. Here manner and kind of the Japone were led along to the Plot just as the Dutch together Answers they give.

That they and the Dutch should would have their, was the mented, and the Dutch of *negotia mentis* was. But what is there of the Dutch, their confided, as is already said, may hath already been examined.

End of the English Relation, is here forbidden to be repeated; which the Dutch Relation hath deliver here to be examined.

Libel Prince, the English Factor, Fenger and Negotiator of the Japone: It is true, that the Dutch had some kind of Conversation with the Japone; that, would be and likewise did with other Japone: But is it credible, that they any thing of Murther, or Murder, to a drunken, debauched, and that were there committed, as is the said Tower's Relation, need him for his Murtherer? maketh this *Libel Prince* to be Merchants in the Out-factory, his pretended Treason, and their own Projects, but the Dutch, and two other, guilty of this, he sets down the general Confessions in one Body, where Mr. Tower's Relation of the Japone's Exploit, he is to be the want of Possibility, as well as the Weakness of their own Part, and of the Dutch, in Comparison of which their Doubt, he tells us, that he had already was little to his Purpose, and that were, not when the Dutch were

" their Strength, and the English the weakest, but
 " would expect till the Governor should be somewhere
 " abroad upon some Exploit, and some English Ships or
 " Ship, at least at *Ambyna*, the People whereof he would
 " tie in the Enterprize; likewise he would send for the
 " Factors, and Slaves of the other Factories, and should
 " have a Supply from the *Tarnatanes of Lobo* of certain
 " Curricurries, &c.
 " Here he hath enrolled a goodly Army for this Action;
 " but let us see the Manner how they should have executed
 " their Exploit; and first, for the *Japone* in the Castle,
 " we must believe, if this Author or his Voucher say true,
 " that Master *Tower* had acquainted those, and won them
 " to his Plot, before he had imparted it to his own Coun-
 " trymen the *English*; and yet in the Acts of the Process,
 " *Emanuel Thomson* is recorded to have confessed, that
 " eight Days after the Consultation, Master *Tower* told
 " him, that he had then sent out *Johnson* and *Price* to treat
 " with the *Japone*, and win their Consent to this Enter-
 " prize; but what could these do, being in all but ten?
 " Marry, saith the Relation by and by, Master *Tower*
 " had ordained that eight of them should have been be-
 " stowed, by two in a Company, upon the four Points of
 " the Castle, to kill all those that would resist them, and
 " to take the rest Prisoners.
 " It must be therefore here imagined, that the *Dutch*
 " and their Mardikers in the Castle, being three or four
 " hundred, would scorn to take the Advantage of sending
 " forty or fifty, much more of an entire Company, to any
 " Point of the Castle, but would combat with the *Japone*
 " at even Hand, by two at a time, and so give the *Japo-
 " nese* Respite to kill or take them by two, and by two;
 " a sweet Conceit, and such a Service as perhaps hath been
 " sometimes represented upon a Stage, but never acted in
 " Surprise of a Castle in good Earnest. Thus we see how
 " eight of the *Japone* were to be employed, what should
 " the other two have done? Forsooth, they should have
 " waited in the great Chamber to murder the Governor;
 " yea, but this Relation told us, yet while, that this Plot
 " should have been executed while the Governor was
 " abroad upon some Action. How then should these two
 " *Japone* have killed him in the Castle at the same
 " time?
 " But we see how all the *Japone*, that is, all the pre-
 " tended Party of the *English* within the Castle, should
 " have been occupied, who should have opened the Gates
 " to the *English*, and their other Aids? who should have
 " killed the Court of Guard at the Gate? These Parts
 " were left for them that were without, therefore let us
 " take a Review of them what they were. The Relation
 " mustereth them to be fourteen *English*, whereof eleven
 " were Merchants, one Steward of the House, one Tay-
 " lor, and one Barber to dress the Wounds; besides, God
 " knows how many Skippers, Slaves, and *Tarnatanes*.
 " First, for the *English* Merchants, of what Dexterity they
 " are to take Forts, is easily judged; and in all the *Eng-
 " lish* House, when it was seized by the *Dutch* upon this
 " pretended Treason, the whole Provision was but three
 " Swords, two Hand Guns, and about half a Pound of
 " Powder; yea, but the *English* Ships would have brought
 " both fitter Men, and better Provision: But how knew
 " Master *Tower* that those of the *English* Ships, when
 " they came, would join with him in this Work, being
 " so contrary to the Treaty, and itself so dangerous? or
 " why did he not stay the opening of the Plot, till his
 " Ship or Ships were come, that he might swear the
 " Skippers also, at least the chief Officers amongst them,
 " and take their Advice? Is it credible that Master *Tower*
 " was so slight to open this Plot to all the *English* at
 " *Ambyna*; yea, to the Taylor and Barber, so long be-
 " fore it was to be put in Execution, and before he knew
 " the Minds of the chief Assistants, of whose Arrival
 " he was so uncertain? Yea, but he was fore of the Slaves
 " of the *English*, and of the *Tarnatanes of Lobo*, with their
 " Curricurries in *quibbet Evenston*.
 " This, indeed, is the Remainder of the Army; let
 " us view them; the Slaves were, in all the *English* Facto-
 " ries, just six in Number, and all Boys; the *Tarnatanes*
 " were Enemies as well to the *English* as to the *Dutch*, as

is before shewed, in Answer to the Preface; when were they reconciled? How came this, that in all the Examinations of the *English*, this Point was not fitted, and somewhat confessed of it amidst so many Tortures? There is no Confession thereof in all the Examinations, and Mr. *Tower* in his expressly denied it, and was pressed no farther. The Truth is, the Governor and Fiscal of *Ambyna* knew, that whatever had been confessed in this Point, would not have been believed by their own People there, who knew well enough, that the first Beginning of this Breach with the *Dutch*, and the *Tarnatanes of Lobo*, was about the Slave of the *English*, and the Outrages thereupon following were done upon the *English*, as well as upon the *Dutch*. Yet this Author seems to hope, that they may be believed here in *Europe*, which had no Colour at *Ambyna*.
 " Concerning the Time of executing this Plot, it was not, as the Relation saith, yet prefixed, but left to the next Meeting of the Conspirators, which should be shortly holden, when *Gabriel Tower* had prepared all things, &c. Here was certainly a hot Practice of Treason, and worthy to be termed by this Author an horrible Conspiracy. They met together on New year's-day, and plotted, as is before related; and now it was the five and twentieth of *February*, and not only nothing done all this Interim, no not so much as a new Consultation; but this, to wit, is the Body and Substance of the unanimous Confession of all the *English* by themselves, severally published.
 " In the next place, the Author relateth some what singular in Mr. *Tower*'s Confession, as that he said he was moved to this Fact by Hope and Desire of Honour and Profit; and being demanded for whom he intended this Honour, and for whom he meant to hold the Castle? his Answer was, that if he could have compassed his Projects, he would forthwith have given Advertisement thereof to the rest of his Nation at *Jaccatra*, which now they have christened *Batavia*, and have craved their Aid, which, if they had yielded to him, then he would have held the Castle for the *English* Company; and if not, then he would have kept it for himself, and have used Means to have agreed with the *Indians*, and so by one Means or other would have compassed the Enterprize.
 " Here first is to be observed, that he would not, as the Author makes him speak, have sent for Aid to *Jaccatra*, until he were first Master of the Castle, and yet in the general Confession before, it is said, he would attend the Coming of some *English* Ships before he would adventure upon the Castle. Next, let the ambitious and alternative Resolution here said to be confessed by Master *Tower* be considered in both the Parts thereof, and it will appear, that no Man in his Wits would have any such Conceit as is here pretended. What Hope could Master *Tower* have, that the President and *English* Consul at *Jaccatra*, living under Command of the *Dutch* Fort there, and altogether subject to them, durst join any such Action, thereby to give Occasion to the *Hollanders* to arrest, torture, and condemn them of Treason?
 " Master *Tower* knew well enough, that about six Months before the Arrival of the *Dutch* at *Jaccatra* had caught a very silly Occasion to entrap the *English* President there, who, having sent out two of his People in the Night to the *English* Cow house, to see what Watch the Blacks in their Service kept over their Cattle, the first two *English* were apprehended by the *Dutch* Soldiers, kept in Prison seven Days, and charged that they had said that they went the Round; and one of them being last examined, was told by the Balcon, the Officer of the *Dutch* in criminal Causes, that his Fellow had confessed, that they had said, they went their Round, and that by the *English* President's Command; and if he would not confess the same, he should be tortured; but the Fellow being constant in the Truth, came off at last without Torture: Yet this was Item enough to the *English* President and Council, how the last of the *Dutch* was to entrap them upon the least Occasion; and thus, and other darts upon

“ Dealings of the *Dutch* at *Jaccatra*, which were too long here to recite, were all advertised, from time to time, to Mr. *Towerjon*, who therefore was sure he could expect no Assistance from them, that were themselves in such a Predicament.

“ The other Part of Mr. *Towerjon*'s Resolution is said to have been to keep the *Cattle* for himself, and to agree with the *Indians*, in Default of Help from the *English*. This is yet more improbable than the former: Were the *Paringuerze* and the *Indians* not able to keep out the *Dutch* from *Amboyna*, when they had no Footing there; and shall Captain *Towerjon* with twenty *English* and *Japanese*, without Ship or Pinnace, be able, with the Help of the poor naked *Indians*, to drive them out, having three *Cattles* in the Island of *Amboyna* and at *Cambello* hard by, all well furnished with Men and Provisions, besides their Power of Shipping, which makes them file themselves Lords of the Sea? And yet how could Master *Towerjon* hope to win the *Amboyne* (the *Hollanders* sworn Subjects) to his Side? He might rather assure himself, that after he had mangled the *Hollanders*, it yet that must be believed to be possible, the *Amboyne* would have surpris'd him, and cast him out, being to weakly provided to stand of himself, that so they might utterly free themselves from their Servitude: Here also must be remarked, that this Author himself in his Preamble saith, that the *Indians* themselves durst not undertake such a great Design as he there feigneth against the State of *Amboyna*, without some great Aid of some Nations of *Europe*, either of *Spaniards* or *Portuguezs*, or some other; whereby is not only contended how weak the *Indians* of themselves are, but withal it felloweth, how small Hope Mr. *Towerjon* might have, being deserted of his own Nation, as here the Case is put, to hold the *Cattle* for himself by the Help of those *Indians*, if yet he could once have won it.

“ In a Word, they that know the Power of the *Dutch* in *Amboyna*, and thereabouts, and the Weakness of the poor *Indians*, will judge this Conceit of Mr. *Towerjon*'s to keep the *Cattle* for himself, to be a mad Plot, and for which Master *Towerjon* should rather have been sent to *Bedlam*, or the *Dullen Kist*, as the *Dutch* call it, than to the *Gallows*. But this Author hath one voluntary Confession, upon which he taketh especial Hold, to wit, that Master *Towerjon*, after his Examination was finished, being expostulated with by the *Dutch* Governor, and demanded whether this should have been the Recompence of his (the Governor's) manifold Courtesies towards him, answered with a deep Sigh, *Oh! were this Matter now to do, it should never be done*. This voluntary Confession, and penitent Acknowledgment, saith this Author, was made the Ninth of *March*, being the Day when the Execution was to be done, and the Examination of *Towerjon* was ended the Twenty-eighth of *February*, to many Days before. But how shall we believe this? Forsooth, he hath it out of the Acts of the *Proccels* of *Amboyna*; yea, but in these Acts are omitted many material Passages of these Examinations, as is already shewed, why may they not then be guilty of Adultery, as well as of such Mutilation and Omision? But let us peruse the Words of the Act itself, which are these;

“ We whose Names are hereunto subscribed, do declare upon our Truth, instead of an Oath, that *Gabriel Towerjon*, after that he had been already examined touching his said Offence, and that the worshipful *Jan Speult* had expostulated with him thereupon, asked him, whether this should have been the Recompence of his Courtesies from time to time shewed unto him the said *Towerjon*? Therupon he the said *Towerjon*, with a deep Sigh, answered him, and said, *Oh! if this were to be done, it should never be done*. Datum the Ninth of *March*, in the *Cattle* of *Amboyna*, and so subscribed,

“ *Heyman Van Speult,*
“ *Jacobus J. Muelshack,*
“ *Canon Heyvaen,*
“ *Heerman Crayanger,*
“ *Peter Van Swieten,*
“ *Leonaert Auck.*

“ Thus we see the Act itself, and this pretended voluntary Confession of Mr. *Towerjon*, which is not delivered upon the Credit of the Court or Council at *Amboyna*, but upon the Attestation or Affidavit of the Governor, and five others, the principal Actors in this bloody Tragedy; and this not upon their Oath, but upon their Truth, or honest Word, forsooth, instead of an Oath. The Time when these Words were uttered by Mr. *Towerjon*, is not described by the Day when he spake them; but only by the precedent Act of his Examination; and yet the Circumstance of Time is not an usual and customary Solemnity, and requisite in such Attestations, but also in Business of this Nature altogether necessary, as likewise in this Case that of the Place was; for if these Words were spoken in the Place of Torture, or incidentally after the Examination ended, they are by their own Law esteemed no more voluntary, than the Confession upon the Rack itself. Neither yet doth this Attestation affirm, that this Confession was voluntary.

“ But this Author, unconsciously reporting the Date of the Attestation for the Time of the Confession, lets it to be voluntary, because, as he saith, it was made the Ninth of *March*, being so many Days after his Examination, which was taken the 28th of *February*, can a Man attest nothing but what was done upon the very Day when he maketh Affidavit? The Attestation saith, that these Words were spoken by Mr. *Towerjon*, after he had been already examined; why may not that rather have been upon the very Day of his Examination, than upon the Day when this Act was entered, if he ever spake any such Words, or meant them, as he is here interpreted, the contrary whereof is more probable, by all the Circumstances of this Business truly set down in the Relation of the *English*.

“ But in that this Author makes so much of this poor Circumstance of Mr. *Towerjon*'s Profession of *Notow* for what was done, naming it a voluntary Confession, it is plain how defective he was of voluntary Confession, and of all true and concluding Circumstances. What was there not a Letter, or other Paper, to be found in all the Cells and Boxes of the *English*, to wit, seized at *Amboyna*, *Larica*, *Hitto*, and *Cambon*, to discover this Treason? Nor, amongst to many Accomplishes of diverse Nations, a litle Brother to betray the rest, and to accuse them voluntarily, but the Profets must begin with the Torture, and the Heavens Confessions upon Torture be sufficient to bring Criminals to Torture.

“ That debauched and notoriously intamous Person (such as *Price* was) to draw Torture upon the best orderly, and untainted? And yet this Relation itself saith, that *Price*'s Confession was drawn from him by the Examiners, specifying of Place, Prison and Time unto him; certainly one of their own Nation or Nation to advise that more Advocates might be sent over to the *Indies* to aid the Accused, and make a *quaestio* answer; for, said he, they go to work there so unmercifully and murderously, that the Blood of the poor Profets crieth to Heaven for Vengeance. But was there no Particular of any Man's Confession but of *Price* and Mr. *Towerjon*, and all the rest benched together in one Body? Did none of all the rest go forth in any Confessions, or contents more than they? Where is *Price*'s Confession, that he was at *Amboyna* upon New-year's-day, when ten or twelve of the *Dutch* were witness'd he was at *Hitto*? Where is his Confession of *Clark*'s Plot to go to *Maccassar*, to deal with the *Spaniards* there to come and rob the small Part of *Sumatra*? Where is *Cesari*'s Confession of another Plot about two Months and a half before his Examination undertaken by *Abomjon*, *Johnson*, *Price*, *Price*, *Price*, and himself? Where be the leasing Interrogatories directed them to the Accusation framed by the Profets, lest otherwise there had been as many *Price*'s as *Price*'s was confided as Persons examined? Nay, were all this, not of a great deal more of the *English* is here in *England* proved by the Confessions of the Persons to have passed in the Examination of

self, and this pretended *Voluntariness*, which is not delivered Count or Council at *Ambogna*, or Affidavit of the Governor, or principal Actors in this bloody Transaction their Oath, but upon their Forsworn, instead of an Oath. Words were uttered by Mr. Price by the Day when he spoke precedent Act of his Examination, and the Circumstances of Time is not only a Penalty, and requisite in all such a Bolusness of this Nature, as well as in this Case that of the Words were spoken in the Court, but also after the Examination and an Law effected no more, and upon the Rack itself. The Narration affirm, that this Con-

ditionally reporting the late Time of the Commission, because, as he said, it was sitting for many Days after his Execution the 25th of *January*, and what was done upon the very Affidavit? The Articulation, spoken by Mr. *Price*, after examined; way may not that the very Day of his Examination, in this Act was entered, yet the words, or meant them, as he is contrary whereof is the more probabilities of this Bolusness truly the *English*.

Author makes so much of this poor *Overseer's* Profession of *Screw* being a voluntary Confession, he was of voluntary Confession, including Circumstances. What, or other Paper, to be found in the Files of the *English*, to *Indica*, *Hitta*, and *Lombard*, to *Indica*, amongst to many Accused, a false Brother to betray them voluntarily, but the Probable Torture, and the Heavens can be sufficient to bring Crimes

and notoriously infamous Persons to draw Torture upon the Rack.

And yet this Relation that of Confession was drawn from any thing of Place, Prison and Time of their own Nature. The *Rack* Advocates might be let over Accused, and make a separate way to work there to violate the Blood of the poor People's Vengeance. But why have we Man's Confession but is of *Price* all the rest blended together, and all the rest go together, and more than they? What is *Price* he was at *Ambogna* upon *Price* twelve of the *Dutch* *Price* *Price*? Where is his Confession to *Mucassar*, to read words and to the said Factors, and the Contribution of another Prisoner, but before his Examination, *Price*, *Price*, *Price*, the leading Interrogatories, and accusation framed by the *Dutch* had been as many Days before he was examined? Not to say, that deal more of his Confession, and by the Care of the *Dutch* in the Examination, and

" appeareth how faithfully the *Dutch* at *Ambogna* have entered the Acts of this Process?

" Well, at last he concludes the Narration of the Confessions with the summing up of the Number and Nations of the Parties that had thus confest, which he saith, were ten *Japanese*, fourteen *English*, and the *Netherlandish* *Marnubo*, or Captain of the Slaves; by which last Words, he would give the Reader occasion to think, that this Fact was so clear, and their own Proceedings so even and just, that they had executed one of their own *Netherlanders* for it; which how true it is, is already declared in the Conclusion of the *English* Relation. The Truth is, this Captain of the Slaves was of the *Portuguese* Race, and born in *Bengal*; his very Name, *Augustin Perez*, sheweth he was no *Netherlander*.

" Having thus finished this Relation, this Author proceedeth to a Disputation, and taking Notice of some Aspersions in *England* cast upon these Proceedings at *Ambogna*, he divideth them into two Heads, the one, that the Process was without its due Formality, the other, that there was Excess and Extremity used against the Conspirators. For the Point of Formality, he first taketh great Pains to prove, that the Formalities of Process in *Ambogna* are not therefore unlawful, because they agree not with our Form in *England*; which Labour he might have spared, for no wise Man will deny him this Point; and such as shall be so ignorant as to blame the *Dutch* for varying from us herein, were not worthy the answering. Herewithal also, he deducteth the Title of the Lords the States-General to the Sovereignty of *Ambogna*, and to the Governor of *Ambogna's* Jurisdiction, in Causes as well criminal as civil, to be rightly grounded. Thence he concludes, that the *Japanese* being sworn Servants to the *Dutch*, and in their Pay, were subject to the Jurisdiction of the *Dutch* Governor. Then he telleth us, that the Author and Accomplices of Murder and Treason, are by the Laws of all Nations to be punished with Death; all which Points may be granted him without any Prejudice to the Cause of the *English* in this Question. At last he comes in particular to their Case, and affirms, that the Chief of the *English* there might not apprehend the *English* Accomplices of this Conspiracy, because themselves were Accomplices of the Fact; all which also may be granted in this Point of Apprehension and safe Custody; but how it may proceed in the Point of Cognizance, shall be anon in due Place examined.

" In the mean time, this Author, to make the Point of Apprehension clear beyond Exception, saith, that the *English* were not apprehended upon the first Suspicion, when yet there was Evidence and Indicia sufficient to it. But after the Examination of all the *Japanese*, and their joint Confession, that the *English*, whom they specified by Name and Surname, moved and hired them to this Treason: Yea, not until *Abel Price* had also confessed as much, and that all the *English* in the *Out-Factories* were privy therunto. For Answer hereof, that must be repeated, which hath been upon other Occasions before alleged, that the first Beginning of the Process was by the Torture, there being no sufficient Evidence or Indicum to torture the *Japanese*, that only sought to inform himself of the Course of the Watch, and of the Strength of the Castle where he himself was a Soldier; and to the whole Series of Examination proceeding from the Confession of one tortured Person, to apprehend and torture another, without other Evidence, though it brought forth more Confessions, and those with Name and Surname, and other Circumstances, according as the Interrogatories or Directories of the Governor and Fiscal led the Prisoners, was wholly against all Laws of Tortures. *Sicut in facta si prava est regula prima. Materiam de se fieri, atque obliqua necesse est.*

" But here must be answered an Objection, that may be made against this from another Part of this Relation; that is, that some of the *English* confest without, or before Torture. Yea, this *Price* here mentioned, was either not tortured at all, or very lightly; yea, but he was brewed the tortured Bodies of the poor *Japanese*,

" martyred with Fire and Water, and told, that unless he would confess that which they told him they had first confest, he should be tortured as ill, or worse than they. This Fear of Torture is by their own Law equalled to the Torture itself, and consequently the Confession thereupon, made no better Indicum, or Evidence, to bring another Man to the Torture, than the Confession made upon the Rack itself. Again, it must be here remembered, that the very Matter of *Price's* Confession here mentioned, to wit, that all the *English* Merchants of the *Out-Factories* were privy to the pretended Treason, was confest by the Process of the *Dutch* themselves, that found *Peudel*, *Ransley*, and two others of those Factors guilty of it.

" Next, this Author taketh Notice of an Objection made in *England* against the Jurisdiction of the *Dutch* Governor, and his Council at *Ambogna*, over the *English* there, because this Power is by the Treaty of the Year 1619 disposed of, and agreed to consist in the Council of Defence of both Nations at *Jaccatra*; for Information in which Point, this Author saith, he hath perused over all the several Articles in the said Treaty, and findeth in the twenty-third Article, that the Portresses were to remain in the Hands of them that then possessed them; and in the thirteenth, fourteenth, and fifteenth, that the Council of Defence hath no other Power but only over the Fleet of Defence, over the Commerce, and, finally, to tax the Charges of Maintenance of the Ports; but he could not see the thirtieth Article, which orders that all Disputes that cannot be decided by the Council of Defence, should be remitted into *Europe*, first, to the two Companies there, and in Default of their Agreement, to the King and States; why then was not this Dispute so proceeded in? There is nothing in the former Articles to limit the Council of Defence, and this general Article appeareth to be added by way of Amplification, to provide for that which was not particularly and expressly cared for in the former, which is most plain by the Words of the Explanation upon this thirtieth Article, agreed upon at the first, and subscribed by the Commissioners on both Sides, *Anno* 1619, where this Course of Proceeding is expressly directed, not only in Disputes about the Meaning of the Articles, but also about any other Matter happening in their Commerce abroad; since which also the King's Majesty hath, upon a smaller Occasion than the Life of his Subjects, clearly declared himself in the Point of Sovereignty, that both Nations in the *Indies* should wholly lay aside all Pretence thereof, which Declaration was sent to the Lords States-General, and by them accepted before this bloody Butchery was executed. But if it were granted, that the *Dutch* were absolute Lords of their Partners the *English* in those Parts, without respect to the Treaty, yet at least the *Dutch* in *Ambogna* were bound to observe the Laws of the *United Provinces*, for so saith this Author himself. Do these allow to begin the Process as to the Torture, and to bring Persons of honest Fame to the Rack upon others Confession made in the Torture? Do their Laws allow of the leading Interrogatories above mentioned, to direct the Prisoner what to say, to avoid the Torture? Where, in the *United Provinces*, is that drowning with Water in use? Or the Torture with Fire used to *Fabryson*, *Thomson*, and *Clark*? Or especially the splitting of their Toes, and lancing of the Breast, and putting in Gunpowder, and then firing the same, whereby the Body is not lit intire, neither for Innocency nor Execution? *Clark* and *Thomson* were both said to be carried to their Execution, though they were tortured many Days before.

" Lastly, their Confessions were contradictory, apparently false, and of things impossible to be done, much less practised before by the said Parties, and therefore ought not by their Law to have been believed, nor the Prisoners to have been condemned thereupon, without other sufficient Indicia, or Evidence besides. In the last Place, this Author handleth the Excess of Torture, whereof he taketh Notice, there is much Complaint in *England*, and saith, that the Lords States-General took

“ great Care to inform themselves of all the Passages in
 “ this Business; and to that End desired to see all the
 “ Letters, Pieces, and Papers, that concern this Process,
 “ by which it appeareth not that there was any cruel Tor-
 “ ture used. But suppose the Acts made no mention of
 “ them, is it any Marvel that the Authors of this mur-
 “ derous and tyrannous Process, being themselves the
 “ Persons that also formed the Acts, would omit those
 “ things that made against them?

“ It is to be presumed also, that the Acts kept by their
 “ People at *Poloway* in *Banda*, have omitted many things
 “ of their Process against the poor *Poleroons*, whom in
 “ August 1622, being about six Months before this Exec-
 “ ution of the *English*, their Governor there used in like
 “ Sort as the Governor of *Ambeyna* did the *English*, and
 “ gave him a Model and Precedent of this Process, which
 “ it will not be amiss to relate briefly, because this Au-
 “ thor in the next Place alledgeth the merciful Disposi-
 “ tion of the *Netherlandish* Nation in general, to infer
 “ thence; that it is therefore unlikely, that their Go-
 “ vernor at *Ambeyna* was so cruel as is reported in *Eng-
 “ land*.

“ *Peleroon*, one of the Islands of *Banda*, was in Posses-
 “ sion of the *English* at the Time of the Treaty Anno 1619,
 “ and by Agreement was to remain theirs.

“ After the Treaty came to the *Indies*, the *Dutch* sur-
 “ bore the publishing thereof in the Islands of *Banda*, until
 “ they had taken *Peleroon*; but knowing that it must be
 “ restored again, according to the Treaty, they first take
 “ all Courses to make the Island little or nothing worth.
 “ They demolish and deface the Building, transplant the
 “ Nutmeg-trees, plucking them up by the Roots, and
 “ carrying them into their own Islands of *Nera* and *Pelo-
 “ way*, there to be planted for themselves, and at least find
 “ a Means to dispeople the Island, and to leave it so as the
 “ *English* might make no Use of it, worth their Charge of
 “ keeping; and that upon this Occasion was a young Man,
 “ the Son of an Orankey, or a Gentleman in *Peleroon*,
 “ that had committed Felony, for which, by the Laws of
 “ his Country, he was to die. This Fellow, to save his
 “ Life, fled to another Island of *Banda*, called *Refinging*,
 “ and there turned Christian; but quickly understanding
 “ that that would not make him safe from Punishment,
 “ he went back secretly into his own Country of *Peleroon*,
 “ and having lurked there for two or three Days, took
 “ his Passage for *Nera*, another Island where the *Dutch*
 “ have a Fort, and told the *Dutch* Governor, that the
 “ Orankeys of *Peleroon* had conspired to massacre the
 “ *Dutch* as well at *Peleroon* as at *Poloway*, with Help of
 “ the People of *Seran*, that should send over thirty Curri-
 “ cularies for that Purpose. Immediately upon this Indic-
 “ tium of this Malefactor, certain Prows or Fisher-boats
 “ of the *Poleroons* that were fishing at *Poloway* were seized,
 “ and the People made Prisoners. Command was sent by
 “ the *Dutch* Governor to *Peleroon*, that the Orankeys
 “ should come over to him, that there might be farther
 “ Inquisition made of this Matter.

“ The Priell of the *Poleroons* and seventy Orankeys
 “ instantly took a Prow, or small Vessel of their own, and
 “ embarked themselves for *Poloway*. As they were at Sea,
 “ and yet out of Sight of the *Dutch* Cattle, they were met
 “ by a Fishing boat of *Bandanezes*, and told how all the
 “ rest were apprehended, and that if they went to *Poloway*
 “ they were all but dead Men. Nevertheless the Priell
 “ and the rest, although they had Space and Means to
 “ have escaped to *Seran*, and other Places late enough
 “ from the *Dutch*, yet were so confident of their Inno-
 “ cency, that they would needs go to *Poloway* to purge
 “ themselves, where, as soon as they arrived, they were
 “ instantly carried Prisoners to the Cattle, and withal the
 “ Governor, with a Force of two hundred Men, went per-
 “ toally for *Peleroon*, whence he fetched all the rest of the
 “ Orankeys, and brought them Prisoners to the same
 “ Cattle: As soon as they were come, they were presently
 “ brought to the Torture of Water and Fire, even in the
 “ same sort that our People were afterwards at *Ambeyna*,
 “ only herein differing, that of those of *Poloway* two were
 “ so tortured, that they died of their Torments, the rest,
 “ being one hundred and sixty-two Persons, were all, upon

“ their own forced Confessions, condemned and executed.
 “ The Priell, when he came to the Place of Execution,
 “ spake these Words in the *Malayan* Tongue: All ye
 “ great and small, rich and poor, black and white, look
 “ to it, we have committed no Fault; and when he would
 “ have spoken more, he was taken by the Hands and Feet,
 “ laid along, and cut in two by the Middle with a Sword,
 “ forthwith the Governor caused the Wives, Children,
 “ and Slaves of those of *Poleroon* to be all carried out of
 “ the Island, and distributed in other Islands subject to the
 “ *Dutch*, and so have made a clear Country for the *Eng-
 “ lish*, where they may both plant and gather themselves,
 “ destitute of the Help of any of the Country People,
 “ without whom neither the *English* nor the *Dutch* can
 “ maintain their Trade in the *Indies*; and yet this is not
 “ here recited, to the End thereby to charge the *Neth-
 “ landers* Nation with those cruel Proceedings, but to
 “ Persons themselves that have committed such barbarous
 “ Tyrannies, who, if we shall believe an Author of their
 “ own, are not of the best of that Nation.

“ For the *Majors*, as this Author lays, use the *Indi-
 “ as* a Tuckt-houise, or Bide-well, to manage their wives,
 “ and unruly Children and Kindred, whom, when they
 “ cannot rule and order at home, they lead to the *Indi-
 “ as*, where they are preferred to Offices and Places of Go-
 “ vernment; yea, saith he, they prefer such to be Judges
 “ there as never saw Study nor Law; so that this comar-
 “ vel, that such Persons proceed not with the Justice
 “ and Moderation as is used generally in the *Low Countries*
 “ by the Choice of the Nation there; and this agreeth
 “ well with the Report of our Merchants of Great that
 “ came lately from *Ambeyna*, who aver, that exceeding
 “ the Governor himself, who is well kept in Years of the
 “ rest of the Council there, as well the *Indi-
 “ as* other,
 “ there was scarce any that had Hair on their Faces; yea,
 “ that most of them are leud, drunken, debauched Per-
 “ sons, and yet must be Judges, as well of our *English* as
 “ the poor *Indians* there. Now to return to this Author's
 “ Proofs, that there was no Excess used in the Proceed-
 “ ings, at the last he taketh one Argument by way of
 “ Comparison from the Law of *England* to press Men to
 “ Death, which, he saith, hath much more Cruelty than
 “ their Course of Torture used by the *Dutch* in *Ambeyna*,
 “ and is holden, as well by some Authors of our own Na-
 “ tion as others, for damnable. How pertinently is this
 “ Matter of pressing alledged for justifying men's Courses,
 “ since no Man in *England* is pressed for not confessing,
 “ which is the Cause of the Torture with the *Dutch*? but
 “ the Cause why any is pressed is, for that he obstinately
 “ refuse the Trial of his Country, and challengeth for
 “ Judges as incompetent, which the Law opposeth him,
 “ when he doth for the most part to save his Goods, who
 “ but by that ordinary Course of Trial cannot be tortur-
 “ ed; what is this to the Point of Confession? the Re-
 “ sult whereof the *Dutch* use the Torture, and yet may
 “ blameth them for proceeding according to the Law of
 “ their Country therein, nor yet in their Execution, when
 “ they break the Legs, Arms, and Thighs of the Male-
 “ factors, and then set them upon a Wheel on the top of
 “ a great Pole, there to languish to Death; and Execution
 “ far more dreadful than the *English* Pressing, which is
 “ suddenly done, and so seldom used.

“ But why doth he not name the Author of cruelty,
 “ or foreign Writers, which condemn this kind of Execu-
 “ tion? Let him do it yet, and he shall have more Ac-
 “ tions of his own Country that shall condemn more
 “ of Tortures, and yet the *English* complain not of
 “ Courts in general, but of the unlawful Use of the con-
 “ trary to the Laws even of the *United Provinces*. I shall
 “ in this Point the Author pretendeth, that the ordinary
 “ Torture was used in this Process. What Torture
 “ was, and in what Degree, appears in the *English* Plea-
 “ tions, but he can find little or none now used in
 “ Acts. What if he will not find it? Shall we not
 “ know at *Ambeyna* have conceived it? Shall we not know
 “ that that suffered it then-lives? Shall we not know
 “ those that being themselves so justly yet have
 “ Cities, and saw the Burning of many Cities, and
 “ men, and have continued the Remembrance of it

“ and Reasons for the King’s Majesty to behold his own
 “ Cafe with an Eye of Prevention; but especially finding
 “ a Combination betwixt *France* and *Holland* to take and
 “ divide the Provinces of *Flanders* betwixt them, and to
 “ possess the maritime Towns, as *Dunkirk*, and others
 “ opposite to *England*. This made his Majesty think
 “ how to quench the Fire that might flame into his own
 “ Houfe. And having Intelligence that they were both
 “ to join in one Fleet, a Thing not usually done by the
 “ *French*, and they making no publick Declaration of
 “ the Design of their Ships, as commonly Princes use to
 “ do in such Cafes, his Majesty could make no less Con-
 “ struction, than that they intended to deprive him of his
 “ ancient and allowed Prerogative of the Narrow Seas,
 “ which behoved him as much to defend, as his King-
 “ dom; for he that covets the one, will do as much by
 “ the other, if it were in his Power to effect it. Where-
 “ fore his Majesty armed these Ships following to Sea, to
 “ engage the Reason at their Hands, not intending to in-
 “ jure any Nation, but to keep himself and Subjects from
 “ being injured, and to curb the Insolency and Pride of
 “ any People that should go about to intrude his Royal
 “ Prerogative.”

It may not be amiss to observe here, that the Word Pre-
 rogative is used in a Sense by this Author, which interests
 the Subject as much as the Prince; for the Prerogative
 here contended for, though nominally in the Crown, was
 virtually in the People of *England*; and it was to main-
 tain their Right that the famous *Seiden* was encouraged to
 compose his *Mare Clausum*, in Answer to *Grotius’s* Book,
 entitled *Mare Liberum*, intended to justify, by Reason, the
 ambitious Projects of the *Dutch*. That this was truly the
 Cafe, and that the King had nothing in View but for the
 Benefit of his Subjects, appears plainly, by the Care he
 took for advancing the Trade to the *East Indies*, which
 began now to decline exceedingly; for the *Dutch* had so
 frightened them by their Severities, that the Servants of the
East India Company were afraid to dispute with them, and
 not much inclined to settle in any Colonies there; so that
 by degrees, our Trade would have fallen to nothing, which
 was precisely what the *Dutch* desired, and were, by all
 means, endeavouring to bring about.

The King, to redress this Evil, and to preserve this
 Trade, as far as it was possible, listened to the Proposals
 made by Sir *William Courten*, and some other rich Mer-
 chants of *London*, for sending a Squadron into those Parts
 to settle and trade, but without Prejudice to the Rights
 of the *East India* Company; and accordingly by his Com-
 mission, under his Royal Signature, dated the 12th of *De-*
cember 1643, he did grant Licence to the Persons therein
 named, to lend a certain Number of Ships into the *East-*
Indies, and they accordingly did send six large Ships, Sir
William Courten himself adventuring one hundred and
 twenty thousand Pounds. These Adventurers had very
 good Success abroad, if they could have found any Way
 to have got their Riches home; but the *Dutch* were too
 cunning for that; so, creating the Establishment of a free
 Trade between the *English* and *Indians*, they resolved to
 take Things in the Beginning, and accordingly to way-laid
 the *Prasen* and the *Catherine*, which were two of the lar-
 gest Ships these Gentlemen had employed, that not far from
 the *Cape of Good Hope* they sunk both the Vessels, and
 every Soul on them, by which a great Number of able
 Seamen were lost, together with a Cargo of the Value of
 One hundred and fifty thousand Pounds.

No other was this the single Act of this kind, for in the
 Year 1644, of the same Proceedings, except Sir *William Cour-*
ten, who was dead, lent out seven more Ships, which
 were employed to the *East Indies*, and were again met with
 by the *Dutch*; for in the Month of *January* 1645, the
Elizabeth and the *Prasen*, being with Pepper and other Indian
 Goods, were intercepted, where they found in the Hands of
 the *Dutch*, who were under Pretence of helping the Master
 and Crew to the Coast, seized and pillaged them
 of all their Goods, Tackles, Ammunition, Merchandise, and
 Provisions, and reserved the Tackles to the Use of the *East*
India Company, and *John Fendley*, the Govern-
 or of the *East India* Company, sent away the Master and

out any manner of Succour or Relief, to the Damage of
 Mr *Courten*, and the rest of the Interessed, the Sum of
 10000 Pounds and upwards. And about the Month of
June 1643, the *Bona Esperanza* making a trading Voyage
 from *Goa* to *Maccas*, in the Streights of *Malacca*, was
 violently fit upon by two *Dutch* Ships, Men of War be-
 longing to the said Company, called the *Jendille* and the
Portogalle, whereof Signior *Vesmeren* and Signior *Gra-*
land, with the Lieutenant of the Fort of *Malacca*, were
 Commanders, who, in a hostile Manner, killed the Ma-
 ster, *Roger Tuckerman*, and divers Seamen were wounded,
 the rest took Prisoners, and robbed them of all their Goods,
 Merchandize, Books of Accounts, Writings, and Letters,
 and afterwards led the Mariners about the Streets of *Mal-*
acca in Derision of the *English* Nation, dragging about the
 King’s Colours after them in Triumph, contrary to the
 Laws of Nations and common Anity, all which amounted
 to the Damage of Mr *Courten* and the Interessed in the
 Voyage, to the Sum of 75000 Pounds, or thereabouts.

Upon the News of these inhuman Dealings, Mr *Cour-*
ten was forced to absent himself from the *East Indies*, his
 Bills were protested in *England*, *Holland*, and *Italy*, so
 he became intolvent, and was out law’d, with Sir *John*
Littleton, in the Years 1644 and 1645, for the Sum of
 Fifty thousand Pounds, or thereabouts. Sir *John*
Littleton, being then sequestrated for his Inability to ob-
 ligeance to his Majesty, and in the actual State of the
 King, could not appear to prosecute his Act, or to re-
 venge the Parliament, or the Courts of *Justice*, for Re-
 paration of the violent Injuries aforesaid. Sir *John*
Littleton having taken up several great Sums of Money, and ad-
 vanced them to the King’s Use, was with some of the
 Commissioners for the contracted Farms of the *East*
India Company, fined 150,000 *l.* by the Parliament, and was bound by
 Law for the said Debts, whereby he became intolvent in
 his own Houfe, and during the late dissentions I was
 made incapable to look after his Proportion of the said De-
 mages from the *East India* Company of *Holland*.

Thus all this Project for reviving and restoring the
East India Trade came to nothing; but these Mercantiles
 had engaged in them such vast Sums, were utterly de-
 gared. It is true, that King *Charles I.* interposed in their
 Behalf with the States, which serves rather to show the
 Care of that Monarch, even in his lowest Condition, for
 the Interest of his Subjects, than to show the Justice
 of the *Dutch*, who with much ado were oblig’d to
 pay 85,000 *Guilders*, which proves that their Dealings
 have been just, though the Satisfaction was not
 Notice. While Things stood thus in *England*, the
East India Company carried all before them in the
Indies, and having none to oppose them, they did their
 selves as effectually, that it was not only impossible for
 the *English* to form any Designs to them, but they
 were forced likewise to lay aside all Thoughts of
 their just Rights, and to abandon their *West India*
 Colony for several Years. Such were the sad Effects of
 Confusions at home, with regard to our *East India*
 Trade, and this too at such a critical Juncture, when
 might have been done for the Service of the Nation.

This is, indeed, a very dark and critical Con-
 juncture, of which was never clearly explain’d, and
 the *English* Reader, for should I have said, that
 long now, but that at this Distance of Time, the
 Prejudices are worn off, and we may see more
 freely of the *Machiavel* the Civil Wars, were not
 not only by the Confusions and Struggles
 amongst ourselves, but in the *Indies* themselves,
 by the Confusion it drew upon it, by the
 manner, which might otherwise have been
 and perished People in *Europe*. I am sure
 that our Government to be long, and to be
 our Liberty, or a Republick that we should
 any such Overtight for the future, that we
 ourselves to be betrayed into such a State,
 any Advantages that can be procur’d by
 the Party, or the prevalency of such a
 any agree compensate the evil Effects
 when by reason of such Disturbances, as
 that, we are arriv’d here at the

always to pay to our general, lasting, and solid Interest, as to Affairs at Sea, and of Traffick.

These great and necessary Cares can never be prosecuted as they ought, but in Times of full Peace, and perfect Settlement; that is, when the People and the Government look one Way, and have but one View, as they never can have but one Interest. We see how little, during these Divisions, it was in the Power either of the King or Parliament to obtain any Satisfaction for the Losses they sustained from foreign Nations, which being grounded in the Nature of things, must always be the Case whenever any thing of the like kind happens, in proportion to the Degree in which it happens; for beyond a Question, the Prosperity of this Nation at home and abroad, depends solely on the Harmony subsisting between the Government and the People, which can subsist no other Way than by the former attending to the Concerns of the latter, with that Diligence and Disinterestedness that becomes those, who for the publick Benefit are entrusted with the Administration of the Concerns of a free People. We have nothing more to add during this Reign, and shall therefore proceed to such Matters as concern this Subject after the Death of the King.

10. The immense Wealth, and great naval Power of the Dutch, acquired, as has been before observed, in the Times of our Divisions, and when it was impossible for us to prevent it; encouraged them to think of establishing their own Wealth and Grandeur by a total Suppression of our maritime Force, to which, perhaps, they were tempted, from an Opinion, that the Parliament, or, as it was then called, the Commonwealth of England, would scarce adventure upon a War abroad, when the had scarce extricated herself from one at home. But they were mistaken, for the Parliament of England, however they came by their Right, or by their Power rather, were determined to make a just Use of it; and this produced the first Dutch War, in which they, for the Reasons before assigned, were the Aggressors, but suffered dearly for it in the End, since after repeated Defeats at Sea, and notwithstanding they expected to procure a new Revolution here, by setting up the Protector instead of the Parliament, yet they were forced to submit to a Peace upon the Terms presented to them, which was signed at *Breda* the 21st April, 1674, and by this Treaty the States were obliged to do that Justice to *Amboyna*, which they had refused to King James and King Charles.

The twenty seventh Article of that Treaty being contained in these Words: "It is agreed above, that the Lords the States General of the United Provinces, shall take Care that Justice be done upon those who were Partakers or Accomplishers in the Misdemeanor of the late *Amboyna*, as the Republick of England is pleased to term that Fact, provided any of them be living." In consequence of this Treaty, there was a Commission granted on both Sides, which sat at *Goldsmith's Hall*, in order to hear and determine the Complaints that should be made to them both by the English and Dutch East-India Companies, and their Determination was to be final. The English Company put in a Charge, consisting of fifteen Articles, concluding, that besides the Loss of their Settlements, they had suffered to the Amount of the Sum of two Millions six hundred ninety six thousand nine hundred and ninety nine Pounds fifteen Shillings Sterling. The Dutch East India Company on the other hand brought in their Demands, but without entering exactly into Particulars; yet ascertaining in the Close their Expenses at eight hundred and fifty thousand Pounds, which being considered, together with the evidence offered on the Support of each side, the Commissioners came to a conclusion, which they Ruled a Regulation concerning the Losses and Damages sustained in the East and West Indies, which was signed on the 21st of August, 1674.

And in this Paper, after reciting all the Demands before-mentioned at large, they proceed in the following Terms: "All which Complaints and Demands exhibited to us the said Commissioners, by the Deputy of both the English and Dutch Companies, expressly chose to this Purpose, have been laid before us with a great Number of Documents, Instruments, and Proofs, exhibited to us

"for forming and corroborating their own Demands, as
"for destroying and retuning those of the opposite Party;
"and at length the Arbitration of all those Controversies
"is submitted to us the aforesaid Commissioners by the
"said Deputies of both Companies. Wherefore we the
"aforesaid *John Loxton, William Turner, William Thom, &c.*
"*Thomas Kendall, Adrian Van Armonde, Christian Van*
"*Rodenburgh, Lewis Housens, and James Oysel,* after
"having seen, read, examined, and accurately considered
"all the Documents, Instruments, and Proofs exhibited
"to us on both Sides, together with all other things which
"seemed necessary for the Discovery of the Truth; and
"being desirous to reconcile and to establish a permanent
"Agreement between both the Companies aforesaid, by
"virtue of the Power and Authority to us given and
"granted by the most high the Lord Protector of the Re-
"publick of England, Scotland, and Ireland, and the High
"and Mighty Lords the States General of the United
"Netherlands, have decided, defined, and determined,
"and by this our present Award and Arbitration so decide,
"define, and determine, as follows:

"We make void, extinguish, obliterate, and altogether
"wipe out and commit to Oblivion to be never to be re-
"vived at any time, and upon any Pretence, by any Per-
"son whatsoever) all Complaints, Pretensions, and Con-
"troversies mentioned more at large above, and all others
"whatsoever, which the English Company trading in the
"East-Indies, doth or may form against the Dutch Com-
"pany, without excepting a y^e of whatsoever kind, Na-
"ture, or Condition they may be; and particularly we
"appoint and ordain, that the said English Company shall
"not for the future sue or demand any thing of the said
"Dutch Company in *India*, or elsewhere, under the De-
"nomination of the Customs of *Ormus* and *Goa*, so
"that the Dutch shall never be molested, or disturbed by
"the English in that Cause, under any Pretence: Provided
"nevertheless, that this does not prejudice any Action or
"Plaint, which the English Company may enter against
"the King of *Perusia*, or any other Person whatsoever, the
"Dutch excepted. In like manner we make void, extin-
"guish, obliterate, and wholly blot out and commit to
"Oblivion, to be never to be revived at any time, and on
"any Pretence, by any Person whatsoever, all Complaints,
"Pretensions, and Controversies mentioned above more
"at large, and all others, whatsoever they be, which the
"aforesaid Dutch East-India Company can or may form
"against the before named English Company trading in
"the East-Indies, except name, or whatsoever kind, Na-
"ture, or Condition they may be; and moreover we ap-
"point and decree, that the said Dutch Company shall
"yield and restore the said *Amboyna* to the said English
"Company, in the same State and Condition as it is now;
"provided nevertheless, that it shall be lawful for the said
"Dutch Company to take a reasonable number of their
"said Island military Companies, Militaries, and of
"hold Staff, and all Moveables, if they happen to have
"any in the said Island.

"And in the last Paragraph of the said Award, that the
"said Dutch Company shall pay to the said English Company
"the Sum of Sixty thousand Sterling in ready Money
"before the last Day of February next ensuing, according
"to the English Style, and the other Money before the
"last Day of March following, according to the same
"Style; and all Controversies between the said Companies
"being by this means composed, decided, and deter-
"mined, to the end that a Stop may be put to the
"Quarrels of private Persons.
"We have by this Award determined all the Com-
"plaints and Demands, which have been exhibited to us
"Name of both parties, and the Witnesses, and of
"having received Injury and Damages at the said
"Year 1674, and on the other hand we have considered
"the Matters which have been alledged and
"exhibited by the above-mentioned Deputies of the
"Company in their own Defence; and we the said Com-
"missioners aforesaid considering that no one Person has
"pleas under-written hereon this Award, or that any
"Articles or Demands have been exhibited, or that any
"whatsoever should be entered in our Award, and being

any Regard to the good of
to be spoken at all times, I
to say, that I knew not where
his Part of my Subject, and
these Things down, than
Collection. But if there be
Facts, or any Truths written
Animosity, it is none of my
Intention; besides all this,
orious, and to very capable of
very Nature, at the same time
tercels were equally concerned
cannot help thinking them as
my Author's Book has been
well as unrefuted, is a demon-
gh very extraordinary, they are
and if so, I am very surpris'd
e a Place in his History, that

what they could not lade home, they were to employ by
Freights in *India*; and I saw a Letter from the Governor
of the Company in *England*, intimating, that when they
had got as much Credit of the Mogul's Subjects as they
could, then they would pick Quarrels with the Creditors,
and put a general Stop to their Trade, which was accord-
ingly done; for in 1686 and 87, the *Surat* Merchants traded
briskly by Sea to *Mocha*, *Perfia*, and *Bassora*, to the West-
ward; and to *Bengal*, *Achen*, *Malacca*, and *Siam*, to the
Eastward. The General granted Patks to all who required
them then; but about the latter End of the Year 1687, he
sent many Complaints and Grievances to the Governor of
Surat, and demanded Redress and Satisfaction.

These Complaints of his were digested into thirty five
Articles, most of which related to *Mell Pitt* and *Boucher*,
who were originally of the Governor's Council, appointed
him by the Company, Men of fair Characters, and who
had given him much Trouble, by opposing all his illegal
and violent Measures, which made him use them foolish, and
threw without such an Inclination to use them worse, that to
preserve themselves from Beggary and Ruin, they retired
into the Mogul's Country; and *Mr. Boucher* having, by an
Application to that Monarch, procured his Licence to trade,
continued it with great Success; but as for *Mr. Pitt*, he
had the Misfortune to be taken by Pirates at Sea, who at
first would have ransomed him for five thousand Pounds,
but were persuaded by the Governor to demand twenty-
five thousand Pounds, so that he remained a Prisoner to the
Day of his Death; and the Governor required *Mr. Boucher*,
who resided at *Surat*, from the Governor, toge-
ther with his Wife, Children, and Effects; the rest of his
Demands were alike reasonable, and all of them delivered
in such Language, as would not become one Gentleman to
use to another, much less fit from the Governor of an trading
Company to be great a Prince, as may appear from one of
them; in which he demands, that the Gates of *Surat*
should not be shut, when he went to take his Pleasure, or
should be opened at his Return, and due Respect paid him
whenever he thought fit to unbend his Mind, and to amuse
himself with such kind of Diversions.

These Grievances were the Foundation on which General
Cham built a Quarrel with the Mogul, without ever lend-
ing them to Court to know the King's Pleasure; but with-
out declaring War, seized his Subjects Ships, where-
ever they were found, although they had the Sanction of his
own Patents. This Articles of Complaint were but weak Ar-
guments to support and raise a War that cost his Masters
above four hundred thousand Pounds before they could get
rid of it, besides the Loss of their Credit with the Mogul,
and his Subjects, which to this Time is not quite reco-
vered. For by what Rule in Policy could *Sir Jothab* or *Sir*
John think to rob, murder, and destroy the Mogul's
Subjects in a Part of his Dominions, and expect the Com-
pany to copy a free Trade in the other Parts? Or how
could they suppose that he would stand neuter? The General
having lost a great Number of Ships on his Hands, and
been Employed for them, sent them to *Mocha*, *Perfia*,
and *Banga*, where the *Sarats* had sent theirs, under the
Protection of his Patents. Captain *Andrews* in the *Ch. II.*
went to *Mocha*, and set up the King of *Argentan's* Flag on
his Flag-staff, and there he seized two *English* Ships, one
from *Argentan*, called the *Streight's Merchant*, commanded
by Captain *Beard*, and another belonging to *Mr. Samuel*
Whitman at *enon*; he was commanded by one Captain
Wren, whom they seized in the *Casbah*, because he would
not deliver his Ship up voluntarily; there was but little of
their Cargoes on board of the Ships, so they might as well
have left them alone. However, the Company complained the
Governor and Merchants of *Mocha*, that they had a Design
to force Captain *Andrews* to raise the flag, but he refus-
ing as much, fled on board, and hid his Colours flying
at the Mast.

He then after left *Mocha*, and carried his two Prizes
with him; and *Mr. Charles* Captain of the *Mer-*
chant, that Bills for his Ship were paid for at *Madagascar*, ex-
cept about sixty Pieces of Silver, that he carried with him
to *England*, which was very well, and the Company were
obliged by Law to make good on his Ship's Cargo 170

rata, as those sixty Bales sold for, which amounted to
thirty two thousand Pounds. The *Bristol's* Cargo was also
made good to her Owners, with the Ship that was taken
at *Johanna* by the *Phoenix*, which came to sixty thousand
Pounds; and the *Little Betty*, that was also taken by the
Phoenix, in her way to *India*, cost them twelve thousand
Pounds, though she and her Cargo at *Bombay* were sold for
less than six hundred Pounds. The Owner of that Vessel
was one *Mr. Hestwell*, a Quaker, and a substantial Mer-
chant in *London*, who arrested Captain *Fryell* going off the
Exchange. The Captain proffered King *James* for Bail;
but the Quaker would not accept of him; yet was content
to accept of *Sir Joseph Horns*, who became Bail. The
Charles, *Caspar*, and *Royal James* and *Mary*, way laid the
Surat Shipping, and brought in fourteen Sail to *Bombay*,
in *Arro* 1688, and yet no War with the Mogul, only with
the Inhabitants of *Surat*, whom he threatened to humble.

In *October* 1688, he went to *Surat* Road in the *Royal*
James and *Mary*, with three or four other Ships of Coun-
tenance, to try if he could bully the Governor, and frighten
the Merchants to a Compliance of losing their Barges; but
was disappointed in both. He staid there till the Begin-
ning of *January* 1689, and then left *Surat* in a Huff, and
brought all the *English* Ships, except the *Slap Adventure*,
which the *Phoenix* had forced over the Bar, when she was
lying at the River's Mouth, taking in a Cargo to *Eng-*
land, under the Protection of *Mr. Boucher's* Firmans.
However, her Supercargo dying, the Ship's Bottom was
eaten up with Worms in the River, and part of the Cargo
remained many Years in *Mr. Boucher's* possession. On the
General's Passage to *Bombay*, he met with a Fleet of Ves-
sels that were carrying Corn to an Army of the Mogul's
that lay at *Dunder-rajah pore*, about fourteen Leagues to
the Southward of *Bombay*: That Fleet he also seized, and
carried into *Bombay*, though against the Opinion of most of
his Council. Before this Seizure, he asked the Opinion of
some Sea Officers; and one Captain *Hinder* being the oldest,
advised him not to meddle with the Corn Fleet, because it
would frighten the Army, and force them to look abroad
for Provisions, where it might be procured, and perhaps
might affect *Bombay*, which was in a great measure be-
hoken to its Neighbours for Suttenance and Fire-wood.
The General intreated him with scurrilous Language, called
him Coward and Fool, and bragged, that if *Sir John* *Tacop*,
which was the Mogul General's Name, should care to
come with his Forces to *Bombay*, he would blow him off
again with the Wind of his Bum. Cowards are generally
fearful when Dangers are at a Distance, and so was our Ge-
neral, who had never seen a Sword drawn in Anger, and
who was consequently very ill acquainted with War; and
when it came to his Door, none was ever so confounded
and so dejected as he was, as appeared by his Conduct in
that War, that he so foolishly brought on himself and his
Country.

When the News came to *Sir John Tacop*, that his Fleet
with his Provision of Corn and Cloth were seized, and car-
ried to *Bombay*, he sent a civil Letter to our General to dis-
engage his Fleet, protesting, that as he had not meddled
in the Affairs between him and the People of *Surat*, he
would continue neuter, unless he was forced to do other-
wise. But our General gave him an insolent Answer, and
the Fleet was unladed at *Bombay*. *Sir John Tacop* desired
to desire the Delivery of his Fleet in plain Terms, other-
wise he should be obliged to come with his Army and ap-
pear at *Bombay*, where his Provisions were all consumed;
that his Fleet was seized at *Lahore* before the Month of
February, which was our first Hand; he would be ready
at *Bombay* in 1490. But still receiving no satisfaction,
he performed his Promise to a *Latin* Merchant, who
he had met at a Place called *Surat*, about six Leagues
from the main Port, with twenty thousand M^{rs} of the
Our General's Security; he made from thence a private
returning to a *Country*, relating to the *King's* *Ar-*
Forest, which was seized at that time, and the *Surat*,
or ever were fired, and *Europe* and *India* had Ships
enough, had they been seized in proper places, they might
certainly have hindered his coming to *Bombay*, and
again; but in those times, they were not so well success-
ful.

and the *Sedee* landed at Midnight, and the Redoubt, where he landed, fired a great Gun to give the Alarm, and so deserted their Post, and the *Sedee* took Possession of it.

At One in the Morning the *Cattle* fired three Guns to give the General Notice, which brought such Fear on those that lived securely in their Houses without the *Cattle*, that the poor Ladies, both white and black, ran half naked to the Fort, and only carried their Children with them; but they were all obliged to wait without the Walls, till Day-light relieved them. Next Morning the *Sedee* marched to *Mazagan*, a small Fort of fourteen Guns, and about a random Shot distant from the *Cattle*. On the Enemy's Approach, the Fort, though situated on a Point of Rocks, where the Sea defended three Quarters of it, was also deserted in such Precipitancy that eight or ten Chests of Treasure, which generally contain one thousand Pounds each, and four Chests of new Arms, were left behind, though the Seamen that were sent in Boats to bring them off proffered to carry them along with them; but the commanding Officer thought them not fit to be trussed with Money and Arms, and to they were left for a Present to *Sedee Yaccup*, with fourteen Cannon, two Mortars, with some Powder, Shot, and Sails. But why that Treasure, and those Arms and Ammunition were deposited in *Mazagan*, few could account for; and the Reason why they were left to the Enemy was as wonderful: But it is plain, that the old Way of fishing in troubled Waters was known at *Bombay*, and the Officer was never called to account for his Oversight. *Sedee Yaccup*, finding no Opposition, sent a Party of Men towards *Mabim* to plunder the poor Peasants, and to take the Fort, which he thought might be deserted as the rest had been, and was not in the least out of his Conjecture; for the Garrison had embarked in Boats, and came by Sea to *Bombay* before they saw an Enemy; the *Sedee* taking Possession of *Mazagan*, hoisted his Flag there, and made it his head Quarters. The following Day some of the Enemy appeared on *Mazagan Hills*, which grieved our General's righteous Soul to see Infidels come to near him in a hostile manner.

He called a Mission of his own, one Captain *Peau*, who was no better Soldier than himself, and ordered him to take two Companies, each containing about twenty Men, and march to those Hills, and drive the Enemy out of Sight; he ordered one *Monte*, who had been a Soldier at *Tangier*, to be his Lieutenant. In *Tangier* he had received a Wound in his Head that spoiled his running, and accordingly they marched in good Order within shot of the Enemy, who shewed their Heads above the Surface of the Hill, but did not offer to advance, or expose their Bodies; several Gentlemen Volunteers took their Arms, and accompanied the little Army. The Lieutenant advised the Captain to march up the Hill in Platoons to separate the Enemy's Forces. The Captain, who took it as an Affront to be advised, had his Lieutenant, that when he had the Command in his own Hand, he might use it as he thought fit, but as it was intended to him, he would use it according to his own Mind, and to ordered his Men to stand as much as they could; and when they saw the Enemy open in the Plain, to discharge at once amongst them, which he had would not have done. *Monte* opposed his Scheme, and told him of the Danger he would bring himself and them into, if the Enemy should attack them, whilst their Arms were reloading; but nothing could persuade him from his Project, and he commanded his Men to fire, as he had directed. The *Sedee* being then to one in Numbers, and better Runners than our Men, and better acquainted with close fighting with Sword and Target, took hold of the Opportunity, and advanced with all their Speed, which the Captain perceiving, he took himself to his Heels, and was the last of his Men to the Portuguese Church, where he took Courage to look behind him, to see what was become of his Men. *Monte* thinking to stop the Enemy's Career by a shot of the Wing that he commanded, found himself cut off by about thirteen or fourteen stout Fellows, who were soon surrounded by the Enemy, and cut to Pieces. *Peau* had not stopped at the Portuguese Church, but he had sent a Party of one hundred Men that lay there ready to support or receive him, as his Case should require. He was a brave Man, well used, for finding as any that was

ever seen, and was so much in the General's Favour, that he had not so much as a Reprimand for his Cowardice and Misbehaviour. This Relation I had, says Captain *H.* from a Gentleman Volunteer, who always kept near the Captain, while he could keep Pace with him.

When the General left *Sarat*, there were several Gentlemen in it, some in the Company's Service, and some private Persons, who were all imprisoned, and put in Chains, except Mr. *Boucher* and his Dependants, who were protected by his Purmand. Those imprisoned were severely used, being obliged to pass through the Streets with Irons about their Necks, for Spectacles to please the Mob. Captain *Johnson* and Captain *Phinan*, though particular Merchants, were obliged to act their Parts in the Tragi-Comedy, and continue Prisoners, where Captain *Johnson* died; but Captain *Yeoman* got his Liberty at the End of the War, which was about the Beginning of June 1692. I will now return back to the Year 1686, when Sir *John Weyborn* was sent from England with a Commission of Judge-Admiral from the King, and he had likewise another Commission from the Governor of the Company, when they made him believe was also from the King, to condemn and hang thirteen of the Inhabitants of *St. Helena*, where, in a Tumult caused by the Oppressions of the Governor of that Island, one *Johnson*, the Second, was killed, Sir *John Weyborn* took his Passage to *India* on board the Ship *London*, and in his Way called at *St. Helena*, and hanged up the thirteen proscribed Persons without former Process, for which the Company paid dear afterwards; and to had Sir *John*, had he lived. But he being the illegal Proceedings of Mr. *Child* to be insupportable, and meeting with many Affronts (from that Man without Manners) died at *Bombay* about two Months before the *Sedee* came on it. He was much lamented by all honest Men that knew him. He was Captain of the *Happy Return*, who accompanied the *Gloucester*, when she was bringing the Duke of *York* to *Scotland*, and lost by the Way. It was Captain *Weyborn* that sent his Barge to wait on the Duke, and brought him safe on board the *Happy Return*, who carried him forward to *Scotland*, for which good Service he was knighted; he was ever after a great Favourite with King *James*, who seeing he could not be brought into his Majesty's, put that Employment on him, to assist him with Honour: And now the *Sedee* being Master of the whole Island, except the *Cattle*, and about half a Mile to the Southward of the *Cattle*, he raised Batteries on *Deserth Hill*, which overlooked the Fort Wall, and called the Garrison very much; then he put four great Guns in the Custom-House, commonly called the *India House*, and raised a Battery at the *Moodies House*, within two hundred Paces of the Court, and another in the *Lady's House*, which he had been to be kind to; so that it was dangerous to go out or in at the *Cattle* Gate, till we got up a Hill, Men over it. All Men were then pressed into the Company's Service, and our Author among the rest.

We sailed, says he, the Month of *April* to *Bombay* very ill; for Provisions grew scarce, by the Addition of three thousand *Servises* that were employed as Auxiliaries in the military Service of the Company. When the War of Months were over, in *September* we went to Sea with our small Ships to cruise on the *Mogul's* Subj. I had a pretty good Success. I was employed in that Service, and had the Command of a small Privateer of twenty eight Guns, with twenty fighting Men, and sixteen Fellows. In three or four Months I brought me Prizes to the value of Laden most with Provisions and Cloaths for the *Mogul's* Army, which was now increased to forty thousand Men; but we were not allowed any Plunder, but were obliged to distribute ourselves; for when we brought our Prizes to the Chells were severely treated, and if we could have any of our Pay, it was paid for by the Company's Officers; Money we had found in the Prizes, was made us a present of, by putting the Enemy at Sea: Except when King's Prizes we never looked out for Prizes; by which Ind. we saw many of the Enemy escaped, that we could have had. The ill Success we had assure with the Enemy, our General sick, and in *December* he dispatched two of our Ships to the *Mogul's* Court, with a Letter from our *Mogul* *Muzumdar*, he was cut off, and had some other

 a Court-Martial, and
 and some other that

Court. They went under the Name of the *English* Em-
 bassadors; Mr. *George Weldon* was first in Commission, and
Abraham Narvar, a Jew, was second. In fifteen Days
 they arrived at Court, being then at *Jehanabat*.

They were received but colidly; but about the Middle
 of April, by the special Alliance of Presents to the Officers
 at Court, they were admitted to Audience, but were
 brought to *Aurengzeb's* Presence, after a new Mode for Em-
 bassadors, their Heads being tied by a Suth before them,
 and were obliged to prostrate themselves. The King gave
 them a severe Reprimand, and then asked their Demands.
 They first made a Confession of their Faults, and desired
 Pardon. Then that their Phirmaund, which was forfeited,
 should be renewed, and that the *Serde* and his Army
 should be ordered off *Bombay*; their Submission he accept-
 ed, and pardoned their Faults, on condition that Mr.
Child should leave *India* in nine Months, and never come
 back again. The Phirmaund to be renewed on condition
 that Satisfaction should be given his Subjects on account
 of Debts contracted, Rebberies committed, and Loss and
 Damages made good; and on Security given for the due
 Performances of these Premises, the *Serde* and his Army
 should be ordered off the Island.

In January General *Child* died, which much facilitated
 their Affairs; but it was kept secret at Court, till they
 knew how the King would order the Affair about him. In
March, *Miser Mezzanie* died also, and it was supposed was
 poisoned by some Enemies contracted by his good Services
 to the *English*. When he was given over by the Physicians
 our Embassadors sent to know what he had done with the
 nity thousand Rupees he had received for secret Services?
 He answered, that he was sorry that ever he had meddled
 in their Affairs; for he had served them even with his Life,
 and yet they were not contented; for what Use that Sum
 was put to, he durst not divulge. When our Affairs were
 in so bad Circumstances at the Mogul's Court, the *Dutch*
 Company had one Mr. *Barren* their Embassador there, who
 designed to impole on *Aurengzeb*, who he thought was ig-
 norant of *European* Affairs. The News of the Revolution
 in *Britain* being arrived in *India*, when he had an Au-
 dience of *Aurengzeb*, he began to magnify the Power and
 Authority of his Country, and vilify the *English*.

The Mogul seemed to be pleased with his Discourse and
 encouraged him to go on: He said, that the *English* were
 but contemptible in Con parison of his Sovereigns; for they
 were forced to lend the *English* a King to rule over them;
 and that if his Majesty would excite the *English* from the
 Trade of his Dominions, the *Dutch* would carry it to a
 much greater Height, and into his Treasury, and the
English would not know where to put it. The Mogul
 gravely answered, that if his Majesty was so much super-
 ior in Power and Riches to the *English*, they might easily
 cast them out of *India*, and engross all the Trade of his
 Countries to themselves, and commanded him to tell his
 Majesties, that he expected it from them. Then the Em-
 bassador excused himself, and said that he could act nothing in
 that Affair, till he received Orders from *Holland*: *Au-*
rengzeb then imprisoned him, and showed him wherein he
 had erred; for, says he, about seventeen Years ago the King
 of *France* conquered most of your Country in a few Days,
 and then it was the *English*, and not the Power of *Holland*,
 that rebelled him; and that if *England* did not hold the
 Balance of Power, either the Emperor, or the King of
France, could conquer it in one Campaign. The Em-
 bassador knew not how to answer these Truths; but being
 sent to solicit some Indulgence in that Trade, he could ob-
 tain none, and so left the Court distressed.

After our Embassadors had obtained Pardon, they began
 to be dispensed, and had Liberty to take their Diversions
 abroad, till a new Phirmaund was drawn up, which, ac-
 cording to the Method of Eastern Courts, took up some
 Time. However, Orders were sent to the *Serde* to be in
 Readiness, and the *English* had the same Orders, so that
 frequent Visits passed between the *Serde's* People and ours;
 and during the War, about sixty *Europeans* of several
 Nations had deserted us, and took Part of the *Serde*. The
 Reason they give for their Desertion was, that they re-
 ceived from the *Dutch* Officers a great deal of Money, and
 still the Way, on pretence of Pardon. The Phirmaund

being ready, and the required Security given, *Serde Taccop*
 left *Bombay* the 8th of June 1699, but he also left a Pestil-
 ence behind him, which in four Months Time destroyed
 more Men than the War had done, and for Joy made a
 malicious Bonfire of his head Quarters, *Muzagan* Fort.

Now we may see the Mogul's Sale in his new Phir-
 maund, to be sent to *Surat*, as it stands translated from
 the Company's Interpreter, which runs thus in the printed
 Copy annexed to Sir *John Child's* Articles of Grievances:
 "The Occasion of your writing to me was, your being
 in Fault in all these Troubles; that you have repented
 of what you have done; that you made several Com-
 plaints against former Governors; all which I have
 here from several of my Omras, and the several
 "Abus received from them and their Officers; all
 "which you should have acquainted me with before you
 "proceeded so violently. Having acknowledged your
 "Error, and desired Pardon, I do not only grant your
 "Request, pardoning what is past, but granting you a
 "Phirmaund, according to your Desire, and have order-
 "ed *Asfa Caun* to forward it to the Governor of *Surat*,
 "with such Particulars as he will acquaint you with. At
 "the Arrival of my Phirmaund, receive it with great Re-
 "spect, acknowledging the great Glory you have got in
 "obtaining the same. That you may trade as formerly
 "at your Pleasure, and as accustomed. That you deli-
 "ver to the Merchants that have complained against you
 "their Ships, with their Effects. That, for the future,
 "you do not commit the like Error in doing as you have
 "done; and proceed according to my Will and Pleasure,
 "and be not forgetful of the same. If you receive any
 "Affronts from my Governors, or their Officers, or any
 "of my Subjects, be not negligent in acquainting me
 "of the same; I have ordered *Asfa Caun* to write accord-
 "ingly. What you write concerning former Governors
 "protecting Mr. *Boucher*, that you have several Demands
 "on him; that you cannot call him to an Account, de-
 "siring that he may be delivered to you; my Order is,
 "that you prove your Demands according to Law, that
 "Justice may be done accordingly. Dated the 31st
 "Year of *Aurengzeb's* Reign."

It seems, the King was not ignorant of the hard Usage
 his Subjects had met with; nor was he desirous of Seve-
 rity in punishing Offences and Affronts, but, like an in-
 dulent Prince, only told them of their Faults, and pru-
 dently admonishing them not to be guilty of falling into
 such like Errors; and, in a Majestick Style, advised them
 to receive his Favour and Graces with great Respect; and
 that they ought to make the Law the Standard of Justice,
 and in all his Words and Actions use a Christian Moderation.
 General *Child* being dead, Mr. *John Faux* succeeded
 him in the Government of *Bombay*: But Mr. *Barkolome-*
new Harris, who had been Prisoner at *Surat* all the Time
 of the Rupture, had the Seniority in the Company's Ser-
 vice; but it not being a Custom for one that had been the
 Mogul's Prisoner for any Crimes judged to be capital, to
 receive publick Marks of Esteem from the State, without
 a singular Allowance from the King, Mr. *Faux* was obliged
 to go to *Surat*, and receive the Phirmaund, and the
 King's *Serpas*, or Pretent, which, on such Occasions, is
 generally a fine Horse, and a Suit of Cloaths from Head to
 Foot, made of rich *Atlas*, or *Zerbaftas*; those are
 Sattins, or *Pasties*, full of Gold and Silver Flowers
 wrought in them. The Horse must never after be sold
 on any Account whatsoever. They have also a fine Tur-
 ban, embroidered Sines, and a Dagger of Value flunk in-
 to a fine *Cummand*, or *Sath*; and being equipped in
 that Habit, the Phirmaund is presented by the *Goelber-*
dar, or *Hollibouk* on (or, in *English*, the King's Mes-
 senger) and the Governor of the Province or City, makes
 a short Speech adapted to the Occasion, letting forth the
 great Honour conferred upon him by the great King in
 the World; with an Administration to make his future Ac-
 tions deserve such Favours.

At the aforesaid Manner Mr. *Faux* received the Phir-
 maund in a gilded Box; and, according to Custom, put
 it on his Forehead a little while, and, by an Interpreter,
 proposed the Governor a Compliment, acknowledging the
 King's favour and the Governor's Civilities; and then the

and sent him Prisoner to England. Though his Reign was short, it was very pernicious to his Masters, as well as to particular Merchants under his Jurisdiction.

But to return from this Digression: *Bombay* was governed by a Deputy, since the President was obliged to stay at *Surat*, and of seven or eight hundred English that inhabited before the War, there were not above sixty left by the Sword and Plague. Thus *Bombay*, that was one of the pleasantest Places in *India*, was brought to be one of the most dismal Defarts; but the Spirit of Injustice still resided in it; for those who had ventured through the War and Plague in Defence of the Island, had not the Liberty of returning home to their own Country, nor to raise their Fortune by private Trade; but all were continued pressed Men, in the Right Honourable the Company's Service, without the Hope of Preferment, which made some Discontents; and even in the Time of War, when Strangers should have been encouraged to have brought Provisions into the Island, the Company's Taxes of five per Cent. were exacted with great Severity; for it was common to see the *Portuguese* Subjects bring twenty or thirty Poultry to the Market, and five of the best taken for the Custom of the rest.

13. The Desire of continuing this historical Account of the Affairs of *Bombay*, which I take to be very useful and instructive, as well as curious and entertaining, has led me a little out of my Road of Chronology, and therefore I shall be obliged to go back again with respect to the Affairs of this Company, and the political Accidents that have attended them during the Reign of King *William*; but the Reader will not fall into any Perplexity or Confusion from this Method of treating them, because what I have now to say has little or no Reference to the Affairs abroad, and consequently has no Connection with what goes before.

The first Transaction I meet with in this Reign is a Charter of Regulations granted to the *East-India* Company, by their Majesties King *William* and Queen *Mary*, under the Great Seal of *England*, bearing Date Nov. 11, 1693. Referring to a Charter of the 7th of *October*, by which it seems their former Charters were confirmed, and by this new Charter they were enabled to take in a new Subscription for seven hundred and forty-four thousand Pounds. The Company was also tied down to make public Sales by Inch of Candle, to export yearly to the Value of one hundred thousand Pounds of the Manufactures of this Kingdom, and to furnish the Crown yearly with five hundred Tun of the best Saltpetre, at the Rate of thirty-eight Pounds ten Shillings per Tun in Time of Peace, and at forty five Pounds per Tun in Time of War; they were likewise directed to make no Dividend upon their joint Stock, but in Money only. This Charter was to continue for twenty-one Years, provided the Governor and Company complied exactly with the Rules therein prescribed; as also with such other Orders, Directions, Additions, Qualifications and Restrictions as their Majesties, by and with the Advice of their Privy Council, should think fit to appoint on or before the 29th of *September* 1694, otherwise all their Powers and Privileges might be determined and taken away, by Letters of Revocation.

In pursuance of this Proviso, another Charter of Regulations was granted to the said Company, under the Great Seal of *England*, dated *September* 29, 1694, and in the sixth Year of their Majesties Reign, in which among other things it is prescribed, that once every Year, in the Month of *August*, the Governor and Company should present to the Privy Council a true Account fairly written, under the Governor or Deputy Governor's Hand, of the Nature, Quantity, Value, and prime Cost of the Manufactures of this Country by them exported, and from what Place; and this upon the Oaths of the proper Officers and Servants of the Company. And it was further ordered, that none of these Goods should be again landed in *England*, or carried elsewhere, than within the Limits of the Company's Charter. It was also directed, that, on the Application in Writing, of any six or more of the Proprietors, each possessed of One thousand Pounds Capital Stock, demanding a general Court of the said Company to be called, then the Governor, or Deputy Governor should be obliged, within eight Days, to call such a Court, which should not

be adjourned but by the Consent of the Majority of the Proprietors to assemble; and the Company were required to signify their Acceptance of, and Submission to these, and other Restrictions, under Pain of Dissolution.

But, notwithstanding all these Charters and Regulations, which seemed to fully to confirm, and to much to enlarge the Powers and Privileges of this Company, yet were they never so precarious as at this Juncture; for, on the one hand, their Authority was boldly disputed by such as had an Intention to trade to the *Indies*, without any Regard to the Company's Rights, and who, by them, therefore were styled Interlopers: And this, upon Pretence that it was not in the Power of the Crown to grant any exclusive Charter. On the other hand, the Government wanted Money, and therefore the Ministers, who should certainly have defended the King's Prerogative, since otherwise it was a high Crime in them to advise him to grant such Charters, struck in with the other Party; and, for the sake of making more Money, and removing the Obstacles in the Way of their own Administration, promoted the Ruin of those Grants and Charters, which they had been most exorbitantly paid for procuring; and upon the Faith of which vast Numbers of Persons had subscribed their fortunes into the Company's joint Stock. But as it was not to be supposed that any Set of new People would advance two Millions, which was the Sum proposed upon a new Charter, which might prove as precarious as the old one, it was resolved to subject the whole of this Affair to the Cognizance of the House of Commons, in order to have every thing settled and secured by an Act of Parliament. Accordingly, in the Year 1698, this Matter was proposed to the House, not only with the Concurrence of Persons in Power, but backed and supported by all their Interest; so that though it was steadily and vehemently opposed by the Members of the old Company, yet it was to very little Purpose. They followed the bill however into the House of Lords, and were heard there by their Council, Sir *Thomas Pown*, and Sir *Barkulamew Shover*, who, with much Eloquence and great Strength of Reason, maintained the Cause of their Clients, but without Success; and it was a Point determined, that their Interest should give Way to that which, whether truly or falsely I shall not determine, was called the Interest of the Publick.

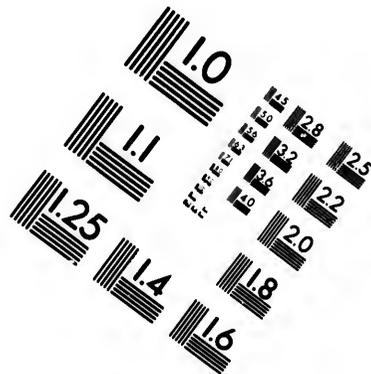

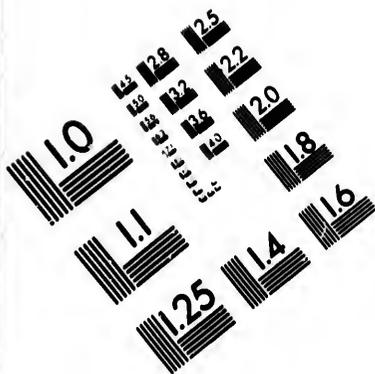

Thus it came to pass, that in the Reign of King *William* III. a new Company trading to the *East-Indies* was incorporated by Act of Parliament, they having advanced the Government two Millions of Money, for which they at first received Interest, after the Rate of Eight per Cent. out of the Funds assigned for the same: But that Interest hath been sunk by subsequent Statutes to Six and Five per Cent. After this, the old and new Companies, having a due Regard to their own common Interests, for the Prevention of divers Inconveniences that might otherwise have happened, both to themselves and this Nation in general, agreed upon several Articles for the Union of the said Companies in manner following, viz.

It was agreed that the Effects of both Companies should be brought home with all convenient Speed for their separate Accounts, and all possible Provision made for the enabling both Companies to bring home the same with Security; and that neither the Crown nor the new Company take any Advantage of the old Company, under Pretence of Forfeiture; and that each Company give a Release to the other, and to their respective Factors and Servants.

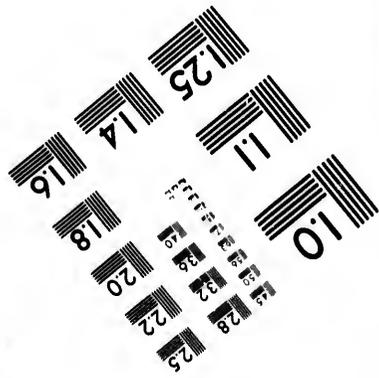

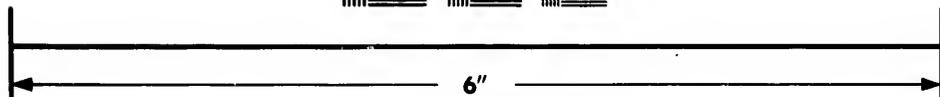

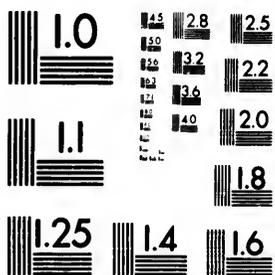

The old Company's 315,000*l.* in Funds, upon the Execution of this Agreement, to be immediately united to the Capital Stock of the new Company; and that the old Company purchase of the new Company, to be transferred by three of their Members in their political Capacity, 673,500*l.* in the Capital Stock and Fund of 1,662,000*l.* with the Benefits to arise thereby: So that the old Company may have 988,500*l.* in the said Fund, which will make that Company equal to the new in Fund and Title to the Trade, and which Stock of 673,500*l.* shall be transferred at four several Times, each fourth Part to be paid for at the Time of their Transfer, at 100*l.* for 100*l.*

That the old Company's dead Stock at home and abroad be valued at 33,000*l.* and the new Company's

dead Stock both abroad and at home, at 70,000 *l.* and that the old Company, at the Time of transferring the first fourth Part of the said 273,500 *l.* do transfer all their dead Stock, abroad and at home, to the new Company, the new Company paying for one Moiety thereof at the same time 16,500 *l.* and that the old Company shall also pay to the new Company 25,000 *l.* for the Moiety of their dead Stock; and thereupon the old Company shall have, and be entitled to a Moiety of both the said Stocks, as Members of the new Company.

The Members of the new Company transferring, shall be entitled to the Arrears of their Annuity until the Time of the several Transfers; after which all Annuities arising by the old Company's 273,500 *l.* shall be paid to such Persons as shall be appointed for that Purpose by the said old Company for their Use; and the new Company shall have the Benefit of all Money arising before their Agreement, and also 5 *l.* per Cent. on all Ships entered or cleared before the Execution of the said Agreement: each Company is to desist from any separate Exportation.

That, during seven Years, each Company shall have an equal Power in the Administration and Management of the Fund and Trade; and, to that End, twelve Persons shall be appointed by the General Court of each Company respectively, out of the Courts of Committees and Directors of the said Companies, who shall be called in the new Charter, *Managers of the United Trade to India*; and a new additional Stock shall be raised for carrying on the future Trade, and be advanced in such Proportions as the said Twenty-four Managers, or the major Part of them, shall from time to time appoint, the General Courts of each Company agreeing thereunto.

The old Company, during the Space of seven Years, shall preserve their Stock in their political Capacity; and, for that Time, remain a separate Corporation, so as to transfer and assign in their own Books, as now they do; and, at the End of the said seven Years, the old Company shall transfer and assign in the Books of the new Company their Share in the Fund to their several Members who shall be then entitled to the same; and thereon the said Members of the old Company shall become, and be admitted Members of the new Company *gratis*.

That each Company shall indemnify the other from their respective Debts and Demands, and a proper Provision be made for that Purpose: And, that the new Company, after the executing their Agreement, shall not take up any Money upon their common Seal, or do any other Act, except what relates to their separate Effects as aforesaid, without the Concurrence of the old Company.

A Covenant to be entered into, that his Majesty shall make a Re-grant within ten Days after the making such Assignment as aforesaid; and that the old Company, within one Month after the said seven Years are expired, shall surrender their Charter and Corporation; and also that the King, within ten Days after such Surrender, shall make a new Grant to the same Trustees, and subject to the same Trust of all such Estate and Effects of the old Company as shall come to or devolve upon the Crown, by reason of the said Surrender.

That immediately from and after the said Surrender, the new Company shall change its Name, and be called the *United Company of the Merchants of England trading to the East-Indies*. Nevertheless, the future Management of the said Stock and Trade, after the said Term of seven Years is expired, is to be, according to the new Company's Charter, on the 3^d of September, 1698. And for the better attaining the Purposes aforesaid, that there be a Tripartite Indenture, executed by his Majesty and both the said Companies, wherein such Covenants and Provisions may be made as shall be thought reasonable, with proper Recitals from his Majesty to each Company, so that as soon as the aforesaid seven Years, allowed for the Convenience of Affairs on both Sides, are expired, the two Companies may be entirely one in Name and Effect.

This, in Truth, was the only Remedy that could be devised for the Cure of so great an Evil, many of the bad Consequences of which were foreseen before it took Eff-

fect, which, however, proved but few in comparison of what was discovered by Experience. Some there were who imagined that this was a *Dutch* Design originally, and formed with a View to undermine our national Interest in this Trade to favour their own; and, to speak freely, there are some Circumstances which give some Probability to this Notion; and, perhaps, amongst these Circumstances, there is none stronger than that the Subscription of the Two Millions was chiefly promoted by Foreigners, as we are expressly told by the Author of the *Complete History of England*, in his Account of the Reign of King *William*, who magnifies the Alacrity with which that Sum was subscribed, and seems to think, that twice as much might have been obtained, if the Act of Parliament had extended to far. But it may seem a Paradox to say, that People would venture their Money to hurt the old *East India* Company: But this is easily solved, by considering that little depended on that Trade, where they were to have so large an Interest as Eight per Cent. for their Money.

The only Way to form a right Judgment of this Affair is, to take a View of the Situation of Things in the *Indies*, after this new Establishment took place: And of this, in his Account of *Bengal*, the before mentioned Captain *Hamilton* has given us a very full and fair Relation, interspersed with some Concerns of his own, which shews that he was an Eye-witness, and did not deliver any thing from Hearsay. If we wanted other Evidence, I might cite that of Mr. *Lockyer*, who, in his Account of the Trade of the *Indies*, informs us, that the old and new Companies had each of them a Factory at *Surat*; and that those that managed them acted with such Animosity against each other, that it was very hard, even after the Companies were united, to reconcile them. It is extremely difficult to find out, and bring together such Relations as these; but the Desire I have that the Readers should be perfectly acquainted with the State of this Commerce in different Periods of Time, that he may frame the better Notion of what has contributed to promote, and what has occasioned, at any Time, the Decay of this Trade, has encouraged me to take all the Pains I could to range the several Accounts I have been able to collect, in such Order as might make them best understood, and best answer the End that I proposed. It was solely with this View, that I resolved to give the following Passages from Captain *Hamilton's* Travels, which, I hope, will sit this Matter in as clear a Light as either myself or the Reader could wish. The Country about *Bengal* described, he proceeds a little higher. Up the East-side of *Hugly* River is *Poreilly*, a Village where a Corn-mart is kept once or twice in a Week: It exports more Riches than any Place on this River. And five Leagues farther, upon the other Side, is *Tanna* Fort, built to protect the Trade of the River, at a Place convenient enough, where it is not above half a Mile from Shore, but it never was of much Use; for, *Anno* 1686, when the *English* Company quarrelled with the *Mogul*, the Company had several great Ships at *Hugly*; and this Fort was manned, in order to hinder their Passage down the River. One sixty Gun Ship approaching pretty near the Fort, saluted it with a Broad-side, which so frightened the Governor and his Myrmidons, that they all deserted their Posts, and left their Cattle to be plundered by the *English* Seamen. About a League farther, upon the other Side of the River, is *Governors*, where there is a little Pyramid, built for a Land-mark, to confine the Company's Colony of *Calcutta*, or *Fort-William*, on that Side: And about a League farther up, stands *Fort-William*.

The *English* settled there about the Year 1690. After the *Mogul* had pardoned all the Robberies and Murders committed on his Subjects, Mr. *Job Channock*, being then the Company's Agent in *Bengal*, he had Liberty to settle an Emporium in any Part of the River-side below *Hugly*; and for the sake of a large shady Tree, chose that Place, though he could not have chosen a more unhealthy Place on all the River; for three Miles to the North-eastward is a Salt-water Lake that overflows in *September* and *October*, and then prodigious Numbers of Fish resort thither; but in *November* and *December*, when the Floods are dissipated, these Fishes are left dry, and with their Putrefaction affect

new in comparison of some there were who design originally, and in national Interest in to speak freely, there be Probability to this Circumstances, there tion of the two Mil- ners, as we are ex- pleat History of King William, who Sum was subscribed, ch might have been ad extended to far. t People would ven- India Company: But at little depended on o large an Interest as

Penzance, a Village vice in a Week: It is this River. And Side, is Anna Fort, ver, at a Place con- e half a Mile from ; for, Anno 1686, with the Mogul, t Hugly; and this their Passage down oaching pretty near , which so fright- s, that they all de- le to be plundered ague farther, upon apore, while these k-mark, to confine Fort-William, on r up, stands Fort-

Year 1690. After eries and Murders annoack, being then ad Liberty to settle ide below Hugly; e whole that Place, re unhealthy Place North-eastward is mber and October, retort thither; but ods are dissipated, Putrefaction affect the

the Air with thick stinking Vapours, which the North-east Winds bring with them to Fort-William, where they cause a yearly Mortality. One Year I was there, and there were reckoned in August about 1200 English, some military, some Servants to the Company, some private Merchants residing in the Town; and some Seamen belonging to Shipping lying in the Town; and before the Beginning of January there were four hundred and sixty Burials registered in the Clerk's Book of Mortality.

Mr. Channock chusing the Ground of the Colony where it now is, reigned more absolute than a Rajah, only he wanted much of their Humanity; for when any poor ignorant Native transgressed his Laws, they were sure to undergo a severe Whipping for a Penalty; and the Execution was generally done when he was at Dinner, or so near his Dining-room, that the Groans and Cries of the poor Delinquent served him for Musick.

The Country about being over-spread with Paganism, the Custom of Wives burning with their deceased Husbands was also practised. Before the Mogul's War, Mr. Channock went one Time with his ordinary Guard of Soldiers, to see a young Widow act that tragical Catastrophe; but he was so smitten with the Widow's Beauty, that he sent his Guards to take her by Force from the Executioners, and conduct her to his own Lodgings. They lived lovingly many Years, and had several Children; at length the died, after he had settled in Calcutta. But instead of converting her to Christianity, she made him a Profligate to Paganism, and the only Part of Christianity that was remarkable in him, was, burying her decently; and he built a Tomb over her, where, all his Life, after her Death, he kept the Anniversary-day of her Death by sacrificing a Cock on her Tomb, after the Pagan Manner. This was, and is the common Report, and I have been credibly informed, both by Christians and Pagans, who lived at Calcutta, under his Agency, that the Story was really Matter of Fact.

Fort William was built an irregular Tetragon of Brick and Mortar, called Puckab, which is a Composition of Brick-dust, Lime, Molasses, and cut Hemp; and when it comes to be dry, is as hard and tougher than firm Stone or Brick, and the Town was built without Order, as the Builders thought most convenient for their own Affairs, every one taking in what Ground best pleased him for Gardening; so that in most Houses you must pass thro' a Garden into the House, the English building near the River-side, and the Natives within Land.

The Agency continued till the Year 1705, that the old and new Companies united, and then it became a split Government, the old and new Companies Servants governing Week about, which made it more anarchical than regular. Sir Edward Littleton was Agent and Consul for the new Company at Hugly, when this Union of the Companies was made, and then he was ordered to remove his Factory to Calcutta, and being of an indolent Disposition, had let his Accounts with the Company run behind; he was suspended, but lived at Calcutta till 1707, that he died there. He was the only Precedent, or Precedent, in the Company's Service, that lost an Estate of seven hundred Pounds per Annum in so profitable a Post in their Service.

This double-headed Government continued at Calcutta till January 1709, that Mr. Welden arrived with the Company's Commission to settle it at Bombay and Fort St. George, which were under the Management of a Governor and Council, which those of the Direction in England took to be a better Way to promote their own Creatures, as well as their own Interest. His Term of governing was very short, and he took as short a Way to be enriched by it, by harassing the People to fill his Coffers: There was one singular Instance of it. A poor Seaman had got a pretty Magpie Wife, a little inclined to Lewdness in her Husband's Absence. She entertained two Armenians, who were like to quarrel about sharing her Favours, which coming to the Governor's Ears, he reprimanded them; however, by the strong Persuasion of five hundred Rupees, paid in Hand by one of them, he awarded him to have the sole Right to her, and he carried her to Hugly, and bragged openly what his Purchase had cost him, to

the great Credit and Praise of the Governor; and when the poor Husband returned, he was forced to submit to lose his Mate under the Pain of Flagellation: Yet he was very shy in taking Bribes, referring those honest Folks who trafficked that way to the Discretion of his Wife and Daughter, to make the best Bargain they could about the Sum to be paid, and to pay the Money into their Hands. I could give many Instances of the Force of Bribery, both here and elsewhere in India, but am loth to ruffle the Skin of old Sores.

About fifty Yards from Fort William, stands the Church built by the pious Charity of Merchants residing there, and the Christian Benevolence of sea-faring Men, whose Affairs call them to Trade there; but Ministers of the Gospel being subject to Mortality, very often young Merchants are obliged to officiate, and have a Salary of fifty Pounds per Annum added to what the Company allows them for their Pains, in reading Prayers and Sermons on Sundays.

The Governor's House in the Fort, is the best and most regular Piece of Architecture that I ever saw in India, and there are many convenient Lodgings for Factors and Writers within the Fort, and some Storehouses for the Company's Goods, and the Magazines for their Ammunition.

The Company has a pretty good Hospital at Calcutta, where many go in to undergo the Penance of Physick, but few come out to give an Account of its Operation. The Company has also a pretty good Garden, that furnishes the Governor's Table with Herbage, and Fruits; and some Fish-ponds to serve his Kitchen with good Carp, Callops and Muller.

Most of the Inhabitants of Calcutta, that make any tolerable Figure, have the same Advantages, and all sorts of Provisions, both wild and tame, being plentiful, good and cheap, as well as Cloathing, make the Country very agreeable, notwithstanding the above-mentioned Inconveniences that attend it.

On the other Side of the River are Docks made for repairing and fitting their Ships Bottoms, and a pretty good Garden belonging to the Armenians. That had been a better Place to have built their Fort and Town in, for many Reasons; one is, that where it now stands, the Afternoon Sun is full in the Fronts of the Houses, and shines hot in the Streets, that are both above and below the Fort, whereas here the Sun would have sent its hot Rays on the Backs of the Houses, and the Fronts had been a good Shade for the Streets.

Most Gentlemen and Ladies in Bengal live both splendidly and pleasantly, the Forenoons being dedicated to Business, and after Dinner to Rest, and in the Evening to recreate themselves in Chaises, or Palankins, in the Fields, or going to Gardens, or by Water in their Budgeroes, which are convenient Boats that go swiftly with the Force of Oars; and on the River, sometimes there is the Diversion of Fishing, or Fowling, or both, and before Night they make friendly Visits to one another, when Pride or Contention do not spoil Society, which too often they do among the Ladies, as Discord and Faction do among the Men; and altho' the conscript Fathers of the Colony disagree in many Points among themselves, yet they all agree in oppressing Strangers, who are consigned to them, not suffering them to buy or sell their Goods at the most advantageous Markets, but to the Governor and his Council, who fix their own Prices, high or low, as seemeth best to their Wisdom and Discretion; and it is a Crime hardly pardonable, for a private Merchant to go to Hugly to inform himself of the current Prices of Goods, altho' the Liberty of Buying and Selling is entirely taken from him before.

The Garrison of Fort William generally consists of two or three hundred Soldiers, more for conveying their Fleet from Patana, with the Company's Salt-petre, Piece goods, raw Silk, and some Opium belonging to other Merchants, than for the Defence of the Fort: For, as the Company holds their Colony in Fee-tail of the Mogul, they need not be afraid of any Enemies coming to dispossess them; and if they should at any Time quarrel again with the Mogul, in prohibiting his Subjects to trade with the Company would soon end the Quarrel.

There are some imperious troublesome Rajahs, whose Territories lie on the Banks of the *Ganges*, betwixt *Patana* and *Cassambazaar*, who pretend to a Tax on all Goods and Merchandize that pass by, or through their Dominions of the River, and often raise Forces to compel Payment; but some Forces from *Fort William* in Boats generally clear the Passage, tho' I have known some of our Men killed in the Skirmishes.

In *Calcutta* all Religions are freely tolerated but the Presbyterian, and that they brow-beat. The Pagans carry their Idols in Procession through the Town. The *Roman* Catholics have their Church to lodge their Idols in, and the *Mahomedan* is not discountenanced; but there are no Polemics, except what are between our High-churchmen and our low, or between the Governor's Party and other private Merchants, on Points of Trade.

The Colony has very little Manufactory of its own; for the Government being pretty arbitrary, discourages Ingenuity and Industry in the Populace; for, by the Weight of the Company's Authority, if a Native chanced to disoblige one of the upper House, he is liable to arbitrary Punishment, either by Fine, Imprisonment, or corporal Sufferings. I will give one Instance out of many, that I knew of the Injustice of a Governor of the double-headed Government in *Ann* 1706.

There was one Captain *Perrin*, Master of a Ship, who took up about 500*l.* on Respondentia, from Mr. *Ralph Sheldon*, one of the Governors, in a Voyage to *Perfia*, payable at his return to *Bengal*. *Perrin* having dispatched his Affairs in *Perfia* sooner than he expected, called at *Goa* as he came home, and bought a *Surat* built Ship, very cheap, and carried her to *Calcut*, and took in a Quantity of Pepper for the *Bengal* Market, and having brought in his other Ship good Store of *Perfia* Wines, called at *Fort St. George*, to dispose of what he could there: But finding no Encouragement from that Market, carried it to *Bengal*. On his Arrival, he complimented Mr. *Sheldon* with the Offer of his Pepper and Wine; but he declined meddling with that Bargain, farther than with as much of the Pepper, at the current Price, as would ballance his Account of Principal and Respondentia. Accordingly *Perrin* delivered so much Pepper, and, on the Delivery, required his Bond up; but the Governor told him, that he being a Fellow troubled with the Spirit of interloping in buying Goods, and taking in Freight where he could best get them, he would keep the Bond as a Curb on him, that he should not spoil his Markets for the future. Poor *Perrin* used all his Rhetorick to get his Bond up, but to no Purpose; and the Governor moreover gave his Wine a bad Name, so that he could not dispose of that neither; and all this Oppression was in order to straiten him, that he might be obliged to sell his purchased Ship at a low Price to him and his Associates, which at last he was obliged to do, holding a Quarter-part in his own Hands, to secure the Command of her to himself, which, after all, he could hardly do. *Perrin* made his Complaint to me, but I was in no Condition to assist him; because having three or four large Ships at *Bengal*, I was reckoned a Criminal guilty of that unpardonable Sin of interloping. However, I advised *Perrin* to comply with his inexorable Master, on any Terms of Agreement whatsoever, which he endeavoured to do, that he might at least keep the Command of his Ship, where he was so much concerned, and had hardly done it but by Accident. One Day meeting me on the Green near the Fort, he stopped me to relate his Grievances, and begged, that if he was turned out of his own Ship, he might have an Employ in one of mine, which I promised he should.

Sheldon espied us out of a Window, holding a long Con-fabulation; and being impatient to know about what, sent a Servant to call *Perrin*, and he obeying the Summons, was interrogated about what our Discourse was, and he told the Promise I had made him. *Sheldon* told him, that he was as capable to employ him as I could be. *Perrin* answered, that he knew that, but wished that he would be as willing too; so *Sheldon* promised that he should command his own Ship to *Perfia*.

But the Wine still lay unfold, though it was scarce then in *Bengal*; but the Name that it got first in *Fort St. George*,

and afterwards in *Fort William*, stuck so fast to it, that none of it would go off at any Price: So I advised him to carry it off in the Night in my Boats on board of one of my Ships, and I would try if I could serve him in selling it, which accordingly he did; and two Gentlemen of the Council being that Season bound for *England*, coming one Day to dine with me, I treated them and the rest of my Company with that *Perfia* Wine, which they all praised, and asked me where I got it? I told them, that knowing that good Wine would be scarce at *Bengal* that Year, I had provided a good Quantity at *Surat*, from whence I had come that Season. Every one begged that I would spare them some Chests, which I condescended to do as a Favour, and next Day sent them what they wanted at double the Price the Owner demanded for it while he had it, and so got off above one hundred and twenty Chests, which enabled Mr. *Perrin* to satisfy most of his Creditors. *Sheldon* provided a Stock and Freight for *Perrin* to *Perfia*, and put on board some rotten long Pepper, that he could dispose of no other Way, and some damaged Gunnies, which are much in use in *Perfia* for embalming Goods when they are good in their kind; but, *volens volens*, *Perrin* must take them, and sign Bills of Lading for good well conditioned Goods; and yet, after he was ready to sail, he had been stopped, if he could not raise the Sum of 2500 Rupees to discharge a Bill that at that Time became due, and was indorsed to *Sheldon*. I also helped him out of that Difficulty, and took his Bond for the Sum, bearing Interest from the Date at the current Interest of one per Cent. per Mensis; so *Perrin* proceeded on his Voyage to *Perfia*, but called at *Calcut* in his way home again, and laid up his Ship there, and took Protection of a *Neger*, with the full Hand of 11,000 Pounds Sterling of *Bengal* Money, and wrote to Mr. *Sheldon* that he might keep his former Bond, and he would take care of his Part of the Stock in his Hands. He also wrote to me, that he would take particular care to reimburse me; but in a short time after he died, and his Effects came into the *English* Chief's Hands, who detained them several Years, denying that ever he paid any till Governor *Boone* came to the Government of *Bombay* in 1715, and then he made a lame Account. I have been so prolix and particular in this Story, that you may form an Idea of the Deformity and dismal Image of Tyranny and Villany, supported by a Power that neither divine nor human Laws have Force enough to bridle or restrain. The Company's Colony is limited by a Land-mark at *Greenampore*, and another near *Barnagul*, about six Miles distant, and the salt-water Lake bound it on the Land-side. It may contain in all about ten or twelve thousand Souls, and the Company's Revenues are pretty good, and well paid, they arise from Ground-rents and Conflagration, on all Goods imported and exported by *British* Subjects; but all Nations besides are free from Taxes.

It is very clear from this historical Account of the Company's Affairs, and of their Government in *India*, that nothing held them together, but the slender Tie of Self interest, which obliged such as otherwise hated each other so far to comply, as to be able to make the Machine go on; but still this was doing Things uneasily, and nothing can be clearer than that the publick Interest must have suffered greatly, while it had no other Support than the left-handed Assurances, from such as wanted its Protection to make their private Fortunes. But we were all the Time engaged in a foreign War, from the glorious Motives of settling the Ballance of Power, humbling *France*, and securing the Tranquillity of *Europe*, which to me took up our Ministers Heads, that they had scarce Time to think of Trade and Navigation. Yet there is nothing plainer than this to any Man who will study the Interest of this Nation, which one would imagine should be the Science of Ministers, than that an Application to the Extent of our Commerce, is the sole Means of raising the Power and Credit of this Kingdom, which must be rendered considerable abroad by its naval Force, and that that Force cannot be kept up, or increased, any other Way than by promoting a Spirit of Trade and Navigation. However, as the Heads of the Ministry were now turned another Way, the *East-India* Company was obliged to think of some Means of obtaining such Regulations.

William, stuck so fast to it, that
 at any Price: So I advised him to

 eads of the Ministry were now turned
East-India Company was obliged to
 ans of obtaining such Regulations in
 then

their Favour, as might be sufficient to remedy the Incon-
 veniencies that had resulted from the settling two Compa-
 nies; and in order to obtain such a Law as was requisite
 for this Purpose, they, in the sixth Year of *Queen Anne*,
 refused to lend the Government the Sum of one Million
 two hundred thousand Pounds, over and above what had
 been lent already; which Proposal of theirs was accepted,
 and in Consideration thereof, it was agreed, that the Par-
 liament should give them such Assistance for carrying on
 their Trade as they required. The Reader will observe,
 that by this Means the *East-India* Company is to be con-
 sidered in a double Capacity; that is to say, as Creditors
 to the Publick, and as a trading Company. In the former
 Capacity, they have a Security, as other Companies have,
 for the *Monica* by them advanced, and a proportionable
 Interest thereupon; and in their other Capacity, their Di-
 rectors are Trustees for the Company's Trade, the Profits
 of which likewise belong to the Proprietors, and from
 hence it appears, that the Dividends upon their Stock are
 compounded of the Interest they receive from the Govern-
 ment, and of the Profits accruing from their Trade to the
Indies. The first being fixed and invariable, serves as an
 Index to the latter, since at all Times the Interest paid to
 the Company being deducted from the Dividend, paid by
 them to the Proprietors, shews clearly what the Profits
 made by their Trade must be, as we shall farther explain
 in the Course of this History. In the mean time, let us
 return to this Act of Parliament in the Reign of *Queen*
Anne, in order to see what Effects it had upon the Affairs
 of the Company, and what Advantages they received in
 Consideration of this large and necessary Supply for the
 publick Service; and, by the way, let us remark that it was
 but reasonable to grant a trading Company certain Advan-
 tages, beyond the bare Interest of their Money, because
 they might otherwise have employed it more to their Ad-
 vantage. It was therefore enacted, that the *English* Com-
 pany trading to the *East-Indies*, shall advance and pay in
 to the Exchequer 1,200,000 *l.* on several Days appointed,
 and, in case of Failure by the said Company, the Monies
 not paid shall be recovered by Action of Debt, and 12 per
 Cent. Damages; and the said Company may borrow Mo-
 ney by their Common Seal, on Security of their united
 Stock, so as the principal Money at any Time to be owing
 don't exceed 1,500,000 *l.* above what might lawfully be
 borrowed thereon before this Act. In case the Governor
 and Company of Merchants of *London* trading to the *East-*
Indies, and the General Court of the said *English* Company,
 whilst they separately continue, &c. shall think fit to call
 in Money from their respective Adventurers towards
 raising the said 1,200,000 *l.* or repaying the Money bor-
 rowed for that Purpose, they are impowered to make such
 Calls accordingly, to make up the said Sum; and if any
 Members shall neglect or refuse to pay their Shares of the
 Monies called in, or which the said Company in Pursuance
 of the Statute of 9 *W. III. cap. 44.* or their Charters, shall
 call in for carrying on their Trade (after Notice fixed on
 the *Royal Exchange*) then the said Company respectively
 may stop the Dividends payable to such Members, and
 apply the same towards such Payment, until it be satis-
 fied; and also stop the Transfers of the Shares of such De-
 faulters, and charge them with Interest at 5 per Cent. till
 Payment; in neglecting which, in three Months, the
 Company may sell so much of the Defaulter's Stock as will
 pay the same. The aforesaid Sum of 1,200,000 *l.* shall
 be deemed to be an Addition of the Stock of the *English*
 Company, and be Tax-free. The united Stock of the
 said *English* Company shall be subject to the Debts con-
 tracted by the said Company, and Persons entitled to
 7,200 *l.* Part of the two Millions, the original Stock, who
 have not united their Stocks to the Corporations, and who
 are authorized to carry on a Trade for their separate Use,
 may hold and enjoy their Trade as if the said Act had not
 been made. But the *English* Company may repay the
 same at the End of three Years, together with the Annu-
 ities due thereon, and then the whole Trade shall be vested
 in the said Company. Matters in Difference between the
 two Companies, concerning an Union between them, are
 referred to *Sidney* Earl of *Godolphin's* Arbitration, and after
 the making the said Award and Surrender of the Charter

of the Governor and Company of Merchants of *London*
 trading to the *East-Indies*, the Persons who at the Time
 of the Surrender, pursuant to an Indenture Tripartite,
 made between the *Queen* by the first Part; the said Govern-
 nor and Company of the second Part, and the said *English*
 Company of the third Part, shall be Directors and Man-
 agers of the united Trade of the *English* Company,
 shall be such until new Directors are chosen, according to
 the Charter dated the 5th of *September*, 10 *W. III.* This
 Act hath also a Proviso, that on three Years Notice, after
 a Time limited, and Repayment of the said two Millions,
 and 1,200,000 *l.* and all Arrears then due for the Annu-
 ities, which Annuities amount to 160,000 *l. per Annum*,
 then the aforesaid Duties on Salt, &c. and the Benefit of
 Trade given by this and the former Act and Charters to
 cease. This Proviso of Redemption is enlarged, as to the
 Time, by Stat. 10 *Ann. cap. 28.* and by the 29th, the
East-India Company may enter such Goods as they shall
 import at the Custom-house, by Bills at Sight or Suffe-
 rance, and shall give Security under their Common Seal for
 Payment of the Customs and Duties as are rated in the Book
 of Rates, and upon Coffee, which is to be ascertained by
 the Oath of the Importer, viz. for paying half thereof at
 the End of six Calendar Months, and the other half at the
 End of twelve Months; and the Custom Officers shall
 grant to the said Company such Bills at Sight or Suffe-
 rance, and take Security as aforesaid, and make such Al-
 lowances and Deductions as are made to other Merchants,
 paying their said Customs at or before the landing their
 Goods and Merchandize; but nothing herein shall ex-
 tend to alter the Method of paying the Duties of 15 per
 Cent. on Mullins and Calicoes, or the Duties upon any
 other Goods that are to be ascertained by Sale at the
 Candle.

16. In the Beginning of the Reign of King *George* the
 First, it was found, that various Attempts had been made
 to discover the Secrets of the Company's Commerce, for
 the Information and Benefit of Foreigners, and therefore
 a Law was obtained to remedy this Evil, viz. the Statute
 of 5 *K. George I.* which ordains, with a View to render
 such Practices impossible, That if any Subjects shall fail,
 or go to the *East-Indies*, or such Places of *Asia*, &c. be-
 yond the Cape of *Bona Esperanza*, to the Straits of *Ma-*
gellan, where any Trade, or Traffick, or Merchandize is,
 or may be used, or had, contrary to the Laws in being,
 or the Tenor of this Act: Every Person so offending,
 shall be liable to the Punishment inflicted by Law for such
 Offence; and it shall be lawful for the united Company of
 Merchants of *England* trading to the *East-Indies*, and their
 Successors, to arrest and seize such Persons, being Subjects
 to the Crown of *Great-Britain*, at any Places where they
 shall be found, within the Limits aforesaid, and to send
 them to *England*, there to answer for their Offences, ac-
 cording to due Course of Law. Every Person who shall
 procure, solicit, obtain, or act under any Commission,
 Authority, or Pass from any foreign Prince, State, or Po-
 tentate, to sail or trade in, or to the *East-Indies*, or any
 the Parts aforesaid, shall forfeit 500 *l.* the said Penalties
 and Forfeitures to be sued for and recovered in any Court
 of Record at *Westminster*, by Bill, &c. one Moiety to the
 Informer, the other to the Crown.

But notwithstanding these Severities, this Law did not
 produce the Effects expected from it; for our *East-India*
 Company having for many Years divided 10 per Cent. upon
 their Capital, which in most foreign Countries was under-
 stood to be the Profits of their Trade, it raised such a Spi-
 rit of sharing in this Commerce, and so many *Englishmen*
 were found ready to join in such Projects abroad, that a
 Company was established at *Ostend*, which made another
 Act necessary, which passed in the ninth Year of the same
 Reign, by which it was enacted, that if any Subject of
 his Majesty shall contribute to, or encourage the establish-
 ing or carrying on any foreign Company trading from any
 Part of the *Austrian Netherlands*, to or from the *East-*
Indies, and other Places beyond the Cape of *Good-Hope*,
 described in former Acts for securing the sole Trade thither
 to the united *East-India* Company in *England*, or
 shall be interested in any Share of the Stock or Actions of
 any such foreign Company, or shall make any Payments

in Money, or by Bills of Exchange, or otherwise, towards promoting or supporting such Company, or the Trade thereof, or shall subscribe to the establishing any other foreign Company, for trading to the *East-Indies*, or be concerned in any Stock therein, &c. the Person so offending shall forfeit their Interest and Share in the Stocks of any such Company, with treble the Value thereof, one Third to the Crown, and the remaining two Thirds to the *East-India* Company, if they inform or sue for the same; otherwise one Third of two such Thirds to the common Informer, recoverable by Action of Debt, &c.

And the Attorney-General, of his own Authority, or at the Relation of the said united Company, and for the Company, may file a Bill of Complaint in the Court of Chancery, or the Exchequer, against any Person who shall have subscribed or contributed to, or promoted, or any ways become interested in the establishing any such foreign *East-India* Company, or the Stock or Trade thereof, for the Discovery of his Offence, remitting or waving the Forfeiture of the treble Value of the Offender's Stock, or Concern in any such Company, and insisting only on the single Value. And thereupon, such Person shall answer to the Bill, and not plead or demur to the Discovery thereby sought; and in case the single Value only of such Interest or Share shall be decreed to be paid, one third Part thereof shall go to his Majesty, and the other two Thirds to the Company. If any Subject shall have accepted of any Trust, or know of any Interest, Share, or Concern, which any of his Majesty's Subjects shall have, or be entitled to, in any such foreign Company, and shall not within six Months after accepting the Trust, or the coming to the Knowledge of any such Interest, &c. truly discover the same in Writing to the said united Company of *England*, or their Court of Directors, he shall forfeit treble the Value of the Interest, &c. so accepted in Trust, or so known, and not discovered, one Moiety to the Crown, the other to him who will sue for the same, by Action of Debt, &c. or such Offender shall, at the Discretion of the Court where the Prosecution is commenced, suffer one Year's Imprisonment; and Persons that within the Time above limited shall voluntarily come to the Court of Directors, and make a true Discovery in Writing of the Interest, Share, or Concern of any Subjects in the Stock of any such foreign Company, shall have one half Part of the clear Amount of the Forfeitures arising by this Act.

In case any of his Majesty's Subjects (other than such as are lawfully authorized) shall go to, or be found in the *East-Indies*, they are hereby declared to be guilty of a high Misdemeanor, and may be prosecuted for the same, in any Court at *Westminster*, and being convicted thereof, shall be liable to such corporal Punishment, or Imprisonment, or to such Fine, as the Court where the Prosecution is commenced shall think fit; and the Offenders may be seized, and brought to *England*, and any Justice of Peace may commit them to the next County Goal, till sufficient Security be given by natural born Subjects, or Denizens, to appear in Court, &c. and not to depart out of the Kingdom without Leave.

All Offences against this Act, or against 9 *H. III. cap. 44.* or 5 *Geo. I. cap. 21.* &c. shall be laid in *London* or *Middlesex*, at the Pleasure of the Prosecutor; and a *Capias* in the first Process shall issue upon any Bill, Plaint, Indictment, &c. prosecuted for the said Offences. One would have imagined, that these Laws might have prevented any *English* Subjects from being concerned in Designs so prejudicial and destructive, as these manifestly were to their native Country; yet when we come to speak more particularly of this *Offend* Trade, we shall be obliged, though unwillingly, to shew the contrary, and that all the Measures that have been since taken in other Countries to lessen the Commerce of our *East-India* Company, have been brought about by the Intrigues of such avaricious Persons as were determined to make their Fortunes at any Rate, and from such self-interreled Views sacrificed the Wellare of this Nation to their private Advantage.

What in some measure contributed to this, might be the Pains taken by the Company to prevent the Frauds committed by some in their own Service; in order to which,

a Law was passed in the seventh Year of the same Reign, for the better preventing an unlawful, and further securing a lawful Trade to the *East-Indies*, by which it was enacted, that all the Goods shipped on board any Ship to the *East-Indies* (except Goods of the Company, or such as are licensed by them, and naval Stores, Provisions, and Necessaries for the Ship in her Voyage) and all Goods taken out of such Ship in her Voyage homeward bound from the *East-Indies*, &c. to *England*, before her Arrival here, shall be forfeited, and double Value, and the Matter, or Officer of such Ship, knowingly permitting the Goods to be shipped or taken out of such Ship, shall forfeit for every Offence one thousand Pounds, and shall not be entitled to any Wages, &c.

Agreements or Contracts made, or entered into by any of his Majesty's Subjects, or any in Trust for them, on the Loan of Monies by way of Bottomry, upon any Ship in the Service of Foreigners, and bound to the *East-Indies*, &c. and all Contracts for Loading, or supplying any such Ship with a Cargo of any sort of Goods, Merchandize, Treasure or Effects, or with Provisions, Stores, or Necessaries, and Partnerships entered into, relating to any such Voyage, the Profits thereof, and all Agreements for the Wages of any Persons serving on board any Ship to be employed in such Voyage, shall be void; and every Person, Subject of his Majesty, that shall go to the *East-Indies* contrary to the Laws now in Force, shall be deemed a Trader, and to have traded there; and all the Goods there bartered, or trafficked for, or purchased by any such Person, or found in his Custody, or any other in Trust for him, by his Order or Procurement, shall be forfeited, and double the Value.

And by this Act it shall be lawful for the Attorney-General, or for the united Company trading to the *East-Indies*, at any Time within the Space of six Years, to file in any of the Courts at *Westminster*, Informations against clandestine Traders, and if the Defendants shall be found guilty thereof, the Court shall forthwith proceed to give Judgment against them, &c. Also it is declared lawful for the Attorney-General, at the Relation of the Company, or by his own Authority, to exhibit Bills of Complaint in the Exchequer, against Persons trading, dealing, trafficking, or adventuring to, or from the *East-Indies*, &c. contrary to Law, or against any Person concerned as an Agent, or Factor, or Copartner with such illegal Traders, for discovering of such their trading, &c. and for the recovering of the Duties and Damages, &c. and such Persons shall pay to his Majesty the Customs of the Goods sailing or purchased by the said unlawful Trade, and shall answer to the Company 30 per Cent. according to the Value thereof in *England*; and if such Offenders pay the Customs, or the Amount of the same, into the Exchequer, and Damages to the Company, they shall not be otherwise prosecuted by this Act, or any other Statute, for the same Offence; but if a Decree be obtained against the Defendants, they shall pay Costs to his Majesty and the Relator, respectively.

And if such Bills (being exhibited at the Relation of the Company) be dismissed by the Court, so that the Parties are acquitted, the Company shall pay every Defendant his full Costs; the Forfeitures and Penalties herein before appointed, or in former Acts relating to the *East-India* Company, may be sued for, not only by the Attorney-General, or the said Company, but also by any Officer of the Customs, such Officer having the Consent and Direction of the Court of Directors of the united Company, as by the Act is particularly required; and one third Part of all such Penalties shall be to the Crown, one other Third to the Company, and the remaining Third to such Officers of the Customs as shall inform and sue, as aforesaid. The said united Company shall be allowed to ship out Stores, Provisions, Utensils of War, and Necessaries for maintaining their Garrisons and Settlements, free of all Duties, so as the Duties, if they had been paid, do not exceed in any one Year three hundred Pounds. No *East-India* Goods to be imported into *Ireland*, or the Plantations, but from *Great-Britain*, on Pain of forfeiting Ships and Goods, &c.

of the same Reign, and further securing which it was enacted, any Ship to the East-India, or such as are provisions, and Necessary Goods taken out of the said bound from the said Arrival here, shall the Matter, or Officer who the Goods to be shall forfeit for every shall not be entitled to

entered into by any Trust for them, or any, upon any Ship and to the East-India, or supplying any such Goods, Merchandize, or Stores, or Necessaries, relating to any and all Agreements for on board any Ship to be void; and every Person who shall go to the East-India, shall be deemed a and all the Goods there shall be forfeited by any other in Trust for shall be forfeited, and

ful for the Attorney-General trading to the East-India of six Years, to file Informations against Defendants shall be found to proceed to give to it is declared lawful of the Company, it Bills of Complaint in dealing, dealing, traffick the East-India, &c. concerned as an Agent, or illegal Traders, or &c. and for the recovery, &c. and such Persons of the Goods answering Trade, and shall answer to the Cause thereforers pay the Customs, or the Exchequer, and shall not be otherwise prosecuted, for the same Offence against the Defendants, by and the Relator, re-

mitted at the Relation of Court, so that the Parties shall pay every Defendant Penalties herein before relating to the East-India only by the Attorney-General also by any Officer of the Continent and Director of the united Company, as and one third Part of the Crown, one other third to such Officers as shall be, as aforesaid. The shall be paid, do not exceed Pounds. No East-India, or the Plantation of forfeiting Ships

It is very evident, from the whole Current of this History of our East-India Trade, that such as have been entrusted with the Management thereof, have had continual Difficulties to struggle with; whereas our Rivals in this Trade, the Dutch, have all along enjoyed the full Protection of their Government; and, at the same time, have been allowed to manage their own Concerns in such a Manner as seemed to them most conducive to their own Interest. But, of late Years, and since our Company have had the Authority of Acts of Parliament to support them, they have, in some measure, gained upon the Dutch, especially in those Countries where both Nations trade freely, and where, consequently, the Success of their Labours must, in a great measure, depend upon the Inclination of the Natives, and that Preference which their good Opinion gives to either Nation.

In the Island of *Sumatra* particularly, the English have extended their Trade with great Success, having not only a good Settlement at *Achen*, but also at the other End of the Island, where their principal Settlement was *Bencoulen*, which first began to flourish about the Year 1685. They had also another at *Sillebar*, where they likewise carried on a considerable Commerce: By degrees they became so considerable, that several of the little Princes of that Island chose to put themselves under their Protection, as well to secure themselves from the Power of the Dutch, as that they may receive the Benefits of the English Trade; and have, generally speaking, continued very firm in their Attachment to the Company; though they have been sometimes but indifferently treated. The first Inducement the Company had to fix their Factories and Settlements on this Part of the Island was, the Advantage derived from the Pepper-Trade, carried on from *Lampoun*, which is in the Southern Part of the Island, and about twenty Leagues within the Streights of *Sunda*, very well situated in a deep Bay. Here they had a good Trade for Pepper, till they were deprived of it in 1683 by the Dutch, in consequence of the famous War with the King of *Bantam*, which we have so often had Occasion to mention: For this Town of *Lampoun* lying opposite to his Territories in the Island of *Java*, made likewise a Part of his Dominions; and therefore, when the Dutch brought him entirely over to their Interest, or, in other Words, which however mean the same thing, and are the plain English of the foregoing Dutch Phrase, had reduced him under their Yoke, they obliged him to break off all Commerce with the English, which put an End to the Pepper-Trade at *Lampoun*, and forced the Company to remove to the Place before mentioned.

The Country about *Bencoulen* is mountainous and woody, and in the Heart of the Island there are several Volcanos, which render the Country subject to Earthquakes, and fill the Air so full of malignant Vapours, that it is very far from being wholesome. We may add to this, that the Town itself stands in a Morass, which obliges the Natives to build their Houses upon Posts, to defend them from the bad Effects of the continual Moisture of the Soil. These Inconveniencies did not hinder the English from making it their principal Residence in this Country, and where, for their greater Security, they erected a Fort, of no great Strength indeed, but which seemed sufficient to answer their Purposes. This Fort was garrisoned with *Bugasses*, which is the Name given to the *Maccassars* when transplanted out of their own Country; and as they depended on these for military Services, so with regard to their Revenues, they considered in the Chief of the *Chinese*, who had the Title of Captain, a Thing customary in all the Settlements where the *Chinese* reside. As for the Natives, they lived, as they had formerly, under the Jurisdiction of their own Princes, called in the *Malayan* Language *Pangarans*, of whom there were two that were particularly under the Protection of the Company. One whose Dominions lay North from *Bencoulen*, and who was styled *Pangaran-Munco Rajah*; and the other called *Pangarang-Songé-Htam*, whose Country lay to the South. Though their Territories were not large, yet they were divided into several Districts, each under a Governor, called a *Dupitty*, the Place of whose Residence was, in their Language, called their *Dusan*: And these Governors had under

them lesser Magistrates, called *Dattoes*. The Company had also a good Correspondence with the most powerful of the Princes in the inland Parts of the Island, such as the Sultan *Catebel*, and several others, which induced them to believe they might take any Measures they thought necessary for the Advantage of the Company, and Ease of the Factory.

It was this that, in the Year 1719, engaged the then Chief to think of removing from *Bencoulen*, where, from the Cause before-mentioned, abundance of English People died every Year; and it was with this View that a Place was fixed upon a few Miles distant, for erecting a new Fort and Factory, which was to be called *Marborough Fort*; and the Ground being traced out, the Work began to be carried on with great Vigour and Spirit. But, it seems, they had not sufficiently consulted the Temper and Disposition of the Natives, who were not at all well pleased with this Design. There had been some little Jealousies and Heart-burnings amongst them before, which not breaking out into an open Quarrel, had been overlooked; but these People considering with themselves that this new Fortification rose apace, and that it looked as if the English were diffident of them, or had a mind to punish some Offences that they hoped had been forgotten; they from thence grew absolutely disaffected, and meditated nothing less than a total Revolt, and an absolute Destruction of that Power which they now began to dread. They concealed, however, their Sentiments so well, and shewed so little Sign of Uneasiness or Resentment, that the English went on without any Apprehension of what was contriving against them, till it was on the Point of breaking out. The remaining Part of this History will best appear, and the Conclusion of this Conspiracy be most naturally made known, from the following Account, written by the Persons principally concerned, to the Company's chief Officer in the *Indies*, which I have therefore chosen to insert, as containing the most remarkable Piece of History within this Period of Time.

To the Honourable Joseph Collet, Esq; President and Governor of Fort St. George, &c.

"Honoured Sir,

"IT is with the greatest Concern that we acquaint you with the Misfortunes that have befallen us and our honourable Masters Affairs, since our Advices by the *Queen* and *George* Brigantine, wherein we did, with too much Confidence, assure you of the perfect Peace and Tranquillity we then enjoyed at *Marborough-Fort*, which the Satisfaction the Natives seemed to express in our Administration, gave us but little Reason to imagine would prove of so short a Date. Our Pepper, for some Time after, coming in very plentifully, and we having frequent Promises from them of much greater Quantities ready to be brought out of the Country, we had made a Progress in our Buildings, even beyond our own Expectations; the Foundation of one Gorge and two Curtains of our Fort-walls being laid, and raised in Brick and Chinam a Foot above Ground, and the Earth laid open for a third, in the Space of a little more than a Month; and we had made such Provision for Bricks and Chinam, that we should have had sufficient to complete the whole, which, at the Rate we had begun, might have been finished in less than twelve Months. Thus we thought ourselves successful in our Undertaking; and it was no small Pleasure to us, to think that, by diligently serving our Masters, it would add to our Credit, and in a more peculiar Manner recommend us to their Favour hereafter: But, in the midst of our Prosperity, all our Hopes were blasted by a secret Combination of the whole Country against us, which they certainly designed to put in Execution whilst we had no Ship in the Road to assist us, the *Atchappatam* having been at *Bantam* from the 21st of *January*, but fortunately returned to our Assistance the 18th of *March*, being but very few Days before this horrid Plot was discovered.

"I:

“ It was late at Night, on the 23d of *March*, before we had the least Suspicion of any Treachery, when Captain *Gibb* advised the Deputy-Governor, that *Dupatty Bentorin* had got together between four and five hundred Men in his *Dufan*, and he believed they designed to make War with the Company. The Deputy-Governor immediately dispatched a Letter to him, to know the Reason of his entertaining such Numbers of People in his *Dufan*, ordering him immediately to disperse them, and to come himself to the Fort in the Morning, where, if he had any Complaints to make, they should be heard, and he should have Redress; which, if he did not immediately comply with, we should no longer esteem him our Friend, but treat him as an Enemy. Early in the Morning he sent a trifling Answer, assuring us of his Friendship; but taking no Notice of dispersing his People, or coming himself to the Fort, as desired. Whereupon the Council was immediately summoned, and acquainted with what had passed, when it was agreed to send Mr. *Macky*, who was the Dupatty's Friend, to beseech, or confer with him, and persuade him to come to the Fort. About Noon he returned with the Dupatty's Answer, who promised to wait on the Governor the next Morning. In the mean time our *Pangarans* and *Dattoos* were sent for, to advise with on this Occasion, who were the Persons that ought to have given us the first Notice thereof; but they seemed to make flight of it, and persuaded us the Dupatty was an honest good Man, and one that would not be guilty of an ill Action against the Company, the People of his *Dufan* being only Friends that he had invited out of the Country to feast with him. This different Opinion of theirs made us jealous of their Fidelity, which made us desire them all to take a fresh Oath of Allegiance to the Company; and the present Deputy-Governor and Council, before we bechar'd farther with them on this Affair, which they did with much Persuasion consent to, and it was performed by one of their *Padres*; after which *Pangaran-Munco* Rajah undertook to bring in the Dupatty, and did accordingly let out himself for *Bentorin*; but not an Hour after he was gone out of the Fort, we were alarmed at the dreadful Sight of the Sugar-Plantations being on Fire, it being then about Six o'Clock at Night.

“ A strong Party was immediately sent out to *Bencoulen*, under the Command of Ensign *Adaire*, with Orders to proceed next Morning, on the 25th of *March*, to *Dufan Bentorin*, and to engage the Enemy either there, or where he should meet them, using his Endeavours to destroy the *Dufan*, and as many of their People as he possibly could: But in this we had no Success for want of the *Pangaran's* Assistance, who had promised to supply him with Sampanns to ferry his People over the Water at *Bentorin*, or where he should have Occasion for them; but in this they deceived us; for our Party finding a Body of the Enemy had fortified themselves with a strong Breast-work of Fire-wood, and some small Guns on the other Side the River, over-against the Sugar-Plantations, and not one Sampan sent by the *Pangarans*, according to their Promise; for want of which he could only come to an Engagement a cross the River, in which Manner they continued till about Four in the Afternoon, when most of our *Buggaffes*, *Blacks*, and *Chinise* having left the *English*, the Ensign with the rest returned to the Fort about Six in the Evening, having performed but little Execution on the Enemy. By the Account we had from the Ensign, we plainly found that the whole Country were concerned in this Rebellion. The principal Persons that he saw and knew amongst them were *Rajah Roojong*, *Pangaran Munco* Rajah, under most of the *Dupatties* of the *Dufans* adjacent to us, with many of the Inhabitants and *Bazar* People of *Bencoulen*, who were headed by *Dupatty Bentorin* and *Selobrian*; but he could not well guess at their Number, they being under the Cover of the Trees and Breast-work they had raised of Fire wood; and Mr. *Alcock*, from *Sillebar*, had given us an Account the same Day, that *Pangaran*

“ *Jantentially* and his Country also were in concert with them.

“ On the 26th of *March* in the Morning, the strongest Party we could muster of *English*, *Buggaffes*, *Blacks*, and *Chinise*, were ordered out to engage them, under the Command of Mr. *Newcome* and Ensign *Johnsen*; but when they came to *Bencoulen* to join the *Buggaffes*, they were strangely surpris'd to find them retic'd to fight without a present Reward; and Mr. *Newcome* was credibly informed, that a considerable Number of the *Buggaffes* were laid in Ambush to fall on the *English*, of which he immediately sent Advice to the Fort; whereupon the Sign was given to recal the Party, which prevented our coming to an Action that Day. The Sultan being examin'd, pretended that a wrong Interpretation was put upon what he said at *Bencoulen*, and would have persuaded us that he had always been, and was still ready and willing to fight for the Company; but our Suspicion of his Treachery made us unwilling to trust him at that Time. About Eleven o'Clock the same Day, *Pangaran Munco* Rajah brought a Token, which, as he said, was from his Uncle *Rajah Boojong* from *Singledemend*, to give us Notice that two hundred *Orangooones* were come on our Side at *Singledemend*, and desired we would lend the *Malayes* some Weapons to defend themselves. This we had great Reason to suspect was false, *Rajah Boojong* himself being at that Time in *Arus* against us at *Bantorin*; but the *Pangaran* positively affirmed he was then at *Singledemend*, notwithstanding Ensign *Adaire* had seen and spoke to him the Night before at *Bantorin*.

“ When we found ourselves so deeply involved in Trouble on all Sides, that we were betrayed by our *Pangarans*, and our *Buggaffes* had given us just Cause to suspect their Honesty, to that we had none but the *English*, *Blacks*, and *Chinise* to trust to; the former of which did not exceed one hundred and twenty-five Persons in Number both civil and military, and most of them unexperienced or disabled Men; and the latter had given us but small Encouragement to depend on them by their deserting Ensign *Adaire* at *Bentorin*. With this small Force, we thought ourselves in some Danger of being overcome; wherefore a general Council was called of all the Company's Servants, and Inhabitants of the Place, to consult about saving what we could of the Company's Effects, and making some Provision for our Passage, if we should be put to flight; when every one gave their Opinion, that it was for the Company's Interest, as well as for our own Safety, to put on board the Ship *Matchlapatam* the Company's Treasure and Books, with what Stores and Provisions our Time would permit, with all the Expedition and Secrecy it could be possibly contriv'd: After which, it we were oblig'd to it, we might make our Escape in the best Manner we could, by the Help of the Ship *Matchlapatam*, and what Boats we had by us. The Remainder of that Day was spent in Pursuit of that Resolution; but no Boats could be got off that Evening: About Seven o'Clock the next Morning, being the 27th of *March*, the Company's Treasure, &c. as per enclosed Bill of Lading, were sent on board; about Eight, News was sent that both the *Pangarans* with their Wives and Children, were eloped from *Bencoulen*, in the Night-time, and no Account could be given which Way they were gone. About Ten, *Suitay Cutcheel*, who was come from *Bentale* in the Ship *Matchlapatam*, undertook to accommodate Matters with the Country People, provided we would consent to their chusing new *Pangarans*, to which we agreed; but before we could come to a Bechar with them, the *Portuguese* Padre's Slave brought News from *Bencoulen*, that the *Buggaffes* and *Malays* were risen there, and had cut off the Padre and most of the *Portuguese*, Men, Women, and Children, in a most barbarous Manner. He had hardly done telling his Story, when a large Fire broke out at *Bencoulen*; another near the Fort behind *Canbury Poggar*; another towards *Sillebar*; and soon after, the Herbage-house was set on Fire. All this Time

Book I.

were in concert with

He Story, when a large Fire her near the Fort behind wards *Sillebar*; and soon at- on Fire: All this Time

" no Enemy appearing, but still frests Fires breaking out
" in different Places, which could not have been done
" otherwise than by our own Buggaffes or Malays, that
" are in our own Service: No Enemy yet appearing, we
" discharged what few great Guns we had mounted, at
" the thickest of these Fires, as we thought; in doing of
" which, one of the Waddes of our own Guns unfortu-
" nately fell upon the Tops of the Fort Buildings, which
" took Fire, and burnt to fierce, that there was no extin-
" guishing of them: At which Time, we marched out of
" the Fort in one Body to meet the Enemy. We first
" passed the Lower Guard; from thence, round the Horse
" Stable-Hill, to the Hermitage, and so by the China-
" Town and Brick-fields, which were all on Fire, but no
" Enemy to be seen.

" We then came to the Sea-side, where we saw some
" Thousands of the *Malays*, headed by our Sultan and
" Buggaffes; which Train reach'd from *Bencouen* to
" *Maribrough*: Most of the *Chineje* had secured them-
" selves in Boats, and on board of their own Praw. We
" had then none left to stand by us but the Blacks; Un-
" der these Disadvantages, we thought it in vain to ha-
" zard our Lives any longer, against so numerous an Ene-
" my; our Fort and most of our Buildings being destroyed
" by Fire, which put every Man upon laying his Life by
" swimming, or getting on board the Boats in the best
" Manner he could: In which Attempt, near Half our
" People were either drown'd or kill'd by the Enemy,
" before they could make their Escape. The next Morn-
" ing, we computed near Three Hundred and Fifty black
" and white Men, Women, and Children, were saved on
" board the Ship *Matlapatam*, Mr. Newcome's Barge,
" and three *Tombongons*, or Boats for going on board
" Ships; for which Number we had not Water for
" above five Days, at a Pint a Man each Day. Our
" first Design was to go to *Bantial*, but both the Wind
" and Current were so strong against us, that we
" could not stir that Way, and so it continued 'till the
" 29th of *March*; till which Time, we remained in the
" Road, when we were obliged to alter our Resolution,
" and make the best of our Way to *Batavia*; where, in
" all Probability, we might sooner arrive, as the Wind
" and Current were then set; or at some Place where we
" might get some fresh Water, which we could not expect
" to be supplied with on the Coast of *Sumatra*, to the
" South of *Bantial*. After we had supplied each Boat with
" five Days Provisions of Water and Rice we weighed
" Anchor and set sail in Company for *Batavia*. On the
" Second of *April*, we lost Sight of all our Boats: On
" the ninth, we anchored at *New-Island*, where we wa-
" tered, and got some Provisions: On the 11th, we
" weigh'd from thence, and arrived at *Batavia* on the
" Sixteenth.

" On the 18th and 19th, fifty out of our Military,
" who were sent in Boats to guard the Blacks and Slaves,
" arrived at *Batavia* from *Lampoun*, where they had put
" in for Water: where the Blacks mutinied, and cut away
" the Rigging of their Boats, which occasioned their dri-
" ving on Shore: Then the Blacks left them, encouraged
" by one Serjeant *Thomas Wright*, who also went with
" them. The rest of our *Europeans*, after being plundered
" of their very Shirts off their Backs, were at last kindly
" assisted by them with two large *Sampans*; in which
" they saved their Lives, and arrived at *Batavia*. We
" met with kinder Usage as to our Entertainment at *Ba-
"tavia*, than indeed we expected; for they assisted us in
" transporting one Hundred and Twenty of our People,
" on board their own Ships, to this Place: Seventy of
" which, had their Passage free, and the Ship's Provision,
" they working for the same; and for fifty more, we were
" obliged to pay twenty Rix Dollars each for their Trans-
" portation; and twenty Rix Dollars each more, to the
" Captains for their Provisions, in their Voyage. Thirty
" Persons more came with the Deputy-Governor on the
" Ship *Matlapatam*; and seven more are on board the
" *Madrafs* Brigantine, who left *Batavia* in Company with
" us; so that we had saved one hundred and fifty-seven
" Persons from the Hands of our Enemies, besides twenty
" Slaves belonging to the Honourable Company, and
" private Persons which were disposed of in *Batavia*.

" One of the *Dutch* Ships arrived here the 24th Instant,
" when Mr. Newcome, &c. advised the Governor of our
" Misfortunes, but the Letter we understand is not yet
" gone from this Place. The *Matlapatam* arrived here
" Yesterday, and this Day the other two Ships, on which
" are our whole Complement; and we shall stay here no
" longer than absolutely necessary to provide for our Pas-
" sage to Fort St. George; where we hope to arrive soon
" after this comes to your Hands. The *Madrafs* Brigant-
" tine is not yet arrived. Whilst we were in *Batavia*,
" we used all our Endeavours to send some Assistance to
" *Bantial*, tho' we had but little Reason to hope that Place
" had escaped the same Fate we ourselves had met with;
" but in this the *Dutch* opposed us in all our Proposals.
" The Deputy-Governor would have gone himself in the
" *Matlapatam*, with as many of our People as he could
" conveniently carry; but this they would not allow with-
" out he could take all our People along with him, which
" was altogether impossible; nor would they supply us
" with a Vessel on that Occasion.

" We endeavoured to hire the *Madrafs* Brigantine, for
" that Purpose, but the Master and Supercargoes alledged,
" she was not in a Condition to proceed. We then pro-
" posed to the *Dutch*, that we might have four Chests of
" Treasure, and some Gun-powder to be forwarded to
" them on the *Amelia*, on her Arrival; but they refused to
" take Charge of it, as they pretended, lest Disputes
" might ensue: We then requested, to leave it in the
" Hands of any private Persons; or that we might leave
" some of our own Servants there, to take Charge of it;
" but they would not consent to any one of these Proposals,
" nor suffer the Treasure to be left behind in any manner
" whatsoever. We had drawn out a Protest against them
" for this Refusal, but when we were going to deliver it,
" the Shawbander, who had been our Friend, plainly told
" us, what the Effects of it would be, that the next
" *English* Ships that fell in there, would suffer for it, in
" meeting with worse Treatment than ever any had yet
" done; whereas we ourselves had been civilly treated in
" all other Respects.

" Upon this, we considered, that the *Amelia* would
" shortly arrive, for whom we have left Orders to pro-
" ceed first to *Bantial*, and from thence to Fort St. George,
" with Advice, if she arrives Time enough to get away
" by the 15th of *June*; if not, to come directly for Fort St.
" George; as also the outward-bound *China* Ships: And
" probably this Year's Shipping from the West Coast
" might be obliged to put in there for Provisions; which,
" if they should fail of our Company, might suffer more
" than the Advantage they would reap by our Protest:
" Upon which Consideration, it was agreed, it should not
" be delivered. This is a true Narrative of our Proceed-
" ings, since our Troubles commenced; and what we
" have omitted herein, you will find more particularly in-
" serted in our Diaries and Consultations, when we come
" to lay them before your Honour, &c. for your Perusal,
" which we hope will be sufficient to demonstrate, that this
" Misfortune is no way owing to our Misconduct, which
" we submit to your Honour's favourable Construction,
" and beg Leave to subscribe,

Honoured Sir,

Your most Obedient, and

Obliged Humble Servants,

Negapatam,
June 28, 1719.

Thomas Cook, Depy-Governor,
Stephen Newcome,
William Palmer.

" The foregoing is an Account of our Proceedings, as
" it was remitted to the Governor and Council of this
" Place from *Negapatam*; to which it will not be amiss to
" add, the Reasons that were the Occasion of this Mis-
" fortune, which is omitted in the foregoing Narrative:
" First, it is to be considered, that the *English* had been in-
" volved in Troubles with the Country Government, both
" at *Maribrough* and *Bantial* for some Time before they
" arrived on the Coast; which tho' I was to fortunate as

“ to bring to a Conclusion, and had for many Months
 “ after kept a fair Correspondence with the Natives, till
 “ they harboured in their Minds a secret Relentment of
 “ the former Injuries they had suffered, which they con-
 “ cealed under a Cloak of Friendship, and seeming Satis-
 “ faction of my Administration, till they had brought the
 “ whole Country into a Combination, and being sensible
 “ how briskly our Fortifications were carried forward, took
 “ the Opportunity of Revenge before our Brick-buildings
 “ could be finished, and at a Time, as they thought, we
 “ should have no Ship in the Road to assist us; but the
 “ *Matelapatam* very fortunately arrived a few Days be-
 “ fore they put their Design in Execution. Not long be-
 “ fore this Rebellion, a Difference had happened between
 “ *Dupatty Renterin* and *See Gibb*, Captain of the *Cbina-*
 “ *men*, and Undertaker of the Company's Sugar and Ar-
 “ rack Plantations. The *Dupatty* is one of the second
 “ Men in the Kingdom, and Governor of *Dusanor*, a
 “ Town of that Name, situate on the Side of the River,
 “ opposite to the Company's Sugar and Arrack Plantations.
 “ He is a Person well beloved among the Natives, being
 “ esteemed a Priest amongst them, and always thought
 “ to be a good Friend to the *English*.

“ The Difference first began by the *Cbinamen* killing
 “ some of the *Dupatty's* Buffaloes, that had broke through
 “ some of their Fences, and done some small Damage
 “ to the Plantations, and indeed, the Fences were not so well
 “ secured as they ought to have been; and this they at-
 “ tirmed to me they had done, by an Order given them
 “ by Mr. *Farmer*, when Deputy-Governor. But consider-
 “ ing the ill Consequences that might attend granting
 “ such Liberty to the *Cbinse*, I immediately forbade them
 “ doing the like for the future, and obliged them to
 “ make the *Dupatty* Satisfaction for some Buffaloes they
 “ had killed, and if the like should happen again, I pro-
 “ mised that the *Dupatty* should make good to them what
 “ Damages the Plantations appeared to have sustained,
 “ provided they kept their Fences in Repair. Notwith-
 “ standing what I had done in this Affair, some of the
 “ *Dupatty's* People, out of Revenge, got into the *Cbina-*
 “ Compound, in the Night-time, and killed one of *See*
 “ *Gibb's* Slaves, as he was sleeping in his House. The *Du-*
 “ *patty's* Brother was seen, and known to be one of the
 “ Company; whereupon he was taken and brought to the
 “ Fort, where he was put into the *Cock-house* for about
 “ twenty-four Hours, till he could be brought to his Trial;
 “ when he was acquitted, without any further Punish-
 “ ment, there being no plain Proof, that he was the Per-
 “ son that actually committed the Murder, though by
 “ the Evidences that appeared against him, there were
 “ circumstantial Proofs enough to have condemned him.
 “ However, out of Respect to the *Dupatty*, whom I al-
 “ ways esteemed to be my Friend, and being well ac-
 “ quainted with his Interest, and the Influence he had
 “ over the Country People, I thought it convenient to
 “ pass the most favourable Construction on this Accusa-
 “ tion, which I accordingly did, and made the *Dupatty*
 “ and *See Gibb* shake Hands, and promise Friendship to
 “ each other before they parted, and so they remained
 “ for some Time alter, till the *Dupatty* had got his Forces
 “ together in his *Dusan*, and then he again renewed this
 “ Dispute, resenting the Wrongs they had received from
 “ the *Cbinse*, as also the Disgrace of having his Brother
 “ put in the *Cock-house*, and brought to his Trial, not-
 “ withstanding I had been so favourable to him on this
 “ Occasion, and under this Pretence our Trouble com-
 “ menced. *Thomas Cook*.

The two following Letters were intercepted by the *En-*
glish in the Year 1717, which shews, that the Natives had
 formed this Conspiracy some Time before it was put in
 Execution.

“ This comes from Sultan *Manfore*, *Raja Guillamet*,
 “ *Dattue Pandabo*, all the great Men in *Bandar*, *Sapoole*,
 “ and the Overseers of Trade in *Bantayan*, and *Yego Leova*,
 “ to *Datto Raja Quasso*, with all the *Proterens* and *Le-*
 “ *micitas*, from *Sabat* at *Uttawan*, to *Calaboon*, *Surambe*,
 “ and *Manacca*.

“ *Raja Quasso's* Letter sent by *Tuan Mallin* and *Du-*
 “ *patty Lora Samiclan*, is received, which we like very

“ well. We are now assuredly certified the whole Coun-
 “ try as far as *Abong*, likewise *Tuan De Goono* with his
 “ People, will unanimously join us, and when this ar-
 “ rives, send *Tuan Mallin* into the Country, to advise,
 “ that we intend utterly to destroy the *English*, and raze
 “ the Settlements throughout the whole Coast, because
 “ they have broke Faith, and become quite otherwise
 “ to what they formerly were. We shall proceed as soon
 “ as the Festival is over, therefore would have you *Datto*
 “ *Raja Quasso* dispatch a Messenger with your real Senti-
 “ ments of this Affair, signifying also how the *Proterens*
 “ and *Lemicitas* are affected.” The Answer, “ This
 “ Letter comes from him that eats nothing, to *Raja Man-*
 “ *fore*, and Sultan *Guillamet*, assuring them, that he will
 “ gather together all those like himself, with the most va-
 “ liant Men hereabouts, and march directly against *Ben-*
 “ *coolen*, therefore desires the Assistance of Arms, which
 “ yourselves and *Raja Passaffer* must not fail to lend to
 “ *Tuan De Goono*, who is resolved, if the Kings are
 “ agreed to be their Ally, and you may depend on his
 “ Fidelity, for he knows not how to tell a Lye: When he
 “ comes down from the Country, will bring over to his
 “ Interest the People of *Serangi* to *Beneulen*, and *Lat*
 “ *Cewi*, with those belonging to *Pangaran Munco*
 “ *Aunoom*, even as far as *Pollomboug*. This is what I
 “ promise to do, desiring your Letter in Answer to it.
 “ So God bless and keep you in all your Undertakings;
 “ give my Service to *Datto Raja Quasso*.” Faithfully
 translated per

Robert Dymond, Linguist.

“ Found at *Tanjoeng Arang*, up *Sabat* River, by *Oran-*
 “ *gio Bandabarrab Munco Raja*, January the 27th, 1717,
 “ while Mr. *Farmer* was Deputy Governour of the West
 “ Coasts of *Sumatra*.”

Notwithstanding the Natives had thus driven the *En-*
glish from *Beneulen*, they suffered them in about a Year's
 Time to return again, and go on with the Fortifications
 at *Marlborough* Fort, without Opposition. It is true,
 there had been some *English* Chiefs sent thither, who were
 not endowed with so much Discretion as they ought.
 These Gentlemen, by an imperious and assuming Behav-
 iour, had highly provoked the Natives; but this being very
 tolerable in comparison of the Tyranny the *Natib* had
 exercised in every Place where they prevailed, the *Mal-*
lays, upon the Expulsion of the *English*, began to be un-
 der terrible Apprehensions lest the *Dutch* should come and
 settle amongst them by Force, and put an iron Yoke up-
 on their Necks, as they had upon their Neighbourhood. They
 soon laid aside their Relentment therefore, and over-look-
 ing the Indiscretions of the *English* Chiefs, gave all Encouragement to our Countrymen to settle among them;
 and it was very happy for the *English*, that they removed
 from *Beneulen*, for there were buried Multitudes every
 Year, whereas a late Chief of *Marlborough* Fort assures
 us, that during the whole Year, they did not bury one
 Gentleman; such a Difference there is in the Situation of
 these two Places, notwithstanding they are no more than
 two or three Miles asunder, and *Marlborough* Fort be-
 ing much more defensible in its Situation than *York* Fort;
 for at *Marlborough* our People are not so apprehensive of be-
 ing surprized by the Natives as formerly, if there should
 happen any misunderstanding between them again. By this
 Means the *British* Commerce is greatly extended on this
 Island of *Sumatra*, and with very good Effect.

16. The Company of late Years have been extremely at-
 tentive, not only to the general Characters, but to far as it
 has been possible for them to be informed as to the Educa-
 tion, Genius and Behaviour of their Chiefs, by which
 wife and prudent Conduct, they have given quite a new
 Face to their Affairs, and if it had not been for the setting
 up new Companies in different Parts of *Europe*, by which
 their Trade has certainly been very much hurt, they must
 by this Time have been in a Condition to have almost
 doubled their Dividends; yet I cannot but acknowledge,
 upon this Occasion, that as these new Companies were
 erected abroad chiefly from the Opinion that Foreigners
 entertained of the Profits that were made by our Company,

ified the whole Coun-
De Goona with his

to the Discovery of this was, in a great measure, owing to
 the lascivious Disputes that have long reigned amongst us;
 for great Complaints being made of the Decay of our Trade,
 the Ministry caused the Amounts of the Company's Sales
 to be constantly published, which struck Po signers with
 Amazement, and contributed greatly to the forwarding
 the Projects they had formed of obtaining a Share: this
 lucrative Traffick.

At the same time these Designs were vigorously pur-
 sued abroad, there wanted not some Projectors at home,
 who were desirous of laying upon the *Indian Trade*; and
 abundance of plausible Things were said upon that Sub-
 ject, which, as it very naturally might, greatly alarmed
 the Company, more especially as it happened at a Time
 when they had Reason to apprehend that popular Opinions
 might prevail to their Prejudice; and therefore it is not to
 be wondered that they entered likewise, on their Side, into
 such Schemes as were most likely to defeat these Designs,
 and to secure them in the Possession of their Rights and
 Privileges. I shall not take upon me to decide so nice
 and intricate a Question, as whether the laying open this
 Trade would, or would not, have been for the Advantage
 of this Nation; because, on the one hand, I am sensible
 much may be said on both Sides; and on the other, that
 I have not Room to examine here what might be alledged
 on either Side. I confine myself therefore to Matters of
 Fact, and endeavour, with all the Brevity that is consistent
 with my Design, of giving as compleat a History as is in
 my Power, of our Commerce to the *Indes*, which, so far
 as I know, is a Subject not attempted before, and conse-
 quently more necessary, which leads me to observe, that
 the Result of the Company's Considerations on this Head
 was, the proposing to such as had the Direction of the
 publick Affairs, a new Agreement with respect to the Com-
 pany's Powers, so apparently beneficial to the Nation, as
 that it might effectually secure them from listening to the
 Proposals that were, or might be made, for laying this
 Trade open, in which, without doubt, such as were then
 entrusted with the Direction of the Company's Concerns,
 did their Duty to the Proprietors, and were so successful
 therein, as to obtain the Concurrence of the Administration;
 and, in consequence thereof, such a Law as they were
 desired for the preserving the Powers and Privileges of
 their Principals.

At all Events, this was much better for the Nation than
 the Method taken in King *William's* Time upon the like
 Occasion, when the old *East-India* Company found it re-
 quisite to distribute an immense Sum of Money to the
 Ministers and Favourites, to obtain a new Charter, by
 which the Publick did not gain a single Shilling in Re-
 turn for the Advantages that were granted to this Corpo-
 ration. This Observation of mine will be fully justified,
 and the Truth thereof effectually proved from the Con-
 tents of the Act of Parliament before-mentioned, which
 was passed in the third Year of his present Majesty, in
 consequence of the Agreement, of which I have before
 taken Notice, and was intended on both Sides, to be abso-
 lutely final, and in every Respect conclusive.

This Act therefore, after reciting several Acts, Proviso's,
 Charters, and Agreements, &c. relating to the United
 Company of Merchants of *England* trading to the *East-*
Indies, Enacts, That in pursuance of their late Agree-
 ment, the said Company shall pay into the Receipt of the
 Exchequer, on or before a certain Day appointed, the Sum
 of 200,000 Pounds, to be applied towards the Supplies
 granted to his Majesty, for which no Interest shall ever be
 payable to the Company, nor any Addition be made to
 their capital Stock or Debt from the Publick, on account
 thereof; nor shall the same, or any Part of it, be paid to
 the Company. And after the 29th of *September*, 1730,
 the Annuity, or yearly Fund of 100,000 *l.* shall be re-
 duced to 128,000 *l.* in respect of the capital Stock or Debt
 of 3,200,000 *l.* which reduced Annuity shall be charged
 on the same Duties and Revenues by the like weekly or
 quarterly Payments, and with the same Provisions for
 making good Deficiencies in the said reduced Fund, as
 their present Annuity or Fund is now charged on, till
 some new or other Provision shall be made by Parliament,
 with Consent of the Company. But, upon one Year's

Notice to be given by Parliament after the 25th of *March*,
 1736, on the Expiration of that Year, and on Re-pay-
 ment of the said Debt of 3,200,000 *l.* to the Company, and all
 Arrears of their reduced Annuity of 128,000 *l.* which
 shall be due at the End of the said Year; then, and from
 thenceforth, the said Annuity, or yearly Fund, shall cease,
 and be no longer payable.

At any Time, on a Year's Notice after the said 25th of
March, 1736, given by Parliament, at the said Year's
 Expiration, upon Re-payment to the Company of any
 Sum, not being less than Five hundred thousand Pound,
 in Part of the capital Stock of 3,200,000 *l.* and on Pay-
 ment of all Arrears which shall be then due on their re-
 duced Annuity, after such Payments made to such of the
 said Annuity as shall bear a Proportion to the Money so
 paid in Part, shall cease and be abated; and so from time
 to time, upon such yearly Notices and Payment of such
 other Sums in Part of the said capital Stock, till the
 Whole of their Annuity shall be entirely sunk and deter-
 mined. Notwithstanding any such Redemption, all Per-
 sons entitled to any Interest in the said capital Stock in
 Trade, or Money paid in for carrying on the same, or in
 the Factories, Settlements, Lands, &c. belonging to the
 United Company, shall be, and continue a Body politick
 and corporate, &c. and have perpetual Succession; and
 they, and their Successors, shall be capable in Law to pur-
 chase Lands, &c. not exceeding at any one time the yearly
 Value of ten thousand Pounds in the Kingdom of *Great*
Britain, and also to aliene the same; and may also enjoy
 all Privileges, Stocks, and Estates, and Advantages, &c.
 which are not hereby altered as by former Acts or Char-
 ters founded thereon, the Company might hold or enjoy
 the same; and after such Redemption of the said yearly
 Fund, or one Moiety thereof, the Company may, at their
 General Courts, declare how much, and what Share in the
 remaining capital Stock, &c. shall qualify Members of the
 same Company to be Directors, or to give Votes in any
 General Court. And, notwithstanding such Redemption
 as aforesaid, the Company shall, subject to the Proviso or
 Determination herein after contained, enjoy the whole and
 sole Trade to the *East-Indies*, and have the only Liberty
 of trading thither, &c. And the *East-Indies*, or Islands,
 &c. within the Limits of the said Company, shall not, be-
 fore the said Determination, be failed to by any other of
 his Majesty's Subjects.

And if any of the said Subjects, other than the Factors,
 &c. of the United Company, shall at any Time fail, trade,
 or adventure to or from the *East-Indies*, and Parts aforesaid,
 they shall incur the Loss of all Ships which shall be
 employed in such Trade, &c. and the Goods laden there-
 in, and double the Value thereof; which Forfeitures shall
 be paid for, recovered, and distributed, as by the 7 *Geo. I.*
c. 21, is directed, concerning the Penalties and Forfeitures
 mentioned in that Act.

The said Company shall, at all Times hereafter, have all
 the Powers which by any Charters, &c. are granted them,
 and not altered by this Act, freed and discharged from all
 Proviso's of Redemption, &c. as fully as if the same were
 here severally repealed, but subject to the Restrictions con-
 tained in the Acts and Letters Patents now in Force, and
 also to the Proviso's following, *viz.* Provided that upon
 three Years Notice to be given by Parliament, after the
 25th of *March*, 1736, upon the Expiration of the said
 three Years, and repaying to the Company of the whole
 capital Stock of 3,200,000 *l.* and all Arrears of Annuities
 payable in respect thereof; then, and from thenceforth,
 the Right, Title, and Interest of the said Company, to the
 whole, sole, and exclusive Trade to the *East-Indies*, &c.
 shall cease and determine. But after the Determination of
 that Company's Right to the sole and exclusive Trade to
 and from the *East-Indies*, the Corporation, with all or any
 Part of their joint Stock, Goods, Estates, &c. may trade
 in common with other the Subjects of his Majesty trading
 to and from those Parts.

Any Notice in Writing, signified by the Speaker of the
 Houle of Commons, shall be deemed a due and proper
 Notice by Parliament, to all the Ends and Purposes for
 which such Notices are directed by this Act to be given to
 the Company. Nothing in this Act shall extend to sub-
 ject

ject the Governor and Company of Merchants of England trading to the *Levant-Seas*, to any Penalties and Forfeitures thereby enacted, in respect to their Trade in those Seas; and nothing herein shall restrain or prejudice such Trade or Navigation within any of the Limits of the *East-India* Company, as the *South-Sea* Company are any ways entitled unto.

With this Act I shall conclude the historical Part of this Section, having, as I promised, deduced the Transactions of the *East-India* Company, and with them the Commerce of the *British* Nation to the *Indies*, from the earliest Accounts we have of their trading to this Part of the World, and from their first Establishment in the Reign of Queen *Elizabeth* down to the present Time; in which Series of Facts, we hope the Reader will find a greater Satisfaction, since it exhibits to him in one View, and considering the vast Variety of Matter in a very narrow Compass, a regular Chain of Events, which demonstrates the vast Importance of this Commerce to the Nation, the Means by which it was at first acquired, the Progress made therein, the Difficulties and Obstructions it has met with, the Methods by which they have been overcome, and the Manner in which the Company has at last acquired a happy and secure Establishment, which we have Reason to hope will last as long as our present excellent Constitution, since it is founded on the same Basis, and is fortified by the strongest Authority that the Laws of this Country can afford.

It remains, in order to conclude the Plan laid down at the Beginning of this Section, that we should present the Reader with a clear and succinct View of the Possessions of the Company in the *Indies*, and the State of their Commerce in those Parts, as it stands at present, which we shall do with all the Brevity possible, and in that Order which seems most natural, both with regard to the Situation of Places, and the avoiding unnecessary Repetitions, having nothing more in View than to state every thing as clearly as it is possible, and to confine ourselves within as little Room as the Pursuit of that Design will allow.

17. We shall begin then with the Port of *Gambraon*, or, as some write it, *Gombroon*, on the Coast of *Persia*, which became famous after the Destruction of the Island of *Ormuz*, and the Ruin of the *Portuguese* Power in the *Indies*. The City was built by the Great Shah *Abas*, from whence it is called by the *Persians* *Bander-Abassi*, that is, the Court of *Abas*. It stands in the Lat. of 27° 40' North, and is looked upon as a Port of the greatest Trade in this Part of the World. We have elsewhere given a large Account of the Situation, Climate, and Condition of the Country in the Neighbourhood of this celebrated Mar, and shall here therefore confine ourselves strictly to what concerns the Commerce of the *English*.

Our first Establishment was about the Year 1613, and the Great Shah *Abas* having, at that Time, Occasion for our Assistance against the *Portuguese*, granted us by Treaties, in Consideration of our Services in that War, half the Customs of this Port, which were duly received for a considerable Time; but, at length, under various Pretences, were reduced to one thousand Tomans a Year, which amounts to three thousand three hundred thirty-three Pounds six Shillings and eight Pence of our Money; and even this, for forty Years past, has been but very indifferently paid; and at present, as I conceive, we have the Right only, and not the Possession. But the *East-India* Company still maintains a noble Factory here, by which it manages the whole Trade of the Empire of *Persia*, and exports thither a vast Quantity of *European* Goods. In the Year 1720, the Factory suffered severely, and the Confusions induced by repeated Rebellions in *Persia*; but as the Affairs of that Empire are now pretty well settled, there is no doubt but those of the Company will be also restored, and that we shall regain that important Commerce which has been so long carried on here.

The City of *Mecca* stands at the Entrance of the *Red Sea*, in the Latitude of 13° 11' W. and is a Place of very great Trade, as we have shewn in the former Part of this Work. The *English* are likewise well received here; carry on a great Commerce in Coffee, and other Commodities, as well as in all the adjacent Ports of *Arabia*, as has been

already shewn in the foregoing Sections. It is true, that we have been some times exposed to the Injustice of the *Arabian* Princes, and to the Depredations of Pirates in those Parts; but in this we have only shared the same Fate with other Nations, and perhaps have escaped rather better than they.

We shall next proceed to the *Indian* Coast, where we have either Factories or Forts, and Settlements, at the following Places, viz. *Baroaeh*, *Swalley*, *Surat*, *Bombay*, *Dabul*, *Carwar*, *Tellebery*, *Anjengo*, *Fort St. David*, *Cannemere*, all along the *Malabar* Coast, and turning up to those of *Coromandel*, where we come next to what may be called the Capital of our Possessions in the *Indies*, I mean *Fort St. George*. We have in the Course of this Work, and particularly in this Section, given a large Account of most of the Places before-mentioned; which is the Reason that we have not dwelt upon them here; but as for *Fort St. George*, which stands in the Latitude of 13° 20' North, it requires a more particular Description for many Reasons, and, therefore, I have thought fit to insert a large Historical Account thereof, as well as a clear and circumstantial Description, written by one who was perfectly acquainted therewith, as well as with all the Transactions that occur in his curious Relation, which will contribute to render the History of this Part of our *Indian* Settlements complete, by furnishing as exact an Account of this, as we have here before given of other Places; and therefore cannot but afford the Reader an agreeable Entertainment.

Fort St. George or *Maderasi*, or, as the Natives call it, *China Patam*, is a Colony and City belonging to the *English East-India* Company, situated in one of the most incommodious Places I ever saw: It fronts the Sea, which continually rolls impetuously on its Shore more here, than in any other Place on the Coast of *Coromandel*: The Foundation is on Sand, with a Salt-water River on its Backside, which obstructs all Springs of fresh Water from coming near the Town; so that they have no drinkable Water within a Mile of them, the Sea often threatening Destruction on one Side, and the River, in the rainy Season, Inundations on the other. The Sun from *April* to *September* scorching hot; and if the Sea-Breezes did not moisten and cool the Air, when they blow, the Place could not possibly be inhabited. The Reason why a Fort was built on that Place is not well accounted for; but Tradition says, that the Gentleman who received his Orders to build a Fort on that Coast, about the Beginning of King *Charles* the Second's Reign, after his Restoration, for protecting the Company's Trade, chose that Place to ruin the *Portuguese* Trade at *St. Thomas's*; others again alledge, and with more Probability, that the Gentleman aforesaid, which I take to be Sir *William Langborn*, had a Mistress at *St. Thomas's*, of whom he was so enamoured, that it made him build there, that their Interviews might be the more frequent and uninterrupted; but whatever his Reasons were, it is very ill situated.

The Soil about the City is so dry and sandy, that it bears no Corn; and what Fruits, Roots, and Herbage they have, are brought to Maturity by great Pains and much Trouble. If it be true, that the Company gave him Power to settle a Colony in any Part of that Coast that pleased him best, I wonder that he chose not *Cuboon*, about six Leagues to the Southward, where the Ground is fertile, and the Water good, with the Convenience of a Point of Rocks to facilitate Boats landing; or why he did not go nine Leagues farther northerly, and settle at *Polsat*, on the Banks of a good River, as the *Dutch* have done since, where the Road for Shipping is made easy by some Sand-Banks that reach three Leagues off Shore, and make the high turbulent Billows that come rolling from the Sea, spend their Force on those Banks, before they can reach the Shore. The Soil is good, and the River commodious, and convenient in all Seasons: Now, whether one of these Places had not been more eligible, I leave to the ingenious, and those concerned, to consider.

However, the War carried on at *Bengal* and *Bombay*, by the *English*, against the *Mogul's* Subjects, from 1685 to 1689, made *Fort St. George* put on a better Dress than

ns. It is true, that the Injustice of the Actions of Pirates in shared the same Fate escaped rather better

ian Coast, where we Settlements, at the *alley, Surat, Bombay, Fort St. David, Cony* d turning up to those to what may be called *Indies*, I mean Fort of this Work, and large Account of most which is the Reason that re; but as for Fort of 13° 20' North, on for many Reasons; I insert a large Histo- near and circumstantial a perfectly acquainted antiactions that occur contribute to render *ian* Settlements com- account of this, as we Places; and therefore agreeable Entertain-

as the Natives call it, belonging to the *Eng-* in one of the most in- fronts the Sea, which Shore more here, than *Coromandel*: The Foun- River on its Backside, Water from coming is no drinkable Water en threatening Destruc- the rainy Season, Inun- April to September zes did not moisten and Place could not possibly Fort was built on that out Tradition says, that orders to build a Fort on King *Charles* the Se- son, for protecting the e to ruin the *Portuguese* alledge, and with more ore said, which I take to Mistress at *St. Thomas's*, at it made him build be the more frequent his Reasons were, it is

at *Bengal* and *Bombay*, s Subjects, from 1635; at on a better Dreis than he

le wore before; for the peaceable *Indian* Merchants, who hate Contention and War, came flocking thither, because it lay far from those Incumberers of Trade, and near the Diamond Mines of *Golconda*, where there are many Times good Bargains to be made, and Money got by our Governours; the black Merchants resorting to our Colony, to secure their Fortunes, and bring their Goods to a safe Market, made it populous and rich, notwithstanding its natural Inconveniencies. The Town is divided into two Parts, one where the *Europeans* dwell, is called the white Town: It is walled quite round, and has several Bastions and Bulwarks to defend its Walls, which can only be attacked at its Ends, the Sea and River fortifying its Sides. It is about four hundred Paces long, and one hundred and fifty broad, divided into Streets pretty regular, and Fort *St. George* stood near its Centre. There are two Churches in it, one for the *English*, and another for the *Romish* Service. The Governor superintends both, and in filling up Vacancies in the *Romish* Church, he is the Pope's Legate à la- tere in Spiritualities. There is a very good Hospital in the Town, and the Company's Horse-Stables are neat, but the old College, where a great many Gentlemen Factors are obliged to lodge, is badly kept in Repair. They have a Town-Hall, and underneath it are Prisons for Debtors. They are, or were a Corporation, and had a Mayor and Aldermen, chosen by the free Burghers of the Town, but that scurvy Way is grown obsolete, and the Governor and his Council, or Party, fix the Choice.

The City had Laws and Ordinances for its own Prefer- vation, and a Court kept in Form, the Mayor and Aldermen in their Gowns, with Maces on the Table, a Clerk to keep a Register of Transactions and Cases, and Attornies and Solicitors to plead in Form, before the Mayor and Aldermen; but after all, it is but a Farce; for, by Experience I found, that a few Pagaloes rightly placed, could turn the Scale of Justice, to which Side the Governour pleased, without respect to Equity or Reputation. In smaller Matters, where the Case on both Sides is but weakly supported by Money, then the Court acts judiciously, according to their Consciences and Knowledge, but often against Law and Reason; for the Court is but a Court of Conscience, and its Directions are very irregular, and the Governour's dispensing Power of nulling all that the Court transact, puzzles the most celebrated Lawyers there, to find Rules to justify such Conduct.

They have no martial Law, so that they cannot inflict the Pains of Death any other Ways than by Whipping, only for Piracy they can hang, and some of them have been so fond of that Privilege, that Mr. *Yale* hang'd his Groom (*Cross*) for riding two or three Days Journey off, to take the Air; but in *England* he paid pretty well for his arbitrary Sentence: And one of a later Date, viz. the Orthodox Mr. *Collin*, hang'd a Youth, who was an Apprentice to an Officer on board a Ship, whose Master going a pirating, carried his Servant along with him, but the Youth ran from them the first Opportunity he met with on the Island of *Jonckeyloan*, and informed the Master of a Sloop which lay in the River there, that the Pirates had a Design on his Sloop and Cargo, and went armed in Company with the Master, to hinder the Approach of the Pirates, and was the first that fired on them, yet that merciful Man was inexorable, and the Youth was hang'd.

The Power of executing Pirates is so strangely stretched, that if any private Trader is injured by the Tricks of a Governour, and can find no Redress, if the injured Person is so bold as to talk of *Lex talionis*, he is intallibly declared a Pirate. The black Town is inhabited by *Gentoes*, *Mohammedans*, and *Indian Christians*, viz. *Armenians* and *Portuguese*, where there are Temples, and Churches for each Religion, every one being tolerated, and every one follows his proper Employment. It was walled in towards the Land, when Governour *Pit* ruled it. He had some Apprehension that the Mogul's Generals in *Golconda* might some Time or other plunder it; so laying the Hazard and Danger before the Inhabitants, they were either persuaded, or obliged to raise Subsidies to wall their Town, except towards the Sea, and the white Town.

The two Towns are absolutely governed by the Governour, in whose Hands the Command of the Military is lodged; but all other Affairs belonging to the Company, are managed by him and his Council, most Part of whom are generally his Creatures; and I have been, and am acquainted with some Gentlemen, who have been in that Post, as well as some private Gentlemen who resided at *Fort St. George*, Men of great Candour and Honour, but they seldom continued long Favourites at Court. One of the Gates of the white Town looks towards the Sea, and it is for that Reason called the Sea-gate, the Gate-way being pretty spacious, was formerly the common Exchange, where Merchants of all Nations resorted about Eleven o'Clock to treat of Business in Merchandise; but that Custom is out of Fashion, and the Consultation-chamber, or Governour's Apartment, serves for that Use now; which made one Captain *Hart*, a very merry Man, say, that he could never have believed that the Sea gate could have been carried into the Consultation-room, if he had not seen it.

The Company have their Mint here for coining Bullion, that comes from *Europe*, and other Countries, into Rupees, which brings them in a good Revenue. The Rupee is stamp'd with *Persian* Characters, declaring the Mogul's Name, Year of his Reign, and some of his Titles. They also coin gold into Pagaloes of several Denominations and Values. There are also Schools for the Education of Children; the *English* for reading and writing *English*; the *Portuguese* for their Language, and *Latin*; and the *Mohammedans*, *Gentoes* and *Armenians*, for their particular Languages, and the *English* Church is well endowed, and maintains poor Gentlewomen in good Housewifery, and good Cloaths and Palankines.

The Diamond Mines are but a Week's Journey from *Fort St. George*. Some Customs and Laws at the Mines are, when a Person goes thither on that Affair, he chuses a Piece of Ground, and acquaints one of the King's Officers, who stay there for that Service, that he wants so many Covets of Ground to dig in, but whether they agree for so much, or if the Price be certain, I know not. However, when the Money is paid, the Space of Ground is enclosed, and some Centinels placed round it. The King challenges all Stones that are found above a certain Weight; I think it is above sixty Grains; and if any Stones be carried clandestinely away, above the stipulated Weight, the Person guilty of the Theft is punished with Death. Some are fortunate, and get Estates by digging, while others lose both their Money and Labour. The current Trade of *Fort St. George* runs gradually slower. The Traders meeting with Disappointment, and sometimes with Oppressions, and sometimes the Liberty of buying and selling is denied them: And I have seen, when the Governour's Servants have bid for Goods at a public Sale, some who had a mind to bid more, durst not, others who had more Courage, and durst bid, were brow-beaten and threatened; and I was Witness to a Bargain of *Surat* Wheat, taken out of a Gentleman's Hands, after he had fairly bought it by Auction, so that many trading People are removed to other Parts, where there is a greater Liberty and less Oppression.

The Colony produces very little of its own Growth, or Manufacture for foreign Markets. They had formerly a Trade to *Pegu*, where many private Traders got pretty good Bread by their Traffick and Industry, but the Trade is now removed into the *Armenians*, *Moors* and *Gentoes* Hands, and the *English* are employed in building and repairing of Shipping. The Trade they have to *China* is divided between them and *Surat*; for the Gold and some Copper are for their own Markets, and the Grofs of their own Cargo, which consists in Sugar, Sugar-candy, Allum, China-ware, and some Drugs, as China-roots, Galling-gal, &c. are all for the *Surat* Market. Their Trade to *Persia* must first come down the famous *Ganges*, before it can come down *St. George's* Channel, to be conveyed to *Persia*. They never had any Trade to *Mocha*, in the Product and Manufactures of *Coromandel*, before the Year 1713; and *Fort St. David* supplies the Goods for that Port; so that *Fort St. George* is an Emblem of *Holland*, supplying

supplying foreign Markets with foreign Goods. The Colony is well peopled, for there is supposed to be 80,000 Inhabitants in the Towns and Villages, and there are generally about 4 or 500 Europeans residing there, reckoning the Gentlemen, Merchants, Seamen, and Soldiers. Their Rice is brought by Sea from *Ganjam* and *Orisa*; their Wheat from *Sarat* and *Bengal*; and their Fire-wood from the Islands of *Diu*, a low Point of Land that lies near *Matculpatam*, so that an Enemy that is superior to them in Sea Forces, may easily distress them.

Mr. *Zachary*, in his Account of this Place, tells us, that the Administration is vested in the Governor and Council, which consists of six grave Merchants in the Company's Service; and though these Officers have but small Salaries, yet their Perquisites and Advantages they derive from Trade, are so considerable as to enable them to make a good Figure while they live there, and carry home, notwithstanding, very large Estates. He seems to differ with other Writers as to the Properties of the Soil and Climate; and therefore it may not be amiss to attend a little to his Account. The Inhabitants, says he, enjoy as perfect Health as they do in *England*, which is plainly discovered in their ruddy Complexions, which few of our other Settlements can boast. The Heats in Summer are the greatest Inconvenience they labour under; yet, I never heard of any ill Effect from them. The delicious Fruits that the Country abounds with, are a great Help in this Extremity; nor are they wanting to themselves in other Respects. Bathings and wet Gouneys being often apply'd with Success to the Relief of the panting. It seldom lasts above four or five Hours in a Day, when the Sea-Breeze coming on, the Town seems to be new born. The Governor, during the hot Winds, retires to the Company's new Garden for Refreshment, which he has made a very delightful Place of a barren one. Its costly Gates, lovely Bowling greens, spacious Walks, Teal pond, and Curiosities, preserved in several Divisions, are worthy to be admired. Lemons and Grapes grow there; but so much Pains is necessary to bring either to Maturity, that a Bunch of one, or a single Fruit of the other, will stand its Owner in five Shillings before it is ripe.

The Governor seldom goes abroad with less than three or four score persons armed, besides his *English* Guards to attend him: He has two Union-Flags carried before him, and Country Musick, enough to frighten a Stranger into Belief the Men were mad. Two *Dubashes* attend to cool him with Fans, and drive away the Flies, or at otherwise would molest him. He is a Man of great Power, respected as a Prince by the *Rajahs* of the Country; and is, in every Respect, as great, save that these are for themselves, this his Subjects. When a Person of Note dies, the Funeral is solemnized with the greatest Magnificence. The Governor, Council, and Gentlemen of the Town attend, nor are the Fair-Sex wanting in their duty to their deceased Countrymen: The Executors are liberal in all Respects to express a just Concern for their Friend; whence the Ceremony is performed with all that is necessary for the Intertainment of a Christian. The Burial Place is at the further End of the Black-Town, adorned with many stately Tombs in Honour of the Deceased; some with lofty Spires, and into different Fancies, after the *Indian* Manner. Others on a lower Sphere, gravely express the Merit of the Person for whose sake they were erected, and almost all have the most curious Workmanship in *India* bestowed on them.

Much of the Powder expended in the Garrison is made on the Island, about a Gun shot from the Town. It has not the same Quality that which comes from *England*, for no other Place can be so well incorporating the Ingredients. It is made of the finest Salt Petre, and Brimstone, with good Charcoal, which ought to make the best Powder; but for want of skillful Managers and good Contrivances, they are all of a bad Quality. And, in truth, the Company's Powder is of the like Nature, are very much wanting to themselves. There is not an *English* Carpenter, Joiner, or other Artificer in the City, who knows his own Trade, whence they are obliged to black *Indians* for what they have Occasion for in these Trades; and in their Shops at one Shop of any sort in the *English*

Town, the Benefit of which all the *Dutch* Settlements sufficiently demonstrate; for they are so sensible of it, that they take due Care never to be deficient that way. This is a Thing easily brought to pass by a Body so considerable in the Kingdom. I shall rather admire it has been so long neglected, than offer at the Means for effecting it. However, I wish, for the Honour of the *English* Nation, they would decline sending such diminutive, dwarfish, crooked Recruits, as of late have gone to supply their Settlements. To say no better can be had in Time of War, is an Excuse, my own Experience proves altogether light; for, since it is no matter what Country in *Europe* they are of, let but three Captains be sent to *Ireland*, in less than three Months they could raise a Regiment of picked Fellows, who would be able to do them Service; besides, they look like Men, which is enough for them at *Fort St. George*. Objecting their Religion, looks like Partiality, for the *Tepals* in *India* are all of the same Principles; our Officers kill none but Protestants to serve in our Troops, wherefore that Country is quite over-run with lusty Men, who are ready to slave for want of Employment.

But, to proceed regularly in our History of the Settlements of this Company. Along the Coast of *Ceylon*, there were formerly several Places along the Coast to the Northward, which had *European* Factories settled in them, but are now neglected and unfrequented. There were also some Places farther up the Country, where the *English* and *Dutch* settled; but the *Rajahs*, who possessed the adjacent Countries, giving great Interruption to Trade, by their unjust and unreasonable Impositions, obliged them to withdraw their Factories. That of *Matculpatam* was the last they quitted, and, about three score Years ago, was effected the most flourishing Colony the *English* had in all *India*; but now their House is deserted, and the *Dutch*, who remained behind them, are preparing to take the same Course. It is not a great many Years ago since the *Mogul's* Viceroy, upon this Coast, offered the Governor of *Fort St. George*, to make him a Present of the Islands of *Diu*, and the Inhabitants were well inclined thereto; but the Governor delayed taking Possession so long, that both the Viceroy and the People changed their Minds; and when he would have erected a Factory, or a Fort there, they would not permit it.

Next to *Matculpatam* is *Nasipore*, where the *English* had a Factory for long Cloth, for the Use of their Factory of *Matculpatam*, when they manufactured Cloths there. It also affords good Teak-Timber for Building, and has a fine deep River, but a dangerous Bar, which makes it little frequented. And passing round *Covrange* Point, a little up *Carrange* Bay, is *Angerang*, that has the Benefit of a large deep River, that penetrates far up into the Continent. It has a Bar, soft at the Bottom, and three and an half Fathoms on it at High-Water. Here the best and finest long Cloth is made that *India* affords, and is sold cheap; but the inland Countries lying near the River, are in the Hands of several *Rajahs*; and each being Sovereign in his own small Dominions, lays such Impositions and Exactions on the Cloth that comes down the River, that they ruin that beneficial Trade of *Angerang*, and make it little frequented. In *Anno* 1708, the *English* from *Vizagapatam* settled there; but whether the Factory was starved for want of Money, or whether the constituent and constituted Chiefs of the Factories disagreed about dividing the Bear's Skin, I know not; but the Factory was soon withdrawn, and the Project lost.

Coasting along Shore, there are several little Ports between *Matculpatam* and *Vizagapatam*, besides *Nasipore* and *Angerang*, but *Wabew* is the most noted, for it produces Rice for Exportation, besides some Cloth, but it is not frequented by Europeans; and therefore I proceed to *Vizagapatam*, a fortified Factory belonging to the *English*. It is regularly fortified with four little Bastions, and has about eighteen Guns mounted in it. It has the Advantage of a River, but a dangerous Bar to pass over before we get into it. The Country about affords Cotton-Cloths both coarse and fine, and the best Duracs, or striped Mullins in *India*; but the Factory is generally heat-sick for want of Money to refresh it.

Dutch Settlements suff. to sensible of it, that cient that way. This a Body to considerable fire it has been to long for effecting it. Howe *English* Nation, they ive, dwasish, crooked apply their Settlements. he of War, is an Exa- altogether light; for, in *Luxury* they are of, land, in less than three ent of picked Fellows, Service; besides, they for them at Fort *St.* looks like Partiality, f the same Principles; ants to serve in our is quite over-run with ave for want of Fin-

In Anno 1709, the Factory drew a War on themselves for the Nabob of *Chickacul*; for one Mr. *Simon Halcomb*, who had been Chief at *Vizagapatam*, had borrowed considerable Sums of the Nabob, and aliased the Company's Seals to the Bonds he gave for them. Mr. *Halcomb* dying, the Nabob demanded his Money from the succeeding Chief, who would not pay him, alledging that *Halcomb* had borrowed it for his own private Use, and not for the Company's, and that he must get Payment out of *Halcomb's* private Estate, if there was enough found to pay the Debt, otherwise he might get his Money from some inland Rajahs, who stood indebted to *Halcomb*, by his Books of Accounts, in a greater Sum than would pay his Principal and Interest; and that he being the Mogul's General, could compel those Rajahs to pay their just Debts, which they would make over to him; but the Nabob, not caring to enter into a War with his Countrymen on such a Foundation, sent Agents to acquaint the Governor and Council of Fort *St. George* with his Affairs at *Vizagapatam*; they proved deaf to all the Agents Propositions and Arguments, and hardly treated him civilly; so he went back to his Master with the Account of his bad Success; upon which the Nabob came to a Garden, about half a League from *Vizagapatam*, accompanied with 500 Horse, and 3500 Foot, to demand his Money.

I, says Captain *Hamilton*, being accidentally there in a small *Dutch*-built Ship that I had bought from the *French* on my Credit at Fort *St. George*; and the Factory being but ill mann'd, Mr. *Huyling*, who was then Chief, and my Friend, desired the Assistance of my Arms and Council in that Juncture of Affairs, which I very freely gave him; and being asked in Council what I thought about the Affair, I advised him, and his Council to compound the Matter as well as they could, and spout out Tim, that we might better fortify the Avenues to the Factory. My Advice of compounding the Matter was rejected, but the other Part was followed; so, with seven *Europeans* that belonged to the Factory, and twelve that were with me, and twenty Topasses, and two hundred Natives, most of them Fishers, that lived under the Company's Protection, we fortified some Rocks that the Enemy were oblig'd to pass within Pistol-Shot of, if they had a mind to attack us.

We threw up Breast works between the Rocks, and moored my Ship within Pistol-Shot of the Shore, and had eight Minion-Guns to scour the Sands, if they had attempted to come that Way; and for six Weeks we continued on our Guard, and were often alarmed in the Night, but finding us always ready to receive them, they did not think it proper to force an Entry into the Town. I had the Honour to command all the Out-guards, and the Chief with eight *Europeans*, and twenty Blacks, kept the Fort. Thus we continued in perpetual Watching and Alarms, till Reinforcements arriv'd from Fort *St. George*, and then I left them, and proceeded on a Voyage to *Pegu*. Both Parties being vry busy, one striving to get his Money by Compulsion, and the other to save the Company's Money on any Terms, right or wrong. The War being drawn to a greater Length than was imagin'd at first, and Charges rising higher than was expected, inclin'd them to make all up amicably, which was at last effected by the Company's paying near the Sum that was at first demanded.

The Nabob, whose Name was *Takerly Caxon*, would bear of no Peace without the Company's Merchant, who was a *Genoue*, called *Agupa*, and a Subject of the Mogul (who was very active in the War, in encouraging the Town's-people to defend themselves and the Company's Interests, and who also had wrote to some neighbouring Rajahs to embroil the Nabob's Affairs in his Absence, in order to divert him from pursuing his Demands on *Vizagapatam*, should be delivered up to him, which at last he was, and was put to a very cruel Death. He was set in the hot scorching Sun three Days, with his Hands fastened to a Stake over his Head, and one of his Legs tied up till his Heel touched his Buttock, and in the Night put into a Dungeon, with some venomous Snakes to bear him Company; and this was repeated till the third Night he ended his miserable Life. But the Company's Merchants,

for the future, will be careful how they espouse the Company's Interest again. There was one *Baiy*, a Recruit from Fort *St. George*, on some Discontent deserted the Company's Service, and enter'd into the Nabob's; but falling into an Ambush, was taken Prisoner by our Men, and was sent to Fort *St. George*, where, for his Desertion, he was severely whipped out of this World into the next, and there I leave him.

After the War was ended, and all was quiet, the Nabob returned to *Chickacul*, but could neither forget nor forgive his Treatment at Fort *St. George* and *Vizagapatam*; but finding by Force he could not get the Factory into his own Hands, without a great Loss of Men and Money, he had Recourse to Stratagem, for surprizing it: He came into the Town one Day with one Hundred Horse, and some Foot, without advising of his coming, as was usual, at the Town-gate, and before the Chief could have Notice, he was got into the Factory, with twenty or thirty of his Attendants. The Alarm being given a resolute bold young Gentleman, a Factor in the Company's Service, called Mr. *Richard Harden*, came running down Stairs with his Fuzee in his Hand, and Bayonet fixed on its Muzzle, and presenting it to the Nabob's Breast, told him in the *Genoue* Language (which he was Master of) that if any of his Attendants offered the least Incivility, his Life should answer for it. The Nabob was surprizingly astonish'd at the Resolution and Bravery of the young Gentleman, and fit down to consider a little, Mr. *Harden* keeping the Muzzle of his Piece still at his Breast, and one of the Nabob's Servants standing all the while behind Mr. *Harden* with a Dagger's Point close to his Back; so they had a Conference of half an Hour long in the above-mentioned Posture, and then the Nabob thought fit to be gone again, full of Wonder and Admiration at so daring a Courage.

The next Kingdom to *Celeonda*, in which the Places we have been last speaking of lie, is that of *Orissa*; and proceeding along its Coast, we come to the Mouth of the River or *Ballasore*, where there is a very dangerous Bar, sufficiently noted for the many Wrecks and Losses made by it. Between *Comaca* and *Ballasore* Rivers there is one continued sandy Bay, where prodigious Numbers of Sea-Tortoises resort, to lay their Eggs, and a very delicious Fish, called the Pamplee, some in Shells, and are sold for Two pence a hundred; two of them are sufficient to dine a moderate Man. The Town of *Ballasore* is but four Miles from the Sea by Land, but by the River twenty. The Country is fruitful to Admiration, producing Rice, Wheat, Gram, Doi, Callavances, several sorts of *Pulse*, *Annis*, Cummin, Coriander, and Caraway-Seed, Tobacco, Butter, Oil, and Bees-Wax. Their Manufactures are of Cotton in Sanis, Casses, Dumities, Mulnuils, Silk, and Silk and Cotton Romals, Curalls, and Lungies; and of Herbs (a sort of tough Grass) they make Gung-hams, Pinacots, and several other Goods for Exportation. The *English*, *French*, and *Dutch*, have their respective Factories here; but at present are of little Consideration; though, in former Times, before the Navigation of *Hugly* River was cultivated, they were the head Factories of the Gulph of *Bengal*.

The Town of *Ballasore* drives a pretty good Trade to the *Maldives*. Those Islands have no Rice or other Grain of their own Product; so that *Ballasore* supplies them with all Necessaries they want; and in Return bring Cowries and Cayer, for the Service of Shipping. The Seashore of *Ballasore* being very low, and the Depths of the Water very gradual from the Strand, make the Ships in *Ballasore* Road keep at a good Distance from the Shore, for in four or five Fathoms they ride three Leagues off. From *April* to *October* is the Season for Shipping to come into the Bay of *Bengal*; Pilots lie ready at *Ballasore* to carry them up the River *Hugly*, which is a small Branch of the famous *Ganges*. The *European* Companies before-mentioned, keep theirs always in Pay; but when none of their own Shipping is there, their Pilots have the Liberty to serve other Ships, which is no small Advantage to them. The Sides of the River are over-grown with Bulhes, which give Shelter to many fierce and troublesome Tygers, which do much Mischief. A good Author says, he knew an *Englishman* that was in the Ship's-boat laden with fresh Water,

Water, lying in the River, waiting the Tide to carry her over the Bar, and this Man had the Curiosity to step ashore, and being a little Way from the Boat, had a Call to ease himself, and had no sooner put himself in a Posture, near the Bushes, but out leaped a Tyger, and caught both his Buttocks in his Mouth, and was for carrying him away; but one of the Seamen in the Boat seeing the Tragedy, took up a Musket, and placed a Bullet in the Tyger's Head, while the Man was in his Mouth helpless. The Tyger immediately let him fall, and skulked into the Bushes, and the wounded Man was carried on board his Ship, where the Surgeon made a perfect Cure of the Wounds.

Pepy lies on the Banks of a River, supposed to be a Branch of the *Ganges*, about five Leagues from that of *Ballasore*; formerly it was a Place of Trade, and was honoured with the *English* and *Dutch* Factories. The Country produces the same Commodities that *Ballasore* does. At present it is reduced to Beggary, by the Factories removing to *Hughly*, and *Calcutta*, the Merchants being all gone. It is now inhabited by Fishers, as are also *Angole*, and *Kidgiere*, two neighbouring Islands on the West-side the Mouth of the *Ganges*. These Islands abound also in tame Swine, where they are sold very cheap. There are near these Islands dangerous Sand-banks, that are both numerous and large, and make the Navigation out and into *Hughly* River both troublesome and dangerous; and after we pass these Islands, in going up the River, the Channel for Shipping is on the East side, and several Creeks run from the Channel among a great number of Islands, formed by different Channels of the *Ganges*, two of which are more remarkable than the rest, *viz.* *Coxes* and *Sagar* Islands, where great Ships are obliged to anchor, to take in Part of their Cargoes, because several Places in the River are too shallow for such Ships to pass over, when their whole Cargoes are aboard.

There are no Inhabitants on those Islands, for they are so pestered with Tygers, that there could be no Security for human Creatures to dwell on them; nay, it is even dangerous to land on them, or for Boats to anchor near them; for in the Night they have swam to Boats at Anchor, and carried Men out of them; yet among the *Pagans*, the Island *Sagar* is accounted holy, and great Numbers of *Jesuits* go yearly thither in the Months of *November* and *December*, to worship and wash in Salt water, who many of them fall Sacrifices to the hungry Tygers. The first safe Anchoring-place in the River, is off the Mouth of a River above *Sagar*, commonly known by the Name of *Rogues River*, which had this Appellation from some *Banditti Portuguese*, who were Followers of Sultan *Syab*, when Emir *Jemal Aurenzeb's* General, drove the unfortunate Prince out of his Province of *Bengal*. For those *Portuguese* having no way to subsist after their Master's Flight to the Kingdom of *Aracan*, betook themselves to Piracy among the Islands, at the Mouth of the *Ganges*, and that River having Communication with all the Channels from *Xaugam* to the Westward from this River, they used to fall out and commit Depredations on those that traded on the River *Hughly*.

About five Leagues farther upon the West side of the River of *Hughly*, is another Branch of the *Ganges*, called *Gonga*; it is broader than that of *Hughly*, but much shallower, and more incumbered with Sand banks. A little below the Mouth of it, the *Danes* have a thatched House, but for what Reasons they kept a House there we are in the dark. Along the River of *Hughly*, there are many small Villages and Farms interspersed with those large Plains, but the first of any Note on the River side is *Calcutta*, a Market-town for Corn, coarse Cloth, Butter and Oil, with other Productions of the Country. Above it is the *Dutch* Banks Hall, a Place where their Ships ride when they cannot get farther up for the too swift Currents of the River.

Calcutta has a large deep River that runs to the Eastward, and is called *Juanparajao*, and on the West-side there is a River that runs by the Back of *Hughly* Island, which leads up to *Radnagur*, famous for manufacturing Cotton-cloth, and silk Nomaals, or Handkerchiefs; *Buffundri* and *Freshin*, or *Gergat*, and *Colong*, are all on that River, which produce the greatest Quantities of the best Su-

gars in *Bengal*. We are now arrived at the greatest Settlement the Company have on this Coast, which is *Fort William*; but having already given a large Account of this Place, and of such others as are of any Note in its Neighbourhood, we will proceed. The Kingdom of *Dara* is the first on the Eastern-side of the *Ganges*, next to that lies the Kingdom of *Aracan*, then the Kingdom of *Ava*, which is next to that of *Pegu*; on all which Coasts we have some, but very little Trade, and as to the Islands along the Coast, though well enough situated for Commerce, yet, as they are uninhabited, they do not deserve, or require our Notice.

The next Place on the Continent to the Southward, is *Merjee*, a Town belonging to the King of *Siam*, situated on the Banks of the River of *Tanacerin*, lying within a great Number of small uninhabited Islands. The Harbour is safe, and the Country produces Rice, Timber for Building, Tin, Elephants Teeth, and *Agale*-wood. In former Times, a good Number of *English* free Merchants were settled at *Merjee*, and drove a good Trade, living under a mild indulgent Government; but the old *East-India* Company envying their Happiness, by an arbitrary Command, ordered them to leave their Industry, and repair to *Fort St. George*, or to leave them, and threatened the King of *Siam* with a Sea-war, if he did not deliver their *English* up, or force them out of his Country, and in *June* 1687, sent one Captain *Weldon*, in a small Ship called *Courtesy* to *Merjee* with that Message; he behaved therein very insolently to the Government, and killed some *Siamese* without any just Cause. One Night, when *Weldon* was ashore, the *Siamese* thinking to do themselves Justice on him, got a Company together, designing to seize or kill the Aggressor; but *Weldon* having Notice of their Design, made his Escape on board his Ship, and the *Siamese* missing him, tho' very narrowly, vented their Rage on all the *English* they could find, the poor Victims being only guarded by their Innocence, did not so much as aim themselves to withstand the Fury of the enraged Mob, so that seventy six were massacred, and hardly twenty escaped on board of the *Courtesy*; such was the tragical Consequence of one Man's Insolence.

Before that fatal Time, the *English* were so beloved, and favoured at the Court of *Siam*, that they had Places of Trust conferred upon them, both in civil and military Branches of the Government. Mr. *Samuel Weste* was made *Shawbandaar*, or Custom-master at *Merjee* and *Tanacerin*, and Captain *Williams* was Admiral of the King's Navy, but the troublesome Company, and a great Revolution that happened in the State of *Siam*, made some repair to *Fort St. George*, others to *Bengal*, and others to *Achen*.

Since that Time, Things are quite altered, and the Affairs of the Company being thoroughly settled, all Things are carried on with the utmost Regularity, so that though it has not been found necessary to establish new Factories, or to settle Colonies along the Coasts, which would not only have alarmed other Nations, without contributing much to the Service of our own; yet the Commerce of the whole Gulph, from the Mouth of the *Ganges*, to the very Extremity of the Peninsula of *Malaca*, is properly provided for, by which Means the Company reaps the Profit, or at least a reasonable Part of the Profit of the private Trade thither, without being put to any unnecessary Expence. As to our Factories on the Island of *Sumatra*, they are now so numerous, that it is conceived we enjoy the best Part of the Traffick which that rich Island affords. Our Factories there are *Mecks*, *Bantam*, *Cattoun*, *Bencoolen*, *Marlbrough Fort*, of which we have spoken largely before, and *Silabar*, of which we have also taken Notice.

It is true, that the *Dutch*, being Masters of the neighbouring Island of *Java*, have found Means from thence to fix themselves upon Part of this Island, and it is said, they are possess'd of a gold Mine, which they work, but to no great Advantage, at least to the Company. On this Occasion, I cannot help taking Notice, that the Conduct of our *East-India* Company is to the full as commendable in their not endeavouring to follow this Example, since I am satisfied, that Commerce is a much more valuable Thing than Mines of Gold, especially in the Hands of a Company. Because this may seem a Paradox, I think I shall not mis-

Book I.

On this Occasion, I Conduct of our *In-* endable in their notew- ince I am satisfied, that e Thing than Mines of a Company. Beautif- ak I shall not m-

pend either my own or the Reader's Time, by endeavouring to explain it. There is certainly no Country in the *Indes* which abound so plentifully in Gold as this Island of *Sumatra*, if we except *China* and *Japan*, and that Method must certainly be the best, by which most of this precious Metal can be obtained. But the establishing by Force any Settlements in that Country, is not like to prove the most effectual Means, for many Reasons, for, in the first Place, the Natives will not work the Mines for themselves, and considering it as an intolerable Slavery to work them for others, have an unconquerable Aversion for such as would put them on such Labours; so that from the Time this Method is tried, there is an End of all free Correspondence with the People of this Country.

In the next Place, the Mines are far from yielding in any Proportion to what is expected from them, the Reason of which is not hard to discern; for all the Nations on that extensive Island, being employed in picking out of the Sands and Channels of the Rocks, such Gold as is forced into them by the Torrents, that pass through the Mines, the Quantity of Metal obtained by the Industry of such Multitudes, all working for their own Benefit, must exceed, in a transcendental Degree, what is dug out of a single Mine, under the Discouragements before mention'd. Several Colonies therefore, in different Parts of this Island, the gentle Usage of the Inhabitants, and the bringing them to consume and esteem *European* Commodities, is the true, safe and certain Means of acquiring peaceably, and by their own Consent, the Gold that is thus gathered; and these three several Advantages arise from the proceeding in this Way.

First, the vast Hazard of maintaining an absolute Power over a numerous Nation with a Handful of Men, is avoided. Secondly, an Intercourse is established, by which not only a vast Quantity of Gold is returned to *Europe*; but, which is a thing of no less Consequence, it is returned not by the Labour of *Indian* Slaves, but for Goods and Manufactures belonging to, or wrought among ourselves. Thirdly, by this Means a great Quantity of Shipping is employed; whereas the Possession of Gold or Silver-Mines requires only a few Ships, and as it is acquired by Tyranny abroad, so such a Retain of this Wealth can only serve to promote Idleness and Luxury at home. From all which Considerations, I conceive the Point I first laid down to be fully established, viz. that the Policy of our *East-India* Company, especially if considered in a national Light, is much preferable to that of the *Dutch*; and I make no question, that the Experience of future Times will abundantly justify this Observation. We had formerly Settlements on the Coasts of *Cochin-China*, and in the Kingdom of *Tanquin*, which have been since withdrawn; but we have still an occasional Trade there, and especially in the last-mentioned Kingdom.

As to our Trade to the *Fallward to China* and the *Malaccas*, I have not much to say of it here. The former is so well known in every Respect, that there is no Need of dwelling upon it; and, as for the latter, there is so little can be said with Certainty, that I can scarce persuade myself to meddle with it at all: However, for the sake of Method, and that I may not seem to conclude this Matter abruptly, I shall just touch upon both. As to the *China* Trade, it has been found by Experience, that we manage it as well, or better, at *Canton* than we did formerly at *Amejer*, when we had a Factory in the Island of *Cebu*. To say the Truth, the Affairs of our Company were in so good a Condition thirty Years ago, that we bid fair for monopolizing this Trade; but the high Duties laid upon Teas and other *Chinese* Commodities, defeated our Industry abroad, and gave Encouragement to the pernicious Practice of Smuggling, which, in a very short time, put our Trade in *China* almost on a Level with that of other Nations; but, perhaps, by a right Management, and a due Regard shewn by the Government for the Interest of the Company, Things may be set right again.

As to the *Manilla* Trade, the *French* say, that we carry on a considerable Part of it under *Irish* Colours; but I must confess, I believe there is no good Authority for this, though it is very highly probable that something of this sort may be done under *Moorish*, or rather under *Portu-*

guese Colours; for the *Spaniards*, contrary to their Custom in all their other Colonies, have laid open this Trade to all Nations, the *English* and *Dutch* only excepted, which Exception by the Government is of no great Consequence, where it is the Interest of their Subjects, as well as ours, to break through it. But, with respect to *Japan*, which lies still farther to the East, we have, as I have already shew'd at large, lost all Correspondence therewith, and whatever Commodities of that Country are brought into ours, we derive from our Trade with the *Chinese* and *Dutch*.

Thus, according to the clearest Lights that I have been able to obtain, I have performed my promise, and given the best Account that was in my Power, not only of the Rise and Progress, but also the present State of our Commerce to the *Indes*, which, I hope, appears to the Reader to be in a much more flourishing State than ever; and that it may still continue, or rather that it may yet improve beyond what it has hitherto done, it is absolutely necessary that three Points should be universally well understood; the first is, that this Trade is highly beneficial to the Nation; the second, that as Things now stand, it cannot be effectually carried on otherwise than by supporting the present Company; and lastly, that the Objections heretofore made, and which are still circulated among the common People are false and groundless; so that if we should grow careless enough to lose this Trade, it will go near to carry all other Trade with it. We will successively demonstrate each of these Points, and so conclude this Section.

First, then, I am to shew that it is a Thing advantageous to this Nation, that the *East-India* Trade should be carried on. If we consider this generally, there is nothing easier, nothing more certainly to be made out than this; for have we not seen that the *Hebrews*, *Syrians*, *Egyptians*, *Greeks*, and *Romans* in ancient Times; and that the *Venetians*, *Genoese*, *Portuguese* and *Dutch*, among the Moderns, have all raised themselves to immense Wealth, and to a surprising Degree of naval Power, by being possessed of this Trade? What Need then of arguing to persuade the People of this Country, that what has enriched all others must be beneficial for them, that what has bestowed the Dominion of the Sea in former past and present, is necessary to them, and that if in a Matter of this Nature, we are guided by Experience, it is scarce possible that we should be mistaken. But, to descend to Particulars, the *East-India* Trade, I speak in reference to this Kingdom, has all the Marks and Characters of Advantage that any Trade can have.

In the first Place, its Navigation is very considerable: it maintains a vast Number of Seamen, more indeed than can be easily computed: But to place this Point in a proper Light, we must, first of all, consider the Number of Ships that are annually taken up by the *East-India* Company; we must next call to mind the Number of Seamen continually employed in the *Indes*, in trading from Port to Port; and lastly, we must reflect on the Shipping employed in exporting *East-India* Goods to all the different Parts of *Europe*, and then we shall have a competent Notion of the Value of this Trade in this respect, provided also that we bear in mind the great Improvement that such long Voyages naturally make in those who are employed in them, and the great Consequences of this to a Country, the Power and Welfare of which depend upon a maritime Force.

In the next Place, there is nothing more certain, than that we derive a great Part of our Wealth from this Commerce, which brings in large Quantities of Gold and other intrinsic Riches immediately from the *Indes* in its ordinary Course. It is no less evident, that private Men make vast Fortunes in the *Indes*, which, sooner or later, they bring home: And all these Estates are consequently Accrues to the Wealth of this Kingdom. We must add to this the Balance that accrues to the Nation from the exporting of *Indian* Commodities and Manufactures, which is in itself so vast a thing, that it would require Volumes to explain it thoroughly. But this is not my present Business; all I aim at is, to give a general Notion of the Advantages derived to us from this Commerce; and, in order thereto, it is sufficient that I put the Reader in

mind, that there is scarce a Branch of Trade which we at present enjoy, but is some way or other affected by our Importations from *India*, and which, consequently, must so far depend upon them, since, if we had not these Goods, we could not carry them on.

Another great Advantage this Commerce bestows, is the Exportation of our Manufactures, to which the *East-India* Company are bound, by their Charters, with which they not only comply, but have greatly exceeded what was expected from them; and, of late Years especially, have constant yincreas'd their Exports, so that a great Part of those valuable Effects which they bring home are, strictly and properly speaking, the Produce of the Labour and Industry of our own People. But, besides this, they bring home several raw and unmanufactured Goods, such as Silk, and Cotton, which are wrought up here, and vast Quantities of them exported to our Plantations, by which we obtain a great Part of that prodigious Balance in our Favour which arises from that Trade.

There is yet another Point which I must insist upon, which is the furnishing us for our own Wear, with large Quantities of cheap and beautiful stuffs, that might enable us, if our Poor were properly regulated, and due Care taken to excite an universal Spirit of Industry, to make and send abroad vast Quantities of woollen Goods. For though it be true, that our own Consumption of those Goods is of great Consequence to such as are employed in the making of them, yet with respect to the Nation, it is of no Consequence at all, for what we gain one by another, is no Accession of Wealth to the Publick, for that must arise from what we draw from other Nations, either by paying for the Goods and Manufactures which we receive from them by what we export to them, or bringing over the Balance in Money; or, which is still better, in such as we can again export, and so add the Freight and Profit upon those Goods to the Balance by which they accrue. If these are not clear and convincing Proofs of the Benefit resulting to us from this Trade, it is simply impossible that we should have any such; and if our Opinions are not to be guided by these, it is not easy to say upon what they must be grounded.

But perhaps it may be expected that I should form some Computation of the Profits arising from the *East-India* Trade, which, I must confess, will be a very difficult thing, and would require much more Room than I have to spare; to which I may add, that this has been already done by *Dr. Davenant* and others, in a Way that will convince any Man who has Leisure, Attention, and Capacity, of the Truth of what they have delivered. However, that I may not seem altogether deficient in what many of my Readers may conceive the most material Point in this Enquiry, I will venture to lay down a Fact, the Proof of which I am ready to undertake whenever I am properly called upon so to do, which, I hope, will satisfy them, and it is this, that the Nation gains *Cent. per Cent.* by all that the *East-India* Company exports: And, indeed, it is my private Opinion, that for every five Pounds which the *East-India* Company employs in that Trade, the Nation gains six Pounds; but how far this may be lessened by the setting up so many different *East-India* Companies in all Parts of *Europe*, is a Consideration of another Nature, and with which therefore I shall not meddle here.

The second Thing I promis'd was to shew the Expediency of supporting the *East-India* Company, and of leaving that Trade in the Channel it is now in. In the first place, I must premise, that I am absolutely disinterested in this Matter, and so far from having any Direction or Instructions from, that I have not the least Connection with the Company, or any of its Directors, and am likewise so far from being a Friend to exclusive Companies in general, that I think this the only one that is, or can be beneficial to this Kingdom, for which I shall very freely assign my Reasons. The first is, that the Trade to the *East-Indies* is of such a Nature that it is of the utmost Consequence to the Nation to have, from time to time, distinct Accounts of its State and Condition, which could not be so well, or at least, not so easily received, if it was not managed by a Company: As, on the other hand, the necessary Instructions and Regulations, could not, with

such Facility, be any other Way convey'd. What seems to strengthen and enforce this Opinion, is the Conduct of all other Nations, who whenever they have adventured to interfere in this Trade, have constantly put it under the Management of a Company; and to say the Truth, whoever shall consider how Things are to be distributed in the *Indies*, and what a Connection there is between the Commerce of the several Countries included within the Extent of the *East-India* Company's Charter, will very easily discern, that if the whole were not under the Management and Direction of a Body of Men conversant therein; and not only capable of giving Directions, but properly empowered to see these Directions carried into Execution; it would be impossible, that this Commerce should thrive, or even, that it should subsist.

One may in like manner conceive, that if the Possession of the Colonies and Forts in the *Indies* were in the Crown, and the Management of the Trade only in the Hands of the Company, it could not but be attended with numberless Inconveniences, as indeed Experience shewed, in the Reign of King *Charles II.* when *Bombay* came to the Crown, by his Marriage with the Infanta of *Portugal*, and therefore both that Island, and the Island of *St Helena*, have been granted to the *East-India* Company, for the Sake of publick Convenience. We may likewise discover from the Disorders of the *East-India* Company's Affairs in that Reign, and in the Reign of King *James*, that it is very detrimental to this Commerce, and to the Benefits resulting from hence to the Nation, that the Company should be immediately under the Power of the Crown, so as to stand indebted for all Encouragement, and to have no other Resource in case of Convances, than what they can draw from Royal Power; for this on the one hand renders Trade precarious, and on the other, interests a great Body of People in the Support of the Prerogative, which might be of dangerous Consequence.

The Mischief's flowing from two *East-India* Companies subsisting at one time, we have known from Experience; and so great they were, that both Companies became very soon sensible, that nothing but the Union of their Interests could possibly afford a proper Remedy. Yet I think one may safely conclude, that the laying this Trade open, which is what has been often contended for, would be a Scheme big with still greater Inconveniences, because it would be at the Bottom a Multiplication of Companies, all acting upon separate Interests, which consequently would be perpetually clashing and intertering with each other. But as Things stand at present, and as all other Countries carry on this Trade in this Way, there remains no other for us, and we must either support the *East-India* Company, or resolve to give up our Commerce to the *Indies*, there being no middle Courſe for us to steer; and it was, without doubt, from a just Sense of this, that in the two last Reigns, so much has been done by Parliament, in favour of this Company, and so many new Powers granted them.

I am very sensible, that even these Powers, and indeed, all the Powers with which the Company are intrusted, may be liable to many, and some of them just Objections; but if the Powers of the Board of Trade were enlarged, and its Jurisdiction properly enforced, all those Inconveniences upon which these Objections are grounded, might be easily taken away; and besides, we very well know, that the Courts of Chancery and Exchequer can, and do interpose, as well in favour of Foreigners, as Natives, whenever the Power of the *East-India* Company, or any of its Officers, is so exercised, as to commit Acts of manifest Injustice.

But at the same time, that from all these concurring, and, as I conceive, unanswerable Reasons, I am persuaded, that this Trade is best carried on by an incorporated Body; I am very far from contending, that they should act without Controul, or that they should not be in all respects subject to whatever Regulations the Legislature shall from time to time think fit to enact, for rendering the Commerce they carry on more and more beneficial to this Nation. It is from a due Sense of this, that I could heartily wish, Proposals might be made to the Board of Trade,

conveyed. What seems
 opinion, is the Conduct of

 e Legislature shall find
 for rendering the Com-
 re beneficial to this Na-
 s, that I could heartily
 to the Board of Trade,

for opening a direct and Immediate Correspondence, ei-
 ther by the *Cape of Good-hope*, or by the *Straits of Ma-
 gellan*, with the Southern continent; and in case any Pro-
 ject of that sort should be laid before them, that was
 thought practicable, I should esteem it highly reasonable,
 that upon their Recommendation, the *East-India* Company
 should be obliged to make such an Attempt, or if they
 refused, that any private Persons might be allowed to un-
 dertake it, and have proper Assurances and Encourage-
 ments given them by the Publick. For it is, and will be
 ever my Sentiment, that this, and all other Companies,
 are but so many Corporations endowed with Powers in
 Trust for the Publick, for which they are, and must be
 accountable to the Publick, and also be subject to such Al-
 terations, Extensions, and Restrictions, as may render them
 most serviceable to the Publick.

I rather insist upon these Points at this Time, be-
 cause without some accession of new Trade, which we
 may possess as a Nation exclusive of all others, I do not
 see how it is possible, we should maintain our maritime
 Power at its present Height. As on the other hand, I can
 see no Reason whatever, why, if any thing can be done
 for the Service of the Nation, in this respect, by opening
 a Trade to the southern *Indies*, by recovering the Trade
 of *Japan*, by discovering any Countries to the North of
 that Empire, or by any other Method whatever, it should
 be left undone out of Respect to the Powers or Privileges
 possessed by any Corporation.

I come now to the last Point that I have undertaken to
 clear, and that is the popular Objections which have been
 raised against the Commerce to the *Indies*, of which there
 are many, and some of them so plausible, that Men of
 great Parts, and good Intentions, have been led away by
 them. The first of these is grounded upon the Exportation
 of Bullion, and which, if I conceive it right, is thus stated.
 The common Measure of all Things in a commercial Way,
 is Silver, and consequently the great Mark of a Nation's
 Wealth, is her drawing this common Measure from other
 Nations; but the *East-India* Trade is carried on by ex-
 porting this real and intrinsic Wealth which never returns,
 but is employed to bring back Things that are not neces-
 sary, but meer Instruments of Luxury.

Before I proceed to the direct Solution of this Difficul-
 ty, I must observe, that if we give this Objection its full
 Weight, it will destroy all Commerce. The Necessaries
 of Life, are in every Country, or at least in every habitable
 Country, and it is to what some People call Luxury, that
 all Trade whatever is owing; so that if we admit this Prin-
 ciple, we should not only drink Sage instead of Green-tea,
 but make use of Honey instead of Sugar. In short, we
 should endeavour to cultivate and improve the Produce of
 our own Country, live upon it, and leave all the rest of
 the World to shift for itself. How just a Maxim this
 would be, for People who inhabit an Island, and how rea-
 sonable it is, for folks who derive most of the Blessings
 they enjoy from Trade, and maritime Power, to talk thus,
 I leave the Reader to judge. But if once we let this Ob-
 jection so far aside as to allow that Trade is a commenda-
 ble Thing for the very Reason the Objection assigns, viz.
 that it makes the Country in which it flourishes, Rich;
 the Trade to the *East-India* becomes as defensible as any
 other: For, if exporting of Bullion does not impoverish the
 Nation, then there is no Force at all in the Objection; and
 that it does not in this Case, I am very well able to prove.
 When the first Charter was granted to the *East-India* Com-
 pany, this Evil was foreseen, and properly guarded against
 by a Proviso, that the Company should be obliged to bring
 in as large a Quantity of Bullion as they carried out, in the
 Interval between the Voyages made, at the Risk of the
 Company. In reality therefore, there never was any Founda-
 tion for this Complaint, that the Quantity of Silver in
 this Kingdom was diminished by the *East-India* Trade.
 But by degrees, and as this Commerce has increased, in-
 stead of impoverishing, it has greatly encreased the Wealth
 of this Nation, by bringing in on one hand large Quanti-
 ties of Silver for the *Indian* Merchandize exported, and
 detaining here on the other as great Sums of Money, that
 must otherwise have been exported for foreign Manufac-

tures, which would have been worn here, if we had not
 been better and cheaper supplied from *India*.

Another Objection is, or at least was, that the wearing of
India Piece goods hurt our own woollen and silk Manufac-
 tures; but this in a great measure has been cured by the
 Laws passed for that Purpose. It may not be amiss, how-
 ever, to observe, that those Manufactures are chiefly to
 be encouraged, which contribute to Exportation, since it is
 certain, that the cheaper People can be clothed here, let
 that clothing come from where it will, the cheaper they
 can afford to work; and it is the Cheapness of Labour,
 that is the great Point to be studied in a Nation; for if
 we can under-work other Nations, we shall infallibly
 undermine their Trade, and extend our own; for, as I
 observed before, private People may be enriched by home
 Consumption, yet the Publick gets nothing thereby, and
 this Consideration is sufficient to enable the intelligent
 Reader, to discern how a Clamour may be raised in fa-
 vour of Trades, no way advantageous to the Publick,
 and against such Trades as are highly beneficial to the
 People, and this from confounding the Interest of private
 Men, or of great Bodies of Men, with the Interest of the
 Publick, which it requires great Skill, Industry, and Dis-
 interestedness to disentangle, and set in its proper Light.
 There is besides, a great Disadvantage in arguing on Topicks
 of this Nature, because, while a Man is really plead-
 ing for the Publick, he is maliciously misrepresented as an
 Advocate for the private Interest of that Body of Men
 whose Cause he espouses, tho' in Truth he does not espouse
 their Cause out of regard to their private or particular In-
 terest, but merely from a Conviction of Mind, that their
 Cause is in this respect the Cause of the Publick.

A third Objection is, that even the Exportation of *Indi-
 an* Goods is disadvantageous to the Nation, because it
 lessens, or at least is supposed to lessen the Consumption
 of our own Manufactures, in those Countries to which the
 Produce of *India* is exported: A very strong Objection
 this, in all Appearance, and yet at the Bottom a meer Illu-
 sion, and not at all grounded on Truth. For this Objec-
 tion supposes what is manifestly false, viz. that it depends
 upon our Exportation, whether the Inhabitants of those
 Countries to which we send them, shall wear the Manu-
 factures of the *Indies*, or not; but as it is notorious, that
 if we did not supply them, they would receive them from
 the *Dutch*, or *French*, which would have the same Effect
 as to the Exclusion of our Manufactures; the true State
 of the Question comes at length to this, whether we shall
 take their Money, or their Goods for *Indian* Commodities,
 or whether we shall submit to let them lay out that, or part
 with those for *Indian* Commodities, which we might sup-
 ply, to other People?

The Truth of all this, as it will appear to every candid
 and ingenious Reader, from the Reasons and Arguments
 already advanced, so, at this Juncture, it must be evident to
 every Man who has but common sense, from the Light of
 Experience; for do we not see, that the *Russians*, *Swedes*,
Danes, and other Nations, are bent upon establishing a di-
 rect Correspondence with *India*, in order to obtain greater
 Quantities of the Goods of that Country; and does not
 this manifestly prove, that the Appetites of these People
 for those Things were so strong, that it was no way in our
 Power to check, or correct them?

The Truth of the Matter is, that the sole Objection
 against this Commerce, that has any Force, lies in this
 simple Proposition, that it is against the Interest of the
 western Part of the World, to correspond with the *East*.
 The Reasons which are brought to prove this, are indeed
 very plausible. It is said, that the Balance of Trade is
 against us, that we import the Commodities and Manu-
 factures of the *Indies*, and export Silver to pay for them.
 That this drains *Europe* to such a Degree, as that since
 the Discovery of the Passage by the *Cape of Good-hope*, it
 is demonstrable, that the *Indians* have gained from the
Europeans upwards of two hundred Millions in Silver,
 which immense Wealth they possess, while all that we re-
 ceived for it, is long ago lost and consumed. It is con-
 fessed, even by the warmest Writers in favour of the *Indi-
 an* Trade (tho' I freely own I am of a different Opini-
 on) that this sufficiently proves, that it would be for the
 Benefit

Benefit of the western Part of the World, if they had no Commerce at all with the East; and that it would be an Advantage to Europe in general, if the Commerce to the Indies were totally abolished.

Admitting this to be true, what is it to us? We are not yet the Legislators of Europe; we cannot bid the Dutch dissolve their Company, and recall their Subjects from the Indies; we cannot forbid the French to trade thither; and if our Ministers at Stockholm, and Copenhagen, should persuade those Courts not to send any more Ships to China, it is not at all probable, that they would take our Advice. We must be content then, to take the World as it lies before us, and since the Humour of trading to India cannot be extinguished, we, as a trading Nation, must endeavour to manage that Humour, and our Commerce, as that both may turn to our Advantage.

We must contrive to maintain and support the Acquisitions made by our Company in that Part of the World; we must engage them to take off as great a Quantity of our Manufactures as is possible; we must encourage to the utmost the Exportation of such Goods and Manufactures as the Company brings home; and, which is of the greatest Consequence to this Nation, we must, at all Events, and by whatever Means it can be done, prevent the smuggling of Indian Commodities into these Kingdoms; for such as promote that Practice, are the most notorious

Enemies of their Country, and cannot get a single Shilling, without robbing the Nation of five.

Thus I have entirely finished what I proposed, with respect to our Commerce with this Part of the World. I have shewn, that it is the great Wheel which moves all the rest; that we have no reason to be dissatisfied at seeing it managed by an exclusive Company; that by degrees, and by a Variety of Accidents, this Company is now placed on the best Basis that can be for the Nation; that there is no doubt, their Trade is extremely beneficial; that the Objections against it are very far from being well founded, and that at this Juncture, it imports us more than ever to be well informed, and clearly convinced as to these Things, because there never was a Conjunction when the thorough understanding of them was of so great Consequence to the Publick. If in the managing so extensive, so intricate, and in some Cases, so invidious a Subject, I shall be thought to have performed well, it is the Height of my Ambition; but if I have failed therein, it will be still my Comfort, that it was my Endeavour. I might with much greater Ease to myself have contracted this Section into a narrower Compass, but I have sincerely studied the Benefit of the Reader, and how to render the Time he bestows in the Perusal of this Work beneficial to himself, by inspiring him with such Sentiments as may render him useful to his Country.

SECTION XXXIV.

A succinct History of the Rise, Progress, and Establishment of the Dutch East-India Company; with a View of the immense Profits arising from that Commerce, and a Prospect of their Affairs, and the Manner in which they are conducted, as well at Home, as in their extensive Settlements Abroad.

Collected chiefly from their own Writers.

1. An introductory Account of the Situation of Affairs in Holland, at the Time their Commerce to the East-Indies was first undertaken.
2. Houtman's Imprisonment in Portugal, proves the Means of their opening the true Rout to the East-Indies.
3. The first Voyages made under the Direction of Houtman, at the Close of the sixteenth Century.
4. A new Company of Merchants engage in this Trade with great Success.
5. The States-General and Prince Maurice interpose in order to put this Company on a proper Establishment.
6. The Dutch East-India Company formed, and Letters Patent dated March the 20th 1602, for twenty-one Years.
7. A great Struggle between the Dutch and Spaniards about the Moluccas, in which the former at last prevailed.
8. An Account of the surprizing Success of the Dutch Company, and of the prodigious Dividends made by them to their Proprietors in a few Years.
9. The Rise of the Company's great Power in the Indies, and the Causes thereof truly assigned.
10. Their Charter renewed and enlarged, with the Consequences arising from thence.
11. The Progress of their Trade in the Indies, and other remarkable Occurrences.
12. The History of this Company continued till the Expiration of their second Charter.
13. An Account of their Affairs to the Year 1660.
14. The Continuation of this History to the Close of the last Century.
15. A concise Deduction of this History to the present Times.
16. A short Account of their present Settlements in the Indies.
17. A curious and particular Relation of the Manner in which they manage their Affairs.
18. Of their Councils and Government in the Indies.
19. The Oeconomy of their Fleets, Squadrons, and single Ships, with other Particulars relating to their naval Concerns.
20. A View of their Management of Orphans Estates, and of the Care taken by them of their Poor.
21. Of the Management of the Company's Affairs in Holland, with a Table of their Dividends, from 1610 to 1717.

THERE could not certainly be any nobler Subject chosen by an Author inclined at once to entertain and instruct his Readers, than an Enquiry how far the Spirit of Liberty and Trade may be able to advance a People, notwithstanding any Difficulties they may labour under from the Situation of their Country, the Poverty of its Soil, and the Opposition of their Neighbours. Such a Plan as this, might enable a Man of solid Understanding, quick Wit, and competent Learning, to frame a political System as useful, and at the same time, no less pleasant and agreeable, than the famous Poems of Homer, which have hitherto been esteemed inimitable, and which are allowed to contain the Principles of almost all Sciences, though delivered under the specious

Veils of Fictions. But if the Composition of such a Work be a Task so hard as scarce to be expected, an Author of a cooler Genius than is requisite for such a Performance, might perform something very laudable in this kind, by writing a copious History of the Establishment of the Dutch Republick, which would sufficiently shew, that the Desire of preserving religious and civil Liberty, maintaining the natural Rights of Mankind with respect to Trade, and transmitting the Blessings of an equal and mild Administration to Posterity, are Principles capable of raising such an heroic Spirit in any People, as will enable them to overcome all Difficulties of what kind soever, and that to such a Degree, as to give them a Capacity of changing, at least in Appearance, the very Laws of Nature, so as

to render the meanest Country a Paradise, and the most distressed and dejected of the human Race, the bravest Soldiers, and the most enterprizing Seamen.

Such a History would particularly shew, that Providence can conduct, by the most unlikely Means, the noblest Designs to the highest Degree of Perfection, and lay the Ground-work of the most exalted Power and Liberty in the midst of Tyranny and Oppression. For most evident it is, that if the *Spaniards* had not pursued the most barbarous Plan of Politicks in reference to their Subjects in the *Low-Countries*, the Republick of the *United Provinces* had never existed, nor had the People of *Holland* ever arrived at any Part of that Wealth, Dignity and turpizing Power, as for the two last Centuries they have enjoyed. It is the peculiar Glory of the Almighty, to produce Order out of Confusion, Good out of Evil, Strength and Happiness out of Weakness and Misery, and of this, no Period of History affords us a more illustrious Instance, than that which is to be the Subject of the present Section. It was the Bigotry of the *Spaniards*, and their illegal Introduction of the bloody Inquisition into the *Netherlands*, that introduced that Firmness to their religious Principles, and that zealous Concern for the Liberty of Conscience, which has proved the Source of the Grandeur of the *Dutch*. It was the barbarous, as well as arbitrary Government of the Duke of *Alva*, Cardinal *Granvelle*, and such Ministers of Oppression, that established those Notions of civil Liberty, that enabled the distressed Inhabitants of the *Low-Countries* to establish a Form of Government capable of procuring and maintaining their Freedom; and it was the Measures taken to curb, to distress, and to ruin the little Trade they then had, which forced these People upon those Methods that in a very small Space of Time rendered them the most considerable trading Republick the World ever saw.

It must be allowed, that of all the Monarchs that were ever seized with a Passion for universal Empire, there never was one who seemed to have it more in his Power to gratify Ambition in its largest Extent, than *Philip* the Second of *Spain*, who was not led thereto by the Encitements of Ministers more capable than himself, but formed his own Schemes, and conducted them with such Wisdom and Policy, that if the End he aimed at had been attainable by human Abilities, one could scarce conceive how he came to be frustrated in his Design. He had gained the Court of *Rome* entirely to his Interest, and was thereby able to bend the predominant Religion in *Europe* to his Purposes. He had the whole Force of the *Spanish* Monarchy, and of the House of *Austria* in *Germany* at his Command; the greatest maritime Power in the World was at his Disposal, a great Part of *Italy* was in his Possession; he had a strong Party in *England*, and a stronger in *France*, and all the Riches in the *Indies* flowed into his Coffers; but what was still of greater Consequence, he had the most able Ministers, and the most experienced General, and the best disciplined Troops in the World at his Devotion; all which Advantages were doubled by his Skill in making use of them; for he had a Soul above the Reach of Fortune, and a Capacity more extensive than his Dominions, so that had he undertaken what was in the Power of Man to achieve, he had easily and happily performed it; but as his Project was without Bounds, to the Methods he used, tho' wisely contrived, and generally speaking, well carried into Execution, proved not only fruitless, but dissipated the Wealth and Strength of his Empire, that as he died himself of Discontent, so he left the *Spanish* Monarchy under an incurable Consumption.

But amongst all the vast Designs which this Monarch formed, that which was best digested, was attended with the worst Effects. He knew, that a Monopoly of Trade, was the first Step to universal Empire, and therefore formed a Plan for fixing the whole Trade of the World to his Dominions. It was with this View, that he set on Foot two Schemes which proved abortive indeed, but which will eternally prove the Strength of that Genius which devised them. The first was the seizing and securing the Sound, or narrow Passage into the *Baltick*, by which he hoped to become Master of a Part of the Trade of the North: The other was building a City of his own Name in

the Straits of *Magellan*, and establishing such a Colony there, as might put it out of the Power of other Nations to trouble the Commerce of the *South-Seas*, or find a Passage that Way to the *East-Indies*. But failing in these Designs, he turned his Thoughts another Way, and finding that his revolted Subjects in the *Netherlands*, began to make a great Figure in Trade, especially after the Ruin of the City of *Antwerp*, he resolved to cut them short in that, as much as lay in his Power, and being become Master of *Portugal*, he absolutely forbid them all Commerce, not only with the *Indies*, but in the Commodities of the *Indies*, which they had hitherto purchased at *Lisbon*, and with great Profit to themselves, had distributed to the northern Parts of *Europe*. It was by this Prohibition, expressly calculated for the Ruin of their Trade, that the Inhabitants of the *Low-Countries* were compelled to those Undertakings which have since made them Lords of *India*. If the *Spaniards* had never forbid them, they had never thought of going thither; if they had remained the sole Carriers of Spices, or even been allowed a reasonable Proportion of that Trade, they had never been the Proprietors of it.

But the making this unexpected Stroke at their Commerce, at a Juncture when they had many rich Merchants amongst them, and their Country swarmed with able Seamen, instead of damping their Spirits, and depriving them of all Hopes, excited them to form a multitude of Projects for averting this Evil, more especially when they found that his Catholick Majesty remained firm to his Point, and actually caused their Ships to be seized, and such as were on Board them to be imprisoned. This convinced them, that they must either abandon all Thoughts of this Commerce, or strike out some new Rout for themselves, which was so much the more difficult, because even while they lived under the *Spanish* Yoke, they had never been permitted to make Voyages to the *Indies*. They derived, however, some Assistance from the Merchants who had settled among them, after the taking of *Antwerp*, for they were better acquainted with the *Spanish* Trade, and with the Method used in carrying it on, and it was those People who advised the taking into their Service such Seamen and Pilots as had served under Sir *Francis Drake*, the famous *Cadiz*, and other *English* Commanders of Note. The Informations gained from these People, gave them such Lights, that by degrees, their Merchants began to think an *Indian* Expedition practicable, and began likewise to be willing to run the Hazard of such an Undertaking, from the Prospect of the prodigious Profit that must necessarily accrue to them, if they met with Success, which bore scarce any Proportion to the Expence necessary for making such a Trial.

2. Among others, *James Falk*, and *Christopher Roelcius*, the one Treasurer, and the other Pensioner to the States of *Zeland*, in Conjunction with several Merchants, particularly *Balthazar Moucheron*, *Jen Jansen*, *Charles Dirk Van Os*, and many others, took up a Resolution to open a Passage into the *Indies*, from whence they were unjustly excluded by the Emperor *Charles V.* and *Philip* the Second, King of *Spain*. They conceived, that by steering North-East, they might run along the Coast of *Tartary*, and to reach *Cathay*, *China*, *Japan*, *India*, and the *Philippine* and *Molucca* Islands: The execution of this Project was committed to two excellent Mariners, *William Barontz*, and *James Heemskerck*, and afterwards to divers others; but hitherto the Almighty has not favoured the Discovery of that Passage, or of the People that live in those Climates. While they were in quest of this Northern Passage, one *Cornelius Houtman*, a *Dutchman*, happen'd to be in *Portugal*, and there satisfied his Curiosity by a diligent Enquiry into the State of the *East Indies*, and the Course that one must steer, in order to come at it. He had frequent Conferences upon this Subject with the *Portuguese*, who gave Notice of it to the Court.

At that Time, all Foreigners were prohibited to make such Enquiries; and upon that Score *Houtman* was put in Prison, and ordered to stay there till he paid a heavy Fine: In order to raise such a considerable Sum of Money, he address'd himself to the Merchants of *Amsterdam*, and gave them to understand, that if they would pay his Fine,

he would discover to them all that related to the *East-Indies*, and the Passage thither: Accordingly they granted his Request, and he performed his Promise.

After mature Consideration of what he had offered, they resolved to erect another Company, called the Company for remote Countries. The Directors of this Company were, *Henry Hudden, Remir Paz, Peter Haffelaar, John Jans, Charles de Oude, John Poppen, Henry Busck, Dirck Van Os, Szwert Pieterfz Seem, and Arenten Grootenkuijfe*. These Directors considering as yet that 'twas very uncertain, whether the North Passage was practicable; tho' at the same time they were sensible, that it was the shortest and surest Passage, and withal the most healthy, in regard that in it they did not cross the Equinoctial Line: Upon this Consideration, they came to a Resolution *Anno Domini 1595*, to send four Vessels to the *Indies*, by the Way of the *Cape of Good-hope*.

3. *Houtman*, and some others, who had the Command in this Expedition, were ordered to observe the Course they steered very nicely, and to settle with the *Indians* the Commerce of Spices and other Goods, especially in those Countries where the *Portuguese* had no Settlements. They looked upon this Commerce as a very valuable Thing, especially considering that it would save them the Trouble of fetching that sort of Goods from *Portugal*, which they could not do without great Hazard. These Ships returned to *Holland* in the Space of two Years and four Months after their setting out; and though they had made no great Profit of the Voyage, yet their Success animated their Owners, and several other Merchants, to carry on the Design yet further.

In Effect, a Member of that Company being dead, they presently put into his Place *Gerard Bicker*, a very considerable Merchant. Then they had Advice that some other Merchants of *Amsterdam* designed to set out Ships for *India*. The Names of those Merchants were *Vincent Van Bronckhoff, Simon Jansfz, Gvoert Dirrickz, Cornelius Van Campen, Jacob Thomafz, Elbert Simonfz Joubeyn, and John Harmanfz*. The Company, to avoid Animosities, thought it necessary to unite with those Merchants, and, accordingly, the two Fleets, consisting of eight Vessels, joined under the Command of *James Van Nek*, their Admiral, and sailed from the *Texel* *A. D. 1598*.

A Design of the same Nature was likewise set on Foot in *Zealand*, and accordingly *Baltasar Moucheron*, and *Adrian Hendrickzen Haaf*, with some other Partners, fitted out Ships for the *Indies*. The Inhabitants of *Rotterdam* being spurred forward by such Examples, presently formed a Company, and fitted out five Ships, under the Command of *James Masu*, with Orders to sail to the *Molucca* Islands, by the Strait of *Magellan*, and the *South-Sea*. In the mean time, the *Amsterdam* Merchants grew hotter upon the Matter, and the Company before mentioned, without staying for the Return of the Fleet they had sent already, fitted out three Ships more, which put to Sea *May 4, 1599*, under the Command of *Stephen Vander Hagan*. On the 8th of the then next *July*, four of the eight Ships that went out first, arrived in the *Texel*, and after they were unloaded, were immediately sent back again under the Command of *James Willekens*.

4. About the same time, several *Amsterdam* Merchants, most of whom were *Brabanters* by Birth, formed another Company upon the same Design, and fitted out four Vessels, which put to Sea *December 1599*, in consort with four of the old Company's Ships. Two Years after all these Ships came home with rich Cargoes: But before their Arrival this new Company had sent out two Ships, which were joined by six more of the old Company, all of them putting to Sea *A. D. 1600*, under the Command of *James Van Nek*; and, in the Process of Time, all of them returned at several Times to their respective Ports. Upon the Consideration of these lucky Adventures, several fresh Ships were fitted out in *Amsterdam, Zealand*, and elsewhere; among others, thirteen were sent from *Amsterdam*, viz. four belonging to the old, and four to the new Company, under the Command of *James Heemskirk*, and *James Gvoert*, and five more of the old Company, bound for

the *Moluccas*, under the Command of *Wolpbat Harmanfz*; all the thirteen set sail from the *Texel*, *April 1601*.

At this, the *Spaniards* were enraged with Anger and Grief, partly in regard of the Affront they suffered in seeing such petty Merchants compass their Ends in spite of their Teeth; and partly upon the Account of the Loss they sustained, and were likely to sustain hereafter. With this View they fitted out a strong Squadron, in order to surprize the *Dutch* Ships. This Squadron consisting of thirty Men of War, well manned, fell in with eight of the *Dutch* Ships in the Month of *May*, in the Lat. of 14°. The *Dutch* perceived the Inequality of their Number and Forces, notwithstanding that they had some Soldiers aboard: However, they were not daunted, for they fought bravely, and the *Spanish* Admiral was so warmly received, that he thought it convenient to let them pass.

The next Year, three Ships came home from the *Indies* richly laden; they brought Advice, that the King of *Achen* had attempted to seize two of the *Maucherons* Ships that had set out from *Holland, A. D. 1599*: that *Cornelius Houtman*, the Commander, had lost his Life in the Adventure; and in fine, that the Ships had escaped, but that some of the *Dutch* continued Prisoners in the Hands of the King of *Achen*.

Paul Van Caerden, having set out for the *Indies* that same Year, arrived at the Port of *Achen*, without knowing what passed, and there was exposed to the like Danger; for that the King being egged on by a *Franciscan* Monk, who resided there in the Quality of a *Portuguese* Envoy, and had come thither from the *Moluccas* on purpose to wheedle him. The King, I say, thus solicited, set all Instruments at work to seize *Caerden's* Ship; but all his Attempts proved abortive, and the King owned, afterwards, that he was seduced by the *Portuguese*, and accordingly gave a very good Reception to the Fleet commanded by *Laurence Bicker*, which had set out from *Zealand, A. D. 1601*: Nay, when the Fleet had taken in its Lading, which was very considerable, he sent some Embassadors with them.

This Fleet putting into *St. Helens* to take in fresh Water, happened to meet with a *Portuguese* Carrack, richly laden, which they took, and brought along with them. The same Year *George Spilbergen* and the Ships he commanded were as favourably treated by the same King of *Achen*. The *Spaniards*, finding themselves inferior in Strength, endeavoured to ruin the *Dutch* by all manner of Stratagems and Tricks; they sent emissaries to all the *Indian* Kings, to decry the new Adventurers, to brand them for Pirates, and Men of no Faith or Honour. In fine, they used all possible Efforts to affect their Ruin, as will appear in the Sequel.

5. The States-General and Prince *Maurice*, having received Advice of what passed, resolved to give Commissions to all Ships that sailed that Way; and indeed the Commanders of the Ships stood in need of them, in order to fettle the Calumnies of their Enemies. By these Commissions, they were impowered not only to defend themselves, but to attack and commit Hostilities upon all that should disturb their Commerce. The valiant *James Heemskirk*, being clothed with such Authority, sailed with two Ships from *Bantam* in order to have them loaded at *Jabor*, and falling in with a rich Carrack upon her Return to *Macao*, or *Cbina*, with above seven hundred Men on board, attacked her, and forced the *Portuguese*, after a slender Shew of Defence, to strike, and ask Quarter, which was granted them. This was a Proof, that things were much changed with this Nation, and that the *Dutch* had not to do with those gallant and glorious *Portuguese*, who had spread the Terror of their Name, and the Authority of their Crown over the finest Provinces in *Asia*. Neither had the *Dutch* yet learned to behave with that Haughtiness and Intolerance, with which they have since been reproached in this Part of the World. On the contrary, they behaved so kindly to their Prisoners, and trafficked every thing in relation to them, with so much Honour, that they obtained ample Testimonials to this Purpose from the *Spanish* Governor in the *Molucca* Islands, as also from him who presided at *Malacca*, by which, as they

no way diminished their Wealth, they greatly raised their Reputation, and wiped off that Imputation of Piracy; which, to render them odious, the *Spanish* Government had thrown upon them.

This Capture was of prodigious Consequence, because it gave them a compleat View of the Riches and Commodities of the *Indies*; so that themselves and their Countrymen now knew exactly what they were seeking, and could form a just Notion of the Value of that Prize, for which they drew their Swords. This heightened that Spirit which was already sufficiently raised of joining in Adventures to *India*; and as good or ill Fortune seldom comes alone, so, in this Case another Circumstance happened, which gave still greater Credit to, and excited warmer Hopes from such Undertakings.

At the same time *Oliver Van Noort* returned to *Holland*, after a three Years Voyage: He had been fitted out by *Peter Van Beveren*, *Hugh Buis*, and *John Hoekbaker*, and set sail from *Goeree* September 1598. He made but very inconsiderable Returns for the Merchants, but he acquired a great deal of Glory, a Share of which redounded to his Country; for, at that time, the *United Provinces* shared this common Glory with the *Portuguese* and *English*. That one of their Natives had sailed round the World, by the Straits of *Magellan*. We have given a large Account of this Voyage in the first Chapter of this Work, and therefore need not insist upon it here. It was, to be sure, a glorious Undertaking, and the Fame that attended it had such an Effect on the enterprising Spirits of those Times, that it induced many rich Merchants to go and settle at *Amsterdam*, and drew thither the most experienced Seamen and Commanders from all Parts of *Europe*.

This is what the *Dutch* Writers tell us; and, indeed, we follow them entirely in this Account of their Company, as being the best instructed, and the most intelligent Guides. It is, indeed, very possible, and probable, that they have represented these Things to their own Advantage, for which the judicious Reader will make a proper Allowance. But, upon the whole, I believe it would have been difficult to have found any where better Materials, since, to do them Justice, they have been more careful to preserve and record the Rise and Progress of this Commerce, from the Time it fell into their Hands, than any other Nation that was ever concerned therein; and the Pains they have taken to insert the principal Successes of their *East India* Company in their general Histories, is what can never be too much commended.

6. While their Navigation continued to be thus successful, and the Trade of the *Indies* flourished more and more, there happened an Accident that discontinued their former good Fortune, and threatened Ruin to the whole; I mean the Plurality of Companies that were then formed, and the sorry Understanding that was between them. Oftentimes many of them fitted out Ships for the same Port, which lowered the Price of their Goods, and discouraged the Sailors. The States-General being acquainted with these Inconveniencies, called a Meeting at the *Hague* of the Directors of the Companies, both of *Holland* and *Zealand*, and obliged them to unite in one Body for the future, to which their High Mightinesses joined their Consent and Authority. The Treaty that was then agreed upon was confirmed by a Patent from the Sovereign Power, for twenty-one Years, commencing from the Date, *viz. March 20, 1602.*

The Patent being given out, the Company became a very considerable Body, and made a joint Stock of 6,600,000 Livres. Upon this Bottom they promised themselves great Things, and fitted out a Fleet of fourteen great Ships, which put to Sea in *June* 1602, under the Command of *Wybrandt Van Waerwyck*. The next Year, in the Month of *February*, the Yacht called *Wachter*, returned, and gave Advice that five of the other Ships would be at home very speedily. By this Yacht an Account was brought of what pass'd before *Bantam* between *Wolphart Harmanse* and his Vice-Admiral, *Hans Bouweer*, on one Side, and *Don Andreas Fortado de Mendez*, who had formed a Design to drive the *Dutch* out of the *Indies*. In Effect *Don Andreas* was beat, and the *Dutch* Admirals

pursuing their Course to the *Moluccas*, arrived there at several Times one after the other.

The same Yacht brought the News of an Engagement at the *Moluccas* between *James Van Nek*, Admiral, and three *Portuguese* Ships, which did not turn to his Advantage; for that, after the Loss of eight or nine Men, and some of the Fingers of his own Right-hand, he was obliged to their off. It was this Vessel likewise that brought the first Intelligence of the taking of a *Portuguese Carrack* by *James Heenskirck*. Upon the Arrival of this News, another Fleet of thirteen Ships was fitted out, and sail'd *December* the 18th, under the Command of *Stephen Vander Hagen*.

In the Year 1605, the King of *Spain* issued forth a severe Declaration, in which he prohibited the Inhabitants of the *United-Provinces* to trade to the Dominions of the King of *Spain*, or to the *East* and *West-Indies*, under the Pain of corporal Punishment. But the Company was so far from being over-awed by this Edict, that it rather inspired them with fresh Courage, and animated them to pursue their Design with more Vigour and Diligence. In a Word, they presently fitted out a Fleet of eleven Vessels, which were fit not only for Traffick, but for warlike Exploits, and gave the Command of them to *Cornelius Matelief*. This Fleet had scarce put to Sea, when the Directors gave Orders for preparing another of eight Ships, which were manned not only with a full Complement of Seamen, but with Soldiers, that were engaged to stay and keep Garrison in the *Indies*, if Occasion required. This third Squadron was commanded by *Paul Van Caerden*. Soon after two Ships of the first of these two Squadrons came home with a rich Cargo of Cloves and other Spices: They brought Advice that Admiral *Vander Hagen* would follow them very quickly; and accordingly he arriv'd the next *July*, after taking several *Spanish* and *Portuguese* Vessels, and possessing himself of the Fort of *Amboyna*, the demolishing that of *Tidore*, and entirely dislodging those two Nations out of the *Molucca* Islands.

This Expedition gave Rise to a mighty Dispute between the *Dutch* and the *English*, upon the Account that the latter favoured the *Spaniards*, and by supplying them with Powder, enabled them to hold out longer. The next *October* three other Vessels arriv'd in *Holland*, and gave Intelligence that *Wybrandt Van Waerwyck* was upon his Way home, but was obliged to put in at the Island of *Maurice*, because his Ship was leaky, and that he had taken a *Carrack* at *Patana*. This Admiral arriv'd in the Spring 1607, but in the preceding Winter the Company had sent two Ships more to the *Indies*, under the Command of *John-Jansz Molais*, to whom they owed the taking of the Fort of *Tidore*.

7. A Negotiation being then set on Foot for a Peace in the *Netherlands*, the Company fitted out a fresh Squadron of thirteen Ships, under the Command of *Peter-William-zen Verboven*, who had given a signal Proof of his Courage and Conduct in the Engagement at *Gibraltar*, where he was Vice Admiral under the illustrious *James Heenskirck*. This great Fleet was fitted out with a Design to give the World to understand, that no Treaty of Peace should tempt the *United Provinces* to drop their Trade to the *Indies*. Immediately the *Spaniards* started a warm Dispute in Reference to this Article, which proved the Subject of their principal Conferences; upon that the Company gave in frequent Remonstrances both to the States-General, and to the Mediators, and presented to them written Memorials, in order to make them sensible that there was a Necessity of being resolute upon that Head.

In fine, this Point being looked upon as a principal Article by both Parties, so that it could not be adjudged, the States, upon a final Resolution, made this Proposal, that either the *Spaniards* should content to their *Indian* Trade in the Treaty of Peace, or allow it them by a Truce, for some Years, or else, that Things should continue beyond the Tropic of *Cancer* upon the same Bottom that they then stood on, and that either Party should make War there, and do what they could for their own Advantage. This done, the Truce of twelve Years was accepted and concluded, and upon certain Conditions 'twas agreed, that

both the *Portuguese* and the *Dutch* should continue their Trade where they pleased, and live in mutual Peace. This Affair was in Agitation without coming to any Resolution in the Year 1603; at which Time Admiral *Mateuf* returned from the *Indies* with several Ships. This Admiral had laid Siege to *Malacca*, but was obliged to break it up, in order to give Battle to the *Portuguese* Fleet, that came to relieve it; however, he had concluded an Alliance with the King of *Jabor*. In the Year 1609, the Company sent a very expert Pilot, called *Henry Hudson*, with a Fly-bout, to find out a North east, or North-west Passage to *China*, but he returned without bringing his Design to bear. At that Time they heard nothing from the *Indies* since the Arrival of Admiral *Mateuf*, except some Advice by the Way of *England*; but the next Summer, four of their Ships arrived with a large Cargoe; they reported, that the *Spaniards* were still possessed of *Ternate*; that the *Dutch* had mastered *Macian* of the *Molucca* Islands, and that they hoped in Time to possess themselves of *Ternate*.

The Truce being concluded and proclaimed in the *Netherlands*, they resolved that a Pinnace should be sent to the *East-Indies*, with a Passport from the King of *Spain*, and the *Archdukes*, to acquaint the *Spaniards* and the *Dutch* with the Treaty: This Project was accordingly put in Execution, and towards the End of the Year, nine Vessels were fitted out under the Command of *Peter Borth*, both the Seamen and Soldiers being allowed to carry their Wives and Children along with them.

It may not be amiss to observe here, that it was by this Truce, the new Republick of the *United-Provinces* came to be owned for a legal and independent State by all the Governments in *Europe*; neither was this Negotiation of less Use in the *Indies*, where the *Spaniards* and *Portuguese* had begun to receive their spirits, and to distinguish themselves by a vigorous Defence of what they possessed in that Part of the World, against the Attempts of the *Dutch*.

Don *Juan de Silva*, who then commanded for the King of *Spain*, in the *Philippines*, was a Nobleman of such Courage and Conduct, that no Advantages were to be gained while he held the Government. For having received Intelligence, that a *Dutch* Admiral, whose Name was *Wilheri*, was at Sea with a Squadron of four Sail, and had sunk a *Spanish* Galleon richly laden from *China*, not contented with which, they were still cruising for some other Ships that were expected from *China* and *Japan*; Don *Juan* resolved to hazard his own Life to retrieve the Honour of *Spain*, and to free those Seas from such unwelcome Guests. It was with this View, that he embarked his own Guards, and such other Troops as were at *Manila*, on Board such Vessels as could be drawn together on a sudden, and with them he attacked the *Dutch* Admiral with such Fury, that he made himself Master of three of his four Ships, the Admiral himself having his Head taken off by a Cannon ball in the Beginning of the Engagement, in which he lost one hundred and twenty-five Men. This Battle was fought on the 25th of *April* 1610, and the *Spaniards* following their Blow, made themselves Masters of the Island of *Tidor*, and came before that of *Ternate*, while the Inhabitants of the Island of *Banda*, encouraged by these Successes, revolted from the *Dutch*, and having surprized their General, *Peter William Verboegh*, at some Distance from their Fort, killed him, and all that were with him.

Admiral *Paul Van Caerden*, who was then in the *Indies*, thought to put a Stop to these Evils by his Presence, and going on Board a *Ship*, with twenty-five Men, proceeded for the Island of *Banda*; but being attacked by a *Spanish* Vessel in his Passage, and his Crew having mutinied, he was taken Prisoner, and the *Spaniards* demanding for his Ransom the Island of *Maluco*, 600 Ducats in Money, and half a Year's Wage for the Mariners, he chose rather to be carried to the *Philippines*, than submit to such Conditions. This happened on the 25th of *July*, in the same Year, and it was this News that induced the Company to send the *Ship* as that before mentioned, under the Command of Admiral *Peter Borth* to the *East-Indies*.

The *Company* thought fit to send a solemn Ambassy to the King of *Japan*, at the same Time which were *James* and *Peter Verboegh*, who, on the 10th of *August*,

1611, had an Audience of the Emperor at *Macao*, and obtained very advantageous Terms from that Monarch, notwithstanding all the Opposition that could be given them by the *Spaniards* and the *Portuguese*. But while Things went on thus prosperously Abroad, the *East-India* Company were not altogether free from Difficulties and Discouragement at Home, occasioned chiefly by the Covetousness of some Merchants concerned in their Stock, who had fallen into a Practice of Jobbing, which was attended with many Inconveniencies, so that the Government interferred for the Remedy of these Grievances, which the States General redressed by a *Placard* published *February* 27, 1610.

In *May* 1611, the Company sent out four Ships more, under the Command of *Laurence Real*, which were followed by a strong Squadron that put to Sea from the *Tenel*, in the next *December*, under the Command of *Adrian Block Martz*; near the *Cape Verd* Islands, this Squadron met with seventeen *Spanish* Men of War, which fell upon them, but were so warmly received, that only four of them were left in a Condition to sail for *Spain* with the News of their Success. When the Directors received Advice of a sharp Engagement, they conceived, that their Ships must needs have received some Damage, and in order to reinforce them, fitted out two other Ships the next *May*, under the Command of *John Peterz Cien*. In fine, the Commerce to *India* became so extensive, that the Forces of the Company grew to that Height, that in the Years 1613, and 1614, they fitted out twenty-seven Ships at several Times, under the Command of several Commodores, particularly *Reyff* and *Pianna*.

In order to a full View of their great Successes, we need only to cast our Eyes upon the following List of the Dividends that were made within the Company of eight Years.

The Dividends made by the *Dutch East-India* Company, viz.

		l.		
Anno Dom.	1605 in June	15	}	per Cent.
	1606 April	75		
	1607 July	40		
	1608 April	20		
	1609 June	25		
	1610 August	50		
	1613 May	37		

The Company being in such a flourishing Condition, the next Year, viz. 1615, the States joined in sending a strong Squadron to the *South-Sea*, by the Way of the *Magellan* Strait, upon the Prospect of surprizing the *Spaniards*, and weakening them on that Side, after which they might have an easy Passage to the *Indies*. *George Van Spilbergen* was Admiral in this Expedition, of which we have given a large Account in the former Part of this Work. In the mean Time, the War in the *Indies* continued, where the *Spaniards* did all that in them lay to persevere and to augment their Conquests in the *Moluccas*, which appeared to them of the greater Consequence, because of their Situation which was extremely favourable for securing a Communication between the Colonies and Settlements of their Countrymen in the *East* and *West-Indies*.

But the *Dutch* Admiral *Verboegh*, perceiving clearly that Don *Juan de Silva* was under great Difficulty from the Quarrels that continually arose between his Officers and the *Portuguese*, and that the latter were extremely backward in sending Don *Juan* the Succours that he expected; he resolved thereupon to lay hold of this Opportunity of crushing the *Spanish* Strength, and having fitted out a considerable Squadron, he cruized on the Coast of *Malacca* for the *Portuguese* Gallies, that were going to the Assistance of Don *Juan de Silva*. They were to a great Number, and had a considerable Body of Troops on Board, but Admiral *Verboegh* nevertheless gave a good Account of them all; for the largest he took with all that were on Board her, made himself Master of the Board with all her Equipage, and forced the other to contribute with very little Loss to himself. This News was brought to *Holland* by a Fleet of four Ships, richly laden with Spices, and other Commodities, to the Value of

Three Millions of Ducats, which small Fleet arrived in the Month of September, 1616, and soon after the Company received the agreeable News that the King of Ternate, and the English settled in his Country, had joined the Dutch, and had obliged the Spaniards to abandon all the Places of which they were Masters in the Moluccas, by which that Nation was entirely driven out of the Spice Trade, for which they had formerly struggled so warmly with the Portuguese.

2. The Year before this, some Merchants, among whom were Isaac le Maire, made the greatest Figure, endeavoured to supplant the Company, and draw some Part of their Commerce into their own Hands; with this View, they resolved to search for another Passage to the South-Sea, than that of the Magellan Straits, and for that End, fitted out two Ships in June 1615, under the Command of Cornelius William Sebosten, and James le Maire. In Effect, those Commanders found out a Passage to the Southward of the Strait of Magellan, which they called le Maire's Strait. By that Passage they entered the South-Sea, and sailed as far as the Moluccas; but when they came to Batavia, their Ships were stopp'd and sequestered, upon the Pretence of their going upon an Expedition contrary to the Patent given to the Company by the States. At that Time the Company sustained great Losses, and their Trade was much impaired by the Means of some Powders that were imported, and mixed with the Spices by the retail Merchants: This the Company represented to the States, and thereupon a Placard was issued, for preventing the like Abuses for the future.

In June 1617, George Van Spilbergen returned to Holland, after two Years Absence, in which he sailed round the World. Cornelius William Sebosten, and James le Maire, who had set out for Holland the same Year with himself, returned on Board of him, but James le Maire died by the Way, on the 22d of the preceding December. The States perceived, that some Potentates were alarmed with the Company's Prosperity, and did their utmost to oppose it, particularly by inveigling their best and ablest Seamen, and drawing them off from their Service. Upon this Apprehension, the States published an Edict, by which the Desertion of Seamen was expressly prohibited. In the Year 1618, and 1619, the Company had very good Fortune, for they received from the Indies, at several Times, ten Ships with rich Cargoes, valued at six or seven Millions. This new Progress inspired them with fresh Courage, not only in resisting the Spaniards, but in concerting their Ruin by Way of Reprisal. This Work was carried a great Way by the Diligence and Affection of Laurence Real, a very knowing and prudent Man. This Gentleman lived nine Years in the Indies, where the Company honoured him with the most considerable Post, and then he returned to Holland, A. D. 1620.

The Reader must observe, that all these Facts are taken from the Dutch Histories, and placed in that Light in which they represent them, because it would take up a great deal of Room, and oblige us to repeat many Things that have been said before, if we should labour to correct such Deviations from Truth, as from a Propensity towards magnifying the Power of the East India Company, these Writers have now and then thought fit to make.

But with regard to Isaac le Maire, it may not be amiss for us to note, that we do not at all depart from the Judgment already given, concerning this Expedition, in the History of the Circumnavigators, but merely infer this, to shew in what Light the Dutch Authors would have us consider this Point, out of Regard to their East-India Company. One Observation we shall take Leave to make by the Way, which is this, that the Treatment given to these Adventurers, has, in all Probability, been sufficiently punished by its Consequences; all that rich Trade that might have been derived from the Discoveries, and the Pursuit of the Discoveries of le Maire, has been totally lost by Neglect, which perhaps has done as much Damage to the Dutch, as their East-India Company has done them Good. Of this, *John de Witt* was aware, and has very wilyly remarked, that too the Pursuit of such a Commerce might have been beyond the Strength and Power of the East-India Company at that Time, yet

there was no good Reason why the States should have abandoned it, or should not have encouraged the setting up a new Company, in order to have made a Trial of what this new Trade would have produced; for if new Trades do not prosper, they occasion only a temporary Loss to private Persons, and none at all to the States; whereas, if they thrive and turn to good Account, they not only produce immense Riches to such as are concerned in them, but prove also a mighty Advantage to the Publick. For new Trades, especially under such a Government as that of Holland, bring new People, and increase the Subjects of the State that encourages them, for Wealth is a powerful Attraction; and where Men are sure to be rich and free, there will never be any Want of People.

But the Dutch East-India Company began now to feel their own Strength, and, like all other Companies, attended to nothing but the promoting their own Power, which induced them, about this Time, to engage in the War of Java, where they had not only the Natives of that Country, but the English also to deal with; and by degrees, and their obstinately persisting in their Design, they overcame both, though not without great Difficulty and some Loss, which however was abundantly repaired by the Reduction of Jacatra, and the settling their new Colony at Batavia, which was done in 1619, chiefly by the great Assistance which the States-General afforded to their East-India Company, while ours was slighted and neglected by the Government here, either from a Want of knowing the Importance of that Commerce, or from a Want of Power to afford the Assistance necessary in case they had a just Apprehension of the Value of that Trade: But, however it was, most certainly the Establishment of Batavia proved the Basis of such a Power in the East-Indies, and gave the Company such an Opportunity of disposing of her Factories and Settlements, in an Order to agreeable to that Government which she established in this new Capital, that we may from thence date her Acquisition of that Empire in the Indies, which not only renders her superior to all the trading Companies in the World, but in point of Power, Riches, and Dominion, very little, if at all, inferior to the Dutch Republick itself.

They began likewise, about this Time, to extend their Alliances in that Part of the World, and to treat with the Indian Princes in every Respect as Sovereigns; appointing at the same time Officers, who had not only the Titles of Generals, Commanders in Chief, Admirals, Governors, and such like, but had also the Power, and were effectually such as these Commissioners spoke them to be; and were, at the same time allowed such Salaries, and invested with such Authority as did not seem either very agreeable to their Dependency upon the Republick, or consistent with the Modesty and Frugality of the Dutch Government at home. This, the States however were content to overlook, because, that such as had the Direction of the Company's Affairs, pretended that these Titles, Revenues, and Commands, were absolutely requisite in the Eastern Part of the World, to preserve the Respect and Obedience of the Natives of those Countries, who were to be wrought upon only by the Splendor of Dress, Equipage, and such like Exterior Marks of Superiority. The Truth however seems to be, that the Common-Wealth Party in Holland, paying a very unwilling Obedience to their Stattholders of the House of Orange, were not a little pleased to behold a kind of new Republick rising in the Indies, independent of these Princes, and where their Relations might be sent to acquire Fortunes, to learn Principles, and accustom themselves to the Discharge of publick Offices, without being immediately under the Direction of these Stattholders, who, by the Necessities of State, were placed at the Head of the Government at home.

Yet the Governor, General, and other principal Officers, always acted under the Prince of Orange's Commission as Stattholder, and in most Part of the Indies magnified his Power, making the Indian Monarchs believe that he was a King, nay, and one of the greatest Kings in Europe. But this was only to serve their own Purposes, and to extend their Power the better; for the Duccons of the Company continued to administer its Affairs in a manner independent of the Government of Holland, and every State was

of four Ships richly laden
abilities, to the Value of
these

these Commissions, because they could not well do their Business without them.

Two Things especially contributed to their Grandeur, and to their quiet enjoying a Power of such extravagant Extent. The first was the Factions and Divisions that reigned at that Time in *Holland*, which so occupied the Cares of the Government, that they were the less able to look abroad, for it was at this Juncture that those Troubles happened, which cost *Barnesvelt* his Life, and the famous *Groenius* and other worthy Members of the State, a tedious Imprisonment. The second Cause was, the vast Riches which flowed in from the *East-India* Trade, and which were evidently of such prodigious Benefit to the *Dutch* Nation in general, as rendered it very improper to take any Measures capable of lessening the Interest or Authority of that Company, by which the Trade was managed, from which such mighty Profits accrued. Besides, it is not at all improbable, that both Parties had their Views upon this Company, and were in hopes of turning that Indulgence which was shewn it to their own Advantage, more especially because the Term granted by their Charter was drawing towards a Close, when it might have been practicable to have given it a new Turn, and to have removed all those Inconveniences, which, for particular Reasons, and perhaps from private and very different Views, had been hitherto pass'd by and over-look'd: But, as we shall see hereafter both Parties in the *Dutch* Government were mistaken in their Conjectures, and the Company, instead of losing, or abating a y Part of her Powers or Privileges, acquired still greater, and more extensive, by the new Charter which she obtained, as is usually the Case in Countries where Oppositions prevail; and the Government, whatever its Form may be, is not at Liberty to pursue such Measures as are most consistent with her Interest.

But to return from these Reflections to the Thread of our History, as it is taken from the *Dutch* Writers. The vast Success which attended this Company in all its Undertakings, so raised the Spirit, and excited the Hopes of the States, that they at length began to think of doubling these Advantages, by erecting a new Company, with the same Power of trading to the *West-Indies*, which this Company enjoyed in trading to the *East*. But though this was a Project both reasonable in itself, and which had all the Countenance the Government could give it, yet being feverly opposed by the *East-India* Company, it went on but slowly, and they were forced to make several Alterations in the Charter, before the Capital of this new Company, which consisted of 7,200,000 Livres, could be made up; and the State likewise presented the new Company with three large fine Ships, equally fit for Trade and War.

But while so much Care was taking of the younger Child of the Republick, the elder was very well able to go alone, and there wanted not some who were for hurrying at too great a pace, and sending such Numbers of Ships to the *Indies*, as if the *Dutch* had not fought the Commerce but the Conquest of *Asia*, in which however they were checked, and all Things kept within due Bounds; which, however it might dispel arbitrary Spirits, was certainly signat in the main.

About this Time the Abuses and unwarrantable Practices relating to the Sale of the Actions or Stock of the Company, began to revive; upon which the States found themselves oblig'd to renew the Placard of 1610, with a few Amendments suitable to the Circumstances of the Time. In the Year 1621, the Ship call'd *Goede Vrede*, arriv'd in *Zealand*, having on board five Children of Kings or Princes, in order to their Education, in the Provinces, and Instruction in the Christian Religion, pursuant to the Tenor of the Letters that were written to the Prince upon that Subject. In February 1622, two Ships more came home with ten Captives; they brought Advice that the *Indian* Trade flourish'd still, that they continu'd to wage war with the People of *Bantam* in *Java*, and with the *Spaniards* in the *Molucca* and *Manila* Islands, and that they had already possess'd themselves of the Island of *Banda*. Soon after there arriv'd three more, with Advice that the last Ships that went out had arriv'd safe in the *Indies* in four Months and three Days Sailing.

10. The Company's Patent expired this very Year, 1622, and a Difference arose between the Directors and Subscribers, that might have extended to a great Height, if the States had not interpos'd. These wise Measures appeas'd all by their Prudence. The Directors Accounts were call'd for, and pursuant to the Measures of Equity and Reason, a Dividend of 25 per Cent. was allotted to the Subscribers, and paid them in Cloves. After that the Company obtain'd a new Patent for twenty-one Years, commencing from 1623. By Virtue of the Renewal of the Patent, the Company had the Satisfaction to see four Ships richly laden, return in *October*. The Difference between the *English* and the *Dutch* that had lain long in Suspence, was then accommodated upon the Payment of 800,000 Livres by the *Dutch* to the *English*.

The infinite Advantages that redounded to the Country by the erecting of this Company, could not dissuade the Envious from thwarting it to a flaring Degree. To remedy this, and prevent the other Inconveniences that might happen, the States thought fit on *March* 13, 1623, to add new Clauses to their new Patent, alter the Diversion of a new Passage to the *Pacific* Sea, made by *James de Maure*. Their High Mightinesses, in Conjunction with the Company, came to a Resolution to send another strong Squadron that Way to the *Indies*, in order to ruin their Enemies. This Fleet set sail in *April*, under the Command of *James P. Hermit*; but, before their Departure, two Ships and a Yatch set out for the *Indies* by the common Course. The next *May* two Ships came home, and found a very good Market. The Abuses in the Sale of Actions oblig'd the States to revive a third Time their Placard upon that Head.

In *September* *John Peter Coen* arriv'd at *Genoa* with four Ship on the Company's Account, and a fifth, which had straggled from them by the Way, arriv'd the next *November*. At that time a Handful of Merchants bought up, at one Sale, all the Company's Pepper, the Quantity of which amounted to 19,000 Bales, and the Sum which they paid for it amounted to 4,500,000 Livres, which was certainly a very remarkable Thing. In *May* 1624, the *Hees* Yatch return'd, having sail'd to *Batavia* and home again in the Space of nine Months and seven Days. Their Intelligence import'd, that all things went well in that Country, excepting that the *English* had rais'd one Commotion at *Amboyna*, but the *Dutch* us'd their utmost Efforts to hinder the *Spaniards* to trade in *China*, and hoped for Success; that three or four Ships were taking their Lading in order to come home; accordingly three homeward-bound Ships arriv'd the next *September*, and in *May* 1625, another, call'd the *Heusden*, arriv'd from *Surat*, which gave Advice that their Affairs were in a pretty good Posture at *Ormuz*, and in the neighbouring Countries, from whence three Ships more return'd the next Spring. The *Schoonbozer*, an outward-bound ship for the *Indies*, met with a violent Storm on the Coast of *Spain*, and was call'd away off *St. Jago*, where twenty six of the Men were saved, and carried to *Spain*.

This Affliction was alleviated by the Arrival of two Ships from *Surat* in *February* 1626, and two more the next after, having on board an Embassador from the King of *Persia*. They brought the News of the Victory obtain'd over the *Portuguezze*, and of the great Commotion rais'd, occasion'd by the King's Son taking up Arms against his Father, inasmuch that both Armies were in the Field when the Ships came off. Upon this Intelligence they fitted out a Squadron of nine Ships, bound for that Country, under the Command of *Hybrandt*, who tougg'd bravely at *Sera Leoni* with *Campaen* the Pirate. In June two Ships of *James P. Hermit's* Squadron came home, and before the Year was out, a Ship return'd from *Cammandel*. It was in this Fleet that the famous Mariner, *William Yarrant* return'd safe to his native Country, whose Adventures, though related by himself with all the Plannets and Simplicity becoming his Condition, yet were long held absolutely beyond the Power of Words, till, by a careful and strict Enquiry, every Circumstance was verified.

It is true, that a Thing of this Nature does not seem to fall in immediately under the present Section, but, undoubt-

of this very Year, 1622, when the Directors added to a great Height, These wise Mediators the Directors Accounts Measures of Equity was allotted to themselves. After that time for twenty-one Years, the Renewal of Satisfaction to see four other. The Difference that had lain long in upon the Payment of the English.

bounded to the Company, could not diffuse a flaming Degree: In Inconveniences that hit on March 13, 1673, Patent, after the Discovery of the Sea, made by James, in Conjunction with to send another Broom in order to run their April, under the Command before their Departure, the Indies by the several Ships came home, and the Abules in the Sale of give a third Time that

arrived at *Genoa* with about, and a fifth, which Way, arrived the next of Merchants bought's Pepper, the Quantity, and the Sum which 500,000 Livres, which Thing. In May 1672, failed to *Batavia* and Months and seven Days, at all things went well the English had raised the Dutch used their attack to trade in *China*, and four Ships were taking home; accordingly three the next September, and the *Huyslen*, arrived from their Affairs were in a and in the neighbouring Ships more returned the, an outward-bound Ship Storm on the Coast of *Zege*, where twenty failed to *Spain*.

by the Arrival of two 16, and two more the assader from the King of the Victory obtained great Communion in, king up Arms against the armies were in the last upon this Intelligence of ships, bound for that *Combrandi*, who took to *Spain* the Pirate. In *Van's* Squadron came home, Ship returned from *Car*, that the famous *Manna*, ed fate to his native Count, related by himself with becoming his Condition, yond the Power of *Bomb*, quiry, every Circumstan-

is Nature does not seem to ent Section, but, undoubtedly,

edly, it has a very strict Relation to the Business of this Collection, and therefore I shall give as clear an Account of this Man's Misfortunes as is possible, and in as few Words as I can.

William Bontekoe, Native of the Town of *Horn*, sailed on the 28th of September, 1618, from the *Texel*, for the *Indies*, on board a Vessel of eleven hundred Tons, having two hundred and six Men on board, in Company with two Ships of a smaller Size. The Difficulties he met with began very early; for being separated from the rest of his Squadron by a violent Storm, which lasted for several Days, he therein endured such Hardships, and ran thro' such Variety of Dangers, that neither himself nor any of the experienced Seamen he had on board, expected to escape. At length, however, the Violence of the Tempest abated, and they found themselves in the Straights of *Sunda*, where they met with another Accident still more terrible; for one of the Crew going down to pump, at the same time that the Steward went to draw Brandy, it fell out unluckily, that the former had a Candle in his Hand, out of which a Spark flew into the little Hole which the Steward had pierced in the Brandy-Cask, and that consequently took Fire. The Captain, soon apprised of the Accident, ran down and ordered them to throw Water upon the Cask, which, in their Confusion, they rolled down into the Place where their Smith kept his Coals; but, however, the Water seemed to have put out the Fire: But in about half an Hour they were fatally convinced, that the Coals being covered with the flaming Brandy, had taken Fire. In this Distress, they continued to throw great Quantities of Water upon the Coals, in hopes of extinguishing them, from whence a new Evil arose; the sulphureous Smoak of the Coals coming up through the Scuttles in such thick Clouds, that they were not able to see what they were doing; and, which was worse, they were so suffocated thereby, that they were no longer able to mind what they were about.

In this Distress they were constrained to shut the Scuttles, and to make Holes in the Ship's Sides, thro' which, by the Help of Canes, they continued to pour Water. Captain *Bontekoe*, foreseeing that their greatest Danger lay in the Fire reaching the Powder-room, just for the super-cargo, without whose Consent he could do nothing, and endeavoured to persuade him to consent that the Powder should be thrown overboard; but he was not to be moved, alledging, that if they threw over the Powder, and should afterwards be attacked, tho' by a Vessel ever so much inferior to them in Strength, they must be obliged to strike, without making any Defence. By this Man's Obstinacy, they were left in this dreadful Condition, fluctuating between Hope and Despair, the Fire appearing sometimes, and sometimes was to little to be distinguished, that they had Reason to think it had been out. But, alas! they were soon convinced of their Mistake; for the Coals lying at no great Distance from a Fire of Bats, filled with Oil, the Fire very soon reached them, and then the Crew began absolutely to despair. Their Case indeed was miserable, beyond Description; for they were out of Sight of Land, the rolling Ocean on every Side, and the Fire immediately under them. It so happened, that their Shallop had been for some time in Tow, and to make room for the Men to bring Water to put out the Fire, they had likewise heaved out the Long-boat. The Crew observing this, slipped some of the Fore-casts, and some into the Galleries, from whence they dropped into the Sea, and the Swam on board the Shallop, or Boat; so that what the Captain was using his utmost Endeavours to preserve the Ship, he lost a great Part of his Men.

When he discovered this, he endeavoured to get them on board again; but finding that impossible, he made all the Sail he could to come up with them; and while he was doing this, the fatal Blow which he expected took place, that is to say, the Ship blew up, and he was thrown from the Quarter-deck with two great Wounds in his Head, his Body half scorched, and his Legs and Arms so bruised, that he could barely move them. However, his being so suddenly plunged into the Water, brought him to his Senses; so that seeing the Mainmast of

the Ship near him, he with much ado got upon it, and by the Help of two Boards kept himself floating, till he was taken up by the Shallop with much Difficulty. It was by this time Night, and though the Captain, as soon as he came on board, advised them to keep as near the Wreck as they could, yet they kept towing all Night long, as if they had been sure of making Land. But when the Day broke, and they saw neither Shore nor Ship, they came to the Captain, beseeching him to tell them what they should do. They were without Sails, without Compass, without Water, and had not above seven or eight Pounds of Bisket, but were still rowing as hard as if they had been within Sight of Shore. The Captain exhorted them to Courage and Obedience, and in the first Place made a Review of them, by which it appeared, that there were forty six in the Shallop, and twenty six in the Long-boat. He advised them to lay aside their Oars, as serving only to weaken them, and bid them make use of Sails. They asked where they were to make; the Captain replied, that every Man must pull off his Shirt, that by sewing them together, they might make as good Sails as they could. It was then objected, that they had not either Needle or Thread; but the Captain taught them to supply the first with Nails, and the latter by unrolling the Ropes. While they were at work upon the Sails, he employed the Carpenter in making a *Yacob's* Scaffold, for taking Observations; and tho' he was to ill, that he could not fit up, yet he made shift to draw a Compass, and a Chart, in which he laid down the Islands of *Sumatra*, *Java*, and the Straights of *Sunda*.

While they were thus at Sea, they got some Mews, and some Flying-fish; and when it rained, they collected the Water in their Sails, and preserved it in two or three Casks. But notwithstanding all this, they were in a Fortnight's Time driven to such Necessities, that it was with great Difficulty the Captain prevailed upon them to desist from a Design they had formed of killing and eating two or three Boys they had on board. It was the 20th of November that the Ship blew up, and on the 3d of December they, with much Difficulty, made an Island on the Coast of *Sumatra*, from whence, with infinite Danger, they reached that Shore; and after running thro' Variety of Perils, in which they were preserved by the wise Council of their Captain, they at last passed the Straights of *Sunda*, and arrived safe on the Coast of *Java*, where they were taken on board the *Dutch* Fleet, commanded by *Pedrick Houman* of *Amster*, who sailed out of the *Texel* at the same Time with Captain *Bontekoe*.

After he had remained some Time with him, the Admiral sent Captain *Bontekoe* to *Batavia*, to the General *Johannes Peter Coen*, who then commanded in the *Indies*, and who immediately gave him another Ship, as the full Reward of his Toils, and sent him with naval Stores and Provisions to the *Moluccas*. After this, he was employed by the same General in several other Services for the Space of two Years, and then he was sent to *Cebu*, on board the Fleet of *Cornelius Reggers*, who was entrusted with an Expedition of great Importance, which was to establish a Commerce with the Inhabitants of that Island, either by fair Means, or by Force; and in case the latter only was found practicable, they were ordered to make themselves Masters of the Island and Forts of *Manna*, or one of those Islands on the Coasts of *China*, which the *Portuguese* had given the Name of *Pisafalou*.

This Expedition, tho' very well concerted, and a Force employed, every way sufficient for the Execution of it, yet failed by unforeseen Accidents; and the *Portuguese* at *Macao* having repulsed them in their Attempt upon that Place, they were obliged to think of executing the latter Part of their Commission by attacking some of the Islands before-mentioned. This proved a Work of Time, and was likewise attended with innumerable Difficulties, chiefly through the wicked and pernicious Temper of the *Chinese*, who were too numerous to be wrought upon to Advantage by Force, and who, under Colour of Peace, betrayed and murdered such as trusted to themselves in their Hands. They likewise frequently surprised the *Dutch* Squadrons by their Fire-ships; and, in time, gave such Disquiet to Captain *Bontekoe*, that he resolved to go on

Book I.

Dutch, the King of *Mataram* had at last laid Siege to *Batavia*, and at the End of three Months was forced to break up with the Loss of 16,000 Men. *Peter Vanden Broecke*, who had likewise been long in *India*, and was the first Introducer of Trade upon the *Red-Sea* and the adjacent Countries, returned home the next Year: He brought with him seven Ships, the Cargoes of which were valued at Eight Millions. But these happy Incidents were accompanied with a very disagreeable Circumstance; for of the eight Vessels he commanded, he brought home but six, one being lost by Fire under the *Aceres-Islands*, and the other having straggled from the Fleet; however, the last went round by *Ireland*, and came safe home. *Broecke* acquainted the Company that General *Coen* died suddenly two Days before the Arrival of *James Spey*, and that *Spey* acted as General by way of Provision. In fine, *Antony Van Diemen* returned in the Year 1631, with seven Vessels, which brought the Company incredible Treasures.

These mighty Advantages enabled the *East-India Company* to prosecute their Designs to their utmost Extent, to enlarge their Commerce in the *Indies* by every Method possible; and in order thereto made use, with great Dexterity, sometimes of Force, and sometimes of fair Means, to compass their Ends, and to secure to themselves the largest Share of a Trade, which, by Experience, they found of such wonderful Benefit. It was with this View, that in 1641 they attacked the important City of *Malacca*, the strongest Place the *Portuguese* had left in the *Indies*, and which was of so much the greater Consequence, because it not only secured their Commerce with the Kingdoms of *Johore*, *Siam*, and *Pegu*, but also afforded them vast Advantages for the Management of their Trade with *China* and *Japan*; at the same time it made them Masters of that Strait which is of so great Consequence to the Commerce of the *Indies* in general; so that whoever is Master thereof may, in Time of War, be in a Condition to give Law to all the Nations that carry on any Trade in that Part of the World.

It was in the same Year that the *Dutch* secured to themselves the entire Possession of the rich Commerce of *Japan*, by the total Exclusion of the *Portuguese*, and all other Christians. We have already mentioned this Matter more than once, and given the Reader such Lights therein as may enable him clearly to conceive how that Matter was brought about, and how far the *Dutch* may be justly charged with contributing thereto. Instead therefore of insisting farther upon that Matter here, I shall content myself with a single Remark, which I think of some Importance.

It is this, that whatever other Nations, or the *Dutch* themselves, may think of the Benefits accruing from this Exclusion of other Nations; it is however demonstrable, that they would have carried on a more extensive Trade to that Country, and with much more Ease to themselves, if that Trade had remained on the old Foot; for immediately after the Expulsion of the *Portuguese*, the *Dutch* themselves were obliged to quit the Port of *Surabaja*, where they had erected a noble Magazine, built all of stone, and were obliged to shut themselves up in the little Island of *Dona*, where they have ever since been subject to the Caprice of the *Japoneze*, and exposed to a Multitude of Injuncts and Inconveniences, which never could have betaken them but from this Event; so that though, I confess, the *Dutch* are much enriched by the *Japoneze* Trade, yet, I think, I have Reason to deny that they are at all the better for the Exclusion of other Nations.

13. The Power and Credit of the Company was now grown to such a Height, the Wealth they brought into the Nation was of such Consequence, and so necessary to the State, and the Circumstances of Things were so changed in their Favour, that without any Difficulty, at the Time of the Expiration of their second Charter, they procured the Renewal thereof for the same Term of twenty one Years, to commence from the First of *January* 1644. And so effectually did their Directors twist the Affairs of the Company with those of the Government, that upon the Conclusion of the general Peace, the same Care was taken of their Interests as of those of the Republick, to which the *Spaniards* consented, and thereby relinquished their

Right, as they had long before lost the Power of questioning the Conquests of the Company in the *East-Indies*. It was in Gratitude for all these Favours, that the Company entered the same Year into a Project of erecting, at an immense Expence, a Monument to the commercial Fame of the City of *Amsterdam*.

The Occasion was this: The old Town-house, or Guild-hall, which had hitherto served well enough as an Exchange for the Merchants, in which they met to transact Builnets, was now thought too little, and also too mean an Edifice for a City of such Wealth and Trade. Upon this, the two great Companies of the *East* and *West-Indies* undertook to build a new Stalhoufe, the first Stone of which was laid on the 29th of *October* 1648. While this noble Structure was raising, an Accident happened, which rendered it not only convenient, but necessary; for by some Means or other the old Town-house took Fire, and was burnt down to the Ground, which obliged them to hasten the Erection of the new one, which was fit for Use in the Year 1655, and has been ever since considered as one of the finest Structures in the World; which all the Power of Architecture is displayed to the utmost without, and all the Riches of the most distant Countries in the World are assembled to render it magnificent within. There never was a Time in which the Company were better able to launch into so vast an Expence, her Commerce being now at its greatest Height, and her Power raised to such a Degree, that, from the *Cape of Good-Hope* to the most distant Parts of *China*, there scarce inhabited a Nation which had not learned to respect her, by having experienced the Effects either of her Retentment or Good-will.

Yet all this Power, Wealth, and Trade, did not render such as had the Care of the Company's Concerns at all stolid or negligent; on the contrary, they were always contriving some new Scheme for the Benefit of those by whom they were entrusted; and being very desirous of overcoming those Difficulties which had hitherto cramped their Trade in *China*, the General and his Council at *Batavia*, in the Month of *July*, 1677, sent a solemn Embassy, at the Head of which were *Peter Boyer* and *James Kysel*, with rich Presents to the *Chinese* Emperor. He then resided in the City of *Peking*, to whose Presence, after a Stay of eight or nine Months, they were admitted, and from the Civility shewn them at their first Audience, they had great Hopes of Success; but they soon discovered that there were Persons in that Court who traversed all their Designs, and found Means to misrepresent all the Propositions they made. The Chief of their Enemies was *Father Adam Schaal*, a Native of *Cologne* in *Germany*, and by Profession a Jesuit. He had resided in *China* upwards of five and thirty Years, and had wrought himself to highly into the Emperor's Favour, that he raised him to the Degree of a Mandarin of the first Rank, and placed him at the Head of all the Philologists and Mathematicians in the Empire. This Man, by his great Interests, and Knowledge, effectually baffled the Designs of the *Dutch*; for he represented them as a People without any Lands or Settlements in *Europe*, who lived merely by Peddling and Pracy, and had by Fraternity and Cunning raised themselves a large Empire in the *Indies*, at the Expence of the Natives, and more especially of such Princes as suffering themselves to be deceived by their fair Pretences, had admitted them into their Dominions, and by that Means afforded them an Opportunity of entrelling them and their Subjects.

The *Chinese*, who are naturally suspicious, having once got these Notions into their Heads, began to put such Questions to the *Dutch* Embassadors as might be able to enable them to judge of the Truth of what they had been told: And, upon their asking at how great a Distance the Seat of their Government lay from *China*? they answered, about five thousand Leagues; and being interrogated as to the Power and Strength of the Colony at *Batavia*, they gave such Answers as were true in themselves, and most likely to create Respect: But these were precisely the Things that turned most to their Disadvantage; because they seemed exactly to agree with what *Father Schaal* had laid down. So that towards the latter End of the Year 1677, the Em-

battlers quitted *China*, without being able to make any Progress in the Execution of their Commission; so strong were the Prejudices raised against them, and to great the Apprehensions the *Chinese* had of their Danger, in case those Strangers were admitted to trade in the Ports of their Empire.

But if they were disappointed in their Hopes on this Side, they had better Success in *Japan*, to which Country they sent *Zurbary Waglener*, with the Title of Ambassador to the Emperor, with Orders to use his utmost Endeavours to gain a perfect Knowledge of the Policy of that great Empire, and to make himself likewise as agreeable as possible to the Emperor and his Ministers, which Commission he was very capable of performing, being a Man of deep Reach, very great Experience, and extremely courteous and affable in his Deportment. He had not been long however at *Edo*, before a sudden Fire reduced that City to Ashes, which occasioned such Confusion at the Court of *Japan* as induced the *Dutch* Ambassador to return home.

He was scarce arrived at *Batavia* before News came that great Disputes had arisen between the *Japanese* at *Nangasack* and the *Dutch*, who were settled in their Factory there, which alarmed the General and Council to much that they oblig'd Mr *Hagbanner*, much against his Will, to make a second Voyage to *Japan*, where he did not arrive till the Beginning of the Month of *March*, 1659. He found the Way and Means to ingratiate himself with the Emperor and his chief Ministers, and by promising two Tonnoys on the Part of the *Dutch*, obtained all that he could reasonably ask in their Favour. The first of these was, that they should give early Intelligence of any Designs that might be formed in the *Philippines* to the Prejudice of the *Japanese* Empire: The other, that they should forbear taking *Chinese* Ships upon the Coast of *Japan*, because the Emperor allowing them to trade in his Dominions, it was but reasonable that he should be able to protect them.

While these Negotiations were carrying on in the most distant Parts of the East, there arose a new War in *Java*, which brought Rumour to the *Dutch* Affairs. We have treated upon this more than once, but for the better understanding this History, it will be necessary to give a concise View of the whole Matter from the *Dutch* Histories. The Island of *Java* had been under the Power of a single Monarch, sometimes styled by the *Dutch* simply the Emperor, and at other Times called King of *Japara*, from whom the Governour of *Bantam* revolted, assumed the Title of King, and was supported in the Quality of an independent Prince by the *Dutch*. It was by the adroit Management of these Divisions that they maintained and supported their own Power, for, whenever the Emperor of *Java* attempted any thing to the Prejudice of *Batavia*, the King of *Bantam* was sure to take Arms in their Favour; and, on the other Hand, whenever the King of *Bantam* took up Arms against them they never fail'd to have Recourse to the Assistance of the Emperor of *Java*. But in the Year 1651, the Emperor being very much embarrassed at home, the King of *Bantam* took hold of this favourable Opportunity to raise a great Army, and to attack the *Dutch*, supposing that for want of the Emperor's Assistance they could not be able to make him self Master of *Bantam*, to which he immediately laid Siege. He found that he could never by assault force the Company was oblig'd to give them to understand, that they were able to conquer the Kingdom by their own Strength, which they did accordingly, and that the Lords of a great Part of his Kingdom, the *Bantams*, and him self oblig'd to rate themselves as vassals to the Emperor, and to pay him an annual Tribute.

The Emperor of *Java* had had much Success for some Years past, but his Father an invincible Hatred to the Company, yet they made use of the Effects of their Power to overcome him, and thereby they oblig'd him, that they were oblig'd to conquer it, or to stoppage of the great Means of trade, to have any Correspondence with them. These Disturbances at home did not however divert the Governour and Council from stopping in a new War, but the Success of one of the Allies, which

was the King of *Bengal*, who was in great Danger of being dethroned by his Brother. At first the *Dutch* only furnished him with Provisions and Artillery, and offer'd him, in case he was expelled, a Sanctuary at *Batavia*. But afterwards, finding that a considerable Part of his Subjects adhered to him firmly, they sent over Troops to his Assistance, and thereby not only deliver'd him from the immediate Danger he was in, but restor'd him to his former Dignity: In Gratitude for this reasonable Assistance, he gave them Leave to erect, not only a Factory, but a Fort at *Hugely*, well fortified with twelve Pieces of large Cannon mounted, and a good Detach. It was by this Means that they ruin'd the *English* Trade there, and secured all the Commerce of those Parts to themselves.

Yet these remarkable Instances of good Fortune could not make them forget the Misfortune of their Affairs in *China*, much less incline them to forgive the *Japanese*, to whom they attributed the Defeat of that Ambassy, which cost them an immense Sum of Money, and which, as we have shewn before, ended in an absolute Disappointment. To be revenged on the Authors of this Disgrace, they fitted out a Fleet of thirty Sail, with Orders to sail to the Island of *Macassar*, and to attack the City of the same Name, in the Port of which they knew there was a *Portuguese* Fleet, richly laden, and in which the *Japanese* were deeply concerned. On the 7th of *June* 1659, the *Dutch* attack'd *Macassar* by Land and Sea, and to the *Indian* Monarch of that Place defend'd his Allies with his whole Force, yet the *Dutch* obtained a complete Victory, for they burnt three of the *Portuguese* Ships, took two, and took one, to richly laden, that it sufficiently reimburs'd the Expence both of the *Chinese* Ambassy, and of this Expedition. What was still more honourable for the *Dutch*, the unfortunate King of *Macassar* was oblig'd to send a solemn Ambassy to *Batavia*, and to submit to such Terms as the *Dutch* Governour General thought fit to prescribe, which were hard enough, since he was oblig'd not only to expel all the *Portuguese* in his Dominions, but also to promise, that he would never admit them, or any other *Europeans*, to settle in his Territories; so that we may justly affirm, that never any Expedition was more completely executed, or turned more to the Reputation of the *Dutch* Company than this, which not only humbled their Enemies, but brought vast Advantages to them selves.

But as the greatest Fortune is seldom the most secure, so immediately after this mighty Success, the *Dutch* Company received one of the severest Checks they had ever met with since their Establishment in the *Indies*. They had at this Time a very fine Settlement on the Island of *Formosa*, one of the fairest and most fruitful Countries in the *East*, abounding with all the Necessaries of Life, producing various rich Commodities, and affording them the Opportunity of carrying on a vast Commerce from thence. They had built for the Protection of their Colony, a good Fort, with large Bastions, and below these, towards the Sea, they had another Fortification, which cover'd the Palace of their Governour, consisting of two round bastions, an excellent Covered-way, and four Half-moons, the whole united to the Fort by very strong Walls, surrounded by a great Number of Cannon, and the whole protected by a numerous Garrison. The Town was goodly and large, extremely well peopled, and the Inhabitants, of seven Years old and upwards, being charged with a Tribute, at the Rate of half a Guilder a Head, paid the Company Revenue more than sufficient to discharge the Expence necessary for the Maintenance of this important Colony. Such indeed it might be well fill'd, since by its situation at the Distance only of twenty four Leagues from the Coast of *China*, and one hundred and fifty from *Japan*, it afforded them the Means of carrying on, with the greatest Ease, a Trade to both that was excellently managed.

The *Chinese*, in the Year 1653, had had a very deep Design for the Destruction of the *Dutch*, by an universal Conspiracy amongst the Natives, which however had not the designed Effect; for being luckily discovered in Time, it was absolutely defeated. This Piece of good Fortune made those who were entrusted with the Care of this Settlement, more remiss than is usual with the *Dutch*, inasmuch, that they neglected the Fortifications, and the

in great Danger of being first the *Dutch* only Artillery, and offered Sanctuary at *Batavia*. A considerable Part of his Subsequent over Troops to his delivered him from the but restored him to his this reasonable Assailant, not only a Factory, and with twelve Pieces of Dutch. It was by this Trade there, and left parts to them lives.

of good Fortune could sage of their Affairs in to give the *Japans*, to of that Embassy, which money, and which, as we absolute Disappointment, s of this Disgrace, try with Orders to sail to the took the City of the they knew there was a and in which the *Japans* 7th of June 1661, the and Sea, and it is to be intended his Aides with ned a complete Victory; *Seize* Saips, took two, and but sufficiently remaind a Embassy, and of this more honourable for the *Macaçar* was oblig'd to a, and to submit to a general thought fit to pre- sence he was oblig'd, not in his Dominions, but never admit them, or any Territories; so that we Expedition was more ore to the Reputation which not only had had theirantages to them lives.

eldom the most secure, success, the *Dutch* Com- Checks they had ever in the *Indies*. The settlement on the Island of most fruitful Countries, Necessaries of Life, pro- and affording the best Commerce from any of their Colony, a part below there, towards the tion, when covering the thing of two or three Miles, and four Half Miles, very strong Walls, and a, and the water of the. The Town was of great and the Fortifications, being engag'd with a bold- der a Head, and success to declare the Town of this in 1671, the Company, and, since by means of it, it Leagues from the Con- dity from *Japan*, it being on, with the greatest excellently to be seen.

1653, had had a very deep *Dutch*, by an universal, which however had not ckly discovered in Time, his Piece of good Fortune with the Care of this Settlement with the *Dutch*, at the Fortifications, and the

fered their Magazines to grow empty, while, by a steady Application to Trade, they were labouring to advance their private Fortunes. At the Time the *Tartars* made their last Conquest of *China*, there dwelt in the *Dutch* Town, upon this Island, a *Taylor*, whose Name was *Chin- chlung*, by the *Dutch*, and other *Europeans*, called *Iquon*. This Man had a prodigious Spirit, a vast Capacity, and a Courage equally stubborn and enterprising; and, from an unconquerable Aversion to the *Tartars*, got together a few Men, two or three small Barks, and with this Force turned Pirate, or Privateer, which ever you will please to call him. In a short Space of Time, his Power increas'd to such a degree, that he became extremely formidable to the *Tartar* Emperor, who finding that his Foible was Ambition, offer'd to make him King of the two great Provinces of *Canton* and *Fekien*, and sent for him to *Pocbeu*, where he promised to give him the Investiture of his new Dignity; but instead of keeping his Word, he caus'd him to be seized, and conducted to *Peking*, where he was soon after put to death.

This *Taylor*, who was so near being a King, had a Son, whose Name was *Coxinga*, or *Coxenga*, and who had been *Taylor* to Mr. *Puttman*, Governor of *Fort Zealand*, and who, on his Father's Imprisonment, took upon him the Command of the Fleet. He at first demand'd Succours from the *Dutch*, and promised them great Advantages if he was successful against the *Tartars*, which they refus'd; and this provok'd him to such a Degree, that he resolv'd to turn his whole Force against *Formosa*, the rather, because he had a good Intelligence from the *Dutch* Town, and knew that their Affairs were in a very bad Condition. He assembled, with this View, a Fleet of six hundred Sail, most of them Frigates of small Force, but near one hundred were stout Men of War, of forty Guns and upwards. The News of those great Preparations reaching the ears of the *Dutch* Governor, who was at that Time Mr. *Frederick Cojet*, Successor to *Cornelius Keyser*, he immediately dispatch'd Advice to *Batavia*, and demand'd a speedy Succour, and also to *Japan*, for the Assistance of such *Dutch* Ships as happen'd to be there. All this, however, was to no Purpose; for before any Relief could come, *Coxinga* sent his Fleet under the Command of his Uncle *Saja*, which appear'd before the Place in the Month of *March* 1661.

The *Dutch* Governor sent a Detachment of three hundred and fifty Men to prevent the debarking of their Troops, who behaved as well as Men could do, but to very little Purpose, as we may easily guess, since the *Chinese* landed forty thousand Men. They soon cut off the Communication between the Town and the Island, and having made themselves Masters of the adjacent Country, *Coxinga* treated all who had join'd the *Dutch*, in the same Manner that *Nicholas Herburg*, who was Governor in 1653, did such as were concern'd in the Rebellion; that is to say, he put them to Death with all the Marks of Shame and Cruelty he could invent, and without the least Regard to Age, Sex, or Quality. After this, he attacked as the Outworks at the same Time, which prevented the *Dutch* from succouring each other; so that these Places were very soon carried, though with a vast Effusion of Blood, and the Governor was forced to retire into *Fort Zealand*.

The Conqueror considering the great Strength of the Place, and how unfit his Army was to undertake Sieges, made choice of Mr. *Anthony Hancock*, the eldest of the *Dutch* Clergymen, and sent him with his Brethren, two or three Schoolmasters, and some of the gravest Men among his Prisoners, to persuade the Governor to surrender, declaring, that he was content they should retire in Safety from *Formosa*, and that he would not touch the Hair of a *Dutchman's* Head, or one Farthing's Worth of their Goods; but if they refus'd this Proposition, he would put them all to the Sword, without Mercy. The Governor told those who brought him this Message, that he had all the Sorrow and Concern in the World for their Misfortune; but at the same Time, that there was nothing could induce him to betray his Trust, or to give up the Place he commanded into the Hands of the Enemy. With this Answer they returned to *Coxinga*, who, as soon as he

heard it, caus'd all his Prisoners to be put to Death, Men, Women, and Children.

When this was done, he embarked the best Part of his Army on board three hundred Juncks, a very light Sort of Vessels, with which he block'd up the Port, while he fired upon the Forts from two Batteries of twelve Pieces of Cannon each. While Things were in this Situation, there arriv'd from *Batavia* a stout Squadron of nine Men of War, commanded by Commodore *James Cawen*, who immediately made the best Disposition he could for the Relief of the Place. With this View, he landed the Troops he had on board, and being join'd by a Part of the Garrison, march'd to attack 6000 *Chinese* that were covered by a Redoubt, not yet mounted with Cannon. These Troops being well armed, and compleatly disciplin'd, received them in Order of Battle; and tho' the *Dutch* fought with great Resolution, and renew'd the Attack several Times, they were at length oblig'd to retire with the Loss of four hundred Men. The Commodore then order'd his Ships to force a Passage into the Port, but the Juncks drawing very little Water, kept close under the Shore, where the great Ships durst not follow them; and in this attempt the *Dutch* lost two of their best Men of War, of which one run ashore, and had all her Crew, to the Number of three hundred and eighty Persons, killed by the *Chinese*, the other was blown up by a Shot fired into her Powder-room.

Commodore *Cawen* perceiving that it was impossible for him to do any Thing more, detach'd two of his Ships to *Japan*; and having taken on board two hundred Women and Children that were in the Fort, he sail'd back to *Batavia* with the five Ships remaining of his Squadron, and made an exact Report to the Governor of the Council of the State of their Affairs in *Formosa*.

The News was received there with deep Concern, and a Resolution was immediately taken to send an Embassy to the Emperor of the *Tartars* in *China*, to inform them, that they were in Danger of losing *Formosa*, on account of refusing to assist this *Chinese* in his Rebellion; but not depending altogether on the Success of this Embassy, they order'd five Saips of War to be equip'd, and to sail forthwith to the Relief of the Place. The Governor *Cojet* made so obdurate a Defence, that old *Saja*, the Uncle of *Coxinga*, resolv'd to raise the Siege without the Knowledge of his Nephew, with, at least, that Part of the Army which he commanded. But tho' he managed this Design with the utmost Secrecy and Caution, yet *Coxinga* came to have a Suspicion thereof; upon which, forgetting the Nearness of his Relation, he caus'd old *Saja* to be arrested, and put in Irons; after which, notwithstanding he had the Plague and Famine in his Camp, he push'd on the Siege so vigorously, that the Governor found himself oblig'd to surrender, notwithstanding that the Successors he expected were in Sight.

Accordingly the Place being given up to the *Chinese*, he march'd out with the Remains of his Garrison, and being taken on board the Squadron, he return'd to *Batavia*, where, instead of having received the Thanks, as he might reasonably have expected of the Governor General and Council, he was committed to Prison, and kept there a long Time, under Pretence, that he had given up the Place too soon, because the *Dutch* Squadron was in Sight. To say the Truth, we may, in some measure, pardon the Injustice of this Proceeding, when we consider the Importance of the Place, that the Loss was irreparable; and that, instead of having the *Portuguese* and *Spanish* Trade at their Mercy, their own was now to much expos'd, that it was very difficult for them to send their annual Squadron to *Japan*. This Misfortune, however, brought about a Correspondence with the *Chinese* Emperor, who consented to give them his Assistance, to restrain the Power of *Coxinga*, to hinder him from pirating in those Seas, and thereby disturbing the Commerce of *China* and *Japan*.

14. It was about this Time, and by the Mediation of King *Charles II.* who had married the Infanta of *Portugal*, that a Treaty of Peace was set on Foot between that Crown and the Republick of *Holland*, which was soon after concluded, to the mutual Satisfaction of both Parties; for the

East-India Company were much too strong for the *Portuguese* in that Part of the World, and had in a short Time deprived them of their most valuable Settlements; yet in the *West-Indies* the *Portuguese* were too hard for the *Dutch*, and had not only recovered *Brazil* out of their Hands, but were also in a fair Way of making still greater Conquests; and besides all this, their Privateers were so numerous, that the *Dutch* found their Trade in the *Mediterranean*, and on the Coast of *Africa*, very precarious; so that notwithstanding the Advantages made in the *Indies*, they had no Reason to desire the Continuance of the War.

The Company, however, as it they had been really Sovereigns within the Bounds of their Charter, took little or no Notice of the Peace: So that in the Year 1660, they attacked *Cebu* on the Coast of *Malabar*; and having reduced it, they next attacked *Cananor* on the same Coast, of which, tho' with some Difficulty, they became Masters; and tho' their first Design was to have demolished the Place, and to have established only a Factory there; yet, on second Thoughts, and when they came to consider the Convenience and Importance of its Situation, they changed their Minds, and determined to repair the Fortifications, and keep it as a Settlement of their own. After the Reduction of *Cananor*, they next proceeded to *Cochin*, a City of still greater Force and greater Consequence, as being a Bishop's See, and a Place of great Trade. The *Dutch* Commodore *Grens* met here with greater Resistance than he expected, and during a Siege of some Continuance, lost a considerable Number of his People; but being resolved to master it, cost what it would, he prosecuted his Attempt with such Success, that at last he prevailed; and the *Portuguese*, who had but a small Number of Men during the Siege, were constrained to surrender the City into his Hands.

When he was possessed of it, however, he scarce knew how to act, because on the one hand he saw that the Preservation of it was a Thing of great Consequence; and, on the other, that it would require a very numerous Garrison, and a great Expence, to put the Fortification into a proper Repair: He applied himself therefore to the General and Council at *Batavia*, who immediately sent him Orders not to spare for any Expence, either of Men or Money, but to push his Fortune to the utmost; and at the same time they sent him this Message, they sent likewise a fresh Squadron, and a considerable Body of Troops on board it. This encouraged Commodore *Grens*, that he marched with his Forces by Land to attack the City of *Perca*, which was the Capital of a little *Rajah*, or *Indian* Prince, who had been subject to the *Portuguese*: But he not caring to dispute with those who had bear his Masters, offered to become their Tributary, and to pay them the same Obedience which he had formerly done to the Crown of *Portugal*; and this being as readily accepted as offered, put an End to the War on that Side.

The City of *Cranganor*, which is situated between *Callicut* and *Cochin*, fell next into his Hands without a Blow; and thus, in the Space of one Year, the *Dutch* expelled the *Portuguese* out of all the Places they held on the Coast of *Malabar*, and acquired to themselves a Territory of one hundred and fifty Leagues in Length, with all the Trade belonging to it, and which the *Portuguese* had enjoyed without Interruption from the Time of their first Settlement in *India*. They likewise contracted Alliance with the *Sarmora* of *Calicut*, the King of *Cochin*, and other *Indian* Princes.

They also laid hold of this Occasion, to send a solemn Embassy to *Alexand*, who had just mounted the Throne of the *Mughl*, by whom they were most graciously received, and an Intercourse of Friendship settled between them: They took the same Method with respect to all the Monarchs whose Dominions lay on the Gulph of *Bengal*, and with the same Success. It was not long, however, before they found some Cause to differ with the King of *Siam*: Upon which they withdrew their Factories out of his Dominions, which so alarmed that Prince, that he immediately sent Deputies to *Batavia*, to know the Cause; which the Council signified to him by a very respectful Letter: On receiving which, he sent an Ambassador to invite them back, on the strongest Assurances not only of Redress

in respect to the Grievances they complained of, but of any other that might happen in Process of Time; and the Company accordingly re-settled their Factories at *Siam* and *Ligor*.

Not long after the composing these Differences, there arose fresh Grounds of Complaint, but on the opposite Side; for the Crew of a *Dutch* Bark murdered thirty-five *Siamese* in cold Blood, after having ravished their Wives and Daughters. But before the Inhabitants or their Monarch had Time to complain, the *Dutch* Council at *Malacca* caused the Offenders to be apprehended; four of whom they broke alive upon the Wheel, and five they hanged; which gave such Satisfaction to the Natives, that they never heard any more of this Matter.

In the midst of all those Successes, they could not forget the Loss of *Formosa*, or the Overtures made by the Emperor of the *Tartars* in *China*, for restoring to them that Place. There was the greater Reason to expect that this Monarch would act sincerely with them, because *Coxenga*, not satisfied with *Formosa* and its Dependencies, had actually made himself Master of several Islands on the Coast of *China*, and some Towns upon the Continent. On the Assurances therefore given them by Mr. *Borel*, who was the Ambassador to the Emperor, they fitted out a great Fleet, consisting of no less than seventeen Sail of large Ships, under the Command of *Balthasar Bont*, with Orders to join the *Tartars*, and to act with the utmost Vigour against *Coxenga*. On his Arrival on the Coast of *China*, he found that Conqueror in Possession of the Island of *Quemoy*, which the *Tartars* with all their Force were not able to take from him. The *Dutch* Commodore observing, that the principal Fortrels in this Island stood upon the Sea-Coast, resolved to try whether it was not possible to take it by Assault; supposing that this would not only strike a Terror into the Enemy, but also raise the Credit of the *Dutch* Army with the *Tartars*; but he quickly found, upon Trial, that the Soldiers of *Coxenga* did not at all resemble any of the *Chinese* that he had seen; for they gave him to warm a Reception, that he was very soon obliged to abandon his Design.

He next determined to attack their Fleet, while the General of the *Tartars* engaged their Forces on Shore, to which the latter consented. This Fleet of *Coxenga's* consisted of four score large Juncks, and Twenty Immense, all full of Soldiers and Seamen, and very well provided with Brass Cannon. The Battle was very brilliant and bloody, and *Coxenga* distinguished himself as a gallant Soldier, an experienced Seaman, and a great Captain: But the *Dutch* large Ships tore his Juncks to Pieces, so that after an Engagement which lasted for several Hours, he was forced to retire, but he did it in Order, and with a good Countenance. The *Tartar* General, before the Battle, began to draw up his Forces in a regular Line, and while it lasted, looked on very quietly: After all was over, he expostulated this Matter a little warmly; but the *Tartar* General answered, that he could not prevail upon his Men to fight; but in case the *Dutch* would attack the Enemy a second Time, he believed they would behave better. Admiral *Bont* took his Word, and attacked the Fleet of *Coxenga* a second Time, and routed them entirely: But the *Tartar* General was still a Spectator as before. This Victory, however, was of greater Consequence than the former, since it not only cost *Coxenga* all his new Conquests, but his Life.

The *Tartars* had hold of this Opportunity to demolish the Fortrels they had raised as tall as they left them, and the *Dutch* were very brisk in carrying off whatever they met with that was valuable. After this they made themselves Masters of the Island of *Amoy*, and the Recovery of *Formosa* was looked upon as a Thing certain; yet when they came to attempt it, they were strangely disappointed; for old *Soyja*, who had now recovered his Liberty, drew together the Fleet and Army of his Nephew, and disputed every thing in such a Manner, that there was nothing to be done but by Force, and even of doing any thing that way there was great Uncertainty. The old *Chinese*, however, being a Man of great Wisdom and Experience, was not willing to risk all, it all might be saved without running any Hazard, and therefore had a mind to make Peace

with the *Tartars*, and to grant the *Dutch* a Settlement
and a free Trade, which he thought might content both
Parties.

The Son of *Coxenga*, however, having discovered the
Design, defeated it, and procuring himself to be elected
General, seized the old Man, and sent him a second time
to prison, where, in a Fit of Melancholy, he dispatched
himself with his own Hands. This young Officer inherited
all the Spirit and all the Abilities of his Family, and man-
aged his Affairs with such Courage and Conduct, that the
Admiral soon found himself obliged to return to *Batavia*
with his Fleet, without being able to execute the Com-
mission he had received, which was the Reason that he
met from the General and Council no extraordinary
Welcome.

The War in which the States engaged with King *Charles*
the Second, retarded in some measure the Progress of the
Company in the *Indies*; and when this was finished, they
very unexpectedly found themselves a-fresh embarrassed in
that Part of the World, by the Insults and Depredations
committed by the King of *Macassar*, as their Writers re-
port; for his Subjects had murdered some of the *Dutch*
that had landed in his Dominions, and had likewise plun-
dered several Ships that had run ashore upon the Coasts of
his Dominions; but before any Hostilities were com-
menced on either Side, a Treaty was set on Foot, by which the
King promised to make full Satisfaction for the Injuries
done to the Company; as also to make such Submissions
as they should require from him on account of these Dis-
orders.

The Company, however, suspecting the Sincerity of
the King's Promises in this respect, thought proper to send
their Admiral, *Cornelius Speelman*, who had been Governor
of the Coast of *Coromandel*, with a Squadron of thirteen
Men of War, and a certain Number of Transports, with
eight hundred Soldiers on board, with Orders to see the
late Treaty executed according to the Letter in every Ar-
ticle; and he arrived with this naval Force before *Macas-*
far on the 19th of *December*, 1666. The very next Morn-
ing came two Deputies from the King on board, and brought
with them a thousand and fifty-six Ingots of Gold, which
had been promised in Satisfaction for the Murder of the
Dutch; and also the Sum of One thousand four hundred
and thirty-five Rix-Dollars, in Satisfaction for the Vessels
that had been plundered, but at the same time they de-
clared in the Name of the King their Matter, that the Sub-
missions required of him were inconsistent with his Digni-
ty; and therefore such as he could not comply with. As
this was precisely what the Company expected, and as they
were also informed that the King of *Macassar* had sent a
large Fleet in order to attack the Island of *Bouton*, Admi-
ral *Speelman* immediately declared War; and having made
two Descents upon the Enemy's Country, carried off an
incredible Quantity of Plunder, burned fifty Villages to
the Ground, and about an hundred of his Ships in his
Potts.

After to signal a Revenge the Admiral sailed from *Ma-*
casfar in order to relieve the Island of *Bouton*, which was
hard pressed by the Fleet and Army, which the King of
Macassar had sent against it; Admiral *Speelman* arrived
before that Place the last Day of the Year before-menti-
oned; and on *New Year's Day*, 1667, he forced a Pas-
sage with his small Vessels into the Haven of *Bouton*, and
then proceeded to attempt the Relief of the City, which
was besieged by the King of *Macassar's* General, at the
Head of ten thousand Men. But the *Dutch* attacking
them in their Entrenchments, and finding Means to set
their Magazines on Fire, forced them immediately to
raise the Siege; which Disaster was followed by such
a prodigious Desertion among the Troops of their Allies,
which made up the best Part of their Army, that the Ge-
nerals of the King of *Macassar* found themselves obliged
to enter into a Treaty with the *Dutch* Admiral; and be-
ing able to obtain no better Terms, surrendered at Dis-
cretion. Thus this War was ended in the Space of four
Months, with great Glory to the Company.

The first thing they did was to disarm their Prisoners,
of whom they sent five thousand five hundred to people a
desert Island not far from *Bouton*. Four hundred of them

they kept for Slaves, and five thousand *Bougies*, or Au-
xiliaries of different Nations, they delivered up to the King
of *Palacca*, who had been their faithful Ally during the
Continuance of this War. They restored to the King of
Bouton three hundred Vessels, together with whatever
Plunder had been taken from his Subjects by the Enemy,
and could be found after their Defeat; the rest of the
King of *Macassar's* Junks they incorporated with their own
Fleet of Transports, and with an hundred and ninety-five
Standards, and all the Arms and Ammunition of the
Enemy, with the principal Officers of their Army, whom
they kept Prisoners. Admiral *Speelman* returned in Tri-
umph to *Batavia*, where he was received with universal
Applause.

The King of *Macassar* however remained still fixed to
his Purpose; and notwithstanding all these Losses, abso-
lutely refused to submit to the Terms which the Company
prescribed; but knowing, by Experience, that the whole
Force of his Island would not be sufficient to protect him
from their Retentment, he resolved to employ his Endeav-
ours in persuading most of the little Sovereigns, who
were his Neighbours, to assist and support him in his De-
signs, which he declared to be no less than shaking off the
Yoke of the *Dutch* Company for good and all. He suc-
ceeded to effectually in making this Alliance, that Admiral
Speelman was obliged to solicit all the *Dutch* Confederates
for their Assistance; and, at last, having drawn together
all the Force they could raise, he, on the 8th of *June*,
sailed from *Amboyna* with sixteen Vessels, great and small,
and fourteen Shallops, on board of which were the Suc-
cours furnished by the Kings of *Palacca* and *Ternate*. He
sailed first to *Bouton*, but in his Passage Part of his Fleet
was separated, which, however, did not hinder him from
landing in several Places on the Coast of *Macassar*, where,
notwithstanding the great Inequality of the others in Point
of Numbers, he had tolerable Success.

At length, on the 19th of *July*, in the Morning, he
attempted to force a Passage into the Port of *Macassar*,
but in this he was disappointed; for the King having
erected a Royal Fort for the Defence of the Place, the
Dutch, after twenty-four Hours cannonading, were forced
to retire. A few Days after the Admiral was joined by
that Part of the Fleet which had been separated from him
by the Storm; and, on the Second of *August*, he made a
Descent with his whole Force at a Place called *Glysson*.
The Army of the Company consisted of six hundred
Dutch Troops, three hundred disciplined *Indians* in their
Bay, three thousand Men from *Ternate* and *Bouton*, seven
thousand *Bougies*, eight hundred Seamen, and two inde-
pendent Companies, under the Command of the Captains
Jonker and *Stryker*. But the Forces of the Enemy were
incomparably greater; for they amounted to no fewer than
twenty thousand Men, under the Command of all the
little Kings and Princes that the Monarch of *Macassar* had
drawn over to his Party.

Admiral *Speelman* kept the main Body of his Forces
near his Fleet, and detached one hundred Men, the bravest
and the best armed under his Command, to attack the
Castle of *Glysson* in the Night. The King of *Palacca*,
who was intrusted with the Management of this Affair, ex-
ecuted it with such Courage and Conduct, that, by three
in the Morning, he became Master of the Place, of which
he gave Notice to the *Dutch* Admiral, who immediately
sent him such Reinforcements and Supplies as were requi-
site to preserve it. This was a dreadful Blow to the En-
emy; and as the Admiral very justly foresaw, the first thing
they did was to attempt the Recovery of it, in which, how-
ever, they were so far from succeeding, that after three ge-
neral Assaults, in each of which they lost a great Number
of Men, they were forced to give over that Design; nei-
ther was this all, for taking Advantage of the Situation
of this Fortrels, such Multitudes of Bombs and red-hot
Bullets were fired from thence into the Enemy's Camp,
as threw them into the utmost Confusion and Confusion,
which Opportunity was not let slip by the *Dutch* General,
who, with the best Part of his Forces, attacked the En-
emy's Entrenchments, at the same time that a vigorous
Sally was made from the Castle, which obliged the Enemy
to quit all their Potts.

General *Speelman* soon after embarked his Forces, and transported them to another Part of the Island, where he committed great Ravages, and destroyed a great Multitude of Villages. As this War was apparently attended with great Losses and Inconveniencies on both Sides, Deputies were at last chosen, to try what could be done towards settling a Peace. The King of *Maccassar* was very unwiling to let these Deliberations be spun out to any length, because he found his *Indian* Allies deserting him by Degrees, and making Peace for themselves on the best Terms they could; which Example of theirs he resolved to follow, by submitting to such Terms as he could get, which were, indeed, none of the most reasonable; and so the Treaty was concluded on the 18th of *November*, 1667; in consequence of which, the Regents of the Island, and all the neighbouring Princes, as well as the King of *Maccassar*, sent a numerous and solemn Embassy to the Governor-General, *John Maetsjuicker* at *Batavia*, to make their Submission to the Company.

All this Time the *Dutch* Army and Fleet continued in the Island, and the rainy Season coming on, there ensued such a Mortality among them, as induced the *Indians* to hope they might gain some Advantages over them, by which they were tempted to break the Peace, which they did by massacring a great Number of the dying Soldiers, and two of their Captains; upon which the War broke out again, and continued with as great Violence as ever for two Years; in which Time the Success of Admiral *Speelman* was so great, and the Calamities he brought upon the Natives of *Maccassar* were so many and so heavy, that, at last, they were forced to implore a Peace, to send a new Embassy to *Batavia*, and to make all the Submissions the Company could require; and, after all, they were left to the Mercy of *Speelman*, who, by a new Treaty, concluded on the 15th of *June* 1669, not only renewed the Treaty of the 19th of *August* 1666, and the 18th of *November*, 1667, but also imposed upon them other Conditions still more grievous and more intolerable. By this Treaty the Company became entirely Mistress of the Commerce of the Islands of *Celebes*, which, though very considerable in itself, was still more so by being taken from other *European* Nations, who under Colour of trading for the Commodities of the Islands, came in for a considerable Share of the Trade in Spices; so that it served likewise to secure to the *Dutch* what was of more Consequence to them than any thing else, their absolute Sovereignty over the *Moluccas*.

I have been the more particular in writing the History of this War from the Memoirs furnished me by the *Dutch* Authors, because it is the last of any Consequence that the Company has carried on in the *Indies*, and has, with respect to the Natives, established their Power so effectually, that there is no great Danger of their being obliged to sustain such another War. Before I part however with this subject, I shall take the Liberty of making a few Remarks, for the sake of such Readers as seek Instruction rather than Amusement, and are truly desirous of understanding what in this Section I have undertaken to explain.

My first Observation is, that how rude and barbarous never we may esteem these Nations, yet most evident it is, that the King of *Maccassar* acted like a great and wise Politician, and that the *Indian* Princes, who joined with him, were entirely guided by a Principle of publick Spirit, and a very just and rational Desire of preserving a Ballance of Power in those Parts upon which their own immediate Safety and quiet Enjoyment of their Dominions depended. They notwithstanding acted, but it was in a noble Cause, and even their Marriage sufficiently proves the Rectitude of their Intentions, for since the Conclusion of this fatal Peace, to which they were driven by absolute Necessity, they have lost all Commerce with Strangers, and are, to all Intents and Purposes, the Vassals, or to speak in plain *English*, the Slaves of the *Dutch*. This plainly shews, that the Ballance of Power is not such a Chimera as some People would represent it; and my next Remark will make this still more evident.

It is very strange, that while these *Indian* Princes were so desirous of being at their own Freedom, but for the Li-

berty of trading with *Europeans*, all the *European* Nations settled in the *Indies* should be quiet Spectators of a War which so much concerned them, without interposing in the least for the Preservation of those who were engaged in their Cause as much as in their own. If they had stirred ever so little, we may easily discern, even from these *Dutch* Accounts, that the King of *Maccassar* and his Allies might have been supported in their Pretensions, and might have been enabled to have thrown off the Yoke of the *Dutch*; so that if Barbarity consists, as surely with respect to Nations it does, in political Ignorance, then the *Europeans* in the *Indies* may, with greater Justice, be titled barbarous than the poor Natives, who certainly did all they could; and the wisest, greatest, and bravest Nations never did more.

My third Remark is, that the *Indians*, who joined with the *Dutch*, were Enemies to themselves, and by destroying the Power of the King of *Maccassar*, not only contributed to the Ruin of the only Monarch who understood and pursued the true Interest of the *Indians* in general, but likewise subverted and took away their own Importance: For, while the King of *Maccassar* continued a great and powerful Prince, the *Dutch East-India* Company considered, and must have always considered such Princes as lived in Friendship with them in the light of Allies, and durst never have treated them but as Allies ought to be treated. But when this Power was gone, which made their Friendship so necessary, and of such Importance, they became as much the Vassals, as much the Servants, or, as I called them before, the Slaves of the *Dutch*, as that King and those Princes, who by their Assistance, the *Dutch* subdued. This is a very useful and a very important Lesson; for Men are the same in *Europe* and in the *Indies*.

It is now time to resume our History, which leads me to take Notice, that while the *East-India* Company carried all before them abroad, the Republick was exceedingly distressed at home; for now it was that the *French*, jealous of her Power, and the *English*, in Resentment of former Injuries, concurred in that fatal Alliance, which was very near bringing the States as low as when they first snook off the Tyranny of the *Spaniards*; nay, which actually did bring them into such Distress, that it is reported that they had once thought of seeking that Protection from their *East-India* Company, which they had hitherto attacked it, and of transferring that Government to *Java*, which they almost departed of preserving at the Hague.

Providence however interposed, and by touching the Hearts of the *English* Nation with a generous Concern for their Neighbours, whom though they might with some Humbleness, yet they had no Desire, as indeed they had no Interest to see them destroyed, delivered them from this Calamity, and raised them once more to Power and Freedom.

Yet the *East-India* Company, though it felt but little of this Storm, was not altogether exempt from its Force, since the *French* sent a powerful Squadron into the *Indies*, with a View to have torn from them a Part of their Possessions. This Squadron was commanded by the *Marquis de la Hay*, who proposed first attacking *Ceylon*, with a View to make the *French* Masters of the Cinnamon Trade at once, as the shortest Means of introducing the Commerce of the *Indies* according to the Project of the *Marquis de la Hay*, a *French* Refugee, who had been long in the *Dutch East-India* Company's Service, undertook their Affairs perfectly well, and made his Peace at home by betraying as he knew. This Man embarked on Board the Fleet, and was principally depended upon in the Management of every thing. It cannot be denied, that he served the *French* Ministry very effectually; but they had not sufficient consideration of the Importance of the Expedition in which they employed him, or the Force of the Enemy with whom they had to deal; for if they had, they would undoubtedly have sent a second Squadron to have supported that which *Mr. Hay* commanded; and this might have been of some Use; but, as it was, it only shewed the Disposition of the *French*, and served to put the *Dutch* upon their Guard.

In the Summer of the Year 1673, the *French* Fleet appeared on the West-Coast of the Island of *Ceylon*, and immediately landed and attacked the Citadel of *Trincomalee*.

male, of which they became Masters; and by fair Pro-
mises, and magnifying the Power of the *French* King,
drew the Natives to join with them; so that thus far they
had all the Success they could expect. But *Trinquinale*
was a Place of too great Importance for the Company to
let it remain long in the Hands of these new Conquerors;
they therefore sent Commodore *Goens* from *Batavia* with
a Fleet of sixteen Sail, all of them large Ships, and well
manned. On the first Appearance of this Squadron *Mr.*
de la Hay retired with his Ships to *Surat*, leaving a small
Garrison in his new Conquest. The Commodore blocked
up *Trinquinale* by Sea, and debarking his Forces, besieged
it at the same time by Land; so that he soon recovered it,
together with one hundred and twelve Pieces of fine Brass
Cannon, which the *French* had left there for its Defence;
so that here ended their Views upon *Ceylon*, almost as soon
as they began.

But *Mr. de la Hay*, when he came to *Surat*, advised
with *Mr. Caron* about the Measures which they should
next take; and, pursuant to his Advice, resolved to at-
tack the Fortrels of *St. Thomas*, which about twelve Years
before the Dutch had taken from the *Portuguese*; and in
this sudden Attempt they were as successful as they had
been before in surprising *Trinquinale*, and just as unlucky
in keeping it. After leaving a good Garrison here, and
seeing the Magazines put into the best Order possible, the
Sieur de la Hay thought proper to return to *France* with
the only Ship that was left of his Squadron. But it fell
out unluckily enough for him, that even this poor Con-
tolation of bringing home a few of the People he had car-
ried out, was denied him; for, in the Road of *Lisbon*, his
only Ship was wrecked, by the Malice of his Pilot, as it
was supposed, more than by any Violence of Weather; the
rather because *Mr. Caron*, two Captains, and several other
Officers were drowned in their Endeavour to get ashore
in the Long-boat, which was the Fleet, as is supposed,
of some Practices which the Treachery of *Caron* to the
Dutch put them upon taking; but as this is a bare Sulp-
sion, and absolutely destitute of Proof, to insist upon it
farther would be needless.

This was the last Attempt made against the Commerce
of the *East-India* Company; and during the Remainder
of the Century, they were continually improving and aug-
menting both their Power and their Commerce; so that,
at the Close of it, they were in a much better Condition
than ever; for in the Year 1687, we find that they
brought over One hundred and seventy thousand Pounds
Weight of Cinnamon; and yet they brought over less that
Year than they had done for many Years before, which
shews the prodigious Importance of their being solely pos-
sessed of the Island of *Ceylon*. On the 11th of *August*,
1698, their Charter was renewed for forty Years, which
gave them such an Accession of Power and Credit, as ren-
dered them almost as considerable in the Eyes of all Eu-
rope, as they were before in the Indies: And having said
that, it may seem altogether unnecessary to add any thing
by way of Explanation.

15 We have now conducted the History of this famous
Company, from its earliest Establishment to the Beginning
of the present Century; and for what regards the Tran-
sactions thereof from thence to the present Time, there is
so much said in the first Chapter of this Work, in the Ac-
count we have given of Commodore *Reggetzen*, that there
seems to be the less Occasion for our insisting much on that
Subject here, therefore we shall content ourselves with men-
tioning only a few Particulars that have not hitherto fallen
in our Way; that, as far as in our Power lies, there may
be nothing deficient in the treating a Subject so curious and
important in itself, and the Knowledge of which is so pecu-
liarly necessary to a trading Nation.

In the first Place, though we have mentioned them oc-
casionally before, we will more exactly distinguish the
Dates of the Company's Charters, the rather, because
many of the Dutch Writers are not very exact in that Par-
ticular. The first Charter was dated the 22th of *March*,
1602, and was to continue for twenty one Years. The
second was granted the Year in which the former expired,
for the like Term, but with this Variation, that it was to
commence from the first of *January*, 1623, so that it de-

termined in 1644, when they procured a new Charter for
the same Term. Their fourth Charter bore Date the 7th
of *February*, 1665, and was to extend to the 31st of *De-*
cember, 1700; but the Company thought proper in 1698
to obtain another Charter for forty Years, from the Deter-
mination of that which was then in being. And, again,
in the Year 1717, the Company thought it requisite to
apply for new Favours, but they were not able to obtain
a new Charter, as they expected; however they procured
a Placard, by which the States-General forbid all their
Subjects to send any Ships to the *East Indies*, or any where
within the Limits of the Company's Charter: They like-
wise prohibited their Interfering in any manner in the Com-
merce of the Indies, without the Licence of the Company
first had and obtained for that Purpose; as also to have
any Concern in foreign Companies, or to serve on board
any of their Ships; which Precautions were thought nec-
essary not only for the *East-India* Company's Security,
but for the preserving this rich and beneficial Trade to the
Subjects of the Republick.

There happened, about the Time that their Charter
should have been renewed, some Commotions in the Indies,
which had like to have been of very fatal Consequence to
their Establishment; and of which we have not, as yet,
received in Europe any Account of these Transactions, that
can be thoroughly depended upon; all we know of them
is this, that the Conspiracy having been discovered among
the *Chinese* at the very Juncture that it should have been
executed, the Governor was constrained to have Recourse
to the most speedy Methods for securing the Safety of the
Inhabitants, and preserving the City and Fortrels of *Bata-*
via from falling into the Hands of the Enemy. It was in
consequence of this Necessity that all the Souldiers were
landed from the Fleet, and had the Plunder given them of
the *Chinese* Suburb, to encourage them to serve the Com-
pany effectually, which they did, by attacking and putting
to the Sword the greatest Part of the Conspirators. By
this speedy and severe Proceeding, the City and the Do-
minions of the Company in the Island of *Java* were pre-
served, but not without a vast Effusion of Blood, which
was followed by a formidable Rebellion, that was not sup-
pressed for some time.

Such as favoured the Governor and Council of the In-
dies, pretend that all this was owing to the Wickedness
and Treachery of the *Chinese*, who, notwithstanding the
Mildness of the Company's Administration, had formed
a deep and dark Conspiracy, the Design of which was to
extirpate totally the Dutch that were settled in *Batavia*,
and Places adjacent. Such again as were Enemies to the
Governor and his Council, attributed the whole of this
bloody Affair to their Mis-administration; and would
have us believe, that the *Chinese* and their Accomplices
were driven into all they did by the most horrid Oppres-
sions, in order to afford an Opportunity for this falling
upon and destroying them, and thereby putting it out
of their Power to demand the immense Sums of Money
which were due to them from such as were indolent in
bringing this Calamity upon them. Some again who pre-
tend to speak impartially, without Favour to the *Chinese*,
or Prejudice to the Governor, give quite another Turn
to this Affair, and tell us, that he was so far from being an
Enemy to the *Chinese*, that he had been rather too much
their Friend; and for the sake of considerable Sums of
Money and several rich Presents that had been made him,
granted them such Liberties as were inconsistent not only
with the Interest, but with the Safety of the Company,
which were the true Causes of their endeavouring to sub-
vert the Government, and to make themselves Masters of
Batavia, and the Country about it, agreeable to the true
Nature of the *Chinese*, who are known and acknowledged
throughout the East to be an insolent, ungrateful, and per-
fidious People.

However this Matter might be, it made a prodigious
Noise in Europe; and *Bacon Imhoff*, the present Governor-
General, was sent over to *Batavia*, to settle the Con-
cerns of the Colony and Company, and to make a very
strict Enquiry into this Affair. The Charter of the Com-
pany, when it was near expiring in 1740, was renewed
only for one Year, but soon that Time, all Affairs have
been

been adjusted in the *Indies*, and at home, to the Satisfaction both of the Company and of the Government, as shall be shewn hereafter. At present, it is our Business to shew, after giving to copious an Account of the Growth and Grandeur of this Company, how its Affairs are conducted, and what Form of Government it is, that has been able, not only to render a Body of Merchants formidable to the greatest Monarchs in the East, but to acquire them Dominions very little inferior to any of these Monarchs, and Revenues, Armies, and Fleets superior to most of them: This is a Thing so admirable in itself, and demonstrates so clearly, what it is in the Power of an extensive and well regulated Commerce to do, that I flatter myself my Reader will pay a very strict Attention to the following Account of it.

16. Their whole Business in *India* is divided into Governments and Directions, after the following Manner: I. *Batavia* is the chief and capital, where reside the Governor-General, and Council ordinary of *India*, to whom also the Governments and Directions are subordinate, sending their Accounts to them, the Balance whereof is entered into the Accounts-General of *India*, kept there; besides which, there are several Places immediately under the Government and Direction of the Governor and Council of *Batavia*, viz. *Japan* a Chief-ship, *Tanquin* a Chief-ship, *Macassar* a Commandant, *Siam* a Chief-ship, *Bantam* a Factory, *Japara* a Factory, *Jamoeé* a Chief-ship, *Pallumban* a Chief-ship, *Arrakan* a Chief-ship. II. *Ambyna* a Government, under which are several Islands, where they pay a yearly Pension to the Inhabitants, not to suffer Cloves or other Spices to grow. III. *Banda* is a Government, and under it are several Islands, to the Natives of which they likewise pay Money yearly to destroy the Spice. IV. *Ternate* is a Government. V. *Maiacca* is a Government. VI. *Zelon*, or *Ceylon*, is a Government, where they have many Factories, and all their Accounts are sent to *Celumbo*, the principal Place. VII. *Cochin* is a Government, and under it lies all the *Malabar* Coast. VIII. *Pateat* is a Government, under which are the Coasts of *Corromandel* and *Pegu*. IX. *Bengal* is a Direction, and under it all the Factories in that Bay: *Hughly* is the chief, from whence they send their Accounts to *Batavia*. X. *Surat*, another Direction, under which are many Factories. XI. *Persia* a Direction, the chief Residence *Gombroon*, and under it are *Spaban* and *Bassora*. XII. *Cape of Good Hope* a Government, and under it the *Mauritius*, or Island of Prince *Maurice*.

To understand this perfectly, it must be observed, that Governments are when the Places are their own, Directions when they are under a foreign Prince, and have no Garrison: *Batavia* excepted, no Government, Direction, or Command, hath Precedence of Place; but the Persons in those Places, and all other Degrees and Qualities, take Place according to their Seniority in Standing.

This Account sufficiently explains the general Scheme of their Government, from whence we shall descend into Particulars, that it may appear, with how much Wisdom, Justice and Prudence, all things are regulated by this Company, to prevent either Corruption or Confusion, which though it is very probable they may not absolutely do, yet it is very certain, they must do it in a great measure; for otherwise the Company's Affairs must have fallen long ago into a very distracted State; whereas we see them at this Day in as good a Condition as ever.

This I conceive to be especially owing to that Nicety of Judgment shewn in adjusting all their Salaries, and Allowances for Diet, to the several Qualities and Degrees of their Servants; so that none has either too little as to be pinched by Necessity, nor any so much as to let them above the Performance of their Duty, which is, generally speaking, the Ruin of such Governments as pursue a contrary Conduct: For the more easy understanding of this Point, we shall take their inferior Officers first, and so ascend gradually to the Governor-General of the *Indies*. The Under-assistant, Scribe or Writer, is the lowest Degree, and is chiefly supplied with Soldiers, taken out of the Guards, from four to fourteen Guilders *per mensum*. Next is the Assistant at twenty Guilders *per mensum* Salary, and four Rix dollars Diet. After him the Upper assistant Book-

keeper, or Secretary, from twenty eight to thirty six Guilders *per mensum* Salary, and four Rix-dollars Diet. In the fourth Place, the Under-copeman, from thirty-six to forty-five Guilders *per mensum* Salary, and eight Rix dollars Diet. Then the Copeman from fifty to sixty five Guilders *per mensum* Salary, and eight Rix-dollars Diet. Next to him, Upper-copeman, from eighty to one hundred and twenty Guilders *per mensum* Salary, and twelve Rix dollars Diet: Some from the lesser Chambers are sent out at twenty-two Guilders *per mensum* Salary.

At *Batavia* and *Zelon*, where Provisions are dear, they have thirteen Rix-dollars Diet. In the seventh Rank a Commandore has one hundred and fifty Guilders *per mensum* Salary, and twenty Rix-dollars Diet; Commandant, a new Title, somewhat less than Commandore. The eighth, Director, has two hundred Guilders *per mensum* Salary, and thirty Rix-dollars Diet. The Governor has the same, as also a Member of the extraordinary Council of *India*. A Member ordinary of the Council of *India* at *Batavia*, each of them, three hundred and fifty Guilders *per mensum* Salary, and one hundred Rix-dollars Diet; and lastly, the Governor-General of *Batavia* has one thousand two hundred Guilders *per mensum* Salary, and two hundred Rix-dollars Diet; and every Time he goes to the Fleet, one thousand five hundred Rix-dollars Gratuity, which has been usually done upon a Fleet's Departure for *Europe*: But this General has not taken it for some Years past.

All Persons in the Service, whether Merchants, Divines, civil Magistrates, Soldiers or Seamen, are ranked in their Degrees, and take their Places accordingly. The General is allowed Wine, and all other Liquors and Provisions, out of the Company's Warehouse, without Limitation. All others, down to the Assistants, are allowed monthly Liquors, Spice, Oil, Wood, Rice, Vinegar, Candles, &c. according to their Quality, very large. The Upper-copeman's Allowance is twenty Canadars of Spanish Wine *per mensum*, besides Mum, white Wine, and other Liquors; twenty-four Pounds of Wax for Candles, Corn for Poultry, Rice for Slaves, &c. so that the Diet-money allowed them is only for fresh Provisions.

Soldiers are ranked in the same Manner, viz. first a common Soldier, or private Centinel, is from one to fourteen Guilders *per mensum*, as the Under-assistant. Next, Sergeant's Pay and Diet as the Assistant. Then Sergeant's Pay and Diet as the Under-copeman. After him Lieutenant's Pay and Diet as the Copeman. The fifth Captain's Pay and Diet as the Upper-copeman; and the sixth Major's Pay and Diet as the Commandore. Military Perks give place to the civil of the same Rank, viz. a Commandore precedes a Major, and Upper-copeman a Captain, and a Copeman a Lieutenant; but a Major precedes an Upper-copeman, a Captain a Copeman, and a Lieutenant an Under-copeman. There are three Majors in *India*, one at *Batavia*, one at *Ceylon*, and one at *Ambyna*, or *Banda*. They assist the Governor in military Affairs, and have the Command over all other Officers and Soldiers, but have no proper Company of their own. There are not Captains over every Company, but one over two, three, four, or five Companies, every Company has Lieutenants and Ensigns, and they often make provisional Officers, who, upon some Merit in Service, do attain to the Pay of such Places.

Seamen are ranked in the same Manner, viz. first a common Seaman, from nine to fourteen Guilders *per mensum*, as a common Soldier; next third Mate, Gunner, Boatswain, and Steerman, from eighteen to twenty-four Guilders *per mensum*, and the Assistant carpenter's Wages from forty to fifty Guilders *per mensum*. The Under-steerman, or second Mate, from twenty-four to thirty-six Guilders *per mensum*, as the Upper-assistant. After them, Upper-steerman, or chief Mate, from fifty to sixty Guilders *per mensum*, in the Under-copeman's Rank. The fifth are Skippers, from sixty to one hundred Guilders *per mensum*, in the Copeman's Rank; and the sixth, Commandores from one hundred to one hundred and fifty Guilders *per mensum*, besides which, they have the Ship's Allowance for Provision, and, when in *Batavia*, they have Road-money paid them every Month for fresh Provisions and

Fruit; but in other Roads, they are supplied with these things from the Factories on Shore. They have none who have the Title or Pay of Captain at Sea, and the Commodores are very few, sometimes not more than one in *India*.

The Ministers Pay and Allowance stand thus, viz. first the Predicant, or Preacher's Pay and Diet, the same as the Upper-copeman's. The second Dominees, or Visitors of the Sick, twenty-four Guilders per mensum, as the Assistant. The Ministers are all sworn not to write of, nor intermeddle with any Matter relating to the Affairs of the State, or Commerce. In all Governments they are allowed a President, and in *Batavia* two or three to spare, in case of Mortalities. In all Directions they have no Dominees, only read the Scriptures, and printed Forms of Prayer, Mornings, Evenings, and Sundays. With them the Surgeon's Pay is from forty to fifty Guilders per mensum.

17. In all Qualities from Under-assistant to Upper-copeman, they generally serve five Years, and some but three, as they agree; which Term being expired, if they please, they may quit the Service; but they are usually continued, and upon their Petitions, if they are deserving, and the Company's Occasions require, the Governor and Council entertain them again, to the next Degree they served in before, and for such Terms for Salary, &c. as they find them deserving within the settled Salary of each Degree; but on any Merit in Service, they are often preferred from one Degree to another, though they have not served six Months in a Station; so that upon Account of Merit, some have risen in two or three Years from Assistant to Under-copeman, and others, in as little Time, from Under-copeman to Upper-copeman; in this they have respect to Succession, as if a Chief, or Second of a Factory dies, and the Third performs the Business of the Place to Content, tho' he be but a Book-keeper, for that Service he shall be an Under-copeman, and Chief of the Place; and as he gives further Content, a Copeman in one or two Years more. Married Persons receive all their Pay in *India*, and the unmarried but half theirs at an Over-rate: As at *Batavia*, the Rix-dollar is valued at sixty Stivers, which is worth but forty-eight, and at *Policat*, the Pagoda is valued at five and an half Guilders, which is really worth but four and half; but this is in a Way of Regulation, as they lay, upon Complaint of it to the Governor.

The Company find all their Servants Accommodations for Lodgings, for which, and Warehouses, they have spacious Buildings in all their Factories. All, or most Persons sent out of *Europe*, are of the Qualities from Assistant to Upper-copeman, seldom in a higher Degree; sometimes they may be of the extraordinary Council: But such, and all others, are left to the General and Council at *Batavia*, to be disposed of in Employments according to their Qualities or Abilities, who give them Preference as they merit. Such Persons as are of Capacity, may gradually rise by Time of Service to the Quality of Upper-copeman, but they must stand there, and cannot rise higher, till they are made Commandores. When Directions or Governments fall vacant, an Upper-copeman, capable of being made Governor, Director, or Commandore, generally succeeds; and some have been fifteen or twenty Years Upper-copeman, before they have been put into any of those Places: Some stand there, and rise no higher, and many never come to that, but remain in lower Degrees, according to their Capacities.

All Persons in those Degrees or Qualities, precede one another, according to their Seniorities and Standings in the same Degree, or that are of the same Profession. As the first Assistant precedes all others that are made after him; so likewise a Copeman made this Month precedes him that is made a Month after; but the Profession of the Merchant (or as they commonly term it, the Pen) hath the Preference of all others, and he that is an Upper-copeman in that Quality, precedes all others, whether Preachers, Soldiers or Seamen (as is said before) tho' they may be his Seniors in the same Degree.

All these Salaries and Wages for Merchants, Soldiers, Seamen, and others, go on for their outward bound and home Voyages, and every one has a Copy of his Accounts

out of the Book of Wages, every Year, which he keeps, or carries Home with him, or sells to another; and when he returns to the Chamber from whence he was sent, he is punctually paid the Ballance of his Account, together with what is due for the Term of the Voyage; and such as have served out their whole Time, and desire to be Freemen in *India*, fill their Accounts, or send Letters of Procuration Home, upon Sight of which they are paid; so that neither the Company, nor their Servants, have ever any Trouble in adjusting their Accounts.

These Freemen are such as have served out their Time, and are then cleared of the Company's Service, and suffered to live in the Country, or such as of late have been permitted, or encouraged to come out of *Europe*, on their own Accounts. They are always obliged to have Families, and live in parished Towns, and in their Plantations on the Spice Islands, where they are allowed to trade too and fro in Provisions of all Sorts, and other Commodities, where the Company do not trade, and sometimes where they do trade, with the General's and Council's Licence, even in the Company's Commodities: This being their Policy, that the Benefit of some Trades may not be lost, but referred to the Company, when they are so considerable, as to be worth their minding, or will be at the Charges of a Factory. All Freemen perform the publick Offices of the Towns, and take their Turns to watch and ward as in the *Netherlands*, none excepted.

18. The first ordinary Council of *India* is chosen by the *Bewindboers*, or Directors, out of such of their Servants, as have served the Company as Governors, or Directors, and none under those Qualities; by which means their head Council consists of Men of Estates, and Experience in the Business of all Parts of *India*. The extraordinary Council are also nominated by the *Bewindboers*, and they, when they are at *Batavia*, sit with the General and Council, but have no other Vote than one of Advice. Several of the Directors and Governors are of the extraordinary Council, and there is a late Order, that three of the extraordinary Council shall always reside at *Batavia*. By another Order of late, all of the ordinary Council are to reside there likewise, and not to remove from thence, but upon Business of great Importance; and the General, and Director-General, are not to remove upon any Occasion whatever.

There are often Boxes sent out of *Europe* with private Directions, which are sealed, and ordered not to be opened but on extraordinary Accidents, as in case of the General's Decease, or other Occasions of great Moment, which keeps the great ones in Awe of each other. The General hath Power in a particular Commission to himself, to send Home any one Person of the ordinary Council when he thinks fit, that shall not behave himself well towards him, and to take to himself what Salaries, and other Allowances he thinks proper, which the great *Matzuyker* caused to be read on some Clashing of the Council at *Batavia*.

The General, and all the ordinary Council, the Secretary, the Major, the Upper-copeman, called the two chief Factors, and the Upper-copeman, who keeps the general Books of Accounts, live within the Fort, or Castle, with their Wives and Family, in Apartments fitted according to their Offices and Places. The General and Council are so near together, because of all Letters being opened and read in the Council, that often sits in an Evening, after Prayers, and never misses upon Sundays, for an Hour to dispatch small Business, Petitions in Complaints, and twice a Week constantly, *Tue days* and *Wedays*, at Four o'Clock in the Afternoon, about managing the Company's Business. The Secretary has good Accommodation, and large Offices to write in; the Major lives in the Fort to receive Orders from the General, and to assist him in the Government of his Soldiers, and the two chief Factors are near the Second, or Director General, who has the most laborious Employment, having the Care of all Ships, Goods, Treasures, and Stores, and proposes all Voyages and Cargoes.

These two Upper-copemen, whom they call Factors of the Castle of *Batavia*, are his Assistants, to examine Accounts, and Advices, and thereupon draw up Lists, and

Calculations, of the Sorts, Qualities, and Quantities, of the Goods, that are sold at any Place, and set down whether they increase or diminish, with the Loss and Gain thereon, which Notes they send to all the Factories where these Goods are provided. The chief Book-keeper lives in the Fort, because all Registers and Books are kept there, and the Offices for Accounts must be there standing. Every one of the ordinary Council of *India* has his particular Charges and Employments allotted to him, wherein he is most experienced, viz. one is ordered to read, examine, and answer all Letters and Papers from the Government of *Ceylon*. Another the Letters, &c. of the Governments of *Ambryna*, *Banda* and *Ternate*; another, the Coast of *Coromandel* and Bay of *Bengal*; another the Directorship of *Surat* and *Perfia*; and another the *Cape* and *Mauritius*; the General only writes Letters to the Company in *Europe*.

Besides which, they have other particular Employments and Places of Trust and Importance at *Batavia*. I. The General proposes and concludes in Council, and directs all Matters of Government to the Council, and superior Officers. He is sworn to be faithful to the States in his Office, and that he will not prefer any one in the Company's Service, for Fear, Favour, or Affection, but only such as are most faithful, most able, and most fit to manage the Business for the Company's Advantage. II. The Director General, as aforesaid, proposes the Employments and Cargoes of all Ships. He sells, and orders the Disposal of all Goods, Stores and Provisions, has the Charge of the Treasure and Cash, and orders the Receipts and Payments of Money. III. Another is President of the Chamber of Orphans, and the Council, his Assistants, are half Company's Servants, and half Burghers, whose Office and Trust are the same as in the *Netherlands*. They sit once a Week in Council. IV. Another is President of the College of the Rate of Justice, who is always a Civilian. He gives Judgment in all Cases civil or criminal, between the Company and their Servants, or the Burghers. In this Court, the Company's Servants only are of the Council, none of them under the Quality of a Copeman, and they are usually Advocates, or such as have been bred up to the Civil Law. V. Another is President of the College of *Skepen* and *Burgomasters*.

He judges in all Cases, civil, military and criminal, between the Burghers and others. The Counsellors, or Judges, who sit with the President at this Court, are three Upper-copemen in the Company's Service, and three of the chief Burghers. Both these Courts sit twice a Week, constantly, and oftner, as occasion requires, in the *Stadhoute*, or *Town-hall*. All of the ordinary Council are sworn to be true to the General and the States, to prefer none for Fear, Favour, or Affection, but the fittest and ablest Persons to the Offices in their Particular Disposals. Below the Second, or Director, is no Precedency of Place, but Employments or Offices are appointed to those who are the fittest for them. The Secretary of the Council at *Batavia*, is a Person of great Ability and Experience, of the Quality of Upper-copeman; he takes Place next to the extraordinary Council, and has the Pay and Allowance of a *Commandore*. The minor Votes are always carried by the major in Council, the Fiscal hath a double Vote. Upon signing, none may enter any Exceptions, except the Matter concluded be expressly against the Orders of the Company, and then they may enter Dissent, giving that for the Reason.

Upon extraordinary Occasions, which require Secrecy, a Governor, or Director, may call a Council of any two or three Counsellors, and may act according to their Resolutions. All Persons of the Quality of Copeman, and Upper-copeman, as also Captains and Lieutenants, are capable of being of Council in all Governments and Directorships, except *Batavia*. The Seconds of Governors and Directors, are chiefly Copemen, and the Chiefs of subordinate Factories under Governments, are commonly Copemen, and Under-copemen; but if it so happens, that one of a higher Degree, or Quality, comes to a Place where one of a lower Degree is Chief, he, of the higher Degree takes Place, and gives his Advice in the Company's Busi-

ness, but does not govern or direct in any Affair without special Commission.

In all Governments and Directorships, the Consultations are entered in Books, and signed by the Council. The Offices for the Secretary and Accountants, and the Ware-houses for the Company's fine Goods and Truaries, are built in the Forts, and *Houles*, or Factories, and those who officiate in them, must dwell there. In subordinate Factories, they keep no Consultation-books, only Copy-books of Letters, Accounts and Diaries. All Letters and Orders from *Batavia*, are signed by the General and Council, and those to *Batavia*, must be signed by the Governors, or Directors, and their respective Councils; but all Letters and Orders from Governors and Directors to subordinate Factories under them, are signed only by the Governor or Director singly. The Cash at *Peccat*, is at the Disposal of the Governor, to be put into the Hands of an Upper-copeman, that shall be on the Place, and the Sorting of Cloth is done by the Governor, Second, and others, who are of the Quality of Copeman, and Under-copeman, every one setting down his Opinion at the Price of the Goods when forced.

They have Fiscals in their Governments, who are under an Oath to discover and seize all forbidden private Trade, and detect what else may be done to defraud the Company. They are usually of the Quality of Copeman, or Under-copeman, and seldom continue longer than three Years in that Office, except at *Batavia*, where they have two principal Fiscals, of the Quality of Upper-copemen, who continue many Years in that Employ. One of them is called *Advocate-fiscal*; he makes Enquiry, and takes Cognizance of all Frauds, Frauds and Misdemeanors in the Company's Service, in all Parts of *India*, makes and maintains the Processes, and has half of what is recovered thereon, the other half goes to the Company, who gives one Third of it to the Poor, after the Process and Condemnation is paid, before the President of the Council of Justice; so that the Governors, Directors, &c. are not concerned in the Discovery of any private Trade.

The Company sends every Year printed Papers of the News and Affairs of *Europe*; which are dispersed over all their Factories in *India*, by which they are instructed in the Interest and Concerns of the several Powers and are directed to behave themselves accordingly to all *European* Nations in *India*. Also they send Abstracts of the Sale of their Goods, and the Loss and Gain thereon in *Europe*. It is very easy to observe, that all these Regulations are calculated for the Improvement of the Persons in the Service of the Company, for enabling them to discharge their Duties punctually and perfectly, and with such a Measure of Knowledge and Understanding, as may fit them for whatever Places they may be called to serve in.

It is not easy to conceive, what mighty Effects flow from such wise and just Regulations, what Order and Harmony they may beget, and how easily all Things are managed, where so much Care is taken, that every Man shall be acquainted with the Importance of his Station, and with a Probability of his bettering his Circumstances by his discharging his Functions with Diligence. It is by setting these Orders, and taking care they shall be constantly carried into Execution, that we find the *Dutch* are never at a Loss for Men fit to be employed on any critical Occasion, as Ambassadors, Plenipotentiaries, and ordinary Residents in the Courts of *Indian* Princes, whereas other Nations, that carry on other Trade in that Part of the World, are at a Stand in this respect, and in all such Emergencies, are forced to take such as come to Hand, or which is worst, such as push themselves forward, and mistaking Vanity for Talents, get into Employments only to expose themselves, and those under whose Authority they act.

It is a received Opinion, and I believe founded on Reason, that the Capacities of Men are much alike, and that where one makes a Figure by dint of what is called Genius, there are a hundred become able Men from Discipline and Experience. It is therefore extremely commendable in the *Dutch*, that they take so much Pains to propagate real Knowledge among such as are in the publick Service,

in any Affair without

the Consultations by the Council. The Outputs, and the Ware-houses and Treasuries, or Factories, and those there. In subordinate Companies, only Copy-books, Diaries. All Letters sent by the General and all signed by the respective Councils; but Letters and Directories to be signed only by the Council at *Patna*, as to be put into the Hands of the Governor, Secretary of Copeman, and down his Opinion of

Officers, who are under forbidden private Trade, to defraud the Company of Quality of Copeman, or continue longer than three Months, where they have the Quality of Upper-copeman, or Employ. One of them takes Enquiry, and takes the Quality and Middleness in the Quality of *India*, makes and half of what is recovered by the Company, who gives the Proceeds and Consent of the Council of Directors, &c. are not to be private Trade.

Officers are dispersed over all the several Powers and are accordingly to all *European* Abstracts of the Sale of Gain thereon in *Europe*; all these Regulations are of the Persons in the Service they are to discharge perfectly, and with such a Understanding, as may fit may be called to serve in that mighty Effects flow from them, what Order and how easily all Things are taken, that every Man of Importance of his Station, attending his Circumstances with Diligence. It is making care they shall be that we find that Men fit to be employed on Affairs, Plenipotentiaries, Consuls of *Indian* Princes, and on other Trade in that and in this respect, and to take such as come to push themselves forward, as, per into Employments those under whole Author-

and I believe founded on Men are much alike, and by dint of what is called the able Men from Discipline extremely commendable much Pains to propagate are in the publick Service, and

and that they do not content themselves with barely qualifying their Under officers for the Discharge of the Places they are in, but oblige them likewise to take Pains to fit themselves for more important Services. It is one Thing to read News-papers for Amusement, and another Thing quite to oblige People to read them for Instruction; and it is very easy to conceive, that a Person in the Indies, who has a good general Notion of the Affairs of *Europe*, and of the Situation Things are in there, will have vast Advantages over another Person of equal Abilities, who has never turned his Thoughts that Way, but has lived all along in an Opinion, that if he did his Business in the Counting house, his Superiors had no farther Title to the Disposal of his Time, but that he was at full Liberty to employ it in such Amusements or Diversions as best suited his Humour or Disposition.

But to bring these Reflections to a Point, and not to detain the Reader too long upon to grave a Subject, I shall finish them with observing, that whatsoever Company takes Care to give its Servants true Notions of Merit, rewards and encourages Merit, and leaves no other Road open to Preference but Merit; will be always sure to have more capable Servants, and will consequently have its Affairs better carried on than any other Company, in the Management of whose Concerns Inclination, Interest, or Chance, governs all Preferences. It may be said that these are just and general Observations, very easily made, and which never will be disputed. The Question however is not where these Rules are owned and admitted, but where they are recommended and practised. Since we took Occasion to enter upon these Remarks, not from the general Principles of the *Dutch* Nation, but from the settled and invariable Regulations of their *East-India* Company, which have the Force of Laws to those in their Service.

19. The Government, Order, and Provision for their Ships and Fleets runs thus, *viz.* all their Ships are the Company's own, and the Men belonging to them are all in their Pay, sworn to serve them either by Sea or Land, as Occasion shall require. They have two Persons, who have the Style of Admirals, and are of the ordinary Council of *India*. For the Care of their Shipping at *Batavia*, they have one called Equipage-master, who is of the Quality and Pay of an Upper-copeman, a seafaring Man, and vulgarly called a Commandore; He hath the Care of fitting all their Ships, and is continually visiting them in the Road, if Occasion requires, and supplying them with what they want.

There is a small Island, about three Miles from *Batavia*, where they have a Fort, which serves them as a Store-house for all Manner of Necessaries for Ships, under the Charge of a Master-Shipwright, who has also Command of the Fort and Island. He is of the Quality of Upper-Copeman, and has large Pay and Allowances. When they send out a Fleet of War on any Expedition, they make a Merchant of the Quality of Upper-copeman, and sometimes of the extraordinary Council Admiral or General, who has a Council of Merchants and military Officers to assist him, as Occasion requires. The Admirals of the Fleet that go from *Batavia* to *Europe*, are such as have served the Company as Governors, Directors, Commanders, or Upper-copemen, and are willing to go home, they have their Salaries allowed them till their Discharge in *Europe*; and if there be none that return of their own Choice, they appoint at least a Copeman to command, who comes back again, if he thinks convenient.

As to their Admirals out of *Europe*, the Flag is worn by Turns; *Amsterdam* Squadron carries it three Years, and the *Zealand* Squadron every fourth Year. The *Amsterdam* having two Parts of the Stock, the other lesser Chambers add theirs to it, and the *Zealanders* have one Quarter of their own. The Merchant who is sent Admiral, must either take his Passage on the *Amsterdam* or *Zealand* Squadron. If a Copeman, or Under-copeman goes from Port to Port on any Ship, they have the Command of her, and also of the Fleet or all Ships in Company, by the Company's settled Order in their Articles. When there is a Fleet together under the Command of a Commandore, the Council is to consist of Copemen and Skippers. When

a Ship is single, the Council is to be of Copemen, Skipper, Under-copeman, Book-keeper, and Steermans, and they are always to steer their Course by the printed Directions, and to set off their Work every Day upon Charts, which are delivered up the very Day when they come to *Batavia* or *Holland*.

There is an Under-copeman, or Book-keeper in every Ship, who keeps an Account of the Ship's Expence in Stores, Provisions, and Mens Wages, in the Nature of a Purser, and they are to see the Provisions so got up that none be spoiled. These take place as they are capable of Preference in their Factories by their Time of Service, and they are often taken out of Factories where they are wanted, and others put in their Places. If he that is upon a Ship, as a Book-keeper, be but an Assistant, he takes Place of the Steermans, or next to the Skipper, by reason of his Office, or, as they in Respect term it, the Pen. All Chiefs of Factories, &c. have free Power to dispose of their Ships and Men, while they are under their Chief-ship, and, as Occasion requires, in the Company's Service. They may take out Men, Ammunition, Provisions and Stores, though such Ships come there casually, through Accident or Necessity. Thus every thing relating to this Subject, is so fully and clearly regulated, that Doubts or Difficulties rarely arise.

20. At *Batavia*, and all other Governments, they have a Chamber of Accounts for Orphans and Overseers of the Poor thus provided: There is a President and Master of the Chamber of Orphans at *Batavia* of the ordinary Council, who has for his Council half the Companies Servants of the Quality of Copeman, and Upper-copemen, and half of the best Burghers, besides a Secretary, and other Assistants. They sit once a Week, and order the Disposal of all Orphans and deceased Mens Estates, as they think fit. At *Pelicut*, and all Governments under *Batavia*, they have but two Persons of the Chamber of Orphans, and a Secretary to them, all Company's Servants. The Chambers in those Governments are not accountable to *Batavia* or *Europe*; nor do they send Copies of their Books of Accounts to any Place, but always keep them at *Pelicut*, &c. and the Estates of Persons who decease in any Place under that government, are under the Charge of that Chamber, whose Wills, Inventories and Accounts, are there registered; for which purpose they have a particular Chamber in the Fort.

They must keep plain and fair Books of Accounts, Journals, and Ledgers. At *Pelicut* the Master of the Orphans Chamber, is every three Months to shew the Balance of the Books to the Governor. Those appointed for this Office do continue in it two Years or longer; and when one goes out the other must stay a Year to instruct the next Comer, though his two Years be out. They are sworn to deal justly, and to keep secret the Concerns of the Chamber.

The Secretary of the Office must give three thousand Pagodas Security for the Performance of his Trust, and be responsible for all Goods sold at Outcries, for which he receives Three per Cent. upon the Account of the Sale; and by reason he is responsible, he may deny any Man to bid or buy, whom he thinks not safe to trust. The Secretary also enters the Wills, and Inventories, and puts the Journal, which is kept by one of the Masters, and takes Care of the Papers that belong to the Office. The Chamber of Orphans may call whom they will into Council to advise with in difficult Matters; and no Person may deny to come and sit with them, though it be the Governor himself. The Council is allowed Two and an Half per Cent. out of the Estates of the Deceased, for what is received upon the Sale of Goods, but nothing on Money left in Cash; which Two and a Half is equally divided betwixt the President and all the Masters; besides which they have each Money for a Gown yearly, which is charged on the deceased Person's Estate. If any Man or Woman dies, leaving Children under Age, the Chamber of Orphans take Care of the Estate, and provide for their bringing up, till they arise to the Age of Twenty-three Years, and then they receive what their Parents left them, with Interest, and the Increase thereof. If the

Parents of the Children have any Estates in *Europe*, the Chamber of Orphans where such persons die, writes for the Effects to be lent to them, which is accordingly done.

The Money the Chamber of Orphans pays into the Company's Chest at *Batavia*, is lent in Nine per Cent. and is lent out to Freeman and others at Twelve per Cent. in good Security. But at *Pelicut* it is usually put into the Company's Stock, at Six per Cent. Interest. If a Person dies and leaves no Will, or Resigns his Estate, the Chamber of Orphans takes Care of the Estate, and gives the deceased Man's Account out of Credit for the same; and there it remains till the next Half-Year is it. If any Person dies with a Will, and leaves his Widow an Estate for the Children, tho' their Mother, the Chamber of Orphans may, if they please, require the Estate at her Hands, and keep it for the Children. And if they do allow the Mother to keep the Estate and the Children, they always take a Copy of the Will, and an Obligation from the Mother for the same.

The Chamber of Orphans may keep the Estate in their Hands, and manage it as they please; but for the better Security, it is usually put into the Company's Hands, on the Interest before mentioned, and they have the Company's Obligation for it. If any Person dies, leaving a Will, and there it does not give such a Proportion of his Estate to his Children as the Law requires, they will not allow of the Will, but require a full Part for the Children. If a Man dies in the Company's Service, the Officers are not to touch his Papers, nor is the Chamber of Orphans to assist of any Discovery of his Concerns to the Effect of gain, if any Man dies in the Company's Service, and they owe him Money for Wages, the Chamber receives it, and enters it to the Credit of the Deceased. The Company, besides One third of their Half of the Fiscal's Comission, allow also Fines on Offences; and the Confiscations of the Estates of Men executed, for the Poor. There are many Overseers and Masters of the Poor at *Batavia*. At *Pelicut* they have but two, and those not of the Masters of Orphans, but others. They have Cognizance of all poor Christians under the Government, whether they be *Dutch*, *Portuguese*, or others, and take Care for their Relief, by making Collections in Churches every Sunday, and Distributions according to their Number and Necessities.

The Poor has always a considerable Stock before-hand, which has been gathered from the Confiscations of private Trade, and charitable Gifts. This Stock they allow out to the Company upon Interest, when they constantly receive, and employ as is found needful, and tho' the Interest of the Stock be sufficient to maintain the Poor, yet they never neglect the weekly Gatherings in Churches, to increase the Stock as much as they can. For, say they, it may happen, that by great Wars and Losses, many may be maimed, made Widows and Fatherless, and then the Principal may not be enough to maintain them. The Overseers, or Masters of the Poor, must keep a fair Book of all Receipts and Payments, that is, an Account of Cash, and an Account of what's paid into the Company's Stock, at Interest, with a Roll of the Names of all Persons to whom they give Alms, and what they give to every one. At *Batavia* there are Collections for the Poor every Sunday Morning and Evening, in all their Churches.

When the sagacious and intelligent Reader shall have perused the substance of this Scheme of *Dutch* Policy in the same, I have yet added that he will very easily account to himself, or others, having read so extensive and solid an Empire in all part of the World. He will see that they extend their Nations in the *Indies*, not from Accident, but from a Concurrence of lucky Circumstances, but from a well-managed and disposed Establishment, and a constant observance of the Principles on which it is founded. They will see that so much Power the *Dutch* may be inclined to, Republicks, and Low Peasantry, with their Notions of Liberty, and Equity, if they have had no Scruple of de-

parting from those Sentiments in the *Indies*, for the sake of complying to suit with the Genius of the People in that Part of the World, as to establish such a Power in a single Person, as may contribute to keep up at once the Grandeur and Authority of the Company, and facilitate the Direction of their Affairs. But if the Government of *Batavia* has the Splendor, Revenues, and Power of a Prince, he earns them very dearly, by that perpetual Application to Business, which is required from him, and which he has it not in his Power to shake off. The same Thing may be said of the Director General, and of the Members of the Council of the *Indies*; if they have great Appointments, they have a great deal of Business, and for their Power be large, they are obliged to give a very true Account of the Manner in which it is used.

That Example are of inexpreffible Consequence, for they oblige all their Officers in their several Stations, to a constant and diligent Attendance, from whence they can never hope for any Dispensation, when they are such as are at the Head of Affairs, tied to a stricter and more laborious Attendance than themselves. The due Care thus taken, that every Man shall have a full Satisfaction for his Case, a proper Substitution, and a Certainty of receiving whatever is due to him, without Difficulty or Delay, and without needing the Assistance or Favour of any Man, must be acknowledged a Circumstance of infinite Importance. The Frugality shewn in their military and civil Establishments, and the Care taken to preserve a due Dependence on the civil Government, are Steps worthy not only of Attention but Imitation, because they are equally calculated for increasing and extending, as well as preserving and securing the Dominions and Trade of the Company. The Tenderness shewn for Orphans, and the Security that this affords to private Men, that their Children shall certainly enjoy the Fruits of their Labour, is both a Spur to Industry, and a Means of promoting Marriages and Settlements, both of the utmost Consequence to their Affairs in the *Indies*, as it serves to increase their Force, without draining their Mother country. Their Regulations for the Poor are copied from those in *Holland*, and highly laudable they are, in this respect; I mean, in not suffering any Diligence of Country or Climate to deprive their People of their Birth-rights, which is the Benefit of their Laws, and to this I suppose it is owing that the *Dutch* are observed never to lose, or even to impair their Affection for their native Country, which they particularly distinguish, by the tender Appellation of Fatherland, and to which therefore all their Cares are confined, and in which all their Acquisitions center.

To be the better satisfied of this, and to bring this Section to a Conclusion, by what most of all concerns us, the Knowledge of that Profit which accrues to them by the *East-India* Trade, we shall next consider the Economy of this flourishing Company at Home, and demonstrate the Means by which all the Proprietors receive the clearest Satisfaction, that the whole Profits upon their Capital, are fairly divided out to them, and are not put into the Pockets of such as are intrusted with the Direction of the Company's Affairs, as also how the State preserves such an Influence over the Company, as is requisite for its own Security, and finally, how an Estimate may be made of the Wealth brought into the *United Provinces* by this Company, from the Time of its original Establishment to this Day.

21. The great Power, prodigious Wealth, and vast Importance of this Company to the *Dutch* Republick, so occasioned a great Variety of Treaties on its Form, Constitution, and Manner of Government, so that it is very far from being an easy Task to reduce the Substance of what they had delivered within the narrow Bounds which we are obliged to keep. To begin as methodically as possible, we will first state the original Stock of the Company, and the Proportions in which it was advanced, and which have never been varied since that Time: A Stroke of Policy of infinite Consequence to them in the Management of this extensive Committee.

The Capital Stock of the *Dutch East-India Company.*

	Florins.
Amsterdam	3,674,915
Zealand	1,333,882
Delft	470,000
Rotterdam	177,400
Horn	260,858
Enchuyfen	536,775
In all	6,459,840

Those six having advanced this Money, they settled a Chamber in each of the Towns (that of *Zealand* being in *Middleburg*) from whence they chuse the seventeen Deputies, who direct the Affairs of the Company. They meet four Times a Year successively at *Amsterdam*, for the Affairs of the Company, and twice at *Middleburg* alternately; but not at the other Towns. These Deputies are the Sovereigns of this illustrious Company, yet under the Authority of the *States-General*. The seventeen Directors are chosen in the following Manner; eight by the Chamber of *Amsterdam*, four by that of *Zealand*, *Delft*, *Rotterdam*, *Horn*, and *Enchuyfen*, one each; and the *Maes*, *Middleburg*, and *North-Holland*, chuse one by Turns. These seventeen Directors govern the Company, and represent the Sovereignty of the whole Body by Plurality of Voices. They regulate all Affairs of Consequence, as the making of Counsellors, Captains, Lieutenants, and equipping of Ships, the Sale of the Goods, the Division of the Profits, and all the particular Chambers must conform themselves to their Orders. They likewise appoint the Time for the Sale of the Goods, one half of which is sold in the Chamber of *Amsterdam*, a fourth in that of *Middleburg*, and a sixteenth in each of the other four Chambers, at the Time by them appointed, to the highest Bidder.

But besides these seventeen Directors, each of the Chambers have more belonging to the same Body: Thus *Amsterdam* has ten more, besides the eight sent to the sovereign Court; and *Haerlem*, *Leyden*, *Utrecht*, *Dort*, and *Tergoe*, have each of them one there, as have the Provinces of *Guelderland* and *Friesland*, and *Zealand* likewise, besides their four Directors have eight or ten more from other Towns of the Province. All the Deputies are to give their Advice in their respective Chambers for the Good and Advantage of the Company; and when any of the Deputies die, the Towns to which they belong name three others in their Stead, out of which the Magistrates chuse one. This Committee meets twice a Week, and change their President each Month, so that every one presides in his Turn. There are two Advocates belonging to the Company, who make their Report of what is resolved upon to the *Indies*; upon which the Officers of the Company there form their Regulations, and issue their Orders. There are eight Deputies for the Affairs of the Marine, War, and building of Ships; four to inspect their Magazines, and the Goods that are sent to and come from the *Indies*; four which take care of the Money which the Company pays and receives; and the rest take care of the Accounts, and other Affairs relating to Order and Justice, which is done to the meanest Manner as well as to the greatest Offices.

The Whole, though it seems at first sight in a manner independent of the State, is however kept in great Subordination, by means of the wise Regulations made in establishing the Directors, and the Care taken, that not any two of them shall be related to each other, which prevents Combinations, and all those Practices by which publick Establishments are converted into private Jobs, and what ought to redound to the common Benefit of a Nation, conveyed into the Pockets of a few private Men. Once in three Years the *States-General* demand and receive a strict Account of the Company's whole Transactions, in order to be satisfied that they keep within the Bounds of their Charter, that they do Justice to their Proprietors, and that they manage their Trade so as that it may not be prejudicial to the State: which Regulation may be justly esteemed the principal Cause, that hitherto the

Affairs of this Company have been so perfectly well conducted.

In order to this Examination, or Controol of the Company's Accounts, the ancient Practice was for the *States-General* to name a Committee of their Members to go to *Amsterdam*, and there examine the Books of the *East-India Company* upon the Spot, which took up a considerable Time; and during that whole Space, this Committee from the *States* had their Charges delayed at the Expence of the Company. In the Year 1728, the Company thought fit to make a Representation to the *States-General*, setting forth the Inconveniencies and unnecessary Charge this Method occasioned, and therefore praying, that their *Higb Magnificences* would consent to its Alteration, and allow the Company to send a Deputation to the *Hague*, in order to lay their Accounts before them, which, after mature Deliberation, was offered to.

The Magazines of the Company are always kept in excellent Order. Such as are intrusted with the Care of them, give large Security, and are liable besides to the severest Punishments, in case they are guilty of any Breach of Trust. The same Degree of Strictness is shewn to all Degrees of Persons in their Service; nor are the Directors themselves exempted, in whom the smallest Fraud would be punished with a speedy and exemplary Justice. This keeps up that Spirit of Care and Diligence which is so absolutely requisite to the right Management of Commerce; and all the Under-officers, moved by the Example as well as constrained by the Inspection of their superiors, discharge their Duty very exactly; so that the Dock, or Yard, in which their Ships are built and repaired, is kept in as exact Order as that of any private Man, tho' there are seldom less than twelve hundred Persons employed therein.

They do not however exert the same Authority over the Sailors and Under-servants of the Company, that return from the *Indies*; but, on the contrary, allow them all the Liberty they can desire, and suffer them to live in what Manner and at what Expence they please, which is likewise done from a Principle of true Policy, since it affords them the Means of spending, in a short Time, all that they have acquired in long Service; so that in the Space of five or six Weeks they are, generally speaking, reduced to their primitive State of Indigence, and consequently are obliged to enter again into the Company's Service for a fresh Term. Thus the Liberty of the Subject is preferred intire, and the Company nevertheless seldom wants a regular Supply of able and seasoned Seamen, which has very good Effects, because Experience shews, that such as are used to these eastern Climates go many Voyages without Prejudice to their Health; whereas fresh and raw Seamen die in great Numbers, to the vast Prejudice of the State. The greatest Care is taken, that all employed in this Service, both at home and abroad, shall be properly qualified for the Stations in which they serve; and therefore it is a Rule, that none shall be admitted into any Office, before they have undergone a proper Examination; and though there may be some Instances where Interest or Favour may have procured Dispensations in this respect, yet these occur but seldom, and are not therefore of very great Consequence.

In order to have a just Idea of the Manner in which this great Mass of Property is managed, it will be necessary to explain the Meaning of a Term frequently made use of here, and yet but indifferently understood. The Term I mean is the *Actions* of the *East-India Company*. The general Signification of this Phrase, both here and in *France*, is precisely the same with what we call *Stocks*. When therefore it is said, that *Actions* rise or fall, the Meaning is plain and obvious; but then it is absolutely necessary to know the Value of *Actions*, or rather the Value of the *Actions* in a particular Company, before we can form any just Notions of them. The original *Actions* of this *East-India Company* were fixed at three thousand Florins; that is to say, a Person possessed of so much of the original Stock, was said to hold one *Action*; he who had twice as much so, and so on. This Phrase is still kept up, though the Value is very much altered, since a single *Action* is now worth from twenty-five to twenty-six thou-

and Florins. These Actions vary in their Price, according as the Dividends made upon the Company's Capital rise or fall; but whatever their Price be, a principal Director must have two in his own Possession to qualify him for that Post, and none are capable of giving a Vote in an Election, who are not possessed of one Action at least. The Salaries of the Directors vary, according to the Chambers to which they belong. Those eighteen that are chosen by the City of *Amsterdam*, have three thousand Florins a Year; but there are others that have but twelve hundred.

The Manner of buying and selling *East-India* Stock is very easy and expeditious. When the Parties have settled the Price between themselves, they go together to the *India* House, where the Seller applies himself to the Clerk of the Book in which his Stock is entered, and desires him to transfer so much from his Account to that of the Buyer; which being done, he signs it, and afterwards signs a Receipt for the Purchase-money, and the whole Transaction being performed in the Presence of a Director, he signs the Book likewise; so that there is not a Possibility of any Fraud being committed, yet the whole Expence of this Transfer does not amount to more than seven Shillings and six Pence of our Money.

The Directors, who have the sole Management of the Company's Concerns, settle not only the Times, but the Quantities and Qualities of the Company's Goods, that are to be exposed in their Sales, from the Produce of which their Dividends are raised, and are high and low, according to the Profit made by the Company. This, however, must be understood with some Restriction; for most certain it is, that, from their first Establishment to this Day, they have never deviated to the full Extent of their Profit, and this for very good Reasons. First, because long Wars, and other chargeable Expeditions, must be detracted out of this reserved Stock, to prevent a great Decrease in their Dividends, which would necessarily occasion a very great Fall of their Actions. Secondly, they have constantly paid the State very large Sums for the renewing of their Charters, and they have likewise paid largely for such other Acts of State as they have procured from Time to Time in their Favour. Thirdly, it has been found requisite for them to keep large Sums in Bank, to answer the Exigencies of the State as well as the Company, in Times of great Difficulty and Danger. Besides all this, they have likewise reserved vast Quantities of Spices, and other rich Commodities, that their Sales might not lower the Price of them too much; and upon this Principle, they have sometimes burned great Quantities of Spices. They have also formerly had recourse to another Method for the Benefit of their Proprietors, which has been paying their Dividends in Cloves, Mace, and Nutmegs, at a very low Price, by which those who received them, gained very considerable Advantages.

It may, indeed, be surmised, that these Methods afforded room for the Directors to make great Advantages to themselves; but when it is considered, that their general Accounts, upon the Balance of which their Dividends have been declared, have been every three Years constantly audited by a Committee of the *States-General*, there is no just Reason to apprehend, that any Thing of this kind has been ever practised. Thus it clearly appears, that as the *East-India* Company in *Holland*, by a wise and prudent Disposition of their Affairs abroad, have been able to erect and maintain a Sovereignty, very little, if at all, inferior in Power to the greatest Monarchs in *Asia*, without which it would have been impossible for them to have maintained and supported that Commerce which has been the Source of such immense Riches; so, on the other hand, by their prudent and exact Oeconomy at home, they have constantly sustained the Reputation of the Company at the greatest

Height, and thereby proved of infinite Advantage to their Country.

This indeed is the main Point, and the Thing which of all others we have laboured to set in the fullest and strongest Light in this Section. For though it be true, that both the Glory and the Profit accruing from the right Management of the Affairs of this great Corporation, belong to the *Dutch* alone, and not to any other Nation, yet the Example of so extraordinary a Constitution as this is, by which a Body of Merchants have been able to raise an Empire in the *Indies*, and a kind of new Republick in the Bosom of that by which they were erected, is common to all the World; and therefore the entire History of its Rise, Progress, and present Condition, concerns not only all the rest of *Europe*, and in a particular Manner every maritime Power, but ought likewise to be transmitted to Posterity. This, as it inclined me to take so much Pains, and to turn over so many Books, in order to bring all that has been said of it into such a Method, as that the *English* Reader might clearly comprehend, not only its past and present Condition, but the Means by which the former was acquired, and the latter is and probably will be maintained as long as the Republick of the *States-General* shall subsist: So I hope it will merit a Degree of Attention equal to the Trouble it has cost, and inspire every Reader with a sincere and hearty Concern to see the Affairs of *English* trading Companies put into a like Train of Management, that as we have not equal only, but greater Advantages for the promoting and supporting an extensive Commerce than the *Dutch*, we may not be always as much behind them in this respect as we are at present.

There remains but one Thing more to complete the Aim and Design of this Section, and that is, to give an Account of the Dividends which have been made since the Establishment of this Company, which, when I began this Enquiry, I thought could not have been brought lower than the Year 1717; but by a diligent Search I have continued them eleven Years farther, and have Reason to hope that, in the Appendix to the next Volume, I shall be able to gratify the Reader's Curiosity to its utmost Extent, by bringing them still farther down, perhaps to the present Year. As they stand in the next Page, they will fully answer three very great and useful Ends. In the first Place, they will fully support, and undeniably prove the Truth, not only of the Facts recorded, but also of the Observations made upon those Facts through the Course of this History, and thereby convince the Reader, that it is not an over-weening Passion for Trade, or any particular Fondness for the *Dutch*, that has led me to treat so largely of this Subject, but an honest and laudable Zeal for Truth, and for the Interest of my Country. It will in the next Place shew, what incredible Advantages result from Commerce, when wisely established, and steadily pursued, and how this alone contributes more, not only to the enriching, but to the raising the Power and Credit of a Nation, than all other Methods taken for that Purpose put together; and lastly, it will demonstrate, beyond all Question, the Falshood of that Objection, which, of all others, has been thought the strongest against the *East-India* Trade, *viz.* that it exhausts and impoverishes the Nation which carries it on, by exporting annually vast Quantities of Silver; for, if there had been any Truth in this, the Experience of so long a Course of Time, as one hundred and thirteen Years, must have rendered it visible to a Degree beyond all Contradiction; whereas this Account of the Company's Dividends is the fullest and most authentick Evidence of the contrary; so that it is to be hoped, we shall never hear that Objection urged again; or if it be, that it will have as little Weight as an Argument built upon Conjecture ought to have, when opposed to the Lights of Experience.

A complete TABLE of the DIVIDENDS made by the DIRECTORS of the Dutch-East-India Company, upon their Capital; from Anno 1605 to 1728, inclusive.

Years.	Months in which paid.	In what Manner.	Years.	Months in which paid.	In what Manner.

In all 278 $\frac{1}{2}$ per Cent.

It may, perhaps be said with Truth, that so clear, so accurate, and so satisfactory an Account as this is, for such a Number of Years, and also of such an extensive Commerce, is scarce in the World to be met with. Let us therefore make Use of this Account, in order to raise such Observations as may enable us to penetrate clearly into the Subject. In the first Place, we must remember, that by the Constitution of the Dutch Government, all Ranks of People were allowed originally, and are, to this Day, permitted to invest their Fortunes in the Stock of this Company; by which Means every Body became interested in its Welfare; and the Support thereof was considered as equally beneficial to the Publick, and to private Per-

sons; which Spirit has been kept alive for upwards of one hundred Years, by that Skill and Oeconomy which we have described, and by making all the Proprietors sensible of the Profit and Loss of the Company's Trade, by the Rise and Fall of their Dividends. In the Course of this Time, it clearly appears, by comparing the Total of what has been divided, with the Number of Years in which that Sum has been divided, that, one Year with another, the Proprietors of this Stock have constantly received somewhat more than twenty-four per Cent. which is so considerable a Thing, that a very little Attention will convince us, that it must have laid the Foundation of a great many private Fortunes in Holland, and is still of very great Use,

Use to the Publick, and of prodigious Benefit and Advantage to private Persons in the same Way.

But then, if we consider it in a larger and more extensive View; and as it hath a Reference to the Commonwealth of *Holland*, and the *Dutch* Nation, we shall find that this *East-India* Commerce has been so far from exhausting and drawing out the Wealth of these Provinces, that, on the contrary, it has brought in a much greater Proportion of Wealth than could have been obtained any other Way. In order to be satisfied of this, we need only consider the original Capital of this *East-India* Company, which consists of not quite six Millions and a half of Florins, that is, to take it in round Numbers, about six hundred and fifty thousand Pounds Sterling; and yet upon this, in the Year 1728, they had divided Eighteen Millions of our Money.

It may, indeed, be objected, that before we can draw any Consequence from this, we ought to know the Quantities of Silver that have, within that Space of Time been exported from *Holland*; because, till these Sums are known, and deducted from the Eighteen Millions, divided amongst the Proprietors, it cannot, with any Certainty, be known how great Profits have accrued to the *Dutch* Nation from this Trade. But, in answer to this Objection, which is the only one that can be made; I say, first of all, that the Dividends made by the Directors of the Company, arise from the Sales by which the Goods brought from the *Indies* on the Company's Account, are thrown into the Hands of private Merchants, by whom the greatest Part of them have been exported into other Countries of *Europe*, and a vast Profit acquired thereby, which Profit is not at all taken Notice of in the Account before stated. I say, in the next Place, that the home Consumption of *India* Goods in *Holland*, bears so little Proportion to the Quantities of these Goods vendible by the Company in their publick Sales, that it is impossible to conceive they can conduce to any considerable Impoverishment of the People; and that there is the highest Reason to believe the whole Eighteen Millions before mentioned has been drawn from foreign Countries into *Holland*, by the Sale of those Commodities; and consequently this Sum at least has been gained, not only by the Company, but by the Nation.

I say, in the third Place, that this is the more credible, because this is so far from being the whole of the Profits which the Company has gained by its Commerce, that there is good Reason to believe it is not much above one half of them; for we must consider that the Company has, at several Times paid for the renewing its Charters and Privileges more than its original Capital; that it has likewise expended, from the Time of its first Establishment, an immense Sum every Year for the building, repairing, and equipping the Ships employed in its Service, and in discharging the Wages due to all who are in its Service, which, with many other Articles, that I need not enumerate, must have arisen from the Gain produced by their Trade. I say, in the fourth Place, that as the Company has very wisely avoided very high Dividends, and has always retained a vast Stock, and an immense Treasure for its Support in case of any extraordinary Emergency, so all this, in its Amount be what it will, is excluded from the before-mentioned Sum of Eighteen Millions, and belongs to a separate Account.

I say, farther, that all the Property of which the Company is possessed in the *East Indies*, and which is capable of being transferred from thence into *Europe*, ought to be considered as the entire Produce of this Trade, as it never could have accrued to, or have been by any Means in the Power or Possession of the Subjects of the States of *Holland*, but by the Establishment and Management of this Company: So that if we take in all these various Branches, which make no Part of these Eighteen Millions, I believe, there is no reasonable Man, at least no competent Judge of Matters of this Nature, who will not readily allow that they must vastly over-balance whatever Quantities of Silver have been exported by the Company, since its Establishment, for the carrying on of the *India* Trade. So that on the whole, I think, I may very truly, and with the

greatest Justice conclude, that if this Article of the Trade of *Holland* could be balanced with the utmost Nicety, it would appear, that, at least, this Sum of Eighteen Millions has been gained by the *Dutch* Nation, as well as by the Proprietors of their *East-India* Company.

But if it should be said, that the Wealth of the *Dutch* Provinces does by no means correspond with this Calculation, and that therefore it is very improbable; my Answer to this is, that in the first Place, this ought to be proved, and in the next, that supposing it could be proved, it is no reasonable Objection to the Truth of what I say, since it is very possible, and indeed highly probable, that a great Part of the Wealth brought into *Holland* by this Commerce, and by the numberless Branches of Trade which depend upon it, may have been in Part dissipated and dispersed by the great Wars maintained by the Republick, and by various other Exigencies of State; so that allowing there were not eighteen Millions in the Hands of all the Subjects of this Republick, yet this does not prove, that they may not have gained so much by this Commerce, because, as I have said before, they may have spent it. I may add to all this, that there is no great Difficulty in setting this Argument in such a Light, as that it may operate strongly in my Favour; for, if we consider the prodigious Sums the *Dutch* Government have levied upon their Subjects, the many and long Wars in which they have engaged, and the great Difficulties and Distresses to which they have been driven, it is as difficult to imagine, how they should have been able to find Money for their Expences, and yet leave their Subjects so rich as they are at present known to be, without admitting such a Profit upon this Trade, as it is to believe, that the best Part of these prodigious Expences was taken out of that Wealth which this Company brought in.

That a great deal of Time has been spent in examining and tracing the History of the *Dutch* Commerce in the *Indies* for such a Number of Years, that I have been very large in my Description of its Establishment Abroad, and have bestowed no less Labour in setting forth the Oeconomy of this *East-India* Company at Home, is what I cannot deny; but at the same Time, I must profess, that the bringing such a Multitude of Things into the Compass of this Section, and thereby exhibiting in one View, what it would cost the Reader much Time and Trouble, and I might add, Expence likewise, to pick up, from a Multitude of different Writers, was my sole Motive thereto; and therefore I hope this will be thought a just Excuse for any Inconveniencies that may have attended it; the rather, because in the Course of my Enquiries, I have met with such Helps, as I did not, and indeed could have no Reason to expect, which has enabled me to render the Account I have given, much more perfect than at first I had any Hopes of making it. There is no Possibility of judging, on the first laying of a Plan of this Nature, how all the Materials are to be collected, what Space they will fill, or what Accessions may be made to them, while the Structure is erecting; but it is always clear, that an Author, who has a due Regard for his own Reputation, and a just Concern for the Performance of what he has promised to the Publick, will be always attentive to the main Object, and will let Circumstances of smaller Consideration give Way thereto, for which, when all Things have been sufficiently weighed, his Readers will not think that he ought to be blamed.

But if we have dwelt so long upon a Subject so fruitless of Matter as this has apparently been, it will prevent our employing so much Time as we should otherwise have done in accounting for the Endeavours of several other Nations in *Europe*, to share in this Trade, by erecting new Companies for carrying it on, of which it will now be necessary to say no more than what is requisite, to shew how, when, and by whom they were erected, and what their Situation and Expectations are at present, which will conclude all that we have to add concerning the *East-Indies*, as it will also do this our first Volume.

SECTION XXXV.

The History of the French East-India Commerce from its first Original, together with a clear and concise Account of the several Alterations it has undergone; and a full and plain Description of its present Circumstances at home and abroad; interspersed with some curious Remarks on the Nature of the French Government when the Powers thereof come to operate upon Trade.

Collected entirely from the French Writers.

1. *The fruitless Endeavours of Francis I. Henry III. and Henry IV. to engage their Subjects in long Voyages, and the first Appearance of an Indian Trade in that Country.* 2. *The Pains taken in this Respect by the great Cardinal Richelieu, and his noble Plan on that Subject abortive.* 3. *The first effectual Establishment of this Commerce owing to the Wisdom and publick Spirit of M. Colbert, who interested the Crown in this Affair.* 4. *The Protection of the King, the Patronage of that able Minister, and the most zealous Endeavours of the Merchants in France sail in promoting the Interests of this Company.* 5. *After the Decease of M. Colbert it declines continually, and loses all Countenance from the Court, which brings it into a very low State.* 6. *Transition from the Affairs of the Company in France, to the Management of their Commerce in the Indies.* 7. *A succinct History of the Acquisition, fortifying, and erecting a Town at Pondichery, with the Reasons which induced the Company to make it their capital Residence.* 8. *Remarkable Revolutions that have happened to this Place, and to the Affairs of the Company in the Indies.* 9. *A Description of the Fortress and Town of Pondichery as it now stands, a Calculation of the Number of Inhabitants, and the Importance of this Place set in a new Light.* 10. *The Condition of the French East-India Company at the Demise of Louis XIV. impartially represented.* 11. *A View of the Regent Duke of Orleans's Scheme for a Coalition of the French trading Companies for the Improvement of Commerce, and the Support of publick Credit.* 12. *A short bislorical Account of the China, Senegal, and West-India Companies that were united to the Company of the Indies by the Regent's Edict.* 13. *A perfect Representation of the Nature, Power, Privileges, and Establishment of the present French East-India Company since the Execution of that Scheme.* 14. *A brief Account of the Company's Trade from 1720 to 1741, with an impartial Account of its present State at home as well as in the Indies, and the true Value of its Actions.* 15. *Remarks and Observations on the Facts related in the foregoing Sections, explaining the Nature and Consequences of maritime Powers.*

WE opened the former Section with observing, that Zeal for Freedom, a due Portion of publick Spirit, and great Industry, were capable of conferring the Blessings of an extensive Trade, even upon Nations labouring under the greatest natural Impediments: But it will be the Business of this Section to shew, that where Freedom and publick Spirit are wanting, Power cannot supply their Place; and even Industry itself, though it may procure Credit to such a People, will never be able to purchase Wealth. Commerce loves to find its own Channels, and will not submit to any Restraint. Hope will nourish it in the most barren Soil, provided that Hope be cherished by a mild and prudent Government; for Trade is found to be of the same Nature with certain Plants, which though they become fair and large by Cultivation, yet can never be forced.

There have been few Governments, at least, where the Monarchs affected arbitrary Power, which could boast of being so happy in Ministers as France; neither has this Country wanted some great Princes who have both understood their Subjects Interests, and laboured to promote them: And yet, with respect to the Commerce of which we are treating, both have laboured in vain. The first Monarch of this Country, who strove to excite his Subjects to extend their Commerce, by making long and distant Voyages, was Francis I. who, by his Declarations in the Year 1537, and 1543, exhorted the French Nation to emulate their Neighbours, and to labour to obtain a Share in those important Discoveries, by which they were to much exalted both in Reputation and Riches. Henry III. renewed these Exhortations by an Edict, dated December 25, 1578, but without any Effect.

It was under the Reign of his Successor, Henry IV. one of the wisest, greatest, and which is still a higher Character, one of the best Princes that ever sat upon the French Throne, that this Nation first attempted to share in the Commerce of the Indies. One Gerard le Roy, a Native of the *Leto Countries*, and who had made several Voyages to

the *East-Indies* on board the *Dutch Ships*, came into France, and offered his Service as a Pilot to some Merchants, who were desirous of associating themselves for carrying on that Trade; of which the King having Notice, gave them all the Encouragement they could desire; and by an Arret, bearing Date June 1, 1602, erected the first *East-India Company* that had been seen in France, and granted them exclusive Privileges for the Term of fifteen Years; which however proved of no Use, either through the Divisions and Disputes which arose amongst the Merchants that composed this new Company, or from their finding it impossible to raise a Fund sufficient for carrying so great an Undertaking into Execution.

But notwithstanding this Company failed, yet Gerard le Roy still continued in France, and still laboured to see on foot an *East-India Company*, which at length however he effected under the Reign of Lewis XIII. who granted the Merchants that were engaged in this Project his Letters Patent, dated March 2, 1611, by which they had all the Privileges that they could desire confirmed to them for twelve Years. But, notwithstanding this, they suffered four whole Years to elapse without fitting out so much as a single Ship; and thereupon two Merchants at Reason petitioned the King, that these Privileges might be transferred to them, offering to fit out a certain Number of Vessels that very Year. But the Company before erected interposed, and declared that this Delay of theirs arose from unavoidable Difficulties, and not from any Design of dropping or abandoning their Project; upon which the King very wisely directed, that these Merchants should be associated with the old Company, in order to increase their Capital, and carry on their Trade the better.

In pursuance of this Resolution, they had new Letters Patent granted, dated July 2, 1612, which were registered in Parliament the Second of September following; and, in consequence of the ample Privileges that they had thus obtained, they began to fit out Ships, and actually

possessed themselves of the Island of *Madagascar*, which was then considered as a very great Thing, and mighty Hopes were conceived therefrom. But this, instead of facilitating their Commerce to the *Indes*, proved the Ruin of it under this Establishment; for, it being found by Experience that the Profits arising from the Possession and Commerce of this Island were of very little Consequence, it was too hastily concluded, that the Whole of this Trade would prove as insignificant; and so, notwithstanding all the fair Promises made at the Beginning, this Company, like the rest, sunk, and was totally lost.

2. The great Cardinal *Richelieu*, however, resolved to revive this Commerce, and undertook it with great Spirit, and consequently with all the Appearance imaginable of Success. The Royal Privileges granted to this new Company were dated the Twenty fourth of *June*, 1642, and contained all that could be thought necessary for promoting the Interest of a Society, under the peculiar Protection of so great a Minister; yet it fell out unluckily, that he did not long survive this new Grant, which, without doubt, was a great Prejudice to the Company's Affairs: However, *Louis XIV.* or rather the Regency acting in his Minority, confirmed those Privileges by an Edict dated the Twentieth of *September*, 1643, and the Company entered into Possession of all the Advantages derived therefrom immediately.

All these it quietly enjoyed for twenty Years; during which Space, this third Company sent every Year a Vessel, but the far greater Part of them were either cast away in their Passage, or lost the best Part of their Crews by the Scurvy; so that tho' the Name of an *East India* Company was still kept up in *France*, yet, in Fact, they were possessed of no such Trade, but contented themselves with a Number of tricks and fatiguing Attempts to settle a flourishing Colony at *Madagascar*; a Design, which, after all, they could never bring to bear. The Time of their Privilege being expired, the Duke de *Maillebois* thought fit to attempt an *Indian* Trade upon his own Bottom, which, however, ended in sending a Ship or two to *Madagascar*, where he got into the Possession of the *French* Settlements, and found them not worth keeping, though it is said that he made this Attempt at a pretty easy Rate, because being Master of the Ordnance, he made to free with the King's Stores, as to send large Quantities of them to *Madagascar*, and placed the same to his own Account. On his Death, however, his Son, who was styled the Duke de *Mazarin*, sold his Interest in this Island for about one thousand Pounds of our Money, which proved a great deal more than it was worth.

Thus we have spent our Time hitherto in contemplating the Progress of the *French East-India* Companies for about threescore Years, within which Space they did nothing; though some private Men from *St. Malo* sent Ships thither, and found their Trade turn to some Account. This very plainly shews, how little the *French* Government agrees with Commerce, and how difficult her ablest Ministers find it to establish Trade by dint of Power: And yet it must be allowed, that Cardinal *Richelieu* took all the Pains in this Respect that it was in the Power of Man to do; for he sent but Persons who were best versed in this Trade from *Holland*, drew abundance of rich Merchants from various Parts of *Europe* into *France*, drew the Plan for the Establishment of the new Company himself, and engaged some of the principal Persons for Quality and Fortune in *France* to embark in it.

What he conceived would most promote it, proved the Ruin of the whole Design; for there being always some great Nobleman or other at the Head of the Business, such as endeavoured to obtain Employment in the Company's Service, were forced to become his Creatures; by which happy Contrivance there were hardly any employed who had either Merit or Capacity, so that the Merchants and such as were the best Judges of the Means of carrying on such a Commerce with Success, treated the *East-India* Company as a mere Phantom, and never concerned themselves at all therewith: As, on the other hand, the *English East-India* Companies were under no Appearance of favour; but being solely guided by Experience, treated the Affairs of a *French East-India* Company

with Contempt; while the rest of the States of *Europe*, seeing that *France*, with all her Power, could make nothing of these repeated Attempts, took it for granted that the *India* Trade was designed by Nature for the maritime Powers, and so never troubled their Heads about it. Thus Things remained quietly in this Situation for the major Part of the last Century; and while *France* gave Law to her Neighbours by Land, she made as inconquerable a Figure by Sea as any of the little States in *Italy*. But the Scene was soon changed when *Louis XIV.* came to manage his own Affairs, and had taken into his Service such Ministers as were equally capable of undertaking great Designs, and of foreseeing and overcoming all the Difficulties that could possibly be met with in the Execution of them.

3. The famous *M. Colbert*, so much distinguished by *Louis XIV.* and whose Activity and Prudence procured him most of those Successes which distinguished the former Part of his Reign, and rendered him the most powerful Monarch in *Europe*. This active and intelligent Minister, *L'Hay*, was the Person who conceived the Design of reviving the *French East-India* Company, notwithstanding all the Misfortunes that *Scheme* had met with, and which had, over and over, disappointed the Skill and Care of all his Predecessors. But before he made his Intentions known to the Publick, he took care to make himself perfectly well instructed in the Affair he was to undertake, when he did, by drawing to his Acquaintance such Merchants and Seamen as were held to understand this Subject best. It was from them he learned that there were three principal Difficulties in the way of that Structure which he laboured to raise, and which, as they had never hitherto been overcome, so it appeared extremely doubtful whether, considering the Nature of the *French* Government, and the Temper of the *French* Nation, it was possible they should be got over.

The first was the finding a sufficient Fund for the effectually fixing and establishing such a Company, as to which nothing hitherto had ever been done worth mentioning, or that could afford any probable Hopes of Success: The *French* Merchants, being extremely fond of new Projects, were ready enough in promising Subscriptions, but very slow in performing what they promised, and in complying with the Terms of their Contracts, even after they had subscribed. The second Fault was said to be a peremptory Exclusion of Foreigners, notwithstanding it was so evident, that the necessary Funds for the carrying on so extensive a Trade were not easily, at least, to be found in *France*. The third and greater Difficulty of all was, the affording such a Degree of Liberty and Independence to this Company as might satisfy both Strangers and Natives as to the Security of their Properties, and put the entire Management of their Affairs into the Hands of such only as were chosen and entrusted by themselves.

All these Things *M. Colbert* weighed in his own Mind, and when he thought he had sufficiently ripened his Project, he reduced it into Writing; but knowing it to be of great Importance, and the great Consequence of having the most useful Sentiments helped by a proper Method, and adorned with the Graces of Writing, he communicated his Plan to *M. Charpentier*, of the *French* Academy, esteemed one of the best Pens in *France*. This Gentleman having new-redded our Statesman's Thoughts, by digesting them into their proper Order, and clothed them with the plain and significant Language, the Scheme came abroad with all the Advantages that could be desired, and was attended with all the Success that could be expected. As this Paper was esteemed a Matter-piece in its Kind, had amazing Effects, and contains abundance of curious Circumstances, it may not be amiss to give the Reader an Extract of its Contents.

It was in the first Place observed therein, that as former Schemes of the like kind had failed for want of proper Funds, there was no Danger that any Thing of this Nature should happen here, since, besides the constant Protection and Support which the Government determined to give thereto, the King himself, and the greatest and wealthiest Persons in the Nation, were resolved to furnish such large Sums at the Beginning, as might put it on a

the States of *Luzerne*, could make nothing but granted that the re for the nation leads about it. Thus nation for the major *France* gave Law to e as inconceivable a tes in *Italy*. But the XIV. came to manage his Service such Mi- Pertaking great De- ming all the Difficul- in the Execution of

As this Paper was , had an amazing Effect. Circumstances, it may an Extract of its Con-

therein, that as former ed for want of proper any Thing of this Na- does the constant Pro- government detest, and the greatest and the ere resolved to finish as might put it on a level,

level, at least, with the *Dutch East-India Company*, at its first Establishment. In regard to any Objection that might be raised from the various Disappointments which had overturned three several Companies already, it was observed, that few, or no Undertakings of this Sort were attended with immediate Success. That the *Spaniards* suffered greatly in their first Expeditions to *America*, which, however, did not hinder them from persevering in their Designs by which they had acquired the Empire of the new World. That the *English* Colony to *Virginia* had failed four or five times, and yet was brought to Perfection at last; and that even the *Dutch East-India Company*, which so much excelled all others, was far enough from being fortunate in its first Beginnings.

These Principles being laid down, it was shewn, that the Island of *Madagascar*, a considerable Part of which was then in the Possession of the *French*, was a Country capable of being improved to such a Degree, as to become of more Consequence, and of greater Advantage, than any of the Settlements possessed by the *Dutch* in the *East-Indes*. In Support of this, it was said, that no body would deny, that this Settlement was incomparably more commodious and more secure than that of *Batavia*, in the Island of *Java*, which the *Dutch* had nevertheless made the capital Residence of their Company in the *Indies*. For with respect to the Commodiousness of the Place, the Country of *Madagascar* was extremely agreeable, the Climate equally temperate and pleasant, and the Soil affording all the Necessaries of Life, in the greatest Abundance, whereas the Territory about *Batavia*, was so far from being fruitful, that the Company were obliged to procure from distant Places, Rice, fresh Meat, and other Provisions, for twenty-five, or thirty thousand People, which could not but be attended with great Difficulties, as well as with a vast Expence. In respect to Security, it was well enough known, that only a small Part of the Island of *Java* was in the Power of the *Dutch*, and that the rest of the Country, which was very large, and very populous, was inhabited by a Variety of Nations, agreeing, however, in the Ferocity and Brutality of their Natures, and in a bigotted Zeal for the *Mohammedan* Religion, which made them hate and despise all Christians to the last Degree. That the Territories of the *Dutch* bordered on one Side on those of the King of *Mataram*, who had more than once invaded them at the Head of an Army of one hundred thousand Men; that on the other, the City of *Batavia* itself, was but twelve Leagues distant from the Dominions of the King of *Bantam*, who had likewise shewn himself their powerful and inveterate Enemy; whereas, on the other Hand, the Inhabitants of *Madagascar* were of a mild and excellent Disposition, and to much inclined to receive the Doctrines of the Gospel, that a Settlement consisting only of one hundred Men, would be in greater Security there, than a like Settlement even of a thousand and upwards in the Island of *Java*.

That besides all this, by fixing their capital Colony in *Madagascar*, the *French* Company would be better seated for Trade than the *Dutch* in *Batavia*, because it was equally convenient for carrying on the Commerce of the Red Sea, or of the Gulf of *Bengal*, and lay at the same Time very properly for the Dispatch of Ships to *Clema* and *Japan*, affording a convenient Place for re-sitting and refreshing in their Return. In reticence to the Execution of a Project which these Arguments were supposed to demonstrate probable and feasible,

It was said in this Memorial, that a Fund of six Millions, or six hundred thousand Pounds of our Money, would be necessary in order to the equipping twelve or fourteen large Ships, from 800 to 1400 Tons, in order to embark such a Number of Persons for this Island of *Madagascar*, as might effectually, and at once establish a considerable Colony there. That there was no reason to doubt, that his Majesty would advance a tenth Part of this Sum. That the Nobility and other Persons of large Fortunes, would advance also the Sums requisite to set this Design on Foot, and that as the King was willing to take a ninth Share in the setting out, they had Reason to expect he would concern himself largely in future Expeditions. That as a further Encouragement, he was willing

to grant the Company an Exemption from half their Duties both Inward and Outward, on all the Goods they exported to, or imported from the *Indies*; and over and above all this, his Majesty was content to take upon himself all the Loss that might arise for the first eight or ten Years, which was sufficient to shew, how much, and how sincerely he had this great Design at Heart, and how willing he was to contribute to its Success. That as to private Persons, they should be at Liberty to subscribe in what Proportions they pleased, till the Fund was full; after which, no farther Subscriptions should be received on any Terms.

That the King would not only permit Foreigners to take what Share they pleased in these Subscriptions, but to encourage them thereto, would likewise consent, that such as subscribed ten thousand Livres (this was afterwards changed to twenty thousand) or upwards, should thereby acquire the Right of Naturalization, without any farther Ceremony, by which their Relations, tho' Strangers, should be capable of inheriting their Estates in the Kingdom of *France*; and farther, that in case of a Rupture with the State, to which such Strangers were Subjects, their Estates should never be liable to Confiscation, on any Pretence whatsoever. That the Affairs of the Company should be managed by their own Directors, chosen from amongst themselves, in whose Hands the Funds of the Company should constantly remain, and that Foreigners should be capable of being elected Directors, provided they were interessed in a reasonable Degree in the Stock of the Company, and resided in *France*. That in Point of Law Suits, the Company should be made as easily as possible, and after being heard, in the first inferior Court, near the Place where the Cause of Action arose, they should be at Liberty to appeal directly to the Parliament.

Such was the Memorial which this great Minister caused to be dispersed through all Parts of the Kingdom of *France*, in the Month of *June*, 1664, and upon which, the Edict for establishing the *East India Company*, which still subsists, and which bears Date in the Month of *August*, in the same Year, was founded. We have been the larger and fuller in this Account, because it answers two Purposes; for, first, it clearly explains the Methods taken by this great Minister to accomplish what in his own Opinion appeared to be a most difficult Undertaking, and next, it affords us an easy, and at the same time, a perfect View of the principal Points upon which the present *East-India Company's* Establishment rests; for tho' as we shall shew in the Course of this Section, the royal Authority has been often exerted in changing and new modelling, as the Circumstances of Affairs in general, and those of the Company in particular required, certain Articles in this Plan; yet has it been always considered as the Basis and Foundation of their Privileges, and consequently it was necessary to be well acquainted therewith, in order thoroughly to understand the subsequent History of their Transactions.

But first, it will be necessary to observe, that this Edict for the Establishment of the Company, was digested into forty seven Articles, and that the Value of the original actions, (and by the way, this was the first Time that Word was used in *France*) was fix'd at one thousand Livres, and the subsequent Call restrained to five hundred more, which Edict of Establishment was registered in Parliament the 7th of *August* 1664.

4. As soon as this Edict was published, his most Christian Majesty ordered the Sum of three hundred thousand Livres to be paid out of the royal Treasury, into the Hands of the Cashier of the *East-India Company*, and M. *Cobert*, who had been so warm and so industrious in bringing Things thus far, continued to apply himself with equal Attention to whatever might promote the Concerns of a Society, that he had taken to immediately under his Protection. The Assiduity of a first Minister in *France* is capable of putting any Thing into Motion, as appeared manifestly upon this Occasion, since in the following Spring, there sailed four large Ships from *Brest* for *Madagascar*, all of which arrived safely there on the 10th of *June*. This new Colony changed the Name of the Place where they were established, from *Madagascar* to the *Dan-*

the Name, by which still Name it is still known to the French; and, according to the Accounts they published of it, ought to be deemed a perfect Paradise. In a short Time, however, they began to change their Opinion, either from the natural Levity of that Nation, or because Opportunities presented of extending their Views in the Indies.

Two Persons offered themselves upon this Occasion, to promote the Interest of the new Company; the one was Mr. Caron, who has been already often mentioned. He was a Native of France, but had been for many Years in the Dutch Service, and had been raised in that Service to the Rank of Prefect of the Factory of Japan, where, for Reasons which we have assigned in another Place, he suffered severely. An Officer not thinking himself sufficiently considered for his Sufferings, quitted the Dutch Service, and returned to France, at a Juncture when a Man of his Abilities was much wanted, and therefore he was carelessly employed. The other was Mr. Marcara, a Native of Japan, in Java, and nearly allied to several Persons of great Rank in that Kingdom, as also to some who enjoyed Governments, and other great Employments in the Indies; he also was employed by the Company, and did it considerable Service. In Conjunction with Mr. Caron, he settled a Factory at Surat, and, by his own Interest purely, procured for them an Establishment in the Kingdom of Cochin, in the Year 1669.

But it afterwards fell out, that these two Gentlemen differed, and Mr. Caron lent some heavy Accusations against the French, who cleared himself, however, so effectually, of all that was laid to his Charge, that he was honourably acquitted, and continued in his Employment. It was also in this Year 1669, that the Directors of this East India Company began to dislike their Settlement in the Island of the Dauphin, which had been always considered as their chief Residence; but now they were desirous of transferring that Honour to Surat, to which the Court of France assented; and that nothing might be wanting for the Support and Encouragement of this Commerce, the Harbour of Port-Louis was granted to them, with all its Dependencies, together with full Power to make such Alterations and Improvements as they judged requisite; and it was in virtue of this Grant, that they built and established their Magazines at what is now called Port-Orient. But, notwithstanding all these Acts of Favour, the Affairs of the Company were so far from taking a successful Turn, that it was found, upon stating a general Account, that they were indebted in no less a Sum than four Millions to the Crown, which, however, the King, agreeable to the Promise made them at their Establishment, easily forgave, and took that Lots upon himself.

About this Time, some private Persons, having insinuated that they were willing to embark their Fortunes in a Trade to the Indies, provided they might have the Company's Favour; and the Company likewise having engaged to the King, that it might prove beneficial to him, if they had it in their Power to grant such Indulgences, this Favour likewise was added to the rest, and private Traders were permitted to engage in this Commerce, upon the following Conditions; first, that they should transport themselves and their Effects on board the Company's Ship, both coming and going. Secondly, that they should pay their Freight and Passage before their Departure. Thirdly, that the Goods they brought home, Jewels and precious Stones only excepted, should be exported in the Company's Vessels, and their Produce fairly accounted for. Fourthly, that these Licences should be in Force only for five Years; and fifthly, that if they should be found prejudicial to the Affairs of the Company, the Directors might abridge or cancel them at their Pleasure.

There was yet another and still more considerable Act of Grace obtained by their powerful Protector Mr. Colbert, which was an Exemption from all Duties on the Goods they brought home. But notwithstanding these mighty Advantages, and though they were asked any Thing of their Patron but what was granted, yet their Affairs continued declining; and as he died in 1683, the Spirit of

this Commerce might be said to expire with him. The Body, indeed, of the Company was kept up, not much perhaps to its Advantage; they had not only a Court of Directors at Paris, but, in Imitation of the Dutch East-India Company, Chambers of Direction at several Ports, a Council in the Indies, and, in short, the Appearance and Trappings of a great and powerful Society, when at the Bottom they were distressed and poor; so that upon stating a general Account in 1684, it clearly appeared, that instead of gaining one Penny by their Commerce, they had actually run out one Half of their Capital, or about three hundred thousand Pounds of our Money.

This was attributed to several Causes, but principally to these three; first, to the War with the Dutch, which lasted from 1672 to 1678, and of which we have spoke largely enough in the last Section. Secondly, to the Negligence and Fraud of the Persons employed in their Service in the Indies, who thought, though they were lent by the Company, they had no other Business there than to mind their own Interests, which they did at the Expence of their Masters, so that some private Fortunes were made, while the Concerns of the Publick were running to Ruin; and lastly, to the Supineness, Timorousness, or Inability of their Subscribers, who had not paid in, as they ought to have done, to the great Detriment of their Affairs. To remedy these Disorders, and to retrieve, if possible, the Trade of the sinking Company, it was resolved to change the System of their Government, to suppress all the little Chambers of Directors, and to put the whole Management of the Company's Concerns into the Hands of twelve Directors residing in Paris, who were each of them to pay in thirty thousand Livres upon the forfeited Actions, and to be allowed reasonable Salaries for the Business they did. It was also resolved, that all who had not paid in, should forfeit their Shares to the Company, with a Proviso, that if in two Years they made good their Payments, they should enter into their former Rights, and have all their Actions restored.

This Regulation was confirmed by a royal Edict, dated in February 1685, by which the King left the Company free Liberty either to resume the Sovereignty of Madagascar, which they had surrendered in 1670, as has been before-mentioned, or to leave it as it then was in the King's Hands. As the Company had thus their Option, and were left at Liberty to do as they thought fit in this Affair, they, after mature Deliberation, thought proper to adhere to their last Resolution, and to quit this Island intirely to the Crown; which Act of theirs was confirmed by the King's Arrêt, bearing Date the 4th of June, 1686. All these Regulations at home were supported by an Alliance abroad, which it was hoped would have had a very good Effect, and totally restored the Company's Affairs.

The History of this Treaty will be given in the succeeding Volume, and therefore we shall be very short in what we have to say of it here. The King of Spain, a very powerful Prince in the Indies, had raised one Mr. Constance, who was originally no better than a Servant in an English Factory, to the Rank of his First Minister; and he being a bold enterprising Man, took it into his Head that it was very possible to convert his Matter and all his Subjects to the Christian Religion, by engaging him in a very close Correspondence with the Court of France, in which last Part of his Scheme he succeeded so well, that not only Millions were lent over to convert the Name, but a Squadron of Men of War likewise, with some Troops on board, to make the King as absolute as his Brother of France. This raised such a Jealousy in the Minds of his Subjects as created an universal Revolt, in which the King was murdered in his Palace; his Prime Minister cut off in the same manner, and the French Garrison in the Citadel of Bankock, after an obstinate Defence, totally destroyed; and thus ended that Affair, and all the Advantages that were expected from it; so that in about two Years time the Company's Affairs were in as bad a Condition as ever, and all the high Hopes they had conceived from the Change of their Administration, and the grand Alliance in the Indies vanished into Air, and were almost almost as soon as they bloomed. This fell the heavier upon them, because abundance of new Subscribers had been

drawn in, which increased the Clamour upon their Mis-
carriage, and induced a general Opinion that it was abso-
lutely impossible for the *French* Nation to carry on a Trade
to the *Indies* with Advantage.

5. But all these vexatious Circumstances at home and
abroad were nothing in comparison of the Loss of their
generous Protector Mr. *Colbert*, who was ready at all times
to exert his Influence in their Favour, and whose Influence
was so great, that he never exerted it in vain. There
was nothing of Self-Interest, or Views of private Advan-
tage in this Conduct of his; he acted purely from a Prin-
ciple of publick Spirit, and the Desire he had of contri-
buteing to the Glory of his Prince, by pursuing what he
took to be the true Interest of his Subjects. These, it
must be confessed, were great and laudible Notions, and
such as he carried into Action with surprisng Success;
yet, taking all this together, it is perhaps the clearest and
most convincing Argument, that the *French* Nation are
altogether incapable of carrying such great Designs into
Execution, with such Advantage to themselves as accrues
to their less powerful Neighbours, because it is impossible
that Trade should flourish in a Country where its Welfare
must depend solely on the Will and Capacity of a single
Person.

Accidents are not to be trusted to, especially in Matters
of Property and Things of Importance. Yet what greater
or more apparent Accident can there be than the rising of
an able, experienced, and honest Minister, in an arbitrary
Government? It is such an Accident as not only seldom
happens, but is very rarely to be expected; and when it
does happen, like every other accidental Good, misleads
unwary Minds, and makes Men mistake for a solid and
certain Foundation, what is in Fact no more than a lucky
Continuance of Things in the same Posture; so that such
as are tempted to hazard their Substance in building upon
such a Basis, are not to be esteemed wiser than if they
were drawn in to contribute to the erecting a large Struc-
ture upon the Ice, because it had been known to remain
firm for nine or ten Weeks.

As these are reasonable and just Principles in themselves,
so, in this Case, they were fully justified by Experience.
The Successor of Mr. *Colbert* was Mr. *Pont Chartrain*, a
Man who was far from wanting Abilities, or being desti-
tute of Probity, but whose Notions with respect to Com-
merce were either crude and indigested, or, which was
worse, narrow and obscure. He was, from the Beginning
of his Administration, no Friend to the *East-India* Company,
as appeared very clearly by his crossing every thing they
asked, and countenancing every Attempt that was made
against them. To enter into a long Detail of the Facts ne-
cessary to justify in its largest Extent this Observation,
would be at once tedious to the Reader, and draw me
much beyond the Bounds I have prescribed to myself in
this Work, therefore I shall take Notice of one Thing only,
which is this; the *East-India* Company finding that all
Sorts of painted Cottons, gold and silver Brocades, and
such other showy Goods as they imported from *India*, went
off at a great Rate in *France*, they struck into that Trade,
and began to make considerable Advantages of it. This
encouraged them to venture upon another Undertaking,
which was the importing vast Quantities of white Cottons,
and causing them to be painted in *France* after the Man-
ner of the *Indies*, which occasioned a prodigious Outcry
among the Manufacturers in *France*; who let forth, that
the Sale of these Cottons and Silks was excessively inju-
rious to them; and that if they continued, it was impos-
sible that their Manufactures should subsist.

Upon the Representation of these Things to the Prime
Minister, he took the Thing so warmly, that he immedi-
ately procured an Edict, dated the Twenty-seventh of
January, 1687; by which the importing them was abso-
lutely prohibited. On the Application, however, of the
East-India Company, and the Interposition of some Friends
at Court, which they had still left, the Execution of this
Law was, in some measure, suspended in Favour of the
Company; that is to say, they were allowed a certain
Space of Time, in which to dispose of the Goods then in
their Hands; as also of such as might be brought from
the *Indies* within a limited Time: But the great Blow was

not to be parried; and the Edict, which required the de-
stroying all the Molas, and other Utensils for painting
Linnen in *France*, was to take place absolutely on the First
of *January*, 1689. The Company indeed endeavoured,
and by the Help of its Friends made great Efforts to de-
feat this Design; but all they could do proved ineffectual
in the main, and procured only a Suspension for three
Months; and, in the mean time, they were obliged to
take back what they had sold to private Merchants, and
to return them their Money. As to the gold and silver
Brocades, and other *Indian* Silks, they were permitted to
import these to a certain Value, *viz.* One hundred and
fifty thousand Livres; but this was upon Condition, that
they exported to the Amount of Five hundred thousand
Livres in *French* Manufactures; and they were afterwards
restrained to the Exportation of such Manufactures only as
would sell to Profit in the *East-Indies*. The Company's
Commerce was before declining, and they had but this
single Chance of supporting themselves by the Honour
which prevailed of buying these printed Cottons, Brocades,
and Silks; so that the Reader may easily judge that when
this Prohibition came to take place, it gave the Death's
Wound to their Trade.

It must however be owned, that upon certain Occasions
they did procure the Dispensation of this Law for a cer-
tain Space of Time, which might afford them a temporary
Relief, and just keep them from sinking; But they had
no longer a Power of trading as a Company; their Fac-
tories in the *Indies* grew low, those who were employed
in their Service lost their Credit, and the *French* Flag in
the *Indies* was little regarded, and indeed scarce known.
The Farmers General of the King's Duties likewise at-
tacked the Company; and as their Employments gave
them the Ear of the Ministers, they were almost always
too hard for them; so that, by degrees, the Company lost
the Benefit of most of those great Privileges which had
been procured by Mr. *Colbert*, and yet without their
being taken away; for in *France*, and perhaps in some
other Countries, Methods are found out for eluding the
Laws by the Manner of executing them, and without
any formal Repeals. Some other Laws were likewise
made for laying Penalties upon such as dealt in wrought
up, or in any way exposed to Sale any Chints, or any
other painted Cottons; which being executed with great
Severity, put a full Stop to that Branch of Trade, as the
want of Money had done to most other Branches. So
that between those Oppressions peculiar to themselves,
and the Mischiefs they endured in common with the rest
of the Subjects of *France* by the long Continuance of the
War, they found themselves in so low a Condition as to be
scarce able to keep up the Appearance of the Company;
and those who had formerly yielded them Assistance at
Court began to be tired, and listened no longer to their
Solicitations.

There arose likewise a new Spirit in *France* of curbing
and distressing this almost broken Company, under Col-
our of augmenting the Revenues of the Crown, and
protecting the Manufactures which afforded Bread to the
People; under Pretence of which, they first restrained the
Company from selling Cloths and other Piece-goods to
Foreigners, which was not only a very great Loss to the
Company, but to the *French* Nation in general, among
whom the Money would have infallibly circulated for
which these Manufactures had been sold; whereas, by
this Prohibition, so much ready Money was kept out of
France, and not a Thread more of their own Manufac-
tures vended. Afterwards a Duty was laid upon the raw
Silk, which they imported: And notwithstanding this pro-
duced a great Sum of Money, yet it was not long before
a Prohibition was applied, under Pretence that the Com-
pany importing every Year seven thousand Pounds of raw
Silk, did thereby great Damage to one of the staple Com-
modities of the Kingdom; whereas, in Truth, the great-
est Part, if not all this Silk, was sold by Strangers:
But it was the Misfortune of the Company, that while
they were distressed and ill treated abroad, on purpose to
drive them totally out of the *Indies*, they were envied
and persecuted at home, on account even of that small
Trade which they drove thither; and all this under the

plausible Appearance of publick Spirit, and Concern for the Poor; but, in reality, from private Views and selfish Principles, as will be shewn hereafter.

The Ministers that then governed *France* were very different from *M. Colbert*; they were unacquainted with the extensive Nature of Commerce, took every Thing that was alleged by the Farmers of the Revenue on one Side, and by the Agents for Manufactures on the other, for granted, and made whatever Orders were desired on either Side; but, as for the Company, their Applications were continually slighted; and the Decay of their Commerce, though produced by these very Measures, was pleaded as a sufficient Excuse for this Treatment, and made a Reason for continuing it. In the mean time all their Settlements abroad were sinking as fast as they could; and the few Servants they had were not so much bound by a Sense of Duty, as fixed to the Places where they resided by the great Debts they had contracted, and which neither they nor their Masters knew how to discharge. But as the Scene soon after changed surprisingly, and as this Company has since made some kind of Figure, it will be necessary to enter more particularly into the History of their Settlements in the *Indies*.

6. We have already observed, that when the Company was erected, they placed the Seat of their Government, and proposed to fix their capital Settlement in the Island of *Madagascar*, which, in a warm Part of Loyalty, they called the Island of the *Dolphin*, and which they represented to the World in the fairest Light possible. They suggested, that the Climate was extremely agreeable, not warmer for two Thirds of the Year than it is in *France*, during the Springs, and not hotter for the remaining four Months than it is in that Kingdom, during the Summer.

The Country abounding with fine Fruits, wholesome Herbs, and pleasant Roots, producing three Crops of Rice in a Year, and all Sorts of *European* Grain, better in Kind, and more in Quantity, than in any Part of *France*. They added to all this, that there grew Vines there naturally, which bore admirable Grapes, and from which it was very practicable to make excellent Wine. As to Animals, besides black Cattle in Abundance, it afforded Goats, Swine of several sorts, and many other useful Creatures. In Point of Riches, they affirmed, that there were Mines of Gold, which, by the way, could never be found, besides Iron, Lead, and other Metals: They, with more Truth, asserted, that Cotton, Wax, Sugar, black and white Pepper, and Indigo, might be raised there to Advantage; that the Country afforded both Mulberry-trees and Silkworms, and that there was great Store of Ebony, and other rich Woods. The Colony they settled there cost them immense Sums, and remained for some Years in a very flourishing Condition, sending home yearly several Ships richly laden, and would very probably have answered their Expectations, if they could have had Patience.

But after they had once settled Factories in the *Indies*, those who were in the Company's Service, found it so much easier to raise Fortunes for themselves in these Settlements, that by their Representations they procured the Removal of the Council of the *Indies* to *Surat*, where they built a most noble and convenient Houle, and added to it Warehouses, Magazines, and other Offices, much superior to the Trade which they had established to support it, and from these excessive and extravagant Expences their first Misfortunes arose.

7. But after the first *Dutch* War, in which they made themselves Masters of *St. Thomas*, which they lost again to the *Dutch*, the *Sieur Martin* retired to a Place called *Pondichery*, where, by the Leave of the Viceroy of the King of *Vijapour*, he settled himself. This was in the Beginning of the Year 1674, and as the Company had at that Time a great Demand for Piece goods, it was thought they could not establish themselves in a better Place. It was for this Reason, that the *French* Company committed *M. Martin* to procure that Place for them, on the best Terms he could; with which Order he complied exactly. This Gentleman appears to be one of the honestest and most capable Persons they ever had in their Service; and he procured from the Governor, who first gave him

Leave to settle there, a Licence to fortify, and to secure his People and Effects in the best Manner he could, which he accordingly did, and settled under the Protection of his Factory a little *Indian* Village, of about forty Houses, in which those who wrought for the Company lived quietly and happily.

Things had not remained long in this Condition, before he was threatened with total Ruin; for the famous *Setsa-Gi* falling with a vast Force into that Part of the Country, endeavoured to overwhelm him as a Dependent upon his Enemies. However, *M. Martin* supplied by Prudence what he wanted in Force; and, by a timely Application, brought about a Treaty, which was managed on his Side by an *Indian* Priest, which ended in a Licence to trade in his Dominions, for which he paid one thousand six hundred *Ruppes*. This was in the Year 1680, and he had the Year before purchased the Territory of the King of *Vijapour*, whose Inheritance it was; so that now he was tolerably secure, only he was apprehensive, that the Son of *Setsa-Gi*, who was Sovereign of the Place, might take it amiss, if he presumed to raise a regular Fortification without his Consent, which he obtained in 1689, and then put it in a Posture of Defence. This was a very timely Provision; for the *Dutch* began to be extremely disturbed at the flourishing Estate of this little Colony, and offered very large Presents to the *Rajah*, in whose Dominions it lay, in case he would dispossess the *French* of *Pondichery*; but the *Indian* Prince, who was also Son to *Setsa-Gi*, rejected these Offers with Contempt. He said, the *French* had fairly purchased that Settlement; that they had applied to his Brother for a Protection, for which they paid him a valuable Consideration; and that, therefore, all the Money in the World should never tempt him to dislodge them: A glorious Instance of the natural Probity of the unconquered *Indians*, and which deserves more Praise from Mankind than the most extensive Conquests.

The *Dutch*, however, resolved to carry their Point, and the War having broke out between them and *France*, they made Dispositions for attacking it by Force, which, however, they did not do till the Year 1693, when they came before the Place with a Squadron of nineteen Sail, landed an Army of between two and three thousand Men, with a fine Train of Artillery, and six Mortars. To make their Conquests the surer, they applied to the new *Rajah*, who was not of the same Temper with the old one, and for the Sum of about twenty thousand Pounds of our Money, purchased the whole District in Property. They then invested and attacked the Place, which, after a good Defence, *M. Martin*, who was then Director-General for the *French East-India* Company, surrendered upon very honourable Conditions, on the 6th of September, 1693. This Stroke, which seemed to put an End to the Company's Authority in those Parts, proved, in its Consequences, the happiest Thing that ever befel them. For the *Dutch* were no longer in Possession of the Place, than they raised new Walls, seven regular Bastions, and what else was necessary to render it one of the completest Fortresses in the *Indies*.

In the Year 1699, upon the Conclusion of a general Peace, the Place was restored to the *French*, who then acquired the Property of *Pondichery*, and all their new Fortifications, and this for so trifling a Sum as five thousand Pounds, which they paid to the *Dutch* Governor, upon his delivering up all that he was possessed of, which probably he would never have done, if he had not been compelled thereto by the Orders of the *States-General*, who, as they were great Gainers by that Peace in 1697, would not perplex themselves with the Disputes between the two Companies.

8. As soon as the News of this was brought into *France*, the *East-India* Company received Orders from the Government to put that Place into such a Condition, as that in case of a second War, they might not lose it so easily as they had done before; and, to enable them to do this, a Squadron was sent from *France*, with two hundred regular Troops, for the Augmentation of the Garrison; several able Engineers, a vast Quantity of military Stores, and what ever else was requisite to secure *Pondichery* from any future Attempts of the *Dutch*. The *Sieur Martin* was again

intended

fortify, and to secure in the best Manner he could, which was the Protection of his about forty Houses, in which the Company lived quietly

intrusted with the Command of the Place, which in the Space of four or five Years he so changed, as that it was scarce to be known. He not only completed the Fortifications according to his Instructions, and assembled a good Garrison of seven or eight hundred Men, but likewise built one hundred new Houses, and laid out a regular Plan for a large Town, into which, by his own Prudence and good Management, he drew, within the Space of five Years more, fifty or sixty thousand Inhabitants; so that in the Year 1710, it was become one of the most considerable Places in the *Indies*, in the Hands of the *Europeans*; and if the Affairs of the Company in *Europe* had kept Pace at all with the Improvements made by this Gentleman in the *Indies*, the *French Company* might very soon have been upon a Level with their Neighbours the *English* and the *Dutch*.

This, however, was so far from being the Case, that both this Gentleman and succeeding Governors were obliged to find Ways and Means to support themselves; the Factory and the Town, by the Trade carried on in it, and by the Industry of the *Indians* settled there, in which they were so fortunate, that while the Company was daily declining at home, every Thing carried the Face of Plenty and Prosperity there; and none knew or felt Difficulty or Pain, but the Governor and their Council, who yet were never tempted to oppress the People with Taxes, or to endeavour to make their own Circumstances easier, by laying any Part of the Load upon others. It is true, that when the Town grew too large for the old Fortification, it was found necessary to surround it with a new Wall; but how clear soever that Necessity might appear, and however advantageous for the People, yet the Governor found it absolutely impracticable to defray the Expence without the Assistance of the Inhabitants. In order to procure this, he acted with equal Integrity and Caution; for, having first ordered the Wall to be marked out, and Part of it to be erected at each End, he thereby shewed his People at once the Advantages which would be derived from such a Fortification, and the Expences that would attend it; so that when, in order to compleat his Design, he imposed upon the Inhabitants a Tax of Two-pence a Month for every Head, they were equally satisfied, as to the End for which it was imposed, and the Sum that would be raised by this Imposition, and therefore, instead of murmuring or complaining, they paid it with the greatest Cheerfulness, and gave the Governor hearty Thanks for the Care taken of their Interest.

I have dwelt the longer on this Incident, for a very particular Reason, with which, when communicated, I am thoroughly satisfied, the Reader will be very well pleased. The *French*, who in *Europe* pride themselves so much in the Grandeur and absolute Power of their King, and talk in so high a Strain of his Conquests, affect quite another Language in the *Indies*; for they value themselves there upon their Justice and Moderation; their having purchased the small Territory, which they possess; their having lived always upon good Terms with their Neighbours, and their establishing to large a Town, and acquiring to many thousands of Subjects, purely by the Equity and Mildness of their Administration: The Fact is equally true and strange, at the same Time that it demonstrates that common Sense directs all Nations to think the same Way, and that the great Difference of Opinions, and what we call the Temper and Disposition of Nations, arises purely from Accidents in Education and Government. Independent of these, Reason is every where the same, and Men think exactly alike, which shews the Reality and Certainty of the Laws of Nature, to which all Men return of themselves, when the Influence of Power, and other accidental Restraints are removed.

9. As we have shewn by what Course of Events this Fortress of *Pondichery* is become the chief Seat and capital Residence of the *French East-India Company*, it will be necessary to give the Reader a more particular Description of it, and of the Government established therein. The Town then of *Pondichery* is situated in the Province of *Gingy*, on the Coast of *Coromandel*, in the Latitude of twelve Degrees North, and in the Longitude of one hundred and fourteen from the Meridian of *Paris*. It stands

at the Distance of one hundred Yards from the Sea shore, and has nothing more than a Road before it; so that they are obliged to carry all their Goods in Boats for a full League. The Magazines of the Company, and of private Persons, are both numerous and magnificent, as far as any Thing of this Nature can be so; they have a large and very beautiful Market-place, six fine Gates, eleven Bastions for the Defence of their Walls, a regular Citadel well fortified, upwards of four hundred Cannon upon their Works, besides a good Train of Field-pieces, Bombs, Mortars, and other military Stores in their Arsenal.

The Governor has a very fine House, with convenient Offices, and whatever else is requisite for the Service, or Credit of the Company. On the West-side of the Town the Company have a very fine Garden, beautifully laid out into publick Walks, whatever else may contribute to the Satisfaction and Pleasure of the wellheier and better Sort of People, who resort to which Garden, there is a very fine Piazza, neatly finished, made use of for the Reception of foreign Princes and Ambassadors, who, wherever they resort thither, are treated with infinite Respect, and all their Expences defrayed by the Company, which has been found a very wise and useful Contrivance, of much more Consequence to the Interest of their Commerce, than the Expence it occasions. The other publick Buildings consist of a large Convent of the *Jesuits*, where they have usually twelve or fifteen Priests, who, besides officiating in that Character, likewise teach School, and instruct the Children of the Inhabitants in Reading, Writing, and the Mathematicks, and whatever else may be of Use in civil Life; for, as to the learned Languages, they trouble not themselves about them, and indeed, the Knowledge of them would be of little Service in this Part of the World: There are, besides that of the *Jesuits*, two other Convents, but not so considerable by any means as the former. The Houses of the Town are as regularly laid out, as if it had been all built at once, tho' it is now near four Leagues in Extent. The *Europeans* build with Brick, but the *Indians*, and other Nations, use only Wood, building in that Manner which we call here in *England* Lath and Plaster. For the latter, they have the best in the World, which is computed of all Sorts of Shells ground to Powder, and wrought up into a kind of Paste, which when exposed for some Time to the Air, becomes altogether as white, and almost as hard as Stones.

These Houses are one Story only, and are usually eight Yards in Front, and six in Depth, and yet there are fifteen or twenty People live in them. They are but very indifferently lighted, so that it is not easy to conceive how they are able to dispatch their Business in them. Their Roofs are all flat, for the Convenience of lying upon them, which they do almost naked, agreeable to the Custom of the Country; for *Pondichery*, lying in the Torrid zone, is extremely hot, tho' otherwise the Climate is found by Experience very wholesome. One Thing there is in it very singular, and which therefore deserves Notice, and this is, that it never rains there, except seven or eight Days at the most, towards the End of *October*, which falls out regularly, and is therefore the more singular and extraordinary. The native *Indians*, or as they are called here *Gentiles*, are most of them Weavers, or Painters; and tho' the very best Workman cannot earn above Two-pence a Day, yet upon this he is able to subsist himself, his Wife, and his Children; their principal Food being Rice boiled in Water, or wrought upon into a Paste, and baked upon the Coals. The Country round about is extremely well cultivated, and produces Rice in Abundance, so that there is hardly a Place in the *Indies* of greater Plenty, or where they have Fish, Fowl, and Fowl, on more reasonable Terms; and this, notwithstanding they have no other Water than what is derived to them from the overflowing of the *Cobram*, and other great Rivers, which they prelerve in Lakes, or Ponds, and draw it for Use, through their Country, in artificial Canals, after the same Manner as in *Egypt*.

The Governor General for the Company, as he is lodged in a fine Palace, so he makes a Figure equal thereto in every Respect. He has twelve Horse Guards clothed in Scarlet, lac'd with Gold, and an Officer with the Title of Captain

Captain who commands them; he has also a Foot-Guard of three hundred Men, Natives of the Country, called *Poms*; and when he appears in publick, he is carried in a *Panankin* very richly adorned with gold Fringe. But all this Pomp and State is displayed only on proper and particular Occasions, upon the receiving of Princes, or Ambassadors; at other Times his Guards are employed in the necessary Service of the Company, and earn to the full the Wages they are paid; for, as we have already shewn, there are few Settlements better regulated, or more discreetly governed than this, which the Reader will more easily believe when he is told, that, according to the last Account taken of the Inhabitants of this Place, there appear to be in it no less than one hundred and twenty thousand Christians, Mohammedans and Gentiles; a thing altogether incredible, if the Fact was not supported by Testimonies, the Authority of which is not to be disputed.

There cannot be a Place better seated for Trade than this, being in the midst of the *European* Settlements on the Coast of *Ceromandel*, and having all the Bay of *Bengal* open before them; so that here the Company's Magazines are full of all the Commodities and Manufactures, not only of the Coast of *Ceromandel*, but of other Parts of the *Indies*; such as *Bengal*, *Surat*, and the Coast of *Malabar*, as also of such as are imported from *Persia* and the Coast of the *Red Sea*; and here likewise are their Warehouses for all sorts of *European* Commodities, which are conveniently transported from thence, as Occasions require, to all the Markets in the *Indies*. The staple Trade however of the Place is esteemed to be *Piece-goods*, of which the finest are made in the neighbouring Kingdom of *Golconda*, and the best painted here; they likewise have great Quantities of Silk raw and manufactured, Gold and Silver Brocades, Perfumes, Spices, and Diamonds; in which last Trade they are said to have made a great Progress of late, and for which it is certain they are very conveniently situated, as being at a very small Distance from the finest Mines in the *Indies*, and by having amongst them Persons as well skilled in Jewels as any in the World. The *French East-India* Company therefore can neither be blamed for their Choice of this Residence, which, all things considered, is the fittest for them of any in the *Indies*, or for the Pains and Expence they have bestowed about it, amounting, in the Whole, to about eight hundred thousand Livres, or forty thousand Pounds Sterling. Since thereby they have rendered it so strong and so commodious, that it might very easily drive ten times the Trade they have ever had in this Part of the World.

10. We are now to return into *France*, and to consider the Situation of Things, with respect to the Company, as low as the Demise of the late King *Louis XIV.* The War, as it brought numberless Mischiefs on all other Branches of the *French* Commerce, so it particularly affected the *East-India* Company, and this as much through the wrong Notions that were formed of that Trade at home, as from the Interruptions it met with abroad. The Farmers of the Royal Revenue not only continued their Persecutions, by attacking from time to time the Privileges of the Company, and almost always without Success; but new Enemies were daily arising, thus added to the Number of their Hardships and Misfortunes.

The Office of High Admiral, which had been for a long time suppressed in *France*, was given by the King to his natural Son, the Count de *Toulouse*, who took Exceptions against two Privileges of the Company. The first granted them the entire Property of all the Prizes taken by Ships in their Service; and the second exempted them from the Rights of the Admiralty, in regard to Wrecks. This occasioned a very long Dispute, which at last ended in a Decision contrary to the Interest of the Company. It appeared clearly from hence, that, on the one hand, the Company had entirely lost its Credit at Court; and on the other, that their Privileges were far enough from resting on a firm and settled Foundation, since they were liable, at every Turn, to be subverted and taken away by such kind of Judgments to the Company's Prejudice.

Such a continued Series of Mischiefs and Misfortunes not only crushed the Trade, but broke the Spirits of the Company, and that to such a degree as to oblige them to have recourse to Expedients for their own Support, which were not very advantageous, though at the same time they were highly dishonoured. We have before observed, that in the Year 1687, they had entered into a Scheme for permitting private Trade upon certain Conditions, which we have mentioned; but their Affairs were now fallen into such Disorder, that they were not only content to suffer private Persons to share in their Trade, but even to resign it to them, and that upon very moderate Conditions.

Accordingly, in 1708, they granted Leave to Mr. *Crozat* to fit out two Ships in the Name of the *East-India* Company, upon Condition that he paid them fifteen *per Cent.* upon all the Goods imported under this Privilege, and two *per Cent.* upon all the Prizes they should make beyond the Line; with a farther Reservation, that the Company might be at Liberty to bring home on board his Ships ten Ton of whatever Commodities they pleased, without paying any Freight. The Reason they assigned for this extraordinary Step was, that their Affairs were become so embarrassed, and the Persons employed in their Service so loaded with Debts, that without the Assistance of this Project they must have been obliged to relinquish their Settlements in the *Indies*. It is reasonable to believe, that they found from this Expedient some little Relief, which induced them to extend their Project, and for the Preservation of their Servants in the *Indies*, who by this time were above ten Millions in Debt, they fairly sacrificed themselves.

For in the Year 1712, they entered into a Treaty with some private Traders at *St. Malo's*, by which they yielded up to them all their Privilege as a Company, upon such Terms they could obtain; and this with a View to furnish such as were employed by them in the *Indies* with Sums sufficient to keep under the Interest of their Debts, and thereby prevent all things from falling into Confusion. A miserable Situation this, and yet the Company found themselves unable to undertake any thing upon their own Bottom; so that on the Expiration of their own Privileges, about the Time of this King's Death, they warmly solicited a Renewal of them, not from any Hopes of reviving their Trade, but solely with an Intention to renew their Agreement with the Merchants of *St. Malo's*, that they might gain enough thereby to preserve their Settlements, and not suffer such as they had employed to be utterly undone in their Service.

It is very clear from hence, that the Ruin of the *French East-India* Commerce has hitherto been the Nature of their Government, which is a Point I shall take the Liberty of laying open, for the Information and Satisfaction of the *English* Reader. In the first place, I must observe, that the Edicts for their Establishment, and the exclusive Privileges granted by them, though they are, in one Sense, necessary to the Being and Foundation of the Company, yet are hurtful and disadvantageous to it in another. Since though few dare express their Thoughts freely upon the Subject, yet all Men of good Sense cannot help observing, that in a Country where so much depends upon the Will and Pleasure of the Crown, no Commerce can ever be secure; for as the same Power that gives may take away, so it may likewise alter, abridge, and even destroy by new Edicts any of those Privileges, though granted and confirmed in the strongest Terms that Words can express.

In the next place, as the Company must be almost supported by Acts of royal Favours, so the obtaining them must always depend upon the Favour of the Administration; or, in other Words, and in plain Terms, upon the Will of the Prime Minister for the Time being; which is such a dangerous and precarious Tenure, that no Man, who thinks at all, can believe he has any Property while it depends thereupon. In the third place, the Maxims of the Government rendering it absolutely necessary to prefer the Interest of the Royal Revenues, upon which the Administration of the Government itself depends, to any other Interest whatever; this is such a Source of Dis-

chiefs and Misfortunes broke the Spirit of the People as to oblige them to their own Support, which at the same time they were before observed, they were reduced into a Scheme for certain Conditions, which were now taken into only content to latter Trade, but even to recovery moderate Condi-

tioned Leave to Mr. de la Haye, in the Name of the East-India Company, he paid them fifteen hundred thousand Livres Prizes they should have had for their Reservation, that they might bring home on board Commodities they pleased. The Reason they assigned for their Affairs were being employed in their Reservations without the Assistance of the Company, and being obliged to relinquish a reasonable Part of their Prizes, and for the sake of the Indies, who by their Debts, they fairly sacri-

ficed into a Treaty with the Company, by which they yielded up their Prizes, upon the Condition that the Company should have a View to furnish the Indies with Supplies of their Debts, and bring into Confusion. A Company found themselves upon their own Bottoms, and their own Privileges, and they warmly took any Hopes of reviving their Attention to renew their Trade with the Indies, that they might serve their Settlements, and be employed to be utterly un-

der the Ruin of the French, and the Nature of their Affairs, all take the Liberty of their own Satisfaction of the Company, and I must observe, that the extensive Privileges they are, in one Sentence, the Ruin of the Company, and to it in another. Some might freely upon the Company, and cannot help observing, that such depends upon the Company, and Commerce can be maintained, that gives may take the Company, and even daily the Company, though granted, that Words can ex-

pression must be almost upon the Company, and to the obtaining the Company, and the Administration of the Company, upon the Company, which is the Company, that no Man has any Property while in the Company, the Maxims of the Company, and solely necessary to the Company, upon which the Company depends, to any such a Source of Don-

ger and Disquiet, as must necessarily banish all Trust and Confidence in the Faith of such a Government. Hence it may be observed, in the fourth Place, that such as are engaged in the Management of a Company's Concerns, under such Circumstances, will look very little farther than the Time present; and, instead of placing their Hopes in the future Success and Prosperity of such a Company's Affairs, will confine their Views to the making the most they can of immediate Advantages, in order to secure (if possible) their private Fortunes, let what will become of the Publick.

Lastly, we may easily discover, from these Reflections, how it came to pass, that private Traders in France, such as the Merchants at *St. Malo's* were able to invade their Fortunes, and carry on a Trade to the *East-Indies* with Advantage, under the Authority of a Company that was, in a manner, become bankrupt; and this, notwithstanding they paid considerable Sums out of their Profits for participating in its Privileges; for, as private Men, they could drive a good Bargain with the Company, with some reasonable Assurance of having the Terms of their Contract comply'd with, because made only for a certain Time; enjoying also the full Benefit of those Settlements which the Company had made, without contributing any thing to the Expence which they originally roll, or even to that by which they were supported; so that, considered in this Light, the Company stood between them and the Government, and these private Traders might be said to enjoy in France itself, those Advantages that could be expected only in a Land of Freedom, and by the Enjoyment of which solely their Trade became advantageous.

The more we reflect upon these few Observations, the more must we be convinced, that it is not from any Defect in the Country, any Want of Skill or Industry in the People, but for the Want of a right Government in France, that her Trade has never been established on a secure and solid Basis. This likewise demonstrates, that however dangerous and destructive the Ambition of this Power may be to her Neighbours, from that arbitrary Force, with which, by the Policy of her Ministers, she has been long armed; yet this, at the same time, is an Evil that preys upon her inward Strength, and keeps her in a continual, though slow Consumption; so that if her Neighbours would but unite among themselves for their own Defence, the arbitrary Disposition of the Court of France must necessarily return upon itself, and sooner or later procure its own Dissolution.

There are, however, certain Seasons, when from a Variety of Accidents, there appears even in such a Government a strong Spirit of promoting the publick Welfare, not from any real Principle of that kind, but to cover some other Design, which could not otherwise be carried into Execution: As for Instance, upon Changes of Administrations, more especially in Monarchies, when such as are at the Head of the Government find the Measure of their Power must, in some measure, depend upon the Extent of their Reputation. At such Times as these, I say, there may be a temporary Cessation of those pernicious Notions which infect the Heads and Hearts of arbitrary Rulers, or, which is the same thing to the People, a Suspension of the Practices which flow from them; so that, for some little Time, the Government seems to act upon new Principles, and consequently Affairs change their Face in the same Proportion.

This happened to be the Case at the Period of Time, when the *French East-India Company* were struggling for a new Grant of the Privileges which they had enjoyed for fifty Years, though sometimes in a larger, sometimes in a less Degree. But the Renewal of these Privileges in that State in which they then stood, was all that they desired, to have them augmented was what they least hoped; but to have this done, and their Term rendered perpetual, exceeded the Limits of their Expectations, and was entirely owing to such a Revolution in their Government as has been before-mentioned, and which it is now necessary that we should describe as clearly, and at the same time as exactly as possible.

1. The Duke of Orleans, who defeated the old King's Will, and, in some measure, established a new Government

in France, contrary alike to the Wishes of the most potent of the Nobility, and of the most eminent Part of the People, found himself obliged therefore to sustain his Authority, by endeavouring to acquire to his Administration such a Reputation as had never attended all the Victories and Power of *Lewis the Great*. It was with this View, that from the Time he took the Reins of Government into his Hands, he affected to act on Maxims directly opposite to those of his Predecessors; he declared expressly, that the great End of Government was the Good of the People; that it was impossible this should be promoted by being engaged in perpetual Wars, or in continual Quarrels with their Neighbours; that Peace was an universal Blessing, and must therefore be the Interest of France, as well as of all other Nations; that Commerce was the natural Produce of settled and quiet Times; and that the Effects of an extensive Trade were more certain Resources of Power and Strength than Conquests, or arbitrary Dominion.

Whether the Duke-Regent was persuaded of the Truth of all this, or whether he pretended only to be so persuaded, is a Point not at all important for us to determine, since it is sufficient for our Purpose that he acted upon these Maxims, whatever he might believe about them; and that by acting upon them, he really carried his Point, and came to be considered as a Prince who had great Notions of Liberty and Commerce. The *East-India Company* therefore, or at least such as had the Management of the Affairs of the Company, entertained the warmest Hopes of Succour and Protection: For though, before the Death of the late King they had obtained a Prolongation of their Privileges for ten Years, to be accounted from the Fall of May, 1715; yet this, like most of the royal Favours they had received, was of very little Use, since they had no Funds left for the carrying on their Commerce; and, besides, the Term they now had was so short, that it added very little to their Credit at home or abroad. It was from the Duke-Regent that they expected more solid Assistance, and such Helps from the Treasury as might enable them to revive their Trade.

But the Regent and his Ministers were in Sentiments quite opposite to those the Company had flattered themselves with, and, instead of being at all inclined to part with Money out of the Royal Treasury, for other People to employ in Trade, they were contriving how to make Use of the Sound and Reputation of Commerce to fill the King's Coffers, to pay off the Debts of the Crown, and to discharge the Loads which lay heavy on the Government upon the Shoulders of the Nation, by that Series of Contrivances which are still known in France by the Name of *the System*. It was with this View that the Regent shewed so much Favour and Kindness to the *West-India Company*, and established its Capital at One hundred Millions, and thereby procured an Opportunity of lessening that immense Quantity of Paper-Money which the long War had made requisite. But when the *East-India Company* came to represent the Condition they were in, and to sue for Assistance and Protection, they soon found that they had to do with those who understood their Affairs to the full, as well as themselves; therefore, instead of governing them as they had done former Ministers, they were forced to put themselves entirely into their Hands, and trust absolutely to their Generosity and Discretion.

The Consequence of this was, very probably, what they had not foreseen, since it proved to be the Dissolution of the Company, or, which is the same thing in other Words, the Union of it to the *West-India Company*, which had already swallowed up some others. This Edict of Union or new Establishment extinguished the Title of both the Companies, as well as of the rest of the Societies comprised therein, and gave to the whole the comprehensive and significant Title of the *Company of the Indies*. In the Preamble of this Edict, we have an excellent History of the Transactions upon which this Union of the Company was built; for therein it is said, that the King having principally applied himself to the restoring the Commerce of the Kingdom, and thereby repairing the Losses and Decays occasioned by a very long and expensive War,

and having already had the Pleasure to see the Circulation of Money wonderfully quickened by the Establishment of the *West-India* Company, his Majesty had from thence been led to his Majesty's State of the old Companies erected before his Majesty's Accession to the Throne; and in particular into the State of the *East-India* Company, which he found to be in a great measure. In the Space of fifty Years they had, notwithstanding repeated Assurances from the Crown, managed their Affairs so indifferently, as to be oblig'd to abandon their Commerce entirely, and to take up with such trifling Advantages as could be obtained by letting out their Privileges to Hire.

The King declar'd, he was satisfy'd that this did not proceed at all from Disadvantages in the Nature of that Commerce, but from the Mistakes and ill Conduct of such as had been employ'd with the Management of the Company's Affairs, who, in the first Place, had made their Bottom too narrow, and had undertaken the Traffick of the *Indies* upon more a too small a Capital. That, in the second Place, to keep up the Credit of their own Administration, and to maintain their taking such considerable Summs to themselves, they had made large Dividends, where there were no Profits; and having, by this means, exhausted the Company's Stock, they carried on their Trade by borrowing as much Money as they could at very high Interest. This however, the King, his Great-grandfather, having always protect'd and encouraged this Company, and even granted them a new Term towards the End of his Life, they might have enjoy'd it, or, at least have drawn all the Profits from it they could, if their Conduct had not become so flagrantly bad, that neither the Glory of the King, nor the Interest of his People, would permit him to overlook it any longer. On the one Hand, there were continual Complaints from the *Indies*, that the Company had borrowed vast Summs of the *Crown*, without paying them either Capital or Interest, having in the Space of sixteen Years, not sent so much as one single Ship to *Surat*. On the other, the private Merchants carrying on this Commerce in the Name and under the Authority of the *East-India* Company, were so cramped and oppress'd by the Duty of Ten per Cent. and other Gratuities to the Company, that they are unable to pursue their Trade with the same Spirit and Advantages which are enjoy'd by the Subjects of other Nations; and, being afraid to go to *Surat*, on account of the Danger they were in of having their Ships seiz'd for the Company's Debts, they found themselves oblig'd to purchase most of the *Indian* Commodities and Manufactures which they brought into *Europe* from Foreigners, at a very high Price, and this equally to their own and the Nation's Disadvantage.

For these Reasons, and others of the like Nature alledg'd against the *China* and *African* Companies, his Majesty declar'd, that the Privileges of all those Companies are, by his Majesty's Order, dated in the Month of *May* 1711, revok'd, extinguish'd, and suppress'd. He granted at the same Time, to the new Company of the *Indies*, an exclusive Privilege of trading from the *Cape of Good Hope*, to the utmost Extent of the *East-Indies*, as also to the Islands of *Madagascar*, of *Bourbon*, and of *France*, the Coast of *Affrican Africa*, the *Red-Sea*, *Perth*, the Dominions of the *Mogul*, of the King of *Siam*, and that of the Emperors of *China* and *Japan*, as also of the *Straits*, from the *Straits of Magellan*, or *la Maire*, to the *East-Indies* that Way, forbidding all the rest of his Majesty's several Trades, under Pain of the Confiscation of their Vessels and Effects.

His Majesty gave and grants to this Company, the Profit of the Duty and Effects of the other Companies, at the same Time charging them, however, with all the just Debts which those Companies had contracted, and were liable to. For better to enable them to discharge these Debts, and to carry on the vast Trade granted them by his Majesty's Order in their Favour, twenty-five Millions of new Actions, to be purchas'd for by ready Money, at the same Terms that the *East-India* Company paid for their hundred Millions of *Actions*, and with the like Privileges and Advantages in every Respect. He likewise granted full Licence and Authority to import all

Sorts of Manufactures of Silk, Silk and Cotton, gold and silver Stuffs, dyed Cottons, as also painted and striped, on Condition, however, that none of these shall be vendic'd in his Dominions, but be intirely sold and dispos'd of to Foreigners; for which Reason they were to be deposited in Magazines under double Locks, the Keys of one to be kept by the Farmers-general, and the other by the Directors of the Company, for the better preventing Frauds and Collusions. He likewise grants them leave to import all sorts of white Cotton, Raw-silks, Coffee, Drugs, Spices, Metals, and whatever else the *East-India* Company might have imported under their Privileges.

This *Edict* had all the Effects, and even more than was expected from it, and such an Eagerness there appear'd of subscribing to this Company, that instead of twenty-five, the Subscribers amounted to fifty Millions, which encouraged the *French* Ministry to venture upon some new Regulations, which were made public by an *Edict* of the Month of *June*, in the same Year. The Principal of which was, that they should take off four Times the Number of old *Actions*, in order to be entitl'd to the new; so that in order to purchase five thousand Livres of the new *Actions*, the Subscribers were oblig'd to take twenty thousand Livres of the old ones.

The great End the Government propos'd by all this, was, as we have hinted before, to find the means of calling in and suppressing that immense Quantity of Paper-money which was such a heavy Burthen on the State; and to this End Annuities to the Value of twenty-five Millions are created, which not answering that Intention, the new Company of the *Indies* offer'd their Assistance, and undertook to discharge them at the Rate of fifty Millions in one Month; so that the whole Load of this Paper credit, amounting in the whole to near sixty Millions of our Money, was to be taken away and extinguish'd, by the End of *July*, 1721. In Consideration of the Zeal and publick Spirit manifest'd by the Company in this Proposal, the King was pleas'd, by his *Arret* dated in the Month of *July*, 1720, to change the Terms on which the Company held their Privileges, and to declare them perpetual, restraining himself and his Successors, from ever treating them as other Companies had been treated, in order to their Establishment; and thus this Company acquired that Title by which they are now known in *France*, *The perpetual Company of the Indies*, with all the Privileges of the other four Companies confirm'd to them for ever. In two Years Time it was settl'd and declar'd, that in Consequence of the Annuities granted and assign'd to the Company from the *Crown*, they should be able to pay annually the Sum of Ten per Cent. which should be paid duly and exactly for ever; in Consequence of which, the Directors were to be at full Liberty to export and import what they thought proper, without being accountable annually to their Constituents, because the Dividend was to be regular and certain, and they were to manage Things so, as that the Deficiencies of one Year might be made up by the Profits of another.

This Course of Management, though it had certainly one great Convenience in fixing and ascertaining the Interest as the Proprietors were to receive it, yet the Circumstance of not accounting for the Profits, has prov'd of such ill Consequence, that notwithstanding these Dividends have been all along very duly and regularly paid till now, yet the Proprietors could never be cur'd of a Suspicion they entertain'd, that the *East-India* Commerce has not been carried on for their Profit, but in their Name, for the King's, and thus has contributed to keep their Actions low, though they had such extraordinary Interests in them, with such Regularity. The Grounds of this Suspicion lying in the Annuities paid by the *Crown* to the Company, which are sufficient for securing such a Dividend, without the least Assistance from the Profits of their Trade, made the Thing not altogether incredible, especially when it was perceiv'd, that for twenty Years together, the Dividends remain'd in the same Rate, though the Trade of the Company has for that Time been apparently increas'd.

But to understand this Point perfectly, as well as the true State of the Company's Affairs, and how they came to have

have a Fund capable of discharging regularly so high an Interest for such a Number of Years, as well as to clear up some Things that may seem obscure in this History of the Establishment of the Company now subsisting, it will be requisite to give as clear and concise a Relation as is possible, of the Rise and Progress of the other Companies that have been noted to this by the Edict before-mentioned, and of the *West-India* Company in particular, in which Abundance of curious and instructive Passages will occur that never hitherto have appeared in the *English* Language.

12. The *China* Company in France was originally set on foot in the Year 1700, but was very soon after absorbed by that of the *East-India* Company, which, as we have shewn, had the sanction of royal Authority given it in 1664; but when that Company began first to decline in its Affairs, those who had the Management of its Concerns, were content, in some measure, to revive this old Company, by granting their Licence, which was likewise confirmed by the Crown to one Mr. *Jourdain*, a very rich Merchant, who fitted out a very large Ship, called *Amphitrite*, for that Voyage, which sailed in March 1698, and returned safely to France on the Third of August, 1700, very richly laden. The Success of this Voyage encouraged the Merchant before-mentioned, and those who were concerned with him, to fit out the same Ship again, and which they accordingly did in the following Spring, and she returned in the Month of September, 1703, with as great Profit as from her former Voyage, though she very narrowly missed being shipwrecked falling down the River of *Canton* at her Return. The Success of these Voyages, one would have thought, might have established this new Company; but the general War in which France was then engaged against most of the Powers of Europe, rendered it impracticable: And thus the Company lay dormant, though still possessed of its Rights, which extended to the Coasts of *China*, *Tanquin*, *Cochin-China*, and the Isles adjacent, till such Time as, for Reasons of State, it was united to the *Western* Company.

The Company of *Senegal*, though under another Name, was one of the earliest in France, being carried on by a Society of Merchants at *Dieppe*, though without the Sanction of any public Authority. They fixed a little Settlement in an Island at the Mouth of the great River *Nigeria*, called also the River of *Senegal*, and carried on a considerable Trade thither. This Commerce came afterwards into the Hands of the Merchants of *Rouen*, who, in the Month of November, 1663, yielded it up to the *West-India* Company. But when that Company was dissolved about ten Years afterwards, the old Company of *Senegal* was revived, and three rich Merchants undertook that Commerce, which they carried on with great Profit to themselves till the Year 1681, when Mr. *Colbert*, whose Character we have already given, conceiving this Traffick might be greatly enlarged, prevailed upon these Merchants to accept of a valuable Consideration for their Privileges, and to admit of its going into the Hands of a larger Number of Persons, with new Privileges which they enjoyed for many Years. But it being discovered, that the exclusive Rights they had were, by much, too extensive for their Capital, it was thought for the publick Benefit to divide this Company; and hence arose the *Guinea* Company, to whom the greatest Part of their Privileges were assigned, and the rest remained to the old Company of *Senegal*, which still continued in a thriving Condition.

Yet, in Process of Time, and from a Variety of Accidents, it fell out, that the Proprietors of this Company came to be reduced into such low Circumstances, that the Company must have failed, if it had not been for the Wealth and Spirit of a single Merchant, whose Name was Mr. *D'Angoy*, who, at length, for the Sum of three hundred thousand Livres, bought out his Associates, and in the Year 1701, by the Consent of the Crown, had the whole of their Privileges conveyed to himself, and he erected a new Company, which, however, was so unfortunate, that after struggling a long Time to no Purpose, at last, yielded up their Privileges to some rich Merchants of *Rouen*, who carried on this Trade with tolerable Suc-

cess, till the Year 1718, when it was united, as we have seen to the Company of the *Indies*.

As for the Company of *Guinea* before-mentioned, it had several Rises and Falls till the Accession of Philip V. to the Crown of Spain, who in the Year 1701, granted them the Liberty of transporting Negroes to the Spanish *West Indies*; and then it took from thence the Title of the *Affricco* Company, under which it continued to flourish, when almost all the Branches of French Commerce languished and decayed, by reason of the War; and as it was singular in this, so it was no less singular in its Conclusion; for it lost all its Privileges, and even its Being, by the Treaty of *Utrecht*, which revived the other Branches of French Trade, but conveyed this to the *English*, and gave rise to our *South Sea* Company.

We must now pass to the *West-Indies*, where the Course of a great River, navigable from within seven or eight Leagues of its Source for eight hundred Leagues, where it falls into the Gulph of *Mexico*, was discovered by Robert Cavalier de la Salle, a Native of *Rouen*, who brought the News of it into France, 1680. This River, called by the Natives of the Country *Mississippi*, and by the French, *Mississippi*, and the Country about it being held of infinite Consequence, as affording the greatest Conveniencies for establishing a Settlement in one of the finest Climates, and most fruitful Countries in *America*, the Motion for attempting such a Colony was readily embraced in France, and all imaginable Encouragement given to Mr. de la Salle, who undertook the Performance. He, by Letters Patent dated in 1684, establish'd a Company for that Purpose, and embarked on board a Squadron of four Ships, filled with People, and with every Thing necessary for his Design; but was so unlucky as to miss by Sea the Mouth of that River which he had discovered by sailing down it, and fixed upon another, where his Colony began to decline in such a manner, that he had not above one hundred Persons left; yet in the Midst of these Misfortunes he kept up his Courage, and endeavoured to repair his past Mistake, by using all possible Means to discover the Place he sought, which it is very probable he would have done if his Company had not mutinied; in which unlucky Accident one of the Villains shot him with a Musket Ball, on the 20th of March, 1687.

Seven or eight Years after his Death, one Mr. *Hiberville*, a Gentleman of *Canada*, discovered the Mouth of this famous River, erected a Fort, and began to establish a Colony there, but died before it was thoroughly settled, and so the Design miscarried a second Time, and the Affair slept till the Year 1712, when Mr. *Anthony Crozat*, a Gentleman of large Fortune, undertook the fixing a French Colony on the River *Mississippi*, a third Time. He obtained the King's Letters Patent, dated 12 September, in the same Year, and succeeded so far as to discover the River and Country effectually, and to raise a Fort and some Settlements there. This Gentleman, according to the Custom of the French, changed the Names of all the Places he visited, or, to speak with greater Propriety, were visited by those he sent thither. The great River was no longer to be called *Mississippi*, but the River of *St. Lewis*, and the Country round about it was *Louisiana*, and an Island at the Mouth of it, which till then had been called the Island of *Madagascar*, was thenceforward to be known by the Title of the *Dauphin's* Island.

The Consequences of these Discoveries were great in themselves, and the Expectations raised from them much greater, of which Mr. *Crozat* made a very wise Use, by taking this Opportunity to surrender his Patent, which he did in 1717, that the Publick might have the Benefit of these important Settlements. The Regent was considering at that Time of the Project offered him by the famous Mr. *Lamoignon*, a Scotch Gentleman, whose Name is well known to the present Generation, and is not like to be forgot by Posterity. The End aimed at by his Project, was to reduce all the publick Debts in France into some Form; and for this Purpose it was necessary to erect, under plausible Appearances, a new Company in the like Manner, that by the Advice of Sir *John Blount*, the Lord Treasurer *Oxford* had done the same Thing in England,

by

by establishing the *South-Sea* Company. But whereas that Nobleman had very wisely and honestly rejected the remaining Part of the Project, which was cheating credulous People of their Money, by running the Actions or Stock of the new Company to an excessive Rate; this was accepted by the Regent, and made that Part of the Design, which is filed in *France* the System, and which was at once the most iniquitous, and the most infamous Contrivance that ever entered into the Heart of Man.

But as it was necessary, in order to carry this Scheme into Execution, that a new Company should be set up with such Privileges as might create probable Hopes of vast Gain to the Proprietors, this new Settlement was thought of for that Purpose, from whence the Project itself is generally called the *Mississippi* Scheme, tho' that was not the Title of the Company. It cannot be expected, that we should enter here into a long Detail of the Conduct of the Regent's Scheme, because it is not the proper Business of this Section; all that is aimed at herein, is to shew the several Steps by which almost all the foreign Commerce of *France* was thrown into the Hands of the single Company of the *Indies*, which Title, as we have already shewn, the Company acquired by the Union of the old *East-India* Company with the *Western* Company, which had before swallowed up several others that have been already mentioned.

The Royal Bank also was united to the Company of the *Indies*, which was the Engine employed for bringing about the great Ends of the System, which being once effected, the Regent and his Ministers began to turn their Thoughts on the Means of recovering the Company from that dreadful Confusion into which it had been thrown by undertaking the Execution of a Design equally prejudicial to the general Commerce and private Property of the Inhabitants of *France*, which had very justly overturned and destroyed their Credit, and put it entirely out of their Power to carry on any Part of the Trade, to which they had an exclusive Right. It was therefore high Time certainly, for the Government to interpose, and endeavour to remedy some of the many Inconveniences they had introduced, since the Welfare of the Kingdom was now so closely connected with that of the Company of the *Indies*, as that it was neither in the Power of the Government to neglect the one without neglecting the other, or to separate, as perhaps they would have done those Interests, which by their own Management were so closely united.

To understand this Matter clearly, we must consider the Company of the *Indies* in two very different Lights; that is to say, as a trading Company, and as Creditors of the Government; neither of which Points, if we advert what is daily written about them, seem to be well understood here, and therefore we shall take some Pains in representing them both to the *English* Reader's View, in Terms that may remove all these Mistakes. In the first Place then, with regard to their Trade, the Company of the *Indies* in *France*, is generally called here the *French-East-India* Company; which Title does by no means express the Nature and Importance of their Trade; since they have not only the Commerce of the *Indies*, but likewise that of *Africa* and the *South-Sea* under their Direction, and though it be true, that they are not able at present to exert themselves in carrying on all these Trades; yet it is no less true, that they retain the Power of doing it whenever they are able, and that the *French* Government will most certainly put them upon it as soon as any favourable Opportunity offers.

The Inference I make from this is, that we ought to consider the Company of the *Indies*, as the Center of *French* Commerce, and to look upon the Rise and Fall of the Actions of the Company, as a political, or if you will, as a Commercial Barometer, which constantly points out the Condition of the Trade in *France*. I look upon this Observation to be a Matter of great Consequence to us, and it was for the sake of setting it in a clear Light that I have taken so much Pains to shew how the several Branches of foreign Trafficks came to be thrown into the Hands of a single Company, the chief Motive to which, was undoubtedly this, that the Cares of the Government, with respect to Trade, might be brought into a narrower

Compass, and consequently be attended to with more Ease by the Ministers.

For such is the Constitution of the *French* Government, that every Thing in that Kingdom must depend upon it; and we must allow, that Experience has shewn, that some of its Ministers have understood it as well, and profecuted it better than the ablest Merchants could have done. I do not say this as if what had happened in *France* ought to be a Rule to any other Country, blest with a better Constitution: God forbid it should! But what I say, is, that the Relation between the Government and Commerce of *France*, being rightly understood, it will appear, that the latter is entirely dependant upon the former, and must either prosper or sink, as it is supported by the Crown, and attended to by the Ministers, or as it is neglected by both.

This shews, that a general War, which demands all the Power, all the Revenues, and all the Attention of *France*, must sink and ruin its Commerce, and that to such a Degree, as cannot happen to any other Country, the Constitution of which is not the same with that of which we are speaking. This I am sensible has been often said, but I do not know, that it was ever demonstrated before, and I hope by that Time I have finished this Section, to make this Subject so clear, and so intelligible to every *English* Reader, as that he shall have no sort of Doubt as to the Interest and Policy of the *French* Court on this Head. Thus much as to the Company of the *Indies*, with respect to its Trade; let us next consider it as a Society of the Creditors of the *French* Government.

We have heard, that this Company has for many Years divided Ten per Cent. annually upon their Capital, which, till the present War, and indeed to the present Year, has been justly and regularly paid. But this Interest, or Dividend of Ten per Cent. never arose from the Profits made by the Company, nor in Truth any Part of it, but was paid to the Proprietors, as Creditors of the Publick, out of the stated and settled Funds assigned them for that Purpose, and therefore we can attribute the Lowness of the *French* Actions in Time of Peace, to nothing but their Diffidence of their own Government.

The Reason why the Ministers of *France* have made it their Choice to continue Things in this Situation, seems to have been this, that the regular Payments made by this Company to the Proprietors, might have a double Effect, and sustain at once the Publick Credit and that of the Company. The former was necessary to prevent those Confusions ever falling out again, which happened on the Ruin of the System, and which had like to have been attended with the most fatal Consequences to the Nation, from which nothing could have saved them, but the arbitrary Power of the Government, which forced them to bear their Misfortunes till Ways and Means could be found to relieve them. On the other hand, the regular Payment of these Dividends has been of prodigious Service to the Company in their trading Capacity, in which, to say the Truth, they could not have subsisted without them; because it kept the Proprietors from either requiring, or receiving any general Accounts of their Dealings, which enabled the Directors to do many Things which otherwise they could never have done; and has, in Fact, been the sole Support of their Commerce: For, we must observe, that on the founding of this new Company, they had Rights and Privileges given them, without either Powers or Funds to make use of them. They had the nominal Advantages of several Companies bestowed upon them, but upon Condition that they took likewise the real Load of Debts and Incumbrances for which those Companies had engaged. They received vast Sums of Money from the Proprietors, but not for their Use as a Company to Trade with, but as Agents for the Government, which, very probably, the far greater Part of their Proprietors did not understand; but which they might very easily have understood, if they had considered the Funds out of which their Dividends were paid; for they could never conceive that such a Government as theirs would grant them so high an Interest for Money, without making use of it.

On the whole therefore, this was one of the great Secrets of the *French* Councils, and the Design of restoring

the Affairs of the Company, that which, of all others, they have managed with the greatest Address; for by this Means they have gained Time, which, in such Affairs, is all Things, and by affording the Company such Sums of Money as could be spared; and at the Seasons they could spare it, they have revived the East-India Trade, kept it constantly and regularly on Foot, put all the Company's Debts in a Train of Payment, relieved and replaced all her Factories; and if this War had not broke out as it did, would very soon have placed her, as a Trading-Company, in as fair and good a Condition as for many Years she has stood in, considered in her other Capacity as a Corporation of publick Creditors. This has been generally attributed to the wise and peaceable Administration of the late Cardinal Fleury, but was no otherwise due to him than as he continued the Direction of these Affairs in the Hands of Mr. Orry, who has had the entire Management of them for ten Years past; in which Time he has done more Service to this Nation, than all the Statesmen and Generals that have been employed in this Reign; and though it has so fallen out of late, that his Method has been interrupted and thrown into Disorder, yet we shall presently make it appear, from the Consideration of the present State of the Company, that he has overcome the greatest Difficulties, and put her Concerns into such a Channel, as must strike all who attentively weigh the Particulars, which we shall impartially relate, with Amazement and Surprise.

But, before I quit this Part of my Subject, I must again remind my Reader, that all this Success has been owing to the Firmness and Steadiness of the Administration, for to many Years, showing in some measure from the King's Temper, in some measure from the long Life of the late Cardinal, and from a Variety of other Circumstances, that demonstrate the commercial Interest of France to be continually liable to Accidents, and to be consequently always in a precarious Condition. I do not say this with any Intention of lessening our Jealousy of the French Traffick, which I acknowledge to be extremely reasonable and well founded; but, for the sake of Truth, and that Things may appear to be as they really are, which I think the most likely way to enable us to judge of what will be most for our Interest and Advantage.

I may likewise add, that by proving, as I have done, that this is truly the Case, it will afford great Encouragement both to the Government and People of Great Britain, to pursue whatever rational Schemes shall be offered for promoting and extending our Commerce, since our Situation is such, that we need only the Countenance of the Legislature, and the Repeal perhaps of a very few Laws, which restrain and cramp our Trade, to be able to undertake new Branches of Commerce, which must necessarily increase our Seamen, augment our Shipping, carry off our Manufactures, and, by reviving a Spirit of Industry, find Employment for all our People, which would effectually root out seditious and seditious Humours, and find something else for the meaner Sort of Folks to do, than to rail at or resist the Government. But if we neglect the Advantages we have, and the French should grow wise enough to resolve upon keeping upon fair Terms with their Neighbours twenty or thirty Years, they may go near to shew us, within that Time, that in spite of all the Difficulties they struggle with, their Company of the Indies may be put into such a Condition as will enable her to put in for a large Share of that Trade, which, by being hitherto engrossed by us and by the Dutch, has obtained and secured the honourable Title of a *Maronne Preter*, which, as it was acquired by, will certainly be lost with our Trade.

13. The Capital of the present Company of the Indies was, as we have before observed, composed of the original Capital of the *Western* Company, and of twenty five Millions added thereto, upon the Union of the *East India* Company therewith; but after the Ruin of the System, when all Things fell into Confusion, it was found requisite, in order to restore them, that the King should make a Revision of the Actions possessed by the Proprietors of this Company, in order to distinguish between such as had acquired their Property fairly, and by Purchase; and

such as had thrust themselves into the Company's Books only to serve their own Purposes by Stock-jobbing. It was in consequence of this Revision, that by an Edit, in the Year 1723, the King fixed the Actions of this Company to fifty-six thousand, and which formed a Capital of One hundred and twelve Millions; for their Dividend upon which, they had a yearly Revenue assigned them of Eight Millions four hundred thousand Livres. By another Arret in 1725, Five thousand of these Actions were cancelled and burnt; so that the Capital of the Company, by this means, was reduced to Fifty one thousand Actions, and their Dividends secured by the annual Payment of Eight Millions from the Farmers-general of the Farm of Tobacco; the exclusive, perpetual, and irrevocable Privilege of vending which, was granted to the Company in 1723, and confirmed to them in 1725, together with the Profits arising from the Furs imported from *Canada*; so that the Fund for the Payment of their annual Dividends was as effectually settled and secured, as it was possible a Thing of that Nature could be in *France*.

In the mean time the Commerce of the *Indies* was assigned to them as a collateral Security, not to be touched for the present, but to be employed in strengthening and enlarging the Funds for restoring and maintaining that important Trade, discharging all the Incumbrances thereon, and putting it thereby in a Condition to become a certain and indubitable Security for the Payment of still higher Interest to the Proprietors than they have hitherto received. The Condition of the Company, therefore, considered in this Light, appears to be such as ought to satisfy all who have rational and moderate Views for the Security and Increase of their Fortunes, since though no more than fifteen hundred Livres have been paid in upon each Action, yet the Proprietors have constantly and regularly received their Interest of Ten per Cent. which is more than they could have made of their Money in any Part of *Europe*, and have still a clear and undoubted Title to the Profits that have arisen, or shall arise from the Commerce of the Company in the *Indies*.

It is indeed true, that hitherto they have received nothing upon this Head; but to ballance this, it is to be considered, that, till within these few Years, this Trade has been carried on in a very languid and negligent Manner; that since it hath been put on a better Foot, they have been obliged to repair the Losses sustained by the Shipwreck of some of their largest Vessels, to pay off abundance of old Debts, to discharge several Annuities, which the Company were obliged to pay, and which have extinguished very slowly, to rebuild and restore several of their Factories, which were in a very bad Condition, to repair many, to build some new, and to equip all the Vessels in the Company's Service, to purchase new Houses for the Establishment of new Factories, and to add proper Warehouses and Magazines to these; to lay out upwards of Fifteen Millions for the Improvement and Security of *Louisiana*; to complete the necessary Works at the noble Haven of *Port d'Orion*, and all the lesser Creeks, Docks, and other Places that depend thereupon; and to be at other very considerable Charges and Expences for supporting its Commerce, maintaining its Marine, subsisting its Forces, and keeping every where in good Order its Fortifications.

Whenever these great Expences shall have so far answered their End as to be no longer necessary, and the Affairs of the Company, in point of Commerce, are in such a Situation as that there is no imminent Danger to be apprehended, but, on the contrary, certain annual Profits coming in, there will be instantly added to the present Income of the Company, who will likewise enjoy all that Stock which has been raising both in *Europe* and the *Indies* for their Benefit. The rising or falling therefore of the Company's Actions, cannot any way affect its real Security, which depends, in the first Place, on those settled Funds before mentioned; and upon this Trade, which, before the present War, was in a very thriving and flourishing Condition. The common Notion therefore, which has so long prevailed in *France*, and might be very easily imposed upon Strangers, is, that the King has

ried on this Trade for many Years, and after paying a Part of the Profits, suffered all the rest to pass immediately into his own Coffers, or into those of the Directors, is an absurd and ridiculous Calumny, equally repugnant to Reason and to Fact, as well as utterly inconsistent with the express Words and direct Intention of the eleventh Article of the Edict of 1723, in which, after declaring the Company of the *Indes* to be a Society for promoting the Trade of the *French Nation*, to that Part of the World, under the Protection of the King, and the Administration of their own Directors, his Majesty proceeds thus: "Our Will and Pleasure is, that it shall remain, conformable to its Institution, a Company purely for Commerce, applying itself solely to the Support of that which is confided to its Care, and endeavouring, by its Wisdom and Oeconomy, to contribute as much as is possible to the Welfare of our Subjects interested therein; so that the Funds of the said Company of the *Indes*, shall be and remain for ever employed in the Maintenance of the said Commerce, and to no other End or Purpose whatsoever."

Such is the Description of the Situation of the *East-India Company*, as laid down to us by one of the ablest Pens in *France*, who tells us besides, that both the Security and the Interest of Money placed in this Company, are much better than when employed in the Purchase of Lands in *France*; for, says he, with respect to Security, the Purchaser of Lands has nothing more than his own and his Lawyer's Knowledge to direct him in the Assurance of his Title, and he can very rarely purchase at such a Price as to make more than five *per Cent.* of his Money, after which he runs very great Hazards with respect to bad Tenants, being forced to lay out large Sums in Repairs, besides risking the Inclemency of Seasons, which may put it out of the Power of his Tenants, how honest soever, to pay him punctually his Rent, and to the toll; so that he may very often be at a Loss for a Subsistence, and not know where to borrow Money, tho' at the same time a landed Man of so much a Year; whereas he who lays out his Money in the Actions of this Company, has double their Interest, paid him regularly and constantly every half Year, without having any Reason to be apprehensive of his Capital, or ever being in Danger of wanting Money by an unlucky Turn of Affairs.

We may easily judge, from this Representation of the present State of the Company's Affairs, that they are in a far better Condition, or at least were so at the breaking-out of the present War, than ever, and more likely to produce considerable Profits to the Nation, and to the Company, than ever. But, on the one hand, the natural Impatience of the *French*, unable to bear being put off for above twenty Years together with fair Words and fine Promises, and, on the other, their Apprehensions that either the King would never suffer them to enjoy this Commerce at all, or else would deprive them of the Fund they already possessed, and leave them to the precarious Dividends arising from Trade, has constantly kept their Actions, I will not say below the real Value, but much below what they would have been esteemed worth in this, or in any other free Country, especially after remaining for so many Years in so strict and regular a Course of Payment. But their continual Jealousies, as to the true Intention of the Crown, and as to the future State of their Affairs, has constantly kept them in a precarious Situation, in spite of the wittil Measures the *French* Ministers were able to take, the large Sums purchased by Foreigners, the frequent Factions in their Favour, and, which is still more extraordinary than all the rest, the regular coming and going of their *East-India* Fleets, and the vast Sums of Money they brought by their publick Sales.

Yet so far was this from contributing to make the People rich, whose Fortunes were engaged in this Undertaking, that they provided it administered sufficient Cause for all their Jealousies and Complaints. If, said they, the Company of the *Indes* be ours, it all this Money that we receive by publick Sales, if all the Improvements that we have made for so many Years are legally and indifferently disposed, and that they who direct and manage

why should we be kept so much in the Dark, why not have it in our Powers to call these People to an Account, or why not receive, from time to time, some Part of the Profits by way of Addition to the Dividends already made us? It was in vain to tell them, that all these Precautions were taken for their Sake; that the Company owed its Restoration to this Method of managing their Affairs; that they had visibly overcome by these Means most of those Difficulties which had been found insuperable in former Companies; and that this happy Progress of their Trade ought to make them perfectly content with regard to the Manner in which it was carried on, and give them entire Satisfaction as to the Integrity of such as directed their Affairs.

It was in vain, I say, that these Arguments were used, or that Scheme of their Circumstances, which the Reader just now perused, submitted to their Consideration; the Proprietors remained firm to their old Opinion, and their Suspicions could never be got out of their Heads, till that very Mischief fell upon them which they had so long apprehended; I mean, the Suspension of their Dividends, which, however, produced that general Account for which they had so long clamoured. But before we come to speak of this, it will be requisite to resume the History of the Company's Affairs in the *Indies*, and to give a succinct View of the real Improvements of their Commerce, which will both support what has been already said, and render the Close of this Section more intelligible.

14. At the Time the Company of the *Indies* was formed in *France*, their Affairs in that Part of the World had taken a very bad Turn; for their sovereign Council, which had been established at *Surat*, was suppressed, most of those Colonies sunk to nothing, many of their Factories in the same State, and the rest declining in such a Manner, as that little better than an entire Extinction could be expected, and that too in a very short Space of Time. This was undoubtedly a very melancholy Situation for the Servants of the Company to be in, who, while they meditated nothing more than how to obtain a Passage home to *Europe*, and an Indemnification for the Debts contracted in the *Indies*, at least with respect to themselves, were surpris'd by the Arrival of three Ships, not only laden with the richest Merchandize of *Europe*, but also with very large Quantities of Silver; so that they were immediately in a Condition to discharge a great Part of their Debts, which it did not restore it, at least revived their Credit, and gave them some Degree of Reputation in the *Indies*. It is requisite that the Reader should know how this strange Alteration happened, and the Secret is no more than this. When the Regent executed his Scheme, the Company of the *Indies* being the principal Machine in the use of, there consequently came into the Hands of that Company a considerable Part of the Plunder of the Publick, which enabled the Directors to fit out these three Ships in the manner before-mentioned, not only with the Consent, but to the great Satisfaction of the Government, inasmuch as it made a Shew of Trade, and thereby kept up the Spirits of the People, and gave a Reputation to the Company at home. But this, however, did not last long, for Reasons we shall quickly shew.

This Treasure was not employed in Commerce, but in discharging the Debts contracted by the old Company at *Surat*, at *Cambaya*, at *Beugal*, and other Places; so that the Returns made to *France* were but very inconsiderable, in Proportion to the Cargo sent out. But this was not all; for, before these Returns arrived, the System, as it was called, was intirely overturned; so that, taking all Things together, the Company, in the two succeeding Years, 1721 and 1722, were not able to send to much as a single Ship to the *Indies*, which exposed them to the Contempt and Scorn of the trading Nations in *Europe*, and subjected such as were in their Service in the *Indies* to the Insults of the *English* and *Dutch*, who did not fail to present them to the *Indians* as down-right Bankrupts, without either Effects, Money, Credit, or Reliefs. We may therefore truly affirm, that in the Year 1722, the Affairs of this Company were in the lowest and most deplorable Condition.

The Directors at Home, however, represented their
Difficulties to the Government in the strongest Terms
possible, and at the same Time shewed, how prejudi-
cial it was to the Glory of the French Kingdom, that
Things should remain in this Situation, and that after the
Government had taken the Company under its immediate
Protection, it should be suffered to fall at once into Ruin,
without the least Effort made to sustain it. One would
have imagined, that the more natural Method would have
been to have had recourse, in this Situation of Affairs, to
the Proprietors themselves; but both the Directors and the
Ministry were lessible enough, that this would have been
attended with still worse Consequences, since by laying
open the true State of their Affairs, they would intalibly
have driven their Proprietors to Despair. Instead of ob-
taining a Subscriptions for putting their Commerce on a
better Foot, the French Ministry, sensible of the Truths
contained in this Representation, resolved to take this Op-
portunity, as they were in full Peace, to try what might
be done to retrieve Things in the Indies, and prevent the
entire Ruin of the Company, which was then justly appre-
hended. It was from these Considerations, that two Ships
were sent that Year, with an Assurance to such as were in
the Company's Service, that they might rely upon an-
nual Supplies from France, and that therefore they should
order their Affairs accordingly, and put their Debts into
such a Method of Payment, as might discharge them all
by Degrees, and from the Prospect thereof restore their
Credit for the present.

Things went on in this Way for about fourteen Years,
during which Time, sometimes three, sometimes four
Ships were sent every Year, and thereby the Affairs of
the Company were recovered, and restored, though but
slowly. They had still great Difficulties to struggle with;
for, in proportion as their Commerce revived, their Exp-
ences were enlarged, by their being obliged to re-settle
their Factories, and to establish new ones; so that in
all this Space of Time, there was very little, if any Pro-
fit accrued from their Trade; on the contrary, they ran
some Years into Debt, but not, however, without some
Prospects of future Advantages. But as the other trading
Nations in the Indies were entirely unacquainted with the
Secrets of the French Commerce, to judging by Appear-
ances only, they were fully persuaded that the French
Trade was in a flourishing Condition, because they saw it
viciously extended, and the Returns made to Europe far
more regular, and, at the same Time, much more con-
siderable, than they had hitherto ever been. Yet notwith-
standing all this, if they had gone on in the same Manner,
it would have been many Years before they had been
brought into such Circumstances as to have been able to
support themselves, and carry on their Trade upon their
own Bottom.

But in the Year 1737, M. Ory de Lucy, being at the
Head of the Finances, or Revenues of France, which he
has managed with most surprising Success, the Company
fell naturally under his Care and Protection. He saw
plainly, that greater Supplies were necessary to extricate
them from the Difficulties under which they laboured, and
therefore, having first made a strict Enquiry into the situ-
ation of their Affairs, and put them into the best Order
possible, he next furnished them with such Sums as were
necessary for enlarging and augmenting their Commerce;
so that in the short Space of two Years, he doubled their
Returns, and in three Years more, brought them to three
as much as they had formerly been. By his Management,
their Sales at Port de l'Orient became regular, and consi-
derable, increasing in such a Manner, that the publick
Sale, in the Year 1742, produced twenty-four Millions of
French Livres, or about one Million of our Money; be-
sides which, they reserved in their Magazines, Goods to
the Value of four Millions of Livres more; and the first
Ships that arrived in 1743, brought Home still a richer
and more valuable Cargo. This sudden and extraor-
dinary Change in the Company's Affairs alarmed and
amazed all Europe, but more especially the Maritime Powers,
who from without Concern, a Company that but
a few Years before was looked upon as entirely sunk and
destroyed, now rising into so high Credit as to supply in Eu-

rope; and on the other hand, this encouraged the north-
ern Powers to prosecute their Schemes of falling into
the East-India Trade with greater Warmth and Dili-
gence.

But what was still more extraordinary than all the rest,
the War did not seem to affect the Company so much as
might have been expected; for their Dividends were still
regularly paid, and this kept up their Credit to such a
Degree, that so lately as Christmas 1744, their Actions
were at two thousand. But the War with Great Britain
increasing the Expences of France on the one hand, and
lessening her Income on the other, the Secret at last came
out, and Mr. Ory was forced to acquaint the Directors
of the East India Company, that the King's Affairs were
in such a Posture as would no longer permit him to sup-
ply the Company in the Manner he had hitherto done;
so that now they were to stand upon their own Bottom,
and to carry on their Trade for the future as well as
they could. This unexpected Stroke demolished the whole
Fabrick, which had been raising for so many Years, and
reduced the Actions of the Company to eight hundred;
neither has the Eloquence of Mr. de Ory, or the Arts
which the Court has made use of to recover the Proprietors
from their Fright, been able to carry their Actions
above one thousand, or at least very little above it, ever
since.

The main Cause of this was the Propositions made by
Mr. Ory to their Directors, that either the Proprietors
should subscribe such a Sum of Money upon their Actions,
or should suffer their Dividends to be postponed for a
certain Time, or that they should come to some Agree-
ment amongst themselves for compounding these two Meth-
ods, by advancing some Part in ready Money, and al-
lowing their Dividends to go in discharge of the rest. The
Motive that obliged the Ministry to this Discovery, was
the Necessity of having Money to carry on the East-India
Trade, which they knew must be ruined, even by a tem-
porary Stagnation; which Money, since the Crown could
no longer furnish, it was necessary that the Proprietors
should. But to this it was answered, that hitherto the
Proprietors had been no Gainers by that Trade, had no
general Accounts made up to them of it, nor, according
to the Condition of the Directors themselves, were to
have received any such Accounts, if this Accident had not
happened; by which they asserted, that their Properties had
already lost one half of their Value, and might very prob-
ably lose a Part of the other half; so that they were had
in a Condition to pay, when this Demand was made,
which would have been sufficiently grievous, even in the
most of Peace, and when their Actions were at the
highest.

To this it was replied, that they had no Reason to com-
plain of the King, or of his Ministers, who had hitherto
supported this Trade for their Advantage, without their
contributing to it at all. That if they had received as yet
no Profits from their Trade, it was because no Profits had
accrued from it; and that, not through any ill Manag-
ement in such as were intrusted with their Concerns, or be-
cause this Commerce had not been carried on to great Ad-
vantage, but by reason of that immense Load of Debts
which lay upon them, at their first Establishment, and
which the Profits of the Trade was obliged to pay off,
and the prodigious Expence the Company had been at,
both in Europe and in the Indies, for putting their Com-
merce on a solid and certain Footing. That to put all
Doubts upon this Subject entirely out of the Question,
and that they might be satisfied of the Truth of these Par-
ticulars, a general Account of their Trade should now be
laid before them, by which they would, in the first place,
see, that, tho' slowly, it had been continually improving,
and that of late Years especially, it had risen exceed-
ingly.

In the next place, they might be satisfied, that even at
present, it was so far from being in a desperate Condition,
that notwithstanding an enormous Sum was necessary for
carrying it on, yet there was no Danger of their being called
upon for another Supply, since what was now asked would
be sufficient to put the Company upon a Condition to main-
tain it, without any more upon their Dividends, which
they had,

All the good Effects however which it hath produced to this Company, are like to vanish into Smoke, by Means of the present War, which has been equally fatal to it at home and abroad: For at home it has occasioned the high Demand for Money, which has brought on the Suspension of their Dividends, and thereby the Ruin of their Credit; and the Blow struck by Commodore *Barnet* in the *Indies*, and the Loss of the Ships taken at *Cape-Breton* has gone so far towards the Ruin of their Commerce abroad, that another such Stroke will go very near putting an End to it: For the *French*, like other People of lively Tempers, are easily discouraged; and if once, after all the Care has been taken of it, their present Company of the *Indies* should fail, they would infallibly despair. This sufficiently shews the Consequence of making a proper Use of our Naval Force in a War with that Crown; since, if we destroy the Commerce of *France*, we must necessarily enlarge our own. There is so much the more Force in this Argument, because Trade in that Kingdom is a new Thing a Thing, which, as we have abundantly shewn, they have nursed with the greatest Care, and yet have raised with the utmost Difficulty; so that if it can be overthrown, they are set back for twenty or thirty Years at least, which is a Thing of far more Consequence to us than all the Conquests we can gain upon the Continent.

To say the Truth, our Title to *Martin's Power* is that which we ought chiefly to regard; and as it is impossible to succeed in all, if we engage in too many Designs at once; so, if we fix our Attention upon this, and pursue it with Vigour, we shall find that it will have a better Effect, both with Regard to ourselves and our Allies, than if we diverted our Views to other Objects, which, at first Sight, may appear of equal Importance. The Truth of this will be clearly discerned, if we consider that the increasing of our Naval Power will render us more formidable than any thing else, and the recovering and extending our Trade, prove the surest Means of bringing in Riches. The former will render us most dreadful to our Enemies, as the latter will make us most useful to our Friends. While we are able to carry Terror into the most distant Parts of the World, our Foes can never be out of our Reach; and

while we can, without empowering ourselves, grant timely and suitable Assistance to our Allies when attacked, there is no Danger either of the disturbing domestic Quiet, or losing the Balance of Power. For whatever speculative Politicians may pretend, we must derive our Title to both from the Superiority of our Fleets, and the Wealth of our Subjects. Arbitrary Governments may attain Strength and Influence from other Maxims; but a free People never.

It is our peculiar Happiness, that the Glory of the Crown, and the Interest of the People, depend upon the very same Thing; so that whatever advances one, must necessarily enlarge the other; and what diminishes this may, sooner or later, destroy that. In *France* the Government is obliged to take unwearied Pains for the Encouragement and Protection of Commerce. In *Great-Britain*, again, this may be entirely spared; for, provided the Government does not oppress Trade, private Men will carry it on with all the Success that can be wished for; and the less the Hand of Power meddles therewith, so much the better. This shews, at once, the Difference between other Constitutions, and the Excellence of that under which we live. It is to this Constitution that we owe our Trade being natural to our Island. It is to their living under a different Constitution, that the *French* feel, by Experience, the Difficulty of carrying on Commerce to any Advantage. If ever our Trade fail, it must be owing to ourselves; it ever theirs flourish, it must be the Effect of Accidents, or rather of Miracles. In short, nothing but Tyranny, under the Mask of Corruption, can possibly hurt the Commerce of this Nation; whereas nothing but the wise and gentle Administration of despotick Power, can possibly raise the Trade of that. These Reflections shew sufficiently what we have to hope, and they have to fear. They arise naturally from the Subject; they are of the greatest Consequence to my Readers, and if by dint of these Reflections, founded upon Facts, I shall be able to impress them as strongly upon their Minds as they deserve, my End will be fully answered. In the mean time, having executed all that was proposed in this Section, I shall proceed with as much Brevity as is possible, to finish the few that remain, in order to make this Volume complete.

SECTION XXXVI.

A succinct, but complete History of the Rise, Progress, and Suppression of the Imperial Company of the Indies, established at Ostend, by the late Emperor Charles VI.

Collected from private Memoirs, as well as publick Histories and Acts of State.

1. *The first Grounds and Beginning of this Trade from the Austrian-Netherlands to the East-Indies, and the Difficulties with which it was attended from its Infancy.* 2. *The Plan of its first Charter, and the Motives which induced the Court of Vienna to consent to its Establishment, set in a true Light.* 3. *An Account of the Reasons alleged by the States-General for its Abolition, and an Extract of the Memorial presented by their Minister on that Subject to the Court of Vienna.* 4. *The Use made of that Memorial by the English East-India Company, to obtain an Act of Parliament to prevent the Subjects of Great-Britain from having any Concern in the Capital of that Company.* 5. *An Abridgement of the Imperial Letters Patent for the Establishing of the said Company, with a concise Account of the Privileges granted to the Proprietors.* 6. *The Approbation raised by this Establishment, in Great-Britain and Holland, and the Methods used to overturn it.* 7. *The Kings of France and Spain also take Umbrage at this Company, and publish their Disapprobation of it to all Europe.* 8. *The Emperor and the King of Spain being judiciously reconciled, conclude a Treaty of Commerce, by which the Ostend Company obtains the Protection of both Monarchs.* 9. *An excellent Memorial of the Dutch East-India Company, demonstrating the Incompatibility of this Treaty of Commerce with the Emperor's Title to the Netherlands.* 10. *The Grounds of the Treaty of Hanover concerted for the impeding the Execution, and defeating the Views of that of Vienna.* 11. *The Substance of M. Vander Meur's Memorial to the King of Spain, in Defence of the Rights of the Maritime Powers.* 12. *A succinct Detail of the remaining Part of this Dispute, and the Conduct of their High-Mightinesses.* 13. *The Letters Patents of the Ostend Company are suspended, by which the Commerce of the East-Indies is secured to the Maritime Powers.*

As soon as those Provinces which were formerly in the several Cities of *Holland* and *Brabant*, set their Heels at Work, to find out Ways and Means by which their Commerce might be extended through the Authority and Influence of the new Market. One of the first Things

Things that occurred to them, was the opening a Trade to the *East Indies*, for which they thought their Country, at least, as well situated, as either *Great-Britain* or *Holland*. In order to make Trial of this, they first of all formed a private Company, without Patent, Charter, or even Licence from the Imperial Court, which, notwithstanding, was thought to have advised them to this Method, and furnished them with Passports. They had, however, but very indifferent Success at the Beginning, one of their Ships being taken on the Coast of *Africa*, richly laden, on the 8th of *December*, 1718, by the *Dutch*.

This Accident had very probably dashed their Hopes in the very Beginning, if they had not been encouraged by *Vianna*, with a Promise of Letters Patent, and Leave immediately given them to take in Subscriptions. The Emperor went yet farther, and demanded Satisfaction of the *States-Generall* for this Infract offered to a Vessel provided with his Passports; but before that Complaint was well laid before them, a fresh Occasion afforded room for another, the *Dutch* having seized a second Ship, and showing very little Inclination to give Satisfaction for either. Upon this, the Merchants at *Ostend* applied for Commissions, that in case of any further Infracts, they might, at least, be in a Condition of defending themselves. This being looked upon as a very reasonable Request, was readily granted them, and in Consequence thereof, one of their Vessels, well armed, took a *Dutch* Ship, and brought her into *Ostend*. The *States* did not fail to make loud Complaints of this to the Governor-Generall of the *Spanish* Low Countries, who answered, that the Merchants of *Ostend* had done no more than they were entitled to do by Virtue of his Imperial Majesty's Commissions, in order to obtain Satisfaction for their Losses.

This gave to much Credit to the new Company, that in the Year 1721, they equipped five large Ships for the *Indies*, and the Year following, they had out six more, three for *Ceina*, one for *Malac*, another for *Surat*, and the Coast of *Malabar*, and the sixth for *Bengal*. This irritated the *Dutch* to such a Degree, that they immediately fitted a Vessel richly laden by the Merchants of *Bruges*, and ordered her Cargo to be sold, notwithstanding the Approaches of the Imperial Commissioners at the *Hague* to prevent it. This Misfortune was followed by another, an *English* Privateer taking very soon after on the Coast of *Madagascar*, an *Ostend* homeward-bound Ship, very richly laden from the *Indies*, which discouraged the new Company, that they ordered a new Ship, they were then building, to be laid up.

But in the Months of *May* and *June* 1722, they received two Ships from the *Indies*, and in the Month of *September*, two more, the Companies of which being excluded to pass, went off at a good Rate, that they found could give no reasonable Return for all their Losses, but were a common to carry on their Commerce with greater Spirit and Success than ever. The only Thing they wanted, was a legal Establishment, for, tho' the Imperial Court had for a long Time flattered them with the Hope of Letters Patent, yet they had heretofore declined to do so, to avoid a disagreement with the *Netherlands* Power.

At the Arrival, however, of these last mentioned Ships, the Company having Money then in Hand, and very powerful Friends at the Court of *Vienna*, resolved to apply to the Emperor, that might put their Affairs on the best Footing possible, and with this View, they left some of their Directors to Court, very well furnished with Instructions, as also with other Credentials, no less necessary to them, than most other Courts, viz. Money for consideration of the Emperor, and Money. These Gentlemen managed their Affairs with such Discretion and Prudence, that they obtained a Promise of a Charter as extensive as they could wish, or any Company in *Europe* had ever received, tho' the Emperor was immediately drawn, and gave them entire Satisfaction.

This Charter was to have consisted of several Articles, Importing first, that the Directors should be fixed to the Number of Eight, to be choic'd out of the wealthiest,

most reputable, and best experienced Merchants in the *Low Countries*; that they should be allowed four thousand Florins a Year Salary; that none of them should continue above six Years, or be capable of being re-elected, till they had been a full Year out of Office. Secondly, That a general Court of the Proprietors should be held every Year for the Choice of Directors, whom the Company should name twenty four, out of which List the Emperor should choose eight. Thirdly, That the Court of Directors, the Treasury, and Books of Account belonging to the Company, should remain the first three Years at *Antwerp*, and the next three Years either at *Ghent* or *Bruges*, but that their sales should be constantly made either at *Ostend* or *Bruges*. Fourthly, That the Company's Capital should consist of ten Millions of Florins, and should be divided into ten thousand Actions, of one thousand Florins each. Fifthly, the Prizes which the Vessels in the Service of the Company should take in Time of War, were to belong entirely to the Company, and were to be sold and disposed of for their Profit. Sixthly, All the Ammunition, Provisions, Artillery, and naval Stores, requisite for the Forts and Factories of the Company, were to be exempted from all kinds of Duties and Impositions in their Passage through the Custom's, either of his Imperial Majesty, or of any of the Emperors, or Ecclesiastical Communities in the *Low Countries*. Seventhly, That the Goods transported on Board the Ships of the Company, should pay for all Customs and Duties Inward and Outwards, four per Cent. and no more, till the Expire of the Month of *September* 1724, and from that Time six per Cent. for ever.

The Emperor likewise promised, in which he also kept his Word, to send a Person well skilled in a publick Character to the Great Mogul, in order to settle an Alliance with him, and to return him thanks for the Privileges he had granted the Company, not only to erect a Factory, but also a Fort, to protect their Commerce in his Dominions. The Prospect his Imperial Majesty had of enriching his Subjects in the *Low Countries*, and augmenting the Revenues he drew from thence, by fixing to extensive and profitable a Commerce there, engaged him to allow the Agents of that Company of all greater Favour. He even intimated, that he would remit all Customs and Duties for three whole Years, and would likewise allow the Proprietors a Present of three hundred thousand Florins in ready Money, to signify his satisfaction in a full and successful prosecution of the said Establishment of their Commerce.

When all this good News came to one, who in the *Netherlands*, it called such a Spirit, not only among the Merchants, Bankers, and other Persons concerned in Trade, and in Money; but also among the Nobility and Gentry who had Fortures and Estates in the *Netherlands*; that they showed an eager Inclination to exert themselves to the utmost in the Support of the new Company, of the Success of which, they found to be no longer any Doubt. It was not to be said, however, costerly, that it was not the Inclinations only of these Proprietors, and of other Subjects of his Imperial Majesty, that encouraged the Undertaking, but Strangers and particularly the *English*, *French*, and *Dutch*, who were concerned in the Support, also in the Management of the Company's Affairs, notwithstanding that they well knew they could never profit, but that the Expectation of their native Countries, and of the Establishment of the same Commerce long ago erected in them, which heretofore had been carried on with great Profit and Reputation.

We need not wonder, therefore, that the Emperor, tho' the new Company at *Ostend* should be so many as to reach Nine and a half Millions of Florins, should be so ready to render the Support of this Settlement as a necessary Part of the general Policy of his Empire, as to give out the Patent for it; but it may, however, be said, that what was at first Sight, that the warm'd Inclination of the Allies of his Imperial Majesty, should be so readily consented in this Opposite to One, who was so very much against the Emperor's, the same Reason, tho' the Company, tho' other Princes and States have not approved the same.

1. That it is the Opinion of this Committee, that several Subjects of *Great Britain* have been concerned in promoting and carrying on a Trade from the *Austrian-Netherlands* to the *East-Indies*, and negotiating and establishing of a Company for that Purpose, to the great Prejudice of the Trade of this Kingdom.

2. That it is the Opinion of this Committee, that the House is desired for Leave to bring in a Bill, effectually to prevent his Majesty's Subjects from subscribing, or being concerned in encouraging or promoting any Subscription for an *East-India* Company in the *Austrian-Netherlands*, or for the better securing the lawful Trade of his Majesty's Subjects to and from the *East-Indies*.

The fourth of the said Resolutions being read a second Time, was agreed unto by the House *Nominis contradicente*, and it was also unanimously ordered, that Leave be given to bring in a Bill effectually to prevent his Majesty's Subjects from subscribing, or being concerned in encouraging or promoting any Subscription for an *East-India* Company in the *Austrian-Netherlands*, and for the better securing the lawful Trade of his Majesty's Subjects to and from the *East-Indies*.

This Bill afterwards passed into a Law, under the Title of "An Act for preventing his Majesty's Subjects from subscribing, or being concerned in, or encouraging or promoting any Subscription for an *East-India* Company in the *Austrian-Netherlands*, and for the better securing a lawful Trade of his Majesty's Subjects to and from the *East-Indies*." We have already, in the thirty-third Section of this Work, given the Reader an Account of the Scope and Contents of this Law, upon which, therefore, it is not necessary that we should dwell longer here; only we thus observe, that, henceforward, the Maritime Powers looked upon themselves as equally obliged to prosecute this Affair with Vigour, and to oblige his Imperial Majesty to assent to the new Company in the *Netherlands*, as a Sacrifice necessary to preserve the Friendship of his ancient Allies.

2. But, notwithstanding the joint Solicitations of the *English* and *Dutch* Ministers, the Emperor seemed more and more determined to restrain his Ports; and therefore, in the Month of *August*, 1722, actually granted his Letters Patent to the *Ostend* Company, though with some Variations from the Plans fore-laid down. In the Preamble to these Letters, the Emperor not only took all the Titles of the Head of the House of *Austria*, but likewise that of the King of *Spain*; and, in particular, styled himself King of the *East* and *West-Indies*, of the *Golden-Trade*, &c. with a View, probably, to grant this new and ample Charter to the *Ostend* Company, which was established for forty Years, with Licence to trade to the *East-Indies*, *India*, and on all the Coasts of *Africa* on this Side, and on the other Side the *Cape of Good-Hope*, observe of the usual Customs.

The Capital however of the Company was, by these Letters, reduced to Six Millions of Florins, and the Number of their Attoms to Six Thousand; but, in other Respects, they had all the Powers and Privileges laid down in the Bill Propos'd, and many more: For they were permitted to build Forts and Castles in whatever Parts of the *East-Indies* they thought fit; they were also to furnish themselves with all kind of Arms, Artillery, and Ammunition, as they thought convenient. They were likewise to buy, sell, and equip Ships of what Size and Structure they thought proper, in any of the Ports of his Imperial Majesty's Dominions in the *Low-Countries*, *Flanders*, &c. where, as also to make Leagues, Treaties, and Alliances with the sovereign Princes and States of the *East-Indies* in the Name of his Imperial Majesty, with this Restriction only, that they should not make War on any Part of the world, without the Leave of his Imperial Majesty, or his Successors, first had and obtained.

The Confirmation of all these Privileges, Benefits, and Advantages, the said Company bound themselves to perform, as a Homage to his Imperial Majesty, his Heirs, and Successors, in every Generation, a Golden Lion of the weight of twenty Marks, being under the Crown of the Emperor, the Arms of the Company, which was to be worn on the right Arm, and with the territorial Globe

between his two Heads, surmounted by an Imperial Crown. Lastly, his Imperial Majesty undertook to protect and defend the said new Company against all who should unjustly attack them; and should, even in case of Necessity, employ the whole Force of his Dominions to support and maintain them in the full and free Possession of the Enjoyment of the Commerce and Navigation granted them by these Letters, and obtain for them full Damages and Satisfaction from any Nation, State, or Potentate, that should presume to trouble or disturb them; and should likewise, for the future, provide, in every respect, for their Safety and Welfare, by any Treaties, Alliances, or Leagues, into which his Imperial Majesty, his Heirs, or Successors should hereafter enter with any Powers whatever. Such was the Rule, and such the Establishment of this famous Company at *Ostend*, from which both the Company and his Imperial Majesty promised themselves to many and to great Advantages.

6. As soon as these Letters Patent were published and registered in the Sovereign Courts of the *Austrian-Low-Countries*, the Directors taking Possession of their Office, held soon after their first General Court, in which it was resolved, that the Books of the Company should be opened at *Antwerp* on the Eleventh of *August*, which was accordingly done, and that with such Success as surpris'd all *Europe*; for the next Day, by Noon, the Capital was entirely subscribed, and by the End of the Month of *August* the Stock of the *Ostend* Company was 15 per Cent. above Par. The Affairs of this new Society were no less flourishing in the *Indies*, where the Persons they employed, being most of them such as had served before, either the *English* or the *Dutch East-India* Companies, found Ways and Means to settle Factories with amazing Facility and Success, and to push their Trade in such a manner as very evidently shew'd, that if the Interests of such as oppos'd this Company did not get it suppressed in *Europe*, their Effects in the *Indies* would do little, unless they had Recourse to open Force.

The *Dutch East-India* Company was so far convinc'd of this, that, in less than a Fortnight, they presented to the States General, in which they kept any Measures, but plainly intimated, that as to the Establishment of this Company was in direct Violation of Treaties, to they ought to be left at Liberty to act, as if those Treaties no longer subsisted, and do themselves Justice by Arms, which it was every Day more and more apparent could not be obtained any other way. The States, however, were by no means inclin'd to break at once with his Imperial Majesty, it by any Method's possible they might avoid it, and therefore still continued their Applications at the Court of *Vienna*, in conjunction with *Great-Britain*, in order to obtain the Revocation of the Authority by which the new Company acted, or at least a Suspension of it; and in the mean time, they made such Laws at home, in Favour of their own *East-India* Company, as they thought requisite, to prevent any of the Subjects of their High Mightinesses from having any Concern, either in the Capital of the *East-India* Company in the *Netherlands*, or in the Management of their Affairs in the *Indies*.

As, on the other hand, the *Dutch* Company, tho' they did not proceed to direct Acts of Violence, took in a Manner that Part of the World, where their Power was so great, and so extensive, as gave this new Society great Trouble, by cramping their Trade, and rendering it a great measure precarious, in which they were to be excused by the *English*, that nothing but the Activity and Abilities of the Persons concerned in this new Trade, and their finding themselves in a manner deluded, if they did not succeed, could have kept it on for so long a Time, notwithstanding the Difficulties and Inconveniences which they every Day experienced.

7. But it was not only *Great-Britain* and *Holland* that exerted themselves with great Vigour against this new Establishment; for *France* likewise began to take Notice of a Scheme which threaten'd direct Destruction to that Establishment of the same kind, which was every Day seeming to erect, and therefore his most Christian Majesty's Council published a Declaration, dated the thirtieth

by an Imperial Crown, took to protect and all all who should un- in case of Necessity, mmons to support and possession of the Engraving granted them by full Damages and Sa- Potentate, that thou- by, and should likewise, respect, for their Safety ances, or Leagues, into rs, or Successors should whatever. Prussia and *Holland* t- Vigour against this rose began to take a more direct Destruction to it, which the was either his most Christian Ma- uration, dated the 16th of

August 1723, by which all the Subjects of the Crown of *France* were forbid to interest themselves in any manner whatever in the Capital of the *Ostend* Company, under pain of forfeiting three thousand Livres for every Act of Offence, besides incurring the Confiscation of whatever they should subscribe into the Capital of the said Company; and in case of a second Offence, the same Fine and Forfeiture, together with Banishment for three Years. By the second Article of this Declaration, his most Christian Majesty directed, that in case the Effects his Subjects might acquire by intersting themselves in the Stock of this new Company, could not be reached, so as to make them liable to the Confiscation before mentioned, then their Effects and Fortunes in *France*, should be liable to the like Seizures and Forfeitures, until the Sums in which they were so concerned in the *Austrian* Company should be raised and levied, and all this in the short, summary, and extraordinary Method described by the Royal Ordinance of 1670. By the third Article all Seamen, Manufacturers, Tradesmen, and in general all the Subjects of his most Christian Majesty were strictly prohibited and forbid to enter, in any Manner or Quality, into the Service of the said *Ostend* Company, on pain of Imprisonment and Forfeiture of all their Effects. By the fourth Article, all Persons whatever were prohibited from inviting, inhaling, or otherwise entering into the Service of the said Company, any of the Subjects of his Most Christian Majesty, in Quality of Officers, Soldiers, Seamen, or in any other Quality or Manner; as also to sell, or buy, or lend, or equip any Vessel for the Service of the said Company, on pain of the Pillory for the first Offence, and of being sent to the Gallies for the second, besides the Confiscation of all that should be thus bought or sold, and a Fine of three thousand Livres each on both the Buyer and Seller.

This Catholic Majesty likewise joined heartily with the Maritime Powers in this Affair, as appears plainly from a Representation presented to his *Britannick* Majesty by the *Spanish* Minister on the 26th of April, 1724, conceived in the clearest and most express Terms, and demonstrating fully the Injustice and Illegality of this new Establishment, by proving it utterly inconsistent with the Treaty of *Munster*, by which the Crown of *Spain* engaged not to disturb the Navigation of the *Dutch* to their *East-Indies*, in Consideration of a reciprocal Engagement on their Side, nor to disturb the Commerce of the Subjects of the Crown of *Spain* in that Part of the World. It was by these reciprocal Stipulations, that the Subjects of the Crown of *Spain* in the *Low-Countries*, were restrained from trading to the *East-Indies*: And it was under these Restrictions, that the *Spanish* *Low-Countries* were yielded to the Elector of *Bavaria*, and by *France*, with his Consent, to the House of *Austria*, upon express Condition, that this House should hold them in the same Manner, and under the same Restrictions as they had been held by the Crown of *Spain*; for which their High Mightinesses likewise engaged: So that if the *Ostend* Company might be legally established, it would turn as much to the Detriment of *Spain* as to that of the States General, contrary to the plain Meaning and Intention of all these several Treaties and Alliances made, as is most apparent for establishing and securing the Tranquillity of *Europe*, but, by this Contraction, if it could be put upon them, rendered hurtful and ruinous to all Parties save the Emperor alone, and destructive of themselves.

Such was the Representation of the Marquis de *Pozzo* *Buono* at the Court of *London*; and to clearly was his Catholic Majesty convinced, that the Establishment of the *Ostend* Company was utterly inconsistent with his own particular Interest, and with the general System of the Affairs of *Europe*.

But, in such less than a Year, the whole Face of Affairs was changed; his Catholic Majesty saw, or was persuaded by his Ministers to think he saw, his Interests in another Light; and he no longer took this in his Head, than the general System of Affairs in *Europe* must change likewise, and every State and Power therein, alter not only their Notions and Maxims, but their Politics and Conduct. To explain this, we must observe, that for

twenty-five Years together *France* had been struggling to set *Joseph* V. on the Throne of *Spain* and the *Indies*, notwithstanding the Pretensions of the House of *Austria*; in maintaining which, almost all the rest of *Europe* was engaged, and even at this very Time a Congress was sitting in the *Low-Countries*, and endeavouring to adjust and settle amicably the Disputes between his late Imperial Majesty *Charles* VI. and this same Prince *Philip* V. in whose Quarrels so many Princes and States had almost bled and exhausted their Subjects.

Yet such was the Obstinacy of both these Princes, that all the Methods their best Friends could employ, proved ineffectual for procuring a Reconciliation; when, of a sudden, they took a surprizing Resolution, not only of reconciling themselves, but of doing it at the Expence of their Friends; and as such violent and unnatural Motions generally exert themselves with extraordinary, not to say extravagant Force, so they not only concluded a Peace, but likewise a Treaty of Commerce, dated at *Vienna* the 11th of May, 1725; by which his Catholic Majesty sacrificed the Interest of *France*, to whom he owed his Crown; and his Imperial Majesty those of his Allies, to whom he was under to many, and to great Obligations, that they were scarce to be enumerated or computed. It was one great Design of this new and amazing Treaty of Commerce, to fix and establish the *East-India* Company at *Ostend*; not only by his Imperial Majesty's Authority, whose Interest visibly led him thereto, but also by that of his Catholic Majesty, to whose Interest it was directly repugnant, and, that as appears by the foregoing Declaration in his own Sense and Judgment, expressed in the clearest and most direct Terms.

This shews how weak and ridiculous a Thing it is, at least for free Governments, where it is always understood, that Power is to be solely exerted for the common Benefit of their Subjects in general, to interest themselves in the Support of any particular System which must always depend on the Wills and Inclinations of many arbitrary Princes, who, without any Regard to the Principles upon which such Systems are founded, or to the Obligation they are under to such free States as risk the Wealth and Well-being of their Subjects for establishing a d maintaining such Systems, think themselves at Liberty, not only to alter and change, but to subvert and overturn them whenever they see, or imagine they see, that greater Advantages are to be obtained by such Actions, how unjust or unworthy soever, than by readily adhering to their Allies. Such ever has been, and such ever will be the Fate of these Kind of Engagements, fatal to those who, from Principles of Probity and good Faith, constantly and justly observe them, and profitable only to those who keep their Promises, and observe their Treaties no longer, than till they can have their own Price for breaking them.

A Lesson this, that Reason has always, and Experience often taught us, though we have most unaccountably neglected to learn, or, at least, to practice it; but a Lesson never dictated to us in stronger Terms than by this singular Treaty of *Vienna*, by which two Princes, who owed their Power and Territories to the Friendship and Faith of others, gave up their Benefactors to a Prospect, and, as it proved a false Prospect too, of particular Advantages to themselves. However, upon the Conclusion of this Treaty, the *Ostend* Company seemed to be fixed upon to firm and solid a Foundation, that both Enemies and Friends concluded, that they were not to be moved or shaken, much less ruined and dissolved by any thing less than a general War: A Thing hard and difficult of Execution to the Maritime Powers, who were very unwilling to pull down the Work of their own Hands, and to destroy that Bulwark which with so much Difficulty, and such vast Expence of Blood and Treasure, they had erected for their own Security.

As, on the other hand, they were no less unwilling to see the Commerce of their Subjects torn away by the Violence of a Prince who had never been prevailed with this Power of ruining them, but by the Pains they had taken for his Preservation. But, to return from these Reflections, which, however, are very well worthy the Notice and At-

tention of the *English* Reader, and to return to Matters of Fact, and the Methods employed by the Maritime Powers, in Conjunction with *France*, which now, out of regard to its own Interest, very heartily joined them, for the pulling down this Edifice, which while it stood, threatened its Neighbours with the Loss of those Advantages that had for so many Ages rendered them considerable, and by maintaining the Wealth of their Subjects, and the Naval Power of their respective Governments, had placed them in a Condition to hold the Balance of Power, and to prevent the Madnets of ambitious Princes from reducing the Inhabitants of *Europe* into that abject State of Slavery, which renders *Africa* the most despicable, tho' in itself the richest, most populous, and most delightful Quarter of the Earth.

9. The *East India* Company in *Holland*, were so much alarmed at this Accident, and to terrified with the Thoughts of seeing this new Company almost in its very Dawn, on a better Foot than themselves, that they could not forbear once more representing their Apprehensions to their High-Mightnesses, which they did in a Memorial so closely worded, and in which all the Facts concerning this important Affair, are so fully and clearly set forth, that for the sake of avoiding Variety of Abstracts, we will give the Substance of these various Treaties therein to the Reader.

The Directors of the *East India* Company in this Country, having observed their Commerce in the *East-Indies* decline from Time to Time, ever since it hath been attempted in the *Spanish*, *Portuguese*, *and* *Dutch* Netherlands, to carry on a Trade in the *Indies*, have presented several Memorials to your High-Mightnesses, shewing, That the said *Netherlands* have no Right by Treaties to this Navigation and Commerce; that they never could claim it under the Kings of *Spain*, and that consequently they have it neither by virtue of the said Treaties, nor of these that have been made with his Imperial Majesty, and his Predecessor the Emperor *Leopold* of glorious Memory. The rather, since the chief Aim and Tendency of these Treaties and Negotiations was, that in the Countries and Dominions which his Imperial Majesty might acquire by virtue of the grand Alliance with *England* and this *State*, nothing should be attempted that might be more prejudicial to these two Nations, than if the said Countries had remained in the Hands of *Spain*. It was therefore very wisely stipulated by the Barrier Treaty, that his Imperial and Catholic Majesty should possess the *Spanish* Netherlands, in the same Manner as the Kings of *Spain* his Predecessors had done, and that their Commerce should be carried on in the Manner stipulated by the Treaty of *Munster*. But though the Directors could have heartily wished they had not been obliged by fresh Incidents to trouble your High-Mightnesses again by new Writings, seeing they flattered themselves, that his Imperial and Catholic Majesty would forbear carrying on that Commerce any farther to their Prejudice.

Yet they have seen with Grief, first, That the private Navigation begun some Years ago at *Ostend*, has been changed into a formal Company trading to the *East-Indies*, and authorized by an ample Patent; and secondly, That all sorts of Means are now used to improve and maintain this Company by Treaties with other Powers, to the great Prejudice of the Rights and Privileges the *East-India* Company in this Country has formerly obtained, as it evidently appears to the said Directors from the Treaty of Commerce lately concluded between his Imperial and Catholic Majesty, and the King of *Spain*, where it is said in the first and third Articles, "That the Men of War, and the Merchants Ships belonging to their said Majesties, or to their Subjects, shall be freely admitted to all the Ports, Coasts, Countries, and Provinces on either Side, without asking any previous Permission, which extends also in a special Manner to the *East-Indies*, where they may ask for every Thing necessary for Navigation, with this singular Restriction, with respect to the *East-Indies*, that it shall not be allowed to carry on any Commerce in each others Dominions, and that the Men of War, especially in those Countries, shall behave themselves so, as not to give to the *Spaniards* any Cause of Fear or Suspicion." 'Tis more-

over said, in the thirty-sixth Article of the said Treaty, "That his Imperial and Catholic Majesty's Ships and Subjects, shall be allowed to import into, and sell in all the King of *Spain's* Dominions, all sorts of Fruits, and Effects and Merchandizes, brought by them from the *East-Indies*, provided it appear by Affidavits of the Deputies of the *East-India* Company established in the *Asyrian* Netherlands, that the same came from the conquered Places, Colonies or Factories of the said Company; in which case they shall enjoy the same Privileges granted to the Subjects of the United Provinces by the Treaty of *Munster* in 1648, both with respect to the *Indies*, and any other Thing applicable to the said Treaty, and which shall not be contrary to it, any more than to the present Peace." Which by the forty-seventh, or last Article of the said Treaty, is moreover extended, "To all what the *British* Nation has stipulated in their Favour by the Treaties of 1667, 1672, 1713, and last of all, by a certain Treaty and Convention, the Day and Date whereof are not expressed, so far as it may be applicable to the Emperor's Subjects." Moreover, "To all what has been granted to the *States* of the United Provinces, not only by the Treaties of Peace of 1648, but also by the Treaty of *Marine* in 1650, and the Treaty of Peace 1714." With this Addition, "That all these Treaties shall serve as a Rule in doubtful Cases, or such as are omitted, or not plainly expressed in the present Treaty between their said Majesties."

Upon which doubtful Cases, and which are passed by in Silence, it may be pretended and established in the first place, that his Catholic Majesty has been willing to grant to the Imperial Subjects by the second Article, free Access to all the Countries, Sea-ports, and Places of his Dominions, seeing that neither in that Article, nor in the whole Treaty, any express Restriction, or Exclusion are found, which are inserted in all other Treaties of that Nature, to wit,

That this is only to be understood of those Countries and Places which the King possesses in *Europe*, or those where other Nations have always had a free Commerce, as it appears by the fourth Article of the Treaty of Trade concluded by the King of *Spain* and this *State* in 1667, where it is said, "Which the said Lord the King understands to be restrained and limited to the Kingdoms, Countries, Dominions and Lordships, which he holds and possesses in *Europe*, and other Places and Ports where the Subjects of the Kings and Princes his Allies trade." Moreover, by the Treaty of *Munster*, in the fifth Article it is said, "That the Directors and Commissioners of the *East* and *West-India* Companies shall have free Access and Commerce in all the Countries within the King's Dominions in *Europe*, but all the *States* Subjects are not to frequent the *Castilian* Places in the *East-Indies*." And lastly, by the thirty-fourth Article of the Treaty concluded at *Utrecht* in 1714, between his present Catholic Majesty and this *State*, wherein it is expressly said, "Tho' it be mentioned in several of the foregoing Articles, that the Subjects on either Side may freely come to, frequent, Ray, sail to, and trade in the Countries, Lands, Cities, Ports, Places and Rivers, belonging to the above said respective contracting Parties; yet it is to be understood, that the said Subjects are only allowed that Liberty in their reciprocal Dominions in *Europe*, since it is expressly agreed, that as to the *Spanish* *West-Indies*, it shall not be allowed to sail to, or trade there, but pursuant to the thirty-first Article of the said Treaty." On the other hand, the like unlimited Terms are again to be met with in the thirty-sixth Article of the above-mentioned Treaty, between their said Majesties, wherein it is stipulated, "That the Emperor's Subjects shall be allowed to import into all the Countries and Dominions belonging to the King of *Spain*, without any Distinction, all sorts of Effects, Fruits and Merchandizes, from their Colonies and conquered Places in the *East-Indies*, provided they have the necessary Affidavits required by the said Article; in which Case they shall enjoy all the Privileges granted to the Subjects of this *State* by the King of *Spain's* Letters Patent in 1663."

Although the Directors of the *East-India* Company in this Country do not know of any other Privilege, but that which allows them to import the Products and Merchandizes from the *Indies*, into the Dominions the King of *Spain* possesses in *Europe*, or in such Places where all other Nations have a free Trade, and that indeed by certain Letters Patent issued by the King of *Spain* in 1663, it was enjoined, that at the entering of those Products and Merchandizes into such of his Majesty's Dominions where their Importation has always been allowed, Affidavits should be produced, to make it appear, that they are brought from the Countries, Colonies, and conquered Places our *East-India* Company is possessed of in the *East-Indies*, to the end they might be distinguished from the Merchandizes brought from the *Portuguese East-Indies*, *Spain* being then at War with that Nation. Yet your High Mightinesses Minister then residing at *Madrid*, strenuously opposed it, in the Name of the *State*, and having represented to his Catholic Majesty, the Impossibility of complying with this Demand, it was dropped in all Appearance, since they never heard, that the like Affidavits have been afterwards required in *Spain*, for the Produces and Merchandizes brought from the *East-Indies*.

But as these Things have in all likelihood been interpreted according to the ancient Practice, or that they might be susceptible of such a Construction from preceding Acts and Treaties, the Directors glance upon them occasionally, to shew only, that the implicit Meaning and Intent of these Articles is altogether unknown to them, or at least does not appear so clear as what is established in the abovesaid second Article, wherein, "The said free Access, and Resort to all his Catholic Majesty's Ports and Places is expressly extended to the *East-Indies*." Which the Directors do not remember to have been granted in such a Manner to any Nation whatsoever, and especially to the Subjects of this *State*, since by the fifth Article of the Treaty of *Munster* so often quoted, it is expressly stipulated, "That the Subjects of this *State*, shall forbear frequenting the *Catholic* Places in the *East-Indies*." This has been strictly observed ever since by the *Spaniards*, as it appears by a particular Case, the Directors had the Honour to lay before your High Mightinesses, by their Memorial in the Year 1720, viz. "That in 1687, a Ship belonging to their Company, having on Board two Friars, who had been ship-wrecked on the Coast of *Cbina*, and having at their earnest Request carried them to the *Philippine* Islands, the Captain of that Ship only demanded, on this Occasion, a small Provision of Water, which he wanted, by reason he had gone so much out of his Way; but instead of granting him this, or any other Favour, they ordered him forthwith to retire."

Hence it is manifest, how far the King of *Spain* was from designing, that his Sea ports and Places in the *East-Indies*, which extended no farther than the *Philippine* Islands, oserwise called *Manilas*, should serve for Staples, or Places of Refreshments to the *East-India* Ships, of this *State*, as knowing very well what might be the Consequence of it, but the Directors think they have a more particular Reason to complain of the said thirty-sixth Article, because the King of *Spain* grants thereby to his Imperial and Catholic Majesty's Subjects, not only all that has been granted, but moreover yielded to the Inhabitants of this *State*, by the Treaty of *Munster*, both in regard to the *Indies*, and otherwise, which they take to be directly contrary to the fifth Article of the said Treaty of *Munster*, by which it is stipulated, "That the *Spaniards* shall continue their Navigation within the same Limits, as at the Time of that Treaty, without extending it any farther in the *East-Indies*." As on the other hand, it was stipulated by the Treaty of *Utrecht*, in 1714, between his *Spanish* Majesty and this *State*, "That the Navigation and the Trade in the *East* and *West-Indies*, belonging to the Lords the *States-General*, shall be carried on in the same Manner as it had been practiced hitherto." Which proves evidently, that no Change ought to be made on either Side, with respect to this Navigation, whether it be by their own Subjects, or those of another Power, not comprehended in the fifth Article of the

Treaty of *Munster*, seeing the tenth Article of the Treaty of *Utrecht* lays moreover, "That the Prerogatives relating to the Navigation and Commerce in the *East-Indies*, expressed in the fifth Article of the Treaty of *Munster*, shall only concern the two high contracting Powers, and their Subjects, namely, *Spain* and this *State*, and no others."

So that the true Meaning and Intent of these Words appear plain and manifest by the Report of the Plenipotentiaries at the Congress at *Utrecht*, inserted in the Verbal and the Notes, or Resolutions of your High Mightinesses of the Fourth of *January*, 1714, in the same Terms: "First, upon the fifth and sixth Articles of the Treaty of *Munster*, which the said Plenipotentiaries looked upon as deserving some Remarks, as being applicable to others, saying, that the States and their Inhabitants ought indeed to enjoy all the Advantages stipulated by this Treaty, but that the other Nations, and particularly the *Hans Towns*, shall not partake of the same." A convincing Proof that the Exclusion, or Non-admittance of other Nations from enjoying what has been agreed upon by the fifth Article, about the Navigation and Commerce of the *East-Indies*, was the only true Aim of that Treaty; which having been thus inserted at the Request and Instances of the *Spanish* Plenipotentiaries, and agreed to by both Parties, it is not allowed to either of these two Powers to transfer this Right by Treaty, or make another Nation partake thereof without the Concurrence and Consent of the other Powers comprehended in the same Convention, and concerned therein. Besides that, after the King of *Spain* had once yielded in Favour of the Inhabitants of this *State* the Part of the *Indies*, which the privileged *East-India* Company possesses, with Promise that the *Spaniards* should not extend themselves on that Side, he has no Right to make over a second Time to other Nations, what his Majesty had formerly desired from by so solemn a Treaty, and which he has always left to the privileged *East-India* Company of this *State*, or to such who having been formerly his Majesty's Subjects, are also comprehended in the Article of Exclusion. Neither is he entitled to tolerate publicly, that the Districts yielded, and which have been peaceably enjoyed without any Lett from the *Spanish* Subjects, but frequented by Men of War and Merchants Ships, that Ports, Colonies, and Factories for Trade be set up there, and generally to do every thing that could be done had there been no Treaty, to the great Prejudice and impairing, if not entire Extinction of the Prerogatives of this *State* formerly stipulated and obtained.

And forasmuch, High and Mighty Lords, as the Directors of the *East-India* Company in this Country are more and more confirmed in what they did foresee long ago; that in case the *East* and *West-India* Company erected in the *Austrian-Netherlands*, will thus carry on their Navigation and Commerce, within the Limits of the Grant made to the *East-India* Company of this Country, and disturb the Commerce every where in the *Indies*, the Consequences of this Affair will every Day grow more important; and seeing, besides, that this Navigation and Commerce, with the Grant relating thereto, is now of late confirmed on the Part of the King of *Spain*, by an important Treaty, and highly prejudicial to the Commerce of the *East-India* Company of this Country; and that, in some Respects, the *Austrian* Company is favoured more than the Inhabitants of this *State*, they could not forbear representing at this Juncture their Grievances, most humbly beseeching your High Mightinesses to take them into your serious Consideration, and that you would be pleased, according to the Importance of this Affair, to use the most effectual Means, as well at the Court of *Vienna* as at that of *Madrid*, and elsewhere, where it might be of any Service, to have the said Grievances redressed, and that Navigation entirely put down, hoping withal, and expecting that it will not be taken amiss, that, seeing they cannot acquiesce to the new Grant and Treaty, they stick close to the ancient Treaty, and apply the same as a Rule, not only in Cases that are doubtful, or omitted, but in all other Cases.

10. In this Memorial we see, at one View, and in the most expressive Terms possible, the Nature of those Grievances under which the Maritime Powers laboured from this Treaty of Commerce, concluded at Vienna, and the Reasons which induced them to hope that they would be redressed. We see plainly that there could be nothing in Nature more plain & notorious to the Maritime Powers than the several Clauses in this Treaty, of which they complained, nor any thing more plain or self evident than the Rights upon which they insisted, of which the States-General were so sensible that they resolv'd to repeat their Applications at the Courts of *Vienna* and *Madrid*, in order to obtain Satisfaction and Redress. They were strongly seconded by the Courts of *London* and *Paris*, who, in the mean time however, considering how little Advantage had hitherto been obtained by the slow and pacifick Measures, resolv'd, if possible, to quicken them by some Step of another kind, which might convince both the Emperor and the King of *Spain*, that they were not to be treated with high Words, or to be persuaded out of their Properties, by the Parliament Agreements of other Princes.

They took Advantage therefore of the Disposition the King of *Prussia* was in, who, low with some Implication to be exorbitant, and as he convers'd, Anticonstitutional Power of the Emperor in *Germany*, the Consequences of which he thought might be fatal to the Prerogatives of Great Britain, of some Princes; with which Nations striking in, they concluded a defensive Treaty at *Hanover*, dated the 15th of June, 1724, which Treaty was to subsist for fifteen Years, and to which the States-General were to be invited to accede. That there is not the least mention in this Treaty of the *Offend* Company, yet in the second Article it being expressed, that the contracting Powers guarantee not only each others Dominions, Countries and Cities, as well in Asia as in *Europe*, but also all their Rights, Privileges and Advantages, particularly those relating to Trade, it was well enough understood, that under this Treaty particularly the *Offend* Company was included, since it was impossible it should continue to subsist, and the contracting Parties in this Treaty reserve their Rights and Privileges relating to Trade. As soon as this Alliance was concluded, it was not only made known to the States-General at the *Hague*, but they were likewise invited and press'd to come in to it, as the most effectual, and indeed the only way of preventing what they, or all other Powers were most intirested to procure, viz. the Abolition of the *Offend* Company.

For when the Emperor and the King of *Spain* concerted to assist united, and the rest of the Princes of *Europe* connected by any counter Alliance, it was most evident, that they had it in their Power to give Law, and to do what they pleas'd, with that Power it was likewise very visible they intended to use for many Purposes, and lately irreconcilable to the Interest of other Princes and States, more especially in the Case of this Company, which stood now upon such a Foundation as might have enabled it, in the course of a few Years, to have intirested itself against any Prince that could have been thought to disturb it: of this we may be easily sensible, if we consider that never any Establishment of this kind was possess'd of equal Advantages, or supported by the Authority of two such Potentates. Neither for the Time it continued did ever any Company rise into such an extensive Trade, or make so rapid a Progress as this of the *Offend* Netherlands. So that it is possibly had it been left to itself, or been supported only by the ordinary Methods of Memorials and Applications, it would have risen to such a Height as it will have a double Reason, who from narrow and particular Views, might not see a possible Remedy.

But it is not to be thought, however, that they could not help acknowledging the general Equity, the Wisdom and Prudence of the Treaty of *Hanover*, yet they did not immediately acquiesce in it, but on the contrary, resolv'd to try to obtain the Repeal of it, by applying to the Court of *Madrid*. It was with this View that they directed Mr. *Vander Meer*, their Ambassador at that Court, to present a Memorial to the King of *Spain*, in the following Manner that was done then by him, viz. That by the Treaty which the Emperor, which Nations

was actually possess'd on the 4th of Nov. 1713, and as it is intirested out of the most injudicious, as well as one of the plainest Papers that apply'd in this whole important Controversy, in which the whole commercial Interest of *Europe* were at Stake, we shall, omitting those Parts of it which are purely Matters of Form, insert, as the best Account that can be given of this Matter, and therefore in the following Paper which we shall mention upon this Occasion. But it may be proper to put the Reader in mind, that Mr. *Vander Meer* presented this Memorial only in the Name of his Masters the States-General, yet it contains likewise the Grounds of Jealousy and Disaffection given to *Great Britain*, and therefore concerns us as much as it did them; and it is very possible there may come a Time when these very Points may again concern us again. The Arguments we used were these that follow.

11. Treaties being understood to be the Basis and Foundation of the Union of Nations and Potentates, it seems just, that each Party should make it an inviolable Law, not only to forbear all open Infraction of them, but likewise not to alter them in any manner, nor permit their Ministers to make use of Subterfuges for explaining the Intent and Articles of them in another Sense than what was intended at the Time of their mutual Conventions. It is with these Nations of good Faith that their High Mightinesses have always rigorously executed all they have stipulated, without changing or altering in the least Point any Article whatsoever; in doing of which Rule to themselves, to redress any Abuse, and give Satisfaction upon Complaint made, and causing Justice to their Subjects to be severly punished who pretend to deviate from the strict Observations of their Oaths, and as for entering into Engagements with other Powers, to the Prejudice of their Allies, whatever such Oaths have been made to them, they have given evident Marks to your Majesty of their perfect Attachments to your Interests, by retaining generally all the Advantages that were secured them if they would have gone into the *Quadruple Alliance*.

My Masters flattered themselves, that, that after such real and such particular Regards, they should find in your Majesty's Person, not only an Ally, but a line Protection against all those who should attempt any Infraction in the Treaties to their Prejudice. Nevertheless they are now the Grief to see Things bear quite another Face, and that far from being supported by your Majesty in their just and just Rights, in relation to their Commerce to the *Offend*, they had in your Royal Person the Protector of a Company, whose Commerce cannot subsist without running against their High Mightinesses Subjects and People, and whatever Favour your Majesty's Ministers may have in court, when they intirest that nothing has been granted to the Emperor which is not conformable to all the said Treaties, it is easy to demonstrate that it cannot be without a framed Contradiction, contrary to the Expressions of the Articles; for by taking them literally, and in the same they were pens'd, it is obvious to every Eye, how wide this new Treaty of Commerce is from the Aim of those who after such cruel Wars, and to much Blood shed, were retaining the Rights of the Republick, as well with respect to their Navigation to the *Indies*, as to their Commerce, and generally had at length conclude the Treaty of *Utrecht*.

I come, Sir, to these Demonstrations. By the second and third Articles of the Treaty of *Vienna*, in the said War, or Merchant Ships, belonging to his Majesty's Majesty, and his Subjects, are allowed to enter the Ports, and Ports of the Dominions of *Spain*, and of the *Indies* included therein to take in Refreshment, provisions, and generally whatever they may want for the service of their Voyage, with this sole Restriction, that they may not trade, or traffick therein. In the fifth Article of the same Treaty, it is said, that the Subjects of his Majesty may import and vend in the Territory, and Dominions of *Spain*, all the Goods, Merchandizes, and Products, which they shall bring from the *East Indies*, provided they shall produce a Certificate from the *India* Company of the *Offend* Netherlands, that those Merchandizes, or Products, are of the Growth of their Colonies and Conquests; giving besides, to the said

of the Emperor, all that was yielded to the Dutch, by the Treaty of *Munster* in 1648, and afterwards by particular Grants in 1693, and by the Treaty of *Utrecht* in 1714.

The forty-seventh Article of the same Treaty of *Vienne*, grants likewise to the said Subjects of the Emperor, all that the *English* obtained in 1607, 1673, 1713, and lastly, by a certain Treaty, or Convention, the Date of which is not specified, with this Addition, that in Cases doubtful, or not sufficiently clear, those Treaties should serve for a Basis, and Foundation; nor is it explained, that the Entrance of the Emperor's Subjects into the Dominions of the Crown of *Spain*, ought to be understood to comprehend only the Ports, Towns and Harbours, of your Majesty in *Europe*, and not those of the *Indies*, which Restriction is most expressly specified in the Treaties made with their High-Mightinesses, my Masters.

So that, under this Pretext, the Subjects of his Imperial Majesty would enjoy much greater Advantages, than any other Nation; for never was any Part permitted to frequent, in any Manner, under any Pretence whatever, your Majesty's Ports and Towns in the *Indies*. And for a Proof that this is observed with extraordinary Rigour, on the Part of *Spain*, it may suffice to relate, that in 1670, a Ship belonging to the *Dutch East India Company*, having taken on Board two Monks, who had been wreck'd on the Coast of *China*, and having taken away some of their Goods, the *Govornor* of the said Company, on that Occasion, desired the *Govornor* of *Spain*, to allow him to take in a little Water, of which he was not sufficient, because he had given his promise to carry the two Monks whether they had denied, which he refused him; Voyage; but far from obtaining his Request, he received Orders to retire immediately, without being allowed the least Retribement, which setting aside the Ingratitude of the *Govornor*, is an evident Proof, that the Kings of *Spain* have never understood, that the relating to Ports of their Dominions, ought to comprehend their Towns and Harbours in the *Indies*; whereas the Article being granted to the Emperor's Ships, is manifestly opposite to the Treaty of *Munster*, as is also the fourth sixth Article of the said Treaty of *Vienne*, by which it binds what has been already alledged above; your Majesty gives to his Imperial Majesty's Subjects, not only all that is granted, but even yielded to the Inhabitants of the Republick, by the Treaty of *Munster*, as well with respect to the *Indies*, as otherwise, which is also directly contrary to the sixth Article of the said Treaty of *Munster*, where it is said, that the *Spaniards* should limit the Navigation within the Bounds it was at the Time of that Treaty, without extending it further in the *Indies*, and this was confirmed by that of *Utrecht*, in 1714.

These Articles prove evidently that, that no Change ought to be made in that Navigation, on the one side, or the other, whether by the said Crown Subjects, or by those of any other Power, who is not comprehended in the fifth Article of the Treaty of *Munster*, concerning, further, that the tenth Article of that of *Utrecht* declares, that the Privilege, with respect to the Navigation and Commerce of the *East Indies*, comprized in the said sixth Article of the Treaty of *Munster*, shall have Effect only in what concerns the two aforesaid Powers, contrary, and their Subjects (that is to say, *Spain* and the Republick) not others. Accordingly, the same sense and Meaning of these Words appear clearly, by the Report of the Plenipotentiaries at the said Congress of *Utrecht*, inserted in the Journal, which is among the Acts of the Negotiations, where it is said, concerning the fifth and sixth Articles of the Treaty of *Munster*,

That the Intention of your Majesty's Plenipotentiaries was, that the *States-Generals*, of the United Provinces, and their Inhabitants, ought of Right to enjoy the Advantages stipulated by that Treaty, but that other Nations, and particularly the *Hanse Towns*, ought not to enjoy them, a certain Mark, that the Exclusion (or Non-Admission) of other Nations to the Enjoyment of what is settled by the fifth Article touching the Navigation and Commerce to the *East-Indies* was the only Aim of that Treaty. And seeing those Conventions were inserted at the

Request and Influence of your Majesty's Plenipotentiaries, and were agreed to on both Sides, one of the two Powers ought not to transfer his Right by a particular Treaty, or let another Nation participate therein, without the Consent and Concurrence of the other Power, who is particularly interested in the said Convention. Besides, *Spain* having yielded to the Republick, that Part of the *Indies* which it now possesseth, with a Promise, that the *Spaniards* should not extend the Privileges on that Subject, that *Spain* has no Right to yield a second Time to other Nations, what it yielded from, and yielded by to, to another Treaty in Favour of the Republick.

How is it possible then, that your Majesty's Ministers should permit those Articles to be inserted, without an authentick Permission to the *Queen's* Company, and by bestowing on them Privileges, which there would have been no Right to grant, had that Part of the *Netherlands*, which they inhabit, remained under your Majesty's Dominion. And seeing that the Kings of *Spain* had anciently the Power, and were in the Possession of excluding all the Subjects of their Dominions (except those of *Spain*) from the Navigation to the *Indies*, the Inhabitants of the *West-India* Settlements, who at that Time were their Subjects, were excluded, and it was only by the Treaty of *Munster*, that the United-Provinces obtained the Privileges they enjoy, with the mutual Consent, that the Division of the *Indies* being made, the two Parties were only to abstain from the Navigation within each others Territories.

Whereas it follows, that the Republick having engaged, that her Subjects should not navigate in the *Spanish Indies*, she at the same Time acquired the Right of excluding all the Subjects of the Dominions of *Spain*, and consequently those of the *Netherlands*, from the Navigation within their Territories, and the Treaty of *Utrecht* which was made on the said Occasion, is manifestly being such, that his Imperial Majesty should not be allowed to alter the same Conditions, because of *Spain* being so clear, that the Convention, by changing that which could not acquire any legal Privilege to the Republick, and contrary to all the Treaties.

Besides the express Terms of the thirty-first Article of the Treaty of *Utrecht* is, that your Majesty promises and engages, not to permit any foreign Nation whatsoever (and for any Reason, or under any Pretence whatsoever) to send Ships, or to trade in the *Spanish Indies*; but that on the contrary, your Majesty obliges herself to maintain the same Privileges, as they were granted by the King of *Charles* II. and conformable to the said mutual Law of *Spain*, which absolutely prohibits and interdicts all foreign Nations from entering into trading with those *Indies*, in which even the *States-Generals* had engaged to support and maintain your Majesty against all those who should have attempted to contravene. Whether therefore the Subjects of the *Netherlands* be considered as having been formerly Subjects of the King of *Spain*, or whether they be considered as Foreigners, the Articles authorize the granting them Privileges, opposite to the Terms of the mutual Treaties and Conventions between your Majesty and the Republick.

All these Considerations, Shew, as is also declared above following, that by the Treaty of Commerce between your Majesty and his Imperial Majesty, the Emperor's Subjects are permitted to trade in the *Indies*, which is entirely contrary to the Aim and Intention of the Articles of *Munster* and *Utrecht*. II. That by the said Treaty of Commerce, the Emperor's Subjects have obtained Permission to enter and trade in your Majesty's Ports and Towns in the *Indies*, under Pretence of the said Treaties therein, &c. a Thing which has always been referred to the Ships of their High-Mightinesses, respectively, by virtue of the Treaty of Commerce, and of other Treaties to their Prejudice. III. And your Majesty supports and authorizes the Establishment of a Company formed by the Inhabitants of a Country which was heretofore been under your Dominion, in specifically all the Prohibitions which were stipulated with regard to all the Subjects of the Crown of *Spain* (the *Spaniards* excepted) which is very different from the Terms of the Treaties, wherein it is declared, that your Majesty will not only

hinder all foreign Nations from trading in the *Indies*, but likewise that you will support their High-Mightinesses in all their Rights and Prerogatives in that respect; and Lastly, That your Majesty and their High-Mightinesses standing engaged to assist each other mutually for hindering any other Nation from going to trade in the *Indies*, it is evident, that neither of the two contracting Parties could have a Right to alter, or desist from those Articles, without the Participation and Consent of the other Party interested.

Sire, all the Considerations above mentioned, do, at this Time, form just Ground for the Complaints of their High-Mightinesses, my Masters, who cannot sufficiently wonder how your Majesty's Ministers (without making due Reflections on the manifest Contradiction between the Treaty of *Vienna* and those of *Munster* and *Utrecht*) could venture to grant so considerable Advantages to the Subjects of the *Austrian* Netherlands, to the great Prejudice of their High-Mightinesses, and if one may be allowed to say it, even to the great Prejudice of your Majesty, and of your People, who, if that continue, will in Time see themselves frustrated of the Advantages of their own Commerce, by that very Company which is now so signally protected. Their High-Mightinesses most earnestly entreat your Majesty, therefore, by my Mouth, to be pleased to order, that the most serious Regards, and the most suitable to the Importance of the Case, may be had to the present Remonstrances, well weighing how far these Contradictions to the Treaties of *Munster* and *Utrecht*, may in Time lead to all Consequences, and create Troubles in *Europe*.

Their High-Mightinesses are thoroughly persuaded from your Majesty's Zeal and Piety, that it was not your Intention to overturn the Rights and Prerogatives of the Republick, founded on such authentick Treaties, so that they can impute only to your Majesty's Ministers, the Attempts made against them by that of *Vienna*. But if your Majesty has not the Goodness to apply in Time the necessary Remedy, this Republick will find themselves frustrated of all the Advantages they had acquired at the Expence of so much Bloodshed, for the Support of its Navigation; whence it is easy to conclude, Sire, that Commerce being in general Part of the Basis and Foundation of the State, their High-Mightinesses can never desist in the least from the mutual Conventions of the Treaties of *Munster* and *Utrecht*.

They therefore flatter themselves, that your Majesty will be pleased to cause the Articles of the Treaty of *Vienna*, which are contradictory thereto, to be reformed, and will provide, that the *Ostend* Company may not in any Manner, nor under any Pretext, go, and navigate in the *Indies*, to the End, their High-Mightinesses, my Masters, may satisfy and calm the alarmed Minds of their People, who look upon this Treaty of *Vienna*, as the entire Subversion of the Rights and Prerogatives of their Commerce, and claim the Performance of the Treaties of *Munster* and *Utrecht*.

12. The Representation, however, though extremely clear and plain, had none of the Effects that were expected from it. Their Catholick Majesties had formed to themselves very extensive, but at the same Time very groundless Expectations from the Treaty of *Vienna*, and were therefore obstinate in their Resolutions of supporting it at all Events. The *Ostend* Company was visibly of no Advantage, but in its Consequences very likely to prove a great Prejudice to the *Spanish* Trade; but the Reason which induced the Court of *Madrid*, notwithstanding, to consent to the Support of it, was, the Assistance she expected from the Emperor, in the Execution of a favourite Design of her own, which was the recovering the Forts of *Gibraltar* from the Crown of *Great Britain*.

But the great and all-powerful Motive which induced *Spain* to act as she did, was, the vain Hopes of obtaining the Hearts of the House of *Austria*, the present Empress and Queen of *Hungary*, for Don *Carlos*, the eldest Son of the Queen of *Spain*, and at present King of the *Sicilies*. This Notion, tho' very indifferently founded, made such an Impression on the Minds of their Catholick Majesties, that nothing appeared to them in the Light of an Inconvenience, which they apprehended might contribute there-

to, and this it was that engaged them to comply so readily with whatever his Imperial Majesty demanded, and even induce them to make such Dispositions as looked like engaging in a War with the *Hanover* Allies. The Emperor, also, on his Side, shewed as great Obstinacy, and indeed, with more Reason; for all the Articles of the *Vienna* Alliance, were entirely in his Favour, and the establishing the *Ostend* Company, in the Manner he designed, was a Point of such infinite Consequence, both with respect to Honour and Interest, that we need not at all wonder he pushed it in the Manner he did, or that he laboured, by several Negotiations in the North, to engage most of the Crowns there in the Support of his Schemes, in which at first he had extraordinary Success, but by Degrees, the Aspect of Affairs was changed, by Measures which we shall next explain.

13. The *States-General*, seeing how little they were able to effect by Memorials and Representations, and beginning to feel daily more and more the bad Consequences of the Establishment of the *Ostend* Company, with regard to their Commerce in the *Indies*, took at last a Resolution of acceding to the Treaty of *Hanover*, notwithstanding all that their Imperial and Catholick Majesties could do to hinder it. They did accede accordingly, which very clearly demonstrated to the Courts of *Vienna* and *Madrid*, that it was impossible to prosecute their Designs farther, without running the immediate Hazard of a War. *Spain* seemed resolved to run this Risk, and actually committed Hostilities against *Great-Britain*, by besieging *Gibraltar*, with very little Effect however, and without any Assistance from the Emperor, who, on his Side, was unable to make the necessary Provisions for a Rupture, without the Assistance of such Supplies in Money from *Spain*, as at that Time she could not afford. The Court of *France* remained also steady to her Engagements, and appeared so willing to enter into a War against *Spain*, in Conjunction with the Maritime Powers, that this Court began to dislike exceedingly the Situation she was in, and to wish for a Peace upon reasonable Terms.

The Court of *Vienna* too perceiving that *Spain* began to open her Eyes to her own Interest, and having never had really any Inclination to comply with that Marriage, which their Catholick Majesties had so fondly set their Hearts upon, thought likewise of a timely Return to her old Friends, and those Engagements which had been formerly productive of so many Advantages. Things being in this Situation, it was not long before Preliminaries were settled, in which there was an Article that took away for the present those Apprehensions that the Settlement of this Company had raised.

It was some Time before it could be so worded, as to satisfy all Parties; but at length, the Preliminaries being absolutely settled and signed at *Paris*, on the 20th of *May*, 1727, the first Article of them ran thus, "His Imperial and Catholick Majesty having no other View than to contribute to the publick Tranquillity of *Europe*, and observing that the Commerce of *Ostend* has given Birth to Jealousy and Uneasiness, consents that there shall be a Suspension of the Charter of the *Ostend* Company, and of all Traffick between the *Austrian* Netherlands and the *Indies*, during the Term of seven Years." By the fifth Article of the same Preliminaries it was agreed, that the Ships which sail'd from *Ostend* before this Convention, the Names whereof were to be given in a List on the Part of his Imperial Majesty, were to be permitted safely to return home, and in case any of them should be taken, it was agreed, that they should be, *bona fide*, restored with their Cargoes.

It is unnecessary to pursue the political History of this Point any farther, since by this Suspension the *Ostend* Company was in fact destroyed, and tho' some Sales were afterwards made with considerable Advantage to the Proprietors, yet they lost the Power of continuing their Commerce, and the Maritime Powers carried their Point. Thus ended this troublesome and perplexed Affair, which had very near given Birth to a general War, and by which, as it has been very plainly and fully proved, that if his Lands had not been tied by Treaties, his Imperial Majesty might in a few Years have restored the Commerce of the *Austrian* Netherlands,

SECTION XXXVII.

The History of the Danish Commerce to the East-Indies, their Establishments there, the Decay of their Old Company, and the Motives which induced them to set up a New One.

Interpersed with Original Papers and Memoirs.

1. *The Danes anciently very powerful by Sea, famous for maritime Expeditions, and always remarkable for keeping up a considerable naval Force in the North.*
2. *Their first Voyages to the Indies, their Establishment on the Coast of Coromandel, their Forts and Town of Tranquebar, or Tincombar, and the Fate of their Colony there.*
3. *An Account of their long War with the Rajah of Tanjour, the Siege of Tranquebar, the Intrigues of the Dutch to the Prejudice of the Danes, and the Relief of that Town by the English, thro' the Generosity of Mr. Pitt, Governor of Fort St. George.*
4. *The History of the Danish Colony, continued down to the Time of the New East-India Subscription at Hambourgh on the Fall of the Ostend Company.*
5. *An Impartial View of the new Establishment, or the Incorporation of the new Company at Altona, with the Old East-India Company at Copenhagen.*
6. *Objections raised against that Establishment, and the Probability of its succeeding in its Commerce.*
7. *Answers to these Objections, and a farther Account of the Privileges and Immunities granted to the incorporated Company by his Danish Majesty.*
8. *The Opposition made to the New Company (as it was called) at Altona by the Maritime Powers, Memorials presented on this Subject to the Court of Denmark, and Issue of that Dispute.*
9. *The thorough Completion of this Scheme under the Auspice of the present King (then Prince) of Denmark, and Progress of this incorporated Company, from its Foundation to the present Time.*

THE *Danes* were anciently as remarkable for a Naval Force as any Country in the North, which manifestly appears, not only from their Chronicles, but ours. It was by this Means that they became Lords of almost all the Countries round about them, and were so formidable by their Fleets as to undertake various Expeditions into remote Countries. Thus, under the Name of *Norman*, they conquered a Part of *France*, and even settled themselves in the Kingdom of *Naples*. It is true, that the naval Concerns of *Europe* were then in a Condition very different from what they are now; yet this, instead of lessening, will, to a Man of good Sense and Consideration, rather increase the Difficulty; for if we find it so hard with all the Advantages we enjoy to transport a small Body of Troops to the opposite Part of the Continent, what must we think of the *Danes* landing such numerous Armies in this Island, in *France*, and in other Countries.

These Facts are not to be disputed, and, at present, it is not my Business to account for them; all I aim at is, to shew that the *Danes* had many Ages ago a great Maritime Power, and I believe Experience will shew, that where once a Nation has been possess'd of such a Power, and escapes being conquered by her Neighbours, she generally preserves some what of her ancient Spirit, which exerts itself more or less, as Occasions offer, and is never totally overwhelmed. If the *Danes* had applied themselves more to Trade, and less to foreign Conquests, they would have made a much more considerable Figure in *Europe* than at this Time they do, since it is certain that their being driven out of *Sweden* and Part of *Norway*, exhausted them extremely, and the Civil Wars in their own Country proved another great Cause of weakening their Force.

Yet they have never been totally deprived of Maritime Power, or of a Maritime Spirit, but have frequently shewn an Inclination to attempt considerable Discoveries in the Northern Parts of the World, to establish Colonies and Fisheries in those Parts, and have even made very long Voyages, with a View of extending their Commerce, it not with all the Success they could wish, yet with more than some of their Neighbours, and have been all more tenacious of what they acquired, as if they meant to retain these distant Conquests, till such a Government arose at home, as by paying due Attention to Trade, and just Encouragement to those who endeavoured to promote it, might be able them to turn such an Establishment to greater Advantage. By this Means they have been, and still are, in a Condition to embrace any Opportunity that offers, and will, in all Probability, sooner or later, distinguish

themselves as much by Commerce as ever their Forefathers did by Courage and Force, as from the Contents of the present Section, we shall evidently make appear.

It was very early in the last Century that the *Danes* thought of attempting a Trade to the *East Indies*, and about the Year 1612, King *Christian IV.* granted his Protection to a Company established at *Copenhagen*, for carrying on a Commerce from thence to the *Indies*. The Capital of this new Company consisted of two hundred and fifty Shares, of the Value of One thousand Rix dollars each, and about four Years afterwards they fitted out some Vessels for the *Indies*, with such Success that they established themselves on the Coast of *Coromandel*, at no great Distance from the *French* Settlement at *Pondicherry*. The Name of this Place is very differently written; the *Portuguese* and *Indians* call it *Tranquebar*, the *English* say it is *Tincombar*; but I take the true Name of it to be *Tranquebar*.

It is situated fifteen Miles to the Northward of *Angapatzen*, and enjoys a considerable Trade. The *Danes* have built here a regular Fort, faced with Stone, and surrounded with a deep Mote, which makes it esteemed one of the strongest Fortresses in the *Indies*. The Town also, which is about two Miles in Circumference, is surrounded with a noble Wall, faced with Stone, having large Batteries at proper Distances, mounted with Cannon. The Houses which the *Danes* and other *Europeans* inhabit, are of Brick or Stone, built all upon a Floor, but come short enough, the Streets are wide and bright, and paved on the Side with Brick; but the Houses of the *Indians* are very mean, having Clay-Walls, and thatched Roofs, as in most other Towns of *India*. The Garrison is not answerable to so large an Extent of Ground, consisting only of one hundred and fifty *Europeans*, or thereabouts, and some *Indians*, who are only fit to oppose Soldiers like themselves. In the long Space of Time however, that the *Danes* remained here, they collected together a great Number of *Indian* Subjects, who live very happily, and even grow rich under their Protection. They have likewise taken Care to make Proselytes to the *Christian* Religion of a great Part of those who live among them, and they have thereby bound them more effectually to their Service, so that their Colony is very considerable, and grows more to every Day, and this chiefly for the following Reason, that it supports itself, and pays the *Danish* Company Ten thousand Rixdollars a Year, by Way of Tribute.

Their Trade in this Part of the World has suffered various Alterations, being sometimes better and sometimes worse, according to the Revolutions that have happened in that Part of the World, and the Accidents which befall the Company in Europe. However, as far as I am able to judge, it was most considerable about twenty-four Years after it was first settled; for then, I find, a very eminent Dutch Writer comparing the Danish Trade to that of the English, and affirming that the former, with a little Application, might be made as considerable as the latter. The Reader will observe, that this was false in the Time of our Civil Wars, when, as we have shewn in our History of the English Company, their Trade declined exceedingly; so that it is not at all improbable, that this Observation might be then true. It is, notwithstanding, certain, that the Trade of the Danes was rather profitable to private Persons, such as the Governor of Tranquebar, and the principal Merchants employed there, than to the Publick; and the Reason was plainly this, that they seldom received any considerable Supplies from Denmark, and as seldom sent home Ships laden with the Commodities and Manufactures of the Indies; so that they subsisted chiefly by the Trade they carried on with their Neighbours, and into different Parts of Asia, since they sometimes lent Ships as far as China, from whence they obtained considerable Returns.

But they had from their first Establishment very great Difficulties to struggle with, being very often engaged in Wars with their Indian Neighbours, and very seldom upon good Terms with the rest of the European Nations settled in India, who, though they affected to despise and contemn the Danes, and to treat their Trade as very despicable and inconsiderable, yet they could not help envying them even the little Trade they had, to which, perhaps, the convenient Situation of their Fortrets might in some measure contribute, from a Persuasion that, in other Hands, it might become of much greater Consequence, more especially with regard to the Diamond Trade, for which, without doubt, it stands as well, or better, than any of the European Factories in that Part of the World.

But the most considerable War in which they were ever engaged, was towards the latter End of the last Century, when this Fortret very narrowly escaped being taken, of which, as it is the most remarkable Transaction of which I can obtain any Account, I think it will not be amiss to insist upon it a little more largely, the rather, because it was the principal Occasion of the old Danish Company running into Debt, and bringing their Affairs into a worse Condition than they ever were before.

3. The Ground of the War was this; the Danish Colony living on the Frontiers of the Indian Rajah of Tanjour, the Dutch stirred him up to attack and destroy it, promising him considerable Assistance under hand, and to give him a Lun of Gold, which, as we have elsewhere shewn, amounts to above Ten thousand Pounds of our Money, for the Place when taken. That this was a very base and barbarous Design, an English Reader will very readily allow; but it was, nevertheless, very well contrived, and had very near taken Effect; for the Indian Prince was very brave in his Person, esteemed by his Countrymen a good Officer, and had, without doubt, Troops enough to have done his Business, if he had not been prevented by the Interposition of Mr. Pitt, who was at that Time Governor of Fort St. George, who very generously assisted the Danes, from a Principle of Humanity, which ought to be applauded.

We have, by this Means, a tolerable Account of the whole Transaction, which I shall give in a few Words as possible. When the Prince of Tanjour had resolved upon this Enterprize, he assembled the whole Force of his Dominions, and marched directly towards Tranquebar, in order to attack it. The Indians were to extremely cautious, that they began to open their Trenches above a Mile from the Town, and carried on two Attacks; the Earth being a dry Sand, they drove down the Bodies of Cocoa-nut Trees, instead of Stakes, both on the Inside and on the out, and filled up the Space between them with Sand, so that their Trenches were almost as thick as a Town-wall,

and very high, so that they were perfectly covered from our Fire. They had about twenty or thirty thousand Men employed in this Siege; and with incredible Labour and Patience, in about five Months Time, they brought down their Trenches within Pistol-shot of the Walls, and with their Batteries had almost ruined one of the Ballions, when the English Reinforcements arrived. The Danes expected every Day an Assault, and were preparing to move their Effects into the Fort, and quit the Town; and indeed they gave the Enemy very little Disturbance, as far as I can learn, in carrying on their Works; for the Garrison did not consist of more than two hundred Europeans, as many Indian Portuguese, and about a thousand Blacks; and, besides the Fort they had to defend, the Circumference of the Town-wall was not less than a Mile and an half. It was faced with Stone indeed, but had no Ditch; and therefore the Danes, to prevent the Enemy's scaling it, had set high Pallisades upon the Top of the Ramparts.

A Day or two after the English arrived, a Sally was resolved upon; and about Sun-rise in the Morning, a Detachment of the Blacks marched out of a Ballion, and were followed by the English; but the Blacks were no sooner out of the Gates, than they opened to the Right and Left, and made room for the English to advance, never intending to engage themselves. A Body of the Enemy moved out of their Trenches to oppose our Troops, and came on in tolerable Order with their Broad-swords and Shields, without shooting an Arrow, or firing a Piece. They were all decently clothed in white Vells and Turbans, and seemed determined to engage our People hand to hand, in the Plain between the Town and the Trenches. The English Officers were in some Pain, seeing this Body of Indians advance with that Resolution, knowing their Men were several of them new raised, and mixed with Portuguese, on whom there is very little Dependence; But our great Guns from the Walls, beginning to play upon the Enemy, put them into Confusion, and they retired to their Trenches with much greater Haste than they came out. And our Men advancing, while they were in that Consternation, drove them still farther. But there being no Preparations made for levelling the Trenches, and the Day growing hot, the English retired into the Town, and the Enemy returned into their Works, without any great Loss on either Side.

A few Days after, it was resolved to make another Sally, with the greatest Part of the Garrison; and accordingly they marched out at the great Gate, which faced their principal Attack; the Black Soldiers, according to Custom, retired under the Walls almost as soon as they were out, to make room for the Europeans. The Enemy kept close in their Trenches firing at us; but between the two Attacks upon the Plain, there stood a considerable Body of Musketeers and Pike-men, against whom the English Commander thought fit to advance; but he had not marched many Paces before an unlucky Ball wounded him in the Middle of his Foot, which compelled him to quit the Field.

The next Officer thereupon took upon him the Command of the English, and led them towards the Enemy, who were drawn up in the Plain; that Body retreating, drew the English so far from the Town, that they were intercepted by the Moorish Horse; and the Danes, whom the English expected to have supported them, never advanced a Step. In this Exigency, the English Officer resolved to throw himself into the Enemy's Trenches, finding it impossible to retreat into the Town over the Plain; and having thrown some Granades into the Trenches, the Indians were so complaisant as to quit them, and make room for the English, who marched quite along them towards the Town, till they came to the Fall of the Works; but here they were met by the Moorish Horse; yet upon making one general Fire, in which great Execution was done, the Horse routed off, and left the English at Liberty to march on to the Walls, where they found the Danes drawn up in perfect Security.

In this Action, the English were one half of them killed or wounded. Among others, one of the Grenadiers, a drunken Shoemaker, received twelve or fourteen Wounds,

and yet was brought alive into the Town, and recovered. It was by this reasonable Assistance afforded them by the *English*, that the *Danes* preserved this Town and Fortrefs; for soon after, the Rajah of *Tanjour*, growing weary of a War that harrassed his Subjects, and brought himself no Advantage, retired into his own Territories, and left the *Danes* at Liberty to pursue their Trade as before.

4. They have since that Time remained in quiet Possession of this Place, and carried on the little Trade they have in Quiet. Besides the Town of *Tranquebar*, and the Fortrefs of *Danebourg*, which is a regular Citadel, with four strong Bastions, they have a small District of Country dependent upon them, the Inhabitants of which, partly *Moors*, and partly *Indians*, are their Subjects; and for the Education of their Children they have built and endowed a publick School, where they are taught all Kinds of useful Knowledge; and the *Danish* Missionaries being compleat Masters of the *Malabar* Tongue, preach in all the neighbouring Countries, and make many Converts. They have formerly built very good Ships here, which they not only employed in their own Commerce, but also let them out to their Neighbours upon Freight, which if it did not turn to a very great Account, it at least enabled them to subsist, and not only to keep what they had got, but also to enlarge and improve their Colony. I must not, however, forbear mentioning another Method by which as some of their *European* Neighbours suggest, the *Danes* made use of to better their Fortunes; and that is, their allowing their Ships to croize not only on the Infidels, but also on the Shipping of some Christian Nations, which, if true, it must certainly have been a most illegal and unwarrantable Practice.

But we must not yield too easy a Belief of such kind of Accusations, since it is very certain, that those who framed them were strongly prejudiced against the *Danes*, and from thence inclined to speak ill of them, whether with or without Foundation; and not only to speak ill, but also to use them ill, when it lay in their Power, as is evident from the Behaviour of the *Dutch*, not only in raising the War before mentioned, but in their Behaviour towards the People of *Tranquebar*, when in that distressed Situation; for the Enemy being possessed of the Springs by which the Town was furnished with Water, they sent Deputies to desire the Assistance of their Neighbours the *Dutch*, who, instead of complying with so necessary and reasonable a Demand, first whipped their Messengers, and then sent them back without Water. We may therefore justly suspect the Testimony of such People as were capable of an Action of this Nature towards their Fellow Creatures, when in such Distress. On the Whole therefore, I think, instead of wondering, that after above one hundred Years Possession of this Place, and of some other little Factories about it, they should be considerably in Debt, which is no more than what has happened also to their Neighbours, we ought rather to wonder, that the *Danish* Company were able to go on at all, especially since they received so little Assistance from home, and had nothing to depend on but their own Industry in the *Indies*, and the small Revenue arising from their Territories there.

5. We are now to open a new Scene, by relating what chiefly gave Occasion to this Section, I mean the establishing what its Enemies thought fit to call a new *East-India* Company in *Denmark*, the Occasion of which was this: Upon the Ruin of the *Ostend* Company, a *Dutchman*, whose Name was *Jesusa Van Afferen*, who had been concerned in that Affair, went to *Copenhagen*, where he applied himself to King *Frederick* the IVth, a Prince of great Goodness and Virtue, and who had nothing more at Heart than promoting the Welfare of his Subjects by all the Means that lay in his Power. The Scheme proposed by *M. Afferen* to his *Danish* Majesty, had a very fair Appearance, and great Probability of Success; he observed, that there was a great Spirit raised of opening a new Trade to the *Indies*; that many People, who were very well versed in that Trade, had engaged in the Service of the *Ostend* Company, the Success of which would unquestionably have answered their Expectations, if they could have carried it on; that the Causes of its Ruin were such as could

not attend that Project in any other Country, but least of all in *Denmark*, which had enjoyed an uninterrupted Commerce to the *Indies* for above a Century; that therefore there was nothing farther necessary to render the *Danish* Company as flourishing as those of *England* and *Holland*, than to increase its Capital, by opening a new Subscription upon advantageous Terms.

By the Force of these Arguments, the King was prevailed upon to suffer his Scheme to be put in Execution, and that it might be done more conveniently, the *Danish East-India* Company was transferred from the City of *Copenhagen* to the Borough of *Altona*, a Place belonging to the Crown of *Denmark*, but situated close to the rich and free City of *Hamburg*, and therefore made Choice of, upon this Occasion: In order to induce Foreigners to engage in this Undertaking, his *Danish* Majesty thought fit to grant a new Charter, dated in *April* 1723, for promoting the Commerce of the said Company to the *Indies*, *China*, and *Bengal*, the chief Articles of which were these, viz. The new Subscribers shall have an equal Share and Right with the old Members, in all the Concessions, Océroys and Privileges granted to the said Company by his present Majesty and his august Predecessors. And likewise in all the Ports, Settlements, Revenues, Houses, Magazines, Ships, Efforts, and, in short, whatever the Company is possessed of at this Day, or may acquire in Time to come. The old Shares, or Actions, which are in Number two hundred and fifty, of one thousand Rixdollars each, shall subsist and remain as they are, and will have the same Rights as the new Shares. The Directors shall declare, and affirm upon their Honour, that all the Debts of the Company do not exceed one hundred and sixty thousand Rixdollars in Specie. The united Company are obliged to discharge and pay the said Sum of one hundred and sixty thousand Rixdollars, upon Condition that the old Shares shall have no Dividends till the Year 1733.

Though there is no Question, that the Accounts of the Company are just, and that their Debts do not exceed the said Sum of one hundred and sixty thousand Rixdollars, it is nevertheless stipulated, That if the said Debts should appear to exceed the said Sum, the old Shares shall be answerable for the Overplus, and that the new Subscribers shall not be obliged to contribute thereunto. Each new Share shall be one thousand Rixdollars in Bank, or Specie, without twenty *per Cent.* shall be paid upon the Account of *M. Alexander Bruggner*, Banker at *Hamburg*, or in the Manner prescribed in the Project published by the Company at *Copenhagen*, *December* 16, 1727. If there was any absolute Necessity to make a further Call the present Year 1727, the same shall not exceed five or ten *per Cent.* at the farthest. The Call for the next Year shall not exceed twenty, or twenty-five *per Cent.* The Remainder of the Subscription shall not be called in without the Resolution and Determination of a general Court of the Company. If the entire Sum of the said one thousand Rixdollars, for the new Actions, is not paid in the Year 1738, the Proprietors of the old Shares shall have an Interest at the Rate of five *per Cent.* allowed them, for the Sum they have paid more and above the new Subscribers. There will be no other Actions than Shares of one thousand Rixdollars, and half Shares of five hundred Rixdollars each. Every Subscriber shall be allowed to take Shares for the Bearer, signed by the Company; and such as please, may have them inscribed in the Company's Books. There shall be paid for each Transfer two Rixdollars to the Company, and half a Rixdollar to the Post. The Creditors of the Company are allowed to take new Actions for the Sums due to them, provided they do not count on the said Debts thirty *per Cent.* for the present Year, for each Share, and twenty-five *per Cent.* for the next. The Shares they shall purchase on this Condition, shall have the same Dividends as the other new Actions. The said Shares shall not be liable to any Seizure, or Stop, upon any Account whatsoever, as it is declared in his Majesty's Océroy.

The Directors shall yearly communicate to the Subscribers an exact and particular Account of the Affairs of the Company. The Dividend shall be regulated upon the said Account, in a general Court of the Company, by the Majority

Country, but least of
uninterrupted Com-
tury; that therefore
to render the *Danish*
England and *Holland*,
ing a new Subscription

, the King was pre-
be put in Execution,

it is declared in his Ma-

communicate to the Sub-
ccount of the Affairs of
all be regulated upon the
of the Company, by the
Majority

Majority of Voices. The Directors are not allowed to un-
dertake any Trade but the Commerce in the *East-Indies*,
upon the Company's Account, without the Consent of
the Members thereof. And lets still shall they dispose of,
or lend the Company's Money to any Person whatsoever,
for which they are to be answerable in *Solids*, in their own
Name and Estate. They shall take an Oath of exact Ob-
servation of this Article, and for a faithful Administration
of the Affairs of the Company, for the common Benefit
and Advantage of the Members thereof. All the Mer-
chandizes which shall be sold in any other Place than *Co-
penhagen*, shall be paid in the Bank at *Hamburg*, to one
or more Merchants, and most substantial Traders, for the
Company's Account. These Merchants shall be chosen,
and appointed in a general Court, by a Majority of Voices,
and in no other Way, upon any Pretence whatsoever.
The said Merchants, or Cashiers, shall pay no Money,
but upon Orders, signed by three or four of the Direc-
tors at least. The Money to be paid this Year, shall be
at the Disposal of the present Directors, till the new ones
to be added to them are chosen. The Money arising by
the new Subscriptions shall be laid out, in sending Ships
to *Tranquebar*, *Bengal*, and *China*, and for no other Use
whatsoever. No more Money shall be kept in Cash, than
what will be necessary for the fitting out and sending of
Ships, as in the preceding Article. A general Court of
the Company shall be called as soon as possible, in order to
choose four new Directors, out of the new Subscribers, who
may be all Foreigners, &c.

6. Upon the Publication of these prodigious Advan-
tages, granted to the new Company for carrying on a
Trade to the *East-Indies* from *Denmark*, there followed a
great Contentment in *Holland*, where they began to sus-
pect, that all the Pains they had taken in destroying the
Ostend Company was merely thrown away, and that this
new Establishment in *Denmark* would prove as prejudi-
cial to their Interest as the former, which they had so
much dreaded. They began therefore at *Amsterdam*, *Rot-
terdam*, and all the great Cities in the United-Provinces,
to decry the new Company, and, at the same Time, they
formed a Process against *M. Van Asperen*, whom they
condemned and executed in Effigy. But they soon found
that this did not answer their Purpose, and therefore they
had recourse to other Methods.

They discovered that this Gentleman had written in very
strong Terms to his Friends, both in *Holland* and in *Great-
Britain*, to solicit them to subscribe into the Capital of the
Company at *Amsterdam*; upon which they had recourse to the
Answers of these Letters, which they framed in the best
Manner they could, for the answering their own Ends, and
then caused them to be published in all the *English* and
Dutch News-Papers, that they might the more effectually
spread their Objections to this new Company, and thereby
disappoint the Labours of *M. Van Asperen*, and the Di-
rectors, to procure Subscriptions. In these Writings they
insinuated, that the old *East-India* Company in *Denmark*
was actually become Bankrupt, and that there was but
very little Reason to confide in the Privileges granted to
the new. But it will be best to give these Objections in
their own Words, that the Reader may judge of them
with a greater Certainty; and therefore we will make as
succinct an Extract of them as possible, reducing their Ob-
jections under four Heads, concerning which they express
themselves in the following Manner. The Reader is to
observe, that these Objections are delivered as from a Cor-
respondent of the Projectors, in answer to what he had
written in the Favour of the Company at *Amsterdam*.

First, That these Articles, tho' to Appearance suffici-
ently inviting, are not to be depended upon under arbi-
trary Governments, especially as long as the Words *Visa*
and *Liquidation* are in Memory; and all agree, that the
Reason why other Nations lodge large Sums, and contin-
ue them in the Funds of free Governments, is, that they
are secure by the established Laws of those Countries. Sec-
ondly, That they think the Word and Honour of two
Directors, as expressed in the last of the thirty-eight Ar-
ticles, is but a slender Security, or Guaranty for the old
Company's Debts, being no more than one hundred and
sixty thousand Rixdollars in Specie, more especially, when

they reflect, that one of the two Directors, tho' now a
Count, and honoured with a white Ribband, is the same
individual Person, who, during the late War with *France*,
became a Bankrupt, for upwards (as was then said) of six
Millions of Florins, and fled by way of this Country in-
to *England* for Protection; but so soon as the Queen was
apprized of his Situation, that he was not persecuted by
the Court of *France*, as he pretended, but prosecuted by
his fair Creditors, for large Sums he had defrauded them
of, and brought away with him; the good Queen, tho'
at War with *France*, and altho' he had been naturalized
in *Scotland*, before the Union, withdrew her Protection
from him; whereupon he came over here again, and set-
tled at *Vianen*, where it cost him, as you may remember, a
great Sum of Money for a Protection; but he was to closely
followed by his numerous Creditors, with the Assistance of
the *States-General*, that not finding himself safe any longer,
he fled into *Denmark*, where he found both Protection
and Honour. Now, say the People here, and in *Eng-
land*, this same Man being the Author, Prompter, and
principal Manager of this new Scheme, we will never ven-
ture our Money in such Hands, to make a Jobb for him.
Thirdly, I find it objected here, by all who know the
East-Indies, that there is a great Demand upon the old
Company in *India*, and particularly in the Bay of *Bengal*,
for a large Ship which they formerly seized, with a full
Lading, bound to *Surat*, carried her off, and sold both
Ship and Cargo at *Tranquebar*; for which the *Merc* drove
them off, and they have not appeared there since. This
Debt alone has been computed at three hundred Rixdol-
lars in Specie, seven Years ago, and will be demanded by
the Government, and must be paid with full Interest up-
on Interest, at the Rate of twelve *per Cent. per Annum*,
according to the Custom of the Country, before they will
be permitted to trade again in that Port; and this Account
is confirmed to be true by several Persons here and in
England, that have resided in *Bengal*, some of them at
the very Time when the said Ship was taken and carried
off.

Fourthly, 'tis objected, That there can be no Profit
made equal to the Hazards a Man must run of various
Kinds, besides these before-mentioned. And thus having
freely given you the unanimous Opinion of all that I have
talked with, or wrote to on this Subject, which is exactly
agreeable to my own Way of thinking, I hope you will
not give yourself, nor me, any farther Trouble on this
Subject; and, before I conclude, as you have been my
old Friend and Acquaintance, I cannot help saying, I wish
you would retreat in time, and endeavour to obtain For-
giveness for the Injuries you have endeavoured to do your
own native Country, in Defiance of the Laws in being;
for nothing can be plainer, than that this new Scheme is
principally intending for Stock-jobbing, and to draw the
ready Money of other Nations into *Denmark*, at all Events;
but when it comes to be understood that all, or most of
the Profits, that can be made on this Scheme, belongs to
Foreigners, whenever they want to call the Profits and
principal Money Home, I leave you to judge of the
Likelihood there is, that publick Faith will be maintained:
You cannot forget what was done in *Mississippi*, when they
found the Money was going out of the Kingdom.

It was hoped, that by the publishing these Objections,
Subscriptions would have been stopped, and that the new
Company of *Amsterdam* would have sunk of itself, or, to speak
with greater Propriety, would never have made any con-
siderable Figure, or have been capable of carrying its Plan
into Execution, or of sending to much as a single Ship
to the *Indies*; but it fell out quite otherwise, notwithstanding
what was published on this Subject in *England*, *France*,
and *Holland*.

7. As soon as this was perceived, and it was certainly
known that the *Danish East-India* Company was actually
preparing to send Ships to the *East-Indies*, agreeable to
their Plan, and to the Power given them by their Charter,
a Resolution was taken by the Maritime Powers, to act in
concert in this Affair, and to endeavour to deprive the
new Company of their sole Support, which was his *Dan-
ish* Majesty's Charter of Incorporation. It was with this
View that Orders were sent to the Ministers of *Great-
Britain*

Britain and Holland at the Court of Denmark, to act jointly in this Affair, and to use their utmost Industry to procure the Repeal of the Powers granted to this Society; and, in consequence of these Instructions, those Ministers soon after drew up, and presented the following Paper to the Court of Denmark.

" His Majesty, the King of Great-Britain, and their High Mightinesses the States-General of the United Provinces, foreseeing the Injury the transferring the East-India Company from Copenhagen to Altona, will do to the Commerce of their Subjects; and perceiving, with Concern, that almost at the same Instant they are making in great Pillors to stop the Progress of the United Company, the King of Denmark, their good old Friend and Ally, is setting up another equally prejudicial to their Subjects, have ordered the subscribing Ministers to make most humble Representations to his Danish Majesty, hoping, from his Majesty's Friendship, that, as soon as he shall be informed of the Unjustness this Novelty gives them, he will withdraw the Privilege lately granted to that Company, and leave it on the ancient Foot as it has always subsisted at Copenhagen; accordingly the subscribing Ministers desire your Excellency to make a Report thereof to the King, and to procure them a favourable Answer." *Book at Copenhagen, July 31, 1728. Signed,*

*Glennorby,
Apostelski.*

5. The King of Denmark and his Council did not at all reject this Memorial; to which however an Answer was given, wherein his Danish Majesty insisted that the Maritime Powers had totally mistaken the Point; because it never was the King's Intention to erect a new Company, or to transfer that which had now subsisted above an hundred and ten Years, from Copenhagen to Altona. That this appeared clearly from the very Project of Incorporation, which granted no new Power to the Company, but barely confirmed the old ones. That the Voyages proposed directly for China could not be esteemed an Intrusion of Treaties, any more than the Voyages formerly made by the Company's Ships from Tranquebar. That farther still, his Danish Majesty was not restrained by any Treaty whatever, from maintaining and supporting the Commerce of his Subjects to the Indies, either from their Establishments in that Part of the World, or directly from Copenhagen. That the Law of Nature and Nations not only gave him a Right, but made it his Duty, to promote the Welfare of his Subjects, and to extend their Trade as far as it was in his Power. And

that, finally, as he did not endeavour to encourage this Commerce with any View of injuring the East-India Companies in England or Holland; but purely with a Design to benefit and enrich his own Subjects, he could not discern how this should expose him to the Dislike or Resentment of any other Power whatever.

How clear and full toover this Answer might seem to the Court of Denmark, it was far enough from giving any Satisfaction to Great Britain and Holland; and therefore a fresh Memorial was drawn up, to shew the Insufficiency of this Answer, and the Right which the Maritime Powers had to expect, that his Danish Majesty should comply with their Demands, and withdraw his Protection from this Company. This Memorial was delivered by the Earl of Coblenfeld, and the Deputies from their High Mightinesses the States-General, to Mr. Grey, his Danish Majesty's Minister at the Hague, in the Summer of the Year 1728; from which Time to the present, I do not find that any farther Applications have been made on this Subject, or that the Rights of the Danish East-India Company have been farther contravened.

It is, however, certain, that the Opposition made by the Maritime Powers to the Establishment of this Company, and their absolutely forbidding their Subjects to have any Share or Concern therein, affected the new Subscriptions to such a Degree, that they did not, by any means, answer the Expectations that were formed of them, when Mr. Van Spieren's Scheme was first published; but they to far answered, as to enable the Company to enlarge her Commerce, and even to enter into a direct Trade from Copenhagen to the Indies and China, in which they were chiefly encouraged and supported by the Prince Royal of Denmark, now King Christian VI. under whose Auspice they have flourished ever since.

By the Advantages derived from his Favour, their Affairs are now in so good a Posture, that there seems to be no Doubt of their being able to pursue their Trade constantly, and with considerable Advantage both to the Proprietors of the Company's Stock, and the Danish Nation in general; for their Fund is considerable, their Credit good, their Warehouses, Magazines, Yards, and Docks at Copenhagen, in perfect Order, and their Sales are very large and regular, inasmuch as they generally send two or three Ships annually to the East-Indies, and receive as many, with rich Cargoes from thence: So that, on the whole, we may venture to assert, that this Company is effectually established, and that, in a very few Years, they will have a considerable Share in the Trade to the East-Indies.

SECTION XXXVIII.

A succinct History of the Swedish East-India Company.

Including an Extract of the Royal Charter.

1. The Crown of Sweden far less considerable at Sea than the Danes, yet in some measure a Maritime Power, and always ambitious of a direct Trade to the East or West-Indies.
2. The Rise of the present Company, properly that of Henry Koning, but commonly styled, The Gottenburgh-Company, and an Account of its Charter.
3. The Progress and present State of this Company, with some Remarks.

THE Swedish Nation, though not formerly distinguished by any great Share of Maritime Power, have nevertheless always preserved the Character of bold and intrepid Seamen, as appears both from their own and foreign Histories, more especially those of the Danes and the Hanse Towns in Germany, with whom they were engaged in frequent Disputes, that were, generally speaking, determined by naval Engagements. It is not, however, appear, that the Swedes had ever any Thoughts of carrying on a Trade to the East Indies, till the Time of the famous *Gustavus Adolphus*, the Glory

of their Country, and the most finished Hero of his Age. This great Prince, whose rising Passion was the Welfare and Reputation of his Subjects, formed the Project of establishing a Trade to the East Indies from Sweden directly, to which he invited his Subjects, by Letters Patents, under his Broad-Seaal, dated at Stockholm the 14th of June, 1626. But the War in Germany prevented the Prosecution of that Design, which seems to have had with that glorious Monarch who formed it.

His Daughter, the celebrated Queen *Christina*, equally remarkable for her Love of Learning, and Contempt of

Grandeur, which she manifested by resigning her Crown to her Cousin *Charles Gustavus*: Tho' she did not protect her Father's Project, yet she shew'd the same Willingness he had done to encourage and extend the Trade of her Subjects: and therefore formed, and carried into Execution, a Scheme for establishing a Colony in the *West-India*, which, in some measure, was brought to bear. The Place they fixed on was that Part of *North-America*, now in our Possession, and filed the Province of *New-Jersey*, where they established three Towns, *Christina*, *Essexburgh*, and *Gottenburgh*; out of which however they were soon worked by the *Dutch*, who bestowed upon this, and the adjacent Country, the Name of *New-Nelgia*; so that the Design of fixing a Trade in this Part of the World from *Sweden*, was overturned almost as soon as it was formed.

We hear very little from this Time of any Attempts made by the *Swedes* in regard to Commerce, which might, very probably, be owing to the Wars, in which the Monarchs of that Country were engaged for many Years after, and which in a manner disabled both them and their Subjects, from thinking of, or, at least, undertaking any thing of this Kind; so that all *Europe* was surpris'd at the News of an *East-India Company* being set up in *Sweden*, about fourteen Years ago.

2. It was the Ruin of the *Ostend* Company that produced this Establishment, of which one *Henry Koning* was the chief Author, a rich Merchant, and one who had a true Notion of the *East-India* Commerce. He represented to the Ministry, that this was a very favourable Time to undertake a Thing of this Sort; that there were a Multitude of Places in *Africa* and the *Indies* neglected by the *Europeans*, who had constantly followed one the other, and had scarce ever undertaken to strike out of the common Road, that, besides all this, there were Numbers of Persons, that, by the Dissolution of the Imperial Company of the *Netherlands*, were thrown out of Business and Bread, and, which was worse, deprived of the Means of returning into their own Country, by the Steps taken to hinder the *Ostend* Society from carrying on their Trade; that, consequently, there could be nothing easier than to procure proper People for carrying this Commerce on, and fixing it in such a Manner as not to be liable to any Hazard, either of Loss by Trade, or Opposition from other Powers.

This Proposition being maturely considered, it was resolv'd to authorize this *Henry Koning*, to associate such Persons as should be willing to contribute to his Designs, and to grant them the following Privileges, by virtue of a Charter, dated *June 14, 1711*. The King then by concedes to *Henry Koning* and his Associates, the Liberty of navigating and trading to the *East-Indies* for fifteen Years, from beyond the *Cape of Good-Hope* to the Islands of *Japan*, where ever they shall think proper or convenient, with this Restriction only, that they shall not trade in any Port belonging to any Prince or State in *Europe*, without their free Leave and Consent first had and obtained. The Ships employed in this Commerce shall constantly take in their Lading at *Gottenburgh*, to which Port they shall return with all the Merchandize they bring home from the *East-Indies*, and that there shall be liberty to be publickly sold, as soon as conveniently they can. The said *Henry Koning* and Company, shall pay to the Crown of *Sweden*, during the said fifteen Years, One hundred Dalers per *Loft*, for every Ship they employ or freight, such Ships being measured before their Departure from *Gottenburgh*; which Money is to be paid within six Months after the full Return of the said Ship from the *Indies*; and they shall likewise pay two Dalers per *Loft*, in full Satisfaction for the Town Duties.

The said *Henry Koning* and Company may employ, equip, and arm as many Vessels as they shall think proper, provided that those Vessels are built or bought in *Sweden*, and whatever else is necessary for equipping an *East-India* Ship them be had in the *Swedish* Dominions. But in case they should be found at any Time impracticable, then the Company may provide themselves with Ships, or whatever else shall be found requisite for their Commerce, wherever they shall think fit, provided always that they give

the Preference to, and promote, as far as in them lies, the Building, Manufacture, and Produce of *Sweden*. The said Ships shall carry the *Swedish* Flag, and shall be furnished with Passports under the King's Hand, as also from the Republick of *Algiers*. The said Company shall be at Liberty to raise what Sum they think fit for the carrying on their Commerce, by a voluntary Subscription, or otherwise, as they think proper; and such as shall become Subscribers shall be obliged to pay in their Money at the Times prescribed, on pain of forfeiting their Interest in the said Commerce.

The Company may transport what Ordnance or small Arms they think proper, as also Silver coined, or uncoined, *Swedish* Money only excepted; and may likewise bring from the *Indies* what kind of Goods or Manufactures they think fit, without any Restriction whatever; the Vessels of the Company, when freighted, ready to sail, shall not be stopp'd or hinder'd on any Pretence whatever, nor shall they, at their Return, be impeded from entering into the Port to which they are consign'd. The Goods of the said Company may be transported at their Pleasure, from Place to Place, within his *Swedish* Majesty's Dominions, being first furnished with proper Passports, without paying any other Duties than those before stipulated. The Captains of the Company's Ships shall have the same Power for maintaining Discipline amongst their Crews, as the Captains of the King's Ships; and with respect to Trade, they shall conform to the Instructions given by *Henry Koning* and Company, provided always those Instructions are not repugnant to the Privileges granted by this Charter.

The Seamen and Soldiers entered on Board the Company's Ships, shall not be liable to be press'd into the King's, or any other Service, and on the other hand, it shall not be lawful for the Company to take into their Service, any who shall have desert'd that of the Crown. The Seamen and Soldiers belonging to the Ships in the Company's Service, and deserting from it, may be apprehended and detain'd; but according to the usual Forms of Law, and by the Hands of the proper Officers. The Ships belonging to the Company being return'd, and having landed the Merchandize on Board them, the said Goods shall be Duty free, excepting only a very small Acknowledgment to be paid upon removing them.

The Persons acting under this Charter shall constantly chuse out of their own Number at least three Directors, who shall be all Men of distinguished Probity and known Abilities, of which the said *Henry Koning* shall be one; and in case of his Demise, the Members of the Company are directed and empowered to make Choice of another Person in his Stead, provided always, that the three Directors shall be Natives of the Kingdom of *Sweden*, at least naturalized *Swedes*, Protestants, and resident in the King's Dominions, unless necessarily absent in foreign Parts, for the Service of the Company; in which case the Proprietors may substitute another Director at Home. The said *Henry Koning*, and his Associates, may make such Regulations for the Management of their Commerce, as they shall think proper, provided they be agreeable to this Charter.

They shall render a faithful Account to all the Persons interested, as well of the Profit and Loss, as of the Capital of the said Company; but they shall not be obliged to discover the Names of their Subscribers, or the Sums they have subscribed; nor shall they be obliged to produce, or suffer their Books to be inspected on any Pretence whatsoever. In case any of the Directors shall find, that the rest betray their Secrets, or are guilty of any other Fraud or Misdemeanour, they may apply to the Board of Trade for Justice and Reparation, and upon due Proof, such Offender shall be suspend'd or degraded from his Office of Director, and the Company shall be at Liberty to chuse another in his room.

In like manner, if any of the Proprietors shall find, that the said *Henry Koning*, and the rest of the Directors may bear False, or are guilty of any Frauds, they make the true Application, and obtain the same Redress. The said *Henry Koning* and Company may employ such Number of Supercargoes, Officers, Mariners, or they shall think fit, either *Swedish* or Foreign, on their Ships, to be employed, that they shall

leges, as if they were born Swedes; and the Money employed, either by Natives or Foreigners, in the Capital of this Company, shall not be liable to any Stoppage or Seizure.

Such Persons as are interested in, or employed by the Company, shall be naturalized according to their respective Qualities, upon their applying themselves to the King for that Purpose. The said *Henry Koning* and Company, and such as are authorized, or employed by them, in case they are molested, or disturbed in their Commerce, by any Person, or in any Part of the World whatever, shall have full Power from his Majesty, to obtain ample Justice and Satisfaction, by all convenient Methods, and shall be at Liberty to oppose Force by Force, and to consider such Disturbers as Pirates and Enemies to the publick Peace.

His Majesty will grant them these Powers, especially in such Commissions as their Captains shall receive; and in case, notwithstanding they should be attacked, and suffer any Injury, or Injustice from any Nation whatever, in the carrying on of this Commerce, his Majesty, upon due Information thereof, will grant them his high Protection, and endeavour to procure for them speedy and ample Satisfaction, either by way of Reprizal, or otherwise. The rest of the Subjects of the Crown of Sweden are expressly prohibited, and forbid to engage in, or interere with the Trade of the said Company, under pain of his Majesty's high Displeasure, and the Confiscation of their Vessels and Effects. The King promises to alter, or augment these Privileges, upon Application from the Company, as often, and in such Manner, as shall be found necessary for promoting the Trade to the *East-Indies*, and the Interest of the Persons concerned therein. This Charter is said to be granted by the King in the Senate, which Phrase I take to be pretty much the same with ours, of the King, by and with the Advice of his Privy-Council.

I have dwelt the longer upon this Charter of the *Swedish East-India Company*, because I have heard it admired as one of the best drawn, and best contrived Pieces of its kind, more especially, because all the Powers therein are such as, strictly speaking, concern Commerce Abroad, and are not calculated to give the Company, or its Directors, too much Power at Home; because it subjects them to the Board of Trade, or, as it is called in Sweden, the College of Commerce, which consists of the President of the Treasury, and four Counsellors, who hear and determine whatever comes before them in a summary Way, according to the Laws of the Kingdom, and the general Maxims of Equity. There were great Expectations formed of this Company, for various Reasons; First, Because they had all the Powers granted them that they could reasonably expect, or desire. Secondly, Because they were not limited in their Capital, but allowed to raise such Sums, and in such a Manner, as they shall esteem most for their Benefit. Thirdly, From their being prohibited from interfering with the Commerce of other Nations, and thereby running themselves and their Country into Difficulties and Disputes. Fourthly, From their having the King's Protection secured to them, in such a Manner, and for such Purposes, as might serve to answer all good Ends, without involving the Crown of Sweden in any Controversies with the Maritime Powers, or any other of her Allies. And, Lastly, Because from the Nature of the present Constitution in Sweden, there seemed to be as high Security for the Properties of such as interested themselves in this Affair, as in any other Country whatever.

These Expectations were likewise heightened by the Company's meeting with no Disturbance, or Opposition from foreign Powers, who neither knowing who the Subscribers were, or to what their Subscriptions amounted, were the less alarmed by this new Company; and besides, seeing themselves secure from any Apprehensions of their interfering with the Trade already established in the *East-Indies*, found it more difficult to assign any rational Cause of Complaint, to which we may add, that the Company went on very slowly at the Beginning, and being a long while before they completed their Subscriptions, or put out Ships for the *Indies*, it was generally both in *England* and *Holland*, that the Design

would come to nothing, and the Company would vanish of itself.

3. But though the Author of this Design, *M. Henry Koning*, and his Associates, were not hilly in equipping Ships for the *Indies*, yet they took care to provide themselves in every Respect with what might be found necessary for carrying on their Scheme with Success. They built, for this Purpose, two very large and strong Ships, one called after the King, *the Frederick*, the other by the Name of the Queen, *the Ulrica*. These they furnished in such a Manner, as to be equally fit for Trade, or for Defence. They made Choice of such Supercargoes as had not only established Characters both for Honesty and Abilities, but were likewise well versed in the particular Business in which they were to be employed, and Men of Experience in the Trade to *China*; they proceeded with no less Caution in the Choice of their Officers and Mariners; and tho' they spent full two Years in making Preparations, yet that Loss of Time was very well compensated by the Exactness with which those Preparations were made; so that at the Time their Ships left the Harbour of *Gettenbourg*, they were as well equipped, and in all Respects as completely furnished for an *East-India Voyage*, as any that were employed in that Trade by the Maritime Powers, and the same Care and Diligence they had used ever since; so that it may with great Truth be said, that as scarce any Company was better established at first, so the Affairs of none have been hitherto better conducted.

Their first Voyages, though not attended with so much Profit as might have been expected, were however tolerably successful, and the Company established their Factory on the River of *Canton* in *China*, with the Consent of the *Chinese*, who seem to be very well pleased with these new Comers, and every way disposed to favour and promote their Trade; so that they were very soon in the same Footing there with other *European* Nations. At Home, indeed, they met with some Difficulties, for the Company being obliged to make use of a great many Foreigners in all Capacities, for the better carrying on of their Trade, and there being no Nation in *Europe* naturally more jealous of Foreigners than the *Swedes*, this occasioned a great Clamour, especially among the common People, which, however, was in some measure quieted, by publishing an Order, that at least Two-thirds of the Mariners should be for the future Natives of the Kingdom; and as the Execution of this Order was apparently attended with Difficulties and Inconveniences, it convinced even the Vulgar of their first Mistake, and that the Company had done no more than what they were warranted to do by their Charter, and what the Circumstances of their Affairs, more especially at the Beginning, rendered not only expedient, but necessary.

Since that Time, the *Swedish* Company have been very regular, both in fitting out their Ships, and in their Returns, which, by being sold to Foreigners, have brought in great Sums of Money to the Kingdom; yet, notwithstanding as a great Part of this Money has been exported again, for the carrying on this Trade, a new Complaint has been created thereby, in respect to the Silver carried to the *East-Indies*. We need the less wonder at this in Sweden, because, tho' the Trade of the Kingdom is not large, yet it produces annually a considerable Balance in ready Money, as is known experimentally here, since it is known, that Two-thirds of the Trade we carry on thither is managed with ready Money only, and it also pretty much the same Thing with other Nations who trade thence, the *French* only excepted, who have a Balance in their Favour from the *Swedes*, which, however, has gradually grown less and less, in proportion as they have taken more vast Stores of late Years than they did formerly, and as their Subsidy treaties bring in considerable Sums to *France*, or at least keep the Money there, that would otherwise be employed in discharging the Balance of Trade; so that the *Swedes* being used to see great Sums of Money brought in by every other Branch of Commerce, and being so immediately acquainted with the Profits arising from it, are the less disposed to consider it as advantageous.

Upon these Grounds, a Report has been lately raised, as if the Privileges of this *East-India* Company would be suffered to expire next Year, when their Charter determines, which, no doubt, would be agreeable not only to the *French* and *Danes*, but to the Maritime Powers, who find this Company detrimental to them, by the Sale of its Commodities from the *Indies* over all the *Norrb*, tho' they do not interfere with them much, by their Manner of carrying on their Trade in the *East*. The Company, however, are said to have prepared a very long and curious Representation to the Senate, in order to ward off this Blow, and to procure the Renewal of their Privileges for fifteen Years more; in which they insist, that this very Application is a sufficient Motive for obtaining their Request, and satisfying all who are to be satisfied, by reason of the Advantages resulting from their Commerce.

For, as they observe, very little, and indeed scarce any of the Returns made by the Company have been disposed

of in *Sweden*; so that if the Proprietors of the Company are Gainers thereby, as they must be, or they would not be desirous of having their Charter renewed, this Gain, whatever it is, must be drawn out of other Countries, and, as the Proprietors reside in *Sweden*, must consequently be so much clear Gain to the Nation. What the Issue may be of this Representation, and how far the Senate may be prevailed upon thereby, Time will show; but we may venture to affirm, that if popular Notions should get the better upon this Occasion, and the *Swedish* Company shall be suffered to expire with their Charter next Year, it is highly improbable, that any Attempt of this sort should be again made in that Country, where, at the Beginning, it can only be undertaken by Foreigners; and there, after such an Example as this would be, no foreign Merchants would be so interested as to undertake it, for fear of being treated a second Time in this Manner.

C O N C L U S I O N.

AFTER having thus deduced the History of the *East-India* Commerce from the earliest Accounts that are preserved of it, down to the present Times, and pursued it through all the several Nations among whom it has flourished, there is nothing now left for me to do, but to perform the Promise I made of shewing, that the common and received Notion, that, taking all Things together, this Commerce is highly prejudicial to the *Europeans* in general, is very ill grounded, and no better than an erroneous Opinion, taken up for want of thoroughly examining, or, at least, of perfectly understanding the Subject. But to place this Matter in a clear Light, it will be first of all necessary to state the Objection fully and fairly, that it may appear we know what we are about, and do not pretend to judge of what we have not thoroughly considered.

The Objection then, when set in the strongest Light, will stand thus. It is an incontestable Maxim, with respect to Commerce, that Silver is the only true and certain Measure of Wealth; and as we export yearly vast Quantities of Silver from *Europe* for *Indian* Goods and Manufactures of little intrinsic Value in themselves, and which are all in a short Time consumed here, it follows that the Trade from *Europe* to the *Indies* must be a losing Trade to the former, since we export Bullion and import Bubbles; wherefore, if the *European* Princes and States would seriously and impartially consider this, instead of encouraging the setting up new *East-India* Companies, they would abolish the old, and secure the Wealth of their Subjects, by banishing a Commerce so destructive as this is, out of their Dominions. This then is the Objection that I am to overturn, and, I must confess, that, so far as I am acquainted with the Matter, I am the first who have thought it possible to overturn it; but, however, no Truth is less a Truth for being new, and the Argument from Authority against Reason and Experience is of little avail to the Genius of the present Times, that, if I have the Honour in my Favour, I have no great Reason to be in Pain about the former. But, however, to make the Road the easier, it may not be amiss to premise somewhat as to the Origin of this Notion.

When some ingenious Persons undertook the Defence of the *East-India* Commerce in particular Countries, and found themselves pressed with the first Part of the Objection, that the Nation was impoverished by the Exportation of Silver, they, to shorten the Debate, agreed that this might be true, as to the Commerce to the *Indies* in general, and yet was no sufficient Argument to prove this Trade prejudicial to any Nation in particular, because, if that Nation, by exporting to others a certain Proportion of their Returns from the *Indies*, brought in more in the Balance of Trade, than a much greater Quantity of Silver than they carried out, it was plain, that the *Europeans*

in general might lose by this Trade, yet it might, and indeed must be, highly beneficial to the particular Nation by which it was carried on; because it proved the Means of producing a Balance in her Favour, which otherwise she could never have obtained. I do allow, that in arguing thus, they argued very right; but, I presume to say, that, in giving up this Point, they did what was frequently done, that is, they argued right from wrong Principles; and, as I do not blame them for taking this Method, because, with respect to their Subject, it was the shortest and most expeditious Method they could take; so, I hope no body will blame me, if, after taking so much Pains, and entering so deeply into the general History of this Commerce, I declare absolutely, that this Point ought not to have been given up, and that there is no better Foundation for asserting, that the Trade to the *Indies* in general is prejudicial to *Europe*, than for maintaining that it is disadvantageous to those particular Nations, such, for Example, as *England* and *Holland*, and who manfully owe their Wealth and Maritime Power to their Success in this Trade.

In the first place then, I say, that it is the same thing with regard to *Europe*, as with regard to any particular Nation in *Europe*, as to the total Balance of Commerce; and if a losing Commerce be absolutely equal to one Side to produce a lucrative Commerce on the other, then the Loss sustained by that Commerce is no good Argument against it. But most evident it is, that since the *Europeans* have carried on an extensive Trade to the *East-Indies*, their Manufactures, Shipping, and Commerce in general, have been very much extended; so that from the time the *Portuguese* discovered the Passage by the *Cape of Good Hope*, the Face of *Europe* has been entirely changed, and we have grown infinitely more considerable, in comparison of other Parts of the World, than we were before. But, to come closer to the Objection as to the Point of exporting Silver. If the Commerce to the *East-Indies* has drained us of many Millions of intrinsic Wealth, as I readily admit it has, I desire to know how we came by them? The Answer will be at every Reader's Tongue's End, from *America* and the *West-Indies*. But then, give me Leave to ask again, How came we to find out that? The Answer to this will unmask the whole Mystery, since every Body knows it was by searching out a new Passage to the *East-Indies*. It therefore, by cutting off the Commerce of the *East-Indies*, we have fallen upon another Commerce, which not only supplies Silver sufficient for the *East-India* Trade, but likewise brings in annually an immense Treatise besides, what Pretence there is for saying that *Europe* in general has been, or ever can be, a Loser by carrying on this Trade? It appears from hence, that Providence excites the narrow Notions, and levelled the Resources of this World in such a Manner, as to

make Commerce the Interest of all Nations, has provided effectually against this supposed Evil of trading till we have nothing left to trade with.

But, besides this, we owe many other great Advantages to this Commerce in the East. For, in the first Place, it is the great Support of the Maritime Power of *Europe*; it makes us Masters of all other Parts of the Globe, who, if it had not been for this Maritime Power, might, long ago, have been Masters of us. Let any Man consider the wide Difference, in Point of Dominion, Number of Subjects, and whatever else contributes to Grandeur, between the little Republick of *Holland* and the great Empires of *Turky*, *Persia*, and *India*; and remember that this Commerce has rendered a Company in that little Republick formidable to all those great and mighty Empires, and capable of maintaining herself, and protecting her Concerns against them all. And then let me ask him, does not this plainly shew the Importance of this Commerce, and that it was a very wise and right Thing to promote and encourage it: Can there be a clearer and stronger Demonstration than this, from Reason or from Experience? Or might we not safely rest the Point here, without running into any farther Considerations? I dare say, every rational and intelligent Reader will confess we might; and yet, for the better explaining the Matter, I am content to go still a little farther.

The only Answer that can be given to this, or, in other Words, the only Means left for supporting this Objection, is, to suppose, that, instead of two or three, all, or the greatest Part of the Nations in *Europe*, should fall into this Commerce, by which Means the Exportation of Silver would be extravagantly increased, and, consequently, the *Indies* be vastly enriched at the Expence of *Europe*. At first Sight this seems to be very clear and plain; but closely considered, the Supposition is very fallacious; for, if the Powers at present interested in this Commerce, bring home as much of the *Indian* Goods and Manufactures as serve all *Europe*, then there is already as great an Exportation of Silver as could happen, if this Supposition took place, and the only real Consequence that could happen from the Extension of this Commerce would be this, that the present Possessors of the *India* Trade would be deprived of

their Profits, and every Nation would import as much as sufficed itself, and no more. This, I say, will be the only Consequence, with respect to the Evil apprehended; but other Consequences there might, and would be many, but particularly these. The rising of such a Spirit of Trade would necessarily produce new Discoveries, inasmuch as it would beget new Maritime Powers. The *Southern Indies* would be then explored, as well as the *East*, and those Countries that are now hid from us, would become as well known as the Coasts of *Malabar* and *Ceylon*. Various Nations would, in this Case, either find or force a Trade to *Japan*, and the Countries beyond it. The *Dutch East-India* Company would be obliged to open her secret Resources, and indemnify herself by a Trade to *New Guinea*, for the Losses sustained by other Nations interfering in her Trade to the *Indies*. And thus, instead of weakening or impoverishing *Europe*, this very Thing will prove the Means of making her infinitely richer, greater, and more powerful than she now is, and might take away the Temptations which mislead her Monarchy into quarrelling and destroying each others Subjects about Provinces, scarce worthy of being compared to the mighty Empires that, by the Help of Commerce and Maritime Power, they might share among themselves.

It is one Thing to consider the Trade of a particular Nation, to argue in Favour of it, and to point out the Means of protecting or improving it, and quite another to launch out into such wide Enquiries as these. The former may, indeed must, be conducted by the narrow and confined Notions of human Policy; for the Advantages of particular Societies must result from the Contrivances of particular Men. But when we quit these, and consider Things only in general, the Scene changes, the Prospect enlarges, and we find ourselves lost in the View of these prodigious Benefits, which the Wisdom and Goodness of an infinite Being has placed within the Reach and Capacity of human Kind. These, though we discern, it is impossible we should comprehend, and therefore we ought always to suspect such mean and narrow Principles as would persuade us, that right Measures may be pursued too far, or that the earnest Prosecution of Good should run us upon Evil.

The END of the FIRST VOLUME.
