Bombay is fituate on an island near the west coast of India, in seventy-two degrees eastern longitude, and nineteen degrees north latitude. It has an excellent harbour from whence the Portuguese were the first Europeans that possessing the properties of the seventy called Bombay. The island on which it tands, is about twenty miles in circumference: the chief town is a mile in length, meanly built: the fort sands at a distance from it. The island is inhabited by English, Portuguese, and Moors: there are three or four more small towns on the island. The foil is barren, and the water bad; they preserve the rain-water, therefore, in cisterns, and there is a well of pretty good fresh water about a mile from the town. The king of Portugal transferred this island to Charles II. King of Great-Britain, as part of the portion of the infanta Katherine; whom he married, in the year 1662, and the king afterwards gave it to the East India company. The fort has been befiged both by the Mogul and the Dutch, but neither of them were able to take it.

Though Bombay lies within the tropics, yet the climate is not disagreeable to the constitution of the Europeans; there Bombay is fituate on an island near the west coast of In-

there are but few days in the coarse of the year, in which the weather is very intense; the short hot season precedes the periodical return of the rainer; the night-dews, however, are extremely dangerous, therefore great care should be taken not to be exposed to them. If people would but live the periodical return of the raine; the night-dews, however, are extremely dangerous, therefore great care should be taken not to be exposed to them. If people would but live, temperately in this place, they need not be afraid of the temperately in this place, they need not be afraid of the temperately in this place, they need not be afraid of the temperately in this place, they need now some good playsicians on the island. They have wet weather at Bombay about four months in the year, which is commonly introduced by a very violent thunder storm: during this seafon all trading vessels are laid up. The rains begin about the latter end of May, and continue till September, when the black merchants keep a session, gidling a cocoanut, which they conferents and commit to the waves.

What they abound in snot is their groves of cocoanus.

which they confectate and commit to the waves.

What they abound in most is their groves of cocoatees, their rice fields, and onion-grounds. Their gardens also produce mangoes, jacks, and other Indian fruits; and they make large quantities of falt, with very little trouble, from the fea-water, which being let into little pits, extracts the mixture, and the falt is left behind.

The town or city of Bombay is a mile long, and surrounded by a wall or ditch, it has a figure next wood called.

rounded by a wall or ditch, it has allo a pretty good caftle; fo that it is well fecured, and effected one of the ftrongest places belonging to the East India company. The houles of the English here confist in general of a ground-floor, with a court both before and behind, in which are offices. and outhouses. Most of the windows are of transparent oyster-shells, which admit a pretty good light; and the flooring of their habitations is a fort of stucco composed of thells that have been burnt; this they call chunam, which, being well tempered, and becoming hard, has an elegant polith on it. The houses in which the black merchants refide, are in general ill-contrived, aukward struc-

The English church is a very neat building, fituated on pleafant green, round which are the houses of the English. As to the pagodas of the gentoos, they are such

wretched edifices, as to be unworthy of notice.

The government is intirely English, subordinate to the India company, who appoint by commission a president and council: and the marine and military force is under the immediate direction of the prefident, who is fliled commander in chief.

The common foldiers are of many nations, some Portuguese, some Dutch, and others French: what are called topasses, are for the most part black, or of a mixed breed from the Portuguese. There are also regular companies

of the natives, who are called feapoys.

Any popility prieft, except a Portuguele, may officiate in the churches of the three Roman catholic parifines, into which Bombay is divided; but the English formed an objection against the Portuguese, from an apprehension that these fathers might have rather too close a connection with others of their own country, in the adjacent fettlements belonging to their mafter. There are no difputes in this town about professions in religion, all alike are tolerated. Liberty of conscience, freedom of speech, riches, and honours, diftinguish the people and clime.

The inhabitants of Bombay, are a mixture of feveral nations. English, Portuguese, and Indians, amounting, as it is faid, to fifty or fixty thousand. The president of Surat is usually governor of the place, who has a deputy here, and courts of justice after the model of England. And and courts of interested in moter of England. And the governor, when he is upon the island, appears in greater fate than the governor of fort St. George, being attended when he goes abroad, by two troops of Moors and Bandarias, with their standards. The natives, and those who are feafoned to the country enjoy a tolerable state of health,

and, if they use temperance, live to a good old age; and

those who go over young, do pretty well.

Near Bombay are several islands, the chief of which are
Butcher's island, Elephanta, and Salfette. The first is so
called from great numbers of cattle being kept in it for the use of Bombay; and the second has its name from the enormous figure of an elephant cut in stone, and which at a distance appears as if alive, the stone being exactly of the colour of that quadruped. On this island, which is nearly one intire hill, and about three miles in circumference, there is a temple hewn from a rock. This real curiofity, which is supported by two rows of pillars, is ten feet high; it is an oblong square, about eighty seet in length, and about forty in breadth; and its roof is formed of the rock cut flat. At the farther end of this fingular structure stand the figures of two giants, the faces of which however, have been much mutilated; the Portuguese, when they became possessed of this island, disfiguring and which opens on the left hand, has an area before it; at the upper end of which is a range of pillars or colonade, adjoining for an apartment ornamented with regular architec-ture, round the considers of which are fome paintings. The whole of this temple differs from any of the most an-tique gentoo buildings; but with respect to the grawhen genius and labour produced it, no discoveries have vet been made.

To the northward of Bombay lies Salfette, being about twenty-fix miles in length, and nine or ten broad. Here, is a ruinated place called Canara, where are feveral caverns in rocks, which confiderably gratify the curiofity of fuels Europeans as vifit them. The foil of Salfette is extremely fertile, and great plenty of game is found in this ifland, which it must be acknowledged is a most agreeable fittu-It was originally comprehended under the regality tion. It was originally comprehended under the regairty of Bombay, and of confequence became the property of the English crown when Bombay was given to king Charles II. but the Portuguese defrauded us of it, though it is so connected with Bombay, that the people thereof cannot well substitutions it, having of needfley almost all their provisions from it. The Portuguese, however, lost this island by the suvasion of the Marattas, who inhabit the continuest hardware on Rombay there. who inhabit the continent bordering on Bombay; they are a very formidable tribe of Gentoos, who have extended their dominions by dint of arms. Their chief or king resides generally on the mountains of Decan, at a feet called Karee, reported to be the strongest place in the univerie: it is fo well and powerfully guarded by nature, that no enemy can approach it, being furrounded by steep inaccessible rocks. In this well-desended fort the king, or mar rajah, holds his court, and lives in great fplendor. He has long been the avowed foe of the Moguls, Subahs, and Nabobs: making war and concluding treaties just as it suit his interest or ambition.

The Marattas are alike bred to arms and agriculture: they learnt the use of the former from the Europeans, though they depend greatly on their targets, which will turn the ball of a pillol, and even that of a mulket, from fome diffance. Their mulkets are very indifferent; but their fwords are excellent, and they use them with great execution. Their targets are quite round, and rife in the center nearly to a point. The horfes on which they ride are small, active, and will go through a deal of fatigue.

European arts and manufactures receive little encouragement among these people, who prefer those of their own country to the most curious that can be shewn them from

foreign parts,

On an island about twelve miles in length, and fix in breadth, and in fifteen degrees twenty minutes north latitude, and feventy-four degrees twenty minutes cast longitude from London, stands the large and strong town of Goa, which is the principal place belonging to the Portuguese in India : it was taken by them in 1508. It has the convenience of a fine falt water river, capable of receiving ships of the greatest burden, where they lie within a mile of the town. The banks of the river are beautified with a great number of handsome structures, such as churches, caftles, and gentlemens houses. The air without the town is very unwholfome, for which reason it is not so well inhabited now as formerly. The vicercy's palace is a noble building, and stands at a small distance from the city, which leads to a spacious street, terminated by a beautiful church.

Goa contains a great number of handsome churches, convents, and cloitters, with a stately large hospital, all well endowed, and kept in good repair. The market place takes up an acre of ground; and in the shops about it may be lad the produce of Europe, China, Bengal, and other countries of lefs note. Every church has a fet of bells, fome of which are continually ringing. Their religion is the Roman catholic, and they have a

fevere inquifition. There are a great many Indian converts, and they generally retain some of their old customs, particularly they cannot be brought to eat beef. How-ever, there are many Centoos in the city, who are tolerated, because they are more industrious than the Christians, and better artists. The clergy are very numerous and illiterate; but the churches are finely embellished, and have great numbers of images. Their houses, which are of stone, are spacious and handsome, and make a sine shew; but within they are poorly furnished.

he was in this istand, stood or a hill near the city, and counted above eighty cliutches, convents, and monasteries, and he was told, that there were about thirty though and priests and nonks. The body of St. Francis Kavier is buried in St. Paul's church, and, as they pretend, performs a great many miracles. None of the churches except one, have glass windows; for they make use of oyster shells instead of glass, and all their sine houses have the

The town itself has few manufactures or productions, The town itself has few manufactures or productions, their belt trade being in arrack, which they diffil from toddy, the fap of the cocos-nut tree. The rivers mouth is defended by feveral forts and batteries, well planted with large cannon on both fides; and there are feveral other forts in different places. This fettlement is two hundred and fifty miles north by weft of Cochin.

The illand of Diu or Dio, fituated in fixty eight degrees fifty-five minutes eaft longitude, and twenty-one degrees forty-five minutes north beingle, is three miles long

grees forty-five minutes north latitude, is three miles long and two broad. The town, which bears the fame name, is pretty large, and fortified by a high stone wall, with bafis pretty large, and fortified by a high stone wall, with battions at convenient dislances, and well furnished with cannon. The harbour is fecured by two castles, one of which is made use of for powder, and other warlike stores. It was one of the best places in those parts, the structures being built of free-stone and marble. It contains sive or six since churches well embellished within with images and painting, built by the Portuguses; but it is much decayed of late years, not one fourth part, of it being inhabited in 1670 it was taken by the Arabs, who plundered all the churches and other places of their riches, but were driven. churches and other places of their riches, but were driven away with the less of one thousand men. There are not now above two hundred Portuguese inhabitants, for the rest are Banians, who may amount to forty thousand. If this town was in good hands, it would be the best place

The John via ligon lines, it would be a profession of cape Romano, but produce nothing fit for the carrying on commerce. Pulo Aure, one of them is peopled by Malays, who are faid to form a fort of republic, lieaded by a chief. In this idand are feveral mountains on which are many plantations of cocoa-trees. Articles in trade are pur-

plantations of cocoa-trees. Articles in trade are purchafed here with iron, and the people have the character of being very honest, friendly, and hospitable.

The island and town of Sincapour, or Sincapora, lie at the southermost point of the peninsula of Malacca, and give name to the south-east part of Malacca straights. Here is a mountain which yields eacellent diamonds, and singar-canes grow to a great size. The foil of Sincapour is fruitful, and the woods produce good timber for ship-midding. building.

There are feveral islands in the East Indian fea, lying off. the coast of Cambodia, the principal of which, called Pulo-Condore, is the only one inhabited. It is fituated in one hundred and seven degrees forty minutes east longitude, and eight degrees thirty-fix minutes north latitude. It is about thirteen miles in length, and nine in breadth,

but in fome places not above a mile over.

The inhabitants of this ifland are of a middle flature, and well thaped, but their complexion is exceedingly fwarand were mape, out their complexions exceedingly war-thy. Their hair is firait and black, their eyes are remark-ably finall, and their nofes high; they have thin lips, finall mouths, and white teeth, and in their dispositions are very equireous. They go almost maked, except on very, particular occasions, when they are dressed in a long garment girded about the waift, and ornamented with various coloured ribbands.

Their houses are built of bamboos, covered with long grafs; but they are very small. They are raised several feet from the earth, on account of the dampness of the ground; and they have neither doors or windows; fothat one fide is left open as well for convenience of light, as for the entrance of the people. They are very free of their women, and will bring them on board the thips, where

they are kept by the failors while they stay.

These people me idolaters, but of what kind is not known; however, they have images of elephants in their temples, as well as horfes. In a finall village, on the fouth fide of the ifiand, is a temple, which is a mean edifice built of wood; within it is the figure of an elephant, and without is that of a horle.

The foil of these islands is a brackish, and pretty deep, No. 19.

The inhabitants are contented with greens, fruits, and roots, which, with a little bread, rice, and fish, is their principal diet, though they have hogs and fowls in plenty. However, they are much addicted to women, and are generally weak, lean, and feeble. Captain Hamilton, when he was in this island, shood on a hill near the city, and counted above eighty clurches, convents, and monateries, and he was told, that there were about thirty though fand priests and monks. The body of St. Francis Kavier is buried in St. Paul's clurch, and, as they pretend, giernian and monks. The body of St. Francis Kavier is buried in St. Paul's clurch, and, as they pretend, giernian and monks. The body of St. Francis Kavier is buried in St. Paul's clurch, and, as they pretend, giernian and monks. The body of St. Francis Kavier is buried in St. Paul's clurch, and, as they pretend, giernian and monks. that grow here.

In 1702 the English settled on this illand, after the factory of Chusan, on the cost of China, was broke up. However, they continued here but a short time; for, hav-ing made an agreement with some Macassare, natives of the itland of Celebes, to serve for folders, and assist in the illand of Celebes, to ferve for foldiers, and affift in building a fort, and not discharging them at the end of three years, (for which term they were engaged) they rose in the night, and murdered every Englishman they could find on the island. The English had purchased this island of the king of Cambodia, to whom, after this circumstance, it again reverted. Few remains of the fort are now standing it having been for the most part demolished.

There are several other small islands in these seas, namely, 1. Pule-Dinding, near the continent of Malacca, which belongs to the Dutch, where they have a stort. 2. Pulo-Timon, on the castern coast of the peninfula of Malacca, in one hundred and five degrees forty minutes east longitude, and three degrees welve minutes north latitude.

lacca, in one hundred and five degrees forty minutes eatt longitude, and three degrees welve minutes north latitude. It is pretty large, covered with trees, and the vallies are very plealant. It is often touched at for wood, water, and other refreshments, and there is great plenty of green turtles. 3. Pulo-Way, near the idland of Sumatra: it is stuated in twenty-one degrees forty-feven minutes east longitude, and five degrees forty minutes north latitude, and is the largest of all those which, form the entrance of the channel of Ackers and is readed by men banished. and is the largest of air tube which from the entrance of the channel of Achem, and is peopled by men banished from Achem. 4. Puna, one hundred and twenty miles north of Patay, one thouland degrees five minutes west longitude, and three degrees fisten minutes south latitude; it lies at the entrance of the bay of Guiaquil.

SECT. XI.

Treats of the Afiatic islands under the dominion of the Turket

Turks are possessed of all the islands that are difperfed about the Archipelago; but, from the rigorous oversiment of the Ottomans, they are greatly degenerated

government of the Ottomans, they are greatly degenerated from their prittine opulence and importance. We thall describe them as they lie, beginning with those fituated to the westward; namely, 1. Tenedos; 2. Lefbos; 3. Carceners; 4. Chios; 5. Pfara; 6. Samos; 7. Icaria, or Nicaria; 8. Patmos; 9. Claros; 10. Leros; 11. The Mandria illes; 12. Coos, or Stanchio; 13. Stanballa; 14. Carpanthus; 15 Issue in the gulf of Smyrna Those situated to the northward, are, Rhodes and Cyana.

t. Tenedos. This is one of the smallest in the Ægears say, but was greatly, famed, among the antients. It lies in forty degrees north latitude and fixteen degrees cast longitude, exactly opposite to Troy, from the shore of which it is about two leagues distant, and indeed formed the Trojan harbour. The Grecians concealed their sleet behind this island, in order to delude the Trojans, by making them suppose that they had raised the siege, and returned to Greece. The inhabitants of this island were reduced to the utmost indigence after the fall of Troy, were at length conquered by the Persians, and afterwards alternately subdued by the Lacedæmonians, Romans, and Turks.

dued by the Lacedæmonians, Romans, and Turks.

This island is near twenty miles in circumference, and had formerly a confiderable city, and two havens: it was likewife celebrated for a temple dedicated to Apollo Smin-flius. The only antiquities now to be feen on this island are the ruins of the granaries built by the emperor Justinian; they were two hundred and eighty feet in length, and ninety in breadth. In this island is produced the begand most delicious wine in all the Levant, which is called Muscadine, and is held in the highest repute both by Europeans and Maistes. ropeans and Afiatics.

Tenedos is furrounded by rocks, and contains feveral towns, or rather villages, the principal of which has the fame name, as the island, is inhabited by Greeks, and addrned with many fountains of white marble, being made of stones brought from the ruins of Troy. A strong casse, standard with square towers, stands on the north of the town, close to the sea: besides which, two round towers, and a battery of twenty cannon, defend the ha-ven. To the fouth of the port there is another cattle, which commands the harbour and town, and is confequently of the utmost importance to the piece. Here are thewn the tomb of Marpelia queen of the Amezons; and that of the Grecisn hero Achilles.

a. Lefbo; which is one of the principal Hands of the Archipelage, its about fixty miles from "lenedor, indicate right miles from the continent of Aila Minor!" it fees under the thirty-ninth, degree north latitude, and between the twenty-fix and twenty-leventh, degrees will longitude being about feventy miles in length, and one hundred and

The chief cities of Lefbos were, 1. Arifbs, which was intirely defroyed by in carffiquake. 2. Pyrths, on the western coast towards Greece, which met with the same

fate, as the former, as did Hiera and Agamis. (1) (1) (2) (2) Ereflus; which was fituated on the fouthern promontory of the illand, and only famous for having been hence of the leekbrated Theophradus, who faceceded Ariflotle in his peripatetic scademy. 4. Antiffa, according to Strabo, was formerly an sitand of itleft, and was called Antiffa from being upporter to Lefbos, which was then known by the name of fife. This city was destroyed by the Romans, on account of its disaffection to their government. '5. Methymna was the place of Arlon's nativity, and in great repute for the excellent wine which the inhabitants made. 6. Mitylene, the metropolis of Lefbos. This city was not more famed for the fertility of the circumjacent country, and the uncommon magnifrience of its buildings, than for the number of confiderable personages to whom it gave birth; among these were, Pittacus, one of the seven Grecian fages; Alexens the Lyric poet; Sappho, the celebrated poetes; Terpandor, the muscian: Hellanieus, the historian; Cailias, the crite, besses many others. Mitylene was deemed so much the fear of the funes, and the centre of politenes, that Arithtle refided in it two years, to partake of the elegant conversation of its inhabitants. After having revoked from the Romans, this city was greatly injured by the Peloponne-fian war. It was afterwards destroyed by the Romans, and at its fiegethe famous Julius Cafar made his first camand at its fiege the famous Julius Carlar made his first campaign, and greatly figuralized his courage. Being rebuilt, Pompey restored it to its antient franchises. The emperor Tridjah adorated it with many elegant structures, and from his own name called it Trajanopolis.

This illand is naturally very fertile, and was celebrated by the antients for producing in great abundance all the necessaries and surverse of life. The wine in particular is excellent, and as much externed by physicians for its faluheirer as admirable fairs admirable flavour by the voluntuous.

brity, as admired for its admirable flavour by the voluptuous.

The Letbians in general fore fuctor an immoral character, as at length to become proverbial, for the Greek faying, "To live like a Letbian," Implied, to live the most abandoned and profiligate, life that it was possible for any person to be addicted to."

At present Lesbos is but thinly peopled, and scarce any As present Letoos is out unity peopled, and fearce any thing is to be feen but the fragments of its former magni-ficence: however, travellers tells us, there are fifth one hundred and thirty fmall villages, and feveral harbours, particularly Caftel, butth on the ruins of the articut Mi-tylene, which is fituated on the east fide of the island, has an excellent port, and is defended by a ftrong caftle.

There is a town named Cos-dogg, which is hellt on a spot where a city entiently stood, called the Mounts of Ida; the inhabitants are principally Greeks; but the neighbouring mountains are infested by a great number of Tuckish robbers, who are some of the most bloody and

mercilefs miscreants on earth.

mercile's miscreants on earth.

The trade of Leibos consists principally of wine, grain, fruits, check, butter, bitch, &c. The duties paid to the Ottomans amount to eighteen thousand piastres, and the inliabitants are computed at about twenty thousand. The house at present are low, and meanly built, and the people miscrably poor; they are, however, as vicious as when they lived in greater affluence. Magazines are kept here, to surnish with stores the Turkisti gallies which are employed by the Porte to cruize against the pirates that sinfest some of these islands. The governor is a cadi; but the troops on the island is commanded by an aga of the janisaries.

3. The Careeners, or Spalmadori islands, are exceedingly small, and, being situated to the north of Lesbos, the plrates put in here to careen, the fituation being extremely convenient for watching the fhips that go to, or come from

Constantinople, for the purposes of trade,
4. Chios, or Scio, lies in thirty-nine degrees north lati-

the and twenty-feven east longitude, the Turks call it Sakifaduci. It is fituated opposite to the coast of lonis, and has a coast of about eighty miles in circuit, being divided into upper and lower ground, the former terminating towards the north at cape Apanemeris, and the latter towards the fouth at cape Massico.

This island is mountainous and rocky, yet the plains produce corn, wine, oil, honey, freit, and gums, though produce corn, when, on, noney, reuze, and gums, stought the ferrility is much impeded by the great fearcity of water.

The country is in general fertile and populous, and the inhabitants opulent. The men are well made, the women handlome, and both fexes so much inclined to mirth, that they think all the time lost that is not employed in singing, dancing, feafting, revelling, gallantry, or fome kind of

Commerce is carried on here to a great extent; but the commerce is seried on here to agreet extent; but the harbour is bad, and indeed dangerous; yet the flips going to and coming from Confiantiple rendezvous at this place; and a Turkith fundron is kept here, to protect the merchant ships and chaltife the pirates that in set these feas. The capital, Scio, is a handlome city. The houses are clegant, and have grand terraces, and windows glazed with ted and green glass. This city is two miles in circumstrants, and extincted has funerable harmitist.

ference, and environed by feveral beautiful gardens. The inhabitants are chiefly of the Greek church, or Roman catholics, and have feveral churches and monafteries, which remain unmoletted by the Turks, who likewife permit them openly to profess their religion. The Vene-The Venetians, in 1694, took Scio, and greatly embellished it, but loft it the year following.

The port and town are defended by a castle, which was mine in oth . and is mood it to son T to the wife pin

built by the Genoese: the garrison confists of one thousand four hundred men, and both fortress and town are not above twelve miles from the continent of Afia, from whence they are supplied with provisions, fince the island, though tolerably fertile, does not afford a sufficiency for its numerous inhabitants, and the great number of frangers who are perpetually touching at the port. It is to be observed that Scio was or, of the seven cities that contended for the

honour of being the birth-place of Homer, and their coin formerly was flamped with the image of that antiene and celebrated bard. The neighbouring people in general deem the natives of this island a very stupid and signorant set of people: the Turks call them prasmios, which signises shallow wretches; and have a proverb concerning them, which implies, that we may as foon expect to meet with a green horie, as to fee

There are, in this island, thirty villages, three hundred churches, two thousand Latins, ten thousand Turks, and one hundred thousand Greeks. In time of peace, it is governed by a cadi, with a flipend of five hundred afpers per day; but in war time a baffa is fent from Conftantinople, to take upon him the supreme command. The Greek bishop is immensely rich, having, besides the abovementioned three hundred churches, many chapels and mo-nafteries under his jurisdiction; the chief of the latter, called Neamoni, or New Solitude, is about five miles from Scio, contains one hundred and fifty monks, and paye to the government five hundred crowns annually, which it can well afford, its yearly revenue being an eighth part of the produce of the whole island, amounting to fifty thou-fand crowns.

Their staple commodity is gummastich, gathered in Au-gust and September; at which season the officer who goes to receive the grand Signor's quota, is entertained in a very

fumptuous and leftive manner by the people.

The most considerable towns of the island, next to the capital, are the following: 1. Callimacha, the chief mattich town; it contains fix churches, which have thirty fubordinate chapels and a numery belonging to them. 2. Pergi, which contains a castle, thirty churches, and two thorsand inhabitants. 3. Mesta, smooth for the wester wine which its neighbouring vine wards produce. 4. Armolia, a mastich town, defended by a strong castle: 5. Volista is famous for its fille manufactory; it contains three hundred houses, one thousand five hundred inhabitants, and is defended by a cafile crected by the celebrated Belifarius, who experienced a most astonishing reverse of fortune, having been reduced to the condition of a public from being one of the most glorious conquerors. 6. St. Helena is fituated on a rock; and contains two churches, a chapel, and about two hundred inhabitants;
7. Cambia has a caille upon a rock, and is celebrated for its pinos, with which the Torks build many gallies, and for a hot medicinal fpring. 8. Cardamita; fituated in a very rich territory, which in particular produces annually

one hundred and seventy tons of excellent wine; many coins of Constantine the Great have been dug up in the neighbourhood; and a spring of water issues from a rock at no great distance, which in its fall forms a beautiful cascade. This town was antiently for the second of the secon cascade. This town was antiently fur at for the temple of Neptune near port Dolphin, the rate of which are yet to be fren.

The natives of this island, while the reference of the Venetians and Genoese, were permitted to be governed by their own laws; but since the Turks conquered it, the poor people are both despised and oppressed by

4. Pfara is a very finall island to the westward of Chies, and remarkable for nothing but a breed of asse, who die immediately after being carried from the island, but are exceeding strong, hardy and long-lived, while they remain at their native place. Near this island are some smaller ones, called Careeners, which, like those already mentioned, are frequented by pirates who interrupt the trade.

6. Samos, at the distance of forty miles from Chios, and opposite to the south coast of lonia, lies in thirty-feven degrees growth latitude, and twenty-feven east longitude.

and opposite to the south coast of lonia, lies in thirty-feven degrees north latitude, and twenty-feven east longitude. It is about eighty miles in circumference, and the see of an archbishop; but this prelate is exceedingly poor, for he is obliged annually to pay so large a stipned to the court of Constantinople, that he scarce leaves himself any thing. It was formerly a commonwealth; and is naturally so fertile, that when Greece was at the summit of her glory, it was deemed, though less than many, of as much importance as any of the islands of the Archipelago. The trade at prefent consists of several forts of wines, which are admirable, a superior kind of conous and earlick. are admirable, a superior kind of onions and garlick, fine earthern ware, raw silk, oil, honey, saffron, fruits, drugs, minerals, emery, oker, and hlack dye, &c. Notwithstanding the natural richness of this island, the natives are so much oppressed by the Turks, and plundered by the pirates, who intest the coast, that they are in general very miferable and indigent.

There are about twelve thousand inhabitants in this issand, which are principally Greeks; the capitation tax which they payamounts to about fix thousand four hundred crowns, and the customs are farmed at ten thousand more. The governor, who is an aga of the janificate, collects about as much again for himfelf, and makes him likewicheir to every Greek who dies without male iffue, taking money, house, goods, and indeed every thing but the garden, which is left to the quiet possession of the daughters.

This island abounds with wild fowls, such as partridges,

woodcocks, fitipes, thrushes, wood-pigeons, turtle-doves, and wheat-ears; besides which, their poultry are excellent; they have iron mines, and most of the foil is of a rushy colour: they have also emery stone, and all the mountains

are of white marble.

The Greek monks are two hundred in number; and are fo extremely ignorant, that their whole knowledge of religion confifts in being able to fay maß by rote: they have a bishop who refides at Cora. The women are very nafty and ugly, and never shift above once a month: they are clothed in the Turkish manner, except a red coif, their hair hanging down their backs, with plates of filver, or block tin fastened to the ends.

Samo, the chief town, which, as well as the island it-felf, the Turks call Sussan, is now reduced to a poor vil-lage; and, to add to its wretchedness, the pirates frequently plunder ir, but the noble fragments of its antient fplendor, which still remain, excite at once admiration

splendor; which still remain, excite at once admiration and grief in the speciator.

The other towns are, 1. Vati, the residence of the French vice conful; this, thogh formerly a splendid city, is now only a mean village, containing about three hundred miserable houses, and a few wretched inhabitants; but though they possess, and a few wretched inhabitants; but though they possess worldly wealth, they appear rich in the most valuable of all treasures, contented minds.

2. Cora, which contains about fix hundred houses; but, force it with shundred by the Verenius, gray of them are fince it was plundered by the Venetians, many of them are gone to ruin, and more are uninhabited. A cadi and an gone to ruin, and more are uninhabited. A cada and an aga of the janifaries are obliged by the porte to refide here, notwithflauding the unwholefomenefs of the air, occafioned by the purtid waters that furround the place, which are now stagnant, though they freely flowed to the sea in antient times. The rest of the towns are as much or more miserable; and, upon the whole the island contains little essentially the stagnard of the bedder. It was however, exclusive in history. of the beholder. It was, however, celebrated in history, for liaving been the birth place of that admirable philospher Pythagoras, who afterwards removed to Crotona.
Antong other things, the city of Samos was remarkable

for a noble temple built to the honour of Juno; it was formerly a very magnificent city, as we may judge from its ruins,
which are fill superb monuments of its antient grandeur.
7. Nicaria, or learia, is about seventy miles in circomference, and rocky, mountainous, and barren: it lies in
thirty-seven degrees thirty minutes north latitude, and
twenty-fix degrees thirty minutes east longitude. It has
no harbour for shipping, and consequently must be without
continerce. The Samians say, that when the two islands
were made, all the good snaterials were exhausted in making Samos, and that nothing but the rubbish remained for
Nicaria. Some negative benefits, however, arise to the
natives from these disadvantages, for the Turks do not
think it worth their while to oppress them, nor the pirates

natives from thete diladvantages, for the Turks do not think it worth their while to oppress them, nor the pirates to plunder them of their little property.

The inhabitants are about three thousand in number: they have wine, which is but indifferent, sheep, goats, and atomatic herbs. They row their boats, and do other work quite naked; for fear of wearing out the sew cloaths, they are able to procure. They are of the Greek communion, have a kind of bishop, twenty-four priests, and a few changels.

a few chapels.

A ridge of mountains runs through the whole island: they are covered with wood, and supply the country with springs. The people are strong and well made, but, ill-favoured and nasty, they are exceedingly lazy, of savage dispositions, and speak a most barbarous dialect of the Greek.

8. Patmos lies, between Nicaria and Samos, in thirty-

feven degrees twenty minutes north latitude, and twenty fix degrees forty-five minutes east longitude, and is only about eighteen miles in circumference; nevertheless it has about eighteen miles in circumference; enverthelefs it has feveral convenient harbours, which give it an advantage over many other of the Levant islands. De la Scala, its principal port, is deemed the very best in the Archipelago. Sapsila and Cricon are likewise excellent harbours, but they are all terribly insested by pirates, which has obliged the inhabitants of Sapsila to evacurate the town, and retire up a neighbouring hill to the monastery of St. John, which is at once a religious house and fortres; has an annual revenues of strengths are manual revenues of the strengths are maintains one husilists.

at once a religious house and fortress; has an annual revenue of six thousand crowns, and maintains one hundred monks. Though the use of bells are probibited in all other parts of the Turkish dominions, yet the monks of this monastery are permitted to have two large ones. The whole island is very barren, and without wood: however, it abounds with partridges, rabbits, quails, turtles, pigeons, and fnipes. All their corn does not amount to one thousand barrels a year. There are scarce three hundred men in the island; but then there are twenty women to one man, who expect that all firingers; who land here, should carry some of them away: these latter are good tempered and handsome; but spoil their faces by using a prodigious quantity of paint.

using a prodigious quantity of paint.
This is the island to which St. John the evangelist was a miss the hand to which St. John the evanguit was banished by the Romans, and when it is supposed he wrote his revelation; and to his memory there is an hermitage on the fide of a mountain, the entrance to which is hewn out of a folid rock, and leads to the chapel, which is almost forty-four feet long, fifteen broad, and is covered with a gothic roof. Overhead they shew strangers a chink in the rock, through which they tell you that the Holy Ghost dictated to St. John. The management of the island is committed to the care of two Greek officers, as no Turks reside upon it. The taxes produce about ten thou-fand crowns annually. The houses are neater than those fand crowns annually. The houses are neater than those of most of the other islands; and the chapels are well built arched, and about two hundred and fifty in number.

Claros, which is about forty miles in circumference, lies very near Patmos: it is mountainous, has two fea ports,

lies very near Patmos: it is mountainous, has two fea ports, a town and a caftle, to which it gives name, yet was never famous for any thing but a magnifeent temple dedicated to Apollo, and was on that account celebrated by the poets, 10. Leros, Lerio, of Oleron, lies to the fouth of Patmos and north of Claros, is eighteen miles in circumference, and produces abundance of aloes: Greeks and Triks in-liabit it, but are not numerous. It contains but one fmall town, a few scattered hamlets, and a small number of monafteries. Upon a hill are fome noble ruins, in particular about twenty superb marble pillars that remain intire, and which are perhaps the remnants of the cemple of Diana, on whose account this island was famous. This island, according to fome authors, was remarkable for the birth of

11. The Mandria islands are to the eastward of Leros; the center island is by far the largest, but none of them are inhabited, except by the pirates that insest those parts, who are some of the most cruel and savage wretches existing, murdering the crews of all the ships that fall into their power.

12. Stanchio, or Coos, lies in thirty-fix degrees forty 12. Staticulo, or Coos, lies in timey-ix degrees forty minutes north latitude, and twenty-fewen degrees thirty minutes call longitude, is opposite to the coast of Doris, eighty miles from Samos, seventy in circumference, has a fruitful foil, and towards the cast gradually rise into mountains; it is rich in-passure, wines, fruit, turpentine, correct intelliginal and other allows.

cyptefs, inedicinal and other plants, &c.

The capital, Cos, is fpacious, populous, well built, and ftrongly fortified: it is fituated on the eastern coast, and was formerly famous for a fuperb temple of Æsculapins, as the island itself was for the birth of the celebrated Hippocrates, whose house is still shown in the town of Harangues : but both these celebrated physicians owed their fame more to their recommending temperance, than to any of the medicines they discovered or prescribed.

This island was celebrated for fome light garments ma-mfactured here, and called vehimenta coa: but was full more remarkable for the flattle of Venus, made here by Apelles, who was a native of this little island; and hence the notion of Venus's rifing out of the fea originated. This admirable piece of workmanship was first lodged in a stately temple, but Augustus carried it to Rome; and to make the superstituous people some amends for its lofs, their tribute was intirely remised. The larbour is good, and well fecured from the depredations of the pirates that infest these seas.

13 Stampalia is fixty miles in circumference, and lies 13 Stampalia is nxy mines at the coall of Anatolia, has a town of its own name on the fouth coast, two harbours, and very thinly inhabited; but has a church or two, subject to a bishop.

14. Carpanthus, or Scarpanto, lies on the fouth coaft of Doris, between Corale and Rhodes, in thirty-five degrees forty-five minutes north latitude and twenty-feven degrees forty minutes east longitude, it antiently gave name to the Carpanthian sea. It is near eighty miles in circumference, but is mountainous, barren, and but thinly inhabited. It has no town, except Scarpanto, whose harbour is tolerable, but terribly insested by the pirates.

15. The islands in the gulf of Smyrna, are five in number, small and uninhabited: one is called Long Island, or Ifola de Eglere, that is Church Island; it is ten miles long, rather narrow, and contains the ruins of a magnificent temple. Another of them, the Greeks fay, formerly contained many elegant buildings, of which no veftiges are at present left, except an apartment supported by four pillars, the whole being cut out of the solid rock; from this island a causeway formerly joined to the main land, but it is now intirely ruined. Some bave imagined this to be the Clazomene of the entients, but we cannot determine on the propriety of this conjecture.

16, Rhodes is fituated feventy-five miles east from Candia, eight from the Lycian coast, is about one hundred and twenty in circumference, and extends from thirty-five degrees fifty minutes to thirty-fix degrees thirty minutes north latitude, and from twenty-eight degrees twenty minutes to twenty-eight degrees forty-four minutes caft lon-gitude. It has formerly gone under the names of Afteria, Ethreea, Corymbia, and many others; as for the name of Rhodes, some are of opinion that it was so called by the Grecians from the abundance of rofes the foil produces, Rhodes in that language fignifying a rofe. While the poets feign it received this name from Rhoda, one of the daughters of Apollo by Venus. The chief town is called by the fame name, and was always effectned a place of ftrength: it is fituated on the north-east part of the island, having a tolerable good harbour, and as some say three harbours, but two of them will receive only very sinall vessels: the city slands part of it on the rising of a hill, and is three miles in circumference, the fireets broad, ftraight and well paved, and the largest is paved in the middle with marble from one end to the other. In this firect are fill to be feen the apartments of the knights of St. John of Jerufalem, and the palace of the grand mafter, but very much decayed; for as the Turks did not demolifh them upon their taking the place; fo neither will they do any thing towards the repairing of the most beautiful buildings whatever: the grand master's palace is seated on the highest part of the hill, now converted into a prison for the chams of Tartary, whom the Grand Signor banithes hither when he depofes them, and he has almost always one of the royal family of that prince here to let up against him if he disputes his orders: the church of St. John, which adjoins to that palace, is now a mosque: the city is desended by three walls, and as many ditches, and effected one of the ftrongest fortresses in the Sultan's do-

minions: the inhabitants confift of Turks, Jews, and Christians, but the Christians have only shops within the walls, and arcobliged to have their dwellings without the city, whither they retire every night. Lindus and Cawe do not find there any worth observation at present, except Rhodes. The houses are elegantly built in the Ita-; lian take, and the markets well supplied with all kinds of provisions. This city was formerly celebrated for the learning and politeness of its inhabitants; but at present

learning and politeness of its inhabitants; but at present-literature meets here with the same treatment that it does in all other parts of the Turkild dominions.

The air of this island is very healthful, and the country exceeding pleasant, cloathed with tress and herbage always; green, and a day fearce ever happens, it is faid, wherein the fun does not same upon them; their wines are much admired, and the country affords such plenty of all things besides, which can render life agreeable, that it gave occasion to the sidion of golden showers. Indeed they do not abound in corn, but then they are well supplied withit from the neighbouring coatinent of Natolia.

At the mouth of the harbour of Rhodes, which is fifty fathons wide, it is said, stood that great colossus of brass, eftermed one of the world; one foot placed on one fide of the harbour, and the other upon the other.

on one fide of the harbour, and the other upon the other, fo that ships passed in between the legs of it: the face of coloss represented the sun, to whom this image was dedicated; the height of it was seventy subits, and every part proportionable, the thumb being as thick as a mark could grass in his arms, and every singer of the see of an ordinary statue, and it carried in one hand a lighted house for the direction of vessels into the harbour: this prodictions statue was thrown down by an earthquake, fifty or threescore years after it was erected, and lay there till the the Saracens made themselves masters of Rhodea, who having beat it to pieces, sourcen hundred vears after the on one fide of the harbour, and the other upon the other, having beat it to pieces, fourteen hundred years after the making of it, fold it to a Jew that transported it to Egypt, and there loaded nine hundred camels with the brafs. Chares of Lyndus, a town in the island of Rhodes, is reported to have been the flatuary who framed this mighty

image, which he was twelve years in making.

The principal manufactures are fonp, tapefry, and camblets; but the city is a mart for all the commodities and productions of the Levant; yet Rhodes is kept merely in opposition to the Christians, as it does not remit any thing to the Grand Signor, the Turkish bassa being allowed the whole of its revenues to maintain the gallies, the garrison,

When this island, was attacked by the Greeks, the Rhodians called in the Romans to their assistance; who drove away the Rhodians chemics, and, according to their, usual custom, repaid themselves for their trouble, by seizing their country, and making bold with the property of the natives; after which it underwent many revolutions, being taken by the Venetians in 1124. The Turks conquered it in 1283, but were driven out of it by the knights, of St. John of Jerufalem in 1308; however, Soliman the Magnifectual state of the Magnificent attacked it with an army of two hundred thoufaud men and three hundred thips, and took it, January their men, and the Turks a much greater number. After this misfortune most of the Rhodians quitted their counthe Turks, however, flewed fo great refpect to the knights of Rhodes, that the fuffered them to keep their loudes, effects, coats of arms, flatues, incriptions, &c. and granted very confiderable privileges to fuch as would come and fet-tle there, which drew back fome of the Rhodians, and many of the Greeks; fo that Rhodes at present is as po-

many of the Greeks; to that Riddes at present is as po-pulous and flourishing as Turkith tyranny will permitany place to be that is under the dominion of the Ottomans. 17. The island of Cyprus is fituate in the most eatherly part of the Levant between the thirty-fourth and thirty-fixth degrees of north latitude, and between thirty-three and thirty-fix cast longitude, fixty miles south of the coast of Caramania or Cilicia, thirty west of the coast of Syria, and about three hundred miles to the eastward of Candia, and about three fundred miles to the eathward of Candia, and is tuppofed to have obtained the name of Cyprus, from the great number of cyprefs trees, which sourish here. The island stretches from the fouth-west to the north-east, being about an hundred and fifty miles in length, and seventy in breadth in the broadest part, but much wider on the south west, than on the north-east. The chief town is Nicosia, the capital of the island, between the feet of the helf or vicerous and formers. ing at prefent the feat of the balla or viceroy, and formerly the relidence of their kings. It flands near the middle of the country, and is about three miles in circumference,

but much fallen to decay fince it has been in the power of the Turks. The cathedral which went by the name of St, the Turks. The cathedral which went by the name of St, Sophia is converted into a Turkili mosque; there are however feveral churches and chapels in it, which are allowed to the Greeks, Latins, Armenians, Nethorians; and Maronites. This city is of a circular form, furrounded by walls, and is well fortified, and defended by a deep ditch. The Greek archbishop refides in it, whose suffrages are the bishops of Famagusta, Paphos, Larneza, and Cerreits.

Next to the capital, the following are the principal places; namely, 1. Famaguita, or Arinoe; which is an elegant city, and good fea-port, pleafantly fituated, and defended by two forts: it is incloided on two fides by a ditch, and double wall well fortified; and on the other two by the fea The Turks are fenfible of the importance of this place, and contrary to their usual cultom, keep the fortifications in excellent repair. The governor of this city is accountable only to the Ottoman Porte, not being lubordinate to the basis of the islands. The Greeks and other Christians are only remuirted to keep shows not being subordinate to the bassa of the islands. The Greeks and other Christians are only permitted to keep shops here in the day time, but are not allowed to sleep in the city. 2: Larneza is a good sea port town, in which the French and Venetians have a conful; the houses are; however, low and mean; and the inhabitants composed of Turks, Greeks, and some Europeans. The commodities are cotton, cotton yarn, wool, &c. 3. Cerenes, the antient Ceraunia, is almost in ruins, though formerly a strong and populous place. People depart from hence to the continent, as the nearest port: The palace of Peace, a magnificent edifice, formerly belonging to the knights, is near this city: and at about nine miles distance there is a Greek monastery, the monks of which have cells along the Greek monastery, the monks of which have cells along the fea coast, where they deposit the fish which they are emsea coalt, where they depoint the fifth which they are employed to catch for the ule of the brotherhood. 4. Limiffor this is now nothing but a meer village, though it remains a bifhop's fee; and the fituation of the antient city of Amatheus is not at prefent known. 5. Paphos, now called Baffa, is fituated on the weftern coalt of the island. Though much decayed from its former glory, it is still a bishop's fee, and a good sea-port town. In antient times it was much collected for its reasonisticant temple a bishop's fee, and a good sea-port town. In antient times it was much celebrated for its magnificent temple dedicated to Venus, from which the goddes of love was called the Paphian Venus. In this city St. Paul converted its governor Sergius, and struck the necromancer Barjesus

its governor Sergius, and struck the necromancer Barjetus with blindnefs, Acts xiii. 6.

This island was formerly divided into twelve districts, each containing a large city, and the whole including eight hundred villages. It is, as we before observed, governed by a bassa, subordinate to whom are five fangiacs, namely, Itchili, Alaine, Cyprus, Schis, Tarsus; and these have again under them forty ziamets and one hundred and fixty-feven timariots. The inhabitants were formerly deemed some of the most lewed and debauched people in the universe; and, according to the most authentic accounts, their inclinations are as deprayed as ever; but the Turkish their inclinations are as deprayed as ever; but the Turkish their inclinations are as depraved as ever; but the Turkish government compels them to a more referved behaviour, and at leaft obliges them to act with an outward appearance of decency. The prefent inhabitants are chiefly Greeks, who dress after the Italian fathion, but retain their

own religion and customs.

The natives of Cyprus were converted to Christianity by St. Paul and St. Barnabas, the latter of whom was a native of Cyprus. It gave birth to the poet Acelepiads, Xenophon, Zeno, Apollonius, the famous bithop of Epiphanius,

and feveral other great men.

There are no confiderable rivers in this island; but fome famous mountains particularly Olympus, which is of an aftonilhing height and extent. On this mountain, at the dislance of every league, there is a Greek monaftery, and a fountain said to be credted by the empress Helena, the mother of Constantine the Great. Hardly any vestiges remain of the anticut city of Salamis, formerly celebrated

for its temple of Jupiter, who was here represented by an image armed with thunder and lightning.

Cyprus was formerly populous and opulent, but at prefent is poor and thinly inhabited, which is chiefly owin to two causes, viz. the oppressive nature of the Turkith government; and the iwarms of locusts which for some government; and the twarms of locults which for fome ages path have infelted it, to the frequent defluction of the produce of the earth. The foil produces all kinds of grains: their wines, oil, lugar, cotton, honey, faffron, wood, metals, minerals, plants, drugs, flowers, &c. are all excellent in their kinds. Their wool and cotton manufactures are the best in the east, but the fisk is very indifferent. All the fugar canes in the island were destroyed by one of the Turkith ballas; the people, however, have No. 20.

a great traffic in a delicious bird, which they catch in the month of September and October, and pickle in vaft quantitles to export to Venice, where they are much prized, and purchased by the voluptous at a high price.

This island, like most others, was at first governed by several petty sovereigns or heads of samilies, who were afterwards brought under the dominion of the Egyptians, and next the Phoneicians their treithbors, as head

and next of the Phoenicians their neighbours; at least each of these nations had their colonies here upon the sea coaft, and kept the inland natives in subjection to them: yrus the Persian emperor afterwards invaded the island, which he found under the dominion of nine feveral fovewhich he found under the dominion of nine feveral fovereigns, whom he fuffered after his conquest to retain the itame and authority of kings, (the first of whom was Clinyras, brother of Pygmalion) but obliged them to pay an annual tribute. Alexander the Great, next made a conquest of it, and in the division of his empire it sell to the share of Ptolemy king of Egypt, under whole successfors it remained rill the Romans cashing an eye on the wealth of the country, without any other colour for invading it, sent Porcius Cato to reduce it under their power, which he effected, bringing back with him to Rome the spoils of the island, which amounted to seven thousand talents: the Saracens asterwards plundered it, but it returned to the obedience of the Greek emperors again, to whom it fell on the division of the empire. About the turned to the obedience of the Greek emperors again, to whom it fell on the divlinon of the empire. About the year 1191. Richard I. king of England, putting in here for fresh water in his voyage to the Holy-land, met with a very unhospitable reception, whereupon he subdued the island, and transferred his right to it; to Guy Lufignan the titular king of Jerusalem, in whose family it remained till the year source hundred twenty-three; when the fultan of Egypt invaded the island, taking John the king prisoner, whom he admitted to ransom for a great sum of money. and permitted him to ensolv his kingdom again. prifoner, whom he admitted to ranfom for a great fum of money, and permitted him to enjoy his kingdom again; under a tribute of forty thousand crowns per annum, and about the year 1473, one of these tributary princes made the senate of Venice his heir, who held it about an hundred years, under the like tribute. When Selimis the Turkish emperor, as sovereign of Egypt, claimed a title to Cyptus, and his grand vizier Mullapha, sitting down before the city of Famsgusta, then the strongest town in the strong the tribute of the strong the

SECT. XII:

Containing a description of New Holland, New Guinea, and other islands lately discovered.

THE island of New Holland is supposed to be the largest in the universe, being two thousand miles long, and its square surface exceeds that of Europe. The north-west and south-west coasts were discovered by the Spaniards in the feventeenth century, but captain Cook was the first who saw the east coast, which was in 1770. The fouthern parts are low and level; the northern parts hilly, but diverfified with woods and lawn:. There are but two forts of timber trees: the largeft is the gum tree, which grows all over the island: it yields a deep red gum, and the wood is heavy, hard, and dark coloured, like the ligancy with a sight years, leaves like the first the first the first the first the sight years. lignum vitæ, with narrow leaves like those of the willow. The other grows tall and upright, refembling the pine, fomething like the live-oak of America. The wood also of this tree is hard and heavy. Befides thefe, there are trees having a fort bark, eafily peeled off, the fame that is used for caulking of thips in the East Indies. Here are palms of three forts, a kind of cherry-tree, a fort of fig

plum trees, trees with a red apple, margroves, in this, a frong bearded grafs, plants of various kinds, &c.

There are feveral forts of quadrupes, but, as they could not be caught, no defeription can be given of them. They feem to be of the wolf, pole-cat, andweazel kind. There are goats, but no tame animals, except dogs. They have the opoflum, a creature with a membranous bag near the ftomach, in which it conceals and carries its young, when thomach, in which it conceals and carries its young, when apprehensive of danger. They have also a remarkable animal, about the fize of the care called a kanguroo, some of which weigh upwards of eighty pounds, and are not bad eating, refembling the slesh of a hare, but better slavoured. Here are birds of various kinds, innumerable infects, and abundance of fish of various forts.

The complexion of the people is chocolate colour, their features tolerable, their teeth white and even, and their hair, though they finge it thort, is naturally long and black, and generally firaight with a flight curl at bottom. Their hair is in general matted and fleck, but without oil or greafe; and, though they feldom comb it, find a method to keep it free from vermin.

The flature of the men is of the middle fize, but flender, and their boues fo fmall, that a continon hand may pan their ancles and their arms above their elbows; and in general they are clean-limbed and remarkable, vigorees, active, and mismble. Their beards are of the fame colony with their hair, and also bushy and thick, it never being fur-

fered to grow long.

The people in general go naked, without the leaft fenfe of indecency; they are not, however, without their ornaments, the principal of which is a bone five or fix inches long, and as thick as a man's finger, which they thraft shrough the feptam of their nofes: it reaches quite scroft the face, and to effectually ftops up the noftrils, that the wearer, when he speaks, snoffles so as scarce to be understood, and is obliged to keep his mouth conflantly open, in order to breath freely: the failors, in humour, call it their sprit fail yard. They were also necklaces made of shells, bracelets of small cord round the upper part of their arms, and a string of human hair plaited tied round their waift; and some were seen with large gorgets of shells hanging on the breast, and a few women had scathers on their heads, stuck on with gum. They paint themselves red and white, and dust their fires with a white powder. The red is generally laid on in broad patches upon the breastand shoulders, and the white in streaks, oncoround their thighs, two below their knees, one like a fash over their shoulders, and another aerost their foreheads. They have holes also in their ears, but no ornaments were seen in them. On their bodies were observed large sears in irregular lines, apparently made by some blunt instrument, probably as memorials of grief for the dead.

They have very mean huts, like hovels, fearce big enough to hold their families, and here they make fires, with which they are almost sinoke-dred. Their utensils are a vessel made of bark, to hold water, and a bag, made like a cabhage-net, to carry their whole property, which consists of paint, fishing-hooks, darts, and bracelets. They feed principally on vegetables and fish. To produce fire, they take two pieces of soft, dry wood, one a round stick of about eight or nine inches long, the other piece flat: one end of the round piece they shape into an obtuse point, and make a hole in the flat piece. In this hole they twirl the end of the stick between their hands, as we do a chocolate mill, pressing it down in the hole, till it fires. By this method they get fire in less than two minutes, and, from the smallest spark, they encrease it with assomithing speed. They will wrap up a spark in a little dry grass, which, by moving, will be fauned into a stance. Thus a man will run on for miles, and, without any visible fire in his hands, will at every fifty or a hundred yards, stoop down and leave fire behind him. One of their methods of annoying their European visitors, whom they confider as enemies, was, by setting fire to the high grass in the neighbourhood of the place where the tents were fixed, which, being dry as stubble, burnt with amazing force, and did a great deal of mischiel in its progress.

Spears and lances of different kinds, are among their weapons; some with four prongs, pointed with bone and barbed; the points of which are covered with a lard refin, which gives them a polith, and facilitates their entrance into the object they firike: others with only one point, and some barbed all the way up the shaft. They throw these with a throwing stick. They have likewise bows and arrows, an oblong shield, and a sword resemble a seymitar. Some of their weapons had a chissel site at their ends, but of what substance they were framed, could not

be learnt.

To the fouthward of New Holland, the canoes are made of one piece of bark, about twelve feet long, tied up at the ends, and fpread open in the middle by two flicks. In shallow water, they push them on by a pole, and in deep water by paddles, two of which they use at a time. More to the northward they are made of the trunk of a tree, fourteen feet long, hollowed out by fire. They are in general very narrow, and furnished with an outrigger, to prevent their oversetting. Fourty-cople are the most they will carry.

With respect to their tools, the only ones seen among them were, an adse made of stone, wedges of the same, wooden mallets, and a few shells and pieces of coral. They make use of the rough leaves of a wild sig (which answers they work of the work

the purpose of thave grafs, for polishing.

These people have no idea of traffic, nor could any be given them; for all the signs made to them, describing a return for things presented to them, were fruitles: they

did not feem to understand them. This indifference with respect to buying, kept them honest! they never attempted to pursoin any thing, but, if resuled what they wished for, they attempted to take it by force. They feemed to set no value upon any thing that was given them, for, like play things given to children, they pleased only while they were new. Nor do they feem to have any curiosity; for though walking on the sea flore, in sight of the ship, a wonderful machine they had never seen before, fearce one cast an eye towards it, though numbers trudged along the shore. They introduce into company as the English do, by their mames.

We cannot truly ascertain whether they are brave or not: they made some opposition to the ship's crew on landing, but they were soon intimidated by the sire arms, as a few pieces fired with small shot presently dispersed them, and, after the first comest, they would never come near enough to parley; so that the Europeans could by no means form the least connection with them. How it happens that there are so sew inhabitants, is not easy to devise: whether they are destroyed by each other in contests for sood, whether sweep off by samine, or their encrease prevented by any particular cause, cannot be at present determined. That they have wars amongst them, is evident by their weapons; but what gives rise to these wars, or what is the consequence of them, we cannot determine.

In confirmation of what has been related above, and for the farther fatisfaction of our readers we shall add the following remarkable particulars: when captain Cook first landed at Botany Bay (thirty four degrees fouth, one hundred and fifty two degrees thirty feven minutes east) fo called from the great quantity of plants which the gentle-men collected there, two of the natives came down, each armed with a lance about ten feet long, and a fhort flick which appeared to be used as a machine to affist him in throwing it. They feemed determined to defend their coast, though the party that landed were forty in number. "I could not," says caprain Cook, "but admir: their courage, and being very unwilling that hostilities should commence with such inequality of force between us, I or-dered the boat to lie upon her oars. We then parlied by figns for about a quarter of an hour, and, to belpeak their ood will, I threw them nails, beads, and other trifles, which they took up, and feemed to be pleased with. I then made figns that I wanted water, and, by all the means that I could devise, endeavoured to convince them that we would do them no harm. They now waved to us, and I was willing to interpret it as an invitation; but upons our putting the boat in, they came again to oppose us. One appeared to be a youth about nineteen or twenty, and the other a middle aged man. As I had no other recourse, I fired a musket between them. Upon the report, the youngest dropped a bundle of lances upon the rock, but, recollecting himself in an instant, he matched them up again with great hafte. A flone was then thrown at us, upon which I ordered a musket to be fired with small shot, which struck the eldest upon the legs, and he immediately ran to one of the houses, which was diffant about one hundred yards.

" I now hoped that our contest was over, and we immediately landed: but we had feareely left the boat, when he returned; and we then perceived that he had left the rock, only to fetch a shield or target for his defence. As foon as he came up, he threw a lance at us, and his comrade another, they fell where we flood thickeft, but happily hurt nobody. A third musket was then fired at them; upon which, one of them threw another lance, and both immediately ran away. If we had purfued, we might probably have taken one of them; but Mr. Banks fuggefting that the lances might be poisoned, I thought it not prudent to venture into the woods. We repaired immediately to the huts, in one of which we found fome child-ren, who had hidden themselves behind a shield and some bark : we peoped at them, but left them in their retreat; without their knowing that they had been discovered; and we threw into the boule, when we went away, fome beads, ribbons, pieces of cloth, and other prefents, which we hoped would procure us the good will of the inhabitants when they should return : but the lances we found lying about, we took away with us, to the number of about fifty. They were from fix to fifteen feet long, and all of them had four prongs in the manner of a fifth-gig, each of which was pointed with fifth-bones, and very tharp. Wo observed that they were smeared with a viscous substance of a green colour, which favoured the opinion of their being poisoned, though we afterwards discovered that it was a miliake: they appeared, by the sea-weed that was with mpted vilhed ed to r, like e they ; for hip, a

each of hflance of their that it at was found flicking to them, to have been used in firiking fish. Upon examining the canoes that lay upon the beach, we found them to have been the worst we had ever seen. They were between twelve and fourteen feet long, and made of the bark of a tree in one piece, which was drawn together, and tied up at one end, the middle being kept open by flicks, which were placed across them from gunwale to gunwale as thwarts.

gunwale as thwarts.

"Here was feen a tree, the fruit of which in colour and shape, refembled a cherry. There are but two kinds of timber wood here, both of which are as large, or larger than the English oak, and one of them has not a very different appearance. This is the same that yields the red-dish gum like sanguis draconis, and the wood is heavy, hard, and dark coloured, like lignum-vite. The other grows tall and straight, something like the pine; and the wood of this, which has some retemblance to the live-oak of America, is also hard and heavy. There are a few shrubs, and several kinds of the palm; mangroves also grow in great plenty near the head of the bay. The country in general, as far as it was observed, is level, low, and woody. The woods abound with birds of exquisite beauty, particularly of the parrot kind; here are also crows, exactly, particularly of the parrot kind: here are also crows, exactly the fame as those in England. About the head of the harbour, where there are large flats of fand and mud, there is great plenty of water fowl, most of which are species intirely unknown. One of the most remarkable was black and white, much larger than a fivan, and in shape some-what resembling a pelican. On these banks of land and what retembing a perican. On these parks or it and and mud there are great quantities of offers, mufcles, cockles, and other shell fish, which seem to be the principal subsities ence of the inhabitants, who go into shoal water with their little cances, and pick them out with their hands. They were not observed to eat any of them raw, nor do they always and the seements of the seements. ways go on shore to dress them, for they have frequently fires in their cartoes for that purpose. They do not, how-ever subsist wholly upon this food, for they catch variety of other fish, some of which they strike with giggs, and fome they take with hook and line.

"All the inhabitants were stark naked; they did not appear to be numerous, or to live in focieties, but, like other animals, were feattered about along the coast, and in the woods. Of their manner of life, little is known, as no connection was formed with them, for they never would connection was formed with them, for they never would come near enough for a parley; nor did they touch a fingle article of all that was left at their huts; and the places they frequented, on purpole for them to take away. At the fight of these Indians, Tupia, with an air of superiority and compassion, shook his head, and faid, that they were taata enos, "poor wretches." A midshipman, who had straggled alone into the country, saw an old man and woman, and some little children; they were they had fore little children; they were hoth green. woman, and fome little children; they were both grey-headed with age; the hair on the man's head was bufly,

headed with age; the hair on the man's near was built, and his beard long and rough; the woman's hair was cropped thort, and both were flark naked.

"More to, the northward is Hervey's Bay, in which was found a true mangrove, fuch as grows in the Weft Indies, and the first of the kind net with in these feas. Indies, and the first of the kind line, with in their least. In the branches of this mangrove were many nests of a remarkable kind of ant, as green as grafs. When the branches were disturbed, they came out in great numbers, and punished the offenders by a much harper bite than the least which of a simple is allowers known to give the same kind of animal is elewhere known to give.
Upon these mangroves were also seen small green caterpillers in great numbers: their foreheads were thick set with hairs, and they were ranged upon the leaves, fide by fide, likeafile of foldiers, to the number of twenty or thirty together. On touching them, the hair on the bodies was together. On touching them, the hair on the bodies was found to have the quality of a nertle, and gave a much more acute, though a lefs durable pain. More north-wardly was found a species of the bustard, as large as a turkey, one of which weighted seventeen pounds and an half. It was generally agreed, by the gentlemen who eat of it, to be the best bird they had tasted since they left England, and in honour of it they called the inlet Bustard Ray: it lies in letting to weather four decrees four mixture they had to the site of the strike they had to the site of the tard Bay: it lies in latitude twenty-four degrees four minutes one hundred and fifty-one degrees forty-two minutes eaft. Here are oysters in great numbers, and of various kinds; among others, the hammer-oyster, and abundance of fmall pearl-oysters.

"Thirfty Sound, twenty-two degrees ten minutes fouth, one hundred and fifty degrees eighteen minutes eaft, Upon the branches of gum-trees here, were found ants nefts, made of clay, as big as a bushel, something like those described in Sir Hans Sloan's natural history of Jamaics, vol. ii. page 221. tab. 258, but not fo smooth. The ants which inhabited these ness were small, and their bodies white. On snother species of the tree was found a fmall black ant, which perforated all the twigs, and having worked out the pith, occupied the pipe which had contained it; yet the parts in which this insect had thus formed a lodgment, and in which they swarmed in amagaing numbers, bear leaves and flowers, and appeared to be in as flourishing a state, as those that were found. Here was also such a swarm of butterslies, that for the space of three or four acres the air was so crouded with them, that millions were to be feen in every direction. three or four acres the air was to crouded with them, that millions were to be feen in every direction; at the fame time that every branch and twig was covered with others that were not upon the wing. Here was also found a fmall fifth of a fingular kind; it was about the fize of a minnow; fish of a fingular kind, it was about the fize of a minnow; and had two very strong breast-fins. It was found in places quite dry, but did not feem to become languid by the want of water, for when it was approached it leaped away, by the help of the breast fins, as nimbly as a frog; and when it was found in the water, it frequently leaped out, and pursued its way upon dry ground. From the great difference in the needle when brought on shore, captain Cook thinks there is iron ore in the hills.

"Along the coast of New South Wales, the sea in all parts conceals shoals, that suddenly project from the shore and rocks that rise abruptly like a pyramid from the base and rocks that rise abruptly like a pyramid from the base.

and rocks that rife abruptly like a pyramid from the bottom, for an extent of twenty-two degrees of latitude more than one thousand three hundred miles. Off cape Tri-bulation, which lies fixteen degrees fix minutes east longibuttion, which lies fixteen degrees fix minutes east longi-tude, our intrepid, and hitherto prosperous adventures very nearly escaped the miseries of ship wreck. On the 10th of June 1770, at eleven o'clock at night, the ship sud-denly struck against a coral rock, and became Immoveable, except by the heaving of the surge, which beat her against the crags of the rock upon which she lay, and caused so violent a concussion, that it was with the utmost difficulty any one on board could stand on his legs, at the dawn of any one on board could trang on his legs, at the day land appeared at eight leagues distance, without any island in the intermediate space, upon which they might be set on shore by the boats, and afterwards proceed to the main, if the ship should go to pieces; the wind, however, died away, till it became a dead calm, by which the ship should be caped inflant and inevitable destruction." After relating feveral other circumstances respecting the perilous fituation the ships company were in, and the hardships and distresses they underwent in endeavouring to save the vessel from finking, captain Cook sums up the narrative as follows:

"But the full danger which they had escaped, was not known till the vessel arrived at Batavia, and was hove down; for, on examining her bottom, it was found to be in a worse condition than was apprehended. The false keel was all gone to within twenty feet of the stern post; the main keel was confiderably injured in many places; a great quantity of fheathing was torn off, and feveral planks were much damaged; two of them, and the half of a third, under the main channel, near the keel, were, for the length of fix feet, fo worn that they were not above the eighth part of an inch thick, and here the worms had made their part or an inch tinek, and neer the worms had made their way quite into the timbers: yet in this condition fhe had failed many hundred leagues, where navigation is as dangerous as in any part of the world. How much mifery did those on board escape, by being ignorant that so confiderable a part of the bottom of the ship was thinner than the fole of a shoe, and that every life on board depended upon so slight and fragil a barrier between them and the unfathomable ocean!

New Guinea reaches from the equator to the twelfth degree of fourh latitude, and from one hundred and thirtyone to one hundred and fifty degrees east longitude, in one one to one nundred and titty degrees eatt longitude, in one part it does not appear to be above fifty miles broad. It was first visited by an European ship in 1529. Saavedra, a Portuguese, who made the discovery of the north west part of this country, called it Terra de Papuas. Van Schouten, a Dutch discoverer, gave the name of New Guinea to its south-western part. Roggewein also touched here; and before him, Dampier, January 1, 1700. Captain Cook made the coast of New Guinea, in latitude, six degrees fiften minutes longitude, and one housted degrees fifteen minutes longitude, and one hundred and thirty-eight degrees eaft, on the 3d of September, and landed from the pinnace, accompanied by Mr. Banks, doctor So-lander, nine of the ships crew, and sewants well armed, and, leaving two feamen to take care of the boat, advanced fome little way up the country; but coming to the fkirts of a thick wood, they judged it prudent to proceed no fur-ther, left they should fall into an ambuscade, of the natives, and their retreat to the boat be cut off. Having advanced about a quarter of a mile from the boat, three Indians rushed out of the wood with a hideous shout; they threw their darts, and shewed such a hostile disposition, that the

party, to prevent the destruction of these people, returned to the boat, as they lad, no intention forcibly to invade their country, either to gratify their appetites or curiofity, and it was evident rothing could be done upon friendly terms. When they got on board the boat, they rowed

and it was evident nothing could be done upon friendly ferms. When they got on board the boat, they rowed along the shose. The people were stark neked, and their hair cropped thort, and in general made much the fame appearance as the New Hollanders.

New Britan, or Solomon's Harnds, confist of three large, and several smaller ones. The large, are, New Britanin, New Irlandower. They were merely coasted, and are therefore but imperfectly known. They are mountainous, but have a romantic pleasant appearance, and are fituated in five degrees south lastitude, and two hundred and ten degrees west longitude. From the people seen on the beach, they are supposed to be populous. The inhabitants are black, and woolly-headed; they go almost naked, ornament themselves with shell bracelets, wear ear rings in their ears, which are very long, chew best to rings in their ears, which are very long, chew betel to make their teeth red, and powder their hair and beards white. They have fometimes feathess on their heads, fhells about their reck, and rings through their nofes. They live chiefly on vegetables, and are idolaters in their worship. Their cances are long and narrow, some seach to ninety feet in length, and yet are formed of a single tree. The head and ftern are very much raifed, to thefter the people within from arrows, which is done by turning either end of the boat towards the enemy. Their cances are

end of the boat towards the enemy. I hear canoes are decorated with carved work, and thirty or forty rowers are employed to paddle them on the water.

Thefe people have lances, bows and arrows, flings, and long flicks and poles, like the quarter fraff, for their offensive weapons: they have flields to defend themselves with. The imoffensive and defensive weapons, their dexerous management of them, and their boldness in attacking, is a convincing proof that they are always at war with force of their neighbours.

We shall now proceed to give a description of the New Hebrides, which are eleven in number, and received their name from captain Cook, in 1774, and are as sol-

Terra del Espiritu Santo (the first of them) was discovered by De Quiros, in 1606: it lies in fisteen degrees thirty-nine minutes south latitude, and one hundred and fixty-fix degrees fifty minutes east longitude from Greenwich. It is the westernmost, and lies farthest north of all the Hebrides; is the largest of the whole, being twentytwo leagues long, twelve broad, and fixty round. The land to the west is very mountainous, the hills frequently rifing immediately from the fea. Every part of it except the cliffs and beaches, is covered with trees and plantations, and every valley watered with a stream. It has a remarkable fine bay on the north fide, called, by De Quiros, remarkable his bay on the north hde, called, by De Quiros, St. Philip and St. Jago, it being St. Philip and St. James's day when he arrived here. It has twenty leagues of fea shore, is cight leagues at the mouth, and cannot be fathomed. There is a fine anchorage place in this bay, from two to forty fathoms, called Vera Cruz, and capacious enough to hold one thousand ships with clear foundings.

This island is fertile, and likewife contains hogs, fowls, birds, bees, &c. The natives are tall, flout, and have black hair: they go naked, except two long slips of matting hanging down before and behind, from the waist to the

St. Bartholomew's Isle (the second) was so called by captain Cook, because he discovered it on St. Bartholemew's day. It is between fix and teven teagues in chromatal and is fituated in fifteen degrees forty minutes north latitude, and in one hundred and fixty-leven degrees twenty-

feven minutes eaft longitude.

Mallicolo (the third) is eight leagues long, and fituared in fixteen degrees twenty-five minutes fouth latitude, and one hundred and fixty-feven degrees fifty-feven minutes east longitude. It was touched at by captain Cook, in This island is mountainous and woody, but July 1774. This island is mountainous and woody, but the foil is rich and fertile. Here are plenty of fugar-canes, yams, cocoa-nuts, bread-fruit, turmeric, oranges, hogs, poultry, and various birds. It is a warm and populous country, but the people are remarkably ugly, dark, and Ill-made: yet firightly, and quick of apprehenion. They have flat noles and foreheads, woolly hair, and thort beards. They tie a cord uncommonly tight about their waifts, and wear a piece of cloth or leaves before them. They wear bracelets of shells on their arms, a piece of white carved stone in the nostrils, round the right waist hogs tusks bent circular, and round the left a round piece of wood to ward off the firing of the bow ; fome wear tortoife-shell earsings, and other rings of shells: On their breast they hang a shell suspended by a string round their neck. Wearing of ornaments seems to be the privilege only of

With respect to the women, they are not less ugly than the men; for they paint their heads and faces red and yellow, and also their shoulders, over which some wear a kind of petticoat, others a bag made of a kind of cloth, in which they carry their children. Full grown women wear thort pieces of cloth or matting round their waifts, seaching nearly to their knees, others have only a string round their middle with a whifp of straw between the

round their middle with a whifp of straw between the legs; and girls, as do the boys, go quite vaked.
Clubs and spears made of a hard wood, and bows and arrows, are their weapons. Their bows are about four feet long, made of a dark-brown stick like mahogany, split through the middle, are strong, elastic, and nicelypol..hed; and, their arrows, are a kindof reed, pointed with hard wood, or bone dipped in poison, which they keep in a fort of quiver made of leaves.

They have small wretched howels for their dwellings, so low, that they can hardly stand upright in them, and consist merely of a roof, refling on a few posts, and thatched

fo low, that they can hardy thand upright in them, and confift merely of a roof, refting on a few pofts, and thatched with palm leaves. Some few are inclosed with boards, and the entrance is by a fquare hole at one end. Their carioes are like those of the neighbouring isles.

These people seem to be of a chearful disposition, and pass great part of their time in music and dancing. Their

pais great part of their time in music and dancing. Their inftruments, we may suppose, are very simple; for none were seen but drums and pipes, which are readily made. Their drums asso, in cases of danger, serve to found an

Sandwich isle (the fourth) is ten leagues long in the direction of north-west by west and south-east by east, twenty-two leagues south-south-east half east from Mallicolo, and is twenty-five leagues round: it was so called in compli-ment to Lord Sandwich. The hills gently sloping to the sea, and diversissed with woods and lawns, exhibit a de-

lightful view.

Erromango (the fifth) is twenty-four leagues in circuit, and lies eighteen leagues from Sandwich island; the mic dle of it is in eighteen degrees fifty four minutes fouth latitude, and one hundred and fixty-nine degrees nineteen minutes east longitude. These islanders seem to be of a different ent race from those of Mallicolo, and speak a different language. They areof the middle size, have a good shape, and tolerable features; their colour is very dark, and they paint their faces, forme with black, and others with red pigment; their hair is very curly and crift, and formewhat woolly. The few women which were feen, were ugly; they wore a petticoat made of the leaves of fome plant. The men, like those of Mallicolo, were in a manner naked, having only the bek about the waift, and the piece of cloth or leaf used for a wrapper. No cances were feen in any part of the island. Their plantations are laid out by line, and senced round: they live in houses, covered with thatch.

Tanna (the fixth) is about eight leagues long, and three or four broad, in nineteen degrees thirteen minutes fouth, one hundred and fixty-nine degrees thirty-eight minutes eath and about twenty-four in circuit : it lies fix leagues on the fouth fide of Erromango. Its name, in the Malay lan-guage, fignifies "earth." The foil, in some parts, is a guage, againes are the fort, in tone parts, is a rich black mould; in other parts, it feemed to be composed of decayed vegetables, and the asses of a volcano, which was seen about eleven miles to the west of the ship, burning with great fury. The country is in general to covered with trees, shrubs, and plants, as to chook up the breadfruit, and cocoa-nuts. The houses and inhabitants are truit, and cocca-nuts. The houles and niliabitants are thinly feattered. Several ponds of flagnant water were feen, in which the natives had planted great quantities of eddoes. During the fixteen days that captain Cook continued here, the volcano vomited up, at different times, vaft quantities of fire and fmoke, accompanied with an explosion about once in five minutes: some of these explosions resemble violent claps of thunder, and a rumbling noise continued for about half a minute : the whole air was filled with finoky particles and affies, which occasioned much pain when they fell into the eye; at one time great flones were feen thrown up high in theair, fome of which were at least as large as the hull of a ships long boat: its fires prefented a most pleasing and magnificent fight: the smoke, which rolled up, from time to time, in thick and heavy columns, was coloured with all the various hues of yellow, orange, crimfon, and purple, which died away into a reddith grey and brown : as often as a new explotion happened, the whole country, with its

It was remarked, that the explosions of the volcanic recommenced after showers of rains to that it should seem that rain excitor them by promoting or increasing the formation of the various unlears standard flances which the mountain contains in its bowels.

With respect to their persons, they are of a middle size, stronger and better proportioned than the Mallicolese strenger and better proportioned than the Mallicolese sharing only a firing round the belly, which did not, however, cut their body in so shocking a manner as that at the other island. Their hair is generally black or brown, growing to a tolerable length, and very crisp and curry; they separate it into small locks, which they woold or ever round with the rind of a slender plant, down to an inch of the ends; and as the hair grows the woold is continued, each of these cues or locks, is somewhat thicker than common whip cord, and they look like a parcel of small strings hanging down the crown of their heads; their beards, which are strong and bushy, are generally short. The women do not wear their hair so, but cropped; nor do the boys till they approach manhood. They make use of a cylindrical piece of alabater, two inches long, which they wear in the carrilaginous part between the noticils as a nose jewel, in the same manner as is practifed at Mallicolo. Their features are large, the nose broad, but the eyes full, and, in general, agreeable. Not one single corpulent man was seen here; all are active, and full of spirit. Their ears are hung suil of tortoise-shell rings, and necklaces of shells fall on their bosom.

Some of the elderty women had caps made of a green plantain leaf, or of matted work; but this head-dress was rather uncommon. But the number of ornaments confiderably increased with age, the eldest and uglieft being loaded with necklaces, car-rings, nose-

nels and leaver;
Apec (the feventh) is not less than two hundred leagues round, and is diffant from Ambrym about five leagues t its longest direction is about eight leagues north-wielt and fouth-east. It is very high land richly diversified with woods and lawns. This and the former were discovered

woods and lawns. This and the former were discovered by captain Cook in \$774.

Ambrym (the eighth) is situated in fixteen degrees sifteen minutes fouth latitude, and one hundred and fixty-eight degrees twenty minutes east longitude, is about feven leagues in the longest pair, and has a volcano in it; but is very fertile and rich.

Whitfunday ise (the ninth) is of the same length, liest about four miles to the fouth, and runs in the same direction; having more sloping exposures than Aurora, it appears to contain more plantations, and so be better inlabited. Aurora (the tenth) is about twelve leagues long, but not above five miles broad in any part, lying nearly north and south; the middle is fifteen degrees its minutes fouth latitude, and one handred and fixty-eight degrees twenty-

fouth; the middle is fifteen degrees fix minutes fouth latitude, and one hundred and fixty-eight degrees twenty-four minutes east longitude. Mr. Forster supposes the Etoite of M. de Bougainville to be situated on this island. Inhabitants were seen here, and canoes, but none came off to the ship. A sine beech, and most luxuriant of vegitation, preferated themselves; the whole country was woody, and a beautiful eascade poured through a forest. This island is divided by a channel from which.

The life of Lepers (the eleventh and last) lies between Espiritu Sante and Autora island, eight leagues from the former and three from the latter, in latitude sisten degrees twenty-two minutes south, and one hundred and

former and three from the latter, in latitude lifteen degrees twenty-two minutes footh, and one hundred and fixty-eight degrees three minutes east longitude. It was first discovered by M. de Bougainville in 1768, who gave it the above appellation, from its leprous inhabitants. This island is in form like an egg, very high land, and about twenty leagues round. Some of the ship's crew went on short, and were approached by a numerous troop of the natives, armed with bows and arrows, and stones ready to cast. They began hotilities to but were soon quieted by a discharge or two from the musquetry.

The people are of two colours, black and mulattoes; they have thick lips; and their hair is wooily, which they powder with turmeric, that gives it a yellow cast; butthey do not wear a beard. They are short, ugly, ill-made and in general infected with leprofy, They wear an ornament in No. 20.

the notes like the Mallicolefe, and the same kind of bricelest and excellents. The same go naked. The women are not left disagreeable than the men, and wear bandages on their backs, by which they carry their children. On their cloth they point many pretty defigns with a fine trimfon. They use, for their arms, bows and arrows, and clube of hard wood, like those at Mallicolo i ftones also are among their yeapons of defence, but they seft them without slings: they have also subsect of hard wood. Their cancer refemble those of their neighbours:

This lifting is covered throughout with trees the follis very light, and of no great depth. There are many paths through the woods, and places inclosed three feet high with reed fences. Their huts are low, and could not be entered but by creeping. They have a particular species of figs here, and other productions in common with the neighbouring islands.

illands.

New Caledonia extends from fouth latitude nineteen degrees thirty-feven minutes, and from east longitude one hundred and fixty-three degrees thirty-feven minutes to one hundred and fixty-feven degrees fourteen minutes. This illand was discovered by captain Cook in 1774. It is hilly, bet contains several fruitful vallies, has many fine freame so water it, and appears delightfully pleasant. The productions are bread-fruit, figs, fugar-canes, plantains, vans, and coops note.

yams, and cocoa-nots.

There are no quadrupods of any hind in this island, but a variety of the feathered tribe, large tame fowls with bright plomage, dacks, a fort of imall crow tinged with blue, a beautiful species of parrot, turtle-doves, fly-catthers, a kind of hawk, boobies, man of war, tropic birds, and others unknown to Europe. Turtles and fish absent here, particularly a polifonous fish, something like a fun-fish, with a large, long, ugly head, and which brings on an extraordinary numbnefa and giddiness to those who east it. They have also beatles, ants, spiders, llzards, feorpions, &c. and a fist-raited water-shake. Captain Cook less with them an O-Taheite dog and bitch:

The inhabitants are not very numerous. They are all fout, well-featured, and of a mallogany colour. Their hair is black, strong and frizzled To comb their hair, or rather scratch their heads, they have an excellent instrument, akind of comb, made of sticks or hard wood, from seven to ten inches long, and about the chickness of knitting

rather ferateh their heads, they have an excellent infirument, a kind of comb, made of flicks or hard wood, from feven to ten inches long, and about the thickness of knitting needles; about twenty of these are fastened together at one end, parallel to each other, and about the tenth of an inch asunder. These combs they were constantly in their hair, on one fide of their heads. They cut their hair with a piece of mineral, shapened like a filmt. Some sew indeed of the men wear it long, and tie it upon the crown of the head; others suffers only a large lock to grow on each side, which they to up in clubs.

In this island, the men go quite haked, except a wrapper over their privities, which they fasten up to their girdle, as they do at Mallicolo, or up to the neck by a string, and ornament that string with small round beads, of a pale green nephritic stone. They wear on their heads black cylindrical caps, made of sliff coarie matting, open at top, very much like a husser. They stretch the staps of their ears to a great length, cut out the whole cartilage or griftle, as at Easter sland, and hang great numbers of tortoiseshell rings in them, as they at Tatna do.

The women drefs gives them a thick squat shape, and consists of a petticoat resembling fringe, about eight inches long, just dropping below the wissi: it is made of silaments, or small cords, laid thick over one another, and fastened to a long string that is wound several times round the body. The outward sliaments of this stringe they dye black; the under ones are of a pale yellow. By way of ornament, they fix on one side of the petticoat a sew pearly overschells. Both sexes wear tortoiseshell carrings, necklaces, and bracetets, above the elbow. The women attow or puncture themselves a little in the face, generally in three black straight lines, from the under lip downwards to the chin; and they carry, their infants in a kind of stachel on their backs.

to the chin; and they carry their infants in a kind of fatchel on their backs.

The houfes of these people are like those in Friendly Isles, which we shall describe hereafter. Their chief utensities are made of red clay; they subsite on roots, fifth, and the bark of trees. They are well provided with weapons of offence, as of course they must sometimes have ware among themselves, or with their neighbours: these wearness are chief forces, there and clays, they were the course the course for course the chief forces. pons are, ciubs, tpears, darts, and flings for casting stones.

Their clubs are about two feet and a half long, and of different forms; some like a feythe; others like a mattock; some have a head like a hawk, and others have knobe as

the end; but they are all nearly made, and well polithed. Their darts and spears are or same ased with carved week; but their slings are perfectly simple, being no other thanas slender round cord, no thicker than pack thread, with a tassel at one end, a loop at the other, and in the middle. The stones they throw are of a fost loap rock, rubbed into the form of an egg. They exactly sit the loop in the middle of the sling; and are kept in a pocket of insting, tied round the wait for the purpose. They cast their darts also with a short string knotted at one end; and looped at the other, as they do at Tanas, called by the fearmen a Becket, and are very destrous in throwing them. Their spears are fifteen or twenty feet long, blackened over, and have a prominence near the middle, carved so as to resemble a human face.

Their carioes are heavy and clumfy. They are; as it were, double, confifting of two hulls, made out of two hulls, made out of two high, and clofed at each end with a kind of bulk-head of the fame height. The two hulls are fecured to each other about three feet a funder, by feveral crofs fpars.

Their language differs from those of the other islands in

Their language differs from those of the other islands in the south seas, and their pronunciation is indistinct. They are good swimmers, and sond of singing and dancing. The only mosted instrument observed among them was a whitle, made of a polithed piece of brown wood shaped like a bell, though apparently solid, with a rope fixed at a small end. The holes were made in it near the base, and another near the inferrion of the rope, all which had some communication with each other. The inhabitants are strictly honest, and nos the least addicted to pillering: they may in general be deemed a friendly, inosfensive people: they gave captain Cook and his ship-mates a very welcome and peaceable reception, addressing him sint in a short set speech, and then inviting him ashore. But they are indosent, and destitute of curiosity; the greater past of them did not move from their feats when the European passed them for the first time: they are remarkably grave, speak alwayain a ferious tone, and laughter seems to be a stranger among them.

fusanger among them.

Many of the natives were feen with prodigious legs and arms, which feemed to be affected with a kind of leprofy; the fwelling was found to be extremely hard, but the fkinnot alike harfh and fealy in all the fick perfons; the presentatural expansion of the leg and arm did not appear to be a great inconvenience to those who fuffered it, and they feemed to fay that they felt pain very rarely in them; but in forme the disorder begun to form blotches, which were marks of a great degree of virulence.

marks of a great degree or viruence.

They deposit their dead under ground, which seems to be a more judicious manner of disposing of them than that used at O-Taheitee, where they expose them above ground till all the slesh is intriety purstised; if the mortality was more considerable in that island than it is supposed to be, such a custom might have the most persicious consequences, and produce a dreadful epidemical distemper; such a disease at the small-pox, for example, if introduced, would go near to depopulate the whole country. The grave of a chief, who had been sain in battle, here refembled a large mole-hill, and was decorated with spear, darts, paddles, &c. all stuck upright in the ground round about it. Lieutenant Pickerskill was shewed a chief, whom they named Tea-booma, and slied their areckee, or king; but nothing further is known of their government, and very little of their religion.

Captain Cook when he first landed here, was accompa-

Captain Cook when he first landed here, was accompanied by a native, who appeared to be a man of some confequence and who had come on board the ship before she came to an anchor. The natives affembled in great numbers on the beach, led merely by curiosity, for many had not so much as a stick in their hands. The party, on landing, were received with great courtesty, and with surprize natural for people to express as feeing men and things so new and wonderful. The captain made presents to all these women his companion pointed out: but, on his going to give a few beads and medals to some women who stood behind the croud, the chief held his hand, and would not infer him to do it. As they proceeded up a creek, Mr. Forster shot a duck that slew near them, which was the first assessment the second of sire-arms. The friendly natives begged to have it; and when he landed, he told his countrymen in what manner it was killed.

From this excursion, they learnt, that they were to expect nothing from these people but the privilege of visiting their country undiffurbed, for they had little else than good nature to bestow; and "in this" says captain Cook,

"they exceeded all the natives we had yet met with; and aithough it did not faitify the demands of nature, it at once pleafed and left our minds at eale." A batchet was not quite so whale as large spike nail; small nails were of little or ne value; and beads, looking glasses, dee, they did not admire. Many of the natives come on board the ship with perfect confidence, and one of them exchanged a yam for a piece of red cloth; they admired every thing that had a red colour, perticularly red cloth or baize, but did not chuse to give any thing in exchange. Captain Cook sent the king. Tea-booms a dog and bitch, both young, but nearly full grown, which may be the means of stocking the country with that species of animals; and thebai; the friendly chief before spoken of, he gave a fow and boar pig, in order to grovide, it possible, a speck of domestic animals, for a nation whose inossentive character seemed highly deserving of such a present. To enhance, their value with the Indians, and thereby induce them to be more careful of their stock of hogs, the captain explained to them how many young ones the female would haveat one time, and how soon this would multiply to some the dead.

haveat one time, and now noun task where minery, from a hundred.

No one of the natives attempted to take the leaft trifle, by flealth, but all believed with the fittleft honethy. Some of them fooke of a great land to the northward, which they called Mingha, the inhabitants of which were their enemies, and very warlike. They likewise pointed to a fepulchral mount, where one of their chiefs lay buried, who had been killed fighting in defence of his country, by a native of Mingha. The appearance of a large beef, lone, which an officer began to pick towards the conclusion of the fupper, interrupted this convertation; the natives talked very loud and carneftly to each other, looked with great furprize and fome marks of difgust at the franger, and at laft went away altogether, expressing, by figns, that they supposed it to be the limb of a man. The officer endeavoured to free himself and his shipmates from this supposed in the interpolation, but two infurmyountable impediments by in his way, via. the want of language, and that the natives had never seen a quadruped in their lives. At another time a native, who was in a boat with captain Cook and Mr. Wales, acquainted them that they had esernise who feastled upon human slefth, which doubtless had contributed to make them impute the same practice to their new friends. This island, the largest discovered in the south-sea between the tropics, remains intirely unexplored on its fouth-side its minerals and vegetables still remain untouched; animals it should seem to have none, from the ignorance which the natives to the northward discovered of such as

New Zealand is fituated between one hundred and eighty, degrees forty-five minutes, and one hundred and ninety-three degrees afteen minutes well longitude, and thirty-four degrees twenty-four minutes fouth latitude, and about two thouse the difference from O-Tabeitee. It consists of two large islands, divided by a straight four or five leagues broad, and lying nearly north and south of each other. The northern island is called by the natives Eahle-monauwe, and that to the fouth Tavai Poenammoo, they are much the fize of each other, and together are as large as the island of Great Britain, having many small islands about them. They were first discovered by Abel Janton. Tassman, a Dutchman, on the 13th of December, 1642. He coasted the eastern part, from latitude thirty-four degrees to forty-three degrees, and entered the straight which divides the two islands; but, meeting with a disgreeable reception from the natives, as soon as he dropped his anchor, he thought proper to weigh it sgain without landing. Captain Cook was fix months in coasting this country, viz. in the latter end of 1769 and beginning of 1770. He visited it again in 1773, and a third time in 1774.

This island, in the southern pert of it is rather barren,

This island, in the southern pert of it is rather barren, but the other is tolerably fertile, and the latter contains a mountain as high as the Peak of Teneriss. The productions are such as are common to the south sea islands; but, among other productions, the trees claim no small but, among other productions, the trees claim no small that, among other productions, the trees claim no small that, trees, the straitest, cleanest, and largest ever seen. They are rather two hard and heavy for maste; but if they could be lightened by tapping, as it is probably they might, they would make the finest maste for shipping in the world, they are not unlike the pitch-pine. There are some with a fearlet flower, well adapted to the mill-wright. There are many other forts of trees, one like the maple, yielding a whirits gum, and another giving a deep yellow substance fit for dying. They have plenty of manigrove-trees; and

a kind of tree that grows to large and lofty, that they will measure, at fixteen inches above the ground, full ninseem feet in girth, and are as straight as an arrow, from the root to the first branches; namy of them will yield three hundred and fifty-fix feet of folid timber, exclusive of the branches. It bears a narrow leaf like the juniper, is generally found in low land, and has a dark-coloured appearance. Of this tree, the natives make their canoes.

Though there are, in this island, many trees and strube, which beer beautiful slowers, and are highly aromatic, yet there is not one that produces fruit; but there is a plant worth them all, ferving the natives instead of hemp and stax. Of this plant there are two species; one bearing a deep red flower, the other a yellow. The leaves of both resemble flags, but the blossom are not fo large, and their slusters are more in number. They make all their cloaths of the leaves of this plant, and also all their strings and cordage, which are at once glossy, clastic, and so strong, that nothing made of hemp can equal them. From the same, by another process, they draw out long, stender, strong shores, white as snow, and shining as silk; of these they make their better cloth; and by stitting the le sea in proper breadths, and tying them together, they make their shing-nets. This plant seems to grow best in boggy grounds; there is every reason to believe that it would their well in England; and, could we transport it hither, is would be a valuable acquisition to this country.

Dogs and rate are the only quadrupeds here; but they have a great variety of birds, some of which are exquisitely besutiful.

There are but sew inhabitants, in proportion to the extent of country. Tavis Poenammoo is, as we observed

Intely besutiful.

There are but few inhabitants, in proportion to the extent of country Tavai Poenammoo is, as we observed before, very thinly peopled, confishing chiefly of wanderers; but Eahie-monauwe is better peopled. The wostern fide of this island is quite a defert; and the interior parts being so mountainous, scarce any place is inhabited but the foa-coasts, which, on an extent of four hundred leagues, is supposed to contain only about one hundred thousand people.

is supposed to contain only about one hundred thousand people.

The men in general, are equal in stature to the largest Europeans, being tall but thin, yet exceedingly strong, siefly and well made, and they are particularly active and vigorous, with an uncommon adroitness in every thing they do; but most of their legs are stender and bandy, with large knees, owing to the little exercise they take, and their continually string crofs-legged in confined canoes. Their complexion is a clear manogany brown, though they are rather darker in the southern island. Their hair is black and curling, and their teeth extremely regular and white. They have good saces, like Europeans, dark eyes, lips rather thick, and aquiline noses. Their voice is rough, they talk loud, and, in general, are more rude and unpolished than the natives of O-Taheitee, of whom we shall shortly treat. The women are plain, and have no great semale delicacy; but their voices are remarkably soft and harmonious, and by this they are chiefly distinguished, the dress of both fexes being nearly the same. They have, like the women of other countries, a chearfulness superior to the men, and a greater flow of animal spirits. Both sexes have the practice of tattowing. With respect to the dress of the people of this country; that of the men is merely a wrapper round the body, kept

with respect to the dreis of the people of this country; that of the men is merely a wrapper round the body, kept from falling belowthe wait by two flips overthe fhoulders, fattened before and behind with bone bodkins. It is made of flag leaves, and refembles a flaggy door mat. Some men on particular occasions, wear another piece of this matting round the wait, which reaches almost to the

ground:

ground.

The drefs of the women is a cloak and petticoat of matting, and a bunch of aromatic leaves hanging from a girdle between the legs. Some of them wear their hair eropped short, others have it slowing about their shoulders but the men tie theirs up in a bunch on the crown of the head, decorate that bunch with feathers, and stick a comb behind it. They wear their beards cut short. Both men and women greate their hair, and frequently wear upon the crown of their heads, a large bunch of black seathers, tied up round so as to raise their head twice its natural height, and almost to cover it. and almost to cover it.

A variety of comments is worn by both fexes, fuch as ear-rings, necklaces, anelets, &c. Both men and women bore their ears, and fretch the holes till they will admit a finger; in thefe they wear cloth, feathers, bones of arge birds, and fometimes flick pieces of wood through them. The women frequently fluff in the white down of the albatrofs, stained with ruddle or oker, which spreads before and behind, as large as ones fift; and, though fingular,

has a very good effect. Somesimes they hang to their ears, by strings, chilfels, or bodkins, made of tale, and often the nails or test of their deceased relations: brace-lets and anciets are made of birds, bones, shells, or any other substance they can drill a hole through. The magn fometimes wear round the neck, suspended by a string, a piece of round green transparent tale, or whalebone shaped like a laurel leaf, and with the rude figure of a man carved upon it; and some wear a feather through their nostrils.

These people live upon fifth, birds, and vegetables. Water is their only liquor; and, having nothing that will intoxicate, they are in this respect the happiest persons in the world; but, on the other hand, should their plantations fall, or an unfavourable season happen, and they happen not to be provided with a sufficient dry stock, the differes to such as inhabithe interior, parts of the country most be dreadful. This will in some measure, account; for the fast these peoplelive in of each other, for the care they take to fortify their villages, and for the horrid custom of eating those whom they kill in hattle. The head is the only pirt they do not east they take the brills, and frequently convert the skull to domestic purposes, such as to hold water, &c. The way they dispatch their prift ners, is, by knocking them down with their patta-patta-sa and then ripping them up.

The hippala, or towns of these people, are all frestified.

The way they dispatch their prift ners, is, by knocking them down with their patta-pattans, and then ripping them down with their patta-pattans, and then ripping them go.

The hippahs, or towns of these people, are all fortified. Many are built upon eminences near the sea, and secured on the land side by a bank or ditch, and a high paling within the ditch; and some have outworks; their, houses are built on a rising ground, under a tust of trees, but are little better than dog-kennels, feldom more than twenty sect long, een broad, and six high; their furniture and uternsis are trising. Their amusements are singing and dancing: they have three musical instruments, a trumper made of a shell, a wooden pipe, which yields a noise like a child's whiths. A top was seen here, shaped like the gigs in England, and, like them, made to fin by whipping.

In these issands, two or three forts of cloth are made: the shaggy fort, resembling a thrummed door mat; one as coarse as our coarsest canvas, though ten times as strong; and another as gloffy as silk. The shaggy fort is made of sig-leaves, split into three or more slips, and intervoven with dry, leaving a number of ends hanging to it on the outside, eight or nine inches long; and the gloss fort is made of signesses, split into three or more slips, and intervoven with dry, leaving a number of ends hanging to it on the outside, eight or nine inches long; and the gloss fort is formed by many thread lying ever close one way, and a few crossing them the other; but these are about half an inch assume of the size of the cloth; this stuff is prepared to as to thine like silk, and is often striped. It is made in a frame of the size of the cloth, about five feet long, and four broad. They have asker and axes made of black stone, and chilsels of bone, or pieces of insper; they have like will be some as the signes are made of a sin of grass, very strong in its nature; and their principal nets are so large, that they seem to be the joint work and joint property of a whole town it hery a

at the top.

The natives have a particular and fingular tafte for carving: they attempt not to imitate any thing in nature, but confine themselves to a volute or spiral, which 'they vary many ways, fingle, double, and triple, and with as much regularity, as if done from mathematical draughts.' They thus ornament their boats, paddles, arms, tools, and almost every thing they make, though they have very aukward tools to do it with.

Helilities among them are destand with

tools to do it with.

Hoftilities, among them, are declared with a war fong and a dance, in which the women join and attack, with differed features, hideous shouts, rollingeyes, and tongues lolling out of their mouths. The heads of their chiefs are curiously tattowed, and sometimes adorned with a wooden comb and feathers. Captain Cook, having expressed a desire to see their mode of attack and desence; one young man mounted a fighring flage, which is a platform railed from the ground and furrounded with a ditch, of which they have many large ones on the fides of hills; and another went into the ditch; both he that was to and another went into the ditch; both he that was to defend the place, and he that was to attack it, fung the war fong, and danced in a frightful manner, working themfelves up to a degree of mechanical rage; this some they attacked each other with uncommon fury.

As these people live in perpetual hostility with each other, there is therefore little land in a state of cultivation,

and every village is made a fort; they feem to have studied

A lance painted and batbed is their missile weapon:
A lance painted and batbed is their missile weapon:
this is held like a quarter flass, in the middle, and drown with great fury: they likewise formalines sight with shore darts and arrows, and with stones, but have neither beams to convey the former, or sings to the water their which we have no seen any heart and the matter their which to convey the former, or flings to the wither other weapons are bettle-a.c., and the patta-particle is made of green tale about a foot long, and thick mouth to weight four or five pounds. It is formed like a pointed battledore, with a fhort handle and flarp edges, and defigned for colof fightimer through the handle there is a firing to twift round and when the weapon is used the patta-pattoo is worn in the girdle, as a confiderable military remainint. Their chiefs carry about them a flaff of diffinction, generally the rib of a whale, white as flow, one mented round the rop with carving, dog-fiting and fear aers, like our fleriff's halbens; but fometimes this flaff is merely a flick about fix feet long, adorned in the farme manner, and intaid with a fittel refembling mother of pearl.

and fearaers, like our shetist's halbens; but sometimen this staff is merely a slick about fix feet tong, adorned in the same manner, and inlaid with a shell resembling mother of pearl.

The cances used by these people associate striking proof of their ingenuity; they are of discrent sizes, narrow and long, and resemble very much the New England whale-boat Some of the larger fort seem to be built chiefly for war, and will contain from forty to near one hundred armed men, being near swearty seet long, though not more than sive feet broad, and about three sets and a half in depth. The sides are made straight, of three intire planks, one above another, which reach frees and to end, and are sewed together by a string, made of the sea plant and caulted with the woolly substance of the read more. The sides being straight, and the bottom sharp, they are in form of a wedge. A confiderable number of thwarts or seets are laid from gunwale, in order to strengthen them, and a profusion of carved ornaments decorate the head and sern, which project beyond the body, vising almost perpendicularly size, or six seet above it, are pierced through and through in figists. like fillagree work, and adonted with streamers hanging from them. The gunwales of their both boats are worked by eighteen or twenty small light paddles, about six sections, neatly made, having anoval blade, pointed at the bottom, and gradually losing it oval form in the handle; and the Indians have such an adroitness and manual detterity in using these paddles, that thirty of them together will keep time so exactly, that one would think the rowers were actuated by one common soul. They frequently sing when rowing, and beat time with their paddles. Sails of matting sixed upright, between two poles, are sometimes made use of 1 but they can make no way with these, except right before the wind.

The New Zealand language and that of O-Taheitee are radically the same, the difference being only provincial. They worthip a Supreme Being, but believe in subordinate detices

openence; but mose or Earne-michain acknowledge a fovereign, under whom are feveral fubrin, see chiefs, to whom great respect is paid, and by whom has been the probability administered; and it was learne that the probability of the fourthern island have feveral things in count on, particularly their sine cloaths are preferved in a place by themselves, in the middle of their towns, and part of their nets are found in almost every house; for they collect these parts, and join them together, when they go out to fish. em together, when they go out to filh.
They New Zealanders, though more irafeible than the

They New Zealanders, though more traicing than the other fouth fea islanders in general, are, however, lefs immodelt, having some idea of indecency. They are as decent and referred in their behaviour as the politest persons in Europe. When an overture is made to any young woman, the party is given to understand, that the confent of friends is necessary; that a suitable present must

be made; that the confenting female must be treated with good mainters and delicacy; that no unbecoming liberties must be taken, and that the day-light must not be a with the confidence by them as regular and binding as a starting ceremonal in Kuropean countries.

The two following inflances will ferve to shew the ferocity of these people, sovand of whom were killed, and great pains taken to conciliate their affections, before captain Cook, who was here in 1769, could affect or being them to the with integrity. Mensseum Marion, who commanded two French Ithis, was, in 1772, with twenty-eight of his men murdered here. The carpenters belonging to this officer's ships were encuenanged in the woode, under the protection of a MC Crozet, with a small party, for the purpose of making new mass, atc. Upon the news, therefore, of captain Marion and his men being cut off, a corporal and four marines were dispatched to M. Crozet, to acquain shim with his danger, while several boats waited to receive him. M. Crozet immediately disposed every thing, as well as he could, an effect a retreat; but soon found himself in sight of a grodiseus crowd of the natives, led on by several chiefs. He directed the four marines to be ready to site at such persons as he should point out, if moreflety required it, and then ordered all his party to strike their tents, and retire with their tools to the boats, while he advanced up to one of the chiefs. This man told him, that M. Marion who killed by attacher chief, whom he named. At this, M. Crozet seed is boats, while he named. At this, M. Crozet seed is a site to be the sout; while he named. At this, the creation of the one; but the faving which being observed by M. Crozet, he institute on his commanding the croud to sit down a which they commanded by the captain to, and threw stones at him, however, by the exertion of his people, he got fast on board. This, however, did not intimidate M. Crozet for finding himself under a necessity of procuring me ordered to follow, and not have the substitut

the cutter, in which were the two mutanputer is to expende the man was fent up a creek, to procure wood and water which not returning, occasioned fome anxiety (bott the afety. The next day an officer was fent in a code of less a fearch of them. The first intimations which they re

in fearch of them. The first intimations which they received of the fate of their commades, was, the fight of the cutter, and forms shoes, one of which was known to have belonged to a midshipman who was of the party; presently a piece of meat was found, which was at first supposed to be some of the falted meat belonging to the cutter's crew, but, on a closer examination, it was found to be fresh. Several baskets lay on the beach was found to be fresh. Several baskets, lay on the beach tied up, which they eagerly cut open, and found them to contain realted fiesh, and fern roots, which ferved them for becast on further learch, many those were found, and a here, which was immediately known to belong to a forecattle-man, it being marked with the initial letters of his name by an O-Taheitan tattow instrument. Proceeding onward to the next bay, a great many people appeared on the beach, and three or four cannea, on the approach of the beach, and three or four canoes, on the approach of the bost, they retreated to a small island, on the beach were two bundles of celery, which had been gathered for loading the cutter; a broken oar was fluck upright in the ground, to which the natives hadtied their canoes. Thy fearched in vain every part of the beach for the cutter, but a thocking spectacle suddenly opened upon them. Here were scattered the heads, hearts, and lugs of several of HY.

Charlette's Sound, in fearch of natural productions of the country, by accident fell in with a very agreeable indicated them as better opportunity of remarking the perfonal fabordination of their popular their had before offered. The perions proprient of a pretty boy about ten years old. The widow, was mourning for her builband with tears of bleed, according to their cultout: and the thind, by him doubt of its father was become proprietor of a difrict of land. The widow, was mourning for her builband with tears of bleed, according to their cultout: and the father of the father was become proprietor of a difrict of land. The wither and the man of the father, to the number of distorts are feverated in the father, to the number of distorts are feverated in but have any house, or other sheet from the weather, the indemnatics of which, culton had probably seabled them to endere without any lafface sheet made and instinctions. They preferted each perfon with fills, and a transford of fit to drefs it, and prefice them many times to flay till the morning; which they would have done, had they had expected the filly to fail.

A man and how women were the flat inhabitation found in a boat. The women were before a land, as it is allowed to the land, and the women were before and sold with a land, on the rocky point of all inflating such with a long pear in her hand. His fabilation was universed in the language of O-Taleitee; Tayo here mai, Friend, some inther; he did not, however, filt from this post, but held a long spect, frequently (winging round bis cleb, on which he learned at other times; I'm is cipain in ladde to the processor, but did not to the rock alone; guest light of the rown of the flay, on the flay, on the flay of the control of the country, by joining notes, by which token of annity all apprehensions on the part of the matter was weather with a flow of the country, by joining notes, by which the tender of the country, and on the flay of the country, one of them had a prodigious extressment of the rown of th

he flunk into the cabin, feelingly telling his misfortune by his tears: the flern father unused to the melting mood, was einized to fee the inteltinable prefent begrimed with filth, sind in the ungovernable fally of his anger, bestowed many hearty blows on the poor fufferer.

The disposition to fleal and fecret every thing they could lay their hands on, was prevalent in all that came on board the ship in Queen Charlotte's Sound; feveral of them were choosed in one of the purpose, upon which they were ignorable they for their purpose, upon which they were ignorabled the ship in Queen Charlotte's Sound; feveral of them were choosed in conveying away a variety of things that lay conveniently for their purpose, upon which they were ignorabled to the failor, and conveyed it to a young Zealander. The owner, finding the flolen goods upon him, took sway his property without externmony, for which he received faveral blows with the fift, which the failor with great good in paided by, imputing them to jocularity; but as he was advancing to the boar, he was falsed with great good in paided by, imputing them to jocularity; but as he was advancing to the boar, he was falsed with fiveral large flottes thrown at him by the New Zealander. This was more than the pirit of the feamant boald birooth, he therefore returned, and began to attack the agreefed inthe English manner of boxing, and prefently betting the following the first of the feamant boald birooth, he therefore returned, and began to attack the agreefed inthe English manner of boxing, and prefently betting the being brought upon the table, a glass was filled out to farme, offe inthe English manner of boxing, and prefently betting the being brought upon the table, a glass was filled out to have been being brought upon the table, a glass was filled out to him, which he refined to have strocker, which he into being out to depart o

SECT. XIII.

Traits of the island of O-Tabelton, Society for, Baster Ifa, the Marquesas, Friendly Isles, and Queen Charlette's Islands, &c. lately discovered.

He Margalas, Friendy Istes, and Lucan Charlete's Istands, is's lately discoursed.

THE island of O-Taheitee, called also king George I the Third's island, was first discovered, by captain Walls, in the Dolphin, on June 19, 1767, who made some stay in this island i it has also, been visited by feveral stayigators, but last by captain Cook in the Endeavour, in April 1760. It is fituated in seventeen degrees thirty immutes fourth latitude, and one hundred and fifty degrees west longitude, consists of two circular peninsulas, one of which is near as large again as the other; the biggest is therefore termed Great O-Taheitee, and the other Little O-Taheitee: the issums that joins them is two miles broad. The whole island is thirty miles long, and one hundred and twenty in compast; is surrounded by coral rocks, and internally insonntanes.

The foil, except at the very fummit of the hills, is rich, woody, well watered, and verticant: from various appearances, however, it seems to beve undergone many changes by subternacous fires. The inhabitants only dwell in the valles, or in the flat lands near the fea. The houses are built without order, and scattered up and down with a signatusion to each. The productions are breaf fruit, plantains, coccoa-nuts, yams, custard apple, fagur canes, wild indigo, ginger, turneric, see, but neither fruits, vegetables, or grain, resembling those of Europe.

When M.de Baugninville was there in 1768, he persuaded once of the chest to include apple, oats, rice, manze, onions, and pot-herbs of all kinds, and gave him to understand of what great use they would be to the inhabitants if they were properly attended to; but they did not thrive, or were neglected, for captain Cook, in 1773, neither saw nor heard of any of their product. In May 1769, captain Cook sowed forms melon feed, and the feed of other plants, but they did not thrive, or were neglected, for captain Cook, in 1773, neither saw nor heard of any of their product. In May 1769, captain Cook sowed forms melon feed, and the feed of ot

prefuned the ducks bred and increased, there being plenty presumes the ducks ored and increased, there being plenty of them at prefent its the signal. In August, 1973, captain Cook left a couple of goats, male and female; and, on his return the April loilowing he found that the lile goat had two kids, and was with kid again, that they looked fleek and well, and that their hair was as foft and fine as The domestic animals here are little hogs, and finall flothful dogs. There are likewife ducks, green doves, blue pigeons, cuckoos, kingudiers, licrone, paroquets, turtles,

flothful dogs. There are likewife ducks, green doves, bluepigeons, cuckoos, kingtiflers, herons, pasoquets, turtles,
ants, &c.

The natives of this island are a flour, well-made peoples
both men and women are remarkably handfome, and besutifully made, those of distinction rather taller than the
English; those of an inferior class rather below us in height.
Their natural complexion is a clear brunette; their features do not differ from those of the Europeans, except
that their noses are rather flat, being purposely flattened in
their infancy; their skin is delicately toft and smooth;
their eyes are black, sparkling, and fullof expression; though
they have no crinison in their cheeks, they are delicately
clear; their feeth are beautifully white and regular, and
continue so to old age; and their breath without the least
degree of taint; some are of a pale white complexion,
with white hair, eye-brows, and eye-lashes. The hair of
the people in general, however, is black. They oil it with
coca-nut oil, perfume it with a certain root, and dress it
neatly without combs. The men wear whitsers, and their
beards in many shapes; cleanlines is their characteristic. Both men and women regularly bathe themselves
in running water thrice a day i as soon as they rise, at noon,
and before they go to rest. They wash their mouth at
eyery meal, and not only their mouths but their hands,
and this sive or six times in the course of the meal, and
they keep their cloaths without either spour or flain upon
them.

The lower class of inhabitants are frequently seen without

The lower class of inhabitants are frequently feen without The lower clais of inhabitants are frequently ken without any other covering than a faft or mantle round their wift; but the principal people have an additional garment: they wrap themselves gtacefully in a piece of cloth containing many 'ards, which hange down as low as the knees, Some of the women wear a piece of cloth, with a hole in the middle through which they put their head, so that it hange down before and behind and below their knees; over, this they throw a fine white cloth, like a mantle which is wound several times over the body, in elegant truns, below this they throw a fine white cloth, like a mantle which is wound feveral times over the body, in elegant turns, below the breaft, forming a kind of tunic. The cloth is made like paper, of maferated bark, spread out and beaten together. Girls, under four, and boys under feven years of age, go naked. On the head they wear a bouncer made of matting or cocoa-nut-leaves, and the women sometimes decorate themselves with small turbans, and, plaiting their heads. Sometimes they slick which is recard their heads. Sometimes they slick decorate themselves with small turbans, and, plaiting their hair, twine it round their heads. Sometimes they slick flowers and seathers in their hair, and both sexs wear ear-rings of shells, berries, or small pearls, in one ear only. They let the singer-nails grow, except that of the middle firger on the right hand.

In 1606, when De Quiros saw this island, the men were quite naked, and the women covered only from the waits accommand with a garmant made of the sales were the single-

downwards with a garment made of the palm-tree: he in-deed faw one man, who feemed to be a chief, who had on his head a kind of coronet made of small black feathers, his head a kind of coronet made of small black feathers, fo fine and fost that they resembled filk, and behind hung down a bonch of red hair somewhat curled, as low as the middle of his back; by which we learn that a century and half will make some alterations in the customs of the natives of the South Seas, as well as in those of the Europeans. These people mark their loins and back part of their thighs with black or blue lines, in a variety of forms, which they call tattowing. They stain themselves in this manner, by puncturing or pricking the skin till it just bleeds, with a sharp instrument something like a comb, and then rubbing upon the part a grease made of foot and oil, which continues through life; such as are marked with deep blue punctures have the parts rubbed with the juice of a plant that gives that colour. They do not mark their children till they are about thirteen years old; and shough it is a painful operation, and several days before the nart's healed, they bear it with great resolution; considering it as the highest ornament.

rig it as the highest ornament.

"The diet of these people is vegetables, fish, poultry, pork, and dogs-fiesh; and their manner of dressing their food is very singular. Having procured fire by making a grove in one stick, and rubbing another in that grove, in the fame inanner as carpenters whet their childles, till the fmall duft kindles, they dig a hole in the ground about fix inches deep, and eight or nine in circuit: this done they pave the bottom with pebbles, and make a fire in it: they

then fweep off the after, and flay their food upon it, first covering it with plaintain leaves, and then heaping over it the hot embers. Here it lies till it is fufficiently baked; and when taken out, it is tender, jaiey, and full of gravy. Their chief drink is water, but they formetimes drink the juice of the cocoa-nut. They have an intoxicating juice,

Their chief drink is water, but they fornetimes drink the juice of the coxea-nut. They have an intoxicating juice, which they prefs out from the root of a plant, yet they feldom are inebriated. They fit on the ground at meals, with leaves foread out by way of table-cloth. Their provisions are brought in bufkets, their falt and water are kept in cocea-fhells; none est without washing their hands and mouths; they carve with fhells, feed with their fingers, and cat immoderately. They are filent during the whole repail, and eat feparately with their faces turned from each other.

The huta of these islanders confust merely of a roof, dupported on three rows of pilla, one on each side, and one in the middle, and thatched with the leaves of the palma-tree; their houses are formed like our hay-ricks, with their roofs sloping both ways, the caves of the roof about three or four feet from the ground; they have feldom any walls, but are open at the sides and ends; some few are inclosed with reeds; having only a hole to enter in at, which can be shut up with aboard; but these are the habitation of the principal people. Within, they are very neatly bedded with a kind of straw or hay, on which they four legged stools, by way of pillow. When dark, they burn a kind of canelle, made of the kernels of, an oily nut, many of which they side upon a small piece of wood like a skewer; one over another; when the first is burnt down, the one below it takes fire, and so to the bottom. After meals, and during the heat of the day, elderly persons of the better fort lie down to scept indeed eating and scepting, their general way of passing time, for they have little to do but procure themselves food, and are very indolent peothe better for it a cown to here; indeed eating and neeping, is, their general way of paling time, for they have little to do but proque themselves food, and are very indolent people; fo indolent as fometimes even not to feed themselves. If they and a few trees in the course of their lives, it is all that if expected from them. They are not, however, all that if expected from them. They are not, however, without the more forightly amufements; fuch as mufic; dancing, wreftling, fwimming, and diving, which they do wonderfully (not only men and women, but children of fix years old), throwing a lance, and fhooting with a bow. In throwing a lance, their ambition is, to hit a mark at about twenty yards diffance; and in using the bow, he is the best archer that conveys the arrow farthest; and as their arrows are not feathered, will often fend them two hundred and eighty yards. They kneel when they draw they bow, which, as foon as the arrow is delivered, they drop.

Flutes and drums are their only musical instruments; the flutes are made of the bamboo cane about twelve inches long, with two holes only, which they flop with the first finger of the left hand, and the middle one of the right. Thus they have only four notes, and of thefe they feem to have but one tune; and, what is more remarkable, they to have but one tune; and, what is more remarkable, they found this inftrument by blowing through their notirils. The drum is cylindrical, and formed of a hollow block of wood, folid at one end, and covered with the fkin of a fhark at the other. These they beat with their hands, and can tune them: they have a contrivance also to tune the flute, which they do by the ear with great exactness.

They sometimes sing, and sometimes dance, to the found of these instruments. Their songs are in couplets, and frequently extemporaneous, and, from their repeating them, seem to be metry, though without rhime. At other times they dance, and their way of dancing is not less singular than their muse; for they twist and writhe their bodies into many extravagancies.

Dramatic entertainments, or regular interludes, divided

Dramatic entertainments, or regular interludes, divided into hree acts, are here performed by men and women. Thefe dramatic interludes are called by the islanders Heava, and they confit of dancing and comedy, and last near two hours. Their language is fost and melodious, and abounds

Cloth is their principal manufacture, which is made of bark of different degrees of finencis; blanched, and died red cr yellow. They are likewife very ready in making bafkets and wicker-work, which they do very expeditionly; they will make bafkets of the socoa-nut leaves in a few minutes, and also bonnets to flade their faces, from a few minutes, and allo bonnets to lines their faces, from the fun; not fuch bonnets as cover the lead, but merely, a shade over the eyes, which they tie round the head of the make ropes and lines of the bark of another, tree, from the fixed of a packinead to that of an inch in diameter. Of these they form their, fishing-nets and tackleand of the fibres of the cocoa-nut they make thread. The filling

fifting-hooks are made of mother of pearl; and they make a harpoon of cane, pointing it with hard wood, for they have no metal of any fort.

The tools used by these people are in general made of fhells and stone, and with these they will erect houses, build cannes, and after their manner carve images. They make an adze with flone, a chiffel of human bone, a rafp

make an adze with stone, a chissel of human bone, a raspof coral, and for files and polithers they use coral sand.

These isanders carry on their trifling navigation in canoes, which are of various fizes, and designed, according
to their construction for sighting, fishing, making voyages,
&c. the length is from ten to seventy-two seet, the sides
are perpendicular, and the bottoms stat. Two sighting
canoes are always lashed together, and upon the forepart
of these a sage is erected like a quarter-steck for the warziors to stand on. From hence they throw their lances;
which are their military, weapons, as their bows and arrows are only used by way of amustement. They also which are their military, weapons, as their bows and arrows are only used by way of amusement. They also make use of sings. Below these stages, which sometimes cover the whole cance, fit the rowers, fixteen or seventeen in number, who paddle on with oars resembling a bakers peal; and the spate men (when any are wounded on the platform above, change places with them. The fishing cance is from ten to lorty feet in length, and sometimes carries a fail; and the travelling cances are always used in pairs, and have generally a small house fix or seven feet square, but on a slage in the forepart of them, and fometimes only an awning: for in fine weather they go in comtimes only an awning; for in fine weather they go in com-panies a pleasuring in these boats; and make a good ap-pearance. At these times the vessels are decorated with pearance. At these times the vesters are occurated with fireamers, and the people on board are dressed; they who five you and steer are dressed in white; they who sit upon and under the awning, in white and red; and two men, in red only, are placed on the prow of each canoe.

The year is divided here by the moon, which they call the people of the peo

Malama, and measure the day by the sun. They measure distances by the time they pass them, and count by their fingers. Their language is fost and harmonious, and abounds with yowels, like the Spanish and Italian, which they can readily pronounce; but they find a difficulty in

pronouncing English.

The priests are physicians and furgeons. They use bleeding, which is performed with a sharp wooden instrument. The principal diseases are ulcers, leprous and cutancous eruptions.

This people have two kinds of deposit for the dead, one called a tupapow, which is little less than a stied, under which the sless is suffered to putrify; and the other called a morai, a kind of inclosure, with pyramidical evergence of them, when the home of the called a morai, a kind of inclosure, with pyramidical evergence of them. tions of stone, where the bones are afterwards interred;

tions or itone, where the bones are afterwards interred; and in the magnificence of the latter one, their chief ambition feems to confift. The morai is not only a place of burial, but a place of worthip.

When any person dies, the house of the deceased is crouded with relations. Such as are nearest of kin, and are truly affected by the loss, are silent; the rest are clamorous, and at one moment with lamentations, and the next with lamentations, and the morous, and at one moment with lamentations, and the next with laughing and vociferous talking; for true giref always ties the tongue. Thus is the remainder of the day and the fucceeding night fpent, and in the morning the body is wrapt in a cloth, and conveyed on a bier to the fea-fide, attended by a prieft. The latter prays and fprinkles the corplettill the moral is confirmed, when the body is deposited therein, and left to puterly. The nearest female relation then wounds herfulf on the head with the tooth of refation then wounds herfelf on the head with the tooth of a fhatk, and the blood is thrown on the hier. The other women follow her example, the ceremony continuing three days. On these occasions they likewise wipe their tears with pieces of cloth, and throw them on the bier, and some even tear off their hair for that purpose.

As soon as the women have performed their part, the men begin. Every relation in turn, beginning with him who is the nearest of kin, assume the oline of chief mourner: he dresses himself in a fantassic deeps, such as none as in England would convert he idea which purses a fist to a chost or so he

would convey the idea which nuries affax to a ghoft or gob-lin; it confifts of drapery, fhells, and feathers, which cover the whole body, even the face. At the death of a man, the woman wears this drefs; and at the death of a woman, the man. The chief mourner, at the head of the reft (who are naked to the waift, and their bodies fmeared with charcoal and water as low as the shoulders) marches in procession to a great distance, round the corpse; and as he carries in his hand a long stick, the end of which is set with shark's teeth, and affects a kind of phrenzy, occasioned by grief, the people by before him, left the should strike and wound them with it, which, had they been withing his reach, he certainly would have done. These processions are not dropped till near the expiration of five months, when the remains of the dead body are taken down, and the bones feraped, washed, and buried in the place of inter-

When the people mourn, they have a vail over their face, and a certain head-dress of, feathers; and the weal-thier fort are preceded by a flave, who beats castancts before them, to give notice to all who approach; that the

fore them, to give notice to all who approach that the way may be cleared for the mourners.

Little can be faid to the religion of the control of the contro only are allowed to tattow and eircumcife.

Marriage here is but a mutual contract to be continued at the pleafure of the parties, the priest having nothing to

do with the affair:

do with the affair.

In this country, the feudal government feems to fubfift. Each of the pentifulas has a chief; and each of the difficults, which are forty-thre; in number, a fubordinate chief. The chiefs have a k.nd of court, and a council. Each difficit, in case of an attack, furnishes a certain number of fighting men, and the sovereign commands the whole. The weapons are slings, pikes, and clubs. They give no quarter but kill men, women, and children, and carry off the law bories as trophies. carry off the jaw bones as trophies;

feems to arise rather from not having any notions of private property, than from any criminal inclination. They are amorous and unchastle before marriage, but in general very faithful afterwards. There is a fociety, however, called the arreoy, in which indifferiminate concubinage is

called the arreoy, in which indiffriminate concubinage is permitted. Polygamy is allowed to the principal people of the island. Love is the ruling jaffion; but a submissive obedience; spaid by the wives to their husbands. When a lifeture arises at any time between two chiefs, it is settled among themselves. Captain Cook was once present at a naval review; and found it contisted of upwards of three hundred large cances completely equipped, and manned with near eight thousand man; the chiefs, and all those on the sighting platforms, were habited in their war accountements; which consisted of a creat quality of cloth, turbans, breat-plates, and unweild? bited in their war accourtements, which conflicted of a great quantity of cloth, turbans, breaft-plates, and unweildy helmets. This causes were dreffed with flags and fireamers. This fleet was defigned to attack a neighborring illand that thrown of its dependency on O-Taheitee. Some of the troops at captain Cook's requeft, went through their exercise on shore. Two parries first began with clubs; the blows of the clubs were aimed at the legs and head; these were exaded by immings, and shoft as those at the legs were evaded by jumping; and those at the head by flooping or leaning aside: when they pro-ceeded to use the legs were as or darts, they patried the push or dart by fixing the point of a spear in the ground before them, and directing the other end of it, as they forefaw

them, and directing the other end of it, as they foreign the aim was made at the other party.

When captain Wallis (who not long fince failed to this is and) brought his ship close under the land, he was furrounded by some bundreds of canoes, with feverall perfons in each. When they came within pistol shot, they gazed, and seemed to hold a council how to act; at last they paddled round the vessel, exhibiting signals of firendship, and one of them made a speech. Soon after this, some few came on board, but one of them being butted by a goast then on deek, and on turning round seeing the goat some tew came on board, but one or them being butted by a goat then on deek, and on turning round feeing the goat rife on his legs, they all jumped over the fides of the veffel in the greatelt fright, but foon fwam round her and returned on board again, and the crew had enough to do to prevent their flealing fundry things that lay in their way; one of them fnatched off a gold-laced hat from an officer's head, leaped overboard and fwam off with it. Upon the captain's fending out a boat to found the depth of water, the Indians to prevent their coming on flore, threw flores into her. dians to prevent their coming on shore, threw stones into her, and wounded fome of the men, which made an officer in the boat fire his musket, loaded with buck shot, at the Indian who threw the first stone, and wounded him on the shoulder.

This was an alarm sufficient: it brought together three or four hundred canoes, with upwards of two thousand men, arnied with flings and flones, of two pounds weight, who attacked the ship, and hurt fome of the crew but they were foon quieted and disperfed by firing a few great guiss at them, with the loss only of a few Indians. They prepared for a fecond attack, but found it in vain; in thort they became to afraid of a gun, that a musket being pointed at them, thousands would my before it, like affect

of sheep. So great indeed was their dread, that wisen a party of Indians once attempted to attack an officer, then strolling about on shore by himself, he put them all to flight, by prefenting his tooth pick case at them, which they conceived to be a little gun. After this, the ship's boat went peaceably on shore; and upon signals of friendship made on both sides, a trade was opened with the islanders, which improved every day. The things they valued most were nails and hatchets, they having no iron; and the rates of trafficing were. A solike for a small iron; and the rates of trafficing were, a fpike for a fmall pig, a fmaller for a fowl, a hatchet for a long, and middling fixed nail for twenty ecocanuts or bread-fruit. Nay, they trafficed with the fhip's craw for the perfonal favours of their daughters and fifters, whom fathers and brothers brought down to the fea on purpofe: a nail was generally the price of thefe favours; but, to flew that they were not infenfible of the fuperiority of charms in one female more than auother, the fize of the nail demanded rofe always in proportion to the beauty of the lady; but no nail under the fize of a forty-penny were current at O-Ta-

bettee.

With respect to the general character of these peo is, we must observe, that they are hospitable, unambitious, and far from revengeful. They probably are not so fincare in their professions of friendship as from appearances might be expected; for they weep upon every little occasion, and seem to have tears at will; like children, they cry for tristen, and, like them, their forrows are soon forgotten: but when we resee that they have never been taught either to district on supressive their ressions, and are taught either to difguife or fupprefs their paffions, and are not accustomed to thought, which alone can recall the past, and anticipate the future, it is no wonder that their forrows should be transient; they are affected only with the occurrence of the paffing minute; and yet they are of a benevolent disposition. Though they have no trade, they have plenty of amusements and employments: manusacturing of their of a mutements and employments: manusacturing or their drefs is an agreeable employ to the women; and building houses and cances, with making of tools and arms sufficient occupations for the men. Most of their days are spent in a country where nature has been lavish of her gifts; where the temperature of the air is warm, but constinually explaned by whelefome hereges; where the atmost insuling refeased when whelefome hereges; where the atmost timually refreshed by wholesome breezes; where the atmosphere is constantly clear and serene, and where the climate and fruits of the land contribute to the strength, pleasure, and elegance of the natives. In short, their tempers are unruffled by violent passions; they live a life of ease, equanimity, and content, and are situated in a delightful country, free from care, and happy in their ig-

M. de Bougainville, when at O-Taheitee, met with a native of that island, about thirty years of age, very de-sirous of accompanying him to France, and his countrymen feemed to approve the step. He happened, however, to be a stupid fellow, and in two years stay at Paris, could never be brought to speak or even pronounce the language, possibly from some impediment in his speech; yet still he would go out into the streets by himself, and was well acquainted with the town. He frequently ande a purchase, and feldom paid more for it than its value. The principal exhibition that pleafed him was the opera, and particularly she dancing; he conftantly went there by himself, paid for his admission, his favourite place was in the feats befor his admission, his favourite place was in the feats behind the boxes. Among the great number desirous of seeing him, he knew how to distinguish those who were most civil, and his grateful heart never forgot them. The ministry sent him, in March, 1970, to the life of France, that he might be thence conveyed lione; but he never lived to reach his native isle, for having caught the small pox, it proved fatal to him.

The Society isles are fix in number: vis. Huaheine, Ulietea, Bolabola, Otaha, Tubai, and Marus

1. Husheine was discovered the 11th of July, 1769, by captain Cook. It is fituated in fixteen degrees forty-three minutes fouth latitude, and one hundred and fifty degrees fifty-two minutes well longitude, is upwards of twenty miles in circumference, has a hilly furface, and a commodious harbour on the west side.

This island is divided into two peninfulas joined by an ishmus, which at high water is overflowed. It feems to have been disturbed by volcanos, and the face of the country is fomewhat fimilar to that of O-Taheite

The same language is spoken here as at O-Taheitee; the natives also wear the same kind of habits, and are the same as the O-Taheitaus, except that they are not so dark coloured. The women in general are handsome, and both women and men rather stouter, larger made, and left timid; but they are more indolent and lazy. The productions likewife of this uland are the fame as those of the last mentioned, but are about a month forwarder in their growth. They have here indeed mulberry-trees, which are not to be met with at O-Taheitee. are fimilar; they are likewife governed by which, and their religious notions are much the fame. Captain Forneauu, in 1773, brought from this illaud a young man, named Omai, who, however, was not a native of this place, but of Uliese, having been driven from his home by the inhabitants of Bolabola. He was but of the middle claft of eople, and but an ugly specimen of the natives of these stands. While in England, he was introduced to the best illands. While in England, he was introduced to the best company, and taken uncommon notice of by his prefent Majelty. Great pains were taken, while here, to feath his eyes with wonders. During his stay here, he was inoculated for the small pox; and, when captain Cook failed for O-Tahelice again in July 1776, Omai voluntarily went with him, though with manifest regret at leaving England. He carried with him a great variety of dreftle and other ornaments, a portable lianti-organ, a popperhow, a coat of mail, a fuit of armour, and an electrical machine which he was taught toufe. Though at your of maturity, his indement was fill in its indement was fill in its indement. maturity, his judgment was fill in its infant flate, and, like children, he coveted every thing he few i he did not earry with him any inftruments of real use in life; but a veriety of domeftic animals, make and female, were put on board, as a prefent from captain Cook to the inhabitants of O-Taheitee, and the other South Sea illands. Omai, however, dying in his passage home, never again

faw his native country.

2. Ulictes was first alicovered by captain Couk in July 1760. It lies fouth-west and by wost, about seven or eight leagues from Huaheine, and is about three times as eight regues rom runaneine, and is about three times at large, has much broader plains, and much higher hills, but is not fo fertile or populous; the foil, at the top is a kind of flone mark. Here are plantains, cocon-mus, yams, hogs, and fowls. It is governed by a viceroy, deputed from Bolabola. Their burial places here are in: tofed with flone walls, made with coral flones. The principal people, when they receive a vifit of ceremony, are feated within their habitations, at the end of a long mat, and the party introduced by four or five old women weeping, and party introduced by four or nee on women weeping, and, as it were, bitterly lamenting, and cutting their leads with infruments made of the teeth of a flast, till the blood runs plentifully down their faces and fhoulders, before the visitor enters, these women embrace him, and thus frequently besmear him with their blood. quently befrees him with their blood. This ceremony ended, they go and wash themselves, and is unediately re-

fume their former chearfulnefs.

In this ifland, the dances and dramatic entertainments re very fingular, in one house, where Dr. Solander, and are very fingular; in one houte, where Dr. Solander, and Mr. Banks paid a vifit, by order of the malter, a man with a large cylindrical piece of wicker work upon his head, about four feet long and eight inches in dismeter, faced with feathers placed perpendicular and edged round with tharks teeth, began to dance. In dancing, he often twifted his head in fuch a manner, that the top of the head-drets deferibed a large circle, and was frequently firiking the by-flanders, which never failed to produce a laugh, at the expence of the serfon who had been fruck by him.

expence of the person who had been struck by him.

3. Holabola lies north-west and by west, and is distant about sour leagues from Otalia. It is made up of one high forked peak of land, and is furrounded by a reef of rocks and feveral finall iflands, all of which are only eight leagues

in compals.

4. Otaha lies within about two miles of Ulictea, and is divided from it by a ftraight; both illands are inclosed in one reef of corsi rocks, fo that there is no paffage for fhipping between them. This island is not populous; shipping between them. This island is not populous; nor has it any thing to distinguish it from the other islands, The natives received the boat that landed on this coast, in the most courteous manner, and were particularly attentive to pay Mr. Banks and Dr. Solander, who went in her, the same compliments that they paid to their kings, uncovering their thoulders, and wrapping their garments round their breafts.

5. Tubai: which produces nothing but cocoa-nuts, and is faid to be inhabited only by three families. The coaft abounds with fifth, which cocasions the shore to be trequently visited by the natives of the neighbouring

 Marua is a finall ifland intirely furrounded with a reef of rocks, and without any harbour for fhipping: a high hill rites in the middle of it, which may be feen at the diffance of ten leagues. It is inhabited, and its productions are the fame as the island bordering upon it.

degrees

degrees five minutes fouth latitude, and one hundred and nine degrees forty-fix minutes west longitude. It is hilly

degrees for minutes fouth latitude, and one hundred and nine degrees forty-fix minutes weft longitude. It ir hilly and flony, and affords neither fuel, water, or anchorage for falipping. It is not certainly known who fird difcovered this island, but ceptain Cook vifited it in March, 1774. The only productions are, plantains, nuts, potatoes, fugar-canes, yanns, and gourds. The animals are fowls, a few land, and fome fea-birds; elfo rats, which they eat, se well as the former. The people are frogal livers, and good fwimmers.

The natives, with respect to their persons, are lively and strong, of a middling stature, sender, but hard-featured. Their looks are mild, pleasing, modest, and submissives, and stome few are darker, and some are quite white, and the bodies of the men are very hairy. Their beards are black and strong, and they wear them clipped short. The noses, both of men and women, are not very broad, but rather shat of the negro, are strong, and their hair is black and curling. Their eyes are dark brown, and rather small, and the whites of them not so clear as in other islands of the South Seas. The women wear their hair long, and sometimes tie it upon the crown of the head; but the men never suffer theirs to grow more than three inches in clength. Both men and women are remarkable for the sometimes tie it upon the crown of the head; but the men never 'uffer theirs to grow more than three inches in length. Both men and women are remarkable for the great length of theirears. They pierce the flaps of them, and firetch the holes, by wearing a leaf in them, rolled up tight like a feroll, till they become two or three inches long, and reach the shoulders. They fometimes turn this slit over the upper part of the ear, and it then looks as if the slap was cut off.

These fisheders have the profiles of mainting and tate.

These islanders have the practice of painting and tat-wing. The men cover their heads either with a round towing. The men cover their heads either with a round fillet, feathers, afraw bonnet, or with a bufhy cap. The cloathing of the women confifts of a piece of red and white quilted cloth, or a mat, one part wrapped round the loins, and the other thrown over the shoulders; but the men go almost naked, except a flip of cloth between the lega both ends of which are fastened to a belt round the waith. Both fexes wear on the breast, sespended by the neck, a flar piece of bone, shaped like a laurel-leaf; and occasionally, by way of amulet or charm, necklaces and ear-rings made of shells.

As to their huts, they refemble a canoe lying upon the ground, with the keel upwards: they are about fifty or fixty feet long, and built in the following manner: the foundations are laid with stone, by paving the ground in two curve lines, converging at the extremilies to each other: the distance, from line to line, in the middle, is about fix feet, and at the ends not more than a frot. In every stone of this line or foundation is made a hole, into which they fix a flake, fix feet high in the middle; and diminifhing proportionably to two feet at the ends: thefe flakes are drawn together, and fadened at the top, and the whole is covered to the ground with matting of fugarcane leaves.

They have but few working tools, and those are very mean, being made of stone, bone, or stells; but yet they are very ingenious at carving, and shew a taste for the arts. They carve and very highly polish, human sigures show eighteen inches long; which they perform with great neatnels and proportion.

Clubs, spears and battle axes are their weapons; their canoes are very badly contrived. Very little that may be depended on, can be faid of their religion, language, or

government.

There is a number of gigantic stone statues in several places on the coasts of this island, some credted in groves, in platforms of masonry, and others single, sixed only in the earth. They resemble a human figure to the waist, are thirty feet high, morethan eight seet across the shoulders, and seemed to be formed each of one single stone. The most manshin is rude: and the eyes and nose, are scarce and teemed to be formed each of one fingle itone. The workmanship is rude; and the eyes and nose, are scarce marked on an ill-shaped head; but the ears quite long, in the present fashion of the country. On the heads of these statues are placed huge round cylinders of sone, five feet in height, and five in diameter, set upright. They seem to have been erested over the graves of some chiefs, in former days, not being the workmanship of the present inhabitants. But preserved now as monuments of antionity. habitants, but preferred now as monuments of antiquity. How these stones were thus raised one upon another, is as little to be accounted for as the manner in which those at Stonehenge on Salisbury-plain were erected. The islanders do not pay any adoration to them, but hold them in a kind of veneration, and will not fuffer any one to tread upon the platforms. They probably may have fome tradition

oncerning them, but as the Burn and who vifited t ifland did not continue long erou to have the quage, nothing could be collected with certainty 1 by only that they were the burial-plac of some former cl. ds. Though these itlanders have weather of defence, by

Though these islanders have weat in of desence, key are cowardly and timorous; they stand in great awe of a mussquet, and probably from the destruction that was made among them by Roggewein and his people, who, without any provocations, wantoning fred upon tile natives, and made a great staughter among them; but they are harmless and friendly; having a natural mildense, fellow-feetings and good-nature in their disposition, which prompt them to treat their visitors kindly, and as hospitably as their wretched country will admit.

The Marquessa were discovered in 1505, by Alvara Metedana, a Spaniard, who gave them their present, name, La Marquessa de Mendoça, in honour of the marquis of Cannete, vicercy of Peru, he also gave to four of the different illestheir respective names. The Marquessa re sive in number 1 La Magdalena, St. Pedro, La Dominica, Santa Christina, and Hood's Island, which last was a discovery of

Christina, and Hood's Island, which last was a discovery of captain Cook, in April 1774; Mendana having only feen the first four. They occupy one degree in latitude, and near half a degree in longitude.

La Magdalena, is fituated in ten degrees twenty-five mi-nutes foull latitude, and one hundred and thirty-eight degrees fifty minutes west longitude. It is fix leagues in circuit, and is in general mountainous, but contains forme vallies where the people dwell. The inhabitants are handforme, of white complexions, flout, and portly.

St. Pedro, feems barren, by the diffant appearance; but it is uncertain whether it is inhabited, not having been

touched at.

La Dominica, is mountainous, woody, and in fome measure fertile; but is inhabited. It is about flateen leagues in compais.

Santa Christina, lies about a league fouth of La Domi-

Santa Christina, lies about a league fouth of La Dominice, and is eight leagues in circumference. It has fertile vailies abounding with fruit, trees, and vegetables, is in fome places hilly, but well watered.

The natives are a well-made people, of a tawny or yeltowish complexion; but look almost black, by being punctured over the whole body. The men wear long beards, which some tien two hunches under the chin, and others plait. The women resemble those of O-T sheitee; their cloathing is also the same, and made of the same materials. The men in general gos almost naked having only their clostning is also the tame, and made of the fame materials. The men in general go almoft naked, having only a slip of cloth passed round the waist and between the legs. The drefs of the women is a piece of cloth wrapped round the waist like a petiticoat, lunging down below the middle of the leg, and a loose mantle or tunic thrown over the shoulders. But, to be more particular,

This island, though high and steep, has many vallies which widen towards the sea, and are covered with sine forests, to the furnities of the justice, mountains. On the

rests, to the summits of the interior mountains. On the south siderises a peak, which is very craggy and inaccessible. All the north side is a black burnt hill, of which the rock is vaulted along the fea-shore, and the top clad to the fumnit with a shrubbery of casuarinas. The products of fumnit with a Inrubbery of caluarinas. The products of this island are, bread-fruit, bananas, plantains, cocoa-nuts, fearlet-bbeans, paper-mulberries, of the bark of which their cloth is made, casuarinas, with other tropical plants and trees. They have hogs and sowls and plenty of fish. Mr. Forster says, he never saw a single deformed or even ill-proportioned man among the natives; all were strong, tall, well limbed and active in the highest degree.

Their says are sledyled and force in the highest degree.

Their arms are clubs and spears, like those of O-Ta-heitee, but neater. They have also slings, with which they throw slones with great velocity, and to a great dis-tance; but not with a good aim. In times of danger, they have a making with draws of the sime kind with those. beat an alarm with drums of the fame kind with those of the Society Isles; and, like them, are under a monarchical government; but they are not quite fo cleanly as that peogovernment; but they are not quite to cleanly as that people, who furpals, in that respect, perhaps, any other in the world. Their canoes are from fixteen to twenty feet long, and about fifteen inches broad, being very fimilar to, but not quite so large as those of O-Tabeitee. Their drink is purely water, cocoa-nuts being rather scarce. They are much given to pilsering, like the lower fort among the O-Tabeitans.

Hoo's Iffand was discovered by captain Cook, in 1774, who gave it that name from a person on board his thip, who first saw the land. It lies in two degrees twenty-fix minutes south latitude, and one hundred and thirty-nine degrees thirteen minutes west longitude; is five leagues and a half distant from the east end of La Dominica, and the most northernly of the cluster.

The Friendly Islands are fituated between nineteen degrees forty-four minutes and twenty-one degrees thirty-two minutes fouth laritude, and one hundred and feventy-four degrees and one hundred and feventy-five degrees fourteen minutes weft longitude. The three most confiderable of them were first discovered in 1043, by Fasman, a Dutchman; they are seven in number exclusive of some letter and very inconfiderable illands.

Anticulant Isle, or, ask the natives call it, Tongatabu, the in twenty one degrees seven minutes bouth lantude, and one hundred and feventy-five degrees weft longitude, is to the northward of Middleburgh, and about five leagues from it; it is something in the farm of an intiches transdegrees and one hundred and feventy-five degrees fuunteen

from it; it is fomething in the form of an ifoiceles trian-gle, the longest fides of which are seven leagues, the shortest about four; its direction is nearly east-fouth-east and westnorth-west.

Middleburgh, called by the natives Eacowe, lies in twenty-one degrees leventeen minutes fouth latitude, and one hundred and feventy-four degrees forty-four minutes west longitude, is about ten leagues in compass, and may be seen at the distance of twelve leagues.

be feen at the diffance of twelve leagues.

The general flature of the men in the iflands of Amsterdam and Middlehuigh is equal to our middle fize, from five feet three to five feet ten inches; the proportions of the body are very fine, and the contours of the limbs extremely elegant, though fomething more mulcular than at at O-Taheitee, which may be owing to a greater and more conflant exection of strength in their agriculture and domestic exconomy. Their complexion is a clear malogany or chefinut brown, with black hair, in short friezzled cuts which feem to be burnet at the time, where beards are curls which feem to be hurnt at the tips so their beards are Their features are extremely mild and cut or shaven. pleafing, and they practice tattowing, or puncturing the Ikin. They have a practice likewife of powdering their hairs fome with a white powder made of lime, which burns; others with bluer and fome with orange colour, made of turmeric.

Both men and women have, for their diefa, only a piece of cloth or matting tied round the waift. The men frequently wear a ftring of leaves round their nocks; and the women, loofe necklaces made of shell fish, teeth, and freds intermixed. Their utentila, animala, habitations, &c nearly refemble those in the Society Islanda. Their manufactures are like thuse of O-Taheitee, only of an in-

ferior fort.

Their weapons are clubs highly polifhed, sharp pointed spears barbed, and hows and arrows. The bow is six feet long, and, when, sack, forms a curve; the convex part has a groove that holds a string. In drawing the bow, instead of pulling it, so as to increase the natural curvature, they draw it the reverse way, so that the spring, to recover its former polition, gives greater velocity to the arrow and the recoil never hurts the arm of the person who dif-

charges the bow.

In point of neatness and workmanship, their canoca exceed every thing of the kind met with in the South Seas. They are constructed of feveral planks fewed together fo neatly, that the joints on the outfide are feareely to be feen. Some of their canoes are double, and fome fingle; the fingle ones are from twenty to thirty feet long, shout twenty line es wide in the middle, terminating at each end in a point. At the ends are a kind of deck, shout ten feet long, fo that the cause is open in the middle; and they frequently decorate the decks with rows of white shells. Some of them have fails; and some are worked on with paddles. The double the decks with tows of white facilis. Some of them have fails; and fome are worked on with paddlea. The double canoer are formed of 'two,' fastened together by strong beans, and a boarded platform is raised upon staunchions over them. They are in contrived, that they can be sunk under water splite to the platform, without being in any darger of fisting; nor can they fink while they hold together. They are in general fixty or seventy feet long, and four or five broad. They have one fail made of matting, four or five broad. They and one maft in the hiddle.

Their religious opinions are little known; and what respects their anniements and government statids in the same predicament. The prevailing disease is the keptofy, to cure which, stey blotter the check bone. The common cure which, they hister the check bone. The common mode of faturation is by putting nofe to no e, a more condition or is kifting hands, the tokens of peace is a white flag, and the greatest testimony of friendship is an exchange of names; but their most singular custom is, the cutting off the joints of the little fingers at the death of parents and relations, one joint for each, till they have left none transfer requiring.

le't none remaining.

These islanders are in general, brave, friendly, and courteous; the women are modely; but both sexes are given to pilfering, like those in the neighbouring islands.

Rosterdam Island, or Anamocks has a great number of finall inconsiderable islands in its neighbourhood; it is fmall inconnectable listed in its heighbourhood; it is financial in wearly degrees fifteen minutes fouth latitude, and one hundred and feventy-four degrees thirty-fix initutes werk longitude. The inhabitants, productions, languages, &c. are finillar to those of Amikerdem island; but the former learn more leprous than any of those de-

In this island, the houses are different from any thing above cited t they are an oblong figure, about thirty feet long, eight feet wide, and they are built about nine feet in height; their walls and fides are about four feet high, and made of reeds fixed up, not perpendicularly, but converg-ing from the caves of the roof to the bottom. The roof ing from the control of the state of the whole would refemble a pentagon. It is thatched, and the roof foresde a good way beyond the floping walls. In one of the long fides there is an opening like a window, which is the only entrance into it. Within are flored quantities of yams, which are probably the chief support of the natives; on these they sleep, covered only with a little matting they cest their heads on narrow stools, as the O-T sheitsna In the day time they lie under flieds, the floors of which are covered with mata; and they have a variety of large wooden dithes, bowls, and earthern pots, as house-hold mensils.

The ifle of Handsome Prople was discovered by De Quiros in 1606. It is eighteen miles in circumference, and Stuated in ten degrees fouth latitude, and one hundred and eighty-five east longitude. Notwithstanding the exand eighty-live east tongrude. Notwinstanding the ex-cellive heat of the climate, the natives are remarkably fair and handfome, from which circumstance the island had its name. The natives are covered only from the waist downwards with mats made of palm, and wear a mantle of the same upon their shoulders.

Their canoes are trees hollowed out; and their houfes,

which are thatched, fland in clusters.

Cucos and Traitors Islands are situated in fifreen degrees fifteen minutes fouth latitude and one hundred and feventyfive degrees thirteen minutes west longitude. They were discovered in 1616, by Schoulen, and afterwards vilited by

captain Wallis, in July 1767. Cocos, called also Boseawen's Island, is a high mountain, in appearance like a sugar-loas. Traitors island is three miles and an half long, two broad, and lefs elevated than Cocos iffe. Traitors iffe was fo called from at attempt. made by fome of the natives to feize Schouten's boat, when

he was here.

The inhabitants of both these islands are a savage pee ple, cloathed with rufties or mats: they are, however, well made, and robuft; have their bair in different forms. The flaps of their ears are flit, and hang down slmost as low as their shoulders: they wear whiskers, and a little beard under the chin, the rest being all shaven: and their podies are marked or punctured like those of the O-Ta-

When Schouten was here in 1616, a chief put off from the fhore,in acanoecovered with a mat in form of a tent, and accompanied with a number of people in forty-fiveanoes; as they approached the flip, the chief cried out three times with a loud voice; and at the fourth, all his company joined in the cry. He prefented the captain with a paper drefa, and a fine mat; and he was entertained and received prefents in return. These people certainly had no idea of property, attempting to fleal every thing they could lay their hands upon; may, they tried to draw out the nails from the flip's fide with their teeth, and some fewer under the keel, and attempted to draw the nails from under the keel, and attempted to draw the nails from the shore, in a canoe covered with a mat in form of a tent, and under the keel, and attempted to draw the nails from thence; but being fixed at, they defilted. The next day, however, they put off from flore to the number of one thousand, with hogs, bananas, fowls, and occoa-nuts, of which they have plenty, under a pretence of trading; and the chief, or Latou, as he is there called, in a double cance, giving a figual, they all thoused, and at that instant threw a volley of flones on board the ship, and the chief was abfurd enough to suppose that he could run down the ship by failing against it with his cance: he made the ridiculous attempt, and beat the head of his canoe to pieces; this exafperated the Indians, and they reiterated their attack; but on a difcharge of feme mulqueta, and a few great guns, they were foon put to flight, with the flaughter of a very finall number of them.

Their canoes are made of one piece of red wood, flat before, and pointed behind; they dart along very fait in them, fleering them and putting them on with two oars aftern. They have other canoes, that carry a fail, in the middle of which is generally drawn a grey and red cock ;

Horn or Hoorn Island was also discovered by Schouten, in 1616; it is situated in sources degrees sifty-six minutes south latitude and one hundred and seventy-mine de-

grees eaft longitude.

grees east longitude.

The complexion of the people of this island is a yellow brown. The men are tall, large, well made, and strong bodied it they are fast runners, capert fwimmers, and good divers. They do not fosfer their beards to grow, but take great pleasure in dreffing their hair, which is black. Some tie it, others frize it, and others curl it, some let it grow down the waist, and tie it in five or sat tails, and others drefs it right an end, standing up like hoof's brilles. like hog's brifles.

Both men and women go naked, except a piece of covering between their legs? the women are very much de-formed both in face and body, and are very thort; they rub their leads and closeks with formething red. Their breafts are long, and lising down to their bellies like lessliern

breate are long, and using down to their neither like resulern bags, for that they m.-že a very diagreeable appearance; they are befides very immodelt, performing the rites of Venus in the prefence of every one, only under a mat.

The foil produces fpontaneously a great variety of fruits, such as cococs, banalias, yams, &c. for they know nothing of cultivation. They have foure hogs, which they cook wretchedly. At low water the women catch fifth which is

eaten raw.

Queen Charlotte's Islands were visited by captain Carteret in 1767. They consist principally of eight islands, namely, Egmont's Isle, or New Guernsey: Howe's Isle, or New Jersey: Edgecumb's Isle, or New Sark: Ourry's Isle, or New Alderney; Swallow, Casteret, Simpson, and Gover's Islands. The following is the best account we could procure of Egmont's Isle, the rest being only seen at a distance.

a diffance.

Mendana first discovered this island in 1505. He would fain have fixed a colony here; but sound it impracticable, as the natives continually maintained hostilities against him, captain Cateret's attempt in 1767 was equally unsceed ful; for on the first attempt to land, a skirmith enfued, in which sour people lost their lives. We perceived, however, that the island abounds in hogs, sowls, ring-days, surfactores are stricted. doves, turtle-doves, partridges, geefe, herons, fwallows, and black lizards. It likewife produces plantains, fugarcanes, two orthree kinds of bread-fruit, beetle, two kinds of good almonds, Spanish pumpkins, cheficuts, and nuts, ecoca-nuts, large pine-apples with kernels in them, and apples, refembling pearmains; fago, fweet basit, ginger, a kind of indigo, &c.

Their towns confift of about twenty houses each, they Their towns confift of about twenty house each, they are built round and of plank, and thatched with palm-leaves; every house has two flories, to which they go up by land-ladders; each flory is inclosed heast high, the part shove being left open to give light and air. Their houses are furrounded by a wall of loofe flores, open at the entrance, inflead of a gate; and the fides and flones within are lined with fine matting. There is in each town a large house, explainly a tenule; and another lang loofe. within are lined with the matting. I here is in each town a large house, probably a temple; and another long house, apparently belonging to the community, in which are hong bundles of arrows, in great quantity, ready for use; and also a wellor two curiously made, with steps to go down, and covered with plank. Some of their towns are surrounded with breast-work of some, refembling a fortification, and gives reason to suppose that the natives are often troubled with civil water. Gone tithing wiers sequed with some bled with civil wars; fome fifthing wiers fenced with stone are found clofe to the fea.

The inhabitants at prefent go naked and unadorned. though when Mendana was there they had cloathing and ornaments. They live principally on fifth, and a vegeta-ble called brete; their chief diverifion is dancing. Their manufactures, belides fifthing-tackle and weapons, are ropes of ozicis, and cordage of tattans, bags and pockets of palm, and curious and large mats for fails. They weave also, in finall looms, a kind of cloth, which ferves as a covering

for the women. Their arms and offentive weapons are hows and arrows, darts with three rows of barbs, a kind of wooden fword, and fromes: the bows are fix feet five inches long, and their arrows four feet four inches, pointed with flint; and with these missile weapons they do execution at a consider-able distance. One of their arrows wounded aman in the thigh, after going through the boats wash-board.

Some of their cances are double, like those at O-Ta-heitee. The common ones, for daily use, are small, and

of rude workmouthip; they are all formed from the trunk of a tree hollowed out, with an out rigger, but no fails. Some of them will carry a dozen men. Their voyage canoes, which will hold thirty men, are more beautiful that

There is an iffand about ten leagues north of Egmont's iffe, which is near four leagues round, of a conical figure,

ifle, which is near four leagues round, of a conical figure, and contains a volcano.

Captain Carteret had only an opportunity of feeing at a diffance the other iflands, of which Queen Charloire's iflee conflit; but had reafon to believe them all to be inhabited. As he paffed the ifland that bears his mame, which is about two days fail from Egmont's life, is near fix leagues long, and lies in eight degrees twenty-fix minutes fouth latitude, and one hundred and fifty-nine denutes fouth latitude, and one hundred and fifty-fine degrees fourteen minutes ead longitude, he met with forne of the inhabitants fithing. He fent out a boat, and feized one of the canoes, which was large enough to contain eight octen men, was very neatly built with planks well jointed, ornamented with fibel-work, and figures rudely printed, and the feams were covered with fomething like black putty, but of better confidence. The people were arrived with hows, arrows, and figures prouted with litt, as at Egmont ifle. They feemed to be the fame kind of people as the natives of that ifland, and were quite naked.

Belides those above described, there are feeverly featered.

as the natives of that island, and were quite naked.

Belides those above described, there are feveral scattered islands between the equator and the fouthern tropic viz.

1. Eimeo, or York island; 2. O-Heetroa; 3. Hervey island; 4. Palmerston island; 2. Svage island; 0. Islands of Danger; 7. Duke of York's island; 8. Turtle island; 9. Byron's island.

Eimeo, or York island, was first discovered by expeasing the state of York's island; 1. Turtle island; 1. Since, or York island, was first discovered by expeasing the state of York's island; 1. Turtle island; 1. Since, or York island, was first discovered by expeasing the state of York's island; 1. Turtle island; 1. Since on York island; 1. Since of York island; 2. Since of York island; 1. Since of York island; 1.

O-Heteroa is fituated in twenty-two degrees twentyfeven minutes fouth; one hundred and fifty degrees forty-feven minutes west, and is thirteen miles in circumference. feven minutes weft, and is thirteen miles in circumference. It does not thoot out into high peaks like the other islands, but is more uniform and even, being divided into small hillocks. It is neither populous nor fertile. The natives are holile, armed with lances, dressed in striped cloth, their heads decorated with feathers, and their labit a thort jacket reaching to their knees. The whole is girded with a yellow saith, which passes round the neck, is crossed upon the breast, and is gathered about the middle.

Hervey island lies low, in nineteen degrees eighteen minutes fouth latitude, and one hundred and fifty-eight degrees and fifty-four minutes west longitude. It was discovered by captain Cook on September 23, 1773, who gave it the above name in honour of the earl of Briflol, Palmerston island is situated in one hundred and fixty-

three degrees ten minutes west longitude, and eighteen de-

grees four minutes fouth latitude.

Savage island lies in nineteen degrees one minute fourth latitude, and one hundred and fixty-nine degrees thirty-feven minutes west longitude. On captain Cook's landing here. June 1774, the natives attacked his party with great fury: every possible intimation of good will was given them, but without any effect: a dart or spear was thrown by one of the natives, which grazed captain Cook's shoulder; a party which had been posted on a rock, to secure a retreat in case of an attack, saw it absolutely neceffary to fire on the natives, to refeue their commander, and those who were with him, from destruction. This and those who were with him, from deftruction. This prevented others coming down from the heights, and abated the ardour of those who were engaged; whether any of the Indians were hurt, could not be perceived. This disposition of the natives, as well as the island furnishing no port, determined captain Cook to leave it. The name of Savage Island was given by him to this spot, from the conduct and aspect of the natives who thus came down upon them with the fury of wild beasts.

Islands of Danger; a name given by commodore Byron to three islands which had rocks and broken ground between them, and were to low, that a thin, may be close.

to three illands which had rocks and oroken ground between them, and were fo low, that a fhip may be clofe in with them before they are feen. Their fituation is differently laid down by commodore Byron and captain Cook; the former placeing them in longitude twelve degrees thirteen minutes fouth; latitude one hundred fixty-feven degrees forty-feven minutes well; and the latter in ten degrees forty-feven minutes well; and the latter in ten degrees forty-feven minutes well; and the latter in ten degrees forty-feven minutes well; and the latter in ten degrees forty-feven minutes well; and the latter in ten degrees forty-feven minutes well; and the latter in ten degrees forty-feven minutes well; and the latter in ten degrees forty-feven minutes well; and the latter in ten degrees for the fever minutes well; and the latter in ten degrees for the fever minutes well; and the latter in ten degrees for the fever minutes well; and the latter in ten degrees the fever minutes well; and the latter in ten degrees the fever minutes well; and the latter in ten degrees the fever minutes well; and the latter in ten degrees the fever minutes well; and the latter in ten degrees the fever minutes well; and the latter in ten degrees the fever minutes well; and the latter in ten degrees the fever minutes well and the latter in ten degrees the fever minutes well and the latter in ten degrees the fever minutes well and the latter in ten degrees the fever minutes well and the latter in ten degrees the fever minutes well and the latter in ten degrees the fever minutes well and the latter in ten degrees the fever minutes well and the latter in ten degrees the fever minutes well and the latter in ten degrees the fever minutes well and the latter in ten degrees the fever minutes well and the latter in ten degrees the fever minutes well and the latter in ten degrees the latter minutes well and the latter grees lity-one minutes and one hundred and fixty-three de-grees forty-three minutes. The fouth eafternmost of these islands is about three leagues in length between the extreme points, from both which a reef runs out, upon which the fea breaks to a tremendous height; upon the northwest and west sides innumerable rocks and shoals threach

mear two leagues into the fea, and was extremely danger-ous. The islands have a fertile and beautiful appearance, and (warm with people. No farther diffeovery concerning these secluded spots could be made by the commodore, as the great danger to which the ships were exposed prevented

his going on shore.

Duke of York's island was first discovered by commodore Byron, June 21, 1765, and, according to all pro-bability, never received a human footstep before that time. The boats landed with great difficulty, and procured about two hundred cocoa-nuts, which, circumstanced as the crews were, was an inestimable treasure. This island lies in latitude eight degrees forty-one minutes fouth; and in one hundred and feventy-three degrees three minutes weft longitude: a dreadful fea breaks upon almost every part of the coast, and no foundings could be found.

Turtle Hand lies in nineteen degrees forty-eight minutes fouth latitude, and one hundred and feventy-eight

degrees two minutes west longitude. It was so called by captain Cook, who first visited it, on account of the great

number of turtles that were feen here

By:on's Island was first discovered by commodore By-By: on's Hand was first discovered by commodore Byron, July 3, 1765; but he could not go affore, or procure
any refreshments, there being no part favourable for a
fine to anchor. This is shad lies in one degree eighteen
animutes fouth latitude, and one hundred and seventy degrees fifty-three minutes east longitude, and is supposed to
be about four leagues in length. It was very populous;
for as soon as the ship came in fight, the natives to the
number of above one thousand, allembled on the beach,
and more than fixty cames, or poss, not off from the and more than fixty canoes, or pross, put off from the shore, and made towards it, and ranged themselves in a the inclusion of the Indiana fundamental the indiana fundamenty jumped out of his proa, fwam to the fhip, and ran up the fide like a cat. As foon as he had ship, and ran up the side like a cat. As soon as he had stepped over the gunwale, he sat down upon it, and burst into a violent sit of laughter, then started up and ran all over the ship, attempting to steal whatever he could lay his hands on, but without success, for being stark naked, it was impossible to secret his booty. The seamen put him on a jacket and trowsers, which produced great merriment, for he had all the gessures of a monkey newly dersided. Bread was given him, which he ate with a voracious appetits; and, after having played a thousand antic tricks he leaped overboard clad in his new apparel, and fram back to his proga-

tricks ne icaped overboard clad in his new apparel, and fwam back to his pros.

Thefe people are tall, well proportioned, and clean limbed; their fkin is a bright copper colour; their features good and their coontenances exhibited a mixture of intreplicity and chearfulness that is very firling. They have long black hair 1 some had long beards, some only whifkers, and others nothing more than a fmall tuft at the point of the chin. All their cars were bored, but they had no ornaments in them. They were all fark naked except their ornaments, which confifed of fhells very prettily diffored and firung together; these they wear round their neck, wrifts, and waids.

SECT. XIV.

Gentaining a journal of Captain Cook's three years wayage round the world.

E shall conclude our account of this quarter of the globe with fome few particulars relative to the important expedition made by captain Cook, &c. for the dif-every of a fouthern continent, which object has greatly attracked the notice of the learned and curious. On July 13, 1772, the Refolution and Adventure (the former commanded by captain Cook, and the latter by cap-

former commanded by captain Cook, and the latter by captain Furneaux) failed from Plynouth Sound, having on board Mr. William Hodges, landfcape painter; Dr. John Reinhold Forfter, Mr. George Forfter his fon, and Mr. Sparman, naturalitis; together with Mr. William Wales, and Mr. William Bayley, aftronomers; and arrived at the Cape of Good Hope on the 30th of October following. On the 10th of the next December they faw the first ice, in latitude fifty degrees forty minutes. This first ice was a very large mass, but they afterwards saw another much larger: this prodigious body was two thousand feeling, four hundred broad, and about two hundred in height. On December 12, they passed by fix more ice issands, some of them near two miles in circuit, and sixty feet high. Here the elder Mr. Forster and Mr. Wales had nearly perished by cold and samine, having gone with some nearly perished by cold and samine, having gone with some others, in the ship's boat, to make some experiments of

the temperature of the sea at a certain depth, but were at length saved by the Adventure. On December 26, the length laved by the Naventure. On December 20, the hips passed through a great quantity of packed or broken ice, fome of which looked dirty or decaying. Islands of ice fill surrounded them, and in the evening, the fun fetting just behind one of them, tinged its edges with gold, and brought upon the whole mass a beautiful suffusion of purple: they had no thaw during the continuance of the

whole fummer.

On the 2d of January 1773, captain Cook fearched for Cape Circumcifion, which is laid down by Bouvette in fifty-eight degrees fifty-line minutes fouth longitude, and ten degrees fix minutes east latitude. January 9, three boats, were boisted out, and in about five or fix hours took up as much ice as yielded fifteen tons of good fresh waterup as much ice as yielocd hitem tons or good nicht water, It is remarked, that here was a difcovery made, important to ficience; that nature forms great maffes of ice in the midft of the wide ocean, which are destitute of any faire particles, but have all the ufeful and falubrious qualities of the pure element. On January 16, they croffed the antarctic circle in longitude thirty-nine degrees thirty-five mistrette circle in longitude thirty-fine degrees thirty-five minutes eaft, which had till then remained impenetrable to all former navigators. The next day thirty-eight ico islands, great and small, were seen, besides loose ice in abundance. After having reached fixty-feven degrees fifteen minutes fouth, captain Cook ordered the ships to put about, and stood north-east by north, an immense field of solid ice extending to the southward, as far as the eye could reach from the maft head, which rendered it impoffible to advance farther that way. Here were feen many whales playing about the ice, and for two days before feveral flocks of brown and white pintadoes were feen, which they named antarctic peterels, because they feemed to be natives of that region. January 3r, they passed near two islands of ice, fifty degrees fifty minutes south, fifty-fix degrees forty-eight minutes east, one of which appeared to be breaking or falling to pieces, by the crackling noise it made, said to be equal to the report of a four pounder. This was the last ice seen till they returned again to the

On February 8, the Resolution lost fight of the Adventure, and the two floops continued separated for the rest of the cruize, but afterwards met in Queen Charlotte's found, in Zealand; then failing together for O-Taheitee, and other islands within the tropics, in coming round the fame coasts near to Cook's straights they again separated and never more joined during the voyage. Captain Furneaux never more joined during the voyage. Captain Furneaux feeing no probability of forming a junction with his confort returned to England, and reached Spithead in

July 1774.
On February 28, the Resolution, in fixty-two degrees footh, fell in once more with a folid piece of ice, which obtructed their further progress in that course. In lati-tude fifty-nine degrees fifty-eight minutes fouth, longitude one hundred and eighteen degrees thirty-nine minutes east, three islands of see were in fight all of them largo effectally one, which was larger than any that had been before feen : the fide opposite to the ship feemed to be a mile in extent, and the whole mass supposed to be three in circuit. It was supposed to be one hundred set high; yet such was the impetuous force and height of the waves which broke against it, by meeting with such a sudden re-sistance, that they rose considerable higher. On March they made the coast of New Zealand, and anchored in Dufky Bay, after having been one hundred and seven-teen days at sea, in which time they had failed three thoufand fix hundred and fixty leagues, without having had fight of any land. The Refolution left Dufky Bay on May 11, 1773, and, casting anchor in Queen Char-lotte's Sound on the 17th of the same month, continued till the 7th of Jane.

Having now loft the Adventure, captain Cook, determined on fully exploring the fouthern parts of the Pacific ocean, began his fecond course alone, on the 27th of November; and on the 6th of December they were in latitude fifty-one degrees thirty-three minutes fouth, and longitude one hundred and eighty degrees, confequently just at the point of the antipodes of London, being the fift Europeans, and most probably the first human be-ings, who had reached that point. and perhaps will be the last. The first ice was seen December 12, in fixty-two degrees, ten minutes south, one hundred and seventy-two east, which is eleven and a half degrees more to the fouthward than the first ice seen the preceding year in the At-lantic ocean. On December 15, in fixty-fix degrees fouth, one hundred and fifty-nine west, the surrher course to the southward was interrupted on account of the ice,

among which they, were in a manner ambayed, which obliged them to tack to the northward; and foom effect they got clear of all the loofs iso, but not without-receiving favoral hard knocks from the largest pieces. The weather remained foggy, and feveral ice-islands ftill lay in their way, one of which they, were near falling should of, and if that had happened, more would have survived to relate the circumstance. The thip passed with her can length to the windward of this they emiss to the survey, were on hoard, was in the most draudful suspense for a few minutes. Sayeral penguina were feen on some little ice-islands, and a few antactic peterols on the wing. We doubt not but the following account and description of these binds will prove acceptable to our readers. nong which they were in a manner embayed, which

a few antachtic persels on the wing. We doubt not but the following account and description of these birds will prove acceptable to our readers.

Captain Cook relates, that having continued desiring the whole summer in the frigid some, their chase of penguint proved very unjuccissful, though is asserted great sport; these birds dived so frequently, continued so long under water, and at times slighped continually into and out of it, making way with such amazing velocity in a straight line, that the fowlers were obliged to give over the pursuit; but not before they had come near enough to wound onto of them; but though they followed it closely, and fired shows ten times with small shot, which was observed to hit, yet they were at last obliged to kill it with balk. When they took it up, they perceived its hard glossy plumage had constantly turned the shot of the summage is entramely thick, and consists of long narrow feathers which his above cache other as closely as scales and fecure these amphibits birds against the wet, in which they almost constant the. Their very shick skin, and their fat, seem wilely appropriated to, them by nature, to resist the propertual winter of these inhospitable climes. Their broad helly, the situation of their feet far behind, and sins which supply the place of wings, are constructed with squal wildom to section the progress of their otherwise lampish bodies through the water. That which was shot weighted eleven pounds and a half. The blue petrels which every where abound in this imments occan, settled in flocks of several hundreds on the smooth furface of the water: these were not worso fitted out against the cold shan the penguines. Their plumage was amaningly shundant, and increased their halk in a great proportion; and two feathers, instead of one, proceeded out of every root, lying within each other, and formed a very warm contyring. As they are almost continuelly in the air, these wings are very strong, and of great length to support them in signing.

They croffed the antarctic circle a feccest time on De-cember 20, in one hundred and forty-feven degrees forty-fix minutes well longitude. The oux morning

cemer 20, in one hundred and forty-feven degices forty-fix minutes well longitude. The next morning ice-ifiands were feen very high and it. 2god, forming et their tops many peaks, whereas those that had here feen before were flat at top, and not to high; many of these were between two and three miles in circuit, with perpendicular cliffs or fides, aftonishing to behold.

Most of their winged companions had now less them, the grey albatrofical only excepted, and; indicate of the other brids, they were visited by a few matarihis peterelli, two of which were shot. To the description given above of this bird, we may add, that they have of the line of a large pigeon, the feathers of the head, back, and part of the upper side of the wings white, the this feathers are also white, but tipped with brown. Another peterel was show hite, but tipped with brown. Another peterel was shown for whose finaller, and interely of grey planning; these birds were fuller of feathers than any hatterto team. A few chocolate coloured albatrofies were feen in these parts all which birds keep among the lee, fresh whence, captain Cook observed, he might with reason conjecture than ever land to the fouth.

is land to the fouls.

On December 22, they had penetrated to fary-favor degrees thirty-one instantes; being the highest fouthern latitude they had reached 3 one hundred and farty-two degrees fifty-four naistess well longined. Twenty-three insal ice-flands were this day feen from the deck; and twice that number from the maft-head; and yet the weather was fo forgy, that they could not fee above two or three miles round them. On the 13th the weather was clear and fair, and upwards of hinsty large itse-illands were in fights. This heing Chiffmen-day, the captain lawleted the officers and master motions of padding, regular, themselves with the brandy of their allowance which they had faved for this occasion fome months beforehand. The No. 21.

fight of an immense number of ice-islands, among which the ship drifted at the mercy of the current, every moment in danger of being dashed in pieces against them, sould not deter the failors from indusing in their favourite amusement; as long as, they had brandy less, they would persist to keep Christmas in their way, though the elements lied conspired togetier for their destruction. Their long acquaintance with a feafaring life had enured them to all kinds of perile; and their heavy labour, with the inclementales of the weather, and other hardships, making their muscles rigid, and their nerves obsule, had communicated infensibility to their minds.

January 3, 174. Being in fifty-fix degrees forth, one hundred and forty deginess thirty-mes minutes west, the wind, being westerly obliged them ato sheet north-east-wardly, the captain was therefore obliged to leave a space of fea unexplored to the west, containing near forty degrees of longitude, and half that of latitude. January 22, being in fixty-two degrees thirty-four minutes footh latitude, one hundred and fixteen degrees twenty-four minutes footh latitude, one hundred set in height, and terminated in a peak not unlike the oupole of 8t. Paul's church. January 23, the wind increased very much, and in a short time blev a temperson gale; is nine o'clock stringht a huge mountainous wave struck the ship on this beam, and filled the deck with a delige of water, I spectred into the cable, and extinguished the lights, leaving the gentlement who wire stitug there for a moment in doubt whether they were not intricty overwhelmed; and sinking into the shyss. The ice, the fog, the forms, and rushed surface of the fee, composed a foul sinking seems, and rushed surface and eight degrees their viving beams of the sink plantary 26, passed by the reviving beams of the sink plantary 30, passed for the third time within the antarctic polar circle, longitude one bandred and nine degrees thirty-one minutes west, which sore sinked the sowistic the footh polar and south structures.

January 4, 1775. Captain Cook failed fouth eaft from Staten island, in order to pass a third fuminer faufon to the foothward. On leaving Sasten island, he has the following remarks: "It is amaning to fee how the different animals, which inhabit this foot, are saturally reconciled: they feem to have entired into a league not to disturb each other's transpullity. The far-bears each wind of the fee count; the fee horse take up their about in the island; the shags have post in the highest chiffs; the pringuins fix their quarters where there is the most easy communication to and from the fee; and the other birds chuse more retired flations. We have feen all these animals mix together like donestic earlies and poulary in a farm yard, without once attempting to molest the other; nay, I have often observed the eagles and vultures fitting on the hills among the flags, without either the old or young of the laster being distorted at their prefence. It may be asked how these birds of prey live? I suppose on the careastes of flash and birds which die by various causes, and probably in no finall numbers, as there are fo many of them."

On January 14, being in tifty three degrees fifty fix minutes fouth latitude, and thirty nine degrees twenty-four minutes west longitude, land was discovered i its mountains appeared of a vast height, covered with snow and ice, in most places, quite to the water's edge : to-wards the fouth end feveral low islands were seen, which appeared to have some verdure upon them, and were therefore called the Green islands. I his land, which was at first supposed to be part of a great continent, was sound at length to be an island of seventy leagues in circuit, between the latitudes of fifty-three degrees fiftyfeven minutes and fifty-four degrees fifty-feven minutes, and longitudes thirty-eight degrees thirteen minutes and thirty-five degrees thirty-four minutes well, extending fouth east by east, and north-west by west, and is thirty fouth-eart of eart, also norm-were by were and as antione leagues long, in that direction, its greatest bleadth
is about ten leagues, it feemed to abound with bays
and harbours, which the vali quantities of ice rendered
inacceffible the greatest part of the feer. This large stand
received the name of Southern Georgia. Captain Cook landed in a bay on the northern tide of this ifland, which three different places, and took pofferion of the country in his Majetty's name, under a discharge of small arms. Two rocky islands are fituated on the north end, one of which was named Willia's island, from the person who discovered it. It is a craggy cliff, nearly perpendicular, which contained the nests of many thousand shags. The other received the name of Bird island, from the innomerable flocks of birds of all forts that were feen upon it, from the largest albatroffes down to the least peterels. Several porpoiles were likewise observed, and seals, which probably came to breed on these inhospitable shores. The probably came to breed on these inhospitable shores. The head of the bay, as well as two places on each side, were terminated by perpendicular ice cliffs, of considerable height, such as are sound in the harbour of Spittbergen, in the northern hemisphe . Pieces were continue breaking off and floating out to the fea; and a great fall happened while they were in the bay, which made a noise like cannon.

The other parts of the country were not lefs favage and horrible. The wild rocks raifed their lofty fummits till they were loft in the clouds; and the vallies lay covered with snow. Not a tree was to be seen, nor a shrub even hig enough tomake a tooth-pick. The only vegetation observed was a strong bladed grass, growing in tusts; wild burnet, and a plant, like moss, which sprung from the rocks. Seals, or sea-bears, were pretty numerous. Among them was a huge animal of the same kind with the sea-lion described in lord Anson's voyage; a mid-hipman shot it through the lead, whilst it lay assepp. It was all over of a dark grey colour, with a slight olive cast, something like the seals in the northern lemissers; the snofe projected far beyond the mouth, and had a loose wrinkled skin; it was about thirteen feet long. Here was sound a flock of about twenty penguins, of a much greater size than any before seen, being thirtynine inches long, and weighing forty pounds. The seals and penguins killed here were very acceptable to the whole crew; for any kind of fresh meat was eagerly craved. Besides being uninhabitable, South Georgia does not appear to contain a single article for which it might be visited occasionally by European ships. On the whole coat, not a river or stream of fresh water was to be seen.

On the 26th of January captain Cook left the foothern part of this island, and steered east-foath-east, until he arrived in fixty degrees latitude, further than which he did not intend to go, unless he observed from certain signs of meeting with land. These high southern latitudes, where nothing was to be found but ice and thick fogs, had at length tired even this persevering chieftain himself it is therefore; put about to the sastward.

where nothing was to be found out the and trick togs, lad, at the gld tired even this perfevering chieftain himsfelf; he theirfore put about to the unit ward. I have a substitute the perfect of the larged rice-illands that had been feen in the voyage. As the thip was now proceeding northward, the hope of foon reaching a milder charact diffused a general fattafaction; but another frozen country rofe to their views, and, threatened to retard the accomplishment of their wishes. The discovery of this island was made on January 37, at feven in the morning. Captain Cook gave, the name of Bandwich land to this discovery, which may possibly bet the northern point of a continent; for he is of opinion that there is a tract of land near the pole, which is the fource of most of the ice that is spread over this vast fouthern

Southern Thule, in latitude fifty-nine degrees thirty minutes fouth; longitude twenty-feven degrees thirty minutes weth, was the most fouthern extremity that was feen; proceeding northward, many projecting points of land were discovered; the mountains appeared to be of vash height, their fummits being conflantly wrapped in clouds, and the lower parts covered with show down to the water-edge. These captain Cook named, in the order his which they were seen, Preezeland Peak, Cape Bristol, and Cape Montagu; with an island that received the name of Saunders, shuated shifty-elght degrees twenty-seven minutes south latitude, twenty-fix degrees twenty-seven minutes south latitude, twenty-fix degrees forty-four minutes west longitude, and two small ones, which were named Candlemas siles; they are of no great extent, but are of considerable height, and are covered with snow. The whole country had the most desolate and horrid spinerance imaginable; not a single blade of grass could be discerted upon; it, and it seemed to be forsken even by the amphibious and lumpish animals which dwelt on South Georgia.

February 15, bore away to the northward, having croffed the meredian of Greenwich, in latitude fifty-feven degrees fifty minutes. On the 19th croffed the place where Cape Circumcifion is laid down by Bouvet; without having the leaft figns of land, though the weather was favourable to diffeovery. Captain Furneaux likewife paffing between Georgia and Sandwich land, croffed the meridian of Cape Circumcifion in the latitude of fifty-feven degrees fifty minutes fouth, without meeting with any laid. The folicitude of all on the lot arrive at an European port, was now rifen to the loft impatient height; their voyage had then lafted twenty-feven months after leaving the Cape of Good Hope, fince which time they had not touched at any European fettlement, but had fevered from all intercourse with their country, their filends, relations, and domeltic endearments. As they approached a place that had fome correspondence with Europe, their hopes and fears began to be anxiously excited; all the tender and endearing tics at home now took intire possessions.

On March 26, being then between thirty-five and thirty-fix degrees fouth latitude a flip was feen to windward, and in three hours afterwards they came in fight of another. The eagernefs with which every person on board bent his eyes towards these welcome objects, was the strongest proof of that ardent longing for an intercourse with Europeans, which till then had been suppressed by the attentions which their ficuations and regard to personal fasety demanded. Two tedious days, however, passed in this state of painful uncertainty, before they could come up with either of the ships; at length they got within five miles of one of them, which proved to be a Dutch East indiamen. A boat was holisted out and sent on board her, and in a few hours returned with the welcome news that there was universal peace in Europe. In the asternoon they got sight of two Swedish, one Danish, and an English ship, the latter of which bore down to them, and ileutenant Clarke, the elder Mr. Forster, and a middlipman, went on board her. This ship was the True Briton, capain Broadly, on her return from China. The gentlemen were received with a generous hospitality, and invited to dinner. These three famished circumnavigators, who had not feen fresh meat for six weeks, attacked with the highest relish a dish of fattened Chinese quality, and in a delicious goole, which their kind entertainer seckoused very honesty fare. On relating how long they had bired upon salt beef, and how often they had parting in the sent and the mates dropped their knives and forks, and impure pity to the strangers religned all pretentions to their dinner. Ar parting, capain Broadly presented them witten harge saying succession which the gentlement of the thing dinder the two following days.

captain and the mates dropped their knives and forks, and in pure pily to the firangers religned all pretentions to their dinners. Are parting, captain: Broadly prefented them with a large fat pily and feveral geefe, on which the gentlement of the filip dired, the two following days.

They came to an anchor in Table Bay, in the Cape of Good Hope; on the 22d, which they found was only the 21d according to the reckening of the people on those, they having advanced a whole day by failing round the world to the eastward. On the 27th of April captain Cook failed from the Capt, and in his way to England touched at St. Helena; the weferm-idenals of Afcention and Ferniando Norenha; Fayal; and on the 29th of July made the land near Plymouth having been aftener from England three years and eighteen days, in which time it is computed that they ran over a greater space of

fea than any ship ever did before; since, according to Mr. Fortler, all their tacks, taken together, form more than thrice the circumference of the globe. Thus was completed a voyage which will immortalize the conductor of it, as it was not only the most extensive, but the most in-

itructive one ever performed.

In this celebrated voyage, captain Cook not only discovered, but furveyed valt tracks of new coafts; diffelling hereby the illusion of a Terra Australis incognita, and fixing the bounds of the habitable carth, as well as those of the navigable ocean, in the southern hemisphere. But being the ablest navigator which perhaps any age or country ever produced, is not this great seanan's ultimate praise; his humane and judicious attention to every means which might possibly conduce to the healthness of the ship's company, gives him an eminent place among the distinguished sew who are true friends to mankind, and his endesvours were successful to a degree of admiration, the methods he made use of for preserving the health of the failors being no less simple than efficacious. With a company of one hundred and eighteen men, he performed a voyage of upwards of three years, throughout all climates from fifty-two degrees north, to seventy-one degrees south, with the loss of only one man by a distemper. From hence it plainly appears, that marine diseases are not caused by any malignity in the sea air; and avoyage round the world may be undertaken with less danger to health, than a common tour in Europe; espe-

cially when such assiduous care is taken of the diet, bedding, cloathe, the application of excellent antiscorbatic medicines, &c. as was constantly employed by captain Cook, which obtained him the cordial esteem and assection of the most respectable societies in this country, and will for ever erset a monument of deserved sulogium and gratitude in the hearts of his countrymen, and the friends to real merit, of every distinction, throughout the globe.

O Z. SECT. XV.

We shall here observe, as Supplementary to our account of the Dutch settlements in the East Indies; that

N November 12, 1781, the town and citadel of Negapatam, on the coaft of Coromandel, in the Eaft Indies, was taken from the Dutch by the English sleet and army commanded by admiral Hughes and Sir Hector Munro; the garrison consisted of near eight thousand men, about five hundred of which were Europeans, and the rest Indians: and also,

THE NEW AND COMPLETE HISTORY AND DESCRIPTION OF

A F R I C A.

CONCERNING AFRICA IN GENERAL.

SOME geographers; both Greek and Latin, have, in their fythems, ranked. Africa as the third part of the known or inhabited world; neverthelefs, as the potterity of Noah made their first emigrations out of Afria into this northern quarter of the globe (for the antients knew but little of the fourthern part of Africa), we shall therefore make choice of it, as most proper for the second division of our most.

too bur 1 by ring har its feet and out ?

The far greater part of Africa continues still whenever to us; and though we are at present become beauty acquainted with it than we formerly were, yet our knowledge of it extends little farther than the regions that lie chiefly along the coasts of the Mediterranean; which being the most fruitful in corn and other produce, and also more easy of access, have been more constantly resorted to both

by Europeans and Afiatics.

The midland parts were for a long while believed inaceffible and unimbabited by reason of their intolerable heat,
they lying mostly under the torrid zone, and have on that
very account, as well as the savageness of its inhabitants, been little visited by any strangers. Even the southern parts of it, which lie under a more temperate climate, and are much easier of access, are found inhabitedby such barbaroous people, so fierce and savage in their
nature, so uncount and forbidding in their manners and
language, and so shy of all intercourse with foreign nations, that our readers need not wonder that we are almost as much in the dark about them as we are about the
midland earl of this continent.

midland part of this continent.

The name of Africa, or Afrie, was given to this vaft tract of ground from one of its antient provinces, which we now fiyle Africa Propria, and extends itself along the Mediterranean, from the antient Mauritania, on the west, to Cyrenaica, on the east, where is now the kingdom of Tunis, and where was once the seat of the celebrated Carthagenians. The antient Greeks called at Libya, from another of its provinces, whose defart part bordered upon Egypt, and was included, with other uninhabited parts of it, by the old Arabs, under the name of El-ber, which fignifies a divided, or forsaken land. The Indians call it parabab; the Arabs, Iphrica, or rather Aphirikiah, or Afrika; the Ethiopians, Alkabutan; and the Persians, Americans, and other nations, by different names.

Africa, in its largest sense, lies, south of Europe, and west of Asia, and is bounded on the north by the Medi-

Africa, in its largest sense, lies, south of Europe, and west of Asia, and is bounded on the north by the Mediterranean, which parts it from the former; and on the east by the Red sea, which separates it from the latter to which it only joins by that small issumus or neck of land

which cuts off the communication between those two seas, and is commonly known by the name of Suez. On the fouth and west, it is furrounded by the main ocean, so that it may be properly styled a vast overgrown peninsula, joined only to the continent of Asia by the isthmus above-mentioned, which, if cut off, would make it by far the largest island in the world. It extends itself a vast way, not only on each side of the equinox, but of the two tropics likewise; the southern verge of it reaching quite to the thirty-side degree of southern, and the northern almost to the starty-seventh degree of north latitude: so that its utmost extent, from north to south, is almost seventy-two degrees or about sour thousand three hundred and twenty miles. From east to west it reaches still farther, viz. from seventeen west to fixty east, or seventy-seven degrees of longitude, that is, sour thousand six hundred and twenty miles.

tude, that is, four thousand fix hundred and twenty miles.

The antients divided this part of the then known world into twelve regions or provinces, and ranged them in the order following, going from east to west, viz. the two Mauritanias, the two Numidias, Africa Propria, Libya Oyrenaca, and Marmarica, Lower Egypt, Thebais, Libya Interior or Upper, and the two Ethiopias. Others ranked them in the following order: Egypt, Marmarica, Cyrenaca, Syrtica, Africa Propria, Numidia, the two Mauritanias, Inland Africa, Libya Interior, and Ethiopia. Under the Romans, it was divided only into these fix provinces: Africa Propria, Mauritania Casariensis, Mauritania Tingitania, Numidia, Tripolitana, and Bizaccuia; all which amounted to little more than what we slyle the present Barbary, but was all they possessed, or were perhaps acquainted with, except the kingdom of Egypt, which they did not reckon a part of Africa. Even Strabo had little notion of its real extent; and though Ptolemy, who was much better acquainted with it, and hath gone farther in his division of it than any of the antient. I kaving distinguished it by twelve regions or provinces; yet one half of the country was unknown to this excellent geographer.

The African and Arabic geographers have been no better

The Afreau and Arabic geographers have been no better acquainted with this region, than the Greeks and Romans. This plainly appears from the general defeription which Mocaudi and Becker, two of the best, have given of it. They neither allow it so great an extent as Ptolemy doth; nor place in it Egypr and the other countries that lie between the Nile, the Red Sea, and the eastern ocean in Africa, but make them to be part of Asia. They are no less inaccurate in affigning the true fituation, manes, &c. of capes, gulfs, and several cities and provinces, but a general confusion feems to run through the whole, occasioued

in all likelihood by the coming of the Arabs into this part of the world, whe, to blot out the remembrance of its antient inhabitants, gave new names to those places, and caused such changes in it, as the old Africans, upon their recovery of it, could never thoroughly rectify. Having made it evidently confpicuous, that the antients had a very imperfect knowledge of a great part of Africa, and consequently had never failed round it, as some have affirmed the Phoenicians did; we shall proceed to shew when, and, in what manner it was circumnavigated about three hundred years ago, which is a fact that is not doubt of in the present day.

The Goths having recovered Portugal from the Moors, followed them crofs the streights of Gibraltar, and subdued part of Morocco, taking from them the towns of Tangier,

followed them crofs the streights of Gibraltar, and subdued part of Morocco, taking from them the towns of Tangier, Ceuta, Arzilla, &c.

Prince Henry V. son of John II. king of Portugal, accompanying his father in one of these expeditions against the Moors of Africa, being firmly persuaded that a way might be traced out round Africa to the East-Indies, from whence the fine spices and other rich merchandize were brought to Egypt and the ports of the Levant, and observing, also, that gold, ivory, and other valuable merchandize was annually brought over land by carvans from Guinea to Morocco, he formed the design of discovering the west coast of Africa, being convinced that it would turn to account to visit those golden shores, if he should be disapointed in inding a passage to India by the south of Africa. He no sooner returned to Portugal, therefore, from the African expedition, but he obtained save of his father, king John, to sit out some ships for the discovery of that coast; but the attempt proved more difficult than he expected; for his ships arriving at Cape Bajadore, the waves past to terribly on that coast, that they durch not attempt to pass it for ten years afterwards: but having at length and the distinction of the distinction of the distinction of the theory of the coast is the distinction of the coast. beat fo terribly on that coall, that they durft not attempt to pass it for ten years afterwards: but having at length overcome the difficulty, he obtained a buil or grant from the pope, of all inside! countries, that should be discovered to the south and east from Cape Bajadore to the East-Indies, with a plenary indulgence for all such souls as should perith in the undertaking.

Prince Henry continued his discoveries on this coast so the eighth degree of north latitude; but dying in the year 140, he was not so fortunate as to see Africa entirely surrounded.

In the year 1471, the trade was extended as far as the Gold-coaft, in five degrees north latitude.

King John III. cauded the fort of St. George del Mina to be erected for the protection of the Gold-coaft, in the year 1481, and having now great expediations of discover-ing a way to the East-Iradies round Africa, and appreing a way to the East-Irades round Africa, and appre-hending that other princes, notwithfunding his grant from the pope, would attempt to follow his people to In-dia by the fame rout, he applied to the feveral princes of Christendom, representing, that they ought to furnish their optotas towards lubduing the infidel nations on the coast of Africa and India, as they would all reap the benefit of it; but the enterprize being fall effective were hazardous, or rather chimerical, they all refufed to be engaged in it.
Whereupon king John applied himfelf to the pope, to comfirm the donation of all pagan countries, fouth and eaft of Cape Bajadore, which had been made to his ancel. tors by the holy fee; and the pope not only confirmed the former grant, but decreed, that no other nation should be spaties grant, but decreed, in an in other institut mount be instituted to any fuch diffcoveries; and the king of Portugal from that time (1484) affumed the title of Lord of Quinea, by which was then meant all the west coast of Africa then discovered, or then after to be discovered, or dering his commanders to fet up (tone crofles in memory of the coast of taking possession of those countries as part of the Portuguese dominions.

Portuguele dominions.

Diego Cam, was the first commander fent out, which was in 1484, who, passing Cape Catharina, came to the river-Congo in the kingdom of that name, but called by the natives Zayre: he passed on twenty leagues further, and set up a cross at a place he called St. Augustin, inthirteen degrees south latitude, and another in wenty-two trusteen degrees touth latitude, and another in wenty-two fouth; and returning to Congo, he had a conference with the king of that country, wherein he told him, they came to inftrué, his people in the Christian religion, as they did in every place they came to; and the king fent ene of his fons and feveral of his nobility with captain Diego to Portugal, where they were baptised, the king and gueen, and feveral persons of quality being spontors; the chief's former name was Zakuta, but they gave him the king's name of Don Lohn king's name of Don John.

Bartholemew Diaz, in 1486, was fent with three ships to make further discoveries to the fouthward, in order to

find a passage to the East-Indies; and was so fortunate as to make the most southerly promontory of Africa, which ha named Cabo Tormentolo, from the terrible storms and

to make the most southerly promontory of Africa, which he named Cabo Tormentofo, from the terrible fromts and mountainous seas he met with there; which so terrified him, that he durft not pass it, but returned to Lilbon, to give the king arraccount of his voyage, who concluded now that he had gained his point by opening a passing to India, and gave the southern promontory Dias dreaded so much the name of Cabo de Bueno Esperanza, the Cape of Good Hope, instead of that which Dias had given it. However, the passing the Cape of Good Hope, instead of the cape of Good Hope, in the southern promoters in India, were not essed till the reign of Emanuel, the son hour whereof were one hundred and stay men commanded by Vasco de Gama, to attempt the passing of the Cape of Good Hope. De Gama set fall from Portugal on the 8th of July 1492; the captains who commanded the other two ships were, Paul de Gama, brother to Vasco, and Nicolas Nunez; they had a tender with them loaden with provisions, commanded by Gonzalo Nonnez, and a sloop, of which Bartholomew Dias was captain, bound to Del Mina on the coast of Guinea! Admiral de Gama, with his three ships, made the Cape of Good Hope on the 18th of November in the evening, and passed it on the 20th; after which he landed, and erected accosts and hought form earlie of the Indias the stiffer accosts of the landed, and erected accosts and hought form earlied of the Indias de Cape of the stiffer accosts and hought form earlied of the Indias de Cape of the Indias de Ca Good Hope on the 18th of November in the evening, and passed it on the 20th; after which he landed, and resteed a cross, and bought some cattle of the natives for trises; but still; the natives looking on the Portuguese with a jealous eye, and apprehending they had a design to shad their country, pulled down the cross that had been erested; and the Portuguese sailed away to the north-east, not seeing land again till Christman-day, and gave it the nature of Terra do Natal, as being our Saviour's birth-day. They afterwards arrived at a river, which they called De los Reys, or the King's, being on the feast of the Epiphany here they went on shore, and dealt with the natives for some ivery and provisions, and the admiral left two men heje to inform him of the state of the country at his return: these men were condemned criminals, whose purithment had been changed for this purpose. Casting along still to the northward, they arrived at Mosambique, nithment had been changed for this purpose. Cdasting along still to the northward, they arrived at Mosambique, in journal degrees south latitude, where they found Arabian merchant; that traded to India for spices, precious cones, etc. There was a pretty good harbour, and the town was inhabited by Moors, who traded to the Red Sea; and to India, in large vessels, but without drks. The Portuguese having entered the harbour, the sheik, or chief of the Moors, sent them presents and provisions, defiring leave to come on board, which was granted, and he came with a numerous train of attendants, dreft in a Turkish habit; and here the Portuguese obtained a pilot of the king to carry them to Calicut in India, which they were told lay about one thousand leagues to the tastward.

Ring to carry them to Calicut. in India, which they were told lay about one thousand leagues to the teatward.

But to proceed with our general furvey's Africa some prehends forty-one kingdoms, flates; or countries; namely, 1. Tripoli; 2. Barca; 3. Alglers; 4. Tonis; 5. Morocco; 6. Zaara; 7. Biledulgerid; 8. Tombut; 9. Mundingo; 10. Sierra Leona; 11. Ja'offs; 12. Pholey; 13. Ardrah; 144 Whidah; 15. Gold Coaft; 16. Slava Coaft; 12. Commendo; 18. Few. 10. Apr.; 20. Jahy ley; 13. Ardalı; 14. Whidah; 15. THE NEW HISTORY AND DESCRIPTION OF

$\mathbf{R} : \mathbf{B}$ B

SECT. 1.

Of the situation, boundaries, rivers, mountains, provinces, chief towns, &c. of the kingdom of Morocco.

POROCCO is fituated on the western bordets of OROCCO is fituated on the weftern borders of longitude, and between two and eleven degrees of weft longitude, and between twenty-eight and thirty-fix degrees of north latitude; being bounded on the fouth, by the celebrated mountain called the Great Atlas; on the north, by the Mediterranean; on the eaft, by the river Mulvia, which feparates it from Algiers; and, on the weft, by the Atlantic Ocean; it is about five hundred miles long, and four hundred and sightly head and often where long, and four hundred and eighty broad, and fome make the dimensions much larger.

This empire contains three grand divisions or provinces;

This empire contains three grand divisions or provinces; namely, that of Fez, to the north. 2. Morocco Proper in the middle: and, 3. Suz on the fouth.

The chief rivers are, 1. The river Mulvis, which runs from fouth to north, feparating the kingdom of Fez from Algiers, and difcharging its waters into the Mediterranean. This is a large deep river, according to Dr. Shaw, and admits of fmall cruifing veffels, and might be made commodious for flips of greater burthen: the fources of this river lie a great way within the Sahara or defart, at the difference of the contract dious for fhips of greater burthen: the fources of this river lie a great way within the Sahara or defart, at the difference of eight hundred miles from the fea, and runs almost its whole course in the fame meridian. 2. The river Suz, which runs from east to west, through the kingdom of that name, discharges itself into the Atlantie Ocean, at the mouth whereof lies the port-town of Santa Cruz. 3. The river Rabatta, which runs almost in the same direction, and discharges itself into the fame ocean, the piratical port of Sallee standing at the mouth of it. 4. The river Cebu, at the mouth whereof Mamora is situate, being another piratical port. The river Lecus runs in the same direction, and falls into the same ocean, near the mouth whereof stands the port of Larrache. None of these are navigable for ships, and the ports at their mouths will admit but of small vessels. The most commodious are those of Tangier and Tetuan, in the Mediterranean, but these of Tangier and Tetuan, in the Mediterranean, but thefe are unfafe in forme winds. The Spaniards are in possession of the port of Ceuta, opposite to Gibraltar, and of Penon de Velez east of it; but neither of them are fase harbours. Orhers lefs considerable are the Taga, the Ommitability and the Tenfift. This river runs through the city of Morocco, and supplies the inhabitants with water: it has a handfome bridge over it.

rocco, and supplies the inhabitants with water: it has a handsome bridge over it.

The Greater and Lesser Atlas are not only the principal mountains in Barbary, but some of the most celebrated in the universe. The Great Atlas divides Barbary from Biledulgerid; and the Little Atlas extends along the Barbary coast to the strain his of Gibraltar. The coldners and inaccessibility render the Great Atlas in many parts uninhabitable; but some places enjoy a milder climate, contain many villages, numerous herds and flocks of cattle, are well cultivated, and inhabited by Arabs, Barebers, and other African people, who, in the severe parts of the winter, are obliged to retire into vast caverna, to preserve themselves and their flocks from being overwhelmed with the prodigious quantities of snow that fall, and from the inclemency of the weather. These people are in general ficice, cruel, and warlike, and are spread in numerous tribes over the various branches of this prodigious mountain. They can bring many men into the field, and have it in their power to be very troublesome to the neighbouring governments, it being as impossible to be intiively upon the desense as a supplied to the intiively upon the desense as a supplied to the intiively upon the desense as a supplied to be intiively upon the desense as a supplied to the unique tubication.

tubjection.

The capital city of this empire, called also Morocco, la pleasantly stuated on an extensive plain, between two rivers, the Nephtis and the Agmed, and is watered by the Tensist. It is one of the most opulent, populous, and important cities in Africa. The most received opinion is, that it was founded by Abu Techisien, and finished by his warlike fon Joseph, who after obtaining many glorious victories in Spain, brought from thence thirty thousand captives, whom he containtly employed in furrounding it with strong walls, which were twelve miles in circumserence. It then contained one hundred thousand houses, and still hath twenty-four magnificent gates, and a great number of mosques, I alecs, &c. but at prefent its prittine splendor is much decayed. It is fasteen miles north of mount Atlas, and one hundred and fifty from the Atlantic occan, in thirty degrees forty minutes north latiqude, and seven degrees well longitude. The walls are so strong both with respect to the stone themselves, and the cement with which they are connected, thatthey are imponentable to the pick-ax, and other instruments; they are surrounded with a deep ditch, and shailed with strong tower bulwarks, bastions, &c.

Within a Coscious fortross called the Ab-Creave and

pick-ax, and outer many properties alled the Al-Capava, and within a spacious fortress called the Al-Capava, and which is situated on the outside of the city, star is the imperial palace. It is defended by high walls, strong towers, a deep ditch, &c. and has only two gates, the one leading towards the country, and the other towards the city; both of these are handsome and well guarded; and that towards Morocco faces an elegant and capacious street; the vista of which is terminated by a large magnificent mosque, admirably embellished with carvings of marble, jasper, &c. and the noble gates of the church of Seville, which the celebrated Almanzor brought from Spain. On the top of its stately tower, four large copper balls, plated with gold, were fixed upon iron spikes; they weigh together seven hundred pounds, but the fixes are unequal, the smaller being capable of containing one, the next two, the third four, and the largest eight facks of wheat. There is a capacious vault beneath the mosque; it was originally designed for a cistern, but is now converted into a granarly. The batvault beneath the monique; it was originarly sengues for a ciftern, but is now converted into a granary. The battlements are exceeding lofty, and the fpire rifes feventy feet above them, from the fummit of which the talleftmen appear to the beholder like small children. The royal apartments, halls of audience, feraglio, &c. are noble atructures, highly embellished, and richly furnished.

The gardens, though neither well defigned, or properly variegated, are extensive and magnificent, containing all kinds of trees, herba, flowers, shrubs, &c. which can possibly grow in that climate: but the splendor still repointoy grow in that climate; but the iptendor thit re-maining is inconfiderable with respect to the former gran-deur of the place, the vestiges of which yet subsisting a va-viety of noble fragments. The innumerable ruins of many superb palaces, colleges, halls, baths, hospitals, and above four hundred aqueducts, are the mouraful monuments of the devastations of time, the effects of despotism,

and the ravages of frequent wars.

Great part of the houses are gone quite to decay, and the Great part of the houses are gone quite to decay, and the reft are but in an indifferent condition. The inhabitants are about twenty-five thousand; but the Jews, the number of whom is about four thousand, live in a particular quarter, which is near the palace, and furrounded by a wall, through which there is but one gate, and that is well guarded by Moors; yet foreign ambassadors, agents, merchants, &c. clusse to live in this part, preferably to any other in Moroeco. The Jews have the art of growing rich, though they are exceedingly taxed; but they, politically, pretend to poverty, and from obvious motives make a very ment appearance. a very mean appearance.

The city of Fes, fituate in thirty-eight degrees north latitude, and four degrees west lungitude, was originally the capital of the kingdom of the force name, and is at prefent a rich and populous city. It comprises three dif-tinct parts, via. 1. Beleyd, which contains about four thousand houses, and stands on the east side of the river Fea. 2. Ain-Alu: conteining about four thousand inlin-bitants, and stands on the welt side of the same rives. 3. Albegd, or White Fea, which was built by Jacob, king of the Beni-Mereni, and contains twenty thousand inha-bitants. The two first form to Old Fea, the latter New Fea. and a ressent the same research. Fea, and at prefent they form together one city, Old Fea is nine miles in circumference, flands between

two hills, is furrounded by firong walls, and flanked with magnificent towers. It is without fuburbs, contains many excellent gardens, hath narrow fireets, feven gates and

magnificent towers. It is without faburbs, contains many excellent gardens, hath narrow fireets, feven gates and two caffles: the one old and gone to decay, the other new and in good condition; the latter is garrifoned with blacks, but neither have any cannon to as-fend them. The houses are of stone or brick, three stories high, flat roofed, excompassed with galleries, adorned on the outlide with mo-fale work, and embellithed within with carving, painting, and handlome furmiture; but it is to be observed, that in general the feraglio's are upon the turrets of the houses, from whence the women have a fine prospect, but they are reverpermitted to slit abroad, being confined to the feraglio. The principal magistrate of this capital is styled provos of the merchants, befides whom there is a governor, a cadi, and their subordinate officers. The river Fez, in passing through the city, divides itself into fix canals, over the various parts of which are two hundred and fifty stone bridges, and three hundred and feeving mills are turned by the several streams. In the city, three hundred and thirty-fix ovens are daily employed, the mosques are computed at five hundred, fifty of which are of the first rank, and one in particular is a most amazing structure: it is a mile and a half in circuit, including the clostler and college belonging to it: the roof is one hundred and fifty cubits high, and fifty in breadth; there are thirty stately gates; and the pillars which support the minaret, or tower, are thirty cubits in length and twenty in breadth; there are thirty cubits in length and twenty in breadth; the roof facilities of the subites. are thirty cubits in length and twenty in breadth: the roof is fustained by one thousand five hundred pillars of white as tutainer by one thousand me nundred pillars of white marble, a I feventeen arches; two curious lamps conti-nually kept burning, adorning every arch. In the cloifler belonging to this mosque are forty-two galleries, and four hundred eitherns for people to perform their ablutions. The college is the most eminent, and contains the best li-brary in the empire; here are several other hospitals and college, which are large, magnificent, and well endowed; fix hundred water conduits, and two hundred spacious inn. As Fez is rivally deemed the grand magazine and principal mart of Barbary, the fireets therefore fwarm with merchanic and tradefineu of all professions, and the wave-boules, thous, &c. are filled with a great variety of com-

Mequinez, where the court now refides, is fituated in a pleafant plain, in fix degrees of well longitude, and thirty-four degrees of north latitude. The city is divided into feveral guarters, or rather contains several cities united. The palace is a diffind city; the parks and gardens that turround it, with the number of halls, rooms of flate, offices, pavilions, &c. are surprizing to the beholder. The quarter of the Moors and the Negro town are also distinct, and the Jews have a quarter to themselves, in which there do not refide less than fifteen thousand of that nation, bedo not rende lets than inteen thousand or that nation, being allowed a field or miguitrate, who has the government
of them according to their own laws, and the king allows them his protection. Notwithstanding which, these
peopleareexcendingly ill used, as they are plundered, abuted,
and beat, evan by the very meanest of the Moors, and
dare not resent the sill treatment they receive. The great men horfewhip or cudget them whenever they come in their way, and they are not permitted to come out of their quarter with those and flockings on, being obliged to walk barefored in the threets which the Moors frequent.

The city is three trikes in circumference, furrounded with firing walls, environed by gardens, and embellished with many molduos, colleges, baths, &c. the markets are daily crouded with people, particularly Arabs, who bring honey, wax, butter, hides, and dates for fale. It has also an extensive feraglio, large magazines and storehouses, an armoury, barracks for the guards, and apartments for various mechanics, who are continually retained by the em-geror to do bufinets immediately belonging to the palace. Sallee, on the weel coaft of the kingdom, of 1.22, is effectived the best port the emperor of Morocco has. It is

fituated in thirty-three degrees forty-eight minutes north

latitude, and fix degrees twenty-five minutes well longitude. This is an antient city, being mentioned by Ptolemy, and flands on the river Gueron, which divides into two parts. The northern part, encompassed with a strong wall, and defended by hatteries, towers, &c. is Salla or Sallee, properly so called; but the southern part, named Rabat, compries many farm houses, orchards, gardens, and compries many farm houses, orchards, gardens, and confields; the latter being fufficiently extensive to yield wheat enough for the sufferance of fifteen thousand persons, yet the whole is surrounded by walls, which were erected by the whole is furrounded by walls, which were creeted by the captives that Almanzor brought from Spain. On the fouth cast part there is a tower which ferves for a land mark in the day time, and a light house at night: it is lower than it was originally, for some part of the top was struck off by lightning; it is fifty feet square, built of stone strongly cemented, and opens towards a magnificent mosque one thousand four hundred paces long, and three hundred wide, in the court of which is a well thirty feet deep, and one hundred in width. Beneath the tower are two docks. one hundred in width. Beneath the tower are two docks, the one for wintering, and the other for huilding of fhips, The harbour is large; but to large, that the piratical things are obliged to put into the ifland of Tedal near its mouth. The town is defended by two cattles, which communicate with each other, but the fortifications are irregular and illdefigued. All articles of commerce pay a tenth part to the emperor. The main support of the place is the piratical trade; for it has long been famous for its rovers or pirates, which make prize of all Christian ships that come in

their way, except there is a treaty to the contrary.

Magazanis, a firong, well built town, furrounded by a firong wall about fix yards thick, and well defended by cannon. It is fituated thirty miles fouth of Sallee, and poffessed by the Portuguese, who have a numerous garrison The piratical thips often intercept the provision vessels, which puts the gairifon to great straits, and ob-liges them, in order to obtain a subsistence, to make excur-

fions, and rob the Moors.

Akaifar, was a good trading town till the Portuguese took it in 1458; but while they postessed it, they did it great injory; and after it was recovered by the Moors, it was suffered to run to decay. The celebrated Abmanzor is Supposed to have built this town.

Arzilta, and fome other port towns on the west, belong to Portugal still. They are strong fortiesses, such at least as the Moors cannot take, for their foot are very indifferent militia, and are not able to recover any of their places from the Portuguese, or Ceata from the Spaniards. It is about twenty-four miles from the firaights of Gibraltar,

l'angier, is fituate in thirty-five degrees fifty-fix minutes north latitude, and fix degrees thirty minutes wet longitude, on a bay of the fea, near Cape Spartel, just at the entrance of the flraights of Gibraltar, on the African fide: it is built on the declivity of a hill, which makes it excessive but in summer, the afternoon fon lying full upon it. When the English possessed it, the walls were upwards of a mile in circumference, and they had lines and redoubts that took in the neighbouring hills, with two caftles, the upper and lower, for its defence; in the former whereof lived the English governor, and the balls at prefent: there was a mole built for the fecurity of thipping, the heads whereof run out three hundred fa-thoms into the fea, and were defended by three batteries of cannon; but these and most of the works were blown up, or demolished by the English when they abandoned the place, and it is now not very firing: there is our one lingle hape in the town, and another in the caffe; how-ever, it makes a tolerable appearance from the fea, the houles being white, and all in view; but they have fearer any trade. This, as has been observed, was the Tingis of lace, and it is now not very frong : there is but one any target.

In a state of the anticuts; and from at this part of Africa was called Mauritania Tingitana. Alphonfo V. king of Portugal took it from the Moors, in the year 1463; and in 1662, the court of Portugal nansferred it to Charles II. king of England, on his marriage with the princes Catharine, in-fanta of Portugal. The English kept it twenty-two years, and laid out a great deal of money in the mole and fortifi-cations; but the parliament refuting to let the king have money to maintain the garraton, he found himfelf obliged to quit the place, though it is agreed, it would have been of very great fervice to the nation, if we had been maf-ters of it in the late wars with France and Spain.

In January 1745, the Infpector privateer, having forung a leak, was obliged to run afhore in the bay of Tangier, where the whole crew (except the captain, whose name was Veale, four licotenants, and two privatemen), were dragged to a loathfome dungeon, and fulfield inconceivable hard-thips, being almost tamithed with hunger, and otherwise

Exceelly treated. Out of the whole thip's company, which amounted to one hundred and eighty-three before the wreck, exclusive of Mr. Ruffel the furgeon, whose dead body they found on the shore, minety-sive perished by the waves, or were murdered by the Moors; and the furvivors, to the number of about sixty, were redeemed for a large sum of money by the English ambasilador, at the command of George II. king of Great Britam.

Melilia, in the province of Garet, in feated near the sea, seventy-sive miles from Tremeson, at the bottom of a bay called Eutrescheos, in one degree fifty-feven minutes woth longitude, and thirty four degrees forty-eight minutes morth latitude. It received its name from the great quantity of bones which the neighbouring territory yields. It was anticutly the capital of the province, and is still a confiderable place, containing two thousand houses. It was taken by the Spaniarda in 1496, who built a citadel here, but is returned back to the Moorts.

Ceuta is fituated in fix degrees twenty five minutes west longitude, and thirty-fix degrees thirty-five minutes north latitude, and lies at the entrance of the Mediterranean. on a kind of peninsula, which is the nearest point of land to the Spanish coast; the walls and fortifications are not to good as might be expected from its situation; nevertheles it is a considerable town, has a strong garrison, a magnisicent cathedral, and a noble palace. John king of Portugal took it from the Moors in 1415, but now

nevertheles it is a considerable town, has a firong garrifon, a magniseent cathledral, and a noble palace. John
king of Portugal took it from the Moors in 1415, but now
it belongs to the Spaniards. It full ained a vigorous foge
in 1697 againft the Moors, who have never been able to
take it, though they have blockaded it ever fince. Near
this city is a mountain with feven heads, which the antients
diffinguish with the appellation of Septem Fratres, or
Seven Brothers. It is a place of great trade, and has a
good harbour.

good harbour.

The next town we shall describe in the province of Fez is Tetuan, which is situated on the ascent of a rock, about eight miles from a bey of the Mediterranean sea, called from this place Tetuan Bay, and is between twenty and thirty miles south of Ceuta, and about fifty fouth-east of Tangier. The town is about a mile long, and half a mile broad, and has a sine prospect of the sea and the country beneath it; the streets are narrow, unpayed and full of dunghills, which makes it a filthy place in winter; and yet this is fald to be one of the best towns in the country, on account of its being better built than most country, on account of its being better built than most others. Their houses are usually built about a little open others. A net routes are unusuy outer arous a new open figure, with piazzas fusporting galleries above them; and in the middle of the fquare, people of fubflance always have a fountain. There are commonly four rooms on a floor, one on every fide of the fquare, which have no other light than what they receive from the great folding dears that open into the nierae.

doors that open into the piazza.

The town of Tetuan contains about thirty thousand inhabitants, of which five thousand at least are Jews, who inhabitants, of which five though the part and parts have feven fynagogues here; but, though their numbers are fo great, they have not two hundred houses amongst them, feveral families living under the fame roof. They are faid to be very poor, though all the trade of the place affes through their hands, for they are the only brokers between Christians and Moors. One thing to be observed with respect to this town, is, that the people walk on the tops of the houses, which are flat roofed, and visit one another from thence, more than by the fireets, as they do in Algiers, and other parts of Barbary. The town is furrounded with an ordinary wall, and defended by an old caftle, conflitting of two figures; the outward figure flanked with towers, but the walls not cannon proof, and it is commanded by hills about it. They have a burying place, on a hill above the town, adorned with fuch numbers of cupolas and pyramids, that it looks like a town ittelf; but what is beft worth feeing at Tetuan is the basha's palace, the entrance into which is by a cloifter, which leads to a spacious square, surrounded by a pisaza, and in the middle a marble fountain, the pavement of the area and piazaa, being of mosaic work. The mosques are as elegant as any buildings can be that are in the Moresco style. The fantons or monks liave about twelve cloifters, which are places of refuge for all criminals, exone another from thence, more than by the fireets, as they copt those which are places of refuge for all criminals, except those guilty of treason. The Christian slaves here are very numerous and very ill used, being locked up every night in a dismal dungeon, called the Mortimore, every night in a difinal dangeon, called the Mortimore, which is a place twenty feet under ground, where there is no light but what comes from a hole at the top, like a gully hole in England; and it is always very damp, on account of the fprings rifing in it, occasioned by its being dug fo deep. The inhabitants, between trade and thieving, are in tolerable circumstances; for when thy are No. 22.

not frong enough to plunder a flip, they will traffic with

Meffa, inthe province of Suz, and on the river of that name is composed of three fortified towns lying in a triangle, each furrounded by a wall, and about a mile distant from each other; there is a temple in it built of large fill bones inflead of timber. It is fituated at the foot of mount fill bones infleed of timber. It is flusted at the foot of mount Atlas, near the ocean, in a country abounding with palm trees, eight degrees fifty-five minutes werk longitude, and twenty-nine degrees twenty minutes north latitude. The adjacent territory is fertilized by the overflowing of the river, and whales have been frequently caft upon the flore. The town of Teffint, about four miles diffant from Messia, is like that divided into three parts. A branch of

the river Sus waters it, and paties through a large mofque in the centre of it, by which means the people have an opportunity of preforming their abbuttons in a running fream. The town contains about four thoughtd family lies; the neighbouring territory is extremely fertile; and the principal commodities are logar and Morocco leacher. Tarudent is a handforne, populous, and fourishing place but finall, and the linhabitants are opulene, polite, and

controus.

Tedfi is feated in a plain abounding in corn, and where there is plenty of sheep, seventeen miles from mount Atlat, and twenty from Tarudant. This town is famous for its fugar manufactory, and contains about five thouland inhabitants. The chief alfakis, who is supreme judge in all ecclesiastical matters, resides in the great mosque here: it has a good market on Mondays, the chief traffic being leather, linen, woollen, cattle, horses, iron tools, sugar, wax, honey, butter, &c.

ther, linen, woollen, cattle, horfes, iron tools, fugar, wax, honey, butter, &c.

Tagaoft, is reckined the largest city in the province of Sus; it is fituated in a fettile plain, one huidred and fifty miles from the fea, and thirty feven fouth of Taradant, and contains eight thousand families, four hundred of which are Jews, wno carry on a confiderable trade. Here are two matkets weekly, to which the Araba and Moors refort with their commodities, and the negroes to buy apparel. It lies in feven degrees thirty-five minutes west longitude, and twenty-eight degrees thirty-two minutes north latitude.

north latitude.

Taffier, is feated on a river in a plain, three hundred and twenty miles fouth-by-east of Fez, and two hundred and seventy-five fouth-east of Morocco. The territory in which it flands was once a kingdom of itself, but never very confiderable; the whole country is divided into three provinces, Dras, Saro, and Tuet. It is mountainous and fandy, but produces an excellent kind of indigo, dates, and fandy, but produces an excellent kind of indigo, dates, and a little wheat and barlet by the fides of the rivers. The people are miferably poor, living upon camel's flesh and dates, and they breed horses to sell to foreigners. They have also obviches and dromedaries, which last will travel one hundred miles in a day. Most of the dates which are font to Europe come from hence, as the emperor will not permit them to be exported from any other part of his dominions: and at is all rmed that the leather manufacture has a termed with the flower of that frair. minions: and it is all timed that the leather manufacture there is tanned with the flones of that froit. About four thousand horse are retained in this district, to keep the people, who are chiefly Bereberes in subjection, and it is usually governed by a prince of the blood. The governor resides in the city, which has a strong castle to defend it. The inhabitants are about two thousand in number, and are employed in the manufactures of leather, silk, and linen: they are very sociable, though extremely superstitious. It is a great rendezvous of both African and European merchants. European merchants.

European merchants.

Gefula, a province on the coast of Barbary, is subordinate to the governor of Tasiset: it is a dry barren country, the limits of which are not perfectly ascertained. The mountains, however yield plenty of iron and copper, and the inhabitants are famous for working in those metals, by the exchange of which they procure horses; linens, woollens, spices, &c. They have annually several fairs, but one in particular, which is kept on a large plain; lasts two months, and is resorted to by merchants from all parts of Barbary; and this fair is, perhaps, better regulated than any other in the universe; is the people, though naturally brutish, are under such restrictions, that a quarret was never known to happen during the fair time, and its faird, that the merclants who come thinter to bay the wates, are maintained at the expence of the province.

Seymetars, daggers, darts, spears, and short guns, are the weapons of the Gesulians, who can bring suxy thousand men into the field. Their dress is a striped jacket of linen or woollen, with short sleeves, overwhich they throw agown of coarse woollen cloth. They have only one

mode of punishment, that is, piercing the criminal to death with darts, and throwing his carcale to the dogs or wild

SECT. II.

Contains a description of the persons, babits, music, buildings, food, furniture, customs, &c, of the inbabitunts of Morocco.

NHESE people, as well as the rest of the inhabitants of Barbary, confist of three forts, all of the Mahometan religion, but differ much in their way of lile. The Moors, the original inhabitants, live in towns and acc the most numerous: the Arabs live in tents, and remove their camps when they want forage for their cattle. Those who inhabit mount Atlas, in the fouth, are a plain inno-

cent people.

The natives are generally of a good stature, and well proportioned: the Moors, that are not exposed to the weather, have good complexions: the Arabs are a tawny race; and labouring people among the Moors are as tawny as the Arabs. The Moorish ladies are fair, and usually have sine seatures: neither Moors or Arabs have any great share of learning, but are men of good natural parts, and

want only opportunities of improvement.

Their mulic is bad a they do not write down their compositions, nor have they any contrast or variety of parts. The music of the Arabs is suitable to their homely instruments. The bladder and ftring is in great efteem amongst them; and they have another instrument in the form of a kettle-drum, which ferves as a base in their concerts. The mufic of the Moors is more ingenious and melodious than that of the Arabs, and they have a greater variety of instruments. Besides several forts of flutes and hauthoys, they have a violin of two strings, and a base double stringed lute bigger than our viol, with several small guitars of different fizes, each of them tuned an octave higher than

The inhabitants of the mountains, named kabyles, live in dallikas, or thatched cottages, and their villages are called gurbies: each of these cottages contains but one room, in which also they hoose their calves and kids, the people and their young cattle living much alike. The Arab women make the cloathing and furniture for the family, particularly their lykes, or woolfen blankets, and the webs of goats hair for their tents. One of these hykes is usually fix yards long, and the or fix broad, ferving the kabyle and Arab for a complete drefs in the day and for his hed and covering in the night. It is a loofe but troublefome kind of garment, being frequently dif-concerted, and falling upon the ground; fo that the perfon who wears it is obliged to tuck it up continually,

They have a garment called the Burnoofe, which is a cloak or mantle also made by these women. The Moors and wealthy Arabs wear caps or turbans; but many of the poorer fort among the latter go bare headed, binding their temples with a narrow filler, to prevent their hair be ing troublefome. Some of the Arabs wear under their hykes a clofe bodied frock or tunit girt about their bodies, except when they are at work; for then they ufually throw of their hykes and mantles. The Moors wear linen under their tunics, but the Arabs in general wear nothing but woollen.

The Bedwins, or Arabs, are not used to wear drawers, which the citizens of both fexes do conflantly, especially when they go abroad or receive vifits. The virgins are diftinguished from the matrons, in having theirs made of needle-work, striped filk or linen. But when the women are at home, and in private, then they lay aside their hykes, and sometimes their tunies; and instead of drawers, bind

only a towel about their waift.

With respect to the habits of the Moorish women, when they appear in public, they always fold themselves up so close in their hykes, that without the addition of a vail, there is very little to be seen of their faces. But in the summer months, when they retire to their country Cots, they walk abroad with lefs caution and refervedness; and upon the approach of a stranger, let only their vails fall over their faces. They all affect to have their hair long, which they collect into one roll, upon the hinder part of the head, binding and plaiting it afterwards with ribbons. Where nature has been lefs liberal, there the defect is to be fupplied by art, and foreign hair interwoven with the natural. After their hair is plaited up in this manner, they pasceed to drefs their heads, by tying clofe together, above the roll I have deferibed, the feveral corners of the triangular piece of linen, wrought into a variety of figures by the needle. Persons of better fashion, wear above this a sarmath, as they call it, which differs not much in shape from the former head dress, but is made of thin flexible plates of gold or filter variously cut through, and engraved in imutation of lace; a handkerchief of crape, gauze filk, or painted linen, bound clofe about the farmath, and falling afterwards without any order, upon

None of them think they are completely dreffed, will they have tinged the hair and edges of their cyclids with the powder of lead-ore. The footy colum, which is in this manner, communicated to the eyes, is thought to add a wonderful gracefulness to persons of all com-

plexions.

Persons of distinction, among the Moors, have variety of diffus at an entertainment, mixed up with almonds, dates, fweetmeats, milk, honey, &c. "I have feen at fome of their feftivals, fays Dr. Shaw, more than two hundred dithes, whereof forty, at leaft, were of different kinds; but among the Arabs and kabyles, there are neither utenfils nor conveniences for fuch entertainments ; two or three wooden bowls, a pot and a kettle, being the whole kitchen furniture of the greatest emir, or prince." However, all the orders and degrees of these people, from the bedwin to the balla, eat in the fame manner, washing first their hands, and then sitting cross legged round a mat or low table, upon which their diffes are placed. They make no ufe of a table cloth, each person contenting himfelf with a share of a long towel that lies round the mat, knives and fpoons are little in use, for the food being well roasted and boiled, requires no carving. Cuscassowe, pilloe, and other dishes likewise, which we should reckon ipoon meats, are ferved up in the fame manner, with all other forts of food, lukewarm; fo that the whole comorder for so rood, fukewarm; to that the whole company dipping their fingers together in the dith, making alle of their right hand only, take what portion of it they can conveniently difpore of for a mouthful, making it first into little balls, or pellets, in the palms of their hands. No founce is any perion faitsfied, than he rifes up and wather highly the policy of the period himfelf, without paying the leaft regard to the company, whilft another that very moment takes his place; the fervant fornetimes (for there is no diffinction of tables) fueceeding his mafter. When they fit down to thefe meals, or cat and drink at any other time, and, indeed, when they enter upon their daily employ, or undertake any bufinefs whatfoever, they always pronounce with the greatest seriousness and reverence, the word Bismilla, i. c. in the name of God, using the expression Alhamdalla, that is, God be praised, after they are sufficed, as they do when their affairs areprosperous.

With respect to the Moots, they are early rifers, comflantly attending their public devotions at break of day. Each person employs himself afterwards, in the exercise of his proper trade and occupation, till ten in the morn-ing, the usual time of dining; returning again to their bufiness till afa, the afternoon prayers, at which time all kind of work ceases, and their thops are that up. fupper commonly follows the prayers of magreb, fun fel, and then, repeating the fame at the fetting of the watch, when it begins to be dark, they immediately after go to

The inhabitants of Morocco, who dwell in the inland parts of the country, are an hospitable, inosfensive people; rnd, notwithstanding their poverty, they have a liveliness about them, especially those of the Arabie descent, that gives them an air of contentment; for, having nothing to lofe, they are peaceable among themselves; but both Moors and Arabs are cruelly oppressed by a finall number

of insolent domineering Turks.

As to their religion, many of the people of Morocco follow the tenets of one Hamet, a modern fecturift, who was an enemy to the antient doctrine of the califs. They are all very fond of idiots; whose protection will in some cases screen offenders from punishment, who have been onlike of the most atrocious crimes. The Moors of Barbary in general have however adopted the very worth parts of the Mahometan religion, retaining only to much of it as authorizes them to commit the most shocking, actions with impunity. Though the men are indulged with a plurality of wives and concubines, they are nevertheless allowed to commit the most unnatural crimes. Adultery in the women is punished with death.

The Bedwin, or Arab, follows no regular trade or employment: his life is one continued found of idleness or divertion. When no pattime calls him abroad, he does nothing all the day but loiter at home, finoke his pipe,

and repose himself under some neighbouring shade. He hath no relish at all for domestic pleasures; what he most of all values, is his horse, for in this he places his highest satisfaction, being seldom pleased, or in a good humour, but when he is say from home, riding at sull speed, and hunting.

SECT. III.

Treating of the inhabitants of Morocco, with respect to their civil, political, and ecclesiastical bistory, revenue, seins, trade, learning, &c.

OVERNMENT cannot be with propriety faid to exist in Morocco, whose monarch is deemed the most despote prince in the universe, having an uncontrolable power over the lives and property of his subjects, or rather vassals; for there is not a single person in the whole empire who can pretend to the least shadow of freedom control and the same whole the same who was the same who the same who was the same was the same who was the same was the same was the same who was the same was t whole empire who can pretend to the leaft shadow of free-dom, or dares openly to avow his sentiments: these mo-narchs have for some ages been parties, judges, and even executioners with their own hands, in all criminal matters; to all which their subjects submit with a degree of satisfaction almost incredible. Every military offser in the absence of the emperor, has the power of life and death in his hand, and they seldom regard the form of a indicial proceeding. The information of the records rejudicial proceeding. The infatuation of the people re-fpecting their monarch is faid to be fo great, that they think he does them a favour when he treats them with barbarity; and imagine, that to be murdered by him is a pe-culiar bleffing, as it insures their immediate admittance

culiar bleffing, as it infures their immediate admittance into paradife.

This monarch, befides the unbounded power he exercises over the peoples property during their lives, is the univerfal heir to all his fubjects upon their decease; fo that the greatest part of the wealth of the empire devolves to him. His titles are very exasted, being called, The most Glorious, Mighty, and Noble Emperor of Afric, King of Fez and Morocco, Taflet, Suz, Dahra, and all the Algarbe and its territories in Afric, Grand Sherif (that is, deferredant) of the prophet Malomet, &c. &c.

is, descendant) of the prophet Maliomet, &c. &c. Mr. Blathwait, who attended Mr. Russel, the English Mr. Bisthwait, who attended Mr. Ruffel, the English ambassador to the court of Morocco, about the beginning of the reign of his late majethy George II. gives us a very shocking account of the manners of the Moors at that minister's audience at the palace of Mequinez. He relates, that on the day appointed a Spaniard, alcaide (i. e. governor) of the Christians, and several officers of the palace, came to conduct the ambassador to court: that about earnes to conduct the amounted to court; that about twelve of them mounted, and rode in the following manner: the ambaffador, between the baffa who conducted him to Mequines, and the baffa's brother, preceded by twenty mulketeers; the reft of the English gentlemen, secompanied by another of the baffa's brothers, and fonce other officers of the court : two of the amballador's fervants in liveries on horseback, and after them the exp-tives, and the Moorish and Jewisn servents who walked on foot: the whole closed with a guard of horse belong-ing to the bassa: however, u drunken Moor of quality, in the superabundance of his zeal, rode in amongs them, calling them Christian dogs and rogues, presenting his piece at the English, and it was with some difficulty he was perfuaded to go about his business. Nor was this in-fult taken any notice of; for, it feems, a flaming zeal for their supersition is an atonement for any crime they com-

When they had entered into the first gate of the palace, they all alighted, and in the square within it were found thirteen fine horses of the emperor's, richly caparisoned and accoutred, and held by fo many negro grooms, for state: these the bassa led them to take a view of; after which, having passed two or three squares more, they came to the emperor's apartment, but in such a croud, that it was with a great deal of difficulty that they arrived there. After some time they were conducted into a long gallery, the floor and sides whereof were covered with small tiles an inch square, of various colours. Hither his British majesty's present was brought, and set out to the best advantage, confishing of a large crystal sconce with twelve branches; eleven bales of coarse cloth, each bale containing three pieces; three boxes of superfine cloth, containing fifteen pieces; one box of French linen, called Britanies; two boxes, containing each fourteen loaves of double refined fugar; one box of china ware; one box, containing eighteen pounds of tea; one box, containing three large china jars of sweetmeats; one box of

toys; one box with brocades, filver, tabbies, threads, fat-tins, and gold lace; one cafe, containing a gan, and a pair of pittols; four chefts of Florence wine, and one box

ontaining hollands and cambrics.

After waiting here about an hour, they were conducted to an open gallery, which gave the prospect of a fine meadow within the paisec, over the middle of which there is a terrace walk from the one end to the other, thick shaded with vines, supported by an arched frame. Having passed in a continual crowd still a great way further, they were at length stopped, and given to understand the enveror was in the next room. Whereupon the bass, his brothers, and several other great officers, immediately pulled off their alhagues, their outward velts, or habits of distinction, as well as their slippers, and each of the bass's brothers took a China jar of sweet meats, part of the present carry in to the emperor, and all the rest of the present was carried in and placed in the emperor's fight, before the embassador was admirted: then two great doors were slung open, and they saw his majesty fitting under a canopy, in an open gallery, and at his feet, his savourite brother, Muley, with his prime minister, bassa carried, a great fat negro. After waiting here about an hour, they were conducted

great fat negro.

When the ambaffador was led up to the throne, he pulled off his hat, and made three bows; and having deputed of the bows and having depute the pulled of the bows. ivered the king of Great Britain's letter, tied up in a handhereing into the emperor's own hand, and a gold watch in another, he put on his hat and nusde a feech, expressing the great esteem his matter had for his imperial majetly, condoling with him on his father's death, and congratulating with him on his accession to the throne, which was interpreted, our author observets, to very little purpose; for the emperor was so drunk, he could scarce purpofe; for the emperor was to uruns, as count issues hold up his head: however, it feems, he understood fo much by the speech and the present, as to be very well pleased, and answered, "Buono, huono," ordering the alcaide of the Christians to see they did not want wine alcaide of the Christians to see they did not want wine and roast pigs every day, charging the prime minister to let the Christian minister, the ambassador, have what-ever he demanded. Then the courtiers profitzated them-fesses on their faces, and crawled upon their hands and knees to kils his feet : foon after which, his majesty's eunuchs, finding him much out of order, carried him away and the court retired. While the ambaffador waited to be admitted, there was such a noise and disturbance among the drunken courtiers, that he could compare it to nothing elfe but the common fide of a goal; though, at

their audience, things were a little composed.

This emperor, Muley Hamet Duhebby, was upwards of fix feet high, about fitty years of age, of a fierce countenance, and much pitted with the finall pox, his face bloated, and his fore teeth out, and being a Mulatto of a tawny complexion, made a very indifferent figure: it being cold weather, he had a black cloak over a white alhague, or veft; his turban was a green filk fash, which being tied carelessly about his head, shewed he was drunk. All he had about him worth admiring, was a fine scymetar in a

ecious stones. gold feabbard, richly fet with pr

After they had carried away the emperor, the confusion among his drunken courtiers was as great as before; neither was there any eare taken to conduct the ambaffador back again to his house; they were pushed and shoved about, and in danger of being trouden under foot, and instead of being affished by the officers of the court, the gates were being annited by the officers of the court, the gates were that against them, and extravagant furns derganded for permillion to go through them. In the mean time the throng was very great, and their very buttons were cut off their cloaths before they could get away, and they expected every moment to be stripped by the mob: how-ever, by hibing the porters very handsonely, they were for fortuness as length, to a force out of the paless and fo fortunate, at length to escape out of the palace and get to their house. But to return to the emperor: It was usual with him, it seems, to drink with his ministers till he fell down dead drunk, and then was carried to bed till he fell down dead drunk, and then was carried to bed by his eunuchs: and when he awaked again, he was fure to give fome examples of his cruel and fierce disposition; infomuch that his servants fled, and dreaded to come near him, and happy was the minister that could make an ex-cuse to be abient, and escape the effects of his fury. During the English ambassador's stay at Mequinez, the same emperor short two men that waited on him, and en-

deavoured to kill his prime minister with his own hand: but this courtier keeping out of the way till his murdering rage was over, was then taken into favour again. He commanded two young Jewish women to be brought to his bed; and when he sent them home again, hearing that their husbands had prefumed to go to bed to them, he ordere

both the men to be put to death. One of his midreffer difobliging him, he ordered all her teeth to be drawn out; and inquiring of her afterwards, being told fite was not recovered from the illnefs that operation had occasioned, he dered the man's teeth; who drew them, to be likewife pulled out, and fent to her hy way of fatisfaction. For any trilling offence, or for his humour, he would order a trant to be toffed, that is thrown up into the him her. eny trilling offence, or for his humour, he would order a man to be toffed; that is, thrown up into the air by four lutty flaves, as high as they could, and then let fall again, whereby fonfeithnes the perfon was killed and at others made a triple of: and fuch feats as thefe, it feems, were his fnort and divertion. We need not therefore wonder that the English amballador haftened to be difmiffed from fuels a coult as this; which is deemed the most faithlefs, and the respecting energy that the english amballador haftened to be difmiffed from fuels a coult as this; which is deemed the most faithlefs, and the respecting energy that the english amballador haftened to be difmiffed from fuels. The identifies Mr. Ruffel was instructed to make at the function of the four to make at the function.

any in the universe.

The demands Mr. Russel was instructed to make at the court of Mérocco, were, to get all such captives released as had been taken under British colours; to get resistation made to such merchants, whose ships had been robbed by the Sallee pirates lines; the last peace; and to confirm that peace with the present emperor. But he was soon given to undersland, that there was no resistation to be expected from this court; and with respect to the captives, they conferned to release about a dozen of them, of which four were English, and for these the smbassador maid a stress data. four were English, and for these the ambassador paid a great deal more than their ransom could have been valued at. The prime miniter, the favourite women, and every offi-cer concerned in his dispatches, were bribed again and again; nor was there a lervant about the court but was perpetually begging fomething of him, under pretence of some good offices they had done him during his refi-dence there.

The British ambassador, after this, took his leave of the court of Mequinez, and began his march to Tangier, under a Moorish guard, commanded by officers, who had money allowed them by their superiors to defray the whole expences of the journey, but which they put in their pockets, and made the ambaffador pay his own and their charges upon the road; and befides, forced the country people to furnish provisions, without allowing any thing for them. When the ambassador came to Tangier, he was under apprehenfions of being detained there by the baffa, under pretence of fome further demands: but the baffa being then treating with the governor of Gibraltar for powder and other warlike flores he wanted, was fo good as to permit the ambaffador to embark for Gibraltar, good as to permit the ambailador to embark for Gibraltar, where he arrived February 7, 1728. He had been promifed two fine Barbary horfies, and a lion, by the court of Mequinez; but it feems they never intended to gratify him in this particular, unlefa he would have paid double the price for them, as he did for every thingelfe: and the was very glad to make his escape from that barbarous court without the presents.

If a renegado, aster he has professed himself a disciple of Mahomet, apostatizes, and turns Christian again, he is burnt without mercy: murder, thest, and adultery, also, are punished with death: and erimes against the state are punished with death: and erimes against the faste are punished with great cruetty; as impains, dragging the prisoner through the streets at a mule's heets till all his storn off, throwing him from a high tower upon iron hooks, hanging him upon hooks till he dies, crucifying him against a wall.

Their forces, were they assembled in one place, would certainly constitute a very numerous and formidable army.

Their forces, were they affembled in one place, would certainly conflicture a very numerous and formidable army. It is computed, that the black cavalry and infantry do not amount to lefs than forty thousand men; and the Moorifit horfe and foot may be as many, but being difperfed in feveral parts of this large empire, are not feen in fuch numerous bodies as the negroes, who live in Menuinez, and have the goard of the emperor's perfon; the blacks are effected their best horfe. The Europeans have experienced their bravery and military skill, both at Oran and Ceuta: they have fire arms as well as swords Oran and Ceuta: they have ne arms as well as twords and lances: their troopers ride very thore, and their faddles have long peaks before and behind: their filtrupirons are flaped to the foot; to that they can fland up and frike when they make their blow; and no men flew more dexterity in riding, wheeling, or faring: their horfes are very fwift, beautifully made; but not to fittons and heavy his ours. as ours.

They chiefly rely upon their cavalry both in their civil wars, and those with loreigners. Their infantry, indeed, are numerous, and carry fire-arms; but are not disciplined, and observe no manner of order; five hundred of their foot will fly before fifty horse: nor do they understand how to attack or desend a town, which may be the reason they have fearer one place of firength in the country, and but few guns mounted on the walls of their towns. They eem vary ignorant in the management of great guns and combs. Thefe are altogether left to the skill of the renegado Chrithians, of whom there are fome thousands in their armies. They have a train of one hundred and fifty brais guns in the palace of Mequinez, before feveral mortars, which are for times drawn out in times of dans ger; but I do not find there are any mounted upon the

Captain Blaithwait relates, concerning their fhipping, that when he was there in the year 1727, their whole naval force confited but of two twenty gust fhips, the biggoft not above two hundred tone, and a French brigantine they not above two hundred tone, and a French brigantine they had taken, with fome few row boats; and yet with thefe, being full of men, they iffue from Sallee and Mamora, which lie on the Atlantic Ocean, near the firaights mouth, and make prize of great numbers of Christian merchant ships, carrying their miferable crews into captivity. Though they are at peace with Britain, they make no scruppe of seizing and carrying their thipp into Sallee, if they find a passager on board, belonging to a nation at war with them; however they are usually to good as to dismis the ships, and their crews, after they have robbed them of some of their merchandise. The charge of these piratical cruizers, is borne intirely by private adventurers; though the emperor has a tenth of all the prizes and captives they make, which leads me to enquire into the revenues of this princes. prince

These arise either from the labour of the husbanda and the fruits of the earth; or by duties upon goods imported and exported: the emperor has a tenth of all the corn, cattle, honey, wax, hides, rice, fruits, and produce of the foil. After his tythe is deducted, he is at liberty to purchase the remainder of the prisoners, if he thinks proper, at only fifty crowns per head. This produces im-mense proset to him either by their ransom or labour, for he makes them work, and supplies them with nothing bot a scanty allowance of coarse bread and oil. If they fall fick, he gives them no affiftance but leaves them to the fa-thers of a Spanish convent, who supply them with ne-cessaries and medicines; but even the benevolence of these is taxed, as they pay him a confiderable annual flipend, for a toleration to act with humanity to their fellow-creatures. The Jews pay a capitation tax, and all the com-modities in which the Christians deal are heavily assessed.

They have no shipping to carry on a foreign trade by fea. But the Europeans bring them whatever they want from abroad; as linen and woollen cloth, stuffs, iron wrought and unwrought arms, gunpowder, lead, and the like; for which they take in return, copper, wax, hides, Morocco leather, wool, (which is fuperfine) gums, foap, dates, almonds, and other fruit. Their trade by land, is either with Arabia or Negroland: to Mecca they fend caravans, confiting of feveral thousand camels, horfes aud mules, twice every year, partly for traffic, and partly upon a religious account, great numbers of pligrims taking that opportunity of paying their devotions to their great prophet. The goods they carray to the east, are woollen manufactures, Morocco Kins, Indigo, cochineal and offrich feathers; and they bring back from thence, muslins and drugs. By their caravans to Negicland, they fend falt, filk and woollen manufactures; and bring back gold and ivory in return, but chiefly negroes; from hence it is, that their emperor recruits him black cavalry, though there are also great numbers helps in the country, for they bring ravans, confifting of feveral thousand camels, horses and are also great numbers born in the country, for they bring those of both sexs very young from Negroland; he se-mates for breeders, and the males for foldlers, as they grow up: they first carry a musket, and serve on foot, and after some time are preferred to be cavaliers; and as these laws no other hopes or dependence but the favour of the emperor, they prove much the most dutiful and obsequious of all his subjects; and indeed support the prince in his tyranny over the rest, who would not probably have borne the barbarous cruelties of the two last reigns, if they had not been governed with a rod of iron in the hands of these who, like other foreign mercenaries, never en-

negroes; who, like other foreign mercenaries, never en-quire into the reasonableness of their prince's commands, but execute his most inhuman decrees without remorte. Their gold coin is a decat, resembling the ducat of Hurn-gary, worth about nine shillings sterling, and athey usually give three of them for a moidore. Merchants accompts are kept in ounces, an imaginary coin, on of which inake a docat in merchants accompts; but in payments to the government, it is said, they will reckon seventeen councis and a half for a ducat. They have also a sleece, which is a copper coin in less than a farthing, twenty of which make

In Morocco, learning is chiefly confined to reading, wisting, and arithmetic, as few attempt any thing higher, except the priefts and doctors of the law. The favourite feience of the two latter orders, and what the people ignorantly admired is aftrology to that a fuperfittious belief in ouens, predictions, occ. is general throughout the nation. Most of the towns have feveral public schools and academies, in which children are stught to read, write, cast accounts, and repeat a fhort catechism, which contains the principles of their religion.

Every Friday, which is their fabbath, both fexes visit the sepuliehres of their ancestors and relations, in blpe habits, blue being their mourning colour. They greatly venerate the dead, embellish their tombs as much as their sircumflances will session, and contains the principle of their mourning colour.

verterate the each enterthin their others as much as their circumflances will afford, and permit no Chriftian to approach within a certain ditlance of them. They are very particular in the observation of the three following winning local notions: 1. To place victuals and drink upon the tombs of their ancestors and relations, at certain times, tombs of their anceftors and relations, at certain times, that the dead may not flarve in their graves. 2. To bury gold, filver, jewels, &c. with the corple, that the performance in the other world. 3. To dig the grave very wide, that the decessed may not be incommoded for want of room. They have another indition, equally fingular and abfurd, which is, never to bury two perfors in the same grave, left they might have forme difficulty in finding their own bones on the refurred ton-day. The prevailing opinion of the Moors is, that all persons of any nation or religion, and of either fex, are secure of faivation prior to the age of fifteen: but after thest period they imagine that none but Mulcelmen can be are secure or autonous more to the age of inteers: our arer that period they imagine that none but Muffelimen can be faved. They enforce the attendance on public worthin with great rigour i for the first negledt, the person is rendered incapable of being a witness in a court of justice; for the second, fined; and for the third, burnt as a heretic. but they exclude women from these places. Games of chance are strictly forbidden; and those who are detected playing for money, are liable to be severely punished. With respect to the history of Morocco and Fez, the

Mauritania of the antients, no material transactions occur Mauritania of the antients, no material transactions occur concerning it, till conquered by the Romans, who found, that the prevailing mode of government throughout Bárbary was abfolute monarchy; and that Bogud (the fift prince of whom we have any authentic account) was comporary with Julius Carfar. This country, on the death of Bogud, became a Roman province, and was afterwards to the death of Bogud, became a Roman province, and was afterwards. befored by Augustus on the younger Juba, whose son Ptolemy was put to death by the tyrant Caligula. The Goths then over ran the country, and possessed it till they were driven out by the Saracens in the year 600. These were again subdued by the Arabians, who divided Barbary into many kingdoms, till 1008, when they were Barbary into many kingdoms, till 1008, when they were all united into one fovereignty under the family of the Almoravides 1 for Joseph, the second monarch of that race, founded Morocco, and not only subdued Fez, but the Moorish dominions in Spain. His grandson, Albo Hali, was a great friend to learning; but a taste for literature died with him. Mahomet, the fourth of this fuccession, lost the Moorish conquests in Spain; and after the reign of three succeeding monarchs, whose reigns were remarkable for nothing but domestic broils, the race of the Almoravides became extinct; after which, the race of the Merins raised themselves to the regal dignity.

The Merins were a set of unhappy monarchs, all meeting

The Merins were a fetof unhappy monarchs, all meeting with untimely ends. Alboacen, the fixth of them, with an army confiding of foor hundred thouland foot, and feventy-five thouland horfe, was defeated by the kings of Caftile and Portugal at the bead of only twenty thouland foot and fourteen thouland horfe. The race of the Merins becoming extinct in 1540, the Shariffs, or Cheriffs, the supposed successfors of Mahomet, were advanced to the imposing liquid to the commence of the control of the con imperial dignity, or rather by artifice and cruelty obtained the fovereignty.

Amet, who was the first monarch of this line, was deposed by his brother Mahomet, who, after a reign of con-

tinual intestine broils, was murdered by his own guards; and succeeded by his son, Abdallab, who, for his security, put to death ten of his brothers out of twelve, and died unexpectedly, just at a time when a plot was ready to be put into execution for destroying him.

Mahomet, the fon of Abdallah, fled immediately to Don Sebaftian, king of Portugal, who together with the two competitors for the fovereignty of Morocco, were flain in 1578, at the famous battle of Aleazar. No. 23

The reigns of the three faceceding princes of this line contained nothing remarkable; but the eighth monarch, named Sidan, reflored péace to his country. However, a gang of pirates, in his reign, possessed the port of Saltee, when not having maritime strength sufficient to distodge them, he applied for aid to the court of England. The treighing monarch, Charles 1: complied with his request, and fent some ships to his affistance. the pirates were taken or destroyed; and the emperor, in return; sent three hundred Christian slaves as a present to his Britannic majesty. This worthy monarch died in 16 50, and was succeeded by his eldes son, Muley Abdelmelech, who was remarkable for his cruelty and drankenness, and was, after having reigned sour years, murdered by a Christian slave. He was succeeded by his brother.

by his brother.

Muley Elwaly, a prince of fweet disposition and generous spirit, who began his reign by releasing all state prifoners, and increasing the pay of his troops. He digd much regretted, after having enjoyed the crown twelve

Muley Hamed Sheik fucceeded his brother Muley El-Muley Hamed Sheik succeeded his brother Muley Elwaly; but being murdered by the Araba, they raised one
of their own chiefs, named Crumel Hack to the crown,
who was, on his demise, succeeded by Shariff Muley, king
of Tassiet. The latter engaging in a war with Sidi Omar,
prince of Hloch, was deseated, taken prisoner, and closely
confined; during his capitivity, he was attended by a negro
woman frightfully ugly, with whom he nevertheless cohabited, and she bore him two sons; the cledet aamed Muley
Archy, succeeded in the kingdom of Tassiet. The reign
of this prince was but short; for being used to drink immoderately, he one day mounted a spirited horse when intoxicated, and riding furiously into a grove of orangetrees, he was thrown against the trunk of a tree, fracevered his scull, and expired of the wound. His nephew
Hamtet caused himself to be proclaimed sovereign at Mosrocco, while his half brother (by a white woman) took
the fame she at Tassiet; but Muley Ishmael, his sfull brother by the negro woman, proved two hard for both, for he
wrested the crown from them, and began his reign in the
year 1672.

weeted the crown from them, and began its reight in the year 1672.

Muley Ifhmael was remarkable for an odd jumble of policy and abfueltly, critely and religion. His flitchefs during his whole reight was fuch, that he would never drink any wine or fitting liquor; he observed the ramadan, or Mahometan lent, four whole months every year, dan, of Mahometan lent, "four whole months every year, and with a more than ordinary abstinence. He was no less a serupulous observer of the usual washings, public prayers, and other brainches of his law; and never undertook any thing of moment, without prostrating himself a good while upon the ground, and praying for the divine protection and affistance, fully satisfied that Mahomet would obtain it from heaven; to that whatever was the result of his devotions, he constantly believed that prophet was the immediate cause and director of it.

Though he was east of accept, and were visited and im-

immediate cause and director of it.

Though he was enj of acces, and very rigid and impartial in the execution of justice, yet he would sometimes run into wild extravagancies, of which the following is an inflance: A poor farmer of the Berebers race, having complained that some of his negroes, (whom by the way, he was noted for keeping at short allowance) had stolen from him a yoke of ozen, which were his sole dependence, he ordered all the negroes to past before him, and thot every one whom the farmer accused: but asking him asterwards, what amends he could make him for the loss of 6 many flour nerroes, and the man being at a loss what to answer. what amends he could make him for the loss of so many stout negroes, and the man being at a loss what to answer, he made him undergo the same sate. He was for ever building and pulling down again; alledging, that he did it to keep his subjects so busy, that they might have no time to mutiny or rebel; for, says he, "I have a bag of rats; unless I keep the bag stirring, they will eat their way through it." He had three thousand wives, sive thousand concubines, nine hundred sons, and three hundred daughters; all of whom at times, selt the effects of his cruelty and capricious temper. He would frequently shoot, stab, or behead both slaves and subjects for his amusement; and was so avaricious, that he spent his whole life in plunderwas so avaricious, that he spent his whole life in plundering his people, and amassing wealth: and indeed every thing was made subservient to his miserable temper. When any body complained to him of having been robbed or defrauded, the criminal was first ordered to make

reduced or derrauded, the criminal was first ordered to make restitution of the property in question, not to the person aggrieved, but to himself, as he asserted that he was the only sufferer, his dignity being insulted by the crime; and then a considerable sine was levied upon the culprit, as a recompence to offended justice; but all went into his own 3 M coffers.

coffers. He extorted valt fums of money from his fub-jects by unjust and cruel means; and was to fordidly mean, as to keep the fervants of his houshold at hort allowance, and not allow his foldiers any thing to fubfit on, telling them in a furly tone, that his mules, camels, or, other beafts, atked him for no maintainance, and therefore they might get theirs where they could find it, thus licensing his army to plunder all that came in their way.

his army to plunder all that came in their way.

In process of time, one of his fons, Muley Mahomer,
(who was the most accomplished, and indeed the only one
of them who had a princely education), raised a rebellion
against him; but being taken prisoner by his brother Maley Sidan, his right hand and left foot were cut off by the
emperor's order, of which wounds he died; and Muley
Sidan was appointed heir to the crown; but his cruelty and
drunkenners were such, that he was murdered by his own
wives, before the death of his father. At length, Moley wives, before the death of his father. At length Muley Ishmael, one of the most infernal monsters of cruelty and avarice that ever existed, died a natural death in 1727, having reigned fifty five years; which, in a country were in-furrections, dethronements, and affaffinations, were fo common, is a circumstance truly remarkable and asto-

nishing.
On the death of Muley Ishmael, his son Muley Hamat On the death of Muley Ifmiael, his for Muley Hamat Deby fucceeded to the crown: having been appointed to that dignity by his father merely because he was the most diffolute of all his children; for Muley Ishmael fancied that his fon's drunkenness and intemperance would be foils to fer off his own fobriety and abstemiousfiels; for he imagined that his temperance in eating and drinking made ametide for his infaisable avarice, unbounded cruelty, and excepted with respect to women. Muley Hamet was deposed by his favourite eunuch, and his brother Abdelmelech proclaimed emperor; but the latter soon rendered himself odious by his cruelties. Maley Hamet was again reflored odious by his cruelties. Maley Hamet was again reflored of the proclaimed emperor; but the latter soon rendered himself odious by his cruelties. Maley Hamet was again reflored proclaimed emperor; but the latter ioon rendered himlelt odious by his cruelties, Meley Hamet was again reflored to the throne: Abdelmelech was kept in clofe confinement for fome time, but at length strangled, by order of his brother; and Muley Hamet, sive days after, died by excessive drinking, being March 22, 1729.

The next successful was Abdalla, another of the sons of Mules Classes, was abdalla, another of the sons of

The next fuccessir was Abdalla, another of the sons of Muley Ishmael; when the duke de Ripperda, having been driven from Spain, offered his services to Abdalla, who accepted them, made him a bassa, and caressed him as his chief savourite. Ripperda then Isid a plan before the emperor, which was, to drive the Spainards from their possessions on the coast of Africa, and even to invade Spain; but his designs were frustrated by the bravery of the Spainiards, and the superior skill of their engineers. Abdalla at length increated daily in cruelty, killed multitudes of people, attempted the life of his own mother, who, to be out of his reach, made a pilgrimage to Mecca; this monster was heard to express their senses but my will, and my greatest pleasure is, to kill them with my own hand." His cruelties at length rendered him so odious, that he was deposed by the black army, and his brother Muley Ali, raised to the throne in his stead. But this prince, being almost, continually stupessed by an immoderate use of a fadorisc herb called archicha, they deemed rate use of a sadorisic herb called archicha, they deemed him unfit to reign, and therefore deprived him of the crown, nim unit to reign, and therefore deprived nim of thecrown, and, in 1736, reflored it to his brother, who was now unbounded in his cruelty, facrificing many hundreds to his revenge, anger, or caprice, without the leaft regard to rank, age or fex. I his occasioned Abdalla to be again deposed, and Muley Sidi, another prince of the blood royal, was placed on the throne. Abdalla, however, raised an army, gave battle to and defeated his rival, and once more refumed

the fovereignty.
The fiege of 17/a, an inches 1, which commenced October 23, clille, which took place on the 8th very of the troops of Morocco, of which we have any certain inpire. The court of Spain had are the mu account relaction to this conpire. account relation to this impire. The court of Spain had for fone years past greatly neglected these places; so that neither the gartilon or fortifications were in a proper condition to sustain a siege; but those disadvantages were overballanced by the conduct of the Spanish officers, the bravery of the men, and the total want of discipline and experience in the Moorish troops, which occasioned the emperor's army not only to fail of success in their attack upon those two places, but even to be repulsed by the suall garrison of Penon de Velaz, a les considerable fortress wepon that coast. Warlike preparations were continued on both fides, though little was effected on either; and Mefille was either blockaded or befieged till the middle of March, when the Moors thought proper to abandon the enterprize.

eral o a blen meen o' dint! Il echin of ahous tree SECT. IV.

Containing the description and prefent state of the kingdom of Algiers, and its principal towns.

THEFT PERSON

THIS kingdom (which takes its name from its metropolis) is four hundred and eighty miles in length
from east to west, and one hundred miles in breadth,
where widest, and is fituated between thirty and thirtyfeven degrees north latitude, and one degree west, and nine
degrees east longitude, being bounded by the Mediterranean, on the north; mount Atlas, on the fouth; tho
kingdom of Tanis, on the east; and the river Mulvis,
which separates it from the empire of Morocco, on the
west.

The principal rivers, which tife in mount Atlas, and run northward into the Mediterranean, are, at The river Arefgola, or Hartegol, which falls into the Mediterranean, about feven leagues to the westward of Oran. 2. Assaran, which discharges itself into the sea, five leagues to the welt-ward of Algiers. 3. Chilef, which falls into the sea, hear Mostagan. 4. 80 saya, which runs into the sea, to the eastward of the city of Algiers. 3. Sef Gomar which runs by Constantina, into the Mediterranean. 6. Zinganor, or Major, which falls into the sea, near Bugia. And, 7. Mira, which discharges itself into the Mediterranean, mar Arzea. None of these have a very long courie; sining but in the mountains of Alas, or other hills in this kingdom: nor do we find that any of them, are navigable, at least that there is any navigation upon them: though there which discharges itself into the sea, five leagues to the westleast that there is any navigation upon them; though there are fome of them large enough, and would probably be made navigable, if any other people but the Turks were possessed of them; and indeed they appear so very indolent here, that they have not one bridge or ferry over any river in the country, but go about frequently fome miles to find a ford; and, if there happens to fall heavy rains, travellers are forced to wait till the waters are down again, before

This kingdom is ufually divided into eighteen provinces, namely, 1. Algiers Proper. 2. Tremeden. 3. Termez. 4. Bujeyah. 5. Angad. 6. Beni Arazid. 7. Miliana. 8. Couco. 9. Labez. 10. Tebeffa. 11. Human Bar. 12. Harefgol. 13. Oran. 14. Moftagan. 15. Bons. 16. Sargel. 17. Irgeri. 18. Confiantina. 15. Bons. The climate of Algiers is remarkably ferene and fine, that the country Genus to gain a secretary benefits and

the clumate of Algers is remarkably reverse and may for that the country feems to enjoy a perpetual verdure, and the people are unacquainted with the extremes of heat and cold. This is to be underflood only of the parts towards the fea, the inland parts being principally wild and barren, and very little, inhabited except by a great variety of wild

and very little inhabited except by a great variety of wild creatures, particularly lions, tygers, leopards, buffaloes, wild boars; flags, porcupines, monkies, offriches, &c.

The provinces beforementioned, into which Algiers is divided, are comprehended under three general heads: I. The eaftern, or Levantine; H. The weffern; and, HI. The fouthern government

The towns in the first are, Bona, Constantina, Gigeri, Bugia, Steffa, Tebef, Zamoura, Bifeara, Necanz, and Couco, The fecond contains, Oran, Transcript Managers. Tremesen, Mostagan, Tenez, and Screelli. The third, or fouthern government, has no houses in it, the inhabi-tants, being almost wild, and living in tents, which they remove at pleasure.

Bona, supposed to be the antient Hippo a sea-port built by the Romans, was once the capital of the province of its name. It lies on the Mediterranean, latitude thirtyfeven about ninety miles north-eaft of Conftantina; and near it is a coral-fullery. It is a poor mean place, thinly inhabited, and much exposed to the incursions of the Arabs. The only fragments of its antient grandeur are the ruins of a noble cathedral or monaftery. Near this is a famous fpring, called St. Auftin's well, and reforted to by French and Iralian failors. The fortrefs hath a garrifon of three hundred Turks, commanded by an aga, who is governor of the t. m. The celebrated St. Auflin is faid to have lived and used here. Charles V. took this town, among others, in his expedition against Tunis, but it was recovered by the Turks not long afterwards.

Constantina is situated on a river forty-eight miles from the fea, and about ninety miles fouth-east of Bugia, latitude thirry-five. It was the Cisla-Numidiæ of the Ro-mans, and received its prefent name from Constantina, the daughter of Constantine the Great, who rebuilt it with great magnificence; the fituation is on a penintula, difficult of accets, except towards the fourh-well. It is one mile in circumference, well fortified, and contains many antique fragments, particularly a noble bridge, near which is a

ngdom of s metrobreadth. thirtyediterraoth : the Mulvia, las, and he river

tiles from gia, latintina, the t it with a, difficult ne mile in y antique lich is a large

large subterraneous aquedus, that terminates in a cascade, into which state cominals are thrown, and receive their deaths by being dashed to pieces against the rocky bottom. The bey of the eastern government resides here, and has under his command three hundred Turkish horse, and one thousand sive hundred Moorish soldiers. The inhabitants are opulent, haughty, and spirited. The ineighbouring mountainous territory contains a robust, hardy, and brave people, tenacious of their liberty, civillaed, and humane. They furnish the neighbouring towns with great quantities of fruit and other provisions, and are able to raise forty thousand sighting men; on which account the bey of Constantina stands in great awe of them. They are, however, destitute of sire-arms, and have only lances and arrows to annoy the enemy with. On the sea coast, at a are, however, destitute of fire-arms, and have only lances and arrows to annoy the enemy with. On the sea coast, at a sinall distance from Constantina, shand the ruins of a Roman colony, autiently called Colo. It is situated on a high rock, and has a garrison under the command of an aga: adjoining to it is a French fastory, where the Moors bring hides, wax, and wool for fale; and at no great distance are the remains of the antient city of Stora, the bay of which is still good. Constantina was the refidence of the kings of the province of the fame name, till 1520, when it was conquered by Barbarosa, who annexed it to the territory of Algiers. Some soble ruins are found in and about this town.

Gigeri is situated on sea coast between Bona and Bujeyah, at about the distance of sitteen miles from each. The town (which contains about one thousand sive hundred

town (which contains about one thousand five hundred town (which contains about one thousand five hundred houses, inhabited by very poor people) is defended by a fort and a small garrison. The whole territory contains no other town, the natives living in a roving wild manner, robbing all they can come at, plundering any ship that is so unfortunate as to be wrecked upon the coast, and treating the crew with the most savage serocity. The dey himself cannot reduce them to any kind of order, as they say to places inaccessible to all but themselves, and set the Algerine army at desance. The French were fortifying themselves here in the year 1666; but were driven from thence by the Algerines, and obliged to leave their cannon thence by the Algerines, and obliged to leave their cannon and most of their effects behind them.

and most of their effects behind them.

Bugia, formerly the capital of a kingdom of the fame name, is fituated at the mouth of the river Major, about twenty leagues to the eastward of Algiers. It now lies in ruins, and contains nothing remarkable but the fepulchre of Seedy Busgree, the titular faint of the place. Here are three castles, two at the port, and one upon a rock. The inhabitant deal in iron-works, particularly plough shares, oil, wax, &c. The English admiral, in 1671, took or destroyed nine Algerine men of wat here, which the castle was not able to protect from his attack.

was not able to protect from his attack.

Steffa, or Steffa, is fituated in a fertile valley, about fixty miles to the fouth of Bugia, and lifteen from the fea: it exhibits only the melancholy ruins of its former magnificent buildings, containing now about three hundred fami-

tent outsings, containing now about three numered ramilies, who are miferably poor.

Tebef, is at prefent quite decayed, and very thinly inhabited, though it was antiently a flourishing city.

Zamoura, is reduced to as defpicable a fituation as the two former, by the tyranny of the Algerine government, though the territority is one of the most fertile spots an all stables. Barbary. It is defended by a fort with a good garrifon; and has a market every Monday, which is frequented by the Araba.

Bifcara, fituated in five degrees fifty minutes east longi-tude, and thirty-five degrees ten minutes north latitude, has a fort and garrifon to keep the inhabitants of the neighbouring diffrict in awe. The people here are very ignorant, and lead a wandering kind of favage life; but their chief employ is carching and taming wild beafts, particularly lions and tygers, which they carry for fale to

Algiers.
Necanz, is one of the pleasantest towns in Bachary, being fituated about fixty miles to the louth of Steffa. It is watered by an agreeable river, whose banks are adorned with a variety of beauful trees. The inhabitants in ge-neral are polite, the women handsome, the houses neat, the gardens well laid out, and the neighbouring territory fertile. The town contains a magnificent molique, and a large well endowed college for the education of Mahome-

Couco, is fittated between Algiers and Bugia. It was formerly the ractropolis of a kingdom of the fame name; but the fover signs entering into frequent alliances with the Spanish co et, the Algerine government, in the beginning of the seventeenth century, laid waste the whole country, and destroyed every town in it. The inhabitants

are independent, and dwell in the mountains, which are very fertile 1 the Algerines keep them milerably poor, by preventing them from carrying on any kind of commerce, as they formerly did.

as they formerly did.

The western, or second Algerine government is day vide? 'roo the five following places: the first is,

"tuated on a bay of the Mediterranean sea, latitude thirty-six degrees, east longitude one, about two hundred and sity miles west of Algiers. It lies partly in a plain, and partly upon the ascent of a hill, and is about a mile and a half in circumserence, as well fortlied as the ground about it will permit; but, it being commanded by some of the neighbouring hills, if there be not a garrifout of ten or twelve thousand men to defend the avenues, distant castles, and redother, as well as the storm lists!

diffant caffles, and redoubts, as well as the town itself, is eannot fustain a long siege.

As the Spanish coasts and merchant ships had suffered much from the confairs or rovers of this town, Ferdimuch from the corfairs or rovers of this town, Ferdinand, king of Spain, fent over an army, under the command of his prime minister, Cardinal Ximenes, in the year 1509, to befiege it; who having a correspondence with some of the inhabitants, when the Moors fallied out with the best part of the garrison against the Chri han gramy, their friends in the town shut the gates against them; and the cardinal obtained an easy conquest, killing above four thousand Moors, and delivering at the same time twenty thousand Christian saves out of captivity: the Turks of Alviers made, feveral stremms to recover this twenty thousand Christian slaves out of captivity: the Turks of Algiers made several attempts to recover this town from time to time for near two horidred years; but were always repulsed till the year 1708, when they made themselves masters of it, by the treachery or cowardice of the governor, as the Spaniards give ont, and remained in possession of Oran till the year 1723. But king Philip, having at this time no other enemy to contend with, and a fine army of veteran troops, that had no other employment, embarked a good body of them at Alicant, about the middle of June 1722, under the command of the Conde de Montemar, who landed near Oran, on the 20th of the same month, with very little opposition; and, having afterwards gained the height of the montains above Oran, the garriton abandoned the place, without waiting to besieged in form: of which transaction we received tepeated advice in our common news-papers; but the actepeated advice in our common news-papers; but the ac-count the Turks give of this enterprize affords fome further particulars. According to them, the dey of Algiers, believing that this armament of the Spaniards was intended against his capital, did not fend such reinforcements to Oran as he would have done, if he had expected they would have attempted that city: However, the bey or viceroy of Oran had affembled an army of twenty thou-fand men, for the defence of the place, most of them horse; with which he endeavoured to hinder the descent of the Spaniards; but his troops were difordered by the continual fire of the cannon of the enemy from their men of war and gallies He attacked them also after they were landed; but, the ground being unfit for cavalty, and his horse ftill galled by the Spanish artillery, he was obliged to retire; and thereupon determined to wait for a reinforcement of four thousand Turks, and fix thousand Moors, which he daily expected from Algiers, before he engaged which he daily expected from Algiers, before he engaged the Christians again: and, in the mean time, for fear of the worst, removed all his effects, his treasure, and his women, out of Oran to a place of security: whereupon the garrison and inhabitants were in the greatest consternation, imagining they should be soon abandoned by the governor, and facrisced to the Christians; and thereupon packed up all that they had, after the bassa's example, and kindly quitted the town to the Christians without a blow; leaving in it an hundred and forty-fix pieces of cannon, besides mortars, and at least fifty thip-loads of provisions, which contributed very much towards the preservation of the conquest; for the sea was io tempessuous they could receive nothing from their sleet for several days. receive nothing from their fleet for feveral days.

However, the baffa attacked the Spanish army as they were marching into the place; and, though he found it impossible then to save the town, so obstinate was the engagement, that the Spaniards loft near five thousand men; and were afterwards to much harraffed by the Turks, be-

and were afterwards so much harrassed by the Turks, before they could put the place in a posture of defence, that
great part of their army was cut off, and amongst them their
new governor the marquis of Santa Cruz, and several of
their best generals. But to proceed:

This city was the residence of a bey, and, though greatly
fallen from its pristine: spiemdor, is still the best sorting
place in the kingdom, except the city of Algiers. About
fix miles from Oran, stand the ruins of the antient city of
Batha, where a little chapel is built to the meunory of a
marabour

marabout, who faved up money enough to maintain five hundred disciples, whose sole business was, to repeat a long Mahometan litany, by the help of their beads, at cer-tain hours. Oran, is still in the podestion of the Spamiards.

Tremefen, (the province) is bounded on the north, by the Mediterranean fea; on the east, by a province called Africa; on the fouth, by the defert of Saharah; and on the weft, by the kingdom of Fea ; it is above three hun-dred and feventy miles in length, and one hundred and twenty-five in breadth. The capital town, of the fame aame, is fituated ninety miles fouth-weft of Oran, and farrounded by a strong wall, well fortified; has five gates with draw-bridges before them, and a strong castle containing very handsome barracks for the janisaries who are in garrison. Tremesen, while the metropolis of the in garrifon. I remelen, while the metropolis of the kingdom of the fame name, was a noble city, but is now fallen greatly to decay; for out of one hundred and fifty modiques and one hundred and fixty baths, there are re-maining only eight of the former, and four of the latter; and the place exhibits little but the fragments of its aptient magnificence, among which, the remains of a refer-woir, or bason for water, are the most conspicuous. The inhabitants are extremely indigent. The territory con-tiguous to it is dry, barren, and mountainous, except on e north fide, where there are plains abounding in corn, fruits, and pastures.

MoRagan, is fituated fifty miles eaft of Oran. This town is built in the form of a theatre opening to the fea, and furrounded on every other fide with rocks that hang over it. The ruins of an old Moorith caftle fland in a space between the rocks, and there is a strong stone wall towards the port, with a modern built castle, garrisoned by a number of Turks. The citadel is erected upon the fuminit of one of the rocks, and commands both city and territory : the haven is commodious, and the town is well fupplied with fresh water. The neighbouring mountains are inhabited by a reople called Magaraba, who live in tents, possess are unmber of stocks, and pay to the dey of Algiers twelve thousand crowns annually. There handsome mosque in this town.

Tenez, is fitnated about one hundred miles to the castward of Oran, and twenty miles east of Mostagan, and ar a league diffant from the fea, where it has a convenient port. Here is a calle that was once a royal palace, and in which the governor resides. The fortifications are strong, the garrison numerous, and the neighbouring territory fertile. This was supposed to have been the Julia Cæsarea of the antients.

Sercelli, lies between Tenez and Algiers, about twentyfour miles to the westward of the latter. It is defended by a Turkish garrison, and has a little port, which will only admit of small vessels. This was antiently a large populous city, but is at present a very poor desolate

The third Algerine government, being the fouthern dif-trict, is inhabited by a wild fet of people, who like some of the Tartars, roam from place to place, and live in tenta while they refide in any particular fpot. The territory itself is hilly, a part of mount Atlas running through it: the only riches of the people are their numerous flocks and herds. The government exacts a tribute from them, but the bey is obliged to come annually at the head of an army to collect it; and many of them retire to inaccessible places till the troops are withdrawn, in order to evade

the payment.

We shall now proceed to give a particular description of the metropolis and chief city in the kingdom.

Algiers is fituated in latitude thirty-feven, west longisude three and a half, on a bay of the Mediterranean fea. a little to the eastward of the river Safran: it is built on the fide of a mountain; the houses flat roofed, terrassed, and white-washed; and, rising gradually from the sea shore up the hill, forms a kind of amphitheatre, and apnote up the ann, rother a kind or ampointeatre, and appears very beautifully on the approaching it by fea; but this, like most other Turkish towns, looks better at a distance than when we are in it: The mosques, domes, spires, castles, and palace standing in full view, give us a great idea of the place; but, as the streets are extemely narrow, and the private houses but mean, our expectations are not answered when we come to examine it closely: are not answered when we come to channel however, there is this convenience, that the inhabitants can vifit each other from the tops of the house almost all the can without going into the streets. The walls are about a league in circumference, defended by fome baftions and square towers between them; the port is secured by a pier or mole, in length about five hundred paces, ex-

ded from the continent to a finali rocky island, when flands a caffle, called the Lantern, with three tier of brafe cannon, befides other fortifications, lately erected for its eannon, befider other fortifications, lately ercelled for its defence, fince the French bombardment: the town has five gates; and in it are ten great mofques, or Mahouseush temples; fifty leffer mofques, three colleges, and ahundance of fehools; where the children are brought up with the utmost prejudice to Christianity. It is computed, there are about an hundred thouland fouls in the city.

The fortifications towards the fea are much stronger, and more confiderable, than those on the land fide. The

and more confiderable, than those on the land fide. The mole was the work of Cheredin, the fon of Barbaroffa, as well as many of the other fortifications; for that moment employed all the Christian slaves in the improvement of the old, and construction of new fortifications in and about Abelers; and, by performing infreeding their proceedings, had the fatisfaction to see the whole completed in the space of three years.

To the fouth, there is another fortress with three bat-

teries to defend the entrance of the harbour. teries to defend the entrance or the narrour.

A ne naves are continually cumployed in bringing flones from a quarry in the neighbourhood which they lay on the fand, to defend the mole from the impetuofity of the waves; and this laborious work is obliged to be repeated continually, because the sea constantly washes them away, and makes a perpetual supply necessary. The embrasures of the eastle and batteries are in good repair; and the cannon, with their carriages, and all other necessary utenfils, are kept in

excellent order.

This city is supposed to contain one hundred thousand na, and one thousand five hundred Jews, two thousand Christians flaves, and some renegadoes. is one fireet, which is broad and handfome, and paffes quite through the town from eaft to weft, in which the houses and shops are elegant and capacious, and the markets are kept here; but all the other threets are narrow, incommodious, and dirty. Some travellers have accounted for the narrowness of the fireets, by afferting that they were so contrived to keep off the extreme heat of the fun, and others attribute their being built in that manner to the frequency of carthquakes, on which account the freets are not only contracted, but the houses low, and propped by pieces of timber passing across the streets from one to the other.

The houses appearing one above another, make a very fine appearance from the sea: they are about fifteen thou-fand in number, are built either of stone or brick, apon a fquare plan, with a paved court in the centre. Round the court is a double range of galleries one above the other, and both fupported by columns. The tops of the houfes are all flat: for which reason they walk upon them in the evening to take the air; and many embellish them with pretty gardens, placing a neat funmer-house in one corner. The people are obliged, by the laws of the place, to white-wash their houses inside and out, at leaft once a year; but all who can afford it, do it much oftener. Their furniture is exceeding mean, confishing only of a few wooden and earthern utenfils, a mat, and two quilts laid upon a few boards to ferve as bed and bedfead. As there are no fquares or large vacancies through-out the city, the inhabitants may pass from one end of it to the other over the roofs of the houses, and most of them visit each other this way. Though the houses in general are mean, many of the principal people have very fine edifices, the pillars and pavements of which are of a very beautiful marble, and the ciclings and folding-doors finely carved, painted, and gilt. Of these, the palace of the dey flands in the centre of the city, and is the most magnificent building therein. It has two grand halls, in one of which the divan meets every Sunday, Monday, and Tuefday. This building is very extensive, and furrounded by two superb galleries, one above the other, supported by marble pillars.

Here are noble fiructures erected as barracks for the Turkish troops: they are adorned with fountains, and contain many spacious and convenient apartments. Married men are not permitted to lodge here, but take up their refidence either in private houses, or in one of the four fendacas of the place; the latter being large commodious buildings, confifting of feveral ranges of apartments, warehouses, &c. which are let indiscriminately to all who chuse to take them, and serve instead of caravanseras or inns. Christian strangers, if of any consideration, are ufually accommodated at the conful's house, according to the nation they belong to, but the poorer Levantine, or other traders, lodge at the abovementioned places, and may eat and drink according to their circumstances or inclinaid, where er of braft ed for its town ahousean t up with

tions, as there are many cook-shops, taverus, land other public-houses, kept either by the Christian slaves of this dey, or by the Jews; who will accommodate any petion, or deal in any commodity. Here are time hundred and fevern modifues; superbly built, and chiefly fituated niear the sea side, the baths are numerous, and in general large, sumptions, paved with marble, and well-furnished with all requisite conveniences. The landamentania are obliged by their religion to tife them sive times daily, but their pleasure often prompts them to go still more frequently. A number of boths are appropriated to the use of women only, who do not refort to them for the benefit of bathing alone, but also for the sake of intriguing; for though the most decadful punishments attend detection, yet the Alignine women science every thing, that they may pursue their inclinations. There is a saw enacted there, which is strictly put interection, pursuant to which; any woman their inclinations. There is alaw enacted here, which is strictly put it execution, puriuant to which; any woman who is convicted of being engaged in a criminal correspondence with a Christiau, is fentenced to be thrown into the fee, with her head tied in a fack, in case her lover does not surn. Mahomistan. Examples of this fevere ponithment are frequently feen, hotwithstanding which, the married women and maident are fired with a most violent passion for the Christians, and there are perhaps as many intrigues in Algiers as in any city is Christendom:

About sinve of the battle are used for bathing; but, besides these, in each of which there is a chapel for the free secretic of their religion. Every lave is left out at a certain hour in the morning, and must be punetual as night to the time limited for their events and a rug for a lay treat of the morning of the religion of the morning of the content of the secretic of their religion.

up t each of them is allowed a materals and a rug for a

bed. There are feveral tolerable edifices without the wills of the sown, which add to the beauty of the environs, par-ticularly the marine efficer's public hall, a marabout's fur-perb dwelling, and a "waisary of Turkin's fepulchre and measurement; smong the laters, for magnificent tombs of a circular figure are the most confuseuous! these were erested to the memory of ful days, who were successive elected, and their murdered in the divan within a few shame. It is no he observed, that the tombs of days and elected, and then improved; that the tombs of deys and baffas are diffinguished by a flone, on which a turben is carved in relievo; those of the aga's and other military officers, by a pile fixed in the ground close to the coffin; those of the fac appealus, by a flaff with a gilded ball at the top; and flones; in the form of a coffin, are laid on the

top; and ftones, in the form of a coffin, are laid on the graves of the common people.

The city of Algiers had formerly none but rain water, and the finhabitants were often greatly diffressed upon that account: till a Moor, who had been driven from Spain, 'contrived,' by means of two aquedudts, to introduce' as much into the city as was requisite to supply one hundred Countains with water. This water, which is allowed to be excellent, is brought thither by a long course of pipes and conduits, from a great variety of rivulets that have their feurees on the adjacent mountains.

The circumiscent country is very ferrile, and the grave

The circumjacent country is very fertile, and the gardens, groves, and country feats numerous i in their gar-dens they use but little art, but trust to nature in most-productions of the earth, which occasions a wild exube-rance to prevail throughout the whole, and many of the fruits and vegetables not to arrive at the perfection they might fruits and vegetables not to arrive at the perfection they might be brought to by means of ingrafting, pruning, transplanting, fic. gardens are not walled, but furrounded by inclofures of Barbary fig-trees, which, from their compactness and prickles, are more secure than any other kind of sense and prickles, are more fecure than any other kind of sense and prickles, are more fecure than any other kind of sense and more for its aftonishing fertility; it is fifty miles in length, and twenty in breadth, includes many delightful villas, fragrant groves, and pleasant gardens, and produces such a profusion of the most delicious fruits of all kinds; rice, roots, and grain of every species, that the 'nhabitants enjoy every year two, and frequently three creps.

three crops.

The hot baths of Meereega are the only natural euriofities in the vicinity of this city; the principal of them is twelve feet fquare, and four deep; the waters are exceeding hot; and, when they have filled the larger bafon, difcharghemfelves into a smaller, where the Jews baths; as they are not permitted to use the fame bath as the Mahometans. These hot baths proceed from the great quantities of sulphur, nitre, and other inflammable bodies in the bowels of the earth; from whence likewise are caused the frequent earthouskes that the kingdom in general, and the city of earthouskes that the kingdom in general, and the city of earthquakes that the kingdom in general, and the city of

Algiers in particular, are fubject to.

sect. Vi

Of the customs, manners, languages, Ge: of the inhobitants, also she civil and exclessificat history of Algiers:

alls the civil and exclosificat history of Algiers.

The most antient possession of Algiers were diled Receiver to the present inhabitants are composed of anisture of these, with the Moors or Morieson driven from Spain, Arabians, Levantines, Turks, Jews, Christian states of various nations, and the children descended from all the above combinations of people; the Moors and Arabians are the most numerous: the former are divided into two orders; assetly, those who live in towns and sellow piriscy, or various professions by land or sea, and others who wander about, not being possession of either land or riches: The first are the citizens of the kingdom, the latter the bulk of the people.

We shall first describe the wandering forr, who are distinguished into various tribes, each forming, an itinerant village, and every family living in a portable tent; they subting the first order; they pay their rent to their landlords in corn, herbs, fruit, honey, wax, &c. and a tribute to the dey, according to the number of the family in each moving camp. Their tents are mean, their utensits trilling, their circumstances poor, and their manner of living fifthy. The family, and Il domestic animals, he promiseously in the hut exgerter, except the dogs, which are placed on the outside as guards. They live chiefly on rice, bread, fruit, and plain water, and their principal employ is hutbandry, or breeding beas and filk-worms.

The Ares of the men is only a long piece of coarse cloth wrapped round their shoulders, and falling down to their anclest, and a cap of the fame. The women wear a piece of woollen stuff that covers them from their shoulders to their knees; they braid their hair, and adorn it with glass beads and filhes teeth, they deck their arms and legs.

to their knees; they brisd their hair, and adom it with glaft beads and filhes teeth, they duck their arms and legs with bracelets of ivory, horn, and even wood; and blacken their checks, foreheads, arms, legs, &c. The children are fuffered to go naked till feven or eight years of age, when they cover them with a few rage, rather for ornament than deceney. The shelk or ohief of every tribe wears a cap of fine cloth, and a thirt and cloak all of one piece, hanging from the shoulders half way down the leg. These strabs profes the same religion, customs, and maners, as those of Arabia.

hers, at those of Arabia.

These people are of a swarthy complexion and robust habit of body, both which may be acribed to their roving and abstemious life. The men are active, the women fruitful, and the children healthy. When a youth would marry, he drives a number of cattle to the hut where the intended bride resides." The girl and her parents, on include the fact immediately confert all the young wonders and the conference of the country wonders are the conference of the country wonders. viewing the flock immediately confent; all the young wowhen of the adowar or village are then invited to the feaft: the bride is afterwards placed on ahorfe of the bridegroom; and led home amidft the thours of all prefent. When the and led home annualt the thouse of all prelent. When the arrives at the door of the bridegroom's hut, a mixture of milk and honey is given her to drink, while a nuptial forg is fung.. She then alights, and is prefented with a flick, which the thruths into the ground, and repeats fome lines to the following purport. "As this tlick is fallened in the earth, fo I am in duty bound to my hulband; as nothing but violence can remove it, fo death alone finall force me from his love." She then drives his facek to water and back season to them her williaments to reform and and back again, to thew her willingness to perform any duty he may affign lier. These previous ceremonies being settled, all the company enter the hut, and the evening concludes with the greatest festivity that these poor people are capable of enjoying. Subsequent to the marriage, the capable of enjoying. Subfequent to the marriage, the wife is obliged to wear a vail, and never fit from the hut for the space of a mouth, and is excluded from all con-cern in and knowledge of public affairs ever after that

I he Moors here are armed with a zagay or thort lance, and a feymitar, or broad cutlafs: they are of a warlike difpolition, excellent horfemen, and fometimes give the government great trouble: but are allo great thieves, fo that it is dangerous travelling without a marabout or prieft in company, to whom they fice fuch respect, that when they fee a purion thus attended, they will not attack him.

Of all the pirates in Africa, the Algerines, are the most

Of all the pleaces in Arrica, the Algerines, are the more cruci and dangerous: they are also base, perficious, and rapacious to the last degree; no oaths or ties, human or divine, will avail to bind them, when their interest interferes; in short, notwithstanding the respect they pretend to pay to Maliomet their prophet, gold is the only idel they worship. The people who reside on the coast are equally savage to such as unfortenately fall into their hands by thisweek 1 so that it appears the Algerines are as much strangers to humanity as they and to an elegant taste or po-

lite behaviour.

lite behaviour.

Algiers retains the title of a kingdom, though in fact it is but a republic, as their public ordinances swince, which run thus to the great and fmall members of the mighty and invincible militia of Algiers," &c. This alteration was caused by the tyramsy of the Turkish bustias, who were at length deposed by the militia and junifacies, who put up a dey of their own cluting; when stee Ottoman Porte, that they might not run the risque of losing Algiers intirely, found themselves upder a necessity of ratifying this regulation. The janifacies now became extremely powerful, as they formed themselves into a divan, and always elected a dey; but this dignity is a very precarious station, for by the manner of election, a dey is skelom chosen without much tunnult and bloodsted ine is always in danger, from the nature of his office; and select and early the miner of his office; and select and selection of the memory of the office; and selection is always in danger, from the nature of his office; and selections are the selection of the memory of the office; and selection of the memory of the office is always in danger, from the nature of his office; and feldom dies a natural death, which is owing to the difposition of those about him.

The age of the januaries is the next officer in dignity and power: he only enjoys his post two mouths, and then retires upon a pension. The other officers of importance are, a secretary of state, twenty-four chiah basses, or colonels subordinate to the age; eight hundred bolluk basses, or senior captains, and four hundred oldak basses, or lieutenants. In all these officers, the right of seniority is firicity observed in Algiers; for a fingle infringement in this effential point would immediately cause a revolt among the foldiery, and perhaps cost the dey his life. Befides the above, there are purveyors to the army, a body of guard to the dey, &c. and the officers to the Turkish forces, who are diffinet from the reft.

The people of Algiers in general use a compound of Arabic, Moresco, and the remains of the antient Phoenician languages; but all public business is transacted, and records are kept in the Turkish tongue, though most of the Algerines of all denominations understand the Lingua

Though most of the Algerines are fond of the piratical Though most of the Algerines are fond of the piratical reade, yet they admit free. Christians, Jews, Arabians, Moors, &c. to trade in filk, wool, cotton, leather, carpets, &c. in the country. They are also allowed to import gold and fiver fluss, damasks, cloths, spices, tin, iron, brass, lead, quickfilver, linen, cordage, fail-cloths, bullets, rice, alum, tartar, cochineal, sugar, sop, cotton raw and spun, aloes, copperas, brazil, logwdod, arsenie, vermillion, gumlack, opium, sulphur, anise and cummin seeds, farsa-parilla, frashinense, ealls, innew, paper, combs. cards. parilla, frankincenfe, galls, honey, paper, combs, cards, dried fruits, &c.. And they are allowed to export offrich feathers, wax, hides, wool, copper, rugs, filk faftes, embroidered handkerchiefs, dates, and Christian slaves, who, for large ranfoms, are permitted to be fent home. commerce is greatly injured by the oppressions of the government, the suspicions of the merchants, who are always afraid of being deprived of their properties, and the perfidy of those who carry on the trade.

The three chief ecclesiastics are extremely reverenced

by all: these are the musti, the cadi, and the grand mara-bout. The first is the high-priest of their religion: the second the supreme judge in exclesiastical causes, and such civil matters as the civil power does not interpose in; and the grand marabout, their great living faint, or hermit, or rather the general of that order who profess themselves hermits or marabouts: the last have an inconceivable influence both on the government and the affairs of every prience both on the government and the affairs of every pri-vate man in the kingdom, as upon all occasions they take advantage of the weakness and superstition of the people, and enrich themselves by their folly. The three ecclesi-astics may be distinguished by the largeness of their tur-bans: they fit in the divan, a little below the dey, on his right hand; and when they enter the assembly, he rises up and embraces them; but though they are advised with upon important occasions, they have no vote here. The di-van confiss of near two thousand officers and foldiers, and

of none but the Turkish soldiery.

Justice is venally administered, favour publicly fold, and

corruption fo general, that it is not looked upon as a vice. The usual punishment at Algiers for offences not capi-tal, is the bastinado, which consists often of some hundreds of blows over the foles of the feet, the calves of the legs, the buttocks or belly, with an unmerciful cudget. In capital cases the Turks are strangled with a bow-string, which two people pull different ways with all their strength: but the various deaths the poor Christian saves are put to,

that offend thefe batharous pleases, are almost innumerable 1 impaling, and burning, or sather, roasting, the unhappy fufferers alive, are but two frequent on their attempting to make an estape, especially if any. Turk is killed in the fourfile; but the work of all deaths, is the throwing them off the walls of the tewn upon iros hooks, on which they are carched by the jaws, by the ribs, or fome other part of the body, and hang in the most exquisite torture for feweral days before they appire; hus this, it is faid, has not been excented for many years I however, we find there have been instances of the crucifying Christians, and nailing their hands and feet to the walls within these few years; to which they have been provoked by reports that were spread of some of their Christian neighbours having been equally cruel to the Turks they had taken. A Moor convided of burglary hath his right hand cut off, and fattened about his neck, and then he is led through the city on an ass with his face towards the tail; persons of diffinction, for crimes against the flate, are placed between two boards, and fawn afunder. Woment deterfied in adultary are fastened by their hecks to a poles, and held under that offend thefe bacharous pirates, are almost immumer#. tery are faffened by their necks to a pole, and held under water till they are fusfocated. And this leads us to give fome account of the condition of the Christian slaves at

but he examines into the quality and circumfrances of all his prifoners; and, if he imagines they do not give him a just account of themfelves and their comrades, he orders athem to be beltinadeed on the foles of their feet till they do. Having got what information he can, he brings them on shore after he has firipped them almost maked, and carries them to the death hours, which the Emistage conflicts. ries them to the dey's houle, whither the European confule immediately repair, to fee if there be any of the prifoners who belong to their refpective nations, who are at peace with Algiers 1 for, in that eafs, they re-claim them, pro-vided they were only paffengers but, if: it be proved the prifoners ferved for pay on board the fhips of any nation

at war with this government, there is no way to get them releafed, but by paying the full ranfom.

The matter being fettled between the dey and the con-I he matter being fettled between the dey and the con-fuls, which of the prifoners shall be set at liberty, and which of them deemed flaves, the dey has his choice of every eighth slave, and generally takes the masters, sur-geons, carpenters, and most useful men belonging to the respective prizes: and, besides his sighth, he lays claim to all such priloners as are of any quality, for whom a swing-ing ransom may be expected: the rest are left to the cap-ter and their courses, and usually excepted to the captor and their owners, and usually carried to the befiftan, or tor and their owners, and unually easiers to the quality, the flave market, where the crief proclaims the quality, the profession and circumstances of each of the unhappy captors, and the respective prices set upon them. They are led afterwards to the court before the dey's palace, and fold by auction in his prefence, to the best bidder 1 but whatever-is given beyond the first price set upon them belongs to the government: the captors and owners have no more than

n

the first price, which is divided equally between them.

The women throw a vailover them when they go abroad, fo that they are unknown, to all but the slaves who attend them. Some are carried in litters made of offer twigs and covered with painted cloth, but fo low that they are obliged to fit crofs legged in them: this mode of travelling is used by both fexes in long journies, particularly pilgrimages, as the traveller can fee and not be feen, and travel without being annoyed by wind, dult, rain, heat, &c. The women in general lead a life of indolence, their principal employment being drefling, folling on their fofas, bathing, chatting, vifting the tombs of their relations, and fauntering in their gardens. Then men spead most of their time with the women in their gardens, in conversation, drinking

coffee, fmonking, &c.

The Algerines, by their law, may have as many wives as they pleafe, but they usually content themselves with two or three at the most. They seldom see them before rwo or three at the floor. They letdom fee them before marriage, but have their description from a female go-be-tween. When the marriage is agreed upon, the bride-groom fends a prefent of fruits and fweetmeats to the bride, and gratifies her relations with a feaft and a mufical entertainment. On the nuptial day she is conveyed, richly dressed, to the house of the intended bridegroom, where another entertainment is provided, and the marriage con-

When any of the Algerines are fick, they are attended and nurfed by persons of their own sex. The physicians are very ignorant; and if they find their patients on the point of death, they turn them towards the cast. On the death of a person, the corpse, after being washed, and clad in a shirt, drawers, silk robe, and a turban, is laid in a kind

of square cosin, and carried on mens shoulders by rheath of poles to the grave, attended by the relations, friends, &c. Mourning is expressed by the women going vailed for forme stays, and the men wearing their beards for a month; during three days after the interment of the body, the nearest relations wist the touth, distribute aims to the poor, and suffer no fire to be lighted in their houses; the better fort of people have epitable, or suitable passages from the koran upon their tomb-stones, in which, as with us, the dead are complimented with virtues which they never possessed.

iteed are complimented with virtues which they never por-felled, that the living may be flattered in the fuppored me-zies of their deceased relations and friends.

The militia who elect their dey, are all natural Turks or renegado Christians, admitted into those troops generally denominated janisaries, and amount to about twelve thou-fand men; these are, by sonie, stilled the nobility of Al-giers; and certain it is, that the frequent revolutions that happen at Algiers, are brought about by this class of people chiefly; they are but sew in number indeed, com-pared with the native Moors; and yet they do tyrannize over the natives in a most insolent manner. On the con-trary, in the empire of Moreecto, the Moors govern every thing, and with not suffer the Turks to have any share in the government. The Moors here are failed to be a cowardly and mean-spirited people, in comparison of the Turks; and mean-spirited people, in comparison of the Turks; who have defeated armies of them, both in Morocco and who have defeated armies of them, both in Morocco and Tunis, of fix times their number, and flormed and plundered both their espitals within a very few years, compeling their respective princes to accept of such terms as the deys of Algiers were pleased to impose on them. The readous of which superiority is supposed to proceed either from that fubmission the Turks have always exacted from the Moors, whereby the latter are in a manner disprirted; or that the Algerine Turks, being all men of sword, engaged perpetually in the most desperate services by sea and land, and, dreading no dangers, are an over-match for all their neighbours, who endeavour to live in peace: but, from what cause soever this superiority proceeds, it is surprising to observe, that less than ten thousand of the Algerine Turks should dare to march through great part of the empire of Morocco, and make themselves malters of the capital city of Fez one year, and afterwards of Tunis the empire of Morocco, and make themselves matters of the capital city of Fea one year, and afterwards of Tunis the next. But, it is certain, the native Moors have as great a dread of these pirates by land, as our defenceles merchants have of them at sea, and tremble at the very name of an Algier Turk. Part of the Algerine soldiery serve as marines on board their veffels; about one thousand of marines on board their veiles; about one thousand or them do garrifon duty, and part are employed in foment-ing differences among the neighbouring Arab princes. The dey can bring one thousand Moorish horse into the field; but as they are enemies to the Turks, they are little trusted. The Algerines are more formidable at fea, than any other power on the coast of Barbary; and the fea-faring

people are in great efteem, on account of the prizes they frequently bring in 1 but fill they have no there in the election of a dey: the fathers of the trinity affire us, that election of a dey: the fathers of the trinity affure us, that the Algerines have no left than five and twenty ships of war, from eighteen to fixty guns, besides a midlitude of simaller cruising vessels; and, as they have very little timber in the country, nor any naval stores whatever, their ships are either those they take as prize, or in part built, and rigged out of the materials of such thips as are taken: however, they never suffer the number of their ships of war to be diminished; but, if any of them are loft, or decayed, diminished: but, if any of them are lôst, or decayed, they immediately add as many more, by means of the military stores with which they are supplied by the Europeans, who purchase their friendship with the implements of mischief, and court them not to make depredations on their trading ships, by furnishing them with the power to do it: the English consul, in particular, provides them with powder, balls, bombs, fire-arms, anchors, cordage, &c. takes in return, corn, oil, provisions, and other necessaries for the garrison of Gibraltar; we must however consess, that the success as successed from time to time to this place. that the fuccours afforded from time to time to this place have been of unspeaked from time to time to this place have been of unspeaked fervice to it during the present tedious siege of that fortress by the Spaniards. The Algerine failors are composed of Couloglies, Moors, renegadoes, Christian slaves, &c. but all the officers must be Turks. The failors in general are extremely filthy, and Turks. The failors in general are extremely filthy, and even book of their nathness, pretending to despise the nicety found in most of the vessels belonging to the Chris-

We shall now proceed to give some account of the history and revolutions that have happened in Algiers, from the time that the Romans were expelled the Algerine ter-ritories by the Vandals and other northern barbarians, who held them from the year 427 to 558, when they were

conquered by Belifarius, the emperor Justinian's celebrated general.

From the above-mentioned period, they continued subject to the Greek emperors till the year 63, when the whole country was over-run by the Araba, who remained mesters of it till togs; when Alel-Texein, of the Zinthagiant were driven or the continued in his samily till the wealth century, when the Zinthagiant were driven out by the marabouts. This priestly race was foon diverted of power by the Benimerini, who in the thirteenth century, were filtewise deprived of what they had conquered, by the sharifs of Hascen, who divided Algiers, and other parts of Barbary, into several petty kingdoms; but falling out among themselves, Ferdinand V. kingdo Artagon, took advantage of their civil diffensions; and in the year 1505, by advice of his prime minister cardinal Ximenes, sent a powerful armament to Algiers, under the command of the count of Navarre. This nobleman soon made himself master of Oran, Bugia, and some other places. In this exigency the Algerines applied to Selimi Euremi, an Arabian prince for assistance; but though he aided them to the utmost of his power, he could not prevant the count from making the city of Algiers tributary to the court of Spain. This subjection continued till the death of king Ferdinand, which happened in 1516, when the famous pixte Barbarossa undertook their deliverance; but, instead of vanquishing their enemies, he exiquered the kingdont of Tenes and Tremesen, and established his power for pirate Barbaroffa underrook their deliverance; but, inflead of vanquifning their enemies, he ex-squered the kingdont of Tenes and Tremefen, and elabifited his-power for firmly as to be dreaded not only by the neighbouring flates, but by the European; till, in 1517, the emperor Charles V. prepared to oppose to, and to for the young king of Tremelen on the throne, of which by had been deprived by Barbaroffa. The Spaniards and Arabs reconquered the kingdom of Tremelen, after a laving totally defeated the army of Barbaroffa, who was himself than, and his head carried from the field of battle in triumper appon a large.

Barbaroffa's defeat and des n occa oned great conflerna-Barbar-da's defeat and des' occi-oned great confirmation at Algiers; but the people determined to chuse his
brother Hayradin Barbarosa king and high admiral in his
room. But Hayradin, fearing that he should not be able
to support himself against the numerous enemies that surrounded him, and his own domestic foes, applied to the
Grand Signor, and proposed to cede the Algerine kingdom
to him, on condition that himself should continue to rule
it as viceroy, and beaffisted with some Turkish forces.
These proposals were gladly accepted by Selim L'and a body
of sorces immediately dispatched to the affistance of Hayradio.

Being now become formidable to the Moors and Arabians by land, and the Christians by sea, Hayradin laid bians by land, and the Christians by sea, Heyradin laid siege to the Spanish forr, which was a continual thorn in his side, and took it by storm, after a brave resistance. Being now secure from enemies, he turned his thoughts to improve he larbour of Algiers; which he did effectually, by he being a strong mole for the safety and convenience of the shapping. Upon this great work, thirty thou said Christian slaves were incessantly employed till the whole was completed the afterwards repaired the forr, and put a strong garrison in it, and thus rendered Algiers more secure than ever it had been, against the attack of an enemy. enemy.

Hayradin was now raifed by the grand Signor to the dig-nity of captain baffa of the Ottoman empire, and Haffan, a a Sardinian renegado, appointed baffa of Algiers in his flead. The latter purfued his piracies with great fuecefs, and even made depredations on the coalts of the ecclefi-ability! One. This induced the rate to the table the present aftical state. This induced the pope to exhort the emperor Charles V. to put a stop to the ravages of the Algerines; which that monarch immediately undertook, and soon set fail at the head of a formidable armament, confifting of one hundred and twenty ships, twenty gallies, a large train of artillery, thirty thousand foldiers, and a great number of artillery, thirty thousand soldiers, and a great number of volunteers of several nations, among whom were many knights of Malta. These forces being landed, the emperor built a fort on an eminence, which to this day goes by the name of the emperor's fort; he then closely invested the city, and greatly distressed the inhabitants, by turning the course of the streams that supplied it with water.

After these operations, the Algerines looked upon their condition as so desperate, that the members of the divan were upon the point of surrendering the city, when a poor ennuch, named Yuses, who was looked upon as a lunatic, appeared in their presence, and thus addressed them:

"My lords, I am the poor Yuses, the slave of slaves, and most abject of Mussumen, persecuted by the great, represented.

prefented as a madman by our marabout, on which account not only my advices have been rejected, but myself treated ignominiously; the cadi, who is the judge of the law, hath often made me undergo very severe, publish punishments; and why? Becaute the Almighty, whose ways aregto us unfearchable, hath fometimes given to me an infight, into furarity; and what I have hitherto foreteld, hath been thought unworthy of their regard. I have, remained filent towards them that despited me, but have informed those poor people, who plitted and relived me, of things of the greatest stousent to them: but at this juncture, Hassan, being ruler, of our city, the public danger forters me to freat; here is a powerful facet of insidels, whose welfels are crouded with armed men, and she have come as suddenly upon us as if they hadrisen out of the fault of the danger forters me to freat; here is a powerful facet of insidels, whose welfels are crouded with armed men, and she have come as suddenly upon us as if they hadrisen out of the danger forters me to freat; here is a powerful facet of insidels, whose welfels are crouded with armed men, and she have come as suddenly upon us as if they hadrisen out of the out of the duly as the machinations of men, hath quite other thoughts; he will release his people out of the hards of idulaters (for 60 the Mahometans call, the Roman Catholics) in spite of all their saints, be they ever so many. Lord Haffan, and you his ministers, and great men of the kingdom, and learned men in the law, I call upon yo it or take courage, rely for this once upon the despiced and abject. Yusef; and be assured men in the law, I call upon yo it or take courage, rely for this once upon the despiced and abject. Yusef; and be assured men in the law, I call upon yo it or take courage, rely for this once upon the despiced and abject. Their arms and equipage will fall to our share and as they have already employed a vast number of hands in crecking forts for our future. Lesence against themetowes, so a strial number only

flaves to us in the place they thought to conquer.

The members of the affembly were diverted by this fingular speech from their intended design of delivering up the city: and what is still more extraordinary, every circumstance of the prediction was verified within the month, the greatest part of the emperor's sleet being defreyed by a violent tempest, and his army greatly distrassed by the incediant rains, which occasioned torrents of water to pour down, from the mountains, and overwhelm his camp. These distaters obliged him to raise the fiege, which he did with precipitation, leaving behind him tents, baggage, artillery, &c. and betaking himself to his ships; which the Algerines no sooner perceived, than they fell upon his troops while they were embarking, cut many to pieces; and took a great number of prisoners. In sine, the emperor's whole loss amounted to one hundred and twenty ships and galifies, three hundred officers, and above twelvs shousiand foldiers or failors killed or drowned, and near as many taken prisoners; with respect to the latter, the Algerines in derison put many of them up to public fale, at an onion per head. The Algerines rewarded Yusef siberally, looking upon him as a faint; and they have ever fince been great admirrers of the art of divination, and asuch addicted

to the fludy of astrology.

Not long after this event, Hassan died, and was succeeded by Hass, an officer of the militia, who was, however, obliged to resign in favour of Hassan, the stor of Hayradin, the brother of Barbaroffs; the latter being nominated by the Ottoman Porte. In the beginning of the reign of this prince, the Spaniards obliged the Algerines to evacuate Tremester, but a few years afterwards they fabdued and plundered it. Hassan was afterwards, by the intrigues of the bassa Rustan and Salha Rais, deposed, end a creature of theirs advanced to the throre in his stead. This prince rendered tributary several Numidian provinces, and returned with sifteen cause loads of gold dust, and other valuable spoils; he afterwards died of the plague, and was succe led by a Corscan renegado, called fassan Corso, who was murdered by Tekelli, a Turk. I his latter tyrannized but a short time, being killed by Yusef Calubres, who succeeded him, and reigned only fix days, being suddenly carried off by the plague.

The fopreme dignity was now held in trult by Chajah, a Turk, till the pleafure of the Porte was known; when Haßen, who had been depofed by means of Ruttan and Satha Rais, was reftored by the Grand Signor's order, and Chajah quietly refigned the government to him. This prince invaded Tremelen, but was totally defeated; the enfoing year, however, made fome amends, for, the Spaniards making an attempt upon Moftagan, he gave them a dreadful overthrow. In the fight, the brave count d'Æcondela and his fou Don Martin de Cordova, with many other officers, and a great number of private men, were flain,

and twelve thouland Spaniards; including feveral mobilemen and gentlemen, were made captives that Hasian, becoming obnosious to the janifaries, was sgain depofed, and fent. w. Conflantinople in trois; when Bednoc Huffan, agt of the janifaries, and Couza Mahomet, the general of the land-forces, took upon them jointly the office of deputies to floperintend, the affairs of government. Soon after a new viceroy, named Achmet, arrived at Conflantinople, who began his reign by fending the two deputies to that city, where they were beheaded. Achmet died in four months; and his lieutenant Yajas governed the kingdom four more, till the will of the Ottuman court could be known, when Hasian was a third time appointed to the fovereignty; such was the friendship which he slove than II. entertained for him, and the esteem which he always professed for him father and untel, the two famed Barbarosias.

Haffari was no fooner reinstatedon the shrone of Algiers, than he raised a greater armament than had ever been cot-lected by any of his predecessors; his army consisted of sincera thousand Turks; reinegadoes, see, one thousand spatis, and ten thousand harfs; and the flost of thirty-two gallies and galliots, and three French wells indea with provision; with this force he intended to smale himself nuster of Marsaquiver, and drive the Spatiants from thence, this he had nearly effected, when a powerful destrained upon the coust, under the command of the celebrary Genories edmiral Doris, which obliged him to raise the sign with precipitation. The court of Constantinople now growing jealous of him; he was obliged finally to refign his dignity; when retiring to that city with all his wealth, he died about three years after, in the eighth year of his bassachip, and the fiftieth of his age.

Mahomet, the fuecessor of Hassan, was a public-spirited prince, and became very popular on many occasions; in particular, he incorporated the janisaries and Levantines, which proved the first sep towards rendering Algiers independent of the Ottoman Porte. In this prince's reign; a bold Spanish adventurer, named Gascon, 'made a romantic attents on Algiers, but he incorporate traisfance to be interested and the content of the Ottoman Porte. In this prince's reign;

Mahomet, the fuecessor of Hassan, was a public-spirited prince, and became very popular on many occasions; in garticular, he incorporated the janisaries and Levantines; which proved the first step towards rendering Algiers independent of the Ottoman Porte. In this prince's reign; a bold Spanish adventurer, named Gascon, 'made a romantic attempt on Algiers; but, being raken prisoner, he was put to a cruel death.' The Grand Signet, however, thought proper to depose Mahomet, and appoint a renegado, called Ochali, or Halibassa, in his room. 'This prince' should be a cruel death.' The Grand Signet, however, thought proper to depose Mahomet, and appoint a renegado, called Ochali, or Halibassa, in his room. 'This prince should be a compared to the famous battle of Lepanto was the only Mahometan chief who gained the least reputation: he was neverthele's soon after deposed by the Porte, and Arah Achmed appointed to the government in his stead. Within three years the latter was recalled, and Ruraurdan Sardo placed in his room, who contributed to the expulsion of the Spaniares from most parts of Barbary, and affisted Moley Moloch in the coaquest of Fez; but being recalled from Algiers, how as fent as bassa of Tunis, and, in his stead, 'Haissan 'Verfedic was appointed to the kingdom of Algiers, 'This prince reigned better than three years; and heng recalled, on account of his uncommon extortions, an Hungarian renegado, named Jasser, succeeded him, and arrived at Aligiers about the end of August 1580, when thatticy saffered a dreadful samine, occasioned by his predecessor having monopolized the principal necessaries of life. 'Immediated a dreadful samine, occasioned by his predecessor having monopolized the principal necessaries of life. 'Immediated a three occasions: yet the rapacions Halisan found means to make so many friends at the coort of Constantinople, that the laster was recalled, and himself again appointed.

other occasions: yet the rapacions Hasian found means to make fo many friends at the coort of Constantinople, that the joir Jastevan of Algiera. The first thing he did, after was recalled, and himself again appointed to the government of Algiera. The first thing he did, after his restoration, was, to fit out a considerable sheet, with which he made irruptions on the coasts of Sardina, and plundered other parts of Christendom; but becoming once more displeasing to the Ottoman Porte, be was again recalled, and poisoned soon afterwards.

The above tyrant was fucceeded by Mommi Arnaud, who g. w fo bold, that he effected what no corfair had ever before been confident enough to attempt, that is, to pair the flraights of Gibraltar. After entering the Atlantic Ocean, he proceeded to the Canaries Hands, which he plundered, and returned to Algiers in fafety, nowithflanding a Spanish fleet of eighteen thips was ordered to watch his return; but he took the opportunity of repaffing the flraights in a fformy night when the Spanisrds fought fields in a fformy night when the Spanisrds fought fields in a fformy night when the Spanisrds fought fields from Algiers to the Tunisan government.

Aclimet invaded the Christian territories, reigned three years, and then was ordered to the government of Tripoli, to make room for l'idir bassa, who, in the year 1592, was recalled, and succeeded by Shaabanbassa, the latter

ruled Algiers about three years; when being ordered to Confrantinople, his kindman Mudapha was placed on the throne. This printee was supplanted four years afterwards in favour of Hidir baffa; who was re-appointed to the government of Algiers by the Potre. Hidir had no foonit regained his power, that he actored aftern thousand death from Mudapha, before he fet fall for Confrantinople; and ruled the Algerines with his usual tyranny, opprelling the poor, and plundering the tich with the usual tyranny, opprelling the poor, and plundering the tich with the usual tyranny, opprelling the poor, and plundering the tich with the usual tyranny, opprelling the poor, and plundering the tich with the usual tyranny, opprelling the poor, and plundering the tich with the usual tyranny, opprelling the poor, and plundering the tich with the usual tyranny opperation. All the times the content uninfiry thought proper again to recall that tyrant and to re-appoint Mudapha occe more. The latter foon returned to Algiens, stripped Hidir of the principal part of his ill-get wealth; sent him to Conflantinople, and afterwards ruled the people with so much justice and moderation, and acted upon all oceasions with soch generosity and humanity, that he was beloved by all ranks of people, and the station was never more prosperous or happy than while he conducted the public affairs.

We have new brought the history of the Algerines down to the latter end of the sixteenth continy; all that now remains wotthy of notice, is, that in 1682 the Algerines and a streamy of alliance with England, and in the same year plundered the French coasts; which occasioned the court of France to find a sheet against them under the command of the marshal du Quesse, who cannonaded Algiers, but a storm arising, his ships received some considerable migrates which obliged him to return home. He was no some some the same sense of the same sense in the same sense and favage cruelty, murdering all the French captives, and firing off the conful of that nation from the mouth of a mring on the control of that nation from the mouter of a mortar. This inhumanity the Freuch admiral punished by deftroying all the fhipping and fortifications, and all buildings in the lower, with molt of those in the upper part of the city; that is in fact, all that his canhon or hombs could reach. Having done as much mitchief as he intended, he failed home, and a peace was foon after concluded, he tailed home, and a peace was foon after concluded between the two nations.

The Algerines, in 1686, entered into a treaty with the English (or rather renewed one entered into in 1682,) which was often broke, and often renewed in subsequent which was often broke, and often renewed in subsequent years; till it was thought proper to challife them for their perfidy; when captain Beach stacked seven of their frigates, drove their on shore, and burnt them. This brought them to their reason: the treaty was revived in 1700, with the addition of three articles; and soon after two other articles were added, in a treaty with Sir George Byng, asterwards lord viscount Tortington." But the Algerines were never punctual in the performance or due observance of their treaties with us, till we become possessed the state of the immortant forterestes of Gibraliar and Minorca. the servance of their treaties with us, till we became policified of the important fortreffes of Gibraltar and Minorca, the latter of which has lately fallen by coinquest into the hands of the French and Spaniards; for till we had possessing their faith was a farce, and their words but wind; but our having command of the straights, by means of those impurtant acquisitions, obliged them to do those things through fear, which they would never be prompted to fearly means of these services of inserting the services of the servic to from motives of integrity.

Admiral Baker, in 1716, renewed and ratified all the for-mer treaties with Algiers, in the fame manner as he did with the states of Tunis and Tripoli, of which we shall

ake notice in the fequel.

In July 1775 the Spaniards attacked Algiers with a very formidable fleet and army; but, by the misconduct of No. 23.

their principal officer, the Algerines obtained a conquest, and the Spanlards were obliged to retire with great precipitation, after a loss of shout eight hundred killed, and two thousand woutheds, and two thousands were the step in t fince that time, though they have continued the

SECT. VI.

Treats of the profest flate of the kingdom of Tunis, its boing-darlos and extent, chief towns, inhabitants, their cuffeines, Ger

derivined extent, chief tevens, inhabitents, their cultures, Grand Tribalis, on the east; by mount Atlas, on the fourth; and by the river Guadilbarbar, which feparates it from the kingdom of Alglers; on the west; lying between thirty and thirty-free degrees and a half north latitude, and extending near two hundred miles from west to east. This kingdom was antiently the republic of Cartiage.

The chief rivers are, The Guadilbarbar, already mentioned, which rifing in mount Atlas, rains dorthwards, and discharges sitelf into the Mediterranean near the ideal of Tabarca. The capes, or capitts, which rifes also in the mountains of Atlas, and runs north-cast, falling into the Gandilbarbar, already mentioned the state of Capes. Mejerads, which rifes in Mount Atlas, and runshing northwards, divides the kingdom of Tunis almost in two equal parts, discharging itself into the Mediterranean near the town of Tunis almost in two equal parts, discharging itself into the Mediterranean near the town and island of Golettar There is also the Zaine, which feparate the Tunisan from the Algerine dominions; the Miliana, which forms the bay of Tonis e and the Gabbs, or Triton of the animals. The chief towns are, Cairvan, or Kayr-wan, sinuated on the rivert Mejerada, latitude thirty two, said to be the fish town the Swacens built in this country, and most remarkable at present for being the burying place of the Mahometan princes and great men. Urbs, or Tuburbo, sinuated on the Mediterranean, in Africa, or El-Melidia, stusted on the Mediterranean, in

miles fouth west of Tunis; remarkable for the marnie pillars, images, and other Roman antiquities sound here. Africa, or El-Melidia, stuated on the Mediterranean, in latitude thirty-sive, ninety miles south-east of Tunis, said to be the Advanceum of the Romans. Susa or Ruspinsa, situated parity on a site, and partly upon the ascent of 4 rock on the Mediterranean, twenty-sive niles to the cast-ward of Tunis; is lies in ruins at present, and is said to ward of Tunis: it lies in ruins at prefent, and is faid to contain med antiquites than any town in the kingdom; here is a small harbour, where the gallies and final fhips belonging to Tunis frequently lie. Modern, geographets divides taits kingdom into eight difficies, viz. Tunis Proper, Bytta, or Catthage and Goletta, El-Medea, Sufa, Kayr-wan, Ramamet, Bizerta, Porto Farino. We shall describe the principal provinces, towns, and cities.

The city of Tunis, the capital of the kingdom, is fituated on a first which user a fractional lake, in thirty-fix deared on a first which user a fractional lake, in thirty-fix de-

The city of Funis, the capital of the kingdom, is fitted ated on a fine plain near a spacious lake, in thirty-six degrees and a half, north latitude, almost over-against the island of Sicily, and but a few miles from the place where the samous city of Carthage stood. It is about three hundred miles from Algiers, and three or sour leagues distant from the Mediterranean, is a large, populous city, and a place of some trade; the walls about a league in circumserence, but of sto great strength. The basis's palace, the mosques and bagnios are the most temarkable buildings in it. The houses are all of stone, and but one story high; those belonging to the better fort of people are built about listle squares, adorsed with pillars, galleries and sountains; but have no other light than what they receive from the doord that open into the squares; and the roots of the houses are that open into the fquares; and the roots of the houses are flat and terraced, as in other Mahometan countries. When Charles V. took it in the year 1535, it is faid to have con-tained an hundred thousand men, befides women and chidren: but this, we prefume, must comprehend all fuch Moors as sled thither for protection on this invasion of the Christiane: certain it is, the numbers are not near so great

The grand mosque is remarkable for its bigness and magnificent tower, but in other respects it merits not attention, as the architecture is invirely in the Turkish taste. The city has five gates, viz. Valonk, Carthage, Elboary, Affeya, and Elinenar-gate; and without the walls are the Turkish separates, which have an agreeable look from the intermixture of tharble totales, and slower-plans. The head's palace is a magnificent square structure, with sour bey's palace is a magnificent square structure, with four superb gates, one at each front, and turrers at each end. The galleries are rich and elegant, the courts capacious, and the spartments very fpacious, and handfome; but

the gardens, though large, are laid out in a bad tafte. In the treasury chamber, besides other valuable articles, the book containing the Tunisian code of the laws, is kept. The city is defended by a strong castle erecked on an eminence, by the fortest Goletta, and by a fortrest built on an island in the neighbouring lake. The colleges and academics, are numerous and large; the janisaries barracks spacious, the custom-house tolerably handsome, and the eachange for the inetchants very convenient. The dock is tolerable, and the aftenda, pretty well stored with march. is tolerable, and the arienal, pretty well flored with mate-

rials for the building of gallies.

There is a very capacious piazza in the fuburb, that formerly contained about three thousand fhops, but their number at prefent is much diminished:

The flaple commended to the flaps of the flaps of the flaps. modities are woollen, and linen, in which articles the ma-

nufacturers exect all others in Barbary.

The inhabitants of Tunis are a mixture of Turks. Moors, Arabians, Jews, and Christians of various nations, but their general character does them fingular honour, as they are reputed to be more polite and juft, rather kinder to their flaves, and much lefs haughty, infolent, and merenary than most of the other inhabitants of Barbary; in fine the generality of them prefer the fruits of honeft industry to unlawful plunder, and rather than feek wealth from piracy, endeavour to obtain it by commerce. Both fexes are clean in their persons, and neat in their dresses, use persumes very much, and bathe frequently: the women, when they go abroad, are vailed, but at home they are permitted to be feen by, and converse with frangers.

Palms, figs, dates, citrons, lemons, olives, &c. are very plentiful in Tunis, but there is a great fearcity of corn, and the inhabitants are not fecure of what little they raife; and the inhabitants are not lecure of what little they raile; for it is no uncommon thing, in harvest time, for the Arabs to come suddenly upon the husbandmen, and plunder the whole territory of all the ripe grain. The rich, however, are supplied by commercial means with wheat, with which they make fine cakes, and an excellent kind of vermicelli. The poor are obliged to content themselves with barley, and even that they cannot at all times procure; but when they are so happy as to obtain a little, they regale themselves, by making it into a dumpling, which they eat without cooking, only dipping it into a little oil and vinegar, or plain water if those are not to be got; they have, however, plenty of honey and fruits, but feldom eat meat, upon festivals, or some very fingular occasion.

Nabel is fituated in a low ground, at about a mile and a half from the fea shore, and nine miles from Tunis.

a half from the lea thore, and thine miles from a unis-lt is famous for its potteries, and a flourishing town.

Marsa or El-Mersa, was supposed to have been founded by queen Dido, one hundred and forty-one years before the building of Rome. Its name implies a haven. It is fituated where the part of antient Carthage shood; and contains a magnificent mosque, a capacious college, about cight hundred houses and several palaces, built by the most eight nundred noutes and leveral palaces, built by the most considerable Tunisians for pleasure, as the territory is exceedingly agreeable and fertile. This pleasant district was once the seat of the celebrated city of Carthage, the center of commerce, mistress of the sea, and rival of imperial Rome, when that city was in its most flourishing state.

Kommart, stands at a little distance from the ruins of antient Carthage, and about nine miles north of Tunis; it is a walled town, inhabited by fishermen and gardeners, who supply Tunis with fish, fruit, and sugar canes.

Ariana, is about three miles distant from Tunis: it is

a fmall village and inhabited by poor gardeners, who bring for fale, to that city, their fruits and herbs.

Arradez, is famous for its fine fprings and excellent baths: it is fituated on the road between Tunis and the gulf of Goletta.

Sonfa, or Sufa, is one of the most considerable cities in the kingdom, and the cepital of the province of the same name. It has a flourishing trade for oil, linen, wax, honey, and pickled fish. The town is situated on a high rock, behind which runs an extensive plain country, fertile in barley, figs, olives, fruit, and patturage. Though it hath greatly dwindled from its prifine grandeur, it is fill weal-thy and populous, and the inhabitants are polite and courteous to ftrangers. A Turkith baffa refides here; the fuperior people are merchants, warehousemen, and mecha-mes; the lower class are husbandmen, herdsmen, and potters. It has a good port, and pays twelve thousand ducate
to the governor of the province.

Monaileer, is a flourithing city, furrounded by flout walls,

and fituated on the extremity of a cape; the houses are handsome, but the inhabitants are extremely poor. city was famed in the Roman and Carthagian times.

Starce any veftiges are now remaining of Heraclea, a city on the lea-coast, built by the Romans, but fince de-

ftroyed by the Arabians. Kayrwan, or Carvan, though fituated in a barren defart, deflitute of fresh water, and without the least article for the fustenance of life, except what is brought in carts from feveral miles distance, is nevertheless one of the most populous and flourishing towns of the kingdom, and the ca-pital of a province of the same name. It is twenty-four miles from Sonfa, and has, about halfa mile from the town, a refervoir and a pond for the reception of rainwater; the inhabitants are supplied from the first, and the castle by the last; the waters of both, but more particularly of the latter, are unwholsome, and occasion many distorless roce only in the heaft; the water so the property of the latter. diforders, not only in the beafts, but in the human species. This city was rebuilt by Hukba, generalissimo of Ottoman or Hatman's forces, which last was the successor of Mahomet III. calif of Damascus, in the year 652, and had sent him from Arabia into these parts to make what conquests he could in them. Hakba having landed his forces in some of the neighbouring ports, made choice of this barren and defolate spot for the place of their rendezvous, and of the ruinated city for his retreat, which he accordingly caused to be furrounded with lofty and ftrong brick walls, flanked with flately towers; and, among other noble edifices, builtamoff magnificent mosque, supported by an incredible number of stately columns of the finest granate, two of which were of fo exquisite and lovely a red, bespangled all over with little white sports like the porphyry, that their price was reckoned ineftimable, and the whole flucture the most magnificent in all Africa. It had likewife a very con-fiderable revenue and endowments, and the title and privilege of a head metropolis, as being the first Mahometan molque built in this part of the world, upon which account it is likewise become the burial place of the Tunifian monarchs; and not only they, but all the grandees and wealthy men of the kingdom, are ambitious of hav-ing their remains deposited in it, from a superstitious notion, that the prayers of the head pontif and fuccessor of Mahomet will procure them a plenary pardon for their fins, and fend them by the nearest way into Paradise. The very city itself is held so facred among them, that those great personages usually pull off their shoes before they en-ter it, and cause some stately chapels and oratories to be erected over the graves of their deceased relations, and settle a yearly fum on some persons, not only to keep them in repair, but likewise to retain a number of idle priests and monks to refort thither at proper times. It is most probably upon the account of this superstitions concourse, and vast donatives, that this city is still so thriving, notwithstanding provisions are very dear and scarce.

Tobulba, is now but a very poor village, though it was once a confiderable city; and Gables or Capes, once a noble city, is in much the fame condition. The island of Jerba, which is the fouthern boundary of the balla's fummer circuit, is about twelve miles fouth of the latter. Hamamet, is fifty-one miles from Tunis by land, and

fixty leagues by sea: it is a small but opulent city, situated upon a promontory near the fea, and fo well fecured on the land fide by rugged and inacceffible rocks, that a very

finall expence would render it totally impregnable.

Biferta is fituated near the place where Utica formerly flood; thirty-feven miles north-weft of Tunis, and two hundred and forty west of Algiers: it is well tortified, particularly on the fide nearest the sea, and contains two particularly on the fide hearett the lea, and contains two towers to defend the haven, a confiderable magazine, and two large prifons for flaves; it has plenty of fresh water, and is well supplied with fish. Eight inconfiderable villages belong to the governor of this place, whose inhabitants, as well as those of biferta itelf, are miserably poor, though the territory is pretty settile; their only dress is a coarse cloth wrapped round their bodies, and anotherabout their heads in lieu of a turban. They are, however, admirable horfemen; but they do not floo their horfes, or use either bridles or faddles. The Biferrans are deemed by all travellers the most superstitious people in the kingdom of Tunis, and by some in all Barbary. They will not undertake the most trivial affair withour hanging a great number of ammulets or charms about them; and if they travel, they load their horses with the same kind of supposed securities, which are only pieces of parchment or paper inscribed with strange characters, and sewed in leather or filk. It is fituated in forty degrees ten minutes east longitude, and twenty-feven degrees twenty minutes

Porto Farino is feated to the west of the ruins of Car-thage, and thirty miles north of Tunis; this place is

ter. and much fallen from its antient splendor, and is at present oilly remarkable for its fine cothon, where the Tunisian navy is kept. The town is called by the natives Gar-el-Mailah, or the Cave of Salt, from the falt works in the vicinity. Lewis king of France, commonly called St. Lewis, died here on his expedition to the Holy Land: it is subject to the dey of Turiss, and lies in nine degrees cast longitude, and thirty-fix degrees thirty minutes north latitude. latitude.

latitude.

Tuburbo, or Urbs, is inhabited by Andalufian Moors: it is fituated one hundred and eighty miles fouth of Tunis, has a caftle with fome cannon, and a garrifon. Many vefliges of its former splendor are here found; and Maham bey, from the ruins of a magnificent theatre, caused a very lofty bridge, or rather dam to be erected, in order to raise water from the river Mejerda sufficiently high to water a beautiful plantation of oranges, lemons, citrons, pomegranates, nectarines, peaches, apricots, dates, figs, and other fruit-trees, which were fet in different spots, that they might grow without intermixing with each other. that they might grow without intermixing with each other. Between the castle and the town, a chrystalline stream of fresh water ran through an alabaster conduit, and turned feveral mills in its courfe, but this valuable work is now

entirely gone to decay.

Along fome part of the coasts of this kingdom, there are the fand banks, which hydrographers denominate frets, being very dangerous, as thips which approach too near are drawn in by the vortex, and often lost. The hot fprings in many parts of the country likewife deservemention. The water of those of Melkoutean and Mecreega, are exceedingly hot, particularly those of the first; but their excessive heat renders them unfit for bathing. The baths of Jereed, Cassa, and Zozer, are only lukewarm; but those of Seedy-Ebli and Elelma-el-Hammah are just

of a proper temperature.

There are feveral falt lakes and marfnes in this kingdom; and a mountain of falt, named Jibbel Hadilessa, which is and a mountain of fait, named fibbel Haddella, which is as hard as a rock, of a dark red colour, and bitter; but when it is walled from the precipices by the rains, it lo'es its bitterness, and becomes foft and white; befides the above, there are fome finall rocks of a bluith eaft, the falt of which fells at a high price, and is much admired. In this kingdom fome artificial curiofities are found,

In this kingdom fome artificial curiofities are found, befides those already mentioned, particularly a threefold inosaic paverment, which is a noble piece of workmanship, exhibiting a great number of objects in the animal and vegetable creation, beautifully diversified, finely variegated with the most admirable colours, and wrought with a symmetry that is truly associately of David; for the natives imagine that it is the sputcheral monument of a celebrated Moorith faint of that name. However, from the nature of the workmanship, it evidently aspears to be the fragment of the workmanship, it evidently appears to be the fragment of a Roman prætorium, which is also the opinion of Doctor Shaw

The amphitheatre of Jennine, or rather its fragments, is another magnificent piece of Roman antiquity: they confift of fixty-four arches, and four orders of columns,

comint of inxy-rour arches, and rour orders of columns, but have fuffered confiderably from one of the beys, who ordered four of the arches to be blown up; they have like-wife fuftamed great injury from the Arabs.

The maufoleum near Hamamet is an admirable building, in the form of a cylinder, vaulted beneath, and fixty feet In diameter; and the remains of the triumphal arches of Spaitla evince their antient magnificence.

or spatta evince their antent magnificence. Having thus given an account of the most remarkable cities and towns in the kingdom of Tunis, according to their modern state; we shall proceed to describe the antent and celebrated city of Catthage, the center of commerce, mistress of the sea, and rival of imperial Rome, when that city was in its greatest splendor.

Carthage was furpored to have been founded by queen Dido, one hundred and forty-one years before the building of Rome. This city flood on a gulf, in a peninfula of between forty and fifty miles in circuit. In the center of it was the citadel, called Byrfa, on the fummit of which was a towned definited to A. Effective of the peninful of the state of the s a temple dedicated to Æfculapius. On the land fide the city was defended by a very high triple wall, flanked with towers four hundred and eighty feet diffant from each other. The towers, walls, &c. contained flables, florehouses and batracks for twenty thousand foot, four thousand horse, and three hundred elephants, with the requisite food, fod-der, &c. which, though lodged within the walls, did not in the least incommode the trading part of the inhabi-

This extensive city had two harbours which communicated with each other, and had only one common entrance of feventy feet in breadth. The one was for merchant-flips, and the other for hips of war. The latter harbour, and the ifland of Cother in the midt of them, had apper-taining to them many magnificent warehouses full of ftores.

The number of inhabitants in the city of Carthage, at the beginning of the third punic way, was feven hundred thoufand; a prodigious number, confidering the many ter-rible blows they had received from the Romans during the first and second punic wars, as well as from their mercenaries betwist these wars, and in their destructive broils with Masinisa: the force they could bring into the field, as well as their power by sea, was very formidable; the sleet consilted of more than two thousand ships of war, and above three thousand transports; and the troops under Hamisear, against Gelou, of three hundred thousand

We are told by a modern author, that Carthage at this time was twenty-three miles in circuit, and that the temple of Apollo was fined with plates of gold, and the image of that fabulous deity was of maffy gold: the temple of Juno likewife, built by queen Dido herfelf, was extremely mag-nificent; but the treafures belonging to them, as well as

many other valuable articles, became the plunder of the Komans, when Scipio facked the city. The Cartinagenians were addicted to the groffen idelatry, and their facrifices were replete with the most horrid cruelties. Diodorus Siculus relates, that their principal deity was Chronus, the Saturn of the Romans, to whom they was Chronus, the Saturn of the Romans, to whom they facrificed the children of the beft families, as a certain law enjoined them to offer up none but fuch as were nobly born. At length, however, they substituted the children of slaves, prisoners, &c. to gratify their supposed bloody idol, till Agathocles made war upon them, and reduced them to the utmost extremity; when saneying that their misfortunes were owing to the improper offerings made to Chronus, they barbarously facrificed two hundred well-descended children; but their abfurd crucity availed them nothing. For their army was soon after totally defeated. deteended children; but their abfurd cruelty availed them nothing, for their army was foon after totally defeated. This fo furprifed them, that they imagined the facrifice was not fulficiently bloody; whereupon, influenced by the fame ridiculous idea, three hundred of the principal citizens voluntarily offered up their lives as oblations to the fanguinary idol; their cruel facilities were, however, ufelefs; for their misfortunes, instead of diminishing, increased the page. creafed the more.

creafed the more.

From the abominable practice of facrificing children to Chronus or Saturn, the fable of Saturn's devouring his children originated. But the cuftom was so shocking to humanity, that the Roman poets and fabulist thought proper to drop the literal meaning for an allegorical one; and therefore changing the mythological Saturn into Time, the idea appeared without any horror annexed to it; and they represented thereby a pleasing and instructive fable; for Saturn was said to consume all things, devour his own children, and vomit them up again. This alludes to Time, which consumes all things that it produces, till they are revived, and as it were again renewed; thus days, months revived, and as it were again renewed; thus days, months and years, are the children of Time, which he constantly devours, and re-produces.—However, the inhuman custom of facrificing children del not cease with the destruction of Carthage, but continued among the Africans till the time of Tiberius, who was so shocked at the horrid pra-

time of 1 iberius, who was to inocked at the north prac-tice, that he not only prohibited it under fevere penalties, but destroyed the idols, and put the priests to death. Scipio Æmilianus finally destroyed this extensive, opu-lent, and populous city, in the third year of the one hun-dred and fifty-eighth olympiad, in the year of the world 4150, and one hundred and forty-seven years before Christ, and nove (tig...) of it remain at prefent, exception fragments of the noble refervoirs which received into the city fresh water for the use of the inhabtants, and the ruins of the expensive aqueducts, by which the water was conveyed; the latter reach above thirty miles into the country. near twelve yards over, finely arched, coated with a the 192 cement, and in most places faced with stone.

SECT. VII.

Containing the political and civil history of, and the various revolutions that have taken place in, the singdom of Tunis, from the conquest of it by the Romans, &c.

THE fovereign of Tunis is independent both of the Ottoman Porte and his own divan, though a nominal respect to the persons of both is still affected to be kep

up. The government is deflotic and hereditary, but notto the eidest fon only, for the bey it at liberty to name for his successor which son he plases, or even to exclude all his sons, and nonlinute a brother, nephew, or any other relation. A Turkith has reides here, and a divan is frequently assembled, but the some is a more cypher, and the latter without the leak authority.

Through motives of fear, the beyond Tunis keep up a good correspondence with their neighbour, the fitter of Alglers and Tripoli; and, from white, which cultivate a friendhip with the subjects of Subject of Market occitivate a friendhip with the subjects of Subject on Market, and I and France, though they are at perpetual variance, with the Spaniards, Sardinians, Venetians, Maltese, the thirds of the eccle-statical state, and other neighbouring powers.

The Tunisan forces are composed of renegadous, and the militia of the country: the first form the beyong susad, and garrison the metropolis, and the latter garrison all the other sea-ports and fortresses. This is the peace establishment; but in war they are able to increase their army with strong bodies of Arabians and Moon, though there is not much dependence to be placed upon the fidelity of these auxiliaries. Their marritime power is another sea than what might be imagined, considering their admirable structure of the commerce of every kind. Their capital ships ation for commerce of every kind. I heir capital ships are but four in number, the largest carrying only forty guns; besides which, they have about thirty galliots of various burdens, that are marined with from twenty to one hundred and twenty men each, who are renegadoes, Turks, and Couloglies, or fons of married foldiers; the command is, however, aimost always given to renegadoes. command is, nowever, amout aways given to renegaces. The four large thips truit careful year, and are furnished with bifeuit, butter, oil, and vinegar, by the boy. The galliots are fitted out by purishe perfour; who you a certain dipulated quota of whatever they acquire to the bey. The mercantile veifels are very numerbouc, and the merchants purfue traffic with great avidity. The whole or The mercanthe veitels are very numerous, a content of the chants purfue traffic with great avidity. The whole of their marine may be diffinguished into, it ships, of some masts; 2. Patachas; 4. K. take on a Barks; 6. Pinks; 7. Tartans; 6. Cances. When a thip brings in a prize, the balf of the vellet, and half of the cargo, after all expenses are deducted, belong to the bey, and the remainder is divided by ween the captain and the child. bey, and the remainer is civided by ween the captain and the flip's company. The liey has moveover one half of the privilege of purchasing the rest, if he chuses it, at our numbered pastiers per head, every tenth person excepted who becomes the property of the diven; but the members of that assembly do not dare to claim their right to this allotment. The revenues of Tunis confift of the cultons arising from imports and exports, and the tributes paid by the Arabians and Moors.

When Christian merchant thips arrive here, they always falute the cashe wire three guns: but men of war wait to be saluted according to their rate, when they return the compliment wan the fame number of guns, During the whole time that a Christian ship of war is in the road, the conful, and the merchants of the nation to which it belongs keep colours flying on the tops of their moules. If a flave escapes, and gets on board a man of war, the bey cannot reclaim him; on which account it is ufual, as foon as a frip of lorce appears in the road, to keep all the Christian flaves very ctole confined, and abridge them of the liberty at other times allowed them, till her departure; previous to which, the bey fends to the commander a prefent of oxen, three, poultry, and other refreshments. The French pass-porte to these seas are li-mited to three years, but the English extend to fourteen, and are not loaded with so many restrictions as the former.

and are not loaded with 10 mary retrictions as the former. The Tunifians experience, oil, wax, wool, hides, morrecco leather, beans, lentils, &c. and import Spanish wool, Languedoc cloth, peppe, fugar, vermilion, cloves, wine, brandy, hardware, iron, steel, paper, gold and filver tiffue, damaks, filken and woollen stuffs, &c. They likewife trade for a variety of articles to Egypt, Arabia, the Letrade for a variety of articles to Egypt, Arabia, the Levant, and the neighbouring piratical flates. The English, French, Dutch, Genoefe, and Germans, have their confuls in Tunis, who are treated with great respect

Commerce is carried on here in that jargon of tongues known by the name of Lingua Franca; all public writings are in the Arabic language, which is in this country much corrupted from its original purey and elegance.

Jews are very numerous in this langdom, and it is affirmed there are upwards of ten thouland in Tunis only:

but as they are much addicted to cheat all with whom they deal, keep falle weights and measures, make fraudulent bankrupteles, and adulterate most articles in which they trade, the laws are particularly levelled against them, and they are, when detected, more feverely punished than any other foreigners. Befides Jews, here are renegadoes of all nations

The religion, cuftom, manners, laws, &c. of the Tu-nilians being exactly the fame with those of the Algerines already described, we therefore refer the reader to the article already deferibed, we therefore refer the reader to the article of Algarra, and fall only add here a few circumfances peculiar' to these people. If a flave is caught in attempting to e cleape, or murders his patron, his limbs are all broken, and then he is faftened to a horfe's tail, and draged through the firetes till he dies. If a renegado thould turn Chriftian again, they wrap him up in a cloth disped in pitch, and burn him; or elfe pile flones, mud, mortar, &c. all-around him, and having walled in all hut his head, they rub that over with honey, which attracts wafps and other infects, that forment the poor wretch with their flings till he capities; which fometimes does not happen for feweral days. With respect to the revolutions that have happened in this country historians of undoubted credit relate, that if was alternately subjugated and over-non, by the Man anse

this country intorians or undoubted credit relate, that it was alternately fubjugated and over-men, by the florances. Goths, Vandals, Saracens, and Arales, at length Abdul-Hedi, a Moorith officer of Sville, came with a confiderable force, landed at Tunis, obliged the Arabs to evecuate the towns and yillages, and ruled the kingdom, in quality of themselves the treatment of the country and the property of themselves. of vicery to the emperor of Morocco, with great reputa-tion, till his death, when he bequeathed the government to his fou Abu-Zechariah, a martial yet pendent prince, who extended the Tunifian terratories, and raifed contributions in all the countries to the confines c! Negroland. On his demife, he left the kingdom and an immense treafur to his fon Abraham, or Abu-Forez. This privacy sinding himfelf fufficiently powerful, revoited from the encountered further and ambellified Tunis, and gave it the name of the nectopolis of Africa. At his death, he divided the kingdom between his three fons, giving Tunis to one, Bu-gis to another, Numidis to the third. But Hutman, or Autman, who reigned over Tunis, foon difpoffeffed his brother Hamar of Numidia, and left both to his fon Abu-

brother Hamar of Numidia, and left both to his son Abu-Bay, who was afterwards deprived of them by Subsjah, one of the descendents of the califs of the Saracens.

Muley-Mahmet, one of the fuecessor of Subajah, had many children, but they were all, except the youngest, for profligate and wicked, that he appointed him to succeed him. This young prince, who was the celebrated Muley-Hassan, was scarce settled on the throne, before his eldest brother, attempted to make his cleape from the prison in which he was confined; but failing in his attempt, he was put to death, with several of his other brothers, and many persons who were suspected of adhering to their cause, for suspections who were suspected of adhering to their cause, for suspections in these cases, is frequently as satal as conviction. But one of his brothers, named Afrashid, fled to the king of Nuonidia, who raised an army in his favour, marched against Hassan, and totally deseated him: but being without artillery, it was impossible to take Tunis. Alrashid, therefore l-unit the suburbas, took leave of his Arabs, and repaired to Algiers, to engage in his cause the famous repaired to Algiers, to engage in his cause the samous Barbarossa, who governed that kingdom for the Grand

Signor.
This prince was conducted by Barbaroffa to Conftanti-This prince was conducted by Barbarolla to Contantinople, where he was apparently well received, and promifed
redrefs: he was, however, detained there as a kind of
hoftage, while Barbarolla failed for Tunis with a firong
armanent, having taken Biferta, Porto Farino, &c. he
appeared before the fortrefs of Goletta. This fo terrified
Haffan, who was hated by his subjects, that he fled in the
ultroof confernation, leaving all his resurres behind him. But he was no fooner gone, than the principal people, imagining that prince Affalhid was in the Turkish fleet, released his wife and fon from confinement, paid them the most profound respect, and sent two horses finely ear to Goletta, one for Afrashid, and the other so ifuned roffa. that they might make their public entry ir so city. Bar-Perceiving their disposition and mistake, haroffa took care not to undeceive the Sur dicm to .ld immedutely land to receive their allegiance

Immediately hereupon fixty royal sware filled with Inmediately hereupon fixty royat prove a filled with Turkish troops to the number of filme to usuand with landed, and inflantly took possession of the content castle. The people were rather surprised notes as All admid with Barbarolla; but how greatly was their configuration in created, when, inflead of even mentioning him as politic Turk talked of nothing but their fubrilled to the will of the Grand Signor. This apparent to anner y for irritated the inhabitants, that they slew to errors: some went after Hassan, to bring him back to their defirerance; while

while others attacked the castle, but were repulled with great lofe; and the Tunisians were at length compelled to acknowledge the Grand Signor for their fuvereign, and Barbasosia as governor.

Harbapolia as governor.

In order to regain his dominions, Hassan had recourse
to a very unaccountable capadient, which was, making
application to the Christian emperor Charles V, to which
he promised to become tributary. This rendered him still
more odious to his own subjects, and obnoxious to all
Mahometans in general. The emperor entered heartily Mahometans in general. The emperor entered heartily into the enterprise, and prepared a powerful armament accordingly; while Barbaroffa did all that an able commander could do upon such an occasion: he put Tunis into the best state of defence possible; invited all the Moorish and Arabian princes to join him, who readily gave him affiliance, as they imagined that it was a general cause, in which all Mahometans were concerned, and persuaded most of the Levantine cruisers to aid him with all their strength: however, the court of Constantinople could afford him but little affiliance, being then involved in its ford him but little affiftance, being then involved in its Atlantic wars.

At length the emperor's fleet, confifting of one thou-fand four hundred thips of various fizes, appeared on the Tunifian coaft, when the numerous forces were imme-diately landed, and the cafile of Goletta invefted in form distely janded, and the caute of Goletta invertee in county, which, after a very flour refittance, and great lofs on both fides was taken by florm. The emperor then proceeded towards Tunis, while Barbaroffa marched out on his approach, and drew up his army in order of battle in the plain of Cazar-Menevi, which is about three miles from the metropolis. The two armies prefently came to an enthe metropolis. The two armies prefently came to an en-igagement, when the Arabs foon giving way, Barbaroffa inflained a total overthrow. After retreating to Tunis, he now thought of nothing but escaping with his treasure, though he did all he could to conceal his intentions from even his own people; but his design was perceived, both from his hurry to remove his riches from the castle, and the order he gave to blow up all the Christian slaves. This disholical order, however, none of his offices hed he diaholical order, however, none of his officers had the

cannotest oruce, nowever, none of his officers had the cruelty to put into execution.

Among the Christian slaves was one named Paul Simons, a brave Maltefe, who had behaved so gallantly against the Turks, that Barbarosia would never suffer him to be ransomed on any account. This gentleman, having an intimation of Barbarosia's design, found means privately to procure some hammers and files, when he immediately released himself and the rest of the Christian start that the procure of start has chair to the count of start has should be supported for the christian start has supported for the chr flaves from their chains, to the amount of feven thousand, and jointly breaking into the calle armoury, they furnished themselves with weapons, with which they fallied out, and killed or routed all the Turks who guarded the avenues to the castle. They then secured the place, and waved a white banner from the battlements, inviting the Christians to come to their relief. The tumult this occasioned larought Barbarosia to the place, who demanded entrance into the castle, but was answered only by a volley of musquetry; when perceiving how matters went, he cried out, "I am undone! these Christian dogs have got possession of the castle, and all my treasure;" and sled with the utmost precipitation, so that he got safe to the city of Barca, before the emperor Charles knew of the revolution in his savour. Simoni, however, sent him word of Barbarosia's slight; and as soon as he entered the city, presented himflaves from their chains, to the amount of feven thouland, flight; and as foon as he entered the city, prefented him-felf before him at the head of the newly emancipated Christians; when the monarch tenderly enhancement Christians; when the monarch tenderly embraced the Maltese knight, saying, "My dear friend, blessed for ever be that noble resolution which enabled you to break off your fetters, to facilitate my conquest, and encrease the glory of the Maltese order." This gentleman was after-

glory of the Maltefe order." This gentleman was after-wards fent to Malte loaded with favous, at I was most cordially received by took of his order. Thus the Christians became patietised of Turus; but we are forry to add, that the mustices which they indicaminately exercifed upon the poor Tunifans of all banks and ages, and of either sex, tended greatly to tarnish the laurels they ad gained by their courage and confiancy.

Haffan was now re-fettled upon the throne by the emperor, under the following conditions: r. That the fort of Goletta should remain in the emperor's hands as a pledge, though Haffan should be obliged to repair the fortifications at his own expense. 2. That a garrison of the emperor's excepts should remain in it, but Haffan should maintain and pay them.

3. That prince Mahomet, Haffan's fon, should pay them.

3. That prince Mahomet, Haffan's fon, should ps. mound remain in it, but Hassan should maintain and pay them.

3. That prince Mahomet, Hassan son, should remain in the emperure power, as an hodage for the side-dity of his state.

4. That all Christian captives, of whatsoever no new and the least of without any ransom.

5. That the Analysis should have a free commerce No. 24.

throughout the whole kingdom. 6. That they should be allowed to fettle in it, to build churches and monasteries, and enjoy the five serecife of their religion. 7. That no corfair, Turk, or Moor, should be allowed to come to eny fea port. be furnished with any provisions, or be assisted of favoured in any case by the Turissians. 8. That the whole coral sistery should belong to the emperor and his helfs of rever. 9. That the kings of Turis should hold themfelves vassas and dependents on the crown of Spain, and fend thither yearly, in tokenof it, fix horses and twelve fallows; in consideration of which, they should be intided to the protection of that crown, on any emergency.

These stipulations were exceeding disgressible to the Mahometta powers; and rendered Hassan not only bated by them, but very contemptible in their eyes. As soon as the emperor returned to Europe, this general distike began to evince itself by the revolt of several of the cities, which either put themselves under the procedion of the Turks, or erected themselves into little commonweaths: Bates roll, at the same time, having raised a considerable army and seet in Alvies.

rolla, at the fame time, having raifed a confiderable army and fleet in Algiers, began a new attack upon Tunis. Haffan, being harrassed on every side, fent to Europe for succours, which were liberally promised him, but the performance was so flow, that he was determined to go and folicit themselvisid.

While he was in Europe upon this errand, his fon Hamida revolted against him, and raised a dangerous commotion at home, making the following specimus motives the pretext for his unnatural rebellion: 1. That his father than the context of the superior, in order to turn Christian. 2. the preteat for his unnatural rebellion: "That his father was gone to the emperor, in order to turn Christian. 2. That Hassan's design was, to cut him off from the succession, because he was a friend to Mahometanism; and to place the crown upon his brother Mahmed's head, who had a great propensity to Christianity. The governor of Tunis, however, severely reprimanded him for his unnatural proceedings, which repulse formen chaggined the prince, that he retired to a country house at a small distance from Tunis, where he mourned in private his precipitate condust: house the people, who were more persole tance from I unis, where he mourned in private his pre-cipitate conduct: but the people, who were more prepof-felled in his favour than he imagined, really fancied that Haffan was dead, according to fome flying reports; and that the governor would confpire with the Spanish garrifon in the Goletta to crown prince Mahmed, and thereby force a Christian king upon them: their notions operated for powerfully upon the minds of the vulgar, that they tu-multuously went to the place of prince Hamida's retire-ment, and made him an immediate offer of the crown. This exactly futing his amphitions tensor, he accepted of This exactly fuiting his ambitious temper, he accepted of the propofal, and, putting himfelf at the head of the male-contents, he proceeded to the calle, where he caufed the old governor to be murdered, and committed feveral

other enormities and excelles.

This revolution having reached the ears of Hassan, he returned home, with about two thousand Italian forces; but his son defeated him, took him prisoner, and deprived him of his fight. However, Hassan's brother Abdulmelech drove Hamida from Tunis, and assumed the reins of government himself; but dying in a very short time, the spanish governor of Goletta had one of his sons crowned king, instead of Hassan's fon Mahmed, who ought in justice to have been advanced to the throne. The unfortunate Hassan himself found means to make, another voyage to Europe; when applying to the emperor Charles V. he was kindly received, much pittied, and promised redress; but the promise was the only comfort he ever had, for it but the promife was the only comfort he ever had, for it was never performed by the emperor. In the mean time, Hamida had been fo fuccefful in forming alliances with the Arabian and Moorifa princes, and chiefs, that he recovered Tunis, and reigned without molefation till the

other enormities and excelles.

covered Tunis, and reigned without moletation till the year 1570, when he was again difpoffessed of it by Halli, bass of Algiers.

During this interval, Hassan remained in the emperor's court, till that monarch had prepared a powerful armament to drive Barbarossa, and other formidable pirates, from the places they possessed on the Barbary, coast. The command of the Claristian steet was given to the famous Doin a research shares admiral who was ordered to begin command of the Christian fleet was given to the ramous Doria, a great Genocle admiral, who was ordered to begin his operations by dislodging the celebrated pirate Dragut from the places of which he had possessed the Tunisan coast; for Dragut not only commanded the piratical, but the Turkish sleet, Barbarossa having resigned in his favour, that himself might have more leisure to pursue all reanner of debaucheries, as his inclination for every species of libertinism seemed to increase, instead of diminishing with his wear, till be fell a marty to excess at nifting with his years, till he fell a martyr to excess at unwards of fourfeore years of age. At length the grand imperial Christian fleet arrived on the coast of Africa with the unfortunate Haffan, old and blind, and his fons Mahmed and Muley-Bubekar on board: but the wretched monarch foot after died of a fever in the camp of the Christians, and was buried with his ancestors at Kayrwan. He was of a majestic appearance, black complexion, blave, wife, and politic; but cruel, and to the last degree

Admiral Dorla in a short time made himself master of "Admiral Doria in a fhort time made himself master of most places on the sea coast particularly Mahodia, in which he got an immense plunder; but the emperor afterwards ordered that place to be totally demolished, and the Christians to evacuate their possession on the Barbary coast, the Goletta excepted, having occasion for his troops in Europe, when Hali the Tork possession for his troops in Europe, when Hali the Tork possession for his troops in Europe, so that a total conquest of the kingdom in the reign of Selim II. and destroyed all the Christians but southern whom he sent in chains to Constantinople. Having brought the whole beneath the Ottoman yoke, he appointed for its government a bassa or viceroy, a divan, several government of beyone over the different provinces, sour thousand janisaries, and a number of garrisons in the different fand janifaries, and a number of garrifons in the different cities, towns, and fortreffes. This revolution terminated the splendor of the kings of Tunis, after three hundred and feventy years continuance, from its first establishment

by Abu-Ferez, in 1204.
At this period the kingdom of Tunis began to be governed by deys chosen by the divan; but the state was in such confusion, the jealousies so great, and the intrigues so various, that new deys were frequently elected, almost all of them being either murdered or dethroned; fo that in the space of one hundred and twenty years no less than twenty-three reigned, the whole of whom, except five, were dethironed or murdered. The people in general were fo diffatisfied at the very first with the bassa that Sinan had placed over them, that they petitioned the Porte to abolish that office, and permit them to elect a dey to govern them, as was done at Algiers. This request was granted, and they immediately elected a popular person, of whom they were wonderfully sond at first, but they murdered him within the twelvementh. One Ibrahim was their next choice; and they would have ferved him in the fame manner, if

he had not luckily given them the slip, and fled to Mecca.
These frequent and bloody revolutions gave an oppor-tunity to the beys or officers of the second rank to usurp an authority over the deys, and to render the divan, or fe-nate itelf, fubfervient to their pleafure. The fublime Porte, alarmed at the despotic power of the Tunisian beys, determined to revive the office of bassa, that they might have a person upon the spot to be a check upon the former: but so jealous was this politic court, that, searing its own bassa should become as powerful, arbitrary and troublesome as the bey himself, it never permitted that

officer to reside above two years at Tunis.

This kingdom, during the reigns of the several deys, must be considered rather as involved in anarchy and consustant. than as a well regulated government; and we are lefs acquainted with their history at that period, than at any other. But, subsequent to the year 1681, we are better acquainted with the Tunisian affairs; for at this time the bey Morat II.
dying, left three sons, viz. Mahomet, Hali, and Ramadan, who for fome time maintained a bloody contest for the fucceffion; but Ramadan at length, greatly to his honour, declined his pretensions, and gave up all his right to his brothers, persuading them at the same time, in pity to the people, to compromife matters, and put a stop to their fanguinary proceedings: but his brothers, more ambitious and less humane than himself, continued the dispute for a and lefs humane than himfelf, continued the difpute for a confiderable time by frequent appeals to the fword, till Mahomet, growing fired of the conteft, gave it up, and retired to Kayrwan, where he refigned himfelf to a life of devotion; but the war was foon after rekindled by the perfidy of Hall; for Mahomet, when he went into retirement, intrusted his fon Achmet to the care of his brother, that he might be brought up in the court in a manner fuitable his bitch, but the treatherous Hall; integral of the to his birth; but the treacherous Hali, instead of prorecting, basely murdered his nephew. This so exasperated Mahomet, that it drew him from his solitude; and being informed that the persons who had advised Hali to murder the young prince were sled, he pursued, overtook, and faerificed them to his refentment. Hali himfelf had been driven from Tunis by the citizens, fome of whose pri-vileges he had attempted to infringe, but was now in full march to lay fiege to that place, in order to reduce it to obedience.

This feemed a favourable opportunity for Mahomet to obtain the crown: but an ambitious and artful person, named Cheleby, had the address to prejudice the people

equally against both brothers, so that Mahomet appeared as obnoxious to them as Hali. This, however, occasioned a reconciliation to take place between the two brothers, who united their forces, and inveited Tunia ; when Cheleby making a faily, totally routed their troops; but he had not the pradence to make a proper advantage of his fueccis, by purfuing the brothers, who foor rallied, recruited their forces, and firengthened their army by the cruited their forces, and strengthened their army by the addition of forty thousand Aberines, whom they hard of Ibrahim dey of Algiers. With these troops they soon made themselves masters of Tunis, and took Cheleby prinoner, whom they put to death. The Algerines, committed many horrid cruelties and depredations in the city, till they were paid, and sent home, and Mahomet was universally acknowledged as bey: but this prince ruling in a very arbitrary manner, the people called in the Algerines to expel him from the government: which they did, and made Sen-Choukee, his brother-in-law, bey in his stead, but this change availed them nothing, for the latter was as arbitrary and rapasious as the former; so changing their minds again with their usual facility, they restored their minds again with their usual facility, they restored Mahomet, and dethroned Ben-Choukee.

Mahomet, and dethroned Ben-Choukee.

Ramadan was foon after made bey, on the death of his brother Mahomet; but this prince, having lived always a reclufe life, knew nothing of public business, or of mankind, and was confequently very unfit to govern a kingdom; but, what was still worse, instead of taking any trouble to qualify himself for the loven, any, he was intirely devoted to piesfore, and made an Italian fiddler hia prime-minister, leaving the whole administration of affairs to him. This occasioned several commotions, and at length so much exastee the very leaven the three states of the several severa at length fo much exasperated the people, that they strangled

Ramadan, and tore in pieces his prime minister.

Morat, the nephew of the former bey, succeeded his uncle, and proved a monster of cruelty; but being murdered by Ibrahim, the captain of his guard, the assaurate of the succeeded to the throne, and, after an unfortunate but the succeeding the short reign, was killed in a fea engagement (occasioned by an infurrection among his subjects) and was succeeded by Hassan-Ben-Hali, a politic and formidable prince, who freed himself from a dependence on the Porte, rendered

himself so powerful as to stand in no awe of his neighbours the Algerines or Tripolitans, restrained his subjects from acts of piracy, and concluded many commercial treaties with the Christian powers, particularly the Dutch and English: the stipulated articles between the Tunisians and the latter were concluded with admiral Baker, and are nearly the fame as those agreed upon between the English and the people of Tripoli. Nothing that deserves particular notice has happened in Tunis since that period.

SECT. VIII.

Description of the kingdom or republic of Tripoli, its boundsries, chief city, towns, Gr.

RIPOLI is bounded on the north by the Mediterranean fea: on the fouth, by the country of the Beriberies; on the weft, by the kingdom of Tunia, Biedulgerid, and a territory of the Gadamis; and on the eath, by Barca, and the kingdom of Egypt. It extends nine hundred and twenty five miles along the fea coast; but the breadth is various. Exclusive of the creeks and projections of the shore, its extent on the coast is from ten degrees thirteen minutes, to twenty-five degrees twenty-feven minutes east longitude.

The most accurate geographers divide the whole kingdom into fix provinces; namely, Tripoli Proper, Mefrata, Haicha, Benolefa, Gulf of Sidra, and Ouguela. The towns on the fea coast are the most considerable, and the best known, those of the inland parts of the country are so little known, and so triffing, that they have searce been deemed worthy of attention by either antient or modern travellers: the inhabitants of both, however, are equally addicted to robbing, the former being professed pirates and the latter, whenever they can find opportunuity, make

no scruple to plunder their neighbours.

The antients distinguished the city of Tripoli, which now the capital of the whole country, into Old and

is now the capital of the whole country, into Old and New; the former was built by the Romans, subdued by the Vandals, and destroyed by the Mahometans. The new city arose out of the ruins of the old.

The present city of New Tripoli is populous, but small; and the natives, though barbarous, are flourishing. It is situated on a fandy soil, near the margin of the sea; surrounded by strong wa!!. desended by formidable ramparts, and

peared others, Cheof his d, re-by the hired cy foots , comie city, as uni ng in a gerines d, and

The d the are fo been odern qually make which I sad ed I y This

fmall; It is furparts, and

and flanked by syramidical towers. Here are but two gates, the north gate towards the fea, and the fouth gate towards the country; and the whole city is in the form of a crefcent, the concave part of which inclofes the haven. At the extreme points of the harbour, which is very commodious, are fome military works; those to the eastward are in had condition, but on the westward there is a callle well fortified. The houses in general are very mean, and low built, and the freets narrow and crooked; yet fome remaining monuments of magnificence feem to confirm the prevailing opinion of the inhabitants, that it was once remarkable for the splendor of many of its public buildings; among these, are the fragments of a triumphal arch, which is nearly buried in the sand, but exhibits a fufficient part above ground to give some iden of its elegance when perfect, and standing in its proper situation.

This city labours under two very great inconveniencies, which are, the scarcity of corn, and want of sweat water, the sandy soli making it difficult to cultivate the first, and the want of rivers, springs, &c. rendering it impossible to procure the latter, without the disagreeable necessity of catching rain in cifterns and refervoirs. The deficiency of such in grain in cifterns and refervoirs. The deficiency of step house the search and great sterility respectively of the sea, which has frequently been known to overslow the neighbouring territory to a very considerable distance; but these inundations, though they may have essentially injured them in another particular, that is, the amazing increase of lothus trees, which thrive best in a saline clay or sandy soli, and produce both food and drink, as the fruit cats exceliently well, and makes a most delicious wine. Yet, after all, the inhabitants of Tripoli could not subsit upon the produce of their country, without the additional provisions continually brought in by their piratical vesses, which are constantly cruing in the Mediterrancan sea. terrancan fea.

The people of Tripoli trust the guarding of their city, in the night time, to mathiffs, which are shut up during the day, in one of the bastions of the ramparts. Their mathiffs discharge very faithfully the dures of their functions; they patrole through the streets of the city, and if tions; they patrole through the itreets of the city, and it they happen to meet with any perfon, they are fure to tear him to pieces. As from as day breaks, they go of themselves to the door of their prifon; and bark when they hear any perfon appreach their habitation, and their roaring is heard in all the quarter of the city where they are confined. This city is frequently visited by the plague; on which account the Franciscans, who are fettled here, have besides their church and convent, an hostial, in which they adminifer relief to the Timplians.

fettled here, have besides their church and convent, an hotpital, in which they administer relief to the Tripolitans,
as well as to those of their own religion.

It has been remarked by a reputable writer, that Tripoli
is far less considerable than Algiers, and not comparable to
Tunis. The government is the same with that of the rest of
the cities of Africa; the Moors are in as little credit here
a sat Algiers; the Nazarene (i. e. Christian) renegadoes
enjoy the greatest share of authority of any sect of people
in this country, and fill the chief employments; indeed
there are a vast number of renegadoes here, many of
whom the person abovementioned had conversed with; and
that they all appeared to be as ignorant of the religion they
had embraced, as of that quitted by them: most of the that they all appeared to be as ignorant of the religion they had embraced, as of that quitted by them: not? of the persons in question having been so poorly educated, that they were scarcely acquainted with the rudiments of their belief, and indeed, says he, they affign the most trifling reasons possible for quitting their religion; whereas in other countries, slaves are commonly prompted, from the ill treatment they meet with from their masters, to turn Mahometans but here on the countries was broaded. Mahometans; but here, on the contrary, they are brought over by gentlenets. Of all the corfairs of Barbary, none are lefs crued than the people of Tripoli, though none are fo much addicted to their.

The country adjoining to Tripoli abounds with villas of the principal Tripolitans, the gardens belonging to which, are usually not eged by the Christian flaves, who are however, all the state of the country of the co

city itself, during are anglet time.

Cabes, or Gabes, as fituated near the gulf of the same name, and on the antient river Triton, to which the moderns and on the antent river Priton, to which the moderns have given the fanne name as the town. Being the frontier town between Tripoli and Tunis, it is large and well fortified, and in its weighbourhood are found the ruins of the antient city called by the Romans Tacapa. Cabes, however, is but poor, well thinly inhabited by fiftermen and a few hulbandmen; the latter of which cultivate a final quantity of barley, a confiderable number of palm trees, and a root which refembles a potatoe. The natives are as black as nogroes, and so poor, that they look upon a few pecks of thriey, and half a dozen of palm trees, as a considerable fortune. The river Cabes rifes in a fandy defact, and difembogues itself into the Mediterrancan; hence the waters are so hot, that they cannot be drank till they have been put for about the space of two hours, into a cool place. This town lies in ten degrees fifty-five minutes cast longitude, and thirty-nine degrees north latitude.

tude.

El-Hammah, is situated in ten degrees sifty-one minutes east longitude, and thirty-sour degrees north latitude, near a lake called the Lake of Lepers, becade it ceres that disease. The inhabitants are a few fithermen, who are pirates when occasion offers; and some hulbandmen, who are thieves at all opportunities. It was never remarkable but for its Roman walls, its lifet sulphbreous springs, the aqueducts by which they are conveyed, and of which scarce any veltiges remain.

Zoata, sixty miles west of Tripoli, is well fortified, and has a good harbour. It is surrounded by an old wall, almost in ruins: the inhabitants, who are tut few in number, live by fishing, and burning quick lime or pot-

alh, or, when opportunity ferves, by piracy. This town is supposed to be the antient Pissau, and lies in thirteen

degrees twenty-five minutes east longitude, and thirty-two degrees forty-five minutes east longitude, and thirty-two degrees forty-five minutes north latitude.

The towns above described, which are fituated on the western coasts of the gulf of Sidra, are the best in the country; those on the eastern fide, and within the gulf are in a most wretched condition, and present a dreadful picture of the devilations of time. of the devastations of time.

of the devaltations of time.

The various inundations of Goths, Vandals, Arabs, Mahometans, &c. who have over-run the country at different times, have fubjected these parts of Africa to a great number of revolutions: they have also suffered much from the depredations of the Europeans, and tyranny of the government. The island of Malta is a perpetual thorn in the sides of the piratical states, particularly those of Tripoli and Tunis, from the vicinity of the situations, and the Maltes kuishts merit the thanks of all contracts.

Tripoli and Tunis, from the vicinity of the fituations and the Maltefe knights merit the thanks of all commercial nations, for having fo greatly circumferibed the power of the Barbary rovers, and reftrained their piracies.

The Moors, after they were driven out of Andalufia in Spain, built the town of Derne, on the western side of the gulf of Sidra, which indeed is the only place worth mentioning in the district of that name. It is situated at the distance of about half a mile from the sea, and is better tupplied with sweet water than most of the towns in the Tripoline territories; nevertheless the analysismus are sew in number, and miserable poor in circumfances. few in number, and miferable poor in cit milances.

tew in number, and miterable poor in circumstances. The most remarkable produce is great quantities of honey, the delicacy of which is occasioned by the bees feeding upon a kind of shrub peculiar to this country, which blossoms all the year, and bears a fragrant yellow slower. In province of Mesrata, is at present much reduced, though it was antiently very flourishing: it contains, however, a few towns on the sea coast and some feattered villages, and upon an emergency can raise ten thousand men fit to bear arms. The inhabitants retain their former foirist for they ampear at present the as impraisers of the men fit to bear arms. The inhabitants retain their former fiprit, for they appear at prefent to be as impatient of the Tripolitan, as they were antiently of the Tunisian yoke: they pay a tribute, though reluctantly, to the bey of Tripoli, and are often at war with the wild Arabs.

With respect to the inland difficulture may observe, that they are less populous, less than any of those described. Indeed Anguela, or Ourselds though in many nexts above the reserved.

Ouguela, though in many parts a barren defart, contains a few fpots that are fertile, particularly in pasturage and

The revenues are raifed by an impost on the corfairs, which are usually about eight in number, by a taxon commercial imports and exports, and by a subsidy which the Jews are obliged to surnish. The bey likewise taxes the wild Arabs and inland Moors; but these frequently refuse to pay the tribute, when he his obliged to send his slying camp of janisaries among them, to reduce them to obedi-ence: but heither the Porte, or the Turkish bassa, trouble ence: but neither the Forte, or the I urkish balls, trouble themselves about the government, provided the bey pays with punctuality his stipulated tribute to the first, and gratifies the avaricious cravings of the Iast. The beys of Tripoli see not mere nominal vasials to the Turkish government, like those of Algiers and Tunis, but are obliged to pay a considerable tribute, which puts them under the necessity of tyrannizing over the poor people, and reducing them to the utmost indigence and mistery, in order to obtain a sufficient stum to discharge their quota. obtain a sufficient sum to discharge their quota.

Their chief article of commerce is in flaves, which are taken by the corfairs at fea, or stolen by the wild Arabs and Moors from the neighbouring states. Both are however, usually bent to Turky, and fold there as the best market, unless it is imagined that they belong to a distinguished family, when they are kept in expectation of a considerable random for them. ranforn for then

rantom for them.

The only article of trade worth mentioning, befides the above, is the fale of albes, which are disposed of to the Europeans for the purpose of making soap and glass. It is necessary to remark, concerning this regency, that, with respect to commerce and treaties, the people are much better observers of their word, and perform their promises with more punctuality, the samp of the political states who live near them.

live near them.

SECT. IX.

The history of, and various revolutions in the kingdom of Tripoli, Gr.

E find the first accounts of Tripoli in some of the Roman historians, who speak of it as a very sourishing state. In the decline of that empire, after the inhabitants had thrown off the Roman yoke, they were funceflively subdued by the Vandals, Saracens, and the forvereigns of Morocco, Fez, and Tunis. At length, in the reign of Bucamen, king of Tunis, who railed the Tregolines year despotically the inhabitants thought access to polines very despotically, the inhabitants thought proper to revolt, and constituted one of their own people king of Tripoli i but the new monarch, turning tyrant, was poiloned, and fucceeded by Abubacer, who had been one of his officers, but, turning marabout, quitted the military for the bermetical life.

Tripoli was befieged, in the beginning of this king's reign, by an army of fifteen thouland Spaniards, who foon took the place, and fent Abubar, with his whole family, prifoners to the emperor Charles V. who was then at Palermo; but this monarch reflored him to his kingdom, on condition of his becoming valid and tribu-

Ahubacer was fovereign of Tripoli till the knights of Rhodes were driven from that island, and obliged to retire to Syracule, when the beforementioned emperor granted them the island of Malta, together with the city and cassle of Tripoli, which lay opposite to it. They accordingly garrifoned the latter, but were soon dispossesses by the famous Barbarolla. They were, however, soon after retaken by the emperor, who put the knights of

Malta again in possession of them.

The Turks, under the command of the baffa Scrai, in The Turks, under the command of the baffa Scrai, in the reign of fultan Solyman, befieged Tripoli, when it was furrendered to him, as is imagined, by the cowardice of treachery of the governor, who was a Frenchman, after it had been forty years in the hands of the Christians. It continived for feveral years under the government of a fangiac, deputed by the Porte to rule the people, and collect the revenues, the castle being garrifoned by Turks, and the city inhabited by Moors. At length the Turkish despotism and extortions became so incollerable, that a marabout, named Sid-Hajah, found an opportunity to cause a general revolt about the close of the fixteenth century: he was, however, repeatedly defeated by Haf-chen baffa, and at length affaffinated by fome of his own

party.
Mahomet Beygh, a Greek renegado, was then fent by the Porte to govern Tripoli; but this officer was no foor oftablished in his government, than he refused to receive any bassa from the Grand Signor; he indeed acknow-ledged himself the vassal of the Porte, and voluntarily flipulated to pay a certain annual tribute, but he alledged, that in common prudence it was requifite for him to defend himself from the fate of many other governors dependent on the Porte, who had been put to death upon the most unjust and oftentimes frivolous pretences, with-

out being so much as allowed to vindicate their conduct.

The following are the only remarkable transactions which now remain to be taken notice of relative to the kingdom of Tripoli; namely, the bombardment of the capital city by the French, in the reign of Lewis XIV: and the treaty of peace and commerce between the Tripolitans and English, in the year 1716. The first of these occurrences took place in consequence of the Tripolitans having taken a ship under French colours, and detained several French subjects in a state of slavery. This occasioned Lewis to order his officers to make reprisals upon the vessels of Tripoli, wherever they met them.

Thefe orders were firifilly obeyed by the French espesials ; in particular, M, d'Amfreville attacked fix of their veffite near cape Sapiença. Three of the corfairs fled in the beginning of the engagement; and the other three, after having been much thattered in the fight, took refuge at the island of Chios. The French commodore, M. Du Quefna, who commanded in the Lewant, having intelligence thereof, immediately proceeded to block them up with seven thips of war: but, previous to the commencement of hotilities, he sent a mellage to the governor aga, to the following purport: "That his mafter was in perfect amity with the Chians, and the Porte of Conflantinople, but came in fearch of some Tripolitan pirates, who, contrary to the most folemu treaties, had committed nople, but came in fearch of fome Tripontan piraces, who, contrary to the moft foleran treaties, had committed the moft outrageous depredations on the fubjects of France, and therefore hoped that the aga would not protect fuch infamous problers." The aga, however, refuted to give up the face; which fo exafperated the French commodore, against the place, against the place, against the beau immediately to bombard the place, againft which be threw upwards of feven thousand bombs; made a dreadful havock both of the houses and Tripolitan ships, and killed a great number of the people; but he could not enter the port on account of a strong saccado which the Tripolitaus had contrived to lay in his way. The court of Conflantinople thought proper to interfere, in order to get matters adjusted, when at length it was agreed between the grand vifit and the Gallac ambassador, that matters should be compromised with the tenor of eight arti-

cles, which were wawn up for that purpois,

The abovementioned articles, however, which were framed greatly to the advantage of the French, were rejected with the utmost distain by the regency of Tripoli, who at the same time prudently prepared for the worst. On the other hand, the French monarch ordered a powerful annament to fail immediately to Tripoli, under the command of the famous marthal D'Etrees vice admiral of France, who being joined by the squadrons under the marquis d'Amsre-ville and captain Neimond, appeared before Tripoli on June 15, 1085, with his whole sleet. On the 22d in the evening the bombardment began, and was carried on with ccess under the immediate direction of the celebrated M. Tourville. The marshal D'Errees then had the portevery where sounded, in order to find the most convenient place to raife a battery, which might effectually destroy both town and fortifications; this, with the number of houses already deltroyed, and people killed with the bombs, to terrified the Tripolitans, that the dispatched a venerable old man, of near one hundred years of age, to fue for a peace, which they were willing to receive upon any terms, when they at length agreed upon the two following stricles: 1. That the Tripolitans should pay two hundred thousand crowns as an equivalent for all the captures made of French merchantmen; and, 2. That they should restore all the Christian captives they had taken fighting under French colours.

The terms proposed occasioned several delays, which arose chiefly from the difficulty of raifing fo large a fum of money: it was, however, agreed to reduce the demand to five hundred thousand livres, but even that could not be said till the dev and principal people had ftripped their wives of their bracelets, rings, jewels, &c. whole was at length paid either in money or valuables. The French flaves were fet at liberty, and two of the principal people of Tripoli were obliged to go to France, to do homage to the king of that nation.

A treaty of peace and commerce was concluded, in 1716, between the regency of Tripoli, and the British admiral Baker on the part of the king of Great Britain; the articles of which we shall g that full length, as they nearly concern Englan as a commercial nation, and refemble. *h other Barbary flates. those agreed or

of II. That all inerchant thips belonging to the dominions of Great Britain and trading to the city or any part of the hingdom of Tripoll, thall pay no more than three per cin's for all kinds of goods they shall fell; and as for those they shall not fell, they shall be permitted freely to embark them again on board their ships without paying any duty what-foever, and shall depart without any hindrance or in lef-

again on board their injust without say hind any duty whatfeever, and shall depart without say hindrance of it leftation.

11. That all ships and other vessels, as well belo
to the sa'd king of Great Britain or to any of his map
subjects, as those belonging to the city and kingdom of
Tripoli, shall freely pas the feas, and trassific where they
please, without any search, hindrance, or moless goods,
merchandizes, and moveables, to what people or nation
feever belonging, being on board any of the faid ships or
vessels, thall be wholly free, and shall not be stopped,
taken, or plundered, or receive any harm or damage
whatfoever from either party.

11. That the Tripoline ships of war, or any other
vessels thereunto belonging meeting with any merchant
ships, or other vessels of the king of Great Britain's subjects (not being in any seas belonging to his majesty's deminions) may send on board one single boat with two
sitters, besides the ordinary crew of rowers, and no more
than the awostiters, to enter into the sid merchant ships,
or any other vessels, without the express leave of the con-

fitters, besides the erdinary crew of rowers, and no more than the swessters, to enter into the said merchant ships, or any other vessels, without the express leave of the commander of every such ship or vessels; and then upon their producing to them a pass, under the hand and seal of the high admiral of England, or of the commissioners for executing the said office; the said boat shall depart, and the merchant ship or ships, vessels or vessels, shall freely proceed on its or their voyage; and though the commander or commanders of such merchant ship or ships, or vessels, &c. produce no pass from the high admiral of England, or the manissioners for executing the said office; yet if the major part of the ship's or vessel's company be subjected of the said king of Great Britain; the said boat shall presently depart, and the merchant ship or ships, &c. thall freely proceed on their voyage. And any of the said ships of war, or other vessels of his said majesty, meeting with any ship or ships, &c. chosing to Tripoli, if the commander or commanders of any such ship or ships, &c. shall produce a passisgned by the governors of Tripoli, and a certificate from the English consult residing there; or if they have no such pass or certificate, yet if the major part of the said ships or vessels; company be Turks, Moors, or slaves belonging to Tripoli, shin the said Tripoli ship, vessel, &c. shall freely proceed on their voyage.

"V. That no commander, or other person, of any ship belonging to Tripoli, shall take out of any ship or vessel of a said majesty subjects any person or persons whateover, to carry them any where to be examined, or upon any other pretance, nor shall use any torture or violence unto any person of what nation or quality soever, being on board any strip or wessel said majesty, upon any pretance whatsoever.

"V.T. That no shipweek belonging to the said king of Great Britain, or to any of his subjects, upon any part of

white-whattoever.

"VI. That no fhipwreek belonging to the faid king of Great Britain, or to any of his subjects, upon any part of the coast belonging to I ripoli, shall be made or become a prize, and that neither the goods thereof shall be seized, nor the men made slaves: but that all the subjects of Tripoli thall do their best endeavours to fave the faid men and

poin institut time bett endeavours to have the faut their and their effects.

"VII. That no ship, nor any other vessel of Tripoli, shall have permission to be delivered up, or to go to any other place at enmitty with the king of Great stritain, to be made use of as corfairs against his majesty's subjects.

"VIII. That if any flip or veffe belonging to Tunis, Algiers, Tetuan, Sallee, or any other place being at war with the king of Great Britain, bring any goods or veffels of his faid majefty's fubjects to Tripoli, or any other port or place of that kingdom, the governors there shall not permit them to be fold within the territories of Tri-

poli.

"IX. That if any of the faid king of Great Britain's fubjects shall happen to die in Tripoli, or any of its territories, his goods or monies shall not be seized by the governors or any ministers of Tripoli, but shall remain with the English conful.

"X. That neither the faid conful, nor any other fub-ject of Great Britain shall be bound to pay the debts of any other British subject, unless they become furety for the fame by a public act.
"XI. That the fubjects of his faid British majesty in

Tripoli, or its territories, in matters of controverly, shall

be liable to no other jurifdiction but that of the dey or divan, except the difference be between themselves, in which case they shall be liable to no other determination than that of the conful.

"XII. That in case any subject of his Britannic majesty, being in any part of the kingdom of Tripoli, shall happen to kill, woulnd, or strike a Turk or Moor; if he be taken, he shall be punished in the same manner, and with no greater severity, than a Turk or offer to be for the like offence; but if the escape, neither the English conful, nor any other British subject, shall be in any for 'civet' thoned or troubled on that recount.

"XIII. That the English confulnow, or at any time hereafter, residing, at Telpoli, shall be there at all times with intire freedom and safety of his person and state, with shall be permitted to clause his own interpreter and throker, and freely to go on beard any fish in the roads, at offer, and freely to go on beard any ship in the roads, at offer, and freely to go on beard any ship in the roads, at offer, and freely to go on beard any ship in the roads, at offer, and freely to go on beard any ship in the roads, at offer, and freely to go on beard any ship in the roads, at offer, and freely to go on beard any ship in the roads, at offer, and freely to go on beard any ship in the roads, at offer, and the city and kingdom of Tripoli, the faild British majesty and the city and kingdom of Tripoli, the faild conful, and all other his majesty's subjects inhabiting in the faild kingdom of Tripoli, shall always and at all times, both in peace and war, have full and absolute liberty to depart, and to go into their own or any other country, in any ship or vessel of with them all their effects, goods, families, and fervants, though born in the dountry, without any molellation or hindrance.

"XV. That no subject of his Britannic majesty, being

tion or hindrance.

"XV. That no fubject of his Britannic majesty, being a patienger front or to sny port, shall be molested or meddled with, though he be in a ship or vessel at war with Tripoll

poll.

"XVI. That if any of his faid Britannic majefty's
fhips of war come to Tripoli, or to any other port or
place of that kingdom, with any prize, they shall have
liberty to fell it, or otherwise dispose of it at their own

nips of war come to Iripoli, or to any other port or place of that kingdom, with any prize, they shall have liberty to sell it, or otherwise dispose of it at their own pleasure, without any lett or motestation; and that his liad majesty's ships of war shall not be obliged to pay any customs whatsoever; and that if they shall want provisions, victuals, or any other thiogs, they may freely buy them at the market price.

"XVII. That whan any of his Britannic majesty's ships of war shall appear before Tripoli, upon notice thereof given to the English cooss, or Tripoli, upon notice thereof given to the English cooss, or Tripoli, public proclamation shall be immediately made to secure the Christian captives; and is, after that, any Christians' whatsoever make their escape on board any of the said ships of war, they shall not be required back again; nor shall the side consul or commander, or any other British subject, be obliged to pay any thing for the faid escaped Christians.

"XVIII. That all the merchant ships coming to the city or kingdom of Tripoli, though not belonging to Great Britain, shall have free liberty to put themselves under the protection of the British conful, in selling and disposing of their goods and merchandise, if they shall think proper, without any molestation.

XIX. That all the British ships of war carrying his majesty's slag, upon their appearing before the city of Tripolo, after due notice given of it by the British conful, shall, in honour of his Britannic majesty be faluted with twenty-seven cannon fired from the castle of the city, and the said thing shall return the same number to it.

"XX. That no merchant ship belonging to Great Britain, or any other nation, under the protection of the British conful, being in the port of Tripoli, shall be detained from proceeding to fea on her voyage longer than three days, under pretence of arming the ssipple shall be permitted to turn Mussulman in the city and kingdom of Tripoli, being induced to it by any surprize "hatfoever, unless he voluntaril

ing induced to it by any furprize - battoever, unless he vo-huntarily appear before the dey or governor, with the Eng-lish conful's interpreter, thrice in twenty-four hours, and every time declaring his refolution to become Ma-

and every time dectaring his retordion to occur associated with the continuous of the continuous and the continuous and the continuous and the continuous it displayed as long as he pleases; and likewise that the said conful shall have the like liberty of putting up and displaying the said flag on his boat, when he passes on the water; and no man whatsoever to de, diffurb, or lainre him therein either by word or

deed.

"XXIII. That whereas the ident of Minorea, and city of Gibraitar, have been yielded to his Britannic majority by the hing of Spain, as well as feveral other powers of Europe engaged in the lets war; it is agreed and concluded, that from this time forward for ever, the hid iffand of Minorea and city of Gibraitar shall be offerented in every respect, by the government of Tripol, to be part of his Britannic majeth? a dominione, and the inhabitants thereof that the deemed his natural subject, as if they had been born in Greet Britain 1 and they, with their shape entrying desirin colorus, shall be parasited frusty to trube and traffic in any part of the kingdom of Tripoli, and shall pass without any molestation, either on the fees or otherwise, in the same manuer, and with the same freedom and grivilegue, as have been shouland in this and all formers pustures, in whall of the British suction and subjects.

"XXIV. And whereas in the treaty concluded in the reign of king Charles II. A. D. 1696, by Sir John Nar-horough, an article was inferted, by which the flaips of Tripoli were suched from cruing before or in fight of the port of. Taugler, then belonging to his Majesty; it is now ratified and concluded, that rone of the flaips or refigis belonging to Tripoli shall cruife or look for prizes before or in fight of the sidned and concluded, that rone of the ships or refigis belonging to Tripoli shall cruife or look for prizes before or in fight of the sidned of Minorca and Gibralgar, to distant or makes the commerce thereof, in any manner what forcer.

whatfoever.

"XXV. That all and every article in the treaty shall be involably kept and observed between his facted majefty see, and the mest illustrious lords, see, of the city and kingdon of Tripoli ; and all other matters not particularly expressed in this treaty, and provided for in any former, shall still remain in full force, and shall be essemed the

shall still remain in full force, and shall be esteemed the same as it inferred.

"Dated in the presence of Almighty God, in the city of Tripoli, on the 19th day of June, in the year 1716 of the Christian ma; and of the Mahometan heeira 1128."

We shall close our description of this country with observing, that the kingdom of Tripoli was once the richest, most populous, and respectable of all the states on the coast; but it is now much reduced; and the inhabitants, who are said to amount to between four and sive hisraded thousand have all the vices of the Algerines.

Barcs, which is included in the kingdom of Tripoti, is fituate between ten and thirty degrees cell longitude, and thirty and thirty-four degrees of north latitude, is filled by the few Arabe who inhable it. Ceyárt Barcs, or the defart of whirthinds and hurricanes, extends four hundred miles from north to footh, and three hundred from eart to west. This inhespitable country comprises those districts which the antients termed Marmarica and Cyvanaics. It was better known to the antients than the moderns, and is particularly mentioned by Virgil, on account of the ferocity of the people, in the speech which that poet puts into the mouth of Arma, queen Dido's fifter, when the is recapitulating the flatss that surround Carthage.

fifter, when the is recapitulating the flates that furround Carthage.

The territory about the towns and villages produce a fcanty pittance of com, millet, and maise; all other parts of this wretched region, are totally barren; and the whole labours under agreat fearcity of water. Small as the quantity of grain is, the poor people are under the necessity of hartering fome of it for camels, fieep, dates, &c. Perhaps the most pleasant place in the whole country is that small district upon which the tempte of Jupiter Ammon formerly tood; yet this is furrounded by herrid plains of burning fands, which move under the traveller's feet like waves, or, being raised by the, winds, overwhelm him with clouds of dust. If any are obliged to travel through this diffegreeable region, they must travel with a compass or they would be lost in the defart, and wander about till they perished with hunger and thirst.

The antient Cyrenaica, is the defart part, and that called Marmarica the habitable difficile, those who live near the fea coast are all given to piracy; and the marisime part its

fea.coaft are all given to piracy; and the marisime past it-felf is called the coaft of Dernha, from the chief city remaining, all the other towns known to the antients being either totally ruined, or dwindled to the most inconfiderable villages; fo that what condition they are in, what commerce they carry on, or how and by whom governed, we cannot give any latisfactory account of; and can only farther add, that the people are the most determined, ferocious, and cruel robbers, both by fea and land; and they are to poor, that in order to augment their motive of fub-filiance, and get rid of all that they may deem on incum-brance, they are frequently obliged to fell their wives and children to the Stellans.

SECT. X.

Giver a general and Supplementary account and description of Barbary, in Sustan, fell, produce, business, battle, lists, bitante, Ge.

DARBARY is bounded by the Mediterranean, on the north, which feparates it from Europe; on the self, by Egypt; on the fouth, by the defarre of Zaara; and on the well, by the Atlantic Ocran; being in length from ant to well; about two thousand two hundred miles; and in breadth, from north to fouth, where widelt, about fin hundred miles.

on the well, by the Atlantic Ocean; being in length from such to well, shout two thousand two hundred miles; and in breadth, from north to fouth, where wideft, about the hundred miles.

This country enjoys a wholeform temperature of air, neither too hot in funance, nor too sharp and cold in winter. The winds are generally from the sea, i. e. from the west (by the north) to the salt. Those from the cast are common at Algiers from May to September, at which time the westerly winds take place, and besome the most frequent. Sometimes also, particularly about the equinous, we very fensibly experience that force and impetuosity, which the antients have steribed to the Africus, or fouth-west wind, called labetch by the mariners of these feas. The foutherly winds, which are usually hot and violent, are not frequent at Algiers. They blow sometimes for five or sin days together, in July and Angust, rendering the sir so excessively suffocating, that during their continuance, the inhabitants are obliged to forinkle the floors of their house with water. The winds from the west, the north-west, and the north, are attended with fair weather in summer, and rain in winner; but the easterly winds, to less than the southerly, are for the most part dry, though accompanied with a thick and cloudy atmosphere in most sedons.

Rain is very uncommon in this climate during the summer feason; and in most parts of the Zaara, or Defart, on the south of Algiers, particularly in the Jereed, they have tarely any rain at all. The distinguished the summer season; in others a month late; rafter which the Arabe break up their ground, and begin to sow wheat, and plant beans. This commonly falls out, about the middle of October; but the sowing of barley, and the planting of lentils and gravances, is a fortnight to three weeks later, or not till the end of November. If the latter fall in the middle of Agiers, particularly in the Jereed, they have a round to be, a little more or less, equal to one of our acres. We could never learn that any part of B

where they have a command to water rice, Indian corn, and particularly a white fort of Millet, which the Araba call drah, and prefer it to berley for the fattening of their cattle. Oats are not cultivated at all by the Araba (the hories of this country feeding strogether upon barley) neither is big (or winter wheat) to much as known in this climate.

The Moore and Arabs continue to tread out their corn, after the primitive custom in the east. After the grain is trodden out, they winnow it, by throwing it up into the wind with shovels, lodging it afterwards in mattamores or bterraneous magazines.

Beans, lentile, and gravances (the latter of which is a eer or chich pea) are the chief forts of pulfe that are utilvated in these kingdoms. Pease, till of late, were known cultivated in th in the gardens only, of the feveral Christian merchants. They are fown with the first rains, and blossom in the latter end of February, or the beginning of March. Beans are usually full podded at that time, and being boiled latter end of February, or the beginning of March. Beans are usually full podded at that time, and being boiled up with oil and garlick, are the principal food of perions of all distiction during the fpring. After them lentils and gravances begin to be gathered. Of roots, pot-herbs, and the fruits of the country, there is not only a great plenty and variety, but a continuance or fuccession at least of one kind or other throughout the whole year. of fubincumi on and

Paim trees are very numerous in this country; as are also aimond trees, plumbs, cherries, mulberries; apples, pears, peaches, nectarines; pongranates, prickle pears, cirves, walnuts; but no financial filberts, currants or goofe-

pears, peaches, nectarines, pomgranates, practice pears, olives, valunuts; but no fassel filberts, currants or goofsberries.

Their grapes ripen towards the latter end of July, and are cut for the vintage in September. The wine of Algiers, before the locults in 1723 and 1724, made fuch destruction of the vineyards, was not inferior to the brill. Hermitage, either in brifkness of tafle or flavour. But fince that time it greatly degenerated, and has not for many years recovered its tudal qualities; but at prefers it may dispute the preference with the wine of Spain or Pertugal. The lemon (and sometimes the Seville orange) tree, it may dispute the preference with the wine of Spain or Pertugal. The lemon (and sometimes the Seville orange) tree, it always in a fuccession of fruit and blossors; but the Chims, as it is commonly called, is a foreigner, and beareth only towards the latter end of autunns.

With respect to their gardens, there is nothing laid out with method, beauty, or design; the whole being only a medley or confusion of trees, with beds of cabbages, turnips, beaus, gravances, see, may, sometimes of wheat and harley disperted among them. Fine walks, parterres, and flower-plats, would be to these people the loss of some harley disperted among them. Fine walks, parterres, and flower-plats, would be to these people the loss of some improvements and discoveries, would be so many deviations from the practice of their ancestors, whose southers, the summary that the most provided in the providence of the full of the aiming at any new improvements and discoveries, would be so many deviations from the practice of their ancestors, whose southers, the total providence of the summary the summary of the aiming at any new improvements and discoveries, would be so many deviations from the practice of their ancestors, whose southers, the summary that the summary the summary to the same and the summary that it is blackish, whill in those of Eknildegah, &c. it inclines to bree of the summary thems of Sections of Lie and

rated with these minerals. In the falt-petre works at Tlemfan, they extract fix ounces of nitre from every quintal of the common mould, which is there of a dark colour; and at Doufan, Kair-wan, and some other places, colour; and at Doulan, kari-wan, and tome other paces, they have the like quantity from a loamy earth, of a co-lour between red and yellow. To this grand and inexhaufible fund of fait we may in a great measure attribute the great fertility for which this country has always been gemarkable, and fill continueth to be fo, without any

the great terting for winds this country has always been gemarkable, and fill continueth to be fo, without any other manuring than the burning, in some few places, of the stubble; though it is somewhat extraordinary that the province of Byzacium, which was somerly held in someth repute for its fertility, should be at present the most barren and unprofitable part of their kingdoms.

Salt is the chief and prevailing mineral of these kingdoms, as well from the several fall springs and mountains of salt, as from the great number of falline shibkahs that are to be met with in every district. The salt pits of Arzew lie surrounded with mountains, taking up an area of about fix rolles in compass. They appear like a large lake in winter, but are dry in summer, the water being then exhalled, and the salt less the shind crystallized. In digging, they pass through different layers of this fait, whereof some are an inch, others more in thickness; i morporotion, we presume, to the quantity of saltine particles proportion, we prefume, to the quantity of faline particles the water was impregnated with, before their respective concrations. This whole area is made up of a succession confirming fittal heaped one upon another; and in the fame manner are the faling between Carthage and the Goletta, those of the Shott, and of other, places, bordering tpon or lying within the Saara.

Jebbel Had deffi is an intire mountain of falt, fituated

Jebbel Had defia is an intire mountain of fair, intuited near the eaftern extremity of the 'lake of Marky. The falt of it is of a quite different quality and appearance from that of the falina, being as hard and folid as flone, and of a reddilfh or purple solour. Yet what is washed down from these precipices, by the dews, acquires another colour, becoming as white as snow, and loning that share of bitterness, which is in the parent rock falt. The falt of the mountains, near Lwotiah and Jibbel Miniss, is of a grey or bluish colour, and, without submitting to the of a grey or bluifh colour, and, without fubmitting to the like socidental purification as at Had-deffs, is very agreeable to the palate; the first especially being fold for a penny au ovace at Algiers.

The falt of the lake of Marks (called likewife Bahirah Pharuouse), and of other leffer plains of the same nature, is of the like quality and flavour. These are usually called

Shibkah; i. e. faltish plate of ground, being contamonly overflowed in winter (at the same time they appear like so may extensive lakes); but are dry all sommer (when they may be taken for the like number of bowling-ground prepared for the turf). Some of these shibkahs, have a hard and folid bottom, without the least mixture of gritty mould, retaining the salt that lieth eryfallized upon them after rain. But others are of a more ouzy, absorbent nature, feldom preferring any faline incrustations upon the surface.

nature, feldom preferving any faline incruftations upon the furface.

But, besides the falt springs and rivulets, already mentioned, these countries aboutd in hot and sulphurous springs and baths. Some of these, waters are little-more than lokewarm; others of more intense hear, and very proper to baths in, while the Hammam-Messources, and the upper bath at Mercaga, are much too hot for that purpose; the foruser boiling a large piece of mutton very tender in a quarter of at hour.

Besides the hot mineral essures that are continually discharged by the therms, there still remain below the surface some vast and inexhaustible funds of sulphur, nitre, and other inflammable bodies, of which the frequency and violence of the carthquakes, Anno 1723 and 1724, thoose down as austiber of houses, and elosed up the course of several sountains: but by one of these violent concussions, Anno 1716, a large patch of ground at Wamre, lying in an easy descent, with a well, a few trees; and a farm house, glided all down together for the space of a furlong, till they were, one or other of them, stopped by the channel of the Harbune. Several of the branches; together with some pieces of the house turned upside down, and lying a distance from each other, are to this day standing monuments of this catastrophe. I was likewise informed, that the like accident happened at the same time in some of the mountainous districts near Boujeiah and El-Khadarah. The great shock in Anno 1724, was perceived from Miliana to Bona, the air being then very clear and tenthe mountainous districts near Boujeial; and El-Khadaralı. The great shock in Anno 1724, was perceived from Miliana to Bona, the air being then very clear and temperate, and the quicksilver standing at the greatest height, whilst, upon enquiry, other concussions; were only found to be local, or of small extent; the quicksilver, in these cases, observing no certain period, and the air being, as at other times, either calm or windy, hazy or serence.

Earthquakes, at Algiers, generally sall out a day or two after a great rain, at the end of the summer, or in the autumn. The cause, everhaps may arise from the extraording.

Earthquakes, at rangers, generally after agreat rain, at the end of the fummer, or in the autumn. The caule, perhaps, may arise from the extraordinary conflipation or closeness of the surface at such times, whereby the subtetraneous streams will be either sent back or confined; whereas the whole country being full of deep chinks and chasses, the inflammable particles have an easier escape.

Lead and iron are the only metals that have yet been difeowered in Barbary; the latter is white and good, but in no great quantity. Their lead ore is very rich, and might be obtained in large quantities; if their mines were under a good regulation.

Besides the horse, the mule, the als, and camel, used in Barbary for riding and carrying burdens, Dr. Shaw (from whose travels into these parts this account is chiefly taken) mentions another animal, called the kumrah, a little ferviceable beaft of burden, engendered betwirt an ais and a cow, being fingle hoofed like the ais, but the tail and head (except the horns) like a cow, and a skin seeker than that of the ais.

In this country, the neat cattle are generally very small and slender, the fattest of them, when brought to the stall, rarely weighing above five or fix quintals, or hundred weight: neither is their milk in proportion to their fizes, for notwithstanding the rich herbage of this country from for notwithstanding use rich nerves on the county hour between to July, the butter, never has a fablance or richness of taste equal to what our English dairies afford us in the midst of winter. Abdy balls, dey of Algiers, was no lefs surprised than his ministers, when admiral Cavendish acquainted him, that he trad a Hampshire cow was no lefs furprifed than his ministers, when admiral Cavendish acquainted him, that he da a Hampshire cow on board the Canterbury (then in the road of Algiers) which gave a gallon of milk in a day; a quantity equal to what half a dozen of the best Barbary low would yield in the same time. The Barbary cattle have likewise another impersection, which is, that they always lose their calves and their milk together.

The dairies hete are also in some measure supplied by the sheep and goats, as the Moors and Arabe chiefly make cheese of their milk. Instead of runnet, they make use (in the summer season particularly) of the flowers of the great-headed thisself, or wild arnebake, to turn the milk, putting the curds thus made into funall baskets of rushes, or palmetta leaves, and binding them afterwards and pressing them. Many of tiese cheese weigh about two or three

three pounds, being utually of the thape and fire of a penny loaf." They have no other method of mixing butter, than by petting their milk or cream into a goar-dkin, which being sufpended from one fide of the unit to the other, and pressed to and from one funiform directions quickly occasions that spenation of the unchoose and wheyey parts which is requisited. The interest which is requisited. The interest plants which is requisited that the interest plants.

We may observe further, that, besides the great variety of the cattle of this country, ach species are very homer ous and prolific. Several Arabian tribes can bring the the field only three or four hondred sovers at the faine time that they the possesses of more than to many, houseful cattle, and thrice that number of sheep and black cattle. The Arabs rarely kill any of their sheeps and black cattle. The Arabs rarely kill any of their sheeps when their wood brings them in each trip, deele upon what their wood brings them in each trip, and their sheeps to be cattled to are not marcally taine and domessicated, these kingdoms afford large herds of the neak kind; called bekker-el-wash by the Arabs. This species is remarkable for having a rounder turn of body, a state face, with borns sheading more to each other than in the same kind; these agree in colour with the rod deer, and she of the same face.

"The ion and partier are among their wild beatts a the tyger is not a native of Barbary. The dubbah is an ania mat about the bigness of a wolf, but of a efatter body, and naturally limps upon the hinder right leg. Befides thefe animals, it has others in common with other counmere animals, it has others in common with other countries, as red and fallow deer, the gazel or antelope; the bear, the ape, the felineumon, porcupine, hedge-hog; for, ferret, weafelt alto the mole, rabbet, hare, and wild boar, which are every where in great numbers. The lion is supposed to prey chiefly upon the latter, which not withstanding both sometimes been known to defend itself with fo much bravery, that the victory hath inclined to neither fide, the carcafes of them both having been found lying dead together all in a gore, greatly torn and mangled. The abovementioned traveller observes, that the locusts

which he faw in the years 1724 and 1725 were much big-ger than our common grasshoppers, having brown spotted wings, with legs and bodies of a bright yellow. Their wings, with the same both a together performance was towards the latter end of March, the wind having been for fome time foutherly, and in the middle of April their numbers were for vafily increased, that, in the heat of the day, they formed themselves into large bother. in the fleat of the day, they formed themicives into large bodies, appeared like-a fucefilion of clouds, and darkened the fun: about themiddle of May, when their ovaries were turigid, each of these bodies began gradually to disposer, retiring into the metijah and other adjacent plains, to depositheir eggs. Accordingly, in the month following, their young broods began gradually to make their appearance, and it was surprising to observe, that no sooner were any of them hatchred, than they immediately collected themselves contains each of them forming a compass but of sore together, each of them forming a compact body of feveral hundred yards fquare, which marching afterwards directly forward, climbed over trees, walls, and houses, and eat up every plant in their way, letting nothing escape

them.

The inhabitants, to stop their progress, made trenches all over their fields and gardens, and filled them with water; or else placing in a row great quantities of heath, stubble, and such like combustible matter, they fet them of fire on the approach of the locusts. But all this was to no purpuse, for the trenches were quickly filled up, and the fires put out by infinite swarms succeeding one another, whilst the front seemed regardless of danger, and the rear pressed on so close, that a retreat was impossible. A day or two strong or tw caped before with the loss only of their fruit and foliage; fo juffly hath the infpired writer compared them to a great army, and observed, that the land is as the garden of Eden before them, and behind them a desolate wilder-

Having, in this manner, lived near a month upon the ruin and destruction of every thing that was green and juicy, they arrived at their full growth, and threw off their worm-like state by calling their skins. To prepare them-felves for the change, they clung by their hinder seet, to some bush, twig, or corner of a stone, when immediately, by an undulating motion, used upon the occasion, their heads would sirst appear, and soon after the rest of their by an undusting motion, used upon the occasion, their leads would first appear, and soon after the rest of their bodies, after which they lay in a languishing condition; but as soon as the sun and air had hardened their wings, and dried up the moisture that remained upon them, after the casting off their floughts, they returned again to their former yoracity; with an addition both of firength and againty; but they continued not long in this flate, before they were interest difference as their parents had been before, after the laying of their eggs; and as the direction of their marches, and flights of them both, was always to the storthwarde, it is probable they perished in the fea, a grave, which according to those people, they have only in common with other lawinged creatures. These infects, sprinkled with falt, and fried, are not much unlike the river cray-fifth in taken to have not much unlike the river cray-fifth in taken to have not smuch un

river cray-fift in after the alending according to the fame author, the natural and ordinary course of things is much the fame in Barbiry, as in other places; each fincies, as far as he could be informed, keeping inviolably, so, ittelf; for if, fays he, we, sacept the mule and, assurable, (which two are produced, from animals under the direction of mankind, and therefore not so properly left to themselves) few, it is prefumed, if, indeed any inflances, can be fairly unged in favour of the old observation, that Africa is always producing fome new moniters. ways producing fome new monfters.

and sciences are little known or encouraged in Barin Arts and sciences are little knewn or encouraged in Rar-bary: besides their koran, and some other enthusastic comments upon sighvery few books are great or anguired after, by those sew persons of riper, years, who have both time and lessure for study and, sontamplation. All that wartery of learning which they formerly either, invented themselves, or adopted into their own language, may be be reduced, at present, to a few sheets of blandering geo-graphy, for to some tirefome memonit of the transactions of their own times; for such branches of history as are older than their prophet, are a medicy only of romance and confusion. and confusion.

The fame writer observes, that, upon his arrival at Al-giers, he made it his chief business, to be acquainted, with such persons as had the character of being searned and curious; and though it is very difficult (as well from their natural flyness to strangers, as from a particular contempt they have for Christians) to cultivate any real friendship among them; yet in a little time, it was perceived that the chief aftronomer (who had the fuperintendance and regulation of the hour of prayer) had, not trigonometry enough to project a fundial; that the whole art of navi-gation, as it is practifed at Algiers and Tunis; confifted in gation, as it is practited at Aiguers and I unis, conflicted in Jordhing more than what is called the pricking of a clear, and diffinguishing the eight principal points of the compals: Even chemistry is no farther applied at prefent than to the diffilling of role water; though this was formerly the favourite science of these people.

the lavourite feience of these people.

Notwithstanding the extreme ignorance of these peog ple in general, there are however, favoral persons who prescribe in physic, play upon a variety of musical instruments, and are concerned in other assume and persons ance, which feem, at least, to suppose some skill in mathematics; yet all this is learnt merely by practice, long-habit, and custom, affished, for the most part, with great strength of memory and unickees of invention. frength of memory and quickness of invention; for no objection can be made against the natural parts and abilities of these people, who are certainly subth and ingenious, and only want time, application and encouragement to coltivate and improve them.

As the people believe in first and absolute predefination, the office of the color of the

few of them will either admit of advice or medicine; whilst others, who are less fix, efficious respecting religion, prevent the assistance of both by their ill conduct and management, leaving all to the strength of nature, or else to

nagement, leaving all to the firength of nature, or elfe to mager-ealt, as they call charms and enchantments, concerning which they are very credulous.

There is fearcely one person in twenty thousand that is versed in numeral arithmetic algebra, notwithslanding their foresthers; if we may dee from the name, seem to have been the inventors of the one, as they have given to all Europe the characters of the other. However, the merchants, besides being frequently very destrous in the addition and subtraction of large sums by memory, having a singular method of numeration, by putting their hands into each other's seeve, and then touching one another with this or that singer, or such particular joint of it (each of them denoting a determined sum or number), they will transact affairs of the greatest value, without speaking to one another, or being at all understood by the byeing to one another, or being at all understood by the byeflander.

The Arabs are more addicted to superstition than any other nation in the world, or even than the Mahometans in general. They hang about the childrens necks the figure of an open hand, which the Turks and Moors paint upon their fhips and houses, as an antidote and counter charm to an evil eye; for five, with them, is an un-

Jucky number. They who are grown up, carry always about with them fome paragraph or other of the koran, which, as the Jews did their phylacteries, they place upon their breaft, or few under their caps, to prevent fafeination and witchcraft, and to fecure themfelves from fickness, and other misfortunes they are exposed to.

The people suppose the virtue of these charms and scrolls to be so far universal, that they hang them upon the necks of their horses, and other beasts of bunden. They also place great confidence in magicians and forcerers; and upon some extraordinary occasions, particularly in a lingering dillengers, they use several supersticious ceremonies in the facrificing of a cock, a sheep, or a goat; by burying the whole carcase under ground, or by drinking a part of the blood, or else by burning or dispersing the feathers; for it is a prevailing opinion all over this country, that a great many disastes proceed from some offence or other that has been given to the jenoune, a fort of creatures placed by the Madifactes proceed from fome offence or other that has been given to the jenoune, a fort of creatures placed by the Mahometans betwirt angels and devils. Thefe, like the faries of our fathers, are supposed to frequent shades and fountains, and to assume the bodies of toads, worms, and other little animals, which, being always in our way, are liable every moment to be hurt and molested. When any person, therefore, is sick or manned, he fancies that he has injured one or other of these beings, and immediately the women, who are destrous in these ceremonies, when the suppose a Wednesday with frankingens and other extraponal other personal than the suppose of the suppose of the second go upon a Wednesday with frankincense and other per-fumes, to some neighbouring spring, and there sacrifice as we have already hinted, a hen or cock, an ewe gr a rain, &c. according to the sex and quality of the patient, and the na-ture of the distemper he is afflicted with.

SECT. XI.

Contains a description of the Mediterranean fea.

A S the feveral provinces and diftricts of Barbary, lately treated of, have the Mediterranean for their northern boundary, it will be therefore used from the state of the sta boundary, it will be therefore necessary to give a particular description of that celebrated sea, before we proceed with our account of the other parts of Africa; especially as there are many particulars relating to it, too curious to be over-looked in a work of this nature, and which we shall now give our readers in as succinct a manner as the subject

will admit of.

The Mediterranean fea is so called on account of its being surrounded by the land on all sidea, except at the two strights at the end of it, viz. that of Gibraltar, on the west, and the Bosphorus on the east, which last lets the Euxine or Black sea, as the sormer doth a constant current from the western ocean into it. The antients called it the Hesperian sea, from the word Hesper, or Vesper, signifying the west. It was also stilled Mare magnum, or the Great sea; and Mare infernum, or Lower sea. The sormer was given to it by the facred books of the or the Great fea; and Mare infernum, or Lower fea. The former was given to it by the facred books of the Old Testanent, in opposition to the fea of Galliee, and the Dead fea, which, though dignified with the name of fea, where but finall lakes in comparifon of it; and the Latter or Lower fea was given it by the Romans, from the coast of Genoa to those of Sicily. Those of Internum, Interius, and Intestinum, were given it on the fame account with that of Mediterranean. The spaniards call it Mardi levanto, or the Eastern fea, by reason of its fituation with respect to them.

This fea parted from the western occan by the straighter.

This fea is parted from the western ocean by the straights of Gibraltar abovenientioned: from the Red fea by the ishmus of Suez; and from the Propontis, by the straights called Dardanels. It is bounded by Europe, on the north; by Africa, on the fouth; by Afia, on the east; and by the Braights of Gibraltar, on the west. Its utmost extent from north to fouth, where widest, that is from the guif of Sidra, in Tripoli, to that of Venice, reaches from thirty, twenty, to forty-fix, forty, that is, upwards of fixteen detwenty, to forty-thx, torty, that is, upwards of fixteen degrees, or three hundred and twenty leagues, or nine hundred and fixty miles. Its length from eaft to well, is fill much greater, viz. from five degrees western, to thirty-fix eastern, or forty-one degrees of longitude, making in all seven hundred and ten leagues, or two thousand one hundred and thirty miles. During this long course, though it retains the general name of Mediterranean, yet it bath a miles of the line of the leagues of the course of the second early to well a second early the second early the second early to well a second early the second early the second early the second early to well a second early the variety of appellations given to its feveral parts, according to the countries it touches on each fide; such as the sea of

Genoa, the Tuscan or Etruscan, the Sicilian sea, &c. and that branch of it which runs northward from the Cape Ottanto, quite up to Venice, is filled the Adriatic sea, or gulf of Venice; and so of the reft.

gulf of Venice; and so of the rest.

The Mediterranean hath abundance of these gulfs. The most considerable of them are, that of Venice, last spoken of; that of Lions, on the coast of France: the Archipelago, in the Levant; and that of Sidra, on the coast of Barbary. It hath likewise a real humber of peninsular, of which we shall only mention the three principal ones, viz. Italy, Greece, and Anatolia. The most considerable of its islands are those of Sicily, Sardinia, Corfica, Majorca, Minorca, Gossu, Cephalonia, Zante, Candia, Rhodes, Cyprus, those of the Archipelago, and many others; an account of which the reader will find at the close of the quarter to which they respectively appearatin.

It is allowed on all hands, that a continual current flows from the Atlantic occan into it, at the straights of Giraltar; and another as constantly flows into it at the Bosphorus, from the Euxine or Black sea. Captain Bolland, who lived nine years at Tangier, and made his constant observation on the former, tells us, that he never saw it fail, during all that time; but that the ships in the middle of the straight were always carried by the stream into the Mediterranean, unless hindered by contrary winds; and it is well known, that at Constantinople, a strong rapid stream sets always in from the Black sea; notwithstanding which, and the prodigious quantities of water that are likewise thrown into it many of which are very, large and deep, this sea is never observed to overflow, or even rise beyond its usual height. What becomes of all the water that is thus thrown into it, by two such large and constant currents; the one of which is computed It is allowed on all hands, that a continual current flows and contant currents; the one of which is computed about four miles broad, and the other about two, is a question, that is more easily asked than resolved, though question, that is more cally again that relaying, though the learned have formed many conjectures concerning it. The most received opinion, is, that which supposes the middle stream to flow into it, whilst the two fides, by a contrary course, discharges themselves out of it into the ocean. And indeed it is observable, that though in the midocean. And maced it is observable, that though in the inter-de of the firsight there be a rapid current always fetting in, yet, on the fides, there is a stream of about a third part of that breadth, that flows fix hours, and ebbs fix, every day; and that a still narrower fiream along the shore doth likewife ebb and flow full twelve hours, but at contrary times from the other; so that on the first day of the moon it is slood at one of the clock, and ebb at seven, in the two intermediate streams next to the middle current; and, on the fame day, it is flood at ten, and ebb at four, in the two outermost streams next to the shore : or rather. as the abovementioned captain Bolland affores us, it flows at ten, and ebbs at four, on the African shore; and slows at cleven, and ebbs at five, on the European fide.
We shall now only add that surprising phoenomenon of

its opposite currents; as difficult to be accounted for, as that we have been speaking of concerning the Mediter-ranean. These currents have been long since taken noranean. These currents may been long links taken notice of by Procopius, who lived in the fixth century, and tells us, that the fishermen who frequented it, especially that part which is fliled the abyls, observed, that their nets, when flung into it, were dragged by the upper current directly from north to south from the surface downward to a certain depth, after which they bent visibly z quite contrary way; whence they concluded, that the lower current was quite opposite to the upper. M. Toursefort, who bath examined the truth of this observation, endeavours to account for this contrary course, by supposing that the waters moving viclent'y against some hol-low rock, and meeting with a strong repulse from it, must of confequence be beaten back with an opposite motion to what they had before. However, that judicious author is far enough from being fatisfied that this is the true cause of this wonderful phoenomenon, and only proposes it as a conjecture of his own, which may excite others to seek out for a better. Several other ingenious men have also carefully examined the fact, and owned it altogether surprising, particularly Mr. Gilles, and count Marsilly; but neither they, nor any other, have ventured to give their opinion about the cause of it. Thus much shall suffice for the description of this fea, which has been fo remark-

able both in antient and modern history.

C H A P. II.

THE NEW HISTORY AND DESCRIPTION OF

GRO

SECT. I.

Tracts of the fituation and boundaries of the river Gambia, fettlements thereon, the kingdom of Mundingo, the Gum Defart, country of the Pholeys, &c.

EGROLAND, or Nigritia, is fituate between eighteen degrees west, and fifteen degrees of east longitude and between ten and twenty degrees of north latitude. The great river Nigeror Senegal is supposed to run through the whole length of it, falling, by several channels, into the Atlantic ocean: on the banks of this river, as also on the Atlantic occan: on the banks of this river, as alfo on the borders of the river Gambia, are feveral fettlements belonging to the English. This extensive country is bounded,
on the east, by Abysinia and Nubia; on the north, by
the desart of Zaara; on the west, by the Atlantic ocean;
and on the south, by Guiney and the kingdom of Benin.
It extends about eight hundred miles in the broadest part,
from north to fouth; and is upwards of two thousand two
hundred miles from east to west.

The river Gambia lies in thirteen degrees twenty minutes north latitude, and in fifteen degrees twenty minutes north latitude, and in fifteen degrees twenty minutes.

The river Gambia lies in thirteen degrees twenty minutes north latitude, and in fifteen degrees twenty minutes weft longitude, from whence it is little to be wondered at that the climate fhould be exceffively hot. The rainy featon efually begins with the month of Junc, and continues till the latter end of September, and fometimes the beginning of October: the first and last are generally the most violent. The wind comes first, and blows excessive hard for the space of half an hour, or more, before any rain falls, informeth that a vessel may be suddenly surprized and overset by it: but then a person may be aware of it a and overfet by it: but then a perfor may be aware of it a good while before it comes, for it looks dark, and the lightning breaking out of the black clouds, as they move lightning breaking out of the black clouds, as they move flowly on, makes it appear very dreadful, During the rainy feafon, the fea breezes feldom blow, but inftead of them eafterly winds right down the river, which in the months of November, December, January and February generally blow very fresh, especially in the day time. Four months of the year are unhealthful. The greatest heats are in May, three weeks or a month before the rainy feafon heating.

The river Gambia is divided by a number of islands and sand-banks, and in the widest part is about nine miles across. It is navigable for small vessels upwards of six hundred miles, the sides reaching to that distance from its mouth. The land on each side is chiefly stat and woody; but there are some parts very open, on which the natives plant rice, and in the dry season they produce, pasture for the cattle. The wild beasts consist of lions, tygers, and elephants, and there are great numbers of crocodies in

On this river, the English, French, and Portuguese have settlements. The chief belonging to the English is in a small place called James's ssland, which lies about ten miles from the north of the river. There is also another confiderable factory at Gyllifree, a large town on the north bank of the river, near the beforementioned island; and a third at Joar, higher up the river in the kingdom of Bar-fally, which we shall more particularly treat of he eafter. Between James's fort and the mouth of the river, at a place called Albedra is the chief fettlement of the French.

Gold, elephants teeth, bees-wax, and flaves, form the principal part of the trade carried on here; the latter of these are either priioners taken in war, or persons stolen or condenned for crimes. The gold is of an excellent qua-lity, and much siner than sterling gold. The ivory, or relephants teeth, called by the natives morphel, is either

found in the woods, or got by hunting and killing the beafts; and the larger the teeth the more valuable the ivory : fome of them are quite white, others yellow, but the difference of colour neither adds to, or diminishes the the difference of colour neither adds to, or diminifies the value. Bees wax is fold in great quantities about the river, and is made in cakes from twenty to one hundred and twenty pounds weight. Gum dragon is also brought from this country: it comes from a tree called bois de fang, or blood wood, from whence an incition being made in the tree, the red liquor ouzes out drop after drop, till feveral lumps are formed, which are afterwards dried in the fun.

Several forts of people inhabit the banks of the river Gambia; they are known under the following appella-tions; namely, the Mundingoes, the Jolloifs or Jalofs; the Pholeys or Fouleys; the Floops or Fatoops; and the Portuguele; of all which, together with the manners and customs of the inhabitants, we shall now proceed to give

an account.

Mundingo is much larger than any other kingdom fitu-ated on the banks of the Gambia, and the inhabitants of it are much more numerous. The Portuguese conquered this kingdom in the beginning of the fourteenth century, when fome of them lettled in it, and their descendants have ever fince intermixed with the natives, so that there is little difference between them either as to their colour or shape, the former of which is quite black, and the later thick and clumfy; but as they still retain a corruption of the Portuguese language, and as they christen and marry by the help of the priest sent annually from St. Jago, one of the Cape de Verd islands, they consider themselves as different from the Mundingoes, as if they were really natives to Portugal; and as the term Negro is only used by them for the slaves, they efteem it the greatest affront that can be offered, to apply it to them.

The kingdom of Mundingo is of considerable extent, but its exact distance cannot be a secretained. The natives are quite black, and have very disagreeable features, their lips being exceedingly thick, and their noses remarkably broad and stat. They are rational and humane in their disspositions, and are particularly civil to strangers. They is little difference between them either as to their colour

dispositions, and are particularly civil to strangers. They are in general very brifk and lively; but, if affronted, are impetuous and revengeful; nor can any quarrel be adjuiled, otherwise than by the destruction of one or other

of the persons contending.

These people have a great sense of pride, the wealthier part of them keeping a prodigious number of flaves; but they treat them in fo humane a manner, that it is fonctimes difficult to know the fervant from the mafter; they are frequently much better cloathed, particularly the wo-men, who are ornamented with necklaces, brucelets, and ear-rings made of coral, amber, and filver, to a confiderable value. Several of the natives have many flaves born in their families; and though in fome parts of Africa thefe are fold, yet in Mundingo it would be thought not only indiffereet, but very wicked; nor is ever any family flave 'old, except for fuch crimes as would have authorized its being done had he been free. If indeed there are many flaves in the family, and one of them commits a crime, the maker cannot fell him without the conjent of the reft; for it he does they will defert him, and fly to a neighbouring kingdom for protection.

In moft of the towns of this kingdom they have a kind of drum of a very large fize, called a tangtong, which they only beat on the approach of an enemy, or on fome very extraordinary occasion, to call the inhabitants of the neighbouring towns to their affiltance; and when this is

beat in the night time, it may be her at fix or feven |

milet distance.

If any of the natives ill treat s' European, he applies to the akaid, or head man of the town, who is appointed to do justice on such occasions; he is called the white man's king, and has otherwise great power: he has the first voice in all conferences relative to public transactions,

and decides all quarrets.

There are feveral persons called lords of the soil, in this and the other kingdoms; they are considered as kings in the respective towns where they reside; to them belong also the palm and ciboa-trees, which are here in great abundance; and no one dare use any leaves, or draw any wine, from them, without first obtaining their consent. They who have the liberty of drawing the wine, asknowledge the obligation beyingstoned days produce in a weeklo ledge the obligation by giving two days produce in a week to the lord of the foil; and white men are under the necef-fity of making a finall prefent to them before they can cut leaves or grafs to make coverings to their houses.

Having mentioned the palm and ciboa-tree, it may not be improper in this place, to give a particular description of them. The palm tree is very strait and smooth, and some of them grow to the height of one hundred feet. From the trunk of the tree the natives extract a liquor roin the trunk of the tree the natives extract a industrial called paint winc, which in colour greatly refembles whey: to effect this, they make an incision at the top of the trunk, to which they apply goard bottles, and the liquor is conveyed into these by means of a pipe made of leaves. The wine is very sweet in its taste, and if drank as soon as drawn is very purgative; but if kept two or three days, it ferments, grows strong, and becomes not only palatable, but also very wholesome. The natives climb these trees with suntiling against in the following markers. They but allo very wholelome. The natives climb thefe trees with fuprifing agility, in the following mariner: They take a piece of the bark of a tree, formed in the shape of a hoop, with which they inclose themselves and the tree, the hoop being afterwards fecured; they then six the hoop under their arms, and resting their back against it, and their feet against the tree, they climb up with surprising expedition. Sometimes indeed they meet with a statl accident, which either arises from the bark, on which they are sometimes indeed they meet with a statl accident, which either arises from the bark, on which they reft not being properly fecured, or from miffing their flep in climbing. The ciboa, or palmetto tree, greatly re-fembles the pain tree, and runs alfo to a very confiderable height; the wine extracted from it taftes fomething like that from the palm tree, but is not quite fo fweet; and they

that from the pain tree, but is not quite to iweet; and they make coverings of the leaves which grow on the top.

Their buildings, especially those of the common people, are very low and mean, of a conical form, and have no other light but what is admitted by the door, which is so low, that they are obliged to stoop in entering it; they are formed of a kind of wicker work plaisfered over with earth, and covered with leaves of the palm tree on the

with respect to their furniture, they have only a few common necessaries, such as earthern dishes for their food, wooden bowls, pates, dishes, &c. They have neither chairs, tables, or beds, a mat supplying the place of all three; for on that they sit, eat, and sleep. Among the better fort indeed the master of the house is distinguished by the state of th

by having a bed, which confifts of a kind of hurdle laid upon pieces of wood, and elevated about two feet from the floor: on the top of it is laid a mat, on which, they fleep; but they have no kind of covering, nor any fheets, Rice, pulfe, and Indian corn are their principal food, which they mix with boiling water, or broth made from the fleth of crocodiles: they like the latter the beft, and are not out found of the fleth of the ercocodiles, but also their cross their error of dainy, however, is fifth dired in the eggs; their greatest dainty, however, is fish dried in the fun, or smoked, and the more it stinks the better they like iun, or imoked, and the more it flinks the better they like it; in fliort, they are far from being delicate in their appetites as they will not only eat what is already mentioned, but also finakes, monkies, alligators, or any other thing that comes in their way. Their common drink is water; but they sometimes use palm wine and mead, and they will not refuse rum and brandy if they can meet with it. They make two meals a day, one about noon, and the other in the evening. They fit at their meals, and take up the victuals with the fingers of the right hand only, confidering it indecent to touch with the left either their food or lips.

Poor people among them go almost naked, having only a piece of linen fatened round the wait with a girdle, in which they always carry a long knife. The richer fort wear a kind of thirt, with drawers made of cotton; and they have also sandals to their seet, which are sastened on the instep with strings. Some of them carry a long darr, others have bows and arrows, and some have a sword slung over the right shoulder.

The women have a piece of cotton tied round the waiff, from whence it reaches to the knees. The upper part of the body is naked, but, by way of ornament, it is flained or painted with figures of various colours. Bome indeed have a loofe piece of cotton thrown over their fhoulders, but that is confidered as a particular kind of extravagance. Both fexes wear a large bunch of keys hanging at the end of their girdles; which is an addition they are extremely proud of.

The people marry their daughters very young in this, as in most other hot countries: fome of them are even contraded as foon as they are born, and the parents can never afterwards break off the engagement; the men, however, can refuse accepting them when at a proper age; neither dare the girl marry any other without his consent. Before a man takes his wife he is obliged to make a present to her parents of two hundred cola: two iron bars, and two cows; the cola is a fruit that grows in the inland two cows; the cola is a fruit that grows in the inland parts of the country, and fonewhat refembles a horse chefinut. When a man takes home his wife he makes a grand entertainment, to which they who think proper come, without the ceremony of a formal invitation. The bride is brought on mens shoulders, with a vail over her face, which is not removed till the marriage is properly consummated; and during this time the company sing, dance, and exhibit every kind of the most ridiculous mummery Imaginable,

munmery imaginable.

The men are allowed to take as many wives as they please; and if any one of them proves false, the husband is at liberty to fell her as a flave. If any diffike arises, he may turn off his wife, and make her take all her children with her, unless he is inclined to keep any of them himself, in the head of the grant her had been as the head of the same able to a fifth. in which case he generally chuses such as are able to affish him in the business he follows. He has also the liberty of going any time after they have parted, and take any of the

other children from her.

A very diftinguished respect is paid by the women to their husbands, insomuch that if business ealls them a day or two from home, their wives, when they return, falute them on their knees; and they farther shew their humi-

lity, by always placing themselves in that posture when they give them drink.

And their lordly hossbands, in order to render their And their fordly hulbands, in order to render their power as complete as poffible, compel their wives to obedience by all the force of fear and terror. For this purpofe, they have a figure about eight feet high, made of the bark of trees, and dreffed in a long coat, with a whifp of fraw on the head, made in the form of a cap. It is called a mumbo jumbo, and when any controverfy arises between a man and his wife, this strange figure is sent for to determine the distance which company to the control of the contro determine the diffute, which generally terminates in fa-determine the man. When the women hear him coming, they run away and hide themselves; but if you are ac-quainted with the person concealed in the mumbo jumbo, he will fend for them all to come, make them fit down, and afterwards fing or dance, as he pleases; and if any re-fuse to come, he will send for, and whip them. The peo-ple also swear by the mumbo jumbo, and theoath is esteemed irrevocable. Most towns of note have one of these objects of terror in it.

They dip a new-born child in cold water feveral times in the day, at each of which, after having dried up the water with a cloth, they rub the infant over with palm oil, particularly the back-bone, finall of the back, elbows, neck, knees, and hips. When born, they are of an olive complexion, and fometimes do not become black, till they are two months old. They are not born with flat nofes; but as that fhape is greatly admired, their mothers or nurses, whenever they wash them, press down the upper part of their nose with the finger, and, from its natural tenderness at that time, the compressure has the wished-for effect. They give their children a name about a month after they are born: shaving the head, and rubbing it well over with palm oil, is the only ceremony attending this. They circumcife their rule children a short time before

the commencement of the rainy feafors: after the ceremony is over, these children wear a peculiar habit adapted to the occasion. From the time of circumcision to that of the rains, they have the privilege of committing any kind of outrage, without being called to account; but they must lay aside those follies, throw off the dress of circum-cision, and put on the habit of thecountry, when the first

rain begins.

On the death of any person, all his friends and acquaintance come and cry over him for two days; and such of his relations as are not on the spot, when they hear of it, though at a considerable distance will testify the same

lling the llow, but ifhes the bout the hundred brought d bois de ing made drop, till dried in

kind of lamentation as if they were really prefent with the deceafed. When they bury the corple, they dlg a hole about feven feet long, three deep, and about two feet in breadth. The body is wrapped in white cotton cloth, and at the time it is put into the grave, the whole affembly bow, and give one univerfal shelek. After the corple is deposited, they lay slicks across the grave even with the surface of the earth, on which they place straw, or the leaves of trees, so thick as to prevent the mould from getting into the grave, and on the top of these they lay the earth, which they trample hard down with their feet, prefing it very close. preffing it very close.

"Thee people have a language peculiar to themselves, which is more generally spoken on both sides the river, than any other, one who is well acquainted with this language, may travel from the mouth of the river quite to

the country of the joncoes, or merchants, so called from their yearly buying a vast number of slaves, and bringing them to the lower parts of the river for sale. The natives have also a corrupt kind of Portuguele, which, when they trade with the Portuguele is generally used by them.

The Mundingoes are chiefly Mahometans, and preferve many maxims of the most superfittious nature. When an eclipse of the moon happens, they believe it is occasioned by a large car putting one of her paws between the earth and the moon and during the time of its progress, they pay reverence to Mahomet. They keep their fabbath on the Friday, when they pray three times, but on the other days of the week only twice. the other days of the week only twice.

They have neither temples nor mosques, but are summoned to their devotions under the shade of a large tree by their marabouts, or priests, of which there is one to by their marabout, or patents, or which there is one to every village. They pay the greatest reverence to their priests, informuch that if perfons of the first distinction happen to a with one of them, they immediately form a circle rounding, and, falling on their knees, folicit his

benediction.

From their superfittious notions, they have such faith in their prieffs, that the can but obtain a charm, or, as they call it a grifgris, they think themselves secure from any kind of danger. This grifgris confifts of nothing more than a sew Arabic characters drawn on a piece of paper, or the figure of lizards, ferpents, or fome other animal, which they wear about them as the most valuable possession. They have such an opinion of the utility of this fupposed charm, that the poorest negro will not be without it; and he is particularly cateful to have it about him it i and he is particularly careful to have it about him whenever he engages in any hazardous enterprize, as fuppoling it a prefervative from every danger: however, when it happens to prove ineffectual, which is fometimes the cafe, the marabout attributes it not to any defect in the charm, but to the bad conduct of him who posselfed it. The priests reap considerable benefits by the sale of these charms, as they fix the price in proportion to the circumstances of the purchaser; and some of them carrying on the richest commerce of the country, not only by trading largely in these articles, but also in gold, slaves, elephants reeth, &c.

There is a fort of people on the borders of the kingdom of Mundingo, called Hoops, who are in a manner wild, and investrate enemies to their neighbours. Their country is of confiderable extent, but they have not any king, ard are intirely independent of each other; notwithstanding which, they are so numerous, that the Mundingoes, with all their force, cannot conquer them. Their towns are which, they are lo numerous, that the Mundingoes, with all their force, cannot conquer them. Their towns are furrounded with a kind of fortification made of flicks driven into the ground clofe together, and covered with ela. They have the character of being very grateful when they receive any favour; but if any injury is offered them, they will never forgive the party, or fuffer it to pass unrevenged, when an opportunity presents itself.

About one hundred miles from fort St. Lewis is fituared the Gum Defart, which is the place where the trade is car-ried on with the Moors. It is a large plain, furrounded at a confiderable diffance by hills of red fand, and to harren, that it produces only a few straggling shrubs. Near the fide of the river is a large palmetto tree; and there are a few huts built by the French, to fecure their merchandize from the depredations of robbers: they are furrounded by a ditch fix feet in breadth, and encompaffed with a kind of rampart and pallifadoes. This part of the country may properly be called the Defart, for it is generally defli-tute of inhabitants, and is only visited at such times as the Moors have an opportunity of bringing gum to fell to the French, who then go down to it, and purchase what they bring, how great foever the quantity may be. There is a place called Engerbel, about twenty miles to the cast of this Desart, where the king of the Jolloiffs has his pelace, which consists only of a large number of huts, built much like those of the other negroes, but only more built much like those of the other negroes, but only most spaclous. They are inclosed with pallisadoes made of reeds, and in the center is an open place well planted with trees, round which are the king's store houses, stables, and apartments for his women and officers. The gate trees, round which are the king's flore houses, stables, and apartments for his women and officers. The gate that leads to the palace is always guarded by a number of negroes armed with pittols and sabres, who are relieved by others at certain times. This whole country, from the northern bank of the river Gambia, to the lake Cajor, is called in general the kingdom of the Jolloifs, though divided among several petty princes. It extends shown north to south about three liundred miles, and is near four hundred from the sea coast eastward.

The people who inhabit this country, called Jolloifs, are blacker than the Mundingoes, and much better fea-tured, their nofes not being fo broad, nor their lips fo thick. Their drefs confifts of a loofe garment made of callico, which reaches from the shoulders to the knees, and is faffened about the middle with a girdle agreeably ornamented. Both fexes are fond of decorating their hair, wearing bracelets and anciets on their legs and arms, and

rings in their ears.

The king is abfolute and the greatest respect is paid to him and his family; for when any persons come into their presence, they must immediately prostrate themselves with their faces to the ground. No one, except the king, is allowed to fleep under tendres (that is, clothes to keep off flies and mulquetoes), on pain of being fold as flaves, should it come to the knowledge of the king. They also are subject to the same punishment, who presume to sit on the same mat with the royal samily unless licenced to to do. His subjects are naturally courageous, and addicted to arms; notwithstanding which, they are good natured, modest, and hospitable, particularly to strangers.

It is needless to mention here the manners, customs,

ceremonies, religion, &c. of these people, they being nearly the same as those in the kingdom of Mundingo.

The kingdom of the Pholeys, or Fouleys adjoins to that of the Jolloifs: many of the natives of it are dif-perfed throughout the different kingdoms and provinces of the whole country of Negroland. This kingdom extends the whole country of Negroland. This kingdom extends along the river Gambia, from east to well, near fix hundred miles; but its diftance from north to fouth cannot be afcertained with any certainty, on account of its defolate ftate.

The people of this country are much like the Arabs, but not so white, nor yet so black as the negroes, being rather of a tawny complexion. They generally speak the Arabic language, though they have one peculiar to themselves. The men are of a middle size, well shaped, and have good features; but the women are very short, and at the same time remarkably thin. They are all naturally of a weak conditution, notwithflanding which, they are very affidness in their professions, which principally confit intaking cate of their cattle, and cultivating their lands. They live in hotds or clans; and form their buildings on fuch a construction, that they are easily removed from one place to another. Their country is very fertile and one place to another. Their country is very fertile and produces plentiful crops of large and small millet, cotton, tobacco, peafe, rice, corn, potatoes, yams, &c. They have great numbers of carrie: their goats and fheep are ex-tremely fine; and their oven so large, that the French buy up all their hides at a very great price. They plant to-bacco near their houses, and round their towns they plant cotton, beyond which are their corn fields. The corn is of four forts, viz. maiz or Indian corp, rice, and the larger and lesser Guiney corn, the laster of which is called by the Portuguele, n anfaroke.

The Pholeys are very fond of European merchandize, and treat the traders that bring them with great civility. They use a variety of musical instruments, and are very fond of dancing. The dress of both sexes consists of a fond of dancing. The drefs of both fexes confifts of a kind of wrapper made of feveral flips of cotton, which is fastened round the waist, from whence it reaches to the knees; and they adorn their arms and legs with anciets and bracelets of amber, gold, pearls, and glass beads of va-rious colours. I heir houses are of a round form, terminated by a cone; they are built in rows at force diffance from each other, and are placed with great uniformity.

They are very temperate in their living, and remarkably industrious and frugal. As they raise much more corn and cotton than they confume, they fell it at a reasonatie price to strangers, to whom they are very civil and hospitable when they come to visit them. They also supply the wants of their neighbours; and have been even known to distrest stemsfelves in affishing the Mundingoes, who in some bad scasons would have otherwise been exposed to the ravages of dreadful famines. But though they are remarkable for the mildness of their temper, yet they are far from being dessient in courage, for they are as brave as any neonle in Africa.

arm people in Africa.

Their arms confift of the lance, bows and arrows, floor cultaffes and musquets, all which they use with great decterity. They are very expert in the management of cattle, and are excellent huntimen; they not only kill lions, tie, and are excellent huntimen; they not only kill lions, tygers, and other wild beafts, hut they alfo go in companies together to hunt elephants, whole teeth they fell, and dry the flesh in the fame manner as bacon is cured in England. They frequently remove their dwellings from one place to another; but commonly chuse a spot near the Mundingoes, who think themselves happy in having such useful neighbours; and indeed there is hardly a Mundingo cause of next and the size, that has not a Plackar town. town of note up the river, that has not a Pholey town in its neighbourhood.

The monarch of this country is very powerful, and not only receives homage from the king of the Jolloifs, but all the great men of that kingdom are his valfals, and pay him every fourth year a number of flaves, and as many oxen. He keeps a flanding force of cavalry, and his infantry are armed with fabres, lances, and bows and arrows. The governors or principal men of his kingdom are differed in the feveral parts into which it is divided, and they are obliged when commanded by the king, to join their forces with his; in which cafe they have a right to make flaves of all the negroes they meet with in their match, though the king has not that liberty over any of his fubjects, unlefs they are convicted of an offence of a capital nature. nature.

In this kingdom, the following are the most remark-

nature.

In this kingdom, the following are the most remarkable places; namely,

1. Obeda; which is a village situated on a small river that runs from the lake Cajor into the Senegal; and Cajor, another village, which receives its name from the faid lake. These two places have each their particular lord, who are vasfals to the king of this country.

Terrier Renge, lies to the east of Queda, and is famous not only for the gum trade, but also for elephants teeth, offrich feathers, hidea, and ambergris.

Hovalade, is another trading place, farther to the east, and situated on the northern bank of the Senegal. The whole country between these two places is exceeding pleasant, being laid out in large meadows, which abound with the best of cattle, and are very sertile.

Guiorel, is situated about fixty leagues from Hovalade; it is a large village, and the trading place of the strote, or king of the Pholeys, though he has not any house there. His palace, or place of residence, is situated about thirty miles to the north east of this village; near a large river, that swells much at the same time as the Senegal, and, overslowing its banks, forms a large marsh, where the negroes plant tice, millet, pulse, see after the waters are the class to the cloth of the king of the Pholeys; it is about eight to the lost of the king of the Pholeys; it is about eight

groes plant tice, milet, pune, etc. arter the waters are dried up.

Boucar, is another confiderable village, and belongs to the eldeft fon of the king of the Pholeys: it is about eight miles from Guiorel, towards the north-eaft, and fituated on a hill in the center of a large plain, where the wind blows from all quarters, which renders the climate ference and wholefone. The whole country is well cultivated, and befides other things, produces a great quantity of cattle. The inhabitants are very numerous, and carry on a good trade with those who live near them.

Laca, is the laft place of any note in this kingdom, and lies about twelve miles north of Guiorel; it is a very confiderable village, and belongs to a near relation of the king, who is called lord of this part of the country. His huts or habitations are at fome diffance from the village, fituated on a rifing ground, planted with lofty trees that fecure them from the violent heat of the tim. The whole building confifts of three spacious courts, the fift of which contains flables for feveral kinds of cattle, and is inclosed on three does with reeds and thick briers: in the feclosed on three fides with reeds and thick briers ; in the fecond court are the lord'a lusts, those of his wives, and some of his servants; the rest have huts in the third court, where there are also others used as warehouses. Between Guiorel and Laca are several other villages, which almost join each other; and the whole country in this part is well

cultivated, and very populous.

Thus having described the principal places in this country it will not be improper here to introduce a remarkable No. 25.

flory of one Jeb nett thomon, of the race of the Photeys, and fon to the halt, test of Bundo, in Forts, who was fold as a flave, came to England, and received diffinguished honours from the royal family and nobility. Mr. Moore deferibes the particular circumflances of this amiable Aftelant; and as that gentleman was in company with him after his return to his own country, his relation of him must be therefore the most gentuine and credible. As this person was travelling, in the year 1731; on the south fide of the Gambia, with a fervant, he was robbed and seized by order of a king of a country a little within the land, who fold both him and his man for slaves to one captain Pyke, who failed with thent to Maryland. The Pholeys, his humane countrymen, would have redeemed him, had he not been carried out of the river before they had notice of his being a slave. Joh, on his arrival at Maryland, was fold to a planter, who, finding he had very distinguished abilities, treated him with great respect and at the expiration of twelve months; Job had the good fortune to have a letter of his own writing, in the Arabic tongue, conveyed to England. This letter coming to the hands of Mr. Oglethorpe, he fent it to Oxford to be translated, which being done, it gave him such satisfaction, and inspired him with sig good an opinion of the author, that he immediately sent orders to have him bought of his master.

Mr. Oglethorpe soon after this set out for Georgia;

matter.

Mr. Oglethorpe foon after this fet out for Georgia; and before his return from thence Job arrived in England, where, being brought to the acquaintaine of Sir Hans Sloan, he was found to be a perfect matter of the Arabig tongue, by his translating feveral manuferipts and inferiptions on medals. Sir Hans Sloanie recommended him to the duke of Manusone who hering netaed with his genius the duke of Montague, who being pleafed with his genius and capacity, the agreeableness of his behaviour, and the sweetness of his temper, introduced him to court; where, he was graciously received by the royal family and most of the nobility, who honoured him with many marks of their favour. After he had continued in England about fourteen months he determined to extensive the section. fourteen months, he determined to return to his native country, from an earnest desire he had to see the high

priest his father.

priest his father.

On his leaving England, he received many noble prefents from her majesty queen Caroline; his royal highness the duke of Cumberland, the duke of Montague, the earl of Perubroke, several ladies of quality; and the royal African company; the latter of whom ordered their agents to show him the greatest respect. On the fell of August 1734; he arrived at James's fort, at which time Mr. Moore, then employed in the fervice of the African company, was at that place; and finding the vessel came from England, he immediately went on board. Mr. Moore thus relates what followed after the first interview; and which we shall give in his own words:

what followed after the first interview; and which we shall give in his own words:

"Job," fays he, "defred that I would ferid a message to his country, to let his friends know where he was. I spoke to one of the blacks whom' we usually employed, to procure me a message, and he trought rite a Pholey, who not only knew the high priest his stather, but Job himself, and expressed great joy at feeing him returned from flavery, he being the only man, except one, ever known to come back to his country, after being once carried a flave out of thy white men. Job delivered him the inessage himself, and desired that his father should not come down to him, observing that it was too far for him to travel; and that it was fit the young should go to the old, and not for the old to come to the young. He also sent some presents to his wives, and defired the man to bring his fittle one his best beloved down with him. beloved down with him.

"Joh, having a mind to go up to Joar, to talk to fome of his countrymen, went along with me. We arrived at the creek of Damofenia, and having fome old acquaintances at the rown of that name, Job and I went there to ances at the rown of that name, Job and I went there together. In the evening as we were fitting under a great tree, there came fix or feven of the very people who three years before had robbed and made a flave of him, at about thirty miles diflance from that place. Job, though naturally pofferfied of a very even temper, could not contain limitle for feeing them; he was filed with rage and indignation, and was for attacking them with his broad fword and piffols; which he always took care to have about him. It was was with great difficulty I could diffuade him from ruthing upon them; but at length reprefenting the ill confequences that would infalliby attend to rath an atten, and the impossibility that either of us should efcape alive. I made him lay aside the attempt, and perfuade him to fit down, and, pretending not to know them, to alk them questions about himself, which he accordingly is did, and they told him the truth. At last he inquired how the king their master did; they replied; that he was dead; and by farther inquiry we found, that amongst the goods for which he fold Job to captain Pyke, there war a pittol, which the king used commonly to wear stung by a sling about his neck; and as they never carry arms without their being leaded, the pistol one day accidentally went off, and the balls lodging in his throat, he presently died. Job was so transported at the close of this story, that he immediately sell on his knees, and returned thanks to Mahomet for making his persecutor die by the very goods for which he fold him into slavery. Then turning to me, he faid, "You see now, Mr. Moore, that God Almighty was displeased at this man's making me a slave, and therewas dipleased at this man's making me a flave, and there-for made him die by the very piftol for which he fold me : yet I ought to forgive him, for had I not been fold, I should neither have known any thing of the English tongue, nor have had any thing of the fine, useful, and valuable things I have brought with me; nor have known that there is such a place in the world as England; nor such noble, good, and generous people as queen Caroline, the duke of Cumberiand, the duke of Montague, the earl of Pembroke, Mr. Holden, Mr. Oglethorpe, and the royal

"After this, Job went frequently with me to Cower, and feveral other places about the country. He always fpoke very handsomely of the English; and what he fail that handsomely of the Pholeys felt amongst removed much of that horror the Pholeys felt amongst removed much of that horror the Pholeys felt amongst them for the state of slavery their countrymen had been subject to 1 for they before generally imagined, that all who were fold for slaves, were at least murdered, if not eaten, since none ever returned. His descriptions also gave them an high opinion of England, and a veneration for the English who traded amongst them. He fold some of the presents he brought with him for trading goods, with which he hought a weapon save and two berset. He gave which he bought a woman flave and two horfes. He gave his countrymen a great deal of writing paper, a very va-faable commodity amongst them, and the company had made him a present of several reams. He used frequently to pray, and behaved with great affability and mildness to all, which attracted the efterm of every one."

all, which attracted the eftern of every one."

"The messenger whom Job had sent to his father, &c.

"The trurning so foon as was expected, he desired me to go down to James's fort, to take cate of his goods, and I promised not only to send him word when the messenger came back, but to fend other messengers, for fear the first should have miscarried."

At length the messenger returned with several letters, and advice that Job's father was dead, but had lived to re-ceive the letters his fon had fent him from England, which gave him the welcome news of his being redeemed from flavery, and an account of the figure he made in England. That one of Job's wives was married to another man; but that as foon as the new hufband had heard of his return, he thought it adviseable to abscond; and that since Job's absence from his native country, there had been such a dreadful war, that the Pholeys there had not any cows left, though before Job's departure his country was famed for its numerous herds. With this messenger earne many of Job's old friends, whom he was exceedingly glad to fee: but notwithflanding the joy their prefence gave him, be thed abundance of tears, for the lofs of his father, and the man who had taken her; For, faid he, the could not help thinking I was dead, for I was gone to a land from whence no other Pholey ever yet returned; therefore nei-ther the nor the man are to be blamed. During three or four years he converted with his friends without any interruption, except 'o sleep and eat."

Job took his last farewel of Mr. Moore in the most af-

sectionate manner, when he embarked on board the company's veffel for England; and at the fame time gave him letters to the duke of Montague, the royal African com-pany, Mr. Oglethrope, and feveral other gentlemen in England, telling him to give his love and duty to them, and to acquaint them, that as he defigned to learn to write the English tongue, he would, when he was mafter of it, fend them longer epiftles. He also defired Mr. Moore, that as he had lived with him almost ever fince he came there, he would let his grace and the other gentlemen know what ke had done, and that he would endeavour to produce fuch an underflanding between the African company aid the Pholeys, that he did not doubt would be of great advantage to the English, from whom he had received innumerable favours, and by whom he had been redeemed from flavery, and brought fafely home to his country and

SECT. II.

Gives an account of the European fettlements, and other placet on the river Gambia; alfo a defeription of the river Viger or Sonegal; with the principal kingdoms, &c. on its banks.

THE English have their principal fettlement here at St. James's ifind: it is fituated near the center of the river, which is here at least feven miles wide, and about thirty miles from the river's mouth. The island, at low water, is about three quarters of a mile in circumference. Though this island belongs to the English, it is nevertheless subject to a small tribute paid annually to the

king of Barrab.

The fort is a fquare flone building, with four baftions, on each of which are feven guns well mounted. Under the walls, facing the water, are two round batteries, on the walls, facing the water, are two round between them each of which are four large cannon: and between them are planted finall guns. Within the fort are convenient ste planted imail guns. Within the fort are convenient apartments for the governor, merchants, factors, and military officers; as also magazines and storellouses. Without the walls of the fort are strong barracks for the soldiers, artisticers, servants, and slaves: they are made with stone and lime, and are surrounded with strong pallisadoes. As a proper soldier, are the soldiers are constantly one data. duty, and centurels are appointed night and day to patrole round it, and make their report to the governor. They generally keep here three or four Boops and as many long boats; foune of which are continually employed in fetching provisions and water from the main, for the use of the garrison, and the rest are employed in carrying goods up to the other factories, and bringing from them wan, elepliants teeth, and flaves.

The company have also a factory pleasantly situated at a large town called Gillifree, a little below James's fort; and here are large gardens that fupply James's fort with all kinds of vegetables. This town is inhabited by Portuguese, Mundingoes, and some Mahometans, the latter

whom have a leat mosque.

On the north five, opposite to St. James's island, and about a mile and a half from Gillifree, is a small place called St. Domingo, consisting only of a few round huts belonging to the compary, in which some of their slaves live, who fill the casts sent there daily for water, take care of a well, and cut wood for the fort.

wen, and cut wood for the fort.

Here is also another factory belonging to the English, nearly opposite to the south side of James's island; this is situated on a river called Cabata, which falls into the Gambia; but as the chief use of the sactory is to supply James's island with provisions, little trade is carried on

here.

The English have likewise another factory about twenty miles above James's fort, at a town called Vintain, fituated on a river of the same name, which falls into the Gambia. The chief commerce of this factory confists in hides, ivory, and wax. The town, belongs to one of the kings of Fonia, and is pleasantly fituated, on the side of a hill, near the river. The inhabitants consist of Portugussian which was the latter of whom have a head. hill, near the river. The inhabitants couldn't of Portuguese and Mahometans, the latter of whom have a hand-fome mosque. The town is plentifully supplied with provisions, great quantities of which are brought by the Floopa which border upon it.

The people of this town are extremely proud of their hair; some of them wear it in tusts and bunches, others

cut it in croffes, and fome string, coral, or beads upon it. The men wear a cloth round their waists, which reaches to the knees, and they have another cloth thrown over the to the knees, and they have another clott throwin over the right shoulder: on their heads they wear caps of cotton cloth, some of which are plain, and others adorned with feathers and goats tails. The drels of the women consists of a piece of cloth wound round the waiff, and reaching to the small of their legs; they tie handkerchiefs round their to the imallof their legs; they be haldecenters round their heads, leaving the crown bare, which fonce of them ornament with small horse bells; and they who have not got hand-kerchiefs, supply their places by using a slip of blue and white cotton. Their huts are about fifty seet in circumference, built with sticks and clay, and covered either with long grafs or palmetto leaves. Their surniture consists long grafs or palmetto leaves. Their furniture confifts only of a fmall clieft for cloaths, a mat to lie on, which is tailed about a foot from the thoor; a jar to hold water, and a calabath to drink it with; two or three woodest mortars, in which they pound their com and rice, and a few large dithes, out of which they eat their food with their fingers, fince they ute neither knives, forks, or fpoons

Thefe people are very fond of imouking tol zrco, which

is of their own growth; and some of them, being surnished with this article, will go two days together without eating. They make their pipes themselves, the bowl of whicks is formed of a redish coloured clay, but the stems are only a piece of reed, or a small stick bored through with a hot iron wire, and some of them are fix feet in length. After they are bored, they possible them with rough leaves, till they are smooth, white, and handsome. They saften the bowl and stem together with a piece of red leasther, and sometimes they hang a sine leather tassel to the center of the pipe, as an ornament to it.

The above mentioned town is situated in the kingdom of Fonia, which begins were Cabata river falls into the Gambia, and reaches to the river Vintain. It is governed by two kings, who have each their separate districts; but it has not any remarkable place, that deserves the least notice, except the town just treated of.

At Tancrowall, in the kingdom of the English. This town is about that a male in length pleasantly situated by the side of the river, and behind it is a fine hill beautifully variegated. It is divided into two parts, one of which is inhabited by Portugues, and the other by Mundingoes. The former live in large square buildings, and the latter in round lusts made of sicks and clay; they are about eight seet high, and twenty in diameter, with a roof like that of a bee-hive, made either of straw or palmetto-leaves, and so thick as not only to keep the rain from penetrating through, but also to secure them from the violent heat of the fun.

This town is the residence of a priest annually sent over from St. Jago, one of the Cape de Verd illands, who

This town is the refidence of a priest annually sent over from St. Jago, one of the Cape de Verd islands, who has a church here, in which, during his refidence, mass is faid almost every day. Here are many of the defeend-ants of the Port guele, who fend canoes up the river once or twice a year, by which means they have made this town the riched of the whole river, and a place of great

refort.

Caen reaches about feventy miles along the river, and is governed by an emperor and a king, who are both Mundingoes, and have their respective revenues from commo-

dingoes, and have their respective revenues from commodities of different kinds.

Barfally, is the next kingdom we come to: it is a very noted country, governed by a king of the Jolloif nation 1 and here the English have also a factory at a town called Joar, where they carry on a very considerable trade: This town is fituated in a fine saxannah surrounded with woods, in which are most kinds of wild beasts. It is about two miles from the Gambia, and is inhabited by a few Portuguese. It is very small, the whole number of houses not exceeding twelve, among these are included the factory, and a house belonging to the king of Barfally, which two take up more ground than all the other buildings. About a mile from the town is a ridge of high and rocky hills, covered with trees, which runs many miles up the country. It is very pleasant walking on these hills in the summer; but in the rainy seasons it is extremely dangerous, from the wild beasts who refort there in great abundance on acbut in the rainy lealons it is extremely dangerous, from the wild bealts who refort there in great abundance on ac-count of the low grounds being overflowed. About the favainah are plenty of deer, buffaloes, and wild hogs; also a great number of partridges, which are exceeding good, and greatly admired by the natives. Here are like-wife cameleous; and great numbers of erocodiles, which the people kill and eat, considering them as their most delicious fare.

the people kill and eat, considering them as their most delicious fare.

Cohone, where the king of Barfally usually esides, is about eighty miles from the English fortat Joar. As there are tolerable advantages to be made by the company at this place, provided their supereargoes are honest, they generally fend a sloop thither two or three times in a year. At these times the king frequently ransacks some of his enemies towns, makes prisoners of the people, and sells them for such commodities as he wants, which — commonly brandy or rum, gumpowder, balls, guns, pittols, and cut-lasses for his attendants and foldiers, and coral and filver or his wives and concubines. The king, as well as his people, are of the Mahometan religion, not rithstanding which they are greatly addicted to drankenness. The dress of the king consists of a garment made like a surplice, but reaches no lower than his knees, and a large piece of cloth gathered tround his wait the wears no stockings, and he only morocco slippers on his feet. His head is cover with a simal white centro cap, and he wears large gower-rings. His people, as well as himself, always wear white clother and white caps; which being a direct control to their matural colour, makes them look exceeds iteal. This king's dominions are very extending.

D.

vided into feveral provinces, over which he appoints governor; called boomsys, who come annually to pay him homage; and though they have almost an unlimited power, yet they are beloved as well as feared by the people whom they govern.

The country of Yang lies contiguous to the kingdom of Barfally eastward 1 it is very large, divided into two parts, and diftinguished by the names of Upper and Lower, each of which is under the government of a different king, the one a Mundingo, and the other a Jolloif. In the Lower Yang the company have a finall factory at a place called Yanrmarew, which is kept by a black factor, whose only business is to buy corn and tice for the use of James's fort. This is the pleasantest fort on the banks of the river, it being delightfully shaded with palm and ciboatrees, the leaves of which the inhabitants use for covering their houses with.

There is a small town in the Upper Yang called Cutterjart, situated about a mile from the river, between which the company had once a sactory; but it being overslowed in the year 1725, and great quantities of goods deftroyed, they removed it to Samy, about eight miles farther, where It has continued ever finee. This town is noted for a good trade, particularly in slaves; and is about twelve miles from the river.

good trade, particularly in flaves; and is about twelve miles from the river.

from the river.

The factory of Fatadenda is higher up the river, which is here exceeding broad, and deep enough to admit veilels of forty tens burden. The fides of the river are woody; and the land low; but the factory flands on an eminence, and is at leaft ten miles from any town. On each fide of the factory is a pleasant prospect of the winding of the river for several miles, and in the front of it is an agreeable view of part of the kingdom of Cantore. The port here ferves for a landing place to Suteco; a town about nine miles distant: but, excepting the factory, it has not any loude near it.

The English have also another factory near a large town called Brucce, about half a mile from the river, in the kingdom of Jemarrow. The town is inhabited by a people of the Mundingo race, but they are strick Mahometans. About half a mile below the town is a ridge of rocks that runs three parts across the river, and leaves so

finalla channel, as to reinder it very dangerous for large veiffels.

Dabocunda, nine miles from Brucoe; is a large town: it is finated on the footh fide of the river, and divided into two diffinite parts; one of which is fo: lified by a wall made of palmetto-trees fixed in the ground, and clay laid in between, fo that it is little inferior in firength, to those made of brick and mortar. The other town is only encompassed by a sence of canes fattened together by a number of staken, in which manner most of the towns on the Gambia, as well as the factories, are furrounded. In p.a. able times, the people live in the open town; but in time of war, they shut themselves up in that which is most time. If war, they shut themselves up in that which is most time. If the factor and have a king of their own, called Suma, who has a preat power over all the towns adjacent.

The kingdom of Tomany, is next to that of Jemarrow: this is a very extensive country, and contains more towns then any other on the whole river. The English have a factory at a small place called Yamya macunda, where a considerable trade is carried on, particularly in dry committed in the statory is on the south, and is defended by a strong fortuseation. All vessels that pass this port pay a duty to the line of Tomany, who is a Mundingo, and lives at a place called Sutimore, about there miles distant from Yamyamacunda.

Contoro lies beyond Tomany: this is a large and population.

yamacunda. yamacunoa. Control lies beyond Tomany; this is a large and popu-lous country, with many finall towns differed about it, but not any one nearer the river than three miles; and they and ill fo infignificant as not to deferve any particular

they all so infiguiticant as not to deserve any particular description.

We stall now proceed to give an account of the famous river Niger, or Senegal, which takes its rise in the castern part of Africa, and after a course of three hundred miles hearly cast and west, divides itself into three branches, under the rames of the Senegal, the Gambia, and the Sierra Leona; all which, like the Nile, overshow their banks are a particular time in the year.

Correspond have not been able hitherto to ascertain the the first of this greatriers: but from the farther part that

tentof this greatriver; but from the farther part that
the penetrated to the fea, it reaches near two thousand
uniles. It runs cast and west till within about fix scan, when it fuddenly breaks off, and forms

lergues, when it disembogues itself into the sea. Thought of the river is about three miles serois, but pullage here is often very dangerous, on account of the bar, which is not only continually thifting, but also chooks it up; and when the north winds blow, the stream is for rapid, and the waves run so high, that it is impossible for any vessels to pass it. The fastest times for crofting the bar, are, between the months of March and September when the winds are chanceable and the bar is recreating forder. the winds are changeable, and the bar is generally fixed till the rainy feafon fets in. The banks of this river are very

fertile, and beautifully variegated.

Near the river Senegal are lofty trees inhabited by various forts of birds, fome of which are very finall, others large and many of them exceeding handfome, and of brighteft colours. There are also great numbers of fq. rels and monkies; and the more diffant parts abound with lions and elephants, the latter of which have not that ferocity in them that is natural to the in other counthat treesty in them that is natural to the is other contriets, for they will not attempt to attack any one they meet with, unlefs first molested. Some parts of the low grounds abound with a fort of the ny trees which run to a prodigious height, and bear large branches of yellow stowers that have an odoriferous seent. The backs of these trees are of different colours, some being black, others white, green, or red; and whatever colour the bark is of the same, and appears to be a species of the sbony, from it subtance. from its fubstance.

On the banks of the Senegal, the following kingdoms

On the banks of the Senegal, the following kingdoms and places, being the principal ones, are fituated; namely, Guber, which lies forty miles from Niger, and almost three hundred miles eaftward of Gago: between this latter and Guber there is a vast defart, without water. This kingdom is furrounded with very high mountains, and contains a great number of villages, many of which are inhabited by people who are employed in taking care of their cattle and theep: the whole country abounds with rice, and other grain. There are also abondance of artificers and linen weavers, the former of whom make fandals. and linen weavers, the former of whom make fandals, and fell them to the people of Tombuto and Gago. The wholecountry is overflowed every year by the inundations of the Niger, and at that time the inhabitants fow their rice. There is one town, which contains almost fix thousand families, among whom are many merchants.

Zanfara, lies to the westward of the kingdom Zegzeg, and is bounded by Guber on the west. It is very large and is bounded by Guder of the west. It is very large and ferrite, the fields producing great quantities of rice, millet, and cotton. The inhabitants are in general very poor, and are chiefly employed in the business of tarbander; they are of a tail flature, and very black compression, with broad faces, and most firstage and maith plixion, with This kingdom is very little know to huro-

peans.

Cano, is bounded by Zaara on the north; by the river Niger, on the fouth; by the kingdom of Agades, on the well; and that of Cafona, on the east. Some of the in-kabitants are herdmen, and others till the ground, and dwell in villages. Some parts of it produce great quantities of rice, corn, and cotton; but other parts of it are very barren, confifting of defarts and woody mountains, in the fatter of which are wild citrons and lemon trees. center of the province is a large town of the same name, fituated in ten degrees twelve minutes east longitude, and fifteen degrees thirty minutes north latitude. The walls and houses of this town are made of a kind of clay, and and houses of this town are made of a civil and obliging dif-the inhabitants in general are of a civil and obliging difpolition; the principal of whom are metchants. Their king was once a powerful monarch, and had a prodigious number of troops always at his command; but he has for many years been tributary to the king of Tombuto; on which account one of that prince's countiers always refides in the town, to collect the tribute. This kingdom is feven hundred miles fouth of Tripoli in Batbary.

Cafena, or Caffena, is fituated on the eaft of Cane, and confifts principally of fields and mountains, which profluce great plenty of millet. There are many villages in the province, but they ate very finall, and the buildings exceeding low and mean. They also had formerly a despote monarch, but he is now subject to the king of Tombuto. The inhabitants have broad notes and thick lips; and their

complexions are a jet black.

Zegzeg, is about one hundred and fifty miles from Ca fena, from which it is separated by the Niger; It has that of Zansara on the cast; Renin on the south; and the defarts, on the west; and borders on Cano. This country, which is very extensive, is divided into two parts, one of which is a plain, and the other mountainous : the air of the former is exceeding hot, but in the latter it is intole-rably cold, informed; that they are obliged conflantly to keep fires in their houses; and when they go to sleep, they put hot coals under their beddleads. Their finds are in put not coats under their heddleads. I heir had are in general fertile, and there are many torings of excellent water. These people were formerly governed by a king of their own; but he being conquered and flain by one of the kings of Tombuto, they are now subject to the monarch of the kingdom. Their houses are poor wretched buildings made of the same materials, and much after the fame manner as those at Casena.

Guangara, is bounded on the fouth-east by the province of Zaniara, and is fituated to the north of the Niger. It of Zandara, and is fituated to the north of the Niger. It is a large and populous country, and contains a great number of villages chiefly inhabited by hutbandara. About the center of it is a large town of the fame name, which is ornamented with many handdome boildings, and the inhabitants carry on fuch a trade with the neighbouring nations, that many of them are exceeding wealthy, and live in the greatest iplendor. Some parts of the country to the fouth of Guangara town abound with gold; and when the merchants travel to those parts for that valuable article, their good are carried by flaves, the roads being too rough the merchants travel to those parts for that valuable street, their goods are carried by flaves, the roads being too rough and dangerous for any beaft. Their flaves carry prodigious burdens, with which they will travel upwards of twenty miles a day. The great loads they carry is amazing; for befides the merchandizes, they are loaded with provisions for their masters, as also foe the foldiers that guard them. They are governed by a king, who maintains a garrifon-confifting of a great number of horsemen and archers, and e receives considerable tributes annually from his sub-

ets.

Bito, which lies to the fouth of the Niger, is a fmallngdom, and is bounded, on the east, by Temian; ors bill, which he to the louth of the Niger, 18 a limit kingdom, and is bounded, on the east, by Temian; on the west, by Tombuto; on the north, by the kingdoms of Guber and Zausara; on the south, by Dauma. The inhabitants are great traders, and many of them said to be exceeding wealthy. This country is large and sertile; but has only one capital town in it, called by the same

Temian, is bounded on the north, by the Niger; on the eaft, by the kingdom of Wangria, the defart of Zaara, and the kingdom of Dauma; on the fouth, by the kingdom of Guber; and, on the west, by that of Bito. The inhabi-tants of this country, who are faid to be very favage, are very little known to the Europeans.

Dauma, is fituated in fourteen degrees thirty minutes eaft longitude, and eight degrees north latitude. This is also a fmall kingdom, and has not any thing very remarkable to diftinguish it, though the inhabitants are said to be

Biafana, is fituated to the fouth of Dauma; and is bounded, on the north, by the defart of Seth, which is a large space of barren ground, and reaches as far as the bor-ders of the kingdom of Gago, where it joins another large tract of land called the defart of Zaara, or Sahara.

Gago, is fituated four hundred miles fouth of Tombuto, having Dauma on the east, Melli and the Mundingo country on the west, and Guiney on the fouth, from which it is separated by a ridge of mountains. It abounds with corn and flefth, but there is fearce any wine, trees, or fruits. The villages are principally inhabited by fhepherds and husbandnen. The people are very illiterate: they go stark naked in summer, but in the rainy season are clearlied. with the skins of beasts. The principal village is called Gago, and is of great extent: the king resides here; but the houses are very mean buildings, except those belonging to the king and his courtiers, which are more spacious and handlonie. The country for fonic miles round the town produces great quantities of rice, millet, corn, and cattle. alfo foine melons and citrons : there are likewife many fprings, which produce excellent water. There are many rich merchants in this town, which is much frequented by people of neighbouring countries, who come to buy cloth brought hither from Barbary and Europe. They also carry on a great trade in flaves, for they make no feruple of felling wives and children.

I he people here are in general very poor, owing to the enormous taxes continually laid on them by the king, who has a great number of flaves and concubines, the latter of whom are kept in a private place, and attended by cunuchs. His body gnards confilt of a troop of horfe, and a great number of foot; beddes which, he has upwards of one hundred archers. The king determines all controversies hundred archers. The king determines all controverness between his fibjects, in the execution of which he attends with great diligence. The place fet apart for this purpose is between the inner and outer gate of the palace 1 and

though he is as it were judge himself, yet he has his counfeilors and other officers, befolds whom, he has also fecretaries, treasurers, fact vr., and suditors.

Melli, hes along die banks of a river that runs into the Niger. It is bounded, on the north, by Ghines; on the fouth, by mountains and defarts; on the well, by large woods and forests reaching to the fas shore; and on the east by Gago. It received its name from a large town called Melli, which was once the residence of a fowereign who reigned over the whole kingdom, and ast that thee the town is faid to have contained fix thousand families. At present, however, the kingdom is divided into different fowereignties and lordships, and bet a small part of it realins the original name. The inhabitants are faid to be the most civilized of all the negroes, and very courteous to strangers; they are likewise very industrious and frugal. The country produces great quantities of corn, rice, and millet; also good cattle, and fome catton. The people are generally employed in the business of hisbandry; but there are amongst them some artificers and merchants, who carry on a confiderable trade with the neighbouring kingdoms. The religion of the country is a kind of Mahometanism. Some affirm that this kingdom is urbutary to Tombut. Between Melli and the kingdom of Gag is a large tract of kind called Foute Gallon, faid to be the original country of the Pholeys; but it is now almost uninhabited, and little better than a more defart.

There are several considerable piaces towards the coast, the first of which is Kachao, called by the Frenc Cachaux. It is a Portuguese colony, fituated but the rives St. Domingo, or Kachao, which fails into the fea about sixty miles below the town. It stand in the country of the Papelle, ant idelations people, who facrified dogs to to their fettilh, or idel, which they call Shina. The Papelle have frequently been at open warry with the Portuguese, for which as and onlists chiefly of two long nerrow streets with a few mall ones that crush the

them die, it is a difficult matter to find another that will fupply hie place.

The civil and military government is under the direction of one called captain-major, who has under him a lieutenaut, an enfign, and an adjutant; befides whom, there are other officers, as, an intendant of the king's dety, a notary; and fome feriveners. The garrifon confifts of thirty foldiers, who are banished from their own country for the commission of fonce capital crime; and this banishment is of the most hortid nature, for they are kept at fuch short allowance, and so miserably cloathed, that if they had not forme kind of business to assist them, they must inevitably perith. Some of them will often follow the profession for which they were sent-here; for after dark they will parade the firetes, and rob all they meet; so that it is very dangerous to walk after sun-fet, unless a person is well provided with arms; this is also practiced in most of the other Portuguese colonies. Portuguele colonies.

The country on the fouth fide, where the town flands, confilts onicity of marthes, with a few fields in which they

fow some rice; but they are so small, and so little cultivated that they do not produce a sufficiency for the maintainance of the inhabitants. The river before the town is at least a mile screed, and so deep as to admit the largest thips, were it not for a dangerous but that interrupts them at the mouth of the river. The north bank of the river is covered with mangreves, beyond which are some of the sinest trees, which are all of one plece, and so large and strong that they will carry ten ton weight. The Papells are eftermed the best rowers on the whole coast, by the Pertuguese. The natives of Cachao employ the principal part of their time in the cultivation of a plant called manioc, which is used included of bened, not only here, but in several other parts of Africa. This plant is also cultivated, and brought to no less persection by the inhabitants of the island of Bissio. The paste of manioc is called cassay, which is converted into a cake by rousting, without moving ir. It would be dangerous to cat as much cassay as shour of manioe, because the former is less roasted. Both of them keep a long time, and are very nourishing, but a little difficult of digestion. Though this sood seems are town, called Farim, is situated about sevents.

town, called Farim, is fituated about feventy Kachao, on the fame fide of the river; a to-ade wax and ivory is carried on here; and te held for the fale of flaves in the months of

of November.

a village to the north-east of Farian: most of moders buy rice at this place, where it is very plentiful, and exceeding good in quality; and they fell millet and oxen at another village a little farther, called

Bole.

Gefves, is so called from a river of the same: it is a very confiderable town, and supposed to contain at least forty thousand inhabitants, among whom there are not above twelve white samilies, the rest being all tawny or black. The trade carried on here consists of wax, ivory, and savet. The natives that live on the banks of this river are partly Papells, and partly Mundingoes. The Portuguese have a sastory on it.

There is a province in this country called by the Portuguese Kobo, the king of which resides at a small place about thirty miles east of the town of Gefves; and near the mouth of the river of that name is a small town called Coorbali, where a considerable trade is carried on in slaves; falt, and ivory.

The river Casamanga, whose course is considerably long, and its stream very rapic, is said to be an arm of the Gambia, and lies to the fount of the river of St. Domingo, or Cachao. The only trade carried on here consists chiefly

Cachao. The only trade carried on here confifts chiefly in ivory and wax, which is all in the hands of the Portuguele, who have two finall forts on the banks of this river, but they conflit of little more than a few wretched huts, furrounded with final moats; and the principal fecurity of each lies in the difficulty there is to come at it, for they are both fituated in marchy grounds, and are hid by man-groves, defended by legions of musquetoes.

SECT. III.

Contains an account of Sierra Leona, its boundaries, climate, inbabitants, animals, produce, foil, &c.

SIERRA, or Serra Leona is bounded on the north and fouth by two famous capes, the former of which is called Cape de la Vega, and the latter Cape Tagrin, or Sierra Leona. This country is rendered confiderable by the river which gives name to it, whose banks are more fertile than those on the western coast of Africa. The capes abovementioned form a spacious bay, into which the river discharges itself. The shoot in the bay runs seven hours, and the ebb sive: it is between seven and eight fathom deep, and ships may ride in any part of it with the greatest fatery.

falety.

The river is faid by fome to have received its name from the noise of the sea against its rocky shores, resembling the roaring of lions; others affirm, that it was sinst called to by the Portuguese, from the great number of lions that infest the neighbouring mountains. It also goes by the names of Tagrin and Mitomba (from the capes so called), the latter of which it preserves for about eighty miles above the mouth of the river. On the south side of it is a town called Las Mageas, where none but the Portuguese

are permitted to refide for trade, and when there are any kreach or English ships in the bay, the natives come down the river to barter for commodities.

A creek called the Bay of France, is near the entrance of the river: there is a bason or reservoir of fresh water in it, that falls from the adjoining mountains. It flows in it, that falls from the adjoining mountains. It flows down in gentle marmurs or impetuous fireams, and, in a country almost parched by the heat of the fun, produces most agreeable scene, besides which, its beauties are considerably heightened by the surrounding hills, that are congred with losty trees, that afford a perpetual shade, and render the whole one of the most delightful spots that can be met with in such hot countries. Here are also several small islands, the principal of which are Tasse and selection. Tasse, in a large stat island, near three lengues in circumstrence, where the company's slaves have a good plantation. The chief, part of the island is covered with woods among which are silk cotton trees of a producious fire; and good indigo is produced in some parts of it. And about nine miles from the road is situated,

Bense, where the English had once a small fort, whole

Benfe, where the English had once a small fort, whose Benfe, where the English had once a small fort, whose advantages arose chiefly from its standing on a steep rock, the ascent to which was by a flight of steps." The fort was built of limeand, stone, and before it was a platform with fix guns. The garrison generally consisted of twenty white men, and thirty gromettoes or free blacks, who lived in a small village under the shelter of the fort. This forters, however, was taken by two French Lenn of war in the year 1704, who sirst plundered, and then razed it to the ground. Benfe island is much smaller than the others' it produces only a small quantity of rice, the foil of it beit produces only a fmall quantity of rice, the foil of it be-

The climate of this country is in general very unwholefome, particularly in the mountainous parts; where, dur-ing four months in the year, it rains, thunders, and is fo ing four months in the year, it rains, thunders, and is so intolerably laot, that the people are obliged to keep close in their huu; and the air is corrupted in such a manner by the lightning, that all animal food is reduced in a few hours to a state of, putrefaction. The stat open country, however, is not so bad; for dough in summer the heat is excessive in the former part of the day, yet it is very temperate in the asternoon, from the refreshing freezes that generally come from the south-west quarter.

Great numbers of mangrove-trees grow on the banks of the Sierra Leona; the Leaves of them exactly refemble those of an European laurel. The branches of these trees are nearly of an equal length, but the thoots, growing downwards, as soon as they touch the water of the earth, take root, and by that means make a hedge so thick as to be almost impenetrable.

most impenetrable.

The whole country abounds in millet and rice, which is the principal food of the natives. It also produces great plenty of oranges, lemons, bananas, Indian figs, anymas, pompions, water-melons, yams, potatoes, wild pears, white plums, feveral forts of pulse, and the kola fruit. This last fruit formershat resembles a chefaut, and grows in clufters of ten or twelve together, four or five in a rind, each divided by a thin ikin. The outfide of the nut is red intermixed with blue; and the infide, when out, is of a violet colour mixed with brown. The negroes and Portuguese use it in the same marmer as the Indians do arek and betel. It makes the water exceeding fweet, when put into it; and has a harsh sharp taste.

There is a variety of large trees on the shores, particu-

larly the palm, cocoa, and cotton tree; and on the mountains are abundance of palm and laurel-trees.

Deer, hogs, goats, and fowls, are very numerous here;

thefoshe natives fell to the Europeans for a small quantity of brandy, a liquor which they are particularly fond of. In the mountains are great numbers of elephants, lions, tygers, wild boars, and roe-bucks; also apes of several forts; and ferpents, which last are so large, that it is faid they will swallow a man whole; but this we do not give intire credit to.

intire credit to.

The apes, monkies, and baboons are fo numerous, that they make great defiruction in the plantations. There are three forts of these animals, one of which is of a prodigious fize, and remarkably agacious. When taken young, they are taught to walk upright, and by degrees are rendered very useful to the natives: they are taught to pound Indian wheat, to setch water in calabashes or gourds, from the river or springs, on their heads, and to turn the spit. These creatures are such lovers of oysters, that, at low water, they go down to the shore among the rocks, and when the shells open with the violent heat of the sun, they put a small stone between, and take out the oyster; sometimes fmall flone between, and take out the oyfter; fometimes it happens that the stone slips aside, or is too finall, when

the monkey's foot being caught, he is taken and killed by the blacks, who reckon their fleth; and also that of ele-phants, delicious food.

Pigeons, parrots, parroquets, and Guiney hens, are in great numbers in the woods, the latter of which are about the fize of a pheafant, and beautiful: but it is very difficult to eatch them, on account of the thickness of the trees. They have also other forts of fowl, among which are white pelicans as large as fwans, a bird called ox-eyes; herons, curlews, and boobies.

pelicans as inrge at iwans, a bird cause of stepes, and solves, curiews, and boobies.

There is a great variety of fifth in the bay and entrance of the river, such as raics, shornbacks, and a fifth called old wives: allo gar fifthee, cavallees, tharits, and deword fifthee, dog fifthes, and one called thoemater, having on each fide the month products like barbel, and try make a noise formwhat refembling the granting of a log. The most common fifth, however, caught here, are, pichards, the because, the monk or angel fifth, the mullet, and old wives: the latter is thaped much like a tench, is about nine inches long, and has large feales. It is mostled with red, yellowith, and brownish lines placed atternately, and running from the head to the tail, being five or fix in number. The fnont is oblong, and turn upwards, and the lips are thick, fields, and project from the jawa; but, the moeth is fmall. The terth are ferated, but notivery sharp, and the fines are mostled with red, blue, and yellow. The tail, when expanded, is roundish, and the fish is extremily beautiful altogether.

the fins are mottled with rea, once, when expanded, is roundiff, and the fifth is extremely beautiful altogether.

The becume and monts, or angel fifth, being little known in Europe, we findl here give an account of them. The former of these greatly resembles a pice, but only longer, had imposen frequently caught upwards of sightfeer inlengtin. It is a greedy fifth, and dangerous to be met with in the water, because it can bite much easier than the sharts, and to fearles, that it will not be driven away by any noise that can be made. The fielh has the same take as fresh water pike, but there is often great danger in eating its, for an else the teeth are white, and the liver sweet, it is possionous. The monk, or angel fish, is between a shark and a state, and grows to a large fize, often weighing upwards of one hundred or anger min, is between a lark and a vate, and grows to a large fire, often weighing upwards of one hundred pounds. The colour on the back and fides is of a dufky afh, and the belly is white. The mouth is broad, and placed at the end of the head, in which it differs from the other fat, grilly fifth. The head is roundiff at the extremity, and there are three rows of teeth in each jaw, each placed at the end of the head, in which it differs from the other flat, grifly fifth. The head is roundith at the extremitry, and there are three rows of toeth in-each jaw, each row confifting of eighteen, to that there are one hundred and eight toeth in all. The tongue is broad and there are three rows of toeth in-each jaw, each row confifting of eighteen, to that there are one hundred and eight toeth in all. The tongue is broad and there as at the end; and the nothrils ere wide, being placed on the upper lip, and filled with a fort of filline. The eyes are of a middle fine, placed not far from the mooth, and do not look directly up, but fide ways. Inflead of gills, it has holes like the thornshek. Near, the head are two fins that look much like wings, for which reason it is called the angel fifth. On the extremities of these fines, near the corners; there are floor, filtery, and crooked prickles; as there are also on the lowermost fines, which are placed near the vent; Below the vent are also two fines, and the tail is forked. The chief value of this fish consists in its fish, which is used in making cales for instruments; shut the fieth is for rank, and of fo differeable a rate, that it is little used. The European failors find the great plenty of fish that are in the bay and river of Sierra Leona to be of infinite fervice to them, not only for provisions; but also for traffic; for the natives are so indolent, that they will not be at the trouble to catch them, but content themselves with fuch as are left among the rocks by the obb tides.

Great plenty of oysters are on the sides of the bay; and they appear as if growing on the mangende-trees, which are very numerous here. Many of them hang down in the water, and are so thick covered with bykers, that at striff sight it, might be imagined they were produced from the tree. Some of these oysters are on the sides of the bay; and toes upon the weets that grow on the sides of the. bay make, commoditual haunts for crocodiles; as also for the manates, or sea cow, w

shore. It is covered with a very thick skin, which g early refembles the bark of an old oak, for it is rough, wrinkied, without hair, and so hard as scarcely to be penetrated.

Though the beek is the smoothest part, yet it is covered with circular weinkles from the top of the neck to the tail sin. They are in general about twenty-five feet in length, but the head is very small in proportion to the body. It is flat at the top, and goes off sloping to the smooth, which is eight inches in dismeter. The head is covered with a black hard skin, exceeding rough, but thinner than in other parts. The mouth is small, but large enough for its manning of feeding. The lips both shows and below are double, and divided into the inner and outer, the upper lip terminates the shout, and appears like slemi-circle at the end: it is very thick, being sourteen inches broad, and tenden; it is very thick, being sourteen inches broad, and tenden; and is white, befor with transparent brilles, about, four inches long. The nether lip is also double; the outer one is black, and forms a fort of chin seven inches broad, but without brilles. The inner lip is hirty, said, only a little separated from the outer, entire does, it appears when the mouth is shut. The corners of the speed when the mouth is shut. The corners of the speed when the mouth is shut. The corners of the speed while the creature is eating. The brilles are blue small quality, hollow within, and bulbula at the rote-in. The leaves jury, which is only moveable, is shorter than the upper, and the slips move in the same manner as those of casts. They have not any teeth, but, instead thereof, two strong white bones that run the whole length of both jawa. The nostrile resolute those of a borie, and are parted by a grisse above an inch thick: they are two inches, over, with wrinkles, on the instead, and brilles half an inch long. The eyes are placed in the center of the head, between the end of the shouthers to the navel, the body is large a but from thence to the anus, it grows slender. The circumference of the head is seven sees, and of the body is large a but from thence to the anus, it grows slender. The circumference of the head is shout hole sin, or a

The tibrea and the lean parts are like beef, but more red and harfh, and may be kept a great while in the hotteft weather without tainting. The fat of the young ones salike port, and the lean greatly refembles veal. In the head, are four flones of different fizes, which are formewhat like bones, and are used in medicine. Helman afterms they are exceeding useful in cases of epilepsy; and they are also faid to be good against agues, and to cleanse the kidnies of

gravel.

The method of carching these creatures is as follows:
The negroes go in a canoe, and paddle towards it with as little notic as possible, it being exceeding quick of hearing.
As soon as they find themselves near-onough, the stans, who is placed ready at the head of the boat, strikes a harwho is placed ready at the head of the boat, firikes a harpoon fixed at the end of a long pole into it, and then lets go. The heaft immediately betakes itelf to the mangroves, where the water being Hallow/they follow it close, and renew the fivokes till they have wearled it out, when laving obtained possession of thecreature, they drag it a shore!

With respect to the inhabitants of Sierre Leonis, they are not to, black as those of the neighbouring countries, neither have they such flat noses or thick lips. "The men in general are tall and well-made, of a chearful disposition, land not given to quarrel, but the women are short and robust, owing to their being constantly employed in labour; for besides the business of housewifery, they work

hard in tillage, make palm-oil, and spin cotton. The poorer fort no naked till they are twelve years of age, when they wear a piece of aloth round the waith, or akind of apron made of the leaves, of trees. They also wear a leathern girdle, to which are intened, a long knife and a poniand. Periops of rank, especially when they appear abroad, wear a long stowing robe of stripped callico tied round the waith with a filten girdle. They adoen their arms with bracelets, and wear a great number of rings on their singers. Their care are ornamented with witness toys, and on their cheeks they have different squres made with red hot irons. Both fexes amoint their bodies and limbs with palm oil, and forme use civet in order to give them an agreeable scent. They wear no hair on their eye-lida, and they cut that on their head in eror a lines, leaving squares trust standing eroch, but the women in general shave all close. They are naturally temperate in their living, and very sober; so though they are exceeding sould of brandy and other spirituous liquors, yet they never drink to excels, considering drunkennels as one of the greatest crimes.

The huts and houses of these people are low, built with wooden stockades set in the ground, sand sharched with straw, some of the greatest crimes.

The huts and houses of these people are low, built with wooden stockades set in the ground, sand sharched with straw, some of them are ornamented, in the front with two wings of a spiral form. They are kept very clean, being swept as lead once every day. Their furniture consists of two or three eartherm gots to boil, their victuals in, a gourd or two wherein to feeth palm wine, and half a goutte for a cup) a few earthern dishes, a basket or two sey the wise to gather cockles in, and a knapisek for the hutband, made of the bark of trees, to earty his provision in when he goes abroad. Their bedstead is made of billest of wood laid across each other, on which they is mat, and sleep without any covering. Some of them have gunt, which they are ver prove fatal.

prove fatal.

Roots, herbs, fruits, cockles, and oystess, are their chief food; and their common drink is water. They plant about their houses gourds, potatoes, pompions, and to-bacco, the latter of which they are very fond of, particularly in smoaking. Their pipes are made of clay well barnt, and the bowl is remarkably large. They put a small bollow cane, about a foot and a half long, into the lower end of it, through which they draw the smoak and swallow it. They squeeze the juice out of the tobacco when the leaves are green, from an opinion that it would otherwise make them, drunk; after which, they shred it small, and then dry it on coals.

They are very fond of dancing, and generally spend their evenings in that diversion. They make a ring in the open part of the town, and one at a time shew his skill in antic motions and gesticulations, but with a great deal of sgilley; and their music consists of two or three drums made of a hollow piece of wood, and covered with the skint

made of a hollow piece of wood, and covered with the skirt of a kid or other animal.

The women of this country fend their daughters, at a certain age, to one peculiar house in every town or village, where they are taught for a year to fing, dance, and perform other exercises, by an old man appointed for that purpose, and when the year is expired, he conducts them to the market-place, where they publicly exhibit such performances as they have been taught at school. During formances as they have been taught at lenoon this time, if any of the young men are disposed to marry, they make choice of those they like bed, without regard either to birth or fortuge. When the han has declared his intention, the parties are considered as actually married, provided the bridgeroom can make some presents to the bridge parents, and to the old man from whom she received her education.

It is customary here, when they bury their dead, to put It is customary here, when they bury their dead, to put all the best goods of the deceased into the grave, and erect a roof over it, which they cover with linen cloth. The corple is always attended to the grave by a number of people hired as mourners, who howl and lament in proportion at they are paid for their trouble by the relations.

They call the courts of justice Pallavers, where the principal or elderly men aftemble to settle differences amongst

them, which generally artife in mattern relative to trade-each falutes the other, at meeting, with a bond of the cl-bow, and railing his hand to his face. When they have heard the parties; they determine the dispute by vote; and he that has the insportey, is accounted the lithoceur periodi. In case of fornication, the party, whether man or working is fold for a flave. 'On a cliarge of munder, the furnected period mind drink of a red parrative water prepared by this adger, which is called purging the critical in the law known to have led a bad life, and to have bore malice to the deceased, notwith flatiding a positive evidence may be wanted, in his judges will give him lets, or make it weaker has the lawy appear this cent to the friends and relations of the case of the fire friends and relations of the deceased. thole limits, as in that case he would be called to a fevere account.

Attempts have been frequently made by the Munding negroes, who are fifth Maltomerans, to "propagate the religion among these people; but they have ever rejected it, and fall follow their own maxims. They acknowledge one fupreme Bering, Creator of all things, whom they all Kanu: they allo believe in a furner face, but they do not worthin any living creature wintever, nor ever they full of moon. They have mind, fashefithed inthonia and pay great respect to their fefifies, or "charms," which they confiarnty they have mind, fashefithed inthonia and pay great respect to their fefifies, or "charms," which they confiarnty they have mind, fashefithed the fell of the part of their body. The nursher of their deficie is not seed, every one charing his ido! according to his own fancy, forme have a horn, forme a crab's claw, and, others a finall's their, a bird's head, or forme fuch trifle. To these they pray with the greated dalgence, and at their meals always offer them a part. They never not offen or circles have in their a part. They never not offen or circles the rivers without these follows confidering menticives by those near feeling as particular authority opins a fee; and, after the voyage, thank is 6-1 the case it has taken of them during that time.

This country is feparated by the river Sierra Leona into woo kingdoms; namely, that of Bulon or Bulm, to the north, and that of Burne to the fouth. The definer of these kingdoms lies very few and fise, but the soil is ser-

these kingdoms lies very few and flar, but the soil is fertile, and produces great quantities of rice, milliet, stidinaiz, of which they make excellent bread. The natives are very fond of the English and Portuguese, many of whom inhabit that part of the country, and they take great pains to similate the maxims and mainners of the Europeans.

Burre, is a much more open kingdom that that of Bothm, and near it is that long ridge of mountains easiled. Sierra Leona, which is the admiration of all strangers. There are so many eaver and dens about the mountaints, that where a single gun is fired from a thip in the bay, the each is so often repeated, and the sound sold of soid and strapp, that there seems to be the report of several carmon. This sar from being disagreeable to hear; but where is chunders, the noise is at first dreadful, each clap being exchoed with as much force as the real.

Not far from the mountains abovementioned, there runs

eaft; by Course and the Atlantic ocean, on the footh; by the fame ocean, on the weft; and by Negroland, on the north.

The fact accurate geographers divide the whole country into four parts, under the specializins of; a. The Grain, or Pepper Coaft; a. The Ivery Coaft; 3. The Gold Coaff, and, 4. The Slave Coaft; in which order we propose to trease of it. The principal rivers are, Sheritor, Ceffer; St. Paul, and Slerra Leona.

The Grain or Pepper Coaff, begins at Cape Tagrin, from whence it extends upwards of four hundred miles fouth-caft of Cape Palmas. It received its name from the Guiney pepper, called by the Spaniards, Malagueta, which grows here in abundance. It also produces another species of pepper common in the Weft Indies, and generally known in England by the name of Jamsica pepper. The English and Dutch purchase great quantities of these articles: but ivory and saves conflictute the chief country.

Travellers usually make but two feafons in this country, anamely, the wet and dry feafon. From April to September inclusive, is their drieft and hottes, as well as fairest weather; though then the fun is farthest from them on the footh-fide of the equator; whereas, the coaft of Guiney lies five degrees north.

But their wet feafon does not always begin just at the same time; nor is it the same at all places on this coaft; at fome times, and in sometimes of a longer, and at others of a shorter duration; however, between the vernal and the autumnal equinox, the generally have excessive rains, attended with violent forms of wind, at well at thunder and lightning; and, as the winds at this time blow from the south, if any shipping happens to be there in these storms; they are infallibly run on shore, and sure in not one harbour upon the south, if any shipping happens to be there in these storms; they are infallibly run on shore, and sure any time, even during the fair feafon, especially at Whidah. The most violent forms, or travedoes, are in July and August, and come from the southward. It is observed also, tha

The foil is tolerably good, and, besides pepper, produces plenty of vegetables and roots, as also various kinds duces plenty of vegetables and roots, as also various kinds of froits, particularly oranges, lemons, cocoe nuts, bananas, and dates. Their cattle confids of cows, which give wretched milk, and very little of it; sheep, which are cloathed with hair instead of wool, make very indifferent food, yet are very deat; they have also goats, hogs, hares, and deer, which are much better food than the former: they have a few horses, but they are very small, and of little use. Here are also several kinds of wild beafts, mer: they have a few horses, but they are very small, and of little use. Here are allo several kinds of wild beafts, as lions, tygers, leopards, elephants, buffaloes, wild hogs, wild dogs, foxes, 'crocodiles, and apes of various forts. They have likewise a species of monky here, some of which are five feet high; and are so bold and impudent, that they will sometimes attack men: but 'they have another fort of monkies, coal black, with white beards, not above two feet high, and very pretty. 'These creatures are all very thievish here, as well as in other places, plundering gardens and corn fields, but pretty nice in their diet, chusing the best of every kind of grain or fruit. The cameleon is also some of the seventh of the colour he usually puts on, when he is surprised, is a fine green, spotted hrown or yellow, for his ordinary colour le grey, but they never change to a red; and the skin is almost transparent; it is a very small animal, lefs than a rat, but considerably bigger than a monthe, and will live several months (some say years) without sood; though others are of opinion, that it catches slies; as some other creatures do, by putting out its tongue, which is almost as long as the body; but the flies must light on the cameleon's tongue, if he does eatch them, for he is so exceeding flow in his motion, that he can overtake nothing by running after it. Their poultry consists of geese, turkies, and ducks, with plenty of cocks and liens, the latter of which are esteemed as good in quality as those of Europe.

No. 26. With respect to the staives of this perc of the country they are in general tall and well festured, colerably sensible and contracts to firtingers; and are said to be the most honest in their dealings of any on the whole coult. The habit of a negro is a pean or pagne; (a cloth) shout his wells, two feet broad; and those of the better fort have another cloth of a good length wrapped allow thistin, and thrown over their shoulders; but yet so as their arms, lags, and a great part of their bodies appear hailed, both of the men and women. Their ornament donsin of a multitate of rings, or bracelets, of gold, ivory, or copper, according to their circumstances; wom on their arms and legs, with netalaces, and girdles of toral, one upon another; but the platting and adorning their hair take up the greatest part of their time; especially of the women; the hair of some of the negroes is longer than that of others; and they have a way of pulling it out of the natural curls and making it first; by hanging weights to it; after which, they form it into various fashious, diesting it up with little thin plates of gold, copper, timel, beads, coral, and sheller that make a gittering they; from of the women throw a vall over all, to keep off the feordhing fun, and some of the next have caps; their fishermen, particularly, have them made of falins or ruthes; and are very hippy if they can get a European hat; hut many of the negroes go perfectly have headed; and their featipe, its fishely are fo hardened by it, that they are not sensible of the sure intensibles.

Rics, miller, fifth, and fruits, are their common food; and their general drink is water mixed with a little palmwine, or the milk of cocoa-nuts. Most of thent are very abstentious, and will too drink any strong liquors to excess such as do are severely punished, by order of the king, for the conditions and the conditions.

tuch as do are feverely punished, by order of the king, for that practice.

The monarch of this country governs with despotic fivay; and with such authority, as to strike an awe into his subjects; who severence him more from sear that affection; he is limited by no laws, or any other restraints. When he goes abroad, he appears with the greatest pomp and magnificence; but he is never seen in public but upon

particular occasions.

particular occasions.

These people are all Pagants, but believe in one supremensing, and seem to entertain some notions of a future state. The chief part of them are employed in husbandry, but there are fome artificers amongst them, that are excellent workmen, particularly smiths, carpenters, and macons, the former of whom are so well acquainted with the nature of tempering sheel, that they make their various instruments to the greatest perfection. They purchase sincerums, gun-powder, and builtets of the Europeans; but darts, arrows, lances, and broad swords; they make themselves. The carpenters make the canoes of various sizes with great neatness; and they also build their houses by huts, (which are made of wood or clar, and thatched with reeds or branches of the palmetto-tree), in a very regular manner.

Some of the natives of this place are of a mixed breed, called mulattoes. These are an abandoned set of people, and have proceeded from the intermisture of negroes and and have proceeded from the internal sture of negrees and Europeans; for when the Portuguese first discovered the fouth-west part of Africa, they not only propagated their religion, but also their species, in many parts of it. These are of a tawny complexion, and profets themselves Christiana, notwithstanding which they retain many of the most superstitiona notions of the Pagans. The mens are great drunkards, lewd, thievish, and trescherous; the women are altogether the most abandoned, profittating thermselves at all times, and to all forts of men, without the least degree of restraint. They imitate the Portuguese in their wices.

The trade is carried on by figurals from the flips; or the appearance of which, the natives immediately go in their canoes, carrying with them their pepper, lvory, &cc. for the Europeans have no fettlement in this part of

for the Europeans have no fettlement in this part of Guiney.

One of their principal rivers is the Sherbro, called by fome authors Solbole, and by others Palmas, which difcharges itself into the great bay formed by the capes of Tagrin and Vega. It leaparates the country called Sierra Leona from that named Sestor, and has its fource in Upper Ethiopla; from whence it is conjectured by some either to be a branch of the Sengal, or of the river Gombia. Large ships go up this river for about seven leagues from its mouth, but farther up it grows shallow, and is only mayigable for canoes. The country round it is very mountainous, and the river has many turnings and windings, tainous, and the river has many turnings and winding

They use but little ceremonies in their marriages; thiose who are able to purchase a wife, after agreeing with the woman, apply to the parents or relations, and, if they ap-prove of the bargain, the wife is delivered to the hufband, who conducts her to his hut, and his other wives prepare a wedding fupper. The huband thay all night with his new bride, and the next morning the goes to work with the reft, no farther estempony, being observed on this occa-There feems, in some respects to be little difference! between their wives and their flaves.

Those that live the easiest amongst them, are the wives of the merchants, the dealers in wine, and the fishermen,

who have, so laughte manure w, for time, de destricting newspards, bringing lines, livelihood, and propising, for shore families; whereas the men of effaces make their, wives seasure such cultivarities, and the more wiven they live, for the greater is their, force, of colors, lives, and also have, being returned in the faces, and the more wiven they live, being seen in the live time, and they was not enjoyed many other privileges in the live-time, of the hardback of the liptoric lives, and they are not the manufacture of the hardback of the liptoric desirts a delign of dedicating her to his god, and with whom he, is my surface, it can be liptoric day, and of the other dely of the west approprieted to the large of their gods, a hard is excellent this properties of the liptory they are not to much concerned.

they are not to much concerned.

A fareat distinction is fluwn to the wife, wite is full delivated of aboy, as, the thereby, becomes the favourite, or chief, but the fometimes pays very dear for the preference given her, being obliged, if her huthand dies fark, to tellow hips, and to buried alive in the fame grave. This egramment a Franch writer of, credit, who was an eye witness of the melancholy, transaction, has given us, the following account of:

remony a French writer of, ereckt, who, was an eye witnesse of the melancholy translation, has given as the following account of the control of the will are the following account of the control of the will are the control of the co and great actions of the deceased, and then began their lamentations afreth. This mock music lafted near two hours, when four lufty negroes entering the house, took the dead hody, and, tied it on a hand-barrow made of branches of trees; then lifting it on their shoulders, they carried it through the town, runnings a fast as they could, and recling from time to time as if they had been drunk,

and reeling from time to time as if, they had been drunk, with a thouland ridiculous geftures, very fuitable to the exclanations, of the wives of the deceased, and the other women, who attended the procession: In short, the noise was so great, as would have drowned the loudest thunder, "They parade being over, the body was taken from the handebarrow, and deposited in its place; after which, the fonds, cries, and extravagancies of the women began again. During this, the marabout made a grave deep and large enough to hold two bodies; he also stripped and kinned a goat, if the pluck ferved to make a ragout, of which, he and the allishants are jhe also caused the favourite wife to eat some, who had no great inclination to take it, knowit was to be her last: She ate some, however, and during this repair, the body of the great goat was divided into this repair, the body of the great goat was divided into finall pieces, broiled, and eaten. The lamentations began imall pieces, broiled, and caten. In a lamentations began again 1, and when the marabout thought it time to end the ceremony, he took the favourite wife by the arms, and delivered her to two hufty negroes. Their citating her roughly, tied her lands and feer behind her, and, laying her on her back, placed apiece of wood on her breaft; then holding each other with their hands on their shoulders, they samped with their feet on the piece of wood till they had broken the woman's breaft. Having, thus, at leaft, half difthe woman's breat. Fraving, thus, as least, half dip-patched her, they threw, her into the grave, with the re-mainder of the goat, calling her hulband's body over her, and filling up the grave with earth; and fones. Immedi-ately, the cries calling, a quick filence, increeded the noise, and every one retired home with the greatest composure and unconcern." and unconcern.

The common people wink at their wives bellowing favours on other men , and indeed promote their own dif-

TAT

ing fa-wn dif-lonour,

ver her. mmediapolore himour, provided they can get money by it: they will contrive with their views how to draw young fellows into the hare, for the fake of the damages they are entitled to, which another levades their property: for the internet man does not recover left than the or fix pounds feeling. If he can though the fact of the their feeling, if he that who will calce of the fact, befiles the wivel; for the than will ackes a flepin each that they generally flind meaning the man will ackes a flepin each that he is innocent; and there can be no attracts again third ber the wife, he cannot be convicted. The women that are unmarried, it is faid; take very great liberties, which is no reproach to them upon this coat, neither does it hinder their getting hubands; but the give no other reason for it, than that it is an anticut coffor trahfinished to them by their ancestors. They pay great respect to their prietis, who, besides their excellishtical fortition, are looked upon as the most able physicians, though in general they are very ignorant.

Their principal commodites of traffic are, Guney pepper, elephants teeth, cattle, and positry. Their language is for unintelligible; that they are obliged to trade with the Europeans by figus, and in this they are for expert, that bergains and agreements are made without much difficulty.

Cape Monte, is the next confiderable place we come to it is intuated about twenty-five leagues from the mouth of the other are remarkably industrious, particularly in the cultivation of tice and boiling of fait, which they do not only for themselves, but also for the benefit of their king, so when first discovered at sea, appears like a lofty island. It contains a great number of villages, the inhabitants of which are remarkably industrious, particularly in the cultivation of tice and boiling of fait, which they do not only for themselves, but also for the benefit of their king, so when first discovered at sea, appears like a lofty island. It contains a great number of villages, the inhabitants of which is

furplice; but the women have only a narrow piece of cloth fastened round the waist. Both fexes take great pains with rateried round the wait.

Their harry or wool, which they twift into ringlets, and ormament the top of it with gold or precious flories. They
wear also necklaces of feveral rows; and on their arms and

war also necklaces of feveral rows; and on their arms and wrifts they have bracelets, and rings above the ancles, where some hang bells of filver, the noife of which, when they diver themselves by dancing, they are very fond of.

Though the houses are for the most part mean buildings, yet they are kept exceeding clean. Those belonging to the king and principal men are built long; some of thems are two stories high, wild a vaulted roof of reeds or palmi-leaves, to thick laid as to render of no or the heat of the sun absolutely impenetrable. A gentrance is the hall of audience, which is also their pass of eating; here is a kind of sophs, made of earth or clay, about sia feet in breadth? and raised above twelve inches from the ground; in covered with fire mats made of grafs or palmi-leaves, and dred of various colours. In this place the principal people spend the greatest part of the day with their wives, and amuse themselves with simoaking, talking, and drinking palm-wine. Adjoining to the audience-room is the bed chamber, where they have an estrade or sophs, constituting of a number of mats laid one on the other, and surrounded with pagnes sewed together, or printed linen like curtains. Their kineshens are fittuated at some diffance from the dwelling house, in a surrounded welling house, in a surrounded with pagnes sewed together, or printed linen like curtains. The well and the surrounded welling house, in a surrounded welling house, the dwelling house, and are very next.

The people here are in general more cleanly in cating their victuals, than their neighbours. They use bowls made of hard wood, and basons of pewter or copper tinued, which they keep exceeding neat. When they roaft their meat, they fasten it on a wooden fpit; but as they have not the means of making it turn round, they first roaft one fide, and then the other.

one fide, and then the other.

A man may marry as many wives as he can keep, for which reason some of them have a great number, for the expende is very trifling, as they make them work so hard, that each nearly earns her own maintenance; they feldom quariel, but in general live very happy; and so little jealous are the men, that if their wives believe savours on others, it does not give them the least concern.

Their religion constitts chiefly in reverencing and obeying their king; and they have such little notions of ambition, that each lives happy in his own way, neither exulting at the downfal of the poor, or envying the prospectives.

rity of the sich. Their imiliary weapons confer only of bows and arrows, has they sive kept more for ornament than use. They never go to war with their neighbourrs for if any differences arise, they are amicably adjusted by treaty between the parties.

Many of their mate the bought by the Europeans that trade here; they are of a bright yellow, and esceeding beautiful 'also goet quantities of 'bory,' which is equally good in 'quality to that of Bierra Loca ! they likewing purchaise the same of flows, santhers, tygers, and other wild beafts, as also a great number of saves, which are brought hither by the Mundingo merchants from the inland parts of Arica. The forests yield plenty of several forts of wood fit for dying,' particularly cianwood, which the native cut, and bring to the thore in blocks of four or five feet in length; the Europeans buy a great deal of it, thinking it much more folid and beautiful than Brail wood, to which they prefer it.

At a small distance from cape Monte, is a river called Rio Novo, on the banks of which are several good villages, and the foll is very fertile, producing great quantities of rice, and other grain, with various kinds of fruit, as oranges, lemons, citrons, pomegrainates, &c.: Here are also sever, and horse. In summer, the waper of this river is brackish about two leagues from the coath, on account of the flowing in of the tide; and in the winter it foundation will for a to overshow its banks; before the mount of it is confiderable sand-bank, which prevents large versely confiderable frand-bank, which prevents large versely obtruct the navigation, and are very dangerous.

Towards the south-east, and about ten leagues from cape Montic; is a prodigious hill called cape Mensurado, thoogh not quiter to high as cape Monter, is a prodigious hill called cape Mensurado, thoogh not quiter to high as cape and high, but that to the land is more gentle and accessfible. On the east side of it is a bay of considerable extent, which is terminated by a high land covered with lofty trees.

flicks and clay, and are covered with straw. In one of them are generally lodged at least forty people, confissing of men, women, and children of different families, all

of men, women, and children of different families, all confudedly mixed together.

The people here are very civil and good-natured, and the women remarkably handlome. The men are naturally very indolent, and leave the principal part of bufinefs to be executed by their wives. They are as carelefs about religion as their neighbours at cape Monte, and only attend to the enjoyments of feftivity and diversion. They live very peaceably with their neighbours, and are not apprehensive of any enemy except the English, their fears of whom arofe from two large versels that once stopped here, the crews belonging to which ravaged the country, destroyed all their canoes, plundered their houses, and carried off fome of the people for saves: since which time they have ever been fearful of most Europeans, but particularly the English, and have retained an enmity to them ever since.

The garb of the common people is only a piece of cot-

The garb of the common people is only a piece of cot-ton wound round the waift, and faftened between the legs; but the better fort have a fluiped frock which reaches to

kness; and they think themfelves equipped to the test advantage, if they can get an old hat to grace their

leads with.

reasest advantage, if they can get an old hat to grace their fasais with.

The weapons of these people are lances about sive seet long, with pointed iron heads; finall bows and arrows the latter of which are positioned at the ends; and if they touch the blood, it inevitably kills the object, unless the part affected is immediately cut off. Their arrows have neitheriron heads or feathers, and they always shoot them ht random; notwithstanding which, they feldom miss their mark. They earry square targets of this board about four feet long and two broad, which are made to hang on their arms, but in so convenient a manner, that they can easily manage the bow with their hands.

Palm-wine and rice are their chief articles of trade; of these they have great quantities, and exceeding good in exchange for these commodities.

About eight miles up the river, and near a quarter of a mile from the side of it, the king's town is situated. This is surrounded with woods, and the entrance to it from the river is through a beautiful walk shaded with lofty trees. The council-hall is in the center of the town; here the king and his chief people meet to hear all cardes, dispense which and over it a penthouse of a circular form supported by posts, and thatched with palm branches, to shelter them from the heat of the slun. The whole is open on all sides, for the convenience of light and air, and is about twelve yards in diameter.

There are about forty houses in this town, which, though vards in diameter.

yards in diameter.

There are about forty houses in this town, which, though I be buildings, are very neat: they are open on one side, and walled on the other three with stakes intermixed with red clay, which bind well, and is very lasting. Their kishens are even with the ground; but the bed chambers are raised about a foot from it, to avoid the inconvenience of the dews. The roof is raised like a tent, and covered with reeds, or palm-leaves, so close intervoven as to admit neither sun nor rain. In the center of the kitchen is the standard of the control of the standard of the center of the kitchen is the standard of the standard of the center of the kitchen is the standard of neuner iun nor rain. In the center of the kitchen is the fire-place, which is railed about fix inches from the ground; and they keep their fires conflantly burning; in the day-time, for drefling their victuals, and the convenience of finoaking; and, in the night, to fecure them from the moiftnets of the air, and the cold.

They have, beddes their houses, buildings for holding fless respections as rice, millet, nalmonil, heardy, and other

They have, beddes their houses, buildings for holding their provisions, as rice, miller, palm-oil, brandy, and other necessaries. These buildings are of a round make, with a conic roof, and are secured by padlocks of which the husband keeps the keys, and diftributes daily or weekly such provision as he thinks necessary for his family. This does not give the least offence to his wives, who live amicably together, and spend their time in working abroad, or taking care of the children and other necessary business at home. The buildings belonging to each family are covered with reeds or palm-leaves to secure them from the inclemency of the weather, and are enclosed with a wall of earth seven or eight seet high.

The river called St. Paul runs to the west of Mensurado, the entrance of it is about six feet deep, and in calm weather it is navigable for vessels of a tolerable burden. This river takes its course westward about three miles, and eastward to the river Sestos, whither the natives daily pass in their canoes, and trade either in the natural

daily pass in their canoes, and trade either in the natural produce of the country, or in elephants teeth, which latter article is brought in confiderable quantities to the river

Seftos.

The river called del Punto or Rio Junck, is to the fouth an eriver caused our runto or kip junce, is to the fouth-eaft of cape Menfurado; but the entrance is fo clogged with rocks, that it is impossible for any ships to pass them: however, on the other side of them the river is navigable, and runs for several miles up the country with a fine smooth

current.

The river St. John is farther to the fouth-east of that last mentioned: the banks of it are covered with losty trees; and to the east of this river is a high mountain, in the form of a bow; but it is chiefly barren and uninhabited. Near the fea-coalt, a few miles from its mouth, is a village called Tabo Carea, and not far from it, is another, called by the mative: Tabo Dagron, and by the French Petit Diappe, there is a river of the fame name near it.

Settle Cro, or Settre Crue, is fituated on the fouth-eaft the size of the fame is always and the size of the fame is always and the size of th

of the river St. Paul; near it there is a large and beau-tiful village inhabited by people remarkable for being honeft in their dealings, and preferving a more regular and pru-dent conduct than their neighbours. The country here is flat and low; but at fome diltance from the village the land

is bigh, and covered with trees that afford excellent timber, Near the fea are two large rocks about a mile diffant from each other; and the place is known at fan by thefe marks. The house at Seffer Cro are built upon piles at leaft five feet high from the ground, not only as fectus them from the unwhelefone damp of the earth during the reiny feafons, but also from the wild batha, which are a confant terror to the inhabitants, being very numerous here. Wappo, is a frash village about three miles beyond Seftre Cro; there is a piece of fresh water in it, that is exceeding good and wholefones. This place is known at fea by feveral high trees that appear upon a hill behind the shore, the tops of which, feam of a red colour at a diftance. Before this place is a large rock, which feems as it were feparated from the shore, though attually out it.

There are several other villages between Wappo and cape Seftor, the most considerable of which is Great Seftro, where there is a large basin of fresh water fituated among a number of rocks: but this village contains nothing elle that is remarkable; and the rest of them are too inconfiderable to require any particular description.

We shall now proceed to take a view of the countries adjoining to the Grain Coast, or the inverior part towards the west and south-west. These countries are divided into feveral territories or kingdoms; the principal of which are, Quilliga, or Quilga, is three hundred miles north of Mosambique; it is a large fertile country, abounding in all the necessaries of life, and was discovered by the Fortunges in 1498, to whom it is now tributary.

Quoja, reaches from Sierra Leona to the Grain Coast; and ontains, besides Proper Quoja, the bingdoms of Bolem. Gila, Guilliga, and Carredabu. This is a large kingdom and Inhabitants of the antient inhabitants of cape Monte, who were once a populous and warlike people, but being conquered by the Quojans, and reduced to subjection. who were once a populous and warlike people, but being conquered by the Quojans, and reduced to fubjection, are now very infignificant, and few in number. In this kingdom are many handforne towns and villages, the chief of which are fituated on the river Maguiba, by which the

of which are situated on the river Maguiba, by which the whole country is plentifully watered.
Great number of water-elephants are found in this river, and on its banks, and the natives, when they catch them, present them to the king, who claims, them as his particular property, but usually compliments the persons who bring them with a handsome present. This creature is properly called the hippotamus, or see-horse. It is an animal that feeds upon grafs, but frequently hides himself under water, where he continues for some time. When he raises his head from the water, he books about to see if any danger is near, and can finella man at a confiderable any danger is near, and can fmell a man at a confiderable diffance. If any thing frightens him, he will immediately any danger is near, and can finell a man at a confiderable distance. If any thing frightens him, he will immediately hide himfelf in the water, where he will continue for a confiderable time before he again raifes his head. As foon, however, as he appears, the hunter, who has patiently waited for the opportunity, levels his gun at his head; and if the creature happens not to fee him, it feldom miffes doing the wisfled-for execution. If he is killed, the colour of the water will discover where he lies, when they go with a boat, hooks, and cords, and drag him ashore. They then skin him, take out his bowels, and convey him away on a carriage; for his weight is very confiderable, being from two thousand five hundred to three thousand pounds, when full grown. when full grown.

The water-elephant in colour and shape, greatly resembles a rhinoceros, except the legs being somewhat shorter. The head is much like that of a common horse, but the mouth and nostrils are much larger. His cars and eyes are small, and his hoof is cloven like that of an ox: but his pattern being too weak to support the weight of his body, nature has taken care to supply that defect, by placing two little hoofs about it, on which he rests in walking, and little hoofs about it, on which he retls in walking, and they leave on the ground the impression of sour points. The body is very smooth, but the tail has hair on it, and is short like that of an elephant. The udder of the female hangs between the hind legalike a cow's, but it is very small in proportion to the bulk of the beast. The hide is about an inch thick; and so hard, that it can seasely be penetrated with a musiket ball, which is the reason that they who endeavour to catch them generally aim at the head. The who endeavour to catch them generally aim at the head. Th who cheevour to each tienge about this animal are its tudes, which are four in number; they proceed from the lower jaw, and rife out of the mouth to a confiderabe length. They are in thick as the horn of an ox, and weigh about ten pounds each. They are very white, and always, rene rany
ne conus here.

The e length. ways rethe tain their colour; for which reason, they are much used by the reathermatical instrument-makers for scales, sessors, are. E.d. dee these, he has in all sorry-four teeth, viz. eight incides, so but in each jaw; four dog teeth, two in each side, which are all cylindrical; and thirty-two grinders, of which there are finteen above, and the same nutatior below. The fieth of this animal is exceeding good, and in season parts is sold at fix-pence per pound. The fat is of qualvalue with the lean, being according wholesome, and generally used dinsead of better. This cristure delights in rivers, where the water is good, and chuses those parts in rivers, where the water is good, and chuses those parts in rivers, where the water is good, and chuses those parts in rivers, where the water is good, and chuses those parts in rivers, where the water is good, and chuses those parts in a bady. Their method is, to plant therefers at the mouths of large rivers, by which they intercept all the fish that come down it. They do not sleep in the water, but among reads or tushes on the sides of the rivers; and they fraquently snore so load, as to discover themselves to their pursuers. They being forth their young on the land, where they suck leand keep them unless disturbed, when they immediately take to the water. The negroes who have huse near the sivers, are obliged to guard their fields day and night, otherwise these creatures would do great dantage to their rice and corn, as well by trampling it down with their feet, as eating it.

Another animal, nearly resembling the above, is formationed in this river. It is almost of the same face of a brown colour, with white streaks, a long neck, short body, small lags, and has house like a bullock. They are only caught in the water; for though they are forsetimes found on shore, yet they are too nimble to be overtaken by any beast.

feen on shore, yet they are too nimble to be overtaken by any beaft.

There is also a great variety of fish in this river, among which is a remarkable one called the fea-woodcock. It is about ten feet long, and five in circumference. It has a along fin on the back, and two of the same fise below the gidls. The tail is large, indented, thick, and firong; the type fail, big, red, and lively. The mouth is wide, armed with small teeth, close fet, and sharp; besides which, it has a bill about twenty inches long, divided into two parts, preceeding from the upper and lower jew. This bill is hard and borrey, turrounded with a cartilage covered with a rough skin something like shagreen. The steft of it is intermined with fat and lean, and is far from having a difagreeable taste.

Intermixed with fat and lean, and is far from having a difagreeable table.

Hendo, is divided into four principalities, the chiefs of
which are appointed by the king of Quoja, to whem they
pay an annual tribute of red cloth, falt, and braft kettles.
Folgias and Manow, are both very extensive empires,
but the latter is the most considerable; and the Folgians
are in the fance manner subject to the emperor of Manow,
as the Quojas are to the Folgians. The emperor's authority entends over all the neighbouring nations, who
acknowledge their folonistion by making him annual prefeats of cloth, bugles, iron bers, faves, &c. and he in reteam subjects his respect by preferring shem with a certain
qualitative of sed cloth. The Folgians pay the fame complained to the Quojas, who do the like to the king of
shoulds. The subjects of the emperor are called mendi,
which figulated lords; and the Quojas are called mendi,
which figulated lords; and the Quojas are called mendi
monow, that is, "she people of the lord." Each of these
kings has an absolute authority over his own diffrict; and
they can make laws, declare war, or proclaim peace, withset the emperor's confent, notwithstanding their subjections to the misser.

east the emperor's confeat, nowithflanding their fubjection to him.

Befides nice and other grain, these countries produce a great whitely of vogcables and roots, as also plenty of amignavors, bananes, pine-apples, see. The only entitle help have are theop: they are indifferently supplied with fowles, except small birds, which they carch in the woods, in which there are also great numbers of elephants, tygers, buffaloes, and other wild beath.

One of the birds in this country is talled kinfi-fowkeghoss, or her it fing, they immediately teturn home; and if any one dies soon after, they say, kegbosh killed him. This sied is about the size of a sparrow-hawk, and black-feathered; pissures is its usual food.

They have two other birds, which, besides the above,

feathered; pitmires is its ufual food.

They have two other birds, which, befides the above, the blacks will never touch, but hold them In the most facered light. The first of these is called the fenton, and is about the fige of a lark. When the negroes are huntring in the woods, this bird will place itself on a tree near the flow where the animal is hid, and on the approach of the hunters will immediately begin to fing; when the is faithful the people have taken notice of her; the immediations of her; the immediation of the people have taken notice of her; the immediations of the people have taken notice of her; the immediation of the people have taken notice of her; the immediation of the people have taken notice of her; the immediation of the people have taken notice of her; the immediation of the people have taken notice of her; the immediation of the people have taken notice of her; the immediation of the people have taken notice of her; the immediation of the people have taken notice of her; the immediation of the people have taken notice of her; the immediation of the people have taken notice of her; the immediation of the people have taken notice of her; the immediation of her people have taken notice of her people hav

livers is to the mother; after which, the whole company disperse, accept a few select friends, for whom an elegant entertainment is provided; after which they divert these selects in their usual manner.

On the death of any person, all the friends and sequaintance of the deceased immediately assemble, and surrounding the scopie, sing elegies, in which they set forth the praise and exploits of the defund. After this ceresiony is over, the corple is washed, and the body set upright, supported by props at the back and under the arms. If it is a man, they put a bow and errow in his hand, and dress him with his best garment. His nearest relations and friends them make, a fors of skirmish with their arrows; after which they kneel down with their beck to the corple, and extend the bowking to its umont limits, intimating their readinates to fight against his enemies, or those who shall presume to speak difrespectfully of him. While these ceremonies are in agitation, the woman attend on the widow, to lament and condole with her; in doing of which, they throw themselves as the refet, and continually keep repeating these words, Bgune, Bgune, that is, be keep repeating these words, Bgune, Bgune, that is, be comforted, or cease your lamentations. After the whole ceremonies are over, previous to interment, the corpse is carried on a bier to the grave, which is generally made near the fepulchres of their ancestors in some desolate spot, and their deposited about three feet in the ground: they throw into the grave all the kettles, befon, and principal things the deceased was possessed of a after which, they cover the whole with a mat, and hang his armour on an iron rod, which they fasten in the center of the grave. They generally ered a hut over the grave, to secure it from rain, as also the better to preserve the memory of the deceased. If a woman is buried, the emblems placed on the rod are, basons, mugs, and other things necessary in house keep-

It is customary for the relations and friends of a deceased It is cultomary for the relations and friends of a deceased gerson, after the suneral is over, to make a yow of ability stenee, which is called Bolli, Guwe; this yow, for the common fort is observed ten days; and for the king, or any very considerable person, thirty. They who keep this fast, on making the yow, lift up their hands, and declare they will not eac any rice during that time, nor drink any liquor but what is kept in a hole made for that purpose in the ground, as also to abitain from connubial enjoy and the women vow to clothe themicives only with white and the women yow to clothe themicives only with white or black rags, or to go with their hair loofe, and to fleep on the bare ground. When the time of abilinence is over, they lift up their hands again, to denote that they have very punctually fulfilled their engagements. After this, the men go to feek for game, and if they meet with any, on their return it is dreffed for regaling the consignary. All who have kept the faft are complimented by the nearest relation of the deceased with presents, consisting of a piece of cloth, a basket of falt, an iron bar, &c. but a mat, a theff, or some kind of weapon, is generally necessarily presents. but a mai, a staff, or fome kind of weapon, is generally pre-fented to those of a more distinguished fort. When it is suspected that a person did not die a natural

death, they neither wash the corpse, or lament, till they they are saissied of their doubts, and the criminal is dethey are faursied of their doubts, and the criminal is de-redied. As foon as the surpected person is taken into cus-tody, he is chained to a great block, and asked if he will acknowledge the fact; if he does, he is immediately put to death; if not, they try him by making him swallow a large quantity of quony. This is the rind or bark of a free to called, which in presence of the deceased's friends, is pulled off by the suspected person, that the sap or juice may be used without any deceit; The bark is pounded, and then put into a large quantity of water, which, after form time standing, is of an acid taste. Of this liquor they make the criminal drink three or sour quarts on the fol-lowing morning, in the presence of the whole company. fowing morning, in the presence of the whole company. If he soon discharges it from his stomach, he is deemed innocents, but if it continues there long he infallibly dies, when they either cast his body into the river, or burn it. Although the Quojas Berkoma are Jubject to the king.

of Folgia, yet that prince confers on the king of Quoja the title of Dondagh, which he also preferves, and which is conferred on him by the emperor of Manow; and the king of the Quojas gives the same title to the king of Bulm, who does not pay honage to the king of the Folgias but to him. gias, but to him.

Notwithstanding the king of Quoja is an absolute monarch, yet his government is mild, and his councils are formed of the wisch and most experienced persons in the nation: however, he is jealous of his authority and prerogative. When he appears in public, he sits or stands on a shield, to denote that he is the defender of the county

try, the leader at war; and this protector of his people. He keeps a great number of concubines, most of whom are brought from the neighbouring kingdoms.

If a perfon of note, who has been differed, is defirous of obtaining an audience of the king, in order to regain his favour, he first delivers presents to the chief of his wives, constituing of ribbands, elephants teeth, &c. the's the exprise to the prince, begging that such a person may be admitted. If the king clustes to grant the petition the present is accepted, and the person admitted but if not, the present is privately restored to the owner. However, he daren not return liones, till the king, through the mediadares not return lionie, till the king, through the mediation of his friends, gives his confent, then the prefent is accepted and an audience granted; when he obtains forgiveners, provided his crime be not of a very enormous

When a nobleman has been guilty of any mifeonduct; he is fummoned before the king; and if he refuse to ap-pear, itsis majesty sends his koredo, or shield, by two drumparts, who are not to ceafe beating their drums till the party conies with them, carrying in one hand the koredo, and in the other fome valuable prefers. As foom as he comes into the king's prefence, he profitates himfelf on the ground, and, throwing earth over his head, bega forgiveneft, and acknowledges himself unworthy to fit on givenets, and acknowledges himself unworthy to fit on-the koredo; but promifee amendment in future. The shield is sent to him by way of reproach; intimating, that as he refused to obey the mandates of the king, he might come himself; and take the place of the fovereign, and bear the fatigues of government. Offenders in cri-nainal cases, that are sentenced to death, are executed in some wood at a considerable distance from the village in which they resided. Here the criminal kneels, with his lead here, and the executions that a large themsels. head bent, and the executioner thrufts a lance through his body, after which, he cuts off his head with an ax or knife, and quarters him, delivering the limbs, to his reflective wives. If a manis charged with their or perjury, and the evidence is not fufficiently clear, he takes his trial by belli, a composition made by the belli-mo, or priest; with the bark of a tree and herbs, which is laid on the person's hand, if it does not hurt him, he is supposed innocent; if otherwise, he is deemed guilty; in which case he is sentenced to death, and executed in the manner.

cafe he is fentenced to dearn, and execute in the human abovementioned.

When a woman is accused of adultery, the swears by the belth, withing that if the le guilty, the spirit (jannanin, the spirit of the woods) may defrey her. If the has sworn fallely, and is afterwards convicted, the asympholicly led by her husband to the market-place, where the council sit to hear the merits of the case. They first incommend the same after which they cover the woman's voke the januanin; after which they cover the woman's eyes, that the may not fee the spirits that, are supposed to be waiting to carry her off; the then received a severe re-primand for the disorderly life she has led, with the most dreadful threats if the ever does the like again. A horrid dreadul threats it the ever does the like again. A horrid noise then entues; after which, her eyes are uncovered, and she is discharged by the januanin, on promising to live chafe, and morthlying hertelf for the remainder of her life. If, however, the thould relapte after this, and its again convicted, the belli-mo, with his attendants, go early in the morning to her house, and making a strange noise with instruments adapted for the purpose, conducts her to the market-place, where the council again sit, round which they oblige her to walk three times, that the which they oblige her to walk three times, that the brotherhood may have an opportunity of properly feeing her; they who are not of the order must not presume to appear, not even so much as to look out from their houses, for fear they should be taken away by the jandauin... After the griminal has walked three times round the market-place, the is conducted to the wood of belli, and is never after heard of ... The negroes in general think fuch women are carried away by the belli; but it is most reasonable to conjecture that they are put to death ; and indeed fome of the more sensible part intimate as much, but nevertheless affert that it is done to appease the indignation of the belli, in order that they may still preserve their superstitious. Ac-

With respect to their religion, they believe in one supreme Being, though they cannot form any just idea of him. They call him Canno, and attribute to him omnipotence, omniscience, and omnipresence... They also be-lieve that the dead become spirits, whom they call jamauin, that is, patront or defenders, and imagine, them able to proted them in all calemities. Thus when a man happens to escape some imminent danger, he facrifices as the grave of his supposed deliverer force kind of beath, and makes a feath for the emertainment of the relations of the

defundt, at an acknowledgment for the protection he has received. They believe also that the januarin, or spirits, reside in the woods; and when they receive any particular lajury, they repair thither, and repeat their grievances with cries and lamentations, intreating Canno and the januarin to clustife the malice of the party whom they name. In thort, such is their veneration for those spirits, name. In thort, such is their veneration for those spirits, that they rely on them as well for their present as future welfare. They never drink palm wine without first spiling a tirtle of ire for the januauin, which custom is also practified even by the kings themselves; and indeed their relations worthip is chiefly directed to those spirits, whom they daily invoke, though they appear at the same time to pay great reverence to Cannio.

Circumction is considered by them as a divine institution, and therefore they practife it with great punctuality. They generally circumcite their children at the age of fix anothers; but some defer the operation till they are three years old, that it may be performed with the greater case and safety to the child.

On the day of every new moon they keep a festival,

On the day of every new moon they keep a fellival, when they abiliain from all kinds of business, and will not permit any stranger to be with them; and tiley alledge, that if they were not strictly to observe these ceremonies, the moon would not only change the colour of their rice, but render it of no use or benefit to them.

All the nations of this part of the country have two other ceremonies that are of a very peculiar nature, and are generally practifed by them. These ceremonies be-long to two locieties or lects, the one of men and the other are generally practiced by them. I need coremonies belong to two locicities or lefts, the one of men and the other of women, but they are intirely independent of each other. The first of these is called belli, and is properly a school or college, established once upon a certain time by order of the king for the education of youth, who are taught to dance, and to fing often what they call belli-dong, or the practice of the belli. When they have completed their education, and gone through all the ceremonies of the school, they are ditinguished by the title of. The market of the belli. After this, they are considered as persons of great fagacity, and are admitted to give their opinion in all matters relative to the good order and government of the state. These seminaries are situated in a large wood, where proper barracks or huts are built, and the land is cultivated on at produce a fufficiency for the scholars, that they may not have occasion to go to other places for the common necessaries of life. When those who intend to send their sons to the school, have given intimation of their intentions; proclamation is made, forbidding all semalest osporoach the facred wood during the continuance of the school, which is generally four years, and sometimes five, as circumstances may require.

as circumstances may require.

As foon as the foggonos, or elders, who are appointed by the king to govern the school, have taken their places, they proclaim the laws to the scholars, forbidding them to They proclaim in the laws to the lenously formula the man of his out of the precinity of the college, or converfe with any but their fellow fludents, or fuch as have the mark of the belli, which is the first thing they tective after admission. This is done by making feveral cuts in the flesh from each side of the neck to the shoulder-bone: the operation is a subject to the state of the second by the secon sation is painful, but they are foon cured by proper fin-ples; after which, they obtain fuperior dignity, and alforeceive a new name.

They are removed from school, when their time of edu-They are removed from school, when their time of education is expired, to huts built for the purpose at some distance, where they are visited by their relations, who endeavour to polish their manners, and make them sit for society; for, from their long consistent in this retreat, they are such utter strangers to decency and good behaviour, as to be mere savages. While under this tuition, they are dressed with a particular garment about their waits, and their neeks are ornamented with strings of beads, intermixed with leopards teeth. On their heads they were a large cap with slappets, that hang over the sace; their legs are loaded with brass bells and rings, and their bodies are ornamented with seathers of various colours. In this dress they are conducted to a place appears. lours. In this drefs they are conducted to a place aplours. In this drefs they are conducted to a place ap-prointed for the purpose near the king's palace, where, in the presence of numerous spectators, they take off their caps, and then sing, dance, and exhibit such other per-formances as they have learnt while at school; and if any-be found deficient they are ridiculted in a particular man-mer by the women, who exclaim, "He has spent his sime as eating of rice;" the same kind of sligma is also hild as they have been another are affected beat and laid on them by the men, and they are afterwards looked aport by both fexes with the greatest contempt. When the performance is over; the loggonos or teachers, call each their own pupil by the name that was given him on

his admission into the school, and their protents him to his parents: this name he over after retains.

The school or ferminary calculated for the improvement of semales, is called Neilogue: the cerestonics attending it are these; at a time appointed by the king, a number of huts are eracted in the middle of a wood, for the reception of such anmarried women as chuse to become members of the foclety. When intimation is given of the number of persons desirous of being admitted, the most antient woman of the profession is appointed as a governess, and is called sogwill. As soon as the scholars are assembled, she enters upon her office by giving them a treat, and exhorting them to be faissfied with their confinement of four months, which is the usual time allotted for their tuition. She then shaves their heads, and they, having; by her orders, fripped themselves maked, she leads them to a brook, where they are wished all over, and their bodies anointed with palm-oil; after which they go intirely naked during their continuance in the school. The logwilli, or governess, teaches them the dances of the edunitry, and to recise the verses of the Sandi, which gives name to the profession, they being called Sandi Simodistino, or the daughters of Sandi. These verses conflict of certain enteoniums which are chanted; and at the time they exhibit strange gestures and motions of the body, some of which are not only ridiculors, but of the most indeficate nature. When the time of their education is nearly expired, the parents sent them clothes and various rinkels to adopn their bodies with, as bugle strings, briss bolls, rings, &c. Ou the proper day appointed, they are conducted by the fogwill to the village where the king resides, whither prodigious numbers of people of both sexes resort, to see them perform the feats they have learnt as chool. During the exhibition, the governess site on the ground, and the daughters of the Sandi dance one after another to the best of a small drum, when each receives the applicates of the publi

refectively belong.

We might take notice of other firange maxims which prevail among the negroes of these nations; but shall only add to their other superficious notions, the great faith they liave in magicians and forcerers, as also in a fort of men whom they they call munusur, these they believe can fuck the blood from the hord can be described. whom they they call munufu: thefe they believe can fuck' the blood from the body of either man or beaft; at leaft they imagine that they can corrupt it in such a manner, as to occasion lingering and painful diseases. There are also other enchanters called pilli, who, they believe, can prevent the growth of their rice. 'Such men, they fay, are policified with the sovah or devil, and that being overcome with meliancholy, they feclude themselves from all society, by retiring to the most desolate parts of the woods and forests, where the devil shews them such herbs and plants as are to be used in their enchantements, as also plants as are to be used in their enchantments, as also the words, geftures, and grimace sproper for fuch practices.

The blacks are fo confident of there being fuch people as there in the woods and forefts, that they will never travel. there without company; and they always carry with them a certain composition, which they sancy secures them from the malicious machinations of the supposed forcerers.

SECT. II.

Defeription of the long Couft, itt townt, rivers, produce, inhabitante, their enfome, Ge.

THE Ivory Coast derives its name from the great
nomber of elephants teeth purchased here by the
Europeans, the principal part of which are found on this
coast, and in its vicinity. It is bounded, on the east, by
the Gold coast; on the west, by the Grain or Peppercoast;
on the north, by Negroland; and, on the fouth, by the
Atlantic ocean. The whole coast, which extends from
cape Palmas to cape Apollonia, is about two hundred and
fitty miles in length, and is called by the natives the Quaqua coast, the word quaqua fignifying a tooth, in the
language of the country.

Cape Palmas is fituated in eight degrees west longitude,
and four degrees thirty minutes north latitude. The
most favourable times of the year on this coast, are the
months of February, March and April; during which the

months of February, March and April; during which the air is very ferene, and the breezes gentle; bur owards the ond of May there arife violent florms from the fouth and fouth-eath, attended with thunder; lightning, and heavy showers of rain, which often continue till the end of

January following. To the west of this cape are their round hills, and a little further in land is a grove of palm-trees, which, Randing on an elevated ground, is seed a confiderable difficience at less, and was the occasion of this tape being called Cabo das Palmas, or the Palm-tree cape. Behind the cape is a bay, where ships ride fieldly at anchos, being sheltered from the southerty winds. About three miles eastward of the bay, is a shoal that aparata like a long mountain: and opposite the western About three miles eaftward of the bay, is a fineal that ap-mits like a long mountain; and opposite the western tolint of the cape is a long range of rocks, even with the trifice of the water, which reach from fouth-east to both; about four miles into the fea. The coast here, estiles abounding with rocks and shoals, is very muddy, in therefore dangerous for-vessels to past along it. There is a river called Cavadel, about five leagues som cape Palmas, and to the east of it stands a very high both. About twelve leagues north-east is a rown called Ottend, which name it probably received from the Dutch; ut it is a very inconsiderable place, not meriting any par-cular description.

but it is very inconnectance place, the action of course decreption.

A town of fome note, called Drewin, was formerly near the mouth of the river St. Andrew, but the inhabitants of the latter having a dipute with those of Drewin, went to war with them, and burnt their town to after, making prijenters of all the men, women and children, and they fold them to the Europeans, whose ships then lay in the river abovementioned.

and my fold teem to the Europeans, whose inps then by in the river abovementioned.

St. Andrew is a very large town, and is fituated on a fase river of the fame name, which dicharges idely into the less shout twenty-five miles to the north-east of cape Palmas. This river divides titell into two branches, one ranning north-west by well, and the other east fouth-east; of most times of the year it is navigable for small vessels four lesgues up; but in the height of the summer the chirance is se ophracted by a bar of fand, that no vessels can get into it. This town is way large, and since the demosition of Drewin has become a place of confiderable trade. The country about it is easily distinguished by a number of land-marks and lefty trees, as also several villages, which are for lost together, that the whole are seen as each view. The fold is exceeding fertile, and produces great quantities of rice, millet, main, peas, and a great variety of fruits. The passurage is excellent for cattle, of which they have great numbers, particularly oxen that are very large, and fold by the natives at a very cheap

Enfward of St. Andrew's river are a great number of red cliffs, which extend many miles along the fhore, and are very, confpiencous feveral leagues at fea. Between the feventh and eighth cliff is a fmall village called Dromwa Petri, remarkable only for two large trees that final in the centur of it, by which it is discovered at a confiderable diffance. And fill farther so the east is cape La Hou or Laho, which is the most confiderable place for trade thoughout the whele coast, the cipplants teeth being not only the largest here, but in the greatest abundance. The town is critensive, running at least three miles along the shore, and is very populous. The country about is fertile, and produces great plenty of most kinds of provisions, which are cheaper and much better than those of St. Andrew. The natives here are very civil, and easy to trade with; but they raife the price of their commodities in proportion to the number of European ships they see on this part of the coast.

here is a large river, about four miles west of Lah There is a large river, about four miles wett of Laho, whose, main channel runs to that of St. Andrew; and the finaller branch firetches a few leagues eafward up the country. And three miles to the eaft of Laho are two villages nearly together, one of which is ealled Jack-la-How, and the other Corbi-la-How, but the foil about them is very indifferent. Between these two villages are several finall rivulets; and to the west of the latter, about a house form the store is a trade of the sea called by the a league from the shore, is a track of the sea, called by the Dutch Keel sonder Grondt, but by others the bottomless pit.—It received this name from a supposition that there was no bottom; fevera' attempts were at different times made by the natives to found it, but without foccess; at length, however, it was effected by the Europeans, who found it to be no more than fixteen fathom in depth.

Cape Apollonia is fituated at the eaftern extremity of this coaft, in four-degrees fifty minutes north latitude. It received this name from the Portuguese, who discovered e festival of that faint; and is remarkable for its great height, and the lofty trees that grow on it. The cape rame out a little to the fouth; and towards the thore-the ground is flat, but farther beek it rifes into three diffined hills, which in clear weather may be differed ten ues at fes. On the top of these hills are several losty trees, which, though disposed in a straggling manner, tender the prospect very agreeable. There are three villages near these hills, on the shorts, but the landing is dangerous on account of the swelling and breaking of the fea on the state ground between the hills and the shorts. The villages here are inhabited by some negto natives, under the government of the Dutch, who problibit them, under very severe penalties, from trading with any other Europeans but themselves.

Thus have we described the most material places which form that part of Guiney called the Ivory coust, which being one of the most delightful divisions of this part of Africa, we shall therefore now proceed to take a general view of the country, and describe its various productions, with the cussoms and manners of the inhabitants, their method of trade, dress, language, religion, laws, &c.

The rocky mountains in this coast, which are red, and the constant verdure of the trees that cover them, sorm, by their various colours, an agreeable prospect, which is

me constant verdure of the trees that cover them, form, by their various colours, an agreeable perfored, which is greatly heightened by the beauty of the valles, that contain many villages encompafied with groves of lofty trees. The foil is in general very fettile, and produces great quantities of rice, millet, maiz, and a variety of roots and vegetables; also feveral forts of fruits, as melous, oranges, citrons, cocoa-nuts. &c. Here are livenit quantum or rice, miles, mais, and a variety of roots and vegetables; a sile feveral fort of fruits, as melons, oranges, citrons, cocco-nuts, &c. Here are likewife walnut-trees of a peculiar kind, bearing auts finaller than ours, which are divided in the middle, and talk like the best almends. Sugar canes also grow here very plentifully, and to great perfection, but they are not regarded by the natives, and only ferve as food for the elephants, which are as ore as merous here than in any other part of Guiney. They have fome tobacco, which, if carefully managed, might turn to great advantage. Indigo and cetton are also so comments in this country, that they grow without caldivasion.

They have abundance of most forts of cattle here, as exam, goars, hogs, sheep, &c. a good of is feldom sold for more than a sew dosen of knives, and the inferior ones in proportion. They have also great plenty of goultry, and the whole coast abounds with variety of sish. Among the latter, are frequently found three remarkable creatures, namely, the sea-on, the aingana, or hammer sish, and the

and the whole coast abounds with variety of fish. Among the latter, are frequently found three remarkable creatures, namely, the fee-ox, the aingans, or hammer fish, and the fea-fish; which, for the information of our renders, we shall here give particular descriptions of.

The first of these, viz. the sea-ox, or horned fish, is about eleven feer in length, from the snout to the end of the tail. The body is about five feet in circumsterence, and of the same thickness all over. The skin is hand, rough, and without scales, but fall of anequal points, and marked with large spots of various colours. The head is thaped much like that of a hog, but has a protuberance at the end, like the trunk of an eleplant, by means of which, like that animal, it receives its food. The eyes are exceeding large, and surrounded with prominent lids, compart of the head are two horns, of a long substance; they are strong, rough, and pointed at the ends, and are about sixten inches in length; they lay strait and parallel as his back, on the upper part of which, near the shoulders, are two excressences, that continue from thence to within a foot of the tail. That part of the tail next the body, is very sleshy, and covered with the same kind of skin; but the extreme part is composed only of a fin, strong and hisk, of a honey colour, crossed with white raw, or the extreme part is composed only of a fin, strong and thick, of a brown colour, crossed with white rays, or es. This feems to ferve as a defence to the fift, parallel lines. This feems to ferve as a defence to the nith, who has also two spurs at the extremity of his belly, each of which is a foot long, round, boney, and pointed like his horns. The gills are large, and to each of them is a sin, small in proportion to his bulk, but very strong. Besides these, and a smaller one beneath his belly, between the two spurs, he has also on his back a rising lump, which supports a fin shaped like a fan, about a foot and a half in diameter, and the same height. The flesh is far from having a diffigreeable taste, and it is very white and

The next is the zingana, or hammer-fish, which is a voracious creature, and will feed on any thing it meets with, particularly human flesh. The head of this animal is flat, and extends titelf on both fides like a hammer, from whence it probably derived its name; at the entre-mity of each of these are placed the eyes, which are large and sparkling; the mouth is formed much like that of a shark, and contains two rows of long sharp teeth; the body is round, and terminates with a long sloping tall sony is round, and terminates with a long moing tail, only a thick fit in with frough fpots; the fine are large and throng, and greatly affilt him in feixing his prey, which he always attacks with the moft furprizing engerness.. flesh of this creature is intirely useless; an ascount of its coarseness, and unpleasant take.

With respect to the sea-devil, we may reasonably suppose that it is so called from the uginess of its form, in which it has the pre-eminence above all other creatures in these seas : it has four eyes, and is about twenty-show the till its an angular substance as hard as a horn, and very sharp; the tail it very long and taper, and terminates with a dangerous point: the back is covered with small lompa about two inches high, and sharp at the ends, the bead is large, but there is no appearance of any neck, and the mouth is surmissed with a great number of sharp-pointed teeth; two of the eyes are near the throat, and are round and large, but the other two are placed above them, and histen small length, the middlerhooft of which is three feet long, and an inch and a half in diameter, but they are seatch this creature for the sake of the liver, from which they extract large-quantities of oil; but their selfs is ill-infect and harsh.

In these sea there is another side of the same tame

ill-tafted and harfh.

In these seas there is another fish of the same name with that last mentioned; this is only about four feet long, and broad in proportion; it has a butcht on its back covered with thorus and prickles like those of a hedge-hog, and the skin is hard, rough and black, rising with several small bunches, between which there are two small black; eyes; the mouth is very wide, and armied with several tharp teeth, two of which, are crooked like those of a wild boar; it has four fins, and a broad tail forked at the end; and over the eyes are two sharp horus that bend towards the back. The slesh of this fish is a deadly poison, and it is also an exceeding frightful creature to look at.

The natives of the Ivory coast, called the Ouaqua

true to look at.

The natives of the Ivory coaft, called the Quaqua blacks, are tall, lufty, and well featured; but at the first view appear rather frightful, which in all probability is the reason that fome writers have described them as a favage and barbarous people: this, however, is a great mistake: for in general they are rational and well-behaved, and are very honest in their dealings, particularly with the Europeans that visit this coast. When they go to trade with any ship, they take some water into their hands, and let a few drops of it fall into their eyes, this is a kind of oath; by which they intimate, that they would rather lost cheir eye-fight; than cheat those they trade with. They are no lefs averse to drunkenness than fraud; and though their country produces a prodigious number of palm-trees. their country produces a prodigious number of palm-trees, yet they will not drink any palm wine, but only a certain liquor called bordon or tombo-wine, which is much weaker, and, by being mixed with water, is rendered full more fo.

more for.

The drefs of the common people confifts of only a fmall piece of linen clofe round the wait; but the better fort wear a kind of mantle or large linen sheet wrapped about them, with a seymetar or poniard by their sides. They file their teeth very sharp, but they are in general irregularly placed, and very crooked. They are fond of having long nails, and take particular pride in the length of their hair, which they plait and twift in different forms, and grease it with palm oil mixed with red earth. With this composition they anoint their bodies every day; and continually chew betel, the juice of which they rub about their mouths and chins. As the more rings a man wears, the greater is his quality, so they adorn their legs with a great number of iron rings, in which their chief dignity confists.

The women wear only a piece of cloth before, which hangs from the shoulders to the knees, but their backs are quite naked. They deck their hair with little toys of pure gold, which are of various fornis, and generally very thin, but the wives of the rich negroes have such a quantity

thin, but the wives of the rich negroes have such a quantity of them on their heads, as amount to a considerable value. These are sometimes of great use to their husbands, who, when they are unable to purchase goods for want of eash, make no scruple to strip their wives of their ornancits, and turn them into money to defray their expense on this account.

These people use a language that is altogether unintelligible to us, and they speak hastily, and by starts. When they meet each other, they use the word quaqua, at the fance time each laying one hand on the other's shoulder, and taking hold of the fore-singer, pull it till it staps, when they close the salutation by repeating the word quaqua in a low voice.

qua in a low voice.
Though there are several petty princes in different parts

No. 27.

of the toath, yet the whole are subject to a king called foccoo, whom they not only respect, but dread. They look upon all their kings and priosts as forcerest, but particular the king of foccoo; and they imagine that he could cause all like stemes to die; if he would only make use of his settlines be enchantments: they are all idolaters.

A fundamental law of this country is, that every one is obliged to continue all his life-time in the condition, wherein he was born; so that for instance, one whole father was a fisherman, can never follow any other trade or profession, but must always remain a fisherman.

At Laho, and some other parts of the coast, they make a pretty fort of totton furfis, striped blue and white, about three quarters broad, and stree or soit ells long. These fell for a good price in most parts of Guiney, alid are greatly valued.

fell for a good price in most parts of Guiney, aild are greatly valued.

Though the native negroes are extremely fond of trade, yet they are very cautions in going on board European ships, particularly those from England. When they fee a vessel on the coast, they first examine it sind, if they think they can deal fafely, they carry their goods on board, such as gold, twory, diver, or provisions. However, they are always mistrustful, and titels fears are in some degree justity founded, since the Europeans have trepanied many of them, whom they have fold for slaves. They generally go four or five in a canoe, but only one will go on board first, the others remaining in the catice, till he has fatisfied them of their safety; for can they, on any occasion whatever, he persuaded to go down between the decks. The most effectual mischood of alluring them on board, is for the master, or some of his officers, to take up a bucket of water from the sea, and with their hands sprinkle some of it on their eyes. This they imagine binds them like an oath, looking upon the sea as a deity, or object of rerigious teneration. It is impossible to conceive what patience is required to trade with most of sheep epope; and, what is worse, they cannot be understood, nor do they understand Europeans; so that all is done by signs and gestures of the hands or singers, and by setting a quantity of goods against the teeth they offer for fale.

The negroes here, besides the articles of ivory, gold and saves, carry on a great trade in sale, which they self to their neighbours, who carry it farther into the inland countries, where it is very scarce, and dispose of it to great advantage.

The largest and best elephants teeth in the universe are

countries, where it is very scarce, and dispose of it to great advantage.

The largest and best elephants teeth in the universe are cound in the inland parts of this toast; Mons. Marchais fays, "The quantity of ivory which this country affords is so great, that 10,000l. worth has been sold here in one day. The inland sountry is so full of elephants, that the inlabitants of the hilly parts are obliged to dig their houses in the backs of the mountains, and to make their doors and windows narrow and low; that they are forced to use all kinds of artifices to drive them from their plantations, or to lay snares for them to kill them. The reaction of ivory being so plentiful here is, because the electhants cast their teeth every three years; so that the teeth they get from those they kill are sewer in number than those they find loose in the forests."

Though elephants teeth are as plentiful here now as

those they find loose in the forests."

Though elephants teeth are as plentiful here flow as formerly, yet the blacks have considerably enhanced the price of them, so that the advantages of that trade are much lessend. This, however, is in a great measure owing to the coast being annually visited by prodigious numbers of ships, not only belonging to the English, French and Dutch, but also to the Danes and Portuguese, which has occasioned the trade to become more general, and not so prostable as heretofore.

. SECT. HI. (18 19

Containing a description of the Guld Coast, its boundaries, situation, and natural history; also an decount of the inbabitants, their persons, dress, manners, customs, religion, towns, villages, government, Gt.

of Guiney is diftinguished by the appellation of the Gold coast; fince the other three parts of the coast produce equally as much gold, and at least as good in its quality. All the inland countries abound with gold mines; and though the natives are into artists enough to follow a vein, yet they find great quantities of it in feveral of their mines; but they preferve them so focure, that they will not permit any European cither to see thase they have discovered, or to search for others: Besides 3 Y

their mines, they who live near the fea large another see thood of finding gold, which is this: in the rainy feafour, after a wet night, they go to the feaf-thore, each having a cpithle of bowls or platters made of calabahes, the largest of which they fill yith earth and fand, tuch as is driven down from the mountains, by the violence of the rain, into the rivers, brooks, i.e.. They walls this with many waters, by often turning the bowl round, fo that the dirt which rifes on the furface washes over the brinn: if there be any gold, it finks to the bottom by reason of its weight; and thus they carefully take out, and lay by for a minute in-spection. They then fill their platter again and work on, till they have gathered a tolerable quantity of dregs, which they carry llotne, and there fearch with great diligence. Sometimes a lefs quantity, and frequently they cannot procure any.

The Gold coast is situated within the fifth degree of north latitude; is bounded, on the wast, by the Slave coast; on the west, by the Tooth or Ivory coast; on the morth, by Negroland; and, on the fouth, by the occan. It is about one hundred and eighty miles in length, and contains eleven different districts, namely, Axian, Anta, Adom, Jabi, Commany or Commendo, Fetu, Saboe, Pantyn, Acron, Agonra, and Aquamboe. These countries contain seen to the countries contain seen to the countries contain seen of the seen of the countries contain seen of the seen of them are king-ton to the seen of the seen of them are king-ton to the seen of the seen of them are king-ton to the seen of the se

of their own magilitates; and inventor of their own magilitates; and inventor of the capacity of the capacity. The heat here is exceffive from October to March; but, in the other fix months it is tolerable temperate. The coast is very unheatily, owing to the extreme heat of the day, and the coolnels of the nights; to which may be added the damp friphurous mifts that arise every morning from the mountais. Tormadoes are also frequent here, particularly in the months of April, May, and June. There are violent forms of wind vising suddenly from the eoft and south-cast, and sometimes from the north, with a few points to the west. They are generally attended with repeated claps of thunder, and dreadful lightning, with prodigions showers of rain falling like a shoot, and an uncommon darkness. They sometimes last an hour, and sometimes two or more; but as soon as they are over, the weather immediately becomes clear and sine. If they shappen in the summer feason, which is sometimes the case, they are not so violent as in the winter, but they are use to involve the same the case, they are not so violent as in the winter, but they are used to the last of the case, they are not so violent as in the winter, but they are used to the last of the case of the country.

for tevers use the country.

The native blacks, who live on the coaft, fhun rain with the greatest eare, thinking it prejudicial to their bodies: this indeed the Dutch themselves experience, particularly in the tornado season. The rains that fall then are of so genticious a quality, that if a person sleeps in his wet cloaths, he is sure to contract a dangerous disease: it has been found, that cloaths laid by wer have in a short time been so rotten as to fall to pieces with the most gentic touch. The negroes, for this reason, avoid the rain as much as possible; and when they happen to be caught in it, they cover their shoulders with their arms across, to keep it off their bodies. They are so fearful of the bad effects of rain, that they always seeps with their serve the fire, and anoint their bodies with oil, through a persuasion that the frequent unction keeps the pores shut so that the rain cannot penetrate; for they attribute all their diseases

We shall now proceed to give the natural history of the Gold coast, which in general abounds with a variety of trees, some low, and others very large and lossy, there are also many beautiful groves, which serve to render the malignity of the climate more supportable. Some of the trees here grow naturally in such order, as to appear as a placed by art; whilst others, stand so thick, and extent their boughs so wide, as to form the most agreeable retreat; and these run for many miles into the inland parts of the country. One of the most remarkable trees, which species grows in great abundance all along the coast, which species grows in great abundance all along the coast, is the pape, tree, the trunk of which is feveral fact thick, and composed of a spongy wood, or rather root, which it most resembles; it is hollow, and may be easily penetrated

with an sx. The fruit at first is produced at the top of the trunk without any branches; but as the tree grows older, it shoets out branches towards the top, which respectively only stocks, whereon fruit likewise grows. At the vortex of the trunk and branches shoot other small sprigs almost like reads, a little crooked and hollow; and at the extremity of these sprigs grow large broad leaves, resembling in their shape those of the vine. The fruit's about halt the size of a cbook-nut, and of the same form, it is green both within and without; but after being sometime gathered, it turns red, and abounds with white kernics, which are the feeds from whence the trees are produced. The fruit in its taste resembles that of a pompion, but of the two is rather inferior to it. These trees are of two sorts, male and semale; the males bear no fruit, but are continually full of blossoms, consisting of a long, white shower the semale also bears the same blossom, though not so long neither are they so numerous. Some of these trees are very large, and run up to a considerable height.

of these trees are very large, and run up to a tombeight.

With respect to the inland countries on the coast, they, are in general sertile, and produce several sorts of grain, particularly maiz and millet, which grow in great abundance. They have also several kinds of vegetables medions, as cabbages, beans, wild pursalia, potatoes and yams. These last are extremely beautiful, and, next to race, of the greatest advantage to the natives: they grow under the earth like potatoes, and are about two spansleng, and as much in circumserence. They shoot, out a long green stem, almost like that of French beans, with little prickles, and they arm up sticke placed by the side of them in the same manner, by which the negroes know when they are ripe, and then dig them up. They are quite white within, and when boiled or roasted cat exceeding well, and are used instead of bread, not only by the natives, but many of the Europeans. The taste resembles that of earth nuts, thoogh not quite so fiveet, but they are much more substantial, and also drier.

they are much more fubfiantial, and allo drier.

Here are abundance of palm-trees, which are of infinite, fervice to the natives, not only from the wine that flows, from the trunk, but the oil which they extract from their, nuts. They have also plenty of various kinds of fruits, such as plumbs, pears, oranges, citrons, cocoa-nuts, and figs; to which may be added, ananas, water-melons, and, the kormantin apple. This laft fruit is more peculiar to this country than any other: it is about the fize of a walfant, and has a green hufk; but the outer rind is of a yellowift eafl, fomewhat inclining to red. In the core are four large kernels separated by the pulp, which is red and white, of a sweetilitart raste, but most inclining to the latter. It is a very agreeable sud refreshing fruit, and of infinite service to those afficied with the bloody flux: for it is very aftringent, and is not only more faintary, but pleafanter than transtrinds, when boiled with wine and fugar. In this country are several kinds of tame animals, such

In this country are feveral kinds of tame animals, such as bulls, oxen, cows, fleep, goats, and hogs; but the paflure is fo indifferent, that they are in general exceeding poor and fmall: the cows yield very little milk, and one of the belt, when full grown, is fo light, that it will not, weigh above 250 lb. The sheep are not above half the fize of those of Europe; but, instead of wool, their bodies are covered with long, shagey shir. The goats are very numerous, but small it compared to those of Europe; bowever, the stell he very fat and sweet, and greatly preferred to that of the sheep. Here is also a great number of hogs, but their shesh is very indifferent, and the little fat they have so of an oily nature.

Dogs and cars are their chief domestic animals. The negroes frequently eat the former, and are very fond, of them, indonuch that they will not only give a sheep for one of them, but also something to boot. They prefer dogs shesh to any other, and consider it in the same light at the Europeans do venison. The dogs here are much like our foxes, and have long upright ears: their tails are long, but tiper, and are without hair; the skin is also naked; and they never back, but only how! They are very disagreeable to the tight, but much more so to the touth. The blacks call them cabra de matta, which, in the Portuguele, signifies a wild goat; and so universally are they admired in this country, that in some places they breed them for sale, and they setch a much better price than the sheep, when carried to the markets.

The negroes are allo very fond of cats, but they do not eat them, unless out of necessity. If they are good moniers, they value them much, as they are prodigiously peftered with various forts of vermin: their cats are called by the netives ambaio, and are in general very handsome.

y do not d moauily per-Among Among their wild beafts (of which they have various does; both on the seafts, and in the inland 'parts) notice are more diffinguished than the elephants; for though in other parts these animals are rendered docile and useful, yet here they are never tamed: but, notwithstanding this, they feldom lurt any one, not is it an easy marker to provoke them: The following story of one of these animals is velated in Mr. Rostman's description of Guiney: "In December 1700, at six in the morning, an elephant came to El Mina; walking easily along the shore under the bill of St. Jago. Some negroes were so bold as to get to him without any thing in their hands: he fossered them to encompass him, and the following shot which the negroes now poured out him, did not even make him mend his sace, and he only seemed between whiles to threaten the negroes, by prickling up his ears, which were of a predigious size. However, he went on; and soon entred our garden. This down the west soon fallowed by some of our people. He had broke down four or five occa-trees; and in our prefence he broke down five or fix more; when the frength he same appraised to the in breaking down a tree might be fittly compated to the force exerted by a man in knocking down a high of three of four years of age. While he shood here, above an hundred shot were fired at him, which made him these as if no r liad been killed on the foot. But this in a spiring the negroe abow with his trunk, and drawing him to him, fred upon him wo or three times, and, as if that was not sufficient, gored two holes in his body with his trunk, and drawing him to him, red upon him two or three times, and, as if that was not sufficient, gored two holes in his body with his trunk, and drawing him to him, tred upon him two or three times, and, as if that was not sufficient, gored two holes in his body with his trunk, and drawing him to him, tred upon him two or three times, and, as if that was not sufficient, gored two holes in his body with his trunk, and drawing him to him, tred upon him der to make our escape; but he followed none of us, but going to the back door, threw it to a great distance; then turning from it, walked through the garden hedge, and proceeding flowly to the river by mount Jago, bathed himself. Flaving thus refreshed himself a little, he came out of the river, and stood under fome trees by our water tubs, where he also cooled himself, and then broke the tubs, where he also cooled himself, and then broke the tubs in pieces, as he did also a cance that lay by them. The firing was here renewed, till the elephant at length self; after which, they cut off his trunk, which was so hard and tough, that it cost the negroes thirty frokes before they could separate it, which must have been very painted to the elephant, since it made him roar, which was the only noise I heard him make. He was no fooner dead, than the negroes sell on him in crouds; each cutting off as nuch of his seln as he could, so that he furnified great numbers with food. They who pretend to understand elephant shooting, afterwards told us, that we ought to have find tron, bullets; indeed, ours were not only of to have fhot iron bullets; indeed, ours were not only of lead, but soo finall, and therefore most of them had rebounded from his fide, and very few penetrated his skull."
Thus far Mr. Bosman. These creatures are so very numerous here, that they are very prejudicial to the fruit-trees, especially to the orange, banana, and fig-trees; they not only eat the fruit, but also the stem of the latter, and

not only eat the fruit, but allo the item of the latter, and totally definor the tree.

Great numbers of tygers are all over this coaff, fome of which, being not only large, but of the most ferectious nature, are exceeding dangerous. Jackalls are allo very numerous, and nearly as ravenous and fierce as the tygers. They are whally about the fize of a sheep, but have longer legs, which are thick in proportion to their bodies! Their half is short and sported, their head share and broad, their head share stored as the specific of their seals assessing than and they are very strong; Some teeth exceeding that ; and they are very firong; Some wild boars are also here; but they are not fo rapacious as in other countries; and their flesh is very agreeable to the

in other countries; and their flesh is very agreeable to the taste, and is exceeding good to eat.

Monkies and apes, in great numbers and variety, are to be found in this country. Some of these are called by the Dutch bearded monkies, from their lawing long white beards; the hair on their backs are of a light brown, that on the belty white, and the rest of the body is covered with thost, if here are others called white notes; from that part of them only being white. These animals, though of various Torts, are all very cunning, and ready to imitate what they see. They are found of their young; always in

action, and greatly referribe the homes form; the she this neigness call them award used, and say they could fould for they would. They are in general thieves; and she wirromarkable fubrity in what they she particularly willist, of which we have the following; relation : they take did on swo stalls in each pass; is much anales they main they did not award they had they are they take did on swo stalls in each pass; is much anales they maint is way, continually leaping out their hind who is better they maint is way, bed what they have in their about it, and let the wife from they had what they have in their about; and let the wife drop to be at liberty to run. Every stall, they plottle it nicely examined, and if they do not like it, they show it a way, and pull another; fo that this daintinust occasions mere damage than their thievery.

The maives call one of the most remarkable of chefe species boggo; and the Europeans; mandril : le is different from all others, and approaches much neiters to the human shape. The body, when full grown, is as large as that of a man; their legs are much shorter, but their seek is and the early legs are much shorter, but their seek is any other hair than the systems. The most is very large, and the face broad and flat, wishout any other hair than the systems. The most is very frame, the hips thin; and the mosth wide. The face is wrintled in a fruith old age, and the face broad and stay without any other hair than the systems. The most is self-self in a first hold of the month wide. The face is wrintled in a fruith old age, and the seeth are broad and stay without any other hair than the systems. The most is self-self in a first hold of the month wide. The face is wrintled in a fruith old age, and the seeth are broad and stay without of the body is orvored with long hair. They always wale erect; and, when teased, cry link children. A preferit of one of these months and the self-self in charge to a negre slave, who knew how so feed and nurse it, but whenever he left the deck, the sai

death of the animal, for it was found dead under the wind-lafa the next morning.

There are, befides the wild beafts of a voracious nature, others that are much mider, fuch as harrs, antelopes, and hares. The former of these are of various sorts, forme of them being as large as cows, others not biggs: than sheep, and some even so small areas. They are in general of a red colour, with a black stope on the back, and some of them are beautifully striped with white. Their fiesh is particularly admired by the Dutch; and all the different kinds are good to eat.

particularly admired by the Dutch; and all the united kinds are good to eat.

Several forts of wild cats are to be not with here, forme of which are fpotted like tygers, and are very fierce and mifehevous. Among their is the civer-cat, caffed by the negroes kankan, and, by the Portuguefe, gatof de algalia. I hey are about the fize of a fox, but longer legged; and the tail refembles that of a common cat, except being longer in proportion to the body. Their hair is grey, and full of black spots; those who keep them for the fake of the musk, generally feed them with raw fiely, or entrails, as they yield much more from that than a drier food: When hungry they are very ravenous and will even graw. as they yield much more from that than a drier food. When hungry they are very ravenous and will even gnaw through the wood of their eage. They are very cleanly, and slways roll and tumble on their food before they eat it. They who keep them generally vex and teaze them before they take out the mufk from the bag: for the more the animal is entaged previous to this operation; the beforet will be the effect. The bag which contains the civice is in the middle betwize the arous and the puderdum, both in the mide and fermale [but it is much larger in the male. The liquor of which the civet confifts appears to be excreted from certain glands that he liveween the coats that compose the bag from which the civet is taken. The pivet is not of any use in medicine, but is valued as a great ferfunc.

Some porcupines are afform this country, which are in general about two free in height, and their teeth are remarkably thatp. They are very diving, Infonuch that they will venture to attack the largest and most dangerous snakes. When irritated, they shoot their quilts at the enemy; and with such violence, that they afterwards prove fatal. Their quilts are from eight to ten inthes long, and pointed at both ends; they are of a horny substance, and much referrible tortoilethest in coloni. The negroes can them, and consider their sless as great delicacy.

There are reveral other annuals in this part of the coast of Gulney, and, among the rest, that remarkable one called by the natives potto, but more generally known by the name of stotic, and is faid to be the most ugly creaters.

tare in the universe. This saimal is fo flow in its motion, that it cannot travel above twenty yards in a day. The head is firangyly disproportioned, and the fore-feet greatly resemble hands. The hair of the young ones is of a pale mouse colour; but that of the old is red, and looks more like wool than hair. The semale, when big with young, climbs the trunk of some old tree, in which there it an hollow, from some accidental decay, at is distance from the ground. Here she deposits her young, which are generally two in number: during the time the fusckles her young, she continues in the same, hole, and though that period is very short, before it is expired, she becomes almost emaciated. When the young are able to crawl after her, the leads them to the nearest branches of the tree, where they devour the leaves first of one and their another. When the tree is quite stripped, they are obliged to seek a new place of abode: the journey, however, to the next tree, takes up no small time in performing; and though the creature is fat and in good condition, at the time he leaves his former habitation, yet before has reached his new one he becomes as poor and lean as possible; and if the tree is high, or at any distance, and he meets with nothing in his journey, he inevitably dies with hanger. While it is thus travelling slowly on the ground, any heast may kill and devour it, for it is intirely defence-less, and, when attacked, only makes a noise like the crying of a kitten. It has three claws on each foot, and the fore-feet longer than those behind.

A four socked animal, called by the negroes, quoggelo, lives in the woods. It is almost eight feet long, including the tail, and is covered from the neck to the end of the body with scales resembling the leaves of an artich ak: they are placed very close together, and secure the creature from the attack of his enemies, particularly the typers and leopards, who frequently pursue, in the wood of the holy with scales resembling the leaves of an artich ak: they are placed very cl

ture, and will not hurt any thing: it lives on pifmires, catching them with its tongue, which is very long and glutinous. The negroes knock them on the head, fell their fkins to the Europeans, and eat their flesh, which they fay

is exceeding white and palatable.

The grano is an amphibious creature, and greatly refembles the crocodile; but it is very inoffenfive, not
hurting any thing except cocks and hens, among which it
makes great flaughter. This animal is about hurting any thing except cocts and nent, among which it formetimes makes great flaughter. This animal is about four feet in length, the body is black speckled, the eyes are round and sharp, and the skin very tender. The negroes eat their siesh, as do also the Europeans, and they all agree that it is far preferable to that of their cocks and hens, being

very grateful to the tafte.

Cocka and hens, geefe, ducks, turkies, and pigeons are their tame poultry; their wild fort are, mallards, phea-fants, and partridges; befides which, they have peacocks, fieldiares, ring-doves, cranes, &c. Here are also great neutrares, ring-doves, cranes, &c. Here are also great numbers of parrotts, parroquets, eagles, kites, green-birds, and several others. The most common are the cocks and hens, which are exceeding plentiful all over the coast : in some parts they are very fat and good, but in general they are so dry and lean, that sew people chuse to eat them. The best birds here for use are the wild ducks, which

are very plentiful, and little inferior to those of Europe. e also various kinds of small birds, some of which are exceeding beautiful; among these, there is one that has this remarkable circumstance attending it, that whenever it moults, it changes its colour; so that those which are black this year, become blue or red the next; they will be yellow the following year, and afterwards green; but they never vary from their five colours, which are always very bright, and never mixed. The crown bird is more beautiful than those in other parts of Guiney. bard is more beautiful than funde in other parts of cuincy. They are about the fize of a flork, and receive their name from a large tuft that grows on their head, fome of which are red, ethers blue, and fome of a fining gold. Their tails are very long; a and the negroes pluck their feathers to adorn their heads with. Their bodies are chiefly covered with black feathers; the fides of their heads are beautified with purple spots, and the feathers of their wings and tails are of different colours, as yellow, red, white, and

Abundance of reptiles and infects are on this coaft, fuch as ants, bees, beetles, fpiders, gnats, caterpillars, millepedes, locults, cock-roaches, fcorpions, frogs, toads, and fi here are also some camelions, many crocodiles, and great numbers of lizards.

The most remarkable of these insects are the aute, which

bre of various forts and colours; forme are white, others black, and fome red. The white are as transparent as glafs, and bite very forcibly; but the red are the worst, their shing being inflammatory, and the pain it produces inof much longer centinuance than that of the millepodes. They make their nests in the fields, and generally raife them as leaft ten feet from the ground; but fome build them in high trees, from whence they the in the forement to the at leaft ten feet from the ground; but fome build them in high trees, from whence they fly in such swarms to the European settlements, as to become exceeding troublesome to the inhabitants. They are very ravenous, and will sometimes attack a living thesp, which in a night'a time they will reduce to a period skelenor, saving not the leaft thing except the bones. Fowls and chickens frequently share the fame fate; and even rats, though such a strength the famile are the fame fate; and even rats, though such a strength the famile. share the same rate; and even rate, though men active animals, are not able to escape. As soon as one of these animals is attacked by the anta, his destruction is at hand, for they gather in such predigious numbers, that they soon everpower him; now will they quit him, till they are sufficiently reinforced to carry him off to some convenient place, when they immediately fall to work, and in a short me reduce it to a mere skeleton. .. It has been remarked time reduce it to a mere ficeleon. It has been remarked, that if these little animals have not a language (as many believe they have), yet they have certainly some method of communicating their thoughts, which has been experienced in the fullowing manner: when two or three of them have been found straggling on the hunt, a cockroach has been killed, and thrown in their way. As soon as they found what it was, they sent away for help, while the others staid and watched the dead body, till their comrade returned at the head of a large posse; when if they found themselves too sew to carry off the prize, have detached a second messenger for an additional force.

Ginats are very numerous near, woods, and marshy

Gnats are very numerous near woods and marthy

Gnats are very numerous near woods and marshy grounds: they sting very sharp, and raise prodigious swellings, attended with violent pain. They frequently oblige the inhabitants to change their habitations, as they are exceedingly troublelome in the night-featon.

Millepedes or log-lice, are also very numerous; and though their sling is not so dangerous as that of the scorpion, yet it occasions a very sharp pain for some time. They are stat and red intersected like other worms, and have two small horns or claws with which they strike. Their feet are forty in number, viz. twenty on each side; from whence they are called sorty-ters by the English and from whence they are called forty-legs by the English and Portuguefe.

Here are great numbers of locults, which fometimes make great destruction among the corn and vegetables. This insect is about five inches long, and about the thicknees of a man's little finger; it has a cowl over the nees, aid a pyramidal head, from whence there proceed two horns or feeders, almost an inch long; the eyes are prominant, and of a dark red colour; the body is oblong, and of a bloody purple colour; and the tail is forked like a swallow's. It has four ash-coloured wings marked with dufky foots: the fore-feet and thighs are very flender, but the hinder ones are long and thick, and marked with trans-verse streaks of a blackish colour. Besides the fort already deferibed, there are other species of this infect, some of which are not above three inches in kngth; these are of the cowled or hooded kind; the lower wings are finely chequered with brown and scarlet, and the upper are of a light green ftreaked

Cock-roaches are in general about two inches long, of a dark brown colour, and in shape somewhat like a beetle.

in

la n

They are said to be great enemies to bugs,

I hey are taid to be great enemies to bug,

Scorpions are in general about three inches in length;
they have four legs on each fide, befides two claws armed
with fnippers, between which is the head. The body confifts of nine joints, and the tail of fix, which has a hooked
weapon at the end. There are fome on this coaft as big
as finall lobiters, and have the fame fort of claws and feet; but their bodies are covered all over with long black hair.
All of them have a small bladder full of deadly possion at
the end of their tails, which they discharge either at man

Toads are remarkably large here; and some of them so strong and venomous, that they frequently engage and kill

Snakes not only infest the woods, but also the houses of the negroes, and even the European forts and fettlements. Most of them are very large and vent mous; but there is one of a peculiar nature, and so inoffentive that it will neither hurt man or beast. It is called the horn-snake, from a horn, or rather a tooth, that rises from the upper jaw, and projects through the note. It is about five feet in length, variegated with black, brown, yellow, and white fireaks very agreeably mixed. I he head is broad and flat, and the horn is white, hard, and the presented. The negroes often tread upon them; for they found mes so glut the meleves with food, that they freezet froid will not awake them. The negroes often eat them, and account their fields a very delicious

There are on the Gold coast great quantities of various kinds of fifth in the fea and rivers. Thole of the former are, doradoes, bohitas, cod, tunny, thornbacks, the flying-fifth, fee. There are alle bohiter, crabs, prawns, thrimps, and mufeles. The principal fresh-water fish are of three forts the first of which is called carmon, and is a white fish about two feer long; but they are very fat and oily, otherwise their fiesh would be extremely agreeable. The fecond is the mullet which differs from the former only in its fize, and not baving for thick a head, and the fiesh is of much the fame quality. The third fort is called batavla, the largest of which are tolerably good, but they are apt to take muddy: they are about a foot in length, and very proportionably shaped. There are also some plalce; and flounders are exceeding plentiful, but they are not so good as those in Europe, and differ greatly in their shape.

plalee; and flounders are exceeding plenturu, but they are not fo good as those in Europe, and differ greatly in their shape.

The dorado is the best sish of those caught in the sea, the siesh of which is exceeding delicate; and in taste somewhat resembles that of a falinon. They are generally about four or five feet long, and have a fort of crest on the head, which joins to a large sin that runs to the extremity of the tail, there is also another that is shorter, and runs only from the vent to the tail. The belly sins reach almost to the vent, which is placed in the center of the body, and the mouth is of a middle fize, having small sharp teeth in the jaws, palate, and tongue. The eyes are large, the scales exceeding small, and the colour of a blush green. The liver dried and pulverized, if taken in wine, is a cure for the dysentery. They greatly refort about ships, and are effectmed the swiftest sish that swims. The king-sish is reckoned, when in scason, one of the best on the coast. They are in general about sive feet in length; with a long forked tail, and the back and sides are full of brown spots, but the belly is white. They continually harbour among rocks; and sometimes get into such share, so he was an and sometimes get into such share, so he was a such sides are full of brown spots, but the belly is white. They continually harbour among rocks; and sometimes get into such share, so he was an and sometimes get into such share, so he was a such some the cat-sists. The heart, so he was a such some the cat-sists. The heart, so he was a such some the cat-sists.

The horn-fish, called by forme the cat-fish, received the first name front having ash horn on the top of its head, or beginning of the back: it is about a foot long, with a very large head, and finall mouth; the back is bluffly the belly white, and the fins and tail yellow. It is much effectned, and the fiesh reckoned very wholesome.

The moon-fish is of a flat form, and would be almost oval, were it not for its tail, which, is large and hollowed. It is about two feet long, one broad, and near two inches thick. The mouth is small, and contains two rows of teeth; over it is a little rising, which appears like a nose with nostrils, and the part above that looks like a forehead, with large wrinkles. The eyes are round, and very red: it has only two fuss, but they are large, and placed at the sides of the gills, with two brisses, one about the middle of the back, and ending at the tail, and the other running in the same direction beneath the belly. The fieth is particularly admired by the Europeans, and is white, firm, and well-tailed. well-taffed.

The bonito is a good fifth, but inferior to the dorsdo, above deferibed. It is about three feet in length, and two in circumference, and has a fharp head, a finall mouth, large gills, full eyes, and a tail like a half moon. It has not any feales, except on the middle of the fides, where there is a line of gold colour, that runs from the head to the tail. The back and fides are of a greenish colour, but the belly is white, and shines like filver. It has seven but the belly is white, and fhines like filver. It has feven fins, two on the back, two at the gills, two on the belly joint below the gills, and one in the center of the belly, opposite to the largest on the back. From the last on the back proceeds a small narrow one, that reaches to the tail, and another that extends from the last on the belly to the tail in like manner. They are caught in places where the fea is roughest. The failors catch them with a hook baited with a white rag, which they snap at with great exercises.

The albicore is in general about fix feet in length, and has yellowish eyes, with a forked tail, the bottom of the belly is blue, inclining to green; and near the tail, on the under part, are feveral thort fins. The fixin is fmooth and white, and they have but one bone, which extends through the body: the fins are of a yellowith colour, and the fifth, when in the water, appears exceeding beautiful. It refem-

itsein feine respects the honizo, but the field is drief, and not fo will tailed.

There are, bediese the "6th abredly minimized obtained of a much larger first that infest the Gold count, particularly gramputels, finants, and populoise, but these are felded on caught by the natives." Here are after two forts of sprens, which only differ in that, fize, one of them being much larger than the other, but the smaller are the back, and; when other phillid or fried, at very agreeably. With respect to the blocks inhabiting the Gold conft, they are in general of a middling stature, and offer yes-prows; their teeth are white, and tolerably well ranged their she are red, and not of thick at those of the inhabitant in the other parts of Guildey. They are broadfaculdered, have large arms; thick hands, and long fingers. They anoint their bodies every morning with palm-oil, so that their sich is very smooth and sleek; but, exclusive of this, they confider that as a very wholesome practice; and, as they are naturally apt to breed vermin, reckon it a prefervative from them.

They anoint their bodies every morning with palm-oil, fo that their fkin is very fmooth and fleck; but, exclusive of this, they consider that as a very wholefome practice; and, as they are naturally apt to breed vermin, reckon it a preservative from them.

The men are very quick of apprehension, and in general have excellent memories; but they are naturally such and indoient, fo that they are only industrious from necessity. They transact their assays appear indifferent whether they rive to prosperty does not feem in the least to affect them. This, however, does not appear to be real, or well-grounded; for they are very proud; cunning, deceisful; and greatly addicted to thest; and so environment of the right of they are very proud; cunning, deceisful; and greatly addicted to thest; and so environment and selfish, that they will quarrel among themselves on the most trisling occasion. Those of consequence walk with their eyes fixed on the ground, feldom looking about, or taking notice of any one, except it be a person of higher rank; but to their inseriors they show such contemps; that they will not ever deign to speak to them. They are generally very complainnt to strangers; but they do that for the sake of in being returned, which in a distinguished gratification of their pride. They pay great respect to the Europeans, and are highly pleased with their accustomed civilities; but of these they frequently take advantage, by laying some scheme either to plunder or defraud them.

The women, though not so tall as the men, are very first and well-proportioned; they have fine sparkling eyes, small mouths, and beautiful teeth; their nostes are in general high, and a little crooked, and they have fine sparkling eyes, small mouths, and beautiful teeth; their nostes are in general bigh, and a little crooked, and they have fine sparkling eyes, small mouths, and beautiful teeth; their nostes are in general bigh, and a little crooked, and they have fine sparkling eyes, small mouths, and beautiful teeth; their nostes are insu

These people are very cleanly in their persons, and where opportunity ofters, with themselves several times a where opportunity ofters, with themselves several times a star, for which purpose they grammonly build their villages near, the sea, or our the benies of syers. This cashom is exceeding necrastry, as it not only eleantes them from the line and star, to which vermin they are naturally, subject, but also being to raise off the disagreeable secured, the palmoil with which they are not the star of the

rants, but for the more necessary purpose of a market fer the fale of provifiens and other commodities.

The people of higher rank have their houses generally fituated near the market, and separated from other buildings. They are built of the same materials as these of the common people, but are more lofty and spacious. In the center is a portice open on all fides, but covered with a floping reof made of the leaves of trees, to shelter them from the heat of the sun; and here they divert themselves at their being house. at their leifure hours.

at their leifure hours.

The houfes of the common people are built at a very small expence; the materials, which consist only of timber, clay, and leaves, being taken by the slaves wherever, they can find them. They commonly creek a house in fix or seven days, and the expence to the carpenters feldom exceeds forty shillings. Each family has a granary or store-house, where they keep their wheat, millet, and other grain: these are without the town.

With respect to their furniture, a few stools, some earthern pots to hold water and drefs their victuals in, and a few small wooden came, connected the whole.

With respect to their furniture, a few stools, some airthern pots to hold water and dress their victuals in, and a few small wooden caps, compose the whole. The poorer fort have only a mat to lie on, which they spread on the ground, and some of them cover themselves with the skins of beafts. The better fort use quilts made of rushes, on which they lay a fine may wish a boller, and by it a large kettle with ware to wash them.

In their diet, they are very fifthy, and prefer either steffs or fish that shinks to that which is sweet and wholesome. Their common sood is a pot full of millet boiled to the consistence of bread; or instead of that, yama and potatoes, over which, they pour; as liste pelms oil, and mix with it some herbs, and a small quantity of sinking sish. They have another dish called malaghetts, which is composed of sish with a, handful of Indian wheat, the same quantity of dough, and some palm-oil, all boiled in water. This they essent excellent, and indeed it is far from being diagreeable, provided the sish be sweet.

At their meals, they use neither knives sorks, or spoons, but take up their victuals with their singers, and eat it very greedily. They lay it on a mat on the ground, and fit cross-legged, shem squarting on their heels. The husband generally gate alone in his own hut, and his wives separately in theirs, except when he happens to invite his chief singer a pays a visit to his savourite one. They make but tyo meals in a day, one at sun-tiling, and the other at sun-fish, expending a meal they drink water, or poyton, which is a kind of small beer; and they drink palm-wine inher employment of the meals abroad, either in

The chief employment of the men is abroad, either in trade, fifthing, or making palm-wine, great quantities of which are every day fold in the markets; and the profits they get from their labour they give to their wives, who dispose of it in a very frugal manner, as they are in general excellent housewive

Tal excellent housewives.

The women are chiefly employed in providing for the family, under the direction of the principal wite. The first thing they attend to, in the article of diet, is, to make the bread. In the evening they fet by the quantity of corn thought necessary of the family, the shoreeding day. This they beat in the trunk of a tree hollowed for; that purpose like a mortar, or in doep holes of rocks, with wooden peffles; they then winnow and grind it on a flat flone; after which, they mix it with flour of millet, and knead it to a fort of dough, which they divide into finall round pieces, and boil like dumplings. Of the fame dough they also make a fort of biscuit, which will keep for several then the and with this the issue cances are victualled when they go long voyages. They are allo very careful in bring-ing up their children, perticularly their daughters, whom they infirmed in every thing that may tend to make them good and prudent wives, and acquaint them with every branch of dometic occonomy.

Their marrians extremelies are in more and the second

good and pendent vives, and acquaint them with every branch of domestic occonomy.

Their marriage carepropries are in general much she fame as those all along the coath, except in a few particulars. When a fether finds his ion is able to get his own iving, he seeks out for a wife for him, unless the latter should disappoint him by providing for himself. When the parties are agreed, the father of the bridegroom communicates it to the parents of the young woman, who readily agree to the marriage. A priss is then sent for, who, after administering the fettish or oaths, obliges the woman to promise the woman to promise the will love her hutband, and be faithful to him: the point of fidelity. After this ceremony is over, the parents make mutual presents, and the whole company spend the day in feating and mirth. In the evening the hutband leads his wise home, attended by some other relations or friends, who stay with list a whole week to hear her company; after which, they leave her, and she enters on the employment appointed for her.

The negroes sometimes dispose of their daughters when they are too young to consummate the marriage, the ceromonies attending which are as follow: on the day appointed for the wedding, all the kindred on both sides meet at the house of the bride's father, where an elegant entertainment is provided. In the evening the bride is taken to the bride provides house, and put in her husband's bed between two women, where the remains all night; after which the bride is fent back to her faller's house, and there which the bride is fent back to her faller's house, and there which the bride is fent back to her faller's house, and there which the bride is fent back to her faller's house, and there which the bride is fent back to her faller's house, and the enters on the which the bride is fent back to her faller's house, and the enters on the which the bride is fent back to her faller's house, and the enters on the which the bride is fent back to her faller's house, and the enters of the which the

between two women, where the remains all night; after which the bride is fent back to her father's house, and there kept till the is of age for the marriage to be confum-

mated.

Polygamy being allowed among them, fome have from twenty to thirty wives; for the greater the number, tho more they are respected; but the cotsmon fort have feldotts more than ten. All their wives are employed in tiling the ground, and managing the affairs of the family, except two, who, if the husband is rich, are always exempted from labour: the principal of these is called the mulicre grande, or the great wife; and the second is called the bosfum; but having taken occasion to mention these favourite wives, in the former part of our general account of Guincy, to avoid repetition, we shall only add, that when the husband thinks proper to sleep with one of his other wives, lie gives her private intimation of it, in order other wives, he gives her private intimation of it, in order to prevent jealouly, when the retires to her apartment with the greatest privacy, and the matter is kept a profound fe-cret from the rost of them.

They name their children as foon as born; which are

naturally of such strong constitutions, that little care is required in nursing them. The poorer fort of women-fasten them to their backs when they go to their daily labour, and fuckle them ardifferent times, by raising them up to their shoulders, and turning their breasts over to up to their shoulders, and turning their breasts over to them. They take great pains in washing them every-night and morning, when they rub them well with palm-oils, which makes their joints sexible, and greatly secili-tates, their growth. They go quite naked till they are ten-or twelve years of age, when they wear a kind of clout-fastened round the middle. When they arrive at that age, the father takes the boys under his care, and brings them up to his own business. The girls are taught to grind-ces had been dead even it. corn, bake bread, and carry it to market for fale; as also to weave balkets, mats, caps, puries, and other things. The boys are chiefly brought up to filhing or agriculture, her fome of these are put to trades, the principal of which are, fmiths, carpenters, and goldfmiths.

The fmiths make all forts of tools for hulbandry and

The limiths make all, forts of tools for hilbandry and houlhold uses, and though they have no steel, yet they make them with great nearners. Their chief tools are a hard stone instead of an anvil, a pair of tongs, and a small pair of bellows with three or four notels, which is an invention of their own, and blows very strong. Their files are of various sizes, and well tempered: they purchase their hammers of the Dutch,

They chiefly employ their carpenters in making eanoes, and the frame or timber-work of houses, the roofs being and the frame or timber-work of houses, the roofs being made by others called thatchers, who have a poculiar method of ranging the haves of palm-trees, the firms of indian wheat or rashes, which they bind and fasten together on poles of different sizes. These they fell ready-made in the markets; so that they who have occasion to rebuild or repair a house, are at no loss to supply themselves with a roofs as they are sabricated in all sizes and forms.

dark colour.

They have a variety of musical instruments, all which they make themselves. They consist of copper hasone, blowing horns, superpers or castenets, and an instrument with fix strings, resembling a guittar; also hand-bells, sutes, and stagelets. The blowing-horns are made of elephants teeth, and ornamented with the figures of birds, beastls, sisten, acc. They blow at the sinall end, and reduce the sound to a kind of tune, by varying it as their sancy directs. Their drums are of several forts, and are mostly made of hollow trunks of trees covered at the end with a sheep's skin, but the other is lost entirely open. They sometimes hang them about their necks with strings, but in general set them on the ground like kettle drums. but in general fet them on the ground like kettle drums. They beat them with two long flicks, and fometimes only with their hands; but the noile is very harsh and difagree-

They beat them with two long flicks, and fometimes only with their hands; but the noife is very harfh and diffagreeable either way.

They always use these instruments at their dances; which is a diversion so delighted in by both sexes, that it is the custom for them to assemble every evening at the market-place for that purpose. On these occasions, they dress themselves in their best attire; the women have a number of small bells hanging at their feet and legs, and the men carry small sans in their hands, made of the tails of elephants or horses. They who compose the dance divide into couples opposite to each other, and the dance consences by their throwing themselves into many wild and idiculous postures, advancing and retreating, leaping, stamping on the ground; bowing their heads to each other as they pass, and muttering some strange noise. The men them strike each other alternately with their sans; and the women lay large circles of straw on the ground, into which they first jump, and dance round them, then throw them up into the air, and catch them with their sands. Thus they divert themselves for about an hour, when they break up the dance, and retire to their respective throw them up into the air, and catch them with their hands. Thus they divert themselves for about an hour, when they break up the dance, and retire to their respective habitations. This is their manner of dancing in general; but they have some dances adapted to peculiar times and circumstances, particularly shole in honour of their settles, which are of a very serious and solemn nature. In some towns they have public dances instituted by order of their kings, which are held annually for eight successive days, when people of both sexes resort to it from all parts of the country. This is called the dancing season, and during the whole time of its continuance the greatest anisth and sessive time of its continuance the greatest anisth and sessive time of the country. The natives of the Gold coast are troubled with few diseases, notwithstanding the unwholesomeness of the climate. That with which they are most affisited is, the canker, or self-worm; they breed between the sight and passage; and not only men and women, but also cattle, are subject to this disorder. Various conjectures have been formed relative to the causes of these worms: some attribute them to the great quantities of fish the negroes

been formed relative to the caules of thele worms: fome attribute them to the great quantities of fish the negroes eat, and others to the palm-wine; but the most reasonable opinion is, that they are occasioned by the unwholefome-ness of the water, which is generally taken out of pools or ponds. This appears the most likely, as it is certain, from that cause alone the inhabitants of the isle of Ormus from that cause alone the inhabitants of the isle of Ormus are affisited with the same disesse; and, to prevent it, they drink fresh water, which is procured at sea eignteen fathoms deep, by the help of divers. These stell-worms are of different faces, but in general run about a foot in length, and are not thicker than a hair. White they remain in the body, they occasion the most exeruciating pain, informuch that some can neither stand or walk, others are incapable of fitting or lying down, and others again are thrown into a flate of infanity.

These canker worms disclose themselves by various symptoms, sometimes with cold shiverings, and at others

Their goldfraiths make a variety of articles of pure gold i, fuch as breaft-plates, helmets, bencelets idons, lausting-verdila, pattins, plates, ornaments for the nets, sings, buttons, &c. They alfo caft, in the most surious manner, the figures of all forts of tune and wild beaft, the heads and fkelerone of lions, tygers, owen, deer, aton-kies, and goats. They are, indeed, excellent artifus but their greateft ingenuity is shown in the gold and filver hatbands made for the Europeans, the thread and texture of which cannot be excelled by any artift in Europe or effewher.

There are also among them fome good potters, who have learnt that art from the Portugues. Though their artifus and the worm appears fo far out at to which cannot be excelled by any artift in Europe or effewhere.

There are also among them fome good potters, who have learnt that art from the Portugues. Though their sarthers were is thin, yet it is very subfantial, and equally good for use as any made in Europe. Their vessels will and the subject of the subject

rether than endure it, a man would for ever renounce all the profit of trading on this coaft.

The negroes here are likewife fubject to other differingers, namely, the lues venerea, the head-ach, and fevera but as these are very speedily cored by compositions made of herbs and other simples, they are under no uneasy apprehensions concerning them.

On the death of any person, the relations and friends immediately affemble, and, surrounding the corpse, express the most hideous lamentations; they then wrap the body in an old cotton cloth, and put it into a cossin made of the back of a tree, covering the sace over with the skin of a goat; in this manner they expose it in the open air for half a day, the favourite wise fitting by it all the time, and rubbing the face with a whip of straw. If the deceased is a woman, the husband uses the same ceremonies. During this time the nearest relations appointed on the occasion sing mournfully, and beat their brais basions, till the bearers come to remove the body, and every thing is

During this time the nearest relations appointed on the occasion sing mournfully, and beat their brass basons, till the bearers come to remove the body, and every thing is ready for the procession. In the interim, however, an old woman goes from house to house, and collects formerhing for the funeral charges, towards which every person in the town or village is obliged to contribute, in proportion to their circumstances: with the money then collected they purchase a cow or an ox, which they present to the priest, that he may obtain repose for the deceased, and affist him in his journey to the other world: this beast the priest factrisces, and sprinkles the feetish of the deceased with its blood, which with them is considered as a proplitary offering for the departed person.

The previous ceremonies being over, the coupse is laid on a board, and the company for a short time sing and dance round it, after which it is carried to the grave by men, but only women are suffered to attend as mounters. The chief or favourite wise walks immediately after the corpse; and if the deceased be a woman, the husband only follows it, no other man being permitted to attend. When they come to the place of interment, the body is immediately as in the grave, which is generally made about four feet deep; it is inclosed with sakes, and over it they raise a shed or covering, so that neither rain or beasts car come near it. When the body; is deposited, the women croep beneath this shed, and renew their lamentations by way of a conclusive sarewel. They then raise a square heap of earth over the body, on which they lay the principal tools and instruments used by the deceased in his life time, as asson his cloaths and weapons. The friends of the departed also bring their gifts, as tokens of their affection, which they either lay in the grave, or place over it.

But the most excessive lumentations, and tokens of forover it.

over it.

But the most excessive lamentations, and tokens of forrow are expressed, when the king dies; for as his condition
and digaity require great attendance, he is provided with
servants not only to accompany him in his journey, but
also to wait on him in the other world. To effect this,
each of his grandees, or, chief men, present him with a
slave; others give one of their wives, and some one of
their children, so that there is always a considerable number, who are all facrificed previous to the interment of
the royal corpte. The persons thus designed for victims
are infinared by stratagem, for, on the day appointed for
the funeral, they are sent on a pretended errand to some
remote place, where people chosen for the purpose lie in
wait, and easily dispatch them. Their bodies are brought

to the palace, and poblicly engaged, as a atfilmony of the great respect in which the time was held by his subjects; after this, they are befineared with blood, and carried with the royal corps in great feleranity to the grave, which is previously made in a wood, or fome other place equally private. Their bodies only, however, are interred, for their heads are fevered off, and fixed on poles round the grave, which is confidered as an honourable ornament. Besides these, the king's favourite wives request to be factified, that they may be laid with him in the fame grave, in order to accompany him in the other world. They bury also with him his cloaths and weapons, with such the things as he effected most valuable; and near the grave they place vessels containing victuals and drink, which, as soon as smpty, they change, and bring others in their sead.

in their Read.

We shall here give in account of the ceremonies obferved at the funerals of the kings of Fetu, which, though not exactly the same as those abovementioned, tend to shew the strange notions diese people have of paying reverence to the dead. When one of these kings dies, the people experts their grief by mournful songs and outcries. They wash the corple, drefs it magnificently, expose it to public view, and serve up victuals to it at the usual hours, as if the deceased were living. When the body begins to corrupt, four slaves bear it, without ceremony, and inter it in the woods, for ever concealing where they put it. If any of the wives of the deceased follow them, they kill them, and bury them along with him. In the same grave they lay his fetifies, his cloaths, his arms; in thort, whatever he was sonded of when alive, with victuals and drink. When the slaves have covered up the grave, they return to the palace, and without speaking, kneel down at the gate, fretching out their necks to the executioner, that they may go serve their master in the other world; in full perivasion that he will reward their fidelity, by giving them the first posts in his new kingdom. While the slaves are busy in the interment, the people make a cruel slaughter of those they think may be useful to the deceased in his present state. Some kings who have been well beloved, have had four or sive lundred persons of both fexes massaced on this occasion. This barbarous cuttom is practified, more or lefs, all along the coast of Guiney; as M. Marchais relates, in his voyage to these parts.

There are, befides the fetifies of particular pessons, others common to each kingdom; these are generally some large mountain or remarkable tree, which if any person should be so indiscrete as to cut or disfigure, they would be put to the most cruel death. Each village has also its guardian fetish, dressed benefits; and for this patron they erect, in the most public place, a kind of altar made with reeds, and covered with a roof of palm-leaves. These kind of altars are frequently met with in woods, and other private places; they are generally loaded with all forts of settless, and before them are plates or pots filled with maiz, rice, and fruits. When the negroes want rain, they place pitchers before them; if they are at war, they lay sabres

and ponisrds to aft victory; if they want fifth, they offer fifth-bones is to intreat for palm-wine; they leave the frault chilfel with which they eva the tree; and fo with refpect to other things, being firmly perfuseded the fetifh will grant their requeft, and beflow upon them? At a they have occasion for. Each priest has his peculia. The fifth which chiefly consists of a large wooden the fifth with earth, oil, blood, the bones of men and beasts, feathers, hair, and other such tristing articles: an oath taken before one of these fetishes is deemed of the most folern and obligatory nature. These people live in great dread of the devil, to whom they see the litheir missortunes, and even tremble at his name. The motions of the prejudices they receive from this stend, are such that they have an annual custom of banishing him from every town have an annual custom of banishing him from every town and villages the exercenonics attending which are thus described by a person who was twice an eye-witness of them: "This procession is attended by a feast of eight days, spent in all manner of singing, skipping, dancing, mirth, and jolitity is in which time a perfect lampooning liberty is allowed, and scandal so highly induged, that they may freely chant out all the faults, villainies, and frauds of their superiors, as well as inferiors, with impunity. The only way to stop their mouths, is, to ply them well with drink, which immediately alters their tone, and turns their faires into panegyries on the good qualities of him who has so mobile treated them. On the eighth day in the morning they hunt out the devil with a distral cry, all atunning one after another, throwing excrements, stones, wood, or any thing they can come at, as thick as hail, at tunning one after another, throwing excrements, stones, wood, or any thing they can come at, as thick as hail, at tunning one after another, throwing excrements, frones, wood, or any thing they can come at, as thick as hail, at tunning one after another, throwing excrements, frones

appears itear his late awening teveral ingues incremively. The blacks have generally two days of worthip in the week, one of which is dedicated to their teithes, and the other is called their boffum-day, being that on which they were born. On the latter day they clothe themselves in white, and bessear themselves with earth of the same concur, as emblems of innocence. The fettish-day, however, is observed with the greatest devotion: on these days they wall themselves more carefully than on others; and, putting on their best cloatts, assemble at a particular place, in the middle of which is a large tree. At the soot of this tree a table is set, the feet of which are dressed with several garlands made of boughs, and on it they spread rice, millet, maiz, sruit, meat, and sish, with palm-wine and oil, as offerings to their fetishes. In the middle of the table sits the priest, called fetisses, who make a long harangue to his auditors, which they hear with a living lizard in it, and when the harangue is over, he sprinkles or washes the table with some of this water, during which the people repeat certain words with a loud voice clapping their hands, and crying out, jom jore; which concludes the ceremony.

The priefts are the only people that are excimpt from labour; and indeed they have but little occasion to work; for they are fed at the public expence, and gather confiderable possession by the sale of their fetithes, the prices of which they fix in proportion to the circumstances of the purchaser. The negroes believe that the fetisleroes or priests converse with the fetisles, whom they seem to consider as intelligent beings, and that they are acquainted with their most distant and private transactions; for this reason they always approach their priests with the greatest respect and reverence, and reserve for them their choicest daintes.

There are five degrees, or divisions, into which the natives of the Gold coast are distinguished: the first are, their kings. The second are their nobility, who are men that have acquired great reputation by their wealth. The third may be called civil magistrates, their province being only to take care of the city or village, and to appeale such tumults as may arise among the inhabitants. The fourth are the common people, employed in agriculture, fishing, &c. The fifth and last are the slaves, who are either taken in war, become so by poverty, or are fold by their relations.

the nafirst are are men n. The ce being appeale s. The iculture,

ip in and the hich they felves in Me may confides the different kingdoms sinher at use-narchies or republies, whose kings are in general herediture, but some of them are electives. The government of most of them consist of two parts; the first of which is the body of the kabothirs, or chief men; and the other the sunferes, or young men; all ordinary affairs fall under the administration of the latter; but the national concerns are determined by both parists together. Their their justices, or judges, as well in kingdoms as expublics, are continently choisi from amongst the most weathy, and particularly the governors of towns and villages. These take cognizance of all civil and eriminal cases, but use the parties have siberty to appear to the king, their judgment is not altifolately decifive:

1. Offences of a criminal nature are generally punished by fairs. A murdeier indeed is sentenced to death; but such persons are feldom; accounts; for it ha has other affects himself, or friends to pay the fine, he cleapes; but if not, he suffers. In the latter case, as soon as sentence is passed, he is delivered to the executioner, who blinds his eyes, and ties his hands behind him; after which, he leads him to some field without the town, where he makes him kneel down, bending his head forward, when he durust a speat through his hoody. This done, he cuts of his head with a hatchet, and dividing the body into four parts, leaves it exposed in the open air, to become a prey to birds and beafts.

oratte.

The murdering of a flave is generally punished by a fine of thirty-fix crowns, and that of a free negro by one of five hundred; but the relations of the perion mordered frequently murgate the fine.

Threvitig is commonly punished by a refloration of the goods, and paying a fine, which is levied in proportion to the value of the goods, and the circumstances of the of-

TOn the coaft, adultery is punished only by fine, for which reason many women, by consent of their husbands, bestow their favours merely to take advantage of those who

bettow their ravors merely to take advantage or those bare been foolshly captivated by their charms.

But there is more frickness observed by the inland negroes, in cases of adultery, than by those on the coast. He that debauches a negroo's wife is not only intirely He that debucties a negroor wile is not only interly reined, but his relations often (offer with him; and if the person injured be a man of property, the fine will not sa-wify him, but he must also have the life of the offender. If the criminal be a flave, his death is inevitable, and that in the most cruel manner; besides which, a sine is levied In the most cruel manner; besides which, a fine is levied on his master. A woman caught in adultery is also in great danger of her life, unless her relations pacify the enraged hulband with a sum of money, or some valuable present; and she who is eaught with her hulband's shave is infallibly put to death, as also she shave her paramour; besides which, her relations are obliged to pay a considerable sum of money to the hulband.

They punish the sealing of men with great severity, and sometimes with death; as also the stealing of hoge, there, or other cattle. In those parts which are independent.

and concerner with death, at allot the treath of bogs, there, or other cattle. In those parts which are independent of the Europeans, they will much fooner put a man to death for flealing a theep, than for murder.

The negroes, in all cases of injury, are responsible not only for their children, but also their relations, who in

fech cases help one another by a mutual contribution, each giving something towards the fine, according to his eircumstances, otherwise the offender would be condemned either to flavery or death. In like manner every mafter is obliged to make good the injury done by his flave; for whatever crime he commits his mafter muftaile pay the fine.

An exceeding heavy fine is imposed on a very rich man who commits an offence: they affign two good reasons for the levying of it: first, that he was not urged to it by necef-fity; and, secondly, that he can better spare the money. On this account, many negroes, though rich, will always plead the greatest poverty; as by that means, if either they or their relations should commit any offence, the fine levied is but small, compared to what it would be if the magistrate knew their real circumstances.

magifrate knew their real circumflances.

As the fovereigns of the different kingdoma on the Gold coaft are naurally proud and ambritous, contentions frequently break out amongst them; on which occasions war is formally declared, and the kings, by their governors, appoint a day for their subjects to assemble in arms. This being done, a herald is fent to announce it to the enemy, at the same time fixing the day, the place, and hour of battle. The grandees, or nobles, then repair to court, and, after complimenting the king, proceed to the war, taking with them their wives and families; and if the motives of the quarrel be great, before they set out, Ne. 27.

A . W.

they defirely, their houses and towns, that the enough, if victoriotic, may gain the left advantage of their enequesh. The kings have a great humber of guarde, who use that their persons either at home or in the field. Thais are well furnished with arms, and have a most formidable appearance: they paint their faces with red, white, or yellow freatts, riarking their breafts and the rot of their bodies with various figures of the fame colour, and across their bodies with various figures of the fame colour, and across their fleesiders they hang a freight firstig of glass beads as a preferentive against dadget. They entry a poniard in their girdli, and in their lists hand they have a long broad field that covers their whole bodies, with a dart or large ollar made of the boughs of trees, to keep off the blows of their oriemies weapons; and on their heads they have caps made of the finn of leopards.

The chief posts in the army are occapied by the nobels, who wear their fasters before them, with large knives harging by their fides. Their save arms with large knives harging by their fides. Their save march by their fides or behind them, and are armed with hows after arrows, and cittless; The common foldiers have long shows and hatchets; their fabrus are fastered in a belt girt retend their wait, and they have sape or helinest made of the files of crocodiles, adorned behint, with a tost of horse hair, and on each fide with a rod shell.

Musters or carbines are their only fire-arms, with which they are furnished by the Dutch, and shey are very apport in the use of them. Some of their shows are made with two edges, and have bread wooden fandles covered with this plates of gold. They have also two forts of alleging or lances, the smallest of which are threy coitinually heep in their right haid, and while they are using it against their enemy, they defend themselves with their shield in the left.

their right haid, and while they are using it against shele enemy, they defend themselves with their sheled in the left.

Their shields are in general made of the bask of crees interwoven, though some of them indeed are made of tenther: they are about six seet long, and four broad, and strongthened within by a cross of wood placed with ison. Some of them are co-ered with the hides of ozen, others with gilt leather, and some with the stime of typers. They are very sapert in the use of this defensive waspon, which, with their sabes, they brandish in such a manner, as some of their bows and arrows with such nicety, that they use their bows and arrows with such nicety, that they use their bows and arrows with such nicety, that they will hit a very small mark at a considerable distance. They are made of hard, tough wood, and the strings are formed of the bask of trees. The arrows are sentented at the head, and pointed with iron; and their quivers, in which they carry them are made of gost stims.

The negroes engage their enemy in bettle, without paying the least regard to order: each commander hus his men close together in a crowd, himself being hid in the midst of them, and in this manner they engage one heap of men against another. In case a few are killed, the rest immediately run away, unless surrounded by the enemy; and so natural is cowardice to them, that when one officer sees another enthralled, instead of advancing to affist him, he consults only his own selety by a speedy slight. As soon as they have discharged their guns, which is the chief each of all their wars. They who cannot raise their ransom, are either kept or fold as slaves; if a person of rank in taken, he is well guarded, and his tansom is staten, he is well guarded, and his tansom is staten, he is well guarded, and his tansom is stated wery high; but if the person who eccasioned this war falls into their hands, they will not admit of any ransom of rains in taken, he is well guarded, and his ransom is signed on.

When the war is ended, and a tr

the future.

When the war is ended, and a treaty of peace agreed on, the contending princes confent to meet each other on a certain day, to proclaim their determinations. The place is generally a large open plain, and each party appears as if aroued for battle, bringing with them their feetihes. The priefts, who are always the principal people in these ceremonies, make the chiefs swear reciprocally to each hostilities, to forget what has pussed, and, as a security for their premises, to give mutual hostages. As soon as these caths are taken, the drums and trumpets begin-to found, the parties throw down their arms, and embrace each other with the greatest cordisity; after which, they pass the remainder of the day in finging and dancing, and commerce to

setween them as it was before the querral

We fhall describe the previnces and kingdoms that form the Gold coast; and the different fettlements in each be-longing to the Europeans: in treating of these, we shall begin at the most wastern part, namely the kingdom of Anism, fitnessed about twenty miles saft of cape Appol-

This is a very plentiful country; for the land being na-turally good, and the inhabitants very attentive to cultiva-tion, it produces provisions of most kinds in great abun-dance. Rice in particular is so plentiful here, that it is apported to all other parts of the coast, and the inhabi-tants bring millet, yame, potatoes, and palm-oil in re-

esported to all other parts of the coaft, and the inhabitants bring millet, yame, potatoes, and palm-oil in return.

Ackombone is the chief village or sown here: it is very populoue, and pleafantly fituated. Near it is the Dutch fort of St. Anthony, which once belonged to the Portuguses, from whom it was taken by the former in the year 1642; and having been ceded to the Dutch India company by the enfuing peace between Portugal and Hostand; that ever finor renained in their possible. This fort is fituated on a rock, and, though small, is yet very commodious. It has two batteries on the land fide, and one on the sea, with proper outworks, which, as well as the walls, are all made of black stone found in the country. The gase of the first is low, and well scured by a ditch eight feet deep cut in the rock, over which is a drawbridge, defined by two patteraros. The first mounts twenty-two large iron guns, besides several small ones, and the garrifus usually consists of twenty-five whites, and the fame number of blacks, who are under a serjeant belonging to the company. The chief sactor's house is nearly suit of brick, of a triangular form, and very lostry it has three fronts, before one of which, is a small spot of ground planted with orange and palm trees.

The dress; enfours, manners, religion, &c. of the natives of Axim, are the same as on the Gold coast in general, and therefore need not be repeated here. The people are for the most part rich, from their carrying on a considerable trade with the Europeans, for gold, which shey chiefly dispose of either to the English or Dutch. With respect to their laws, they are subject to the chief factor, as governor of the fort, who maintains a kind of sovering authority throughout the whole country. He determines all cause among the negroes, and the fines being paid into his hands, he distributes them to the injured persons, first dedecting his own fees, which are very confiderable. If a black, for instance, in fined one hundred crowns, the governor's dues amount to two thi

plaintiff, and the other fourth is for the kabofhirs and the factor, who divide it into three parts, the former taking one, and the latter two. He also obtains confiderable

one, and the latter two. He also obtains confiderable fums from the fishermen, who are obliged to give him an eighth part of all the fish they catch.

There is a large beautiful fort called Fredericksburgh, about seven leagues fouth-east of Axim, which was built by the Brandenburghers, but now belongs to the Dutch. It has four large batteries surnished with seventy-fix pieces at any nour large matteries rurninged with leventy-its pieces of ordennee, and the gate leading to it is exceeding magnificent. The walls are thick, ftrong, and high, and within are feweral specious dwellings for the officers and foldiers, as also good warehouses for the reception of their merchandines. The fort is well known by the name of Committee of the retains the obstance from the Chamitee. Conny's caltle, which it obtained from the following cir-cumliances: when the Pruffians who were first possessed of it left the coast of Guiney, they committed the care of the fort to one John Conny, a black, with strict orders not to deliver it up to any nation but the Pruffians. Soon after their arrival in Europe, the king of Prufia fold all his interest on the coast of Guiney to the Dutch India company, there being another fort belonging to him, situated upon cape Three Points. When the Dutch came to demand this fort, John Conny refused to deliver it up to them, which produced a war that continued for fome years, and coft the Dutch much money, and a great deal of Heodified. On the other hand, Conny, sushed with his repeated withories over the Dutch, became a mortal enemy repeated vectories over the John, because a moral entity to them, and confidered them in the most obnoxious light; to flew his hatred to them, be had a small path, that hed from the outer gate to the inner apartment of his cashle, paved with the skulls of Dutchmen who were slain in battle; and, as a farther mark of contempt, be had one skull tipped with filver, which he used as a punchbowl. However, in 1724 he was completely co-when he fled into the country, and the Dutch to feffion of the fort, in whole hands it has remain

fines.

This fort is one of the baft fitested on the coaft; and the anchorage and isnding are both fafe and convenients. The tilmate is tolerably wholesome, and the country rich and well-improved. The negroes here are more civilized and honest than in most other parts of the coaft, and the government is well regulated. They carry on a great trade not only in gold, but alfo in ivory and flaves.

Cape Puntas, or Three Points, confists of three little heads or hills that ile at a small different from seek other (from which circumstance it derives in name), and between them are two convenient bays. The hills are ornamented with groves of lody steen, which are visible a confiderable difference at fee; the whole country about the cape is exceeding woody.

ceeding woody.

A fmall fort, called Dorothes, stands about three leagues. A small fort, called Dorothea, stands about inree reagues cast of the Cape: this formerly belonged to the Prusina, from whom it was taken by the Dutch in the year 1683. The apartments within are very numerous, and most of them not only conveniently disposed, but very elegantly furnished. The fort itself consists only of a large house with a flat roof, on which are two small batteries contained.

furnished. The fort their country on the Gold coaft, exwith a flat reof, on which are two small batteries containing ten guns.

Anta, which is another country on the Gold coaft, extends almost thirty nilles from east to west, and is full of
hills covered with large trees, between which are several
considerable villages. The foil is well watered, and produces great quantities of excellent rice, the best fort of
main, sugar-canes, and potatoes. It also yields plenty of
palm-wine and oil, occos-nuts, annars, oranges, and
small lemons. In the mountainous parts are great numbers of wild beafts, particularly elephants and tygers, the
latter of which are so rapacious, that they frequently visit
the English and Dutch forts in the night, to the great
tetror of the inhabitants, who sometimes sustain considerable injury in the loss of their castle, sheep, &c.

Dickscove is the first remarkable place we meet with in
the kingdom of Anta: it is fituated about eight leagues
to the north-east of cape Three Points. Here the English have a feet, which is a handsome and regular building, and is well defended with four good batteries, on
which are mounted twenty pieces of ordnance. This and
all the other English forts are subordinate to cape Coast
Castle, as no other than the St. George's sing is allowed
to be losifted by them.

There are two villages near Dickscove, that are comunanded by one and the same cobocero, who always dif-

manded by one and the fame cobocero, who always dif-plays the St. George's flag at his house, whenever that at the fort, in honour of the English, is hoised. Batenstein is a fort belonging to the Dutch, and lies at a small distance from the abovementioned villages. It is

a finall diflance from the abovementioned villages. It is fituated on a very high hill, and is built of an oblong form; it has a small building, and has only two batteries; on each of which are planted four guns. At the foot of the hill is a village called Boutton, or Boutri, the inhabitants of which are particularly distinguished for their hosnessy in all matters relative to trade. This village is watered by a river that comes down from the country, and diffembogues itself into the sea by the Dutch fort. The banks of it are exceeding pleasant, being adorned with lofty trees; and the sides of it are lined with mangroves, whose boughs are plentifully stocked with excellent oysers. This river associates the lenty of single in hazardous This river affords great plenty of fish; but it is hazardous a mis river airors great pienty of min; but it is hazardous to catch them, owing to its being infelted with prodigious numbers of crocodiles. It is navigable only about four leagues from its mouth, for though it reaches much farther, yet it is impaffable, owing to the violent water falls that pour down from the rocks.

Tokorari is fituated on the top of a high hill, which jute to the fouth-east into the fea, and is furrounded with feveral rocks. This is a pleafant village; and the country behind it is very agreeable, confifting of delightful vallies and plains, adorned with lofty trees, between which are agrecable paths covered with white fand. There was formerly a fort here, which was at different times pollefied sormery a fort nere, which was at different times polletted by the English, Dutch, Danes, Swedes, and Prussians; but in 1665, the Dutch blew it up as a place of no expe-quence, and there are not any remains of it now to be feen. The natives here are famous for making the best and largest cancer on the coast; some of which are at least thirty are those and will be rest about the attention. thirty feet long, and will carry about ten tons of goods, The price of one of the largest is about 501, sterling; ships bound from the Whidah generally provide themselves with thefr.

The viltage of Sakkundi, or Sacuadoe, is about four balles east of Tokorari s the English and Dusta have each a fort here, the letter of which is called Grage, and, like the former, is fituated on the top of a hill. That belonging to the Dusta he try finall, and poorly defended i but the English fort is large, and mounted with twenty pieces of cannon. The French had formerly a fettlement here, but not finding it answer their expectations, they defended it. The country round is admirable, being divertified with hills and dales covered with lofty trees, which grow with such uniformity as to appear as if placed by art. This village is very cich in gold, and is as healthy a place as any on the coast.

Two small villages lie between Sekkundi and Sama; the one called Anta, and the other Beari; but they are not of any note for trade, except in the article of plant-oil, great; quantities of which are exported to most of the neighbouring parts.

Sama is watered by a finall gives called the Country of the coast.

ing parts.

Sama is watered by a finali river called St. George, which runs into the sea near the soot of the hill on which it is fituated. It contains about two hundred houses or cabins, so piaced as to form three separate villages. The place is populous, but the inhabitants are very poots, and chiefly employed in agriculture and fishing. The Dutch have a fort here, about the size of that at Boutrous, and mounted with the same aumber of guns. It is called St. Sobastian's, which name was given it by he rortuguese, who were first masters of it, but the Dutch afterwards toolsde.

who were first masters of it, but the Dich arterwards toolsit.

Adom and Jabi are two countries very fertile in mais, and have feveral mines of gold; but they have no villages in them that deferve particular notice, neither are there any European fettlements in them.

Commends, or Commany is divided into two parts, diffinguished by the names of Great and Little Commany, the inhabitants of which are chiefly fithermen, or brokers, it being a piace of confiderable trade for gold and flaves. In this diffrict are two European forts, one belonging to the English, and the other to the Dutch. The fermer is large quadrangular building with three fiquare baffions, and one round; and within the fort is salarge tower built of stone and time. It mounts twenty-four guns, and has garrifon of twenty-five whites, and the same number of blacks. The Dutch fort is called Vredenburgh, and was a garrifon of twenty-five whites, and the same number of blacks. The Dutch fort is called Vredenburgh, and was pull in the year 1688. It is a square building, strengthened by good batteries, on which might be conveniently mounted thirty-two guns within so many pars of the breast-work; though at present it contains only twenty that are mounted. are mounted.

breaft-work; though at present it contains only twenty that are mounted.

Fetu is a fine plentiful country, extending about one hendred and fixty miles in length, and about the fame number in breadth. The principal part of the inhabitants are employed in agriculture, fowing corn, and drawing wine from the palm-tree; others in fishing, and boiling fait; and fome trade as broker for the inhabitants of the inland countries, or on their own account.

The town or village of El-Mina is the principal place in this kingdom; it is fituated about nine miles from the Dutch fort of Vredenburg; and is remarkable for the castle of St. George, another strong fort belonging to the Dutch, who took it from the Portuguese in the year 1638. It is a large square building, with very high stone walls, so strong, that they are faid to be cannon-proof. It has four large bassions or batteries within, and one very strong one on the outworks. Two of the bassions within lie to the sea, and are very losty, the point of the peninsula on which shey stand being a high star rock; but the other two are low, the ground descending gradually from the rock. These basteries are mounted with sorty-eight pieces of sine brafa cannon, and that on the outworks is filled with irongicess, which are only fixed as statutes, or on days of public rejoicings.

This fort, towards the land, is adorned with two canals

public rejoicings.

This fort, towards the land, is adorned with two canals at the fort, toward the railways furnished with rsin or fresh water sufficient for the garrison and ships. The infide of the fort consists of a large quadrangle, surrounded with handsome storehouses of brick and stone. The gewith handsome storehouses of brick and stone: The general's lodgings are in the upper part of the castle; the ascent to which is by a large stair-case of black and white stone, defended at top by two small brass guns, and sour patteraros of the fame metal, commanding the place of arms, and corps-de-guard. Next to this is a great hall full of arms, and beyond it a large gallery wainfootted; and ornamented at the end with large gallery windows. This gallery leads to the general's apartments, which consist of several handsome rooms and offices belonging to the ramparts. On one side of tites rooms is

Thurshs it. An horizon for the feet, form enough to contain at least one hundred people, is encluded at the rathpares.

Mine is feetered just under the death, and is a colorably long and polutious tevin. The houses are in general very peoples and empresses, who are is built which rect force. Trade, hasheaders, and affing, she the ultral employments of the inhabitance, who are is written people, and, from their long correspondents with the Europealle, are the most river called Booja, which fugures and the kingdoms of Commenda and Feet; and the north file of which, upposits to St. George's taffis, is the fort of Contradefourgh, colonging also to the Dutch, and fituated on a high hill called St. Jago, it confishs of a hardform quadrangle, fitrengthened with four good batteries; the walls are twelve feet high and strengthened with four good batteries; the walls are twelve feet high and streng, having four lesser, but on the twelve gons. Within the fort is a large tower, with tonvenient apartments for the gratison, which consists in general of twenty-five men, who are relieved from El-Mina once in twenty-five men, who are relieved from El-Mina once in twenty-five men. The affects to the force is easy on the side of El-Mina, but on that towards Commenda it is steep and difficult. The bridge over the river Bonja has a drawbridge in the center as well for security, as to admit small ships to go up the river.

At the foot of St. Jago hill are several tombe and monuments, which are supposed to have been eracked by the ladies to the memory of their kings, or other distinguished personages. On the north side of the hill is a large garden sous walls; and is stocked with rows of excellent corage trees, also senon, excen, palm, and other forts of trees and uncommon plants of the country; as also a variety of European herbs, pulfe, and roots: in the center of the garden is a large funimer-house, round and open, with a cupola roof, and the ascent to it is by a handiome fair-tosic.

of the garden is a large funtiner-house, round and open, with a cupola roof, and the ascent to it is by a handlome flair-case.

A place called by the Portuguese Caloo Corfo, but cape Corfe, or Coast, by the English, is fituated at a small distance from St. Jago hill: it is formed by the store juting out a little, and making an angle whose south and cast fides are washed by the sea. On this cape is situated cape Cosst Castle, which is the most important fortress of any belonging to the English on the coast of Guiney; it stands on a large rock that projects into the sea, and was erected by the Portuguese, who first settled here about the year store. In a short time after the Portuguese had builk it, they were dispossed by the Dutch, from whom it was taken by the English under admiral Holmest; in 1664. By the treaty of Buds, it was sligulated that the first should remain in the possession of the English, and a charter being afterwards granted by king Charles II, to the African company, they immediately fet about enlarging it; and gave it the elegant form which it now retains.

The walls of this fort are very high and thick, particularly on the land side; they are partly built of rock stone, and partly of brick; the parade is twenty feet perpendicular above the rock, and forms a kind of quadrangle, being open on the east side towards the sea, which renders it very pleasant, and assords a delightful prospect of Queen Asine's twenty pleasant, and assords a delightful prospect of Queen Asine's twenty pleasant, and assords a delightful prospect of Queen Asine's point, and the ships in Anamaboe roud; on this side are thirteen pleaces of heavy cannon, which command the road and passage leading to the fort; the other three sides comain many spacious apartments and offices; particularly of the rock called Tabora on the outside of it. On the battlements are ten guins, and twenty-five on the sankers, which is about twenty paces from the eastle, if a round tower, containing it twelve pounders, and serve the sea of the particu

change for exportation | are as y stand different froat the gate of the castle in a prilon for the continuent of crimitality. There are very extensive gardens belonging to the castle, which are noise eighternries in circumirence, and are without any fort of inclories, except on the fouth fide; they produce attack every thing naturalies for the climate, publicularly oranges, lettering, eitrone, quawes, plantains, haranas, cocoa nuts, cinnateren, unmarinde, plantains, haranas, cocoa nuts, cinnateren, guawes, bidatains, haranas, cocoa nuts, cinnateren, water-melonde of validus kinds, cucumbers pumpaint, water-melonde of validus kinds, cucumbers pumpaint, water-melonde from Englith feed; burtheir ber roots are yams und postuces. The town at Cape Coat Cette, which is inhabitants, though Pagans, are very civil tand industrious; fome of them are employed in getting gold, others in fithing, and form attend to agriculture, and fupply the ref with the necellaries of lifeby their industry and labour.

Two final forts are created in the neighbourhood of Cape Coat Catter thefe also belong to the English, and are just three quarters of a mile from the catte; one of them is called Phippa's tower, and the other fort Royal, or Queen Anne's fort; the former is a finall round tower fituared on the cominence of a freep hill by the fide of Cape Coaft gardens, and was built by General Phipps, from whom it received its name it flands north-well from the town, and mounts feven of their in called Phippa's tower, and the other fort, was built on a flut manuel Deerstein, of the Dantift mount, because the Dante mounts of our hill manuel Deerstein, of the Dantift mount, because the Dante mounts of our theology of the fort, and ever non the platform. The garrison are idaily relieved from Cape Coaft Cattle, and confiste of fi

Manfrow, is fituated beneath the fort, and is almost insceedible by means of the great rocks that furround it; it is a very small tows, and the few inhabitants that live in it, are chiefly fall boilers, labouters, or fishermen.

The small kingdom of Sabu, or Saboe, begins from the list metalloried town: it extends two leagues along the coat, and four in land to the north: however, it is a plentifolishot, and the inhabitants of it are reckoned the most industrious on the coat.

Quéen Annès 'Point,' a finall fort belonging tothe English, is the first place we meet with here: it is fituated on a hill, about a mile from fort Royal to the west, and we miles from a Dutch fort called Nassau to the east; it has a gairtifor of five whites, and the fame number of stacks, and mounts live gone.

Nassan fort, belonging to the Dutch, stands on a hill, near a finall village called Mown; it is almost square, and has four batteries, mounted with eighteen pieces of cannon; the walls are higher than those of any fort on the coast, that of El-Mina's excepted: two of the batteries, which are next the sea, are inclosed by a very spacious and convenient captain; and the angles are ornamented with four bautsful square towers. It was built by the Dutch, had was their chief settlement when El-Mina was in the gottestion of the Porteguese.

Mown; is a finall village containing about two hundred house; the inhabitants are chiefly fishermen, apprending the coat, and contains many villages well inhabited; it

they catch.

The territory of Fanyn, extends about ten miles one the coatt, and contains many villages well inhabited; it has no king, but is under the government of a braffo, or leader, whose power is greatly restrained bythe old men, or counsellors, who frequently attagreeable to their own inclinations, without paying any regard to the braffo. The inland people are thiefly employed in agriculture, and found its the markets with fruit, corn and palma-wine; but the braffo, the markets with fruit, corn and palma-wine; but the braffo, the markets with fruit, corn and palma-wine; but the braffont of the coast carry on a great trade in gold, fish, with felt. arld fait.

and fair.

Ansmable 's the most important place we first meet within thin in the ton, and where the English have a small, but very near text: it is feated on a rock about fifty yards from the sea, and is built of stone and brick; next the fea it is defended by two stankers, and on the other side by two surrets; is mounts twelve guns, and the garrifon confists of thirty people, twelve of whom are whites, and the rest blacks; within are several good warehouses, and the spartments for the principal officers are very ele-

si.

other fervanes of the compony, have apartments provided for them.

Anomabed town is very large and populous, containing the leaft as many people as ard in the two kingdoms of Sabus and Commonda; the inhabitants are very flout and wascerding, but at the fame time the greatest chems on the wheeleves, and very ledy, for that they make an excellent leads, and very ledy, for that they make an excellent land-mark, being very configurous many miles at far the hills are clostated with a great variety of tress, which render the profest exceeding plenfant; but the palmatress are the most numerous, and the wine extracted from them is said to be fuperior totall other in this part of Africa, "Two villages, cafled Great and Little Commands are fleured about two miles from Annatabou, the latter of thefe is a very intensfiderable pleas," but the Dutch have a final foreiness is, called Amsterdams. It is a fquare building of roth, front, firengthened with three finall and one large bactery, and is smooned with twenty please of cannon. In the center is a large tower, the upper lart of which is formed like a dupola, and on the typed if rithe flag-flass, within are convenient construction, which consider of mency-new whice, and the like number of blacks. The prospecturion the rop of the tower is exceeding pleasant, as a not only commands the flag, but an extensive view of the adjunctic country of in 165, the Dyrch admiral of Ruyrer took this fort from the English, to whom it once belonged.

The village of Great Communicative the underson the English, to whom it once belonged.

The village of Great Communicative themselves the inhabitants about both villages are chiefly employed his agriculture and fishing, and the labot stear them are very level in the flags of the property of the content of the villages. The villages of the fisher from the twenty of the fisher from the flags of the content of the property of the content of the villages.

retile. Tantumquerrielles a little to the east of these villages. It is plasfantly stream are very fertile. Tantumquerrielles a little to the east of these villages. It is plasfantly stream and engerous. The English have a small but regular fort here, having four flankers, on which are mounted twelve pibees of ordanees. The territory of Acson aktends from the borders of the Fantyneau country to a famous place called. The Devel's mount. It is divided into Great and Little Acron the former of which, being farther inland, is a kind of republic; and the latter, a kingdom; and, notwithsading they are independent of each other, the inliabitantalive in perfect amity. They are a very industrious peoples and apply thenselves with such diligence to agriculture, that great quantities of grain are experted from heasen we other parts of the coast. The Dutch have a fort here, called fort Patience; and under it is the village, inhabited only by fishermen.

ently by fiftermen.

Agonna, is a very fertile and pleafant country, and the inhabitants are diffinguished for their ingenuity in making various articles in gold and filver. It contains favoral momarkable villages, the first of which is called: Winneba, or Wimba, and is pleafantly fituated, being feirrounded with beautiful lefty trees. Here the English have a fort, of much the fame inseand form with that and antunquerri. It stands on a riing ground about fourred wards from the fame field, from whence there is a hand four avenue encompality trees, that the to the outer gate. It has also a tree, which is a infinite fervice, as it not only contributes to the strength of the fort, but is a fecurity to them from the ravages and incursions of the wild beaute by night.

It is remarkable, that the kingdom of Agonos has always been governed by a woman, who, to preferve the fovereignty in her own hands, lives unmarried, but that the may not have a construction of the state of the st in her own hands, lives unmarried; but that the may not want a proper companian, the generally purchases one of the handfounct flavet he can meet with, who is prohibited. on pain of death, from ever intriguing with any other woman. Her eldeft daughter it neat heir to the rown, the fone being all fold as flaves, or otherwise disposite of, fo as not to interrupt the faceession in the female line. The daughter is taught the same political maxims practified by her mother, and, where of proper age, is allowed the fame indulgence of having such a male companion as the thinks proper to make the object of her choice.

The country of Aquambos, which is the last place the remains to be described on the Gold coast, is of considerable extent, and chiefly situated within land. The maximps

with them.

The other fort of Crevecceur belongs to the Dutch, and is fituated on a rocky headland, about a mulket-foot from fort James 1 and though boats earl come up to the frank with fafety, yet the landing may be easily opposed by the guns of the fort, and the small arms of the garrison. The building is of a square form, with four batteries, which, with the curtains, are of stone, but they are neither so thick or high as those of the English fort. Within is a large stat, square house, with a platform, and the apartments are convenient both for the officers and garrison, which consists of afteen white men, and twenty live negrees.

which confifts of fifteen white men, and twenty five negrois.

Chriftian Durgh, a fort belonging to the Danes, flands at a finall diffance from Crevecceur, and is the only one they have on this coaft. It is a fquare building firengthened with four batteries planted with twenty guns. It appears very beautiful and feems like one continued battery; for the canon may be removed to any part of it, the roof being intirely flat.

We may here remark, that, confidering the warlise diffosition of the blacks on this part of the coaft, it is frange they ever permitted the Europeans to build three fuch good forts to clufe together; but to great is the power of money even in this golden country, as well as in other parts of the world, that one of the kings of Acra being gamed by confiderable prefents, which the Danes and Durch made him, granted them that liberty; at first, they afted to build each of them a store-house to fettle a factor in, under the obligation of seven marks of gold yearly for each house. The houses thus built, the Dutch and Danes constantly infimuated to the natives, that whereas they were continually exposed to the affaults of their mortal enemies the Aquamboes, it would be for their fastey to allow these houses to be turned into forts, to protect them and their families with their cannon. By these means they prevailed on the people to permit these places to be just into the condition above described.

The European forts are chiefly supplied with provisions brought from care Coast. Anamaboe, and Cormantin.

put into the condition above deferibed.

The European forts are cluiefly supplied with provisions brought from cape Coast. Anamaboe, and Cormantin. The country round Acra is executing pleasant, not being so woody as other parts of the coast: but it is much lefs fertile, owing to its being almost depopulated by the frequent wars with the Aquamboes.

A market is held three times a week, at a village called. Abono, about twenty miles from the coast, for the sale of gold and slaves, of which commodities the trade chiefly confists: hither the negroes resort from the inland countries. The gold is reckoned as good in quality as that at Anim, or any other part of the whole coast, and the slaves being so numerous, is occasioned by the frequent wars No. 28.

of Guiney, which goes un-of the Slave coaff, is very ex-ably winding, we cannot pro-a straight line. It commences whence to the tiver Benals, are der the appelle tenfive; but as it is perly afcertain its distance at the river Volta, from about one hundred and mi ety-five miles; from thence to a and thirty-five; and from ans of Ambrifes, one honcape Formofa, one huma strence eastward to the most uns of Ambrifes, one hondred and fixty-five; and the foothward to the river. San Boniso, the utmost bendary of the country, one hundred and twenty; in all we hundred fixty-five miles. It is bounded on the east, be the kingdom of Benin; on the west, by the Gold coalt on the north, by Biafaris, with the defart of Seth; and the Atlantic ocean, on the

with the defart of Seth; and the Atlantic ocean, on the fouth.

The four following kingdoms are on this coaft; namely, Coto, Popo, Whidah, and Ardrab: but the principal of them are the two lath.

Coto (by fome called the Land Lampi) begins at the river Volta, and eatenda eaftward to Little Popo, a diffence of about fifty miles: it is a flat, fandy, and barren country, and the only trees to be found in it are the palm and wild cocca. The town or village of Coto, otherwise called Verbon, is about fourteen miles from the river Volta, and was formerly the refidence of the king. The inhabitants of this kingdom are poor and illiterate, and their chief traffic confifts in flaves, whom they fleal from the inland countries, and sell to the Europeans. They practife much the fame customs and manners as those on the Gold coaft, exceet being more fond of their fettiles, in the number of which consists their principal wealth.

Popo, extends about thirty miles, and is divided into two parts, by the names of Great and Little Popo. The last is remarkably sandy; and so barren, that the inhabitants are supplied with all their provision from Whidsh. They chiefly live by plunder and stealing slaves, in both which they exceed their, neighbours of Coto, being of a more courageous and warlike dispose; in. They are also great cheats, and frequently take advantage of the Europeans, by deluding them on thore in expectation of slaves, at a tima they have not one to dispose of, when they not only sleece them, but sometimes detain them for several months, before they can procure the number wanted, and then exact upon them, by fixing an exorbitant price on those they purchase.

Little Popo, is situated on the shore, about ten miles

and then exact upon them, by fixing an exerbitant prices on those they purchase.

Little Popo, is firmated on the shore, about ten miles from Coto. It is a poor miserable place, and constitue only of a number of straggling huts, inhabited by people whose, lives are chiefly spent in concerting measures for, the ensuring and misery of their fellow-creatures, whom the dictates of humanity should excite them to relieve and defend.

lace that confider-

ale line

enc

Great Popo, is not to barren as those already, mentioned; for in the inland parts are great plenty of various kinds of finite, as also cattle and poultry. The town stands on an island formed by mershes, and is divided into three parts, each distinct from the other. It is the residence of the king, whose palace is very large, consisting of a number of huts, inclosed by losty trees. The passage to the royal apartments is through three courts, each of which is guarded by a number of soldiers. In the farthest of these is the by a number of foldiers. In the farthest of these is the king's audience toom, where his nobles and principal officers occasionally assemble, to consult his majesty on affairs relative to the government of the nation. The king has a great number of concubines, two of whom constantly sland by him with fans to cool and refresh him. His dress consists only of a long gown of breezde, with an offer cap on his head, and slandals on his feet. He is very found of tobacco, and spends the principal part of his time in smooking, and conversing with his concubines.

The only place in the kingdom that merits the least notice is the town of Great Popo, the rest being only small hamlets of five or fix insignificant buildings, whose inhabitants immediately retire to Great Popo, on the least apprehension of danger.

bitants immediately feet prevails a great addictedness to plunder and rapine, neither are they very difficult in the objects they pitch on; for as they are thieves by profession, the provided as a foc. They carry on fome trade in flaves, but their chief advantages arile from the fish caught in the rivers, which they not only fell to their neighbours, but export great quantities of them to

There was formerly a fettlement belonging to the Dutch here, but trade being greatly interrupted by the frequent wars between Popo and Whidah, they fuddenly left it, and

have not traded there for many years.

The French, fince that time, have established a small factory at Popo, with two agents and fome negroes, who are subordinate to the director-general at Whidah, from whom they receive goods, and to whom they remit flaves.
This trade is carried on by land, and every precaution is used to prevent the property being loft by the way: the usual full method is, to oblige the person who fells the goods, to convey them to the frontiers at Whidah, where they are fure to be fafe; but the feller is subject to the lois, in case of any accident before delivery.

SECT. V.

Contains an account of the kingdom of Whidah, its provinces, iroduce, animals, inhabitants, laws, customs, &c.

THE kingdom of Whidah next demands our attention. It extends about ten leagues along the shore, and in the middle reaches fix or feven in land, after which it divides itself like two arms, being in some places thirty or forty miles broad, and in others much more. It is bounded, on the eaft, by the kingdom of Ardrati; on the west, by the river Volta; on the north, by the country of Daho-my; and, on the fouth, by the gulf of Guiney. It is a fine, populous, and fertile country, being watered by two excellent rivers, both of which take their rife in the kingdom of Ardrah. The fouthernmost of these runs within about a league and a half of the sea, and is called the river of Jakin, from a town of that name in the kingdom of Ardrah: it is only navigable for boats, fome parts of it Ardrah: it is only navigable for boats, some parts of it not being more than three feet deep. The other river is called Euphrates; it runs about a league to the fouth of Xavier or Sabi, the capital of Whidah, and is much deeper than the former. The water is exceeding good, and the river would be navigable, were it not for the banks and shoals in the channel. The roads where the ships ride is at the mouth of this river, but in the months of April, May, and July, the landing is exceeding dangerous, on account of the prodigious swell of the fea at those times.

This country is acknowledged by all Europeans to be one of the most delightful spots in the universe, and that its fertility is greatly promoted by the abovementioned rivers. The coast part is agreeably diversified with a varivers. The coast part is agreeably overmout and rich ricty of lofty and beautiful trees, which are planted in such the most agreeable retreats. The country order as to form the most agreeable retreats. The country rifes from the coast with a fine easy ascent for the space of fifty miles, commanding, in molt parts of it, a fine prof-ped of the fea. The fields are every-where cultivated, and, inftead of hee es or other fences, are divided by beautiful groves of trees: in thort, the beauties of this fpot may be much more eafily conceived than described, as the whole country appears like one continued garden.

Whidah, is divided, into twenty-fix provinces or governments, which are given to the granders of the country, and are hereditary in their families. The king is at the head of thefo, and has the government of the province of Xavier, fo called from the 'capital of the kingdom; each of these provinces has several small villages or hamlers subordinate to it; so that the whole kingdom appears to be one large and populous town divided by gardens, lawns, and groves, into different parts.

The fertility of this country is anazing, infomich that as soon as one harvest is over, the ground ic fown with

The fertility of this country is anazing, infomich that as foon as one harveft is over, the ground ic form with fome other grain; to that they have two, and formetimes three crops in a year. They plow their land in ridges, by which means the dews falling in the hollows; and the function, the grain confilts of sice, millet, and main, or Turky corn. Then engroes are for induffrous; that they will not fuffer any fipot of ground to lie, uncultivated; even the inclosures of their house and villages are planted with melons and other fruits; and they have only final with melons and other fruits; and they have only finall paths that lead through the fields from one village to another.

Oranges, lemons, bananas, ananas, pine-apples, water-melons, citrons, ahd tamarinds, grow here in great plenty, as also prodigious numbers of palm-trees; but thee last are chiefly cultivated by the natives for the sake of the oil, as few of them take the trouble to draw the wine, which they are not very fond of. They have likewife cabbages, carrots, turneps, radifies, parfley, and various kinds of fallads, all of them little inferior in quality to those of Europe; befides which, all the roots produced on the Gold

coast grow here.

rope; befides which, all the roots produced on see Goic coast grow here.

They have one species of pea of a very peculiar nature; producing small trees like those that bear the pimento or red pepper, but they have no slower, and seldom exceed fix seet in height; the peas grow in a ag or membrane, almost as strong as parchment, placed beneath the sein amongst the roots, which yield nouisiment to the plant; the bag contains in general one hundred and fifty peas when the leaves begin to grow yellow, they pull up the plant with the roots, open the bag, and extract the peas; but if they chuse to have them very tender, like those of Europe, they pull up the plant while the leaves are green. They are as well tailed as those of Europe, are cast of digestion, and make excellent foup. They sow these peas at the end of the rainy season, and they grow so fast, that they are fit to gather in fix weeks.

As the people in general take care to leave no part of the country about Whidah uncultivated, they are therefore seldom troubled with wild beafts; but in the more inland parts there are elephants, buffaloes, and tygers. There

parts there are elephants, buffaloes, and tygers. There are many deer and hares, the latter of which are much like are many acce and maces, the latter those of Europe; they have also a greater plenty of all forts of apes and monkies than in any other part of Guiney. Their tame heasts are oxen, cows, goats, sheep, and Their tame heafts are oxen, cows, goats, theep, and hogs, all of which are much larger, and the llesh better tafted, than those of the Gold coast; the hogs in particular are exceeding large, and the flesh as white and sweet as those of England. This indeed is little to be wondered at, for the poorer fort of negroes pay more regard to their hogs than to themselves, and feed them much better. Their tame poultry confifts of cocks and hens, geefe, ducks, and turkies.

They have great plenty of wild fowl, as partridges, phenfants, thruthes, pintadoes, wild ducks, seal, wood-cocks, ortolans, and ring-doves. There are also many parrots, which are chiefly grey, with fome red feathers on the head, and the tips of their wings and tails. The crown bird is likewife found here, but is not fo beautiful as those of the Gold coast; however, here are several other forts of birds, which we shall here give a particular descrip-

tion of, on account of their peculiarities

The kurbalot, or fifter, is a finall bird, about the fize of a fpatrow, and its plumage is beautifully variegated; the bill, which is as long as the body, is very ftrong and tharp, and is furnished on the infide with finall teeth, not unlike those of a faw. They build in high trees by the unlike those of a faw. They build in high trees by the fides of the rivers, and their ness are composed of earth mixed with feathers and mofs: they make their nefts at mixed with reathers and nois: they make their nefts at the extremity of the most fletider branches, where they hang hy a reed or straw about a foot long; they are of an oval form, and are entered by a projection at the top that bends a little, fo that the inside is perfectly fecure from the weather. These birds are exceeding numerous, and breed so fast, that sometimes a dozen nests are found on the same tree. They not only fly in the air, but fkim on the fur-face of the water with prodigious fwiftness.

The pintade, or Guiney hen, has a sound back, white a sail curned downwards like a partridge, and the feet are furnished with membraneaor webs, like water-fowls. The head is covered with a kind of helmet, and the whole plumage is black, be dark grey, speckled with white spots a like size of a common fowl, and the helmet on the middle of the head is of a horny substance, and a dusty red colour. Under the bill are wattlet, but they do not consider the middle of the head control to the head of th proceed from the lower chap as in liers; they grow from the upper, and the head is bare of feathers, but on the upper-eye-lids, there are long black hairs that turn up-wards. The bill is like that of a common fowl; but in forme of them, at the root of it, there is a small tuft confishing of twelve or fifteen threads, one third of an inchin length, as thick as is pirt, and in fubfiance nearly resembling the bristles of a hog. On each fide of the bill there is a bluith kin, which extends towards the eye, and surrounds it, but becomes black in that place. This kin forma the eye lids, and, being lengthened, and becoming double, make. It appendies or wattles of the checks. They are of different thapes, some being oval; forme square, and others triangular; they are of a red colour in the fermale, and blue in the male. The cars are placed behind the mattles, and are quite innovered; but the apertures are very small. The feet are of a greenish colour, and eyered with large feels before, but behind there is only a rough skin, like shagreen leather; and the hinder toe is short. They feed their chickens indistriminately, each attending to those that comes first in their way. They commonly go together in large slocks. fome of them, at the root of it, there is a small tuft con-

attending to those that come first in their way. They commonly go together in large flocks. The Numidian damfel is a very delicate bird in its construction: the body is long and taper, as are also the, legs. The feathers on the upper part of the wings and back are of a light colour, but the tail, which is long and ragged, is black. The sides of the head are white, and from the top of it behind hangs a long tust, which reaches for several inches down the back part of the neck. This bird is very much eftermed by the blacks: the flesh of it is firm, and of an agreeable taste.

or its firm, and of an agreeable talle. "

The monoceros is a voracious bird, and lives chiefly on filh: it is also very ugly, and the fielh of it harsh and difagreeable. It is short and thick, of a dark colour, except the wings and upper part of the back, which, are white. The back is long and very thick, and the tips of the wings reach to the upper part of the legs. The neck is short and thick, as are also the legs, and the claws in larticular are remarkable large.

is mort and three as are anothe legs, and the claw in particular are remarkably large.

Buftards here are about the fize of the Guiney hen. The bill is of a whitifit colour, and much longer than those of Europe. The eyes are large, the iris hazle coloured, and the cyclids of an ash colour. The sides of the head, all round the eyes, are of a bright brown, but the top of the head, and the whole neck, are covered with black (eathers langing a little loofe, with narrow points. The back, rump, and tail, are of a bright brown; and the feathers of the latter have transverse black bars. The quills, or greater wing feathers nearest the back are brownish, with white spots, and the middle quills white, with transverse bars of black. "The legs are long, and the toes short in proportion, being void of seathers some way above the knees. They have only three toes, all of which stand forward, and they are covered with scales of a white colour, but the claws are dusky. The siest of this bird is exceeding good.

The bird called the aigret is of the heron kind, but is

remarkable for the colour of its legs and feet, which are of a deep red: the body is about the fize of a goofe, and the feathers are of a darkish colour intermixed with white; the neck is long, but the tail is remarkably short; the bill, near the head, is of a bluish colour, but towards the point

tis black. As their flefh is dry and ill-tafted, they are little used by the negroes.

Swans differ greatly in shape here from those of Europe; their flesh too is coarse, and disagreeable to the palate. They are white from the head to the shoulder of the wings; but from thence to the tip the colour is a dark brown, as is also the tail. The legs are long and taper, and the back is also long, and very thick, but terminates with a

tharp point.

The fea, tho' it runs very high in the road of Whidah, abounds with hith, which the natives take with lines, they being strangers to the use of nets. Among the fish caught here is a remarkable one, called by the natives the ape or monkey-fills. It is in general about ten feet long, and between three and four broad, from the extremity of the neck, till within a third of its length, when it diminishes intensibly, ending in a long round tail. The head is

from de the systemali, and the chin thorse and the upper limits furnished with fair like whithers! The neck is very diffinct from the body, and on that part of It next the head is a round; excreçeence like a crown. It has four first which refemble the beard or whikers of a whale; the two forement are to flueted that they supply the place of baseds; nfor he can convey any thing with them to his meath. The hinder fins are placed beneath the middle of the belly, and are less than the former! It has not fealed but a kin fnorted with fmall pinplet like that of the that! It is of a black colonr, but finnes when first taken out of the water; but, when dead, lofes its lifter. It is allevely fifth, and fwims very with. When it appears fifth on the furface of the water, before he takes the hooks, his whotions are truly directing. He course gendy nearly, looks at five takes it with the edge of his lips, and then quire in After several evolutions, he latelength swall the quire is allevely takes it with the edge of his lips, and then quire in After several evolutions, he latelength swall the quire is allevely takes it with the edge of his lips, and then quire in After several evolutions, he latelength swall the postures, as to afford a very laughable seem to the speatty resembles learn beef.

Great plenty of various kinds of fisher. And is the first that all the same of the private, particularly easy mullets, foles, who was allo great quantities of shripping when he he there is beach in the first of the late and pointonus, but the other is quire harmfels, and worthing the first of the rivers, where the water is brackish.

They have great numbers of snakes or sepents, but they are chiefly of two forts. The first of these is black and pointonus, but the other is quire harmfels, and worthing the private particularly easy as their greatest fetils. The poilonous fort he other is quire harmfels, and worthing the private particularly easy as the other is quire harmfels, and worthing easy of the particularly easy of the late of the

intermixed. They are fo gontle; that they will not hurt any creature except the venomous ferpents; to whom they have the greatest enmity, and feem to take a pleasure in destroying them. Both negroes and whites handle and play with them without the least danger; but should either a negro or a white man kill one of them, whether on purpose or by accident, his life would pay for it. When the English first fettled at 'Vhidah, a, captain of that country having landed and housed his cargo, his men found one, night a snake in the lodge, which they inadvertently killed, and threw out before the door. The blacks next morning seeing the dead snake, and the English innocently owning they had killed it, the natives massered that were in the lodge, set fire to it, and destroyed all the goods. The English, deterred by this cruelty, forbore going to trade there for some time; but at length, some of them trade there for some time; but at length, some of them again venturing, on their arrival, the negroes shewed them fome of these snakes, and defired they would not hurt them, as they were facred. The English readily obeyed this request, and their commerce was renewed.

The veneration of the Whidaians for their makes is fo great, that they will not hear any think spoken in derision great, that they will not hear any think tooken in derition of them, ftopping their ears, and running away, if any European pretends to laugh at their fuperfittions reverence for them. Bofinan relates, that a hog happening to derour one of these snakes, a proclamation was immediately issued for destroying all the hogs in the country, and abundance of them were saughtered on the occasion; but at the instance of some of their rich owners, and some prefents made to the king, the fevere decree was revoked; but it feems that fo many of them were destroyed for this offence, that hog's field became very dear while he was

there.

With respect to the persons of the Whidah blacks, both sexes are generally tall, lusty, and well proportioned, but their colour is not so shining a black as those of the Gold coast. Their dress consists of three or sour ells of a stuff called paen, which is wrapped round the wait, and then descends to the middle of the leg. The ladies wear a silk garment, with two or three rows or fringes, the bottom of the coarsing the state. Sometimes these ways a them. tom of it covering the feet. Sometimes they wrap them-felves round with a piece of the abovementioned fluff paen, and bring part of it over the head and round the fhoulders like a mantle. The better fort of the men are diftinguilhed by their hats, which they purchase of the Europeans the larger they are the better they like them, and are

n

particularly, proud of them; after they are odd land rady; others have boundts made of deer, but dog-thinst They were firing of peerls or coral on their necks; and an their area and write have bracetets of the faites mass-

on their arm and write have bracelets of the fame materials.

The negroes here are more polite and civil than any other people on this part of the coaft, though in general they are very liliterate. When two perions of equalitonic dition meet, they both fall down on their knoces; clay their hands, and mutually fainte, by withing each other is good day. They pay particular rafpect to their fuperiors; for when they chance to meet them they immediately fall of their knoces, and kife the earth thrice, clapping their hands; and addreffing them by withing them a good stay or night, which the fuperior returns, by gently clapping his hands together, but without altering his pedure; all which time the inferior continues on the ground till the other departs. The fame kind of ceremonies are also used by the wiver to their husbands, the children to their fathers, and the younger to the cloter brother.

The blacks of Whidah not only differ in good behaviour and colour from those on the Gold court, but also in point of industry; for as the latter are naturally flothful and industry; fo the former are cleanly and affiduous in bufines ; nor will they ever leave any work they under-take till it is thoroughly completed. Befides being em-ployed in agriculture, the men make calabathes, wooden utenfils, hardware, and feveral other things, which they execute with great neatrefs. The women are employed in fpianing, and in planting and fowing their corn, yams, potatoes, &c. The Whidah cloth is of various colours, polatose &c. a see without the white or blue: they make it about that most in use is either white or blue: they make it about two yards long, and a quarter of a yard broad. Those that are very wealthy, besides husbandry, in which their wives and flaves are employed under them, carry on a very confiderade t rade in other commodities, particularly

Polite and industrious as these people are, yet, next to the Chinese, they are the most artful thieves in the uniwhenever, they are the most artful thieves in the universe; and, like them, are extremely addicted to gaming. When they have lost their money and other property, they will play for their wires and children; and when they have lost them, stake their own liberty, and then heaven they of them, flake their own liberty, and thus become the pro-erty of their countrymen, who fometimes fell them to the

European traders.

Most of the customs here are the same as those practifed by the inhabitants of the Gold coast. One of the most material that differs from them, and perhaps from all other countries in the universe, is, the indulgence given to polygamy. It is no uncommon thing here for a poor man to have forty or fifty wives; a chief, or grandee, three or four hundred; and a king as many thoulands. These wives, however, may be considered only as so many flaves, and indeed the principal part of those belonging to the great people are probably captives that happen to please their masters, who therefore, rather than sell them to the Europeans, chuse to maintain them.

With respect to their marriages, little ceremony is used. When a man fancies a young woman, he applies to her father, and defires her for his wife, which is feldom refuted. He then prefents her with a fine pagne, or garment, as also necklaces or bracelets; after which he provides a grand entertainment, which concludes the cere-mony. If a flave has a mind to marry a girl who is the flave of another, he asks her of her master, without applying to her parents. The master of the girl claims the boys of this marriage, as his property.

In this country, the women may be confidered in no her light than as flaves. They are in general obliged to other light than as flaves. till the ground for their hulbands; and even the favourites, who are kept at home are not exempt from work; besides which, they are obliged conftantly to attend on their huf-bands, and behave with the greatest submission to them.

We need not wonder that fuch a prodigious number of flaves are to be had here; for from the multiplicity of wives each man has, a great number of children must rea-fonably be expected. It is no uncommon thing to see fathers who have two hundred children living at the same time, and it often happens that a man has half a dozen children born in one day, for they never collabit with their wives while pregnant, which indeed is the only reason that can be given for their being permitted to take so many. A man's principal wealth confiss in the number of his children, whom he can dispose of at pleasure, except his eldeft fon.

On the death of the father, the eldest fon inherits not enly all his goods and cattle, but his wives, which he re-

tains as his own, except his mother; for whom the cafe the defines its he provides a feparate fublishmer and apartment: This cutton preals with the king and grantdes, as well as amongs the common people; as a smongs the common people; and the people have are equally food of during with those on the Gold-cost; and the methods they again that wherefit are much check that it is marked to the common with the fame. Their marked instruments are also

of the like kind, but are much better made aind their found is not fo harth.

They practife circomcision in Whidah as in most other parts of Guiney; but the time of performing the ope-ration is uncertain, some doing it at the most airfant state; and others not till the children are five or fiel years of

general in to being an all as a little and of dileafes, particularly malignant fevers, and the floth-worws, which latter we have already described in our last faction. Their fevers are most prevalent in the months of June, July, and August, and discover themselves by violent pains in the bead and reins, an inclination to vomit; bleeding at the nose, nead and reins, an inclination to voring locating at the noise, and fuch a thirst that the tongue appears quite black. However, they have excellent physicians; so that though these disorders are frequent, yet they feddom prove sital. The worth and most difficult disorder to cure is the dyfentery, which attacks people at all feasons of the year. It commonly arises either from their making too free with fpirituous liquors, or from eating the country fruit to ex-cels. They are greatly alarmed at the approach of fick-nels; and the mention of death hath fuch an effect upon them, that it frequently accelerates their illness. Even to fpeak of it before the king, or any great man, is accounted a capital crime.

There is little difference between the religion of the Whidah blacks and those of the Gold coast, except that the number of the fetishes of the former is much more confiderable. Their chief deity is a ferpent of a particular species, whose bite is not mortal; and is so well used by his votaries, that he fearce ever attempts to hurt them. They address themselves to this animal on the most inportant occasions; as for feasionable weather, the prefer-vation of their state, or whatsver else concerns the public welfare. They have also a grand temple erected in Whi-dah, dedicated to this serpent; and a lesser in almost every village, with priests and priestesses to officiate in them. The king annually makes prefents and offerings to the great temple, confifting of gold, cattle, pieces of filk, and all manner of meat, drink, fruits, and European merchandize to obtain a plentiful harvest, and the profperity of his kingdom; and if they apprehend any calamity like to beful them, these offerings are frequently repeated.

In this temple, it is said, they always keep a serpent of a montrous size, worfulpping the creature in person, and person said.

not in effigy: and formerly, the king used to go on pil-grimage with his whole court, annually, to adore this ferpent; but, of late, deputes a certain number of his wives to perform this act of devotion in his flead. Once every year it is pretended, that the virgins, and young women of the country, are feized by this species of serpents, and worked up to a kind of religious frenzy: whereupon they are carried to the ferpents temples in the respective villages, and obliged to remain there for a certain time, till they and obliged to remain there for a certain time, the mey return to their fenfes. These are usually the wives and daughters of the principal men of the place, who thereupon make presents to the priests and priestesses; but our author looks upon the whole to be a pious fraud to get a little money out of the people; and, it seems, if any one refuses his wife or daughter to go to this idol temple, when they pretend to be thus infpired, he does not only incut the protection of a profuse person, and an enemy to their the reputation of a profane person, and an enemy to their religion, but is in danger of being ruined by the influence and suggestions of the priests: and that they may be supported by the government in their pretentions, the king, it feems, is allowed to thare the profits which the priefts gain by this pretended infpiration of the females, who, when they are difinified from the ferpent's teraple, are required not to divulge what has happened to them there, under the feverest penalties; but this seems to be needless, because the women are fond of going to these temples on such occasions, being allowed to take greater liberties there, than they could at home.

The next thing the Whidahs pay divine honours to, are fine lofty trees and groves. To thefe they apply in their fickness, or on any private misfortone; all the ferpents temples are in some grove, or under some spreading

The fea is another of their principal gods, to whom they facifice, when the winds and waves are to tempetuous, that no foreign meretrant can wife their coaft; which troubly happens in July and "August, and fometimes" in other mouths: then they tiffrow in all mainher of goods, inteat, drink; and cloathing; and affor a ring, to appeare the engraged element. But the tarcase of the beatt facificed on this occifion is the property of the priest, who dispotes of it in such manner as he thinks proper; fometimes he divides it smiong the people; but in general he appropriated it to himself.

it in fuch manner as he thinks proper; fornetimes he divides it stining the people; but it general he appropriates to himself.

Belides these public objects of adoration, every than has a numerous set of gods, of his own chusing, at Whidahi Every thing they meet with on going abroad, animate; or insulinate, they introduce into the number; after it has undergone the following trial: they pray to it for something they fland in need of; and if they obtain their defire by any means, they ateribe their fuccess to the insulance of this new god; but if they are disappointed, the blame: is generally laid on themselves, and not on the delity.

Another of their public terifies, called agove, is made of black earth or clay; and in form somewhat resembles a negro squatting. It is placed on a kind of peccellal ornamented with a slip of red cloth Bordered with cowries the head is crowned with hisards and from the top issues the point of an allowaye that goes through a larger lizard, betteam which is a filver brescein. This idod is placed on a table in the bouse of the grand facristice; before it stand three wooden bowls, or half calabashes, in one of which are a number of small carthen balls. The people generally consult this sold before they commence any capital undertaking, for which reason he is called, the god of councils. Those who davise with this setish, address themselves to the serificer, informing him of the bussiness they are about to undertake; after which, they present their offerings to agove, and give the priess, his interpreter, the fee. If the priess faitssied with the present, he takes the bowls, and, after several grimaces, throws the balls at random out of one bowl into another, if the number in each appears to be odd, the undertaking is declared prosperous, and the person, and as the priess of a dice returns home perfectly fatisfied. This oracle, however, frequently proves erroneous, in whelt case, such as the preposition of the hegroes, that they key the blame intirely on themselves, and acquit goye.

P

autione of marrying a prieftefi. Nor would they ever confent that their wives should be admitted into the order of the priefthood, if they could help it. For 'as I apprehend it, there is a cerv in tribe amongst them who are priefts and prieftes by inheritance; but then there are others admitted by that tribe into this order upon special occasions.

The priefts, as well as prieftesses, are easily known by the sears and marks on their bodies, made at the time they were initiated into the religious order. In other respects they differ but little from the laity, their habit being moch the fame, though they have the privilege of dreffing themfelves like the grandees. They trade like other people, and gather conliderable possessions by the sale of cattle and states; but their greateil gain arises from the credulity of the people, from whom they extort offerings and presents for the great seprent, which their deluded devotees imagine for the great terpent, which their deluded devotees imagine is religionly bellowed, whereas it only contributes to the emolument of the priefls, for they convert them to their own use 1 and in this they are to diligent, that they fometimes even leave the poor ferpent without victuals.

The Whidah blacks have imperfect and confused notions of heaven and a future state; and some of them

mention a local well for the punishment of the wicked, but feem to regard it as little as Christiana do. Some of them believe, that both black and white men were created by the fuprente God at the fane time; while others afferibe the creation to a great foldor they call analis. Every thing relating to religion, they denominate fetifit; but to the idol of their hearts, or lavourite god, they give the title. of No. 28.

boffuns; and to this god, the beloved wife is always dedicated, and allo affurmes that name.

Each priefl, or fetifier; bath a different god, to whom the people; under his care, apply on public becasions, or common calmities: When they are debatting on war and prace; they bring facifietes, and confult the god by their priefl, who fometimes performs the ceremony alone; and returns an answer to those who come to enquire of him; at other times he confust the ided in their prefence; from whom, however, they expect no votal answer; but the priefl throws up fome nuts or finall pieces of leather; and at they full mearer or farther from each other; he forestells good or bad success to the undertaking. They take every folening outst also before an idea; drinking a draught after it, said praying their god may firthe them dead, or the liquor may burit them, if they do not —form their engagements, or if the thing be neet true which they atted: however, it feerils, the prieft has power to absolve them from these oaths; to prevent which, upon great occasions, they make the prieft swear, that he will not absolve the party, or dispense with his oath, requiring the most dreadful imprecations from the prieft to confirm it: and the negroes believe, that wheever drinks the dreadful cup with fuch imprecations, and afterwards breaks it, will infallibly burst or dire, the whole town or conneity confuls their excelling when the

If the weather is unfeafonable, either excessive wet or dry, the whole town or country confult their priess how the dry, the whole town or country confult their prieft how the vengeance of heaven may be appealed: and he generally advices them to offer certain facrifices, which is readily complied with: and every village has a facred grove fet apart; where the facrifices are killed; and divine worthip performed; and their they will not fuffer to be profuned or cut down upon any occasion. But befides the idol that belongs to the prieft, every perfon has his particular houshold god, before which he confantly performs his devotions on the day of the week he was born. This they call their bostom, as they do the day itself, and drink no wine or strong liquor on that day before fun-fet: they are also then habited in white; or their skins coloured with a whitth earth to paint. There is another day of the week also fet apart for divine worthip; when the poor facrifice poultry, and the rich a sheep to their god, without the affittance of a prieft, which is eaten by the man and his friends, but the guts and inwards, builed in the blood, is reckoned the most delicious more here, as well as at the cape: and there are few families in Guiney, but what his friends, but me gut a maximum to stock in a recond the most delicious morfel here, as well as at the cape; and there are few families in Guiney, but what are obliged by antient cultion (which they think themselves religiously bound to berform) to abfain from certain kinds of meat; fome from the flesh of goats, others from that of hogs, and a third perhaps, from tame white fowls; and their respective children and potterity never deviate from me rules prescribed by their ancestors, among which, at Acra, on the Gold coast, circumcision is one; but from whence they recrived it, or how long they have used this site, we cannot ascertain; as none among them could give us any fatisfactory information concerning it.

What notion they have of the deities they worship is also uncertain, any farther than that they look upon them as beings vested with givest power, and that carefully observe their behaviour, and reward and punish them in this life according to their demerits he they have no great an exclusion or dread of futurity; it is faid, the rewards they expect are multitude of wives and flaves, health and wealth,

expect are multitude of wives and flaves, health and wealth, and other proferous circumfances in this world; and the punishments they apprehend, are a deprivation of shefe. The greatest calamity that can befal them, and what they dread most is death. Marder, adultery and thest, according to our author, are venislerimes, and may be atoned for with gold, &c...But their cating forbidden meats, and drinking prohibited liquors; and a neglect of their holi-days; they think, can never be jardoned, but will (with deliberate and willful perjary) be punished with death. Most of them, as has been observed, believe little of future rewards and punishments; shought they feem generally to agree, that, the sous of good men survive after death; and some few of them talk of a paradise not unlike the elysian fields; whither good spirits are sent; that is, such as have expect are multitude of wives and flaves, health and wealth force few of them talk of a paradife not unlike the elyfian force few of them talk of a paradife not unlike the elyfian fields, whither good spirits are sent; that is, such as have kept their holidays, inviolably abstained from forbidden meats, and observed their oaths: and they that have been deficient in any of these particulars are drowned in a certain river; and a period put to their existence; but scarce any of them seem to have any notion of a wicked man's being punished eternally. Those that have are supposed to have learned it from the Christians, with whom they have converted upwards of two hundred years and there are those that imagine their soussetter death pass into the bodies of white men, and ungerdo an unlimited transmigration.

Though Though all the negrous worthip form creature or other yet they have not all idols or images in their houses; and some of the netives of the mountainous inland. Country. is is faid, worthip a living man, as the Tarters near China to; of whom they relate ten thouland mire les, and believe he dooms them to happiness or misery after death, accord-

Having thus given an account of the religion of the Whilah megoes; we shall next proceed so describe, their government, with the several kinds of positionents indicted on offenders is a state of the several state.

The king of Whidsh, to use the words of one of the Dutch factors, is feared and reverenced by his subjects as Dutel-factors, is feared and reverenced by his fubjeds as a demi-god, who siways! appear in his preferee, either kneeling; or proferate on the ground: which they attend him in the morning, they proferete themselves before the gate of his plates, kin the earth three times, and clapping, their hands together, the forme emperifions that look more like the adoration of fome deity, than compliments paid to an earthly prince; and they even tremble as the fight of him: the his his viceroys, governors, generals, and other officers, as European princes have, of whom, he con-gantly maintains four or five thousand with meat and dulity in the state of the sta Hantly maintains four or the thousand with meat and double; fourie of whom frequently are permitted, to set in his prefence. But no perion whatever is permitted to fee his impely ear, or to know in what part of the palace he fleeps, unlefs his wives, of whom the king feldom has lefs, that one thousand. These continually furround him they are his life guards, and are frequently fent on his emballicy and imployed in executing such commands and fentences as ferm much more proper for men; as to pu-nish criminals, pull down their houses, and the like. Bof-man relates, that a little before his arrival at Whidah, a negro officer of his acquaintance having been unjustly accused to the king, orders were issued to demolish his loude, and destroy all that he had of which the man laiving received fome notice, when a detachment of two or three hundred of the king's wives came to execute the fentence; they found him placed near a heap of gunpowder, with a lighted match in his hand, profeffing his innocence, but threatened to blow both them and himfelf up, if they did not give him time to represent his case to the king t which being agreed to, he had the good fortune to convince his byteidaian majesty of his innocence, and to get the fentence viverfed.

26. When the king goes abroad five or fix hundred of his wives tun before him, or attemp him; be has not it is faid. a fingle man in his train; but he spends the greatest part of his time at home in his palace, administering justice to his subjects; and transacting affairs of state; or conversing with the theorogen factors or enterchants, who find him, ufailly, in a flately half of nucleace, richly habited in gold and filter that this wives, also, when they attend m, are richly clothed and adorned with gold, cors gittering writes, especially their hair; and shough the king never cats before company, it is faid he will drink very plentifully both with the Europeans and his own subjects,

at circuin times. 491

The cabecers are the chief magnitudes under the king, there are confute in thate affairs, and concerning peace and war; and by there, he usually administers justice to the people. "Uravellers make two classes of nobility in every government in Guiney 1. s. The cabiceres last mentioned who are the granders of every kingdom or that. 2. The intende nobility, an order of knights, who being possessed of considerable fortunes, either by descent or purchase, said having obtained fome, reputation in their respective countries, are allowed to have foven trumpets, or hollow elephants teeth, fountled before them; when they go abroad.

The king of Whidah has feveral vicerous under him, whom he appoints at pleafure; and who, in his abfence, have an unlimited power. He has also grand: captains, who are vicerous over sermin diffricts; belides these, there are a green number of Monorary captains, and another fort that are intrufted with the case of the markets, flaves, printaria

Notwithstanding there be no written have in Guiney, yet they have particular punishments appropriated to certain crimes by custom. Murder is utually punished with death, if the person killed was a free-man; but if for the murder of a flave, a fine only is exacted. Adultery is alfo punished with death, where it is committed with any of the king's wives, or the wife of a great man. But of the punishments for these eriches, we shall speak more cularly, before we quit this subject.

In criminal cases, the king assembles a council, when he opens the indictment, and requires every perfou to declare his opinion what punishment the offender deferyes a back according to the verdict, the punishment is immediately

indicted.

For the murder of a free subject, the criminal is cur open alive, his entrails taken out and burnt, and his body fixed on a pole eredted in the market place, where it continues for some days, and is then carried to some remote place, to be devoured by birds or wild beafts.

Adultery is no less severely punished than murder, especially when it is committed with one of the king's wives. If the guilty couple happen to be surpristed, the king pronounces sentence of death immediately; the unanner of executing, according to the abovementioned author, is thus performed: the king's officers caufe two graves or pits to be dug, fix or feven feet long, four broad, and five sep, so near each other, that the criminals may see and fpeak together. In the middle of one they plant a tike, to which they faften the woman, tying her arms belief the post: her legs are also tied at the knees and at the ancles. At the bottom of the other pit the king's wives lay bundles of small faggots, after which they retire; and two bundles of small faggors, after which they retire; and two forks of wood being fastened by the officers at the ends, the man stark naked, is tied to an iron bar, like a broad spit, with iron chains, that he cannot stir, and laid across the two forks. They then set fire to the wood, so that the sames may just reach the body, which is thus roasted by a flow sire. This cruel punishment would be very lingering, if they did not take care to turn the criminal so with his free decreases. wnward, that the imoke juffocates him before he is roiled: When they no longer perceive figns of quite broiled; When they no longer perceive figns of life, they untie the body, fling it into the pit, and fill it up with earth. When the man is dead, women iffue from up with earth. When the man is dead, women iffue from the palace, to the number of fifty or fixty, richly dreffed as on a feditival day. They are guarded by the king's mufketeers, accompanied by his drums and flutes. Each carries on her head a large pot of fealding water, which they pour one after another on the head of the female criminal, dead or not dead, and throw the pot after it. This done, they loofen the body, take up the flake, and caft them both into the pit, which they fill up with flones and earth. When it happens that the wife of a grandee is taken in adultery, the hulband is at liberty to use his own discretion, either to put her to death, or fell her as a flave to the Europeans. If he determines on the former, the is fundiciently fatisfied on being made acquainted with what has passed. The injured hulband, however, has not any power over the man that dishenouted him, unless he hap-

power over the man that dishonoured him, unless he happens to catch him in the fact, when he has liberty to kill him on the spot. If otherwise, he must apply to the king, for justice, who usually sentences the criminal to death. The Chevalier Marchais, who was prefent at one of their executions in the year 1735; gives us the following account of it: "A grandee complained to the king, that, a private person had debauched his wife. His majelty, upon hearing the witnesses, passed sentence, that the offender should be beaten to death wherever he could be found, and his body exposed for food to the beats and birds. The officers belonging to the governor of Sabi immediately went in fearth of him, and found him almost entering his own door, where they foon dispatched him with their clubs, and left the body as the king had ordered. The neighbours went to acquaint the captain of the fe-raglio, that the body would infect all that quarter, before it corrupted, and intreated he would obtain the king's orders to have it taken from thence, or thrown into fewer, where it could not affect any body. The officer represented their complaint to the king, who replied, "If I did not punish adultery with severity, no person in my kingdom could be safe. The body shall lie there till it be devoured or rotten. The people shall see it; and learn, at the expense of this wretch, how they invade their neighbour's bed. All I can grant, is, that in the day-time they may throw a mat over the body, leaving the face unco vered, that the criminal may be known as long as his fea-tures can be diffinguished." Not content with this, the king game to the grandee, whom the deceased had injured, his effects, to fell or dispose of as he thought proper, and alfo his wives and flaves.

The punishment of crimes of a more trifling nature is left to the viceroys, who generally order fome kind of penamee," or a pecuniary mulet, which the king always re-

The crown of Whidah on the death of the king, defeends to his eldeft fon, unless the grandees have rea on to reject him; in which case they appoint the younger bruther in his stead. These sons, however, must be born

is told the fecret, which he is obliged to conceal from him on pain of death. By these means it often happens, that when a prince is called to the throne, he is at the very time employed in some of the most menial offices; and it is with great difficulty he can be perfuaded to give credit to those who inform him of his elevated fituation. This is a political manocuvre of the grandees, in order to preserve the government, at least for some time, in their own hands; for from the obscure fination in which the prince has been brought up, he is obliged to consult the grandees upon every occasion, being himself destitute of all knowledge of government.

every occasion, being himself destitute of all knowledge of government.

The new king is immediately brought to the palace on the death of the old one; but the time of his coronation is uncertain, that resting in the grandees, who fix it as best suits their respective interests; it is in general some months, and frequently several years; but seven years is the longest term for which it can be delayed. During this interval the government is rather in the hands of the grandees, than those of the king, for they execute all public business within themselves, and never consult him even-upon the inost important occasion. In every other respect, however, he is treated like a prince; only with this distinction, that he must seave the palace previous to the time of his coronation; which when the grandees have fixed, they give immediate intignation of it to the king, who affembles them in the palace; and, after the council have deliberated on the measures to be used in celebration of it, notice is given thereof by a dicitarge of cannon, and the whole kingdom is soon made acquainted with the news.

The grand factificer goes the stext morning to the palace,

The grand factificer goes the next morning to the palace, and demands of the king, in the name of the great ferpent, the offerings due on the occasion. These offerings generally consisted an ox, a horse, a sheep, and a fowl, which are factified in the palace, and afterwards carried in great ceremony to the middle of the market-place. As soon as ceremony to the middle of the market-place. As foon as they arrive there, the grand facrificer erects a pile nine or ten feet long, at the end of which is a piece of linen in imitation of a standard or slag, and round the victima are placed small loaves of milet, rubbed over with palm-oil. After some triding ceremonies, the company retire, and leave the carcases exposed to the birds of the air, no person being permitted to touch them on pain of death. As soon as they arrive at the palace, about twenty of the king's wives march in procession, from thence to the place of sacrifice, the eldest or chief, carrying a large figure made of earth, representing a child sitting, which she places at a small distance from the victims. They are attended by a number of musketeers, with a party of the king's sittes and drums; and both coming and going they keep cominually singing, the people profirating themselves as they pass, and expressing their joy by the loudest acclamations and tokens of applause.

of applaute.

The granders, at the conclution of these ceremonies, repair to the palace, dressed in their richest apparel, and attended by their slaves. When the king is not present, they enter it without stripping, and, after having prostrated themselves before the throne, they retire. This part of the ceremony continues for fifteen days, during which the king's women make the palace resound with their shouts, and the public joy is announced by the firing of cannon, and an almust continual display of rockets from every

and an almost continual display of rockets from every quarter.

When the fifteen days have clapfed, the grandees depute one of their number to go to Ardrah, with a magnificent retinue, to request one of the nobles of that kingdom (in whose family the right has continued time immenorial) to come and crow, the king. The greatest respect is paid to this nobleman by all ranks of people, and the exponces of his journey, are defrayed by the grandees of Whidah. When he' arrives at the last village next the capital, he and his retinue must continue there four days; during which hereceives visits from the principal people of the kingdom, who make him presents, and divertibin with various kinds of entertainments, the king's wives also, preceded in a pomentrature and the state of the conditions of of the entertainments; the king's wives alfo, preceded in a pom-pous manner by a guard of fufileers, and his majefty's band of mulic, carry him provisions twice a day from the royal table.

After the expiration of four days, the grandees, attended by their usual train, and a prodigious concourse of people,

sfer their father's accellion; those born before being excluded.

As foon as the king's eldest fon is born, he is always regrivate person, who lives remote from the palace, and with
whom he remains unacquainted with his birth, or the rank
he is designed for. The person in whose hands he is placed,
is told the screet, which he is obliged to conceal from him
on pain of death. By these means it often happens, that
when a prince is called to the throne, he is at the very time
employed in some of the most menial offices; and k is
with great difficulty he can be persuaded to give credit to
those who inform him of his elevated situation. This is
a political manceuver of the grandees, in order to preserve
the government, at least for some time, in their own hands;
for from the obscire situation in which the prince has been
brought up, he is obliged to conclust the grandes upon
every occasion, being himself destitute of all knowledge of
government.

The new king is immediately brought to the palace on
the death of the old one; but the time of his coronation.

his coronation.

The king fets out from his feraglio, about five o'clock in the evenlug of the fixth day, attended by forty of his favourite wives dreffed in the most fumptuous manner, and rather loaded than urnamented with gold necklaces; pendants, and bracelets, foot chains of gold and fiver, and the richest jeweis. The king is dreffed in the most magnificent manner, and on his bead he wears a gilt helmit, decorated with red and white feathers. He is attended also by his guards, and proceeds from the feraglio to the throne; which is placed into an agle of the court to the east of the palace, and is called, The Court of the Coronation. The throne confists of a large gilt arm chair a little elevated, with a velvet tufnion thely laced with gold, on which the king fits, having another of the fame quality at his feet. On the left hand of the king are placed his forty favourite women; on the right, his principal grandees, and a line with them the chief Europeans of the English factories. One of the grandees holds in his hand an unberells, which is more for ornament than Me, is the certificant. tories. One of the grandest holds in his hand, an unbrells, which is more for organient than use, as the cerismony is performed at night. It is made of the richest cloth of gold, the linking embroidered with gold, and the edges adorned with gold friages and toffels. On the top of it is the figure of a cock as large as the slife, and the pole that supports it is about fix feet long, and gilt. Another grander kneels before the king, and keeps fanning him during the whole ceremony. Opposite to his majety are two of his dwarfs, who alternately represent to him the good qualities of his predecessor; extol his justice, liberality, and clemency, and exhort the king not only to imitate, but surpais him; and conclude their hirangue with wishes for the king's happines, and that he may enjoy a long and prosperous reign.

These ceremonies being ended, the grander from Ardrah is font for, whose office is to crown the large. When the arrives at the outer gate of the palace, the cannon are discharged, and the music, plays. He enters the court with his attendants, who guard him to a certain diffance, when he leaves them, advances singly to the throne, and other the interval of the states of the palace, the court with his attendants, who guard him to a certain diffance, when he leaves them, advances singly to the throne, and other the limb.

when he leaves them, advances fingly to the throne; and falutes the king by gently bowing his head, but without proftrating him off. He then makes a thort speech to the king, relative to the ceremony he is to perform; and, taking the helmet off his head, which he holds in his hands, he turns to the people. A fignal is then made, it which the mufic immediately cases, and a total filence enwhich the multi-time immediately cealers, and a total hierice en-fuer. The grandee of Ardrah then, with a loud voice, re-peats the following words three times: "Here is 1900r king, be loyal to him; and your prayers shall be heard by the king of Ardrah, my matter:" after which, he replaces the helmet on the king's band, makes a low bow, and re-treats: the caution and finall arms are immediately fired, the music strikes up, and the acclamations are renewed. The grandee of Ardrah is then conducted in great state to his partments; after which, the king, attended by his wives, his guards, and the Europeans, return to the feragulio, where the ladies make their compliments to him, as he enters the gate. The next-day the king fenders handform prefect to the Ardrah grandee; after which he must return here to the head of the same than the same the same than the same the same than the same t home, not being allowed to remain three days longer in the kingdom. The rejoicings that follow the coronation continue for fifteen days, and the whole is closed with a grand proceffion to the houfe or temple of the great fergent; the manner of which is they related by the Chevalier

number of beadles, or conftables, with large rods or fwitches in their hands, go foremost to keep order, and faake way. These oblige the people, gathered near the temple gate, to sit on their heels and lacep silence. Next follow forty of the king's musketeers, sour and four, with their captain at their head: then the king's trumpet-major, with twenty trumpets; and after him the drum-ma-jor, with as many drums, beating as loud as they can; next, the chief player on the flutes, with twenty mulicians, on the fame infrument. These three bands are the king's chamber-music; and formetimes play separately, sometimes together. Twelve of the king's wives, two and two, carrying the king's presents to the seprent, which consist of bujis, brandy, linen, callico, and silk: the king's valet-dechambre alone, with a cane in his hand, bareheaded, and cloathed like the grandees, his pagne trailing on the ground; twenty-one trumpets, three and three; forty foldiers with musikets, four and four; twenty drums, two and two; twenty stutes. two and two; twelve of the king's wives of the chird; class, with large baskets of reeds on their heads. next, the chief player on the flutes, with twenty mulicians, the third class, with large baskets of reeds on their licads, with victuals for the serpent, from the king; three of the king's dwarfs richly dreffed, and long pagnes trailing behind them, which makes them look more diminutive; the grand mafter of the ceremonies bereheaded, his cane in his hand, dreffed like the grandees ; forty mufketeers, four and foor; twenty drums; twenty trumpets; twenty flutes; twelvo of the king's wives, carrying the queen-mo-ther's prefents to the ferpent; three valets of the queen-mother carrying her arm-chair; the foremost has the back of the chair fastened to his shoulder, the two other carry the feet; three of the king's dwarfs, dreffed like the former; alter them comes the queen-mother, walking alone, her cane in her hand, magnificently dreffed. her pagnes trailing behind, and on her heads reed hat, neatly wrought; threeladies of the palace rich dreffed but bare headed; twelve women trumpets, two and two; twelve women drums; twelve women flutes; the grand facrificer, bareheaded, his cane in his hand, richly dieffed, like a grandee; laftly, a body of forty mufketeers cloting the procession, with some becales or

conflables, to keep off the populace, and preferve the peace.

When these several bodies arrived at the place of the ferpent, without entering the court, they profirated themfelves with their faces to the earth at the gate, clapping their hands, throwing duft on their heads, and giving ex-traordinary flouts of joy. Mean time the men and wo-men muficians, ranged on each fide, made a horrible noise, while the foldiers kept continually firing with their mufkots. The king's wives, who carried his prefents and those of the queen-mother, waited, ranged in a line in the outer court, till that princess entered, and delivered these presents to the grand facrificer. In doing this, she was affifted by the king's valet-de-chambre, the mafter of the ceremonies, and the three ladies of the palace, who were the only persons admitted into the temple. This princes it feems, was not admitted to see the serpent, for that is a favour not even allowed to the king, who is not suffered to enter the first hall, but makes his addresses to the serpent by the mouth of the grand facrificer, who brings back such answers as he thinks proper. After this, the procession returned to Sabi with the same order and attendants that it

fet out with, from the palace.

We need not wonder, that the exalted character of a monarch of this country, after the obscure manner in which he has been brought up, should distate to him the paths of eafe and diffigation; and that he should enjoy a peculiar relish for those pleasures, with which, had he been progressive familiar, he would in all probability, have been fariated. He lives almost in a state of indolence, Seldom going abread, and only attending his grandees oc-casionally when they are assembled in the hall of audience for the administration of justice: all the rest of his time is spent in the recesses of the feraglio, attended by his These are exceeding numerous, and divided into three classes; the first confists of the most beautiful among them, whose number is not limited. She who bears the first son is the chief, and is distinguished from the rest by the name of queen, or, as they term it, the king's great wife. She has the fole management of all affairs belonging to the feraglio; nor dare any person controul her, except the king's mother, whose authority is superior to that of any other subject whatever. She has a separate apart-ment, with a settled revenue for her support; but she is un-der this restriction, that she must remain a widow during the rest of her life The second class of the king's wives confift of those that have had children by him, but, either from age or other causes, are sendered incapable of contributing any farther to his future amusements; there is no

limited number of thefs. The third and left class confifts of those who serve as slaves to the king, and his other wives; shd though they are employed in these menial offices, yet it is death for them to leave the feragin. Without permission from the king, or to have connexions with any other men.

The king is extremely jealous of his wives 1 fo that flould a man meet one of them in the fireets, and only touch her by accident, the is never permitted to enter the feraglio again, for both fhe and the man are immediately lengtion again, nor both line and the man are immediated de-fight in their touching each other, the woman is fold, but, the man is put to death, and all his effects conficeted to the king. For this reason, such as have occasion to go to the palace, call out immediately on their entrance "Ago;" which palace, call out immediately on their entrance "Ago," which fignifies, "Make way, retire, or take care," when the women place themfelves on a range on one fide, and the men walk as cloic as they can on the other. In like manner, when the king's wives go to work in the fields, whoever meets them must inflantly fall on their knees, and continue in that position till they have passed. But though the people are obliged to pay such difference to the king's wives, yet his mejetly has very little espect for them hims if such attend him on all occasions like ferwants, and instead of strending any affection, be generally treats them with the melt haughty contempt.

As the king confiders his wives only as flaves, fo on the most trisling occasions, he will fell a number of them to the Europeans; and even sometimes, when ships are waiting on the coaft for flaves, he will fupply them with whatever number they want to complete their complement. The deficiences are supplied by the affiduity of his capiains, dr governors of the lengtio, who go about the fireets, and feize fuch girls as they think will be pleasing to the king ; and as they are the handfomed they can felect, his majerty is fometimes particularly attracted by their beauties. When this happens to be the case, the object that most firikes his fancy is honoured with his company for two or three nights, after which she is disca ded, and obliged to pala the remainder of her life in a state of obscurity ; for which realon the women are fo little defirous of bee wives to the king, that they would rather prefer a life of

celibacy to that honour.

The palace of this monarch is magnificently furnished, and abounds with all the elegancies and luxuries of life. On all public occasions he observes great flate; at which times he is dreffed in filk and gold, and is attended by his principal officers, or those who hold employments under him. No subject is permitted to see him, unless his busness be of a peculiar and urgent nature, and he has ob-tained the royal perm slion; in which case he is ushered in by the high priest, before whom he must prostrate himself, as well as to the king. Even his granders (except when a general council is called) and fome difficulty in obtaining an audience; and when they do, they must appear before him in the most humiliating form: they advance creeping to a certain distance, till the king by cia ping his hands foffly, gives them leave to speak, which they do in a low tone, with their face almost to the ground, after which, they retire in the same manner in which they advanced. The captain of the feraglio, and the grand facrificer or high-priest, are the only perions that are allowed to enter the feraglio without permission first obtained from the king; but if they want to speak to him, they must pay the same homage as any other fubiect.

The Europeans refiding here are exempted from these stavish ceremonials, and are granted an audience whenever they defire it. They always falute the king in the fame manner as they would do an English nobleman; and he receives them with a diffinguished familiarity. He takes them by the hand, makes them fit down, and drinks to them : if it be the first visit, and the persons be directors, or commanders of thips, they are generally faluted with five or feven guns, when they leave the pa In the audience-chamber are two benches, one of which is broader than the other, covered with a cloth, and by it is an oval flool, whereon the king fits during the conferences. The other bench is covered with mats, on which the Europeass fit bareheaded, not by order, but from a vo-luntary defire of shewing proper respect to the sovereign, who entertains them in the best manner he is able during their flay, and endeavours to make his company as agreeable to them as possible. If they dine or sup with him, the table is fet out and ferved with greatelegance. While they are feafling, the king's grandees profisate themfelves before him, and feem readily and chearfully to accept what provisions are left by the Europeans to be given them.

With respect to the king's revenues, they see very considerable; for, besides what arises from his tands, he received a duty on all commodities sold in the markets, or imported in the country. His lighter not only fernish huma with provisions for his houshold, but allo for exportation, grant quantities being annually fold to the neighbouring risations. His property in this respect to two consined to the borders of Sabi alone, for his lands extend into several of the previnces. These are under the cognitance of the givernors, who take care of their being tilled, get in itte harder, and without the least expense to the king, lay up the produce in she royal miggather. Except the vice-royal-ties, become also the property of the king, thut this is inconsiderable, from the injury of his collectors, who make such depredations on their trust, that scarcely energy make floud be detected, they are subject to be sold, and their simily and effects conficated to the king; and their samily and effects conficated to the king; a trick of the samily and effects conficated to the king; and their samily and effects conficated to the king; a trick of the lamb of the king; and their samily and effects conficated to the king; a trick of the lamb, giveral fairs or markets are kept; not only

flouid be deteded, they are subject to be fold, and their family, and effects considered to the king's article.

"I'm Whiday, several fairs or markets are kept;" not only for the sale of saves, but also for most other commodities. Two of these are kept weekly, one as Sabi, and the other in the province of Aplogua, both of which are restreted to by prodigious numbers of merchants. But the most confiderable market is kept about a mile front Sabi, and is held twice a week, that is, on Wednesdays and Saturdays. The king's second wiver have liberty/to go to these markets to sell their clothes, and other trading articles, in the making of which they chiefly employ their time:

Their markets are subject to great regulations for when they are kept, is proper place is allowed for the sale of every different commodities. In order to prevent disorder and consultion amongs the buyers and sellers, the king appoints a judge or magistrate to attend, who, with four officers well of med, inspect the markets, hear all complaints, and in a summary way decide all differences, having power to select this magistrate, there is another appointed to latifyed the endeancy, which is called Todges, confishing of strings in the markets is another appointed to latifyed the endeancy, which is called Todges, confishing of strings in the confision of the first the province to latify the subject the great of the same to the first of the same coscupied by cooks or sutters, who fell provinces to the are obscupied by cooks or sutters, who fell provinces when since the endeancy and subject the same show and subject the same show the same shows the same show the sa

Booths are erected round the markets: forme of them are occupied by chola or futlers, who fell provisions veady adredled, as beef, pork; goats feths; acci others are for the fake of ride, knillet, main, and bread a and in form are fold opalm: wine; brandyl and pitolia kind of beet. In a fine for J. The principal commedities fold at Whidsh, fire; flaves; lockey; these, goats; poultry); and most kinds of fowls; lockey; these, goats; poultry); and most kinds of fowls; monkles and other animals; wire out of flavespean clots; lines and woollen; printed callicous; filks; grocery goods, climas gold in dust or basel lines in base or wrought. Abriding their tride runder great disadvantages, (though private traders work obliged to pay them was per cent!) they exclude the best have they exold in this mittainey, by lestening their attence about the iform; they incordingly withinker all supplies from the gerifon, staying them for this by their own management, or fairer; Charles fort, at the mouth of the river (dimbia: having the river) are the mouth of the river (dimbia: having the river). ohly twelvement, was taken by a privateer of eight gent in 1709, it Sierra Leona had but thirteen men is Sherbeo in No 29.

four-yimathiefe twies not any charge to the company; boy ing possessed by fisch, as having allong time-ensided in that fervice; by help of this soft interior interior in the fervice; by help of this soft interior in the source chapable of doing fomething for themselves; and to the pervise with traders, by degrees, got entirely quit of this duty; the reason in a manner ceasing for which it was first imposed. About the year 1719, their affairs feemed to revive again, under the adopted of the dute of Chamdeis; who became a very great proprietor in their flock; and promiled, from his figure and interest, a renewal of their privileger: more ships were employed than for many years past; but whether it wate their too large expence, or corruption of their chief officers, who too often in companies think they are fent aboud purely for their own fervice; they foot fort, that, withbut a separase act, they were incapable of contending with private traders; they applied to parliament for, relief, but instead of finding any, were disloved, and a new company crefted, by set of parliament;

The favourers of companies suggest, that is that trade be allowed, it seems better for the public, that some rich and powerful set of menshould have exclusive powers to encourage she shable them to maintain forts and garrisons, to swe the institue, sand praserve the trade from being engosised with the same proportion of their what proper have trading ships bring two or three boats with them upon whit coult for dispatch; and while the matte go away in them, with a proper parcet of goods and instructions, into the ricers and bye-places, the ship is making good her trade at others near hard.

The success of a voyege depends, first, on the well fortains, and on the timeing of a cargo. Secondly, in a know-

trade at others near hand.

"The fuecets of a voyage depends, first, on the well forting, and on the timeing of a eargo. Secondly, in a know-ledge of the places of trade; what, and how much, may be expected every where. Thirdly, in dramming well with English spirits; and conforming to the humours of the negroes. "Firstly, in timely farnishing proper food for the flaves." Fifthly, in dispatch; and, Lastly, in the good order and management of flaves when on board; of each a word or two.

me regross. Triffilly, in dispatch; and Laftly; in the good order and management of flaves when on board; of each a word or two, at the cargo: this depends, at feweral places; much unjoing of a cargo: this depends, at feweral places; much unjoing of the tegross; who make great demands one royage for a commodity, that; perhaps; they reject next, and is in part to be remedied; either by making the things they stechastive to pair off thofe they have not to anuch mind to; we by fach in continual traffic and correspondence on the coast, as may furnish the owner, from time to time, with quick intelligence, act be done only by great merchants, who can keep employed a number of filips; rithat; like a thread unites them in a knowledge of their demands; and a feadler supply for them, as well as dispatch for their maker's interests; by putting the purchase of two or three thips into one; Mr. Humphry Morrice was formerly the greatest private trader in this may; and, inhelis providence had fixed a carrie upon it, the subject of the foreings; this may be observed in general, that the windward cargoes i crystals; consist, and braffaries are one assessed in the crystals; consist, and braffaries are of the windward cargoes i crystals; consist, and braffaries for more braffs; and one of the subject of the su

fents) and are a ready purchase for fish, a goat, which, our stowless is a most of the story of

betweeter into their eye, and are pleafed where answered the fame menner. This passes for an engagement of shand-fecturity, and yet, after all this oremony, they is foundames return to shore; if hardy enough to come board, they appear all the time thy and frightened, and much least appearance of a penyarr, jump all over

board. "The property of the pr

whiten a fhip has gathered up all this trade, the makes up the deficiency of her freight at Anamaboe, three leagues below: cape Corfo, where they conflantly flop, and are formetimes two or three months in finithing. It is a place of very confiderable trade itself; and befides, the company of very confiderable trade itself; and befides; the company haves house and factor, keeping always a number of laves against these demands of the interlopers, who they are fensible want: disparch, and therefore make them pay a higher price than any where on the whole coast, felling a fix ounces and half a flava (in exchange for goods) though the poor greatures look as meagre and thin as their

writers of the trading negro, is no finall artifice for fucests. If you look firange, and are niggardly of your dram, you frighten him; Sambo is gone, he never cares to treat with dry lips; and as the expense is in English spirits, of two shillings a gallon, brought partly for that purpose, the good humone it brings them into, is found discounted in the late of the goods.

Another article is, the whole some victualling and mahagement of flaves on board. ... The common, chespell, und most commodious diet is vegetables, horse-beans, rice, Indian corn, and farine, or flour, the former, thips bring Indian corn, and farine, or flour; the former, flips bring with them out of England; ice they meet to windward about Serlow; Indian; corn at Montford; Anamaboe, &c. and further implies of them, or farine; at the illands of St. Thomas and Princes, mafters governing themselves in purchasing, according to the courie they defign to fiver. This book is accounted more falutary to flaves, and nearer to their actustround way of feeding than falt fifth. One or other is boiled on board at conflant times twice a day into dake, add former much meet in change have an advanced to the conflant times twice a day into a dab-a-dab (fometimes with meat in it) and have an over-feer, with a cat-of-nine-tails, to force it upon those that are follen and refuse to eat it.

are tollen and refule to eat it to a second and the which is when there was that great trade for flaves at Which is the commenders, while their furgeons, always attended on fhore, where they purchased them, in what they called a fair and open markets. The mater kept on board, receiving from time to time their mater's directions, as to the boods wanted, and to prepare the fally for reception and fecurity of the flaves fort him; where this is a rule through before the learnth material almost the is a rule through before the flaves for the land to the second the second the second the second to the second the second the second to the second the second the second the second to the second the second to the second always objected, to keep the males always a-part from the atways obfer triple fuch as are flurdy with chains round; their, necks); and to keep your own men fober, and on a barricaded quarand to keep your own men tootr, and on a parrical equation delivery though the natural cowardies of these creatures, and no other prospect upon rising, but falling into the hands' of the fame fort of regues that fold them, very much lesses the danger: hever theless it is advisable, at all times, to have a diligent watch on their actions, yet (bating their fetters) so treat thems with all gentleness and

civility "The bulk of them are country people, stupid in proportion to their distance from the converse of the coast neid in propornon to meny difference from the converte of the localt ne-groes; cat all day, if victuals is before them, or if not, let it glone without complaint; pair without tears with their wives, children, and country, and, are more affected) with pain than death; yet in this inducite flate; the wanter re-sult a modelly; for though flatped of that poor clout which covers their printies (as we know the Whidals ge-nerally do) they will keep founted all day long on beind, to hide them; they feel of the line were substantially to

nerative to) may will keep squares all any long on occurs to hide them; then here to not it has won anapara, each to both hand to so yet; other parts as a fleepy difference; and to wind ward, occupalishes. There are few inflances of deformity any where, eith their nobles know suthing of chronical differences, nor their ladies of the vapours. Their flattish nobel are owing to a continual gribbing in their inflancy against their mother's backs, being tied within the

beines, whether upon travel, or bufiness, for a year or two, the time of their funking.

When we are flaved, says our author; and out at festite comatonly inadjined the negtoes ignorance of navigation, will always be a fasguard; yet, as many of them thank themselves bought to eat; and more, that death will find them into their own country, there has not been wanted ing axamples of rising and killing a ship's company distant from land, though not so other as on the coast; a hundred to be the second of every day.

Slaves differ in their goodness: those from the Gold coast are accounted best, being cleanest limbed, and more docible by our settlements than others: but then they are for that very reason more prompt to revenge, and murder the instruments of their slavery, and also apterin the means

to compass it.

To windward, they approach in goodnies, as is the distance from the Gold coast; so as at Gembia, or Sierra Leona, to be much better than at any of the interjacent

To leeward from thence, they alter gradually for the worfe; an Angolan negro is a proverb for worthleffinds, and they mend (if we may fo call it) in that way, till you come to the Hottentots, that is to the fouthernmost extre-

mity of Africa.

We have observed how our trading is managed for flaves, when obliged to be carried on aboard the ship. Where there are factories (as at Gambia, Sierra Leona; the Gold coast, Whidsh, Calabar, Cabenda, and Angola) we are more at large 1 they are sold in open market on shore, and are examined by as in like meaner as our brother trade do beafs an Smithsfiel; the counts nance and flavence, a good set of seeth, pliancy in their limbs and joints, and being free of venereal taint, are the things inspected, and governs our choice in boying."

r choice in boying."

Before we conclude this account of the flave-trade, we thall give fome further particulars relative to the unhappy fituation of these wretches while on board the vessels, which is truly deplorable: they are all put in irons two by two, shackled together, to prevent their mutinying or swimming ashore. Such is the horror of their minds at which is truly attracted to prevent their muthrying or fwitnming afhore. Such is the horror of their minds at the thoughts of leaving their own country, that they frequently leap out of the cance, boat, or finje, into the fea, and keep under water till they are drowned, to avoid being taken up and faved by their purfuers. Captain Philips; who was commander of a Liverpool flave fhip to the coeff of Guiney, after marrating the shocking sufferings of a grear number of negroes who were chained and confined on board a freall ship, and the horrid barbarities exercised on some of them for a confipracy to murder the crew, and recover their liberty; makes this reslection: "Will not Christianity blush at this impleme factinge! May the relation of it force to call back the struggling remains of humanity in the hearts of those, twho, from a love of wealth, partake in any degree of this oppressive gain; and have the han effect on the minds of the fincere, as may be productive of peace, the happy effect of tree repentance for doctive of peace, the happy effect of true repentance for past transgressions, and a resolution to renounce all con-

Among other of the dreadful confequences arising from this diabolical traffic, we shall only take notice of the following memorable, but tragical event, which happened a few years ago on board a ship from Liverpool, then lying at anchor about three miles from shore, near Aera fort. They had purchased between four and ave hundred riegroes, and were ready to fail for the West-Indies. The men were stackled two and two, each by, one leg, to a small iton bur; thefe were every day brought on the deck for the henefit of the air, and left they should attempt to recover their freedom, they were made fast to two common shains, which were extended on each fide the main deck; easins, which were extended on each het the main deck; the women and children were looke. Such was the finantion of the flaves on board this veffel when it took fire from the carelofiness of a person who was drawing spirits by the light of a lamp; if he safe bushing the fire spread with such voolence, that in about ten minutes the failors apprehending it impossible to extinguish it before it would seach a large quantity of powder they had on board, concluded it accellary to shrow themselves into the lea, as the only

means of faving their lives. However, they first endeavoured to lose the chains by which the negromen were fastened to the deck, but in the consulion, the key being missing, they had but just time to loose one of the chains by whenching the staple, when the vehemence of the fire of increased, that they all but one man jumped overboard when imadediately the fire having gained the powder, the vessel blew p with all the slaves who remained fastened to the one chain; and such others as had not followed the simples. There happened to be three Portuguese va. In fight, who, with others from the shore, putting out their beats, took up about two hundred and fifty of those poor souls who remained allive, of which number about fifty died ofthore, being mostly of those who were fettered together by iron shackles, which, as they jumped into the sea, had broke their legs, and these fractures, being instance by the violence of their struggling, mortified, and occasioned their deaths. Those who remained allive were soon disposed of to other purchasers, for the benefit of the owners.

owners.

The Europeans pay for the flaves in gold duft, but the payments for other commodities r,e in firings of cowries, which, as we observed above, contain each forty in number. Five of these firings make what the nativer call a fore; and fifty fores make an alkove, which weighs about

fore ; and fifty fores make an alkove, which weighs about fixty pounds.

As the negro traders bring their gold from diftant places, fo they do the flaves they furnith us with, many of which are captives taken in war by the negro kings; and having; agreed with the European merchants for the price of the goods they are to take in exchange, a fhip is foon dispatched, if they deal fairly; but if a merchant delivers his goods before he has his flaves, they will fometimes make him wait a great while, and, perhaps, put hard conditions upon him. It is computed, by travellers, that about forty years ago there were ar usully exported from the whole coaft of Guiney, feventy account diverse his whole coaft of Guiney, feventy account diverse and upwards, by the English, Dutch and ortougue; but the country where the greatest number of slaves were purchased, till of late yers, was the kingdom of Whidah, or Fida, for that reason usually called the Slave coast.

The revenues arising from the flave trade are very con-

utually called the Slave coaft.

The revenues arifing from the flave trade are very confiderable, the king receiving three rix-dollars for every flave fold in his dominions, Every European veffel allo plays him a pecuniary duty, excludive of prefents, which they make to the king for the liberty of trading, and his protection.

" SECT. VI.

Treate of the revolution in the kingdom of Whidab, by the con-quest of it, and that of Ardrah, by the king of Dahome.

WE shall now give a relation of the conquest of the kingdom of Whidah by the king of Dahome, and the revolution that happened there in the year 1726.

Sabi, the chief town in the kingdom of Whidah, is situated about seven miles from the fea-side. In this town the king allowed the Europeans convenient houses for their factories, and by him we were protected in oar persons and goods, and when our business was finished, were permitted to go away in safety. The road where thiss anchored, was a free port for all European nations trading to those parts for negroes. And this trade was so very considerable, that it is computed, while it was in a flourishing state, there were above twenty thousand negroes yearly exported from thence. from thence.

from thence.

The land was well stocked with people, the whole country spiceared full of towns and villages: and being a very rich foil, and well cultivated by the inhabitants, it looked like a garden. Trade having flourished for a long time; had greatly enriched the people, which, with the fertility of their country, had unhappily made them so proud; effecting, and luxurious, that though they could have brought at least one thundred thouland men into the field, yet to great were their fears, that they were driven out of their principal city by two hundred of their enemies, and at last lost their whole country to a nation they formerly contemired.

contemited...

The king of Dahome, a far inland prince, who for some years pail had rendered himself famous by many victories gained over his neighbours; fent an ambassidor to the king of. Whidah, requesting to have an open traffic to the fea-field, and offering to may he usual enterms on magness exported, which being refused, he referred the affront, and invaded Ardrah, the most morthern prevince

of the kingdom of Whidah, of which a great lord, named Appragah, was heredit my governor, who forthwich fint to the king for his affidance; but through the interest of his enemies at court, who wished his destruction, he was refused; so having made a little resistance, he submitted to the king of Dahome, who received him with every demonstration of kindness.

The conquest of Ardrish gave the king an easy sistence into the heart of the country, but he was obliged to halt there by a river, which was about half a mile to the northward of the principal town of the Whidah, called Sabi, the residence of their king. Here the king of Dahome encamped for some time, not imagining he could have found to easy a passage and conquest as he mat with afterwards. For the pass of the river was of that nature, it might have been defended against his whole army by sive hundred resolute men; but instead of quarding it, these cowardly luxurious people, thinking the fame of their numbers lufficient to deter the Dahomes from attempting it, kept no set guard. They only went every meaning and and evening to the river side to mike striss, as the passage in it; that is, to offer facrifice to their principal god, which was a particular harmless sinks they adored, and played to on this occasion, to keep their enemies from coming over the river.

prayed to on this occasion, to keep their enemies from coming over the river.

In the mean time the king of Dahonie, sent to the Europeans, then residing at Whidah, to assure them, if they should receive no damage in their persons or goods, in case he proved conqueror; and he would ease their trade, and remove divers impositions laid on it by the king of Whidah: on the contrary, if they speeared spaint him, they must expect his resentante. They would gaidly have retired from Sabi to two mud-walled forts, belonging to the Engalish and French African companies, which are within three miles of the sea side; but finding it would have been resented by the king of Whidah, as a discourigement to his people, they were obliged to remain in the town, never suspecting the inhabitants would have run away in that cowardly manner they did, or that they should feare the face of war with them.

The pass of the river being left wholly to the care of

of war with them.

The pass of the river being left wholly to the care of the snakes, whom the enemy little feared, and they having observed for several days, that the Whidahi kept no set guard there, it encouraged the king of Dahome's general to fend two lundred of his soldiers to ford the river; which having done without opposition, and being bold follows, they marched towards the town of Sabi, sounding their musical instruments. This was about three o'clock in the afternoon, and the out-guards of the town were almost all assets, and shouts, they sled into the town, reporting that all the Dahome army was got over the river, which soon reaching the king's ear, he immediately sled with all his people, making no resistance. The white people, then in the English and French forts, affirmed that about five o'clock the same afternoon, they saw setting markets the second of the same afternoon, they saw setting the same afternoon and the same afternoon, they saw setting the same afternoon and the same and the same afternoon and the same afternoon and the same an in the English and French forts, affirmed that about five o'clock the same afternoon, they saw such numbers of people flying from all parts of the country, towards the seafide, that it was very furprizing: for the fields were covered with them many miles round, and their black colour made them the more conspicuous in a clear fan hining day, on a fine, flat, champaign country. The king, with a great number of his subjects, fied to an island on the sea-coast, which was parted from the main land by a tiver, having ferried over in cances, but a great many that could not have the same benefit, being hutried on by their fears, were drowned in the rivers, in attempting to four to the were drowned in the rivers, in attempting to fwint, to the ifland lying near Popo, which was the next country to their own on the fea coast to the westward, and where they

tilana lying near ropo, which was the next country to their own on the sea coast to the west wird, and where they might have been secure from their enemies. Many thousand down the poor people, that sheltered themselves up and down the country, among the bushes; pertited afterwards by sword and famine.

But to return to the Dahoure soldiers: when they first came to Sabi, it seems they mirched directly to the king's court, where, not finding him they set it on fire, and then sent their general word what had happened, who brought the whole army over the river that evening. He was in such surprise at his good fortune, that he could hardly believe what he saw; and the white gentlemen were as much amazed to see the great cowardice of these people, who had vapoured so highly, and as ignominiously quitted the town, without opposing their enemies in the least, leaving them entirely in the power of the conquerors, with all their riches. The day after the taking the town of Sabi, the white men taken prisoners were sent into the country to the king of Dahome, who then lay encamped with another.

thet army, about forty miles off in the kingdom of Ardrah 1 fome hammooks being provided for the principal white people, which is the usual way of travelling in this country for gentlemen, either white or black.

Some few days after their arrival in the king of Dahome's camp, the Europeans were fet at liberty, and suffered to return to the English and French forts, the principal gentlemen being preferred with flaves; and the king assured them, as foon as his affairs were fettled, he should encouling trade, and have a particular regard to their interests:

Captain Srelgrave relates, that he arrived at Whidah in the latter end of March 1726-7, about three weeks after this conjuett, and found that three country, lately excepting populous how deftroyed by fire aid livord; that the flaughter of the inhabitants was a most moving speciacle, the fields being in a manner covered with their car-

the fields being in a manner covered with their carcaffes.

From the road of Whidsh, the captain failed to Jaqueen, a port about feven leagues to the eastward of it; this people having fubmitted to the king of Daltome, and were then under his protection.

The king of Dahome, hearing of captain Snelgrave's arrival on the coaft, with an intent to trade, invited him to his camp, which then lay about forty sailes up the country, whither the captain went, being furnished with horfes, harmtocks, fervants, and all manner of accommodations for his journey. The day after his arrival at the camp, he had an audience of his negro majety, of which the captain gives the following account, (viz.). The king was in a large court, palifideded round, fitting (contrary to the custom of the cauntry) on a fine git chair, which he had taken from the king of Whidah. There were held over his head, by women, three large umbrellas, to finde him from the fun, and four other women flood behind the chair of flate with fuses on their floulders. It was observed that the women were finely dressed from the middle downward (the custom of the country being, not to cover the body upwards of either fex.) Moreover, they had on their arms many large muscless or rings of gold, of great value, and round their necks, and in their hair, abundance of their country is wells, which are a fort of beads of diversed ours, brought from a large inlant country, where they are dug out of the earth, and are held in the fame efterm by the negroes, as diamonds are to led, which

ropeans.

The king had a gown on, flowered with gold, which "The king had a gown or, flowered with gold, which reached as low as his ancles, an European embroidered hat on his head, with fandals on his feet. We being brought within ten yards of the chair of flate, we paid his majefly the respect of our hats, bowing our heads at the fame time very low, as the interpreter directed us. Then I ordered the highlift to acquaint the king. That on his majefly's fedding to defire me to come up to his camp. I forthwith refolved on the journey, that I might have the pleasure of feeing fo great and good a king as I heard he was, relying entirely on the promises his medienger had made me in his majefly's hants." The king feemed well pleased with what I faid, and affured us of his protection and kind usage. Then chairs being brought, we were defired to fit down, and the king drank our healths, and then liquor being brought us by his order, we draik his majefly's. After this, the interpreter told us, "It was the king's defire we should say some time with him, to see the method of asying the soldiers for captives taken in war, and the heals of the flain.

It so happened, that in the evening of the day we came into the camps, there were brought and the distance of ix days journey.

hundred captives, from a country called Tuno, at the diffance of his days journey.

"The king, at the time we were prefent, ordered the captives of Tuffo to be brought into the court; which being accordingly done, he chofe himfelf a great number out of them to be facrificed to his fettih, or guardian angel; the others being kept for flaves for his own use, or be fold to the Europeans. There were proper officers who received the captives from the foldiers hands, and pald them he walve of twenty fullings, for every mon, in received the captives from the foldiers hards, and pald them the value of twenty fillings feeling for every man, in cowries (which is a field brought from the Eart Indies, and carried in large quantities to Whidah by the Europeant, being the current money of all the neighbouring countries far and near and ten shrillings for a woman, boy, or girl. There were likewise brought by the foldiers formethousings of dead people's heads into the court; every foldier, as he has fueces, bringing in his land one, two, three, or more heads hanging in a string; and as the proper officers received them, they paid the foldiers five shill

lings for each head: then feveral people carried them away in order to be thrown on a great heap of other heads that lay near the came, the ling till telling us, his majelly defignate build a monument with them, and the heads of other carmies formerly con puered and killed."

The captain afterwards went to fee the manner of fiverificing their enemies. "Our guard, fays he; mixib way for us through the crowd, till we came hear foint final flages, which were recled five feet from the ground; we flood close to them, and observed the cremony, which was performed in the following manner:

"The first violin we faw was brought to the fide of the flage; it was it conicly old man, between fifty and flary years of age; it is leaded were teld behind him, and in his behaviour he flewed a brave and undaunted mind, nothing like fear appearing in him. As he shood upright by the flage, a fettifler, or prieft, laid his hand on his head, faying fome works of confectation, which lasted about two ministes; then he have the fign of execution to a man this shood behind the victum, who, with a broad fword, immediately firsted him on the neck with such force, that the head was fevered at one blow from the body; whertupon the riabble gave a great flow. The head was east on the flage, and the body, after having lair a little willie on the ground, that the blood might drait from it, was carried away by flaves, and thrown into a place adjoining to the camp. "The linguist told us, the head of he victim was for the kade," the blood for the fettiffe, or god, and the body for the comander, "I he head of the victim, was for the kade," the blood for the fettiffe, or god, and the body for the head was the victim was for the kade, the shood for the flages bold and unconcerned; but he crite of the poor women and children, were very moving. "I told are officer," were very moving. "I told are officer," I wondered they flood the moving of the flage and officer, were very moving. "I told are officer, if wondered they flood the moving of the flage and o ern. eed it this lamentator manner, and observer, that the mere went to the fide of theiltages bold and unconcerned; by the cribe of the poor women and children, were very meving. 'I feld an officer,' I' wondered they should the cribe to many people, of whom they might otherwife make good advantage by felling them.' He replied, 'I know ever been the cultom of their riation, after any conquest, to offer to their god a 'certain' number 'of captives, which were always choic out from among the prisoners by the king himself; for they firmly believed, thould this be omitted, no more factors would attend them: and he affected from more factors and and and within a few years, without any defeat. 'Then I asked him, 'Why, 'fo many old men were facrificed in particular?' He sinfwered,' It was best to pus them to death; for being grown wife by their age and long experience, if they were preferved. They would be ever plotting against their masters, and fo disturb their country, for they never would be easy under savery, lawing been the chief men in their own land: moreover, if they should be spared, no European would buy them on accounted their and, then observed to him. their country for they never would be easy dane lawery, if they should be spered, no European would buy them on account of their, age. I then observed to him. That I had seen seen a successive their age. I then observed to him. That I had fern several handsome young people facrificed, without was successive the successi

Sabi, the capital of Whidah, is very finall in comparison
to what it was belowed its being reduced to affice by the
king of Dahome. At that time it was at least four miles
in circumferance. The houses were nearly built, and the in circumferance. The houses were nearly built, and the firetes were long, spacious, and uniformly disposed. The houses belonging to the factors were built in the Edropean tatle, and contained many near and commodious loast rights; on the first floor of each was a specious hall, with an elegant balconfy; in front; and beneath, on the ground-floor, were warehouses for the stowing and preservation of their goods. The town was so exceeding populous, that notwithstanding the breadth of the fireten, it was signatures a difficulty to pass them. Markets were daily held in different parts of the city, where various store of European's well as Artical Commodities, were explical to built time, as also abundance of all study, as grownous. Near the European factlesis was a stational passe or in manifel with long and the unified stress. In the which the merchants and governors of the forte every day aftentive to thanket business. But there is the town larger terms. fixty hing

nant left of the magnificence and (plan that we get this populous city, finen all these sine places were destroy by the king of Dahome's army!

There is a small town called White the sine places were destroy by the king of Dahome's army!

There is a small town called White the surpeans generally land at this place when they dome to trade on the Slave coast. Here the English have a large fort, called fort Williams, consisting of sour strong batteries, on which are mounted seventeen pieces of cannon. At a small distance from this is another lichnights to the French, which is encompassed by a thick mud wall, as is also that belonging to the English: It would be a dissent matter for an enemy to surprise these two forts without alarming the garrison, as there is a deep and broad ditch to each of them, at some distance from the wall.

SECT. VII.

Of the boundaries and extent, produce, inhabitants, their cuf-toms, religion, laws, Sc. of the kingdom of dravab; also an account of the kingdom of Dabone, its climate, inhabitants, animals, Ue.

THE kingdom of Ardrah, or Arder, is bounded on the east by the kingdom of Benin; on the west, by that of Whidsh; and on the south, by the golf of Guiney; but how far it extends northward, and what country it borders upon that way, is not known. It is very harrow towards the sea, but widens considerably, and is divided into two parts, distinguished by the names of Great and Little Ardrah. It lies in three degrees sive minutes east longitude, and five degrees north latitude.

This kingdom is not so considerable as that of Whidah, but is very populous and contains many good towns and villages. The country in gerieral is very flat, and being well watered by several small rivers in different parts of it, the foil is exceeding fertile, and produces great quantities of Indian wheat, millet, yams, potatoes, as also several kinds of fruits; particularly pine-apples, bananas, cocoaauts, oranges, and lemons.

The manners, customs, religion, &c. of the Inhabltants of this kingdom differ little from those of Whidah. The dress of the men consists of several coths, the mansfacture of the country, wound round the waist, and fastened with a girdle: but the better fort were two short petiticoats, made of castesty, or other silk, and have filk fears in the form of shoulder-belts. They mostly go with their heads and feet hare, though they are permitted to wear sandals, and hats or bonnets, except in the king's presence. The women of rank also wear petiticoats and fears, but, like the men, they have not any covering either to their heads or feet. The poorer fort have only short cloths but, like the men, they have not any covering either to their heads or feet. The poorer fort have only thort cloths ried about their waift, the other parts of their body being intirely naked. Both fexes are exceeding cleanly in their naked, the other heads over morning and evening perfons, washing their bodies every morning and evening

persons, washing their bodies every morning and everting in pure water, and anointing themselves with civet, or fome persume of an aromatic flavour.

Rice, pulse, herbs, and roots, with beef, mutton, and dog's fieth is their common food: their ordinary drink is the beer called pito, which they generally mix with water: palm-wine is the drink of the better fort.

Fishing, boiling of falt, and trading, are the employment of those who live near the sea-fide; but the inland inhabitant delicate their, time to the breeding of satte and

habitanta dedicate their time to the breeding of cattle, and the cultivation of their lands.

the cultivation of their lands.

These people are in general exceeding illiterate; few of them can either read or write; for which reason, in buying and selling of goods, they make use of cords tied in knots, each of which has a particular signification known only to themselves, and those who are accustomed to deal with them. Some sew of the richer fort understand the Portuguese tongue, which they not only speak fluently, but also read and write with great accuracy and propriety.

They allow polygamy here as at Whidah, every man being allowed to take as many wives as he thinks proper. As no difference is paid to birth or fortune, the poorest man has liberty to pay his addresses to a woman of the greatest quality; but if the rejects him on the first visit, he is not allowed to make a second. Little ceremony is used in their marriages, the chief thing consisting in the mu-

in their marriages, the chief thing confifting in the mu-tual confent of the parties, and their respective parents: when this is obtained, the bridegroom presents his bride with a callico paan, and invites all her relations, and his own, to an entertainment: when he declares to the company, that he takes the woman for his wife, and this public acknowledgment conflitutes the marriage.

Men of condition marry girls at ten or twelve years of

age, but they do not confurm a the narriage till they have kept them feveral year in the character of fervants I when the time is fixed to cohale g, they prefer their bridge in a piece of the or a front frock, and the relation both particular invited are elegant enter-

tain many their destination of the property of

such gross dolaters, they acknowledge one fupreme Besing, who, they believe, appoints the time when every perfori shall come into, or go out of the world; notwithstanding which, they tremble at the very mention of death, and are greatly alistmed at sickness.

If a perfon is taken ill, he sends for a priest, who immediately goes to him, and facrifices some animal for the recovery of his health. The priest rube the patient's fetish with the blood; but throws away the field of the animal.

recovery of his health. The prieft rubs the patient's fetifit with the blood, but throws away the fielh of the animal.

The high prieft appoints the fetifites belonging to the king and court; these are birds of a black hue, not unlike the crows in England; prodigious numbers of them see kept in the gardens of the palace, and it is equally criminal to pay diffespect to them here, as it is to the grand ferpent at Whidah. The common peoples fetificae consist of a particular stone, a piece of wood, or some other mantimate substance, which they always keep hid in their house under an earthern pot; once in every fix months they make an offering to the priest in honour of their fetifith, at the same time asking the shol several questions relative to their future welfare. If the priest thinks the offering too insignificant, he tells the people that the fetifith does not like it; and will not answer his questions till he has one to please him. On this the perfon enlarges his offering, and then the answers are delivered by tile priest in a low voice, which the superstitious blacks imagine to be effected by some secret impulse of the fetish. The oracle thus delivered, the priest covers the idol with the pot, and sprinkles it elther with beer or meal. The like is done to every person present on this occasion:

The people consider the priests in general in the most respectable light; but the great marabout, or high-priest, is perfectly adored by them. They imagine him to be an infallible diviner, and that he can foreted things by conversing with an awkward image, which he keeps in his hall of audience, where he receives visits from his credulous devotees. This image is painted white, and represents a child, which the marabout tells them can communicate to him such circumflances as shall arise from their future condust. When they go to consult the marabout, they present him with the best offering their circumflances will assort and the intelligence of their future success or misfortunes is principally directed in proportion

victed of adultery, and other crimes.

Aftem is the most diffinguished place in Ardrah; but the Europeans call it Great Ardrah. It is the capital of the kingdom, and is fituated about fixteen leagues inland to the north-west from Little Ardrah, a spacious road to the north-west from Little Ardrah, a spacious road leading from the one to the other. It is encompassed with four walls of earth, which are very lofty and substantial; each wall has a large and deep ditch, but they are all within, and over them are wooden bridges. The houses are in general well built, and the streets regularly formed. The king's palace is a spacious edifice, though greatly inferior to the original building, which the king of Dahome deaftroyed in the year 1720. At that time the palace confissed of many large courts intirely surrounded with portices, above which were apartments that had small wincoes, above which were apartments that had fmall windows. Some of the floors of thefe apartments were covered with mats, and others with large Turky captes, and the furniture confifted of eafy chairs, cabinets, and porcelain brought from China. There was not any glass

in the windows, but only frames of white lines, and tafferty curtains. The gardens belonging to it were very extensive, and laid out in long vistas of thick and lofty trees, which efforded a cool and shady retreat when, the fun was intensifely hot. The present palace, however, is far from being comremptible.

The king a court is kept with great splendor, though his majesty, like the sovereign of Whidah, is dependent on the king of Dahome. He feldom goes abroad, and when he does, it is in so private a manuer; that see of his subjects see him. He keeps a great number of women, with whom his time his chiefly employed a the principal of these has the title of queen; with this percogative, that, the has the liberty to fell some of his other wives to supply her waste, in case his majesty denies her any thing the has occasion for.

occasion for.

No perfon whatever eats lit company with the king and when he drinks, an officer makes a fignal, by firthing two fmall rods of iron together, in order that all who are within fight may turn away, and not look at his majefly a for it is a capital offence for any one to fee him drink, and

within fight may turn away, and not look at his majety, for it is a capital offence for any one to fee him drink, and is punished with death. An instance of this was once seen in an instant, who being affeep by the king, was awakened by the noise of the rods; and his majetly observing that the child east its eyes at him while the cup was at his mouth, ordered it to be put to death immediately.

When a person presents any thing to the king, it is offered kneeling; and the like respect is shewn even to the provisions fet on the table. They who happen to be in the way of the officers who carry them, prostrate themselves with their faces to the earth, and dare not rise till the distinct are carried out of their fight to the king's table. The king of Ardrah treats the Europeans with a very distinguished respect. When any one goes to Assen, to obtain an audience of his majesty for liberty to trade (which must be done by every one that comes for that purpose,) he is lodged in the palace, and a genteel prevision is daily made for him at the king's expence. On the day sixed for the augience, he is introduced to his majesty by the captain of commerce: when he enters the hall jeffy hy the captain of commerce: when he enters the hall where the king is feated, his majeffy immediately rifes, and advances force steps to racet him; he then takes him by the hand, presses it in his own, and three times successively the hand, prefies it in his own, and three times fuccessively touches his fore-finger, which is the greatest token that can be given of amity and friendship. After this, he defires him to sit down by his side on neat mats spread on the floor; which being complied with, he then lays his presents before the king, and, by an interpreter, communicates his business; the answers to which, the king returns through the fame channel. As foon as the audience is over, the European goes, with his attendants, to the house of the high-prieft, who, in respect to the king, provides an elegant dinner on the occasion; after which, he fends for his gant anner on the occasion; after which, he lends to I his wives, and entertains his guefts with dancing, mulic, and fuch other diversions as are usually practifed in this part of the country. The following day a licence is granted to the European for liberty to trade, and the same is made known by the public crier, who receives forty braffs rings, become and a piece of leth for his trouble.

Slaves are the chief commodity the Europeans purchase here; and the articles they fell the natives confit of cowries there; and the articles they tell the natives connit of cowries (which are the current coin of the kingdom), flat iron hars, gilt leather, white and red damafk, red cloth, copper bowls or cups, brafs rings, beads or bugles of feveral colours, looking-glaffes, guipowder, mufkets, firelocks, &c.

The town which is called by the Europeans Little Ardrah, and by the natives Offia, is large and populous, and, like the capital, is inclosed with mud walls. The Dutch

had once a fort here; but their factor being killed and the land laid walte by the inhabitants of Popo, they fled, and for fome time deferted it; however, they have a conland laid walle by the inflabitants of Popo, they fied, and for fome time deferted it; however, they have now a factor there, as have also the English, each of which has a very large and elegant house; and they both, but particuly the Dutch, carry on a confiderable trade in slaves.

The town of Jacken, or Jackin, situate between Great and Little Ardrah, is of considerable extent, and inclosed with a thick and losty mud wall. Here the English have

a factory; and the governor's house is a spacious building,

Grand Foro, a large village, lies a little to the north of Jacken, and is remarkable for having a kind of inn for the accommodation of travellers; as there is not, in any other part of Guiney, a convenience of that fort to be

Dahome, whole powerful king subdued Ardrah and Whidah, as related above, is situated to the north of the Slave coaft, and extends a confiderable way in land.

boundaries on the west, north, and saft, are oncertain.
This is a very wholefore country, as it lies high, and is
daily refrehed by fine cooling breezes; and the kingdom
of Great Popo, though at a confiderable diffuses, may be

feen from it.

Abomay, is fituated two hundred miles up in the inland country it he king has his palace in this town. He is a very powerful prices, and always keeps a confiderable fletuding army, but it confiits only of foot foldiers. He has for his encules a nation called Joes, who live a great way to the florith towards Nubia, and all fight on horfebacks. These two powers have been frequently at variance with each other, but they have been upon good terms, fince the treaty, which was unantimoully agreed to, was fornied between them forms sew years ago.

Adjoining to Ardrah is the kingdom of Benin, which extends about fix hundred miles from east to west; but its extent from north to footh cannot be afcertained. It is

extent from north to fouth cannot be afcertained. It is bounded on the east by the kingdoms of Mujac and Ma-koko; on the west by Ardrah, and part of the gulf of Guiney; on the fouth, by Congo; and on the north, by part of Gago and Biafara.

This is in general a very low and woody country well watered with rivers, the most diffinguished of which is that called by the English and French the river Benin; but by the Portuguese Kio Formosa, or the Beautiful Kiver. Its length and fource are not known, but its branches are supposed to extend through most parts of the neighborium constraint. bouring countries. Its lanks are exceeding pleafant, being ornamented with lofty trees, and many finall but neat villages.

The noxious vapours exhaled from the low grounds by the heat of the fun render the climate of this kingdom rather unwholesome, but the foil is tolerably fortile, and well adopted for the produce of millet and rice; but as the in-habitants are not foul of those grains, little of them are cultivated. Their printipal attention is directed to the produce of yarus, which they use instead of bread; and they have also great plenty of potatoes and other roots. The chief fruits here are oranges, lemons, and bananas; and they have fome cotton and pepper-trees; the latter of which produce a tolerable commodity; but not in fuch quantities,

duce a tolerable commodity, but not in fuch quantities, neither are the corns fo large, as those of the East-Indies. In this country, the wild beafts are, tygers, leopards, bears, and monkies. The tame ones consist of horses, cows, sheep, dogs, and cats the two latter of which the natives prefer to any kind of stells whatever. They have also great plenty of poultry, and the woods abound with game, as harts, hares, tilrtle-doves, pheafants, par-

tridges, &c.
The people inhabiting this kingdom have each their particular king; all of whom, except the king of Overri, are slaves or vassals to the king of Great Benin. The naare inves or values to the king of Great helm. It he na-tives in general are good-natured and obliging, particularly to Europeans, and if the latter compliment them with prefents, their liberality, is fure to be doubly returned. When any favour is afked of them, they will ufe their ut-most endeavours to grant it, even though it may in some degree be prejudicial to themselves. To use gentle meaagree of prejudent to themicities. To the gentic mea-fures, is the only way to fucceed in whatever is wanted; and in that case it is their greatest pleasure to oblige the person that applies to them: on the contrary, if they are treated with violence, no people in the world can be more refractory; and then they will take as much pains to in-jure, as they would at other times to serve you. Among themselves, they carry the appearance of civility and complaifance, but in reality they are very close and referved, specially in their dealings, not caring to trust each other. The traders are very attentive to bufiness, and remarkably tenacious of their old cuttoms; and a foreigner may easily deal with them, if he complies in this particular.

There are four classes of inhabitants in this kingdom a

the first of which is composed only of three persons, called great lords, or great men, who are always near the king's perfon; and whoever wants to obtain any favour from his majefty, mult apply to these people, who acquaint the king with their defines, and return his answer. As there is no intermediate person between these, the king, and he who folicits favours, they act on these occasions in fuch manner as beil fuits their own interests; fo that in reality the whole government is intirely in their hands. How contradictory loever their conduct may be to the intentions of the king, yet it can never be known, as no other persons are admitted into his presence, except those

in a public capacity.

The ores de roes, or road chiefs, who are of four forts, are the fecond rank or class of people here: the

four anest meanest preside over slaves; those a degree higher over the low tabble; the third inspect the condad of those-encemend in bulandry and agriculture; and the fourth, or superior order, superintend the military. These people are very numerous, and from them are chosen the viceroys and governors of those countries subject to the king. They are all under the command of the three great men, and are responsible to them on all occasions. They obtain their posts by the recommendation of these three bods; and the king, as an entign of their honour, profents each of them with a shing of coral, which they are obliged continually to wear about their necks. They are made of a fort of pale carth or stone well glassed, and greatly reformable variegated marble. The postessors must be very careful of them; for if any one should lose this badge of honour, whether by degradation, but he would be put to death for it.

The sindors, or brokers, are the third class; they are appointed by government to see that all matters of commerce are fairly transacted between the "respective partles and their business is to treat with the Europeans on behalf of the traders of Renin.

and their busines is no treat with the Europeans on behalf of the traders of Benin.

The commonity form the last class. The generality of these are very indolent, nor will they go to work but when necessity obliges them: the laborious part of their business is executed by the wives, such as tilling the ground, pinning of cotton, weaving of cloth, and other handicrasts. Smiths, carpenters, and leather-diesser, are the principal artificers amongst them.

The negroes here (particularly the better fort) dress in a white callico or cotton cloth, which is fastened round the walst, and neatly plaited in the middle, but the lower and tupper parts of the body are intirely naked. The dress of the meaner fort is of the same form, and only differs in the quality of the stuff it is made with.

Callico paans are worn by the wives of the granders to

the quality of the ftuff it is made with.

Callico panns are worn by the wives of the grandest thofe were in this country, are very fine, and besutifully variegated with different colours: they are fastened round the waift, and the upper part of the body is covered with a piece of cloth about a yard long, which serves instead of a vail. Their arms, legs, wrifts, and singers, are ornamented with copper or iron rings; and they wear necklaces of coral agreeably disposed.

The men let their hair grow in its natural form, and take but little pains with it, except buckling it in two or three places, in order to hang a great coral to it; but the women's hair is artificially formed into large and similar buckles and divided on the crown of the head, so that the latter are placed with great uniformity. Some of them oil their

are placed with great uniformity. Some of them oil their lists, by which means it lofes its black colour, said in time turns to a fort of green or yellow, which they are very fond of, but to a stranger it has a disagreeable appear-

In this country, when a great man goes abroad, he is attended by a number of fervants, all of whom are armed, attended by a minuter of revealts, and water are meet, fome with fipears, others with long darts, and fome with hows and arrows. He ufually rides on horfebeck, and fits on the beaft fideways, as the women do in England. One of his attendants holds an umbrells over his head, to fhelter him from rain, or the violent heat of the fun; and another goes before leading the horse. The only security of the rider confists in his resting the left hand on the shoulder of one of his attendants, for they use neither bridles nor faddles.

There are very spacious and losty buildings in most of the towns in this kingdom, but they are differently constructed, some of them being square, and others of an oblong form. The doors are made high but narrow, and the windows are few in number and exceeding small. They are all made with a flat roof, on the top of which is a coand when they pay a vifit to each other, they frequently regale themselves here. vering raifed leveral feet, to keep off the hear of the fun;

gale themselves here.

Persons of condition live well, but not luxuriously: their principal diet consists of beef, murton, or chickens, and for bread they use years, which, after being boiled, are beat fine, and made into cakes. Their common drink is water, but sometimes they mix brandy with it. The pooter fort live or dried fillt, yams, bananas, and pulse; and sheir drink is water, or a kind of beer, somewhat resembling that drank on the Slave coast, called pito.

There allow rollerance beers with the fairst prince as on.

They allow polygamy here, with the fame latitude as on the coast of Guiney; and their marriage ceremonies confift only in the content of the parents, and an entertainment for the guelts on both fides. The great men are exceeding jealours, for which readon the wives of the poor people enjoy a pleasure to which the those of the botter for are intire frengers, for while the wives of these latter are close confined, to obviate all opportunies of tranf-graffion, the forsites have the full enjoyment of their li-

greffion, the fornite have the full enjoyment of their liberty.

All the bdys both in this country are prefented to this king as his property, for which reason all the meles are alled the king's flaves, but the sensies are the property of the father, who has liberty to dispose of them as he please. If a woman happens to be 'telivered of two clildrent at a birth, immediate information of it is given to the king, who orders public rejoicings to be made on the occasion. Such circumstances are considered as hap-v omensin all the territories of Benni, except at a place called Arabo, where they are productive of the most horrid cruelties: for the people there generally faceristic both the woman and children to a certain dentou, which they say hinhabits a wood near the town. Sometimes, indeed, they will spare the wife, by the hustrand's offering a sumale slave in her stead, but the children are considerated without redemption.

It is affirmed by Hosinan, that while he was at this town in 1699, he knew a merchant's wife thus redeemed, but her children were destroyed, whose sad sing as the same delivered of two childrent; whose sad sing as the same writer, the like happened to the wife of a priest: the was delivered of two childrent; whom, with a slave in his wife's room, the father was; by virtue of his office, himfelf obliged to facrisice with his own hands. This shocking custom still prevails in that town; hut of late year, they that are enabled to defray the expence, avoid the confequence, by feeting their wives to a more humane part of the country, when they draw near the time of their delivery.

Circumcission is practised on both sexes, which is per-

delivery.

Circumcifion is practifed on both fexes, which is performed when the children are about a fortnight old; but they can give no reason for this custom; only saying, that it was handed down to them by their ancestors. They also inside another positioners to the children by pinking their bod mi, that is, making incissions in different parts, in a fort of regular order, and leaving the marks of birds, beatls, and other figures. The girls undergo the greatest punishment in this particular being much more marked than the boys; for their parents are very liberal in beflowing these marks, which are considered as the greatest ornaments they can have.

ornaments they can have.

The thoughts of death are not fo terrifying to the ne-The thoughts or death are not to territying to the negroes of llenin as to their neighbours on the coaft of Guiney. When a person falls fick, he inimediately applies to the prieti, who also acts in the expicity of physician, and furnishes him with medicines; but if these prove intercetual, he has recourse to shortifices. If the patient recovers, the pricft is rewarded for his affiftance; but no farther regard is paid to him: fo that the priefts here are generally poor, having little other dependence than what generally poor, noting the samply class; for without apply-ing to the prieft, each man offers his own facrifices to his idols, and think they fufficiently acquire themselves of their

idols, and think they fufficiently acquit themselves of their religious duties.

On the death of a person, the corpse la kept only one day before interment, except he happens to die at a distance from his general place of residence; int which case, in order to preserve it for conveyance, it is dried over a gentle fire till all the mositure is extracted, when it is put into a cossiin, and publicly exposed; after which, it is carried on mens shoulders to the place of interment: When the funeral is over, the nearest relations go into mourning, and hewail their loss by cries and lamentations. The show of bewail their loss by cries and lamentations. The flew of mounting confifts only in thaving their heads, fome half-way, and others half-over; and the men thave off their

beards on thir occation.

Many flaves are facrificed at the burial of a grandee; but the greatest number fall victims on the death of a king. The ceremonies attending a roy funeral in this country are very fingular, and thus deferied by Barbot, who was once an eye-witness of them: "As "oon, fay he, as the king of Benin expires, they dig a large pit in the ground at the palace, to deep, that the workmen are fometimes in danger of helm expired.

Palace, to deep, that the workmen are fometimes in danger of being drowned by the quantity of water that fprings from the earth. This pit they make wide at the bottom, and very narrow at the top. They first let down the royal corps into it, and then such of his domestics, of both fexes, as are felected for that honor, for which there is great litterest made. These being let down into the pit, they shut up the mouth with a large stone, in the presence of a croud of people, who wait day and night at the place. The some is removed the next morning and some proper officers alk the persons inclosed, if they tound out the king? If they answer, the pit is thut up again, and the following

following day opened with the like cerentony, which centi-nues till the perions are dead, and no answer returned: After this, the chief ministers inform the successor, who immediately repairs to the plt; and caufing the stone to removed; orders all forts of provisions to be laid on it for the entertainment of the populace. After they have regaled themselves, they run about the city in the night, regates themselves, they run about the city in the night, committing the greatest outrages, and killing all the men women, and children they find. They chop off their heads, and leave them in the firests, but they bring their bodies, and throw them; into the pit, with their garments, housheld goods, &c. as prefents to the deceased king." This strange cuttom, we are told, is fill-preserved in the stretch manner; and they who are allotted to fall vishing on the occasion are for fir from lantenting their chart the stretch when the stretch the stretch control to the historic market the stretch chart the fate; that they reckon it the highest mark of honour they can be favoured with. Art

These people worship various kinds of ideals, some of which are made of elephants teeth, claws, dead mensiheads, skeletons, &co. Each is his own priest, and addresses himself to such of his idols as helikes best. Many, however, have a tolerable idea of the supreme Being; for they afcribe to God the divine attributes, and believe that he governs all things by his Providence. As he is invisible, they say it would be absurd to attempt to make any our poreal representation of him; for that could not be effected; as it would be impossible to make any image of what was never feen. The images of their idol gods they confider as fubordinate deities, and believe that they are mediators between them and God. They believe also in the devil, and think themselves obliged to reverence him, left he should hurt them. They make their offerings to him by the same ideas as to the higher power; so that one image ferres them in two capacities. Such are the strange abfurdities and inconfiftencles of their religion l

It is generally believed by these negroes, that the apparitions of their ancestors wist them, but it is only when they are assect. They call the shadow of a man passador or conductor, which they believe really to exist, and that it will fome time or other give testimony whether they have lived well or ill. If the former, they are to be raised to great dignity; but if the latter, they are to perish with langer and penury.

Daily offerings are made by the poorerfort to their idols, which consist only of a few yams mixed with oil; forme-times they offer a fowl, but they only sprinkle the blood of it on the idol, for the flesh they convert to their own use. The great men make annual facrifices, which are very expensive, and they provide an elegant entertainment for their friends, that last several days; besides which, the poor have always handsome presents made them on thefe occasions.

The time is divided by them into years, months, weeks, and days, each of which is diflinguished by a particular name; but in their division they make fourteen months to the year. They keep their sabbath every fifth day: which is folemnly observed, particularly by the better fort, who on the occasion secrifice cows, sheep, and goats; while the poorer fort kill dogs, cats, clickens, or what-over they are able to purchase. In order that the festival may be universally kept, those who are so distressed as not to be able to obtain any of these, are affished by the others.

They keep two other annual festivals, befides those held on the fabbaths. The first of these is in commemoration of their ancestors, when they not only facrifice a great number of beatls, but also human beings; but the latter are generally malefactors sentenced to death, and referved for these sometimes. If it happens that there are not so many criminals as are requisite on these occasions (the number of which is twenty-five,) the king orders his officers to parade the streets, and feize indifferently fuch perfone as they meet not carrying lights. If the persons so seized are wealthy, they are permitted to purchase their redemption; but if poor, they are facrificed on the day appointed. The flaves of great men so seized may be also ransomed, on condition that the masters find others to fupply their place. This custom contributes greatly to the olument of the priests, it being their province to redeem the persons so taken, from whom they are fure to receive a very handfome compliment.

But the most considerable is their second annual festival, which is called the coral feath. It is celebrated in the month of May; and the king appears in public the day on which it is held. A person who was present at this sestionate, gives the following account of the singular ceremonies attending it. "On the day appointed, the king came

magnificently dreffed into the fecond court of the palace, magnicentry dreited into the tecond court of the palace, where, under a rich canopy, a feat was placed for him, as also others for his wives and a great number of his principal officers. Soon after the king was feated, the procedion began, which being ended, the king removed from his throne, in otder to facrifice to the gods in the open air, and threshy begin the feast. This action was accompanied. with the universal and loud acclamations of the pe with the universal and loud acclamations of the people. After passing a quarter of an hour in this manner, he returned to the former place, where he sat two hours, in order to give the remainder of the people time to perform their devotions. This done, he returned into the palact. The rest of the day was spent in costly treating and feasting, the king causing all kinds of provisions to be liberally distributed to the populace, and the grandees following his example, so that nothing but joy was to be seen throughout the city. The resson why this is called the coral feast, is, because at this time the king bestows the strings of coral on those whom he advances to any preferent, which doral on those whom he advances to any preferment, which he never does but on this sestival, unless a very extraordinary occasion urges the contrary, te

The kingdom of Benin, which lies contiguous to Ardrigh, is fubject to an arbitrary monarch, and his will is an abolute law; but the chief direction of government is welled in the three great lords. Their laws are in general very mild, and not attended with those diftinguished impositions to which the inhabitants of fonte other countries are subject. When a person of property dies, the right of inheritance devolves to the eldest son, but he is obliged to prefent a flave to the king, and another to the three great lords, with a petition that he may flucteed his father in the fame quality, which the king accordingly grants, and he is declared the lawful heir to all the pofferious left by his father. He is not compelled to make any allowance to his younger brother, that being wholly left to his own discretion; but if his mother be alive, he must allow her a maintenance suitable to her rank. He takes his father's other wives home, especially those that have not had children, and if he thinks proper he makes them his own; those he disapproves of are obliged to work for their maintenance under his inspection, but he never cohabits with them. If the deceased leaves no children, the brother inherits the effects; and in case of failure of such heir, the next of kin; but the whole becomes the property of the king if no lawful heis appears.

Criminals are punified in proportion to the nature of their offence. From the particular respect they pay to foreigners, the injuring of any European is confidered as expital crime, and the punishment for such offence is thus executed: they take the offender, tie his hands behind his back, and blindfold him. After this, the judge raifes him up, to that his head hangs towards the ground, which the eaccutioner cuts off with a hatchet, and feparating the body into four quarters, leaves it for the wild beafts and birds to devour.

When a person is found guilty of thest, he is obliged to restore the goods, and pay a fine; and if he is unable to pay the latter, he suffers corporally. If the robbery is nmitted on a grandee, the punishment is death. But theft is feldom committed liere, the natives not being of fo pilfering a disposition as those of the neighbouring na-

They punish murder with death, except the crime be committed by the king's fon, or a grander, in which case the offender is banished to the most distant part of the the oftender is banished to the most distant part of the kingdom, and never permitted to seturn. But murders feldom happen here. If a person kills another by accident, he may purchase his life, by sirft burying the deceased, and atterwards producing a slave to suffer in his stead. When the slave is sacrified, the offender must bend his body, and touch the flave's knees with his forehead; after which he must pay a fine to the three great lords, when he obtains his freedom, and the relations of the deceased think the offence has been sufficiently atoned for.

They have various ways of punishing adultery, in proportion to the circumstances of the parties. If a common person surprises his wife in the fact, he is entitled to all the effects of the person that has injured him; and the woman, after being feverely drubbed by her hufband, is totally difearded, being left to thift for herfelf the remainder of her life. In these cases, the better fot avenge themselves much in the same way; but the relations of the effending party, in order to avail themselves of the feandal that might accrue to their family, frequently bring about a reconciliation, by paying a large pecuniary com-pliment to the injured liuband, who after this latisfacm, as prine proen air, panicd cople.

he rerform palacra teaft_ perally I feaft. igs of which aordi-

n procom-; and the reavenge ons of y bring y con. latisfaction,

tion, hushes up the matter, and the unreasonable liberality of his inconstant spouse is apparently forgot.

Crimes of an inferior nature are punished by fine, which is proportioned to the nature of the offence; and the criminal is subject to corporal punishment, if he is not able to pay the fine levied. The fines on these cocasions are thus disposed of: the person injured is first satisfied; after which, the governor has his share, and the three great lords have the remainder of the fine.

have the remainder of the fine.

We shall now point out the most remarkable places in this kingdom, the principal of which its the town or city of Benia; the use residence of the king. It is a large town, pleasantly structed on the banks of the river, about forty miles from its mouth: If contains a great number of affreets, most of which are very spacious, and the house uniformly built. The principal street is exceeding broad, and at leaft three nilles in length; it is interfected by many cross firects and lanes, all of which are straight, and of confiderable extent; and the whole city is at least nine miles in circumference. The houses of the grandees are much higher than those of the commonalty, and are ascended by steps. At the entrance of each is a vestibule, or porch, higher than those of the commonalty, and are ascended by thess. At the entrance of each is a vestibule, or porch, which is every morning cleaned by the slaves, and spread with straw mats. The inner chamber is square, with an opening in the center for the admission of light; and in these apartments they both sleep and eat, though they drest their victuals in other places separate, having many offices under the same roof. All their buildings are made of red earth tempered with water, which being dried by the sun, forms a folid wall, and they are covered with reed, straw, or the leaves of strees. The incuses of the common people are entered by a small door, which is in the center, and sevel with the ground; and light is admitted from an operting in the roof, instead of windows.

A market is kept every day, in the principal street of

A market is kept every day, in the principal firest of the city, for the fale of provisions and merchandize. The former consists of dogs, of which they are very fond, roafted baboous and monkies, but and large rats, pareous, heats, issands dried in the fon, fruits and palm-wine. Their meschandize confifts of cotton, elephants teeth, wooden platters, sups, and other houlhold fluff; cotton cloth, iron infruments for fifthing and tilling the ground, lances, darts and other weapons. The merchandize is all lances, darts and other weapons. The merchandize is all disposed with great uniformity, and a place is allotted

disposed with great uniformity, and a place is allotted for each fort.

The royal palace is very extensive, and consists of several large squares survounded with galleries, each of which has a portice or gate, guarded by soldiers. The first galleriy, on entering the palace, is very long, and supported on each side by losty pillars. At the end of this gallery is a large mud wall, with three gates, the center one of which is ornamented with a turret about seventy seet high, terminated with the figure of a large stake, cast in copper, and with ingeniously carved. These gates open to a large plain about a quarter of a mile square, inclosed by a mud wall. At the end of this plain is another gallery much like the former; this is terminated by a gate that opens so a third, the pillars of which are carved with human figures, and in one part of it, behind a cotton curtain, asseleven smens heads cast in copper, on each of which is an elephant's tooth. Leaving this you enter a large plain, where there is a south gallery, beyond which are the king's audience-chamber; where he receives the nobility, foreign ambalfadors, &c. The sides of it are hung with tapetry, and the illoor is covered with carpets of European manufacture. At one end of the room is the king's attorner, which is made of ivory, it is a scended by where stems and one part is a account. for each fort. At one end of the room is the king's throne, which is made of ivory, it is afcended by three fleps, and over it is a cauopy made of the richeft filk. All the other apartments are very spacious, and the furniture of them exceeding ele-

very spacious, and the furniture of them exceeding elegant and costly.

This city is intirely inhabited by the natives, no foreigner being permitted to reside in it. Some of them are very wealthy, and spend their whole time at court, leaving trade and agriculture to be executed by their wives and servants. These go to the circumjacent villages, and either trade in merchandize, or serve for wages, and are obliged to bring home the greatest part of what they ger, otherwise they would be fold for slaves by their masters. Some years ago the city of Benin was much more populous then it is at present. It decay was owing to the avaricious disposition of the then king who, in order to increase his costers, caused two of his road chiefs to be put to death, under pretence of their having conspired against his life. The wealth he accumulated by these two, presupted him to make the like attempt upon a third; but this man was so universally beloved, that he had timely No. 49.

notice of the king's resolutions; and accordingly belook himself to flight, attended by the principal part of the inhabitants. As foon as the king heard of this, he dispatched an army to pursue them, and oblige them to 'teturn, but the army mer with fuels a repulse, that they were obliged to return without having effected the business on which they were fent. The king, tritated at this, made a fecond attempt, by fending a much more confiderable army; but here he also failed, for many of them beling hilled, the rest took shelter in the city.

Elated with this success, the road thief determined to be revenged of his sovereign, and marched with all his men to the city, which he plundered, spring no place except the king's palace. After this he retired, but continued for several years to rob those inhabitants of Benin that happened to fall in his way; 'till at leftgth,' at the intercession of some Europeans, a peace was concluded between him and the king,' by which he was pardoned, and interested to return to his former habitation. Fearful, however, of the integrity of his majesty, whom he still considered as his most inveterate enemy, he did not think proper th comply, but fettled at a place about three days journey from Benin, where he kept a court, was fightly respected by the people that adhered to him, and lived with as much splender, and dignity as the king himself. Some sew of the citizens returned to the capital, and were not only received by the alternative of the country of the other to be deluded; they preferred a life of case and freedom to that of syranny and oppression, nor early on them to return such a feet of the country of the other towns in this kingdom are situated on the river Benin, and are chiefly remarkable for trade. The principal of these towns in this kingdom are situated on the river. Benin, and are chiefly remarkable for trade. The principal of these towns in this kingdom are situated on the river. Benin, and are chiefly remarkable for trade. The principal of these towns in this kingdom

mouth of the river.

Boedodoe, is a trading village, at a finall diffance from Awerri: it contains about fifty hotfies, built with reeds and mud, and covered with the leaves of trees: It is governed by a viceroy and fome graitdees, whose authority extends only to trihing matters, as tivil canfes, and the raising of taxes for the king; but they must flate the matter to the court, and wait their determination, if case any thing confiderable hyperson.

court, and wait their determination, in case any uning confiderable happens.

The village of Ogatton, near the mouth of the river, is pleafantly fituated on a high island in the center of it; and furrounded with most kinds of fruit tree. This was once a considerable place, but it fuffered so much in the wars, that it was almost laid wafe; bowever, from its delightful situation, the buildings of late years have considerably increased, and it feems as if its original falendor would its time he reflowed. in time be restored.

in time be reftored.

Arebo, is the greatest place of trade on the river Benim, and is fituated about fifty miles from its mouth. It is a large populous town, and the inhabitants of it are remarkably honest in their dealings. The Dutch and English have both factories here, but the latter having neglected their trade, the lodge fell down, and has never fince been rebuilt; so that the only European settlement in this part of the country now belongs to the Dutch.

The town of Meiberg, is a small but very neat place, and the houses are built with great uniformity. The Dutch had once a factory berg, and were greatly respected by the natives; but during their stay a melancholy circumstance happened, occasioned by the indiferention of the principal factor, that intirely ruined their affairs; which was this:

happened, occasioned by the indiferention of the principal factor, that intrely ruined their affairs: which was this: N. Beeldfinyder, their last factor, having cast a wanton eye on one of the negro governor's wives, ravished her; which so enraged the injured hosband, that he carre with a body of armed men, and refolved to kill the adulterer, who narrowly escaped on board a ship; but in the slight was so wounded, that, through the surgeons unskilfulness, he died. The company's director-general on the coast, not being rightly informed of the case, fent a vessel from El Mina; well manned to Benin, with strict orders to revenge the murder. These foldiers fo exceeded their committion, that they killed or took prilogers every serion in the revenge the murder. These folders to exceed their committion, that they killed or took prisoners every person in the town, who could not escape. The king being informed of this, and the occasion of the massacre, commanded the riegro-governor to be brought before him: and though he had done nothing but what might be justified, in defending the

the honour of his family, yet the king caused him and his whole sace to be put to death in the most gruel minner. The dead bodies of these milerable wretches, were exposed to be devoured by the beafts, and their houses were razed to the ground, with strict orders that they should never be rebuilt. The Dutch, however, from these circumstances, made no farther attempt, and ever since that time there has not been any European factory in this town!

There are, in, this kingdom, several other considerable rivers, besides Benin; particularly the river Rio del Rey, which is very spacious and extensive, but the shore to each side is low and masslay. It takes its source from the north, and is very wide for a considerable way up the country. On its banks are a great number of villages inhabited by people divided into two nations, one of which dwell along the upper part of the river, and the other towards the mouth; but they are always at enmity with each other. They are a strong, robust, people, but poor; dislinously, and treacherous; and are very fitthy both in their houses and persons. They go quite naked, timewring their bodies with oil internixed with a red colour; they plait their thair in various forms, file, their teeth, and adorn their foreheads with strange marks made, with hot irons or pincers. In short, they are merg sayages, and their only employment is stihing; for the mechanical arts or agriculpincers. In thort, they are mere favages, and their only employment is fithing; for the mechanical arts or agricul-

employment is fifting; for the mechanical arts or agriculture they are total firangers to.

Another large river: is called the Kamarones; its inhabitants are governed by a chief of their own, called Moneba. His, feat, or palace, is fituated on a delightful fepet that commands the adjacent gountry, which is exceeding fertile, and produces great quantities of yams, bananas, palm, and other fruits. The people here carry on a confiderable trade with the Europeans, having plenty of elephants teeth and flaves, which they fell at very reasonable rates. The goods fold by the Europeans, in exchange, confift chiefly of iron and copper bars, brass pots and kettles, bugles or beads, ox horns, and fleel files. The natives here have a remarkable smooth skin, and are lufty, tall, and well-shaped.

About fifteen lesgues from cape de Lopo Gonfalvo, or

** *{*035, *

160,000

tall, and well-shaped.

About fifteen leagues from cape de Lopo Gonsalvo, or the utmost point of, the gulf of Benin, is situated the river Gabon, which is very large, and the mouth of it is at least fix miles aerofs. About nine miles up the river are two silands, one of which takes its name from the king, and the other from the prince of this river, two great lords of Benin. But these islands have now but sew inhabitants, the king having left one, and the prince the there, each of them living on particular parts of the river. The river is navigable for small ships several leagues up, but its spring and course cannot be ascertained. There are many villages on its banks; and the trade carried on here consists in elephants teeth, honey and wax.

The people who dwell near this river, are with respect to their persons, very large, robust, and well-shaped, but

their persons, very large, robust, and well-shaped, but they are serce and cruel in their dispositions. The men are greatly addicted to thieving; and the women are so are greatly addicted to theiring; and the women are to abandoned, that they care not on whom, or in what man-ner, they bestow their favours. They are divided into three classes: the first of which are under the govern-ment of the king; the second, under that of the prince; and the third are totally independent. The two former

all in edited 4

The dress of the king differs greatly from that worn by lus subjects. It confilts chiefly in beads of bone, and shells dyed red, and strung together like a chaplet round his arms, legs, and neck. The royal palace is larger than the other buildings. Before the gate of it is planted a brass cannon, with several small guns, the appearance of which strike an awe into his subjects, who are very obedient, either from fears of other notices.

awe into his fubjects, who are very obedient, either from fear, or other motives.

"Cape Lopo Gonfalco is fituated about eighteen leagues from the river Gabon, and is the utmost boundary of the gulf of Guiney." It appears like a low flat island, but it is a long, narrow peninfula, stretching, from the continent several leagues to sea. It has a good harbour either for anchoring or cattening ships, especially for those, homeward-bound, provisions being not only plentiful, but allo very cheap. On the shore are several huts, where the natives occasionally reside, as the European vessels stop for the above purposes; but the town they belong to is called Olibati, and is situated about fix miles from the cape. It is the residence of a king; and the town contains about three hundred houses, which are made with bultushes interwoven, and covered with palm-leaves. The natives are much more civilized than those at the river Gabor, but they difmore civilized than those at the river Gabor, but they differ little in their drefs, manners, and customs. The country abounds with wild beafts; as elephants, buffaloes, wild

try abounds with wild beafts; as elephants, buffaloes, wild boars, apes, monkies, &c.

As foon as a vefful arrives at the cape, it fires off four guns, to alarm the country, and give notice of their arrival; when the people immediately repair from Olibato, and other inlaud places, to the cape, and carry with them fuch articles as they have to difpole of, the principal of which are water, wood for fuel, and provisions. They always keep a stock of wood by them, that they may be ready to limit your welful as from at the carry these carry in the carry is in the contract of the carry that they may be ready to limit with welful as from at the carry these carry. to lupply fuch veffels as ftop at the cape: they cut it into billets about twe feet long, a boat load of which they gene-rally fell for a bar of iron. They get their water out of a large pond near the cape: it is allowed by most feamen to be

exceeding wholesome, and preferves its good quality at sea.

The Europeans also purchase here elephants teeth, wax, honey, and cam wood; and the articles fold to the natives, are, firelocks, powder, ball, and fhot, knives, iron

bars, beads, old sheets, axes, and brass basons.

THE NEW HISTORY AND DESCRIPTION OF The series vs The Indian

C О. O

SECT. I.

Contains a general description of the kingdom of Congo, or Lower Guiney, also an account of that division of it called Benguela.

THE kingdom of Congo is fituated between the equinoctial line, and eighteen degrees of fouth latitude. It is bounded on the north by the kingdom of Benin; by the inland pasts of Africa, on the east; by Mataman,

on the fouth; and by the Atlantic ocean, on the west. It extends upwards of one thousand seven hundred miles from

. In order to give a more clear and distinct description of this extensive country, we shall divide it into four parts; namely, 1. Benguela; 2. Angola; 3. Congo Proper; and, 4. Loango; and shall treat of them separately, as there is in each of these kingdoms seve al things worthy of notice, and which are peculiar to itself.

Benguela,

Benguela, is bounded on the west, by the Ethiopic occan; on the north, by Angola; on the south, by the kingdom of Matanian; and, on the east, by that of the Jaggas, from whence it is separated by the river Kunteni. It is about four hundred and thirty miles in length, from east to west, and one hundred and eighty from north to south. The coast part begins near the mouth of the river Coanza, and extends to cape Negro. About the center of it is the bay of Cows, which, though not very large, is nevertheless a good harbour, and capable of receiving most ships of burden. It receives its name from the many herds of that sorted cattle which are herd within its environs. The that fort of cattle which are bred within its environs. country is plain, and produces lmost kinds of provisions.

Different forts of metals, particularly filter and lead, are found in fome parts of it.

With respect to the climate, it is so exceeding unwhole-

with respect to the climate, it is so exceeding unwholefome, and prejudicial to strangers, that few chute to land
there. Even the provisions are affected by the ill quality
of the air, so that they who eat of them at their first coming, run the hazard of their lives, and, if they escape,
generally contract some disagreeable and lasting distemper.
The Europeans that reside here look more like companions
of the dead than the living, the unhealthines of the place
rendering them mere spectacles.

Among the few places in this kingdom that merit any

rendering them mere spectacles.

Among the few places in this kingdom that merit any particular notice, the most material is Old Benguela from whence the kingdom receives its name, and is so called to diffinguish it from New Benguela, a small town built by the Portuguese, on the north side of the bay of Cows. Old Benguela is situated in ten degrees thirty-five minutes south latitude, and thirteen degrees ten minutes east longitude. Besides the kingdom, it gives name also to a province, which extends about ten leagues along the coast, from cap. of. Bras, to the bay of Pullets and Fowls, so called from the great numbers of poultry sound there. The land here is very low, but the soil is sertile, and produces abundance of cattle, as also several kinds of grain and roots. Here the Portuguese lave built a strong forand roots. Here the Portuguese have built a strong for-tress, called fort Benguela, in which they maintain a gar-rison to keep the savage Jaggas in awe, who would other-wife ruin the whole country. The fort is shaded with orange, lemon, banata, and other fruit trees, and is sur-tounded with houses. Here the Portuguese have built a strong for-

There are feven villages in the neighbourhood of Old Kafomba, and is fo large and populous, that the inhabitants can raife three thousand men at a very short notice in

cases of emergency.

The bay is situated to the south of the town of Benguela, is about two leagues broad at the entrance, and so

guess, 18 about wo leagues oroad at the chtrance, and to deep, that thips of burden may find good anchorage in it.

A village called Manikicongo lies about twenty miles from the mouth of the bay: at this place the Portugueschave a warehouse for the reception of various commodities. The village stands at the foot of a hill, and is very large and populous. The chief articles fold here by the Portugueschape and populous. and populous The chief articles fold here by the Por-tuguese to the natives, are guns, gunpowder, fine linens, and cotton cloths.

The mouth of the river ealled Caton-belle (which is formed by two or three small rivers united together) is to the fouth of the above villaged. The water here is extremely brackill, so that the natives, convey it into dicthes, where they let it evaporate, till it becomes falt. Though this falt is of a very inferior quality, yet it is in fuch effeem, that the merchants load their veilels with it for exporta-The mouth of the river is sheltered from the wind

and it being at least fifteen feet deep, sud quite clear of rocks, ships anchor in it with the greatest security.

A bay, called by the Dutch the Good Bay, on account of its fafe anchorage, is a little to the north of the river Caton belle. The coast here is low and fertile; and the

Caton ocite. The continers is low and tertile; and the inhabitants breed great plenty of loogs and black eattle.

The face of the interior part of the country is covered with forests, which are inhabited by prodictious numbers of wild beafts, particularly lions, tygers, elephants, rhinocerosles, and wild mules.

But the most remarkable animal found here, and which is require not remarkate a minar tout a terrain which is peculiar only to this country, is called by the natives abada, it is of the wild kind, very flw, fwift-footed, and of the fize of a half grown colt: but what renders it more fingular, is, its having two horns, one of which grows on the forchead, and the other on the nape of the neck: the former is about three feet in length, and sharp at the point, but near the root it is about the thickness of a man's leg, and bends downwards; that on the nape of the neck is flatter and thorter, of a blackish or dark brown hue. The head is not so long in proportion as that of a horse: it is

short and flat, like that of an ox, only more hairy, and the hair much stronger. Its tail is also like that of an ox, though not quite so long and the hair more like that of the horse; the see quite fo long and the hair more like that of the horfe: the feet are cloven like those of a stag, but they are much larger: when this creature is young, the front horn is straight, but as it advances in age, the horn bends gradually up like the tusk of an elephant, The hatives hunt it for the sake of the front horn, which they esteem as an excellent antidote against posion. They look on the virtue of it to be greater or less, according to the age of the animal when killed; and the Portuguese, in order to know the goodness of it, make use of the following expedient: they let the horn uprightouthe ground, and suspend an asked sword over it point to point; if the horn be good and hard, the point of the sword will not penetrate it, whereas when the horn is fost and young, the sword immediately sinks into it, which shews that it is not arrived at its full persection, and of course greatly lessens its value. They also make a poultice of the pulverized bones of this creature mixed with water, which they say is a sowering remedy against all achs and pains of the body, by drawing away the peccant humours from the whole mass of blood, as well as from the part affected.

Glafs beads about an inch long, and of various colours, are the current coin of this kingdom: thefe they alfo use as ornaments about their arms, legs, and other parts of the body As the manners, customs, religion, &c. of the inhabitants of Benguela are much the fame with those of Congo, as the limit the manners to the same with those of Congo, as the limit the manners to the same with those of Congo, we shall omit the mention of them till we come to treet of that kingdom, and in the mean time proceed to a de-feription of those countries and nations that border on Congo and Angolo, beginning with the kingdom of Antiko

SECT. II.

Describing the kingdom of Ansiko, its source inhabitants, &c. and the country of the Jaggas, their incursions, ravages, borriderueltes, and barbarous customs.

A NSIKO, is bounded on the east, by the river Umbre, which runs into the Zaire; on the west, by the borders of Loango; on the north by some of the defarts of Nubia; and on the fouth, by the province of Songo. It is one hundred and eighty miles in breadth, from north to fouth; and two hundred and eighty-five miles in length,

from east to west. There are many copperamines in this hingdom, of which the Portuguese make considerable advantages. It is in general a very barren country, and the inhabitants of it mere favages. They have no lands or inheritance, but it mere favages. They have no lands or inheritance, but wander like Arabs, from one place to another, regardlefs of life, and intrepid in their undertakings. They pay no attention to agriculture, nor do they use any endeavours to preserve their existence, but by plundering all who happen to fall in their way, some of whom they kill, and others they keep as slaves. They are dreaded for their extreme brutality; and at 86 irrational, that sew Europeans can trade with them. Their language is barbarous; and so unintelligible, that even the inliabitants of Congo cannot understand it. not underftand it.

In order to preferve their health, they all anoint their

In order to preferve their health, they all anoint their bodies with a composition made of white sandal-wood pounded, and pain-oil. Both sease go naked from the wait upwards; but the better fort dittinguish themselves by wearing red and black caps made of Portuguese velver. The Anskans are perfect cannibals, their chief food being human flesh; and there are public markets where bodies are hung up and exposed for fale. They believe themselves possible of an absolute right to dispose of their slaves; and those taken in war are satteried, killed, and either used by their conquerors, or fold to the butchers. However shocking these relations may appear, wet they are However shocking these relations may appear, yet they are indisputable facts; for the people of this country seed on each other with as much indifference as those of other countries do on the respective animals appropriated by Pro-vidence for the suffenance of mankind. Here discon-tented slaves offer themselves for sood to their malters: fa-thers and sons, brothers and sisters, reciprocally feed upon each other without the least remorfe; and infants just born, are eat by their unnatural and inhuman parents. no graves for the dead, except the bellies of the living, who eat the deceased foon after their departure.

Their weapons are buttle-axes, and small but very strong bows, strengthened and adorned with the skirss of serpents; the strings are made of supple and tender shoots of trees, and the arrow of a hard but very tight wood, polited at the ends with iron. They shoot with

the most far rifing sellity, infomuch, that they will difcharge near a dozen arrows from the bow, before the first
falls to the ground. They minage the battle-ax with equal
dexterity: one and of this influment is very sharp,
and the other flat like a mallet, with a handle between
about half the length of the trop, rounded at the end,
and covered with the skin of a serpent; with the slat end
they screen their bodies, and seard off the darts of their
enemies. They have adgrees also in Seabbards made of
the skins of serpents, whier they earry in leathern girdler
faltested by their fides.

It may be reasonably supposed that their religion is gross
idolatry. They worship the fun as their chief deity, whom
they represent in the figure of a man, and the moon under
that of a woman. They have also an infinite number of
inferior deities, each keeping one peculiar idol, to when
he offers scriftces, and constantly invokes before he engages in any enterprize of importance.

gages in any enterprize of importance.

Zimbis, or finall fiells, are the current coin of thefe people: these they gather on the coast of Angola, in extending for which, as also falt, filk, glass, knives, and other

merchandize, they give flaves.

The Juggss, is a lavage and cannibal people, inhabiting a final kingdom called Matamba, to the fouthward of Anfiko, and have also confiderable territories to the foutheast of it. It is uncertain from whence these people office of the confiderable to the fourth and the confiderable territories to the fourth and the confiderable to the confiderable to the fourth and the confiderable to the confiderable the confiderable to the c ginated, but they are supposed to have first settled about the kingdom of Ansiko, and from thence spread themselves along those spacious waters that lie between Ansiko Loango. From thence it is imagined they forest by de-grees along the eastern frontiers of Loango, Congo, and Angola, and from thence eastward to the kingdom of Maamba, of the latter of which, with the territory adjoining, they made themselves complete masters, and, to the great injury of their more rational and peaceable neighbours, have ever fince preserved.

Thee people poffets territories which extend from north-east to fouth-west; along Matamba and Benguela, about nine hundred miles; but they are very narrow in proportion, being in some parts one hundred and fifty, and others not above one hundred miles broad. They are and others not above one numered miles broad. I hey are inclosed between the kingdoms of Matamba and Benguela, from whence they are feparated by the great river Kurierfo, on one fide, and by the empire of Moni Mujion the other. The only town throughout all these dominions is called Kassaij, and is situated on the north part of them, new the frontiers of Matamba, where the great jagga, or king, occasionally refides. Having neither towns nor houses besides, they roam from place to place with tents removing as inclination directs, or necessity obliges them to shift their quarters.

They live intirely by plundering their neighbours, and feize every thing that comes in their way; confequently they neither fow nor plant: in their persons, they are tail, fufty, and frong, yet nimble and fwilt of foot, climbing up the fleep mountains and craggy rocks with the most conference of the property of the control of the conference of the conf altonishing agility. Their women are stout, well shaped, fertile, wastike, and active; and both sexes are so interpid, that no enterprize is thought two hard or dangerous for them to venture upon; and whenever they meet with an opportunity of plundering, they ruth on their ad-versaries at all hazards, and with a fearless unconcern for their own lives. They confider it as the greatest mark of bravery to attack the fiercest and strongest creatures, and a still greater one to be more fierce and inhuman; and this favage disposition not only extends to the people of the nations they invade, but to those of their own, and even to their relations and children, whom, when they are in want of other food, they make no fcruple to butcher and eat.

of other food, they make no feruple to butcher and eat.

They build their kilombos, or camps, of fuch materials, and on fuch a confiruction, that they are eafly removed on the thortest notice. When they go on any capital expedition, they are always accompanied by the great lagga and his court; at which times their camp is formed in the following mainer: the officers, who are the chief directors of them, having pitched upon a proper foot, divide it into seven distinct quarters, each of them onder the experiment of its own particular commander. under the government of its own particular commander; in the center one is the royal pavilion, furrounded by those of the ministers, officers, and servants belonging to the court, the whole of which composes a spacious square, and is encompassed by a strong hedge, so disposed as to appear more like a labyrinth than a circular fence.

The kalambo, or general of the army, inhabits the next quarter in rank: this officer is filled muta-aita, or chief of the war, and on these occasions is the next in authority to the king he orders and directs all military expeditions,

ericampments, engagements, and retreats; and must there-fore be an experienced and intrepid warrior, cruel, and de-fitute of the least sensation of humanity.

The third quarter is occupied by an officer called tersela; he commands the econta, or rear-guard, and is the chief of all the electors, as well as fupreme officer during an interregnem; for which reafon, next to the king, he is held in the highest esteem.

The fourth quarter is commanded by ari officer called mani-lumbo; he is the chief engineer of all the fences and hedges with which the camp is fortified, and particularly that part of it belonging to the royal family the is the only perfon who is permissed to come is the the royal presence whenever he thinks proper; and is particularly respected at court out account of this distinguished primishes.

respected at court out account of this astinguined pravilege.

The officer who commands the fifth quarter is intrusted with all private commissions, and charged with the execution of them: in case of any siture, he is immediately put to death, and another appointed to succeed him.

The fixth quarter is commanded by an officer called illunda, or the captain of the baggage, whose business it is to take care that every thing is in proper order for the use of the army. In times of peace, which follows happen, he is intrusted with the care of filling the magazines with arms, and is to keep them in proper order to be delivered to the foldiers, on any sudden and emergent call for them.

Another illunda, or keeper of the royal wardrobe and baggage, commands the feventh or last quarter. As this place is confidered of great trush, it is generally given to one of the king's relations, who has particularly diffinguished himself for his courage and loyalty fervice

of his fovereign.

There is also another great officer belonging to the camp, called the manicurio, or fuperintendant of the provisions, who is ufuelly chosen for his fingular dexteries another are who is utually content for his imagular destroys are me are of plundering; he hath a great number of officers and flaves under him, who are all equally qualified for that beginners. It is to be observed, however, that this officers are only purveyor to the court; for as to the foldiers, they are d to provide for themselves. They generally do this by force; but fometimes they purchase provisions from the Europeans in exchange for slaves; the latter of whom often give their new mafters the flip, before they can be properly

The piumbis, or fore-runners, are the last officers belonging to the camp. There are a fort of fpies, whole buliness it is to be in continual motion, and to endeavour to discover the situation, strength, and number of the encmy; to fkirmfih. oppofe, or even attack them, as occasion offers, and to support the van on the first onset. They fight with the most determined resolution, being usually chosen from amongst the most interpid of the whole

The foldiers belonging to the Jaggas are neither well disciplined, armed, or cloathed. Their offensive weapons are bows and arrows, fpears, darts, daggers, and clubs; but they are taught rather to use their defensive weapons than their miffive ones, being particularly instructed to cover their bodies, which are almost naked, with their large oval shields made of thick bides; and this method is fingularly ferviceable in a retreat, as it preferves them from being wounded by the arrows and lances of their purfuing. enemy. Their chief excellency confifs in firength and activity of body, in the artfully covering themselves, and the throwing their missive weapons, by which they generally annoy the enemy, and make them spend their thot against their shields : after this they renew the onset with fuch vigour, as feldom fails of putting the enemy to flight, which is always followed by a general flaughter; for they pay norespect either to perious or fex when victory declares their favour.

If they happen to invade a country where any confiderable opposition is expected, they intrench themselves very quietly for fome time, and only alarm the inhabitants with frequent fkirmishes, till they think they have sufficiently harrassed them; or, if these assault them, they stand on the defensive for two orthree days, till the others have fpent their strength and fury; when the commanding officer fends out a large derachment in the night, to lie in ambush at iteme diffance from the enemy's camp. On the follow-ing morning they begin the attack, when the poor natives, being suddenly surprized, are easily put to the rout, and leave their country to the merciles invaders, to plunder

and savage at their pleasure.

Sheir Dross, Arms, & manner of fighting.

great courage and refolution, never undertakes any thing in war without previous enchantments, and confulting his motifio, or devil, by facrifices, from whence he pretends to foreknow the event of his enterprize. On these occasions he rises before day, break, and first himself on a stool, attended by two of his conjurors, one on each side, and about fifty women standing in a circle round him, waving the tails of beasts, and singing. In the center is kindled a great fire, over which is placed an earthern pot containing tome white powder or paint, wherewith his conjurors besimes his forehead, temples, breast, and belly, using at the same time same many enchanting terms, and continuing their ridiculous ecremonies till fun-fet; at which time they bring his casengala, or hatchet, and put it into his hands, bidding him be strong against his enemies, for the mokific is with him. A male child is then brought to him, which he immediately kills; a ster, which four men are brought to him, two of whom he slays, and orders the other two to be killed without the camp. He also orders ten cows to be killed without the camp. He also orders ten cows to be killed, sive within, and ave, without the camp, with the fame number of goats and dogs; the blood of these animals, is signished on, the sire, but the slesh camp, with the fame number of goats and dogs; the blood of these animals, is signished on, the sire, but the slesh with the camp, with the same of the seaten with great sessivity an extrumph. The same ceremonics are likewise used by the inferior officers of the army on the like account; but as they pretend that the mokillo frequently appears and speaks to them, so neither they not their chief make use of idols on the feo any other occasions.

An extraordinary degree of respect is paid to the great igga, or king, no person being contractors.

nor their chief make we of idols on thefe or any other ecanons.

An extraordinary degree of respect is paid to the great jaggs, or king, no person being permitted to sit before him, except the kalambo, or head general, who is supreme judge in all cases, whether civil or criminal. This officer is allowed to fit in a chair with a back to it; but the tendels, who likewise sit as judge, is only allowed a small shoot about a foot high. Those of a certain rank are permitted to sit in the king's presence on a carpet, but they must pread it with their own hands. They who obtain audience of the king, must speak to him, with their bodies bent almost double; and, if of an inferior, rank; must prostrate themselves on the ground. If the king happens to since ze, cough, or break wind, the whole assembly must wish him bealth and long lise; and they who are nearest to his person, must give notice to those at a distance to do the same; on which they all express their good wishes, by bending their bodies and clapping their hands.

That our readers may have a proper idea not only of their dees, but also the importance of the most dignified autong these people, we shall present them with the following account, as extracted from Battel, of the dress, &c. of the kalambo, or head-general, under whom he served for several months. "He wore (says this writer), long hair, set off with many knots of hamba shells. His neek was adorned with a collar of masos, which are another kind of shells found along the Ethiopic coast, and sold among them for about the value of went with the importance of the men or about the value of went of this lines. His

was adorned with a collar of masos, which are another kind of shells found along the Ethiopic coast, and sold among them for about the value of twenty shillings. His middle was incircled with a girdle of lardes, or beads made of oftrich eggs, and under it a palm-cloth, as fine as filk. His body was painted with various figures, and anonited every day, with human fat. He wore across his nose a piece of copper about two inches long; and two others of the same fort in his ears. He had about thirty wives, who followed him when he went abroad, one of whom carried his bow and arrows; and four others his cups and drink, ing vessels; and whenever he drank, they all kneeled down, clapped their hands, and sang. He kept, his men under the stricted discipline; and if any, of them turned his back to the enemy, he was condemned to death, and his back to the enemy, he was condemned to death, and his body eaten, and the more effectually to deter them from cowardice, he used to make an oration from a kind of scaffold every night, in dispraise of it, and in commen-

icaffold every night, in dispraise of it, and in commendation of courage and valour."

We have also, from the same writer, a description of the method in which they bring up their young soldiery.

"These (says he) are not wheir own offspring, but the children of such captives as they make in their excursions; for though they allow themselves many women, and these are no lefs fruitful than those of other African nations, yet they fuffer few of them to rear up their children, but ore them to be buried alive as foon as born; and, in lieu of them to be buried alive as toon as norm; and, in new or them, make choice of fuch as are the most promiting from among those of their prisoners, to be trained up to arms, and to the plundering trade. These they commonly chuse at about the age of twelve or thirteen years, the se-males for procreation, and the males for war. The latter males for procreation, and the males for war. The latter are no fooner enrolled, than they have a collar hung about their necks, in token of flavery, which is to be worn by them till they bring home the head of an enemy, when it

is publicly taken off, and they declared freemen of the cannibal commonwealth. The remainder of the captive
train of both fexes are inhumanly referred to be killed and
eaten, not in time of fearcity, of eattle and other provistions, but out of cruel wantonness, and in preference, so
all other field. This privilege of being accounted men,
and freed from their bedge of flavery, feldom fails of inpliring the youths for cholen with an uncommon ambition
to attain it at all hezards, and to face the greatest dangers with
an intrepid boldness for the fake of it. By this method
they keep up their number complete, and the fiesce favege
nature of the Jagga republic from recoiling into compassion
and humanity."

In this country, the angument people of both sexes go

and the plaga republic from recoiling into compatition and humanity.

In this country, the common people of both fexes go almost naked, having only a place of cloth fathened round the waist, which is to small, that it barely covers half their highs. Persons of rank indeed draft themselves in gaudy apparel, adorning their hair, neck, same, and legs, with shells and boads of various forts a but their additional dress arises more from pride than any affectation of modelty. They have a strange customore pulling out four of their teeth, two above and two below, and they who resuse or neglect to do this are so despited by the rest, as to be deemed worthy to be excluded their society.

Their people have no exemonies of marriage among them, intermixing with each other according to their inclination. But they have some particular customs in this interment of their dead, especially those of the male kind, and which evince farther tokans of their, savage cruelty. The deceased is not only washed, anointed, and, beceked with all his most beloved women, who are conveyed with him to his grave, with their arms broken. The body is catried to the grave in a chair, between two men, and placed in it as if still alive, and the two women, one on each side of it. As soon as they are thus deposited, the grave, which is commonly very deep, is covered on the top with earth; and the relations, who are there prefent, fornske it with the blood of slain goats and palm-wine; after which they make a suneral lamentation over it for several succeeding days. Those of high rank are interred with more pomp; and the ceremonies and libitions, according to the rank of the deceased, are reiterated a longer or shorter, number of days, weeks, &co.

We shall next proceed to give some account of the country of the Jaggas, a nation of cannibals and savages; previous to which we mult remark, that though what is banded down to us of the history of this people is but of recent date, yet the circumstances are so surprisings, and the events so interesting, that it, would be unpardonable not to record them; as they will at once gratify she curiosity of the reader, and fully evince what we have already advanced concerning the ferocious disposition of this nation of fiveres.

Historians relate, that about the raiddle of the fisteenth century, one Zimbo. Alo. was at that time a principal leader among them, formed a defign of invading the vast empire of China. The people, in, hopes of enriching themselves by the plunder of those nations, readily, approved of his proposal, and clated at the prospect, slocked to him in such numbers, that he readily found himself, at to him in such numbers, that he readily found himself, at the head of a numerous army, who all promised to, obey him in every thing, and to follow him wherever he thought proper to lead them. He took with him, a favourize, woman named Tem-ban-dumbs, who served him at once as a concubine and a counsielor; and with these he penetrated without any considerable opposition, to the very center of the Congosse empire, committing the most dreadful ravages and slaughter whetever he came, leaving nothing behind him but desolation and delituation. What added to the inhumanity of their proceedings, was, being added to the inhumanity of their proceedings, was, being thing behind him but defolation and delituction. What added to the inhumanity of their proceedings, was, being accustomed to feed on human siefth, they made no less havock among the unhappy people that fell into their hands, and, in order to give a higher relish to the siefth, they wantonly put them to the most exercuiating deaths.

This monster, by his success, gained a daily increase to his army, the wretched Congoese slocking to him, in hopes of preserving themselves from the forming and delivery.

nis army, the writched congoes notes in in nopes of preferving themselves from the famine and destruction with which they were threatened. Zimbo accordingly grew more powerful, till having one day mustered up all his forces, and finding them too numerous to continue longer in one body, he thought proper to divide them into several parts; and, having set tome of his most enterprizing officers over them different to the proper to the second of the officers over them, difperfed them into various parts of Ethiopia, enjoining them to fpread defolation wherever they went. One of those officers, named Quizzuva, a

man no lefs bruith than martial, had the infolence to go and attack the Portuguese at one of their fortresses and Teto in the kingdom of Monoceauge: but he there met with the fate he judly metited, being totally defeated and killed, with a great sumber of his men; the rest higher chaestraghts jettloreagt de pair to slight by plaintstead in all higher parties fort, with a fresh tupidy of forces, engaged the Portuguese commander, and, after an oblinate thruly gle on both fides, deseated and killed him, making affor a most dreassful shapsher among the rest of his forces. Those whom he took priloners underwent at more cruel fate, being put to the most hortid deaths; particularly their chapsins, whom he had observed to be singularly active during the engagement. He ordered all their heads to be stuck on lances, and carried away as trophics, together with all their chapt check the shape of the proceeding had in a pricilly habit; in attribute of their religion, he marched at the head of the procession of their religion, he marched at the head of the procession of their religion, and electer upon

of the properties.

Elisted with this fuecels. Zimbo made a defeant upon the fland of Quilon, where, after plandering the place, he put three shouland-of the inhabitants so the fubble the reft he took priloners, some of whom he ordered to be facilities to his inhabitants are the took priloners, some of whom he ordered to be facilities to his inhabitant his i

Fire kingdom of Melinda, was the next object of this ferocions adventurer; the inhabitants of which at the first between a real management of the first and properties, by betaking themselves to the woods. They were prevented, however, from carrying their design into execution, by their noble-spirited monarch, who represented to them, in the strongest terms, the impropriety of abandoning their country to a set of robbers, who had abandoning their country to a let of robbers, who nad neither religion, honour, nor humanity; proteiling at the fame time, that whatever they might refolve on with regard to their own fafety, he was determined to meet and engage them, and to defend his country and fubjects to the laft drop of his blood.

This declaration so animated the people, that they determined, one and all, to stand by him to the last man; and

termined, one and all, to traine by him to the late man; and the king, having made every necessary preparation, set out with them to engage the enemy. Having accordingly advanced some distance from the capital, he met Zimbo at the head of his victorious cannibals, who immediately engaged the king's troops with his usual secrencis and affurance of success. The engagement lasted several hours, during which it was so obstinate and bloody, that prodi-gious numbers were killed on both sides. At length, howglous numeers were kined on both lades. At length, now-ever, the favages, despairing of fucces, betook themselves to flight; when the king thinking it most expedient, if possible, to extingate fo diabolical a race, ordered his men to pursue, and kill all that fell into their hands; which orders they fo readily obeyed, that very few, except some of

Zimbo the general, who was among the fugitives, re-tired with the scattered remains of his army into the woods, tired with the feattered remains of his army into the woods, where he continued fome time, in expectation of recruiting his army; and during his flay here, he formed a refolution of making a tour round the coafts of Africa, in which there was a prospect of daily increasing his army from amongst the favages, and enriching himself with such spoils as might fall in his way. Accordingly he set out, and steered his course southers are to the cape of Good Hope, without many times are to the cape of Good Hope, without many times are to the cape of Good Hope, without meeting with any opposition or disafter: and, as he found his army confiderably augmented, he divided them into feveral columns, for the better convenience of ravaging; but charged them not to feparate further, than that they might, in case of an emergency, be immediately affembled together for action.

Leaving the cape, after a hort flay there, he proceeded northward as far as the river Cuneva. on the banks of which he formed a camp distributing his men into several bodies under proper commanders, and referving to himbodies under proper command over the whole. In a fhort time he greatly increased his army; which so animated him, that he made all necessary preparations for some grand expedition, when death put an end to all his projects, and likewise soon carried off the faithful companion. of all his travels, his favourite concubine Tem-han-

dumba.

The furviving commanders, on the death of Zimbo, not chufing to fubmit, or become dependent on any other chief, readily agreed to diffolve the community, and each of them accordingly took upon him the command of his own troops. Some of them went in quelt of new fettle-ments, while others continued in their former flations.

One of the chiefs that leparated from the rest, was named

Dought: ac was principally remarkable for being the fatheriof the short inferral virage that ever lived. She was hord at the camp which Zimbo chofe for his last retreat, that was cannot Tem-ban-dautha, in compliment to the that general's favourite contribute. Dongs, her father, removed with his final army to the province of Ganghalli, favourd on the fouth fide of the kingdom of Maramata, where dying from after, his wife Musliza, a blosh was the most same and laving these brought up in the plunder-days rate from her youth, gave thous fur in market proofs of her interpolity, that they readily submitted them felves to Re conduct, add followed her in the most dangerous expeditions. She always appeared arised and dreffed like a task warrior; and re viving her daughter to be pofferfiel of nathral courage, the dreffed her in the same maniter, and nock the young virage with her in all her excursions, the ping thereby checking excellently to train her up as the mirrhal butters the was then profeculty, and had been so well practifed in.

been to well practiced in.

Tem-ban-dumba, though at this time very young, differenced fuch prudence and prefence of mind on the greated emergencies and difficulties, that Muliars, her mether, made no hefitation to entruit her with the command of some of her forces, while the herfelf led the reft on to of some of her forces, while the nerich to the text on to foune important exploits. The young virage was so elated at this, that the began to think herfulf of too much confequence to be under anykind of subjection to her mother. She therefore foon found an opportunity to display that infernal disposition, which alterwards diffunguished her as the most inhuman and abandoned of her fex, and claimed

an independent power.

This heroire, being of no lefs amorous than warlike temper, had indulged herfelf in the embraces of feveral gallant youths of her army, of whom, through her natural ficklenefs, the no fooner became tired, than the caused them to be privately put to death, to make way for new ones. For this imprudent, as well as inhuman condud, she had been often severely reprimanded by her mother; till at length, being no longer able to bear such constraint, she b, oke out into an open rebellion against her. This resolute step, added to the intrepid bravery she had shewed on many occasions, made her the more admired, as well as dreaded, by the whole favage army, who began to think her fomething more than human, and expressed the utmost eagerness to come and fight under her banner; fo. that the greatest part of her mother's forces came gra-dually over to her, and the foon found herfelf at the head of a numerous army, who, as they imagined her to excel all others in prudence and magnanimity, obeyed her more punctually than they would have done any general of the other fex.

The more effectually to inspire her men with veneration and dread for her, the ordered her whole army to be drawn up in arms before her, and appearing in her maiculine drefs, the harangued them in a long fpeech, in which the ac-quainted them with her fauguinary views of making them, victorious and happy under her conduct, and by their valour and affiltance, to lay the foundation of a powerful and glo-rious kingdom. The better to accomplish her future pro-jects, the told them, the must and would instruct them in the laws and rights of the antient Jaggas, their anceftors, as the most infallible means to make them no less successful than their late leader Zimbo, without the danger of expoint them to the fame misfortunes. To convince them how much the was in earnest, and expected to be obeyed, the told them, the would immediately fet them an example worthy of their attention, unless they were greatly degenerated from the natural courage and intreplicity of their celebrated race; and that if they were it would infallibly revive it in them.

Having thus far raifed their expediations, while they fixed their attentive eyes and ears on her, the ordered an only fon, whom the had by one of her paramours, to be brought to her, together with a large petitle and mortar; in which, inflead of beflowing on it the careffes of a young and tender mother, as might naturally have been expected, the, to their great furprize, and without the least thew of remorfe, pounded the innocent babe alive, till she had reduced the bones, flesh, &c. into a pulp, among which she mixed several kinds of powders, herbs, roots, oil, and other ingredients; and thus, having formed the whole into a kind of ointment, she stripped herfelf, and ordered fome of her maids to anoint her with it from head to foot. before all her men. After this was done, the refumed her martial drefs; and told them, that was the fovereign balfam that would render them not only firong, and fit for

martial exploits, but invincible, and confequently a terror to other kingdoms. This inflance of diabolical heroism was universally approved by her barbarian fubjects, who immediately followed her example, by murdering thany thousands of male infants in the fame horried manuer.

Tem-ban dumba, after this, made several laws, which the strictly enjoined her subjects to observe; among these, one of the most detectable was, that none of her subjects should ordertake any thing of consequence, or even confult about any enterprize, till they had previously anomate themselves with the shocking composition above described, which she with the shocking composition above described, which she with the shocking composition above described, which she with undoubted success: and that there might hever be waiting a sopply of it, she enacted some other callets, by which several torts of male children were excluded from being admitted into the camp, or even from being brought

which feveral forts of male children were excluded from being admitted into the camp, be even from being brought up; fome of which, that were either deformed or defective, the ordered to be thrown to the dogs, and others to be pounded or boiled for the use abovementioned.

Fearing, however, that fuch barbarity might at length terminate in a general discontent, or perhaps in open rebellion, the found herfelf, in the course of time, under the necessity of reducing the force of such of her laws as were either detrimental to the increase of the male kind, or too shocking to natural affection of parents; and, instead thereof, the introduced others more agreeable to the natural creaty of the 'geople,' among which was that of

br too shocking to natural affection of parents; and, infeed thereof, the introduced others more agreeable to the
natural cruelty of the 'people; among which was that of
feeding on human fieth, and preferring it to every other
kind of diet. In this law, however, the made an exception against the killing or eating any of her own fex.

She made, besides these, several other laws, all of which
were of the same inhuman nature, and calculated to cheourage and entire her subjects to all manner of rapine, bloodshed, and remorfeles cruelty. In short, the had at length
to hardened all her subjects in their destructive trade, that
they spread fire and slaoghter all over the western parts of
Ethiopia, without mercy, or almost any opposition: and
if at any time the met with a repulse, or even defeat, from
her warsike neighbours, instead of being discouraged, the
only grew more fierce and desperate, reinforced her army
with all possible speed, and fell upon her enemies with such
eagernels and fury, that every thing was forced to give way
to her, or stee from her victorious arms. What effectually
animated her troops to follow her through the most arauous and ungerous enterprizes, was, the applause and
ecompence they were sure to meet with on their return to
the camp, especially with respect to the distribution of the
plunder and slaves, which she divided amongs them,
vithout referving to herself any of the most valuable part
thereof.

This desperate and blood-thirsty monster, after having

thereof.

This defperate and blood-thirfly monfler, after having filled the greatest part of Ethiopia, with terror, blood, and slaughter, at length fell a victim to lust and inconstancy. After the had murdered great numbers of her paramours in order to prevent the discovery of her private debauched. in order to prevent the difcovery of her private debaucheries, the at length grew enambured of a freshone, in whom, though then only a private foldier, she discovered such excellecties, as made her overlook the great disparity between herself and him. His name was Kulambo; he was in person, tall, strong, and well-shaped; in his disposition bold and fearless, and no way interior to his mitters in craftines and cruelty. As he was not ignorant of the fate that had attended so many of his predecessor, so neither did he accept of her condescending offers, but whita fixed resolution to retaliate it upon her, as soon as he found her affedion for him in the least to decrease. In the meanine, however, he used every means he could project to please her, and in a short time so worked up her passions, that he prevailed on her to marry him. The nuprials were accordingly celebrated with great pomp, after their manner, that is, with the death of a great number of human and other victims, for the entertainment of their numerous guests; yet neither could this, nor the many other fayours other victims. for the entertainment of their numerous gueste; yet neither could this, nor the many other favours the heaped upon him, prevent his keeping so watchful an eye over her, that he became more and more apprized of her fackle, lewd, treacherous, and tyrannic disposition; infomuch that he at length perceived he was become at least indifferent, if not wholly disgreeable to her, in spite of all her female at and address.

Kulambo now thought it high time to ward off the blow that threatened him. by retreaving and redoubling list careffes to her, by sumptuous banquets, and such other entertainments and diversions as he knew were most likely to suspense the treacherous intentions against him. He

to suspend her treacherous intentions against him. He supplied her in particular with a variety of European wines, and with the most delightful cordial water, till he

found an opportunity of conveying a frong dole of pol-fon into one of them, of which the had no comer drank than the capited in his arms, according to his expects

than the capired in his arms, according to his expectation.

He appeared, after this event, to highly smileted, and conducted himself with fuch artful fuchefly that he passed altogether unsubjected of having had any hand in the death of a spoule, whose loss he feethed to deeply to lament, that he affected to attempt, in order to dissemble the better with those who might supped him, more than once to theath the fword in his own break. This counterfeited excets of grief, joined to his well-known courage, made for deep an impression on the minds of the Jaggas, that he was declared her successor, and soon after raised, by proclamation, to the fovereign hutthority over them.

That Kulambo's new subjects might have a fresh proof of his pretended affection for his lare spoule, he burled her with the most distinguished magnificence. The place which he chose for her interment was on a distant eminence, where he caused a spacious cave to be dug, and divided it into several large apartments, all of which were hung with some of the pichest dioths of Europe, and the soons overed with the sifter, furs, and most divious mastings. That designed for the copie was been thered with the choicest meats and liquors. She was been the with the choicest meats and liquors. She was been the with the choicest meats and liquors. She was been as followed by the king and his whole court, who accompanied it with their and dreadful outeries, heightened by the found of all their martial music. The procession was closed by the hings and immartial music. The procession was closed by the unhappy human victims, which were either to be butchered over her grave, or buried alive in it with her copie.

On their verival at the cave, the body of the deceased

human victims, which were either to be butchered over her grave, or buried alive in it with her corpfe.

On their vrival at the cave, the body of the deceafed queen was deposited in the apartment prepared for it, amiddt the most hidcous cries of the court and foldiers, and the hortid found of the martial instruments, after which, the victims were slain, and their blood sprinkled plentifully on the corpfe. Those victims that were designed to serve her in the other world, then went down into the grave, the bodies of the slain were thrown in, and the whole place immediately filled up with earth. As soon as the ceremony was over, the new monarch assumed the reigns of government, and the company retired to the camp.

The beginning of Kulambo's reign was remarkable for

The beginning of Kulambo's reign was remarkable for his frequent excursions and rayages; but he was soor hopped in his career. He became captivated with a beauful flave, who soon persuaded him to change the martial trade for the pleasures of the matrimonial life. He sent his officers and forces upon new exploits, while he enjoyed himself at ease with his queen, till he at length suddenly expired in her embraces, and was afterwards honoured as an inferior delty by her and all his subjects.

Chingaril was appointed the successor of Kulambo; he was not only equal in valour to his predecessor, but of a more savage disposition. The rayages he committed were attended with much greater cruelty than had been exercised by any of the former princes; and the was desting business, that he did not hestate to engage in the most hazardous enterprizes, till at length, venturing to try his bravery against the Portuguese at Angola, he was defeated and tlain, and a great part of his army made captives.

Caluximbo fucceeded Chingarii. This prince was a man of great courage and conduct, but of io gentle and humane a difpolition, that he could never be prevailed upon to cut any human fiell either before or after his election. His barbarian subjects, from this circumstance only, con-His barbarian fubjects, from this circumstance only, con-ceived an invincible aversion against him; and unde pre-tence that their late queen Tem-ban-dumba resented his open violation of her laws (a notion which the priests in-dustriously propagated) he was affassivated to appease her anger, and at his funeral obsequies three hundred victims of each sex were ordered to be butchered.

The several successors of Calusimbo committed in ge-

The feveral fucceitors of Calustimbo committed in general, in a greater or left degree, the usual ravages of their predecessors, leaving nothing behind them, where ever they went, but the melancholy marks of shaughter and desolation. Of these Calanga was the most distinguished: he was a man of no left prudence than courage. This chief having entered into an alliance with the Portuguese cover naving entered into an animate with the Fortuguete governor of Angola against queen Zingha, who then headed another party of desperate Jaggas in the kingdom of Metamba, was prevailed upon by the governor to abolish some of the laws made by queen Text-ban-dumba, particularly such as related to the destroying their own chil-

and bringing up in their flead those which they brought away captives in their excursions. This depre-dation was so ill approved of by the savage Jargas, that it cost Calanga his fife; for he was soon after assassing by

dation was to it approved of by the favage Jaggas, that it coff Calaing his fife; for he was foon after all fillinged by one of his fona, and interred with the utual ecreptonies. The particles, however, did not long enjoy the high dig fifty he had fo Infainsoully acquired; the Jaggas, according to their laws, claimed their right of election, and fer up another for of the decasted in his flast.

This prince was unside Calainge Cangoin-Gurii; and entertained to high six opinion of the Portuguele, that, in order to obtain liter is mandled, he cauted hindred in the orinciples of the Roman-Catholic religion, and was baptized by the name of Don Pafcale. But, whether through fear of being dethroned, or from a natural prediffection for the large cultoms, he foon after reliadvished his new pertuation, became more grued and sommittee greater ravages than any of his orecacciors. his footiess being every where marked with death and defolation.

We have no particular account of any king of the Jaggas, after this, all we know farther in, that different times of their people under their religious cheefs, fill institutions at the law of first people under their religious cheefs, fill institutes of their people under their religious cheefs, fill institutions a first particular stream of their people under their religious cheefs, fill institutions of their people under their religious cheefs, fill institutions of the first people under their religious cheefs, fill institutions are filled to the particular and internal maxima.

story the fested un nethrone in a communiting as to endlotion fro edl ste C.T. mr.

Contains a defeription of the kingdom of Angola; its bounda-Pres, fituation, nature of the country, crovers, provinces, found, the bilants trade, groupment, Ge.

HE natives originally called this kingdom Dongo, in but the Portuguete afterwards called it. Angola, in compliment to the prince of that name, who first usurped it fruit the king of Coney, this name it hath ever fince retained. It is bounded by the kingdom of Matamba, on the least, by the Ethiopic ocean, on the welf, on the north, by Congo, om which it is separated by the river Dantal, and, on the folish, by the kingdom of Benguela. It lies between there degrees form uninters of Tough lattude, and between the rever and forty one degrees of east longitude, being about two hundred and fifty miles broad from north to fouth, and about three hundred and fixty in length, from east to when

and about three hundred and they as engine, now eas to well. It is in general a very mountainous country, there being but few plashs to be net with, except on the manifine fide, and between the ridges of the mountains. It is however well watered with rivers, the most conspicuous among which are the Dapda and Coanza. The former of there is very large, and capable of receiving vessels of one hundred tons. It is well firsted with most kinds of fish, but it is dangeroms to case, them on account of the river being greatly pelfered with crocodiles. The Coanza is also large, deep and rapad, and imputes itself into the rime occan with the Danda, about nine degrees twenty minutes south latitude, and about twelve leagues south of Loanda San Paullo, the 'apital' of the kingdom. It is navigable as far it's place called Cambamba, which is about one stondered and fifty spiles from its mouth, where the Portugues have a forreets, or equipment, under the direction of it governor silied by them capain. It hash a good depth of water all the way to the above place, but afterdepth of water all the way to the above place, but after-wards it is full of rocks and dreadful cafeades, which renwards it is full of rocks and dreadful cafeades, which render the course so rapid, that it is impossible for any vessel to advance much farsher. It receives many rivers in its course, the chief of which are the Mocos, the Luente, and the Calucala. It forms also several islands that are pleasantly struated, and very fertile. The principal of these are the Messander and Motchiama, the former of which is about nine miles long, and two broad. The forth of it is of fertile, that they have generally three crops a year of maiz, millet, and other grain. It produces also great quantities of the mainorloop, which the inhabitants use inflead of bread, as also numbers of walm and other fruit inflands. great quantities of the maniochoot, which the inhabitants are inflead of bread, as also numbers of palm and other fruit trees." The other right and is five miles in length, and one in breadth, it is mostly level, there is on itgreat plenty of cartle, and a variety of roots and herbs. But the natural produce of this kingdom in general, as well as the perfons, manners, customs, religion, government, &c. of its inhabitants, being nearly the faine with those of Congo Propose which we hall treat of the reader is therefore to Proper, which we thall treat of, the reader is therefore referred, for an account of them, to that divition, in order to

avoid unnecessary repetition.

Angola, is divided into fixteen provinces; namely,

1. Chiffama 2. Sumbi 3. Rimba 1. 4. Seetta 1. Rember 1. Chiffama 2. Sumbi 3. Rimba 1. 4. Seetta 1. Lebolo 1. 10. Loanda 1. 11. Benga or Bengo 1. 11. Denda 1. 13. Mofeche 1. 12. Benga or Bengo 1. 11. Denda 1. 13. Mofeche 1. 12. Illanba 1. 14. Carin 1. 65. Embacca.

The province of Chiffama is fituated in cleven degrees fouth latitude, near the anouth of the river Coanza, and has a lettlengent belonging to the Portuguefe. It is divided into three parts, each of which is governed by a perfon appointed by the king 1 and these exercise fo despotic a power, that they beliave more like tyranta than inferior officers over the natives. From this cause it is, in all probability, that the country, which is very mountainous, is 6. poorly cultivated, the principal part of it being entirely barron. However, it is samous for producing a peculiar falt made by the natives from a briny kind of water, which they dig for, and which, being congealed, they form into oblong square cakes like bricks, about its inches in length 1 and these they enchange with the Portuguese for meal, oil, and other commodities. The merchants make, considerable advantages by exporting this silt to most parts of Ethiopia, as it is not only axeellent to be used with sood, but also in physic, it being a very pleasant diuretie. This province also abounds with sine honey and wax; but it labouse under considerable disadvantages from the want of fresh water, as they have feldom any rain from May to October, and their mountains are without springs or rivers. They who live near the Coanza, setch it from that rivers, but is a very dangerous, as that part of the country is insufficed by great inumbers of wild beafts.

Simbi, is for the most part sat, and well watered by several small rivers, particularly those called Rice, Caiba, and Calacombola. The natives are tall and strong; but it is and involent, that they will not be at the trouble of cultivating the lands, though the soil is naturally so wells.

and Calacombola. "The natives are tall and firong 1 but foliasy and incolent, that they will not be at the trouble of cultivating the lands, though the foil is naturally to well calculated not only for breeding cattle, but also producing various kinds of grains. The most industrious part of them are those towards the mouth of the river Calacambols, the foil of which is remarkably fertile, and the country freer from wild beafts than any other part of the province. The inhabitants breed vast quantities of cattle, with which, and other provisions, they supply their more indolent neighbours: their lands allo are well cultivated, and produce ferverse form of excellent grain.

bours: their lands also are well cultivated, and produce several forts of excellent grain.

Rimba, is divided into twenty-eight lordships or districts, whose governors always keep a great homber of milities. This province is bounded on the east, by Temba, on the north, by Lubolo; and on the fouth, by Sectta, The land is serille, and produces great quantities of grain, with plenty of cattle; and the rivers abound with most kinds of fill. The inhabitants are industrious, very tracetable, and not addicted to any particular vice, but are chiefly idolaters.

The province of Scetta is one of the most rocky and mountainous in all the kingdom, particularly on one fide of it, where a ridge of perpendicular rocks covers a fpace of thirty nulls in kugth without interruption: the furface of thefe rocks, however, is well inhabited and cultiface of thefe rocks, however, is well inhabited and cultivated, enjoys a ference and wholesome air, and is plentifully supplied with fresh water. The low lands are also well watered, and produce excellent paffuse for eattle, great numbers of which are bred by the inh ibitants; but they often fuffain confiderable loss from the number of wild leafts that infeft this part of the country. The torrents that flow from the hills bring with thom great quantities of iron ore, which the inhabitants carefully gather, by laying fraw and other fuch materials across the fireams to receive it and, afterwards, by means of fire, convert it into ex-cellent iron. Great quantities of a kind of transparent ore, which the natives call tare, are also found in this country, and which, when wrought, is in appearance much fu-perior to iron. The governor of this province is one of the most powerful in the whole kingdom; he has twenty-two inferior officers under him; his residence is on the doclivity of a high mountain called Lombo, on the frontiers between this and the province of Rimba,

Bembea, extends itlesf on one fide along the sea, and on

the other divides the kingdom of Angola from other na-tions on the fouth. The great river Sucano, or San Fran-cifea, waters most part of this province: but it is of little other use, for though it abounds with fail, yet the inhabitants dare not venture to catch them, owing to its being infested with great numbers of crocodiles, sea horses, and monstrous serpents, which not only destroy great quantities of fish, but also do considerable mischief to the adjacent grounds. The country is very large and populous, and abounds with small cattle, the hides of which the inhabitants convert into garments, and anoint their heads

feith e alt a gu a più bu

and bodies with the fat. These people ste much more favege than their neighbours, are almost all idolaters, end have a language peculiar to themselves. They are very artial, and use a singular stratagem in war, which is, to drive great numbers of eattle stowards that side on which the enemy is expected, whilst they secrete themselves at a small distance, either by lying stat on their belies in the high grass, or among the least or copies; the cattle feldont fail of exclusing the enemy to advance in order to make a capture, when they studently rife; and furioutly fall on them with their struck clubs: this scheme is generally stended with success, the enemy soon surrendering; effer which, they are fold for slaves to the Europeans by their conquerors.

The province of Temba, is in general flat and low, and is well watered by a number of finall rivers. The Rlo Longo, or Long River, is the most remarkable; it spirings out of a rock, on the top of which the Portuguese have a fortress that defends the whole district. This province is divided into twelve lordships, whose chiefs, though under the protection of the Portuguese, live free and independent, being only obliged to surnish them with a certain number of foldiers in cases of energelvey. The whole teountry ebounds with wild cows and mules, which the inhabitants hunt and kill for food: it also produces feveral excellent roots, among which one in particular refembles partiteps, but is much finer in taste, and is said not only to attenuate pliggm; but to be an admirable purisher of the blood. Some of the inhabitants have been converted to the Roman Catholic religion, which they strictly adhere to; but most of them are idolaters.

Oacco, is bounded on the south-west, by Lubolo; and, on the north east, by the river Coanza. It is beautifully diversified with hills and plains; and is so well watered

Oacen, is bounded on the fouth-weft, by Lubole; and, on the north east, by the river Coanza. It is beautifully diverified with hills and plains; and is so well watered with rivers and springs, that it is one of the most delightful provinces in the kingdorn. These advantages, however, are of little use to the names, who are restrained by the Lords from cultivating any more of the land than what is absolutely necessary to summit provision. For their own families: This is one of the most formidable provinces in the whole kingdom; as the chief governor of it has twenty others under list, whose principal business is, to discipline and exercise the military.

ethers under him; whose principal business is, to descipline and exercise the military.

There is a distemper which the natives of this province are subject to, and which is peculiar to the climate of this part of the country. It generally begins with a violent sead-ach, and verigo, and is followed by convultions, which soon reduce the patient to a mere skeleton. The medicine for this disease is made from a plant something like our hysso, which they pulvetize, and drink the insusion the parts convolled. They are likewise subject to a kind of swelling, that begins at the mouth, and spreads all over the neck, which often swells to the bigness of the head, and is frequently attended with suffication. It is generally cured by anointing the parts affected with some of the abovementioned oil.

A very singular infect is found in this province; it some

A very fingular infect is found in this province; it fome-A very ingular infect is found in this province; it fone-what refembles our dragon fly; its fing is fo dangerous, that if a quantity of blood be not immediately drawn from the affected part, the perion is thrown into a violent fever, attended with exceffive tortures, that commonly end in a lotal delirium, and, if not freedily relieved, in convultive death. The most remarkable circumstance attending this is, that when a person is cured, he feldom fails of a relapse, whing merely to the remembrance of what he felt during the time he was affected; and fome of them undergo fich exeruciating torture, that they close their miseries,

fich exeruciating torture, that they clofe their mileries, by putting an end to their existence. But we rather think that this relapse is owing to the unskilful manner in which they extract the position by bleeding, which being imperfectly done, may occasion the return of the disorder. The poor idolaters, when stung by these positionous infects, have recourse to their priests, who seek out for any insect of the same kind; which having sound they dig a hole in the earth, and put it in, adding sundry sumigrations, exorcisms, and supersitions, known only to themselves; after which, they still, the hole with water, and replenish exorcims, and superlitions, known only to themselves; after which, they fill the hole with water, and replenish it as the liquor finks, stirring it, and letting the earth settle again several times, at length, without staying till it is quite clear, and divested of its diagreeable earthy taste, they give the patient plenty of it to drink. This occasions a violent sit of vomiting, by which so great a part of the posion is thrown out, that the natural strength of the patient enables him to get rid of what is left behind. Many, however, who are cured by this strauge nothod, are some however, who are cured by this strange method, are some time after seized with pains and convulsions in their nerves, No. 20.

which fometimes terminate in a dead paily, but more frequently in a fertical lamench. The hurograms themfelvas will in piric of the express prohibition of the church, have recoarse to the above method of care, however superstious, from its being sometimes successful.

The province of Cabezao is very populous and settle, producing not only abundance of cattle, but also most kinds of province. In one part of it is a hill, called The Iron Mountain, from the yleding great quantities of that metal, which the Portuguese have raught the natives to pussey, and work into vertous kinds of instruments. In this province are many large and lofty trees; particularly palm and cocca-trees I there is also one for that greatly resembles our apple-trees, the back of which being cut with a knife, yields an odoriferous juice of the colour and consistency of honey; it is very useful in medicine; but must be first qualified by fome cooling drug, being in itself of a very hor nature.

be first qualified by some cooling drug, being in helf of a very hor nature.

Great pains have been taken by the Portuguese to propagate the Roman Catholic religion in this province; and not without success, for there are more idolaters in most other pasts of Angola, than are to be sound here!

Lubolo, is situated on the southern banks of the river Cohaza, between the provinces of Cabezzo and Quissans. Its elimate is very wholesome, and the foll remarkably fortile, producing great plenty of most sorts of provisions. It is chiefly noted for its axcellent palm-trees, which produce better wine, oil, and timber, than are to be met with in all the other parts of the kingdom. This province is tributary to the Portuguese, and the greater part of the people are of the Romish religion.

The province of Loanda, which is situated in eight elegres thirty minutes south latitude, and thirteen degrees fix minutes east longitude; is one of the most considerable places belonging to the Portuguese settlements on this fide of Africa, and is remarkable for having in it the capital of the whole kingdom of Angola. It is a large city, pleasantly situated on the declivity of a hill, near the sea coast. It is through defended by a spacious sortres; in which is a church dedicated to St. Amaro, and a convent of Cifterlians, besides several bulwarks that serve to guard the entrance of the port. This city is called by the Portuguese San Paulo de Loanda, and was built by them; in the year 1578, under the direction of Paulo dias de Novais, the first governor of this part of Angola. It is very populous, and greatly reforted to 1 not only on account of its being the residence of the Portuguese governor; but also for the whole containing the chief courts of judicature for the whole containing the chief courts of judicature for the whole the refidence of the Portuguefe governor, but also for its containing the chief courts of judicature for the whole kingdom.

containing the chief courts of jodicature for the whose kingdom.

The churches and other public buildings are fumptuous, as are also those of the merchants and officers, both spiritual and temporal. The streets are straight, wide, and regular, and always kept exceeding clean. The houses belonging to the Portuguses are built of stone, and most of them very elegantity furnished; but thise of the natives are very mean, being built only of earth, and thatched with straw. In the center of the city is a large convent belonging to the jesuits, who are here held in the highest esteem. It is a stately edifice, and endowed with a considerable revenue. On one side of it is an hospital-called the Mifericordia, which hash twenty-four wards or rooms for patients, besides convenient apartments forthedirectors, physician, surgeon, apothecary, and other attendants. On the other side of the convent is a church belonging to the fraternity of St. John the Baptist. Ar a small distance from these three buildings is the cathedral, which is a large stately structure dedicated to Our Lady of the Conception, under which is another dedicated to the Holy Sacrament. Here are also many monasteries and chapels belonging to Here are also many monasteries and chapels belonging to the capuchina, carmelites, and friars, which, with other parochial churches fo furround the city, as to ferve inflead of fortifications and walls to defend it.

Prodigious numbers of flaves are kept in this city, who are employed in tilling the ground, carrying burdens, and fetching water from springs in an adjacent island called Loanda; the city not having the convenience of being watered by any other kind of means. On the north side of the city, at a small distance from it, is a lofty hill, on which the original city flood. It ftill bears the name of on which the original city itood. It fall bears the name of San Paulo, and upon it are fome fine houses, together with the ruins of a monaftery which formerly belonged to the jefuits. The prefent city fuffered much by the Dutch, who took it from the Portugues in the year to 44 but the latter soon after retaking it, restored it to its primitive grandeur. Notwithstanding the want of water, the country round is very fertile, well cultivated, and beautifully diversified with a variety of fruit-tree, gardens, and villas. About half a mile from the city is fituated the island of Loande, or Loando, which is very disproportionate in its form, being fifteen miles long, and only one broad. The Portuguese have many houses on it, as also a great number of gardens, which they keep well flocked with most forms of fruit-trees, and vegetables. They have also on this island several handsome churches; besides which, there is a specious convent belonging to the Jessie, the neighbourhood of the capital (which is called by the name of the island) are many elegant feats and villas belonging to the Pertuguese, most of which are richly surnished, and adorsed with gardens, orchards, and other embellishments; in some of them are also very handsome chaptes in which service is performed by priests, who are allowed a sufficient salary for that purpose. The city which contains about three thousand houses, built of stone and covered with tiles, is well supposed, the laster of which is greatly effected by the Europeans.

Here are plenty of fish, which they take on the coasts of the 3sland of Loands. The bread used by the Europeans is made of millet and Indian wheat; but that used by the natives is made from the meal of the manice root. The laster of or which reason numbers of those animals are fattened up, slaughtered, and emposed to file in the public markets.

In this place similet are made either in zimbis

ofed to fale in the public markets.

emposed so fise in the public markets.

In this place small payments are made either in aimbis (the shells of a small sist) or cife beads, the latter of which are of various fizes, colours, and fashions, and are worn by some of the natives as ornaments to their arms, necks, and writes. Larger payments are made with pieces of cloth of sheir own manufacture, of a stated length and breadth: and goods are assually paid for in slaves, where the sum is considerable.

Benge, or Bengo, is divided into many districts, the chieft of which are natives, though tributary to the Portuguese. It is situated on a river of the same name: and is bounded, on the west, by the sa, and, on the east, by

tuguele. It is fituated on a river of the fame name; and is bounded, on the well, by the fix, and, on the call, by the province of Moleche. Here are eight churches, three of which are salled purchial; and one of them belongs to the jefules, who celchaste their feftivals in it with the greatest pompand magnificence. The country is fertile, and produces great plenty of mais and miller, as also a produces great plenty of mais and miller, as also a producing our number of banana and becove trees.

digious number of banana and bacova trees.

The province of Danda, istuated to the north of Bengo, on the fouth fide of the river of that name, which sparate the kingdom of Angola from that of Congo. As this country is well watered, it is very fertile, and produces plenty of grain, with various kinds of fruits; but it is greatly inselted with erocodiles and large ferpents, which harbour an the river Bengo. The jeduts take great pains to bring over the unconverted to a tenfe of Christianity; and as the inhabitants are for the most part Christians, here are faveral churches regularly ferved by facular priests. The chief of these is fituated at the mouth of the Danda; and as fome dislance from it is another, as also feveral and at some distance from it is another, as also several es and chapels, all which belong to the jefuits.

Mofeche is fituated on the northern banks of the river Coanza. In this province are two contractable southern, called Manfangune and Cambamba, each of which is under its particular commander. The two have twelve fovas, the are obliged to maintain In this province are two confiderable fortreffes, or native chiefs, under them, who are obliged to maintain a numerous foldiery, not, as is generally supposed, for the defence of the kingdom, but for the fervice of their Portaguese masters. The foil is very fertile, and, besides grain, is remarkable for producing the manier root, which is so plentiful, that large quantities of it are annually sent Loanda.

Mines of various kinds of metal are found in this province, particularly in the government of Cambamba. What is very remarkable, each mine tinges the complexion of the inhabitants who live in that territory; for though they are all naturally black, yet those near the filver mines differ in their complexion from those who live near the mines of gold and lead; which cannot be otherwise accounted for, than from the effluvia which exhale from the different

metals found in them.

Here are a great number of churches, the most considerable of which are those at Massanguno and Cambamba. These bear the title of royal chapels, and the priest that belong to them are endowed with many diffinguished privileges. The inhabitants are chiefly Christians.

Illaraba, is divided into two parts, diflinguished by the names of Higher and Lower. The former is fituated between the rivers Bengo and Calucata; and the latter between the Danda, on the north, and the Bengo on the

fouth. They both pay a tribua to the Portuguese, are very servise, and the natives chiefly Christians. The Higher Illambo hath mines of excellent iron, and is almost covered with finall hills. In the center of it is a large mountain, from the fuminit and sides of which show a prodigious number of springs and rivulets of clear and wholsone water, which is not only exceeding good to drink, but of infinite service in contributing to fertilize that part of the country. This province pays a considerable tribute to the king of Portugal, and the governor is obliged to maintain a numerous militia for the service of that prince.

is obliged to maintain a numerous militia for the fervice or that prince.

The province of Oarii, is fituated on the northern banks of the river Coanza, and adjoins to the province of Mofeche. It is watered by a great number of finali rivers that fall into the Coanza, but which, in the time of the great rains, become large, rapid, and dangerous. The Portuguese lave two fortreffes in this province, at each of which they keep a frong garrison. One of these is built at Quitongo, an island of great importance on the river Coanza, and the other at a place called Maopongo.

This laft-mentioned fortrefs is fituated on the top of a number of large rocks, and appears, at a distance, like a

number of large rocks, and appears, at a diffance, like a confiderable city furrounded with high walls, and diversified with fleeples, turrets, pyramids, obelifks, triumphal arches, and other eminent fructures: on a nearerapproach, however, it shews itself to be no more than a heap of gigantic rocks, parted from each other by intervals of a valid depth, and feveral fathoms wide; and the fummit of it, exclusive of a small part round the fortress, is a large, bareren, and uncultivated plain.

ren, and uncultivated plain.

Though this place is near one hundred leagues from the fea, yet it abounds with a variety of fprings of brackith water, very proper for making falt, and which, riting and falling with the tide, mount up at high water in large streams above the level of the plain. A circumstance still more fingular than this, is, that these springs are intermixed with an equal number of fresh ones, the waters from which are both clear and well-tasted. The sepulchres of the antient monarchs of Angola, called by the Portugues La Pubuillas de Cobazzo, are still to be seen about

of the antient monarchs of Angola, called by the Portuguefe Las Pubulihas de Cobazzo, are fill to be feen about fix miles from this place.

The province of Embacca, or Membacca, which is the laft we have to mention, is fituated on the north fide of the river Lucala, and between that and the Higher Halamba. It is wholly fubject to the Portuguefe; for though the last the converse is affirmed a calum to a kind of line the lord who governs it, assumes a claim to a kind of inthe lord who governs it, assumes a claim to a kind of sin-dependence, yet it is granted him only on condition that he shall maintain, at his own expence, a numerous body of foldiers for their service. These troops though idola-ters, are stout, warlike, and well-disciplined, never betray-ing any fear of death when they engage an enemy, for which reason they are highly valued by the Portuguele. The reader will easily perceive, from what we have ob-ferved in describing the above provinces, that form the kingdom of Augola, that the Portuguele are malees of the chief part of it: we say, the chief part, because some of them neither pay tribute to, nor acknowledge any de-pendence on them, except when they want their assistant

better the the pay thinks to, hot section leggs any dependence on them, except when they want their affiliance in cases of emergency. The following, namely, Dauda, Mofe te, Bengo, Higher and Lower Illamba, Oarii, Embacca, Sectta, Cabezzo, Lubolo, and Oacco, acknowledge a real subjection to the king of Portugal.

The purchasing of slaves constitutes the chief trade cases and the state of the s

ried on in this kingdom by the Portuguele and other Eu-ropeans; and indeed this inhuman commerce first invited the Portuguese to this part of Africa. The commodities brought in exchange, are, broad cloths, crimfon and other filks, velvets, cambricks, and hollands of all forts, gold and filver lace, broad and narrow striped tickings, black ferges, Turkey carpets, threads and filks of all forts and colours, Canary and other wines, brandy and other spirituous liquors, oil, spices of all forts, loaf-sugar, knives, sishing-hooks, pins and needles, fire-arms, fwords, cutlaffes and other weapons, small bells, variety of other trinkets and baubles, glass beads of all sizes and colours, rings of the fame or other materials, &c.

It is usual here, to divide the inhabitants of every pro-

vince (called by the natives Mirundo) into four different classes. The first is that of Macotas, who are a kind of noblemen. The second confists of those stilled the children of Mirindo, who are the original natives of the coun-try, of either fex, whether merchants, artificets, or huf-bandmen. The third is that of the Quificos, or flaves, who are the property and inheritance of the lords of that province, which devolves, like all other real effates, to their heirs and fuccessors. And the last is the Mabicas, who

are the flaves either taken in war, purchafed, or condemned
to forfeit their freedom for fome missement or crime
they have committed.

The kingdom of Angola was formerly lubject to Congo,
but it does not at present acknowledge any such dependence; and the king, from the protection he receives from
the Portuguese, preserves an absolute authority. He obliges
all the lords under his dominion to maintain a certain
number of troops for the common fervice of the realm;
but they are very indifferent either with respect to their
discipline or havery, their arms or secourements. They
are only a kind of national militia, in which every man
that is abla to bear arms is obliged to be enrolled; and they
feldom appear before their commanders, except when they
are summoned on any particular expedition, at which time
the agreeablencia of their appearance artise chiefly from
heir number. When they are about to engage an enemy,
they divide themselves into three bodies, at certain distances
from each other. In the center one is the general, who
directs all their motions by the sound of several warlike instruments. They then move forwards, retire, or wheel
about as those direct, and fall on the enemy with great
sound as those direct, and fall on the enemy with great
sound as those direct, and fall on the enemy with great
sound as those direct, and fall on the enemy with great
sound as those direct is to be worsted, they betake
themselves to slight (for they ere arrant cowards,) nor is it
possible for their general to rally them, so that the first onsite determines the facecs for the battle.

They have several kinds and fises of musical instruments
which they sie in war. One of the loudest of them refermbles the drame in Congo; it is soovered at one end
with the skin of a wild beaft, and is beaten with lovery
flicks, with which itgives a greater and more wardiske found.
They have another instrument that resembles an inverted

semines the urms in Congo; it is covered at one end with the fixin of a wild beaft, and is beaten with ivery flicks, with which itgives a greater and more warlike found. They have another infirmment that refembles an inverted pyramid, with the point fixed on the ground, and confifts of a certain quantity of pieces of metal, this and round, like bells turned uprifie down. This infirmment is of fach importance in an engagement, that the persons who touch it with wooden flicks frequently crack the metal by endeavouring to give a loud and more dreadful found. The third fort is made of elephants teeth: they are of various flaces, and in their form formewhat resemble our German flutes. This infirmment is much more musical than either of the former two; it gives a found like that of the corner, but has a greater variety of notes, and, when played on by a fallful hand, affords very agreeable music. This infirmment is supposed either to have been first introduced, or else greatly improved by the Portuguese, who have also introduced the use of kettle-drums, trumpets, hautboys, and ther infirmments; but those principally used in war are the three first mentioned.

other infiruments; but those principally used in war are the three first mentioned.

The largest of their instruments are appropriated to the head general, whose orders, by means of these, are heard by the whole army. The text in size are used by those who command the several bodies into which it is divided, and the leffer sizes are for the use of the captains and other instrument is no somethear, than all the others answer in concert, and by this method the whole army is made assuminted with the orders of the wenter army is made assuminted with the orders of the wenter.

concert, and by this method the whole army is made acquainted with the orders of the general.

The military officers are dreffed in a very grand manner; and they appear much taller than they really are, as well as more terrible, by the length and variety of oftrich, peacock, and other feathers, with which they adorn their cape.

They wear about their necks feveral links of iron chain, to which are faftened great numbers of rings that make a loud jingle at every methon; for the fame purpose also, they hang a number of bells about their middle, the noise of which they suppose apimates the foldiers to fight with more ardour, and at the fame time give themselves a greater more ardour, and at the fame time give themselves a greater air of pony and grandeur. They wear bufkins on their legs, after the mainer of the Portuguese. Their weapons are the bow, fword, target, and dagger, those, however, who carry the bow, are allowed only to wear the fword and Their weapons

dagger, but not the target.
Some of the common foldiers use broad swords, muskets, and piftols, which they purchase of the Portuguese; but those who go naked from the waist upwards, fight only with bow and dagger, and wear large crooked knives in

their girdles.

With respect to the language of the people of Angola, it is radically the same with those of Congo; but the dialects of the different provinces vary so elseatially in pro-nunciation, that it is difficult for those born in places remote from each other to converse together. This, however, is not to be wondered at, in a country where there is no regular grammar, fince England and France, which abound in polished writers, labour under the same

inconveniences, as the jargon spoken in many of the countries of the former, and the several provincial dishelds of the latter, render it impossible for the native of the several provincial dishelds of the latter, render it impossible for the native of the funder country to be understood by a pure speaker of either. We shall conclude our account of the particulars relative to this kingdom, with the description of a remarkable ridge of mountains which extends itself north-east from cape Negro. Some of these, on account of their prodigious height and coldness, are called by the Portugues Montt Freddi; and some others, which are still higher, they call Montt Nevoss, on account of their snowy tops, the water of which, falling in great plenty during the summer feasion, form a considerable lake below. But the most considerable one of all is that called Cambenabe, on which there is a mine that produces excellent faiver. The Portugues is a mine that produces excellent faiver. The Portugues and, in order to secure it, have built a very strong servers. This place, which, by reason of its vicinity to the great river Coanza, is very conveniently situated for the great river Coanza, is very conveniently situated for the great river Coanza, is very conveniently situated for the great river Coanza, is very conveniently situated for the great river Coanza, is very conveniently situated for the great river Coanza, is very conveniently situated for the great river Coanza, is very conveniently situated for the great river Coanza, is very conveniently situated for the great river Coanza, is very conveniently situated for the great river Coanza, is very conveniently situated for the great river Coanza, is very conveniently situated for the great river Coanza, is very conveniently situated for the great river Coanza, is very conveniently situated for the great river.

SLCT. IV.

Defeription of Congo Proper, its fination, kundaries, rivers, provinces, natural biflery of the country, natives, governa-tions, laws, trade, Gr.

CONGO Proper, is fituated between the a bond and a eleventh degrees of fouth latitude, and between the thirty-fecond and forty-first degrees of east longitude, extending in length, from north to fouth, five hundred and forty miles, and in breadth, from east to well, about four hundred and twenty. It is bounded, on the east, by the kingdoms of Makoko and Matamba; on the north, by the river Zaire; on the fouth, by Angola, from which it is feparated by the river Danda; and, on the west, by the ocean.

is separated by the river Danda; and, on the west, by the ocean.

The most considerable of its rivers is the Zaire abovementioned, called by the natives the great river of Congo. This river is situated in five degrees forty minutes south latitude, it is three miles broad at the mouth, and runs with a very strong current into the sea. It is navigable for large veisses about it seems miles up the country; but beyond that it cannot be passed, owing to a prodigious humber of rocks that lie in the centre of it. From this river run several small brooks, which not only water the country, but are also very convenient for the merchants and other inbabitants, who can go in cances from one village to another. In the course of this river are several small islands, the inhabitant of which are under the government of lords appointed by the king of Congo. Those called Bommo and Quintella, are the two principal, and are situated near the inouth of the river, the first of which is remarkable for having many mines of iron.

Though the islands above-mentioned are all inhabited, yet there is not a house to be seen, the ground being so low and marshy, that it is constantly under water; for which reason the negroes live chiefly in their cances, or under trees, round which they build their huts, raised several sect above the ground. These islanders are a strong and resolute people, but they are very unpolished in their manners. They have no marriage or betrothing, but from their youth form such alliances as their inclinations direct, without any ceremony. They are governed by particular chiefs and officers, who are chosen by a majority of voices in the affembly.

The other of these islands, mantely, Quintella, in re-

chiefs and officers, who are chofen by a majority of voices in the affembly.

The other of these islands; mantely, Quintella, is remarkable for having an idel, which no one dare approach but the persons appointed to attend, and who secure it from being discovered. To effect this, they are themselves obliged, as often as they go thichter, to take such a path as they think no other persons can find out. Many persons; particularly in case of Schenes, make rich offerings to this idel, all which are totally destroyed; for as soon as they are dedicated, the person attending conveys them to the idel, which is placed on a large plain, surrounded with a wall maske of slephants teeth, where they are lung on poless, and there left till they are entirely destroyed by time.

Three lakes communicate water to the river Zaire; the first of which is the Zambre, the second the Zaire, and

Three large communicate water to use river Laire; the first of which is the Zambre, the feeofid the Zaire, and the third a great lake, from whence the Nile is supposed to have its source. The Zambre, however, is the most considerable, being, as it were, the center from whence all the rivers in this part of Africa proceed.

The Umbre or Vambre, Brancare or Bancare, Bar-

'e or Varbele, Lelunda; Ambrift, Encocoquematari, Cara, Libongo, or Lemba, and Dauda; are the other rere in this kingdom, but they are all too inconfiderable; merit particular notice. The congo landivided into fix provinces, the fituations, unites, and titles of which, are as follow, viz. the country centifeit of Songo) and the great duchy of Benha, ong the doaft; the duchy of Sundi, and the marquifate. Pango, to the north eaft; the duchy of Bala, bettward; led the marquifate of Penha, in the middle. We may let to these provinces; the territories or lordships of Amaca, Danth Ambulla, Dembo Quingenge, Dembo Amaca, Danth Ambulla, Dembo Quingenge, Dembo Amaca, Danth Catanga; but these distributes are for trifting and not to squire siny particular descriptions.

ova Cavanga but these dibricts are so the terratory of course any particular description.

The province, or county of Songo, is bounded, on the latt, by Pango and Sundi; on the west, by the Ethiopic, a count, by the Lethiopic, a count, by the Lethiopic a count, by the Lethiopic as the count, by the Lethiopic as the count, by the Lethiopic as the count, by the Lethiopic and were it not for the great quantities of fall which are gathered on the sea-coast, the governor or count's income would be every triffing. The chief, produce of the inland parts are palm-trees, the fruit of which is the principal substitute. Banza, or Banza-Songo, the county is the county of the co

are paint-received the his province, its flusted about fine miles from cape Padrone, on the fouth fide of the mouth of the Zaire. It contains about 400 houles, which are built fo irregular and straggling, that they take up a large compast of ground. They are generally thatched, and the lides of them are fewed with palm-branches, or leaves neatly interwoven. The infides are hung with mats of various colours, and diffinguished from the reft, not only for its fire, but is always painted with a mahegany colour, or nearly retembling it.

There is a church in this town, which is remarkable for its antiquity, it being supposed to have been built ever fince the Portuguese first came into the provinces, which was about the year 482. If this supposition is juffly founded, it is an extraordinary circumfance, the edifice confishing only of timber, plaistered on both fides with clay. But befinds the above, there are three other churches in this town, the first of which stands within the inclosure

this town, the first of which slands within the inclosure in this town, the first of which names within the manus of the count's palace, and is dedicated to the Virgin Mary of the count's palace, and is the or the count's parace, and it dedicated to the Virgin Mary-the fecord is fituated at fome diffance from it, and is the borial pace of those governors; and the third, which is dedicated to St. Anthony, adjoins to a monastery belonging to the capuchins, and ferves them not only as a chapel, but also as a parish church. Here are several other infector chapels, as well as in table monaster of the chapels, as well as in other parts of the provinces every fova, or inferior governor, being obliged to maintain on in the place of his rolidence.

The count maintains, in his court, a dignity and fplendor little inferior to those of the king: he has many petty lords under him, who were formerly independent, but are now fubject to his government; and he might be flyled an absolute monarch, were he not tributary to the king of Congo. His dress differs according to the various feaft as also on other particular occasions, which we shall

here particularize.

His signal habit is a garment of straw cloth, girt close about him, but of such workmanship, that no other perfon dare presume to wear the like, without first having obtained his permission. This garment reaches from the shoulders to the ancles, over which is a long baize cloak, inculters to the ancies, we write it is a long basic close, that hangs trailing on the ground. On the feast days he changes this cloak for a hort fearlet one, fringed all round with the fame cloth, pinked. On the most folemn days he puts on a fhirt of the finest lines, as likewife yellow or crimton filk stockings, and a cloak of slowered filk. When he goes to communicate at the altar, he has a cloak all white, which is fo long, that it trails on the ground as he walks: In going to church, which is at leaft three times a week, he has a velvet chair and cuthion carried before him, being brought himself in a net, on the shoulders of two men, each with a tan in in in a land, in caperal, the other chony tipped. The hat he then wears, is caverd first with tasfety, and above that a fort of very fine seathers, under which he has a small white cap, neatly slitched with filk. On his breast is a large brassy cross; and from his neck hang feveral ftrings of coral, with a large chain of pure gold? Pefore him march a number of inuficians, whom is diftinguished above the rest, by having feveral finall round bells fixed to an iron about a yard long, which he keeps continually jingling as he walks. On each fide of him is a man holding an umbrella fixed on the the top of long poles, to shalter him from the hear of the a fund. After mail, his guards, who always attend him, fire a volley, which is followed by the found of drums, and it

other infiruments of war.

Nine or ten of the principal men in the prevince cleck in the count to the sendoun these generally attend his perion. The choice is always made between the death-of their the former count and his interment; but the government is in the bands of the electors during the vacancy.

On the death of the count, it to meetimes happens that his fosh, or fome other person in the family, will raise a faction in the province, to order to obtain possession of the throne, and exclude the electors from their accustomed privilege; for which reason, the sucharist has been sometimes during to the administered to him, for sear of differential to be administered to him, for sear of differential the search of the covering his fituation by the priest's going to court, and, his death is always concealed as much as possible from the public.

public.

All the count's subjects, on the feat of St. James, show their allegiance by complimenting him with some present, in proportion to their circumstances. On the same day the civil offices are disposed of to those who are thought worthy of holding them; and such as have milbehaved in their employments are discarded.

The ductry of Bemba is the second province of Congo Proper; it is fituated between the rivers of Ambris and Loza, the latter of which separates it from the marquisate of Pennis on the east, and the former from the county of Senga on the north. Along the fearcast it, extend ite, felt much farther, viz. on the south, to the river Danda, which parts it from the kingdom of Angola, and norther ward to the river Lelunds. ed to the river Lelunda.

wand to the river Lelunds.

Bemba is one of the largest and righted provides in the whole kingdom; in soil, it maturally fertile, and would produce abundance of all the necessaries of life, were the natives industrious in cultivating and improving it. The sea coasts produce likewise a produgious quantity of last, infomuch that they have not only a sufficiency for their own consumption, but they also export it to foreign countries, which makes the asticle yield an extraordinary revenue to the crown. The inhabitants in general profess the Romish religion, and keep several jesures, and other priesses, for religious nursoles.

the Romith religion, and keep feveral jetuits, and other priefts, for religious purpoics.

Ranga, or Panga, the capital of this country, is fituated about disray milas from the fea-coaft. It is a large town, but the houses, like those in Songo, are built in a very fitraggling and irregular manner. It fands in a hilly country, and is wateted by two rivulets. Here are several churches, but they are all very mean buildings, the topseling covered with thatch, and the walls made of clay.

The greatest respect is paid at court to the lord of Bamba, who is also capital general of all his majesty's forces, and the most powerful of all his vasfals.

The duchy or province of Sundi begins about forty miles north-east of St. Salvador. It is bounded on the east, by the province of Pemba; on the worst, by that of Pango; on the north, by the river Zaire; and, on the fourth, by the duchy of Batta. Its capital is called Banza Sundi, which name was given it to distinguish it from Banza (now called St. Salvador) the capital of the whole kingdons.

There are feveral distinct governments in this province, most of which being far distant from the capital and in places surrounded with mountains almost inaccessible, the mont of which being far diffant from the capital and in places furrounded with mountains almost inacceffible, the people pay obedience to the governor according to their own difference. They are always armed, and keep the whole province in a constant fate of trouble and agitation; for, as the Portuguese have not been able to propagate their religion amongs them, they are more refractory than any other people in the whole kingdom of Congo.

If this province was well cultivated, it would be one of the most fertile spots in the universe, it being watered with several rivers; but the inhabitants are so indolent, that they rather chuie to live aimost in want, than apply themselves to labour; and therefore they purchase from the adjoining provinces what provisions they have occasion for.

The most precious, metals abound in the mountaina liera, but, by reason of the turbulent spirit of the inhabitants, they are not suffered to be dug for. They work only the iron mines, and one mine of copper which is sound in the mountains on the north side of the Zaire. This sast is of a beautiful yellow, and the inhabitants of Loango purchase great quantities of it.

Pango, was formerly called Panga Logon, at which time it had the title and prerogative dignity of kingdom; but it hath lost both ever fince the kings of Congo subdued and reduced it to the rank of a prevance. This marqui-

C

h

fate is bounded on the east, by the mountains of the fun; on the west; by Pemba; on the north, by Sundi; and; on the fouth, by Batta. Its capital is called Banza Pango; and is situated on the banks of the river Barbel, which runs through the center of the province. The nature of the inhibitants; as also ther dispositions, customs, and manners, are the famile in general as those of Congo, not has the town; or the province fuels, any thing remarkable in them.

has the town, or the province itself, any thing remarkable in them.

The province or duchy of Bata, or Batta, is fitulated on the fouth-weft of Parigo, and hath the falt petre mountains, on the east; out the fouth, it is bounded by the Montes Quemados, of Burnling Mountains; and, on the west, by the province of Pemba: It is of considerable extent, and was formerly a kingdom of itself; till it voluntarily submitted to the kings of Congo; for which reason it enjoys more privileges that any other province in the kingdom, and a person descended from the antient kings of that country is always appointed governor of it.

This province has a very fertile foil, which produces several sorts of excellent grain; the inhabitants are more civilized and assable than their neighbours; and were more cassily converted tochristianity, the principles of which they have ever since strictly retained and adhered to.

Batta, is the capital city of this province; but it is not considerable for any thing except its being the residence of the governors of the province, who are allowed to have a number of mussetters in pay to desend it from the incursions of the wild Jaggas, who inhabit hear its eastern frontiers beyond the mountains of the Sun and Salt Petre, living chiefly by ravaging their neighbours on all sides; and would do the same by this, were shey not over awed by those troops. The road between this capital and that of the whole kingdom hath a great number of houses and hamlets on both sides, a circumstance very uncommon in these countries. The boundaries of this capital are extremely fertile.

The governor of this province, who is stilled manitremely fertile.

The governor of this province, who is filled mani-batta, is confidered as the fecond person in the kingdom. Whatever he says, must not be controverted by any of the rest; and on the failure of the royal line, the succession de-volves upon him. His court and attendants are little in-ferior to those of the king, for when he goes abroad on any public occasion, he is preceded by trumpets, drums, and other martial instruments. He sometimes also eats at the king's table, which is a privilegation from the desired even. the king's table, which is a privilege flot granted even to the king's fons.

The marquifate of Pemba, is the last province that re-mains to be mentioned in this kingdom, which, though smaller in extent than any of the rest, hash always lad this fmaller in extent than any of the reft, hath always had this fingular advantage, that its capital hath always been the native refidence and burial place of all the kings of Congo, whether idolaters or Christians. This province is well watered, not only by the Lelunda, which runs quite through it from east to west, but also by the river Ambris and fome others, which equally contribute to its fertility, and the riches and happiness of its inhabitants. The constant residence of the king and his court, which is very numerous, emulates the peopleto industry, whilst the great confumption of provisions, and other merchandizes, improves their comparers, enforces their dilineance, and increases. their commerce, encourages their diligence, and increases their wealth; the fruit of which they quietly enjoy, without being exposed to the extortions of foreign vicerory, or (being 6 happly situated in the heart of the country) to the incursions of barbarous neighbours.

the incursions of barbarous neighbours.

We shall now give a particular description of the city of St. Salvader, the capital of the kingdom of Congó, which is situated almost in the center of this province of Pemba. It was (as we before observed,) formenty called Barza, which in the language of the country, signifies, court, from its being the usual residence of the kinga. It received its present name, from the Portuguese, by which it has for many years been known to all other Europeans. It stands about one hundred and fifty miles from the sea, on a large and high mountain, which is almost all rock: on the top is a plain about ten miles in circumserance. on a large and high mountain, which is almost all rock; on the top is a plain about ten imiles in circumference, which commands a most extensive and delightful prospect, and is beautifully shaded with a great variety of fruit trees; as palm, tamarind, plantain, kola, lemon, and orange-trees. The air is also exceeding wholsonte, which was one of the motives that induced the kings to fix thelr seats there; another reason was, its lying in the center of the kingdom, by which means, if particular circumstances trequired it, relief might be quickly fent to any other part; a third reason was, the great elevation of the land, which renders it almost inaccessible to an enemy, and consequently neither easy to be surprized or attacked. The No. 32.

mountain hath also some iron mines, which are of singular use to the inhabitants, who fabricate it into weapons and instroments of agriculture. It is therefore little to be wondered at, that the Congo monarcha should have choses for their usual place of residence, a spot which is rendered valuable by so many conveniences. The city is very populous; the number of inhabitants being computed at forty thousand.

On an angle of the hill towards the south-east, stands the town, which is so strongly situated by nature, that it liath not any walls; except on the south side. The surface of the hill is covered with shoules, most of which belong to persons of quality, who have such a number of spartments and out-buildings belonging to them, that each sous appears, as it were, a town of itself. Those belonging to the inferior people run in a straight line, and form very standsome streets: most of them are spaceous, thought they appear mean from their construction, being built only of clay and straw; but those belonging to the Portuguese, which are covered with thatch, are built of brick.

The royal palace is large and spacious, surrounded with sout walls, one of which is made of stone, but all the rest of straw; the walls of the inner spartments are made of the same materials, but covered with hangings or mais curiously wrought. Adjoining to the inner court (where the king spends most of his time) are large gardens and occlards, adorned with arbours and pavilions; which are very commodious.

the king spends most of his time, are large gardens and orchards, adorned with arbours and pavilions; which are very commodious.

Exclusive of the palace, the most considerable buildings in the clty, are; twelve clturches, of which one is the cathedral, a college belonging to the Jesuits, where four of stem are constantly employed in teaching the Latin and Portuguese, and in catechising the people; and lassly, the Portuguese fort, which is a strong and spacious edifice. The churches, and other public buildings, except the Jeruit's college, have stone foundations, but the roofs are very mean, being covered only with straw; and they are ladifferently provided with utenfuls for the celebration of divinte offices in public worship.

Two excellent sountains afford a plentiful supply of fresh water to the city: the one is in a place called St. James's street, and the other within the walls of the court: besides which, there is, on the cast side, near the foot of the hill a spring of excellent water called the vese, which salls into the river Lebemda, and is extremely serviceable to the adjacent country and environs of the city.

There is a spacious square before the great church, on one side of which a large market is kept every day for the sall of provisions. The rest of the square is surrounded with elegant houses, shiefly inhabited by noblemen.

In the vallies below the city, as also in the adjacent plain, are produced several forts of grain; the chief of which is an exotic brought thit for grain; the chief of which is an exotic brought thit for surrounded with elegant houses, shiefly inhabited by noblemen.

In the vallies below the city, as also in the adjacent plain, are produced several forts of grain; the chief of which is an exotic brought this for surrounder which, when ground, makes excellent bread, and is preferred by the natives to that of wheat, which last they use only at the performance of mass. Here also grow quantities of mair, called by them mazzacongo, or corn of Congo; but they only use this artic of the kingdom, as their pasture-grounds yield excellent

greater number of cattle are fed herethan in any other part of the kingdoms, as their pafture-grounds yield excellent grafs for them,

Confidering the equatorial fituation of the kingdom of C.ngo, its elimate is much lefs fultry than might naturally have been expected. Their winter months, are April, May, Jane, July, and August, during which they have almost continual rains, whereby the rivers are fo welled ato overflow the principal part of the country.

The winds, in winter, blow from north to west, and from north to north-east. These winds drive the clouds towards the mountains, where being gathered and compressed, they at length condense into water, In the summer, the winds blow from the fouth to the south-east; and as they clear the southern skies, so they drive the rain into the northern regions. These winds are of infinite fervice in cooling the air, which otherwise would be so hot as to be almost insupportable; for even as it is, they are obliged, in order tookeep off the violent heat, to hang coverings over their houses.

The soil is exceeding sertile, and produces several forts of grain, particularly rice and maia, and the whole country is well watered with rivers. They have also a great plenty of a grain called luko, which in its form resembles mustard-feed, but when ground produces flour little inferior to that from wheat. The manioc-toot is likewise cultivated here, and much admired by the Portuguese, who, instead of making it into bread, bruise it very small,

likewife great plenty of various forts of vegetables, most of which are cultivated with very little labout. Assorpthes are turneps, cabbage, potatoes, radifies, cauliflowers, carrots, and figures, potatoes, radifies, cauliflowers, carrots, and figures, befides others not known in Europe. They have allo feveral ufeful herbe, as balm, fage, mint, hysfop, thyme, fweet-majoram, and divers others.

Among the trees most diffinguished for medicinal qualities, is one called Angaris, the root of which, boiled in water, is an infallible remedy for violent pains in the fide. Another tree of medicinal virtue is the khifeka, any part of which being reduced to powder, and mixed with water, it good against fevers; and in cafes of fainting, if applied either to the forehead or temple, is equally efficacions as hartfhorn. The Jakasfa-tree, which grows very tall, and is of a red colour, has the virtue of curing the tooth-sch and fore gums; but it is very perincious to birds; for they foon fall dead to the ground, after having fettled on its branches.

A tree which bears a fruit refembling a lemon, likewife

fertied on its branches.

A tree which bears a fruit refembling a lemon, likewife grows here. This very fingular production of nature, called mignamigna, pofesses two opposite occult qualities in the most eminent degree, being at once a deadly poison and powerful antidote. If a person is infected by the fruit, the leaves are a certain cure; if by the leaves, the fruit has the sum effect; and the wood is deemed both as pernicious and falutary as either the leaves or the fruit.

fruit,

Among the wild animals of this country, are elephants, lions, tygers, leopards, buffaloes, bears, wolves, large wild cats, cameleons, apes, and monkies; befides which, they have great numbers of flags, fallow-deer, reebucks, hares, and rabbets. Their tame animals, are, ozen, cow, theep, goats, and hogs.

This country abounds with poultry, particularly lowls, geefe, and ducks. They have also abundance of wild fowl, as partridges, pheafants, woodcocks, pigeons, doves, hens, dee. The wild hens are much more beautiful, and the flefit better tafted than the tame ones, but they are not effectual by the natives. The birds of prey, are, eagles, falcons, and fparrowhawks. In fome parts of the kingdom are officiens; and on the borders of Angola is a wood encompaffed with walls, where peacocks are bred for the sife of the king. The feathers of these birds, mixed together, and made in the form of an umbrella, are used inclead of banners and ensigns in war.

There are great numbers of parrots in the woods, most

There are great numbers of parrots in the woods, most of which are very large, and either of a grey or green colour; but there is one specie eaceeding small, not being larger than sparrows, and their feathers are beautifully variegated: the most admired among the small birds are those called birds of numse; they are about the size of a canary-bird, but differ greatly in the colour of their feathers; some are all red, and others green, with their feathers; some are all red, and others green, with their feathers; fome are all red, and others green, with their feathers; fome are all white, grey; dun, or black. These last are kept in cages by the better fort of people, merely for the sake of their fong, as they have the most agreeable note.

They have several kinds of mariles.

They have feveral kinds of reptiles here, as feorpions, They have feveral kinds of reptiles here, as 'corpiona,' millepedes, vipera, finakes, ferpents, &c. Among the inakes, there is one species so amazingly large, that we are told it will swallow a whole sheep. It is called the great water-adder, from its being chiefly found in the rivers. It goes, however, on laind in search of prey, and climbs the trees, where it lies in wait for the cattle that come to pasture. where it lies in wait for the cattle that come to patture. As foon as a fleep or hog arrives near the place, the finake immediately defecteds, and winding its tail round the hinder parts of the animal, fecures it from moving, when he kills and devour; it: When he has gorged his prey, he becomes for fome time flupid; but as foon as he recovers, he immediately makes for the water, where he continues till hunger prompts him to feek for a fresh supply of

A great variety of fish is found in the feas and rivers: among others, in the former, are prodigious quantities of fardinias and anchovies; and in the latter are plenty of fturgeons, foles, barbel, trout, tench, and other fish. They have also, particularly at the mouths of the river, several kinds of shell-sish, as oysters, muscles, cockles,

and large crabs.

There are mines of feveral forts of metal in this kingdom, especially iron and copper; and in the mountainous parts are large quarries, that produce not only excellent flone, but marble of various colours; also porphyry and

jasper. With respect to the natives of Congo, they differ in their persons, according to the respective provinces in

which they are born: some of them are very tall and robust, but the generality are of a middling stature; some again are of an olive complexion, while others are quite black. They have all black curling hair; but their nose are not so flat, neither are their lips to thick, as those of the negroes in general. In their dispositions, they are proud and haughty among themselves, but to strangers they are very affable and courteous. They have a natural propensity to thest; and whatever they get, either by stealing or otherwise, they spend in liquose, of which they are very sond, and frequently drink to the greatest excefs. They have naturally a ready turn of wit, and, when sober, will converse with great circumspection. They are, however, very revengetud; and when ever they think themselves offended, nothing will lat say them but defroying the object of their resentment, which they generally effect by posion. which they are born : fome of them are very tall and ro-

The drefs of the common people confifts only of a fe garment made of cloth, which is fastened round the fit, from whence it reaches to the middle of the leg. and some have the bottom ornamented with a fringa.

The upper part of the body is intirely naked, nor do they wear any fort of covering on their heads. The richer fort have long and broad cloaks made of cloth or ferge, fort have long and broad cleaks made of cloth or ferge, and in form much like those worn by the Portuguese, under which they have a white shirt, or a kind of damask or fattin petticoat, which reaches from the waist to the ancles; they have also gold or filter fashes, with neek-laces of red coral, and on their heads they wear caps made of white cotton. Some of the ladies have a vail over their heads, and a valvet cap richly ornamented with jewels un-

The great men, when they travel, are carried in ham-mocks made either of net-work, or ftrong fluffs; the man-ner of which is thus deferibed: the hammock, is faitened to a long pole about a foot from each end; and when a to a toig pole south a foot room each end; and when a person has got into the hammock, two men, one before and the other behind, take up the pole, and lay it on the shoulders, carrying the person in this a confiderable way without retling. When it is gournies, they have four men, wito relieve each the doing fooders, carrying the perion in this are a confiderable way without refting. When the the doing of which they have four men, who relieve each the doing of which they are fo expert, that they have four the food of travelling, the perion fitting or, lying in the hammock as he thinks proper; and in order to thelter themselves from the hear of the fun, they have four-times a piece of callice themselves are the sections.

have fometimes a piece of callico thrown over the pole. They have likewife another method of travelling, which is, that inflead of a hammock, they faften two ropes to the pole, one of which is much shorter than the other: they are each tied in two parts, and hang like swings; in the former the perion firs, and at the bottom of the latter is a square piece of board, on which he tests his feet. The perion carried generally holds an umbrella in his hand, to perion carried generally notes an amorete fhelter him from the heat of the fun, or the inclemency of the weather. The reason of their travelling in this manner, is from the want of horfes, there not being in the whole kingdom any of those useful animals.

Their buildings here pretty much refemble those in th other parts of the wellein costles of Africa; they form little towns or villages, by eredting feveral houses together in the midft of an inclosure. These buildings are made of wood, and covered with the branches of trees: each house is divided into several apartments, the innermost of which is adapted for the women; they are all on the ground

which is adapted for the women; they are all on the ground floor, and are without windows; the only light they have being admitted at the door, which is fo finall, that they are obliged to floop when they pass it. The inclosure of the house is formed by trees, which grow to close together, that they keep off the volent heat of the fun, at the fame time that they fervo for a fence.

Their houses are very thinly stocked with surnivare, the whole of which consists only of a few necessary utensits, as pots, kettles, cale assets to hold their provisions, a mill to grind their corn, a hatchet to fell timber, and some infruments of agriculture. Some of them have beds made of coarse cloth stuffed with straw, on the leaves of trees, but loofe straw spread on the ground serves the generality of them to lie on. them to lie on.

The common people live chiefly on rice, fifth, potatoes, and other roots; but persons of higher rank have also fieth and fowl. They sometimes regale themselves with palmwine, or brandy mixed with water; but their common drink is water only.

drink is water only.

The natives who reside near towns, live chiestly by trade; but in the country they are principally employed in agriculture, and the keeping of cattle. About the given

[AFRICA.] CONGO

Laire fome of them fublift by fifthing, fome by drawing alm-wine, and others by weaving. Towards the eaftern borders of the kingdom are fome excellent artifle, who get confiderable wealth by making various forts of cloths, as cloths of tiffue, futins, taffata, damalks, farfonets, viewe tux and uneut, &c. The yarn is made of the leaves of palm-trees, which trees they always keep fhort, every year cetting and watering them, that they may grow (mall and tender against the next (pring. The threads drawn from these leaves are very fine and even, and with these that are longest they wasve the largest pieces. The fitting are woven in several forms; fome site eleves, or the figures of birds and animals. Their brocades, are by far the best but leave made be first obtained from the king, before any person in germitted to ware them.

The Congocs, are enternely fond of diversion and selvivity. In most villages, the people assemble zery evening as some open place, where they form a sing, in the corner of which is placed a large wooden platter foll of provisions. The eldest of the company who is called Makaluntu, gives to each his portion, which he divides with such exactness, that no person has the least reason to come by at the time of the selfivities, they are qualify welcome to participate with the rest of the greets, but only a large stalk, which, when any self reason to come by at the time of these festivities, they are qualify welcome to participate with the rest of the guests, and always take their place in the ring, without being assessment, and singular advancement in life. As these seats they dance, and singular advancement in life. As these seats they dance, and singular advancement in life. As these feats they dance, and singular advancement in life. As these feats they dance, and singular advancement, inconsist shey have also feats, such as againing a law-fuit, a marriage, the birth of a child, for any singular advancements, consisting of stutes, pipes, ivory sammens, and drums, the latter of w

make public proclamations to the people, in the lame manner as the trumpet is among us.

Their, marriages are celebrated according to the rites of the Romift church, fome of the natives of Congo having embraced that religion; but moth of them preferve their antient idoistrous maxims, are married by their own priefus, have a number of wives, each taking as many as he thinks he is able to maintain. Their contracts of marriage are he is able to maintain. Their contracts of marciage are thus performed; when two parties, approve of each, other, the parents of the young man fead a prefent to those of the girl's; at the fame time requesting that they will let his fon have her for a wife. If the, parents of, the young woman retain the present, it is a token of compliance; in which case the young man, with his relations and friends, good immediately to the house of his mitter's father, and conducts her to his own, when a priest is sent for the marriage ceremonics are performed; and the extening its concluded with joy and setting; it. When the father of the girl receives the marriage present, he must not complain; be it ever so trisling, as that would be considered in the light of felling his daughter; for which reason, and to prevent such a crime, a tax is settled, what every man that give, according to his circumfances in life; his call to set of the husband afterwards discovers any material imprais-

If the hufband afterwards discovers any material imprur-dence in his wife, or has reason to be disgusted with her, he fends her back to her parents, and has the prefents we nersions ner ouch to her parents, and shat the prefents we-thored; but if the fault appears to be on his own fide, he cannot recover any thing. A man who is det-cled in hav-ing a criminal parverfation with another a wife, is obliged, as a compenfation for the injury, to give the value of a

flave to the hulband; but the woman receives no other pen-nifiment than afking pardon of her hulband for the of-fence the has committed. Those who are desected in co-habiting together without the ceremonies of marriage, an punished with a fine, which is levied in proportion to the

punished with a fine, which is levied in proportion to the offender's circumfunces.

The pagan right here, the farms in Lounge, tay sertian injunctions on young people, such as obliging them to, abstain from eating some lotts of positry, the field of certain healts, fruits of different kinds, roots either man, or boiled after this or that manner, with the lite ridiculous obligations, which they call heilil. There rules are as invisibly kept as they are firely, origined, they would sooner fast till they perished, than take the least bit of what has been forbidden; for they think, if they commit the least trepais against the kepilla, they find certainly lie in a very short time. The preposition of their minds on this headwill be evident from the following fory mentioned by Merolla, in his voyage to Congo: "A young black fays he, upon his journey who, had recurred, the keyilla, coming to a friend's house at night, his holf near morning had for breakfast, a wild fowl, which is much setter than a tame one. The guest hereupon demanded it is was a wild hen? and being answered in the

tioned by Merolla, in his voyage to Congo: "A young black saya he, upon his journey" (who hat restived, this kejilla,) coming to a friend's house at night, his host next morning had, for breakfult, a wild fowl, which is much steter than a tame one. The guest hereupon demanded it is was a wild hen? and being answered in the negative, he fat down and ato says hearily. Four, years after, their two meeting together again, the country black afted his friend, who was not yet married, if he would sat a wild hen? I hat young man answered that he had received the keilla, and therefore could not, the other laughed, and afted, What made him refuse k now, when he had saken it at his table fo minty years before? At hearing this, the other began to remble, and in left than treatity-four hours died, by the mee effects of intagination:

The method they take to cum the head ach, in, by bleeding the patient in the tamples, in, doing of which, they first cut the kin with this edge of a fhell sharpened, and then applying a small horn to the part, sick out the blood. For complaint in other parts of the body, they perform the same operation.

On this death of any person, a number of heats is immediately killed by the relations, who foriakle the boosis, both within and without, with the blood, from a support it on that it will prevent the apparation of, the docastes from visiting any, of alse stunce inhabitants. As form, as this part of the escendary is core, where they have his inhabitants has been also as the grave, which is made in some remote lost at a confidence in the support of the core of cotton cloth, is carmed on met it shoulders to the grave, which is made in some remote lost at a confidence has a first horn of some strange beast, an earthern platter, bowls, or any other wells, but stone, other person is inferred to touch these things, which are held in a carrier in the other would, but since, the Portuguese have a large heap of cart raised, on them, other person is inferred to touch these things, which are held in a stran

Ro gives public sudience twice a week, but sto one is perstitted to speak to him except his favourite nobles.

The king's dress is very rich, being for the most part
cloth of gold or filver, with a long velvet mantle. He gegenerally wears a white cap on his head, as do also his favoorsters, but if any of the latter come under the displeasure of the king, he orders the cap to be taken off, which
is the highest mark of indignity they can receive: this
white cap being confidered here as a badge of distinction
or knightstood, and no less honourable than the star and
garter among the nobility in England.

His Majesty is attended, when he goes abroad, by a
sumerous retinue; for not only his nobles accompany,
him, but likewise all althe principal men of the city; ione
of whomago before, and others behind. The king is
preceded by musicians; and a sumerous guard, some of
whomare atriced with musices, and others with lances, or
bows and arrows. When he goes to the cathedral, the
Portugases, both temporal and spiritual, as well as the
grandees; must wait on him; and return with him to the
galacs; but the Portugases are not obliged to attend him
on any other occasion. Attelled times the king is dressed
in his richest robes; which confist of a long mantle, or,
clock of filk, ornamented in the most elegant manner. He
wares a bordered can on his head, and round his neck are ak of filk, ornamented in the most elegant menner.

wears a bordered cap on his head, and round his neck are chains of gold intermixed with the finest coral: his swms and wrifts are decorated with bracelets of gold, and he hasafort of half booth on his legs:

"If if pompand grandeur of the king are also particularly displayed at other times; and these are, when he gives a public treat to fuch of his nobler as have distinguished, themselves in his fervice. On these days he causes all the themselves in his service. On these days he causes all the ribblemen, then in the bounds of the palace; to be numbered, and a provision is made accordingly. The entertainment is prepared in the largest apartments of the palace; and the provisions are brought in gots, some of which contain boiled beams, others field and fith, and some are stilled with miller; seasoned only with falt and palmodil. When every thing is ready, the king sends to the greatest lords each his mets in a wooden platter, with a small staff of palmowine; but the others are called up by their names, the or seven together; and such provisions are given to them as the king thinks proper to direct; with which they retife to an adjaining apartment. As soon as they have done eating, they come all into the kings presence, and, falling upon their knees, clap their hands; and low their heads, in token of thanks and submission; whe which, they depart home, except the king's favourites, who during the remainder of the day, moke tobacco and drink wine with him.

This monarch has but one lawful wife, who is called mani-niembada, that is, queen; befides whom, lie keeps a great number of concubines, in violation of the principles great number of concubines, in violation of the principles of that religion he facins otherwife fo feriously to profess. The queen is maintained at the expense of the public, there being an annual tax, called pintelfo, gathered for that purpose from every house in the kingdom. This tax is collected on the king's wedding-day, when the proper officers of each province go to the respective houses, and threastive the length and breakth of every bed, she owners of which is taxed according to its breakth, viz. for every span, the gives either a flave, or the value of one; for which reason, they will be the profession of th they who use beds have them exceeding small, but most of

the conimon people lie on the ground.

The conimon people lie on the ground.

The year number of ladies attend alternately both day and night upon the queen, and the king's concubines are obliged to pay her the greatest homage; for should they behave to her in the least diffespectfully, they would be punished with perpetual flavery. She lives with great splendor, having apartments in the pelace peculiarly appropriated to her use.

her use.

With respect to the royal revenue, it consists chiesly inthe tribute that is passed to him'by several vassed princes, as
thisse of Angola, Losago, and some other inferior ones,
and which the stain, or governors of the fix provinces,
are obliged to gather for lism. Others make him a kindof free will offerings, some of cattle, others of grain, wine,
palm-oil; and the list, as acknowledgments for the lands
they hold under him. He is also proprietor of all the
zimbis; or cockle-shells (the current coin of this and other
heighbouring kingdoms, which bring him, in exchange,
staves, eleptants teeth, fanders; stuffs, oattle, millet, and
other, commodities. Fines and confiscations, likewise
fring him's considerable moone; to which may be added,
his power in levying taxes on his subjects as often as the
heates; but this the feidhom does, except in case of neceiities. The poverry of his subjects being so great, that it

might prompt them to revolt, and confequently produce fome diagreeable confequences, were he often to repeat

might prompt them to resort, and contequency, where the often to repeat fuch oppressions.

The military of this kingdom'are not very numerous, nor are they either well cloathed or disepsined. The best of them are the musketeers, who, having been taught by the Portugues the asso of sire-arms, still retain the art of handling them with surprising deketerity. All the king's subjects may be said to be foldiers; for, whenever there is obtained, and he thinks proper to command, they must all attend. Sometimes he orders a general review of them, when he attends himself; but their sigure and variety of sams make them appear more uneouth them can be conceived. Some of them are armed with bows and arrows of different makes and sizes, others with broad swords, daggers, and cutalses, some without any atter cloaths or arms than their long targets; others with their bodies covered with skins of different kinds of beasts, from the girdlet of the kines; some bave their face and body painted with figures of animals, birds, sec. Inshort, all of them are armed and accourted according to their faire yor ability, are armed and accourted according to their faire yor ability. with neures or animats, brids, etc., Indhort, all of them are armed and accourted according to their fancy or ability, and they who cannot obtain a bread fword of nietal, will get one made of heavy wood. What contribute towards making them look fail more delpicable, is, that their colours are generally little better than drity rags torn and mangled, their fleel and from weapons eaten up with ruft, and their wooden ones very indifferently finaped. Their heads are dreffed with feathers of various colours, and in almost as at any different fathious as there are men, and all of them. many different fathions as there are men a and all of them-have fome emblem of the butiness they follow, besides their

particular weapon:

When they engage, the foldiers are taught to fall on the foe with a dreadleft kind of fury, which they accordingly do on all occasions; but as their arms are of little use in do on all occasions; but us their arms are or name me fuel such violents and irregular onfetts, for want of better dick-pline, they are fonetimes put to the rout; and when that happens, they are feldous able to rally; fo that the break ing of the very first body is mostly attended with the loss of the battle. The flight of one army generally animates attending. the other to an eager pursuit, the confequences attending which are dreadful, the carnage being always great. When which are dreadul, the carriage being always great. Whense the conquerors think prober to give over the purfuit, they return, and plunder the enemy's camp, feize all the men, women, and children; they meet with, and fell them too the Europeans for flaves. They look upon this as the swoft confiderable part of the fpoil, and therefore hallers them as foon as possible to the lea fide, or to fome inland, market. Few of those wounded in the battle furvive, their arrows and darts being infected with fo deadly a poi-fon, that if they draw blood, it is fure to cause a speedy and anavoidable death, if the performs not provided with some

Terms of peace are proposed by the victor after a conquest; and these, though savoorable on his own part, are generally accepted by the vanquished; but they are nolonger attended to by the latter, than while he becomes sufficiently formidable to recommence hostilities.

No order is observed respecting the succession to the errown of Congo, neither legitimation nor feniority taking place farther than the ruling nobles think proper, who esteem all honourable side, and chuse him from among the king's foins for whom they have the greatest respect, or

efteem all honourable sake, and cause and roll the king's four for whom they have the greatest respect, or think the most proper to govern. Sometimes they give the crown to a brother, nephew or some distant relation,

fetting afide all the children

As foon as a fucceffor is pitched upon; and the day appointed for the coronation, all the grandees are luminooned to appear on a plain near the inetropolis; from whence, with the male children and relations of the descafed king, they proceed in great pomp to the cathedral, which, on these occasions, is richly ornamented. At one end of it is erected an attar, by the side of which is a stately throne for the bishop or priefi; and at the other end is a chair of state for the principal officer, who is surrounded by the respective candidates for the kingly office; but the person to be elected is concealed from the officer and people. pointed for the coronation, all the grandees are fum-

Before the person is named by the principal officer, the latter rises from this chair, and proceeds to the altar, where he kneels down; and makes a thort prayer; after which he refumes his feat, and makes a long harangue to the people on the duties of a monarch, and the necessary care that is required to discharge so important a trust. He then de-clares to the assembly, that he and the other electors, hav-ing maturely weighed the merits of each respective candidate, think such a one the most proper to be elected to the sovereign dignity. After this, the officer takes the new anonarch by the hand, and leads him up to the altar, where

On their arrival at Lishon, Carn, presented the ambuffador and his campanions to the king, who received them in facus a manner is fully evinced the fatisfiction the fale set the fueces of the expedition! They continued for found time in Formal, during which they were relucted in a manner furtable to their rank, and particularly instructed in the principles tof the burch of Rome. The ambassideries in the principles tof the burch of Rome. The ambassideries is and the king himself it wouchfaing to than guistather, they and before a set of the king was baptized at Baja; the ceremony of which was performed with great magnificence is and the king himself it wouchfaing to than guistather, they and the king himself it wouchfaing to than guistather, they are before a set of the king feat. The Africans to their own country, in a thip which he ordered to be fitted out for that purpose under the command of one Gonzales' de Souna; a man of no left rank and abilities than Carn and with them he also first leveral spriedle, tengether with fonts, mitres, chalices, and other negotiaries proper for discounting the ceremonies of the Remain perfusion. An accident, however, happened on their judgether with fonts, mitres, chalices, and other negotiaries proper for discounting the ceremonies of the Remain perfusion. An accident, however, happened on their judgether with fonts was carried on board the flip by forme, of those who had embatked, when several of them-died, among whom was the commander; but this loss we soon remedied, for Gonzalea de Souna, a near relation of the described was appointed in his stend, by consent of all the officers.

Arriving at the river Zaire, they landed at Songo, when, they were received with great joy by the governor of the province, who was uncle to the king, and had his fixed refidence in that capital for the fake of carare more renorices in that capital for the lake of car-rying on a commerce with the Portuguese, and had been so well infituded by them in the principles of the Romithl church, that he was baptized foou after their landing by the name of Emanuel, which was that of the brother of his Portuguele majeky

Portuguele majethy.

Gonzalez, feon after this ceremony was performed, went to the king's court; where he informed his majethy of the convertion and baptilin of his uncle; at which he was fo highly pleafed, that he gave him abfolute powers to define every thing that tended to paganifm throughout his dominions. The Portuguele commander then informed the minions. The Portuguese commander then informed the king of his commission, and of the holy vessels and ornaments he had brought with him. The king appeared greatly pleased at this information, but much more so, when, at his request, they were brought to him, and exoled to the view of the whole court, amidit crowds of his inhiests, who all beheld them with the greatest veneration, particularly the crofs, before which the Portugues falling on their knees, the king 'and nobliny indirect their example: by profitating themselves before it. Alix majety was very particular in examining every veilel and veilment,

and paid-timed ferious stention to the femiliation ship prieft gath and overy articles the refult of which was, that he immediately referred on-building a magnificent observed. Libis capital for discretization of the prieft a ride querific yi and though, he was obliged to get the table materials for the familiation of the remotest jerre of the kingdom, yet his had for the succession of its was for gener, that by the num-late of mande employed; the edifice was correlated, in three meaths, had the times of the hady cook was given to be an interesting the state of the state of the state of the last of hermalon; to sail self-induction to the large and queen, with favoral of the hobbility, which was performed in the new-ereded church, with great enguidences. The king was christand by the naries of John, and the queenty with of Eldonorm, in kompliment to their Pertuguete majories, in the Agrest; matching of their fovereign; and the king the followed the example of their fovereign; and the king the

christened by the name of 'spoke, and the queen's what of Eldonores, in templianes to their Portuguese majeties, as is A grear maintain of the kings' fibilish of both's force-followed the example of their fovereign; and the king the more fituagly augid the people in general to become converts, on account of this being there as 'grariance with' an eighbouring prince. "Of he king being decentrated to engage has enemy in person, Souns, the Portuguese ambustication of the confidence in the great page has enemy in person, Souns, the Portuguese ambustication of the translation of the figure of a crofe, and at the fame time embored him to place his confidence in the protoclor of the religiorists had to lack unbraced, and to nelly folloy on which affiliation for the face cofe of the expedition. He lafe engaged to accompany him with an hundred of his men, and would endeavour to facilitate a corquete over his entraise; by contributing very thing in, his power towards its or this bos, as more intensity of the first contributing who marchind at the head of his troops so attack the enemy, when had planted themselves on a large plain in his literity towards. The fighted belaviour of Sourian highly pleased the haves in the front of the enemy, when had planted themselves on a large plain in his literity when the form of the enemy, that those in the rear precipitately fied, leaving all their ammismition in the field. Thus did the king obtain a complete subject in the front of the enemy that there is the rear precipitately fied, leaving all their ammismition in the field. Thus did the king obtain a complete subject in the front of the enemy that the field in the field of the country, to punish them with often greated foreign; in the front of the was over; the lain is beginned for march with the paintiples of that religious he now prefelled. The king-readily this principles of the attent of the demonstration in the field was confident with the paintiples of the trip is now for the many the form the many than the field of the king

territorios very pricervoldioundefundion through his mediation, i china d'I dell'inità socian cit and accionati f. Souza, departed in aithore time after from Congo, Assalinghehited hist a mitmore et mifflomarie, to prepagate the new religion: and the Portuguele have ever finer isboured with the atmost care to benish isolatry from the country. To effect this, they have emblithed feveral, perfore implehoolizefiers, by whom the inhabitants are truggle to bread and write, and are infineted in the principles of the Romith religion. Several Portuguele and Mulasto priefit, who efficiate according to the rites of the church of Rome, are also maintained hereages and to the first of the church of Rome, are also maintained hereages to the rites of the church of Rome, and the minimized hereages to the rites of the church of Rome, and the minimized hereages to the rites of the church of Rome, and the minimized hereages to the rites of the church of Rome, and the bowers of history to the possible inhabitants.

also maintained here, we will be filled the inhabitants of the chief place in this kingdom appear outwardly to profes the Romish religion, yet the principal part of therin ere fill idolaters in their hearts, and forcetly purfue their antient fuperflittens notions. To fiscal more plainly they are mere hypocrites, appearing only to be Christians when they are in the prefence of the Europeans: they openly carry their beads and crosses, and secretly their heathenish charms and amulets. Such of them as live near churches, and in the fight of the Portuguele, are 'married according to the precent onies of the church of Roune; but they will not fulfil their engagements, since every one takes as many concubines as he can maintain, as we have; alexady laticoncubines as he can maintain, as we have; already inti-mated. Nevertheless the inhabitants of Congo are reckoned mated. Nevertheles the inhabitants of Congo are reckoned rather batter Christians, than those of any other pure in the whole, kingdom; they have a greater, number of churches, where fervice is every day performed; their clergy are also more numerous; and the people are apparently such realism Catholics, that they never appear abroad without being loaded with beads, crosses, medals, and other religious utensits. However, even these are and other religious utentils. However, even thefe are not without preferring the remembrance of their idolatrous cuttoms is for they feldom fail of addreffing them cives no their heathenth deities, if the faints, to whom they apply, do not grant their petitions.

"Upon the whole, we may conclude, that not withflanding the great pains taken by the Pertuguese to establish their religion in this country, yet few of the people se-

rioufly profes it, and even these appear to do it more from policy, than being affected by religious featuments. The chief of those who seem really attached to it are the king and those belonging to his court, as also the governors and principal officers of the respective provinces; but as for the lower class, more aspecially those in the eastern parts of the kingdome they full retain their old maxima; nor can the Portague's prevail on them to renounce their idolatrous principles, motwithstanding they employ their tumost artisless and endangeurs for that purpose.

SECT. V.

Gives an account of the profess frate of the hingdom of Le-enge, its bunderles and extent, climote, produce, principal provinces, animals, labablesvar, their religion, the affe a particular defription of the city of Leange, and the hing's paloes there a med the flate and dignity of the hing, his go-ucernment, lante, revenues, the.

particular bifeription of the city of Leangs, and the hing's polese there; and the facts and dignity of the hing, his general states, better, revenues, is's.

THE kingdom of Leango, is the most northern division of Congo in general: it is bounded, on the east, by the kingdom of Makoko; on the west, by the Atlantic ocean; on the north, by the kingdom of Benin; and on the fouth, by Congo Proper; it is upwards of four hundred miles long, and three hundred in breadth. The processing provinces it contains, are, Loangir, Loango-Mongo, Chile; 20, and, Piri. Besides these, there are others much smaller, that chiestly lie on the coast, and are strequented by the Europeans.

This kingdom is Tusted sear the center of the torrid zone; notwithstanding which, the climate is far from being unwholsome, and as it is watered by a number of small rivers, the soil is tolerably fortile; but it might be turned to much greater advantage than it is, were, it not for the natural indolence of its inhabitants. However, it produces a fractal ferra of grain, of which they have three crops anasally; also peas and beans not inferior, to those of Europe; with great plenty, of yams and polators. Granges, lemons, bonanas, pampions, occa-nuts, the kind fruit, bec, are likewise produced here.

The province of Loangoit is large and populous, and well watered by several broaks and rivers, which render the foil exceeding fersile. The inhabitants live chiefly on list, and employ themselves chiefly in making cloth and linen. They are more addicted to war than their heighbours, being an general a more couragous people.

The province of Loango-Mongo, is a large mountainous country, and particularly abounds with palm-trees. The inhabitants are merchants, and, like those of Loangiri, employ themselves chiefly in making cloth and linen. The city of Loango, which is the utual residence of the fovereign of the kingdom, is in this province.

The inhabitants are merchants, and, like those Loangiri, employ the province of the kingdom is in this province.

The i

ones.

The first of these provinces, called Majomba, is situated to the west of Piri, between the third and fourth degrees of south latitude, and extends westward to the sea coast, where there is a high promontory called cape St. Catherine. The bay or port of Majumba lies two leagues to the south of cape Negro; and the great river Banne, on which are several small islands inhabited chiefly by sistermen, runs into this bay.

The principal part of the country confifts of woods and

groves, the former of which abounds in whether kinds of wild animals, particularly labours, aper, and, feveral force of menkies. The foil of the province is is, general very barren, not producing any kind of sorn or grain, for that the natives live on plantains, roots, fluts, and fift; and fomentimes they catch elephants, who is field they greatly administration.

berren, not producing any kind of corn or grain, to that the natives live on plantains, reots, nuts, and fish; and fometimes they catch elephants, whole field they greatly admire.

There is only one long theet in the town or village of Majumba; and this is built to near, the fee, that the waves often oblige the inhabitants to defeat their house. On the north field of it is a river that is remarkable for producing great quantities of cyflers. This river is very narrow at the mouth, and not above fin feet deep to but higher up it is both breader and deepes; and is navigable for large canoes. It is very convenient for those who trade with the inhabitants of Sette, as it extends at least fifty miles up the country. In this town is a mokificalled marambe, which is kept in a large house, or temple. It retembles the figure of a man, and tlands upright in a high basket made like a bec-hive. When the lord or governor of the province goes shroad on any particular occafion, the intege is always carried before him; and the first cup is peuted at the feet of the idod when the governor drinks palm-wine.

The province of Sette is situated about sixteen miles northof Majumba, and is watered by a river of the same name. It abounds with millet, palm-trees, and a kind of red wood, called by the inhabitants takuel. This wood is of two forts, the best of which is very hard, and of a bright red colour. Great quantities of it is annually purchased by the inhabitants of Majumba, as the chief trade of the nativers, all navigable sor canoes. The land of this province is very barren, but the rivers abound with various kinds of fish. The chief town in it lies about twenty miles from the coast, but it is a simulate some since from the coast, but it is a simulate some since from the coast of millet and other grain. Here are two simulating with the silors are directed to the port of Longo. This province were formerly un independent kingdom, but heig a conquered by the king of Longo, it became a peet of his deminions. The river Cacongo is the

and tell elephants theth and flaves to the Portuguess in exchange.

The smallest of all the provinces is Angoy, but the soil of it is much better, and would produce great quantities of grain, were it not for the natural indolence of the inhabitants, who sometimes, from this cause only, are obliged to apply for relief to their heighbours. This province is bounded, on the north and east, by Cacongo; on the west, by the sea : and, on the south, by the river Zaire. The capital town is call Bennangoy, and is fituated on the north side of the above river, not far from its south. It is tolerably large and populous, bot the bousins are very mean buildings, being irregular in their form, and confirdled only of reeds and made, covered roughly with branches of trees. The bay is a very commodisces place, and

and here must thise supply themselves with wood and water. I At the jutine of the bay is the village of Kalanda, which is supply and mean a place, as not to survit any other notice than the bare mention of it. The shief port hom is also stall a Kabenda, and is stuated to the north of the riter Zeire.

which is the piece and mean at place, so not to servit any other notice than the bare mention of it. The shief pert have in also stable (kebenda, and is fituated to the north of the river Zelee.

There are great numbers of wild beafts, in the more remote parts of the kingdoon, of Loango, such as chepharts, tygers, beoparde, tivet cats, and various forts of monkies. They have only two forts of game uninsel, namely, hogs and goats; but this deficiency is supplied by the poultry, which is so plentiful, that a good sowl may be purchased at the value of an English farthing. They have assessing the second of the country; mong the latter, the most remarkable is that called the pelican, which, being a bird little known to Europeans, we shall take this opportunity of describing.

The pelican, from the top of the bill to the end of the tail, is about five feet in length, and weighs in general set is than twenty pounds. The bill, which is hooked, is about fourteen inches long, from the tip to the conters of the mouth. The senters of the body are of a greysth colour, and those on the top of the head sand covert feathers of the wing are of a dusty sh colour; but the ends of the quill feathers are black, of which there are twenty-wight in each wing. The upper chap is list: and broad, and the bil stear the thead is of a lead colour, but yellowish towards the end. The lower chap is she two long ribunied at the cutremity; and between them, there is a thick yellow membrane, or skin, which it can draw so else up to the bill, as hardly to be perceived, but not withstanding this, it may be so distend at to contain a podiglous quantity of water; which is often of infinite use to the be obtained for many miles. The legs are bare above the knees, and the feet are webbed, having four twos. But the nost remarkable circumstance belonging to this bird is the bones, which appear to be transparent, with many fibres and veins remarking up and down them throughout themselves; are coded greatly addicted to drinking: however they are to least t

bow and arrows.

The women wear short petticents reaching only from the waist to the knee, and over them they wear a pice of European stuff or linen. The upper part of the body is quite bare; but their arms, legs, and necks, are adorned with rings, beads, and other trinkets.

with rings, beaus, and other trincers.

Both fexes anoint themselves with palm-oil, and stain their bodies with a liquid made from a wood called takeel, the colour arising from which is a dingy red. Their food confists chiefly of dried sish, which they boil with herbs, and season with Brassian pepper. They make their bread with the sour of millet, and water is their common drink

Little ceremony is used in their marriages, the chief hing being to obtain the confent of the parents; if that is obtained, they affemble togs ther; and the parties agreeing to take each other, an entertainment is provided for the guest, and the whole ceremony is ended. The common cople have in general only two or three wives; but fome perions have ten or twelve.

the is the practice here, as in other parts of Africa, for the women to do all the flavish work. They are kapt under great (ubjedient, and not only perform their described decies, but are ubbliged an activate the land, while their humbands it in any other polares the not the flavor in may other polares then on their bonded hasee; in one over cet till after their their humbands in may other polares then on their bonded hasee; in one over cet till after their their humbands in the one of their humbands in the flavor to a perfect black. This circumfance greatly decived the Portuguese for some time after they settled in these parts; for, having commerce with the negro women, they took it for granted, that, when a child was born, it must be theire; but when they came to be undestroed, and convinced that it was the offering of a negro, they lot that fatishation they had before invisible? however, when a child is produced between both, that is, a mulesto, shey have not only a great respect for the infant, but a high veneration for the object that produced it, when he is not a little runarkable, that though both parties are negroes, yet it formefinies happens that the child is very different in colour from that of its parents. Their had been a little runarkable, that though both parties are negroes, yet it formefinies happens that the child is very different in colour from that of its parents. Their fight is very imperfect to the day; but at high they fee clar, officially by let be the one. Their they have greyere, and they remained to be occasioned by the effects of imagination in the woman on feeing a white man, in the same time their woman because the continued by the woman by the fight is very imperfect to the day; but a white man, in the same time the of the high of the proon. Ight. These was held in their which, t

attending the grave for fix fuccessive weeks, morning and

They will not fuffer any foreigner to be buried in their country; when it happens that an European diea here, his body it carried in a boat two miles from the flore, and his body it carried man book its rife from a Porand body it carried in a boat two miles from the litore, and thrown into the fea. This cuftom took its rife from a Portuguefe gentleman being buried here fome years ago, foon after which the whole country was affilied with a famine. The priefit thought proper to attribute the caufe of the general calamity to the interment of the foreigner, whole body, in confequence of their opinion, was taken up, and thrown into the fea; and they have never floce permitted a firanger to be interred in their country, merely from this circumflance.

circumflance

circumstance.

These people are all idolaters, though an attempt was once made to bring them to a knowledge of Christianity; for in the year 1662, a famous missionary, named father Bernardin, an Hongarian, being at Loango, had some conferences with the then king, acquainted him with the doctrines of the Christian religion, and baptized him, together with his queen, his children, and some persons of his court. The people, however, would not be persuaded to follow the king's example, nor could the most foreible arguments induce them to relinquish the kast particle of their superinduce them to relinquish the least particle of their super-fitious maxims. They paid no respect to the mandates of the king, who in order to establish the new religion, commanded them not to work on Sundays, which they abfolitely refused to comply with; nor would they pay the least attention to such matters as were derogatory from their idolatrous notions.

elı

th fu This refractorings of the people produced a national commotion t one of the king's coulins, a man particularly realous for idelatry, put himself at the head of the people, feduced fome of the new-converted Christians, both by promises and profeuts, and became at length fo powerful as to dare to offer battle to his fovereign. The king who was naturally courageous, went with his army to attack the rebels, and a despetate engagement ensued that the rebels, having found means to bring over the principal part of the royal army during the engagement, the king was obliged to retire with the few that had remained faithful to him. The conquerors offered to lay down their arms, and to pay obedience to him as formerly. If he would renounce the new religion he had embraced, and put things again upon their antient footng. merry, it he would renounce the new region he has em-braced, and put things again upon their antient footing. The king, who, appeared convinced in his mind of the truth of the Christian religion, made answer, that he would never renounce the worthly of the true God, and would fpill the very last drop of his blood in the Jefence

In confequence of this refolution, feveral other battles were fought between the king and the rebels, in the last of which the king's troops were intirely cut to pieces, and himself stain. On this the conqueror was acknowledged king, who used all his endeavours to entirpate the Christian religion, and re-establish pagarism; but his triumph and relign were of short duration; tor one of the late king's children, who had estaped from the last battle, raised a new army, protesting most folemnly, that he took up arms with no other view but for the fake of the Christian religion; and that, after his father's example, he would defend it to his last breath. Accordingly he engaged the rebels; and the event of the battle way such that the new tyrant was defeated and killed, with almost all his troops; after which, the young conquero accended the throne, and established the Christian region for sometime throughout his dominions. After the death, from those, and established the Christian region for fonetime throughout his dominions. After 18 death, however, it was finally rooted out by his feeculor, and from that time to the prefent idolatry has prevailed in this country, which we shall now proceed to give an account of.

count of.

They have fome notion of a Supreme Being, whom they call Sambian pogo, but their ideas are extremely imperfect; nor have they any belief in the refurrection of the dead. Their idels, which they call mokifices, are of the are made to refemble the human species; others confist of a piece of wood about a yard long, with small bits of iron on the top, or elfe the figure of fome animal carved at the end of it. The heads of their greater idols are ornamented with the feathers of hens or pheasants, and their bodies are decorated with various kinds of trinkers. All afts of devotion are perof their greater idols are ornamented with the feathers of hems or pheafants, and their bodies are decorated with various kinds of trinkets. All acts of devotion are performed to these idols, of which they have great numbers. Each has a peculiar name, according to its office or jurification. To some they ascribe the power over lightning and the wind, and suppose that by praying to them it will preserve their cours from vermin and birds of prey. To others they give the command over sithes of the lea and rivers, their course, other they make protectors of their health and natury, others they consider as being able to secure them from evuls and misfortunes. Thus every idol has his peculiar province, and his power is limited to a particular place. They have a notion that these idols are jealous of one another; for which reason they make their addresses to them all indifferently, as their protectors and guardians. They generally keep them in a pot of earth, with the figure half in and the other part out; they are made by their priess, who obtain considerable wealth by the fale of them, as their value is fixed in proportion to the circumstances of the person who buys them.

Their notions relative to the disposal of the soul after death, are very extraordinary. Those of the toyal family believe, that when any one dies, his soul is regenerated as some of the family; while others think that the soule and body have one determinate end. Some, sike the Greeks and Romans, place the foul among the heroes, or else bring it into the number of their titular houshold gods; others give them a common place of refort under the particular is whill a fifth fort make for them little recep-

Pot-

of the

e congether court.

follow

ments

they from

This

gods; others give them a common place of refort under the earth; whilst a fifth fort make for them little receptacles under the toofs of their houses; before which places they make fonce offerings for the benefit of the foul of

their departed friend, when they eat or drink.

These idolaters are led into the practice of the most abfurd ceremonies, being prompted thereto by the craftiness of their priests, who werk upon their supersitious notions. When a child is born, they call a fetilher, or pricit, to enjoin to keep some particular thing as a law.

The priest asks the perents what was their injunction, and that of their ancestors i when being answered, he tells them, that the oracle, by the mokiss, has ordered, that the child shall be enjoined not to do such things during the course of its life; which the mother takes care to inculcate in the mind of the infant as it grows. These injunctions are of various kinds; as, that they must abstall from such particular stells, herbe, or fruit; or that, if it eyeat such stells, they must eat it alone, leave none, and hey the bones deep; that they may not be seraped up again, and caten by any beast.

and caten by any beaft.

Some are forbidden by the priest to shave either their beads or beards, and citiers are commanded to abstain from all kinds of fruits. Some are forbid to go over any water; others to crofs a river in a cance, though at the fame time they are permitted to walk, [wim, or ride through. If on unmarried man has got a foolish child, he must not eat of the breast or udder of a buffalo; but if he gets another more sensible, he then becomes freed from that re-

freint.

Thefe, and fuch like idle maxims, they observe with the greatest exactness, firmly believing, that if the command enjoined by the mokiflo, or the promise made to him, are not fully performed, he hath power to kill, or otherwise punish them; since all circumstances that happen to them, whether good or evil, they suppose to arise from the power of the mokisso.

of the mokiffo.

If a min preferve a good confliction, by living in a clade and temperate way, he ascribes his health to the mokiffo, and not to those virtues themselves. If a fick man recovers, they never impute it either to the force of nature, or the application of medicines, but the mokiffo gets the credit of the cure which they performed a and if the patient happens to die of old age, or by any misfortune, they believe he was killed by forcery for having violated the mokiffo's injunctions.

They have, besides their private mokiffoes many public

violated the mokillo's injunctions.

They have, befides their private mokiffoes, many public ones, that are kept in temples or huts, to which they daily repair to pay their devotions. One of thefe is at a rillage called Thirito, and in figure refembles a man. The ganga, or high-prieft, who is lord of the village, performs the fervice very morning, in this manner: as soon as the people are affembled, he firs down upon a mat, and with a leathern hag flrikes his knee feveral times, having fanall iron bells faftened to his fingers. After thir, he firikes the bag feveral times on his breaft, and then use many strange motions and postures of his body, hands, head, and eyes: fometimes he raises his voice, and then depresses it, frequently repeating the word mariomena; to which the affembly answer, ke. When, this has continued for fome time, the ganga appears as if distracted, and his rage becomes so violent, that he is obliged to be held; but hy virtue of a four liquor, drawn from cane, with which they sprinkle him, he recovers, and then declares what he has received from the mokiffo, and what must be done in case of sickness, and the sike. After this, he recommends to the mokiffo the health of the king, the welface of the country, sourishing of the feed, success to the morehars, and full ness for sistement. The includes They have, besides their private mokissoes, many public fair of the country, flourishing of the feed, success to the merchants, and full nets for fishermen. The whole company clap their hands, in token of affection, at the mention of the king's name; which concludes the cere-

mony.

Kikokoo, is another remarkable mokiffo. This is a black.

They believe Kikokoo, is another remarkable mokillo. This is a black image cut in the shape of a man sitting. They believe that this mokisso preserves them from death, and that ho keeps them frombeing hurt by forcerers. It is kept in a hut, which is always guarded, on account of its having been once solen by some Portugues sailors, who took it out of the house, and carried it on board their ship; but in the way the head and one of the arms broke off. When the Portuguese came again to Loango, they were assault to venture on there without restoring kikokoo, so nailing on the broken limbs, they conveyed him at night to his old habitation. The next day a report was fpread among the blacks, that kikokoo had been in Portugal, and that a trading fhip had carried him away thither. Some time after this, a Portuguese ship happening to strike upon the rocks of Loango, the blacks said that kikokoo had broken the ship, because the Portuguese had driven a nail into his

head.

But the mokiffo, called malemba, is the most reverenced by them, and is particularly esteemed on account of its being visited by the king. It is a max about a foot and a half square, on the top of which haing several small baskets, with scolops, scatters, iron bells, rattles, bones, and other trifles. The ceremonies belonging to this are performed with little drums or tabors, on which boys strike with their

hands. After this, a fong is chanted by the company, and a person appointed for that purpose dips a brush into some water that has been coloured with takeel, which he sprinkles on the king and the ganga, or high-priest. The nobility that attend receive a streak on their bodies out of the same pot; after which, they have the honour to carry away malemba, with his pots, brushes, &c. which they replace

Another of their mokiffoes is called kofrie, which con-Another of their mornioes is called working. The fer-tifts of a fack with fome horns full of whiting. The fer-vice to this image is performed with rattles, long flicks, rite or a lack with tome norms full of winning. The fervice to this image is performed with rattles, long flicks, ninging fongs in the night, creeping on their knees, washing, fipitting, fhouting, tying rings and bands about their bodies, and the like. They fay this mokifio fecures them against the dreadful consequences of thunder and lightning, and side preferves them from sickness.

Besides the abovementioned, they have many other images which have different names and are supposed.

images, which have different names, and are fupposed to be serviceable to them on various occasions; but they are all equally ridiculous, with those we have already described, and only tend farther to evince the folly and superstition of their deluded votaries, who facrifice every particle of rea-fon to defend the honour of their contemptible idols.

ion to defend the honour of their contemptible idola.

Before we describe the city of Loango, &c. we shall give some further particulars relative to the trade, inhabitants, method of travelling, houses, coin, produce, &c. of the Loangoese, as extracked from the account given by Captaia Uring, who failed to this part of Africa.

"The chief of their trade, according to this writer, is in flaves, 'hough they have some elephants teeth, and been-wax, and have very rich conper mines in the country.

bees-wax, and have very rich copper mines in the coun bees-wax, and have very rich copper mines in the country. I have feen, fays he, quantities of copper-drops, which were pieces of about a pound weight, run from the ore, and is for the most part bought by the Dutch. I was informed, that the greatest part of their slaves were brought eight or nine hundred miles out of the country, which they call Poamboe; I take this to be Ethiopia. They used to make excursions nearer home, in frong parties, and where they found any people settled by themselves, and not under the protection of any government, they seized them, and drives them before them, as other people feized them, and drave them before them, as other people feized them, and drave them before them, as over people do cattle, till they brought them to a trading town, where they were fold for flaves; and this is as much a trade among them, as felling horfes, cows, and fleep, or the like, in other countries. Those flaves which are brought like, in other countries. Those flaves which are brought for an ord of the country, are generally very ignorant, and dull of apprehension; but those taken nearer the fea coast are more quick, especially the people of Loango, who are a crafty cunning people, and tolerably ingenious; they are most of them tall, strong, and well limbed; and all of them are great lovers of brandy and tobacco: they do not make so good slaves as those of the Gold coast, or Whidah; the reason which is given for it is, that the people on the Gold coast fare hard for want of provisions, and are casable of going through more labour, with lefs people on the Gold coaft fare hard for want of provisions, and are capable of going through more labour, with less victuals than the natives of other countries, where they have plenty, as they have in the kingdoms of Angola, Congo, and those countries from whence these save brought. It seldom happens that any of the town's-people are sold for slaves, except in cases of adultery, or when their great men sell some of their servants for disobe-

dience.

"The women do all the drudgery; as planting, reaping, dreffing their provisions, carrying burdens, combing their husband's hair, twiffing it into several forms, and painting their bodies: they also make mate. Most of the bread caten amongst them they call cankey, which is raide with Indian com, beat small, which they mix with some roots, and boil in dumplings, and when they take it out of the pot, then they wap it up in leaves, and it will keep sive or fix days.

"The great men and Europeans travel in the same

The great men and Europeans travel in the fame

manner as in Congo.
"The houses of the inhabitants are low, the fides of them made with cane, wattled together with twigs, and covered with leaves or branches of trees, of which they have many convenient for that purpose, and consist mostly of two or three rooms, the innermost of which is particularly for their women. Most of them have small yards, larly for their women. Most of them have imall yards, inclosed in the same manner as the walls of their houses, where are generally growing plantain, banana, and other trees, the fruits of which serve them for food, and the branches are convenient to stage their from the sun, when they have a mind to take the fresh air, which makes the town look very agreeable. Some of their greatmen, and the chief of their merchants have cane-walls of about ten or twelve feet high, which form a walk about eight

feet wide, reaching wear forty yards from the houses, but with so many windings and turnings, that you go five times that dilance before you come to their habitations; which is all the grandeur! observed in their buildings. have been entertained with palm-wine and fruit at many

of their houses.

"The chief of their common people's food is cankey, potatoes, and other roots; the better fort eat fowls and potatoes, and other roots; the better fort eat fowls and flewed fish. Their fish is droffed thus; they take five or fix fresh masounge, and put them into an earthen pot, with a little water and palm-oil, and a great deal of bird-rapper, and some falt; over the fish they lay three or four pieces of small sticks across, and then fill the pot with green plantains, and cover it close, the fume of the pot flews the plantains; this is effected an excellent savoury dish. I was prevalled on to tade it, but it was so hot of the pepper, that I could not get the taste of it out of my mouth for several hours.

**Their money they call mueates, being certain pieces of

mouth for feveral hours.

"Their money they call mucates, being certain pieces of cloth made of filk-grafs by the women, about the bignefs of a fheet of paper, and paffes as current coin; they few feveral of their together, which make a fathom, and was what they cloathed themfelves with, before the Europeans traded with them. They value our goods by an imaginary coin, fomething in the nature of the Portuguese manner of contributes to great of whom I improfe they lettened is coin, iomething in the nature of the Portuguele manner of counting by rees, of whom I huppofe they learned it. A piece of blue bafts is valued at one thouland, a piece of painted callico at fix hundred, a piece of necessite in the first hundred, a finall keg of powder three hundred, and To of the reft. Annabates and brais pans, pewter-baions, guns and powder, are much effectined with them: they are very fond of finall black beads, and coral, to make bracelets: we had also knives, tapicels, and charcolees, with a finall quantity of fearlet, and blue broad-cloth, which the na-tives wear in finall rings tied round their waift for ornament. We bought men-flaves from three thousand fix hundred to four thousand, and women, boys, and girls, inproportion. We reckoned a man-flave at fifty thillings; prime-coft of the goods in England. There was in the town a large Portuguele factory, and in the road a large Dutch thip and two English thips befides ourselves, or we should have purchased slaves much cheaper.

They have a market every day, where provisions and cods are fold; it begins very early in the morning, and goods are fold; it begins very early in the housing, su-lasts about three hours; they have plenty of Indian corn, kidney-beams, calavances, pindas and guba-gubs; which last are in shape and taste like our white peafe, with this difference, one grain being as big as four or five; they grow upon a vine which runs upon the ground, and every fingle grain is covered with a distinct shell. They have great numbers of plantain and banana trees, as they have of palm trees of feveral forts, from whence they draw t quantities of palm-wine, and extract a great deal of oil from the fruit, which they both eat and anoint them-felves with, and fell to the Europeans. They have also large cotton trees of a proligious fize: pine-apples are fo plentiful here, that I have bought ten for a knife, which coft in England about two-pence. They have fome limes; in England about two-pence. They have fome limes to but I faw no lemons, and but very few oranges, and thofe bitter, four, and ill tafted. They have plenty of dunghilf-fowls; but I faw neither turkey nor duck in the country, no black cattle, nor hogs, (except wild ones) and but one theep. The men have their drinking-bouts of palm-wine, which is the only liquor the country affords befides water: they lot it fland two days after it is taken from the tree, in they let it fland two days after it is taken from the tree, in which it ferments, and grows four, and has fome spirit in it, which exhilarates them, and makes them merry: they fit at these drinking-bouts twelve hours together, tilk they get drunk. I have tasted it, but sound it very disagreeable, but when it is sift taken from the tree it has a very pleasant taste." Thus far this author.

We shall now, as we proposed, give a particular description of the city of Loango, and particularly the king's palace; with an account of the state and dignity of the king, his government, laws, punishments, revenues, &c.

to all and file in mooth to

cor vit cor arr im law wh Po wh

Loango, the capital city of the kingdom of the fame name, flands about four miles from the sea coast, and is situated in four degrees and a half of fouth latitude. It is a very large and populous city; the streets are long and spacious, and on the sides of them are planted rows of palmetto and banana-trees. The houses are built of an oblong form, with two gable ends, and a stoping roof, which rests on long thick posts supported by stays. They are all built nearly of the same fize, stand at equal distances, and appear with great uniformity. The infide contains

three or four apartments, which are all on the ground floor, and only separated by a flight partition made of wicker or reeds. Their houshold furniture confifts thiefly of pofts, wooden trays, mats, small and great baskets for their cloaths, &c.

There is a spaclous square, surrounded with losty trees, near the center of the city: here (as is observed above) a daily market is held for the sale of all kinds of provisions, as meat, poultry, sish, wine, corn, and oil; also palm clotils of various sorts, and great quaintties of elephants eeth. On the west side of this square is the royal palace, which consists of a number of detached buildings. The king's apartments are in front, and behind are those belonging to his women. The whole is surrounded with losty palm-trees, and is at least a mile and a half in circumference.

At a small distance from the front of the palace is the

longing to his women. The whole is furrounded with lofty palm-trees, and is at leaft a mile and a half in circumference.

At a finall diffance from the front of the palace is the place where the king holds public audience, and tranfacts all buffaces relative to the flate. Adjoining to the entrance of the palace, on the east fide, is the banqueting-house, where the king every day retires to drikk palmiwine. It is a noble building, and the place where all difficult cases are adjusted in the presence of the king. The front of it is open for the bencht of the sir, and about wenty feet backwards is a screen or partition quite across, to prevent the palmiwine being seen by the people. The foom is hung with rich tapestry; and in the center of it, just without the lereen, is the throne, which is supported by small pillars mit e or palmetto-branches curiously wrought in imitation of basket-work. The throne is raised from the ground about a foot and a half, and on each side of it are two large wicker-baskets that contain several weapons kept there by the king for the security of his person. The king's gardens are on the east side behind the palace; and those belonging to the queen are on the west side.

There are two mokisses at a small distance from the city, one of which is called mokisse at Loango, and is highly effermed. It is kept in a small hut, and relembles a man in a firting posture. The natives person their services to this idol by dancing round it with rattles in their hands, and throwing themselves into the most ridiculous postures and gesticulations.

A place called the Broad way, is situated from the east end of the city, whither such as have been found guity of any crime by the imbonda drink, are dragged and executed. The ecremony respecting the trial of innocences by means of this drink, we shall take notice in treating of their punishments.

The monarch of this country hath a great number of wives, all of whom, except the principal one, are obliged to be very obsequious to him. The latter, however, who w

dignity.

This prince is very powerful; and to circumstanced, as to be able to bring into the field a confiderable army; for all his subjects are obliged to equip themselves with arms, and immediately attend at his command. His drefs conand immediately attend at his command. His dress confifts of a garment made of cloth or fuff, and both he and his nobles wear, on their left arth, the fixin of a wild can kneed together with one end ftuffed. He makes two meals a day, the first of which is about ten o'clock in the morning. His provisions are brought to his apartment in covered baskests; and with the people that bring them there is a man with a large bell in his land, which he rings, to give notice, that the king's dishes are arrived.

The king on hearing the found of the belt, leaves his commany, and as foon as he enters the anattment, the fer-

The king on hearing the found of the belt, leaves his company; and as foon as he enters the apartment, the fervitors retire and leave him, when he shuts the door, and continoes by himself during the whole time he is at dinare; for (as is the case in other parts of Africa). should any person happen to see him either eat or drink, he would immediately be put to death. And so punctually is this law observed, that even animals are subject to the same fate; which happened to a sine dog presented to the king by the Portuguese. This creature, not being well field by those who had the care of him, smelling the victuals one thay when the king went to dinner, followed the feent, and his majesty not fastening the door properly, the dog, while he

was il dinner, throst it open with his feet, and room, when the king intimediately quitted the sand ordered the treature to be killed; as a fit punit was for his bold instrution.

After dinner, the king goes every day in thate, accompanied by his nobles, and a great crous of people, to the banqueting-house, in order to refresh himblif, by drinking pulm-wine. As foon as he arrives there, he feats highly on the thirdne, and od each fide of him is a cup bearer. He on the tight-hand reaches him the cap when he is intellined to drink, but at the fame time turns his head; out of which is given to the company by him on the left, who strikes two iron rods, pointed at the ends, against one another. At this fignal the people turn their backs to the king, and bend their faces to the ground, in which posture they remain so long as the itions continue ringing: after which, they rife, turn their faces to the king, and wish him health; by clapping their hands:

His majerty, goes as fecond time after fun-fet, to the apartment adapted for eating, where his provisions are prepared for him as before; after which, he again wish the banqueting-house, where he remains till nine or ten o'clock, when he returns and retires soon after to his chamber.

It is very uncommon for the king to appear abroad, were the second of t

b'elock, which he returns and retires from after to his chamber.

It is very uncommon for the king to appear abroad, except on the above occasions; or when an ambaffador arrives, or fome extraordinary accident hath happened, such as when a leopard is taken in the country; or else lodged about the city ready for the chase (for he is very fond of that diversion); or, lastly, when his land is to be tilled, and his chief nobility being him tribute. The place appointed for his appearance on these occasions is a large plain in the center of the city, opposite to the palace. The stood, or chair, on which he fits, is raised about a foot front the ground, and adorned with black and white wickers, very artificially woven. Behind his back, on a pole, hanga as sheld, covered with European studies of various colours. Near him are placed six or eight fisns sixed at the ends of long sticks run through the middle of thems, which being moved with great force produce very refreshing breezes. Before theking, a great closh is spread on the ground, made of leaves very curiously woven; and on this no person dare tread, except the king and his children. The nobility sit in ranks, some on the bare ground, and others on cloth made of the same stuff with the king's, each of whom hold a bussalo's tail in his hand, which he keeps continued by a bussalo's tail in his hand, which he keeps continued. As soon as the king is feated, the mustic immediately plays, and continues during the whole time his misjerly is on the throns.

The musical instruments are of three forts, the first of which is made of vory, and is like abunting horn. The second fort are drarus made of a hollow piece of timber, to

The musical instruments are of three forts, the first of which is made of ivory, and is like a hunting horn. The feecond fort are drawns nade of a hollow piece of timber, covered at one end with leather, or the skins of wild beasts; and the last fort fornewhat resemble tabors, having little bells fastened all round. When the music has been forme time playing, the most distinguished of the nobllity rise from their feats, and compliment the king by leaping backwards and forwards before him two or three times; after which they clap their hands together, and then, in token of subjection, profrate themselves on the ground, rolling their bodies several times over.

Three or four criers stand on one side of the king's feat, with iron instruments in their hands, upon which they strike with a slick, to give notice when the king demands silence. Thefe criers are likewise officers of the city, and not

filence. Thefe criers are likewife officers of the city, and not only proclaim the king's orders, but also, like the bellmen in England, go about the streets, striking their iron instruments, to give notice to the people when any thing is loft

or found.

The king likewife appears in a public manner at the commencement of the feed-time, which is always on the first of January. He takes his feat at three o'clock, when the women who tilt the ground appear before him with their instruments of husbandry; and the men walk backwards and forwards, armed in their military habits. The king generally stays about an hout, when he returns to his palace amids the acctamations of the people, who devote themselves to festivity and mirth for the remainder of the day.

Heating the wild beafts is a favourite diversion here; therefore when any of the inhabitants have discovered a leopard in the woods adjoining to the capital, intimation of it is given to the king, while repairs to his public place of appearance; and a trumpet is founded, we give notice to the people to attend his majefty at the sport. If the

olace where the leopard lies be too far for the king to walk, he is carried on men's fhoulders on a kind of chair made of wicker, and sichly ornamented. As foon as they arrive at the foot where the leopard is fecreted, the people fur, round it, arrhed with bows and arrows, lances and darts, leaving only a fmall place open, that the king may have a convenient epportunity of feeing the foott. They foread near before this opening, fo that if the leopard should happen to take his coarie that way, he may be taken alive. When every thing is ready, the beaft is roused by the people making an univerfal shouting, together with the blowing of horns, and beating of drums. As foon as the creature finds himself surrounded, he endeavours to make his escape, but is prevented by the vollies of darts and arcreature finds himself furrounded, he endeavours to make his escape, but is prevented by the vollies of datas and arrows that are discharged at him by the multitude, who follow him close; and if he happens not to take to the rest, overpower and dispatch him. When the leopard is killed, the king retires to his palace, before which the hunters bring the carcase, and triumph over it by dancing, singing, and exhibiting various kinds of antic postures and diversions.

The hielest refreed is not only them by the common the common terms of the common terms of the common terms.

The highest respect is not only shown by the corumon people of the city of Loango, to the king, but also the greatest submission to the nobility; for when they happen to meet any one of them its the fireets, they immediately fall on their knees, and turn their heads the other way, intimating that they are not worthy to look at him; and in this posture they continue till the nobleman has

passed.

The laws in this country are not complex, but some of the punishments are as severe as those of the neighbouring kingdoms. Thest is never punished with death, unless it be committed on the king: in common cases, when a thief is detected, either he or his friends must restore the goods folen, or atone for the want of them by an adequate compensation; besides which, the thief is tied to a post in the middle of the street, where he continues an hour as an object of ridicule and contempt to the speciators. If he is unable either to reftore the goods, or pay the value of them, his relations must work for the party robbed till he thinks himself sufficiently satisfied.

They purifi adultery only by a fine, which is levied in proportion to the circumflances of the offender; except it be committed on any of the king's wives, when the man is buried slive, and the woman burnt.

I still a sail as .

When any person is suspected of a crime, and it cannot be clearly proved against him, he is sworn by drinking a certain quantity of a liquor called imbonda. It is made from the root of a small tree or shrub so called, which is arout the root of a finall tree, or thrub fo called, which is amout fix inches long, and much refembles a carrot. The root is feraped into water, which is boiled in gourds. The liquor is as bitter as gall; and fo strong, that one root would ferve to try an hundred people. When the person drinks the liquor, if it be too much insufed, it occasions a suppression of urine, and strikes up into the head, incibiating to such a degree; that he falls down as if dead, in which rash he is presumed autive, and it according in which case he is pronounced guilty, and is according dragged to the Broad way, and executed; but if he can stand upright, and make water, he is deemed innocent. The determination of this matter rests intirely in the imbonds given, or person appointed to administer the potions, for however innocent he may be that is suspected, yet if the Imbonda man has any dislike to him, or his accuse is a person of importance, he is sure to give him the liquor so frongly infused, that its operation proves satal, thought he does it foatfully, that it cannot be discovered. This ceremony is personned at Loango almost every week, so that many people are destroyed by it in the course of a wear.

year.

On the death of the king, the fuccession of the crown does not devolve to his children, but to his eldest brother; but, for want of such kindred, it falls to his fifter's children. Those who have preensions to the grown are five in number, and reside in towns or villages at some distance from the court; they preserve their titles agreeable to the names of the respective villages in which they

live.

The next heir to the crown is called Mani-kay, who refides at a large town of that name about fifty miles from Loango. The fecond is called Many-Bokke, and lives and a Rokke, fituated about fourteen miles up Loango. The fecond is called Many-Bokke, and lives at a town called Bokke, fittated about fourteen miles up the country. The third, called Mani-Salloga, lives at Salloga, a large town fittated about thirty-five miles north of Loango. Mani-Kat, the fourth, lives at the village of Kat, about fifty miles from Loango. And Many-In-yami, the fifth and laft, refides at the hamlet of Inyami, which is fituated on the borders of the kingdom. When, on the king's death, Mani-Kay fucceeds, Mani-Bokke removes to the refidence of Mani-Kay, and the reft all follow, a proper person being appointed to supply the place of the laft. And then they succeed to each other villages, and afterwards to the crown by a regular rotavillages, and afterwards to the crown by a regular rotavillages, and afterwards to the crown by a regular rotavillages, and afterwards to the crown by a regular rotavillages, and afterwards to the crown by a regular rotavillages, and afterwards to the crown by a regular rotavillages. villages, and afterwards to the crown by a regular rota-

Mani-Kay, after the decease of the king, immediately Mani-Kay, after the decease of the king, immediately enters upon the government; but he does not go to count till the funeral of the late king is over, the ceremonies attending which are these: they first make two vaults underground, adjoining to each other, in one of which they lay the corpse, richly dressed, on a stool, and by it all manner of houshold stuff, as pots, kettles, pans, cloths, and garments. They then place round it little images made of wood and red earth representing the houshold servants of the deceased. After this, they leave the royal corpse, and go to the other vault, where they place the bodies of several saves, who have been facrificed to serve the 'ng in the other world, and to make attestation in what maintenance. in the other world, and to make attellation in what manner he behaved during his life. The two vaults are then closed; and in order to preferve it from the inclemency of the weather, a covering is crecked over each of them.

The revenues of the king of Loango principally arife from elephants teeth, copper, and flaves. The greatest part of the copper is brought by steath from an inland country, because the inhabitants of it and the king of Lo-

ango are always at variance.

Befides the branches of trade mentioned above in cap-Hender the Dranches of trade mentioned above in cap-tain Uring's account, the natives allo deal in tin, lead, copper, iron, red-wood, and feveral forts of cloths, the manufacture of the country; in exchange for which, they purehace of the Europeans, falt, Silefia ticking, beads, looking-glaffes, cuttaffes, and other commodities.

the cape of Good Hope, from the last mentioned cape, turning north-east, to the mouth of the river Spirature State, it rans about fix hundred and farty miles s and from thence proceeding up the cowary amoust on the againothis line, it is about one thousand seven hundred and forty miles farther. In fome places it is aine, hundred, and in others not above shrix hundred broad. Cape. Negro is in fitteen degrees thrixy minutes fouth latitude, and in the river Del Spirim Santo in twenty-five degrees seuth latitude. Caffraria is so named from the Caffrey, its inhabituant; though some authors affram, that this name is merely an opprobrious term given by the Araba to all who have but confused notions of the Deity, and which the Partigues have by missele applied to these people.

Geographers, usually divide this extensive vegion into hive parts; namely, i. The kingdom of Mataman, of Climbede; 2. The inland countries between Mataman and Monomortan; 3. The country of the Hottentous; 4. Terra de Naral; and 5. Terra dos Fumos. But it is necessary fift to take notice of the discovery of this country, before we enter upon a local description of it.

The cape of Good Hope, which is the most southern mart of Africa, till so late as the year 1493, when it was hirl discovered by Barthelomew Diaz, the admiral of a Portugues siect, who, on account of the boisterous weather he met with when near it, distinguished it by the name of Cabo dos totos Tormentos, or the cape of all Plagues; since which, no place in the universe has been more spoken of, though little of the country, except the coast, has been penetrated or known. The reason why it has so much attacted the attention of mariners of all nations, is, their being under a necessary of frequently calling there for water or other refreshments, and also of doubling it, in their voyages to the East Indies. But John, king of Portugues, not liking the name which his admiral had bestowed on this large promontory, changed it to that of the cape of Good Hope, which appellation it hash ever

tended.

Some time after, these timid people landed here, under the conduct of a viceroy of Brasil, named Francis d'Alimerda, where the Portuguess were shamefully defeated by the fearer armed and unwarlike natives; the viceroy and seventy-five of his men being killed in the engagement, and the rest obliged to retire with precipitation to their ships. The Portuguese were much chagrined at this disaster, and greatly abashed at the idea of such marrial furseriority in a record by them degreed as once favors and

after, and greatly abashed at the idea of such marrial superiority in a people by them deemed at once savage and despicable. They determined to be revenged; but not having magnanimity enough to shew a becoming resentment, they contrived a most inhuman and cowardly expedient.

Touching at the cape about two years after, they landed with all the appearance of amity, and brought on thore with them, a large camon loaded with grape shet. Knowing the fondacts of the unsuspecting natives for brass, they presented to make a present of this engine of destruction, which was of that metal. The poor people, overjoyed by the help of two long ropes, which had been previously fastened to the muzzle. Great numbers laid hold of the ropes, and many others went before by way of triumph, ropes, and many others went before by way of triumph, when the treacherous Portugues firing off the cannon, a prodigious slaughter ensued, as most of the people shood within the the range of the shot. Many were killed, se-veral wounded; and the few who escaped, abandoned with the most precipitate terror the fatal prefent.

the most precipitate terror the latal prefent.

The Dutch, about the year 1600, began to touch at the cape, in their way to and from the East Indies; and becoming annually more fensible of the importance of the place, they effected a fettlement lete in 1640, which fines that time hath rifen to great power and opulence, and beautiful fervice to the inland parts of the country of the Caffres, the Europeans are but little acquainted with them;

Carries, the Europeans are not tittle acquainteawird ment; however, it is agreed that the country called Mozumbo Acalongo, is bounded on the east; by the empire of Monomotapa; on the well, by Mataman, or Climbede; on the north, by the province of Ohila; and, on the fouth, by the country of the Hottentott.

Chila and Abatas have been little known, and less harderised, by the Earthean travellers; however, the huminis field to abound in gold unines.

The province of Te-test contains many iron shaller, and on the midft of them is a forpriling fabric, thing a length itous figure earlie, built of politic free from: the frontie are very large, and placed upon such other without any kind, of centent. The walls are near nine feet thick, and demain feveral discriptions, which no person that yet been able to explain; or even such to what language the characters belong. As the inhabitants are unacquainted with the founder of this extraordinary pile, they compliment the devil, with the honour of being the architect. The nearest flone building to this castle is a Portuguese fort, which, however, is two hundred leagues from it.

The town of Fatuca, near this place, is rich in gold and precious stones.

Boro and Quitici, abound in gold mines; and Chlowee

Boro and Quitici, abound in gold mines; and Chleover contains many filver mines; this last place lies more to the

north-east.

That part of Caffraria, called the country of the Hottentors extends towards the north, to the tropic of Cancer, and is bounded on all the other parts of the fouthern occan. It is divided into twenty parts, or provinces; which, being independent of each other, are termed nations. We shall describe these Hottentot states in the following order.

The first is the country of the Heykama. This terri-

The first is the country of the Heykama. This terri-tory abounds in cattle, though there it no fodder but stage and reeds, nor any water-but what is brackish. The few walkies are fertile, but the abountains are many and barren. Game and wild beasts are namerous, but fresh water is a fcarce articles

The next is the district of the Chantours, which containe the fineftand the most lofty trees of any in the Hot-tentors country: the land in general is flar, the foil rich, and the water excellent. Here are abundance of cattle, great quantities of game, a variety of wild beatly, and plenty of fea and river life.

The third is the land of the Hosteriques, which contains many fine findy woods, and fair, fertile meadows; the last are Besutifully enamelled with a great variety of fragtant flowers; and the former are flocked with abundance. dance of medicinal herba.

The fourth country is that of the Gauriques, or Gaurost is is a final, but plentiful territory; and abounds more in wild beats than any other place near the Borders of the coaft.

coaft.

The fifth is the country of the Damaquas; who inhabit a district which is flat and fertile. It abounds particularly in eartie, game, hemp, and water-melons. Wood is very feared, and fak-pits are at once humerons that ule-loft, for the Hottentton inver eat any fait, and the pits are too fair from the coast to be of any service to the Europeans. Those who travel through this territory are much obstructed in the way by the serpetitine river Palamites, which meanshers through the whole country; and, as the people have not the least idea of building a bridge; they pass it upon sources the coarse. floats, or in cances.

The land of Dunques, being the the country, is the art of Africa Here is a profution of cattle, game, fin., 103; and flowers. It is watered by feveral fine ftreams, which difembogue

It is watered by feveral fine treams, which difembogue themselves into the river Palamiter.

The feventhi is the country of the Sonquise, who are few in number, and inhabit a very barret rocky country; but their poverty renders them more induftious then the reft of the Hottettetts, and their natural wants make them excellent hutbandmen. They are active and intrepidly and when they find it impossible to substitute in their own country; they let themselves out to blire as foldiers, to fight the battles of some of their more law and lefs war-like neighbours: so that they may not introposelv be fight the battles of some of their more lany and lefs warlike neighbours: so that they may not improperly be
termed the fwifs of the cape. Cattle is so scarce among
them, that they never kill any but apon certain folenth occassons; their sood being either the game they provide
themselves with in hunting, or such roots; plants, and'
herbs as their poor country surnilless. Many employ
themselves in searching hollow trees for honey; which
they barter to the Durch for brandy, tobacco, and hardware. Though unimproved by art; they are the philosophers of nature: deeming this life a shadow, they never shun any danger, as they imagine it may hastel and
saintage their journey to a state which they ardently expect
in a better world. in a better worl

- The eighth is the country of the Hellaquas, or Gaffaquas, which is one of the richest and most polished of all the Hottenormations; that is, they have the greatest quantitles of cattle, the only criterion of riches, and are the most huxurious in their living, the fole mark of refinement which is observable in this country. But their wealth and havens, on the other hand, are their greatest missertune; for the former by raising the envy of their neighbours, encourages then to committelepredations in their territories; and the latter by having enervated, has rendered them incapable of defending themselves. Hence they are obliged frequently to folicit the affishance of the Dusch, and to pay part of their wealth in support of their effeminacy. Their traals, or villages, are larger, and better bulk; their bakkeleys, or onen for carriage, stronger and handsomer, and their country better inhabited than any other about the cape. They have plenty of game, and indeed every thing that is necessary for convenience or plassure in that tropical situation. Some of these poole article themselves to the Dutch for a certain number of years, and as et with the utmost integrity during the thipselated space.

whose integrity during the superlated space, and set who we would be superlated space, and the superlated space, and the superlated space, and the superlated space and fertile territory, well supplied with wood and water, and which contains many European

fettlements. The tenth is inhabited by the Chainouquas, whose territories are small, but sertile: the people consist only of about four hundred persons: they are hospitable to strangers, and very rich in cattle.

The eleventh is the country of the Cabonas, fituated mear the tropic of Capricorn, and are reported to be an-thropophagi, or men-eatern. But as these people are very little knewn, it is probable that the supposition is not founded in bruth, and that what is faid to their difadvantage may be owing to the total ignorance of their real characters.

The twelfth country is that of the Hancomquas, which adjoins to the former, lies about the twenty-fixth degree of fouth latitude, and is likewife very little known: as we spean not, therefore to adopt any circumstances but such as are well authenticated, we doem it more eligible to omit any farther particulars of this place, than to insert them from the mere conjectures of others.

The thirteenth is that of the Henfaquas, who differ from the other Hottentots, in applying themselves to agriculture, as well as the breeding of cattle. They cultivate a fingular root called dakka, the jujec of which is sharp and sprituous. The substantial past serves them for food, and the sluid is an intoxicating liquor, of which they are very fond. These people catch lions by traps, and have the peculiar art of training them, so as to render them so-ciable and domestics. Some of the strongest and serves they breed for the purposes of war; and so perfectly well discipling thems, that they are obedient to command, and attack furiously when ordered by their malters; so that the Hensaquas are exceeding formidable to their neighbours by the affidance of these tremendous light troops. The sourteenth country is inhabited by the Attaquas, The thirteenth is that of the Henfaquas, who differ

boors by the affidance of thefe tremendous light froops. The fourteenth country is inhabited by the Attaquas, who are poor, having but few cattle, which is owing to the barrenness of the country, and the want of water. This poverty of foil, is, however, their grand fecurity againtf invasion; as few care to risque their lives: with a certain prospect of being lesers, or to steal that which is not worth the having.

The country of the Chirigriquas, being the fifteenth, borders on the bay of St. Helen's; the people are strong, active, and bold. The territory is watered by an excellent thream called the Elephants river, on account of the

lent fream called the Elephants river, on account of the great number of elephants which frequent its banks. This diffrid abounds with mountains which are dat as the top, and the furnishes of fome of them have all the verdure of the finest meadows. The vallies are admirably enamelled with the most beautiful flowers; but it is dangerous to acquire their fragrancy, by reason of the prodigious number of snakes with which they abound; that called cerastus is particularly wenomous. These people are very numerous, and are celebrated for being the most dexterous of any of the Hottentota in throwing the affagaye or half-pike, which they do with the most critical exactness: they al-

which they do with the most critical exactness: they always keep the blade of it bright and clears, and, when used in war, it is dipt in poison. This weapon is made of a taper stick, about four feet long, armed at one end with an iron plate, sharp at the edge, and tapering to a point.

The fixteenth of these countries is inhabited by the Namaquas, who are divided into two nations; the greater Namaquas inhabit the coast, and the lefter Namaquas exends more to the eastward. Though the government of these two nations differ, the characters of the people are much the same; they are more polished and possess a greater degree of reputation than any other of the Hot-

tentors. Their firength, valour, fidelity, and differetion, are much admitted even by the Europeans. It is computed that the two nations can together, bring twenty thousand men into the field. They always cellorate before they fieck; whe very few words, and give a faccoin but perfenent answer to all questions. The women are the fondest of finery, and the most artfell in their behaviour, of any of the native about the care. The country therethe which of finery, and the most artfol in their behaviour, of any of the nestives about the cape. The country through which the Elephants river winds, is meantainess, fony, and barren. Wide beasts are numerous, though there are but few woods. A beautifulfeet is found in this part: it is frasll, exceeding fwite, and affords delicious ventifien, it is of a handfome make, and the hide is admirably marked with white and yellow spots. These dimirably marked with white and yellow spots. These dimirably marked with white and yellow spots. The dimirable are never known to go singly; but herds of several hundreds of them are frequently seen together:

The seventeenth country lies to the north of Saldina bay, and is peopled by the Odiquas. They are continually at wat with the Chirigriquas is therefore they are in perpetual allance with the Saniquas, for their mutual defence againt the common enemy.

tual allance with the Saniquas, for their mutual defence against the common enemy. Adjoining to the last-mentioned nation is that of the Sassignus i the country is mountainous, but at the same time covered with verdure, and the vallies are finely enamelled with flowers. It was once a very populous country, but is now thinly inhabited; for the great fearcity of water has induced many of the natives to quit it; and others have been driven away by the Dutch freebooters.

The country inhabited by the Cochaquas, which is the minetenth, is particularly fertife in patturage, on which account a great extent of it is occupied by the Dutch farmers, who have the care of fermithing die Dutch East India thing with provisions, which they are enabled to do.

India thips with provisions, which they are enabled to do, by means of the abundance of cattle, and excellent faltby means of the abundance of cattle, and excellent fairpite found in the territory. Dutch guard is placed in
this country for the lecurity of the fair-pitr and cattle, and
to fend notice to Cape Town, when any fhip comes within
view of the coatt. These people, and indeed most of the
other Hottentots, move from place to place in their respective districts, for the benefit of fresh passurage. When
the grass in any meadow is rank, they fet fire to it; and
the other redirects the foil and improve the intervent. the after meliorate the foil, and improve the next crop Hence the country is frequently feen in a blaze for the fpace of feveral miles round; and if the flames, in their progrefs, enter into any other territory, it infallibly occa-fions a war between the two nations. The Dutch at the cape burn the grafs for the fame reason, but stop the paggrefs of the fames with much more difference. In ord-der, to impede the fury of the fame, they are er to impede the fury of the fire, they can trenches round the place, which limits it to the spot designed to be ma-ured; but the indolent Hottemore, rather than give themselves for much trouble, world eather cause an universal configgration, and also kindle the flames of war.

The twentieth and last of these countries is that of the

Gorenghaiconas, or Gunjemans, who dwell promificuoully with the Dutch, as they fold their country to those people, only referving to each family a small portion of land just sufficient for the maintenance of their cattle, and retaining the privilege in hunting in those grounds which the Europeans possessed.

It is necessary to observe here, that the Hottentots and Caffres have been often confounded together by writers, but they are a different people, having a confiderable diffirmi-larity even in perion and features, as the Caffres are totally black, and the Hestentots of a dark olive colour; but we shall give a more particular description of them hereafter. so must not omit to mention, that the above names of the several Hottentot nations were not given to these people by the Europeans, but are rendered agreeable to the found of those appellations, by which they diffinguish each other: nor is term Hottentot a word of derision, as some fuppose, but the name by which these people have called themselves time immemorial.

The kingdom of Mataman, or Climbede, extends from fixteen degrees thirty minutes fouth latitude, to the river Bravaghul, in twenty-four degrees fouth latitude, croffing the tropic of Capricorn, and being in length four hundred and fifty miles from north to fouth; and two hundred and fixty miles broad from east to west. The river Braand fixty miles broad from east to west. The river Bra-vaghul bounds it on the east and west; Benguela, on the north; and the Atlantic ocean, on the fouth.

The first place worthy of observation in this Kingdom, is cape Negro, or Black cape, which receives its appellation from its fable appearance to mariners when at a confiderable distance at sea. At the extremity of the northern angle is a bay about fix miles broad; and on the fummit

Not long after this, a chief of another nation, with a confiderable namber of attendants, clame in a friendly manner til the cape, when seconding to the Duich witters, the governor, for their entertainment, ordered a tub full of bainey, with a wooden diffilin if, to be placed among them wifer the men began to be intoxicated, wo of three hundred little pieces of tobacco where thrown among the first melling for which, they made a horrible noise. The noise and harry burly over, they began to leap and dance with iteraral strange gritures; the women in the mean while thapping their hands, and continually singing, or ranger tearing our. Ho, ho, ho, ho! Having slept tilf they were sober, they were dismissed with presents of coral, were fober, they were dismissed with presents of coral topper, brais, tobacco, and other things. But we shall how proceed to a more particular description of each of the Dutch professions at the cape.

"Cape colony extends from Stellenboth colony by a delart of confiderable extent, which reaches from the cape to a plantation called Saxenburgh."

tation called Saxenburgh.

This diffus contains in it the hills called the Tyger-hills, Cow-hill, Lion-hill, Table-hill, Wind hill, Bluehill, or Blue mountain, the Norwegen hill, and Bulk-

hill, or Blue mountain, the Norwegen many and all the first of these, namely, the Tyger hills, receive their name from the first plant power and they frem spotted and cosoured exactly like the fall of the animal after whom they are named. These hills are very settle, are near twenty-five miles in citeomstrence, and the farthest is about soor miles distant from the cape; usou these entering a commence are twenty-two estates, the possessions of which have not only a good mansion-house as death, but great quantities of carde, some house and district the cape; and three or four hundred head of large cardle.

Near twenty miles from the cape stands Cow-hill; but New twenty miles from the cape flands Cow hill; but it is not fo well fettled as the former, the land and water

being verr Indifferent.

It is not to wen terrica as the former, the tame and water being very indifferent.

The next, denominated Lion-hill, extends northward fe to 1 able Valley to the ocean. Its name is deduced by the fear, from the refemblance it bears to a lion, when viewed both the fear, but others affirm it was so called from having formally abounded with llons. In a declivity between his and Table hill are two centinels continually upon they, a cortage being crefted there for their refulence. Their businels is, daily to affend to the fummit of this hill, which they do alternately, by means of rope ladders. The person at the top is able to delery a fail at the diltance of thirseen or sourteen leagues at feat. As from its to preceives a fail, he gives a figual to his comrade below, who goes to the sortiers to give notice to the governor, while remaining centrical hostis the Dutch flag, and dischalges a two-pounder. At the soot of this hill a little fort, mounted with four gurs, was creeked by the governor, Simon Vander Stel, at the head of a finall creek, but scarce any remains of it are now to be feen.

mon Vander Siel, at the head of a small creek, but scarce any remains of it are now to be seen.

Table-bill, is the highest of any, being near two thousand seet in height. It is very fertile being covered with villeyards, plantations, cattle, acc. The governor, among others, has a charming sear at this place; and two gardens, the one named Roune bush-garden, and the other New-Mids, which are extremely placefant. The former receives in name from the sine lofty treet which agreeably shade it, and render it good retreat in the luminer months. The latter hath its appellation from having been more recently made than the other. The scene is romantically charming, from its woody appearances; so that a stranger might fancy. these than the other. The scene is romanically charming, from its woody appearances; to that a firanger might fancy that the genrus of the woods had his refidence here. This hill is finely watered, and is very prohiable to the company. "In the center there is a prodigious chafin, where a number of trees grow in a very formantic manner; and the torrents ruthing down here have a "dey romantic heaves are doing the number of the law of the production of the prod

and the torrents rulining down here have a very remantic appearance doring the rainy feafon.

We are told by Kolben, that a flort time before his revival at the cape, the people had observed, for near a month together, upon this hill, formething very filling and rependence when the remaining the rependence of the remaining and rependence of the remaining and rependence of the remaining the r the or sovery of what it was. But this at we mag that a luminous Vapour on the reounnot general summous vapour on the recombles a ferrent with a carbundle and peculiar to the conjurors at the cape, for a writer (Mr. Hayries) informs us of a teek the finiter folly: "On the cape of Samba, he fay, have light is feen, which much referables a flar. The same faid, he had feen this light feveral times are the same and the same faid, he had feen this light feveral times. 1 18 hlous voyages by this filand, and it was faid to he's large

with a ciamond on his head. Some of the Turkish partenger lidd it was universally believed to be for and that the Grand Signor had caused several attempts to be anade in older to discover what it was; but that every one of them proved inessection, on account of the abe, it list in the year 1763, some men contrived formething like rope-ladders, fixed fron hooks at the ends, and, by means of very long poles, hings them as high as they delired, then climbed up them, and discovered a monitoous selpeint with young ones about it; but did not perceive any diamond on the head of the.

There was some years ago a filver mine discovered upon the 190 for this hill, between the two groves, known by the respective names of tell and Paradise; but as the profit what not found adequate to the expenses, the Dutch have left of working it.

Near the Lion hill flands she winds hill, be Devil's-hill, as it is termed by the fations, it is separated from the found; by a chalm of valley. It species these appellations from the built-rous winds which break from the serious cloud that either lowers over it; for whose these hardeness five product of the valley of the trainer way. This hill exceeds to the its filler, that, to gether with Table-hill and Lion-hill, encompassing a plain called Table-valley, which is tolerably fertile, as well as the eminences.

About twenty-five miles from the cape stands Blue-hill, which is so called from the colour of its foil when seen at diffance. It abounds with wild beatts, but has only a difficulties of the soulle and difficulties only a difficulties of the soulle and difficulties.

which is fo called from the colour of its foil when sen at a dillance. It abounds with wild beafts, but has only a few plantations shout a not being well supplied with

"Those call if the Norwegen-hills are very craggy, and many is muniter; but as they are at a confiderable diftance troop the cape, four only are fettled, and on these creat quantities at cattle are reared; but the governor Vander Stel built a handome country-house, a fish-house, a capacious flable, &c. on a fertile foot hers.

The last of these called Bush-hill, is so samed from the trees and shrubs with which it abounds, and runs down so

a place called Wood's bay, on the coaft.

a place called y ood a bay, on the coant.

The Salt river, is the principal that waters this colony:
this is so called, because the waters, towards its mouth, as
Table bay, are brackish, but at its source in Table-hill is
if sweet, faltubrious, and clear. Signon Vander Stel attempted to cut a canal of communication between this river and Falfo Bao; but on being convinced that it would neither answer the design, nor reimburse the expence, he

The river Mushel or Mussel, is only a temporary one, which is formed in the rainy season, and falls from the mountains into the Selt river. Another stream, called Kerley's river (from a German of that name drowned therein) is always flooped up in the dry featon by drowned therein) is always flooped up in the dry featon by the fundbanks which are raifed by the violent fouth-east wind; and this, by throwing the water out of its channel, forms a confiderable lake; till the wet featon, causes it to flow again in a regular manner, by demolithing its fand-banks.

Many parts of the country abound with smaller streams, fprings, fountains, cascades, natural and artificial canals, ponds, and other reservoirs.

Stellenhofh colony was originally a wiki country, overrun with firmus, hambles, and brufti-wood, and called at firli, by the Dutch, Wild Forest. At length, the governor, Simon Vander St., cleared and fettled it, when it received from him, the name of Stells-bulh colony, which was af-terwards corrupted to Stellenboth. This colony which is feparated from Cape Colony by a fandy defart, is divided into four diffricts; nam.ly, Stellenboth, Hottentot Hol-

land, Mottergate, and Bottelary.

The diffriet of Stellenboth is furrounded by bills, has a wholefome air, fertile foil, and abounds with ward partia-rage, herbs, flowers, &c. The plantations for condivided into vineyards, corn fields, orchards and partiess. The banks of Stellenboth river, which falls from the mountains, are adorned with many commodious houses and pleasant effates, the stream itself yields various kinds of small fish; near Table bay into which it discharges itself, many of a larger fort are taken. A fine bridge is laid over the larger for are taken. A fine bridge is and over the over, which was crefted by a public fipitited gendleman at his own expense, in the room of one of a very narrow and inconvenient confiruction. Adiram Vander Stel crefted another bridge over a different part of, this river, which has been fince fuffered to runto decay, and is now in a ruinous

flate. The village of Stellenboth was accidentally freet to the

ground ist 1710, but has face been rebuilt with tolloubide falses, and is as flourishing fination at present.

The second of these districts of cattle are beed hare for the company's use, it there are many houses, sineyards, and eardens, helenging to the plenjantions, lifetides the passays and eardens, helenging to the plenjantions, lifetides the passays and eardens, helenging to the plenjantions, lifetides the passays and eardens, helenging to the plenjantions, lifetides the passays and eardens, helenging to the plenjantions, lifetides the passays and eardens, helenging to the plenjantions. It is now in general cultivated, and those vornejous animals have been citter driven to incre retweet and sequestered plents, or totally destroyed. In the hilly part of the country are three rivers, which disambegue themselves have leave the river, but he latter civer, frequently overflowed, till a respective was made to receive its rapid waters, by which the michief was prevented, and plenty of water breathed against the dry station: a stream from this basion lurns a corn mill, and a fort was formerly built upon the banks of the river, but the latter hat been fusited to tran to decay. The other two rivers are less confiderable; indid have not as yet obtained asiy name; but it is very extraordinary, that though the waters themselves are sweet, yet fresh water sish will not live in either of the three.

Two roads lead from the cape to Hottentot Holland, the otherwer the fandy downs in Tyger valley, and the other over a mountain which has not yet been diffinguished by any peculiar appellation; the latter is the most guestion of the sine prospect it affords, though the former is the most open and the rock which the micro and the strength of the sine prospect and have their habitations. The bay abounds with fish, and had once an established fishery here, which the company, for cogent reasons, thought proper afterwards to drop. Stellenboth and Hottentot Holland rivers empty themselves into the bay; and the rock which terminates

The diffrict of Mottergate, fies to the north of Hottentot Holland, and was fo called on account of the meltowness of the foil, occasioned by the frequent shoods which intirely overslow it, and render it muddy; for the word "motter" implies muddy. The waters, however, at the same time that they make the roads bad, give an uncommon degree of fertility to the foil; so that this district is not inferior to any of the others with respect to houses, inhabitants, produce, &c. The advantages of these inundations are many; and the sew inconveniences might be easily remedied, or at least palliated, by the erecting of bridges, and cutting dykes; which improvements we have reason to believe will take place, as necessity must coint out their utility, and the inhabitants have both timber and industry.

The district of Bottelary, which is the most northern part of the colony, receives its name from the quantity of any made in it, which exceeds all that is made at the cape bridges. On an elevated ground, called Josen-hill, are

nay made in it, which exceeds an that is made at the cape befides. On an elevated ground, called Joffen-hill, are feveral plantations, confifting of vineyards, orchards, paf-tures, farms, cavelte, and nurferies. Fuel and water are very fearce here; of the latter they have little but what the rain affords them, and this the lot weather turns brackish in

the dybes, where it is preferred. To restedy the inconve-nitness arising from the want of wood; the company have planted feveral acres of this district with trees, and enacted a law, that every gerien shall be publicly and the versely whipped by the common hangutan, who shall prefum es-cut a single twig.

Drakenstein colony was fettled in 1675, principally with French refegger, and under the direction of the governor, Simon Vander Stel, who give it its prefent name, in compliment to his great friend and patron the, baront Van Rheeden, lord of Drakenstein, in Guelderland, in

Yan Rheeden, lord of Drakenslein, in Guelderland, in Holland.

This colony is very large, extending northward to Saldanna bay, foutliward to the Turnagain, mountains, and westward to the Drakenslein mountains, and westward to Horse mountain. The Drakenslein mountains are high, steep, and ragged; herice travelling over them is tedious, statiquing, and dangerous, on which account they are called the Vexations mountains by some.

The only public buildings in this very extensive country are a church and a water-mill: there is not a single village, though it contains many scattered farms in the leveral set-tements.

thements.

The Mountain river is the principal one; it is fo named from having its fource in the mountains. There are many good plantations on both fides of this river, but it has no bridge over, to facilitate in communication. The waters of it empty themselves into the bay of Sti Heleas, after meandering through feveral diffracts.

The air is ference, confidering the fituation, the water remarkably falubrious; and the foil, though mountainous, is ferrile.

is fertile.

From Tornagain mountain to the church, the road is deep, narrow, and dangerous, beltig full of precipices, and infested by wild beafts; so that many have leaped down, the former to avoid the latter, and perificed by one death in flunning another. Near this road a filter mine has been discovered, but no permission hath been yet given to work it; and a noble mansion, supposed to be one of the finest seat in Africa, hath been erected here. Here is a noble estate called Simon's valley, consisting of a stately dwelling-house, commodious wise-house, mill, gardens, orchards, vincyards, corn-ficials, skd. Anal near this place is a mountain called, from its height; the Babylenian tower; and there are many good plansificate on it.

near this place is a mountain called, from its height, the Babylenian tower; and there are many good plangitions on it.

The church of Drakendein is onte of the meaned buildings imaginable; the walls are exceeding low, and the roof is only made of reeds; nor are the decorations within fisperior to the appearance without. Near this plain faibne is a market for the fale of grootries, finall waret, &c. In the vicinity is the Pearl mountains, to called from the valgar notion of its fummir refembling a pearl; it produces excellent mill-fenes. The mountain rained Riebeack's caffle is high, fleep, and deficient in water; once barracks were built, and troops posted here, as an advanced dhere upon the Hottentots; but recent treaties, and the amicable behaviour of shose people, having rendered such presquetions unnectfary, the former have been suffered to run to decay, and the latter withdrawn.

A district called Twenty-four Rivers, is situated at about a days journey north of Riebeack's-casser it received its name from the variety of streams which water it, and render the pasturage excellent. The land is not entailed, but granted by licence, yet it is well inhabited, fertile, and abounds with cattle; the people here grind their corn is little hand-mills, as they are not accommodated with either wind or water-mills.

The Honey mountains are at the distance of a days journey from Twenty-four Rivers: they derive their name from the great quantities of wax and honey sound in 'the cless, which the Hottentots obtain with imminent danger of their lives, and sell to the Europeans. The white people here are greatly insessed with the Hottentos failty, idlenses; they feldom cultivate any land, depending chierly on their cattle; and, what is singular, instead of cating bread with meat, they are feldom visited by disease. About a days journey from hence a few cattle seeders inhabit some high, hills called the Fiquet mountains, from the first return kaving been immediately given to gaming and in particular to playing at piquet. The g

Waveren colony was fettled in 1701, by the governor, william Vander Stel, it was named after the illustrious Waveren family to which the governor claimed relationship: it is the most eastward colony from the cape. Being the youngest fettlement, the boundaries are uncertain; the mountains, which furround the greatest part, are not named; the lands are only licensed, the habitations are but huts, and the people in general but servants, as they have no tattle of their own, but take care of the cattle of perforts belonging to the colonies adjacent.

A high steep mountain, called the Red-sand mountain, is stoened between this colony and the cape: it was so denominated from the colour of the foll: there is such difficulty in travilling bore it, that the waggons are taken to pieces on only side, packed up, sind carried on the backs of the teams, and put together by the other side; there is a fertile place called Blackland, near this mountain.

The inhabitants of this colony, having heither church

is a fertile place called Blackland, their this mountain.

The inhabitants of this colony, having theither church or council-house, are obliged, for worthip, to go to Draikenstein church; for marriages or christenings to the cape; and to Stellenboth on account of legislative con-

Here are two hot batha; but it is dangerous to go to either, on account of the wild beafts which swarm in these parts. The waters of this colony are in general very good.

Terra de Natal, was likewife purchased by the Dutch, and is inhabited principally by the Castres, who are very different in many respects from the Hottentots, not greafing their bodies, or stammering in their speech. They, unlike the Hottentots also, sow corn, brew a kind of beer, and build square houses with a kind of plaister. These people trade with the Arabians and rovers of the Red Sea, for filk, elephants-teeth, coffee, &c. which they barter with the Europeans for cordage, anchors, tar, and other maritime stores, and exchange with the former for training articles.

"This diffrict bath been but little penetrated by intellifcription we have been able to obtain concerning it, we learn, that such part of the country as lies towards the sea is plain, champain, and woody; but within land it appears more uneven, by reason of many hills which rife in unequal heights above each other; yet it is intermixed with pleufant vallies and large plains, and is chequered with natural groves and favannahs or meadows. There is no want of water; for every hill affords little brooks that want of water, to every many i forme of which, after feveral turnings and windings, meet by degrees, and make up the river of Natal, which difcharges itself into the caftern ocean, in the latitude of about thirty degrees footh; then it opens, pretty wide, and is deep enough for finall wessels. But at the mouth of the river is a bar, which has not above ten or eleven feet water on it in a fpring ride; though within there is water enough. This river is the not above ten or eleven tee, water on it in a lpring ride; though within there is water enough. This river is the principal of the diffried of Natal, and has been frequented by fome of our English ships. There are also other streams and rivers, which bend their courses northerly; especially one of a confiderable bigness, which runs due north, about one hundred miles within land.

Several forts of trees grow in the woods, many of which afford very good timber fit for any use, they being tall and large. The favannahs are cloathed with kindly thick large. The favannahs are clostned with hims, grafs. The land animals of this country are lions, tygers, the land animals of the deer hous, rabbets, &c. elephants, buffaloes, bullocks, deer, hogs, rabbets, &c. Here are also abundance of sea-horses; buffaloes and bul-Fiere are also abundance of ica-hories; buffaloes and bul-lucks only are kept tame, but the reft are all wild. Ele-phants are so numerous here, that they feed together in prodigious herds. Mornings and evenings they are seen grazing in the favannahs; but in the heat of the day they retire into the woods, and they are very peaceable if not molested; deer are also very plenty here, they feed quietly in the favannahs among the tame cattle; for the natives

feldom difturb them.

feldom disturb them.

Fowls of various forts are found here in great plenty, fome such as we have in England, ducks and teal both tame and wild, and plenty of cocks and hens, besides abundance of wild birds, wholly unknown to us. Here are a fort of large wild sowl as big as a peacock, with many fine coloured feathers; they are very rare and thy. There are others like curlews, but bigger: the slesh of these is fweet and wholfome, hut black.

Though there is plenty of divers forts of fish in the fea and rivers; yet the natives do but feldom endeavour to and rivers; yet the natives do but leaden endeavour to take any, except torroifes or turtles, and that is chiefly when they come affore in the night time to lay their eggs. But they have another very strange way to catch turtle: they take a living fucking fifth, or remora, and faftening a couple of firings to it (one at the head, and the other state tail) they let the fucking-fifth down into the water, on the turite-ground humong the half-grown, or young turites; and when they find that the fifth has faftened itself to the back of a turtle, as he will foon do, they then draw him and the turite up together. The fame way of fifthing is also practiced as Madagastar, one of the islands in the Incident occasion.

allo practice at Madagaicar, one of the illands in the Indian location.

With respect to the natives of this country, they are but of a middle stature, yet have very good limbs; the colour of their skins is black, and the hair crisped; they are oval visaged, their noies neither stature in high, but very well proportioned: their teeth are white, and their aspect alto getter graceful; they are nimble but very law, which probably is for want of commerce; their chief employment is husbandry. They have a great many bulls and cows, which they carefully look after; for every man knows his own; though they all run promiseuously in the savanaha; yet they have pens near theirown houses, where they snake their gentle; and bring the cows to the pail. They also plant corn, and sense in the fields, to keep out all eattle, as well tame as wild. They have Guiney corn, which is their bread; and a small grain, no bigger than mustake swell tame as wild. They have Guiney corn, which is their bread; and a small grain, no bigger than mustake are professed among them, but every one makes for himself such necostaries as need or ornament requires; the men bouild houses and huts; plant, and do what is to be done abroad; and the women milk the cows: dress the yelloule, for, and manage all demedie. what is to be done abroad ; and the women milk th

theirs; the men build houses and huts; plant, and do what is to be done abroad; and the women milk the cows; drefs the victuals, &c. and manage all domedic matters: Their houses are not large, nor richly furnished; but they are made clofe, and well thatched; to that they are well defended from the inclemency of the weather.

Their clothes, of which they wear but few, are extremely mean; the men go in a manner naked; their common garb being only a square piece of cloth made with filk grafs, or moho rind, and wrought in form of a short apron; at the upper corners it has two straps to tie round their waists; and the lower end, being finely fringed with the same, hangs down to the knees. They have caps made with buff greased, of about nine or ten inches high; they are a great while in making these caps; for the grease smult be made very pure before it is sit for this use; besides, they lay on but a little at a time, and mix it finely among the hair, and so it never afterwards comes off their heads. When they go a hunting, which is but seldom, they pare off three or sour inches from the top of their caps, so that it may sit the snugger; but the next day they begin to build it up again, and so they do every day, till at is of a greater and stationable height. It would be a ridiculous thing for a man here to be seen without a greasy cap; but boys are not suffered to wear any till they arrive at years of maturity, and then they begin to build up their cheads. The women have only short periticants, which at years of maturity, and then they begin to build up their heads. The women have only short petticoats, which reach from the wait to the knee; when it rains, they cover their bodies with a simple cow hide, thrown like a blanket

orn, becf, sife, milk, ducks, hens eggs, &c. They also drink milk often to quanch their thirft, and this forsteimes when it is fweer, but commonly they let it be four first. when it is sweet, but commonly they let it be four first. Besides milk, which is their common drink, they make a better, but of the same grain beforementioned, purposely to be merry with; and when they used to fuch occasions, they make themselves extraordinary sine with feathers sluck in their caps very thick: they make use of the long seathers of cocks tails, and none else. Besides these head ornaments, they wear a piece of cow hide made like a tail, and, like that, it is fastened behind them, reaching from their waist to the ground. This piece of hide is about six inches bread, and each side of it is adorned with little iron rings of their own making: when they are thus are iron rings of their own making; when they are thus attired, their heads a little intoxicated, and the mufic playing, they all fkip about merrity, and shake their tail briskly; but in their mith they are very harmless and in-

Polygamy being tolerated here, every man may 'to e many wives as he can maintain; and, without the manner wives as he can maintain; and, without the manner are none to be had; neither is there any other commenced by to be bought or fold but women. Young virgins are disposed of by their father brothers, or nearest male replions; the price is according to the beauty of the damiel. hey have no money in this country, but give cows in ex-change for wives; and therefore he is the richest man who has most daughters or fisters; for then he is fute to get cattle enough. They make merry all the wedding, but the

ride

Terra dos Fumos, is but a finall triding bountry, bounded on the fouth by the river Dellagos, which sparate it from Terra de Natal, on the heart, by Zaguans, on the welt, by the country of the Naonetas, and by the Eastern occur on the east. It extends from the subth of the river Dellagos, to the mouth of the river Dellagos, the first appellation figurity in the siver of rob bers, which is in twenty-first degrees forty mindtes fouth latitude. The not places of the places of fouth latitude. Potto de Pefquerla, or the Filhing-place, which is a little beyond the former; and the bay of \$1. Lucla, which is between the latter and the Lastroon river, that is a little beyond the former; and the bay of \$2. Lucla, which is between the latter and the Lastroon river, the faints days on which they discovered them, or from femerivial circumstance which they observed when they first faw them, gave this country the name of Terra dos Fomos, or the Land of Smoke, from perceiving forthe fincks on their first approaching the force.

The Deropeana, as yet, have not made any fettlement here; and the Caffres, who inhabit the place, live in a simple state of nature, without towns, villages, or fettled habitations, and frequently indeed without even movable hute; fo many sire the artificial wants of men, and fo few; their real necessities.

hute; fo many are the artificial wants of men, and fo few their real necessites.

Cape Town, is fittuated in cape Colony, in thirty-four degrees fifteen infinutes fouth latitude, and sixteen degrees five minutes east longitude. This place is large, commodious, pleasant, and populous, the streets are spacious, and regularly laid out; the hooses are built of stone, and tolerably handsome; but they are very low and only thatched; both which circumstances are owing to she dormy weather; for were they built high, they would be blown down, and, if tiles were used instead of thatch; the people would be knocked on the head with them as they passed along the streets. The houses in general have pleasant gardens behind; and neat court yards before them. Building, as well as tillage is greatly encouraged here, and land given for either purpose to those who clouds to accept of it; but then the government claims an annual tenth of the value of the former, and produce of the latter; and a tithe of all purchase money when estates are fold.

The town extends from the sea shorts to the company, garden, spreading along the Table bay. The fort is valley at a little-distance, its form is pentagonal, it commands the landing place, and is garrisoned by two hundred foldiers; the government storehouse are within it; the governor and other officers have apartments here, as well as fix hundred servaints; the same number of slaves are lodged into two waria, the one for the men, and, the other for the women; and there is a house of correction for the reception of dissolute persons of either sex. The hospital for sick seamen is of estimation emen, and the other for the women; and sheeple are that here, as were informed that there were formerly thelving pent house creeked on both sides the streets, to shelter passengers in rainy weather; but these brought the inhabitants under such of the section of orther ore of the survices, that they were quickly all pulled down by order of the government very wirely laid hold of that occarion to rid the peftering them, by publishing an order, which is still in force, and from time to time republished, that no Hottentot or common failor shall smoak in the streets; with a declaration, that the failor or Hottentor, who should a deciration, that the latter of rottenting who mount prefume for do, should be tied to the whipping post, and severely lashed. This cleared the streets at length, and keeps them clear to this day of all failors and Hottentots who have no business there; for it is with great difficulty

that either of them can forbear mosking, while they are awake, if they have tobacco, which they are feldom with-

Out.

What is most to be admired at the cape is the company's garden, where they have introduced almost all, the fruits and flowers that are to be found in Europe, Afia, or America; and most of them are improved, and flourish more than they did in their respective, elimates and countries from whence they were brought and the garden is watered with springs that fall down from the Table monatain just above them. The applet and peers of Europe are planted here, with the garper of Afia, as well as those of Europe; although a colicust shavour. Here are also excellent lemone, oranges, citrons, figs. Japan apples, and a great variety of other fruits.

radicality s SECT. III.

Contains an account of the climate, foil, produce, animalional the people called Hettentote, at the cape of Good Hope.

THE weather at the cape of Good Hope may be divided into two feafons only, via, winter and fundar; of the west monstoon begins in March, and the dry monfoon. The west monfoon begins in March, and the dry one in September; for that fundare commences at the cape about the time that, concludes with us. The inconveniences of the climate are, exceffive heat in the dry feafon, and heavy rains, thick fogs, and unthealthy north-west winds, in the wet feafon. Thunder, and lightening are never known here but in March and September. Waser feldous freezes, and, when it does, the ice is but thin, and diffolves upon the leaft appearance of the fun. In the hot weather, the people are happy when the wind blows from the fount-east, because it keeps off the fea-weeds, which otherwise would float to the flore, and corrupt there, which by infecting the air, and causing dreadful licad-ache; would prove very trouble-foine.

the shore, and corrupt there, which, by infesting the air, and causing dreading liead-ashs, would prove very trouble-forme.

The appearance of two remarkable clouds, which frequently hang over the summits of the two mountains, of Table-hill and Devil-hill, commanly enable the inhabitants of this country to prognosticate what weather will happen. These slouds are at first but small, bort, gradually increasing, they at length unite, and investop both mountains, when a tertible hurricane soon ensues.

The violence of the wind does great damage to the corruption of the wind does great damage to the corruption of the sire, which greatly contributes to the health of the inhabitants. A gentleman who resided many years at the cape says. "The skirts of this cloud are white, but seem much compacter, than the matter of common clouds. The upper parts are of a lead colour, owing to the refracted rays of light,. No rain falls from it, but sometimes it discovers great humidity at which time it is of a darker colour, and the disting from it is, broken, raging by fits of short common through the wind seems and sometimes, about the open two, three, or eight days, and sometimes, about the open two, three, or eight days, and sometimes, about the open the street supplied with new water. When the cloud begins to brighten up, those shoughts fall, and the wind proportionathy abates. At length the cloud growing transparent, the wind coales. the wind cenfes.

the wind ceases.

During the continuance of these south-east winds, the Table-valley is torn by surious whirlwinds. If they blow warm, they are generally of short duration, and in this case the cloud soon disappears. This wind rarely blows after suit-let, sind never longer than tewards midhighi, though the cloud remains, but then it is thin and clear. But when the wind blows cold, it is a sure sign it will last for some rine, except an hour or two at noon or midnight, when it seems to recover itself, and afterwards renews its boilterous rage."

Near the came, the water of the ocean is of a green con-

renews its boilterous rage."

Near the cape, the water of the ocean is of a green colour, owing principally to the coral firmlis, and the weed called tromba. The first, while in the water, are green and fost, but when exposed to the air, they grow hard and change their colour to white, black, or red. The latter are ten or twelve feet in length, hollow within, and when dry, become firm and frong. They are often framed into trumpet, and the found they produce is very averable to the extra agreeable to the car.

The force of the rivers in this country are in the mountants: they glide over a gravelly bottom, are clear, pleafant, and falubrious; but most other fireams are dark, muddy, and outwholfome. Here are a few bracklift forings, whose waters, medicinally used, greatly purify the blood, and feweral warts and hot butte, which are finguentry efficacions in various deforders:

In Waveren colony are three hot fipting, the most particular of which is Black-hole bath. The mould of this hole is of the colour of lot, light, greafy, and so fast, that the feet of horses fink into it. The waters me used in scorbutic, leprous, and should diferders, being from ly imprognated with falian and fleely particles. Upon the whole, the reparations of the cape waters is for great, that whole, the reparations of the cape waters is for great, that whole, the reparations of the cape waters is for great, that whole, the reparations of the cape waters is for great, that whole, the reparations of the cape waters is for great, that care has a fewer that abounds here, for the particular use of his Danish majety.

White are red chalks are found in abundance at the cape, the allow the excellent clay both for the purposes of manniness. The late excellent clay both for the purposes of manniness in the acaretine water the white chalk is the late excellent clay both for the purposes of manniness. The late excellent clay both for the purposes of manniness in the late of the country of old his present in mounts in the fact of the cape with the red the red by the late and the late an

When we take occasion to mention agriculture, it is to be observed, that the Europeans of the cape and their lands are implied; for the liettentots in general detert the very idea of cultivation, and would fooner flarve than till the ground, so greatly are they addicted to floth and indefence.

defence...

The working of the plough here is to laborious, from the fiffine of the foil, that it frequently requires near twenty oxen those plough. The fowing feafon is in Jan, and the havest about Chrismus. The corn is not thrush it with a hail, but trod out by horfes or oxen on an artificial floor made of cow-dung, firmy, and water, which when mixed together, cements, and foon becomes perfectly hard. It is haid in an oxal form; the cattle are continued by a deers, which true from one to the other, and the criver flands in the middle, where he exercises a long flick to keep them continually to a quick pace. By and the criver flands in the uniddle, where he exercifes a long flick to keep them continually to a quick pace. By this method hilf a dozen horfes will do more in one day, than a dozen men can in a week. A tythe of the corn belongs to the Dutch co teamy a a matter of right, and the reft they parchafo a price flipulated between them and the hulbandnen, and the hulbandnen, and the kindness of the mature of the crop and the kindness of the

and the kindness of the second and the kindness have seen translated from Europe and India, besides what trees mig. originally grow here, to that the cape now produces oak, fir, camphire, pine, cypress, orange, lemon, citron, quince, pomegranate, apri-cot, apple, pear, peach, fig, plumb, chesnut, walnot, and almond trees. The cinnamon tree has likewise been atmond trees." The crimamon tree has likewise been brought from Ceylon, and succeeds tolerably." The vines of Germany and Perfia liave been introduced, and thrive exceedingly! fo that the most inconsiderable hulbandman is not without a vineyard. The stocks are planted in rows; but that they may not be injured by the lonth-west wind; they are never suffered to grow above two seet high, or three at the farthest. It is remarkable that they pro-

hother Mustrolims of the Natural History included in this Work.

o die als the state of the stat

and the fat is much valued and sold a drawing a drawing at the ser much larger buffsloss than in Europeins They are of a brown colour: the horns are those, and call the wards the neck, where they incline to each other of the twen them there is a tart of the fair upon the foreign which adds to the faceners of the look! a The skin is expected in the second of the look of the second of the look of the second of the look of the second of the look. The skin is expected in the second of the look of of th

many other animals.

They have very large elks here, being five feet high, with horns a foet long. This is a very handsome creature, having a beautiful head and neck, flender legs, and foft mooth hair, of an afth colour. Their upper jaw is larger than the other, the tail about a foot long, and the flesh by the cape epicures is faid to exceed the belt beef. They runfwift, and climb the rocks with great agility, rhough they ufually weigh about four hundred pounds each.

The creature called flink-breeches, or flink-box, is one of the mod fingular animals at the case. This, head treature called flink-breeches, or flink-box, is one

of the most fingular animals at the cape. If This beaft re-ceives its name from its offensive steach both living and dead. When pursed, it can fink away those who follow it; and, if killed, the finell is so odious, that more can approach the carefe. It is about the fire of a common

house-dog, and made much like a ferret. The goats are of various species, particularly one called the blue goat, which is of a fine azure colour. The spotted goat, is larger than the other, and beautifully aported goat, is larger than the other, and beautifully marked with brown, white, and red spots. The borns are a foot long, and the sieh is sine eating. The tame goat is much like the European. The rock-goat is no larger than a kid, but very mischievous in the plautations. The diving-goat is much like the tame one, and receives its name from its method of fquatting down in the graft to hide itself. There is another animal called a goat, but without any additional appellation; it is of the fixe of a hart, end extremely beautiful; the hair on the back and fides is grey, streaked with red, and that on the belly white; a white streak passes from his forehead to the ridge of his tail, and three others furround his body in circle The female hath no horns; but those of the male are three feet in length, and the flesh of both is exceeding delicate. The horns of the hart do not branch like those of Europe: but the roebuck is in every respect like ours.
Wild cats are of several fort; here: the first the Dutch

call the civet-cat, not that it is really the animal fo denominated, but because of the fine scent of its skin. The next is called the tyger-cat; from its being very large, and fpotted like a tyger. The third fort is the mountain cat, which, as well as the tame cat, exactly refembles those of Europe. The fourth species is termed the blue cat, from its colour; as it is of a fine blue tinge, with a beautiful red lift down its back.

There is a frecies of mice peculiar to this country, called the rattle-moufe, which is about the fize of a fquirrel, and makes a rattling noise with its tail, from which it receives its appellation; it is very nimble, resides among trees, lives upon nuts and acorns, and purs like a cat. The rats, and their other mice are like ours; and indeed fome have affirmed, by miftake, that there were none of this fort of vermin at the cape till the Europeans carried them

The country abounds with hogs of several forts; namely, the common hog, which is of the breed of those brought from Europe, and resembles ours. The Java hog, which The wild hog, or rather wild boar, is very fierce and harbours in woods; and the earth hog, which is of a red colour, and without teeth; this latter lodges like a ba in holes, and feeds upon ants, which he procures by forcing his long rough pointed tongue into their hills, and drawing it thence with a great number of those animals

Many jackalls, and fome ernmess, are found about the cape. Baboons, apes, monkies, ike, are very nume-No. 33.

Controlled in the controlled of the state of the controlled in the capacitant of the chanded is an article quantity of the controlled in the capacitant of t an afti nie 111:7

Captain Carteret having the order of his prefent man-jefty, performed a voyage round the world in the Swallow. floop of war, wrote a letter to the late. Dr. Maty, feeretary to the Reyal Society, in which his mentional the cantillo pardalis; hid to have been sound in the sountries about the pardalis, faid to have been found in the sountries about the cape: : "From the fedrity of this creature (faye be) at 3. beliene none have been fein in Europe, finel Julius Cefar's time, (when, I think, there were two of them at Rome is Limbgine a more certain knowledge of its realist, will have be difagreeable to you, at the existence of this fine animal has been doubted by many; at I you will have it to hay afford any pleasure to the curious, you may make what use of Good Plope has fent our parties of iten on it. and discoveries, fome of which have been ablent from eighteen anomas to two years, in which traverse they have discovered many curiosities, which it is hoped they will, in convenient curiofities, which it is hoped they will, in convenient time, communicate to the world. One of these parties crossed many mountains and plains, in one of which they are found two of these creatures, but they, only caught the young one; they endeavoured to bring him alive to the cape town, but ansortmental it died. They took off his skin, which they brought as a confirmation of this trutty, and it has been sent to Holland?

The fkin alluded to in this letter is now depended in the cabinet of natural history at Loyden. Linneus ranks this animal as one of the deer kind. He head is like that of a frag, this horns are blunt, about fix inches long, covered with hair, and not branched; the neck refembl camel's, but is longer, being near feven feet in length: it has a mane like a horfe; feet, ears, and tongue, like a cow; flender legs, the fore ones being confiderably longer than the hinder; the body is but imall, covered with white hair, and spotted with red; the tail is long, and buthy at the end; the upper jaw contains no fore-teeth; be moves both the fore feet together when he runs, and not one after the other like other animals ; he is eighteen feet in length from the tail to the top of the head, and is fixteen feet from the ground when he holds up his head.

There is a great variety of birds and fowls found at the cape, most of which are fold cheap, particularly cocks, turkies, capons, and other poultry.

Here are three forts of eagles, viz. the bone-breaker, who feeds on tortoifes i to get at the steff of which it uses this singular method: Having carried the tortoise aloft in the air, it drops it upon fome hard rock, by which means the shell is broken, and the eagle can easily come at its prey. 2. The dung-eagle, which tears out the entrails of animals to fubfit on; and, though no bigger than a common, goole, is exceeding flrung and voracious. And, 3. The duck-eagle, which feeds principally upon ducks.

Wild geefe are likewife of three forts, via. . The wa-

Wild geeie are ingewind of three fores, via. 1. The water-goofe, which refembles ours: 2. The mountain goofe, which is the largest of all, and has a green head and green wings. 3. The crop goofe, 6 named from its remarkable large craw, of which begs; pockets, and tobacco-pouches are made. All these kinds of geele are fuch good cating. fo plentiful, and so eatily taken, that the people at the cape do not think the tame goese worth the trouble of breeding.

The bird called the flexings is one of the profit fingular, in has along moth, and in every way larger that a future the legs are remistably long, and of an orthing laway, and the fear are like there of a good 1 the bill identifies blue touth with black points in the bead and not such a like the law laws are like the law laws and law law laws and law laws are law laws. le of a bright

It is very affettly in deflecting, is expanta; to eat, then, but on that account the days of known half a fout darkingth will be received the control of the contr in the tints of their feath

The cape-finch and blue bird are peculiar to the red with blue feathers of different shades, and has a reddish bill near four inches long; the former are remarkable for changing the colour of their feathers twice annually. In fummer the head and neck are scarlet, but all the rest black; in winter, they are all over of an aft colour. The bill is yellow, fharp, and thort, and the reft divided into two apartments; in which there are feparate accommoda-tions for the male and female, or leading the colours.

Reptiles are very numerous at the cape, particularly the following ferpents, or reptiles of the ferpent kind: ... The tree ferpent, which is fo called, from refembling the tree terpent, which is to cauca, from retembning the branch of a tree, and from being fond of winding itelf about trees, fhrubs, &cc. 2. The afth coloured afp, speckled with red and white, which is several yards long. 3. The shoot serpent, so named from the amazing velocity with which it shoots, or darts itself at an enemy. Some call which it thoots, or darts itielf at an enemy. Some call it the eye ferpent, on account of the numerous white fnots refembling eyes, with which its fkin is marked. 4. The blind flow worm is a black, fcaly ferrent, fpotted with brown, white, and red. 5. The third ferpent, or inflamer, is a most venomous and dangerous ferpent, about three quarters of a yard long; has a broad neck, blackback, and is very active. The hair ferpent is about three feet in length, as thick as a man's thumb, and received its name from its yellow hair, its poifon. 6 malignant, that nothing but the ferpent slone can potent its proving mortal. The sone abovementioned is said to be an artificial composition prepared by the Bramins in India. who mortal. The from abovementioned is fail to be an artifi-cial composition prepared by the Brazina in India, who keep the fecret to themselves. It is shaped like a bean, in the middle whitish, the rest of a sky-blue. Whenever this is applied, it slieks close without bandage or support, and imbibes the poison till it can receive no more, and then drops off. Being laid in milk, it purges itself of the ve-nom, turning the milk yellow, and so is applied again, till by ite not sticking, it proves the poison is exhausted. Some affirm, that horned forpents are found at the cape, but the best authentics contradict this affertion. House ferpents, however, are very common; but they are intirely inoffensive, and may perhaps be of the same kind as those which the people in Whidah worship.

Among that indebts of this rectast of the familie of alleds a fingure, whose hists is merchal; a finaller lipsches of shee familie calleds a fingure, which does great mischie in the sinesy calleds a fingure, which does great mischie in the syntages a polisonous black spiders, butterflies, familie, f

feales, has a yellow back, white belly, and a final month, armed with four teeth; but being of a poifonous nature, is not fit to be eaten. The brown fifth is as big as an ox, and is deemed good food either treft or faired. The brance is not in the case of the case yeard waters, and is very dry cating. The gold fish has a streak from head to tail, cincles round his eyes of a gold colour: it is eighteen inches long, weight about a pound, and its fiesh of an exquisite tafte.

Porposses, pikes, pilot fishes, sharks, and dolphins, abound here. The braffern is only found about the care. Of this fish there are two forts: the one has a black back, Of this fift there are two forts: the one has a black back, and purple head; the other is of a dark blue colour, and the former is rounder than the letter. They are both cheap and wholfome food. The flone-braffem is good either fresh or falted, refembles a carp in make, but is more delicious in tafte. One species of this fish is called flat-nofe, from the shape of the head, and is much more valued than the other fort. The red-shore fish, is exceeding beautiful to the eye, and exquisite to the taste: the back is fearlet spotted with blue, and bespangted with gold; the eyes are of a bright red, and furrounded with a sliver circle, and the belly is of a pale pink colour, has a shining filver tail, resembles a carp both in shape and taste, and weighs about a pound.

there tail, refembles a carp both in thape and tatte, and weights about a pound.

Barbels, tortoifes, tunnies, foles, rock-fifth, eels, lob-fiers, crabs, oyfters, fea-finalis, &c. are innumerable. Of the latter, there is one fingular species called klin koosen, which has an upper and under-shell, thick, tough, twisted, and incrusted. In vinegar, however, the crust drops off, and the shell exhibits an admirable pearl co-

Sea-funs and fea-flars are fmall round fhell-fish; and receive their denominations from the great variety of mickles, which shoot from them like rays of light. The fift called pagger has a prickly fhell, and is much dreaded by the people at the cape, as a wound from one of its protubeid:

rances turns to a mortification, unlefs great care is taken to prevent it. The fea-fpaut refembles a piece of moss sticking fait to the rocks: it is of a green colour, emittwater, and within is like a tough piece of flesh. It exhibits no figns of animation, except on being touched, when it diftils clear water from several small holes.

It has been affirmed by some, that sea lions are found here; and we are told by an accurate author, that a sea lion was shot while basking on the rocks in Table bay in 1733: it measured about seventeen seet, in length, and as many in circumference; his head nearly resembled that of a lion in shape, but had no hair, nor had he either hair or scales on his body. The tongue was all fat in a manner, and weighed above fifty pounds. The colour of his skin was yellowish. Before, he had two short legs footed like a goose: in the place of hind legs, he had two broad fins, each about eighteen inches long: his body tapered to a tail, ending like a half moon. Several barrels of oil were extracted from him.

The torpedo, or cramp-ray, found at the cape, is a very

to a tail, ending like a half sagon. Several barréls of oil were extracted from him.

The torpedo, or cramp-ray, found at the cape, is a very fingular production of nature. The body is circular, the kin foft, fimooth, and yellow, marked with large annular spots 1 the eyes small, and the tail tapering. It is of different sizes, and weights from; five to fifteen ponded. The marcotic or benumbing quality of this fifth was known to the antients, and hath surnished matter of speculation to the philosophers of all ages. If a person touches it when alive, it instantly deprives him of the use of his arm, and even has the same effect if he touches it with a flick. Kempfer, in speaking of this creature, say, "The instant I touched it with my hand, I selt a terrible numbness in my arm, and as far up as my shoulder. Even if one treads upon it with a shoe on, it effects not only the leg, but the thigh upwards. They who touch it with the feet are seized with a stronger palpitation than even they who touch it with the hand: this numbness bears no resemblance to that which we seal when a nerve is a long time pressed, and the soot is aid to be alseep: it rather appears to be like a sudden vapour, which passing through the potes in an infant, penetrates to the very springs of life, from whence it distuses itself all over the body, and gives real pain. The nerves are so affected, that the person struck imagines all the bones of his body, and particularly those of the limb that received the blow, are driven out of joint. All this is accompanied with an universal termor, a sckenes of the stomes, a general convulsion, and a total suspension. this is accompanied with an univerfal tremor, a fickness of the stomach, a general convulsion, and a total suspension of the feculties of the mind. In short, such is the pain; that all the force of our promises and authority could prevail upon a feaman to undergo the flock a fecond time.

A negro indeed, that was flanding by, readily undertook to touch the torpedo, and was feen to handle it without feeling any of its affects. He informed me, that his whole fecret confifted in keeping his breath; the torpedo was harmlefs; but when we breathed ever fo little, its power took place. However, experience has fince proved, that this expedient will not always prevail, as the shock hath been fometimes found very great, even when the breath was held; but climates in this may make a difference.

It has been observed, that the powers of this fish de-cline with its strength, and intirely cease when it expires. This benumbing faculty is of double use to the torpedo; first, it enables it to get its prey with great facility, by ren-dering other fishes insensible with its touch, and consequently neapable of getting from it; and fecondly, it is an admirable defence against its enemies, as by numbing a fish of superior force with its touch, it can easily escape. The narcotic power of the torped is greater in the female than the male. According to Appian, it will benumb the father than through the whole extent of hook, line, and rod. The 6th for this remarkable fifth having, however, no pernicious quality, is eaten by the people at the cape, in com-

SECT. IV.

Treats of the performand habits of the Hettentets, their food, camps, government, forces, method of fifting, furumning, marriages, burials, religion, &c.

THERE are fixteen Hottenwe nations, which inhabit thit fouthern promontory; at least, there are formany that nold a correspondence with the Dutch though

The flature of the Hottentot men is from five to fix feet in height. Their bodies are proportionable, and well made: they are feldom either too fat or lean, and fcare

ever any crooked or deformed persons amongst stem, any farther than they disfigure their children, themselves, by flatting and breaking the grisses of their notes, looking on a stat note as a beauty. Their beads as well as their eyes, are rather of the largest: their lips are naturally thick, their hair black and short like the negroes, and they have exceeding white teeth and after they have taken a great deal of pains with grease and soot to daken alway and the state of the state

halfpenny, before a crowd of people, which perfectly fpoils the character that Mr. Kolben has given of their modefly.

The men cover their heads with handfals of greafe and foot mixed together; and going without any thing elfe on their heads in the fummer-time, the duft flicks to it, and makes them a very filthy cap, which they fay cools them, and prefeves their heads from the feorching beat of the fun; and in the winter, they weat flat caps of cat-fkin or lamb-fkin, half dried, which they tie sith a thong of the fame leather ander their chins. The m m allo wear a kroffle or mantle, made of a fheep-fkins or other fkins, over their fhoulders, which reaches to the middle; and, being faftened with a thong about their neck, is open before. In winter they turn the woolly or hairy fides next their backs, and in fummer the other: this ferves the man for his boad at night; and this is all the winding-sheet or cossin be has when he dies. If he be a captain of a village, or chief of his nation, instead of a sheep-fkin, ais mantle is made of tyger-fkins, wild cat-fkins, or some other skins they set a value upon: but though these mantles reach no lower, generally, than their waiss, yet there are some nations who wear them as low as their legs, and others that have them touch the ground.

The man also hangs about his neck a greasy pouch, in which he keeps his knife, his pipe and tobacco, and some dahka (which intoxicates like tobacco) and a little piece of wood, burnt at both ends, as a charm against witcherast. He carries in his right hand two sticks, the first called his tirri, which is about three feet long, and an inch thick, but blurn at both ends; the other, called his rackum-flick, about a sout there feet long, and an inch thick, but blurn at both ends; the other, called his rackum-flick, but which is fastened a tail of a fox c whick, about a foot long, to which is fastened as a dart to throw at an enemy or wild beast; which he shout have of the raw hide of an ox or elephant, when they are obliged to travel through s

The women wear caps, the crowns whereof are a little raifed; and these are made of half dried kins, and tied undertheirchins. They scarce ever put them off night or day, winter or summer. They usually wear two keosses or mandes. one upon another, and, as these areonly fathered or mantes. See upon another, and, as these are only fastened with a time, about their necks, they appear naked down to the mid-lie: but they have an apron, larger than that of the men re cover them before, and another of faill larger dimensions that cover their hind parts. About their legs they wrap thongs of half dried skins, to the thickness of a jack-boot, which are such a load to them, that they lift up their legs with difficulty, and walk very much like a trooper in jack-boots: this serves both for a diffinction of their feez, and for ormament. But this is not all their finers. in jack-boots: this ferves bout for a distinct finery.:
fex, and for ornament. But this is not all their finery.:
if they are people of any figure, inftend of a sheep fine.

On a mantle of wild cat fkin. They they wear a tyger fkin, or a mantle of wild est fkin. They have also a pouch hanging about their necks, in which they also carry something to eat, whether facy are at home or abroad, with their dahks, tobacco, and pipe. But the principal ornaments both of men and women are brass or glass beads, with little thin plares of glittering brass and mother of pearl, which they wear in their hair, or about their cars. Of these glass or brass beads strung, they also make necklesses heacless for the arms, and girdless make necklaces, bracelets for the arms, and girdles, wearing several strings of them about their necks, waith and arms, chusing the smallest beads for their necks: those are finest that have most firings of them, and their arms

are fometimes covered with bracelets from the wrift to the elbow. The largest beads are on the strings about the middle: in these they affect a variety of colours, all of which the Dutch furnish them with with, and take their cattle in return.

There is another kind of ornament peculiar to the men; and that is, the bladder of any wild beaft they have killed, which is, blown up, and faftened to the hair as a

though, which is, blown up, and ratened to the hair as a trophy of their valout.

Both men and women powder themfelves with a dust they call bachu; and the women fpot their faces with a red earth or stone (as ours do with black patches) which is thought to add to their beauty, by the natives; but, in the eyes of Furopeans, renders them more frightful and shocking than they are naturally.

eyes of Europeans, renders them more frightful and inocking than they are naturally.

But, as part of their drefs, we ought to have mentioned, in the first place, the custom of daubing their bodies, and the inside of their caps and mantles, with grease and foot. Soon after their children are born, they lay them in the sun, or by the fire, and rub them over with fat or butter, mixed with soot, to render them of a deeper black, it is faid; for they are naturally tawny: and this they continue todoalmost every day of their lives, after they are grown up, not only to increase their beauty, but to render their limbs hippleand pliable. As foine nations pour oil upon their heads and bodies, fo these people make use of melted fat: you cannot make them a more acceptable present than the fat or seum of the pot shat meat is boiled in, to anoint themselves. Several of these Hottentots coming on board our children with a white a contract the several of t Thip, fays this author, as foon as we arrived at the cape, addressed themselves, in the first place, to the cook for some of the fat he had skimmed off his boiling coppers; which being gratified in, they immediately clapped it on their heads by handfuls; which confirmed us in the opinion of their nattiness, of which we had heard to much.

Nor are the Hottentots more cleanly in their diet than in their dress; for they choose the guts and entrails of cattle and of fome wild beafts (with very little cleanfing), rather than the rest of the fiesh, and eat their meat half boiled or broiled; but their principal food confifts of roots, herbs, fruits or milk: they feldom kill any of those cattle, unless at a fellival they only feed of fuch as die of themfelves, either of difeases or old age, or on what they take in hunting; and, when they are hard put to it, they will set the meaning that it is they are hard put to it, they will eat the raw leather that is wound about the womens legs, and even foles of shoes; and, as their mantles are alashamed to sit down in the public streets at the cape, pull off the lice, and eat them. And we ought to have remembered, that they boil their meat in the blood of beafts when

they have any of it.

They rather devour their meat than eat it, pulling it to pieces with their teeth and hands, discovering a canine ap petite and fierceness: they abstain, however, from swings-fiesh, and some other kinds of meat, and from fish that have no fcales, as religiously as ever the Jews did. And here it may not be improper to fay fomething ve the management of their milk and butter: they never ftrain their milk, but drink it with all the hairs and nedinefs with which it is mixed in the milking by the Hottentot women. When they make butter of it, they put it in to fome fkin made in the form of a foldier's knapfack, the hairy fide inwards; and then two of them taking hold of it, one ateach end, they whirl and turn it round till it is converted into butter, which they pot up for anointing themselves, their caps and mantles with, for they cat no butter; and the reft they fell to the Dutch, without clear-ing it from the hairs and dirt it contracts in the knapfack. The Hollanders, when they have it indeed, endeavour to feparate the naftinefs from it, and fell it to the shipping, that arrives there, frequently for butter of their own making; and fome they eat themselves (but furely none but a Dutchman could eat Hottentot butter) and the dregs and dirt that is left they give to their flaves; which having been found to create difeases, the governor of the cape fometimes prohibits their giving their flaves thus fluff by public edict; which is not, however, much regarded. The butter-milk, without any manner of cleaning or ftraining, the Hottentots drink themselves; giving what they have to fpare, to their lambs and calves.

The usual drink of the Hottentots is cow's milk or water, and the women fometimes drink ewe's milk; but this the men never touch: and it is observed, that the women are never suffered to eat with the men, or come near them.

during the time of their menfes.

Since the arrival of the Dutch among them, it appears that the Hottentots are very fond of wine, brandy, and other splrituous liquors? these, and the baubles already mentioned, the Hollaiders truck for their cattle; and though a Hottentor will furn splr for a Dulchman half a day for a draught or two of feur wine; yet do they never attempt to plant vineyards (as they fee the Durch often do) or think of making wine themselves.

We thall proceed; in the first place, to give an account of their towns and houses, or rather, their camps and tents.

The Hottentots, like the Tarrars and Arabs, remove their dwellings reconstructive for the conveniency of water and

their dwellings frequently for the conveniency of water and fresh pasture: they encamp in a circle formed by twenty or thirty tents, and fometimes twice the number, contiguous to each other; within the area whereof they keep their ous to each other; within the area whereor they keep their leffer cattle in the night, and the larger on the outfide of their camp: their tents, or, as fome call them, houses, are made with flender poles, bent like an arch, and covered with mats or skins, and fometimes both: they are of an oval figure, the middle of the tent being about the height of a man and decreasing gradually (the noles being thorter). oval figure, the middle of the tent being about the height of a man, and decreafing gradually (the poles being fhorter) towards each end, the lowest arch, which is the door or entrance, being about three feet high, as is the opposite arch at the other end; the longest diameter of the tent being about twelve or fourteen feet, and the shortest teat; and in the middle of the tent is a shallow hole about a yard diameter, in which they make their fire, and round which the whole samily, consisting of nine or ten people of all ages and sexes, fit or lie night and day in such a smooth (when it is cold, or they are dressing of victimals) that it is when it is cold, or they are drefting of victuals that it is impossible for an European to bear it, there being usually no vent for the simoak but the door, though some have feen a hole in the top of some of their huts, to let out the simoak, and give them light. Such a circle of tents or luts as has been described, is called by the Hottentots a kral, and sometimes by the Hottentots a kraal, and fometimes by the Europeans a town or village; but feems to be more properly a camp: for a town on fitting of more fubfitantial buildings, and is feldom capable of being removed from one place to sanother; whereas these dwellings consist of nothing more than final tent-poles, covered with skins or mats, which are moveable, and carried away upon their baggage oxen whenever they remove with their herd: to a diffant passure.

As to the surniture of their tents; they consist of little

more than their mantles which they lie on, fome other fkins of wild beafts they have killed or purchased, an earthern pot they boil their meat in, their arms, and perhaps fome other trivial utenfils. The only domettick animals they keep, are dogs, as ugly in their kind as their matters, but exceeding uleful to them in driving and defending their

cattle.

The Hottentots are agreed by all to be the lazieft generation under the fun: they will rather starve, or eat dried skins, or thoe foles at home, than hunt for their food; and yet, when they apply themselves to the chace, or any other exercise, no people are more active and dexterous than the Hottentots; and they serve the Europeans often with the greatest fidelity and application, when they contract to ferve them for wages: they are also exceeding generous and hospitable; they will scarce eat a piece of venison, or a dish of fifth they have catched, or drink their beloved drams alone, but call in their neighbours to partake with

them as far as it will go.

The next thing we shall enquire into, is the government of the Hottentots; and we find all people agree, that every nation has its king or chief, called konquer, whole authority devolves upon him by hereditary fucceffion; and that they do not pretend to elect their respective fovereigns. That this chief has the power of making fovereigns. That this chief has the power or making peace and war, and prefides in all their centrals and cours of judice: but then his authority is faid to be limited; and that he can determine nothing without the confent of the captains of the feveral knals, who feem to be the Hottentot fenare. The captain of every kraal, whose office is hereditary alfo, is their leader in time of war, and whise feather that the break in time of ware, and with chief magifirate of his kraal in time of peace; and, with the head of every family, determines all civil and criminal causes within the kraal; only such differences as happen between one kraal and another, and matters of flate, are determined by the king and fenate. The Dutch. fince their arrival at the cape, have presented the king, or chief of every nation of the Hottentots in alliance with mem, with a brafs crown; and the captains of each kraul with a brafs-headed cane, which are now the badges of their respective offices, formerly they were distinguished only by finer skins, and a greater variety of beads and glittering tritles.

In their councils their king fits on his heels in the center, and the captains of the kraals fit in fike manner round

about him. At his accession, is it iaid, he promises to observe their national customs, an gives them an entertainment, killing an ox, and two or three sheep, upon the occasion; on which he feasts his captains, but their wives are only enterained with the broth; but then the next day, we are told, her Hottentot majesty treats the ladies, and their hirbonds are put off in like manner with the soup. The captain of each treat allow, at his accession, engages to observe the customs of his kraal, and makes an entertainment for the men, as his lady does the next day for the women; and, though these people shew their chiefs great respect, they allow neither their king or inferior magistrates any revenue; they subsite, as other families do, upon their stock of cattle, and what they take in hunting. As they have no notion of writing or letters, they can have no written laws; but there are some antient customs, from which they scarce ever deviate. Murder, adultery and robbery, they constantly punish with death; and, if a person is suspected of any of these crimes, the whole kraal join in selzing and securing him; but the guilty person dependently plunder the mountains, where robbers and criminals like himself, secure themselves from justice, and frequently plunder the neighbouring country; for no other kraal or nation of Hottentots will entertain a stranger, unless he, is known to them, and can give a good restorms of the savine his cany kras!

for no other kraal or nation of Hottentots will entertain a stranger, unless he is known to them, and can give a good reason for leaving his own kraal.

If the offender is apprehended, the captain assembles the people of his kraal in a day or two; who, making a ring, and sitting down upon their heels, the criminal is placed in the center of them: the witnesses on both sides are heard, and the party suffered to make his defence: after which, the case being considered, the captain collects the suffrages of the judges; and, if a majority condemn him, the prisoner is executed on the spot. The captain first strikes him with a truncheon he carries in his hand, and then the rest of the judges fall upon him and drub him to death: then wrapping up the corpte in his krosse or mantle, it is carried to some place distant from the kraal, where they bury it.

carried to tome place dittant from the krail, where they bury it.

In civil cases also, the cause is determined by a majority of voices, and satisfaction immediately ordered to the injured person, out of the goods of the person that appears to be in the wrong. There is no apeal to any other court: the king and his council, consisting of the captains of the krails, never interpose unless in matters that concern the public, or where the krails are at variance.

It may be proper here to add, that the Hottentor's eattle

It may be proper here to add, that the Hottentot's eattle and perional effate descend to his eldest son: he cannot diffinheric him, or give his effects to his other children; but, as for property in lands, or any certain real effate, no man has any; the whole country is but one common, where they feed their cartle promiteouotly, moving from place to place, to find water or fresh pasture as necessity re-

Even the feveral nations have no stated bounds; but use fuch tracts of land as their ancestors did before them : it is true, their respective limits sometimes create great dif-

is true, their respective limits sometimes create great differences between the several nations, and occasion bloody
wars; which brings us now to treat of their arms, and the
arts and stratagents they use in war.

The arms of a Hottentot are, 1. His lance, which resembles a half-pike, sometimes thrown, and used as a missive
weapon; and at others, serves to push with in close fight,
the head or spear whereof is possened. 2. His bow and
arrows, the arrows bearded and possened. 2. His bow and
arrows, the arrows bearded and possened likewise, when
they engage an enemy or wild beast they do not intend for
food. Their bows are made of iron, or olive-wood; the
string, of the sinews or guts of some animal: the quiver
is a long narrow case, made of the skin of an elephant,
elk, or ox, and slung at their backs, as soldiers sling their
knapsacks. 3. A dart of a foot long, which they throw
exceeding true, searce ever missing the mark they aim at,
though it is not above the breadth of half a crown; thee
allo are possened. When they engage an enemy or a wild allo are poisoned, when they engage an enemy or a wild beast that is not to be eaten: and lastly, when they have fpent the reft of their missive weapons, they have recourse to stoom, seldom making a discharge in vain; and, what is most remarkable in their shooting or throwing arrows, darts, or stooms, they never stand fill, but are all the while skip-

or tiones, they ever train this, but are at the white help-ping and jumping from one fide to the other, possibly to avoid the stones and darts of the enemy. They are all foot, and never engage on horseback; but have disciplined bulls or owen taught to run upon the enemy, and to to sand difforder them; which these creatures will do with the utmost fury on the word of com-mand, not regarding the weapons that are thrown at them; for though the Hottentots have numbers of large elephants

in their country, they have not yet learned the set of taming them, or training them up to war, as the military men in the East Indies do.

Every able bodied man is a foldier, and possessing of feet of such atms as has been described; and on the summons of his prince, appears at the rendezous with all imaginable alsetity and contempt of danger, and every man rhaintains laimself while the expedition lasts. As these officers, civil and military, have no pay; so their do the private men expect any; a sense of honour, and the public good, are the sole motives for hazarding their lives in their country's fervice. country's fervice

good, are the fole motives for hazarding their lives in their country's fervice.

In war, the Hottentots have very little conception of dicipline, nor indeed is it possible they should; for the only method of raising an army, is, for the kraal captains to order the people to foliow them; the only method of maintaining ones, is by honting as they march: and the only way of deciding a dispute between two nations, is, by fighting one battle; the success of which determines the whole affair. In an engagement, they attack with an hideous yell, fight in great consustion, and put more considence in their war ozen than their own skill: for, as we have hinted above, these animals, when trained to the business, are better disciplined, and much more formidable, than the Hottentous themselves.

The principal inducement to their entering into a war at any time, is the preservation of their territories. As they have no land marks or written treaties to adjust the exect bounds of every nation, they frequently disagree about the limits of their respective countries; and, when any neighbouring nation grazes their cattle upon a foot of ground another claims, fatisfaction is immediately demanded; and, if it be not given, they make reprishs, and have recourse to arms. But this is not the only occasion of wars amongst the Hottentots: they are not always that chasses of the state of them is and virtuous scoole Mr. Kolben has represented them:

courfe to arms. But this is not the only occasion of wars amongst the Hottentots: they are not always that chastes, and virtuous people Mr. Kolben has represented them; some tempting Helen (for Hottentots possibly may appear amiable in one another's eyes, with all the grease and earrion they are closthed with) has finiten a neighbouring chief, perhaps, who prevails on his people to stift him in the rape of the desired female; and this frequently seta their tribes together by the ears. The stealing each others cattle is another cause of deadly strife; for though each the kraal punishes these among themselves with death, yethin is looked upon as an heroic asl to rob those of another nation; at least the body of the people are so backward in giving up the offender, that they frequently come to blows upon it.

ward in giving up the offender, that they frequently come to blows upon it.

When they march into the field, every man follows his particular captain, the chief of his kraal: they observe little order; neither do they take the precaution of throwing up trenches to defend themselves; and what is fill, more furprising, have no shields to defend themselves against missive weapons, though some say they will ward off a lance or dart, and even a stone, with a little truncheonabout a soot long, which they carry in their hand.

The several companies advance to the charge, at the command of their chief; and, when those in the front have shot one flight of arrows, they retreat and make room

have shot one slight of arrows, they retreat and make room for those in the rear; and, when they have discharged, the former advance again, and thus alternately they continue till they have spent all their millive weapons, and then they lawe recourse to stones, unless they are first broken and dispersed by a troop of bulls; for the wise chiefs and generals of each side, according to the European practice, remaining on an eminence in the rear, to observe the fortune of the day, when they observe their people are hard pressed, give the word of command to their corpic de reserve. of bulls, who break into the body of the enemy, and geor ours, who oreak into the body of the cherry, and generally bring all into confusion; and that fide that preferves their order best, on this furious attack of these bulls of Basan, are sure to be victorious. The skill of the general feems to lie chiefly in managing his bulls; who never charge each other, but spend their whole rage upon the men, who have, it feems, no dogs of English breed to play against them, or this stratagem would be of little service: but we should have observed, that as the battle always bebut we should have observed, that as the battle always, begins with horrid cries and noile, which pethaps supplisathe place of drums and trampet; fo the victors insult with
no less noise over the conquered enemy, killing all that fails
into their hands: but they seldom fight more than one
battle, some neighbouring power usually interposing to
make up the quarret; and of late the Dutch perform this
good office, between such nations as lie near their fettles; ments. From their wars with each other, we naturally proceed to their wars with wild beats, with which their country abounds more than any other: these people, is:

4 P

No. 33.

feems, effectivit a much greater honour to have killed one of these fore to markind, then an enemy of their own

of these four to manikind, than an enemy of their own fpecies.

There are inflances; of a Hottentob's engaging singly with the stereoft wild beafts, and killing them; but nfoldly the whole transi or village assemble, when a widd beaft is discovered in their neighbourhoot, and, dividing themselves in small parties, endeavour to farround him. Having found their enemy, they ofteally fet up a great cry, at which the frighted anienal endeavoure to break through and escape them? If it prove to be a rhinoceros, an elk, or elephant, they throw their lances at him, darts and arrows being too weak to pierce through their thick hides if the beaft be not killed at the first discharge, they repeat the attack, and load him with their spears; and, as he runs with all the rage at the persons who wound him, those in his test follow him close, and ply him with their spears on whous he turns again, but is overpowered by his enemies, who constantly return to the charge, when his back is towards them, and scarce ever fail of bringing the creature down, before he has taken his zeveres on any of them. How hazardous soever such an engagement may appear to an European, these people snake it their sport; and have this advantage; that they are exceeding swift of soot, and scarce ever miss the mark they aim at with their spears; if one of them is had pressed by the own over quiet the field till the beast is killed, or makes his essape; though they sometimes dexteroorly avoid the adversary, they immediately return to the charge, subduing the fiercet either by strategem or force.

In the attacking a lion, a loopard or a tyger, their darts

by itratagem or force.

In the attacking a lion, a loopard or a tyger, their darts and arrows are of fervice to them; and therefore they begin the engagement at a greaser didance, than when they charge an elephant or rainocerot; and the creature has a wood of darts and arrows upon his back, before he can approach his enemies, which make him fret and rage and fly at them with the greatest fury; but those he are also the problem. approach his enemies, which smake him fret and rage and fly at them with the greatest fary; but those he attacks, nimbly avoid his paws, while others purise him, and finish the corrupes with the w spears. Semetimes a lion takes to his heels, with abundance of positioned darts and arrows in his fiesh: but, the goidon beginning to operate, he soon falls, and becomes a jacy to those he would have

preyed upon.
The elephant, the rhimoceros, and the elk, are frequently The elephant, the improvement any manner of hazard, taken in traps and prafile, without any manner of hazard. The elephants are observed to go in great companies to water, following in a file one after another, and usually water, following in a file one after another, and usually take the fame road till they are diffurbed: the Hottenton therefore dig pits in their paths, about eight feet deep, and four and five over; in which they fix fharp flakes pointed with iron, and then cover the pit with small flicks and turf, fo as it is not differmible; and as these animals usually turf, to as it is not differrible; and as their animals utually keep in one track, frequently one or other of them falls in with his fore feet into the pit, and the flake pierces his body; the more he firuggles, the deeper the weight of his monftrom body fixes him on the flake. When the reft of the herd observe the misfortone of their companion, and find he cannot difengage himself, they immediately abandon him: whereupon the Hottentets, who hie concealed, in expectation of the fucces of their stratagem, approach sharmounded least that him with their Genera and cut his the wounded heaft, flab him with their spears, and cut his largest veins, so that he soon expires; whereupon they cut him to pieces, and, carrying the siesh home, feast upon it as long as it lasts. His teeth they make into rings for their and, when they have any ivory to spare, dispose of he Europeans. The rhinoceros and elk are frele to the Europeans. quently taken in pitfalls, as the elephants are.

The Hottentor, who kills any of thefe, or a lion, leo-pard, or tyger, fingly, has the highest honour conferred upon him, and several privileges, which belong only to upon him, end several privileges, which belong only to such intrepid heroes. At his return from this hazardous and important service, the men of the kraal depute one of the feniors to congratulate him on his victory, and defire that he will honour their with his prefence; whereupon he follows the old deputy to the allembly, whom he finds, ne follows the old deputy to the affembly, whom he finds, according to cuttom, fitting upon their heels in a circle; and, a mat of diffinction being laid for him in the center, be fets himfelf dewn upon it: after which the old deputy urines plentifelly upon him, which the hero robs in with great eagerness, having first fetateded, the great off his fikin with his mails at the deputy all this while pronouncing forme words unlarelligible to any but themselves. After this, they like a rine of schools, which should declare. this, they light a pipe of tobacco, which they smoke and hand one to another till there remain nothing but ashes in the pipe, and these the old deputy strews over the gal-lant man, who rubs them in as they fall upon him, not

fuffering the leaft dust to be lost. After which the neighbours having severally congratulated him on his advancement to the high honour, they disperse, and go to their respective tents. The conqueror, afterwards, fastens the bidder of the furious beast he has killed to his heir, which he ever after wears as a badge of his knighthoed; and is from that time efteemed by every one a brave man, and a bunefaster to his country.

Being setired to his tent, his neighbours from to via which of them shall oblige him most, and are, for the next, three days, continually fending him, one declicous morela, or other; nor do they call upon him to perform duty during that time, but suffer him to include his ease; but what is still more unaccountable, his wife, or wives, stop, he may have more than one) are not allowed to come near him for three days after this honour is conferred on him; but they are forced to samble about the fields, and to keep to a spare diet, left they should, as Mr. Kolben surmises, tempt the hubends to their empresee: but out the third, day in the evening, we are told the women return to the tempt the hulbands to their embraces: but on the third day in the evening, we are told the women return to the tent, are reserved with the utmost joy and tenderness; muetual congratulations pass between them; a fat sheep is killed, and their neighbours invited to the feast, where the prowers of the here, and the honour he has obtained, are the chief subject of their conversation.

There is fearce any wild beast, but the fless is good eating, if it be not killed with posionous weapons; but the typer is the most delicious morsel; and as the whole kraal partake of the feast, the person who kills him meets with a double share of praise, as he both rids the country of any enemy, and pleases their palates. Mr. Kolben relates, that he has himself caten of the fless of a tyger, and that it exceeds any veal in the world. But to return to the field

ceeds any veal in the world. But to return to the field sports of the Mottentots: when they hunt a deer, a wild agont, or a hare, they go fingly, or but two or three in com-pany, armed only with a dart or two, and feldom min the game they throw at: yet, as has been observed already. (a) long as they have any manner of feed left, if it be but the raw hides of cattle, or fine soies, they will hardly be per-fuaded to flir to get more; though is is true, when they apprehend their cattle in danger from wild beafts, no peo-ple are more active, or puriue the chase of them with

preserved in the more active, or parties the chains of them with greater alactivity and bravesy.

From hunting, we proceed to treat of their fishing; as which according to Kolben, they are very expert; taking, fish with angles, nets, and spears; and they get a cortain fish, called rock-fish, particularly by groping the holes of the rocks near the shore, when the tide is out:

noise or the rocks near the inore, when the tide is out: thefe are mightily admired by the Europeans; out having no scales, the Hottentets willnot eat them.

When they throw their lines into the sea, Kolben pretends they allure the fish towards the bait, by whistling and other noise; which we shall not encourage our readers to have much faith in, our sishermen imagining that a noise frights away the fish: however, both seem to be of opinion, that sish can be a in the water, and if this may be decaded. rights away the min nowers, noth teem to be of opinion, that fifth can hear in the water; and if this may be depended on, we cannot fee why fifth, as well as ferpents, may not be charmed with music, or fomething like it. Certain it is, the finakes in the East Indies will rike up and dance to the voice of a girl, and the music of a very ill infirument. But ftill, we must confess, we are in doubt, whether fish can hear in the water; and if they can, whether they may be charmed with founds of any kind.

But the manner of the Hottentote swimming, is as particular as of his fifhing; for he stands upright in the sea, and rather walks and treads the water, than fwims upon it, his head, neck, and shoulders being quite above the waves, as well as his arms, and yet they move fafter in the water than any European can; even in a storm, when the water than any European can; even in a storm, when the waves run high they will venture into the sta, rising and falling with the waves like a cork. However, it is observed by our author, that before they venture either into the sea, or a river, they mutter something to themselves, which he supposes to be a short praver; adding, that when they have fuppofes to be a fhort prayer; adding, that when they have put up their fish in skins, they will swim, or rather walk with a great load of them upon their heads, through tho waves to the fliore.

The next thing we shall consider is the marriages of the riottentots: and it feems, every young fellow has such re-gard to the advice of his father, (or rather the laws and customs of the country require it) that he always consults the old man before he enters into a treaty with his miftrefs, and if he approves the match, the father and fon, in the first place, pay a visit to the father of the damfel, with whom having imosked, and talked of indifferent things for some time, the father of the lover opens the matter to the virgin's father, who having consulted his wife, returns

an answer immediately to the proposal: if it be rejected, the lover and hit father retire without more words; but if the offer be approved by the old folks, the damfel is called, and acquainted, that they have provided a husband for her; as the most furbinite to their determination, unless the can hold her lover at arms end, after a nights struggling; for we are told, that when the parents are agreed; the two young people are put togetiler, and if the virgin-loses her maidenhead, the must have the young fellow, though she be never so averse to the match; but then she is permitted to pinch and foratch, and defend herself as well as the can; and if she holds out till morning, the lover returns without his mithrest, and makes no surther attemps; but she subject is this wife, tag li intents and purposes, without surther ceremony; and the next day the man kills a fat ox, or more, accoming to his circumitances, for the wedding dinner, and the entertainment for their friends, an answer immediately to the proposal: if it be rejected, wedding dinner, and the entertainment for their friends, weoning dinner, and the entertainment for their riends, who refort to them upon the occasion, bringing sbundante of good withes for the happines of the married couple, as is usual among politer people. The ox is no fooner killed, but the company get each fome of the fat, and greate themselves with it from head to foot, powdering themselves afterwards with buchu, and the women, to add to their charms, make red spots with oker, or red chalk, out their black faces. their black faces.

their black faces.

The entertainment being ready, the men form a circle in the area of the kraal (for a large company cannot fit, within doors) and the women form another; the bridegroom fitting in the middle of the men's circle, and the bride is the center of her own fea. Then the prieft enters the men's circle, and urines upon the bridegroom, which the voung man robs in very joyfully. He then goes to 'he ladies circle, where he doet the bride the fame favour. Then the old man goes from the bride to the Bridegroom, till he has exhaufted all his fore. The prieft then pronounces his benediction in these words: "That they may live long and happily together; that they may nove a brave man, and an expert hunfman, and the like." After which, the meat is served up in earthen pots glazed with greafe; and some of them having knives since the with greafe; and fome of them having knives fince the Europeans came amongst them, they divide their meat pretty decently; but more of them make use of their pretty decently; but more of them hake the of their teeth and claws, pulling it to pieces, and eating it as vo-aciously as so many dogs, having no other plates or nap-lins than the shinking corners of the napkins they wear, and sea fhells without handles usually serve them for spoons. When they have dined, a pipe is filled with tobacco, which they fmoke all round, every one taking two or three whiffs, and then handing it to the next. It is fingular, that though the Hoventots are immoderately fond of spirituous liquors, music and dancing, yet they do not drink the first, nor practice the latter at weddings:

The Hotten allow of polygamy; but feldom have more than three views at a time; and it feems it is death to

marry or lie will a lift or fecond coulin, or any near relation. A father feldom gives his fon more than two or threecows, and as many five, upon his marriage, and with thefe he must make his way in the world; and we do not find they give more with their daughters than a cow, or a couple of sheep; but the latter are to be returned to the father, if the bride dies without having had any children : on the contrary, if the ever bore any children to her hufband, the portion becomes his, even though the children are de-

id is a compy or

They do not leave their daughters, or younger fons, any thing when they die; but all the children depend upon the eldeft brother, and are his fervants, or rather flaves, when the father is dead, unlefs the elder brother infranchife them; nor has the mother any thing to infift on, but what

the eldest fon allows her.

As there are no great fortunes among them, they match purely for love; a "greeable companion is all their greated men aim at: their chiefs intermarry frequently with the poorest man's dat gheet; and a brawe fellow, who has no fortune, does not despair of matching with the daughter of a prince. Merit, according to Kolben, is much more regarded there than among politer nations. A widow, who marries a second time, is obliged to cut

A widow, who marries a lecond time, is oniged to cut off a joint of one of her fingers; and fo for every huf-band the price after the first. Either man or woman may be seen, on shewing sufficient case before the captain. The seft of the kraal; the woman, however, must now your spain, though the man is allowed to marry, and have as many wives as he pleases at the same

A young Hotter of never in marter of a hut or tent till

he marries, unleft his father dies and leaves him one i therefore the first be tinefa the bride and bridegroom imply themselves to, after their marriage feast, is to creek a seaso or hut of all new, naterials, in which work the woman has as great a share as the man; and this taking them up about a week's time, the new married couple are enter-tained in the mean time in the states of some of their re-

lations.

When they refort to their new apartment, and come to keep house together, the wise seems to have much the greatest share of the trouble of it: she feeders the cartle, milks them, cuts out the firing, searches every morning for roots for their food, brings them home, and boils or broils them, while she drone of a husband lies indolently as home, and will feater give himself, the trouble of getting up to eat when the food is provided for him by the drudge up to eat when the food is provided for him by the drudge his wife. The more wives he has, fill the more indolent life he leads, the care of making provision for the family being thrown upon them:

He will, it is said, in his turn, attend his cattle in the field; but expects every one of his wives should do, at least, as much towards taking care of them as he does. He will also, sometimes, but very rarely go a hunting with

leaft, as much towards taking care of them as he does. He will alfo, fometimes, but vety rarely go a hunting with the men of his kraal; and .bring home a piece of venifon; or a difh of fish; but this is not often; and if he is of any handlerast trade, he may work at it two of three hours in a week, and instruct his children in the art. He also takes upon him to fell his cattle; and parchase tobacco, and strong liquors of the Dutch, with needfary toods, beads and other ornaments, for which the Hottentots barter; away their cattle: their wives are not permitted to Intermeddle in the business of buying and felling, this being the fole prerogative of the man. tive of the man:

outness or buying and telling, this being the fole prerogative of the man.

If a woman brings a living fon into the world, there is great rejoicing: but the first thing they do with the childing to doubt it all over with cow-dung; then they lay it before the fire; or in the fun, till, the dung is dried; after which they rub it off, and wasti the child with the juice of catain herbs, laying it in the fun, or before the fire again, till the liquor is dried in, after which they about the child from head to foot with butter, or sheeps fat melted, which is dried in as the juice was: and this custom of anointing their bodies with fat, they retain afterwards as long as they live. After the child has been thus smeared and greafer! the mother gives it what name she thinks proper, which is usually the name of some wild beast, or domestic anirval. When the woman is well again, and able to leave her, hut she use herself all over with cow-dung; and this filthy daubing is by these delicate, people termed a purification. Being thus delightfully perfumed, and elegantly decorated with theep's guts, she is permitted to go abroad, or to see company at home.

If the woman has twins, and they are girls, the man pro-

company at home.

If the woman has twins, and they are girls; the man proposes it to the kraal, that he may expose one of thems either upon pretence of poverty, or that his wife has not milk for them both; and this they usually indulge one another in; they do the fame when they have a boy or another in; they do the lards when they have a boy or girl; but always preferre the boys; though they happen to have two at a birth. The exposed child is carried to a distance from the kraal; and if they can find a cave of hole in the earth, that some wild beast has made; they put the child alive into it; and then having stopped op the mouth of the den with stones of earth, leave it there to draws if they cannot rest study the control of the cannot rest study to the control of the cannot rest study to the cannot be seen to the seen to starve : if they cannot meet fuch a cavity, they tie the infant to the lower bough of a tree, or leave it in fome thicket of bushes, where it is frequently destroyed by wild beatter. They do not deal thus, however, as has been observed, by They do not deal thus, however, as has been observed, by their male children: on the birth of a boy; they kill a bullock; and if they have twins, two bullocks; and make an entertainment for all the neighbourhood, who congrait that the parents on their good fortune; and, as with us; the greatest rejoicings are on the birth of the first form.

At about ten years of age, the males are always deprived of their left testicle, the operation is performed with a dexistence when would surrouse an European surrous, and had

terity that would furprize an European furgeon, and bad confequences are feldom or never known to enfue. A theep is killed, and great rejoicings are made upon the occasion; but it is to be observed, that the ment devour all the meat. but it is to be observed, that the mert devour all the meat; and allow the women nothing but the broth. The reason of this absurd cu'om of mutilating their male youth is unknown: some of the Hottentots say, it is to make them run (wift; but the greatest part of these people give their general reason, which they use upon all occasions, when they are unable to account for any of their shurd practices; namely, That it is the Hottentot custom; and has been practiced by their ancestors time immemorial.

At the age of eighteen, the male Hottentots, being the same of the

deemed men, are thus admitted into male fociety: the men of the village (if it may be fo called) fquat down, and form a circle, as is ufual upon most public occasions, the youth fquats down without the circle, at fome dif-tance. The oldest man of the knal then rifes from the trance. In order than the general confent for the ad-mission of a new member, he goes to the youth, acquaints him with the determination of the men of the kraal, and concludes his harangue with fome verfes, which admonifh hims to behave like a man for the future. The youth be-ing then daubed with foot and fat, and well fprinkled with urine, is congratulated by the company in general in a kind of chorus, which contains the following wifnes t that goe. For use may attend him, that he may live long, and thruse saily; that he may foon have a beard, and many children; till it is univertally allowed he is a useful man to the nation. A feast concludes the ceremony; but the youth himself is not permitted to participate of any part thereof till all the rest are served.

thereof till all the rest are served.

Being thus admitted into male society, it is expected that he should behave ill to women in general, and to his mother in particular, in order to evince his contempt of every thing seminine. Indeed it is usual for a youth as soon as admitted, to go to his mother's hut, and cudgel her heartily, for which he is highly applauded by the whole kraal; and even the suffering parent herself admires him for his spirit, and protests that the blows do not give her so much pain, as the thoughts of having brought such a mettelcome son into the world afford her pleasure. The more tlesome son into the world afford her pleasure. The more ill treatment he gives his mother, the more esteem i.e obtains; and every time he firikes her she is in the highest raptures, and thanks providence for having blessed her with fuch a spirited child. So egregiously will custom counteract the very dictates of nature, and impose upon the understanding of the ignorant.

A Hottentot never obtains an eftablishment, or, in other words, never is permitted to have a hot or cattle, previous to his marriage, but lives immediately under the direction of his father after eighteen, as he did with his mother before that age. As foon as he is married, his wife, as we hinted above, becomes his flave, does all the drudgery, nd has all the care of domestic affairs upon her hands. and has all the care of dometic arraits upon the manual. The hufband finks into fupineness, and gives himself totally op to idleness; if he ever fitrs, it is now-and-then to go a fifting or hunting for a little amusement, or, if he knows as mechanical business, he may perhaps teach it to his eldert fon. Upon no other occasion will be quit his beloved indolence, or flew the least alacrity, unless indeed he happens to receive an invitation to get drunk. Then joy fparkles in his eyes and elates his heart, and he hinks he never can make too much hafte to render himfelf

a greater brute than he naturally is.

It may be proper now to fay fomething of those officers amongs them, which the Europeans generally denominate their priests. These persons are called surri or masster, and are elected by every kraal: they are the men who perform the ceremony of making water at their weddings, and other feltivals; the furrials is the perfor who extracts the left tellicle from the young males at eight years of age; for all which he has no flated revenue, but a present now and then of a calf or a lamb, and makes one at all their en-

tertainments.

But every kraal also has its physician, as well as its priest, who are persons that have some skill in physic and surgery, who are perions that have inche that in pytic and cargery, and particularly in the virtues of failutary herbs: thefe allo are chosen by a majority of voices, and make it their bufues to look after the people's health; but have no other reward neither for their pains, than voluntary presents. And such is the opinion of the Hottentots of these physical process. cians, that, if they cannot effect a cure, they conclude they are certainly bewitched; as the doctor himfelf also never fails to give out: whereupon application is made to some pretended conjurer for relief; and if the patient happens to recover, it gives the cunning man, as we call him, a mighty reputation.
The Hottentot physician and surgeon, as has been hinted,

I he roctentor pryncian and augeous as as seen among is the fame perfon; and though thele gentlemen fearce ever faw a body diffected, it is faid, they have pretty good notions of anatomy: they cup, bleed, make amputations, and reflore diffocated limbs, with great dexterity; cholicks and pains in the flomach they relieve by cupping. Their cup is an horn of an ox, the edges cut very finooth: the doctor, having sucked the part where the pain lies, claps on the cup; and, after it has remained some time, till he thinks the part is insensible, he pulls off the horn-cup, and makes two or three incisions, half an inch in length, with a common knife, having no other instrument : after which, he applies the cup again, which falls off when it is full of blood, but the patient, it is faild, fuffers great pain in the operation. If the pain removes to another part, they rub it with hot fat; and, if that does not safe the pain, they use the cup again on the part last affected and, if the second cupping does not relieve the patient, they give him inward medicines, being infusions or powders of certain died room and berby.

They let blood in pair to be a diable of those of the

ders of certain dried roots and herbs.

They let blood in plant he has and indispositions of that kind, liaving no other margament than a common knife; and, if bleeding will not effect the cure, they give the patient planter. For head-achs, which they are pretty much subject to in calm weather, they shave their heads in turrows, as they do when they are in mourning; but a brilk gale of wind usually carries of the head-ach, without any states and instance. other application; and this they do not often want at the

cape.
They feldom make any other amputations, than of the fingers of fuch women as marry a fecond time, or oftner; they have bind she ignit below that which is tingers of luch women as marry a lecond time, or other; and, in this case, they bind the joint below that which is to be cut off very tight, with a dried snew, and then cut off the joint at once with a knife, stopping the blood with the juice of myrri-leaves; after which, they wrap up the singer in some healing herbe, and never any part of the singer receives any hurt beyond the amputation.

They have little or no skill in setting fractured limbs;

but are pretty dexterous at reftoring of diffocations.

The Hottentot physician, in case he meets with a foul stomach, gives the juice of aloe leaves; and, if one dose itomach, gives the juice or and bases, and, for any invard ail, they give chiefly the powders or influious of wild fage, wild figs and fig leaves, bucho, garlic or femnel: but, whatever the difease be, it feems the patient never fails to facrifice a bullock, or a fheep, upon his recovery.

These people are exceedingly supersistious, and fond of vination. In order to know the sate of a fick person, divination. they flay a sheep alive ; after having its skin intirely taken off, if the poor animal is able to get up and run awas, it is deemed a propitious omen; but, on the contrary, if the excruciating pain kills it, they imagine that the patient will certainly die, and accordingly give him up intirely to nature, without taking any farther care of him.

Whatever they believe of departed fouls, they have no notion either of heaven or hell, or of a flate of rewards or punithments; this is evident from the behaviour of a dy-ing Hottentot, and those about him; neither he nor his friends offer up any prayers to their gods for the falvation of his foul; or even mention the flate of departed fouls, or their apprehenfions of his being happy or initerable after death: however, they fet op such terrible howlings and fhrickings, when the fick man is in his last agonies, that they may be heard, fays our author, at a mile's distance; and yet these very people are frequently guilty of mur-dering their antient parents, as well as their innocence

When the father of a family is become perfectly useless and superannuated, he is obliged to assign over his stock of cattle, and every thing else he has in the world, to his elsest fon; and in default of sons, to his next heir male: after which, the heir creeks a tent or hut in some unfrequented place, a good distance from the kraal or camp he belongs to and, having assembled the men of the kraal, acquaints them with the condition of his superannusted relation, and defires their consent to expose him in the distant but; to which the kraal scarce ever resuse their consent. Where upon a day being appointed to carry the old man to the fo-litary tent, the heir kills an ox, and two or three sheep, and invites the whole village to feast and be merry with him; and at the end of the entertainment, all the neighbourhood come and take a formal leave of the old wretch, thus condemned to be starved or devoured by wild beasts (which feems to be the most cross and ill-natured part of the whole tragedy): then the unfortunate creature is laid upon one of their carriage oxen, and carried to his laft home, attended to the place, where he is to be buried alive by most of his neighbours. The old man being taken down, and set in the middle of the hut provided for him, the company return to their kraal, and he never fees the face of a human creature afterwards: they never fo much as enquire whether he was starved to death, or devoured by wild beasts: he is no more thought of, than if he had never been. In the same manner they deal with a superannuated mother; only as the has nothing the can call her own, the has not the trouble of affigning her effects to ber

greater cruelty to fuffer an old creature to hangelft out a miderable life, and to be menty years a dying, than to make this quick dispach with them; a said that it is out of their crutisms tenderness they put an end to the lives of these old wretches; all the arguments in the world against the inhumentity of the custom, can make no impression out them-tand, indeed, as long as the Darch lave resided at the cape, or pewell with them to alter any part of their conduct, how barbarous or abfard fower; and, it frems, the capain of a krasil is not exempted from feeling his funeral following this manner, while he is alive, if he happens to become useless. And this leads me to treat of such funerals as are followinged after the person is really dead.

The fick man, having resigned his breath, is immediately bundled up, neck and heels together, in his theep-shim mantle, exceeding close, so that no part of the corple appears: then the captain of the kraal with some of the seniors, search the neighbouring country for some cavity in a rock, or the den of a wild beaft, to bury it in, never digging a grave, if they can find one of these within a moderated of the capital or the stream of the terminal and the capatant of the seniors that in a moderated of the capital that the substitute of the capital or the capital on the stream of the capital or th

degate a gave, it they can find one of thefe within a mo-derate defence. After which, the whole kraal, men and women are to attend the corpfe, fildom permitting it to run und more than fix hours. When all things are the neighbourhood affemble before and fing their elbows on their knees the hee (the has rhe women do in snother; here they.

and how, crying, Bo, bo, bo! (i. e., fibra.)

and how, crying, Bo, bo, bo! (i. e., fibra.)

and how, trying, Bo, bo, bo! (i. e., fibra.)

and how, crying, Bo, bo, bo! (i. e., fibra.)

and how, crying, Bo, bo, bo! (i. e., fibra.)

and how, the word of the complete here be belong to the complete here. the door, the bearers early min in their arms to the grave, the men and women follow it in different parties, but without any manner of order, crying all the way, Bo, bo, bol and wringing their irands, and performing a thousand ri-diculous gettures and grimaces, which is frequently the fablest of the Dutchmen's mirth; it being impossible, it fe fald, to forbear laughing at the antic tricks they thew on fuch an occasion:

on fuch an occasion:

Having put the corple into the cavity prepared for it, stry stop up the mouth of it with ant hills, stones, and pieces of wood, believing the ants will seed on the corple, and soon consume it. The grave being stopped up, the men and women rendezvous again before the tent of the deceased; where they repeat their howling, and frequently call upon the name of their departed friend; after which two of the oldest men get up; and one of them going into the circle of the men, and the other into the circle of the women, using upon twenty one of the commun. men, unine upon every one of the company; and, where the heads are fo very large, that two cannot find water nough for this ceremony, they double or treble the number. Then the old men go into the tent of the deceased; and, having taken up fome ashes from the fire-place, they sprinkle them upon the bodies of the people, place, they sprinkle them upon the bodies of the people, bleffing them as they go: and, if the decaded was a person of distinction, this is acted over again several days. But we should have remembered, that the ceremony always concludes with an entertainment. If the decaded had any eattle, a fleep is killed on the occasion; and the caul be-ing powdered with buchu, is tied about the licir's neck, who is forced to wear it while it rots off, which is no great who is forced to wear it will be in the ross of a Hottentot. All the relations also wear the cauls of sheep about their necks; which it seems is their mourning; unless the children of the decasted are so poor, that they cannot kill a sheep; and then they shave their heads in furrows of about an inch broad, leaving the hair on of the same breadth between every furrow:

It is not an easy matter to come at a Hottentot's religious notions; he is sparing of his words, and laconic in his answers upon all occasions; but when religious topics are introduced, he generally conceals his fentiments in filence. Some on this account have doubted whether the Hottentots have any religion at all : but the most intelligent among the Dutch at the cape positively affirm, that they believe in a Supreme Being, whom they stille Gounya Tequoa, or God of gods, and fancy that his place of residence is beyond the moon. They allow that Gounya Taquoa is a humane benevolent being, yet they have no mode of worthipping him; for which they give this reafon, "That he corfed their first parents for having greatly offended him, on which account their posterity have never from that time

paid him adoration. The believe that the moon is an inferior vifible god, and the representative of the high and invisible: that the has the direction of the weather; and therefore they pray to her when it is unfeatonable. They never fail to affemble

No. 33.

and worship this planet at the new and sull moon, lee the weather be never so bad; and though they diffort their bodies, grin, and put on very frightful looks, evying and howing in a terrible manner, yet they have some experisons that shew their veneration and dependance on this inferior delty; as, 'Musschi Atze, I salute you; you are welcome: Cheraqua kaka chori Ounqua, grant us pasture for our cattle and plenty of milk.' Thiese and other prayers to the moon they repeat, frequently dancing and clapping their hands all the white; and, at the end of every data; orying, Ho, ho, ho, ho it raising and falling their voices, and using abundance of odd gestures, that appear ridiculous to European spectators; and which no doubt, made them at first, before they knew any tr, and of their language, conclude, that this could not be 1.2e affect of devotion, especially when the people themselves told them, it was not an act of religion, but only intended for their diversions. But to return :

But to return:

They continue thus shouting, singing and dancing, with profitations on the earth, the whole night, and even part of the next day, with some short intervals, never refusing, unless they are unite spent with the violence of the action; and then it was a first some upon their heels, holding their heads between the state a little time, they start up again, and falling to singline and dawing in a circle as before, with all their might.

The shottenest as a safe a little time, they that up again, and falling to singline and dawing in a circle as before, with all their might.

with all their might.

The Hottenots also adore a fly about the bigness of a lioner, called by some the gold beetle: whenever they see this infect approach their kraal, they all assemble about it, and sing and dance round it while it remains there, streming over it the powder of buchu, by botanists called spirream; which when it is dried and pulverized, they always powder themselves with it at settivals. They strew the same powder also over the tops of their tents, and over the whole area of the kraal, as a testimony of their verteration for the adored fly. They sacrifice also two theeps as a thankfairing for the favour thewn their knaal, believing they than giving for the layout newn their knast, occurring they mo-certainly profess after fuch a vifit; and, if this iniect hap-pens to light upon a tent, they look upon the owner of it for the future as a faint, and pay hun more than usual re-spect. The best ox of the knast also is immediately lacrigiving for the favour thewn their kraal, believing they shall ficed, to tellify their gratitude to the little winged deity, and to honour the faint he has been pleafed thus to diffungiolifs to whom the entrails of the beaff, the choicest morfel in their opinion, with the far and the caul is prefented; and the caul being twifted like a rope, the faint ever after wears it like a collar about his neck day and might, till it putrifies and rots off; and the faint only feath upon the entrails of the beaft, while the reft of the kraal feed upon the olint, that are not in for high effects among them; with the far of the tearifies also the faint anoins his hody from time to time, till it is all figent; and, if the right lights upon a woman the is no lefs rever need by the neighbourhood, and entitled to the like privileges. ficed, to tellify their gratitude to the little winged deity, hood, and entitled to the like rivileges.

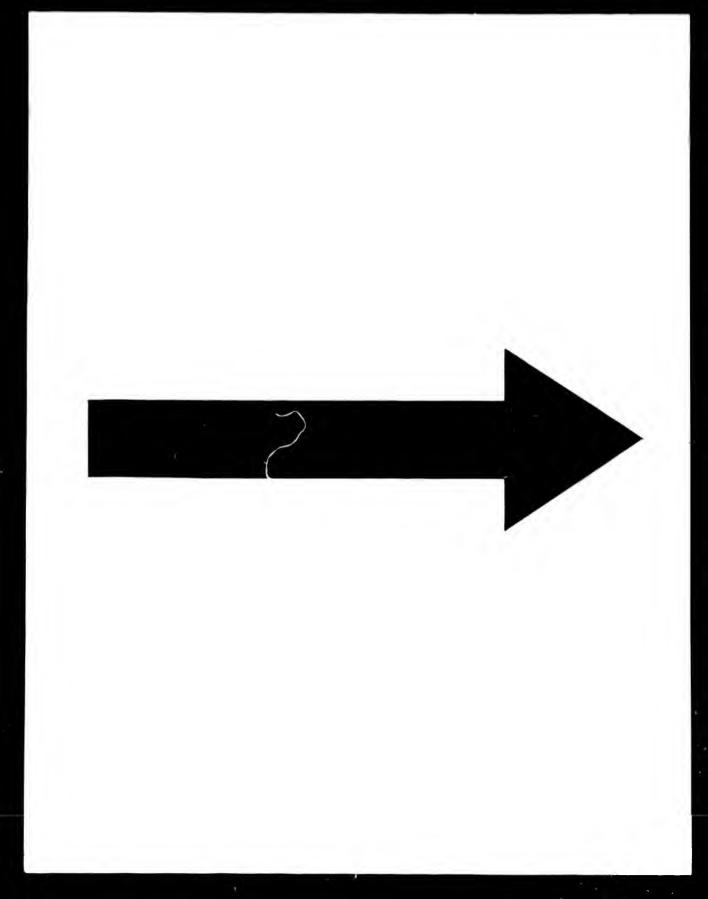

It is scarce possible to express the agonies the Hottentots are in, if any European attempts to take or kill one of these insects, as the Dutch will sometimes seem to attempt. to put them in a fright: they will beg and pray, and fall profitate on the ground, to procure the liberty of this little creature, if it falls into a Dutchman's hands; they are on fuch an occasion, in no less confernation than the Indians near fort St. George, when the kite, with a white head, which they worthip, is in danger. If a foldier takes one of thefe alive, and threatens to wring the neck of it off, the Indians will gather in crowds about him, and immethe Indians will gather in crowds about him, and immediately collect the value of a thilling or two, to purchafe the liberty of the captive bird they ado e. But to return to the Hottentots: they imagine if this little deity should be killed, all the eattle would die of difeases, or be destroyed by wild beasts; and they themselves should be the most miserable of men, and look upon that kraal to be doomed to some imminent missortune, where this animal feldom

appears.

The Hottentots also pay a fort of religious worship to the souls of departed faints and heroes; they consecrate stelds, mountains, woods, and sivers to their memory; and when, at any time, they happen to pass by such confectated ground, they put a short prayer to the subordinate deity of the place, and sometimes dance round, and clap their hands as they do in their adorations of the snoon.

The Hollanda's have fent saveral, reverend divines as

The Hollanders have fent feveral reverend divines to the cape as miffionaries, who liave spared no pains to bring the Hottentors off from their idolatry, and induce them to embrace Childhanity; even their covetouness and am-bition have been applied to, and temporal rewards offered-them, on condition of their being instructed in the prin-iples

TO THE REAL PROPERTY OF THE PARTY OF THE PAR

elples of Christianity. But no motives whatever, whether those relating to this or another state, have yet been able to make the least impression on any one of them: they hold fast and hug their ancient superstitions, and will hear of no other religion; which, with me, is a great argument that they have a religion or superstition of their own; for were they governed only by facular motives, and had no notion of God or providence, why should they not accept the rewards the Dutch offer, and importune them to accept of, on their embracing Christianity? and I am apt to think, that the reason that they neither imitate the Europeans in their building, planting or cloathing, is because they imagine themselves to be religiously obliged to follow the cuftoms of their ancestors; and that, if they should deviate from them in the least of these matters, it might make way for a total change of their religion and man-ners, which they cannot think of without abhorrence. Kolben relates, that one of the Dutch governors at the

Kolben relates, that one or the Dutch governors a maccape bred up an Hottentot from his infancy, obliging him to follow the fashions and customs of the Europeans, to be taught feveral languages, and to be fully instructed in the principles of the Christian religion, cloathing him handlomely, and treating him, in all respects, as a person for whom he had a high efteem; and let him know, that he defigned him for fome beneficial and honourable emne designed nim for fome benencial and nonourable em-ployment. The governor afterwards fent him a voyage to Batavia, where he was employed, under the commiffary his friend, for fome time, till that gentleman died; and then he returned to the cape of Good Hope: but, having paid a vifit to the Hottentots of his relations and acquaintance, he threw off all his fine cloaths, bundled them up, and laid them at the governor's feet, and defired he would give him leave to renounce his Christianity, and live and die in the religion and cuftoms of his ancestors; only begged the governor would give him leave to keep the hanger and collar he wore for his sake; which while the gonanger and coins in the work of this had, which which the go-vernor was deliberating with himself upon, fearce believ-ing the fellow to be in earned, the young Hottentot took the opportunity of running away, and never came near the cape afterwards, thinking himself extremely happy that he had exchanged his European cloaths for a sheep skin and the rest of the Hottentots dress and ornaments : the English East India scrupany, we are informed, made the like experiment, bringing over two of that nation hither, whom they, cloathed decently after the European manner, and used them, in all respects, with the greatest goodness and gentleness, hoping, by that means, to be better informed of the condition of their country, and whether it might be worth the while to make a settlement there; but the two Hottentots only learnt English enough to bewall their misfortune in being brought from their country and their friends; and, after two years trial of them, being again set on shore at the cape, they immediately fripped off their European eloaths, and, having taken up the sheep skin mantle again, rejoiced beyond measure for their happy escape from the English. the English East India company, we are informed, made

SECT. V.

Of the traffic and commerce, manufactures, artificers, lan-

THE poor Hottentots fometimes employ themselves in making arms, viz. bows and arrows, lances and making arms, viz. bows and arrows, lances and darts, bartering them with the rich for cattle, to begin the world with: others get elephants teeth, and what they do not tie in making rings and ornaments for themselves, are generally disposed of, it is thought, to the Portuguese and other Europeans, who touch at Terra de Natal, and other parts of the eastern or western coast. The Hottantots sell very sew teeth to the Dutch; though it is manifest they kill abundance of elephants: they supply the Hollanders however with cattle, and take wine, brandy or tobacco, in creturn; and Kolben relates that an ox may be purchased return; and Kolben relates that an ox may be purchased of them for a pound of tobacco, and a large sheep for half a pound. As to coin, the reader will conclude they have a pound. As to coin, the reader will conclude they have none; nor do they ever fee any, unless fome fmall pieces of money the Dutch sometimes give them for their wages at the cape; and it must not be forgot, that the Hottentots find abundance of oftrich's eggs in the fand, which they better with the sea-faring men, that touch at the cape, for brandy and tobacco; every failor almost being proud of bringing home one of these egg shells to his friends, after he has fried and eaten the yolk, which makes a large parake, and is pretty good food, but rather of the strongest.

Their butchers are said to be great artists in their way,

and to handle a knife as dexteroufly as an anatomist: hav-ing tied the hind and fore legs of a sheep, they throw the creature on his back; and with cords, two of them extend. It to its full stretch; while a third rips it up; for that all the entrails appear: then, with one hand, he tears the guts from the carcase, and, with the other; sirs the bloods avoiding as much as becan the breaking any of the blood-wessels about the heart 1 fo that the sheep is a long time a dying: in the mean time he gives the guts to another, who just rids them of the filth, and rinces them in water, and part of them are broiled and eaten amongs them, be-fore the sheep is well dead; having scooped the blood out of the body of the animal with their hands or sea shells, they cut the reft of the guts in firstly pieces, and flew them in the blood, which is the Hottentots favourite difh. An ox also is killed in the fame barbarous manner; being thrown upon his back, and his legs extended with cords, he is ripped up, and his gute taken out first; in which cruel operation the beast is half an hour a dying: they separate the parts with great exactness, dividing the slesh, the bones, the membranes, mucles, veins, and arteries, and laying then intervent a parels every thing entire. The bones allo are taken out of the fieth, and laid together in fach order, that they might be easily formed into an exact ficeleton; these they boil by themselves, and get the marrow out of them, with which phey anoint their bodies. Of the fixer parels, if it be large; but, if it is finall, they cut it inso thongs, to adorn their women's legs; and the hide of an ox ferves either to cover their tests, or to make gives and thene of either to cover their tents, or to make girts and strape of, with which they bind their baggage on their carriage oxen when they decamp; and, if they have no other ofe for their ox-hides, they lay them by, and cat them, when they want other food.

They have another artificer, who is both felmonger and taylor : that his, he dreffes fkins after their way, and then makes them into mantles: he takes a fheep fkin just flayed off, and, rubbing it well with fat, the fkin becomes tough and fmooth; and, if it be for one of his countrymen, he rubs it over also with fresh cow-dung, and lays it in the fun till it is dry: then he rubs it with fat and cow dung again; which he repeats feveral times, till it becomes per-fectly black, and flinks fo, that no European can bear it and then, with a little shaping and sewing, it is a compleat mantle for a Hottentot: but, if it be dressed for a Dutchman, he only rubs the ikin well with fat, which fecures the wool from coming off. If he be to drefs an ox's hide, he rubs the hairy fide with wood afhes; then fprinkling it with water, rolls it up, and lays it a day or two in the fun; which expedients effectually bring off the hair; this skin is then well greased, stretched out, and dried again, when

Their finish do not only fashion their iron, but melt is from the ore: they find plenty of iron flones in feveral parts of their country; and having got a heap of their, they put them into a hole in the ground, heated and prepared for their purpose: then they make a fire over the stones, which they supply with fuel, and keep up till the iron melts; and then it runs into another hole, which they make for a receiver, a little lower than the first : as foon as the iron in the receiver is cold they break it to soon as the iron in the receiver is cold they break it to pieces with stones; and, heating the pieces again in other fires, beat them with stones, till they shape them into the heads of lances, darts, arrows, and bows, and such weapons as they use; for they serve ever form any other utenils, but arms of this metal: they get the hardest flat stone, according to monsieur Vogel, and, laying the iron upon it, as upon an anvil, beat it with another round stone, which serves them for a harmers. which ferves them for a hammer; then they grind it upon the flat flone, and polith it as nicely as any European artificer could do with all his tools: they have fome copper ore too, which they make only toys and ornaments for their dress of this metal; norindeed, do they ever work in iron, but when they want weapons. They would never labour, if their necessities did not foinctimes compel them to it; but, when they do, no people work harder, or none indefatigably; for they never leave a piece of work, till they have finished it.

The ivery-turner makes the ivery rings that are worn ornamentally about the arms; and confidering that his only tool is a common claff knife, which he procures from the Dutch, the workmanfhip has great merit.

The potter or maker of earthen veilels is another art;

but this, it feems, they are all deaterous at, every family making the pots and pans they want. For these they use only the earth of ant hills, clearing them of all fand and gravel; after which, they work it together with the bruifed .

ant eggs, that are faid to conflictute an extraordinary cement. When they have ricoulded these materials into a kind of passe, When they have risoulded these materials into a kind of passe, they take as fituch of them as will make one of their pota; and fashion; by sind upon a flat stone, making it of the form of a koman urn; then they smooth it within and without very carefully, not leaving the least toughness upon the surface; and, having dried it in the sun two or three days, they put the pot into a hole in the ground; and burn it, by making a fire over it; and, when they take it out, it appears perfectly black; every family also make their own mats, with which they cover their tents or buts; but this is theirly the business of the women: they gather the slags and ruthes by the river side, or weave or plat them into mats so closely, it is said, that neither the weather or light can penetrate them.

light can penetrate them.

The last artificer we shall mention is the rope-maker, who has no better materials, than such stags and rushes as the mats are made of a and yet they appear almost as strong as those made of hemp: the Dutch, at the cape,

buy and use them in ploughing, and in draught-carriages.

As to the way of travelling here, the natives all travel on foot, except the aged and infirm; and these are carried on their baggage oxen. As there are no inns or places for refreshment, the travelling Hottentot calls at the kraals in his way, when he meet with heart subsequence. refreshment, the travelling Hottentot calls at the krasls in his way, where he meets with a hearty welcome from his contrymen, who endeavour to shew their hospitality to strangers, whether of their own country or of Europe. Such indeed is the general urbanity of these people, and their strick integrity when any confidence is placed in them, that when the Hollanders travel either on foot or horseback, if they cannot reach a European settlement, they also call at the krasls of the Hottentots, where they are complimented with a hut, and such provision as they have, or they may lie in the area of the krasl, in the open air, if they please, and the weather be good; and here they are secure, both from robbers and wild beasts; for the bushis buildit; on the mountains are dangerous, as they give no banditt; on the mountains are dangerous, as they give no quarter; but the Hottentot nations in general hold them in abhorrence, and unanimously concur in seizing and pu-

an absorrence, and than moulty contert in telzing and punishing them upon all occasions.

Their language is very inarticulate and defective; one word fignifies feveral things, the definitive meaning being determined by the manner of pronouncing; and the pronunciation is fo harth and confused, that they seem to frammer in all they speak. Hence, though they are easily taught to understand other languages, they can feldom be brought to speak them with any degree of intelligi-

bility.

We shall here subjoin a finall Hottentot vocahulary, for the faisfaction of the curious; khauna, fignifies, a lamb; kgou, a goofe; bunqvaa, trees; knomm, to hear; quaqua, a pheafant; tkaka, a whale; horri, beaffs in general; knabou, a fowling piece; qua-ara-ho, a wild ox; ounequa, the arms; quienkha, to fall; likhanee, a dog; ounequa, the arms; queenkina, to rail; inknance, a dog; konkequa, a captain; quas, the neck; quan, the heart; kgoyes, a buck or doe; tikquoa, a god; komma, a houfe; khoaa a cat; kowkuri, iron; konkekerey, a hen; thoukou, a dark night; tkoume, rice; ghoudie, a fheep; toya, the wind; ttkaa, a valley; tkaonoklau, guupowder, kamkamma, the carth; quaouw, thunder; duckatere, a kamma, water; quayha, an afa; naew, the ears; kirri, a ftick: nombha; the beard; ka-a, to drink; durie-fa, an ox; hek-kaa, an ox of burden; ounvie, butter; houteo, a fea dog; bikgua, the head; kamma, a ftag; kouquil, a pigeon; anthuri. to-morrow; kou, a tooth; khamouna, the devil; hakqua, a horfe; koo, a fon; kammo, a stream; tika, grafs; toqua, a wolf; koanqua, the niouth; khou, a peacock; gona, a boy; gois, a girl; khoakamma, a baboon; kerhanehou, a star; mu, an eye; tquaffouw, a tyger.

The Hottentota have only ten numerical terms, which they repeat twice to express the multiplication of the first term, and three times to express the re-multiplication of the latter. Their terms are: q'kui, one; k'kam, two; kouna, three; kakka, four; koo, five; nanni, fix; hounko, feven ; kliffi, eight ; khaffi, nine ; ghiffi, ten.

SECT. V.

Treats of the empires of Monomotapa, and Monoemugi; de-feribing their boundaries and extent, provinces, rivers, the inhabitants, their customs, dress, laws, coremonies, and other particulars relative to thefe people.

MONOMOTAPA is one of the largest empires in all Africa; being bounded on the wast, by the mountains of Castraria; on the east, by the kingdom of So-

fals i on the north, by the river Cuams, which separates it from Monoemogy; and, on the fourth, by the river de Spiritu Sancto. It is fausted between the fourtheaths and twenty-fifth degrees of fouth latitude, and between the forty-fifth and fifty-fixth of east longitude; being fix hundred and fifteen miles in breadth from north to south,

and fix hundred and feventy in length from each to well.

In this country are fix provinces, or petty kingdoms, the governors of which are valids to the king or emperor of Monomotapa. The names of these provinces are Monomotapa Proper, Quiteve, Manies, Inhambans, Sabla, and Inhambans, Sabla,

nomotapa Proper, Quiteve, Manies, Inhambana, Sabis, and Inhamior.

The most considerable of the whole is Monomotapa Proper, which is particularly distinguished for containing the capital city of the empire. It is stuated in eighteen degrees twenty seven minutes fouth latitude, and thirty-one degrees twenty seven minutes fouth latitude, and thirty-one degrees ten minutes east songitude from Löndon. It is a large and populous elty, and the streets very long and spacious. The houses are built with simber and earth, and are of different sizes, some being much more lofty than others, according to the quality of those that occupy them the roots are large, and formed in the shape of a bell; and all of them are neatly whitewashed both within and without. The greatest ornament of the city is the imperial palace, which is a large spacious sabric, well stanked with towers, and has four avenues or stately gales, constantly kept by a numerous guard. The inside consists of agreat variety of sumptious apartments, spacious and lofty halls, all adorned with a magnificent kind of corton tapestry, the manufacture of the country. The floors, ciclings, beams, and rafters, are all either gift, or plated with gold curiously wrought, sa are also the chair of flate, tables, benches, &c. The catteleticks and bratches are made of ivory inlaid with gold, and lang from the stelling by chains of the same measures of sluer site. The places dishes, and boxle be-The candetticus and tranenes are made or vory initiate with gold, and liang from the fleling by chains of the fame metal, or of filver gift. The plates dithes, and bowls belonging to the emperor's table, are made of a fort of porcealian, curioufly wrought on the edges with fprings of gold refembling those of coral. In thort, to rich and magnificent is this palace, that it may be fall to vie with that which diffinguishes a monarch of the east.

This revenue contains fewers exhaut the strings all of which

This province contains feveral other towns, all of which are very inconfiderable, except one called Tete, which is remarkable for being the refidence of the Portuguese jesuits,

and is large and populous.

To the fouth of Monomotapa Proper lies Quifere, which is bouited on the east by Sabia, on the weft by Caffraria, and on the fouth by Manica. The king or governor of the province ulually refides here in this city, which is large, and wall inhabited. and well inhabited.

and well inhabited.

Manica, is bounded on the east, by Sabia; on the west, by Castraria; on the north, by Quinteve; and, on the south, by the river de Spiritu Sancto. The capital town is called after the name of the province, but it is a small place, and very poorly inhabited. The river de Spiritu Sancto, by some called Manica, springs from the mountains of Lupats, situated in nineteen degrees south laviance and transfer of degrees and laviance. It runs latitude, and twenty-fix degrees eaft longitude. It runs first from north to louth, after which it bends its course to the fouth east, then passes along the kingdom of Manica, and empties itself into a small gulf, with which the sea immediately communicates.

The province of Inhambana lies fouthward from the above prevince under the tropic of Capricorn, fo that the air is here exceeding fultry. The capital town is called Tongue, which, though fimall, is very populous, owing to the number of Portuguee that refide in it.

Sabia, is a very large province, and well watered by feveral excellent rivers, one of which is called Sabia, and the other Aroe. The illand of Bocica, and the capes of St. Sebathian and St. Catharine, are on the coast of this kingdom

Inhamior, is a very extensive province, but it doth not contain any thing that merits particular notice. Its chief town is of the same name; and here the king or governor

contain any timing this contains any timing the second of the fame name; and here the king or governor of the province constantly resides.

The climate of Monomotapa is much more wholsome than many other parts of Africa; and the foil is so fertile, that it produces a great plenty of the principal necessaries of life. It abounds with passure grounds, on which are bried prodigious quantities of cattle, especially oxen and cows. The chief grains are rice and millet, and they have plenty of various kinds of tropical fruits. In the woods and forests are great numbers of wild beafts, particularly elephants, the latter of which the natives kill not only for their flesh, but also for their teach, which they make a considerable advantage of by selling to the Portuguese, while the former furnishes them with sood.

There

There are many rivers in this country, and on the banks of most of them grow many fine trees and fugar-caise without any culture. They abound with a variety of excellent fish, and in forme of them is found gold that is swept away from the mines through which they run in the more infland parts.

With respect to the natives, they are in general tall, well shaped, and healthy; they are quite black, and have woolly hair, which they decorate with a variety of trinkets. They are of a very sprightly and docile disposition; notwithstanding which, they are fond of being engaged in war, and prefer that employment to any other. The poorer fort are brought up to diving; and their chief bitiness is, to get the land or mud from the bottom of the rivers, ponds, and lakes, from which they separate the gold that is intermixed with it, and barter it with the Portugues for cotton and various other necessary articles.

The common people wear a piece of cotton cloth of

The common people wear a piece of cotton cloth of of various colours round the waith, from whence it reaches nations colours round the waitt, from whence it reaches to the knees; but the upper part of the body is entirely nated. The gaments of the incher fort are of the fame form, but more costly and elegant, being made of Indian filks, or of cotton embroidered with gold; and they generally went the kin of fome wild beaft over them.

The field of oxen and elephants is their common food.

The fielf of oxen and elephants is their common food, with bread made of rice or millet, which is baked into thin cakes; and their drink is either four milk or water. The better fort molly effecting pain, wine, which is reckoned a royal I or, and greatly used at court; though fome of them use firong liquous made from honey, millet, rice, and feveral forts of fruit.

Here, as in most other parts of Africa, polygamy is allowed, every man being permitted to take as many wives as he can maintain, but the first wife is the principal; and the father's estate devolves to the children borne by her.

These people pay a religious worfnip to the dead, every one preferving the bones of the mont diffinguished of his family. These they hang up in a court, and know to whom they belonged by fixing certain marks on them. Every feventh day the relations go and vifit them, being all dresed in white, which is the mountain of the being all dresed in white, which is the mourning of the country. They forcad a little table before them with provisions, then pray to the decealed for the king's prosperity, and afterwards fit down and regale themselves, which they look upon as the greatest honour they can couler on their departed re-

The Portuguele have converted fome of the inha The Portuguele have converted fome of the inhabitants here to the Roman catholic religion; but the principal part of them are idolaters, and practice the most superflitious maxims. They hold a feat on the first day of every act moon, as also on the anniverfair of the empetor's birth. They show a singular veneration for a certain virgin, whom they call Al Piroo, and have temples erected in honour of her; they affor confine some of their daughters in numeries, of which they have several, obliging them to obliging of the chilered quirtue life.

numeries, of which they have feveral, obliging them to observe rich celibacy during life.

The emperor or king of Monomotips, has a prodigious number of wives, the principal of whom are the daughters, of some of his vasial princes: Sur the fart only is called empress or queen: He always wears the same kind of dress, which consists of a robe made of a filk stuff, manufactured in the kingdom: it reaches from the waist to the knees, and is fastened with a girdle richly bedecked with diantonids and other precious stones. He has allo a brocaded mantle over his shoulders, and on his legs he wears bushins, richly wrought and embroidered with gold, peatls, &c. On his head is a turban, the bard of which is ornamented with diantonds, rubies, emerals, and other premiented with diamonds, rubies, emeralds, and other pre-cious flones; and his neck is decorated with a magnificent carkanet, or collar, enriched with the fame coffly jewels.

This monarch is executingly fond of palm-wine, great quantities of which he always keeps by him, in reflets made of horn, curiously wrought; but he generally mixes with it reanna, must, or fome other high feetned perfumes, of which also the counters and bester fort of peofus ple are great admirers, and use them not only in their victuals and drink, but also in their apartments and walks,

and other places.

and otheir places.

The emperor's victuals is always dreffed by the princeffes and ladies of the first rank, who bring and serveit at his table: they dicharge this business in their turns, and think is the highest known to be so employed. During his med, he is accompanied by a band of musiciants: but these, before they come into his presence, must be hood-winked, or have a veil before sher faces, to prevent their security limits of the present free security of the property of the present security of the property of the present security of the security of the present security

filence, except when he drinks, or happens to finese or cough, at which time one of them cries aloud, "Fray for the health and prosperity of the emperor:" as foon as the words are repeated, they all kneel, then rife, and refusy their joy by the loudest acclamations and tokens of loyalty. Whenever his majesty goes abroad, he is generally extrict in a stately sedam or chair, over which is a magnificant canopy richly embroidered, and befpangled with peril and preclous stories; and if the weather happens to be cloudy or misty, four lighted torcher are carried before him, to clear and persume the air. He is always attended by a prodigious retinue, besides his own guard and a numerous band of musicians." Ou these occasions his subjects pay him the most profound homage and respect, nerous band of musicians." Ou these occasions his fubjects: "ops him the most profound homage and respect,"
wishing him all imaginable success and prospectly, and
shewing their attachment to him by facrificing a deer, or
some offset visitin, on the road through which he passes.

This prince having many powerful visitin, far remote
from his capital, takes care to bring up their successor as his
count as hostages of their successor. They have colleges and
academies appropriated for their education at his expence,
and he endeavours to win their affection by the research.

academies appropriated for their concernon at his expense, and he endeavours to win their affection by the greatest acts of monificence. He affor takes great pains to preferre the respect of his 'ubjects: he exacts no taxes or tribute from them,' instead of which he is fatisfied with a triding present, when they apply to him for any particular favour. This is an universal custom from an interiour to a superiour of every rank and denomination, and is effected the highest mark of respect that can be shewn. efteemed the highest mark of respect that can be shewn. His subjects always obey his commands with the greatest chearfulnets, instead of attending upon him with residence; for if at any time he orders them to labore ither at the goldmines, or any other service, as is seldom the case, he always sends them cows, or other provisions.

The officers and ministers of the king of this country, both civil and military, as well as his foldery, who subsite by his pay, are indeed obliged, instead of taxes, to pay him a kind of service of seven days in every anonth, either instantial of the service of seven days in every anonth, either instantial of the service of seven days in every anonth, either instantial of the service of seven days in every anonth, either instantial of the service of seven days in every anonth, either instantial of the service of seven days in every anonth, either instantial can be served as the service of the s

coffivating his grounds, or any other work he thinks pro-per to employ them in; and the lords and nobles are also bound to the same service when required, unless exempted

from it by four particular privilege granted to their family of office in time part.

A numberous army is maintained by the king, for he has no cavalry, there being but few hories, and those not fit for the purpose, throughout his dominions. The weaicymetar, cutlafs, and dagger, and fome of them carry a hatchet; all which they handle with great dexterity, being-trained up to it from their youth. Wherever the emperor encamps, they always cred: a large wooden house, in which a fire nurth be kept conflainty barning during his flay. Neither he nor any of his folders are permitted to wash their hands or face while the war continues; and when it is over and they have gained a complete victory, the spoil is over and they have gained a computer victory, the ipon-is divided, the emperor referving one part to himself, and distributing the rest in proportionable thares to his officers and men. This equitable distribution, as it tends to ani-mate the mens, and make them fight with distinguished intrepidity, has an excellent effect.

There are few laws in this country; and fo little occafion is there for the confinement of criminals, that there is not a fingle prifon throughout the whole empire. Justice is administered in every part of it with the greatest expe-dition; the judges hear the reasons and depositions on both fides, and then pronounce sentence, which the empefor either confirms or annuls; and every criminal is executed in the open fields immediately after conviction. If the complaint or crime be of fuch a nature that it cannot be so quickly adjudged, and there be any danger of the person accused making his escape, he is ordered to be tied to a tree, and a guard is fet over him, till he is either acquitted or condemned. In trilling matters they only inflict corporal punishment, which is done by giving the party a certain number of strokes with a knotted cord, acording to the nature of the crime; but those found guilty of murder are punished with death.

With respect to the gold mines in this empire, from which the Portugues have reaped considerable advantages, the chief of them are in the physics of Manica, near the capital of the fame same. They extend themselves through a large, spacious, champaign, wild, fandy, and barren country, about nine miles in circumference, and furrounded with high mountains. They are fituated about one fiundred and fifty miles west of the market, dr place where the commerce for it is carried on. The natives that work at them, find great disficulty in gathering

the river Magnito, whole governor is a vasial to the emperor. These mines are reckoned the most antient in the
whole empire, on account of some castles in their neighthe river Magnico, whole governor is a vallal to the emperor. These mines are reckoned the most antient in the whole empire, on account of some castles in their neighbourhood, which bear the greatest marks of antiquity, and are supposed to have been built as a safeguard to them. The most distinguished of these buildings is situated in the middle of alarge spacious plain, and surrounded by the mines abovementioned. Its walls are not high, but of the thickness of twenty-five feet; the stones are laid regularly one upon another, bu without any kind of cement to fasten them together. On the front, just over the great gate, is a stone larger than the rest, and upon it an inscription in characters, or rather hieroglyphics, which are so unintelligible, that no person hath yet been able to decypher them. And at some distance from this building are several others, all situated on forme eminence or rising ground, and amongst them is a tower about seventy feet high. The natives imagine them to be the works of demons, being unable to conceive how such structures could be raised.

mons, being unable to conceive how such structures could be raised.

There are several considerable places between the mines and the sea coast, where fairs and markets are held for the sale of gold, particularly those towns which lie on the river Zezele and Cuama, and where the Portuguese have built fortresses to keep the natives in a we, who come to those markets to exchange their gold for European and other commodities. In each of these markets they have an officer of their own, who decides all contests and differences that arise about their traffic; they have likewise churches and monasteries in most of these towns.

The Portuguese were first permitted by the emperor of

The Portuguele were first permitted by the emperor of Monomotapa to build forts here, in gratitude for the fervice they had done in contributing to reduce fome revolted vasials to return to their obedience, as well as to enable them, on all fuch exigencies, to be nest at hand to affift him. This was about the year 1640, fince which time they have been on such good terms with the sovereigns of the empire, that they have made themselves masters of a track of land on both sides the river Cuama for above one hun dreu and fixty miles; besides which, they have engrossed the whole commerce not only of the coast, but also the inland parts, and obtained to themselves some of the most considerable mines in the empire.

confiderable mines in the empire.

The natives, befides gold, bring great quantities of ivory, furs of fundry wild and tame beafts; and other valuable articles, in exchange for cloths of various forts, glafs beads of different fizes and colours, and other trifling trinkets, which renders it a very advantageous commerce to

the Portuguele.

Manoemugi, is a confiderable empire; but, being an in-Jand country, is very little frequented by the Europeans. It is bounded on the north, by Abyffinia, on the eaft, by part of Zanguebar; on the fouth, by the empire of Monoinotapa; and, on the west, by Matamba and Makoko.

We have no particulars relative to this empire, but what are chiefly founded on the authority, of the negroes, who carry on a commerce with it. European travellers not daring to venture themselves in it, not only by reason of the unhuman Jaggas, who insert the interior parts of it, and massacre all that happen to fall in their way, without regard to see or fee. to age or fex.

It appears from the distance of the confines of this em-It appears from the diffance of the confines of this empire, that its extent is very great, though it cannot be afcertained. The emperor is a powerful and rich prince, and hath fubdued most of the petty kingdoms about h m to obedience; but some of them, especially on the north side, revolt, and put themselves under the protection of the Abyssinian or Monomotapan emperors. He is said to have many rich gold, filver, and copper unines in his dominions, by means of which he carries on a kind of commerce with those two empires, as also with some of the eastern coasters, with whom he is forced to exchange gold for Indian and European commodities, for want of having some fort of No. 34.

his own on either the eaftern or western sea. This obliged him to preserve a constant friendship with the marking kingdoms of Quiloa, Mombaso, and Melinda, whose merchants furnish him with a variety of silks, cotton cloth, and other such merchandiae. He also lives in friendship with the great makoko, another prince on the north of him, on account of the negro merchants who trade with the Portuguese, and carry on a considerable trade with him and his subjects by passing through his dominions.

Monoemugi, is divided into five kingdoms or provinces, all of which are governed by petty princes, subject to the emperor. The names of these are as follows anamely, Gingiro, Mujaco, Alaba, Cambate, and Monocamugi Proper.

mugi Proper.

mugi Proper.

Gingiro, which is a very large kingdom, lies between Narea, the most southern kingdom of Abyssimia, and Makoko and Cambate. Father Anthony Fernandez, who travelled through this kingdom, fays, the king preferves an extraordinary dignity, and that he contends with the sun; for which teason he never goes abroad, or gives audience, but before the fun rifes, alledging that two suns cannot appear at once. The same person tells us, that his palace is no better than a cottage; which, when he dies, is always burnt, and the successor has a new one built for him, which is dedicated with the blood of two or three men of a sertain family killed at the door, and en that acmen of a certain family killed at the door, and on that ac-count the faid family is free from all other duties, which are fo heavy, that they fender this cruel coniposition acceptable; for when the king buys any thing of foreign merchants, he pays them in flaves, and these are the fons and daughters of any family, which he takes at pleasure.

pleafure.

The province of Mujaco, is bounded on the eaft, by Ahyssina; on the west, by Congo; on the north, by Nubia; and, on the south, by Makoko. It is a large kingdom, but very poorly inhabited; neither does it contains any thing that merits a particular description.

The province of Alaba, is very large, and fituated to the east of Cambaie: it reaches to the coast of Zangoebar, and is inhabited by a cayel nonle called Gallas. Many

and is inhabited by a cruel people called Gallas. Many of the people are idolaters, and of the worst fort, for they

offer homan facrifices.

The province of Cambate joins to that of Gingiro, on The province of Cambate joins to that of Gingiro, on the welf, and is bounded on the eaft by Alaba, on the north by Ahyffinia, on the fouth by Makoko, and on the well by Gingiro. This country pays a voluntary acknowledgement to the emperor of Abyffinia. Sangara, which is a poor place, and wretchedly inhabited, is the principal town in the kingdom.

town in the kingdom.

The province of Monoemugi Proper, is bounded on the east by Congo, on the well by Tranquebar, on the north by Monomotapa, and on the fouth by Makoko. This is the larget division of the whole empire, and, except for its being the residence of the emperor, is no otherwise

Exclusive of the respective mines of gold, filver, and copper, the chief production of this country, are, palm wine and oil, and honey is here so plentiful, that the ne-groes cannot consume one third of it, so that they fuffer and climate is fo unwholfome, that no miffionaties, or other Europeans, date venture fo far into the inland parts, principally on account of those degenerate cannibals the

Jaggas, who intert them, as we before objectived.

In this country the natives drefs themfelves in filks and cottons, which they buy of strangers, and wear collars of transparent beads which are brought them from Camboys's these beads also serve instead of money; gold and sliver being considered of no value, as it is so very common beach.

We have not any account of the laws, euftoms, cere-

We have not any account of the laws, enttoms, ceremonies, and other particulars relating to the people; what
we farther know of them is, that they are refractory and
cruel in their dispositions, and most of them idolaters.

According to the Portuguese, there is on the east side of
this empire a great lake full of small islands, from whence
issue several rivers. They say that these islands abound in
all forts of sowl and cattle, and are inhabited by negroes.

It has been observed, expending the little knowledge as

It has been observed, respecting the little knowledge at-tained of this empire, and those parts that border on it to the southward, that "The farther we move southwards the fouthward, that "The farther we move fouthwards towards the cape of Good Hope, the farther we may be faid to travel in the dark;" though all our maps unite to embellish both the coast and inland parts with such profeeds, and pompous names of empires, kingdoins, and countries, crouded so close to each other, as might induce an unwary reader to imagine those countries to be as fully known as Europe itself; and were he to compare the vast shew in those maps with the little he finds in the relations and accounts of the African writers, he might be apt to conclude, from the former, that the far greater and most confiderable part of the latter, like those of the antients, have been unhappily lost or destroyed. And this we think ourselves bound to apprife our readers of, lest they should be induced to a scribeour leaping over such a wast track of land, overlooking so many feeming considerable kingdoms and states, to our neglest, rather than to what it is really owner, the wast of proper intelligence, and to lost their time. ing, the want of proper intelligence, and to lofe their time in a fruitlefs fearch after them, amongst that variety of authors that have written on this part of the world. The truth is, the Arabs, as well as the natives who inhabit this whose eastern could, are two jedious of, not to say in-censed against all Europeans, to give them any Intelligence of the inland parts; much less to let any of our missiona-ness penetrate into them, as they have more luckily done in the western. So that all the knowledge we have been able to get of them is chiefly founded on the precarlous report of those trading coasters, and extends little farther than the names and fituations of those kingdoms which make so fine an appearance in our maps; and might pro-bably be represented by them in such a light, as rather to deter than encourage strangers to attempt making any far-ther discoveries of countries which bear so unpromising an aspect.

THE NEW HISTORY AND DESCRIPTION OF

NGUEB

SECT. I.

Contains a general account of Zanguebar; also a description of the kingdoms of Mosembique, Melimba, and Safala, their towns, rivers, soil, produce, inhabitants, their persons, dress, manners, customs, laws, ceremonies, G.

TANGUEBAR, by some stiled Zangihar, is so denominated from the word Zangue, which in the Arabic language fignifies black, all the inhabitants being of that colour. It is bounded on the eaft, by the Indian e-zean; on the weft, by Monoemugi; on the north, by Anian, or Aian; and on the fouth, by the river Cuama, which fersates it from Monomorans. It is very diffuse. which feparates it from Monomotapa. It is very diffre-portionate in its extent, being not more than three hundred and fifty miles in the broadest part, and one thousand four hundred in length.

mundred in length.

This country has a very extensive coast, and there are many rivers and islands in it. This part of it is best known to the Europeans, owing to the conquests made here by the Portuguese. The inland parts consists of a large, barren, and unleastly track, the lands lying low, and are intersected by rivers, lakes, thick woods, forests, and marshy grounds. Most of the inhabitants are Arabs, the descendants of those who were banished here from their own country, on account of their adherence to the fect of Ali, whose tenets they profess and adhere to with great Brichnels.

Kilmanci, or Quilmanca, is one of the rivers that wa-Kilmanci, or Quilmanca, is one of the rivers that waser this country: the latter name was given it by the Portuguele, from a fort and town so called, built by them at the mouth of it. This river hath its source near the mountains of Gravo, in the kingdom of Narea, subject to the Abyffinian empire, and near a village called Bochia, or Bexia; it is one of the most considerable in all this part or Bexia; it is one of the most considerable in all this part of Africa, especially on account of the length and vast winding of its course, making a kind of circle toward the north and east, as it were to inclose into a kind of peninsula the kingdom of Gingiro, and divides the settlement of the wild Jagass from Abyssina; and thus far its called hy the name of Zebea. After this, it winds its course through the country of the Makorites, which it leaves on the cast side, then croftes the equinoxial line, centinues its course along the coast of Zanguebar, and discharges ltself into the ocean in the kingdom of Melinda. Prolony, in his description of the coast of Africa, men-tions this river, which is by most authors supposed to be the Rapte. They also divide the continental part of Zanguebar into two kingdoms, namely, Mofambique and Melinda: the former of which is divided into feveral provinces and lordships, and each of them has a peculiar dialect to itself.

The climate here is exceeding fultry and unwholfome, but the foil is very fertile, producing plenty of millet, rice,

and feveral forts of pulie; as also abundance of orange and lemon-trees. It abounds likewife with wild beafts, par-ticularly boars and elephants, the latter of which are fo numerous, that the inhabitants are obliged to kindle fires merous, that the inhabitants are obliged to kindle fires round the fields, to prevent them from devouring the corresponding to the proving the corresponding to the proving the first the description of the country.

The natives of Mofambique are in general of low flature, very black, and have flort, curied hair; they are naturally considered description of the description

turally cruel, deceitful, and great enemies to strangers; but as they are naturally timerous, the Portuguese keep them under tolerable subjection. The men go quite naked, except only a finall piece of cloth fastened round the waist; but the women have a kind of petticoat of coarse cotton cloth, which reaches from the waift to the knees. Their ornaments confift in three or four necklaces of coral beads of feveral colours, with brafs rings in their ears, and bracelets of the fame metal on their arms. They adorn their bodies by infcribing the figures of birds and animals on different parts of them.

ferent parts of them.

Their common food is the flesh of elephants, with bread made of millet and rice; from the latter of which they also make a kind of beer. Their towns are very small, and their buildings low and despicable.

Gold, ebony, ivory, and flaves, are the chief wealth of these people, who traffic with the Portuguese only, for they will not fuffer any other foreigners to enter their country, or trade with them.

Some of these people are Christians, and others Mahometans, but the principal part of them are idolaters, and use all those specificious and ridiculous maxims practifed in other idolatrous countries in Africa.

There are two fuall diffries, called Mongalo and Angos, adjoining to the kingdom of Mofambique: the former is fituated near the mouth of the river Cuama and is chiefly inhabited by Araba; the other is also fituated on a

chiefly inhabited by Araba; the other is also fituated on a bank of the same river, about one hundred and fixty miles from the former. Both these places are fresitful, producing abundance of rice and millet, as also great quantities of cattle. The inhabitants are chiefly Mahometans, but intermixed with negroes, who are idolaters, and remarkable for the lowness of their statue. They have no covering to the upper parts of their badies, but round their waist they wrap pieces of cotton or filk; and a turban is worn by some of the better fort.

A commerce is carried on hy the negation of both shorts.

A commerce is carried on by the people of both thefer places with the inhabitants of Monomotapa in gold, gum, elephants teeth, and other commodities.

Melinda, is fituated partly mider the equinoxial fine, and partly on both fides of it, for its fouthern boundaries lie under two degrees thirty minutes fouth latitude, and its northern extremity extends to the river Quiln sici, the

mouth of which lies fome minutes to the north of the equator. Its extent welfward is not certainly known, but it is supposed to be bounded on that side by the country of the Molicayes, a barbarous nation of the Casfree; and on

the Mostegayes, a barbarous nation of the Castres, and on the cast by the western ocean.

The foil of this kingdom, which is well watered by rivers, is in general very fertile; and produces great abundance of the principal necessaries of life. It abounds allowith a variety of fruit trees; particularly orange, palm, and citron trees, the latter of which constantly persume the air with an odoriferous scent: they have likewise several forts of cattle, with plenty of game and poultry. Some of their sheep are remarkable for having large tails, which, on an average weigh from twenty to thirty pounds. Instead of bread, the poorer fort use potatoes, which are here exceeding large, sine, and in great plenty, they having that little wheat or rice. wheat or rice

The complexions of the inhabitants of this country are very different, fome of them being quite black, fome of an olive colour, and others almost white, particularly the

With respect to their dress, the ladies of quality always appear in filk, and adorn their neeks and arms with rings of gold. The common people wear only a loose piece of cloth about their waits; but the better fort have a garment made of cotton or filk, which reaches from the waift to the knees, and adorn their necks and arms with firings of gold: the men wear a turban on their heads.

The capital city of this kingdom, called also Melinda, la fituated in a very agreeable plain, and contains a great number of houses, most of which are well built with free-fidne. It is the residence of the king, and in it are a great number of rich merchants who trade with the Indians of Camboya in gold, ivory, copper, quickfilver, and all forts of stuffs. The Portuguele are so numerous in this city, that they have built no less than seventeen churches and chapels in it; and they have also erected a frately cross of gilt marble before one of the churches. The king's palace is a very spacious edifice, built of stone, and neatly ornamented; the apartments within are large, and deco-

rated with very rich furniture. The king is an arbitrary monarch; notwithstanding which, he is greatly revered by his subjects, whose affection he obtains, by being always reasy to litten to and redess their complaints. Whenever his goes abroad, he is carried in a sedan, on the shoulders of soor of the greatest men in the kingdom, and incense and other persumes are burned before him as he passes along the streets. When burned benote him as no paies along the interest. When he goes on any particular expedition, he rides on a horie richly caparifoned, amidft the univerfal acclamations of his people. On these occasions the priests facrifice a hind before him, and, whilst the king's horse is passing over it, they observe very narrowly the motions of the creature's entrails, and, from the observations they make upon them, pretend to foretel whether his expedition will be attended with success. They also offer a facrifice of the same kind, and with the same views, whenever an ambassador arrives from a foreign prince, to treat with the king on any important business. At every town the king enters, he is always met by a number of beautiful women, some of whom prefent him with flowers, and others go before him feattering various kinds of perfumes; some of them make a kind of music by beating flicks upon brass basons, while others join the melody of their voices with the sound of other instruments, singing the praises of the king, in short, they all endeavour to please and divert him, to the utmost of their shifties. of their abilities.

There are but few laws in this country, and those wholly vefled in the power of the king. If any one is found guilty of murder, he is immediately punished with death; but thefts and trifling offences are punished only by fine. If any of the king's graudees are detected in having imposed fallities upon him they are fentenced to pay a fine, or to receive a number of blows from the king's own hand, more or less, according to the greatures of the offence: in the latter case, the method of inflicting the punishment is as follows: they strip the criminal naked, and lay him on the ground, in the apartment of the palace affigned for that purpofe; the king then gives him a number of blows on his back and breach with a kind of whip made with two long pieces of leather fastened to the end of a flick: as foon as the king thinks he has fufficiently fcourged him, he defifts, when the criminal rifes, puts on his cloaths, kiffes the king's feet, and thanks him in the most respectful and submiffive manner. After this, the king orders him into his prefence chamber, when he grants him a pardon in he prefence of his whole council, and forbids every

one from reflecting on him for what has passed. The cri-minal is then conducted out of the palace with great pomp-personad treches being carried before him by the rest of the nobles. They who caluminate their neighbours are also chastised in the same manner; but the punishment is inflicted by the king's officers; when this happens among the lower rank of pecials.

innected by the king's officers; when this happens among the lower rank of people.

The people of this kingdom use bows and arrows, darts and shelds for their wespons. They are faid to be the best foldiers on the whole cost of Enguebrs; notwith-standing which, they would certainly have been over-powered by their neighbours; who have made several attempts on them, had not the Portugues constantly affisted and precedted them;

and protected them:

With respect to their religion, some of them are Mahometans, but the principal part are idolaters. The Portugues have made but sew proselytes in this kingdom, the people being obtinately tenacious of their own religious principles. The fortier have used many efforts to bring them to a sense of Christianity; but as these have proved ineffectual, they have long time desitted from any farther attempts, and now satisfy themselveds with the liberty they enjoy of exercising their own feligion without molestation.

Sofala is a very extensive kingdom, and, like that of Monomousha, and others above described, is remarkable for containing many excellent mines of gold. It is bounded on the east, by the Indian sea; by the province of Manifest, on the west, by the empire of Monomousha, on the morth; and by the kingdom of Sabla; on the south. It is properly speaking; a continued coast, extending itself from the river Cuama, on the north, to that of Magnico; or De Spiritu Sancto; on the fouth. The inland parts are very trifling in extent, being confined on the west by are very trifling in extent, being confined on the weft by the empire of Monomotaps, notwithflanding which, the whole kingdom is esemputed to be two thouland two hun-dred and fifty miles in circumference, at the leaft.

Several rivers run through this country; the most confiderable of which are the Cuanta and the De Spiritu Sancto. both of which are supposed to take their rise from the lake Goyama. The former received its name from the Portuguefe, but it is generally called by the natives Zanihere. trectives in its course, among others of less note, the Mangania, Mazeno, and Suabo; and after being divided into two branches, dicharges itelf into the Indian sea at four channels, from north to south, distinguished by the names of Kilimano, Linda, Cuama, and Luava. It is navigable upwards of one hundred and fifty leagues, and hath many large islands besides those formed by its several many large islands besides those formed by its several channels. This river washes down great quantities of gold; which the negroes gather when the waters are low, by diving to the bottom of such parts of it, as from piractice, they know contain the greatest abundance. They bring up the mud in buckets, which being properly levigated; the metal is afterwards easily discovered.

The principal capes on the coast, are, Cortentes, St. Catharint, and Sebastian. The former is situated under the twenty-third degree of south latitude: it is noted for the many rocks, fands, and shelves, that lie between it and the island of St. Laurence or Madagascar, and which cause frequent shipwreeks along that channel, to European vessels.

The foil of this country, from the mouth of the river The foil of this country, from the mouth or the Iver De Spiritu Sando to Cape Corientes, is very uneven, barren and defart; but from thence to the mouth of the river Cuama, it is very fertile, and produces great plenty of feveral forts of grain, particularly rice and miller; in fome parts of it there is also excellent pasturage, and the cattle bred here are larger than in any other part of Africa. The inlead parts shound with various forts of wild beatle. cattle bred here are larger than in any other part of Africa:
The inland parts abound with various forts of wild beafts,
but particularly elephants, great numbers of which are annually killed by the natives, not only for the fake of their
fieth, which is the chief part of their food, but allo for
their teeth, which they fell to great advantage to the Europeans. The number of those animals, deftroyed here
by the matives, is faid one year with another, to amount at
leaft to four thouland. But the climate of this kingdom
is a reaching to which they have been as the state of the standard of the stan is exceeding unwholfome, occasioned by the vast number of marties in it, which, being dried up in furumer by the feorehing heat of the fun, infect the air with pestilential fleams

With respect to the inhabitants of this kingdom, they are in general well-shaped, and have short curled hair; they cover themselves only from the waist to the knees, with a garment made of fift or cotton; but they adome their arms; wrists, legs, and ancies, with rings of gold, ame

ber, or coloured beads; the better fort have fwords by their fides, the handles of which are made of ivory curi-oully inlaid with precious flones, and they also wear a tur-

ban on their head

Dan on their heads.

The people chiefly fubfit on the flesh of elephants, large and small cattle, and sith, with which the rivers abound; and they use rice and millet, instead of bread. The better fort have a kind of beer, made of rice and millet; they have also some strong liquors made from honey, palm and other fruits; but the drink of the lower class is water.

The leaves of the strong the strong liquors made from honey, palm and other fruits; but the drink of the lower class is water.

Class is water.

The language of the country, is chiefly spoken by the common people, but they also understand the Portuguese and Arabic. The coasters in general speak the latter, which is indeed their natural language, for they are not the original natives, but the descendants of the natives, who settled themselves more or less upon this whole, western coast, after having been expelled from their native country. The king and his court, with a great number of the principal people, are also the desendants of the Araba, and not only speak their language, but also strictly profess the Mahometan religion; but the original natives are permitted to retain their antient cutoms, as also their religious maxims, the latter of which nearly resemble those practified by other African idolaters.

The only place of any note in this kingdom, and which is the metropolis of it, is called Sofala: it is pleasantly fituated on a small island at the mouth of the river Cuama. Before the Portuguese visited this part of the coast, is was

situated on a small island at the mouth of the river Cuama. Before the Portuguese visited this part of the coast, it was a very inconfiderable town, neither large nor -walled, but fenced only with a thorny bodge; since their arrival, however, it has been greatly improved, and is now a very large and populous place. The Portuguese have also built a strong fortress here, which is of infinite service to them, as it secures their ships in the harbour when they stop here in their passage to and from India. Both the sortress and island are tributary to the king of Portugal. The articles the Portuguste purchase of the natives, are, gold, ambergris, slaves and elephants teeth; in exchange for which they supply the natives with sikes, stuffs, cotton, glass beads, and other such tributes. other fuch trinkets.

There are two other towns on the coaft, near the town of Sofala, one of which is called Harlema, and the other

of Sofaia, one of which is called Harlema, and the other Dardema; there are also several villages, but they do not merit particular description, being inconsiderable places.

A great number of soldiers is kept by the king ... these are all paid in gold dust, each according to his rank. Since the arrival of the Portuguese, they have been taught the use of fire arms, of which they are very fond, and exercise them with greatdexterity; but their original weapons were bows and arrows, the symetry, javelin, dagger, and hatchet.

This country is frequently reforted to by the inhabitants of Quiloa, Mombata, and Melinda, who come thirher in mall boats called tambues, with stuffs of blue and white cottons, sik stuffs, yellow and red ambergris, which they exchange with the people here for gold and ivory; and these again sell them to the inhabitants of Monomottapa, who give them gold in return, without weighing it, so that the give them gold in return, without weighing it, so that the profit of the exchange is very confiderable. This is the reason that when the Monomotapans come to purchase these articles, as foon at the Sosalaus perceive their vessels at sea, they light fires on the shore, to testify their joy, and

bid them welcome.

The gold mines of this kingdom are faid to yield above two millions of metigale per annum, each metigal amounting to fourteen livres; that the ships from Zidem and Mecca carry off above two millions a year in time of peace; and that the governor of Mofambique, whose office lasts but three years, has above three hundred thousand crowns reunat use governor of monamorque, whose office lafts but three years, has above three hundred thouland crowns revenue, without including the foldiers pay, and the tribute annually paid to the king of Portugal. From hence many learned men have conjectured that this is the Ophir, whither Solomon fent thips every three years from Exiongeber to fetch gold; Exion-geber being thought to be Suez, a fex-port on the Red fea. This conjecture is supported by the remains of feveral stately edifices, which are found in the different parts where the gold mines are situated, and, from their appearance, are supposed to have been originally palaces or castles built by that opulent prince the king of Mrael. It may be also confirmed by the authority of the Septuagint, who translate the word Ophir, i Kings is, a8, into Sophira which has some resemblance to its present name of Sosala. As a farther confirmation of these conjectures, Lopez, in his voyage to India, says, the inhabitants of this country, boast, that they have books to prove, that the Israelites sailed every third year to fetch gold from these parts, in the time of Solomon, 19 The first of the state of C.T. He

Treats of the republic of Brown; and also of the hingdoms of Magadana, or Magadasha; and the hingdom of Adel, or Aeila, U.S., their fituation, boundaries and extent, principal places, foil, produce, inhabitants, their traffic, U.S.

THE republic of Brava, is the only one on the whole coaft of Africa. It is pleasantly fituated on the coaft of the fame name, being bounded on each fide by a river, supposed to be two branches of the great river Quilmanca. It inland extent is inconsiderable; and the chief thing that renders it remarkable is its capital, which is also called that renders it remarkable is its capital, which is also called Brava, and situated in one degree north latitude, between the two rivers or branches abovementioned, where it has a tolerable good harbour. It is a large city, and, with the whole republic, was sounded by seven Arabian brethren, who shed hither to avoid the impending danger that threatened them from the tyranny of their king, who was one of the petty monarche of Arabia Felix at that time.

Several strong walls encompass this city, which is otherwise well fortified. The houses are very spacious, and built after the Moresco sile: they are chiefly inhabited by rich merchants, whose principal traffic consists in gold, silver, elephants teeth, gums and other drugs, particularly ambergris, with which this coast abounds; also cotton and other cloths.

This republic is subject to an aristocratical government.

and other cloths.

This republic is subject to an aristocratical government, the inhabitants having a right to chuse twelve chiefs from among the most antient families, whom they intrust with the administration of justice, and the management of all

The Mahometan is the prevailing religion of the inhabitants, who pay an annual acknowledgment or tribute to to the king of Portugal, and the manner by which this republic became tributary to the Portuguese is thus re-

Triffran de Cugna, admiral of the Portuguese steet, having set on shore at Melinda three ambassadors, sent by king Emanuel to the emperor of Abyssimia, and recommended them to the care and protedion of the king of it, continued his course northward along the costs, till be came to the cite of Berna where he and continued his course northward using the coan, and se-came to the city of Brava, where he cast anchor, at the port. Here he dispatched, according to the Portuguese custom, one of his officers, named Lionel Codingo, to cuttom, one or ins others, named Lionel Codingo, to wait on the heads of the republic, and offer them peace, and the friendfhip and alliance of the king his mafter. To this the chiefs answered, that they had no objection to enter into such a treaty; but this answer proved to be only a piece of diffirmulation, and calculated to detain the flect to its destruction, the season being then near at hand, when such doth to nices in the harbour all their slices would doth to nices in the harbour all their slices.

when tuen posterous whose situally blow in these parts as would dash to pieces in the harbour all their ships.

This artisice being discovered by Cugna, he resolved immediately to assault the city. Accordingly, before daybreak, he drew up his men on the shore, and formed them into two lines, the first whereof consisted of fix hundred men, the command whereof he gave to Alphonso Albuquerque, whilst he reserved to himself the command of the others, which consisted of about six hundred foldiers. the others, which consisted of about fix hundred foldiers. Brava was at this time garrisoned by four thousand men, half of whom immediately fallied out against them. The consist was severe on both sides: but the Portuguese charged them with such fury, that they found themselves obliged to give ground, and made a very regular retreat into the city; after which to prevent the army from following them, they shut all the gates.

Heremon the above was immediately surrounded by the

Hereupon the place was immediately furrounded by the

Hereupon the place was immediately furrounded by the Portuguefe, who examined, with the utmost diligence, where they could best force an entrance; but were all that time terribly annoyed from within by burning torches, and other missile weapons cast at them by the belieged.

Albuquerque, having in the mean time, discovered a weak part in the wall, began his attack there, but was quickly opposed by the garrifont, who slocked thither with all speed, and defended it with surprising intrepidity. The contest was maintained with great spirit on both sides, when, lucklib for Albuquerque, the admiral came up, at whose content was maintained with great part on both indea, when, luckily for Albuquerque, the admiral came up; at whose approach the Moors were firuck with such a panic, that they fled with the greatest precipitation, whilst the Portuguese foldiers, eager for their prey, would have pursued them into the city, had not their commanders restrained

Soon after this success, the affailants entered the city, and plundered it of a very large and valuable booty, which the Portuguele immediately carried on board their flips.

ab

o bo

la re ot al good his he by

printing to windre drawing the firm

Great numbers of the belieged were flaise and wounded, and many of them takeripiloners i but most of these were foom after released. The Portuguese had about fifty of their men killed, and many dangeroully wounded, he deseighteen others who peristred in the long boar, which, through their instraible avarice, they had loaded to immoderately, as an occasion it too overfer. Such too was the inhumanity of the Portuguese fallors, and such their trifty after spoil, that they cit off the arms of sevent women, to come the more readily at their rings and bracelets; but Cugna deterred the rest from this barbarity, by severely punishing the perpetrators of this cruelty.

The victors having plundered the city, Cugna ordered it to be fet on fire; and it was soon reduced to ashes in sight, of the inhabitants, who stood at a small chiance; beholding the dismal speciacle. From this catastrophe, they were forced to become tributary to their conquerers; for the Portuguese would not permit them to rabuid their eity, or enjoy their ancient privileges, on any other condition than that of paying the king of Portugal an annual acknowledgment, which from that time to the present has been regularly exacted and paid.

The kingdom of Magadoxa, or Magadoka, is fituated on the coast of Ajan, and reaches from five degrees forty minutes of north latitude, quite to the equinox, where the river or gulf of Jubo feparates the coast of Ajan from that of Zanguebar. It is bounded on the east, by the coean 1 on the west, by the kingdom of Alaba; on the north, by the kingdom of Adel; and on the fouth, by the territories of Brava. It receives its name from the capital; fituated at the mouth of a river of the farme name, and which river, by reason of its annually overslowing like that of Egypt, is called by the Araba the Nile of Magadoxa.

and which river, by reason of its animus; the Nile of Magadora.

The country is likewife well watered by a number of canals that are cut from this river; fo that the foil is exceeding fertile, and produces great quantities of several kinds of grain, as also a variety of excellent fruits; it likewife affords good pasturage, for which reason the natives breed great quantities of cattle, particularly oxen and sheep: they have also numbers of horses, and in the instand parts are various kinds of wild animals, particularly monkies, baboons, and apes. The rivers also produce several forts of fifth, which the inhabitants eatch without any fear, they not being infested with crocodiles, or any other dangerous animals, as in most other parts of Africa.

The natives of this country are of different complexions, forme of them being quite black, others of a tawny colour, and some almost white. They are very robust, and of a courageous and warlike disposition. Their weapons are bows, and arrows, the latter of which they infect with poison; they are also darts and lances in war.

With respect to the city of Magadoxa, it is tolerably large and well inhabited. Great numbers of merchants vesors to it from the kingdoms of Adel, Camboya, and other parts, who bring hither stuffs of various sorts, as wise drives and solves; in exchange for which they receive

other parts, who bring hither fluffs of various forts, as allo drugs and spices; in exchange for which they receive gold, ivory, wax, and other commodutes, from the inhabitants.

The Mahometan religion is professed by the king and his court, as also by the chief inhabitants of the city; but shose in the interior parts of the country strictly adhere to their heathenish superstitions and maxims, being all of them idolaters.

As to the historical part of this country, we have only to observe, that an hollile attempt was made on its capital by the Portugues steet, under the command of admiral Triffand & Cugna, who, as we observed above, took the city of Bravá, and reduced it to asses: their atchievements

eity of Brava, and reduced it to ashes: their atchievments in this place are thus related:

Cugna, after the reduction of the last mentioned city, proceeded as far as Magadoxa, which he caused to be summoned, as usual: to accept of peace and friendship, or, in plainer terms, of subjection, and tributary ship to Portugal. But here he found the inhabitants teady prepared ogive him a fuitable reception; great numbers of foot were patrolling along the shore, the walls were covered with armed men, and a considerable body of troops were drawn up before the town, which made Codingo, the officer fent with the summons, assaud of going on shore; instead of which, he sent one of the Brava captives to assaud to the summons, as a summon of the summons are successful to the summons with the summons, as the summon of the summons of th of Brava, fell furfoully upon the mellenger, and true city in pieces; they also threatened to save Codingo in the No. 34.

The Address The .

fame mariner, if he offered to land; which obliged bias to return to his admiral, and to acquaint him with the in-folent menaces of the enemy, and the ill fuccess he had

folent menaces of the enemy, and the ill fuscafe he had met with.

On receiving this information, Cugna was fo eriraged, that he determined to bombaid and ftorm the place, but was liapply diverted from his defign by the perfusion of his officers and pilots.

It lie former repreferred to hint the fixtural fittength of the place, the number of the garrifon, the great plenty of ammunition, and the valour and refolution of the inhabitants: the latter pointed out the extreme deliger that mull unavoidably arife to the thips, both from the fire of the town, and the violence of the fea, especially as winter was then coming on, and the featon for failing nearly expired; fo that if his troops should milearry in their strempt against the place, their fleet and army must inevitably parish. These reasonable observations induced Cugna to leave the brave Magadoxans in the peaceable enjoyment of their own possessing he had for pecipitately formed, for that it gave orders for failing to the island of Socotora, where he soon after arrived with all his thips.

The kingdom of Adel, otherwise called Zeila, is bounded on the east, by part of the castern ocean; on the west, by the kingdoms of Babeliannele ; and, on the foeth, by the kingdom of Magadoxa. Its full extent on either side is not certainly known; but along the coast, from north to fouth, it is supposed to reach shoul seventy-two leagues, and shoul one hundred and firsty from east to west.

The scoon name, which is givin-hi, was taken from the capital called Zeila, which is situated to the fouth-east of the mouth of the straits of Babelmandel, near a very spacelous and convenient bay. The city is toletably large, spacelous and convenient bay. The city is toletably large,

of the mouth of the fraits of Babelmandel, near a very fpacious and convenient bay. The city is toletably large, and the freets are regularly formed: the houses are built and the threets are regularly formed: the noures are pour of flone and mortar, and are in general very spacious, and divided into convenient apartments. The foil round the city is very barrent, and lo diffressed are they for water, that they are obliged to go many miles to sette that useful article. At some distance, however, from the city, the country is very fertile, and produces most of the necessaries of life, particularly corn and fruit, which are so plentiful, that the natives have not only a sufficiency for their tiful, that th ie natives have not only a fosficiency for their trut, that the natives have not only a folinciency for their own confidentions on a flow aport givent qualities to the neighbouring countries. They have likewise abundance of excellent cattle, especially oxen, theep, and hoga; and in the woods are plenty of various forts of game. Befides thefe, the country also produces gold, ivory, frankintense, and pepper, which the natives fell to the merchants of Arabia and Camboya, who come hither with cloths, amber, necklaces, glass beads, dates, raisins, and other commodities.

The people who inhabit the northern coast of this king-The people who inhabit the northern coaft of this kingdom are of a tawny complexion, but to the fouth are quite
black. Both fexes are ftrong and well made, and have haturally good conflictutions. They go almost excel, having only
a loole piece of cloth hanging from the wards the knees a
but they are very fond of ornaments, especially the women,
who decorate their arms, necks, and ancles with circlets
made of glafs and amber, beads. The king and nobility
are diffinguished in their drefs from the commonalty by
having a kind of loose garment, which covers the whole
body from the shoulders to the ankles, and wearing caps
on their heads on their heads

These people are naturally of a warlike disposition, and are frequently at enmity with those who inhabit the remote parts of Abysinia, as well out of zeal for religion, as in hopes of plunder; the former being all staunch Mahoin hopes of plunder; the former being all staunch Mahometans, and the latter a publishmous fort of Christians, no ways equal to them either in valout, discipline, or warlike weapons. The arms of these people consist chiefly of bows and arrows, lances, and javelins, all wretchedly fabricated, and the ordinary fort amongst them have hardly any thing better than long staves, sharp pointed at one end; whereas the Adelites are furnished, by the Turks and Araba, with variety of fire-arms, and other offensive weapons, in exchange for which, they give them slaves, gold dust, and such other articles as they obtain from their neighbours, by plundering them in their executions. cursions.

There are in this kingdom feveral other large towns be-fides Zeila, but the only one that merits any actice is called Barbora, fituated at the bottom of a convenient bay, on an island of the same name. It hath been continually a kind of rival in commerce with Zeila, and is no lefs re-forted to by foreign merchants, who carry on the same

hind of studie. It is fituate appeals the city of Adan and was once more confiderable than it is at persons, being plandered and a great part of it destroyed by the Portu-guels see tunder Tristran de Cugna, who expected so have bound a confiderable spell in it, but were greatly disp-pointed, the inhabitants having had time enough so easy off their most valuable effects, and make their fiscase.

pelned, the inhabitajte having had time emough security off their most valuable effects, and make their strape.

This town is firmted on an ifland, which is very fertile, and produces abundance of different kinds of grain; as also plenty of fruits and cattle, great quantities of which are amported to foreign countries by the enerchants.

With respect to the interior parts of the kingdom of Adel, they are chiefly flat, and they have feldom any rains; but this defect is supplied by the number of rivers that water the whole country. Among these, the most considerable is called Hawash, which is very broad and deep, and hardly inferior to the Nile, except in the length of its course; for it does not extend above fix miles from its mouth, before it is divided into such a number of casses to be in some measure exhausted before it reaches the fea. This renders the foil so exceedingly fartile, that it produces great plenty of wheat, barley, and millet, as also prodigious numbers of sheep, cows, and other earth.

Gold-dust, elephants teeth, frankincease, and saves, sensitivate the principal traffic of the natives is these parts of the kingdom; all which they get chiasly from the inhabitants on the borders of Abysinia, with whom they are continually at war, and mile no opportunies of making investigation fail of meeting with merchants from Arabia, Camboya, fail of meeting with merchants from Arabia, Camboya,

1 nd 2 h 30 t

and other ports, erhoseed by taket shows off the and formish them wish closes of cotton, fifth, lim lets, amber, crystal, televanes, and other pos

and furnish them with cloths of cotme, fifth, linen, becomiets, amber, ergins, three-same, and other commercially in exchange.

The entero part of this coast is a more fundy and function tract, producing neither corn, grain, fruit, or any animals.except wild once; for which reason it is generally called the Defert coast. The nombers part of it however, makes arreed, the foil being revy fertile, and producing most kinds of previsions; in which the inhabitants carryon a great commerce. It is particularly remarkable for producing an excellent breed of horses, which are shiefly parchased by foreign merchants, for which the natives that slike, cottons, and other commedities, in exchange.

There are great numbers of negrees on the coast, who live and internancy with the Bedouin Arabe (an idelication and internal particular their producing the producing that it is necessary to the second of the coast of the coast of the producing the producing that the second of the republic of Braw, with the kingdoms of Magadons and Adal, mader the general name of Ajan, though that is but a serm accidentally given by the Poetuguesia to the whole tract of coast called by that name, which extend itself from the fraits of Babil-mandel quies to the utmost verge of Africa en that side, or to the cape called Guardsful; and on the eastern fide from the faid cape, in the twelfth degree of north latitude, which divides it from the coast of Zaneguebar, already described.

THE NEW HISTORY AND DESCRIPTION OF

ABYSSINIA OR UPPER ETHIOPIA, ABEX, AND NUBIA,

SECT. L

Contains a general occount of Abyffinia; together with a de-feription of the different hingdoms and previnces that new form that extensive empire.

A BYSSINIA, is fituated under the torrid sone, and lies between the cighth and feventeenth degrees of north latitude, and between the thirty-firf and forticth of weft longitude from London. It is bounded on the caft, by the Red Iga, and the coafts of Abex, or Fabeth, which have been diffmembered from it, and now make a province of the Turkish empire; on the west, by the river Maley, which divides it from Shankala, or she country of the wandering Ethiopians, and falls into the Nile, after it bath run a confiderable way into the Nubian dominions; on the north, by the kingdomo of Nubia; and, on the fourth, by Alaba. This country is of a thou-fand miles extent; and has been known by the different riames of Abyssinia, Abassa, and Habessinia, the latter of which is obtained from the Arabic word Habash, signifficing a mixture, or confusion, it being inhabited by people of various nations. The inhabitants, however, reject these names, and call themselves Ujopians, and their country Maughesta Isjopian or kingdom of Ethiopia is but the diversity of names having heretofore made great consultion, that of Abyssinia at length prevailed, and by this it hath for ages past been universally known.

It may however be proper to say something concerning the title that hath been absurdly given to its monarchs, namely, that of Prefor John, and which keems to haye, thus originated: in the kingdom of Tenduc, in Tartaria Proper, was an antient raccol Christian princes, who bere the title of Prestor, or Presbyter John, as it was corruptly called by the Europeans, though chiefly owing to an epi-

thet which Ung Chiang, one of the first of those monarche, either took of Prestigian, or was complimented with by his subjects, that word signifying apostolical or orthodox, but which had by the Europeans, been corrupted into Prester John, on supposition that he was a priest as well as king. The fame of this monarch was become so great, in the time of John II. king of Portugal, when the discovery of India was made, that he sent Peter Covillan by Isod to make inquiry after him in India; but as he could be unothing of such a prince there, he ching informed that there was a potent Christian emperor in Africa; took that country in his way home, and was so kindly treated by the reigning monarch, that this was the king-dont so much sought after, though he could find nothing treated by the reigning monarch, that this was the king-dom to much fought after, though he could find nothing like the title of Prestor John This point, however, hath groduced much controverly among the learned world; fome affirming the empire of Abyssinia to be the real Prestor John's country; while others, with much more reason, have treated that notion as absurd and chimerical.

have treated that notion as abfurd and chimerical.

This enspire was much more extensive than at prefent, feveral of its kingdoms and provinces having been different of its kingdoms and provinces having been different belong to the Gallas, a barbarous people, of whom we shall treat hereafter.

The kingdoms and provinces that et prefent belong to it are as follows: namely, r. Tigra, or Tigre; 2. Bagameder, of Bagamedri; 3. Amars, or Amhars; 4. Olecand Choa; 5. Damoha, or Damut; 6. Goyam, or Gojam; 7. Dambea; 8. Narca, or Enarca. We shall describe each of them in the order here set down.

The kingdom of Tigra is the most considerable in the whole cupure, and is remarkable for having in, it the remains of the city of Asum, which was formerly the refidence of the emperors; and though now abandoned by those monarch, and reduced to a mere village, is still the place whither they repair to be crowned. It is bounded on

as the taff, by the Red fen; on the staff, by Dambon, and test of Nabia; on the north, by Barnagais; and, on the north, by the kingdone of Angue and Baganteire. Its sugth, from north to fouth, is computed to be about here hundred miles, and its breadth about an inundred and fine.

length, from north to fouth, is computed to be shoes these hundred sailes, and its breadth shoet an hundred and fister.

The city of Anum, which was formerly very opulent, and the steplan city of the hidgidom, is the thisir place? Oneste le let. When in its professity, it was a large and well built city, as appears by its few stamains; and fittened on a fpactious and desightful plain, wastered by feveral rivulets, and was adorned with density palaces, churches, obelifus, arches, fee. There are particularly the ruins of a fostious and magnifaceit: firstfure, fisses of the floats of which are of a pooligious length and thickted; one of these, which is full up be fleen in the form of a pyramid, is one headred and four cabits high, on a buffe of un cubits; and miled on a plinth shout two fact high. Buffees this, there were many other fuperb buildings, all of which were reduced to a mere heap of ruine during the wars between the Galles and the Abyffahiann; after which, the imperial court being removed, it fails fasther declined, and has now fearcely two headred holdin left, at they make but a smean sheperamoe. This city is fituated about forty-English miles from the Red, fin; and though the way to it was for rocky and mountainous, that it took up feven days journey, ye ir was well flopplied from thence with various neorflary articles. It was antiantly the vesidence of queen Castidae, and even of the famed queen Subsh, if the Abyffahian accounts stay be tredited.

The town of Madgogs, which is fituated on a hill, flands about ten miles fouth-weft of Asum: it was for called originally from the isotherwise, who is the their refidence in it, on account of one father Framenties; the first and their order that came into these partiacts of Abyffahian by the pope; after whose death it fill continued the refidence and feminery does not be easied by the long reflectors and death of value? I was for the miles of the whose death it was for the profession and feminery death of their order that came into the country (the greatest

jefuite in this town:

A town called 'Ambacanet is about a day's journey from Madgogs, and a little further to the fouthern frontlers is another called Manadela; but they are both infignificant places, and very indifferently inhabited. To the northward of the litter, however, as two of the finet menateries in the whole empire; both of which were formerly occupied by the jefuit millionaries; the largest of them is called Hallelujah, and the other Abogarina.

The town of Barnagafi is the wessoft extent of this kingdom, and reaches to the coast of the Red fes, where it had formerly a famous fes cart called Arquico, which ren-

The town of Barnagafi ly the wesself extent of this kingdom, and reaches to the coaft of the Red fea, where it had formerly a famous fea, part called Arquico; which rendered its commerce very confiderable. This port, however, was fome years ago feised by the Turks, fince which Barnagafs has gradually dwindled; and is now become for infigration and the merit of Tigra: it was one of those wrefted from the Abyfinian empire by the Gallas, who broke into infrom the Abyfinian empire by the Gallas, who broke into infrom the Abyfinian empire by the Gallas, who broke into infrom the Rothern harts, where they moffly forced themselves up to, or even keyond the line, and made thomselves complete matters of ft. It hath fome few towns in it, vis. Angoe, the capital. Dofarso, faid to contain nest one thousand houses. Abugaia, once famed for having in its handsome church called Imbre Christos, and for being the capital of a confiderable territory of its name. Besides these, there are many others of lefs note, but they all contains wreckied buildings, and no left despicable inhabitants.

Bagameder, or Bagamedri, lies work of Tigra, and extends from it to the Nile. The about an hundred and eighty miles in length, and firsty in breadth; but the greatest part of it is mountainous, rocky, and inhabited by wild nations. It has some towns, particularly one of it own same, which is the metropolis, but it an inconsiderable place, and the other's are full more any other of notice. This province is liboured eligided into thirton governments, most of which are fertile; and well watered by finall rivers.

Amars, or Ambara, lies to the Bouth of the last men-

Amers, or Amhers, lies to the fiests of the last men-tioned province, and on the west is divided by the Nile, which separates it from the province of Gojam. It is

computed to extend about they leagues front subtes with, and has thirty-six difficient. This is centifiered as the most richle previous in the empire, from its being the sufail verification of the Abyfinites monarche, and confequently of the chief mobility. Fethes a paculiar claimful different from his heart which is become that of the court, smill of the polite throughout the empire. First fund the rocks of Ambagueran, where the appire. First fund the rocks of Ambagueran, where the princes of the blood-were ferroughly withined and educated a and this province ile cicindared in the other of the empire, at this time, if the previous of Olean, lies to the fouth of Ambard, and is bounded on the sub by Angot, and on the wife by Golant; from which is in fegurated by the Nile. It is a very final province, and has nothing restrictable internal of its towns.

constat, from which it is feparated by the Nile. It is a very family prevince, and has nothing remarkable in may be fits towns.

To the fouth of Oleen, is faristed the prevince of Chongealies life Kan, and Sheira. It hash part of the country, of Marabet on the northy life on the arth, and Golan on the west. It is divided into Upper and Lower Chong and it the lind prevince on the fouth side that now actnowinges subjection to the suspersor of Abysinia. The river Sambo, which raws into the Nile, part is from the northytes Rouns on the fouth-west, and the Yema on the fouth-west, in the river stand on the eastern berders.

**Markera, the capital, is almost the only town worthy of notice 1 it was once the integral residence, as which time this province flourished (speried to any other in the end pire. Some countries of the imperial palace are fill to be leen; as also those of a church; and is large meanatery called Namesth. "Helpe are also fonce other towns that have mornateries in them, particularly those called Debra Lobonus, or Mount Lebanos; Marighestra Samijat, et alsomos of Biaveas, and some others of lefs note. The general of the monks usually resided in the abstractive etc.

The kingdom of Damots, or Damut, hath reither of-ties not towas, the principal part of it being covered with high mountains; notwithflanding which, it is fo well peopled mid cultivated, that the inhabitants of it were the first that mudd on infurrection against the empirere, on ac-count of the Portuguese missionaries, which could not be quelled tilt they were wholly emispated by the command of that manners account in the state of the property of the command of

that monarches the second seco

The river Maley hath its firing head under one of the mountains in this kingdom; and; in its course towards the Nile, tune scrots its.

There were formerly two places of residence for the jefuits in Damona, from whence they were driven by the

inhabitants, in the infurrection abovementioned.
On the other field of the Nile, and further to the west, inhabitants, in the infurrection abovementioned.

On the other field of the Nile, and further to the west, is the province of Goyam or Gojam, which is almost encompassed on every field by that river, encept to the northern assessment of the Danbean lake; Its benefit from the north-west to the fouth-east is fomewhat above an hundred and fifty miles, and its breadth from east to west, where if the breadest, is about minory, it contains twenty districts or governments. This country is fertile, but in the middle is high and mountainous; and these temperatures are parally inhabited by a scopic field to be descended from filigars. Absuham's Egyptian bond-maid.

"The morthern purst are alcogniber mountainous and rocky, and faid to be inhabited by Jewey but is in more probable that they are fone of the ancient Apyfinians; who have never yet embraced the Christian religion; for though these are great numbers of Jewe dispersed through the whole empire, yet that people are never known to pre-predefer the braidion; before the inhabited plains and places of commerce into it is published; then they would reside among the inflospitable rocks, unless we suppose fame more producing the property.

mines lie hid smongh them, which keep them more pro-fitably employed.

There is also, about the neck or hithmus made by the Phile, a very iteep and almost inaccoffible monatch, on the top of which is an oyal plain two hundred and fifty fathous in length, and one hundred and white in broadth; to which there are two paths as afterns across he recks; and on ener fides a lipting of excellent water. Farther cowards the Mile is another plain separated from this monatch by a material trench; where there is a kind of camp, in which the viceroy resides.

This blegdess has but five deves of some. The chief, and staly one worth notice, is the called Nebulli, in which the supports Heleina, governote to, the emperor David, seredled a magnifisher, church, which was afterwarde defected for magnifisher, church, which was afterwarde defected for five the prising, who would give the facility, who would in feweral parts of the himpdens: doubt rises of its original quantature are fill to be from thems! which of its original quantature can be traced from thems! who has not its original quantature can be traced from thems! who has not the fourist by Gojam, from whence it is feparesed by the Nike, and the late of its own name; and the north, by Nubes; on the saft, by Tigra and, on the tretty by Changalle. He length from eath to work is about minety miles, and done much to fourth about shorty-file tenduline of this late, or leversy including it. It is one of the fitteth tenduces in all Abydium, for that it is frequency of worldward, rot only by the late of Emenos, but allot the rivers that run through it from the higher heads; and on this isocount it is injustified almost away where with deep disthes and canals. Then, is, on the entern continue of this linguism, a sentential amount of the first the amparent formerly refided, with their count and matinum. Here alfolives an elegant building evolute first in a church called Gambioret; and about nine hundred, from butte, in barricks, dever with the neither count and mutinum. Here alfolives an elegant building evolute distinct and the support for men of the Perengue for the support for the printer, a return called Gambioret; and about nine hundred, from butte, in barricks, dever with the suddence of the Perengue for the support for men in his hardy for the printer, and the support of the perinter of the return of the from its first abbet of that name, believe with the proper to this, and is for the printer of the men of the first about of that name, believe to the perinter of the first of the printer of the perinter of the perinte

is in the monaltery of the humanus, we came out to large abbest of that manuscillate the resident of the large manuscillate. There is not a fingle town in this province; the configuration of which, Luddiphalisers at a that step scape the root only spring the living in feature of which a besides to towns, where houses are contiguous, but likewise much themselves at a left to conceive how it is possible to live in large or walled towns, and be there (upplied with all the reconstructes of hir v. fuch sure of rangers are they to these contrainess to fed for the carrying one of commerce in other countries. This kingdom is divided, into feature diffirlets; and powered by a viceopy who has the hitle of Lambon. Canthal.

Dambes Centibe.

The things most worthy of notice here are the following: in the caltern part of the kingdom is a famous meastery called Ganeta Jefu, fituated on a low ground, but very plasfast, and being well watered, in exceeding fertile. In the church belonging to this monastery but the mountments of the Abrillania, emperors for, ages pales, if after Palis, a Portuguete jeduit, was for plassing with this floot that he built here a church as also a paleon for the, emperor, after the European manner; but they have been both defired on a no.

ster the European manner; our trey have seen com de-froyed long ago.

Eliert is between Ganera Jefe, and the frontiers of Ba-gemeder, a finall but pleafant territory; restarkable for a kind of market or fair kept in it for cattle, so which the in-lahitants of most parts of the kingdom sefort. This jer-ritory was heresofore granted to the partiacth, Mendes for his fubfillence, and that of his fraternity. It is about nine miles in length from east to well, and about fix a ... un north-so fouth.

his subfiftence, and that of his fraternity. It is accurationally in the last through from each to week, and about fix it is nor north to fouth.

Contiguous to the kingdom of Dambon is a finall berren province called Fatigar. It was formerly a part of the Abyfinian empire, but was difficentiated from it by the Gallas, who fo ravaged it, that is hath not any thing now werth mentioning, except two high hills, one of which is called the Mountain of the Fever: it is fatuated mare a plain, to which the Europeans have given the partie of Market, because those of the merchants of the engishesis in district, because there is a lake about nine miles in compass, with feveral monaturies yound is, at the foot of it.

Several other small kingdom belonging to the Gallas, for the west of Fatigar, and on the each and north-each are the rivers Haowach and Machi, which join their streams in the kingdom of Fatigar, and thence take their course through the kingdom of Adel, and the usit territories of the eastern Gallas.

Narea, or Emers, which is the last kingdom or province worth poise, extends south as far as the first degree of longitude, and consequently to the extremity of the east pire. It was formestly governed by in own monarchia, who, as well as their subjects, were Pagana, but being conquered about a century ago, they embraced Christianity,

Receiver, a conflictable that of the bestery to fifth to fund ned, and perture the enversed. The whole ting dear is attented with and fertile, and produces a great humber of eartie. The inhabitations carry on a confiderable trade with the Caffrey who being them abundance of good, which they exchange for cloth, fait, and other merchan-

selective. The inhabitants carry on abundance of gold, which they exchange for cloth, falt, and other merchanding, vivy vicence 1 and the part of the country of the cloth of

there of the plunder, which is adjudged to him according so she flame he had in the victory, and the courage he displayed to all the bad in the victory, and the courage he displayed to all the had in the victory, and the courage he displayed to all the had a courage he displayed to all the courage he displayed to all the courage he displayed to a courage he displayed to the hide of a bull or buffalo. They had formerly no cavalry, but have finese learned to fight on herfeback; and though sheir horfes are but indifferent, yet they fight to close, and in facts good order, that the Abyfinness, shough much better mounted, cannot bear the fhock. It is even a appital crime among them to give way after the onfet is begun; hrace they all fight to corrupte or die, neither giving nor afking quarter; ruffing with fuch fucy on the foe, that it is very difficult to make head againg them; whence they have gained many fignal victores over Abyfinness tampes that have been much more aussences, and provided with better horfers and arms. Whenever therefore the Gullas make encurions, into the expinority of an enessy, indeed of traffing to numbers, they commonly choose a feleft body of determined youths, not exceeding eight or ten shouland at the most, who being all fworn to fund by each other to the laft, fight with fuch intrepidity as feldom fails, of putting into diforder an enemy of twice or three times their numbers. They are discounted women, while they follow, that they often the more many exercise of war and hunting. They, however, feel numerous, herds of cattle, and live chiefly upon their milk, and fuch production of the jeasth as the country affords, fulfing from place to place for the fake, of patture, always asking with them their families and cattle. They, give a political reason, for their families and cattle. They, give a political reason, for their families and cattle. They, give a political reason, for their families and cattle. he-ATA formed: they bring a sheep to a proper place appointed, where they anoint it with butter; after which the persons (or, if it be taken in the name of a tribe or family, the heads of it) lay their hands upon the head of the fleep, and folemnly proteft, that they will religiously observe every part of their engagement. The explanation they give of this cereamony is, that the fleep is, in some sense the mother of all that swear, and the butter is an emblem of the mutual love of the mother and her children ; and, confe-

quently, that when a man hath taken an oath upon the head of his mother, he ought never to violate it.

As to their religion they acknowledge one fupreme Being, as governor of all fublunary things, but have not any mode of worthlp, being extremely ignorant of every thing relating to religion. When the Romith miffionaries were here, lating to religion. When the commitment of the memory of them embraced Christianity, to which for fone time they strictly adhered; but they have laid that religion aside, and followed their original maxims, ever since the expulsion of the jefuits.

SECT. II.

Describing the mountains, rivers, foil, produte, and animals of Absfinia; containing also an account of the inhabitants, their persons, dress, manners, and castenst, segether with their buildings and furniture: also of their marriages and fu-

A BYSSINIA, is interfected throughout with a great number of prodigious high mountains, between which are such dreadful precipices as must naturally strike No. 35.

terror intes the beholder. Some of them here very large plains on the tope severed with trees and other verdeave and affect faring, of excellent when; and fone of them are fo well cultivated as to produce most of the planipal accordingto of his.

Thefe flapscholder hills, which the nativest call Dusbus, appear at a different with a delightful variety of flapschome of various flapse. Some are of an equal frames of various flapse. Some are of an equal frames of various flapses. Some are of an equal frames of various the with the chiffel. Some spain fo decive the eye, that when you savive at what you suppose to be the top, you different it only to be the foot of another, no left different to her of the firming an attent productions, and the great danger and differently there is in aftending them, we ditail pratent the readst with an account of that called Guas, fittested in a lingulori of Tigra, which travellers who bone from the Red fea are abliged to cook, in aging to Dumba a when you have gained she top, it opens to year view a handforce spacious plain, is the midst of which stands another mountain of equal height; which you must also go over, after you have sufficiently refreshed yourself on the fertile and delightful top of the Guas. The afcent takes up about laif a days journey, and goes winding all the way up, the paths are very surrow, and cut into the side of the folid rock; and all the way you go persfirms you with a most be reached by the naked eye, but only offers a gust, which cannot be reached by the naked eye, but only offers a gust, which as design up and down these steep and narrow reads, chance to meet another in it way, they are in the greater danger, both man and beast; of being thrown down the preciples, and cannot without great rispo the turned to meet another in two ways, the being cheed by the adjacent rocks, and often heightened by loud wind; a swell as by the continual trampling of the men and beaste upon the rock; increases the horried din to such a degree, that one cannot year, and the

we may call the feat of this wonderful and supereminent chair, is pleasantly situated a town of the same name, whose inhabitants make a decent livelihood by helping the caravans to load and unload the beasts of burden a good part of the way of the craggy ascent beforementioned, in order to help them to leap from one sep to another; so that one would be surprised to see with what facility they make the beast sclimb and keep their feet, while they themselves convey their burdens from one stair to another, through every difficult part of this extensive ascent. Thus far the description of this remarkable mountain, as given by the authors of the Universal History. of the Universal History.

In this country, there are other mountains of much the fame nature as the above, particularly one fituated between the kingdoms of Amhara and Oleca. But the most confiderable of them all is that called by the natives Thabat Mariam, or more properly Tadbaba Mar-jam, whose furnity.

rate greatly exceeds all the reft, and is at the fame time very factions. This remarkable mountains, whose bottom is wasted by two large rivers defeending from it, that no its fammit leven handlome churches, the of which deare assument even ananome churches, one of which de-dicated to St. John, is exceeding beautiful, having been formerly the burial place of the Abyflinian empetors: within fide are at this time five monuments erected to the memory of those monarchs: the arms of Portogal are prefented on them, and they are covered with tapeftry. In the kingdom of Gojam there is a remarkable hollow

and high rock t directly opposite to which, at a small distance, is another much at the same height and bulk, so exactly placed by nature, that it echoes back a word barely whispered in the former with amazing force; and the joint voices of three or four persons speaking together, produces a found not inferior to that of a numerous army thenting

Here are many excellent rivers in this country: the most considerable of which, besides the Nile, which takes its rife here are the following: 1. The Tacazee, supposed to be the Aslabores of Ptolomy; it rifes in the kingdom of Angot, and, after many confiderable windings, first east, then north, then west, and then north again, discharges itself at length into the Nile: this river, though not lo large as that it runs into, is in many places very deep, and abounds with crocodiles and fea-hories, as also that remarkable fish called the torpedo, already described.

2. The Mareb, or Moraba, which comes down from the coaft of Habeth, or Abex, and runs mostly north-west through the kingdom of Tigra and other provinces, and at last falls into the Tacazee. 3. The Maley, which rifes in Damut, and, after a course of some score leagues to the westward, turns northward toward Narea, waters Bisamo and Fascala, westward of the Nile, and then dis-embogues itself into the White river. 4. The Bahr el Abiad, or White river, which springs in Bisamo, receives the Maley, and furrounds the kingdom of Changura on the west, dividing it from those of Gorham and Gagoa, and falls into the Nile about fixty leagues below Nubia. 5. The Zebee, which rifes in the kingdom of Narea, and is little inserior to the Nile: it takes its course first westward, then eastward, and after that fouthward; when it furrounds in some measure the kingdom of Gingiro into a peninsula, as the Nile doth that of Gojam; after which, a peninfula, as the Nile doth that of Gojam; after which, it continues its course fouthward, and at last empties itself into the Indian ocean. 6. The Howash, or Haowachs, which runs through the kingdoms of Gan, Fatagar, Bally, &c. and loses itself at last in the fandy defart in the kingdom of Adel. This river makes ample amends to the inhabitants for the want of rains, which feldom fall in this part of the country; and being, like the Nile, drawn into numerous channels, enrich all that traft, by watering their fields, and fertillaing their vallies; so that they produce most of the articles necessary for the preservation and subsistence of the inhabitants, particularly plenty of corn and cattle.

In this country, besides the above, are great numbers of smaller rivers, the chief of which fall at length into the Nile, and the rest into the Indian sea. The people cut canals from these rivers, to water their lands, which in some parts are made so rich and sertile, that they yield an-

Several large lakes are also here, the most considerable of which is that called by the Europeans Dambea, and by the natives Bahr Tzana, or sea of Tzana, from the chief island in it of that name. This lake is situated in the kingdom of Dambea, and is computed to be about thirty leagues in length, twelve in breadth, and one hundre leagues in length, twelve in breasth, and one nuarea and fifty in compass, exclusive of its deep bar, crecks, and other windings. The country round about it is plain, tertile, and pleafant; and the infide of the lake abounds with a multitude of islands of different sizes, the largest of which are inhabited by Abyssinian monks. About seven or eight of these islands contains the remains of large monafteries, which appear to have been formerly flately edifices; and among the natural productions of them are such fine citron and orange trees as are not to be equalled in any other part of the empire. One of these islands, and the most barren of them all, is called by the natives Dek, and is the place where state prisoners are usually con-

The Abysfinians fail on this lake in flat-bottomed boats. which they call tancoas : they are not made of wood, but of a kind of rushes that grow on its banks, each of which is about the thickness of a man's arm, and about two yards in length. They call these rushes tambas, the like of which grow also on the banks of the Nile, and are used

for the fame purpoles. Thefe laft are those which the antients called papyrus, and were ferviceable to them not only in making their boats, fails, and other tackle, but alfo their

paper.
This lake is attended with one great inconvenience, which is, that it breeds great numbers of fas horfes, which not only endanger the navigation, but deftroy the fifth, and fometimes make confiderable ravages in the land. However, the people that live on its banks make it their buffielt to deftroy these animals, not only to secure their corn and other grain from being destroyed by them, but also for the sake of their fieth, of which they are very fond; they likewise cut their skins into long straps, called allongas, which they use to scourge their horses with, instead of white.

With respect to the climate of this country, we may With respect to me classace or this country, we may reasonably suppose, from its fituation, that it is exceeding fultry; but the astreme heat is only felt in the vallies or low lands, for the hills, or ridges of mountains (most of which are of a prodigious height, as we have lately observed), enjoy an agreeable coolnefs; informech that there where the formation as lafe fultry than its ferved.), enjoy an agreeable coolness; infomech that there are some parts where the summers are less sultry than in Perugal; sud others, where the inhabitants are more assaid of cold than heat. This difference of climate is, however, frequently productive of violent forms of thander and lightning, which are sometimes so terrible as to be very destructive both to man and beast. These storms are also generally attended with excessive rains, which are frequently so violent, that their streams carry away with them trees, houses, and even hills, while all the rivers overslow. trees, houses, and even hills, whilft all the rivers overflow, and lay the country under water; and after the water re-tires, the lands and roads are so covered with a thick slimy mud, that they become for some time intirely impassable. But the greatest inconvenience that attends these rains, is, But the greatest inconvenience that attends these rains, is, that they insect the air with a dangerous malignancy; for, falling on a ground that hath lain dry and almost parshed up for a considerable time, they naturally raise such was clued on the considerable time, they naturally raise such as the such as the considerable time to the considerable time. They have properly speaking, three seasons are such as the summer which begins at the latter end of September; the summer which commences on the 25th of December; and the winter, which begins on the 25th of Ione. They

and difagreeable; and the other, which is much more moderate and pleafant, they call Hagai.

The winds also of this empire differ, as well as the climates: forme especially on the high lands and lofty mountains, are very refreshing and pleafant; while others on the low lands, where the sit is less agitated, are hot and very unhealthy. They are subject to one in particular, which is rather a hurricane, and is called in their language sengo, or screen. This is sometimes so violent, that it overturns houses, tears up trees by the roots, and is frequently very prejudicial to the shipping. But notwithstanding these inconveniencies, this wind has some good property, as it clears the air of the lower grounds, which would otherwise flagnate, and prove insectious not only to men, but to other creatures in general. men, but to other creatures in general.

The lands in Abyffinia are some of them so fertile as to yield two or three liarvefts of very good millet, barley, and wheat. They have no rye infead of which they make use of a small grain called test, which is of much the same taste and flavour, and yields very good nourishment. It is smaller than our poppy seed, and a little oblong; but at the force times the second in the same time the people in general live very poorly, and even nastily, and their cattle seem to fare much better than they do themselves. As they have no eats they feed their liories, camels, dromedaries, and other large beafts with barley; for though their low lands produce plenty of grafe fufficient to feed a prodigious number of cattle, yet they never make any lay, which is here the more necessary, as it must be frequently scorched up by the heat of the sun, and even when it is most plentiful, it is liable to be defroyed by the vast slights of locusts, with which they are sometimes insested, which cover the surface of the earth, and foon devour every blade of grafs, besides other vege-

A conflant verdure is faid to crown the trees of this country, and if the inhabitants have a fearcity of fruit, it is rather owing to their negligence than to any fault of the foil, which is capable of producing as great a plenty and variety of them as any country in Africa. They cultivate the black grape, peaches, four pomegranate, fugareanes and fome citrons and oranges: they have also several kinds of

figs, and among others one called enferte, which grows to a prodigious fize, and which Ludolph has endeavoured to prove to be the dudain of Mofes, which is rendered matrices and the second of the se

dance.

During the greatest part of the year, the banks of the rivers, are adorned with jasmines, roles, lillies, jonquils, and a prodigious number of flowers unknown in Europe.

This country produces a great variety of both domestic and wild animals: among the former are camels, dromedaries, hories, asses, mules, cows, sheep with great talls, and goats, which are bred in vast numbers, they being the principal wealth of the inhabitants. Their fat oxen are said to be of 60 monstrous a size, that at a distance they have been miltaken for elephants: whence it has been faid that horned elephants were common in Abysinia, and that horned elephants were common in Abystinia, and these horns travellers have represented as being so large, these horns travellers have represented as beins, so large, that one of them will contain above ten quarts of siquor, and say they are used by the people instead of pitchers and other vessels to carry water, wine, milk, or other liquids. But besides these large oxen, which are fatted for slaughter, they have an ordinary fort designed for labour and carriage, whose horns are faid to be so fost and slexible, that they hang down like a dead weight, from their heads.

Here is a very fight breed of libries, which, like those of Europe, are of various colours, but the black are the most numerous, and in the greatest efteent. These are only used for war and for travelling. In long iounties they

used for war and for travelling. In long journies they make use of mules, which are commonly very gentle, fure footed, and fit for the eraggy mountains; they have a quick easy pace, and in travelling are commonly preferred by the Abyfinians to their best horses.

They have here, among the animal of the camel kind, the camelopardus, which is faid to be much taller than an elephant, but as flenderly made as that is clumfy and unweildy; its fore legs are repreferred as of an amazing length, and though the hinder are fomewhat shorter, its balls it of the fore the removed that and many than the state of t belly is 6 far from the ground, that a tall man may easily pass under it without stooping. The neck is of a proportionable length toenable it to reach the ground, and freed upon the grass, which is the food it chiefly lives on.

hants are here extremely numerous, and none were ever known to be brought up tame in this empire. They make dreadful havock among the corn and other grain, much more being destroyed by trampling it down, than by

what they eat.

The zebra is one of the most beautiful animals in this country, it is of the shape and size of a mule, but more sleek and slender; it is here curiously marked with white, black, grey, and yellow streaks across the back from the neck to the tail. This animal is not, however, very common, fince it is so much admired as to be thought a present of sufficient value to be offered to the monarch. We have already described this creature more at large.

Lions, tygers, panthers, leopards, wolves, monkies, foxes, wild cats, civet cats, hares, rabbits, squirrels, and a variety of other animals, abound in this country.

Travellers who have visited Abyssinia mention a very extraordinary animal, which is probably one of the many species of monkies. They represent it no bigger than a cat; but as having the face of a man, with a mournful cat; but as having the race of a man, with a mountral voice. It lives upon the trees, where they fay it is brought forth, and dies: but it is fo very wild, that there is no poffibility of taming it; for when any of them have been caught in order to bring them up, all the care that can be taken of them will not prevent their pining themselves to death.

This place is flocked with a great variety of the feathered kind, both wild and tame, many of which are found in Europe; but those here excel several of ours in beauty and fize, particularly their partridges, which are faid to be as large as our capons; they have feveral kinds of them, as also of pigeons and turtle-doves. Among the birds which feem in a manner peculiar to this country is the ma-roc, or honey-bird, fo called from its particular inflinct in

their ravages.

The crocodile and hipopotamus, or river horie, are the largest and most destructive of their amphiblous animals, It is not eafy to conceive how this animal came to be called It is not eafly to conceive how this animal came to be called a horfe, to which it has fearce afty refemblance: its body is like that of an ok, but is twice as hig as that of a bull; its legs are short, and refemble those of a bear, it having large round see, with four claws in each; hit tail is like that of at elephant, and it has no more hair on its body than there is upon that animal. In the lower jaw it has foul, large teeth, two of them trooked like the two tusts of a wild boar, and the other strate, but standing forwards, and all of thest as thick as the horns of an ox: Its eyes and ears are small considering its bulk; but it has a wide mouth, great open postrils, and an upper lip like a lipo's. and ears are finall confidering its bulk; but it has a wide mouth, great open notifits, and an upper lip like a lion's, on which grows a briftly beard. He ipends the day comme ity in the water, and the night on land, when he feed or the graft, which is his principal food; his teeth, on account of their not being subject to turn yellow, are afterned more valuable than ivory.

The rivers and lakes abound with a variety of fish, among which is the torpedo, whose peculiar benumbing quality, on being touched by the finger while alive, we have already given an ample account of

what shready given an ample account of.

With respect to their persons, the Abyssinians are generally tall and well-shaped; their complexions may be called black, but some of them are inclined to the tawny, and to a reddish brown. Among them, the olive is reckoned the sinest complexion, and there to that the jet black, but the reddifth, and particularly the yellowifth brown, is eftermed the most disagreeable: They have re-gular and agreeable features, and their eyes are black, brisk, and lively: their noses are not flat, nor their lips

britk, and lively! their nofes are not flat, nor their lips protuberant, as attiong the natives of Guiney.

These people are stout and strong, brisk and healthy; and their labour, together with the temperance they use in eating, prolong their lives to a good old age. Most of them are so nimble and active, as to climb up the tallest trees, or steepest rocks, with surprizing ease and agility. The women greatly exceed those of Europe and Asia in strength and sprightlines; they breed easily, are delivered without help, and can take care both of the child and themselves, without the sfiftance of a nurse. Indeed, except where they are weakened by a sedentary life, this strength of constitution is common to all the women in these hot climates. thefe hot climates.

The men of quality wear a long veil, either of fine file or cotton, tied about the middle with a rich fearf; that of the citizens is much the fame, but of cotton only, they not being allowed to wear filk, neither is their cotton of the being answed to wear mix, letter is their cotton of the fame finencis. The common people have only a pair of cotton drawers, and a kind of fcarf, with which they loofely cover the reft of their bodies; and, till about a century ago, this was the general drefs of all the people, none but the emperor, the royal family, and fome diffinguished favourites, being allowed to wear any other; and this fcarf, or a piece of cloth, serves then to wrap themselves in at

night.

The habit of the women is allowed to be as fine and genteel as their circumftances will admit; for they are fac from being kept in so recluse a manner as those among the more eastern nations. Those of high rank usually dress in the richest silks and brocades, their upper garments are wide and full, not unlike furplices: they adorn their heads and hair an hundred different whys, and take care to have the richest pendants in their cars; besides they spare no expense in adorning their necks with the

most colly ornaments of chains, jewels, and other decorations.

The natives of both texes are extremely curious about the management of their hair, on which they lavish a great deal of butter, to render it smooth and shaining. This vanity is perlaps the more excuseable, as smore but the emperor is allowed to wear either a cap or, any other, covering for their, head, which, as they have a great deal of dile time upon their haids, is an inducement of them to best on a part of it in this amusement. Indeed their hair not being apt to grow thick and long, but mostly thin and frizly, some additional art seems necessary to keep it in tolerable order, so as to diftinguish each sex; and therefore while the men take souch pains in braiding it up in various forms, the women strive to have it hang loose in a variety of, curls and ringlets, except the foretop, which according to their rank, they take fill greater palms to adorn with sewels and trinkets.

Their drefs, upon the whole, is chiefly accommodated to the climate. The heat is so excessive, that they can hardly suffer any cloathes to touch the sight, which makes them contrive, during the heat of summer, to have them as light, and, to hang as loose as possible. Hence the cloth that covers their bodies is thrown loofely over them, their breeches likewise, and the women's drawers, are made wide and long; but in the cooler seasons they bring them much closer to their bodies, and the rich then appear in handforme vesses.

and loog; but in the cooler lealons they bring them much closer to their bodies, and the rich then appear in hand-fome vefts, open only to the waift, and closed with finall buttons; their have finall collars, and very long and firsit fleeves gathered in at the wrift. Some authors have militaken them for thirts; though according to the featon and their circumflances, they wear another light garment under them, next to the skin, made of thin taffety, sattin,

or damaik.

The Abydinians are not fo temperate in their drinking as in their food, especially at their feats, where after a full meal they usually drink to excess: agreeable to one of their proverbs. "Plant first, and then water." Their liquors are rendered more tempting than their meat. As they have plenty of honey, their mead is excellent; they have likewife fome other liquors made of various fruits, and a likewife fome other liquors made of, various fruits, and a third fort made of Barley without hops. These excelles are attended with no ill consequences, for they live peace-ably, and feldom quarrel among themselves for if they do, attent contests feldom go farther than exchanging a few blows; and in matters of consequence, they generally decide the controversy by umpires chosen amongst them-felves, or lay the affair before the ruler of the place. Here they are allowed to plead their own cause without the help of a lawyer: and when judgment is given, whether by the judge or the arbitrator, they without the leaft grudge, murmur, or appeal, lubmiffively acquiefce in it.

The men and women are faid in general to be witty and

ingenious; but those of the kingdom of Neres are deemed to exceed the rest in sense, bravery, generosity, affability, and other social virtues. They are extremely inquisitive and fond of learning; yet the people of Tigra and the neighbouring kingdoms are represented as being for the snot part perfidious, cruel, revengeful, haughty, and in-

conflant.

Though there is but little learning found among the Abyfinians, that defect is rather for want of proper means, than of capacity to attain it, for they are naturally docile and fond of knowledge, which is acknowledged to have been one of the principal motives that induced them to give the jefuit millionaries fo kind a reception at their first

coming amongst them.

An intire negligence appears here respecting the symmetry and architecture of their buildings; which is owing to their living in huts or camps, after the manner of their monarchs : fo that except a few old royal palaces, there are neither public fructures nor private buildings worthy of notice to be feen throughout the whole empire; for those they file houses would hardly deserve the name of those they file houses would hardly deferve the name of huts among us, they being huilt of clay and laths put together in the meanest and most slovenly manner, so as to be easily rafed, and as readily abandonded, when they think proper to shift their quarters. These buildings belong to the inferior fort, who follow the royal camp, and being unable to purchase tents, erect these huts with almost a little trouble as a large tent would require in reaction. as little trouble as a large tent would require in rearing. The very emperors themselves had neither castles nor pa-laces till the Portuguese missionaries came among them, but lived in their fastely pavilions, where all their nobles, guards, and other retinue attended them.

At the time abovementioned, these people were not only fuch strangers to all kinds of stately edifices, but even to

most cottly ornaments of chains, sewels, and other decorations.

Common against buildings, that when failer Pays undertions.

The natives of both goes are extremely chings about of this princes subjects knew so much as how to dig the of flift printer subjects knew so much as how to dig the stores out of the quarries, inties let's how to fquare or work them it to see the see them to the see the see them both state, and how to make the proper tools for the matoris, carpetrers, jointly, and in short, for every part of the work; and allo low to join the stores, which was performed with a red clay of so gluthous a nature, that it makes a good strong cement, without the help of quicks line. The people were filled with amazement, arbeholding not only a large supenduous structure, crecked with much strength and regularity, but even high and stately stories raised one upon another, for which they had not even a proper word, but shield them babeth laibeth, or house upon house; such was their ignorance of the instance of buildings in general.

buildings in general.

They have chiefly round tables, which among the rich are large enough for twelve or fourteen persona to fit round them; but they are very low, as the people, like the in-habitants of most of the countries in the east, sit upon them; but up are the major fort on the ground, or on math. Their furniture even among those of lingh rank, is mean; they have no fine paintings, tapettry, or other ornaments; and indeed, their way of living is in fome measure incompatible wild; any such finery. Even their beth beds are no better than couches, on which they lie upon hides or for furs wrapped in their upper garments. Indeed, some of their princes and persons of wealth purchase Indian quilts, with silk borders, which now come to them from the ports on the Red Sea "and these they spread upon their couches, chiefly in their outward apartments, that they may be seen by those who come to vitic them. But the poor mostly lie on mats, or a hide or two spread on the ground, which serve them instead of a bed.

ferve them inflead of a bed.

ferve them inited of a bed.

Here are neither inns, taverns, nor caravanleras for the entertainment of firangers. "These are rendered unnecessary, by that spirit of hospitality which prevaits amongst them. If a traveller flays longer in a village or camp than three hours, the whole community are ready to lodge and furnish him with proper necessaries for himself, his fervants, and cattle at the public expense. "He need only enter the first hut or tent he likes, and reveal his wants to the malter of it, who immediately goes and informs the chief person of the place; upon which an ox is ordered to be killed, and so much of it is sent to him as will be fufficient for him and his company; together with a proper quantity killed, and to meen of it is sent to mini as win to function for him and his company; together with a proper quantity of bread, liquor, and conveniencies for lodging. They are the more careful to supply him with all these, being liable to a fine of double the value of what they are bound to furnish him with, should he prefer a complaint, in case of their neglect, to a proper magistrate. However, this laudable culton is attended with great inconveniencies, as it gives encouragement to a number of idle vagabonds to abuse it, and become burdensome to others.

Manufacturers are not numerous among them; and though they are chiefly dreffed in linen and cotton, and their country is as proper for producing them as any in Africa, they are to indolent, that they raife no more than will just serve their present wants; and the less of either ferves them, as they make no use of any at their tables or for their beds, and a small quantity is sufficient to serve the common people as a covering for their bodies. The Jews are faid to be their only weavers, as they are in most parts of the empire their only fmiths, and work in all kinds of metal.

What joiners, carpenters, and malons are produced in this country may be cafily guessed, from the meanness of their buildings and furniture; and the same may be said of other trades, as taylors, shoe-makers, &c. from the plain-ness of their drefs. Indeed the potters, and makers of horn-trumpets and drinking-cups, are in the highest efteem. These and other inferior artists are incorporated into tribes or companies, and have their feveral quarters, neither intermingling nor intermarrying with the reft, the children commonly following their parents bufinefs. Gold and filver iniths, jewellers, and other curious ar-

tificers of the like kind, are altogether unknown to them, unlefs by fome of their works being brought by way of traffic or exchange, and thefe are only to be found among the great and opulent. The fame may be faid of their carpets, tapeftry, filk, brocades, velvets, and other coftly fluffs, which the Turks bring hither, by the way of the Red fea, and eachange for gold duft, emeralds, and fine horfes. The Jews, Armenians, and Arabisus are the common brokers between them and the Abyfinians, who feldom or ever travel out of their own country, or indeed are suffered to do fo by the Turks, who, being possessed of

who deed d of all the tea ports on the Red fea, enrich themfelves by this monopoly; and are extremely careful to prevent any trade from being opened into the country by any other nation, or of its being carried on by any other hands but those

of their own nation.

The Turks, besides the above articles, bring them several kinds of spices, in very small quantities, which they keep up at so high a price, that none but the richest of the Abyssinians can purchase them; in return for the Abyssinians bring them ivory, honey, we therefore, and krather in great quantities, for which they take what the hockers please to give.

We must not omit, that in Abyssinia the people have no idea of money; but in purchasing what they want, exchange one commodity for another. The most common article of trade exchanged by them is salt, by which they state the value of every thing else; and which in general answers the purposes of money, by being exchanged for such necessaries and conveniencies of life, as they have occasion for.

casion for. casion for.

Among the Abyffinians, marriage is little more than a firm bargain, or contract, by which both parties engage to cohabit and join their flock as long as they like each other; after which they are at liberty to part. The custom of meeting and blessing the married couple at the church door, is doubtless derived from the Jews; and it is faid that none

is doubtlefs derived from the Jews; and it is faid that none but priefts and deacons are married within the body of the church. In this part of the matrimonial fervice feveral ceremonies are performed.

Alvarez, who was prefent when the abuna, or patriarch, officiated at one of these marriages, says, that the bridegroom and bride were waiting at the church door, where a kind of bed or couch had been prepared for them, with his cross in one hand, and a censer in the other, made a kind of procession round them; and then laying his hands on their heads, told them, that as they were become a kind of procession round them; and then laying his hands on their heads, told them, that as they were become one stells, so they ought to have but one heart and one will. This was followed by a short exhortation suitable to the occasion; after which he went into the church, and celebrated divine service, at which they both assisted; that being ended, he gave them his bleffing, which renders the marriage valid, and then dimissed them. The more religious fort not only attend divine service, but receive the holy communion, either just before or after their being joined. What session and rejoicings attended the nuptials, we are not told. The liuband and wife after consummation, keep separate tables; or, if they agree to eat together, each brings their own provisions ready dressed, or sends them in before by their slaves or attendants.

Married women are permitted to appear abroad, and to

or fends them in before by their liaves or attendants.

Married women are permitted to appear abroad, and to vifit their friends and relations; and the princeffes of the royal blood have still greater privileges, and are faid to think no gallantries, however injurious to their honour, ought to be denied them by their hubands; in which liberties they are so far upheld by their own relations, that all complaints against them will not only be in vain, but all complaints against them will not only be in vain, but

also give offence.

However, this is far from being the case of those of in ferior rank, who are generally obedient and faithful to their hulbands. These are commonly obliged, especially among the meaner fort, to perform some of the most laborious offices of the family, and particularly to grind all the corn used in it, which the very slaves of the other sex will refuse to do: for as they have only hand-mills, they are forced to grind corn either for bread or drink every day, as they want it. alfo give offence.

are forced to grand corn either for bread or drink every day, as they want it.

Marriage between perfons in the fecond, third, and even the fourth degree of confangunity, is forbidden, and therefore they efteem it unlawful to have more than one wife at a time; yet many amongh them are faid to have a plurality of wives; thefe are indeed deprived by the church of the benefit of the holy communion; but they are, notwithstanding suffered to live with their wives without motherion, instituted as nolveramy is not despread by the flat lestation, inasmuch as polygamy is not deemed by the state detrimental to fociety

detrimental to fociety.

We have already intimated, that they admit of divorces, not only as a breach of conjugal fidelity, but for want of children, by reason of disagreement, bodily infirmities, and the like; in all which cases, the woman has the same privilege of abrogating the marriage contract as the man. In such cases, the dissistinct party applies to the bishop, and having obtained the desired divorce, which is feldom denied, if the party cannot be prevailed on to withdraw she suit, they next pention for a licence to contract a fresh the fuit, they next perition for a lience to contract a fresh marriage, which they very easily obtain. By these indulgences, frequent divorces happen, espe-

No. 35.

cially among those of high rank. But with respect to the grand motive, the breach of fidelity on either fide; they frequently compromise the affair; for as both the humand and wish ave their separate lands, goods, and chattels, they can make what is esteemed a fultable compensation for the can make what is effected a furtable compeniation for the transgreffior. But where such a compeniation cannot be agreed on between the injurier said the injuried, the woman is usually the most severely punished: she is condemned to lofe all her goods, and to leave her husband's house in a mean ragged drefs, and never to enter it more; carrying with her a sewing-needle, by which the may carn her live-lihood; and sometimes she is sentenced to lose her head of being here the series of the s hair, which is her chief orttament, and to be close shaved, except a single lock on her fore top. But the hulband, if he pleases, may take her again; or, if he does not, they may both marry. If the hulband be the offender, he is also liable to be punished, as well as the pattner, in his guilt; but a fine is generally laid upon them both, and appropriated to the use of the wise. Thus likewise the man who has debauched the wise, if convicted, is semented to pay a sine of forty cows, horses, suits of cloaths, &c. and if unable, he becomes the prisoner of the husband, till the debt be paid. If the injured hulband suffers him to go, he obliges him to swear, that it is to fetelt what will satisfy him; upon which the guilty person sends him a piece of beef and some liquor, after which they sometimes eat and drink together; and then, upon his asking pardon, the husband sirit remits one part of the sine, and then another, till at length the offender obtains a full acquittal. hair, which is her chief ornament, and to be close shaved. acquittal.

They have but few ceremonies in the interment of their dead; as foon as the person has expired, and the body is wassed; as foon as the person has expired, and the body is wassed; and wasping it in a sheet, place it on a bier. The bearers then take it, and hurry it away with such swiftness, that those who attend can hardly keep pace with them. When they come to the church, or church-yard, sfor they bury in either), they again ittense it, and throw plenty of holy water upon it. After the priest has read the fourteen sint verses of the gospel of St. John, they shoot the corpse into the ground, instead of letting it down gently; the priest repeating the service, and the grave is immediately filled up.

The relations bewail their dead many days; their laamentations begin early in the morning, and continue till the evening; the parents, relations, and friends, meet at he grave, together with women mourners, hired to accom-They have but few ceremonies in the interment of their

the grave, together with women mourners, hired to accom-pany the folemnity with their outeries, all clapping their hands, finiting their breafts, and uttering the most affecting expressions in a doleful tone.

expressions in a doleful tone.

The funerals of the emperors and grandees are performed with great pomp and magnificence, and are accompanied with all the infignia of their dignity, such as the horse, thield, lance, and other accountements of the deceased, which are brought to the place; offerings are made to the church, and the clergy, and provisions given liberally to the poor. This ceremony continues, according to the quality of the perion, from three to forty days; and is repeated a fresh on the anniversary; and, during the mournful solemity, they all pray to God to be merciful to the foul of the deceased person. But they use neither torches, nor any other lights, either in the church, or in the pronor any other lights, either in the church, or in the proceffian.

SECT. V.

Treats of the power, grandeur, and titles of the emperor of Abylfinia; bis camp, marriage, and revenuets great officers, forces, manner of trying caafes, laws, punishments, &c.

T is univerfally allowed, that the Abyffinian government hath, from its first foundation, been intirely despotic; and according to their annals, there never was a period of time, fince its first origin, wherein the princes of this empire did not claim an absolute right over the lives, liberty, and fortunes of their subjects, as well as an uncontrollable artheristic and leader their their subjects. troulable authority in all eccleliastical affairs, and it is

not known that there ever were any written laws to re-ftrain this exorbitant power of the monarchs, or fecure the liberty of the fubject againft his arbitrary mandates. The emperors of Abyfinia boat their being defeened from Menileheeh, the ion of Solomon king of Mrael, by the queen of Sheba. According to them, this princels reigned twenty-five years after her return from Judea, and was fucceeded by this son, from whom descended a series of princes in a direct line down to the year 960, when the

srown passed into another family, but was afterwards reflored tolt again. Hence the emperor still retains the
pompous titles of the Beloved of God, Son of the Pillar
of-Sion, Kinfman to the race of Judah, Son of David and
Solonton, and Emperor of the Great and High Ethiopia,
its kingdoms and provinces, &c. They likewife bear in
their arms the lion of the tribe of Judah, holding a crofs,
with this inscription in Ethiopic, "The lion of the tribe
of Judah is conqueror."
This monatch has a degree of respect paid to him by
liss subjects which amounts almost to adoration: those
who are admitted into his preferre fall used: the hefershim

who are admitted into his prefence fall proft .te befo and kifs the earth as they approach his person; and it is said, that even in his absence they never hear his name mentioned without howing very low, and touching the ground with their hand. The other marks of grandeur chiefly confift in the retinue with which he is attended; for he is not only attended by his own houshold and guards, which are very numerous, but by all the grandees and officers of the empire, who firive to outvie each other in the number,

empire, who thrive to outvie each other in the number, sichnefs, and fiplendor of their retinue, in the elegance of their drefs, and the magnificence of their pavilions.

We have already observed, that they chiefly live in tents; the emperor's campalways takes up a large space of ground, and makes a very splendid appearance, to which the regular disposition of the streets, and great variety of tents, ftreamers, and other ornaments, and especially the many lights and fires at night do not a little contribute; fo that the whole appears like a vast open and regular city, in whose center, or on fome eminent part of it, stands the imperial pavilion, which eclipses all the rest in grandeur, bulk, and height. Near to it are those of the empresses and royal family, and then those of the officers of the court, all appearing with proportionable, though inferior lufte; to these may be added those large and flately pavilions which ferve as churches, upon which they bestow no small expence, in adorning them both within and without. In thort, the imperial camp is of a vast extent, and yet good order is commonly observed in it. It has markets, courts of justice, and places where young persons of rank per-form a variety of exercises on horseback. But all the rest refembles only a great number of long extensive lanes, of mean ordinary talte, or low miferable huts of lath and clay, covered with fixw, which ferve the emperor's guards and common foldiers, befides a prodigious number of futlers, who fupply them with all necessaries.

If either through the want of wood, or provisions, in the different wars in which the emperor is engaged, it becomes necessary for him to remove his camp, the chief care is to choose a convenient and spacious spot, well furnished with water, and especially with wood, of which they make fuch havock, that vast forests are frequently laid bare in a short time; and they are amazed, and think it incredible, that such great cities as are in other pasts of the world, should be able without being in extreme want of wood to subsit so long a time in one place.

When the emperor is on his march, whether in time of eace or war, he is always attended by his chief ministers; he appears with a crown on his head made of pure gold, with filver lillies, intermixed with pearls, and fixed on a cap of blue velvet, on the top of which is a gold cross. Some time before he begins his march, officers are fent to the governors of every province and place through which he is to pass, with orders to clear and repair the roads, and open the woods through which his way lies, by cutting down branches of trees, the briars, and every thing elfe that may retard the march; and to provide ne-ceffaries both for him and the whole army, which travels but flowly, and by thort journies, on account of the multitude of women, children, and cattle, which follow the

At the time appointed, all the governors punctually come in with their quotas of corn, cattle, beer, and other liquors ; all which are distributed, with the utmost exactness, among the several ranks and orders of the army. these marches the titmerari, an officer who commands the van-guard, fixes his pike on the fpot he chooses for the imperial pavilion; after which, every one of the reft know-ing his own rank, and the ground he is to take up, easily gueffes by his eye where the tents are to be pitched; fo that the whole encampment is foon completed with furprifing readinels, and in to exact and regular a manner, that, notwithflanding their being fo frequently removed, every one knows the ways and paths fo well, that he can go to the tent of any one with the fante facility as he can to his own, or as we can find a ftreet, lane, or house in any of our cities, and towns.

They always divide the camp into feven parishes, each They always divide the camp into feven parifies, each of which has its minifier, deacons, and inferior officers, who affift in the inftruction of youth, in performing disvine fervice; and the other functions of the minifier's office. Whenever'an enemy Is near, the army is ordered to march clofe and in the best order, the van-guard and rear drawing up clofe to the main body; the wings spread themselves out, and the emperor keeps in the center with his guards, great officers, and ladies, a sufficient interval being left for subfoling the bacages. At other times living in glatto, great onteers, and naues, a tunicient interval ocing left for inclosing the baggage. At other times little
order is observed in their marches, only there is always a
number of warlike inftruments founding before, and a
particular guard marching round the emperor. He generally mounts and alights in his tent; but if he has occasion
a figurative who are well as guard invariable wales. to diffmount by the way, the guards immediately make a ring about his person, spreading their cloaths to keep him unseen; and it he difmounts in order to take rest, a couch, which is commonly carried for that purpose, is brought him, on which he lies on cushions covered with the finest filk carpets.

Though the crown of Abyssinia, is hereditary, and must I hough the crown of Nomina, is nereditary, and must be preferved in the fame family; yet the emperor, if he pleases, may choose any one of his children whom he thinks most worthy to succeed him. This probably gave birth to the severe custom, formerly observed in this enspire, of confining all the princes of the blood to the fortress, or rock, called Ambagnezen, which some have desirable of the severe and discussed in the confined as the confined as the severe and discussed in the confined as the severe and discussed in the confined as the severe and discussed in the severe and discu feribed as a fevere and difagreeable place of confinement, on the fummit of a lofty mountain; while others reprefent it as an earthly paradife, in which these princes enjoyed every bleffing except liberty, and were educated in a manner fuitable to their birth and descent.

These young princes were brought out of this abode to ascend the throne, in the following manner: after due consultation, and a first inquiry into the character of the prince, or after the emperor's having declared him his succeffor, which precluded all fuch confultations, the viceroy of Tigra went at the head of fome forces, and encamped at the foot of the mountain, whence, with a proper retinue of grandees and officers, he afcended it, and entered the cell of the prince elect with great formality, fixed the imperial ear-ring to his ear, as a token of his election : and inflantly the other young princes were fent for to pay him homage, and congratulate him on his accession to the

a:

The new emperor was no fooner come down from the mountain, than the governors and other officers met him at the head of the army, and all alighting together faluted him. After which, upon his giving them the fignal, they mounted again, and taking him into their center conducted him to the debana or imperial pavilion, with the found of trumpets, kettle-drums, with other mufical inftruments, intermixed with loud acclamations of joy. Here he alone alighted within, while all the reft did the fame without the parilion. He was foon after folemnly anointed by a prelate, and the rest of the clergy accompanied the cere-mony with plaims and hymns suitable to the occasion. Soon after he was invested with the imperial robes, and the crown set upon his head. The sword of Rate was then drawn and put into his hand, and he being feated on the throne, an herald proclaimed him emperor, and was fud-denly answered by the loud acclamations of the whole affembly and army, who came to pay him their homage.

Upon these occasions a kind of ritual, which perhaps

contained the duty of a good fovereign, was read and ex-plained before him, either by the metropolitan, by whom e was anointed, or by some of his substitutes, thence the new fovereign went and affifted at divine fer-vice, and received the holy communion; after which he returned, accompanied by his court and army, to the royal tent, through the joyful acclamations of the people, with the found of mufical instruments; and the folemnity was closed with feathing, and other tokens of joy, by all ranks

of people.

It is usual for the Abyssinian monarchs, like their ancient progenitor Solomon, king of the Jews, to allow themselves a plurality of wives; and not only imitate him in that, but in taking those of different religions, even Mahometans and Gentiles; and some have carried this so far, as to allow their heathen wives to have their own temples and idols; fo that on one fide might be feen the church of God, and on the other a Pagan temple. Others, however, have had fo much regard to their religion, as to cause those Pagan or Mahometan ladies to be instructed and baptized before they married them. The generality of thele princes, however, choose to marry the daughters of noble families among their subjects; while others, less ettentive to their noble extraction, pay a greater regard to the natural endowments of the mine, or the beauty

of the perion.

No fooner has the monarch pitched upon a young lady for his wife, than the is taken from her parents, and lodged with fome of his relations, in order to obtain a better knowledge of her good qualities. If he is fatisfied with her, he takes her with him to church, and having both received the holy communion, they are conducted to the imperial pavilion, attended by the whole court in therichest attire; and there the abune, or chief prelate, commonly performs the matrimonial ceremony; which being ended, the emperor, as at other times, dines by himself in his own apartnent, and the in her's, in company with a number of other ladies. The nobles and elergymen are treated at other tables in separate tents, with variety of meats and liquors; and the feaf generally continues among the male guests till all the liquor is drank, after which every one returns to refer

hters , lefs ntive The Abyfinian emperors used frequently never to appear in public, and they were seldom known to trouble themselves with the silairs of government, the care of which was committed to two ministers, called babluded, or favourites; but this custom has been long abolished, and they shew themselves to their subjects at least three or four times a year, though none is allowed to see then eat, except the pages who feed them; (for both they and all the great have their meat cut into birs, and conveyed to their mouths by young pages); and when they give audience to foreign ambassadors, they always fit behind the curtain,

great have their meat cut into hits, and conveyed to their mouths by young pages): and when they give audience to foreign ambaffadors, they always fit behind the curtain, concealed from the public view.

The imperial revenues feem to be very Inconfiderable, and chiefly arife from the four following branches: the first is the tribute paid by the governors of fuch provinces and kingdoms as abound with gold, which amounts to no more than about five or fix thousand ounces per annum, one year with another. The next arise from the fale of all the great offices of the empire, and the yearly tribute they pay him. The third branch confists of a tenth of all the cattle in the empire. By this last (which it appears was unknown till about the middle of the third century) every man that hath cows, is obliged to pay him one out of ten every third year, and the country breeding vast quantities of them, makes it by far the most confiderable branch: this is called the burning or branding tax, because the emperor's officers brand those with a particular mark which they set aside for his use. The fourth and last branch arises from a duty laid on every loom of cotton cloth. If it belongs to a Christian, he pays one piece of cloth; and if to a Mahometan, a piece of eight per annum. By this duty are gathered, in the kingdom of Dambea, and parts adjacent, about one thousand of these pieces, and in that of Gojam three thousand; besides about two hundred bissess, which are a thicker and stronger cloth, and all shaged on one side. The like tax is gathered in all the other kingdoms and provinces throughout the em-

pire, and the annual amount of it is very confiderable.

We shall now, as we proposed, give an account of the freat officers and forces of the empire; beginning with the chief officer belonging to the empire; beginning with the chief officer belonging to the empire, who is slided rash, or principal, and is generalissimo of all the forces; he has mader him two great officers, one of whom is called bellatinoche goyta, that is, lord of the servants, and is a kind of high steward; his power extends not only over tha azagues and umbares, or civil judges of the empire, but over all the viceroys, governors, and generals of the army. The other officer is stilled taliah, that is, lord of the leffer fervants; he is only a kind of under steward to the king's houshold, which is generally composed of persona of interior rask. These have in a good measure the management of the empire, and the regulation of the army, which is indeed far from being answerable to the extent of the country, as they seldom exceed forty thousand men, of whom between four and five thousland are cavalry, and the self soot.

rest foot.

With respect to their cavalry, about fifteen hundred of them are well fized, and properly mounted; but the rest are indifferently armed and accourted, having no other arms but spears and a buckler. The spears are of two forts, the one like our half pikes, and the other resembles a halbert or partizan. The staves of the former are slender, and the iron narrow like our pike, but the iron of the other is broad and thin; the first is to be darted at the enemy, and the last to be used in close fight with one hand, while the other holds a buckler made of a buffalo's hide, which is not all were thick and strong.

is usually very thick and strong.

The foot soldiers have each of them two spears; and

those of a higher cank have likewise swords, which they feldom use in battle, but rather wear them as a mark of dittinction, and in time of peace commonly holding them in their hands when in conversation, but if they walk, their farvants carry them under the arm. They have the hilt of gold, or sliver gilt, and the scabbard of velvet or rich damask, which is commonly red; these weapons are hiefly worm by wky of ornament. They likewise wear a kind of dagger under their girdle, and some also carry a club of some hard, heavy wood, with a dagger in it. This weapon they commonly use by darting at the enemy when they come to a close engagement.

Their foldiers are but little acquainted with fire arms, and as poorly surnished with powder and ball. The Abyse

Their foldiers are but little sequainted with fire arms, and as poorly furnished with powder and ball. The Abyfinians have not above one thousand five hundred muskets, and there are not more than three or four hundred musketeers in any action, who are generally so ill trained to the use of arms, that they never fire above once, for want of powder and ball. These they feldom have at their exercises, except a sew of the higher rank; who with their

musquets use a reft;
Their cavalry are all fald to be very good horsemen, and are all armed much like the foot: they mount and fit their horses settemely well; but in other respects, are very ill-disciplined like the foot.

The Abyfinians generally draw up their atmy with little regularity, so that the first shock frequently begins and ends the battle, one side turning their back, and the other pursuing; for it is so common to run from the enemy, that it is not considered as any disgrace; and they never endeavour to rally their troops, or indeed know how to go about it. This behaviour is intirely owing to their want of discipline, for they are commonly hardy, and enured to hunger, thirst, and fatigue, to which they are trained up from their ynuth; and as they continue in the field the greatest part of the year, they are equally capable of bearing the most excessive heat, the sharpest cold, and the most violent rains, with very little for their suffenance; and even this they procure by their labour from the lands the emperor allows to those in his service. Another disadvantage is, their taking their wives and children with them, and these are generally so numerous, that a camp of thirty thousand men always consists of above an hundred thousand persons, allof whom are obliged to live on the propuce of lands affigned for their maintenance. They have also a vass number of priests, who not only persorm the divine service in pavilions, but escort and attend the facred utensils with great promp and ceremony, and with vocal and instrumental music. The army is also attended by drums and kettle drums, larger and louder than ours, besides trumpets, handows, states, and other instruments.

trampets, hautboys, flutes, and other infiruments.

The viceroys and governors of provinces, as well as the military commanders and civil magifitrates, hold their feveral courts of judicature, in which all caufes, whether civil or criminal, are decided; only those of the martial kind have martial officers; who preside in them, and the others are tried by the civil judges, who alone are allowed to sit, while the planistiff, defendant, and the rest of the company stand. These, upon proper occasions; will even st upon the ground in the highway or open field, and try a cause brought before them, when every one who pleases may be present. They make use of no writing, nor keep any records, nor do they allow of attornies and councils to plead on the merits of the cause; but both the plantiss and defendant plead their own cause, the former speaking sirth, and the latter after him: each may answer and reply three or four times by turns; after which the judge, commanding silence, asks the opinion of the by-standers, and then prosnounces sentence upon the spot.

nounces fentence upon the foot.

In riminal cases, if the accused be east, he is either kept prifoner by the judge till he has made satisfaction to the accuser, or if the crime be capital, as in the case of murder, he is delivered up to the plantiff, to be punished at his diference, and that of the relations of the deceased, who either sell the murderer, or put him to death in what manner they please. But when a murder cannot be sufficiently proved against any man, all the inhabitants of the place where it was committed are severely fined, or suffer some bodily punishment for the crime.

They have three kinds of capital punishments: the first is, burying the criminal quite up to his mouth; then covering his head with thorns and briers, they lay a heavy stone upon them. The second is, beating him to death with thick clubs about two feet long; but the mich usual method, in cases of murder, is, running the criminal through with their lances, in which case the nearest relation of the deceased makes the first thrust, and the reserved.

follow in due order: even those who come after the cri-ninal has expired, generally dip their weapons in his blood, to shew that they are also concerned to revenge the murder of a relation. But what is still more barberous is, the feating and loud rejoicing made by those relations, from the time the criminal is delivered into their hands, till his execution, and more particularly on the night pre-ceeding it, to all which the prifoner himfelf is a witnefs. This often exafterates his friends to that degree, that it is not unulual for the death of fome of the most zealous prafecutors to follow that of the criminal.

History informs us, that the Abysfinians boast their having received both their kings and the Jewish religion from Solomon. Of this they have an ancient record, which gives the following account of this fingular event: "That a great and potent queen, named Azeb, or Maqueda, reigning in Ethopia, being informed by a merchant, named Tamerin, of the great power and wisdom of Idoman, travelled to Jerusalem, attended by a retinue of the greatest nobles and princes of Ethiopia, and with inimense trea-fure. There Solomon instructed her in the knowledge of the true God; and upon her return home, at the end of sine months, the was delivered of a fon, who was called Menilehech, and also David. This fon afterwards going to Jerusalem, to fee his father Solomon, was magnificently entertained by him, and anointed king of Ethiopia, by Zadoc, and Joath, the high-prieft; and when he was thoroughly infructed in the law of God, which he was to caule to be observed in his dominions, Solomon assigned several of the first-born of Israel to attend and ferve him in Ethiopia, and furnished him with officers and fervants belonging to the boule of Judah, with a high-prich, levites, and doctors in the law of Moses, the Jewish legislator.'

Though it must be allowed there is nothing in this ac-count very improbable, yet the same record adds many circumstances that are evidently falle; as, that the first born of Ifrael, at the inftigation of Azariah, the fon of Zadoc, went to Jernsalem, and setched the ark out of the Temple; and, being assisted by a train of miracles, escaped the pursuit of Solomon, and arrived with it in Ethiopia. However, it is not improbable, that the prince of Abyffinia might cause another ark to be made like that formed by Mofes; and that this flory might be afterwards invented, in order to procure it a more general veneration from the

They keep this ark so closely concealed, that even their monarchs are not admitted to the fight of it. Since the Abyssinian emperors have assumed the custom of living in tents, this precious relic is no longer confined to a temple, but always accompanies the royal camp, and is carried about with the greatest form and ceremony, at-ended by four presents in their pontifical habits, and about forty or fifty other priests, who chaunt before and after it; while one marching backwards before with a cenfer in his hand, offers incense to it all the way, till it be deposited in the grand pavilion, which is the church were the imperial

court affemble.

These people maintain, that they were converted to Christianity by the eunuch or prime minister of their queen Candace, or, as they call her Handake, who after his conversion by Philip, they say returned into Ethiopia, and gave his queen a full account of all that had passed; upon which that princes also believed the gospel. However, in the year 335, Atlansfuls, patriarch of Alexandria, ordained Frumentius bilhop of Axuma, and fent him to preach the gospel in Ethiopia. This he performed with great success; the discipline of the church was then fettled conformably to that of Alexandria; prietls and decouns were every subject ordained. Huseling articles deacons were every where ordained; liturgies, articles, and canons were fettled and confirmed; and the Abyffinian church was brought to acknowlege herfelf wholly Subject to, and dependent upon that of Alexandria.

It appears, however, that the Abyffinians retain many of the Jewish ceremonies, besides that of attending the ark; fo that their religion may be deemed a mixture of Judaism and Christianity. They circumcife not only the male but the female infants, which last is done by cutting off a small piece of skin from the clitoris. They abstain from blood, the remaie minants, which iait is done by cutting or a final piece of kin from the clitoris. They abftain from blood, thlings firangled, the flesh of swine, and the other animals prohibited by the Mosaic law. They use purifications and washings, after sertain definements. They oblige a man if his brother-die without male issue, to marry his widow, and raife up feed to his name; and they keep the feventh day fabbath. On the other hand, they believe the doctrincof the trinity, and that Christ shall come again in glory to judge the quick and the dead, when the just

shall inherit the kingdom of heaven, and unrepenting finners be sent into the miserable regions of darkness.

The people never enter their churches without pulling off their shoes or fandals. The divine service confiss of off their fhoes or landsis. I he divine fervice consists of a fet of prayers, pfalms, and hymna fuitable to the feafons, and for the most part performed with great decency and devotion, without any of that pomp and ceremony used in the church of Rome. They have no bells, but call the people to the church by the found of wooden hammers, which, they do the head of the people when do the the heading of which they drike upon a hollow board; at the hearing of which both the clergy and laity repair thither with a decent gra-vity, faying fome prayers all the way they go; and when there, neither flare about, whifper, nor fpit. The priefls and laity are separated from each other; the former are in a kind of choir, with a curtain drawn before them, which hinders the people who are in the body of the church, from feeing, though not from hearing the divine fervice. They have neither pews, benches, nor haffocks, but con-tinue standing all the time. In none of these edifices, whether sumptuous or mean, are any statues or carved images of any kind, except pictures: they will not fuffer any crucifixes, whether carved or cast in metal, to be seen in them, or to be worn about the necks of the people. Tha elergy are allowed to marry.
In baptifm, they use a three fold immersion, if the infant

be capable of bearing it; without danger of its life; if not, the three fold asperlion of water is deemed sufficient. The first immersion is only of one-third of the body, in the name of the Father; the fecond of two-thirds, or up to the breaft, in the name of the Son; and the last of the whole body, by plunging in the head, in the name of the Holy Ghoft. They then anoint the whole body, especially the joints, with the holy chrifm, and alterwards administer the holy communion to the child in both kinds, by dipping a bit of the confectated bread into what they call the wine,

and apply it to the lips of the child.

There is in every church a small room behind the east end, in which are the materials for making the communion bread, which is a leavened cake, that they confecrate every time they administer the Lord's supper, dividing the whole among the communicants, and having it fresh made every time. Instead of wine, from which they wholly abflain, they keep in this little room a fmall quantity of dried rainns, which they figureze and macciate in a greater or leffer quantity of water, according to the humber of the communicants; for they administer the cup also to the laity, and receive both the elements as fymbols and channels conveying to them the benefits of Christ's death. They do not admit laymen and women to come up to the altar to receive, but administer it to them at the door of the choir; nor do they oblige them to receive it kneeling, but in a standing posture.

The Ahyffinian clergy are little verfed in the facred writings, having neither expositors, commentaries, concor-dances, nor any of those helps which are in use amongst dances, nor any or those neigh which are in the atmosgre us, except a few homilies upon fome felect parts of the gof-pels, or upon a few theological points; but as they never preach or expound them to the laity, it is not furpifing that they are extremely ignorant; and in many particulars grofsly superfittions. Like the Roman catholics, they offer up their devotions and prayers to the faints, and have proper offices, fails, and fellivals to their honour. Though they do not believe a purgatory in the fame fense as the Greek and Roman churches, nor have any particular office for the dead, yet they make mention of them in their common service, and pray to God to absolve them from their fins, and to make them fit for the joys of heaven. They likewife keep a kind of anniverfary of their departure, on which they give alms according to their ability, to the priests, monks, and poor, to pray for the fouls of their departed friends.

In this church they receive the fame canonical books, both of the old and new testament, that we do; the former are translated into Ethiopic from the Greek version, called the Septuagint; and the latter also from the Greek text: they have likewife the apostolical constitution, which in many respects, differs from the work which passes by that name. This they believe to be of divine authority, and to have been written by St. Clement, whose name it bears. They have also the Nicene, but not that called the apostles

Like the oriental churches, they observe four lents, viz. the great lent, which lasts fifty days; that of St. Peter and St. Paul, which lasts forty days, more or less according to the nearness of their Easter; that of the Assumption of our Lady, which continues fifteen days; and that of Advent, which lasts three weeks. In all these lents they abstain from eggs, butter, chosic, and neither eat nor drink till after fun-set, which is never lates than, between fix and feven in the evening; and after that time, they may eat, and drink till midsight. Infleed of butter they use oil, which they extract from a fmall grain, and is far from having an unpleafant tafte. They faft with the fame frielines on all the Wednefslays and Fridays throughout the year, and on those days always go to prayers before they begin their evening meals. The very peafants leave their work to have some to perform their duty, before they break their fift. Meither the old nor young, nor even the fick, we excelled from fashing, except in some very extraordinary eases.

their feft. Neither the old nor young, nor even the fick, the excelled from fafting, except in fome very extraordinary eafes.

It may not be improper, befora we quit this fubject, to take fome notice of the different orders of the Abyfinlan detay; the most dignified of which is the abuna, or patriarch, who is whelly subject to that of Alexandria, as all the reft of the clorgy are to him. His office is very lucrative; for having no bishope under him, nor any other person to contract blim, he dispose of all benefices, which bring him great emolument. He has likewise the sole privilege of ordaining, which also produces a considerable income, sew being received into holy orders, without a previous offering to obtain them admistance. Besides these advantages, he has also certain lands assigned him in the kingdoms of Tigra, Gojsm and Dambea. The first of these is computed to being him in forty or fifty ounces of gold per annuar; shose of Gojam and Dambea afford him a more shan safficient quantity of provision for his tables, the remainder of which he disposes of for his own prosit. To these says be also added, a kind of public gathering of salt and cloth, which is annually made for him throughout the empire, and amounts to a considerable value, all which put together make a very large income; and the more says the emperor has exempted the lands from taxe.

The Debarans are the acut order of ecclessatics; and these are held in great esteem! They are neither priests store descones, but a kind of Jewish levices, or chanters, who assist at all public offices of the church, and whose head, or supreme, called barea guyes, hath the care and direction of the facered pavilions in the imperial camp. As these boast themselves of Jewish levices, or chanters, who assist at the sole, or supreme, called barea guyes, hath the care and sirection of the facered pavilions in the imperial camp. As these boast themselves of Jewish levices, or chanters, whe fongs, dances, and beating of drums, to mitter the fervice of the Jewish tabernacl

it till noon.

The next in order are the komos, and in point of dignity follow the abuna. Every parochial church hath one of thefe, who is a kind of hagumenus, or archipreflyter, and hath all the inferior priefts and deacons, as well as the fecular affairs of the parifu, nuder his care and government; and as they have no bithops over them, they prefide in chief at divine fervice, ditribute the feveral offices of the inferior and are not provided in the first and the second of the inferior and provided the second of the inferior at divine fervice. amer as only pervice, different the leveral offices of the inferior clergy, and reconcile their disputes. The office of the inferior priefts, is, to supply the place of the komos when ablent, and, if present, to assist him in baptizing, marrying, visting the sick, burying the dead, and other parts of divine service.

parts of divine service.

The last order of the priesthood are the deacons, who likewife assist in performing religious duties though in a lower sphere than the priests; and both have their proper offices and vestments when they officiate. This order is conferred by L. : abuna on the emperor, princes, grandees, and even on their children; not that they may have the privilege of officiating as fuch, but only to affilt at the divine fervice, and receive the communion in the chancel

with the clergy, and be feparate from the laity, who stand in the body of the church by themselves.

The abovementioned orders are allowed to marry, even effer they have been ordained priests. Their fons also are permitted to succeed them in their ecclesiastical benefices. parmitted to fucced them in their constitution between the abuna, exceeding poor, informed that they are obliged to apply themfelves to labour and induftry, but chiefly to farming and paffurage; all which renders them loss respected than the clergy in other countries, especially as they wear no particular dress, or other mark of the priestly office, except a small cross, which they carry in their hand, and bless the people with, and a fmall round cap of any colour, which they wear on their heads. Neither have they the privi-leges enjoyed by priefts of many other countries; for should they commit any thing derogatory to the laws of their country, they are liable to be punished by the lay manifracy, in the same manner as secular persons.

The Abylinian churches appear for the most part to have been formerly large and elegant firultures; but they are new fo decayed, that it is impossible to form a proper idea of their original magnificence. The following ones are the most diffugulified, and chiefly claim the attention of all the curious: namely, St. Emanuel, St. Saviour, St. Mary, the Holy Crois, St. George Golgotha, Bethlehem, the Martyra, Marconco, and Lalibela. However increadible it may appear, yet certain it is, that these ten churches were all cut out of a folid roak, by dint of the hammer and chiffel. The last of them bears the name of their founder, who, being defirous of having them executed, fent for a number of yorkmen from Egypt; and so expeditionly was the undertaking carried on, that it is faid the whole was completed in twenty-four years. A floor times confidering the stately manner in which they are conflicting the stately manner in which they are conflicted.

windows pillars, arches, channels, &c. and also the number of them.

There are, besides the above churches, many monasteries in Abyssinia, most of which contain two chapels, one for the men, and the other for the women; but how they came to be introduced, and of what order the first sounders of them were, is not known. At present there are only two different orders, who are called by the names of their sounders, namely shose of Taklo Haymanout, and of Albs Euclatius; the former a native of Ethiopia, and the other of Egypt. All the monks belonging to these monasteries live in a very recluse and abstemious manner: their cells are very mean, being built only of clay, and covered with stream, and their furniture within is equally despicable; they lie only upon mats on the stoor, and follow every thing that is antiwerable to a monastic life. To what we have already said concerning their fasts, it may be necessary to add, in this place, that in their work of mortification they are peculiar to themselves, for, instead of those practiced by the monks of other countries (which perhaps rather stimulate than damp the slessly appeties, they plungs themselves into the coldest rivers, and continue in them, with the water up to their chin, for several hours together, and this kind of mortification they practice even in them, with the water up to their chin, for several hours together, and this kind of mortification they practice even in them, with the water up to their chin, for several hours together, and this kind of mortification they practice even in them, with the water up to their chin, for several hours together, and this kind of mortification they practice even in them, with the water up to their chin, so several hours together, and this kind of mortification they practice even in them, with the water up to their chin, so several hours together, and this kind of mortification they practice even in the coldest weather. They have all of them the privilege of carrying a cross in their hands, and blessing them several bec the flate, by the emperor himfelf.

SECT. VI.

The history of Abyssima, and the succession of their monorchi, from the reign of the queen of Sheba, to the present century, comprising a space of upwards of two thousand seven hundred

THE principal materials relating to the Abyffinian.

Initory have been collected by the jefuit missionaries while in this empire. It is less copious and more vague than the histories of most other countries; notwithstanding than the histories of most other countries; notwithstanding which, we hope our readers will find some fatisfaction in perusing the detached fragments they have transmitted to us. The antient records, from whence they have obtained these accounts, are preserved in the great church as Axum, and are digosted in the following order:

The queen of Sheba was the first sovereign of the Abyssinian empire. She came into Judes in or about the year before Christ 992, and of the world 3012. She reigned twenty-five years after her return, and left the crown to

Menilehech, her fon, who reigned in conjunction with his father twenty-nine years, and eighteen more with his for Rehoboam; after which he died, and was fue-

Sadgur, the fon of Menilehech, from whom proceeded in a lineal descent twenty-four princes; but the length of their reigns is not recorded, nor any particulars relative to either of them, except that in the eighth year of the last, (viz. A. M. 4004.) whom the chronicle calls Photon, our Saviour was born.

Thirteen emperors reigned from this period to the year 327, whose names, and the length of the time each reigned, are omitted; but it was in the above year that St. Atha-

nalius fent Frumutius into Ethlopia to convert the Abys-

rafius fent Frumutius into Ethlopia to convert the Abyffinians to Christianity.

The records, after the above circumstance, furnish us
with a remarkable account of three brothers who agreed
to reign jointly; their hames are, Atzsa, Atzsed, and
Amay; and it is said, that in order to prevent discord
among them, they projected a very strange expedient,
which was, to divide the day into three parts, and to hold
the reigns alternately, each his third part, or eight hours.

This was certainly a most uncommon mode of government, notwithstanding which, if we give credit to the
Abyssinian legends, it proved very successful; for if at any
time one of the brothers differed or fell out with another,
the third was ready to interpose, and act as umpire between the third was ready to interpofe, and act as umpire between

Several other monarchs fucceeded thefe; but we have not any account of their lives and reigns, only that in the three last of them, whose names were, Atado, Aladoba, and Alamid, great numbers of monks and anchorites cam hither from Egypt, with a view of propagating the Chris-

tian faith.

Tacena, was fucceeded by Alamid, who left the crown to Caleb, in whose time new tribes of monks came from Rum, and fettled in the kingdom of Tigra. This was about the year after Christ 521, and the timethat Justinian was emperor of Rome. Caleb was sometime at war with the Sabean or Homente kingdom; but at length totally subdued it by the defeat and death of the Jewish king Dunavas, whose crown he is said to have sent to Jerusalem; to be there suspended in the great church of St. Sepulchre, in memory of his signal success over that distinguished perfectuor of those who professed Christianity at that time.

Gabra Mesket succeeded Call and Christianity at that

Gabra Mesket, succeeded Caleb. He was a very peace-able prince, and it is said, formed an alliance with the emperor Justinian. His two next successors were Constantine and Fuzena; and after them fifteen more; all the de-feendants of Solomon. The last of these was named Del-Noad, who reigned till about the year 960, when the succession passed into the Zagean samily; at which time the usurpation, which continued for three hundred and forty years, commenced, by the infamy of a woman named Tredda Gabex, who, for her impiety, cruelty, lewdnefs, and other enormous vices, was otherwise called

Escat, or Firebrand.

This woman formed a plan not only to destroy Del-Noad, the then emperor, but also the whole imperial family; and this the concerted in order to raife a fe whom the had by the governor of Bugns, to the Ethiopian throne. So effectually did the fucceed in this diabolical plot, that only one of the whole family cleaped, who fled for fecurity into the kingdom of Xava, where his posterity were preserved with the utmost privacy by the viceroys of that kingdom, who, during the whole time of the Zagean usufpation, were strongly attached to the line of Solomon. While the imperial throne was in the hands of the Za-

While the imperial throne was in the hands of the Zagean family, the following are the only princes of whom any notice is taken; namely, Lalibela, Degna Michael, Newaja Ohristos, and Naacu Luabo. The first of these eternized his name by many glorious actions, and particularly distinguished his piety in causing ten churches to be hewn out of a folid rock, for performing divine service, which we have lately described. The last of the above monarchs, was greatly extolled by his subjects, as a peace-able, magnanimous, and beneficent prince, and likewise of a very pious disposition.

are not certainly informed who the rest were that filled the throne during the Zagean usurpation, neither are we told by what means the crown was restored to the de-feendants of Solomon; but only that the Zagean family being driven from the throne about the year 1300, Icon Ambac, whose predecessors had been preserved in the king-dom of Xava during the usurpation, recovered the Abyssi-nian throne; and that it hath continued in the antient line

of Solomon ever fince.

The last-mentioned prince held the throne about fifteen years, and is faid to have been succeeded by fixteen other princes; but we have no particulars mentioned of either of them till we come to Zaara Jaacob. who was the laft. This prince began to reign in 1437, and was greatly effected as

a man of learning and deep penetration.

After the death of Zaara Jaacob, which happened in 1465, Boeda Mariam assumed the reigns, and, after reigning only ten years, died, and was succeeded by Alexander, whoreigned fifteen years and fix months, that is from 1475

During the reign of Alexander, Peter Covillan arrived

in the empire of Airyffinia, and was the first Portuguele that ever penetrated fo far into the interior part of the

country.

Amida Jeygon was the fucceffor of Alexander: he reigned only fix months, and then dying without iffue male, was

succeeded by Nahod his uncle, and the fon of Booda Mariam, which Nation his uncle, and the fon of Boeda Mariam, whe was confined, at the time of his accrifion, on the rocks of Amba-Guezen, where he had been placed by the eff of peror Alexander. He reigned thirteen years and nine months, dying about 1507, was faceceded by Euran Deaglel, or Lebna Denghel, who is better known by the names of Onga-Segued and David; which laft he took on his accession to the crown.

his accession to the crown.

This prince reigned very peaceably for some years after his accession, but was at length so harrassed by the cruel depredations made on his dominions by his Moorish neighbours, that he applied to the Portuguese for affishance rewhich gave them an opportunity of enlarging the endeavours they had heretofore made of propagating the Romish religion in the Abysinian empire. Ong Segued, by the great zeal he shewed for the cluurch of Rome, and the Pope's supremacy, had not only occasioned his subjects in general to hate hirr, but in particular rendered the whole Abysinian clergy his most inveterate enemies, and at last brought on those complicated troubles which occasioned his death.

Notwithstanding the affistance offered by this prince to the Portuguée, yet fo powerful were his enemies, fuch devalations had they made by their incursions, and so closely did they follow him, that he was reduced to the necessity of feeking refuge among some of the defart mountains, where he remained for some time; but being at length routed, was obliged to retire to the top of the Damo. Having fome of his braveft men with him here, he endeavoured to defend himfelf for fome time having now little more than the name, much lefs could the fupport the dignity of a monarch. However, all his troubles had a period in this fortress; for here, in the year 1540, he yielded up his crown and life, in the forsy-second year of his age, and the thirty-third of his rei which hebegan in 1507; the first twenty years of which had been as happy and prosperous as the last thirteen had proved distracted and unfortunate.

Claudius Segued, or Atgnaf-Segued fon of the former, fucceeded to the throne. His reign was but little more tranquil than the latter part of his father, being harraffed on all fides by the Gallas and Mahometans, and harraffed on all fides by the Gallas and Mahometans; and his whole empire must have been totally destroyed, had not the Portuguese interposed to prevent it. However, in the month of March 1559, he lost his life in an engagement with the Gallas, after a tiresome reign of little more than eighteen years. Leaving no male issue, he was succeeded by his brother's son,

Minas, who assume the name of Adama Segued, at

his coronation. This prince reigned only three years, when he was treacherously murdered by his own foldiers, in an ingagement against one of the revolted governors of the maritime provinces, in April 1562. He was fue-

Melech Segued, a wife and valiant prince, who was bleffed with a long, and, for the most part, fuccessful reign, though hardly ever free from wars, either against some of his rebellious subjects, or his formidable and inveterate enemies the Gallas and Mahometan Moors. After reigning a little more than thirty-three years he died in 1595; and as he had no fons by his wife, defigned a natural one, named Jaacob, for his fucceffor; but having changed his mind a short time before his death, he lest the crown to .

Zedenghel, his brother's fon, who, though in other respects a brave and noble prince, yet, on account of his too great fondness for the Romish church, unhappily proved the satal cause of a most bloody civil war, as many of the grandees took Jacob's part against him. Peter, the then abuna, was the principal leader of this rebellion; and, having absolved the Abyshnians from their oath of allegiance, they took uparms against him, whilst he, with the few forces he had left, and a small number of the Portuguese, venturing to give them battle, was deseated and killed, after he had reigned nine years, in October 1604.

Jaacob, on the death of Zedenghel his competitor, obtained the imperial dignity, but had not long enjoyed it, before he found himself strenuously opposed by the great grandfon of Etana Danghel, whose name was Susneus, or Socinius, a young prince, no less artful than brave. The contest lasted somewhat longer than two years, when it was decided by an obitimate engagement on the 10th of

March 160); in which Jacob and the abuna Peter lost their lives on the field of battle.

The crown of Abyssinia, then devolving to Sussinia, he intendistry manifested his strong attachment to the Roman catholic religion, resthistanding it had been very projudicial to severat of the education. In consequence of this, he gave such error was ensured the Popish missionaries, that great numbers slocked thitlest during his reign, who in all probability would have universally astabilished the pope's authority in this country, had not a stop been put to their progress by the unexpected death of that monarch, who took leave of the empire and the world in November 1632, and was succeeded by his son,

Britides, who assume attolics; and through the whole of his reign, proved as great an enemy to the missionaries, as his father had been a friend and patron to shem; infloment, that before his death, he totally extirpated them from the empire. He died about the year 1664, and was succeeded by his son John, who, on his sitemson, took the name of Aclas Segued. This prince, after reigning peaceably for sixteen years, sied studently, and was succeeded by his son John, who, on the second of the way was deterred by his son Jawlo, or Adyan Seguel, who ascended the throne in 1680, and, after reigning, unwards of twenty-six years, was dethroned by his son Tahlimenoth, who took possessing the strong of the crown in the year 1766, and enjoyed it but a fourt time, for the people having conceived a universal disguit against him for his persidy, cased him to be massacred about two years after by his own troops.

him to be maffacred about two years after by his own troop.

Tefilis, the brother of Taklimenoth, then usurped the throne. His resign, however, was little less permanent than that of his predecessor; his prime minister, named Oustas, the son of a sister of Jawso Adyan Segued, having dethrened him in the third year of his reign, and seized upon the crown. The Abyssinians, however, would not fuster him to hold the imperial dignity longer than till they sould raise another prince, named David, to the throne; but this was not effected till great shaughter had been made by both parties, as appears from accounts received from Mocha, dated June 1718.

David, having obtained intire possession of the throne, snjoyed it without interruption during the remainder of his life; and the revolutions occasioned by his accession

were the last of any confequence that have happened in this empire, his successors having from that time to the present regularly assumed the imperial dignity, and quietly enjoyed the honours annexed to it.

the honours annexed to it.

Having now given the most interesting particulars we could meet with, relative to the Abyssinian history; we shall, before we conclude our account of this country, give a succeinst account of the strenges the Portugues share made to establish their religion, the destruction it hath occasioned, and their final extirpation by the na-

it hath occasioned, and their final extirpation by the natives.

The Portuguese missionaries, resorting to Ethiopia at the latter end of the sistematic entury, when their countrymen found the way round the cape of Good Hope, had almost made good catholics of the Ethiopians, and persuaded their emperor, not only to acknowledge the pope's substitute from Rome. The government also consented to abolish their antient rites and ceremonies, and conformenticy to the ritual of the Roman church; but many of the nobility and governors of the provinces, with a major the nobility and governors of the provinces, with a majority of the common people, having the greatest abhor-rence of the popish religion, rose in arms against their em-peror, which occasioned civil wars in Ethiopia, that lasted upwards of one hundred years, wherein many thousands were killed; but the court, with the affifance of the jefuits, European engineers, and forthe Portuguede troops, were generally victorious over those of the ancient relibut could never subdue their obstinate perseverance in it; and feveral provinces revolted entirely from the em-

peror.
Their emperors, however, continued fill to profess the popish religion, and submit to the dictates of Rome; till at length the jesuits, under pretence of maintaining the pope's ecclefiafical supremacy, took upon them to direct almost all secular affairs, treating the prince rather as vicercy to his holiness, than sovereign of the country; and having erected and garrisoned several fortresses, were fending for European forces to maintain their usurped power; which gave such an alarm to the emperor, as well as to the nobility, that it was agreed at once to abolish popery, and restore their ancient religion. The Romish priests were here-

apon generally factificed to the fury of the people, and the patriarch very fistri why escaped out of the country, when his life! and wher three capachins afterwards carde as far as Squaquena, upon the Red fee, from whence they fent letters to the emperor of Ethlepia, to obtain leave to come into his territories again, that prince requested the Turkith baffa, who commanded on that country for no franks to come that way into his territories, and to fend him the health of those Capuchins; which the bassa did not only oblige him in, but fent him their skins stayed off, and stuffed, that he might know them to be franks by their cooliour, and priest by their shared crowns.

Thus have the jestility and sathers of the Romish church procured their superstition to be banished out of almost every country where they have, planted it; they have, indeed, by their skill in physic and mathematics, and an artistil address; instructed they have, planted it; they have a indeed, by their skill in physic and mathematics, and an artistil address; instructed they have almost the popular superstay structured the superstay of the supe

SEC Ton VIII while

Contains a description of Nubia, Abon, and Anian, their fitua-tion, extent, climate, veretables and advisionly valse the per-son, deep, customic, and manners of the inhabitants; with an account of the respective cities in these empires, and the ar-ticles of sheir commerce, &c.

UBIA, which is also called Sentar, is bounded on the north, by Egypt; on the east, by the Red fest on the fouth, by Abyfinia; and on the west, by the kingdoms of Tagos, Caoga, and the defart of Gorham. It is fituated between the thirteenth and twenty-feurth degrees of north latitude, and between the twenty-fish and thirtyof north latitude, and between the twenty-fifth and thirty-eighth degrees of eaft longitude, extending in an irregular oblong fquare. Its principal rivers are the Nile, the Nubia, and the Sira. The Nile overflows here at its ufual feafon, but not fo confiderably as in Egypt, "This country, though entirely under the torrid zone, is nevertheless in many places very fruitful, especially on the banks of the Nile, where the inhabitants, as in Upper Ferryt raif the water into the high banks are and the state of the Nile, where the inhabitants, as in Upper Ferryt raif the water into the high banks are and the state of the Nile water of the N

Egypt, raife the water up to the high banks by art and la-bour. Hence it produces some very fine fruits, with plenty of sugar-canes; but the natives are unacquainted with the of fugar-canes; but the natives are unacquainted with the method of making good fugar. They have alto a great variety of medicinal plants, roots, and drugs; with others that are extremely obnoxious, particularly a most dreadful poifon, fo quick and fatal in its operations, that, it is faid, a fingle feed taken inwardly gives almost instant death. These feeds grow on the top of a plant that refembles our nettles, and it is faid that considerable quantities of it are exported to the neighbouring countries. Nubia also affords gold, ivory, fanders, and other medicinal woods, and drugs. Here are likewise great numbers of dromedaries, camels.

Here are likewife great numbers of dromedaries, camels, horfes, and various kinds of wild beafts, as lions, tygers, leopards, crocodiles, vipers, and teveral kinds of ferpents, particularly one of a colour which to nearly refembles that of the dut or find in which is lives which it was a file. of the duft, or fand, in which it lurks, that it is not eafily avoided, and its bite is commonly attended with almost immediate death, and that of the most painful and dreadful

Most of the inhabitants are Mahometans; they are much given to cheating; are a stupid debauched people, and are said to have neither modesty, civility, nor religion. and are taid to have nevener moderly, civinty, nor reigion. Those that live in villages chiefly apply them to agriculture, except those who inhabit the more defart parts, who live upon plunder. Mr. Norden, who proceeded up the Nile, a considerable way into Nubis, found them base, treacherous, mean, and avarieous; especially some of the great, who scruple neither threats nor entreaties to obtain the treasures of those whom they dare not plunder by open violence and force.

The natives are fwarthy, and small of stature. Those

A. ..

of forgeries mark in the heart of the country was it well without florred; but the teastmon people only wrap a piece of linea cloth shout them, and the children go quiet, naled. However, surjess of quality were the look large robes of file or centers, and their of the weamen reach to the growing the file of the promise of the growing and other relative, filers; and brids; yet have arching on their least or feet but a kind of, facials, he for the women; of lower runks, they early wear a flore kind of personan, from the world on the kinds of personan, from the world on the file mass.

They fight to greater advantage on harlebuck then on least, for they are very expect herfesten; but, they possion for they are very expect herfesten; but, they possion have weepen, the Turks follows care to attack them; they are however almost continually at war with the inhabitants of Gorhaen, the defeat trafts on the fouth weft, agmaking excursions a far as to the Eed-Sea, in the saflery

page.

Mr. Pascot, a French physician, who palled through that exceeding the project of Ethiopia, fays, they are indiged the a gainet, who were a long role, suphroidered with gold and filver, inferned with a girdle of the finet copton. On his bend to has a verben of the fame, and never agreemen a public reithout having his face welled, with a fill grade of various colours. Begangers, who are permitted in my their humage on him, are obliged to pull off their litors, and knowledge to him, and obliged to pull off their litors, and knowledge to kind the ground, from or three times; and his subjects always, appear hardonized before him.

times; and his falpells always, appear barelonized before him.

The fame gradest solveyes, that the reyal paless in a large confusied pole of haddings, without any regularity, and farrounded with a high brich wall; it is, however, farmified, with twey shing, alterand curious, rich, and coilly; and the floors, after the manner of the eaftern 'nations, are covered with this finest fifty earpers. This prince applies himself five days in the week, to affairs of tate, and the administration of judice, at which time ha fit a at the head of his governit, and desides causes with the urnost prediction. What features of death is pessed on the criminal, it is intendiately succused by laying him flat on his back, and beating him on the breath, with a slick till be expires. It is also faid, that on the death of the king the grand council affectable; and have the inhumnity as cause all the brothers of their new foverigin to be put to death. However, the accounts we have both of this country and Abyfinial are me, entirely to be depended upon a tabught the author last scentioned from to have as much viracity as those writers among the Jefuits, who have decined the conservy of Abyfinia, and have endearoused with the semont malignity, to destroy his credit as an halforian.

The king of Nubia is a despotic, independent, and werful prince. Dangala or Dongola, and Sennar, the pital, are the chief cities of Nubia. ipital, at

espital, are the chief cities of Nubia.

Seinner is fituated in the footseath degree, morth latitude and twenty-mitting degree, east longitude. It flands on the eithern bank of the Nile, and is bounded on the fouth by Abyffinia, and on the west by Gagoa. It is pleasanedy fituated on an entirence, between which is a large plain; covered with a great variety of odoriferous fruit rees. It is about five miles in circumference; and fo populous, that the inhabituats are estimated at one himdred shoutand. The house in general are low, flat, and ill built: and those in ogeneral are low, flat, and ill built: and those in ogeneral are low, flat, and ill built: and those in ogeneral and ill built; and those in paticular without the city are truly wretched, confiding only of poor fmall hots made of wood and mud. Provisions of all kinds are here very wood and mud. Provinous of all kinds are here very plentiful and cheep; and a market is held every day in the centre of the city for the fale of them. The inhabitants make fine wheaten bread for firangers, but they chufe a coarfer fort feelr own eating. The inconveniencies attending this city are chiefly owing to the air being very unwholfome from the exceptive heats, which are also atto men and beats from the diforders produced by it.

A confiderable trade is carried on here, in all parts, be-

connucrance trace is carried on nere, in all parts, between this city and Dangala, as also from thence down to Cairo, and other parts of Egypt. The commodities they dispose of are gold, mpsk, elephants teeth, in return for which they receive spices, costons, filks, and other commission that the second of the commodities they receive spices, costons, filks, and other com-

modifies belonging to India.

Dengala is frusted in nineteen degrees, ten minutes, north latitude, and twenty-feven degrees, ten minutes, east longitude. It flands on the castern banks of the Nile, mear the confines of Gagos, and is about two hundred and fifty miles from Sennar. It is extremely populous, and is faid to contain at least ten thousand houses; but they are all infiguricant buildings, being very low, and made on mud and wood, and covered with firaw. The inhab

tante however in most of them very rich, and carry on a considerable traffic with Caire, and other parts of Egypt, where they exchange that ware controcilities, of gently fanders and mast, for arms, licen, croth, its.

There are four principal wayns in this kingdom, namely, Cush, Gools, Jaise, and Sola; but thay are all very triding, seither, of them contraining any thing wordry of particular distribution.

Most of the villager, of which there are many, are freazed on the banks of the Nils, and other rivers, for the convenience of wasteling the grounds. There are desired in the convenience of wasteling the grounds. There is not a footh of Nubla, but we know little of it elfe, than that it is chiefly a defart country, and that the inhabitants of it are generally at war with the Nublans, and other adjoining kingdoms. This people are very rude and ignorant, go about naked, and are chiefly by plunder. There is not a fingle village in the whole kingdom, or any thing that looks like one; encest a few wretched hust fituated along the White River, which divides this territory from Abyfinia, and fills into the Nile fonte leagues below the elty of Sensar, otherwise called Nubla.

We must not coult so mention, that the language of the Nubians is peculiar to themselves, but bears fone kind of affinity to the Arabic : it is not however university poken throughout the whole kingdom, for in the defolate parts, which are infinibied by a different kind of people, they feel a language that does not border either on the one of the other; so that these and the inhabitant of the more civilized parts of the country, can fearcely converte tegether at all.

The country of Aben, or Habeth, is only a narrow flip of land which extends along the western or African show of the Red fea, and was formerly a part of Upper Ethlepia, though it is at prefery fubject to the Turks, who leiged on all its bays and ports from Egypt to the Straits of Babelmandel, by which means the natives of Abyfinia ware accluded from all intercourte with the Red fea

Ċo

the wei

roi

flor ben

allo faid to abound with a great number of none, tygers, and other wild animals.

Along chain of inacceffible mountains fecure the weftern part of this track of land, and prevent the paffage of an army from Abyfinia into their country, there being only two narrow paffes, that of Suskin and that of Arkico; and even in their paffes the road is fo rugged and difficult, that there is no travelling above five or fix milet a day, and confequently they may be easily defended against a numerous army by a handful of troops.

The natives are a mixture of Turks, Egyptians, Ethiopians, Caffres, and Arabs.

Jusquam and Arkica, or Ercoco, are the chief towns i besides which there is a number of villages of fifterment. Suaquam is built on a small ssan of its own name, fituated in nineteen degrees forty-sive minutes north latitude, and is one of the best sea ports in the Red sea; the entrance into the harbour is by a narrow strait that reaches into a lake, in the midst of which is the island on which the town is built. All the house are of sone on which the town is built. All the houses are of stone and mortar, and here resides a Turkish governor under the basha of Cairo. Turks and Arabs are the principal inhabitants of this city.

The town of Arkico, or Ercoco, is fituated in fixteen degrees five minutes north latitude, on the coast of the Red fea, and is defended by a castle; but is small, and neither

fea, and is defended by a cattle; but is imail, and neither rich nor populous.

Several petty kingdoms, fearce worthy of notice: one of the principal of these is Dancali, or Dancaly, which extends beyond the straits of Babelmandel. The foil is for the most part day, sandy, and barren; for the whole country labours under a great scarcity of water, and that which they have is very brackish. The land produces little besides some hardy vegetables that serve to feed the goats, which are in a manuer the only quadrupeds in the country. Index fome narray vegetables that ferre to feed the goats, which are in a manuser the only quadrupeds in the country. It has fome ports in the Red fea, the principal of which is Ballur, and having fome falt mines, the produce of them is fent into other countries, and in return they receive the necessaries of life. Their king, though a Mishometan, is faid to be tributary to the Abyssaian monarch.

Anian extends along the fouthern coaft of the gulf of Babelmandel to cape guardafuy, and from the twelfth degree of north latitude to the equator; it being bounded on the north by the gulf of Babelmandel, on the eath by the Indian ocean, on the fouth by Zanguabar, and by Abyfinia and the unknown parts of Africa on the weft.

The climate being exceeding hot, all the seffern coaft is a mere fandy barren tract, producing neither corn, fruit, nor any animals, but of the wild kind, on which account it is generally called the Defart coaft, but the northern coaft, which is washed by the gulf, is a fertile country that producet plenty of provisions, in which the natives carry on a confiderable commerce. They have alfo an excellent breed of horses, which foreign merchants purchase in great numbers, in exchange for filks, cottons, and other commodities. modities.

commodities.

Along the north coast the inhabitants are for the most part white, with long black hair, and grow more tawny, or even quite black, on proceeding towards the fouth. Here are likewise many negroes, who liveaud intermarry with the Arabs settled in the country, and carry on a great commerce with them in saves, horses, gold, and lovy, which they commonly bring from Abysinia; where they are almost constantly waging war; and, by their frequent inroads into that kingdom, have rendered themseves a warlke people.

quent inroads into that kingdom, have rendered themseves a warbke people.

Several kingdoms are included in this trick, the most considerable of which is that of Adel, so called from its metropolis, which authors have not described; it is also named Zeila, from snother sea-port situated on the southers teach of the Red sea. This kingdom has the firstis of Babelmandel on the north, part of the castern ocean on the east, and the Gallas with the kingdoms of Dancali and urknown countries on the western part.

Zeila is scated on a spacious bay, to the southeast of the mouth of the straits of Babelmandel, in cleven degrees thirty-

mount of the traits of Basemanael, in eleven agrees ten minutes north latitude, and forty-four degrees thirty-five minutes east longitude from London. This city is extremely populous, the fireets are regularly laid out, and the houses built of free-flone. Its haven is very commodious, and it carries on a confiderable commerce, it haven the above therether the state of the commerce, it being the place through which the greatest part of the merchandize carried into the Abyssinian empire commonly affer, as well as those that are consumed in the kingdom

peffer, as well as those that are consumed in the handsof Adel.

The toil about Zeila is only a dry barren fand, and the inhabitants are obliged to setch fresh water at the distance of two days journey from the city, where the country

abounds with corn and fruit to such a degree, that the inhabitants cannot confume it all; on which accound the
people of the neighbouring places come thither to partials
provisions, and carry goods in return.

Barbors, the next city, is situated at the bottom of a
bay, on an island of its own name. It has been all along
a kind of rival in comperce with Zeila, and is no less reforted to by foreign merchants.

The island, which is almost contiguous to the contiment, is very fertile, and produces plenty of corn, fruit,
and cattle, great part of which is exported into other
countries.

and cattle, great part of which is exported into other countries.

The other parts of the kingdom of Adel being generally flat, and with very few hills, they have feldom any rains; but that defect is shundarthy fupplied by the many rivers that run through the country. One of these rivers named the Hawath, slows down from the Abyssinian mountains, and receiving some other rivers, takes a circuit before it enters the kingdom of Adel. This river is very broad and deep, but it has scarce run six miles through the country of Adel, before the inhabitants divide it into such a multitude of canals, that it is in some measure eshausted before it reaches tho sea. This renders the country so rich in grain, fruit, and other provisions, that part of it is conveyed into the neighbouring kingdoms.

They have plenty of wheat, barley, and will! and a variety of cows, sheep, and other beasts; but their principal traffic consists in gold-dust, elephants text. frankincens and negro saves, which the inhabitants of Adel carry to the port of Zeila, where they hever fail of meeting with merchants from Arabia, Guazara, and other parts, who give in exchange for them cloths of cotton, silk, and ments of amber and crystal, with dates, raisins, and other arricles of merchandize.

The natives are brayes and warilke, and sieht such since

articles of merchandizes

The natives are brave and warlike, and fight with fur-pring intrepidity against the Abyshuians, who are far from being equal to them in valour, dicipline, and offensive weapons, the Adelites being furnished by the Turks and Araba with variety of fire arms.

Araba with variety of fire arms.

Their drefs confilts of a piece of cotton cloth, which covers them only from the girdle to a little below the knee; the reft of their body being naked; but the king and nobles of both fexes wear a kind of loofe garment, which covers their whole body, and a cap on their heads; however, all the women are very fond of adorning their necks; arms, wrifts, and ancles, with bracelets of brafs or amber; and other decorations: and other decorations:

THE NEW HISTORY AND DESCRIPTION OF

E

SECT. I.

Treats of the name, fituation, and boundaries, climate, divisions, description of the river Nile, produce of the country, Sc.

THE name of Egypt, according to the clafficks, is de-HE name of Egypt, according to the clafficks, is derived from (Egyptus,) the brother of Danaus, once sovereign of this country. It is called Mifraim by the Hebrews and Arabs, which name it is supposed to have obtained from Mifraim, the son of Cham, and grandson of Noah. It has also been known by the name of Coptus, the capital city of Upper Egypt, from whence the natives were called Cophtis, as the Christians of Egypt are at this day; and, notwithstanding they are the most numerous, are looked upon to be the true descendants of the antient Egyptians.

Egypt is fituated on the north-east part of Africa, being bounded by the Mediterranean sea on the north: by the Red sea, and the Ishmus of Sues, which divide it from Afa, towards the eaft: by the empire of Abyffinia and Núbia towards the fouth; and by the defart of Barca to-wards the west. And extends from the twenty-fast degree of northern latitude, to the thirty-first and some odd milnutes beyond; and confequently must be about fix hundred miles in length from fouth to north; but the breadth in many places does not feem to be ness two hundred

The air of this country is not liealthful; the situation The sir of this country is not neathing; the intuation being very low, and the mud which covers the best part of it after the overslowing of the Nile, sending up a noisome vapour. The sandy defarts also, which enclose Egypt on three sides, render it excessive hot. Nor are there more than two forings in the whole country to refresh the parched inhabitants; so that they seem to be under a necessity of building their towns on the banks of the Nile. Accordingly most of them stand near the river upon rising ground AY. Remade by art or nature 1 and when the river overflows, appear like fo many idands, which have a communication with each other only by boats. It feldom rains here in the furniter, but in the winter, modern travellers affure us, it rains plentfully fometimes, efpecially in Lower Egypt 1 notwithflanding it was univerfully believed formerly, that it never sained here at all; which error, we prefume, was occasioned by the relation of fonce traveller, who had refided but part of the vearin Ecupse, and had us informed. refided but part of the year in Egype, and had me inform themselves of the different featons.

This country, as has been observed aiready, is usually divided into lower, middle, and upper Egypt. Lower Egypt is most part of it contained in a triangular ifland, made by the Mediterranean sea, and the two great brauches of the Nile, which dividing irself or fix miles below Old Color. Court parts of the contained in the contained of the country of the contained of the country Old Cairo, flows one part of it and the north-west, and falls into the sea at Rossetto, and the other branch towards the north-east, failing into the sea at Damieta, the antient Pelufium; but there is a great excit of country both to the eaftward and westward of this triangle, which is included under the name of Lower Egypt. But we thall fpeak more particularly of thefe divisions, when we come to deferibe the chief towns, and the antiquities con-

tained in them.

Dr. Pococke observes, that the foil of Egypt being sult of nitre, occasions vapours that render the evening air cold and unhealthful. On the small lakes in the low grounds a cake of salt is left on the surface after the water has evaporated, which they carry away for domestic uses. This nitre, and the fediment of the water of the bles. This little, and the fediment of the water of the Nile, renders Egypt fo fruitful, that they fometimes find it necessary to temper it with common fand. For within a mile of the mountains the country is fandy, and lies upon an easy escent, which the Nile never reaches, and on the cege of it are many villages; but where the mountains extend four or five miles from the Nile, there are villages in the midway between them and the river built on eminences raifed by art; and these resemble so many islands, from their being surrounded with water,

many iflands, from their being furrounded with water, during the flood.

The river Nile or Abanchi, which in the Abyffinian language fignifies the father of rivers, bath its fources, as is generally held, in eleven or twelve degrees of northern latitude, in the empire of Abyffinia: but whether the Portuguefe jefuits, as is pretended, or any other perfors have deteovared the very fountains it is flues from, is very much quatitioned, the country where it rifes, as fome of the native regard, being covered with vaft impenetrable woods. This river runs a courfe of about fifteen hundred woods. This river runs a courfe of about fifteen hundred miles from fouth to north for the most part, and a little miles from fouth to north for the most part, and a little below Cairo dividing itself into two branches, one inclining to the call and the other to the well, fails into the Me-diterrancan, the mouths being about an hundred miles afunder. . As for any other branches of this river our modern travellers take no notice of them, and probably those that have been mentioned by antient writers were only canals cut from one of these, particularly the canal which was made to convey the water from the river to Alexandria, feems in our maps to be laid down for one: however, certain it is, there are no other branches navigable at this day than those of Damieta and Rosetto. While the river is contained within the bounds of the ordinary channel, we do not find it is broader at Old Cairo than the Thanes at London, and in the drieft feafon of the year is fordable at London, and in the dreft feafon of the year is fordable in many places. In the upper part of the fiream there are feven cataracts where the water his in fleets from a very great height, causing a predigioul noise; but through Lower Egypt it flides along with a very gentle thream, and passengers are feldom suprised by tempers on it, as has been observed. The water is very thick and sauddy, especially when it is swelled by those heavy rains, which contains the suprise water for the same set of the same set. flantly fall within the tropicks in the beginning of frum-mer, and these are the occasion of its overflowing a low lands in Egypt annually. The antients, who were a quainted with those latitudes, were much perplet of the cover the true cause of the deluges but at this day and traveller observes, that this is the case of all rivers which have their rife or course within the tropicks; they break have their rife or couries within the tropicts; they was a their ordinary bounds annually, and overflow the laids for many miles before they reach the fea, particularly in Tonquin, Siam, Bengal, &c. And thefe also leave a prolificts mud which yields a vast increase, like that which the Nikelaves in Egypt; and though the waters of all these sivers be very thick, when they have flood some time, they are not unwholesome or unpalatable, and some esteem th

preferable to fpring water, on account of the long course they run in latitudes where the fun has so much influence,

There are great rejoicings annually in Egypt, when the river Nile rises to a certain height, for upon this depends the faultfulness of the sountry; and at the cutting of the banks to let it into their canals, from whence it is difficulted into their respective fields, is folemnised one of their greateft ferlivers. "The river usually begins to fivel in the month of May, and on the agin of June they publish in Caro, and other towns, by a seler, how much the water is increased."

One circumflance, however, belongs to this river, which of a peculiar nature. Other rivers being supplied by the detail, the ground is lowest near the banks; but as no water flows into the Nile in its paffing through Egypt, and as it is necessary that this river should overflow the land, the country of Egypt is generally lower at a distance from the Nile than it is nearly; and the hand feem; in most parts, to have a gradual defeent from the Nile to the foot of the hills, that may be faid to begin at those fandy parts stready mentioned, as being a mile or two from them, which are never overflowed, fince they rife towards the mountains in

a gradual afcent.

The catanets in Uppet Egypt, are fome of the most re-markable particulars in relation to the Nile. Several au-thors have visited them; one of whom observes, that, on thors have visited them; one of whom observes, that, on approaching them, he never faw manue difcover for rough a face as appeared in the country. Nothing is to be feen our face as appeared in the country. Nothing is to be feen our face as appeared in the country. Nothing is to be feen our face as appeared in the river, but rocks, on the well, the hills are either of fand or black rocks: above to the fourth, there feems to be a high trocky illand; higher up, rocky cliff appear on each fide; and below, to the north, are for many rocks, that little of the water could be feen. The bed of the Nile is crofted by rocks of granter, which in three blaces, at fome diffance from each other, divide the freem. places, at forme diffance from each other, divide the fiream, and make three falls at each. The first he came to was the least, and appeared not to exceed three feet: the ficond, which is a fixtle lower down the river, winds round a large rock, or island, forming two streams. This island is about twelve feet high towards the north, and we are told that at high water the Nile nurs over it. but succeeding the discussions are discussed in the same of the same o high water the Nile runs over it; but supposing the river to be then five feet higher below the rock, the fall will not exceed seven or eight seet. There are other rocks farther to the west; and a third stream, which has a greater fall an any of the reft.

We are not able, however, from this account, no formany idea of these cataracts described by the antients, and even by some of the moderns, who inform us, that under the twenty-third degree of latitude, the water of the Nile issue from several large openings of a high rock into its bed below, falling near two hundred teet with such prodigious noise as to exceed that of the firing of cannon, or the loudest claps of thunder. The water, in its fall, resembles a large white theet about thirty seet in breadth, which in its rapid descent forms a kind of arch, under which people may walk withous being wet; and this seems to have been forre not able, however, from this account, to formany deficent forms a kind of arch, under which people may walk without being wet; and this feems to have been formerly the amufement of the neighbouring people, there being faveral nieles and feats in the rock for the convenience of fitting down. There are alfo, under the arch made by the cafeade, a kind of platform, and forme fubterraneous grottes, into which the people used to retire, in order to cool themselves; but these are now become insacessible by the breaking in of the water from some fresh gaps of the rock. It is also observable, that the water, in its fall below, raifes a thick mist, which at a distance resimbles a cloud; and yet one who tells us he saw the fave the same constrained. fembles a cloud; and yet one who tells us he faw this cataract, affirms, that the natives thoot it with rafts; which circumstance we think very improbable, though it is cer-tainly conformable to Lucan's, antient description of it learned Dr. Shaw's accounts of the cataracts agr. with the descriptions of the judicious Dr. Posocke and Mr. Norden, and seem to discredit every thing that is mas-vellous in the above relation; for he assures us, that they are only ordinary falls of water, like those we frequently meet with in great rivers, where the stream is a little confixed: but (and which feems highly probable) may not the catacacts farther up the Nile be much higher, and more agreeable to the descriptions of the antients, than those trotal by these gentlemen?

Those authors, who have given descriptions of Egypt, cuttored with frame that its feetility is faither to be contented by the contented to the conte

I note auther, who have given descriptions or expre-contented with E; ing that its fertility is folely to be afcribed to the annual inundation of the Nile, have, by their filepee, given occasion to think that Egypt is a paradice on earth, where the people neither plow nor fow, but every thing is produced as it were spontaneously after the draining of the

waters t though few lands have more need of cultivation than those of Egypt.

The people have been taught, by necessity, to form various methods of raising the water, where the land lies

an

higher than the indudation rifes. This is done at Dumieta (where the Nile, when at its height, is not much below the furface of the earth) by means of a wheel made with boxes round its circumference, which receive the with boxes round its circumference, which receive the water, and as the wheel turns round, the boxes empty themfelves at the top into a trough made for that purpofe. Where the water is too deep to be raised in this menner, they put a cord round the wheel that reaches down to the water, but he end of which, are failtened earthen jars that fill as it goes round, and empty themfelves at the top in the fame manner as the other; both heing turned by oxen. But where the banks are high, the most common way is to make a befon upon them, and fixing in the ground a pole forked at the top, they place another pole by an axle to the top of it. To one end of this last pole tissy tie a heavy flone, and at the other a rope and a leathern bucket. Two men draw down the bucket into the water, and the weight brings it up, the men directing it, and turning the water into the balon. This befon is frequently made on the side of the bank, and running into another is raifed up higher with the fame labour; and in Upper Egypt there are fonterines feen five of them, one higher than the other, the uppermost only ferving to water the fields. However, in Lower and Middle Egypt, where canals have been dug, they have no occasion for all this labour. The water is conveyed by opening fluices, or breaking down banks, through canals as for than purpose, into large refervoirs which are made to furply the rower lands as there is occasion for it.

They founterines also near Cairo use leathern weldes,

which are made to highly the lower lands as there is occafion for it.

They fornetines also near Cairo we leathern wellels,
and an hydraudm machine called the Persan wheel to pour
writer into the cause; and very ingenious methods have
been invented to retain the water upon the ground till fufficture tunidity is imbibed, and the foil thoroughly fosked.
The grand Signor is not intitled to his tribute till the cause
is opened at Grand Cairo; and when the balla openel
it he people refuse to pay tribute, unaris the waters are fixteen
cubits high.

With respect to the natural history of this country, we
must first observe, that Egypt naturally produces sew vegetables, most of the tender plants being destroyed by the
heat and inundation; but where the Nile has overslowed,
and the land is plowed and sown, it yields a great increase.
Egypt, which was anciently the granary of the Roman en-

Egypt, which was anciently the granary of the Koman en-pire, flill produces great quantities of wheat, rice, barley, beans, and other kinds of pulse, with which the neigh-bouring countries are fupplied; bofides fugar-canes, of which fome fugar is made; and likewise melous, dates, figs,

cucumbers, and other vegetables, which the people eat in hot weather as a cooling food.

not weather as a cooling tood.

Upper Egypt (upplies most parts of Europe with fenna; and coloquintida grows wild in the fandy grounds: but as Egypt has no common grass, they supply the want of it by fowing the land with clover, without plowing. The spring corn and vegetables we sown in November and December, and December and Decemb as foon as the Nile is fallen, and foorer where that river does not naturally overflow the ground. This corn confifts of wheat, lentils, and barley that has fix rows of grain nits of wheat, tertuits, and oarrey that as he tower of gain in one ear; and with this they feed their horfes, for they have no oats. They fow beans for their camela, and their the people also eat green both raw and boiled. They have a kind of wetch little inferior to pease, with one large grain in each pod; they also plant an herb called nill, of which they make a kind of indigo blue, resembling that used in Europe.

Most of the trees in Egypt seem to have been transdoubtles exotics, as the cons, or cream-tree, apricots, oranges, lemons, pomegranates, cassa, cotton-tree, and mosch, a delicious fruit.

The papyrus is a production of Egypt, though not fo plentiful as formerly. This reed grew principally on the borders of the Nile, and ferved the statients for writing-

14.1

paper.

The most common trees in Egypt, are, the fount, which bears a key or pod used instead of bark in tanning of leather, the tamarik, Pharoab's fig. the sycamore of the antients, the palm, or date wave, and is another species of

the palm.

Four footed beafts, are not very numerous here: the cows are large and red, with fiber horrs: the natives make use of their oven to turn the wheel with which they raise the water, and to plow the land. They have also make use of their oxen to turn the water with which they raise the water, and to plow the land. They have also large bussiloss, which are so impatient of heat, that they will stand in the water with only their noses out to breathe; and when this convenience is not to be had, they will lie wallowing in mud and water all day like fwines.

They have a great number of beath of burden, particularly camels and dromedesies, and the Turks wat the field of the young ones as a most delicate diffs; but will not permit it to be eaten by the Christians, projectly that the breed may not be defined. The hories, especially those of Upper Egypt, are very fine ones; but that, nechase two shorts. They never trot, but walk wells and gallop with great speed, turn short, stop in a moreant; and are extremely tradable; but they cannot perform long journies, and are only sit to walk in traveilling. During the heat of summer, when there is no clover-graft, they are fied with chopped straw and barley. In Cairo all but the great ride on after, of which they have a fine large breed, and in that city there are said to be no less than forty thous fand of them. fand of them

and of them.

Great numbers of anteloper, are about Alixandela; they have longer house; and are more beautiful than those in other countries. The hares and foxes are of a light colour, but the former are not very commen. The types and the hyene are feldon feen; however, they have allo home of their here. Of the hards in Egypt, the oftelch, deserves the preference; it is called in Alabic ter-gimel, or the camel-bitd, because in its head, neck, and walk, it refembles the camela. This bird is common in the mountains fouth-west of Alexandria; its fat is fold by the Araba, and oled as an ointment for the rise mention, palfy, and all cold tumours. They have here a kind of large domestic hawk, of a brown colour, with a very fine eye, These frequent the tops of houses, where they may be feen with pigeons flanding close by them; but though they are not bitted of parsy, they eat flesh wherever they find it; the flatives never kill them, for they, as well as their ancestors, feem to entertain a verseration both for their birds and for cats. The ter-chaous, or messenger bird, would be thought very beautiful were or melletiger bird, would be thought very beautiful were it not so common ; it is almost as large as a dove, and is not only finely speckled, but has on the top of its head a tust of feathers which it spreads when it alights on the

ground.

They have also a beautiful white bird, called by the Europeans the field-hen; it refembles a stork, but is not half to large, and is seen about the fields like a same fowl. They have likewise a large white bird with black wings, shaped like a raven; but it is very ugly, and not at all thy: these last are called Pharaoh's hens, and live in the same manner

as the tame hawk.

as the tame hawk.

Great numbers of the bird called ibis, are found on the islands in the Nile; these were held in great reneration by the Egyptians, on account of their delivering the country from the multitude of serpents that breed in the ground after the retreat of the Nile. They are of a greyif a colour, with the wings and tail black, and resemble the craze.

The stock is held in the highest esteem and veneration when he had a stock of the stock of th

The flork is held in the highest esteem and veneration by the Mahometan; it being as facred among them as the bis was among the Egyptians, and no less profame would that person be accounted, who should attempt to kill, or only to hurt and mosest it. The great regard paid to these birds was at first, perhaps, less occasioned by the service they are to mossis since the since the profame of a variety of reptiles and infects, than from the folerant gesticulations they are observed to make whenever they rest upon the ground, or return to their nests: for they first throw their heads backwards, as it were, in a posture of advantion; then strike, as with a pair of cassants. These of adoration; then firite, as with a pair of caffanets, their upper and lower bill together, and afterwards profitate their necks in a fuppliant manner quite down to the ground; confiantly repeating the fame motions three or four times together.

together.

Here are also great flocks of wild geen of feveral kinds, wild ducks, woodcocks, fnipes, quails, &c., and eagles and valutures are among their birds of prey.

In this country are feveral forts of yellow lizards, among which is the worral, which is this to be affected by mufic. Dr. Shaw fays, he has feen feveral of them keep exact time or shaw mys, the dervices in their circulatory dances, torning when they turned, and ftopping when they ftopped. This animal, which is of the lizard kind, is four feet long, eight inches broad, and has a forked tongue, which it puts out like a ferpent, but it has no teeth, and is harmlefe, liying on lizards and flies. It frequents the grottos and caverns in the mountains on the west of the Nile, and is only found during the hot weather, as it always fleeps during the winter.

There are two species of vipers in Egypt, which are much esteemed in physic; they are of a yellowish colour like the fand in which they live, one with a kind of home, which have some resemblance to these of sails, but are of a horny fubitance; and the others like those in Europe.

that is faid to be formetimes two buildred pounds weight. The most delicate fifth is the hesser, which is only caught in Upper Egypt; it has a long narrow shout, and so small a mouth that one would imagine it could only live by sucking the juice out of the weeds on the ground. Here is a small fifth in Upper Egypt called the gurgur, which is about a foot long; its head is armed with a strong bone; the sin of the back, and those on each side under the gills, are alto armed with bone. The inhabitants believe that the crocodile is frequently killed by this fish. Many of the creatures described by the antients are unknown to the modent inhabitants of Egypt, particularly the hippopotamus, or river-horse-which is supposed to be a native of Ethiopis in the upper parts of the Nile; and the crocodile so rarely appears below the sirt cataracts, that the sight of it is as great an object of curiosity here, as to the Europeans; and though this creature was thought peculiar to Egypt, yet there does not seem to be any material difference between it and the alligators of India and America. They are both in the form of a lizard; are amplificant mixed. They are both in the form of a lizard; are amphibioss animals, which grow till they are about twenty feet in length, and have four fhort legs with large, feet armed with claws. They have a flat head; their eyes are indif-ferently large, and their back is covered with feates, of a fquare form, which, though extremely hard, are not proof

As many ridiculous and marvellous ftories have been told concerning the crocodile, fome of which have proceeded from travellers taking the most abfurd tales upon trust, and others have been the manufacture of their inventive faculothers have been the manutature of their inventor acut-ties, in order to impose upon the credulous "we shall there-fore present our reasers with the following description of one that was dissected from years since by the jesuits: "It was eighteen feet and a half, and the head and neck about two feet and a half ; the circumference was four feet nine inches in the thickeft part; the four legs had the fame parts and make as the arms of a man both within and without: the four-feet had five fingers, the two last of which had no nails, and were of a conical figure; the hinder legs, ineluding the thigh and paw, were two feet two inches long; the pawa, from the joint to the extremity of the longest s, were about nine inches, they were divided into four toes, of which three were armed with large claws, the longest of which was an inch and a half; these toes were united by a membrane, refembling those of a duck, but thicker. The head was long, with a little rising at the top, but the roll was flat, and especially towards the extremity of the jaws; it was covered by a skin adhering firmly to the scull and to the jaws. The scull was rough, and un-equal in several places; and about the middle of the fore-head there were two long cress, about four inches high; the fcull, between these two crefts, was impenetrable by a musket ball; for it only rendered the part it struck against a market ball, for it only rendered the part it fruck against a little white. The eye, in proportion, was very fmall, and so placed within its orbit, that the external part, when the lid was closed, was only an inch long, and the line running parallel to the opening of the jaws: it was covered with a double lid, one within and one without that within was folded in the great corner of the eye, and had a motion towards the tail, but being transparent, it covered the eye without hindering the fight. The iris was very large in proportion to the globe of the eye, and was of a yellowith retw colour. Above the eye the ear we's placed, which in proportion to the globe of the eye, and was of a yellowing grey colour. Above the eye the ear was placed, which opened from above downwards, as it were by a kind of fpring, by means of a folid, thick and cartilaginous fobfatuce. The nofe was placed in the middle of the upper jaw, near an inch from its extremity, and was perfectly round and flat, being nearly two inches in diameter, of a black, foft, fpongy substance, not unlike the nose of a dog. The jawa appeared to thut within each other: and the opinion commonly received is false, that the animal's under jaw is without motion, for it moves like the lower jaw in all other animals; while the upper jaw is fixed to the feull, and absolutely immoveable. The animal bath feull, and abiolutely immoveable. I he animal name twenty-feven cutting teeth in the upper jaw, and fifteen in the lower, with feveral void spaces between them; they were thick at the bottom and tharp at the point, being all of different sizes, except ten large hooked ones, six of which were in the lower jaw, and four in the upper. The mouth was sisten inches long, and eight and a half in the broadest part; the distance of the two jaws, when opened as wide as they could be, was fifteen inches and an half. The colour of the bedy was of a dark blows on the upper part, and of a whitth citron below, with large spots of both colours. From the shoulders to the extremity of the tail, it was covered with large square scales, disposed like parallel girdles, and fifty-two in number; but these near tits tail were thinner than the rest. The animal was covered not only with these, but all over with a cost of arthour, which, however, as we before observed, snight underneath the belly were of a whintis colour, and were made up of scales of divers, stapes, which were not fo hard as those on the back. The guilet was large when to hard as those on the back. The guilet was large when to make the stable of the same and was drawn up again the entrails were but short it proportion, being not so long as the animal's body. The tongue (which some they erroncoully, from Pliny, asserted this animal is without) consisted of a thick, spongy, soft sless, and was strongly connected to the lower jaw. The leart was about the fixe of a call's, and of a hright red dolour, the blood passes were no ladder, but set he kelders since the ways to had the nume to he connected to the lower jaw. The heart was about the fize of a call's, and of a hright red dolour, the blood pal'sing as well from the veins to the aorta as into the lungs; there was no bladder, but the kidnles sent the urine to be discharged by the ands. There were fixty two joints in the back-bone, which though very closely connected, had fufficient play to enable the animal to bend like a bow to the right and the left; to thist what we are told of ccaping a crocodile, by turning our of the right line, seems to be fabulous; nor is there any foundation for the flory that the test's and alluring voice of this creature will draw perforts to it, in hopes of devouring them; or that the little bird hotchios swes on the meat it picks from the crocodilest teeth; or that the ichnemmon, or rat of Pharoah; destroys this animal, by turning into his mouth, and cutting his way out again through his belly, though it must be confessed by a safety of the safety with great avidity.

The crocodilea will leap out of the river on a man or beaft that flands near it, and selze hint with their sore-paws; but if the distince be too great, they make a spring, and with their talls endeavour to beat down their prey.

We are told, that the most common method of killing crocodiles, its, by shooting them in the belly, where the stim is soft, and not covered with scales like the bick. The natives destroy them by making foste animals cry at a distance, and when the crocodile comes out; they thrust a spear, to which a rope is thed, into his body; then letting lim retrie into the water to spend himself; they afterwards draw him our, run a pole into his mouth, and, leaping spon his beak tie his jaws together. The people sy, they can hot size a man in the water, and therefore frequently cros

his back tie his jaws together. The people fay, they cani-not feize a man in the water, and therefore frequently croff the Nile by fwimming both by themselves and with their cattle, even above the first cataract, where there an agreed number of crocodiles

number of crocodiles.

They are not fond of falt water, but love to continue in rivers. They lay their eggs in the fand, having previously dug a hole with their fore-paws, to deposit them in. Having delivered some of their burden, they cover up the place with great care, and then retire. The next day they return again, uncover the place, ky about the fame number of eggs, and then retire till the enfeing day, when they repeat the fame for the last time, after which the whole is finally closed. As foon as the eggs are hatched by the is maily cloted. As toon as the eggs are natched by the warmth of the fun, which happens at the end of thirty days, the young ones begin to break the shell. The mother, by instinct, goes at the fame time to affist them by forasching away the sand. The moment they are at lieberty, the strongest move towards the water, and the rekmount upon the back of the mether, who carries them fafely to it; but the moment they arrive at the water, all natural connection ceases, for when the female has introduced her young to their natural element, she and the males become their most formidable enemies, and devour as many of them as they can; the whole brood featters into different parts at the bottom, and most of them are deftroyed. This animal is not only an enemy to its own species, but is at perpetual war with allother living creatures. Man is its professed soe, and kills it to prevent its depredations, as well as to eat it.

tions, as well as to eat it.

The field of the crocodile is but indifferent food, though the eggs are deemed great delicacies, and are fought after very except, not only by man, but by many beafts and birds of prey. The vulture is particularly fuecesful and deftroying its eggs, which they effect by the following stratagem: They hide themselves among the bushes and shrubs, about the banks of those waters where the crocodile inhabits, then watching till she hath deposited her eggs, they

and and ocothey go to the place at foon as the retires, feratch away the fand, and feath upon the spoil. At other times, when they have not diffeovered a crocodile's nest, they are equally defructive to the young ones while they are running to the

firudive to the young does while they are running to the river.

Having mentioned the ichneumon, it may be proper here to give some account of that animal, which, with respect to shape and colour, resembles a badger; it has a shout like a hog, with which it root up the earth and sand, the nose is prominent, and the ears short and round. It is of a yellowalft colour at all times, when angry: but if provoked it brilles op its hair like a porcupine, and then appears of two colours, which are white and yellow, that run in distinct streaks, The legs are black, the tail long, and the tongue and teeth like those of cat, It is an amphibious creature, can bear to remain under water moch longer than the otter, and is bold, active, and nimble.

Some of the inhabitants, particularly those who are more favage than in Lower Egypt, have several strange methods in crossing the Nile, which they perform without the least apprehention of failing a prey to the crocodiles. Two men, our author observes, were set on a trus of straw, while a cow was swimming before, one of them held in one hand her tail, and with the other guided the beast by a cord fastened to her horns. The other man, who was behind, seered with a little oar, by means of which he kept at the same time the balance. The same person likewise saw forme loaded causels crossing the river. A man swimming before held the bridle of the first camel in his mouth; the second cautel was fastened to the tail of the first, and the third to the tail of the fecond: while another than brought fecond camel was fastened to the tall of the first, and the third to the tail of the fecond; while another than brought up the rear, and took care that the fecond and third ca-mels should follow in a row.

stct. it.

Containing an account of the persons, dress, manners, tustoms, education, miligion, Ge. of the Egyptians.

A S this country is inhabited by a variety of people, namely, Arabs, Moors, Copts or Coptis, Turks, Greeks, Jews, Franks, &c., fo they materially differ in their perfons, manners, habits, and cultons. The Turks are tall, well-made, finely featured, fair, and dreffed after the Afiatic fathion. The Arabs are a fmall (warthy people, and refide a tent Anatom the country in people, and refide fathion. The Arabs are a small swarthy people, and reside in tents scattered about the country in a circular form, which they remove as inclination prompts, or decessive requires. The Moors are nearly as Swarthy as the Arabs, and in every other particular resemble the Moors of the Bombay states. The Greeks are in every particular like those of the Levant; the Jews in all respects resemble those who reside in the other parts of Africa; and the Franks may be characterized from the different nations to which they belong.

Franks may be characterized from the dinerem nations to which they belong.

The real Egyptiants, called Copts or Copts, who are defeended from the original inhabitants of the country, are a very Ill-favoured, bad-fhaped; effeminate, flovenly and dirty people. They are difagreeable to the beholders in themselves, and receive no manner of addition from their. drefs, for if the latter be ever fo good, they put it on fo aukwardly, as to appear very ridiculous to other people; and indeed the best drefs cannot remain long decent upon them, as they frequently use their long fleeves not only to wipe their hands and mouths after meals, but to blow their noies on at other times. The Coptic tongue is a corrup-tion of the anticut Egyptian, and is now a dead language. These people are faid to have been called Coptis, from their retiring to Coptus, and the adjacent places, during the first perfecutions.

The people of this country are naturally inclined to indolence, and take great delight in fitting fill, and hearsnootnee, and rake great delight in intengitil, and near-ing tales, and indeed appear to be always more fit for a quiet than an active life. This probably may be owing to their being enervated by the heat of the country. They are also envious and mischievous; which prevents their finiting and setting up for themselves. The Mahometan Inhabitants are either original natives, who live in the villages, or of the Arab race. The latter are divided into those who are also settled in the villages, and are for the most natural honest. Iarmels, usones, who live and cance who are also tettled if the villages, and are for the most part an honest, harmless people; who live in tents, and rehiefly subsist on their cattle, which are principally camela and goats, that seed on small thrubs. The Turks, who are thus named to distinguish them from the Arabs and the original natives of the country, are those sent by the grand signor, and the slaves. These are the governing party, and are remarkable for being most avalve. No. 36, No. 36,

ticlost, and very fond of power: the Turkish dress distinguishes them from the others.

In the country, most of the children go naked in furnimer, and many of them do so all the year round. This most simple dress of the natives resembles that worm by the antient Egyptians, who were closthed in linen, and over it has woollen garnent: this, it is not improbable, may be somewhat like the primitive manner of closthing. They wear a long shirt with wide steves, commonly tied about the middle. The common people have over it a brown woollen shirt; those of superior rank a long cloth coat, and over that a long blue shirt; but in the dress of ceremony, they wear a white shirt instead of a blue one, which, in Upper Egypt; they appear in on sef-tivial days, and when they visit their superiors. In the lower parts of the country they use a garment of the same form made of black woollen, which is sometimes less open serves and the people of rank have them of cloth adorned with furs. The Coptis and Arabs always wear large sleeves; but the Turks only wear them upon public occasions, at other times their steves are small and close. The people in general wear drawers, but the men do not tuck the thirt or under garment into them, though the women do. Some of the Turks, over their linen drawers, we's another pair made of red cloth, but the latter reaches to the ancles, and beneath them yellow focks are worn.

We have the following account of the true Mamaluck dress; which is the sing target the rate, and they wear the fort of shoes used by the Arabs when they ride. In other respects they dress like the Turks; and this is the dress of the flaves, as also of the great men, except on extraordinary occasions.

Among the descendance of the Arabs, and the native

Many occasions.

Among the descendants of the Arabs, and the native Mahometans, it is almost a general custom to wear in winter a white or brown blanket, and in summer a blue and white cotton sheet. This the Christians in the country also constantly use, wrapping it round their bodies over the left shoulder, and under their right arm, which is left free; and in some parts of the country no other cloathing it worm by any groups and the progreg fort.

iree; and in lone parts or the coontry no other cloatning is worn by young people and the poorer fort.

The Janisaries, Arabs, Egyptians, and Christlans here, wear slippers of red leather, while those of the Jews are blue. Within doors, the Turks and Christlans, out of frugality, wear a kind of wooden clogs, some of which are made very fine. People, in thort, are distinguished by the dress of their head and feet; and are fined, if they do not follow the custom: hence none but forcing Christlans. not follow the custom: hence none but foreign Christians are permitted to wear yellow slippers. The dress for the head, is either the turban, or red woollen cap that fits close to the head, which is worn among the Coptis and the Araba by the lower class of people.

The drawers, worn by the women, and most of their other garments, are of filk; all but their outward dress are shorter than the mens, and their sleeves hang down very low. They wear on their heads a white woollen skullcap, and over it an embrouered manuscreamer, which their hair is plaited. Over all they have a large black vall. As it is effected indecent to flew too much black vall. As at a separative cover the mouth and one eye, if of the face, they generally cover the mouth and one eye, if not the whole face. Women of ordinary rank have a large garment like a furplice, of blue linen or cotton, and before their faces hang a kind of bib joined to the head-drefs by a tape over the nofe: thus hiding all the lower parts of the face, and leaving the eyes uncovered, which gives them a

very odd appearance.

The women, among the vulgar, especially the blacks, wear rings in their noses adorned with glass beads, and have car-rings three inches in diameter, that come round their ears, and are adorned with stones; they likewise weat floor rings on their fingers; which among the ordinary people are of lead, while those in better circumflances have them of gold. The bracelets are generally of wire, but fome are of plain iron or brass, but others have them of gold finely jointed. The women, among the vulgar, paint their lips, and the tip of their chin, with blue, and those of superior rank paint their eye-lids black, and their nails and feet yellow; but both, in order to render themselves attractive, take great pains to make their appearance frightfully hideous to strangers.

In Egypt, education chiefly confifts in learning to read and write, which the Coptis generally obtain, together with book-keeping; but few of the Arabs and native Malnometans can read, except thoic bred to the law, or educated for fonce poft. The best education is given to the Cares with the first purchase the property of the control flaves, who often understand. Arabis and Turkish, and

frequently write both. They are alfo well fkilled in rising, thooting, and throwing the dart; which are effected great accomplishments.

accomplishments.

It may not be improper, before we defetibe the prefent flate of religion in Egypt, to give forse account of that used by the antient Egyptians, who were gross idolaters, and worshipped the most stabulous deities, furpassing all other people in superstition. They had a great number of gods of different orders and degrees, which we shall omit, as belonging more to sabe than history. Among the rest, two were universally adored in that country, and those were Ofiris and Iris, which are thought to be the sun and moon; and indeed the worship of those luminaries have given rise to idolater.

and indeed the working of those numbers have generally of idelatry.

Befides these gods, the Egyptians worthipped a great number of beafts; as the ox, the dog, the wolf, the hawk, the crocotilite, the ibis, the cat, &c. Many of these beafts were the objects only of the superstition of some particular cities; and whist a people worthipped one species of animals as gods, their neighbours had the same animal gods in abomination. This was the source of the continual wars which were carried on between one city and another; and this was owing to the safe policy of one of their kings, who, to deprive them of the opportunity and means of configurations. to deprive them of the opportunity and means of confpir-ing against the state, endeavoured to amuse them, by en-

gaging them in religious contests.

Every nation had a great acal for their gods. "Among us, fays Cicero, it is very common to fee temples robbed and flatues caried off; but it was never known, that any person in Egypt, ever abused a crocodile, an ibis, or a cat; for its inhabitants would have suffered the most extreme torments, rather than be guilty of fuch facrilege

It was death for any person to kill one of these animals voluntarily: and even a punishment was decreed against him, who should have killed an ibis, or a cat, without defign. Diodorus relates an incident, to which himself was an eye-witnefs, during his flayin Egypt. A Roman had inadvertently, and without defign, killed a cat; the exafperated populace ran to his house; and neither the authority of the king, who immediately detached abody of his guards, nor the terror of the Roman mame, could refeue the unfortunate criminal. And fuch was the reverence which the Egyptians had for these animals, that in an extreme famine, they chose to eat one another, rather than feed upon these

imagined deities.

Of all these animals, the bull Apis, called Epaphus by the Greeks, was the most famous. Magnificent temples were erected to him; extraordinary honours were paid him while he lived, and still greater after his death. Egypt went then into a general mourning. His obliquies were folemnized with fuch pomp as is hardly credible. In the reign of Ptolomy Lagus, the bull apis dying of old age, the funeral pomp, befides the ordinary expences, amounted to upwards of fifty thousand French crowns. After the last honours had been paid to the deceafed god, the next care was to provide him a successor, and all Egypt was sought through for that purpose. He was known by certain figus, which diftinguished him from all other animals of that species; upon his forehead was to be a white spot in form of a crefcent; on his back, the figure of an eagle; upon his tongue, that of a beetle. As foon as he was found, anourning gave place to joy; and nothing was heard, in all parts of Egypt, but fellivals and rejoicings. The new god was brought to Memphis, to take possession of his digsou was rought to the infalled with a great number of caremonies. Cambyfes, at his return from his unfortunate expedition against Ethiopia, finding all the Egyptians in transports of joy for their new god upis, and imagining that this was intended as an infult upon his misfortunes, killed, in the first flart of his fury, the young bull, who, by that means, had but a short enjoyment of his divinity. It is plain, that the golden east fet up near mount Sinai hy the Israelites, was owing to their abode in Egypt, and an imitation of the god apis; as well as those which were after-wards set up by Jeroboam, (who had resided a considerable time in Egypt) in the two extremities of the kingdom of

The Egyptians, not contented with offering incense to animals, carried their folly to fuch an excess, as to ascribe a divinity to the pulse and roots of their gardens: for this, they are ingeniously reproached by the fatyrist:

Who has not heard, where Egypt's realms are nam'd, What monfter gods her frantie fons have fram'd; Here Ibis gorg'd with well grown ferpents, there The crocodile commands religious fear: Where Memnon's statue magick strings inspire

With rocal founds that emulate the lyre; And Theber, fuch fate, are thy diaftrons turns? Now profirste o'er her pompous ruln mourns; A monkey-god, prodigious to be told! Strikes the beholder's eye with burnish'd gold; To godfip here, blue Trikon's fealy herd, The river process is there preferr'd: The siver progeny is there preferr'd:
Ther's reprogeny is there preferr'd:
Thro' towns, Diana's power neglected lies:
Where to her dogs afpiring temples rife:
And should you leeks or onions eat, no time
Would expiate the facrilegious crime:
Religious nation fure, and blest abodes, Where ev'ry orchard is o'errun with goda.

Several reasons are given of the worship paid to animals

by the Egyptians.

The first is crawn from fabulous history. It is presented, that the gods, in a rebellion made against them by men, fied into Egypt, and there concealed them'elves under the forms of different animals; and that this gave birth to the worship which was afterwards paid to these .

The second is taken from the benefit which these several animals procure to mankind; oxen by their labour, sheep by their wool and milk; dogs by their fervice in hunting and guarding houses; whence the god anubis was represented with a dog's head. The ibis, a bird very much refemted with a dog's head. The ibis, a bird very much refembling a ftork, was worthipped becaufe he put to flight the winged ferpents, with which Egypt would otherwife have been grievously infested; the crocodile, an amphibious creature, that is, living alike upon land and water, of a furprizing strength and size, was worthipped, because he defended Egypt from the incursions of the wild Arabs; the ichneumon, a kind of rat, was adored, because he prevented the too great increase of crocodiles, which might have proved destructive to Egypt.

After having thus given an account of the religious worthip of the antient Egyptians, we shall proceed to take notice of that practifed by the modern ones; and must first premise, that the prefer established religion in Egypt is that of the Mahometanism, which is here exercised in all respects the same as in Turkey, except that they are not quite so strict in observing it in the former, as they are in

It appears by the most antient and authentic records, It appears by the most entirent and authentic records, that Christianity was first planted in Egypt by St. Mark, who was the first bishop of Alexandria; then the metropolis of the kingdom. The juridistion of these prelates was settled by the council of Nice over all the churches of the diocese of Egypt, which included Libya, Pentapolis, and Egypt properly so called; and asterwards the Ethiopian. or Abysfinian churches, became subject to this patriarch

In the time of Severus, a perfecution against the Christians went through all the Roman provinces, but it was more violent at Alexandria than any where elle; and many Christians of the first tank in Egypt suffered martyrdom; particularly the two female confessors. Felicia and Sr. Perpetua. Churches were established in Egypt in the

third century.

The religion which is professed here by the Coptis, is that of the native Christians. The Greeks also are very numerous at Cairo and in Dalmatia; but there are not many of them in the other parts of the country, except a few merchants in the principal towns. The Christian refew merchants in the principal towns. The Christian re-ligion would be at a full lower ebb, did not the people fund it convenient to have Coptis stewards, who are well acquainted with bufinefi, and very expert at keeping accounts, which they do in a fort of Coptic characters that none but themselves understand. They are the protectors of the Christians in every village and town.

The Coptis, in general, are very irreverent and carelefs in their devotions; yet they fpend the night before Sun-days and festivals in their churches, which they no sooner cater, then they pull of their flippers and kifs the pavement. They pass their holidays in fauntering about, fitting under shady trees in summer, and under their walls in winter. They feem to imagine that religion confilts in repeating their long fervices, and in the strict observance of their numerous lasts. They use the liturgies of St. Basil, St. Gsegory, and St. Cyril; but the first, being shortest, in oftenest read. However, both the priests and people are extremely ignorant with respect to the doctrines of their religion; the former perform the service in the Coptic. language, which they generally understand very imperfectly, but they have books of their liturgy with an Arabic interpretation annexed to them.

reation annexed to them.

These people are faid to fast seven months in the year.

The children are espoused at seven or eight years of age, and consummate at eleven or twelve; and a little before that time they are circumcised. They easily procure divorces on accounted adultery, long sickness, or diagreement; and, at their desire, the patriarch, or bishop, gives them leave to marry again: but, if this be refused, they go to the cady, who will do it readily, and this is practised all over Turkey by the Christians.

The child at baptlin, is plunged three times into the water, and then the priest dips the end of his singer into the confecrated wine, and puts it into the child's mouth; but if the child happens to be sick, instead of being immersed in water, it is laid on a cloth near the font, and the prieft, dipping his hands in water, cubs it all over him; but if the infant be too ill to be brought to church, they then only anoint him, which they fay is baptifus fufficient under

that circumstance. The facrament is administered by them in both kinds on Sundays, Wednefdays, and Fridays, on all their numerous holidays, and every day in lent; and when the prieft, in reading the fervice, mentions Peter's cutting off the ear of the high prieft's fervant, the people cry out, well done Peter. They abfain from iwines' fieth, from blood, and things strangled; pray for the dead, and prostrate them-felves before pictures; but have no images, except acrucifix. They also administer extreme unction, and at the same

They also administer extreme unction, and at the same time give absolution, anointing all the people present in order to repel the evil spirit.

Notwithstanding the religion of the Coptis in many respects resembles that of the Greeks, yet they bear an implacable hatred to them; and have generally as little regard for the Europeans; which proceeds in a great measure from the endeavours of those of the Romish church to make converts of them; for they seldom distinguish between those of different religions, but include all under the name of Franks, the name they give to Christians in general.

those of different religions, but include all under the name of Franks, the name they give to Christians in general. Jews are very numerous in Egypt, and, as in times of paganism, they were afraid of drinking wine offered to idols; they ftill have here all they drink made by their own people, fealed up and fent to them. This customs they observe throughout all the east. There is a particular section among them who live by themselves, and have a separate stynagogue: these are the ancient essential who are regard to the five books of Motes, which they frietly observe according to the letter, without receiving any written tracording to the letter, without receiving any written tra-

ditions whatever.

In Egypt, the Turks are deeply tinetured with the doctrine of predefination, which not only infpires them with courage, but makes them discover great magnanimity, courage, but makes them discover great magnanimity, when thrown from the height of power into a state of poyerty and distress, faying, It is the will of God. They indeed behave better in adversity than in prosperity; for though persons in high rank assume a becoming grayity, and confer savours in a very graceful manner, they are greedy of money; for nothing is to be done with them without a bribe; and they are apt to fancy that the greatest villainies are expiated as soon as they have washed their hands and feet, which is their preparation for prayer. Religion is fathionable among them; they pray in the most public places, and when on a visit will call for water to wash, and then perform their devotions; and yet their

public places, and when on a vitit will call for water to wash, and then perform their devotions; and yet their words generally pass for nothing, either in their promises or protessions of friendship.

Opiam is less used by them than formerly. The Arabs feldom drink wine or strong liquors, and the common people pound leaves of green hemp, make them up into a pill, and swallow it, in order to render them chearful.

The peored Malonusten thinks himself superior to the

The poorest Mahometan thinks himself superior to the richest Christian; but the Arabs and people of the country behave with great civility; and, fitting about the firanger, grow troublelome, by being too curious and inquifitive.

The Turks indeed behave with great civility, either to ob-The Lurks indeed behave with great envirty, either to obtain prefents, or to discover your designs, in which they are very artful. They treat their superiors with the utmost decorum and respect, and one of great dignity readily holds the stirrupto ancider who is still greater than himself. Their falutation, as they pass, is, by stretching out the right hand, bringing it to the breast, and a little inclining of the head. The extraordinary salute is kissing the hand, and the stretch head. When they said to superior is the head and the said of the said the said of th

of the head. The extraordinary fature is kiffing the hand, putting it to the head. When they vifit a fuperior, they kifs his hand; but if he be greatly their fuperior, they kifs the hem of his garment. When they take any thing from a fuperior, or that is fent by a fuperior, they kifs it, and put it to their foreheads; and they put their hand to their turban, when they promife to ferve or protect you. The word made use of in these salutations is peace; but this

finaple word a Mahometan cannot be prevailed on to make use of to a Christian. Joining the hands, and bowing the head several times to him saluted, is the Arab salutation.

The Egyptians are very frugal in their provisions, as they do not often eat; and the tables of the great are of little expence, considering the number of their attendants, in which they are very extravagant; for they sometimes have fifty or firsty slaves, and many other fervants.

The Turks, at their meals, make use of a low circular, or octangular stool, instead of a table, under it a coloured cloth is placed on the ground, and over it a kind of table cloth is spread, large enough to come into the lap of the guesta. They give to people of condition a napkin before they eat, and another after they havedone, previous to their washing. A copper dish, tinned both within side and without, is put on the stool, and bread, pickles, sallads, &c. are placed round it. Two or three dishes are then served ap, to which, the company either kneel, or fit cross-legged. up, to which, the company either kneel, or fit crofs-legged. They use no knives or forks; they employ their right hand only at meals, and tear the meat with it in a beaftly manner, and the master of the house sometimes throws large pieces to fuch of the guefts as he would pay an extraordinary compliment to. The entertainment confifts of two of three courses, and coffee immediately succeeds. The second confists of pilu, soups, sweet ragouts, stewed dishes, pieces of meat cut small and roasted; and dulma, dines, pieces of meat cut imail and rosated; and duima, which is any kind of vegetable ftuffed with forced meat. The inferior kind of fervants, who are not flavrs, eat what is left; but the flaves have a meal of the coarfest kind of food provided on purpose for them. The Arabs, for their own family use only a skin by way of table cloth which they spread upon the ground; but when they have company, a coarse woollen cloth is substituted; when whole theep and lambs, boiled or roasted, are served up; and as some accountive had done. foun as one company has done, another falls to, till all is confumed by the guests.

confumed by the guelts.

An Arab prince, it feems, will often dine in the ffreet, before his door, and call to all that pafs, even beggars, and permit them to fit down to the repath, for the Arabs, being great levellers, put all persons on a footing with themselves; and, by such hospitable and generous behaviour, maintain their interest with the people; but the middle class among them, and the Coptis, live poorly.

At a Turkish visit, a pipe is immediately brought, and cossee; if it is a visit of ceremony, sweetmeats with the cossee; afterwards a therebet; and then according to the quality of the person, incense and rose-water, to persume.

quality of the perion, incenfe and rofe-water, to perfume. Some of them have music at certain hours of the day, and in others a man tells fome history, or an Arabian tale. Tradesimen have often their provisions brought to the coffee houses, and they having little or nothing to do, spend whole days in them. If now one poese to the house or trant of our property of the period of days in them. If any one goes to the house or tent of an Arab, bread is immediately made, and they serve up four milk, fried eggs and, oil to dip the bread in, a falt cheese like curds, and other things of a like nature.

The women in Grand Cairo are obliged to ride on affest the first of the control of t

The women in Grand Cairo are obliged to ride on affest because the men are weak enough to put confidence in an old prediction, which declares, that a woman on horfo-back shall sometime or other take that city. They are likewise obliged to have short stirrups, which would be difgraceful for a man riding on an as to make use of. Friday is the day appointed for women to go abroad, when they repair to the sepulchre of their relations, to adorn them with househ a wideness to have a lamo over them. them with boughs and flowers, to hang a lamp over them, and pour water upon their graves. Ladies of diffinction are attended by many female flaves, who follow them all mounted upon affes. The women, in riding, wear yellow

Here are public bagnios for men and women: the women more particularly meet in theirs, where they freely chat of the current news, and converse together without the least reserve.

The fautos, or fantonis, a kind of enthuliafts, are very much admired in Egypt. They are very numerous; fome of them go intirely naked; others have a rag or tkin of a beast round about their loius, for the sake of decency. Some lead a folitary life in holes or caverns, others run beg-Some lead a folitary life in holes or caverns, others run begging about the city: the laft are very trouble fome to every
decent per from who passes the streets, particularly the Franks,
who generally ride when they have occasion to go to any
distant part of the city: for these fantos will take hold of
the ass's neek, and keep with you until you give them
something. One of these, who begs between Cairo and
Boulack, with a brick or stone in his hand, will accept of
cathing pushes the dougrants in the stone of these a stone wall, for the sake of two or three paras.

fantos who go intirely haked are highly efteemed by the people, who say they are undoubtedly in a state of innocence, otherwise they would know they were naked, and would ask for clothes. The fantos who beg on the banks of the Nile, between Rosetta and Cairo, wear their own hair. Most of them have got some favourite passage of the alcoran by heart, which they repeat in the streets. Many of the tombs are covered with a building in form of a cupola. These manssoleums are crecked at the expence of shose who most admired the santo in his light-time. When the followers if a santo cannot afford to build him a magnificent sepulcine, they will, when carrying him to the grave, fuddenly stop, then run backward, as though impelled by some external force; and as soon as they have so it ather pretend to have) recovered themselves, they will seign to try again to get the corpse to the grave, and suddenly run backward as before. After several pranks, they declare the holy man will not be buried in the common ground, but must have a manssoleum erected over him. The populace believe this, and a collection is immediately made to desay the exence of building one.

made to defray the expence of building one.

The people in general are great believen in magic, divination, and fortune-telling; are fond of talifmans, philtres, and charms; and firmly believe that the eyes of fome particular perfons, commonly called evil eyes, have the power of doing great mifehief, by fafeination. This brings us to inquire into the first rife of that rafeally people called gypties. Those pretended fortune-tellers that inleft most countries in Europe and Asia, and who are generally held to be of Egyptian extraction, at least the first of them were such. They are called in Turkey Zinganees from their captain Zinganeus, who when Sultan Selimus made a conquest of Egypt about the year 1c17, with several other Mamalukes, and as many native Egyptians as refused to submit to the Turkish yoke, retried into the defarts, where they lived by rapine and plunder, and frequently came down into the plains of Egypt, committing great outrages in the towns upon the Nile under the dominion of the Turks; and idle people frequently reforting to them in hopes of participating in their plunder; they encreased at length to 6 formidable a body, that the Turks were glad to come to a treaty with them, wherein it was agreed they should lay down their arms and be permitted to exercise any other callings with the same privileges other

Subjects enjoyed. The Zinganees, however, having been long used to a vagabond rapacious way of living, and composed of a mixture of nations, who, during their depredations upon all mankind in the defarts, had loft all fense of religion, and became averse to the following any art or science, began to have recourse to their former ways of rapine and robbery; and though they were often forgiven by the Turks for fear of another infurrection, yet it being found at length that they were not to be reclaimed, the govern-ment were compelled to banish the Zinganees their country, and a power was given to any man to kill a Zingance, or make him his flave, if he was found in Egypt after a limited time; and this edict was fo well executed, that a Zinganee was not to be feers in Egypt for feveral years after; at leaft, any that dare profess themselves foci, for it feems they agreed to disperse themselves in finall parties into every country in the known world; and as they were natives of Egypt, a country where the occult feiences, or the black art, as it was ealled, was supposed to have arrived to great persection; and which in that credulous age was in great perfection; and which in that credulous age was in great vogue with people of all religions and perfusions; they thought that they could not pitch upon a more effectual way to gain a fubilitence, and yet indulge that lazy wandring life they had been ufed to, thar by fetting up for a more than ordinary [kill in foretelling future events; and as they had by a profligate life quite eradicated all princi-ples of honour and confeience, no doubt they had a view of supplying their necessities by other means when fortunetelling thould fail them.

The reason these people are still tolerated in Turkey, may be, that they do there, at least of late years, apply themselves to some handicrast business, particularly the making of edge tools, which they are very excellent at; carrying their tents and utensils upon asses, and usually pitch their black camp near some great town, where by pitch their black camp near some great town, where by working, thieving or fortune-telling, they make a pretty good provision for their bellies, but do not much trouble themselves about clothing or furniture: and when the people begin to grow weary of their pissering tricks, they move off to some other part of the country. They have a prophecy, it seems, amongst them, that they shall recover the dominion of Egypt again, and the Turkish chipine

after a certain period shall be destroyed, which Mr. Hill has given us in English verse as follows:

Years over years shall roll, Ages o'er ages slide, Before the world's controul, Shall check the crescent's pride,

Banish'd from place to place, Wide as the ocean's roar, The mighty gypsy race Shall visit every shore.

But when the hundredth year Shall three times doubled be, Then shall an end appear To all their slavery.

Then shall the warlike pow'rs From distant climes return; Egypt again be ours, And Turkish turrets burn.

There is also In Egypt a very particular fort of people called dervises, which may be diffingushed into two of three classes. Those that are in convents are a kind of religious order, and live retired; though some of those travel with credit, and return to their convents. Some who assume this character live with their families, and follow their trades: these also appear to be a good kind of peoples. But there is a third fort that travel about the country and beg, or rather oblige every body to give. They all wear an octagonal badge of white alabaster, with 2 greenish east, on their girdles, and they have a high stiff cap without any ornament; the tarcomen wear the same, but with a white salh about it, and a little more pointed. Except those who live in convents, and others at a small distance from Caine, there are not many of these nones in Ferner.

from Cairo, there are not many of these people in Egypt.

Hefore we quit this section, it will be proper to mention, that among the inhabitants of Egypt, above deferibed, there are two forts of a peculiar kind, the first of whom are called the established Bedouins or Bedwins, and the latter the Wandering Bedouins. The former live in villages, and are to be confidered as peafaints of the country. The Wandering Bedouins lead the fame life as the antient patriarchs, living under tents, upon the milk of their cattle, and thift their habitations for the convenience of pasture they always encamp in places where they carr conveniently come at water; fome take up their refidence near the mountains, and others retire to places before uninfiabited. With respect to these people, it is said, the golden age is still in being: their cattle not only furnish them with the most delicious repairs, but also supply their other occasions. The wool of their sheep suffices to cloath them, as they make a ftuff with it which defends them from the injuries of the weather. A celebrated French writer observes concerning them, that "they have no difference about religion, no wrangling doctors or divines; fince they pass their lives. unditurbed by the rage of opposite parties, who are always ready to murder one another. These happy people have no tent encompassed with ditches, guarded by folders, and fet apart for the confinement of prisoners of state; nor do they make it criminal for their brother to think different to the confinement of the prisoners of the criminal for their brother to think different to the confinement of the property of the confinement of the property of the confinement of ferently from themselves respecting religious matters, every one having the liberty of addrelling the deity in whatever language he pleases. A fuit of law between two persons never lasts above twenty-four hours, for the oldest man in the tribe gives his decision of the matter in question on the spot. These people are ignorant of edicts and new regulations concerning property; for never does a Be-douin go to bed with an hundred thorfand crowns in his pocket, and rife not worth a penny. The most he loses is a sheep, which a woss may not his the night. He pays no tax at coming into the world, nor any at going But notwithstanding the panegyric of this w it is affirmed by others, (most probably the wandering tribes) that they frequently rob caravans, when they happen to be the dronger party. The principal men among them are called emirs and theiks.

SECT. III.

Gives a description of the cities of Alexandria, Rosette, Grand, Cairo, Damiata, and other remarkable places in Egypt.

THE city of Alexandria was so called from Alexander the Great, who, after his return from confalling the oracle of Jupiter Ammon, built a city in the place where Ricotis

der V the

Recotis stood, three hundred years before the birth, of Christ. This city is called by the Turks Seanderis of Scanderoon, as among them Alexander is called Scander It was once an opulent and elegant city, seated near the most westerly branch of the Nile, where the sea forms a most space of the season of space of the season of the season

beautiul, than to view from hence the mixture of anique and modern monuments in this city.

On passing the smallest casse, called the Little Pharislion, you see a row of great towers joined together bit ber usins of a thick wall. A single obelisk is of a sufficient height to make itself remarked where the wall has fallen down. On turning a little farther you perceive the towors appear again, but only in a distant view. New Alexandria afterwards makes a figure with its minorets, and are distant view. Promper's column, a most missing missing to the sufficiency size promper's column, a most missing to the sufficiency size. and at a diffance rifes Pompey's column, a most majestic monument: and the view is terminated by hills, towers, and a large square building, in which a magazine of pow-der is deposited.

The walls round the outlide of the old city are beautifully built of hown flone, flrengthened by femi-circular towers twenty feet in diameter, and about one hundred and thirty feet distant from each other. At each of them are

thirty feet distant from each other. At each of them are steps to ascend up to the battlettents, there being on the top of the walls a walk built on arches. The inner walls which appear to be built in the middle ages, are much stronger and higher than the others and are desended by large towers, which are also very high.

A fourth part of the city was taken up by the palace, with the buildings belonging to it, and within it was the museum, or academy, and a burial place of the kings, where the body of Alexander was deposited in a gold costinut that being taken away it was put into one of glass, and was probably in that condition when Augustus taking a view of the corpse, adorned it with a golden crown, and scattered flowers over it. feattered flowers over it.

With respect to the street, which extended the whole length of the city, it is said to have been a hundred seet wide, and had certainly many magnificent buildings, as appears from the granite columns still remaining in several places. Among these was the Gymnasium, or public schools, to which were porticos that extended above half a quarter of a mile. These may have been where there are great ruins to the west of that street, and some large columns of red granite still flanding. In this magnificent street was also probably the forum, or court of justice, which was per-haps erected where fome pillars remain nearer the fea, and are now to be feen.

are now to be icen.

But the most extraordinary remains of the ancient city are the eisterns built under the houses for receiving the water of the Nile, as they do at present. The canal of Canopus comes to the walls near Pompey's pillar, and has a passage under him. But the water is not only conveyed to the eisterns from the canal on its entering the city, but from feveral distant parts of the canal, by passages under ground, to the higher parts of Alexandria. The materials of the old city have been carried away to build the new, so that there are only a few houses, some mosques, and three convents within the old walls.

Among the mosques, is one called, the mosque of a thoufand and one pillars. Dr. Pococke observed that it has four rows of pillars to the fouth and west, and one row on the other fides. This, it is faid, was a church dedicated to St. Mark, at which the patriarch refided, it being near the gate, without which the Evangelift is faid to have fuffered martyrdom. There is another great module, named St. Atlanafus, which was also doubtles a Christian church. The Greeks, Lavins, and Coptis have each a monaftery in the old ciry, but fome poor Arabs being always encamped within the walls, it is dangerous being abroad after fun fet.

All over the city are fragments of columns of beautiful marble, the remains of its arcient grander, and magnifi-cence. Among the reft an obelils, formed of one fingle piece of granter, rife fixty-three feet high; but two of its four faces are so dissigned by time, that the hierogly-No. 37.

phics with which they were anciently covered can fearely be feen. This is still called the obeliffs of Cleopara. Another lies near it broken. About a quarter of a mile to the fouth of the walls slands Pompey's pillar on a fmall eminence. At this is not mentioned by Strabo, it was probably erected after his time, and perhaps in honour, of Time or Addain.

Titus or Adrian.

Near the pillar abovementioned are fome flagments of granite columns four feet in dismeter; and it appears that fome magnificent building was creted diere, and that this noble pillar was placed in the area before it. Indeed fome noble pillar was placed in the area before it. Indeed some Arabian historians say, that here was the place of Julius Cæsar. This pillar is of granite, and, besides the soundation, consists of only three stones: the capital is supposed to be eight or nine feet deep, and is of the Corinthian order, the leaf appearing to be the plain-laurel or bay-leaf, and a hole being on the top, it has been thought that a statue was erceled upon it: the shaft, including the upper torus of the base, is of one piece of granite marble, eighty-eight seet nine inches high, andnine feet in diameter: the pedestal, with part of the base, which are of a greyish stone resembling slint, are twelve seet and a half high, and the soundation, which consists of two tier of stones, is sourced the supposed to the supposed to the supposed to the order of the supposed to four feet nine inches; fo that this pillar is an hundred and fourteen feet in height.

Three leagues from Alexandria are the ruins of an au-cient temple in the water, with broken flatues of fphynxes, and pieces of columns of yellow marble; and near it are the remains of other buildings, part of which appear to have been a grand portico, from there being many pieces of reclumns of great and statistics. of columns of grey and red granite, and from the order in which they lie, they feem to have belonged to a round temple. Most of them are three feet three inches in diameter, and fluted.

These ruins are stuated in a wide bay, in which is a little island joined to the continent by a chain of rocks ; and on the shore of this bay are cavities in the rocks, used as a agreeable retreats, where people may enjoy the cool air, and without being feen, fee every thing that paffea in the port. The natural grottos in these rocks gave the ancients the opportunity of forming them, by the affiftance of the chiffel, Into places of pleasure. Entire apartments and thus formed, and benches are cut for seats, where you may be secored from the wet, or bathe in a part of the grottos, into which the sea rises; and little harboursa grottos, into which the feel rifes; and little narbours, fheltered from all the winds, were formed on the outfide. There is a cavern generally called a temple, opposite the point of the penintula that forms the port. The only entrance is a little opening, through which you pass, lighted by stambeaux, and stooping for twenty pueces, when you enter a pretty large square hall. The cicling is smooth, but the bottom and sides are covered with sand, and with the exceptions of hats and other animals that harwith the excrements of bats and other animals that harbour there. A passage leads from hence into a round caven, the top of which is cut in the form of an arch. Here four gates are opposite to each other, each adorned with an architrave, a cornice, and a pediment, with a crescent on the top. One of these gates serves for an entrance, the others form each a niche, that may contain a kind of ehest, saved out of the rock in hollowing it, and kills of eneil, taves out of the fock in nonlowing it, and large enough, to contain a dead body. We may hence perceive, that what in that country is effected a temple, was probably the tomb of fome great man, or perhaps of a fovereign prince. It is reasonable to suppose, that further on there are other structures of the same kind, as there is

on there are other fructures of the same kind, as there is the appearance of a gallery, which continues beyond this supposed temple.

A celebrated writer, in speaking of New Alexandria, observes, that it may be justly denominated a poor orphan, who possesses that it may be justly denominated a poor orphan, who possesses that it may be justly denominated a poor orphan, who possesses that it may be justly denominated a poor orphan, who possesses that it may be justly denominated a poor orphan, who contracted, it the new, to a small suck of land, which separates the two harbours. The most superior temples are converted inter align industry. parates the two harbours. The most superb temples are converted into plain thosques; magnificent palaces into sull-confincted houses; an opelent and nunerous people are succeeded by a few foreign traders, and a multitude of wretches who are the slaves of those freels whom they obtain a substitute. This place, once delebrated for its commerce, is no longer any thing more than a place where people embark, and is so far from being a phoenix forming from its own ashes; that it may with greater propriety be deemed a reptile sprung from the dust and corrup ion with which the keyran hath infested the whole country; but not with a substitute of the buildings in general, they withflanding the meanness of the buildings in general, they withtening the invariety of columns, in feveral houfer have placed a great variety of columns, in feveral houfer built round the courts on porticos: these columns were mostly of granite, with which they adorned the antiene city.

The decay of this city is principally owing to the dif-covery of the new way to the East Indies, by doubling the cape of Good Hope; for till then it was one of the chief marts to which the fpices and valuable commodities of the East were brought, and dispersed into all the countries of Europe from thence.

Europe from thence.

The greateft part of the inhabitants are Jews, Turks, Copits, Greeks, and Armenian Christians, besides a lew European merchants, most of which are the French and English; the former, it seems, flatter themselves with being treated with more respect, but the latter appear to have a better trade. The French maintain a conful dependent on the conful of Grand Cairo, and enjoy a flourishing trade.

The English have also a conful, and send every year a great number of English vessels to Alexandria; but they are not always laden out the account of this nation. not always laden on the account of this nation.

With respect to the environs of Alexandria, they are very low; the only marks, by which the failors can know the coaft, are, the tower of the Arabians, which lies thirty-fix miles to the westward of the town, and the column of This circumstance often occasions thips bound to Alexandria to go to Cyprus, or to Syria, when the weather is foggy. There are neither woods nor pattures for a confiderable diffance round the town. The land is covered with land and fome few date-trees grow on it, but the fruit is very indifferent.' An ingenious writer observes, "that it is really a matter. At migronic water onerves,
"that it is really a matter of furprize that this foot flouid
be chosen for segreat a capital to be built upon, where it is
foldificult of access for flips, and so destruct of wood,
water, and all other necessaries of life. But it Is much more to be wondered at, that the Ptolomies spent such immense sums to people this place, and to collect together in it all things that could be had in the world, in the greatest abundance

The late Marcotis lies to the fouth of Alexandria: it is thirty miles long from east to west, and twelve broad. is dry about four or five months in the year, and receives its waters out of the Nile at the time of its overflowing The town of the Arabs, called by the natives the called Abuzir, is at the west end of this lake. It is, indeed, a square earth, eighty seet high, and its fronts are each two hundred and filty seet broad. It is built of fine free stone, and the walls are fourteen feet thick. About three quarters of a mile from this caftle, is another tower, which is fquare at top, and round below, and fix miles from thence, there is another to the westward, on the walls of which are the remains of an inscription in Arabic: but all these buildings are in a very ruinous state at present.

The city of Rofetta, is esteemed one of the most pleafant places in Egypt, and, being refreihed by the winds which blow from the fea, is extremely healthy It is called by the Egyptians Rafchid, is fituated twenty-five miles to the north-west of Alexandria, in thirty one degrees five minutes north latitude, and in thirty-one degrees ten minutes east longitude from London: it stands on the west side of the branch of the Nile, anciently called Bolbetinum, or the Bolbutic branch, about four miles from its mouth. It is nearly two miles in length, but only confits of two or three long freets: but the buildings are flately, and the houses commodious. It is defended by two castles, one on each fide of the branch of the Nile, by which merchandize is brought hither from Cairo. The fine country of Dolta on the other fide of the Nile, and two beautiful islands a little below the town, afford a delightful prospect; and to the north of the country is agreeably improved by pleafant gardens of cirrons, oranges, lemons, and almost all kinds of fruits, and is variegated by groves of palm trees, finall lakes, and fields of rice, which latter, when ripe, make

a very beautiful appearance.

Here is a cassle, about two miles north of the town, on the west side of the river. It is a square building, with round towers at the four corners, having port-holes at the bottom of it, and some pieces of brass cannon. It is built of brick cased with stone, and is said to have been erected about four hundred years. A little lower down, on the opposite side of the river, is a platform of guns; to the east of which are falt lakes, where great quantities of falt are collected. A little nearer to the fea, from the above castle, is another, whose walls, ordinance, and garrison,

are in a poor condition. Somewhat below this second castle, the Nile splits into two branches, one turning eaft, and the other weft, and forming what is called a bogaz or bar in their mouth, which is known by the name of Canopie. This bar is very dangerous to pass over, especially when the sea is agi-tated by a northerly wind.

The water at Rofetta, though fituated near the fea, is in

general very good, unless when the north wind blows frong, or the Nile is at the lowest, at which time it is bracklin. The river here does not rise above three or four feet; becaute the banks are low, and the water tining above them, spreads tiless all of the lance above them, spreads tiless all of the lance width as the Thames at Gravesend; but it lessens by degrees, till it becomes fo shallow in many places as to be very dangerous, bwing to the difficulty of avoiding the

An island of a triangular form, is near this part of the Nile it is called by the Greeks Latimia, on account of the division of the water here, by which two entrances are made at the mouth of the rivers. It is about a mile in circumference, and there are fandy hillocks from eath to west along the middle of it. The island is a kind of morals towards the fouth, but to the north it is fandy.

A confiderable manufactury of ftriped and coarfe linea. is carried on by the inhabitants of Roletta; but the principal butiness of the place is the carriage of goods between this town and Cairo; for all European merchandize is brought hither by sea from Alexandria, and sent from thence in other hoats to Cairo; and also that brought down the Nile from Cairo is here put into large boats, to be feit to Alexandria. On this account the Europeans have their vice-confula and factors here to transact their business, and letters are regularly brought from Alexandria to be feit by the boats from Cairo; but those of great con-fequence, which require dispatch, are sent by soot mel-sengers across the defart which lies between Alexandria'

Grand Cairo the capital of Egypt, at prefent confilts of Old and New Cairo, which are a mile distant from each other. It is situated about a mile from the eastern bank of the river Nile, and extends eaftward near two miles to the neighbouring mountain. This city flands in middle Egypt, in thirty degrees fifteen minutes north latitude, and in thirty two degrees twelve minutes east longitude from London. It is about feven miles in circumference, and was much larger before the discovery of the East Indies by the way of the cape of Good Hope, it being then the center of trade, all the spices of the East being brought to this city, and from thence fent to Europe

The city of Grand Cairo may be faid to confift of three towns or cities, namely, Old Cairo, which adjoins to it; Cairo, properly fo called, and the port of Bulac. Old Cairo s at prefent reduced to a very finall compass, not being two miles round; but it is the port for the boats that come from Upper Egypt, and some of the beys and European merchants have houses here, to which they retire at the rifing of the Nile.

The Jews have a synagogue here, which nearly resembles our churches, and is said to have been built in its' present form one thousand six hundred years ago, They pretend that Jeremiah the prophet was on the very spot where they usually read the law, and that they have a manuscript of the bible written by Ezra; it is kept in a niche in the wall about ten feet high, before which a curtain is drawn, and lamps kept continually burning: this writing

is esteemed so facred, that none are permitted to touch it.

The streets in Cairo, like those in most of the Turkish cities are very narrow; and the widest extends the whole length of the place, but in Europe it would only be confidered as a lane; and the others are fo narrow, that the people frequently spread a light stuff across the houses, from one lide of the firet to the other, to defend them from the fun. Most of the streets, or at least each end of every ward, is that up with gates as foon as it grows dark; and guards of janiflaries are placed at fome of the principal ones, to that no idle people can lurk about them without being discovered. Several streets confist only of shops, withoutany houses, which are also locked up at night, when the tradefinen return home; and the thops of the fame trade are commonly together, as well in the berellans, or exchange, as in the fireets. Perfons are appointed to fweep and fprinkle the streets every day with water, especially before the houses of the better fort; for being without any pavement, they are generally full of dust.

The outsides of their houses, like those in Turkey, are

without any kind of ornament : the lower part is built of stone, and above is a fort of cage-work, fometimes filled up with unburnt brick; and the windows which look into the streets are secured with iron rails and curtains, in order to prevent the women from being seen. The insides are equally plain, having no other embellifluments than the necessary furniture for domestic uses, except their falsons where they receive their friends and acquaintance. fon who visited the house of a bey, gives the following defeription of the fine saloon into which he was introduced. It had, says he, a sobby before it. The grand room is an oblong iquare, with an octagon marble pillar in the middle, insaid on two sides about eight feet high, with pannels of grey marble, each bordere. I with Mosaic work. The floor is covered with since arpets; and the sophaextends all round the toom, having rich velvet onlinons belonging to it.

"A carial, which comes out of the Nile close to Old Cairo, runs through the center of the city. It has water during three months only, after which it is a mere ditty diech. In the watery feason it forms seven or eight simple points in the city and its environs, waters the adjacent fields, and about nine miles from Cairo communicates with the Lake of Filigrims.

theids, and about time miles from Caro communicates with the Lake of Pligrims.

After forming an idea of feveral figures or places about the city from a quarter to three quarters of a mile in compass, contrived to as to receive and retain the water of the Nile conveyed to them by the canal, as the river rifes, we Nile conveyed to them by the canal, as the river riles, we shall have a pretty just notion of the several lakes that are about the city during great part of the year, when nothing can be imagined more beautiful, for they are surrounded by the best houses in the city t and in the summer, when the Nile is high, are covered with sine boats and barges belonging to persons of distinction, who spend the evenings with their ladies on the water, where concerts of music are never waring and sometimes freworks are added. All never wanting, and fometimes fireworks are added. All the houses round are in a manner illuminated, and the the houles round are in a manner illuminated, and the windows filled with fpectators. This pleating feene however, intirely vanishes when the waters are gone off, and nothing but mud appears. Yet even this is foon fucceeded by the agreeable view of green corn, and afterwards of harveft in the midt of a great city, and in the very places where but a few months before the boats were failing.

where but a few months before the boats were failing.

Here are twelve churches and a convent belonging to the Coptis, who pretend that the holy family were in a cave in the church dedicated to St. Sergius. Their churches are commonly adorned with columns in the front; they have two ailes with galleries over them supported by pillars, and the space for the altar is separated by a partition; that in some of them is sinely ornamented with carving and inlaid work of tortoiseshell and ivory. The Romans have an hospital belonging to the sathers of the Holy Land. Here are also about half-a dozen mosques, among which one named Amaralt is said to have been a church, and is remarkable for having near four hundred columns, which, with their capitals seen to have been collected from sewith their capitals feem to have been collected from fe-

with their dapitals feem to have been collected from fe-veral buildings of great antiquity.

Though the city of Grand Cairo is very populous, yet the inhabitants of it are a mixture of various nations 1 such as original Egyptians, or the Coptis Christians; Arabs; people of Barbary and other western parts of Africa; and fome from Nubia; but the principal parts of the inhabi-tants are descended from the Mantalukes. Here are also a great number of Jews, a few Armenians, and fome Greeks.

Greeks.

There are feveral very handsome and convenient bag-nios in this city, which are reforted to by great numbers of people: some visit them on a religious account, to purify themselves; while others go to them for refreshment and diversion: the latter are chiefly women, who, once or twice in a week, spend most of the day in them, and are glad of such a pretence to be released from their con-finement. People of the first rank, to avoid intermixing with those of inferior character have bagnios in their own

Here are likewise many kanns, which they call okalas. There are indifferent buildings round a court, and are commonly appropriated to the use of metchants of particu-lar countries for the slae of their respective commodities. There is one for those of Nubia, and the black flaves they bring with them; and another for white flaves from Georgia They have likewife feveral kanns at Boulac; in which all strangers are at a very easy rate accommodated with a

There are, in Old Cairo, feveral fquare courts en-compassed by walls about fifteen feet high, built chiefly with brick; and threngthened by femi-circular buttrelle; these places are usually called Joseph's granaries. The hontes are filled with corn, and room only lest to enter at nontes are filled with corn, and room only left to enter at the door. The grain is covered with mats, and the door faitened only with wooden locks; but the inspectors of the granaries, by putting a handful of clay on the locks, fix their feal thereto. The corn brought from Upper Egypt, and paid as a tax to the Grand Signor, is deposited here, and diffributed among the foldiers as a part of their pay. This granary, however, is not very antient, for it teems to have been built in the time of the Saracens.

At the north end of the city is a plain building for railing the water of the Nile to an equeduct. The fittudine is not hexagon, each fide of which is near ninety feet in length, and about as many in height. The water flows into a refervoir below, and is drawn up by five oxen, which turn fo many Perfan wheels, that empty the water into the aqueduct. These wheels are turned at the top of the building, to which is an ascent on the outlide for the oxen to go up. Both this edifice and the aqueduct are built with free-stone, in order to convey water to the castle. The aqueduct is supported by about two hundred and eighty-nine arches and piers of different dimensions, the former being only from ten to fifteen feet wide. These arches are low towards the castle-hill, where the water runs into a reservoir, whence by means of several wheels placed over each other, it is raised up to the castle.

A pleasant: is fituated in the midst of the Nile, and extends near a mile in length. Towards the north end is a village of the same name, and at the fouth end is the Mikias, or house in which is the famous pillar for measuring the rise of the Nile. This is fixed in a deep bason, the bottom of which is on a level with the bed of the river, and the water passes through it. The pillar, which is glaced under a dome supported by Corinthian columns, is divided into measures for observing the rise of the waters, and is crowned with a Corinthian capital, and from the court that leads to the house is a descent to the Nile by steps, on which the common people believe that Moles, after being exposed.

to the house is a descent to the Nile by steps, on which the common people believe that Moses, after being exposed on the banks of the river, was found by Pharoah's

. The ceremonies practifed at opening the canal, are fome of the most remarkable customs observed at Cairo. When the Nile begins to rife, they cast up a bank of earth acrosa the end of the canal near the river, and about the middle of August, when the water is rifen to a proper height, it is broke down with great rejoicings. Mr. Theyenot, who gives the most particular account of these ceremonies, went to Boulac, the port of all the boats that come up the rivery and which some reckon a part of Grand Cairo; to see the preparations, when he observed several gallies lying in the river, in the sterns of which were noble rooms. rooms, fome of which were twelve or fourteen paces fquare, and furrounded with rails and ballusters gilt, and painted, and the floors covered with rich carpets and cuthions.

cultions.

About feven in the morning the basha arrived in great state; as he passed, a sheep was killed in several places, and three or sour more more on the bank of the river. All the beys and great men of Cairo accompanied the basha in his gasley, and having failed as high as Old Cairo, he was faluted by the guns of the basha's galley were of several corlorer. The sails of the basha's galley were of several corlorer, and worked with large red roles, and the sign and the stage are to the petter of the sails of the basha's galley were of several corlorer, and worked with large red roles, and the sign and the sails of the basha's galley were of several corlorer. ffreamers in this and the other gallies made a very pretty appearance on the water: the trumpets and other music played as they passed, while the guns fired, and the people shouted, to express their great joy. In this manner, they moved gently along, till they came to the place where the bank was to be opened to let the water into the canal. there the mob were waiting in crowds, and there being two patheboard towers filled with fireworks, these were let off as the batha passed; in the mean time the people broke down the bank to give the water a passed into the causal, and boat loads of sweetneats were thrown into the river, and boat loads of fweetmeats were thrown into the river, for which they jumped in and ferambled. The viceroy moved forward to his palace in the illand of Roida, opposite to Cairo t and bonfites, illuminations, and fireworks were continued for three mights fuccedively. There were particularly two vast machines tepresenting a man and woman of gigantic stature placed on the river before the hasha's palace, which took up no less than two thousand lamps to illuminate, them; besides all the gallies, barges, and other vessels were hung full of lamps, and in them the music played, and sireworks, with great and sinall guns, were continually let off; if But the ceremonies are more usually performed by land, when the basha, attended by his guards. performed by land, when the hafha, attended by his guards, proceeds on horseback along the canal, and coming to the proceeds on horfeback along the canal, and coming to the end of it, difmounts, ftrikes the bank, takes horfe, and riding back, leaves feveral perfons to break it down, while great crowds follow him, finging and ftriking each other with cudgels. The water at length flows in accompanied by a number of men and boys fwimming. Fireworks are played off, and all the while the canal is filling, it is covered with boats filled with young men, finging and playing on nusical infitruments, to express their joy for the fectility-produced by this river to the country.

In this part of Egypt, is an ancient palace built by the feventh king, who was of the race of the Mamalukes, and lived about the year 2290. The entrance to the grand apartment is by a fine door formewhat in the Gothic tafts. In this room is a noble faloon in the form of a Greek croft, with a capole in the middle, and it is wainf-cotted, or rather inlaid, ten feet high, in a very expensive manner. Round the top, about two feet deep, are Arabic inscriptions; then for two feet more it is covered with mother of pearl, and different kinds of fine marble, in the form of fmall arches. Below this the wall is covered with pannels, some of the most beautiful marble, and others of mother of pearl; while all the pannels are furrounded with a border of Mofaic work, in azure and mother of pearl.

a border of Mosaic work, in azure and mother of pearl.

There are several magnificent mosques in New Caire, particularly one on the north-east of the town called Kubbeel-Azab, which is about fixty feet square, and has a very beautiful dome raised on a base of fixteen sides, in each of which is a window. It is cased round with all the most beautiful kinds of machia among which the sides of sides of the same sides. beautiful kinds of marble, among which are feveral fine flabs of red and green potphyry. Thefe are all placed in pannels finely carved and gilt, and above is a fort of frise covered with fentences cut in large gilt characters, called the Couphe, in which they here anciently wrote the Ara-abic tongue. The walla above have Arabic inferiptions the Couple, 18 which they above have Arabic inferiptions abic tongue. The walls above have Arabic inferiptions in letters of gold. All over the module are hung a great number of glafs lamps and offriches eggs: adjoining to this edifice are feveral apartments built for the priefts; and alfo fome very elegant ones for perions of rank, who formatimes come and refide there. This great building is faild to have been erected by Jaafar, who conquered Epypt for Moezz, the califf. The window lattices both to their mosques and houses are very elegant, being curiously ma-nusatured either of iron, brass, or wood. They are made of round bars let into each other, and forming fmall

fquares, which are decorated with a variety of ornanents.

At the foot of the caftle hill there is a mosque which exceeds all the rest, as well in the solidity of the building, as in its grandeur and magnificence, so sa to strike the be-holder with admiration. It is very losty, and erected in the form of an oblong fquare, crowned with a cornice all round that projects a great way, and is adorned, after the Turkish manner, with a kind of grotesque carving. The entrance is inlaid with several kinds of marble, carved at

The accent to it was by feveral steps; but these have been broken down, and the door closed up, because, when public infurrections have happened, the rebels have often taken shelter there.

Eastward of the town of Tailoun stands the castle of Cairo, faid to have been built by Saladin. It is feated on a rocky hill, and is walled round; but though it is very difficult of access, it is so commanded by the hill Tabel Moclisttham to the east, as to be incapable of withstanding an attack fince the invention of cannon. The eaftern en an attack fince in terremon to Lamon. And can extract it rance is called the Gate of the Janifaries, and the western one the Gate of the Arabs. The castle is about a mile in circumference; but yet is an irregular building, and the principal part of it is in a very ruinous condition. At the west end are the remains of very noble apartments, some of which are covered with domes, and adorned with pictures in Mofaic work; but these apartments are now only used for weaving, embroidering, and preparing hangings and coverings, great quantities of which are annually sent to Mecca by the caravan.

The eastern part of this castle stands on much higher round than the and castle stands on much higher round than the standard or a round follows.

ground than the reft, and near a grand faloon called Jo-ieph's hall, from whence there is a delightful prospect of Cairo, the pyramids, and all the neighbouring country. This, it is probable, was a terrace to the faloon, which is open on every fide, except to the fouth, and is adorned with large and beautiful columns of red granite, fome of which have capitals of the Corinthian order; fome are only marked out in lines like leaves, and many are only plain stones that do not much refemble capitals. In the west part of the castle is the goal, which the common people think to be the prison in which Joseph was confined at the

infligation of an adulterous woman.

A finall garifon is kept here; and the men are lodged in large towers, which form an inclosure or court, on the fouth fide of which are the basha's apartments; so that whenever he receives an order from the Porte to quit his government, a battery of four or five cannon is raifed against them; which would foon demolish them, should he offer any resistance. Near the basha's apartments are alfo those of the great divan, where the beya attemble three times a week under the kaia, or prime minister of the

basha; and the latter fornetisses sits in a room behinds, that has a communication with some lattice windows. A stranger may enter with the consul's interpreter; and, being afterwards conducted to the basha's coffee room, will be entertained by his fervants with sweetments and coffee, there are to be seen several leashern shields, each almost an inch thick, with a javelin skicking it them, wherewith it is faid they were plerted by one of the fultans, and are kept as monuments of his strength. The officers under the basha have also noble apartments here.

bash a have also noble apartments here.

Near the abovementioned apartments is the mint, where they coin their gold, and small pieces of iron washed over with silver; which last are of the value of three farthings, and are called medines.

In this castle there is a well, which is much admired on account of its great depth, which is two hundred and forty-four feet; but it has two shafts that are not perpendi-cular above one another, the first is one hundred and fortyeight feet long, and the other one hundred and fixteen feet. It is generally called Joseph'a Well, not from the patriarch of that name, but from a grand vifir, who about feven hundred years ago had the care of the work under Sultan Mahomet, but the Arabians call it the Snail Well, because it descends in a spiral line. The water of it can only be drunk at the time of the inundation; after which it is brackish, like all other wells in the town. They draw the water up by means of a double wheel, and a double range of earthen jars. The oxen employed to turn the wheel go up the first shaft by a path which is cut in the rock quite round the well from top to bottom.

There are grottos, in many flories, all up the fide of the rock upon which this caffie is built; but feveral of them are now inaccefible, though there is a way to othera by a narrow terrace. These are generally lofty rooms, eight or ten set square. Towards the brow of the hill, on the top, are two rooms, with holes on the top to admit the light; over which is an eminence, to which the great people often go & enjoy one of the finest prospects in Egypt, fince it eye can reacl:. Over the fouth cliff is a molque, the infide of which is painted all over with flowers on a red ground: here was interred the Sheik Duife, whose name is given both to the hill and the mosque: several of the sheiks children and some of the sons of bathas are buried

There is a kind of ancient fuburb called Caraffa, to the fonth of the castle: at the entrance are several magnificent tombs covered with domes, and faid to be the magnifi-cent tombs of fome Egyptian kings. The people in general suppose that they are the monuments of the califs, the relations of Mahomet, who conquered this country; and fuch is the veneration for them, that they oblige Christians and Jews to alight from their affes and camels to pay them respect, when they pass this way. On an eminence, adjoining to Caraffa, is the great mosque of El Imag Shafee, antiently one of the four doctors of the law, who is held in great veneration among them, and whose se-pulchre is there. It is called Le Salchiah, from a title they gave Saladin who built it, together with a college and hospital.

There ftill remains a matter of a very fingular nature, to be related of this part of the country, which every traveller who passes through it takes notice of; as first, their way of hatching chickens in ovens. They put their egga in ovens, says Thevenot, which are heated with so temperate a warmth, and imitates fo well the natural heat, that chickens are formed and hatched in them: thefe ovens are under ground, and the hearth of them covered with cotton or flax to lay the eggs upon. There are twelve of these ovens together, fix on a fide, two stories on each fide the passage, that is three ovens above and three below on each hand: they begin to heat the ovens about the middle of February, and continue to heat the overs about the mindes of February, and continue to heat them about four months: they heat their overs only with the hot ashes of oxen, or camel's dung, which affords a smothering heat without any visible fire; this they lay at the mouth and the father end of the oven, changing it and putting in fresh dung every day: this they continue to do for ten days, and then lay in the eggs, fometimes eight thousand in an oven ; after eight or ten days they pick out the good from the bad, which are discovered by holding them to a lamp, then they put out the fire, and having laid one half of the eggs in the upper overs, they that up all close and let them lie about ten days longer, when the chickens are hatched; at which time it is very entertaining to fee fome of the chickens just putting forth their heads, others half our of the thell, and others quite free. Thunder occasions abund-

ence of eggs to milearry; and at beh, it is observed that there are sew of them which have not some descen, and nice people think they can diffingulfis one of these pulsers from another by their pelates. It has been disputed, it seems, whether this can be effected in any other country besides Egypt, where the natural heat of 'the climate in thought to contribute much towards these productions: but M. Thevenot tells us, that the duke of Florence sent for some of the Copyis (who only follow this business) and hatched chickens in Italy In the same manner, and since that time, the late learned and ingenious M. Reaumor, after many experiments, found it practicable in Francet and in a work on that subject, which has been translated into English, has shewn the manner of doing it. Before we leave Grand Cairo, it may not be improper to give an account of the grand pilgrimage made annually from that city to Mecca, at which time the grand Signor sends thithers very costly present, faid to amount to one-third of the value of the revenues of his kingdom.

At the time appointed for the caravan to prepare for Mecca, the presents are brought with great folemnity from the castle, through the city to the palace of the emir hadge, who is captain of the caravan of pilgrims, which our author had the opportunity of seeing performed. In the beginning of the procession came the fervants of the beys and lords of Cairo, followed by the chiaux, azapes, and janifaries; and after them by the busha on this occasion; then came the janistaires of the divan followed by men carrying sour very long pieces of crimson velvet, emproudered with Arable letters of gold as large as one's singer.

then came the janisaries of the divan followed by men-carrying four very long pieces of erimson velvet, em-broidered with Arabic letters of gold as large as one's singer, and others carried a large door-pièce of velvet embroidered in the same manner; after these came a camel well har-nessed, carrying a great pavillion or tent of crimson satin embroidered with gold, and shaped like a bell, with a great gilt hall on the top of it; then a little square pavillion, car-ried by a man, and some other utentis, which were all to be employed in hanging and adorning the caaba, or little temple of Mecca: after these great numbers us banners and colours were carried in procession, all the santos with and colours were carried in proceifion, all the fantos with drums and mufic attending them; the people in the mean' time preffing and crowding to touch the facred utenfils, and those that could not get near enough threw a piece of, linento touch them, holding one end in their hands that they

Sinento touch them, holding one end in their hands that they might draw it backagain; and it is not to be conceived with what devotion they would kifs the thing that had touched but a rope employed in the facred prefent, which was to adorn the place they efteem most holy.

Thefe ornaments being lodged at the palace of the emir hadge, two days after he went out of town encamping, near-the city. The cavalcade on this occation was not very different from the former, only there were fix field pieces, which the emir always carries with him on thefe expeditions: there were allo a great many little children mounted on camels and horfes, who were the fons of the emir's officers, and feveral camels loaden with provisions for the journey. A multitude of fantos in strange antic emir a others, and leveral camels loaden with provinons for the journey. A multitude of lantos in fittange antichabits, also followed dancing and ferewing themselves into a thousand ridiculous shapes and postures, like masquers at a carrival, as our author expresses himself. At length came the blessed camel which carried the pavillion abovementioned, richly dressed out, with another to relieve him

when he was weary.

It is wonderful, our author observes, to see the multitudes which come from all places to perform this pilgrimage, there being no less than five caravans of them, viz.
That of Cairo, which consists of Egyptians, and of all
those that come from Constantinople and the neighboorhood of it. That of Damaseus, in which are all the pilgrims of Syria. That of the Magrebins, or those who
come from the westward, consisting of the natives of Barbary, Fez, and Morocco, who meet at Cairo, and those
of Persia and India. Those who come from Fez and Morocco undergo the greatest fastigue, travelling by land over
large desarts, in which they employ a whole year, and one
half of them usually die in the journey. The caravan of
Cairo, our author says, was very numerous when he was
there; there being in it sour beys or princes, and several
other great lords, besides an hundred thousand other pilgrims, as was given out; but he understood asserwards
they did not amount to a fifth part of that number. The
emit hadge, or captain of the caravan, has usually sisten
hundred camels to carry his baggage, and sell to those who when he was weary. hundred camels to carry his baggage, and fell to those who lose their own, for many of them die by the way, and he has five hundred camels also to carry water on'y.

No. 37.

The entir made having encamped fome time close to the city, removed releve miles fatther to the blruge, being a great basin or refervatory of water, about twelve miles to the saftward of Calro, and is the rendeavous of all the caravans. The emir hadge decamped from thence on the eighth of August, it being the custom for the caravan of Calro to fet out feven and fifty days after the beginning of the ramadan, that they may be at Mecca at the time prescribed i the next day, being the minth of August the caravan of Magrebins, who come from the war part of Africa, fet forward these do not depend on the emit hadge of Calro, but have a chief of their own. They travel chiefly in the night to avoid the heat, which is infusionately and when there is no moon they have men who carry torches, and either in their campa, or on the march, that infinite number of lights which are spread over the defarte make a noble illumination, which is seen at a very great distance.

defarts make a noble illumination, which is seen at a very grest distance.

There are other reasons for going this pilgrimage to Mecea besides pure devotion: many go upon the account of trade, merchandize being brought thither from almost every part of the known world; and some go, it is faid, to estape the punishment of their 'rimes; for let a manhave been guilty of the most notorious acts, he is never called in question if he makes this journey afterwards, but obtains a general indemnity, and the character of a sint, on account of the fastigue and hazard he has undergone to see the holy place. But whatever may be the true inducement to the undertaking this journey, all perform it with abundance of seeming devotion, repeating of singing some verses of the alcoran all the way they go; and bestowing their charity according to their respective circumstances; as to their beliaviour when they arrive at the holy place, we have given an account of it already, in treating of the Persan pilgrims.

About six weeks after the setting out of the caravan from Cairci with a successions.

of the Perfian pignins.

About fix weeks after the fetting out of the caravan from Cairo, it being computed that they are ready to return, an aga marches from Lairo to guard the fresh provisions which people fend to the relations in the caravan; all which are leaded up to be delivered to those to whom they are directed.

people fend to the r relations in the carvan; all which are leaded up to be delivered to those to whom they are direct delivered to the structured and encamped at the birque twelve miles from the city on the thirteenth of Noowember, and the chravan of Magrebins arrived there the day before; several people came from Cairo to the birque to meet their friends, and welcome them lone; and upon these occasions they falute and kis all they know five or fix times; and indeed, there is nothing to be seen in the city but kiffing and congratulations for five or fix days successfuely, or else people lamenting the death of their relations who died in the journey.

The piggirms are forty-five days in their journey from Cairo to Mecca, and as many in returning, belides the time they spend there; but they make very casy journies, often stopping to unload and load their camels, of whilch many die as well as of the people. They find, but little water in the way, and that exceeding bad, and fresh provisions they meet with once but what they carry with them. What incommodes them most are the hot winds, which frequently inflocate or otherwise destroy them? in ons day, it seems, there died several hundred of pigrims by the hot winds in this journey; and not less than fix thousand belonging to the caravan of Cairo died by one misfortune or other. It is no incommon thing, as our author relates, to hear a man singing some verses of the alcoran, and in a moment see him drop down dead from his camel; and those who return alive are so altered and emacisted that they can hardly be known by their friends; notwithstanding which there is not a year but many women and chilthey can hardly be known by their friends; notwithstanding which there is not a year but many women and chil-

ing which there is not a year but many women and children perform this pilgrimage.

Those who have made this journey are called adgi or pilgrima, and are in great efteem in the countries where they live ever after. The emir hadge amaffes vaft funts in this command, for beides his other profits he is entitled to the effects of all that die in the journey, of which perquifite alone he made three hundred thousand piastres in one year, there were so many of the pilgrims that died: he is also superme judge of all the people under his charge during the expedition. The number of those which compose the caravan feldom amounts to less than forty, thousand; but in times of peace and plenty it is often much greater. Every mustulman is obliged to make at least once in his life this grand pilgrimage to Mecca, the center of the Mahometan faith.

Tha

The city of Damiers, which is needly appedent Softers, flands on the callern hranch of the Niles between flow and five miles from the mouth of the Niles between flow and its principal inhabitants are fifterment and in fiftaries. It is encompafied by walls, except that part which froms the river, and, at the north end of it is a fine large round tower built of bewin flore. It is reckoned to be most advantageously fituated for trade, on account of its commodicies harbour on the Mediterranean.

This city is supposed to contain about twenty-five thousand inhabitants, without including its suburb on the other fide of the Nile. Here are about four hundred Greek families, who are the principal merchants and traders in the city. They have a church, a bishop, and the free suberty of exercifing their religion, except the stricke of ringing the bell. Besides the Greeks, here, are many other strangers of various nations and religions; but they are greatly restrained in the enjoyment of their national privileges, and are afraid of going into the streets, especially after dark, on account of the insulus they are liable to meet with from the Turkith foldiery, who have a natural antipathy, to all strangers: but they have a particular systsion to Europeans, which seems to be handed down to them by their forefathers, and to be occasioned by the holy war, as this city was the principal scene of action, and where Lewis IX. was made prisoner. As a Christian is known by his mien, strangers dare not go out of the streets they are accustomed to frequent 1 nor must any perion appear in an European drefa. are accustomed to frequent; nor must any perion appear in an European drefs.

in an European drefa.

With respect to the trade of this place, that chiefly carried on here is the export of rice and coffee to all parts of Turkey, and of the former, a contraband trade to Europe, which has been productive of tumults against the Christians. They have also an import of tobacco and foap ; the latter from the coast of Syria, and the former

from Latichea

At a small distance from Dannieta, and the south-west of the lake called Marcotia, is the castle of the labyrinth, so called from a famous ancient labyrinth, of which we fo called from a famous ancient labyment, or when a may take fome notice when we come to treat of the ancient fatte of Egypt. This antique edifice is about one hundred and fixty-five feet long, and eighty broad. The portico is a very ruftic work, and the principal part of it delitoyed, being no where above fix feet high; but the front is in a mineral point of the first part of it. The being no where above in teet high; but the front is in a more ruinous condition than any other part, of it. The upper flory, in the middle, is fallen down, and is almost intirely gone all the way from the breaking off. In its prefent flate, there are forty-four tiers of flone, each nine inches deep, and consequently the whole is thirty-three feet high. This edifice, viewed all together, has the appearance of some antient palace, or other public flrusture; but its remains are incapable of conveying an adequate idea, of its original magnificence and grandeur.

out its remains are incapsole or conveying an acequate inca-of its original magnificence and grandeur.

'Many ftones are feattered about the plain near this build-ing, especially several round ones with holes in the mid-dle; which seem to have composed the pillars that might have been about this edifice, and, by means of these holes, were probably fastened to each other.

were probaby fattened to each other.

The town of Suezia the nextprincipal place that attracts our attention; it is fituated at the north end of the Red fes, and is thought to be built on the foot where formerly flood the antient city of Arfinoe. It is a confiderable fea port on the ifthmus of its name, which joins Afia and Africa, and is advantageously feated on a finall peninful that juts linto the utmost verge of the Red fea, about fixty-three miles fouth-weft of Cairo. The trade between, the last mentioned place and this town is effected by fluips belonging to private persons at Cairo. Southward of this town there is a large sandy bank about two miles long, to the east of which is a road to go out to the shipping; and when there is no wind, they draw the bosts along by this bank. About a mile south-west of it are the ships three miles from the town, the deep water being on the west, where the shore is inclosed by high hills; but there are considerable shoals where the land is low, on the east side.

low, on the east fide.

low, on the caft fide.

Suez, is a finall town; but the houses, mosques, quay, magazines, and other public edifices, are made of a most cutious fort of stone, constituing of a wast number of shells, for closely united by nature as to be infeprable. Here are four mosques, all of which are very handsome buildings; and here is also a Greek church. Most of the inhabitants are Mahometans, there being only about fixty Greek families, and a few Coptis. They setch all the necessaries of life, and even pot herbs, from Cairo; for the country,

test firsty miles round, sheet not produce my thing. Water is likewife very clarce, infomuels that they are obliged to get it from a place miss miles off, and pay two-pence per pail for it, though it is of a brackift quality.

This town is governed by a capitain, whose bufaces chiefly depends on the shipe, and he has under him a caimacam (the ordinary governor of towns), who both together, or separately, govern the affairs of the place. The caimacam generally resides, here, and the captain when the ships are in the port. They have a garrison of about three hundred uten, one half anissaries, and the rest. Arabs, and the felt are commanded either by a civil officer of their own, shield, sader, or by a sheek. The harbour lies morth and south, is not large, and has very little water; when the tide has obbed out, it is not above five feet deep.

As this harbour is only fit for small ships, the larger ones, which are employed in bringing goods to jedda and other, parts, anchor in another harbour, about sour miles and an half from the town. Many of their vessels will and fifty tons. Some of them are pierced for thirty gans, but never mount more than two, and these are the best armed; for most of them haye, only two pedercroes. They direct on the outside, and placed in an inclined fituation, not quite horizontally; a rope is fastened at the end, which passes on the outside, and placed in an inclined fituation, not on the passes of a long and thick beam, placed abast. The rope, being put through the blocks, is hung or safenced on a peg, which slands on that part of the slend where the helm is. On each slide three men are placed, who must not take the substitute the stransfer on the outside and reas a substitute the stransfer of the slend on a peg, which slands an this part of the slend where the helm is cope while the vessel is under fail; and must alter the On each fide three men are placed, who must not leave this rope while the vessel is under fail; and must atter the direction of the helm, when required, by drawing at the rope. These vessels are but ill provided with failing tackle and trimmings; nor indeed do they require them to complete as in way of other converges, for these carees, for these carees and in which we have the complete as in way of other carees. plete as in most other voyages, for they never fail without a fair wind, and always keep along the shore. The harbour in which these vessels lie at anchor is from five to eight fathons deep; they are sheltered there by the mountains of Ettaga from the east wind; and when they are forced away by another wind, they run a shore, without

any damage, on the neighbouring fandy beach.

The fortifications belonging to the town are very indifferent, fince it has no other defence than twenty-two cannons and three culverins, all of which are in fo wretched

a condition, that they appear as if entirely useless.

The ruins of an old cassle, supposed to have been the merly built by the French, are to be seen on an eminence

at a small distance from the town.

at a small distance from the town.

The Roman emperors and kings of Egypt made many attempts to cut a channel through the filthmus of Suez, and join the two seas togesher; but all their efforts proved ineffectual., About three miles from the town, there is still to be seen a deep dirch, which runs from north to fouth, and is supposed to be a relic of that vain and impracticable undertaking.

We shall now proceed to give a description of the principal towns and villages situated up the Nile; and the first we meet with is called Gize, supposed to stand on a part of the ground where the ancient city of Memphis once stood.

the ground where the ancient city of Memphis once flood. the ground where the ancient city of Memphis once flood. The town itfelf is tolerably large, but the boules are very low, mean buildings; and its only ornaments confift of four or five minierets or mosques, and some palm-trees. The inhabitants are chiefly employed in making earthen pors and tiles; but they are so indifferently executed, as to produce but an inconsiderable advantage.

The village of Deitr-Etijn, is situated about a mile and a half to the south of Old Ceiro; here is a mosque and a Contil convent. The house here are almost all built or

Coptis convent. The houses here are almost all built of clay, and covered with reeds. The greatest ornaments of clay, and covered with reeds. The greatest ornanients of this village, as well as most of the others, are the paint-trees, which are cultivated in great abundance. One end of this village is close to the Nile, and the other extends towards

the mountains.

The village of Dagjour, is a little distance from the above; it is remarkable for containing in its neighbourhood many spacious mosques and several handsome pyramids.

Benefoof, the next village we come to, is fituated on the western shore of the Nile: it is a kind of capital, about one hundred miles distant from Cairo, and the place of residence of a bey, who is the governor of it. There

are in it feveral very large and elegant mosques.

Mount Kobzim, is fituated to the north-east of the last mentioned village, at the foot of which stands the convent

of St. Antony; and at found diffunce are the mountains of Afkar, where are seen the ruins of three monasteries, namely, Deir-Berdet, Deir Bahsta, and Deir Anna.

The convent of St. Paul is not far distant from that of St. Antony. The Coptis call this the Tyger convent, from a supposition that those animals made the tomb of that faint. The principal building is a quadrangle, but much less than that of St. Antony. The church is thirty-two seet long and fourteen broad, and is very light. The walls are ornamented with paintings, and on that part where the altar is fixed are the remains of a Greek infeription, but the characters are illegible. Thegarden is planted with many fruit-trees, particularly vines; and the friar plant as many kitchen herbs here, as those do who belong to the garden of St. Antony. Here are fourteen monks in this convent, sive of whom are priest; two wear the angelic dress, and the rest are lay-brothers. About forty yards from the monastery is a rock which supplies it with a large sountain of water.

Monssalut, is another village, on the same side the Nile with that of Benesses. It is a fort of capital, whose mosques give it a beautiful appearance; and it is the see of a Coppits hishop. The adjacent country abounds with a variety of fruit trees, and is in general very fertile.

Sionth, another village, contains several handsome mosques, and is the rendezvous of those who go with the caravan that sets out from hence to Nubia. This village is situated about two miles from the river, in a very pleasant part of the country; and a large lake is by the side of it, which is silled from the Nile by a canal, over which there is a bridge of three high Gothic arches. The church is three miles from the village, among a number of hills, in which several grottes are cut. A cashif, who is governor of the province, resides here; and there is a bishop, with about five hundred Christians.

The large village of Aboutiethe, is struated on the same side of the Nile with Sionth. It is supposed to be the Hypsele of

Hypfele of the antients; it is at prefent a bilhop's fee, and has fome mosques in it.

On the east lide, farther up the Nile, is the village of Akunin, which is very large, and adorned with several mosques. Here are the remains of two temples, consisting of stones twenty ket long and ten broad; all of which are painted, and full of hieroglyphical figures. Here is a Greek inscription of sour lines on one of the stones; but the first and last lines are almost totally, and the others partly defaced. Here is an hospital belonging to the Congregatio de propaganda Fide; and the Coptis have a convent here.

gregatio de propaganda Fide; and the Coptis have a convent here.

To the saftward of this village, at the foot of a mountain, is the monaftery of St. Sentodius. It is built of free flone, and of an oblong quadrangular; it is one hundred and thirty feet long, twenty feet broad, and fifty feet high, and a cornice goes quite round it. Its greatest fides have two rows of twenty-one windows each, all closed up; there are only nine windows in each row, on the other fides; five doors were formerly on the west fide, but they are now all closed up, and the entrance to the monastery is by a little double door on the south fide, the leaves of which are covered with iron plates. The church is in a very decayed state; but there are still sourteen pillars in it, some of stone, and the rest of bricks, covered with grypfum, and which support the cicling. The choir, which is preferved, contains three altars, but hath not any thing remarkable in it. This convent is inhabited only by three monks, who have very wretched habitations. There is likewise a deep and wide well in it, whose water rises and falls like the Nile, though the convent is above three niles from the river. However, this rising and falling of the water (which the monks and Coptis considers an miracle wrought by Dioscorus whilf he staid in this monastery) is occasioned by a communication with a canal, whose water is supplied from the Nile, and so provides this well with it. whose water is supplied from the Nile, and so provides this well with it.

well with it.

We come next to the town of Girge, or Tshirsche, which is the capital of Upper Egypt, and the residence of the bey. It is about a quarter of a mile from the river, and tolerably large, being at least two miles in circumserence: the houses are chiefly built of hard brick, and are pretty spacious; and here are several handsome Turkish mosques. It is also the see a Coptis bishop; and the fathers de propaganda Fide have an hospital here, where they maintain themselves by their practice of physic, that renders them useful to the Turks. When the bey of Girge has any thing to communicate to the chief of the Araba from the Divan at Cairo, he sends them word that they are

to comie to hird. They immediately fend the framework with twel thousand horfement to a definine for those interviews t these troop over a many ground the bey, who is attended by a foire of born a many round the bey, who is a sterned by a foire of born a many round the bey, who is a sterned by a foire of the writer performs only; and each returns to his own home a the interview is over.

On the sestern side of the Nile is the village of Gain, which was once very large, but a considerable part of it has been washed away by the overshowings of that rives: Here are sourteen columns, full of hieroglyphics, preserved standing. At some distance from the village are many feattered confinus cut in stone, but it is greatly dissigned. The village of Endy is situated on the same side of the Nile, and about seven miles from Gain; it is the residence of a sheik of the same name. This village is famous throughout Egypt on account of a shake, of which the people relate many strange and miraculous stories; and some of them believe it to be the devil, banished into the mountains of Upper Egypt by the angel Raphael. This ferpent is kept by a sheik, and has been in the possession of his predecessions for a long time. Among other strange stories concerning it, they tell us, that the sheik would cut it in pieces at night, and be fore to find it whole and sound the next morning. But notwithstanding the absurd notions the people here entertain of this frepent, it is remarkable that they can handle these reputies without receiving the least injury, as we are assured by a celebrated writer, who, from the history of his travels while in Egypt, gives us the following account.

"I am now going, says he, to inform you of something with a like well and the next morning."

who, from the history of his travels while in Egypt, gives us the following account.

"I am now going, fays he, to inform you of fomething which I look upon as very curious; but I assure you the thing is foamazing, that had I not had ocular demonstration of the sact, I would not presume to relate it. One morning, as I was looking for something in our warehouses, I observed in several parts of them, the traces of serpents, which gave me some uneasines, left at any time I should be hurt by them. I consuited our druggerman about it, who told me to make myself entirely easy, for he knew an Egyptian who could catch them by a charm. I communicated this to Mr. F. H. who, like me, wanted faith to believe that any mortal had this power. The druggerman sent for the man; and as I suspected he might bring tame serpents with him, and pripower. The druggerman fent for the man; and as I fuf-pected he might bring tame ferpents with him, and pri-vately let them loofe, and then catch them again in our prefence; I proposed that the charmer, before he began, should be ftript to his skin; which was agreed to be done. We led him into the court yard where the warehouses shoot; but before he went into either of them, he fixed his eyes towards the sky, and muttered something unintelligible to us; this done, he went into one of the warehouses, and with a short and sender stick of a date-tree, he had in his hand, he pointed to the roof, and uttered forme-thing with a loud voice, at the fame time flamping hard on the ground: as foon as he had done this, he told us, on the ground: as foon as he had done this, he told us, there had been ferpents there, but they were gone. Hat hen went into another warehouse, and, after doing the same as he had done in the first, he faid, there was a serpent somewhere in the walls; which were of loofe stones, very thick, and much decayed. Here he repeated his charma and presently a very large serpent came out of the wall, and stopped; but the charmer, who stood in the middle of the warehouse, uttered some more jargon with very great vehemence, and the serpent came to his feet; he took it up in his hand as unconcerned as though it had been only an eel. In the same manner he caught another amonter is more venerate, and the terpent came to ma reet; he took it up in his hand as unconcerned as though it had been only an eel. In the fame manner he caught another among fomeruins in the yard. We examined the ferpents, and found they had their teeth; for I affure you, fir, we were fo much amazed, that we could hardly believe outers. We gave him thirty paras for his trouble, and he went away quite fatisfied." The above relation is coroborated by the testimony of the learned Dr. Hasselquist, who also travelled into Egypt, and tells us, that they take up the most possensors with their bare hands, play with them, put them in their bosoms, and use a great many more tricks with them; and that he has frequently feen, them handle vipers that were three or four feet long, and of the most horrid fort. He adds hereto, "I inquired, and examined whether they had cut out the vipers possensors teeth; but I have with my own eyea seen they do not: we may therefore conclude that they are to this day pstill (that is, persons who are capable of fascinating or taming terpents) in Egypt; but what art they used, is not easily known,

Inem. Some people are very superfittious, and the generality believe this to be done by some supernatural power, which they obtain from invisible beings. I do not know whether their power is to be ascribed to good or evil; but I am persuaded that they who understand it use many superstitions." The doctor then gives an instance of a woman who handled these nozious creatures with the greatest similiarity, and without the least harm happening to ker, to the great constrenation of himself and his triends. But we shall have occasion hereafter to speak nore persicularly of this miraculous serpent, and detect the fraud practifed with it, when we describe the tomb of the pretended Turkish sine.

Torkifh faint.

Near the village of Eridy, in the mountains, are ten or twelve fepulch it eaverns. There are also many heaps of ruins, which, are the remains of the antient town of Irgy, according to the report of the Coptis.

Here us a sinail village called Dandera, which is very pleafantly fituated, it being encompassed by continued rows of trees, which produce all the various fruits to be met with in Egypt. Nagadi is a large town, and, among other addices, contains several spacious mosques: and a Coptis bishop constantly resides here. Carnac, is a name given to a vast extensive country to the east of the Nile, where some confederable ruine of buildings, that were once spacious and magnificent, are seen in various places. Esnay is higher up the river, and is a large place, adorned with a very handsome mosque. It is the residence of an Arab shelk, and is situated where the antient Latopolis shood, some remains of which are still to be seen. Edia or Edsou, is the antient Apollinopolia, and is situated on the western

some remains or which are full to be teen. Edia or Edou, is the antient Apollinopolis, and is fituated on the western side of the Nile. Here is a fine monument of antiquity, which has been long converted by the Turks into a citadel. The town of Essouan is likewise fituated on the western side of the Nile, and is the antient Seyne, which was under the tropic of Cancer. It is a poor and fmall place, with a fort of fortress or rather barrack for janissaries, under their governor, who has the command of the country. In this town, as also in an island adjoining, are quarries of granite, and the remains of some antient buildings. The first cataract of the Nile begins here, above which is the island of Glesiret Ell Heist, the Phile of the antients, which is a defart, and quite covered with rocks of granite. The borders of this island are cut in the form of a walk on the rock; and there are abundance of colonades, buildings, and other magnificent and venerable autiquities

The ruins of feveral grand edifices are to be feen at Debondi, as also at Hindau, Sahdaob, and Taffa, where Nubia begins, and Egypt ends. From thence up to Derri are many finall villages, in some of which several ruins of antiquity are to be seen.

antiquity are to be feen.

The town of Derri, is fituated on the eastern shore of the Nile, near the place where the river begins to direct its course towards the west. It is inhabited by a race of people called Barberins, who are a poor and miserable tribe, and live chiefly by plunder. The slope of the shore of the Nile here is in many places covered with lupines and radisless, the seed of which they make oil from. The people of Derri frequently cross the Nile, in order to go to Essous; but as they have no canoes, they supply the want of them in the manner described in a former section; befices which they have the following: they put section; befides which they have the following; they put shemselves a straddle upon a great piece of wood, after having placed their cloaths upon their heads in sorm of a surban. They also fasten to it their assagaye or dart; they afterwards make use of their arms as oars. By these me-thods they cross the river without any danger from the ecocodiles, or much difficulty or hazard to themselves.

SECT. IV.

Treats of the language, arts, trade and commerce, manufac-tures, weights, coins, difeases, &c. of the Egyptians.

THE most antient language spoken in Egypt, that we have any account of, was the Coptic, which was generally used till Alexander the Great conquered this country, when he introduced the Greek, which for above nine hundred years afterwards, was the language most in use, and which prevailed till the Greeks were expelled by the Arabs; fince which, the most universal has been the vulgar Arabic, or Arbesk language. It is true, the Turkish, Coptic, and modern Greek, are still spoken, but not so univertally as the Arabic language.

The liberal or ingenious arts are principally in the hands

of the Frenks or Christiana, the senius of the Turks tending more to traffic. The Christians only are filver-finiths and jewellers; and these have a pretty brilk trade, on account of the great demand for trinkets and trappings to adorn women and horses; for the Mahometans are not allowed to keep plate in their houses, nor are the mean permitted to wear rings, unless they give a tenth part of what they are worth to the poor; and sew of them are so found of ornament as to purchase the privilege of appearing fine at so great an expense. The Turks of Constantinople far surpass those who reside here in every branch of work they attempt to essecute.

nople far furpass those who reside here in every branch of work they attempt to excute.

The inhabitants in many of the villages on the banks of the Nile, are chiefly employed in making salammoniae. This salt, it seems, is procured from the foot which artises from the burnt dung of animals that seed only on vegetables; but the dung of these animals is only sit to be burnt for that purpose during the four first months of the year, when they feed out fresh spring grass, which in Egypt is a kind of tresoil or clover; for when they feed only on dry sneat, it will be ineffectual. The dung of ozen, buffances, theep, goats, horses, and asses, at the proper time, is as fit for this purpose as camels dung. The soot arising from the dung is put into glass vessels, and these vessels into an oven or kill, which is heated by degrees, and at last with a very strong five for three successive nights and days: a ster which, the smoke first thews itself, and in a short time the salt appears, adhering to the glasses, and coshort time the falt appears, adhering to the glaffes, and covers the whole opening by degrees. They break the glaffes, and take out the falt in the fante form and state in which we receive it.

which we receive it.

Their domeflic trade chiefly confifts in supplying the lower parts of Egypt, from the Upper, with corn, pulse of all forts, dates, &c and supplying the upper parts from Delta with rice, falt, &c. Cairo is the general mart for all things imported into Egypt; but Indian linens, mullins, callicoes, china-ware, &c. being brought the principal part of the way by land, bear a greater price here than in Fundand.

England.
The Turks prohibit the exportation of coffee and rice from Egypt, to any parts not under their government; however, great quantities of both are finingsled to home places. Fax is tent to all parts of Twrkey and Leghon, and cotton is transported in great quantities. to Marfeilles.

Senna, caina, coloquintida, and a red dye called faffranous, are exported from hence to feveral European countries. The Egyptians import English, French, and Venetian cloths, filk from Leghorn and Venics, likewife druga and cloths, filk from Leghorn and Venice, likewife druga and dyes which Egypt does not produce: alfo coral and amber from various parts, raw filk from Syria, wool from Barbary, carpets from Afia Minor, iron from Salonica, furs and copper utenfils from Conftantinople, fmall wares from France and Venice, lead and marble blocks from Italy, and tin from England. Befides the above, they import and export to and from different places the following articles; namely: their imports are, Brafit wood, cochineal, cinnambar, vermillion, vitriol, quickfilver, antimony, orpiment, arunic, and agaric; and their exports are, fal ammoniace, faffron, tamarinds, cinnamon, furar, indico, opium, &c.

faffron, tamarinds, cinnamon, fugar, indigo, opiuse, &c.
Linens are the principal manufactures of Egypt, which
are not confumed at home, great quantities of these being
sent to Turkey, France, Algiers, Italy, and other parts. Linen, woollen, and filk, are the three chief manufac-tures here. The filk is worked into large pieces for wo-mens veils, and of some are made rich handkerchiefs worked with gold: many fattinets and taffeties are made in Cairo, but both are inferior to those of India; the wool is manufactured into carpets of different colours and wood in manufactured into eapers of unferth colorisms and faces, and various kinds of garments. The linen is made from flax which principally grows in the Delta: the threads are drawn from the dilaff by letting the fpindle hang down without being fpun. The linen, however, when made, is not very fine, which feems to be principally owing to there are a terms of the first principally owing to there not being a great demand for it in Egypt, as people of dis-tinction wear a kind of fine light mushin, which feems better adapted to 60 hot a climate. The chief place for making the linen is at Rosetta, which is in general cheap and

At Cairo, red leather is made, and a better fort is pre-pared at Alexandria; yet the latter is far inferior to that which is made in Morocco. Pebbles are here finely po-lished for fruff boxes, handles for knives, &c. They are done by a wheel, like jewellery-work, and are not to be rivalled any where.

lith at this place?

"The goods we have to fell here, fays he, are configured to us by forme eminent Turkey 'merchants in London. The principal articles are, woollens, lead, lead 'ore, tin, fire-sime, cutlery, hard-ware, optics, bob and chime clocks, also watches, made in a particular manner for the Turkey trade. We fell our goods to fome for ready money, and we barter with others for fome of the following articles, viz. cocculus indicests, affactation, fat ammoniace, along, mayorth, frankincente, fagapenum, gum tragacanth, gum arable, gum elemy, failafras, coffee, and other commodities.

dities.

"On our first fettling here, and felling goods to the Mahometans, they would sometimes bring them back, after having kept them a week, complain of defects when there were more, and insist on having the money returned, but we were soon after instructed in what manner to deal with them. When we sell any thing now to a Mahometan, as soon as the price is egreed on, which we will suppose is two hundred sermahoop chequins, we call in two Malionistans as winesses, and then take a bandful of dirt, and put it upon the goods, saying at the same time, "We fell you this dirt for two hundred aermahoop chequins: "I have this dirt for two hundred sermahoop chequins; the bargain will then be like the laws of the Medes and Persans, which after not. Perhape custom only has established this method; but be that as it may, the goods are never afterwards returned on our as it may, the goods are never afterwards returned on our hands. When we have gum arabic, frankincenie, myrth, or cocculus indicus, to fend to Christendom, we always take care to have it garbelled first, but we, and all other Franks here, are obliged to employ a fet of men called Garbellers, and no other, as this privilege is yearly, purchased of the basha for a certain sum.

chated of the balha for a certain fum.

Those merchants who confign goods to Cairo, should be very careful to see them well and securely packed or embaled. We had thirry barrels of tin in rods configned to us by a merchant in London; it came very fase to Alexandria, and was there unshipped and put on board some vessels for this place. In their passage up the Nile, the exceptive heat of the sun had such an effect on the barrels, and the cause of the sun to say for such cause contains. veifiels for this place. In their paifage up the Nile, the exceffive heat of the fun had such an effect on the barrels, so to cause some of them to sail intirely to pieces, others lost their hoops, and some their heads; which gave the poor pilfering sailors, who work these veifiels, a fine opportunity of making a penny; which when the goods arrived at Boulac, we find they had not neglected; for out of every barrel damaged, they had taken some pounds weight of tin, and sold it ardifferent villages on the banks of the Nile. I would advise merchants, who send tin to Cairo, not to have ir put up in barrels, but in fivong cases made of elm or oak, to the length of the rods, and have them well nailed up; were this done, there would scarce be a probability of an ounce being lost; for I never heard of Nile sailors forcing any packages open. Woollens should be embaled as tight as possible, with a tarpaulin under the outside canvas; for at the mouth of the Nile is a boughas, or mudbank, on which sometimes the germs run soul; but cloth packed up in the manner I describe, may, in case of this accident, be got without damage into another germ.

It is usual to pack up gold and silver stuffs in shout waxed cloth, and then put them into a strong case. In and near Cairo, they make oil of the seeds of safflowers and sell the greaves at twenty-fix paras the quintal of sive hundred rotolos; these greaves are used by the poor people for food. In Upper Egypt there are many plantations of sigar-canes; the sugar and molasses made there are sent to a kan near Boulac for fale; the molasses are put into the skins of oxen, heiers, calves, and other animals, which appear like for many dead beafts, when quite full.

to a kan near Boulac for fale; the molasses are put into the skins of ozen, heisers, calves, and other animals, which appear like so many dead beafts, when quite full.

Brokers, who are most of them Jews, conduct the chief part of the business: these will buy or fell for their employers, no matter how, so that they get the brokersge. A native of Aleppo, who kept a shop in this city, sold many pikes of woollen cloth, to a great Turk, for the closthing of his servants, and to be given to the poor; and a sew days after being desired by the Turk to bring in his bill, replied, that, through the hurry of business, he had forgot to enter that transaction in his book; that, he perfectly remembered the rate per pike agreed on, that, he perfectly remembered the rate per pike agreed on, that, he perfectly remembered the rate per pike agreed on, but as to the number of pikes, he was totally at a lofs. The Turk defired him to guess as near as he could; and the shop-keeper, suddenly recollecting himself, asked the Turk if he had the listing of the cloth by him; and was answered in the affirmative; then said he, we can soon settle the matter, by measuring that, which must be the same as the length of the cloth, The listing was mea-

fured, and the thopkeper was field for as making pittes of cloth; but he grolely impored on the Turk; for it was a wident he made him pay twice as much as he ought, as all woollen cloth has two liftings: The bacasels of this transaction was a few days after explained to the Turk; but the Aleppo knews had a friend who warned him of his danger, and abufed him to docume, which he immundiancy did.

We pack the drage, itc. for Christendem in large duare healtest, made of date-tree wood, which are called outside, we like them with coarse blue linen, and cover them with them of besits. During the Turkis line, smonth, or moon Ramasan, we fill more woolens than at any other time; for then the Turks, against the feast of Bairans, purchase great quantities for the stew cloathing of themselves and farvants.

They make us of the following weights in Egypt; visz. A gasin is the first and least, four of which is a killat, Sizten killats is a dram, of which all the Egypuan weights are compounded. One dram and half is a mettigal, by which gold and filver lace is weighed. One hundred and four ounces, one dram, and eight-elevenths. Four hundred drams is an oke, by which weight shopkeepers fell pepper, fugar, and other goods.

The quintals in Egypt are, one of thirty-fix okes, others of one hundred and fifty-five rootole. One peund avoirdupois is equal to one hundred and fifty-five rootole. One peund avoirdupois is equal to one hundred and fifty, and one hundred and fifty-five rootole. One peund avoirdupois is equal to one hundred and forty two drams, twelve-fourteenth. One hundred and eighty pounds.

The colins current in Egypt are, burbers, medines, and

and forty two drame, twelve-fourteeuths. One hundred weight to forty okes. One oke to two pounds, twelve ounces, four-fifths. One hundred okes to two hundred and eighty pounds.

The coins current in Egypt are, burbers, medines, and fequins. The burber is a copper pieces of money about as big as a fix-pence, twelve of which make a medine, which is a piece of iron filtered over, and about the fise of a filver three-pence. The fequin is of two forts; the one, called a funduclec, is of the value of one hundred and forty-fix medines; the other, called a sermshoop, is worth one hundred and ten medines. Afpers, though not coined in Egypt, are taken here, three going to a medine. Barbary fequine and Spanish pieces likewife go here. In speaking of great sums, the inhabitants of Egypt always reckon by puries, a purse being twenty-five thousand medines, or one hundred and twenty pounds sterling.

The Turks begin their month, which is lunar, at the time the moon first appears. The coptis month is thirty days; and every fourth year fix. Their era begins three hundred and two years after Christ, from the martyrdom of the saints in Egypt, in the reigu of the emperor Dioclessan. Caravans come from Tunis and Algiers to Cairo; besides, there is one of the Barberines, from Sennar, who oring the goods of Ethlopia, and of several parts of Africa, as black flaves, gold-dust, elephants teeth, gums, ostrich-feathers, must, ambergris, and chony. One great caravan that arrives at Cairo, consists of those blacks who come from the country near the life of Pheasants, and past through Fez, Moroeco, and Tripoli, being about; eight months on their journey, and chiefly bring gold-dust.

The principal inconveniencies and diffeunpers people are subject to in this country, are, first, excessive heat, so inclerable, that a man knows not how to fet about any business; and in the summer nights there is no sleeping quietly for mustectoes, or gnats; there are always swarms of them bussing about; the bast remedy against them is to have a fine cloth tac

A pain in the stomach foreigners especially are very subjett to, which proceeds from their going open breafted, which chills their bowels, and causes dangerous severs and fluxes, especially in autumn, when the river overslows the

fluxes, especially in aurumn, when the lives overshows and country.

Another diffemper which reigns here is the swelling of the scrotum; and sore eyes are almost universal in summer time, occasioned by the scorching hear treflected from the sand, and the dust itself, which is very subtile and salt, and perniclous to the fight. Our author relates, that a French merchant of his acquaintance lost his sight by it, as many of the country people do, and others were so affilisted with it, that they were in the extremest torture, crying out night and day, for a fortnight or three weeks together, and could see the same of the same

378 THE NEW AND UNIVERSAL SYSTEM OF GEOGRAPHY.

get notificate, a Voi with haldly fee any book abroad, in lumner time, that is perfectly free from this difference, and most of them with little flips of blue fluff hanging over their year. M. Therenot fays, he cheaped fore eyes hims-felf, which he imputes to his walking them frequently with

The fwelling of the legs, attended with their saling, is another disconvenience many people infler at Cause ind when the water of the Nile begins to rife, there are few people but are froubled with an inflammation, which runs over the whole body, and when they drink they feel than pricking pains all over them; as if a handred needles were run into them at once in feven years.

pricking pains at over them, as it a manera needes were run into them at obtech.

"The plague generally visits them once in seven years, during which time it is observed to take a tour round the Ottoman empire, but is sometimes at Cairo two years to getter;" All diseases are more fath in Egypt during the the Hamenin, or bot winds, than at any others time, and they generally begin about the seventh of April, and last sitty days. They bring abundance of sand-into-the town, which gets into the clambers, trains, and boxe, let them he; hever so chose; and many of the people, who travel with the curvature as this time of the year, perish by these winds; as soon as the hot winds each, and the dews begin to fall, by some, or, as others say, when the Nile begins so rise, all differingers, even the plague itself, ceases to be mortal; so that this noble-river constantly brings health and plenty with it, when it overslows the country, and may well be the occasion of that annual soy they express on its rising to a certain height. its rifing to a certain height:

As for physiciaus or remedies, the Mahometans in Egypt

fearce us any, adhering immoveably to their doctrine of fate; and, therefore, when the plague is in a family, they wifit their neighbours are to ther times, and do not feruple to wear the clothes of a man that died of it.

ليو سين الله أن الله SECT. V.

Contains a description of the Egyptian pyramids, catacombs,

TEAR Caito we meet with those extraordinary monuments the pyramida, which were formerly ranked among the seven wonders of the world, and cannot now be viewed without admiration. These are fituated upon the solid rock, at the soct of the high mountains that accompany the Nile in its course, and separate Egypt from Libya. Their architecture, both on the inside and without, it extremely different with respect to distribution, materials, and gran leur. Some of these are open, others are ruined, and most of them are inclosed, but all have been fulfured. The immense quantity of materials used in constructing them renders it impossible for them all to have been built at the same time, and those that were last errolled greatly exceed the first in magnificence and grandeur.

grandeur.

These pyramids are the works of the remotest antiquity, and even more early than the times of the most autient historians whose writings have been transmitted to
us, the tery epocha of their beginning being lost at the
time when the first 'Greek philosophers travelled into
Egypt. It is not improbable that the invention of pyramilds was owing to the ignorance of the people in having
no other chedical of covering a great-circumserince, before
the art of arching and employing columns to support a
roof were invented. It is indeed a mortifying considerasion, that its indeed in the single of the people in the single of the single properties. tion, that the most durable works in architecture have been owing to ignorance. Thus the famous aqueducts of the antients, the remains of which are the woulder and admiration of the prefent times, were owing to their not knowing that water would rife up nearly to the fame height

as its fource.

It is the opinion of the common people, that the pyramids, the valt palaces, and the temples, whole remains fill the fpectators with amazement, were built by giants; and, indeed, it has been supposed, that men some thousand years ago were much larger than at present; but these opinions are fally consuted by the beight of the eintrances of the cases from whence they have taken thous for these poses, by the narrownels of the passages of the pyramids, and by the height of the doors of the inost autient structures. Arudures.

As the principal pyramids, being fluated three or four leagues to the well of Cairo, near the place where the city of Memphis is supposed to have flood, they are commonly called, The pyramids of Memphis. They stand out a rocky

plain, eighty feet perpendiculat above the level of the ground overflowed by the Nile) and kappears that this rock, not being every-where level, has been finoothed by the chiffel... It is remarkable, that this rock is almost covered by the thing fund brought by the wind from the adjacent mountains; and that in this fand are a great number of fhells, and those of bysters petrified, which is the more furpring, as this plasts of folid rock is never overflowed by the Nile, which, besides, has no fhell-slift throughout its whole course. Here are also found the beautiful fiint-flones which, on account of the singularity of their colours, are thought much more valuable than agate, and of which the people of Cairo make handles for knives; and finust-boxes.

Four of the pyramids more particularly deferve the attention of the curious; befides thefe, there are feven prelight others, but these last are not to be compared with the former, especially as they are in a very rulnous condition. The four principal are nearly upon the fame diagonal line, at about four hundred paces diffant from each other; and their four faces exactly correspond to the four cardinal

points. It was most northerly are the largest; and Mr. Greaves, who measured the bottom of the first, found that it was exactly fix hundred and ninety-three English feet quare, and that its perpendicular height is five hundred feet; but if it be taken as the pyramid ascends inclining; then the height is begun to the breadth of the base. It may be proper here to observe, that the fequer of Lincoln's innefields is said to have been formed by Inigo Jones of the fize of this pyramid, which if placed in that lequare, would on all sides reach to the houses. This byra-

fquare, would on all fides reach to the houses. This pyramid is akended on the outside by steps, which run round the pyramid; the number of them has, however, been very differently related; but they are between two hundred and feven and two hundred and twelve in number, and from two feet and a half to four feet high, and are broad

from two feet and a half to four feet high, and are broad in proportion to their height.

The external part of the pyramid is chiefly built of great future flones, cut from the rock which extends along the Nile, where to this day may be feet, the caves from whence they were taken. The fize of the flones is unequal; but they have all the figure of arprifim, that they may lie perfectly close. The architect has only observed the pyramidical figure, without troubling himself about the regularity of the flers and it is means that the inequality of of the steps; and it appears that the inequality of the stones, which differ four, five, and even ten inches, is the reason why so many travellers, who have counted them, always differ with respect to number. These kinds of steps were not defigned for afcending and defcending, and there fore, regularity was 'no farther fought than was necessary for the general thape of the pyramid and the facility of the work. It appears that the external lays are forely comwork. It appears that the external lays are forely com-pacted by the weight of the flones, without mortar, lead, or cramps of any metal; but in the body of the pyramid or cramps of any metal; but in the body of the pyramid they have used a mortar composed of lime, earth, and clay. At its sour corners it is easily perceived that the lower stones are placed on the rock, without any other soundation; but beyond them, quite to the middle of such face, the winds has formed a slope of sand, which ou the north side rises so high as to afford a commodious, affects to the entrance of the pyramid, which is about forty-eight feet in beine. in height.

When you afcend to the entrance, you discharge a pis-tol to frighten away the hats, and then two Arabs, whom you are obliged to have for your attendants, enter and re-move the fand, which almost stops up the passes. You move the raind, which amont stops up the parage. You then fittip yourfelf to your shirt, on account of the exective heat constantly felt in the pyramid, and in this condition enter the passage, each of the company having a wax candle in his hand; for the torches are not lighted till you are in the chambers, for fear of causing too much fmoke. This paffage runs downwards ninety-two feet and imoke. In its panage runs qownwards nately-two rect and a half, and is very steep; but at the fartherend of; it is an opening fo small, that it is barely a foot and a half high, and two feet in breadth; yet through this hole you are obliged to pais; but the traveller, instead of creeping, commodily lays himself down, and each of the two Arabs that went before take one of his legs; and thus drig himself and the description.

over the fand and duft through the paffage.

After having paffed this strait, which is luckily no more than two ells long, you enter a pretty large place, where trayellers: commonly take fome refrehment to give them conrage to proceed farther.

All the passes, except the fourth, are three feet and a half square, and lined on the four sides by great blocks of white marble, so polished, that this, with the acclivity

extremely black with the finoke of the forches used hit sa-amining its various pares. The training its various parts of the After viiting the lower chamber, you must as the refting-place, and ascend upwards by fadening your feet as before, till coming to the out of the faurth gallery you meet with a little platform. You must then begin to climb again, but form finding a new opening, where you may that upright, you contemplate, a little room, which is at first no more than a palm's preadth larger than the galleries, but afterwards enlarges itless on both sides; and at longth, the coming for the last time, you had she remainder. is at art to more than a paint a preadth larger than the galleries, but afterwards enlarges itself on both fides; and at length, thooping for the last time, you pass the remainder of the fitth gallery; that leads in a horizontal line to the upper chamber. This is a very noble room in the centre of the pyramid, at an equal diffunce from all the fides, and almost exactly between the balispand the top. The floor, fides, and roof, are all, formed, of, wast, blocks, of, granite marble. There are burshs ranges of floor from the bettom to the top; and those which cover it are of a stupendous height, like so many lung beams lying flat, and traversing the room, nine of them forming the cicling. This hall is something more than thirty-four feet in length, it is seventeen feet broad, and nineteen feet and a half in height. On the left, fide is what is generally supposed to be a coffin, fermed of one entire piece of granite marble, and annowined at the top; and on being struck within a key, sounds like a bell. This is said to be the tombros Cheons, king of Egypt, whom Diodous calle Cheunis. Its form is like that of an altar, hollowed within, and the stone is smooth and plain without any relief. The exterior surface contains feven feet three inches, and an half, in length, three feet, three inches, and an half, in length,

contains feven feet three inches and an half an length, three feet, three inches, and alter equators in depth, and as much in breadth. The hellow put within is dittle asomethan fix feet long, and two-feet broad, it is a common fer people to dicharge a pittel in this sound, which makes a noile refembling thunder. Perfous go out by the fame way they entered; and the traveller hat no footer quitted the pyramid, than he wrapt himself up waym, and drinks a glats of fome spirituous liquot, to preferre himself from a plentify, occasioned by the sudden transferon fittin ancestremely hot to a temperate air.

When the perfon has regained his matural heat, the affect of the pyramid; in order to enjoy a delightful professories the pyramid; in order to enjoy a delightful professories.

When the perfort has regained his natural heatiche alcends the period into control to prove delightful professor the furrounding country. The way to alcendit is by the north calt corner; and when the fleps are high, or are broken, the perfor much fearth for a convenient place where the fleps are entire; or a high for a convenient on a point; but in a little flat or figures, conflicting of nite flones, before two at the angles that are wanting, addundance of people, which have single that are wanting, addundance of their being here, have in feribed their names on the top, in the entrance, and in the chambers of it, the first top, in the entrance and in the chambers of it, the first when we have been affirmed by fowers tweeters, that a first when the chamber of the results of their being here, have in feribed their names on the top, in the entrance, and in the chambers of it, the first when the control the state of the results of the control to the state of the results of the control to the state of the results of the state of the results of

arrow seather than the bottom, but it must seemanty, and upon the fleps in-bowers, it is very certain, that a good how and a firong-erm will fend-an-arrow-heyond them. There is a little juffice in the remark, that sheld pyramids call no-shadows. [In-femmer-time, it-is) they mad for meas three quaters of a year, the pyramids call no-shadows at noon; but every morning-sude-woing such byear, and as moon in winter, they cestamly call a findow preportionable to their bulk; and if halles; the Miletian, according to the proportional of the first the pyramids. Play and Lacrius, took the height of thefe pillars by their thadows about two thousand years ago.

The second pyramid appears on aproaching it, even

of the way, would conder them, impallible, were it not for the way, would conder them, impallible, were it not for the man the fifth which is owing to iss being placed in little holes out for selling the feet at . . eighty in-front.

At a finall diffuser from these pyramids, and about a nurser of a nulls from these of which, represent that of a beautiful woman, and the body that of a bon. This extraordinary figure is faid to have been the sepulchro of king Amasis. It is of one entire stone, smooth and polished, and was cut out of the fold rock, and Dr. Pococke observes, that what some have thought joinings of the stones, are only veins of the rock. The lower part of the neck, 'or beginning of the beach; is thirty-three freet wide,' and twenty thick to the beach; and thence to a large hole in the beack is even the neck to the tail thirty three feet wide, and thence to the tail thirty back is eventy three feet, and from thence to the tail thirty back leventy-three feet, and from thence to the full thirty feet. Besides the above mentioned hole in the back, there is adolter on the top of the head, by which it is conjectured the priests entered to deliver their oracles. The sand

tured the priests entered to deliver their oracles. The fand is raised about it to fuch a height, that the top of the back can only be seen. Some people, have taken great pains to break off part of the mole of this figure, and thereby very much disfigured this celebrated monument of antiquity. The third pyramid is fituated on a rising ground, about two hundred yards from the fecond, and is faid to have been built by Mycherinus, the son of Cheopy, and see-cellor of Cephrenes. It is closed like the fecond, and is without any conting. It measures about three hundred seet on every-side, and, though lefs than the bother two, its faid greatly to excel them in the beauty of its workman-ship. On the outside of this pyramid wat, likewise a temple, which was also composed of stores of a prodigious size, and it more distinguishable in its ruins than the other.

(i) the succeptaint to be mentioned, which is the fourth; is an hundred feet liefs than the third, and also without spaning matrix closed, land refembles the others; but had no coming privin closed, and refembles the ordiers; but had no temple tit has however, the fingularity, which is, its frumth being terminated by a fingle from that is very large, and fermate have feryed as a pedeful. It is frunted a little more to the west, and out of the line of the others. The foreign great pyramids are irrounded by others that are similers, which are in arrest ruintous condition, and have been for the most part opened. As a second tion, and have been for the most part opened. As a second tion, and have been formed by nature, for the ule to which it is applied, the step in the foot of the mountains, in a plain that feems formed by nature, for the ule to which it is applied, the step ing of great batterou, but to high that, it is never say all outself been formed by the Nile s and where it great reason to believe the table substrated city of Mamphin sexended almost

deve the trace sheer area car, or a manning expenses, among the sheet of the prainting of the sheet of the sh kind of free-flore as the others; but was cafed with a fine-bard sone; which is full remaining in several parts of the abundance; which is full remaining in several parts of the abundance; who was up is an entrance three feet five inches invide; said four feet two inches deep. The stone within aspect the heighteand breadth of the entrance, and about after the length. Mr. Norden and his companions entered this passage, which is steep, and has also holes out as rests for this feet. Having passed through it, they entered a room aventy arms feet and a haif long, and eleven feet ten inches wide. At the height of ten feet six inches a range of stones projects five inches inwards on such fide, and and in the farne manner twelve, tires, project one farther, than the other till they meet at the top. To the west of this room is shother that resembles it: these rooms are formed of shooth white stones, so large, that there are only three or sour of them in breadth, and seven of them

There is another, at the diffunce of a mile to the fouth-esft, called the great pyramid to the fouth, which at the the bottom is about his hundred feet fquare. It is built within of good hewn stone, and feems to have been cased

within of good hewn flone, and feems to have been caled all the way up.

About two miles to the eaft of the laft great pyramid, and on a lewer ground, is one built of unburnt brick, which forms to have been made of the mud of the Nile, which forms to have been made of the mud of the Nile, it being a fandy black clay, with form petbles and help in the clay together, as unburnt bricks are at prefent ufually made in Egypt and other parts of the eath. Some of these bricks are thirteen inches and a half long, fix inches and a half broad, and four inches thick but others were fifteen inches long, feven broad, and four inches three quarters in thickness, but were not laid to as to bind each other. This pyramid extends two hundred and feir feet on the welf fide, and is one hundred and fifty feet high; and at the top is forty-three feet by thirty-five. It feems to have been built with five degrees, each being ten feet broad, and thirty deep, yet the afcent is eafy on account of the bricks having crombled away throught length of time.

These pyramids are supposed by many, to have been ailt by the Israelites, which is confirmed by Josephus, the cays, that when time had extinguished the memory

of the benefits of Joseph, and the kingdom was transferred to another family, they used the lifselites with great rigour, wasting them by several labours. They were ordered to cut canals for the river Nile, to raise walls and cast up banks to hinder the inundation of that river, and that they oppressed them also with erecting those fabricks of the pyramids; and compelling them to learn many mechanical arts. But Mr. Greaves thinks it a fufficient confutation arts. But Mr. Greaves thinks it a fufficient confutation of this account, that the pyramids are built of storie, and not of brick, in making whereof the Israelites were employed. But though the Israelites might, a little before their departure from Egypt, be employed in making bricks, methinks it does by no means follow, that they were never employed in any other works. And when is it more likely that the Egyptian kings should undertake these was fitter that when they had so many hundred thousand laves in their dominions, whom they seem outer a meaceflity of employing constantly in such works as these to prevent an infurrection? besset, as it is some weight with me, that this was the general opinion, so long since so "Joense and the second of the second opinion, so long since so "Joense and the second opinion, so long since so "Joense and the second opinion, so long since so "Joense and the second opinion, so long since so "Joense and the second opinion and the second opinion, so long since so "Joense and second opinion, so long since so "Joense and second opinion and second opinion, so long since so "Joense and second opinion and second me, that this was the general opinion, fo long fince as Jo-fephus wrote, for had it been much later, the time of their being crefted would not, in that age, have been fo difficult

The time when these pyramids were built is not less uncertain than the founders names; for nothing can be more precarious than the Egyptian chrotology, where we find a succession of kings for fifty thousand years; and they pectend to enumerate no less than three hundred and thirty kings, who reigned before king Morris. Mr. Greaves has taken an infinite deal of pains to assertain the time of their erection, and concludes at length, that they were built between the time of the straight going out of Egypt, and the building of Solomon's temple, being a space of four hundred and eighty years. But we cannot help inclining still to believe that they were built by the straighter, whom the kings of Egypt employed in these stupendous works; on a politic account, rather than sor any oftentation of their power and grandeur, as some writers imagine; not but that there The time when these pyramids were built is not less unaccount, rather than lor any oftentation of their power and grandeur, as forme writers imagine; not but that there might be some other inductments to the erecling them, befides the keeping a mutinous people in action, who, upon the leaft respite from their labours seemed ready to break out into rebellion. That they were actually em-ployed in laborious works, we have the best authority we can have, both from facred and profane writers. And as shere were no lefs than fix hundred thousand of these labourere, besides women and children, as it appears there bourers, bendes women and enturers, as it appears there were at their leaving Egypt, when can we affign a properer time for creeking these vast structures, than when they dwelt in this kingdom? I their being employed in general in preparing materials for building, by the kings of Egypt, of which we have such undoubted testimonies, carries a much fironger prefumption that they were employed in the erecting these fabricks, than the account of their making bricks does, that they were never concerned in any other work, but brick-making. Besides a less body of men than the Ifraelites were, would have made but a flow progrefs in fach mighty buildings: and the recion the dimensions of the Egyptian pyramids exceed any other structures that ever were in the world is, because never any other prince employed so prodigious a number of labourers, or had equal reason for doing it. Another reason why we are intestined to believe they are as antient as the time of the structure of their erection; but we leave every man to his own consectures. to his own conjectures.

100 his own conjectures.
"Many persons have thought that the pyramids were erected as spulchres for the kings of Egypt; but if this was the case, they would furely have provided a better entrance, and not made it necessary to drag the corpse through which a coffin was to fland. 'Dr. Shaw is of the fame opinion, that the great cheft of granite marble found in the upperchamber of the pyramid, was probably intended for fome religious use, it being of a different form from the flone-coffins found in Egypt, which are conflantly adorned with facred charefers, and made with a kind of pedefial at the feet; for the munmics always fland upright, where time or accident have not diffured them; but this where time or accident nave not disturbed them; but this cheft lies flat upon the floor, and confequently wants that dignity of posture, which, lays Dr. Shaw, we may suppose this wife nation knew to be peculiar, and therefore would be very scrapulous of denying, to the human body. Upon the whole, then, in so symbolical a religion as that opon the whole, then, in folymbolical a religion as that of the antient Egyptians, it is not improbable that the pyramidical form might convey fome facred meaning; and perhaps the pyramids themselves might be objects representing the deity, and to which they offered their adorations; last as the Paphian Venus was, according to Tacitus, not of a human, but of a pyramidical form; as is also the black flone worthinged by the Gentoos of India, under the name of Lassermant. name of Jaggernaut.

We shall now proceed to give an account of the catacombs, or mummy-pits, and Egyptian mummies, which are to be seen in the same plain in which these last pyramids are placed, the entrance into which is by a kind of wells, about four feet fquare, and twenty feet deep, cut through a flaty rock, covered with fand, which being moved by the wind, fometimes fills up these entrances. However, fome of them are cased as far as the depth of the sand fome of them are cased as far as the depth of the fand with large unburnt bricks. People are usually let down with ropes, when being got to the bottom, they find a parasge five feet wide, and about fifty feet in length, filled up very high with fand, and having got to the end of it turn down another passage to the left hand about fix feet high, on one fide of which are little rooms, with benches about two feet above the floor, and on the lother fide are narrow calls but his appears to receive a large offin. cells just big enough to receive a large coffin. At the end cells just big enough to receive a large coftin. At the end of this alley is another, which is userower, and on each fide are niches that feem defigned for coffins placed upright. This passage leads to rooms in the form of an oblong fourer, filled with the remains of mumines. Our author observes, that here the infector persons of a family were probably deposited, while the heads of the families were placed in the niches. Each family had originally, perhaps, its burial-place; and as the family increased, they henced out the foundation. branched out these separate place for their remains.

There are found in these catacombs the reliques of em-

balmed bodies, swather feathered up and down, and some-times coffine standing upright and entire, made of, syca-more or Pharach's fig. tree, that have continued in these subtransous apartments above three thousand years, shough the wood is to appearance floorigand years, though the wood is to appearance floorigand porous. The apper part of the coffin is commonly flaped like a head, with a face painted upon it; the reft is a continued trunk, and the end for the feet is made broad and flat for it to fland upright in the repolitory. Other coffins are made of flone, d they are generally adorned with carved work representing hieroglyphical figures of various animals.

on opening the coffine the bodies appear wrapped up in a linen through uson which are faftened feveral linen ferolls painted with his coglyphic characters. These serolls commonly run down the belly and fides, or are fixed on the knees and legs. On a kind of linen beadpiece, which covers the face, the countenance of the person is reprefented in gold, or painted; but these paintings are very much decayed by time. The whole body is swathed by fillets or narrow bandages of linen wrapped round in so

curious a manner, with fo many windings and fo often upon each other, that it is supposed a corple has feldom less than a thousand ells of fillerting. Those especially about the head and face are laid on with such surprising neatness, that there may be plainly perceived scmething

of the shape of the eyes and mouth.

The learned and ingenious Dr. Pococke brought a mummy to England, which was in a coffin made of wood, the seams of which were filled up with linen and fine plaster. Four folds of cloth were over the head, and he processor as a composite the season of the seas ane platter. Four folds of cloth were over the head, and the upper one painted blue. Beneath these was a composition about half an inch thick of gum and cloth burnt by the heat of the things applied to it, and over the skin was a coat of gum, or bitumen, of the thickness of a waster. The back part of the head was filled with bitumen, which had been poured in at the rose, and had penetrated even into the bone of the skull. The body was bound round with a backer of lieus are about the secretary of the skin the same was the statement of the skin the same was the same and the same and the same are about the same are same as the same are same as the same are about the same are same as the same are same are same as the same are same are same as the same are same are same as the sam with a bandage of linen tape about three quarters of an inch broad, under which were four folds of cloth, then a swathe two inches broad, and under that eight different bandages of the same breadth laid across from the shoulders to the hips on the other fide; under this was a cruft of linen about an inch thick, burnt almost to ashes, but flicking together by means of the gums with which it had been smeared. The arms were laid across the breast, the right hand over the left, and both lying towards the face. From the hips to the feet, were eight bandages twelve inches broad, and under these were bandages an inch thick confumed by time, and the heat of the drugs; but the outer bandages did not appear to have been smeared with gums. The cossin in which the body was put was formed of two pieces of wood hollowed fo as to receive it, and being put together were faitened with broad pegs in the top fixed in holes in the lower part. This coffin was in the hape of an human body, as bound up after its beingembalmed; and both the coffin and body wrapped

up in linen, were painted and covered with a thin plaster.

One of the catacombs is appropriated for the birds and
other animals worthipped by the antient Egyptians; for
when they happened to find them dead they embalmed when they happened to must men usual may emounted them, and wrapped them up with the fame care as the hu-man bodies. The catacomb is about thirty feet deep, and has the fame kind of entrance, only the pailage from it is about eight feet wide, and almost filled with faml. It is also much more magnificent than the others. The birds also much more magnificent than the others. The birds are deposited in earthen vases, covered over and stopped close with mortar. In one of the irregular apartments are large jars that might be for bigger animals. In short, the birds were embalmed by dipping them in gums and aromatic drugs, and bound up, like the human bodies, with many folds of linen.

We shall conclude this section with a description ofthat famous building called the Labyrinth, at a place called the town of Caroon, near the city of Memphis, which is faid to have been much more furprifing than the pyramids. It was built according to Herodotus, by the twelve kings It was built according to Herodotus, by the twelve kings of Egypt, when the government was divided into twelve parts, as fo many places for them to meet in, and, transact the affairs of flate and religion. This was so extraordinary a building, that Decadus the famous Athenian artificer, came to Egypt on purpose to see it, and formed the labyrinth in Crete for king Minos on the model of this. The same the flate of this describes it: "This labyrinth has twelve saleous or covered courts, with gates complise seemed. twelve faloons or covered courts, with gates opposite to each other, fix towards the fouth, and fix towards the north in continued lines. They are furrounded by the fame outward wall. The apartments are on two floors, the one under ground, and the other over them, and are three thou-The apartments are on two floors, the one under ground, and the other over them, and are three thousand in all, each floor confifting of one thousand five hundred. Thase above ground 1 myself have seen and gone through, so that I speak from my own knowledge; but those beneath the sepulchres of the kings, and of the facred crocodiles, the rulers of the Egyptians were by no means willing to exhibit. The upper apartments are greater than any other human works; for the outlets at the top, and the various windings through the falcons, gave me infinite surprize, as I passed from a falcon into apartments, and from apartments into bed-chambers. and gave ments, and from apartments into bed-chambers, and into other rooms out of the bed-chambers, and from apartments into faloons. The roof of the whole is flone as well as the walls. The latter are adorned with feulpture: each Ialoon has a perifyle of white stones admirably joined together. Unite close to the line where the labyrinth terminates, is a pyramid of two hundred and forty feet, on which large animals are engraven, and the entrance into it is under-ground." Little, however, is now to be feer, of these hoasted pieces of art, but heaps of ruins, broken co-

lumns, fhattered walls, and entablatures. Among the reff, is the foundation of an oblong fquare building formed of a reddith stone or marble. Some semicircular pilasters are placed upon it, and the remains of the edifice above are of brick plastered over.

partic upon in an an analysis of the process of the been taken away by Seleucus.

SECT. VI.

Treating of the ruins still to be seen of several cities of Egypt, famous in antient times; particularly Busiris, Hilispolis, Antimopolis, several remarkable antiquities; a more particular account of the miraculous serpes theredy; asso a description of the ruins of Tentyra, and Thebes, Gr. with other cities and places of Upper and Lower Egypt.

SOME of the ruins of the ciries and temples of Egypt, like those of Palmyra and Balbec, raise our ideas of their antient magnificence and grandeur; while others only shew the places where the most splendid cities; &c, once shood; the vast length of time since they were built having levelled them with the dust, and only lest a few scattered monuments of the shoft superb structures as testimonials of the truth of history, and as specimens of the architecture of the early ages before it was improved, and carried to persection by the Greeks: Those of the last kind, and which are most impersect, shall take the first place here.

place here.

The village of Baalbait, a little to the northward of Cairo, is fituated on one of those artificial eminences on which probably stood Busiris, a city celebrated for its temple dedicated to Iss: here are the remains of a temple; whose materials are the most costly of any in Egypt. The temple appears, from these ruins, to have been about two hundred feet long and one hundred broad, and, at about one hundred seet alience, it is encompassed by a mound raised to keep out the Nile. The outside of this structure was of grey granite, and the insides and columns of red, the capitals being the head of Iss: there seem to have been four rows of twelve columns each in the temple. But be n four rows of twelve columns each in the temple. But what most commands the attention and admiration of the

what most commands the attention and admiration of the curious, is, the exquisite beauty of the sculpture; for though the figures are only about four feet high, there is something so fine, and so divine in the mien of the deities and priests, that exceeds imagination. But the columns are frequently cut into mill stones by the natives, who are constantly employed in destroying these fragments of antiquity.

To the north east of Cairo are the small remains of Heliopolis, or the City of the Sun, situated on the borders, of the Delta, which is the Or of the triptures, and is now called matarfa. It was a city of great antiquity, and famous for the worship of the sun. They allo worshipped a bull, which was kept here under the name of Mnevls, A large mound encompasses the whole, the ancient seize being about a mile long, and half a mile broad. Here are A large mound encompasses the whole; the ancient seite being about a mile long, and half a mile broad. Here are the remains of a temple, several sphynxes, and an obelish near seventy seet high. The priests of Heliopolis were the most famous of all Egypt for the study of philbsophy and altronomy; and were the first that computed time by years, of three hundred and sixty-sive days. They had here a fort of college consisting of a great number of rooms, Herodotus came to this place to be instructed in the Egyp-tian learning and Strabe when here, was the with the activatian learning; and Strabo, when here, was shewn the apartments of Plato and Eudoxus. Near this city was a famous oblervatory, which received its name from Eudoxus, who was a great altronomer, and studied that science here for many years. There is great reason to think that the ter-ritory about Heliopolis is the land of Goshen, called also Ramefes in feriprure; especially as the children of Ifrael went by Ramefes the first station, on their departure from Egypt; the country being near Memphis, where it is probable Pharson resided at that time.

We read in history, that Sesostria erected, in Heliopolis, two obelists of extreme hard stone, brought from the quarties of Syene, at the extrenity of Egypt, which were each one hundred and eighty seet high, and of one piece of granite. They were cut with a design to acquaint potentity with the extent of his power, and the number of nations he had conqueted. Augustus caused one of their obelists to be transported to Rome, and placed in the Campius Martins. He durft not venture upon a second, which was near the palace of Heliopolis, and of a prodigious size, made in the reign of king Rameses, who it is said employed twenty thousand men in cutting it. This obelist must be considered as one of the most valuable monuments which now remain of Egyptian antiquity. It was respected even by Cambyses, at the time when that furious prince put all to fire and sword in Egypt, and who neither spread temples, nor those superbonnents, whose ruins are still the admiration of travellers. This prince, after having made himself master of Heliopolis, gave up the whole town to the stames; but when he saw the fire approaching to this obelist, he ordered it immediately to be extinguished. It was afterwards brought to Rome by Constants, the son Constantine, and placed in the Circus, with immense labour and expence. It was afterwards thrown down, but re-established by the care of pope Sixtus V.

The village of Matare is fituated at a fmall diffance to the fouth of the above city. It is faid the holy family lay for fome time concealed here when they came into Egypt; and they add, that being in danger from fome bad people, a tree opened, and became hollow to receive and shelter them.

More to the east are the remains of an oblong square edifice of white hewn stone plastered over, with a kind of base and plainth ranging round. Near it is a kind of rustic building that seems to have been a gate. At length appear the remains of the grand structure itself, which is now called the cassle of Caroon. It had a portice of rustic work, which is now no where above six feet high, and the front is more ruinous than any other part. On the other sides are forty tiers of stone, each nine inches deep, and consequently it is there thirty-three seet high; it has signs of a cornice ranging round with ornaments of sculpture. There are four rooms in the length of this building, with the doors crowned with double cornices, and over each a kind of false door ornamented in the same manner; on the sides of the walls are several niches, and many stones are scattered about the plain, of some of which the shafts of the columns amonar to have been composed.

the columns appear to have been composed.

The ruins of the city of Antinopolis lie a little farther to the south, where antiently was a town called Basa; Antinous, who accompanied Hadrian into Egypt, being drowned there, that emperor built this city, and named it Antinopolis, in allusson to his favourite, to whom he instituted games and divine honours. It was about four unites in circumference, and on the part where it stood is now a town called Ensineh. Some remains of this antient city are still to be feen, particularly a beautiful gate, of which the front is almost entire; and behind it are four pillars, together with as many columns and their capitals, the fronts being sluted. Beyond this gate is an avenue with one hundred and thirty pilasters on each side, but they are all in a very bad condition. At the end of this avenue stands the column of Alexander Severus, the Roman emperor; the fusts, which is built of five pieces of stone, is thirty-two feet long, and has a proportionable diameter. The first piece and the capital is ornamented with solinge; the pedestal is square, twelve seet high, and sive broad. On one side of it is a Greek inscription, but the greatest part of it is so defaced as to be entirely unintelligible. Near this pedestal is another, on which also are the remains of a Greek inscription. About one hundred yards from this last is a triumphal arch almost entire. The fronts are forty-eight seet wide, and the sides twenty-four in length. It has three gates, the two outermost of which are feven seet wide, and twenty high; and the centre one, which is the largest, is sixteen seet wide, and thirty feet high. Opposite each of the four sides of this triumphal arch was a colonade, or range of pillars of red granite, of which nothing remain but some troken pillars.

In this part of Egypt also flood Cynopolis, or, The

In this part of Egypt allo flood Cynopolis, or, The City of Dogs, in which Anubis was worfhipped; and dogs were held in great efteem, a certain food being allotted to them. It is faid the rife of this was owing to Anubis, a companion of Ofiris, who wore the dog's-fkin for armonr, as an emblem of his courage; as Maccdon, his other companion, wore the fkin of a wolf, on which account it is conjectured these animals came to be worthipped,

Several other cities also ornamented this part of the Egyptian country, called, Heptanomis, or Middle Egypt; namely, r. Acanthus, where was a temple of Osiris, and a wood of Thebaic Acantha, that produced gums, from which, it is probable, the city might have teceived its name. 2. Heraclopolis, or the city of Herveles, in an island made by a canal running from the Nile. 3. Nicopolis, which shood in the lower part of this island, to the north. 4. Arsinoe, on a branch of the Nile, which ran into the lake Mooris, about fifty miles south-west of Memphis, and twelve miles and a half from the lake. It was first called the city of Crocodiles, hecause the inhabitants worshipped that animal. It is conjectured that this city was about four miles in circumserence, and had a canal on every side. Some of its rains are still to be seen near the province now called Fayoum. 5. Oxyrynchus, so called from a fish of that name worshipped all over Egypt, but principally in this place, where a temple was enceled to that deity. 6. Hermopolis, or the temple of Mercury, now the village of Archo-Mountain. This city was lituated about two miles from the river, and was irregular in its form, being about a mile long, and half a mile broad. Here is still to be seen the grand portico of an antient temple, consisting of twelve pillars, fix in a row, and nine feet in diameter. About three miles south-west of thee ruins was the antient castle of Hermopolis, where they took custom for all commodities brought from the city of Thebes. 7. On the calt side of the river stood Anucropolis, or the city of Anchors; so called from a neighbouring quarry, out of which were cut sone anchors. 8. Aphroditopolis, or the city of Venus, the inhabitants of which paid particular adoration to a white cow. 9. Co-resura, fituated on the western side of the Nile. so. New Babylon, supposed to have stood on Mount Jehus, at the fouth end of Old Cairo, where many ruins are still to be feen.

To the fouth of Hermopolis is a mountain called Shebat el Kofferi, in the fide of which are fome remarkable autiquities. After afcending the mountain for about two hours, you arrive at a gate which leads into a great faloon, supported by hexagonal pillars cut out of the folid rock. The walls are adorned with paintings, which are fill plainly to be distinguished, and the gold that was employed glitters on all fides. There are openings leading to other apartment; but those are filled up with rubbish. There is another apartment above, to which you may arrive, though with great difficulty, by elimbing up on the outside. It is simaller than the first, and has no pillars, but is painted like the other. On each side of the second grotto is a tomb of the same stone with the mountain, with which they both form a continued body. One is open, and the other clossed, but almost buried in the fand. This upper cavern had also a communication with other apartments; but these are also closed up, like some of the others;

Gawa Kiebra is a little farther to the fouth: here flill remains a beautiful portice of a temple, containing eighteen pillars in three rows: thefe lave a fingular kind of capital, and their shaits are enriched with hieroglyphics, executed in a masterly manner. This temple appears to have been extremely magnificent, not only from the grandeur of the portice, but from the vast stones which formed the walls, one of which was found to be twenty-one feet long, eight broad, and four deep; and another thirty feet long, and five broad. At some distance behind the portico is a stone shaped like the top of an obelish, which is adorned with hieroglyphics, and has on one side of it a niche as if

for a flatue.

There is at fome diffance to the fouth the grotto of the famous ferpent called Heredy, where is the tomb of a pretended Turkith faint, adorned with a cupola raifed above the mountain. The Araba affirm, that this faint, who was named Heredy, dying in this place, was buried here; and that, by a particular favour of the Almighty, he was transformed into a ferpent that never dies, but heals difeases, and beftows favours on all who implore his aid. Of this ferpent both Dr. Pococke and Mr. Norden have given a very particular account, and perfectly agree in the particulars they relate of it; and therefore we shall give an account of it here, as this can hardly fail of being acceptable to the curious reader, who will doubtles be inclined to entertain a very mean opinion of the people who could be deceived by this pious fraud; but abfurd as it is, it is not more so than the vulgar belief among the ancient Romans, attested by very creditable authors, of Æsculapias entering into a serpent, and under that form being brought to Rome and curing a pesitience in that city.

Roapius ought

& to cular particular persons, and is more propitious to the great lords than to the poor: for if a governor be attacked by any disorder, the stepent has the complaisance to suffer himself to be carried to his honse; but a person of the common rank must not only make a vow to recompense him for his trouble, but send a spotless virgin on the important embassy; for the fair alone can have any influence on him; and if her virtue should be the least suffice, he would be inexorable. On her entering into his presence, she makes him a compliment, and, with the most humble submission intreats him to suffer himself to be carried to the person who wants his assistance. who wants his attiftance.

The ferpent, who can refuse nothing to female virtue, begins at first with moving its tail: the virgin redoubles her intreaties, and at length the reptile springs up to her neck, places itself in her bosom, and there remains quiet, while it is carried in state in the midst of loud acclamations, to the house of the person who dispatched the smbassaders. No sooner is it brought into the room, than the patient begins to find himself relieved. Yet this minaculous physician does not withdraw; for he is very willing to remain some hours with the patient, if during the whole time they,

fome hours with the patient, if during the whole time they take care to regale his pricits, who never leave him.

All this is performed to admiration, provided no Christian or other unbeliever comes in, whose presence, it is pretended, would intrictly mar the plot; for this fagacious serpent, on perceiving him, would immediately disappear. The pricits would search for him in vain, and it would be impossible to find him: for were he carried to the other fide of the Nile, he would return invisibly to his dwelling in the tomb. The Arabs even boldly aftert, that were he cut in pieces, the parts would inflantly join again; and that nothing can put a period to his life, being deftined to be immortal.

The Christians, who ought to claim a degree of wisdom fuperior to the Arabs, have even the folly to believe that this pretended faint is the devil himself, whom God has this pretended faint is the devil himfelf, whom God has permitted to missed these blind and ignorant people; and in this belief they are consisted by a tradition, that to this place the angel Raphael banished the devil Asmodi, whom in Tobit vii. 3. he is said to send into Egypt. On which an author of credit makes the following reflection:

"I am persuaded," says he, "that both the Arabs and these Christians offend against the rules of reason. Before we consider a thing as mirroulous or supersitions. It is

these Christians offend against the rules of reason. Before we consider a thing as miraculous or superfictious, it is necessary to examine whether the fact itself be true; whether the circumstances are such as are pretended, and whether no fraud is used. I agree that the serpent is there, but it cannot be immortal; he undoubtedly dies like other serpents, and the priests who draw a profit from him substitute another of the same kind in his room. Were they indeed to cut the serpent in pieces, and were the parts seen to join again, it might be steemed a proof of its immortality; but they can never be brought to this; and when the emit of Akınım ordered them to make this trial in his presence, the priests excused themselves from the experiment.

periment.

"Is there any thing eafier than to make a tame ferpent obey certain figns? The virginity of the ambaffadrets is fecured by her being fo young as to be free from sufpicion; and ferpents are known to be attracted by certain odours and herbs, with which the girl may be rubbed; at least she is adorned with chaplets and gerlands of flowers, in which they take care not to forget such as are agreeable to the stepent. In short, if it be asked how it is possible that it should disappear from the sight of so many people, I answer, that it is sufficient to conceive that these priets are excellent ingelers and these will be no difficulty in imagence. excellent jugglers, and there will be no difficulty in ima-gining them capable of conveying away the ferpent in the prefence of a great number of feetators, without the most attentive and quick-fighted being able to perceive it: who-ever has feen the tricks daily played by the mountebanks in the great figure before the caftle of Cairo, must have been struck with feats much more remarkable than this." If to all this be added the account travellers give us of the dancing ferpents, and other particulars relating to those reptiles, in Indostan, every thing mysterious in the affair will vanish, and the whole must appear to be an arrant

imposture.

We shall now proceed to give a description of the antient state of Upper Egypt, or Thebais, and also an account of the ruins and remaining antiquities in that part

of the country.

The city of Tentyra was situated still farther up the Nile, the inhabitants of which paid extraordinary adora-tions to Venus and Ins. to each of whom they built a temple. From the many heaps of ruins seen here, the city appears to have been of great extent, and to bave been much frequented fince it was in its ancient felendor. People feem to have lived even in the temples, and feveral houles have been built of unburnt brick on the top of the great temple, which is two hundred feet long, and forty-five broad. The principal remains of the ancient builtings are near each other; these are two gates and four temples.

ings are near each other; these are two gates and four temples.

The grand temple already mentioned appears to be that of Isis, and seems entire, only the apartments which appear to have been built at the top are destroyed, and six or seven of the rooms which have been formed below are filled up. There is an alcent to the top by ten flighes of steps. The pillars are adorned with large capitals of the head of Isis, each capital baying four faces, one on each side, and over them are compartments in basic relievo, finely executed, and in a noble tale. At the end of the grand room are four stories of hieroglyphics in seven compartments, each of which has two or three human sigures, but some of them are defaced. There are likewise some stories of hieroglyphics on the outside, and it is not improbable that before the ground was saifed there were sive both within and without. On the outside of the south end are five colosial sigures, and two more beautiful than the r.ft stand at each corner. Round the top of the edifice are several spouts, with an ornament over them representing

the r ft ft and at each corner. Round the top of the edifice are feveral spouts, with an ornament over them representing the head and shoulders of the sphynx before-mentioned.

The ruins of the ancient city of Thebes, being the most coinsiderable in Egypt, and generally known by the name of The antiquities of Carnack and Luxerien, two villages situated among those ruins of antiquity, we shall now give our readers a particular description of them.

The city of Thebes extended on both sides the river, and according to some authors, was built by Osiris, and according to some authors, was built by Osiris, and according to others by Bussias II. who appointed its circuit, adorned it with magnificent buildings, and readered it the most opulent city upon earth. It was originally called Diospolis, or the city of Jupiter, and afterwards obtained the name of Thebes. Diodorus Siculus observes, "that not only this king, but many of his successors, improved the city with presents of gold and silver, with ivory, and a multitude of colossal statues; and that no city under the sun was so adorned with obelishs of one entire stone. the fun was so adorned with obelisks of one entire stone. the fun was so adorned with obelisks of one entire stone. The buildings erecked here by the antients have remained to modern times; but the gold and silver, the ivory, and precious stones, were carried away by the Persians when Cambyses set fire to the temples of Egypt. It is faid that the Persians having transferred this opulence to Asa, and having carried artists with them from Egypt, built the magnificence palaces of Persepolis, Susa, and others in Media. It is added, that the riches of Egypt were at that time so great, that after the plundering and burning, there were taken above three hundred talents of gold, and two thousand three hundred talents of silver, from among the fand three hundred talents of filver, from among the ruins.

There were four temples admirable in beauty and great-nefs, the most antient of which, according to Diodorus Siculus, was in circuit thirteen stadia, and forty-five cubita in height, with a wall of twenty-four feet broad. The ornaments and offerings within were agreeable to this magnificence, both in value and workmanship. The rolins of the above temple are still to be feen, and it a computed to have been about half a mile in circumference. consputed to have been about hair a finite in circumiterence. It has eight grand entirances, to three of which were avenues of a great length between fibyinxes, two of them having fixty of these statues on each side. Having passed between these at one of the entrances, you come to four grand gates at a considerable distance behind each other in a distance of the entrances. rect line to the temple. They are about thirty-five feet deep, one hundred and fifty in length, and, before the ground was raifed, must have been from fixty to fixty-five feet high. These structures lessen every way like a pyra-mid, from the bottom to the top: the first is of red granice finely polished, and beautifully adorned on the outside with hieroglyphics, in four feries from the top downwards, and

hieroglyphies, in four feries from the top downwards, and three on the infide, in each of which are the figures of two men finely executed, and bigger than the life. Farther on each fide are colofial figures, about fifteen feet high, with hieroglyphies under them; and in this laft manner the gates are adorned, but without the compartments.

Dr. Pococke, who viewed these venerable rains, observes, that on each of these gates there feem to have been colossal flatues. On the outside of the first, on one side, is a statue of red granite, and on the other a statue of a kind of granite that seems composed of small pebbles. On measuring the liead of one of them, it was sound to be sive feet fix inches in length. The next gate is much ruined, and

has only two stories of colossal figures to the fouth, and one to the north. The third gate is covered all round with hieroglyphics and coloffal figures of men; and here are with hieroglyphics and coloilal figures of men; and here are the remains of a flatue of white marble, the head of which has a ferpent on its cafque. This head is four feet and a half from the top, to the lower part of the neck. The fourth gate is a heap of rulns; and before the main build-ing is a large pond, that was probably a refervoir of the water of the Nile for the use of the temple. From those gates walls had been built, that extended to the other gates, as well to enclose particular courts between the gates and

the temple, as to form the entire inclosure of the building.
There is another superb entrance about one hundred and fifty paces to the west, with the same kind of avenue and nry paces to the west, with the lame kind of avenue of sphynxes; and all the rest have the appearance of extraordinary magnificence. The grandentrance to the west is forty feet broad, the bottom part being a solid wall of the fame thickness. Within this is a large open court, having on each side, at the first entrance, a terrace of eighty seet broad. In the front of the entrance are two fmall windows; but the upper story is in many parts fo ruined, that at a distance it has the appearance of battlements. The walk between the two terrades leads to the inner part of the temple, and is adorned on each side with a grand colonade of pillars above forty feet high, and eight feet diameter, with large capital vales, like a bale, only worked with fome figures in lines. At the farther end of these pillars are two colossal statues of red granite on pedeslas four feet wide, and six long, but the leads are broken off, and the statues much dissignred and mutilated.

Our author fays, that notwithstanding the wall of the inner temple is greatly ruined, it has in its present state more grandeur and magnificence than in any other building he ever faw. The door is very high, and yet in a just pro-portion; and the walls on each fide are beautifully adorned with hieroglyphics and the figures of men, in fix com-partments, above nine feet high, and twelve wide, every compartment having the figure of three men in it.

There appear, on entering the inner temple, fixteen rows of pillars one way, and eighteen another; those in the two middle rows are eleven feet in diameter, and the others eight, with capitals of square stone. The temple was higher above the middle rows than in the other parts, and had a kind of windows over the space between every two pillars, with twelve lattices of stone in each. Both within and without the temple are hieroglyphics, and other representations. Carved representations of battles and chariers, one of which is drawn by stags, are still to be feen on the outfide to the north, which was beautified in a very grand manner.

There is on each fide of the grand entrance into the east end of the temple, an obelifk upwards of fixty-five feet high and fix fquare, having only one column of hieroglyplics. Farther to the east are two other obelisks, seven feet fix inches square, and seventy-three feet high; but one of them is fallen down : they are all of red granite, and these two last have three columns of hieroglyphics all the way down. At a little distance from these obelisks are two walls, separated by an entrance in the middle, and on the west side of them are colossal busts.

Continuing along the middle to the east, you come to a small room of red granite; and on each side of the temple are feveral apartments, some of which might probably have been appropriated to the use of the priests, and others adapted for the beasts they kept for facrifice. About one hundred and fixty feet to the east, is a large building which confifts of feveral finall apartments on each fide of a spacious colonade, and feem at if adapted for the use of the officers of the temple. To the north of this are ruins of buildings, with a grand gate before them, which seems originally to have led to the temple. Among the rest, are the remains of a temple, which appear to have been one hundred and seventy-five feet in diameter, and to have been of a round form.

The following are the principal hieroglyphics now to be seen on the gates of the abovementioned temple: on one, a man offers the deity, in each hand, a vafe like a chocolate difh, having on each arm fomething refembling a folded napkin. In an another, one feems to offer himfelf to two detites, which might probably be the fun and moon. A man likewife offers fomething like apples to one on a throne, four-deities being on thrones above, as on another floor. A bird like a hawk on a pillar fomewhat refembling the Corinthian order. A peacock on another. A man standing before four monkies, which are on two floors; and three trees on a pedefall. These figures are all entire, for they could not easily be disfigured, being cut in granite.

Here are also the remains of several other temples, whose ruins are scattered several miles round; among these, one of them, from the situation of its fragments; appears to have been round, and in diameter near one hundred and feventy-five feet.

A very elegant temple once flood about four miles east Carnack; but the whole of it is totally deftroyed, except the grand gate, which is entire, and near it is afphynx about four feet long. And about a mile to the north of Carnack is a kind of fireet, on each fide of which is a rocky ground about ten feet high; in thee rocks are cut many rooms, and supported with pillars. Being contrived as excellent fecurities against the inclemency of the weather, they are therefore supposed to have served instead of houses in the very earliest times.

After paffing through feveral vallies, where the mountains rife to a great height, the traveller comes to a round opening like an amphitheatre, and, afcending it by a nar-row steep palfage, arrives at a mountainous place called Bribah el Maluke, the sepulchres of the kings of Thebes, which are formed in the rocks. The vales, in which are these grottos, are covered with rough stones, that have pro-bably rotted from above. It is about one hundred feet wide, between high precipices, in which grottos are cut in a most beautiful manner. Long galleries, or passages are formed under the mountains, out of a close white free-frome that cuts like chalk, and is as smooth as the finest There are generally four or five of these galleries one within another, from thirty to fifty feet long, and from ten to fifteen feet high, leading to a spacious room, in which is the king's tomb, or cossin, with his figure cut in relief on the lid; in one of the galleries the picture of the king is painted at full length. Both the ceiling and fides of the rooms are cut with hieroglyphics of birds and beafts, fome of them painted, being as fresh as if they were but just sinished, though they must be above two thousand years old. One of these sepulchers is most beautifully adorned with hieroglyphics cut in the stone, and painted.

The entrance into this, which has a defeent, is cut through the rock, and for thirteen feet is open at the top: then for eight more the cieling inclines, answering to the descent under it. The galleries have hieroglyphics carved on each fide, first on a kind of compartments next to the cieling, in the manner of a frize. Below them are carved figures representing mummies, and under there are hieroyphics all down the fides, divided by lines into different columns. In the middle of the ciching are the figures of men with flars ou each fide. The king's tomb is of one flone of red granite, feven feet nine inches high, eleven feet eight inches long, and above fix feet broad, the cover being made to flut into it; and on it is cut the figure of the king in mezzo relievo, with an hieroglyphical inscrip-tion, which may be some account of the monarch. This room is adorned with hieroglyphics in different columns, with figures of men, hawks, and bulls. In the great room is the flatue of a man holding a sceptre in his hand, and on the cicling is painted a large figure of a man holding a particular kind of feeptre, with wings hanging lower than his feet, and covering his whole body. On each fide of the entrance are four men cut in the flone above the natural fize, with the heads of hawks and other animals, of different species.

To the fouthward of these mountains are two very extensive apartments: to one of them is a descent of ten steps to a spacious area cut in the rock, which leads to a room supported by square pillars, also cut out of the folid rock; and beyond it is a long room supported by pillars on each side. All the apartments are adorned with hieroglyphics; but they are in some places black and scaled, as if damaged by fire. Beyond these rooms are apartments, to which there is a defcent of feveral steps to the right; and one part leads to a gallery cut round the rock, which has apartments on one fide, and in them are holes cut perpendicularly down to other apartments below, where there are doors and openings, and probably as many rooms as above, One would imagine, fays Dr. Pococke, that these were the habitations of the living, and that they were cut under those of the kings of Theles, if they were not themselves palaces, to which those princes retired to avoid the heat, when it was most intense.

Other apartments are cut in a fmall hill near the appearance of a grand entrance under the mountains: the way to which is through a valley, that feems to have been divided by walls or mounds into four parts; one of them is dug much deeper than the reft, and was probably a refervoir of the water of the Nile, and the others extend to-

wards fome remains of old buildings.

the ap-ns : the ve been ly a retend toTo the west is a room that has a well-turned arch, and appears to have been used as a Christian church; for the hieroglyphics, which are in small columns, and extremely well cut, have been covered with plaster, on which is painted Christ encompassed with a glory.

To the south-east are the ruins of a large temple, and a distance from it the ruins of a pyramidal gate, and of a very large-colossis state, broke off about the middle of the trunk. It is twenty-one feet broad at the shoulders; from the top of the head to the bottom of the neck is eleven first and the sax is three feet long.

feet; and the esr is three feet long.

Two rows of fquare pillars, are in the first court of the temple; on each tide of which is a statue, but their heads are broke off. Each of these statues has the lituus in one

are broke off. Each of these states has me must be hand, and the fingellum or whip in the other, as is commonly feen in the states of Oficis. In the second court are the remains of two colosial states stiting; they are of black granite, and the head of one of them, which lies on these states of the inches in length.

black granite, and the head of one of them, which lies on the ground. is three feet five inches in length.

Many pillars belonging to the temple are fill flanding, and many others are deftroyed. Two forts of pillars are observed in this edifice, one more besutful than the other. Their thicknefs and folidity give them at a distance a noble appearance, and on approaching them the eye is entertained with the hieroglyphics; and when you are near them their colours have a fine effect. This fort of painting has neither shade nor degradation. The figures are enculted with it like painting in enamel; and it is faid to forpass in strength every thing seen of the kind, it being a perior in beauty to the al-fresco and Mosaic work, with '1 advantage of being more durable. It is surprising to see,

an itength every thing leed of the kind, it being it perior in beauty to the al-frefeo and Mosaic work, with it advantage of being more durable. It is surprising to see, how the gold, ultra marine, and other colours have preferred their lustre to the present time.

Besides the antiquities already mentioned at a considerable distance from the temple, are what is called the colossal states of Memnon, which front the Nile. The sirst appears to represent a man sitting, and the other a woman in the same posture; and they are both fifty feet high from the bases of the pedestals to the top of their heads. They are seated upon stones sisten feet in height, and as many in breadth; but the back part of each stone is higher than the fore part by a foot and a half, and they are placed on plain pedestals sive seet high. The statue to the north has been broken off at the middle, and has been built up with five tier of stones; but the other is of one single stone: the seet lines to the color is of one single stone: the seet lines to the other is of one single stone: the seet lines to the other is of one single stone: the seet lines to the other is of one single stone: the seet lines to the other is of one single stone: the seet lines to the other is of one single stone: the seet lines to the other is of one single stone: the seet lines to the other is of one single stone: the seet lines to show the other is of one single stone: the seet lines to show the other is of one single stone: the seet lines to show the other is of one stone of the seet lines of the seet lines of the seet lines of the seet lines of the seet lines. tions, fome of them epigrams in honour of Memnon; but most of them are testimonies of those who have heard his found; for one of them has been thought the famous flatue of Memnon, which at the first and second hour, it is pretended, uttered a found, occasioned by the rays of the fun striking upon it, like the breaking of the firing of a harp, when it was wound up.

Not far from these flatues are the rwins of several others, particularly one of yellow granite almost entire, and from the top of the head to the thigh, was twelve seet in

Near two miles from Carnack is a finall village called Near two miles from Carnack is a finall village called Luxvien, built on a part of the antient Thebes, oit the aftend of the river, adjoining to this village, are the remains of a large and magnificent temple, which was also a part of the ancient Thebes, and is called by Diodorus the sputchre of Olymandus: it is fit ated on the east fide of the river, to the fouth of the antiquities just described. On approaching it you come to two obelisks, which are probably the finest in the world; they are at present fixty feet high, and might be seventy or eighty, according as the ground has risen, which is certainly a great deal: they are feven feet and a half square, and at bottom might be eight seet. The hieroglyphics extend in three columns down each feet. The hieroglyphics extend in three columns down each fide, and are cut with a flat bottom an inch and a half deep, and the granite has perfectly retained its polish, which is as fine as can be imagined. On the top of each fide a perfon fits on a throne, and another offers him fomething on his knees. These figures are likewise below. Lower down are three hawks, then three bulls, and at the distance of about every foot is an owl. There are also monkles, heads of camels, hares, dogs, ferpents, birds, insects, and other

There is at a finall distance from the above, a pyramidal gate, two hundred feet long, and at prefent fifty-four above the ground. On each fide of the cutrance is a coloffal flawhich rifes thirteen feet and a half above the furface

of the earth, though the thoulders are only three feet said a half above the ground. In the front of the pyramidal gate are windows and feulpture, particularly a before feeted on a throne, holding out one famid, in which he had a feeptre or a staff, and is survounded by others in postures of adoration. On the other side a man is reprisented in a. car, galloping and shooting with a bow, and followed by many chariots. This may have a relation to the wars of this king against the Rackrians. Within this gate is a court almost filled with cottages, with some pillars that once formed part of a colonade, beyond which was another gate now in ruins, and beyond that another court, which had a large and beautiful attar in the middle, and the history of the king was cut all round on the walls. The pillars in this court are forty feet high; but the work in the capitals, instead of being in relief, is only cut out in lines. The walls of the rooms are adorned with sculpture, among which à delty is represented carried by eighteen men in a kind of bost preceded and followed by a person holding a particular entign: Here are also a person sitting, and another kneeling to him, with instruments of music, a man leading four bulls with a firing, and men kneeling who have in their hands the heads of hawks.

Besides those abovementioned, the following cities, fittiated on this side of the Nile, were contained in this patt of Egypt; namely, 1. Lycopolis, or The City of Wolves, so called from the inhabitants of it paying an extradidinary respect to that animal.

2. Hypsele, about a mile to the west of the Nile.

3. Ptoleman, faid by Ptolemy to be the largest of them all. It had a government established after the Greek manner, so that it was probably rebull to nder the greek manner, so that it was probably rebull to the west of the Nile.

3. Ptoleman, faid by Ptolemy to be the largest of them all. It had a government established after the Greek manner, so that it was a very small place, and its now a village called El Berbl, or the Temple of these walls is fitteen teet, and the length thurty-inx. On the top of one of them are the rentains of a coimice, below which there is a globe, supported by two fish like lampreys. 7. Aphroditopolls, that is The City of Verus. 8. Latopolis, in which was the temple of Pallai, where both that deity and the fish latus were worthipped. The principal part of the temple is still standing, and is thus described by Dr. Pococke; "The capitals of the pillars are somewhat like the Corinthian; within the temple are those shrives shrives shrives shrives shrives a shieres the incervations of hierostyphics of men about the feet help. are fomewhat like the Corinthian; within the temple are three flories of hieroglyphics of men about three feet high; and at one end the lowest figures are es big as life, one of which has the head of an ibis." 9. Clocoditopolis, or the City of Crocodiles, so called, according to Strabo, from that animal being the particular object worthipped by the inhabitants. 10. Apollinopolis, where was antiently a magnificent temple, some remains of which are fill! extant; but the interior parts cannot be entered, they being quite filled up with earth and rubbiss. Its front, in breadth, was one hundred and eighteen feet; the fides one hundred and fixty-nine feet long, and its height seventy feet. There in now a small village called Utsu on the ruins of the city.

11. The city of Elephantine stood on an island of the same 11. The city of Elephantine flood on an island of the same name. The island is about a mile long, and a quarter of a mile broad to the fouth, ending in a point at the north.
There was a temple at Cauphis on this island, and a nilometer to measure the rise of the Nile. Here are fill the remains of a temple, before which is a statue, fitting with the hands across on the breast, and a lituus in each hand:

the flatue is about eight feet high.

12: The city of Philæ flood about twelve miles from Elephantine, in an island of the same name, not above half a mile long, and a quarter broad. The island was deemed sacred, from an opinion that Oficis was buried there; and the ruins of a magnificent tentple are ftill to be feen. It was called a Temple of the Hawk, from the inhabitants worshipping that bird, the figure of which is cut among the hieroglyphics in feveral parts. It was built with free-stone, and fituated on the west fide of the island. with tree-itone, and trusted on the west nde of the island. The outer court of the temple was of considerable length, and on each side of it are still remaining a row of pillars, ornamented with a variety of capitals. On the outside of the inner court are large colossal sigures, and within ars several beautiful pillars; ornamented with capitals wrought in basso criticals. The south part of the entrance is ter-

minated by a wall, at which are two obelifts raifed on very handforms pedefinis; and on each fide of the entrance to the east is an obelific of red granite.

The appearance of the country about this island is very remantic; the east side of it is all rock; and on the west the hills are either fandy, or of black rocks. The rocks the hills are either fandy, or of black rocks. The rocks of grante crofs the Nile; and in three different places, at

of granite cross the Nile; and in three different places, at tome distance from one another, divide the stream into three parts, making three falls at raich of them. Here are several large cataracts, the most considerable of which appears to be that described by Strabo, who says, "It is a rocky height in the middle of the river; the upper part of it is smooth, so as the water can run on it, but ends in a precipice down which the water falls."

Going down from the island of Philes, and on the cast fide of the Nile, stands Syene, built on very high rocks, opposite the southern of Elephantine. Its ruins are still to be seen on the height over Asronan, exactly under the ropic of Cancer. Pliny mentions this place, and particularly the antient forts here, as being situated in a peninfola; and it is conjectured by modern travellers, that the granite pillars in that neighbourhood are the remains of some antient temple. Strabo tells us, that here was a garrison of three Roman cohorts. The same historian also forme antient temple. Strabo tells us, that here was a gar-rifon of three Roman cohorts. The fame historian alfo deferibes an observatory here, built over a famous well, for making aftronomical observations.

for making attronomical observations.

The granite quarries are to the fouth-east of the ruins of Seyne; all the country, the islands, and some parts of the bed of the Nile, being red granite, which is the stone mentloned by Herodotus. The quarries are not worked in deep, but the stone is hewn out of the sides of the low hills. Dr. Pococke says, "they seem to have worked in round the stone with a narrow tool, and when the stones were almost separated, there is reason to think they forced them out of their beds with large wedges, of which there are evident signs in all parts of the quarries."

The city of Ombos stood sarther to the south of Seyne; it is now a village, called Com-Ombo, where a great heap of ruins are still to be seen of an old temple. On some of the pillars, which are a few seet above the ground; are many beactiful hieroglyphics; but the chief parts of the building are so buried in the earth, that no judgment can be formed either of the shape or magnificence of the building in its original state.

ing in its original flate.

Not the leaft remains are at this time to be feen of the city of Elethys, or Lucins, famous for a temple facred to that goddefs.

The last city we have to mention in this division of the

country, is Chuphis, so called, according to Strabo, from a god of that name which the inhabitants worshipped.

Lower Egypt forms a kind of island, and in shape re-fembles a triangle, or Δ , from whence it received the name of Delta, the fourth letter in the Greek alphabet. It extended from Heptanouris to the Mediteranean fea, and contained not only that part which is encompassed by the arms of the Nile, but also Marcotis and Alexandria, with its dependencies to the west; and so the east, Casiotis and Augustamnica, with some other territories towards Arabia.

This division begins where the Allie towards Arabia.

Augustamnica, with some other territories towards Arabia.
This division begins where the Nile is separated into two large canals, through which it empties itself into the Mediteranean. The eastern mouth is called the Pelusian, and the western the Canopic, from two cities in the reighbourhood, fortaerly Pelusium and Canopus, called now Damietta and Rosetta, but there are five smaller branches between these two large ones.

Several considerable places were formerly near the lake Maxootis, but there are no vestiges of them now to be

The famous city of Alexandria (which we have already deferibed) flood between the lake and the Canopic branch of the Nile: the Ptolomies made it the place of their refidence, and the capital of all Egypt, after the death of Alexander its founder.

Several other cities were at a small distance from Alexandria, particularly Nicopolis, Eleusis, and Canopus.
The latter of these was situated near the sea-side, about thirteen miles from Alexandria. It is faid to have been mirreen mires from Alexandras. It is faid to have been built by the Spartans on their return from the Trojanwar, and to have taken its name from Canopus, the pilot of Menelaus, who was buried there. In the centre of this city frood the temple of Scrapis, besides which several obelifks were in different parts of it, but not the least part of them is now remaining.

Several other cities antiently flood between the fea and the canal that runs from Alexandria to Canopus, as also to the fouth and west of the last mentioned place. The cities of Mitelis, Naucratis, and Sais, were likewife between the Pelufian and Canopic branches; the latter of these was once the metropolis of Lower Egypt, and sup-posed by some to be the Sin of the scriptures. Here was poted by forme to be the one of the scriptures. Here was a famous temple dedicated to Minerva, and near it was the afylum of Ofiris, where he was supposed to have been buried; for, according to the Egyptian mythology, Isis deposited several cossins in different places, that his body might not be discovered by Typhon.

The cities of Cabasa and Brutus stood to the north of

Sais, the latter of which was famous for having in it the

les of Diana, Apollo, and Latona.

There are many other cities, befides the above-men-tioned, in this part of Delta; but we know nothing more than their names, which have been handed down to us by than their nan the antients, there not being the least trace of any of them now remaining.

the antients, there not being the seat trace or any or them now remaining.

The following remarkable cities once stood on the cast-side of the Delta, where Egypt was bounded by Arabia Petresa and Palestine; tamely, t. Barbartus, on the most castern part of the Nile, where was a magnificent temple dedicated to Diana, whom the Egyptlane called Bubassa.

2. Onias, situated higher on the river, and which had its name from a Hebrew priest, who had obtained it of a king of Egypt, and built a temple there in opposition to that of Jerusalem. According to Josephus, Onias was influenced to build this temple, by a great faith he had constantly placed in a propilety of Esias, who, six hundred years before, had foretold that a temple should be built in Egypt by a Jew, to the honour of the most high God. Mount Cassus 800d at a small distance, from these cities; and here, according to Ptolomy, was a town of the same name. Strabo favs, it had a magnificent temple dedicated to Jupiter Cassus; but what rendered it most remarkable, was, that it contained the sepulcher of Pompey, who was buried in this sandy hill, which runs sinto the sea, and seems to be the place now called by mariners,

fea, and feems to be the place now called by mariners, Tenere. Near this place Pompey was treacherously mur-dered by the command of Ptolomy. He was buried by Cordus, a Roman foldier; and a superb monument was afterwards erected to his memory, which was repaired and

afterwards erected to his memory, which was repaired and beautified by the emperor Adrian.

The lake Sirbonis, which feparates Egypt from Syria, is a little to the eaft of mount Cafius. The autient Egyptimus called it the place of Typhon's exit, and the poets feign, that Typhon lay under it; for in those times it was supposed to be a place of great fecurity. It was then twenty-five miles long, but narrow, and inclosed by hills of fand on each fide.

of fand on each fide.

Several other cities formerly flood near the lake Sirbo-nis and the Red fea, but there are not any remains of them now to be feen. We shall therefore conclude this account of the antieut state and antiquities of Egypt, by observing, from Diodorus Siculus, it originally contained eighteen thousand cities, the chief of which was Thebea; Memphis fucceeded to Thebea, and at last Alexandria; in Memphis; as Cairo has fince done to Alexandria; in which city there were four thou and palaces, as many baths, four hundred fquares, and forty thousand Jews that paid tribute when it was taken by the Saracens.

SECT. VII.

Of the antient history of Egypt; including also its govern-ment, laws, seldiery, artificers, arts and sciences, bus-bandry, &c.

T will not be expected that we should dwell long upon the antient history of this country, our business being chiefly with the modern; we shall, however, give a short view of it, which we presume may be acceptable to most

of our readers.

The Egyptians are certainly a very antient nation, though far from being so anticut as they would represent themselves, when they give us a catalogue of their princes, some of whom, according to their sabulous account, must have lived several thousand years before the creation. But if, as it is observed by some writers, the Egyptians, by years, did not mean the periodical revolution of the fun-but only of the moon, their chronology, in that cafe, might be confiftent with reason and truth; but otherwise, as hath been long since remarked of the Chinese and other people, who run up their original so very high, it consutes itself, as no tolerable account or history is given us of these pretended times, but on the contrary, the invention of all arts and fciences, even agriculture, were introduced among them about the time nentioned in our

histories; which could not possibly have been the case, had the world been is old as they sogget; for it cannot be conceived how men could live any time in a regular society without these area.

That this country was early planted is very evident; but the history of its antient state is so inveloped in obscurity, or disguised by fables, that it cannot in the least be depended on. We cannot with certainty affirm, as some have ventured to do, that Menes, or Misraim, the son of Ham, and grandson of Noah, who reigned in the year of the world 1816, and 2188 years before Christ, was the sounder of the Egyptian monarchy, because it is very difficult to show who were the first planters of almost any nation in the universe: it is sufficient that it appears, Liathing the everal of the neighbouring nations were planted foon after the dispersion of the people at the building of the tower of Babel. But it is observable, that all writers, antient and modern, republican, as well as the advocates for monarchy, agree, that the first plantations or settlements were made and conducted by some great captain or several plantations which had the supreme command of his followers by virtue of his birthright, and that a republican form of government was not known in the first ages of the world. But to return from this digression. Cham, the son of Noah, is generally held to be the same with Jupiter Ammon, and Missim, his grand-son, the same with Osiria, the great deity of the Egyptians, and from him, it is said, descended that race of monarchs, who had the general denomination of Pharsolie; but from whom or how the word Pharaoh came to be the fityle of their kings, I find no faits after reckoned about skyty princes of the line of

word Pharaoh came to be the ftyle of their kings, I find no faisfactory reason given.

There are reckoned about fivty princes of the line of these Pharaohs, and they reigned, as it is said, in an uninterrupted succession to the year of the world 34.35, when Pharaoh Pfamniticus, the second monarch of that name, was conquered by Cambyses II, king of Persia, who united Egypt to that empire, under which it remained till the reign of Darius, being upwards of one hundred years, when it revolted from that crown, and became an independent kingdom again, A. M. 3600, (Amyrteus being their first king after that revolt), in which state it continued about fifty years, when Ochus, king of Persia, recovered the dominion of it again; and it remained subject to the Persian monarchs till Alexander the Great defeated Darius, when it fell under the power of that prince, with the rest of the provinces of the Persian empire.

After the death of Alexander, A. M. 364, Ptolomy, the son of Lagus, or, as others infinuate, the son of Philip of Macedon, and consequently half-brother of Alexander, sound means to feat himself in the throne of Egypt, and render it an independent kingdom once again,

Egypt, and render it an independent kingdom once again, hilos fuccessors, the kings of Egypt, ever after retained the name of Ptolomies; in which time it continued between two and three hundred years, the last fovereign being the famous Cleopatrs, wife and fifter to Ptolomy Dionysius, the last king, and mitters to Julius Cæsar and Mark Antony successively. This was about the year of

Mark Antony fuccessively. This was about the year of the world 3025.

Prolomy Philadelphus, fon of the first Ptolomy, collected the Alexandrian library, said to consist of seven hundred thousand volumes; and the same prince caused the feriptures to be translated into Greek, but whether by seventy two interpreters, and in the manner as is commonly related, is justly questioned. The Ptolomies continues extended their dominion over a great part of Syria, and were frequently at war with the kings of Syria, in which they met with various success.

After the death of Cleopatra, this kingdom fell under the power of the Romans, and was usually governed by a

the power of the Romans, and was usually governed by a gentleman of Rome, it being thought too hazardous to trust fo confiderable a command with a fenator. When it was made a province of the empire; it was looked upon as the emperor's peculiar, and afterwards made an entire dicefe of itfelf, fubordinate to the Præfectus Prætorio Orientis; and while it was under the dominion of the

Crients; and while it was under the dominion or the Romans, the nation in general embraced Christianity.

Egypt remained a Roman province till the reign of Herachus, the emperor of Confiantinople, when the people, being difgured with their governors, called in Omar the third caliph of the Saracens, and submitted themselves to the Mahometan power; being about the year of our Lord 640, But furely the administration of the Greek emperors must be very grievous, which could induce a Christian ration to make choice of a Sarac... for their fovereign.

The caliphs of Babylon were fovereigns here till about the case of the case

the year 870, when the Egyptians fet up a caliph of their own, called the caliph of Cairo, to whom the Saracens of

Africa and Spain were sublect; but the governors of the provinces, or suitans under the ealiphs of Babylon and Cairo, soon werded the civil power out of the hands of their caliphs, or high-priests, leaving them only a shadow of sovereignty.

About the year 1160, Assarcadin, or Saracon, general of Florraddin, the Saracen suitan of Damaseus, subdued the kingdom of Egypt, and usurped the dominion of it, being succeeded in this kingdom by list for Saladin, who reduced also the kingdom of Damaseus, Mesopotamis and Palestine under his power, and about the year 1190, took ferusiaem from the Christians. It was this prince who established a body of troops in Egypt like the practical printing of the sons of Christians taken in war, or purchased of the Tartara, to whom they gave the name of Mamalukes, which, it is said, significane more than any, which, among the forces of the Mahometan princes, is looked upon it a tide of great honour, as it expresses their being devoted in a peculiar manner to the service of their sovereign, and consequently they are entitled to greater privileges than other subjects. The posterity of Assarchia enjoyed the crown till the year 1242, when the Mamalukes deposed Elmuten, as they had done his father Melech Assach fome years before, and set one of their own officers upon the throne. The first king of the race of the Mamalukes being Turquemenius, these Mantaluke sultans were engaged in continual warn with the Christians in Syris and Palestine, till Araphus the fixth sultan entirely dispossed the Christians of the Holy Land, the ninth sultan melechnassor subdued the island of Cyprus and made it tributary to Egypt.

About the year 1501, Campson Gaurus sthe sifteenth futan of the Mamalukes, entering into an alliance with Island of the Mamalukes, entering into an alliance with Island of the Mamalukes out of their own body, who were so the igrandes of the Mamalukes maintained a war for some inner against Selimus, but was a length defeated, and Egypt made a province of the Ottoman family, the consed

national troops.

national troops.

There is a perpetual jealoufy between the Turkish basha and these Egyptian royalet; sometimes the basha will take upon him to depose one or them, and perhaps take his head; and there are instances on the other hand, where they have deposed the basha, and compelled the porte to send them another more acceptable to them; and the Grand them another more acceptable to them; and the Grand Signor has thought sit to humour them in it, rather than haaard the revolt of so rich a province, which is now essentially of Rome; for this is a foil fo fertilized by the Nile, that it is not in the power of the Turks, it seems, to render it larren. But one great reason of its continuing to be manured is, that they are yet governed by their own princes, barren. But one great reason of its continuing to be ma-nured is, that they are yet governed by their own princes; and have an inheritance in their lands, which are privi-leges very sew of the subjects of Turkey enjoy besides: neither dare the Turkish government overload this people with taxes, for fear of a general revolt: ansomuch that ex-cept what the viceroy and his creatures illegally extort from them, the whole revenue raised by the government, does not amount to a million of our money, of which two thirds see spent within the kingdom, and not more than one third comes into the Grand signer's treasury. But we shall treat more particularly on this subject when we come to give an account of the government of Egypt, at the

the close of this section; and as we have given above, a sketch of the antient history of the Egyptana, till they became subject to the Turks, it may be necessary here to subjoin the most remarkable particulars we have been able to collect, relative to their antient government and laws.

The Egyptians were the first people, who rightly understood the rules of government. A nation fe grave and ferious, immediately peresived, that the true end of policicks, is to make like easy, and a people happy.

The kingdons was hereditary; but according to Diodorrue, the Egyptain princes conducted themselves in a different manner from what is usually feen in other monerchies, where the prince acknowledges me other rule of his actions, but his achitrary will and pleasures. But here kings were under greater refuraint from the laws, than these subjects. They had some particular once digusted by a former monarch that composed part of those books, which the Egyptains call faired. Thus every thing being settled by antient custom, they never sought to live in a different way from their ancestors.

No save, or foreigner, was admitted into the immediate sevice of the prince; is such post was too important to be instrusted to any persona, except those who were the most distinguished by their birth, and had received the most excellent education; to the end, that as they had the liberty of approaching the king's person, day and night, he might, from men so qualified, hear nothing which was unbecoming the royal majesty, or have any sentiments instilled into him, but such as were of a noble and generous kind. For, adds Diodorus, it is very rarely seen, that kings siy out into any vicious excess, unless those who approaches to their passions.

The kings of Egypt freely permitted, not only the quality and proportion of their catables and inquide to be pre-

them approve their irregularities, or serve as instruments to their patients.

The kings of Egypt freely permitted, not only the quality and proportion of their catables and fiquids to be preferribed them (a thing cunfommay in Egypt, the inhabitants of which were all fober, and whofe air infpired frugnlity) but even that all their hours, and almost every action flouid be under the regulation of the laws.

In the morning at day-break, when the head is cleared, and the taoughts least perplexed, they read the several letters they received, to form a more just and distinct idea of the at airs which were to come under their confideration than the?

of the afairs which were to come under their consideration that dr.,

Ar loon as they were drelled, they went to the daily fact ace performed in the unspie, where, surrounded with their whole court, and the vicil imaplaced before the altar, they affitted at the payer pronounced aloud by the high-priest, in which he alted of the gods, health and all other bleffings for the king, because he governed his people with elementy and infines, and made the laws of his kingdom the rule and standard of his actions. The high-priest entered into a long detail of his vistues; a observing that he was religious to the gods, affable to men, moderate, just, magnanimous, fineers, as enemy to fallhoud; liberal, manner of his passions, punishing crimes with the utmode lenity, but boundless in rewarding merit. He next spoke of the faults which kings might be guilty of; but supposed at the fame time, that they never committed any, except by surprize or ignorance; and loaded with imprecations such of their minusters as gave them ill council, and suppressed of their minusters as gave them ill council, and suppressed of their minusters of the west factors. It was thought that re-distribution to their kings. It was thought that re-distribute the rest. their ministers as gave them ill council, and suppressed or disguised the truth. Such were their methods of conveying instruction to their kings. It was thought that reproaches would only four their tempers, and that the most effectual method to inspire them with virtue, would be to point out to them their duty in praises conformable to the fense of the laws, and pronounced in a folemn manner before the gods. After the prayers and facrifices were ended, the councils and actions of great men were read to the king out of the facred books, in order that he might govern his dominions according to their maximas, and maintain the laws, which had made his predensions and their subjects for happy.

We have already observed, that the quantity, as well as quality, of both entables and liquids, were prescribed by the laws, to the king; his table was covered with nothing but the most common means; because rating, in Egypt, was designed not to tickle the palate, but to fistisfy the crivings of nature. One would have concluded (observes the histories) that their rates had been hid down by some able playsician, who was attentive only so the health of the prince, rather than the legislature. The same simplicity prevailed in all other things; and we read in Plantach, of a temple in Thebas, which had one of its pillare inscribed with impressions against that king who first introduced profusion and luxury into Egypt.

d

function, is the adminishering justice to their Publicks. Advancedingly the kings of Egypt calcivated more Immediately this daty, convinced that thereupon dependent not only the act and comfort of the fiveral individuals, but the happiness of the state, which would be an herd of robburs, I there than a kingdom, should the weak be unproceeded, and the powerful enabled, by their riches and instuence, to domain trimes with imponity. Thirty judges were sleeked our of the principal cities, to form a body, or alsembly for judging the whole kingdom. The prince, in alling their vacancies, chose such as were most renowned for their honestly; and put at their head him that was most distinguished for his knowledge and love of the laws, and was held in the most universal esteem. By his bounty they had revenues assigned to them, to the end that, being freed from domestic cares, they might devote their whole time to the execution of the laws. Thus henourably substitute the gravitotivity to the people, who have a natural right to it, among whom it ought to have a free circulation, and, in some lasse, and therefore calls tought for they protection of the laws.

To guard against surprize, assairs were transacted by writing in the assault had was dreaded, which dasales the mind, and moves the passions. Truth could not be expessed with too much plainness, as it was to have the only lively in judgments, because in that alone the rish and poor, the powerful and weak, the learned and the ignorant, were to find relief and security. The president of this sense wore a collar of gold, set with pracious stones, at which hung a figure represented blind, this being essled the earnolem of truth. When the pendent put the coller on, it was understood as a fignal to enter upon business. He mothem of truth. When the pendent put the coller on, it was understood as a fignal to enter upon business.

Wilful murder was ponished with death, whetever might be the condition of the musdered person, by whether he was free-bern or otherwise. Herein the hu

honefly.

The faile accuser was condemned to undergo the punishment which the person accused was to liave suffered, had the

ment which the perion accused was to have suffered, had the accusation been proved.

He who neglected, or refused to save a man's life, when attacked, if it was in his power to affish him, was punished as rigorously as the affassin. But if the anfortunate person could not be successed, the offender was at least to be impeached, and penakies were decreed for any neglect of this kind. Thus the subjects were a guard and protection to one another, and the whole body of the community united against the designs of the bad.

No man was allowed to be weless to the state; but every man was obliged to enter his name and place of abode in a public register, that remained in the hands of a magistrate, and to annex his profession, and in what manner he lived. If such a one gave a salse account of himself, he was im-

and to annex mis procession, and its what manner actived. If such a one gave a falle account of himself, he was immediately put to death. The wifest and best regulated states, as Athens and Rome, ever found insuperable difficulties in contriving a just medium to restrain on one hand, the cruelty of the creditor in the exaction of his lean; and on the other, the knevery of the debtor, who join; and on the other, the knevery of the debtor, who refuded or neglected to pay his debts. Now Egypt took a wife course on this occasion; and without doing any injury to the personal liberty of its inhabitants, or runing their families, pursued the debtor with incessant fears of insamy from his dishonesty. No man was permitted to borrow money without pawning to the creditor the body of increase in the second of the

his father, which every Egyptian embalmed with great care, and kept reverentially in his house, and therefore might be easily moved from one place to another. But it was equally impious and infamous not to redeem foon to precious a piedge; and he who died without having dif-charged his duty, was deprived of the customary honours paid to the dead.

Polygamy was allowed in Egyptian and a precise of the

precious a pledge; and he who died without naving dicharged his duty, was deprived of the cuftomary honours paid to the dead.

Polygamy was sliowed in Egypt, except to priefts, who could marry but one woman. Whatever was the condition of the woman, whether fine was free or a flave, her children were deemed free and legitimate.

One euftom that was practifed in Egypt, shewed the profound darkness into which such nations, as were most celabrated for their wisdom, have been plunged; and this was the marriage of brothers with sifters, which was not only authorized by the laws, but aven, in some measure, was apart of their religion, from the example and practice of such of their gods as had been the most antiently and univerfally adored in Egypt; that is, Ossis and list.

A very great respect was there paid to old age. The young were obliged to rise up for the old, and on every occasion to resign to them the most honourable feat. The Spartans borrowed this law from the Egyptians.

The virtue in the highest esteem among the Egypians was gratitude. The glory which has been given them of being the most grateful of all men, shews that they were the best formed of any nation for social life. Benefits are the hands of concord, both public and private. He who acknowledges favours loves to do good to others; and in banishing ingratitude, the pleasure of doing good remains so pure and engaging, that it is impossible for a man to be intensible of it. But no kind of gratitude gave the Egyptians a more pleasing satisfaction, than that which was paid to their kings. Princes, whilf living, were by them honoured as so many visible representations of the Deity; and after their death were mourned as the fathers of their country. These sentiments of respect and tenderness proceeded from a strong persussion, that the Divinity itself had placed them upon the throne, as he distinguished them fo greatly from all other mortals; and that kings bore the most noble characteristics of the Supreme Being, as the power and will of doing good to

persons.

We have aircady observed, in our account of the Egyp-We have aiready observe, in our account of the Egyptian mummles, that it was customary, particularly with the more opulent, to preserve the bodies of their deceder relations, or such persons for whom they had a peculiar regard and veneration; the method of doing which, is thus described by a late author. "In the preparing of them, so as to keep them from putrefaction, they drew out the brains at the nostrils, and supplied their place with prefervative spices; then cutting up the belly with an Ethiopian stone, and extracting the howels, they cleansed the inside with wine; and stuffing the fame with a composition of cassian, myrith, and other odours, they closed it again. The poorer fort of people effected the like with bitumen, and the juice of cedars, which, by the extreme bitterness and siccative faculty, not only immediately subdued the cause of interior corruptions, but have preserved dued the cause of interior corruptions, but have preserved them from putresaction above three thousand years." The second the bodies of their ancestors they had preserved, recalled to mind those virtues for which the public had honoured them; and were excited to love those laws which holorica them, and were extred to love those away much fuch excellent persons had left for their security. We find, that part of these ceremonies were perfurmed in the funeral honours done to Joseph in Egypt.

Among the heathens, it was a consolation to a dying

Among the heathens, it was a confolation to a dying man, to leave a good name, belind him; and they imagined that this is the only human bletting of which death cannot deprive us. But the antient Egyptians would not fuffer praifes to be indiferiminately bettowed on all deceafed perfons. This honour was to be obtained only from the public voice. The aftembly of the judges met on the other fide of the lake- which they crofted in a boat. He who fat at the helm was called Charon in the Egyptian language; and this first gave the hint to Orpheus, who had been in Egypt; and, after him, to the other Greeks, to invent the fiction of Charon's boat.

As 600n as a man was dead, he was brought to his trial.

As foon as a man was dead, he was brought to his trial.

The public accuser was heard. If he proved the deceased had led a bad life, his memory was condemned, and he was deprived of burial. The people were affected with laws, which extended even beyond the grave; and every one, thruck with the different that was inflicted on the dead person, was atraid to rellect dishonour on his own memory, and that of his family. But if the deceafed per-No. 39.

fon was convicted of any crime, he was interred in a dithonourable manner.

dithonourable manner.

There was a fill more aftonishing circumstance in this public inquest on the dead; namely, that the throne lifely was no protection from it. Kings were spared during their lives, because the public peace was concerned in this forhearner, but their quality did not exempt them from the judgment passed upon the dead; and even some of them were deprived of spulture. This custom was imitated by the lifracities. We fea in feripure, that bad kings were not interred in the monuments of their more worthy ancestors. This practice suggested to printer, that if their dignity placed them out of the reach of man's judgment, while they were alive, they would at last be liable to it, when death should reduce them to a level with their sub-jects,

when death should reduce them to a level with their subjects.

When a favourable judgment was pronounced on a deceased person, the near thing was to proceed to the ceremonics of interment. In this panegyric, no mention was
made of his birth, because every Egyptian was deemed
noble. No praises were considered as just or true, but
such as related to the personal ment of the deceased. He
was applauded for having received an excellent education
in his younger years; and, in his more advanced age, for
having cultivated picty towa: 's the gods, justice towards
men, gentleness, modesty, moderation, and all other virtues which constitute the good man. 'Then all the people
shouted, and bestowed the highest eulogiums on the deceased, as one who would be received for ever, into the
society of the virtuous in the kingdom of Pluto.

We shall now proceed to give some account of the military men, artificers, arts and sciences, husbandmen, &c.
of the antient Egyptians.

of the antient Egyptians.

of the antient Egyptians.

Among the antient inhabitants of Egypt, the profession of arms was in great repute. After the feerdoal families, the most illustrious, as with a, were those devoted to a military life. They were not only distinguished by honours, but by ample liberalities. Every foldier was allowed an arours, that is, a piece of arable land, very nearly answering to half a French acre, exempt from all tax or tribute. Besides this privilege, each foldier received a daily allowance of five pounds of bread, two of flesh, and a pint of wine. This allowance was unfaicent to support ago of their family. Such an indulgence made them more affectionate to the person of their prince, and the interests of their country, and more resolute in the defence of both; and, as Diodorus observes, it was though inconsistent with good policy, and even common sense, to commit the desence of a country to men who had no interest in its preservation.

commit the detence of a country to men who had no in-terest in its preservation.

Four hundred thousand soldiers were kept in continual pay (all natives of Egypt) and trained up in the exastest discipline. They were inverted to the fatigues of war, by a fevere and rigorous education. There is an art of forming the body as well as the mind.

This ait, lost by our sloth, was well known to the anticuts, and especially the Egyp-

tians.

Foot, horfe, and chariot races, were performed in Egypt with wonderful agiity, and the world could not thew better horfemen than the Egyptians. The feripture, in feveral places, fpeaks advantageoufly of their eavalry.

Military laws were eafily preferved in Egypt, because fons received them from their fathers; the profession of war, as all others, being transmitted from father to fon. Those who side in battle, or discovered any signs of cowardice, were only distinguished by some particular mark of ignominy, it being thought more adviseable to restraint them by motives of honour, than by the terrors of punishment. ment.

ment.

But notwithstanding this, we will not pretend to say that the Egyptians were a warlike people. It is of little advantage to have regular and well paid troops; to have armies exercised in peace, and employed only in mock fights; it is war alone, and real combats, which form the said in the said that the said that the said that the said that the said the said that fights: it is war alone, and real combats, which form the foldier. Egypt loved peace, because it loved justice, and maintained soldiers only for its security. Its inhabitants, content with a country which abounded in all things, had no ambitious dreams of conquest. The Egyptians extended their reputation in a very different manner, by sending colonies into all parts of the world, and with them laws and politeness. They triumphed by the wisdom of their countels, and the superiority of their knowledge, and this empire of the mind appeared more noble and glorious to them, than that which is atchieved by arms and connected.

The Egyptians had an inventive genius, and turned if

to profitable speculations. Their Mercuries filled Egypt with wonderful inventions, and left it almost ignorant of nothing which could accomplish the mind, or procure ease and happiness. The discoverers of any useful invention and happinefi. The discoverers of any useful invention received, both living and dead, rewards equal to their profitable labours. It is this that confectated the books of their two Mercuries, and stamped them with a divine authority. The first libraries were in Egypt; and the titles they bore,

The first libraries were in Egypt; and the titles they bore, inspired the reader with an eager define to enter them, and dive into the fecrets they contained. They are called the Office for the Disafes of the Soul; and that very justly, because the soul was there cured of ignorance, the most dangerous, and the parent of all other maladies.

As their country was level, and the air of it always ferene, and unclouded, they were some of the first who observed the course of the planets. These observations led them to regulate the year from the voorse of the fun; for, as Diodorus observes, their year from the most remote antiquity, was composed of 305 days, and six hoors. To adjust the property of their isads, which were every year covered by the overslowing of the Nile, they were obliged to have recourse to surveys; and Lis fruit taught them geometry. They were great observers of nature, which in a climate so ferene, and under so intense a sur, was vigorous and froitful.

rigorous and froitful.

was vigorous and froitful.

By this study and application, they invented, or improved, the science of playfick. The fick were not abandoned to the arbitrary will and caprice of the playfician; he was obliged to follow fixed rules, which were the observations of old and experienced practitioners, and written in the facted books. While these rules were observed, the physician was not answerable for the success; otherwise a biferrieur of them had less. This has the statements. wife a mifearriage coft him his life. This law checked in-deed the temerity of emperies; but then it might prevent new diffeoveries, and keep the art from attaining to its just perfection. Every physician, if Herodotus any be credi-ted, confined his practice to the cure of one difease only;

one was for the eyes, another for the teeth, sind so on.

What we have faid of the pyramids, the labyrinth, and that infinite number of obelifts, temples, and palaces, whose precious remains still strike with admiration, and whole precious remains till trike win aomiration, and in which were displayed the magnificence of the princes who raifed them, the fkill of the workmen, the riches of the ornaments diffused over every part of them, and the just proportion and beautiful fynumetry of the parts in which their greated beauty confided; works in many of which the liveliness of the colours remain to this day, in fpite of the rude hand of time, which commonly deadens or deftroys them: all this, we fay, thews the perfection to which architecture, painting, sculpture, and all other arts

had arrived in Egypt.

The Egyptians entertained but a mean opinion of that fort of exercise, which did not contribute to invigorate the body, or improve health; nor of muse, which they considered as a useless and dangerous diversion, and only

fit to enervate the mind.

fit to enervate the mind.

Hubandmen, shepherds and artificers, formed the three classes of lower life in Egypt, but were nevertheless had in very great esteem, particularly husbandmen and shepherds. The body politic requires a superiority and subordination of its several members; for as in the natural body, the eye may be said to hold the first rank; yet its lustre does not dart contempt upon the feet, the hands, or even on those parts which are less shonourable. In like manner, among the Egyptians, the priests, soldiers, and scholars were disjusted by particular bonours; but all professions to the rueanest, had their share in public esteem, because the despising any man, whose labours, however mean, were useful to the state, was thought a crime. ful to the flate, was thought a crime.

ful to the flate, was thought a crime.

A better reason than the foregoing might have inspired them at first, with these sentiments of equity and moderation, which they so long preserved. As they all descended from Cham, their common father, the memory of their origin occurring fresh to the minds of all in those sirst ages, established 'among them a kind of equality, and stamped, in their opinion, a nobility on every person derived from the common stock. Indeed, 'the difference of conditions, and the contempt with which persons of the lowest rank are treated, 'are owing metrely to the distance. lowest rank are treated, 'are owing merely to the distance from the common root; which makes us forget, that the meanest plebeian, when his descent is traced back to the fource, is equally noble with those of the most elevated rank and titles.

Be that as it will, no profession in Egypt was considered as groveling or fordid. By this means, arts were raised to the highest perfection. The honour which cheraifed to the highest perfection. rifhed them, mixed with every thought and care for their Improvement, Every mast had his way of life offigned him by the laws, and it was perpetuated from father to feet, two professors at one time, yet change of that which a men was been to, were never allowed. By this means, men became more able and expert in employments, which they had always exercised from their infancy; and every man adding his own experience to that of his anesthese, was more capable of attaining perfection in his particular art. Besides, this wholesome institution, which had been established, antiently throughout Eg. pt., extinguished all irregular antibition; and raught every man to fit down consented with his condition, without aspiring to one more elevated, from interest, vain glory, or levity.

"From this source slowed numberless inventions for the improvement of all the arts, and for residering life most

improvement of all the arts, and for rendering life most commodious, and trade more easy. We could fearesty believe that Diodotus was in earnest in what he relates concerning the Egyptian industry; manely, that there peo-ple had found out a way, by an artificial fecundity, to hatch eggs, without the fitting of the hen; but all modern traveilers have put this beyond a doubt; and we have already given an account of the methods made use of for this

Durpofe,
With respect to their foil and produce, we shall treat
only of some plants peculiar to Egypt, and of the abandance of corn which it produced,

from the most of which shows

The papyrus is a plant, from the root of which shoot out a great many triangular stalks, to the height of fix or feven cubits. The antients wrote at first upon palm-leaves; next on the infide of the bark of trees, from whence the word liber, or book, is derived a after that, upon tables cowered over with war, on which the cheracters were impressed with an infirument called Stylins, sharp pointed at one end to write with, and flat at the other to efface what had been written; which gave occasion to the following expression of Horace: " Oft turn your file, if you define to write things that will bear a second reading;" which intimates that a good performance is not be expected without

many corrections. At last the use of paper was introduced; and this was made of the bark of papyrus, divided into thin flakes, or leaves, which were very proper for writing; and this pa-pyrus was likewife called biblus. Pliny calls it a wonderful invention; fo useful to life, that it preferves the menory of great actions, and immortalizes those who atchieved Varro sferibes this invention to Alexander the Great, when he built Alexandria; but he had only the merit of making p.per more common; for the invention was of much greater antiquity. The fame Pliny adds, that Eumence, king of Pergamus, fulufituted perchanent inflead of paper, in emulation of Ptolemy king of Egypt, whose library he was ambitious to excel by his inven whole norary he was ambitious to excel by his invention, which carried the advantage over paper. It was called pergamentum from Pergamus, whole kings had the honour of the invention. All the antient manuferipts are either upon pareliment or veilum, and a great deal finer than the common pareliment. The plant papyrus was likewife used for fails, t. ckling, closths, coverlets, &c.

Linum, flax, is a plant whose bark, full of sibres and firings, is useful in making fine linen. The method of making this linen in Egypt was wonderful, and carried to fuch perfection, that the threads which were drawn out of them were allowed to be too finall for the observation of the tharpest eye. Priests were always habited in linen, and never in woollen, and not only the priells, but all persons of diffinction, were linen cloaths. This flax formed a of distinction, wore linen clouths. confiderable branch of the Egyptian trade, and great quantities of it were exported into foreign countries: a great number of hands, especially women, were employed in the

making of it.

Another kind of flax was called Buffus : this was exceeding tine and fmall, and often received a purple dye. It was very dear, and none but rich and wealthy perfons could afford to wear it. Pliny, who gives the first place to the afficient or afterinum (the combuffible flax), places the byffus in the next rank, and tays, that it ferved as an ornament to the ladies. It appears from the holy feriptures, that cloth of this fine flax was brought from Egypt.

Another plant in great request with the Egyptians the Letus, or Lote-tree, whose berries served them in former times for bread. There was another Lotus in Africa, which gave its name to the Lotophagi, or Lote-exters, because they lived upon the fruit of this tree, which had fo delicious a safte, if Homer may be credited, that it made the eaters of it forget all the fweets of their native country, as Ulytics found to his cost, in his return from Troy.

It may be faid, that the Egyptian pulfs and fruits were excellent; and night, as fliny observes, have fufficed flight for the nourithment of the inhabitants; finth was their excellent quality, and fo great their plenty. And, indeed, working easy lived then almost upon nothing elfe, as appears from those who were employed in building the bymsnide.

Besides these rural riches, the Nile, from its fish, and the fatness it gave to the foil for the feeding of cattle, furnished the tables of the Egyptians with the most enquisite sith of every kind, and the most fuestulent fieth. This it was which stade the Israelites to deeply regret the loss of Egypt, when they found themselves in the dreary defart. "Who," fay they, in a plainitys, and at the same time, seditious tone, "thail give us fieth to eat? we remember the fifts, which we did out in Egypt freely; the cucumbers and melous, and the leeks, and the onions, and the garlick; we fat by the flesh-pots, and we did eat bread to the full."

But the great and matchless wealth of Egypt arose from

But the great and matchiefs wealth of Egypt arole from its corn, which, even in an almost universal famine, enabled it to support all the neighbouring nations, as it particularly did under Joseph's administration. In later ages, it was the resource and certain granary of Rome and Conmtinople,

SECT. VIII.

Of the prefent political, military, and civil government of Egypt.

THIS is the most considerable government belonging to the Grand Signor. It is veited in a batha, twenty-four beys, and seven corps of different troops, without the consent of whom the basha cannot act. He begins his viceroyship with the month of September, which is the first in the Contic calendar; and the Grand Signor fends his order every year towards that time, by virtue of which he is either consistent in his post, or dismissed from it. His residence is in the castle of Cairo; and he holds a divago, or privy council, three times a week, viz. Sundays, Tucsdays, and Thursdays; at which the beys and a jas, or head of the abovementioned troops, always assist and give their attendance.

head of the abovementioned troops, always affait and give their askendance.

The number of beys, though fixed at twenty-four, is never complete: the batha, who has a right to appoint them, turns the falary of those who are wanting, to his own secount. This feliary is five hundred afpers, or about fifteen thillings per day; and in case they have some campaigns for the good of the country, it is double that fum. The dignisy of bey is purchased, and thirty-parses in generally the price paid for it.

The case is nearly the same with the militia, or land-forces, who are feldom found to exceed half their proper number; only with this difference, that the officers appropriate to their own use the pay of those that are wanting, though not without making some fairable acknowledgment to the batha for conniving at the deficiency of the troops ordered to be provided.

The janisfaries and Araba are the two only corps of troops which leve on foot; the reft being horsers, and are

The janissaries and Araba are the two only corps of troops which serve on foot; the rest being horseries, and are called jumalis, tusckgis, therakias, mettefarases, and shaosa, The janissaries are supposed to form a body of twelve thousand, the Arabs one of eight thousand, and the horse twenty thousand; to that the whole number should be forty thousand; but they feldon amount to above half the number for the reason before affigned. The foot soldiers form the garrison in the castle and eity of Cairo, the mettefaraeas, hold the other castles, such as Alexandria, Roseita, &c. The jumelis, tofekgis, and sherakias, are distributed all over the kingdom, to serve the bey and governers of provinces; and the shaous are appointed to keep a watchful eye over the Grand Signor's chargeable revenues. This country is divided into a number of provinces, called cashesis. The governors of them are called cashes; and those who possess visilages, meletzens. These are obliged to obey the commands of the divan and bassa as Cairo. Each meletzen, or owner of a village, must either

Cairo. Each meltezen, or owner of a village, must either have fold or given his right to another forty days before his death. In default of this the whole becomes the property of the Grand Signor, in confequence of his right to conflicate all the possession of his subjects, who are in his fervice at the time of their decease.

The troops, as well as the power, are vefted in the bevs, and there is always one amongst them who takes fome degree of authority above the others, and raifes their jea-

loufy by that means, but he only retains this stuation sill his essenties have found a stronger party than his cowin. The government of cliose who thus elevate themselves above the rest is short, and their end often proves tragical; we are told by Dr. Pocceles, that neither the basha, her any of the beys, scruple taking off their enemies by poison or the dagger, particularly by the former; of which he gives the following instance: "A basha knowing that the bey whom he would willingly dispatch was jealous of his designs, ordered his fervant, which he came to wish him, to pour his own cosses, and that of the bey's, out of the same pot. The bey, seeing this, concluded that it could not be poisoned, and drank it off; but the slave, on his giving the cosses to the basha, made a falle step, as he was ordered, and spill it on the stoor; upon which the bey perceived the basha's treachery when it was too late to prevent the mischievous effects of it."

The basha generally grows rich when any intessine wars some of the power back into his own hands, and partly because a considerable shate of the estates of those who are killed in battle, or are asterwards proclaimed enemies of the state, becomes his property. But the most considerable branch of his revenue arises from the pestilence that for frequently rages in Egypt; infomuch that during the street or four months it commonly lasts, it produces so great an income, that a single day may bring in two or three hundred thousand crowns, by the deaths of those who are possessed to the search of them fall to the share of the basha, to which he is entitled by virtue of his commission, and these frequently amount to immense summission, and these frequently amount to immense summission in one week a fince the death of the purchase.

In treating of the political consistation of Egypt, a celebrated writer remarks, that "notwithstand

trade with those slaves, force them to abjure their religion before they bring them into Egypt. All the beys, and effecially all the officers of the troops, are renegadoes and it is reckoned extraordinary to see a Turk raised to any great military post. They go into the service of the renegadoes, who partly to get rid of the expence of feeding them, obtain for them the pay of a janistary or a horseman: in a word, all the seven corps of troops configurerly of the life-guards of these renegadoes. There are thay as of the janisharies, who have a guard of sour hundred men about them, besses those whom they keep in their villages. The renegadoes inherit equal shares of their matters estates with the children; and this been observed, that the laster being brought up to a voluptuous life, foon

their villages. The renegadoes inherit equal thares of their masters estates with the children; and it has been observed, that the laster being brought up to a voluptuous life, foor spend their inheritance, and are reduced to such wretched circumstances, as to have recourse to their own slaves, and beg of them for subsistence, or even permission to serve them. It may be justly faid, that in no country whatever such vast changes happen in families as in Egypt."

The Grand Signor's revenues in Egypt consist of three branches which arise from the land; the customs, and the poll-tax on Christians and Jews. All the villages in Egypt pay a certain yearly tent to the Grand Signor; and this is the hasins, or treasure, that is sent every year to Constantinople. How easy the levy is, may be concluded from the sum which is raised, amounting only to fix thousand purses, each of twenty-five thousand medines, or about one hundred and twenty pounds sterling; out of this, corn, flour, oil, and the like, are fent yearly to Mecca, and twelve thousand soldiers are paid, which reduces the treasure to one thousand two hundred purses. After other deductions, for the conveyance of the water of the Nile to their lands, preferving the public canals, repairing the castles, supplying the sergillo, and storing the articular, the whole of this treasure carried to Constantinople does not commonly amount to more than two hundred purses in specie, or about twenty-four thousand pounds sterling. The customs are farmed; and the persons that pay the poll-tax (which is called the harach, and levied only on Christians and Jews) are only men after they arrive at the age of fixteen.

Not only the political, but eivil government of this age of fixteen.

Not only the political, but civil government of this kingdom is first vested in the basha, whose prime minister is called caia, and generally holds the divan. The basha

dited,

preferves a dignity and inferior to that of the Grand Signer. He always fits behind a lattice at the end of the diven; and feldom affifts in perfon, except on very particular ecca-fions, such as reading some order from the Porte, or the When he goes abroad, he is always attended by one of the great officers, called a druggerman aga, who is not only an interpreter, but more especially acts as master of the ceremonies; and he is always escented by a body of the

guards, like the Grand Signor.

The divan is held at the baffa's palace at Cairo, three times a week; via. on Sunday, Tuefday, and Thuriday. This grand council affemble in a spacious and magnificont hall, which hath a noble fquare, or court before it, where the members of it parade with all their retinue, and make such a splendid appearance with their fervants and horfes, richly dressed and caparisoned, and gistering with gold, filver, and precious fores, that it is faid to exceed even the points of the Grand Signer Configuration. even the pomp of the Grand Signer at Conflantinople. According to antient records, we are informed that Sultan Selim, having told his divan at Cairo, and in the stately Selim, having told his divan at Cairo, and in the flately hall of the royal palace of the Egyptian monarchs, forbad the then baffia, and all his fuccellors, to meet any more in that magnificent apartment, left the fight of fo much grandeur and opulence, joined to the noble appearance of the divan, should infpire them with a defire of flaking off their allegiance to the Porte, and of making themfelves abfolute matters of Egypt's fo that this hall, where the divan now meets, is quite different from that of the divan now meets, is quite different from that of the antient Egyptian kings; nor is there any thing in it worthy of observation, except seen deal planks, each about half an inch thick, and clotely fastened together with an arrow, which, it is faid, that fultan fhot through them. Thefe are kept suspended over the place where the tassa fits, as a momento of the above-mentioned moments's ex-

traordinary fireigth.

Egypt is subdivided into several provinces, some of are under the direction of governors, called fangiacs; other divisions of it are governed by Arab theika, or chiefs, all of whom are annually chosen by the divan, on the 20th of August, which is the first day of the coptic year. The business of these officers is to collect the revenue belonging to the Grand Signor, and keep the people under

the respective jurisdictions in proper order.

Grand Cairo, and the country north of it, are under the protection of the janisfaries; and the Arabs guard the country round the city. An officer called the walla, con-flantly patroles about the city, especially at night; his office answers to that of the Turkish souballa. He takes into cuttody all diforderly persons, or such as cannot give a fatisfactory account of themselves ; and, if they are not protected by the janifaries, frequently punishes them as he pleases. The metessib is another distinguished officer belonging to the city, whose business is to inspect all weights measures, and see that their standard is just and legal.

Another great officer is the testerdar, who is lord high treasurer of the tribute paid out of the lands to the Grand He is chosen annually by the Porte; but ofually retains his office during life, except in case of milbehaviour,

or breach of truft.

The officer called the emir hadge, or prince of the pil-grims that go to Mecca, is also chosen annually; but in order to make amends for the great expense he must necessarily be at the first year for his equipage, he is generally continued two years in his office. If he be a person of abilities, and has great interest at the Porte, he then continues much longer, though rarely more than fix years, for if they conduct the caravan feven years, the Grand Signor prefents them with a collar of gold. Their perfons are effectived facted; and thould they in any respect deviate from the conduct they ought to preferve, they are not fubject to any other punishment than degradation from their office. He has the command over the estates that belong to Mecca. If he behaves well during his administration, it procures him the general esteem and affection of the whole country. The perquifites of his office, exclusive of what he is allowed by the Porte, confift in being intitled to one tenth of the effects of all pilgrims who die on their journey.

The administration of justice here, nearly refembles that in most other parts of the Grand Signor's dominiona. A cadilishier (whose office is much like that of lord high chancellor) .. fent annually to Grand Cairo from Conflantinople: appeals are made to him from the cadis; and, at his arrival, many causes of importance are brought before him. His house is in the place of justice; and he has his deputy, who is called nakib. There are eight cadis in different parts of Cairo, and an officer in every ward, catted kabandi, who is fomething like a notary-public for all obligations that are deemed valid, must be drawn by him. The cadilisher sends the cadle from Caro to most other towns, and one of the officers is fent annually from Confuntinople to Gize, Danietta, Rofetta, and Alexandria Hind H

The people here apply themselves greatly to the study of the law, which is writter in the purelt language, such as is spoken at Damakeur. They have a saying, that "the law cuts the sword, but the sword cannot cut the law;" for, however attocious the offence may be, the Grand Sig-nor himself cannot insist any punishment on a person of that profession.

One thing auch to be sendred in the administration of justice here, is, that all causes are immediately decided, as foon as the paries make application to those in whose power it is to determine them. Many causes here, are broughs before leading men, who finally decide the matter,

without having any reference to a magistrate.

With respect to the punishments inflicted on offenders With respect to the punishments institled on offenders in Egypt, they are proportioned to the offences committed. Those guilty of nurder is punished with death; but in trifling matters, they either give them the bassinado, or else feverely whip them. They are particularly fevere in the punishment of bakers for making their bread descions; as also to butchers, for felling their meat either short of weight, or fo slale as not to be wholesome. We have a particular account of these latter punishments, given by a person who lately travelled through most parts of this person who lately travelled through most parts of this kingdosn, which we shall present our readers in his own

" The punishment inflicted on bakers in this country, for making their bread deficient in weight, is, I think, fevere and cruel; for though I cannot excuse so barbarous an imposition on the labouring part of the community, yet I would by all means limit the punishment within the bounds of humanity. When found guilty of the first offence, the overseer of the bakers, (who is the examiner, and only person who tries them) immediately orders the delinquent to be severely bassimaded; which is, beating them on the soles of their seet with a large slick; for the fecond, they are more severely punished in the same man-ner; and, for the third, without any other process than the above officer's order, they are sometimes put in their own oven, when hot, where they are faffered to perish, being burnt to death; which punishment I faw executed."

The punishment of the butchers in this country (the fame writer informs us) who are detected in felling meat either stale or deficient in weight, is no less extraordinary than that of the bakers, though not fo cruel or fevere and as I mean rather to acquaint you more particularly with facts I have had ocular demonstration of, than relations culled from other travellers, fuch as dancing camels, &c. vouched by many, and which, after the most first enquiry among the natives, I could never learn the least sixtimation of, from the oldest inhabitants of Cairo; fo you may be affured the following is a fact, of which also was an eye-witness. A butcher in the neighbourhood I was an eye-withels. A butcher in the neighbourhood where I refided, was detected, by the examining officer, of being guilty of this crime, and without any other form of trial than the order of the officer, was immediately nailed by one of his ears to the poft of his own door; leis nofe pierced, and one end of a wire, about fix inches long, fadened to it; at the other end of which, a piece of the other end of which, a piece of his stinking meat was fixed. In this fituation he was obliged to continue near four hours.

It is a privilege belonging to the relations or descend-dants of Mahomet (called in Arabia, sheriff or noble, and by the Turks, emir or prince) to be exempt from ap-pearing before any judge but their own chief, who is himfelf a relation of Mahomet, and is called neckilel-They are fo much effeemed, that though any one of the military bodies will punish them if guilty of any missemeanor, yet they first take off their green turban, out of respect to their character, and then subject them to equal punishments with others; and when they are punished by their own magistrates, the like ceremonics are

Notwithstanding the basha, his beys, and the military officers, administer justice in some cases, yet they themfelves pay little regard to the laws of equity. The military officers in particular, enrich themselves by various oppreffions of the people, especially of the richer fort, whom they either artfully inlift, or pretend to have inlifted, under fome of their bodies; by which they fleece them while alive, and feize on the best part of their effects after they are dead. The basha connives at all these abuses, either as

externed, anytume from them, and are ever concerning new methods whereby to renew their oppositions on the people.

These creet extertions extend in like meaner to the Europeans, and other trading nations: as the jamifarines are never are a loss to quarter with them, fometimes about their dreft, at others about their behaviour, as not paying them a proper respect, or for admitting form of their Mahometan woman into their quarters by night. Thus they extert money under such presences, whether, real or false; for there is no method of avoiding their refentment, but by quick submission, and some answerable, atonement, as speedy as valuable, according to one of their favouring edager, that "the egg of to-day is presentle to the chicken of to-morrow." But, of all nations, that of the Jews is most hated, despised, and oppressed by this tyrannical government, undes which they are dwindled to a very inconsiderable number, except at Cairo, and reduced to the lowest poverty; though they were once intrusted with found of the most important posts of the state, and were at the same time very numerous and rich.

The people who inhabit the upper parts of the singdom are fill more wretched, as they are not only equally opperated by their respections governors, but frequently exposed to the inroads and dreadful ravages of the Arabian sheiks, who take all opportunities of plundering the poor villagers, by way of reprisal, for the hardships they infer from their perty tyrann and oppressors.

Upon the whole, the government of Egypt, from the tyranny thus exercised by one degree of people over another, may be faile to be at least equally oppressive with that under the power of the most despotic prince. The rich plunder the poor, who, in defence of themselves make regrisse wherever they are to be met with. Thus infureralions frequently happen, the consequences of which are not only the loss of property, but of lives for the power for them urged by necessity, become desparate, and wreak their revenge on those that have opperfied them

SECT. IX.

Containing a description of the Defart, chiefly distinguished by
the previnces or kingdoms of Anara or Zabara, Biledulgerid, and Tombuta; with an account of its situation, extent, divisions and previnces, tenns, willages, inhabitants,
their customs, dress, manners, diet, marriages, successed, Us.

THE defact of Znara, is a valt inhospitable tract of land; which firetches itself from the Atlantic ocean on the west, to the kingdom and defacts of Barcs and Mubia on the cast, and from the river Senegal on the on the welf, to the kingdom and delarts of Barca and Nubia on the eaft, and from the river Senegal on the fouth, to Biledulgerid on the north; that is, from the cighth degree welf, to the twenty-fixth of east longitude, and from the fifteenth degree of east latitude to the tropic of Clancer, comprehending from east to welf, a space of at least fifteen hundred miles in length; and in breadth, from north to fouth, about five hundred.

The Araba divide this immense track of land, into three general districts. Cabel, Zabara, and Asgar, that is, the landy, stony, and marshy desarts, according to the nature of the foil; but later geographers divide this country into seven provinces, which are Zanaga, Zuenaiga, Terga or Hayr, Lempis or Iguidi, Bardos, Bornou, and Gaoga.

As this country is covered with burning fands, the foil cannot be supposed to be fertile, though that fisuated on the northern lanks of the Senegal being watered, peopled, and cultivased, produces coyn, rice, millet, and a variety of fraits, but little more perhaps is reaped than is sufficient for the use of the inhabitants, except dates.

Cassels and other cattle are common here, but this country is most remarkable for a species of domestic animal emist assumation, of which there is great plenty. This is No. 39.

being a shares of the spoils, or out of sear of disoblying such a powerful hody, by disconnectancing or suppressing them.

pitable, as they are allowed to be inhabited by feveral different nations, particularly by the Berviches, Ludayers,
Duleyns, and Zenequi, fome of which are fo numerous as
to raise fifteen or twenty thouland men; there are also
avaiety of Arab trible no less numerous, potent, and warlike, and confequently they find lands capable of providing
them and their cattle with fubfiltencs.

Zuenziga is, if possible, a more dry and barren province than Zanaga; and we are told, that of large caravans thet pash through this country, feldom half the number, either of men or beasts, ever return; most of them
dying of thirst, hunger, fatigue, or under the whirlwinds of
fand with which they are overwhelmed; but this we cannot give entire credit to.

Many beautiful hordes are bred in this district; and their
inhabitants are such expert horsemen and warriors, that
they are become formidable to the prince of Barbary, who
shudy to keep on good terms with them; nor are they less
dreaded by the negroes, whom they seize on all eccasions,
and sell to the people of Fez and Morocco; and when the
negroes get any of them in their power, they cut them
in pieces by way of retalization.

Targa is said to be less barren, dry, and fultry than
either of the former provinces, it having a variety of good
wells of fresh water dug deep in the ground, and the sand
produces grafs and several vegetables fir for food; the climate
is healthful, and great quantities of manna are gathered
here, which they fell to their neighbours.

The province of Lempta, which lies to the east of Targa,
travellers find no less dangerous than any of the former,
on account of the excessive heat of the sun reflecting from
the fand, the scarcity of water, the whirlwinds of
sand, and the barbairty of the people, who endeavour to
rob and plunder all that come in their way. Through
this inhospitable region cravana pass from Constantia,
and other towns of Algiers and Tunis, to Nignitia, though
equally in danger of perishing by thirst, hunger, and the
word is but their

with the utmost fortitude.

The province of Bardon freeches from the fixteenth to the twenty-facond degree of east longitude. The inhabitants, who are named Bardonits, have no towns but live in tents on the plunder of merchants and paffengers. Near the mountains, which form the northern between this province and Tripoli, stands the town of Kala, where are kept fome fairs, to which merchants relogt from 5 G

being

every part of Zahara, and the nations bordering upon the Mediterraucan fea, with the wealth of their feveral countries. The foil is in general dry, barren, and produces no commodities that merit particular notice.

The kingdom or province of Bornou extends from the twelfth to the twenty-fecond degree of cast longitude, and from the feventeenth to the twenty-first degree of north latitude. The northen part refembles in barrenness the other provinces of Zahara; but all the rest, which is the greater part, is well watered by forings and civers, that fall with a dreadful noise from the mountains, and render the country fertile in corn, grafs, and fruits. Both the castern and western frontiers are inhabited by a people of a roving disposition, who live in tents, and are said to enjoy every thing in common, no such thing as property being known thing in common, no fuch thing as property being known among them. These frontiers are divided into mountains and vallies, covered with flocks of cattle, and fields of rice and millet; timber, fruit trees, and cotton, also grow on many of the mountains.

The people of this province, as we before observed, live in tents or cabins, which are placed together in the form of a circle, and in the center is a spacious area, in which they keep their cattle. As they frequently remove from one place to another, they are confequently under difagreeable apprehensions from robbers and wild beafts; and, in order to guard against any surprize from either, they always keep centinels without the tents, who, if any danger appears, give an immediate alarm, which is cir-culated throughout the ensempment, and every person able to bear arms, desends his own habitation.

The poorer part of the natives, who are chiefly shepherds and husbandmen, go almost naked in hot weather, wearing only a short apron before, which reaches to their knees; but the better fort wear a large thirt made of black linen, and fastened round the middle by a fash. Their heads are and ratened round the middle by a lain. I her needs are covered with a red bonnet or cap edged with white cotton; and they wear fandals of Morocco leather, which rife to the calf of the leg. Both fexes wear ear-rings and pendants, as also rings on their singers, and bracelets on their arms. The men let their hair hang low, but the women tie it up in aknot, and ornament it in proportion to their station and quality. During the winter, they are warmly cloathed with the softest sheep-skins, of which they also form their bed cloaths.

Cakes made of millet are their chieffood, and their ufual drink is milk or whey. They have wheat and barley, but they are so averse from slaying long in a place, that it is seldom reaped by the hands that sow it. They sit crosslegged at their meals, on a mat made of Morocco leather or palm-leaves, and the diffies that contain their food are made of copper or ivory. They wash after their meals, and then regale themselves by drinking coffee, and smoakang tobacco. They eat but two meals a day, one a little after sun rife, and the other a little before sun fet; and the

women are not permitted to eat with the men.
Their male children are circumcifed at the age of fourteen : after which they may marry as foon as they can purchase a wife. They who have many daughters consider them as a capital effate, for when any failor offers himfelf, them as a capital citate, for when any failor offers limitely, he must make considerable presents to the parents, as his success principally depends on that. They form a judgment of the suitor's affections by his liberality; and however well the parties may like each other, the parents of the girl will not deliver her up, till they are fatisfied with the present made by the intended husband. If he does not approve of his wife after the is delivered to him by her parents he may setturn be back to them, but he is abligated. tents, he may return her back to them; but he is obliged, in that case, to forseit the presents made previous to their

marriage.

On the death of a person, the nearest relation alarms the whole camp, who immediately assemble round the tent of the deceased, and testify their forrow indiscriminately by the mot lamentable fhricks. This continues for some time, when the body of the deceased is washed, and placed on a stool, to be publicly viewed till the grave is made, when he is carried to it, attended by his relations, and the principal people of the camp. After the ceremony, an enternament is provided by the relations of the deceased

for the attendants.

In the fouthern parts of this province are feveral good towns, inhabited by people particularly diflinguished for their politeness and hospitality; and among them are many artificers and merchants of various nations, and of all complexions. It is faid that the government is in general monarchical, and that the king refides at Bornou, the capital of the province, but his palace is a very mean building; and only remarkable for its furniture, the principal part of which is of folid gold, as are likewife his flirrups and spurs, with the bit and ornaments of his bridles; whence it may be conjectured, that a great trade is carried on here in that article with foreign countries, or that gold is produced either in this, or some of the neighbouring kingdoms.

Besides Bornou, the capital of this province, there are said to be rhetowns of Amozon, Sagra, and Samegonda, all of them to the northward of the metropolis, and, to the eastward, those of Sama and Nabrina, but as the very existence of these towns is questioned by these writers, therefore no account can be given of them.

The last and most eastern province of the defart of Za-hara is called by the natives Gaoga, and is reckoned to be upwards of five hundred miles in length from north to fouth, and three hundred in breadth from east to west, exfouri, and three number in breadth from east to wett, ex-tending itlelf from the nineteenth to the twenty-eighth de-gree of east longitude, and from the twelfth to the twenty-fecond degree of north latitude. It is bounded, on the east, by Nubia 1 on the west, by Bornou; on the thorth, by part of the same province; and, on the footh, by the kingdom of Gorham, from which the river Senegal se-

This is for the most part an exceeding mountainous country, and the inhabitants are little better than favages! from their cattle; but they fometimes obtain a confiderable booty by plundering travellers. They live in small werethed luts, made of so light a construction, that they frequently take fire, and the whole village formed of them is totally

Gaoga, is the chief and only city in this province: it is fituated on the north fide of the lake of the fame name, in fifteen degrees forty minutes north latitude, and twentyfive degrees thirty minutes east longitude, but it is fo, wretched a place, and the inhabitants are so rade and illiterate, that travellers have not thought it worthy of a particular description.

We shall now take notice of the learning, poetry, and music, of the natives of the defart of Zaara; their method of making war, skill in horsemanship, and their riding upon

the back of an ofrich, &c.

The learning of the Moors and Arabs of the defarts, is so extremely limited, that sew of them are able to read Arabic or any other language; yet fome of them have a tolerable notion of aftronomy, and talk with the precision of an European scholar upon the stars, their number, situation, and division into constellations. The clear and serene sky in which they live has greatly affifted their observations, an advantage they have improved by a warm imagination and a happy memory: their fystem of astronomy is, however, so replete with fable and absurdity, that it is in general difficult to comprehend their meaning: yet, with all their ignorance, they feem formed by nature for liberal fentiments, and with a taste for the polite arts, as their effays in poetry and music, which are far from being contemptible, seem to indicate. Those who are acquainted with the genius of the oriental tongues, from which theirs is derived, have been highly delighted with their fongs, fung in recitative, accompanied by a kind of guittar, which they are extremely fond of.

It might be imagined, from the fofmels and effeminacy It might be imagined, from the lotteria and entermacy of their mufic, that their people cannot be very warlike; but if we may judge from some of their maxims, they are far from being putillanimous. "Can any thing, say they, be more dastardly, than to kill a man before you approach him near enough to be distinguished." Hence they never attack an enemy till they come within the length of their lances, and then retiring to a proper distance, throw them, or shoot their arrows, with surprising desterity. They fight chiefly on horseback with short stirrups, and by raising themselves high in the saddle, strike with greater They never draw up their cavalry in long lines and extended wings, but in small detached squadrons, by which means they are less liable to be broke or thrown into confusion; and when such an accident happens, are more easily rallied, 'The agility of their horses, and their own skill in riding, give them great advantages by attacking in all quarters, wheeling off, and returning to the charge with

amazing dexterity and quickness. We are told, that they fometimes mount the offrich. we are tota, that they tometimes mount the offrich. Mr. Adamson says, that some of those he had seen among the burning sands on the morth side of the Senegal, are incredibly large, swift, and strong. Two boys were mounted upon the back of one of these gigantic sowis not followers. full grown, with which weight it ran feveral miles with a velocity exceeding belief, and the fwiftness of the fleetest courfer. 210 were not eteft offrich, the gentlemen abovementioned had two frout men mounted upon his back, when their weight appeared by no means diproportioned to his ability, as it was far from retarding its progrefs. At first the bird went a pretty high trot; but when he was heated he extended his wings, as it were to catch the wind, towhich his swiftness seemed indeed equal. "Every body, says he, must have seen a partridge run, and consequently must know there is no man whatever able tokeep pace with it; and it is easy to imagine, that if its steps were longer, its speed would be greatly augmented. The offrich moves like the partridge, but with the advantage of a long step, andgreat smillance from its wings; and I am satisfied, those I am speaking of would have distanced the sleetest race horses in England." Whence, we may remark, must if they could be tamed and broke in the same manner as a horse, we might easily judge of their utility.

the fame manner as a horfe, we might essily judge of their utility.

The natives of this country are in general fond of long journies and excursions into remote parts on affairs of trade and commerce, in which respect they are so indefatigable, that no hazard is too great, where profit is the motive. These expeditions being undertaken in large caravans, in which their goods and necessaries are carried on camels, they are able to make head against any opposition they may meet with on the road, and seldom return without rich ladings of gold, ivory, gum, officih feathers, camel's hair, slaves, and other commodities, which they sell to the Europeans, or to the merchants of Fez or Morocco. As no road or path can be preserved in these sandy desarts, they are directed in their course by the slight of certain birds. The zealous and devout Mahometans consider these as guides sent by their prophet to direct them in their way is

The zealous and devout Mahometaus confider these as guides sent by their prophet to direct them in their way; and it is said, they never presume to undertake a journey of any considerable length without their direction.

The kingdom of Tombuto, which borders on the province of Zuenziga, is situated to the south-east on both sides the Niger; and, though little known, is said to be of great extent. It took its name from Tombuto its capital, which slands in the latitude of fourteen degrees thirty-two minutes, and in the length and of two degrees twenty-five minutes, and from the length and the said of two degrees the said from the length and the said of two degrees the said from the minutes eaft from Lou

minutes calt from Low. Twell as those in the circum-jacent country, are least a shell form, and only composed of hurdles plaisfered over with loam; but here is a hand-forme mosque built with stone and lime. The royal palace is likewise built with the same durable materials, after a de-sign drawn and executed by an-excellent artist of Granada, who was driven hither when the Moors were expelled from Spain. There are some other tolerable structures, besides those abovernationed those abovementioned.

those abovementioned.

Many weavers of cotton reside in the city of Tombuto, and mechanics are more encouraged there than in any part of Africa. European cloths are brought hither from Barbary and the coast of Guiney. Markets and public sairs are held for the sale of them, to which the women resort with their faces vailed. Some of the native inhabitants and strangers who reside in the city are so rich, that the king thinks it not beneath the dignity of his rank to enter into a ulliance with them. enter into an alliance with them.

enter into an alliance with them.

This country is very fertile; being well watered by the river Senegal, which runs through it: and when that river overflows, the water is conveyed by fluices to Tombuto. Besides, this, there are many springs, the water of which is exceeding good. Here are all kinds of grain, grass, cattle, milk, butter, and all the necessaries of life except falt, which they procure by land carriage from Tagara, which is about five hundred miles distant, and is so highly valued, that eighty ductts are given for a camel load of it.
The unpareh of this country, when he goest abroad.

The monarch of this country, when he goes abroad, rides upon a camel tichly caparifoned, all the furniture thining with burnished gold, and his horfe is led after him by one of his principal officers. He likewife rides upon a cantel in war; but all his foldiers are mounted on heafts. upon a camel in war; but all his foldiers are mounted on horfes. His attendants confit of three thousand horfemen, and a prodigious aumber of foot, who, befides other arms, have poifoued arrows. They have frequent skirmishes with those who refuse to pay tribute, and when a conquest is obtained, the captives are fold to the merchants of Tombuto. Their horses are chiefly brought from Barbary, for those bred in the country are fo sew, and at the same time so similarly that they are only used on very trifling occasions. The king, however, is always well provided with these beasts; for when a merchant comes there with horses, he orders the best of them to be picked out for him, and never scruples to pay whatever price the merchant demands. He has in his possession a prodigious quantity of gold plate, and the whole court is said to ear out of gold vessels; filver, or any other metal being feldom used,

uled,

The king has the most profound homage and respect
paid him by all his subjects; and when any stranger, or
ambassador from other princes obtains an audience of him,
he must fall prostrate before him, and shew his submission,
by taking up the dust with his hands, and sprinkling it over
his head and shoulders. This ceremony is particularly
observed by all who never had the honour before.

This prince has such a natural ampirestly so the Large

observed by all who never had the nonour before.

This prince has such a natural antipathy to the Jewa, that he has strictly prohibited their being admitted into the city: and if a merchant is known to traffic with them, he is subjected to a heavy penalty. The king's tatte for literature is said to appear from the great number of doctors, judges, and priests, whom he maintains at a great expence in the capital, furnishing them with every converging to find the subject of the subjec

Interature is faid to appear from the great number of doctors, judges, and priefts, whom he maintains at a great expence in the capital, furnishing them with every convenience for study.

Manuferipts from Barbary are brought hither, and sold as the most valuable merchandize; and some traders are affirmed to have amassed immense wealth by consining themselves to this literary traffic, which the monarch encourages with a princely spirit, taste, and generosity. Notwithstanding all which, learning has made but little progress, except about the court, ir having produced no visible alteration in the manners of the people.

The inhabitants are in general mild and gentle in their disposition, frugal in their exconomy, industrious in the discharge of their several employments, and chearful in the hours of relaxation, which they devote to finging, dancing, and merriment of various kinds.

Great quantities of European cloth are brought hither by the Barbary and Tripoli inerchants; besides which, the latter also bring glass beads, coral, paper, copper basons, and other like wares. The articles exported from hence, are gold, slaves, ostrich seathers, sens, and dates.

Instead of coin, they use bits of gold, six of which weigh an ounce: they have also shells brought from Petsia, sour hundredof which are estimated at the value of a ducat these latter they use in purchasing articles of small price.

There are neither gardens nor orchards without the suburbs of Tombuto. The gentry here place the highest mark of state and dignity in keeping a great number of slaves; but their earelessness of their means the whole town is often in stames; for the houses, being built of combustible materials, eatch fire upon the most trivial accident.

There is a large town to the south of Tombuto, called Cobra, which is pleasantly situated on the banks of the river Senegal. There is a judge appointed by the king to decide all constroverse; a but the people have the liberty of appealing from his decision to the sovereign. The buildings are much th

eases, that carry off numbers, which is supposed to be owing to the heterogeneous qualities of their food, which is usually composed of slesh, fish, milk, butter, oil, and wine; besides which, they addict themselves to spirituous siquors, and sometimes drink them to great excess.

The province of Biledulgerid received its name from the Arabic Biled-el-gerid, signifying the land of dates, on account of the great quantity of that fruit which is peculiar to this country, and so plentiful as to supply the neighbouring kingdoms. Some geographers affirm, that this province was antiently known to the Greeks and Romans by the name of Numidia, and that it was then divided into two large provinces, whose inhabitants were distinguished by the names of Mascelyans and Massylians, the latter of two large provinces, whose inhabitants were distinguished by the names of Mascelyans and Massylians, the latter of which were stuated eastward of the former. It is almost of a square form, and extends above eighty leagues every way, or from twenty-eight degrees thirty minutes to thirty-two degrees fifty minutes north latitude, and from five degrees thirty minutes to cleven degrees fifty minutes east longitude; and is bounded on the east by a ridge, of losty mountains which divide it from the kingdom of Tripost and part of Gudamis, on the west by the countries of Zeb and Mezeb, and on the south by the province of Verghela: this is all that can with propriety be comprehended within the just limits of Biledulgerid, though it is usual to include all the countries here mentioned as its frontiers, under that name. fror tiers, under that name.

Biledulgeridis mountainous, fandy, and barren, through-out, producing little besides dates, which grow here in such plenty, that the face of half the country is covered with trees bearing that struit. The climate is hot and unhealthy, the people lean, swarthy, with shrivelled complexions, and their eyes inflamed, owing to the research of the sur-bannes.

beams from the white hard foil; and the showers of dust and fand driven by the high winds that blow here at cer-tain seasons with such violence, as sometimes to beary under

it both men and cattle.

If both men and cattle.

Eating dates is faid to occasion an inveterate scursy in
the gunts of the Inhabitants, which frequently makes all
their teeth drop out, and sometimes spreads over their
whole bodies, by which means they are rendered unhappy,
and extremely loathsome. In other respects the natives are found, vigorous, and healthy, and many of them live without fickness to a good old age, though they difeover a furrowed countenance, thrivelled tkin, and hoary locks very early in life, and before infirmity, decrepitude, or any decay

early in life, and before infirmity, decrepitude, or any decay of their faculties begin to appear.

The plague, which makes fuch havock in Barbary, is in a manner unknown at Biledulgerid; though the countries are contiguous, and there is a conflant intercourfe between the inhabitants at all featons. This is also the case with the finall pox, which in other hot countries is no left contagious and fatal than the plague.

The people of this country are represented as fav., reacherous, and thievish, confissing of a mixture of old Africans and Arabs. The former live with greater regularity in villages, composed of a number of small huts, and the latter in tents, ranging from place to place in quest of food and plunder. There is not a town in the whole country befides Touser and Tonsera worthy of notice; nor is it less destitute of rivers, there being in all this large terriit less destitute of rivers, there being in all this large territory scarce a single stream worth mentioning, or that is not

ed up for feveral months together.

In Biledulgerid, the Arabs, who value themselves on their being superior in birth and talents to the primitive inhabitants, are perfectly free and independent, and frequently enter into the service of the neighbouring princes who are at war. They are fond of hunting, particularly the offrich, of which they make great advantage, for they eat the flesh, exchange their feathers for corn, pulse, and other things they want, use the calons as pendants for their ears and other ornaments; their fat is effected a medicine of fingular virtue, and they convertheir fkina into pouches and knapfacks; fo that no part of the animal is left unemployed in fome useful purpose. The Arabs likewise live upon the flesh of camels and goats, and drink either the broth in which it is boiled, or camela milk, for they feldom taffe water, that which is good being generally more fearer than milk itself. They have some horses which they use in the chace, where people of rank are attended by negro flaves; and those of interior fortune by their women, who are no less obsequious than the slaves themselves, looking after the horfes, and performing the most servile and laborious bufiness.

Learning is here at a very low ebb; they have never-theless schools to which all the boys of distinction are sent in order to be inflructed in that kind of knowledge which is most in repute, and are raised from thence to the digni-ty of judges or priests in proportion to their genius and the proficiency they have made in their studies. Some addict themselves to poetry, for which many of the natives of this country shew a very early genius; and it is not un-common to see a person ment the highest distinctions by means of this talent, which, considering the rude ignorance of the people in general, they fonetines carry to an amazing pitch of fweetnefs and fublimity. Their invention is furprifingly fertile, and they particularly excel in fables and parables. A few of them purfue the mechanic arts: surprinningly tertuie, and they particularly excel in fables and parables. A few of them purfue the mechanic arts: but the people in general defpite them as mean and fervite; and where any of them engage in the employments of hutbandry, their wives and ilaves, commonly do all the

Tousera, which de Lisle has placed within the limits of Biledulgerid, stands on the confines of Tunis, in thirty-two degrees twenty-eight minutes north latitude, and in ten degrees twenty-fix minutes eaft longitude from London. Of this city Marmol has given us the following account: that it was built by the Romans, and fortified with high walls, the ruins of which are still to be seen. The Mawais, the rinks of which are this country, plundered and hometans, on their entering this country, plundered and deftroyed the city on account of the reinlance made by the inhabitants, and thus all its noble fluctures were demolified, the prefent buildings confifting only of low and mean huts. Here they have fairs at certain feafons, to which the merchants of the furrounding countries refort. Through the center of the town runs a river, by which the Arabs and Africans are feparated, each possessing a certain quarter, the one to the fouth, and the other to the north, enjoying different privileges, though all are equally the inhabitants of the same city. They are even continually at war with each other, and make incurious acrofs the river with all thesencous and animofity of declared eng-miss, but when endeavous are made to bring them under a foreign government, they will then frequently unite against common foe.

About ninety miles north-west of Tonsers, in thirtythree degrees fifteen minates north latitude, and nine d guess three minutes east longitude, was fituated the city of Capfa, which was almost a Roman city, and was formerly furrounded with high walls, towers, &c, but they were almost senally demoished by the Araba; bat the walls of the citadel, are ftill flanding, which are built of large square flones, and are thirty feet thick, and one hundred and fifty in height. It was once a very populous city, and con-tained many stately mosques, and other magnificent structares; but it is now very poorly inhabited, and the people are greatly oppressed under the Tunisian government. In the center of the city is an inclosed fountain, the water of which is bot, and ferves not only to bathe in, but, when cool, to drink. The adjacent country is fertile, and shounds with palm, citron, olive, and other fruit treer; but the cit-mate is very unwholefome, and the inconvenience the inhabitants labour under on that account makes them naturally of a peevifi and churlifit temper. Both fexes go well lady of a poewin and couring temper. Both lexes go well cloathed, except about their feet, on which they went large coarfe thoes made of the fkins of wild beafts, but fo much out of form, that they not only disfigure them, but are also exceedingly inconvenient; so that they are obliged to lay them aside, and travel harefooted, when they are on a journey that requires available. ney that requires expedition.

We cannot, with propriety, take leave of the continent of Africa, without, in the first place, giving the opinions of the learned concerning the reason of the dark complexion of the negroes, who chiefly inhabit this quarter of the globe. And, secondly, introducing some observations, together with objections and answers, relative to the slave trade, in order to prove that it is absolutely inconsident with and even contravate of cound policy as well as a soft and the state of the sta with, and even contrary to found policy, as well as ab-horrent to humanity, reason, and justice: with some hints to those who are not to be moved by such arguments; for the better treatment of flaves during their passage from Africa to America, and on the plantations of the latter,

for the benefit of both.

A learned author, in treating of the deep-black which tinges the complexions of the negroes, fays, "The caufe of this fingularity has been the subject of much inquiry, which has given rife to a variety of fystems. Some have abfurdly supposed that the negroes, being the descendants from Cain, have had this mark of infamy stamped upon them, as a punishment for the fratricide of their ancestor. If it were so, it must be allowed that his posterity has le a severe atonement for his crime, and that the blood of the pacific Abel has been thoroughly avenged by his posterity."

It was long the opinion of the christians in general, (fays Mr. Salmon) and perhaps of the jews before them, that all men were white till after the flood; but that Ham. that at timen were write the airer the mood; but that raum, the fiction of Noah, was converted from a white man to a black man, by his father's curfing him; and that A-frica, falling to the lot of this fon, all his pofferity whop effected this part of theworld, have remained black ever fince.

But that this curfe of Noah's was not the occasion of

fuch a change of complexion is pretty evident; for first, the posterity of Cham, or Han, if they possessed Asiaca, are not all back. The entire northern coast, from Egypt to the empire of Fez inclusive, and for several hundred miles to the fouthward, even as far as the Tropic of Cancer, if not further, are not black, any more than those who inhabit to the fouthward of the Tropic of Capricorn.

a. The people, in fome parts of Afia, particularly in the peninfula of India, on this fide the siver Ganges, and who are supposed to be the posterity of Seth, the favourite fon, are full as black within the Tropic of Cancer, as any of the negroes in Africa: nor is there, in the librard country of India, at a diffance from the coast, a single perform the coast, as the single performed the coast, as the single performance of the single ion to be found that is not black; at least I never met with one, though I travelled some hundred miles in that country, and refided fome time in it. It has been reported. indeed, that there are no blacks out of Africa; but probably those writers who assert this, had their information from fuch merchants or fearnen, as had vifited only the coaft of India; where, 'tis true, there is a tawny mingled breed; but even there the greateft numbers of the natives are black, who lie within the Tropic of Cancer. Indeed the Indian blacks have not the flat noies, and thick lips, or the fhort frizzled hair of the negroes. But these, I think, have never been reckoned part of and oah's curse.

Another

Another reason assigned for the blackness of the negroes, is the heat of the climate, their country being situated within the torrid zone. But neither can this be admitted as the fole reason of it, for great part of the continent of America also lies within the torrid zone; and yet there hever was a black man there, till the Europeana transported them thelies from Affice.

of the state of the

hever was a black man there, till the Europeans transported them thither from Africa.

Others have fuggefled, that the people of Africa, being efa tawny complexion, between black and white originally, and not able to rocket between black as white as their northern keighbours, took gran pains to make themselves black, as a more definable color than the olive 1 that they accordingly rubbed over their bodies with oil or grease, mixed with foot, or some other black ingredients: and thereby contributed to render their complexions darker than they were originally; and that the women afterwards, seeing nothing else but black men, brought black children into the world; and these ftrengthen their opinions by some very notable elfe but black men, brought black children into the world; and thefe frengthen their opinions by fome very notable facts. It is observed by all travellers, that the negroes grease or anoint themselves and their children, continually from the hour they are born; and that many of them mix. black ingredients with the ointment: that the Caffries and Hottentots, beyond the Tropic of Cancer, who are not naturally of fo dark a complexion as the negroes nearer the line, do actually darken their skins pretty much, by rubbing them with fat and soot. them with fat and foot.

Others observe, that not only the complexions, but the very features, hair, make and flature of people differ, as the country and climate differs, wherein they were severally born; and as to the negroes in particular, their hair, their lips and notes, are not at all like those of Asia or Europe, even those who live in the north of Africa. The Scy or even those who live in the north of Africa. The Scythians, of old, and the Tartars and Laplanders, atpresent, are of a very different make from the people of the southern parts of Europe or Afia: the Tartars are remarkable for their olive complexion, squat make, star faces, and little eyes set deep in their heads. In some countries the people are tall, in others short; and not only the persons, but the very genius and temper of men differ, as the foil and climate differ where they were born. The Spaniard is grave and sedate, mighty slow and circumspect in his actions; while the French are gay and airy, perpetually dancing and singing: and this difference, no doubt, proceeds from the soil and situation of the respective countries; for, transplant any people from one country to another, they will alter or any people from one country to another, they will alter or degenerate into the fame kind of men, in a few genera-fions, as the former inhabitants were. If the Spaniards and

degenerate into the fame kind of men, in a few generafions, as the former inhabitants were. If the Spaniards and
French were to change countries, they would, ina few generations, alter their perfons and humours; the French
would be Spaniards, and the Spaniards French.

Did not every body fee agemarkable difference between
the French and the English, when the French fit came,
over hither? and yet, in two or three generations, it was
impossible to diffinguish the one from the other. And so
I take it to be in complexions, as well as in features and humours: blacks, in a few generations, would become white,
if brought over hither; and possibly white men might become black, or very near it, if they were planted a few
generations in the heart of Africa, especially if pains were
taken to make them so, by rubbing their children withgrease
and soot from the time they were born as the Africans do.

To sum up all: the sun, no doubt, goes a great way towards the darkening the complexion of the people that
inhabit the torrid zone; but then the foil they live upon,
the pains they take to make their children full blacker,
and their women conversing altogether, or chiefly, with
black men, every one of these may contribute something
towards making them so exceeding black; for the timalone, it is certain, will not do it; or the people, who live
within the torrid zone in America, would be equally black.
And, as to Noah's cursing his son Ham, it is evident, this
san be of no weight; for, as I have observed already, great
pair of the people of Africa (the country his posserity are
lapposed to inherity are not black; and the people of the
East-Indies, who are supposed to be the descendants of
Seth, the savourite son, are as black as any of the negroes
of Africa; though, it is true, their bair is long, and their
features much more engaging than those of the negroes

If it is certain, it is true, their bair is long, and their
features much more engaging than those of the negroes

features much more engagement and alteration of climate or foil will have any effect upon the features as well as complexion, we may remember, that the Tarks, Perfans, Indians, and Chinele, all come originally from Tartary (at leaft the fovereigns and governing parts of those empires); and yet they do not at all resemble, the Tartars from whence they descended, at this day, but the people of those countries they respectively possibled to the southward Na. 20.

No. 39.

of them, which, I believe, will be admitted to amount, to a demonstration of what has been advanced oil this head.

To this may be added, that whatever may be the original and radical cause of that variety of complexion in the human species, it is agreed; that this complexion is owing we agelstinous substance that is lodged between the cuticle and the stain. This substance is blacklish in negroes, brown in olive-coloured or swarthy people, white in kitropessa, and diversified with reddish spots in those who have eatremely light or red half. Anatomy hath discovered, that, in negroes, the substance of the brain is blacklish that the pinea gland is littirely black, and their blood in of a much deeper red than that of white people. Their shin is always hotter, and their posse quicker. The reasons that he has being curled, is because, having to penerate though a net work of a more dense and tenacious substance, it becomes twisted, and cannot be lengthened out. The sweat of the negro disfuses a strong and disgreeable odour, because it is impregnated with that thick, rancid shin the sen long lodged, and slowly oozes out between the cuticle and the skin. This substance is so palpable, that one may dissinguish in it, with a microscope, a sediment, formed in little blacklish globules. Hence it happens that the linen cloth which wipes off the petspiration of a negro, when copious, is tinged with it.

We small now offer some remarks and observations relative to the African slaves, of whom it has been publicly afferted, that they are equally incapable of reason and virtue. We hope, that what we are going to advance on this

afferted, that they are equally incapable of reafon and vig-tue. We hope, that what we are going to advance on this fubject will fet the matter right, and convince every dif-cerning perfon, that such ar opinion is altogether erroneous and unjust.

In the year 1752, an English ship that traded to Guiney was obliged to leave the surgeon behind, whose bad state of health did not permit him to continue at sea. Murray

was obliged to leave the furgeon behind, whose had flattay of health did not permit hint to continue at fea. Murray (for that was his name) was there endeavouring to recover his health, when a Dutch ship drew near the coast, put in irons the blacks whom curlofity had brought to the short on the blacks whom curlofity had brought to the short on the blacks whom curlofity had brought to the short of the unhappy people, incensed at so had a treachery, instantly rap to Gudjoe (a black at whose house Murray lodged) who stopped them at his door, and asked them what they were in search of? "the white man who is with you," replied they, "who should be put to death, because his frethren have carried off ours." The generous host answered, "The Europeans who have carried off our comprymen, are barbarians; kill them whenever you can find them. But he who lodges with me is a good man; my house is his fortres; I am his foldier, and I will defend him. Before you can get at him, you, shall pass over my body. O my friends, what just man would ever enter my doors, if I had suffered my habitation to be stained with the blood of an inanceant man?" This discourse appeared the rage of the blacks; they retired, assumed of the design that had brought them thither; and some days after acknowledged to Murray himself, how happy they were that they had not committed a crime which would have stung them with remorse as long as they lived.

they had not committed a crime which would have flung them with remorfe as long as they lived. From the above circumfiance it is very reasonable to con-clude, that the first impressions which the Africans receive in the new world, determines them either to good or bad Repeated experience confirms the truth of this actions. Repeated experience commiss the truth or this colleryation; for those who fall to the thate of a humanic matter, willingly espouse his interests. They infentily adopt the spirit and manners of the place, where they are fixed. This attachment is sometimes exalted into herolifit.

adog the fairlt and manners of the place, where they are fixed. This attachment is formetimes esalted into Beroffin. We shall here give a remarkable instance of this.

A Portuguese slave, who had sled into the woods, having leagnt that his old master had been taken pp for an aftifination, came into the court of justice, and acknowledged himself guilty of the fast: fuffered himself to be put in prison instead of his master; brought salte though judicial-proofs of his pretended crime, and instead death instead of the guilty person. Actions of a less heroical nature though not uncommon, have touched the hearts of forme colonists. Several would readily say as Sir William Gooch, governor of Virginia, did, when he was blamed for returning the falutation of a black; "I should be very forry that a slave should surpass me in positiones."

It is a melancholy consideration, that many writers have prossituted their abilities to justify policy what morality condenns. Be that as it may, it would be unpardonable in us, at a period when so many errors are boldly inculcated, to conceal any trush that is luterasting to humanity. If whatever we have thitherto advanced "The seminally tended only to a leviate the hunden of slavery, the reason is,

is, that it was first necessary to give some comfort to those unhappy beings, whom we cannot fet free; and convince their oppressors, that they are cruel, to the prejudice of their real interests. But in the mean time, until some confiderable revolution shall make the evidence of this great truth fetr, it may not be improper to pursue this subject fresher.

further.

We shall then first prove, that there is no reason of state that can authorize slavery. We shall not be afraid to cite to the tribunal of reason and justice those governmenta which tolerate this cruelty, and are not ashamed to make it he basis of their power. The celebrated French writer Montesquieu could not prevsil upon himself to treat the question concerning slavery in a ferious light. In reality, it is degrading reason to employ it in resulting an abuse so repugnant to it. Whoever justifies so odious a system, deferves the utmost contempt from a philospher, and, from the negro, a stab with his dagger. "If you touch me," said Clarissa to Lovelace, "that moment i kill myself;" and I would say to him, who attempted to deprive me of my liberty, "If you approach me, I will stab you." In this case I should reason better than Clarissa; because, defending my liberty, or, which is the same thing, my life, is fending my liberty, or, which is the fame thing, my life, is my primary duty; to regard that of another, is only a fe-condary confideration; and the death of a criminal is more conformable to justice than that of an innocent person, if

conformable to justice than that of an innocent person, is all other circumstances were the same.

"If any one should fay," continues our author, "that he who wants to make me a slave, does me no injury, but tonly makes use of his rights, I ssk, Where are those rights? Who hath stamped them upon so sacred a cheracter, as to silence mine? I hold from nature the right of elf-defence: nature, therefore, has not given to another the right of attacking me. If thou thinkest thyself authorised to oppress me, because thou art stronger and more ingenious than I am; do not complain if my vigorous arm shall plunge a dagger into thy breast; do not complain when in thy tortured intrails thou shalt feel the pangs of death conveyed by possion in thy food. I am stronger, and when in thy tortured intrails thou shalt feel the pangs of death conveyed by poifon in thy food. I am stronger, and more ingenious than thou: sail a vickim, therefore, in thy surn, and expiate the crime of having been an oppressor and an enemy of mankind; for that person, who supports the system of slavery, is the enemy of the whole human race. He divides it into two societies of legal affassins; the oppressor and the oppressor. It is the same thing as proclaiming to the world, If you would preserve your life, instantly deprive me of mine, for yours I would fain take

away.

'You may perhaps fay, The right of flavery extends only to the right of labour, and the privation of liberty, not of life. What! does not my mafter, who dispose of my life. my firength at his pleafure, likewife dispose of my life, which depends on the voluntary and proper use of my faculties? What is existence to him, who has not the disposal of it? I cannot kill my flave; but I can make him bleed under the whip of an executioner; I can overwhelm him with forrows, drudgery, and want; I can injure him every way, and fecretly undermine the principles and spirits of his life; I can fmother, by flow punishments, the wretched infant which a negro woman carries in her womb. the law protects the flave against a violent death, only to leave to my cruelty the right of making him die a linger-

ing one.

But to carry this reasoning a little farther: The right of flavery is that of perpetrating all forts of crimes; those crimes which deftroy personal safety; for the slave may be facrificed to the caprice of his master: those crimes which make modesty, shudder. My blood rises at these horrid images. I detest, I abhor the human species, made up only of victims and executioners! May it be annihilated, if it

is ever to remain in this depraved state!"

It ever to remain in this deprayed Rate!"

This great man now proceeds to difclose his fentiments on this subject without reserve. "Cartouche, the highwayman," says he, "fitting at the foot of a tree in a deep forest, calculating the profits and losses of his robberies, the rewards and pay of his affociates, and adjusting with them the ideas of proportion and distributive justice; this Cartouche is not a very different character character. Cartouche is not a very different character from that of the merchant who, reclined on his couch, with his pen in his hand, fettles the number of attacks which he can order to be made on the coasts of Guiney; who deliberately examines how many firelocks each negro will coft him, in order to support the war which is to furnish him with slaves; how many iron fetters to confine him on board; how many whips to make him work: how much each drop of blood will be worth to him with which each negro will water his plantation: if the black women will contribute more to his estate by labour of their hands, or by those of bearing children! What think you now of this parallel? The highwayman attacks you, and takes your money; the trader carries off even your perfon. The one, invades the rights of fociety; the other, those of naure. This certainly is the truth; and if there existed a religion which authorized, which tolerated, even by its flence, such enormities; if, moreover, occupied, by idle or factious questions, it did not eternally denounce vangeance against the authors or instruments of this tyranny; if made it criminal for a stave to break his bonds; if it due not expel the unjust judge who condemns the suggister to death; if such a religious

of intruments of this tyranny, I made it criminal for a flave to break his bonds; if it due not expel the unjust judge who condemns the sugitive to death; if such a religion existed, its ministers ought to be massacred under the ruins of their altars, as examples of terror to others.

"Nay but, fay they, these negroes are a race of men, born for slavery; their dispositions are narrow, treacherous, and wicked; not only the superiority of our understandings, but the justice of our authority is in a manner acknowledged by them.

"To this I reply, The minds of the negroes are contracted, because slavery destroys all the springs of the soul. They are treacherous, because they are under no obligation to speak truth to their tyrants. They exknowledge the superiority of our understandings, because we have abused their ignorance: they allow the justice of our authority, because we have abused their weakness. I might as well say, that the Indians are a species of men bern to be crushed to death, because there are santics among them, who, before the temple of Jaguernat, threw themselves under the wheels of their idol's car.

"It is further urged, But these negroes were born."

"It is further urged, But these negroes were born ves.' Barbarians! will you persuade me, that a man can be the property of a fovereign, a fon the property of a father, a wife the property of a hubband, a domettic the property of a mafter, a negro the property of a planter? But these slaves have sold themselves. Could a man ever But these slaves have sold themselves. Could a man ever by compact, or by an oath permit another to use and abuse him? If he assented to this compact, or confirmed it by an oath, it was in a transport of ignorance or folly; and he is released from it the moment that he either knows himsels, or his reason returns. But they had been taken, in war. What does this signify to you? Suffer the conqueror to make what ill use he pleases of his own victory. Why do you make yourselver his accomplices? But they were criminals condemned in their own country to flavery. Who was it that condemned them? Do you not know, that there is no criminal but the tyrant in a despotic, state?

Those who are under the dominion of an absolute prince are upon the footing with flaves in a flate repugnant to nature. Every act that contributes to keep a man in fuch a state, is an attempt against his person. Every power which fixes him to the tyranny of one man, is the p of his enemies; and all those who are about him are the authors or abettors of this violence. His mother, who taught him the first lessons of obedience; his neighbour, who fet him the example of it; his fuperiors, who com-pelled him into this flate; and his equals, who led him into it by their opinion: all thefe are the ministers and inftruments of tyranny. The tyrant can do nothing of himself; he is only the first mover of those efforts which all his subjects exert to their own mutual oppression. He keeps them in a state of perpetual war, which renders rob-beries, treasons, and assistantions, lawfol. Thus, like the blood which flows in his veins, all crimes originate in his

hood which nows in his veries, all crimes originate in his heart, and return thither as to their primary fource.

"Caligula used to fay, that if the whole human race had but one head, he should have taken pleasure in cutting it off. Socrates would have faid, that if all crimes were heaped upon one head, that should be the one which ought to be struck off. Let us therefore endeavour to make the light of resign and the fortiments of nature asker also. to be truck on. Let us therefore engageour to make the light of reafon, and the fentiments of nature, take place of the blind ferocity of our ancestors. Let us break the bonds of so many victume to our mercenary principles, should we even be obliged to diseard a commerce which is founded only on injustice, and whose object is luxury. But even this is not necessary: there is no occasion to give up those conveniencies which custom bath so much endeared to us. We may draw them from our colonies, without peopling them with flaves. These productions may be cultivated by the hands of freemen, and in that case no remorfs would attend the reaping of them.

"In the islands are many blacks, whose fetters have been

broken. They faccessively clear the small plantations that have been given them, or which they have acquired by their industry. Such of those unhappy men as should recover They fuccessively clear the fmall plantations that fe of llel ? ney; ades This

beets that d by ould recover their independence, would live in qutet, upon the fame manual labours; that would be then free and advantageous to them 'The vaffals of Denmark, and others in the dominions of the empres of Russia, who have lately been made free, have not abandoned their ploughs, or relaxed in their labour, fince they have obtained that in-

been made free, have not abandoned their ploughs, or relaxed in their labour, fince they have obtained that indulgence.

Notwithstanding the several nations concerned in the African trade are equally interested in preserving the slaves in their passage, yet they do not all attend to it with the same care. They all feed them with beans, mixed with a small quantity of rice, but they differ in their manner of treating them in other respects. The English, Dutch, and Danes, keep the men constantly in irons, and frequently hand-cus the women. The small number of hands they have on board their ships, obliges them to this severity. The French, who have great numbers, allow them more liberty. There or four days after their departure, they take off all their fetters. All these nations, especially the English, are too negligent with regard to the intercourse between the sailors and the women saves. This irregularly occasions the death-of these-fourths of those whom the Goiney voyage destroys every year. None but the Portuguses, and other calamities. This advantage is a consequence of the care they take to man their vessel only with the negroes, to whom they have given their freedom. The slaves, encouraged by the conversation and condition of their countrymen, form a tolerably favourable idea of the destiny that awaits them. The quietness of their behaviour induces the Portuguses to grant the two sexes the happiness of living together; which indugence would be productive of the greatest inconveniences, it allowed in other vessels.

The Guiney negroes in general, and those born in the islands, as well male as semale, have the yaws once in their lives; it is a disease they must necessarily pass through; but there is no instance of any of them being attacked with

islands, as well male as female, have the yaws once in their lives; it is a disease they must necessarily pass through; but there is no instance of any of them being attacked with its second time, after having been railically cured. The Europeans feldom or ever catch this disorder, notwithstanding the frequent and daily connection they have with the negroe women. These women suckle the children of the white people, but do not give them the disorder. How is it possible to reconcile these facts (which are incontestable) with the sentiments which physicians have adopted with regard to the nature of the yaws! May it not be allowed that the sentiment, the blood and skin of the negroes, are suffectible of a vivus peculiar to their faces? Perhaps allowed that the temen, the notice and kind rine negrees, are fufceptible of a virus peculiar to their fpecies? I Perhaps the cause of this disorder is owing to that which occasions their colour; one difference is frequently productive of another; and there is no being or quality in nature, that exists absolutely detached from others.

Be the cause or nature of this disorder what it may, it is however evident, from the most accurate and undeniable

Be the cause or nature of this disorder what it may, it is however evident, from the most accurate and undeniable calculations, that one-feventh part of the blacks that are imported into America from Guiney, die there every year. Fourteen hundred thousand unhappy beings, who are now in the European colonies in the new world, are the unfortunate remains of nine millions of slaves that have been conveyed thither. This dreadful destruction cannot be the effect of the climate, which is nearly the same as that of Africa, much less of the disorders, to which, in the opinion of all observers, but sew fall a facrifice.

It may naturally be supposed that this great mortality must originate from the manuer in which these slaves are governed; and might not an error of this nature be corrected? The first step necessary in this reformation would be to attend minutely to the natural and moral state of savage nations; those who convey them to America, and especially those who direct their labours, often think themical the sum of the sum of the save in the save An emitory or all manking will new them, that in order to render flavery rifeful, it is at leaft needfary to make it eafy; that force does not prevent the rebellion of the mind; that it is the mafter's interest that the slaves should be attached to life; and that from the moment he no longer fears to die, nothing is to be expected from him.

Many shufes would be reformed, if the principle on enlightened reason, derived from the fentiments of humanity, had its proper influence. Men would acknowledge the necessity of lodging, cloathing, and giving proper sood to beings condemned to the most painful bondage that ever has existed, since the intamous origin of slavery. They would be sensible that it is naturally impossible that those who reap no advantage from their own labours, can have the fame understanding, the same ecconomy, the same activity, and the same strength, as the man with cannot be produce of his industry. That political moderation would gradually take place, which consists in lessening of labour, alleviating punishment, and rendering to man part of his rights, in order to reap with greater certainty the benefit of those duties that are imposed upon him. The preservation of a great number of flaves, whom disorders, occasioned by vegation or regret, deprive the him. The prefervation of a great number of flaves, whom disorders, occasioned by vexation or regret, deprive the colonies of, would naturally flow from so wife a regulation. For from aggravating the yoke that oppresses them, every kind of attention should be given to make it easy, and, by favouring a natural tasse that seems peculiar to the negrees, to diffipate even the idea of their present situation. "I tray be observed, that the organs of the negrees are extremely sensible of the powers of music. Their ear is fo true, that, in their dances, the tune of a song makes them soring up an hundred at once, striking the earth at

them spring up an hundred at once, striking the earth at the same instant. Enchanted, as it were, with the voice of a singer, or the tone of a stringed instrument, a wipta-tion of the air is the sprint that actuates all the bodies of these men; a sound agitates, transports, and throws them into exstasses. In their common labours, the motion of their arms, or of their feet, is always in cadence

of their arms, or of their feet, is always in cadence. At all their employments they fing, and feem always as if they were dancing. Music animates their courage, and rouses them from their indolence. The marks of this extreme sensibility to harmony, are visible in all the musics of their bodies, which are always naked. Being poets and musicians by nature, they make the words subservient to the music, by a licence they arbitrarily assume, by lengthening or shortening them, in order to accommodate them to an air that pleases them.
