"Whenever any object or incident strikes a negro, he instantly makes it the subject of a song. In all ages, this has been the origin of poetry. Three or sour words, which are alternately repeated by the singer, and the general chorus, sometimes constitute the whole poem. Five or fix bars of music compose the whole length of the song what appears to be a singular circumstance, is, that the same air, though merely a continual repetition of the same work or dance for several hours; neither they, nor even the white men, are digusted with that tedious uniformity which these repetitions might naturally occasion. This particular attachment is owing to the warmth and expression

the white men, are difgusted with that tedious uniformity which these repetitions might naturally occasion. This particular attachment is owing to the warmth and expression which they introduce into their songs.

"Their airs are generally double time. None of them tend to inspire them with pride. Those intended to excite tenderness, promote rather a kind of languor. Even those which are most lively, carry in them a certain expression of melancholy. This is the highest entertainment to minds of great sensibility. So strong an inclination for music might become a powerful motive to action under the direction of skilful hands. Festivals, games, and rewards might on this account be established among them. These amusements, conducted with judgment, would pre-These amusements, conducted with judgment, would prevent that supidity so common among slaves, ease their labours, and preserve them from that constant melancholy which confunes them, and fhortens their days.

"After having provided for the preferration of the blacks exported from Africa, the welfare of those who are born in the places whither they are conveyed would their be confidered. The negroes are not averse to the propagaborn in the places whither they are conveyed to the propagation of their species, even in the chains of flavery. But the cruelty of their masters effectually prevents them from complying with this great end of nature. Such hard labour is required from negro women, both before and after their pregnancy, that their children are either abortive, or live but a fhort time after delivery. Mothers, rendered desperate by the punishments which the weakness of their condition exposes them to, sometimes finate their children from the cradle, in order to firangle them in their arms, and facrifice them with a sury mingled with a spirit of revenge, and compassion, that they may not become the property of their cruel masters. This barbarity, the horror of which must be wholly imputed to the Europeans, will perhaps convince them of their error; so that their sensibility may be roused, and engage them to pay a greater attention

AND THE NEW AND UNIVERSAL SYSTEM OF GEOGRAPHY.

stien to their true instructs, as well as the instruction. There will find, that by committee on the contrastor rights of mankind rights and they will at leaf costs to bers, if they will rate become the benefit

Thus the Europeans, urged by these cogent motives, perhaps resolve to liberate those mothers who shall brought up a considerable number of children to the

age of siz years. The alterements of liberty are the most powerful that can influence the human heart. The negrowesses, animated by the hope of so great a birfling, to which all would aspire, and six would be able to obtain, would make neglest and infancy be succeeded by a virtuous ambition to bring up thildren, especially when freedom and tranquillity would be secured to them by she number and prefervation of their ofspring."

C H A P. IX.

THE NEW HISTORY AND DESCRIPTION OF THE

AFRICAN ISLANDS;

ZOCOTRA, BABELMANDEL, MADAGASCAR, THE COMORA ISLES, BOURBON, AND MAURITIUS, ARE IN THE INDIAN OCEAN, AND THE REST IN THE ATLANTIC.

SECT. I.

Treats of the island of Mauritius, or the ifte of France, its boundaries and entent, rivers, barbours, produce, animals, inbabitants, &c.

THIS island lies in the Indian occan, between the nineteenth and twentieth degrees of south Istitude, and in fifty-eight degrees thirty minutes east longitude from London, about one nundred leagues to the east of Madagasar. It was early discovered by the Portugusse; after them, the Dutch took possession of it in 1508, and settled on fouth shore, but abandoned it, after they became possessed of the cape of Good Hope: they gave it the name of Mauritius, in honour of prince Maurice their stattholder. It remained uninhabited, after the Dutch quitted it, till the French in 1720, landed on it.

Mauritius is reckoned to be about forty-five leagues in eintumference. The form is oval; and from the many

cumference. The form is oval; and from the many sistemerence. The form is oval; and from the many high mountains burnents of water ruth down with great impertuolity, and form various 'rapid rivers and rivulets, which are foul near where they fall, particularly in the mountains, and are transperent as crystal before they difemborus themselves into the fea. A French officer, who made the circuit of the illand in 1770, during the dry feason, crossed twenty four rivers flowing with fresh water, but none of them are navigable for sloops above a nusfuser that from their mouth. One of these rivers.

dry feafon, croffed twenty four rivers flowing with fresh water, but none of them are navigable for floops above a antiquet shot from their mouth. One of these rivers, which is named Anguilles, flows from springs of a ferruginous quality, which covers the water with an oil.

According to the measurement of the Abbe de Caille, the ise of France, is, in its greatest diameter, thirty-one thousand eight hundred and every fathoms from north to south, and twenty-two thore the standard and twenty-two four from each twenty twenty is all content is four hundred and thirty-two of one hundred and twenty-two of one hundred and twenty-two of one hundred and twenty-two of one hundred per of one hundred per feet the perch. The country is a tome parts mountainous, covered with thick goods. The island is almost

tainous, covered with thick ...oods. The island is almost entirely encircled, at some distance from the shore, by a best of, rocks; and in the parts where this defence fails, the coast is formed of rocks high and inaccessible.

The wind generally blows from the south-east; but when the fun is in the northern hemisphere, particularly on the months of May and June, it commonly blows from the north-west. The hottest months are those of November and December, but the air is then venered with plentiful rains, yet dreadful hurricanes visit the island at that season. On account of the conti-

nued florms, all navigation is at a flettle from December till April. While a hurricane lafts, it is usual for the wind to go quite the circle of the horizon, after which a perfect calm succeeds. A very fatal lurricane happoned in 1760. The fe tempeth definor a great number of rats, grashoppers, and ants, with which this island is infasted. This island contains two ports, the principal of which is to the fouth-east, where the Dutch fettlement formerly was, the remains of the building belonging to which are fill to be feen. This port may be entered before the wind; but it is very difficult to get out of it, as the gales generally blow to the fouth-east. The other port, mamed port Louis, is futuated to the north-west, and is finaller than the former is a ship may go in or out of it large before the wind, which induced the French to fix their principal settlement here, although fituated in the most diffagreeable part of the island.

here, although intuated in the name and which has fearely the superance of a market sown, is built with tolerable regularity at the bottom of the port, and at the opening of a valley which is about three quarters of a teague long, and eight hundred or one thousand yards wide. It confishs of wooden houses of one flory high, and is defended towards the sea by a fort, called fort Blanco, and a battery. This harbour is greatly obstructed by hulks of ships, which having been long since funk there, form each an island, which is every day increased by the madrepores growing wound them.

There are only three churches in the ifland, one at port Louis, the second at the fouth-east part, and the third and handsomest at a fettlement called Pamplemousse. The two first are smaller than the churches of a country visiage. two first are smaller than the churches of a country visinge, Indeed, another church was built at port Louis upon a very commodious and elegant plan, but the roof being too much raifed, the walls were infassicient to bear its weight, and resist the force of the hurricanes; what remains of it is now used as a storehouse, of which there are but few in the island, and the greater part of them are built of wood, a material by no rocens proper for public buildings here, where the strongest beams will only last forty years, if the worms do not destroy them sooner.

if the worms do not deftror them former.

It has been remarked by a late writer, that every thing in this ifland differs from what is forn in Europe, even the herbage of the country. The foil is almost every where of a redifficelour, and mixed with veins of iron, which are frequently found near the furface, in the form of grain, the fize of a pea. In the drier parts, especially near the town, the ground is very hard. It refembles pipe clay; and, to make trenches, they fometimes cut it with axes, as they do lead. As foon us it, rains, it becomes fort and

flicky, notwithstanding which, they have not yet been able to nake it into bricks. There is no real sand in the foll, butthe ground is every where rocky, except where artificial means have been used to make it otherwise. The rocky subtlances in general are or an iron grey colour, contain a great deal of iron ore, and vitrify in the fire. The whole illand is futrounded with mad repares, a kind of vegetation of stone, formed like a plant or shrub: these are so numerous, that the rocks seem formed of them only.

With respect to the natural productions of this island, the first we shall mention is a turk which growal he desinear the sea shore: it is very thick and elastic; its leaf is very small, and so sharp-pointed as to prick peoples cloathe. The cattle will nottouch this herb, but love to browse upon a kind of dogs grass, which grows in many parts, and puts out little hard branches from the joints. The best herb, however, is one that grows on the windward side of the island: it has pretty large blades, or rather leaves, and is green and tender all the year. Here is likewise a furub that yields a kind of fruit whose husk might be turned to singular advantage. A prickly aspargus; a missllow with simall leaves; a thistic with yellow slowers, which yield seeds that are polsonous; a bad scented gilllstower; swich yield seeds that are polsonous; a bad scented gillstower; which yield seeds that are polsonous; a bad scented gillstower; which yield set distance; less so, as you approach it, and perfectly nauscous when you come near it; and here is a kind of bramble that bears a nut, the kernel of which is bitter, but efficacious in many disorders. The plants called raquettes, which bear yellow slowers, are used in making hedges, on account of their sharp prickles.

Here is a very pretty shrub called bois de demoiselle, or lady-wood; others that resemble the box-tree, and that bear a great affinity to the cork tree. Balm shrubs and a bastard kind of potatoc are common; as is panier grass, which serves for physic and clea

ang manner, and fecure them from the violence of the hur-ricanes; of the bark of these they make strong cords, which are tougher and more serviceable than those made of bark.

The mapou-tree, is as penetrable to a knife as a turnip, but it is of a poisonous nature. The bastard cinnamon tree is large; its timber resembles that of the walnut tree, and its wood is much valued by cabinet makers. The

and its wood is much valued by cabinet makers. The iron wood and flinking wood trees are common, as are likewife the fandal wood tree, the vacoaer finall palm, the latanier, the mangrove, which is a very large kind of fero, and grows in the fand of the fea.

The real or black ebony tree, grows very high and thick, has a bark of a dark colour; and the leaves which refemble those of myrtle, are of a deep green. The chony trees, after being cut down, are buried under the ground for fome time, which it is said improves the jetty black. The wood, being very fine and beautiful, is used in various Mosaie in-laid works, and toys; the qualities are, being hard, heavy, of an admirable black, and bearing a high polith. The ebony of this illand is reckoned the finest in the world; but fince the Europeans have discovered fo many methods of givthe Europeans have discovered so many methods of giv-ing other hard woods a beautiful black colour, and an ele-

ing other hard woods a beautiful black colour, and an elegant polifh, this wood is on that account not quite for much in request as formerly.

Many vegetable productions, which have been brought into this island by order of government, transplanted by private perfons, or imported by the desire of some of the settled inhabitants, have greatly increased. These are distinguished under four classes, namely, a. The plants, which, being once sown, afterwards grow spontaneously by resowing themselves, and thus become naturalized.

2. Articles of cultivation.

3. The produce of the six of the kitchen garden.

Those of the first class, consist of a kind of indigo, pursain, water-cresses, dandelion, wormwood, mullen; the bolrush, which is green for about sive months in the year: white grass, which was introduced first of all for forage, but none of the eattle will eat it, and its increase is now so great, that it may justly be deemed one of the

now fo great, that it may justly be deemed one of the plagues of husbandry; the brette, a species of the morell, with a prickly leaf, but pleasant of take, and of a purgative nature; there are two species of the brette, one of which is ferved up at table in the manner of spinach, and the other is used as a medicine.

The cassa root is one of the plants which are the objects of cultivation. It was transplanted hither from Ame-

port third The lage, very too

rica, and grows in great plenty; it is of great fervice in fubfifting the negroes, who are allowed three pounds of it daily. Maiz or Turkifh, and mamoe; are common; as are wheat, rice, millet, fatague, a fine kind of grafs brought from Madag fear, and tobacco; the the latter is very indifferent. Vegetables, it has been observed, in general despared to the state and the base who with the works and the state of the stat

from Madagatea, and toneco i net make the different. Vegetables, it has been observed, in general degenerate here; and that they who wish to have them to-lerable goods are obliged to be supplied with fresh sed from the Good Hope, or Europe, and superimens have been water, but without success, to propagate saint-foin, trefoll, hemp, fixt, and hopa.

The vegetables of the third class, which are propagated and grow here, are, lecks and onlone, selery, lettuce, endive, fennel, parsey, cauliflowers, tabbage, bornet, garden pursuants fage, asparajeus, carrots, parsneys, turneps, saffafras, radishes, best-roots, European pottatoes very small, Indian potatoes very large, fastion, gingen, pitachio-nuts, chives; also cherville, forrel, garden cresses, spinach, strawberries, pomegranates, pine apples, peppen gourds, cucumbers, water melous, miclons, pumpkins; artichoaks, French beans, and peas.

cumbers, water melons, melons, pumpkins; assessing french beans, and peas.

With respect to the flower gardens, attempts have been made to cultivate a variety of flowers here, but they have never succeeded; the only productions from Europe being the tuberofe, lark's-foot, large daify of China, and a small species of pinks. The African exotics are the flowering shrub, called belle immortelle, or immortal beauty of the cape; a reed which bears a group of leaves, white in the infide, and violet coloured without; a kind of tulip, bearing but two leaves, which always edhere to the ground. These flowers are all without smell; and even those transplanted from Europe, when cultivated here, lose their

Thele flowers are all without smell; and even those transplanted from Europe, when cultivated here, lose their agreeable fragrancy. And it has been remarked in general, that no plants bear flowers here of a pleasant smell.

Among those which shourish here, are, aloes, rose-trees, jassmines, myrties, a stower called the shoe-maker slower; the poincillade, a kind of bramble; jalop slowers; the vine of Madagascar, which is only a rattan, with which cradles are made but it bears a yellow flower. The franshipanier, an inferior kind of jassmine, the Indian ilac, and the mongris, which has some resemblance both to the jassmine and the orange tree.

and the mongris, which has fome refemblance both to the jassimine and the orange tree.

Hereare found some oak, pine, fir, cherry, apricot, mediar, apple, pear, olive, fig. and mulberry-trees; but they are in general much degenerated with respect to fize, many of the fruit trees only blossom, and scarce bear any fruit, unless we except the peach tree, which produces some fruit; and the vines transplanted hither bear grapes, but a kind of white lousse is very destructive to both. The cotton tree, sugarcane, and coffee-tree, succeed tolerably well. The polehe is a tree that affords a pleasant shade, and the bambou is useful in various domestic matters. The banana is very common, and the blacks are exceedingly fond of its fruit. They are treated with it in great plenty every new-year's day; and they usually count their years of forrow and services. They are treated with it in great plenty every new-year's day; and they ufually count their years of forrow and fervitude by the number of banana feafts they have regaled at. The badamier yields a kind of almond; the avacat ferves as a fweetmeat; the jaca tree furnishes a large fruit, which is rather agreeable to the tafte. The gonyavo tree is a kind of medlar; and the jamroe tree refembles a rose tree, but bears a small fruit of a sweetish, but insipid taste.

O range and cirron trees abound here, though the fruits of each are but insisting the state of each are but insisting the state of the conserver how. of each are but indifferently tafted. The cocoa-trees, however, produce nuts which are very delicious. Date, palm, fago, &c. are found to e, but in no great perfection. The tamarind tree has a beautiful head: its leaves are fpread during the day, but closed at night, like most other leguminous plants: its pod contains a mucilage, which makes excellent lemonade. It may be re makedupon the whole, that the exercise of Africa are had activated formations. whole, that the exotics of Africa, are belt calculated for transplanting hither, as the climate of this island is rather too

planting hither, as the climate of this island is rather too cold for Asiatic vegetahles, and too hot for those of Europe. As to the animals of the island of Mauritius, the only quadrupedes natural to it are monkies and rate. The monkies are of a middling size, of a reddingrey cast, with long tails. They frequently go in droves, and pillage the houses. When they are on the scout, they depute one of their number to ascend the lights of the court has given by the court of the court has deputed to the court has a subject of a rock, and if now the

foot, they depute one of their number to afcend the highest tree, or the point of a rock; and if any danger is apprehended, he cries out to alarm the rest, when they all immediately decamp: this watchman has sometimes been unfortunate enough to be shot by the failors. This island has always been pestered with great numbers of rats, insomuch that the Dutch are said to have abandoned it on that account. They are much the same as those of Europe, from whence it is supposed they were originally brought. The havock these animals make here

is almost incredible, perticularly to the corn and fruits; and we are told, that a whole field of mais has been known to be destroyed by them in a fingle night.

The feathered race are not very numerous, or in great variety in this is and. But among them is one called corbigeaux, which is rectioned the best game they have; but they are very difficult to eatch. Parrots are tolerably plentiful, but none very handsome. There is also a species of the paroquest; it they are about the size of sparrows, and have green bodies, with grey hads. Another of their birds it called by the natives palleneus, and by the English the tropic bird. Of these there are two forts, one of which is all white, and the other, variegated, having the body white, the beak black, and the tail and claws red. They buildthelr nestain the woods, but are generally found near the sea, and are so familiar, that they are easily caught. The woods abound with blackbirds, which are a kind of game greatly admired by the natives. There are also two kinds of pigeons, one of which, though pleasant to the taste, is of so bad a quality, that they who eat of them are thrown into strong convulsions.

Great numbers of toslouroux are found near the seafed; these are a kind of amphibious crab that make burrows under ground, like modes a they can very saft; and will snap their claws by way of defence, when attacked.

The most extraordinary creatures here is that called bernard l'hermite; it is a kind of looker, whose hinder part is not provided with a shell; but it inflindively lodges isself in entipty shells which it finds on the shore. They run together in great numbers, each with its house after it,

in empty shells which it finds on the shore, They run to-gether in great numbers, each with its house after it,

which, as it advances in growth, it abandous for a larger one.
In feets are extremely numerous in this island, the most defructive among which are the grafthoppers, which fome-times light upon a field like a fall of frow, when they eat times light upon a field like a fall or loow, when they ear up the verdure in the course of a night. Ants are equally mischievous in houses, where they prey upon every kind of provision, which it is difficult to secure from them. Here are likewise waspa, spiders, various kinds of sies, centipedes, and lizards. Moths, or small buttersies, so insest the houses after dark, that they are obliged to put their candles into glass cylinders. These sies draws into the louses a very beautiful lizard: it is about five inches lous, and has bright and sparkling eyes; it climbs along the walls, and lives upon flies and other infests: they are not in the least mischievous; but, on the contrary, so tame, that is sugar is thrown on the ground, they will immediately come and take it. But the greatest enemy to these insects is the spider, some of which have bodies as big as a nut, with large paws covered with hair. Their webs are so strong, that even small birds are sometimes caught in them. They are particularly serviceable in destroying the centipedes and wasps.

An insect called formicaleo, proves very destructive to the ants here; and another, named canerelas, is equally so, of which there are three forts: the most common are about the size of a coekchaser, of a reddish brown; another of them is flat, and of a grey colour. They are very up the verdure in the course of a night. Ants are equ

ther of them is flat, and of a grey colour. They are very destructive to furniture and books; and the houses are

greatly annoyed with them in wet weather.

It is observed by a late celebrated writer, that the temperature of this climate is fo favourable to the propagation of infects, that in a short time the fruits would be eaten up by them, and the island itself become uninhabitable, were it not that most of the fruits of these meridional countries are cloathed with a thick rind, and afterwards with a fkin, a very hard shell, and an aromatic bark, like the orange or citron : infomuch that the flies can introduce their eggs into but very few of them. Many of these noxious animals are at perpetual war with each other. The formicaleos lay snares for the ants; the green sty pierces the cancelas; the lizard hunts the butterfly; the spiders spread nets for every infect that flies; and the hurricane, which rages once a year, annihilates not only a great part of the prey, but of the devourers also.

The animals of the quadruped kind, brought into this island from other countries, and which may be called doisland from other countries, and which may be called do-medic, are borfes, oven, theep, and hogs. The horfes are very small, and so dear, that a common one cannot be purchased for less than a hundred pistoles. Here is one fort of oven, of the Madagasar breed; but they are not so good as those from Europe, nor will the cows of that breed give half thequantity of milk. The pork is at least equal in quality to that of Europe; but it will not receive the falt, on account of the peculiar acidity of that article. The there are large and fat, but they are are to lose their wool.

freep are large and fat, but they are apt to lofe their wool.

Great numbers of wild goats, hogs, hares and flags are in the woods. The latter are particularly numerous;

and as their fields is exceeding good from the beginning of April to the end of August, they therefore afford a very ample supply of food for the natives.

Their poultry consists of various kinds; but the most common are ducks and fowls, the former of which were brought from Manila, and the latter from Europe. Thay have also a small species of fewl from Chius, whose fields is exceeding delicate. The wild fowl are pintatoes, Chincis pheasants, pigeons, and three forts of partridges these birds, the better to secure themselves from being deflected by the rats. always rooft on the tops of trees.

ness pheasants, pigeons, and three sorts of partridges these birds, the better to secure themselves from being deflicted birds, the better to secure themselves from being deflicted by the rats, always rooft on the top of trees.

They have a very beautiful small bird, called the titmouse, which has a number of white spots on the wings. There is also another from Bengal, called the cardinal, some of the plumage is of a party coloured grey; but the head, neck, and belly, at acertain time of the year, is of alively red. The martin is the most propagating bird in this island, and in size, colour, and aptitude to talk, greatly resembles the Eaglish starling. It will perch upon, and peck at beafts without fear; but its chief prey is the grashopper, which it pursues with an unwearied persurence. They always say in pairs, and constantly assemble at sun fet in very considerable slocks. The shooting of them is prohibited, though their sless it very indiffuent eating.

In this island are two forts of birds, brought from the cape, one of which is called the gardeners friend. It is of a brown colour, about the size of a large sparrow, and lives upon worms, snalls, and small serpents, which is not only eat when pressed by hunger, but collects an ample slove of, by sticking then on the prickles of the hedges. The other cape bird is much like the English sky, lark, and is the only seathered lunabitunt of this island that is heard to fing. They were first brough there as curiosities; but some of them ecaped to the woods; where they bred so fast, that there are now great numbers of them.

Here are two sorts of foreign sist, is one of which is the

iome of them escaped to the woods; where they hred so fait, that there are now great numbers of them.

Here are two sorts of foreign sist, one of which is the Chinese gold sish; these thrive equally well as in their own climate; but as they increase in bulk, they lose their beauty. The other is called Gourami, and was imported from Batavia. It is a first water sish, about the fise of a salmon, but the taske of it is far superior; and in India it is preferred to any other kind of sish.

It has been several times attempted to introduce frogs into the sishes of the sishes

It has been feveral times attempted to introduce frogs into this country, that they might eat the eggs which the musquetoes lay on the flanding water; but every attempt has proved unfuccessful, either from the difference of cli-

or fome other unknown caufe.

Mr. Buffon takes notice of an animal of a very fingular Mr. Buffon take notice of an animal of a very fingular nature, which he calls the great Madagafcar bat, but as it is common not only to that island, but to the islands of Bourbon and Mauritius, and there are great numbers of them in the latter, we shall here deferibe it: previous to which, we observe, that the bats seen in Great Britain are inoffensive, and, from their fize, incapable of highing mankind, being also not sufficiently numerous to incommode them; but the race of bats here is truly formidable:

a stand one is a dangerous enough. but when they unite in a fingle one is a dangerous enemy; but when they unite in flocks, they become really dreadful. Definarchais says, that if the inhabitants of the African coast were to eat animals of the bat kind, as they do jin the East Indies, they would never want a supply of provisions. Here are such numbers of them, that when they fly they obscure the serving sun; early in the morning they are seen slicking upon the tops of trees, and clinging together in great heaps. The Europeans often amuse themselves in shooting them; and the negroes are expert in killing them; but they would not eat it if they were ready to perith with hunger, as they

always regard the bat with horror.

It is about a foot long, from the tip of the nofe to the infertion of the tail; and its extent, from the tip of one wing to that of the other, is about four feet. It has large wing to that of the other, is about four feet. It has large canine teeth: that is to fay, four cutting teeth above, and four below. The nofe is black and fharp, the ears large and naked, and the talons crooked, ftrong, and compressed fideways; but it is without a tail. These animals differ in colour, some being of a beight red, others brown, and a third fort of a dark, dusky colour. It resembles the common bat in its internal formation, the shape of its wings, and manner of its slying. When these creatures repose, they slick themselves upon the tops of the tallest trees, and hang with their heads downwards; but at other times they frequently settle upon animals, and even upon man himsels. They devour indiscriminately struits, sieth, and They devour indiscriminately fruits, fiesh, and infects; and are, in particular, fo extremely fond of the joice of the palm tree, that they will fometimes intoxicate themselves with it, till they drop to the ground. At night they may be heard in the forests, at the distance of more

then two miles, with a most horrible din; but they usually retire at the approach of day. Nothing is fale from the depredations of these nealess creatures: they defined fowls and domestic animals, if they are not properly focused, and frequently falten upon the inhabitants therefelves, attacking them in the face, and infilling very ter-

depredations of these measures I they destroy fowls and domestic animals, if they are not properly focused, and serves, the the animals when felves, attacking them in the soe, and insilicing very terrible wounds.

The first mentioned author observes, that it is probable the animals took their idea of harpies from those facree and voracious creatures, as they both feem to cooked in many parts of the description, being equally cruel, deformed, ancleanly, and greedy. That notwithstanding their disgreeshe nature, the Indians eat these animals, and say the side is very good, especially at particular times of the year, when they have more fat than assay in an even some of the French here, and in the life of ilourbon, have brought themselves to use them, in order to give a relith to, their bouillous; but negroes, as we observed before, hold them in the utmost abhorrence, and will not touch them upon any account. Persons have been attacked by these creatures, and have formetimes passed from a found step interesting to the bat is so dearrous a bleeder, as to infimuse its sharp pointed tongue into a vein unperceived, and to suck the blood till it is faitated, at the same time faming with its wings, and agitating the air, which, in hot regions, lulls the person attacked by them into a still sounder. It is therefore daugeroous to be in any respect exposed to the incursions of these nonious animals, and especially to repose in the open air.

About the month of September, whales are often feen to the windward of this island; but they are finallee than in the northern sea; the negroes have a method of harpooning them. The vicille is a blackth fish, and their sich in so a measure resembles the cod fish, in task and exceeding delicious. The hog sish has a head like a pike, and upon its back are streemble here of a spis sound of the sishes, and upon its back are steven points, as large sa is thody, the pricks of which are very venemous; a membrane, streamblance to the bird of that name; they also like them, go together in number

of the different inhabitants, their cultoms, manners, treatment of their flaves, &c.

The island of Mayrinus, when first discovered, was uninhabited. The first French people who established themfelves here, were sew husbandmen from the isle of Bourbon. These people were simple in their manners, industrious in their callings, and hospitable in their behaviour. When the importance of this island was known, from its situation in the course from Europe to the East Indies, many persons came to settle here, particularly several who were sent by the French East India Company. These, by their tyrannical and avarieous behaviour, soon became exceeding offensive to the people in general; commerce employed their thoughts, but they had not the least

ides of humanity, they fupposed they came so far to get wanny, not to so good; and, infland of dearing the lands so the purpose, of agricultures, they cleared them are swelling-houses and warehouse, which they might fill at an exercision price so new fetters. Complaints were included made of their arbitrary proceedings, but the complaints were too inconfiderable to obtain radress, said the aggressors too great to be punished.

After this, many see-faring people stitled here, who hoped to gain great advantages from the commerce carrying on between Europe and India; but naither the manners or morals were in the least mended by these new-comers.

The French East India Company foon afterwards fent a military force histor, commanded by officers whose families were very good, while their pockets were but low. These, having more pride than money, did not chule to keep company with the merchants or clerks, because they were fordied; with the planters, because they were fordied; with the planters, because they were mean; nor with the failors, because they were bruttle; so they affociated with each other; and hence remained as poor in this illand, as they had been in Old France, from whence, they see out.

this island, as they had been in Old France, from whence, they fet out.

Some time afterwards, fome of the king's troops touched hers, and several of them became settlers; but these entertained a sovereign contempt for the troops of the company and the rest of the inhabitants; and this dilike was retained and upmented, by the disdain the other parties expessed towards them.

Some missionaries of the order of St. Lazarus, were the next settlers; when all the endeavours of these were to reign as uncontroused over the minds, as the company's principal servants did over use lives and properties of the inhabitants.

The following a succession of scheming recognition when

inhabitants.

Then following a fueceffion of scheming merchants, who introduced monopolies, and all the chicanery of trade; and at length, to complete this heterogeneous mixture, the late war (which commenced in 1756) occasioned the scum of Europe and Asia to emigrant to the sist of France; bankrupts, ruined libertines, thieves, profitutes, and wretches of every cast, driven by their crimes from the former, or by the bad success of the French arms from the latter, sought refuge here. On the arrival of this set of men, the complaints, both general and particular, of the inhabitants, were increased; every character was traduced with an Asiatic ingenuity, bitherto unknown to the calumnistors of Europe. No woman was now looked upon as chafte, nor any man as honest; all confidence and essem were at an end. Thus they thought to reduce all mankind to their own level, by vilifying all without distinction.

mankind to their own leves, by visiging an winour distinction.

At length, in 1765, the French East India company yielded up to the king this island, but little benefit seems to have been derived from this change; the inhabitants appear to be neither wealthy nor happy. An ingenious French officer, who resided there upwards of a twelve-month, gives no favourable idea of the state of society in this feeluded spot. "Discord, (says he) reigns all over the island, and has entirely exterpated that love of society, which might be expected to prevail smong Frenchmen banished to a defart, surrounded by the seas, and at the end of the world. Each man is discontented; each man wants to get a fortune, and to leave the place. To hear them talk, one would think the island would be once more uninhabited, every man declaring he will go away next year; and some of them have held this intention for thirty years pass, yet remain to make the same declaration the year ensuing." European goods are dearer at the isse of France than in India, and Indian goods dearer than in Europe.

Europe.

There are but few married people in the town, but those men who live upon their plantations marry: the women feldom go to town but to a ball, or to confess at Easter. They are most passionately fond of dancing. The women are rather pale, but well made, and in general handsome. They have naturally a good flow of wit and spirits, and if better educated, would be most agreeable companions, but many are so ignorant as to be unable to read. At their meetings they are reserved and filent. Each woman brings with her some secret pretensions, either from the fortune, the employ, or the birth of the husband: others reckon upon their youth or their beauty. An European looks with disdain upon a Creole, who as often looks upon the European as an adventurer. The women here are not celebrated for their chassity; but, says our author, they are, in my opinion, far more deserving than the men, by whom they are neglected for the black liaves. Such of the

women as are really virtuous, are highly to be commended, as it is by no means owing to their education that they are for. They have at once to combat with the heat of the climate, the indifference of their huffmads, and the produgality and ardour of young officers, failled in fedoction, and regarded of repulfs. In other respects they have very many good qualities; they are domestic, sober, very rarely drinking any thing but water, and neat in their apparel to an extreme. The dreft most continuous here, is

rarely drinking any thing but water, and neat in their appared to an extreme. The drefs molt continon here, is of mullin, trimmed will rofe-colouted taffety. They are extravagantly fond of their children, who run about the houle naked foon after they are born; are never put in (waddling cloaths, but are frequently hathed, est fruit as they think, proper, live without care and without fludy, and foon grow from and robuth. The puberty of both fexes makes a very early appearance. Girls marry at sleven years of age. The children are fuffered to exterlic their capriless upon the poor flaves to a degree of tyranny beyond all-bounds. So that their depravity is only equalled by their ignorance. Indeed, the principal people fend their children very young to France for education, from whettee they return with vices, perhaps more anniable, but full more dangerous, than they before pulleted.

On this fifthed are flarely four hundred planters. There are about an hundred women of condition, ten only of whom live in the town. The evening is their

There are about an hundred women of condition, ten only of whom live in the town. The evening is their time of vifiting, and for want of conversation they game, or foon grow tired of each other. At eight o'clock the evening gun fixes, and every body goes home on hearing that fignal!

Indians, or negroes, are the black inhabitants of this island. The Indians are Malabars, or Malayans, who come from Pondicherry in the East Indias, in order to article therefores as ferynans, for a certain term of viers.

article themselves as servants, for a certain term of years. They are almost all of handierast trades; are sober and thrifty, but lafeivious, and live in a fuburb called the Camp of the Blacks. They are clad in long mulin gowns, wear a turban on their heads, have gold rings in their ears, and filver bricelets on their writts. Some & ... mere ears, and filver bracelets on their writts. Some kw, who are not fond of farming work, engage themselves as zunning sostaten to the principal and richelt people. These being equipped with a handlome cane, and a poniard at the girdle, affect great state, and deliver the most trivial mediages with such air of profound respect, as to make a truly farcinal appearance.

The negrous are housely from Management and the professions are housely from Management.

The negroes are brought from Madagafcar, where a fave may be bought for a harrel of powder, for a few murkets, linen, or efpecially piatres. The greatest price paid is 50 erowns (7), 10a.) or rarely formuch. Thefe are neither fo black, nor fo badly featured, as the natives of Guinea; but relemble the Europeans in their features, and in their complexion incline to a copper colour. They are in general active, ingenious, graceful for favours, and faithful when well wed; and have a quicker fense of an injury done to any one they love, than of any personal instalt to thamselves. After having been purchased at Middagafear, they are landed, with only a rag aboot their loins, at the ifle of France, where, being fold, it frequently happens that hutbands, wives, brothers, fifters, friends, lovers, &c. are cruelly torn a funder, and, bidding each other a long farewell, are driven in the greatest anguish to the respective plantations for which they are bought." Some, upon these occasions, bave been known to become frantic and desperate, and afterwards hang or possion them-felves, which is to be imputed to the tersors they conceive from the apprehensions of the dreadful fate to which they imagine they are doomed; for it is a prevailing notion with fome tribes of the Madagascar negroes, that the white people intend eating their flesh, making red urine of their blood, and gunpowder of their bones; nor are these frange ideas to be wondered at, when we confider the in-numerable barbarkies of the whites, which have given occasion to suggest them. They frequently secrete themoccasion to foggest them. They frequently screte them-felves in the woods, where they are hunted by parties of foldiers, and by other negroes, with dogs. Some of the inhabitants form parties of pleasure for this purpose, and put up a negro as they would a wild beast; and if they eannot hunt him down, will shoot him, like any wild animal; then his head is cut off, and brought in triumph to town upon a siick, the unexampled trophy of the most atrocious cruelty.

The deferrers are called Maron-negroes, who, being sheltered by immense forests, sometimes collect into a troop of two or three hundred. When a woman in any of these parties, is delivered of a child, it is immediately killed, left their retreat should be discovered by its cries. And when any of these negroes are taken without being

hained, his fentence for the first offener is to the feverely flogged, and to lofe an ear'; for the fecond, to be fill more feverely whipped, and ham-strung; but the third offence is punished with death, which is exceuted by hanging, or breaking on the wheel.

Home of these flowes have been imprized, but that hath given no encouragement to others to become Christiane; for those who are baptized are no better used than those who are that he tellishes for those who are to a the collisions for the second collisions.

who are not; as the religious fentiments of the negroes are not to much attended to, as the interest of the planter

to whom they belong.

to whom they belong.

As to the commerce of this ifland, the inhabitants of ir receive moth of their utenfils from China, their apparel from India, their flaves from Madagafear, most of the articles of provender which they confume from the cape of Good Hope, their money from Spain; their laws and governments from France; their follies from various mations both white and black; and their vices, at the head of which fond inhuments and analyse form the definition.

tions both white and black; and their vices, at the nead of which fland inhumenity and avarice, from the devil, the arch enemy of mankind.

Frade here is greatly clogged by their paper currency, which is payable in France, at fix months after fight, but at the best rate of exchange it bears thirty-three per cent, discount, frequently afty per cent. Ready money in this island is reckoned to produce thirty-three per cent, in eighteen the state of exchange in the state of exchange in the state of exchange is the state of exchange in the state

teen months.

A learned writer has observed concerning this island, that notwithstanding the deprayity of its inhabitants and the inconvenience of the climate, it is of the utmost polithe inconvenience of the climate, it is of the otmost poli-tical confequence, and is at prefent one of the finest, as it always was one of the most important and improveable spots upon the globe. Adminst Boscawen in 748, with six line of battle ships, made an hostile visit to it; but found it to be so well desended both by nature and art, that he did not venture to attack it; and no attempt has been fince made to wrest from the French this valuable fettlement, which renders the British possessions in Asia infecure.

SECT. II.

Containing a description of the ifte of Bourbon and the Comera

THE island of Bombon, which lies in twenty-one degrees fouth latitude, and fifty four degrees each longitude, was first discovered in 1545, by a Portuguese, named Mascarenhas, who called it by his own name; however, he made no fettlement. It soon after became a place of refuge for pitates, who cohabited with negro-women from Madagaicar. They fixed here about the year 1637. The French India company had a factory and a governor. The pirates gradually decreased in mumber; whilst the French were augmented by the frequent arrival of their countrymen from Madagafear. The last of these pirates, whose name was Adam, died at the age of an hundred and four years.

At a distance the island appears like a part of a sphere, with very high mountains, the land of which is cultivated to the height of eight hundred toifes. Here are three inaccessible pikes, which are reckoned one thousand fix hundred perpendicular toiles to the fummit. The whole island is fixty miles in length, and forty-five in breadth. It is only forty leagues to the lecward of the ifle of France, and a veffel can go from thence to Bourbon in a day, but a month is frequently spent in returning. In this island

a volcano.

The principal place in Bourbon, is St. Dennis, the re-fidence of the governor and council. At the thore liere is very fleep, and the fea rolls with a great furf, fo that no veffel can come to the land, a draw-bridge has been contrived for unloading of thips, which projects more than fourfeore feet over the fea, and is fullained by iron chains. At the end of this bridge is fixed a rope ladder, which those who would land must chimb. This is the only place in the whole island where any one can land without fifty jumping into the fea.

St Paul, another town on the island, is fituated on the fide of a great lake of fresh water, of which a port probably might be made. When the wind blows into the bay of St. Paul, there is no getting out of it; and if a vessil should run ashore, the must infallibly be lost, the sea breaking upon a very high fand. The want of a harbour le inconvenience which admits of no remedy, and greatly leffens the value and importance of this fruitful and heal-

Sixty thousand blacks are rechoned to live in Bourbos, and five thousand white inhabitants. It is three as possibus as the island of France, on which it depends for its export traffic. It is also much better extrivated, having produced twenty thousand quintals of corn, and as much coffie, helicer its and other previsions for home confunction. Hards of ozen are not fearce here. The French king pays fifteen livres yer cent. for corn (thirteen fillings flerings hard the inhabitants fell a quintal of coffie for forty-five livres (one pound ninetten shiftings shriling) in platters, and feventy fivres in paper.

This island abounds in all kinds of refreshments, and the air is particularly excellent. The French East India flips touch here to take in water and provisions; for the modes are good for shipping, but there is no harbour in the whole island. Here is plenty of good wood and water, and the size of the country is beautifully divertised with hills and dales, passures and woods, and watered by excellent figrings and rivulets. In one of the inountains there is a small volcane, which discharges fire, and fills the neighbourhood with a bituminous matter; and the sames are perceived, in the night time, at twenty-five leagues diffusnes.

The foil of Bourbon is more fandy than that of the foundation of the founda

pourhood with a biruminous matter; and the flames are perceived, in the night time, at twenty-five leagues difference.

The foil of Bourbon is more fandy than that of the Mauritlus; and is mixed, at form diffance from land, with the fame kind of fmall pebbles with which the fea is covered; from which it appears, that either the island has rifen out of the ocean, or the fea has withdrawn itself. Borne of the trees here are fit for building vessels. The frush that bears coffee, the tamarist, the coaco tree, the tree from whence benzoin difflis, the cotton, aloe, and chony tree are produced hers. The black belony is lefs esteemed than the yellow; and the wild coffee, which is very plantiful, is exceeding good. Many of the trees and plants produce edoriferous guma; and here are piently of oranges, sensors, tobacco, palma, white pepper, &c. This issued likewife abounds with black cattle, long, goars and boars, the selfs of which is admirable, on accoust of their feeding an tortoise; many kinds of fowls, pigeons, turtle-doves, parrots, &c. The surrounding sea and intestecting rivers, include, &c. supply the inhabitants with aboundance of fill, and on the shore are sound great quantities of sait-grain, corals, and beautiful shells. Here are no crocodiles, hakes, muskesoes, or any of those vermin, or other venomous creatures, which in most other parts of the sourid zone are so exceedingly troublesome.

The best animal found here, whether for taste or wholeomeness, is the land tortoise; and the most agreeable fruit, is the anams. The tortoise is of the same figure with those of Europe, but of a very different size. They say the same a prodigious number of years, that several ages are required to bring it to its full growth, and that is can live favoral months without food. They have kept some just the island, which have increased only a few inches in bulk at the end of twenty years.

The anams is a fruit of an oblong form, and of the bigness of a melon; it is covered with short leaves, disposed very much in the same man

than any other.

There is in this island a very fingular kind of bat, which one might call the flying fox, fince it very much resembles this animal in fize, hair, head, ears, and even teeth. The female hath two teats, and, under each wing, a bag to carry har young in. The length of the wings is about four feet from one extremity to the other. The field of them is fo delicious to the taile, that the people go a hunting for them with the same eagerness as we those for partridges in Eu-

oppe.

Of late years, vines have been fuccefsfully planted here, and now confiderable quantities of different wines are annually produced; but the greateft inconvenience here arifo from the terrible hurricanes and fforms, which are not only exceedingly violent, but very frequent; hence flipwrecks are common, and the most horrid devastations be-

early exceedingly violent, but very frequent; hence thiswrecks are common, and the most horrid devastations become familiar to the eye.

A French writer observes, that though this island is in
many respects agreeable, it does not come near to the
seauty of the coasts of Java and Sumatra; plains, which
are covered with orange, cocoa, and other fruit trers, with
a mamber of rivulets the water them, hills adorned with
delightful growes, forest for evergeen, and the most charming and splandid towns and villages.

With respect to the original inhabitants of this island,
we are told by a French officer, who visited both this and

.. 10 0.57 1c formilge ..

him a prefent of a filver hilted hanger, a couple of very handsome knives, a ream of paper, and a looking glafs, which he received with pleasure; and, in return, fent me a young kid and some fruit. I at the same time defired the Arabian captalo, who was then on shore, to buy rie some provisions, promising to lend such commodities as were proper to be given in exchange. Upon this, the captain sent me word, that the inhabitants of the island were of such a next place of the provisions of the such a series of the such as the captain such as the such as th fuch a particular humour, that they would not conclude a bargain of the value of half a rial in a day's time; and would not buy a yard of cloth, without calling together all their neighbours and relations to fix the price they should give for it. I was also informed, that the inhabitants were to overstocked with rials, that they set no value on them, having obtained a great quantity from a Portuguese carrack which had been cast away upon that island about three

which may be years before.

"Having, on the next day, observed two ships belonging to that country, I had the captains brought on board, when they informed me, that they came from the island of Mayotta, that they were laden with rice and dried fish, and were bound for Monbaze. The next day they support the with as much rice, peas, and hung beef, as would plied me with as much rice, peas, and hung beef, as would ferve us for fome months; of which I was very glad, as I could buy nothing of the inhabitants without infinite loss of time. Beides, I began to fusped their honefly; lots of time. Dender, a began to mind the for the day before, when we were founding, in order to come to an anchor, fome of them made a fignal for us to come over a place where we observed a long ridge of rocks; whence I presumed, the advantage they had made by the hipwreck of the Portuguese carrack, had tempted them

anjawieck of the Fortugues carrack, na tempted them to with us the same fate; and as I also found the water brackish, we lest the place, and pursued our voyage."

Angazeja, is inhabited by Moors, who trade with different parts of the continent, and most of the islands to the callward, in cattle, fruit, and the other commodities of the island, exchanging them for callicoes and other cot-ton cloths. The bread used in this island is of the kernel of the cocoa nut, boiled or broiled, and fpread over with honey: their drink is palm wine, a juice extracted from the fugar cane, and fuffered to ferment, or the milk of the

cocos nut.

They never let their women be feen by strangers, with-out permission from one of the chiefs, or an order to fee them, which the stranger brings with him. Many of them write and read Arabic with great facility; and some of them understand the Portuguele, which they learn from their intercourse with Mozambique, whither they trade in vessels of forty tons burden. The houses are built of stone, and lime made of calcined oyster thells, with which the walls and roofs are plaftered in a very elegant manner, and the roofs and windows are covered with palm leaves, which ferve equally as a defence against rain, and the foorching heat of the fun. The constitution of this issued is purely aristocratical, being under the government of the lords.

Mohilla, is an island very seldom visited, not only from the dislike the inhabitants have to strangers, but also from there not being any convenient place for the reception of there not being any convenient piace for the reception of hips. It is under the direction of a fultan, whose chil-dren, whether male or female, finare in his authority, and govern in quality of viceroys in different parts of the illand. All, however bear the title of fultans, though they are in some respects, subordinate to the authority of the father : each has his guards, his crown, sceptre, and all the enfigns and pageantry of majefty, together with a bril-liant court and numerous houfhold. The fultan never goes abroad without being attended by twenty of the principal persons in the island; upon which occasion, his dress is a long robe of striped callico, hanging from his shoulders to his heels, with a turban on his head. The people in general wear look callico gowns, and are continually chewing areks, or betel, in the manner of the East Indians, to whom they have a near assume in their

Johanna, as we hinted above, is the most requented, and best known to Europeans, of all the Comora islands, on account of the fafety of its road, and the civil disposion account of the fafety of its road, and the civil difpoli-tion of its inhabitants; which, together with the fineness of the country, have induced the thips from Europe to touch here for refreshments in their passage to Bombay-and the Malabar coasts of India. This island lies in twelve degrees twenty minutes fouth latitude, is thirty miles long, sitteen broad, and about ninety in circumference. Though such parts of it are exceeding mountaneous, yet it is general a very beautiful and fertile spot. The soil is na-turally very good; and, from its being well watered by ri-ters, produces abundance of the shief necessaries of life. When thips approach this island, they anchor in the road on the well fide of it, where the hills, covered with ever-greens, ending in a delightful valley, form the most pleafing landscape that the imagination can paint. The failors usually pitch a tent on fitore for the reception of the fick, when, such is the excellence of the climate, that those ever so much disabled with that dreadful disorder the those ever so such disabled with that dreadful disorder the feuryr, generally recover their health with surprising speedy which is probably as much owing to the falubrious influence of the earth, as to the variety of excellent refreshments with which the country abounds. Nevertheless the common failors, who arrive hither in health, are sometimes in danger, by their intemperance in eating the delicious fruits the island affords, of laying the foundation of differencess which break out when they go again to sea. It has also been faid, that lying assore is prejudicial to them, on account of the most vapours disfused from the neighbouring hills; but it is probable that their not being sufficiently ferenced from the exercise of the night air, and the damps which

but it is probable that their not being fufficiently ferened from the keenness of the night air, and the damps which arise from the earth, expose them to the greatest danger. The ingenious Mr. Grose, and another English gentleman, by their account of a walk taken by them on this issued in the day after their arrival, have given us an opportunity of conveying to our readers a description of its beauties and natural productions; which we shall set down in their own words: "As we set out pretty early in the morning, says the writer, we made shift to penetrate about sive miles into the country before the fun began to be any ways troublesome; and this was no small stretch, considering the mountainous way we had to go. We had sowling pieces with us, and the view of excellent sport in fowling pieces with us, and the view of excellent sport in shooting, could we have reached the places where we perceived the game to lay; but we could not conquer the ascent of the hills, though we indeavoured to seramble up them on our hands and knees: we were obliged, therefore to reft satisfied with what small birds presented themselves in the vallies and tills that were passable. We made our breakfast on pine apples, and the milk of cocoa nuts, which served to quench our thirst. About noon, coming to a beautiful piece of water, we seated ourselves in the shade by the banks of it, to make a feedand meal, as well as to enjoy the tinkling of several little springs and natural cascades that sell from the rocks, and, according to their distance, seemed to found a gradation of notes, so as to form fowling pieces with us, and the view of excellent fport in distance, seemed to found a gradation of notes, so as to form kind of agreeable water music.

"The orange and lime-trees, which flood in great numbers about that foot of ground, bending under the weight of their fruit, diffused a most fragrant odour. There were also pine-apples which grew wild, of eleven and thir-teen inches in circumference, of a much richer flavour than those I afterwards met with in India. Our guides too made us diffinguish a number of goyava, and especially plumb trees, the fize of whose fruit is about that of a damascene, and leaves a pleasant relish on the palate for some minutes after it is eaten. All these growing promiseuously, and without the least arrangement or order, combined with the falls of water, and the stupendous height of the surrounding hills, covered with trees and verdure, and in their various breaks and projections exhibiting the boldest strokes of nature, altogether composed what might without ex-aggeration, be called a terrestrial paradic, compared to which the finest gardens in Europe, with their statues, ar-tificial cascades, compartments, and all the refinements of human invention would appear poor indeed I here it was

impossible for art to add any thing, but what would rather spoil than adorn the scenery.

"It was not then without regret that we quitted for the arming a spot, after having sealed our eyes with the beauties of it; to which it may be mentioned, as no inconfiderable addition, that there was no fear of wild beafts or venumous creatures mixed with our pleasure, the itland being so happy as to produce none. We returned then to being so happy as to produce none. We returned then to our tent, well paid for the slight fatigue we had undergone in this little excursion."

They have besides the fruit already mentioned, and many others common in the Indies, particularly a remarkable fort of fweet oranges of a finall fize, not exceeding that of a common apricot, but filled with a juice that has a much more delicious flavour than the larger fort generally imported here from Portugal, under the name of China oranges ; and their being gathered ripe and fresh from the

tree, renders their tatte more agreeable.
A great number of mankies of different kinds and fixes are in the woods; and also a beast about the bigness of common monkey, with a head nearly refembling that of a fox; it has a lively piercing eye, its coat is woolly, and generally of a monfe colour; and its tail, which is about three feet long, is variegated with circles of black, within an inch of each other, quite to the end; the natives call it a mocawk, and when taken young it foon grows exceeding tame: the country also abounds with fquirrels, which are generally large and lby; but neither of an agreeable colour or well shaped.

The principal cattle in this island are oxen, which are very numerous, and of a middling size; like those in the East Indies, they are remarkable for differing from ours in having a large siethy excresence between their neck and back, which, when kept in pickle for some time, is generally preferred either to tongue or udder, it tasting like firm marrow; and their sless it is the termenty some archives. Fowls are here extremely good and far; but our author befores what he led was overseming of softing their same.

Fowls are here extremely good and fat; but our author observes, that he had no opportunity of tasting their game, of which they are faid to have great variety; for as the natives are very indifferent sportsmen, either with net or gun, very few of them are caught.

The sea abounds with sish of different forts, which they

The sea shounds with sith of different forts, which they are very expert at catching. Among the rest, they have a particular species called the partor-sith, which is beautised with the liveliest colours that can be imagined; it is about three feet and a half in length, and thick in proportion; it takes its name from the form of its mouth, which is hooked like the bill-of a parrot; the sins are blue, as are also the eyes, which are very firgishty, and have a yellow its; the scales are very large, and there are two rows of strong teeth in the mouth, with which it breaks open muscless and oysters. The sich of this sish is very sirn, and is esteemed delicious eating. They have likewise some flar fish that nearly resemble the turbot; and also thornbacks, mullets, and several other forts.

The inhabitants of this island are in general tall of stature, strong, and well proportioned; they have piercing eyes, long black hair, sips formewhat thick, and their complexions in general are of a colour between olive and black; but their women are rather more clumsily made than the other sex.

The drefs of the common people is only a skull-cap of any fort of stuff, and a coarse wrapper round their loins; but those of sup rior rank have a kind of wide-sleeved shirt hanging over a pair of long drawers, and a waistcoat, which is either thick or thin, according to the season; sewer those of high rank: these are also usually distinguished by the nails of their singers and toes, which they fuffer to grow to an immoderate length, and tinge them with allhenna, a yellowish red, furnished by a shrub that grows in the marshy places of the island. They usually earry large knives, or poinards, which are stuckin a fash they wear round their waists; some of them have silver or agare handles, but they have commonly carved wooders once.

The women wear a fhort jacket and petticoat, with a fort of loofe gown, and vail to cover their faces. They usually adorn their arms and wrifts with a number of braceleta made of filver, pewter, copper, iron. and glass, according to their rank and circumstances. Their singers and toes, and the small of their legs, are likewise decked with chains and rings. Their ears are stuck fo full of mock jewels, and ornaments of metal, that the lobes are in particular greatly dilated and weighed down, which, from their infancy, they are taught to consider as a singular embellishment.

Children of both fexes are fuffered to go flark named from the time of their birth till they are feven or eight years old; which proceeds lefs from any confideration of the heat of the climate, than from plyfical reasons; for they imagine that infants are more apt to be hurt by heat than by cold, and that the free access of the air to every part of the body is nutritious and more favourable to their growth, than their being heated by swathing and cloaths, which deprive them of a hardines's conducive to health; and in case of any disposition to deformity, obstruct the free course of nature, which strives to free itself from any impersections. By this means they are also preserved from the galling and chasing of cloaths, which frequently occasion fuch crying and strainings as terminate in ruptures, if not carefully attended to.

not carefully attended to.

The foil of this island is fo naturally fertile, as to produce every thing they covet for food; fo their conflictional indolence keeps them fatisfied, without any attempts to rove it by tillage or cultivation. They chiefly fubfilt milk and vegetables, both which they poficfs in great tarnty and perfection. Instead of oil and vinegar to their fallads, which are of the lettuce kind, they use a liquid which has fome refemblance to our treacle, and is a pre-

paration of the juice yielded from the cocoa-nut tree, by

These people speak a corrupt Arabic, mixed with the Zanquebar tongue of the opposite part of the continent, from whence the Comora islands were probably first peopled: but those of the fairest complexion, who are generally of the best rank, or at least the most esteemed amongst them, derive their colour partly from the Arab mixture, and partly from their communication with Europeans, which was formerly much more common than it has been of late years.

In their manners, they still retain much of the simplicity of uncultivated nature. The mildness of the climate renders them indolent, and prone to venery. They frequently make use of the liberty granted them by their religion, which is that of Mahometanism, of divorcing their wives upon slight pretences, for the fake of novelty; they have usually two or three of them, and may have as many concubines as they can maintain. Though they are forward to beg whatever they like, they are far from being thievish. They treat the English in a very friendly manner, not merely from a principle of interest and convenience, though this has doubtless some influence, but also from a sense of gratitude, for the effectual affishance they formerly received from them in their wars with the Mohillans, and from their being assured, by frequent intercourse with them, that they have no intention to invade their country or liberty, of which they retain a strong jealousy against the Portuguese and other European nations; but chiefly place their safety in the inaccessibility of their mountains, which nature has formed as an impenetrable barrier and defence of the inland country against

The lower fort of people have huts, formewhat refemhing our barns, the fides being formed of reeds tied together, and plastered over with a mixture of clay and cowdung; and the roofs are thatched with cocoa-leaves. Thag man who has a house erected with stone and mud, is ac-

man who has a house erected with stone and mud, is accounted very great.

With respect to the town, or more properly the village of Johanna, it is composed of about two hundred houses and huts together. Those hones, which are of stone, belong to the chief, who is honoured with the title of king of Johanna, and to the principal men of the country. Their hut buildings are very low, and only of one story high. The house in which the king resides, is built, like the rest, of stone and mod, and does not appear much better than a common alms-house, it being wretchedly surnished, and aukwardly hung with pieces of coarse chintz, with here and there a small tooking-glass. The people here suffer strangers to come samiliarly into their first apartment, but set apart all the others for the use of their samilies.

Notwithstanding the above-mentioned inferiority in point of state and grandeur, in comparison of whatis seen in more extensive and civilized kingdoms, yet the title of king is justly given to the chief of this island, he having all the essential of royalty, an unlimited power over his subjects, both in temporals and spirituals, together with seventy-three villages, and near 30,000 inhabitants under his dominion. He resides, for the most part, about nine miles up in the country, seldom coming down to what they call the lower Town, by the sea side, except when the European thips are lying there, at which times a very numerous retinue accommanies him.

European inips are sying units, as which arrive on the coalt, when he express a great define of arrive on the coalt, when he express a great define of learning the name of every thing that is new to him; and as he has obtained a tolerable smattering of the English tongue, he is very inquisitive in relation to our wars in Europe, and is particularly pleased with the civility of the English captains, who regale him in the best manner they can, after the European fashion, and salute him, both on his arrival and departure, with a discharge of five guns. This is a ceremony he is exceedingly fund of, as it is a mark of respect that gives him an air of importance, and tends to increase, or at least preserve, the esteem of his subjects. His attendants, however, are far from standing so much upon ceremony as their sovereign, and have a forward way of begging any thing they sancy, and if they are refused, seem erestly dissurated.

tends to increase, or at least preserve, the esteem of his subjects. His attendants, however, are far from standing for much upon ceremony as their sovereign, and have a forward way of begging any thing they fancy, and if they are refused, seem greatly distaistined.

On the arrival of any ship, the captain it obliged to obtain a license from the prince, for dealing with the natives, especially for the more considerable articles of refreshment, such as oxen and goats; and also for wooding, watering, and landing the men. But this permission is purchased.

purchased at a reasonable expence, consisting of a few prefents, as a little gun-powder, a few mufkets, fome yards of fearlet cloth, or other trifling articles of the manufac-

When a ship easts suchor in the road, it is presently furrounded by a number of cances, the people hurrying aboard with refreshments of the produce of the islands; and it is diverting enough to observe the confusion and and it is diverting chough to whom exert their utmost furife among the rowers, all of whom exert their utmost endeavour to get first to their market the ship. When the fea runs high, they are fometimes overset, but this is atfea runs high, they are fometimes overfet, but this is ac-tended with no danger, on account of their being excellent fwinners, and therefore they only lofe their little cargoes

greens and fruit. Most of their canoes are balanced on each fide without Most of their canoes are balanced on each fide without leaguers, formed of two poles each, with one across to pievent their overfetting, whilch has fome resemblance to the flying proas we have before described, and which are used in the East Indies. They use paddles instead of ours; and both ends of these vestels are formed for cutting the water, without any distinction of head and stern, and consequently they can fail backwards satil forwards without theking about. Their large boats, called panguays, are raised forme feet above the fides with reeds, and basables of trees. Well bound together with small cord, and afterof trees, well bound together with finall cord, and aftergards made water-proof with a kind of bitumen or refi-

one) carries a fail or two, made either of the leaves of a cocoa tree, or of flicer-grais matted together; and in thefe boats they will venture out at fea for the space of

three or four weeks, and his crimes a longer time.

It was common for the lives, fome years ago, when they came off to the fibre with occos nuts, plantaiss, fowls, &c. to deal entirely by way of barter, for handkerchief, rags, glafs bottles, bits of iron, and almost every article, without regard to money; but they now begin to know its value, and will part with only the most inconsiderable articles in the former manner; for if we want to purchase cattle, fowls, or cowries, they defire to be paid either in specie, fire arms, or gun-powder. They have likewise father upon a method of foliciting those who come thirdier, paraeolarly all paffengers, to contribute a dollar or two towards improving their navigation, which they carry on with the African consistent; and, by way of perluarive examples, produce feveral life of perfons who have subferibed for that purpose; so that they fornetimes colled thirty or forty dollars a ship from those who touch have some colled thirty or forty dollars a ship from those who touch fiere; and they generally make it a point for the captains to fign, and leave with them, a certificate of good usage, when they quit the place.

Before we conclude this follow, we shall, for the enter-

tainment of our readers, give an account of the manner in which the island of Johanna became subject to the prefent race of kings, which we have been favoured with by Mr. Grofe, who was a confiderable time in this island, and to whom we are indebted for many curious particulars relat-

The grandfather of the present king, says our author, was an Arab, or Moorish trader to Mosambique, where, ih a quarrel with a Portuguese, with whom he was dealing for flaves, he killed him, and being obliged inflantly to fly, put to fea in the first boat he could feize on the when the first land he made was Johanna, where, meeting with an hofpitable reception, he remained fome years in obscurity, till an Arabian vessel, being driven in there by stress of weather, he made himself known to in there by itrets of weather, he made innatel known to his constraymen, and procured them all the relief the place afforded. In the mean while he had perfectly learned the language, was become acquainted with the meanners of the inhabitants, and was to pleafed with the fertility and pleafautness of the country, that he not only laid affed all thoughts of leaving it, but formed a scheme. to raife him elf to the fovereignty of it, in which he was greatly countenanced and addited by the Arabs, lais, outitrymen, who, from the advantages they hoped to

drive from the event, came readily into his views.

In the profecution of his plan, he did not proceed so any violent methods, but made himself needfary to the natives, by infructing them in the use of arm, before unknown to them, particularly the lance, which those of any diffinction amongst them now handle with great dexterity. This, with his teaching them other methods of any annual tentry. This, with his teaching them other metaous or war, which these supple savages were before ignorant of, proved of singular advantage to them, by enabling them to repulse the inhabitants of the neighbouring shands, especially those of Mohilla, with whom they were confantly at variance, sometimes invading, and at others besing invaced by them. This acquired him such respects and suthorty, that, soon availing himself of it, he caused himself to be elected their chief, or king, and to be invested with despotic power. In obtaining this point, he proceeded by degrees, and made use of all his art; but he had no sooner gamed the summit of his ambition, then he gave them season to repeat of their credulity and confidence; for having not only strengthened himself by calling in some of his countrymen, with their simplices, but chusing soon having not only strengthened himself by calling in some of his countrymen, with their simplices, but chusing soon having not only strengthened himself by calling arbitrary government. Such as endeavoured to oppose him in his pretensions and snowstons, he forced from their samplies, and sold for slaves to the Araba; who, on this alteration, resorted more than ever to the island, for the sake of trade, which they still continue. In short, he succeeded so entirely, as to surmount all opposition, and to be pueath the peaceable sovereignty to his son, who was about torty-three years of age at the death of his father, when he obtained the peaceable possession to the kingdori, which he also enjoyed during his life, and leaving two sons at his death, the eldest of whom was king of the island in the year 1756." # 13 E 18 TA

SECT. III.

Of the island of Madagastar, its name, situation, and ente the face of the country, also its provinces principal rivers, and the natural history of the islands together wish a description of the persons, manners, customs, the persons, manners, customs, deeps, marriages, samarals, C. of the inhabitants.

HIS island, which is the most extensive of any in Africa, and one of the largest in the universe, is called by the natives Madacase: but the Portuguese, who, first discovered it, gave it the name of St. Laurence; the French call it!'lse Dauphin, or the Dauphin's island; and the Nubian geographers, Perfians, and Arabs, call it Se-randib. It is lituated between the twelfth and twentyfixth degrees of fourh latitude, and between the forty-fourt and fifty-first degrees of east longitude from London, about forty leagues to the east of the continent of Arica, it being about a thousand miles in length from north to fouth, an generally between two and three bundred miles broad. Its fouthernmost end, which leave towards the cape of Good Hope; is the broadest; for towards the north it grows much

narrower, sod terminates in a point.

At additance from the fea are many high and freep mountains, yet it abounds in spacious plains that have excellent passure, and has several large forests always green, in which lemons, pomegranates, and a variety of other fruits.

grow wild.

Madagalcar is interfected and its coasts divided by rivers which have their source in the inland parts, and discharge themselves into the sea. The bays and gulfs are innumerable, and in general abound with good roads and harbours, fo that the island might be rendered extremely beneficial. The French always claim the honour of I neficial. The French always claim the honour of having first discovered the maritime countries between the bay of Anto; gil and the bay of St. Augustine, although the For-tuguele, in all their voyages to the East Indies, base constantly, fince the year 1506, anchored in this island, and approved their discoveries; and the Dutch have followed that the I rench have penetrated farther into the country than either of the two former.

po

an

of Bo

Modern geographers divide this island into twenty-eight provinces, or countries, which form form mon the trenty-eight provinces, or countries, which form form many diffinct people and governments; namely, 1. Anofil, or Carcaufi; 2. Manatengha, or Manampam; 3. The valley of Amboule; 4. Vohitthaug; 5. Itomampo; 6. Icondre; 7. Vatemanahon; 8. Anachumoufi; 9. Eringdrane; 10. Vohitz-Anoghousha. Vaternanann; 6. Anachimours; 9. Eringdrane; 10. Vohits-Anglombe; 11. Manacarongha; 12. Maratan; 13. Antavaree; 14. Ghallemboulow; 15. Tanletari; 16. Sahaveh; 17. Voulovilou; 18. Andovouche; 19. Manghabei; 20. Adeimou; 21. Mandrarei; 22. Angatee; 23. Caramboule; 24. Mahafalla; 22. Houlouve; 26. Sivah; 27. Ivorodheoe; 28. Machicore.

There are a great number of rivers in this idend, the principal of which are Franchere, Aconere, Innahal, Manambatou; Manhafio, Harangazavac, Fantac, Samana in the province of Anoth.

Manampani, in the province of Manatangha.

Manatengha, Aviboul, Andraghinta, Sandravivanges, Manambondreu, Massanac, Mananghare, in the province of Vohitsbang. Itomampo, longainon, Maropie, Mangharae: these run

through the provinces of Itomampo, Icondre, Vatemana-on, Caramboule, and Anachimouffi. Mananghare, waters the provinces of Manacarongha and

Avibabe and Sacavil, water the provinces of Antavaree

and Attachimouffi, Mananghorou, Mananfatra, Morimbo, Sumiame, Mananghare, run along the coast from Tametavi to the bay of Antogil.

Mandrerei, waters the provinces of Ampatre, Manghabei, and Caramboulc.

longhelahe, waters the provinces of Mahafalle, Houlouve, Sivah, and Ivorougheoc

Onghalahe, Ranoumene, Ranoumaninthi, Sahaurriha, Soumaudo, Manatangh, and Manfiatre, run through and water the province of Machicore.

Anoffi, or Carcauffi ; or, as fome writers have called at, Androbeigathe, extends from the province of Mana-tangha to the river Manderei. Crocodiles fwarm in all parts of this province, and indeed they are to be found in all the rivers of the island. A lake is found at the head of the principal river, called Franchere. The name of this lake is Ambone; it is half a league over, and has fufficient depth for any fhip, if the mouth was conflantly open, which might very cafily be effected. The cape which runs out from the river Franchere is by the French called cape St. Romain, but by the natives Ranevate. When the cape is passed, the coast forms a fine bay in the shape of a cross, as the land projects into the middle of it, and forms a peninsula called Tholangare. Fort Dauphin lies to the north of this peninfula, and port Dauphin over against it; and hence the French call this Dau-phin's bay. The entrance is rocky and dangerous; but phin's bay. within it there is a secure harbour for either shipping or boats. A small island, called by the French St. Clare, lies near, and forms another convenient harbour. nes near, and forms another convenient harbour. I his province includes feveral other less confiderable peninfulas and fmaller islands on the coast. The country, upon the whole, is beautiful, abounds in fruit-trees, is fertile in pastures for cattle, and, with proper culture, might be made to produce not only the necessaries, but even the luxuries of life. It is surrounded by mountains, finely

diversified with hillocks and plains. Besides villages and hamlets, this province contains eight towns, namely, Franchere, Imanhal, Cocombes, Andravaule, Ambonetsna, Mor mamou, Imours, Marofontonts, and Fanangha.

At some leagues distance from fort Dauphin the Portugoese had formerly a fort, on the summit of a high rock, and several inclosures that surnished them with all forts of provisions; but the neighbouring natives at length maffacred them all.

The mountains in this province are covered with trees and thrubs, and the French have often dug here, in expectation of finding gold, but have always been difappointed. They have indeed fometimes found flones in
the rivers, and also yellow clay, intermixed with black
and white spangles, the latter thining like filver; these
they carefully pounded and washed, but the separated mather proved much too light. Some writers, nevertheless, affains, that the Portuguese, by digging here, formerly found gold, and that the places where they dug had been filled up by the natives, after they had expelled those in-

Here are two forts of inhabitants in this province namely, who is and negroes. The whites are descended from some Arabs, who settled here upwards of 200 years ago; and the negroes are the original inhabitants of the country.

The whites are divided into three classes or degrees, viz. Rohandrians, Anacandrians, and Andzatfi.

The negroes are divided into four elasses or degrees, viz.

Voadziri, Lohavohits, Antíoa, and Andeves.

The chiefs and kings are chofen from among the Rohandrian whites, who are the nobles. The Anacandrians are of the blood of the Rohandrians, but it is by a degenerate mode, or, in other words, they are the illegitimate offspring, or the descendants of the illegitimate offspring of the kings, princes, and nobles of the Rohandrian race. Both these classes enjoy the privilege of killing cattle, which in Madagascar is considered as a very great ho-

The lowest class of the whites are the Andzats, who are the illegitimate descendants of the Anacandrians. The people of this clais are in general filhermen, and are not permitted to kill any fiving creature except chickens, and the fifth they catch.

The people above-mentioned are rather of a copper colour, their hair hanging down in ringlets, but they are generally distinguished by the name of whites.

The negroes of the fifth of Voadziri class are the most powerful and rich, being masters of several villager: they descended from the original lords of the country, though they are at present, and have been for a considerable time, fubordinate to the whites. They are permitted to kill cattle, if no white happens to be in the village; but they must not aspire to that honour, if a white is near at

The fecond class, called Lohavohits, are chiefs, but are notwithstanding inferior to the Voadairi, as these later are lords of districts, and Lohavohits only of single villages. These are likewise, when absent from the whites, permitted to kill beafts for their own use.

The third class of people, called the Antioa, are the le-gitimate offspring of the Lohavohits.

The Andeves, or people of the fourth clafs, are confidered in a despicable and mean light, the term itself, by which they are denominated, implying "lost men," and as such they may be confidered, fince they are either flaves made by the fortune of war; or the children of slaves. In times of famine, or fearcity, if the masters of the Andeves cannot or will not funder them, the latter have deves cannot or will not support them, the latter have the privilege of changing matters, and giving themselves to be the flaves of others; but freedom is a thing they never can obtain, till death releases them from their tyrants. Others may vary their circumftances by industry, and gain an acceffion of wealth by fortunate contingen-

cier, but the unhappy Andeves have no alternative, nor any hope beyond the idea of flavery.

Manatenpla is well watered by rivers, but nothing particularly remarkable is mentioned concerning this pro-

Amboule is a valley, in which there is a variety of fprings, which it receives from the mountains of En-eælidæ, Hiela, and Manghaze. In the midst of this pleafant valley flands the large town of Amboule, which is populous in itself, and the circumiacent territories abound in cattle, plants and fruits, particularly white yams, and the herb fefame, whole feed, when compreffed, produces the oil menachil, and the cattle are here remarkably fat and fine.

This province produces iron; and neat the town of Amboule is a hot fpring of mineral water, which is deemed exceedingly efficacious in the gout. The people of this district are principally employed in manufacturing weapons and domestic utensils with iron and steel. They are licentious and dishonest in their dispositions; so that this district is deemed the retreat of the roguish and lazy, who escape from other provinces, and run hither in order to herd with fuch whose characters resemble their own. This province contains only about eight hundred persons, the men of which are deemed the best soldiers in the It is subject to a rabertau, or great lord, who is very rich, particularly in cattle, and governs in a very arbitrary manner. Subordinate to this rabertau is another, who rules over a little district called Izame

Vohitsbang extends from the river Manatengha to the river Mananghare, and firetches up the country to the river Itomampo. The fea-coast of this province is mountainous, and covered with thickets, and the plain parts are fertile, and abound in honey, fugar-canes, yams, rice,

and other forts of grain : iron minea are also found here. With respect to the inhabitants of this part, they are black, with long thick curled hair, extremely quarrellome, vindictive, cruel, and treacherous : they are also great thieves, and pay so little regard to humanity in their rob-beries, that they frequently steal the wives, children, and fervants of their nearest relations, and sell them for flaves. They have conceived an implacable hatred to the white natives, as they are policified with a notion, that the latter have the power to bewitch them, and what belongs to them, and to fend difeases and death among them and their cattle. Their garments are made of the bank of a tree called frautrastanou, and those brought from Mataton are made of another bark called avo. Their arms are a heavy dart, and a wooden shield covered with an ox's hide: these people sometimes travel into the provinces of Amossi and Ampatre.

Itomampo is only about three leagues in length, and narrow in proportion: it is fituated in a valley furrounded by high mountains; and the best steel in the island is pre-

pared in this province.

Icondre is also a very small and mountainous province. It boundaries on the north-east are high hills, which divide it from Itomampo. On the fouth are the counties of Vatemanahon and Machieore; and the hills and woods

adjoining to various provinces are the other boundaries.

Vatemanahon adjoins to Icondre; but the whole race of the inhabitants of this province having been extirpated

and destroyed by the wars, it is at present uninhabited.

Anachimoussi is said to be four days journey in extent, Anachimoufi is faid to be four days journey in extent, and is principally bounded by mountains or rivers. This province is extremely populous, finely watered, and exceedingly fertile in cattle, yams, rice, and every other neceffary of life. The people of this province formerly became very rich and powerful by the affiftance of the French, in the wars carried on by them against the neighbouring provinces. The title of its prince is deean or dian panohalie.

Eringdrane is a fine flat country, of great extent, and divided into two diffricts, namely, greater and leffer, which feparation the river Mangharae occasions.

Volsits Anghombe is divided from that of Eringdrane by the river Mananfatra, which river has its fource in the last mentioned province.

Thefe two provinces, we are told, are uncommonly fertile, and so exceedingly populous, that Eringdrane can fend into the field thirty thousand, and Vohits Anghombe one hundred thousand sighting men. In both these provinces, the towns and houses surpass in beauty those of any other. Iron, seel, and all the necessaries of life abound here. Clostles are made of the rind of banana-trees, and these garments are almost as fine as filk, and are preferred to it by the natives, though they can like-wife make filk. The people of these sertile provinces, however, are at perpetual variance with one another.

Manacarongha is fituated on the fea-coast, the inland parts being bounded either by rivers or mountains. river Mananghare, which waters this province, is formed by the conflux of these rivers, viz. the Itomampo, Ion-gainon, and Mangharae, besides many small rivulets that run down from the mountains, and which all uniting, lose their respective names, and take that of Mananghare. This river afterwards separates, and disembogues itself into the sea, by seven mouths, none of which are naviga-ble, nor is the river itself, though a very wide one, on account of the rocks in them.

Matatan is fituated near a river that bears the fame name, which hath its fource in the adjacent mountains, and discharges itself into the sea by two mouths, seven leagues distant from each other, and by which a large and delightful island is formed.

Sugar canes, honey, yams, and cattle, abound in this province, which is watered by many rivers, in which are great quantities of fish. Sugar-canes grow in such plenty, that many ships might be loaded yearly, could the natives be brought to make fugar, and were they furnished with proper implements.

Polygamy is allowed to the chiefs of this country, and their wives, which are generally about twenty in number, live in separate apartments in an inclosed place, furrounded by palisadoes, like a large town; and the punishment of death is inflicted on any person who presames to enter it. Antawarce is watered by many streams, some of which have their source in the Red mountains, which are the

north-western boundary of the province.

Ghallemboulou furrounds a bay of the fame name, which is very extensive, with a good road for boats behind the rocks, but extremely dangerous. The village of Ratimalone, called St. Matthew by the Europeans, lies upon the coast of this province.

Tametavi, fituated on a bay or guich of the fame name, is tolerably fertile, and well watered.

is toicraply rettile, and well weather.

Saltevel is also firstand upon a gulp of the fame name:
this gulph is of a great depth, the bottom is sandy and
good, but the excessive high winds render the bay unsafe.

Vouloviou is near cape Long-Point, and, being well
watered, is exceeding fertile. In this province are some rocks which project a confiderable way into the fea, be-sween which there is a fine harbour.

Andovouche is a maritime province, containing many gulphs, bays, harbours, &c. particularly the bay of Antonghil, formerly called Manyhabee by the inhabitants of the country. It is fituated lengthways to the north, and is about eighteen miles wide. At the end of the bay flands an ifland extremely high above water; it is about fix miles in circuit, covered with the most delightful verdure, and abounding in all kinds of grain, plants, fruits, bananas, honey, fowls, &c. Befides this island, there are some rocks, and three or sour other small islands. in the middle of the bay from the entrance to the northeast fide ; fome of these are covered with wood, and others fown with tice.

The province of Manghabei, which contains many populous villages, borders on the before-mentioned bay, On the north fide of the river flands a large town called On the north fide of the river stands a large town called by the Portuguese St. Angelo. Advancing deep in the bay, on the left hand, stands another, called Spakenburg, built by the Dutch, in 1595, in their sirst voyage to the East-Indies, containing, in the inclosure, about two hundred houses. The coast here is covered with forests of high trees, for several miles in length, and the inte-rior matter the country is full of hamboos, or a kind of of nigh trees, for leveral miles in length, and the inter-rior part of the country is full of hamboos, or a kind of thick cane called bambuvocilau. The foil itself is good and fat, and properly mellowed by the frequent showers of win. The meadows are rich in pasture, though the inhabitants are never rich in cattle, the greatest stock of the most wealthy not amounting to above twenty head.

The mountains are peculiarly fruitful, and the towns, in this part, are erected with great regularity and folidity, and even exhibit fome figns of tafte in the choice of fitu-ation, as they are either built on pleafant eminences, or by the fides of rivers. They are frongly pallifadoed round, and have only two gates or entries, one for the usual goings in and out, and the other towards the woods, to facilitate their retreat to those places of refuge and fasety, when furprifed by their enemies, or when too weak to refift them.

The people in this province are in general fairer than the whites of Matatan; their hair is long, and hanging down; they are free, liberal, and hospitable to strangers, and are not addicted to murder and thest. They are fond of finging and dancing; their dances have rather an immodest tendency, and love is the only subject of their

Adeimou is so small and inconsiderable a province, as to

Mandrerei is partly watered by the river of the fame, and partly by other stream. This river, which, near its source, divides the provinces of Anosh and Ampatre, runs, like a torrent, with great rapidity; it rifes in the fame mountain with that of Itomampo, and runs a great way to the fouth-west, receiving several other rivers and streams in its course, till at length it empties itself into the South-fea.

Ampatre lies along the fea-coaft, is fixty miles in length and between thirty and forty in breadth, from the fea to Machicore. As there is no river in this province, water is very scarce, and can only he had from a few marshes here and there. It is supposed that Mr. Drury, when upon the following occasion he mentions the great scarcity of water, alludes to this country, which he calls Antern-droe, the name given it by the natives. "This em-ployment, fays he, of attending the cattle, was agreeable to me, except in excessive hot weather, when it was a great fatigue to drive them feveral miles to water, at least every other day; but, in the colder feason we had no occasion to observe that practice, for the dew falls so plen-tifully in the night, that we find it sufficient to drive them into the grass about break of day; and even the inhabitants of this part of the country of Anterndroe, who have no water near them, go into the fields in a morning, have no water near them, go into the neits in a morning, with two wooden platters and a tub, and in lefs than an hour will collect about eight or ten gallons of dew water, which is very good while fresh, but will turn four, and grow disgreeable to the taste, in a day or two."

Caramboule is but a small province, being not above the state of the state of

twenty miles in length, and ten in breadth. bounds it to the fouth, and towards the west there is a gulph, which is denominated the bay of Caramboule; gulph, which is denominated the pay of Catamoune; and this bay or gulf runs greatly from the west towards the east, and thereby divides this province from that of Ampatre. The country of Caramboule is in general dry and barren, notwithstanding which there are some good passures, and many herds both of tame and wild cattle. They have cotton and fome filk, which the inhabitants make into apparel.

Mahefalle is fituated more to the north-west, on the fea fide, and catends as far as the fait river, called by the Portuguese Sacalite. This river flows from the country of Houlouve, and turns into a gulf, an accustomed anchoring-place of the Portuguese, but the French never

Houlouve extends about two days journey up the coun-y. This province begins at the mouth of the falt river above-mentioned.

Sivah extends about twelve miles along the coast of the

10

Ivoronheoc, or the country of the bay of \$t. Augustine, is fituated near the river longhelahe, which receives the waters of three fmull rivers, namely, Orandumainthi,

Onghelamafley, and Sacamare, befides many rivulets.
Machicore is of great extent, and of equal length with
the river longhelahe. It is upwards of two hundred
miles from eath-north-ceft to west-fouth-west, the same from east to well, and about one hundred and fifty from morth to fouth, that is, from the river longhelane to the provinces of Mahefalle and Ampatre.

Some years ago, this country was laid wafte, and ru-ined by war, the inhabitants living concealed in woods, for fear of their enemies, and fubfitting upon roots only. or the flesh of wild cattle. Previous to that time, feveral of the before-mentioned provinces were under the fove-reignty of one lord, called Decan or Dian Baluralen, or lord of an hundred thousand parks; in the life-time of this prince, these countries enjoyed a prosound peace, and slourished in excess of riches and pleasure, but, upon his death, a war broke out between his sons, which was carried on with fo much fury and animofity, that it ended

in the ruin of themselves and the country.

In the gulfs belonging to, or near the coasts of Mada-gascar, are several islands. The first we shall take notice of is the island of St. Mary; or, as the natives and Ma-dagascrians call it, Nossi Ibrahim, or the isle of Abraham, which lies in seventeen degrees south latitude, about two leagues from the shore of Madagasear, and opposite the mouth of the river Mananghare. It is about thity miles in length, from north to fouth, and almost ten from east may pass when the sea is high; but at low tide they are scarcely covered with a foot of water, which renders the coarting control dangerous, and only acceptible for flip-ping at particular places. Various beautiful flicils, and great quantities of white coral, abound about this island. The whole is interfected and watered by many rivers, rivulets, and ronning firings, which give fertility to the foil, and beauty to the keene; enriched on every fide by plantations of rice, yams, millet, fruit, vegetables, &c. The air is extremely moift; for there is hardly a day in the year but it rains some time within the twenty-four hours, and it often rains a week together, without intermission. The catle are fat and good: ambergis is found about the eastern thore; and the island abounds with various guins, particularly that excellent one called tacainahaca.

Since the French were fettled on the island of St. Mary, it became much more populous than before: nor dare the neighbouring Madagaferians now fet a foot on the island, though they formerly used to carry fire and sword amongst the poor natives, and were a great fcourge to them. At ent there are ten or twelve villages, and near a thouprefent there are ten or twelve villages, and hear a thou-fand inhabitants, who employ themselves chiefly in cultivating rice, yams, peas, beans, &c. They are likewife very fond of a fift called hourils, which they catch either by nets or hooks, and eat or fell them, as their neceffities require. Their religion is paganifm, intermixed with fome particles of judaifm; and though none of them have been known to become profelytes, yet they keep on

good terms with Christians.

Southward of the island of St. Mary is a small island, separated by a narrow channel, not above three fathom er, fo rich, fertile and abundant, that the inhabitants of St. Mary fend their cattle hither to fatten, and lay out large plantations of rice, corn, roots and fruits, notwithflanding which they have not thought proper to plant any colony in it. This is probably the same island which Flacourt places in the bottom of the bay of Antogil, which he highly praifes for its beauty and fertility, as well as for the fafety of its harbour, which, during the early voyages of the Dutch to the East Indies, was much frequentrd by them.

In nineteen degrees fifteen minutes fouth latitude, and about twenty-two leagues to the saftward of Madagascar, is fituated the uninhabited ifferd of Diego Rodriguer.

The iflands called by the Portuguese Illas Primieras, and four other islands called Angoras, are situated in the fixteenth degree fouth latitude, but thefe islands contain

nothing in them deferving a particular description.

Several small islands, called Utiques, are placed by Le Croix opposite to cape St. Sebastian, on the coast of Sa-fola, and under the latitude of twenty-four degrees nine minutes from the continent; yet these we have reason to believe to be the little cluster of islands which stand off St. Sebastian, on the north-west end of Madagascar, east of the Comora islands; they produce rice, miller, and great abundance of cettle; there is also ambergris found on the fea-coaft, which the people collect and export to different parts of the continent; but the most valuable commodity of these islands is a pearl fishery, which might turn to good account, if the natives understood their virtue, and did not spoil their colour and transparency, by boiling the oysters in which they find the pearls.

This island is inhabited by negroes, who resemble those

of Madagascar both in person and dress, if the bit of rag or lamber tied round their middle, merits that denomina-tion. Their religion is paganism, with some faint gleams

of judaism; and they are exceedingly superstitious, being extremely fond of attending to predictions, though their lives are usually rendered unhappy thereby, 25, indeed, how can it be otherwife, anxiously agitated as they are between the hope of possessing ood, or on the contrary, that some dreadful evil will assured befall

There are a number of small islands to the coast of Madagafear, from the fifth to the fortieth degree of lati-tude; but a description of them cannot be expected, as

they are all uninhabited.

Under the latitude of eight, and ninety degrees eaft longitude, lies the island of Diego Garcia. Near two degrees fouth of this stand three intall islands, called Bromster dons; and directly fouth of them, about three degrees, stands the island of Rodrique, or Roderigo, between the continent and Madagascar, not very far dislant from the omora islands.

Under the twenty-ninth degree of fouth latitude, stands the island of Ramarcires, about three degrees east fouth-east of Mauritius; a little beyond which is the island of John of Lifbon, in twenty-fix degrees fouth latitude, and in the fame longitude with the ifle of Bourbon,

There lies an island, in latitude thirty-two, and longitude seventy-fix, which was discovered by the Dutch, who never gave any name to it. To the fouth of this, between latitude thirty-feven and thirty-eight, are two other islands, one of which is called Amsterdam, and the other St. Paul, but neither of them contain any thing

that merits particular attention.

To the north of the cape of Good Hope, are three fmall islands, called by the Dutch, Roben Eiland, Daffen Eiland, and Frans Eiland. The first of these is also called Rabbet island, from the prodigious numbers of those animals that burrow on the shore: it is very small, being not more than two leagues in circuit. The fecond is called Deer island, by its being inhabited by great numbers of deer. It is imagined that these creatures were brought hither by Spittbergen, in the year 1601. The English and Dutch afterwards brought hither some sheep, which have also greatly increased, though not in propor-tion to the deer, which are so numerous as to cover the principal part of the island. The sheep here grow to an principal part of the mand. A ne meep nere grow to an amazing fize, and their tails are from thirty to forty pounds weight. It is furprising how these animals procure a sub-fishence, or what could induce the people to bring them here, as the island, which is fandy, produces nothing but a few flowers and briers; it must, therefore, have had a very unpromising appearance for the breeding or fattening of cattle, though the event, by the pecoliar care of Providence, has answered the expectations of those who were induced to try the experiment. What still increases our assonishment is, that it wants fresh water; which circumflance alone, it might have been imagined, would have ruined the whole project. But to proceed to the natural history of this island.

Gold, filver, copper, tin, and iron, are found in Ma-dagas, a, of which the natives make razors, lances, hatch-ets, and other instruments. Here are also several forts of precious stones, as topazes amethysts, agates, and several forts of jaspess; frankincenia and benzoin are found i abundance; and ambergris is gathered on the fea coaft.

Besides the lemon and pomegranate trees already men-tioned, they have, among the fruit, palmettos, plantanes, bananas, tamarinds, a currant which grows on a tree and banatias, tandanias, scanarias units grows on a tree and not on a buth as in Europe, and is very pleafant to the tafte. Here are also fugar canes, vats, barley, and rice. They have a large tree which bears a kind of a plumb, which, when ripe, is black, and of the tize of a cherry and on the infide are little stones like those of grapes; this tree has thorns two inches long. They have also a very and on the innue are nutritioned in the innue and in the innue are nutries long. They have alfo a very tall tree, the leaf of which refembles that of the pear-tree; it has a fruit speekled like the sparrow's egg, and of the same fize; it is full of seeds, and of a fweet juice, elemend a certain cure for fluxes. They have a kind of nut which the state of the state of the state of the same state of the stat finells of all forts of spices; it is as large as a nutmeg, but

browner, and more round. . Pepper grows here in first! quantities, no care being taken to cultivate it; this pepper grows in clusters upon thrubs that arail upon the ground.

In this island is a tree, whole leaves and tend fling like nettles, but the toot is of great use where there is a fearcity of water, which is the case in many parts of the country; for it retains a great deal of juice, which is extracted by beating the root in a wooden morter, and prefing out the liquor; and of the bark of this tree they make topes. Here is likewife wood proper for building, as also cedar and chony, but none fit for maits.

Several forts of grafs of different colours grows of the

plains, to a much greater height than any in lingland : the natives never cut any for hay; for before the law withered, new grafs fprings up under it; but the com-monly burn the old grafs.

Tobacco grows there, which is smoked in teeds or The natives are also fond of smoaking a plant, to which they give the name of jermanghler; this plant grows about five feet high, bearing a long and flender leaf, and a pod which contains about a dozen feeds like hemp-feed. The natives mix the leaves and feeds together, and lay them three or four days in the fun, till they are very dry and fit to be fmoked; but it ftrongly invoxicates the seo-ple; their eyes, after fmoking it, look red and firry, their affect ficree and wild; and they are even more active, hold, and vigorous, while the effect continues; but those who use it much, are weak and dispirited whenever they are not intoxicated.

The foil is indeed fo fertile, that it produces two crops in a year of every thing, except fugar-canes, which must be left two years standing, that they may grow to a proper

fize and maturity

Their oxen are predigiously large, and yer so numble and unruly, that they will leap very high fences: they are beautifully coloured, some of them being streaked like a tyger; others are black, with white fpots, and focus are black with white fpots. They have a protuberance between their shoulders, which has some resemblance to that of a camei, and confilts of fat and fieth; fome of these excrefcences are faid to weigh between three and four core pounds. The cows do not give fo much milk as ours in England, nor will they ever fuffer themselves to be nowed will the calf has first forked; so that they keep a calf to every cow till the is again with calf, for they feldom saits a

Here are feme fleep with great heavy tails, and thefe being also goats; but they keep no tame hogs, these being sufficiently numerous in the country, and so very mischievous to the plantations of potatoes, and other root, that they are forced to fet traps to cotch them. They have also wild dogs, and foxes, which are very fierce, and fometimes will attack a man; but there are no lions, tygers, or any other ferocious animals in the ifland, except wild boars, which have two horm ment the nofe, like prickles, and their fkin is almost impenes able.

Here are excellent fowls, with plenty of turtle-doves, partridges, pigeous, ducks, teal and other wild fowl io

In Madagafear, bees are very numerous, and great quantities of honey are found in the woods. The natives also keep bee-hives; for they not only cat the honey, but make a palatable liquor of it, colled toack, which has a confiderable spirit, and of which they frequently drink till they are intoxirated. This is the common liquor drank

at entertainmants.

In this is and are two or three kinds of lik, which are found in plenty in almost every part of it, some of a brownish colour, and one fort white, the entitle of which is 6.% of fmall pointed prickles. The cone is about three makes long, shaped like a ninepin, and at the top is found a fmall hole, out of which a blackish when is sometimes icen to creep; but we have no account of its changing its form in the manner of the common filk-worms, though it probably becomes a flying infect. There are, however, no mulberry trees in the island, and these worms and filk are found on three or four different forts of trees, adhering to the thick branches or trunk. The people pull out the cour on their knees, tearing it to pieces with their hands, and then from it with a splindle made of bone, and a rockfiaff; after which they weave it, and wear it round their waift, as a garment.

There is a tree called roleer in fome parts of the country, which is of great use to the lower, or middling for? of people, from its furnishing materials for a cloth to wear round their waift. The leaf refembles that of the cocoatree, but is longer by two feet, and bears a plumb almost

like a damafcene. They take away the outer bark, and peal entirely off the inner, which is white, and beat it with a flick which is foft and pliable. It then refembles a long, white, thin shaving. After this they foak it in water, then fplit it into threads, which they tie together, and weave it into cloth.

In this island are several kinds of river and other birds, known in the language of the country, by the general name of Vourou; but they are much lefs than those of Europe; the eggs of the hens not being larger than those of pigeons. Here are many pheafants, which are of the same kind as those in England; but there is a particular fort, that have violet feathers, and a red beak. Here are likewife small voter realers, and a red bear. Face are income imate paroquets, and fome of a dark red, but thefe laft are very fearce. Small green finches, that whitle and imitate the four species of other birds; wild carkles; black, white, and grey engles, with fine plumage; wild florks, with creft on their heads; common teal, and a particular fort, with red legs and claws, called haives; pelicans; black and white herons; water-wag tails, &c. Samba is a bird whose feathers are as red as fire. Vourouchonts are white birds, that follow the cattle, and feed upon the flies and leetles found on them; they are generally very lean, and ill-tafted. Vouls is a river bird, with a long and white lock; it is about the fire of a pelican, and its flesh is tolerable good eating. Taliva is also a river bird, about the fire of a hen, with violet plumage, with red aid black feet. Heretae is a bird with a ved creft on his head, and has black feathers, and feet like a teal. Takia is a bird, whose wings, feet, and besk, are black; it is about the fixe of a blackbird, and has but one simple note, from which is receives its name; for it is continually calling takin; as our cuckow in England, from its nore being expressive of that found, is fo colled.

They catch great numbers of lobsters and craw-fish, exthent turtles, sels, the fword-fift, the fea hedge-log, al man Linds of fith common to other countries in the

is no clies re. There are many aligators in the river.
In this aliend are a great variety of infects and reptiles. The or occuration, or break-leaper, is an extraordinary, but eaugecous infect. It is about the fize of a fmall lizard, and fixes irfelf, as if clued, to the barks of trees, with its mouth always open, ready to eatch spiders, flies, and other infects. They are called breaft-leapers, from their leaping on the breafts of these who approach the tree where they are; and they slick so fast, that it is impossible to get they are; and they fire to be any that part of the flesh on which they are fixed. Mardent is a kind of ferpent that feeds on bats and small birds; it is about the length and thickness of a man's arm, and not venomous, though deemed fo by most of the natives. Among other ferpents. here are also the menore, fave, mare, triondibale, renunere are another inchester, and, mary, trondmone, renu-tric, and abacondef. This laft is very dangerous, though in fibflance not thicker than a quill. It flips into the body at particular times, gasaws the inteflines, and occa-fions the most exerciating pain: it infallibly produces death, if not extracted in a thort time, which is foldom the

The water-feorpion, called aringalaks hurawou, refides constantly in marthes and still waters, destroys cattle, at-tacks dogs, and suchs their blood, after it has killed

The feorpion fpider, or vancoho, has a large, round, and black belly, and is extremely dangerous. Its bite occasions an inflantaneous swooning, which fonetimes lasts two days, attended with a remarkable coldness and thivering. The method of cure is, by placing the person near the fire, and administering such things as poulon is usually expelled with.

Here is a creeping animal, called anocalife, that breeds between the barks of rotten and worm-eaten trees. It is about fix inches long, of a flat form, and has many legs like a caserpillar, with a hard fkin. Its bite is exceeding venomous, and causes the like disorder as that produced from the vanocho; and the confequence will be the lois

of life, if the fame remedies are not applied.

Moth-words, ear-wigs, bugs, and other trouble free infects, like sings, but not fo offensive in facel, and other troubles are sentinged, like sings, but not fo offensive in facel; along full grown at a bout the fize of a man's little sings. which tisse it becomes winged, and flies away 11 young ones remain in the houles, and are very delirudity to the furniture, as also to most kinds of appared, and to cloth. The vomban is a betterfly variegated with different colours, among which are those of gold and tilver. Others are known by the name of facondre : thefe proceed from beetles, and keep to the back of a perticular fixub, on which they deposit honey, equal to that the bees pro-

which they deposit noney, equal to that the bees produce.

Many forts of finalis are here, fome of which have their particular appellations, but they are in general called cascors. Carterpillars also abound here in great variety, but the whole of them are distinguished by the name of singuished voulon. Herechereche is a beetle that shines in the woods and booses with a furprising lustre in the night. In this island are worms of various kinds; but the most distinguished are the filk worms, which are four-footed. Some of them, called landeve, produce one prickly cod; effects, called landeseraha, make small cods inclosed in a bege one, frequently containing five hundred young. The third kind, called landeanacas, spin their silk on the tree anacsu that grows by the sea side, the cods hang in strings, separated from each other, and the silk is the sinest, strongest, and best of all. The fourth fort, called landeaulagues, make their silk on the tree vontomis, which is not so substantial as the former, but very sine.

Two forts of land-tortoise are to be found here; one of which is called himsors, and the other fanou. Ants are any particular street is called himsors, and the other fanou. Ants are any particular street is such as a substantial as the former, but very sine.

Two forts of land-tortoifes are to be found here; one which is called hilinitoes, and the other fanou. Antaway we man-terous, and exceedingly harmlefs, except one fear afted ficanoucourous, which are particularly defirued to the rice, of which they devour great quantities. In this island are mines of iron and fleel, which the natives have the art of purifying and forging with much lefs difficulty and labour than the Europeans, in the inland, mount aimous parts, filver is found; and a white metal, which much refembles tin. The gold here is of two forts, namely, a pale fost fort, which is of little value; and a finer fort, which is tolerably good.

In the valley of Amboula, is a fountain of hot water, elecaned a fovereign remedy against all diforders proceeding from cold in the nervous parts; and the fame water, taken inwardly, removes obstructions in the loins, cures asthmas, and all diforders of the longs.

We shall now treat of the persons, manners, customs, drefs, &c. of the inhabitants of Madagasca; previous to which, it may be proper to observe, that this island, though rekomed to be eight hundred leagues in compass from north to fouth, is not populous in proportion to its extent, for it is supposed not to contain above one million fix hundred thousand souls.

All the inhabitants are black, except those of a little province beyond the Maratanes; and most of the great men, who are descended from the Arabs, and still preserve something of their complexion, though they become black insensible, to riginal in-

fomething of their complexion, though they become black something of their complexion, though they become black infenfibly, by their intermarriages with the original in-babitants. The Arabs, who feized upon this island in the beginning of the fifteenth century, established commanders in all the provinces, and fixed the chief feat of their government beyond the Maratanes, which is the reason why their descendants, who are stilled lavalestes, are still fair, or at least called so, for they are for the most part of a tawny complexion.

fill fair, or at least called so, for they are for the most part of a tawny complexion.

The natives are in general tall, well made, nimble, and have a proud gait. Their hair is not woolly, like that of the Guiney negroes, but it is always black, and for the most part curls naturally; their lips are not thick, neither are their noses fact, though they are small. They sometimes affect a smilling countenance, and they know how to conceal a grand delign, or the stronger passion, with as much artisice as the most crafty knave among the nations that are most famous for their political dissimulation.

Wild people are sound in some parts of this island, who let their hair and beards grow, go almost naked, inhabit thick and unfrequented woods, live upon wild cattle, fruits, coots, honey, locasts, &c. and do not affociate with their

roots, honey, locults, &c. and do not affociate with their fellow natives.

Though, according to the accounts given by the French of the inhabitants, fome of the people are faid to be very deceiful, fattering, and like, or this mult be underflood chiefly of those of the code of Manghabei, to the end of the idead, forthward that the people in general are allowed to be of a humane and friendly dipolition; hare with their neighbours what they take in hunting; and the great even take a pride in relieving the diffressed, though they were before at enmity. In thort, they have virtues; but, as in other countries, there are confimany virtues; but, as in other countries, there are conu-derable embers, who violate the laws of juffice and hu-manity, in breer to gratify their paffions. They are, however, not deficient in point of understanding, but are capable of reasoning upon any subject where they have not been blinded by superstition; and many of them are en-dued with admirable good fense. The women are remark-able for their obedience to the traffic and hands, their good temand agreeable conver. - --

With respect to the dress of the Madagascrians, the mein wear only a piece of cotton cloth or filk round their waist, called a samber; some of these they make themselves; but hose who are rich buy the filks and callicoes at sea port towns, giving a great price for them, as a cow and a call for no mire than will make one samber. The men and women of distinction also adorn themselves with rings on their wrist! some are of gold, some of filver, but most of them of copper. They curl their hair and make it lie close and smooth; and those of superior rank adorn their hair with rings and other decorations.

The habit of the women consists of a samber, which reaches to their feet, and above it a garment like a straight hift, which covers all the body, and his short seeves. This is commonly made of cotton, and dyed of a dark colour. Those of a higher rank, adorn it with beads, especially in the back, where they are ranged in rows, and cross each other; these being of different colours, form a large double cross very much refembling the union sing. Some of the women use saranohits, or drawers, with an arzan, or long robe without seeves, and a piece of linen before, sewed at both ends like an apron.

Their ornaments, called firawach, are different kinds of chains worn round the necks, arms, and legs; car-rings, bracelets, rings, and other toys, with necklaces of different names, such as falantes, saraves, and endaclis, consisting of three or sour, and even welve wows of pearts, corals, beads of gold, glass of all colours, rock crystal, agates, cornelian, and sardonian stones. These ornaments of gold arc only worth by the Zaferamini, who are the chiefs of the domain did and mong the negroes, by the Voadziri and Laliavohits.

The common diet of these islanders is cows milk, rice,

Laliavohits.

The common diet of these islanders is cows milk, rice. I he common diet of these islanders is cows milk, rice, and toots. They roast sometimes large pieces of beef with the hide on. They drink water and honey-wine; but they have neither bread nor grape-wine. The honey-wine is a composition of three parts of water to one of honey, which they boil together, and skim, after it is reduced to three-fourths. They afterwards set it to work in large pots of black earth, made in this island. This wine has a very pleasant tartish taste, but is too luscious. They have a fort of wine, still more unwholsome, which is made of sugar canes.

have a fort of wine, filli more unwhollome, which is made of fugar canes.

Licking the feet of a fuperior, is deemed the most refpectful falutation. This kind of abject submission, is practifed by all inferior perfors when they address their prince, and by the women when they come to welcome their husbands on their return from the wars i those of superior, rank lick only the knees of their fovereign; but slaves pay to their masters the above preposterous mark of respect.

Here is no other marriage extensions among the negroes.

Here is no other marriage ceremony among the negroes, than agreeing to colabit together; but the whites have a peculiar ceremony in being joined, or married to the head wife; their other wives are taken with as fittle form as

peculiar ceremony in being joined, or marries to the near wife; their other wives are taken with as fittle form as those of the negroes are.

They practite polygamy throughout the island; and the people in general are exceeding incontinent, which may be afcribed to the extremes which actuate both sexes; the men having too much freedom, and the women being under too much restraint; yet these opposite causes produce, similar effects; for here since the men take all the licentious liberties which such an unbounded licence permits; to the women, being impatient of restraint, sllow themselves such freedom in private, in order to compensate for what they suffer by the severity of the public laws and tyranny of their husbands, that the inestimable jewel chastity is rarely to be met with among them.

Their sunerals are conducted in the following manner: the relations wash and cleanse the body of the deceased, and then deck it with the most costly ornaments which the person wore when living. It is then wrapped up in a mat, in order to be carried in that manner to the grave. The head of a woman's corpse is generally embellished with a kind of cap: but the heads and beards of men of rank, after their decease, are clean shaved. Previous to the inne of burial, the corpse lies in state for some days, deceased the content of the sine of burial, the corpse lies in state for some days, deceased the state of the sine of burial, the corpse lies in state for some days, deceased the state of the

to the time of burial, the corpfe lies in state for some days, during which space a light is continually burnt at its feet; and all the relatious, friends, and flaves, frequently furround the corple, and utter the most diffinal lamentations. Having tired then felves with bewaiting, the women fall a dancing, and the men have recourse to warlike exercises. dancing, and the men have recourse to warnike exercises. At length they all furround the body again, call the dead by his name, very gravely expostulate with him for dying, and pathetically demand whether he had not every thing that could fatisfy him in this life, such as beautiful and faithful wives, dufful children, loving friends, industrious flaves, a sufficiency of gold, silver, iron, cattle, &c. We are forry there is reason to remark, that this burlesque method of howling over and interrogating the dead is not peculiar to this idolatrous people, as not only many other, nations in Africa lawe the same outson; but that even in Europe some persons, who pretend to be more enlightened, still retain these absurd ceremonials.

When the day of intennent is come, the corpfe is carried to the burying-place, which is named Amountouque, in a coffin made of hollow trunks of trees, which are curioufly clofed together; and there it is deposited fix feet, deep, under a strong hut, in which are left plates, dishes, apparel, rice, tobacco, &c. that the dead may want no necessary accommodation! The deceased being thus properly provided for; the hut is intirely closed up, by placing a large stone before the only entrance. Then, on the outside, beafts are sacrificed; and the company having regaled themselves, some fragments of meat are left, which they suppose, will be equally distributed between the dethey suppose will be equally distributed between the de-parted person and the damons.

Fifteen days after, imagining the provisions are exhausted, the relations and friends fend more, lest the dead body, or the dæmons who guard it, should be famished; and these the demons who guard it, inould be ramined; and their presents are always accompanied with the kindest message and most respectful compliments to the deceased. The heads of all the beasts which are facrificed, are fixed upon long poles, and placed round the sepulchral hut in the manner of trophies. Sacrifices of beasts are sixewise made by, or in favour of the children descended from the de-

by, p. In payour of the children detected from the de-ceafed, or those nearly related to him, when the juvenile band, in a kind of lymn, invoke the fpirit of the de-parted person to be propitious to them. When a person of rank dies at a distance from home, his body is burned upon the spot; but his head, having been previously cut off, is carried home and interred in a greener sently he with the pular length size. proper fepulcine, with the usual funeral rites. But per-fons flain in war, who have been halfily buried in or near the field of battle, are, in times of peace, again dug up, and reburied in the usual form, provided the body be not nearly in a state of putrefaction, from the long space since its interment.

These people hold the memory of their ancestors in the utmost eseem and veneration; their greatest and most solemn oath being, to swear by the fouls of their predecef-fors, or the virtues of their parents or nearest relations.

In consequence of the execrable superstitions of these people, they have a most barbarous custom of exposing their children to a certain and cruel, though indeterminate their children to a certain and cruet, insugn modernings, kind of death, by fitnapling them, in the birth, or facri-ficing them to demons; which horrid and atrocious prac-tice may in all probability be the true political reason why this large illand is so thin of inhabitants, in proportion to its great extent and amazing fertility. These shocking this large hand is forthin or infinitely. These shocking cruelties are owing to the ombiasses, who exercise a most uncontrouled power over the minds of the people; the latter being under an obligation of exposing their new born children in defart places to famish, or be devoured by wild beafts; to ftrangle them in their birth, or to facrifice them to their damons, according to the prediction or the command of the ombiation, who pretend to contemplating the aspect of the planets at the time of their birth, pronounce arbitrarily whether they are fortunate or inauspicious, and decree the child to life or death accordingly. These detestable murders are the more frequent, inasmuch as, besides the ombiasses having the fate of new born infants at their difpecial at all times, those who are born on what the people deem unlucky days, are fure to be put to death, and, unhappily, above half the days in the year are accounted to.

The imagineious or unfortunate portions of the year are; the entire mouths of April or Safard, March or Ra-

mahara; the last week of every month in the year; every eighth day, whether it falls in auspicious months or weeks, or otherwife, every eighth day being called Affarontor, and every laft week in each month Alacoffi. Every Wednefday every last week in each month Alacossi. Every Wednesday and Friday throughout the year are decemed unlucky; and even particular hours are supposed to be influenced by the vitangs, or unlucky planets. However, the force of nature sometimes overcomes the prevalence of superstition; and the prejudice of custom yields to the distates of parental affection; to which we may add; that the ombiasses are not insensible to the power of bribery; and what will not a parent, who has tender feelings, give to save his inossensity, the grand fountain of vice, and stimulater of crimes, may, properly applied, be rendered the means of crimes, may, properly applied, be rendered the means of benevolence, and friend of humanity.

Throughout the island of Madagascar, the same lan-

guage is spoken, but differently pronounced in different provinces. It bears a great affinity to the Arabic, is extremely copious, and, in the manner of speaking, and in the order and conjunction of the nouns and verba, is agreeable to the Greek. The charesters in use among the ombisses are the Arabic, twenty-four in number, written from the right to the le't, though the pronunciation of some differs from the Arabic. These characters were introduced about three centuries ago by the Arabis sent by the calif of Mecca, who lended at Matatan, internarried with the women of the country, and taught the Arabic language, with the koran, to thuse who embraced Mahometanism, which some of them still adhere to.

In order to give the reader some idea of the fost and liquid tones, with which the Madagascar language abounds, we have here selected a sew of their common words, with their translation in English; viz. valu, alive; melanjore, to agree; maliske, anger; leshulu, any-hody; munonego; ascend; bettu, brains; haner, beef; omebayvovva, cow; attend; bette, poet; bette, over; bette, teach, catte; tanns, the earth; onebay, cattle; morte, dead; varlarvo, a moule; oroong, the nole; overnarmo, potatoes; plato, a pittol; hulu, people; color, years. Teenongher, east; audreffer, welt; avarruchs, north; attemo, fouth. Their numbers are, efer, one; roaa, two; talu, three; effetcha, four, does five, amming five, feeto, feet, various numbers are, eser, one: roaa, two; talu, three; effutchs, four; deene, five; eamming, fix; seto, seven; varlog-eight; sever, nine; folo, ten. The says of the week are. Allhaida, Sunday; Alletenme, Monday; Talorter, Tuesday; Alletrerbeer, Wednessay; Commesse, Thursday; Immor, Friday; Sarbueche, Saturday.

They reckon from one to ten, like the Arabians and Europeans, and, after ten, add the núraber one, as far as twenty. All the people of Madagascar, except the negroes of Machicore, and the inhabitants of the mountains, are tolerably expert at casting up small suns.

tolerably expert at casting up small sums.

They use no weights or measures higher than a drachma The rames of their final weights are, hand, if a rachm, for as they weigh no articles whatever gold and filver excepted, drachm weights are deemed inflicient; all other commodities being fold by way of barter or exchange.

The names of their finall weights are, nanqui, half a grain; facare, a grain; nangue, fix grains; vari, half a drachm; to many a drachm.

rachm; fompi, a drachm.

The measures are, 1. The voule, which contains half a pound of rice, &c, 2. The monea, containing, fix pounds; and, 3. The zatou, which contains one hundred voulus, or fifty pounds of rice, &c. Thefe are measures of capa-

The measure of length is only a refe, or a measure of about two yards in length, which is used in measuring cordage, stuffs, &c. the land not being estimated by admeast the the apparatity of grain with which it may furement, but by the quantity of grain with which it may

be fown.

They make paper, in this island, with fewer instruments and engines than they use in Europe. The bark of the tree avo is boiled two days in good lye, made of the ashes of the same tree, till it become soft, and supple; when it is washed in clear water, best to a proper consistency, and poored afterwards on mats of exquisite fine reeds, twisted and assistance of the same tree of the sa and regularly joined together, in order to be drained and become paper. After this, it is placed on a leaf of bali-fior, oiled with menachil, to dry in the fun; each dried leaf is afterwards dipped in a decoction of rlee, to prevent it

is alterwards dipped in a decoction of rice, to prevent it from remaining fpongy; then being dried once more, it becomes (mooth, even, and fit for ule.

Their ink is extracted, by way of decoction, from the yvood called arandranto, which is likewife made use of by the principal people for building. The extract, being mixed with verdigris, becomes exceeding black. Their, pens are made of bamboo, and are cut to the fame fize, the included the force finisher against a pender of the contractions of the contraction. fashioned after a similar manner, and rendered almost as transparent as the quills used in Europe.

SECT. IV.

Of the trade carried on in Madagascar; method of going to war between the different provinces, Sc. and the paistical and civil government of the island.

Table natives of Madagascar have very confined ideas and imperfect notions of foreign traffic; so that the trade of this island is chiefly of a domesic nature. There being no currency established among them, they deal together by way of barter, and if they obtain any gold or either coins from the Europeans, who sometimes touch here, they immediately melt them down, and convert them into ear-rings, bracelets, &c. HE natives of Madagascar have very confined ideas

The domestic trade is of this nature: the people of the sotton provinces take carsen cultivate that atticle, and then carry it to the provinces which abound in cattle, rice, &c. Having trucked or bartered commodities, the wants of each are supplied; for they who have plenty of provisions, are by these means supplied with cloathing; and they who can easily procure apparel in their own country are furnished with provisions, in which their own provinces night be deficient. Thus the interchange of the produce of the different provinces becomes of reciprocal benefit to the whole. nefit to the whole.

The foreign traffic which fome of the Madagaferians earry on with the European fhips, confifts in exchanging firth provisions for yellow wires; apphires for hard and fmall wares of all forts; rubies for looking glaffes; eme fmall wares of all forts; rubies for looking glattes; eme ralds for beads; cornelians, and other precious fiones found in the country, &c. for fire arms, and coral of any fize or colour, pie-ced through for ftringing, &c. Thus the riches of these people consist in the wares and commodities which they, procure; in the bills, hatchets, knives, lances, iron and steel spades, lambers, &c. which they make, in the save they take in war, or steal in times of peace, in the earlie they breed, and in the lands which of peace, in the eattle they breed, and in the lands which they cultivate. The French, who trade with these people from the sile of Bourbon for slaves and cattle, complain that of late years piastres are demanded for those and other articles.

The celebrated French governor Hacourt esteemed this island of great importance for advancing and establishing commerce towards Ethiopia, the Red sea, gulf of Arabia, and other Indian countries; and that great advantage might be made from the conveniency of wood for building fhips, for catrying on the trade, and from the exchange of

commodities.

The fovereigns or princes of the different territories in this island are most of them related to each other, as are likewife their great lords and inferior fubjects, by continual intermatriages; neverthelefs they are perpetually quarreling with and waging war against each other; private family diffuses often occasion open ruptures, and the refentment of an individual will induce fome thousands to commit hostilities on the offending party. These domestic with a foreign enemy would be; for when relations and friends differ, it is observable, they entertain a greater implacability against each other, than strangers when they hap-

pen to be at enmity.

Their engagements in the field are feldom regular; they chiefly depend on surprise and ambuscade, and facrifice courage to stratagem. When the prospect of advantage offers, they usually assemble privately, act with the utmost caution and fecreey, gain the enemies frontiers by forced marches in the night, and attack them fuddenly and unexpectedly: if fuccess attends their arms, they commit expectedly: If lucceis attends their arms, they commit the moft cruel ravages: if they meet with an unlooked for repulse, they retire with the utmost precipitation. But good or bad succeis are alike fatal to the country; if they are fortunate, they destroy all before them as they ad-vance; if unfortunate, they lay waste the country in their retreat. Thus, by means of intestine broils, famine frequently reigns in a country calculated by nature to afford the utmost plenty.

The prince of a territory fometimes gives notice to the lords, who are his subjects, to affemble their forces separately, and to march by different routs to the place of rendezvous, in order to come fuddenly upon and attack the towns of their chemies, which they furround, and advance with the most dreadful shouts; and, if successful, they maffacre all they meet with in them, sparing neither age nor fex. After this fanguinary heat is over, if they meet with any other of the adverfe party, or overtake any fugitives, they make flaves of them; but ufually put to death those who are allied to the chief, fearing they might at some future time become formidable, should they be suffered to survive.

With respect to their politic har magement of the war, they depute spies to observe a midition, number, and fituation of the enemy, if one march, or encamped; or andition, number, and to reconsiste their towns, and take notice of the impor-tance of their fortifications, if they frould mean to main-tain them, and fland a fiege. If threatened to be attacked by others, they thilt their place of refidence, drive their women and cattle into the most private recesses, or places difficult of access, and confequently may be easily defended. Sometimes parties of only form or fifty are fent to plunder and defroy the leffer villages and hamlets; and these light detachments are called fanyouve. If opportunity series

the towns are reduced to ashes; but if they are under any apprehension that the flames will exalperate the neighbouring inhabitants, who might immediately purfue them, or cut off their retrear, they fathfy themselves with only plundering the towns without burning them.

These kind of expeditions are named taschamanthi, or forest war, and the

fecret war; and the marguders, who engage in them, are always provided with what they deem charms, which are fmall billets written in Arabic characters; these they imagine will procure them fuccefs, and bring the greatest miffortunes on their enemies, by taking away their strength, and depriving them of their courage to defend themselves a they likewise imagine that they affish their foes with innumerable disorders, and occasion the most fatal distempers to attack them.

Their warlike weapons vary according to the different parts of the island they live in. Some make use of a dart, which is named tencles, with an iron point longand thick, and carry befides fifteen leffer darts, that are named fitoraches. Others use an ample fitield, and a large dart called caubahi, but the generality use lances as well as darts, and the great men earry fire arms; for to carry a lance, denotes a person to be of common or vulgar rank; but to bear a gun upon the shoulder betokens gentillty, and shews that the bearer ranks as a nobleman, or perfon of superior

These islanders have little notion of discipline in their wars they generally charge in separate bodies of one huneach i their charges are irregularly made, as each individual tries to do his best, but at the same time keeps continually flouting, capering and jumping about, in order at once to intimidate the enemy, and prevent any aim be-ing taken at himself; so that an attack thus made, appears to be rather the affault of a promifcuous mob, than the well conducted onfet of disciplined troops. When an enemy falls, he is immediately pierced through with darts by as many as can come near him, and his throat is after-wards cut from ear to ear. And we are told, that during the time of war, the women keep up continual dancing (alternately) by day and night, never eat or fleep in their own houses, said, however addicted to incontinency, never fuffer the company of another man, whilst their husbands are exposed to danger, persuaded that the men would be killed or wounded by insidelity in their absence, and believe them to be animated by their continual dancing, and their ftrength and courage increased; wherefore in compliance with the most inpersitious customs and ceremonies, they keep up their dancing during the war.

It it happens that one of the princes finds himself on weak to oppose the other by force of arms, he has recounte to negociation, and sends ambassedors, laden with preto negociation, and sends ambs fidors, laden with prefents, to sue for peace, appoint a time and place for conference, and settle all the preliminaries for an accommodation. If the presents are received, and the proposals approved, other presents are sent in return, and every thing is settled for the intended meeting, the place appointed being always on the banks of a river. When the day arrives both princes or chiefs repair to the river at the head of their respective armies. Each then kills a bull in the fight of the armies, and then they present to each other a piece of the liver on the end of a spear, which both are obliged to east a piece of : and after this they mutually are obliged to eat a piece of; and after this they mutually wish, with the most solemn affeveration, "That the liver may burit them; that God may withdraw his hand from amongst them; that they may be destroyed by I mies; and that their race may end in themselve any longer think of carrying on the war; if they have any defign of fending witchcrafts or poilons into the enemies

country; if they carry off the cattle, or destroy the sub-jects of each other, &c.

These people have some notion of astronomy, and divide the year like us, into twelve months: the first day of their year begins with the new moon in March. have no certain and regular account of time and feafons, but compute the years by the days of the weeks, beginning the year of circumcifion on Friday. They have likewife observed the motions of the heavens, the revolutions of the planets, and the figus of the zediac, which, in the man-ner of the Europeans, they likewife divide into twelve figus: namely, in the fpring, Alimiza, Alicarobo, Alacoffi, Libra, Scorpio, Sagittarius: in fummer, Ali-zadi, Adalou, Alohotfi, Capricorn, Aquarius, Pifess: in autumn, Alahemali, Azorou, Alizozo, Aries, Tauras, Gemini in winter, Afarata, Alaafade, Afamboulo, Cancer, Leo, Virgo. Thus are they correct by cafual observations only and accurate, without the knowledge or use of instruments; which evince, that the heavens are an univerfal book that is open to all nations, may be read in every climate, and be ferviceable even to the most savage

Enoratit.

and ignorant.

It is the general opinion, that the perpetual entaity, in which the Madagasezians feem to live with each other, arise either from jealousy or thest; but while the former occasions many private animostice, the latter usually terminates in war. Princes and nobles themselves make an manner of conscience of sealing their neighbours cattle adjuster, and their neighbours entitle more them in the privately; and their neighbours retaine upon them in the fame manner whenever an opportunity profess. In this manner it fometimes only prompts the party to return tha fame treatment; but, at other times it occ. one a war to

fame treatment; but, at other times it occions a war to break out between them.

While Mr. Drury was in captivity in the island of Madagafear, he was a slave to a chief of great consequence, who was nevertheless very fond of scaling his neighbour's cattle privately. He thus describes the distress which as feeled his mind, when he first went with his master on one of these expeditions: "My master, says he, attended by several of his slaves, took mealso with him one evening, into the woods. I observed great preparations made for killing and drefing a bullock, or some such thing; but there being none to kill, and it heins then dark. I perfectly a such as the su killing and drefing a bullock, or fome fuch thing; but there being none to kill, and it being then dark, I per-ceived that they walked with great circumfpection, talked foftly, and tellified all the fymptons of fome feeret defign; upon this, the tears flood in my eyes, imagining that they latended to cut me up, and make a meal of me; but my fright was foon over, whon I faw two tlaves hauling along a bullock by a rope failened to his horns, and my matter flriking his lance into his throat, in order to dispatch him. They immediately cut up the carefa, and dreffel his ca. They immediately cut up the carcafe, and dreffed his en-trails after their own manner. The booty was equally divided, and I observed that each man took care to hide bis portion in some private place, from whence he might to ye vey it away by night. As soon as our husiness was over, we parted, some one way, and some another, for sear of being taken notice of. I now plainly perceived, that we were all this time plundering our neighbours of their property." Though, as we observed before, the wives and slaves of the chiefs come ereeping to lick their feet when they return from war, or from a grand husting match of

laves of the chiefs come ereeping to lick their feet when they return from war, or from a grand hunting match of wild cattle; yet when they return from their thieving matches, no such homage or fubmission is paid to them.

The above gentleman has alsogiven us a curious account of their manner of hunting wild cattle, which is one of the principal diversions of these people, and is as follows: "It was now night, says he, and they were going a beef hunting: for when they go out on purpose to kill the best beasts, they always make choice of the darkett nights. They permitted me, on my request, to accompany them. beant, they aways make choice of the darket nights. They permitted me, on my request, to accompany them, but first ordered me to wash myself, as they them elves did, that we might not simell either of smoke or sweat. I would have raken two lances according to custom, but they obliged me to leave one behind, lest two together with the state of the state o

they obliged me to leave one bening, lest two together might rattle in my hand.

"Thefe cattle feed only in the night; and if all thefe precautions were not taken, they could never be surprised, for they are always on their guard, snorting with their nofes, and listening after their pursuers. We can hear them roar and bellow a great way off, by which we know where they are, and we are forced always to go round, till them are simple to the windward one, for otherwise they they are directly to the windward of us, for otherwife they would foon feent us. As foon as we had got the wind and cattle right a head, and were within hearing, we walked with all the circumfpettion imaginable, cropping the top of the grafe with our hands, as close as possible, to mi-mick as well as we could the noise a cow makes when the mick as well as we could the noise a cow makes when the bites it. The moment they heard us, they were all hush, not one of them bellowed or grazed, but feemed to liften with the utmost attention; which when we perceived, we all stood fill likewise without a whisper, whilst three or four, who best understood the nature of it, continued cropping the grass. When the cattle had listened till, as we imagined, they took us for some of their own species, they returned to their grazing, and we walked with caution nearer, still mimicking them as we moved fostly along. Decan Murnanzac (one of the chiefs) ordered me to keep behind, left they should discern my white skin, and be startled , he also gave me his lamber to cover myself with, startied; he also gave me his samber to cover myself with, which was a large piece of black sisk; so that, as the grass was above knee deep, if I had been near them, they could have seen nothing but by face.

"We got at length amongst them, so that one of our men, with some grass in his hand, and under the cover of a bush, took hold of the dug of a cow, and, finding that she gave no milk, he concluded that she was not lean;

for which reason he struck his lance instantly into her belly; and drew it out again, making no other motion. The caw, then wounded, will give a spring perhaps, and make a noise, as if another had run her horns against hera but this is so common amongst them, that the herd is not any ways disturbed by it to that our people stack three as four after this manner, and left them with an intention to come the next morning and trace them by their blood, for it is very dangerous to keep too near them in the slight. As soon as they find themselves forely wounded, they run from their companions, and will attack the first man they see. They are generally found actually dead, or fallen down in some wood or shelter of bushes, as if they industriously endeavoured to conceal themselves at these times. It soon after this beef-bunting, we had an accidental diversion of another kind q our dogs had got the feent of some wild hogs the seets occ into a thicket, and were very bufy in running and the mean and finds no entrance for a confiderable time; is the property of the confiderable time; is the property of the confiderable time; is the property when the structure of the confiderable time; is the property when the structure of the confiderable time; is the property when the confiderable times are also and attempted to enter the

his men or co

is

confiderable time; is a m, to however, they found the path which the wine had charles, and attempted to enter the wood by it; the paffage was defended by a large boar who fought the dogs with great fury, and wounded one of them in a desperate manner. Now what with the dogs on one hand, and the fwine on the other, there was fuch a yelping; grunting, and howling, that they woods rang with their noise; and one would have imagined all the liogs in the island had not there by confent, in order to a meet their quarrel upon us. We laid down with guns and lances; Decah Murmanzach that the boar that wounded his dogs where Murnanach that the boar that wounded his dog; where-upon another, in an inftant, defended the cuttance, and fought fo refolutely, that neither the dogs, nor we ourfelves, could come near the cattle that were within, till we had made a passage behind them with our hatchets and lances; and then fired upon some of the most resolute who turned upon us: the reft, perceiving themselves attacked behind, fought their way through the dogs, and ran away, with the dogs after them; when words cannot describe the noise there was, especially after a number of them were wounded by our men with their fire."

With respect to the political state and government of this island, the accounts transmitted to us differ very much the island, the accounts transinisted to us differ very much from each other, which cannot be imputed to any want of authenticity in the several authors, but to the revolutions which have so frequently happened; to that different writers, in treating of the political state of Madegalicar, at various periods, must of course vary from each other exceedingly. Hence Vincentius Albus and Gaspar de San Bernardino have informed us, that this island was divided into six diffinct kingdouns, whose soverigns were at continual variance with each other; and Marcus Paulus, the Venerian, Ella us; that in his time it was governed by only Venetian, tells us, that in his time it was governed by only four fovereigns. By later accounts, however, it is certain, that every province hath its particular fovereign, or lord, who is called decan, or dian; and this fovereign lord appoints a tiloubei, or governor, over every village in his tar-

We have the following description of one of these sowerings, given us by Mr. Prury, who was presented to him. His hair was twisted in Prots, begin ag at the crown of the head, where they formed a small circle: below them was the head, where they formed a finall circle; below them was another ring of knots, and thus they were continued infeveral circles, each longer than that above it. On fome of these knots hung sue beads; he had also a forchead-piece of beads, that iming so low as to reach his note. About his neck he had a fine necklare, formed of two strings of beads, several of which were of gold; this necklace hung down before in the manner of an alderman's chain and our sech wide the had so rect latter. Pracelets. chain, and on each wrift he had five or if liver bracelets, and four rings of gold upon his were near twenty thrings of be trung very close, and exactly fitted to his legs. He is fil mantle over his shoulders, and another piece of ink, as use I, about his waift. But these princes differ as much ! ac disposition

of their ornaments, as in their profilons.

The fovereigns of this island, though they have an absolute power over the lives of their subjects, and sometimes still with their own hand those who exasperate them, will nevertheless talk familiarly with every body, and fill preserve a decent state. They usually give audience to their subjects string cross-legged on a mat. These princes have no regular bodies of troops trained to war, but make use of their vailals, who endeavour to imitate their bravery; but generally fly when they fet them the example, or when they are killed. Their arms are lances, batchets made in the country, and guns purclasfed of the Europeans, who-frequent the different parts of the island.

In this island, the civil government is not dependent on the diets or public infruments; nor is there a written law in the whole country. The first guide of these people is a kind of natural law, sriling from the common occurrences of life, founded on the feelings of human nature, resulting from reason, and handed down by tradition from father to fon. father to fon.

Here are three kinds of these traditional or oral laws; viz. 1. Msfindili, or the law of the prince; 2. Msfindili, or the law of individuals; and, 3. Msfintanc, or the general law or curom of the island; all of which appear to be founded, for the most part, on good whie, and

natural justice.

The law of the prince respects his peculiar prerogatives, and shews how far his will should be limited, and how far his power extended. The second, or the law of individuals. nis power extended. The fecond, or the law of individuals, is of a domedic nature, and respects each Individuals, his manner of living. his deportment according to his circumstances, his behaviour to persons of his own family, or to his immediate neighbours. The third kind, is the universal law of the country, or what may be called the common law. It regards all occurrences, offences, and compolaints which are of a public and material nature, or which in any measure affect the welfare of the public in centeral.

By the law of the prince, or the prerogative law, (which is of the first kind) it is made death to lie with one of the fovereign's wives

According to the laws of the fecond kind, if a man is detected in robbing his neighbour of an ox or a cow, he is obliged to reflore it ten fold. Alfo, if a man borrows an 'v or a cow of his neighbour, and does not return it in a years time, fix calves are looked upon as an equivalent for the ox; and if he neglects payment at that time, those calves are supposed to be three steers, and three heisers; and their increase, which, by a fair computation, arises by their growth and production, is the mans right of whom the beaft was borrowed. And if it go on for ten years, or mny longer term, it is computed what three bulls and three cows might produce in that time, all which becomes the creditor's property.

The laws of the third kind, or those of a general na-ture, are : if a man has criminal conversation with the wife of another man who is his superior, he forfeits thirty head of cattle, besides beads and thovels in abundance; but if the men are of equal degree, then the fine is only If any one maliciously assaults twenty head of cattle. another, and breaks a leg or an arm, he is fined fifteen head of cattie, as a forfeit to the party injured. If any one breaks a head of another, and the aggrieved party has not retur. I the blow, he receiver three beeves by way of damage. If any one fleals anothers hive of honey, and is caught in the feet, the fine is three iron shovels; for it is to be obfered (as trade is by way of barter), that iron shovels, lices, &c. are a kind of finall money among these people. If one man's cartle break into anomers praction, the owner, for every heaft found there, must give an analysis and one happens to iron shovel. If two men quarrel, and one happens to curse the other's father or mother, whether they be liv-ing or dead, and his antagonist has so much command of himself as to refrain from cursing the other's father or mother, he recovers two breves as a compensation. If any one is found guilty of stealing Guiney corn, cara-vances, potatoes, or the like, out of any of the plantations, he forfeits a cow and a cast to the owner; but if the da-niage done is supposed to require a greater forfeit, more is then to be given.

Before we conclude this fection, it will be proper to take notice, that to the fouth-west of Madagascar, are a people who seem almost of a different species from the other inhabitants of the island. These are called Viraimbers. Their leads are of a very singular shape, the hinder part being as state as a trencher, and the forehead nearly so, which, it is observed, was probably occasioned by their prefling the child's head from its birth. Their hair is not long, like that of the other natives, nor is it quite fo woolly as the hair of the inhabitants of Guiney.

These people have a language peculiar to themselves, though they speak that of the island. Their religion is likewise different from that of the other natives, they having no owley (a kind of portable images) in their houses; but pay an extraordinary attention to the new moon, and when they fit down to their meals, they take a hit of meas, and throwing it over their heads, fay, "There is a bit for the fpirit." Then cutting four more little bits, they throw them to the lords of the four quarters of the earth.

This is the general practice of those who have a regard for religion, though there are many who neglect it; just not in Europe, many neglect faying grace at their meals. But these people, like those in the other parts of the island, have neither priests nor temples; nor is difference of religion confidered as any crime by them.

The Virsimbers make very good earthern ware, as post, diffees, and jugs, glasing them both within and with set; and in many other respects they are very ingenies.

with mi and in many other respects they are very ingenion riscers.

all Englishmen, we are told, have at various riscers to all Englishmen, we are told, have at various riscers to an area of the fourthern coast of Madagasar, and there detained many years, among these were Resert Drury, ayouth (to whose minutes we are indebted for several remarkable particulars relating to this island) and Mr. John Benbow, son of the famous admiral of that name. Drury, after having been fifteen years a slave, was redeemed by captain William Mackett, and brought to England in 17:10. He resided in London many years, and there published an account of his adventures. Benbow also lived many years after his return to England, and wrote a description of the southern part of rhe island, which was handed about in manuscript among his acquaintance, and by that means was lost; this curious performance having been in vain attempted to be recovered by the family. by the family.

SECT. V.

Contains an account of the religious seremonies and superfities a rises of the inhabitants of Madagastar, their som of cir-cumcifion, some particulars relative to their funerals, and of the ombinistes, or pretended magiciant.

THE inhabitante of Madagascar have no particular places of religious worship; nor do they offer up prayers, unless their occasional incanantations, may be so called, notwithstanding they adore and acknowledge and Supreme God, whom they call Deaan Unghorras, apprene God, whom they can Desan Ungnorras, which fignifies the Lord above; who created the heavens and the earth, all animated beings, and an innumerable hoft of angels, in feven days. Yet after having this just idea of the deity, they have not any notion that it is ides of the deity, they have not any notion that it is neceffary to workip him, or pay him divine honours. They likewife fsy, there are four other lords, each of whom has his respective quarter of the world, as the northern, the eastern, the fouthern, and the western lords. The eastern lord they say is the dispenser of plagues and miseries to mankind, by the permission or command of the Supreme God; and though the others also fulfill his commands, they are chiefly the dispensers of headers. They consider these lords as mediators between benefits. They confider these lords as mediators between men and the great God, on which account they have an high veneration for them, and recommend themselves to them in their prayers and offerings.

Almost every person is supposed to have a distinct and separate spirit wito presides over his actions, and presents his prayers to the Lord above; and the people expect, that after a secrifice, these spirits will tell them in dreams what they are to do, and warn them of the dangers that will await them. This naturally renders them super-fittious with respect to dreams, and their most common

They perform the rite of circumcifion, but with very different ceremonies from those practifed by the Jews and Mahometans, from whom they are faid to have received the custom, by means of the Arabs, who came to settle there. This ceremony is performed every third year; at which time they build a hall raifed upon wooden pillars, and the three th palifiedo and plants at that opening a banana-tree, with leaves and fruit, on which hangs a girdle tinged with the blood of the bull: after which that place is looked upon as facred; no person approaches it but with the utmost re-spect, and none enter into it.

The fathers of the children who are to be circumcifed The fathers of the cultures was a control of March, and the last day they walk abroad two and two, carrying the children as their shoulders, wrapped up in pagns. The young dren on their shoulders, wrapped up in paans. The young fabres in their hands, they make threatening motions with them, as though they were going to attack an enemy.
After they have walked three times round the donac (the

bord's house), they stop before the door, and dividing themselves into troops, they exercise themselves a long while in seigned attacks, till being tired at last, they are obliged to fit down on mars prepared for them.

The neat day a priest or marshoot runs like a madman into all the cottages, in order to drive away the evil spirit out of the bodies of these children; he threatens him, and at length makes the people believe that he has forced him to come into the body of a chicken, which is tied up in a basket, and, cruthing it to death, he tells them the hildren are delivered from that evil spirit. The staters and mothers present themselves afterwards before the great lord, with as many ozen and as many bisck chickens as there are children to be circumcised, and the lord appoints the day on which the ceremony is to be performed.

That day being come, the lord, sitting at the entry of the hall, receives, on a table covered with passes or carpets, the offerings of the mothers; then he enters into the hall, and sits down in the middle of it, and the fathers holding their children on a very smooth store, the lord

holding their children on a very innorth stone, the lord cuts off the prepuse; which done, the father imme-diately cuts the throat of the chicken, makes the blood of it drop on the ground, and gives the child back to the

at drop on the ground, and gives the child back to the mother; who, dipping cotton into the blood of the ox that has been killed, and into that of the chicken alfo, ties it about the wound of the child.

The following account of their method of thanfgiving after a fuccessful war, is extraded from Druty. "The inhabitants (fays he) have in all their houses, a small portable utensit, which is devoted to religious uses, and is a kind of boushold also; which she call the owner. table utering, which is devoted to religious uses, and is a kind of houthold star, which they call the owley. It is made of a peculiar wood, in finall pieces neatly joined, and making almost the form of a half-moon, with the horns downwards, between which are placed two alliga-tors teeth. This is adorned with various kinds of beeds, and such a sash fastened to it behind as a man ties about his waift when he goes to war. However, I observed that they brought two forks from the woods, and fixed them in the ground, on which was laid a beam, flender at each in the ground, on which was laid a beam, flender at each end, and about fix feet long, with two or three pegs in it, and opon this they hung the owley. Behind it was a long pole, to which a bullock was failened with a cord. They had a pan full of live costs, upon which they threw an aromatic gum, and plastted it under the owley. Then they took a small quantity of hair from the tail, chin, and eye-brows of the ox, and put them on the owley. Then my master used some particular gestures with a large knife in his hand, and made a formal incantation, in which shared, solved. It whe next place, they three the or the people joined. In the next place, they threw the ox on the ground, with his legs tied fast together, and my master cut his throat." Thus this ceremony ended; and this is deemed an obtation for having obtained a

victory over an enemy.

These people have a great veneration for their forefathers, and have an affurance of their spirits always exiding, which appears in almost every circumstance of the few religious acts which they perform. The burial of the dead is very fingular and folemn. As they treat each other in all calamities and misfortunes with great humanity, fo they frequently visit the fick, and contribute all in their power to affift the afficted family, and to re-flore those to health who are ill. When a person dies, all the relations and neighbours come to the house, the wo-men lament, and the men affist in preparing for the funeral, the manner of which we have already de-

(cribed

scribed.

Each family has a peculiar burying-place, which none dare to break into; it is enclosed with a kind of pallifadoes. No person is permitted to enter these burying-grounds but some of the nearest relations. They commonly go once a year to these burying-places to clear them of weeds, but never enter them till they have burnt a bullock or a cow before the fepolchre.

a pulsors or a cow perore the reputative.

Their method of mourning doth not conflit in the colour or form of the garment, but in flaving their heads; and every man under the jurifidiction of a king, or lord, who does not do this at the death of his prince, is efteemed difaffected to the royal family.

These people are extremely superstitious in their im-plicit obedience to all the directions of their ombiasses, or magicians, who pretend to know the fecret powers of or magiciality, who be engage the affiftance of the guardian fairlits on all occasions. Nothing of importance can be spirits on all occasions. andertaken without confulting them; and it appears that fome of the lords, who are men of fenfe, keep one of these conjurors out of policy, only to amuse their people, who, they think, ought to be humoured in their bigotry,

and copivated by the chifices of these impostures, in order to render them more tractable and obedient. These onphasses, however, never inserters in the acts of their religion, except in fixing the proper minute of performing them i nor in religious matters is any one of-sended because his neighbour has some ecremonies of his own, and devistes from the forms generally practiced.

The first order of ombiasses is usually composed of white Madagascrians, who practice physic, teach the Arabic language, compose the airidal, or Arabic words, written on small billets, which are used as charms; at as school-masters, conjurors, wisards, &c. The fecond order are black ombiasses; and these, by pretending to geomancy, or the art of divination, upon all occasions, live with great reputation among the people, and accumulate considerable profits to themselves. There is also a class of infectior outbiasses, which are placed upon the footing of quacks, as not being deemed so regular in their professions as the two former orders. These, however, wist the sick, not to administer medicines, but to predict the event of the disorder; their predictions usually being favourable recording to the amount of the fee.

Most of their traditions and religious principles have been introduced by the Mahometan Arabs, who were the progetitors of those people called the Madagascrian whites.

Most of their traditions and religious principles have been introduced by the Mahometan Arabs, who were the progenitors of those people called the Madagaserian whites; it is therefore no wonder that they should have made such a felection of Christian, Jewish and Mahometan tenter, and have interlarded them with absurbailes of their own: and have interlarded them with abburdances of their own; nor can we be furprised that they should have attempted to make the Mahomeran the prevailing and primitive religion, since, where chronology is unknown, any error which dates alone can restify may be imbibed. However, they are in a great measure right in their notions respecting Christ, as they allow that he was fent by God; that he was not begotten of man, that he was born of a virgin; was not begotten or hish, that he was a great prophet, and that he was God and man; that he was a great prophet, and that he was crucified by the Jews; but then they add, that God, not thinking proper that he should die, substituted a malesactor in his place, who died instead of him. The latter circumstance might originate from the scriptural account of the malesactor who was crucified at the same time with Christ; but must have been adopted from their total ignorance of the end for which the Redeemer of mankind came into the world.

SECT. V.

Of the hiftery and revolutions in the island of Madagescar.

As the people of this idland are without public records, or the chronological knowledge of events, confequently the antient hillory of the country cannot be given by us. All that is known is from oral tradition; but the transactions thus handed down are too futile and vague, and too much interwoven with fiction, to merit notice.
We are indeed told, that the province of Anoffi, which
has been better known to the Europeans than any other part of the ifland, was, previous to the arrival of the French, governed by a fovereign, who was net only honoured as a king, but almost revered as a god. His name was Andian Ramach, and on his demise devolved. name was Andian Kamaen, and on his centified evolved to Andian Maroarive, who was a Christian, having been educated at Goa, and baptized by the jefuits. He however, foon turned to paganism, and was afterwards, on the attack of the town of Franchere by the French, killed by a mulket-ball.

In the year 1642, captain Rivault, a Frenchman, ob-tained permission from cardinal Rieblieu, for nine years, to fend ships and forces to Madagascar, and the neigh-bouring islands, in order to establish a colony and planand establish an exclusive commerce there. the faid purpose, this gentleman erected a society, under the name of a French East India company, and the grant was drawn out, with the addition of ten years more privilege; fo that it extended to the year 1661. In the mean time, that is, immediately fubfequent to the making out of the grant, A. D. 1642, the first ship was fent under the command of captain Coquet, who was going to load ebony at Madagascar, on the account of himself and some private merchants; but had orders to take with him two governors, whose names were Pronis and Fauquenbourg, and twelve other Frenchmen, these being commanded to land and remain there, till the arrival of a ship from

France, which was in November following.

In September captain Coquet arrived at Madagascar, having in his way enchored at the island of Bourbon,

which he took policifion of in the name of the king of France; touching afterwords at the file of hi. Mary, build the fame; and, failing to the bay of Antongli in Maddagafer, be afted in a finitiar manner. Pronia and Fsuquenbourg were at length landed in the port of St. Lucia, in the province of Manghabel, which is one of the prin-

quenbourg were at length ismost in the province of Manghabel, which is one of the printipal places in the island.

On the first of April in the entiting year, the expected hip from France artived. I twas named the St. Lawrence, and was under the command of captain Cilies Resimont. This officer brought faventy men with him, to reinforce Pronis. The inhabitants, jesiloue that the French would obtain too firm a footing in their country, insestated an opposition: but their intentions were prevented, or at cast delayed, by the prudent conduct and timely presents of Pronis. Upon this success, Pronis sent twelve men to penetrate into the province of Matatan, fix of whom were cut off by the natives, and the rest compelled to retreat; and soon after captain Resimont's son and six failers were nurdered in the province of Vohistbang. This opposition was owing to the secret intrigues of the leading men in Anoss, who, from their maritime situation, did not dare to offend the French themselvest, but upon all occasions, stirred up the people of other provinces to oppose and murder them.

Captain Pronis, in 1644, thought proper to remove from St. Lucia to the hay of Tholongate, where he began to fortify himself; and having reduced almost the whole province of Anosi by force of arms, he built fort Duphin, the fituation of which was excellent, the harbour commodious and finely fluctured, and the entrance very convenient for shipping of any hurden. Behind the fort, he erected several other buildings, with large inclosures, which produced various forts of veretables and fruits. However, in 1650, the fort, by some unforeseen secident, took fire, and was totally destroyed; but was foon afterwards rebuilt, and firougly garrifoned; the French being always at variance with the natives, and frequently at war

10 er,

> The celebrated French governor, Flacourt, in the year 1651, at the head of eighty Frenchmen, and a great number of armed negroots, ravaged the country to a confiderable diffance from the fort, carrying off great quantities of eattle, and deftroving all the houses and huts in his way. This occasioned the natives to conceive an extraordinary aversion to the French; and what added to their diffike was, that whenever any prisoners fell into the bands of the was, that whenever any prifoners fell into the hands of the French, they looked upon them all in an equal figit, and fold them indifferiminately to the then Dutch governor of the ifland of Mauritius, not making any differintialion between deeans or lords, freemen or flaves 1 or flowing any greater respect to their ladies, when captives, than to women of a lower rank. After these transactions, the French, finding that the idea of conquering Madagasa was chimerical; and the danger and expences of maintaining a colony, and keeping up a fortress there, were not recentpenced by the profits accruing from the settlement, thought proper to abandon the island, and all projects relative to the reduction of it.
>
> Mr. Drury, during his captivity in this island, has collected several traditional accounts given by the natives, of the attempts made by the French to settle on and flubdue Madagasar, which being extremely curious, we shall here

> the attempts made by the French to fettle on and fubdue Madaga(car, which being extremely curious, we finall here piesent to our readers for their entertainment. "This part of the country (fays he) to which the French have given the name of port Dauphin, is called Antenofa, in the Madaga(ar language. There came hither, upwards of a cantwry ago, two French ships, on what account I cannot learn; however, they came to an anchor close under land, in a very good harbour. The caprains, observing that there were plenty of cattle, all kinds of provisions, and a very good foil, determined that one of them should say here, and establish a settlement. Hereupon they cast lots who should continue on the island, and the person on whem the lot fell was captain Mesmerrico, who landed with two hundred white then, well rice, who landed with two hundred white men, well armed, and provided with flore of ammunition, and other necessaries for the building of a fort, which they imme-

> diately began. oner had the natives observed their intention, but they used their utmost art and industry to prevent them; this created a war, in which the French were the victors, who took at several times a great number of prisoners. In this war, the king Antenofa and his brother were killed; and, amongh many other children that were made cap-rives, the king's fon was one. When the French had fupprefied the natives, and completed their fort, the ships

fet All for France, and carried with them this young prince, and feveral other persons of diffination.

The natives, shoult a year after this expedition, because it is better presently diffused at the indignity offered to their young prince, and coold by he mean, railful the government and direction of foreignes) bowever, the French, by their artful and cumbing deportment, and infinitations, gained fo much friendthy among them, that they married, and lived up and down in leveral towns, at some diffused from each other; and not above five or fai in a place. They occasionally affifted the natives in their wars against a king that residues to the northward, whom they defeated, took a great number of flaves, and many cattle. In this manner they lived for some years with great transpallity, negleding their fort, and extending themselves all over the whole country of Antenosa? but at last, as their familias grew numerous, the natives grew jealous; and recollecting how inhumanly they had treated their prince, and perceiving them thus scattered and dispersed, they thought this a favourable opportunity to free themselves from a foreign yoke. Hersupon they formed a confipracy to cut off all the white men in one day, and the Wednesday following it was put in execution, not leaving a white man alive in the place.

A French thip soon after came thither as usual, when the materominders, of flaves, who retained a respect for the French, got a knoe, and went off to them, and informed them that their countrymen were all malfacred. The captain was startled, and deeply concerned at this melancholy news, but could not revenge their cause, being glad to fleer another course, without making the least attempt to go on thore; fo that the natives, having now nobody to interrupt them, put their government into its original form, and made choice of one, for their king, who was the nearest related to the former; there being no other son but him whom the French thook captive.

They lived peaceably under this new king's direction for fewera afked if they were English of French? They replied, the latter; but they were fent by express orders from the French king, with some valuable presents, and were inclined to make a treaty of peace. The king they had last chosen, whom we have mentioned before, died about a month before their arrival, and no new one was then elected in his stead; but the old queen (mother of the young prince, whom they had so chandestitlely, conveyed away some years before) being then alive, gave directions that the ambassadors should be conducted to her house. His men carried a number of things of no great value with them; but such your beginning that the weak of the conducted to her house. His men carried a number of things of no great value with them i but fuch, however, as they knew would be highly agreeable in this country. Their were formally prefented in the name of the French king i and the queen testified her staisfaction in the reception of them, by entertaining the captain in the most elegant manner she could devise. This day passed in compliments, mutual presents, and such other exerunoires as were consistent with their ideas

fuch other exemionics as were confident with their ideas of public graindeur.

The next day the queen fent for the captain, and informed him, that the expedied his men, as well as him, felf, thould take the oaths, according to the custom of her country. The captain, having readily agreed to her proposition, the ceremony was performed after the following manner: The holy owley (of which we have already given some account) was brought out, and hung upon a piece of wood laid cross-wife on two forks, all which were cut down on this folenm occasion; as was alfor a long pole, to which a bullock was fastened: this was provided by the queen, and when killed, they took pare of the tail, and some of the hair of the nose and eyebrows, and put them on some live coals under the owley; they then took some of the blood, which they sprinkled upon

upon it, and upon the beam whereon it hung; the liver also was reafted, and a piece planed on it; two other pieces were put on two lances, which were stuck in the ground betwint the queen and the ambashador; after which the queen swore first to this or the like effect; "I swear by the great God above, by the four gods of the four quarters of the world, by the spirits of my forefathers, and before this holy owley; that neither I; nor shy of my offipring, nor any of my people, who affirst at this solemnity, or their liftse, shall or will wittingly or willingly kill any Frenchman, unless he first proves the aggressor; and if we or any of us, mean any other than the plain and honest truth by this protestation, may this liver, which I now eat, be converted into possion, and destroy me immediately." Having repeated this form of words, the took the piece of liver off the lance, and eat it; which when the had duite, the sham ambashador followed her example.

"After this solemn contract was concluded, the captain, or quondam ambashador, tayed on shore about two or three days, and fent on board what provisions his people wanted. A firm friendship being now established between them, they strove who should outvie the other in the arts of coursely and complaisance. The captain invited the queen to go on board his vessel, and she very readily went with several of the chief of her people, who were treated by the captain with great magnificence, and to her intire shis-faction.

"When the queen returned on shore in the ship's boat.

captain with great magnificence, and to her intire falisfaction.

"When the queen returned on thore in the fhip's boat,
the flood looking about her for fome time after the was
landed. The Frenchmen, not regarding the preferce of
the black queen, firipped, and fwam about to walk and cool
themselves; her majesty, observing the whiteness of their
kins, indulged her currosity in looking on theth; at last,
perceiving one man, whose skin was much darker than the
reft of his companiors, as he came towards the shore, and
was going to put on his cloaths, she espied a particular mole
under his left breast; the went to him immediately, and,
looking more wishfully on it, would not permit him to
put on his shirt; but claimed him as her son, who had
been carried away when a cliss man been for, who had
had not patence to reftrain herself, but ran to him, (crying with joy, that she had sound her son) threw her arms
about his nock, and almost shieds him with killes. This
supprised all the people, as well blacks as white; till having recovered herself a little, she turned to them and told
them, this was her son; and thewed them the private mark.
They who had known the young prince, drew near, viewed They who had known the young prince, drew near, viewed the mole, and acquiesced with her, that it must be he, and

"The Frenchmen could not tell what to make of this odd discovery, nor what fatal confequences might possibly attend it. The captain, therefore, taking the man asside, advised him to give as artful answers as he could to what questions they should ask him, for their fastry's sake. Now there were several blacks who spoke French, and by their means the Frenchman as soon understood the queen as they did. She desired they would ask him, If he knew the country he was born in? He answered, he could remember nothing of it, for he was carried from his native place when a child. She asked him, If he knew the r / He faid, he could not preteind to fay absolutely that he did: but he thought the hore a great resemblance to somebody he was much used to when young. This consimmed them more and more in their opinion: as to his being white skinned, they thought that might easily be from his wearing cloaths, dwring the time he was absent from home: and his hair was as black as theirs; so that it was concluded it must be their prince. The Frenchmen could not tell what to make of this

was as beneather their prince.

"The old queen was transported with joy at finding her fon, and the natives were for chuling him their king directly, he being the next heir. They asked what was his name? He took them, he never remembered that he was name? relied by any other name than that of Samuel; but they gave him what they thought was his original name, compounded with Tuley, which denoted his return, or arrival, for they called him Deem Tuley-Noro; and he was also forther faluted immediately with the title of panafker, that

is, king of Antenofia.

"The French captain and his men were forprifed to find the man $a\Omega$ his part to desteroully, not perceiving at first dist he was in earness, and was as fond of being their king, as they were of electing him; shough it was to heathenish a place. He had here twelve though of highling heathenith a place. He had here twelve though it was so heathenith a place. He had here twelve thouf not fighting men irumediately under his command; and a fine spacious and petniful country. The hin's crew failed away, and left him behind them; but as oven as the French had occasion for what this ifland afforded, they meas it a confact firmt practice to put into port Dauphin, and traffic with

them.

"About three years before we were calt away, continues Drury, a French (hip happening to be there, fome of the men got drunt; and in a quarrel with fome of the men got drunt; and in a quarrel with fome of the natives, told them, that king Samuel was not their lawful prince; but that he was fill reddent in France. Tals might have proved of very final confequence to him, but he took fuch care to prevent it as no one could justly blame him for: he fent for the man who made this public declaration, and ordered him to be floot to death; he commanded likewise his companions to depart forthwith, and afford them, that if ever they, or any of their countrymen, prefumed to come within his territories again, they should be severely punished."

"It was once exceeded, says Mr. Salmon, that the ni-

punished."

"It was once expected, says Mr. Salmon, that the pirates would have made a fettlement in this island, and usured the dominion of it, having fix or feven sail of thiss, with which they used to infect the Indian feas, and carry their prizes into a place of fecurity, on the north-east part of Madagascar, where they possessed themselves of a harbour of difficult access, and defended from storms by the little island of St. Mary's, which lies before it in seventeen degrees south is titude.

"The court of England."

degrees fouth latitude.

"The court of England, about the year 1700, fent a fquadron of four men of war, commanded by commodore Warren, to drive the pirates from thence; but he, finding it impossible to come at them, published a proclamation, in pursuance of his instructions, offering a pardon to all that would come in, except Avery their leader; but not a man came over to him. The commodore afterwards proceeded to fort St. George in the East Indies, where the writer of these papers saw him. This gentleman used his utmost diligence to meet with the pirates in the seas.of India, but to no purpose; and having left one or two of his shies on onigence to meet with the pirates in the feas.of India, but to no purpofe; and having left one or two of his ships on the shoals near Malacca, returned with the rest to England: however, his expedition had this good effect, that the pirates durft not silr out from Madagastar; and, finding they were so narrowly watched, they agreed to divide what they had got, and disperse themselves. Two of them were afterwards taken by the Durch at Malacca; and, being some fort St. George, were brutcher over to Furdan. ing fent to fort St. George, were brought over to England in the Howland, being the fame ship the author came house

in the year 1701.
We find, however, from more recent accounts, that Avery diffipated his immerife wealth, returned to England incognito, lived many years privately, and ipoorly, and se length died in great indigence and mifery at Biddeford in Devonthire, thus concluding a life of wickedness in a death

R

of anguish and unavailing remote.

Another English pirate, named Plaintain, fettled here about the year 140, and attempted to profit by the divisions among the petty princes of the island, formetimes taking the part of one, and fometimes of another, by which conduct he made himself respectable among the natives, till each individual of his crew affecting the state of nobility, and growing too proud to be commanded, the captain found himfelf intirely deferted, when, venturing to fea in an open boat, with only one affociate, he landed on the coaft of Malabar in India, and entered into the fervices of roatt of Malabar in India, and entered into the service of the celebrated piratical prince Angela, whole facet were deflroyed in the year 1755 by admiral Wation, fix of his fosts were levelled with the ground, and his principal fort was afterwards taken by general Clive and the English flow in 1750, together with his treature; and his family were at the same time made prisoners by admiral Wation, who behaved towards them with the greatest generolity and bu-

manity.

We shall conclude this fedion with an account of the places where the Europeans have attempted to make fettle-ments on the island of Madagasear; the most remarkable of which are the bay of Antongil, the island of St. Mary, fort Dauphin, and the bay of St. Augustine.

r. The bay of St. Antongil is fituated on the eaftern, coaft, in the fixteenth degree of fouth latitude; it extends about fourteen leagues due north, and is nine leagues broad about fourteen seages due north, and is nine reagues broad at its entrance. In the bottom of the bay is a fmall idiad, which affords plenty of provisions, good water, and a fase harbour for shipping. This bay was once frequented by the Dutch, who had a kind of factory there, confishing of fourteen men, for buying of faves and rice; but some of them died with fickness, and others were murdered by the inhabitants, whom they treated with infolence.

2. The island of St. Mary, also called Noss Ibrahita, or

the ille of Abraham, if fituated to the fouthward of the bay of St. Antongil, in the feventeenth degree of fouth latitude, and is fifty four miles long from north to fouth.

but to greatest breadth from east to west does not exceed nine miles; the nearest part is about two leagues distant

from the coaft.

This is and is entirely furrounded with rocks, over which cances may pass at high water; but at ehb there is not above half a foot depth, and on these rocks may be seen the finest white coral in the world. Ambegras is often found on the eastern coaft of the island, and the island it-felf affords many forts of gums. But we shall give a fuller description of this island hereafter.

3. Fort Dauphin, which was creded by the French, is streated nearthe fouth-east point of Madagascar, in twenty-four degrees twenty-five minutes fouth latitude, near the mouth of the river Franchers; but the French; finding that the trade three did not answer the expence of keeping

that the trade there did not answer the expence of keeping

that the trade there did not answer the expense of keeping the colony, quitted it long fines.

4. St. Augustine's Bay is on the western coast of Madagasar, in twenty-three degrees thirty minutes south latitude, that is, just under the tropic of Capricorn. It is formed by the mouth of the river Yong Lahe. The English formerly traded at this bay, and at other places on the western side of the island, for flaves.

western side of the island, for flaves.

The Euro cans who frequented the island of Madagafacar, purchafed scare any thing there but flaves and cattle, which the natives exchanged for guns, gun-powder, heads, cloathing, and bard-ware; and here the flips bound to and from India fometimes stop, in order to furnish themfelves with water, fresh provisions, and fruits, for which they give pieces of filk, calicoe, and some of the above articles, by way of barter.

cles, by way of barter. A second of the label of the labe

1. 45.

SECT. VII.

Describes the island and streights of Babelmandel, near the Red Sea; also the islands of Majue, Marata, Swaken, and Barbora.

THE Areights of Babelmandel join the Indian ocean to the Red fea. The name given to them is, a conruption of the words babal mandul, which latter fignifies
"the gats of weeping," an epithet given by the Arabs to
shefe fireights, on account of the danger that attended the navigation of them, which was conceived to be fo great that when any of their relations passed them, they put on mourning, as for persons whom they had given over for lost. Nevertheless, many, allured by the hope of gain engaged in these voyages, notwithstanding the dangers they re expoted to.

were expoled to.

The Arabian gulf, or Red fea, which includes the freights of Babelmandel, begins on that part of the ocean, bounded, on the fide of Africa, by cape Guardafuy, of Old Aromata; and, on the fide of Africa, by cape Tartak. The shores run westward from these capes as far as Aden

The flores run well-ward from these capes as far as Aden and Zeyla; and proceed from thence, narrowing with defint cossis, and with little windings, till they meet with two promontories in the mouth of the Arabic gulf.

The part of the promontory on the Arabian side, was antiently called Possodium, but the name of that on the European side is lost. The Arabians and Indians called the intermediate streight Albabo, which signifies the gates or mouths, as it is not above six leagues wide, and so interspersed with little islands, as source to admit of shipping pass through its narrow channels. These small islands are full of bays, ports, nooks, creeks, &c. the ebbing and slewing of the waters into add from which greatly impede the navigation here. the navigation here.

the navigation here.

The cape, on the fide of Arabia, appears to those at sea, to be an island at a confiderable distance from the main land. The island of Robon, or Roboan (fignifying, in Arabic, a pilot is not far from the cape. This appellation was given to the island, because several pilots, who understood the navigation of these streights, resided here. The island of Robon is very star, and not two mites in compass. The water from here to the promontory is so shallow, that, when the tide is low, it may easily be forded.

Here is another island about a league farther it is something bigger than Robon's island; but, though it has a very good haven, is unfrequented

thing bigger san Abbon hand; but, though it has a very good haven, is unfrequented.

It must naturally be supposed, that, by means of someny islands, several channels are made; yet as there is eleven although depth quite through, and neither stat shoals, nor any other obstruction, the principal of them may be No. 42.

puffed in the midft, Reering north-west by west, or south east by east.

ough the other channels are not quite fo wide as the Though the other channels are not quite fo wide as the above, they may be as easily navigated; and as the Arabians do not appear at present to be afraid of failing on their ftreights, we may suppose they are either more fidding in manistime affairs, or less fearfait than they formerly were, when they named them.

The island of Bab or Fabbinandel, is fituated towards the entrance into the Rod fea, and forms one fide of the ftreights of Babelmandel, lying it, twelve degrees fifty minutes north lattede, and is about five miles in circumference. It was formerly called the island of Diodorus,

ference. It was formerly called the ifland of Diodorus, but now the Port of Afflictions. This Island stands in the very middle of the fireights, about four miles from the Arabian, and the fame diffance from the Abyfinian coaft, directly opposite to cape Zeila. Hence it forms two fine channels, one on each fide of it, and from its fituation might, if properly fortified, command both. Antient historians affirm, that the kings of Egypt fortified these channels, by laying booms or chains across both, from the island to the continent on each fide. This island is important on no other account than its admirable fination, as neither grain, roots, herbage, or fruits, are produced in it. However the Arabs of the kingdom of Adel and the Abyfinans formaths contracted with pract fury for the notified. Flowever the Arabs of the kingdom of Adel and the Abyf-finians formerly contended with great fury for the possef-fion of it, and became masters of it alternately, till the Portuguese took it, and demolished the fortifications, Since the Turks have possessed the inland is in a manner deserted, being a sandy, barren soil, with a few poor inhabitants, and affording scarce any fustenance for man or beaft.

The famous Don Juan de Castro, one of the commanders in the sleet of the Portuguese, (and not Don Stefano de Gama) has given us the best account extant of the other e streights of Babelmandel, the navigation of thele fireights, and of the Red fea, with the entrance into the latter, which we shall here; for the entertainment of our readers, extract from the journal of his voyage from

Gos to Sucz.

De Castro, in passing the streights, made an observation at noon, and found the mouth of them to be in twelve egrees fifteen minutes north latitude, and two hours after degrees fifteen minutes north latitude, and two hours after midnight the Portuguese set fail for the mouth of the streights. In the morning they saw both coasts, being nearer the Abeshim, between which and the first sland they failed north-west by west, the wind blowing hard at east till noon. This coast was quive new to the Portuguese; their distance from land was about four leagues. An hour after fun rife they faw a range of illands, most of An hour after fun rife they faw a range of islands, most of them very low, which extended north-west and fouth-east; as the coast did along which, they lay, for about fixty leagues. They failed with a fair wind in this channel of Abeshim, having islands on both fides all the way.

Ships cannot fail here by night; or without the wind in the poop; for if it happens to change it is impossible to tack about or come to an anchor, till the ship arrives at the first islands, which are nine little ones. After having

first islands, which are nine little ones. paffed thefe, the rea becomes more open and free, but, to-wards the shore, these are several islands and rocks, which render the navigation dangerous if a vessel keeps too near the coast; and De Castro thinks that none should attempt the navigation of the streights of Babelmandel, or the Red fea, without a pilotbelonging to the country. A little far-ther are feven intall islands, called the Seven Sifters, between which and the fhore are fome very dangerous rocks.

After having passed there, they arrived at the island of Sorbo, and anchored in nine fathom and a half water in a harbour of the same name.

The island of Sorbo, according to this journalist. fafteen degrees feven minutes north latitude. It is near twenty miles in circumference, and belongs to a great archipeiago of illands, about four leagues from the Abyfinian coaft, and twenty-four thort of Maiua. The Portuguese roved about this illand, and perceived it was low and full of trees, but the trees were all thort, or ci the thrub kind; the plains were verdant; and they discovered the season of men and were verdant; and they discovered the season of men and were verdant; and they discovered fifteen degrees feven minutes north latitude. It is near the tracks of men and beafts in feveral places, though they did not happen to meet with either, a camel excepted, on which account they called it Camel illand. After all their refearches, they did not find any ware, except in one well digged in a ftone, and made principally for the reception of rain, as they conjectured.

rain, as they conjectured.

After leaving Sorbo, they failed among many islands, anoth of which were very low, and atmost even with the fea. In their passage, they kept about a league to the right of them; and in the evening saw 2% to the right, about

After this, they entered the channel between the point of Dahlak and Shamoa; the island of Shamoa being the or Dahlak and Shamoa; the illand of Shamoa being the first they made of five very statistands, which are structed between the said point and the main land of it is two leagues in compais, and contains a few springs and wells. There are several other small islands near this latter, the names of which are unknown, and the places where they are situated are too inconsiderable to deserve particular at-

The illand of Dahlak is fituated near the coast of Habath or Abex, being about twenty leagues eastward from the continent, and about the fame diffance fouth of Masua. This island is near ninety miles in circumference, and is the largest and most considerable on the coast. The air is temperate and falubrious; the land well-watered and yerdant, and the people numerous and robust. Great num-bers of camels, oxen, goats, &c. feed in the passures; the sea and rivers yield plenty of fish, and the inhabitants are profulely supplied with honey, corn, &c. from the con-

"The pearl fishery here, at which many of the natives are very dextrous, conflitutes the chief wealth of the place; and the pearls found here are some of the finest in the universe. Besides pearls, this island produces many emeralds. We shall here, for the information of those not versed in

natural hillory, give a defeription of both thefe.

The pearl is by fome ranked a gem, yet is not properly fo, being a hard white and beautiful fubflance, having ufually a shining roundish body, found in a shell fish resembling an oyster. They have been highly valued in all ages, nevertbeless proceed only from a distemper in the creature that produces them, being analogous to the bezoars, and other flony concretions in feveral kinds of animals. And what the antients imagined to be a drop of dew concreted into a pearl in the body of the pearl fish (which they supposed rose from the bottom to the surface of the water to receive it) is nothing more than the matter destined to form and enlarge the fitell, burfting from the veffels defigned to carry it to the parts of the shell it should have formed, by which means these little concretions are produced.

The emerald, is the most beautiful of all the classes of co-

loured gems, when perfect. It is fometimes found in the roundith or pebble form; fometimes in the columnar or cryftalline form: but the pebble emeralds are most valued. These are found loose in the earth of mountains, and in the beds of rivers they are, in their natural flate, bright and transparent, though lefs gloffy than the columnar ones. Emeralds have the green colour in all its different shades, from very dark to extremely pale, and are sometimes intirely co-lourles; when it is called white sapphire by the English

jewellers.

Such of the inhabitants of Dahlak, as do not employ their time in filhing, are, in general notorious pirates, and plunder all the finisp that come in their way. They behave with asperity to all, but particularly to the Turks, when any of them are so unfortunate as to fall into their hands; and when they get home, they take a peculiar pleafure in boading of their piratical exploits to their wives,

children, and relations.

This island, with many others contiguous to it, are un-der the dominion of the king of Dahlak; and his subjects consist chiefly of Abyffinian Christians, or Christians of the Abyffinian church. Indeed some few Mahametans, of the feet of Hali, refide in his dominions; but thefe are of the fect of Itals, rehde in his dominions; but there are very much oppressed by the king, and cordially lated by their Christian fellow subjects. The people of Dahlak, who appear to be of the Ethiopic race, are black and ill favoured; but strong, robust, bold, daring, and loyal to their fovereign. They are extremely fagacious and crafty, fond of repeating and hearing entertaining tales, see very pleasant companions, and admirably skilled in story settling. telling.

The drefs of these islanders is a large piece of filk or The drefs of their illanders is a large piece of filk or cotton (according to the refpective ratuks of the weaters) tied round the middle, and hanging down to the feet; but from the middle upwards, both fexes go naked. Their deportment is extremely courteous to each other, but they are very uncivil and cruel to firangers. They fpeak the Arabic language, intermixed with fome Ethiopic words. They manufacture the goat's hair, which is here very fine and long, into tolerable camblets. The foil in ge-

heral of this island is red; and though it does not produce much timber, yet it yields abundance of heibs. Here is a finall infect, refembling a bee, which feed on a kind of gum, that diffly from a tree which thath fome firm-litude to a cherry-tree; and from this infect, it is faid, they extract that gum lac, used in varnithing, making seal-

ing-wax, &c. 4 A sold it is contained in length, and The illand of Masua is only Itals a mile in length, and fomewhat less in breadth. It is very flat, and lies very near the main land; that is, on the north-west side. It has a good harbour, secure in all weathers, the depth of the water being about eight or nine fathom, and the ground oosy. The entrance of this port is on the northeast fide, towards the middle of the channel; for from the north-east point of the island there runs a shoal towards another point, fo that thips must take care to keep the middle of the channel, which runs north-east and fouth-west, is very strait, and consequently dangerous

With respect to the people here, they resemble those of Dahlak in customs, manners, vices, &c. and have likewise similar virtues. The men are also of two classes, those who follow traffic, or the pearl-lishery, and those who live by pirscy; yet both classes are looked upon; in a light equally favourable, as pirscy is not deemed criminal, or even dishonourable here. Whatever profits accroe from either trading are, by the men in general, applied to the purposes of gallantry, and the facilitating their amours; for the people, here are very great votaries of Yenus, and Cupid feems to reign, with unbounded power; the men being as expert in intriguing, and the women as faithful in the arts of coquetry, as it they had been educated in nucle politer nations. As the people of Mafun are extremely warm in their paffions, both from their manner of living, and the natural heat of the climate; fo their fanguine constitutions, and the heat of their imaginations, often occasion them to commit very rath actions, and their amours are frequently attended with a fatal catastrophe.

This illand, with all the opposite coast, was formerly subject to the emperor of Abyssinia; but within the last century it was feized by the king of Dahlak, who refides chiefly here, for the conveniency of carrying on a

of gold and ivery are brought to him.

During the months of May and June, the air is exceedingly unhealthy, for want of wind; fo that the king and principal inhabitants, during these months, retire to Dalılak.

Two other islands lie very near this, to the fouth and fouth-west: the largest is next the land; the other, ly-ing towards the fouth-west, is very round. There are many shoals between this island and Masua; but gallies and row-veffels may pass at full sea in a channel that tuns through the midst of them.

These people value themselves upon a tradition which they have among them, that the queen of Sheba crossed from the continent hither, and took thipping in their port, in order to visit king Solomon, to whom the carried im-

mente riches. There are fome clusters of small inconsiderable islands between this and Marate, whose names are not known, and whose importance is so trifling, that geographers and

navigators have not deemed them worth deferibing. The island of Marate is low and barren, of a roundish fhape, about three leagues from the continent, and fixtyfix from Mafua; but it does not exceed five miles in

Here is a very good haven on the fouth-west sid the coat, fecure from all winds, especially the cattern, made by two very long points, which extens north by west, and fouth by east, inclosing a spacious harbour, narrow at the mouth, where there lies a long, very list island, with some fand-banks and thouls; so that no sea can get in. This port hath two entrances, both very near the points. The channel, on the east-fide, lies north by west. The depth is three fathoms in the shallowest place, and increases advancing in the port; it is sour or five fathoms near the thore, and is rather muddy at the

With respect to customs, manners, dress, &c. the people who inhabit this island differ in nothing from those who refide in Mafua, Dahlak, &c.

The island of Swaken is fituated nineteen degrees fortyfive minutes north latitude, and thirty-feven degrees thirty minutes east longitude, and the port is decined one of the best; in the Red Sea. The entrance is by a narrow streight, which leads to a lake; in the midth of which is an island, and a

white 13 A mat. clos town that covert every part of the island. De Castro, in his account of De Gama's voyage, informs us, that this town was once tery important, and extremely opulent. At the islue he was there, which was about the year 1540, he thus writer concerning it: "Swaken is at present one of the richest clieds in the east, standing near the coast of Abytsnia. It squals, if not exceeds, the most eminent places in the goodness and security of its harbour, scrifty in lading and unlading of ships, traffic with remote countries, strength and advantageous situation of the town, &c. The harbour is inclured by nature from all winds; and the waters are so smooth and still, that the tides are fearce properties. It is eapable of containing two hundred large ships, besides a prodigious number of gallies. The road is from five to twelve fathoms water in depth; and hath a mud bottom, which is frem in all places not exceeding seven fathoms water. The ships conte up close to the shore, quite round the city; and may be laden by laying a plank from them to the warehouses of the merchants."

The same writer says, that, with respect to commerce, between the same writer says, that, with respect to commerce,

The fame writer fays, that, with respect to commerce, he knew no city, except Liston, which could compare to it, for at that time it raded to both the peninfulss of India, the Arabian and Persian gulphs, Grand Cairo, Confantinople, Alexandria, Ethiopia, and other countries. For strength, the city seemed naturally well secured by the many shoals, islands, rocks, sand-banks, and intricate channels that lie from fixteen leagues about it, which renders the approach by fea very dangerous, and even terrible to navigators; yet the inhabitants had not taken the lest care to defend it hy art. "This city, he adds, thus fluated, in the midst of a circular rock, stands in a flat island, almost persfestly round, and level with the water, about a mile in compais. In this space there is not a foot of ground but what is taken up with houses; so that all the island is a city, and all the city an island." Such was the importance and opulence of Swaken between two and three centuries ago, at which period it was under the dominion of a Castrian prince.

After the time above-mentioned, this place has fallen into the hands of the Turks, and, like most other places which these baughty, tyrannical, and indolent people have become possessed of, hath ever fince dwindled away to little or nothing, lost its commerce and consequence, grown poor and thin of inhabitants, so that at present it makes but a very mean appearance. Such are the state effects of idleness, an arbitrary government, joined with superstition and innocators.

fuperstition and ignorance!

Three other islands lie on the north-west side of Swaken, two of which are very small, but the third, next the channel, is about as large as the city.

Between this island, and the coast on the north fide, runs a great and long channel, where a numerous fleet may ride in leven fathoms water with fafety.

The decayed city of Swaken is now the feat of a Turkish governor, who acts subordinate to the basha of Grand Cairo; and the model inhabitants are principally Turks or Arabs. The houses now remaining licre; and in the other little islands, are all erected with stone and morter, and built in the European manner. The best buildings in Swaken are the basha; and the most pleasing anusciment which both the Turks and Arabs take, is that of bashings, a lindeed the fullry weather nere feents to require frequent ablations, both for health and pleasure; and Mahomet appears to have entertained the same opinion of the Turksh dominions in general, by his having made purifications, by frequent washings and bathings, a duty daily incumbent on every one of his followers, and a fundamental point of the Mahometan teligion.

It may not be improper to give a particular account of these baths, and the manner in which the persons are treated by the attendants appointed to wait upon the persons who frequent them; we must first of all remark, that the men never bathe with the women; and indeed there is so much modely observed, that any one would be reproved who thould happen to see them through inadvertency, and, if he did it by design, would be baltimaded. Some baths are for the use of the men in the morning, and for the women in the afternoon: others are frequented one day in the week by one sex, and the next by the other. People are very well attended in these baths for three or four assers.

The first entrance is into a fine hall, in the middle of which the principal fountain appears. All round the hall in a small bench, about three teet high, covered with a mat. The men fit upon it to smoak, and pull off their cloaths, which are folded up in a towel. The air in this first hall is so hot, that nothing can be borne upon the

body, but an apron about the waift, to cover before and belind. In this condition a man paffes into a final half which is fill warmer, and from thence Into a larger, where the heat is more fenfible. All these halls are generally closed above with finall domes, which let in light at the top through a round glafs, like those our gardeners put over their melons. In the last hall there are marble basins with two cocks, one of hot water, and the other of cold, which every one mixes according to his own sancy, and pours' upon his body with little buckets of brass belonging to the place. The parement of this chamber is treated by formaces beneath, and every one walks there as long as he thinks proper.

When a man defires to be scoured, a servant of the bath

When a man defires to be feoured, a fervant of the betticauses him at once to lie along upon his back, and, setting his knees upon his belly, press and squeezea himviolently, making every bone crack. They handle after
the same manner the joints of the back and the shoulderblades. If he would be shaved, the servant shaves him,
or gives him a razer to shave himself. When the person
enters the great hall, another servant press his sies, hallover, with his hands so dexterously, that having as it
were kneaded him, without doing him any harm, he
forces out a surprising quantity of sweat. The little
camblet bags they make use of here, are instead of the
strigels of the aotients, and are much more convenient.
To clean the skin rite better, they pour a great deal, of
hot water upon the body, and also use perfuned same,
They wise the skin with linen very clean, dry, and warms,
and the ceremony concludes with the feet, which the
same man washes very carefully when the person teturis
to the hall, in which they smoak, drink coffee, and have
collations; for after this exercise a man finds himself
very hunger.

between hongry.

By cle ming the glands, the bath certainly facilitates perforation, and confequently the circulation of the juices, which fupply the blood. A man perceives himself very light when he has been well purified; but he must be accustomed to the bath from his youth, for otherwise the breath is very much affected by these warm rooms.

The women are very hopey when they are permitted to go to the public baths; but most of them (especially such whose hossis are rich enough to build them baths at home) have not this liberty. In the public baths they entertain one another without any restraint, and pass their time more agreeably than in their own apartments. The men who have any complaisance for their wives do not result to the model of the such as the such

The island of Barbora lies in ten degrees forty-five minutes north latitude, and forty-feven degrees two minutes east longitude; it derives its appellation from a town of the lame name adjacent to it.

The natives of this isand are negroes; and the common people wear cotton garments, which go round their waits, and hang down to their feet, the rest of the body being bare; but those of a superior quality have the addition of a long cotton gown, which covers them all

dition of a long cotton gown, which covers them all over, except their faces.

The foil of the island affording excellent passure, the people are great feeders of cattle; they are al. overy industrious traders, and carry on a considerable traffic, by exchanging cattle, gold, frankineense, ivory, pepner, &c. for clothes, amber, necklaces, glass beads, tausins, dates, and other articles.

The inhabitants of Barbora exchange away either the produce of their own illand, or what they produce from the neighbouring continent; for their labour is looking after cattle, as many of them officiate in the capacity of flepherds and graziers to the people of the kingdom of Adel, en the opposite continent.

Those who here tend the herds and flocks, are some of the bappielt and most inostensive people in the universe; indeed their schieix hath been so much the admiration and envy of others, that many espital men from Adel, and the adjacent kingdoms, and several rich Arabian merchants, have thought proper to retire hither from the adulation of courts, the dangers of war, the hazards of commercial voyages, and the painful buttle of trade, in order to task, in rural retirement, those delicious pleasures which honours and riches could not procure them.

The Turkifh, Moorith, Arabian, Egyptian, &c. merchants, bring their commodities hither. Their traffic, however, is much decayed fince the Europeans have formed fuch powerful connections in the Eart Indies, as the merchants above alluded to naturally repair to the bet

mart, and feek the most prostable mode of vanding their commodities, or trafficking with the natives. These people are admired by all who have traded in those seas, for their universal poliantiropy; and are pe-culiar for their singular benevolence to each other, and their very humane treatment to domeftic and other animals. Happy would it be for mankind in general, if such virtues were more general; and that they who eftern themselves politer people, and boast of a more refined education, would copy the shining parts of all characters, how different foever from them in political or religious fentiments, or remote with respect to the locality of fitu-

SECT. VIII.

Of the isand of Zocatra, Zocatora, or Socatora, its sination, boundaries, climate, productions; also an account of the inbatabinits, their disposition, dress, customs, laws, punishments, &c.

THIS island was first discovered about the year 1560, by one Ferdinand Pereira, a Portuguese. ated about feventy-five miles to the north-east of cape ated about reventy-five miles to the north-east of cape Gauroistipy, in twelve degrees ten minutes north latitude. It is bounded on the fouth, by the continent of Arabia, from whence it is distant about fifty miles; and, on the north-east, by the kingdom of Melinda. It is of very confiderable extent, being not less than eighty miles in length, fixty in breadth, and one bundred and fifty in rengin, may in oreacus, and one numered and fitty in circumference. There are feveral good harbours on the shore; besides which, there are two excellent bays, where the shipping ride with the greatest safety. The ground in the bays is fand, and in some places stony; but not so as to injure the cables.

The tide: here are contrary to those of India; for when the moon appeareth on the horizon, it is high-tide, which thence begins to ebb; and by the time it cometh to the meridian, it begins to flow again in the same order

as it fets at Goa; and it is full fea when fet.

The weather here is eaceeding fultry, owing to the short continuance of rains, which seldom last more than two or three weeks in the season. This defect in the climate is, however, happily remedied by heavy dews, occasioned by the lofty mountains, whose tops are genesally covered with frow, fo high as to condenie the clouds, and afterwards dissolve them in a kind of thick mist or

fog.

In some parts of the island are rivers, which rise from springs, and are never affected even by the drieft seasons in the rainy season, are tobut other pain of it, except in the rainy feafon, are to-

tally destitute of water.

The inhabitants of this island, which is exceeding po-pulous, are under the government of a prince or fultan, who was once subject to the shariffa of Arabia; but is

now tributary to the Turks.

This country abounds in cattle and fruit, with which, and fome other commodities, the natives trade to Goa, where they are better received than the Arabs, who are not permitted to enter that town without paffports. other productions of the island are, aloes, frankincense, dragon's blood, rice, dates, ambergris, and coral. We shall take an opportunity of describing the two last articles, as they have not been hitherto particularly noticed.

ticed.

The former of thefe, namely, ambergris, is generally of an ash-colour, or grey, and is a fat, solid substance, like suct, but light. It is variegated like marble, and is sometimes speckled with white; it springs from the bowels of the earth, is condensed in the La, and is sound floating on the water, though sometimes it is met with on the sea-shore, where it has been thrown by the waves. It is fometimes black as well as grey; but the grey is ac-

counted the best.

There is little room to doubt that this is a fort of bitumen, which proceeds from the earth near the bottom of the fea; for it fometimes, contains stones, shells, the bones of animals, and the bills and claws of birds, as well as honey-combs, from which the honey has not been all loft. Hence it appears, that this bitumen must have been first in a liquid state; lumps of 200lb, weight have sometimes been found.

When put into the fire, ambergris will melt into a fort of gold coloured refin, which will kindle and burn when held to a candle. It will not dissolve entirely in spirits of wine, but leaves a black, pitchy matter behind it. The folution, after fome time, will leave a white cloudy

fediment, which will congulate by little and little, and grow thick, especially by the incorporation of the finer parts of the spirits of wine. When this is dry, it becomes a thining fort of earth, not much unlike spermaceti. It confirs of only greyish particles, which are very sine and volatile, with others that are thicker, faline, and bitu-

Ambergis is of great the among perfumers; and is recommended by physicians for raising languishing spirits, and increasing their motion; whence it is given for diorders of the brain and heart, as well as in fainting fits.

wh an gre tar of the me be

na of tw ni th or fa pr de fe

The dole is from one grain to eight in wine or a positioned egg, and, in subdance, a pill of the fize of a small pea.

Coral confists of various kinds; some of which refemble small trees without leaves; others are in the form of a net, fometimes with large meftes, and fometimes with small. The inside of the branches feems to be of the nature of horn, for it has the same smell when put into the fire; but the bark is of a flony nature, and contains a great deal of falt.

Coral, properly fo called, is of a flony nature, and is placed in the animal kingdom, because it produces seainfects. Some of these are red, and others white, and others of various colours; however, the red, of the co-lour of vermilion, is beft, and is by fome faid to be of the male kind, and that which is palifh of the female. The white coral is the next in value; and next to that, the black; but fome will not allow those of the other colours to be corals, though they are found in the same places. It is always covered with back, and is stony, folid, and very hard, even in the water; though the branches are a little flexible, but foon grow hard in the air. The bark of coral is a mixture of tartar and a fluid of a glutinous nature; and though it is a little rough, it takes a very fine polish.

Some persons take the black coral to be a sea-plant of a different nature. Red coral is not so much esteemed in Europe as it is in Asia, and particularly in Arabia. It is used for making several forts of toys, such as spoons, heads of canes, knife-handles, fword hilts, and beads a and, when tipped with filver, it ferves as a plaything for children, and is designed to rub the gums therewith, to fa-

cilitate the cutting of their teeth.

There are found on the young branches of coral, fe-yoral small eminences, in the form of slars, and full of a milky fluid when they are just taken out of the water. Many learned men have thought fea-plants to be nothing but petrifications, confifting of plates of falt and layers of tartar, placed one upon another; and as coral always grows with its head downwards, in caverns of rocks in the fea, the fituation has caused them to suspect that they were nothing elfe but petrifications, like thoic tound in the roofs of certain caves in the rocks. But fince the difcovery of the flowers of coral, and some other marine productions, it is not at all doubted but they have a regular organization; and if their feeds have not been perceived, it is because their fmallnefs renders them indiferrnible to the eye.

The generation of these plants have been thought by fome to be not owing to these seeds; because as they al-ways hang with their heads downwards, they would fall off to the bottom of the caverns, and not place themselves on the top; but this difficulty may be removed, by fuppoling they are lighter than the sea-water, and that the milk which surrounds them is of so thick a nature, that it may help to affist them in swimming. Hence indeed it may happen that many of these may rise to the top of the water, and there perifh; but then likewife others may afcend to the top of the caverns, and there fix themselves, and then they will grow like coral, from which they proceed. Hence we may conclude, from the regularity of these productions, the organization of their parts, the great numbers of small pores in their bark to receive their bitumen, and other fea-juices, the eminences regularly hollowed in the form of stars, which serves for the rows of flowers in the same shape, the vessels full of a milky fluid which is found between the bark and the body of the plant, to make it grow thicker by little and little, and the perpetual uniformity of the fame circumflances; from all these particulars we have reason to be-lieve, that the bottom of the sea is covered with plants that have characteristics different from these we are acquainted with.

The faculty make choice of the red coral only for medicinal uses; and many authors have ascribed great virtues thereto, which are in a great measure imaginary; however, it cannot be denied that it is a good absorbent, and is therefore proper to reftrain the organism of the blood,

and to blunt the acrimony of the bile and other humours in various forts of fluxes, as well as for paints it. the bowels of childrens: From a feraple to a drachin is "as dofe, according to the nature of the case." It is a paint of the case.

These articles are purchased by the inhabitants of Goa, who export them from thence to many parts of the Indies, and to most of the kingdoms of Europe: whence arise great profits to the traders, and advantages to the inhabitants, who are luxuriously supplied with all the necessaries of life, in exchange for their commodities. Formetly they had a more immediate intercourse with Europe, by means of the East India ships, which frequently stopped here, when disappointed of their passage, either by being too early or too late for the monisons; but this port has been almost entirely neglected since the stated periods of those winds are so well ascertained.

In this island are great numbers of Araba, besides the natives; the former of whom call the latter by the name of Bedouins, or stupid brutes. These last are divided into two forts, namely, the natives of the cools, who intermarry with the Araba, and are called half. Bedouins, and those of the interior parts, who rigorously adhere to their

those of the interior parts, who rigorously adhere to their own customs, and reckon it a heinous crime to mingle own customs, and reckon it a heinous crime to mingle blood with foreigners. The last are the true Bedooins, or original inhabitants of the country. They are much fairer than the Indians, and are in general tall and very proportionably made; but in their dispositions they are deceifful, indolent, and great cowards, suffering them-felves to be enslaved in a manner by a handful of Arabs, and attending to nothing besides liushandry and pature, both which are chiefly carried on by the women. Their food consists of milk, butter, rice, dates, and the fielh of their cattle; water is their common drink, With respect to the other inhabitants of the island.

With respect to the other inhabitants of the island, though they feem to make use of all the benefits of their fituation, yet they want at the fame time the perfonal ad-vantages of the Bedouins; for they are of a low flature, difagrecable complexion, dean habit, and have hideous features; but they are very hardy, and are prodigious strong and active. They feed on fill, fielh, milk, butter, ftrong and active. They feed on fill, fleth, milk, butter, and vegetables: their utual dith, is a composition of all these boiled together; and they generally eat bread, dates,

There are different kinds of dress worn in this island, according to the feveral parts of it. The native Bedouins go almost naked, having nothing more than a small piece of cloth fastened round the wait, and a cap made of goats fkin. The women go bare-headed, and have a fhort gown, or cloak, with a shift made of goars hair. But the most general dress of these standards consists of a long cloak, which reaches from the waift to the ancles; it hangs down in a train behind, and is not unbecoming, though extremely incommodious, on account of the heat of the climate: they gather it up, and fasten it round the waist with a girdle, when they are at work.

These people are entirely ignorant of arts, informuch the, were it not for the Arabs, they would be destitute of almost every convenience of life. They are, if posfible, still more ignorant of the liberal arts; and fo little defirous are they even to acquire the knowledge of reading and writing, that they think they have fufficient learning, it they are able to reckon their eattle by making notehes in a piece of wood. Their chief ingenuity is difplayed in the cambline manufacture, which is a beautiful furf. made with the hair of goats, and other animals. But the have feveral very strange and uncommon customs, which

we thall here particular ac.

The Zocotrant practife polygamy, and divorce their wives at pleafure, either for a certain time, or for ever. They may even be the father of children, without being obliged to maintain either them or the mother, provided the latter, during her pregnancy, confents that the fither shall give away the child, when it sees the light. On these occasions, the father kindles a fire before the door of his but or cave, and then makes proclamation, that he will give away the infant of which his wife is on the point of being delivered. After this, he fixes on fome particular being delivered. After this, he fixes on fome particular person for its adopted father, to whom the infant is carried immediately after its birth. Here it meets with all that tenderness, kindness, and those carestes which are denied it by the annatural sather, is given to a nurre, and ordered to be sed with goats milk. These children are called the sons or daughters of smook; and it frequently happens that a good-natured man, who is himself incapable of getting one, shall have the honour of rearing a dozen children, upon whom he bestows all the affection of a real parent. This is certainly one of the most entraordinary and unnatural customs to be met with in history; as it does not feem to be founded on the principle of religion, policy, or inclination, but upon mere caprice; for it is common with a father, who exposes his own, to adopt the children of others, and requite the good offices due to the former, by his kindness to the

Another custom among them, no less strange and fin-ular than the above, is, that they generally bury their ick before they have breathed their last, making no dif-inction between a dying, and a dead person. They esteem fick before they have breathed their last, making no dit-tinction between a dying, and a dead person. They eftern it a duty to put the patient as soon as possible out of pain; and make this their request to their friends, when they are on the sick bed, which, in all acute disorders, may be called the death bed. When the father of a family sinds himself thus circumstanced, and has reason to believe that his dissource is approaching, he assembles his children around him, whether natural or adopted, his parents, wives, fervants, and all his acquaintances, whom he strongly exhorts to a compliance with the following arti-cles of his last will: "Never to admit any alteration in the doctrine or ensoms of their ancessors; never to inter-matry with foreigners; never to permit an affront done

the doctrine or cultoms of their anceltors; never to intermarry with foreigners; never to permit an affront done to them or their predeceffors, or a beaft flole from either of them, to go unpunished; and lastly, never to suffer a friend to lie in pain, when they can relieve him by death."

They commonly perform the last request of the dying man by means of a white liquor of a strong poisonous quality, which oozes from a tree peculiar to this island. Hence it is that legal murders are more common here than in any other country in the world; for befiles the inin any other country in the world; for, befides the in-human cuftom last-mentioned, the other requests of dying men produce numberless quarrels, and, by taking reveng

of the injuries done to their anceltors, entail family feeds and bloodshed upon their posterity for a long series of years.

Justice is administered in Zocotora by the chief magistrates, who are next in rank to the sultan: they are called hodamos, and fit ar certain times to judge and determine in all causes political and ecclessatical, civil or criminal. There is no appeal from this tribunal, nor can the fuc-cessors reverse any decree passed before their coming into office, which they hold only for one year; and during this time they preserve the most distinguished power and dignity.

The punishment for murder here is death, which is in-flicted either by cutting off the offender's head, or em-paling him alive. In cases of theft, if the robber escapes pating firm alive. In cases of their, it the notice energy, with his booty, and takes fanctuary in a temple, he is protected; but if he is caught by the perfon robbed before he reaches the temple, he is then delivered up to justice, and the punithment of the crime is the lofs of his right-hand. Other trifling matters are punished by fines; of which, one half is paid to the fultan, and the magistrates share

the rest equally among them.

As to their religion, they are pagans, and practise the most superstitious maxims: however, they adhere strictly to circumcision, and are so strict in their adherence to this rite, that they cut off the fingers of those whose parents have neglected to perform the operation upon them, or have themselves refused it. The Arabs amongst them are

Mahometans.

Lent, or at least a time of fasting similar to it, is kept by them: they begin to observe this at the new moon in March, abstaining, for the space of fixty days, from milk, butter, stell, and fish; and living wholly upon dates, rice, hour, and vegetables, procuring the honey from Arabia, in exchange for aloes and frankineenfe. They have altars and croiles; but as they are entirely ignorant of every tenet of the Chriftian church, nothing certain can be deduced from ceremonies and ulages handed down by tendition of which they give a reason. by tradition, of which they give no manner of account, nor produce a fingle reason for them.

That they are gross idolaters, is sufficiently evident from their worthipping the moon, which they efteen as the creative principle of all things; a notion not confifent with Atheifm, much less with Christianity and the doctrines of redemption. At times of great drought they affemble in a folenn manner, and offer up their petitions to the moon. They make a public facrifice to that luminary towards the beginning of Lent, in honour of whom they also offer up numbers of goats. Whenever the moon rifes or fets, they enter into their temples, and practife several other religious ceremonies, which denote them to be the receiver version of this issue described. them to be the zealous votaries of this inconstant deity.

A celebrated French writer tells us, that "at the rifing and fetting of the moon, or more probably at the new and full moon, they make folemn processions round their temples

temples or moquamos, as also round their burist-places, firiking together two pieces of odoriferous wood about a yard long, which each man holds in his hands. This ceremony they perform three times in the day, and as often at night; after which; putting a large cauldron, fulpended by three chains, over a great fire, they dip into it splinters of wood, with which they light their altars and the porch of the temple. They then put up their prayers to the moon, that the will enlighten them with her countenance, shed upon them her' benign influence, and never permit foreigners to intermla with them. They make also an annual procession round the temples, preceded by a cross; and the whole ceremony ends upon the priest's clapping his lands together, as a signal that the moon is tired with their worship. Others say, that the signal constits in cutting off the singers of him who holds the cross; in recompence for which, he has a stick given, on which are certain marks, prohibiting all persons, of whatever rank or condition, to molest or hurt him over after; on the contrary, they are to aid and assist him with all their power, in whatever manner they may require their help; they are doomed to suffer corporal panishment, and the loss of an arm, unless they respect and honour him as a martyr to religion."

Sir Thomas Roe confirmed these particulars relative to the religion of the Zocotrans. This great man, during his slay on this island, took great pains to preserve, in his journal, a minute account of the manners and customs of the natives 1 and tells us, that be found the inhabitants to consist of four different force of unen, viz. of Arabs, whom the king of Caxem had fint to keep the signal in subjection to him; of slaves to the prince, who

Arabs, whom the king of Caxem had fent to keep the island in subjection to him; of slaves to the prince, who are employed in preparing aloes, and other offices of drudgery; of Bedouins, the primative inhabitants of the island, who are banished to the mountains, till they submitted to the voke, and agree broad up their children in the Mahometan religion 3, lastly of favages with long hair, who, excluding them wes from all fociety, live

naked in the woods.

In order to render our description of shand and its inhabitants as complete as possible, we shail here subjoin several remarkable particulars concerning them, given by Mr. Mandesloe, whose observations appear to be very accorate: "they live, says he, chiefly upon fish, roots, and fruit. They have no wild fowl, and very sew tames, yet they are not without cows, camels, asses, and sheep; they have also goats, whose hair upon the thighs is curled in the manner in which satyrs are painted. Their arms are sevords with large hilts, without a guard; poniards, with long blades, which they constantly wear stuck in their girdle; and fire-arms, which they manage with some dextenity, but cannot keep in order, or free from rust; so that in a sew weeks they are rendered useles. They are remarkably expert in the use of bucklers, which they wield in such a manner as to protect every part of the bo-In order to render our description of se .fland and its wield in fuch a manner as to protect every part of the bo dy, and are wounded only when their shoulders are pierced, or cut down by blows.

pierced, or cut down by blows.

"Though they live in an island, and trade with the continent, they are ignorant of navigation, and have no other vessels than six-bottomed sithing-boats, with which, however, they weather great storms. The torrents that flow down from the mountains like rivers, either in rainy weather, or when the flow on the tops of the mountains is melted by the fun, fufficiently supplies all foreign shipping with water. Though they are Mahometans, yet they worthip the sun and moon. Clustifians or insidels, their religion is a strange mixture of truth and error. But, from the folemn processions and facrifices made to the luminaries above mentioned, one would imagine that

idularry and paganism chiesty prevailed.

"The people of this island use their women, who are chiesty Arabians, with great tendernes; but are so jealous, that they never permit them to be seen by a stranger. As they are crafty and deceifful themselves, so they are sufficient of the same infincerity in others: they adulterate their commodities, and expect that those they deal with have done the fame.

"The island affords some indifferent oranges, tobacco, I he mand arrors some indifferent oranges, tobacco, citrons, and cocoa-nuts; but they feldom come to mausity, on account of the firong, dry, and fauly foil. Their chief commodity is aloes; and they have also dragon's blood, and keep great numbers of civet-cats; so that this commodity may be purchased at Zocotora for three or four crowns per ounce; but they find means to adulterate even the civet; so that unhappily there is no method of being secured from fraud. To conclude, the natural eraft and fubtlety of the Zocotorans, together with the

deep penetration and cunning of these and most other Araba, who inhabit the islands in and near the Red sea, are inconceivable, and serve at once to display the pro-found fagacity, as well as persidy of these people.

S E C T. IX.

Of the islands of St. Helena, Bifagos, Biffae, and Gorer, their fituation, extent, preductions, inhabitants, animals, St.

T. HELENA is fituate in the Atlantic ocean, in fix degrees odd minotes west longitude, and fixteen de-grees south latitude, almost in the mid-way between Africa and America, one thousand miles distant from either contiand America, one thouland miles diffant from either continent. It was fo named by the Pertuguefe, who diffeovered it on St. Helen's day. This ifland is twenty-one suites in circumference, and high land, for it may be differend at fea at above twenty leagues' diffances it confifts of one wast rook, fleep on every like, and flooks like a caffle in the middle of the ocean, whose natural walls are of that height, that there is no fealing them, nor the small valley, called Chapel-valley, in a bay on the east side of it, which is defended by a battery of forty or sifty great guns, planted even with the water; and the waves difficult landing even here. There is also one little creek besides, where two or three new may land at a time; but this is where two of three men may land at a time; but this is now defended by a battery of five or fix guns, and rendered inacceffible. There is no anchorage any where about the island, but at Chapel valley bay: and, as the wind always fets from the fouth-east, if a ship overshoots the island ever fo little, the cannot recover it again.

the filand ever to ittie, the cannot recover it again.

A little beyond the landing-place, in Chapel-valley, is a fort where the governor refides with the garrifon; and in the fame valley there is a pretty town, confifting of forty or fifty hoofes, built after the English way, whither the people of the island refort when any shipping appears, as well to affilt in the defence of the island, if they happen when any the anamics as to embersian the feature, if they appears went to mint in the defence of the illand, if they happen to be enemies, as to entertain the feamen, if they are friends: for the governor has always fentinels, on the highest part of the illand to the windward, who give notice of the approach of all fhipping, and guns are thereupon fired, that every man may refort to his post. It is impossible for any ship to come in the night-time, but what has been discovered the day before, and preparations made for her reception, if an enemy.

made for her reception, if an enemy.

made for her reception, if an enemy.

Notwithstanding the island on every side appears to be a barren rock, yet on the top it is covered with a fine layer of earth a foot or a sop and a half deep, which produces all manner of grain, grais, fruits, herbs, roots, and garden-fluss; and the country, after we have ascended the rock, is prettily diversified with rising hills and plains, adorned with plantations of fruit-trees and kitchen gardens, among which the houses of the natives are interfered; and in the open fields are herds of cattle always grazing, some of which are fatted to supply the thipping that touch here, and the rest furnish their dainies with milk, butter, and cheese; they abound also in hogy, goats, milk, butter, and cheefe; they abound also in hogs, goats, turkeys, and all manner of goultry, and their seas are well flored with sinh.

The greatest missortune is, that amidst all this affluence

own growth; for though the foil is exceedingly proper for wheat, yet the rats that harbour in the rocks, and carnot be destroyed, eat up all the feed before the grain is well out of the ground: and though their vines flourish, and afford them grapes enough, yet the latitude is too hoe for making wine. As we have observed already, there is and arrord them grapes enough, yet the nationer is too hor for making wine. As we have observed already, there is no country, except Peru, within the torrid zone, where good wine is produced; neither cold nor very hot countries agree with this liquor. All the wine they spend, therefore, they have from the Canaries, the Madeiras, or the Cape, which is brought to them in European shipping, as well as their flour and malt: and their very houses are some of them brought rerdy framed from Standard Abere Issian on timber on the illand, trees not England, there being no timber on the island, trees not taking deep root here, for the rock that lies so near the surface. However they have underwood enough for their necessary uses in this warm climate

Befides grapes, they have plantaine, bananas, figs, le-mons, and fuch other fruits as hot countries ufually pro-duce, and they make shift to raife kidney-beans, and some other kinds of pulse in their gardens; though they cannot preferve their grain from the rats : and to supply the want of head, they eat potatoes and yams.

two hundred families, most of them English, or descended from English parents, though there were some French refugees amongst them, brought thither to cultivate their vines, and teach them to make wine; but in this, it feems, the heat of the climate prevented their succeeding, as has been observed already. Every family has its house and plantation on the higher part of the island, where they look after their cattle, their hogs, goats, and poultry, fruits, and kitchen-gardens: they searce ever come down to the town in Chapel-valley, unless it be once a week to chorch; or when the shipping arrives, when most of the church, or when the shipping arrives, when most of the houses in the valley are converted into punch-houses, or lodgings for their guests, to whom they fell their cattle, poultry, fruits, or garden-stuff. But the inhabitants are poultry, fruits, or garden-turn. But the innabitants are not fuffered to purchase any merchandize of the ships that touch here. Whatever they want of foreign growth or manufacture, they are obliged to buy at the company's warehouse, where they may furnish themselvea, twice every month, with brandy, European or Cape wines, Batavia arrack, male, beer, jugar, tea, cossee, China and Japan ware, linen, calicoes, chints, muslins, ribbands, woolen cloth and stuffs, and all manner of cloathing; for which they are allowed fix months credit. The coincided curvent there is spanish deliver or English money. which they are allowed fix months credit. The coi chiefly current here is Spanish dollars or English money.

In all other places near the tropies, the children and de-feendants of white people have not the leaft red in their cheeks; but the natives of this island are remarkable for their ruddy complexions, and robust constitutions. Their being in general healthful is ascribed to several causes; among which are thefe : they live on the top of a mountain always open to the fea-breezes that conflantly blow here: they are usually employed in the most healthful exercifes of gardening and hulbandry, and their island is frequently refreshed with moderate cooling showers, and there are no feus or falt-marshes about it to annoy them. They are used also to climb the steep hill between the town in Chapel-valley and their plantation, which is so freep, that they are forced to have a ladder in the middle of it, from thence called Ladder-hill; and this cannot be avoided without going three or four miles about; fo that they feldom want air or exercise, the great preservers

of health.

Mr. Salmon, who was in this ifland, favs, " As to the genius and temper of the natives, they feemed to me the honeslest, the most inoffensive and hospitable people we had met with of English extraction, having fearce any tincture of avarice or ambition. We asked some of them, if they had no curiosity to see the rest of the world, of which they had heard fo many fine things; and how they could confine themselves to a spot of earth, scarce seven leagues in circumserence, and separated from the rest of mankind? To which they answered: They enrout or mankind r 10 which they aniwered: I hey enjoyed all the necessaries of life in great plenty; they were neither parched with excessive heat, or pinched with cold; they lived in perfect security, in no danger of enemies, of robbers, wild beafts, or rigorous feafons, and happy in a continued flate of health: that as there were no rich men amongst them (scarce any planter being worth more than a thousand dollars) so there were no poor in the ifland; no man hardly worth left than four hundred dollars, and confequently not obliged to undergo more labour than was necessary to eep him in

The Portuguese, who discovered this island in 1502, flored it with hogs, goats, and poultry, and sied to touch at it for water and fresh provisions in their return from India; but we do not find they ever planted a colony here; or if they did, having deferted it afterwards, the English East India company took possession of the island in the year 1600, and held it till 1673, without interruption, when the Dutch took it by surprize. However, the English, commanded by captain Munden, recovered it again within the space of a year, and took three Dutch East India ships that lay in the road at the fame time The Hollanders had fortified the landing-place, and planted batteries of great guns there to prevent a descent; but the English being acquainted with a small creek where only two men could go a breast, climbed up to the top of the rocks in the night-time, and, appearing next morning at the backs of the Dutch, they threw down their arms, and furrendered the ifland without firiking a firoke. But, as we have observed above, this creek has been finee fortified, and a battery of great guns planted at the entrance of it; fo that there is now no place where an enemy can make a defcent with any probability of fuccess.

The affairs of the company here are managed by a governor, deputy governor, and florehouse-keeper, who

have shanding salaries allowed the the the company, he fides a public table well furnished. When the salar commanders, masters of ships, and sminent parengers are welcome. The natives cometimes call the refolt of their confultations. I be natives tometimes can the retult of their confutations fevere impositions; and though relief may perhaps be had from the company in England, yet a late writer observes, that the unavoidable delays in returning a redress at that distance, cometimes put the addressers under a hardship: he also thinks, that were not the situation of this island very serviceable to our homeward-bound East India ships, very ferviceable to our homeward-bound East India ships, the constant trouble and expence would induce the company to abundon the listud, for though it is furnished with the conveniences of life, yet the merchants find no profitable commodities there. The masters of the plantations keep a great many blacks, who, upon severe treatment, hide themselves for a quarter of a year together, keeping among the rocks by day, and roving at night for provisions: but they are generally discovered and taken.

Near the mouth of the river Sierra Leona are situated the islands of Bulam. La Gallina, Cassange, Castange.

the islands of Bulam, La Gallina, Casnabac, Cazegut, Calacha, and fome others: these are called the Bisagoe islands. The island of Bulam lies at the mouth of Rio Grande, or the great river, which, by means of this island, divides itself into two branches. Bulam is between eight and ten leagues long from east to weft, and between eight and ten leagues long from east to weft, and between twenty-five and thirty in circumference. The whole coast is bordered with woods, beyond which the country is fertile, rich, and beautiful, covered with rice, Indian corn, nillet, roots, and fruit, which are cultivated by the negroes of the feveral islands, who come hither in feed-time and harvest and fearment actume hours.

harvest, and afterwards return home.

The ground rifes almost imperceptibly for two leagues from the fea-shore, to the foot of some hills, which serve as a base to higher mountains which stand in the center as a bale to higher mountains which fland in the center of the illand; yet these mountains are neither steep nor craggy, being covered with sine and losty trees. Through the many vallies between these hills and mountains run several considerable rivulets, which the negroes affert to run constantly, even in the dry season of the year. While this island presents to mariners a most delightful prospect from the sea, it excites at the same time their admiration at seins of heavisful a freet maintains. at feing fo beautiful a spot uninhabited.

at teng to beauting a por uninnaments.

Both fides of the Rio Grande or great river, are very well peopled, and covered with lofty trees, of feveral forts, which the Portuguese cut to build barks. This river lies to the south-east of the ide of Bulam, is about two leagues broad, and, having run some leagues from east to make a great allock or winding, and turns to the welt, makes a great elbow, or winding, and turns to the north-eaft, till a little higher it is divided into two arms

by the island Bisagoe.

In this island there is one particular tree, which they call Michery, and might be employed to great advantage in hip-building, as it grows to a great height, is carily worked, and is at the tame time hard, folid, and proof against worms. It is full of an oily mouthure, exceffively bitter, which probably keeps the worms from infesting it. Trials have been made of that wood in feveral parts of Europe, Africa, and America, and it has always been found of equal goodness.

The most easterly of all these island is Formosa, which

The island of Gallina, or Hen island, was thus named from the great number of hens the Portuguese found here. This and the island of Casnabac are very populous and fruitful, and have abundance of good water.

Cazegut, one of the most considerable of these islands,

is about fix leagues long, and two broad; its foil is very good, producing orange and palm-trees, befides millet, rice, and all kinds of pulte. This island, with those of Carache, Cunabac, and La Gallina, are the only ones where the Europeans may trade with some femilia. They trade housever, a come of the other curity. They trade, however, at fome of the other islands, but they must be extremely cautious; for if they venture on shore, they will be liable to be robbed and murdered.

and murdered.

Each of the Bifagoe islands, except Bulam, is governed by a chief, who assumes the authority of a king. All these monarchs are persectly independent, and frequently at war with each other. They have canoes that carry from twenty-five to forty men, with their provisions and

from twenty-five to forty men, with their provisions and arms, which are fabres, bows and arrows.

The negroes of these islands are tall, strong, and healthy, though it is said they live only on fash, nuts, and palm-oil; and sell their rice, millet, and other produce of the earth, to the Europeans for the ornaments they wear.

They are in general idolaters, and are faid to be of a favage and eruel disposition, not only to strangers, but to

one another; for authors fay, that they frequently quarrel about trifles, and will fab or drown themselves, if disappointed of their revenge.

The island of Bisso is near forty leagues in circumference, associate average and prospect from the fearising on every side by a gentle ascent to an eminence in the center of the island; yet there are a number of hills inferior in height to that in the middle, separated by beautiful and fertile vallies, divided by small rivulets, which at the same time augment the richness and elegance of the scene.

Here are little groves of palms, and the rest of the ground is cultivated, and produces a harvest equal to the most fanguine withes of the inhabitants. Wheat and mais firing up here to a great height, so as to resemble a field covered with reeds of bamboos. They have like-wife mother grain that is a species of mais, which they make into cakes. They have also oranges, bananas, man-goes, and every kind of fruit to be found in the warm climates, and perhaps in greater persection than in any other place.

The cattle of Biffao ara of an uncommon fize, feem to keep pace with the most extravagant growth of the corn ' milk and wine are in the greatest abundance; but the island affords neither swine nor horses, the natives-forbidding the importation of the former, and the increase of the latter is in general prevented either by the climate

or foil.

Notwithfianding the perpetual flate of war in which the natives are engaged with the neighbouring iffands, and the kingdoms on the continent, yet Biffao is not lefs populous than fettile; but though the inhabitants are numerous, they live in cottages difperfed up and down the country without the leaft veftige of a town, except where the French and Portuguefe have ethablifted themfelves. Even the palace of the king consists only of a number of irregular huts, that have a communication with each other. There are about fix hundred perfons in the Portuguefe town, all of whom speak the Portuguefe, and pretend that they are descended from them, though they have a fixed and inveterate distilke to that nation, and their coma fixed and inveterate diffike to that nation, and their com-

a fixed and inveterate diffice to that nation, and their com-plexions a: piet-black.

In this illand, the drefs of the women confifts of a cotton girdle, which falls down before, and bracelets of brafs, coral and copper; but the virgins go entirely naked, and those of high quality have their bodies marked or, painted with a variety of hideous pictures, of finakes and other reptiles, that give their fkins some resemblance to flowered fattin; even the cldeft daughter of the king is dilumished from the arber halies only by the sleaves of

diffinguished from the other ladies only by the elegance of these paintings, and the bracelets she is adorned with. The cloathing of the men of all ranks is only a skin fixed to their girdle, and drawn up between their legs. One of their most extraordinary ornaments is a large iron guage. There is, however, fomething in this was appearable, for it is difficult to conceive how ideas can be conveyed by shiking together two pieces of iron: it is inevertheless acknowledged, that they have another language that is vocal, and used upon all common occarions. Gless this artificial one.

These people are all idolaters; but their notions of religion appear to confused, that it is difficult to enter perfectly into their system. Their chief idol is a small image which they call Shina; but we cannot afcertain the fentiments they form of this object of their worthip; belides this, it is faid, that every man creates a divinity according to his own faney. Trees are worshipped as the residence of some deity or spirit superior to man, and are therefore held sacred by them.

The government of the Biffaons is altogether arbitrary, the people in general being fubject to the will of their prince; who, though he has nothing to lofe, yet may be faid to possess over his people and their effects. We thall give the following instance of the policy of one of their princes: two slaves, who had been lold to an European transfer the man their feets. pean merchant, made their escape, and were taken by the king's troops. Equity seemed to require that they should ging a troops. Equity recined to require that they nound be reflored to their missers; but the king gave a different verdist, saying, they had obtained their freedom by having escaped, and, by being retaken by his troops, were again reduced to savery; so that now the king had an intre property in them

When the fovereign of this island dies, all the women and saves, for whom he had a peculiar regard, are sacrific 1 and buried near their master, that they may attend him in the next world. It is likewise cultomary for the nobility to have some of their living friends buried with the next world.

him in the next world. It is likewife cultomary for the nobility to have fome of their living friends buried with them. A traveller to this place mentions an inflancu where a father defired that his three fons, of whom he was very fond, might be buried with him, at his death.

These people are warlike, and fight with extreme fury, though with little discipline. As treaties of peace are unknown among these nations, to they have no kind of intercourse except in war, and hence no scheme of politics is carried on among them. As the Europeans find it their interest to ferment their quarrels (war being their interest, by augmenting the number of their slaves) consequently they are far from offering their mediation.

If at any time the monarch of this island is determined to carry the war into the neighbouring territories, he orders an instrument, called the bonbalon, to be founded; this being the general fignal to arms, all in the government's pay assemble hereupon at certain head quarters, that are always fixed; where they find the royal sleet, which usually consists of thirty canoes, each carrying thirty men, with their arms and provisions, under the command of an admiral, for the king seldom puts himself at the head of his sleet and armies. at the head of his fleet and armies.

at the feed of his fleet and armies.

Before the fleet fails, a number of facrifices are offered to the gods, and the fifth of the victims divided between the court, the priefts and the foldiers. In this confultation of the gods, the king always receives a favourable answer; for the deities being of wood, it is eafy for the prieft to direct what they should fay; and hence the army always begins a campaign with the fullest affurance of forecest.

They make a defcent with all possible privacy, furround the enemy's towns and villages, carry off the inhabitants with every thing of value, and then embark before the troops have time to assemble in order to oppose them. One half of the booty belongs to the king, and the remainder is divided among those who obtained it. The mainter is divised among those who obtained it. The flaves are fold to the Europeans, except where any of them happen to be of quality or fortune; in which case he is restored to his friends, on condit on of their sending, in exchange, an equal number of slaves, equal in value. When the invaders return from these expeditions, they

When the invaders return from these expeditions, they affurne an air of great Importance, and go round the country, shewing their wounds, and relating the wonders they have done and seen, with a long train of prisoners behind them, whom they oblige to fing the praises of the herces; for which they make them presents of pieces of cloth and other things, which they exchange for palmwine. But when these incustions are attended with less honour and profit than was expected, the prisoners are in danger of being sacrificed, especially if the Bissons have lost an officer of diffinction.

The warriors who fall upon these occasions receive only.

The warriors who fall upon these occasions receive public honours by dances performed to the music of tabors.

The women express their grief in a manner extremely af-I he women express their greef in a manner extremely af-feeting, pulling their hair, and beating their breaft; after which they are ferved with palm-wine, in order to support their spirits. When thus recruited they begin their mourning with redoubled vigour, and shed tears most plentifully, till the corpfe is laid in the grave; when their countenances suddenly brighten, and they refume their former chearfulnefs.

The king never goes abroad without being furrounded by fome thousands of his nobility, women and guards, all of them richly deeffed and armed, as far as the skins of beasts, and the brightness of their seymetars can make

them fo. The palace is about a league diffant from the point of Biffao.

There was formerly in this island a fort belonging to the There was formerly in this island a fort belonging to the substances of can-Portuguele, which they mounted with eight pieces of can-non, in order to awe the natives, and prevent their trading non, storder to awe the natives, and prevent their trading-with any other foreigner but themselves; the Bissons, however, foon threw off this restraint, and now main-rain the sull liberty of receiving all strangers into their ports, where they enjoy perfect security under the king's protection; but before they are suffered to land, his ma-jesty consults the gods by facrifices, whether admitting those strangers be for the interest of himself and subjects, and the crueral good of the ideas. and the general good of the island.

The island of Goree is situated in sourteen degrees

thirty minutes north latitude, and in feventeen degrees twenty minutes west longitude from London, is called by the natives Barfaguiche; but the Dutch, who were the first Europeans that took possession of it, gave it the name

la

¢

d

Gorce, from an island and town of the same name in Holland. It is only about eight hundred and forty yards in length, and two hundred and forty-eight in breadth; its whole circumference, including a point at the eastern end of the Island, being, according to a late mensuration, about two English miles. It stands to the fouth-west of Cape Verd, within cannon-shoot of the shore, and confists of a long narrow piece of land, and a small but steepmountain. Notwithstanding its sinsulation, its stuation renders it agreeable; for on the north part of the island the inhabitants have a view of Cape Verd and the neighbouring promontories.

the inhabitants have a view of Cape Verd and the neighbouring promontories.

Though Goree is fituated in the torrid zone, the people breathe a temperate air all the year round, owing to its being continually refreshed by alternate breezes from the land and fea. A multitude of furrounding rocks renders it almost inaccessible, except at two particular bays. Upon the funumit of a rocky hill is St. Michael's Fort, which che late director M. de St. Jean embellished with twee about buildings, and added works which, in the opinion of the French, rendered the island impregnable: the land is also defended by several other forts and batteries, in different parts of it.

Formerly the foil was composed of only a red fand, without either grafs, trees, water, or scarce any thing befides teeds; but, by the dilligence of the above gentleman, several springe of first, water were discovered in the island; gardens were planted with excellent fruit-trees; pulle and all kinds of vegetables were made to grow in great abundance; and, in thort, from a small, barren, and difagreeable sliand, it was rendered one of the pleasantest and most

important fettlements in these parts.

Gorce was coded to the Dutch in the year 1617, by the king of Cape Verd, when they immediately built a fort on a rock to the north-west, to which they gave the name of Nashau Fort; but finding that it could not command the harbour, they creeked a fortification, called Orange Fort, near the fhore. The Dutch kept the island till admiral Holmes taking it in 1663, placed an English garrison in it. Two years after it was retaken by De Ruyter, and the governor and garrison obliged to surrender prisoners of war. The Dutch then augmented the fortifications, and the island enjoyed perfect tranquillity, till in 1677 a French fquadron, commanded by the count d'Efrees, attacked the place, and obliged the Duich governor to furrender at discretion. D'Eftrees found that the lower fort mounted forty pieces of heavy cannen, and that the works were kept in excellent repair; but having no infructions to garrison them, he dimantled this, and entirely demolithed Nasau Fort. Soon after M. Du Casse arriving at Goree with a forty gun ship, solemnly took possession of the island, and concluded a treaty with the king and negroes, on the same conditions the Dutch had enjoyed the island; and as this measure, which he had voluntarily taken, was approved by the court of France at his return, he was sent back the following year in quality of governor; and foon after, this conquest was secured to the French company by the treaty of Nimeguin; whereupon the French infantly repaired and added new works to both the fotts, calling the lower fort Vernandois, and the higher St. Michael. Several sort vertiaanous, and the ingher st. Aichael. Several unfluccifful attempts were afterwards made by the Dutch to recover a place of fuch importance to trade, but all of them proving abortive, the French continued in the poffeifion of this ifland till the year 1759, when a fquadron was fitted out under the command of commodore Keppel, ward, and the Dunkirk, feveral frigates, two bomb-ketches, and fome transports, with more than feven hun-dred regular troops on board, commanded by colonel Worge

On the arrival of the English fleet before the island, it was refolved to make the attack on the west fide, not because it was the weaker, but from its being the weather fide; and therefore should their cables be cut by 2 ch. .r. shot, or any other accident, the ships might, without danger, put to sea, and beating to windward, enew the action; but if they had anchored on the east side, such an accident night have caused the ships to be driven on shore. However, on the 11th of November, at about nine in the morning, the Prince Edward and the Fire Drake bomb, bore down towards the island, and in ten minutes after the action was begun, by throwing a shell from a bomb. The enemy instantly returned the fire from the forts and batteries; and at the second shot carried away the Prince Edward's shigh staff, and set fire to an arms-cheft close by it, which, blowing up, killed one of the marines. Encounged by this successful beginning.

they levelled their ordinance at the Prince Edward, and began a terrible fire; and few in the squadron faw this vessel, in the midst of this shower of bombs and bullets, without conding up their most servent wishes for her fairer.

without sending up their make issession.

When the commodore observed that the Fire Drake overcharged her mortar, and that all her shells sell beyond the island to the south, he sent his boat on board the Furnace bomb, with advice, that as they saw the error of the other in overcharging the mortar, they should avoid that extreme, and that as the enemy seemed bent upon finking the Prince Edward and the Fire Drake, he defired they would begin their fire, and endeavour as much as possible to draw part of the enemy's attention from their suffering friends; and these orders were with alacrity instantly obeyed.

obeyed.

The fire from all the faips was foun discharged with prodigious fury on the enemy, and that of the Torbay alone, in which was the commodore, seemed sufficients have razed the very soundations of the island. The commodore had brought up with such judgment a breast of the angles of both the west point battery and St. Francis fort, that the enemy could not bring a gun from thence to beat upon him. Five guns only could have touched him with advantage; two from St. Peter's, and three from a small lunette on the hill before St. Michael's; both which were so warmly attacked by the other ships, that they were soon deferted. Indeed the fire from the Torbay was so terrible, so near, and so well almed, that none but madnen could have stood it. The ship seemed in a continual blaze, and that part of the island was darkened by a very great cloud of simple.

Several hundred negroes lined the opposite shore, to behold the engagement, and were associated at seeing ships bear down with the utmost intrepidity against stone walls, and receiving the fire from the batteries with Intrepid courage. At length the governor was prevailed upon to strike its stay but Mr. Keppel, in the midst of the noise and smoke, was some time before he perceived the silence of the enemy, and at als only suspected they had struck, from the filence of the rest of the squadron. He slackened his fire to look around him, when not a Frenchman was to be feen but those who were slying towards the castle on the hill. Upon this he fent a licutenant, attended by his secretary, to wait upon the governor; but before they had self the boat, they were met by Mr. St. Jean on the beach, who asked on what terms the honourable Mr. Keppel proposed he should surrender? Surprised at the question, who asked, If his slag was not struck? He answered, No, he only meant it as a signal for a parley; and being told that the commodore would hear of no terms but his own, replied that be was sufficiently prepared, and knew how to desen himself; to which the others returned, that the commodore had brought up in a figuation where no guit could hurt him, and did not care if they stood out for a month. Here a the engagement was renewed; but M. St. Jean, ston inding It impossible to keep his foldiers to their quarters, surrendered himself and garrison prifoners at discrement and the British slag was hotisted on St. Michael's fortress. This island, at present, however, belongs to the French, being afterwards ceded to them by the treaty of peace in 1762:

longs to the French, being atterwards treaty of peace in 1763:

The Moors and Arabs bring to this place and Senegal great quantities of gum, which are fent from hence to Europe and office parts of the world; they bring it hither on camels, but locks, horfes, &c. The gum is meatured in a cubical meature, called by the Moors quantor, and every quintal pays a certain duty. Proper commissaries put it into facks, and then allow it to be carried to the fettlements belonging to the company. The inhabitants have no water but what they catch in eisterns, reservoirs, &c. and wood is extremely ferce.

Re, and wood is extremely fearce.

Mahometanifm is the religion of the natives of this place and Senega., and they practice circumcifion with great rigour. They perform this operation at the age of fifteen, that the youth may have firength fufficient to undergo it, and be tolerably well instructed in the principles of his faith. The ceremony is never performed in hor weather; the last quarter of the moon is always chosen, through a notion that the operation is then less painful, and the wound curred with more ease. It is done in a beautifm is moon, furrounded by gardens, upon a few board. The victims are lead that by relations succeeding each other according to their ranks, when the prisst performs the operation; after which, the cuttiers with a chearful countenance, either real or a lead of

5 O

SECT. X.

Containing a description of Cape de Vord iffands, their fitua-tion, foil, climate, productions, inhabitants, animals, &c.

THE Cape de Verd islands are fituated in 14 degrees 10 min. north latitude, and 16 degrees 30 min. well longitude. They were so called front a cape of the same name opposite to them, and were discovered by Authony Noel, a Genocie, in the service of Portugal, in the year 1640, and are about twenty in number; but some of them are only barren uninhabited rocks. The cape took is mame from the persual verdure with which it is covered. The Portugueze give them the persue of Les Ishas de Verdes, either from the verdure of the cape, or else from an herb called singassio, which is green, and sloats on the water all round them. His Portugueze majesty appoints a viceroy to goveen them, who constantly resides in the island of St. Jago. The Dutch call them the Salt Islands, from the great quantities of that commodity produced in several of them.

The principal of these islands are the following; name-

feveral of them.

The principal of these stands are the following; namely 1. May, or Mayo; 2. San Jago, or Saint James'a; 3. Sal or Sait; 4. Boena, or Bono Vista, or Good Sight; 5. St. Philip's, otherwise called Foego, or the island of Fire; 6. St. John; or San Juan; 7. St. Nicholas; 8. St. Vincent; 0. St. Anthony; 10. St. Lucia; 11. Brava.

The foil of these islands is very stony and barren; the climate exceeding hor, and in some of them very un-

wholefome: however, the principal part of them are fer-tile, and produce various forts of grain and fruits, parti-cularly rice, main, or Indian wheat, bananas, lemons, citrons, oranges, pomegranates, cocoa-nuts, and figs. They have also calavanes, a fost of pulse like French beans, and great quantities of pumpkins, on which the inhabitants chiefly subfist.

These islands produce also two other fruits of a remark-Thefe illands produce allo two other fronts of a remarkable nature, viz. the culfard apple, and the papali. The former-of thefe is as large as a pomegranate, and searly of the fame colour. The outfide halk, shell, or rind, is in fuhflance and thiskenes between the shell of a pomegranate and the peel of a Seville orange, fofter than the former, yet more brittle than the latter. The coat or rind is also remarkable for being covered with small regular knobs or rifings; and the inside of the fruit is full of a white for the purpose of the produce of the fruit is full of a white for the purpose of the produce of the fruit is full of a white for the purpose of the produce of the fruit is full of a white for the purpose of the produce of the fruit is full of a white for the purpose of the produce of the fruit is full of a white for the purpose of the purpo white foft pulp, which in its form, colour, and tafte, greatly refembles a custard, from whence it received its greatly retembles a cultard, from whence it received its name, which was probably first given it by the Europeans. It has in the middle a few small black stones, but no core, for the whole of it is intire pulp. The tree that bears this fruit is about the fize of a quince-tree, and has long stender branches that speed a confiderable way from the trunk. Only some of the branches bear fruit, for though these trees are large, yet in general such trees do not produce above twent; or thirty apples. The fruit grows at the extremity of these branches, upon a stalk about nine

or ten inches leag.

The other finit, called the papah, is about the fize of a sunft melon, and refembles it in shape and colour both within and without; only in the middle, instead of flat kernels, which the melons have, these have a quantity of fmall blackith feeds, about the fiae of pepper-corns, the tafte of which is much the fame as that fpice. The tree on which this fruit grows, is about ten or twelve feet high; the trunk is thickest at the bottom, from whence it gradually decreases to the top, where it is very thin and taper. It has not any finall branches, but only large leaves, that grow immediately ou the Ralks from the body. The leaves are of a roundift form, and jagged about the edges, having their stalks or stumps longer or fmaller, as they grow nearer or farther from the top : they fmaller, as they grow nearer or farther from the top: they begin to fpring out of the body of the tree at about fix or feven feet high from the ground, the trunk being below that entirely bare, and the leaves grow thick all the way from thesee to the top, where they are very close and broad. The fruit grow only among the leaves, and mot plentiful where the leaves are thickest; so that towards the top of the tree the papala spring forth from it in clusters. It is, how ore, to be observed, that where they grow so thick, they are but small, being no bigger than ordinary turners; whereas those nearer, the middle of the trunk, where the leaves are not so thick, grow to the fifthemen. the leaves are not fo thick, grow to the first-mensioned fize.

Poultry of various forts abound in the Cape de Verd islands, particularly curlews, Guiney hens, and flamin-goes, the latter of which are very numerous. The flamingo is a large bird, much like a heron in fhape, but bigger, and of a reddith colour: they go in flocks, but are fo fhy, that it is very difficult to catch them: they build their nefts in finallow ponds, where there is a much mud, which they forsape together, making little hillocks, like finall illands, that appear about a foot and a half above the furface of the water. They make the foundations of these hillocks broad, bringing them up tager to above the furface of the water. They make the foundations of thefe hillocks broad, bringing them up taper to the top, where they leave a fmall hollow pit to lay their eggs in: they never lay more than two eggs, and feldern lefa. The young ones cannot fly till they are almost full grown, but they run with furprizing fwiftness: their tongues are broad and long, having a large lump of fat at the nove, which is delicious in its tafte, and to greatly admired, but a dath of them will produce a very confiderable firm of money. That field is lean, and of a dingy co-

admired, be a dath of them will produce a very confiderable fum of money. Their flesh is lean, and of a dingy colour, but it neither tastes sithy, nor any ways unpleasant.

Here are also several other forts of fowls, as pigeons and rurtle doves; miniotas, a fort of land fowl, as big as crows, of a grey colour, and the flesh well tasted; crussas, another fort of grey-coloured fowl, almost as large as the former; these are only seen in the night, and their stells is failed by according selectors. faild to be exceeding failutary to people in a decline, by whom they are sied. They have likewife great plenty of partridges, qualis, and other fenall birds, and rabbets in prodigious numbers.

prodigious numbers.

In these islands are many wild anignals, particularly lions, tigerty and camela, the latter of which are remarkably large. There are also great numbers of monkies, baboons, and clvet-cass, and various kinds of reptiles. The tame animals are horses, assessing the proper libration of the East Indies, windly stop to take in fresh water and provisions, with which they are always plentifully supplied. Fish of various forts abound in the sea near these lisheds, marticularly dolphine.

particularly dolphins, bonettas, mullets, finappers, filver fift, &c. and here is fuch plenty of turtle, that feveral foreign ships come yearly to catch them. In the wet season the tertles go alhore to lay their eggs in the sand, which they leave to be batched by the heat of the sun. The slesh of the turtles, well cured, is as great a supply to the American plantations, as cod-fish is to Europe. The inhabitants go out by night and catch the turtles, by turning them on their backs with poles; for they are fo large that they cannot do it with their hands.

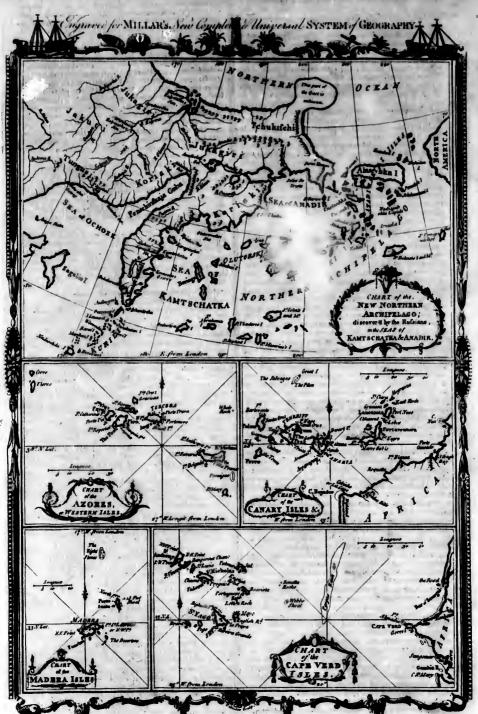

In these islands are many European families, all of whom profess the Roman Catholic religion. The natives are all negrees, and much like their African neighbours, from whom they are supposed to be desended; though, as they are foliogic to the Fortugueze, their own religion and language me vail among them. Both men and women are justs neveral among them. Both men and women are floor, and well limbed, and they are in general of a civil and quiet disposition. Their dress 'particularly in the island of St. John) is very trifling, confusing only of a piece of cetton cloth wound round the waist. The wemen fometimes throw it over the head, and the men acrofs the shoulders. Neither fex wear shoes or stockings, except on certain sessions. The men are particularly sond of wearing breeches, if they can get them, and are very happy if they have but a waithand and slap before, be they ever so ragged.

We shall now proceed to a partial description of the search ideach in the order above sea down.

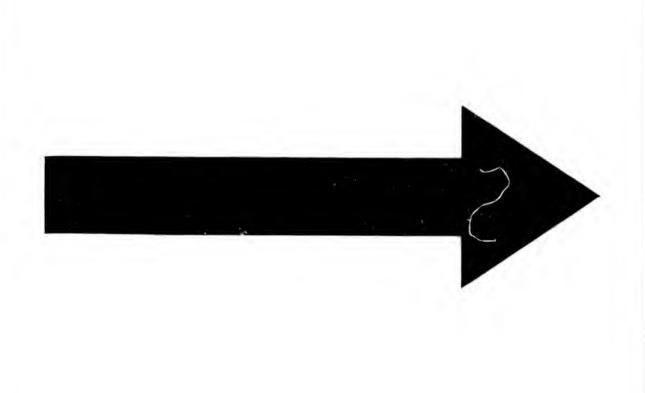

veral islands in the order above set down.

The island of Mayo, or May, obtained its name from its being discovered on the first of that mouth. It from is seing discrete a minutes north latitude, near three hundred miles from Cape Verd, and is about feven-teen miles in circumference. The foil is in general very teen miles in circumference. The foil is in general very barren, and water fearce: however they have plenty of barren, and water fearee: however they have plenty off cows, goats, and affes; and allo fome corn, yants, pota-toes, and plantains. What trees they have are fituated on the fides of the hills, and they have feme water-melons and figs. The fea likewife abounds with wild fowl, fifh, and turtle. There grows on this ifland, as well as on most of the others, a kind of vegetable stone, extremely porous, of a greyish colour, which shoots up in stems, and forms formething like the head of a cauliflower.

There is a bay on the west side of the island, and a fand-bank that runs two or three miles along the shore, within which there is a large failua, or salt-pond, encom-passed by the sand-bank, and the hills beyond it. The whole salt-pond is about two miles in length, and half a mile wide; but the greater part of it is generally dry.
The north end, which is always (upplied with water, produces falt from November till May, those months being the dry feason of the year. The waters that yield this salt work out of the sea through a hole in the sand-bank,

23 WEST MAIN STREET WEBSTER, N.Y. 14580 (716) 872-4503 STATE OF THE PROPERTY OF THE P

and the quantity that flows into it it in proportion to the height of the tides; in the common course it is very gentle, but when the spring tides arise, it is supplied in abundance. If there is any salt in the pond, when the sfull of water comes in, it soon dissolves, but in two or three days after it begins to congeal, and is continues till a fresh supply of water from the sea continues till a fresh supply of water from the sea continues till a fresh supply of water from the sea continues till a fresh supply of water from the sea continues till a fresh complete trade for salt is carried on here by the English, and he armed ships destined to secure the African commerce, afford the vyssels thus engaged their protection. The inhabitants of the issand services they convey it to the fea-side on the backs of affes, which animals are very numerous here. The pond is not above half a mile from the landing-place; so that they go backwards and forwards many times in the day, but they restrain themselves to a certain number, which they seldom restrain themselves to a certain number, which they seldom exceed.

There are feveral forts of fowl, particularly flamingoes, curieys, and Guiney hens. Their chief cattle are cows, goats, and hogs, which are reckoned the best in all the Cape de Verd islands. Besides the fruits above-mentioned, they have calavanes and pumpkins, which are the com-

mon food of the inhabitants.

The inhabitants of this island live in three small towns, the principal of which is called Pimont, and contains two the principal of which is called Fimont, and contain two-churches, with as many priefts; the other is called St. John, and has one church; and the third, which has a church alfo, is called Lagos. The houses are very mean, small, and low; they are built with the wood of the figtree (that being the only one fit for the purpose that grows on the island) and the rafters are made of a fort of wild

cane which grows here.

I he Portugueze governor of St. Jago grants the patent to the negro governor of this island, whole lituation is toto the negro governor of this island, whose struction is to-lerably advantageous, as every commander that lades salt here is obliged to compliment him with a present. He spends most of his time with the English in the salting season, which is his harvest, and a very busy time with all the natives. These people have not any vessels of their own, nor do any Portugueze ships come hither, so that he English are the chief on whom they depend for trade; and though they are subjects of Portugal, they have a par-ticular esteem for the English nation. Assessal and a great commodity of trade here; and are so plentiful, that several European ships from Barbassos and other planta-tions, come annually to freight with them to carry thi-ther. ther.

The island of St. Jago, or St. James's Island, is fituated about four leagues to the westward of Mayo, between the 15th and 56th degrees of north lat. and in the 23d of west long. This island is the most fruitful and best inhabited of all the Cape de Verd islands, notwithftanding it is very mountainous, and has a great deal of

barren land in it.

The principal town is called after the name of the island, and is fituated in 15 degrees north latitude. It stands against the fides of two mountains, between which there is a deep valley two hundred yards wide, that runs within a small space of the sea. In that part of the valley within a small space of the sea. In that part of the valley next the sea is a straggling street, with houses on each side, and a rivulet of water in the bottom, which empties itself into a fine cove or sandy bay, where the sea is generally very smooth, so that ships ride there with great safety. A small fort shauls near the landing place from this bay, where a guard is constantly kept, and near it is a battery mounted with a sew small cannon.

The town of St. John contains about three hundred houses, all built of rough stone, and it has one small church and a convent. The inhabitants of the town are in seneral very poor, having but little trade.

enuren and a convent. In minimize of the town are in general very poor, having but little trade. Their chief manufacture is striped cotton cloth, which the Portugueze thips punchase of them, in their way to Brasil, and supply them with several European commodities in return.

There is a tolerable large town on the east side of the internal parts.

There is a tolerable large town on the east fide of the island, called Praya, where there is a good port, which is feldom without ships, especially in peaceable times. Most of the European Stips bound to the East Indies touch at this port to take in water and provisions, but they feldom stop here on their return to Europe. The town of Praya does not contain any remarkable building, except a fort, fituated on the top of a hill, which commands the harbour. When the European ships are here, the country people bring down their commodities to sell to the seamen and restlements, these article generally consist of buillooks. palfengers; these articles generally consist of bullocks, hogs, goats, fowls, eggs, plantains, and cocoa-nuts,

which they exchange for thirts, ditwers, handkerchiefs, lasts, waitcoatt, breches, and linen of any kind.

The complexion of the natives of this town and St. Jago inclines to black, or is at leaft of a mixed-colour, except form, few of the better fort that redde in the latter, among whom are the governor, the bishop, and some of the padres (fathers) or priests. The people of St. Jago town, as they live under the governor's eye, are pretty or-derly, though generally very poor, having little trade; but those about Praya are naturally of a thievish disposition, for that strangers who deal with them must be very careful, that strongers who deal with them must be very careful, for if they see an opportunity, they will steal their goods,

for if they see an opportunity, they will near their goous, and run away.

The island of Sal, or Salt, is the windwardmost of all the Cape de Verd islands, and is fituated in the 17th degree of north latitude, and 5 degrees 18 minutes west longitude from the Cape. It received this name from the great quantity of salt naturally produced here from salt water, that from time to time overflows part of the land, which is mostly low, having only five hills, and stretches from north to south about eight or nine leagues, but it does not exceed one league and a half in breadth.

There are only a few people in this island, and these

exceed one league and a half in breadth.

There are only a few people in this island, and thefe live in wretched huts near the fea-fide, and are chieffy employed in gathering falt for those ships that occasionally call here for that article. The best account of this barrent island is given us by captain Roberts, who landed here, and relates the following story, which he says he was told by one of the blacks that resided in it. "About the year 1705, not long before I went ashore, the island was intirely deferted for ware, of rish he all is inhabitant expense. deferted for want of rain by all its inhabitants except one old man, who refolved to die on it, which he did the fame year. The drought had been so extreme for some time, year. The drought had been so extreme sor some time, that most of the cows and goats died for want of suffernance, but rain following, they increased apace, till about three years after they were again reduced by a remarkable event. A French ship coming to fish for turtle, was obliged, by stress of weather, or strom some other cause, to leave behind her thirty blacks, which she had brought from St. Antonio to carry on the fishing. These people, finding nothing else, seq mostly on wild goats, till they had destroyed them all but two, one male and the other femaie, these were then on the island, and kept generally upon one mountain. A short time after an English ship (bound for the island of St. Mayo) perceiving the smoke of several fires, sent their boat on shore, and thinking they might be some-ship's company wrecked on the island, put in there; when they understood the situation of the people, they commisserated their case, took them all in, and landed them on the island from whence they were brought."

them on the island from whence they were brought."

The island of Buena Vifta, or Bona Vifta, thus named from its being the first of the Cape de Verd islands discovered by the Portugueze, is situated in the 16th degree of north latitude, two hundred miles west of the coast of Africa, and is twenty miles long, and twelve broad, mostly confishing of low land, with some fandy hills, and rocky mountains. It produces great quantities of indigo, and more cotton than all the other Cape de Verd islands; yet there is not one of them where there are fewer cotton cloths to be fold: for the natives will not even gather the cotton before a ship arrives to buy it; nor will the women spin till they want it. They have, in general, the same animals as in the other islands, with plenty of turtle, and many force of fish.

many torus of fifth.

When the English land there to take in a lading of falt, they hire men and affea to bring it down to the fea; for which they pay them in hiscuits, flour, and old cloaths. This island had also formerly a pretty good trade for horses and affes, which are the best of all that are upon these islands. The people are very fond of filk, with which they work the bosoms of their shirts, shifts, caps, women's waistcoats, &c.

The people of this island prefer the English dress to their own; for most of them have suits of cloaths bought of the English, and have learned to make cotton cloth to imitate the European fashion. The women have one, two, or three cotton cloths wrapped about them like petticoats, tied on with a girdle about the hips, and fome-times without a girdle. Their shifts are made like a man's shirt, but so short, as scarcely to reach to the girdle; the collar, neck, and waiftbands, of the young people of fome rank, are wrought in figures with filk in various colours in needlework; but the old and the poor have theirs worked with blue cotton thread. Over their shifts they wear a waiftcoat, with fleeves to button at the arms, not above four inches deep in the back part, but long enough before to tie with firings under their breafts. Over all

they have a cotton clock in the manner of a mantle; those of the married women are generally bue, and the darker the colour, the richer, it is reckoned; but the maidens, and gay, young wives, and widowa, wear blue and white, some posted and some figured 112 They, however, rather choose, if they can get them, linen handkershiefs wrought on the edges, and sometimes only on the corners; with red, green, and blue fills; the first being the colour they most admire. They wear neither shoes nor stockings, except in holidays; and, indeed, at other times the women have generally only a small corton cloth wrapped round their waist, and the men a ragged pair of breeches; to which, if there be but a waistband, end a piece hanging to it before to hide what modelty teacher them to conceal, they shink is sufficient. The people of Bona Vista are to it before to hide what modelly teaches them to conceal, they think it fufficient. The people of Bona Vifta are found of the English, and most of them can speak a little

of their language.

The illand of St. Philip, called alfo Fuego, or the Ide of Fire, received this latter name from a very large mountain, which frequently emits great quantities of fire and sulphur. It is fituated in fifteen degrees twenty minutes. sulphur. It is situated in sisteen degrees twenty minutes north latitude, and six degrees fifty-four minutes west from the Cape; is the highest of all the Cape de Verd islands, and appears at a distance like one continued mountain. On the west side of it there is a road for shipping, near a small castle situated at the foot of a mountain, but the harbour is not fafe, on account of the violent heating of the waves. The wind blows very frong round this idland, and the fliore being on a flant, the water is very deep, so that, except very near the calle, no ground is to be

found within the lines. Water is very fcarce in this island, there not being a fingle running brook throughout it; notwithflanding which it is tolerably fertile, and produces great quantities of pompions, water-melons, festroons, and maiz, but no bananas or plantains, and scarce any fruit trees except wild figs; however, in fome of their gardens, they have guava-trees, oranges, lemons, and limes. They have likewise fome good vineyards, but they make no more wine than just what they use themselves.

Most of the inhabitants of this island are negroes, there Most of the inhabitants of this man are negroes, are all being an hundred blacks to one white; they are all Roman Catholics, though fone of them introduce many magn superficients into that religion. They breed great numbers of mules, which they fell to other nations, and make cotton cloths for their own use.

The Portugueze, on their fift peopling this island, brought with them negro-slaves, and a stock of cows, hories, asses, and logs; but the king binself furnished the place with goats, which ran wild in the mountains. There are many of the latter animals here at this time, and the profits of their fkins is referved to the crown of Portugal. An officer, called captain of the mountains, has the management of this revenue, and no person dares, without his licence, kill any one of them. St. | John's is fituated in fifteen degrees twenty-five

minutes north latitude, and seven degrees two minutes west of Cape Verd, and is very high and rocky. It has more falt-petre than any of these islands: this is found in feveral cares, covering the fides like a hoar-frost, and in fome hollow rocks, like iscles as thick as a man's thumb. This island abounds with pompions, bananas, water-me-lous, and other fruir, and also with fowls, goats, affes,

hogs, &c.
There are plenty of fish in the feas about St. John's, and most of the fish here have remarkable sharp teeth; and they generally use crabs and insects for baits. Fishing is the principal employment of the natives; hence they mils no opportunities of wrecks, or, when thips touch

here, to procuse all the bits of iron they can.

Captain Roberts tells us, that it is his opinion, that this is the object of the country of the half a minute it would be all covered with cepper, nearly of a gold colour, very thick, and, when dry, it might be 'scraped off in sales, or powder. Some of these waters had a much sharper power than others, and their acidity diminished in proportion to their distance from the fountain-head. Many are found of a dark blue, black, and reddiff colour, fome of which exceed iron, and are nearly equal to lead in weight.

In this island, the falt is made by the heat of the fun, which thining on the water in the holes of the rocks, is thereby turned, and fometimes lies two feet thick. matives usually go and get a quantity of falt early in the

movning, fish the greatest part of the day, dry, split, and salt their fish in the svening, and, having heaped them uplet them lie in the fait all night. On the enduing morning they foread them out to dry in the sun, and they are fit to use when wanted.

The beleas, a fort of whale or grampus, is very common near this island, and some affirm, that scubergris is the sperm of this creature. A great quantity c'a mbergris was formerly sound about this island, but it is lest plentiful at present. Some years before captain Roberts was here, Juan Carneira, a Portuguese, who was banished from Lisbon for some crime, having procured a little ship or shallop, traded among these islands: meeting at length with a piece of ambergris of an uncommon bignels, he not only procured his liberty, and leave to return before the term of his exile was expired, but had sufficient less, after defraying all charges, to put himself into a comfortable way of living, and a rock near to which he found the ambergris, is called by his name to this day.

The natives of this island do not amount to above two hundred souls, and are quite black. They are the most ignorant and superstitious of airy of the inhabitants of these islands. But in their disposition they are simple and harmles, humbles, charitable, humane, and friendly.

harmles, humble, charitable, humane, and friendly; pay a particular respect to their equals, reverence, their edgers, are submissive to their superiors, and dutiful to their

parents.

People wear in common only a flip of cotton fastened to a string before, which passing between the thighs, is tied to the same string behind; but when full dressed they also wear a piece of cotton cloth, (spin and wove by themselves) which the men hang over their shoulders, and wrap round their waists, while the women put it over their heads, and then wrap it about their bodies; and on both of them is attended to the head of the law of lower. of them it extends to the ealf of the leg, or lower,

They use in fifting, long canes for rods, cotton lines, and bent nails for hooks. As to their hunting, the governor having the fole privilege of killing the wild goats, none date hunt without his confent. This was law made by the Portugusse when they peopled these islands from the coast of Africa, it, order to prevent the entire loss of the beat

of the breed.

of the breed.

When a general hunt is appointed by the governor, all the inhabitants are affembled, and the dogs, which are between a beagle and a grey hound, are called. At night, or when the governor thinks proper to put an end to the fport, they all meet together, and he parts the goats fieth between them as he pleater, fending what he thinks proper to his own house, with all the fkins; and after he comes home, he fends pieces to those who are old, or were not out a hunting; and the fkins he distributes amongs them as he thinks their necessities requir; referving the remainder of them for the lord of the foil. This is one of the principal privileges enjoyed by the governor; who is also principal privileges enjoyed by the governor; who is also the only magistrate, and decides the tirde differences that

fometimes happen among the peop! Upon their not fubmitting to the them till they do, in an open place alled round like a pound: but, inflead of a gate, they generally lay only a flick across the entrance, and those innocent people will flick acrofs the entrance, and those innocent people will flay there without attempting to escape, except when overcome by passion, and then they ruth out in a rage; but these are soon caught again, tied hand and soot, and a centinel fet to watch them, till they agree with their antagonist, ask the governor's pardon for breaking out of his prison, and have remained there as long as he thinks then have deserved. Nay, if one kills another, which prison, and have remained there as long as he thinks they have deferved. Nay, if one kills another, which hardly happens in an age, the governor can only confine him till he has pacified the relations of the deccased, by the mediation of his friends, who are bound for the criminal's appearance, in case a judge should be ever fent from Portugal to execute justice: but imprisonment is here reckoned such a sended, that Mr. Roberts says, it is as much dreaded as Tyburn is by criminals here.

About forty-five miles from the island of Salt is St. Nicholas island, the north-west point of which is in seventeen degrees ten minutes north latitude, and fix degrees fifty-two minutes west longitude from Cape de Verd. It

fifty-two minutes well longitude from Cape de Verd. It, is the largest of all the Cape de Verd islands, except St, Jago. The land is high, and rifes like a fugar-loaf, but the summit of the most elevated part is flat. The coast of this island is entirely clear from rocks and shoals. The coal of this island is entirely clear from rocks and shoals. That bay of Paraghisi is very fafe, but the other roads are infective till the trade winds are fettled.

There is a valley in this fact.

There is a valley in this island which has a fine spring of water in it, and many persons employ themselves in supplying different parts with that usual article, with

The island of St. Lucialies in settude seventeen degrees eighteen minutes north. It is high land, full of hills, and is about eight or nine leagues long. On the south-east end of it are two small island, yound which there is a very good bettom for anchoring a and thips may ride at anchor in a very good road, in twenty fathom water, everagainst the island of St. Vincent.

The island of Brava, or the Savage, or the Defart Island, is about four leagues to the fouth-west of Foego. There are two or three small islands to the north of it. The best barbour lies on the fouth-east side of the island, where ships may ancher next to the shore in sistem fathom water. There is an hermitage and as smaller just above the harbear. On the west side of the island there is a very commodious road for such ships as want to get water. No. 43.

SECT. XI.

Of the Canary Mands, particularly those of Lantareta, and Purcepapenta; their Studden, climate, fall, productions, animals, US.

Processed to their financies, climate, fell, predefinate missed.

The Casary Islands, of, as they were antiently called, the footmate islands, he in the Atlantic ocean, near the continent of Africa, between the twenty-feventhele reaching planter, and, the twenty-feventhele reaching planter, and, the twenty-feventhele reaching planter, and the twenty-feventhele reaching the twent he major of the first of Grinatura well longitude from London. A judicious traveller, the fewer that on felling few hundred and fifty miles to the fourth well, from the major of the first of Grinatura along by the coath of Fea and Marocco, on the Atlantic coan, we, arrive at the louth-well catterping of Moont Adas; than leaving the land, and failing into the ocean, directly well one hundred and fixty miles, we came to the fiftand of Lancorots, the best of the Casary islands in that course; the rest of these islands lie all to the well and fourth of Lancorots. The principal of the Canaries are seven in number; these are Lancorots. Feetwormum, Canarias. Tenerist, domers, lietro, or Ferre, and Palma, all of which is from a set to well, in the order in mines they are here placed, and the last is about fixty-five leagues distant from the first. There are fix more though Lancorots than rocks, navigators or geographers have not taken much notice of them.

John de Betancourt, a Frenchman, in the fervice of the king of Casille, alicowered these islands in the year 1417, fince which time they have been subject to the crown of Spelle; he alse featured Frenchman, in the fervice of the hing of Casille, and appoint of them.

John de Betancourt, a Frenchman, in the fervice of the hing of Casille, and alphonnot. V. of Bortugal, each of them claimed a right to the other's dominions, and assume the cach other's sites, so there sites the days of Ferpinand, king of Casille, and alphonnot. V. of Bortugal, each of them claimed a right to the other's dominions, and assume the terrory of the proposed their pretentions; and it was therein simulated, that the Ca

the commerce and navigation of Guiney to that of Portugal exclusively.

The illand of Lancerota is about fifteen miles long, and ten broad, and the center of it is in twenty nine degrees eight minutes north latitude. It is very high, and may be discovered at a great dislance; it appears, on approaching it, to be black, rocky, and barren.

Porto de Naos, on the fouth-earth fide of the illand, is the principal harbour, and any vessel that does not draw about sighteen feet, may enter at high water, and be fectore from all winds and weather; yet, in failing along the conflather things appear as if at anchor in an open road; for the harbour is formed by a ridge of rocks, which at a small sistance cannot the perceived, as most of them lie under water; these breaking off the swell of the fea, the inside is perfectly smooth. This being the only convenient place among the Canary Islands for cleaning and repairing large wells, it is much frequented for that purpose by the finje that trade to these illands. At the west end of the harbour is a square castle built of sone, and mounted with some cannon, but is of no great strength, as ships of war may approach it within musquet shot. There are some magazines at this port, in which corn is deposited for exportation, but here is no town or village.

A specious harbour, called El Rio, is at the north end of Lancerota: this ferues as a channel for dividing this illand of Lancerota from the uninhabited island of Graciosa, and ships of any burthen may pass shrough it. That part of Lancerota from the some pass shrough it. That part of Lancerota from the some pass shrough it. That part of the sone of the serves as a channel for dividing the instance of the sone of the serves as a channel for dividing the instance of the serves as a channel for dividing the instance of the serves as a channel for dividing the instance of the serves as a channel for dividing the instance of the serves as a channel for dividing the instance of the serves as a channel for dividing the instance of the se

On this island there are only two towns; one called Cayas, or Rubicon, which is fituated about two leagues to the north-west of Porto de Naos, and may be termed the capital of the island, since it was formerly a bishopa fee; but it contains only about two hundred houses, most of which have a mean appearance, an old castle mounted with form guns, a church, and a convent of riars, "The town of Haria, the next in fize to Cayas, stands about two leagues within land, to the fouthward of the natrow part of the cliff at El Rio, "All the buildings, except the thurch and three or four private houses, are very mean structures. The town contains about three handred inhabitants.

dred inhabitants.

hendred inhabitants.

Graciofa lies on the north fide of Lancerota. This is about three miles in length, and destitute of water, the it is about three miles in length, and two in breadth.

The island of Fuerreventura is about eighty miles in length, and about fiscen in breadth. It belongs to the lord of Lancerota, and is about twenty-four leagues distant from Grand Canaria. The north end of this island lies about twenty-four prides could and her more forms and contains the control of the state of the control of the state of the control of the state of the control of the about feven miles fouth and by well from the fouth-well point of Lancerote, and in the channel between them is the little uninhabited island of Lobos, or feals, which is about a league in circumference. The middle of Fuerted about a league in circumstrence. In middle of ruerro-wentura is narrow and low, being almost cue in two by the fea. That part of the island on the fouth-fide of the islamus is mountainous, landy, barren, and almost en-inhabited; but the northern part is also mountainous, yet it is fertile and well peopled within land.

There are feveral bays and harbours in this island, and

There are feveral beys and harbours in this island, and three small towns, one of which, called Ollva, is situated formewhat lefs than two leagues within land from the road of Lohos, in the midst of a plain that abounds with cornfelds. Here is a church and about fifty good house, the control of the state of the called the called the called the called the state of the island, and is situated in the centre of that part which lies morth of the islands, and has a church, a convent of Franciscan friars, and near one hundred house.

Here is a also a town called Turche, which cor tains about one hundred houses; but they are very mean, when compared with those of La Vills and Oliva:

Besides the above, there are many small villages scarcered

Befides the above, there are many fmall villages karrered up and down in the northern and inland parts of the island; which sland extremely thick together.

which fland extremely thick together.

A remarkable circumflance relating to these islands, is, that when there is a throng westerly wind, the sea breaks on the rocks, at the north-west end of Lobos, with such violence, as to frike the beholders with sterror. In may without exaggeration affirm, (fays a gentleman who tra-velled to these parts) that I have seen breakers there near fixty feet high: were one of these to strike the strongest thip, the would be flaved to pieces in a moment. When I faw those mighty breakers, our ship had just passed through the channel between Fuerteventura and Lobos: ad a fine brifk trade wind at north north east; and though we had no lefs than ten fathom water when we came into the wefterly fwell, yet we trembled for fear the waves would have broken, and thought ourfelves happy when we got out of foundings. After we had passed these breakers fix or feven leagues, we heard the noise of them like disease through? like diftant thunder."

We shall now give an account of the climate, foil, vegetables, and animals, &c. of Lancerota and Fuerteven-

These islands have both of them the advantage of a wholfome climate, which perhaps is owing to the drynels wnotiome chimate, which perhaps is owing to the drynefs of the foil, and the fitrong northerly winds that salmost continually blow, whence the inhabitants in general live to a great age. From the middle or end of April, to the beginning or middle of October, the wind blows violently, and almost without intermiffion, from the north and north-east. From the middle of October, to the end of April, it most commonly blows in the fame direction; but fometimes intermits, and gives place to other winds. The fourth week wind always brings rain, and therefore is The fouth-west wind always brings rain, and therefore is most welcome. Other winds, particularly the north-west, bring showers, but these are partial, and of short duration; but the rain which comes from the south-west frequently When these rains begin to fall, lafts two or three days. the natives fow their grain, and about fourteen or twent days after the latter rains, that is towards the end of April. days ance the inter ratios that is toward there are apply it is ready for reaping. The north, and north-north-eaft winds blow fo hard and conftantly, as to prevent the growth of all forts of trees, especially in Lancerota, which is least exposed to their violence; yet we find there a few shrubs called subaybas, which never grow to a great height anywhere; but here spread along the ground, ex-

cept when fieltered from the wind by rocks and walls. In the gardanaire lig trees, or forthe low trees, or thrute, which foldom those up higher than the walls of the garden. This lifand, being lofs exported to the wind than Lancerota, is not quite to have of trees and fibrabs, and produces the palm; the wind olive, and a fort of wind prictuces the palm; the wind olive, and a fort of wind prictuces the palm; the wind olive, and a fort of wind prictuces the palm; the wind olive, and a fort of wind prictuces the prickly pear, and fig-trees.

The great plenty and variety of these induced the inlinking real plenty and variety of these induced the inlinking real plenty and variety of these induced to propagate here; but they were dispepainted; for more of those indeas awould remain with them, they not being able to hear the violent winds that prevail here.

bear the violent winds that prevail here. It is seen to to the control of corn grow in both these stands, so wheat, barley, and mining which are preduced the fued abusidance, is not only to serve the inhabitance, but also shock off Tenerist and Palma, who depend greatly on these stands for their sudenance. No vines were produced at Lancerota till within thirty years past, when a volcano breaking out; covered many fields with asset, which have to improved the foil, that vines are now planted and yield grapes, but the wine made from them in thin; good, and so stands evinegar, yet is sery wholesone. A greater quantity of wine, and of a quality something superior to that of Lineerota, is produced here. It can be seen to the forecost grows a great quantity of vine, and of a quality something superior to that of Lineerota, is produced here.

fuperior to that of Lincerota, is produced here. If the line of the fee coaff grows a great quantity of orchilla-weed, an ingredient ufed in dying. It grows out of the botter of the rocks, to about three inches, and fornesimes eight or test-inches. It is of a round form, and of the thickness of test-inches. tell inches. It is of a round form, and of the the cener or common fewing twine; it is of a grey colour, inclining to white, and on the flatk are white foods! Many flatks preceed from the root, at a diffance from which they divide into beauches. This weed dyes a beautiful purple, and is also much used for brightening and enlivening other colours. The best fort is that of the darket colour, and colours. The best fort is that of the darkest colour, and of a form exactly round; the smore it abounds with white spots or scabs, the more valuable it is. This weed also grown in the Madeira and Cape de Verd islands, and on the coast of Barbary abut the best fort, and the greatest quantity is found in the Cariary islands. There is some reason to believe, that the orchills was the getelian purple of the ancients; and in support of this opinion, it is observed, that the coast of Africa adjective to the Capary islands was called by the ancients gettiin, and abounds with orchills weed. with orchilla-weed.

with orchita-weed.

Few firings or wells are in Lancerota. The inhabitants use for themselves and cattle rain water, which they preserve in pits and eitherns. This is also practiced in Fuerteventura, though they slave more springs and wells; but the water is generally brackish. At El Rio, to the northward of the falt-works mentioned in the last festion. is a well of medicinal water, efteemed a fovereign cure for the itch. . It is also good for common drinking, and will

keep fweet at fea for a confiderable time!

Camels, horfes, affes, bullocks, sheep, goats, and hogs are found here, all of which, except the sheep and goats, were brought from Barbary and Spain, since the conquests of their islands by the Spanlards. The horfes are of the Barbary heredy and spanlards. are of the Barbary breed, and are much effeemed in Canaria and Teneriff, for their spirit and swiftness; but the natives of those two islands we are now describing have little or no use for them, on account of their having no great distance to travel, and therefore little care is taken to increase the breed; whence their number is at present very small. The natives use for travelling affes of a larger fize than those of the other islands, which serve well enough for their thort journies, and require little expence to keep

Their cattle, being fat and good, appear in the furing plump, seek, and glillen as if rubbed with oil; but in the beginning of autumn, when all the graft is either withered or eaten up, they have a very different appearance, and are

unfit for eating.
They generally plow here with a camel, or a couple of affes, for the foil is light, and they do not plow deep in the

The want of trees or bulbes occasions a scarcity of birds and wild fowl; yet there are some carary birds, and a bird called tubayba, about the size of a starting, specified black and white. Here are likewise partridges and ravens, with plenty of dunghill fowls; but neither turkies, geefe, nor ducks: the want of the two last species may probably be The black fpider is the only venomous animal here,

the bite of which the natives fay occasions a fwelling,

The inhabitants catch great quantity, of 6th of various kinds on the fea coasts of these islands, particularly, a kind of cod, much better tasted than that of Newfoundand, or of she north fea. Another fish of a fill more ascedlent tailing is eaght here, called mero: it is sa long as a cod a but much thicker, and has long straps or whither lianging at its mouth. There are many other forts of fish, for which have no name; one of them however ought not to be omitted, this is the picude or fea pike, the hite of which is as positionous as that of a viger: yet, when this fish is killed and dressed, it is good and innocent food. There are many shell-fish, and particularly limpets on the rocks by the santhore.

In both these islands are many hills that were formerly wolcanous, the tops of, which are of a small circumferents, and we hollow for a little way downwards, the edges of the tops being usually, natrow and thatp, and on the outlide is generally feen a great deal of black dust and burnt stone like pumice-stone, only darker and more ponderous. No saupston, have been known to happen for swratingers, are pet, that already greationed as Lancerous, which about mininty years ago bocks, out on, she fouth-well parties, and trust of the inhabitants leaving their houtes fied to I were supposed to the jame, after, finding that those who had ventured to say had received no hurt, they took courage and returned. like a hishop's mitro, made of goat's leather, and adoracd with fea-shells.

These people ate their victuals out of vessels made of clay hardened by the heat of the sun. Their food was barley-meal rousted, which they called gosso, and goat's stessels and rousted; also milk and butter.

If any of these were fich, which seldom happened, they cured themselves with the lieros that grew in the country, and when they tad acute pains, they scarined the part affected with sharp somes, or burne it with fire, and then anointed it with goat's butter. When any one died, they laid him between goat's skins in a cave, stretching out the body.

haid him between gone a name body.

When they fewed their land, with harley, which was their own grain, they turned it up with goat's horns; the corn they threshed with slicks, winnowed it with their hands, and ground it with a hand-mill made of two stones. Their method of lighting a fire was by taking a slick of dry, hard thorny wood, which they caused to turn rapidly round on the point, with's a for dry, fongy thiste, and so fer it on sire; and this method has been used to this day.

thirtle, and so set it on fire; and this method has been used to this day.

Each of these islands was divided into a certain number of lordships, and separated one from another by a wall of loose stones, that crossed the island from sea to see. Tenerist in particular, was ruled by nine different lords, or petty sovereigns; and these had frequent wars with each other. But the inhabitants of these quarters had a great effects for the respective chiefs who governed them.

The inhabitants of both these islands were of humane, social, and chearful dipositions, extremely fond of singing and dancing. Their music was youal, accompanied with

a noise made by elapping their hands, and beating with their feet. They were retriartably of mble, and took great delight in leaping and jumpling, which were their principal divertions. Two men took "flast", which they held by the ends, and, lifted up at high above their heads as they could reach keeping it parallel with the ground; and the whole could leap over it while chemed very destrous, Some of them were to active, that they could, at three leaps, boand over three, poles placed in that manner belining each other. They afte climbed up craggy rocks with tensating aginty, and defeended with equal eafe. They frequently quarrelled, and then fought with flicks a yard and an half long.

It was a cultom among them, that if a misn entered the door of his enemy's house, and wounded or killed him, he was sich punithed i but if he came upon him unswares, by leaping over the wall, and killed him, the captain, or chief, by whom the cause was tried, ordered him to be flast.

Their manner of executing criminals, was as follows they carried them to the fea-fhore, and, placing their heads on a fast flood, took another of a round form, and with it dashied out their brains. Their children were held infamous, after the parents had been thus punished.

Their poople were exceitent ferimmers, and used to kill the fifth on their, coasts with "ficks." Their houses were bouit of theme without terment, but worthing and deriving he there were round, and composed of two walls, once within the other, with a space between y and, like their dwelling houses, were built of loose flories, with a narrow charm of their boat milk to him from earther verses.

The dreas of the phenoment of Fuerteenture conflict of their heads on deards like the narrow of Lancerots, wore their heads of carrow, and had high caps on their heads and beards like the narrow of Lancerots, wore the lattle fort of shoes, and had high caps on their heads and conflict of the leg. They drefted the hair of their heads and of goat-filins.

With reflect to the present insabita

worst the fattie fort of shoes, and had high caps on their heads made of goat-fkins.

With respect to the present inhabitants of these two idends, though they past for Spaniards, they are sprang from a mixture of the antient inhabitants with the Normaist and other Europeans, by whom they were subdued; and from some Moorish captives, whom the Spaniards had brought from the coast of Barbary to these islands.

The ratives are generally tall, robust, strong, and of a very dark complexion; but those of the other islands account them; sade and unpolished in their manners and behaviour.

They meither speak nor understand any other language but the Casillan, which they pronounce most barbarously. They dress coarfely, and after the Spanish fashion; for the short cloak and gobilla, formerly afed by the Spaniardy.

are unknown here.

They build their houses in general of stone and limes They build their houses in general or none and times those belonging to the gentry are covered with pantiles; but the meaner fort thatch theirs with firaw. They generally pave the floors with flag stones. Few even of the better kind, have either ceitings or lofts; but they are built in the form of large barns, and divided into apartment by boarded partitions that rise no higher than the walls; fo that all the rooms are open above, and have

ments by boarded partitions that his en higher than the walls; fo that all the rooms are open above, and have no other covering than the roof.

A diffi called goffio, it the ufual diet of the pessants: this is the flour of wheat, or barley, well heated by the fire, which they make into dough with water, and then eat it, without either knives, forks, or spoons, which are not wantad. They sometimes make it up with their hands in balls or lumps, which they dip in honey or molasses; and, during the winter, when grass is in perfection, and they have plenty of excellent milk, they put the gossiand, during the winter, when grass is in perfection. They also prepare gossio by putting it into boiling milk, and stirring it about till ris sufficiently boiled and thickened. On particular occasions, such as sessions and weddings, the poor eat sissing and seems, such as sessions and weddings, the poor eat sissing and seems to be read is rarely used by sny but the gentry, and there are some people in those sisance who have never to the dit. Water is their wind liquor, as thay seldom drink any wine.

Few of the men in Lancerota and Paertaventura, are artificers; for almost all their closure are made by the women,

436 THE NEW AND UNIVERSAL SYSTEM OF GEOGRAPHY.

women, and their houshold furniture is breacht from the other islands. The peasants are employed in tilling the ground, fowing, reaping, and other parts of hushandey. The class of people deemed gentry in these Islands, are so averse to leaving their country, and have so little cutions, that sew of them visit Spain, or even Caparis, except when obliged to attend their law-fuits in that island. A gentleman who possesses a few acres of land, a camel, a couple of assessment of the service of the service to live all his days on gossio, than venture to the Spanish West-Indies, in order to better his fortune by trade, which, in his opinion, would difgrace him and his landly for every yet he will, without shame, oppress the poor peasants, and

Weft-Ind'es, in order to better his fortune by trade, which, in his opinion, would diffrace him and his lamily for every yet he wil, without fhame, oppress the poer peasants, and deceiva '(rangers, in order to support his imaginary rank, which, awong the middling fort, consists wholly in not working, and riding a little way on an afs, attended by a ragged fervant.

The religion of the church of Rome is the only one prossible hers; but there are but few monks, and no name among them: they are, however, in no want of priests, for there are feveral perish-churches, and an inferior courred inquisition in each island, in order to prevent herely.

Though all the Canary islands are subject to Spain, yet the natives of the two we are now describing, with those of Gomera and Hierro, do not hold their lands of the crown, but of the samily of Don Diego de Herrera, who conquered the island of Canaria. The chief part of the power originally possessed by the proprietors of these islands has been, however, taken from them, and, annexed to the crown, probably on account of their making, an ill use of such an extensive authority.

The government is now vested in an alcasse major and a fargento, major, associated government of the civil, and the other of the military government is now vested in an alcasse major and a fargento, major, associated the civil, and the other of the military government. There is an appeal from the decifion of the alcasse major fargento major receives his orders from the governor-general of the Canary Islands, who usually resides in Tenerist. No standing forces are kept form the decifion of the alcasse major are kept in order, and that the companies may be raised at a short notice.

These islands, though but little effectmed by the Spanish government, are really of great value; for were they once

panies may be raifed at a flort notice.

Thefe island, though but little effectived by the Spanific government, are really of great value; for were they once jubiled by any other nation, Palma and Teneriff would fall of course, on account of their depending on Lancesota and Fuerteventura for their corn. Betides, the forts in Lancerota would afford convenient retreats, where the cruiting thise of an enemy might careen, and be supplied with architecturing and water.

with provisions and water.

The commodities exported from hence are entirely con-fined to the other islands, and conflit of wheat, barley, mais, cattle, fowls, cheefe, orchilla weed, goats fixins, and falt fifth, but the two last are only exported from Laneerota. "The wheat is small grained, but hard, clean, and fo good, that it always fells at Teneriff at a higher price, by one-fifth, than either English or other European wheat. About ten years ago a number of camels were exported from Fuerteventura to Jamaica, and other parts of the English West-Indies; but this trade was foun prohibited, for fear of losing the breed, or at least raising the price of those animals to the natives.

The Spaniards having brought affecto Fuerteventura, they The Spaniards having brought affects Fuerteventura, they increased to fast, that they ran wild among the mountains, and were so prejudicial to the natives by eating their corn and other grain, that in the year 1591, they affembled all the inhabitants and dogs in the island, in order to destroy them; and accordingly killed no lefs than listen hundred. Since that time there have been no more in the island than is sufficient to supply the wants of the natives.

We before observed, that they impolitely prohibit the exportation of corn to any place except the other islands; whence in a year of great plenty it becomes of so little walso, as forcely to may the except of the willing it down.

whence in a year of great plenty it becomes of to little value, as foarcely to pay the expence of cutting it down. Hence they are very indifferent about railing mote than what they can conforme themselves, or fell in the other illandt; so that in a bad year the people starve for want, especially the inhabitants of Teneriff, quelte they, are separately at to be supplied from Europa with that necessary article.

Most of the imports are from the other islands, espethe Canney Islands. These confit in English woollen goods, and German linens, both of the coarsest kinds, wine, brandy, oil, fruit, planks, and other timber, barks nd filling-boat, household farniture, tobacco, firuff, ens-wax, foap, candles, and a confiderable quantity of affa, which they receive in the balance of trade, part of thich is paid to the proprietors of the lands, and the reft int to Grand Canaria, to support the expense of their aw-foits; the natives of all the Canary Islands being generally extremely litigious and quarrestonse.

ats of the Ifland of Grand Canaria, both with respect to its antient and modern flate. Char

Treat of the Island of Grand Canaria, both with respect to its antient and modern face.

THE island of Grand Canaria is greatly superior to the delightful temperature of the air, and the plenty of the delightful temperature of the air, and the plenty of pool want, tree, herbe, and delicious fruits found upon it, but by resson of its being the feat of judice, and government from the superior of the nest of the Forunate Island may justly be aspected to it.

From the traditions of the nest of the conquest of it by the Europeans, Canaria was governed by several petty fovereigns, amongst whose Articlements, the green of a miost, sently, and eldouence? Is that for became invested by the people of the other whilely, and was appeted to the visitories, it is the point of arbitrator of the families, and was appeted to the visit of the policy of the other whilely, and was appeted to be delicited to prejudice the Castarians against het, and revention of the policy of the other function for the tradition of the policy of the other than the families of the families which have their caused decided in project courts, and ried before comprised and decided in project courts, and ried before comprised. The project of the which for the work and decided in project courts, and ried before comprised. The piqued her for much their families and the families of the purposed for which they were defigured, and the faceth forms her influence gradually decreate. The piqued her for much therefore and popular officer. The piqued her for much therefore and popular officer. The piqued her formed the faceth them in the purposed the purposed for which they were defigured, and the faceth form her influence gradually decreate. The piqued her formed the faceth him the commander of her army. Having pur hithest his the head of the troops, he faced him as a sing of the which island; and this fon, at his death, left two fons, between whom he equally divided his dominions. Thek were, on their respective thrones, trying to maintain what their fashe had le

poled perty fovereigns were aiming to regain what they had loft, at the time the Spaniards conquered the illand; which event, at the fame time that it united them in one general calamity, put a final period to all their intestine &

Canaria is about forty-two miles in length, twenty-feven in breadth, and a hundred and five in circumference, reckoning the length from the north-east point fouthward to the point 'Arganeguin,' and the breacht from the port of Agare, on the well fide of the illand, to that of Gando

The north-east point of Canaria lies at the distance of eighteen leagues from the fouth-west end of Foettaventura, and in clear weather either of those islands may be

feen from the other.

icen from the other.

Towards the centre of the island, is a number of losty mountains, which rife so far above the clouds, as to stop the current of the north-east wind that generally blows here; so that when this wind blows hard on the north fide of the mountains, it is either quite eath on the other, or a gentle brocze blows from the fouth-weft. The calms and eddy winds caused by the height of the mountains above the eddy what caused by the neight of the mountains above the atmosphere, extend wenty or twenty-five leagues beyond them to the fouth-west. There are also calms beyond fome of the rast of the illands; for those of Teneris extend theen leagues into the ocean, the calms of Palms thirty, and those of Gomers ten. Upon first coming to the calms, the waves appear forming and boiling like a post, breaking in all directions; and when a yellel enters the breaking in all directions; and when a years enters me verge of them, the is flaketh and bearen by the waves oh all fides in fuch a mahner, that one would imagine it im-possible to withfland them. This comfonon, however, does not last long; for after a flap is 'once farrly entered little that the calms, the will either find a dead calm, and smooth

water; or a pleasant and confliant breeze at fouth or fouth-west, according as the wind blows without; for this eddy wind, as it may be called, constantly blows in an opposite direction.

west, according as the wind blows without; for this eddy wind, as it ray be called, constantly blows in an opposite direction.

There is a peninful at the north-east end of Canaria, about awo leagues in eicentification, which it connected with the main land by an isthmic about awo leagues in eicentificate two miles in length, and a quarter of a mile in breatth at the narrowest past. On each side of the fish of the sea. That on the orth side is casled by some Porto de Lox, and by others Porto de Metes, from some steep rocks or islands at the entrance of the bay, towards the north-east. This is a good road for ships of any burthen, with all winds, except the footh-east; but that wind is not common, and varely blows so hard as to endanger ships. The landing-place is at the bostom of the bay, where shads a hermitage, or chapel, dedicated to St. Catharine, and a castle of no strength mounted with a few guns.

At three miles distance is the city of Palmas, the capital of the sistant of the sistance of standing, against a regular attack. Though the city of Palmas is of no strength, it is pretty large, and contains several sine buildings, particularly the cathedral of St. Anne, with many churches, convents of sistars of all orders, and built with stone. The city is another castle, called St. Pedro; but nether of stem are capable of standing, against a regular attack. Though the city of Palmas is of no strength, it is pretty large, and contains several sine buildings, particularly the cathedral of St. Anne, with many churches, convents of sistars of all orders, and built with stone. The city is divided into two parts, which have a communication by a bridge, thrown over a small stream of water, and there are supposed on the sing of the side of the stone of cathedral and the port of Garde, or Ageete, on the northwest part of the sident of the side of the side of the supposed of the moon, except these of lancorota and Fuerteventure. There are no inland, cities or large towns in Canaria, though there are many villages, the the universe. The plaintain tree will bear fruit but once, when it is cut down, and another tree fprings from the same root; the cutting down is therefore repeated every season, as soon as the fruit is gathered. As this issued that a slabbrious air, and is well watered, almost every thing thrives that is planted, such as the pine, palm, wild olive, lawret, poplar, dragon-tree, lera nuesta, or lignum shedium, the aloc shrub, Indian fig, or prickly pear. Besides those above-mentioned, they have all the American and European fruits, except the anna. They have also wheat, barley, and mair, potatoes, yams, the best onions in the world, cabbages and fallads, and many kinds of roots.

of roots.

The climate in this island is extremely delightful; for the heat in fummer seldom exceeds what is generally selt in England in July and August, and the coldest part of the winter is not sharper than with us about the end of May, in a backward sedon. The same winds blow here at the same periods as at Lancerota and Fuerteventura; but the northerly wind is less furious, and compared with that, is only a gentle breeze that cools the air, so as to render it agreeably temperate; and the sky is continually serven, and free from florms and thunder.

The only dispressable weather is, when the south-east of roots.

ference, and free from florms and thunder.

The only difagreeable weather is, when the fouth-east wind blows from the defart of Zaara; but this does not often happen. These winds, being very hot, dry and flifling, are of great prejudice to the fraits of the earth, by their pernicious quality, and by their bringing clouds, which devour every green thing they light upon. In the mountains, indeed, the air is not only cold in winter, but their summits are uninhabitable, from the great quantities of fnow that fall upon them in that season, but the air is exceedingly wholesame below.

No. 43.

No. 43.

Notwiethfianding there is in Canaria more level and arable isnd than in any of the islands to the westward of it, yet that bests no proportion to the barren, strong and rocky ground. The mountain of Doramss is the most fettile part of this listad; it is situated about two leagues from the city of Palma, and shaded by groves of fragrant trees of different kinds, whose lofty boughs are so interwoven as to exclude the rays of the sun. The rills that water these shady groves, the whispering breaze among the trees, and the singing of the canary-birds, form a most delightful concert.

A modern naturalist gives us the following account of this most beautiful singing-bird: "This bird was originally peculiar to these isles, to which it owes its name; the same that were known to the autients by the addition of the Fortunate. On the same spot these charming songerers are still to be found; but they are now so plentist among us, that we are under no necessity of crossing the ocean for them. In its native regions, the canary-bird is of a dusty grey colour, and so disferent from those seen in Europe, that doubts have arisen whether it be of the same species. Next to the nightingale, the canary-bird is confidered as the most celebrated songther: it is also reared with less difficulty than any of the soft-billed birds, and continues its song throughout the year.

We cannot give a very agreeable description of the upper part of this island, which is entirely barren and desolate; for as it projects far above the clouds, neither dew nor rain fall upon it, so that it is exposed to a dry, parching wind, entirely different from the trade-wind below, which generally blows from the west. This westerly wind blows hard in the night, but abates in the day.

The samazing quantity of calcined stones, as and lava, that cover the greatest part of all the Canary islands, greatly disfigure them. But though indoes not appear that any volcano bas burnt in Canaria, since the island was conquered by the Spaniards, nevertheless the apertures from w

may also the channels made by the sery streams that slowed from the volcanos.

Olives have been planted in this island; but no oil is made of the froit, which does not come to such perfection as in Spain, Barbary, and other countries. Foreserly much sugar was made here; but the great demand for the wines and brandies of this island-in the Spanish West Indies, stopped the culture of the sugar cane, and the nactives find it more to their advantage to receive the produce of their wines at the Havannah in sugar, than to raise it in their own country. Canaria also abounds in honey, which is good, though of a black colour. The wine of this island, though of a very agreeable taste, has not such a body as that of Tenerisf, and is therefore left sit for exportation, yet many pipes of it are annually sent to the opanish West-Indies.

Spanish Werk-Indies.

Camels, borfes, affes, a few mules, bullocks, sheep, goars, hoge, and rabbits, are among the animals of this island. The mostry are dusphill sown, turkies, geefe, ducks, partitions, and a present to be any ferpents, scorpious, or other venomous creatures here, except the faider of Lancerots, and a very innocent kind of snake peculiar, to the island of Gomera; but lisards abound in this and all the other islands. the other iflands.

We shall now treat of the antient inhabitants of Canaria, their persons, dress, manners, and costoms see.

It appears, by the accounts of the first discoverers of
Grand Canaria, that the original inhabitants amounted to
upwards of 14,000 men capable of bearing arms; exclustive of women, children, aged persons, &c. which must
have rendered the island extremely populous; but some
time after the first arrival of the Europeans there, a pessisience swept away two thirds of the inhabitants. These
were of a dark complexion, like the natives of Lancerous
and Fuerterentera, of a good stature, and well-proportioned, &citye, warliste, chearful, good-natured, and faithful to their promise; for they considered a lie as one of
the greatest crimes. They were searless of dangers, and
fond of hasardous enterprises, such as climbing to the
tops of steep precipices, and there fixing poles of so great
a weight, that one of them was of sufficient-burden for
a man of common strength to carry on level ground; anise
with these they would leap from one rock to another.

Their dress was a short tight coat, with a hood to it
like that of a Capuchin friar; it reached to the knees,
and was saftened to the wait by a leathern girdle. This
garment was made of a kind of rush, which they best We shall now treat of the antient inhabitants of Ca-

till it became foft like flaz, and then they fpen and wove it. Over this they had a goar-skin clock, with the hairy fide inward in winter, and outward in fummer. They had likewife caps made of the fkins of the heads of goats, taken off almost entire, which they formed in such a manner that a goat's beard lung under each ear; and these they fometimes tied under the thin. Some had bonners of fkins, adorned with feathers. These garments were all neasly fewed and painted, and were in every respect much more curious than these of the natives of the other islands. Some of them wous shoes made of raw hides, the workmanthip of which was very nest, and others went bare-footed.

manthip of which was very nest, and others went barefooted.

The noble or feperior rank of the Canarians had an
external mark of diffinction from those of the vulgar or
lower clast, which was by the et of their hair and boards;
but a man could not be entitled to this henour, merely
from his being the offspring of noble or rich parents; but
was to be declared noble by the fayen, a perfor whose
businets it was to decide disputes among the natives, and
regulate the ceremonles of their religion; in short, he was
a priest, end acted also as a judge in civil affairs.

The manner in which nobility was conferred was very
singular. At a particular time of life, the son of a nobleman let his hair grow long; and when he had obtained
sufficient strength to endour the fatigues of war, went to
the faxen and faid, "I am the son of such a nobleman,
and define also to be ennobled." Upon this the faying
went to the town or village where the young man was
brought up, and there affembled all the nobles, and other
persons of the place, whom he caused foleamly to swar by
their god Acoran, to declare the truth. He then affect
them if they had ever seen the youth so far demean himself
as to destire victuals, or to go into the folds to look after the
strength of the sufficient of the sufficient in time of peace from their owners: We there
lie was ever discourseout, of a standerout disposition, or kill them? If he was ever known to steal cattle, or forcibly take them in time of peace from their owners? Whether lie was ever discourteous, of a sanderous disposition, or gulley of any indecent behaviour, especially to women? If they all answered these questions in the negative, the fayeag cus the youth? hair in a round form, to short as not to hang below his ears, and giving him a staff, declared him noble. But if any of the standers by could charge him with any of the offences mentioned by the fayeag, and bring fusicient proof of them, instead of being declared noble, the fayeag shaved his head, and fent him saway in disgrace, by which means he was rendered sneapshe of nobility.

They efteemed it base and mean to molest or injure the themen and children of the enemy taken prisoners in war, whom they confidered as weak and helpleis, and therefore improper objects of their resentment; hor did they offer the least damage to the enemy's temples.

The antient Canarians used clubs and sharp-pointed poles herdened by fire; but after the Europeans began to make their idand, they formed shields in imitation of

poles herdened by fire; but after the Europeans began to invade their island, they formed fihelds in imitation of theirs, and fwords of pitch-pine, the edges of which were hardened by fire, and fharpened in fuch a manner, that it is fald they cut-like flee! but their chief iterngth lay in their wooden spears, and their throwing stones with great force and fkill.

sorce and fkill.

"I hey appointed public places for fighting, in which a sind of stages, were raised for the combatants, that they might be more easily seen by the speciators. On a challenge being given and accepted, the parties went to the council of the island, which consisted of twelve members, for a licence to sight, which was easily obtained, and then they went to the saying the have this slicence consistence. Afterwards they assembled all their relations and friends, that they might be sineshators of their heaven and this Attendance they anemore an interfrience and inches, that they might be frechators of their bravery and field, and with them repaired to the public place or theatre, where the combatants mounting on two floures flat at the top, and placed at the opposite fides, threw stones at each where the combatants mounting on two trones fat at the top, and pheed at the opposite fides, threw those at each other, which, though good markfinen, they generally avoided, merely by their agility in writhing their bodies, without moving their feet. When each had thrown three flones at his antagonist, they armed themselves with a cudgelin their right hand, and a fiven flint in their left; then drawing near, they beat and cut each other till they were tired, and then retired with their friends to take fome referalments; but four returning function if the treater. were tired, and then retired with their friends to take fome refreshment; but foon returning, fought till the twelve members of the coincil called out, Gama, gama, or Enough, enough, when they inflantly defifted, and ever after remained good friends. If during the combat one of he parnes happened to break his cadgel, the other inflantly defifted from firiking, and the dispute was ended in an amicable manner, though neither of the parties was declared victor. These cambats were usually sought on public festivate, resolvings, or the like occasions; and if either of the combatants was deeply wounded, they heat a rash till it became like tow, and dipping it is melted goar's butter, applied it to the wound as hot as the patient could bear it; and she older the butter was, the source they say a cure was effected.

There were also public houses or rooms, in which they assembled to dance and sing. The Causarian dance is still in use in these itlands; it has a quick and short step, and is called Canario. Their songs were either amorous sonners, set to grave and plaintive tunes, or feisman direct.

forners, fet to grave and pinjutive survey.

They build their houses of flore, without coment, which were nevertheles to next and regular, that shey made a handform appearance. The walls were very low, and the floors surk beneath the level of the ground on which they flood, being to contrived for the advantage of warmth in the winter susten. At the top they had wooden beams, or rafters close to each other, and govered them with carth. Their beds and bedding were the fkins of goats dressed in their halr. Their other furniture confisted of baskets and mats of palm leaves, and rather very nearly made. neatly made.

They had people among them whose sole employment was building house and making of mats. The women were generally employed in painting and dying; and in the proper selon they carefully gathered the flowers and thrubs from which they extracted their several colours. The thread they used in sewing was made of the nerves and tendons of the loins of sheep, goats, or swine, with which they were supplied by the butchers. These they first anointed with butter, and then prepared by fire in such a manner, that they could split them into sine threads at their pleasure. Their needles were of bone, and their sish-hooks of horn. The vesses they used in cookery were made of clay, which they placed in the sunton haden.

cookery were made of clay, which they placed in the funto harden.

The Canarians (especially the better fort) would not
follow the trade of a butcher; for that employment was
reckoned so ignominious, that they would not allow one
of that profession to enter any of their houses, or to touch
any thing belonging to them. It was even unlawful for
the butchers to keep company with any that were not of
their profession; and when they wanted any thing of another person, they were obliged to carry a fast, and slanding at a confiderable distance, point at what they wanted,
but, to compensate for this abject state, the natives were
obliged to supply the butchers with every thing they
wanted. It was unlawful for any Canarian, encept the
butchers, to kill cattle; and when any person wanted his
beast to be slain, he was forced to lead it to the public
stambles, but was not permitted to enter laimself; even fliambles, but was not permitted to enter himfelf; even women and children were subject to this prohibition. Their common food was barley-meal roaded, which

they est with milk or goat's fiels, and when they made a feast, they dressed the latter with hog's lard or auter. They ground their barley with a hand-mill. When they went to plough their lands, about twenty people assumbled together, each had a wooden lastrument re'embling a hoe, together, each had a wooden lattrument re'embling a hoe, with a four at the end of it, on which they fixed a goal's later: with this they broke the ground, and if the rain did not fall in its proper feafon, they moiltened the earth with water, which they brought by canals from the rivulets. The corn was gathered in by the women, who reaped only the ears; these they threshed with slicks, or beat out the corn with their feet, and winnowed it with their ands. Their wealth confifted chiefly in their sheep,

goats, and hogs.

The lower class of people by the fea-coaft, lived chiefly on fish, which they utually caught in the night, by making a great light with torches of pitch-pine. In the day-time, whenever they perceived a thoul of fardinas, a small fish that has some resemblance to a pilchard, a multitude fish that has fome relemblance to a pilchard, a multitude of men, women, and children, went at a fmall diffance into the fea, and fwimming beyond the shoat, chased the fish towards the shore, and with a net, made of a tough kind of rush, inclosed and drew them to land, where they equally divided their prize; but in doing this, every wo-man who had a young child, received a spare for each; or if the bappened to be pregnant, the received the allowance of two persons.

These people had never more than one wife. When the people and tever ince that our wife the parents were disposed to marry their daughter, they fed her thirry days with large quantities of mile and goffio, in order to fatten her; for they thought that ican women were lefs capable of conceiving children than those who d if ient

were fat, and that it was a bad omen for people to marry when lean.

The Canarians were very careful in the education of their children, and never failed to chaftife the an when they did amife. It was uffail, to propose two of the youth as examples to the self, the one of virine, the other of vice; and when a child did any thing that was praise-worthy, he was consusended, and told that such behaviour was antable, and refembled that of the good boy. On the other hand, when a child displeased its parents, they observed that such an action resembled those of the person fix up as a bad example. By this means they raised a spirit of emulation for excelling in virtue.

There were religious women, called Magadas, among the Canarians, a number of whom lived together in one house, or convent, of which there were many in Canaria, and these were held to facred, that eximinals who fied to any of them were protected from the officers of judies. The Magades maintained, that Acoran, their god, dwelt on high, and governed every thing on earth a and when they addressed him, fifted up their joined hands to heaven. The women were distinguished from others by their long white garments, which swept the ground as they passed. In this island are two rocks, to which the inhabitants, in times of public calamity, went in procession, accompanied by the religious women, carrying in their lands palm branches, and vessels of the island, it was governed by two princes, which they poured on this rocks, dancing sound them, and singing mountful solny if from thence they went to the sea shore, and all at once shouting together with a loud voice, struck the water with their rods.

Good government was maintained, and judics strictly administered, emong the Canarians. At the time of the conquest of the island, it was governed by two princes, each of shown had his separate district 1 his before, they were ralled by captains, or heads of tribes, who presidence of the island, it was governed by two princes, each of shown had his separate district 1. T

lated.

When any of the nobles died, they brought out the corple, and placing it in the fun, took out his entrails, and buried them in the earth; then drying the body, they swathed it round with bandages of goat-skins, and fixed it supright in a cave, cloathed with the fame garments which the deceased wore when alive; but if no proper cave was at hand, the body was carried to one of the stone places, now called Mal Paices, where, after they had leveled the ground, and fixed the loofe stones, they made a fort of artificial cave of large stones, placed so as not to touch the body, and then taking another large stone two yards in length, wrought into a round form, with this closed the entrance, and afterwards filled up the outside between the top of the round stone and the outward part of the other large ones with small stones, in a very neat manager.

All the corpies, except those pisced upright in the caves, were laid with their heads towards the north. Some of their dead bodies were put in a chefts, and afterwards deposited in stone sepulchres People of the lower class were interred in the Mal Paices, in holes covered with flones.

SECT. XIII.

Containing a description of the island and pile of Tenerist, also of the islands of Gemera and Palma; their situation, towns, barbours, climate, produce, inhabitants, Us.

THE island of Teneriss was antiently called Nivaria, from the snow that incloses the neck of the pike of Teych, like a coller; the name of Teneriss, or the White Mountain, being given it by the natives of Palma, in whose language Tener signifies snow, and life, white; the submit of the pike of Teneriss snow, and life, white; the submit of the pike of Tames it Vinchoni, but it was called Chineche by the natives.

Point Nago, or Anaga, which is the north-east point of Teneriss, bears north-west about fixteen leagues distant, from the north-west part of Canaria to the nearest part of Teneriss, the distances does not exceed twelve leagues.

does not exceed twelve leagues.

This island is nearly triangular, the three fides being almost equal, and each about twelve leagues long. In the

centre is the famous pike of Temriff, which is faid on be the highest hill in the universe, and failese the behalter with anastranes, both neer and at a diffance. A This great mountain extends its bafe to Garrachine, from whence it is two days and a half's journey to the top; but we theil treat more particularly of this in the fequet.

In coming in with Teneriff, in clear weather, the plus may be easily difference at a hundred and twenty miles difference; and in failing from it, at the diffance of a hundred and fifty miles, it then refembles if this blue vapour, or fmoke, very little darker than the fix; and at a farsher diffance, the shade diffappearing is not diffinguishable from the saurs of the streamment. Before we tole fight of this towering mountain, it fears a confiderable height above the horizon, though from its diffance, and the spherical figure of the earth, the rest of the island is fonk beneath the horizon, newthitharding its being exceedingly high.

showe the horizon, though from its differer, and the spherical figure of the earth, the rest of the island is supticensent the horizon, notwithstanding its being esseedingly high.

There are several high perpendicular rocks near Pente de Nago; and on the louth east side of the island, about five or fix leagues distant from them, is the harbour of Santa Crus, the most frequented part in the Canary islands. The best road for thies is about a mile to the northward, between the middle of the town and fort or castle, thips may lie here secure from all winds, though the lay is exposed to those which blow from the northward coasts, and fouth-east, yet these winds do not blow to hard as to cause any considerable damage above once in the space of four or size years. However, forme years ago most of the shipping in the soud were driven on those by one of these gaies. Some English thips were then in the harbour; but the crews prudently cutting away their masts, rode out the storm.

A mole, built at a vast aspense, for the convenience of landing, is in the middle of the town. It russ up to the northward, and the outermost part turns towards the shore. However, in mild weather, goods are landed at a creek among the rocks, at the distance of a sone's cust to the fouthward of the mole, and aser the custom-bouse.

In the way from the mole into the town, there is a square fort on the left hand, named St. Philips 1 this is the principal one in the bay. To the northward of it are losse forts and hatteries mounted with guns, the most coeffiderable of which is named Passo Alto. Near it is a store forts and hatteries mounted with guns, the most coeffiderable of which he mand the mode into the out-thward of it are losse forts and hatteries mounted with guns, the most coeffiderable of which he mand from the server and them close to the fort, is a fort all of the mode, and coeffiderable of which is named Passo Alto. Near it is a step rocky valley, which begins at the securor, and rons a great way within land. There are several batterie

rally inacceffible.

Santa Cruz is a large town, and contains feveral charches, three convents of friars, an holpital, and the best constructed private buildings of any to be found in the Canary Mands. It is indeed the capital of them all, for though the episcopal fee and courts of judicature are in the city of Palmas, in Canaria, the governor-general of the islands always resides in Santa Cruz, where a great concourse of foreigners continually resort, on account of its being the centre of the trade between the Canary Mands with Eucope and America. The number of inhabitants are supposed to amount to about five or six shouland. The water drank by them is conveyed into the town in open wooden troughs, from a spring beyond the above-mentioned valley, and there are pits of water, which serve for other purposes, in many of the houses.

poles, in many of the houses.

Near twelve miles to the fouthward of Santa Crus, and close to the fea, there is a cave, with a church or chapel, called Our Lady of Candelaria; in which is a little image of the virgin Mary, about three feet high, holding a green candle in one hand, and in the other an infant Jesus, who hat a gilt bird in each hand. This chapel received its name of Candelaria, from its being presented, that on the eve of the Purification of the Holy Virgin, a great number of lights are confiantly seen going in procedion round the cave in which the image is placed; and they assert that in the morning drops, of wax are scattered about the sea-shore. This image is held in the highest veneration, on account of the many miracles it is said to have performed, and her chapel is adorned with so many ornaments, that it is the scheft place in all the seven islands. At a certain season of the year, most of the inhabitants of the island go thither in pigrimage; when troops of young girls march singing, in an agreeable manner,

ner, the praise of the Virgin, and the mireculous deeds the image is fail to have performed.

North-wetward of the island is the bay of Adexe, or, on it is pronounced, Adehe, where targe thips may uncheer. On the morth-well fide is a haven called Garrachica, once the best port in the island; but it was defiroyed in a yoa, which the meives call the year of the earth-qualers, and filled up by the rivers of burning law that the west defined up by the rivers of burning law that the west defined up by the rivers of burning the that the west did not be foound a voicency for that house are now bulk where thips formerly lay at unchor; yet vessels come there is the furnmer fasfon.

The carthquake shape-mentioned began on the twenty-faceth of December; and, in the space of three hours towards the December; and, in the space of three hours towards the December; and, in the space of the house to shake, and obliga the plainishments to shandon them. The conferentation became universal, and the people, with the bishop at their head, made processions and public prayers in the open fields. On the thirty-sirt a great light was observed on Manja, cowards the White Mountains, where the earth opening, two volonoes were formed, that threw up such heapt of shouses, us to raise two considerable mountains; and the combastible metter constitually thrown up, kindled in the neighbourhood above firty fires.

Things remained in this fituation till the fifth of January, and then the four was totally obscured with clouds of sincle and flame, which continually increasing, augmented the confermation and terror of the inhabitants. Refore night, the whole country, for nine miles round, was in same the shoules, and should have been their volumes of the force entirely everthew several house, and should have been their to the open fields, where they avery moment expected to be swallowed up by sump new gulf. The note of the volcano was heard at the steventy leagues distance, where the sen should also are the subment was heard at the set of the store where they every moment expected to be swallowed up by sume new gulf. The noise of the volcano was heard at the st twenty leagues distance, where the sea shought with such violence as alarmed the mariners, who at first thought the volence as alarmed the mariners, who at first thought the ship had struck upon a rock. Mean while a torrent of sulphur, and metted ores of different kinds, rushed from this last volcano towards Guimar, where the houses and public buildings were thrown down by the violence of the accompanying shocks.

On the second of February another volcano broke out

On the fecond of February another voicano broke out in the town of Guimar, which fwallowed up a large charch. Thus, from the twenty-fourth of December to she twenty-third of February, the people were conflantly alarmed by continual shocks of earthquakes, and the terrible voicanoes that burst forth in different parts.

The town of Garrachica is fill pretty large, and contains feveral churches and convents of both fexes. It has a finall trade for brandy and wine, which are usually fent from thence in barks, or large open boats, to Santa Cruz, or Port Orotava. Strong and durable thips are also built there, some of which are upwards of three hundred tons

About fix miles to the eastward of Garrachica is the town of Port Orotava, which is a good harbour in the furnmer feafon; but in the winter, thips are often obliged to flip their cables and put to fea, for fear-of being furnized with a north-weft wind, which throws in a heavy is upon this corft. This is a place of confiderable trade, it having flourished greatly fince the definction of the harbour of Carrachies. bour of Garrachica. It contains two churches, two convents of friers, two of nuns, and fone good private buildings. At each end of the town is a black fandy buy, along the northermost is a low stone wall, built to buy; along the northermost is a low stone wall, built to prevent the landing of an enemy: at the other bay is a small castle, or fort, for the same purpose, and at the landing-place between them is a battery of a few cannon: but the surf that continually breaks upon the shore, is the best defence of this port.

The town of La Vills de Orotava, which is about three miles within sand from Port Orotava, is a large place, and contains several churches, convents of friars and nuns, with a number of stately stone buildings belonging to private persons. A rivalet, which runs through the midst of it, refresher their gatdens and orchards, and supplies the inhabitants with water.

the inhabitants with w

the inhabitants with water.

The city of St. Christobal de la Lagona, that is, St. Christopher of the Lake, extends four miles within land from Santa Gras. The road to it from the above town is a presty steep ascene, till within a small distance of the above

town, which is feated in the corner of a plain, about four nailes in length, and a mile in breadth. This city is the capital of the island, and contains two parish churches, three convente of feiters, two of nens, and three hospitals, two of which are for the veneral difease, and the other for foundillugs. The jessite have also a house here, end, befides these public structures, there are many hendfore parished the structures, there are many hendfore private buildings. The water drank by the imbolitants is conveyed in troughs to, the city, from the mountains situated to the fouthward of the plain.

In this city there is not the least show of business, is being chiefly inhabited by the gentry of the island, particularly the officers of jestices, such as the corregistor and his thilastia, or lieuterants, the registores, or cavillo, with the judge of the indies, who privides in the india-house, where all affairs relating to the Well-india commerce are conducted. Here is likewise an office of inquisition, with its proper offices, subject to the tribunal of the Holy Office at Grand Canaria: yet the city appears to a stranger as if defolate and uninabited; for inardly any body can he seem in the streets, and grass grows in the smoot frequented places.

There is a leganta, or lake, behind the city, about sails a mile in circumference, from which the city takes its name. It is dry in summer, but in winter, and in all feasons expended to the wind.

The road desonds, from the western extremity of this plain, to La Montanaa de Centejo, a large village in the mid-way between Santa Crus and Port Orotwa, chiefly inhabited by pessants and labouring people. Some of the towns belonging to the villages are fitured at no great diffuser from the sea, it is extremely cold in winter, and in all feasons expended to the wind.

The road desonds, from the western extremity of this plain, to La Montanaa de Centejo, a large village in the mid-way between Santa Crus and Port Orotva, chiefly inhabited by pessants and labouring people. Some

distance included there are no habitations as a grantee from each other than three leagues.

The whole island continues to rife on all fides from the fea till it terminates in the pike, which we observed above is in the center. The north-fide is the most firstle, and aftends more gradually than the other, particularly a space than the characteristic and the first about three seagues broad, bounded on the fides by high mountains, or rather cliffs,; but it rifes upwards from the fea, like a hanging garden, till you come within a league of the clouds, without any confider-

A large town, called Realojo, is finated in the western border, and La Rambia on the eastern. The towns of Orotava, and Port Orotava, stood between them, with a number of detached inhabitants featured about from the sea-shore upwards to the clouds, in or beyond which there are no houses; yet the clouds are not higher than the middle distance between the sea and the summit of

All the fertile ground, within a league of the fee, is covered with vines; corn grows in the next league; and, in, the third, fome corn, woods of chefnut-treet, and many other different forts of trees. Above these woods are the clouds, which, in fine weather, generally defend gradually towards the evening, and reft upon these woods till the morning, when they re-ascend about a league, and there remain till the succeeding evening. There are several other towns, and many small villages, besides the towns.

already mentioned.

This island is so populous, that when the last account was taken it contained no less than minety-six thousand persons, and is supposed to contain as many souls as all the

reft of the inhabited iflands.

We shall now, for the satisfaction of the curious part We main now, for the maintained with the relation of a journey up the pike of Teneriff, including a brief account of the weather, and produce of the island. These interesting particulars are extracted from Mr. Glass's history of the Canary islands, which valuable work is highly deferreing of the public efteem.

his gentleman begins his narrative with informing us. In genteema begins his narrative with informing usthat "early in the month of September 1761, at shoot four
in the afternoon, he fet out on horfeback, in company
with the mafter of a fhip, to vifit the pike. They had
with them a fervant, a muleter, and a guide; and, after
ascending above fix miles, arrived towards fun-fet at the
most distant habitation from the fee, which is in a hollow: here finding an aqueduct of open troughs that convey water down from the head of the hollow, their fervants watered the cattle, and filled fome fmall barrels to ferve them in their expedition.

The gentlemen here alighted, and, walking into the hollow, found it very pleasant, as it abounded with many

tress of an ederligous finall; and form fields of main or declare one are the boots. On their mounting again, they travelled for forms times up a five proof, modern or more the boots of forms times up a five proof, modern or more declared for forms times up a five proof, modern or more declared for forms times up a five proof, modern or more declared for the times up a five proof, modern or more declared for the times up a five proof, modern or more declared for the times up a five proof of the times they cause to the upper edge of the weed, above the declared forms of the upper edge

gious number of large and loofe flones, or rocks, whose furfaces were flat, and each of them about ten feet every way.

This road was lefs fleep than the other; but they were obliged to travel a considerable way round, to leap over the yocks, which were not close to each other. Among them is a cavern, in which is a well, or natural referyor, into which they descended by a ladder placed there by the poor people for that purpose. This cavern is very spaclous, it being almost ten yards wide, and twenty in height; but all the bottom, except just at the foot of the ladder, is covered with water, which is about two fathoms deep, and was then frozen towards the inner edges of the cave; but when they attempted to drink of it, its excessive coldness prevented them.

After travelling about a quarter or half a mile upon the great stones, they reached the bottom of the real pike or sugar load, which is exceeding steep, and the disficulty of ascending it increased, and was rendered more fatigating by the ground being loose and giving way under their feet; for though this eminence is not above half a mile in height, they were obliged to stop and take breath near thirty times; and when they at fast reached the top, being quite spent with fatigue, they lay about a quarter of an hour to recover their breath, and rest themselves.

In the morning, when they left the English pitching place, the sun as just emerging from the clouds, which were spread like the ocean. Above the clouds, at a was distance to the north, they perceived something black, which they conjectured to be the top of the island, of Madeira, and, taking the bearings of it by a pocker compass, found it to be exactly in the direction of that island from Teneris, but before they reached to the tops of the pike, it dispapeared. They could neither perceive Lancerota nor Fuerteventura from this place, they being not ship he nough to pleree the islands of Grand Canaria, Hiero, Palma, and Gomera, which seemed to be quite nuar.

After redning for some time, they began to o

before-mentioned retames.

'At about five in the evening they arrived at Orotava, not having alighted by the way to flop, only fometimes to walk where the road was too fleep for riding. The whole diffance they rode in the five hours ipent in coming down from the English pinching-place to Orotava, they computed to be about fifteen English miles, travelling at the

puted to be about fifteen English miles, travelling at the rate of three miles an hour.

Our 'author suppose,' the perpendicular height of the English pitching-place to be about four English miles, and adding to that a mile of perpendicular height from thence to the pitc, observes, that the whole will be about five English miles, and that he is very certain be cannot be mistaken in this calculation above a mile either way."

But Mr. Glass may here probably be mistaken, owing perhaps to his not using any instruments proper for afcertaining the exact altitude of this mountain, which, is much higher than either the Alps, or the highest part of the Andes, according to thus calculation.

In Teneriff, the weather is the fame as in Grand Canaria; but the fet-breeze generally fets in at about ten e'clock in the morning on the east and north-east fides of the island, and blows till about five or fix in the evening, when it falls calam tilt midnight. The land-wind then begins, and continues till feyen or eight in the morning, when it is followed by a calm, which last till the same till the feabreeze ceturns: In the bay of Santa Cruz, and on ell the east-fide of the island, the fea-breeze commonly blows at east, and the land-wind at west. On the north-east, and the land-wind directly opposite to it; but there is no land-wind at Point Nago, where the land stretches towards the north-east far into the fea.

At the brow of the hill above Santa Cruz, and at the city of Laguna, a figsin gale blows from the north-west

eity of Lagunz, a fresh gale blows from the north-west all the time of the sea-breeze, which is occasioned by the mountains almost escompassing the plain. These being so exceedingly high on the south side of it, as to beat back to exceedingly high on the fouth fide of it, as to beat back the fea-breeze, and throw it against the mountains that bound the north fide of the plain, where finding no patiage, it veers to the fouth-east, and there meeting with no refindance, forces its way with great vehemence through the plain; till coming to the hrow of the above-mentioned hill, part of the current of air pours down it towards Santa Cruz, advancing within a mile and a half of the fea, where the true fea-breeze checks it. Yet there is no segular fea or land breeze on the fouth-west coast, which is theltered from the trade or north-easterly wind by the immense height of the pike, which towers above the region of the wind: hence on that side of the island, there giou of the wind: hence on that fide of the island, there is either an eddy wind at fouth welt, or a calm.

This island produces nearly the same vegetables as that of Canaria, only there are more vineyards and lefs corn-land.

Canaria, only there are more vineyards and sew corn-iand. The wines are fitting, good, and very fit for exportation, especially into hot climates, by which they are greatly in-proved. Formerly a great, quantity of Canary fack was made here; but of late years they do not make above fifty pipes in a feason; for they now usually gather the grapes when green, and make a dry hard wine of them, which when about two or three years old, can hardly be diffinguified from Madeira; but after four years of age it becomes fo fweet and mellow, as to refemble the wine of Malega in Spain. This like all the other Canary islands,

affords outhills weed in great plenty.

The dragon-tree, aloe, and pine, are natives of Teneriff. The apricot, peach, and pear-trees, bear twice annually. The pregnada, lemon, and lignar wood are found here; as are the cotton-shrub and coloquintida. The rofe blows at Christman; the carnations are large and fine, but tuli, s will not thrive. The rocks abound with famphire, the meadows are covered with clover, and the beach produces a broad leaved grafs. About fourfrore cars of whicat fpring from one roos, the grains of which are as transparent as the pureff yellow amber, and in a good feation one bushel will produce a hundred fold; and the bailey

and maiz are not inferior to the wheat.

With respect to the animals, here are plenty of rabbits, hogs, wild goats, &c. Quails and partridges are larger than those in England, and extremely handsome. Wood-pigeons, turtles, and crows, abound in the spring. Several torts of wild sowl refort hither in the winter season, affording pictry of game to the inhabitants of Laguna. The falcons, or rather strong large bawks, which hover over the lake of Laguna, are thus described by a gentle-man who lately travelled to these islands: "I cannot forbear mentioning the haggard falcons that four every evening about this lake. It is very good diversion to see the na-groor fight them with slings; for they often stoop, several at a time; and besides, they are the best metted lawks, an the world, beingot a larger kind than the Barbary falcon. The viceroy (governor) being one evening to fee the sport, on the author's commending their strength and mettle, affured him upon his honour, that a falcon bred in that itland, which he had formerly sent to the duke of Larma, did at one thighe (unlefs the refled on any thip by the way) pal's from Andalusia to Teneriff, which is two hand and fifty Spanish leagues, and was taken up half dead, having on the vaffels and bells belonging to the duke.

Fishes are found in great quantities hore, particularly dolphins, sharks, meros, lobsters, mussels, periwinkles, the clacas (which is deemed the best shell-fish in the univerfe) and the cherna, that exceeds in relith any we have in England: here is also another fish which is called an cel, though with little propriety, for it has feven tails of a fpan long joined to one body and one head, which are nearly of the fame length. Silk-worms t

nearly of the fame length. Silk-worms to exceedingly; and been profer in the rocks and mountains.

The city of Laguna, which flands near a lake about nine miles from the fea, is the principal place in Teneriff it is called by the Spanlards St. Christoval de la Laguna, or St. Christopher of the lake, and is handformely beilt, having, two fair parish-churches, and a palace for the governor who resides here. The aldermen of this city pay a certain price to the king to ferve their offices of magistrates; but this gives them great power over the inhabitants, who are divided into three classes; namely, gentlemen, merchants, and husbandmen; or, as they are termed men, merchants, and hufbandmen, or, as they are to by the natives, idlemen, bufymen, and labourin The land on each fide of the road, leading to Lagu in general rocky, but fome spots of corn-land are inter-specied here and there, and terminated by small vineyards on the sides of the mountains.

on the fides of the mountains.

This city prefents the beholder with an agreeable profpect, as it flands on the fide of a hill, and firetches its
kints on the blains behind: it is large, compact, and populops: the houses, though not uniform, have a pleafant
appearance; befides the governor's house, and the two
parish-churches, here are two numeries, four courvents;
an hospital, and some chapels, befides many gentlemen's
houses. The convents are those of St. Francis, St. Auwilling. St. Dominic, and St. Diego. The chapters houles. The coavents are those or St. Francis, St. Augudine, St. Dominie, and St. Diego. The chorches
have pretty high figuare ficeples, which top the reft of the
buildings. The freets are not regular, yet they are for
the most part fracious, and pretty handlome, and near the
middle of the town is a large parade, which has good
buildings about it: There is a ftrong prison on one fide
of it, near which is a large conduit of good water that
finnise all the town.

of it, near which is a large conduit of good water that inpplies all the town.

The inhabitants of Laguna have many gardens that are fet round with orange, lime, and other fruit-trees, in the middle of which are pot-herbs, falading, flowers, &c., and indeed, if the people were curious this way, they might have very pleafant gardens; for the town flands high from the fea, on the brow of a plain that is all open to the eaft, and has confequently the benefit of the trade wind which bloom because it is fet has wind, which blows here, and is commonly fair; fo that there are feldom wanting, at this town, all the day, brifk,

There is a large plain on the back of the town, three of four leagues in length, and two miles broad, producing a thick, kindly fort of grafs. On the call fide of the plain, near the back of this town, is a natural lake or pond of fresh water; but being flagnant, it is only used for cattle;

it is about half a mile in circumference.

The ancient inhabitants of Teneriff were called Guan-The ancient inhabitants of I energy were called Guan-ches, but their origin is not certainly known; they were, and the remainder of them fill are, without literature; but their language, which full remains among the remnant of them, bears fome affinity to that of the Moors in Bar-bary; it was formerly very guttural, and entirely different from that used in the other islands. They were of good flature, well made, and had tolerable complexions, those who dwelt on the north fide of the island were much fairer and had had lighter hair than those in the fouth.

These people some notion of a deity, and held that there was a supreme power, whom they distinguished by the names Achguarergenan, Achoran, and Achaman, which fignify the fullainer of the heavens and the earth. They allo gave him the titles of the Great, the Sublime, the Maintainer of all: but they did not worship idols, nor had any images of the deity. They believed the God created them of earth and water, and made as many women as men, giving them cattle, and every thing ne-ceffary for their fublishence; but that afterwards there apceffary for their fublishence; but that afterwards there appearing to him too few, he created more; but to these last gave nothing; and when they prayed to him for slocks of sheep, and herds of goats, he bid them go and serve the others, who, in return, would give them food. From these, they said, were descended their servants. They had some idea of the immortality of the soul, by supposing the existence of places for future rewards and

They had tome idea of the hands of the hands and punishments. In particular, they supposed the pike of Teneriff to contain hell in its bowels, which they termed Echeyda; and gave the name of Gusyotta to the devil. In civil affairs they had some regulators, as each district had a sovereign, whom they thought it their duty to obey as a supreme magistrate. They promifed vassage to him at a certain age, and confirmed the same promife which they happened to marry. The regal succession was hereditary, and all children (except illegitimate) were permitted to reign. The kings, however, as well as the common

ion people, dwelt in caves, and had not the leaft conception of architecture. One of thrir kings, named Advas, ruled the whole likand fingly for many years, but having feweral children, they confesion against hims, deposed him, and then divided his dominions among thrasfelves. They made war principally for the purpose of stealing cattle from each other, particularly spotted goats, which were highly afteemed, and the remaining Guanches set a great value upon them to this day.

They were very neat and cleanly, always washing their hands and faces whenever they are for front step, when they sat down to eat, and after they had asten. Their food was the stell of sheep and goats, roasted or boiled, which they ate alone, and not like the Europeans, with bread or roots! They all? Ifed upon barley-meal, roasted and dressed with milk and butter. After eating, they, refrained from wink for about half an hour; from the opinion that drinking cold water, immediately after eating warm victuals, spoiled their teeth. Sheep and goats were their only earlie; and whosel and barley, beans and pease, their only grain.

The ground was prepared for the feed by the men, who broke it up with kind of wooden hose; and the women sowed the food, When they were in great differs for want of corst, through drought, or any other calamity, they affembled with their children and flocks in certain places fet a part for that purpole, where they fat on the ground in a circle, weeping and making a mournful noise; their flocks at the same time beleating for want of food; both men and beafts being debarred from all kinds of sustance on these occasions; for they imagined that by these means they would appears the wanth of the heavens, and obtain what they flood in need of.

In marriage, they paid no regard to kindred, except that of a brother or fifter, but no man had more than one wife. When a man achieve were, sking u- consist of the period and remains they would spease the wanth of the heavens, and obtain what they placed, but the children of the wom

effects; but, for focceffion fake; this cultom did not extend to the kings.

When a men accidentally met a woman alone, or in a folitary place, he was not to look at, or to speak to her, unless the spoke sirth, but to him out of the way; and if he made use of any indocent expression, or behaved in an unbecoming manner, he was severely punished. If any person went to the house of another, instead of entering in, he was to fit on a stone at the door, and either to while or sing, till somebody came out, and defired him to walk in. Wheever neglested this ceremony, and entered another person's house without being invited, was deemed guilty of a great affront, and liable to punishment. When their children were born, they were washed all over with water by virgins, who were set apart for that office, and never allowed to marry.

Their usual diversions were leaping, running, shooting the dart, throwing stones, dancing, &c. at all which they were extremely expert. The men wore a short coat made of lamb skins, without plait, collar, or sleeves, being sastened together with strape of the same leather, or skins: those of the women were longer, and reached down to their feet, and underneath they had petticoats of the same skins. They-lived, died, and were commonly buried in this garment, which was called the tamarea.

In the summer near the sea shore. When he travelled, or went to change his place of residence, the elders of his tribe assembled, and carried before him a staff and a lance, with a kind of stag upon it, to give notice of the king approach, that all who were travelling upon the same road might pay him the customary homage, by prostrating themselves before him on the ground, wiping the dust from his feet with the corner of their garments, and kissing speak. The prince was obliged to marry a person who was this equal; but if such an one could not be found, he

them. The prince was obliged to marry a person who was his equal; but if such an one could not be found, he took his own fifter to wife, for he was not permitted to

debase his family by a mixture of plebeian blood.

They had a surprizing facility in counting the number of their sheep and goats, when issuing tumultuously out of

a fold, without even pointing to them wish, their finants or snoving their lips. Fraquent disputes happened among them about their flocks and pistures, which structured in war. "Their offentive weapons were darts made of piethpine, fharpened and hardened in the fire, like those used in Grand Canaria: they liad also a weapon like a speer, very flarp, and were for forstrous at throwing their, that they fested ever missed their mattle.

At the approach of an entemy they alarmed the country, by making a fatoke, or by whitling, which they repeated from one to another: this last method is fall in use, and may be heard at an almost incredible diffance. They were attended, in their wars, by their women, who brought provisions, carried off their dead, and buried them."

On the death of any person, their friends carried the body to accave, and stretching it on a flat stone, opened it, and took out the bowels, then twice a day washed the parous parts; that is, the neck, the arm-pits, behind the ears, the groin, and between the singers, with cold water: after washings it; difficiently, they anointed those parts, with sheep a buster, and sprinkled them with a powder made of the dust of decayed pina-trees, and a kind of brush-wood, called by the Spaniard bresso, and with the powder of pumice-stone. They then dried the body, by extracting from it still its mosture; after which, the relations of the decaded came, and swaddled it in dressed sheep or goat-skins, and girding all tight with leather though, they put is in the cave which had been fet apart by the decaded for his burying-place. The king could only be buried in the cave of his ancestore, in which the bodies were so disposed as to be known again.

A learned gentleman, who resided several years in the interest of the search gentleman, who resided several years in the structure of the stone and the structure of the stone and the stone of the stone and the stone of the

cave of his ancestors, in which the bodies were so disposed as to be known again.

A learned gentlemann, who resided several years in the island, tells us, that being one day hunting, a serret, having a bell about his neck, ran after a coney into a hole, where the sound of the bell was lost. The owner being afraid he should lose his ferret, in seking about the rocks and strube, sound the mouth of a cave, and entering it, was so assigned that he cried out. His fright arose from one of those corpses, very tall and large, lying with the head on a great stone, the feet supported with a little wall of stone, the body itself resting on a bed of wood. The man, being now a little recovered from his fright, want nearer, and cut off a great piece of the skin that lay on the breast of the body, which was more slexible and plant than any kid's leather glove, yet not any ways rotter.

that lay on the breat of the body, which was more able and pliant than any kid's leather glove, yet not any ways rotten.

Particular perform were fet apart for the office of embalming; and there were men to embalm the bodies of the men, and women to perform that office for those of their own fex. During the process, the bodies were watched by the embalmers with the greatest care, to prevent their being devoured by the ravens; the hulband or wife of the deceased bringing them provisions, and waiting on them during the time of their watching.

It is faid, that not many years ago, two of these embalmed bodies were taken out of a cave; they were entire, and as light as a cork; but quite fresh, and without any disagreeable smell. Their teeth and garments were also fresh and found. This observed, that in the poorer fort, to save charges, they took out the brains behind, and swed them up in kins, with the hair on; whereas the richer fort were put up in thins so finely and exactly dressed, that they remain extremely supple to this day. The bodies found in Grand Canaria, are faid not to have been so well embalmed as those in Tenerist, as they are much more continued, and not so entire in the different parts. Their antient people say, that they have above twenty caves of their kings and great personages, with their whole families, yet anknown to any but themselves, and which they will rever discover.

The island of Gomera is situated to the west of Teneriss, in twenty-eight degrees north lastsude, and eighteen degrees west longitude from London. It is about thirty miles long, twenty broad, and fixty in circumserence. The principal town is seated close to the fea-shore, in the bottom of a bay, where ships lie land-locked from all winds, except the south-east. On the north side of this bay is a cove, where ships of any burden may haul close to the short, which is a high perpendicular cliff, and there with safety heave down, clean, and repair. From this cove is a path-way along the face of the cliff to the town; but it is so narrow that two persons cannot walk a-breast. Near the end of this path-way is a gate, which is always shut when it grows dark.

About a stone's cast from the besch the principal street of the town begins, and from thence runs straight within land.

nd, This town is called La Villa de Palmai, or the lead, This town is called La Ville or raines, or the town of Paleas, from the number of paint-rives growing there. There are bere a thurch and convent of friari, with about a hundred and fifty priyate houses, most of which are finall and agean. It is, however, well implied with good water, which the inhabitants draw from wells in every part of the town. During the winter feafon, a large rivalet, which then flows from the mountains, discharges its waters into the fort; and on the fourth fide of its mouth flands an old round dower; also out the top of the perpendicular cliff on the north fide is a chargel, and the fort has a battery of a few pieces of cannon for its defence.

In this ifland many rivolets flow from the craggy mountains, which refseth and fertilife the narrow valleys, and indeed water may be found in every part of the illand; by digging to the depth of about five, feet or upwards.

Gomera produces much the fame as the illands of Temeriff and Canarias. The inhabitants have generally just done enough for their, own use, and feldom import or export any. In this particular it resembles Canaria; for it has almost every necessary within itself, and therefore has little need of any thing from above 1; for cattle, fowls, co.n., whine robus, fruit, and honey, are here in great plenty; and if there was fufficient encouragement for the exertion of their industry, the natives could cashly menufature a fufficient quantity of wood and raw fills, to clothe themselves: here is also flone, lime, timber, and all other materials for building, except iron. The wine of this island is in general weak, poor, and sharp; it is therefore unit for exportation, yet some of it, when two years old, excels the very best wine made in islander;, both in taffe and shawer, though it is at clear as water, and as weak as simili heer.

The fame animals are common here as in the reft of the islands, and also plenty of deer, originally brought from Barbary. There are likewise more mules bred in Gomera than in any of the other Canary islands, and some frakes; but it does not appear that they are any ways

Motions.

With respect to the original natives of the island of Gomera, they were of a lively disposition, of the middle stature, extremely active and dextrona in, attacking and defending, and excellent slingers of stones and datts, to which they were trained from their infancy, it being the common amusement of the young prople to cast small stones and darts at each other; to avoid which they seldem moved their feet, but only waved their bodies to and fro; and fo expert were they at this foort, that they used to

moved their feet, but only waved their bodies to and fro; and fe expert were they at this foort, that they used to catchin their hands the stones and dart as they flew along.

The antient Gomerans used to drefs themselves in a fort of cloak made of goat-stine, which reached to the calf of the leg; but the women were cloatined with a peticoat, and a liead-drefs that hung down to their shoulders, both of which were made of goat stine dyed and curiously painted. The blue dye they extracted from an herh which they called passil, and, the red from the foot of a tree, which they called againsts: all between the boat drefs and peticoat were left bare. They wore shost made of hog's skins. When the mon had any quarrel, which was so be decided by a combat, they laid asset their cloaks, tied a fort of bandage round their waist, and bound their fore-leads with a kind of painted turban. In their combats they used the same weapons as the natives of the other they used the fame weapons as the natives of the other they used the same weapons as the natives of the other islands, which were sticks or poles of hard wood, with the ends tharpened. They have had amongs them several m n distinguished by their brayery, whole same they still eclebrate in their ballads.

The island of Palma lies in twenty-nine degrees north latitude, and eighteen degrees west longitude, about fifty miles to the west of Tenerish, and two hundred west of the

continent of Africa. It is about thirty miles long, twenty

continent of Africa. It is about thirty miles long, twenty broad, and feventy in circuit.

On the north-eaft part of, the island, within land, is a high and spacious mountain, steep on all sides. This is caited La Caldera, or the cauldron, from a hollow like that on the pike of Teneriss. The fummit is about two leagues in circumference, and on the inside the cauldron descends gradually from thence to the bottom, which is a space of about thirty acres. On the declivity of the inside springs several rivulets, which joining together at the bottom, issue in one stream through a passage to, the outside of the mountain from which this brook descends, and having run some distance from thence, turns two

and having run fome distance from thence, turns two fugar-mills. The water of this stream is unwholesome, on account of its being mixed with some water of a per-nicious quality in the cauldron; all the inside of which shounds with herbege, and is covered with palms, pinch-pine, laurel, ligness-studium, and returnes t'which lash have in this iffend a yellow bark, and grow to the fire of large trees; but in the others they are only there. The people here take great care not to let the in-goats feed on the leaves of the returns, on account of their breading a flone in the bladder, which is mortal.

the leaves of the resams, on secount of their breeding a frone in the bladder, which is mortal.

Two rivulets ipring on the outfide of the caldron, one of thefe runs northward to the village of \$£ Andrew, and turns two fagat-mills, and the other runs to the town of Palmas, which lies to the suffward. Thefe are the only rivulets or fireams of any confequence in the island: on which account the naives build tanks, or figure referroirs with plants of pictic-pine, which they make tight with caulking. These they fill with the torrents of rain-water that in the winter feafor rule down from the mountains, and preferre it for themfelves and cattle: but the fipen, goats, and hops, in places a at diffance from the rivulets, fred almost all the year runnd on the roots of fern and afphodil, and therefore have little or no need of water, there being miniture enough in those roots out output the want of that element. Though the fouth quarter of the island is most destitute of water, yet there is a medicinal well of hot water facilot to the fea-there, that the tide spows into it at full fea.

hot water fo close to the fea-shore, that the tide spows into it at full fea.

At Uguer is a cave, that has a long narrow entrance, so straight that people pass through it backwards, with their face to the mouth of the cave, but after they have got through this passes, they enter a spacious greate, where water distills from between the large slakes of slate stones that lang from the roof; the least blow given to these, resonant with a noise like thunder through the cave.

In the district of Tisuya is a meantain, which appears to have been removed by an earthquake from its original struction. The natives have a tradition, that the spot on which it now stands was a plain; and the most fertile spot in the whole sland, till it was destroyed by the barning lava, and the fall of the mountain. Indeed, the effects of volcanos are to be seen in almost every part of the silends for the channels where the barning matter, metted over, and calcined stones and after ran, may be easily dishinguished by a curious observer.

Nunse de People, in his Historical Memoirs, relates, that on the 19th of November 2677, a little after sun-fiet, the earth shook for thirteen leagues with a dreadful noise, the earth shook for thirteen leagues with a dreadful noise. A calcined structure of the sun and a half from the sea, from whence proceeded a great sire, which cast up stones and pieces of rock. The like shappened in several places thereshouts, and is see than a quarter of an hour were twenty-eight gape, about the foot of the mountain, which cast forth abundance of stanes and burning stones. The stem person adds, that on the good of the mountain, which cast forth abundance of stanes and surraing stones. The stem person adds, that on the good of the stem out, from whence came forth, stone he good of the stem out, from whence such sorth. Source and fire, with great carthquakes and thenders for swent days, so that black cinders were taken. fon adds, that on the 20th of November following, there was a feeond eruption of the feme mount, from whence cause forth, flows and fire, with great carthquakes and thunders for feveral days, fo that black cinders were taken up at feven langues distance; the adjacent ground was entirely washed, and the inhabitants forced to quit their dwellings. The last volcano that happened in this island was in 1750, when one of these rivers of fire ran, with great rapidity, from the mountains towards the town of Palenes, and discharged itself about a mile to the northward of the town, but we have not learnt that any considerable eruption hat happened fince that time.

If we take a view of Palma at the distance of three

If we take a view of Palma at the diffance of three leagues off at fea, the mountains feem full of gutters or beds formed by torrents of rain water; but these only appear little from their height and diffance; for we find them to be large vallies, abounding with woods, on a nearer

approach.

In many places on the shore of this and the other is not not black shioing sand used to throw upon writing; to prevent its blotting. It appears to have been east out of voicanos, for the load-stone, when held mark, will draw up every grain of it.

In this island, the air, weather, and winds are nearly, the same as at Tenerist and Canaria, except that the welverly winds and rain are more frequent at Palma, on account of its lying more to the wellward and northward, and on that account is not fo far within the verge of the north-east trade winds as those islands; whence it is particularly exposed to the fouth wind, which mostly prevails, in the latitudes adjacent to those of the north-east trade-winds, as well as to variable winds from other, quarters. winds, as well as to variable winds from other quarters.

The climate here, and in Teneriff, Canaria, and Go-

mera, differs greatly, according as a person lives in the monuraine.

revails traded Go. in the mountains, or near the sea shore. While there is a calm, the least seems almost insolerable near the shore, in the months of July, August, and September; but the sir is at the sare at time quite fresh and pleasant on the mountains, in the middle of winter, the house far up the mountains, near the shoulds, are extremely cold, and the matires keep sires burning in their habitations all day long; but this is far from being the case near the sea, sor there they use fires or vin their kinchens.

The sum:

and tent to Spain. The rabbits were first brought to Palma by Don Pedro Fernandes de Lago, the learned licutenant-general of Teneriss, and have since successful in a surprissing seanner.

Palma affords nearly the same productions as Canaria; but a great quantity of sogar is made here, particularly on the fouth-west side of the island. Good wines are produced on the east side; they have a different taste and slavour from those of Teneriss: the dry wine is small bodied, and of a yellow colour. These wines are, however, very dissicult to preserve, especially when exported to cold climates, where they frequently turn four. The melvaria, or fick, is not so lusicous or so firong as that of Teneriss, but on sits being about three years old, it obtains the rich slavour of a ripe pine-apple.

They have here so great a plenty of all the kinds of fruit that grows in Teneriss and Canaria, that the natives cannot consume them; but as they have abundence of sugar, they make vast quantities of sweetmeats and conserver, which they export to the Indies, as well as to the neighbouring islands.

A great deal of good honey is produced here by the bees, especially in the hives that are at a great distance from the vince, and the mocares, a fruit that resembles an elder-berry; both these having a bad effect on its colour. In time of searcity, they make good bread of the roots of corn, which is said to be not inferior to that made of wheat slour; but the corn of Palma is not essemed sogon, and the natives extract great quantities of patch from the piril-pine.

Notwithfunding the destruction that has happened to the trees, which formerly grew on the summit of Palma, there are nevertheless a great number in the region of the clouds, and heneath it; so that at about two leagues distance, the island appears like an entire wood. Pine grows here to such a size, as to be fit for masts of the larger ships; but as they are exceeding heavy, and the roads very rugged, the bringing them to the shore would be attended with a great expence. They h

Canaria.

The principal port in Palma is called by the fame name, and is invated on the fouth-fide of the ifland. The read is about a quatter of a mile from the fhore, where vessels generally ride in fifteen or twenty fathoms water, and are exposed to casterly winds, yet with good anchors and cables, they may ride with great fafety in all the winds that blow in this part of the world; for the ground is clean and good, and the great height of the island, with the perpendicular rocks that face the road, repel the winds that blow upon it, though eyer for frome.

the perpendicular rocks that face the road, repel the winds that blow upon it, though ever fo firong.

Palma is a large town, containing two parific churches, feveral convents of friars and nums, with many nest and private buildings, though they are neither fo good nor fo large as those in the city of Palmas in Canaria, or of the towns in Teneriff. Near the mole is a castle or battery, mounted with fome pieces of cannon, for the defence of the ships in the bay, and to prevent the landing of an enemy. The inhabitants are supplied with plenty of good water, from sountains filled by a rivulet near the great church in the midst of the town.

On the north-east side of the port of Palma lies another,

On the north-east fide of the port of Palma lies another, called Taffacorta, but being exposed to westerly winds, it is little frequented by any other vessels than boats vit has a village of the same name.

There are no other towns of any note in Palma; but

No. 44.

THE Spaniards call this aland Hierro; and the French L'Ide de Fer, the Idand of Iron. It is the most wefterly of all the Canarias, and lies between the twenty-fewenth and twenty-right degrees of north Initiode, and in eighteen degrees v. alongitude from London. It is about thirty miles long, fifteen broad, and feventy-five in circuit. The French navigators formerly placed in the center of this island their full meridian for reckoning the longitude, as the Dutch did theirs at the pike of Teneriff; but at prefent most geographers reckon their full meridian from the capital of their own country, as the English from London, the French from Paris, dec. it conveying a more difinct idea to fay, that fuch a place is for many leagues diftant eaft or well from the capital of his own country, than to reckon the longitude from a diffant land.

cant tend.

Ferro rifes on all fides fleep and craggy from the feafibors above a league, fo as to render the afcent extremely,
difficult and fatiguing; but, after travelling thus far, the
reft of the island will be found to be tolerably lavel and
fruitful, it abounding in many kinds of tress and flurabe,
and producing 'exter grafs, herbe, and flowers, than any
of the other islands, whence bees thrive and multiply here
in a very extraordinary manner, and excellent honey is,
made by them.

There are but three springs in the whole island. On
account of the scarcity of water, it is said that the sheep,
goats, and swine of this island, do not drink in the funmer; but digging up the roots of the fern, they chew them,
to quench their thirst. The great cattle are watered at
the above fountains, and at a place where water distrils from
the leaves of a tree.

the leaves of a tree.

Many subbors have made mention of this tree, force of whom reprefent it as miraculous; while others deny its very existence: but the subbor of the History of the Dif-covery and Conquest of the Cansary Hunds, gives a particular account of it, which we shall here insert for the fatisfication of the guiden.

very sautence: but the author of the Hist. Ty of the Difcovery and Conquest of the Canary Islands, gives a particular account of it, which we shall here insert for the fatisfaction of the curious.

"In the cliff or steep rocky ascent by which the whole
island is furrounded, is a narrow gutter which commences
at the sea, and is continued to the summit of the cliff,
where it joins, or coincides, with a valley terminated by
the steep front of a rock, on the top of which grows a tree
called in the language of the antient inhabitants gase, oc
facred, which for many years has been preserved entire,
sound, and fresh.

"Its leaves constantly distil so great a quantity of warer, that it is sufficient to farmish drink to every living
creature in Hierro, nature having provided this remedy for
the drought of the island. It is distinct from other treer,
and stands by itself: its trunk is about twelve spans in
circumsference; its height from the ground to the top of
the highest branch is sorty spans, and the circumsference
of all the branches together is one hundred and twenty
feet. The branches are thick and extended, and the lowest
begin about the height of an ell from the ground. Its
fruit resembles an accomp, but taftes like the kernel of a pine
apple, only it is softer, and more aromatic; and the
leaves resemble those of the laurel, but are larger, wider,
and more curved. These come forth in a perpetual succession, whence the tree always remains green. Near it
grows a thorn, which fastens on many of its branches,
with which it is interwoven, and some beech trees, brefos,
and thorns, are at a small distance from it.

"On the north side of the trunk are two large tanks or
cisterns of rough stone, or rather one cistern divided;
each half being twenty feet square, and faxteen spans deep.
One of these contains water for the drinking of the inhabitants, and the side of the trunk are two large tanks or
cisterns of rough stone, or rather one cistern divided;
each half being twenty feet square, and faxteen spans deep

mentioned seep cliff; when the cloud having no year birt. by gatter, gradually ascends it, and advances slowly from thence to the extremity of the valley, and then refit upon the wide-spreading branches of the tree, from whence it distils in drops during the remainder of the day, in the fame manner as water drips from the leaves of trees after a heavy shower of rain. This distillation is not peculiar to the tree, for the brefos which grow near it also drop water, but their leaves being only few and narrow, the quantity in o trilling, that though the natives save some of it, yet they make little account of any but what affilis from the tree i which, together with the water of some springs, it sufficient to serve the statives and their cattle. It has been remarked, that this tree yield intost water, in those years when the casterly winds have most prevailed; for by them alone the clouds or mists are drawn hither from the fest.

hither from the feat.

A person lives near the spot on which the tree grows, who is appointed by the council to take case of it and its, water, and is allowed a terrain falary, with a house to live in. He daily distributes to each family of the distribute from the family of the distribute from the first life feven versita filled with water, besides what he gives to the principal persons of the island."

"Mr. Glafs styl, he is unable to determine whether the tree which yields water at present be the same here described, but justly observes, that it is probable there have been a succession of them. He himself did not see this tree, for this is the only island of all the Canaries which he did not visit; but he observes, that he has failed with the natives of Hierro, who, when questioned about the existence of this tree, answered in the affirmative; and existence of this tree, unswered in the affirmative; and takes notice, that trees yielding water are not peculiar to this island, since one of the same kind in the island of St. Thomas, in the galf of Guiney, is mentioned by some Thomas,

travellers.

By reason of a scarcity of water, the soil, in some parts of this stands, is very barren; but in others it is settle, and produces all the necessary articles for the support of the inhabitants. The sheep, goats, and bogs, that are brought up in those parts distant from the rivulers, seed almost all the year round on the roots of fern and asphodill, and therefore have little occasion for water, as the

on, and therefore have little occasion for water, as the want of that element is supplied by the great mostfure that is naturally in those roots.

There is only one small town in this island, and the most diffingulated building in it is a partial church. Many small villages are dispersed about the town, but there are not any of them that deserve a particular de-

Small cattle, brandy, honey, and orchilla weed, are the chief articles of the trade carried on by the inhabitants of this iffaird.

With respect to the original natives of the Mand of With respect to the original fittings of the island of Ferrol, we are told by travellers, that before it was reindered fubject to Spain they were of a middle fit ture, and cloathed with the skins of beafts. The men wore a cloak of three fleep-fitins fewed together, with the woolly fide outwards fit funnier, and next their bodies in winter. The wonth also wore the same kind of cloak, besides which they had a petricoar, which reached down to the middle of their had a petricuar, which reached down to the middle of their kgs. They fewed their fkins with thorage cut as fine as thread, and for needlen ufed finall bones fharpened. They were nothing on their heads, and their long hair was made of the raw fkins of fheep, hogs, or goats.

These people had a grave turn of mind, for all their fongs were on ferious fubjects, and fet to flow plainive tones, to which they danced in a ring, joining tands, and fometimes jumping up in pairs, fo regularly that they feerned to be united; they full practice in Ferro this mainter of dauciers.

feemed to be united; they full practice in Ferro this mainner of dancing.

Their dwellings confifted of circular inclofores, formed
by a flone wall without cement, each having one marrow
entrance. On the infide they placed poles or ipars against
the wall, one end refting in the top, and the other extending a confiderable diffance to the ground; and these
they covered with fern, or branches of trees. Each of
these inclofances contained about twenty families. A buridie of fern, with goat skin spread over it, served them for
a bed, and for bed-cloaths and coverings they used dressed.

a bed, and for bed-cloaths and coverings they filed drefied goat-films to keep them warm.

Before they offered the breaft to a new-born child, they gave it fern roots reafted, bruiled, and mixed with butter; and 'at prefent they give them flour and barley-meal roafted, and mixed with bruiled cheefe.

The natives afaulty take the flesh of sheep, goats, and hogs; and as they had no kind of grain, their bread was

made of fern roots, of which, with milk and butter, the principal part of their diet was composed.

One king governed them all; and having never any occasion to go to war, had no warlike weipons: they included carried long flaves; but these were only to affist their in travelling; for the country being to rooky, as to make it necessity for every man have his performed by means of these soles.

Polygamy was not allowed; but they had no restrictions with respect to their marriages, except a man's not being allowed to marry his mother of sister; for every man might take the weitman he liked best, and whose consent he could obtain, without the least regard to rank or nobility. Indeed all, except the king, were in this respect upon an equality: the only distinction among them consisted in the number of their slocks. It was assued for the man, when he chose a wise, to make a present of cattle to her father, according to his ability, in return for the favour of letting him have his daughter:

The king received no particular tribute from his subjects; and every one made him a present of cattle; for they were not obliged to give him any thing, but according to their pleasure or circumstance.

For a feast, they killed one or two fat lambs, according to the number of their guests; these they placed in a testile on the ground, fitting round it in a circle, and never rising till they had esteen the whole. These feaths are still continued among their descendants.

If a person sell fick, they rubbed his body all over with botter stid sheeps marrow, covering him well up to keep him warm; but when a man happened to be wounded, they burned the past affected, and afterwards anointed it with batter.

They buried their dead in caves; and if the decessed was a man of wealth, they interred him in his cloaths, and

They buried their dead in caves; and if the decessed was a man of wealth, they interred him in his cloaths, and put a board at his feet, and the pole he used to travel with at his fide; and, in order to prevent his being devoured by ravens, they closed the mouth of the cave with

Murder and thost were the only crimes for which they inflifted corporal punishment. The murderer was put to death in the same manner as he had killed the deceased; and

nameted corporal punishment. The impresent was put to death in the fame imanner as he had killed the deceased; and the thief, for the first offence, was punished with the loss of one of his eyes, and for the second, of the other. This was done that he might not see to seal any more. The office of executioner on these becassons, was performed by a particular person set apart for that purpose.

As to their religion, they worshipped two deities, one of whom was male, the other semale; the male was named Exporanzan, and was the object of the men's adoration; the other, worshipped by the women, was called Moneyba. They had no images, or visible representations of these deities; nor did they ever facrifice to them, but only prayed to them in their necessities; as when they wasted rain to bring up the grafs for the substitute of their cattle, &c. The natives pretended, that when the gods were inclined to do them good, they came to the issandand and alighted on two great rocks, which are in a place to which they gave the name of Ventayes, where they received the petitions of the people, and afterwards returned to their celestial abode; these rocks are now called by the anticents.

We shall now, as we proposed, give a particular de-feription of the present natives of Canaria, Tenerist, Pal-ma, Gomera, and Ferro, with an account of their persons, ma, Gomera, and Ferro, with an account of their periods, dreft, &c. previous to which it will be necessary to observe, that the defcendants of this mixed nation are at prefent denominated Spaniards, whose language is that of the Castilian, which the gentry speak in perfection; but the peasants, in the remote parts of the illands, in an almost uniantelligible manner, to that they are scarcely under-

most unuacuignos manner, so mas mey are reaccely unactioned by firangers.

The greatest part of the natives are small of flature, well made, and have good features; but they are more warrby than the inhabitants of the fouthern parts of Spain; sheir eyes, however, are sine, large, and spark-ling, and their countenances exceedingly expressive; but the old people have a very differentle aspect.

Perforis of distinction were in common a camblet cloak.

Perfolis of diffinction wore in common a cambiet close. of a dark red or black celour, a finen night cap, bordered with lace; and a broad flouched bat: When they pay vifits, a cost, fword, and white perske are added, the latter of which forms a very odd contrast to their duffy completions, and what is fill more fingular, they keep their large flouched hat upon their heads always in the house; but when they are out of doors, they carry then house; but when they are out of doors, they carry then mader

Momen of inferior rank wear a piece of gauze on their heads, which falls down the shoulders, is pinned under the thin, and covers the neck and breast. A part of their dress is a broad-brimmed flouched hat, but vitey use this with more propriety than the men; for abroad they wear it upon their heads, whereby their faces are screened from the fooreling beams of the fun. They throw a mantle over their shoulders, the goodness of which is in proportion to the condition of the wearer. They wear jackets instead of stays, and are all very fond of a great number of patticoats.

over their shoulders, the goodhess of which is in proportion to the condition of the wearer. They wear jacket instead of stays, and are all very fond of a great number of petricosts.

The principal ladds of Grand Canaris and Tenerist dreft after the fashion of France and England, and pay visits in chariots; but none walk the street without being vailed, though some are so careless in the use of their vails, that they take care to let their faces and necks been. Some ladies have their last curvoiry plaited, and fastened to the crown of their head with a gold comb; Their mantles are very rich, and they wear a profusion of jewels; but they render their appearance ridiculous to strangers, from that cluminess of dreft, and sukwardness of gait, which is observable in both sexe.

The poorer fort of people are affished with many loathsome disorders, and are naturally very silthy; the gentry, however, affect great delicacy. Both sexe go every morning to hear main; and most of them go before they take any refreshments. Their breakfast is usually chocolate; they dime at noon; and sultoup the doors till three o'clock. People in good circumstances have four courses brought to table. The first dist coulding carrots, online, and suffren, sewed together, with thin slices of beef, mutton, pork, becon, potatees, tumips; carrots, online, and suffren, sewed together, with thin slices of bread put into the dish. The second course confish of constead meat, sowie, sec. The third is the olio, or ingredients of which the forey was made. After which, comes the defert, constiting of fruit and (weet-meats. The companty drink freely of wine, or wine and water, while it dinner; but have no wine after the cloth is removed. While drinking, their teaths are much like ours. When dimmer is over, a large Giver dish, siled with water, is set upon the table; when the whole company, all at once, wash in it; and then a fervant, who stands at the lower end of the table, cries, "Bledied and praised be the most holy faccament of the story, conceived in this warm clima

this warm climate. "Perfors of higher flations have generally a frier for one of their guefta, who we may fuppose is the confessor to some of the family, and frequently behaves with great rudences; yet neither the master of the house, not any of the company, chuse to take much notice of it. Mr. Glass was once invited to dine with a gentleman, where it Francisco distributed as of the company. Int no fount had cifcan friar made one of the company; but no fooner had they begun to eat, than the friar affect him if he was a chriftian? He answered, that he hoped fo. He was then defined to rehearfe the Apolito's ereod; but answering, that defined to rehearfe the Apositie's creed t but answering, that he knew nothing about it, the reverend father stared suit in hiersee, and exclaimed, "O thou black als !" Offended at this piece of ill manners, our author asked, What he meant by treating him in that manner? When the friar only answered by repeating the abuse; the master of the house endeavoured in vain to perfused him to give over; but as the person-did not at that time understand Spanish owell as to express himself sheartly, he arose and left the house, after telling the gentleman, that he saw he was unable to protect him from insults at his own table.

They treat with chocy late and seven-mean in the morning and evening visits; but in the summer evenings with snow-water. People sop between eight and nine, and retire to rest foon after.

The diet of the common people consists of gossio, fruit, and wine, with sait-ssish brought from the coast of Barbary. Somethink their being subject to the itch, is owing

under their arm. Neither do they put on their perukes, upper coats, or fwords, but when they walk in proceeding, pay formal vifits, or go to church, on high feftivals.

The lower clafs of people wear their own black, buthy hair, and tuck fome of it behind the right car r and their principal garment is a white loofe coat with a friar's cape, and girded round the middle with a fair's cape, and girded round the middle with a fair's cape, and girded round the middle with a fair common the loop and narrow, and made of the woot of their own face.

Women of inferior rank wear a ptoto of gauze on their heads, which falls down the floudlers, is pinned under the chin, and covers the neek and breath. A part of their down the floudlers, it but they ut this with more propriety than the ment, for abroad they wear it upon their heads, whereby their faces are ferceped from the feorething beams of the fun. They throw a mantle over their floudlers, the goodnets of which is in proportion to the condition of the wearer. They wear jackets.

The lower flory of each quarter of the house consists.

The lower flory of each quarter of the house consists.

or other trees common in these parts.

The lower story of each quarter of the house confits entirely of store-rooms, or cellars. The stairs leading to the second story usually begin at the right or left hand confit of twe slights of steps, which lead into the gallery, from which one may enter any room on the second story. The principal apartments are generally in that quarter of the house facing the street, which contains a hall with an apartment at each end. These rooms are the whole breadth of the quarter, and the hall is twice the length of any of the apartments at its extremities. The windows of these rooms are formed of wooden lattices, curiously wrought; none of them looking lawards to the count; but they are all in the outside wall.

all in the outfide wall, the Some great house have balconies in the middle of the front, on the outfide above the gate, equal with the floor of the fecond flory; and fome have a gallery which runs from one end of the front to the other, but the outfide of the house has feldom any.

They white-wish all the apartments; and those at the extremities of the great halls, with fonce of the reft, are lined with fine matt about five feet high, and the floor is fornetiases covered with the fame. The fides of the windows of all the rooms are lined with boards to prevent econics cloaths being whitened. people's cloaths being whitened; for they commonly fit in the window, there being benches on each fide of it for that purpole; and when the mafter of the house intends to flew a franger re-pect, he always conducts him to the window, to converse with him.

The great hall, and the walls of fome of the apartments The great hall, and the walls of fome of the apartments, are hung with painting, reprefenting the virgin, the twelve apostles, faints, and martyrs, ufually drawn as large as life, and diffinguished by fome circumstance of their history. Thus Sr. Peter is usually represented looking at a cock and weeping, and a great bunch of keys always hangs at his girdle. St. Anthony preaching to the fishes, is one of their favourite paintings.

nines, is one of their favourite paintings.

"Their bed; have feldom any curtains, for these they confider as receptacles for sleas and bugs, which abound here extremely. They chiefly use matrasses spread on the sloor upon fine mats; besides the sheets, there is a blanket and above that a filk quilt. The sheets, pillows, and quilt are frequently fringed or pinked, like the shrouds used for the dead with us.

There is a place, in a particular spartment, raifed a sign higher than the sloor, covered with mats or carpets; and there the women generally sit together upon cushions, both to receive visits from their own sea, and give

The house of the peasants and lower fort of people, though only one fory high, are built of stone and lime, and the roofs either thatched or tiled. These are generally near, clean, and commodious. Indeed there is but little dirt or dust in these islands to make them uncleanly; for the ground is mostly rocky, and feldom wet, from the almost continual fine weather.

The deportment of the natives is grave, but at the fame time tempered with great quickness and sensibility, the women, in particular are remarkable for their fpright-liness, and vivacity of their conversation, which is said greatly to exceed that of the English, French or northern rations. The great families in these islands would be highly offended should any one tell them, they are dehighly offended should any one tell them, they are de-feended from the Moors, or even from the ancient inha-bitants of these slands; yet it would not perhaps be dif-ficult to prove, that most of their customs have been handed down to them from these scople. The gentry boast much of their birth, and indeed that they are de-feended from the best samilies in spain, there is no reason to doubt. They have the utmost contempt for the employment of a butcher, taylor, miller, or porter. It is not indeed very furprising, that they should not have any any great effects for the profession of a butcher, or that the employment of a taylor should be considered as formewhat two esteminate for a man; but it is difficult to 'imagine why millers and porters should be despised, especially the former; but it must be toonsidered, that the millers here are generally esteemed great thieves; and as the master of every family sends his own corn to be ground, sunlist it be marrowly watched, the miller will take too much toll. It is faid that when any criminal is to suffer death, and the executioner happens to be out of the way, 'the efficers of justice have the power of selsing the first butcher,' miller, or porter they can find, and of obliging him to discharge that office; such is their dislike to persons of these occupations. occupations.

cocupations.

It may not be senifs to mension a circumfiance given us by Mr. Glafs, who once touching at the iffand of Gomera to procure fresh water, hired some poor ragged sishermen to fill the water casks, and bring them on board; but some time after, going to the watering place to see what progress they had made, he sound the casks full, and all ready for rolling down to the beach, with the sishermen standing by, and talking together, as if they had nothing farther to do. He reprimanded them for their hashes in not dispatching the business is which he had employed them; what do you take us to be, Sir! Do you imadigneed, "What do you take us to be, Sir! Do you imadigneed as a see porters? No, Sir, we are seamen." Not withstanding all his intreaties and promises of reward, he was unable to prevail upon any of them to roll the casks to the water fide; but was at last obliged to hire porters, so do the business.

do the befinefs.

The gentry of these islands, though for the most part poor, yet are extremely polite and well bred, the very peasants and labouring people have a considerable share of good manners, with listle of that forly radicity which is too common among the lower class of people in England; yet they do not seem to be abashed in the presence of their superiors. A beggar asks charity of a gentleman, by saying, "For the love of God, Sir, please to give me half a rial," and if the other gives him nothing, he returns, "For the love of God, 1 beg your worship's pardon," and then denarts. and then departs.

The common people and fervants here are much addicted to private pilering, for which they are utually punished by being discharged the service, beaten, or impriloned for a thort time. Highway robberies are seldom or ever known, but murder is more common than in Engisnd; and they have no notion of duels, for they cannot imagine that because a man has the courage to fight, he thereby atones for the injury done to another, or that it ought to give

for the injury done to another, or that it ought to give him a right to do him a greater.

When the murderer has killed a man, he flies to a church for refuge, till he can find an opportunity to escape to another issnad; and if he had been greatly provided or injured by the deceased, and did not kill him designedly, every-body will be ready to affish him to escape, except the near relations of the person who has lost his life, yet quarrels are far from being frequent here, which may be owing to the want of taverns and other public houses, their polite behaviour, the little intersecurie there is between them, and their temperance in drinking.

and their temperance in drinking.

People of the lower class never fight in public, but if one person puts another into a violent passion, the injured party, if able, takes his revenge in the best manner he can, till he thinks he has had satisfaction, without any regard to the equity of the method he ases for this purpose.

The inhabitants of the Canary islands are in gentremely temperate; or at least, if they are otherwiife, it is in private only; for nothing can be a greater diffrace there, than to be feen drunk; and a man who can be proved a drunkard, is not permitted to give evidence, or take his oath, in a court of judicature. Hence those that are found of liquor, intoxicate themselves in their cham-bers, and then lie down, in order to sleep till they are

Persons of all ranks in these islands are extremely amorous; but their notions of love are pretty fingular; which may perhaps be atributed to the want of innocent freedom between the fexes. However, they do not feem to be in-clined to jealoufy, any more than the English or French. It is ufful for young people here to fall in love at fight; and if the parties agree to marry, but find their parents averfe to their union, they complain to the curate of the parith, who goes to the houle where the girl lives, and endeavours to perfuade them to agree to her marriage; but if they refuse to consent to their union, he takes her away before their faces, without their being able to hinder him, and either places her in a convent, or with some of her re-lations, where she must remain till they consent to her

lations, where the saud remain till they confent to nec-marriage.

We are told, that a lady will fornetimes find a man an offer of her person in an honourable way; if he declines it, he keeps the matter secret till death, should he do otherwise, he would be looked upon by all people in the smooth despisable light. Young men are not allowed to court the youth of the other sex wishout an intention to marry them; for if a woman can prove that a man has, in any instance, endeavoured to engage her affections, she can oblige him so marry her. This, site many other good laws, is abused; for loose women taking advantage of it, sequently lay snares to entrap the simple and unwary; and sometimes worthless young men, form designs upon the fortunes of ladies, without having the least regard for their persons; there are not, however, many mercenary their persons: there are not, however, many uncreasing levers in this part of the world, their notions in general being too refined and comartic to admit the idea of that passion being made subservient to their ambition or la-

their paffione, as not to perceive the frailty and imperfec-On the death of a man's wife, it is usual for form his relations to come to his houfe, and refide with him for fome time, in order to divert his grief, and do not leave him till another relation comes to relieve the first, the fe-cond is relieved by a third, and thus they faceced each

tereff; and yet there are more unhappy marriages here than in the countries where innocent freedoms bring allowed between the fexes, lovers are not fo blinded by

him till another selation comes to relieve the first, the second is relieved by a third, and thus they succeed each
ether for the space of a year.

Y Each of the Canary slands, as well as every town and
family, hath a peculiar tutelary faint for its patron, whose
day, is celebrated as a sessive space field to the occasion.
On these days, the first near the church is strewed with
slowers and leaves, a multitude of wax candles are lighted,
and a considerable number of sireworks played off.

A kind of fair is generally held on the eve of these
sessives, and spend the greatest part of the night in mirth and
dancing to the sound of the guittar, accompanied with the
voices not ally of those who, play on that instrument, but
by those of the dancers. The dances prassised here are
farabands and folias, which are slew dances; those which
are quick are the canario, first uited by the Canarians; the
fandange, which is chiefly prastical by the valgar; and the
rapetes, which nearly resembles our hornpips. Some of
these dancers may be terraced dramatic, as the men sing
verses to their partners, who answer them in the same
manner. Most of the natives of these islands can play
on the guittar, and they have in general excellent voices.

Plays are asked in the streets for the entertainment of
the populace, at the feast of the tutelar saints of Tenerif,
Canaria, and Palma; but the performers cannot be suppossed to rise to any degree of perfection, as they are not
professed as to the very first of the partners of the
place seem to have a natural turn for adding.

The gentry frequently take the sir on horseback; but

professed actors, and only some of the inhabitants of the place from to have a natural turn for acting.

The gentry frequently take the air on horseback; but when the ladies are obliged to travel, they ride on asse, and instead of a faddle, they use a kind of chair, in which they fit very commodiously. The principal roads are paved with pebble-stones, like those pied in the streets of London. There are a sew chariots in Canaria, the town of Santa Crus, and the city of Leguna in Teneris; these are all drawn by mules, but they are kept rather for shew than use; for the roads are not proper for wheel carriages, being steen and rocky.

being steep and rocky.

The lower class of people divert themselves with dan-A he lower class of people divert infemieres wim dancing, finging, and playing on the guittar; likewife with throwing a ball through a ring placed at a great diffance, cards, wrefiling, and quoits. The peafants, particularly those of Gomera, have the art of leaping from rock to rock when they travel, which is thus performed: the long flaff or pole used on these occasions, has an iron spike at the end of it, and when a man wants to defeend from one the end of it, and when a man wants to desend from one rock to another, he sims the point of the pole at the place where he intends to alight, and then throws himself to-wards it, pitching the end of the pole so as to bring it to a perpendicular, and then slides down it to the rock on a perpendicular, as which he fixed it.

In the convents, children are taught reading, writing, Latin, arithmetic, logic, and other branches of philoto-phy. The scholars read the classics; but the Greek is

never trught here, and is entirely unknown even to the fludents in divinity. They are particularly fond of civil law and logic, but the latter is chiefly preferred.

The people-blonging to these islands have a genius for poetry, and compose verse of different measures, which they set to music. Some of their fongs, and other poetical pieces, would be greatly aftermed in a country where taste for poetry prevails. Few of these books called profane (to diffinguish them from those of a religious kind) are read here, since they cannot be imported into the island without being first examined by the inquisition; a court which nobedy cares to have any concern with. The history of the wars in Granada is in every body's hands, and is read by people of all ranks; they have also some particularly and much andired. But the books most read by the laity are the Lives of the Spinus and Martyrs, which may be confidered as a kind of religious romances, stoffed with legends, and the most absurd and improbable fories.

With respect to the civil gavernment of the islands of Canaris, Teneriss, and Palina, which are called the king's islands, it will be proper to observe, in the first place, that the natives, on their submitting to the crewn of Spain, were so far from being deprived of their liberty, that they were put on an equality with their conquerors, in which the Spaniards shewed great wisdom and policy; but how they came afterwards to act in a quite contrary manner in America, is hard to determine; perhaps they might be apprehensive, that if, they proceeded with too much rigour against them, at first, they might in time be induced to lhake off the yoke, and dispossers their tyrannical masters, which we are informed, by late events, has proved to be the case in South America, as the following piece of intelligence, published in September 1982, announces:

"You have repeatedly heard it reported, that there was a rebellion in Chili and Feru, in South America; and though the Spaniards do all they can to keep it a mines in Peru and the city of Pez, which is fitoated in the interior part of the country, where they lodged their bars of gold, and filver, and other valuables, are taken from them, and there were one hundred and fifty millions of pialtres taken out of the strong ehests. The natives will very foon have the whole country in their poffession, for they destroy every white man, woman, and child, and even kill every one begot between a Spaniard and a native." But to return. After the conquest of the Canary Mands, the Spaniards incorporated with the natives in such a manner as to become one people with shem, and in consequence of this political union, the king of Spain is able to raise in these islands more soldiers and seamen than in any other part of his dominions of three times their extent. times their extent.

times their extent.

The alcalde, who is a justice of peace, is the lowest officer except the alguazils; there is one of them in every town or village of note. These magistrates are appointed by the royal audience of the city of Palmas, in Canaria; they hold their places only for a certain time, and, in cases of property, can take cognizance of no disputes where the value of what is contended for exceeds seventeen rials, or seven shillings sterling. Over these magistrates is the alcalde major, who is appointed in the same manner as the other, and cannot decide any case relating to property, that exceeds the sum of two hundred dollars.

From the decision of those magnitrates, appeals lie to the tiniente and corregidor: the first of whom is a lawyer, and nominated by the royal audience; but this latter, who is appointed by the king, is not obliged to be a lawyer, yet must have a feeretary, clerk, or affiftant bred to the law. The corregidor generally holds his place five years, and fometimes longer. Few of the natives enjoy this honourable office, which is commonly filled by

Spaniards.

The proceedings of the corregidor's court, and in that of the tiniente, are the fame; these courts seeming to have been originally intended as a check upon each other. Appeals are made from the corregidor and tiniente to the royal audience of Grand Canaria; a tribunal composed of three oidores, or judges, a regent, and sical, who are usually natives of Spain, and are always appointed by the king. The governor-general is president of this court, though he resides in Teneris. Spaniards. is no appeal from their determination; but appeals are carried to the council or audience of Seville in Spain, in masters respecting property.

No. 45.

In the Canary Islands, the standing forces amount only to about an hundred and sifty men; but there is a militia of which the governor-general of the island is always contamenter in chief, and the officers, se colonels, captains, and substerns, are appointed by the king. There are also governors of forts and castles; some of which are appointed by the king, and others by the twelve regidors of the islands, called the cavildo; some of the forts belong to the king, and the rest are under the direction of the regidors, or subsequency, who also take care of the repair of the highways, prevent nuisances, and the plague from being broughs into the island by shipping; for no man is allowed to land in these islands from any ship, till the master produces a bill of health from the last port, or till the grew have been examined by the proper officers.

or ull the grew have been examined by the proper officers.

The royal revenue arifes from the following articles:
A third of the tithes, which fearcely amounts to a tenth part of them, the clergy appropriating almost the whole to themfelves. This third part was given by the pope to the king of Spain, in consideration of his maintaining a perpetual war against the infidels. The second branch consists in the monopoly of tobacco and funds, which the king's officers fell on his account, no other persons being allowed to deal in those articles. Another branch of the the revenue arises from the orchilla-weed, all of which in the islands of Teneriff, Cauaria, and Palma, belong to the king, and is part of his revenue; but the orchilla of the other islands belongs to their respective proprietors. The sourth branch consists of the acknowledgment annually paid by the nobility to the king for their titles, which amounts to a mere trifle. The fifth branch is a duty of seven per cent, on imports and exports; and the first duty on the Canary West India commerce. All these branches, the fixth excepted, are faid not to bring into the king's treasury above fifty thousand pounds per annum, clear of the expences of government, and all charges relating thereto.

SECT. XV.

Containing an account of the manufaltures and commerce of the islands of Canaria, Tenerist, Palma, Gomera, and Ferra, also of their splay on the ceast of Barbary, their acclessistical government, and the ceins, weights, and mea-sures used in the Canary Islands.

WITH respect to the manufactures of the islands in general, they consist of taffeties, knit filk hole, silk garters, and quits for beds. In Canaria and Teneris, coarse linens and gauzes are made of the flax imported from Holland. In Canaria are also made white blankets and coarie cloths, from the wool of their own fheep.
The reft of the illands also make a coarse kind of cloth, which is worn by the peasants; but on sessions, weddings, &c. the labouring people usually wear English coarse cloth. The exportation of raw silk is now prohibited, in order to encourage their filk manufactures. In the large towns men are employed in weaving, and as tailors; but those trades are exercised in the villages only

by the women.

We may divide the commerce of the Canary Islanda we may divide the commerce of the Canary Handa into these proportions following; namely, that to Europe, and to the English colonies in America; that to the Spanish West Indies; that carried on between the islands themselves, and the fishery on the Barbary coast.

The islands of Ferro and Gomera are so poor, as to be visited by no ships from Europe or America; nor are the ratives of those islands allowed any share of the Spanish Wast India commerce; they being not entirely under the

West India commerce; they being not entirely under the jurisdiction of the crown of Spain, but subject to the count

The ifland of Teneriff is the centre of them.

The ifland of Teneriff is the centre of the trade to Europe, and the British American colonies. A few thips indeed to Canary and Palma, but these are not to be compared to the numbers that arrive at Teneriff. This trade pared to the numbers that arrive at Teneriff. This trade is carried on entirely in foreign bottoms, efpecially in English, the natives being afraid of failing in those sawhere they are in danger of being taken by the corfairs of Algiers, Sallee, and other ports of Barbary. The greatest part of this trade is in the hands of the Irish Roman Caholic merchants fettled in Teneriff, Canarla, and Palma, and the deicendants of the Irish who formerly settled there, and married Spanish wives; and, the English and Durch consuls, and two or three merchants who lives at Teneriff, are the only protestants who reside there.

5 X The commodities imposed from Greet Belaise to these stands consist chiefly of weedlen goods of various kinds, hats, hard-ware, red-herrings, pilchards, and wheat when it is factor in the sillends, with many other articles. They import from Iruland beef, pork, pickled-herrings, bitter, and candles. From Helland and Hamberght, linear of all forts, to a very great amount, are imported; also graces of the sillengs of the red of the red of the sillengs of the red of the

brought hither.

The articles they import from Majorce, Italy, Barestons, Cadis, and Saville, confift chiefly of velvets, filts, eit, fait, and coreage made of base or sparrent, with smany little articles for the confumption of the Canary islands, and the Spanish West-Indics. This trade is almost entirely carried on in the French and Maltese tertans.

The Maltese vessels, before they fait to these islands, make the tour of all the European harbours to the west-ward of Malta, trading from one part to the another. They go from the Mediterranean to Cadia, and from thence to the Canaries, where, besides the entiredities of Italy, France, and Spain, they sell the coston manufactures of their own island; all cottons imported into the Canary islands, except those from Malta, paying such an exorbitant duty as almost amounts to prohibition. The people of Malta have engaged to wast perpetual war with the Torks and Moors, which is the resion that this privilege is allowed them.

From the British colonies in America they import, dried cod, rice, beef, pork, hams, bees-wax, deal boards, pipe slaves, and wheat, slour, and mais, when the crops in

the ifland fail.

Thos islands, in return for the above goods, export to Great Britain and Ireland, wine, orchilla weed, campachy wood, and a confiderable quantity of Mexican dollars. The fame articles to Holland and Hambargh; he agresser quantity of dollars, and little or no orchilla-weed. Jars. The fame articles to Holland and Hamburgh; but a greater quantity of dollars, and little or no orbible-weed. To Marfeilles, Malta, Italy, and Spain, they ferred the commodities they receive from the Spainth Welf Indies, particularly fugar, hides, Campeachy log-wood, fome orchillaweed, and dollars: they export a great quantity of wine, but no other articles, to the British colonies in America. The above goods in general pay a daty of feven per cent. on the chimated value, whether they are imported into, or exported from their identics.

There are particular regulations, to which the commerce of the Canary Islands with the Spanish fertements in the West Indies are subject, and no foreigners are allowed to Weft Indies are fubject, and no foreigners are allowed to nave any flure in it; nor are any flure funded to fail to the Spanish ports of that part of America, from any of the islands, except Tenerist, Canaria, and Palmus, and the trade there is confined to the ports of the Hawannash, Campeachy, and La Guaira on the coasts of Caracons, St. Domingo, Porto Rico, and Maracaroa: the three first are called the greater parts, and the others the lesses, because the trade of the latter, when compared with thirt of the former, is very inconfiderable.

Every thing relating to this trade is managed by a indexe.

the former, is very inconfiderable.

Every thing relating to this trade is managed by a judge, a fecretary, and other officers, who reside in the city of St. Christobal La Laguna; and before a ship takes in her loading for any of their ports, she must obtain a licence from the judge of the India trade, which is generally granted, if it be her turn; for although interest and money are frequently found to prevail against justice, yet this is not the case here, for all ships are registered, and must

have their turns.

The produce of the Canaries conflitute the whole of their trade to the Spanish West Indies; such as, wines, brandy, almonds, raisins, figs, &c. of which they can annually fend one thousand tons; and see only allowed, besides, what is termed a general for each thip, which wonfuls of all kinds of goods thought necessary for the use of the vessel, crew, and passengers, during the veysge; and is more or less extended in proportions to the size of the sine. But though they are restricted by these rules, this trade is extended much farther; and it is said they export at least two thousand tons of the produce of the islands, and also European commodities to a very great amount. have their turns.

and also European commodities to a very great amount.

The imports from the West Indies into these islands The imports from the West Indies into their listance confist of commodities of the ports from whence they came, and are chiefly logwood, hides, cocon-nuts, sugar, and Mexican dollars: all which they are obliged to larde at Santa Cruz, in Teheriff, but Cochinteel and indigo are prohibited from being lained others. The filver they bring is limited to fifty Mexican dollars per ton, secording to the registered tonnage; yet some of these things are failed to bring home a hundred and twenty dollars to Teneris. There are commonly employed in this trade Thips of short twe hundred and fifty, or three hundred one burthen. Some of them are built in the ideads, and extern at the Hayanna, or. Old Spain. No feering a betterm can be employed in this trade; for which reades the freight from the Canary flipping earry to many utilefs hands, particularly shaplaine; lie is long in the road of Santa Cruz, waiting their restrate; and are at fush vaft engines of anchors and sables, that the owners cannot afford to take left freight for a pipe of wire, front the Canaries to Le Gualra; then ten peende firstling; and see the run from Tenerif to that port being all the way before the wind, is usually performed in left than thirty disy; yet our author observes, that were the native allowed to employ English hips in this trade, they would foon find a fofficient number ready to carry their wine at the rare of twenty flailings for each pipe of its.

pipe of it.

The trade carried on from one ifland to another, it as follows: The natives of Canaria export to Teneriff fome raw and wrought fills, coarfe woollen blankets, provisions of all forts, particularly cattle and fowle, orchilla-weed, figuare flags for pavements, fome falt, and filtering-stona vessels for purifying water. In return for these commodities, they shiefly receive eath, and the other produce of the Spanish West Indies. Palma exports to Tenerist boards, pitch, taw filk, orthila-weed, figar, almonds, and sweet-meate; and receives in return European and West Indies goods. The natives of Gomera supers to Tenerist cattle, brandy, orchilla-weed, a great deal of raw filk and fome wrought, and in return receive European and West. fome wrought, and in return receive European and West India goods. The inhabitants of Ferro export to Teneriff cattle, brandy, orchills-weed. Lancerots and Fuer seventura export a great quantity of corn to Teneriff, befides cattle, fewls, and orchilla-weed; and, in return, generally receive European goods and eafh, with fome wine. The natives of the fame identified fend corn to Palatta, for which they recive fugar, wine, cath, boards, and other timber. The natives of Lancerota also expots to Teneriff and Polma forme dried fish and falt.

and other turner.

The veffels employed in this made are built in the idands, and are from twenty to fifty tons burthen; they are about twenty-five in nearber, and such of them navigated by ten hands, on account of the great labour required its loading and unloading.

The fifthery here is carried on by the natives of the Cahary Irelands on the coaft of Barbary. It employs about thirty veffels, from fifteen to fifty tons burthen, the smallest carrying fifty men, and the largest thirty. The about thirty welfels, from fifteen to fifty tone burthen, the smallest carrying fifty men, and the largest thirty. The owners having atted out a welfel for this voyage, put on board a quantity of falt fufficient to cure the fish, with bread enough to serve the crew till their return. Each man has his own fishing tackle, which confitts of a few lines, hooks, one or two flout fishing rods, a little bread wire, and a knife for cotting open the fish. If any of the crew carry wine, brandy, fieth-micat, or any other flotes, it must be at his own expence; for only bread is provided by the owners.

On the north, this fiftery is bounded by the fouthern estremity of Mount Atlas, in the latitude of twenty-nine degrees; and on the fourth, by Cape Blanco, in the lati-tude of twenty degrees thirty minutes; an extent of about fix hundred miles; in all which tract there is neither town nor village, and but few fertled habitations. The wardering Arabs who frequent this part of the world live in tents, and have neither barks, boats, nor canoes; and the king of Morocco's cruifers never venture fo far to the

As foon as the fishermen arrive on the coast, they endeavour to eatch bait, which is done as we do trouts with a fly, only the rod is three times as thick as ours, and does not tape: fo much towards the point. The line is formed of fix hrafe wires twisted together; the hook is about five inches in length, and is not bearded; the shaft is leaded to as to lie horizontally on the furface of the water, and the hook is covered with a fish's fkin, except where is bends to the point. The fishermon getting within a quarter or half a mile of the shore, carry so much fail as to cause the bark to run about four miles an hour, when two or three men throw their lines over the ftern, and let the hooks drag along the furface of the water. The fifth taking the books for fmall fifth, fnap at them; and they are no fooner hooked, than the fithermen fwing them with

The Canarians call thefe fith taffarte; they have no feales, and are thaped like a mackerel, but are as large us a falmon; and they are fo voracious, as to (wallow all the

hook, notwithfunding its being to large; and was it bearded, it would be impossible to extract it, without cutsing open the fifth. Three men, in the florn of a bark, have been feen to ceach a hundred and fifty suffices in half an hour, and a bark will fometimize complete her lading with these fish only.

Another fort of fish which they call enhous is taken in the fame manner: this is rather bigger than a large mackarel, and also serves for a beit; as does also mether fish called cavallon, which 's shaped like a mackarel, but is somewhat more fist and broad; it is about a span long, and is catched with an angle-rod and line, with a very small hook; beited with almost any thing that can be protured.

and is catched with an angle-rod and line, with a very finall hooky beited with almost any thing that can be procured.

As foon as a bark has obtained a fufficient flock of bait, the leaves her boat with five or fix men to catch more, and rans out to fee till the gets into a great depth of water; there she anchors, and all the crew heave their lines and hooks over-board, baited with the above fish, in order to catch bream and ced. The lines are loaded fo as to caste the hooks to fink near the bottom of the fea; where there is the hooks to fink near the bottom of the fea; where there sink heads to fink near the bottom of the fea; where there sink heads to fink near the bottom of the fea; where there sink he will provided with bait, she will be able in four days to complete her cargo.

The fishermen make but one meal in the whole day, which is in the evening, after they have cleaned and falved the fish they have taken; they then drefs their supper in the following manner. In every bark the erw have a long flat stone for a hearth, upon which they light a sire, and hang a large kettle over it, in which they bight a sire, and hang a large kettle over it, in which they light a sire, and heng a large to the the four broken bifcuit, onions stred simall, to which they add pepper and vinegar, and then pour in the broth of the fish, which is faid to be delicious. Having eaten of this excellent soup, they similt their meal with roasted sish; for they throw that of which the soup was made into the fea. Soon after this repath they lie down to step in the most commodious part of the vessel, for they have no bedding, and about five or fix in he morning rife, leave the boat near the fore, wigh anchor, and stand out to fea as before, never tasting stone stands of the stands of the cargoes constit chiefly of large bream, nevertheles, they catch many other forts. The tassare, just mentioned, is a delicious sish, which tastes like a large and fat mackare, but, when dried, is not to be distinguished from same, the morning rise, leav

various kinds. various kinds.

They cure them by the following method: after cutting them open, and having thoroughly cleaned and washed them, they chop off their heads and fins, and plie them up to drain off the water; after which they are falted, and flowed in bulk in the hold, and in this state they remain

till fit for use.

** It is strange; says a judicious author, to think that the Spaniards should want to share the Newfoundland sishery with the English, when they have one much better at their own doors. I say better, for the weather here, and every thing else, concurs to make it the best sishery in the universe. What can be a stronger proof of this, than the Moors on the continent drying and curing all their sish without salt, or any other process than exposing them to the sun-beams? For the pure wholfone air of that elimate, and the strong northerly wind which almost constantly prevails on this coast, totally prevents puttersaction, provided the fifth are spit open; well washed, and then perfectly dried in the sun. till fit for ule. perfectly dried in the fun.

perfectly dried in the fun.

The barks used by the Canarians make eight or nine woyages in a year; for, having unloaded their cargoes, they leave the fish with their agents to fell them at their letione, while they go in search of more. They are commonly fold at three half pence for a pound of thirty-two cunces, which is the weight used for fish and flesh in these

thands.

The magifirates, inflead of encouraging this useful and profitable branch of trade, take every method to injure it, by fixing the price of the fifth, clogging the trade with unreasonable duties, and forbidding the fifthermen to have any intercourse with the Moors on the coast, where they any intercourse with the Moors on the coast, where they fornetimes go to fifth; which is a great hardhip, as they are frequently obliged; when they meet with bad weather, to go afhore for fuel and water. They correspond, however, privately to their mutual advantage: for the Canarians give the inhabitants of the defart old ropes, which the latter untwift and spin into yarn or twine for fishing-nets;

they affe give them brind; postoce, chlorif, and many hinds of fruit; in return for which the Moore make them presents of carboh's eggs and fashers, and allow this to make weed and water on their cook, whenever they are in want of those needs of the cockfinding postoring witches.

With respect to the ecclessified government of the Canary Islands in general, it must be observed, that the bishop is suffragan to the archbishop of Seville, in spain, and has a revenue of fix thousand pounds farting per annum. He resides in the city of Palma, in Canaria, where he is sreased with as much respect and homage as a fovestign prince. The superior of the various orders of fisare and noire resides in the city of St. Christobal de la Lagua, and are only accountable to the generals of their respective orders at Rome.

There is a house in vach of the islands belonging to the inquisition, with its proper officers, in order to prevent all appearances of hereity or differed to the civily magnificate; and, after examining them, they are either fent to the urbands at Canaria, or discharged.

On the arrival of any foreign ships at the islands, the first time the master goes affore; he is considered to enoficer of the inquisition, who examines him whether he has any books or pictures in his ship against the doctrine or ceremonies of the church of Rome? and he is obliged to fign a paper, by which he engages, if he has any, not to land or expose them to view; and that, while he remains in the country, he will neither speak against this Rountin religion, nor ridicale is rights and ceremonles. As all the natives are zealous members of the Rountin folious furthed to their rank, and are unwilling to depend upon their cleder brothers, or other relations, for substince: on their values to their own take the valid from religious motives, being statered by the aums and clergy into a high conceit of their own take the valid from religious motives, being statered by the aums.

their having met with disappointments in love; and a few take the vail from religious motives, being flattered by the nuns and clergy into a high conceit of their own

suns and clergy into a high conceit of their own fanctity.

In these islands the priests are far from being satisfied with their tithes, or the friars with the revenues of their convents, and have therefore found means to load the inhabitants with many impositions, which, though not established by law, it would be dangerous for them to presume to refuse paying. Thus every sishing-bank from the coast of Barbary is obliged to deliver a certain quantity of fish to each convent; and when the Mendicant friars go begging from house to house, they are liberally supplied; and, was any to refuse giving them alms, they would be marked out as objects of their vengeance, and be exposed to the inquisition. In short, all ranks of men, who have any great point in view, take care, in the first place, to any great point in view, take care, in the first place, to say great you turnount every other obstacle when this is accomplished.

As the Catholics of these islands seem to think, that all

As the Catholics of these islands seem to think, that all excellence is confined to those of their religion; therefore when they see any of a different persuasion behave with common decency, they appear greatly surprised, imagining that those they call hereics differ but little from brutes. Such is the prevalence of bigotry and supersition over the minds of the ignorant!

minds of the ignorant!

The Mexican dollar, and the half, quarter, eighth, and fixteenth parts of a dollar, are the current coin in the Canaries. There is also the provincial rial of plate, which is a small filver piece worth five-pence sterling; a also the quart, a copper coin of the value of an halfpenny; ten of which make a rial of plate. The provincial filver coin is never exported, on account of its passing in the islands for more than its intrinsic value. Accounts are kept in imaginary money, that is, current dollars of ten rials of vellon each. The rial of vellon is equal in value to eight of the above quarts, and the current dollar is exactly three shillings and four-pence, and therefore fix of them make one pound sterling. Three sixteenths of the Mexican dollar pass for two rials of plate. Gold coin is very scarce here.

very fcarce here. The quintil, which is their hundred weight, weights only an hundred and four pounds. The arroba is twenty-five pounds. The pound and smaller weights are nearly the tame as those in Europe. The following are the measures used in the Canaries; anamely, the fanega er hanega, the almud, the liquid arrobe, the quartillo, and the var. The fanega is a meetire for corn, eccoa, falt, far, and contains nearly the quantity of two English bushels. Twelve almuds make a fanega. The liquid arrobe contains little more than three gallens, and the quartillo is nearly the fame as our quert. The var (which is somewhat less than the English yard) is a measure for sloth, fac:

We have anow compleated our description of the Canary Islands, but cannot with propriety conclude this fection, without first giving a concile, account of the islands or rocks named the Salvages, which lie between the Canaries and Madeirs.

These islands are fituated twenty-seven leagues north from Polnt Nago in Tenerist, in thirty degrees twenty minutes north letitude, and in fatteen degrees twenty-seve minutes well longitude from London; the most considerable of which is high and rocky, and is about there miles in circumference. These or four leagues to the fouth-west of this island is another, not unlike the largest Needle rock at the west end of the He of Wight. Between these islands are a considerable number of rocks and sands, some above and others under water, so that it is dangerous for those unacquainted with these islands to approach them, except on the east side of the great island, which produces nothing but orchilla-weed.

There are great numbers of cormorants, or sea sown. fo iffands are fituated twenty-feven leag-

arcept on the entitled of the great man, where presents on the anothing but orchilla-weed.

There are great numbers of commorants, or fea fewls that nearly refemble them. Some barks and boats belonging to the Canary Islands frequent the Ssivages in the fummer feafon, in fearch of wrecks, and those fea fewls, for they catch the young in their nells, kill and falt them, and afterwards dispose of them at Tenerisf.

These islands, though uninhabited, are claimed by the Portugueze, who consider them as dependent on the island of Madeirs, and, netwithstanding they fearcely ever visit them, will not allow the Spaniards to gather orchilaweed there. A few years ago some sishermore went in a bark from Tenerisf to these islands in quest of wrecks, but finding none, went ashore, and gathered about half a ton of orchilla-weed. But this was no soone known at Madeirs, than the Portugueze complained of it to the governor general of the Canary Islands, and would not be fatisfied till the master of the bark was thrown into prison, where he was a long time confined. fon, where he was a long time confined.

SECT. XVI.

Of the Madeira or Madera Iflands; their function, and first discovery of them; also their full, produce, principal towns, inhabitants, trade, &c.

THESE islands are only three in number; namely, Madeira, properly fo called; the island of Puerto, or Porto Santo; and Isla Deferta, or the Defoise Isle. They are fituated to the north of the Salvages, and in the Atlantic occan, between thirty two and thirty-three degrees, and feventeen and eighteen degrees west longitude, two hundred and fifty miles north by east from Teneriss, three hundred and fixty from Cape Cantin on the coast of Africa, and three hundred north of the island of Farro. or America, and three minarea noted of the mand of Farro. They were thus named from the principal of them, which was called by the Portugueze Madeira, fignifying a wood or forest, from its being overgrown with trees. They were first discovered by an English gentleman, and many years after by the Portugueze, and as there is fomething extremely fingular in both these occurrences, but more particularly the first, we shall, for the entertainment of our readers, relate the circumstances attend ing it.

In the reign of Edward III. king of England, a young gentleman, named Robert Machin, conceived a violent paffion for Ann D'Arfet, a beautiful and accomplified lady of a noble family. Machin, with respect to birth and fortune, was inferior to the lady; but his personal qualifications oversame every seruple on that account, and she rewarded his attachment with a reciprocal affection. Their friends, however, beheld the woung santanean in Their friends, however, beheld the young gentleman in a different light; they fancied their blood would be contaminated by an alliance with one of a lower rank, and therefore determined to facrifice the happiness of the young lady, to the hereditary pride of blood, and their

own mercenary and inverefted motives.

In confequence of these ideas, a warrant was procured from the king, under the fanction of which Machin was apprehended, and kept in close confinement, till the object

of his affections was married as a nobleman, whose chief marit lay in his honorary title and large possessions; and immediately after the nuptial ceremony was over, the peer took his beautiful bride with him to a strong easilied which he had in the neighbourhood of Briskel, and then the unfortunite lover was fet at liberty.

After being relassiod from his eruel confinement, Machin was acquainted that his mistrefs had been compelled to give her hand to another. This rendered him almost frantic, and he vowed to revenge the violence done to the lady, and the injury which he himself had furtained; and with this view, imparted his design to some of his friends and companions, who engaged to accompany him to Bristol, and affist him in whatever enterprize he understook:

Accordingly one of his comrades contrived to get himfielf hired by the nobleman as a fervant, and by that means being introduced into the family, he foon found an opportunity to let the lady know the fentiments and intentions of her lover; when he fully entered into all his projects, and promifed to comply with whatever he should pro-

pole.

In order to facilitate the design, the lady appeared moso chearful than usual, which sulled assess years further than usual, which sulled assess years further than usual, which to led out daily to take the air for the benefit of her health, which request her consort easily granted. This point being gained, the did not fail to take advantage of it, by riding out every morning accompanied by one servant only, which was her lover's companion, he having been previously pitched upon always to attend her by her own contrivance.

he naving occur previous c.

Matters being thus prepared, the one day rode out se edual, when her attendant conducted her to his friend, who waited at the fea fide to receive her. They all three immodiately entered a boat, and foon reached a fhip that lay at fome diffance ready to receive them on board; and Machin, having the object of his wiftes on board, immediately, with the affifance of his affociates, fet fail, intending to proceed to France; but all on board being ignorant of maritime affairs, and the wind blowing a hard ignorant of maritime affairs, and the wind blowing a hard gale, they miffed their plott, and the next morning, to their aflowishment, found themfelves driven into the main ocean. In this miferable condition, they abandoned themfelves to despair, and committed their fates to the mercy of the waves. Without a pilot, almost destitute of provisions, and quite devoid of hope, they were tosted about for the space of thirteen days. At length, when the morning of the fourteenth day began to dawn, they fansied the; could descry something very near them, that had the appearance of land; and when the fun rose, to their great joy they could distinctly perceive it was such. Their pleasure, however, was in some measure lessened by the restection, that it was a strange country; for they plasinly perceived it was covered with a variety of trees, whose nature and appearance they had not the least knowledge of.

Soon after this, some of them landed from the sloop, in order to make their observations on the country; when, returning soon after to the ship, they highly commended

in order to make their observations on the country; when, returning soon after to the ship, they highly commended the place, but at the same time believed there were no in-

habitants in it.

habitants in it.

The lover and his miftrefs, with forme of his friends, then landed, leaving the reft to take care of the fhip. The country appeared beautifully divertified with hills and dales, fladed with various trees, and watered by many clear meandring ftreams. The most heautiful birds of clear meandring treams. The most heautiful brid of different species perched upon their heads, arms, and hands, unapprehensive of danger; and several kinds of wild beastle approached, without offering any violence to them. After having penetrated through several woody recesses, they entered a fine meadow admirably incircled with a

er of laurels, finely enamelled with various flowers, border of laurels, finely enamelled with various flowers, and happily watered with a meandring crystal rivule. Upon an eminence in the midt of this meadow, they saw a lofty spreading tree, the beauty of which invited them to repose under its shade, and partake of the shelter it would afford them from the piercing rays of the sun. They at length attemped to make a temporary residence beneath this tree; and, providing themselves boughs from the neighbouring woods, they built several small huts, or arbours. They passed their time very agreeably in this place, from whence they made frequent excursions into the neighbouring country. Admiring its strange productions and bouring country, admiring its strange productions and various beauties. Their happiness, however, was of no very long continuance; for one night a terrible from arole from the north-east, which tore the ship from her anchor, and drove her to fea. The crew were obliged to ofe chief ne ; and var, the ng caille

fabilit to the merey of the electrents, when they were deliven to the ceast of Morocco, where the file being faranded, the whole crew was made captives by the Moore farended, the whole crew was made captives by the Moore farended, the whole crew was made captives by the Moore farended, the whole crew was made captives by the Moore farended, the file for the series of the anter morning, they concluded the had foundered, and was gone to the bottom. This new calamity plunged deams less the despirit melancholy, and fo greatly affected the lady, that the could not hupopor herifell under it. She had indeed before continually fed her grief, by fad praiges of the suterprises ending in fome fate centafrophe to all concerned; but the face of the late diffatter fruck her deamb; to that the expired in three days afterwards, in the mod bitter agonies.

"The death of the lady affected Machin to fuch a degree, that he furvived her but four days, notwithflanding the amost endeavours of his companions to afford him confolation. Pravious to his death, he begied them to place his body in the fame grave with her's, which they had made at the foot of an altar, erected under the beautiful lofty tree before-mentioned. They afterwards placed upon it a large wooden crofs; and near that an infeription, drawn up by Machin himself, containing a fuccinit account of the whole adventure; and concluded with a request, that if any Christians should come thither to fettle, that they would build and dedicate a church to Jesus Christ apon that foot.

The remaining companions of Machin, after his death, determined to attempt returning to England in the Boop, which had been forced upon, they unfortenately arrived in like manner upon fome part of the conft of Morocco, where they met with exactly the fame fate, being feized in a fimilar manner, and carried to the fame prifon. Here they met with feveral other Christian flaves, before the others had been forced upon, they unfortenately arrived in like manner upon fome part of the conft of Morocco, wher

new discovered country, which he took care to retain in his memory.

In process of time, John I. king of Portugal, having sentered into a war with the Moore, passed over into Africa with a formidable army, and in the year 1415 laid slege to and zook Ceuta. In this expedition, he was accompanied by his sone, one of whom, prince Henry, took great delight in the study of the mathematics, particularly geography and navigation. Upon the occasion, they had a great opportunity of conversing with the Moore and African Jews; and isforming hantless, the sea about them. can Jews; and informing himself, by their means, of the finishion of feweral foreign countries, the feas about them, their coafts, &c. Hence grew an infatible thirst for making new conquests; and from this time he was determined to deavor his attention to the discovery of unknown countries. In confequence of which refolation, he retired, after the reduction of Ceuts, to the Algarves, where he found a foet to defind it, and determined to fend out thips from these town different them.

fort to defend it, and determined to fend out thise from thence upon discoveries. If the the state of the thine from the perion he intended to employ as chief commander, upon these occasions, was a gentleman of extraordinary abilities, named Juan Gonfalvo Zarco, who, became famous not only for his maritime discoveries, but for being the first person who introduced the use of artillery on board ships. In 1418 he discovered Puerto Santo, one of the Madeiras; and in 1420 he passed the strain, and surveyed a considerable extent of the coast of Africa. In the mean time, a Spanish prince, dying, tell by his will a veyed a confiderable extent of the coaft of Africa. In the mean time, a Spanish prince, dying, left by his will a large fum of money for the purpose of redeeming Spanish Christians, who were kept as flaves in Morocco. Terms being agreed upon between the emperor of Morocco and the commissioners, for the redemption of those captives, a Spanish ship was sent to Morocco to setch home the redeemed Christians, among whom was John de Morales

a Spanish thip was tent to Morecco to retch some the redeemed Christians, among whom was John de Morales
before-mentioned.

On the return of this fibit to Spain, it happened to fall
in with the fundron commanded by Jean Gonfalvo Zerco,
who was, as we have jost noticed, then passing the straits
to make observations on the coast of Afrika. Spain and
Portugal, being at this time at war, Juan Gonfalvo Zarco
made prize of the Spanish ship; but finding it contained
only redeemed captives, he was touched with compassion
at the miseless they had already suffered during their savery, and generously dismissed them, taking out only John
No. 45.

do Morale, when he found to be a very intelligent ger fort, an able fallor, and an expert plat.

When Morales was inferned of the reason of his descrition, and the distoveries that the Fortugues were apon he was mightly rejoiced, and effered voluntarily to exist into the fervice of prince Henry. He then told the Pertuguese commander of the Island which had been lastly discovered by the English, related the flory of the two unfortunate lovers, and every other circumstance, which during his captivity, he had heard from Machin's some panions.

the illand, in order to discover it it contained any cattle; but not finding any, they coaffed westward, till they came to a place where four fine rivers ran into the fea, of the waters of which Juan Gonsalvo filled some bottles, to carry as a present to prince Henry. Proceeding farther, they came to a fine valley, which was intersected by a beautiful river, and after that to a pleasant spot covered with trees, some of which being fallen down, Juan Gonsalvo counter to be revealed of the falvo ordered a crofs to be erected of the timber, and

falvo, ordered a cross to be erected or the number, and called the place Santa Crua, or Holy Cross.

After this, they began to look out for a place proper to fix their refidence in while they flayed: and at length found a fine tract of land, not so woody as the rest of the country, but covered over with fennel, which, in the Portugueze language, is called Funcho; from thence the town of Fonchal, or Funchiale, took its name, which was afterwards built on the fame fpot.

Juan Gorifalvo, after having viewed other parts of the iffend, and finding delly cause for new admiration of the heastles continually discovered, returned to Portugal, and arrived at Julian in the end of August 1200, without having lost a single man in the whole enterprise; and a day of nuclence being appointed for him to make his report of his voyage, the king gave the name of Madeira to the away discovered illand, on account of the great quantity of seculiarity may found them.

An order was found upon it.

An order was found on the made for Juan Gonfalvo &

An order w. Dour smale for Juan Gonfalve to return to Madeira in the sing fpring, with the title of eaptain-gowrher of Madeira, to which title the heir of his family at prefent adig that of count. He secondingly fet fail on his feeond voyage in May 1427, taking with him the greatest part of his family, and arriving at Madeira it anchor in the road, till then called the English Port; but Gonfalve, in honour of the first discovere, then called it Parers de Machino, from which name it was corrocted to Machico, which it now bears.

He then ordered the large fpreading heautiful tree heforementioned (under which Machin and his companions had taken up their refidence) to be cut down, and a small church to be erected with the timber; which, ogreeable to Machin's request, he dedicated to Jriuc Christ, and interfeded the pavament of the choir with the bones of the two unfortunate lovers. He soon after laid the soundation of the town of Funchal, which sfterwards because famous; and the altar of the new wooden church was dedicated to St. Catherine, by his wise Confantia, who was with him.

him. John I. king of Portugal, dying, his eldest fon and fuccessor Duarts, in consideration of the great sums of money expended in peopling this stand, by prince Henry his brother, gave him the revenues of it for life. He likewise gave the spiritualities of it to the order of Christ, which endowment Alonao XV. asterwards consistend. The island of Madeira, properly so called, is composed of one continued hill of a wonderful height, extending from east to west; the declivity of which, on the fouth side, is cultivated and interspersed with vinteyards; and, in the midst of this slope, the merchants have fixed their country-seats, which help to render the prospect very agreeable.

agreeable. The air of Madeira is more moderate than that in the Canary Idands, and the foil more fertile in corn, wine, fugar, and fruits. Fine fprings abound almost in every part, besides which there are eight good rivers. The great plenty of water first fuggested the hint to prince Henry of sending sugar-canes to Madeira from Italy, which greatly improved through the increase of heat, and orreduced more than in their native soil.

which greatly improved through the increase of neat, and produced more than in their native foil.

This island affords plenty of citrons, bananas, peaches, apricots, plums, chetries, figs, and walnuts; with oranges of all forts, and lemons of a prodigious fize. Fruit-trees from Europe thrive here in perfection; and the natives are faid to make the best sweetmeats of any in the world, and particularly greatly excel in preferving citrons and oranges, and in making marmalade and perfumed patter, which greatly excel those of Genos.

The fuger made here is very fine, and has the fmell of violets; this, indeed, is faid to be the first place in the West where this manufacture was set on foot, and from thence was carried to America: but afterwards the sugarplantations at Brazil prospering extremely, the greatest part of the sugar-canes in this island were pulled up, and part of the togar-canes in this mand were pulled up, and vineyards planted in their flead, that produce excellent wines, which, the author of Lord Anson's voyage ob-ferver, scens to be designed by Providence to exhibitants and comfort the inhabitants of the torrid zone.

The cedar-tree here is very first, tall, and thick, and has a rich feant. The wood of the naffo-tree is of a red role colour, here also the mattie and gum-dragon trees; and besides the trees there are a variety of other trees, which are count whoth to Europe and Africa. t surjointy; for when it is at to face; it grows like The everlafting fremer is plucked it cannot to yet and to lace; it grows like fage, flowers like cannot be yet and closely appears fresh and

Vince are here found in abundance; and from the grapes which they produce a vast quantity of the most delicious wines are made. Indeed the foil is so well adapted for the cultivation of vines, that the grapes exceed the leaves in number, and some of the bunches are fixteen or eighteen inches in length.

There are several forts of these wines a one is of the

colour of champagne, but is not much valued: another fast is a white wine, much stronger than the former. A

third fort is encellent, and referables stalanty, it being of the fame nature with that which grows in Tenerit' and another referables Alleant wine, but is much lanfeston to it in tafe, and is never drank alone, but mined with the other forts, to which it gives a coloue and frongth to there forts, to which it gives a coloue and frongth to the property of the barel, after the bung is taken out. In the whole iffund they annually make about twoney-eight themefund pipes, eight thousand of which are drank there, and the reft exported, the greatest part being fant to the Well-Indies. The wines that are brought directly to Emphragare not equal in goodness to stoch as are dest exreted to the Well-Indies. The wines that are brought directly to Emphragare not equal in goodness to stoch as are dest exreted to the Well-Indies. The product of each vineyard is usually divided equally between the proprietor, and the person who yathers and profits the grapes; it commently inappens, hewever, there while the merchant is rich, the gatherer is pobre. The people here trade among themselves, or, barter.

The principal town in the whole, or, barter.

The principal town in the whole island in Funchal, or Fonchisle, and it feated in the fouth part of the island at the bottom of a large hey. Towards the fan is is feetifed by a high wall, with a battery of annon, besides a castle on the Loo, which is a rock standing in the water at a the bottom of a large hey. Towards the fan is is feetifed by a high wall, with a battery of annon, besides a castle on the Loo, which is a rock standing in the water at the bottom of a large hey.

Towards the fine is a state of the standing in the water at a prodiction. The only good time for landing is before the fast-brease comes on. The town is very popule us, but the majority of the inhabitants are not natural-burn Portuguese manner; some English protestants, and a prodiction, and their houses are pretty well built; their churches are well-built beautiful structures, enriched with gidling, sine pictures,

Here are two other towns; one called Manchico, which has a church named Santa Crus, or the Holy Crofs, which has a church named Santa Crua, or the Holy Crofs, and a convent of Bernardine friers: the other town is named Moncerito. In short, the island lately contained thirty-six parishes, a college, and a monastery of jesuits, sive other monasteries, eighty-two hermitages, and sive hospitals. There are several sine seats and castles about the country, in which the merchants chiefly reside. The ordinary food of the poorer people, in the time of vintage, is little clie than bread and rich grapes; and were it not for their abstractions of the lower in the lower.

were it not for their abitenitorinels, fever in the hot fessions would be frequent; therefore en, a the rich, in the hot months, are very mederate in their diet and drinking.

The generality of people in Modina and great gravity in their deportment, and usually deefs in black i but they cannot dispense with the spade and dagger, which even fervants wears to that you may see a footman waiting at table with a sword at least a yard long, and a great basket, hilt so it. The houses in general are plain, as the inha-

hilt to it. The noutes in general are plain, as the inha-bitants put themselves at no great expence in furnishing them. The windows are secured by wooden shutters at night, and instead of being glassed, are insticed. With respect to their marriages here, affection is newer considered, the principal enquiries are into smally descent and circumstances; the women are prohibited from mar-rying Englishmen, unless the latter consent to embrace the Koman catholic religion.

In this island murders are very frequent, on account of the great number of places deemed fand saties, and the with which a murderer can thereby forcen himfelf from justice. But if the criminal is taken before he can reach the fanctuary, the punishment is only either benifts, ment or imprisonment, both which, by a pecuniary composition, may be evaded.

Here are great numbers of clergy, who are generally yields a but none who and detended from Moore or Jews are admitted to take orders. The churches are made responsibilities for the dead, and the coppe is currounly defined and adorned, yet in the internition; force of lime is midding atorned, yet in the internition; force of lime is midding atorned, yet in the internition; force of lime is midding and adorned, yet in the internition; force of lime is midding order to contains the body as feeddly as possible, which, utitally happens in a formight; to that there is then soom for another corps. The bodies of presentants are not allowed to be buried, hut must be thrown into the fear a neverthelide they are permitted to be interned in confectated ground, provided a hendfome funt of money is gaild to the degree of the middle of Madeira. In the thirty-fecond degree thirty mittudes work longitude from London, and is only about fifteen relied in circumference. It was discovated in the year late, by two Postuguese gentlemen, one of whore was Don Juan Gonfalvo, fint by prince Henry, fon to John I. king of Portugal, to doubt Cape Baledory in order to make farsher discovaries i but being furprified by a violent floren, were driven out to fact, and, when they great theorem, were driven out to fact, and, when they great theorem, or the Holy Fort.

This island produces wheat and other corn, just fufficient, for the jusport of the inhabitants these olds are leasily, of oxen, wild hogs, and a wast number of robbits. There are trees which produce the gune called dragen's blood, and likewise a little honey and wast, which are extremely good. It has properly no harbour, bet there is good mooring in the read, which affords a convenient retreat for thise going to Africa, or coming from the Indies; fo that merchanture often stop there, which are extremely good. It has properly no harbour, between is good mooring in the read, which affords a convenient retreat for thise going to Africa, or coming from the indies; fo that merchanture of

ing the place.

There is a little ifland called the Defert, which produces only orchila-weed, and fome goats are on it: it lies on the caft-fide of Madeira, at about fix lengues diffance.

. SECT. XVII.

Treats of the ifands of St. Thome, Princes Ifand, Pernando Po, Amabon, St. Matthew, and Aftenfion, by whom dif-covered; their fluncion and eatenfour, fell, produce, animals, inhabitants; their manners, culpuns, drefs, religion, Gr.

THE island of St. Thome, or St. Thomse, is directly under the equinoctial line, and about two hundred and forty miles north-west from the city of Loango. The air here is so excessively hot that Europeans soon die, though the blacks will live to near an hundred years of age. Heing stuated under the equator, the days and nights are consequently of an equal length. The only rainy months are March and September, when the son passes vertically over the island; but at other times they have nocturnal dews, which refresh and fertilize the foil. It produces less fugar than it formerly did, but is extremely frustful in wheat, wine, millet, rye, barley, melons, cucumbers, figs, ginger, red partnips, cabbages, French turneps, lettuces, radithes, fage, best, parsley, &c. Olive, peach, and almond-trees thrive well in timber, but excessive heat and moiture prevent their bearing fruit. Parturnes, lettuces, reannes, age, west, painty, and exceffive heat and moisture prevent their bearing fruit. Partridges, quails, ouacle, parrots, &c. abound here; fo do
the fea with excellent fish, and large whales. A mountain, in the centre of the island, hath its top covered with
a cloud, which moistens the trees, and greatly nourishes
them. The higher the sun steends above the horizon, the
more moisture the cloud affords. The Portugueze built a
town, called Pavoasan, with a harbour towards the continess. This town is exceeding pleasant, and the inhabitants barter sugar for cloths, leather, wine, and cheese.

Nearly under the equinostial line is Prince's ssand,
intitude one degree thirty minutes. It is woody and
mountainous, abounding in fruit, rice, Indian corn, sugar, herbs, roots, &c. It contains also cattle, hoge, and
goats, but the vast number of affes are both troublesome
and dangerous, for they will attack and tear in pieces a

man, if they find him fingle and unarized, and will wantonly defirey many of the fruits of the certi
The ideaed of Fernando Po is fleated about thery miles

and belongs to the Pertuguene government. The product and inhabitants refumble in all refuelts thest of Prince's Island.

'Annoon was discovered by the Pertuguese on New Year's Day, and was on that measure found Annabas, which fignises the good or the new year. It lies to the east of St. Matthew, in two degrees fouth insteads, and five degrees ten minutes east language, being more two bundred miles from the coast of Loonge, and is near thirty miles in compass. These are two high mountaints, which being continuity covered with clouds, occasion figurest rains. In the feweral fertile vailies of it are produced planty of bananas, potasses, oranges, pine-apples, tamarinds, and eacon-nuts; besides which the island absonds with immore, altrone, nuts, fig. Turkish corm, and millet.' Here are also ozen, cows, hogs, goats, for his prigeone, and plenty of fish. The island also produces great quantities of cotton. The governor is a Portuguez who has vary few white people with him; all the other inhabitants are blacks, who are neverthelesty very submissive to the governor, and sealously attached to the Roman catholic religion.

On the fouth-east part of the island there are two rocks, one of which is very low, and almost even with the fuscate of the first pass between these two rocks, to that thips may cassiy pass between these two rocks, to that thips may cassiy pass between them. There is a very good watering-place on the same side of the island, the water resimple down from the mountain into a valley full of orange and other fruit trees but it is a difficult matter to come at that water, because of the volent breakings of the fea; and the negrees lieve raised an intrenchment of some three, from which they can very much incommode those who go thicher for water.

The road for shipping is on the north-east side of the

from which they can very much incommon those who be thither for water.

The road for shipping is on the north east side of the island, where one may anchor in seven, ten, thirteen, or fixteen fathoms water, on a fandy ground, close to the land, over-against the village where the above-mentioned intrenchment is. When the inhabitants cannot prevent a descent, they leave their houses, which are only of timber and sand, and retire into the mountains. They are very well armed.

well armed.

The inhabitants are poorly cloathed; the wemen go bareheaded, and have affo the upper part of their body naked, wearing only a pacce of linen wrapped round them, which reaches from the pit of the stomach to just below the knee. In the mountains are some civer-cats, which nevertheles efford but little profit. The revenue of the issued consists cliefly of cotton.

The island of St. Matthew lies to the north of St. Helena, under the second degree of south latitude. It was so called by the Portugueze because they discovered it on that faint's day. It is a defart, though there is a fine rivulet of fresh water running through it. Garcias de Loaissa, a gentleman of Biscay in Spain, who commanded the fleet which the emperor Charles V. caused to be fitted out at the Groyne, for the purpose of conquering the Molucca islands, having landed at the island of St. Matthew, found it uncultivated, but full of large orange-trees. thew, found it uncultivated, but full of large orange-trees. He found also fome poultry there, and on the barks of trees there were inscriptions in the Portugueze tongue, which proved that some of that nation had been there before, they are faid to have continued on that island several

years.

'Afcention Island is fituated almost exactly between Africa and America, being nearly at an equal distance from Loango in Africa, and Fermanbue in Brafil, lying in the same parallel, in seven degrees south latitude, and thirteen degrees ten minutes west longitude from Loandon. This island was discovered in the year 1508, by Tustan de Avigna, on his return from the East Indies. who called it Ascension, because he first perceived it on Assention, day. It is about twelve miles long, not above three broad, and nearly twenty-five miles in circumference.

The whole island is quite mountainous, and almost barren; yet it is generally used by our homeward-bound East India ships as a place of refreshment. Great quantities of sishes and 'cinders are found upon the foil, which induces some to imagine, that a volcano must have formerly been nere. The harbour, however, is exceeding-

very lean, and indifferent eating a said shough there are
various kinds all birds, yet near of the fillors can use
them for food, on account of their differents the stillor.

There is a place on this idand, which feamen term the
Post-office, and where they leave letters. The method
they take is, to put them into bottles, which they closely
cork, when the people in the next flip that comes take
out the letters, and leave others in their field.

Though neither the Postagueze, or any other nation,
have thought proper to take plant, as cultivate this island,
it is notwithstanding very convenient for East India ships
to call at, when they happen to go beyond, or mis of St.
fieldens: Just before the flips leave this place, the failor,
after having themselves feasted sufficiently upon turtle,
take a large purce of those amphibious animals on board,
in order to gratify the luxurious appetites of the English
epicures.

in order to gratify the luxurious appetites of the English epicures.

The failors usually diffinguish turtles into four kinds; samely, the trunk turtle, the loggerhead, the hawk's bill, and the given turtle. The trunk turtle is generally larger than the reft, and its back is higher and round; but the flesh is somewhat rank. The loggerhead has obtained his name from the fize of his head, which is much larger in proportion than that of the other kinds; but the flesh, like that of the former, being very rank, is very foldom eaten. The shawk's bill turtle has a long and fmall month, resembling the bill of a hawk. The fiesh is but indifferent, but the shell severs for many valuable purposes, such as making faust-boxer, various trinkets, &c. The green turtle is the most celebrated and most For a second sec

valuable of the turde kind. The delicacy of its flesh, and its nutritive qualities, have rendered it highly effectived, 1s forms a principal dish in the banquet of the epitemes, and the three times referrables and faults the failer?

coire, and at the fine chime refreshes and faults the failer.

Conveniences are made in hips for bringing their over alive, which cannot, however, be always effected: for though they fearcely require any provisions in the voyage, et the washing of the ship occasions them to be been against the fides of the boat that contains them, by which they become bettered and learn; so that in order to cat this animal in perfection, the epicure ought to be transported to the turtle, instead of bringing the turtle to him. The colour of the shell of the latter fore is rather greener than that of the others; from which circumstance it derives its name. Some of them are faid to exceed five hundred pounds weight, but those of about two hundred are the most common.

pounds weight, but those of about two hundred are the most common.

This animal fedous leaves the fea, except to deposit its eggs, or to sport in fresh water. In about twenty-five days after leying, the eggs are hatched by the heat of this lun, and the young turtles, about the fine of qualit, and seen butfling from the fand, as if earth-born, and running directly to the fea, with instinct only for their guide. But it sometimes happens, that the furger of the fea beat them back upon the shore, when they become a prey to the soultitude of birds which hatnit the count at that time.

When the failors are disposed to catch turtles upon this idead, they go lastore in the night, where they find great numbers on the strand, which, from their natural slowners, cannot get away before they turn them upon their backs, and leave them till morning, when they can take them at pleasure; for a turtle cannot again get upon its feet without affishance, when once it is turned on its back, being prevented by the shell.

THE

WHOLE WORLD

THE NEW AND COMPLETE HISTORY AND DESCRIPTION OF

OF EUROPE, IN CENERAL

THE etymology of the same of Europe has been variously given, by different author; some of whose conjectures concerning it have been so romantic, that it would test rather to perplex than inform, the reader to mention them. However, it was anticutly known to the Romans, as it is at present to the Italians and Spaniards, by the name of Europe; Europe by the English and French; the Taylas, called it Rumeli, or Afrank; the Georgians, Frankolas; and the rest of Asia, Frankolas, on the fouth, by the Mediterranean sea; which divides it from Africa; on the east, by Asia, from which it is parted by the Archipelago, the Euxline or Black Sea, and the Palus Mocotis; and thence by a line drawn from the eyer Tanais, or Don, almost to the river Oby, in Muscovy; and it is bounded by the Atlantic Ocean, on the west.

As a continent, Europe contains in breadth, from the North Cape to Cape Matapan, in the Morea, about two thousand two hundred miles; and in length; from the north of the tiver Oby, in the east, to Cape St. Vincent, it is near three thousand fix hundred miles. It lies between nine degrees, thirty-five minutes west, and seventy-five and seventy-two degrees of north latitude, though it does not fill up all that space.

This division is the smallest of the sour parts of the world, but is much to be preserted to the other three for the mildness of the air, the fertility of the foil throughout, the many navigable rivers, the great plenty of corn, cattle, wine, oil, and all things requisite not only for the sufficience but even for the luxury of human life; but especially for the beauty, strength, courage, in muity, wildom and learning of its inhabitants; the cacellency of their seignal ones; namely, the Greek, Latin, Teutonic of Old German, Celtic, Sclavonic, and Gothic; different dialects whereof with accidental additions, being the larguages of all the considerable parts of Europe; Turky and Tartary excepted.

Though most of the European governments are memarchical, yet their administrations are fire sa abilitary, and

There are in Europe, three empires, namely, Germany, Ruffia, and Turky; one spiritual or ecclesiatical fovereignty, called the Popedom; eleven kingdoms, namely, Great Britain, France, Spain, Portugal, Poland, Pruffis, Denmark, Sweden, Sardioia, Hungary, and the two Siciles: one archdukedom, which is Audita; one great dukedom, Toscany; four great republics, namely, Venice, the United Provinces, Swife Cantons, and Genoa; four inferior republics, which are, Geneva, Lucca, San Marino, Raguja; and one Cham, viz. European Tartary. Excludive of these, are the electorates of Germany, Italy, &c. the sovereigns of which are either spiritual, as archbiflops, &c. or temporal, as princes, landgraves, dukes, marquisses, counts, margraves, hospodars, and some others.

cihera.

Europe centsins, besides the circumseribing oceans and fess, one ocean, called the German Ocean, between Germany, and England. Five seas; namely, the Mediterraneas, between Asia and Europe; Adriatic, between Italy and Turky; Black between Europe and Asia, White between Russa, Sweden, Lapland, &c., and the Baltic, between Sweden, Denmark, and Poland. Two Channels; English, between England and France; St. George's, between England and Ireland. One Bay; the Bay of Bissay, between France and Spain And three Gulfs, viz. Bothnian, between Norway and Finland; Finland, between Sweden and Russia, and the Venezian, between Turky and Italy.

Finland, between Sweden and Russa; and the Venetian, between Turky and Italy.

The following are some of the principal rivers in Europe; namely, the Danube and the Rhine, in Germany; Volga and Dwina in the Russan and Severn in England, &c. The chief Lakes are Constance, in Germany; Geneva and Guarda in Italy; Wenner, in Sweden; Ladoga and Onega in Russa; Lochaber, in Seedan; Ladoga and Onega in Russa; Lochaber, in Seedan; Ladoga and Neagh in Ireland. The principal mountains are, the Pyrenean between France and Spain; the Alps between France and Italy; the Dofrin hil's in Swedent; the Grapach hills in Hungary; some hills in the Highlands of Scotland; and several in Wales, particularly Snowdon, &c.

That our readers may form at once a more clear and

That our readers may form at once a more clear and sittant; idea of the continent, islands, and other remarkable parts of this quarter of the globe, we have here annexed a general Inspection table for Europe, comprehending the different nation thereof with their lengthth, breadth, thief cities, distance and bearings from London, religions &c.

THE NEW HISTORY AND DESCRIPTION OF

R US

SECT. 1.

ontaining a general scount of the Russian empire, its wast extent, fail, chimates, situation, rivers, lakes, springs, minerals, and animals, also of the inhabitants, their per-sons, dress, manners, houses, diets, Us.

RUSSIA is deemed the most extensive empire in the universe, and larger than all the other dominions of Europe taken calcellively. It is bounded, towards the north and east, by the main ocean, and towards the west its himits are settled by treaties concluded with several far disant powers; with Sweden, the Poles, Torks, Perfant, and Chinese, by whose dominion this immense country is bounded. It is a greater extent (Volcaire justly observes) than the Roman empire in the senith of its power, or the empire of Darius subdued by Alexander; for it contains more than seven hundred thousand square leagues. Neither the Roman empire, nor that of the Massdomian conqueror, comprised more than fiver hundred and fixty thousand each; and there is not a kingdom in Europe the twentieth part so extensive as the Roman empire. In length, from the ille of Dago, as far as its utmost limits, it contains very near a hundred and seventy degrees; so that when it is noon-day in the west, it is very near midnight in the ensuren part of this empire. From north to south, it streethes three thousand werts, which makes eight hundred leagues, in breadth.

This country received the name of Muscovy from the river Mosco, which gave name likewise to the city of Moscow, once the metropolis of the whole empire. It hath likewise been called White Russia, on account of the snow with which it is eovered the greatest part of the year, but all y disligatified by the name of

fnow with which it is covered the greatest part of the year; but at present it is usually distinguished by the name of

Great Ruma.

Geographers usually divide this extensive empire into fix grand districts; namely, Livonia and Ingria; Muscovy, Proper, or Western Russia; Eastern Muscovy, or Russia; Russiand, and Nova Zembla; and the countries dissummered from Poland. These are again subdivided into a great number of provinces, which include feveral kingdoms, duchies, &c. which have been fubdued at different periods, and annexed to the Ruffish dominions.

It feems needless to remark, that as this empire consists of a great number of provinces, many of which are very entive, the foil and temperature of the air must of confequence be extremely various in different parts of it. In those which lie beyond the fixtieth degree of latitude, In those which he beyond the fixtiern degree of latitude, there are few places where corn will grow to maturity, and in the northern parts of the empire, which reach beyond the feventieth degree, no garden fruits are produced, except in the country about Archangel, where many buffes and firubs grow spontaneously, and yield several forts of berries; horsed cattle are also bred, and there are plenty of wild beafts and fowls; and in the neighbourhood of that city are feveral forts of fith.

of that city are feveral forts of fish.

Moß kinds of trees and garden-fruits, corn, honey, &cc. are produced in the middle provinces of the empire. Horned cartle are likewife very numerous here; the rivers are navigable, and full of the best forts of fish; and the woods abound with game.

The climate is hot in the southern provinces; and though there are many harren wastes in some parts, yet in others the land is covered with verdure and slowers. Tobacco, winte, and fish might be there produced, as the two first are at Aftracan and the Ukraine; they have game

in proportion to the extent and number of the woods and the country is wall-watered with rivers, which afford plenty of fafth.

plenty of fift.

In the northern parts of the empire, and also in the middle, the cold is very severe, and the days extremely short in winter, but the summers are warm and delightful, and the twilight is very juminous even in the shortest nights. At the winter-tellstice, when the day is at the shortest, the fun rises at Archangel at twenty-four minutes after, ted in the morning, and sets at thirty six siter one-Ar Petersburgh the sun rises at siteen minutes after nine, and fers at forty-siye minutes after two; but at Astronauthe sun rises at site story eight minutes after seven, and sets at twelve minutes after four. At the summer-foldies, when the day is at the greatest length, this order is eversed, and the sun rises at Astronauth set severed, and the sun rises at Astronauth set welve minutes after four, and set about forty minutes after seven; and it rises at

the day if at the greatest torget, this order is everied, and the fun rifes at Aftracan at twelve minutes after four, and, fets about forty minutes after four, and fets about forty minutes after four, and fets at twenty-four minutes after ten, at Archangel.

Eaftern countries are in general much colder in winter, and hotter in fummer, than the wellern that lie in the fame latitude, and this is particularly true with respect to Ruffis, for the river Nevs, at Petersburgh, is in some years covered with i.e. so early as the 24th of October, and in other years, about the 22d of November, at the latest; but it generally thaws about the 26th of April, old flyle, and is never known to exceed that time.

With respect to the seasons at Petersburgh, Mr. Hanway, has observed, that February generally brings with it a bright sun and clear sky; every object seems to glitter with gens, and the nerves become heaced with the cold. There is then no small amusement in rising in slodges upon the snow, to those, who from the length of the winter, have lost sight of the superior pleasure which marture yields when cloathed in her summer appered.

The snonth of March is frequently attended with the best in the best of the funder appered.

The month of March is frequently attended with showers, which, with the heat of the fun, penetrate the ice: this is generally three quarters of an inch thick on the Neva, and much thicker in some great rivers to the northeast. This renders it like a honey-comb; and it usually breaks up about the end of that month.

breaks up about the end of that month.

April is frequently very warm; funimer feems to pracede the fpring; for it is fometimes the first of June before any considerable verdure appears, and then the intense heat hrings it on so fast, that the eye can discover its progress from day to day. It feems to be one continued day till the middle of July, the sun not entirely disappearing above two hours in the twenty-four; but the extreme heat of the weather considerably selfens the, delight which this feason naturally affords: however, a week seldom passes without the air being refreshed by southerly and westerly winds, which often bring centle showers. The terly winds, which often bring gentle thowers. The city, once experienced a delightful autumn, to the end of September; but this rarely happens. August closes the feeine, fo that the furniner hardly continues above three months.

The month of September generally brings rain and frofts the feverity of both is increased in October, and the Neva, is always frozen in November. Then comes in the feafour for the eafy and fpeedy conveyance on the from, which brings fresh provisions to market a thousand English miles hy land, and the inhabitants of Petersburgh often eat the beef of Archangel.

In December and January the cold is fo very intense, that the poor, who are overtaken by liquor, or exposed to the air in open places, are frozen to death. But the birch

withbunding its precisions assent, the number of inhabitants' who pay the sall-nax is computed only at five millions are harded by befined; and the red, including the instance, and the provinces added to the compute of the inhabitants of the provinces added to the empire by conquest.

With suffect to the boundaries of the well-of the title Ruffiner empire, towards the east, they are the sid, to the Warcetenian mountains, and to the part of the Wolga, which feparate it from Siberia; on the fouth, it is bounded by the river Don, and a line drawn from the Nieper to the mouth of the Don, at he entrance into the fee of Aforb; and the pair is and extend from the rewnest-united degree to the flary-fifth degree of cast lorigitude, and from the forty-freenth texts fevently-feetond degree of north latitude.

The following any the principal sives: of Ruffin; a Dwins, formed by the conflux of the Succhara and the Juga; 4. Occa; c. Kaems; 6. Oby; 7. Jenefilda.

1. The river Wolga, is the most confiderable in all Ruffin; and one of the largest in the world, as it traveries the far greater part of Ruffin; and, after a long winding course of upwards of two thoedrad English miles, falls into the Caspian fea.—It beth iso caree at the lake of Usenow, as a small distance from the only of Russa Uradianteritis, near the frontleys of Litenania, about fity, flas degrees, fifteen minutes of north latitude, and begins to be nasigable, and to carry defice of a confiderable barden, fire miles below its pring. In its course, which is mostly from east to well, it receives near forty rivers, some of them very large, waters the walls of near double that number of townes, fertifies and all the lands on each fide, and fupplies them with prodigious quantities of fish, gashies, large three miles to the fire the first that is a first travelle, and to the first of a far for part of the section of the colouble that number of them with prodigious qua but also over soveral flat islands which then lie a considerable depth under water. Trees are often torn sway-by the roots from the banks of this river by the violence of the current; and the anchors of the veisels are frequently so entangled amongst them, that there is a necessity of cutting the sables, so that many anchors are supposed to lie at the 1-storn. The Wolga abounds with a fine sist called the sabout eight or ten seet in length.

2. The river Don, which is the Tanais of the ancients, is called Tuna or Dunns by the Tartars, and divides this country, in its most castern parts, from Afs. It has its fource in the province of Rezan, on the north east of the lake Iwano-Olfero, or St. John's Lake; and, in its courfe towards the east, comes fo near the Wolga above-mentioned, that in one place the distance between them is about a lundred and forty werts, or about eight English

The river Occa bath for figure to accomp that Ukrania, and rane its odorfe bowards the storth, seedies if feas of Vorochel, and after having received a good numb of other rivers, fails into the Weigs, lin the lower prime pality of the Nevogorod. On each fide of the fprings, the Occas and, fat a finall diffunct from it, arife those the Seas, on the west, which, falling these the Defauction with its inter the Bosychherics to the last have carried with its inter the Bosychherics to the last have them into the Black, that made to give the first that are the season of the se

that forest, and watering the city of Kalgorea, is whater the works and the set in the water that the works and the works and the works and rapid, and of a blackish hue, but very seven to the take. So The river Oby, or Vener, springs out of the lake Kithai, or Karifan, in the kingdown of Aking in Great Tartary, and thence passes into the Muscovite Tartary, forming several lakes and ithinds in its course; and several lakes and ithinds in its course; and the nearthern fee in Sautalgedia, stouch of Norma Zembla. Among the several rivers which it takes in lineway, such as Sallan, Kot, Vagi, Trangain, dat. in that of freis, which is wide and apple, and greatly increases the firms and softer of its, and, as their confluence, its the city of Sammerock, built just upon the poles of the two freezes.

The river functions from News Zombla.

The river function or Jernifela, and Jeniffla, which me led sport scale want the former; hath its rife like rise in Gener Tentry, and falls into the fame northern each, about one hundred leagues eaft of the mouth; the Oby, and properly helongs to Muscory in the theory in the county of the county of

We are now to describe the principal lakes in this part of the Russian empire, which are those of Ladoga and

Onega.

Lidoga is neckoned one of the largest biase in Europe. It is formed by four rivers, which continually nour in their streams, and shoes of other smaller lakes into it the two principal ones are the Vozen, of Corda the Fair, which shows from the lake of Onega, smaller lakes of how, which shows thither from the fouth. To prevent its overflow from so many streams, It hat the channel, by which it dicharges it self into the golf of Finland, and thence into the Baltic. It is computed to be above forty leagues long, and about there, sive in breadth, where wides, it extends itself in length from says to sixty one degrees sity minutes of latitude, and hath the province of Carelia on the north, and those of Ingria and Novugorod on the fouth,

fouth. The lets Car Peter I, not finding the fouth perr of it so navigable as he without, caused a usual to be due, by which he hash opered a communication with Peterburg, which cannot revches to the river Volahova i by which he hash opered a communication with Peterburg, which cannot revches to the river Volahova i by which means one may sow fail even from theme quite to Affracan, by the help of that and some other rivers which fall into the Wolga above-mestioned. As for the lake, it breeds prosligious quantities and variety of good sith, such as faisnon, sturgeon, and a peculiar kind asled ladog, of the bigness of a letring, but; of a finer tafle, from which the lake is supposed to have its name.

Onegals the neat in bugness, and less about fifty miles estimated in the late of Ladoga, and less about fifty miles estimated in his state of Ladoga on the west, the prevince of Vologde on the footh, but the Cargapoi, and territory of Carelia on the south, but the Cargapoi, and territory of Conega, on the south, but the Cargapoi, and territory of Conega, on the south, but the Cargapoi, and territory of Conega, on the south, but the Cargapoi, and territory of Conega, on the south, but the Cargapoi, and territory of Conega, on the south, but the Cargapoi, and territory of Conega, on the south, but the Cargapoi, and territory of Conega, on the south, but the Cargapoi, and territory of Conega, on the south, but the Cargapoi, and territory of Conega, on the south, but the Cargapoi, and territory of Conega, on the south, but the continuation of the south of the south of the south of the continuation of the south o

mines of this country: here is also isinglass and precious flouses, succeding fine copper, iron, and many other minestals.

Ruffia is most fertile near the frontiers of Poland, where the inhabitants are able to supply their neighbours with copys,. The northern parts are not only extremely cold, but marthy, and over-run with forests, chiefly inhabited by wild beafts. Besides domestic animals, there are in Kusia, hyamas or gluttons, while beeves, rein-deer, martens, white and black force, ermines, and fables, whose skins make the best furs in the world.

The foil of Russia is rather more various than the clinuse. The southern provinces produce wheat, barley, yes, eath, peas, herbs, with various kinds of fruits, and sill these grow so uncommonly fast, that corn is commonly reaped in two months after it begins to appear above the surface of the ground. This is attributed to the frow, which not only enriches and mellows the land, but cherishes and shelters the product of it, and makes it take deeper root in the ground.

In many parts the sowing-time must follow the harvest immediately; because the former, not lasting above three months, there can be no sowing after the frost is begun. But in more moderate clinues, they will not fow till April or May, and then their resping time comes on in August, and sometimes in July. They have no need of manure, the show supplying that in every respect.

Besides grain, and fruits of various forts, the country produces plenty of rhubarb, flax, hemp, good pasture for cattle, honey, wax, &c. The assonishing quantity of mussiness and the produced fine the boor, while at the faine time they are deemed delicacies at the tables of the rich and luxurious. At Moscow, about a thoussand load of mushrooms have been fold annually.

Till the time of Peter the Great, agriculture was but

rious. At Motorow, about a thousand loss of mulinfooms have been fold annually.

Till the time of Peter the Great, agriculture was but little understood in this country; but that monarch, brought his subjects, in some measure, to a better knowledge of it. The principal articles in a Russian farm are wax and honey, which sometimes produce to the peasant

a compressive, as he fells the war and force of the honeys and makes a demedic drink of the reft. This drink is a kind of methoglin, susremely firong, and very palanable. The Reftian method of forming beehives in as follows: the peniant cuts down a tree, faws the trunk late many parts, hollows the pieces, then fleps up the extremities, and borss fmails holes into the body for the admittance of the been; then the bechive is made, and the honey focured from all the attacks of the been, who is exceedingly fond of it, and, in order to make himself mafter of the tweet traffare, will often try a varsety of caperiments and fire-tagents.

treafure, will often try a variety of capatiments and tagens.

In this country, the rye ferves set only for bread, but a frong liquor is entrafted from it, which is preferred to brandy by the Reffient.

In the northern and western provinces, the wild basts are much the fame as those in Lapland, Norway, Sweden, for, the has sein-deer, fours, martene, harse, bean, ermines, fables, and squirrels. In the fouthern provinces are bred black cattle, cannels, famili horse, goats, sheep, dec. The whole empire abounds with poultry, wildfowl, game, birds of pray, dec. and the different parts of it are pleutifully supplied with various kinds of fish, hy means of the morthern ogan, Baltic, Gulf of Finland, White Sea, Black Sea, an. Cyprian Bes, and the innumerable rivers, fakes, rivalets, fee, produce immense quantities of falapon, trout, pike, sturgeon, dec.

SECT. II. ...

Containing a defeription of the first grand division of Great Russia, namely Livenia and Ingria.

Respa, namely Livenia and lagria.

THE province of Livonia, or Leisland, is bounded on the north by the gulf of Finland, on the fouth, by the duchy of Courland and Lithuania; on the fouth, by the gulf of Riga. It is admirably fituated for commerce, having the loss on the north and west, the great lake Popus on the cast, and the river Dwina on the fouth. Three other internal lakes, and many small rivers, likewise greatly contribute to the advantage of this province, by facilitating the inland navigation. From east to west, where broadest, it is about one hundred and fifty from north to fouth. Though extremely marshy, it is in general very beautiful, having many pasture grounds, and producing in great plenty corn, cattle, honey, dec.

About the twelsth century, the Livonians were involved in pagan superstitions, and were to a great degree frocious and favage in their manners. They were brought to embrace Christianity by their neighbours the Germans, who, in order to convince their new converts, were obliged to use the compulsive means of fire and sword.

Albert the cahon of Bremen, who built Riga, held Livonia an chief of the empire, he afterwards obtained permission to coin money, and to institute a new order of knighthood, called the sword-bearers. These knights, them is a chief of the empire, the afterwards obtained permission to coin money, and to institute a new order of knighthood, called the sword-bearers. These knights of the Teutonic order when, in conjuction, they maintained very long and bloody warz against the Poles, Russians, and other neighbouring powers. Albert of Brandenburgh, in the fixteenth century, became a Lutheran, which occasioned a separation between the Livonian order and that of Prussia. About 1535, not-withstanding the menaces and intrigues of the empero the coverness of the empero the covernes

withflanding the menaces and intrigues of the emperor Charles V. the principal part of the Livonians declared for proteflantifm.

Clarles V. the principal part of the Livonians declared for proteflantifm.

The Germana, Ruffians, Poles, and Swedes, have alternately ravaged this fine country. By the treaty of Oliva, in 1660, it was entirely ceded to the Swedes, who kept possession of it till the beginning of the prefent century, when, during the wars of Charles XII. the Ruffians subdued the whole duchy of Livonia, as well as Ing. is, both which were afterwards, by the treaty of Naclark confirmed to Ruffia.

Wills respect to the native peasants of Livonia, they are of strong constitutions, sit to undergo hardships, but even to this time retain a great part of their ferocious and syage disposition; they call themselves Lutherms, but are so extremely ignorant of religion in general, that they seem have a marice of that which they presend to profess.

We shall here relate some remarkable possibles in their marriage ceremonies, and other superstitious observances among them. When a country sellow is differvances among them. When a country sellow is differenced to marry a lass out of another village, he goes on heresback

horfeback to fetch lier, and makes her embrace him with with the right hand. He hath in his hand a tick cleft at the top, where he puts a piece of brais money, which he gives to him who opens the wholet through which he is to pais. Before him rides a man that plays upon the bappie, as also two of his friends, who, laving naked fwords in their hands, give two thokes therewith acrofs the door of the house where the marriage is to be confurnment, and then they then they have the of the feereds. sue agor or the nouse where the marriage is to be confurmated, and then they thrust the point of one of the fwords into a beam over the bridegroom's head; this is done to prevent charms, which, they fay, are common in that country. To the same end the bride featters little pieces of cloth or red ferge by the way, offscially where cross-ways meet, mear crosses, and upon the graves of little children dead withcroffes, and upon the graves of little children dead without baptifm, whom they bury in the highways. She hath
a vail over her face while the is at table, which is not
long; for, as foon almost as the guests are fested, the married couple rife and retire. About two hours after they
get up, and are brooght to fit down at the table. Having,
drank and danced till fuch time as they are able to stand
no longer, they lie down on the stoor, where, like so many
swine, they seen and together.

Their notions respecting religion are very extravagant:
however, they believe there is another life after this.
A Livonian woman, being present

build, but a needle and thread into the grave, giving this reason for it, that her husband boing to meet this reason for it, that her hulband being to meet in the other world with persons of good rank, she was ashamed he should be seen, with his cloaths rent. Nay, they pay so little regard to a stuture state, that in the oath shey take to decide any difference at law, instead of in-teresting the salvation of their souls therein, their present and temporal advantages are the principal objects of their

connideration.

These people are greatly addicted to forcery; and think it so necessary for the preservation of their cattle, that fathers, and mothers teach their children, so that there is fearce any peasant but is a forcerer. They all observe certain superstitious ceremonies, by which they think to clude the effects of it: on which account they never kill any beast, but they cast some part of it away; not do they were make a because which are the side of the lines. any beast, but they cast some part of it away; nor do they ever make a brewing but they spill some part of the liquor, that the forcery may fall upon that. They have also a custom of rebaptizing their children, if, during the first six weeks after their birth, they happen to be fick, or troubled with fits, when they think the cause to arise from the name given them at their birth not being proper for them; wherefore they give them another; but they use their utmost endeavours to conceal this practice, which is deemed both sinsful and criminal, and, if known, would be severely wantiched by the more light age. punished by the magistrate.

They are not less attached to the exact observance of

They are not less attached to the exact observance or their customs, than oblinate in their superfictions. There is a very pleafant story related of an old country sellow, who, being condemned, for some great crime, to lie along upon the ground to receive his punishment, and Madame de la Barré, pitying his almost decrepid age, having so far interceded for him, as that his corporal punishment, and nifiment flould be changed into a pecuniary study of about fifteen or fixteen pence, he thanked her for the kindness intended him; but faid, that, for his part, being kindness intended birn; but said, that, for his part, being an old man, he would not introduce any movelty, nor suf-fer the customs of the country to be altered, but was dy to receive the chaftifement which his predeceffors had not thought a hardhip to undergo; whereupon he put off his cloaths, laid himfelf upon the ground, and infered the punishment ordered to be inflicted upon him. We may here observe, that in Livonia, this is accounted

the people, being of a refractory nature, must be treated no punishment, but only a customary chastisement: for the people, being of a refractory nature, must be treated with that severity which in other places would be insupportable. They are not permitted to make any purchase; and to prevent their so doing, they have only so much ground to manage as will afford them a substitute. Yet they will venture to cut down wood in some places of the hey will venture to cut down wood in fome places of the they will venture to cut down wood in tome piace of the forests, and, having prepared the ground, fow wheat in it, which they hide in pits underground, to be secretly fold. If they are taken in this, or any other fault, they make them strip themselves naked down to the hips, and to inake them trip themieter makes down to the hop, while one of their comrades lathes them with a fwitch or holly wand, till the blood comes on all fides, especially if these words, ----leicke nack maha pexema, beat him till the skin falls

off from the fieth, are pronounced by the mafter.

The use of money is likewise prohibited to this class of people; for as foon as it is known they have any, the gentlemen and their officers, who are paid by the peasantry,

take it from them; but this cruelty of the maftera frequently take it from them, but this cruelty of the matters frequently overwhelms their poor people with defpair of which there onto years ago happened a fadexample: a peafant, prefied by his officer for what he neither had thor ought to pay, and being deprived of the means whereby he might maintain his family, strangled his wife and children. The officer coming the next day to the house, thinking to receive the money, struck his head against the man's feet that was hanging, and then parceived the miferable cataffrophe of which he was the occasion.

The province of Livonia is divided into two districts, namely, Litonia and Letten; the former of these, which is the most narthern part, is bounded, on the fouth, by Letten; on the seath, by Russia; on the work, by the gulf of Finland.

The chief cities and towns are, it. Revel, the capital of Estonia; it is stuared partly on a plain, and the other

of Riga; and, on the north, by the gulf of Finland.

The chief cities and towns are, t. Revel, the capital of Edonia; it is fitured partly on a plain, and the other part on the declivity of a 'mountain,' at 'the top of which there is a frong cattle. It is a hithorical and twenty-five miles from Stockholm, and flands on the gulf of Finland. Waldemar, the feoond king of Denmink, founded Revel, but fold it, together with Narva and Refemberg, to the grand mafter of the Teutonic order. Revel was one of the places originally admitted into the confederacy of the grand mafter of the Teutonic order. Revel was one of the places originally admitted into the confederacy of the Hanie-Towns, and was a compacial place of forms note till 1550, when the Ruffians removed the commerce of Revel to Narva, after having fubdued the latter. But in 1711, when the Ruffians conquered the former, they again turned its trade into the old channel, and fluce that period the place hath in forme degree increased in wealth and liaportance. The citizens fill preferve the privileges granted by their former patrons the grand mafters, the langs of Sweden, Acc. and also enjoy their own forms of government, though a Ruffian garrison fecure the place. The market place, however, is guarded by a band of their own. The civil government is democratic, confifting of elective magistrates, counfellors, Sc. who are obliged occasionally occonfest their confir ents; and their religion is Protestantifus, according to the Augsbourg confession of faith. The can'll peals they would be the want of room, proper provisions, &c., as many people had taken field the plague, which was probably owing to the want of room, proper provisions, &c., as many people had taken fielded the plague, which was probably owing to the want of room, proper provisions, &c., as many people had taken fielded to the other town in Narva, fituated on the river Narva, which divides Livonia from longia. It was officially built by Waldemar, II. King of Denmark; taken by

which divides Livonis from Ingria. It was originally built by Waldemar, H. king of Denmark; tiken by John Bafilowitz, can of Malcovy or Ruffia; retaken by the Swedes; and finally reduced by Peter the Great, in the year 1700. Previous to its reduction, when the Ruffians Ind ega to it with an army of eighty thousand men, under mmand of the duke of Cray, Charles XII. kin Sweden, advanced to its relief, at the head of only eight thousand men; attacked the Russians in their lines, gave them a total overthrow, flew twenty thouland men on the fpot, took the general, most of the officers, and a great number of private men prifoners, with a hundred and ninety pieces of cannon and mortars, a hundred and feventy one colours and flandards; the whole baggage of the army, &c. &c. But Peter afterwards most severely revenged the dishonour of his arms on that unforrevenged the dinonour of his arise on that uniquestunate day, when he afterwards took Nurva, and transported the wretched inhabitants to Aftiacin, the work remote part of his dominions. They yet they the battons where he gave the affault; and it is faid, that on his entering the place; and finding the Swedish governor in his robo de chambre, unsprehensive of such as event, he fruck him feveral times, reproaching him for his inatten-tion to his fovereign's interest, and for having been found in a drefs fo unworthy of a foldier, while the place was in fuch imminent danger. The Livonian dies is thus described by a late English

The Livonian diefa is thus deferibed by a late English traveller: "I had the pleafure, fays he, to dine yesterday in company with four ladies, who were habited in the Livonian drefs. Nothing could more aprly realize that barbarous fpleador which has been to frequently depicted but is now fo rarely to be feen, in any parts of Europe. It was expensive, and might have been worn by perfons of the first eminence, without degradation of their. Their heads were covered with a complete t pearls, which were not worth less than t ribles (four hundred and fifty pounds flesling, at four fhillings and fixpence the ruble); and round their mecks were feveral firings of the fame; a part of their necks was left exposed, but the lower part was concealed by

vést of red fille, which sat close to the breast, and was bordered with a very broad gold lace, which descended to the seet. Their arms had no other covering than the sleeves of their shifts of and should be shaded our, they threw over their heads and should revering than the sleeves of their shifts of and should rever speece of silk termining a highland plaid, and which answers to the silk locaks of our ladies.

On the other side of the river, and just opposite to Narva, is the fortress of Iwanogorod, upon a rock which it almost surrounds. At the soot of this rock there is a sittle town called Russian Narva, instablied only by Russians. Among other ridiculous superstitions, the people have a custom of observing the eve lost whistundsy as a settival secret to the memory of the dead. On this occation the women assembly on the graves and tomb-stoner, and cover them with painted eggs, sist dressed various way, cakes; custards, sec. The price them prays over, and perfume these with salticacasts; the clerk follows; and gathers up the offerings for the use of the church; and the women make the most distal lamentations during the whole obsermony.

Near two miles from the city; an impeteous catards rushes violently down a precipice with a most tremendous noise, and dashes so furiously against the rocks, that a mait or vapour continually ascends from its foam, which produces a beautiful rainbow when he morning fine obliquely thines upon it. The river Narva, which sows from the lake Penbus, and emptics wish in the river Medication, called Weisenburgh, in the midth of a morats, is fituated westenstein, which produces a beautiful rainbow when he the morning fine ortification, called Weisenburgh, in the river Weise, about twenty miles west of Narva; and thirty miles found for Weisenburgh, in the river Weise, about twenty miles west of Narva; and thirty miles found for Finland, is also receding apid, and on the banks of this interest called Nicslat or Newfort. There is another strong fortres called Nicslat or Newfort. There

spiles from Revel, so the fouth. It is a small city, but a place of good trade, a great quantity of corn, efpecially, being shipped hence for the Netherlands. It is divided into the old and new city, and was formerly one of the Hanfe-Towns. It is pretty well fortified, but owes its strength chiefly to its caftle; though it is built only of timber, as are all the houses and churches. The Polanders made this the of capital one of their palatinates, when it was under their juridishlon. It became subject to the Swedes in 1617, after it had been taken and retaken many aimes in the last century; and in 1710 if furrende at to the Russians. A university was removed hither from Deeps, in the year 1685, but it is not much frequented. The river Parnaw, on which this town is situated, has its fipping in a large forest near the little river Beca, and the foring in a large forest near the little river Beca, and the castle of Wessenstein: this river falls into the gulf of Riga at Parnaw, receiving, in its course, the rivers Fela and

Perukeis.

The large and antient city of Detpe, or, as the inhabitants call it Derpat, and the Ruffians Junogorod, is fituated on the river Eimbeck, between the lakes Peihus and Westsi, which have a communication together by that river. It, is fixty miles distant from Narva to the fouth, and feventy-five from Parnaw to the east. It was formerly the fee of a bishop, and was adorned with an university in 1632, by king Gustavus Adolphus, on account of its being a pleasant healthy place, abounding with provisions, and all necessaries: but the university, as we observed above, has been since removed to Parnaw. The buildings at Detpt are of stone and brick, but the town is not fo populous as it was formerly. It has a strong calle for its defence, seated on a hill; but it has, however been subject to many masters. The Teutonic knights took it from the Ruffians in 1580, the Poles seized it in 1582, afterwards the Swedes drove them out; but in 1603 they

regained and kept it till 162g, when the feweder to the squire and at length, im 170g, it furtendered to the Ruffians, who have ever fince kept possession of the 17. The town of Felin, with a castle belonging to it, stands on a small river, which rans from the lake Wertzy to Painaw, feventy miles from that city to the est, and at many from Dept to the west. Ringon is a fortativer-five miles distant from Felin to the fouth. Tarnest, anothen fort, formerly vary strong, but so demolished wheat the Poiscoki it, that though the Swedes were at great expente in repairing it while in their possession, they could five retorie to its former strength; but hot has it been much improved by the Russians, in whose possession it has district its bounded on the east, by Rossia; this district is bounded on the east, by Rossia; on the work, by the river Dwina; and, on the north, by Estonia.

The principal city is Riga, which is the capital, not only of Letten, but of all Livonia; but a judicious travellet, in speaking of it, says, "my stay in the city has teen realise regulated by capitae; than strictly proportioned to the number of objects it prefents, vither respecting elegant amosment or instruction. It would be difficult to find a spot more destitute of any natural beauties and advantages; to induce an adventure to fix in, than in that where Riga stands. Deep harren sands encompass it on every side 1 and a traveller, who regulated his ideas by that part of it he saw here, would secute those authors of gross imposition who have called Livonia the granary of the north. Commerce evidently gave birth to the place; and by the genius of commerce as is fail protected and ensisted.

The lever, Dwina is an inextiantable source of plenty, and makes ample amonds for every other deficiency. It

sched.

The every Dwins is an inexhaustable fource of plenty, and makes ample amends for every other deficiency. It runs a vaft length into the interior parts of Poland, and conveys down all the articles of trade exported from hence. Timber is one of the chief: and many of the largest trees do not arrive, in Riga, within two years, being cut near Bender, on the banks of the Niefter, from whence they are drawn over the fnows to the Dwina, in winter; and the enfuing feafon are brought down to the harbour for filipolane.

the enfuing featon are provening to the continuence of the city of Riga flands in a large plain on the western banks of the river Dwina, fix miles above the mouth of it, which makes a commodious harbour from the gulph of the Baltie, called from thence the gulph of Riga, though by some the gulph of Livonia. The city is one hundred and twenty miles distant from Revel to the fouth-west and twenty miles distant from Revel to the fouth-west it is feated in the firty-fixth degree fifty-three minutes north latitude, and in the twenty-fourth degree cast longitude from London; on the north-east side of the Dwina; and though it is not of any great extent, it is populous, well from London; on the north-east fide of the Dwins; and though it is not of any great extent, it is populous; well fortified, and famed for its trade and oppulence. The heates are handfome, and for the most part built of stone. They are feldom above two stories high, and have steep roofs, for the better carrying off the water, which is very penetrating on the melting of the show, wherein they have the advantage of the Kusilians, who have still greater occasion to provide against the like inconveniencies. The cellars are used as warchouses for flar, and other goods, and the entrance of fish abartunet in many houses is the cellars are used as warchouses for flar, and other goods; and the entrance or first aparunent in many houses is the coach house, through which you must pass to the parlour and dining-room. The fiveets are narrow. The Lutheran churches, is the eitheran St. James's, St. Mary Magdalene's, St. Peter's, and St. John's, are handsone fixedures. The feminaries, called the imperial Lyceans, and the city Gymnasium, are in a flourishing condition; and the city Gymnasium, are in, a flourishing. There are also a strong citidel, and two arienals well flored with arms, one at the charge of the crown, and the other of the circ. and the matters have very connectable islaters. Here are also aftrong citidel, and two arfenis well flored with arms, one at the charge of the crown, and the other of the city. The fortifications both on the land and water side, have been improved under its present masters, and those toward the sea are enlarged by additional works. The city, by means of its excellent harbour has, during the summar season, a good trade with England and Holland, and in winter a trade with the Rossan provinces by sledges, which renders it extremely populous, and very considerable. There are in the town almost as many shops as houses; and provisions are very plentiful and cheap here. About one thousand vessels arrive, yearly at Riga, laders with corn, hemp, flax, pitch, ter, plants, furs, skins of all forts, Russian leather, ashes to make soas and gais, &c. which are exchanged in trade for the commodities of the more southern climates.

This cify is defended by strong walls, bulwarks, and a very large trench on the land-side, and a strong castle on the

the river, where the governor-general of Livonia refides; it is called fort Robber, or Robrums. The harbour is fecurely guarded by the Dunamunde fors, fituated near the mouth of the Dwina, where the flips which fail out of the Baltic into the river pay customs. This place was taken by the Swedes in 1609 and 1618; and by the Saxassin 1700, who gave it the name of Augustusburg. In 1701 it furrendered a third time to the Swedes, and was taken by the Ruffians in 1710, who threw eight thou-fand bombs into it, which reduced it almost to a heap of

rubbiff.

The city of Riga was built in the year 1200, and foon after inclofed with a wall. It has fuffered much by fires and fieges. Charles IX. king of Sweden, befinged it unfuccefifully in 1605, and again in 1600, but his fon and fucceffor, Guftavus Adolphus, was more fortunate, and took it in 1620. He gave the jefuits and all the Romani catholics leave to retire with all their effects. In 1656, while this prince was making war in Poland, the case of

tholics leave to retire with all their effects. In 1656, while this prince was making war in Poland, the ezir of Muscovy entered Livonis, and stracked Riga; but after a feege of seven months, he was obliged to retire. Its privileges are very confiderable, which were confirmed by the empress Anne: the supreme court of judicature and the bigh confistory are held here.

The inhabitants of Riga are a frank kind of people, and very polite to strangers; they live by their trade, and have by their policy kept up hitherto their share of liberty. Their city is governed by sour magistrates, and they have also a great number of counsellers, and a syndic. Their magistrates have a falary annexed to their effice, and they are not permitted to trade during their magistracy, which, though elective, may continue a long as they live, provided they please their council. They have great power in the though elective, may continue as long as they live, provided they pleafe their council. They have great power in the city; but if any think they have not obtained justice, they appeal to St. Petersburg, and frequently get the fentence of the magnifrates reversed. The women are very pretty, rather inclinable to be fat, but have fine agreeable features; the unmarried women are kept in very good order; but it is faid, that after marriage, they do not pay a great regard to chastity, againft which they offend not by ftealth, but pretty openly. The ladies of quality are very vain. regard to chattity, against which they offend not by stealth, but pretry openly. The ladies of quality are very vain, but at the same time polite to those who pay them great respect. Merchants wives, and other idle women, are to be seen at the doors of their house almost through the whole day, for no other reason than to see the gentlemen, at by, and receive their compliments. To such a length is this sholish custom come, that the men scarcely can be covered one moment; and therefore walk with their lasts under their arms, like 6 many neith mairres. Such is she under their arms, like so many petit-maitres. Such is the account given of the people of this city by Dr. Cook, who was many years a physician to the empress of Russia.

The town of Rokerhauren, or Rokenbuys, formerly

The town of Rokerhauren, or Rokenhoys, formerly Rood on the river Dwing, ninety miles above Riga, to the safe. It was strong by its situation on a hill, rather than by its fortifications, but was defended by a good citadel. It had been the residence of the archbishop of Riga. The Russians, in 1701, blew up this town, after Riga had been unsuccessfully besieged by them.

The town of Nienhaus, or Nyenhausen, on the borders of Museovy, near the river Peddes, is forty miles although the property to the south and one bundred and

diffant from Dept to the fouth, and one hundred and eighty from Riga to the east. Marienburgh is twenty-five miles from Nienhaus, to the fouth-west. Warbeck stands at the mouth of the river Eimbeck, near the lake Peigus. These three last are strongly fortified, Sewold. Peinus. These three last are strongly fortified, Sewold, or Segenwold is situated forty-five miles from Riga towards the east, on the south bank of the river Treiden; and over against it, on the other side of the river, lies Treiden, from which it takes its name. The town of Wilmer stands eighty miles from Riga, to the north east, and on the bank of the same river.

The province of Ingria, or Ingermanland, which comprises the second part of the grand division of Russia, comprites the second part of the grane division. Runn, is bounded, on the fouth, by the river Lugs, on the north, by the gulph of Finland, lake Ladoga, and the river Nieva; and, on the east, by an imaginary lake fupposed to be drawn between the town of Lubo, to the river Lugo. It is one hundred and thirty miles long, feventy in breadth, and abounds in cattle. In the winter here are a great number of elks, which in the fummer fwim in the river Nieva, and make incursions into Caseila. The exer. Peter the Great, being defirous of opening a communication between Archangel and the Baltic, by means of the gulph of Finland, in order to improve the commerce of his dominions, determined to make himfelf mafter of Ingria, which he accordingly did in the beginning of this century.

Then to make it an European maritime power, he determined on one of the most arduous undertakings that ever was entered upon by human resolution, via, building the city of Petersburgh, which he designed to make not only the capital of Ingria, but of the whole Russian empire, the sentre of trade, and the principal seat of the imperial refidence.

perial refidence.

The city of Petersburgh is fituated between Ingria and Finland, in a fenny Island, surrounded by the river Nieva, in fixty degrees north latitude, and thirty-one degrees thirty-four minutes east longitude, being distant from Revel, one hundred and eighty miles; from Stockholm, three hundred and eighty-feven; from Moscow, three hundred and thirty; from Warfaw, sive hundred and country from Warfaw, five hundred and thirty; feventy; from Vienna; eight hundred and forty; and from London, one thousand one hundred and ten. The nd on which this fine city has been fo wonderfolly raifed, was nothing but a heap of mud in the fhort fum-mer of these climster, and a frozen pool in winter, nor to be approached by land, but by passing over wild forests and deep meraster, and had been till then the habitation of bears and wolves, till it was in 1703, inhabited by above three hundred thousand Russian, Tartar, Cosfacts, see peasants, whom the exar called together from all corners of his vaft empire, fome near one thouland two hundred miles; and these made a beginning of this work;

hundred miles; and these made a beginning of this work.

To accomplish his defign, this enterprizing prince was
obliged to break through forests; open ways, dry up moors,
and raise banks; before he could lay the foundation. The
first, the workmen had neither sufficient provisions, or even pick-axes, spaces, wheel-barrows, planks, &c. or buts to shelter in; and yet the work went on so expeditionally, that in five months the fosters was raifed, though earth thereabouts was so forere, that the greatest part of the labourers carried it in the skirts of their cloaths, or in beginned of old rags and mats, barrows being then un-known to them. It is computed, that at leaft one hundred thousand perished at the place; for the country had been desolated by war, and supplies by Ladoga lake were often retarded by contrary winds.

The star himself drew the whole chief plan. While

while the fortest was going on, the city began gradually to be built. He obliged many nobility, merchants, and tradefmen, to go and live there, and trade in such commodities as they were ordered. Provisions being searce, and conveniencies wanting, the place at first was far from being agreeable to perfons of distinction, who had in Moscow large builtings and start in the manual start has been such as the search with the performance of the search with the sea large buildings, and feats in the country with fifth-ponds, gardens, &c. However, he little regarded the complaints of those who only confidered their own case. The Boyof those who only considered their own case. The Boyara (nobility) brought great retinues with them, and merchants and shopkeepers soon found their account in secting here. Many Swedes, Finlanders, Livoniant, from
towns nearly depopulated by the wars, repaired hither.
Artificers, mechanics, seamen, were invited slio, to encourage shipping; who, having worked out the time agreed
on for the cast, were employed by the noblemen; and
some built for themselves and fettled, each man being allowed to pitch on the spot he liked best. In one year,
thirty thousand houses were erested, and, in two or three
more, double the number, which doubtless are very much
increased since. Some, indeed, but chiefly in the shabodss
or suburbs, are mean, and may be taken to pleces in two

or fuburbs, are mean, and may be taken to pieces in two or three hours, and fet up elfe where.

To build this town, the case caused that of Ninschans, a strong fort on the Nieva, not far from Noteburg, to be demolished for the materials, and the inhabitants removed hither t and as he intended to transfer the trade of Archaelecter. angel to Peterburgh, in 1713; he made one thouland families come from Moscow, and offered great advantages to all foreigners that should fettle there; and ordered that all goods, usually fent to Archangel, to be foldy feet to strangers, should be fent hither, and the duties to be in every respect the same; but the commerce, &c. were not entirely removed till some years after. In 1714 it was ordered that all suture houses should be built of brick, and

The citadel is a long and irregular hexagonal, with fix baftions parallel to each other, except the two middlemoft, one of which opposite to Carelia, has two orillons or blinds; that over-sgainst the river, none; each of the four others, one. They were all at first but earth and turf; but in 1710, the czar refolved to have them all lined with firong ; those on Carelia fide were finished in his life-time, and the work has been carried on and completed by his fuccessors. The wall is thirty feet high to the parapet, and the faces are all lined with large iron and brafe guns. On he des ings that nake not the im-

with fix llemoft blinds others, frong e-time, by his et, and o. On the flasks, which are pretty fliort, are two rows of cafemates, one above another, arched over, and covered with beams and turf, bomb-proof. The curtains on the right fide of this citadel's gates has one of the finest royal dispensaries in Europe, both for the great quantity of drugs and medicines, and the large number of beautiful porcelain vessels from China and Japan, contained therein. This citadel has two gates, one adorned with statues, particularly of St. Peter, with his two emblethatic keys, and on its inside the black eagle of Russa, with the globe and the sceptre in its two talons; and below the figure, the Russain tutelar patron, St. Nicholas. Before that gate is a ravelln; from whence is a bridge, with two drawbridges over an arm of the river. Gallies and small vessels are sheltered from bad weather in this place.

It being the design of Peter the Great to introduce as much as possible politencia, and refinement amongst his subjects, he therefore, in 1719, caused assemblies to be opened at Petersburg; which he put under several excellent regolations, being seven in number, and which were printed in the Russian tongue. In these assembles, there is descens in one room; in another playing at eards, draughts, or chefs, in which last game the meanest Russians excel; in a third room, there are commonly people fronking and conversing together; and in the fourth, are

is dancing in one room i in another playing at eards, draughts, or chefe, in which laft game the meaneft Rufians excel; in a third room, there are commonly people fmoking and conversing together; and in the fourth, are ladies and gentlemen diverting themselves with questions and commands, crost-purpotes, and such like innocent amusements, that promote mirth aid good humour. Although none of the company are obliged to drink more wine or brandy than they sik for, except on the transgressing the established rules of the assembly, which happens very often; yet there are many Russians who embrace that opportunity of regaling themselves at other men's cost, and consider assemblies as one of the most laudable of the late exar's innovations. Every great man of the court keeps, in his turn, an assembly once in the winter at least; and the master of the police has notice fant to him, if the exar pitches upon a particular person that purpose.

Peter the Great also established an academy here, which has in it a great number of prosessors in most sciences, and the belies lettres, who have liberal slaries. The building is a superb pile, containing two stories, with a beautiful cupols in the middle, and an observatory. Here is a good library, and all manner of natural and artificial curiosties. Dr. Cook says concerning it, "In one of the galleries, in a case, is the skin of a Frenchman tanned and stuffed: this has been the slined man I ever saw. In another case, is his skeleton, and a pair of breeches made of his wife's skin, also dressed, the leather was like bussis. On the bottom, or avenent, stands the skin of an English chessus tories, who was put to death for having murdered her child unlawfully begotten; and this is the only murdered her child unlawfully begotten; and this is the only murdered her child unlawfully begotten; and this is the only murdered her child unlawfully begotten; and this is the only murdered her child unlawfully begotten; and this is the only murdered her child the case of the unfortunate Miss Hami Swedish lady, who was put to death for having murdered ber child unlawfully begotten; and this is the only mur-der of that kind I ever heard of in Russia. It is said, Peder of that kind I ever heard of in Ruffia. It is faid, Peter went and faw her executed; he wept much; bot could not prevail upon himfelf to pardon her, for fear, they tell us, that God would charge him with the innocent blood the bad sted. He caused her head to be capped and injected. The forchead is almost complete. The face is the beautifollest my eyes ever beheld. The dura mater and brain are all preserved in their natural situation. This is kept in spirits in a large crystal vessel. Besides the above, here are deposited great quantities of earths, fossils, stones, ores, natural metals, minerals, shells, mosses, corats, sec.

In one room is a figure of Peter the Great in wax-work, as large as the life; he fits in an elbow chair roofs-legged, dreffed in a blue fuit of cloaths, and has a hanger by his fide. He has thort black hair, his head covered, and is furrounded by mathematical, philosophical and mechanical inframents.

nical infiruments.

The plan of this academy was drawn up by Peter the Great himself, and confish of eleven articles; specifying the number of members, etc. the sciences to be taught; directions to the members, relating to their studies; their times of meeting; public lectures once a day, and system of the sciences professed; filling up vacancies, &c.

Besides the above, here is also an academy for the improvement of arts, furnished with several Greek and Roman models, &c. But this is fill in its infancy, and Russia bath as yet produced a great genius in this way to creater it famous.

On the fouth fide of the river, epposite to the academy, is the admiralty, which is a noble square building. It is No. 46

fortified, hath three entrances by means of drawbridges, and contains a great variety of offices, magazines, &c. Many large men of war, lloops, &c. are built here. On the top of a tower belonging to the admiralty is a high pire covered with copper double gilt, and a hip made of the fame metal, and also double gilt, is placed on the

fummit.

To the eaftward of the admiralty flands the caftle, a royal foundery, in which are cast fome of the best canon, mortars, bombs, &cc, in the universe. It is a noble building, and on the top of it is the figure of a burning bomb, double gilt.

An academy of the marine was also established at Petersburg by the late czar, to which he obliged every confiderable samily in Russia to send one or more of their sons or kinsmen above ten and under eighteen years of age, where they were instructed in navigation: they were here kept under a strict discipline: taught the languages, also to ride and sence, and other exercises proper for genetiemen.

There is a wharf at the welt end of Peteriburg for building small vessels; and machines called camels, which are used to carry great ships over the bar for Cron-stadt. And ou the well end of the westernmost sland be-longing to St. Petersburg, there is an excellent well forti-fied haven, where near three hundred Russian gallies may release the case fearing the state of the state of the state.

indiging to St. Peteriburg, there is an excellent well-fortised haven, where near three hundred Ruffian gallies may ride with great fecurity.

On the west end of the above-mentioned siland is the custom-house, and a sine exchange (though only a wooden sabric) well frequented by inerchants. It is an extensive and uniform building, with convenient warehouses for the preservation and stowing of goods. Not far from the castle is a noble square magazine built of brick, for preserving merchandize. It has only one gate; which is very large, and is guarded constantly by one hundred soldiers.

On the southernmost part of the city slands the grand market place, in which are many warehouses to deposit all kinds of commodities, domestic and foreigh, for sale. It is a large square, with sour entries, and a range of stops on each side, both within and without, with covered galleries to secure from the rain those who frequent it. A learned traveller observes, that a stranger need not, as in other place; but through this for what he wants to buy: a pleasant walk in these galleries will give him an opportunity of stellag at the lante time all lorts of commodilies in the world, as well as many of the best people in Peterse burg, have solded that the state time all lorts of commodilies in the world, as well as many of the best people in Peterse

burg.
They have established here both woollen and linen ma They have established here both woollen and linen manufactures, of which the latter is brought to great perfection, as a sevident from the quantities lately imported from thence. Here is also a workhouse, where an old Dutch woman has employed eighty girls at the spinning wheel; and several regulations are made for improving the plantations of hemip and flax. Paper-mills and powder-mills have also been crested, with laboratories for gunnery and fire-works; and other places for preparing satters and brimstone. They have set up here rope-yards, like those in England and Holland, for the making of cables and tackling for the navy. The great forge at Petersung surnishes anchors, and supplies all necessary forts of iron-work for building ships and house: and they burn bricks, and use them in their buildings, instead of wood. A printing-house is also established, and newspapers are now as regularly printed as in other countries papers are now as regularly printed as in other countries of Europe: feveral useful books have been translated out of the High-Dutch, and printed, the government encouraging the subjects to enquire into the state of the world abroad, instead of keeping them in ignorance, according to their printer manner. cording to their antient maxims.

cording to their antient magnins.

There are a great number of palaces and fine buildings in Petersburg; of which the ntoft remarkable are, a small bouse, which is the most antient and respected, as being erected by Peter the Great. It is built of wood, and confist only of a little kitchen and a small bed chamber, not bigger than a common bed-chamber, and an antechamber bigger than a common bed-chamber, and an antechamber for bufinefs. A covered gallety goes round, where that monarch used to walk when it rained. At the end of this ministure palace is placed the first boat ever built at Peterfourg: the house, gallety, boat, &c. are all at present, their treed with a cover of timber, to preserve them from the injuries of the weather. This little pulace stands near the citadel, on the north side of the river Nieva; and on the fouth side of the fame river there is another wooden palace, which was likewise crecked by Peter the Great: it is large, contains many handsome rooms, rich apartments, &c. and adjoining to it are spacious gardetts, pavillons, pleasure houses, shell-work, water works, fine slatues, a private

private play-house, and a large lake well stored with sista. Before this palace there is a small ship mounting fix cannon, which was said to have been built, and afterwards presented to Peter the First, by a Russian peasant.

About half a mile surther down, on the south side of the Nieva, is the winter-palace which is a superb square stone building, the inside excelling the outside, though with respect to its external appearance it is deemed one of the most magnificent in Europe. The surrivure is made of the noblest materials, and most excellent workmanship. The royal samily, with the proper retinue, attendants, &c. are all lodged here; as are likewise five hundred of the military, who regularly mount guard, and are relieved military, who regularly mount guard, and are relieved every day. And upon a canal, at fome little diffance from the Nieva, there is another elegant wooden palace, built upon piles, and two others in an inferior style

built upon piles, and two others in an inferior flyle.

A noble feminary for the education of females only, and founded by the late empress Elizabeth, stands of a fittle distance from the town. The whole contains about eight hundred young ladies. The building is capacious and grand; and here children of distinction are kept feparate from those of an inferior rank.

There are several admirable buildings on the great quay, or rather angle parade, which runs above a mile in length by the water side; and a bridge of pontons is built over the narrowest part of the water. Canals are cut from this excellent river to all parts of the city, the whole of which is laid out with great regularity; there is not any thing in it that looks old, though many things appear imperfect and unfinished. The buildings which are sinished are landiome, and formed out a larger scale than is usually feen in other places.

handsome, and formed out a large.

A gentleman who was lately at Petersburg has favoured us with the following account of it: "The streets, fays he, are mostly paved; but they have a custom here of laying, in many places, a flooring of timber on the ground. This, I am told, was yet more common formerly in Moscow, where, in the frequent fires they used to have, that street itself caught the stames, and the consignation became terrible. The public buildings of different kinds the irrect itleir caught the fames, and the confagration became terrible. The public buildings of different kinds are fo prodigiously numerous in this city, that I am inclined to believe they conflitted a fifth or fixth part of the whole capital. Some of them are flone, but the larger part are only brick or wood plaistered." The fame person observes, "Near the Nieva is a small palace, built by the present empress, and called, I know not why, the Hermiters for the present control of the present empress. tage; for it no more refembles our idea of a hermitage, than it does that of a temple; but when her majefly refides in this part of the building, the is in retreat, and there is no drawing-room or court. I was admitted a few days ago to fee thefe apartments, which are very elegant, and furnished with great taste. There are two galleries of paintings, which have been lately purchased, at an immense expense, in Italy. The crown, which I saw in the palace idels, is perhaps the richest in Europe. It is shaped like a bonnet, and totally covered with diamonds. In the sceptre is the celebrated one purchased by prince Orloff for five hundred thousand rubles (a hundred and twelve thoufand five hundred pounds) and prefented by him to his fovereign miftrefs only a few years ago. It far exceeds fovereign mistress only a few years ago. It far exceeds Pitt's diamond in size, and is not inferior in water. Lapidaries declare it to be the most beautiful and rare ever brought from Golconda.

"One of the noblest monuments of the gratitude and veneration universally paid to Peter I, is an equestrian statue, which her present majesty ordered to erected, and had been some years under the hands of Monsseur Falconer, but which is now completely executed. In this production, the artist has united the greatest simplicity with the truest sublimity of conception. No other statue, whether autient or modern, gave him the design, which is singular in its kind, and admirably adapted to express the character of the man, and of the people over whom he reigned. Instead of a pedestal adorned with inferiptions, or surrounded by slaves, he appeared mounted on a rock or stone of a prodigious size; up the ascent of which the horse labours, and appears nearly to have reached its summit. This attitude has given him room to exert great anaconical beauty and skill in the muscles of the horse is him the size of the horse is him the size of the stone is similar and lams, on which the whole of his body is necessarily sustained. The exar's figure is full of fire and spirit; he six on a bear-skin, and is clad in a simple habit, not characteristic of any particular country, One of the noblest monuments of the gratitude fimple habit, not characterific of any particular country, but fuch as may be worn without violation of propriety by an inhabitant of any country. The following circuastratial account of the opening of this magnificent flatue

has been lately transmitted to us from Petersburg, dated August 19, 1782.

"On Sunday last the celebrated brass equestrian statue of the Emperor Peter the First was opened to public view. At about five o'clock in the afternoon her Imperial Machty, after having dined at the Hermitage, came in her barge, attended by several of the first nobility, and landed on the New Quay; from whence, on a platform covered with red baize, she proceeded te tile senate-bouse; where, from a balcony handsomely sitted up for her Majesty's reception, she had a full view of the statue, the royal yachter on the river, of which there were several, all dersied is the various colours of diherent nations, and of the prodigious concours of the people assembled on the occasion. On her arrival her Majesty sound the statue inclosed with a series, on which were painted recks, uncultivated spaces, and other emblems of the rude state in which the emperor sound his country. Her Majesty had not been long on the balcony, when, on a signal given by a rocket, the screen, which concealed the statue, on a studen, and as it were by magic, sell, and discovered one of the sucs pieces of workmanship, I believe, that was ever known to any age or country. The sudden appearance of the stately figure, blg with majestic sire, galloging up a precipice on a furious steed, most exquisitely similated, in all the action of conmagic, ieil, and discoverte on various and age or country. The fudden appearance of the stately figure, blg with majestic fire, galloping up a precipice on a furious steed, most exquisitely sinished, in all the action of contending eagerness, together with the firing of cannon from the castle, admiralty, and yachts, and a running fire of about ten thousand foldiers, produced an effect on the mind not easily described. After the firing ceased, and the Empress had contemplated the state for some time with the greatest feeming satisfaction, all the regiments of guards, the regiment of artillery, and three other regiments, which were drawn up on the occasion, marched round it, sowering their colours as they passed by the balcony where the Empress was placed. After this part of the ceremony was ended, her majesty was rowed back to the Hermitage in the same manner she came. In the evening the city was illuminated, and every face manisfied joy, at the happy remembrance of the father of their country. In the winter season, the Russians contrive to make the warmth of their houses suighbe to the severay of the claimate. They give a proper degree of heat to the different than the state of these contributes of the claimate.

mate. They give a proper degree of heat to the different rooms, by means of an oven continued with feveral flues, and their ovens confume a finaller quantity of wood than might at first be imagined: a fingle small faggot only is put in, and suffered to burn till the black thick smoke is evaporated. The chimney is then that, by which the heat is retained, and the place kept warm for the fpace of twenty-four hours; and this fire ferves not only to warm. the rooms, but to dreft the food. The windows, in the houles of the poorer fort of people, are very fmall, that as little cold as possible may be admitted; but in the houses of the wealthier fort, they are large; and in order to guard against the inclemencies of the weather, they have double glafs frames, which are caulked up in the winter. All ranks of people are very expert and nice in regulating the proper heat in their houses by means of a thermometer, when they increase or diminish the heat to a great degree

of exactness, by opening and shutting the sues.

They have here a set of Italian singers; besides which, there are French, German, and Russian players, who perthere are French, German, and Ruffian players, who perform before the court in their respective languages. No person pays either to the play or concert, but mone are allowed to enter except such as have tickets by authority. The play-house doors are guarded: and if any one should get in without a proper right, they would be severely punished. Some sew years since, an English company of comedians went over to St. Petersburg, where they

met with great countenance and encouragement.
The beautiful palace of Petershoff is situated about twenty miles west from Petersburg: it is built on an twenty miles weit from receiping: it is built on an eminence, in a large garden, commanding a fine view, and furrounded by many out-houses, offices, e.g., for fervants and attendants. It faces the fouth, and in the front there is a beautiful canal of clear, transparent water, from which three fountsins are supplied, and confunding play. When the empressis here, the guards are encamped play. When the emprefs is here, the guards are encamped in a part of the garden, where their tents make a very agreeable appearance. In speaking of one of these jet deaus, or fountains, doctor Cook says, "out of the water, much on my agreeable surprise, arose a dog and three ducks, made of copper or iron, and, in appearance, alive. The ducks, sutter through the water quecking; the dog follows after them barking." There is, in a subternancous place, a charming chime of bells, which play by water. The grotto, which is covered before by a cascade, has two entries. Y.

entries, one on each fide. The entries are guarded by flatues, which, when you are its, prevent any from getting out till the keeper, by turning a handle, puts a flop to them. These flatues emit so much water, by vomiting and shooting out of slone pitols and guns, that the keeper said, it would overwhelm any man.

Befides the curiofities before-mentioned, there is a beautiful callery full of the first china in the world.

beautiful gallery full of the finest china in the world; at one end of which is a small, but commodious room, with a bed in it, whither the empress fometimes retirea to repose hersels. The apartments are all splendid and nobly surnished, and among the paintings there are five matchless portraits of the severeigns of hussia, rangely, a Peter the Great. 2. The Livonian Killager, whose virtues raised her from a cottage to arritagerial diadem, and to share the bed of Peter the Great. 3. The empress Anna. The empress Elizabeth; and, 5. The sovereign now on the throne. beautiful gallery full of the finest china in the world; at

on the throne.

A few years any there happened a most dreadful hurricane and inundation at Petersburg, which did incredible damage, and by which the lives and property of many persons were destroyed. The ducles of Kingston, who was there at the time, was a great sufferer by it; her yacht not only lost its rudder, but all its masts and fails; the organ, which cost her grace one thousand five hundred pounds, was entirely broke to pieces; and the elegant coach, which lay in the hold, totally destroyed; the loss was computed at upwards of three thousand pounds. The bridge of boats thrown acrofs the river Niew was entirely destroyed; fo that the inhabitants have been obliged to bridge of boats thrown serofs the river Nieva was entirely destrayed; fo that the inhabitants have been obliged to passethar rapid river, which is about half a mile broad and very deep; in fingle boats, which was praelifed with great danger before Peter the Great would confent to the formation of the grand bridge of pontons. An account of this calamitous event was inferted in the London Gazette, October 18th, 1777, from a narrative dated at Petersburg, in the fame year; and is as follows: "On Sunday laft (September 1777,) an inundation happened here, more extensively destructive than has ever been remembered in these parts. A violent hurricano of wind at west fouththese parts. A violent hurricane of wind at west south-west, which began about two o'clock in the morning, raised the water, in the short time of sour hours, to the height of fourteen feet above the ordinary level of the Nieva, by which the whole town, and a great extent of the flat country in the neighbourhood, was rapidly over-flowed. The water remained about half an hour at its extreme height; and the wind getting a little to the north-ward between fix and feven o'clock it returned in a very short time to its usual bounds. It is impossible to estimate, with any degree of exactness, the loss which the state and individuals have suffered. The number of persons drowned must amount to several hundreds. In the best parts of the town many houses were unroofed, and the loss of liquors and other provisions in the cellars and lower apartments is very great. In the shops, which are all in the same quarter of the town, goods were destroyed to a very considerable amount. In the gardens of the summer-palace, great numbers of the finest trees are broken er torn up by the roots. The lower skirts of the town, where the houses are mostly of wood, and inhabited by the poorer fort of people, presented a scene of defolation which can be more easily imagined than described. Many perfons were drowned in their beds, and others, who lought for safety from the waters on the roofs of their houses. for fafety from the waters on the roofs of their hou were carried from thence by the violence of the wind; and those who escaped with life were lest destitute of habitations and effects.

"Great damage is done at the quay of the exchange, and the lower magazines and warehoules. Numbers of and the lower magazines and warehoules. Numbers of barks, laden with iron, hemp, grain, wood, &c. to a very great amount, were flaved, funk, or driven in pieces in the firects or fields. Several large veffels, lying between this place and Cronftadt, were driven alhore into the woods and gardens. Many of the country houfes in the neighbourhood are deftroyed. The village of Catherinehoff, and fome others on the fame coaft, were intirely fwept away, with all the cattle; and many lives were loft there, as well as on the fide of the Galley Haven, where the ground is very low. The great bridge of boats over the Nieva was carried away, and most of the bridges in the town, except those on the new stone quay, no part of which has suffered any material damage, were torn up. We have the satisfaction, however, to hear, that the works or shipping at Cronstadt, have received little or no damage. It is appears from accurate observations, that the wares were a foot and a half higher than in the great inundation

were a foot and a half higher than in the great inundation which happened here in the year 2752. The plays at the

· I Marty Mat

It gives us some interaction to add, after the above melancholy account, that the empres, with a degree of humanity, that will ever do honour to her character, eveleted the royal coffers to be opened to those who have furfered most materially by the tempest; and that advice was received from St. Petersburg, that four of the ships, which were supposed to have been lost in the hurricane, were returned to that port, but in a very shattered condition; and likewise that nine of the English merchant ships had suffered.

Fered.

Peter the Great, after having laid the foundation of his new city of Peteriburg, and made fome progrefs in the buildings, thought it needfary to have a convenient harbour, in which the flipping might ride fecure; and, for this purpofe, pitched upon the island of Retriani, at the mouth of the gulph of Finland. There he built a new town called Cronstadt, and fecured it with a calle called Cronstadt in the control of the co fo that between the castle and the town, the shipping ride in a safe, deep and commodious harbour. The castle is built in the form of a round tower, and three tier of gal-leries, well furnished with cannon, surround it. Two finall batteries are at preient placed on the opposite island, and, in case of emergency, the piers of the harbour may be mounted with a considerable train of artillery.

There are many elegant houses belween Cronstadt and Petersborg; and on an island formed by the river Nieva, near the western banks of the lake Ladoga, is the strong fortress and sea-port of Noteburg or Oresco. It was raken from the Swedes by Peter the Great, in the year 1702. The town of Nieuscham is demolished. Iwano-1702. The town of Nieuscham is demonstrate: awaited gorod is a firing easile opposite the Narva, from which, at the distance of forty-five miles, is the fortress of Caporis, fituated of the open of the open of the fortress, are right of the same name, fitten miles to the north wanogorod.

SECT. III.

Comprising the second Grand Division of Russia, containing Muscovy Proper, or Western Russia.

VESTERN Ruffis, or Mulcovy Proper, contains twenty-two provinces; namely, 1. Plefkow, or Pfkow; 2. Great Novogorod Veleki; 3. Twere; 4. Rzeva or Refehaw; 5. Biela or Biefki; 6. Smoleníko; 7. Severia; 8. Czernichow; 9. Vorotin; 10. Rezan; 11. Bielgorod; 12. Mordoa; 13. Nifi-Novogorod; 14. Volodimer; 15. Sofdal; 16. Mofcow; 17. Roftow; 18. Yerofawla; 19. Bilejefora or Relozero; 20. Vologda; 24. Czernoli; 22. Dwina.

21. Cargapol; 22. Dwina.

I. The lordfhip of Plefkow or Pfkow, is fituate between the duchy of Novogorod on the caft, Ingria and Eftonia on the north. Livonia on the west, and the pala-Extons on the north, Livonia on the west, and the pala-tine of Polocks on the fouth. It was formerly a republic, after which it had the title of duchy. It was at length subdued by Iwan Basilowitz, anno 1509. It hath a lake of its name, which lies on the confines of Ingris and Li-vonia, and empties itelf into the larger one of Peopus or Crudkow. It lies under fifty-fix, fifty-feven, and fifty-eight degrees of latitude, and twenty-eight and thirty-two of each longitude. of east longitude.

The chief towns in it are, Pleskow, Abdovs, Petzur, Ostrova, Fieburgh, Voronecks, and Postarzova.

Pleskow, the capital, is seated on the mouth of the river

Pickow, he capital, is feated on the mouth of the river Muldow, on the right hand of the lake of its name. It is divided into four wards or quarters, each of which is encoupsifed with its own walls, and is moreover defended by a flout castle built on a high rock. It is a Russian archiepiscopal see, and a confiderable populous city. It stands in fitty-seven degrees, forty minutes of latitude, and twenty-nine degrees thirty minutes of east longitude.

In this territory are some other inconsiderable cities, not worth farther notice, except for their strength and fortissications, which gave the late czar no small trouble to reduce; and are still carefully kept up, for the defence of this advanced frontier. But that of Pleskow is looked upon as the strongest in all the north part of Russia.

II. Great Novogorod Vetcki, or the duchy of Novogorod, is situate on the east of Pleskow, last mentioned, with Ingria, and the lake of Ladoga, on the north; on the east of the duchy of Belowra and Twere; and the province of Raeva on the south. It is divided into

into five principal diftricts, via. Ob Onefksia Petina or diffrict on this fide the Onega, Grafina Psgoft or Grafinean tribe, Vichny Volock and Zaszolft Volock, or the republics of Vichni and Zaszolft, and Befvolki Petina, or the dry or barren quarter. It hath four lakes, called the Ilmen, Voldai, Lutinfch, and Mftim. It hath no left than fixteen rivers, the most confiderable of which are the Wolohowa, Vitegra, Bagda-konfa, Niecka, Mftafua, Palamil, Videca, Phchega, and I o.ga. The most confiderable cities and towns in it are, the Great Novogorod r Novogorod Veliki, Staraia or Old Ruffia, Nova or New Ruffa, Parcoff, Vitegora al. Vitegra, Ochloma, Tiffina, Ladoga al. Ladifkia, Soltza, Gorodna, Poliffa, Crocka, Quelcor, Niewbochi, and S. Nicolas.

This duchy is called Novogorod Veliki, or Superior, to affinguish it from the Inferior or Nifs Novogorod. It extent from east to west, on the fouthern part, is computed to be near two hundred and fifty miles, but grows more and more narrow towards the north. Its chief-produce is corn, flax, hemp, wax, honey, and leather;

produce is corn, flas, hemp, wax, honey, and leather; in all which it drove a confiderable traffic, when it was governed by its own princes, though, even then, it was very often obtituded by its wars with Mofcovy; but fince it has become under its fubjection, it is much decayed from its flourishing condition. In the middle of the fouthern part is the lake Ilmen, out of which flows the rivet Wole-

how abovementioned, which paffes through part of this province into the Ladogan lake.

Novogorod Veliki, the capital of this province, called the French, Neugard, and, by the Dutch, New arten, stands on the Wolohowa abovementioned, and Garten, Rands on the Garten, frands on the Wolhows abovementioned, and is a large and confiderable place, very populous and well fortified. But it is plain from the remains of fome old walls, towers, freeples, ôce, that it was formerly a great deal more fractions; and, indeed, when one beholds the great number of those towers and freeples which it hath fill flanding, one is apt to expect to find it white grand in the place, whereas it is indeed but for the walls being made of timber and mud, as well as the walls being made of timber and mud, as well as the catch part of the house. This change is consistent where the found in the place. being made of timber and mud, as well as reatest part of the houses. This change is owing to the several disasters that it suffered from the Polanders, Russiana, and other nations; for it was once in fuch a flourithing con-dition, that it was a common faying, Who can hurt God or Novogorod? but fince it fell into the hands of the Ruffians, its great trade and felendor have fenfibly decreased.

It is however an archbishopric of the Ruffian rite. The cathedral, called Santa Sophia, is large and beautiful,

though in the antique flyle.

The caftle is on the other fide of the river, and is joined The castle is on the other side of the river, and is joined to the city by a large bridge, famed for the many thousands of clergy, citizens, and others, whom the tyrant of Novogorod, duke Iwan Basilowick, caused to be thrown from it into the river, anno 1 500. The castle is the recidence of the Vaivode, and near unto it is the archiepiscopal pelace, and a monastery dedicated to the miraculous St. Anthony of Padua, mentioned a little higher. There is another monastery, called Perunki. Monastir, faid to have been haits on the ruins of an antient termine dedicated to built on the ruins of an antient temple, dedicated to Perun, or the God of Fire, formerly worfnipped here, under the figure of a deity, holding a thunderbolt in its hand. Here are besides about a hundred churches, most of whose fpires and towers are covered with copper gilt, esp the cathedral; and about seventy monasteries. It in fifty-eight degrees twenty minutes of latitude, and thirty-four degrees of east longitude, about one hundred and fifty miles north-eastward from Picskow, one hundred and

its aimos frouth from Peterflourg, and two hundred and sen north well from Moscow.

Strain, Strain Ruffa or Old Ruffa, from which force authors affirm the country of Ruffa to have had its name, flands on the opposite shore of the lake Ilmen, from whether flours the river Lours which man shares. whence flows the river Lovat, which runs through the town, out of which the inhabitants make a good falt, of which they drive a confiderable traffic. It stands about forty-two miles fouth of Novogorod, and is well built and

The town of New Ruffa stands on the above-mentioned out ten miles from Old Ruffa, but does not con-

river, about ten miles from Old Rulla, but does not consain any thing worthy of particular notice.

Ladoga is about eighty miles north of Novogorod, in
latitude fifty-nine forty-five, and thirty-four forty each.

It flands on the left thore of the river Velcot or Velkove,
which falls into the Ladogan lake.

Mologa flands on the confines or the dochy of Belozers, and at the confinence of the rivers Milla and Wolga.

So Milaber in a large and accompliance of the rivers Milla and Wolga.

St. Nicholas is a large and populous town, near the

Wolga, and is famed for a spacious monastery dedicated for

III. The duchy of Twere is small and compact, but opulous and fertile, and takes its name from its capital, and that from the tiver Twerza. It is bounded on the and that from the river Twerza. It is bounced on the north and well by the Great Novogorod last described, on the east by the duchy of Rosow, and on the fouth by that of Mosow, and the province of Rzeva. Its chief cities and towns are, Twere, Tuerfock, Wolkofkol Staries,

of Moscow, and the province of Rzeva. Its chief cities and towns are, Twere, Tuersock, Wolkofkol Starica, Prezista, Oleschina, Cossin, Sattrite, Gerodin al. Gorodina, Clin, Maigrova, Czornaia-Sloboda, and Mitre.

The capital city Twere, is situate on the consuence of the rivers Twertza and Wolga; which last is by this time become so wide, that they are obliged to cross it in servy-boats. It is presantly situated on the fide of a rising hill, on the banks of the I wertza, from which it has its name; and is a large, rich, and populous city, having no less than sixty churches, and an episcopal see; and is the fiation of amint. It stands about sixty leagues east south-east of Pleskow, and twenty-sive north west of Moscow. Latitude sixty-six sistems, and the sixty leagues cast south-east of Pleskow, and twenty-sive north west of Moscow. Latitude sixty-six sistems, and an episcopal see; and as the fact of Pleskow, and twenty-sive north west of Moscow. A little below it, on the same river, stands the large town of Tersack, Torsack, or Tarsock, about twenty miles morth from Twere. The other towns have nothing that merits particular attention.

of Terfack, Torfack, or Tarfock, about twenty miles north from Twera. The other towns have nothing that merits particular attention.

1V. The duchy of Raeva or Refchaw, is bounded, on the north, by that of Twere last described, and by that of Moscow, on the south, by the principality of Biela, and palatinate of Witepsk; on the west, by the lociding of Pielkow; and on the east, by part of the territory of Moscow. The towns belonging to it are,
Raeva the defart, Raeva Volodimerski, Toropecka, Velikie-Louki, Borgo Cove, Boroveo, Zari, Lubekae, and Dudure. Most of them are inconsiderable.

Rzeva the defart, fo called because ruined and abandoned, was the capital, and sood on the western side of the province, on the south west of Velikie-Louki; but hath yielded its dignity to Raeva Volodimerski.

This town is pleasantly situated on the Wolga, on the castern side of this province, near the small lake. Wolga, which is one of the head springs of that river. It is faid to have been built by prince Volodimer, who made very considerable conquests in this and the neighbouring provinces. It is but indifferently built, but well peopled, and drives some fort of trade in hemp, fish, and other articles.

The town of Toropecka is finall, but neat, and pleasantly fituated on a little river that falls into the Dwins.

V. The principality of Biela or Bielski, is bounded by Raeva. on the north and east, by Lithuania, and the ne-

fantly fituated on a little river that falls into the Dwins.
V. The principality of Biela or Bielfki, is bounded by
Raeva, on the north and east, by Lithuania, and the palatinate of Witepik on the west; and by Smolensko on the
fouth. It was formerly governed by its own princes,
fouth, it was formerly governed by its own princes, though fisbject to Lithuania; and was then a confiderable place, till fubdued by the caar Basilowitz. It slands on the river Opscha or Osca, which discharges itself into the

VI. The province of Smolensko extends about two hundred miles from saft to west, and is usually stiled the duchy and palatinate of Smoleniko. It hath, on the north, principality of Biela; Lithuania, on the west; the duchy principality of Biela, Lithuania, on the well; the duchy of Severia, on the fouth; and Moscow, on the east. It hath been alternately subdoed by the Poles and Ruffiana, and at length was finally ceded to the latter, by treaty, towards the conclusion of the last century. It is watered by the Nieper of Boristheses; the land is in general defart; but the inhabitants derive some profit from the skins of the

wild beafts, with which it abounds.

The capital is called by the fame name, and is agreeably fituated on the banks of the Nieper, near the confines of Lithuania. It is a large, populous, and well-furnifhed city, and contains eight thouland houses tolerably well built. It is two hundred and ten miles from Moscow, has a citadel and garrifon to defend it, was once a metro-politan, and is now a bishop's fee. The furrounding politan, and is now a biftop's fee. The furrounding woods are faid to produce the best furs in Russia. The town of Dragobush is situated on the fame river, about fifteen leagues from Smolensko, but is of no consistency

VII. The duchy of Severia or Severifki, is fituated to the westward of Little Russia, to the eastward of Czernikow, to the westward of Rielgorod, and to the southward of Smoleniko. It had formerly princes of its own, till the country was subdued by the cast Basilowitz, 'It after-wards sell into the bands of Sigismund III. king of Poland, who incorporated it with his own dominions; but it was at length finally ceded to Ruffia, as a member of the antient palatinate of Smelentko.

Noggrodek.

Demetriowick is fituated on the most northern verse of the province, was formerly in the pelatinate of Studensko, and stands about forty lengues fouth east of that

ichitico, and stands about forty leagues tous east of use capital.

VIII. The ducky of Czernichow is bounded on the west and south, by the river Nieper, and the palatinates of Kiow, and on the north east, by Servia and part of Littuania. The river Doniza waters it; but the land is exceedingly steril. The principal town, called Czernichow. is small, thinly peopled, and inconsiderable. The town of Borma is only noticed for some fortifications to guard it against Poland. Others, still feel worth mentioning, are, Omby, Perceop, Vibbi, Sosnica, Kwalesin, Pusca, dec.

IK. The principality of Vorotin or Vorotinski, is

T.K. The principality of Vorotin or Vorotinfle, is bounded northward by the river Ugra, and part of the duchy of Resan; on the fouth by Leffer (Tartay, or the land of the Cofficks; so n the west by the duchy of Severis, and, on the eath, by another part of the faid duchy of

That portion of the province, which is fituated near the Leffer Tarriay, has been almost defolated by the con-tinual incursions of the Cossaks, but the other parts, which are watered by the river Occa, are populous and fortile (

Vercein, the capital of the province, flands on the banks of the Occa. It is only a small town, but well fe-cared by a castle and other fertifications; and higher upon the fame viver fland the towns of Bolgoff, Aurol, and Crom, which are the strongest and most considerable in

Crom, which are the strongest and most considerable in this province.

3. The duchy of Resan or Rhesan (now called the province of Veronia) includes a very large trast of landing between the Don, or Tanais, and the Octa, and exceeding near three hundred miles in length. It is watered by the above rivers, bath Little Russa to the fonth, Smolensho to the west, Nife. Nevegored to the est, and the duchy of Moscow to the north. The Rossians deem the foil of this prevince the most fertile in the univers; and showing to the quantity of falls with which the flow envisees the ground by lying so many morths upon it, as was hinted at the beginning of this article. The people here likewise are fall to be convageous and warlike, civil, and polite, and so very numerous, that they are able to fend fifteen thousand foot; and forty thousand horse to the wars.

the wars.

This country was formerly governed by its own dukes, who were eftermed very powerful priscos; but it hath long fines been fabelued by the care, and become fubject to Ruffia, fines which time it hath decreased much of its antient feltender and rraffic. It continues, however, fill fittle in com, miller, and other grain, and abounds with all kinds of game, as the rivers do with fifth; particularly the great river. Don, which hath its fighing head in this provitice, and tuns altered associate, and, after a long frependine counts, discharges little? Into the Pales Majotis at Aford.

province, and runs altered series it, and, after a long ferpentine course, discharges itself into the Pains Mirotis at Moph.

Threfe towns were most of them formerly confiderable, rich, and well-peopled; but have been to insteadly plundered end abouted by the Crime-Tarrar in the year 1568, and following, that they have not been able to recover themselves fines: particularly

Regan of Rhefan, the sastlent capital of this province, was formerly a fair; large, and populous city, and advantageously fituated on the Occa. It is chiefly famed for the rioble refishates which it made against the Tartare in the year 1570, by which the whole templer was preferred from their fury, though the city itself and almost the whole duchy, were destroyed by them. Since that time; the fertility of the ground, which traches from this city and the river Occa; quite to the internehments which were afterwards made on the confines of Tastary, to prevent the incursions of those free-booters, induced the Moscovites to gather up all the dispersed inhabitants of this once flow-

pilling place, and to cause the meterials of the rained city to be conveyed about eight leagues off, and to build the new town with them called Feresta Resausti, because many of the inhabitants of Feresta want likewise and feathed there. All that, the antient Resau new retains of its former grandeur, is its archiepisopel see, and its being still the residence of that metropolitan.

The town of Voronets, Woronits, contemply now Veronis, is the most considerable place in this duelty, on account of the great ships of war built there by the direction and inspection of the late care Peter the Great; it being situated on a small river of its own name, which falls into the Don, or Tansis, a little below it, and is deep enough to carry them into the great river, and thence down to the Black ica, to which that prince opened himself a free passage by the taking of Aloph. It is situated on a hill, and furrounded with a wooden wall almost rotem. It is divided into three parts; one of which, called Jakatoss, is the common residence of the Russian serrelants; it hash large and extensive ropewalls, and a special substrumena magazine of powder without the walts.

On the declivity of the hill, and along the water-fide, are several spacious houses, some of them four hundred paces long; which belong some to the Russian sadmirals, wice-admirals, and persons of team for them that are employed in this-building. The city shades eathe west fide of the Veronis, and the citadel on the other; and a large bridge is built over it for communication between them.

The citadel is a large square building, stanked with a

the west side of the Veronis, and the citadel on the eshet; and a large bridge is built over it for communication between them.

The citadel is a large square building, stanked with a tower on each coner, hath large apartients in it; and makes a great square without. It is furrounded with strong pallisadoss, and a west fosse, and is defended by a strong garrison. This is the chief magasins in this past of Russia, in which there are about one hundred and shity cannon, mostly unanounted for speedy carriage, conveniences for ship-building, and apartments three shortenhigh for all kinds of uaval stores; and the town is computed to have about ten thousand souts in: There are some hundrome churches in it after the Russian taste, and at a small distance from the town there is a high mountain almost mouldered away, and full of cracks, on which are some antient monuments. It stands nearly twenty-five legues fouth of Moscow, in about sity-sive degrees forty minutes of satistice, and forty degrees twenty-sive minutes of latitude, and forty degrees twenty-sive minutes of latitude, and forty degrees twenty-sive minutes of latitude, and forty degrees twenty-sive minutes of the store of the siver Veronis, and two thirds of the town are washed by that river and the Don. The place is very healthy, on account of the circumjacent lew stat grounds being covered either with wood or water. This town is regularly built with streats, intersacting such other at right angles; but the houses are of wood, as is a palace which stands at the west end of the sown. The citadel is made of earthen ramparts, pallisadoes, with bactions at the corners, mounted with cannon. Taverbook itself is inhabited principally by sailors and siders, who are the garrison, and appointed to defend the place, dwell all together in a neighbouring village, and not in the sown.

The other towns in this duchy, worth mentioning, are

The other towns in this duchy, worth mentioning, are Donksrod, a large place about fourteen legges fouth from Rezan, fituate near the fpring-head of the Don, or Tanais, and Toul, or Tula, on the weftern confines, near the borders of Vorotin, which is defended by a flout eaftle, built by the czar Bafilowick from after he

rook it.

XI. The province of Bielgored: it was formerly called Organia; but we find it filled, in the map of the curious Mr. Thefing, the galatinate of Belgored, or Bielgored. It is a large tract of land lying on the fouth of the province of Ream latt defiribed; and is bounded by it on the iorth, as it is on the fouth by the Negay, and Bein Cofficke; on the west, by the Utran and galatinate of Klow; on the east, by the Utran and galatinate of Klow; on the east, by the Utran and galatinate of Klow; on the east, by the Don; and, further dorth, by the Worga. It is watered by several other rivers, and hattis foll sufficiently fertile, were it well cultivated; but its vicinity to Little Tartary exposes it so much to the continued inroads of the Cossicks above-mentioned, that it is neither rich, fruitful, nor well inhabited. It hath a confidentiale number of small towas, most of them peor, and half-ruined; but it hath no cities, succept that of Bielgored, from which it hath its name, and which is it-fess hardly remarkable upon any other account. The Don Cossacks on the south-east, called also Rodoni Donski, 6.

Docause they bliefly inhabit along the Don, sudthe Nogay Cossists on the south-west, are either very boggy or twody, and have sew towns in their territory; which, with the palatinate of Biespored, was formerly part of Tarnary, both hath been conquered from it by the Russian. Having new gone through the western provinces of Russis, from the lakes Ladoga and Onega, to the southernmost part of it, called Littlé Tartary) we shall proceed towards the north, where, in our course, we meet the provinces above-named; the first of which is called Mill: Morday, are Morday, and the inhabitants Mor-

provinces above-named; the first of which is called MII. Mordwa, or Mordwa, and the inhabitants Morduates, of Mordwa Tartars. They are furrounded on the fouth by the Leffer Tartary and Rezan, laft deferibed; on the west, by the duchies of Moscow, Volodomir, and Nis Novogorod, or Leffer Novogorod; on the north, by part of the same last named, and the river Wolge; and, on the cast, by the southern Czeremisse. The inhabitants of this province are said to be the most civilized of that out, by the fourners Czerenite. I he inhabi-tants of this province are faid to be the most civilized of all the Tartarian Moscovy, and have some towns; the chief of which are Adeura, about forty leagues call from Volodo-mir, and twenty from Nif Novogrodeck; and Moruma, feated on the river Occa; but neither of them worth de-failties. feribing. The people here are heathen, and worship one God, and a devil, the former out of love, the latter out of fear; but have neither temples, altars, or priefts. Their country is small, and full of large forests, and is by M. de L'Isle placed between the rivers Occa, Sura and Moksicha-Reka,

The province or diffrict of Czeremiffe, or Scheremiffe which lies on the east fide of the former, is a valt tract of

which lies on the catt-fide of the former, is a walt tract of land, extending from fifty-four to fixty-one degrees of latitude; and is divided by the river Wolga into two parts; the fouthern diffrict, which adjoins to Mordva, has the name of nagorho, which implies mountainous; the northern is called logoni, or lowland.

"The inhabitants, who are deemed the most favage of all the Fattass, breed walt herds of cattle. They are without rowns; raitlefs in their dealings, fuperfittious in their notions, and cruel in their dispositions. Some are called Mahometans; but the greater part, effecially towards Casan, know nothing either of that or the Christian religion. Their way of naming their children is, by chusing a day fix months after, birth, and giving the name of the fift perion they meet, with

first perfor they meet and future life; but believe that God bleffes, and the devil punishes, according to their defert in this life. They go to a place called Nemda, forty, leagues from Cazan, full of marfies, to pay their devotions to the deity; and believe if they go empty handed, the devil will punish them with a lingering and incurable disease. They worship sun, moon, stars, and animals, but to God they facrifice a horse, on, or ram, roafted; and bafted with liquor made of honey. A man is allowed three or four wives.

The women wear only a coarse linen gown, which covers their whole body; and the head-tire of the married ones rifes over their heads like a horn growing out of their skulls, at the cop of which hangs a little bell by a filk string of several colours. The men have much the fame gash about their bodies, with drawers under. The married shave their heads, and the unmarried let their hair grow to a considerable length. They are subject to the ezar, and are free from all tribute except voluntary pre-fents. Their language is peculiar, understood neither by

n nor Tartar. Ruffian nor Tarta.

XIII. The duchy or lordfhip of Nifi Novogorod lies to the fouth-west of Cazan, and to the east of Moscow. It is watered by the Wolga and Occa, abounds with forests, but is nevertheless pleasant, populous, and sertile.

Nifi-Novogorod, the capital city, is fituated on a rock at the confluence of the Wolga and Occa, surrounded by

a ftone wall, and defended by a ftrong citadel. Near the river-fide, and before the flately gate of the city called Lwanofiki, there is a spacious market-place. A noble flacet, interfected by others, runs through the whole town; the cathedral, which is built after the model of Santa Sophia at Conflantinople, is a flately edifice; it has five cuphia at Constantinople, is a stately edifice; it has five cupolas beautifully varnished with green, and adormed at the top with elegant crosses. The superb archiepiscopal palace is near the cathedral, but contains a church within its own walls. The governor's palace, and the chancery, are noble fabricks, and the hooses in general are well built of timber. The city itself is small, but the subject are large, and the whole has a good trade, and is well surnished with provisions. The luxuries, as well as the necessaries of life, are remarkably cheaps but the inhabitants of both sexes are given to excessive drinking.

The village of Bafiligorod is faid to have neither walls The village of Bafiligored is faid to have neighter walls and fine houses, either public or private. It flands at the foot of a rifing ground near the Wolga, and was originally founded by the east Bafilius, as a check upon the Tartara: but as the Ruffian frontiers at prefent extend much farther, the fortifications have been fuffered to go to deeay. The other towns of inferior note are, Pafeoff, Balagna, Slaboda, and Nifi-Novogorod, the latter of which is computed to be diffant from Moscow about eight huadred weefer, or five German and one hundred control. dred wersts, or fixty German, and one hundred common leagues, by water, but by land it is not above an eighth part so far.

XIV. The province, called also the duchy, of Volodimer, is bounsed by that of Nifs-Novogorod, on the east; by the ducky of Moscow, on the south; by those of Roslow and Susal, on the west; and the river Wolgs, on the north. It is in many parts fertile, well watered by the rivers Ocea, Clesses, and Wolgs, and hath a great number of forest and the second secon

an It

inumber of forefis and fens.

The capital city Volodimer, flands about feventy-five miles from Mofeow to the north-east; it is fituated on a fine hill, which is beautifully divertified with plantations. Hence a most noble appearance is exhibited to the distant eye. It was hullt by prince Volodimer, in the commence-ment of the tenth century, and he and his successors re-

eye. It was must by prince volodimer, in the commence-ment of the tenth century, and he and his fuccessor refided here till the court was removed to Moscow, since which period its splendor hath gradually decayed. There are, however, seven or eight sine stone churches in it, and several more of wood, and the territory about it is extremely sertile. The other towns are, Gorachowitz: Ballesia, situated on the river Clessus.

XV. The ducity of Sussai is bounded, on the north, by the Wolga; on the fouth und east, by Volodimera, and, on the west, by the duchies of Rostow and Jeroslaw. It is very narrow, but extends in length near one hundred and twenty miles, and is watered by several rivers, which render the low lands exceedingly rich and settile. It however contains many forests, which were well-stoned with fallow and other game, and with wild heasts, whose surface of the dukes of Sussai, from whom Bassowed, by the car Jeroslaws, on his son Andrew, who became a branch of the dukes of Susski, from whom Bassowish susski was descended, who was chosen ever after the defeat of or the cuses of Suliki, from whom Benlowitz Suliki was defeended, who was cholen care after the defeat of the sham Demetrius, as was hinted at the beginning of this stricle. John Basilowitz subdued this whole country in 1565, and incorporated it with his own estates. Its chief towns are Suldal, the capital, Castro-Moigored, Louch, and Youries.

The town of Sufdal is fituate on the river Clefma, on the fouthern part of the duchy. It is an archiepifcopal fee, and was formerly the metropolis of Ruffin, but is gone to decay fince the feat was removed from it. It is built mostly of wood, after the Ruffina manner, and retains but little of its priftine grandeur. It is, however, famed for a flately monaftery of nuns, and for some other antient buildings. It flands about feven leagues north-west from Volodimer, and twenty north-north-east from Moscow ; latitude fifty-fix degrees twenty-five minutes, longitude forty degrees eaft.

NYI. The province of Moloow, or Molcovy, properly fo called, to diffinguish it from the great empire of which it is the principal province, bears also the name of ducby, because, for a long time, the princes of it took only upon themselves the title of dukes. It hath its name from its capital, Moscow, or Moscova; and this from the river of that name on which it is situated.

that name on which it is itsated.

This province is bounded on the north by the duchies of Twere, Roftow, Suffal, and Volodimer, already described; on the south, by that of Resan, from which it is parted by the river Occa; on the east, by the little principality of Cachine and the same river Occa, which parts it from Nisi-Novogorod; and on the west, by the duchies of Parte Rish and Small on the West Rish and Small on chies of Rzevs, Biela, and Smelensko. Its extent, frem eaft to west, is computed about fixty-eight leagues, or a little above two hundred miles; and its breadth, from porth to fouth, about thirty-three leagues, or one hun-

dred miles.

The chief rivers that run through it are, the Mofks, Occa, and Clefans; all which fall into the Wolga: and on the western side of this province is a large forest, out of which flows that famed one called the Borythenes, which, crofting the duchy of Smolensko, makes its course to Ukrania, Lishuania, and Poland. The foil, however, is nothing near so service as in some of the provinces we have lately gone through, but the air, though sharp, is here very healthy; which, with the advantage of its fituation.

tion, amidit fome of the best provinces, induced fome of the monstehs to linake it their chief residence, and the metropolis of the empire.

The chief chies and towns are, Moscow, the capital, Treytza, Columns, Colomensko, Mosaisk, Wiesmas, Golutina, Saboda, and Dmittoss.

The city of Moscow, or Moskova, which is the greatest in the whole Russian empire, is feated in a fine specious plain, out the river of its name, over which it hath a stately bridge of twelve arches, of a prodigious height and breastly, because that river often overslows. It was built by prince Gasischin, on the design of a Posish monk, and is the only stone bridge that we know of in all Russians that the town stands in a gravelly it. and wholsome sir, and almost in the center of the approprice of Moscovy, It was founded in the year 1331, and we are told very strange things concerning its largeness, populousities, and number of houses, which it seems once amounted to above eighty thousand; though, if we may guess at these by what they are now, the far greater part of them might be more properly called low wooden hits than shoules; on which account, this city has been always liable to such violent consignations as feldom failed of consuming near two parts in three of it.

It was taken, and almost burnt down, by the Tartars, in 1872, and by the Poles. In ston, in which last, we are

parts in three of it.

It was taken, and almost burnt down, by the Tartars, in 1572, and by the Poles, in 1611, in which last, we are told, forty-one thousand house were destroyed, besider the vast numbers of men and women that pershed, either in the sames, or by the sword. Notwithstanding which lost, we find in 1662, when lord Cartille was attabled, we find in 1662, when lord Cartille was attabled to the same should be supported as to be twelve miles in compass, full of hooses and inhabitants; informed that the number of the former is, by the lowest calculations, said to have amounted

and inhabitants; informuch that the number of the former is, by the lowest factoulations, faid to have amounted
to forty thousand; and by the Russians affirmed to have
been above double that number.

This city standa about fix hundred and fifty miles from
Cass in Crim Tariaty, nine hundred and fifty miles
north-east from Comilantinople, seven hundred and twenty
east from Cracow, fix hundred and fixty east from Stockholm, and one thousand three hundred and twenty from
Landon, latitude sity, size degrees forty-two minutes; eaft from Cracow, fix hundred and fixty eaft from Stockholm, and one thousand three hundred and twenty from London; latitude filty-five degrees forty-five minutes; longitude it.lriy-eight degrees forty-five minutes eaft. It is of a circular form, and coinlift of item diffilite parts, or quarters, all furrounded with diffilited will; vis. t. Cataigorod, a. Czargorod, a. Storodom. a. Strelitze-slahoda, fo called because it was formerly the quarter of the firefitzer, or czar's guada, mentioned hereafter. The Cataigorod, or middle city, is furrounded with a brick walt; and on the lands the calle are, 1. Two paletes of the czars, one of timber, the other of stone, and built after the Italian manner. 2. The patriarchal palace, a large antitent building. 3. The exchequer, chancery, and other offices. 4. The grand magazine: 5. Two handsome monasteries. 6. Five large churchea, among which is that noble one of St. Michael, in which are, among other enrichments, the tombs of the grand dukes, or czars: We omit several other thately boilding that are in this great castle, at whose gase stands that stately antient fabric called the church of Jerusalem; and fronting the castle is the great market and monstrous bell, mentioned farther on. This quarter is washed on the fouth-west by, the river Mosca, and on the north, or north-west, by the Negliga, which falls into the former on the back of the castle. It is called Cataigorod, not on account of its being situated in the middle of the city, as Oleanius sances, but from Catai, the antient and Russian name of China, because the chief merchandizes sold in it came from that country; so that the name implies the same as the Chlines city. fold in it came from that country: fo that the name implies

fold in it came from that country: to that the name implies the fame as the Chinele city.

The quarter called Czargorod, or ducal city, encompaffes the Cataigorod, and is itself furrounded with a white none wall called Biela Stena; whence it is also called Biela Gorod, or White City. It contains, among other buildings; the great arienal, and is watered by the Negliga, which runs through it, and thence flow into the dich that furrounds the middle city.

The Skorodom, or Scoradum quarter, thands on the north-well fide of the Czargorod, and is chiefly inhabited by timber-mongers and carpenters, who fell houses ready made. The houses are moveable, and fold very cheap, and in treat numbers: and, indeed, confidering the frequent sites that happen in this city, owing, mostly, either to their drunkennels, a reigning vice here; or to their neglect of putting out the candles which they light to fome favourite.

faint in their houses and chambers; they have need of fuch a large market to repair to on those occasions. It is called Scoredum, which, in the Russian language, figures deed of the first and the repair to on those occasions. It is called Scoredum, which, in the Russian language, figures deed on the first and the well deserves that name, if what they tell us be true, that it was finished in four days, on a report of the Testars approaching, though it was fifteen or fixteen miles in compass, and the earth every-where supported by planks and beams of sir.

The quarter, called Strellize-Blaboda, formerly that of the foldiers or guards, stands on the east and fouth-east fide of the Catalgored and the castle; is furrounded and fortified with wooden ramparts; and is divided from the reft by the river Mosea; for which reason it is styled suburb, or slaboda.

As the houses are so meanly built, for the most part, except those of the noblemen, gentlemen, and rich merchants, the fortifute of the inside cannot be expessed but to be of a piece; so that, excepting the lives and merchandize that may be lost in such frequents consagnations, the damage is generally looked upon as so inconsiderable, that they never attempt to extinguish the size, but by pulling down such a great number of them as will prevent its spreading suther. But the merchants who have much to lose, take ears to deposit their choicest wares in vaults of stone, which are proof against such disafters.

There are reckoned in this whole city about three thoughts of stone, or brick; which, if they should be a such as the with such long rows of these wooden huts, that they stand at such was disflances from each others, and are intermingled with such long rows of these wooden huts, that they are slmost offs, especially as they do not stand in the trees, which most of them have, specious and in ample order, and surrounded with high and strong walls,

on the backfide of them, for the convenience of large courts and gardens, which most of them have, spacious and in ample order, and surrounded with high and strong walls, to keep off thieves and size. The streets are not paved with thones, but boarded with thick fir planks; and the description we have given of the houses may afford some idea of their beauty.

Their characters and chapels, including those that belong to monaferies, are to prompted by

to monasteries, are so numerous, as to be computed by some to amount to above one thousand five hundred, and by others to two thousand: and some of them are very large and listely; that, particularly, which is in the Kremelin, or palace in the casse, is a was, antient, massy building: on the right side of the altar is the exar's throne, on the lest that of the patriarch; and in the body of the church hangs a chandleier, of immense weight and value. The very jewels, and other costly ornaments, that enrich a picture of the Virgin Mary here, are valued at half a tun weight in gold, besides a wast number of chaliers, place, pains, statues, and other church-utensits of gold and silver, finely wrought, and antiched with precious stones; a wast number of other priestly vestments of great value, and an immense quantity of donatives and prients offered to the reliques of three eminent Russians; which makes the treasure of this church equal to that of any European cathedral.

The learned and ingenious Dr. Cook has favoured us by others to two thousand: and some of them are very

The learned and ingenious Dr. Cook has favoured us with the following account of the celebrated great bell of Mofcows: "I went, fays he, to the great bell, which was then in a large pit. A fire had about two months before burnt down about two thirds of this great city; and the bellfity, being all of timber fhared the fame fate; the bell fell into the bottom of the pit, and had a piece broken out of its edge, large enough to admit a man into it. Its weight is four hundred and forty-three theuland feven hundred and feventy-two pounds, and its height about twenty-one feet four inches and a half. I then went to the top of a very high tower called Joan Velike, or the Great John. From this tower, I had a complete view of the whole city, which indeed made a grand appearance. The weather being very cold, the Rufflans heat their floves before day-light, and make use of fire at no time of the day, except to get dinner ready, so that the view is never The learned and ingenious Dr. Cook has favoured us before day-light, and make use of fire at no time of the day, except to get dinner ready, so that the view is never obstructed by the smoke but at these times. On the top of this tower there are three bells, the least of which, I think, exceeds in fize the largest in London. The antient imperial palace, which is a large stone Gothic building, is under the tower. All these which I have mentioned, and all the imperial antient archives and different course of justice, are in that part of the city called the Grimline, faild to be about two thousand and ninety neces in cheumference, and is surrounded by a high brick wall."

THE NEW AND UNIVERSA
and is, though in the antient flyle, quite superb within
and without, and ninety set in length. That of St.
Michael is the repository of the dead carrs, and of all the
royal family of the unds fex. The body of the princesse
of the blood are interred in the stately abbey of the runs
called Taudoss Monassis, in the same castle, and near the
church above-mentioned. The tembs of the princes
who never respued here, are in a separate chapel. But
nothing is more magnificent than the palls with which
their cossins are covered; not constantly indeed, but only
on holidays; those of the carrs, particularly, are of the
sinces velvet, and have either a massy or embroidered
golden crucifix upon them, of curious workmanship, and
earisched with a vast variety of costly ornaments, especially
inferspions, which are mostly done with pearls and other
precious stones of great value.

Here are many monasteries of men and women, not
only in the city and easile, but in the suburbs and avenues
of the town. We have no room to enter into a detail of
them; we can only say in general, that they are, noth the
the palaces and noblemans houses, some of the best edifices in the city; the sounders of them having spared no
onst to adorn them, with curious architecture, paintings,
gardens, and every thing that is convenient and beautiful.
The only one we shall mention here, is that called Dewitze
Monastir, about a mile out of the city; and is that in
which the ambitious princes Sophia, who had hatched for
many plore agnish the brother the late care Peter I: was,
at length, confined, and ended her days. It is situated on
a spacious plain, and hath three hundred nums belonging
to it, who lad a very regular life, and never stir out of
their limits, as some other forts are permitted to do: these
are only allowed, on holidays, to walk on the terraces
round their gardens, which are raised to a convenient
height for them to enjoy the prospect of the adjacent plain.

Peter L the late care, sounded here, three colleges,
which he too

of the next fpringing generation. The first is for humanity, thetoric, and philosophy; the second for matheof the next firinging generation. The first is for humanity, thetoric, and philosophy; the second for mathematics; and the third sornavigation, astronomy, and others seizuces subservient to it. In all these the youths that are taught are kept under strict discipline, and have, at the same time, all due encouragement to excel in their respective studies. To these the same prince added a dispensatory, which is not only one of the sinest structures in Moscow, but, by all report, one of the best furnished Mofeow, but, by all report, one of the best survivues in Mofeow, but, by all report, one of the best furnished with all forts of medicines, drugs, &c. in all Europe. It is put under the care of some Germans, who are allowed the best masters in that art, though the most tlevenly in their compositions, they never studying to please the eye or taste in their prescriptions, as we do in England, but neasease their patients by the inelegance of their compo-sitions, and, in that sense, may do bett for that country This differnatory bath a yearly revenue of twenty thou-fand rubles, to renew their Materia Medica; and furnithes not only all the army, but, likewife, all the principal cities in the empire with medicines.

In this city the courts of judicatere, euflom-house, and other offices, are generally large, and built of flone; and fome of them rather refemble a gaol, and, indeed, are such in fome fense ; they having apartments for debtors, as well as criminals, who are kept there chained up. ... But this, and other particulars relating to the political government and other particulars retaining to the pointess government of this city, we fhall avoid enlarging upon: and only obferve here, for the benefit of thote who may have occasion to vitit these parts, that though justice is, in general, administer d with some strickness and severity, yet the Ruffians being naturally lazy, and given to drinking, the whole city furarms with beggars and vagabonds, and mostly of fuch a stordy breed, that it is dangerous to deny them an alms. This makes it very dangerous to walk the freets in the night; for they generally lurk in corners, with a short the night; for they gental that in their hands, which they throwar the heads of pullingers, with fach desterity, that they feldom fail of knecking them down; after which, they reb and marder them, and go off. Their distances they feldom fail of knocking them down; after which, they rub and murder them, and go off. These distured happen more frequently on holidays, and especially during the carnival; and wheat a person is found murdered, they carry the body to a coranisplace, where it lies exposed day or two; and, if it is not owned, it is stung into a deep large pit, must to serve an all such accasions; and on the Whittiuntide holidays some priests come shither, to say mass for the found of the deceased.

Mofacer is smuch decayed from its antient grandeur and apulance, fines the building of the city of Petersburg, and the court so often repairing thither, however, it is fill

very full of inhabitants, and all kinds of provisions are brought in, in great plenty, and fold very cheap. Fifth is the only dear food, occasioned both by the number of inhabitants, and the four lents, and other fafts, that are ob-observed by the Ruffians: and this great cheapies shoth for far lowered the price of the land all about the country, that the nobility and gentry are great sufferors by it, their effaces being reduced to luttle more than one third of what they formare whomat in the more than one third of what they formare whomat is now the first was in its flourithing unar-

being reduced to little more than one third of what they formerly brought in, when the city was in its flourithing nate.
We cannot onit faying a word or two of its fine canal,
made by the order and direction of the late Peter the
Great, to open a communication between this metropolis
and his new-built and favourite city of Peterfubrg, and hy
that means, to the Baltick and German Ocean. This
great and noble work, which has been fome time finithed,
at an immense charge and labour, between two cities,
which, in a direct line, stand near ninety leagues as funder,
begins at Petersburg; on the river Niewa, or News, which
empties itself into the gulf of Finland, and, going up that
river quite to the lake of Ladoga, formerly described,
crosses it at the south end, and enters into the Woloff, auoctoffes it at the south end, and enters into the Woloff, auother river, which slows thither from the province of Nocrottes that the fouth end, and enters into the Woltoff, augther river, which flow thither from the province of Novogorod. From the capital of that province, begins what
is properly salled the artificial canal, which, patfing through
the territories of Brognutz, Chieflitz, Chilolova, WitchanVoloscha, Torfchock, the province of Twere, and the
diffrict of Kiln, reaches, as length, the city of Moscow,
and entiches it by the vaft quantities of merchandizes that
are brought to and from thence.

A late stayeller into Ruffa gines the following contents

are brought to and from thence.

At late, traveller into Ruffa gives the following seconds of the monaftery and church of Jerufalem: "The chirch, billiop's, and prieft's house, are all inclosed with high brick walfs; the walf, forming one fide of the billiop's palace, is built on a beautiful detached hill, having on the east, north, and west, the finest lawns in the world, through which, glides a noble river. In the plain, upon the panks of the river, stands the builder's romantic house, all built of stone. It is quite alone, three stories in height, in every one of which are four rooms, except the ground story, where are his kitchen, store-room and another room, I imagine for his attendants, The area of each of these rooms is about eight, or rt most but nine another room, I imagine for his attendants, I he area at each of their rooms is a shout elight, or rt mot but nine feet fquare. In every one is a small stove; his bedstead is of the sone, as are his bed and pillow. His chairs are of the faure materials; every story of his house is walted, and it is flat on the roof, so the conveniency of taking a

and it is flat on the roof, for the conveniency of taking a view of the country. It has but one entry, and every room receives light from one window of the leaft fize. The builder was a hermit, and a profetfed religious. The holofutal is not large, but well enough provided with every necessary except medicine, prayers being, in their opinion, fufficiency, effectious for the cure of all disafes which appear at this holy place.

"At the west end of the church is one of the most capacious capolas I have ever feen, only the middle of the srch had fallen down some years ago. The dome is very magnificent and high, with a gallery which surrounds it near the top: it is well lighted, the windows being large, and the walls are all hung round with various pictures of the faints, very richly adonced with silver, gold, pearls, and peccious stunca; and the astar is very greed, and adonted with various pieces of curious workmanship. This dome is a noble structure; but I cannot say whether it is as large as that of St. Paul's or not."

is a noble firucture; but I cannot fay whether it is as large as that of St. Paul's or not."

Treytza, or Treytzki, is a finall, but handfome town, famed for the stately monastery of that name, or convent of the Trinity, a spacious building, with three large gates, and a noble church, shoulding into middle of the square. The abbot here is so rich, that he has sifty-fix thousand peasants dependent on him, besides other revenues. The cases have here some apartments for themselves, and a noble palace, strongly fortified. In this monastery it was that the late case Peter I, in his yoonger days, was forced to retire, to secure himself from the fury of the Boyatd Cauvanski and, his strelises, who plundered and murdered all opponents in his metropolis; and from the plops and conspiracies of. his ambitious fifter.

The town of Columna, or Kolumna, is structed near the consiner of the duchy of Rezan of the western shore of the tiver Occa, which divides it from a slabode, or

the contines of the duchy of Rezan out the western shore, of the river Occa, which divides it from a slabode, or suburb, on the opposite side. It is almost of a round figure, half a mile in compast, well fortified with a stone wall, six stathous high, and two thick, and standed with slout and high, howers, at the distance of two hundred paces shorn each other; but is now gone to decay, and is almost runned on one ide, The suburb, which is called Colutwina slabods, is the place where the merchandizes

a flone d with undred and is called ndises are exposed to sale. As for the city, it hath nothing con-fiderable in it except the fine stately church of the Virgin Mary, and the archiepiscopal palace; she city being digni-fied with the title of an archbilltopric! It flunds about fifteen leagues fouth-east from Moscow; latitude fifty-five degrees. Longitude thirty-nine degrees twenty-eight ninutes are

nimutes eaft.

Colomensko, or Kolommenski, is a small city in the neighbourhood of Moscow, stuated on an emistence, from which it yields a beautiful prospect. It hath a handsome charch, with two high towers, and a lately monastery. It hath we avenues to it over the Mosca, which shuft be cressed over a float of timber fastened together, so as to be lookened and divided, to give passage to the vessels that go up and down that tive:

creafied over a float of timber faltened together, so as to be loofened and divided, to give passage to the vessels that go up and down that river.

The 19 wn of Mosaich, situated on the same river, about use leagues south-west of the city of Moseow, but not considerable enough at present to merit a particular description.

XVII. The duchy of Rostow, or Rostos, is bounded on the south by that of Moseow, on the north by that of Juscilaw, on the east by that of Susdal, and on the work by that of Twere. It is a rich and plentiful country, and was formetly the first duchy in all Russia, next to that of Novogorod; and was governed by its own duke, till the carr lwan Basilowitz put the last of them to death, and eized on this territory, anno 1564. It was afterwards assigned for the maintenance of the zarowies, or heir apparent. Rostow abounds with corn, fruits, herbe, game, &c. The capital, called also Rostow, is a large town and metropolitical see, stuated on the lake of Rostow, from whence issues the small river Cobris, or Kosspar, which runs into the Wolga. There are some elegant stone churches in this city; it stands about one hundred and twenty miles to the nouth of Moseow.

The town of Uglitz, situated on the Wolga, about eighty miles to the westward of Rostow is celebrated for the excellency of the bread made in it. Here the young prince Demetrius, son of the 2sr lwan Basilowitz. Was murdered by order of his brother-in-law Trederowitz Gadenaw.

Demetrius, son of the zar lwan Basilowitz, was murdered by order of his brother-in-law Trederowitz Gadenaw, during a tumult which was occasioned by a conflagration

during a tumult which was occasioned by a consingration made on purpose, and the throne, was usurped by the neurderer. The town of Chlopigorod is now gone to decay, though it was formerly a place of considerable trade. The town of Pensaw is large and populous, standing at an equal distance from Moscow and Rostow. The other towns and villages) are known by the names of Mologa, Semabratass, Guo, Imbilowa-Uova, and Basinia Nova, but there is nothing remarkable in any of them.

XVIII. The duchy of Yerosawal lies between Moscow and Vologda 1 it is exceedingly scribe, abounds with coincattle, and honey, and it watered by the Wolga, which runs through the heart of its. The capital of the sime name, is a strong, well-fortified, large, populous city, containing forty thousand inhabitants. It is about thirty-fix miles to the northward of Roslow, and has a considerable miles to the northward of Rotlow, and has a confiderable trade in; corn, cattle, leather, honey, &c.): Roma Nova and Darnalofke, which are of little sore, are the other towns of this diffrict, and of he perform a think of a page.

and Darnalofke, which are of little sorte, are the other towns of this diffted.

XIX. The duchy of Bilejefora is a very final province, rearly circular, and derives its name from a lake called Biele-Ozore, or the White Lake, which is forty miles long and twenty broad, and on the banks of which flands the capital of the fame name.

This duchy is bounded, on the fouth, by that of Twere 1 on the welf, by Great Novogorod; on the north, by Vologds; and, on the caft, by Yerodlawia. The whole is fo much incumbered with lakes, fens, begs, woods, &c. that the roads in general are utelefis, except in the winter, when the froft render them patible. Some parts of the province afford corn and patters; and there is plenty of filt: Biele-Ozoro, or Belozero, the capital, is large populous, rich place, is frongly fortified, hath an important caffle, and is furrounded by the waters of the before-mentioned lake.

XX. The duchy of Vologds is bounded, on the welf, by Bilejefora; on the east, by the river Dwina, on the north, by Cargapol and Outtriang; and, on the fouth, by Yeroflawia. It abounds with fish and game, but is defittate of most other kinds of provisions; being woody, mountainous, full of lakes, firs, &c.

The capital, which is called by the name of the prevince, is situated on both fides of the river Vologds; is a capacious, populous, and coornaercial place; as, besides natives, many English, Dwch, and other merchants reside in it. This city, is one of the most antient Russian architepifeopal fees, is sear two hundred and thirty miles to No. 47.

the northward of Moscow, ferrounded by a stone wall, and defended by a strong forrers. The streets are opened regular, the house handsone; and the markets west furnished, every commodity being sold in a distinct quarter. The river is broad and ravigable, and the cathedral magnificent; besides which, here are twenty storie, and story three trooden churches, besides three trunneries, each of which has an alegant chapel.

The town of Dwinitza, situater, on avived of the same name, which falls in the Vologda, a small, but well-poopled town, named Sootka and Stresse, on a vived of the same name, which same are situated two other inconsiderable towns, named Sootka and Stresse, on the river Vologda.

XXI. The province of Cargapol is situated to the north of Vologda, from hence it stretches almost to the White Sea. It is woody and sensy, contains many lakes and rivers, but has no town except Cargapol, which is situated on the western banks of the river Onega. The people are exceedingly rude and batharous. The district of Wiga, which lies to the worth-west of Cargapol, is wild and defolate, and contains only two small towns called Waga, which lies to the western and wild, very thinky inhabited, and histh only one town named Korel-skol, situated on the fouthern coast of the Red-sea, and near the mouth of the river Onega.

XXII. The province of Durina is very extensive. being

thinly inhabited, and hash only one town named Korel-fikol, fituated on the fouthern coast of the Red-fea, and near the meuth of the river Onega.

XXII. The province of Dwina is very extensive, being computed near one hundred leagues long, in form of a loaenge or rhomb. It is bounded on the north and northwest by the provinces of Vaga and Onega, last mentioned, from which it is parted by the river Dwina; on the fouth by the provinces of Vaga and Onega, last mentioned, from which it is parted by the river Dwina; on the fouth by that of Outhoug, or Using; and on the east by part of that of Zirania. It is watered by feveral rivers, besides the Dwina above mentioned; fome of which, particularly the linega, fall into it a little above that town of Upsinaga, and run with it into the White Sea at the last of Archangel, or St. Millael the Archangel, called by the Ruffians, Archania; it is advantageously feated on the east fide of the Dwina, which falls into the White Sea fix leagues below it. It extends itself a gather river only about two miles, or three quarters of a sease, in length; and about one quarter in breadth; but yet is rich and populous; and of modeen structure; being chiefly become considerable by the English ships coming thither to traffic, and thereby bringing a grey refort of merchants thither from most parts of Moscowy, as well as from Holland, Sweden, Denmark, &c. informed that those months in which the river is not frozen, for it will freeze at leaf three months in winter, one may fee between three and fone which the river is not frozen, for it will freeze at leaft three months in winter, one may fee between three and four hundred, and fometimes more, fail of ships, in that

hundred, and iometimes more, fail of thips, in that harboar.

This city was first discovered by the English, anno 1553, when Sir Hugh Willoughby having received a commission to go to find out the north-east passage to China, Richard Chancellor, master of one of the ships, was separated from the rest of the steet, and accidentally sell into the bay of St. Nicolas, on the White Sea; from whence he was sent soy, and kindly received, by the them cara I wan Basillowitz, who soon after granted the English free liberty to trade into his dominions. A company of merchants was accordingly incorporated in London, anno 1555, and had large privileges granted to them by that monarch; upon which encouragement, a considerable traffic was set on foot, to the great profit of both nations, which ours enjoyed solely, for some time. Till then, the Russian commodities used to be conveyed to Narva, a sea-port on the gulf of Finland, but this latter hath yielded, since, to Archanget, which is now, in a manner, the only port, of any consideration, in Moscovy.

After the English, the Dutch and other nations, foou struck in for a share of this traffic, though not with the

fruck in for a share of this traffic, though not with the same advantage with ours, by reason of the peculiar privileges granted to our company; but these were unhappily lost in the time of our grand rebellion, when the cast was so exasporated against the English nation, on his hearing of the murder of King Charles I, that he wholly deprived them of it; since which time, all our efforts have not been able to regain them: fo that our merchants now trade this ther upon the same footing with other Europeans.

The palace, or hall is the most considerable edifice in this city; it is built of large square stones, after the Italian manner, and divided into three parts; in one of which the merchants, both Russians and strangers, have large and convenient apartments, for themselves and their wares; but after the ships are sailed away, which they commonly do in October, they then are obliged to remove to other lodgings. This palace is a large stately building, with a specious struck in for a share of this traffic, though not with the

finalisms court before it, which reaches quite to the river. The courts of judice, both civil and criminal, are held in it to their pregat patricesents.

The Cinede, where the governor refete, is built after the Raffina manner, and forecomed with records which the Raffina manner, and forecomed with records which the manner and forecomed with records which reschading againff the fair; thefe, as well as the houses of the town, as all of wood, but flows and large, and well furnished within, elecably thefe of feeding accept chants. They have all of them a flower within-fide one contains, which are forecast, and the rebuilt and criminal and the resonance of the town, as all of wood, but flows and larger of fallings only in winter the finery, which its areas for every, thick and had upon them, makes them fineseth and coffy during that feedon, which it have to feeve, which the survey of the feeton of the feeton and the other which term white in winter, and reforms their fall of the course of feetings of the court of the cou

Riga the rivals of this, and caused the flow of trade or pass, in a great measure, from it to them.

Archangel is the fee and residence of a Russian archbishop. Its latitude is variously fixed by geographers: father Riccioil places it under fitty-fix degrees forty minutes, and the Dutch maps, after de Liste, restors it shrther north by almost three degrees. We hope ours will be found more exact, which give it fatty-four degrees, thirty-fix minutes, and Longitude forty digrees five estimates east, is St. Nicolas is another fea-port in this prevines, and finds on the fourth coast of the White Sea, about feven reigness well of Archangel. It feems to have been formerly more considerable than, it is a feeing it gave name to this whole hay, or fea, which was, from it, flyl'd St. Nicolas and the statement of the white Sea, about feven heads here.

Colmogored is fituated on the well floor of the Dwina, about nine or, ten leagues above, or fouth of Archanger, and is reckoned one of the most confiderable towns, next to, in this province. It flands a little above the confluence, of the civer Pinega into the Dwina: M. Le Bran, who calls it Colmogors, fays it is large, and the feat of a Ruffan archipithon. Ruffian archbishor

Here is a frong fortrefs, called Nova Dwiniska, it was lately built, to defend, the mouth of the new canal, or most northern mouth of the Dwina, on the William Sea, It hath a large wooden bridge over that river, with a draw bridge in the middle, wide enough for two thips to pass the desired of each other.

abreast of each other.

abreat of each other.

The city of Sottolitsa is very populous and confiderable, and inhabited by many wealthy merchants, and ingenious mechanics: it stands upon the fouth limits of this province, in latitude firsty-these degrees. A territory named Wollostuscy, is near this place; it is inhabited by men of a different language, who are civilized, and belong to the Greek church: they are supposed to have hither from Livonia.

There are a few islands near this part of the Rud fhore, but they are of very little importance: namely, Martinowitz, which is about one hundred and thirty miles long, and upwards of fifty broad. It flands near-two de-grees to the northward of the arthic pole, is full of woods, and watered by feveral rivers: this itland is generally eather Candenora, or Kandenofs. Farther north there is another

on the few villeges which this province contains, are wretched phase.

If. The province of Jugora, or Juguriki, is bounded, on the fouth west, by Massen; on the north, by the northern occum; on the east, by the province of Petzora; and, on the fouth, by those of Onfiloug and Permin. It is a very large territory, divided by the polar circle into two parts, the far geneter of which her on this side; however, in situation is cold enough to make the land barran and uncultivated; so that the country is modify overrun with forests, and covered with lates and begs: it hath also abundance of rivers, the principal of which are, the Fitsa, Goloebineas, Goloebica, Otma, Oymitus, Peitza, Peiaitza, Volologa, and Sudega; all which flow northwards late the gulf of Teasea, called by the Russian, Teaskaia Gouba. There are several others on the south end of the province, which take different course from this, and empty themselves, some into the Dwina, and others into lakes. The territory of Vaconitas Volost is in the middle of this province: it hath a sew towns or great villages; and on the fouth parts are the Jugorlar mountains, which divide that part from the province of Zirania, and are always covered with ice and snow.

The town of Jugora, or Juhora, stands on a famili bay of that name, on the northern coest, in the latitude of fitty-eight degrees, between the island of Gandanois on the work, and the gulf of Petzerfixia on the north-east; and the island of Colgoya lies over against it, about rwenty leagues from the land.

III. The prevince of Condora, or Condicthi, lies between the Dwina, on the work, Jugora on the horth, Petason cest the east, and Pewnia on the fouth. It is a land the latitude with the land of the Samoides.

IV. The bravitory of Teelca, north of Candora and Juhoesic, on the mothern sea, and firty degrees twenty minuture east longitude.

V. The province of Petsora is a wast territory extending titles from the latitude. It is bounded, on the west, by the givent of that lake, runa quite through it, in a direct

Beauties the capital, there are three towns in this pro-vince; namely, Weliki Poyalla, near the spring head of

the above-named river; Papynowgored, above thirty-feir leagues below it; Borvanidate, on the griff of its name near the mouth of the Peteors; Peteorskoy, on the set of the fame; with feme others;

VI. The territory of the Vogalisi, silted also Vogalital, Vogalikoi, and Volgelitae, is fented fouth of the fast named province, and north of that of Permis. Their country is also divided by the Ohlan mountains from the stountry of Siberia, on the set, and extends itself were vised to the river Irtis. Their people differ for much from all their neighbours round about, that they have been fleposhed to be of Tarraisle outraction, but without any probability; fince all the Tartard, sirker of Siberia; Casam, or Afracan, are all Mahometane; whereas their Vogathin are heathens, and refemble most, in their religion and resultance, the Siberian pagant, but are more civilized than they are. The country reaches from fiaty-two degrees their minutes to almost fixty-three degrees of north latitude.

thirty minutes to almost fixty-three degrees of north latitude.

With reduct to their religion, they acknowledge a furgreene Being, the creator and prefereer of all things; and facrifice to him once a year, at the end of furnator, in one of the nearest forests, forme of the best candi they are masters of; one of each fort; but can give no resident for fo doing, but that their fathers did fo. They believe inafatures life of rewards and punishments, but withrost being told that there are any devils, or malevofent phirity, and they bury their dead in their best cloaths, together with fome money. As little corn comes to perfection in their country, they lies chiefly upon the milk of their cattle, and such game as they kill. They never marry within the forbidden degrees of confanguinty; but in other respects may have as many wives as they can maintain, which they purcluss of their parents.

Here are neither either nor towns, but villages made up of hits of a conic figure, with a hearth in the middle; and hole at the top, to let the smoke out; which hole, however, they cover with a thin transparent piece of ice, to let some light into their hust, as foon as their fuel is burnt or a coal. When a woman is near the time of her defivery, the is obliged to go into a private but raised on purpose for her, and so live in it feparate from her husband, and all matrimonial intercourse. The men go a shooting of eltas, fallow-deer, and other game: they live quietly under the Russian government, and pay their tribute in stine and fure, which are fent into the public repository at Siberia.

VII. The province of Perman, or Permethy, is one of

under the Rufflan government, and pay their tribute in filins and fars, which are feur into the public reportery at Siberia.

VII. The province of Peuma, or PerateRy, is one of the largest in the Rufflan enspire, and is bounded, on the morth, by the country of the Voguliai; on the cast, by Siberia; on the foath, by the province of Vasta; and on the cast, by Siberia; on the foath, by the province of Vasta; and on the cast, by Siberia; on the foath, by the province of Vasta; and on the cast, by Siberia; on the foath above firty leagues where broades, though wanth narrower in the foathern part towards Castan, or Castan. Notwithstanding this vast extent, if it is far from being confiderable upon any account; if we except its rivers; fother of which are large, and run a vast kright; the most remarkable one in the Kamas, which receives several others; and springs from shar long chain of mountains which part it from Siberia, and which extend themselves from the kingdom of Castan, quite to the Frosen Sea; that is, from fifty-five to almost seventy degrees of intitude. Besides this ridge, the country abounds with many more, as well as lake, so that its foil is for far from scribe, this the inhabitants are obliged to eat peas, beane, and other pulse, fusted of bread. They differ likewise much from the neighbouring nations in other repoets, and other pulse, fusted of bread that an analyst the first the neighbouring nations in other represent as a place of little note; the object to the Rufflant, and pay their tribute in horie; and several kinds of furs. The chief towin is Pernis Vellicula, which authors represent as a place of little note; though its name implies formething considerable.

VIII. The country of Ontitorig or United the arth. by the rivers. Waga and Dwina; on the west, the borth. by the rivers. Waga and Dwina; on the west, the string towerine are only small, but berrein, a great part Belling Covered with vast and imperentable woods. These hat for a river Jush and Suchana rise in this province, the former on t

meeting near the middle, thesh the grian Design, brief in name imports, the decibe river. Other rivers, which fall into the Suchano on the self fide, see the Petternga Recas, which dielde Outloug from Vologde, the Brouffiels, and Strickfish. There fall into it, on the west fide, those of Reifona, Outloug, Sousenge, Verchna, Jorge, and a fisciler out, at the mount of which shaned the mountery of Toeleys. The Wags, which likewise falls into the Dwina, runs through fonce of the frontier of the growince; that of Outloug, which like his the fines had also in this province, and runs to couré about fluge of the legale front that of the Wags, and falls into the Buchman. This phovince, and runs to couré about fluge of the growince of the Succiano, which receives the Jugh a lette pelow it. It is an archipaticopil se of the Kursan church, and hath our or twelve pent character but for which force, the cipples and fighted of which are cevered over with this. SECTON.

Consuming the fourth grand division of Ruffa, termed Mis-

THIS division of the Ruffian empire comprises the Crim. Lefgee, Buffeer, Ralmuck; Ufbeak, and some left confiderable tribes of Tartars is part of Circania, Siberia, Kamichatka, Sameieda, and the kingdoma of Affracan, Cazan, and Bulgaria, but as the principal part of these belong to Asia, we shall therefore refer our readers to that part of chie work for an account of them, and confine outcless to a description of the kingdoms of Cazan and Bulgatia, which are in the European quarter.

The kingdom of Casan, which the Ruffians call Cazawo Cazana, was formerly subject to in own princes, who were streamed powerful monarche; but was at length subdued by the cazar Basilowita, surnamed the Great, finished the conquest, anno, 1554, and added to it the kingdom of Affracan; ever since which these two kingdoms have been looked upon as the two richest jewels in the Czarifary richness and fertility; and that of Affracan, on account of its extraordinary richness and fertility; and that of Affracan, on account richness and fertility; and that of Astracan, on according its vast and valuable traffic.

er its valt and valuable traffic.

Cafan is bounded on the north by the provinces of Vaida; laft deferibed, and Permia; on the eaft by the Tumeran Tartary; on the fouth by Balkinia Bulgaria, and
Aftracan; on the weft, by the Lower Novogorod, and
Moscory properly fo called; but, according to Mr. Ifbrand's map, not fo far to the eaft at the common ones
do generally place it. It is watered, by the two rivers
Wolga and Kama, which run through it, and earich both
its foil and its traffic.

The chief towns in this kinedom are. Cafan the control

Wolga and Kama, which run through it, and earich both its foil and its traffic.

The chief towns in this kingdom are, Cafan the capital, Laifoff, Sabackzar, Pagantzina, Swiatik, Koleio, Kockforga, Malmith, Tetul, Karakul, Sundin, Batula, Simburlki, But, Uza, and fome others of lefa note.

The town of Cafan, Casan, or Cazanum, is feated on a river of the fame name, near in confluence with the Wolga, is a large, and populous city, and the feat of a Ruffian metropolitan. The vast number of churches, monafteries, and fiveples which adom it, make it yield a fine prospect both from the land, and from the vessels that fail; up and down, the Wolga. The description which Olegains, who had been there, gives us of it, is to this parport; that it is situated on a sine spacious plain on the river Cafanks, about seven werses from the place where it alls into the Wolga, in latitude sity-eight degrees thirty-gight, minuters. Most of, its houses are of wood, as well as its ramparts, and towers. The castle alone is surrounded with shope walls; and this is well-stored with artillery, and warsite aramunition; and the river which runs round its serves it instead of a ditch, which senders the place very strong. A garrison is kept in it, all of Ruffian soldiers, and the Tartars which inhabit the town are forbid to optor; it, under pain of death. The castle is governed by its, own Waywode, and the city by its own governor. Abous seven wells below the town in a reach where the view is broad, there is a large dock for building ships of a considerable bulk, which are afterwards sent down into the Caspian sea. The city is excellently well situated so being well supplied with all manner of necessaries and of a confiderable bulk, which are afterwards tent down into the Cafpian fea. The city, is excellently well futured, for being well fupplied with all manner of necessaries and previsions by land and water, and which are here in great pleaty and cheaptely.

The town of Kockscaga, about feventy miles from Caran, on the banks of the Wolga, is very small. There is also an inconfiderable town on the fide of the river Cafanka, near the frontiers of Bulgaria, surrounded by a statement will, and but thinly reconst.

wooden wall, and but thinly peopled.

At the diffance of about three miles from the Walga are the rivers of Setulieriki; which was once an opuleut city between Cazan and Aftracan, till Tameriane the Great

destroyed it.

The kingdom of Bulgaria, otherwise flied the Horda or region of the Zavolani, was antiently inhabited by the Bulgares, or Volgares, a strange race of men, who broke into these parts from Asia, and so difficient in their morals, that their very name became a term of repack amoust their neighbours; and from them the whole kingdom had that of Bulgaria given to it: it is divided into Great and Little, or Affatic and European. The latter, which lies

along the fouth coafte of the Danwiet, having the Black Sea on the eaft, and Maccdonia on the well, became free merily past of, the kingdom of Hungary, this fudded dependent of Turky in Euterpe, and it interests in foreign to this anticle of Rusha, and will be fighten of in the proper place! Bulgaria the Great in that of which we are not going to focals, an part of Rusha in Europe, conquered from the Tartars by fome of the former cause of Molecowy. It hath its name, as well as Hugaria emissis, from the Bulgaria the Great in that of bounded on the most by the kingdom of Cazan, left deferibed; on the eart, by Balkiria; on the fouth, by the Samata, which divides it from the kingdom of Aftreane, and to be like, well, by the Wolga. The large lake Keaphewl line on the fouthern the past of it, about twenty fowe miles from Camariale; and this is the med; we can meet weath mention concerning the Rushan Bulgaria, whose sapital flands on the north part of it, about twenty fower miles from Camariale; it is a summan, as a summar is fituated on the left flore of, the river of its name, astward of the Wolga, into which is amountain of a moderate height, and which terminates at the flore on which the city stands. It is large, but wantshedly build, of wood, as well as the walls and covers that farround it. The town covers almost the wholy mountain, and the sum covers south of Bulgari, and in latitude fifty-two degrees forty minutes, and longitude fifty degrees thirty minutes calk.

SECT. VI

Comprehending the fifth division of the empire of Russia, called Russian Lapland, and Nova Zembla.

RUSSIAN Lapland is bounded, on the north, by the white Sea; which forms there a spacious gulf, and by the river Zoloticza, which discharges itself, sato it on the east fade of Kierni, and on the west is hath the Danish Lapland. It is further divided into three parts, according to their stream on the west is lath the Danish Lapland. It is further divided into three parts, according to their stream on the rest of the stream of the property of the stream of the stream of the property of the stream of the strea fouth eaft.

fouth earl;

The circumjasent country is mountaineus, woody, and barren; the air extremely cold; the inhabitants are as ruds as ignorant; and, in general, the country, is much like the Swedish and Danish Lapland.

Most of, the islands, circum, and rowns, stand on the fea-coasts, and are as follow; Kiersi, situated near the mouth of the river Zolotica. Zolotkia town and island, in which is a moustlery of the fame name. Kerfelli, or Kieslit, on the mouth of the firsth-water river. Kernekos, a town and island, with form foull ones about it. Kovotoka, fituated on, the mouth of a river which slows from the lake, Pajortwoi into the gulf Ombais on the mouth of a river of the tame name, which empires itself into the vods, lituated on, the mouth of a river, which flows from the lake Pajorfivoi, into the gulf Ombais on the mouth of a river of the fame name, which conpties itself note the Goubs, or Salt River, Wolna Oftrof, or Island of Deer, with a town of the fame name. Cape Touria, Southete, Casavaron, Warfiga, Pelenga, and Pelitza; which are but small towns. Southow, to Island of the Cross; three others on the mouth of the river Penoi; Cape Ornlogone, with a bay; and haven, at the entrance into the White Sea. The isles of Lombacho; the cape and isles of Swetenges, in a bay; at the surther and of which is the town of Jockna, situated on a river of the same name, which associated by the Dutch Nagel Eyland, or Nail Island; the Mariners Bay. Seven islands more on the mouth of a pameles river, well-stored with falmon, as are indeed most of the rivers on this coast. The Golden Bay, Daelna Oligonia, or Fasther Olignia, to dissinguish it from another of the same name, and peace the coast, samely, Daelna Silens, or Fasther Olignia, to dissinguish it from another of the same name, and peace the coast, samely, Daelna Silens, or Fasther Silens, for of Wasonia; Bliesna, or Nearer Olignia; the island and town of Kisdwin; the town, island, and lake of Kola; the Fishermer's island 4 Petainsta river; with a monastery to the same of Polina or Polina Capen with a monastery to the same of Polina or Polina Capen with a monastery to the same of Polina or Polina Capen with a monastery to the tense of Polina or Polina Capen with a monastery to the same of Polina or Polina Capen with a monastery to the tense of Polina or Polina Capen with a monastery to the tense of Polina or Polina Capen with a monastery to the tense of Polina or Polina Capen with a monastery to the tense of Polina or Polina Capen with a monastery to the tense of Polina or Polina Capen with a monastery to the capen of the cap

faill port, structed on the mouth of a liver of the fame hape, which falls into the ocean. It has in latitude farry, cight degrees affy-five minutes, longitude fairty-four grees it weren't five minutes, longitude fairty-four degrees affy-five minutes, longitude fairty-four degrees the town of Wardways and the White See.

The inland part of the Kuffian Lapland, called Terricol Lepoiria, is almost furrounded with the fee, and is the hand that makes the gulf of the White See. It is sue left woodly and barren than the reft, and the chief town in it is the four fairty four degree venture for minutes, longitude forty degrees cell. Lockens is another figual fee-pore, in latitude farty-eight degrees, at the mouth of a river of its name, which falls into the northern ocean. The other difficit, called Reliamouriko. Lepoiris, les at the bottom of the above-mentioned gulf called the White Sea, like the part, it gold, barren and thinly inhabited. The chief forom is Soma futuated on the frontiers of the province of Molecovitifith Carolic, and at the yer entrance ingo the Ruffian Lapland, on the White Sea, Milling that the contract of the different provinces of the Ruffian empire with a description of Nova Zembia, which name, in the Kuffian language, fignifies New Land, it is feparated from the northern part of Kuffias by the first called Veigatz, or Wygatz, which lies in north lativide feventy degrees. The land that forms this first is a promontory, adventing to light of the continent of Greenland on the well, or of Tarary on the east; but it is now known to be an island of great extent.

The English were the first discoverers of this country in the year 2533, when captain Hugh Willoughby failed thister with three veelles, and advanced from the north cape. I furnary as far north as the seventy-second degree of latitude, where he giought he had described this land; but being obligied, through after of weather, to put into a port of Lapsand, he there perithed with cold, with all his company. Three years afterward captain the r

No. 47.

As they cannot fly, they are pubble to that their ensuring attempt by leaping along, which they do premy well, by the belo of their floort wings. However, this bird is activing upon the water, and feems to be very kilful in catching its food. When the fun begins to fet, they retire to the rocks near the fea, where they continue till morning, at which time they are eafly taken. Their eggs are very good; but the selfs has a fifty fifte, and is never eaten but in cafes of great neceffity. They build their nefts on the cracity plints of the rocks, to which their birds can very eafly glimb.

The petiguin is not only common in their northern parts of Roffis, but likewise in feveral countries of North America, and is every-where known by the fame name, with little st. no variation, which in the Celtic, and by our prefent Welfin, fignifies a white head, as thus bird schually hath. This, together with fome great signification which is found in many of the radical words, and proper names used by people in those diffant regions. Consums a curtous conjecture, we have barrowed from the authors of the Universal History. I before taken notice of, namely, which they register their and the first peoplers of Europe even in its remoter's parts, but have preferred their, antient, language more than any other nation we know of, except the Chinele. The fourthern part hash been fince found to be inhabited by a figuat, fearthly for of peoples, who, cloath themselves with feal-fina, or with the fining of a first province half frequently proved a bone of contention between Ruffis and Sweden. In 1202 it fell under notched. They live upon what game or fift they continued the refer to the late acquition of Carella, or the government of Wiburgh, it must be observed that it composes part of the great duchy, of Finland, which, the Sweder Code to Ruffis, and contains the three diffrida of Finlandith Carelia, Kesholm, and Sawelex.

This province half frequently proved a bone of contention between Ruffis and Sweden and the first part of the same

wern fixed near this place.

Kexholm is a very extensive diffired; but is chirdy covered with rocks and lakes. It has been frequently convered with rocks and lakes. It has been frequently contended for by the Ruffians and Swedes, and was referred to the former, by the treaty of Nytladt. The most remarkable place in it is, the town of Kexholm, which

Att When the

s a place of great firefigth; it is fituated on two finall flands at the influx of the river-Wozen into the lake of Ladoga. The principal part of the town is built on one of hefe fifunds; but the hoofes are all of wood; and the safile flands on the other filand.

SECT. VII.

roing an actume of the persons, dross, and manners of the Russians; the houses and furniture of the compant people; their food, fundacts for strong liquers, their roads, manner of travelling, language, Ge.

heaveling, language, Us.

A MONGST fuch a variety of people as are contained.

A in this extensive empire, the fixture, faitures, complexion, genius and habits of the natives differ from one another, as they are differently fixtated.

The Laplanders and habits of the natives differ from one another, as they are differently fixtated.

The Laplanders and habits of the natives differ from one another, as they are differently fixtated.

The Laplanders and habits of the natives differ from one another, as they are differently fixtated.

The natives and furs from head to foot, and afoally few two fkins together, that they may have the fur next their fkins, as well as on the dutide.

The natives about Moscow, Petersburg, and in the middle provinces, are of a moderate fature, have good complexions, and hale, vigorous conflictations; but nothing is for much admired as a ruddy countenance: they are ashamed of tooking pale, and if they want red, dont fail to lay it on pretty thick. They are, it is said, inclined to be corpulent, but those I have feen, and we may fee them every week at the Greek chapel in York Buildings, see of a moderate fize; both men and women. The vest, gown and cap, were the usual cloathing of the men, till Peter, the great obliged them to wear short cloaths, like their fouthern neighbours; and the people of fashion now generally conform to the French mode; though I observed, that several had coast down to their heels, like a fearman's watch-cost; and it seems a little barbarous to compel the poor people to leave off these fort of cloaths in so cold a climate as Rossia. The men and women both wear their hair long, and the virgins had their hair braided, as some of them have fill; the snarried women put theirs under a cap, but the gentry in general conform to our dreft. The greatest difficulty cast Peter met with, was, to make the men part with their long beards, which they seemed to look upon as facted, and took it as a favoor (when they found they must part with them) if he would return them again af

after they were cut off, that they might be huried with them.

The women in general, fays Mr. Hanway, are not fo amiable in Ruffia as in many other countries: indeed, they daub themfelves to much with artificial charms, as to conceal thoig graces, which, it may be prefuned, nature has beflowed on them. In general they profefs, that if nature gives them fufficient plumpnefs, they can procure beauty themselves; and to this purpole we may observe, from the very idiom of their language, that crains devizes, which literally fignifies a red virgin, is the term for a pretty girl. Although it has been observed, that very cold olimates produce the same disposition to amour as very hoc ones, yet this does not appear to be entirely the case in Ruffia. Chaftity, as a virtue, is not, indeed, more in repute in this country than in the fouthern parts of Europe, but it feems as if the fame causes in nature, which refirs in them from a fierce resentment of the illegal commerce of such gratifications. As the Ruffians are not for refined in their manners as to have a very delicus sense of honour, so we find that the chaftisement of sense insidelity is seldom carried beyond a beating, whilst the adultare generally may compound for his offence by a pecuniary mulci. Among the common people, the eccleficatical haw oblige a man to marry a woman whom he has debaushed.

The Ruffians, the same writer observes, are of a middle stater, though many of them tall: the common people, fill are fond of their ancient customs; and though a majority of them salum to modern improvements, others choose to suffer great inconveniencies, and pay additional rares, rather than forsake their heards, and some ide difinitelions with regard to religion.

The common people, both men and women, are

rases, rather than forfake their beards, and some side di-tinctions with regard to religion.

The common people, both men and women, are cloathed in long coats made of sheepskins with the wool inwards, which are very proper for that climate, and cost only two rubles (aine shiftings) and swaddle up their legs and feet in coarse cloth: their caps are lined with fur, and

cover their ears and neck as well as the head; they wear a faith about the loins, and have double gloves, one pair of woollen and another of leather, which have no partitions for their fingers, only a place for the thumb. People of condition follow our modes, only they have a full great cost over all, lined with furs, and a deep quitted or furred can when they go abroad. The britise weer flowered fills closks that d with furs, affailly made of the skine of white large.

Ares.

Perfons of both first hang on their breaft a cods, which par on when they are haptised, and this they never lay tide as long as they live. The croffes of the peafants are field, but these worn by perfects of wealth are of gold or live.

Persons of both fires hang on their breat a cools, which it par on when they are bapitsed, and this they never by aside is long as they live. The croftes of the peasants are of lead, but those wore by persons of wealth are of gold or filver.

The Rusham feldom fail of bathing twice a week, for which purpose along devery bone-lexeper is provided with a bath; and he that has more of his own, goes to those that are public; and baron Mayerburgh alimns, that they pay so little regard to deciner, that man and women subset no kruple as go into them promittuously, and there appear isked to each other. It is also observed, that they will other failty our naked from the warm bath. The about in the cool, roll themselves in the frow, and plump-agains into the warm waser; and this vicilitude of freat and cold they beneficial to the confitution, by residering them healthy and hardy.

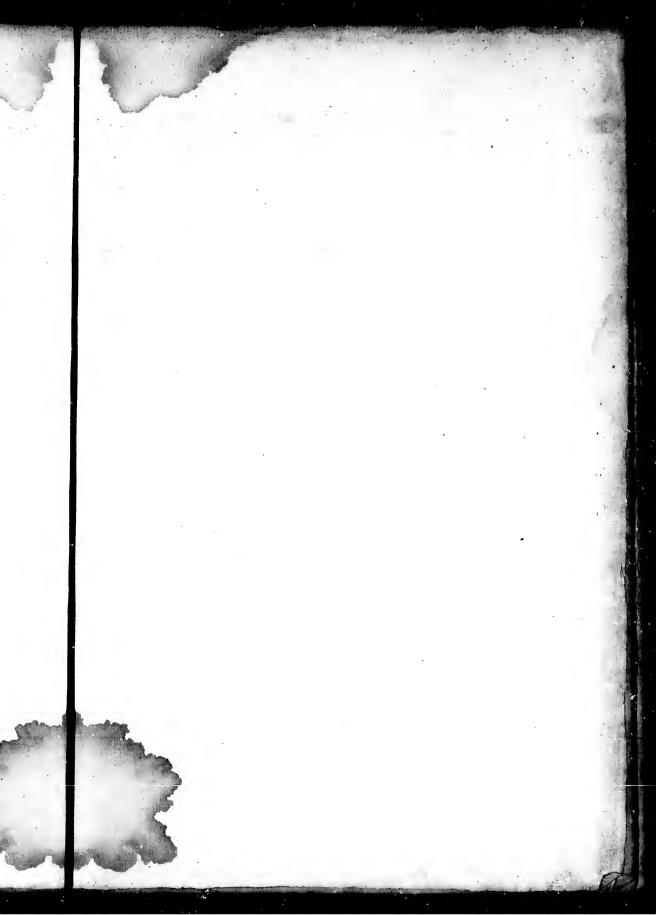

In visits of ceremony, the men and women usually welcome each other with a kift; but those of the lower laids show their profound respect for persons of high rank, by profitating themselves on the ground before them. Even the common people failute each other with great civility, but before a Rusham welcomes his goel, the vintor is obliged to make the fign of the crofs, and at the same time to bow to a picture of fore faint, which is so placed as to be fean immediately at coming in.

With respect to their method of building, their most usual way, both in the towns and country visinges, ii, to lay one beam of wood upon another; and, fastening them at the four corners, fill up the crevices between the beams with most. The house is a transported to the awar: this is fast at the top, and boarded, upon it, and on a kind of flerkes round the room, the whole family sleep without beds. The house is in the villages age contiguous, and built close together, as those in towns commonly are. Three benches, an oblong table, and the picture of a faint or two, compose the principal part of their furniture. Instead of candles of laship, the principal part of thei he mit course at an entrainment unany constit of hams, tongues, and other cold dayoury diffic, that the liquot may relifit the better, I prefume; with these stand several made diffices, oreside with oil, oilves, onlones, and garlick; which having remained upon the tab's about an hour, the second course, consisting of soups and boiled

and roaft meat, is brought in 1 after which fullows the de-fert, and liquor in abundance; though this goes round pretry friency all the time, the health being began at the beginning of the meat, is large cupe in the fathion of a

Their liquots are either resear, or quare, a feet of femile section and with heneycombs; but they are of late years printy succh come into the entiting of hear; the peaks of which the government entrofies, all the brewheales and places where her is resulted being the expensive an and private houses forted to have licences of the government, to brew. It is generally very throw, or the fundame would not still the property of the state of the government of the government is a size, they fedom conclude without a drain of brandy or infilts, and is in they fedom conclude without a drain of brandy or infilts, and if may be had at realmonthic rates; but of topic also the government has the profit. They used to begin their mitertainment at sen in the morning, and by ewelly or one would drink their feither, and also a sentence among the Ruffines, whether rich or poor, to keep they dinner; and this probably may be one restoned giving sentences for her with the government of them, this they may return to rate. If in Ruffine, a person may travel theme, and with great expedition both in furname and winter, the good, roads leading to the chief towns are very exactly measured. With the swrite marked, and the post-lage fixed at person, the rich for throughout the whole simpire, and even in by being, a pillar, interibed with the number of worth, a civetted at the end of each. The expense of travelling in this mainer is to early that between Riga and Peterfourgh, the hire of a post-horse for every wert is no more than two copils; but between Novogrod and Peterfourgh, only one copils; but between Novogrod and Morcow, but half a copill.

stering; between Novogrod and Peteritungh, only one copelle; but between Novogrod and Mofcow, but half a cupelle.

Carrieges for merchanes are drawn by one horfe; thefe vehicles are nine or ten feet long, and two or three broad, and are principally somposed of two strong poles, supported by four wheels of near an equal size, and about as high as the fore wheels of our ordinary coaches, but made very flight: many of the rounds of the wheels are, of one piece of wood, and open in one part for near an inch; and some of them are not shod with iron.

Spring and autumnt are very bad leasons for travelling; as my carryan at this time experienced, says Mr. Hauway. There is a law in force, made in savour of the carriers, by which, any contract for transporting merchandize in the winter, becomes null aid void, if the roads are broke up by a thaw, and thereby rendered impracticable to travel in stedges; in which case, the carriers have the liberty of taking out their horse, and leaving a carrana in any town they can mind can't generally fet out about twelve, both in the night and day, except in the heat of summer. In the winter, between Petersburgh and Moscow, they usually travel seventy werfix in twenty-four houses (forty-feventy miles English) but from Moscow to Zaritsen, only forty or fifty werfix.

Nothing, fays our author, can be accommodated more.

travel feventy werfts in twenty-four hours (forty-feven, miles English) but from Mofeow to Zaritten, only forty or fifty werfts.

Nothing, fays our atthor, can be accommodated more for eafe and disparch; than travelling in fledges in frosty weather, when the flow is well trooden. As a proof of this, I may mention, continues he, that I flept without waking whilst I was carried a hundred werfts (faxy-fix English miles.) The whole food was marked out with firtness, fet in the flow on both fides, at the diffance of about twenty yards; the confunction of timber on these occasions, at a moderate computation is, a hundred and twenty-eight thousand, four hundred and eighty trees. There were also great piles of wood at certain distances, to be fet on fire, to give light to the empress and her court, if they passed by in the night.

Her imperial majetty is drawn, on these occasions, in a house or room, which contains her bed, a table, and other conveniences; where four persons may lodge, and be accommodated with every thing they want. This machine is fet on a fledge, and drawn by twenty-four post-horses; if any of them fail on the road, others are levely to Supply their places in the road, where the post-horse is fine to the road of the forestimes stops. Peter the great once made the journey from Petersburgh to Moseow in forty-siz hours, bring four hundred and eighty eight. English miles. We are rold, that is in not uncommon to go, it with post-harses in seventy-two hours; and that for fourneen or fateen, rubles a commodator of post-horses.

med and prine in it. Their execution is a corru linek, ill-theped, whole letters they have increal number of thirty-night; but ignorants, till of the country, that in thoroughly coursed this whole souther, till clerry and noblity, as well as the country, to good, write, or formaly read. A greater on was given to it, and to greater on was given to it, and to get a such as the country, who, by beforeing his ferrours, thomore and profit, on these who were made in a well as fully for many foreigners. In well as fully forther and profit of the substance of the country of the strong and the second for all forth of learning, and fonding ablesten and gentleman into ferrians. ablesten and gentlemen into fereign countries for education, hath gone a great way, towards transplanting the mufes law, a claimate till then unknown to them: and, had he lived lenger, would in all likelihood have wholly effected in fights of the inness averfice of his fullycits to them. There are not many universities in this country, nor any feminaries of learning, except two or three academies for art and frances, for up in the capital, and a few colleges of felpoin there; and in some other principal cities, for the instructions of youth, which yet, it is to be feared, here not mat with that encouragement after that monarch's death as they did in his life-time, though more owing perhaps to the troubles that have happened in the enfuing reigns, than to dislike in any of his successors. But of this we shall treat more particularly under the article of learning.

SECT. VIII.

Of the religion, marriages, and funeral ceremonies of the

THE Ruffians boaf, that they profess christianity, according to the pure antient rites and doctrine of the Greek church, though in many respects they have so far deviated from it, that they have introduced even more superflittious and ridiculous custions, and lay greater stress upon them, than the most bigotted papists in the world. They pretend, though without any foundation, that the apostle St. Andrew, whom they hold in great veneration, planted the gospel among them; when it plainly appears, according to Zonars, that they were all fank into the lowest pit of idolatry till the time of the great Voledomir, duke of Russa, in the year, ogg. whom, having made feveral confiderable conquests, he was honoured with a grand embersy from the emperor Basilies, and with himse bishop, and other elergymen, to convert the Ruffians to Christianity. Volodomir himself became, one of the first converts, after which, having married the daughter of that emperor, he contributed all he could to establish the Christian faith through hir dominions, and had the pleasure to fee it esseeded, in a little time; and as they received it from a Constantinopolitan prelate, so they have always continued in the saith and communion of the Greek church, some few articles and superfictious customs excepted, not worth troubling our readers with. They differ from the church of Rome in their dishelies of transition, purgatory, the Pope's supremacy and infallibility, &c. but they seem even to out-do them in their worthip of the Virgin, and other saints, crosses, resiques, and the like. They use auticular confession; communicate in both kinds; make the Athanasian creed the rule of their faith; and have a settled liturgy, viz, that of St. Bail, which they use three times a day. They observe four lents in the year with great friends, besides fasting every Wednesday and Friday in the year. They reckon the creation of the world, which used to be their common aris, to have been above 7220 years ago, that is, about 1500 years earlier that any Christian nati

grand jubiles was celebrated, at his metropolis, with the ringing of bells, firing of gues, and other folent, re-joicings.

He then blows upon the child three times to drive away the devil, by whom they suppose children before baptism, are possible. After this, he catte of a little of the child's hair, which he puts into a book; and heving asked the godfathers, whether they defire the child should be hap-tited, he dips him three times in the water, with the usual words. He then puts a corn of fatt into the child's mouth, and making the sign of the crost on his foreshead, lands, breast, and back, with conferrated oil, puts him on a clean stirt, saying; "Thou are as clean from original sin as that shirt," They asserwards put a small cross on the child's neck, which he must wear till his death, or be denied Christian burial; a petallas faint is also assigned him. They never taptish two this sine is also assigned him, and the child a neck, which he must wear till his death, or be denied. Christian burial; a petallas faint is also assigned him, interested by haptism, they therefore administer the shearment of the instant, who are "er asserward permitted to parakh of it. They baptisa their adult prockly us in a river, immerting them thee times, mentioning the often words.

The government of the church was, till the late case. The metropolitan of Moscow was patriarch of all Russia, but was ordained by that of Constantinople till about the year 138%, when one Hieronynel, then the worthless patriarch of Constantinople, having been degraded by his clary, came into Moscow, and, under pretence of having been deposed and persecuted by the Turks, found means to revenge himself on his clergy, and to get an immension to continue though the case of the whole Greek church, and thereby saving the root better case. The of the whole Greek church, and thereby saving the root has a second by the crase and

fair of möney for himfelf, by propoling to the then ezar, Theodore Iwanowitz, to make his capital the patriarchal fee of the whole Greek chutch, and thereby Javing the trouble and charge of going to receive of its metropolitan his induction from that of Constantinopic, as they had done till then. His propofal was excepted by the ezar, and the whole clergy; and Hieronymo having, January 15, of that year, met the whole body of them in his pontificals, if the cathedral of Moscow, and made an harangue to them, foitable to the occasion, did, with great ceremony, resign his patriarchal staff, tiars, &c. into the hands of Jacob, the then metropolitan, and installed him, in a folentin manner, patriarch and head of the Greek, church. This was followed by an instrument of his resignation, and his successor's installation, drawn in form, and laid up among the archives of that cathedral) after which, he retired, with all his wealth, to Rome.

On the elevation of this metropolitan (who has been, till then, the only one in all Russia) to his new patriarchale, two other archbishops were made metropolitans; viz: that of Noyogored-Veliki, and that of Roslow; and since then two more were added, whereof one resideth, at Casan, the other at Saricow. These metropolitans, we are told, were chessed by the craer, and the patriarch by them and the bishops; but since by the car alone. This patilarchal dignity continued till the time of the late Peter the Great, who being just returned from his travels, upon the demise of the last incumbent, declared, that he would have no more preliates raised to that dignity, but that himself would be fole head and governor of the Russian church. However, he nominated the metropolitan of Rezan, a Pole by birth, and a man of learning, to take upon him the administration of all ecclessifical afferiar under him, and to be accountable only to him. Such opposition was made to this great change, by the hishops and clergy, that the casa, who has the proposition of the terminal country in the Russian church, a

Was test; one Ever auh to rich and

wint we nave given on that head, in treating of their religion in the Ottoman empire, p. 155.

We shell now proceed to give an account of the mariages and sucreal ecremonics of the Resinan. With respect to the former, when every thing is agreed upon between the parents, if they are of quality, a woman, called the fuscha, is appointed by the friends of the bridegroom, and another by those of the bride, to take joint care of the nuptials: and these provide every thing sit for the chamber of the new-married couple. The bed is made of forty sheaves of tye laid in good order, and encompassed with several barrels of wheat, barley, and oats: when all is ready, the bridegroom goes late in the evening, accompanied by his kindred, the priest who was to marry him leading the van on horseback. They are received at the bride's door by her relations, invited to come in, and to sit down at table, where only three dishes of meat are served up, and even these are not to be touched by any one present. At the supper end of, the table a place is left for the bridegroom, which is taken up by a young lad appointed for that purpose, while the bridegroom is talking with the bride's friends: but at length he having prevailed on the youth by some presents, to resign his place to him, takes his feat, and the bride, richly dressed, is brought in with a vail over her sace, and placed next the bridegroom; two lada, at the same time holding a piece of tassey, between them, to prevent their seeing each other. The suach at them, to prevent their seeing each other. The suach at them, to prevent their seeing each other. The suach at them, to prevent their seeing each other. The suach at them, to prevent their seeing each other. The suach at them, to prevent their seeing each other. The suach at the edges with such, having on both sides, near the ears, site or six rows of pearls, hanging down in strings on her breast. The upper garment, which has sleeves an ell and a half wide, is conbroidered at the edges with gold and silver, especially about t

pleces, who shall endeavour to few Ilvision or discontent between os." The women then throw some stax or hempesed on the young couple, wishing them much presperity and some pull the bride by the robe, as if they would take het from the bridegroom, to whom she slicks close, while they seem unable to remove her away from him.

When the nupriel ceremony is ended, the bride returns in a sledge or coacts, by the light of six slambeaux, and the bridegroom on horseback. The men immediately sit down at the table, which is covered with provisions; while the women conduct the bride into her chamber, unders her, and, having put her to bed, come to the bridegroom, who rising from the table, is conducted to the bride's chamber by fix or eight young men, each with a wax-candle in his hand, which they slick in the barrels of wheat, barley, and oats, that stand ground the bed. The bride no soner sea the bridegroom, shan she slips on a morning-gown lined with fur, and rising meets and falutes him with a low, inclination of the head and this used to be the first time of the bridegroom's seeing her sace. They then sit down to a table, whese, among other provisions, they have a reassed fowl, which the bridegroom pulls asunder, and throwing over his shoulder the part he lights on first, they, eat the rest, and then go to bed; while the guests employ themseves in several charms to promote the happinels of the new-married couple. Some time after, an old fervant of the house, who attends at the door, comes and silks whether the husinels be done; and the bridegroom answering, yes, the word is given for the trumpets and timbrels to strike up, and these some time steers and the bridegroom answering, yes, the word is given for the trumpets and timbrels to strike up, and these some time steer, an old fervant of the house, who attends at the door, comes and silks whether the husinels be done; where they bathe themselves apart. After they have been well washed in the bath with to trike up, and there found that the new-married couple are, conducted to the flower, where they bathe themfelves apart. Aftersthey have been well washed in the bath with water, mead, and wine, the bride sends the bridegroom a shirt richly embroidered, especially at the neck, and a rich babit. The two next days they spend in the farther cele-institute of their puncils.

babit. The two next days they fpend in the farther celebration of their nuprials.

The lower clafts of people are fatisfied with fewer ceremonies; for the night before the wedding the bridegroom fends fome clothes, a comb, and a looking-glafs; and the next day the prieft is brought in by two lads, carrying lighted wax-candles. As foon as he enters the house, he gives his benediction first to the lads, and then to the guests. The young couple being fet down at the table, the lads holding a piece of taffety between them, the such a drelles the bride's head, which being done, a looking glafs is brought, and the young couple joining their checks, look and simile one upon the other, while the two such as cast and finile one upon the other, while the two fuschas cast hops upon them; after which they go to church, where they are married with the usual ceremonies.

they are married with the ulual ceremonies.

Marriage being elleemed a very facred thing among them, polygamy is forbidden under pain of death, the emperor himlelf heing allowed only one wife at a time; though if the proves barren, he may fend her into a monadery, and marry another. Second marriages they confider as allowable, but not very commendable; a third marriage is not to be undertaken but upon very weighty confiderations, and a fourth deemed a carried form.

marriage is not to be undertaken but upon very weighty confiderations; and a fourth deemed a capital offence.
Funerals, like other public actions here, are performed with great ecremony; for the foul of the fick perfon is no foomer departed than the widow fends for her kindred and friends, who flacding round the corpfe break out into lamentations. They then walls the body, and having put a clean fhirt or fhroud about him, with a new pair of thin Ruffia leather shoes on his feer, they lay him, with his arms across his break, in a coffin made of the trunk of a tree, and in the mean while fend a present to the prieft to tree, and in the mean while fend a prefent to the prieft to pray for his foul. The coffin is covered with a piece of cloth, or the coat of the deceased.

cloth, or the coat of the deceated,

The richer fort, if the feafon will permit, keep the body
eight or ren days, during which the prieft comes every day
to purify it with incenfe, and by fprinkling; it with holy
water. At length the prieft proceeds with the picture of
the patron faint of the deceated, followed by four virgins,
who are neared salted to the latter, and make vary mourn. the patron faint of the decased, followed by four virgins, who are nearest related to the latter, and make very mournful lamentations, but begin and leave off exactly at a time. Then comes the dead body, carried by six men upon their shoulders; but if the decased be a monk or a nun, this office is performed by those of his or her own profession. The corpse is surrounded by several priests, who pour incense upon it, to keep off the evil spirits, all the while they are singing psams: then follow the kindred and friends with wax-caudles, but without any order.

On their coming to the grave, the coffin is uponested.

. On their coming to the grave, the coffin is uncovered; and the prieft, holding over it the picture of the patron and the priest, notang over the planet of the receast, faint, fays feveral prayers, in which he offen receast, ... Lord, look upon this foul in righteonfacts." Mean while the widow continues her lamentations, and the relations and friends, after kiffing sither the decealed or his coffin, take their leave. The prieft them takes a piece of paper; which is a kind of ticket for his centrance into paradic, figured by the hilhop of the piece and the confessor. This he pats into the coffin, which is then flut and put into the grave, with the face turned towards the east; while those who return to the house of mourning are sup-

while those who return to the house of mourning are supplied with good liquor, to drown their forrow.

They allor forry days for the time of mourning; during which three feaths are made for the relations of the deceased, on the third, ninth, and twentieth day after the burial; during which the priest says certain prayers morning and evening over the grave, which for that purpose is covered with a small but of tooks; for though the & diffuse do not believe in purgatory, they maintain that there are two places to which the fouls retire after their separation from has bade, there to wait till the day of judgment, some in a slaces to which the fonds retire after their feparation from the body, there to wait till the day of judgment, fome in a pleafant and delightfel abode, where they enjoy the converfation of angels; others in a gloomy and difmal valley, where they fee nothing but devils; and believe that, while the foul is yet on its way, it may be diversed from the will road by the prayers of the priefits and motiks, provided they are fufficiently fee'd for that butiness.

SECT. VIII.

Treating of the learning, arts, manufaltures, trade, weights, meafures, toint, Use. of the Ruffians.

BEFORE the reign of Peter the Great, learning was but little known in Ruffia ; but this illustrious monarch fpared neither expense nor paint to diffel the clouds of ignorance which overforead his empire, and to infpire his fubjects with a taffe for area and feiences: he founded an academy of sciences, an university, and a seminary at Petersburg, besides other schools in the different parts of his empire; invited persons of learning from England, Germany, France, and Holland, to settle at Peansburg; collected a great number of books; and encouraged his fubjects to travel into those countries where the arts and seinces flourithed. The Russians are far from wanting talents and a disposition for learning. History, geography, and the mathematics, are the studies to which they chiefly

apply themselves. apply inculierva.

There are only three univerfitles in this vast empire; namely, those of Petersburg, Moscow, and Kiow; so that learning may be faid to be yet only in its infancy; however, the members of the academy of sciences not only publish collections of their own memoirs, but compofe a variety of books for the infruction of youth in the kiences, and make translations of the most ulcful books published in foreign countries. Peter the Great established published in foreign countries. Peter the Great established the mystery of printing, that everlasting guardian and friend of the arts, in Russia. His types, and other implements for the purpose, were brought from Holland. A press, with types, had been indeed sent from Poland to Moscow, and a printing hoose erected, by the approbation of one of the sormer cears; but the building was set on fire in the night, and bornt to the ground, by the procurement, as was generally supposed, of the ignorant and supersitious priests, who thought all books, especially such as treated on their own history and the miracles of the faints, to be of very mischievous tendency.

In Russia, the mechanic arts and trades, are continually

In Ruffis, the mechanic arts and trades, are continually improving, and these improvements are far from being entirely owing to the fereigners who reside among them; for the natives being spurred on by emulation, frequently equal, and sometimes excel their matters. They were ferrously should findly amplitude in enriculture feeding of equal, and fometimes excel their masters. They were formetly almost folely employed in agriculture, feeding of cattle, hunting and sisting. It is true, they excelled in making Russia leaster, which had been long practifed by them; but they were whitely unacquainted with the more ingenious mechanic arts. Greek numbers of excellent againstincers, invited hitser by Peter the Great, settling in his dominions, the Russians shewed that, with proper instructions, they did not want the capacity of being taught; and they have now stourishing manufactures of velvet, fills, linen, and woollen stuffs; also copper, brass, iron, seed, and tin, are wrought; and great guns, size arms, gunpowder, wire, cordage, sail-cloth, paper, parchanent, and glass, are made in Rossia. All these manufactures, however, are not brought to such perfection as to be carried on without the sissistance of foreigners, and the additional supwithout the affiftance of foreigners, and the additional sup-plies of those commodities from abroad. Besides, those made by Ruffian workmen are fold for one half, or a third part less than those made by foreigners at Petersburg and

Molcow; and the latter fort will not to more than balf or

Moscow; and the latter fort will not to more than half or a third part of tha fervice. The Rufflan peasants are their own artists, and make all the wtenfills they want. Shipbuilding is carried to great perfection hat,, the Rufflan navy considing, at this time, of a great number of capital thips of way.

It may not be improper, in the make of the total the manner in which caviar is prepared, as it forms a contiderable branch of their commerce. It is made of the roce of the fifth called beloga, and the furgroit. The best is made of the beloga roet, and is of two forts, the granulated, and the prefied. The former, which is most elterance, is prepared in autumns and winter, but the latter is made in furmers, and both forts are exposed to the southern parts of Europe. The granulated for is first slated, after taking away the firingy part, which fist me the oily parrs, it is put into kegs for exportation. Caviar is most palatable when fresh and spread on bread with falt, lecks, and pepper, and is therefore sent in the winter, frozen, to all parts of the empire: but it cannot well be exported fresh, as, without falt, it is soon tainted by warmth.

The Rufflan empire is extremely well fituated for commerce; and her caports are, iron, hemp, wood, hides, grain, pot-ash, wax, cordage, copper, flax, furs, lintedes, slith, leather, tallow, materials for ship-building, &c. The imports are, fugar, beaver-tkins, tin, dye-woods, shalloons, Norwich fluss, irines, friend, Holland, France, Germany, Poland, Turky, Pessa, China, &c.

The Rufflan empire is extremely well fituated for commerce is with Great Britain, Irieland, Holland, France, Germany, Poland, Turky, Pessa, China, &c.

The Rufflan empire frances to the courier of exchange, till it was introduced among them in the year, 1070. Money was then so very scarce in this empire, that foreigners were obliged to barter their goods for those of Ruffla. Most of the foreign merchants then resided at Moscow, but took a journey in the firmer to Archangel, where they had their warchous

fi B

Ruffia. Most of the foreign merchants then resided at Moscow, but took a journey in the semmer to Archangel, where they had their warehouses and factors. This practice continued till 1721, when, by order of Peter the Great, the seat of commerce was removed from Archangel to Petersburg; on which the foreign traders removed their factories thirther, where they are not allowed to keep the goods configned to them in their own warehouses, but are obliged to describe them in marraying halls for this are obliged to deposit them in magazines built for that purpose by the government, to which they pay rent for watchouse-room, in proportion to the quantity of their

watchoule-room, in proportion to the quantity or their goods.

In Peterburg, the merchants and traders, as in other countries, conint of natives and foreigners. The former may fell either by wholefale or retail; but the latter by wholefale only, and that to none but the natives: for they are not permitted to fell any thing to one another, or to have any commercial dealings together. Most of the foreign traders at Petersburg are only factors, and the rest, who trade on their own bottoms, deal chiefly in grocery. The factors are instrusted with large capitals, and, without engaging in commerce for themselves, may raise landoure fortunes. The Russian traders, who bring goods to Peterburg, and carry foreign commodities farther into the continent, do not reside in that city, but annually bring their goods thisher in May or June by water, and in September, October, and December, return with foreign commodities; but the wealthy fave the fatigue of travelling, by fending their factor to Petersburg.

Foreign merchandize is generally fold at a twelve-month's credit; but Russian commodities must be paid for on the delivery of the goods, except the natives find a

for on the delivery of the goods, except the natives find a difficulty in felling their flock; in which case they deal by way of exchange; yet will not barter, goods for goods, but generally infift on one fourth, one third, or one half of the value of the whole in specie; and of late foreign merchants deal for the Ruffian commodities by contract, and

chants deal for the Ruffian commodities by contract, and even advance the money to the Ruffians in winter, upon condition of their delivering in the goods at a fettled price the following fummer; but these contracts are entered in the cultomhouse-books, for the greater security.

Confiderable privileges in trade were enjoyed by the English, so early as the reign of the czar Iwan Bassiowitz, to whom captain Chaucellor delivered a letter from Edward VI. in 1553, and received a licence to trade, which was renewed by Peter the Great. In 1742 a treaty of commerce was concluded between Ruffia and England, by which it was stipulated, that the English should be allowed the privilege of sending goods through Ruffia into Persia i the privilege of fending goods through Ruffia into Perfia that captain Elton, an Englishman, having entered into the fervice of Nadir Shah, and built ships on the Caspian

BUROPE.]

Sea for that monarch, the Ruffians put a flop to this trade, to which the troubles in Perfia contributed. The English, however, still carry on a considerable trade with Ruffia, which exceeds that of any other nation.

Next to the English, the Dutch carried on the greatest trade, with the Ruffians. Bills of exchange are drawn at Petersburg on Amsterdam only; on which account the traders of other countries, who give commission for buying Ruffian commodities at Petersburg, are obliged to procure credit, or to have proper funds at Amsterdam.

The trade to Petersburg is now carried to a great height, for the number of ships which entered that port in 1751, from England, Holland, France, Norway, Demmark, Lubec, Hauburgh, Stetin, Rostoc, Klel, Prassia, Swedelen, and Dantare, amounted to two hundred and ninety. Indeed there is no nation in the world more inclined to commerce than the Ruffians are at present; but they are fossil of chicanery and art; that a foreigner cannot be too much on his guard in his dealings with them.

The Ruffian weights are a fosiothnic, which is one flatter of an ounce, and is divided into halves, quarters, an eighths: a Ruffian pound, equal to ninety-fix fosiothnics; a pud, or pood, equal to thirty-fix pounds avoirdupois: a berkoweta, equal to ten puds. The other weights are the arthine, or Ruffian ell, equal to twenty-eight inches and one tenth English measure is a weight are the arthine, or Ruffian ell, equal to twenty-eight inches and one tenth English measure?

The Ruffian coins, ducats excepted, have alt of them contains three arthines.

one fixteenth of an arfhine; and a farthen, or fathom, contains three arfhines.

The Ruffian coins, ducars excepted, have all of them inferiptions in the Ruffian tongue. The gold coins are imperial ducats; and the largeft filver coin is the ruble, the value of which rifes and falls according to the course of exchange. A ruble in Ruffia is equal to an hundred copeiks, or four fhillings and fix-pence fterling. The other filver coins are half rubles, which are called poltinnics, and quarter tubles. A gryphe, or griwe, is of the value of ten copeiks, and ten griwes are equal te a ruble. The copper coins are, a copeik, which is of the value of about a halfpenny; a denge, or denuffika, two of which make a copeik; and a soluthka, which is a quarter of a copeik. No foreign pieces are current in Ruffia except ducats, Holland rixdollars, and Aibert dollars.

The following coins, beside the Ruffian, are all current in Livonis; a white shelling, which is worth two black schellings; three of the former make one groft; which is feven fifteenths of a penny: a farding, which is one groft and a half: a Riga maik, which is fix groftnes: a Polith guilder, which is six groftnes: a Polith guilder, which is six groftnes; at faty fardings value.

SECT. IX.

Containing the antient and modern hiftery of the Ruffian Empire.

If we trace the Ruffians to their original, they will appear to be as antient a people as any upon the face of the earth: for their ancestors were those Scythians who posselfed Mount Caucasus, or the Dagitlan mountains, which lie between the Euzine and the Caspian Seas, immediately after the stood; even before their brethron demeanagery after the thood; even before their breathern defected from the mountains of Armenia or Arrarat, into the plains of Mesopotamia between the Tigris and Euphrates, as has been shewn in the listhory of Germany. The term Russe signifies a wanderer, as all the Scythians, or northern nations were, till very lately. If we only regard the time, when the Russians and other tribes of Santhians of Taranage of their habitations. Scythians, or Tartars, came to fix their habitations, and live in towns, we need not afcend far into antiquity: for Kioff, or Kiow, upon the borders of Poland, is held to be the first town the Ruffians built, and Volodomir their first prince, who reigned about the year of our Lord 1000. But it is not to be understood that the Scythiana lived with-But it is not to be understood that the Seythians lived with-out any government till then; for government was cer-tainly coeval with the world; but till then, the patriarchal form generally prevailed in Seythia, as it does in some parts of it (now called Tartary) to this day: and, indeed, in many other parts of the world, both in the essern and western continent, we find the patriarchal government still prevail; and these, like other states, will probably be united in time by force or compact, and grow up into kingdoms and empires. This country of Russa, after the patriarchal form was abolithed, was governed by a multi-tude of petty sovereigns, which are usually stiled dukes, till Volodomir united feveral of these dukedome into ohe; about the year 1000, and obtained the name of The Great Duke, and sometimes was called Case or Emfar; forming one potent state, which the sovereign of Cases and African becoming belous of, made war spon the Russians, and compelled them to become tributary to those

Ruffians, and compelled them to become tributary to those princes.

After this, John Basilowita, of Vasiliwita Circiaden, united many more of these duchies under his government; and expelled the Tartars, who were then in possistion of the castie of Moscow, in 1450, and futbuded the provinces of Novogorod and Twere. His fon added those of Pleskow and Smolensko, and John Basilowita his grandson, in 1540, conquered the kingdoms of Cazan and Astracan, and added Siberia to the Russian dominions; and in his reign it was, that the English, commanded by captain Chancellor, strived at Archangel, and began to trade with Russia, which till then had never been visited by the shipp of any nation. The Cassacks and Circassians, fixuated near the mouths of the Wolga, Don, and Nieper, submitted to the cara Alexis Michaelowita; and many of the Calmucks also acknowledged themselves to be the subjects of this kingdoms.

In 1613 Michael, descended from the casa John Basilowita, ascended the throne of Russia, by the unanimous confent of the states. He was succeeded in 1645, by his for Alexis Michaelowita; after whose death, his for Theodore Alexowita succeeded to the throne; who dying without sifue in 1682, appointed John, his brother by the same mother, and Peter his half-brother, to reign, jointly, which they did, until the year 1696, when casa John, 'rid, leaving three daughters by his consort Proseovia Federowa Solticow, viz. the princess Anne, married to Charles Leopold, duke of Mecklenburg Schwerin, the 19th of November, 1710; the princess Catharline, married to Charles Leopold, duke of Mecklenburg Schwerin, the 19th of April 1716, and the princess Proscovia, who died unmarried.

The casar Peter was the son of casar Alexis Michaelowita, by his second wis Natolis Keritroun Neitkin; he

April 1716, and the princess Proscovia, who died unmarried.

The caar Peter was the son of caar Alexis Michaelowita, by his second wise Natolia Keritroun Nersiskin: he married the princess Ottokess Federowna, a subject of Russia, by whom he had issue the exarowits Alexis, born in 1690; but was divorced from his wife, in 1692. The young exar married the princess Charletta Christina Sophia, daughter of Lewis Adolphus, duke of Brunswick-Wolfenbuttle, and fifter of the enpress, confort of Charles VI, In 1721, and died in prison in 2721, being then under sentence of death for a conspiracy against his father Peter the Great, leaving issue a son a superior.

Peter the Great married to his second wife the lady Catherina Alexonna, in 1711 (with whom he had conabined some years before;) he had issue by her the princess Anae, married to Frederick duke of Holstein, and the princess come years before; he had issue by her the princess Anae, married. In the year 1693, Peter the Great entered into a war with the Turks; and the year following took Afoph structed near the Palus Moceotis, which opened him away into the Euxine sea; and having determined to baild a fleet, and share the navigation of that with the Turks, and traffick with the nations bordering upon it (though be had not at that time a single ship of war, or a ship carpenters to return home with him, and stift in rassing a royal navy. Nor did he propose only to qualify himself and his people for the sea-service, but so encourage all other arts and sciences; and, by offering great rewards to learned men and mechanics, induce them to accompany him to Russia.

Peter the Great first visited Holland incognito, and, him to Ruffia.

him to Ruffia.

Peter the Great first visited Holland incognito, and, arriving at Amsterdam, took a house near the principal dock-yards, where he lived with some of his noblemen, and worked part of the day with the ax among the ship-builders, as he obliged the noblemen, who attended him, to do, dressed in the habit of Dutch skippers. Another part of the day was taken up with rowing and failing upon the water; and sometimes he made visits to the Dutch burghers, with whom he would be very merry, laving learned Dutch of the factors of that nation, before he fee out from Moscow; but having feen some English ships learned Dutch of the factors of that nation, before he fet out from Mofcow; but having feen forme English ships while he was in Holland, he was much better pleased with their beauty and preportion, than with those of the Dutch: whereupon he determined to visit England, and having communicated that design to king William, who was then in Holland, a convoy was provided to attend him thirder: but fill chusing to remain incognito, a horse was raken for him, when he arrived at London, in York Buildings, near the Thames, where he resided but a little while; for the construction of ships being his chief business, he respected to Mr. Evesim's house at Deptford, which opened into the king's yard, being attended by the marquis of Carmarthen, son to the duke of Leeds, who was then one of the English admirals. Here the builders communicated to the cast their draughts, and the method of leying down by proportion any ship or vessel of any bulk whatever, with the rules for, and building a ship according to it, which he saw practifed with much pleasure both in the king's and merchante yards, which made him repentals having spent so much time in Holland, where their method is less artissical, observing, that he should have en a bungling ship-builder, if he had not visted England, and declaring he would have all bis ships built after the English model: he took several builders home with him, to whom he offered considerable slaries. The chief him, to whom he offered confiderable falaries. The chief of thefe builders, was a fon of Sir Anthony Dyer, who was fent to France by the coort of England, in the reign of Charles II, to instruct the French in ship building, who chose alle to follow our models, and, it is fasd, have inschoic allie to follow our moders, and, it is lasd, nave im-proved upon us of late. He scened extremely pleased with the marquis of Carmarthen, who worked with him in the king's yards, and failed with him on the Thames, shewing him how near the wind a vessel might fail, and what way the would make when the wind was contrary, as

what way the would make when the wind was contrary, as well as when it was fair; and as an acknowledgement for the fervices the marquis had done him, he made him a grant of the fole importation of Tobacco in his dominions.

During his flay in London the czar was never idle; he attended the founderies for great-guns and morters, and enquired into almost every mechanic art; and having refided here between three and four months? king William his resume of the find weeks in made him a prefent, on his return, of the fineft yacht in England, called the Royal Transport, built like a frigate, and carrying twenty-four guns, which had been contrived by the marquis of Carmarthen, to carry the king over to

by the marquis or Carinater, to carry the king over to Holland, during the war with France.

In 1698, the crar arrived at Vienna, in his way from England towards Ruffia, and received advice of a confpirery in his dominions to depofe him, and declare his throne vacant, fince he had remained fo long ablent from his dominions: but arriving at Molcow, he found that general Gordon, a native of Scotland, had defeated the difaffeched, and all was quiet there. The next year was taken up in improving his revenues, and difciplining his army; but, above all, in increasing his navy, which, in three years time confilled of forty men of war, ten fri-gates, bomb-vellels, &c. twenty whole gallies, and thirty half gallies.

This prince, in the year 1700, entered into a confederacy with the Poles, Danes, and Brandenburghers, against the young king of Sweden, under pretenee that the Swedes had possessed themselves of some places in Ingria that belonged to the Ruffians; and the rest of the confederates made much the same pretentions; for which some of them paid very dear in the ensuing war, and particularly the czar, who having belieged Narva with one hundred thoufand men, his army was defeated by eighteen thousand Swedes commanded by Charles XII. in person, and the fiege raifed. Voltaire relates, that there were but eight outand men in the Swedith army, and that it was one of the most terrible defeats that ever was known, the Swedes killing eighteen thousand Ruffians, and taking as many prisoners, among whom were most of their general officers. But a more particular account of this battle will be found

in the hiltory of Sweden.

The czar, at the time of this battle, was marching at the head of forty rhousand men towards Narva, in order to furround the Swedes on every side; but receiving advice of the defeat of his army before that town, he thought fit to retire; faying, " he knew the Swedes would be victorious for fome time; but, they would, in the end, teach the Ruffians to beat the Swedes." The citizens of Mossow were in fuch a consternation, when they understood the ill fituation of their affairs, that they imputed their misfortunes to the force of magick: nothing but a luper-natural power, they imagined, could have defeated fo fine an army as lay before Narva: so much were they persuaded of this, that prayers were ordered to be put up to St. Nicholas, the patron of their nation, to protect them against these devilish Swedes: the form of one of them being of the following tenor: "O thou, who art our perpetual, comforter in all our advertities, great St. Nicholas, infinitely powerful; by what fin have we offended thee, in our facrifices, genuflexions, bowings, and thankfgivings, that thou haft forfaken us? We have implored thy affiflance against these terrible, infolent, energed, dreadful, insuperable destroyers; when, like lions and bears; who have lost their young they have fall yn upon us, terrified, wounded, and sain by thousands, as who are thy people. As it is impossible this should have happened without diabolical insuence and inchantment, we beseech thee. O great St. Nicholas, to be our champion and sind standard bester, to deliver us from this troop of forcerers, and drive them far from our coasts, with the recompence which they deserve."

[6

the gent control of the control of t

op vit ou Alin from Tibo

and traindard bester, to deliver its from this troop of forcerers, and drive them far from our coafts, with the recompence which they deferve."

After the victory gained by the king of Sweden at Narva, he marched the whole length of Livoriis, and having
obliged the Saxons to raife the fiege of Riga, gained another victory over them upon the banks of the Dwina. He
then purfued the Saxons into Poland, and obtained a third
victory near Cracow: but having left no more than eight
thousand men in Livorila, the Ruffians, who had introduced near one hundred thousand men into that province,
rerounded the Swedish general Stippenbock, and defroyed
all his lafatty, though that general bothe through with
his horse, and retreated to Pernaw, a port-town on the
Livonian sea; and there remaining no force to defend the
open country, the Ruffians plundered Livonia from one end
to the other, making a multitude of prisoners, and driving
them in chains as sar as Aftracan, where most of them
perished. The Ruffians afterwards surprised Dorpt, and
took Narva by storm, putting to death all they found in
arms, and giving the plunder of the town to the soldiers.
Thus did this hero, the king of Sweden abandon his
faittful Livonian subjects, in order to dapose Augustus
king of Poland.

Riga was afterwards surrendered to the exas, being in a

Kiga was afterwards furrendered to the ezas, being in a manner depopulated by the plague: the whole province was foon after reduced by the caar's fences, and Marienwas foon after reduced by the caar's fences, and Marienburg among the reft, where a young virgin, or, as fome relate, a wife, was taken prifoner, in 1702, whom caar Peter advanced to the imperial throne in his life-time, and appointed his fuecefor after his deceafe. She was called by the name of Catharine, being the daughter of a poor woman, who lived in a neighbouring village, as Voltaire relates. She nevet knew her father, but was haptized by the name of Martha, and registered among, the bastard children. The vicar of the parish took her, and charitably provided for her until the was fourteen years of age, bly provided for her until the was fourteen years of age, and then the was retained in the fervice of a Lutheran minister, whose name was Gluck, in the city of Marienburg. Being about eighteen years old, the married a burg. Being about eighteen years old, the married a Swedish dragoon, in 1702, who going out the same day, or the next, upon a party that was defeated by the Russian, he was never heard of more and some lew days after, the herfelf was made prifoner by the Ruffian general Czeremetoff, who made a prefent of her to prince Menzikoff, who finding her genius as well as beauty, exceeding any thing he had ever met with in the fex, could not forbear boatting before the czar, of the prefent which had been made him, and had represented her in so simable a light to that prince, that he immediately commanded her to fent for; at which, it is faid, Menzikoff trembled, when, too late be faw his error, being deeply fmitten with her charms himself, as the exar allo was, as foon as she appeared; and from that hour be entertained, her in his palace, observing in her an aftonifhing capacity; and after a thorough experience of the greatness of her foul, he proceeded to marry her in the year 1711. During his reign, sheadted the part both of a minister and a general; her advice was regarded more than that of any of his council, and the attended him both in his land and naval expeditions, extricating him out of the greatest difficulties, par-ticularly at the battle he fought with the Turks on the banks of the river Pruth, and in the fea-fight with the Swedes in the gulf of Finland : the renounced the Lutheran religion, in which the had been educated, on her marriage with the ezar, and professed herself of the Greek communion, being re-baptized according to the rites of the Russian church. But to return to the part the Russian fians had in this war.

While the king of Sweden was employed in depofing king Augustus, and advancing Stanislaus to the throne of Poland, the czar marched into Lithuania at the head of fifty thousand men, and made himself master of that whole province, and of the duchy of Courland: king Charles being at that time pursuing Augustus into his German dominions: The Ruffians and Saxons alfo having united their forces in Great Poland, defeated an army of eight thousand Swedes and fourteen thousand Poles, of ings, and lent, en like lions 373 upon nent, v of lor-

the party of king Stavislaus, commanded by the Swedish general Mardesiell, which would have given Augustus an opportunity of remounting his throne, if his plenipotentaries, appointed to treat with those of Sweden, had not, at that initiant, concluded a treaty, whereby king Augustus was obliged to relinquish the grown of Poland, and acknowledge Stanislaus the lawful king; which he thought fit to submit to, rather than provoke king Charles to destroy Savony, of which he was then possessed.

As the czar pild to regard to the treaty Augustus had concluded with the Swedes, he riterefore introduced fill more forces into Poland, with which he plundered the estates of all such as appeared to be in the interest of Stanislaus, feeding all the furtiture, pictures, libraries, statues and curiostics he found in the palaces or noblement houses, to Moscow, and rendering the country a perfect defart. The czar asterwards taking up his quarters at Grodno, and cantoning the greatest part of his army in the province of Lithunals, the king of Sweden advanced towards him in the month of January, and having passed the river Niemen, within two leagues of Grodno, before the ezar knew any thing of his marchy the czar left the town by the north gate, when Charles entered by the south. The king had with him about fit hondred of his guards, the rest not being able to follow him, and the czar led with above two thouland men, upon topposition that the whole army was entering into Grodno; but laving leant that very day from a Polish deferrer, that he had quitted the place to up more than six hundred men, and that the body of the enemy's army was still above five and the care in the place to up more than six hundred men, and that the body of the enemy's army was still above five topontion that the way from a Polith deferter, that he had quitted the place to no more than fix hundred men, and that the body of the enemy's army was fill above five leagues diffant, its loft no time, but fent a deachment of one thousand five hundred horfe in the evening to furprise the king of Sweden in the town. The one thousand five hundred Museovites, affilted by the darkness of the night, advanced as far as the first Swedish guard without being known; this guard confilted of thirty men, and they alone fulfained the effort of one thousand five hundred for half a guarder of an hour.

fulfailed the effort of one thousand hye numerous or has a quarter of an hour.

The king, who lay at the other end of the town, came up prefently with his fix hundred guards, and the Mulcovites fled with precipitation: his army was not long without joining him, nor he without purfuing the enemy. All the Mulcovite troops, dispersed in Lithuania, retired in haste castward into the Palatinate of Minsky, near the changes of Musicovite where the rendegrous was appointed. in haste castward into the Palasinate of Minfky, near ne-frontiers of Moscovy, where the rendesvous was appointed. The Swedes, whom the king also divided into several bodies, did not cease to pursue them for above thirty leagues of their way: those who fled, and those who per-fued, made excessive hard marches almost every day, though in the midt of winter. All seasons had been long equal to the soldiers of Charles and of the exar: the sole terror, which the name of Charles carried with it, then made the difference between the Muscovites and the

Nothing but morasses, desarts, mountains, and im-mense forests, lie eastward from Grodno to the Boristhenes: in fuch places as are cultivated, there was no provision to be found: the country people buried all their grain under-ground, and whatever elfe could be preferved there. In order to discover their subterraneous magazines, they were obliged to found the earth with long poles point of with iron. The Muscovites and Swedes served themselves with these provisions by turns; but they were not slways found, and, when they were, they did not prove suffi-

These difficulties were foreseen by the king of Sweden, who had provided biscuit for the subsistence of his army, to that he met with no interruption in his march. After he had croffed the forest of Minsky, where his men were he had croffed the forest of Minsky, where his men were obliged to cut down trees to make way for his artillery and baggage, he found himself, on the acth of June 1708, before the river Berezine; over-against Borislow. The ears had collected together in that place the best part of his troops, and entrenched himself to advantage; his defign being to hinder the Swedes from pating that river. Charles ones doed fome of his reciments on the bake of the fign being to hinder the Swedes from pating that river. Charles posted some of his regiments on the banks of the Berezine, directly against Borislow, as though he meant to attempt the passage in sight of the enemy. At the same time he led his army about three legues up the river; and having thrown a bridge over it, made his way through a body of three thousand men, who defended that post, and marched to the enemy without stopping. The Muscovites did not wait, however, for his coming up but immediately decomped, and retreated towards the Boristhenes, spoiling all the roads, and spreading destruction wherever they maked, that he this means they might retard the orethey passed, that by this means they might retard the progress of the Swedes. But Charles surmounted all diffi-No. 48.

culties; and advancing still towards the Boristienes, he suct with twenty thousand Muscovies in his way, intreuched in a piace called Hollosin, behind a morals, which could not be come at without passing a river. The Swedish here did not wait for the assault till the rest of his lonfantry joined him, but threw himself into the water at the head of his foot-gaards, and crossed the river, with the water formetimes above his shoulders. While he thus marched against the enemy, he ordered his horse to pas round the merass, and fall upon them in flank.

The Muscovites, assonished that no barrier could defend them, were routed; and the Swedish horse, having made their way through the enemy, joined the king in the midst of the hattle. He then mounted on itorseback; but some time after, finding a young Swedish gentleman, named Guilenstiern, whom he very much essenties the head of his infantry. Of all the battles he had ever fought, this, it all probability, was the most glovious; for here he was exposed to the nooft dangers, and shewed the greatest abilities; the memory of it is preserved by a medal, with the inscription; "Sylves, palodes, aggeres, hostes viell, that is "woods and marshes pessed, armies and enemies subdued," on one side; and op the other, "Vistrices copias alium laturum in orbem," that is, "marching with his victorious troops into a new world." The Muscovites, being thus obliged to fly, repassed the Boristhenes, which separates the dominions of Poland from their own country. Clastes lost no time in the purfult, he crossed that river

The Muscovites, being thus obliged to fly, repassed the Borithenes, which separates the dominions of Poland from their own country.

Charles lost no time in the pursuit; he crossed that river after them at Mobileu, the last town in Poland, which formetimes belongs to the care, and sometimes to the Poles, according to the common fate of frontier places. And the oear, thus seems his empire, in which he was giving birth to arts and common fate of frontier places. And the oear, thus seems his empire, in which he was giving birth to arts and common fate of frontier places. And the oear, thus the new part of a war which in a little time migde using all his projects, and perhaps take from him his throne, was inclined to a peace, and even condeficented to transfinit projects, by a Polish gentleman, to the Swedish army. Cheries XII. who had not been used to grant peace to his essenties, answered, "I will treat with the creates Moscow." When this haughty answer was reported to the care, "my brother Charles, says he, fill affects to all the Alexander, but I flatter myself he will not find a Darius in me." About thirty leagues northward from Moliilou, the place where the king passed the Boristhenes, along the river, and fill upon the frontiers of Poland and Moscowy, is fituated the country of Smolensko, in which lies the great road from Poland to Moscow. The way the case retreated, and the Swedes followed by long marches, and so close, that part of the rear guard of the Moscowites was frequently engaged with the dragoons of the Swedish van-guard. The latter had generally the advantage; but they weakened themselves, even by conquering, in these sum of the part of the rear guard of the Moscowite, and in which they always lost abundance of men.

On the 22d of September, in the year 1708, the king

were never decifive, and in which they always loft abundance of men.

On the 22d of September, in the year 1708, the king attacked a body of ten thousand horse, and fix thousand Calnucks near Smolensko. He fell upon this army with only fix regiments of horse, and four thousand foot, broke their tanks upon the first onset, at the head of his Ostrogothick regiment, and forced the enemy to retreat. He advanced upon them through rough and hollow ways, where the Calmucks lay hid; they then appeared again, and threw themselves between the regiment where the king was sighting, and the rest of the Swedish army. The Moscovites and Calmucks in an instant surrounded this regiment, and made their way quite up to his majesty. They killed two aides de camp who fought near his person; the king's horse was stain under him, and as one of his equerties was presenting him another, both the equerty and horse were shot dead upon the spot.

Charles fought on foot, encircled by some of his officers, who immediately shew to relieve him by furrounding him. Several of them were taken, wounded or stain, or carried off to a distance from the king by the multitude that fell upon them, so that only sive men were lest about him. He was quite spent with fatugue, having killed above a dozen of the enemy with his own hand, without receiving so much as one wound, by that inexpressible good fortune, which, till then, had ever attended him, and upon which he still relied. At last colonel Dardoss forced his way through the Calmucks, with a single company of his regiment, and came time enough to disengage the king. The rest of the Sweden put the Tartars to the swort hand, without receiving the rest of the Sweden put the Tartars to the swort has the sweden put the Tartars to the swort has the sweden put the Tartars to the swort has the sweden put the Tartars to the swort has the sweden put the Tartars to the swort has the sweden put the Tartars to the swort has the sweden put the Tartars to the sweden put the Tartars to the sweden put the Tartars to

horfe, and, fatigued as he was, purfued the Mofesvites

for feveral suits.

The king was ftill in the great road from Smoleniko (near to which this great battle was feught) to Mofcow, which is about three hundred miles diffant, and the roads in themfelves not worfs than thofe through which the Swedes had already saffed; but they had information, that the ear had not only made all these roads impelfable, either by laying such parts of them under water as lay near the marshes, or by diagning very deep ditches at certain diffusions, or by covering the way with the wood of whole forests, which his foldiers had cut down; but also they learnt that he had set fire to all the villages, both on the right and left of the road.

forests, which in tonines and the villages, both on the right and left of the road.

The winter was now coming on, and there was little appearance of making any fpeedy advances into the country, and none of subfifting there; and as the whole body of Mofcoviee forces might unexpectedly fall upon the king of Sweden through bye ways, which he was not acquainted with i Charles therefore made a review of his whole army, and by an account taken of their provisions, found that he had, not enough to subfit them above fifteen days. General Lewenhaupt, who was appointed to bring him a supply, with a teinforcement of fifteen thousand men, was not come up; io he resolved to quit the road to Mofcow, and turn to the south towards Ultrania, into the country of the Cossacks; whereupon the Swedish army was ordered to march, towards that side of the country, be the great aftenishment of all the officers.

Charles sent evders to Lewenhaupt to bring his troop.

aftonihment of all the officers.

Charles fent orders to Lewenhaupt to bring his troops and provisions with all ford into Ukranis, where he defigned to pass the winter; the having secured that country to himself, he might conquer Moscovy the next ipsing, and in the mean time he revanced towards the river Defins, which falls into the Borithenes at Kiof. The obtacles which falls into the Borithenes at Kiof. The obstacles they had hitherto encountered in their march, were triffes to those they met with in this new road. They were obliged to cross a forest full fifty leagues broad, which abounded in marshes. General Lapcom, who marched before with five thousand men and pioneers, led the army thirty leagues eastward out of the right way, and they had marched four days before the king discovered the milake. They with difficulty gained the right road again, but left almost all their artillery and waggons behind, which were either stuck fast, or quite sunk in the mud. In this painful and laborious manner they marched for twelve days.

reither fluck fast, or quite sunk in the mud. In this painfal and laborious manner they marched for twelve days, till they had ear up the listle biscuit that was left, and then they arrived, quite spent with hunger and weariness, upon the banks of the Desina, in the place where Marzepa, general of the Cossack, had appointed to meet them; but instead of that prince, they sound, on the other side of the niver, a body of Muscovites advancing towards them. Charles was very much assonished, but resolved immediately to pass the Desina, and attack the enemy. The banks of the river were so steep, that they were obliged to let the soldiers down with cords; and they crossed it in the usual manner, some by swimming, and others by south as the faine time, were not above eight shousand men, so that they made but small resistance, and this oblacle was also summed. The king advanced farther into this wretched they made but finall refifturee, and this oblacle was alfo featmounted. The king advanced farther into this wretched country, uncertain of his road, and Mazeppa's fidelity. Maseppa appeared at laft, but rather as a fugitive, than a powerful ally. The Mulcovites had difcovered and prevented his defign of joining the Swedes: they had fallen upon the Cofficket, and cut off many of them his principal friends were taken, and thirty of them had been broke upon the wheel. His towns were laid in after, his treather of the manufacture of the available of the available of the same presents were the inter plundered, the provisions he was preparing for the king of Sweden feized, and he was fearer able to feape himfelf with 6000 men, and some few hrifes londed with gold and filver. However, he gave the king hopes of supporting him by his intelligence in this unknown country and the Collacks, enraged against the Liuscovites, came and the Collects, enraged against the Liuscovites, came in troops to the camp, and brought them provisions. Charles hoped also that general Lewenhaupt, would have come and repaired this ill fortune. He was to bring with him fifteen the afand Swedes, (more valuable than one hundred thousand Cossess) with provisions and ammunition; and he arrived at last, but almost in the fame condition as Mazeppa had done.

General Lewenhaupt had naffed the Borifthenes above

Mobilou, and advanced twenty leagues fatther on the road to Ukrania, with eight thousand waggons, and the money he had raifed in Lithuania; but as he was upon his march, ucer the place where the rivers Pronis and Soffa join and fall into the Boristhenes, the czar appeared at the

head of fifty thousand men. The Swedish commander, who had not quite fixteen thousand men, resolved not to intrench. Their many victories had inspired the Swedes with so much considerice, that they never enquired after the number of the enemy, but only where they lay. Lewenhaupt therefore marched against them without hesitation, on the 7th of October, 1708, in the asternoon. Upon the first onlet, they killed listeen hundred Moscovites. The case's army sell into consusion, and sted on all sides, and the emperor of Rusha was upon the point of feeing himself entirely defeated. He perceived that the safety of his dominions depended upon the adion of that day, and that he was utof Russa was upon the point of feeing himself entirely defeated. He perceived that the fafety of his dominions depended upon the action of that day, and that he was utterly undone, if Lewenhaupt joined the king of Sweden with a victorious army. 'As foon r' he faw his troopy begin to fall back, he ran to the rear guard, where the Cosseks and Calmucks were possels: "I' charge you (says he) to fire upon every man that runs away, and even to kill me, if I should be so cowardly as to turn my back. From thence he returned to the van guard, rallied his troops in person, assisted by prince Menzikoss and prince Gallicsin. Lewenhaupt, who had pressing orders to join his master, chose rather to continue his march, than renew the sight, thinking he had done enough to discourage the enemy from harrassing him in his way. The czar, at eleven the next morning, attacked him at the entrance of a morass, and drew out his army at length, that he might farround him. The Swedes faced shout, and the sight safed two hours with equal resolution. The Moscovites lost three times as many men as the Swedes; but still kept their ground. At four in the afternoon, general Baver brought the cast a supply of troops: The battle was then renewed for the third time, with more fory than ever, and lasted till night came on: At last numbers carried it. The Swedes were broke, routed, and driven as far as to their sevenes. Swedes were broke, fouted, and driven as fir as to their baggage: Lewenhaupt rallied his troops behind his wag-gons, and though the Swedes were conquered, they did not fly; they were about nine thouland, and not a man of

des one fol-lha die of and the tite but be of Sw oth

fro

bo

not fly; they were about nine thousand, and not a man of them ran away; and the general drew them up as easily in order, as though they had never been beaten. The char, on the other fide, passed the night under arms, and commanded his officers under pain of being cathiered, and his soldiers under pain of death, not to fit for plander.

The next morning at day break, he ordered a fresh affairl; Lewenhaupt having retired to an advantageous ground at fouse mix: distance, after having nailed down part of his cannon, and set fire to his waggont. But the Moscovites coming time enough to hinder the whole convoy from being consimed in the same; they feized upon fix thousand waggons, which they saved. The car, who was defirous of compleating the defeat of the Swedes, sent general offered them are honourable capitulation. Lewenhaupt resused it, and the fifth battle was as bloody as any of the former; Of the nine thousand soldiers he had left, he solf one half, and the other remained unbroken. as any of the romer; Or the rine thousand solders he had left, he loft one half, and the other remained unbroken. At laft, night coming on, Lewenhaupt, after having furtained five battles against fifty thousand men, twam over the Soffs, followed by the five thousand men he had left alive, and the wounded were carried over on floats. The car loft about twenty thousand Moscovier in these five engagements, in which he had the glory of conquering the Swedes, and Lewenhaupt the reputation of disputing the wistory for three days, and of retreating without being broken at last. He then came to his master's camp with the honour of having made fo good a defence, but brought with him neither ammunition nor army. King Stanillaus would have been glad to have joined Charles at the fame time; but the Moleovites, who had defeated Lewenhaupt, lay in his way. The king of Sweden thus found himself without provisions or communication with Poland, fur-founded with enemies, in the midst of a country where he

rounded with enemies, in the midst of a country where he had fearce any refuge but his courage.

The memorable winter of 1,008, which was still more terrible in those frontiers of Europe, than it was in France, carried off part of his army. Charles resolved to brave the feasons, as he had done his enemies, and ventured to make long marches with his troops, during the excessive severity of the weather. It was in one of those marches, that two thousand of his men were shared to death, almost before his eyes: The horsenuen had no boots, and the foot had no shoes, and almost without cloaths: they were forced to make stockings of the skins of beaths in the best manner they could I they often wanted bread; they were obliged to throw could I they often wanted bread; they were obliged to throw

the best part of their cannon into quagmires and rivers, for wait of hories to draw them. So that this once flourishing aimy was reduced to twenty-four thousand men, ready to perish with hunger. They neither received news from Swe-

der, who with fo he num-renhaupt , on the emperor rirely de-sions des troops inge you and even my back. Ulied his d prince n re

dea, not were they able to fend thicker. In this condition, one fingle officer complained: how, fays the king, are you heasty, that you are so far from your wife? if you are a foldier indeed, I will carry you to that diffance, that you shall feares hear from Sweden once in three years. A foldier grumbling. Yentured to prefent him, in the prefence of the whole army, with a piece of bread that was bleck and mouldy, made of barley and eats, the only food they then had; nor had enough of this. The king received the piece of bread without the least emotion, ate it up entitely, and then said coldly to the foldier, "I it is not good, but it may be exten." This little turn (if any thing may be called little that serves to increase respect and confidence) contributed more than all the rest to support the Swedith army under these extremities, which under any other general would have been intolerable.

The caraith monarch, who was as active as the king of Sweden, after having sent fresh forces into Poland, to the affistance of the confederates united under general Smianski against Stanishus, advanced very foon, into Ukrania, in the midst of this sever winter, to oppose the king of Sweden. He continued there with a view of weakening the enemy by small engagements; for by this means be though the Swedish army must be ruined entirely at last, as it could not be recruited, whilst he was able to draw fresh forces continually out of his own dominions. The cold there must have been excessive indeed, since it obliged the two enemies to agree upon a suspension of arms.

On the first of February, they began to engage again; the midst of its and since when the surface of the Cossicks, sopplied them with the necessaries of life: without his assistance, the army must have peristed by hunger and hardships. The car, in this conjuncture offered conditions to Mazeppa, to draw the section and the perison of the Cossicks, sopplied them with the recognitions.

alone, the prince of the Cofficks, fopplied them with the necessaries of life: without his assistance, the army must have perithed by hunger and hardships. The czar, in this conjuncture offered conditions to Mazeppa, to draw him again into his fervice. But the Coffick, continued faithful to his new ally, whether it were through fear of the terrible purishment of the wheels by which he had lost his friends, or whether through a defire of revenge. Charles, with his eight thousand Swedes and as many Cofficks, had not taid aside the design or hopes of penetrating as far as Mosew. Towards the end of May he went to lay siege to Pultowa, upon the river Vorsitat, on the barders of Ukrain, about thirten long leagues cast of the Beristhenes, where the czar had a magasine. If the king took it, the road to Moseow would then be open to him; and in the aboutdants he should then be offer to him; and in the aboutdants he should then be offer to him; and in the aboutdants he should then posses, he could at least wait for the coming up of the succours he sill expected from Sweden, Livonia, Pomerania, and Poland. His fole refuge, then, being in the conquest of Pultowa, he carried on the fiege with vigour. Mazeppa, who had a correspondence in the town, assured him, he would soon be master of it; and hope began to revive in his ermy. His soldiers looked upon the taking of Pultowa as the end of all their miseries. The king, perceived, from the beginning of the free, that he had taught his enemies the art of war. Prince Mensikoss, notwithstanding all his precautions, threw fresh troops into the town; and the accursion by this weens, amounted to almost ten

from the beginning of the frege, that he had taught his entenies the art of war. Prince Menzikoff, notwithfunding all his precautions, threw fresh troops into the town; and the garrifon by this means, amounted to almost ten thousand men. The king continued the flege with still more warmth; he carried the advanced works, gave two affaults to the body of the place, and took the courtine.

The flege was in this condition, when the king, having rode into the river, to take a nearer view of fome works, received a thot from a carbine, which pierced through his boot, and thattered a bone of his beet. There was not the least alteration observed in his countenance, by which it could be suffected that he was wounded; he continued calmly to give orders, and remained near, fix hours on horseback afterwards. One of his demedien, at last, perceiving that the fole of his boet was bloody, made haste to call the surgeous; and his pain then began to be so finary, that they were forced to take him off his horse, and carry him so his tent. The surgeous, looking upon the wound, observed, that it already began to mortify, and were of opinion that the leg mailt be cut off. The array was in the utmost consternation; but one of the surgeous, named Newman, who was better skilled, and more courageous than the rest, was positive, that, by making deep inctious, he would save the king's leg. "Fall to work, then, presently, said the king; a leg. "Fall to work, then, presently, said the king; cut boldly, fear nothing." He held the leg himself with both his hands, looking upon the inestions that were made, as though the operation had been performed upon another perfent. As they were laying on the defining, he gave orders for an affault the next morning, but the orders were scarce given, before word was brought

him, that the czár appeared with an army of above seventy thouseful men: he was, therefore, obliged to take another resolution. Charles, wounded and incapable of acting, sew himself inclosed between the Borithertes, and the river which runs to Pultowa, in a defart country, without any places of security, or ammorition, and exposed to an army, which had prevented him either from retreating, or being supplied with provisions. In this extremity he affembled no council of war, as might have been expected a tut, on the 7th of July, as night, he sent for mareschal Renchild into his tent, and ordered him without deliberation, and without uneasiness, to prepare to attack the czar the rext morning. Renchild did not dispressive him. At the door of the king's tent, he met count Psper, with whom he had long been a variance, as it often happens between the minister and the general. Piper asked him if any thing new had happened no, says the general, coldly, and passed on to give his orders. As soon as Piper was entered into the tent, "has Renchild falt any thing to you." fays the king to him: "Nothing," answers Piper. "Well then, replies the king I tell you, that to-morrow we shall give battle." Count Psper was afternabled at so desperate a resolution; but knew well, that his master could not be prevailed on to change his opinion; he only expressed his northernorm we shall give battle." Count Psper was afternabled at so desperate a resolution; but knew well, that his master could not be prevailed on to change his opinion; he only expressed his northernorm we shall give battle." Count Psper was a course of nine years victories, and seter Alexewitz, by nine years of satigues spent in training up his troops to an equality with the Swedes; the one glorious for having given away otther dominions, the other for having civilized his own: Charles in love with danger, and fighting only for glory; Alexewitz not flying from danger, and making war only for interest: the Swedish monarch liberal through a greatness of soul, and the Moscov

nerous but for some private end i the one sober and continent beyond example, naturally brave, and never cruel but once; the other, having not yet worn off the roughness of his education, or the brutality of his country, as terrible to his fubjects, as wonderful to strangers, and much addicted to excess of pleasures that shortened his days. Charles had the title of invincible, which one unhappy momentrobbed him of; but the nations around had always of the country of

where it was fought, we must imagine Pultows lying out the north, the camp of the king of Sweden on the fouth, drawing a little towards the cast; and his baggage about a mile behind him; and the river of Pultowa on the north

mise benind him; and the river of Puttewa on the north of the town, running from east to well.

The cast had passed the river about a league from Puttewa towards the west, and was beginning to form his camp. At day-break, the Swedes appeared out of their trenches with four cannon, being their whole artillery; the rest were left in the camp with about three thousand men; and four thousand remaining with the baggage. So that the Swedish army, which marched against the enemy, consisted of about tweath five thousand men.

that the Swedish army, which marched against the enemy, consisted of about tweaty five thousand men, whereof there were not above twelve thousand regular troops.

The Swedish generals Kenchild, Field, Lewenhaupt, Slippenback, Hoern, Sparre, Hamilton, the prince of Wirtemberg, who was related to the king, and some others, most of whom had seen the battle of Narva; put the subaltern officers in mind of that day, when eight Wirtemberg, who was related to the king, and some others, most of whom had seen the battle of Narva; put the subaltern officers in mind of that day, when eight thousand Swedes had deltroyed an army of one hundred thousand Russians in their intrentements: the officers faid the same thing to the soldiers, and all encouraged one another as they marched. The king conducted the march, carried in a litter, at the head of his soot. A party of horse advanced by his order to attack that of the enemy; the battle began with this engagement at half an hour after four in the morning. The entenies horse lay westward on the right of the Russians count Gallowin had placed them at diffances between redoubts fortised with cannon. General Slippenback, at the head of the Swedes, fell upon them. All who have ferved in the Swedes, fell upon them. All who have ferved in the Swedes, fell upon them. All who have ferved in the Swedes, the twen that it was slmott impossible to resist the fury of their first shock. The Muscovite squadrons were broken and routed; the care him-felf began to rally them, and his hat was shot through with a musket ball; Menzikost had three horses killed ander him, and the Swedes cried out victory.

Charles did not doubt but the battle was gained; he

. 21

had dispatched general Creuts, about midnight, while five thousand horse or dragoons, who were to take the enemy in finnk, whill the attacked them in front; but his mission of the care, who began to desplir, by this accident had time to rally his horse, and sell upon the king's cavalry in his turn, which not being supported by Creuts's detachiment, was broken, and Slippenback taken prisoner in the engagement: at the same time seventy-two cannons from the early played upon the Swedish horse, and the Russian foot advanced to attack the Swedish infantry. The czar, by a presence of mind and a penetration, which in such moments belongs only to men that are truly great, immediately detached prince Menzikos to post himself between Pultows and the Swedish for post himself exceused his master's orders with dexterity and readlines, and not only cut off the communication between the Swedish army and the troops remaining in the camp before Pultowa, but meeting with a corps de referve of three thousand, be surrounded and put them to the sword. The Moscovite foot, in the mean time, came out of their lines, and advanced in order into the plain. On the other side, the Swedish horse railied within a quarter of a league from the enemies army; and the king, affisted by general Renchild made a disposition for a general engagement. He ranged what troops were left him in two lines; his foot were posted in the center, and his horse made up the two wings. The czar disposed his army in the same manner, he had the advantage of numbers, and of seventy-two cannon; whilf the Swedish had no more than four, and began to want provder. The emperor of Russia mas in the center of the army, having then the title only of major-general, and seemed to serve under general Czerimetos to but he went as emperor from rank to rank, mounted on a Turkish horse, which was a present from the Grand Signior, exhorting the officers and solitors, and promising every one of them rewards.

Charles did all he could to fit his horse, at the head of interested his arm

diers, and promiting every one of them rewards.

Charles did all he could to fit his horfe, at the head of Charles did all he could to fit his horfe, at the head of his troops; but finding the poflure too painful, he returned to his litter, holding his fword in one hand, and a pitlol in the other. At nine in the morning, the battle was repewed: one of the first discharges of the Mosovice cannon carried off the two horses of the king's litter; he caused two others to be put to it, and a second volley broke the litter in pieces, and overturned the king. The troops which fought near him, believed him killed. The Swedes in a confernation lost ground, and their powder failings, and the enemies cannon continuing to play unon Swedes in a conternation loft ground, and their powder failing, and the enemies cannon continuing to play upon them, the firt line fell upon the fectual, and the fecond fled. In this last action, the Swedish army was routed by a fingle line of ten thousand men of the Moscovite foot; fo much were matters changed. The king carried upon pikes by four grenadiers, covered with blood, and all over bruised by his fall, and scarce able to speak, cried out. Swedes. Swedes 1 Anger and grief rangels. and all over bruifed by his fall, and learce able to fpeak, cried out, Swedes, Swedes I Anger and grief renewing his ftrength he tried to rally fome of his regiments: but the Mufcovites closely purfued them with their fwords, bayonets and pikes. The prince of Wirtemberg, general Renchild, Hamilton and Stakelberg, were already taken prifoners, the camp before Pultowa forced, and all in confusion, which did not admit of any remedy. Count Piper, with all the officers of the chancery, had quitted the camp, and neither them what to do, or what was became, and neither them what to do, or what was became, and neither them what to do, or what was be-Piper, with all the officers of the chancery, had quitted the camp, and neither knew what to do, or what was become of the king. They ran from one fide of the plain to the other; major Bere offered to lead them to the baggage; but the clouds of duft and fmoak, which covered the field, and their own confusion, carried them first to the counterfearp of the town, where they were all taken prisoners by the garrison. The king would not fly, and could not defend himself; general Poniatofky chanced the best being the plant in the way as colonel of the Swedith. and could not deterin filmics; general Pollatonsy enfaced to be by him that inftant: he was a colonel of the Swedish guards of king Stanislaus, and a person of uncommon merit, whom his attachment to the person of Charles had engaged to follow him into Ukrania without any post in the army. He was one, who in all the occurrences of his life, and in dangers, where others at most would have only behaved with courage, shewed a command of under-flanding which was ever attended with success. He made standing which was ever attended with success. He made a sign to a young Swede, named Frederick, the king's first valet de chambre, and as interpid as his master; they took the king under their arms, and, affisted by a Drabant who came up to them, mounted him on a horse, notwithstanding the excessive pains of his wound: Frederick got up behind his master, and supported him from time to time. Poniatossky, though he had no command in the army, being made a general on this occasion by necessity, drew up five hundred horse near the king's

perfon, fome of them Drabants, others officers, and others private troopers. This body, re-animated by the misfor-tine of their prince, made their way through more than ten regiments of Mofoorites, and conducted Charles through the midd of the enemy, the space of a league, to the house of the Nicoland State of the second

Rus pe pulled the per still get the

th ħ:

private troopers. This body, re-animated by the misfortene of their prince, made their way through more than ten regiments of Moscovites, and conducted Charles through the midft of the enemy, the space of a league, to the baggage of the Swedish army.

This surprising retreat was of great consequence in such distret. They found amongst the baggage Coent Piper's coscie, for the king never had one fince he left Stockholm. They put him into it, and made cowards the Boristhenes with all possible speed. The king, who, from the time he was fet on horseback, till he came to the baggage, had never spoke one single word, then asked what was become of count Piper's they told him he was taken with all the prince of Whtemberg? added the king. They are principars too, fays Poniately, Prisoners to Muscovites replies Charles, shrugging up his shoulders: come on them, let us rather go to the Turks? They did not observe, however, the least alteration in his countenance, and whoever had then seen him, and not known ble condition, would have never single-seed him to have been either conquered or wounded. Whilst he was getting off, the Moscovites seized upon his attillery in the camp before Pultowa, his baggage, and the money he had raised for carrying on the war, where they sound six millions of specie, the spoil of Poland and Saxony. Near mine thousand were taken, three thousand of four thousand ran away, and were never heard of afterwards.

There still remained near eighteen thousand men, comprehending the Cossocks with Swedes and Poles, who fied towards the Boristhenes, under the discline of species the spoil of Poland and Saxony. Near mine thousand were taken, three thousand of four thousand ran away, and were never heard of afterwards, it is made to the species of the spoil of poland himself upon the banks of the Boristhenes, and they should be comply the conquerors, who some problems the cost of the spain of the spoil of poland himself upon the banks of the Boristhenes, and Lewenhaupt just arrived with the reads of himself s

in anomer. It is tatter had laved leveral chefts of money; but the current being very rapid, and a violent wind beginning to blow, the Coffack, to lighten his boat, threw more than three parts of his treafures into the rive. Count Ponistofky, who was now more than ever necessary to the king, for his remarkable prefence of mind under difficulties, together with Mullern, the king's chancellor, croffed over in other barks with fome of the officellor, crofied over in other barks with fome of the offi-cers: three hundred troopers of the king's guard, and a very great number of Poles and Coffacks, relying upon the goodness of their horfes, ventured to pair the river by fwimming; their troope, keeping close together, refifted the current, and broke the waves; but all who attempted to crofs feparately, a little below, were carried away by the fiream, and tunk in the river. Of all the foot who tried to pale over, not one was able to reach the opposite

shore. During this extremity to which the routed part of the army were reduced, prince Menzikoff came up with sea thousand horse, having each a foot foldier behind him. The cereases of the Swedes that lay dead in the way, of the wounds, satigue, and hunger, sufficiently pointed out to the prince the road which the body of the army had taken. The prince sent a trumpet to the Swedish general, to offer him a capitulation; four general officers, were presently sent by Lawenhaupt, to receive the law of the conqueror. Before that day, fixteen thousand of king Charles's soldiers would have attacked all the forces of the Russian

Ruffian empire, and have perified to the last man, rather than have furrendered; but after a battle lost, and a flight of two days, not having their eyes any longer upon their prince, who was curstrained to fly himself, the strength of every foldier being spent, and their courage no longer supported by any hope, the love of life took place of intrepidity. The whole army were made prisoners of war; fome of the foldiers, rather than fall into the hands of the Moscovites, threw themselves into the Boristhenes, and the rest were made prisoners. They all field off in the presence of prince Menzikoss, laying their aims at his feet, as thirty thousand Moscovites had done nine years before, at the king of Sweden's at Narva; but whereas the king then sent back almost all the Moscovite prisoners but the general officers; the czar retained all the Swedes that were raken at Pultowa, and fent them into Siberia. We shall relate, in the history of Sweden, the king's escape to Hender, and his conduct there, and afterwards.

No sooner had the czar obtained the decisive victory of Pultowa, than Angustus re-assended the themselvia the strength and the Sweden themselves the strength and the Sweden themselves the strength and the Sweden themselves the strength and the Sweden the strength and the Sweden themselves the sweden themse

Pultows, than Augustus re-ascended the throne of Poland, his rival Stanishaus and the Swedish forces retiring into the territories of Sweden. The cast at the same time restored the duke of Courland, whom he married to his neice, the the duke of Courland, whom he married to his neice, the prince Anne, daughter of the late czar John, his eldelf hrother, and completed the conquest of Livonia; he also made himself master of Wiburg, and the territory of Kexholm in Finland. The czar, however, still quartered great part of his army in Poland, though the diet insided on his withdrawing them, complaining that their country had been ravaged and plandered twelve years by foreign roops already, and defired that they might enjoy some rest after so many calamities: that the Swedes were now reduced so low, that the Poles wanted no foreign affistance, and they could not understand what the czar intended by duced to low, that the Poles wanted no foreign affiltance, and they could not understand what the czar intended by quartering his troops still its Poland, unless he had a defign upon their liberties: but they were for a time relieved from the outrages committed by the Russian forces, by a rupture between the Russians of the Russian forces, by a sweden having prevailed on the grand seignior to declare war against Russia, the pretence for which was, that the Russians had pursued the Swedes into the Turkish territories, and made prisoners of many them there. ritories, and made prisoners of many them there.

The ezar did not wait to be invaded by the Turks, but rrarcher into Moldavia, being affured by a Tartarian prince, that the Moldavians and Tartars would join his army with a good body of troops on his appearance among them. He marched into Moldavia, therefore, before he had provided fufficient magazines for the substitute of his troops, relying on the Moldavians to furnish him with his troops, relying on the Moldavians to furnish him with provisions; but whether the treaty between the czar and the Moldavians had been discovered by the Porte, or by whar other accident it happened, the Moldavians did not join him as he expected. The Russian army was destitute of provisions, and being surrounded by the numerous forces of the Turks, was attacked three days successively on the banks of the river Pruth, viz. on the 1sth, 12th, and 13th days of July. The Russians, though they desended themselves very well, yet being destitute of all provisions and necessaries, it was thought proper to hang out a white slag, and demand a treaty with the vizir, who commanded the Turks, which he was not averie to, if he could procupt advantageous terms; and having sufficiently commanded the I urks, which he was not averie to, I he could procure advantageous terms; and having fufficiently tried the refolution of the Ruffians, whom he looked upon as desperare men, he consented to parly with them.

The ministers on both fides, being met, the Turks infifted that the czar should deliver up Asoph, and all his forts on the Black Sea, and renounce all pretences to the

forts on the Black Sea, and renounce all pretences to the navigation of it, which the caar confented to; and thereby his favourite project of building a fleet of men of war at Woronets; to fail on that fea, and trade with the countries on the coalt of the Euxine Sea, and perhaps dipute the dominion of it with the grand felginor, proved abortive. But even upon these hard terms, it is prefumed, the vizir, who knew the Russian army to be in a staving condition, would not have suffered them to retirs to their own country, if the cearian Catherine had not borrowed of the officers, all the money they could raise, and made a prefent of it to the coverous vizir; whereupon the Russians were permitted to march off unmolested, and were supplied with provisions seen by the Turks themselves; but their numbers were so diminished by sickness or the sword, that of seventy thousand men, which entered Moldavia, scare forty thousand remained allive.

The king of Sweden strived just as the Russians were

The king of Sweden strived just as the Russians were marching off, reproached the vizir with betraying his master, and offered with twenty thousand men to attack the Ruffians, and carry the exar prisoner to the grand No 49.

felgolor; but the vizir refuted to violate the treaty he had made, and the ezar teturned to his dominions, quartering a body of his forces in Poland again, which the Poles protefled againft, defiring he would withdraw them; but either under pretence of money due to him for his protection againft the Swedee, or fome other demands he had on the republic, the Russians continued in Poland feveral years, where they raifed what contributions they faw fit; and the war fill continuing between the Swedes and Russians, the ezar with his ally the Dane, fubdued the Swedish Pomeranis, in 1713. The year following, he defeated the Swedish fleet in the gulf of Finland, afterwards made himself master of almost the whole province of Finland, and proceeded to invade the province of Sweden on the west side of the Bothnick gulf, where he demolished some of their iron and capper works, in which the gallies he had builtwere of great service to him; this being a shallow sea, in which he met with little opposition, as large ships of war could not enter it; but the king of Sweden returning from Turky, put a stop to his incursons on that side; and as he had now no other enemy, he applied himself again to the polishing of his subjects, and promoting arts and sciences; but navigation and traffic more particularly engaged his attention.

He made another journey to Holland, in the content of the second of the second of the second of the polishing of his side. selgnlor; but the vizir refused to violate the treaty he had

and fciences; but navigation and traffic more particularly engaged his attention.

He made another journey to Holland, in 1717, not incognito, as hefore, but as a fovereign prince, and was received with all the honours due to his rank. From thence he vifited France, and made himself acquainted with every thing he thought worth his attention: but his principal view being to improve his own people, he engaged the artists in all protessions in his service, and, by the salaries and rewards he offered them, prevailed with many of them to go with him to Russia. Nor did he only introduce arts and sciences among his people, but imitated the political mations in their diversions at his return.

return.

Before his arrival at Petersburgh, he received advice, that a conspiracy had been formed to depose him, and set his only son the exarowitz upon the throne; to which that prince, it is said, was privy. A great many of the conspirators were put to death on the exar's return; and the exarowitz fled to the court of Vienna, to avoid his father's refernment: and as his consort was fifter to the then empress of Germany, it was given out that the court of Vienna had obtained his pardon; but, however, that might be, when the exarowitz returned to Russia, he was anourchended and impressored. apprehended and imprifoned; and, being tried by a court of officers of his father's appointing, condemned to die: however, the fentence was not executed, the prince dying

however, the fentence was not executed, the prince dying a natural death in prifon.

The king of Sweden being now returned to his dominions, and invading the Danith territories; the czar, to make a divertion in favour of his old ally the Dane, was preparing to invade Sweden again; when he heard that king Charles was killed in the trenches before Frederick-shall in Norway; and that his younge. fifter, the princed Ulrica Eleonora, had fucceded him in that throne; who, defining to live at neces, with the care a treat was feton defiring to live at peace with the crar, a treaty was fet on foot in the island of Aland, in 1718, between the two nations, which being abruptly broken off, the czar invaded Sweden again the year following, and delitoyed some of their most considerable copper and iron works, which obliged the Swedes, in 1721, to fubmit to the terms he offered them; namely, that the Swedes should confirm to him the provinces of Livonia, Ingria, and Carelia, and the eathern provinces of Finland. The care raffumed the title of emperor of all the Ruffias, in the above year.

title or emperor or an the x umas, in the above year.

In the year 1723, the Perfians being engaged in a civil war, and having lately depofed Sultan Hoffein, their fovereign; the cara affembled an army of thirty thousand men at Aftracan, and invaded the provinces on the well of the Caspian fea; having published a manifetto, declaring, the state of the case of the the Capian fea; having published a manifelto, declaring, that it was not with any ambitious views of enlarging his dominions, that brought him to the frontiers of Perfia; but to refeue their king out of the hands of his rebellious fubjects; and being arrived with his army near Derbent, a difficult pafs on the coaft of the Cafpian fea, and efteemed the gate of Perfia from Ruffia; the governor and inhabitants agreed to furrender that city to the caar upon the fort furnments. first summons; whereupon the care having confirmed the governor in that office, and left a garrifon of two thousand men in the citadel, returned to Astracan, without any farther attempt at that time.

In the year 1723, however, the Ruffians affembled an army near Derbeut, and the whole province of Ghilan submitted to them as foon as they took the field and foon after the Ruffian troops marched into the province of Shirwan,

Shirwan, and took the port-town of Baku: prince Thomas, fon of the late fultan Hoffein, having made his eftape from the ufurpers at Ifpahan, and allembled fone forces in the north of Perfia, feut a minister to Peterlburg. to defire the exar's protection; and a treaty was concluded on the 23d of September 1723, wherein the exar promited his affinance to prince I homas against the rebels; and the prince, on the other hand, ceded the provinces of Ghilan, Shirwan, Mazenderan, and Astrabad, to Russia. There was foon after treaty concluded between the Turk and Ruffians, guaranteeing to each other the feveral provinces they had possessed themselves of on the frontiers of Persia: in which they declared, that if prince Thomas, thould refuse his con-fent to this treaty, they would keep them by force, but yield up the reft of the kingdom to prince I homas, or any other prince, who should be deemed heir to like throne

any other prince, who should be deemed heir to the throne of Petia, and afford their affishance against the usurper. The czat, in the mean time, caused the czarina to be proclaimed his successor, and crowned; and the nobility and officers of state took the oaths of allegiance to her; from after which he fell sick, and died on the 8th of February, 1724-5, in the sifty-third year of his age. Whereupon the senare proclaimed the czarina Catherine, empress of all the Russias, and renewed their oaths of allegiance to her, who was about forty years of age, at her accession to site throne.

The exarina applied herfelf immediately to perfect what the late czar had begun; encouraging all arts and feiences, and inviting learned foreigners and artificers, by offering them large revenues, to fettle in the Ruffian dominions; and obliged her fubjects to fend their fons and de-pendents abroad, to qualify themfelves in every feience. We had, and have titll, feveral of them in England; but wherever they travel, the court of Ruffia takes an account of them; they are all registered, and never remove from one kingdom to another for improvement, without the leave of the Ruffian minister, who resides in the kingdom to which they are destined, and return home whenever

they are commanded.

they are commanded.

Catherine applying herfelf to the increasing and disciplining her forces both by sea and land, at the beginning of her reign, gave the king of Denmark some apprehensions, that these preparations were intended against his kingdom, as he had lately seized upon the territories of the duke of Holstein, her some intended his in Sleftwick; whereupon that prince applied himself to the British court, to send a squadron of men of war to his constant and a squadron of the state of th affifiance; and a fleet was accordingly, in 1726, fent into the Baltick, under the command of Sir Charles Wager, and a letter fent to the czarina at the fame time, to jullify this measure, wherein his late majesty observes. That the warlike preparations she was making both by sea and land, had alarmed him and his allies, and that he had fent his fleet into the Baltick, to obviate the dangers which his fleet into the Baltick, to obviate the dangers which might arife from fuch an extraordinary armament, especially as he was informed, that measures were taking at the Ruffian court, in favour of the pretender to his crown. He had given orders, therefore, to his admiral, to prevent her imperial majefly's fleet from coming out. The ezarina, in her answer to this fetter, declared, that the had never entertained a thought of diffusing the British nation, by espousing the interest of the pretender; and was so far from having any hossile intentions against British, that she had ordered her port-towns in Livonia to furnish the British sleet with all manner of provisions.

The British sleet had undoubtedly other reasons for visiting the Baltick, than the preventing the Ruffian invasion

The British fleet had undoubtedly other ressons for visiting the Baltick, than the preventing the Russian invasion of England in favour of the pretender. If they had intended it, so weak a naval power, and so distant from our shores, 25 Russia lies, could never have expected any success in such an enterprize: nor can it be imagined, what motives they should have to attempt it, while our traffic with them was more beneficial to them, than that of any with them was more beneficial to them, than that of any other nation: the true reason, therefore, of sending the British fleet to the Baltick, is supposed to have been to protect the Danes and Swedes. The Danes had fold Bremen and Ferden to Hanover, and Britain had guaranteed their possession of Sleświck, the property of the duke of Hossessia and the Sweder; in their distress, offered to confirm Bremen and Ferden to Hanover, on condition, that the English heet protected the rest of the Swedish dominions; which were substantial reasons for sendtion, that the enginn neet protected the rest of the Swedish dominions; which were substantial reasons for sending Sir Charles Wager into the Baltick, but not proper to be owned at that time; and, therefore, some other plaufible pretence for it was to be given out, and nothing could be more popular than defending the nation against the

pretender

The Ruffians making great preparations by fea for fome An Kumars making great preparations by its for fome expedition the next year, 1727, another British fleet was fent into the Baltick, commanded by Sir John Norris; but the cazrina falling fick, no attempt was made either on the Danish or Sweedish coasts, and our fleet returned to England. The szarina, apprehending the should not live long, appointed prince Peter, the fon of the exarowitz, and grandson of the emperor Peter the Great, to succeed her, and died on the earth of May 1 and in the forw this described with the start of the carbon start in the forward in the section of the carbon start in the forward. grandion of the empetor Peter the Great, to succeed her, and died on the 17th of May 1727, in the forty-third year of her age. Peter 11. at his accession, was in the twelfth year of his age, being born on the 22d of October 1715. He was immediately proclaimed emperor on the death of the late empers; in which proclamation it was shewn, that he had a right to the Rossan throne by hereditary descent, as well as by the appointment of the late emperor and empers. The mother of the present emperor was the princess Charlotta Christiana Sophia, of Brunswick Wolfenbuttle, sister to the confort of the late emperor, Charles VI. It was by the particular direction of Peter the Great, that the late examina appointed Peter to succeed her, for otherwas by the particular direction or Freet the Great, that the late cravina appointed Peter to fucceed her, for otherwise the would have transferred the empire to one of the princesses her daughters, of which she left two, namely, Ania Petrowna, then nineteen years of age, married to Charles Frederick, duke of Holstein Gottorp, and Elizabeth Davids and thisteen was of age beth Petrowna, only thirteen years of age.

land protection for the protection in the protec

The young emperor was almost prevailed on to espouse the eldet daughter of prince Menzikoff, who was prime mi-nister of Rossia at the death of the empress. The nobi-lity of Russia were so incensed at this, that they immediately refolved on ruining him, and caused him to be brought to trial, wherein he was charged with being the cause of the death of the late ezarowitz, his imperial majefty's father; with caufing the first confort of Peter the Great to be continued in prison, and with embezzling the Orea to be continued in priori, and with cancer and public revenues; with causing feveral great men to be deprived of their honours and estates, and with a boundless ambition, as appeared in his design of marrying his daughter to the emperor; for all which, his estate was ordered to be consistent, and himself sentenced to be banished to

Siberia.

The young emperor's relations next proceeded to give the late exarina, the first consort of Peter the Great, her liberry, and reverse the sentence of her divorce. They also repeated that law made by Peter the Great, which sub-verted the right of primogeniture, and the natural order of succeffion in the imperial family, and the rest of the Russian similies, and made void the process against the late carrowing, the present emperor's father, and restored the noblemen who had been banished to Siberia, under the administration of prince Menzikoff: and having concluded a peace both with Sweden and Denmark, they proceeded, on the 7th of Maich 1727-8, to the coronation of the czar at Moscow.

The post of prime minister was conferred on prince Dolgoruki, who appeared to have no less ambition than his predecessor, contriving to get his eldest deughter espouled to the prefent emperor, and was congratulated thereupon, and their nuptials appointed to be celebrated; but the czar died of the imall-poz, on the 29th of January 1,29-30, three days before the marriage was to have been 17:30-30, turce days before the marriage was to have been folemnized; whereupon the fenate and great officers of the crown caufed the prinsefs Anne, duchefs dowager of Courland, to be proclaimed emprés. She was the lecond daughter of the late czar John, eldeft brother of Peter the Great; Charles duke of Mecklenburg, having married Cathories here aldeft 600.

Catharine her eldeft fifter.

As the court retided at Mescow on the death of the czar. As the courrented at Moscow on the death of the exar, prince Dolgoruki and three others, were therefore appointed to attend the empress Anne, and convoy her to Moscow. These gentlemen arriving at Mittau, the capital of Courland, congratulated her fuecession; but insisted on limiting the prerogatives of the crown, and vesting part of the legiflative authority in the states, which she consented to, and figned the capitulation they had provided for her, the principal articles whereof were, that she should not make peace or war, or raife taxes, without the concurrence of the states; that she should not marry, appoint a successor, or dispose of any considerable office without a like affent. But the crarina appeared to have so many friends on her arrival at Moscow, that the nobility and great officers attended her with an address, declaring, that monarchical government was most agreeable to the Russians, defiring entering and with the fame authority it was enjoyed by her predecessor; and the articles she had signed at Mittau were thereupon cancelled, and both the clergy and laity took the oaths to her majefty in as absolute terms as they had done to

Peter the Great, without any referves or limitations what-

The prince Dolgoruki, his fon, and feveral of their re-lations and friends, were foon after bankhed, and their estates conflicated, being principally concerned, it is sup-posed, in putting limitations on the prerogative, as men-tioned above; but the declaration published on this occa-fion charged Dolgoruki and his fon with behaving info-lently to the late exar Peter II. and endeas ouring to marry him to Dolgoruki's daughter, and with embezzling the sublic treasure.

lently to the late exar Peter II. and endeavouring to marry him to Dolgoruki's daughter, and with embezzling the public treasure.

The death of Augostus II. king of Poland. happening in February 1732, N. S. the empress of Russia, and the emperor of Germany, by their joint interest, caused the excitor of Sasony, his son, to be advanced to the throne of Poland, shough Stanislaus, father-in-law to the French king, became a candidate for that crown, and was supported by all the power of France; at which Lewis was so incensed, that entering into a consederacy with Spain and Sardinia, he invaded the German emperor's dominions both in Italy and Germany, expelled the Austrians from all their Italian dominions, and took Philipsburg upon the Rhine, though the exarina sent thirty thousand of hertroops as far as the Rhine, in 1735, to the affishance of the Germans; but a peace being concluded, the dominions of the Austrians were restored, both in Germany and Italy, except Naples and Sicily, which were yielded to don Carlos, the king of Spain's eldest son by the princess of Parma.

This was with France and Spain was no sooner ended, but a reputure happened with the Turks in 1736, in which the Russians and Austrians were consederates, and the Russians were very successful the two first campaigns on their side, over-running both Cuim and Little Tartary; but the Austrian army being almost destroyed by a petitential fever, the emperor made a ieparate peace, and the Russians were obliged to relinquish all the places they had taken in this war.

Nadis Shah, or Kouli Khan, as he is usually called, be-

had taken in this war. Nadir Shah, or Kouli Khan, as he is ufually called, be-

Nadir Shah, or Kouli Khan, as he is usually called, becoming very powerful, and recovering all the places the Trirks had taken on the frontiers of Perfis, the czarina, without waiting to be attacked, in the year 1736, refigned all the provinces Peter the Great had possessed in Perfis, on the west of the Caspian sea.

On the twenty-eighth of October, 1740, the empress Anne died, having nominated for her successor prince John, an infant, six months old, son of Anthony Ulsick, duke of Brunswick Wolsenburtle, and of Anne his wife, daughter of Charles, duke of Mecklenburg, and of the princess Catherine, eldest daughter of the late czar John: and during the minority of the infant emperor, she appointed her favourite, count Biron, duke of Courland, to be regent. The mother of the young emperor. land, to be regent. The mother of the young emperor, the princess Anne of Mecklenburg, looking upon herself the princess Anne of Mecklenburg, looking upon nertett much better entitled to the regency, and even to the throne itself, as her son could not have the least title to the Russian throne but by her, she ordered count Munich to take the duke of Courland prisoner, and, causing him to be tried for high treason, he was condemned to die; but his sentence was afterwards changed to a Siberian banishment, and she assumed the regency health; in which changes at court the general count Munich changes at court the general count of the sentence was sentenced. hertelf; in which change at court the general count Mumich, being most instrumental, was mightly caressed by the princess at sist; but she soon removed him from all his posts, for what reason does not appear, though it is probable the regent might imagine he assumed too great a share in the administration; however, the displacing this

thate in the administration; however, the displacing this great man contributed, no dould, so her own ruin.

While the foldiers were under the command of the count, the princefs Anne had not much to fear from them; but he was no fooner displaced, than they oegan to cabal in favour of the princefs Elizabeth, the youngest daughter of Peter the Great, by his last confort the empress Catherine; and on the fifth of December, 1742; all the avenues to the palace, and the chief posts in the city, were feized by the guards, who, with the friends of the princefs, assembling in the palace, proclaimed her empress of Ross. The late regent and her confort, the duke of Brunswick, and their intant son were made prisoners, as were also count Munich, and Ofterman the chancellor. The Dolgerykie's, the duke of Courland, and other state prisoners, were recalled from Sibaria, and their other state prisoners, were recalled from Siberia, and their fentences revoked. In the mean time count Offerman, Munich, and several more, that were thought not wellaffected to the present government, were tried for high treason, and condemned to die; but when they had been brought to the feaffuld, and prepared for their execution,

it was declared, that the reigning empress had given orders for them to be banished.

At first, it had been resolved, that the late regent, the princess Anne, should be sent with her consort and her son to Germany; but upon second thoughts it was judged more politic to keep the royal family in their power, to prevent rivals attempting any change in the government; and though they were on their journey to Germany, they were ordered to be stopped and detained prisoners at Riga; and when the Austrian and Profisan ministers interceded for their liberty, the examina answered, that she had given directions that the family of the late regent should be treated agreeable to their rank, and she should convince the world of the regard she had for them, notwithstanding what had happened.

of the regard she bad for them, notwithstanding what had happened.

The czarina observed, that as the duke of Holstein, who was descended from her eldest fister, might be urged to insist on his right to the Russian throne, she invited him to reside in her court, adopted him her heir, and caused him to proses himself of the Greek church, without which he could not fucceed to that empire, and thus her authority seemed pretty well established, as she had now in her power all the royal samily that could make any pretensions to the Russian throne.

In the year 1742, the war with Sweden still continuing, general Lacy was sent to command the army in Finland, who, having blocked up the Swedish forces in Helsing-fort, would grant them no better terms, than that they

fort, would grant them no better terms, than that they might embark for Sweden with part of their baggage, but that their settllery and magazines should be delivered up to the Ruffians; and in the course of that campaign the

to the Ruffians; and in the course of that campaign the whole province of Finland was reduced under the dominion of Ruffia.

Doring these transactions, the Swedes, in hopes of obtaining better terms for the cazarina, had made choice of her nephew, the duke of Holtein, to succeed to that crown; but he having professed himself of the Greek communion, had rendered himself incapable of it; for it is one of the fundamental laws of Sweden, that their foverigin must be of the Lutheran persiassion, and indeed the one or the fundamental laws of Sweden, that their over-reign must be of the Lutheran perfunsion, and indeed the crown of Sweden was fcarce worth the accepting, after the possession of the people for his sovereign, and was made entirely dependent on the

The czarina having, in the mean time, adopted the duke of Holstein her heir, caused him to be stiled grand duke of Russia, and married him to the princes Catherina duke of Kulha, and married him to the princes Catherina Alexowna, the daughter of Christian Augustus, prince of Anhalt-Zerbst, to whom he has been married near eight years, and has yet had no issue; and as the empress of Russia bersels is unmarried, it is very uncertain who will succeed to that throne, if the grand duke should die before her.

In pursuance of a treaty concluded between Ruffia and Sweden, the castina infifted on retaining that part of Finland, which lies eaft of the river Kymen, and the lakes to the northward of it; but reftored all the reft of Finland to the crown of Sweden, in which state it remains Finland to the crown of Sweden, in which state it remains at this day; and by a treaty between his Bittish majesty and the exarina, entered into the twelfth of June, 1747, her imperial majesty agreed, that during the war between Great Britain and France, in consideration of a subsidy to be paid her, she would keep on the frontiers of Livonia, next to Lithuania, a hody of fifty thousand foot, and forty or fifty gallies upon the same coast, to act wherever his British majesty should require and in such places as his majesty and his allies should think proper; which treaty was signed, Hyndford, C. R. Bettuches, Woronzow; one hundred thousand pounds whereos were paid down at the ratification of the reesty. Sir Charles Hanbury Williams, the Britis mainster at Dresden, through Poemanding a passage &c. doc Russian troop: through Poemanding a passage and the second passage and the passage and Williams, the Britis manufer at Drefden, thereupon demanding a passage L. Che Ruffian troope through Poland, in the beginning of the year 1748, his Polith manicity answered, that this did not depend on him; and at there was no diet fitting, he could intermine nothing in relation to this affair. However the Ruffians began their march through Poland, in April, 1748, at which the French being alarmed, preliminary articles of peace were-figned foon after, and a convention was entered into between Great Britain, France, and the States-general, with respect to those troops, of the following tenor:

We, the underwritten ministers plenipotentiary of his Britannick majesty, his most Christian majesty, and the lords, the States-general of the United Provinces, at the conferences at Aix-la-Chapelle, have agreed, that in order the more speedily to restore a general pacification, and to give reciprocal proofs of the fineere defire their Britannick

tennick and nioft Christian majestles, and the lords the tenuek and note Christian majetties, and the lords the Strate-general have to execute the preliminaries of the thirtieth of April 1st, his Britanniek majesty, and the Strees-general, immedissely after the signature of the convention, fishl fend orders to the auxiliary corps of thirty-feven thousand Russians in pay, and actually in march through Germany towards the Low-countries, to return immediately towards Russia; and that the field corps of Russian troops that return thither as soon as possibly they can according to the conditions of the treasy concluded rauman troops that return interer as toon as pomoly they can, according to the conditions of the treaty concluded and figured a Satelfierg, the nineteenth of November 1sth, between his Baronnick majetty and the States-general on the one fide. If her Imperial majetty of all the Ruffias on the other; and the tit thall not be permitted to the faid Russian troops, upon any pretext, to march any further to-wards the Low-countries: and that his most Christian majefty, immediately after the fignature of this convention, shall send into the interior parts of France, a like number of regular troops, now in the Low-countries, as well infantry as horfe and dragoons, of which a lift shall be given at the same time to the ministers plenipotentiary of his Britannick majefty, and the States-general at Aix-la-Chapelle; which troops, or a like number, his most Christian majesty shall reform in a month after he knows; in an authentic manner, of the actual departure of the faid body of Ruffign troops towards Ruffia; and his faid theft Christian majesty shall communicate to his Britannick majefty and the States-general this reform within a month. His Britannick majefty and the States-general of the United Provinces engage, moreover, that the faid auxilliaries thall not be emplayed in the fervice of any other power, while they are in their pay; and that in case they cannot return home to their own country before the first year for which they are engaged, and during which, according to treaty, they are ftill to remain in do'tr pay and fervice; it is exthey are fill to ternaic in the pay and fervice; it is expectly flippilated, that the energy me be employed under any pretext whatfoever, either against his most Christian majetly or his allier, after the reform above-mentioned is made and executed to the troops paid by his faid most Christian majesty. In witnest whereof, &c. Signed, Sandwich; St. Severin d'Arragon; W. Bentinck; F. H. Waffenaer; G. Indelser; W. Beffelle."

The Selfic recover in preference of this convention.

The Ruffian thoops, in pursuance of this convention, were ordered to halt in Germany, and soon after to grarch back again into their own country : but it feems to have been a very great overlight, on the part of the allies, that the Ruffians were not permitted to join the confederate army, and remain in the Netherlands, until the French had executed their part of the treaty; as nothing but downright force could ever induce that people to execute their treaties according to the true meaning of the artheir peates according to the free meaning of the articles; and we had tamely submitted to give hoftages for the performance of our part, without infifting from them. This was certainly the most inglorious transaction that ever Britain could be upbraided with, and has no doubt placed her in a despicable point of view to her envisors

neighbours.

It may with some degree of probability be surmised, that many political, and some private reasons determined the princes Elizabeth to take part with the house of Austria, against the king of Prussa, in the year 1756. Her arms alone gave a turn to the war; and her conquefts were such as portended the entire destruction of the Prussian power, which was faved only by her critical death, January 5, 1762, when she was succeeded by Peter III. grand prince of Russia, and duke of Holstein Cottorp. This prince was a great admirer of the king of Pruffia, which prince was a great admirer of the king of Fruina, which was diffled and to his people in general; he had riany diffusionable peculiarities, and, what was worst of all aimed at innovation, which even Peter the Great durst not accumpt. Hence a conspiracy was formed against him; so that he scarce knew an interval between the loss of his crown and his life. He was succeeded by his wife, who has reigned many years by the title of Castierine II. The become and his life. He was indeceded by his wife, who has reigned many years by the title of Catherine II. The most remarkable downelse occurrence of her reign was, the death of prince Iwan, who lost his bid in an ill-concerted conspiracy which had been entered with by downers, in order to advance him to the damage; and the most publie transactions were, the late war with the Ot-

more pupile transctions were, the late war with the Ortenan Porte, of which the reader will find an account of in our history of Afiatic Turky, p. 166, 161.

We cannot with propriety take leave of Ruffia, without inferting a recent and important transaction, which has originated from the prefent fovereign of this great empire;

namely,

rott il

fifty, and it is in the interest of the interest

"Declaration from the empress of Russia to the courts of London, Versailles, and Medrid;" and which is expressed in the sollowing terms:

"The empress of all the Russias has so fully manifested her sentiments of equity and moderation, and has given such evident proofs during the course of the war that the supported against the Ottonian Porte, of the regard that the has for the rights of neutrality and the liberty of universal commerce, as all Europe can witness. This conduct, as well as the principles of impartiality that she has displayed during the present war, justly inspire her with the folicit considence, that her subjects would peaceably enjoy the fruits of their industry, and the advantages belonging to a neutral nation. Experience has neverthebelonging to a neutral nation. Experience has nevertheless proved the contrary. Neither the above-mentioned confiderations, nor the mand to the rights of nations, have prevented the fubical of her imperial majefly from their operations by those of the billigerent powers.

"These bindrances to the liberty of trade in genera.

and to that of Ruffia in particular, are of a nesore to ex-cite the attention of all neutral nations. The empress mids herfelf obliged, therefore, to free it by all the means compatible with Let dignity, and the well-being of her fubjects thut, before the puts this into execution, and with a factor intention to prevent any future infringements, the thought it but just to publish to all Europe the principles the means to follow, which are the properties to the property and the property of principles the means to follow, which are the properties prevent any methodershanding, or any occurrences that may occasion it. Her impecial majetly does it with the more confidence, as the finds those principles coincident with the primitive right of nations, which very people may reclaim, and which the belignment powers cannot invalidate without violating the laws of neutrality, and without difavowing the maxims they have adopted in the dif-

ferent treaties and public engagements.

They are reducible to the following points:

First, That all neural thips may freely navigate from port to port, and on the coasts of nations at war.

condiy, That the effects belonging to the subjects

of the faid warring powers thall be free in all neutral vef-fels, except contraband merchandize.

'Thirdly, That the empress, as to the specification of the above mentioned merchandize, holds to what is mentioned in the tenth and eleventh articles of her treaty of commerce with Great Britain, extending her obligations

to all the powers at war.

'Fourthly, That to determine what is meant by a blockading port, this is only to be underftood of one which is fo well kept in by the flips of the power that attacks it, and which keeps their places, that it is dangerous

to enter into it.

Fifthly, That these principles serve as a rule for proceedings and judgments upon the legality of prizes.

Her imperial majesty, in making these points public. dues not helitate to declare, that to maintain them, and to protect the honour of her flag, the fecurity of the trade and navigation of her thijects, file has prepared the greatest part of her maritime forces. This measure will not, however, influence the ftrict neutrality fhe does observe, and will observe, so long as she is not provoked and forced to break the bounds of moderation and perfect impartiality. It will be only in this extremity that her fleet have or lers to go wherever honour, intereit, and need may require.

"In giving this folemn assurance with the usual open-ness of her character, the empress cannot do otherwise than promise herself that the belligerent powers, convinced of fentiments of justice and equity which animate her, will the contribute towards the accomplishment of these salutary purpofes, which manifestly ter ! to the good of all nations, and to the advantages even of most it war. In confequence of which her imperial majed and furnish her commanding officers with instruction formable to the abovementioned principles, found people, and fo offen adopted The courts or and or n the primitive laws of meir connections."

ain, Portugal, the republic of Holland, and mile of navat powers in Europe, and have, in confequence of neutrality for the protection of have acceded to this it, clabished an ara meutrality for the protection of their trade against the inter-deprions that may be given to it on the high feas, by maintain at war with each other. ISTORY AND DESCRIPTION OF THE NEW

SECT. I.

Containing a general account of the country, its name, fituation, entent, elimate, mountains, reads, bridges, marble and after flones; and particularly of the afterfast, precious flones, mines, Etc.

there fines, and particularly of the afterfer, precious fance, mines, Ge.

THIS country is called by the Danes and the Norwegians themselves Norge. It is bounded, on the north and wet, by the north feat on the east, by Swedith Lapland and Sweden; and, on the north, by the sea called Categate, extending in length from the fitty-seventh degree forty-seven minutes to the north cape in the seventy-first degree thirty-sine minutes to very unequal distances within land, it being in some places two hundred and sighty miles broad, about one hundred and fifty in others, and not above thirty in others.

The sir is pure and salubrious in most parts of Norway, but more so in the middle and east side than on the western coast; for in the latter the sir is damp, and the weather extreately variable, on which account the Norwegians are sequently sufficked with scothic disorders.

When the herizon, in the summer nights, is unclouded, it is so clear and bright, that at midnight one may read, write, and do all kinds of work as in the day; and in the extremity of this country, towards the slands of softmark, and is observed day and night to encircle the north pole, contrasting its orbit, and then gradually, enlarging it, till the light parceived at noon being a faint glimmering that orbitness above an hour and a half, which as the fundom in the reflection of the rays on the highest mountains, whose summers are seen more clearly than any other objects; but the bountful Creator has granted the inhabitunts all possible assistance; for, befice the moonthine, which is rendered very bright in the vallies by reselling the mountains, the people frequently receive as much light as it necessary to performing their ordinery business, from the aurora borealis, or northern lights.

The cold of winter, in the wastern parts of this country, generally fets in about the middle of October, and continues all the middle of April. The waters are congeled to a thick ice, and the mountains and vallies covered with frow: yet even this in of some this par

the monitarity, are confidence interests in a finite win-ter; for without this fevere froft and finow they can neither convey to the rivers the timber they have felled, nor carry their corn, butter, furs; and other commodities; in their fledges, to the market-towns; and, after the fale of them, earry back the necessaries with which they are there sopearry back the necessires with which may are there rep-plied: for the largeft rivers, with their roaring cataracts, are arrefted in their course by the frost, and the very splittle is no sooner out of the mouth than it, it congealed, and rolls along the ground like hail. But providence has af-forded the inhabitants of this cold climate a greater variety. of prefervatives against the weather, than most countries

Their extensive forests supply them with plenty of timber for building and for fuel; the wool of the fheep, and the furs and fkins of wild beafts furnish them with warm lining for their cloaths, and covering for their beds; in-numerable flights of wild fowl fupply them with down and

feathers; their caverns alloye them shelter, and the mountains ferrem them from the north and call winds.

But while the winter thus rags in the east of Norway, the lakes and bays on the welf fide are kept open by the warm enhalations of the decen, though lying in a direct line with their frozen endern parts; sent the frost are feldom known to last above a foctalent or three weeks. Even in the center of Germany, which is two hundred leagues mearer the line, the winters are generally more fivers, and the frosts shappen than in the diocete of Bergen; fee this inhabitants here are often furpriced at reading in the public papers of frost and snow in Poland and Germany, when they feel no such weather, and the learned Dr. Frontepilden observes, that the harbours of Amberdeaue, Hamburgh, Copenhagen, and Labeck, are much aftenner from than those of Norway, where this feldom happens above two or three times in a whole century. Thus the winter at Bergen is for mederate, that the sea are almost always open to filhermen and mariners; and them the north see continues navigable during the whole winter as far as the eightleth or eighty-second degree. Thus while the inhabitants of the cattern parts have, by means of the ice and snow, the convenience of bringing their commedities in sledges to the market towns those of Hergen is however for subject to frequent rains, that the men, whenever they go abroad, wear rain- hats made like umbrellas; and the

fledge to the market towns those of the western side on the fea-count are at the same time employed in their profitable fisheries. All the eastern count of Bergen is however fo subject to frequent rains, that the men, whenever they go abroad, wear rain-hats made like umbrellas; and the women secure themselves, in all weathers, by wearing over their heads a black woolen or filk vail.

The weather in summer is extremely hot. But the violent beats, which are only of short duration, may be owing to the vallies being inclosed within high mountains, where the reverberation of the rays of the fun on all sides heat the sir; and as there is very little night, the atmosphera and the mountains have fearcely time to cook. There cannot be a more convincing proof of the summer's heat in Norway, than that several vegetables, and particularly barley, grow up and ripein within six weeks or two months in some places.

The western coast of Norway is serrounded by a great number of islands and rocks, some of the former being three, fix, or nine Norway miles in length, and pretty fertiles a but most of them are small, and inhabited by only a sew sissement and pilote. The rocks, which rise several faduous above the fertiles of the water, are a kind of ramipent that defends the coast; and amount to some hundred thousunds. They form abundance of good harbours; and in many places from rings are fastened to them fer mooring ships, where there is not fea-room or good anchorage. As the water is calm and smooth, they are as great fervice to coasters, the violence of the waters being broken against these barriers, while the open places are very dangerous, and every year prove stated to many small vessels. The thore of Norway is generally steep and perpendicular, so that close to the rocks, the depth of the sea is from one to four hundred fathoms one to four hundred fathoms in breadth, there runs a narrow channel four hundred fathoms in breadth, there runs a narrow channel four hundred fathoms in breadth, there runs a narrow channel four hun

hundred fathoms on the fides.

Norway being a very mountainous country, the arable land is but inconfiderable in comparison of the waters and defarts, which obliges the inhabitants to procure half their fubfittence from the fea. Hence the villeges are small, and the houses scattered among the vallies; but in some places those of the pealints stand so high on the edge of steep precipiers,

that ladders are fixed to climb up to them; fo that when a clergyman is fent for, who is unufed to the road, he singles hid life in according them, affectably in winter.

a elergyman is fent fur, who is unused to the road, he singless hid the in steersting thems, refacelably in winner, when the ways are lippery. In such places the bodies of the dead are let down with ropes, or brought down on men's backs, before they are laid in a coffin a sulf at found distance from Bergen, they are obliged to draw the mail over the steepest mountains; in the winter feason.

A great inconvenience experienced by travellers arises from the roads; for they cannot, without terror, pass even the king's road, which in several places extende up the sides of steep and craggy mountains on ways that are either shored up, or suspended by iron bolts sized in the mountains; and though not above the breadth of a footpath, have no rails on the side. If two stavellers were to meet there in the night, and not see each other son enough to stop where the road will suffer them, to pass, they must meet there in the night, and not fee each other foon enough to ftop where the road will fuffer them to pafa, they must frop thort, without being able to pafa by each other, or to find a turning for 'their horfes, or even to alight. The only refource I can imagine in this difficulty, fays the bi-floop of Bergen, is, that one must endeavour to cling to fome cliff of this steep mountain, or, if help be at hand, be drawn up by a rope, and then threw his horfe headlong down a tremendous precipies, in order to make room for the other traveller to pass. The caverns of the mountains also afford fhelter to the wild beafts, which render it difficult to extingate them, and it is nomically to describe difficult to extirpate them; and it is not easy to describe the havock made by the lynxes, foxes, bears, and especially

the havock made by the lynxes, foxes, bears, and especially wolves, among the cattle, goats, bares, and other animals. The cows, sheep, and goats belonging to the peasants often fall down the precipices, and are destroyed. Sometimes they make a falle step into the projection called a mountain-hammer, where they can heither ascend nor descend; on this occasion a peasant clearfully rentures his sife for a sheep or a goat; descending from the top of a mountain by a rope of some hundred fathoms in length, with his legs over a cross stick, till he sets his soot on the place, where he finds his goat, when he fathens it to the rope, and it is drawn up along with himself. But the most amasing circumstance is, that he runs this risque with the left of only a single person, who holds the end of the amasing circumstance is, that he runs this risque with the help of only a single person, who holds the end of the rope, or fasten it to a rock, if there be one at hand proper for that purpose. There are instances of the assistant simulast having been dragged down, facristicing his life from his fidelity to his friend, on which both have perished. When a man or beast has thus the misfortune to fall some hundred sathoms down the precipices, it is observed, that the air presses with such sorce against the bodies thus falling, that they are not only deprived of life for some time before they reach the ground, but their bellies burst, and their entrails come out, which is always the case when they fall into deep water.

case when they fall into deep water.

The multitude of springs that issue from the mountains, and the vast masses of snow accumulated on their summits, and the vait mattee of those accumulated on toer tulamite, which gently diffole in fummer, form many lakes, in fome of which are floating illands, and a confiderable nomber of rivers, the largeft of which is the Glommen, or Glamer; but none of them are navigable far up the country. Status in the passage being every where interrupted by rocks, and in some places by dreadful cataracts, in which the stream precipitates itself from the height of forty, sity, and even a hundred fathoms. The bridges over these sivers are not walled, but formed of timber cases filled with stones, which ferve for the piers on which the tim-bers are laid. The largest bridge of this kind has forty-three stone cases, and is a hundred paces in length. In those places where the narrowness and rapidity of the cur-rent will not admit of sinking these cases, thick masts are laid on each fide of the shores, with the thickest end fastened to the rocks: one mast being thus laid in the water, another is placed upon it, reaching a fathom beyond it, and then a third or fourth in like manner to the middle of the fiream, where it is joined by other connected masts from the opposite side. Thus in passing over the bridge, especially in the middle, it seems to swing, which to those who are not used to these bridges appears extremely dangerous, fo that filled with terror they alight and lead over their horfes.

Some advantages, however, attend the mountains of Norway; a great chain of them serves as a barrier between this country and Sweden; and befides, they exhibit the most delightful prospects; for here nature has added greater beauties to the fituation of cottages and farm-houses, than in other countries can be enjoyed by royal palaces, though affilled by all the varieties of groves, terraces, canals, and calcades. A predeceifor of mine, says the bishop of Bergen, is said to have given the name of the Northern Italy to the diffrict of Want, which lies fome leagues to the eastward of Bergen; and cartainly there cannot be a more enchanting prospect. The buildings in it are the church, the parfonage, and a few farm-hooles feattered on different

the parsonage, and a few farm-hooles scattered on different aminences.

A The beauty of this place is much heightened by two uniform mountains gradually rising to a vail height, betwigt which runs a valley near half a keyw in breadth, and a river which some interest precipitates is fit down the rocks in some interesting the property of the forest interesting the source of the s hazle, that had lain a long time in the water; but upon a narrow inspection, and drawing out some of the slaments. I found it to be aminanthus, much finer than the Green-land stone-flax, which the reverend Mr. Egede says is used there as wick in the lamps, without being in the least wasted, while supplied with oil or fat. This aminathus, from the softness and sineness of its sibres, deserves to be called stone-filk, rather than stone-flax: I also made a wick for a lamp of it, and it was not consumed; but its light being much dimmer than that produced by cotton, I laid it asset in the last than some profession a piece of paper of this assets which when thrown into sine is not destroyed, but what was written on it totally disappears.

"The manner of preparing this stone-silk or stone-flax is this: after its being softened in water, it, is beaten with a moderate force, till the sibres, or long threads, separate from such other: afterwards they are carefully and repeatedly washed till clear of all terrene particles; then the stax is dried in a sieve: all that remains now is to spin-these sine silaments, wherein great care is required; besides which the singers must be softened with oil, that the

the man are imported from Denmark or Germany is to frin the fine filaments, wherein great care is required; be-fides which the fingers must be foftened with oil, that the thread may be the more supple and plinat."

Notwithstanding this country abounds in stones, yet no slints have hitherto been sound there, so that those for fire-arms are imported from Denmark or Germany; but though there are no flints, there are amethifts, garnets,

chalcedonies, crystals, agate, and airper.

This country formerly produced gold; but the expance of working the mines, and feparating the gold from the ore, being greater than the profit, they have been neglected. There are, however, filter mines, which are attentionable and the profit of the pr glected. I here are, nowever, inver mines, which are extremely valuable, and give employment to feveral thousand persons: the principal of these is at Kongsberg. Other silver mines are worked at Jarssberg, but not to the same advantage, the ore being mixed with lead and copper. In many parts of this country copper mines have been discovered, the richest of which is at Rorass, about a hundred. covered, the recent or which is at Rorass, about a hundred English miles from Drontheim, which annually yields eleven hundred thip-pounds of pure copper, each thip-pound being equal to twenty English stone. Here are likewise fome lead mines, but none either of tin or quickfilver. wile fome lead mines, but none entire of the displacement of the line in great plenty, many hundred thouland quintal being annually exported, chiefly in bart, and the reft east in cannon, kettles, stoves, and the like.

SECT. II.

Here are several kinds of cherries, of which the peasants fell great quantities dried; also many forts of wholtone and well-tafted betries, as fraw-berries, rathereles, red and white currants, goosberries, fun-berries, hiberries; bathereles, exenberries, hackberries, &c. Several kinds of plums sittain to a tolerable ripeness; but this is seldom the case with peaches, apricots, and grapes. However, several forts of apples and pears are found all over the country; but the greatest part of these are summer fruit, which ripen early for winter fruit seldom come to perfection, except the lumner proves botter, and the winter fets in later than osual.

Though Norway is inferior, with respect to its fruits.

ter fets in later than olust.

Though Norway is inferior, with respect to its fruits, to many other countries in Europe, yet this deficiency is compensated by its immense forests, from which most of the provinces receive prodigious tums from foreigners for beams, matts, planks, and boards; befides the great confump-tion for houses built at home, entirely of beams of wood, also for thips, bridges, and a great number of sounderies, which require an immenfe quantity of chercoal in the fusion of metals. In many places the woods are only felled to clear the ground, and are burnt for the fike of the after, to enrich the foil.

Their horses are of greater ofe in riding than drawing a

Their horfes are of greater use in riding than drawing; they have an easy pace, are full of spirit; and very sure source. When they mount or descend a steep rock on stones, like steps, they first tread gently with one soot, to try if the stones they touch be saft; and in this they must be lest to themselves, or the best rider will endanger his neck; but when they are to go down a very steep or sippery place, they draw their him degt under then in a very surprising manner, and slide down. They show great courage in sighting with the wolves and bears, which is very usual with them; for when a horse perceives any of courage in naming with time woives and bears, which is very ofual with them; for when a horfe perceives any of their ferocious animals advancing towards him, and has a mare or gelding with him, this generous animal places them behind him, and then attacks his antagonift by striking at him with his fore-legs, with such courage, that he commonly remains conquerce. Both the Norswa he commonly remains conqueror. Both the Norway horfes and cows are in general of a yellowith colour; but the latter are finall, and yield no great quantity of soilk; however, their flesh has a fine grain, is julcy, and well

Their sheep are small, but the fiesh is delicious, and the fleeces profitable. Goats, in many places, run wild in the fields, both in winter and summer, till they are ten or twelve years old and when the pealant, to whom they be-long, is refolved to take them, he must either do it by some long, is refolved to take them, he must either do it by fome finare, or shoot them: they are so bold, that, on the approach of a wolf, they stay to receive him, and, if they have dogs with thrm, will refist a whole herd. They also frequently attack the snakes; and when they are bit by them, not only kill, but eat them, though they are ill for several days. If these goats are tame, the owner washes the woond with their own milk warmed.

Swine are not plenty in Norway; nor are there many of the common deer, but the hares, which in the cold feafon change from brown or grey to a fnow white, are taken in great numbers in winter. In fome parts of the country there are, bits, but they are not very numerous. The reindeer run wild in herds, and are fhot by the inhabitants for food. The bishop of Bergen observes, that when the reindeer fleds his horns, and others rise in their stead, they appear at first covered with a skin, and, till they are of a finger's length, are for foft, that they may be cut with a kinic like a fausage, and are delicate eating, even when raw. The huntimen, therefore, when far out in the country, and perished for want of food, eat them, and find that they faisify both their hunger and third. But when the horn is grown, there breeds within the skin a worm, which cats away the root. It is also remarked of this animal, that he can draw a kind of skin over his eyes, and can fee through it, otherwise in the hard sinces he would be obliged to that his eyes entirely.

would be obliged to that his eyes entirely.
In this country are also found the lynz, vast numbers of In this country are also found the lyna, 'was numbers of black, red, and 'white foxes; and the glutton, which receives its name from its votacious appetue.' Those of this country, in their shape and size, have some resemblance to a long-bodied dog with thick legs, sharp claws and teeth; his colour is black, variegated with brown and yellowish streaks: he has the boldness to attack every beaft he can possibly conquer; and if he finds a carcase fix times as better the will not leave it, while there are he will be the will not leave it. as himfelf, he will not leave it, while there is any left; when fully gorged, he fueezes himfelf between two trees that fland near together, and thus emptics himfelf of what

he has not time to digeft. As his fain filmes like damafa, and is covered with for hair, it is much valued; the luntifican therefore though this animal with a bow, and blunt arrows, that he may kill him widnout wounding the

blunt arrows, that he may kill him widsout wounding the fkin.

They likewife hunt the mertin for the fake of the fkin and the ermine and figuired; both of which are fhot with blunt arrows. The fkin of the ermine is of a beautiful white, and the tip of the tail black. Thefe little anime! run after mice like cats, and drag away what they can the particularly eggs, which are their greateft delicacy. Ever are affo otters, beavers, hedge-hogs, and badgers. Home of the mice are thought to be polionous, and others as from markable for their being white, and laving red eyes. The most peralcious vermin here is a little animal called the leamus, or lemming, which is between the fize of a rat and a moufe; the tail is thort and turned up at the end, and the legs are also so that they feare keip the belly from the ground. They have very fost hair, and are of different colours, many of them are black, with yellow and brown in streaks, and some in spots. It is fail of these creatures, that about once or twice in every twenty years, they affemble from their screen abodes in prodigious numbers, like the mesingers of heaven, to punish the neighbouring inhabitants. They proceed from Kolen's rock, which divides the Nordland manor from Sweden, and is held to be their peculiar and native place, marching in vast multitodes through Nordland and Finland to the Western ocean; and other bodies of them through Swedish Lapnark to the Sinus Boilinleus, devouring all the grass and vegetables in their way. They do this in a direct line, and going straight forward, proceed into the rivers on the sea: thus, if they meet with a boat in any river, they run in at one end or side, and ont again at the other, in order to keep their course. They carry in any river, they run in at one end or fide, and out again at the other, in order to keep their course. They carry their young with them on their backs, or in their mouths; and if they meet with peafauts who come to oppose them, they will stand undaunted, and bark at them like dogs. This evil is, however, of there duration? for, on entering the sea, they swim as long as their strength lasts, and then are drowned. If any are stopped in their course, and unable to reach the sea, they are killed by the frosts of winter, and if any of these scape, most of them die 25 sources and if any of these scape, most of them die 25 sources are seas. foon as they eat the new grafs.

Toads and fnakes are only in the fouthern parts of this

country, and these snakes are less possonous than in warmer climates. Lizards are here of various colours, as brown, green, and firiped; those that are green are found in the fields, and the others in the cracks and holes

in the rocks near the fea.

Most of the fowls found in the rest of Europe are here, and fome that appear peculiar to this country. Among the former are common poultry, turkir-geefe, peacocks, ducks, and pigeons : T . larks. quails, paetidges, ftarlings, wrens, r 18; wagtails, ftorks, herons, gulls falcons, eagles, and many of Taterorants. are only two fpecies, the tock "

The rock-eagle is fomew: c, and spotted with grey; it haun country, and frequently kills like animals, as well as birds. in the nd the ane miniers here fay, that he animals, as well as birds.

Let rainers here 182, that he will fointsimes attack a deer, in which case he makes use of the following stratagem: he foaks his wings in water, and then covering them with fand, and flying about the deer's face, blinds him for a time, when the pain makes him run about as if mad, sud he frequently falls down a rock and breaks his neck, upon which the eigle feizes upon him for his prey. Young children are fill to be formely a savined when the responsibility is the responsibility.

e gle feizes upon him for his prey. Young children are faid to be fometines carried away by this ravenous bird. The other, called the fifth eagle is of a large faze, and of a light brown. Though it does not diffice a dead cara light brown. I hough it does not united a deac car-cafe on thore, it lives principally on fifth, which it often takes from the otters, and frequently feizes fifth on the fur-face of the water. When this bird flies out to dea in order to finke a fifth with his talons, he fometimes lays hold of fuch as are too ftrong for him, particularly the fifth here called the queite, whose him and prominent back makes him appear much less than he really is: when the eagle him appear much lets than he really is: when the eight firikes his talons into him, he cannot eafily difengage them, on account of their crookedness and length, in which case the fish drags him down with him; while the bird, making a miferable cry, strives to keep himself up, and works with his wings spread as long as possible, though in vain; for at last he must yield, and fall a prey to those he intended to devour. Another instance is mentioned, in order to shew that this king of birds, as he

meddle along the water, on which account they are folders are to come athore. They are fail in hy but two eggs, and there under their wright there are lived nextly does hole by shough an wat one's lift in. In each of their they had not with left trouble than others do so little.

The Norway parrot is a maddle first day of feet as perficilly, and with left trouble than others do so little.

The Norway parrot is a maddle first first black and white, and its beak, which is headled like that of a parrot, is firsped with yellow, red, and black, and fo thatp, that when he bites any of the hird-catchers, he takes are a rice of fielh: his claws are affe very first, with which, and dis beak, he defends himfolf against the raver, whom he holds by the throat, and will carry out to fee, and drown him before he lofes hold. This bird builds him nest between the clefts of the rocks, and also in a faming, hole in the ground, two or three ells deep.

The bird called the black-cap is almost as small as the wren; the body is black and yellow, white under the beliy and the top of the head black. The body is to a faming hole. In the ground, two or three ells deep.

The bird called the black-cap is almost as small as the wren; the body is black and yellow, white under the beliy and the top of the head black. The body is black and yellow, there are the houses, and are finch lovers of meat, that the farmers can hardly keep them from it, and therefore catch them in a top like mice. In thort, there are fuch incredible numbers of sea and land fowl near the rocks on the sea flow numbers of sea and land fowl near the rocks on the sea flow. The counter is also as elentifully supoled with fish at the forwing the time. This counter is also as elentifully supoled with fish as

there they founcimes obcure the fight of the heavess for meany miles out at fea, to that one would imagine that sall the fowls in the universe were affembled in one flock at the fame time.

This country is also as plentifully supplied with fish as any in the world. Here are whales of several kinds, porposics, sword-fish, and sharks; flurgeon, falmon, almon-route, turbot, cod, thornback, rock-fish, stying-fish, whiting, carp, gurnet, slownders, plaife, mackarel, heavings, brane, anchowies, eels, and many others well knews in other parts.

The fin-fish, which is not very common, is forty feet or more in length; their liver alone yields several casks of train oil. On their backs they, have a high round and sharp-hone, with which they tear open the bellies of other sish. They are covered with a kind of hair, something like a horse a more and as often seen about the boats of the sishermen, who are as much airald of them as of the most dangerous mansfer that infest the fea.

One of the most extraordinary creatures produced in the ocean, is the ink-fish, called by some the segment it is if from nine incluse to upwards of two feet in length. The head has two large eyes, and the mouth has some resemblance to a bird's beak; above which there stand two long arms or houns, each of which is sellangular, and covered with a number of simall round' balls, somewhat larger than a pin's head. Achthe Luck of the head are two of these hours twice as long as the rest, and broader towards the end. The body is silked with a simble of it are two skinny membranes, with which the animal can cover isfelf over; and it assumes various forms by the exoction of its skin and arms; but what sums spear very extraordinary, the fore part of the hody is silked with a final, which makes the sish appear of a blue colour, though this suit is sell and the silk, and may ferre for ank to write the long, they become invisible to their partiers, and by this means make their essage. Thut this otherwise help-less animal is provided by the wise Creator for it

of an orange colder, others of a light red, and others of a deep red; and these stripes are streamly over with as many, little which knobs as there were originally prichles. When this since their is broken, which is easily done there is found in it a quantity of fline and water, with a sinall side, of a black, or dark-rad colour; and from this little body there runs into all parts of the shell a gress number of sine threads, that some only composed of a thicker slime, and have a communication with the graymaptickles; and a yellow shown is disposed in firster between those. The fifth lies stretched from the bottom so the top of the shell, where there is an almost imperceptible opening, through which the excrements sets. The mouthwhich is extremely curious, is formed of sive bones, part convex and part concave, all running to a small point, where they join together like the bill of a bird, and have some resemblance to a slower. The sea-urchia rolls himself about on his prickles wherever he pleases, and is greatly found in a sandy-bottom.

Here is also that extraordinary production of nature, ranked among fishes, called the sca-nettle, and as of two kinds; one comprehending those that always resum fixed in one place like fer apiants; and the other consists of those that change their place. Reaurum seems than real animals, because they have organized bodies, and give signs of feeling when they are tothed; besides which, they lay hold of shell-sish, and others, which they are to such a progression energy to a truncated cons, having its base fixed to some stone stones; but in general their outward form approaches nearest to a truncated cons, having its base fixed to some stones; but in general their outward form approaches nearest to a truncated cons, having its base fixed to some stone stones; which, they lay hold of thell-sish, and others wand form approaches nearest to a truncated cons, having its base fixed to some stones; the such city of the search of the secretce of the same and the stones. The search of the s

manner, but slways very agreeably.

The wandering fea-nettles have soothing common with the pieceding except in the name, and they have different appellations in different appellations in different paces, as also according to their

appellations in different places, as also according to their fines.

Many Norwegians of credit have affirmed, that the northern ocean produces fonce very extraordinary anignals, the extifence of which has been doubted by menkind in general; there are, the merman, mermaid, great fau-finake and kraken, or korven; of which, for the latisfaction of the curious reader, we fault here give fonce account of.

A learned and ingenious gentleman, writing concerning, the merman and mermaid, tells us, that "they are fen aniquals which bear forms refernblance to the human form. In the year 1719, one of the males of this species was found d.r.i on a point of land in Norland. His colony was of a dark grey; the fice resimabled that of a man, with a varge month, and flat nofe; the arms were attached to the fields by a thin membrane, and terminated in paws like those of the fea-call. The body tapered into a fift's tail, like that of a porpoise, and the length extended to three fathoms. The membrane is formed in the fame manner, abouting the different of fear, which is difficultied the that of the human res.

These creatures have been feen of various material the fame manner, and hast 'e. A found in leasy parts of the north fees.

"Three fithern in Efficient, in De mark, being examined upon oath were the privy-consistion Prederick van Gram, declared, that in the month of July 1703.

ARMS and DRESS of a CALMOCK Compared for MILLAR's l'on fouplete & Houveral SYSTEM of GEOGRAPHY. HABIT of a MOSCOVITE WOMAN.

alm weather, between Hysen and Sacilland, ched, in their boat, fomething that fleated on like, a dead apply which lay without imp

hollow, his face measure and weather-beauent, and his skin was course and havy.

"One of these shoot may have the course of the surplement the water, and then raifed its tailabove the furface, a whole flip's length from the head. Though the exact, dimensions of the fea-faske cannet be affectationed, we may correlude, from the concurrent teflimony of those who have feen it as sea, that he is an hundred fathoma in length; and that his body is as lange as a hoghead. That his sense of finelling is very sente, the fishermen conjecture from the circumfance of his avoiding the seem of castor, a quantity of which they therefore provide themselves with when they go out to fish in the summer; and they throw a small portion of it overboard, when they meet the seafmake. the water, and then raised its tailabove the furface, a whole

"The kraken, or korven, is the most surprising creature in this sea, and perhaps in the whole world. This unimal is of the polypus kind, but seemingly a mile and a half in circumstrence. The Notwegian sithermen, sometimes, in a summer-day, find no more than twenty or thirty fathoms water, where the depth used to be eighty or thirty fathoms water, where the depth used to be eighty or one hundred; and here they catch great plenty of cod and ling. They know the kraken is below them, and that Loey are fishing upon his back. When they perceive, by their lines, that the water grows more and more fhallow, they judge he is rifing flowly to the furface, and row away with great expedition. As a proper diffance they lie upon their oars, and in a few minutes part of him appears above the water like a nymber of small islands and sand-banks, covered with sea-weeds, and abounding with a great variety of fish, that leap about, and roll off his sides into the water. At length a great number of nellucid antennal riety of fifth, that leap about, and roll off his fides into the water. At kingth a great number of pellucid antenna side upon his back, as large and as high as the mafts of moderate velfels: by means of these instruments, or tentacella, he those shittless; and gathers in his food, which consists of small fisher; after he has renained a little time at the surface, he begins to sink again gradually, and this motion produces a dangerous swell and whirlpool in the water. In all probability, the back of this huge mentler has been mistaken for the sloating islands which have been distribed by so many voyage writers. The whale bone or blubber whale, the permeeti whale, the great feafnake, and the kraken, seem to have been all deferibed, in the holy feriptures, under the general name of leviathan to that word implies not a particular fish only, but a huge for that word implies not a particular fifth only, but a huge fea-monfter, or fifth of a prodigious fize. For want of knowing this, those beautiful passages in the book of Job, wi ere leviathan is described, have been frequently missinderstood.

Of the inhabitants of Norwey, their persons, droft, di manuers, bestielity, their nextons conshements, shin narrowhere, fewling, and trade, See.

Live is people of this county are in general off, with master and of tirely dispulsions; we then on the county are not probed to the first intention to neither to tall, not for robust at their the mannains; but are remarkable for king farer, and having pounder faces. The hair, and year of the Norwagiana are of sighter solers than thefe of most other nations; and a dark complexing in as rate there, he a fair complexion in Ifaly. Indeed their eyes are penerally history in a fair complexion in Ifaly. Indeed their eyes are penerally history in a fair complexion. The Norwagians are in general brills, stave, and to ingenious, that the pentants employ neither instead, short makers, weavers, taylors, tamoets, computed in the master, who in the Norwagians are in general brills, stave, and to ingenious, that the pentants employ neither instead, short makers, weavers, taylors, tamoets, computers, journal, not finishs, all these trades being exceptible in survey, start, house, and they think, that unless a boy becomes matter of all these arts, he can neither be a micrial member of selects, nor a good man.

The derth of, the Norwagians, who live in teats, has neithing turnutable in it; but the pentants do not troul is therefore about fathonas. The foremed frile farmer, have shell believed and those who are found of appearing sine, have the same covered with cloth of different colour. The pentants of one parish are remarkable for wearing white closths edged with black; the drefs of another parish is black edged with black; the drefs of another parish.

On their heads, they wear a flapped hat, or a little most every parish.

On their heads, they wear a flapped hat, or a little

most every parish.

On their heads they wear a flapped hat, or a little brown, grey, or black cap, made quite round, and the feems adorned with black ribbands. They have free of a particular confirmation without heels, confifting of two a paracular construction without neets, consisting of two pieces, the upper-leather fixing close to the foot, and the lole being joined to it by many plaits and folds. In winter, and when they travel, they wear a fort of half boots, that reach up to the calf of the leg, and are laced on one fide; and when they go on the rocks in the fice, they put on fnow-shoes; but as these are troublesome. when they have a great way to travel, they put on inow-flaits, which are about as broad as the foot, but fix or eight feet long, and pointed before; they are covered un-derneath with leal-skin, io that the smooth grain of the hair turns backwards to the heel. With these snowskaits they flide as fast upon the snow as upon the ice, and with a fwiftness exceeding that of any horse.

The lower clais of people never wear a neckeloth, or any thing of that kind, except when they are dreffed; for their neck and breat are always open, and they let the for their next and oceant are aways open, and they fet the flow best into their bosoms: on the contrary, they cover their veins, binding a wellen fillet round their wrifts. They wear about their body a large leather belt, adorned with convex brass plates, to which hangs a brass chain that holds their large knife, gimblet, and other useful

The drefs of the women when at church, and in general affemblies, confifts of jackets laced close: they have also leather girdles, with filver ornaments about them. They also wear a filver chain three or four times round the neck, with a gilt medal hanging at the end of it. Their, handkerchiefs and caps are almost covered with small handkerchies and caps are amount control and large rings, fuch as they wear on their fingers, to which they hang erain a recel of small ones, which make a jingling noise again a parcel of small ones, which make a jingling noise when they move. A maiden bride has her hair plaited, and hung as full as possible with such kind of trinkets, as e'S her cloaths.

They generally build their houtes of fir and pine-trees, the whole trunks of which are only chopped to make them lie clofe, and then laid one upon another, and faftened with morties at the corners. These trunks are left round as they grow, both on the inside and outside of the houses, and are frequently boarded over and painted, especially in

and are trequently boarded over and painted, especially in the trading towns, which makes them appear very genees.

In the country villages, the people build their house at a distance from each other, with their fields and grounds about them. The store-house for the provisions is generally at a distance from the dwelling house, far tell of Kes.

No. 49.

hie, and placed high upon poles to keep the provisions dry, and preferve them from mice and all kinds of vermin. The kitchen also flands separate, as do the cow-

dry, and preferve them from mice and all kinds of vermins. The kitchen also stands separate, as do the cowhouses, barns, stables, &c.

A farm has generally a mill belonging to it, diseased by some rivuler besides a smith's forget. The he country, where timber for building is lof little valle, there are many farm-house as large as the feats of noblemen, these are frequently two stories lightly and have a raised is blooky in the front, and the additional building resemble a village. The common same howers have, however, only the ground-stoor, and no other n nidow but a square holis in the wall, which in summer is left upon the four holis in the wall, which in summer is left upon the four miles which is the inward transparent membrane of some which is the inward transparent membrane of some wait that is very strong. This holed which is as high is spossible, answers the purpose of a chinney, by letting out the since. Under the above hole there is generally placed along thick table, with henches round it; and at the uppose end is a high seat, which belong selelyme the master. In the towns these boules are covered with tiles; but in the country the people lay over the boards the sapp bark of high trees, which will not decay in many year. They cover this again there or four inches thick with turf, on which there always grows grafs or moss.

The Norwegiant are extremely elvile in their behaviour, and are willing to do to another any friendly act in their tower. They are so hospitable, that a traveller is feldom permitted to pay for his lodging; for they think it shelf does them an honour by accepting of their eivilities yet the persant never gives his place at the upper end of the table to the greatest guest that ever comes under his roof; for he claims a peculiar right to that place. At Christmas, they keep open house for three weeks, during which their tables are spread and loaded with the best provisions they can afford. At Christmas, every thin her should be a she to the very birds, for whose use they have so the v

At Christmas-eve, their hospitality extends to the very birds, for whose use they hang on a pole at the barnel door an unthreshed sheaf of corn, which draws thither the sparrows, and other small birds, that seast upon the pro-

vision.

The diet of the inhabitants in the trading towns is much the fame as that of the Danes; but the peafants adhere to the manners of their forefathers: Oat cakes are their common bread; but upon particular occasions, as at weddings, or other entertainments, they have rye-bread. However, if grain be scarce, which is usually the case after a very sewere winter, the peafants have recourse to what even they effect a disgreeable method of preferving life, by boiling and drying the bark of the firstree, mixing it with a little oatmeal, and making it into a fort of bread; and that they may think this food lefs disagreeable in times of fearcity, they accostom themselves to eat some of it, when there is sty of the better fort.

The Norway peafants esteem their best dainties to confift in milk, meats, and different forts of cheefe, on which they foread butter, as on bread. The highland perfants to fond of angelica, which grows very plentitully in the mountains, that they chew it in a morning dried, and

alfo ufe it as fruff.

The people funnish themselves with game in the mountains, and the lakes and rivers afford plenty of frash-water fish. They kill cows, sheep and goats, for their winter flock, part of which they pickle and fmoak; and fome of it they cut in thin flices. Sprinkle it with falt, then dry it in the wind, and eat it like hung beef. They chew and

finoak tobacco, and are fond of brandy.

fineak tobacco, and are fond of brandy.

The lower clafs of people are generally employed in cutting rood, felling and floating of timber, burning of changal, and extracting of tar. Many are also employed in the mines, furgacea, and flamping mills; also in navigation and fifthing, besides hunting and shooting; for every body is at liberty to pursue the game, especially in the mountains, and on the health and commons, where every

pealant may make use of what arms he likes best.

These people are inured to cold and hardships from their childhood: for in the latter end of November they run about here-footed, even upon the ice. The mountaineers, who daily go in the woods have frequently their heards full of jeicles, and their bosoms full of snow. Our author says, that in his travels over the highest mountains of Norway which are covered with thow, and where horfes are of no fervice, he has feen the pealants in great numbers do the work of thefe animals, whom they feem almost to equal in flrength. When they have been in a profule fweat, he faw them throw themselves every half hour upon the flrow, for the fake of its refrelhing coolness, and even sucked it to

ye that the bit of the

ag: pu ke

the

quench their thirst. This they undergo without the least apprehentions of a cold, or a rever, and without marmering, or betraying the least discontent. On the contraviation, or betraying the least discontent. On the contraviation or not singleng merrily and with reliefelible chearful a first and afacter undergo the hardest labour imaginable for sine bours, whichest these million.

No left vineschable are the strong continuous of this sine though which we will make the contraviation of the sine hardest are the strong continuous of the sine hardest contraviation of the sine hardest contraviation of the relief bout the middle of January, to make their winers have a solution of the rich produce of the ocean. The people of dreat shall be abled to the produce of the ocean. The people of dreat shall be the sine after the first weeks provisions, which otherly would be stress that of the weeks provisions, which otherly would be stress that of the weeks provisions, which otherly would be stress that of the weeks provisions, which otherly would be stress that of the weeks provisions in open boats; and after than orded together by some left of the harder of the might, and the next morning return to the same statement of the family and the next morning return to the same statement and the strong of the night, and the next morning return to the same statement when the same strong of the night of the husbandman than in other parts; for he does not the this labour, as in the British dominions, are his shollyte and eritain property. But, on the other hand, it is in many places attended with great incorrencince and strague; for the instelled conflict of lieus lipsu of ground among the rocks, many of which suit be due inflead of being plowed, pair the discussion of the places, where the foil is less fruital, and affords few places, where the plough can'the wide. In this case of the conflict of the confli is not so subject to break. Nor is the narvest without and difficulties; the grain, according to the old custom of the peasants, not being mowed with a feythe, except about Christiana, where it is lately come into use, but ear with a fickle; for the corn often grows so thick and close, and the stalks are so apt to bend with the weight of the care, the same invited and hard while they the trains are to apri to bene with the weight of the ears, that the respers grafe the ftems with one haid, while they cut them with the other, and then bind them in fheaves that they may be thoroughly aired and dried, agreet number of poles are fet up in the fields, and fix or eight sheaves lrung to each pole!

No waggons are used in harvest work, except on the frontiers, where they have been introduced; but instead of fronters, where they have been introduced; but inflead of them; the Norway pealants use fledger, and are prejudiced against any other kind of vehicle, even in placea where wagons might easily travel, though their work would be performed with much greater case and expedition. But in this and every thing else they are fo superfictionsly tenacious of the customs transmitted to them by their forefathers; that they will not venture to move a flour which their parents had bleed in a particular fore.

reats had placed in a particular foot.

'Some of the inhabitains procure a very good maintenance by catching of birds; but it is impossible to give a just it is of the fatigue and danger with which the people fearch for the birds in the high and steep rocks, many of which are above two bundred sathoms perpendicular. These was a procure of the satisfaction of the s which are above two bundred fathoms perpendicular. These people, who are called birdmen, have two methods of catching them: they either climb up these perpendicular rocks, or stellet down from the top by a strong and thick tope. When they climb up, they like a large pole of eleven or twelve ells in length, with an iron hook at the end. They who are underneath in a boat, or stand on a cliff, fasten this hook to the waithband of the man's breeches who climbs, by which means they help him up to the highest projection ite can reach, and fix his feet upon. They then help up another to the same place; and when they are both up, give each ".'a bird-pole," and long tope," which they tie at each end round their wall. The one then climbs up as high as he can; and where it is difficult the other, by putting his pole under his breech, puffices him up, till ne gets to a good flanding-place. The up-permost of the two then the lips the other up to him with a cope; and thus they proceed till they get to the part where the birds build, and there they fearch for them.

As they have many dangerous places the to climb, one always feeks a convenient fpot where he can fland feeure by being able to hold himfelf fast, while the other is climbing about. If the latter thould happen to flip, he is held up by the other, who flands firm, and when he has passed in fasety those dangerous places, he fixes himself in the same manner, that he may enable the other to come the fame manner, that he may enable the other to come fafe to him; and then they elember about after bitds where they pleafe. But fornetimes accidents happen; for if one does not fland firm, or is too weak to support the other

when he flips, it y both fall and are killed; and every year fome perith in this manner. On their thus reaching the places the are feldom vifited; they find the birds to same, that they may take them with their hands, they being unwilling to leave their young; but where they are wild, they throw a net over them in the rock, and entangle shofe that are flying, with a net fixed to the end of their poles. Thus they catch a vaft number of fowls, and the boat keeping undernealts them, they throw the dead birds into it, and foon fill the veffel.

If the weetler continues favourable, and there be a great deal of gant; the birdmen fometimes continue eight days together on the rocks; where they find holes or eaverne in which they can fecurely take their repofe. In this cale they draw up provisions with lines, and boats are kept coming and going to carry away the game they have caught. At many of the rocks are to deep and dangerous, that they earinet possibly elimb up them, they are then let down from above; when they have a flrong rope, eighty or a handred fathom long, and about three inches in thickness. One and of it the birdman fathers about his waith, and then drawing it between his legs, fo that he can fit on it, he is let down with his bird-pole in his hand, by fit men at top, who let the rope fink by degrees, but lay a piece of timber on the edge of the rock, for it to flide on, to prevent lis being torn to pieces by the fharp edge of the flones. O'Another line is fathened round the man's waiff, which he pulls to give figns when he would have them pull him up, let him lower, or keep him where he is. He is in great danger of the flones loofening by the rope, and falling upon him; he therefore wears a thick furred cap well lined, which fecures him from the blows he may receive from fmall flones; but if large ones fall, he is in the greated hazard of lofing his life.

Thus do thee poor men often expose themselves to the most imment danger, merely to get a dobificance for their

the greatest hazard of losing his life.

Thus do these poor men often expose themselves to the most imminent danger, merely to get a substitute is no hazard in it, after they are accustomed to it; but at first the rope turns round? with them, till their heads are giddy, and they can do nothing to save themselves. They who have learnt the art, make a play of it; they put their feet against the rock throw themselves several stations out, and pull themselves into what place they please. They even keep themselves out on the line in the air, and catch with their poles numbers of birds slying out and into their holes. The greatest art consists in throwing themselves out, so as to swing under the projection of a rock, where the birds gather together: here they fix their feet, loosen themselves from the rope, and sasten it to a stone, to prevent it swinging out of their reach. When a man has done this, he climbs about, and eatches the birds either with his hands or the pole; and when he has killed as many as he thinks or the pole; and when he has killed as many as he thinks proper, he ties them together, fastens them to the final line, and, by a pull, gives a fign for those above to draw

line, and, by a pull, gives a fign for those above to draw them up.

The birdman works all day in this manner; and when he wants to be drawn up, he either gives a fignal to those above, or, with his belt full of birds, works himself up with his hands and feet. If there are not people enough to hold the rope, he fixes a post in the ground, fasteus his rope to it, and flides down without any help; after which, he goes to work as before. In some places there are sleep clefts of a prodigious fize lying under the land, and yet above two hundred yards above the water, which are likewite very difficult to be got at. They help one another down these clefts in the above manner; and taking a strong rone with them, fasten it here and there in the cleft where rope with them, fasten it here and there in the clest where

rope with them, fatten it here and there in the cleft where they can; and leave it all the immer; they will run up and down upon this, and takes the birds vry eafly.

To the beholders, this bird-catching appears inconceivably dreadful and dangerous, from the valt height and exceffive steepness of the rocks, many of which hang over the fea. It seems impossible for men to enter the hole under these projections, or to walk a hundred fathoms high on crags of tocks, where their toes can barely fix.

They rat part of these birds fresh, and part is hung up to dry for the winter season. These birds afford the inlustituates a good sasintenance, partly from their stellars, which are plucked and sent to foreign parts, and partly from their stellar and specificant.

The people of Norway carry on a considerable trade, both to Denmark and foreign nations. They import winc, end many other articles of luxury, but their exports are much more numerous, consisting of mass, timber,

are much more numerous, contilling of mails, timber, deal boards, oak planks, copper wrought and unwrought, iron in bars and call into cannon, pots, and floves; lead

in fuall quantities; marble, mill-stones, fatmon, herrings, cod, ling, lobsters, cow-hides, goat-skins; the furs of ermines, martens, beavers, foxes, wolves, bears, &c. down feathers, butter, tallow, train oil, tar, pitch, juniper and other berries, nuts, alunt, falt, vitriol, and pot-asses. A STATE OF THE STA

137 59

a pulliant the S.E.C. T. IV.

Treating of the language, lawt, religion, and government of Norway; all of tit four chief governments, or prefetor-foips, and the principal places in them, particularly of the filter mines of Kongfherg, the remarkable chieppol of Meskooftram, Us.

THE Norwegian language, in most places, is the fame with that of Iceland, which proves them to be of the fame original; but the language differs but little from that of Denmark, in the civilized part of the

country.

King Olave is faid to have been the first legislator of this country, and to have instituted a law for the punishment of robbery, fraud, and assults, king Christian IV. published a new body of laws for Norway, which were in force till the reign of Christian V. who caused a new digest to be drawn up, and these are the only laws now observed in the kingdom. This law-book was printed in one volome in quarto at Copenhagen, in 1087; the substance of it is taken from that of Denmark, with only a few necessary alterations on account of the different circumstances of the two kingdoms. Justice is administered here in several courts, from which appeals lie to the supreme court settled in the capital of the kingdom where the viceroy resides, who governs this state with an absolute power.

The Christian religion is faid to have been planted here about the middle of the tenth century; and the reformation was established by the Danes; so that Lutheranism is almoft the only religion in Norway, except in the province of Finmark, where are ftill no inconfiderable number of pagans; but no hardfulp, expence, or labour, is fpared for their convertion. The first measures for the reformation of religion in Norway were taken in the year 1528, and were completed in a case. tion of religion in Norway were taken in the year 1528, and were completed in 1537. In 1607 a new hierachy or church government was eflabilihed: in every fee there is a bishop: the bishop of Christiana is the principal, and takes place of all the rest. Under the bishops are the provosts, the preachers, and the chaplains, or curates, with inserior church-officers. A parish usually contains more churches than one; when the psrochial incumbent has offer many souls under his care. has often many fouls under his care.

Norway is divided into four diocefes or general govern-

ments, each of which has its general governor, and under these are the prefects; and the office of both is the same as in Denmark. Next to the prefects, are the sceretaries and the collectors, who levy the king's taxes, and pay them into the receiver's hands.

them into the receiver's names.

They have nine provincial courts, over which are the fame number of judges: there are also inferior judges, each of whom, in conjunction with eight affishans, has the power of deciding ear-se within his diffrict. Befides, in the four chief cities of Norway, viz. Christiana, Christiana, Christiana, and Drontheim, are presidents appointed by the king; and under these, as in all other pointed by the king; and under these, as in all other towns, are collectors. There are likewise collectors of the toll, comptrollers over the farmers of the duties, and com-milaries of provifions, in this part of the dominions of the king of Denmark.

Nature has divided the main land of this kingdom into two parts by the immense chain of mountains called Dosretwo parts by the immense chain of mountains called Dostre-field and Langfield, which separate the western and nor-thern parts, that lie near the sea, from the southern and eastern, or inland parts. Here it must be observed, that the highlands which lie to the south and east of these moon-tains are called Sonderfield or Southland; while that is called Nordensisid, or Northland, which lies north of Described, and west of Langfield towards the sea.

This country, according to the political division of it. confils of four general governments, two of which, namely, and lie governments, two of which, namely, and lie governments, two of which, namely, and lie governments in the north part of the king-dom. The eccleficational division into four bilhopries, is agreeable to the civil; and the bishopries are subdivided into provosthips and parifies, as the general governments are subdivided into prefectures, and districts or fiels.

The king of Denmark receives annually a revenue of

ur wards

upwards of eight hundred thousand rix-dollars from

upwards of eight hundred thousand rix-dollars from Norway.

I. The hungest and stelled government in all blowwy in that of Christians, on Agreement, in the fouth part of the thirdon. To principal city is Christians, which is failed to be the best built may in the kingdom: It is an easily built, is of a confiderable extent, and carries on a great rade. There the governor and bishop of Christians, fide, and here are held the general and provincial high sourts of judicature. It has a work house and two substrates called Waterland and Peper-Vigen; through the fift rome a river, which siles in Marchain. The city stands in high-nina degrees lifty-stilinutes north hattreds, and in ted agrees in an uniform the country, and fall into the Baltick. Here are several sa-ports, particularly Heakeren, where the sishing-trade afford a pretty confiderable income?

The town of Kongsberg, in this government, contains about eleven thousand soils, among whom are a congregation of Danes; and another of Germans. In the year 1680 a thint was set up in this town, and in 1680, she mine college was erested. Kongsberg is most remarkable for its filver mines, which are the richest in all Norway. These were discovered in 102, upon which the town was immediately built, and peopled with German miness. In 1951, forty-one thasts and twelve veins were wrought in the four-reviews of this mine, in which three thousand five hundred officers, artificers, and labourers are afrailly employed. The rich ore in this mine is found only in different detart and interrupted veins. Even pure silver is specific strat and interrupted veins.

proyed. The rich ore in this mine is found only in disperied thrat and interrupted veins. Even pure filter in characteristics dug out of it; and in 1647 fome gold was found among the filter, of which king Christian IV., caufed the famous Billen ducan to be coined, with this legend, Vide Min Domini, "See the wonderful works legend, Vide Mira Domini, "See the wonderful works of the Lord." In the year 1697, a vein of gold was dif-order, there, of which ducats were coined, which on one fue had this infectiption, Christian V. D. G. Rex Dan. Norw. V. G. The legend on the reverse was from the book of Job: Von mitternacht kommt gold: that is, "Out of the north cometh gold." Kongiberg, Decem-

r , 1697. Most of these mines are in a mountain between Kongfhaving the same are in a mountain terms to some-berg and the river Jordal; but it has been found that the filver ore is not, as was at firlt imagined, limited to that mountain, but extends its veine for form eniles through-out the adjacent diffricts; which is proved by the new, mines that are from time to time undertaken in feweral.

out the adjacent diffricts; which is proved by the new mines that are from time to time undertaken in feweral places, and most of them carried on very prosperously.

One of the most antient and rich of all the mines, named Old God's Blessing, has sometimes within a week yielded several hundred pounds weight of rich ove. This mine never faits to fill the beholder with amasement at astonishing depth, which is no less than an hundred and eighty perpendicular fathoms; and the circumsteners at the bottom forms a clear of some bundreds of statems. Here the sight of thirty or forty piles, burning on all ides in this gloomy cavern, and continually fed, in order to molify the stone in the prosecution of the mines, seems, according to the common idea, an image of hell; and the swarms of miners, covered with soot, and bustling about in habits according to their several employments, may well pass for so many devils, especially when, at a signal that amine is going to be sprung in this or that course, they road aloud, Berg-livet! Berg-livet! Take care of your lives I. The celebrated town of Frederickshall is near the borders of Sweden, situated in latitude stity-five degrees, twenty-fix minutes, at the north of the river Tiftedal, where it discharges itself into the Spinesfund. This town was formerly called Halden, and was a mean place, under the jurisdiction of the magistracy of Frederickstait yet it made a very gallant desence against the Swedes in 16,8 and in 1660 sustained a third segre from the Swedes; and Charles Gustavus is by some thought to have received here the wound of which he died. Five years after, this

tions; and in 1660 fulfained a thi.d fiege from the Swedes; and Charles Guffavus is by fome thought to have received here the wound of which he died. Five years after, this town received a charter, with the privileges of a city.

In 1716 and 1715, the inhabitants again diffinguified themfelves by the vigorous defence they made seainft the attacks of the Swedes; and here, on the eleventh of December 1718, Charles KII. of Sweden was floot in the trenches. King Frederick IV. ordered a pyramid twenty feet high to be crecked 00 the foot where that hero fell. Its fides were decorated with military trophies, the arms of Sweden, and the king's name; and the top was furmounted

which was a me

with 4, gilt crown. On four marble tables at the bafe, were one Latte and two Danith inferiptions in golden let-branch. Bee him Chefities VI. in complete the present of the present to be aftern down. II. Christians in the convenient finalism, reader it was made important fortrefs in the asserting.

II. Christians in the first in the asserting of the foresh, and year, by he he forth few. This parameter is given in a bridge hid west if from one rock to another, there is no a bridge hid west if from one rock to another, there is no a bridge hid west if from one rock to another, there is no a bridge hid west if from one rock to another, there is no a bridge hid west if from one rock to another, there is no a bridge hid west if from one rock to another, there is no a bridge hid west if from one rock to another is the filter of the state of the filter of the waster. At a finall diffusive from this bridge hid west if from one rock to another the filters, and had as two provincial court. The principal city is Christian in V. between the year lady and 1643, and is thus called from its founder, and the great fande, or frand, out which it is built. It is of a figure form, and the firetes are browned on the fourth it has a communication with fine meadows and the mountains. In 1734 the church, with the greatest past of the city, was defired by fire.

ton with ne meadows and the mountains. In 1734 the church, with the greatest part of the city, was defiroyed by fire.

Arndal, though a small cown, is remarkable for its fituation on a rock in the midit of the river Nid. It has a good wharf, and most of the house stand on the acclivity of the rock, the rest being built on place in the water. The streets are only formed of bridges of beats, by means of which the inhabitants go from house to house. The water is of sufficient depth for the largest ships. It along side of the bridges. As the church stands high, and almost on the fummit of the rock, there is an ascent to it from the houses by a great number of steps hewn out of the rock. The inhabitants make a good use of the commodions situation of this town for trade, by employing many ships and dealing largely in timber.

III. Bergen is from two hundred and forty to three hundred miles in length. This government contains only the single presenter of Bergenhuus, including seven districts, and the same number of provositings. This country is very populous, and is remarkable for its having seven marble quarrier; but produces listle core.

The city of Bergen, which is the capital of this government, has the greatest trade in all Norway. It is fixtated in the sixty-first degree eleven minutes north latitude, in the midst of a valley, and built in a semicrealur soom, on the sides of a bay called by the inhabitants Wang. It is well fortified by nature on the land side by lotty mountains, seven of which are remarkably high, while, the desiles or passes between them are quite impassable to an enemy, and towards the fea she harbour is well defended by leveral fortifications. All she churches, public desidees, and most of the houses along the firmed are built with stone. The number of inhabitants are computed at thirty thousand. This city formarly contained thirty chumbes and convents but it has at present only four parasite surveils, three of which are Dannis, and one General with surveiles, three of which are Dannis, and Ameture.

The large cathedral school was sounded in 1554, by bishop Petrus, who also andowed it, and, by the liberality of king Frederick II. and others, twelve scholars are maintained and educated in it. The navigation school sounded here, which ouse sourished greatly, is now fallen to decay. The Seminarium Fredericianum also deserves

notice, it being a noble foundation, where moral and natural philotophy, the mathematics, lithory, with the Latin and French languages, are taught. This c of carries on a large trade in all kinds of fifth, tallow, hides, and timber; and the returns are mofily made in corn and foreign commodities.

A range of illands extends from the north-saft to the fouth-west of Drontheim, and between them and the continent runs a large bay called West Fiorden. Among the islands above-mantioned is a sensarkable kind of exercit, or whirlpool, called the Moskoestrom, in the fixty-eighth degree of latitude, near the island of Moskoe, from which this whirlpool takes its name. Its impatuous rourings are heard at a great distance, and have no intermission, except for a quarter of an hour at the turn of high and low water, when its vielence feems at a stand, and afthermen venture upon it wise-fair boats to but this motion foon returns, and graded in extendes till it forms a vortex, espable of shorthing where were within its influence this is supposed to be caused by the collision of the waves rising and falling as the size and resture, sgalast a ridge of rocks and shelves, which confine the water, to that it precipitates like a cataract, and thus, as the higher the stood riles, the deeper must be the fall, for whirlpool is the natural consequence.

At the time of shood, the stream runs up the country between the islands of Lasoden and Moskoe, with a bolicerous rapidity, but the roar of its impetence to be these in fearce equalled by the loudest and most deadful cataracts, the noise, before a support of the stream is a strength of the stream is greated the rest of its independence to be strength of the provided the strength of the stre

vated but along the fea-shore, till within twenty-five or thirty miles from it.

The most considerable towns here is Dronthein in Latin Drontheima, or Nidrosia, formerly the capital of Norway, is feated on the coast of the Northern ocean, on a little gulf at the mouth of the river Nider, from whence it was antiently called Nidrosia. It is about two hundred and twenty miles distant from Bergen to the north-east. It has a harbour, pretty well frequented by simal vessels, though very incommodious for large ones, the entruce being obstructed by rocks. It was formerly the residence of the kings of Norway, but the town being only built with timber, was several times burnt down, and is very much decayed from its antient splendor. It has neither ditches nor fortisications, being only inclosed by single wall. Its castle is not strong, and sufasined but a few days sege, when the town was taken by the Swedes, in stogs. The Danes took it again that same year, the 21st of December, after a sege of two months and a half, as Pusselson of the season of the most magnificent in the northern countries; but it lies now in ruins, being deftroyed by free in the year 1921. This town has a pretty considerable trade, consisting in small mastr, and fir-deals. They slife ship off here a large quantity of copper, the mines of which are eighteen or twenty miles distant from this town, near the village of Steckby. At the distance of fix miles from these mines there is a filver one, belonging to the king. The other merchandize exported from these are, iron, tar, sura, saftes, goat-skins, &c. and they import, in exchange, spices, wine, brandy, vinegar, cheefe, tobacco, coarse cloths, and a great many old ria-dollars. This is the seat of the governor of the province, who generally resides in the castle. The town is almost intirely surrounded by the sea and the river Nider, being joined to the continent only by a small neck of land; and it is encompassed by high mountains, which command it on every side. The country round about is very barren;

for fuel, and for feveral utenfils.

To the governments above deferibed, we may add the province of Wardhus, which is bounded, on the north and west, by the ocean; on the east, by the Russian Lapland, on the fouth west, by Swedish Lapland; and, on the fouth-west, by the government of Drontheim. It is three hundred and ten miles in length, from east to west, and two hundred in breadth from north to fouth.

This requires is distincted to the terms of the province in the second of the secon

This province is divided into two parts; namely, r. The western, or maritime part, which is called Finland; and, 2. The eastern part, which is called Norwegian or Danish Lapland. The town of Wardhus, from whence this province hath its name, is the feat of a governor, but consists only of a street of cottages inhabited

vernor, but conflits only of a fireer or cottages immuneaby fifthermen, with a cattle belonging to it.

Bahus, though yielded to the Swedes in 1658, is yet reckoned a part of Norway, being its most fouthern province. It is innerty miles long, but not above twenty-five broad where widest, and only ten in fome places. It hath West Gothland to the fouth, Dalia on the cast, the government of the work and the Catestate on the west.

of Aggerhuus on the north, and the Categate on the west.

The principal places in this province are, 1. The strong castle of Bahus, built on a small island made by the river Nore-Elf, which there receives the Giotha-Elf, and both together are called Trolhetta. It is one hundred and far-teen miles diflant from Christiana; was built in 1309 by Haquin the second king of Norway, and stands on a steep rock near the banks of the river. The kings of Denmark had fortified it after the modern fashion; but surrendered it to the Swedes in 1658, by the treaty of Roschiled.

2. Maclitand, a firong town built on a rock in a kind of peninsula, about ten miles below Bahus. It is a place of great trade for fish, and is desended by a strong castle.

THE NEW HISTORY AND DESCRIPTION OF

SEC.T. I.

1 ... A

41. 27 AL

Containing the fituation, autout and boundaries, climate, lakes, felt, animals and other particulars relative to the natural biftery of Sweden.

THIS extensive kingdom lies between Denmark, Norway, and Russa, and stretches from fifty-five degrees forty minutes, to the firty-ainth degree north latitude, and from the twelfth to the thirty-fecond degree of east longitude from London, being about two hundred and thirty Swedish, or one thousand four hundred English miles in length: its breadth is computed at one hundred fifty Swedish miles, or nine hundred and twenty English, and its area at ten thousand square Swedish miles, but when proper abarements are made for was lakes, inland seas or gulfs, sterile mountains, extensive rocky tracts, barren heaths, morasses, tec. the inhabited or cultivated parts are very small, in proportion to the whole dominion. barren health, moraffes, &c. the inhabited or cultivated parts are very finall, in proportion to the whole dominion. It has Ruffia, the Baltick, and the gulf of Finland, on the eaft; the Baltick and the Sound, on the fouth; the flupendous and impaffable mountains of Norway, on the west; and Norwegian Lapland, on the north.

Though the feafons of the year are regular in themselver, they do not altogether answer those of other climates, as a French ambassador observed, who, in raillery, said, there were in Sweden only nine months winter, and all the rest was summer; for as winter company begins very soon.

was fummer : for as winter commonly begins very foon, fo fummer immediately fuccesses it, and leaves little or no space to be called spring. The productions, therefore, of the earth ought to be, as they really are, more spread in their growth than in more thanker countries; the realon of which feems to be, that the oil and fulphur in the earth (as appears by the trees and minerals it produces), being bound up all the winter, are then on a fudden actuated being pointed up at the writer, are the north that the by the heat of the fun, which almost continually thines, and thereby makes amends for its fhort stay, and brings to maturity the fruits proper to the climate. The heat in to maturity the fruits proper to the climate. The heat in fummer is fo intenfe, that it often fets the woods on fire, which fometimes spreads itself many leagues, and can fearce be stopt, till it comes to some lake, or very large plain. In the summer season the fields are clothed with variety of flowers, and the whole country overspread with strawberries, rasberries, currants, and the like; which grow upon every rock. In their gardens melons are brought to good perfection in dry years, but apricots, peaches, and other wall-fruits, are almost as fearce as oranges. They have cherries of feveral forts, and forme tolerably good, which cannot be faid of their apples, pears, and plums, which are neither common, nor well-tailed. All kinds of roots are in plenty, and contribute much to the nourithment of the poor people.

The fun, at the highest, is above the horizon of Stock-

holm eighteen hours and a half, and for fome weeks makes a continual day: in winter the days are proportionably shorter, the sun being up five hours and a half; which defect is so well supplied as to lights, by the moon, the whiteness of the filow, and the clearness of the lky, that travelling by night is as usual as by day; and journeys are begun in the evening, as frequently as in the morning. The want of the sun's heat is repaired by floves withing. doors, and warm furs abroad; inflead of which, the meaner fort use sheep-skins, and other such defences; and are generally better provided with clothing, besitting their condition, and the climate they live in, than the common people in any part of Europe: though where any neglect

or failure happens, it usually proves fat. I, and occasions

14 , 32 1, 1

or failure happens, it usually proves fact, and occasions ha loss of noles, or other members, and formetines of life; unless the usual rensedy to expel the frost, when it has seized any part, be carefully applied, which is, to remain in the cold, and rub the part affected with how; till the blood returns to its proper channel.

Their woods and valt forests overspread much of the country, and sre, for the most part, of pluss, fir, beech, birch, alder, juniper, and some oak; especially in the province of Bicking in South Gothland; the trees growing, in most places, so close together, and lying to rot, where they fall, that the woods are scarce passable. These afford a plentiful and cheap firing, and, being generally very straight and tall, are easily convertible into thuber su fur all uses. So that the Dutch begin now to export, from very firight and tall, are easily convertible into tunner in sor-all uses. So that the Dutch begin now to export, from hence, boards, and masts for their shipping, which prove as good as those of Norway. In the parts near the numes the woods are much destroyed, but that want is so well' iupplied from distant places, by the conveniency of rive, a and winter-carriages; that they have charcoal above six times as cheap as in England; though, Indeed, it is not half so good.

half fo good.

half fo good.

The principal lakes in Sweden are, the Vetter, the Wener, and the Macler, The first is in Ostrogothia, or East-Gothland; and is remarkable for its foretelling of storms, by a continual thundering nosse, the day before, in that quarter whence they arise; as, allo, for the sudden breaking of the ice upon it, which sometimes surgable. It is accomplished down in half an hour it becomes navigable. It is accomplished down in some places above three hundred. travellers, and in half an hour it becomes mayigable. It is extremely deep, in fome places above three hundred fathoms, though no part of the Baltick fee exceeds fifty. It fupplies the river Motals, which tuns through Norkoping, where it has a fall of above thirty feet, and, fome winters, is fo cheaked up with ice, that, for many hours, no water paffes. The feecond is in Weltrogothia, or Weff-Gothland, from which iffues the river Elve, that, falling down a rock, near fixty feet, paffes by Gottenburgh. The third empties itself at Stockholm, and furnishes one fide of the town with feeth water, as the feethers the arbier. fide of the town with fresh water, as the sea does the other with salt. These, and abundance of other lakes, whereof many, like ponde, have no vent, are not ill stored with variety of sish; as salmon, pikes, perch, tench, trout, eels, and many other forts, unknown elsewhere! of which the most plentiful is the streamling, a sish lefs that a picher, taken in great quantities, salted in barrels, and distributed all over the country. Besides, the gulf of Finland, which separates Sweden from that province, abounds with sails, of which a considerable quantity of train-oil is made, and exported; and in the lakes of Finland are g eat quantities of pike, which they salt, dry, and sell at very cheap rates. I hese lakes are of great use for the conveniency of carriage, in summer, by boats; and, in winter, by seds; and among them, and on the sea coast, are almost innumerable islands, of different face; whereof there are, in Sweden, above six thousand who are inhibited: the rest are either bare rocks, or covered with woods. fide of the town with fresh water, as the sea does the other

Swedth, above its thousand which are inhistified; the relt are either bare rec'es, or covered with woods.

In places capable of cultivation, the foil is tolerably fruiful, though feldom above half a foot deep; and therefore more eatily plowed, as it frequently is, by one maid and an ox; and it is generally belt where there is leaf of it, that is to fay, in the little spaces between the rocks; and frequently the barren land, being emiched by the ashes of trees butter on the places where the areas with the fed. of trees burnt on the places where they grow, and the feed raked among the athes, produces a plentiful crop, with-out further cultivation. This practice is fo antient, that their writers derive the name of Sweden from a word in their linguage that expresses it; but the danger c. de troyintes c when it

ing the woods has, of late, occasioned forme laws to limit that cultons. If the inhabitants were industrious, above what not city forces them to, they might, at least, have or a similar interior of their own; but, as things are stranged, they have not, nor can they fabrish without great importations, of all forts of grain, from Livonia (a country once belonging to Sweden), and other perts of Germany adjacent to the Baltick feat and, netwithsanding their fupplies, the poorest fort, in many places remote from traffic, are onliged to grind the bark of birch-trees to mia with their corm, and make bread, of which they have not always plenty.

with their corn, and make bread, of which they have not always plenty.

In this, as in other norshern countries, the cattle are generally of a very final face, neither can the breed be bettered by bringing in larger from abroad, which foon degenerate; because, in furniner, the graft is much lefs nou-rithing than in the places from whence they earne; and in winner they are wouldy half-flarved for want of fodder of all kinds, which often falls fo very thort, that they are forced to unthatch their houfes to keep a part of their cattle alive. Their theop bear a very coarfs wood, only fit to make clothing for the peafants. Their herfes, effectively those of finland, are hardy, vignous, fittong, fure-foode, and nimble trotters, which is their only feafant and the foldiers pretend that, in war, are not only able to refift, but even to lake best German horfe.

The farmers, in fome parts of Swed The farmers, in some parts of Swed
intere are uncommonly severe, and the cast
in order to nourish them, and cause the todo
out during the season, make hay-tea; that is, all
about a handful of hay in three gallons of water, and the
driuk thus made is so extremely nutritive, that it nourishes
the cattle association of milk, and makes one truss of
sodder go as far as an would otherwise do. If this experiment were tried, on similar occasions, in England, there is
no room to doubt that it would prove equally beneficial.
Some parts of Sweden are much infessed with lynxes,
bears, wolves, soace, wild cats, otters, martens, weasele, &c.
These are hunted either for their slefth, skins, or sura; the
Swedish huntsmen, using guns, are excellent marksmen in

Swedish huntimen, using guns, are excellent markimen in general. Here are also plenty of all forts of deer, eike and hares; the latter of which have this remarkable property,

that in winter they become as white as fnow.

Tame and wild fowls are very numerous in Sweden, and are very good. The keder, which is as large as an ordikey, is much admired; as is also the orras, which naty turkey, is much admired; as is allo the orral, which refembles a partridge. In winter, the Swedish sportmen anuse themselves in killing great numbers of blackbirds, thrushes, and sydenswains, the latter is a beautiful blid of the fize of a field-larc, whose feathers are tipt with scarfeet, and are supposed to come from Lapland in the hard feeton. They have but few pigeons, on account of the great number of eagles, hawks, valutres, and other large birds of prey which destroy them.

There are many excellent mines in Sweden, and in them their wealth chiefly confide. The principal of thefe is the great fiver mine, into which the workmen are let down in balkets to the first floor, which is an hundred and five fathers under ground; the roof there is as high as a church, formerted by any terror than the safe when for the safe when th supported by vatt arches of oak; thence the descent is by ladders, or balkets, to the lowest mine, above forty fathom. ladders, or balkets, to the lower times, and incore forty attends. They have no records to antient as the first discovery either of this, or the copper mine, which must needs have been the work of many ages. The ore feldom yields above four per cent, and requires great pains to refuse it; they are also as the charge of a water-mill to drain the mines, and have the benefit of another to draw up the ore. It yearly produces about twenty thousand crowns-worth of fine filver, of which the king has the pre-emption, paying one fourth lefs than the real value. This mine is at prefent much diminished in its value.

minified in its value.

Their large copper mine is about eighty fathom deep, of great extent; but subject to damages by the falling-in of the roof; yet that is fometimes recompenied by the abundance of ore which the ruined pillars yield, though most commonly the lofs, in that case is very great. The occasion of these falls is assumed to the throwing the earth and stones, brought out of the mine, upon the ground over it; which she pillars become overcharged, and give way: and the reason of this is said to be, that the profit aring, to those who are concerned, is so little, that they are not able to work it off as they ought, and to remove the rubbish to a greater distance: and unless the king abates a considerable

part of the profit arising to the crown from this mine, it is believed it will, in a few years, he at a stand, especially if the designs of making copper, which are on foot essewary do take any tolerable effect. The copper yearly made out of this mine amounts to the value of about two bundred shoutand poands, of which the king has a fourth part, not by way of pre-emption, but in kind; besides which, he has, upon the remainder, a custom of twenty-five per cent; when it is exported unwrought. Some years ago a gendeman of Italy came into Swolen, with proposals to make copper a florier and cheaper way than had all then been practified, so as to make that in five days which before required three weeks, and with one fish part of the charcoal; and with fewer hands. The bargain was made, and his reward to be an hundred thousand crowns. The fift of say he made succeeded to admiration but when he cause to work in earnest, and had got his new-invented evens boilt to his mind, the miners, as he complained, picked out the very worst ore, and were otherwise fo earloes and untractable, that he failed of success, and lost his reward nor was it without dissured the his own charge.

Here are great numbers of iron miner and forge, especially towards the mountainous parts, where they have the besides sipplying the country, there is yearly exported into the value of near three hundred thousiand pounds.

befides fipplying the country, there is yearly exported? The to the value of near three hundred thousand pounds. The of late years the number of these forges has been in many increased, that each endeavouring to under-fell others, the of late years the number of these forges has been in reach increased, that each endeavouring to under-sell others, the price has been much lowered. And fines the prohibition of foreign manufactures, in exchange of which iron was plentifully taken off, it is grown so cheap, that it is sound necessary to lesses the number or forges. Neither has that constrivance had the effect intended; but, on the contrary, many more are like to fall of themselves, because they cannot work but with loss, is which case, many thousands of poor people, whose livelihood depend upon these forges and mines, will be deprived of the means of substitence. As the account which Mr. Wrazall, a late traveller, has favoured us with, of his descent into the iron mines at Danmora, is both curious and juverelling, we shall here anscribe it for the sterisfaction of our readers: "We lay, says this gentleman, at a prenty village called Ostarby, and

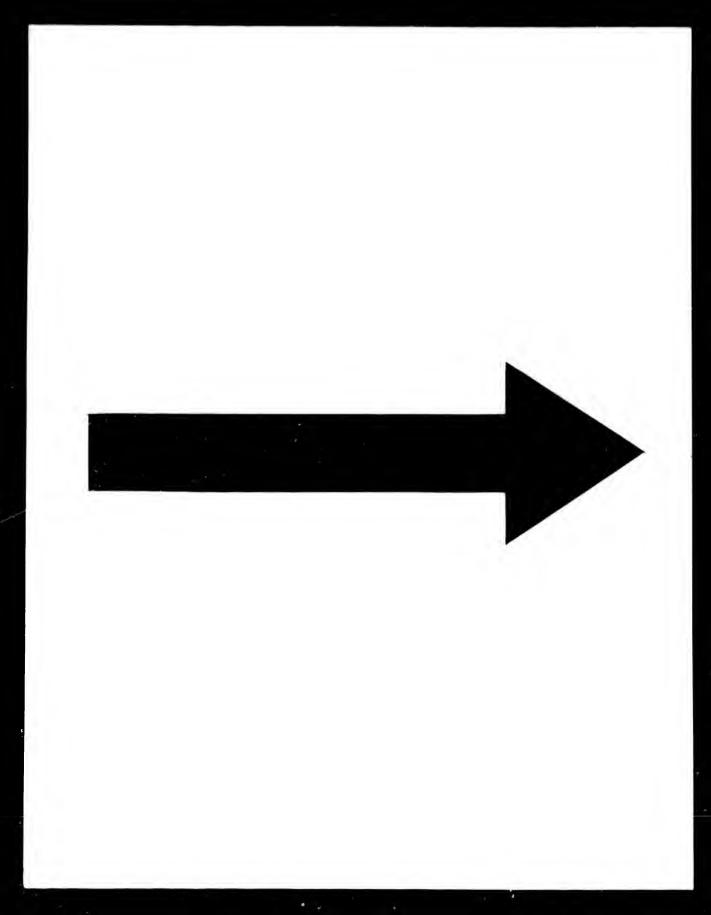

fays this gentleman, at a pretty village called Offarby, and went about three miles, the next morning, to fee the mines went about three nules, the next morning, to fee the mines at Dannors. They are celebrated for producing the fineft iron ore in Europe, the iron of which is exported into every country, and contlitutes one of the most important feurces of the national weath and royal revenue. The ore is not dug, as in the mines of tin and coal which we have in England, but is torn up by powder. This operation is performed every day at moun, and is one of the most tree-mendous and swith that can be conceived.

" We arrived at the mouth of the great mine (which is near half an English mile in circumference) in time to be perfeint at it. Soon after twelve, the explosion bega..: I cannot compare it to any thing so aprly as subterraneous thunder, or rather vollies of artillery discharged under ground. The stones are threwn up by the violence of the powder to a vast height above the forface of the earth; and power to a wan neight above the furface of the earn) and the conceition is fo great, as to flake the furfounding earth, or rock, on every fide. I felt a pleafure, mingled with terror, as I lung over this vail and giddy hollow, to the tottom of which the eye in vain attempts to penetrate. As foon as the explosions were finished, I determined, however, to defeend into the mine; which there is no way

of doing, but in a large deep bucket, capable of containing tusee persons, and fastened to chains by a rope.

"The inspector, at whose house I had slept the preceding night, took no little point to diffuse me from the refoldion; and affared me, not only that the rope or chains fometimes broke, but that the frow and ice which lodged on the fider of the mines frequently tumbled in, and defreyed the workman; nor could be warrant any abfolute fecurity from one or both of these accidents. Finding, however, that I was deaf to all his remonstrances, he pro vided me a clean bucket, and put two men into it, to ac-company me. I wrapped myfelf, therefore, in my great coat, and stepped into the bucket. The two men followed, and we were let down.

" I am not assamed to own, that when I found myself thus suspended between heaven and earth by a rope, and tooked down into the deep and dark abys below me, to which I could see no termination, I shuddered with apprehension, and half repented my curiosity. This was, however, only a momentary sensition; and before I had descended an hundred seet, I looked round on the seen with very tolerable composure. I was near nine minutes before

THE NEW AND UNIVERS
I could reach the bottom, it being eighty fathorn, or four hundred and eighty feet. The view of the mine, when I fet my foot to the earth, was awful in the lightstagres. Whether terror or pleafure formed the predominant feeling as I looked at it, is hard to fay. The highest feeling as I looked at it, is hard to fay. The highest feeling as I looked at it, is hard to fay. The heart feeling as I looked at it, is hard to fay. The server feeling as I looked at it, is hard to fay. The server feeling as I looked at it, is hard to fay. The server feeling as I looked at it, is hard to fay. The server feeling as I looked at it, is hard to fay. The server feeling as I looked at it, is hard to fay. The server feeling as I looked at the server feeling as I fay beams of second and feeling as I fay beams of the server feeling as I fay beams of the feeling as I fay beams of the server feeling as I fay beams of the server feeling as I fay f

a guest among them; and I was not a little please to dry
my feet at their fire, which were wet with treating on the
melted ice.

"There are no lefs than one thousand three hundred
of these then containtly and treat in the mines, and their
pay is only a common of the fire the mines, and their
pay is only a common of the fire the mines, and their
pay is only a common of the fire the mines, and their
pay is only a common of the fire the mines, and their
pay is only a common of the fire the mines of the fire the mines of Christias.

"After brying gratified my curiofity with a full new of
these subtrantaen apartments, I made the signal for being
drawn up; and can meet the part of the signal for being
drawn up; and can meet the part of the signal for being
drawn up; and can meet the part of the signal for being
drawn up; and can meet the part of the signal for being
drawn up; and can meet the part of the signal for the signal fo brics; and no cyclops were ever more deutrous in wallying their materials. I have feen them stand clofe to, and
hammer, in their coarse frocks of linen, a bar of ore, the
heat and refulgence of which were almost intupportable to
me at ten feet distance; and with the sparks of which theyare covered from head to foot. I had the pleasure of viewing the whole process nied to reduce the ore into iron, and
must own it is very curious. They first roast it in the
open air, for a considerable time: after which, it is thrown
into a furnace, and, when reduced to sufion, is poured into a mould of sand about three yards in length. These
pigs, as they are then denominated, are next put into a
furge, heated to a prodigious degree; they break off a large
piece with prickers when red-hot, and this is beat to a
lesser fize with hammers. It is put again into the fire,
and from thence intirely finished by being laid under an
immense engine rescaubing a hammer, which is terned
by water, and fastens the rude piece into a bar. Nothing can exceed the destrity of the men who conduct
this concluding part of the operation, as the eye is the
fole guide, and it requires an exquisite nicety and precision.

SECT. II.

Treating of the frougal grand divisions of Sweden, their dif-ferent provinces, ifands, bount, Gs. particularly of Sweden, properly fa called.

THE kingdom of Sweden has always been confidence by geographers, as divided into feven provinces namely, Sweden Proper, Gothland, Livenia, Inguis

Finland, Swedift Lapland, and the Swedift mans metic Baltick; but, as we obferred, in our defeription of Ruffls, Livonis, and Ingris at prefent appearant to that captive, having been conquered by Peter the Great, and after wards, by potherior treaties, coded to the Rufflars.

Those provinces which at prefent remain in the posetion of the twelfar, are divided in the following manner as Sweden Proper contains, Updandia, Sufermania, Medical Captain, Medical Captai

Sweden Proper contains, Unlandia, Sudermaria, Westrunia, Nericia, Gestrica, Helfingla, Debardia, Medole
palla, Angersama, Edges, and West Boshmia.
Gothland, or Gesthia, contains East Gubbard, West
Forland, and South Costiland.
Finland contains Finland property. Nationals, Carella,
Kenholm, Savolaria, Touristand Capital,
Gwedish Laphart, Fisha Lapharts, Carella,
Kenholm, Savolaria, Touristand, Carella,
Kenholm, Savolaria, Touristand, Carella,
Kenholm, Savolaria, Touristand, Capital,
Gweden, Rustin, and Puntasia, we that therefore breact
of it diffinitely also that had, Emutioned.
The Swedish illands are Gothland, Ociaed Ociael
Dago, Aland, Hagland, and Rugen.
Sweden Proper a bounded and the orth by Espinad
on the fouth by Gesthand, on the aft by the guif of
Bothnia: and the mountains part to or the west from Norway: extending frees hundred and was like from fouth
to north, and about two hundred and was like from fouth
to north, and about two hundred and was the fouth of north, and about two hundred and was not control-wise from
eath to west, though in this wy places it is taken narrower.
The country is frust at though mountainous in Some
parts; abounds with rich mittes of copus, and asford
conveniency of water and fael for wasting them. It is
divided, as we have already observed, have eleven parts;
which are as follow:

Upland, in Latin Uplandia, is furrownded on the
opposite and eath are Bulish forms.

which are as follow:

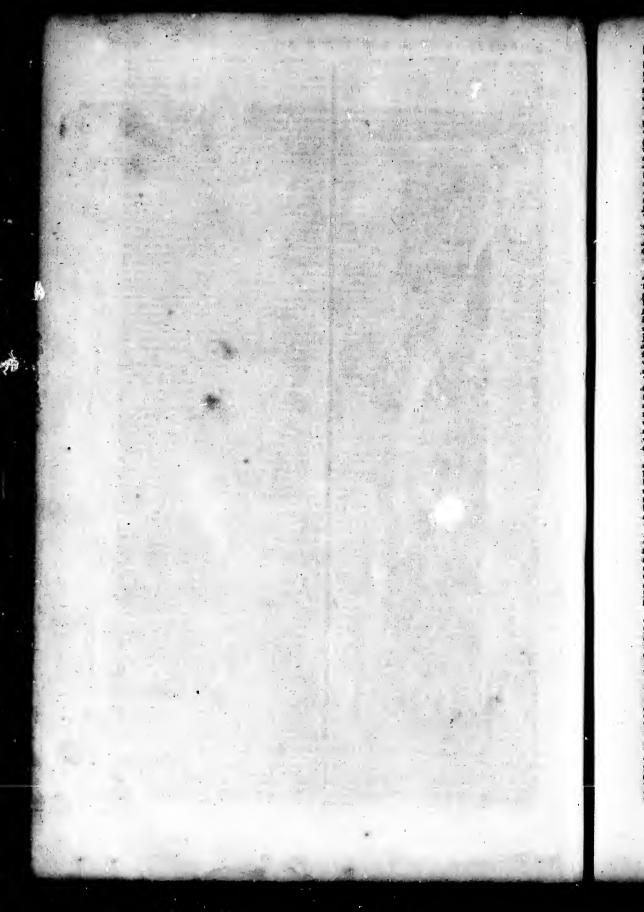

Upland, in Latin Uplandia, is farrounded on the north-east and east by the Baltick fast on the fouth it has pett of the faste fea, and part of Subernamia, from which it is fearated by the lake of Maeler; on the west it is bounded by Westmania, and an the north-west by Gestricks, from which the river Data parts it. It extends about feweitty-fire miles from morth to fouth, and shourt fixty-five from set to well. Here we many mines of iron and lead, and forme of five. It is country it very fruitful, and spectuce, sumongs canera, excellent wheat. The most confiderable cities and suwns here, are as follow:

frairful, and passinces, temongh caters, oxcellent whear. The most considerable cities and savers here, are as follow:

The city of frockholm, the savers at the whole kingdom, and the great quantity of times used in building it; Stock familying times, and the mane from its fituation, and the great quantity of times used in building it; Stock familying times, and the mane from references of the company, three hundred and eighty sales are from Coponhagen, two fundred and stray-five from Washew, for hundred and fixty-five from Washew, for hundred and fixty-five from Washew, for hundred and fixty north from Vienns, eight hundred and fixty from Paris, and feven hundred and mixty five from washew, for hundred and fixty from Paris, and feven hundred and mixty from London. It is built upon piles, in feveral little stands which lie hear one another. It takes up at prefest fix of these is the one in the peniable of Toren, and the other in Athundria. It is commonly divided into four parts, which are South-Malm and Narda-Malm, the two funds, are south-Malm and Narda-Malm, the two funds, is a called Gaspaland; their four make together one of the greatest have in Larope, with regard to the number of house. The life, within which the greatest part of Stockholm is inclosed, is forwounded by two arms of a river, which run and man fines out of the lake Maeler: ore: each of their arms share in a wooden bridge. There are force other illastic formation the city was the save of the few rates and the save of the lake Maeler: ore: each of their arms share in a wooden bridge. There are force other illastic formation the city was the save of the few rates and the save fixed the mixty of fresh water which runs from the late than age, was only a bare illand, which is ouige to the great the save populance as Reifael. The caller, which is course to deep the intensity of fresh water which runs from the late than age, was only a bare illand, with two or think counts of the court thither; it grow by degrees to furpail the other more articular,

buildd. It

liquidation, commerce, execution: here is afto an arminary, chapel, library, the public records, &c. It lodges very two of the inferior officers and fervants of the coults; they, together with the foot-guarde, being quartered upon the burghers, at their landlord's charge for fire, candles, and bedging.

There are nine large charthes in this city, built with bricks, and covered with copper; and three or four wooden chapels. The palace of the nobility, which is the place of their affembly at the convention of the flates, and the depository of their privileges, titles, and fush other records as concern their body, is a very flately pile, and one of the finesh in the kingdoms. Ris as it were, but one large pa ifion, adorned on the outside with marble figures and columns, and within with pictures and telluptures; efpecially in two large halls, where the stobility meet. Next to this palace, is that of the load high chancellor; and a little farther are two other palaces belonging to noblemen. These four palaces frand on the banks of the lake, are built after the fame manner of architecture, and are all covered with copper. The bank, built at the city's charge, is also a noble addice, and, experter with former, afford a handsome prospect.

The burghers' house are shieny built with brick, except in the further where they are of timber, and thereby (ubject to the danger of fire, which commonly, when it gets a head, defrays all before it in the quarter where it happens. To repair which distortune, they formetimate fend the dimensions of the house they intend to build, into Finland; where they are of timber, and thereby fubject to the danger of fire, which commonly, when it gets a head, defrays all before it in the quarter where it happens. To repair which distortune, they formetimate fend the dimensions of the house they intend to build, into Finland; where the walls, and several separations, are built of pleces of timber laid one upon another, and joined at the corners and afterwards marked, taken down and fent by water

watch is kept, who tolks a bell upon the first appearance of fire.

This city is governed by the great statcholder, who is also a privy-counsellor. He site once a week in the townhouse, and presides also in the college of execution, assisted by an under-fladtholder, and a bailist of the castle. Next so him are the four burgomasters; one for justice, another for trade, the third for the polity of the city, and the fourth has the inspection over all public and private buildings, and determines such case as arise on that account; with them the countellors of the city always sit, and give their votes, the majority of which concludes. Their number is uncertain, but uttally about twenty, most merchant and shop-keepers, or such as have ferved the king in some infector employments. Besides their fallary, they have an immunity from such impositions as are laid on the inhabitants to support the government of the city; which pays all its officers and servants, maintains a guard of three hundred men, and defrays the charge of all public buildings and repairs.

ings and repairs.

hundred men, and defraya the charge of all public buildings and repairs.

To support the experies, besides a duty belonging to the city, of goods imported and exported (which is about sour per cept. of the cossons paid to the king, and amounts to about five thou and pounds per annum), the magnificates impose a yearly tax on the burghers; in which they are affilted by a common council of forcy seight (which chusse its own members), and anest every springs to praportion the paymonts for the emining year. On the traders they asked in the paymonts for the emining year. On the traders they asked in the paymonts for the emining the good shears of a meaner condition, as shoomakers, taylors, fee, sive or fix pounds, and on ne housekers, taylors, fee, sive or fix pounds, and on ne housekers the status aftern faillings; besides quartering the guards, interior officers and servants of the court, with other lesse thanges, any which altogether would be thought a great burglen, average which strongether would be thought a great burglen, the interior officers and servants of the court, with other lesses the principle of the place; which must needs pass through their hands of the place; which must needs pass through their hands of the place; which must needs pass through their hands of the place; which must needs pass through their hands of the place; which must need spass through their hands of the place; which must need spass through their hands of the place; which must need spass through their hands of the place; which store parts of the kingdom, as all forcing the property of the gentry, who make iron; they having the privilege to sell it to strangers as soon as it is manufactured.

Stockholm is in a manner the flaple of Sweden; to which most of the goods of their own growth, as lead, copper, wire, pitch, tar, maste, deals, etc. are brought to be exported. The greatest part off the commodities imported from abroad some to this port, where there is a leaven capable to meetre one thouland fail of ships, and has a bridge or key near an English mile long, to which the greatest vessels may lie with their broad-fider. The only inconvenience is, that it is ten miles from the river very crooked, and no tides. It opens marked the reverse very crooked, and no tides. It opens marked the reverse of the same of the most commodious in Europe; for the ships of the largest size his coloc to the key, where they are so sections not cables to hold them. It entrance is defended by two forts.

within, it is one of the most commodicus in Europe; for the thips of the largest size ic close to the key, where they are so fectore from the wind, that they need neiter anchors not cables to hold them. Its entrance is desended by two forts:

The city of Upfal stands on the Banks of the river Sal, or Sala, which falls into the lake of Ekolen; and is forty-two miles distant from Stockholms towards the north-west. It is a very antient city, formerly the capital of the north; and the feat of the king. It is divided into two parts by the river, which is here pretty large, and is fo hard frozen as in February, that a fair is yearly kept there upon the ice in that mouth. The town is large, but without any confidentable fortifications. Here is to be feen the finest church in the whole kingdom; namely, the cathedral. It is all covared with copper, and adarmed with feveral tombs, especially those of many kings. In the chapel behind the alar, stands the monument of king Gostavus in marble, between the statues of his two wives, who le also buried here. In snother chapel is the tomb of king John's wife, who was mother to Sigismund III. king of Poland: it is made of white marble. Above the city, on a steep hill, there is a beautiful calle, which is fortified. It is very large, balk after the Italian suamer, and has a noble prospect ever the city, which it commands.

This city was at sirt a bishop's see, and was treated into an archbishops, who, do not live with the same prospect of fing Charles, successor to S. Epick. Stephen, who died in the year 1158, was the first authoritor, refused to admit the Lutteran confession, and removed to Rome, was the twenty-fiath. Since his time there have been only protestant archbishops, who, do not live with the faine pomp and assynificence as the Roman catholic prelates used to do, for the latter never appeared in public without a retinue of four or sire hundred people on horieback to attend them.

In thie university of Upfal there is a chancellor, shways the archbishops, who, do not live

us, which the dukes of Sudermania used to reside, and is a place of some trade.

The finall town of Strengthness is situated on the fourth side of the lake Macler, and is the few of a bishop, who is suffragen to the metropolitin of Upfal. Opposite to the town, an annual fair is held upon the lee. Some gother inscriptions in the Runic character evince the antiquity of 6 M.

the place. Charles IK. Hee beried in the eathedral, which is an antient gothic edifice.

About forty miles from Stockholm is fituated the town of Trofa, or Trefen, which has a very good harbone.

Wellmanie, Wellermania, or Wellmanhad, is a very barren province; its greatest length, from fouth east, to north west, is about ninety miles, and it is about three-force miles in breadth from north to fouth. The country is barren, but was formerly confiderable by its filver

The capital of Westmania is Aroson; it is situated on the side of the lake Maeler, between Koping and Engkoping, about thirty-five miles from Stockholm. The hereditary convention was settled here in the year 1544, by which the succession to the crown of Sweden was settled in the family of Gustavas Vasa. This city is a history's see, and well defended by a strong castle.

The town of Arbogen is situated on the little siver Arbon, which falls into the lake Maeler; it is about fixty miles to the westward of Stockholm. Koping is a small town between Aroson and Arbogen, and there are some tolerable mines of iron and copper in its neighbourhood. Nota is another small town at the distance of twenty-eight miles to the westward of Arbogen. Lindefzaa is situated to the castlward of the Lindenberg mines: it is an inconsiderable place, and built near a rivulet, which disembogues itself into the lake Maeler.

Nerica is bounded on the cast, by Sudermania; on the north by Westmania; on the south by Westmania; on the south by East Gothland; and on the west by part of West Gothland, and the northeric extremity of the lake Vetter, or Veter. This growince contains several lakes and rivers, of which the river Trosa separates the country into two parts, from west to east.

extremity of the lake Vetter, or Veter. This province contains several lakes and rivers, of which the river. Trois feparates the country into two parts, from weft to east. Silver mines were formerly worked in this province, but at profeet it produces only iron, fulphar, and allum. The chief places here, and which are not very confiderable, are Arebro, Hellingeberg, Afterfeind, and Glaufhamme, Gettricia is futuated between Dalecarlia, the Bottnian gulf, and the rivers Tynea and Dala. This province contains three towns, namely, Gevalia, Borna, and Coperberget: the former, thing at the mouth of the river Hafinida, which forms a gulf that serves as a good harbour; carries on a confiderable trade, but the two latter contain nothing very remarkable.

Hellingia is a very estensive province, being bounded, on the north by Jempaia and Medolpadia; on the west and south-west by Dalecarlia; on the footh by Gestricia; and on the east by the Bottnian gulf. The inhabitants employ themselves principally in fishing and hunting; the country is mountainous and woody. Hudwicks, wald is the capital of this province, and is fituated near the Liothnian gulf: rosin, corn, timber, and hides, are in principal commodities, in which it carries on a confiderable traffic.

The town of Soderhamm has a good haven belonging to

fiderable traffic.

The town of Soderhamn has a good haven belonging to it, formed by the mouth of the river Luifpa; the other towns, viz. Hien, Swegh, Korbole, Lufdal, and Alta,

towns, viz. riten, owegin, remove, Lendal, and rite, are of very little importance.

Delecarlia, or Dalecarlia, is bounded on the west and north by the mountains of Norway; on the east by Helingia and Gestricia; and, on the west by Westermania and Westermaland. This province is one hundred and fixty-Westmanland. This province is one hundred and fixty-five miles in length, and one hundred in breadth; it is fubdivided into what are called three vallies; yet though it is so extensive, it contains only a few very inconsiderable villages. The mountains abound with iron and copper, and some of the mines are extremely deep. It hash been fre-quently observed, that the greatest number of the revolu-tions in Sweden have originated in this province; on which account the inhabitants have been characterized as more courageous, bold, and ferocious than any of the Swedes, as well as possessing the surface of the decembers.

Swedes, as well as possessed of a more liberal interest of independency.

The principal villages are, s. Idra, on the river Essiman, one of the springs of the Dala, or Dalecarlia, which runs into the Silian lake. This town is one hundred and twanty six miles disant from Hudwickfwald to the west. 2. Lima is thirty-six miles from Idra to the fouth; and 3. Hedemora, on the river Dala, near the borders of Westermania, is forty two miles distant from Upfal.

Medolpadia is a very mountainous country, and full of forests, it has the gulf of Bothnia on the east, Angermania on the nouth, Jemperland on the morthewest, and Helsingia on the south-west. It, is watered by three rivers, the most northern of which is called Iudal, and runs through the whole province length-ways. The most meridional one is named Nisarund.

The chiral, which runs betwins these two, is the smelless. Besides dues, there is a trivible called Stamming-Eack, which waters the southern between of this province. The sea-coast here is about forty miles long, and full of rocks, to the south of Standfurald, the capital of this province, at the mouth of the middle river, with a pretty good hardhour. Other pieces of some gone are, Hasso, a sea you can be used to the fouth of Standshald in the mouth of the river load, over-against which lies the island of Alvon. Nirunda, also a sea-port town on the Nifarund. Trop and Tuna stand ligher up on the same river. Tors. Indal, and Carlobee, on the river loads. Ansy, Sion, and Guarp, lie on the same coast.

Angermania, or Angermaniand, is be-vaded on the north by West Bothnia and Lapland; on the sealt, by the gulf of Bothnia in the south by Medopadia; and, on the worth by Imperiand. It is above ainety miles in length, and near as many in breadth. The river Angerman-Flodt runs through it. But it is a mountainous and socky country, fall of rocks and seres is so that there are here very sew villages, and but one town of some note, which is thernosand, on the Bothnick gulf, where it has a pretty good harbour, which affords it some trade. It lies about seventy miles from Handwickfuslad to the north. Natra, in the same province, stands on a bay of the same gulf, sorty-five miles distant from Hernosand to the north. Jemptia, in Jengtia, or Jempterland, has Lapland on the north, Angermania on the cast: Medolpadia, Hissingia, and Dalecarlia on the south, and the high mountains of Norway on the welf. It is watered by two pretty confiderable rivers a namely, the Indal, which sorms in the middle of this province a large lake, and cau, into Medolpadia, and the Hismerdal, which runs from north-well to sooth-east, and enters into Angermania. Hare, are no cities, but only a few villages and hainlets; the most congestions called East Bothnia, the saled to distinguish it from Calanis, which lies not the sease; it has Angermania, on the s

Bothnia.

The chief towns here are. Uma on the gulf, at the mouth of the river of that name, about ninety-fix miles from Hernofand to the north-cast. Pitha, at the mouth of the river of that name, about eighty miles north from Ums. Lula, allo at the mouth of a river of that name, eighteen miles from Pitha to the north. Torno, at the mouth of the river thus called, fifty-four miles diffant from Lula to the north-cast, flands at the bottom of the gulf of Bothnia, near the botders of Lapland. It is a place of fome trade, and has a good harbour.

SECT. III.

Of the fecond grand division of Sweden called Getbland.

OTHLAND, or Gothia, is a large fruitful country, and the most fouthern of all Sweden: it comprises Esti Gothland, West Gothland, and South Gothland.

The first of these, called Esti Gothland Proper, includes the country properly so called Smaland, and the island of Ocland. It is a fertile, open, fist country, producing corn, cattle, fowl, venison, sist, &c. and is bounded on the north by Sudermania; on the east by the Baltick; on the west by the lake Vetter; or Veter; and on the south by Smaland.

Norkoping is the chief town. It stands about seventy miles to the southward of Stockholm, on the bank of a stream which runs from the lake Vetter to the gulf of Brawiken. The town is populous, large, and hath considerable commerce. It is likewise celebrated for a salmon sistery, by which many people are maintained.

fifthery, by which many people are maintained.

The town of Sudercoping carries on fome trade; it flands on a branch of the les, about fixteen miles from the Baltick; is unfortified; but has been remarkable for fom

bouring places.

Stepburg flands ten miles to the saftward of Suderco-ping; it is a final town, has fome commerce, and a tolerable harbour.

iolerable harbour.

The teyrn of Waftens, or Vadfish, is fituated on the eathern bank of the lake Vetter, at twenty-five miles siffance from, and is only remarkable for the ruins of an antient repai palace.

The town of Sinaland is fituated between East Cothland, the Baltick, Bleking, and Halland. It is feventy miles in length, and abounds in cattle, wood, iron, copper, lead, and other sifful articles.

miles in length, and about seventy-five in breadths, and abounds in cattle, wood, iron, copper, lead, and other wieful articles.

Calmar, which is the capital of this province, is a confiderable city, fitoated on a strait of the Baltick formed by the sife of Ocland, which lies over-agains it. That strait is called from themes Calmar Sund. This city is one hundred and sixty miles distant from Stockholm towards the south. It is divided into the Old and New town: Old Calmar is famous by a deed executed there in the year 1393, by which the three northern crowns of Sracen, Norway, and Denmark, were settled on the head of queen Margaret. This is called in history the union of Calmar. Erick, Margaret's foecessor, sounded thirteen prebends here, and gave a decree, by which he put the church of Calmar among the collegiate ones. After the division of Calmar among the collegiate ones. After the division of the crowns, which the fatal union of Calmar had united, this city became a frontlet town, with regard of the Danes, who were in possible of Schonen. It was often taken, retaken, and plundered; and, to complete its rain; it was bust down to the ground in the year 1547, nothing escaped the size but the church, and about threefcore houses. Soon after this missortune, the new city was built at a nuesquet-short's distance from the old town, in a little island called Owarnholm.

This new city is large, the streets are broad and strait, and the house well built; but the town is not populaus. The new fortifications consist only of thick walls, built with large pebbel stones taken out of the sea, and a few ramparts, built only with fund, and therefore supported by another wall, which the sea surrounds almost on all sides, except the gate. The situation of this city renders it very strong, all the avenues to it being foll of marshes, or cut off by water from the fea, which abounds here with notes, between which there are, as it were, so many abstifes, that it is impossible to approach the place sither in boats, on horschack, or o

north-wett, stands Westerwick, a sea-port town of good trade on the Baltick.

On the banks of the lake Salen, and forty-five miles distant from Calmar, towards the north-west, is Wexio, a bishop's see, where some of the first planters of Christianity he buried; and the same number of miles to the west, and eighteen from the lake Vetter, to the east, the town of Eskeso is fituated.

The town of Jonkioping is situated on a bank of the lake Vetter, about firsty miles north-west of Calmar. It is without walls or ditches, but defended by a citades, which is surrounded by ramparts. It is rather a brisk place, as the lake on which it stands affords it some trade. The ingenious Mr. Warsall, a very law traveller into the northern parts of Europe, has favoured us with a very interesting and curious account of his journey from Hessinberg (the first town belonging to the Swedish domlinions on the side of Dennark) to this place; from which we thall, for the satisfaction of our readers, transcribe some of the most material passages; his letter is dated from Jonkioping, May 18, 1774.

of the malt material painages; his letter is dated from Jon-kioping, May 18, 1774.

He thus expresses himself: "I crossed the celebrated passage of the Sound, though it blew very fresh. We were ever in little more than half an hour. At Helsinberg, where I entered the Swedish dominions, I had the pleasure of viewing the beautiful landskip reverted which I had seen the preceding evening from the island of Zealand. Which

of the two is the most charming, I leave connosificurs to determine. I drove twenty miles in the afternoot, and was then obliged, by the approach of night, and the want of horse, to stop at a milerable little lint, or rather cabin, where I could procure nothing besides milk 1. I by down five hours in my cloattle, and then got into the carriage at three o'clock in the ntorning. Had I understood properly the manner of travelling in this country, which is, to send a passant forward from every post-house, to precure horse, in readiness, I should have doubtless made a considerable progress in my way, but as I neglested this necessary lines, I was obliged to wait at every stage an hour or two, while the hories were brought from the neighbouring villages. I was obliged to wait at every stage an hour or two, while the hories were brought from the neighbouring villages. I was forced to spend this night in a anore desolate and dirry hovel than the first, where I wrapped myself up in my great cost, and step upon a table. In the morning, when I obntinued my journey, the whole aspect of nature was, changed. The snow lay upon the ground two feet deep, and the winter scenate to have renewed its empire over these inhospitable plains, from whence the similing month of May cannot benish him.

"In the hope of reaching Jonkioping at night, I sat out, however, in defiance of the inclemency of the weather, which, from having been very warm, was become in a few hours as cold and piereing as our Decembers. The drivers seemed totally unaffecked by this fudden alteration, which did not produce any in their drefs or cloathing and the peasants, both men and women, were all barefooted as before. The snow, however, configiring with the want of horses, prevented me from reaching Jonkioping; and I said all night at a house, which for horors of tircation in ever remember paralleled. It is quite detached from any, village or hamlet, and the spot on which it stands is a bare rock, deflictute of any covering or earth, and ferrounded on every side

my carriage, and left this most melancholy and wretched habitation.

The next morning, about ten o'clock, I arrived at Jonkioping, and gladly enjoyed a few hours of relaxation, after so many pleasing occorrences. It is difficult to give a picture of the country through which I passed from fiel-inberg, the colours of which you will not imagine are heightened by fancy or invention. The first twenty miles exhibited some few marks of cultivation and agriculture 3 and though there was not one collection of huts or houses, which could be denominated a village, yet scattered cottages, and a little ploughed land, smidth an immense waste, Informed the passenger that it was not totally unoccupied or unpeopled. But as I advanced farther into the province of Seamia, and afterwards into that of Smaland, even these faint traces of human residence vanished. Groves of fir or aspin covered the country; and in the course of firsty miles, I can fasely assure you I saw not any unlages. I have driven from one stage to shother, of twelve or fourteen English miles, without meeting or seeing a single person, though, in hopes of differning the countrenances of man, I impatiently cast my eyes around on every fide.

ing a fingle person, though, in hopes of disterning the countenances of man, I impatiently cast my eyes around on every fide.

"The firs on either side the road, in many places, formed avenues as noble as those which are often planted at the entrance to palaces, or noblemen's feats; and through the whole, was spread a kind of rude and gloomy magnificence, which, superadded to their silence and lone-liness, very strongly affected the mind. Even the birds seem to have abandoned these dreamy forests; and the acukoo. I enquired if they did not afford refuge to wolves or bears, as these animals are commonly found in those places and countries which want population; but the peasants affured me, that the former were only in small numbers, and rarely seen; and that there are not any bears.

"With respect to the peasants, they are civil and humble to obsequious first, grateful for the third part of a half-penny, and infinitely less uncivilized and barbarous than one would be tempted to suppose, from the appearance of every thing around them. Had I not taken the presurion to carry wine and provisions with size, I must have been almost starved in my journey through these miserable provinces, where the peasants are strangers to every kind of aliment, except bread, and sale posk of fish. It is indeed a question whether the former of these deserves the name of bread, as it is a compound of rys and eats; among which

which they mingle, in times of dearth and femine, a kind of flow made of the internal bark of uses raised: it is of a colour approaching to black, and of a very differenable

"The fervant that attended me, who is a German, and has wandered over half Europe in various fervices, was quite tired with four days of fuch miferable accommodation, and exclaimed, in a rapture, at the fight of this place, that it was " le paradis terrefire." It is indeed, of Melf, a very neat country town, and rooft delightfully fittated on the lake Vetter. I am just returned from looking down from the top of the church on it, and the furrounding meadows, which are all cultivated, and after the defarts I have passed, which is near an hundred English miles in length, rather resembles the fee, than a piece of inland length;

The lake itself, which it near an hundred English miles in length, rather refembles the see, than a piece of inland water, and extends, far beyond the view, to the north."

We shall give an asecount of Ocland, being an island, when we come to treat of the isles belonging to Sweden. The province of West-Gethland is very examsive, having Smaland on the south-west, the river Gothelba on the north-west, by which it is parted from the government of Bahue, and the province of Dalis; on the north, it has the lake Wenner, and part of Vermeland; and on the east, it has part of Nericia, and the lake Vetter, which divides it from East-Gothland Proper. It is watered by a great many lakes and rivers. Proper. It is watered by a great many lakes and rivers, and abouteds with excellent partures, where great numbers of cattle are bred, and by the fals of which the country is

In this province are feveral confiderable towns, the principal of which is Gottenburg, which stands on the Schager Rack, or Categate, on the fouthern branch of the fiver Gothelbu, which there falls into the fee, and forms the fiver Gothelbs, which there falls into the fee, and forms the barbour of this city. It is one hundred and feventy sales diffant from Calmar towards the west, and two hundred and twenty five from Stockholm to the fouth-west. It is no antient town, being bails in the year 1607, under the felge of king Charles IX. His faceces have granted it great privileges, by which it is become a considerable marttown. The Dutch drive a large trade here. In the war of 1644, the Danes exerted their unnot efforts to ruin this city, but to no purpose; and it has been so well fortified fince, that it is now one of the strongest maritime towns in the kinedom.

The Swedes have of late years established an East-India The Sweder have or the year company at Gottenburg, whence they fend fome thips annually to China, and to the coasts of Coromandel and Malabar. They have no kind of merchandize to fend from Sweden to India, except fome iron and copper, and these articles they cannot find a market for in any confithe articles they cannot find a market for in any confiderable quantity; fo that the greatest part of their cargo must be paid for in specie. How far this part of trade is beneficial for Sweden, where there is so little specie, and where the merchants are obliged to procure slives at a considerable premium, must be lest to the judgment of the reader. If the cargos of the East-India ships, which are landed in Sweden, were for the confumption of that kingdom, this branch of commerce would foon bring the inhabitants to destruction. But we find, by the cultom-house books of Gottenburg, that they export East-India goods to the amount of two hundred and fifty thousand pounds sterling yearly; which are sungisled into Scotland and Ireland, and entered regularly into several ports of the Baltick, to Hamburg and to Bremen, which is rather more than the prime cost and freight of all the goods they bring from India, and, consequently, Sweden has her own consumption free of all charges; and as long as the merchants of this kingdom can find a market for the furplus of their East-Indiagoods, this trade cannot be detrimental to them, but the contrary. The uniting not be detrimental to them, but the contrary. The uniting the Ise of Man to the crown of Great Britain was a terrible blow to the Swedish and Danish companies, as the merchants of Gottenburg, and those of Gopenhagen had in that island considerable magazines of East-India goods.

Skara, Skaren, or Skar, is a bilhop's fee, about twelve eighty-four from Gottenburg to the north-weft, was the feat of the antient kings of Sweden, and had a palace, one of the flatelieft not only in the north, but in all Europe, as may still be judged by its situation, walls, and structure. It is now a senceless town, though formerly the metropolis of West-Gothland. Near the lake Wenner, and the antient palace we have been mentioning, flands the mountain called Kindakulle, which is very high, and produces all kinds of herbs and plants, except vines. Every thing grows there naturally; and this secuntain,

which may be reckoned one of the most fruitful in the north, is also one of the most delightful, by the sweet warbling of an infinite number of birds that frequent it.

The town of Linkoplag, which implies the mart of Lidds, shads on the lake. Neuron, at the meath of the river Lids, which there falls into the lake. It is fifteen miles distand from Skera.

The town of Falcoping stands on the fourth bank of a little lake which empties itself into the river Lida; it is twenty miles north from Skara.

On the castern bank of the lake Wenner stands Marisstadt, being thirty unles distent from Linkoping, to the north-east. This town had its name from Mary-Anne, confort to king Charles IX, who built it.

These three last cities are not very considerable at present.

The province of Vermeland, or Wermeland, has Dale-carlia on the north; Westerspania and Nericii, on the east; the lake Wenner, on the fouth; and Norway, with part of Dalla, on the west. Its greatest extent, from east to west, is about ninety-seven miles; and from north to fouth, about one hundred and forty-four. It has a great many lakes and marshes, it but indifferently cultivated, and thinly geopled. Here are one copper, and several iron mines.

mines.

The chief towns are, t. Carlofted or Carlfidd, which flands on the northern bank of the lake Wenney, one hundred and twenty miles weft from Stockholm. It was built by Charles IX, king of Sweden, in the place of the antient city of Tingwalls. 2. Philipfted, about twenty-five miles from Carlofted, to the north-eaft. This is a place of difficult accefs, being feated amongst brooks and marches. 3. Rufcoy is about the fame diffance from Philipfted, Touthward.

The province of Dalis, which the Swedes spell Dasl.

Philiptad, fouthward.

The province of Dalis, which the Swedes spell Daal, is one of the smallest in the kingdom; has the lake Wenner on the rast, West-Gothland Proper, on the south-east; the government of Bahus, and port or Aggestuus, on the west and north-west; and Vermeland, on the north-east. Its extent, from north to fouth, is about eighty-four miles, and from east to west, not above twenty-sour. It is full of mountains!; and has several lakes and rivers, which fall into the lake Wenner. The country is in general barren: though in some places there are pretty good pastures for cattle, which are of a larger size than ordinary.

The places of most note in this province, are, r. Daleburg, which is the chief place in this province, and stands on the western bank of the lake Wenner, fixty miles from

fame lake, twenty miles more to the northward.

South Gothland is divided into three provinces; namely, Halland, Schonen, and Bleking. It hath Eaft and Weft Gothland, on the north, and is furrounded every-where elfe by the fea.

e province of Halland has the fea of Denmark, or Categate, to the fouth west; Schonen, on the south; and part of East Gothland and West Gothland, on the northall and north. Its extent, along the fea coast, is about eatt and norm. Its extent, along the tea coat, is goott feventy-five miles; but its greatest breadth is not above twenty-two miles. This is a pleafant and fruitful country, which belonged formerly to Denmark, but was, in 1645, engaged to the Swedes, as a feculty for a free paffage of the Sound: and was afterwards, by the treaty of Roschild, ceded to them for ever.

The principal towns are, 1. Halmfted, the capital of "The principal towns are, 1. Halmft.d, the capital of this province, which stands on the Categate, one hundred and forty miles from Calmar, to the west; and forty-fix from Gottenburg to the south. It has a good harbour, and is a place of trade. It was fortified by Christian IV. king of Denmark, but given up to Sweden by the treaty of Bromsbro, in 1645. 2. Laholm, a small town on the Categate, at the mouth of the river Laga, eighteen miles distant from Halmstad, to the footh-east. It has a citade, and a good harbour. 3. Falkenberg, on the same sea, at the mouth of a large river of the same name, it eighteen miles distant from Halmstad, to the users is eighteen miles distant from Halmstad, to the users is eighteen. miles diffant from Halmitad, to the north-well. It is a fea-port, defended by a cattle. 4. Warberg, a small town with a strong castle and a large harbour, is twenty-feven miles diftant from Halmitad, towards the north; and

miles dittent from hammiad, towards the norm; and twenty fouthward of Gottenburg.

The province of Schonen, which is a peninfula, is feparated from Zealand by the Sound, which walhes its coaft, on the weft; it is bounded, on the north, partly by Halland, and partly by Smaland; on the eaft, by part of Bleking, and the Baltick fea, which waters it also on the fouth. It is about eighty miles from north to fouth.

Sound , has a good harbour, much commerce, is irrong, and well fortified. Elinburg, allo fituated on the Sound, is a place of confiderable trade; but the fortifications are gone to ruin at prefent.

Bleking is fituated between Smaland, Schonen, and the Baltick. This province firetches above eighty miles in length from eaft to weft; and is about fifty from north to fouth, at the broadest part. The coasts are rocky, and the interior parts mountainous, woody, and barren.

The chief towns in this province are, 1. Christianstadt, which is eight miles from the sea, and situated in the midst of morasses: it has been several simes taken and reaken in the course of the wars with Denmark. 2. Christianople, more the capital of this province: it had somethy a good harbour, which Charles XI. took a great deal of pains to rain, and render useless. 3. Ahuys, situated on the Baltick, at the mouth, of the river Hellean: it has a sife, casecious, and much-frequented harbour, - Carlscroon, situated on a small island, which it entirely covers; it is joined to the continent by a long bridge. It is near forty-fire miles; ot the east of Ahuys, has an excellent harbour, and is well fortified. There is another small se port, called Carsholm, between this place and Ahuys.

The next grand division of Sweden is Finland, which is shout three hundred and eighty-fix miles in length, from north to fouth; and two hundred and fisteen from east to west: It is bounded by the Bothnian gulf, part of Russia, and part of Lapland. It abounds in grain, cartle, sish, &c. of which exports are made to other parts of the kingdom; it likewise furnishes other provinces with butter, cheefe, &c. The inhabitants speak a very peculiar dialect, so as to be searcely intelligible to the Swedes of other provinces; and their religion is, for the most parts of the kingdom; it likewise furnishes other provinces with butter, cheefe, &c. The inhabitants speak a very peculiar dialect, so as to be searcely intelligible to the Swedes of other provinces; and their religion i

The town of Abo, which is the capital of the whole duchy, and of Finland Proper in particular, is fituated
No. 51.

and flelves that are before it.

Carelia is a very fruitfol province, and extends, from east to west, about one hundred and fifty miles. The principal towns are, r. Wyburg, which is stuated at the bottom of the gulf of Finland, is a bishop's see, has confiderable trade, is well fortified, commanded by a castle, and greatly benefited by having a good harbour, a. Msla, which stands on a small bay, that communicate with the lake sadogs. 3 Wekelso is a very final poor place, and, Vilmanstradt, which belongs to the Russian dominions.

Keybolm is a very extensive, but unfertile province.

place, and, 'imanstradt, which belongs to the Russian dominions.

Kexholm is a very extensive, but unsertile province, containing many large lakes and barren mountains, it is bounded, on the north, by part of Lupland; on the cast, by part of Russia and the Onega lake; on the west, by Savolax; and on the south, by the lake Ladoga.

In this province are only the two fullowing towas of any note; namely, Kexholm, from which the province has its name, is called by the Russian, Carelogood, and in Latin, Kexholmis, or Carelogroda. It is a small city, situated among marshes, on the western bank of the Ladoga lake, fixty miles from Wybarg to the north-cast. It is defended by a very strong citatel, and was formerly, with the whole province, inhiest to the Russians, salabout the beginning of the last century, when the case promised Charles IX. king of Sweden, to surrender the town and province to him, if he would affist him against the Poles, by whom he was then closely befet; but being freed from the danger, he refused to perform his promise; which made the Swedes invade his dominions, and obliged him to yield up by treaty, in the year 1616, not only this town and country, but also the most considerable places in largin. But in the late wars the Russians have taken all again, as we observed above.

The town of Lexa, in the north part of this province, shands on the banks, one hundred and twenty

again, as we observed above.

The town of Lexa, in the north part of this province, flands on the banks of a lake, one hundred and twenty miles distant from Kexholm to the north.

Savolax, an inland province, has Cajania on the north, the province of Kexholm on the eart, Carelia on the fourth, and Tavastia on the west. It is a barren and defert country, covered with forests, and abounding with lakes, white

afford its few inhabitants elenty of fifth. It is divided into the greater and leffer Savoint; the former, which lies towards the fouth, contains five diffusers. The eaftern part of this province was yielded to the Rufflens, by the first treaty of Abo.

The most confiderable towards help are as fathers.

The most confiderable towns here are as follow: 1. Kof-kimps or Kofnipe, the chief town of the province, stands on a lake, about seventy-five miles from Wyburg to the north: 2. Nystet, d strong fort, is also seated on a lake, fifty miles from Koskimps to the east. It was built in the 'year 1475, by Erick Azelfon, governor of Abo, and was of use signing the invasions of the Russians, but belongs note to them. 3. Runal is named by Luytz as one of the chief wars of this province; but, by the maps, Saminge, which stands on the banks of the same lake, a few miles distaint from Nyslot to the fouth, as Runal does about thirty more to the wast, seems rather to deserve that character?

Tayafis, or Tayafisme, has Cajania on the north, and sirrly on the well, where it is also bounded by Finland, properly fo called. It has Nyland on the fouth, and Sawonian on the east. It is a marfny country, and is divided, seconding to d'Audiffred, into four territories, called Sermaki by the inhabitants; namely, the districts of Hattula, Haube, Offre-Haredt, and Nedra-Haredt. Here are reckd eight lakes; the most confiderable of which is the Peinde. This country is not much cultivated nor popu-lous: there are however iron mines, which afford a pretty

The most noted places are as follow: T. Tavastus, the capital of the province, which berrows its name from it, etherwise called Croneburg, in Latin, Tavastia, or Croneburgum, is feated in the louthern part of the province, on a small river, which a little lower falls into the lake Wains, about an hundred miles from Abo to the northeast? and en bundred and twenty-in from Wyburg to the ear, and an bundred and twenty-fix from Wyburg to the north-west. It is strong, by its situation in a marshy ground, which renders it of a very difficult access. Martin Zeiller affects, that Birger Jarl, a Swedish general, forested this city in 1250, in order to keep the inhabitants in awe, whom he had obliged to embrace the Christian religion. 2. Sermaki, the most northern town of this province, near the borders of Cajania, is an hundred and ee, near the borders of Cajania, is an hundred a ry-five miles distant from Tavastus to the north. fixty-five miles distant from Tavassus to the north. 3. Hattula, forty-eight miles from Sarmaki to the south.

Mahatan, fifteen miles from Hattula towards the south-A Mahatan, fifteen miles from Hattula towards the foutheaft. g. Rautalanby, on a branch of the lake Peinde,
twelve miles from Hattola to the fouth. 6. Jemfe, on the
western bank of the lake Peinde, thirty-sia miles from
Rautalanby to the fouth-west. 7. Sisse, on the eastern
bank of the same lake, forty miles from Jemse to the foutheast: and, 8. Padasjoki, over-against Sisse, on the same
lake, forty miles from Tavassus to the north-east; are

The lake called Peinde, or Pe Jende, is about eighty riles long from north to fouth, and communicates with feveral other lakes, particularly with that called Rotalsin, by means of which its waters run into the river Kymen,

by means of which its warers run into the river Kymen, and so into the gulf of Finland.

Cojania, called by some East Bothnia, lies along the Bothnie gulf, which bounds it on the west; it has that part of Lapland called Kimi-Lapmark on the north; part of Muscovite Lapland and Tavastia on the east, and Finland Proper on the south. It abounds with rivers, which empty themselves into the gulf of Bothnia, and has several lakes; amongst which there is a pretty large one, called Ula-Treffs, which receives the waters of several other lakes; and runs into the sea, by means of the river other fakes, and runs into the fea, by means of the river Ula. This lake is about forty-five miles in length, and twenty-four in breadth. In the midft of it stands a little iffand, called Ula, about fifteen miles long, and nine miles broad. The northern and eaftern parts of this province are covered with mountains, the reft of the country is reafonably fruitful.

The chief towns here are as follow : 1. Cajaneburg the chief place of this province, from which it borrows its name, is fituated on the north-east fide of the lake Ulaabout two hundred and feven miles from Tavastia towards the north, ninety-fix from the coaft of the Both-nic gulf to the east, and about thirty from the nearest borders of Lapland towards the fouth-west. It is desended by a good citadel. 2. Ula, a little town at the mouth of the river to which it gives its name, stands on the Bothnic gulf, eighty-eight-miles from Cajaneburg to the weft. 3. Ulaburg, a fortified town, lies in a little ifland over-against the mouth of the river Ula. 4. 5. Carelby; there are two towns of that name, the one called Old Carefby, and the other New or Ny Carelby; they are both on the coaft of the Bothnie gulf, the former about fiventy, and the lexter eighty-four miles from Ula to the fouth. Between these two towns stands, 6. Jecabsadt, fix miles from Old Carelby to the fouth, and eight from Ny Carelby to the north. 7. The small town of Lockto is steasted on the same coast, eight sailes from Old Carelby to the north, near the mouth of the river Lockton, which firings from a ridge of mountains that divide Cajania frost Tavastin, and, being swelled by the waters of a lake, called Lestjervi, runs to the north-west, and falls into the Bottinian gulf, between Lockton and the rock called Kaste. B. Waste, or, as the linkabitants of this country call it, Mustafar, is also a se-port town on the same gulf, firsty miles from Old Carelby to the fouth. It is the native place of the famous Gustavus Vasa, who reigned in Sweden with so much glory. Q. Christianstact also stands on the gulf of Bothnia, is skiy miles from Biorneburg to the fouth.

S. E. C. T. IV.

Containing a description of those islands which form a part of

HE most considerable islands belonging to the king of Sweden are, 1. Gothland. 2. Oeland. 3 of Sweden are, t. Gothland. 2. Ocland. 3. Ocland. 3. Octal A. Gothland or Gothla Infula, is stuated in the Baltick fea, over-against the coast of Earl-Gothland in, Sweden, from which it is about fifty-two miles distant, to the east. fen, over-ageinst the coast of East-Gothland in Sweden, from which it is about shifty-two miles distant, to the east. It lies between fifty-feven and shifty-eight degrees of north latitude, and between eighteen degrees, thirty minutes, and twenty degrees of longitude east of London. Its great eft length, from the fouth-west to the north-east, is about sifty-fix miles; but its breadth is not about eighteen miles; from east to west. Olsus Magnus says, it was called Gothland, that is to say, Good Land, because it is fruitful, abounding with all necessaries of life, and so well previded with all the blefsings of nature, that it may be reckoned among the best islands in the north. It is, says he in another place, a good land, in several respects; the inchabitants are a good fort of people; there are good harbours all round the coasts; the foil is good, it abounds in passures, cattle, wild-sowl, sish, good water, woods, and beautiful marble. This island belonged formerly to the Prussian knights, who quitted it to the Danes in 1408, for nine thousand crowns. The Swedes got it in 1045, but it was retaken by the Danes in 1677, and restored to the Swedes by the treaty of Fontainbleau in 1679. There is here but one considerable city, namely. Wisby, Wisbuy, or Wisburg, the chief place of this island, on the western coast of it. It is built on the declivity of a rock near the fea-shore, is surrounded with a strong wall, and defended by a pretty strong castle, built near the harbour, where the governor of the island usually resides. Olearius relates, that the ruins of fourteen churches, and of several house, gates, and walls, of free-stone and marble, which he saw there in 1635, made him judge that this was formerly a very large city; but it is now very much decayed. It began to be considerable to-

judge that this was formerly a very large city; but it is now very much decayed. It began to be confiderable towards the end of the eighth century; fince which time it became fo populous, that it contained ten thousand inhabeiants, most of them merchants, without reckoning the Danes, Swedes, Vandals, Saxons, Muscovites, Jews, Greeks, Pruffians, Polanders and Livonians, who traded there. These foreigners were so numerous, that they could make head against the inhabitants; and in the year 1288, there arose a quarrel amongst them, and a battle was fought, in which a great many men were killed on both fides. However, the inhabitants gained the victory, and Magnus, king of Sweden, reconciled them with the foreigners.

The inhabitants of Wifby are faid to be the first who made hydrographical tables and fea charts: they also pretend to the glory of being the first that made laws for regulating trade and navigation. But Monster La Martinere observes, that they have rather admitted than invented them. He fays, that being grown rich by navigation, they intro-duced among themselves the famous laws of Oleron, an island of France, in order to decide by them are unparted that might arise amongst merchants. They translated that might arise amongst merchants. ante a that hight are already in the transport of the state of t in to t

The illand of Oelet is about nity miles in length, but the breidth veries in different parts. It is opposite to the coast of Livonia, and has no town of confideration but Arentberg, which is fituated on the fouthern coast of the illand, and defended by a calle. There is also a fortist called Someburg, on the northern coast. The whole is now in the position of the Ruffians, who took it from the Swedes forme years fines.

To the northward of Oelet is fituated the illand of Danish the same fines and by the northward of Oelet.

To the northward of Ociel is intracted the listed of Diagon; they are feparated by the narrow first of Honfelk; it is of a triangular form, the fides being from twenty to twenty-five miles in length. On the western cape there is a high tower, which was built by the fenze of Revel, as a light-house and land-mark. Between this island and the continent of Estonia are some fand-banks, small islands, rocks, &c. The northern and north-east

final itlands, rock, cc. — The northern and notice are parts are mountainous.

The ifland of Hogland is about nine miles in length, and is fituated in the gulf of Finland. It conflicts only of cluster of rocks intersperfed or covered with fir-trees, brambles, &c. and has on it a few bares that in the winter grow white.

The ifland of Ahand, in the Baltick, is fituated between

The iffand of Aland, in the Baltick, is fituated between forty and fifty miles from the fouth-well part of Finland; the circumference is near an hundred and eighty miles, and the inhabitants near fix thoufend in number. They live in finall hamlets, as there is no regular town in the island; for indeed the peafants have almost remonstrated again; for indeed the peafants have almost remonstrated again; the building any, which the Swedish government have been defirous of effecting. The unbappy king; Erick XIV. was confined in a castle in this island, which goes under the name of Castleholm. The apartment where the king was imprifored is composed of stone, and vaulted over head, and is entered into through a trap-door: it is about twenty-three feet long, and twelve broad. Any person must be struck with compassion and horror on reflecting that a sovereign had been the tenant of such a dungeon, which is too miserable for the worst matefactor. The light is admitted by a narrow window, through a wall five feet in thickness.

light is admitted by a narrow window, intoten a wait ave-fect in thickness.

There are abundance of cattle on this island, fome wild beasts, and plenty of fish in the circumjacent feas. It is fortrounded by many fand-banks, rocks, and finall islunds, foute of the latter being inhabited and others not. To the fouth of Aland there are feveral other-ifles, the chief of which are Flys, Landsweden, Rodan and Nyan. The ide of Ekero, in the west of Aland, extends from north

ifie of Ekero, in the west of Aland, extends from north to foots about fix miles; and is separated from Aland by a narrow channel, about three miles broad.

The left island on thall take notice of is Rugen, which is fituated in the Baltick, opposite to Straslund; is twenty-aire miles in length and sitteen in breadth, with the title of a principality. It is skrong by nature, and well fortified

In 1997, the Hant-Towns fent deputies to Lubeck, in breter to draw up hely relative to navigation, which laws are if the draw up hely relative to navigation, which laws are if the draw up hely relative to navigation, which laws are index with complete than those of which there has a man and improvements; and what thew that these laws are index updern than those of Obreno, is, that those laws are index updern than those of Obreno, is, that those laws are index updern than those of Obreno, is, that those are complete than those of Obreno, is, that those are complete than those of Obreno, is, that those are complete than those of Obreno, is, that those are complete than those of Obreno, is, that those are complete than those of the continent of South Cothland, from which it is feparated by a first, which is not above nine or ten miles broad, and is called Calmarian, for the first of Calmar. This is and sping if the continent of South Cothland, from which it is greatest breath is not above twelve miles. The foil affords good afture, and many herds of oxen, horse, and fallow deet.

On the western coast are only two villages, and these oxe possibust, named absect and Smedeby, with the city of Borkholm, in Latin Borcholmia, the capital of this island. It lies under sity-six degrees, fifty-feven minutes, of longitude, east of London. It is about fifteen miles distant from Calmar towards the north-call, and is defended by a castle.

The castern coast is vary well peopled, and contains, going from north to fouth, the towns of Book, Kohingfard. Hogaby, Kilda, Stapeling, Genstala, Remaster, Mookley, Stenala, with the villages of Hudderstad and Otten-by. There are many forts and castles to defend this island, that have been often attacked. In 1530, it was taken by the Daines, from after which the Swedes recovered it; but, being lost again, Gustavas Adolphus sinally retook it in 1013, since which the crown of Sweden has possible did without moleculation.

The island of Cefel is about fifty miles in length, but the bright whi

Of the inhubitance of Sweden, their perfore, dreft, mainere; suffemi, employments, feil, clouding, language, learning, re-ligion; arts, manufactures, trade, ceins, Us.

I N general, the Swedes are a very strong and robust peo-ple; and the climate affording a bealthy and dry sir, they have excellent conditiutions, and are capable of endur-ing hardships and fatigues. Where they are not too much capode to the weather, they have good complexions, and their hair, like that of other northern natious, is inclined their hair, like that of other northern natious, is inclined to yellow. The women are of a just proportion; they have alfo good features, and those who are employed at home are generally fair; but the peasants are accustomed to make their semales undergo an equal stars in all laborious employments: they go to the plow, thresh their corn, row opon the water, and carry bordens in common with the men. The inhabitants are, however, far from being the men.

row opon the water, and carry bordens in common with the men. The inhabitants are, however, far from being fufficient to people the country; a remarkable inflance of this in one place, though not the moft northerly, is, that in the compafe of one thoufand, two hundred, and feventy figure miles, there are hardly four thousand, feven handred people to be found.

Some learned Swedes have computed the number of inhabitants of Sweden and Finland at about three millions, reckoning eighty thousand farms, on which are one million, fix hundred thousand fours, including the women, children and fervants; and it is faid these farms make up above half the number of inhabitants in the whole kingadom. Indeed, some parithes are at present of entensive, and at the same time so thinly inhabited, that a peasant must travel several Swedish miles to visit his next neighbour; others contain not more than seventy farms, and

and at the same time to thinly inhabited, that a peafant must travel feveral Swedish miles to vifit his next neighbour; others contain not more than seventy farms, and yet take up a tract of land equal to the whole province of Holland, though perhaps that flourishing country contains more towns than there are cottages in such a parish. In Sweden, the common people subsist by agricultors, working in the mines, grazing, hunting, nishing, and commerce, both domestic and foreign. The inhabitants of the northern parts are frangers to delicacies, and live very hardy. They eat a fort of bread made of the bark of birch and pine-trees, straw and roots. The hocky or stampe, is also a kind of bread very common in the north; and in times of searcity is sometimes used in the southern parts. This is made of the ears of corn cut from the stemand chopped small; after which it is dried and ground; on this kind of meal they pour boiling water, and mix it with leaven and corn meal, where it is to be had. In spring they also take the bark of firs, which at that time comes the easiest off the trees, but not the hick bark next the wood. Having pared off the outward coarse knots, it is dried in an oven, or placed over a wood fire, till both sides become brown, swell, and undergo a kind of fermentation,

William Tarias

tion, by which the sefin is confured. They make bread of the meal which proceeds from these pieces of bark, after heing that dried end ground.

These poor people are also taught by according to make bread of a plant called mills, and by the fine, wekke (called, in Latin, calla folis cordetis), which in gathered during the figring in the moraffee. After it le dried in the sun, it is baked in an even, or half dried in aware rosen, where it is springled with water. It is then pot into the owne a facond time, and dried till the leaves fall off, and the outward tegument detaches itself at the knot from the flown thete the flows are chopped small in a trough, and, being afterwards ground, the meal is fisted, and dough made of it, by powring bot water on the ancel, it is usual also to pour some hrandy less amongst it, to give the bread a more agreeable slavour. The dough is afterwards kneaded with great known; after which, they mit a third pert of commend with it. Their other food confused sish and dried sless. Persons in assistance in each other countries keeps good table; and the rich, and then as live in great towns, are not unacquainted with delicious fare.

In the winter season, their cloathing is feltable to the climate: the rich wear cloath; their doubt warm fare, instead of which, those who cannot afford them, make abeit cloaths of them, there are an each of them, and thus, are

stead of which, those who cannot stord them, make their cloaths of sheep skins with the wool on; and thus, as a suodern writer observes, are better provided with cloathing adapted to the scale, and to their own condition, than

people of most othercountries are found to be.

With respect to their dress, the saltion of it refembles that of the Germans and other European nations; they wear, in summer, such closults and stuffs as their wealth enables them to procure, the great adorning themfelves with lace and embroldery ; and imitate, as much as pof-

with lace and embroidery; and imitage, as much as possible, the fashions and manners of the French.

There is such an assinity between the Swedish and the Danish and Norwegian tongues, that the inhabitants of the three kingdomy readily understand one another; but Finland and Lapland have their respective dislects. It appears that the possible done. pears, from the Kunic flones, fill to be feen in most of the provinces near the fepulchres of tip dead, that the Swedes, in the time of paganifm, made use of a particular alphabet, sermed Runic characters.

of late years, the Swedes are greatly improved in arts and sciences, but the branches of literature which they chiefly study are acconomies, natural philosophy, with the antiquities, history and geography, of their own and other countries. The most curious piece of learning amongst them is a translation of the evangelists into the Gothic tongue, done above one thouland three hundred years ago, by Upfals, a bifhop of the Goths in Thracis, of which they have the fole antient manufcript copy that is known to be in the world.

he university of Upfal is the most antient and confidetable one in Sweden; there is also one at Lund in Scho-nen, and another at Abo, in Finland. There is likewise a royal academy of sciences at Stockholm: in the same sity is a royal academy of painting and sculpture, and an-other for that part of the mathematics which relates to the

military art. An academy for the polite arts has also been intely in fituted at Dromingholm.

There are feminaries for the education of youth inflituted in ten towns of Sweden; crifcopal schools are founded at Upfal and Abo; and inscrior schools in several other places. In thore, an ordinance for the improvement and regulation of the art of printing was published by his Swedish majefly in 1752, by which a new fociety was instisuted for the encouragement of it.

Sweden was formerly involved in the groffest darkness and idolatry with respect to religion. The city of Upfal was the seat of their supersistions worship. The emperor, Charles the Great, sent hither an eminent excledatic, named Herbert, who preached the golpel in East Gothland: and for the fame purpole, the emperor Lewis fent into Sweden the famous Anicharius, who was succeeded by feveral others. In the middle ages the clergy had obtained the policifion of feveral efface, and the pope affumed a great power over the temporal concerns of the kingdom. Their abuses procured Olaus Petri, a disciple of Luther,

a favourable reception in Sweden, where he promulgated the pure doctrines of the gofpel: and that great king, Guf-tavus Vafa, happily introduced the reformation in Swe-den, in fpite of all the numerous difficulties he had to encent, in figure of all the numerous aimenties he had to en-counter. Indeed it afterwards met with great opposition, and underwent many trials in the reigns of John and Si-gismund; yet it was at last established by the diet and sy-nod-held at Upfai in 1993, when the states of the kingdom solemnly engaged to adhere to the doctrines of Luther;

and this religion, fince the docres of aniformity passed in 1612, is to be esteemed both by the seneraign and his subjects the only established church in the kingdom. Indeed, in 1743, his majedly was plassed to permit, by a royal edit, that the Calvinish and members of the church of England should, in all the sea-ports, except that of Carlfacton, anjoy the free exercise of their religion.

In sweden, the hierarchy is composed of the architecture of Upsal, who performs the coronation ceremony, and tere bishops, with three superintendents, one of whom resides at Carlstadt, another at Hernofand, and the third in Gothiand. The other excelssatios, who are subordinate to these, are the provosts, descons, chaplains, or curstes, and the ministers or incumbents in villages.

In a dissertation delivered in the year 1749, Mr. A. Blich observes, that in this kingdom, exclusive of the German provinces, there are in all three thousand ecclessation benefices, one thousand three hundred civil posts, scaping the military posts, occupied by men of literature, six hundred officers, relating to the several departments belonging to the government, and two thousand six hundred physicians and surgeons.

Within a century or two arts and manusactures bave

odiecra, relating to the feweral departments belonging to the government, and two thouland fix hundred phylicians and furgeons.

Within a century or two arts and manufactures have made great progreis. Formerly no manufactures were effablished in this kingdom; the Hanfe-towns not only exported unwrought iron and copper, but the ore of those meets!, and when they were wrought into various tools and utenfile, fold them again to the Swedes. The inhabitants of the coals were all fibermen, and the towns had no artificers. The Swedes first began to work their metals, and even their wood, in the reign of the great Gustaves Vafa, anno 1330; and towards the middle of the feventeenth century began to fet up all kinds of manufactures, but chiefly employed foreigners, particularly the Datch and Flemings. In the year 1641, a glass-houle was first creeked in Sweden; in 1642, the Swedes began to make farch; in 1646, they erefled tin-works. They had no bookfellers shops till the year 1647, nor needle and filk manufactures till 1649. Leather-dressing and feap-boiling were introduced into this country in 1651; swing-mills were erected in 1653; iron and steel manufactures and 1645 in 2642; but the woollen and filk manufactures domished more than all the rest, till the wars of Charles All, put a top to trade, and consequently to the progress of the arts. But in the reign of Frederick I, trade and manufactures revived; the breeding of sheep was encouraged, tobacco planted, and foreign artists and manufacturers are used to the resign of the progress of the arts. But in the reign of Frederick I, trade and manufactures revived; the breeding of sheep was encouraged, tobacco planted, and foreign artists and manufacturers are the secretic of their religion withencouraged, tobacco planted, and foreign artists and ma-nufacturers allowed the free exercise of their religion without moleflation.

out moleftation.

There are a prefent in Sweden manufactures of filk, cloth, cotton, fuftian, and other ftuffs; linen, fail-cloth, Morocco leather, dying, and printing of cottons; they have hooses for boiling or refining of allum, fugar, foep and falt; for making glass, porcelain, and paper; they have also gunpowder mills; stamping mills, boring mills, wire and flatting mills; vast quantities of copper, brass, iron, and steel are wrought in Sweden; which has founderies for great guns, pots, and the like, and forges for free-arms; and anchors: great numbers of thips; are also built, and wooden weftels and utensits made here.

This kingdom is conveniently fituated for commerce, as it lies between the Baltick and the Nerth fes. The towns which are allowed to import and export goods in their

It his kingdom is conveniently fituated for commerce, as it lies between the Baltick and the North fes. The towns which are allowed to import and export goods in their own fhips, and to trade both with natives and foreigners, are called flaple-towns; these are thirty-four in number : but those that lie near the see, and yet have no foreign commerce, and are only permitted to carry on a dometting trade, to have share in the freight of goods, and to porchase humbalds the nearly important to the first the seed of the seasons. by wholefale the goods imported by the flaple-towns, are called land-towns: fome of these are within land, and

others (as-port towns; others again are mine-towns.

The chief staple-towns in Sweden are Stockholm and Gottenburg. At the former are held the college of commerce, an assurance-office, and the national hank, which has frequently advanced considerable sums of money for ice of the government, and has a fund of about the service of the government, and has a fund of about fix millions of filver dollars, each equal to one fhilling and fix-pence two thirds sterling, befides current bills to the amount of seventy millions. At Gottenburg is the East-India company, erecked in 1731, which pays for every hip that returns from India fifty thousand filver dollars to the government. They have also a Levant goompany, which trade to Smyrna, &cc.

The Swedes export iron wrought and in bars, wrought metals, timber, gunpowder, pitch, ter, falt-petre, pet-ash, cordage, cobalt, furs, Morocco leather as it is called.

Their coins are, the gold ducat, worth about nine fillings and foer-peace feeling. The filver coins are the cer, one of which is equal to foer pfennings, twenty others to a saroline, which is about one filling and twe-genee flerling, and thirty-two to a filver dollar, equal to one filling and file-pene quiere-ferthings English money. There are double and italf carolines; and double, fingle, and half-fingle core, are current here.

Annong their copper pieces are the copper cer, which, like the runditue, is equal to two pfennings, and is no more than the eighth pert of a penny English. An half, a quarter, and a fixth part of a copper cer. A copper dollar, which is about four grofehen, and is nearly equal to fix-pense farthing. Their are very large, and the merchant is often obliged to carry them away in a cartor wheel-barrow, when payment is made in them.

We finall now proceed to decribe the political, civil, and military efablishments in Sweden, also their courts of judice, faws, punishmente, fee.

It appears to be the faifs policy of the Swedith government to discourage agriculture, and to checourage mine-factures, in order to support the arbitrary power of the nobility, and opprefs the commonalty. Thus many of these who are fond of naval or military employments are arivensinte the service of other flates, and the poor obliged to refore for protection, shuter, and substitute, to other countries.

countries.
About one half of the ber iron which is made in this country is exported either to Great Britain or Ireland; and when the fasion happens to be unfavorable, or accidents attend the miners or forges, the merchants are so poor that they are obliged to draw upon the English merchants for the price of the exports, before they are able to ship them off. Yet, notwithstanding these indulgences, and that the balance of trade is greatly in their favour, the Swedish government gives the greatest discouragement to the British trade, which is so capital a source of their wealth; and suffers the nation to be annually drained of a great deal of their specie, by encouraging as much as possible, the French trade.

their specie, by encouraging as much as possible, the French trade.

Most kinds of goods here cannot be made so cheap by an hundred per cent. as they are simugated from the more southern perus of Europe. The government indeed is not only totally supine with respect to sauggling, but most of the principal people prefer sauggled goods to any manufactured in their own country. To these impediments to the increase of trade and commerce we may add, with an accurate judge of lifes matters, that the best established commerce in the world might be ruined by the exchange alone, as it is conducted in this country.

The trade to France is very prejudicial to this kingdom, as it takes off but sew of their commodities, except iron and a little brass wire, yet runs away with a great deal of their specie, and returns them hardly any thing but luxuries. But the trade to Portugal and Spain, for falt, froits and wines, is not against the Swedes, as they harter for those commodities their iron, sin hand copper.

With respect to the established revanues of Sweden, they principally arise from, 1. a capitation tax; 2. erown lands; 3. excises; 4. cultoms; 5. certain tythes; 6. silver and copper mines; 7. law proceedings. These taxes annually amount to ten million, so he hundred and four thousand, four hundred and six dollars, filver mint, which, in the year 1769, according to the then value, was equal, incontain stellars.

nually amount to ten million, one hundred and four thoufand, four hundred and fix dollars, filver mint, which, in
the year 1769, according to the then value, was equal, in
pounds flerling, to five hundred and ninety-four thouland,
one hundred and eighty pounds. But we hear that the
Swedish government has lately taken great pains to augment the yearly revenue, abolith paper currency, and
make other useful regulations. A third part of the revenues
are appropriated to the use of the royal family, and the reft
to support the civil and military establishments.

It is necessary to observe here, that the crown of Sweden
has, for above a century past, received a subsidy from
France, for which the former hath usually facrificed its
dearest interest to the latter; and for the sake of retaining
this paltry annual prefent, Sweden, in the late war with
the king of Prussia, was forced to contract a debt of three
million, sive hundred thousand pounds, which has since
been considerably augmented to such a degree, that it will
be always a dreadful national weight upon them.

An established national militia compose the chief part
of the Swedish forces; the regulations respecting it were
either former of inproved by Charles XI. and have since
continued to he the balis of the present establishment.

The nebility and gentry were obtaced to furnish the cavalry; and a nothernan, after having furnished a sungeoud not put either him or his horfe to any other employment. The inflantry are railed from among the farme, and the king's commission distributes them through the various previness, in proportion to the number of farme, each of which, to the value of above firty pounds par annum, not being occupied by the officers, on appropriated to their peculiar fevrices, are charged with one foot reddler, who receives from the farmer lodging, diet, clostha, and a tritling allowance of money; or otherwile a weeden bould it built for him at the farmer's charge, who much also furnish him with as much hay as will keep a cow in wineter, and with pasturage in funemer, and plow and fow for him such a percel of ground as will afford him bread. These that are married as many of them are) generally accept this latter condition: the annearried folders usually dwell with the farmer, but are not obliged to do him any fervice without wages. When they have ones taken the peasant's money, and are lalisted into the king's farvice, they can novar quit it as long as they are able to fare: and if they defert, they are punished with death. The first inflitution of this method proved very burthersome to the peasants, who were at great charge to hire their men, who cost them ten pounds, and forestimes twents pounds apiece, and they must do the fame, whenever their foldier dies. This is not so chargeable in peaceable times, as in war, when men are unwilling to serve, and there is a greater demand for recruits.

As the country is thus liable to provide all the common foldiers, so all officers, both horfs and foot, are maintained by the king, who has appropriated for that purpose fome of the lands resunited, or formerly belonging to the crown fo that every officer has a convenient house, and a competent portion of land to live upon, fituated in that part of the country where the regiment of soot regiment; and there being in Sweden, Finland, an

the militia have.

The king has made fome very exact laws for maintaining this conflictution; and provides, with great caution, that neither the peafants shall be oppressed, nor the lands or houses ruined; to which end all such lands are yearly virteed, and the possession compelled to make such repairs as are found needful; and as every officer, upon his first coming to such an estate, subscribes an inventory of it, so upon advancement he cannot take possession of another charge, till he has put that estate into as good a condition as he found it; and till that is done, his heir cannot insperie.

herit.

All trefpales and crimes, committed by the foldiers, fall ordinarily under the cognizance of a civil magiftrate, who has the fame authority over them as over the reft of the king's fabjects; except when they are encamped, or in gattifon, or any ways under flying colours; in all which cafes, as also in matters that relate folely to their profession, their officers have jurisdiction over them; without whose leave a private foldier is not permitted to lodge out of his quarters, nor be ahfant a day from the parish he belongs to. The inferior officers cannot be absent from their charge, but by their colonel's permission; nor capatians, and those above them, without the king's leave. The forces kept up in Sweden, amounted, some years ago, to fifty-four thousand. Above the ordinary establishment the king annexed to each regiment twenty supernumerary farms, to answer any extraordinary accident of fire, are, and to furnish

for fuch officers as are pull fervior: and for

a flubstenes for sich officers as we put levice; and the adminion foldiers, whom are and wounds have rendered that for war. Dare is one general hospital, which has a stood revine, and before they experienced that for war. There is no general hospital, which has a stood revine, and the stood revine, and they are the stood revine.

The place new in Sweden above forry thousand land-notes; but we are informed, that the prefent king is employing his atmost endeaueurs to augment them. An insensious traveller, who lastly visited this kingdom, fays.

The navil forces, which heretofore made a respectable give against their enemies, are now in a very poor and debilitated state. When I was at Cariferoon, in the year 1770, the place where their freet is flationed, and where are the dock-yards, storehouses, and all the materials they have for the use of their marine, I was amused to fee the statistine force of this country in such a fituation. South exempt yell ships of the line, the one half of which were rotten and unit for sea, and then or eleven frigates and some of war, almost in title same condition, competed their who have the such that it is the condition of their pay being greatly in arrear. It is true, shey keep up the form of a marine establishment, the efficers of which see specially a store in the militia are, and the men are raised among the farmers to retruit the body of seamen. The port of Cariferoon is defended by several batteries of cannon, and supposed, in this coourty, to be a very strong place; but die English severty or eighty gon ships would foon stene at the line the a such set of the proposed but die such as the such set has a such set of the second of the such set of the such set of the second of the such set of the second Carlicroon is defended by several batteries of emmon, and is supposed, in this country, to be a very strong place; but sid: English severty or eighty gon ships would foom stence all these batteries if they water to be attacked by them, in spite of any resistance the place could make."

In Sweden, as in Denmark, the seamen are of two challes, namely, one order, which is always actually resignation of the country with the standard order, which is always actually resigned which is but nominally ready, as the individuals are only registered, and must appear as recruits, upon occasion.

cation.

There are five great officers of the crown, who prefide such in a tribunal composed of some sensors; and when any of their places become vacant, the king given it generally to the most antient sensor of the tribunal, where the vacancy stappens; though he may bestow it in whose saved to be places; these officers are, 1, the drotter, or chief indice; the is the sarth officer in the nation, and was formerly a kind of viceroy; he has the honous of putting the crown on the king a head at the coronation; he prefides in the surreme court of indice, to which on : he prefides in the fupreme court of justice, to which sion: he prender in the supreme court of justice, to which there is an appeal from all other courts. a. The coinflable; he prefides in the council of war; has the infpection of the dicipline, and all that relates to war; and enjoys many great and theonourable privileges. 3. The admirst; his sower also is very great; he has the command of the feet; and appoints all the officers who ferce by fea, and eiver them their committions: justice, in all that relates no the admiratty, is admiratted to his usume: he has also standy other sivileges. A. The chancellor; he is the me admiratty, is administered to the name he has also shally other privileges. 4. The chancellor; he is the chief of the police, rethins shufes, and gives the necessary orders for the good of the public. he is the keeper of the feals of the crown, dispatches all state affairs, and hay the king's orders and demands before the flates-general.

3. The lord high treasurer; he has the administration of the treasure, and of all the binn's amount administration of The lord high treaturer; he has the administration of the treafury, and of all the king's revenue; audits the ac-counts of all the feveral receivers; figna all the orders for payments; manages the public funds, and pays all the offi-cers of the kingdom: he also presides in the chamber of accompts, where the imposts on the people are affelfed, and which is the place of refort for all the exchaquer officers.

The king of Sweden's revenues were antiently fo finally, that they could hardly maintain him; they arole only from fome duties on merchandizes imported or exported, aither by fea or land. It was confiderably increased by the difference of the reformation, for Guitavus I. having proposed to the hobility to share with him the church lands, which made up above one third of the kingdoma feixed the greatest of their, and unled also with the crown the right of forseitures, which belonged to the histop aims throughout all Sweden; and the refumption of lands grained away from the crown by preceding kings, to the nobility, and geatry, have raised the kings revenues to a very high diegres. This was done by king Charles XI. in the year 1950, and though it was much opposed by the affembly of the flattes, especially by the nobility, yet the lower order candinating, the nobility were forced to comply. Besides The king of Sweden's revenues were antiently fo finall,

there branches, the king has a third part of all fines, when her bornenes, morning has a too fairer. I, when they lo, he takes it all he has allo all forfeitures upon the abount of high treatm, and the effaces of farangers, if their heirs do not appear within a year after the dash of

do, he takes it all? he has allo all fortenures opon the absount of high treatm, and the effates of firangers, if their heirs do not appear within a year after the flash of the last penedro.

Antiently the laws of Sweeten were as various, as the provinces were numerous, each of which had flastuse and cunfors peculiar to itleft, eneddly as focation required, by the laghman, or governor of the province, who was choice by the people, and invelted with great authority, especially when the kingdom was elective, his fuffings concloding the province he governed. This variety was neceffacily artended with great confusion, for remedy whereof, about one hundred said fifty years age, a body of laws were compiled for the direction of the whole kingdom: yet this collection is but an imperfect piece, and the laws fo few, and conceived in facts general terms, that in most cafes they need the efficience of this civil law; and after all, the final determination depends minch upon the inclination of the bench, which in a poor country, where falaries are finall, is often filled with fach men as are of weak parts, and fubject to corruption upon very flight temptations. The effects of this would be more visible, if each foperior court did not keep a check upon the lower, and the king's court of revision overswe them all, to which all civil causes importing the fum of feventy pounds are appealable; and very few end before they have been brought thinter. In this fopenme court the king frequently fits in perfon, and determines causes himself. In this ore of the under-revision; where he and two fecretaries do put business into a method fit to be brought before the king. There are three degrees of courts of justice, interior, to this; of the lowest degree, or first intance, there is one in cash district or territory, whereof every province cours in feveral, fome a bowe twenty: in the former, namely, in cities, an alderman or counsellor prefides, and has fome of his perfone.

as allo in each district or territory, which is the former, hause-constints feveral, forme above twenty; in the former, hause-ty, in cities, an alderman or counfellor prefides, and has fome of his brethren for affifiants: in the latter the gofome of his brethren for affiftants: in the latter the governor of the territory prefides, with a lianding jury under him: his court is ambilatory, and usually kept near or upon the place, where the fact or trespass was committed. In these courts examinations are taken, and matters not executing forty shillings are determined: the rest are transmitted to the sext superior court, of which in every corporation there is one, where the burgomaster is president, and the aldermen affishant: and so in every province there is one or more of these courts, the president whereof retains the manne of highman, without any other authority than that of a sader.

retains the state of a judge,
sity than that of a judge,
From these courts, all causes of blood must be transmitted From these courts, all causes of blood must be transmitted to the respective national courts, where they are determined without farther appeal; and thister also all civil actions, not exceeding twenty poonds, may be appealed. Of these nationals courts there are three; one for the kingdom of Sweden, held at Stockholm; another for the kingdom of Gothia, or Gothland, kept at Jenekoping; and a third for the dukedom of Finland, at Abo. It each of these a privy-counsellor is pretident; and above half the affection must be gentlemen. All these courts sit continually, or at most have but thort vacations; and, not being entered with too moch formality, give causes a speedy

tinually, or at most have but formality, give causes aspeedy dispatch, ensels they be retarded by veragious litigations.

Those actions which relate to the fea are to be tried in the offdinary courts, according to their fea laws, founded upon those antient ones of Wilby in the ide, founded upon those antient ones of Wilby in the ide, of Gothland, which have formerly been as famous in the Baltick, fea, as the laws of 8 hodes and Oleron in other places. The court of admiralty has not any peculiar jurisdictions in the admiraltration of these laws, but only in such macanature dispulse concern the kines' face. and in some places

in the administration of these laws, but only in such materies as directly concern the king's steet, and in some places that belong immediately to the admiralty.

There is a consistory in each diocese for ecclessifications, and the start of the causes, of which the respective bishop is psession, where causes of bastardy, contracts of marriage, and other materies of that nature are tried, and church censures of penance, divorce, itself, nor to insist any corporations, and in such as the sum of the respective national courts, and in some raises to the king, as in all other mattern of a doubstul nature.

Eflates are rendered more fecure to the poffesser, and less subject to contests, by the registers that are kept of all false and alienations, as well as of other engagements concerning them; for if the purchaser omits the recording his transaction in the proper court, he reas the heard of having an after burgain tupercode his.

With respect to criminal ansiters, where the fact is not

an after bargain tupercode his.

With respect to criminal anatters, whose the face la not vary evident, or where the judges are very favourable, the defendant is permitted to purge himself by eath; to which are also added the oaths of fix or twelve other men, who are all vouchers of his innocence. Tresfen, murder, double adultery, borning of bosses, witchcrast, and the like heinous crimes, are punished which death, which is executed by hanging of men, and beheading of women; to which burning alive or dead, quartering, and hanging in chains, are sometimes added, according to the nature of the ctime. Criminals of the gentry or nobility are assault had to death. The punishment of stelling has for several years past, instead of death, been changed into a kind of perpetual slavery the guilty party being condemned to work all life life-time for the king, in making fortifications, or other drudgety; the likewise always wears an iron collar about his neck, with a bow coming over his head, to which a tinkling bell it sastened.

In case of duels between gentlemen, if one of the parties be killed, the survivor is punished with death, and the memory of both branded with a note of infamy. If neither be killed, they are both condemned to a prison, with bread and water, for two years: to which is added, a fine of a thousand crowns. Reparation of honour, in case of affront, is referred to the respective national court, where they usually adjudge recentation, and begging of pardon. All kinds of ellates, as well acquired as inherited, decend to the thiddren in equal portions, of which is for the parent to alter this proportion, without the intervention of a judicial sentence, in case of their children's dilobedince; only they may bequest he tenth of their acquired possession to alter this proportion, without the intervention of a judicial sentence, in case of their children's dilobedince; only they may bequest he tenth of their acquired possession to the child or other as they will show.

we here an citate detected incumpered with debt, the heir usually takes two or three months time, as the law allows, to fearch into the condition of the deceased's dhate; and then cluber accepts the inheritance, or leaves it to the law, which administers, in that case.

tins priforer, and can'us him to be condensed to death, though he changed his fentence into perpetual imperiorment. The Poles thereupon entered into an alliance with the Danes and Rubeckers, in behalf of prince John, and his own fubjeck were fo disputed with the king's conduct, that they appeared rips for an inferrection. Erick, however, defended himself against all bis enemies, but abandoning himself to his peasurers, and leaving the kingstom to be governed by a favourite, who massaced the family of the Stures, that were of the royal blood, under pretence they were, in a configurary against the crown, the people broke out into a rebellion, and he was compelled to relate his brother John out of prison to appease them; however, institug afterwards that his brothers should deliver up the countries their father had fettled upon them, the people took up arms again in behalf of those princes, made Erick a prisoner, and he died in prison, supposed to have been potioned. people took up Erick a priloned.

people took up arms again in behalf of those princes, make Erick a prisoner, and he died in prison, supposed to have been potioned.

This was the end of that mad fon of Gustavus Ericton, who delivered Sweden from the 'tvranny of the Danes. He was faceteeded by his brother John, who endeavouring to reflore the Roman catholic religion; met with great esposition; but dying in the year espo; he was succeeded by his fon Sigismand, then upon the throne of Peland; but the states institute upon the throne of Peland; but the states institute a crowned, he assumed that the kingdom was hereditary and that none had a right to put erran er conditions upon him, and commanded that the kingdom was hereditary and that none had a right to put erran er conditions upon him, and commanded that one church in every town should be reserved for the use of the Roman estholics: he declared also, that he would be crowned by the pope's nuncio, who attended him from Poland.

Hereupon the states traised forces; and being joined by prince Charles, the king's unche, compelied him to submit to the terms they proposed, and he was thereupon crowned by the protestant bishop of Strengness. Determining, however, to break through the engagement he had entered into for the establishment of the protestant religion, he sent forces out of Poland, and when he sound the Sweden were not to be frightened by his threate of introducing foreign troops, he returned to Poland, and the states thereupon declared his uncle, prince Charles and Sigismund, it which several battles were fought. The states at length scluded Sigismand and his posterity from the crown of Sweden, and awarence his uncle Charles to that throne, settling the succession in his family, in 1604.

This prince, soon after his accession, embarked a body of troops, and making a descent in Livonia, engaged the Poles, in which war he proved unsuccessful; and while he was att war with the Poles, the Danes invaked his stretures in Sweden, and greatly distressed him, as the Russan did on the side of Livon

Aumana dis on the face of Livonia; when prince Culturus his fon, then but feventeen years of see, afterwards the celebrated king Guffavus Adolphus, defeated the Denes, and gave a furprifing turn to the Swedish affaire; and his fither, king Charles, dying the neat year tota, use faceceded by his fon Gustavus Adolphus; then eighter of the control of the fitter has been by the conficing of the fitter.

was receeved by his fon Guntavus Adolphus, then eighteen years of age; when, by the confent of the flates, he took upon him the administration of the government, though his father, had appointed queen Christina his mother to be regent till he came of age.

Custavus finding his kingdom involved in an unfortunate war with the Danes and Russians, purchased a pasco with the Danes, in 60.5, at the price of a million of crowns; and carried on the war against the Russians, overwhom he was visitorious in feveral battles, and as the erowns; and carried on the war againg the Ruffians, over, whom he was victorious in feveral battles; and at the peace that er used, they vielded up Kexholm and Ingermania to the Swedes. The truce which had been made with Poland being expired, he invaded their dominions in Livonia, took the important town of Riga, and made himfelf mafter of that whole province: he afterwards invaded Pruffia, took Elbing, Marienburg, and feveral other towns, which were confirmed to Sweden by a treaty concluded not long after. In this war, the Poles were diffited by the Germans, which probably induced Gufdavas

concluded not long after. In this war, the Poles were affilted by the Germans, which probably induced Guffavus to carry the war into Germany, added to the invitation the protestants gave him to come ever to their affistance. In the year 1630, he embarked his army, with which e invaded Pomerania; and advancing to the capital city of Sectin, the duke of Pomerania admitted his troops into their city, and entered into alliance with him, as did also the archibishop of Bremen, the duke of Luneaburg, the Landgrave of Hesse, and most of the protestant princes of Germany, in hopes of his protestion against their catholic workers. The French also entered into an alliance with the Swedes, and agreed to pay them as annual fails fidy of four inindred theoland cowns, but a fide from the fide of the protestants.

The Steedes, in 1632, made themselves matters of feweral other towns in Germany and the great city of Magdeburg declared for them, which being befieged by Tally, the Austrian general, Gustavus advanced towards it in order to attempt the relief to the place, aspeding to be joined by the elector of Saxony, but that cautious primes not thinking it to break with the Austrians, the opportunity was loft; Magdeburg was taken by florm, the imperial general massered forty thousand of the inhabitants, and hurns, the town down to the ground, nothing being left flanding but the cathedral church. The fame year Charles L. king of Great Britain, fent fix thouland men, under the command of the marquis of Manifton;

being left finadling but the cathedral church. The faminy year Charles I, king of Great Britain, fent fix thousand men, under the command of the marquis of Hamilton; but the greatest part of these, landing in Pomerania, were carried off by a kind of pessioners.

The Austrian general then marched into the electorate of Saxony, and made himself masher of the city of Liepick; whereupon the elector intreated king Gustavu to come to his affistance; which he at length complied with, though he feemed to refent the elector's not joining him during the fiege of Magdeburg. Their forces were no fooner joined, but the king gave battle to the Austrians, killed about eight thousand of them, took sive thousand prisoners, with upwards of a hundred colours and standard. The king asterwards marched into Franconia, where he took several strong towns; from thence he advanced to the palatinate, where he defeated a body of Spaniards that were come thicher to the affishance of the imperialists, and the sowns, of Openheim, Landau, Spire, and Germersheim submitted to him. The Saxon troops, in the mean time, made themselves masters of Prague, and other places in Bohemia; but pretending that king Gustavas had an eye upon the imperial throne, they refused no advance into Austrian at the same time the Austrians were entirely dispossed of all the towns bordering on the Baltick.

Gustavas, in the beginning of the year 1632, obtained another yistory over the Sommards in the palatinate, after

disposessed of all the towns bordering on the Baltick.

Gustavus, in the beginning of the year 1622, obtained another victory over the Spaniards in the palatinate, after which he marched into Susbia, in fearch of count Tlly, who find before him, leaving him almost entire master of that country. Tilly at length entrenched himself on the river Lech, where being attacked by the Swedes, that general was mortally wounded by a cannon-ball, of which wound he died fome the days after. The king then laid the duchy of Bayaria noder countributions, and compine

wound he died fome few days after. The king then laid the duchy of Bavaria under contributions, and coming before Munich, that capital was furrendered to him.

In the mean time the imperialifia having driven the Saxons out of Bohemis, and entered Saxony, the elector entreated the king to come to his affifiance; he left Bavaria, therefore, and joined the Saxons; foon after which, a general battle was fought in the plains of Lutzen near Leipfick; and the Swedes made themfelves mafters of the cannon of the imperialifit; but their horfe being fropped by a fmall river, Gulfavos, to encourage his men to cannon of the imperialitis; but their horse being tropped by a small river, Gulfavus, to encourage his ment to attempt the passing it, advancing at the head of the cavalry, was soon after found dead on the other side of the river, laving been shot through the back, which was generally thought to have been done by some pretended friend: but notwithstanding the loss of their great leader, the Swedish generals behaved so well, that they obtained a compleat victory, and the war continued many years afterwards, in generals behaved fo well, that they obtained a compleat victory, and the war continued many years afterwards, in which the Swedes were generally sideoriour, notwith-flanding the Saxons and fome other German princes changed fides, and adhered to the Austrians: but the affiliance the Swedes received from the French, was more than an equivalent for the description of the German-

Gustavas Adolphus lest only one daughter, namely, the princess Christina, who was proclaimed queen of Sweden on the death of her father, being then but fix years of age; whereupon the diet of Sweden determined, that the regency should be committed to the great officers, who behaved with that conduct and fidelity, that the kingdom appeared in a fiortifhing condition during her minority, notwithflanding they were engaged in a war with fuch potent enemies; and, at length, concluded a peace upon tonourable terms, in 1648, usually called, The Treaty of Wettphalia. By which treaty, the duchies of Bremen and Verden, the best part of Pomerania, and the life of Rugen, the city of Wifmar, and the duchy of Deuxponts in the palatinate, were allotted to Sweden and five million of crowns were given them towards the expences they had been at in these wars. Queen Christina, one of the greatest genius of the age, and one of the most learned of her sex, courted by all the princes of Europe, and in the highest reputation for her squitchle administration, having reigned till the year 1644, resigned the crown in favour of her nephew Charles Gustavus, reserving only a permion appeared in a flourishing condition during her minority,

ly, the of age ; the re-

nority, upon Treaty ifle of onts in llion of

and in ration, own lu only a Onto their Dantzick, whereby the Poics relinquished their claim to Livonia, and left the Swedes in the entire possession of that province; and in the same month they concluded a peace with Denmark, on the same conditions they had agreed on at Roschild; only the Swedes ceded the island of Bornholm, and the city and territory of Drontheim in Norway, to the Danes.

After these transactions the Swedes entered into a treaty with England and Holland against France, called the triple alliance. On the commencement of the war, in 1674, they entered into an alliance with France, and invaded Brandenburgh; but their forces were deseated by that elector, who made himself master of most of their territorics in Pomerania, while the duke of Zell reduced Brennen and Verden, and the Danes recovered several towns in Schonen; but the latter being afterwards deseated in several battles, they were compelled to make a separate peace with Sweden at St. Germain's, which was succeeded by the treaty of Nimeguen, in 1678, whereby all the territories the Swedes had loft in this war were reflored to them; and king Charles married Ulrica Eleonora, fister to the king of Denmark.

The young king had been declared of age, in the year 1672; and the states soon after made him as absolute as any prince in Europe, declaring, that the king received his

any prince in Europe, declaring, that the king received his crown from God, and was accountable to none but God for his actions, religning their share in the government entirely in his hands. He foon made use of the powers they had invested him with, to resume all the grants his predecessors had made of the crown-lands, and crested a court for enquiring into such misdemeanours as had been committed by the great lords, or any other of his westly subjects, and replenished his treasury by the sines they ware condemned in, whereby many of the senators and great officers, civil and military, were reduced to great distress. He also lowered the coin, and obliged the creditors of the government to be content with half the money that was due to them, by setting a double value upon every piece, paying only the value of half a crown, where a crown was due. He seems to have made peace with all bis neighbours, in order to make war upon the siberties and property of his subjects. The last considerable trancrown from God, and was accountable to none but God

married to Frederick, hereditary printe of Heffe (afterwards elected king of Sweden) who died in 1741, without iffue.

As the young prince, Charles XII. was but fixteen years of age at the death of his father, his grandmother, the queen dowager, was appointed regent by the late king, till his fon fhould be compleatly eighteen; but he was, however, declared major by the fenate, in November, 1697, though he was not then fixteen, and the fame year faw the peace of Ryfwick concluded under his mediation. In the anean time the king of Denmark continued to encroach on the territories of the dut of Holftein, who had married Charles's eldelt fifter, the princefs Hedwick Sophia; Charles, therefore, interpofed in the duke's behalf, and a treaty was entered upon to adjust this affair, which lasted near two years; but the Dane not being disposed to do the duke justice, and knowing that the Swedes were too powerful for him, if he should enter into a war fingly, he fecretly confederated with Augustus king of Poland, and the czar of Moscovy, and ventured to invade Holstein again, while the king of Poland invaded Livonia on the south, as the czar did on the west. The maritime powers observing this shame kindling in the north, and concluding they must expect no affistance from any of these princes, in case of a rupture with France, which was expected every day, they fent a feet into the Baltick, to propose pacific measures to his Danish majestry, which that prince 'refusing to listen to, the confederate fleet blocked up Copenhagen by sea, while Charles transported his army into the island of Zeland, laid fege to Copenhagen by land, and compelled the Danes, in August 1700, to conclude a peace with him at Trawondal.

While the siege of Copenhagen was carrying on, Peter, czar of Muscovy, invaded the province of Ingria, and in October following, laid fiege to Nisva; for which king Charles receiving advice, embatked his army as soon as he had concluded the peace with Denmark, and landing at Pernau in Livonia with eighteen thousand me one thousand five hundred men in all the engagement. It

one thousand five hundred men in all the engagement. It is said, indeed, that the Russian army amounted to one hundred thousand men, and there is no doubt but they vastly out-numbered the Swedes: but relations, concerning the events of war, are usually much magnified.

The king of Poland, who lay before Riga, raised the fiege of that place, when he understood Charles was marching that way, leaving his army encamped on the fouth shore of the river Dwina, to defend the frontiers of Poland against the Swedes. This army being commanded by the duke of Courland, a most accomplished general, king Charles met with much greater opposition than he had done at Narva, though the enemy's forces were not more numerous than his own. The Saxon troops sought very bravely, and contended long for victory, but king Charles proved victorious, and marched into Courland, of which the duke was sovereign, where he had that province under contribuwas fovereign, where he laid that province under contribu-tion. From thence he marched into Lithuania, where leaving a part of his forces to affit Saphiea against prince Oginski (these great men having drawn the whole province into a kind of civil war) he marched with the rest to the capital city of Warsaw, which opened her gates to him;

king Augustus and his friends being fled towards Cracow. Here he declared to the cardinal printate, who came to attend him, that he would never give peace to Poland, till they had elected another king, and began his march towards Cracow: which Augustus being acquainted with, affembled his Saxon forces, and the Poles in his interest, determined to give the Swedes battle.

The two armies met in the plains of Cliffaw, almost in the midway between Warfaw and Cracow, on the 19th of July 1702. The king of Poland's army consisted of thenty-four thousand men, Poles and Saxons 3 and that of the Swedes is faid not to have been more than twelve thousand. The young doke of Holstein, a prince of great merit, who commanded the Swedish horse, was killed by a cannon ball, on the first discharge of the Saxon srillery. The king being told he was dead, shed some tears, and then covering his face a short time, spurred his horse, and charged the enemy at the head of his guards. The king of Poland, on the other hand, thrice led on his troops to the charge, and fought like a prince, whose crown was at of Poland, on the other hand, thrice led on his troops to the charge, and fought like a prince, whose crown was at flake; but was at length forced to submit to the superior fortune of Charles, who galned a complete victory, made liminsels maker of the Saxon camp, colours, artillery, baggage, and military chest, and, without resting, purined Augustus as he fied towards Cracow, who, not thinking himself secure, left that city before king Charles arrived there. The citizens shutting their gates against the conqueror, he forced his way into the town; and took the castle by storm, obliging the townsmen to pay him large contributions; but he made his soldiers observe such exact discipline, that they were not suffered to plunder any of discipline, that they were not suffered to plunder any of the inhabitants.

the inhabitants.

Soon after this, Charles left Cracow, and purfued Augustus very closely; but had not advanced far from the city, before his horse threw him; and broke his thigh; whereupon he was carried back to Cracow, and confined to his bed fix weeks, the party of Augustus giving out that he was dead; and a dict being affembled at Lublin, most of the grandees of Poland came in and took the oaths of allegiance to king Augustus. In this oath, they declared, that they never had, nor ever would, attempt any thing against this prince; and the primate coming in among the against this prince; and the primate coming in among the reft, Augustus excused his taking the first part of the oath, at which the cardinal bluthed, but took the latter part of it. The refult of the diet was, that they would maintain an army of fifty thousand men in defence of Augustus, and allow Charles but six weeks time to consider whether he intended peace or war; but that prince having received a reinforcement of fix thousand horse and eight thousand remorement or in thousand hore and eight housing foot from Sweden, overturned all their schemes, and sell upon a body of Saxons, commanded by general Stenau, who were encamped on the opposite side of the river Bug, swimming his horse over that river; which so terrified the Saxons, that most of them fled without waiting the attack. The city of Thorn, fill holding out against the Swedes, the king laid fiege to it, and, as he were a plain drefs, was the king laid fiege to it, and, as he ware a plain dreft, was never fingled out by the enemy's gunners; but general Lieven, an a laced coat, walking with him, the king perceived the fhot fly very thick, and directed the general to walk behind him; which the general refufing, becaule the king would then be most exposed to the shot, his majesty took the general by the arm, and compelled him to walk behind him; which he had no fooner done, but a cannon ball, which came in stank, struck the general. This year, much confirmed the king in the notion he entertimed very much confirmed the king in the notion he entertained very much commend the king in the hotor he entertained of piedefination; for his majefly would have been in the very place where the general flood, if he had not removed him in that inflant, with a defign to preferve him.

Rovel, the governor of Thorn, made a brave defence against the victorious Swedes for a month; hut was then obliged to furrender at differentian. The king was

to well pleased with the conduct and courage that governor had expressed in defence of this town, that he gave him his own fword, when he was brought prifoner before him, and prefented him with a fum of money. He never failed to reward valour, even in those who were enemies to him.

After this, the king neat marched to Elbing, which

ciry not opening their gates to him fo foon as he expected, he obliged them to raile him two hundred and fixty thoufand crowns; and thus he made the conquered towns contribute to largely to the charges of the war, that his own kingdom was very little burthened with taxes; whereas other generals frequently beggar their own country while they enlarge their conquetts.

During these translactions, the cardinal primate, who had a little before renewed his oaths of allegiance to king Augustus, attembled the flates of the kingdom at Warfaw,

the 14th of February, 2704, and declared, that this issue Augulus, elector of Saxony, had residered himself incapable of wearing the crown of Poland; and the litter immediately declared, that the throne was vecant, at least fush of them as were assembled on this occasion; for Augustus had fill many friends that refused to appear. The assembly at Warfaw, before they separated, received a letter from the king of Sweden, defiring they would make choice of prince James Sobleski for their king, who was the son of John Sobleski, their late king, who relieved Vienna. This Prince was then at Breslau in Silesia, and received the compliments of some of the Poles on this occasion; but as he was one day hunting within a little way of that city with his brother prince Coustantine, they were both surprized by thirty Saxon troopers, that king Augustus had sent to lie in ambuscade, and carried off to Leipsick in Saxony. About the same time, Renchild the Swedish General was very near surprizing king Augustus, whom he hunted from place to place, as he would have done a wild beast; but the king had the good fortune to escape him, and retired into Saxony. Charles hereupon offered the crown of Poland to Prince Alexander, the brother of Sobieski; but he refused it, looking upon that crown to be his eldest brother's right. Cherles was then advised by count Piper his prince minister, by Stanislaus, and all the coles of his party. To except the course of Poland and the secure of Poland and the course of the course Poland and the course of the course of Poland and the course of the co crown to be his cldeft brother's right. Charles was then advised by count Piper his prime minister, by Stanislaus, and all the poles of his party, to accept the crown of Poland, himself; but his Swedish majethy had so little ambition, that he would not comply with the importanity of his friends, though the kingdom was at that time entirely

in his power.

Staniflaus, whom Charles recommended to the choice of the Poles, feems to have been a prince of great virtue and merit, which were the principal motives Charles had to advance him to the throne. He is also faid to have been endued with great courage, abtemious like himility tremely temperate, hospitable, and generous to his saffai and dependants, informed that he was almost advertised. and dependents, informen that he was almost admit-and effected in every respect the property person to sud-ceed to that throne. He was elected by the diet at War-faw, on the 12th of July 1704, in the absence of the cardinal primate, who still pretended to be neuter; where-upon Stanislaus was crowned by the bithop of Posnania, and the primate, as well as the rest of the great officers, were obliged to come and take the oaths of allegiance to him; which was no fooner effected, than the king of Sweden marched into the fouth of Poland, and took the town of Lemburg, or Leopold, capital of that part of the kingdom, where Augustus had lodged most of his treatures, and Charles met with no less than four hundred chests full of gold and filver, in this place.

While Charles was engaged in this fortunate expedition, Stanislans remained at Warsaw with a garrison of fix

thousand Polanders and one thousand five hundred Swedes ; but having received advice that Augustus was marching towards that city at the head of twenty thousand men, and being sensible he could not defend himself at Warsaw, which was in a manner an open town, he fent away his family into his own palatinate of Pofnania. The cardinal family into his own palatinate of Poliania. The cardinal primate fiew into Pruffia, and moft of them that were of the party of Stanislaus abandoned the place. The new king fied from his capital within fix weeks after he had been proclaimed, and joined Charles near Lemburgh; only the bishop of Posiania, who crowned him, was left behind, being fallen fick, and not able to travel. The Swedish garrison retired into the callle, soon after which Augustus entered the city as a conqueror, and not only demanded a contribution from all the inhabitants in sense. demanded a contribution from all the inhabitants in gene-ral, but fuffered his foldiers to plunder the primate's paral, but furered in sources to passes who adhered to stanislaus: the bishop of Possania, after feeing his palace plundered, was carried away into Saxony, where he died, and the Swedes in the castle were obliged to surrender themselves prisoners of war, which Charles was no sooner acquainted with, than he prepared to engage the Saxons, who fled before him, and at length overtaking general Schulemberg, who commanded the greatest body of Saxon troops, it was with difficulty that general made his escape from him into Silefa, lofing the greatest part of his army in the retreat, in which, however, he displayed a great deal of generalibip. Augustus, having now to forces capable of making head against Charles, abandoned Poland a fecond time, and thut himfelf up in Drefden, the capital of his German dominions, which gave an oppor-tunity to Stanislaus to refort to Warsaw again, where he

other ime,

time, having written a letter first to king Augustus, to beg his pardon for his treacherous conduct towards that prince. In the mean time the czar having fent a great reinforcement of troops into Poland, to the affishance of his friend and ally king Augustus, and Schulemburg, the Saxon general, having raised another army in Saxony, with which he joined the Russians, a bestle was fought at Frauented, on the twelfth of February, 1706, wherein the Saxons and Russians were sgain defeated by the Swedes; the Russians threw down their arms and begged for mercy, but the Swedish general, Renchild, ordered them all to be put to death in cold blood, to revenge the barbarities the ezar had committed in Livonia; for the czar taking advantage of the king of Sweden's absence from that province, had reduced most part of it, taken the chief towns, massiance great numbers of the inhabitants, and fent the reft in chains to the remotest part of his dominions.

The king of Sweden having driven both the Russians and Saxons out of Poland, bent his march towards the river Oder, in order to enter Saxony, which induced the diet of the emplre to declare him their enemy, in case he passed the Oder; the king, however, continued his march, and entering the frontiers of Saxony, the inhabitants immediately fled from their houses, till his Swedish majerly published a proclamation to inform them, that all who removed to their houses, and neit the contributions he removed to the c

mediately ned from their houles, till his Swedish majetly published a proclamation to inform them, that all who re-turned to their houses, and paid the contributions he re-quired, should be treated as his subjects, but to the rest he should give no quarter; and the people thereupon returned to their houses.

The army being encamped at Alransted, near Leipsic, Charles summened the states of Saxony to meet him there, Charles furnimened the states of Saxony to meet him there, and bring with them an account of the revenues of the electorates, which having perused, he imposed on them a tax or consibution of fix hundred and twenty-five thousand rix dollars (crowns) a month, besides which he obliged them to supply every one of the foldiers with two pounds of meat, two pounds of bread, two pots of beer, and four jenice a day, with forage for their horses 1, then he ordered every house, in which any of his foldiers were quartered, to fend him certificates of the foldiers behaviour every month, without which the foldier was not to receive his pay. He affigned inspectors also to visit every house, and enquise if his foldiers had committed any irregularities, and punish them as they deserved; and under such exact. enquire it his losters had committed any irregularities, and punish them as they deferved; and under tuch exact discipline were his soldiers, that when a town was taken by storm, they durst not seize upon the plunder without leave; and so well fatisfied were the people with their security, while the Swedish forces remained in Sakony, that the great annual fairs were held at Leipsic, without interpution, as before. ruption, as before.

ruption, as denote.

Augustus having sent to the conqueror to beg a peace on his own terms, he immediately transmitted to him the following articles: viz. I. That Augustus should for ever renounce the crown of Poland, and acknowledge Stanislaus lawful king, and promife never to remount the throne, even after the death of Stanidaus. II. That he renounce all other alliances, epocally that of Ruffa. III. That he release the prince Sphiefki, and all his prifoners. IV. That he deliver up all deferters, particularly John Patkul; and that all who have deferted his fervice and been entertained

in the Swedish service shall not be liable to a profecution.

While this treaty was in agitation, Menzikof, general
of the Russians, entered Poland at the head of thirty thouor the Kunians, entered Foliate at the head of thirty thou-fund men and joined Augustus, who had fill a body of fix thousand Sazons with him; they attacked the Swedish general Maderfield, who commanded ten thousand men near Califth, and obtained a complete victory, for which Augustus fung Te Deum at Warfaw; but in the midth of hugartas and the state of the s fee his German dominions ruined as well as Poland : Augustus had feveral conferences afterwards with Charles, and endeavoured to procure better terms; but Charles was fo incensed at the defeat of his forces under Maderfield, that he made them fill worfe, and obliged Augustus to fend Stanislaus the following letter; vis. "Sir and bro-ther, as I ought to regard the directions of the king of Sweden, I cannot avoid congratulating your majesty upon Sweeth, I cannot avoit come, though perhaps the advan-tageous treaty the king of Sweden has lately concluded for your Majefly might have excused me from this correl-pondence: however, I congratulate your majefly, befeeching God that your fubjects may be more faithful to you than they have been to me. Augustus, king. Leipsie, April 8, 1707." Augustus was also obliged to order his Saxon subjects not to address him as a king for the suture, and cause his title to be omitted in the prayers used in the

and cause his title to be omitted in the prayers used in the churches.

Augustus would fain have procured the escape of Pathul; but in spite of all his endeavours, he was at length delivered up by the governor of Konising castle in Saxony, to sour Swedish officers, who carried him to the king of Sweden's quarters at Alransted, where he retosited three months in thains, till he was tried by a council of war, and condemned to be broke alive upon the wheel, the usual punishment of traitors in Sweden; for Pathul was a native of Livonia, and consequently a subject of Sweden, and was one of the five deputies sent with a memorial to Charles XI. king of Sweden, to represent to that prince the hardships the Livonians lay under, by the invasion of their liberties, and to solicit redress; which was condemned to have his right hand cut off, and afterwards to be beheaded, and his estate consistent; to avoid which sentence, he sed into Russia, where he was advanced to the highest employments by the exar and Augustus: but Charles XII. was most incensed signing him to being the principal occasion of the invasion of Livonia by the Poles and Russian: it cannot therefore deserve censure, that this prince did not spare him, when he was condemned as a traitor for such atrocious crimes, so many years persisted in.

During the king of Sweden's sea in Saxony he was years perfifted in.

years perfifted in.

During the king of Sweden's ftsy in Saxony, he was attended by ambaffadors and minifers from all the powers in Europe; the allies were terribly afraid he would join the French against the confederates The duke of Mariborough therefore was fent by the British court to found his intentions, by offering him the mediation between the allies and France; but when he found he had only a defign to mortify the emperor for some affronts he bad received, and that his present view was the conquest of Russia, and the deposing of the cast, the duke returned well fia, and the deposing of the czar, the duke returned well fatisfied that the allies would meet with no interruption

from the Swedes in carrying on the war against France,
About this time count Zobor, lord chamberlain to the
emperor, having spoken very diffespectfully of the king of
Sweden, the king demanded that he should be delivered
up to be punished as he deserved, which the imperial court sweden, the king demanded that he thould be delivered up to be punished as he deferved, which the imperial court found themselves under a necessity of complying with; but the king having kept that minister with him a little while, fent him back to Vienna unhurt. His next demand was, that the house of Austra should grant their protestant subjects in Silesia the liberties and privileges they were entitled to by the treaty of Westphalia; and the Lutherans had thereupon upwards of an hundred churches resigned to them, which the Roman-Catholics had taken from them, and were allowed to profess their religion publickly; (but that king was no sooner incapable of assorting the Silesians his protection, than the Austrans revived the persecution of the Protestants again.) And now Charles having obtained for the Protestants the restoration of their rights, be began his march towards Poland, and as he passed by Dressen made Augustus a short visit, attended only by two or three gentlemen of his court, and having break-safted with that prince, and viewed the fortifications of the city, returned to his army, who were in great pain for him, when they knew he had put himself into the power of his mortal enemy, and were over-joyed when they saw him return in fastry.

Charless marched out of Saxons into Poland in Senteme.

of his mortal enemy, and were over-joyed when they taw him return in fafety.

Charles matched out of Saxony into Poland in September, 1907, at the head of forty-three thouland men, and he had another army of twenty thousand men in Poland, commanded by count Lewenhaupt. The czar was then with his army in Lithuania, but retired to the confines of Ruffia as Charles advanced; the grand feignior about this time fent the king of Sweden a folemn embaffy, and prefented him with an hundred Swedift foldiers the Tartars had taken. He defired the silliance of the Swedes and Poles, they might make a divertion in his favour whenever nad taken. He derived the attance of the Swedes and roles, that they might make a, diversion in his favour whenever he should be engaged in War with the emperors of Germany or Russia: the king of Sweden sound Poland so destroyed by the Russians, that he was forced to remain there a year before he could furnish himself with supplies there a year before he could furnish himself with supplies to enter upon his grand design of invading Russia, and then he followed the czar towards the Ukrain, who had assembled most of his forces on that side to reduce the Cossacks, commanded by their general Mazeppa, who had promised the king of Sweden to join him whenever he should march that way.

Charles, apprehending the Cossacks might be suppressed by the Russians before he arrived, marched with great expedition towards Kiof on the Boristhenes, leaving general Lewenhaupt to follow him with a body of fixteen thousand.

thousand men, and convoy a train of artillery, and several thousand waggons loaden with armunition and provisions; but Lewenhaupt being furrounded in his march by a numerous army of Russians, commanded by the carring person, after be had defended himself three days, was at last compelled to retire, having lost the greated part of his army, and all his artillery, sunmunition and provisions, and with great difficulty joined the king with the remainder of his troops, which did not amount to more than four or five thousand.

Mazeppa also having been defeated by the czar's forces, joined the king with very sew troops; and now the communication heing cut off between Poland and Russia; Charles could receive neither recruits nor provisions, and

Charles could receive neither recruits nor provisions, and great part of his army perified by hard marches, and the rigour of the feafon. In the winter of 1709, he loft, as its reported, two thousand men in one day, and in April following his army did not amount to eighten thousand men, besides Cosacks or Tartars of the Ukrain. In this men, befides Coffacks or Tartars of the Ukrain. In this condition, about the latter end of May, he laid fiege to Pultows, which lies in the latitude of fifty, about forty miles eaft of the Borifthenes, in which the czar had a great sagazine, by the taking whereof Charles hoped to furnith himfelf with provisions, and open a way to Mofcovy; but he was defeated at Pultowa, and his whole army entirely he was defeated at Pultowa, and his whole army entirely cut off or made prifoners, except three or four hundred horfe, with which he efcaped to Bender in Turkey. He there gave fignal proofs of a desperate intrepidity, as incapable of fear as void of discretion, having with a handful of men performed prodigies of personal valour against the whole force of Russia. He was at length made prisoner, and peace being ratified, returned to Sweden! His passion for war hurtying him into firsh broils, he met his death by a cannon-ball at the siege of Fredericshall, anno 1718 very fortunately for the peace of Europe.

The peculiarity of character which distinguished this prince is strongly depicted by M. de Voltaire. No dangers, however sudden or imminent; says this writer, ever occasioned in him the least dismay, even when they have shaken the constancy of the similar than the similar to have been a man divested of the smallest particle of fear; and the manner in which he is related

Insken the contraincy of the himset among his followers: he feems in flort to have been a man diverted of the smallest particle of fear; and the manner in which he is related to have endured cold and hunger shew him to be a prodigy of strength as well as courage. His rapid successes against the combined force of Denmark, Poland and Russa, provenium to be no ordinary man; but although they associated all Europe, yet in their consequences they were fatal to the kingdom which he governed. A strong refentment against the unprovoked attacks made upon him, led him to meditate enterprizes against his enemies, extravagant and impracticable in their nature, and the cool and undifinayed perseverance of his great adversary, the czar Peter, at length prevailed over his ill-directed ardour.

On Charles's death, his fifter Uhica Eleanor ascended the throne, by the free eledion of the states; but first gave up all pretentions to arbitrary power; and in 1720, by consent of the diet, transferred the government to her hulband Frederic, hereditary prince of Hesse Cassel. King Frederic having no issue, the states in 1743, nominated Adolphus Frederic, duke of Holstein, and bishop of Eutis, his succession, who accordingly, on the decease of Frederic, assumed the rein's of government, on the fish of April, 1751.

The senate had been gradually advancing in power for twenty ware, the expressioners made by that body on

The fenate had been gradually advancing in power for feveral years; the encroachments made by that body on the royal power were so considerable, that the condition of the king of Sweden became extremely disgreeable; he found his authority disputed, and his person treated with difrespect by an arbitrary supercissions senate. Frederic having applied to this body to convoke an extraordinary diet, in order to examine into the cases of the many heavy grievances which opprefied the kingdom, found the power of the latter too predominant to accomplish his purpose, and had the further mortification to see it proceed to fome unconstitutional acts which directly encroached on his prerogative. Fully determined to wreft from the fe-nate their affumed power, and to recover that participa-tion of authority which the confiltration had affigned to the crown, he proceeded to a measure both bold and deci-five. On the thirteenth of December, 1768, he figured a declaration, by which he formally abdicated the crown of Sweden; and by giving public notice throughout his dominions of this step, at once suspended all the functions of government. The senate seit their authority insufficient to counteract fuch a measure, for their orders were disputed by all the colleges of state, who had ceased to transact the business of their several departments. The magistrates of Stockholm, agreeable to the form of government, were proceeding to convoke the order of burghers, which compelled the fenate to confent to the defired affembly of the diet, and the king's concurrence was requested to confirm the proclamation for that purpose which being given, he refumed the reins of government. At the meeting of the diet, which followed on April 196, 376c, though it coincided in some particulars with the king's views, yet it was far from effecting every thing which he withed.

which he withed.

On February 22, 1771; the king of Sweden did, and was fucceeded by Gustavus the prince royal, then twenty-five years of age. The accession of this young prince to the throne, with the preposession; of the people strongly in his favour, was a favourable period for extending the power of the crown by the reduction of that of the senate. An artiflocracy unsturally and rapidly degenerates into defpositing; the yoke of which is rendered more intolerable to a people in proposition as the compessions of a number of a people in proportion as the opprefitions of a number of tyrants are more grievous than those of a fingle one. The new king found his people divided into two great political parties, diftinguished by the names of hats and saps; the former espouled the interest of the court, the latter the

bi ph tr

CI

country or patriotic party.

The most masterly strokes of policy, as well as the most profound diffinulation were used by this monarch to circuit and the forage. The umvent and deftroy the influence of the fenate. cumrent and deliroy the influence of the fenate. The people were grievously oppressed, for besides the rigorous exactions made on the common people by their rulers, they softened every calamity which a year of great searcity naturally occasions. The army was devoted to his interest, and his two brothers, prince Charles and prince Froderic Augustus, each commanded a body of troops.

Stockholm with the most warm and specious professions of disinterestedness; and of his wishes to be shought only the first citizen of a free country, an infurrection of the military happened at Christian last in the province of Scano; this was fet our Sort by one Hellichus, who commanded there. The plea made use of to justify it was, the tyruny there, The pica made use of to justify it was, the tyrainty and opperfilion of the governing powers. Prince Charles, who was purposely in those parts, made this a pretence to assemble the troops under his command, whilst his brother, who was at Oftrogothia, put himself at the faine time at the head of the troops in those parts.

The senate were smuch alarmed at these proceedings,

whilft the king, with the most confummate diffimulation, expressed his resentment against the infurgents, and his zeal to suppress them, at the same time, by stationing the military force in Stockholm so as to surround the senatehouse, he effectually controuled the deliberations carried on there. It is this esigency the fenate found it employes that y abandoned by the foldiery, who one and all took ouths of allegiante to the king, who being thus supported, was enabled to accomplish a great and almost unparalleled revolution; and to deprive an extensive institut of its libration of the support of the su berties in a fingle morning, without bloodthed, without noife, without tumult, and without opposition; while the people flocked together with as much indifference and tranquillity as if it had been only to partake of some diversion.

After this, the king repaired to the castle, and, having

fent for the foreign ministers, who had retreated there during the commotion, informed them, that it was with tears in his eyes he had agreed to the measure of which they were witnesses, and which he was forced to take for the fecurity of his person, as well as of the flate, which were both equally in danger. He intreated them to aifure their respective courts, that his motives, when made known, would justify him in the eyes of all Europe; that this affair should not be productive of any alteration in his conduct with respect to other powers; and to be of-fured, that what he had done was for the welfare of his people, and the maintenance of true liberty among them.

Next morning the king received the oath of the magiftrates, the burghers, and the college of Stuckolm, by whom they were bound to obey him only, and not the fenate, or their deputies; and a book was opened in one of the apartments of the palace, wherein all those in general were to subscribe their names, who were willing to take the oath of fidelity. The fenators, and great officers, who refused to take the oaths, were all strictly confined, among whom were baron Rudbeck, count Helfenstein; the chief magifrate Societable, the fifeal Engeritroem, the king's fecretary Helfingius, the fecretaries of the nubles, baron Cederftroem, count Kalling, and general Strufenfeldt, the three fecretaries of the clergy, the two of the burghers, and the two fecretaries belonging to the order of pealants. king, that they must take their final resolution, either to fewar to the new form of government, or to quit the kingmonth; and the following day (August 21) being appointed for abolithing the old form of government, and the establishing of the new, the king assembled on the following day (August 21) being appointed for abolithing the old form of government, and the establishing of the new, the king assembled on the states in a plenum plenorum for that purpose.

Such decisive magines were takenter the completion of this great act, as committed mothing to thinney, or to the aprice of fortune. A large detachment of the guards took pollession in the morning of the square where the house of hobies shands; the palace was hivested of every this with troops; all the garrison was under arms; and every thing carried on not only the appearance of war, but of the immediate attack of an enemy; while cannon men househt in and planted in the great court of the hall where the states were assembled. Being thus conveniently secured in this place of servors, it was not a matter of much consideration, whether they should accorde to the propositions that more to me, made to turn.

Therefore passed the force, by causing the hall as all his regainst some store which man already measured by the more as the passed himself should have a sent to the passed himself, the female, of significant in the supposition of the suppo

quarter, in the eyent of which they had her fuller concern.

He further observed, that the only seed of their rulers had been to festily their own power; and this very shing had of necessity here adapted to that purpose; that where the law was clear, the latter of it had been purpose; and the term and though the property of the other.

in gesting together a majority for Mieir party, that may suight be ferenced from the infolence and lawlets violence of the other.

The king shen laid, or infinuated, a charge of the heater.

The king shen laid, or infinuated, a charge of the blacket dye. It faith, if the interior fituation of the realin shoot thus endangered, how hideous was its enternal afpect! "I bluth, says he, to speak shout it: born a Swede, and now a king of Sweden, it should be an impossibility, for me so believe that foreign schemes should govern Swedish usen, and that the basest means should have been, employed for that purpose. You know what it is I mean; my blashes ought to make, you deeply fortible into what consumpt the kingdom has been thrown by your quarrels."

Then the king spale a foleron renonciation upon outh of all absolute sovareignty and power, and that he did not even define or wish for it; after which he ordered the new form of government to be read to the states by the spereary of revision. This piece, which is of a great length, consists of fifty-seven articles t the most offential of which No. 52.

THE NEW HISTORY AND DESCRIPTION OF A particular and the control of the control of

A month of the property of the control of the state of the control The late of the Ditte English

SECT. I.

comprining a general account of this kingdom, is fluorism and boundaries, field, climate, produce, Gr. alfo the division, cristes, tomus, Gr. contained in its, particularly of Justand, property fo called.

cities, towns, Us., contained in its, parsicularly of Justicular, properly fit called.

This kingdom, called in Latin Dania, is one of the seeft antient la Europe; being compated of feveral parts, vis. Justand, including the duches of Slefwick, which fore doesn the most confiderable portion. The name of Denmark is now given to the whole country. The continental part of Denmark, namely, Justand, lies between the fifty-fourth and fifty-hinth degrees of north latitude, and from the eighth to the forty-fifth degree of east longitude, extending from north to flowth near rechanged and forty miles; the breadth, in form parts, not being above townsty-fold miles, and in others near an hundred and forty miles; the breadth, in form parts, not being above townsty-fold miles, and in others near an hundred and eighty. On the fouth, it is divided from the duchies of Lunanburg and Bremen by the river Elbe; on the eaft, it is bounded by the Categate and Middle Fort Sound, or Leffer Beit; and the German ocean waftes it on the northern or western parts.

On the continent, and in the islands which form pert of this kingdom, the foil varies greatly. In the formier, there are good pastures, but the latter are too fandy to be fruitfull. In North Justand the air is sharp and plencing; but on the east fide. of South Justand, and in the islands of Fainen and Zealand, it is milder and more temperate: in the low and marshy part, and in the island of Lealand, the sir is thick, month, and unhealthy. The folden changes of the winds, indeed, render the weather fomewhat variable, but at the same time purge, the air of forg and varpours, is the most violent.

Denmark is chirdly of a low and level surface, and, except the tract of land about the middle of Justand, is very fertile; fo that the country produces plenty for its inhabitants, and yields every necessary for the support. The few-coalts, lakes, ponds, rivers, and brooks of this country yield soundance of fish. Denmark produces no wine, no metals, and very little fait. Most of the provinc much felt in thefe parts.

We shall give a more particular account of the produce this kingdom when we come to describe its several proof this king

of this kingdom when we come to describe its leveral provinces and islands.

There are four grand divisions of Denmark, namely, 1.

Jutland, properly to called, or North Jutland. 2. The duchy of Stelwick, or South Jutland. 3. The duchy of Holttein. 4. The Danish Islands.

North Jutland is bounded on the fouth by the duchy of Stelwick, towards the east by the Baltick, the Categate,

Slefwick, towards the east by the Baltick, the Categate, and the Leffer Belt; and on the north and west, by the German ocean; and is divided into four dioceles, via. Ripen to the fouth, Arhusen to the east, Wiburg to the west, and Aalburg to the north.

The diocese of Ripen is bounded on the north by those of Arhusen and Wiburg, on the south by the duchy of Slefwick, and it extends east and west from the Baltick

of Slefwick, and it extends eaft and well from the Baltick to the German Ocean. It contains thirty prefeterfalips, or Baltwicks, two hundred and eighty-two parithes, ten royal palaces, an hundred noblement feater, and foren offices which are as follow:

Ripen or Rypen, is feated on the river Nipfaw, which, before it comes to this city, divides itfelf into three branches, the largeful of which runs on the north fide of the term; the hiddle branch, which is the finsilest, runs on the fourth of it; the third, also, on the fourth, but at fome distance; they join again a little lower, and fall into the German docum, three miles below Ripen, making a commodious harbour. This city is twenty-fix miles different from Tunderen towards the north; and trently-conficant from Tunderen towards the north; and trently-grade of cartle unit form. If the north and twenty-form able trade; the neighbouring partures and fields produce abundance of cartle unit form. If they are drive almost all the black center from many pairs of Justical, which eve here thipped aff feet foreign countries, and especially for follands: their corn they expect into the neighbouring countries, which have occasion for it, all which afford thou very great profit.

The city is often expected to imminent dangers from

Holland: their corn they expert into the neighbouring countries, which have occasion for it, all which afford them very great profit.

The city, is often expected to imminent dangers from the tides flowing in with a prodigious violence from the fea, fo that the water fometimes comes into the very cherch-yard of the Cathedral, which flandway a fill it and even during the terrible inurdation with which Jutisal was afficted in the year 16 gas, the water, took an ell flight also very cathedral. This places is frong by nature only, without much affiftance from art. Towards the west there is a castle, flanked with four bulwarks, after the old fashion, fails to have been bulk in the year 17 co. The citizans houses are pretty well-builts, said the inhabitants were formerly in better chromitatics, than they are now, but they fusfered very much diving the ward with Sweden, the city being taken by the Sweden in 16 gas on the covered by the Danes. Before the zeformation, this was a bithop's fee, as it is now of a fuper-intendant or Lusterius bithop's fee, as it is now of a fuper-intendant or Lusterius bithop's fee, as it is now of a fuper-intendant or Lusterius bithop's fee, as it is now of a fuper-intendant or Lusterius bithop's fee, as it is now of a fuper-intendant or Lusterius bithop's. The cathedral is a noble of some kings. There is another church dedicated to St. Catherine; here are also two public feboots, for the education of youth in polits therature; and a college for divinity, in the court of the bithop's place, where there is also a public library.

The city is governed by two burromafters or confulr. alfo a public library.

The city is governed by two burgomafters or confulr,

The city is governed by two burgomafters or confulr, and by a fenate, who formerly administered jostice with for much feverity, that "the justice of Ripen" was become a proverbial faying, to express a rigorous execution of the laws. The Danish is the common language of the circus, though there are a great many of them, especially among the merchants, who speak the German tongue.

Colding or Kolding, is an old city mentitined by Ptolemy, and stands on the banks of a little river called Coldinger As, which parts North Justand from the duchy of Sleiwick, and falls into a little golf, thence named the gulf of Colding. De Ville, author of the travels of Denmark, observes, that this gulf is wrong fet down in De Wit's map, which makes it too round at the bottom. Colding is about eleven miles distant from Haderleben to the north. It was burnt down during the civil wars in 1247. In 1258, It was burnt down during the civil wars in 1247. In 1268, king Erick VI. redecuted it out of the hands of Erick, duke of Sleiwick, and fon to king Abel. He built a citadel there, to be, as it were, a bulwark to Denmark, and fortified the town, especially towards the fouth.

Christian III. who liked the city very much, on account of its agreeable fituation, and wholesome air, built the casse of Arisburg, above the city, removed shither with his court, and died there January the 1st, 1550. The hospital wis built by Frederick III. whose fon endowed it considerably. In May 1644, the Danes gained a considerable victory over the Swedes near Calding. This place is but finall, since it does not contain above one hundred or one hundred and twenty house; but what makes it chiefly considerable is its bridge over the river Aa, which is called Boherrit, and gives name to the whole country about it. All the black castle and horder, that come from Jutand, and go into Slewick, must pass over this bridge, and pay each a crown for toll; whence arises a considerable part of the king of Denmark's revenue. Though this town lies commodious for trade on the Lester Belt, over-against Middlafort is Funen; yet they have hardly any trade but in cattle. They have good sist, and the river Aa produces excellent cels.

Fredericks Ode stands on the banks of the Lester Belt, ten miles 'from Colding to the north-east, and about twenty-feven from Ripen towards the east. It was built by king Frederick III. of Denmark, and is well feared an a point of land, with an easy descent to the fea-ward: it has been well-fortified, being a pass over the Lester Belt, ow Middlesfort-found. The works are very high on the landder; atted on the other side of the point there are eight bastleons: it has four greate, and before each a ravelin, but ruinous. Towards the sea the fortifications are lower, and of a greater extent; where there are hallons, platforms, and some batteries on the shore. Those fortifications in cose a great deat of ground, but the fifth part of it is not inhabled, for there are many corn fields and orthards within the wills. All the fortifications are how falling to decay. This place was formerly a resuge for bankrupa, jews, and such beoople; but king Frederick IV. has recalled those with the work of the conside

above three English miles. The Swedes burnt and demo-ished this town in the year 1650;

Weille, or Weele, is fix miles distant from Fredericks Ode to the North-west, and about twelve from Colding to the north. It stands on a little river, which falls into a great bay that communicates with the Lesser Belt, and makes a good harbour. The city is neat and well-built,

makes (a good harbour." In city is meat and well-built, but not large.

Warde is twenty-two miles to the north-west of Weille; Ringeoping is forty-five miles from Ripen, and twenty-four from Warde, to the north. Lenwick la fity-fix from Ripen, and eighteen from Ringeoping to the north. Hostlebro stands about eleven miles from Lenwick to the fouth-cast, and twelve from Ringeoping to the north-east. It lies on a river which communicates with the German ocean by a lake into which the river falls: it is an inland town:

It. The dioces of Arhusen is the castern part of Jutland, having, on the south, the dioceses of Wiburg and Aalburg; on the west and south, that of Ripen; and, on the east, the Categate and Lesses Belt. It eatends about sixty miles along the coast of the Baltick, but is not much above thirty miles in breadth at the widest part. It contains thirty-one prefectorships or baliwicks, three hundred and four parithes, five eastles, or forts, and eight cities, or walled towns: namely, it. Arhusen, the capital of the diocese this city stands at the mouth of the river Gudi, which runs through it, and a little lower falls into the diocrée this city flands at the mouth of the river Gudi, which runs through it, and a little lower falls into the Categate. It is eighty-fix miles to the northward of Slefwick, and forty-two north-eaft of Ripen. The fiteation is pleafant, being furrounded with forells full of game, pattures that are exceeding rich for the country, and fields which produce a confiderable quantity of grain. The rown itself is near and agreeable, well furnished with provisions, and domestic necessaries, from the neighbouring country; and with other commodities and luxuries from various places by means of hippoins. The hirdwar is toleeounny; and win other commonites and inturies from various places by means of hipping. The hirbour is tolerable, and the cathedral church erected after a curious flyle of architecture, beautified and embellifined with various anonuments of noblemen, prelates, &c. The bishop's passes was once a magnificent structure, but is now fallen to decay. This city is now the see of a superintendant: it was made an episcopal see, in the year 1014. 2. Scanderberg is a good fortress, fix miles from Arhusen to fouthwest, 3. The small town of Horsens is twelve miles from

Arhufen, fouth-weft. 4. Randers is a very antient city on the river Gude, and a place of great trade; and abounds with excellent falmon, and corn. 5. Ebefflet is about eightest miles north-weft from Arhufen. 6. Grinaa is faven miles distant from Ebelstot, to the north 1 and, 7. Marisger is fisteen miles from Arhufen, to the north. 8. The small town of Hobro is fa wiles above Marisger, to the westward 1 it is stuated on the bay of the Categore. 111. Wiburg has the dioces of Asiburg on the north, from which it is partly separated from the gulf of Limsford, having Arlusen, on the east, and Ripen on the footh and west. This dioces is not above twenty-four miles from footh to north, and twenty-fix from west to east, being almost of a round figure. Though this is an inland country, it is not without the convenience of navigation; for here are large lakes, that branch out into several parts of this land, and from whence, by means of the Limsford into which they run, and which communicates with the Baltick sea, they receive vessels of great burthen. Among these lakes there is one named Othesunde, from the emperor, Otho, surnamed the Great, who, about the year 948, made an inroad this way, and penetrated even as far as this country, and, casting his javelin into the water, gave it the name it full retains. The best horses in Denmark are bred in that part of the diocese called Salling. In this exertion, and in the middle of north Jutland, of which it is the capital city. This is a place of great resort, being the feat of a high court of judicature, which receives the appeals from inferior courts, but none can be made from it fave to the king. It has been the see of a bishop for above fix hundred years. The bishop and chapter still fabsis, two bundred was attently called Cimmersburg, as being the sent of a high court of judicature, which receives the appeals from inserior courts, but none can be made from it, save of the Augsburg, as being the shift famous for its hered of horse. 3, Nybe, on the same gulf is eighteen mile

extremely hardy. The country is fruitful, and pretty well enriched by treade.

This diversale.

This diversale.

This diversale and the following clitics and towns, vin. Anaburg, fo called from the great quantity of cels taken in the gulf of Limford, on the fouth thore of which it flands, about fix miles from the Categate to the weft. It is the fee of a bithop, founded about the year 1000; but the bifnops refided antiently at Burglaw. 2. Wenfutfael, or Burglaw, on the river Rysia, which falls fourteen miles lower into the gulf of Limford, from which this city is as many miles diffant, to the north: it w formerly a bifnop's fee. 3. Schagen, or Skau, is feated on the cape which it gives name to: it is the most northern land of Jutland, between the Norwegian fea and the Categate, or Schager, Rack. This town is more frequented by merchants from all parts of Europe than any other town in Jutland, because they touch here in their way to the Sound, 4. Nikioping is a considerable town: it is situated in the siste of Mors, made by the gulf of Limford. 5. Tyssed is the most fruitful place of this district: it stands on the south-west part of the diocese, near thirty miles from Aalburg, to the west. It is noted for a kind of university, which was first a free-chool only, founded by Christian III. 6. Seeby, fisteen miles distant from Schagen, to the Suth-west, is a small sea-port town on the eastern short.

SEC.T. IL.

restrof the ducky of Alefwick, or fouth Justinal; and the ducky of Helifein; their fluncium, extent, rivers, produce, inhabitants, Ci.

sheeby of Melfrens is their financiem, crime, ristore, pressure, inhabetients, etc.

SLES WICK derives its name from the enpital of the dwelvy, but is frequently termed in history footh Jeriand, particularly by antient writers. Some have erroneoutly ennexed it to Holdein, and deferibe it as a part of Germany; but Slefwick is in reality a part of Defimant, and if elivided from the duchy of Holdein, which bounds it on the footh, and confequently from the German empire, by the Eider and the Lewen; on the dalt, it is bounded by the Baltick and the rivers Kalding and Skotburg, which forparite it from north Judand; while to went it it washed by the poorth fee. It is about sighty-five miles in length, and extends about eighty-five miles in length in the broaden part. A very few years ago a project was formed but five and the class of Holdein and Slefwick.

This duchy is divided into four circles, viz. Gottorp, Tonderon, Flexflurg, and Haderlaben. The chief towns of it are as follow:

1. Slefwick, or Slayawick, the capital, is france on a finall arm of the fee, called the Sley, at the diffance of about twicity, two miles from Kiel towards the north-weft, history, two miles from Kiel towards the north-weft history, two miles from Kiel towards the north-weft was founded by Exick Barn, affilted by Sk. Anfchar, bishop in from Glockflatto the north-caft, and the clusters with the court of the five miles diffactory of the part of the five history of the five history of th

formerly the fee of a Roman catholic bilinop, and as now that of a protestant fuperintendent, who affects so be styled a bishop.

At a few miles distance from Sleswick, to the sount, are yet to be seen, in many places, the ruins of the famous wall and stretch, which was built in antient times by the Danish kings against the Incur Sona, of the Saxous. It is thought to have been begun by Gotherick, or Gothofred, king of Derimark, to keep out the assaiss of the emperor Charles sie Great, about the year 888, and afterwards improved by queen Thyra, and order Danish monarche, and made so itrong, as to be elected impregnable by the countellors of Henry, turnassed the Lion, duke of Saxony, who distinated that visionous prince from attempting to hazardous and undertaking. This tampart was called Danewark, and, his stadying a small in England, is achorised to have teached from sea to sea, quite across this needs of land.

2. Gottorp, or Gottors, was the antient seat and patermony of the dukes of Holstein, the chief branch of which shally, after the royal one, took from thence the title or surname of Gottorp. It is about fix miles distant from Sleswick to the Sey, which almost surrounds it, and stands on the Sey, which almost surrounds it, and stands on the Sey, which almost surrounds it, and carries vessels, of small burden, to and from the Baltick. This place is, as the same time, a fortress, and a noble palace, being reckoned off of the sacet keats in all these northern parts.

The calle thands to the west of the Sey, in the middle of the text was the built in the form of an oblong fusare.

The caffle flands to the west of the Sley, in the middle of a little lake, and is built in the form of an oblong square, fortfled with four bassions of earth: the bottom is paved

with free-storie, the curraints are long, and the sides shand north and fouth. You approach the saile by a beinge, which joins it to the fouth shore, it is commanded by a mountain that stands storth-east of it, from whomes the Danes annoyed its castle in the year 1575, when the delaiwas treacherously surprited by the king of Denmank, at Rentiburg. The duke, before his death, had designed to rebuild the castle, but the front only is snitted and, if the whole had been completed, it had been one of the since the last the since the sail of the whole had been completed, it had been one of the since the castle, but the since the sail of the court, and the gate of the castle is of a since has some, as listed as wearble, with a laisters over it, that sails twenty-feven lighte.

finest palaces in Europe. A garpant encouragedes the first court, and the gue of the callie is of a fine blue frome, se hard as marble, with a lantery over it, that has twenty feven lights.

On the north fide of the castle them, is a bridge, of supplinded paces, over the lake; and pt his god of the bridge there is a walk. Detweenyous of trees, that had so bridge there is a walk. Detweenyous of trees, that had so bridge there is a walk. Detweenyous of trees on all fides, species on the north, there are also fine. Athorses on the fides of the pond, and in the middle an idercules, of monitrous fize, represented with his calle, soons to kill the Lernara hadre, out of every part of which the water plays. In every corner of the pend there is a parterne, is the form of a crefeent, divided into leveral compartments, with nicher round, containing the holts of many kings, and monitrous fize. There are also she representations of many fabulous animals, that throw water.

At the end of the walk there is a small room, in which it to be feen a globe, made by the famous a yellow make for our first of the world. There is an implication of the world. There is an into the representations of the world. There is an into the presentations of the world. It have is an into the presentation for the world. It have is an into the presentation for the world. There is an into the presentation for the world. There is an into the presentation for the world. There is an into the man, or certain wheels, which are mined about by enter, conveyed from the first house there is a level ground, fifty paces brook and three times as long, divided into three parts, the middle has a great before in the contre, with whit all round. From the highest terrace there is a level ground, fifty paces brook, and three times as long, divided into three parts, the middle has a great before in the contre, with whit all round. From the highest terrace there is a level ground, fifty paces brook, and there times as long, divided into three parts of the world; viz, the

connecrates that the ting of Dennart, tog in forms years there is toll paid for above fifty thousand head of cattle.

3. Eckrenford, or Ekelenford, flands on a little gulf of the Baltick, which makes a very commodious haven, and affords it a pretty confiderable trade, it being one of she fafer ports on that those. It is about twenty-two miles diffant from Gottorp to the east, and fix from Kiel towards the north. It is faid to have its name from the abundance of figurest found in the neighbouring woods; though it is more probable it was called for from an old castle, out of the ruins of which it rofe.

4. Christianpreis, is the capital of a builtwic of that name, which borders on the duchy of Hosfitein: this town is fituated on a gulf of the Baltick, at the entrance of the haven of Kiel, and is commanded by a castle that was built in 1637, by Christian IV. Ising of Dennard. It is about five miles distant from Kiel to the north, and four from Eckrenford to the saft. It has about five busided houses, and type gate, defended with strong works. The Eyder ferves for a ditch, and makes it inascessible; and where the river grows narrower, they have built as he hadden as one in the water, with port-holes for fitteen pieces of cannon. But some maps make the Eyder two miles distant from it; so that, according to them, it mult stand on some rivulet that falls into the Eyder.

5. Fredericks duke of Hosfielm and Stefwick, who built in the year 1621, peopled it with Hollanders, and granted them, great privileges. He endeavoured, also, to fettle as still right shorts, and, for that purposit, sent a fanous embalty to Mosfery and Perfia, which gave occasion to Adam Olearin,

Gorcary of it, to publish an account charant in

any good trade, which instructes daily, by means of the manifester disabour, formed by the Ryder. It was foreigned by the Ryder. her devolved as an inheritance to a younger form of the duta of Holftein-Goussey, filled dute of Holftein-Eutler, from his usual place of reddince about five miles from the city; but he has fines here raifed to the throne of fevedent. This territory extends about firsty thiles in company, containing feveral finall towns, and one hundred and three villages.

taining feveral finall towns, and one hundred and three villages.

The siver Trave brings thise into the heart of the city, which is near ten mites from the fea; the largest weifits, however, unload at Traversment, a fort on the key of Lubect. The primeral trade is to Riph, Revel, Nisrva, and Peterflung, and a magazines and ware-boofts are likew. To well stocked me productions of England, France, Spain, Holland, the Last and West Indies, &c. The next stapic commodity to corn is beer, which is in high estimation, not only as pleasine liquer, but at a melos, when extarnally applied to hruifes, wounds, &c. they it great quantities of this last article to foreign pate.

The little town of Travermend, near the mouth of the river Trave, is dependent on Lubeck, from whence it is but nine miles to the north east, and thrity-two wast of Wilmar. One of the counts of Holstele fold it, in 1320, for four thousand marks, to the Lubeckers, who fortified it with four good battions, ereded a light bouts to guide the ships at night, and commonly keep here a garrifon of three or four hundred zen, commanded by a burgher of Lubeck, who receives his orders from the burgo-masters, and udmits of no persons into the place without a pass-port. It was feised by the case in 1617, in order to fecure transports foot his troope, but he was perfueded to quiet it. There is a peninful over-sgaint it, about a quarter of in hague in circumference, which belongs to the ducky of Macklersburg.

The river Trave rise out of a greet iske, in the juvil-

ports for his troops, but he was perfuseded to quir it. There is a peninfula over-againt ir, about a querter of an largue in circumferense, which belongs to the dechy of Machienburg.

The river 3 rave rifes out of a great ishe, in the jurification of Segeberg; and, after a ferpontine course from north to fourth, by Segeberd and Oldefle, turns flort to the east, waters Lubeck city, of which this town is the port, and then falls into the Battick at this place.

The towns of left note are the following, vis. Oldefle, on the river Trave, feven miles fouth of Segeberg, eighten well of Lubeck, and thirty-one north-east of Hamburg. Travendal, on the firme river, within a mile of Segeberg. Eutin, or Ufin, is about fixteen miles from Lubeck. The town of Pleen is almost furrounded by plakes; it is the capital of what is deemed a principality of the same name. It hath a lofty palace, which commends a beautiful prospect, and is adorned with pleasant gardens and a park. The neighbouring lakes and woods farming great quantities of sish and timber, upon the fale of which the inhabitants principally fubfist. The town of Olderburgh, now fallen to decay, is fituated near the Baltick, twenty-feven miles north of Lubeck. Lemden is a merket town on the conflaces of Selwicks, not far from the Eyder; it is celebrated for its beer. Meldorp, or Meldorf, is large town of figure trade flanding on the Meeler here are three market places, and a public felteol forthestudy of the classics and rhetoric, Heyde is a large but poor town, ten miles not be morth of Meldorp. Krempi is a finall open town, on a little river of the same name.

The town of Gluckstadt is fituated on the north side of the Elbe, twenty-fix miles fouth-well of Hamburg; it is next, well-built, and deemed impregnable. The Dahee have two thouland men in garifon here, and some men of war in the harbour, which is very fafe and space and the proventies and the seventies for the Roman catholics a chapel, and the seventies for the fame here, and some near of war in the harbour, wh

Here the Calvinits have a charch, the Roman catholics a chapel, and the Jewa a fynagogue. This town was founded in a 520, when Christian IV. king of Denmark, ordered it to be called Gluckstadt, which implies Fortunate. Town. There being no firings about the town, the inhabitants use rain or river-water. Persons convicted of thest here are sentenced to draw, duting life, the dust-carts belonging to the town, to which they are chained like galley-stave. Bredenberg is a village on the Stor, defended by a cause. Primeburg is a market town on the Finall, thirteen Tilk from Hamburg, and fourteen from Clauckstate. Glackfladt.

Glackstadt.

Alteria is a con fisher about feated in a most delightful country on a high figure to Elbe, not above a cannon-shot to the west of Hambur 17th threets are regularly laid out, spacious and west paved. The town contains about three thousants Nicolas, and upwards of this y thousand inhabitants, with two Lutheran churches, and the saids number for the German and Danish Calvinists, and the fishes number for the French Calvinists, a fish for the French Calvinists, a fish for the positis, and two Menonite churches, befides those belonging to other feds, who are allowed the free exercise of their religion: the Jews are also very numerous, and have a large

fyringegue, but pay two thoughand duests a four as presention money. Here has reyal feminary, to which the twent shoot is united, me ophers and spoor-house, an anescenden thesers, and there decids for the building of filips." Among its oranaente is the until, which, he being planted with few power of trees, femine an agreeable walk.

This town has a variety of amandatures, and its irade is the from being inconfidentials, the Elibe bringing false of burden to the assessment door. The origin of the same is thus accounted for depoties from Emburg, in a semonfemor to the hing of Dynamics spaint building it to one nor thoir eight requently made us of the works Dajis and its nace, or That is too near; the king unling particular notice of the three last moneylylebbe, fide businesing to the deputies, he could not enced hashelf from going on building is but that to oblige them he would male all it by the name they had given it. This town to funds that the Swedith general, after defeating the hing of Dynamic and his gray at Gadebadich, came and burnel it of the ground active off, for that he was going to defroy their twent. The anaglianste came out in a body, and, filling at his feet, offered him fifty shouthed iri delians to lave the nown; but Steinbock insided on two hundred thouthnel, which they were ready to comply with, and only defeed time to go to Hambery for the stoney; but the grarent would after the burnel; the fone, with their god and landy defeed time to go to Hambery for the stoney; but the poor inhablants were obliged to term out; the mothers, with their inhibite at their burnel; and formed and the forest hour, it effects the hundre poils inhered; and forest they were all gone out, entered the town, and for fine to they speak to burnel, and formed and formed and they first to the poil of the their poils of the part of a critel incending spaint heir forest they are all the parts of it, which burnel and port of a critel incending their town, and for the calle there is a forest hand to the part of a critel inc

and Degmark. An university was established here by the delice in 160 g, which has hed reamy learned professor. It is divided into the new and old towns, of which the former is the longest and planta-tell, the firever being plantad with news of trees. The did town, which is a fact of persisting, is settled by deep disthes title speamed from the new estably a bridge, at the end where of is a drawbridge, and a gate with a quarty and there are sine walks of trees on the harbour. There is a palece (acing the town, on the north file), but it is in very had requir, and quite unsumitted, bloom are feveral fair buildings, particularly a large church and an hospital, which before the reformation was a Franciscan mountlety.

This town is much entiched by its yearly fair, which is kept for three weeks after Twelfish day, and frequented by unpictudes of all ranks, especialty by the nobility and granty of the duchles of Slefwick and Holstein. Vast sums of money are here regociated, and payments made of some contracted beforehand, as punctually as by an Amsterdam haster upon the enchange; informath that the man who does not perferve his credit at this fair, is looked upon as a bankrupt, and fulpfolled to punishment, busides the

SECT. III.

Giving a description of these islands which compose the most im-

BEFORE we proceed now to the description of the principal islands of Dennark, we shall give some account of the saint which they lie, which is called the Batick, and, by the Daues, Sweden, and Germann, the East-jen, because it is to the east of Denmark and Sweden. It is a large gulf, which has Germany and Poland on the Sweden, because it is to the east of Denmark and Sweden. It is a large gulf, which has Germany and Poland on the Sweden, because it is to the east of Denmark and Sweden on the welt, Lapland on the Sweden, and Bothnie, Finland, Livonia, Courland, port of Poland, and of, the kingdom of, Prussia, on the east, the has a communication with the Categute, 1. By the Lefter East, a very narrow streight between Jutland and the island of Funen. 2. By the Greater Brit, between Funen and Zesland, 2. By the Greater Brit, between Funen and Zesland, 2. By the Greater Brit, between for Upland this sa branches out into two arms, one of which rune to the east, and is called the gulf of Finland; the other, which is the gulf of Bothnia, runs to the north. There are in this fee four other gulfs, which deserve to be taken notice of, via, 1. The gulf of Livonia, at the mouth of the Dwind, where lies Riga. 2. Gulf of Courland, at the snouth of the Niemen, where is Menel. 3. The gulf of Dantaick, at the mouth of the Trave. This fee is very dangerous in bad weather, all the coast, especially that of Sweden and Finland, being full of shelves and fands: but then there are here feveral fase hasbours. This fee neither ebbs nor flows, and during three or four months in the year it is generally frozen over.

Zeclaud, in the Dantil language called Saland, or Sigland, in feated at the entrance of the Baltick, and is encompassed by the Categate on the north; the streight called the Sound on the east; the Baltick see on the fouth, and the streight called the Sweden on the order, and the streight called the Sweden on the sorth; the fireight called the Sweden on the sorth; the fireight called the Sweden on the sorth; the fireight call

where fat, and covered with corn or wood, for the whole country is cultivated with great industry.

This island has a tolerable fertile foil, and produces fine barley, of which malt is made, and a great quantity of it exported; it likewise yields plentiful crops of fine oats, but the rye produced here is not more than fufficient for home confumption. It has fertile meadown of a beautiful verdure, and some woods of oaks and beech, which abound with game; but in the country lying near Copenhagen, and some other parts, no woods are to be seen, and the inhabitants are obliged to nie chiefly turf for their feel. There are several lakes in this island, some of which are large, and both these and the rivers abound with fith. The most convenient harbour in the island is that of Copenhagen, and next to that the port of Kallundborg. Within the prefecture of Copenhagen is the city of that name, of which we shall now give a particular description.

Copenhagen, called also Keobenhaven, or Merchant's Flaven, the capital of the kingdom of Denmark, and the

please whose the court refides, is framed on the fieldets, is the forty-fifth degree forty minutes north belitude, and is twelve degree fifty minutes eaft longirade, about thiny miles from the Southd, and has a beneatiful and consmodient between the hour, the entrance to which it for narrow as to admit only one file at sime; and every hight it is puffige it focured with a fireng boom; the mouth of it is commanded on one fide by the citadel, and on the other by a block-house well farmified with artificity. In the barbour, sive hundred fail of ships may ride at safe, and round the whole suclofure a wooden gallery projects over the water. The city is in a low and marfhy fituation; but on the land fide are favoral fine iskes, which furnish the inhibitants with plenty of fresh water. The adjacents country is very pleasant, and opposite the city lies the fertile filand of Anme; which forms the harbour, and which we shall describe in its proper place.

The city at a distance makes a magnificent apportance, and from the West-gate to the Norwey, gate in the ciesdel, extends four thoutland one hundred and fony Zealand ella in longth, and from the North-gate to the Amise-gate it is three thousand one hundred and twenty all in breadth; fo that its circuit must be twelve thousand fix hundred ella, or fix miles fix hundred ells. The Gother-street, which rans in a strait line crofs the whole city, dividing, the Old from the New Town, is above four thoutland two hundred five the length. This metropolis contains four royal castles, ten parish and nine other charcies, a considerable number of public and private palaces, above four thousand one furnished by the five the city are deep canal, of a furnisher principal paris, Old Commander house, feveral of which are inhabited by sem or more families, eleven market and public figures, a hundred and eighty-fix streets, and a hundred thousand inhabitants. This city is divided into three principal paris, Old Commander the buildings are of imber. However, in general, they make a handsome

burghers into as many companies, which have all their particeles colours.

In the Old Town are the following quarters, viz. first, the north quarter, which has the following places of note: the German church, dedicated to St. Peter, which was the principal parish clurch at the time of the reformation; it was afterwards converted into a foundery, but in 15 S was given to the Germans, and in 16 S was again made a parish church. The Wallsendorf college, in St. Peur'n-Revert, was formerly a Carmelite monastery; but the lord fleward, Christopher Walkendorf, converted it into a college for fixteen students, each of whom has a yearly penfent of thirty rix-dollars.

In the fecond or east quarter is the great Wartow hospi-

lege for fixteen students, each of whom has a yearly pension of thirty rix-dollars.

In the feeond or east quarter is the great Wartow hospital, which is an antient foundation; but the edifice is new and spacious, and the endowment so confiderable, that it contains at present above three hundred beds for the fick and poor, each of whom has his lodging gratis, and a weekly allowance of half a rixdollar. The orphan-house, which takes up one entire fade of the new market, and is a confiderable ornament to that square. It has a dispandary, a printing house, and a library belonging to the soundation. The council-house is a new structure, and hand detected from the other buildings, separates the Old from the New Market. In the Old Market is a fine fountain, and in the New is a place walled in for the execution of malefactors. The other places in the west quarter worthy of notice are the west gate, and the royal palace, situated near the citadel of Christiansburg, which in 1743 and 1744 was new frented in a very elegant manner.

The clothiers quarter is the third, in which are the following places worthy of notice. The collegiate chorch of St. Mary, in which the bishop of Denmark and Norway are usually consecrated. The tower, which is esteemed the noblest in Copenhagen, stands on the highest spot in length, and has a fine ring of bells. The university, which includes the royal community, or the cloyfier, in which includes the royal community, or the cloyfier, in which

one frundred and twenty fludents, though no more an ar hundred now reside in it. The Collegium Elemans, founded by George Elers, for fixtures independent as Borrichian college.

The most clegant and best endowed of all the pursue undations is the Borrichian college, or Collegium Medicum. It was erected by the learned Olaus Borrichiue, in 1854, for fixteen Danith and Norwegian students. Every independent in 1854 for fixteen Danith and Norwegian students. Every independent in 1854 for fixteen Danith and Norwegian students. Every independent in 1854 for fixteen Danith and Norwegian students. Every independent in 1854 for fixteen Danith and Norwegian students. Every independent in 1855 for fixteen Danith and Norwegian students. a the city.

The Freeman's quarter is the fourth divition. Here are, we churches, and the church of the Holy Ghon, or, after of the Holy Ginets, the name being derived from large hospital or guest-hoose that formerly stood near it, and was converted by Christian IV: into a houle of, corection. After the fire which happened in 1728, this haich was rebuilt.

a large hospital or sueft-hoose that formerly flood near it, and was convered by Christian IV. Into a houle of correction. After the fire which happened in 1728, this chuich was rebuilt.

Sharron's quarter is the fifth division; in which there is aching particularly resumertable.

Strand quarter is the fifth division; in which there is aching paices worthy of notice; namely, the magnitude places worthy of notice; namely, the magnitude places of Christian Burg, which was enlarged and embellished by Christian III. Christian IV and hadron for the prefer of the prefer to the prefer thing a grandfather, case of the whole building with the adjoining bourse, which had been porchaed of the benefits the foundation of the prefent spacious and magnifecent flucture, which was finished in 1740. Though this edifice colf fix millions of dollars, or about one million two hundred and eighty thousand pounds flering, yet the interption over the ground portal declares, that the fovereign erected it from the ordinary revenues of the erown, without laying any additional burdens on his fableds. It is of a prodigious fize. In one of the apartments in Europe, which have been presented by she refuelive fevereigns. In this quarter is also an edifice, in the first flory in which is the arienal; and in the feconic results of carriodites, the picture gallery, and the collection, and extends shough all the vegetable, are in the third flory; and the calinest of carriodites, the picture gallery, and the collection, and extends shrough all the vegetable, and the first strand at the thousand of the princes. The cover call of the princes of Norway in 16th, only of miles weight five bundred and first pounds, and avaland at three parts fiver. What are most admired in them are the threads, and branches of flory are done on the fides of the jold trees that were buried there.

Among the artificial curiodites is a piece of ivory, one which the history of our Savieur's policy and a five one of the fame, the first flore of the jold rece that were buried

ing the homage of this survey, the previsions, the post-siles, in this quarter, the previsions, the post-siles, into the diches grand firedure in the Gesties dyle, feer he feet in length, and fixty-fix insbreadth; the whick was built in 2024, by Christian IV flory is laid out in, warehoptes, which is digner for the merchants: for on both files or an canals, where the thisps may lie choice a end goods, by conveniently landed or fling. In the previous the merchants and the merchants who have been dead or fling the whole length on both files, in a miss one wing of the fouth file is the result in most of the clothe, files, and findle under dealers.

In the Referaburg quarter, which is a

one of the clothy, filts, and fluft, mails in the migy and deposited, and from thehes, said to the introduce and dealer.

In the Resember, guerter, which is the freely had Calvinist church, a fault held, editics, whose he maintain preach in French and Figid Durch; here is alle the United tower, the arches and of the Resemble, the said the United church, generally called the Round church; the said alle distributions; the arches and of the church; forther in said in the church in the part of the

this of Venice; and where the royal free utility hes at an-

chor.

There are two quarters in the new rown: the first is it. Anne's one quarter, in which are Charlottenburg, a givety large and regular structure, largest in 16 yz, and completed in the factoceding years. It derives its manne from queen Charlotte Amelia, confort of Charlotte Amelia, confort of Charlotte Amelia, confort of Charlotte Amelia, even from the structure of this castle or palace is very agreeable, its principal front facing the square called the King'a New Market, which is embellished with an equivariant state of Christians V. of lead gilt, placed on an elegane padeltal. The great guard-house, the foundery, and the Danish play-house, are also on the fide of this sine square.

In this quarter are also the neval hospital : the church belonging to the gartion; the Frederichaet, which is now adorned with several elegant new palaces: Frederic's

belonging to the garrison; the Frederic and, which is now adorned with feveral elegant new palaces: Frederic's church, built in imituation of \$2. Peter's at Rome: the general hospital: the totbooth or cutson-heasts: and the grand academy of the royal eadets. This last structure was built by Frederic IV. for an opera-house; but in 1720, he assigned it for the land cadets; and, sive or six years after, removed the company of the cadets to this edition. Each company has in separate apartments and exercising-rooms, and is under the inspection of its proper officer, who likewise lives in the eaceterny. These young men are not only supplied with lodging, cloathing, fire and candles, and a monthly peasion sufficient to sind them in diet; but are also instructed at the king; expence in all the feisences, by able masters, appointed for that po. 106. These two companies furnish the state with many able foldiers and samen.

and teamen.

In the west querter of St. Anne, is the royal palace called Rosenburg, a small edifice built by Christian IV. in 1804, in the semi-gestic taske; but is a grand-structure, adverted with one large, end two small towers. It is furrounded with a ditch and a kind of fortification, and has rounced with a circle and a time of sortineation, and has its own communiting officer; but the guard is daily relieved from the garrifon at Copenhagen. The adjoining gardens are very extensive, and embellished with a great number of ornaments. These, in formers, ferre the inhabitants for a public walk, and the royal family fometimes. habitants for a public walk, and the royal family fometimes refide a few days in this palace. The third flory of the palace is faid to be the most remarkable, from its containing a treasure of inefitmable value. In the great hall, which is in this flory, and takes up the whole extent of the building, are five pieces of painting by the 'Danith artiff Krogk; twelve valuable pieces of tapeltry, representing the artifierements of Christian V. and three filerer lions at large as the life, which at the king's inauguration are placed round the throne. In two cabinets adjoining to the hall we begret he all and now results. with other valuable investments are kept the old and new regalia, with other valuable jeware kept the old and new regalls, with other valuable jew-els, and a whole ferrice of gold. Another cabinet has a collection of curious and valuable drinking-glaffes, and other glafs veffels. The royal throne used at the inaugu-ration stands in another spartment. The village of Caristianshafen consists only of one quar-ter. It is fituated on the island of Almac, and had for-

merly its own magistrates; but is at prefent under the ju-riffiction of those of Copenhagen. The most remarkable places in this fuburb are St. Saviour's church, which is olaces in this fubuth are it. Savour's church, which is eftermed the most magnificent and elegant church at Co-penhagen, and has a beautiful steepe, that has a spiral afteat on the outside, by which one may go up to the top. The German, or Frederic's church; the orphan-house for the reduction of two hundred poor boys; the Eaft-India company's hoofe; the fine dock-yard, where thips of war are refitted; and the gate of Christianshalen. Between this place and Copenhagen is a high pillar crefted in the midt of the water, on which is a flatoe of

crected in the midt of the water, on which is a fixtee of a maked woman, with a fran on her left fide, that extends its long neck behind her back, and bringing its head over her right fhoulder, puts its bill into her mouth. This pillar and thatee are confidered as a fymbolical reprefentation of the city of Copenhagen: they were, however, found near Calmar, in Sweden, during the war in 1011, and conveyed to Copenhagen from thence.
The Calvinists have a church in this city to themselves;

those of the Romith religiout frequent the chapets of foreign ministers of that profession, and the Jews have their fynagogues. The megistracy of this city is appointed by the king, and confists of a prefident, three burgomasters, with vice-burgomasters, and common council men.

The plague has frequently wifited this city, and fwept away great numbers of the inhabitants. It has often been , and in 1658, and 1659, held out against the befieged, and in 1938, and 1939, held out against the Swedes almost two years; and in 1700 was bombarded by the combined fleets of Sweden; England, and Holland. On No. 53the costs of Deccherist pale, is the benke cost in the eventing, in a seminal benefic refer that will give, which formal

fiverial other public buildings, were hurst to the groupd.
The ampirerfary of this decadful accident is observed in a
religious manner on the twenty-third off October. The
city has, however, been fince rebuilt with greater elegance
and becauty.

The full the being farted on the data
of Almac, we fhall therefore take four notice of that illand,
which is joined so the city, and confequently to Zerland,
by two bridges. It is about nine miles in length, and
three in breadth; entirely level, and has no woods, esseep a few thickets. The foil is uncommontly rich and
fertile, and is therefore called the garden at Copenhagen.
A part of it was given in 1916 to fearer families, who
were levited thitler from North Holland by Schriftian H.
at the detire of Elizaboth his queen, who was a native of
the Netherlands.

at the delirs of Elizaboth his queen, who was a native of the Netherlands, to make butter and cheefe for the court; the recherands, so make butter and cheek for the court; and their defeendant still reten abe habit, language, and euftoms of their predecetiors, rogether with sheir cleanlines and industry; for they will not mix with the Danes, but intermarry with each other. This lifand, through the industry of their laborious people, pleatifully implies the markets of Copenhagen with all forts of roots and

the markets of Copenhagen with all forts of roots and herbs, besides butter, milk, great quantities of corn, and fome hay. The whole island is divided into two parishes, and is peopled by about eight hundred families, many of whom are Danes. But to return to the island of Zeeland. In the neighbourhood of Copenhagen is a magnificent royal paleoe, fituated on a hill: It derives its name from Frederic IV. who was its dounder, and has been fince greatly enlarged by Christian VI. This edifice is very spacious; on every fide it makes a most magnificent appearance, and has a fine prospect. The earden, which spacious; on every fide it makes a most magnificent ap-pearance, and has a fine prospect. The garden, which lies below the hill, is very extensive, and contains a great number of pleasant walks, leveral groves, a labyrinth, a theave, many statues, sountains, and summer-houses; and, in particular, a very sine caseade just fronts the pa-lace. From this edifice, is a descent into the garden by two slights of broad stone steps. The menagery in the garden is stocked with lions, tigers, and other wild beasts. From this palace a pleasant avenue, planted with a double

From this palace a pleafant avenue, planted with a double row of trees, extends above half way to Copenhagen. Here is a royal hunting-feat, called Taggerflurg: it was rebuilt by the late king; the officers of the chace re-fide in it. From hence a strait avenue leads to the noble park of Charlottenlund, so called from the king's pleasure-house, which stands in it. At about the distance of a mile from the park, lies that of Jagerfburg, which affords plenty of game. Near the middle of it flands a new edifice, called the Hormitage, which is thinty ells in length, twenty in breadth, and elegantly adorned both within and without. In the lowest flory is a curious machine, by means of which the victuals, &c. are conveyed to and

from the king's table in the second story.

About five miles from the park is the castle of Hirscholm, a royal palace, which was anciently a place of confiderable freigth: but nothing now remains of the old caffle, befides the name; for it is not only demolished, but the very fituation of the piace has been entirely altered by art. Christian VI. who took possession of it as prince royal, cansed the soundation of a new edifice to be laid on the spot where the old castle stood; and his queen, after his accession to the throne, continued the building, the king having made her a present of it. In 1739 it was thought to be finished; though every year since new improvements and embellishments have been continually provements and embelliaments have been continually added. The outfide has a very magnificent appearance, nor is it lefs elegant within. The great hall takes up the height of two flories, and has a noble fountain that throws up a column of water above twenty-feet high, which falls down again into a copper bason. Directly opofite to the palace is a noble furnmer-house; and on one posite to the palace is a noble tummer-nous; and on on-fide of the garden is an eminence covered with trees, on which stands the Norway-House, which is so called from its being built in the Norwegian taste. The chapel is cle-gant and well adorned, and the garden very beautiful. The samous eastle of Frederichurg is about twenty

miles from Copenhagen: this is effected the most beau-tiful palace of any belonging to the king, and is frequently called the Verfailtes of Denmark. Christian IV. caused the old building to be demolished, and the present magnificent firucture to he beilt by the labelt and most celeibrated architecter in Europe. Interpretates of the Greek and Gothiectyles of architecture, and stands in the middle of a lake of fresh water, and confist of three principal parts, eich furrounded with water, but joined together by bridges. In the division, at which you arrive by passing over a bridge, resembles a horn-work, the front of wheth is quite round, and faced with stone. On both fides are several buildings, which ferve either as dwelling-houses for the officers of the castle, or stables for horses. From hence you pass over a stone bridge to a noble high tower, which stands over the gate that leads into the second court. On each fide of this court, to the right and less, stands a magnificent building, in one of which are the governor's On each fide of fins court, to the right and left, stands a magnificent building; in one of which are the governor's house, feveral apartments for the noblemen belonging to the court, and the king's kitchen; and on the other fide, the chief magistrate of the prefedure of Serve refideas. From this second court a fine stone bridge, built over a deep canal, leads to the grand portico of the chief entrance of the caffle, which is built with free-stone, and adortted with sculpture and gilding. The principal building confidence from the court of being and two vites form the topics for the chief which is not two vites form the topics for the chief which is not two vites form the topics for the chief which is not two vites form the topics for the chief which is not two vites form the topics for the chief which is not two vites form the topics had been considered. with sculpture and gilding. The principal building con-fists of a corps-de-logis, and two wings, four tlories high, all covered with copper, and adorned with several towers, of which the church tower is the highest. Both the wings are joined to the front by a low building of one flory. These consist of seven arches below, and as many above, built with free-stone, and adorned with statues that stand cither in niches or detached from the wall, with many other ornaments; in short, which way soever you turn your eyes, curious sculpture, and a variety of other em-bellishments, present themselves to view; and there is a beautiful fountsin near one of the wings.

There is a fine collection of paintings in the gallery that leads to the hall of audience, most of which were brought leads to the hall of audience, most of which were brought from Italy; and the hall is hung with the portraits of se-veral of the Danith kings, and of the present royal samily, as large as the life. The exploits of some of these mo-marchs are also beautifully painted in different parts of the paiace, and the great actions of Christian IV. are repre-sented in rich sapethy;

In the church belonging to the castle, the eye is in a manner dazzled by the glittering of the gold, silver, and curious marble, with which it is enriched. The altar is of black marble, the front of the table is of silver and ebo-

of black marble, the front of the table is of filver and ebomy, and the pulpit is of the fame materials. From the gal-lery there is a view of the large pictures with which the pilatters between the windows are decorated. In the windows, and on the walls of this church, are the eleutcheons of the knights of the Daneborg order. The gallery leads to a spacious place behind the altar, where the royal throne is creeked; and on the walls, which are hung with crimfon velvet, are feen the arms of all the knights of the order of the elephant. The grand order in this apartment is eurioufly embellished with sculpture and gilding: formerly a sine organ of silver and ebony likewise stood liere. In the tower is a sine ring of bells. In thorr, all the apartments tower is a fine ring of bells. In thort, all the apartments of the castle are very magnificent, especially the knights ball-room, which is over the church, in the third story, and has also anoble organ. There is a fine garden behind the palace, and the neighbouring park interspersed with canals and fish ponds, and agreeably diversified with a mixture of grass-plats, and little hills and vallies, well stocked with sallow deer from England. In former reigns, the ceremony of the coronation was always performed here, but of late years it has been removed from hence to Copenhagen; and notwithstanding the magnificence of this pa-lace, we are told that it is seldom visited by the present so-

The town of Elfinore or Elfineur, is about eighteen miles from Copenhagen; it is fituated on the Sound, directly opposite to Elsingburg in Sweden, in fifty-fix degrees, eight minutes, north latitude, and thirteen degrees, twenty-three minutes, east longitude. Next to Copenhagen, this is the richest and most elegant town in Zea-It has two churches, in one of which, named St. land. It has two churches, in one of which, named St. Peter's, the ministers preach in the German language. Here is also a grammar-school, in which thirty-three poor scholars are educated and maintained gratis, a good hospital, and the king's custom-house, which is a fine edifice,

newly built ..

Elfinore liss a confiderable trade, and is famous both on account of its being the place by which the Swedes and Notwegians uffully pass into Denmark, and for the toll paid here by every thing that fails through the Sound. the north fide of the city stands the celebrated and important fortress of Cronenburg, which is built, in the most durable manner, with large blocks of hewn stone, is excellently well fortified, and adorned with feveral turrets, and a variety of feulpture.

and a variety of feulpiure.

About nine miles from Cremenburg, in latitude fiftyfive degrees, thirty-fix minutes. Rands the royal palace of
Friedenfburge in a delightful fination; which circumflance
induced Frederic IV. to build the class here; and as the
edifice was completed in 1720, when the treaty of peace
was concluded with Sweden, the king gave it this name,
the word 'frieden' fignifying peace. That prince, being
extremely fond of this place, often refided here, and there,
fore, to cander it as agreeable as possible, endeavoured to
fully by act the deficiencies of nature. The inner court
is a regular octagon, formed by feven wings, one flory high. fupply, by att the deficiencies of nature. The siner cours is a regular oftagon, formed by feven wings, one flory high, and the main building; which is opposite to the principal entrance. In the midst of the court is a fountain adorned with a marble statue of peace, made at Florence. The main building is in the form of a parallelogram, and covered with copper; and in the middle there is a specious light and elegant square hall. The other, apartments, in both stories, are nobly surnished. The garden is not very extensive, but well laid out, and embellished with statues, vases, and other ornaments. It is surrounded with a large wood, that affords plenty of game, and in which several vissas are cut. There is a delightful prospect from the palace; the eye commanding almost all the vissas at once, and at the end of them is an extensive lake, in which is a beautiful yacht. A fine orangery and an elegant church a beautiful yacht. A fine orangery and an elegant church are near the palace. Here is a menagery, flocked with a variety of beautiful tame and wild fowl, in the wood ad-

joining to the garden.

Four Danish, or fixteen English miles from Copenhagen, is the ancient city of Roschild, or Roskild; it is situated. gen, is the ancient city of Rofehild, or Rockild; it is fru-ated about a mile from the extremity of a bay called Ifc-fiord, and derives its name from Roe, the eleventh king of Denmark, who was its founder, and the word 'kilde,' which fignifies a fpring, there being feveral excellent fprings on the floot where it flands. This city flands in fifty, five degrees, thirty minutes, north latitude, and in twelve de-grees, fifteen minutes call longitude. It was a confider-able city many conjuga before Complicates. able city, many centuries before Copenhagen was built, and once contained twenty feven large churches and convents within its walls, and its firests extended to the feavents within its waits, and its irrects extended to the tex-hore. Monuments of many kings of Denmark, are in the great church here, this being their burying place. Here is one of Harold VI: king; of Denmark, England, and Norway, who was the founder of this church, here is also one of black marble, of the famous queen Margaret. The only vestige that it now retains of having been at any time the royal residence is, that from the most remote antiquity the kings of Denmark have been buried in this cathedral. In one of the chapels are two of the most magnificent me-numents in Europe. They were made in Italy, by order of Christian IV. and are erested to the memory of his fa-ther and grandfather, Christian III. and Frederic II. the beginning of the last century. Four other monuments, of two late Danish kings, have not long fince been placed here: they were executed by Windwelf, a celebrated Da-

nish statuary now living.

A large whetstone is likewise shewn here, which they fay was fent to queen Margaret by Albert, king of Sweden, in derifion: intimating thereby, that women should sharpen their needles inflead of aiming at war: but the wit, which is very poor, was well retorted by the queen; the returned him for answer, that she should apply it to the edges of her foldiers fwords; and she was as good as her word, for the overthrew him in a pitched battle, and made word, for the overturew film in a pulsate mattle, and made him prifoner; and after keeping him in confinement feven years, he was compelled to yield to very hard terms to obtain his release. A small royal palace was built in this town, in the year 1733, that has a communication with the church, hy means of a covered passage. In 1699, a convent was founded here for twenty one ledies of quality, and a priorefs. Each of these ladies has an annual penfion of eighty rixdollars, besides lodging and board. Christian V. also endowed this Protestant convent with five hundred rixdollars per annum.

There is a foundery for cannon about twenty miles from Roschild: it was begun by the late king Frederic V. and named Frederic's work, which the natives confider as the most considerable and astonithing in Europe; but, fays Mr. Wraxall, it does not impress a foreigner with

fuch ideas of its confequence.

Calinburg, or Kallundborg, in the prefecture of the fame name, is one of the most flourishing towns in Zegland, and has the best harbour in the island, except Co-penhagen. St. Mary's church, which has four losty spires, makes a good appearance. The inhabitants carry anno in Ju certaj coun roun mark of it. tello ploy per n have buile W vern S Kal fifty

on a confiderable trade, and a great quantity of malt is annually exported from hence. The paffage to Barhuus in Juland is squally performed in twelve hours; and a certain number of imacks fail twice a week to and from

certain number of smacks sail twice a week to and from both towns.

The little noted town of Sora is fituated in a pleasant country, in the presecture of the same name. It is fituated ten miles to the south of Roschild, where it is furnounded by three lakes of fresh water, and these are again almost encompassed with sine woods. This town is remarkable for the royal academy situated at the south end of it, to which belong a grand master, an inspector, procediors in all the sciences that relate to civil or political employments, a French master, a riding-master, with proper masters for sencing, dancing, and drawing. There is also a printing press set up in this academy. The students have their apartments in a large and commodious stone building.

building.

We shall now take a view of the small islands in the go-

vernment of Zeeland.

vernment of Zecland.

Samfo lies about thirty-eight miles to the north-west of Kalinburg, and nineteen from Abruse in Jutland, in the sifty-fixth degree north latitude. It is about sourteen miles long and five broad. It has several hills and eminences, and the soil is for the most part fertile, and particularly yields plenty of peas; whence most of the inhabitants are in good circumstances, and carry on a confiderable trade with their small craft. It confists of five actions and is forecomed with several small states.

derable trade with their imail craft. It connits or nve parifiles, and is furrounded with feveral small islands and sandy shoals, dangerous to shipping.

Mona, Moen, or Moon, as it is usually called in our maps, lies near the coast of the south point of Zeeland, in the straits called the Wolfsund; it is situated in fifty-five degrees, twenty one minutes, north latitude, and is nine-teen miles in length from eaft to weft, and about nine in breadth. The high chalky cliffs towards the Baltick may be feen at a great diffance at fea, one of which has a great refemblance to a throne, and is therefore commonly called the king's chair. Stones of an uncommon figure are in great plenty on this coast. The foil of the whole island is fertile, and yields great plenty of peas. It confirs of one prefecture, and contains seven rural parishes; and in the

middle of the island is the little town of Stege. Bornholm is fituated in the Baltick, in the fifty-fifth degree, fifteen minutes north latitude, and in the fifteenth degree, ten minutes east longitude, about feventy-fia miles from the extreme point of Zeeland, and extends about thirty-three miles in length from the north-west to fouth-east, and is mineteen in breadth. The foil is feriouth-eat, and is finiteen in breadth.

The ton is retitle, and produces all kinds of grain, particularly oats.

Here is allo good pafturage, and a great quantity of butter is exported from hence; it has also quarries of marble and hime-flone, and abounds with pit-coal. The coaft, from its dangerous rocks and shoals, is inaccessible almost on every fide: and great guns are planted where there might be any danger of an enemy's landing. At the peace of Roschild, in 1658, it was ceded to the Swedes; but the inhabitants, being treated with great feverity by their new mafters, took up arms the fame year, and, under the con-duct of Jens Koefod, recovered their liberty; after which they delivered up the island to the king of Denmark, who, pleafed with this proceeding, fent them a letter of thanks, and in a second letter promised to take them under his immediate protection; an engagement which the succeeding kings have consumed from time to time. Bornholm ing kings have confirmed from time to time. Bornholm has been ever fince an hereditary country, belonging to the kings of Denmark. In 1678, five thouland Swedish troops were stranded on this island, in their passage from Pomerania to Sweden; when, notwithstanding their being provided with Danith passes, those that escaped the fury of the waves were made pissoners of war. The inhabitants defend the island with their own militia, without any extend the passible provider was been provided and the position of the position of the passible provider with the passible provider and the passible provider with the passible provider and the passible provider with the passible provider and the passible provider was the passible provider was the passible provider was the passible passible provider was the passible passible provider was the passible pence to his Danilli majefty, and have a go ernor, deputy-governor, prefect, and other officers. The island confifts of one prefecture, which contains about a hundred villages, and fixteen ural churches.

The government of Funen includes Funen, Langeland, Faltler, Laaland, and other small islands. It has two governors, under one of whom are Funen and Langeland, and under the other are Faster and Lazland.

Funen, called by the Danes Feyin, lies between the Great and Little Belt. This island is about fifty miles in length, and forty-five in breadth. It receives its name from its being a fine country, the whole island being fertile, and agreeably diverfified with small verdant hills, some of which are covered with woods; whence most of the noble families of the kingdom relide there. Indeed, it is not

eafy to find, in any other place of such small extent, so many noblemens sents as there are in this siland. The foil yields such plentiful erops of grain, that the inhabitants may annually export above a hundred thousand barrels of tye, barley, oats; and peas, to Norway and Sweden; exclusive of their home consumption. It also produces a vast quantity of buck wheat, which is chiefly cultivated by the inhabitants. They employ a great deal of care in breeding bees, and make a considerable quantity of sine mead, which is exported to all parts of the kingdom. The apples that grow in this island are also much a simired, and it likewise produces plenty of hops and esculent herbs; but the searcity of wood obliges the inhabitant chiefly to use turf for fuel. There are here also great herds of black cattle, a good breed of horses, and abundance of hogs.

This island is divided into five prefectures, the principal places in which are the following; namely,

Alia illand is divided into the prefectures, the prince-pal places in which are the following; amely, Nyborg, or Niburg, a firong town on the Great Belt; and though not very large, has a commodious fituation. Here is a good port, and fome trade. It once was very Here is a good port, and fome trade. It once was very fittong, but now has nothing remaining but the ruins of its old fortifications and caftle. The ships that pass through the Great Belt are obliged to pay toll here, for which purpose a man of war is always stationed in the Belt. This city was first built in 1275. All that remains of the royal antient palace, where Chritian II. was born in 1481, (to the top of which an infant was carried up by a monkey, and brought down again without receiving any hurt) is only a large wing, with a stat tower, a little higher than the roof, and at present serves for a magazine and an arienal.

Odenfee, is a city of great antiquity, and the capital of the general government; it is pretty large and populous, but the greateft part of the city is old and decayed; fome of it is, however, new and well built. It is faid to have been erected before the Christian arra, and to derive its name from the idea Odan, and not as four have inspired from from the idol Odin, and not as fome have imagined from the emperor Otho I. who was never there. It is fituated in a fine plain, in the fifty-fifth degree twenty-five minutes north latitude, and in the tenth degree thirty minutes eaft longitude, on a river that yields a variety of fifth, and about a mile below the town runs into the gulf of Stege-frand. The city is about a mile and a half long, and half as broad. It has four churches, among which the cathedral as broad. It has four churches, among which the cathedral is the most remarkable. In the Grey Friars or Franciscan church, are interred king John, and Christiana his queen, with their fon Francis, and king Christian II. Near this church is a handsome hospital, built in the year 1540. The king's palace is neither large, commodious, nor elegant; it belog only erected as a lodging for Fredetick IV. in his occasional progress through Funen: but there that excellent prince died in 1730. In this city is a college, erected and liberally endowed by Christian IV. and also a large cashedral school. The provincial court is held every month in the great hall of this city. The bay lies a little above a mile from the town; the inhabitants carry on fo considerable a trade, as to employ thirty-four large ships, fo confiderable a trade, as to employ thirty-four large ships, besides above a hundred smaller vessels.

Langeland, which is fituated in the fifty-fifth degree twenty minutes north latitude, and in the tenth degree fifty four minutes east longitude, is thirty-three miles in length, but scarce five in breadth. This island is very rtile, and abounds with wheat, barley, and rye, of which the natives export great quantities. It is under the fame general governor as Funen: and contains only the royal resecture of Traneklar, which includes the north and south

districts, each confissing of seven churches or parishes. Faster lies at the distance of two leagues from Zeeland, in fifty-five degrees north latitude, and is about twenty-eight miles in length; but its breadth towards the north end does not exceed fourteen, and towards the fouthern extremity is but about four miles. It is very fertile, and may be called the orchard of Denmark, from its yielding abundance of fruit: all forts of game are likewife here in great plenty. This itland is commonly the dowry of the queens of Denmark, and confifts of one fingle prefecture, which contains two diffricts, in one of which are thirteen

rural churches, and in the other fifteen.

The chief town in this ifland is Nicopping, in Latin
Nicopis, or Neapolis Danica, fituated on the fraits called
Guldborgfund, in the forty-ninth degree fifty-fix minutes north latitude, and is a pretty large well-built town, one of the most antient in the kingdom; but is not in so flourishing a condition as formerly, when the queen dowager, and other royal personages, constantly refided here. On the land side it is fortified by a wall and ditch. This town

carries on a confiderable trade,

as built, and conthe feak are in ind, and re is also any time antiquity athedral. cent moby order II. the n placed

Laland, or Lolland, called by the Danes Lanland, in feparated from Faller, on the east, by the fireights called Guidborgfund, or, Gronefond, and, on, every other fide is encompassed by, the Great Belt, and the Baltick. This island in nipeteen miles diftant from the island of Femeras is theiry-three miles in length, and about fourset in threadth, and the most fertile spot in the Danish dominions. It produces plensy of grain, particularly very fine wheet, and excellent, peas: it is likewise famous for a kind of red fruit called manna, which in, its taste resembles sweet layers and grows on a sender stem; it also abounds with apples. ... It has some woods, but these are more frequent on the east than on the west-fide.

The capital of the island is Naskow which was anciently well fortified, but is now only encompassed with a wall. It is of a middle size, and handlomely built. The inhabitants are wealthy, and trade in the produce of their country, it having a pretty good harbour. The Jews are allowed the public exercise of their religion, and have a signagogue here: the town has also a grammar-school, and an hospital.

SECT. IV.

Containing an account of the civil ecclefiglical, and political . Hate of Denmark; also of the language, raligion, learning, constitution, government, and laws of the Danet.

HIS kingdom is divided into feven capital governments, each being under the direction of a governor ointed by the king, who is called flifts-ampts-man; and appointed by the king, who is called fifts-ampts-man; and this .fifts-ampts-man, or governor, is ufually a court-favourite. Each of these seven capital governments is again fubdivided into three fapaller jurifdictions, called ampts; and the governors of thefe ampts are called ampts-men. But fifts-ampts-men are cyually unanimous in oppreffing the poor, and obliging the court.... The Lutheran religion is established in Denmark; and

the kingdom is confidered as divided into fix dioceses, viz. one in Zeeland, one in Funen, and four in Jutland; but thefe are in fact no other than superintendencies, for they are without cathedrals, ecclessical courts, or temporalities. The principal business of these bishops, or superintendants, is to inspect the doctrines and morals of the intendants, is to inspect the doctrines and morals of the inferior clergy. The superintendants are abot distinguished from other ministers by their habit. The clerical dress confits of a black gown with short sleeves, a round cap with slat edges, and a large ruff about the neck. The revenue of the bishop or superintendant of Copenhagen, which is the richest benefice in the whole kingdom, amounts to no more than two thousand rix dollars, or about

five hundred and ten pounds fterling.

The clergy, in general, preach without notes, and fome of them lead very exemplary lives. They are wholly dependant on the government, and are obliged to add with the utmost submission and fervility to the court. But to make amends for being obliged to be obsequious to one class of people they take care to shew their authority, and dominees over the lower class of people. Their churches are kept cleaner, and are more embellished with ornaments, than those in England, but the decorations are usually inelegant, and often absurd, particularly respecting their flatues. They are extremely fond of sonorous music; hence their organitls entertain the people for a confiderable

times both before and after fervice.

In Denmark the antient form of government was the fame as that which the Goths and Vandals established in most, if not all parts of Europe whither they carried their conquests, and which in England is retained till this day, for the most part. Denmark therefore was, till within these eighty-five years, governed by a king, chosen within thete eighty-nev gars, governed by a king, choicin by the people of all fosts: even the boors had their voices; which king Waldemar III. who reigned in 1334, acknowledged in that memorable aniwer of his to the pope's nuncio, who pretended to a great power over him; Naturam habenus a Deo, regnum a fubditis, divities a permilbus, religionem a Remana ecelefiu, quam fi nobis invides, rinuncia-mus per præfentes; i. e. " Our being we have from God; mus per preferes; i. e. 'Our being we have from God; our kingdom from our subjects, our riches from our pa-rents, and our religion from the church of Rome; and, if you grudge it us, we renounce it by these presents."

The estates of the realm, being convened, were to elect

for their prince such a person as to them appeared hand-fome, valiant, just, merciful, assable, a maintainer of the laws, a lover of the people, prudent, and adorned with all other virtues fit for government, and requisite for the

great trult repoted in him? fet with a due the first of the framily of the preceding king. If within that any they thought it but a piece of jult greatfield to prefet film the first thought it but a piece of jult greatfield to prefet film thefice any other to this high dualty, and were pleased when they thought it but a piece of jult greatfield to prefet film thefice any other to this high dualty, and were pleased when they the rather than, any of the younger, if well because they had regard to priority of birth, when all other virtues were equal, as because the greatfield of his periodial effate might put him above the reach of temptations to be coverous or dithonest, and enable him, in foine degree, to support the digarity of the oface.

If, after fuch a choice, they found the nicely a mindren, and that they had advanced a crust, vicious, tyrannical coverous, or wasteful perion, they frequently depoted him, often times banished, sometimes deftroyed him, and this either formally, by making him answer before the representative body of the people; or if, by ill practices, fuch

either formally, by making him answer before the repre-fentative body of the people; or if, by ill practices, fuch as making of parties, levying of foldiers, contracting of alliances to support himself in opposition to the people's rights, he was grown too poverful to be legally contended with, they dispatch him, without more exeminity, the best way, they could, and elected prefently a better man in his fiead; sometimes the next-of kin to him; sometimes the values was they had exosted himself 6, for the contents the valiant man that had exposed himself for far as to undertake the expedition, or the killing of the tyrant; at other times, a private person of good reputation, who possibly least dreamt of such an advancement, became the object of

their choice.

The frequent meeting of the fixets was a fundamental part of the conditution. In those meetings all masters relating to good government were translated, good have were enacted, all affairs belonging to pecke or war, alliances, disposal of great offices, contracts of marriages for royal families, &c. were debated. The impoling of taxes, or demanding of benevolences, was purely accidental, no conflant tribute being ever paid, nor any money levide on the people, unless either to maintain a necessary war, with the advice and confent of the nation, or now and then he was of free offit, to help to raife a daughter's portion. by way of free gift, to help to raile a daughter's portionable king's revenue, at that time, confifting only in the rents of his lands and demences, in his herd of cattle, for refts, fervices of tenants in manuring and cultivating his grounds, acc. (cufform upon merchandizes being an im-position of late crept into this part of the world). So that he lived, like one of our modern noblemen, upon the re-

me lives, are one of our mosern nonemen, upon the re-wenues of his own effect, and are not through the fwest of his subjects brows, as the modern practice is. The king's business was, to see a due and impartial ad-ministration of justice executed according to the laws; may, often to fit and do it himself; to be watchful and vigilant for the welfare of his subjects; to command in person

for the welfare of his subjects; to command in person their armies in time of war; to encourage religion, arm, and learning: and it was his interest, as well as his duty, to keep fair with the nobility and gentry, and to be careful of the plenty and prosperity of his people.

Such was the antient form of government in this kingdom; which coatinued, with little variation, excepting that the power of the nobles increased too much, till the year 1660, when at one instant the whole face of affairs was changed, the crown was made hereditary, and the king absolute. abfolute.

This remarkable revolution was accomplished in the following manner: The whole nation, after the peace of Sweden, was in a most calamitous fituation, for the treafury was so much exhausted, that when the army was to have been dilbanded, there was no money to pay off the troops; hence the foldery became insolent and licentious. At the same time the nobles were proud and tyrannical: At the large time the induce were proud and tyranness; the clergy discontented, from their want of importance, and the direspect with which they were treated; and the commonalty grew quite desperate, by reason of the heavy taxes with which, on account of the late war, they had

been oppressed. The fistes, at this critical juncture, affembled to deliberate on the grievances of the nation, when it was proposed to the commons, that an equal tax thould be laid upon all persons indiscriminately, and without diffinalion, in an exact proportion to their respective circumstances. In an exact proportion to their respective circumfances. The nobles, however, firenuously pleaded their privileges, which, they ascrited, exempted them stom paying any kind of taxes; and the commons as strenuously contended, that as the nobles ingrossed and enjoyed the greatest part of the lands, wealth, honours, see, in the kingdom, it was more particularly incumbent on them to bear their share of the common burden, and contribute to the greated strength of the common burden, and contribute to the greated defence.

to the general defence.

The debates hereupen grew warm, and the absorbed became violent; such party conceived an implacable and mofey signific the author, and where indices of all were equally overheard; after the designed of this fermant, a mobianian called Guto Crang flood up, and his erranford of rage told the consideral, that they assiste underflood the prisilegue of the pobility, who were always a swentyred from fruck importion, nor the condition of themfolves, who were no other than their flower. Their degrading was prefions irritating the tomusons beyord all degree of fore bearance, Nanfon, their flower, flarwed up and, fired with indignation, flower that the nobility flowed report their having confidered the commons say while and flaves. The commons, or clergy and burghers, illumidately broke up the affembly, and marchéd under the suffices of their leaders to the brewer's hall; and h. a few hours refolved to make the king a prefent of an shfolute power, and to render the crown hereditary in his family, so as that it might descend even to senales, in default of male beirs, which resolution they accordingly put in execution the matter, yet they were also obliged to comply; and in three days time the alteration was completed; so that the kings have been ever fluor despotic and arbitrary; not the leaft thadow of liberty remaining to the subject.

Since this event took place, all meetings of the chates in parlament are entirely abolished; nay, the very name of effects and liberty is quite frequent, as if there had never been any such thing; the very first and principal article in the Danish law being, as That the king has the privilege referred to himself to explain the kay nay, to alter and change it as he shall think proper. Any confiderate person may easily gues, the consequences of this, which are, frequent and particles and arbitrary taxes, and commonly very excessive ones, even in clauses of peace, little regard being had to the locations of them; so that, favouriter are concerned; with many of the kingdom, is stillen those f

The kinge of Denmark from this memorable period have united in their persons, all the rights of the sovereign power; but they are obliged to delegate some part of the executive power to their confidential subjects, as they are not able to exercise the whole themselves.

Their language, like that of Nayway, is a corruption of the Teuronic, or rather, both the former are corrupted dialects of the latter; the pronunciation is, however, harth, and the tone drawling and difagreeable. Befides, many Dutch, German, and French words, have been introduced; and the better fort of people are fond of speak.

troduced; and the better fort of people are fond of speaking the latter language fluently and accurately.

Learning is at a very low ebb in Denmark, not having
yet triumphed over barberism; so that taste and polite
literature are scarcely known. This country, it is true,
hath produced some two persons admirably eminent in the
mathematical sciences, and the art of medicine, such the metic scheduling the beginning of a country. Tycho Brahe, Borrichius, Bartholines, &c. but the me-rit of thefe is to be confidered as the effulgence of a comet, chillenging the greater admiration, because to feldom feen. The funall progress of the Danes in the feiences, however, appears rather to refult from a defective conflitution, and appears rather to fether than from any want of natural abilities in the people. A learned traveller, who lately visited Denmark, observes, that the clergy and lawyers, visited Denmark, observes, that the clergy and lawyers, as they are entirely dependant upon the court, and the year lords of the kingdom, are the most fubservent reactures imaginable: they fill up their respective places in the scale of slavery; but they fill them as so many epiners, or rather as so many machines that are moved at the will of others. The situation of several very sensible and learned men among the clergy and lawyers of this kingdom is truly pitiable; for certainly a man who knows his dury well, and, is prevented from Joing it, has a very diffequence that to go through; and it is very difficult to define the characters of those men who have no will of their own. For Denmark and Norway, the supreme court of judica-

ture is its done the plot cover states of Countries in, this is being preficient. The prisonal of Bost in it this Citation, preficient of the countries of the countries of the countries of the countries. The not set of the countries of the coun

his will be probledings in the tourie we definitionly, that a full may be carried through all of relies, and finally decided, in thiresen usetuch; and every man, if he chules it, may plead his own using.

Here are three other owner, a benefits are to the tupremateour of judicature, at which the king profide; thefe are the hand-flag, or provincial cour; the herredsfounds, or dirick court; and the byfoglide or them court. Appeals lie from each of these courts to the others according to superiority; and the final appeals to the fupreme court, when the king, as the altimate legislates, gives the utilized decision.

The king as the latimate legislates, gives the utilized decision.

decision.

The king appoints the judges, which are removeable at pleafure; they are junishable for mislemeanors, that is, if the monarch shinks proper to deem their actions such and thus being royally condemned, are obliged to make reparation to the injured party. Their falaries are inconderable, being gain from the king's treasury, from sines, and from gratuities where serves in passed. There is likewise an exchaquer soure in Copenhagen, to try canses relative to the revenue; and a commercial, to try all differences respecting trade. The chancellery executes all manner of business respecting trade. The chancellery executes and the admiralty court manages all marine disputes.

In Denmark, the police is very strick: hence highway robberies, burgaries, coining, clipping, see are erimes fearcely ever heard of 9 and to speak against the government to strongly prohibited, that none dare wag their tongues licentrously in positical masters. Murder and mansleughter are, however, common 1 and the punishment of the

licentously in political matters. Murder and manflaughter are, however, common; and the punishment of the criminal is beheading, which is performed, with great dexertily by the public executioners, who, though universally defpifed, is usually rich, as he is not only well paid to desprive a culprit of his life, but is the general contractor to empty all the jakes, and remove from houses, stables, streets, &c. all kinds of filth, and, in particular, dead cats, dogs, &c. which no other Dane will touch upon any account whatever. There is a master of the police in Copenhages, who superindisting the whole city at midnight, that a perfor may walk through the whole city at midnight, in perfect fafety. To prevent sires, the chimney sweepers are bound to keep a register of all the chimnies they sweep, that the person may be punished for his avarce, or neglect, on conviction, who is the occasion of an accident from a foul-vent; &c. foul-vent, &c.

foul-vent; &c.

In this kingdom the spothetaries are under excellent regulations, only two are allowed in Copenhagen, and one in all other towns of importance. They are licensed by the college of physicians, and confirmed by the king; and are obliged to keep an exact register of the drugs they fell, to whom they are fold, and by whom prescribed.

The Danith laws are contained in so perspiceous and short a code, as to confif only of one quarto volunte, which is written in the language of the country, and divided into its books, the contents of which are as follow: a. On the procedure of the counts of justice. a. Ecclesiatical law, 3. Office and honorary law. 4. Maritime law. 5. Property, law. 6, Criminal law.

the transfer SECT. V.

Treating of the trede, revenue, naval and land forces, &c. of Donmark; also of the persons, babits, churacters, customs, manners, &c. of the Dancs.

TAHIS kingdom, being extremely well fituated for ecommerce, might be easily rendered rich and flourithing; but, by reason of the many exactions and duties it is subject to; is at present one of the most indigent and distressed states of Europe; for where agriculture and internal trade are cramped, foreign commerce can never flourish. When a farmer, in Denmank or Holltien, happens to be an industrious man, and is situated upon a poor farm, which he is, by his great diligence and industry, endeavouring to cultivate and improve; as, soon as he has performed the laborious task, and expects to reap the profits of his toil, his lord, under pretence of, taking it into his own liands, removes him from that re another of his

poor farms a end expects that he should perform the fance laborious task there, withous any office encolaiment than what, he shall think, proper to give him. And it is the control to be the sound of the consording corridaria to le this country, the commert'il consording corridaria jive cattle, heters, and grain from form form form the previous I. Their money he reckoned in ris-dollars and sivers; the difficulties for thillings and far-pence each; the latter rither more than an English penny.

An East India company was established in Demmata in the year 1612, and a settement made at Transjuber, on the Cotomende cash to but the East India trade; thategore the grain of the test in the set of the se

the picket reign.

The king's revenue arties from crown lands, taxes and duties, and these are extremely heavy. The landholders pay dearly to the fovereign, who is absolute, for the privilege of holding their lands, for the implement and liberty of cultivating them, and for every necessary article of life. All perfons, not servants (the clergy excepted) pay eight shillings anneally, as a capitation tax for themselves, the same for their wives, and the same for all their thinks the same for their wives, and the same for all their thinks.

felves, the same for their wives, and the same for all their children who exceed twelve years of age. The clergy only are exempted, in confideration of the trouble they take in making out lifts every year of all taxable persons within their respective parishes. Here is likewise a tax of sour thillings spon every stable where borgs are kept.

There are some sew exemptions from the general mode of taxation; but the person so exempted pays a particular sta, levied in a peculiar manner. Those domestics, who serve the nobility, are thus taxed, annually: stewards and housekeepers, sour shillings; southeast of the serve the nobility, are thus taxed, annually: stewards and housekeepers, sour shillings, shootness, two shillings, and their wives two, if not hired tervants. But one of the most confiderable articles in the revenue of Densark, is the money raised by a doty or toll paid by all. mark, is the money raifed by a doty or toll paid by all thip which pas through the Sound into the Baltick. The Sound is a narrow first between Schomen and the island of Zeeland. On the Danish fide stands the town of Elfineur and the caftle of Cronenburg: and on the Swedish fide the town of Helfinghurg. Between those pass all the thips that trade to the Baltick. But though the Danes by impa that treet to the Danies. But though the Danie by the treaty of peace, have expressly retained their title to it, and receive toll from all flips that pass, except those of the Swedes, yet they do not effects the security of that title fo firm as they could with, for as they are not mafters of the land to the title for the security of that of the land on both fides, they may have the right, but not the power, to affert it upon occasion; and ferm only to enjoy it according to their good behaviour; their stronger

neighbours, the Swedes, being able to make use of the first opportunity given them to their prejudice.

As this toll is very considerable, and has occasioned many disputes, we thought it might not be amis to set down in this place an accurate account of the original and nature of it. It was at first laid by the consent of the traders into the Baltick, who were willing to allow a small matter for each thip that passed, towards the maintaining of lights on certain places of that coal, for the better direction of failors in dark nights: hereupon this paffage of the Sound became the most practifed; that this passage of the Sound became the most practiced, that other of the Great Belt being in a little time quite neglected, as well because of the great conveniency of those lights of the shipping that passed in and out of the East sea, as because of an agreement made, that no ship should pass the other way, to the end that all might pay their stars; it being unreasonable that sale ships should have the advantage of sthose lights in dark or storay winter nights, who avoided paying towards the maintaining of

lights could nee have been maintained by it cand the Danes were not willing to be as the charge blety for the fish and benefit of their ownerstaling, this is because they were mafters of, fo few, at made it nee worth their while; the Lubeckers, Dantzicken, and merchants of other haster downs, being the greatest trades at that time in the northern parts of Europe; by which, they arrived to agrees bright of power and riches:

Anter parts of Europe; by which, they arrived to agrees bright of power and riches; and the street bulk of the flaips belonging to fo many different nations, the Danes began in process of time to grow arbitrary, and exacted finalier or greater furns, according to the firength or weakness of those steps had to deal with, or according to their friendship or discontent with those princes or states to whom the several ships belonged. Therefore the emperic Charles W: to afterthin this toll, concluded a treaty with the king of Denmark; which was signed at Spire on the Rhine, and was in behalf of his tablests of the Netherlands, who had a great traffic in the Haltick, and agreed, that as a toll-custom in the Sound avery ship, of two hundred tons and onder, should pay two rose-nobles at its entrance into, or return from the Baltick; and every ship of two hundred tons and onder, should pay two rose-nobles at its entrance into, or return from the Baltick; and every ship of two hundred tons, three tree-nobles. A rose-noble is worth about cashtene stillings a skelling. at its entrance into, or return from the Baltick; and every flip shows two hundred tons, three tree-noises. A role-noble is worth about eighteen faillings flerling. This agreement remained in forpatill flesh time as the United Provinces shook off the Spanish, yoke; and then the Danes, taking an advantage of those wars, raifed their toll to an extravagant height, the troublefome, times not affording the Dutch leifure to mind the redressing of such a mischief. However, the toll is at prefeto greatly reduced, and much more reasonable; and if the principal maritime powers thought fit to dispute the magner, they certainly would have no occasion to pay it all. About the year 1640, this toll produced two hundred and forty thousand rize-dollars per annum; but fince 1645, it has not yielded above one hundred and niney thousand; fome years not effect either thousand; in 1691, it did not extend to full seventy thousand; and to much lefs fince that time.

that time.

Of all the Danish taxes, that upon marriage is the most, impolitic, and more particularly as the country greatly wants population. All people of rank, who have public employments, pay a sum equivalent to ten pounds sterling for the privilege of being married; people of rank, who have no public employment, pay at the rate of four pounds sterling; clergymen, citizens, free farmers, and the stewards of the nobility, pay fixteen shillings; mechanics eight shillings; and sevants and labourers, sour chanics eight shillings; and sevants and labourers, four shillings; seamen, foldiers and hubandmen, are exempted from this tax, and for a very good reason, which is, that they are totally unable to pay it.

Another very heavy tax is, an exemption subsidy.

they are totally unable to pay it.

Another very heavy tax is, an exemption fubfidy, which, though exorbitant and oppreffive, is chearfully paid by all housekeepers who can raise the money, because by the payment they are exempted from having foldiers quertered on them. This tax is rated by the civil magistrates, according to the fize, fituation, rent, &c. of the house. Besides the taxes to government, two more are paid by all citizens and burghers, for the support of their paid by an eletzens and nurgeers, for their respective cities and towns, viz. a capitation-tax, and a ground-rent tax; and independent of these, here is a heavy stamp-duty, and taxes upon patents, commissions, a titulary tax paid by the nominal nobility, acc.

From these various taxes, duties, imports, and subsidies, the whole revenue of Denmark at present amounts to the

annual income of one million, two hundred thouland pounds, and this is the utmost that government can pof-fibly draw from the people, without draining the kingdom of the little money that remains in circulation; for the Danes are, perhaps, the most heavily taxed of any people in Europe, though they are the least capable of paying such oppressive levice.

opprenive levier.

Most of the regular troops in Denmark are foreigners, and more particularly, Germans. The cavalry and dragoons are well-mounted, and confist of eleven regiments and each regiment in four squadrons, including the body guards: These regiments are thus quartered, viz. three in Zeeland, one in Funen, three in Jutland, and one in Holstein. The infantry is composed of fiateen re-When the regiments are complete, each confirts of two battalions, and each battalion confirts of fix companies of

Frederick IV. inflituted a marine scademy for the inflituction of young cadets. Appointments were made for fifty cadets to be trained up to a thorwigh knowledge of navil affairs, and perficely raight navigation; gunnery, drawing, fencing, history, geography, geometry, and feveral other branches of the mathematics, &c. In order to join practice to theory, they were annually to make a veyage in a frigate, and fucceffively to perform the fervices of common featmen, pilots, and officers. But this noble inflitution is now totally neglected, and the money appointed to fopport it is funk into venal pockets; fo that the Danes, in case of a rapture with any naval power, would have a great difficulty to find proper persons to command their ships of war, except from the few officers among them, bred in the English and French fervices. There are computed to be about two million, one hundred thoofsand subjects in the various parts of the Danish dominions, the inhabitants of which may be diffinguished into five classes, viz. 1. The nobility, who have privileged fiefs in the kingdom. 2. Theritular nobility 3. Clergy, lawyers, and students. 4. Merchants and citizens. 5. Seamen, farmers, and labouers.

There are very few families of the first class, or antjent nobility, now exciting; so that most of the families, who

nobility, now existing; so that most of the families, who are now in possession of the privileged siefs, have been are now in policinion of the privileged term, have been ennobled fince the revolution in 1660, and most of them very lately. They value themselves very much upon their titles and privileges, and are uncommonly fond of pageantry, pomp, and them. They are proud of French supperies, and imitate all the blemishes, but none of the good qualities of that nation. The ladies in general are finished coquettes, and in the practice of that art seem to vie with the most skilful semales of London and Paris.

A great number of the fecond class, or titular nobility, are foreigness, and in particular Germans, who generally come hither very poor, but usually acquire wealth by fervilely attending the court, and falling into all the fehrmes

of the favourite or minister.

The third class, being dependant on, are obliged to be subservient to the court, and submissive to the minister, &c.

The sourth class are conceited and haughty, but at the

fame time timid, and fervile to superiors.

The fifth class, who are the seamen, would be much more alert in their business, if they were better used; and would ack with greater fpirit and courage, if they were not familiarized to fear, and trained from their births to the most abject flivery. The farmers, as we hinted above, are perfect vaffals, and by not being permitted to have any

esse handered cosh. The artillary confight of three regiments, ease of which is findeed in Demmark, sneshes in Nouvey, and a third in Biothem. The copy of engineers is deviced some shown, each of shift contribute wanty of the contribute of the Demmark, sneshes in Nouvey, and a third in Biothem. The copy of engineers is deviced since showness, each of shift contribute wanty of the contribute of the Demits forces, their numbers are no follown to the Demits forces, their numbers are no follown to the Demits forces, their numbers are no follown to the Demmark amongstee forty, thoughod. And white regime to the militia, every perform whethality is that the requirement of the man, and pay half the appeare of a man towards a corps-de-referve, to be embodied and called out only upon extraordinary occasions.

The navy belonging to the Dance confints of thirty flips of the line, and about fixteen frigures is but thefe are generally kept in fuch bad repair, that is would be found difficult, upon an emergency, to fit out wenty flips capable of putting to fis. To man this fleet, there are two orders of features, in fact, and the returned, in times of peace, by a triting annual flipend, and being excessed from the payment of certain four the returned of the composed of four divisions, each that ing a chief and ten companies of our divisions, each that ing a chief and ten companies of our divisions, each that ing a chief and ten companies of four divisions, each that ing a chief and ten companies of four divisions, each that ing a chief and ten companies of four divisions, each that ing a chief and ten companies of four divisions, each that ing a chief and ten companies of four divisions, each that ing a chief and ten companies of four divisions, each that ing a chief and ten companies of four divisions, each that ing a chief and ten companies of four divisions, each that ing a chief and ten companies of four divisions, each that in the confidence of the composed of four divisions, each that in the confidence of the compose of by the number or quality of the acres of land, but by the fleck of boors; who are reckoned a parcel of the freehold,

fleck of boors; who are reckoned a parcet of the freehold, in the fame manner as the timber upon it.

The Danes are well-fhaped and ftrong built, exceeding fair, both men and women, but have Dutch fhapes and a very bad mien; their hair ufually yellow, as is observed, of most northern nations, while the hair of the foutlern people is generally black. The ladies, that are not expected to the weather, have excellent complexious, and make a continue but they ceeks to to the weather, have excellent complexions, and make a very agreeable figure in a fitting posture; but they cease to charm when they put themselves, in motion, and indeed it is difficult to know whether they move at all for some time, if they are at a little, distance from us. They are as corpulent and ill-shaped as the Dutch, and want a little of the activity of the French. Both seves take great care to drefs and curl their fair locks, and imitate the southern, nations in their labits, except the lower class of people, and the caplanders, who wrap themselves in furs or wool in winter from head to foot. Their heavy bodies feem to affect their minds, to both which their excess in eating and drinking may contribute, and they are feldom much improved by learning. On the other hand, they appear to be good-humoured, hospitable people, and their courage, is feldom called in question.

At funerals, as well as marriages, they feaft and make merry. The nobility pique themselves upon having pom-pous burisls and monuments for their dead. Most gen-tlemen keep very plentiful tables, and drink chiefly Rhentlemen keep very plentiful tables, and drink chiefly Khenifh wine or brandy. Upon an invitation, the guefts have
each a glafs of brandy offerd, or rather forced upon them,
as foon as they come in; and at dinner-time, whenever,
the mafter of the house drinks a glafs of wine, every one at
the table does the like. The ladies, as well as gentlemen
take off their glaffes at every health drank at dinner; but
then their glaffes are finaler, and they retire before the
men begin their indelicate toafts.

The criminal directions of the for records are being draws.

The principal diversions of these people are, being drawn in fledges upon the ice, during winter, and running at the goofe on Shrove-Tuefday. The king annually partakes of the pattime of flag-hunting, during which diversion he lays affect the trappings of royalty, and-mingles, as an equal, with his nobles and attendants; even the common equal, with his nobles and attendant i even the common people are indulged with very extraordinary freedoms at this time. When the hunting is over, about fix in the evening the hunting affizes are held in the great court before the palace. 'There the flag, is cut unwith great ceremony by the huntimen, who are cloathed in red, and have

hunting horns about their faches, while the Brunds attend with the most characrous impatterns. Proclamation is also made, that if any person has, that day, transfressed the laws of hunting, he should be leastedately secused. Some individual is always selected for this purpose, tried, and found gulty. Then he is led by two gentleasmen, towards the flag, where he first kneets down between the horns he is afterwards obliged to raise up his posteriors, on which the king himself, with a large wand, insidia's a certain namber of striges, to the insinite diversion of the queen, ladles, and other spectators; during which the hounds open, and the huntimen blowdells horns, as if in concert, to proclaim the king's justice. The criminal having undergone this ludicrous chastisement, tises up, and makes a prosequent obeliance, and then the hounds are permitted to regale upon the stag.

Another royal diversion is swan-hunting, which the rourt enjoys in a small issue near Copenhagen, where those hirds breed is great numbers. Before the young ones are sufficiently fleeting to take their slight, the king, queen, courtiers, ste, set out for this island is a number of pinaneces, inclose the haunt of the swans; and with sowling-pieces, destroy them by thousands: the feathers and down belong to the king, but the set should be a man of with sown belong to the king, but the set in winter, for their diversion, as well as on journeys. If a gentleman obtains a warrant from court for horses or carriages, the farmers of every province are obliged to furnish him with them, as they are for the retinue of the court when the king removes. They have insupon the roads; but there, as in Holland, they make little cabins, like those in sing removes. They have insupon the roads; but there, as in Holland, they make little cabins, like those in sing removes. their weddings and burists.

The Danes are exceffively fond of titles and diffinctions, which are partly annexed to military, civil, and excleditional employments, and partly nominal. The various employments give a kind of dignity, during life, to those who hold them; and the nature of the employ fixes the rank between those who are in the fame train, but it cannot declared the second of the manufactors. cide the precedency between an officer, a magistrate, and an ecclefiaftic; and therefore this is regulated by an ordian ecclefiaftic; and therefore this is regulated by an ordinance for the etiquette or rank. Those who have a certain rank by their employments, often obtain, after some time, titles superior to their respective functions. These titles are sometimes likewise imaginary; as thus: when a person has the title of counsellor of state, of justice, or of snances, it is not to be concluded from thence, that he has necessarily any part of the government of the state of justice, or of the public revenue, except the word " atual" is added to his character.

The king of Denmark has some hundred lords of the bed chamber, who pay about ten pounds sterling yearly for wearing a golden key, which gives them a considerable rank; and yet there are not ten paid for their attendance. at court.

To the coart belong two ancient orders, of knighthood, viz. that of the Elephant, and that of Daneburg. The badge of the former, which is the most honourable, is an elephant furmounted with a castle fet with diamonds, and sufpended to a sky-coloured ribbon, like the Geotge in England. This order was instituted by Christian I. at his fon's wedding. It is conferred only on persons of the his fen's wedding. It is conferred only on persons of the highest quality and the number of companions amount so thirty, besides the sovereign. The order of Daneburg, though left honourable, is much energy antient; for there he seigin of it is loft in fable; it is beflowed, as an honorary reward, upon the achieffs of infuter rank, its drignis being a will ribbon with red edges when very the left thoulder, from which is furpoused a final biamond tradit, and an embroideted fire on the honolf of the cont, furrounded with the motto; "a please of justicia;" by plety and inflice. Here is likewife a modern order of knighthood, called the order of St. Mailda, and infliented in hositar of the late unfortunate queen; but which, being now little regarded, in confequently not affected to or folicited.

S E. C Type VI, all remits mady via

11 1920/2 1 11 - 11 11 Comprising the antient and medien biftery of Denmark, and the kingdoms annexed to it.

THE inhabitants of these kingdoms appear to have been colonies of the antient Scythians, who over-trus all the northern and weltern parts of Europe. They were first known from their leadersted expedition into Italy during the contustitie of Cocilius Metelles and Papilina Corbo. At this time the liberties of Rosse were threatened by intestine divisions, till private feuds gave way to public consternation, on the Romans being informed that three thousand northern harbarians had made an irruption into the Romans territories. These ravigues had deligned to quit the intelment and unfertile regions in which they were bern, for a ference climate, and more fruitful country.

had defigned to quit the inclement and unfertile regions in which they were bern, for a ferener climate, and more fruitful country.

They first conquered all the little nations in their own vicioity, then subdued the Gauls, and at length prepared to attack Italy itsus. Upon this emergency, the senate disparched Papirus Corbo to defind the passage of the Alps. This general, after entering into a negociation with the northern investers, shamefully broke the truce, without any manner of provocation, and unespectedly attacked them in the night; but was fo twernly received, that he met with a repulle. This affair was greatly prejudical to the Romans, since it gave spirits to the Cimbri, as these northern jusopic were called, and engaged many to join them, who would otherwise have been neutral.

Having now entirely over true Gao, the Cimbri defined to pass the Pyrenes, and eshabilis themselves in Spain; but being repulsed by the people of that country, they sent an embally to Rome, to offer their military service to the Romans, on a proviso that they shall have a sufficient territory affigned them, from which they might procure their substitence. These proposals were rejected; which ogreatly energed the Cimbri, that they attacked the conful Silanus, and cut his whole army in pieces. This misfortune was sollowed by several others; for the Germans, entering into an alliance with the Cimbri, the Romans were defeated in three other battles, in one of which the Roman general, Scaurus, with his two sons, were taken perisoners, and above eighty thousand Romans slain. Roman general, Scaurus, with his two fons, were taken prifoners, and above eighty thousand Romans slain.

White affairs were in this calamitous fituation, the cele-

brated Marius was appointed to the command of the Roman army, when acting with more prudence and skill than any of his predecessors, he at length defeated the enemy in one of the most bloody battles that ever was fought, when above a hundred thousand of the northern barbarians were flain. Similar successes followed this, till the whole of these services people were either destroyed, taken captives. or obliged to retreat.

After this, we find little mention of these people, till a great person, named Woden, or Oden, is faid to have made himself sovereign of all the northern nations; and made himfelf fovereign of all the northern nations; and his abilities being equal to his eourage, he not only fubdued all around him as a general, and ruled the people as a king, but formed a new religion for them as prieft, and preferibed a code of laws as a legiflator. Hengift and Horfa, who first brought over the Saxons into England, derived their lineage from him; and most of the roysl and noble families of the northern parts of Europe, to this very day, pretend to trace their defcent from him. Yet historians do not take upon them to ascertain from whence this celebrated perfour came, or when he died. whence this celebrated person came, or when he died; they indeed say, that he lived about fixty years before the birth of Christ; and that he was the first to whom the titles of king of Denmark was given.

The descendants of Woden reigned after him in the

feveral northern nations, and at length revenged the misfortunes and militarriages of their ancestors upon the Ro-mans, by gradually weakening their empire, and at length overturned it. Commi tury, im welter when Pome They of th imme many In

The Danish chronicles mention eightesis kings, from Woden to Reguer, surnamed Logbreg, who began his reign anno domini 150, but they stream to with little ancer than their names, or at least with only such shales as, in this enlightened age, are too ridiculous and absurd for commemoration or recital.

This kingdom was greatly weakened, in the fifth century, by a prodigious number of people quitting it at that stime, to join the armies which effected the conquelt of the western empire; but it recovered about the eighth century, when we shad the Danes rise into importance, as a maritime people, and harras the coasts of Courland, Livonia, Ponnerania, Ireland, Scotland, France, and England. They even attacked the emperor Charlemagne, burnt his palace at Aix-la Chapelle, over-run Lower Saxony, Frischand, Holland, and Flanders; conquered the greatest part of the kingdom of France, obliging her kings to pay an immense tribute, ravaged Spain and Italy, and committed many other depredations.

In the year 832, the Danes landed it, Kent, and defeated

many other depredations.

In the year 832, the Danes landed it. Kent, and defeated king Egbert, remained there two years, plundering and ravaging the country; but in a fecond battle king Egbert was victorious, and drove them out of the island. The Danes landed in England again in the reign of Ethelred his fon, they landed in Suffolk, and murdered Edmund, king of the East Angles in his capital, now called St. Edmundsbury, that king being afterwards caionised for a martyr, because he was killed in the defence of his Christian subjects, by the heathenish Danes.

Guthram, or Godrum, king of Denmest who

the heathenin Danes.

Guthram, or Godrum, king of Denmark, who began
his reign about the year 872, invaded England, and fixed
colonies in feveral parts of it; Alfred, king of England,
fought feveral battles with him, and at length coming to a

counts feveral battles with him, and at length coming to a treaty, Guthram agreed to leave the kingdom, and before he embarked, embraced chriftianity; what other articles there were in this treaty history does not inform us; but as foon as the Danes were gone, Alfred put his subjects on building a fleet of ships to defend their coalis, which rey forn had occasion for, the Danes preparing for an her invasion. Alfred died in the year 900, having lought apwards of fifty battles with the Danes, by fea and land. The greatest part of the people were, at the abovementioned time, bredup to the fea from their childhood, and had no ideas of the dangers to which that element exposed them. When a prince had attained the age of eighteen or twenty years, he generally requested his failier to have fone finise equipped, by which he might attempt some great caploit, with his followers: this the failer from great caploit, with his followers: this the failer regarded as a mark of his rising courage, and of a great mind. A feet was armed immediately, of which the admiral, and all his officers and men, made reciprocal promites never to flect was armed immediately, or which the administration all his officers and men, made reciprocal promifes never to return, except loaded with foolis and laurels. If they had received any injury from a neighbouring nation, that nation was chosen for the first victim. Those whom they tion was chosen for the first victim. "Those whom they vanquished were generally put to death; sometimes indeed they contented themselves with making slaves of them; and often, likewise, by a fingular kind of generofity, or rather by a defire of figualizing themselves, if they sound themselves superior to the enemy which presented itelf against them, they ordered off a part of their sleet, that they might sight the enemy with equal force, despising the gaining an advantage with superior numbers, and regard g it as an infamous practice to surprise an enemy in the night. Their vessels were always well provided with arms; and their men were all taucht to swim. So there as there and their men were all taught to fwim, fo the as they generally fought near the shore, they were often in a fituation of fecuring themselves, although their vessels were

The manner in which their lands were divided in Denmark and in Norway, shews us, that the chief end of their government was, to have a great maritime force; every division, whether it was greater or less, took its name from the number of vessels that it could equip, and in some places their names are still in use. In the beginin lone pieces their names are turn in the. In the origin-ning of their maritime expeditions, their freets were not very confiderable; but when their princes had enriched themselves by plundering their neighbours, they came to have two or three hundred sail of thips of war, each ship carrying from one hundred to one hundred and twenty

men.

To a nation that is wholly addicted to plunder and rapine, civil laws and a police are of very little ufc. This was fluidly the cafe with Denmark, when their king, called the care of the throne in the year \$40. The few Gorman, came to the throne in the year \$40. The few useful regulations which had been left them by Woden and uthers were now laid afide; and the kingdom was divided

among two or three princes, who governed with a very limited power; and that confusion which we find in the history of Denmark to this time was occasioned by one historian writing the history of one prince, who reigned in this country; and another, the liftory of another prince, who reigned at the fame time. But Gorman, by uniting to his crown, all the provinces of Denmark, of which his ancestors had been disposessed, and being forced by the emperor to receive the christian religion into his dominions, gave this government again form form; and from hence we may the the origin of the civil government which for me wars esterwards existed in this state.

ment: which for means efferwards existed in this state. It is related, that in the year 900 there was a general massers of the Danes settled in England, which is still commengorated annually at Hocktide. Be this as it may, tertain it is that Swein and his son Canute, or Knew, conquered this kingdom about the year 1014, though several battles were fought with the Saxon kings Ethelred and his son Edmund Ironside, before the Danes could establish themselves here. Upon the death of Edmund Ironside, anno 1017, all the great men acknowledged Canute their king, swore allegiance to him, and renounced the two ons of Edmund, Edward and Edmund, who were banished in a Sweden, from whence they went into Hungary, where they resided many years. King Canute, in the mean time, obliged the English to raise him one hundred thousand pounds every year, with which he pald his forces, and maintained his court; and in the year 1016, he conquered the kingdom of Norway. In the sisteenstity year of his reign, anno 1021, he visited Rome, where he gave great part of the spoils he had conquered to that see, and, returning to England, died at Shaftsbury on the twelfth of November 1026, having divided his dominions between his three sons; to Harold he gave England; to Swein, Norway; and to Canute, Denmark. Harold died in 1040, leaving neither wise nor issue, and was succeeded by his brother Hardicanute, the third son of Canute, who died in 1042. This was the last of the Danish race in England.

In 1182, Canute VI. subdued Vandalia (the present Danish race in England.

In 1182, Canute VI. fubdued Vandalia (the prefent Pomerania and Mecklenberg) and took upon him the flylo of king of the Vanuals, which country continued fubject to the Danes twenty feven years. Livonia was

Pomerania and Mecklenberg) and took upon him the flyle of king of the Van-als, which country continued fubject to the Danes twenty feven years. Livonis was also conquered by this prince.

In 1202, Waldemar II, extended his dominions in Germany, and lived in great reputation in the beginning of his reign; but count Swerin committing the care of his territories, as well as his wife, during his absence in the Holy Land, to his majesty's protection, he debauched the count's wife; of which her husband being informed at his arrival, took the king prisoner by a stratagem, and made him pay forty-five thousand marks to obtain his liberty, after baving confined him three years. While the king was prisoner, Pomerania, Mecklenburg, Lubock, and Dantzick revolted, the Tutonick knight took Livonia from him, and Hossein and Stormaris were subdued by Adolph count of Scawenburg.

Olaus dying without filbe, anno 1387, queen Margaret his mother was elested queen of Denmark and Norway, who having associated her nephew Eric with her in the government, subdued the kingdom of Sweden, and it was enacted by the states, that these three kingdoms should be united for the sturet under one prince; and upon the death of queen Margaret, Eric became sole soverign of the whole; but being deposed on pretence of mal-administration, he retired into Pomerania, where he lived a private life the remainder of his days.

In the year 1439 was elected Christian earl of Oldenburgh, from whom the present royal family of Denmark is descended. He subdued the kingdom of Sweden, which had revolted, and the emperor Fredrick gave him the county of Holstein. This prince married his daughter Margaret to Janues III. king of Scorland, and gave him with her the siland of Orkney and Shetland, the last being a very valuable acquisition, as it affords the best herrings in these seas. The Dutch begin that slighery here every year at Midsummer, without afking leave of the British court, though they paid in the reign of Charles I. thirry thousand pounds annually for this p

Christian III. established the Lutheran religion in Denmark: he was fucceeded by his fon Frederick II. in 138, Christian IV. his fon being engaged in a war with 5 weden, in order to obtain peace, was compelled to yield up the province of Halland to the 5 wedes.

In the year 1660, Frederick III. his ion, was befieged in his capital city of Copenhagen by Charles tierfavus king of Sweden, who drew his artillery over the ice into the province of Zeeland; and if the Dutch had not come to Frederick's affidance, Gustavus would probably have made a conquest of that island; but though Frederick was unfortunate in his wars with foreigners, he raised his prerogative to that height, that he periocity subdued his ubjects, and from a limited elective monarchy, made himself an absolute prince, and established the succession of the crown in his family. In the same year, the peasants and lower class of people companied, they were not able to discharge the debts the public had contracted during the war, and therefore, currented the nobility and gentry, that as the profits of the lands were theirs, they would condefered to bear part of the butthen, the nobility and gentry, before this time, paying no taxes for their lands. To which they answered the commons with great insolence, told them that they were born in a state of fervitude, their daves and vassiles, and did not understand their duty; to which the commons made no reply, but retired from the assembly with the clergy, who adhered to them, and going jumediately to court, acquainted his majesty, that they were come to a resolution to make him an absolute monarch, and his throne hereditary. His majesty being before apprized of the 'design, had introduced an army into the town, in order to compels, if they refused into the town, in order to compel the upper house to concur in. this refolution of the commons, if they refused
their confent. The lords being acquainted with the fubflance of the address which the commons had made to the throne, and fensible that they were in no condition to difpute with the court and the commons, supported by the pute with the court and the commons, supported by the army, offered to make the crown hereditary, and entreated the conflictation in other respects might not be altered; but they were given to understand, that the king would be faitisfied with nothing left than their unanimous concurrence with the resolution taken by the clergy and commons, which they found themselves obliged to submit to, mous, which they found themselves obliged to submit to, and took the oaths to his majefty, acknowledging him the fupreme and only legislator. Thus was the constitution changed from a republic, with a nominal king at the head of it, into an absolute hereditary monarchy; not one of the nobility daring to oppose it; only Gerdorf, a popular member, said, he was confident, his majesty designed the happiness of his people, and not to govern them according to Turkish politics, wished his fucessfors might follow his example, and make use of this unlimited power only for the good of their subjects.

In 1670, Christian V, succeeded his father Frederick III. and being joint fovereign of Holstein and Sleswick with

and being joint fovereign of Holftein and Slefwick with his share in those provinces, or at least to oblige him to acknowledge his dependence on the crown of Denmark, treacherously invited him to an entertainment, where he treacheroully invited bim to an entertainment, where he made him prifoner, and fent detachments of his army, to take possession of such towns as belonged to the duke; with which the duke reproaching him, the king answered, he was always in the interest of Sweden, and never to be trusted; and unleas he would renounce his right to certain places, he would take possession of the whole country. He particularly demanded of him an order to the commander of Tonningen, the strongest fortress belonging to duke, to furrender it to his majefly's troops; which the duke confented to, apprehending the king would have taken his life if he had refused, and l'onningen was thereupon delivered up to the Danes: several other articles he was obliged to fign, that were very prejudicial to him; but the duke making his escape to Hamburgh, protested against the validity of all the acts he had been obliged to

Hereupon the king gave orders for demolithing Ton-ningen, and fequestered the duchy of Sleswick, causing both magifirates and people to fwear allegiance to him, declaring them absolved from their allegiance to the duke. He also caused all the duke's revenues to be brought into his own treasury, continued garrisons in his towns, and his own treatury, communed garrions in nit owns, and even in his palace of Gottorp; and not knowing how foon he might be compelled, by the duke's allies, to deliver up what he had fo unjurfy teized, he exacted contributions from the poor fubjects, to the value of many millions, whereby he filled his own treatury, and difabled the duke's febjects from giving him any affiliance.

The duke remained fill at Hamburgh, from whence he

the duke remained this at rangourgh, from wheree he fent his fon to the German princes, to implore their adiffiance. He applied also to the court of England (which was guarantee of the peace of the north) but to very little purpose, till Charles XI. king of Sweden, undertook his

cause in the year 1689, and was about to transport his army into Germany, for the redoration of the duke. But the Germany, for the redoration of the duke. But the German peinsen, together with the English and Dutch, who were now entered into a confederacy against France, being apprehensive that this might distorb the peace of the empire, and divert the troops from the French war, at length obliged the king of Dennark to restore the duke of Holstein his dominions, after he had been in possible on the transport of the duke of Holstein his dominions, after he had been in possible on the transport of the differences by the mediation of his territories.

Things remained in tolerable peace from the conclusion of the differences by the mediation of the confederates in 1689, to the year 1696; but Christian Albert, the lare duke of Holstein, dying about that time, and the king of Dehmark having son a deputation to his fan and successor duke Frederick, to renew the union between them, and to let him have a fight of the lare duke's will, that he might fee if there was any thing in it in favour of the

to let him have a light of the late duke's will, that he might fee if there was any thing in it in favour of the cluent prince, in relation to the ducal part of the duchy of Sletwick; the duke refused both the one and the other: alledging, that the treaty of Altena had not been observed, or judice done to the ducal house, particularly in reftoring the significant of Gottes-Gabre, in the island of Aroa. Its the significant of Aroa. the mean time, the guarantees of the treaty of Altena, feeing both fides inclined to a rupture, interpoled their good offices, and engaged them to hold conferences for composing their differences, which were accordingly held at Penemburg: but the duke continuing to introduce Swedish forces into Holftein, and build and enlarge his fortiferations during the time of the terror the horse of the terror. fortifications during the time of the treaty, the king of Denmark marched an army into the country, in the year 1697, and caused the new fortifications to be demolished a

1697, and caufed the new fortifications to be demolifhed a which the duke at that time, not finding himself in a condition to oppofe, thought fit to acquiefer in, till the death of the then king, which happened the 4th of September a699, when he was fueceeded by his fon Frederick IV.

The duke looked upon this as a fivorable opportunity to rebuild the fortifications which hal been defroyed, especially having married the king of Sweden's fifter, and heing assured of support from that crown: he began therefore to repair the demolifhed fortifications, as he infifted he had a right to do by the treaty of Altena, and introfore to repair the demolified fortifications, as he infitted he had a right to do by the treaty of Altena, and introduced into this country a confiderable number of Swedish troops, to prevent their being despolished again. The mediators and guarantees of the treaty of Altena, employed their good offices to prevent a repture, and proposed their good offices to prevent a repture, and proposed that both the Swedea and the Larnes should withdraw their troops out of Holke in, and that the fortifications should not be preceeded in till the matter was fettled by a treatylar the Dane being determined on a war both with Swedea. But the Dane being determined on a war both with Swe-But the Dane being determined on a war norm with owe-den and Holstein, and having entered into a confederacy both with Russa and Poland for that end, would not-hearken to any pacific measures, but, on the contrary, or-dered his general, the duke of Wirtemburg, to demolith Husum, Frederickstadt, and other places belonging to the duke of Holstein, which he foon after effected; and not content with raising such new fortifications as had been erected, invested Tonningen, in which general Bannier commanded with a garrifon of five thousand men.

The princes guarantees hereupon gave the king of Den-mark to understand, that fince he had rejected all their friendly proposals, they should no longer see the treaty of Altena broken or suffer the duke of Holstein to be disposfeffed of his country again, under the pretence of oppofing the building of forts which were already demolithed. The dake of Holtlein slfo published a manifesto, shewing the right he had, by the treaty of Alterna, to build fortifications in his dominions, and the injustice of the Danish invafion. And not only the German princes, but the Dutch joined their forces with the Swedes, in order to bring the Jonied their forces with the Swedes, in order to bring the Danes to reason; and, matching towards Tonningen, the Danith general thought fit to raise the fiege, withoutcoming to a battle. The English and Dutch also fent each of them a squadron into the Balvick, and joined the Swedish fleet, compelled the Danes to retire into the harbour of Copenhagen. In the mean time, the young king of Sweden landed with fifteen thousand horse and soot upon the island of Zec-land, about three miles to the southward of Elsinore, and was land, about three miles to the continuous or binnore, and was preparing to inwest Copenhagen; when the Dane finding himself overpowered, was glad to accept of such terms as the princes, guarantees, who, at this time held their conferences at Travendale, were pleased to prescribe to him.

It was agreed by this treaty, which was concluded the 18th of August, 1700, that the house of Holstein thould continue independent fovereigns in Holstein and Sleswick; and that the crown of Denmark should pay the duke of Holflein two bundred and fixty thousand crowns for the 1E U

damages they had done him. A stifunderstanding, however, happened between the two courts the year following; one part of the Chapter of Lubeck chaffing the brother of the duke of Holstein coadjutor and successor to their bishop, and the other chusing the king of Denmark's son.

The bishop dying, in 1795, the king of Denmark determined to make good his son's election to that bishoppic by store, and took several places belonging to Lubeck; but the court of Great Britain interpoling, the duke of Holstein's brother was afterwards confirmed in the possession of the bishoppic of Lubeck, in consideration of a subsidy granted by Great Britain to Denmark, for a body of Danish troops that were to join the allies against France, which they could not have had, if the war lad been revived at that time in the north! one article in this treaty heing, that the doke of Holstein should permit that body of Danes to pass through his territories, and join the confederates.

of Danes to pass through his territories, and join the confederates.

The duke of Holstein having being killed at the battle of Lissu in Poland, in 1702, and fucceeded by his son Charles Frederick (the late duke) then an infant of two years old, the duke of Holstein Eutin, brother to the late duke of Holstein Gottorp, and afterwards bishop of Luckek, was constituted regent of Holstein, during the minority of his nephew.

In the year 1709, Charles XII. being descated by the Russians at Pulsowa, Frederick king of Denmark immediately joined his former allies, the Czar and Augustus king of Poland, recalled the Danith troops which were in the emperor's service in Hungary, and quartered them in Holstein: he transported ten thousand men from Norway to Denmark, levied new troops at Hamburgh, and fatted out a strong squadron of men of war; and having assembled an army of eighteen or twenty thousand men, proclaimed a fast to implore a blessing upon his deligns. I he king of Denmark, also, on the 28th of November 1709, published a manifesto, to justify his intended enterprise, tetting forth, that the ambitious designs of the king of Sweden had, for several years past, occasioned great devastations in the king-doms of the north; and that he had received repeated instances of the animosity that prince entertained against him and his sabjects, as well by the opposition made to his interest, by the Swedish ministers in sorigin courts, as by several expressions in his own letters, and therefore thought himself obliged to prevent the impending danger, and not imprudently wait till the designs of the Swedes were ripe for execution. He complained also of the dedication of a book, wherein the king of Sweden is styled emperor of Scandinavia, of which Denmark and Norway are parts, and of the Swede granting passes to Foreign vessels on the Sound, whereby the revenue of Denmark was impaired.

Scandanavia, of which Denmark and Norway are parts, and of the Swedes granting paffes to foreign veificis on the Sound, whereby the revenue of Denmark was impaired.

These reasons induced the king to declare war against all the territories of Sweden, except those in Germany; and embarking fix thousand horse and dragoons, and twelve thousand foot, he made a descent, upon Schonen, landing at Helfinghurg the 12th of November 1709; but it being wingstripus he 12th of November 1709; but it ing at Helfinghurg the 12th of November 1709; but it being winter-time, he only took up his quarters in the country towns at first, and invited the people of Sweden to join him, waiting for a proper feason to enter upon action, which gave the Swedes time to put themselves it a posture of defence. About the middle of January, by the favour of a hard frost, the Danes advanced towards Christianstadt, where a battalion of Saxons, being in garrison, laid down their arms, and joined the Danes, whereby that town fell into their hands. They afterwards made by that town fell into their hands. They afterwards made themselves masters of Carelshaven, in the province of Bleking, and threatened Carelscroon, where the Swedish steet and magazines were laid up. At the same time a strong detachment extended themselves towards Holland on the western side of Schonen; and their forces receiving frequent supplies, the Danish army was considerably increased, and became very formidable; but the Swedish general, count Steinbock, having assembled eighteen or twenty thousand men, and marching towards Helsingburg, as if he intended to cut off the communication of the Danes with that place, they immediately abandoned all as if he intended to cut off the communication of the Danes with that place, they immediately abandoned all their conquests, quitting Carelshaven and Christianstadt, and retreated to Helfingburg, near which place the armies came to an engagement, and the Danes were entirely defeated; a day or two after they quitted Helfingburg, transporting the remainder of their troops to Denmark in the night, which, after their ill success, did not amount to above fix thousand or seven thousand men. And thus inglorioully ended the king of Denmark's expedition against Schonen, which the Swedes confidered as a just punish-ment for his pertificus breach of treaties.

The Danes having been disappointed in their enterprize

dpon Sc 1960.
Augultus and the C and aff upon S reduin Pomerania, deliroying the who duntr in a noof and the Swedish for these united power tested into Sti and, the isle of its and allowed a feeting in the still the neat y. joined the troops of king, and all upon 5 redule Pomerania, these united power retired into Su and, the isle of tragegi, and other plan is cearity. I king of Demans, while the Moscovins and the Sax blocked a trailfund, passed the Eibe, and entered the dutely of where the Swedish general not having a sufficient of troops to oppose him, the Dane took the town a taden, and made himself master of the whole come for their return, the Danes insulted the city of Habergh, threatening them with a bombardment, to awond he had the burner when the burners were compelled to raise them two hund and thirty thousand rix dollars. Count Steinbock, the Swedish general, found means afterwards, on the 22d of December, 1712, to engage the Danes lingly, when they Swedith general, sound means atterwards, on the 22d of December, 1712, to engage the Danes fingly, when they were separated from their allies near Wifmar 1 and having given them a great defear, purfued them into Hollein, selezed the magazines the Danes had laid rp there, and put the Danish Hollein under contribution; from hence he with the best contribution of the property of the marched to Pinenburgh, near Hamburgh, where he de-termined to burn the Danish city of Altena, not so much termined to burn the Danille city of Altena, not to much by way of retaliation; or revenige for the many Sweddh cities destroyed by the Danes, and their allies the Moscovites and Saxons, as he declared in a memorial, published on this occasion, 22 to deter them for the luture from committing the like barbarities.

The Danish, Saxon and Moscovite forces being now intend to the property of the pro

committing the like barbarities.

The Daulith, Sakon and Moscovite forces being now joined, to the number of fifty thousand ment, and marching towards count Steinbock, whose army did not consist of above fourteen or fifteen thousand, that general found himself under the necessity of retiring into the ducal Holdein, whither the allies followed him, and pressing him with all imaginable eagerness, he threw himself into Tonningen, and by that incans avoided them for that time, which the Dane afterwards made a pretence for fezzing the duke of Holstein's dominions, alledging, that the governor of Tonningen admirted general Steinbock into the place, by the direction of his master the duke of Holstein (who was not at that time above twelve years of age) this occurrence happening in February, 1712-12, but however that be, the consederates blocked up the city of Tonningen till May following, and the Swedes not being in a condition to fend general Steinbock any reinforcements or supplies, he was obliged to furrender himself, and his little army, constiting of nine thousand men, prisoners of surface, on condition of keeping their cloaths and baggage, and being exchanged or ransomed the first opportunity; and thus, for a little time, the war feemed to be at an end in Germany.

The next were the Moscowite invested Sterin when the

Germany. The next year the Moscovite invested Stetin; when the king of Prussia so managed the matter, that by the agreement of the Czar and the Swedish governor, the town was sequestered into the hands of his Prussian majesty, and agreed to be garrisoned by an equal number of Prussians and Holsteiners, but was to be reflored to the king of Sweden at the end of the war. In the latter end of November, 1714, the king of Sweden returning out of Turky, arrived at the city of Straslund, and sound a league was formed against him, to which the kings of Denmark, Prussia and Poland, and the king of Great-Britain, as elector of Hanover, were parties, the avowed design whereof was, to preserve the peace of Germany, which was proposed to be done by securing the sequestration of Stetin to the king of Prussia, and the possession of Stetin to the king of Prussia, and the possession of Bremen and Ferden, and whatever else the Dane had feized of the dominions of Sweden in Germany, to the Dane, and those to whom he should, or had assigned his interest in those conquests. This the king of Sweden thought highly unrealonable, viz. That he should not be permitted to recover those territories again, which had The next year the Moscovite invested Stetin , when the permitted to recover those territories again, which had

been furprized in his absence.

The kings of Prussia and England insisted, that the restoring the king of Sweden these territories, would embroil the north of Germany in a war, and joined in a confederacy against the distrassed king of Sweden, who had before, the Moscovite, the king of Poland, and the king of Deumark to contend with; and the king of Prussia, on the a8th of April, 1715, proclaimed war against Sweden, disarmed the regiment of Hossein, which was in Stein, entering upon that city as a conquest from Sweden, and holding it no longer in sequestration. The Danes and Prussians soon after assembled their forces to the number of fixty thousand men, and appeared before Strassung. ber of fixty thousand men, and appeared before Straisund, under the walls of which city the king of Sweden found himself obliged to retire, his army not confissing of more

than a fourth part of the enemy's number. In the month of July a treaty was let on foot between the king of Denimark and the court of Hanover, by which the king of Denimark find the court of Hanover, by which the king of Denimark find the court of Hanover, by which the king of Sweden, to the selector of Hanover, it a confideration of the cleftor's entering into the war admind Sweden, and edvancing a fem of money to his Danish majesty.

The confiderates before Straifund being joined by twenty-four thousand Russian and a body of Saxons, carried on the siege of that town with great vigour; but sinding that the place continually received fresh supplies and reinforcements from the island of Rusen, which lies overagainst it, they landed a great body of troops on the island, and, after a sharp dispote, in which the king of Sweden was present in person, made them elves masters of it, on the swententh of November. But the king of Sweden determined to defend the town to the last extremity; and it was a terrible winter's siege, the centines being frequently frozen to death at their posts; and the attacks were desparate, in one of which the confederates lost near a thoofand men; however, they at length prevailed by their numbers, and the king of Sweden, finding the town not tenable, retired in a light frigate, and arrived fastly in Sweden, giving the governor orders to capitalate, which he did the latter end of December, on very honourable terms; and both the town and the island of Rugen were put into the possession of the king of Denmark, and all the inhabitants of the Swedish Pomerania were obliged to take an oath of allegiance to him, except those of the city and district of Stettin, the islands of Uledom and Wollin, and the lands between the Oder and the river Pene, which were left in the hands of his Prussian majelly. The city of Wifmur, in the ducky of McKelenburgh, the only town which the Swedish for furrender; after which, the king of Denmark was left in possession of it; and thus ended the way in Germany. fpring, and obliged to furrendet; after which, the king of Denmark was left in possession of it; and thus ended the

Denmark was left in possession of it; and thus ended the war in Germany.

The Danes and Russians then made great preparations for invading the king of Sweden's dominions in Schonen. The Czar of Moscovy went in person for that purpose to Copenhagen, whither his generals led an army of thirty thousand horse and foot. The Danes also assembled between twenty and thirty thousand of their troops for this expedition, and had prepared near eight hundred vessels to transport them. But great part of the Danish steet being employed in Norway during the summer, to oppose an enterprise of the Swedes on that side, all these preparations came to nothing. The Czar of Moscovy upbraided the king of Denmark, that his sidet was not ready in time; and the Dane pretended to be very angry with the Russian monarch, that he would not make the descent in the latter end of the year; which the Czar observed was imprassicable. end of the year; which the Czar observed was impracticable, there being no forage to be found, and the king of Sweden being ready to receive them at the head of forty thousand veteran troops; and upon this the Dancs and Moscovites, vereran troops; and upon this the Danca and Molcovites, who had been fo long in a confederacy against Sweden, began to look very cool upon each other. The Danc drew up his forces under the cannon of Copenhagen, as if he had some jealously of his old ally, and the Czar soon after retorned with his troops to Germany; and it seems not only the Dane, but other German princes, began to be apprehensive that if this enterprize had succeeded, the Czar would have made himself master of Sweden, and have been apprehensive that it this enterprise in deceever, and have been a very formidable neighbour to many of them; which the Dane did not fufficiently confider when the scheme was first laid for the descent on Schonen; but heing now was first last for the detects on Schoolen; but being now pretty well convinced of his error, he chole rather to fit down with the vast expense he had been at for the invasion of Sweden, and let the affair entirely drop, than contribute any farther to the aggrandizing the Russian emperor, who was become too powe-ful already. The king of Denmark being now left almost alone to defend himself against Sweden, was threatened in his turn with an inva-fion of Zeeland by his Swedish majesty, which had cer-tainly been put in execution, lad it not been that king George I. being under some apprehensions that those pre-parations were intended against his British dominions, or parations were interacted against the solution dominions, or rather for the recovery of Btemen and Ferden, and thereupon fent a fquadron of men of war to the affidance of his
Danish majerby, which put an end to the king of Sweden's
intended enterprize against Zeeland. The following year,
1718, the Swedes marched two assists into Norway, one to the Northward, as high as Drontheim, and the other, led by the king in person, towards Christiana, laying the whole country under contribution, there being no army in Norway firong enough to uppose them; but the king of Sweden, laying slee to Fredetickshal, wat unfortunately shot in the trenches, and the Danes and Banave-tlants thereby delivered from their fears; for had the Sweden made themselves matters of Frederickshall, as it was computed they might have done in a fortnight more, all Norway had been irrecoverably loft, and the Danish dominion reduced to a year narray contact.

nions reduced to a very narrow compath.

By the death of the king of Sweden, the war between Denmark and that crown was in a manner brought to a By the death of the king of Newden, the war between Denmark and that crown was in a manner brought to a conclusion, though the peace was not formally figured till the year 1740, when the Swedes being invaded and differelfed by the Russians, were obliged to accept of such conditions as the mediators and guarantees of it, the kings of Great Britain and France, were pleased to peacewise. By the fifth article of this treaty, the king of Denmark obliged himself not to assist him article against the swedes obliged themselves not to oppose such means were to say to enter his ports. And by the fiath article, the Sweden obliged themselves not to oppose such measures as should be taken by the faid mediators in behalf of the king of Denmark, but relation to the dominions of the duke of Heisliein. By the feventh article, the king of Denmark promises so deliver up to Sweden the city of Strassund, and part of Pomerania, as far as the river Perby to evacuate the fortress of Marstrand, the size of Augen, and all other islands taken by the Danca in the late war; as also the town of Wilman Mecklenburg: in consideration whereof the Sweden, by the ninth araicle, renounce the privilege of passing the Sound without paying toll, and agreed to pay the fame, toll enter the head of Sweden and agreed to pay the fame tolle as the English and Denth. And by the tenth article, the crown of Sweden engages to pay to the king of Denmark fix handred thous fast cowers before the hands. ble, the crown of Sweden engages to pay to the king of Denmark fix hundred thousand crowns before the above-

Denmark fix hundred thouland crowns before the abovefaid places be delivered to the Swedes. And by a separase
article, it was agreed that Wifmar, the finatications
whereof were demolithed, thould never be fortified again.
As to Bremen and Ferden, these provinces had been consfirmed to king George by another treaty.

By the abovefaid treaty, his Danish majetiv obtained
the guarantee of the French king, for the policition of the
dutchy of Slefwicks and the king of Great Britain renewed his guarantee of that duchy, which he had given
by a former treaty. The king of Denmark now reigning
in peace, applied himself to the promoting the trade of has
kingdom, but had the misfortune to see his capital city of
Copenhagen almost destroyed by a sire, which happened in
the year 1728. His first queen was the princest Louise,
daughter of Gustavas-Adolphus, duke of Mecklenburg,
by whom he had issue prince Christian, born December
10, 1699, and Charlotte Amelia, born October 6, 170%,
and some other children who died in their instancy. His
second wise, the daughter of count Raventlau, his chatfecond wife, the daughter of count Raventlau, his chan-cellor, he married within four days after the docade of his first queen, and died the thieseenth of October, 1730, in

first queen, and died the thieteenth of October, 1730, in the fixty-first year of his age.

Christian VI. his son, horn in December, 1600, married Sophia Magdaleus of Brandenberg-Culembach, bern Wahom he had islue his present majestly Frederic V. bern March 31, 1723, and the princes Louisa, born October 19, 1726, and married October 1, 1749, to the duke of Saxe-Hilburghausen. He began his reign with some popular acts, particularly in abolishing the monopolies for the sole vending of wine, brandy, fait and sobseen, which were very grievous to the subject. In the year 1733, he acceded to the treaty between the courts of Vienna and Petersburgh, whereby he obtained them granenna and Petersburgh, whereby he obtained them gua-rantees for his own dominions, and guaranteed the dominions of those powers, and the pragmatic fanction; and by a separate article in this treaty, king Christian agreed to pay the duke of Holstein one million of rix-dollars, on his recovering his right to the duchy of Slefwick; and in pursuance of this treaty, in 1734, he fent its thousand men to the affishance of the emperor against the French; and in 1736, on the inhabitants paying him five hundred thousand marks of filver, he relanguished his pretensions

to the city of Hamburgh.

About the year 1739, the Danes fizzing the lordfhip of Steinhurft, which his Britannick majefty inagined himfelf entitled to, as duke of Lunenburg, a firmith happened between the troops of Hanover and those of Denmark, wherein several were killed on both sides. The Hanoverians recovered the territory in dispute; however, as Dance feemed determined not to relinquish their claim, a treaty was set on soot between these powers, and Britain was then obliged to pay a fubfuly to the Danes for fix . thousand men (which never did them any fervice) for permitting the Hanoverians to enter Steinburd. A P at the broke but better in the Danes and the Dutch, conterning the fifthery on the coast of Iceland: the Dunish guardinipe feized on some of the Dutch stifting-vostib, and carried them to Copenhagen; that the lifolianders threatening to make reptifals, those reflets were released: however, the Danes are fald to have carried their point in this dispute also. On July 26, Freders, V. Successed his father, Christian VI. who reigned faxten years with great reputation: This prince trod in his father is foot-steps, encouraged the manufactories, watended the commerce, and improved the trade of his country. He was first married to the princest Louis, daughter to his Rittatnia majetly; but upon the death of his queens, who was the mother of his present business the strength of the duke of Brunswick Wolfenbuttel, and died in 2760; being succeeded by his folk. Christian VII: his present majetly, who mint be owned, does not seem likely to advance the hottour and consequence of the Danes, by pursuing the faiturery steps marked out for him by this henoured progenitors. His resolution by visiting the principal kingdome and stakes of Europe, which he extected in the year 1968, seemed Indeed to indicate a mind intent upon availing itself of foreign polity, to the advancement of his own dominions; but the manner in which he conduced himself in that extensive prografs, by no means realized those hopes; and fince his return home, he is sid to have fallen into a state of bodily and mental imbetility. He married the princess Caroline Matilda; fifter to aur present most gracious fovereign, George III. by whom he has iffue one fon, Frederic, born January 29, 1768, and a daughter, born July 9, 1971.

It has been justly remarked that a weak prince is generally the dupe of fome infinusting and plausible favouring this monarch entrusted the whole administration of the kingdom to a German adventurer, normal Strainfor, whom he treated as read, and to when the most confiderable of the nobility paid fertile homage; the queen is faid to have had an unhappy attachment to this printe minister.

to have had an unhappy attachment to this printe minister.

The queen dowager, Julia Maria, fifter to the duke of Brunswick Wolfenbuttle, and mother to the king's half brother, prince Frederic, formed a plan to ruin this favourite with his mafer, and the queen confoct with her hostand; this the suddenly and compleatly effected in January, 1772; fince which the British court has been very exercial, and as faceastical, in conceasing the causes which led to this unhappy event; nothing has been announced by authority respecting them. All that is certainly kinewa is that forme of the principal nobility were fuddenly feized, and committed to close confinement. Count Streenser, and his co-adjutor count Braddt, were brought to trini, fentenced to suffer death, and were a coordingly encouned. The life of this queen tonfort forms to hiave been preferred by the resolute application of our minister at that court; whether from the rage of the prevailing faction, or the refernment of an incensed hingdom, is not easy absolutely to fix; she, however, quitted Danmark, and resided at Zell until her death, which happened about three years after, by a purtle fever.

Prince Frederic, the 'ng's half brother, was married October 21, 1773, to the princes Sophia Frederict, nices to the reigning duke of Mecklenburg Schwasin.

C H A P.

THE NEW HISTORY AND DESCRIPTION OF

AP

SECT. I.

Containing an account of the division of the country, its boundaries and extent, elimate, fail; produce, unimals; rivers, laket, minet, See, as of the inhabitants of Lingbank, their persons, dispositions, dresh, manner of living, diversions, employments, method of travelling, bunting and signing, See.

AS Lapland differs, with respect to the manners and customs of the inhabitants, &c. from the other parts of Europe, we shall therefore give the reader a particular account of this country, which is divided into three parts, which are severally subject to Denmark, Sweden and Rustia. There being a great similarity between these divisions, it will, on that account, be sufficient to describe only Swedish Lapland, which is by far the most considerable and best necessity are small those year. best peopled; we must however observe; that all the country in general is called Lapland, which lies above the gulf of Botinia, along the coast of the north sea, even to the

The aritlents called the people of this country Seri-tofiuni, the name of Lapland or Lappia, being unknown to them: they at first initiabited Finland, from whence they were driven more northwards; after which they were called Lappes, which, in the Finit tongue, figuries per-fons banifhed from their country and driven to the most remote places: But the inhabitants call themfelves Sab-

microladic, confidering the other name as reproachful.

This country, namely, Swedish Lapland, is bounded on the east by Russian Lapland, on the west by a ridge of mountains that separate it from Norway; on the north by Danish Lapland; and on the south by Bottinia Angermania, and Sempterland. Its greatest extent from east to west is about three hundred and fixty miles; and in breadth, it extends from fixty-five degrees, thirty minutes, so fixty-nine degreex of north latitude. It is divided into fix provinces, or diffriels, the names of which are, s. An-No. 54

germanland-Lapmark, 2. Ums-Lapmark, 3. Pitha-Lapmark, 4. Lula-Lapmark, 5. Tosno-Lapmark, and 6. Ki-mi-Lapmark.

mi-Lapmark.

The first of these provinces is the most fouthern, and contains only one town of any consequence, which is called Aoslato, and is situated about three hundred miles distant from Stockholm.

diffant from Stockholm.

The second province, which adjoins to the former, contains two little villages, via, Sethisgorfic and Lossby.

The third province is situated between the Norwegian mountains, and contains four unimperant villages; namely, Sitonia, Arie-slog; Locktieri, and Arivitzerss.

The fourth province, which adjoins to the latter, contains three villages; viz. Jackmoth, Sirkeluclit, and Tor-

tains three villages, viz. Jackmoth, Sirkelucht, and Torpajour.

The fifth province, which is the most northern of Swedish-Lapland, is well watered; it contains the great leke Enure, and the towns of Somby, telajorsui, Kittjersui-lye, Kimith, Solden-Kyle, and Kimi.

The fixth province, which is contiguous to Russian and Danish-Lapland, is likewise well watered by many rivers, has fevetal lakes, and contains four towns, viz. Tingavars, Sandewars, Ronnals, and Titisars.

The above-mentioned provinces receive their name from the respective views which water them; and are again sub-divided into smaller districts, called Biars, and these contains a certain namber of families, called by the Swedes rekars, each relax; or family, it allowed a considerable quantity of land, with forests, lakes and brooks, for the maintenance of their families and eattle; but their ands not being inelosed, there is frequently a change of property among them. perty among them.

This country is fituated to near the pole, that the furt neither fets in furnmer, nor rifes in winter. In the latter feation, the cold is fo intense, that none but the natives see able to bear it. The most rapid rivers are then frozen up, and the ice is two or three, and fomestimes four or five feet thick. In furnmer, the weather is as fultry as it is

cold in winter; for fpring and autumn are unknown in this climate. The exceptive heat, however, is qualified by the vapours that rife from the fea, and by the fnow that continued all the furnmer on the tops of the mountains, and in ditches that are sholtered from the sun. In winter, the whole country is covered with snow, and it foldom

Monfieur Maupertuis, in his description of the climate of this country, tays, that in December, the snow continually falling, or ready to fall, for the most part hid the fun the few moments he might have appeared at mid-day. In the month of January, the cold was increased to that extremity, that Mr. Reanmur's mercurial thermometer, which at Paris, in the great frost of 1700, it was thought strange to see fall fourteen degrees below the freezing point, was now got down to thirty-seven: the spirits of wine in the others were frozen: If we opened the doer of a warm room, the external air instantly converted all the vapour roun, the externst are intentity converted all the vapour into flow, whithling round in white vertices. If we went abroad, we felt as if the air was tearing our breafts in pieces; and the eracking of the wood, of which the houses are built, as if split by the violence of the froft, continually slarmed us with an increase of cold; and in this country you may often fee people who have loft an arm or leg by the fioft. The cold, which is always very great, fometimes incresses by such violent and sudden fits, as are almost infallibly fatal to those who are so unhappy as to be exposed to it: and sometimes there arise sudden tempests

of frow that are fill more dangerous. "The winds feem to blow from all quarters at once, and drive about the fnow with fuch fury, that all the roads are in a moment rendered invisible. Dreadful is the fituation of a person surprized in the fields by such a storm: his knowledge of the country, and even the mark he may have taken by the trees, cannot avail him : he is blinded by the fnow; and is generally lost in attempting to find his way home. In short, during the whole winter, the cold was so excessive, that on the seventh of April, at sive in the moining, the thermometer was fallen to twerky divisions below the point of freezing, though every afternoon it role two or three divisions above it: a difference in the height not much less than that which the greatest heat and cold felt at Paris usually produces in that infirement. Thus in twenty-four hours we had all the variety felt in the

temperate zones during a whole twelve-month.

In most places, the fost is exceedingly bad, and so intermixed with stones, that hardly any thing will grow in it; and in other parts it is so moist, from the marlhes and brooks it abounds with, that very little of it can be tilled.

There are many rocks and mountains all over the country: those called the Dofrine mountains, which separate Lapland from Norway, are of a prodigious height; and the high winds that blow there prevent all trees from raking root. Beneath these mountains are large marshes and extensive forests, where there are many trees, though they stand at a great distance from each other. At the bottom of the hills are very pleasant vallies, which, being watered by a great number of springs and brooks, are the most parts of the counti

Their chief rivers are the Uman Lula, Rims, and Torna. The Uma is greatly increased by the waters that fainto it from the rivers Vendilov and Skialfre. The L and Rims are both very confiderable, and are (welled, in their courfe, by grear numbers of leffer ones. The Tor-na receives twenty-nine rivers, one of which is a Swedish mile in bacadth. When the snow melts, all these sivers overflow their banks; and the chief part of them have many superiods and regular ettracts. Most of the re-vers rife from the mountains of Norway, and fall into the Bothnian gulf. Here are also many lakes, which, as well as the rivers, abouted with various kinds of fifs. A great number of trees grow in the forusts of Lapland,

among which are the birch, pine, and fir. Some parts of it also produce the service-tree, willow, poplar, alder, and corneil. They have several forts of plants; but the most ufeful are the angelica and forrel, which are greatly effected by the natives, who use them in their food. They have likewise different kinds of grass, heath, and but the most plentiful, as well as most ufeful vagetable, is the mofchus or mofs; of which there are feveral species, either adhering to trees, or growing on the far-face of the earth. The rein-deer is almost wholly sufsained by this vegetable, which indeed he prefers to all others, and without which he cannot fubfift. The natives also use it as forage for their cattle, but boil it in broth as a cordial and reftorative. There are also plenty of berries, frank as black currents, the Norwegian mulberry,

which grows upon a creeping plant, and is much efterned as an antifeorbuic; juniper-berries are very plentiful, and fome of the trees grow to a confiderable height; here are likewife great quantities of raberries, cranberries, and

They have a great variety of animals in this country, as flags, bears, wolves, foxes of feveral colours, figuries, entities, martens, heres, glittens, beavers, otters, clks; and rein-deer; the last of which is extremely uteful to the wretched natives, who, without them, could not possibly preserve their existence; for these creatures not only afford them food and closthing," but also supply the place of horses, which would not be able to travel where these aninortes, which would not be able to travel where these ammals do. The rein-deer is lefs than a flag; his colour inclines to an afh, but his haunehes, and the parts under his belly and shoolders are white; they have long and rough hair under their necks; their feet are thick, short and cleft, recumbling those of bulls. When they walk, their joints make a noife like the clashing of flints: they have two horns, with two branches each; the larger branch have two horns, with two branchs seach; the larger branch bendle hackwards, and the leffer forward; they feed on mois. There is both a tame and a wild kind of them; those betwist a tame doe and a wild buck are the frongest and largest. Their milk is nonrishing and fat, and makes good cheese. The traces that the the rein deer to the Redge are faftened about their necks, go down by their breafts between their fore and hind legs, and are takened to the prow of the fledge. The reins are tied to their to the prow or me neage. A he rems are then to ment horns, and held by the traveller, who is tied in the fledge, and has a flick in his hand, to remove any flone or wood in his way. He must balance the fledge with his body; for the bottom being round, it is in danger of being overfet. They hang bells to the trappings of the rein deer, with which those animals are very well pleased.

Their dogs are of a red colour, and are very serviceable in hunting; but they are very small, not being above a soot in height: they turn up their tails, which are short; and their ears sland erect, like those of wolves.

The rocks and mountains of Lapland are frequented by eagles, hawks, falcons, Vies, and other birds of prey, Here are allo fwans, geefe, ducks, Ispwings, fnipes, most forts of water-fowl, heath-cocks; stock-doves, and par-Besides these, they have two kinds of fowl culiar only to this country: the first is called the kniper, and ir a kind of fnipe, black on the head, back, and wings, but the breath and belly are white.

Among their infects are a species of sies, which, in the

Among treir intects are a species of nies, which, in the fundier, are hatched in the morafles and woods, and are frequently so numerous as to obscure the light of the day. They are venomous, and exceedingly troublesome, informach that the rein-deer siy we the tops of the mountains for shelter; and the inhabitants move to the sea side, those for shelter; and the inhabitants move to the sea side, those parts being the least infessed by these passitions or these side are very large, have green head; and draw blood from the skin wherever they strike. While Monsieur Mauperrius was here, he informs us, that the slies were so troublesone, that even the Finland foldiers, who are counted the most hard troops in the service of Swaden, were obliged to cover their saces with the skirst of their coats from the attacks of these animals; which swaden were obliged to go the season of their coats from the attacks of these animals; which swaden same to such a degree; that the moment a piece of slesh appeared, it was blackened all over by them.

Delicious salmon are sound in the rivers and lakes; these came from the guif of Bothnia; here are also trout, bream and proch, all of which are very large; and of exquisite shavour.

quifite flavour.

There are mines of filver, lead and sopper, in fome of the diffricts, together with excellent veins of iron; but they are not at prefent worked to any confiderable advanthey are not at present worked to any considerable advan-tage, they being difficult of access. In the district of Torno, there is a vein of gold and silver mixed; another of lead and silver, and a third of copper, and here they have both copper-works and a foundery. They have also fernaces in the provinces of Lella, where they melt the sil-ver which they dig in that part of the country. These mines, however, are only worked for a short time in the fernamer; the climate being so severe, for the principal part of the year, as to render it impossible to work the engines. " Here are a great yeariett of curious shores, losse of which

Here are a great variety of curious fronce, fome of which bear the refemblance of animals, trees, &c. When the natives find these, they put them in some conspicuous ace, and worship them as deities. In the rivers and lakes are found beautiful crystals of a prodigious fine, and fo hard and fine, that, whon polified, they appear like real diamonds.

We shall now proceed to give a description of the per-sone, dress, manner of life, &c. of the Laplanders.

The with the state of a state of

These peoples are of a brown and swarthy complexion, which is the case with the inhabitance both of very cold and very hot countries, their hair is black; and their faces broad, with peaked china and hellow cheeks; They are generally of a middling stature.

The all-wise Creator has made a provision for them against the severity of winter, by placing there a multirede of animals, whose fost and warm sura and skins defined them from the most pieceing cold. The upper garment both of the men and women is made of skins with the hair on, formed like the ploughman's frock, girt about them with a broad belt; they wear breaches which reach down to their ancles, and their cap, which is made of the skin of a young rein-deer, fits as close to their heads as a cull-cap, covering all the neck and shoulders. Their shoes are peaked, and curred up at the tees.

cap, covering all the neck and shoulders. Their shoes are peaked, and turned up at the tees.

The finery of the women consists in a kind of powter wire, with which they work the bosons of their coats, their gridles, and the edges of their caps. Neither for know what it is to wear linen; but in the cold scalon wear next the body a fawn's skin waikcoat. Almost the only difference between the dress of the men and that of the women is, that the latter is somewhat longer. A purse hangs at their gridles, with their money, rings, and toys; a leathern beg and a knife.

The Laplanders afford an instance of a whole European sains statistics of the women who without should be supposed.

in the Laplanders afrord an inflance of a whole European nation fublishing contentedly without ploughing, fowing, or planting; without finning or weaving, brewing or baking; As their tolt is set in a country where winter takes up the greatest part of the year, and confequently renders it impossible for them to provide a fusicionit quantity of hay and fodder for great herds of-eastle, the bountiful Creator has bestowed on them a species of animals that are provided for with little trouble; this is the reinder, which of all tame animals requires the least attendance and support; while it procures the greatest advantage to its owners. These creatures provide for themselves, feeding in summer or leaves; most, and grafts, of which they find as much as is sufficient for them, even among the mountaints; and in winter live only on a kind of molitant growt in almost every part of Lapland. They come at this moss by scraping away the snow with their seet, and that grow in almost every part of Lapland. They come at this most by scraping away the snow with their seet, and are taight by inflinth to find-the spots where it grows. During a journey of several days, in which they are drawn in sledges by these animals, the only trouble a traveller is set, is either to turn them loofs, or its them to a tree; where the quantity, of food they eat at a time does not exceed a handful. The Laplander's are at other times only solicitous to keep their herds of rein-deer from going aftray, and to protect them from wild beafts; and this, particularly in summer, they think no inconfiderable task. They have no occasion to house their animals, for they always lie out in the open sir, without any inconvenience; and when after a firs. Search they sind that there is no danger from heafts of prey, they turn them loofe into the woods; but they are watched by the Lapland herdimen, when they are under any apprehension of danger from that quarter.

when they are under any apprenention of danger room that quarter.

With respect to their manner of living and hibitations, they consist of two different tribes, namely, the Forest, and Mountain Laplanders. The foomer spend the greatest part of the fammer in the woods, and have no property; but the latter live among the mountains. The food of the former chiefly confists of fish and fowl; but that of the latter principally depends on their herds of rein-deer. The Laplanders in general, and particularly the Foresters, are esteemed good marksmen. They have a great aversion to mining. In most of the lapmarks they make it their employment to carry the hunghers to the yearly fairs; and some of the Laplanders, for a reasonable roward, look after the rein-deer belonging to other people. Most of them choose rather to steep away the whole day in their tents, than to engage in any laborious employment; but those whom want has prompted to industry, give evident proofs that they are not without a capacity for mechanic trades, nor seen for exquisite pieces of workmanship. Their boats and stensile are plain indications of their field, and some of their field, and some of their field, and some of their field. and some of their sledges are inisid with horn in a variety of figures. Their horn spoons, their Runic calendars, their moulds for easting pewter utensils, their bows and arrows, and the like, are all of their own making.

arrows, and the like, are all of their own making.

The Lapland wemen make use of a hors perforated with large and small holes, through which they draw pewter into wires of different thickness, with which they neatly embroider their gindles, cloads, and sledge furniture. They also prepare c'll kinds of skins' by various methods, and cut out and sew he habits they wear.

Besides the herds of rein-deer, several of them are masses of a considerable quantity of silver in rings, buchleas large and small spoons, cope, deel and money read in the among them? but they prefer the Holland tindollar to all other coins, because they prefer the Holland tindollar to all other coins, because they prefer the Holland tindollar to all other coins, because they prefer the Holland tindollar to all other coins, because they been supported to the first of the tending for their goods. The west of their shall and other furniture, me tents, iron pors, copper and brass kettles, san and other deaths, bed furniture, since they, fine stedges with barnesses, hatchests, boats, and sishing-tackle. As to the poorer fors, they are obliged to be statisfied with sever-conveniencies. The procuring food for their hards of rein-deer being the chief employment of the Laplanders, it consists them requently to thirt their habitations. At the approach of spring most of them move, with their samilies, twenty on the state of the same should be supposed to the statistics. The procuring should be supposed to save the same safer as the North Sea, where they six their abode till autions, and their quit the mountains and return to the fourth, to prevent their being frozen to death for want of such, and their rein-deer being staved, there being sixtle, or no mole so for to the north. The other Laplanders, who make no excursions to the mountains, but dwell in the village districts, or live by sishing, likewise never settle in one place; to this they are obliged by their rein-deer, which at certain times shew a disposition to remove, either from the want of fodder, or their being sendble of the changes that will happen in 'he weather.

On account of their unsettled way of life, they are obliged to provide portable dwellings, and finch are their tents, which are their from of sugar-base will the top of it broken off. Over these poles they lay a kind of coarsectory, and these form tents, fome of which are fulficient to contain twen

hing. An aperture is terrar the top, where he pote annual join, which ferves both for chimney and window. From this hole hang two chains with hooks at the end, to hang the pots on, in order to boil their victuals, or melt the jee or fnow into water to drink. Round the infide of the tens they lay their cloaths to keep out the cold wind, and foread branches of birch or fir round the tent, by way of feats to fit upon ; for they have neither chairs, flools, nor benche. About the tent stand the cupboards, when they keep their provisions; these are lixed on posts of block of wood, and have some resemblance to a pigeonhouse erected on pillars.

The Laplanders, whenever they have an opportunity, pitch their tents near dried pines, for the convenience of fuel; but in fishing and autumn they are forced to be contented with brush wood. It ought not to be omitted, that in some of the lapmarks they creek boarded cottages, or wooden houses, that resemble those of the Swedes.

or wooden houter, that retemble thole of the Swedes.
Sleiges, shaped like finall boas, with a brox keel, ferve
them for carriages; and those so thick, that no water can
penetrate through them. They have a back-board for the
traveller so lean sgainft, who sits fall laced in the sledge,
and well secared from the cold. This vehicle is drawn by the rein-deer with incredible fwiftness through the snow the rein-deer with incredible fwiftness through the fnow over mountains and valleys. The rein-deer is harnefed with a large cloth girt, embroldered with pewter wire, and faftened on his back. The bir is a piece of leather tacked to the rein of the bridle over the deer's head and neck, and from the breaft a leather firap paffing under the belly is faftened to the fore-part of the fledge, which ferves in-fleed of flasts. The rein-deer in a great measure lose their vigour and fwiftness in fummer, when these are left necessary; but even then they are very proper for carrying the Laplanders' effects from place to place.

They use a kind of skates, like those of the Fins and

Norlanders; confliting of a board three or four Swedish ells in length, and fix inches broad, and ending in a point which turns up before. With these boards fastened to which turns up before. With these boards fastened to their feet, and a pole, with a round piece of wood at the end to prevent his sinking too deep in the snow, she Lap-landers skate along with fach swiftness as to overtake wolves

and other beafts.

Those among them who precise fishing, and live in South Lapmark, make vic of a kind of boat or little bark for crofting rivers, made of flight boards curiously joined together with filaments of the roots of treet, or hempen firings, and are so light that a Laplander carries his boat on his shoulders, with the cars and every thing belonging to it, besides his beg of proxisions. These boats they steer with amazing degitrity, even among the rocks and down id water-falls ; and though the cataract be ever

the most rapid water-falls; and shough the cataract be ever fo dreadful, and the Laplander ever fo great a stranger to it, he undauntedly ventures down the precipice in his little boat: but when he steers against the fream, and comes to a water-fall, he puts ashore, takes his boat upon his back; and travels till he comes to smooth water.

The inhabitants of the northern lapmarks have layer boats, four or fave fathems in length; these they either haul op the great water-falls with ropes, or where the case-cades are small, shove them up with poles; which is done by two men, one of whom fits at the head, and the other at the steen. As for going down the water-falls with the stream, they consider is as attended with no difficulty.

In summer, the mountain Laplanders live chiefly upon milk, and on the cheefs made of it, of which they lay up a store for winter. The month of September, lefore the piercing frost see in, they kill as many of their rein-deer as they think will, serve them till Christmas; afterwards they kill as many as will supply them therest of the winter, and sometimes kill one or two occasionally. It is not unsfush with the western Laplanders to buy Norway cows and sheep is fasamer, which they kill for their winter provision. They also set the sless of bears and beavers, is and wild sowl, &c. The poor who live in villages are contented with the sless of them.

The others and manders live on fish, which they have

contented with the fieth of dogs, wolves, foxes, and norses, when they can get them.

The filting Laplanders live on fifth, which they have various ways of dreffing; and those who have rein-deer on their high days and festivals, drefs flesh and fifth together. In tummer they buy their falt of the Norwegians, and in winter purchase it of the burghers. Tobacco is not very uncommon among them; but they buy it at a many high series. In this country more of the women have not very shedmands along them; but they day it are very high price. In this country none of the women have any hand in dreffing provisions, that office belonging to the matter of the house. They never omit faying grace before and after meat, and before they rife from table shake each other by the hand.

SECT. II.

Treating of the marriage ceremonies of the Laplanders, ma-nagement of their children; their discoses, funeral rifes, seligion, government, trade, revenue, Gr.

HEN a young man has made choice of a female, he employs fome friends as mediators with the girl's parents; and these being provided with some bottles grid parents; and there comp provides with foliar contess of brandy, the fuitor accompanies them to the but of his intended father-in-law, who invites the mediators to enter; but the fuitor is left without, till the liquor be drank, and the proposal discussed. After this, he is called in, and entertained with such fare as the hut affords, but without feeing his militrefs, who, on this occasion, is obliged to retire. The fustor having at length obtained leave to make retire. I not tuned naving a tune to the his addresses to the girl in person, he goes home, puts on his best artire, and then returns to the hut, when his mistress appears, and he salutes her with a kiss after which, he prefents her with the tongue of a rein deer, a which, he pretents her with the tongue of a remideer, a piece of bewer's fieth, or fome other kind of provision. The girl at first declines the offer, it being made in the prefence of her relations; but at the same time the makes: a fignal to the lover to follow her into the fields, where the accepts the prefents. Thus encouraged, he begs permission of her to let him sleep with her in the hut: if the consents, the keeps the prefents; but if not, the throws abem with contempt on the ground.

When the lowers are agreed, the worth it meemitted to

When the lovers are agreed, the youth is permitted to vifit his miftrefs as often as he thinks proper; but every sime he comes, he must purchase this pleasure with a fresh bottle of brandy; a perquifite to agreeable to the father, that he often postpones the celebration of the nuptials for two or three years. At length the ceremony is performed at the nearest church, by the priest of the parish; but even after this, the husband is obliged to serve his father-in-law a whole year, at the expiration of which he retires to his own habitation with his wife, and then receives presents from all his relations and friends. From this time he watches over his wife's conduct with the most jealous attention, and fequeflers her from the company of all

firangers, especially of the male fex.

Immediately after the birth of a child, they wash the infant all over with fnow or cold water; except the head, which must not be touched with water till after baptism.
The woman does not remain in child-bed above four or five days, and in fourteen is generally quite recovered. She then carries the child to be baptized; but before the

can reach the refidence of the prieft, the is often obliged can reach the refidence of the prieft, the as often obliged to traverse large forests, mountains, lakes, and wide extended wastes of snow. The Infant is fastened in a hollowed piece of wood, faretched naked on a bed of sine, most, covered with the skin of a young rein-deer, and slung by two straps to the back of she mother, who always suckles her own child. This little cradle, when at home, is hung to the roof of the but, and is sung from one side to the other, to tall the child assept.

Persons are not acceptable, traceful to the child street.

fide to the other, to built the child afleep.

Parents are very earful in teaching their children, as they grow up, molt kinds of work; but they have a great avertion to schools. The boys, from their infancy, are taught to practife the bow; and they are not allowed to break their fift till they have hit the thark. The females are also initiated very early in suitable befinesses.

There are no physicians in Lapland, nor have they occasion for any, not being subject to those differences common in other countries. They are chiefly subject to fores, occasioned by the smooth and fire which is almost continually in their luts: they are also sometimes withered.

continually in their luts: they are alfo fometimes wifitted with rheumetic pains, and the feurry; and a few are affifiched with the verigo and apoplexy. For the cure of all inward diforders, they use a drink made with the root of inward diforders, they use a drink made with the root of a certain species of moss, which they call jerth; and when that cannot be procured, they boil the stalk of angelica in the milk of the rein-deer. When they seeks pais in any part of the body, they take a kind of mushroom, which grows upon the birch-tree like a cake; and, having set fire to it, they apply it, burning bot, to the part affected; and this produces a biliter, which is supposed to draw off the peccare humour. They have no other plasters for wounds but the rean which drops from fir-trees. When they have any member benumbed with frost, they put stred-hot iron into a cheese made of rein-deer's milk, and, with the fat that drops from it, like are oil, they rub the part, which is almost instantly cweed by that method.

If the friends of a Leplander suppose him to be on his death-bed, they exhort him to die in the faith of Christ, and bear his instanting with resignation, by remembering the passion of our Saviour. But those who have not great regard for religion, forske the dying person, and think of nothing but the funeral entertainment.

When a person dies, most of the estimany leave the hushers of online who do the contraction.

When a perion dies, most of the company leave the hut, being of opinion they shall receive some injury from the frint of the decased, which they believe remains with the copye, and takes all opportunities of doing mischief for the living. The decased is wrapped up in liuen, according to his circumfrances, and deposited in a costin by a person selected for that purpose; but this office he will not perform all the menimum conference to the menimum conference and the menimum confere form till he receives a conferented brafs ring, which is placed on his left arm, and what he imagines will pre-vent the ghost of the deceased from doing him any in-

These people, before they embraced Christianity, used to bury their dead in any common place, which they still do when they are at a great distance from a church. Many of them also preserve the rites of heathenish saperstition; for with the body they put into the costin an ax, a fline and fired, a fiath of brandy, fome dried fifth, and venifor. The provision is for his subsistence during the journey; the flint and ficel are to furnish him with a light, should be find himself in the dark , and with the az the deceased is supposed to hew down the bushes and boughs that may

obfiruct him in the other world.

The friends of the decested, before they carry the body to the place of interment, kindle a fire of fir-b oughs near the coffin, and express their forrow in tears and lamenta-tions. They walk in procession several times round the body, demanding, in a whining tone, the reason of his leaving them on earth: they ask whicher he was out of humour with his wife? whether he was in want of meat, drink, cloathing, or other necdfaries? and whether he had not fucceeded in hunting or fifthing? Thefe, and other fuch interrogations, are intermingled with groans and frightful howlings; and in the interval the pelett fprinkle the corple and the mourners alternately with holy water.

ly water.
After these ceremonies are ended, the body is conveyed to the place of interment, in a fledge drawn by a rein-deer, and followed by the friends and relations, who show their concern for the lofs of the deceafed, by drefling themfelves to the loss of the deceased, by dream flemelyes in the work garments they have, and keeping a continual hooting during the proceffion. After the ceremony, the people retire; and the fledge, with the cloaths which belonged to the deceased, are the princise perquisite. Three-days after the funeral, the selations and friends of the defundt are invited to an entertaument, where they eat the vars, a den. w The one, an differen own pr

easechism, with some prayers, and the manual containing the plaims of David, the proverbs of Solomon, &c. And that they might be encouraged to fend their children to fehool, an armual revenue was allotted to maintain the scholars both in victuals and cloaths. Hence Lapland icholars holin in victual and closurs. Factor appared now produced fome preachers which greatly promoted the knowledge of Christianity in that cognity; for, hereto-fore, their clergy having been Swedes, whole language the people did not understand, it could not be reasonably suppoped. people did not understand, it could not be remousely im-posed they should prefit much by their instructions. Since that time, however, the greatest misfortune bath been, that many Laplanders, as prefent, intermix too much idolatry with the pure profession of Christianity; and from local customs, the ridiculous fondness for omess, particular-times and seasons, dillinguished by the names of black and white days, &c. retain many of their former supersti-

tions:

They fuppose the existence of a good and evil principle, and imagine that these, when at variance, occasion the happiness or misery of mankind. With respect to the pagan superstributes till remaining, they adore the gods. Thor, Storjunkar and Bacwe, whom they worthip under the symbols of stones, trunts of trees, and sire. They have some notion of the metemptychosis, or transing ration of souls; for they not only respect the remains of their departed relations and friends, but dread them as being mischievous till they imagine the spirits of the deceased have re-animated other bodies. They also believe there are fairies, that wander among rocks, mountains; there are fairies, that wander among rocks, mountains, rivers, and lakes; and give them also a share of their

They own one supreme God, whom they arm with shunderbolts: they make the rainbow his bow, and have the fame notion of him that the old Pagana had of their Jopiter. They have another subordinate God, to whom they acknowledge they owe all the hlessings of life, and never fail to worship him. The sun, whom they call Baiwe, is another of their divinities, because of his influence or the bridges of men and heafts. They have tem fluence on the bodies of men and beafts. They have tem-pler and images confectated to each of their gods; Their idols are either the trunks of trees, rudely, carved, or of idola are either the trunks of trees rudely carved, or of fonce. One of those is preserved in the royal cabinet of antiquities at Upfal. All their women are excluded from worthip. They anoint the idol with the heart-blood of the facrise: and when they cannot reach the top of a mountain confecrated to Storjunkar, one of their deities, they dip a stone in the blood of the facrise; throw it up to the mountain; and so conclude their devotion. Sometimes they strew branches of birch and pine about their

As the Laplanders have always been charged with prac-tifing the art of divination; Ls Motraye, travelling in their country, enquired what notion they had of witcheraft and magic: to which one of them answered, that the pro-feffors of the black art were to be found most commonly in Kimi Lapmark and Fluiand; that they converfed with the devil, and knew every thing that they were provoked by any one, or hired to do a man.

flesh of the rein-deer which conveyed the corpse to the grave. The animal being made a sectifies to the manes of the deceased, they collect the bones together, which, being put into a basset, rise with great creamony humared.

It is customary to divide the effects of the deceased between the brothers and siliers, the former having two-thirds, and the latter one; but the fands, laket, and virtures, are held jointly by all the children of both chees, according to the division made by Clarler IX. of Sweden, when he affigned to each family a certain tract of land.

The language of the Luplanders is a very burbardus one, and varies in different parts of the country, according to this correspondence which the natives maintain with the different nations; such as the Notwegians, Swedes, Finally, when the such that they would not tend the contribution of letters.

It is supposed that Christianity was first introduced into Lapland by St. Eric, about the year 1300. However, no material protects was made in the establishment of it will the last century, when missionaries were fent for that pairpose from Norway, Sweden, and Russia, and the other in that of Ulma, for instructing the children of the Luplanders in the Christian religion, and in letters. He also ordered several books to be translated from the Swedish into the Lupland sanguage; such as the each of the canadity which into the Lupland sanguage; such as the each of the condens fary to the acting his pert. Soon after the man returned with his drum, which he had hid among thrube and thoness for fear of a discovery. It was of an oval form, and had but one, head, there was fastened to it a chain, with feveral brafs rings.

Before the operation began, the wizard demanded if they had any brandy 1 and half a pint being prefented to hin, he immediately drank two thirds of it; then putting the chain and rings into the infide of his drum, and turning the bottom upwards, he best upon it with a forked piece of aircin-deer's horn (the head was covered with a transparent parchment, wretchedly painted with the ce-lestial figns); he beat upon it for a few minutes, the rings all the while jumping about, and making a jingling noise: then he laid himself down flat on his back, fetting the head of his drum upon his bare breaft, and having shut his eyes, seemed to be in a trance, not breathing for som time; and, having fetched a deep figh, he gently raifed the drum above his head, and looked upon the rings, which the drum above in neas, an loased upon the rings, which he could easily differn through the parchment; and having confidered their; position, and, distance from the celestial figures, he fixed his eyes upon our traveller, and declared that he would run a great hazard upon the water at he returned

ingures, he fixed his eges upon our traveller, and declared that he would run a great hazard upon the water as he returned in his fledge; and again in going down the estaract, or water-falls, in a boat: that he would have another great-efcape from fire, that his life would be long and healthful after he had ove come two great fits of illneds, both which wold feize him within the space of two years. And as for the interpreter, who led La Morraye to his cell, he directed, him wo go out a fishing, on the 20th, 22d, 24th, 26th, and 28th days of that month; and the 3d, 6th, oth, 12th, 26th, 20th, 24th, and 28th, of the next; and he flouds return home loaded with fish; and the fame days in the months of September, October, and November, would be equally fortunate to him in hunting.

When he had finished his predictions, the traveller affect if he could tell whether he was a bachelor, or a married man; into what countries he had travelled, besides Torno, Lapmark, &c. but our conjurer was too wife to guass at things that were pass, in which he knew his ignorance might be too easily discovered. Our author afterwards made the poor fellow a present of half a crown, with which he feemed extremely latisfied, as the guide was with the predictions concerning his success in fishing and hunting. So excessive credulous these poor Laplanders are, and so preposses the them, that on such a day they shall trke plenty of fish or game, they will not fail to go out that day; and as there is most commonly abundance of both in this country, they usually verify the predictions, Le these pretended with the presence of the that on such a day they shall trke plenty of fish or game, they will not fail to go out that day; and as there is most commonly abundance of both in this country, they usually verify the predictions, by coming home loaded whenever they go out in fearch of game. And if the wizards mark another day as unfortunate, they infallibly make it so, by not going abroad in quest of any game at that time.

With respect to three diffe

at that time.

With respect to their government, Lapland being now subject to three different powers, governors, or presects are departed by each of them, to preside over their respective.

the diffricts. The Laplanders, however, had kings of their own till the year 1277; when the Swedes conquered pert of the orientry, and the remaining part was from after lubdued by the Ruffiarts and Norwegians.

The laws of Sweden ard observed in Swedish Lapland, which, as we have stready neticed, is the most confiderable of the three "here are aressed three tribunals, or course of justice: one for Angermaniand Lapmark; a second for Uma, Pitha, and Luis-Lapmark; and the third for Fomo and Kimi-Lapmark; in each of which courts there is a practest, who determines all causes. They administer justice in the king's name, on which occasious a priest always attends.

justice in the king's name, on which occasions a priest always attends.

Such of the Laplanders, \$2 live near the mountains which part Norway from Sweden, trade with the inhabitants of those countries. Those who are at a greater distance from those mountains trade only with the Swedes; and others, who are fituated towards the north and sufferred with the Ruffians and Finlanders. I he commodities they receive from those maisons are, rix-dollars, woollen, studies, linen, copper, tin, flour, falt, hidea, needles, knives, fishituous liquors, and tobacco; of which last article they are extremely fond. They give, in return, rein-deer and fift, of the latter of which they take such constitutions, that they slock whole refervoirs with them, and put them afterwards into barrels, which they carry to the neighbore.

ing countries: namely, the north of Bothnie, and White Ruffia. They also trade in dried pikes, cheese made of the milk of their rein-deer, fine ermine, and the skins of fe-

Ruffia. They also trade in article pixes, encere made of the milk of their rein-deer, fine ermins, and the fkins of feveral wild beafts.

They formerly pald the tribute in fkins of wild beafts in but it now confifts in a certain coin, rein-deer, and fkins, either dreffed for certain wice, or raw; and is proportionable to the quantity of land polifefied by each head of family. The largest are styled entire territories, or territories of a full tribute; and the owner is obliged to pay yearly, two vix-dollars, in coin, to the crown of Sweden. They who possess a territory in land, of half a tribute, pay only one rix-dollar. But as it happens very often that many of them have no rix dollars, they are allowed to give fkins of foxes or fquirtels fines of coin. Fifty fquirtels fkins, or one fox's fkin, with a pair of shoes after the fashion of Lapland, are valued at one rix-dollar; befides which, every head of a family is obliged to give yearly a white fox's fkin, or a pair of shoes; and if he' cannot procure these things, he must give half a pound of dried, pikes. Part of these taxes is employed for the maintenance of the priess who live in that country, to lastruct the Lapland pay their revenues in a similar manner to the respective states to which they belong, and trade much in that same commodities. fame commodities.

THE NEW HISTORY AND DESCRIPTION OF

rest training I :"**A** 0

.

SECT. I.

Describing the extent, fituation, climate, and produce of Po-land, properly fo called; together with the Geographical division of the country.

POLAND, before its late difmemberment, was a very confiderable country, extending about feven hundred miles in length, and fix hundred and eighty in breadth; the fituation of it is between forty-fix and afty-feven degrees rooth latitude, and fixteen and thirty-four degrees eat longitude. It is bounded by Hungary, Turky, and Little Tarrary, to the fouth; by Germany, to the worth; and by another part of Ruffia, and the Baltick fea, to the north; and by another part of Ruffia, to the eaft. Its name is defived from Polu, a Sclavonian word, which implies a converse adapted to hunting.

country adapted to hunting. The climate is rather temperate, and the air not exceffively cold; yet fometimes its lakes and rivers are fo frozen, fively cold; yet fometimes its lakes and rivers are fo frozen, that coaches and carts pais over them for five or fix months together. The foll also is generally fertile, fit for tillage and patture, and produces a vast quantity of corn and cartle; even enough to feed the populous nation of Holand, who yearly fend vast fletts to Dantziek to buy the corn and oxen tent down thither from the feveral parts of Poland. Lithuania in particular, produces honey, was, hemp, flax, teather, pot aften, fak, wood, fakt-perty, vitriol, and quick-filver. With these shape commodities they purchase those of other nations, viz. wines, coth, fuffi; wrought-filk, tapeftry, jewels, falses, mattens, sin; fleel, iron-ware, aqua-vita, brandy, and spices.

The country of Poland in general produces also at the title that their cavalry is numerous, and well-mounted. There are vines in many places, whose grapes are graveful to the taste, especially if the summer and harvest to favourable; but the wine is generally very sharp, when drawn off.

but the wine is generally very fharp, when drawn off.

In the mountains there are mines of lead, filver, copper, and iron; but the most confiderable of all are the falter mines in Lester Polarid, which are the chief riches of the country, and bring most mousy into the exchequer: they

10 224 5 1024 10 224 5 1024 work in these mines as the colliers do int our coal-pirs. The falt is generally of a bluith colour, but some of it white and transparent. When it is first dug, it has a brackish taste; but, when exposed to the air, it becomes brittle, and more sweet. They have also some weins of Sal-Genma. The woods are well flored with bares, coneys, contends done the beauty between the contends of the contends Genman. The woods are well noted want traces, conceys, fouriers, cheer, fouces, beers, wolves, and boars, The Mafovian forefit have plenty of Elka, wild affer, wildoxen, called Uri, and Buffaloes, whose fielh, when powedered, the Poles effects a great deinty. In the Ukrain there are wild hories also, whose fielh is equally efteemed. there are wild notice and, whose near in equally entergard-by the nobblity. The wolf, refembling a harr, or the Eu-ropean Lynn, called Lupus Cervarius, and by the natives Ris, with foots on its belly and leg., affords the beft fura in Poland. The qualits in Podolin lave green-legs; it is fald their field is unwholfome, and breeds the crassp, if immorerately eaten.

The country in general is plain and flat, rather inclining to marth lands, so that no confiderable woods or mountains are found here, except those that make the frontier to teins are found here, except those that make the frontier so. Hungers, which is a eraggy ridge of three hundred miles in length, and called the Crapach, or Carpathian mountains. The eaftern part of the country, indeed, is full of woods, forefts, lakes, marthes, and rivers, which afford a delightful profect to that part of it which is open.

It most confiderable rivers are the Vistua, the Nichest and Carbons the Niches or Residences, the Niches or Residences.

It most confiderable rivers are the Vistula, the Nicinex or Croires, the Nieper or Borishhenes, the Nieper or Borishhenes, the Nieper os Tyem, and the Bog or Vagus; and the only lake worthy of observation is, the great take of Gopto, or the White Lake, which, it is affirmed, will day of a fivarthy complexion those who bathe in it. One of the most singular productions of Poland, is the manns, which proceeds from the ath and quicken-tree, and allo from the larks, pitte; fig. tak, jumiper, maple, olive fig. tree, dec. and flows in July and August from the nervous fibres of the

With respect to the geographical description of Poland a if confidered in its utmost extent, it may be divided into the twelve following districts: I. Poland, property secalled; II. Poland Prussia; III. Lithuania; IV. Samogista; V. Couriand: VI. Warsovia; VII. Polachia; VIII. Polesia; IX. Red Russia; X. Podolia; XI. Volcius; XI. Polachia; VIII. Polesia; IX. Red Russia; X. Podolia; XI. Volcius; XII. Volcius; XI. Volcius; XI. Volcius; XI. Volcius; XI. Volcius; XII. Volcius; XIII. Volcius; XII. Volcius; XIII. Volcius; XII. Volcius; XIII. Volcius; XIII. Volcius

ocrty fo Samolachia I hinia:

Diffiop of this iee, whom Boleslaus II. killed at the altar with his own hands, because that bishop's admonitions were grown insupportable to him. St. Stanislaus's remains are inclosed in a silver shrine, and malks are conmains are incloted in a filver fiftine, and maifts are continually performed day and night in this church. In the treafury of the cathedral, among other things of great value, are the regalia, on which account it is under the care of the treafurer of the kingdom. Here the kings of Poland are siways crowned, and their remains interred. The annual revenue of the bishopric of Cracow amounts to forty thousand dollars. The chapter confists of thirty-fix canons, before other priests, whose revenues are also very considerable.

very considerable.

Near the cassle is the soburb of Stradomo, which insindes several churches, convents and hospitals; and from thence a bridge over the Villula leads to the town of Cazimircz, which may be confidered as the fecond division of mirez, which may be coundered as the fecond division of the city of Cracow: it lies to the cast of the latter, was built by Cafimir the Great, and is inclosed with a wall. The chief edifice in this part of the city is the university, which consists of eleven colleges, to which are subordinate fourteen grammar-schools, dispersed in several parts of the city. The Jews-town joins to Casimirez. To the north on the city lies the suburb of Kleparz, or Klepardis, which has no walls, but coutains several churches, particularly that of St. Finrian, which is a very stately edifice, and the bishop's palace.

cularly that of St. Finrian, which is a very flately edifice, and the bifthop's palace.

The city of Cracow is large, and was formerly populous and flourithing; but by the removal of the court, and the many caismines it fuffained in both the Swedish wars, lus much declined. The citizens have this particular privilege, that no appeal lies from the city council, but to the king only; and his majesty can judge no causes relating either to the city or its suburbs in any other place but in Cracow. The palatine of this city has the power of chosing the council, but not of displacing any member when elected. This city has often been consumed by fire, and in 1707 and 1708 was visited by the petitience, which keep a way feveral thoulands of the inhisbitants. In 1655 it was beforged and taken by the Sweder; but in 1657 they were obligated to restore it to the Poles. It was formed by the Ruffish army under prince Repain and general

they were obliged to reflore it to the Poles. It was flormed by the Ruffian army under prince Repnin and general

hinir, XII. Ucravia. Most of these previness are divided into palatinates; which are again subdivided into ballivicity, or farofiles.

Geographers divide Poland, property so called, into Upper or Little Poland, property so called, into the south of the that Great Poland and Warforia, on the sortin; Hungary, on the south, Red Roulls, on the cat; and Sliefia, on the west, extending, from east west, about a fronterior little Poland, and that is abstrady called the Bald Mountain, though there is a fronastrey on the funntior sorting the palatinates of Cracow, Lendomit and Labin in which, together, from the dioces of Cracow, containing one thouland and eighteen chorches, among which elever colleghts are included.

The palatinate of Cracow has Sliefia on the west, the palatinate of Cracow has sliefia on the west, the palatinate of Cracow has sliefia on the will be palatinate of Cracow has sliefia on the will read the palatinate of Cracow has sliefia on the west, the palatinate of Cracow has sliefia on the west, the palatinate of Cracow has sliefia on the west, the palatinate of Cracow has sliefia on the west, the palatinate of Cracow has sliefia on the west, the palatinate of Cracow has sliefia on the west, the palatinate of Cracow has sliefia on the west, the palatinate of Cracow has sliefia on the west, the palatinate of Cracow, and the first of the sliend has the palatinate of Cracow, and the first of the sliend has a collegiate charm, and the sliend has the palatinate of Cracow, and the first of the sliend has a collegiate charm, and the sliend has a col

tenators of this palatinate. The juridation of the pala-tine extends not only over the citizens and peafants, bot also over the nobility and gentry of the palatinate. The prætor, or mayor of Cracow, is named by the king; but the cattle is principally under the command of the palatine, who has ten deputies or burgraves, chosen out of the gen-try, by whom, in times of peace and war, a strict guard is kept both night and day.

II. The polatinate of Sendomir, or Sandomir, has that of Cracow, on the west and southwest. Humen has that

of Cracow, on the west and south-west; Hungary, on the south; Masovia and Great Poland, on the north; and Red Russia, and the palatinate of Lublin, on the east. It is divided into eight districts, and has nine senators, viz. the palatine and cattellau of Sendomir, and the cantellane of Williez, Radom, Zawichoft, Zarnow, Malazofch, Polovicz, and Sechow. It abounds with mines of gold, filver, copper, iron, lead, fteel, and marble; and derives its name from Sendomir, or Sandomir, which is the capital of this palatinate.

This town is feated on an eminence near the influx of the river San into the Vistula; and its delightful fituation rendered it the favourate refidence of Cafintir the Great, and other kings of Poland. This city is well fortified both by art and nature, and has a college of Jefuits and other orders, with a rich foundation called Collegium Canonicorum. A provincial court of justice is also held here.

In the year 1259 the Tartars and Russians committed terrible ravages in this city, and put the inhabitants to the sword. In 1656 the castle, which stands on a steep rock, was blown up by the Swedes. It is now claimed by the Austrians. Here are two churches much frequented by pilgrims, both which stand in the middle of a forest.

This town was diffmantled by king Augustus in 1704. This town was difinantled by king Augustus in 1704.

The towns of lefs note are, r. Kunow, forty miles north of Sandomir; it has feveral quarries of marble in it.

2. Schydlowiecz, forty miles north-west of Sandomir; there are great quantities of timber, iron, and steel in its neighbourhood.

3. Viassen, a new-built town of good trade.

4. Optatow, fifteen miles north-west of Sendomir; it has several famous religious structures.

5. Radom, the capital of its district, forty-three miles north-west of Sandomir.

6. Ilza, a neat town belonging to the bishop of Cracow, seventy miles to the north-east, of that rown.

7. Solecia, on the Westell, celebrated for its castle.

8. Bozentin, mear the bettom of the Bald Mountain; there is plenty of iron in its neighbourhood.

9. Kieles, the miles west of Bozentin, is famous for mines of cosper and lapis lazuli.

10. Chencia, twelve miles east of Kieles, noted for mines of lead and silver, and quarries of marble.

11. Racow, or Racovia, neted for having been.

been formerly a neft for the Socialans and Arians, whosedemy there was fupprefied about the year 6506. a.s., govia, famous for making eathers were, if y. Corsin the capital of its diffrier, and has a cattle near the river flock, a.g. Villiess, or Willies, a city and caftellany, tered by the Nida, flands on a rock, fifty-one miles eaft. of Sandomir i there are many serpents and infects in the

adjacent coentry.

All. Lublin palatinate hath that of Sendomir, to the north-eaft; PadieCria, to the west; and Lithuania, to the cast. The whole palatinate, independent of the cottages of the peasants, contains near two thoestand noblemens and gentlemens feats. It is governed by four principal persons, via. the palatinate, the castellan, and two fenators. The Weiffel and Viepers are the chief rivers of fenators.

Lublin, in the palatinate of the same name, is sur-rounded by a wall and ditch; but though it is not large, it is a place of good trade. It has a castle built on a high rock, and stands in a very pleasant and sertile country. rock, and flands in a very it has feveral churches and co rock, and fands in a very pleafant and fertile country. It has feveral churches and convents, a college of. Jefnita, and a great number of Jews live in the finburbs; they have there a very spacious synagogue. In this city are held three annual fairs, each of which lasts a month, and these are frequented by a multitude of Gertoan. Greek, Armenian, Russian, Turkish, and Arabian traders and merchants. The chief tribunal for Little Poland is held in this city, The chief tribunal for Little Poland is held in this city, befides the provincial diet and a court of judicature. In sago this city was fet on fire by the Tartars, after which it continued for a long time in the possession of the Russians. It also suffered much by fire in 1,447 and 1606, and in 1656 was reduced to after by the Swedes. It suffered the same fate from the Russian in 1,650.

Among the rock, near the Weissel is the large town of Cassimir, built of timber: it is about twenty-fix niles

Cafimir, built of timber; it is about twenty-fix miles diftant from Lublin. Here are a beautiful palace and extensive gardens belonging to the archbishop of Gnessa. In this town Charles XII. of Sweden caused general Pat-kul to be broke alive upon the wheel. The Weissel ometimes overflows, and lays above half the town under water.

Twenty-eight miles fouth of Lublin stands Urzendow,

Twenty-eight miles fouth of Lublin stands Urzendow, which is a considerable town, built of timber. The town of Lulow, likewise built of wood, is about fifty-fix miles from Lublin, in a plain: it has a considerable juridiction, and is defended by hogs and palifodoes.

Lower or Great Poland is bounded, on the north, by Pomerania and Polish Prussia; on the fouth, by Little Poland: on the west, by Silesia and Brandenburgh; and, on the east, by Massivia. It is near two hundred miles in. length, and about one hundred in breadth. Though called Great Poland, it is rather finaller than Little Poland, for it did not receive the appellation of Great from its extent, but from having been first settled into a kingdom by Lechua the Great, by whom the Polish monarchy was originally

This is, in general, a level champain country, has pleafast rivers, lakes, and ponds, and is well furnished with all manner of fith and iowl. The most confiderable of its rivers is, the Warta, which passes through great part Its hills abound with sheep, and other cattle; and

its vallies with com.

The first subdivision of this country, we shall take no-tice of, is Posnania, which is bounded on the west by Silesia and Brardenburgh; on the north, by Pomerania; on the east, by Pomeresia; and on the fouth, by the pala-tinate of Kalisch and Silesia.

The archbishop of Gnessa, the hishop, palarine, and castellan, of Posnania; and six other castellans are sectors of this palarinate. There are several other officers in this palatinate, both civil and military. The starostas, or governors of cities, have some of them jurisdiction, others none; as it is, likewise, all over the kingdom. Some of its towns are walled, but the houses, in general, are of timber, except the public edifices, which are of flone or

brick.

Its capital city, of the fame name, flands in a plain, amongft feveral little hills, by the river Varta, or Warta, twenty eight miles welt of Gneina, forty north of Wratiflaw, forty three north-welt of Kalifcla, one hundred and thirty-five fouth of Dantzick, and one hund; al and forty-three welt of Warfaw. It is thought to be inferior to no city of Poland, except Cracow. It is the fee of a to no city of Poland, except Cracow. It is the fee of a bifhoje suffragan of Gnesia; and is defended by a good caftle, a double wall, and a deep ditch. It is famous for its trade, in well-built, and has a cathedral, the bifthep's palace, and an university, in its suburbs, which are large, and encompassed by a moras, and a deep lake, but incommoded, fonetimes, by the overflowing of the rive. The Jefaits have a fine college and monaftery in the city, in the former of which they have many feholars. The inhabitants make as haudfones a figure in their houses and refs, as any-whee in Poland et and their starofts, or chief magniferate, who is chosen annually out of the echevine, or aldermen, in dignified with the title of general of Gress. Poland. Most of them are papists, but here are many Jews, who have greater privileges than the chisans. In 1704, the Saxons had fiege to it, but were foon obliged to raise it, by the approach of the Sweden. In 1716, the Sweden stacked the Saxons here, contrary to a suspension of arms, and made them prifoners of war in the calle. The public buildings are generally of free-lone, of which the most considerable is the castle, that stands on a small eminence, between the rivers Warra and Profina; but its most stately edifices are on the other fide of the Warta, in the suburbs. The suburb is commonly called Valliori, most flately, edifices are on the other fide of the Warts, in the fuburbs. The fuburb is commonly called Valifori, and built fo strong, that like the town, it is able to with-fland a fiege. There are three very famous fairs kept in this city, much reforted to by the German traders and gentry. The first is kept about the beginning of Lent, and last a month; the fecond and third at Midsummer and Michaelmas, each of which continues five weeks. In St. Magdalen's, which is the principal church of the city; they shew the tomb of the duke Micaglaus, who introduced christianity into Poland. Here are several other

they have the tomo of the dute Mechania, who introduced christianity into Poland. Here are feveral other churches, besides monasteries; the streets are spacious, and its town-hou is a large building, of fine architecture.

The other towns of note are, 1, Koson, about thirty-three miles south-west of Possania. 2. Miedzyzecze, on the frontiers of Silesia, about that miles south-east of the frontiers of Silefia, about fiaty miles foun east of Pofinania. 3. Slupeza, on the Warta, about thirty miles fouth eaft of Pofinania. 4. Liffis, thirty-three miles northwest of Pofinania, it was plundered and burnt by the Russians in 1707, so that of three thousand houses, only seven were left fisanding. c. Fraustad, on the frontiers of Silefia, ten miles south west of Liffia, it is remarkable, for the victory obtained near it ever the Saxons by the Swedes, which proved stall to king Augustus.

1V. The palatinate of Kalifch, or Kalis, lies along the river Warta, between the palatinate of Posinania on the west. Siradia on the south south of the support of the siradia on the south and north-east, and Lencicía and Cujavia on the east and north-east. Its fenators are five, viz. the palatine and cassellan of Kalifeh.

weft, Siradia on the fouth, Sendomir on the fouth-eaft, and Leucica and Cujavia on the eaft and north-eaft. Its fenators are five, viz. the palatine and caftellan of Kalifeh, and the caftellans of Land, Naklo, and Kamin. It has its mane from the city of Kalifeh, mentioned by Ptolemy, on the river Profina, which falls, a little lower, into the Watta, twenty miles eaft of Silefia, and north of Siradia, thirty feven fouth of Gnefina, a hundred and thirty three weft of Watfaw and north-weft of Cracow. It less among marshes, and is fortified only with a brick wall, and low towers. Here are the ruins of a strong castle, which were destroyed by the Teutonick knights. It has a magnificent college of Jesoits, and some religious houses. It was taken, and ill-treated, by the Swedes, during the wars of the last century. The Saxons and Poles defeated the Swedes near this place, in October 1705, just as a treaty had been signed, whereby king Augustus renounced the crown to king Stanislaus, his clessrate of Saxony being then over-run by the Swedes, and no other way left him to relieve, it. But the chief city of this paintinate it. Gnefina, called Snifen bythe Germans, which is the capital of the Lower Poland, and was formerly the metropolis of the whole kingdom, and seat of the king. It stands in the middle of the palatinate, in a plain, between his in the middle of the palatinate, in a plain, between his in the middle of the palatinate and of Thorn, ninety-sive north of Breslaw. a hundred and eighteen fourh of Dantaick. the middle of the paratinate, in a plain, netween hills and lakes, thirty-feven miles north of Kalifch and eaft of Pofinan, forty-fix fouth-weft of Thorn, ninety-five north of Breflaw, a hundred and eighteen fouth of Dantalck, a hundred and twenty-one north-weft of Warfaw, and a hundred and fifty-five north-weft of Cracow. It was built, as is generally reported, by king Lechus I. founder of shis monarchy, and called Gnefina, from an eagle's neft found there, which, in the Polith language, is called Gnefina. The kings of Poland were crowned, and the regalia kept here, till 132c, when they were removed to Cracow. It fuffered very auch by a dreadful fire, in 1672, and has been declining ever fine: 16 that it is now only confiderable for being the fee of an archbishop, who is primate of all Poland, legate of the Holy See, and, in cafe of the king's death, regent till a new king be chosen, whom, also, he claims the right of declaring and crowning. He figns himself "Legatus natur, & rigni Polonia primus, & primus princeps." He can reverse all proceedings in any of the bishop's courts, and it is feast to draw a fword in his presence. A golden cross is carried before him when he goes to the dier, or to the King; and when he fit fhal, falute dors, niay trom down The king rinth

he fits, his chaplain holds it behind his chair. His marfhal, who is a fenator, carries a fall before his coach, and
falutes none with it but the king. He vifits no embessadors, though they vifit him. During the interregnum, he
may coin money in his own name; the revenues of the
crown belong to him, and he has then the fame officers
with the king; but at all times he has drums beating, and
trempets founding, within and without, before he fits
down to table; and he may vifit the king when he pleases.
The canons must all be of noble birth and defernt.

In the cathedral there is a vast treasure of gold, filver, and
curious enamelled vesses, left to it by Sigisfmund III. other
kings, and some archbishope. The tomb of one of the
archbishops is cased with silver, and the gates are of Corinthian brass, curiously wrought.

III. To the north and south of the Werta'is situated
the palatinate of Siradia, and cov' ins, r. Siradia, the
capital town, which is futall, b.c. populous, and has a
cattle to defend it. 2. Wielum, the sea of the sarotia,
castellam, and provincial diet. 3. Petrikow, a rolerable
well-built town; and at present one of the great tribunals
of the kingdom, for determining differences arrong the
nobility, and appeals from inferior courts, assembles in
this town; as does also the syndi of the clergy, and a
provincial court.

IV. Leneicia is finated east fron Kalisch and Siradia.

this town; as does also the synod of the clergy, and a provincial court.

IV. Leneicia is situated east fron Kalisch and Siradia, and has Little Poland, towards the south. It is divided into three districts, and hath five senators, viz. the palatine and cathelian of Leneicia, and the other castellans.

Leneicia, the principal town of this palatinate, is eighty miles west of Warsaw, and a hundred and thirty miles north of Cracow. It is surrounded by a shick wall and a dicth, defended by a castle, situated on a rock; has a great annual fair, and is the seat of one of the diets. 2. Pionttum, fitvated on the Warta, is ten miles east from the above mentioned town.

the above mentioned town.

V. Rava palatinate lies eaft from that of Leneicis, and hash four fenators, via. the cafellan of Sochaezow, the caftellan of Godinin; the caftellan of Rava, and the pa-

latine of Rava.

cattelan of Rava.

The town of Rava, which is the capital of this palatinate, flands on a river of the fame name, upwards of forty miles to the fouth-west of Warsaw. It is fituated in the midst of a plain, is built of wood, tolerably populous, and defended by a castle, which is at once the depository of some of the crown revenues, and a state prison. The castle, which is stanked with four towers, and a frate prison. The castle, which is stanked with four towers, and a frate prison. The castle, which is stanked with four towers, and a frate prison. The castle, which is stanked with four towers, and a frate prison. The castle, which is stanked with four towers, and a frate prison. It has a castle furrounded by the river; is adoned with a state prison which is a populous town, where is a noble palace belonging to the bishop of Cujavia.

VI. Brezesty palatinate lies to the north of Leneicia, is fertile, sends sive members to the dict, and hath its name from a little town fixty miles to the cast of Gnessa. It lies on a causeway amongst marshes, and is built of brick

from a little town taxy mights to the east or Griefina. It lies on a canteway amongit marthers, and is built of brick and wood. Its towns are, r. Crafwick, thirty miles well of Brezefty; there is a brick caftle in the middle of it; and in the fuburbs flands the church of St. Peter, built with free-flone, together with 2 college of twenty-four canons. 2. Radziew is fituated on a lake, twenty-eight

canons. 2. Radziew is fituated on a lake, twenty-eight miles north-welt of Brezefty; and the houfes in general are built of timber; hence it is subject to conflagrations, sike many other towns of Poland.

VII. Uladislau, in Latin Uladislavia, is a palatinate, whose capital city, of the same name, is built among marshes, near the Weissel, in the nidway between Ploczko and Thorn, fourteen miles ooth-east of Brezesty, twenty south-east of Trezesty, of the property fouth-east of Thorn, and seventy-five north-west of Warshey. It is the see of the bishop of Cujavia and Pomerania, infifragan of Gness, who always erowns the king, in case of the death, indisposition, or obthinacy, of the primate. The cathedral is an antient Gothick stracture, but rich in plate, ornaments, and relicks; and encompassed with the plate, ornaments, and relicks; and encompated with the plate, ornaments, and reliess; and encompaned with the houses of the canons and prebendaries, and a large free-school. The chief ornament of the place is, the bishop's stately palace, built by Matthias Golanciew, who was forty-two years bishop of this see, and sounded the church of St. Vital the martyr. The houses are generally of brick, as also the cashs on the Weissel, which is wellfortified. Though the adjacent foil is marfly, and fo fearce of fuel, that the inhabitants fuffer very much for want of it; yet it is fruitful in corn, and feuds great quantities to Dantzick, for exportation.
VIII. The pelatinate of Inowlocz, or Inowladislaw,

No. 54.

axtends from the lake of Gople, and the city of Cruswick, to the Weisfel, and the confiner of Pomerania: it has Frussia on the north, the Weisfel on the east, Kalista on the footh, and lies north-well from Breusly. It is divided into these territories, and finds four castellans to the diet, besides the palatine. The chief town of the fame name, is on the river Norer, thiery-eight miles west of Uhadisaw: it is small, but defended by a strong castle.

2. Bydgost, is a walled town, noted for a trade in laimon it is fituated in a plant, on the tiver Barde, by which goods are brought up to it from the Weissel, particularly from Uhadisaw, from which it is twenty-four miles distant.

IX. Dobrin, by forme mide a distinct palatinate of the province of Masseria, and by others a territory belonging to that of Breastly, lies on the east of Weissel, between Cujavia and Prussia; abounds with fruit and fish, was formerly the occasion of many quarrels between the Teuronic kinights. Pressa, and Poland, and in divided into three districts. Its senators are, the three castellans of Dobrin, Ripin, and Sloufs.

On a rock near the Weissel, over-against Uladislaw, stands the town of Dobrin, bulk of timber. It had formerly a strong easile, which the Teutenic knights demolished.

X. On the west side of the country is Piecako, or Ploskow, by some attended to the country is Piecako, or

emolines.

X. On the west side of the country is Plecake, or Ploskow, by some also reckened a palatinare of Massovia, from which it lies rather to the east between the Weissel and Ducal Prussia. It is divided into four districts; and its senators are, the bishop, palatine, and castellan of

and its fenators are, the bishop, palatine, and castellan of Ploskow.

Its chief town, of the same name, stands on a high bank of the Weisfel, from whence there is a prospect of a pleasant and fruitful country. It is fifteen miles fouth of Dobrin, near thirty east of Brezesty, forty-four foutheast of Thorn, forty north-east of Leneicia, and fifty north-west of Warsaw. It has been a bishop's see a long time, is very populous, has a good trade by its river, and is defended by a castle. It has a cathedral with other churches and monasteries, well endowed, especially that of the Benedictines, in the suborbs: where, among other relics, they keep the head of St. Sigismand, given by Sigismund III. in a gold strine.

SECT. II.

Containing a description of Polish Profile, its boundaries, en-tons, produce, &c. their religion, civil and political go-vernments, several divisions of the country, principal truons, &c.

POLISH Pruffia hath been diftinguished by the appellation, of royal Pruffia, and has been added to the general province of Great Poland, though it is a very different country, inhabited by a different people, who have their peculiar laws and privileges; and therefore deferres to be feparately confidered. It is bounded on the north by be leparately confidered. It is bounded on the norm by part of Pomerania and the Baltic fea; on the sait, by the kingdom of Pruffia; on the fouth, by Great Poland; and on the weft, by Great Poland and Pomerania. It is far inferior in extent to the kingdom of Pruffia, it being only about farty miles in length, and fifty-one in its greatest breadth; but the latter does not exceed eighteen miles in fome places.

This country is divertified with mountains, woods, and

lakes; but in the fouth part there is little petture ground, and confequently few cattle. The fisheries are of great advantage to this country, which also yields a vast quantity of honey and wax.

of honey and wax.

The woods abound with wild boars, roe-bucks, and wild fowl, and a good deal of lime is also burnt in some parts of the country.

Here are those remarkable heaths of Skal, Masura, Nicholait, and the defart of Iohannilberg, which is four German miles in breadth, and four in length.

The inhabitants confist partly of Poles, and partly of Germans. The reformation was introduced here early in the fixteenth century, and in a few years the professor of the Lutheran religion increastit so fast, that their number in the principal cities and towns for exceeded that of the in the principal cities and towns far exceeded that of the papills, and they had almost as great a superiority in the similar towns and villages. But succeeding times have introduced considerable attractions. The kings of Poland have, indeed, allowed the inhabitants the free exercise of the Lutheran religion in the cities of Pruffia; but there are at present only a few towns in which the Lutherans have churches, and in other towns they have been com-

pelied to give them up to the papifts. Besides, the protes-tants are continually oppressed, and promise of preser-ment and other means are too successfully employed, in order to seduce the Prussian nobility from the Lutheran church to the Romiss.

As we shinted shove, Polish Prussia is a diffined political body or state, that hath nothing in common with Poland, except its having the same sovereign, and being connected with that crown by a perpetual alliance. For when the inhabitants put themselves under the protection of king Casimir IV. in 1,606, it was expressly stipulated, that the ducty of Prussia should have nothing to do with the re-public of Poland, but that the king alone should personally order and determine all rivatters relating to the former; and public of Poland, but that the king alone should personally order and determine all matters relating to the former; and for that purpose should come among them, and summon general diets. Hence this state enjoys the same right as Poland and Lithuanis, of voting at the election of a king, who after his coronation is obliged to swear, that he will maintain the Prussians in their rights and privileges; and when this is done, they pay homage to the new sovereign in the surface language. in the ufual manner.

With respect to matters of a public nature, the king can determine nothing without the concurrence of the states, who are divided into spiritual and temporal memstates, who are divided into spiritual and temporar members, the latter confissing of nobles and burghers. Of these the senate is at present composed. This council consists, sirst, of the bishops of Ermland and Culm. The former is the president and chief among the nobility, Gnefna j but holds immediately of the pope. His diocefe, in which he has the supreme authority both in civil and ecclefisfical causes, is of a very large extent. Its revenues are divided into three parts, one of which belongs to the chapter; but the other two, which are computed at fixty-four thousand dollars, are affigued for the episcopal table.

The diocese of the bishop of Culm is not near so extensive, and consequently the resenue is much included.

a ne diocete or the bilhop of Culm is not near fo extensive, and consequently the revenue is much inferior to that of the bishop of Ermland. The bishop of Culm is a fuffragan to the archbishop of Ermland. The bishop of Gnesia, and the king absolutely disposes of that bishop is without calling a chapter. The other members of the council are three palatines, who are of equal dignity with those of Poland; three callians, who are not invested with any patients of fee are molecular. with any particular office or employment, but on a general fummons of the nobility may be looked upon as the lieutenants of the palatinates , three vice-treasurers, who have cenants of the paramates; three vice-treaturers, who have only a bare title; but as they are counfellors of flate, they take place of the reft of the nobility; two counfellors from each of the three great cities. Dantzic, Thorn, and Elbing; and each of these representatives has a vote in

According to the laws of the country, their flate coun-fellors ought to be native Pruffians; but this is feldom the telios ought to be native Prunians; out this is feldom the case. They are nominated by the king of Poland, and take a particular oath at their admission. The bishop of Eimland sits as president in the Prussian diet; but, in his absence, his place is supplied by the principal persons among the nobility who are present. These members are styled the two states of the duchy of Prussia, and royal

flyled the two states of the duchy of Prussa, and royal counsellors: they may likewise be termed the superior states, to diffinguish them from the inferior, composed of the lower nobility, and the deputies of the small towns. King Casinir IV. engaged for himself and successors, not odetermine any affair of consequence without the previous concurrence of the states of Prussa. Hence iprung the origin of the Prussa diets, which before had no connection with those of Poland. But in 1569, part of the senate of Poland. and the states of the former were comfenate of Poland, and the states of the former were compelled to appear at the general diet of the kingdom.

political conflitution of Pruffia has been much changed from that time; but it still enjoys particular rights and pri-vileges, and is not entirely interwoven with that of Poland. After the general Puffian diet is fummoned (which is al-ternately held at Marienburgh and Graudenz, the king specifies the time of holding the leffer diets, where the representatives of the former are chosen, and receive their instructions. These provincial diets are held in every painfluctions. Their provincial diets are held in every pa-latinate, and the happy conclusion of them indicates the prospectous iffue of the general diet; for if only one of these assemblies rise abruptly, the general diet is seldom expected to assemble. The numbers of representatives for every palatinate is not fixed, but they have lately been more numerous than heretofore. During the fession of the diet, their expences are defrayed; and the influctions given to

the members are in the Polish tongue.

Befides their own general dict, the Pruffians affift at that of Poland: though they do not agree to the taxes imposed on them in the Polith diet, but only in their own general one. Formerly the Pruffians had their own coln, which is now reduced to the flandard of the Polith money. But the three principal cities of Pruffia Are All the privilege of collning gold and filver pieces, imprefied with the king a head on one fide, and their refective arms on the reverte; which age as the surrest money of Pruffia, after receiving which pais as the current money of Pruffia, after receiving the royal fanction. Here are feveral other public officers, befides the counfellors of state, such as the streament, who is the principal, and the only one who has an annual falary; the (word-bearer, who has only the bare title; the flandard-bearer, who bears the flandard of the province, when all the nobility take the field; and feven judges, with their attendants and clerks.

with their attendants and clerks.

The towns of Prufile are comprised in the three celebrated ones of Dantaick, Thorn, and Elbing, and twenty-feven royal towns, befides those that belong to the bilhop of Ermland and Culm. An affociation was-formed among the small towns, under the government of the knights of the Teutonic order. By this union, which still continues, they are to act jointly in behalf of their common privileges 10 confult their interest as a community in their nativilys affemblies, and to recommend their comtheir particular affemblies ; and to recommend their common concerns, in the general diet of Pruffis, to the representatives of the great cities. Marienburgh, which is the most considerable among these towns, has the directory, and this with Graudena, Dirshau, Stergard, and Konitz, are called the plenipotentiary towns; for, besides their own affairs, these are charged with those of all the other towns, which they be the dischause and the with the property of the state of t which they lay before the directory, and the latter repre-fent them to the deputies of the great cities. These small towns are at present far from being in a flourishing con-dition. An appeal lies from the sentences of their ma-gistrates to the throstas, and also to the king from the latter.

gildrates to the throftas, and also to the king from the latter. There are four provinces or palatinates in Polish Prussia. That of Pomerelia, or Little Pomerania, was antiently a part of the duchy of Pomerania; but at last sell under the dominion of Poland. This palatinate contains five circles, and has four provincial judges. The most remarkable places in it are the following, viz.

The celebrated and commercial city and fortress of Dantzick, called by the Poles Gdantzik, situated on the Vissua, near sive miles from the Balcick, in fifty three degrees, thirty-eight minutes north latitude, and in eighteen degrees thirty-five minutes east longitude. The small rivers called the Kadaune and the Motlau cun through the city, the latter divided into two channels, which run the city; the latter divided into two channels, "which run between the Old and New Town, and afterwards unite again below the city, and, with the Radaune, fall into the Vitula.

Viftula.

This is a large, be autiful, and populous city, built after the ancient manner of the Hanfe-towns. The houses are generally five flories high, which make the fireets appear the narrower, especially as the entrance into the houses is by four or five flone steps, and a balcony, which make a projection of ten or twelve ster. These houses are kept clean after the manner of the Dutch, though with less nicety. Many of the streets are planted with chesinut-trees about thirty seet high, which afford an agreeable shelter from the heat of the sun. from the heat of the fun.

from the heat of the fun.

There is a beautiful harbour belonging to this city; and the inhabitants who are remarkably civil and obliging to firangers, carry on a confiderable trade, effecially in corn. The ships belonging to this port are very numerous, and the privileges of this city are very valuable. As it is one of the three great cities, it fends reprefentatives to the Pruffian fenate or council of fate, who have likewich a feat in the general diet of Poland, and vote at the election of a king. The Dantzickers have allot the privilege of gathering amber, coining money. &c.

of a king. The Dantzickers have also the privilege of ga-thering amber, coining money, &c.

Here are twelve Lutheran churches, exclusive of those in the house of correction and in the alms houses, two Calvinifical churches, one popifi church, and a college of Jefuits. The cathedral, which is a large Lutheran church dedicated to the Virgin Mary, is the most magnificent, and the principal churches in Dantzick. Mr. Hanway observes, that this is an antient structure that has not been much that this is an antient firstfure that has not been much changed by the establishment of the protessant religion in this city: for it was agreed by treaties to have the crucifixes, images, and pictures, as in the times of popery. They shew a very curious painting on wood, of the refurction, by Van Eyck. There is a Lutheran accademy in the Grey Friars convent, in which are seven professors, and one teacher of the Polish language. In this convent is

The other public buildings are the exchange, the council houses in the Old and New Town, the public weigh-house, the arfanal, which contains a good collection of arms, but many of them are old and useles ; they have a hundred and fifty large brass cannon, fome of which are feld to weigh fifteen thousand pounds. They have also a fine mill erected on the river Radaune, which has eighteen wheels, is the largest in all the city, and is faid to have produced to the proprietors a ducat every four.

hour.

Dantzick was anciently the principal of the Hanfe-towns, and the first that entered into the Hanfeatic association. The German is almost the only language spoken here, the inhabitants being little used to the Polith. The city has its own gsrrifon; and the fortiscations make a good appearance, especially towards the south and west; those parts of the town being surrounded with eminences, some of which rife fligher than the towers of the city itself.

In the west 17.2.2. one thousand two hundred and ciclive.

forme of which rise higher than the towers of the city titler.

In the year 17 32, one thouland two hundred and eightyeight Polith veffels, finall and great, from the Vistula, and
one thousand and fourteen ships from the sea, arrived in this
port, and fifty-eight thousand and fixty bushels of corn were
brought into this city for exportation. Indeed the most
considerable branch of the trade of Dantzick is that of corn, which is brought by the Polanders in large barks of about fifty tons burden down the Vistula. In plentiful about first tone burden down the Vistula. In plentiful years the for backs annually amount to about fixteen hundred. As these eargoes are often exposed to the weather, it is sufformaty to spread their fails on the banks of the river, and to dry their corn upon them. They also export bees wax to the annual amount of near a thouland schippounds; hefides narrow linens, facking, pot-ath, pearl-alh, pipe-

wax to the annual amount of near a thoutand schippounds; hesides narrow linens, sacking, pot-ash, pearl-ash, pipellaves, oak-plank, &c.

We learn from antient records, that Dantzick was a large commercial city so early as the year 907. The New Town was founded by the leutonic knights in the year 1311, and was first encorapassed with a wall and moat in 1343. Dantaick shook off the yoke of those knights in 1454, and the inhabitants, upon certain conditions, submitted to Casimir, king of Poland, who, among other privileges, granted them the right of coining their own money. Asterwards they refused to do homage to Stephen, king of Poland, without the previous confirmation of their rights and privileges; upon which the city was put under to ban, and besieged by that prince; but the affair was accommodated, and on their publicly acknowledging their error, and paying a large sine, the king received them into savour, confirmed their privileges, and granted them the free exercise of the Lutheran religion. In 1734, Stanislaus, king of Poland, took refuge here, which occasioned a hot sing and bombardment from the Russians and Saxons but Stanislaus making his esper, Augustus III. was acknowledged as rightful sovereign, by the Dantzickers.

The king of Prussia exempted his city, as well as that of Thorn, from those claims which he made on the neighbouring countries; notwithstanding which, his Prussian majetty feized on the territories belonging to Dantzick under the pretence of their having been formerly part of Polith Prussia. He then proceeded to posses in this Prussian majetty feized on the territories belonging to Dantzick under the pretence of their having been formerly part of Polith Prussia. He then proceeded to posses in the sufficiency and cretted a custom-house in the harbour, where he laid insupportable arbitrary duties upon goods exported or imported. Although the English merchants had in right of treaties several immunities at Dantzick, these could not protect them from the rapacity and extortion of this monarc

them from the rapacity and extortion of this monarch, who laid fuch heavy taxes on the principal articles of comwho laid tuch leavy taxes on the principal articles of commerce, as amounted nearly to a prohibit on of them; and likewife established companies to whom he granted an exclusive right of trading in certain articles. To complete the system of oppression, no person could go in or out of the town, not excepting the ladies, without being searched in the strictest manner.

Garched in the strettest manner.

History will hardly furnish a more striking instance of the sustinity, if not of the absurdity of treaties, so far as shey are considered as guarantees or ads of security, than the fate of Dantzick. Few cities ever existed, and it is probable that none do at present, that have been comprehended in so many general and particular treaties, whose rites and liberties have been so frequently secured, and appropriate the security secured, and appropriate the security secured. guaranteed by fo many great powers, and by fuch a long and regular tucceffion of public acts, as that of Dantzick has been. Nor have the commercial powers of Europe to often armed in the defence or support of any other. The city is in the diocese of Cujavia, and the inhabitants pay the Popish bishop all the regard consistent with the difference of their religion, and the privileges and immunities of the city.

Without the walls of Dantzick lie the following places within its jurification, viz. 1. The Dantziger, Werder, or Island, which is surrounded by the Vistua, the Meslau, and the morastice caused by these rivers, and contains about fourteen hundred bides of lands, and about thirty-three villages. 2. The Frische Nehrung; which is a long narrow slip of land, extending between the sea and the harbour. It contains sive villages that have churches tout the most remarkable place on this island, is a fort called Munde, which is very strong, and has a church and a commodious harbour. And, 3. about a German miltimom Dantzick is Olivs, a celebated convent, that has been frequently consumed by firs. It is at present inhabited by about fifty Cistercian menks. Near the entrance of the church is a marble table in the wall, in commitmoration of the treaty of Oliva concluded in this monastery between the Poles and Swedes in 1660. The dispensary belonging to the convent is clegant and well contrived. This monastery has the privilege of gathering amber on the sea coal. Round this structure a pretty village has been gradually built. There are in the district belonging to Dantzick, several other small towns.

The province of Culmerland, or the palatinate of Culm, has a palatine, who is the first of those belonging to Prussia, a callellan, a vice treasurer, a fword-bearer, a judge, and cigh starofties.

The principal places in this palatinate are, 1. Culm, or Chelmino, the capital of the province, which stands on an

The principal places in this palalinate sre, 1. Culm, or Chelmino, the capital of the province, which flands on an eminence on the banks of the Viffula, in fifty-three degrees twenty minutes north latitude, and in nineteen degrees twenty minutes all longitude. This city was founded in 1239, and bequeathed by one of the dukes of Maffovia to the knights of the Teutonic order. The inhabitants afterwards withdraw therefore fees their chelicages and the continuous control of the control to the knights of the Teutonic order. The inhabitants afterwards withdrew themselves from their obedience, and submitted to Poland. While the Teutonic knights had the sovereignty of Culm, the high tribunal of Prussia was had in this city, and the Culment law became in such reputation, that there were sew places in Prussia or Massovia, where it was not received. The city is at present subject to the bishop. The bishopric of Culm is the most antient see in Polish Prussia, and the college or chapter consists of only sour canons, who are chosen by the bishop, and the rest of the chapter. Culm is large city, though but thinly inhabited, and was formerly one of the Hanse towns.

towns.

2. Thorn, the chief of the three great cities of Polifa Pruffia, flands on the Viffula, feventy-two miles fouth of Dantzick, in tifty two legrees forty-fix minutes north of Dantzick, in little two legrees forty-ix minutes north latitude, and in nineteen degrees fifteen minutes eaft longitude. This city was founded by Herman Balck, first grand master of the Tentonic order, wto, in 1231, built the castle of Thorn, and in the following year laid the fuundation of the town; but in 1235, the building of it was discontinued on account of its inconvenient fituation, and the city was built beautiful to the foundation of the town; but in 1235, the building of it was discontinued on account of its inconvenient fituation, was discontinued on account of its inconvenient nituation, and the city was built about four miles and a half up the river, where it now stands. It is supposed to have been called Thorn, because the knights, by huilding it, open to themselves a thor, or door, into Russia. Thus the feel of the city represents a gate thrown open. Thorn soon after its being built became distinguished above the other towns of Prussia by its enjoying several valuable privileges; him when the Teuronia knights made a very ill use of their but when the Teutonic knights made a very ill use of their power throughout all Pruffia, this city was the first that formed the noble scheme of shaking off their oppressive

yoke.

The inhabitants having concerted an agreement with
the other towns in the year 1454, made themselves malters
of the eastle, and demolished it; and having expelled the
Teutonic knights by force of arms, the confederates put
themselves under the protection of Casmir the Great,
king of Poland; but their rights, privileges, and immunities were to remain entire. They were to honour his
Polish majesty as their sovereign; but without any further
councestion with Polaski than a close harmony and alliance. connection with Poland than a close harmony and alliance, by which they engaged to have the fame allies and ene-mies on all occasions, and reciprocally to promote each

muss on all occalions, and reciprocally to promote each other's welfare and profperity.

Three cities had the following privileges granted them in common: they were declared free, and were to be governed by their own magistrates, consisting of the council, the chief persons of which are the burgares and prefident, the judges, and the representatives of the burghers. The members of the council were to be stilled noble; they were allowed to had a superson court of indicates. they were allowed to hold a supreme court of judicature, and in criminal cases to punish capitally even those who were not inhabitants of the city, if they were taken in the fact; to have their own garrison; to coin money, and to have their-law-fuits decided only in Pruffia. They were to pay no other cuftoms in Poland but those usually demanded at the fish harrier on the frontiers. Lastly, they were to be members of the state-council of Polish Pruffia, and to have a fast and vote in the Polish diet, and at the slection of a king. The third jubice of this event was commensor ted with great rejoicings in the schools of all the three great cities in February, when medals were street on the occasion in the cities of Thorn and Dantzick.

The records of Polish Pruffia are keeps in the city of

on the occasion in the cities of Thorn and Dantsick.

The records of Polith Pruffla are kept in the city of Thorn, which has ten gates, and is divided into the Old and New town, each of which had formerly its respective council, magistracy, and police; but in 1453, they were incorporated into one city. They are, however, sparated by a wall and most within the town, but on the outside are defended in common by a double wall and mosts. This is efterent the handsomet city in Polith Pruffla, its streets being broad and regular, and for the most purt planted with rows of trees: the houses are also remarkable for their steerant appearance and cleanlines.

with rows of trees: the houses are also remarkable for their elegant appearance and cleanlines.

The Coden bridge over the Vistula in this city may be justly esteemed the longest, the most estraordinary and expensive bridge in Europe, the city being obliged to expand great issue in keeping it in repair. It properly expand great issue in keeping it in repair. It properly expand great issue in keeping it in repair. It properly expand great forms to said the German bridge, and the channel over which it lies is efterman bridge, and the channel over which it lies is eftermed the German Vistulas; but the other part is distinguished by the name of the Polish bridge, it lying over the channel over a said of the Polish Vistula. As the river runs confiderably wider, the bridge must necessarily be lengthened, so that at prefent it takes up half an hour to walk over it from one bank of the river to the other. It is also the most singular on account of the quickfand into which the piles are driven, which occasions the whole beidge to shake and totter when aver any carriage or horses are upon it, or even totter who aver any carriage or horses are upon it, or even when it is passed by a considerable number of soot-passen-gers: a stranger who is unacquainted with its construction, gers: a firanger who is unsequainted with its confinction, apprehends blimfelf in great danger in paffing over it. The ice on the Viffuls, which is frequently two or three feet thick, and the rapidity of the current, carry away every year one-third of it. Hence fome idea may be formed of the vaft expence the annual repairs amount to a for the Poles pay no part of that, not withflanding the heavy loads they bring over it.

The reformation was very early embraced by the in-habitants of this city, which has its own garrifon, con-fifting of only one company. This city found as little fifting of only one company. This city found as little fecurity from the king of Praffia's declaration in 1772, as that of Dantaick. Its territories and revenues were feized upon, custom and excise-offices erected at their gates, and heavy esactions demanded even upon the necessaries of life. Thus blockaded and plundered, they were declared free; but at the same time were summoned to do homage to the king of Pruss for all the lands they possessed the walls. In these circumstances, with force and famine to encounter, the magistrates and citizens behaved with wonderful resolution and firmness. They returned for answer, that they had already paid homage and sworn allegiance to one fovereign; and that they could neither renounce their allegiance, nor break their oaths, upon any account or confideration whatfores; it which laudable

resolution they have still persevered.

resolution they have full perfevered.

3. The town of Graudens, formerly called Grodee, and in the Polish language Graudzianz, makes a handsome appearance, being pleasantly situated on an island formed by the river Offs, which here flows through the two channels into the Vistula. The Prussian diet is held alternately

in this town and at Marienburg.

The præfecture of Marienburg comes rans under our The præfecture of Marienburg comes roas under our confideration. Here is a palatine, a vice-uçalurer, and a provincial judge. This palatinate contains three warders. A warder is a fen or morals, furrounded with water, and improved for tillage and habitation. They produce plenty of grafs and corn, but have feldom either woods or hill. That called the wood of Elbing is the most considerable in this diffrict. In many parts the fuel is turf, fraw, and supplies and even where there are woods they were an time diffice. In many pairs the teers of they afford furbble; and even where there are woods, they afford very little game, except haves, woodcocks, and other wild fowl, but harbour very fierce wolves. The fresh water, in these waters is very good; the air is tolerably healthful; a great number of cattle are bred here, and the horses h efteemed.

much entermed...
The inhabitants of the warders have from time imme morial been free peafanus, and are fliled the royal vaffals and warderers. Those, however, who are subject to the jurisdiction of the cities, are under greater restrictions than the roy is prefants who live in the Marienburg warders. They speck the German and Polith languages, and are for the most part Lutherins or Papists: here are also a considerable number of Meanonites (a fost of baptists), and tome Calvinists.

Marienburg and Elbing are the poincipal phases in this pracedure. The former of these is a well-built town, in fifty-four degrees twelve minutes north latitude, and nincteen degrees twelve minutes north latitude, and nincountry.

The city of Elbing was built in 1239 ! it flands on a The city of Elbing was built in 1239 it is many one river of the fame name, in fifty-four degrees twenty-one minutes north latitede, and nineteen degrees fifteen minutes each longitude. It is a handloma large city, fortified for the minute manner, and carries on a confiderable nutes call longitude. It is a handloma large city, fortified after the anisott manner, and carries on a confiderable trade. Between the Old town and the fuburbs, where the florehouses of the merchants are creeded, suns the river Elbing; and the Old town is divided from the New by a walt and most. The houses are high, narrow in front, and built in the old taffe, much like these at Dantalek. The theets are very marrow, occasioned by the balconless that pro-est into them, and before them are receptacles for all the fifth and dut thrown our of the house.

that project into them, and before them are receptacles for all the fifth and dirt thrown out of the houfer.

Elbing is one of the Hanfe-towns; and as it is inhabited by a colony from Lubeck, it is governed by the laws of that ciry; but the burghers have their particular rights and privileges. Here are to a churches, in which divine fervice is performed. That of St. Nicholas, which is the largest and handformed church in Profila, was given up to the Papifs in 1646. The castite, which was built in 1237, was demolified by the burghers in 1454. The fostifications towards the Warder are very flight, but on the opperitude of the profile of the profile towns in Polith Profile. Some companies of the trougest towns in Polith Profile. Some companies of the crown-army of Poland are cantoned in this town; but the hurghers keep guard at the gates, and there is a Pruffilm garrilon in the luburbs.

With refpect to ecclefiatical matters, this city is under the jurification of the bithop of Ermeland, as far as is con-

the jurisdiction of the hithop of Erneland, as far as it con-fiftent with the difference of religion, and without preju-dice to the rights and privileges of the city; but in civil affairs it is only fubject to the king. In 1703, Elbing fell into the possession of the Swedes, who laid it under contribution; but the Russians took is

from them by florm. It was formerly mortgaged to the elector of Brandenburg, as a fecurity for the payment of four hundred thoufand rix-dollars; but as the elector did not receive the fum flipulated, the king of Pruffia, in virtue of the above agreement, took policifion of the district be-

of the above agreement, took policition of the diffrict belonging to the city.

The province of Ermeland is entirely furrounded by
the kingdom of Pruffia. This province belongs to no
palatinate, but is entirely fubject to the bifhop and chapter 16 that neither the nobility nor the other inhabitants
of Ermeland can appeal to any other judicature. Two
thirds of this province belong to the hifhop, and the remaining third part to the chapter. Their fubjects have
free recourfe to the fame courts of judicature as the reft of
the Pruffians; but they have fome particular laws to themfelves. They have also a provincial dic.; to which the nobility, borghers, country judges, and also the freemen, are
fourmomed. Though the Ermelanders do not affilt at the
Pruffian dicts, the bishop is always prefent, and proposes fourmoned. Though the Ermelanders do not affitt at the Pruffinn diets, the bifinp is always prefent, and propoles whatever is debated concerning his diocele, particularly in relation to the taxes, according as they have been agreed upon in a provincial meeting held for that purpole, where the Ermelanders generally concur in opinion with the Pruffian flates, and their own bifinop.

The following are the most confiderable places in Ermeland, vis. 1. Braunflerg, a pretty large trading town, fituated on the Paffarge, at a fmall diffunce from its mouth, in fifty-form degrees fifteen minutes north latitude, and

fituated on the Paffarge, at a small distance from its mouth, in fifty-four degrees fisteen minutes north latitude, and twenty degrees five minutes east longitude. It was built in 1255, and received its name from Brune, bishop of Prague. It is divided into the Old and New town, and is very populous. The calebrased college of the Jesuits in this town was formerly a Franciscan convent. Here is also a convent for num. The eatherdral has fixteen axelends: it is now under the jurisdiction of the bishop. In the beautiful town of Heilburg, on the Alle, stands an elegant seat belonging to the bishop of Ermeland. There is a college of Jesuits in the town. It is faid to have been built in 1244, and was destroyed by fire in 2551. Charles II, king of Sweden, had his head-quarters here in 1703.

1702. Kellel is an elegant little town with a caltle, has a callage

of jefuite, to which the cherch of the Holy Linden-tree in Brandenburg Pruitie belongs. This town earlies on a good trade, and is well supplied with provisions.

Besides the above mentioned, here is 1, the sittall town of Putzig, with a strong castle. 2. Dittehon, a small but strong town on the Vitlula, where a provincial court of judicature is held. 3. Schoeneck, with a castle, on the river Tess. 4. Stargard, a small town on the same, 3. Meye, a town with a castle at the confluence of the Ters and Vistulia. 6. Nande, or Weisstande, a strong forwers at the mouth of that branch of the Weissel which runs by Dantzick, and can binder the entrance of ships. 6. Pantsko, on a guif of the same name, eighteen miles north-west of Dantzick.

SECT. III.

Defiribing the feveral countries, provinces, and duchies of Lithuauia, Samogista, Courtand, Warfovia, Palachia, Poleria, Red Ruffa, Podelia, Volbinia, and Ubraula, sulth an account of their fluencisin, produce, inhabitants, towns, commerce, munifactures, religion, Ge.

camberet, manufattures, religion, Ge.

ITHUANIA, called Letwa by the Natives, is a very exteinfive country, and was united to Poland in 1901. It has Red Rossa, Vollinin, and Podolia, on the fouth; Great Poland, on the west, the Baltick, on the north; and Russia, on the east. It is in length about three lundred and flaty miles, and three hundred and flaty miles, and three hundred and flaty in breadth, where widelt; was formerly almost covered with woods, and thill contains a great many confiderable forests. It is bounds in honey, was, timber, piech, tar, buffaloes, wild horse, wild affer, boars, elks, uris, woodcocks, pheasants, &c.

Great numbers of fish are produced in the numerous lakes; but their many lakes and forests occasion the air to be thick and fuggy. Here are many slocks and herds; and buck-wheat, as well as other grain, is pretty plentiful, fo that provisions are cheap, though agriculture is greatly neglected; but money is extremely scarce.

The Roman catholic is the etlabished religion; but Lusterms, Calvinitte, Jews, Turks, Greeks, Socinian, &c. are tolerated. "Pine nobility affect great pomp and dignity, and are esceedingly fond of retaining a numerous train of domestics and attendants.

This country was governed by its own duke till it was united to Poland by the marriage of the great duke Jagello to Hedwig, the dowager of Lewis king of Poland and Hungary, but each country fill retained its own laws, entoms, privileges, dialect, &c. In a diet held at Lublin, in the year 1690, it was more firmly compacted with Poland than before, and a decree was made, that both countries should be under the same prince, and form but ene state.

With respect to their courts of Justice, the tenth part

ene flate.

With respect to their courts of Justice, the tenth part of what is adjudged in all real actions goes to the judge's bar, said is immediately paid into court. The judge claims half the damages given in personal actions, and a Litboanian mobleman is permitted to compound for murder by paying a fee. I hose who are condemned to death, must either execute themselves, or be executed with the most

ether execute themselves, or be executed with the most exerucianny torments.

The column people, the Germans and burghers in the royal towns excepted, are flaves; and so exceedingly liliterate, that some of them even retain many of their antient idolatrous superfictions. The poor have only Alonday to themselves, and sometimes their lords even

Alonday to themfelver, and fometimes their lords even deprive them of that.

They generally fpeak the Sclavonick, which is the language used in all their courts of judicature: those of Prussia and Livonia have the jargon of both their languages.

They have a great mixture of Polish, and also of the Latin, which last is as common here as in Poland, and poke by people of all ranks; infomuch that Michalon, one of the authors, makes no doubt of their being decended from the old Romans; and the rather, because the Lithuanians had, not long since, the same customs and superfittions; as burning the dead, divining by augurs, and the like.

and fuperfittions; as burning the dead, divining by augurs, and the like.

They commonly car a coarfe black fort of bread, made of eye, the footy wheat unwinnowed, and Barley-car, allground together. They have fefth, fifth, and fowl; and what caule or poultry they think they shall not be able to keep in the winter, they usually kill in Autumn, and preferre with falt. Being for the most part good marksmen, they maintain their families by it; in a great measure. In

No. SS.

every house in the country they have four or five handmills to grand their corn.

They have sife a fort of very long wooden trumper,
which, when they found, fo deasens by fanders, that
they do not recover their hearing for a good while.

Country people have a fort of waggons or carts, all of
wood, and made very light, by saddling or interweaving
boughs with one another; and their coverings are conmonly the fame, not much unlike the colliers or limebottners carts in England. The wheels are of one flat
and entire piece of wood; and as the asistrees are never
greafed, a number of them together make an intelerable
fluesking noife.

They boild their house round, and therefore call them
towers. They are narrow, and open at top, to let out
the sincusk and fluench; and they are generally covered
with boards, straw, or bark of trees. In these the people
and their cattle live together, by which both often receive
hurt.

The most lin the whites haddes other before the

hat their cattle live together, by which both offen feedits that frow the hope feathers and stalks that grow in the marshes; and part of the womens business within-doors is, to weave coasts cloth. Husbandry is followed here without-doors as in other countries. For fear of the incursions of the tartars, the Lithuanians secure all their corn, straw, salt meat, and, in thort, all their provisions, in caves, which they dig in the forests, and hide the entrance with the bark and branches of trees.

Vilna is the first palatinate of Lithuania: it comprehends three large districts, and sidvided lute two equal parts by the river Wilia, which afterwards passes through Samogitia and Prussia, by the name of Russe, into the Baltick, and has only three senators, viz. the bishop, Palatine, and castellan of Vilna. The name is derived from the capital, not only of this palatinate, but of Lithuania, namely.

tine, and castellan of Vilna. The name is derived from the capital, not only of this palatinate, but of Lithuania, smely, Vilius, Vilda, or Wilna, which the inhabitants call Vf-lenski, and the Germans Wilde. It stands at the constant of the Vilia and Wiln, seventy English miles north-east from Grodno, one hundred and fifty-two east from Koningsberg, and one hundred and fifty-two east from Koningsberg, and one hundred and fifty-two east from Koningsberg, and one hundred from Riga, two hundred and feventeen north-east from Warfaw, two hundred and thirty-one fouth from Riga, two hundred and feventeen north-east from Darziek, one hundred and thirty-five east from Darziek, one hundred and thirty-five east from Cracow, and one hundred and thirty-five are from Cracow, and one hundred east since nothers of the same politic from the pulsars of the same politic from the pulsars of the same politic from the pulsars, that half of them are blind before they grow old. They are much given to quarrels, and, if they murder a foreigner, pay only fixteen dollars. The streets are badly paved, dirty, and swarm with beggars; for here is no hospital. Most of the house are low and mean, and built of wood, except those of some foreign merchants; the great duke's palace, the cathedral and churches, are all built of some; as are also, the Bernardine monastery, the university, and the Moscovite company's warehouse, where they keep their ermines, fables, &c.

This being the most considerable staple for trade, is the feat of the chief court of judicature for Lithuania, who meet yearly at this place and at Mink, by turns. All the inhabitants, except the members of the tribunal, are under the jurisdiction of the palatine, who is governor of the city. Here are a ruinous old castle upon a hill, and anosher much more beautiful one of a modern structure at the lower part of the town; and in the duke's palace there is a well-furnished arsenal, or armoury, and a good li-

another much more beautiful one of a modern firudule at the lower part of the town; and in the duke's palace there is a well-furnished arfensi, or armourt, and a good library. The cathedral, dedicated to St. Stanislaus, finands in the lower castle: it has a large filver tomb of St. Casimir, who was canonised by pope Leo X. Its revenues are considerable; and though the archbishop is a Roman catholick, he challenges juridiction over all the bishops of Polish Russia who are of the Greek religion; which is, however, disputed by the bishop of Kiow, who thiks himfelf metropolitan of Russia. Here is a great bell, which requires twenty-four men to ring it, which was given by king Sigismund III. who also gave the filver tomb, and an altar of the same metal. The Jesuita college here was founded in 1579, by king Stephen, with professor of divinity, law, philosophy, the Hebrew language, and philology; and honoured with the title of an university by pope Gregory XIII.

The town is inhabited by Poles, Russians, Germans.

pope Gregory XIII.

The town is inhabited by Poles, Ruffians, Germans,
Tartars, and other nations; as well as by the Lithuaniant.

sians. The suburbs are as big as the own, and sull of the like timber cottages, which have not partitions, but consist only of one foom, common to the family and their cattle. Both the castles are built of bricks, and stanked with towers. The fortifications are but indifferent, and its gates are only thus in sime of war. The protestants had a church and college here formerly, but were deprived of both by a decree of the det of Poland, which, nevertheless, left the Greeks in possession of their monasteries, churches, and the free exercise of their religion.

The Tattars, who live along the banks of the river Vaca, which does not run far from Vilna, have waggons for the fervice of travellers. They live according to their own laws, without giving cause, of complaint, and own the king of Poland for their sovereign. Great numbers of them reside in the villages of a valley three miles from hence, in the way to Koningsberg. Foreign merchants see frozen, and they can bring their goods on sledges over the same. There was so great a famine in these parts, in 1571, that in. Vilna alone there died of it no left than twenty-five thousand, here was a great tunnult in 1581, on account of the bission's zeal in burning the books of the Lutherans, Calvinits, and Russians: in 1610, the Russians, to be revenged for the mischief done by the Poles at Smolensko, took this place, and set fire to it, by which southen catholic and three other churches: so that he queen of Poland had but in the time to effect, with the rest of Poland had but in the time to effect, with the ther with feven catholic and three other churches : fo that the queen of Poland had but just time to cleape, with her attendants, in boats; of which fome, nevertheless, were drowned. In 1644, the Gholars raifed a great tumult, which could not be appealed till major Oginski came with which could not be appeared till major Oginki came with four hundred foldiers, of whom feveral were killed in the fkirmifh, together with the major himfelf.

Eighty miles north-east from Vilna, and eighty-eight fouth-east from Riga, is the town of Braflaw; and the town of Wilkomitz is fituated on the river Swiera.

The province of Troki has Novogrodoc to the fouth, Samogita to the north, Vilna to the east, and the kingdom of Pruffia to the west. It is divided into four di-tricts; but the palatine and the castellan of the city, which gives name to it, are the only two senators. The town of Troki, which gives name to the palatinate, is large, and built of wood, and situated among lakes,

marilies, &c. It has two caltles, and was formerly the refidence of the dukes of Lithuania. Here are also the towns of Birze, Kowno or Conno, Calvarie, and Me-

The town of Grodno is large and handfome, and, next to Wilna, the best in Lithuania: it is situated in fiftythree degrees, thirty minutes, north latitude, and in twenty-three degrees, fifty-two minutes, cast longitude. It stands on the river Niemen, partly on an eminence, and partly on a level, and is encompassed with hills. The old eaftle, which is furrounded with a deep moat, is fallen to decay, so that no more than one wing of it is inhabited. The new palace is a large, regular, and beautiful structure, confifting of two flories; the great hall, that for the fenate, and the chapel, are its finest apartments; and in the court stands the chancery or state-office, which is an elegant ftrudure.

In this city are nine Popish and two Greek churches, and alfo a fynagogue for the Jews, which is built of flone.
The Jefuits college has a fplendid church, and that belonging to the Carmelite nuns is likewife very magnificent. The palace of prince Radzivil is a very large fructure, and that of the Sapichan family is a superb edifice: least of them floud in the market size. ture, and that of the Sapichan family is a superb edifice: both of them stand in the market place, which, together with the castle street, and the area before the palace, are clean and well-paved; but the other streets are generally dirty. In 1673, it was enacted that, for the sturre, every third general diet should be held here; and during the sellion, the concourse of people has been so great, that sour apartments, with the stables adjoining to them have been let for two bundred and fixty ducats a month. Here are also held a provincial diet and a court of judicature.

The province of Poleria, in Lithuanian Russia, contains feveral large motasses, that resemble so many extensive

The principal towns in this palatinate are, 1. Brzefk, which is a ftrong, but not a very large town, fituated on the river Bug, and a caftle built on a rock, near which is a royal palace with a fine garden. In this town is a fa-mous fynagogue, to which the Jews refort from all the countries of Europe, both on account of study, and pre-ferment among their own people. A provincial diet is held here, and a Greek bishop reades in this town. 2. Pinsk, where a provincial diet is also held, is a large, handsome, trading town, on the river Pins, fituated in the midt of extensive morasses, and inhabited not only by the Jews, who have a school here, but also by people of many other religious, especially by the Greeks, who have a bishop here. The leather dressed in this town, after the Russian manner, is essented the best in the whole kingdom.

Black Russia is also comprized in Lithuanian Russia. This province is called, by the Poles, Rus Czarna, which includes the palatinate of Novogrodec and contains some districts, the principal place of which is. Novogrodec.

includes the paintinate of Novogrodec, and contains tour diffirities, the principal place of which is, Novogrodec, at town fituated on a hill, in which are feveral popish and Russian convents, with a college of Jesuits. It has a provincial diet, and an inferior court of judicature: an high tribunal, after the model of that of Wilna, which continues fitting for mathematical the state of the court of the state of the court of the co fitting five months in the year, is held alternately here and

There are four palatinates in White Ruffia, called, by the Poles, Rus Biala, the most considerable places in which are, 1. Minsk, which is seated on the river Swifloez, in the palatinate of Minfk, and has two caftles. This town was taken by the Ruffians in 1656. A provincial diet is held here, besides a high tribunal once in two years. 2. Mobilow, in the palatinate of Miscislaw. is a handsome commercial town on the river Nieper, and the inhabitants carry on a confiderable trade with the Rufians. In 1654, Mohilow was taken by the Rufians; and though it was invefled by the Poles in 1660, they were obliged to raife the fiege. It was, however, taken from the Ruffians in 1662 by the inhabitants, who fent off part of the garrison by firatagem, and then made the rest prisoners of war. 3. Poloc, a fortised town on the river Dawina, and in the palatinate of Poloc. It has two strong castles, and carries on a considerable trade. In 1563, this town was taken by the Russians, but retaken by the Poles in 1579. The Jesuits have a college here, and the Greeks an academy for the study of philosophy. A popish Greek bishop also resides here. In this town are likewise held a provincial diet, and a court of judicature.

The Livonian palatinate, called by the Poles Woic-wodztwo Inflantikie, was formerly a part of Livonia, and is also termed the palatinate of Wend; the Poles, on delivering up Livonia to the Swedes, by the treaty of Oliva, referved this part, which has a biflop, a palatine, and a caftelian, and fends fix deputies to the general diet. It has also five or fix small towns within its diffrict.

The province of Samogitia, called by the Poles Zmuyds, or Xieflwo Zmudskie, is bounded on the north by Cour-land, on the east by Lithuania, on the fouth by Regal Pruffia, and on the west by the Baltick Sea, it being about an hundred and feventy miles in length, and about an hundred and twenty-five in breadth; but as the two territories are much contracted, this is only to be understood of its largest and broadest parts.

This country has for the most part a marshy foil, and

abounds with rivers and lakes, which at fome feafons over-flow the land. Here are also inacceffible mountains; the country is much over-run with woods, in which the inhabitants find great quantities of honey; for it is faid that almost every tree has a swarm of bees; and their wax is whiter and purer than either that of Lithuania or Rus-We are told, that though the arable land is very stiff, the inhabitants use none but wooden plough-shares; be-cause one of their starostas, introducing iron shares, and the feafon afterwards proving lefs kindly than usual, they had the weakness to attribute the cause folely to this change; npon which he was forced to let them return to the use of the wooden-plough-shares, for fear the prohibition should cause an insurrection. Samogitla abounds with cattle, and has a breed of horses, which are sprightly, swift, and hardy, though fmall.

Samogitia anciently belonged to Lithuania; but in the year 1404, was ceded to the knights of the Teutonic year 1404, was ceded to the kinging of the zenome order: about four years after, it was taken from them by Uladiflaus Jagello, king of Poland; after whose death it returned again to them; but in 1525, when Albert of Brandenburgh was made hereditary duke of Prullia, it returned to the crown of Poland. The Chastian religion Lad been introduced for fome time, and it was made a bi-

shop's fee in 1413.

There is but little difference between the peasants of this country and those of Lithuania; but the former are not so laborious, and consequently enjoy less plenty. Many of them, instead of bread, eat turneps, which grow wild, and are of a prodigious size. They are robust, bold, and nimble; and it is not uncommon for people to live to a hundred or a hundred and twenty years of age. The

Perfort in gold circumftances drink, out of horn cups, and set out of wooden platters. However, most of the inhabitants differ but little from the Lithuanians in their manners, habit, or language.

There are about twenty-eight towns in Samogitia; but all of them are finall and ill builtr, among these is Medicki, where the bilhop of Samogitia resides, and Rossenie, where the provincial diet and a court of judicature aspield.

The duchy of Courlaid, which is dependant and under the protection of Poland, is bounded on the west by the Baltick, on the north by the gulf of Riga and Livonia, towards the cast by Lithuania Proper, and by Samogitia towards the fouth. It extends fifty German miles in length, and some places twenty, and in others hardly ten German miles in breadth; but towards the fouth-west it gradually terminates in a point of land, or promontory.

Except in a few districts, the foil is heavy, far, and claylih, and the country abounds in woods and swamps; hence the roads of Courland are remarkably bad. In spring and autumn the meadows and low grounds are under water; but this only serves to improve the land. Some skilful farmers have drained several of the senny parts of Courland, and converted them into what they call staungens: that is, land which is sown three years successfully with summer seed, and then left uncultivated for a like term. Courland, slowever, contains good arable land and fine pastures, and produces great quantities of excellent fax. Here is also plenty of sea sish, and the woods term. Courland, however, contains good arabic land and fine pattures, and produces great quantities of excellent flax. Here is also plenty of fea fish, and the woods abound with elks, hears, and wolves. Courland has also its mines of iron ore and other minerals, at quarries of flone, chalk, and flucco, and its mineral fprings. Amber is likewife found on the coast.

The Windau and Aa are the principal rivers in this country; the former rifes in Samogitia, and dischargea it-felf into the Baltick near the town of Windau; and the Aa, which has also its source in Samogitia, empties itself into the gulf of Riga. The small rivers are the Anger, the Abau, the Berie, the Bartau, the Mussa, and some

Most of the inhabitants of Courland are Germans and Lettonians; but the latter are not only the tenants and vaffals of the former, but in a manner their flaves. Hence

valuate of the former, but he a manner their laves. Frence there are two languages ufually fpoken in Courland, the German and the Lettonian.

So early as the year 1522, the reformation, or Lutheran religion, took place in this duchy; and in 1532 Courland joined with Riga in a particular religious league; fo that when this country fell under the dominion of Poland, all the inhabitants were Lutherans, and they had no papilts amongst them. But the misunderstandings which afterwards happened between the dukes and nobles of Courland oconed feveral orders to be iffued by the court of Poland, and judiciary commissions to be deputed from thence, by which means a fatal gap was opened, by which popery

The Roman catholicks were at first only permitted to have churches in this country; but they soon raised themselves to a level with the Lutherane la 1717 and 1727 they received some additional privileges, and several of the mobility who had embraced the doctrines of popery, exerting their zeal in order to introduce it into the churches erting their zeal in order to introduce it into the charcines within their jurildictions, greatly contributed to its forcading over the country. The marriages of the dukes of Courland with princeffes who were Calvinifts, also introduced that religion into the duchy; but the Calvinifts are excluded from all employments in the flate.

Great privileges are enjoyed by the nobility of Cour-land, and the more antient class of them is carefully land, and the more antient class of them is carefully dillinguilhed from the new; for by an old law, which has been frequently confirmed, the former alone are capable of filling ports of honour. The noblemen of Courland generally embrace a military life. They enjoy in Poland the fame privileges as the natives, and a Polith nobleman has the fame indulgence in Courland. However, neither of them enjoy that privilege till they are fettled in those countries, and judged a Courlandith publishment to refer the political properties. countries; and indeed a Courlandish nobleman at present

fellom holds any eminent poft in Poland, except that of the law, unless he be a papift.

The nobility of Courland have no feat in the general dict of Poland. But a noble Courlander is proprietor of all the mines discovered in his estate: he is not to be taken into custody, or his effects confifeated, till he has been

previously summoned and legally convicted before a court of judicature: his house is an asylum, from which no perfor can forcibly be taken: his tenants, vassel, and domestics are exempted from paying any toll, custom, or excite; and no soldiers are to be quartered on the estate of a Courlander. No new created nobleman is qualified to hold a post of honour, or to be a magistrate till the shird generation; nor can he be sent as an envoy, unless he has distinguished himself in the service of his country, or is recommended by some of the antient noble families.

Among other privileges, the nobility have an unlimited power, over their vassels, which extends even to life and death; but before they can punish avassal with death, they are obliged to hold a regular court, under the penalty of paying a hundred storins; each storin equal to fourteen-pence sterling. Hence the respect paid by the peasants to their lords rices almost to adoration, and whatever these require from them they are obliged to give up, and immediately

from them they are obliged to give up, and immediately obey their commands without murmuring. The nobility are all on a level, and have, in conjunction with the duke, the patronage of the parific churches; the duke being patron of fome, and the nobility of the others.

In war-time, they ap ar on horseback, according to the service they owe the duke as his vassal: but when such a general military appearance is required, the duke is obliged to march at their head, They indeed chuse their own colonels and other officers; but these are all under the duke's command. They are, however, not obliged to march beyond the frontiers of Courland, except the duke

march beyond the frontiers of Courland, except the duke voluntarily agrees to pas beyond those limits.

Disputes between the duke and his nobles are decided only by the king of Poland in person. The judges here are four captains or superintendants; two of which are for Courland properly so called, and two for Semigallia; but from the an appeal lies to the high council, in which the duke prefides in person, and even from this council a second appeal may be made to the government of Poland,

if the cale is fufficiently important.

The whole duely is divided into Courland Proper on the west side, and Semigallia on the east side of the river Mass; and each of these into captainships: the first east sining of Courland Proper is Goldingen, so named from the course of the side of the s its chief town, which was formerly one of the Hanfe. It is not confiderable at prefent, except for its large jurif-diction, though it is adorned with a very fine cassle. This town stands on the river Wataw, which falls into the Baltick thirty miles off, and is seventy fouth-west from

Riga.
The town of Windaw, called by the inhabitants Kiefe, hath a harbour on the mouth of the Baltick, ninety miles north of Memel, and forty miles north-well from miles north of Memel, and forty miles north-west from Goldingen. It is reckoned the capital city of a palatinate of the same name, has a cassle, formerly the residence of the Livonian knights, and the palace where the states of Courland held their affemblies; but is now much decayed, being only supported by building ships for the duke, and by its trade in pitch, tar, wax, &c. which it exports.

The town of Libaw lies on the coast thirty miles southwest from Goldingen, and forty-two north of Mesnel, and has a good road and harbour. And Piltyn, or Pilten, on the river Anger, eighteen miles north-west of Goldingen, is a palatinate, as well as the seat of the bishop of

is a palatinate, as well as the feat of the bishop of Courland. About fifty miles east of Goldingen is the

Courland. About fifty miles eat of Goldingen is the captainfhip of Tuckum, to called from its chief town. The eaftern division of Courland, namely Semigallia, has Livonia Proper on the north, the palatinare of Ploczkow on the east, and Samogitia on the fouth.

On the river Mussa, fifty-two miles fouth of Rigashands Mittaw, the capital of Semigallia, and indeed of the whole duchy, as well as the sett and burial-place of its dukes, who have a magnificent castle, which is fortified by two bastions encompassed by marshes, and has always a strong garrison. The town is also well-fortified, though meanly built, the houses being partly of brick, partly of timber, and some of mixed materials: it is large, and the seat of the diets of the duchy; the inhabitants are only between three and four thousand. It was several times taken by the Swedes, particularly by Gustavus Adolphus in 1621, again in 1701, and also by the Russans in 1705, but as often recovered. The As river, on which the calle stands, passes by the city to the Dwina, with a deep. castle stands, passes by the city to the Dwina, with a deep channel, which might be navigable, if the people of Riga had not choaked up the mouth of it, for their own interest. The town of Bauske, seventeen miles south-east of

Mittaw, is another strong town, on the river Muss, or Plussa, with a castle built on a rock; here is a large garrifon. It was taken by the Swedes in 1701, with the king

ed at three crowns, and lie domaniled fixty throu and files wat quantities of providess. Me priled this sown by first gens, and force in the calle on the medical traffic av-over their spec afficiency in this de-regalified, is, he waited it, with it appy, after level or from the inhalftion to large facts

creen their rear allimators in this status. The Swedes reputified is, but whited it, with the whole where, all type, other level or from the installations targe fasts, a status, a war by the Poles Mansous E. and had reclosed the most considerable part of their kings that heart, because it is homeword with the refisions of the feet, and wast manhers of the rebaility. Caminies, called by the Poles Kaminiet Podoliki, is watered by the river Smertick, and is fituated about one handred and ten miles below the Dinefter. The city of the fame name is the capital of the province, is two hundred and twenty-four miles east from Cracow, and two hundred and thirty fouth-east from Warlaw.

hundred and thirty fouth-eat from warfaw.

It is a populous, well-built city, furcounded with high rocks, bendes being fortified with walls, a deep, broad, and feep dirch filled with water, by the river, which almost furrounds it, and by a very frong caftle; fo that it is the firongeft place on this fide, and uled to be reckoned one of the keys of Poland. In the reign of king Sightmund III. it was taken by the Cofficks, by capitulation. It has been attacked feveral times by the Walachians, Turks, and Tattars. Turks, and Tartars.

In 1669, it suffered miserably by fire; and in 1672, was taken by the Turks, who kept possession of it, and thereby often made inroads to Poland, and carried away vast numbers of captives; till it was agreed to be furrendered by the peace at Carlowitz, in the year 1000, and evacuated next spring, to the Poles; when the diet reforded, that this town and Podolia, should be free from taxes, for ten years. It is the see of two bishops, one a papift, the other an Armenian. The Greeks of Podolia pleaded to be restored to their churches, but this was not granted.

Turks in 1672; but referred in 1699, by the treaty above-Turks in 1672; but referred in 1699, by the treaty abovementioned.

In this diffrict are also the following places, viz. 1. Winnicza, on the fame river, fifty-four miles north-west from Braclaw. 2. Zbaras, a little city on the frontiers of Lower Volhinia, ten leagues north from Braclaw. 3. Humarn, about five leagues west from the frontiers of Lower Volhinia.

The diffrict of Volhinia lies caftward of the palatinate of Chelm, and is divided into upper and lower palatinates:

It is three hundred and ten m. es in length from fouth-eaft No. 55.

to north was, and a hundred and ninety miles in the broades part.

The Upper Volhinis, called also the palatinate of Lutuc, or Lugko, front its chief town, has Chelm and Belicz on the west, Posicia on the fourth, Podolis on the fourth, and the Ukrain on the east. It is a plentiful courtry, near two hundred miles in length, and a hundred in hereadth.

try, near two hundeed miles in length, and a hundred in breadth. The chief town of this paletimes flands on the river Ster, near a lake, which encompatible are of the calle, ninety miles north-east from Lemberg. It is a large city, built of timber, and the see of a bithop, diffragan to the archbishop of Gnesna; but is chiefly inhabited by Jews, Armenians, and ether, caltern people, who traffick in these countries. The cathedral and chapter house are in one of the castles, there being two built on the hills near their city. A Russian bishop also resides here.

Here are also the following towns of less notes: namely, a Filawests, on the river Bug, two leagues from Chimleshichs. 2. Kraemence, the capital of Cremen, thirty-sive miles forth-east from Lusice. 3. Ulodimir, or Weldzimiers, on the river Lug, forty-eight miles from Lusice. It is the residence of a Russian hishop, rixth a considerable jurisdiction. 4. Brodi, a strong town, which has a collegiate church and a public academy. 5. Olika, twenty miles east from Lusice, with the title of a cuchy; it is adorned with a fair cathedral, and has an academy. 6. Constantinow, seventy sive miles north from Caminice, stands meat the fedires of the river Slace, and is aderned and defended by a well-fortified castle.

near the foarce of the river Slacz, and is adorned and defended by a well-fortified caftle.

Lower Volhnia, commonly called the palatinate of Kiow, together with Lower Podolia, comprehended in the Ukrain, lies east from the Upper Volhinia; and the river Borithenea, or the Nieper, passes through the middle of it, from north-west to fouth east, dividing it into two parts, of which only the western is now subject to Poland: the eastern being under the Russians: the former is fruitful, but the latter, from the Tartar incursions, is a mere defart. is a mere defart.

Ukrania is a large country, bounded on the north by part of Poland and Russia; on the south, by Little Tar-sary; on the east, by the Oczakow Tartars; and, on the west, by Moldavia. The name Ukrain is Selavonic, and fignifies a frontier, which it really is to the Turks and Tartars. This is the country of the Coffacks, who have their names from Kofa, a feythe, their usual weapon; or Cosa, which in the Russan language, lignific, if rec-booter, or plunderer. They were originally a crew of dissolute rovers, that assembled together, from the frontiers of Russia, Volhinia, and Podolia, to practise piracy on the Black Sea. Their chief habitation was betwirk the fivers Niester and Nieper; but they extended themselves a great way east from the latter. The Cossack language is a dialect of the Polish, and is full of diminutives, and pleasing expressions. Their common people are of the Greek church; but the better fort are generally Romans, or protessants. their names from Kofa, a scythe, their usual weapon; or

Their first considerable appearance, as an united body, was in 1548, in the reign of Sigismund I. King of Poland, when they called themselves volunteers, and assembled, to the number of fix thousand, for defence of the country against the Turks and Tartars, whom they frequently in-tercepted, at the passes of Nieper, in returning with their prey. Being son joined by multitudes to share their booty, they could with shallow boats pass those rocks in the mouth of the Boristhenes, that hinder the navigation from the Ukrain, to the Black Sea; and during the sum mer, they roved all over that sea, and its coasts, making defects upon Natolia, and pillaging and fpolling wherever they came, even to the walls of Conflantinople.

orderly militia; and, intending to use them against the Tartars, gave them the town and territory of Trethimi-row in this palatinate (which they made their magazine) row in this patatinate (which they made their magazine) appointed a general over them, and gave them many privileges; and for fome time they did the Poles great fervice, by opposing the Tastars: but being fensible of their strength, they began to fet up for themselves; and in the year 1589, rebelled; but their general being taken and executed, it was for a time quieted.

cuted, it was for a time quietee.

About the year 1600, they were fo powerful, that the Poles were forced to raife a large army againft them, who often worsted them, and took their generals; but fill they continued mutinous: wherefore their privileges were taken away, and they continued in a flate of enmity, till about the year 1640. King Uladiflaus VI. making war upon the Tartars, collected them together, and fet over

they have not been so confiderable as formerly.

This country was refigned in 1677 by the Poles to the Turks, with liberry to the Cossacks of this part, to chust their own general, or prince, dependant on the fultan, who kept possession of it till the year 1099, when by the peace of Carlowitz itwas reflored to the Poles.

peace of Carlowitz itwas reflored to the Poles.

The only towns of note, on the west side of the Nieper, are 1. Blalacerkiew, about forty miles fouth of Kiewi 2.

Trethimirow, on the Nieper, fifty miles above Kiew, a strong place, defended by a castle, is the same, which, as we said above, was given to the Cossacks, by king Bathori. 2. Cayskassy, which used to be the chilef retreat of the Cossacks, shands near-the same river eighty miles above Kiew. Twas burne by the Poles, in 1536; but has been remained since that time. has been repaired fince that time.

SECT. IV.

Treating of the inhabitants of Poland, their manners, customs, conflitution and government, trade, manufactures, revenues, land forces, Gc.

HE complexion of the Poles is generally inclining to be fair, and their hair to a pale yellow. Their flature is commonly fomewhat above the middle fize. Their conflictations are generally good, and their bedies inclinable to be gross; so that the women of quality make it their chief study to be lean and thin: but they abhor painting and walkes, nor have they any occasion for it.
The Poles in general have no manner of regard to their clergy, and think themselves wise enough to be their own guides. They exceed most of the European nations in vivacity, freingth, and long life. The poorer fort have a liquor diffilled from wheat, barley, oats, and cyder; which the gentry rectify with anifeeds and spices. The Poles hate effeminacy, and love a cottage as well as a palace. The gentry feldom lie on any other beds but quits. The flaves fleep frequently in finow and froft without any bed, or other conveniency. Their chief exercifes are hunting, dancing, and vaulting; and they are expert horsemen. The common people frequently weave tapeftry and arras as

As to the genius of the people, they are, as Puffendorf observes, commonly downright and honest, very seldom guilty of diffimulation, of a generous spirit, and expect a great deal of respect, to which they make fuitable returns ; yet they are fierce and extravagant, much inclined to an uncontrouled liberty, or rather licentiousness and petulancy, which produces frequent factions and confpiracies. lancy, which produces frequent factions and compresses. They do not want courage, but are more fit for fudden action than the long fatigue of a war. This is spoken of the gentry: but the meaner fort are poor spirited, and therefore the Polish infantry are not valuable; but Coffacks, or foreigners, are made use of on all occasions of

With respect to their apparel, the nobility, merchants, and superior tradesmen, dreis like the English and French, though in a few trivial articles they retain some of their original modes. The ladies abhor painting; but in general are very coarse and indelicate in their manners; and the common people drefs in bear fkins; and are so wretch-edly poor as so be unable to build a small hut, so that they are sometimes obliged to live in caves and holes under ground.

Their language is not copious, as they speak a dialect of the Sclavonic: it is at the fame time haish, and hard to pronounce: for it so abounds with consonants, that some words have seven or eight without any vowel; yet

they found them with vowels in speaking.

Fresh meat, fowl, and sish are their usual diet; and they drink the strongest of Rhenith, French, Spanish, Italian, and Hungarian wines; brandy, aqua vitz, anifeed water, and other spirits. Their sauces, &c. are so enriched with fpices, that fome of the nobility fpend great fums in that commodity; and their usual breakfast is a hot-pot of beer, with eggs, sugar, and ginger. They hang the carcases of ef elks at their gates till they slink; then dress ard eat

them, as a great curiofity, to be met with no where but at the tables of the chief nobility; yet their butchers meat is delicious, and they have planty of good fift.

When they are invited to another's table, they must carry, their spoons, kniyes, dec. with them; and their linen, too, if they would be cleanly; for they have no napkins, but a broad piece of flarched linen sewed round the table cloth, that their servants may not seal it. The ladies carry napkins with them, and put up as much sweetmeats and dried fruit as they please. The masters reach meat from the table to the servants, who cat it as they stand hy the chairs; and the master of the feast is reckoned a niggard, if he don't make his guests drunks. gard, if he don't make his guests drunk,

gard, if he don't make his guests drunk,

The Hangarian wine, though very dear, is drank as
common as water: but it is cultomary for the master of
the house and his intimates, to drink the best wine, while
the other guests that are invited are obliged to put up
with the common fort. Their houses are generally low,
for they feldom lie above stairs. Some tof them are of
brick and stone, but the greatest part of wood. The
kitchen is on one side of the court, the stable in another,
the dwelling-house is on a third, and the gate in the front.
The richer four have harnings of teachtry or area, and bede The richer fort have hangings of tapeftry or arras, and beds with taffety-curtains; but feldom any accommodation to

The Poles were converted from Paganilm to Christi-anity by Aldeber, archbishop of Gnesia, about the year oot, and ever since, the religion of the church of Rome obe, and ever fince, the religion of the church of wome hath been predominant here, except in Red Ruffia, where many of the people adhere to the Greek church. Some of the Greek church fubmit to that of Rome, and are called Uniti, or Uniass, but have their worthip in the Greek. They have alfo. Armenians, who comply with the church of Rome, but have their worthip in their own language. The king, though a Papith, is obliged by his coronation oath to tolerate Lutheranism in Polish Prussia, where there are whole cities of Lutheranism and Dantzick, Elbing, Thorn, and Marienburg; and some Calvinists, especially, in the ducal Pruffia,

Faustus Socinus was of this nation; and his followers from him, called Socinians, grew numerous in the last cen-tury: but king John Casimir made an edict against them, which was inforced by his fuccessor king John Sobieski, who drove them quite out of the kingdom for publishing a book intituled, Tormentum Trinitatem Throng daurbans. The generality of the Papifts here are very great bigots, and their interest is strengthened by the presidencies of the bishops in the grand and petty diets. The inferior clergy have a place also in all courts of judicature; and

the great fecretary of the kingdom is always a churchman.

The regular clergy, as they call the nionks, are more effectived than the fecular; and the mendicant friars have the privilege to enter the privatest room of any house with-out knocking at the door. The secular clergy are generally rich, but openly debauched; and are neither rebuked for rich, but openly debauched; and are neither rebuked for it by their superiors nor the people. The inserior clergy seldom attend their office in the church, but give poor scholars two-pence a day to officiate for them; nor do the bisheps correct the inserior clergy for their milbehaviour. The common people may be drunk without rebuke on their fast days, provided they abstain from siesh, &c. and they will not eat butter and cheese on such days, though the pope give them a dispensation; as he did in cardinal Radziouski's time; for which they called the pope a heretic.

heretic.

At the elevation of the host the people knock their heads against the pavement, or benches, hard enough to be heard at a distance. Their churches are fine, and well adorned; and the priests affect rich vestments. The priests at Leopold have a cape they wear at mass so thick embroidered with pearl and jewels, that it is quite bur-densome. In order to preserve their seet from the excef-sive cold in winter, the ladies, and some of the men, use furred bags in churches.

Their diseases chiefly proceed from drunkenness, to which they are so addicted, that they have a proverb signifying, that a man may as well drink water as wine, if he does not see the effects of drinking. The disemper peculiar to the Poles, is that called the Plica in which the hair of the head is matted together and entangled in one night's time, in spite of all care to prevent it. If it be cut off, it occasions a dinners of sight, if not a total lofs of it, together, with an eruption of puffules all over the body, and pains in the head and limbs; yet foreigners, who have been infected with it, fay, they have cut off their hair without any bad confequence. The Poles are not much troubled with other difeases; and the scurvy, manual troubled with other difeases; lignan

lignant fevers, and pleurifies, are feldom of such ill con-fequence here as in other countries. Their baptismal and matrimonial ceremonies are the same as among the Ro-

requence nere as in other countries. Their objections matrimonial ceremonles are the fame as among the Roman catholics in general.

The funerals of the people of quality are fo pompous and magnificent, that they look more like triumplis. The corpfe is carried in a hearter or chariot drawn by fix horfes, all covered with black. The coffin has a large black velvet past over it, with a crofs of red fattin in the middle, and fix long black filk taffels, fupported by fix of the deceafed's domeflics in clofe mourning. Several priefts, monks, and others, walk before the hearfe with wax-tapers; and immediately before it come three men on horfeback, who carry the arms of the deceafed, one his fword, another his lance, and the third his dart; and as foon as the funeral fervice is over, they ride furioully into the church, break the arms of the deceafed upon the coffin, and the body is interred: after which there is a feaft, wherein both clergy and laity drink to excefs. When women of quality mourn, they wear coarfe black fuff, and their linen is not much better than canvas; and the greater the quality, the coarfer are the mourning weeds. When the king dies, he is laid on a bed of fate; and a certain number of fenators, ecclefiaftical and temporal, are appointed to of fenators, ecclefinitical and temporal, are appointed to attend his corpfe. The republic defrays the funeral expences out of the revenue of the crown. The queen has the fame honours paid her, when she dies, as the king; and all the senators, deputies, &c. that repair to the det for the election of a king, mut wear black at that time.

for the election or a king, mult wear black at that time.

The laws of Poland decree the eflate of the father to be equally divided among the children, except any of them go into a monaftery; in which case their parts are divided among the rest; and the younger children here, as in other popilh countries, are encouraged by their parents to take the vow upon them, that their estates may be preserved entire a the added for

to the eldeft fon.

They lunt buils and bears in the following manner: They lunt: bulls and bears in the following manner: They furround their wild bulls with a great number of horfemen, of whom every one rides up and darts an arrow at him; upon which the creature purfues him, during which another darts him behind; whereupon he face about to purfue the fatter; and thus by turns they so harrafs him, that the beast being quite tired with purfuing so many affailants, falls down, and is easily taken. Another way of taking them is by selling a great number of trees, and thereby inclosing them, when each hunter, having his noss; there was a him; and as the bull runs towards. and intercoy incloning them, when each number, naving his poft, throws darks at him; and as the bull runs towards his enemy, the hunter from behind gives him his death wound: but if he breaks through the inclofure, the next hunter holds out a piece of red cloth, againft which the beaft having an antipathy, he forthwith leaves that perfon, and runs at another, who, being provided for him, commonly kills him.

When they go a hunting for bears, they take those of the biggeft fize with nets; and, when they have hampered him, all the hunters ride about him, and having pinned chim, all the hunters ride about him, and naving plinied down his head and feet with great wooden forks, they so bind him about with strong hempen cords, that he is not able to thir; then they roll him into a great wooden cleft. The knots of the cords are so contrived, that with one pull they may be untied. The bear is kept thus till they have a mind to hunt him, and then they let him out of a

trap-door made to confine him in.

With respect to the constitution and government of Poland, it may be justly remarked, that fince its dismemberand, it may be juttly remarked, that ince its differenterment, no regular form of government can be faid to exist in that unhappy country, for the three partitioning powers, who set in concert, direct every thing as they think proper, while the king of Poland, the senate and diet, are

only the tools to execute what these command.

This government was once one of the freest and most re-This government was once one of the freet and most regular imaginable, though at prefent it is one of the most tyrannical and opprefive: the prefent constitution is the only perfect remains of the Celtic government, which was the union of a republic with regal dignity. Every gentleman has a right to give his voice at the election of a king, and even to be elected himself; but this is one of the fources of the fources of the fources of the four celtification of the without these of the preferences. of all their evils, and of the vitiated state of their present government. The throne, since the extinction of the fa-mily of the Jagellons, has been always put up to the best bidder; and it has often been fold to strangers, as sew of the Poles have been rich enough to buy it.

They have no written laws prior to the reign of Casimir the Great, in the fourteenth century; before which time they were governed by the cuftoms of their anceftors: but he introduced the Magdeburg laws, now called the confitution of Poland: fome of the provinces, particularly those of the royal and ducal Pruffias, have fill their own muni-cipal laws, as have likewife Lithuanis, Volkinia, and Pruffia.

Profits.

As to their form of government, the Poles live under one head, who bears the title, and lives in the fplendour becoming a king, but if we confider his power as being circumferibed within very narrow bounds, he is in effect no more than the prime or chief regent in a free commonstant.

weath.

Civil and criminal courts are held, as ufust, in Poland, for the administration of justice; but the most confiderable are the parliaments, composed of a certain number of gentlemen, elergy, and laity, who are chosen in each palatimate; the lay-members once in four years, and the ecclesistical once in two years. Of these parliaments, there are two for the kingdom, and one for the duchy; those for the kingdom fit at Lublin in Upper, and Petricow in Lower Poland: and that for the duchy is held one year at Vilna. and the other at Ministic. or Novogrodee, by Vilna, and the other at Minfki, ot Novogrodec, by turns. There lies no appeal from these courts, except to the king and senate; but they receive appeals from the in-

the king and fenate; but they receive appeals from the inferior courts.

A Polifi king can neither marry, nor divorce a wife,
without confent of the republick. If he marrier after-his
coronation, the queen cannot be crowned without his afting their confent, nor even then, unless she be a Roman catholick. When the is to be crowned, the bing must conduct her to the church, and prefent her to the archbishop
of Gnessa, or the bishop, who anoints her, with the confectated oil, and puts the crown upon her head, the sceptre
into her right hand, and the globe of gold into her left.
The queens of Poland have no officers but a marshal and
a chancellor, neither of whom are fenators, but only indees An e queeus of Poland have no officers but a marfhal and a chancellor, neither of whom are fenators, but only judges of the differences that happen among her domefticks. They answer the harangues that are made to the queen when an embaffador makes her a compliment in his mafeter's name, or when a prefent is made to her at the marriage of a maid of honour. The king furnishes the queen, with money to defray the charge of her houffield; but after his death the must misintain herself, and all her rettinue, with the revenue which the king beflows upon her. after his death the must misintain herfelf, and all her re-tinue, with the revenue which the king bestows upon her, with the consent of the republick, both for her dowry, and for her marriage-present. These revenues are called the Reformation, and consist of the reversion of a certain number of starolities, which she cannot enjoy till they be-come vacant by the death of the present possession of the con-comer of Poland in Securatily her free her death of the cona queen of Poland is frequently kept from her estate till she be just ready to leave it; for sometimes those who possess be just ready to leave it; for fometimes those who possess the flarofites that are in her Reformation, 'editive her: but if the king dies before the queen's Reformation be settled upon her, the republick sllows her a yearly pension out of the lands belonging to the crown.

The king's titles are, king of Poland, great duke of Lithuania, duke of Russia, Prussia, Massovia, Samoglita, Kiovia, Volbinia, Podolia, Podlachia, Livonia, Smolensko, Severia and Czernichovia. All his revenue is clear to him-felf; for he nave no troops, title seen his own conscious.

felf; for he pays no troops, not even his own guards; all the publick expences being provided for by the fenate; and all the officers of the houthold are Polith gentlemen, who ferve without falary, in expectation of fome lucrative

Notwithstanding the limitations of the king's power, as in the Pacta Conventa, &c. he can remit fines and capital punishments; end, upon invasions or rebellions, can summon the nobility to his standard. He can enlist mercenary troops, create officers of the militia, difband armies, and punish those who transgress their duty. He armies, and punit those who transgets their daty. He appoints the governors and magistrates of towns, makes archbishops, bishops, abbots, palatines, castellans, marshals, counsellors, and treasurers; who are all senators. He also appoints judges and magistrates of the provinces, secretaries, masters of requests, and all superior and inferior officers of the court. He can ennoble plebeisns who signalize themfelves either in peace or war, and grant the usage and occupation of royal caffles, towns, and villages, to fuch as deierve well of himself and the republick. He disposes of the estates of those who are proscribed, or die without heirs. All the laws, leagues, negotiations, and embassies, must be in his name, and pass under his seal; as do all

mult be in his name, and pais under his seal; as do an letters patent, &c.

The Polish senate is composed of fixteen bishops, besides the primate, who is chief, and about one hundied and thirty laymen named by the king, and are for life; viz. the ten great officers of state of the kingdom of Poland, and duchy of Linhanis; to whom are added, the palatines and the lesser senators, who are the castellans and licutenants of the palatinates, and the deputies of the no-bility.

bility. They are created by the king, after they have taken an oath to preferve the liberties of the republick, by virtue whereof they controut the king, when he invades their privileges: and as this court is looked upon to be the bulwark of the commonwealth, against the attempts of the king, therefore four of the senators are always about his control of the senators are always about his control of the senators are always about his perion, on pretence of being his counfellors, though, in-truth, they are but fpies on him.

None of the fenators can go out of the kingdom with-

out leave of the republick, not even for change of sir, or to drink the waters, &c. for their health. In the general diets, they fit on the right and left hand of the king, acelets, they nt on the right and left hand or the king, according to their dignity, and not according to the feniority of their receptions; and they, with the king, approve
and rafify all the conflictutions which the nobility propofe
to them by their deputies: fo that the fenators are, as it
were, mediators between the king and the nobility, to
preferve and defend the authority of the flate.

In Policy there were the strength of the flate.

In Poland there are but fixteen bishopricks, of which Smoleniko and Kiovia are durped by the Mofcovites, and Caminice by the Turks; but they are generally of a waft extent, and endowed with great revenoes, as may be easily believed, when it is confidered that this kingdom, after

There are thirty-fix chief fecular fenators; viz. thirty-two palatines, who are, properly, governors of provinces; three carefulars, viz. of Cracow, Vilna, and Troki; and the starost of Samogista. It is observed by M. Hauteville, that though the quality of castellan and starosts is inferior than the carefular and farosts is inferior to the carefular and farosts in seriors. to that of palatine; their four last mentioned possess almost the first rank among the lay-fenators. The office of a pa-latine is, to lead the troops of his palatinate to the army, to preside in the assemblies of the nobility in his province, t a price upon goods and merchandize, to fee that the weights and measures be not altered, and to judge and defend the Jews. He has a vice-palatine under him, who must take an oath to him, and who ought to have an eflate in bind, which they call 'Possessionatus,' or a possession and the control of t

The next in dignity to the palatines are the castellans, and there are two forts of them in the kingdom, who are usually diffusioned by the title of great cafellans, and petty of tab-cafellans. The number of the former, both in the kingdom and duchy, amounts to thirty two; and that of the latter to forty-nine; and they are all fenators,

that of the latter to forty-nine; and they are all fenators, lieutenants, or deputies of the palatines, and heads of the nobility, in their refeed ite junifiditions.

There are two kinds of Polish diets, which are either ordinary or extraordinary. The ordinary diets meet every fecond year, but the extraordinary diets only upon particular occidions, when summoired by the king. They sit but six weeks, and the diffenting voice impedes the passing of any law, or coming to any sinal resolution concerning what hath been proposed by the throne. Here are not only diets, but dletines or provincial diets; and when the nobility enter into an association, either during an interregum, or while the king is living, it is termed a confedenum, or while the king is living, it is termed a confede-

In this country, every gentleman is a fovereign prince in his own estate, and has power of life and death over his tenants, who are perfect slaves, without laws or principle. vileges to protect them. They dare not leave their m vileges to protect them. I ney dare not leave their mat-ter's lands to go to another's, unless he violate their wives or daughters; fo that they are often glad of that plea. If a gentleman actually kills one of his own flaves, he only paya fifteen livres; and if he kill another's, he is only obliged to furnish another, or as much money as will buy one, and to maintain the deceased's family. If one gen-

one, and to maintain the deceased'a family. If one gentleman kill another, he cannot be executed without the king's consent; so that they frequently escape.

No foldiers can be quartered upon the gentry; and if any officer do it, he is sentenced to die, or else declared infamous by the diet; nor can the king himself lodge at a nobleman's house, without asking his leave. Mean time, their, houses are such sanctuaries for definquents, that though they may be arrefled there, they cannot be taken from thence without the mafter's leave. By the confli-tution of Poland, the gentry cannot be arrefted till convicted by justice; so that he must be first summoned to the tribunal, where he is to be tried : if he does not appear, he is declared contumacious; and if he does appear, and is convicted, he is then arrefled, and imprisoned, in order

to be afterwards fentenced, according to the laws, and the nature of his crime. If a foreigner die without iffue, his effate falls not to the king, but to the lord of the manor. The product of the gentry's lands may be exported, without paying custom; and his certificate, upon oath, exempts the purchaser from paying it. The nobility have also the right of pre-emption; and both they, and the gentry, are reckoned equal by birth; so that they do not value titles of honour, but think that of a noble Pole, or a gentleman of Poland, the greatest they can have. Nor have they any but what is given by foreign powers, for which the persons are rather despised than esteemed by the rest, who say that it is only intrinsic merit, and services done to their country, that deserve preferment. Neither the king nor the republic confer the title of prince on any but the sons of the royal family; and thought have or fix of the chief families have, perhaps, the title of princes of the empire; it gives them no fort of pre-ecdency.

When their gentry travel into France or Germany, they after the title of counts, and barons, that they may have the eafier access to persons of quality, especially in Germany, where they scarce think any a gentleman under a baron, and, consequently, not worthy of their conversation. They never had any order of knighthood before that of the Immaculate Conception, erected by Sigismund III, with some privileges above the rest of the gentry; who so much despited it, that the order some came to nothing. King Augustus, in 1705, created that called the order of the White Eagle, in remembrance of his happily meeting the diet in Lithuania, when the Swedes and Stanislaus thought to have intercepted him. The badge is a white eagle, croword with diamonds; and the motto, When their gentry travel into France or Germany, they is a white eagle, croword with diamonds; and the motto, Pro Fide, Lege, & Rege: 'For the Faith, the Laws, and the King,' He conferred it on feveral lords, but the fenathe King.' He conferred it on feveral lords, but the tena-tors are diffinguished by wearing a golden cross, with the badge and motto in the middle of it. His late majesty on the twenty-fisth of September, O. S. 2730. (which was the anniversary of his birth) created eight knights of a new order, in honour of St. Henry, by which he assumed the title of grand master. The badge of this order is a red shar with eight points, in the middle of which there is a flar with eight points, in the middle of which there is a reprefentation of the emperor Henry, with the felters, A. III. R. In the middle of the reverse is this mostle, Pictate & Virtute Bellices; end upon each ray or point, appears the electors! tword of Saxony. The flar is appendint, by a filver firing, to a ribband of crimson velves, that Many of the gentry have such large territories, that they can raise from suc thousand not not thousand means.

cy can raise from five thousand to ten thousand men each, and maintain them; which makes them fo proud, that when great mens law fuits are decided by the diet, or other tribunal, the execution of the fentence must be left to the longest sword; for the grandees sometimes raise five or fix thousand men of a side, plunder and burn one an-other's towns, befiege castles, and fight it out, rather than submit to the sentence of a bench of judges. They efterm

vereigns of cities, with which the king cannot interfere.

In treating of the commerce, trade, 'manufactures,' &c. of Poland, it may not be improper previously to observe, that not only the laws of the flare, but even the dispositions of the people, are diametrically opposite to commercial improvements; hence it is no wonder that in such a country the manufactures are badly conducted, trade neglected,

and commerce abfurdly regolated.

By the fundamental laws of the flate, no merchant or manufacturer is at liberty to purchase any landed effate, or to acquire any east property in the kingdom; and the pride and errogance of the nobility and clergy are such, that they look on those useful members of society with the greatest contempt, and will, in many respects, scarcely give them the presence to their slaves. Hence it is that their manufactures are in such an unimproved state, and that all their inland commerce is earried on by Jews and foreigners, who take every opportunity to cheat and over-

reach those who are fupporting them.

A learned writer remarks, that "the measure which the king of Prussia has lately taken to diffuels Dantzick, and interrupt the exportation of the natural production of Poland, will not at all answer the end which he has propolard, will not at an answer the end which he has proposed; this prince may be a great general as well as a tyrant, but he is not a great politician; acts of violence will never make his fubjects enter into commerce, nor force the Polea, and the inhabitants of Dantzick, to commit ell their property to his direction. If the other states of Europe suffer him to conquer this city, he may then obtain the and which be proposed, namely, the being master of all the exports of Great Poland, and of regularing the

It appears, at firl fight, that we like the forced into this treasy, otherwise they were treasy if the tree forced into this treasy, otherwise they were trees give the preference to firangers, who was a single-way fleature to epirels them; but fill it will us a single-way fleature to epirels them; but fill it will us a single-way fleature to entire the king of a belief of the king of the trees are of the king of the trees were of the king of the trees with great facility. It is too that a single weight of the king of the king way lay a hard, they force to marchandise, this whereby differed the Tolks, Dantaletter, Hollanders and all who are concerned in this tradebut as he has no good fea-port, which has a commonistion with the Viftula, his fobjects must be the port of Duntalett, or they will never be able to instant and export heavy merchandise to and from Poland, without the pasted inserveniences."

It is not can be affectain the revenues of Poland, us they flettlate according to the resolutions of various with the crown, from the afferent custom-house of the kingdom, and front blat-works. But since the different bernown the kingdom, the falt-works, and some of the commisment of the kingdom, the falt-works, and some of the commisment of the custom-lands, have been feised by the late, empress queen of Hungary, many of the custom-louses by the king of Pullia, and a few of the crown-lands, with the customs of Poland, were, the nobility, by the antient laws of Poland, were,

the empself of Russa; therefore it mult be fet to forme future dier, and the permission of the sartitioning powers, to appoint from henceforth the establishment of the crown-revenue.

The nobility, by the antient laws of Foliand, were, upon extraordinary occasions, to take the field on horseback, together with their adherents; and when this rule was properly carried into execution, a body of an hundred thousand men, might be raised. This army was always called the pospolite; but, from a variety of causes, it usually moved with great difficulty, and was generally without discipline, subordination, or experience; but the Polish army, of late years, hath not been so numerous. Previous to the late dismemberment, the peace-establishment was thirty-fix thousand men; that is, twenty-four thousand for Poland, and twelve thousand for Eithusnia, and third of which were cavalry.

The two bodies of troops that four the Polish army are commanded by two generals, who are independent of each ther; and though they are named by the king, they are not obliged to give an account of their operations but to the republic, and have an absolute authority over the woose. The colonels are likewise absolute masters of their regulations and it is their business to find substitute the armounts and it is their business to find substitute for them, and to pay them as well as they can; but being rarely paid themselves, they destroy the country, and vain the lamans, no stussy, their avarice and the demands of their sports.

The folish note study, their avarice and the demands of their sports.

The folish note study appear with more magnificence in the folde that is, their towns, their tents are more elegantly crim ented than their houses, The cavalry, which is, the great process of the substitute of the substitute

with merchandiae, stamped papers, fate thimmies, playing cards, and all kinds of luxuries. They have likemic doubled the poll-greagen the Jown. The strottles, wheretofoxe pale bits one quastes of their revenues annualty, must not pay three eighths', and the clargy are now desied in apparation the other chair of grocks, thought y, had always higherto found mean for my pay three eighths', and the clargy are now desied in apparation to dound mean for my pay three chairs, and the clargy are now desied in apparation to found mean for my pay three chairs of grocks. Their trade of a lich we have at my mentioned these from paying gar.

Their trade of a lich we have at my mentioned the follow trade of any kind, on part of forth ting their shonears, at the fame time the commonathy want funds, and the spirit of industry, as well as an inclination to manufactures; infomuch that their cloths are all made thread, or by merchant-taylors who travel to noblemens house. Besides, such of the Poles as have any fortunes, spingl too much of other revenues in costly habits, and other actions and the four of the four of the commonation of the commonation of the four transcales, for many of other revenues in costly habits, and other actions of luxury, to be able to undertake any confiderable lack, fur have they any good port, except Dantziels, for many of the foil, the inland commonication is also very bad.

The Polish current gold coin is ducatt, worth two Lench crowns; and two filver coins, of a base alloy, one called the tinfe, a little larger than the Franch silken pence, and the choultack, of which three make a trade.

The inna here are only long stables built up with boards, and covered with straw, the first have windows, but no furniture. There are chambers at one end, but so annothed with vermin and stench, that francer chuse trade to lodge in stables among the horse, or in the common room, which is the only part where sky have a special or in the common many room, which is the only part where sky have a special country into th

my more powers, which united to annuniate their antent form of government; and as their great powers have guagrantied to each other respectively the several districts which, they have feized in Poland, there seems no possibility that the Poles will ever be able to recover themselves, in the present situation of things: time alone must determine how far fome future arrangement of the political affairs of Europe may change their unhappy flate.

SECT. V.

Containing the history of Polands, the civil distributions in these country; and an account of the late classes made by the fa-

ITISTORIANS relate, that the Poles were antiently I a tribe of Scythians, who lived in tente or covered waggons, rambling from one country to another, till Lechus, their first fovereign we read of, taught them to build towns, of which Greeins, in the province of Great land, was the first. Their records are obleve the unfatisfactory till towards the close of the fourteenth century.

Jagellon, grand duke of Lithuanis, who became king of Poland by marrying the daughter and heirefts of Lewis then king, annexed his hereditary dominions to the food Poland, which rendered his name to dear to the Poles, that they decreed the erown to be meditary in his family, his defcendants possessed in the endership to the province of Sigismund Augustus, two combestions areas, the print of Sigismund Augustus, Two combestions areas and the print of Sigismund Augustus, Two combestions areas, and the print of Sigismund Augustus, Two combestions are for the print of Sigismund Augustus, Two combestions are for the print of Sigismund Augustus, Two combestions areas for the print of Sigismund Augustus, Two combestions areas for the print of Sigismund Augustus, Two combestions are for the print of Sigismund Augustus, Two combestions areas for the print of Sigismund Augustus, Two combestions areas for the print of Sigismund Augustus, Two combestions areas for the print of Sigismund Augustus, Two combestions are for the print of Sigismund

THE fell extent and dimensions of Greenland, are entirely unknown. The most foutherly part lies in the fifty-niest degree fifty minutes north letitude, from whence the cash furesche to the north-west beyond the faventy-eighth digree of horth latitude, while the eathern cash reaches, amerding to the Dankh writers, to the cighty-fectors. The west coust was fird differenced in 1585 by. Mr. John Davis, an Englishman, from whom the fireights that run between the condinent of North America and Greenland are called, after his name, Davis' Streights. The eaftern and fouthern coasts abound with raft falkes of ics, and there are driven from Spitzberg, by a very firing correct, towards the fouth.

The east field of Greenland, which is especite to londad, is at predict inscribble, on esseemst of the mountains of ics, which rife to an assessed the mountains of ics, which rife to an assessed the mountains of ics, which rife to an assessed have taking having thereight and letand, feveral adventures have taking arrived there; and this course in particular has been actually streng the Datch.

The west files of Greenland towards Davis's Streights, is, however, better known. On that file the coast is defended by rocks and feveral large and small islands. It has also wide and deep bays, which run a great way into the land, some of which are the mouths of large rivers, and others form good roads and harbours. The main land confists of little move than confused heaps of rocks, the funmits of which, and also some of the vallies, are always covered with its and flow.

As far as the Danish colonies have punctrated, the climates is not indepotrable; but the weather is very changeable and unit ited. During the funmer featon, which is the from the each of May to the middle of September, the fun fines is not indepotrable; but the weather is very changeable and unit ited. During the funmer featon, which is the from the each of May to the middle of

rains that fall here are neither frequent nor heavy. In this climate it feldom thanders; and florms, which are very taxe, are of no long continuance; but the most violent gusts of wind come from the south.

The winters, as far as the fiaty-fourth degree of latitude, are generally reckned by the Danes and Norwegians presty temperate, to which the calm and clear weather may greatly contribute. But when a north-anst wind blows, which causes from mountains covered with ice and snow, it is entremely severe; the air being thick and flied with clouds of key particles, which cause a most piercing frost. The snow falls in lefs quantities in that part of Greenland knews no the Danes, than it does in Norway; for in the farmer, especially near the rivers in the inland parts, the snow does not exceed half an ell in depth.

We must, however, continue this account of the weather to the southern parts of this country subject to the Danes; for to the morthward of the farty-eighth degree of latitude, the cold is in winter so excessive, that the most spiritual illusors, as French brandy see, will freeze near the ire side. As the weather is in this climate very calm, the ice in the bays between the islands is not disturbed till the end of August; and even in the creeks it does not begin, to thaw till the elose of May, whe, it is gradually walled away by the agitation of the waves. From June to August the sun is continually above the horizon, and consequently during that time they have no night; but in winter the sun is invisible to the Greenlanders, and their day is nothing more than the morning and evening twilight, which do not last above two hours.

The foil in the vallies and plains consists of moor and turf land, and in some few spots, particularly in the south parts, in about fixty-one degrees of latitude, grow angelies, scurvy-grass, wild rolemany, forme good esculent herbe, and also since few spots, particularly in the south parts, in about sixty one degrees of latitude, grow angelies, scurvy-grass, wild rolemany, forme go

and there; as finall juniper, goofeberry and bilberry buffies, brambles, and the like.

brambies, and the like.

It is not yet known what minerals are contained in the
Greenland mountains; but there are rocks, from which
confiderable quantities of albeftos lave been hewn. Some
mountains eilo conflit of an imperfect kind of variegated
marbic. of which kettles, and other utenfils, are made by the inhabitante.

mastic, of which kettles, and other utenflis, are made by the inhabitants.

Some heres are found on the main land; but thefe, which are very limit, are grey in funamer, and perfectly white in winter. Here is also a species of rain-deer; but they are very different from those of Lapland. The foxes are white, brown, and grey, but small. White bears are sometimes found here, and are very oumerous towards the north; but the Greenlandes are very daring, and active in destroying them; these differ from the bears of other countries, their heads being long like that of a wolf, which they much referable in form.

Dogs are the only domastic animals in this country; they never bark, but small and howl; are timorous, and unfit for the chace; yet if not tamed when young, become wild and very mischievous. The Greenlanders kill and eat these dogs, and also use them to draw their sledges, yoking four, she made and the use them to draw their sledges, yoking four, she made of the largest seals, with the master sitting upon them, who drives as fast with them as we can do with good horses; for they often travel sixty miles in a sitting of the largest feats, with the master stiring upon them, who drives as fast with them as we can do with good horses; for they often travel sixty miles in a with good horfes; for they often travel fixey miles in a winter's day upon the ice. They have no beetles, rats, mice, &c. and neither finakes or any other venomous

mice, &c. and neither finakes of any other venomous creatures can live in this climate.

Mufactoes, or gnast, fwarm here, and are extremely troublesdme, but they have neither ants nor bees. Their land-sowl are, the ryper, a fort of large parot, which is grey in fummer, and white in winter; but builds his nest very high in the clests of the rocks; they have also eagles, falcons, large speckled owls, ravens, different forts of sparrows, and all kinds of land and sea-fowl known in Norway are seen in amazing numbers.

The rivers afford plenty of trout, cray-fish, and falmon; and the sea yields an inexhaustible variety of all kinds of fish, except oylers; but it abounds with excel-

mon; and the fea yields an inexhauthble variety of an kinds of fish, except oyslers; but it abounds with excellent mussels, and very large shrimps or prawns. The smaller species of fish are dried here for winter-store, especially should be should be something the same should be should institler species of an are drawn are not winter-store, espe-cially the lodden, a fort of finall herring. Here are also great plenty of cod, haddock, thornback, and the holy-butt, by some called the turbot of the north, which is so big that it will fill a large cask. The fresh water in Green-land lass been highly recommended for its falubrity and

Their feas, like other parts of the northern ocean, that Their fess, like other parts of the northern ocean, that lie under the north pole, contain a very great number of the largeft species of filhs, particularly whales, which there swim in vast shoats. In these regions the beneficent Creator has dealt out their food with a liberal hand, and of all climates this is the best adapted to their hot constitutions and enormous bodies, which are as it were inclosed in fat. This species of fish differs from all other kinds in many particulars, for in their internal parts they resemble landanimals. They breathe with lungs, and consequently cannot remain long under water. They also copulate like quadrupeds, bring fortis their young alive, and suckle them with their milk

They have several kinds of whales, which may be di-

They have feveral kinds of whales, which may be di-vided into such as have apertures in the head, and soch as have nostrils for respiration. Some of the former bave two holes or apertures; as the whale properly fo called, the fin-fifh, &c. others have only one, as the eachellette, or feermaceti whale: but those that respire through the nofitrils are feldom to be met with. This species of fpermaceti whale: but more that the fpecies of noftrils are feldom to be met with. This species of whales may also be divided into those that have plain, the laws prominent backs. The fins of whates may also be divided into those that have prent, and those that have prominent backs. The fins of other fish cousin of bones, or cartilages fastened together by their membranes running between them; but the whate has articelar bones, like the fingers of a human hand, with their proper ligaments covered with a thick thin like the first between of the board. that of the other parts of its body. By means of this mechanism the whole can move and turn about with greater eafe than he could with fine of the common form, and fecure himfelf from falling precipitately upon the rocks when he dives to the bottom of the fea; for which end he lays his thick tail horizontally on the furface of the water, which is of great fervice to him on this occasion.

The species of Greenland whale with a flat back is thick and unwieldy, its head taking up one third part of its bulk. These are from fixty to seventy seet in length, the fins on their sides from five to eight seet; and the tail, which is in a horizontal position, or bent a little upwards on both fides, is from three to four fathems broad. When the whale is in danger, he turns up his fide, and brandifines his tall, which it is dangerous to approach. The tall airo ferves him for an oar, with which he rows himself forward with furprising swiftness. The ficin of the back is black and fmooth, but in four places variegated or marbled. Next to the skin, which is not thicker than strong: viting paper, or thin parchment, is the rind, which is near an inch thick; and between this and the steff lies the fat, to the thickness of nine, and fometimes twelve inches. Under the fat is the siesh, which is dry and very red. In its upper jaw, on both sides, are the spicula or whalebone, which are placed in the middle, are seven or eight feet in length, and sometimes more. On each side are generally two hundred and sity of these spicula, so that they amount in all to five hundred. The tongue is very fat; and so large, that it sills several casks. The eyes of a whale, which are no bigger than those of an ox, are in the hind part of the head, where it is broadest, and are defended by eyelide and eyebrows. This sish is very quick of hearing, stought it has no external ears, and has only a spot under the upper skin behind the eye, and ender that spot a narrow duch, which seems to convey the found to the tympanum or drum. They generally bring forth only one at a bitth. the upper fkin behind the eye, and oncer that spot a harrow-day, which feems to convey the found to the tympanum or drum. They generally bring forth only one at a bittly though they have fometimes two, and their milk is like that of a cow. Their ufual food is that of a fmill, back, that of a cow. that of a cow. Their ufual food is that of a small, back, round infect, of about the size of a horse-bean, which abounds in these seas, and of which the whale sucks in prodigious swarms with his mouth, and afterwards grinds them with his fpicula.

The nord-caper, fo called from the vaft number of them feen about the north cape in Norway, is much flen-derer and finaller than the whale. The fin-fifth equals the whale in length, but not in thickness, and has a fin on his back, from whence he received his name. He is ex-tremely uimble, as well as frong. He throws water higher than whale of his fize, has brown lips, which are twifted like a rope, and his body very much refembles that of a tench in colour.

Here is also the narval, or fea-unicorn, which is chiefly Here is also the narval, or tea-unicorn, which is ciniciny remarkable for its long horn resembling ivory, but is generally more folid and weighty. This fifth is smooth like an eel, its colour white sprinkled with black spots, and its eyes small. It has two sleshy fins, and a semicircular hole on the top of its head, from whence it spouts water like a whale. The horn, from which it receives its name, grows strait forwards from the middle of its upper jaw, is enjudied wrestland.

grows strast forwards from the middle of its upper jaw, is curiously wreathed, and terminates in a point: with this is attacks the largest whale, and can strike with such violence as to pierce the side of a ship.

The last we shall take notice of is the sword-ssi, so called from their sharp-pointed upper jaw, which resembles a sword: they pursue the whale and fin-sish with great eagerness. They are of a stender form, of various stages, from these to wenty feet in length, and their away. great eagerness. They are of a stender form, of various fises, from three to twenty feet in length, and their eyes stand far out of their head. A few of them will dispatch a large whale; and they feed chiefly on his tongue, after they have killed him.

The morfe and feal are among these amphibious animals. The morfe is as large as an English bollock, with four feet, a thick round head, and a short neck, in which lies his principal strength. He has red eyes, small ears, and large nostrils, from whence he spouts His fkin is very thick, and covered with hair, and

weter. His skin is very thick, and covered with hair, and from his upper jaw proceed two long teeth as white as fnow, and more efterned than ivory, as they keep their colour better. This creature is very bold, making towards the boat as foon as attacked, and endeavouring to overfet it.

Seals are of the fize of a large dog, are mostly black, but fome grey, with very fine smooth hairy skins. The old ones make a noile like the howling of dogs, and the young ones like the bleating of lambs. Their head and body are shaped much like those of a dog, whence they are by some called sea-dogs. These are the most service-able of all animals to the Greenlanders, for their shelf serves them for food, and the skin for cloathing and boats: ferves them for food, and the fkin for cloathing and boats: of its entrails and membranes they make fails and windows; ira ligaments ferve them for thread and cords; and of the bones they make all kinds of domestic utenfils and

of the bones any mana-hunting implements.

The catching of feals makes a valuable branch of the fifthery practifed in their feas; three hundred feals yield the branch of the feas; three hundred feals yield near as much blubber as a middling fized whate. The feals are not killed by the harpoon, but generally knocked on the head with clubs; and many bears are likewife shor, killed with lances, &c. upon the ice. The thips fet fail in

. . SECT. II.

Giving a defiription of the inhabitants of Greenland, their lan-gungs, draft, hanges, paralture and boots; their method of catching abbilets feels, Us. with an account of the manners castumes, religion, and trade of the people.

The inhabitants of this country, Greenland, are in general floot, but fat, pleans, and well proportioned. Their faces are formething flat, their hair hack and lank, and their complexion of a brownish red. They are strangers to the small-pou, and are feldom smitted with epidemical difease, but the scerey is the reigning distemper, and on this occasion their common remedy is steary graft and other simple. They have neither surgeon nor physicle I among them; but readily rely on cortain impostors who pretend to forctel future events, and to be skilled in physic. They have some instances among them of longevity, and these perhaps would be more frequent, were it not for the numberless dangers to which their manner of life axposes tiered. There is something very singular in their language, which is difficult to be learnt, and yet it said to have many elegant phrases. The women have a particular manner of pronouncing their words, which generally terminate in an n. Mar. Egade has published a dictionary of their language, and for the instruction of the Greenlanders, the four gofpels, with several simal tracts, have been translated into the Greenland tongue, and printed at Copenhagen. The Greenland tongue, and printed at Copenhagen. The Greenland tengue, and printed at Copenhagen. The Greenland tengue, and printed at Copenhagen. The Greenland tengue, and printed at Copenhagen. They design the firm of their deer, those of said, and of

in the pronunciation.

They drefs the fkins of their deer, those of seals, and of certain birds, sewed together with the small guts of the seal. There is very little difference between the drefs of

certain birds, iswed togetner with the man gare to the feel. There is very little difference between the dreft of the two fexes.

The cloathing of the men conflits of a cost or jacket, with a cap or hood fewed to it, that covers the head and fhoulders. This cost reaches down to the knees. Their hreches are very finall, and fit clofe: and the linir of the fains the cost is made of is turned inward, to keep them warm. Over this cost they put a large frock made of featfains, dreffed and tanned without the liair, in fuch a manners as to keep out the water. Between the leathern frock warm. Over this coat they but a large rock made of tealkins, dreffed and tanned without the last; in feeh a manner as to keep out the water. Between the leathern frock
and the under coat they wear a linen thirt; or for want of
linen, one made of feals guts, which also helps to keep out
the water from the under coat. Those feated near theports frequented by the Danes and Dutch have shirts
of striped linen, with coats and breeches made of red and
blue stuffs, which they buy of the Danish or Dutch merchants, but after their own fashion, and these they wear
upon extraordinary occasions. Their shoes and boots a
made of feal-kins well dreffed or tanned. They formerly
wore stockings made of rein-deet or feal skins; but now
they have worsted stockings of different colours, as white,
blue and red, which they buy of the Danes.

The coats worn by the women are higher on the
shoulders, and wider than the mens, with higher and
larger hoods. The married women who have children
have much larger coats than the rest, on account of their
carrying their children in them upon their backs, for these
are their, only swadding cloaths and cradle. They wear

carrying their children in them upon their backs, for thefe are their only fwaddling cloaths and cradle. They wear drawers, which reach to the middle of their thigh, and over them breeches. The drawers they keep on day and night; but the breeches, which come down to the knee, they only wear when they go abroad in winter, and as foon as they come home, pull them off. Next to their bedy they wear a waifleont made of a young fawn's kin, with the hairy fide inward. The coat, or upper-garment, is forming and a boat the state of the state edged with white, neatly wrought in the fearms and about the edges, which look very well. Their shoes and boots, with futle difference, are like those of the men.

Their hair, which is very long and thick, is braided, and tied up in a knot, which becomes them; they commonly go bare headed, both without and within doors; No. 50.

and in thefe foothern parts fridom wear their hoods except

and in these footherst parts stident wear their hoods except it rains or shows.

The chief sinety of the women consists in wearing glass beads of several colours, cerain about their necks and arms, and pendants in their ears; some of them also wear bruck-lets of black skin set with parts, with which they adorn their clocks. The Greenland women have likewise another more autwordlinery kind of embelishment: they make black streams between their syes, on their forehead, upon the chin, arms and lands, by passing under the skin a needle and thread made black. Hiddoou as this renders them in the syes of frangers, they think it extremely ornamental, and say, that those that do not thus adorn their shees, will have their head turned into train oil tube, that shall be placed under the lamps that burn in the land of soals, or depasted spirits.

Their habitations are of two kinds, one of which serves for the winter, and the other for the summer fasion. The winter dwellings are the largest. These are dug deep in the earth, and raised a little above the furshee of the ground with some and tot. In this but the windows are on one side made of stal-gure drasted and fewed together, or the maws of holybutts, which are white and fewed together, or the maws of holybutts, which are white and fewed together, or the maws of holybutts, which are white and fewed together, or the maws of holybutts, which are shown and windows are on one side made with boards, raised half a yard from the ground. Their bedding consists of the sides of seals and sein-deer. On the hearth is a great lamp in the form of a half moon, and over it are hung their kettles formed of a kind of marble, for, where they have the advantages of trade, of brass or copper, in which they boil their provisions. The entrance's dug narrow and winding under ground, and the door so were they have the advantages of trade, of brass or capte at your contribution or deep the shall gure the shal

ceive the day light.

These people commonly eat when they have an appetite, but their chief meal is at night; their common food is the field of the rein-deer and hares, all kinds of land and water-fowl, seals, several forts of feesh water and sea-sish, and even some parts of the whale. Their manner of dressing victuals is extremely disgustful. They usually queuch their thirst with water, yet can drink, a great deal of brandy without being intoxicated; but they are said to prefer the blood of the seals to any other drink.

With respect to their marriages, the chief qualifications required in the bride are skill in domestic affairs, and especially in cutting out and sewing their gaments. On the other hand, nothing recommends a suster more than bold-ness, activity, and fueces in sinning and funting. The bride, at the marriage sessions, putton a shew of gravity, and a melancholy air. Relatious never intermarry here,

not even to the third and fourth degree of confanguinity. They have a respectful idea of marriage, and in general every Greenlander has but one wife. They indulgs their children to a culpable excess a letting them do whatever they please, instead of moderately correcting, or checking them for their faults.

Huating or shifting are the chief employment of the men, for which they have very curious tackle. The boats in which the men row to sea are about six yards long, and only three quarters of an ell broad in the middle, ending in a very sharp point as both extremities. They are made only three quarters of an ell broad in the middle, ending in a very sharp point at both extremities. They are made of very thin narrow boards fattened together with whalebone, and cavered with feal-fkins. Only one man goes out in a boat, the top of which is covered with skin, with only an opening in the middle, which, when the man has entered, is fattened close, round his walft; to that no water can enter the hoat; and thus equipped, he will row fixty or seventy sailes a day, though he has but one oar, which is fix or seven feet long, and flat at both ends. These boats are easily overfet, which they consider as no great damege, if the owner ecloses with his life. The larger fort of boats are chiefly ased by women. They have also a kind of open barges, pointed at both ends, but not very deep; these are covered with scal-skins, and are high at the extremises. They make use of them in coasting from one past to another, in conveying their effects in their emigrations, or when they embark for the whale sishery.

The employment of the Greenlanders is for the most past at fea. When they go to eatch whales, they put on their helt apparel, fancying, that if they were not neatly dreffed, tha whale would thus them. Upon these occafions, about fifty persons, of both sexes, let out together in one of the large boats. When they have found the in one of the large boats. When they have found the whale, they firste him with their hispoons, to which are fastlened lines or straps two or three fathoms long, made of feal-skins; at the end of, which they sie a hag of a whole feal-ikins; at the end of, which they fie a hag of a whole feal ikin filled with air like a bladder, that the whale, when he finds himself wounded and fier away, with the harpoon flicking in his body, may be the footer tired and eafly found, the air-bag hindering him from keeping long under water. When he lofes firength they attack him with fipears and lances till he is killed, and then put on their coars made of dreffed feal ikin, with hoots, gloves, and capt, laced fo tight together, that no water can penetrate them. In this gain they leap into the fea, and begin to flice off the fat, all round the body, and are fonetimes for daring as to get upon the whale's back, while he is yet alive, in order to make the quicker dispatch in killing him, and cutting away the fat.

and cutting away the fat.

Nearly the fame method is used in killing the feals, only the harpoon is lefs, to which is fastened a line of feal fkin, fin or feven fashoms long, and at the end of it a bag of feal fkin filled with air, to keep the feal when wounded feal-skin filled with air, to keep the seal when wounded from escaping by diving: but in the northern parts, where the sea is frozen, they use other methods in catching of seals. They first look out for the holes, which the seals themselves make with their claws, of about the higness of a halfpenny, that they may fetch their breath: On their inding one of these holes, they seat themselves near it, and as soon as they perceive the seal put his stout to it for air, immediately strike him with a small harpoon, which they have ready in their band, to which it sastened a strap of a sathon long, which they hold, in the other hand. After he is struck, and cannot oscape, they cut the hole large enough to bring him up through it, and as soon as they have got his liead above the ice, kill him, and then list him out of the water.

out of the water.

Another way, of catching feals, is: they make a large hole in the ice; but in fpring they find holes are de by the feals themselves, through which they get upon the ice, in order to repose and bask themselves in the sun. Near these holes the sithermen place a low bench, upon which they lie down on their belly, having first made a small hole near the large one, through which they so the town a poie headed with a harpoon, a strap being fastened to it, which one holds in his hand, while another, lying upon the head which his face dewiwards, watches the coming of the seal, which when he perceives, he cries 'Ke,' where-upon the least is instantly struck by him who holds the pole.

pole.

In the foring, when the feals lie upon the ice, nearholes which themfelves make to get up and down, the
Greenlanders, disguised in feal-skins, with a long pole in
their hands, mover their heads backwards and forwards,
and frort like a feal, till sley come to mear that they are
able to reach and strike them with the pole. It is of the

utnot importance to these people to excel in hunting and fishing, finer on their skill in whate employments depends their whole substitution.

In sishing, they make use of hooks of iron or bones; their lines are made of white whalebone, cut very small, and thin, and with this tackie they eatch shundance of sish. Their way of sishing for small saidon or fear trout is as follows: at low water they build small inclosures of stone, near a river's mouth, or any other place where the salmon come; when the tide comes in, the salmon, which enter the river, pass at high water over the inclosure, and remain in the river till the water falls again, when they endeavour to return to the sea, but the sisherment way-lay them at the inclosures, and sop their passage at the time of low sib, when the falmon are left and sty land, and may be caught with the heath of they are left in holes, they take them with a pole headed with two sharp hooked bones, or iron hooks.

rake them with a power bones, or iron hooks.

They are firangers to trade, arts, and felences; have no traffic one among another, and their commerce with foreignes is arry inconfiderable. They neither ofe nor have any knowledge of money; but fix a certain value on iron, which they barter for goods.

any knowledge of moders but fix a certain value on iron, which they barter for goods.

At their entertainments, they exprefs their mirth by drumning, finging, and dancing. They are accoustomed from their very childhood to an unbounded liberty, all of them being on a level. They have indeed little regard to the forms of ceremony and decorum, which in other places obtain the name of politenes; yet are free, open, and cheerful in convertation; nothing pleasing them better than merry jefts and raillery. They live very fociably, and tepose great confidence in each other. Amorous intigges of an unlawful kind are feldom or never heard of among them; and as they abstain from thest; rapine, and violence among themselves, they are never known upon any pretence to make war on their neighbours. They think themselves greatly foperior to the Danes, and nake no feruple to pilfer any thing from them, when it can be done with faster; but it is probable they have little idea of property; and as they behave with fuch integrity to each other, it is natural to suppose that they have earnt this pilfering of the Dutch and Danish seamen. They egercise great hospitality, and indeed have most things in compittering of the Ducta and Dahini seamen. They oggra-cife great hopitality, and indeed have most things in com-mon; so that if there be any among them who cannot work, or ger his livelihood, they do not let him starve, but admit him freely to their table. They are remarkable for their good nature and inostensive behaviour: hatred for their good nature and momenture penaviour; marea and envy, first and rage, are rarely heard of among them. They have as great an abhortence of stealing from each other as any nation upon the earth, and therefore keep nothing under lock and key; but leave all of free that every body may come at it, notwithstanding which they have no

fear of lofing it.

The Greenlanders are charged with having no idea of a God, and fome authors have faid that their language has The Greenlanders are charged with having no idea of a God, and some authors have faid that their language have not any expression to denote a Supreme Being; though they themselves acknowledge that they are convinced of the immortality of the soul, and believe that as soon as a person dies he goes to the land of spirits, and there enjoys the felicity of hunting from age to age; while the body remains behind and moulders in the dust. They maintain, however, that there is a spirit, which they call Torngarkik, to whom they actribe a supernatural power, though not the creation of the world. The Angakuts, or prophets, form very whimsseal ideas of this being, some representing him as without form or shape, others giving him that of a bear, and others pretesding that he has a large body and but one arm. They assign him his abode in the lower regions of the earth, where they tell you is constantly sine san-shine weather, good water, deer, and sows in abundance. They likewise maintain that a spirit resides in the air, whom they name the moderator, or re-strainer; for these Angakuts pretend, by his order, to command the people obtains from certain things, as preservatives from evil and danger.

They believe that there are spirits who govern the elements; and their notions of the heavenly bodies are very whimsseal; they say the moon was once a young man, and the fun a young woman his sister, with whom he was samiliar in the dark; but that the being destrous to find our her lover, rubbed her hands with toot, with which the marked his white bear-skin coat, and thence they say came the spots in the marked his white bear-skin coat, and thence they say came the spots in the marked his white bear-skin coat, and thence they say came the spots.

marked his white bear-fkin coat, and hence they fay came the fpots in the moon. The fun flying from his embraces, afcended the air, whither the moon followed her, and ftill continues to purfue, without being able to overtake her; but this is probably only a fiction of their poets, like those of Ovid in his Metamorphoses.

regulate their different employments. According to their afternomical (yiem, the heavens turn round the point of a huge rock.

A circumstance very extraordinary in these people, these feated in frozen regions, which might be supposed to damp the genius and extragulat the fire of imagination, it there is the poems and extragulate the region of the harmony of which depends both as on the number of syllables of which their verses are composed, and a plain regard to cadence even in their manner, of readings them. They use this fort of poetry, which, all things considered, is as far from being rude, as it is from being exact, to express all their passions, such as leve, joy, grief, but more affected and their passions, such as leve, joy, grief, but more affected and their passions, such as leve, joy, grief, but more affected and their passions, such as leve, joy, grief, but more affected and their passions, such as leve, joy, grief, but more affected and their passions, such as leve, joy, grief, but more affected in the contravery of the first words to express himself in this poetical duel, is held to be conquered, and so the controversy ends without either lawful to shedding of blood.

The Rev. Mr. Egede, who was feat to Greenland by the Danith sector for propagating the Gospell, lived among this people fifteen years, which he spont with the most indefatigable real and laborious application, by which means he made a great number of converts. He resurned to Copenhagen in 1730, and by his solicitation a sminary was sounded, in that city for educating able missionaries and catechists to be sent to Greenland. The Missionaries and catechists to be sent to Greenland. The Missionaries and catechists to be sent to Greenland. The Missionaries and catechists to be sent to Greenland. The Missionaries and catechists to be sent to Greenland. The Missionaries sheet is offered to qualify them for the ministry is

coming within several miles of their colonies. The commodities Groenland affords for commerce are whale-bluber, whale-bone, sea-ouncorns home, the skins of reinders, bears, seals, and fox-kins, which they better for the following merchandizes; shirts made of white, blue, red, and striped linen, coarse woblen cloth, knives, saws, needles, large shing-hooks, and other hard-ware; looking-glasses, rafes, poles, deal-boards, chesta, kettles of copper, brais, tin, &c. ...

Before we take our leave of this country, it may not be amist to present our readers with a singular, but well authenticated, relation of the adventures of four Bussian Delambor, a merchant of Mesen, at twen in the province of Jugovia, and in the government of Archangel, sitted out a vesse, in the year 3-43, carrying sourcern men; she was destined for Spitzbergen, to be employed in the whale or seal sishery. The wind was fair of eight fuccoffive days after they had failed; but on the ninth it changed, so that instead of getting to the west of Spitzbergen, the usual place of rendezvous for the Dutch hips, and those of other nations, annually smployed in the whale sishery, they were driven eastward.

After some days, however, they approached within two English miles of the shore, when the vessel was suddenly surrounded by ice, and they sound themselves in an extreme dangerous situation. In this alarming state a conscit was held; when the mate, Alekis Himkos, informed them, that he recollected to have heard that some of the people of Mesen, some time before, having formed a resolution of wintering here, had accordingly carried from that city timber proper for buildings hut, and had actually erected one at some distance from the shore. This information induced the whole company to resolve on wintering here, if the hut, as they hoped; till existed; for formation induced the whole company; to refore on win-tering here, if the hut, as they hoped; filli exifted; for they clearly perceived the immirent danger they were in; and that they must inevitably perflu if they continued in

and that they multi-interest product of their crew in fearch of the hut, or any other fuecour they could meet with. These were, Alexia Himkos, the mate; Iwan Himkos, is godson; Stephen Scharspot, and Feodor Woregin. But as the shore on which they were to land was uninhabited, it was necessary that they should make some provision, for their expedition. They had almost two miles to

Their time is not computed or steafured by weeks of years, but only by mosths, beginning their computation the fun's fifth rifing above their horizon in the winser, from whence they sell the moons, in order to know the way equally difficult and dangerous y tradence therefore forbad their loading themselves too much, list, being oversorably the feafon in which every fort of fifs, fea animals, or birds, feek the land, that by this knowledge they may regulate their different employmentars. According to the waves, and driven against each other by the wind, rendered the waves, and driven against each other by the wind, rendered the waves, and driven against each other by the wind, rendered the waves, and driven against each other by the wind, rendered the waves, and driven against each other by the wind, rendered the waves, and driven against each other by the waves, and driven against each oth

wooden pike.

Thus accounted, these four failurs quickly arrived at Spitabergen, little suspecting the misfortunes that would befal them. They began with exploring the country; and foon discovered the but they were in search of, about an English mile and a half from the shore. It was thirty-fix feet in length, eighteen feet in height, and as many in breadth. It consained a small antichamber about twelve seet broad, which had two doors, the one to thut it from the outer air, and the other to form a communication with the inner room; this contributed greatly to keep the larger the inner room; this contributed greatly to keep the larger room warm when once heated. In the large room was an earthen flowe confiructed in the Ruffian manner; that is,

room warm when once heated. In the large room was an earthen flove constructed in the Russian manner; that is, a kind of oven without a chlumey, which forces occasionally either for baking, or licating the room, or for a place to fleep upon when the weather is very cold, to which latter ale the Russian peasants frequently apply it.

The discovery of the hat was very agreeable to the failors, who precived it has suffered much by the weather, it having been built a considerable time, but, bad as it was, they contrived to pase the night in it. Early the next morning they, hakened to the shore, impatient to inform their comrades of their success; and also to procure from their comrades of their success; and also to procure from their vessels such that the summar of the recession of their success; and also to procure from their comrades of their success; and also to procure from their comrades of their success; and other necessals, as might better enable them to winter there.

When they reached the place of their sanding, the abonishment and agony they selt was inexpressibly great, on seeing nothing but an open sea, free from the ice, which but a day before had covered the occaso. A violent storm, which had arisen during the might, had certainly been the cause of this disastrous event. But they could not tall whether the ice, which had before hemmed in the vessel, and the cause of the violence of the wave, had been driven against her, and shattered her to pieces; or whether she had been carried by the current into the main; a circumstance which frequently happens in those sea. Whatever accident had betallige the thip, they saw her no more; and as no tidings were ever after heard of her, it is most probable that both she and all on board went to the bottom.

The unhappy wretches being deprived; by this melancholy, event, of all hope of ever being able to coit the

The unhappy were the heard of her, it is most probable that both she and all on board went to the bottom.

The unhappy wretches being deprived; by this melancholy event, of all hope of ever being able te quit the place, returned to the het full of horror and despair, and their first intention was employed, as may be cashy imagined, in devising means for their substitute, and repairing their, int. The twelve changes of powder which they had brought with them soon procured them as many rain deer; and it fortunately happened that there were great numbers of those animals in the country.

Ou examining the hut, they found that there were cracks in many places between the boards of the building, that freely admitted the air. This inconvenience, however, was easily remedied, as they had an ax, and the boards join again a besses most growing in great abundance all over the country, there was more than sufficient to stop up the crevices, which wooden honses must always be liable to:

These climates are habitable but to few species of ani-

always be liable to;

These climates are habitable but to sew species of animals, by reason of the intense cold, which allo renders them equally unsit for the production of vegetables. No tree or shrub of any kind is sound in Spitzbergen; a circumstance of the most alarming nature to these failors. Without fire, it was impossible to resist the vigour of the climate; and without wood, how was that fire to be produced or supported? Providence, however, has so ordered it, that in this particular-tile sea supplies the defects of the land. In wandering along the beach, they collected plenty of wood, which had been driven ashore by the waves, and which at first consider of the wrecks of ships, and afterwards of whole trees with their roots, the produce of some more hospitable, but to them unknown, climate, which had been sent into the ocean by the overstowing of rivers, or other accidents. rivers, or other accidents.

During the first year of their exile; nothing proved of more essential service to them, than some boards they found upon the beach, having a long iron hook, fome nails of about five or fix inches long, and proportionably thick,

and other bits of iron fixed in them; the meiancholy reliques of fome veffici caft away in those remote parts. These were thrown ashore by the waves at that time when the want of powder gave our men reason to apprehend that they mult fall a prey to hunger, as they had nearly confumed the rein-deer they had killed.

This fortunate circumstance was attended with another equally fo; for they found, on the shore, the root of a fin-tree, of a form nearly resembling that of a bow, which sashion they soon brought it to, by the help of a knife; but still they wanted a string and arrows. Not knowing how to precure these at preserve, they resolved upon making a couple of lances, to desend themselves against the attacks of the white brass.

As neither the heads of their lances nor arrows could be made without the help of a hammer, they contrived to

made without the help of a hammer, they contrived for form the large iron hook before-mentioned into one, by beating it, and widening a hole, it happened to lawe about its middle, with the help of one of their largest nails: its middle, with the help of one of their ranges hause this received the handle, and a round button at one end of the hook ferved for the face of the hammer. A large peb-ble fupplied the place of an anvil, and a couple of rein-deer horns made the tongs. By means of their tools they made two heads of fpears; and after polifying and fharpening them on frones, they tied them as fast as possible, with thougs made of rein-deer skins, to slicks, about the thick-ness of a man's arm, which they got from some branches of trees they found on the coaft

of trees they found on the coaft.

Having now equipped themselves with spears, they refolved to attack a white bear; and after a most dangerous
encounter, they killed one, and there by procured a new supply of provisions. The stefn of this annimal they relished
exceedingly, as they thought it much refembled, beef in
taste and slavour. They law, with much pleasure, that
the tendous could, with little or no trouble, be divided into
flavours of white shough the though to.

the tendous could, with little or no trouble, be divided into filaments of what finenefs they thought fit. This, perhaps, was the most fortunate discovery they could make if they were hereby furnished with strings for their bow, besides ofter advantages.

They next proceeded to forge some pieces of iron into heads of arrows of the same shape, though somewhat smaller in fize than the spears. Having ground and shapened the sike they former, they tied them, with the sinews of the white bear, to pieces of fir, to which, by the help of sine threads of the same, they fastened feathers of sea sow, and thus became possessed into which, by the help of sine threads of the same, they fastened feathers of sow, and thus became possessed in a complete bow and arrows. Their ingenuity respectation; for, during the time of their continuance lete, they killed no less than two hundred and sity rein-deer, besides a great number of blue and white foxes. The sich of these unimals served them also for food, and their skins for closthing and other neceshundred and fifty rein-deer, belides a great number of blue and white foxes. The fielh of these xuimals ferved them also for food, and their skins for closthing and other necessary preservatives against the intense collects of a climate so near the polo. But they killed only ten white bears in all, and that not without the utmost danger; for these animals, being predigiously strong, defended themselves with assonishing vigour and sury.

They attacked the first bear designedly, but the other circular killed in desentions themselves from their essential collections.

nine they killed in defending themselves from their assults: for some of these creatures even ventured to enter the outer room of the hus, in order to devour them. It is true, all the bears did not thew equal ferocity, either owing to fome being lefs prefied by hunger, or to their being naturally lefs carniverous than the others: for fome of them which entered the lut immediately betook themselves to flight on the first attempt of the failors to drive them away. A repetition, however, of these attacks, threw the poor men

tual danger of being devoured.

The three different kinds of animals before-mentioned, via, the rein-deer, the foxes, and the white bears, were the only food these weetched mariners tasked during their continuance; in this dreary abode. They were also for foore time reduced to the necessity of eating their meat quite raw, and without either bread or falt, for neither of thefe could be procured. The intenfenels of the cold, these could be procured. The intensences of the cold, together with the want of proper conveniences, prevented them from cooking their victuals in a proper manner. There was but one stove in the hut, and that was not well adapted for boiling any thing. Wood also was too precious a commodity to be expended in keeping up two first; and the one they might have made out of their habitation to dress their victuals, could never have served a narm them; besides, the continual danger of an attack. to warm them: befides, the continual danger of an attack from the white bears, was another reason against their

cooking in the open air.

As the cating their meat half raw proved very difagresa-

ble, order, therefore, to remedy in forme measure that har, ap; they bethought themselves of drying forme of their provisions, during the summer, in the open air, and attained of hanging it up in the upper part of the hut, which was continually filled with simoke. This meat, to prepared, they used for bread, and it made them relish their other such the better, as they could only half-dress it. Finding this experiment answer their wishes in every respect, they continued to practise it during the whole time of their confinement in this country, and always kept up, by that meants, a sufficient slock of provisions. In summer, they had water from small rivolets that fell from the rocks; and in winter from the fnow and thavest ice; this was of coorse their only beverage; and for crucking, and other purposes, their small kense was the only vessel they could make use of.

These remedies experience proved to be effectual; for three of the failors, who purfued this method, continued totally free from all taint of the diforder. The fourth Fodor Weregin, who was naturally indolent, averfe to Fodor Weregin, who was naturally indolent, averie to drinking the rein-deer blood, and unwilling to leave tha hut when he could possible avoid it, was; foon after their arrival leized with the feurey, which afterwards became fo bad, that he passed amount for years under the greatest furferings: in the latter part of that time he became fo work, that he could no longer sit erect; nor even raise his hand to his mouth; fo that his humane companions were obliged to see and attend him to the hour of his death, as if he had here agent home income.

n a new-born infant.

They foon found the necessity of keeping up a continual fire in fo cold a climate, and perceived that if it should unfortunately go our, they had no means of lighting it again; for though they had a seel and sints, yet they wanted both match and tinder. In their excursions through the country they had met with a flimy loam, or a kind of clay, out of which they found means to form a wenfil that might force for a lamp; and they proposed to keep it constantly burning, with the fat of the animals they should kill. This was certainly the most rational stenfil that might ferre for a la they thould kill. This was certainly the moft rational feheme they could have thought of; for to be without a light, in a climate where, during winter, darknefa reigns for feveral months together, would have added much to their other calamities. Having therefore faffilloned a kind of lamp, they filled it with rein-deers far, and fluck in fome twifted linen shaped into a wick. But they had the mortification to find, that as foon as the fat melted, it not calls collection to find, that as foon as the fat melted, it not mortification to find, that as foon as the fat melted, it not only loaked into the clay, but ran through on all fides. It was therefore necessary to devise fome means for reventing this inconvenience, not arising from cracks, but from the fubblance of which the lamp was made being too porous. They therefore made a new one, dried it thoroughly in the sir, then beated it red-hot, and afterwards quenched it in their kettle, wherein they had belied a quantity of flour (part of the small bag shey had preferved) down to the confidence of thin starch. The lamp being thus dried, and filled with fat, they now found, to their great joy, it did not lesk : but, for greater fecurity, they dipped linen rags in their paste, and with them covered all its outsides.

Succeeding in this attempt, they immediately made

in their paste, and with them covered all its outsides. Succeeding in this attempt, they immediately made another lamp, for fear of an accident, that in all events they might not be destitute of light; and when they had made these two, they thought proper to save the remainder of their slow for finisher purposes. As they had carefully collected what ever happened to be cast on shore to supply them with fuel, they had sound among the wrecks of vessels of one cordage, and a small quantity of oakum, which served them to make wieks for their limps. When these stores began to fail, their shirt and drawers were employed to make good the desseiner. By these means they kept a samp burning without intermittion, from the day they first made it, till that of their embarkation.

They

They were, however, exposed the more to the rigidar of the climate, from the necessity they were under of sonverting their shirrs and drawers to the use above specified; they said to found themselves in want of shoes, boots, and other articles of dress; and, as winer, was approaching, they were a sin, abliged to that ingenuicy which meeting taggetts, and which feldom saits in the trying hour of distinguists, and which feldom saits in the trying hour of distinguists, and which feldom faits in the trying hour of distinguists, and which feldom faits in the trying hour of distinguists, and which feldom faits in the trying hour of distinguists, and which they now thought of employing in some more effential service; but the question was, how to tan them. After deliberating on this distinctor several days in feth-water, till they could pull off the hair tolerably well; they then subbed the wet leather with their hands slith it was nearly day, when they spread some melted rein-deer's fat over it, and again subbed it well. By this process, the leather became fort, plant, and supple, proper for answering every purpose for which it was intended. Those skins which they designed for furst they only soaked for one day, so prepare them for being wrought, and then proceeded in the manner before mentioned, except only that ittey did not remove the lair. Thus they sloon farmished themselves with the head flar materials for all the parts of dress they had occasion for making those so boots, not needles for sewing their garments. These wants however, they son surplied the bits of son they had occasion for. Another difficulty which occurred was, they had neither awas for making those so boots, not needles for sewing their garments. These wants however, they show the surplied by their industry even brought them to a certain degree of perfection. The making even to their needles gave them indeed no little trouble; but this they also performed with the lassificance of their knife; for having ground it to avery that point, and though t

then they proceeded to make their new cloaths with the meerflary implements which they had provided.

They wore, he furnmer; a kind of jacket and trowfers,
made of fleins, prepared as above; and in winter they
wore lot, fur gowns, like the Samoleds or Laplanders,
furnished with a hood, which covered their head and neck,
leaving only an opening for the face. Thefe gowns were
fewed close round; fo that they were obliged to bring them
over their heads, like a thirt, when they put them on.

After these distreffed exiles had passed near fix years in
this dismal place. Feeder Weregin, whose illness we before took nerice of, and who all along had been in a languid
condition, died; after having, in the latter part of his
life, suffered the most exeruciating pains. Though they
were thus freed from the trouble of attending him, and
the grief of being withesses to his misery, without being
able to associate with the number lessed, and every one
wished to be the first that should follow him. As he died
in winser, they dug a grave in the show as deep as they
could, in which they laid the corpse, and in order to secure it from the bears, covered it over in the best manner
they could.

they could have properly reflections occasioned by the death of their comrade were fresh in their minds, and when death of their comrade were frefth in their minds, and when each expedied to pay this laif duty to the remaining companions of this misfortunes, or to receive it from them, they unexpediedly got fight of a Ruffian thip. This happened on the 15th of August, 1749. The vessel belonged to a trader of the fest called by its adherents Strav Vieva, that is, the Old Faith, who had come from Archangel, and proposed wintering in Nova Zembla; but the contrary winds they met with in their passage made it impossible for them to teach the place of their defination. The vessel was driven towards Spitzbeigen, directly opposite to the residence of our mariners; who, as soon as they persuived her, hastened to light fires on the hills nearest their habitations, and then ran to the beach, waving a sag made of rein-deer's hide fastened to a pole. The people on board, sowing these figurus, came to an auchor not far from the land, as they concluded that there were men on the share who implored their assistance.

The joy of their poor people, on seeing the moment of their deliverance so near, was almost indescribable. They

No. 57.

foon agreed with the matter of the thig to work for him on the voyage, and to pay him eighty rubles on their arrival, for taking them on board with all their riches, which conflited in fifty pue, or two thousand pounds weight, often dever a far, in many hides of these nimals, and in fitins of the bus and white foacs, together with those of the ten white bears which they had killed. They took care not to forget their bows and arrows, their spears, their knife and ar, which were almost worn out; also their awis and their needles, which they kept carefully in a bone box very ingeniously made with the knife only.

On the 28th of September, 1749, our adventurers arrived fare at Archangel, having spent fix years and three months in their rueful foliude. But the moment of their landing had nearly proved fatal to the loving and beloved wife of Alexie Isimkos, who, being picfent when the vessel same into port, immediately knew her husband, and ran with so much agencies to his embraces, that the narrowly occupied the same developed being drowned by slipping into the water.

with to much eagerness to his emoraces, that the narrowy effeaped being drowned by flipping into the water.

"On their arrival, they were all three firong and healthy; but having lived fo long without bread, they could not reconcile themselves to the use of it; neither did they drink any thing but water, as they could not bear any spirituous

liquors.
We that conclude our description of Greenland with a

injurishing but water, as they could not bear any fpirituous liquors.

We shall conclude our description of Greenland with a curious narrative of the methods made use of by eight seamen, viz. William Fakeley, gunner: Edward Pelham, gunner's-mate; the writer of this narrative, John Wise, and Robert Goodfellow, seamen; Thomas Ayers, whale-cutter; Hehry Bett, cooper; John Dawes and Richard Kellet, landmen; who wintered in Greenland, to preserve their existence in that inhospitable-clime; and of their happy deliverance and return from it.

On the first of May 1630, the Salotation set fail from the Thames, and arrived at Greenland on the 1t tho sthe next month. Being in want of provisions the latter end of the year, they sent eight men or those at a place pretty much frequented by rein deer, to kill venion, leaving them a boat, and orders to follow the ship to Green-Harbour, which lies to the southward of the place where they went ashore. These men having killed sourteen of fisten deer, lay that night ashore, and proposed next day to have gone on board the ship; but a great quantity of ice diving towards the shore, obliged the ship to stand out so far to sea, that when they came to Green Harbour they were ont of sight. However, the ship being to rendezvous in Belsound, further to the southward, and being to leave the country within three days, our huntsmen began to be very anxious, less the shipping should be gone from thence too before they arrived. They thought it proper, therefore, to sing their venison into the sea, in order to lighten the boat, and make the best of their vay to Belsound, distant from thence about fixteen leagues; but none of them knowing the coast very well, they overshot their port about ten leagues, when, sensible of their error, they returned to the northward; but one of their company being still positive Belsoond lay farther to the fouth, they were induced to make to the northward again, still they were a second time convinced of their missae, and then they turned their boat to the northwar time looking on one another, as men anazed at the dif-trefs they were on a fudden reduced to; but their confertreis mey were on a modern reduced to; but their confidernation being a little abatted, they began to think of the propered means to fubfift themselves during the approaching winter; and the weather being savourable, they agreed in the first place, to go to Green Harbour, and hunt for venison; having two dogs with them very sit for their

parpote.

Accordingly, on the 25th of August, they went in their boats to Green Harbour, where they arrived in twelve hours, being fixteen leagues to the northward of Belfound. Here they fet up a tent made with a boat's fail, the oars ferving for polet; and, having stept a sew hours, went early next morning to their sport, killing seven or eight deer and four bears, and the day following they killed twelve deer more, with which they loaded their boats; and, finding another boat which had been left there by the company, they loaded that with the greaves of whales (being the pieces which remain in the coppers, after the oil is drawn from them), and returned with their booty to Belsound. Here happened to be set up a large substantial 7 E

booth, which the ecopers worked in at the fifting feafort: it was eighty feet long, and fifty broad, covered with Dutch tites, and the tides well boarded. Within this booth these failors determined to build another of lefs dimensions, being fernished with boards and timber, by ulling down a booth which steed near the former; and from the chimnies of three furnaces, used for the boiling of oil, they got a thousand bricks, they found also four hogsheads of very sine lime, which, mingled with the sand on the sea-shore, made excellent mortar.

The weather was by this time grown so zold, that they were obliged to have two fires, to keep their mortar from freezing. They perssifted, however, in their work, and raised a wall of the thiskness of a brick against one of the sides of their innermost booth; but wanting bricks to finish the rest in like manner, they mailed thick boards on each side the timbers, and filled up the space between with fand; by which means it became to tight and close, that the least breath of air could not enter in; and the chimney's wear was in the greater booth. The length of this lesser booth. was in the greater booth. The length of this teffer booth, was twenty feet, the breadth fixteen feet, and the height ten; their cicling being made of deal boards five or fix times deade, and to overlaid, that no air could poffibly come in from thence. Their door they did not only make as ftrong and close as possible, but lined it with a bed which found there: they made no windows, except a little they found there: they made no windows, except a little fiole in the tiles of the greater booth, by which they received fome light down the chimney of the lefter: they then made four cabbins, chufing to lie two in each cabbin. Their bedding was the fkins of the rein-deer, the fame the Laplanders ufe, and they found them exceedingly warm; and for firing, they took to pieces fome cafks; and feven or eight of the boats which were left behind (for it feems they use a great many boats in whale fifting, which they leave in the country every winter, rather than be at the trouble of carrying them backwards and forwards). Our failors flowed their faring between the beams and roof of the flowed their firing between the beams and roof of the greater booth, in order to make it the warmer, and keep out the snow, which would have covered every thing in the greater booth, if it had not been for this contrivance.
On the 12th of September observing a piece of ice come

driving towards the shore, with two morfes, or sca-horses, affeep upon it, they went out in their boat with a harping iron and spears, and killed them both; and on the 19th of the same month another, which was some addition to their food. But taking a very narrow furvey of all their provisions, they found that there was not half enough to ferve them the whole winter; and therefore they finised themselves to one meal a day, and agreed to keep Wednesdays and Fridays as sasting days, allowing themselves then only the fritters or greaves of the whales, which is very loathsome food. By the coth of October the aights were grown long, and the weather so cold, that the sea was frozen over; and having no bufinefs now to divert their thoughts, as heretofore, they began to reflect on their milerable circumftances, fometimes complaining of the militable circumflances, fometimes complaining of the cruelty of the mafter of the filip, in leaving them behind; and at others, excusing him, and bewailing his misfortunes, as believing him to have perished in the ice. At length putting their considence in heaven, which only could relieve them in their great distress, they redoubled their prayers for strength and patience to go through the dismal trial, and received great fatisfaction from their devotions, which no doubt were as fincere and rervent as ever

were offered up to the Divine Being.

Having now again furveyed their provisions, they found having flow again subject that the fritters of the whale were almost all mouldy, having taken foure wet; and of their bear and venifon there was feares enough left to afford them five meals a week; whercupon it was agreed to live four days of the week upon the mouldy fritters, and the other three to feaft upon bear and venifon: and left there should want firing hereafter, to drefs their meat, they thought it proper to roaft every day half a deer, and flow it up in hogtheads; and with this kind of food they filled three hogtheads and a half; leaving fo much raw as would ferve to roaft every

a half; leaving to much raw as would ferve to roat every Sunday a quarter, and a quarter for Christmas-day. It being now the :4th of October, the fun left them, and they faw it no rrore till the third of February; but they had the moon all the time, both day and night, though very much obscured by the clouds and foul weather. There was also a glimmering kind of day-light for eight hours, the latter end of October, which shortened every leavill the fift of Deepher, from which thortened every

day till the first of December, from which time, to the 20th of the same month, they could perceive no day-light avail. It was now one continued night, there appearing only

in clear weather a little whiteness like the dawn of day or

in clear weather a little whiteners like the dawn of day sewards the foush.

On the first of Jaruesy they found their day a little so increase. They counted their days it feems, by the smooth and were so exact, that at the return of the shipping, they were able to tell the very day of the smonth on whech the fleet arrived. As for light within doors, they made them three lamps of some sheet lead they lead found upon one of the coolers: and there happened to be oil enough to supply them in the cooper's tent; for wicks, they made also frope-yarm; and these lamps were very comfortable to them in that long-continued night. But faill their miles them that long-continued night. But faill their miles them in that long-continued night. But faill their miles them in the cooper's tent; for wicks, they made them in that long-continued night. But faill their miles then in that long-continued night. But fail their miles the times, reflecting on their former ill-spent lives, they considered this as a just punishment of their offences, and at other times they were referred to bear witness to God's wonderful mercy in their deliverance; therefore they implored the protection of the Almighty, and continued constantly to fall down on their knees two or three times a day.

they due open at one certain place with pick-axes every day. This continued to the tenth of January, and then they drank fnow-water, melted with a hot iron, until the twentieth of May following; and now they took another review of their provisious, which they found would not laft them above fix weeks longer.

To alleviate their milery, on the third of February, they were cheered again with the bright rays of the fun, which hone upon the tops of the fnowy mountains with an inconceivable lattre: to them, at least, this afforded an inconceivable lustre: to them, at least, this afforded the most delightful seene that was ever beheld; and after a night of many weeks or some months, what could be imagined more pleasing to a mortal eye! As an addition to their joy, all the bears began to appear, again, on the selfs of which they had made many hearty meals; but these animals were as ready to devour our countrymen, as they were the bears, and, being pinched with hunger in this barren place, came up to their very door. One of these creatures, with her cub, they met at the entrance of their apartment, and gave her such a reception with their pikes and lances, that they laid her dead upon the spot, and the young one was glad to make his sscape; but the weather was so cold that they could not stay to stay her, but dragged the beast into their house, and there went to work, cutting her into pieces of a stone weight, one of which served them for a dinner; and upon this they fed twenty days, esseming her sless he was stone of the company who was field, attributes his cure, in part, to the eating of it.

If it be enquired how they kept their version and bear's sless, attributes his cure, in part, to the eating of it.

If it be enquired how they kept their version and bear's sless, attributes his cure, in part, to the eating of it.

If it be enquired how they kept their version and bear's sless, attributes his cure, in part, to the eating of it.

If it be enquired how they kept their version and bear's sless, attributes his cure, in part, to the eating of it.

If it be enquired how they kept their version and bear's sless that no corpse or carcase ever putrifies. Had they been stocked with fall provisions, they had infallibly died of the scurvy, as others did, who were left on shore, such better provided with liquors and other necessaries than these poor men were. By that time they had eaten up this bear, others came about their booth frequently, to the number of forty and more, of which sliep killed seven (one of them sin, see thigh at teast) roasin the most delightful foene that was ever beheld; and after

(one of them fin. Seet high at least) roasting their seeth spon wooden spits. Having now plenty of provisions, they are heartily two or three times a day, and could find their strength increase apace, and their health established.

The fixteenth of March being now come, and the days of a reasonable length, the fowls, which in the winter season were fied to the southward, began to refort to Greenland again in great abundance; here they live and breed in summer, seeding upon small sist. The foxes also which had kept close in their holes under the rocks all the winter, now came absoad, and preyed upon the swels, of which our countrymen, having taken some, baited traps with their skind, and caught sity sores in them, which they soasted, and foxund to be very good meat; at least in the opinion of men who had sed hitherto pretty much on bear's flesh. Thus they continued taking sowla and some till the first of May, meeting with no other misfortunes,

Geneaining a general account of the hingdom of Pruffia; witness chief divisions; also a particular description of the hingdom of Pruffia, property so called, Brandenburg, Pruffian Pemerrania, Swedish Pemerania, Magdeburg and Halbesshat; their boundaries and satest, bewin, rivers, inhabitants; trade, climate, foil, produce, animals, &c.

THIS monarchy is composed of twenty-one principal divisious; namely, 1. Ducal, now Regal Prussia, fituated in Poland; 2. Brandenburg; 2, Prussian Pomennia; 4, Swedish Pomerania, in Upper Saxony; 5, Magdeberg; 6. Halbe-stadt, in Lower Saxony; 7, Glatz, in Bohemia; 8. Miracen; 9, Ravensburg; 10. Lingen; 11. Cleves; 12. Meurs; 13. Mark; in the duchy of Westphalia; 14. East Friesland; 15. Lippe; 16. Gulick; 17. Tacklenburgh, in the circle of Westphalia; 18. Gelder, in the Netherlands; 19. Neuschatel, in Switzerland; 20. Part of Siletia; 21. The countries lately diffuembered from Polard, and now suided to Prussia.

Part of Sheisis 12.1 Incommenter state of the Poland, and now saided to Pruffia.

The kingdom of Plutfia is bounded on the north by part of Samogitis; on the fouth by Maffovia and Poland Proper; on the eaft by part of Lithuania; and, on the weft, by Polific Pruffia and the Baltick; the length being one hundred and fixty, and the breadth one hundred and

With refpect to the climate, the autumn, in this country is usually wet, and winter severe, yet the air, being purified in some measure by high winds, is tolerably purified in wholefone.

wholesome.

This country produces corn, flax, hemp, fruit, hops, afterage, game, foxes, cattle, fuch at horses, sheep, deer, dee, also bears, wolves, lynxes, wild-boars, &c.

The inhabitants are plentifully supplied with fish from the Baltick, and the rivers and lakes; and on the shore of the former great quantities of amber are found, inclosed in which are often feen spiders, slies, gnats, minerals, leaves, sishes, frogs, ants, drops of water, pieces of wood, &c.

There is likewise found a kind of manna, and an in-feen, of whose swas that beautiful tred colour, called St.

feet, of whose eggs that beautiful red colour, called St.
John's blood, is made. Wood, pit coal, wax, hency,
pitch, &c. abounds; and glass is made of the asses of some

kinds of wood. Bendes the lakes and canals, feveral first rivers water the country, which afford good inland navia-gation; but the inundations fometimes occasion great day

gation; but the inundations fometimes occasion great day mages.

The inhabitants of Ducal Pruffia only, capable of bearing arms, amounted, previous to the year 1719, to fix hundred, thirty-five thousand, mine hundred and ninety-cight persons. Since that period, seventeen thousand Saltaburgers; and the same number of German, Swifs, and French colonists, have settled in this country; and these ensignants have, fince their coming into this kingdom, erected and founded eleven towns, four hundred villages, fifty churches, eighty-fix seats, and a thousand schools; hence the number of inhabitants at the present time must be greatly augmented.

fifty churches, eighty-fix feats, and a thousand schools; hence the number of inhabitants at the present time must be greatly augmented.

In Prussia, most religions are tolerated; but the Lutterans and Calvinsis prevail. In the thirteenth century, the kinghts of the Teutonic order ma's a conquest of the whole country, and committed the most inhuman barbarities; for they entirpated the natives, and put the Germana in their place; instead of converting the people, which they pretended was their view. But in 1454, one half of Prussia revolted from the knights, and put itself under the protection of Poland.

This-occasioned an alors a continual war betwist the country and the order, full the year 1525, when by a treasty concluded at Cracow, it was agreed that Albert, margrave of Brandenburg, the thirty-fourth and last master of the order, should have the eastern part, under the title of a duchy, and that it should destend to his and his brother's male heirs as a fief of Prassia, but in 1657, the elector, Frederic Willium, had the recreignty combanad to him and his heirs, on condition of its returning to the Poles in case of the failure of heirs male. In 150°, it was raised to a kingdom, by the elector Frederic, who was in a fact time after universally acknowledged as ting of Prussia. He infittuted the order of the black eagle, at Koningserg, at the time of his coronation. The ensign is a gold cross, like that of Maita, cnamelled with blue, and worn at the end of a bread orange-coloured ribbon, which passe over the left shoulder: the number of knights is always thirty, and the foreign is the grand masser.

In the year 1740, his present Prussian majesty seands the order of merit. The mark is a golden erosi, with

of he coine, enamelled with azure, and on the oppor-used point is the peter F crowned, on the three lowers of odness with motor, "For Merit," and on the four pher viner, which form a St. Andrew's crois, as To many literal is cless in gold; this can is fixed to a black tibbon, much diely put about their nocks, from whence it hangs it was become.

with diff, but about their nacks, from whence it hange it with height the interest.

By the littleation of an excellent police, the pre-cast king of their last brought this country into a very marginary, consequently face barnes is greatly in favour of the country. The substitutes exports, &c. being browself, paper, co, cer. to fall, friend, gold lace, filver lace, and force to the fall genowher, cloth, cambles, filk, fockia, s. moen, inteed, hemp-feed, mead, edvist, &c. With these commodities, up; and some context, for exception of the found to the fall of the fa

and reusal matters, in this as well as all his other donations. And as he ulustly refide at Berliu, in his cleborate of Brandenburgh, this country is governed by a research, confiding of four great officers of flate, vize, the great matter, burgrave, chancellot and marihall. There are affilled by counfellors of flate, deputies from the nobles and from the commons. Here are likewifes a board of commerce, a board of navigation, a college of wai, a desimeline chamber, and feveral tribunals of judice.

mefine chamber, and feveral tribunals of judice.

Here, as in all other parts of his Proffast majety's dominious, the military ethabilihment is very confiderable.

Each regiment is quintered upon a particular diffrict, and all the young men of that didvict being registered, are obliged, when called upon, to being the regiment.

This country was formedly divided has German and Lithuanian Proffast. German Proffase ownining two hundred and the professional and the profession of the profession of

dred and eightly parithes, and Little more results one hundred and five parithes; but its mode of histories of Little Lambania, Oberland, Nantangan, and Samland. This latter province or circle lies near the gulf of Courand, and is exhibited for the walf quantities of

a variety of methods have been taken to improve it. The productions, which are most plentiful, are buck wheat, millet, flax, woad, tobacco, herbs, alumi, fait-petre, amber, iron, fonc, &c. Abundence of castle and theep are bred here; and the woods nor only supply the inhabitants with fuel, but with timber, charcoal, tar, and wood-after, not only for domestic uses, but for asportation. They have likewise a very confiderable filk-manufactory here.

About ten years ago Brandenburg contained one hundred and twenty towns, two thouland five hundred villages, and eight hundred thoesfand inhabitants. But his present majedty has greatly increased not only the manufactures, but the number of people, villages, and even towns in his domlitions, and more particularly those in this clectorate.

The chief riven in Brandenburg are, the Ribet Preignitz, Warts, Oder, Havel, and Spires. The filvers and lakes abound with fifth, and are united by castle.

Brandenburg generally divided into three parts, called Marcks, via. 1. The Middle Marck, which lies wat of the river Oder, extending to the Havel and Elbe. 2. The New Marck, which lies to the north-set of potentials. 3. The Alt, or Old Marck, on the west fide of the Elbe, between that river and Lunenburg. To these some self the Upper Marck, or the termarch, near the river Uker, and the Preignitz, which has the duchy of Meckleaburg on the north-west and north-set it is northern streation makes it very cold, and the winter sharp for seven or eight months, but they have plenty of firing, It is not very fruitful, by reason of its cold and watery foil, but it has large forests abounding with deer. The Old Marck, however, is faid to have plenty of sherbs and fruit, and the New Marck has some corn and pasture, wherein are fed great stocks of sheep, and bread watery foil, but it has large forests abounding with deer. The Old Marck, however, is faid to have plenty of sherbs and fruit, and the New Marck, on the west and souther some of the strength of the river of order with the system of t

fell for little.

The chief places in it, are, I. Caftrin, or Kuftrim, its result, increen miles north of Franckfort, and forty five and of Berlin. It was but a fifting village till 1537, when it was walled with hone, and otherwife fortified, and is reckoned the key of the 'lew Marck. Guftavus Adolphus befieged it in van in 1631. It is ftrong both by art and nature, being fituate in a marfin, at the conflux of the Oder and Warta. It has an arfenal well furnished, and a citadel which is reckoned impregnable. The burghers have neat boufes, well furnished, and the mirket-place is the beft in all the marquifate. It has two churches, in one of which, near the palace, are interred its princes. Befides the town council, there is a conseil of the regency here for this division, and a court of bailiwick.

Falkenburg, on the river France, or Rega, thirty-eight

this division, and a court of ballwick.

2. Faikenburg, on the river Frage, or Roga, thirty-eight pairs fouth of Colberg, fifty east of Steiln, and one hundred feven miles north-east of Berlin, on the frontiers of Franciscia, is only noted for its strong castle.

Drissen, or Dreysen, in Latin Driess, another town with a fortress, reckoned Impregnable, hear the Pelish for the reckoned Impregnable, hear the Pelish file frontier, at the conflux of the Notre and the Frage, eighty milet north-east of Berlin. On the Polish file it is desended by a large marth, which reaches alitical a studynest floor from the rown, and its two rivers part at the entrance of the place, and enclose it. The fortification is a regular pentagon, with dischen. The Swedes took is by the treachery of one of the inhabitants in 1639, bits restood is by the peace in 1639.

Landsperg, on the river Warth, fiver which it has a birdge twenty inlies east of the Oder, twenty four east of Kustim, thirty-five north-east of Frankfort, and fixty-eight east of Berlin. It is very conveniently fituate for trade, which tonsists much in casting of Iron ordnances it was twice taken by the Swedes in the German wairs; and as often retaken.

Sunneberg, or Sonneberg, on the same river, fifty miles east of Berlin, was the residence of the balliss of the order of Malth, till the electors feized it in the 10th century, and assigned the power to present their balliss; and dispose their constrainmentes.

6. Schwedt, upon the Oder, forty-leven miles nidth-east of Berlin, in the amenage of earth of the river miles nidth-east of Berlin, in the amenage of earth of the river miles nidth-east of Berlin, in the amenage of earth of the river miles nidth-east of Berlin, in the amenage of earth of the river in the second of Berlin in the amenage of earth of the river in the second of Berlin in the second of the second of the second of Berlin in the second of the second of the second of Berlin in the second of the second of Berlin in the second of the second o

their constrainderles:

6. Schwedt, upon the Oder, forty-leven miles north-east of Berlin, is the appenage of one of the fons of the family, who has a pleasant garden and palace here; and from hence Philip, great uncle to the present king of Prullia, was destroimmated prince of Brandenburg Schwedt. The town is noted for a treaty of neutrality for Swedish Pomerania; to prevent its being ruined by the late war in the north; but Charles XII: of Sweden refusing to stand to it; lost char chunity.

is noted for a treaty of neutrality for Swedish Pomerania, to prevent its being rained by the late war in the north; but Charles XII: of Sweden refusing to fland to it; lost that country.

II. The Middle Markt lies in the middle of the intarquistae, and in the largest of the three divisions, containing about one hundred miles from the banks of the Elbe to the Oder. It has Preignitz on the north, together with Mecklenburg, the Uker Markt, and the New Marck; which last division bounds it likewise on the east, together with Silesia; on the fouth it has Lusatia, and the duchy of Saxony; and the durchy of Magdebourg, on the west. The chief towns are, 1: Lebus, or Libus, on the Oder, fix miles north of Franckfort, twelve fouth of Custrin, and forty east of Berlin. It was formerly a bishopric, founded by Micessaus, the first Christian prince of Poland, about the year 60g. It embraced the reformation in 1555; and in 1028, it was united to the dominions of Brandenburg, by the elector, who was its bishop, and; as fuch, chancellor of the university of Franckfort. The fee, which has since been iccularized, was suffiragan to the archbishop of Gnesia, in Poland. The town stands between two hills, on one of which are the rulns of the old castle of the bishop, which was barnt.

2. Franckfort on the Oder, about teir miles north from the borders of Lusatia, fixteen west from those of Poland and Stetini, one hundred and thirty north of Prague, and two hundred and fifty three north-west of Vicina. The Oder, over which there is a large timber bridge, divides it into two parts. It is faid to have been founded in the year 146, by Sunno, a prince of the Franks, who drow out the Vandala, and planted a colony here of his own people. In 1253, it was rebuilt, and enlarged are thirdy by the elector John I. In 1379, the elector sigitmum grave it great privileges, upon its entering into the league of the Hanse towns; and Joachim I. founded an university here in 1505, supplying the way had been provessed to the house and the trade of the hous

Monchenburg, fittated between Franckfort on the Octa and Seria. The is a small town, inhabited chiefly the defendents, of those French Frotestants who left their amounts when the edict of Nants was repealed.

The little phasant city of Furtherwald fixeds on the setth fied of the Jarge, is the seaton of buildings, and contains an electoral passe.

Berlin, the castal of all the kins of Prutte's dominion, and one of the largest, fixed, and most populous cities in all Germany, consists occasely of five towns, which does not not be largest fixed, and flow passes, who obecomes the passes, which changes in the passes, which changes and largest buildings. The fireets are for the main part broad, regular, firight, and some of them yelf ong and elegant. There are also several large end beautiful squares, together with pleasant walks. There are wenty-five churches, sourteen of which are Lutheran, eleven Calvinist; and one Roman catholic; is an academy of the containts of the containts of the second of the containts of the first of the containts of the second o which were fix thousand five hundred and forty one French, one thousand two hundred and fifty three Bohemians, two "hunand five hundred and ninety five Jews, and twenty fix thousand three hundred and twenty five foldiers who had samilies. This cay is feated on the Spree, which paffes through it in two principal branches, and is in the fifty-fecond degree twenty cipht minutes north-latitude, and the thirteenth degree forty four minutes explonation, a hundred and fifty miles to the north-well of Prague, and is encompalled with agreeable gardens and vineyards.

The corrange is to Realist in the first f

of Frague, and is encompassed with agreeable gardens and wineyards.

The entrance into Berlin is airy and elegant. In going, towards the palace, on the new bridge, which is of flow over the Spree, is an equestian statue of Frederick William, the Great, which is esteemed a piece of equisite works, manship, and was arected by Frederick I. king of Pross.

Both the man and horse are of one entire piece cast at the same time, and cost forty thousand crowns. The elector is represented in a Roman habit, somewhat above the common size, on a pedestal of white marble, adorned with bassis of the base that supports the statue.

The royal palace is a magnificent structure of free-stone, begun by Frederick I. in 1909, and consists of some stone, in particular the quantity of silver every where seen is amazing, for the tables, stands, lustres, chandelien, looking glass frames, couches, &c. are said to be all of that metal. Mr. Hanway observes, that the apartments in the palace are adorned with silver in every shape; but these ornaments are so massy, that the fashion does not exceed feven per cent. so that sow millions of dollars might with great ease be realized, if the exigencies of the state required it. Here are the pictures of Charles V. and his empress, the frames of which are of silver, each weighing so centurers, or six hundred and firty pounds; and there is a superb crown lustre of sevencen centurers. There are fix centurers, or fix hundred and fifty pounds; and there is a superb crown lufter of seventeen centurers. There are also pieces of three, four, and five centurers; and a grand music-gallery finely ornamented, all of filver; besides, one end of a large apartment, for about twenty feet high, and as many broad, is richly farmished with gilt plate; yet all, this is merely for shew, the court having other services of plate for use. The king's particular apartments are determent the large particular apartments are determent. clegant; but have nothing extraordinary; the prevailing tafte is white flucto and gilding. Several of the private apartments have tables, with pens, ink, and loofe aparts, which indicate the dispatch of bufnefs, more than the regularity and elegance one naturally expeds to find in a royal palace.

The hall has feveral good paintings, and the grand fa

The hall has feveral good paintings, and the grand fa loon is adorned with four pieces of tapeftry, representing our Saviour driving out the money changers, his washing, the disciples feet, the mirsculous draught of fishes, and his last supper. The throne in the audience-chamber is of velver, embroidered with gold in a grand taste; but not loaded with ornaments. There is nothing extraordinary in the old quarter of the palace, except a bed of crimson velvet, which has above two hundred cyphers with electoral crowns, all fet with pearls, and the chairs in his room are in the same taste. It is usual for persons of the royal blood to lie in this bed on their wedding night. The library is far from having a beautiful appearance; but all gentlemen have the liberty of reading there, from ten in the atternoon.

Here is a spacious building for the king's stables, which

are divided into two courts, and nine pavillions, at an equal diffance from each other. The architecture on the size divided inter two courts, and nine pavillions, at an equal distance from each other. The architecture on the outfiel is gothle; but the inside is more magnifector, and very lority and lightsome. The mangers are of stone, and the pillars of the stands of iron, adorned with his majetly's typing gift. Over the mangers are several large pictures of the first mechanisms best in the store a fewer all argo pictures of these stoles projects towards the river, of stop being formed in large of a standards, by they defeemd. by middle with the state of the

to Berlin, and from thence to Postdam, are diftinguished by mills-flones. Near this fest is a finall tilty of the fame hame, furrounded by beautiful meadows, watered and tilvided by many canals drawn out of the Havol, and bounded by woods, across which several long vistas are

bounded by woods, across which several long vistes are civis.

Spandaw, which is chiefly used as a fon for state criminate, is eight miles north-west of Be at the construct of the Havel and the Spree.

Brandenburgh is fituated in the sirty-second degrees twester minutes north latitude, and thisteen degrees twester minutes are longitude, on the banks of the Havel, which not only divides the Old and New Town from each other, but spantace the fore from both, and likewise environs the New Town with a particular trench, on which a fluide has been created. The Old Town contains about four hundred inhabitants, and the New Town about twice that number. They are both under one magistracy, and each contains two churches. The fort resembles a suburb, and in it is the cathed intehants, it he houses of the greated part of the members of the chapter; and a riding school, in which young noblemen are instructed. The bishopric is fewelswrized; but the chapter is fill kept up, and consists of seven persons, who are the process, the deam, the festion, the tuberlier, and three other canons. In 1875 king Frederick II. conferred upon it a peculiar distinction, confishing of a chapter cross of gold enamelled with violet, terminating in eight points. There is here a small colon, confishing for a chapter cross of gold enamelled with violet, terminating in eight points. There is here a small colon, and canvas; and by means of the Havel a pretty good trade is cervised on in this town.

The third division, called Ni Alt, or Old Marck, has Mercklenburg on the north. May debure on the frush.

and canvas; and by means of the Havel a presty good-trade is carried on in this town.

The third division, called Ni Alt, or Old Marck, has Mccklenberg on the north, Magdeburg on the fouth, Saxe-Lawenburg and part of Luncuberg on the west, and the Middle Marck, on the cast. Some authors call it The Calibes of Germany, because it abounds in fruits and herbs. It is divided into four petty provinces, namely, Ostund, on the east; Zermundland, on the west; Angerland, on the fouth, and Zealand on the north. It is spanted from Preignizs, on the east, by the Elbe. The chief places in this division are,

1. Stendal; or Stendal; the metropolis, on the river Ucht, twenty-eight miles north of Magdeburg, and thirty-foven north-west of Brandenburg t it is a hanse town, nearly built, and well fortlied. 2. Seltwedel, a large town, on the west 66 of the Jetz, thirty-fix north-west of sendal, and fifty north east of Zell. Their chief trade in Neer,, which they export. 9. Gardelebem thirteen miles south-west of Sendal. 4. Tangermund, on the Elbe, as the mouth of the Anger, was first a castle built by the emberor Charles IV. who bought this Marck, and resided heav: it is a place of presty good trade in corn, and other-commendiate. by the emperor Charles IV. who bought this reads in corn, and other commodities. 5. Offerburg, feventeen miles north of Stendal, is noted for a good corn-market. 6. Werben, mitently Varinum, at the conflux of the Elbe and Havel, trienty miles north-ead of Stendal, was built by the emperor of the conflux of the Club and Candelman. Peror Heary the Fowler, on the ruins of the old Castellum Vari. 7. Havelburg, forty-one miles north west of Brandenburg, was in 96 made a bishopric, suffragant of Magdeburg, and its bishop refided at Witsack, a town of Preignits, but abolished at the reformation; fines which the raligion here has been Lutheran. 8. Potfdam, which lies four miles to the fouth-west of Berlin, is agreeably fituated on a branch of the Spree: it is of a confiderable extent, and the buildings neat and regular. The clestor Frederick-William made this his feat, and in 1662 built the calle, withm made this his feat, and in 1002 built the callle, which was afterwards enlarged by king Frederick I and adorned with a fine portal. King Frederick William began to erect fome could addition to the town, for which purpose he caused several morasses to be filled up and built upon, with a canal fifty paces wide and two thousand in length, to be carried on from the Havel, through the center of the first the first through the center of the the town, to a branch of the same river. tre or the town, to a brauch of the lame river. This cannl is planted on both fides with trees and evironed with well-built houses. King Frederick II. has raised the castle one flory, enlarged it with two wings and adorned it with magnifects apartments. The old house in the neighbourhood of the castle are pulled down, and, instead of them, new, regular, and graind buildings have been raised for the owners at the king's expense. The automorph for the owners at the king's expence. The spartments are semarkable for their elegance, particularly his majefty's writing-chamber and study's the last is partitioned off by baluftrades of filver.

The palace of Saus Sonei (Without Care) is fituated not far from Potfdam, on the top of a mountain, from whence there is a delightful landfcape, comprising a view of the town, neighbouring country, rivers; lakes, woods, vineyairds, groves, &c. This palets, though not very large, is extremely magnificent; and the furniture, though and superby is accelent. The paintings, statues, gardens, &c. contribute to make the whole a most delightful place. The finall, but excellent library, se kept in an operation. The finall, but excellent library, se kept in an operation wainfooted with color, and adorned with foliage of gold is and the elevated sport on which the palete is built has plantations of vina, reds, in which several terraces are tree.

the river Doffie: these three Laft have a crystal and glasshouse. 9. Westinack, on the Kartao.

the river Doffe: these three last have a crystal and glasshoule. 7. Wessinack, on the Kartan.

In this district are affect the following small towns, vis.

Werder, fituated upon an island in the Havel. a. Semenausen, a small town forrounded by the river. Alandia, Distors, a Lutheran closter, containing twelve lastice, its of whom are noble, and the other half descended from burghers. 4. Buck, a small town on the Elber. 5. Arendere, and an abbest. 6. Arneburg, a small town on the Elber. 2. Recentled and an abbest. 6. Arneburg, a small town on the Elber. 7. Nuendarf a protestant nunnery. 8. o. Betzendorf, and Apenburg, belonging to the Schulenburg family, and form a district. 10. Kalbe, belonging to the family of

Aliensleben.

Pruffian Pomerania is Bounded by the Baltick fea, on the north i by the principality of Mecklenburg, on the weeft is by part of Poland and Brandenburg, to the foull, and by Pruffin to the eaft. It is above two hundred miles in length, from eaft to wett, and from they to eighty in-breadth. Its air, by reason of its being the extreme north-east corner of Germany, is reckoned the coldett of stry-part of it. The foll in many parts is fandy and barren, and their stable lands near the shore are frequently overwhelmed with fand; yet in other parts they have corn-enough, both for confumption and export, befidea good res filled with cattle, and many large woods and & which abound with deer, wild boars, hares, foxes, wolves, wild horses, wild bulls, &c. and fowls of all forts. Here wild horfes, wild bulls, &c., and towls of all torts. Here are also beavers, and such plenty of water fowl, that they reckon twenty forts of ducks. They have great plenty of falt and fresh-water fish; particularly, falmon, and very large lampreys, especially in the bay of Stetin, and lake of Lallen. About Grypswald and Rugen they have good herring fishing, and in the lake Madduje, near Colhata; there is a large bread fish called Museum, found no-where elfe in Germany. There are many fair and fertile mesdows betwixt the branches of the Oder, and as great quantities of fruit, of all kinds, as in any province of Germany. They have no wine of their own growth, but excellent mum, and beer of feveral forts; particularly, the bitter beer of Stetin, the mum of Griphwald, and the flout of Wollin, which mariners transport elsewhere; and as there are scarce any mountains in the country, it has no mines

but some few of Iron in the Upper Pomerania.

This country abounds with amber, especially on the coasts of Brandenburg Pomerania, where it is not only thrown up by the fea, and found among the fea-weeds and fands, but also dug out of the rocks and mines. It is frequently dug out of the ground, at a great distance from fca, and many times found by the hulbandmen, as they plow their lands. There is a particular lake in this country, that communicates with the sea, where they gather it in note when the fea begins to flow, and fometimes halo up pieces as big as one's fift. At first taking up it is foft, but foon hardens, by the air, into a stony subillance. It but food flateness, by the air, into a unity instinct. It is of feveral colours, white, yellow, black, and red. The fort found in Pomerania is a dark-yellow. It is supposed to be an oil distilled from rocks, like Petroleum; and that the infects, which are fometimes found inclosed in it imentangled there while it is liquid; and that what's taken in the fea, and in the adjoining lakes and rivers, is broke off from fome rock or vein under-ground, by floods and tempelts. In fome places it is found in a matrix of wood,

tempelts. In some places it is sound which the skilful know at first fight.

meanure lette Pentermite, divides into favoral branches; and, after hering pathol by Garts, Orifoningen, Schweste, and Statin, flows into the Danarsifi laise, and then into Demonster; and at left distant side little a feeth-waver the, or fin, called the Great Frifehe Haff, which is an abreath, showned with fifth, and falls into the Boltick by three currents, vis. the Divenow, the Swyn, and the renemend, through which thise pair to Bostin. Befides the above, mentioned, there are many more rivers in Possenia, which full into the Beltick fee.

With respect to the people, they are reckoned as flowth and nimble as any in Germany, but are charged, on the state hand, with being intemperate in drink, creduleus, and predigel. Cromer gives this charafter of the antient shakes hand, with being intemperate in drink, creduleus, and predigel. Cromer gives this charafter of the antient shakes that they were firangers to decait or rebbery, exhed up nothing, were hoficiable to all firangers, and is ind to one another, that there were no beggins among bout t but in the Pagan times, if fathers had more children than they could maintain, they were allowed to kills to familes, though not the maintain. This, however, usus very inconfiftent with their character, for mutual mevolence.

The Pomeanulan could having fortune with the character of the second country of t

foems very inconfinent with their character. For mutual benevolence.

The Pomerunian coult begins fixteen miles unit of Rofteck; and as the ifte of Regen bears due fouth from the Sound, and the Baltick fee is very open and wide between them, this has been the confequence, vis. that the feasebetween the lifes of Iceland north, Bornhelm each, and Rugen feuth, have been generally the flags of war between the flets of the Swedes and Dance.

Formerly, the nobles, as well as the feveral towns of this duchy; had very particular privileges, which his prefent Prefinan majerty hark greatly abringed. The leshabitents are about half a million in nember, being principally of German and Shavonian defount, a dialect of the interbeing the language of the country. Calvinith and Roman archollos are subcreted there, but Luthermalien is the chabilited religion. The duchy somains an university, feveral obleges, grammar-fehools, Stc. Here are feveral manufactures, and great continuers in carried on by means of the Baltick and the feveral navigable rivers.

The following are the principal places in Profilan Pomerania, viz.

Pomerania, via.

The capacious and handfome town of Settin, or old Stebin, which is reckoned the capital of all Pomerania, and is fituated on an elevated fpot near the Oder, about feventy-four miles morth-eaft of Berlin. It is deemed one of the beft fortified places in Europe; contains various mannfactures, hath great trade, and exports prodigious quantities of corn, timber, linen, and naval flores. The prefped of the river, and the islands formed by it, is very agreeable, and the neighbouring hills have a very romanic amerance.

proped of the river, and the illands formed by it, it very agreeable, and the neighbouring hills have a very romanic appearance.

The principal buildings are, the colleges for education, college of physicians, tribunals of justice, board of health, chamber of communes, court of admiralty, reyal gymnafum or febool of exercife, faperintendency, aricaal, castle, free-school, and dock.

Ships of considerable burden come up to this tewn, and finaller vessels may go much higher, though it is at the ditance of forty miles from the sea.

The inhabitants are noted for their civility to strangers, and for the valorous defence of their civility to strangers, and for the valorous defence of their civy against the Imperialists, who besieged it four months, in 1659, in vain; and again in 1677, when it heldout five months, from July to December, against Frederick-William the Great, then elector of Brandenburg; who after one of the most remarkable singest that has been known in Europe, whereby most of the city was burnt to the ground, at the expence of thirty thousand granadoes, twenty-four chousand hand-granadoes, a hundred and fifty thousand cannon-shots, and aincty-eight thousand pounds of powder, and the garrison educate from three thousand men to seven hundred, was obliged to grant it very honourable terms of capitulation. The account of this remarkable siege, and its deference defence, is fo amply recorded in history, that all we shall observe farther of it is, that the burghers were even more resource, if possible, in the defence of it, than the Svedish garrison.

On the 15th of August, when most of their ships in

best-count had full ready which they reflect 1 on the and, when the town had full ready then another infer; but they very obditions, and made then another infer; but they very obditions, made it doubt for may to "the of a first made; fectured their wired and children, it pieces passand for them under ground, and made virtues a fifty, but were repulsed. The deh of Separable 1 or a transpar to forward them under ground, and made virtues a fifty, but were repulsed. The deh of danger, which yater them larger privileges than they had; but they fift enfeld. He factorized them under made not be sed, after being joined by eight thousfured Dance, but to no perspect. The classer, having undermined their wall, filled the ditch, dee, farmmenged them under on the read of the year, and beyond we have them then the their wall, filled the ditch, dee, farmmenged them spain on the rif of Newmonber, and themsuned sheller rain if they resided his new afters, but they mylled, they would had out to the end of the year, and beyond we have the fance terms then: and though the twen was in relate and one thoushand four hundred chicons killed, hadder follows, they contilued resolute, and made vigourous fallies. On the noth, and also so the goth of that mounts, there were quarrals betwint the garrifon, which was for capitualing, and she burghters, that opposite it; in which feveral fallies; but next day, finding no hopes of railes, they progasted an honeumble application, which, if not granted, they declared they would die fivered in hand, and he buried in the ruina of the city. The election generally compiled, and ratified all the privileges granted them by their faid new charter: but the boughers, infalling on too high terms for the garrison, hollilities were removed with vigour on both files, till the a feth, when they accepted the elector's terms, who, on the 6th of January following, entered the town in triumph. He continued their magieratus, who, with the judges and mainfarts, forcer feaky to him p and, of his own accord, examped th

schools, and religion, as they were. The hetaged had a fine train of artillery, but wanted powder, falt, and wood, He restored the town to the Swedes by the treaty of Nimeyuen.

The town of Anklam, or Anclam, on the river Pene, Is seventeen miles south-west froir Grypfwald, and thictyone north-west of Stesin, it is a well-fornised town, and was taken by the shelter of Brandenburg in 1976, one-ther with Demain on the fame river, but both reflored three years after by the treaty of St. Germain. Anklam, however, was traken by the Prussian in 1715, It was fornerly called Taragim, and some authors will have it to the fear of the Aogli mentioned by Tacitus, who advanced from hence to the Elbe, and from thence to the stand of Great Britain. It made a good figure once among the Hanfe Towns. It is advantageoully sinasted among good srable lands, and excellent pasture, with the convenience of stangs, and of exporting their commodities already. Wollin is the saftermost of the two illouds formed by the three mouths of the Oder. It is twenty-five miles long, fifteen where broadest, and is divided by the Swines from Ufedom. The town, which Randa at that mouth of it called Druenow, is five or fis miles fouth-saft of Rigen, twenty-five miles north of Stetin, and twenty-fouth-west of Wolgast. It was built out of the ruins of Julinum, once a very famous town; and was one of the largest cities in Europe, and its greatest mark, next to Constantinople, being inhabited by Danes, Swedes, Russians, Jews, and merchants of all nations, who liad their feparate streets, and houses of sachange; and fald to have been so, powerful, as singly to mannain a war against Demmark, and to have taken its king. Suinotte prisoner three, several times: Bat, having been partly destroyed by lightning, and partly by the arms of Woldemar king of Denmark, it was in 1170, totally demosished, and has been but an inconsiderable town ever since, its commerce having been transferred to Lirbeck and Dantaick. In the late war it was taken by the formed by the Pene, where it falls into the Baltick along with the Oder; fo that one of the mouths of the Oder, Swirie; which runs betwirk this Wollin, is called the and the other, beyond Usedom, and Pfin. Upon the destraction of Wollin the town of Usedom was referred to by the Danish and Polith merchants, and became a place of good trade, being very large, and well fortified, but since 1473, when it was burnt down by accidental fire, it has been only an inconsiderable sea-port. It received Christianist by the preaching of the bishop of Bamberg above mentioned at the diet here in 1128. The lifand is about fix miles in length, abounds with wild-hoar, deer, and hares, and was the park, in shouth reflectance; but in 1637; two thondand imperialities came upon it by surprise, and

weather.

In the diffrict of Colbatz are the towns of Neumark, Wolfen, Worben, and Bennftein; and the last town in the Stetin territory is Fidichio on the Oder.

On the Ihua, weaty-two miles from Stetin, stands the capacious handfolme town of Stagard, which contains feveral charches, in one of which the Calvinists are allowed the exercise of their religion. Here are, besides a college, a free-school, a house of cortection various manufacturies, and a considerable trade. Golno is also situated on the Ihua; Greissenberg on the Rega; Trepto, on the same river; and Camni, on the Dweno; thirty-two miles north of Stetin.

The simult town of Belegarden, or Belegart, on the same

north of Stevin.

The finall town of Belgarden, or Belgart, on the fame ziver, five miles fouth east of Corlin, fixteen from the Baltick, and fifty-fix north-east of Stetin. It has been a

Satsig, Zachen, Jeen pernunda, Rayandein, and Senior on the giver. On the Zam, not it the village of Ratsbur, burnt by the Cofficks as neighbourism village.

the village of Barabur, which, in 1738, was facked and burnt by the Cofficia and Rudiam, together with alugence neighbowing villages.

On the river Wiper, eighboes miles north-set from Codin, and twenty from Camin, flands Rugenwald, the capital of Wanden ducky. It has four parifice in his differential, is a well built news, and his a handleme calle. The town of Slags, or Slagven, flands on the fame river, a few leagues above Rugenweld; their finell, and ill-built. Eighbon miles north-set of Colberg, flands the town of Collin; it is pleafantly fituated, enjoys a good sit, and it the fault refraece of the histoge of Comin. It is not only, furrounded with tides at high-water, but has a fiream called. Nefenbach, which turus mills for feweral uter. The adjacent country is brautiful, and inserperfed with leveral hills. Here are a parifit church and swe others; also a college, which has fest forth many good febolars. Here are three annual fairs, viz. on All-Seinta Day, the Thurlday after the fourth Sanday in Lent, and the Saturday after Lady-day.

Thitteen miles eaft of Colberg, and twelve word of Collin, flunds the town of Carlin, which is the espital of a bailwick. At the entrance of it there is a wooden bridge over a tiver, formed by the conflux of three finaller ones. It is a very planfant place, and has belonged up the hiftops, of Camin ever fines 2200. In 1642, it had out againft a fiege by the Imperialities, it has two annual fairs, viz., on the Saturday before Falm-Sandaga and on Aforenfonday.

At a finall though first name to a bailwick, Orloo, a market-town, which gives name to a bailwick, Orloo, a market-town, which gives name to a bailwick, Orloo, a market-town, which gives name to a bailwick, Orloo, a market-town, which gives name to a bailwick, Orloo, a market-town, which gives name to a bailwick, Orloo, a market-town, which gives name to a bailwick, Orloo, a market-town, which gives name to a bailwick, Orloo, a market-town, which gives name to a bailwick, or or or of the mode of the part of the bail of town is large, contains four collegiate; has a grammar school, and a found ladies.

ladies.
Swedish Pomerania comprehends the island of Rugen, which we have already described in our foregoing account of 8 weden; the island of Hiddensee, which is remarkable for a light-hoose; a few inalter islands, which are the inconsiderable to defeve description, and some places on the continent, of which the following are the most remarkable to

the continent, of which the following are the most remarkable:

Stralfund, (which is the largest and richest town in Pomerania, the first in rank of the Hanse towns, and a free imperial city, by some reckened the most confidenable in the circle of Upper Saxony) stands near the banks of the sea, over against the island of Rugen, misseen miles north of Grypfwald, thirty two miles north-east of Rostock, and fixty-fix north-west of Strein. Some derive the name from Senno II. king of the Franks, its supposed founder, but it more probably comes from the sarrow sea betwirk it and Rugen, all streights, in the old German language being called Sands. The first certain account of it is, that being for the most part destroyed, it was magnificently rebuilt, enlarged, and peopled with Germans by Jaromar, the prince of Rugen, about 120, and that most of it being afterwards burnt by the Danes, the situation was altered by his fon about 1230, when it was rebuilt, seen grew populous, and was fertified.

In the civil wars of Germany, count Wallenstein, the imperial general, befieged this city in vain , not long after which, the citizens put themselves under the protection of Gindavus Adolphan, kims of Sweden. The vlocker of Brandenburg wock is in 1678, after destroying one thousand five, hundred house by bombe, and was the only prince that ever took it by force till then, the citizene having bassed in the opposite that ever took is by force till then, the citizene having bassed, and ten other princes; but he restored it with other towns of this county, dart year, by the treaty of St. Germanns. In 1711, the kings of Poland and Denmark, Sweden, and ten other princes; but he restored it with other towns of this county, dart year, by the treaty of St. Germanns. In 1711, the kings of Poland and Denmark has been supposed it in vain. In 1712, the king of Sweden, Charles XII. arrived here from his long confinement in Turky, after his defeat at Pultows, animated the garrifon to hold out a vigorous siege against the king of Denmark and Prussia, assisted by the Russians and Saxons; but not withstanding his continually supplying them with men and provisions from the isles of Rugen, the town was forced to surrender on steraits, after four months siege. It was, however, by the treaty of peace in 1720, relinquished again to the Sweden, who continue masters of it.

The nagistrates of Strassand are empowered to degramine all causes among themselves without an appeal; to coin money, and raise troops for fer and land service; to make leagues and consideracies for advancing their trade; to chuse what prince of the empire they please for their protector; and in dase of a naval was by the empire, they are not obliged to venture their ships farther abroad than is consistent with the safety of the city; nor are they obliged to give more than they pleas in the contributions which the other towns in the declay are taxed at ... It suffered much by a fire in 1680, as well as by its seeze above-mentioned, bur is now a flourishing city. It

the other towns in the dacity are taxed at ... It turered much by a fire in r680, as well as by its fages above-mentioned, but is now a flourishing city. It lies in a fort of penintula formed by the fea and the lake Francken. The fea from hence to Rugen is about a mile over, and there are fing gates, with as many bridges, leading to them from the city, to which the merchant ships in the harbour are

On the land fide the town is regularly fortified with bul-warks and fish-ponds, two musquet-shots in breadth, be-fides large ditches, and natural marshes, only passable by four causeways and bridges, leading from four gates, and all fortified; which make approaches to it very difficult. It has an excellent haven, where shi ps come up into the very town the district for trade, that it has a very great and gainful commerce both by fea and land; for here begins the exports of all those staple commodities which all Europe fends for to the Baltick; as corn and naval flares, viz. home; flar, &c. but effectsly corn, of which great quantities are exported, this being the first city in the Baltick to which the Dutch trade for it. Here are allo great quantities of honey and wax, tar, pitch, roin, bides, tallow, and linen; especially canvas, of which a good fort is made here. The fireets are broad, and the buildings beautiful; the private houses being of Rone, and uniform.

The town of Barth, which is upwards of feventy miles morth-east of Stetin, stands in a bay ten miles from Stralfund. It gives name to a small principality, and is cele-brated for an excellent kind of beer. It is defended by a ferong castle, and has a foundation for ladies, first begun

strong calle, and has a roundation for ration, 1733.

Beides the above, in this duchy, are the following places of lefs note: 1. Kenz, a small willage in the neighborhood of Barths. 2. Daingard. 3. Treberis, an old, but important frontier town. 4. Graim. 5. Franburg. 6. Richtenberg, on the Trebel. 7. Eldena, a large village. 3. Wegaste, a town near the river Pene. 9. Gut-skow, on the river Pene, eight miles fouth of Grypfwald, and ten we'l of Wolgast, between Anclaim and Loytz. This town was the first in these parts that embraced Christianity, upon its being preached by Otton, bishop of Bamberg, called the apostle of Fonnerania, who built a church here in the room of its pegan temple. 10. Loytz, on the river Pene, between Gutskow and Demain. 11. Lassan, itsuated also on the river Pene.

The last to be mentioned, is Grieffswalde, fituated at the bottom of a gulf opposite to the ifle of Rugen. It is the bottom or a guir oppoint to the nie of Rugen. It is handfornely built, firongly fortified, pofficifes a good trade, has great privileges; and produces a large revenue. Here is on university, a grammar-febool, and a German feminary; and the three paffors of the town are theological professors. In the neighbourhood are fall springs, which are not of any otility for want of fuel. Here are two annual fairs, on St. James's and Ali Saints days. The town

has a good barbour, with a great many thips belonging

has a good harbour, with a great many ships belonging to it.

The duchy of Magdeburg has Brandenburg and the duchy of Mackinsherry on the north; anhale and Halbertade, on the fouch and south-west; the Upper Saxony, with part of Brandenburg, on the east; and the duchy of Brandenburg, on the east; and the duchy of Brandenburg, on the east; and the Eth runs through it. It is fifty, or at short stay miss, from east to west, and thirty from north to fouth, but the disparity of these computations is, no doubt, owing to the inequality of its form, by reason it is so indensed with its neighbouring dominione. That part of the duchy on the west side of the Elice abounds with corn, but no wood, and that on the east side has plenty of wood, but no corn. It was formerly an arthithopric, erected at the request of the emperor Otho I. with subjection to none in spintuals but the Pope; and its prelate was primate of all Germany till the reformation, when the canons, having embraced Luther's dotrine, chose the electro of Brandenburg's fon a siministrator of the archbishoptic; after which, it remained in the administration of a lecular prince; this after the death of the then administrator, the whole country should devolve on the electro of Brandenburg as a secular estate, and a dukedom; which, together with the bishopric of Halberstadt, was given him as an equivalent for the Hither or Upper Pomerania, granted by that treaty to the king of Sweden, who is condirector with the elector, of the circle of Lower Saxony. It is accordingly now subject to that elector, and is fail to have advanced his annual the circle of Lower Saxony. It is accordingly now inb-jed to that elector, and is faid to have advanced his annual revenue at least fix hundred thousand rixdollars.

Magdeburg, its capital city, (formerly one of the Hanfe-Towns, and reckoned the chief city of all Ger-Hanie-Towns, and reckoned the chief sity of all Germany, as it is now the metropolis of the circle of Lower Saxony) flands on the Elbe, thirty-nine miles fouth-welf of Brandenburg. It is as antient a city as most in Germany: the name fignifies Maiden Town, which fome affectibe to the working paid in it to Venus, till her image and temple were deftroyed by order of Charlemagne, who, being in love with its fituation, built St. Stephen's church there, with its treasure, together with a fort to curb the Saxons. The town was first built about the year 940, by Otho I. who made it imperial, and enlarged by his empress Editha, daughter to our Saxon king Edmund, who, some fay, founded it; but others, with more probability, that

say, rounded it; but orders, with more proceeding, that the received it from him as part of her dowry in marriage. The first tournaments in Germany were appointed here by the emperor Henry the Fowler, to which none were admitted but those of noble extraction both by father and mother, and of a clear reperation, especially in their conduct to the ladies; with an exclusion also of all usurpers, ratiors, operflors of widows and orphans, bereites, nur-derers, and cowards. This city had formerly the fupreme jurisdiction in spirituals and temporals over all Saxony. Its archbishop was also a count palatine, and determined all cases; but now they have no other court besides what is kept by their burgomatters and magistrates, who govern here under the elector of Brandenburg. The situation of this city is very fine, having an outlet on all sides to specious plains that are all very fruitful in corn, as well as an inlet of riches by the river Eibe, but there are sew towns in Germany that have suffered so much as this by war, and

other misfortunes.

other misfortunes.

In 1013, Magicaburg was almost entirely ruined by Bolessus king of Poland, and reduced to ashes in 1180, by 2 fire. In 2214, the emperor Otho IV. came and destroyed its suburbs, with its three churches of St. Peter, St. James, and St. Catharine, which were asterwards, bowever, rebuilt. It has been several times put under the ban of the empire, and punished with long sieges, particularly in 1347, when, depending on assistance from John Prederick elector of Saxony, the citizens turned out the canona, and in 1349, and 1553, when, for refusing to receive the Interim of Charles V. it not only lost the tide of ar_hbishopric, and was put under the ban of the emreceive the interim of Charles V. it not only loft the title of arthbifloppic, and was put under the ban of the empire, but was befieged at leaft a year by Maurice elector of Saxony; who was fent to reduce it i but, being himfelf a Protestant, foun out the fiege; and having prevailed on the Magdeburgers to furrender at laft, on a promife to join his protestant brethren in the war sgainft the emperor, was as good as his word, and the laft of his garifon to reinforce his army in the way he then declared againft the emperor. But this city was the greater fufferer in that called the thirty years war is to be in 10 Mag a Line, Germany was ravaged on all class; for in 1032, the emperors face a wards marti Gr electo tions ftrong

ermined governation of

general count Tilly, took it by dorm, after a long firge, ranffacred the inhabitants in a most barbarous manner, and burnt and destroyed the whole town, except the cathedral, and a few inconsiderable llouses, or statier cottages, of sithermen, so that fixteen churches and chapels, many of them covered with lead, and one with copper, were reduced to sishes, and of forty frauland burghess, nort-bove four hundred ecaped, and these had no support. The general having ordered his soldiers to spare neither age nor less, they ripped up women with child, murdered sucking infants in light of their parents, and assisted young women in the very streets; to prevent which, many of them ran into the albe, and cahers into the sire before the hac of the barbarous and brutil spensal, who used stherwards to bost of this cruelty in his cups, and called it the martiage feast of Magdeburg.

Great affishance has been afforded to this city by the electors of Brandenburg, who have repaired its fortification, which having been carried on many years, are very strong, and they have rebuilt one stately church. The jesuits have also a very sine one, the three teligious being rolerated here according to the treaty of Weltphalia; and the town is populous and extensive, and said to have a more sourching to the treaty of Weltphalia; and the town is populous and extensive, and said to have a more sourching to the treaty of Weltphalia; and the town is populous and extensive, and said to have a more sourching to the treaty of Weltphalia; and the town is populous and extensive, and said to have a more sourching to the treaty of Weltphalia; and the town is populous and extensive, and said to have a more sourching to the treaty of Weltphalia; and the town is populous and extensive, and said to have a more sourching to the treaty of Weltphalia; and the source of nineteen calks of gold which had been from that called Otto's chapel, where he is represented in tasso relieves colours, curiously wought, nine Hamburgh ells long, sour broad, and one thick. H one ftone of divers colours, curioudly whought, nine Ham-burgh ells long, four broad, and one thick. Here is a fine large organ, the reafter-pipe of which is thigty-stree feet long, and to big, that a min can fearce clash it, and is valued at two tun of gold. Behind the high alter are the values at two tun or gold. Beaund the high after are the tombs of the emperors Otho, and the emperies Edgisha, whose bones were removed hither from the ruins of the old cathedral. In the front of the choir there is a fine marble flature of St. Maurick, the patron of the church, having a shield in one hand, with the imperial eagle; and in the other, the flandard which the citizens march to field with

a shield in one hand, with the imperial eagle; and in the other, the standard which the citizens march to field with in, time of war. Among other ornaments, here are the statues of the five wife virgins imiling, and the five sociality one lamenting; both very well done. In the uninr of the cloister of the Augustin friars, of which order Martin Luther was one; there are a chamber, beddlead, and table, which appear by an infeription over the door, in German verse, to have belonged to that reformer.

The elector Frederick I, built a house in this city, which faces the great square before the cathedral, and is opposite to the cittedel he built, which is divided from irby the Elbe. This river brings up a great many merchant ships from Holland, Hamburg, &c. to its quay, and forms an island before the town, which has some works of earth cast up, with several houses, and large warehouses of fir-timber for building ships, which is carried to Hamburgh, and there bought up by divers foreign nations. The island is joined both to the country and the town by two bridges, whereof the first is defended by a fort built of free-stone. Overgainst the town-house there is incloied, in a fort of cage, an equestrian statue, which the city creeked in honour of Otho, accompanied with the statues of his two wives, Edgitha above mentioned, and Adelais; and several squares of armed men, holding the arms of his chief hereditary domains. In the Great Market-place there is the statue of Roland, such as Charlemagne caused to be fet up in all the towns which he either founded or repaired. The late elector erected an academy of cade there, as well as at Berlin, and other towns, where the young gentlemen are instructed in the rudiments of war.

The great square before the elector's palace has sew

in the rudiments of war.

in the rudiments of war.

The great square before the elector's palace has several to it for extent, and sine houses that encompass it, which are all uniform, three stories high, and were all raised in the time of the late elector. There is an arsend in it, which is full of cannon and small arms, and though not so magnificent as that of Berlin, may be ranked among the chief elsewhere. The chapter of Magdeburg meets in the cathedral, and bating the change of religion is on the same footing as before the reformation; and the canons must all make proof of their nobility; though this is a punchilio with which the elector, who confers all its prebends and dignities, sometimes dispenses. The revenue of its provost is computed at twelve thousand crowns a year. The town of Halle, which is large, is situated on

the Sable, twenty-four miles north-walt. It remixed in name from the fast-pits diffeovered, before the hirth of our Saviour, and which was bestowed by the singere. Other the Great on the archibithopia of Mandeburg: His four Other the Great on the archibithopia of Mandeburg: His four Other gave the placer a charter, called it Halle, and made it an impacial city. The town contains four all their inger, many boiling-louder, &c. Thefe intelligence, and the university have rendered Halle a flourifising place.

The university was founded in 1694, by Frederick I. king of Pruffia. From the year of the foundation, to the year 1744, the number of fludents amounted to twenty-nine, thouland two hundred and twenty of whom two were princes, one hundred and twenty outsi, two thouland two hundred and twenty sight students of the fludents of physic. Since which time, to the prefent period, the improvement has been inver rapid, and the number of students considerably increased. This is superior to the university of Liepfic, with respect to the abilities of the prof. slore, ble. discipline of the students, and the cheapers of living. Here are, 1. A lithray consisting of above ten thouland volumes. 2. A Lutheran and Calvinit Symnasium: 3. A free feeduar Calvinish numbers, chapels, hospitals, face. Exclusive of the dudents, garlifon, &c. the inhaoi: ante only are computed at fourteen thousand.

The, magistrates have a large chate, an extensive juris-

The magilitates have a large citate, an extensive jurif-diction, greet power, and many privileges. The orphan house is a laudable infiltration, and the house of correction and workhouse are extremely beneficial. The manners of

and workhouse are extremely beneficial. The manner of the inhabitants is courteous and polite, and the German language le spoken here in its atmost purity.

In this town are various manufacturies for gloves, the stations, fillings, flannel, porcelain, gold, ribbons, metal buttons, silk flockings, woollen ditto, red and yellow leather, cloths, linen, tobacco-pipe, silver, starch, &c. Here are many plantations of mulbery-trees, for the purpose of feeding silk worms, and the improvement of the silk-manusatury.

This duty also constitutes the following treats, viz.

This duchy also contains the following towns, viz. 1. Calbe, on the Bole. 2. Great Salze. 3. Engeln; on the Bole. 4. Trose, on the Elbe. 5. New Holdensteben, on the Ohre. 6. New Hads or New Magdeburg. 7. Sudeaburg. 8. Elmen. 9. Stapfus, on the Bode. 10. Wolmertadben on the Ohre. 11. Schoebeck, on the Elbe. 12. Acken, also on the Elbe. 12. Ochräeld, on the Aller. 14. Herg. 15. Burgh, on the Ihle, were as a considerable woollen manufactury. 16. 17. Sandau and Jericho, both on the Elbe. 18. Lobun. 20. Newmarket. 20. Lebegun. 21. Wettin. 22. Connern. 23. Rotenberg. 24. Giebickenstein. 25. Alseben. The town of Giauche, hear Hallis, is in the balliwick of Giebickenstein; is celebrated for an orphan-house, in which two hundred orphans are continually maintained and educated, and many other persons occasionally relieved. In the school are taught Hebrew. Greek, Latin, and French: theology, logic, mathematics, physic, geogra-This duchy also contains the following towns, viz. 1.

In the fehool are taught Hebrew, Greek, Latin, and French; theology, logic, mathematics, playfic, geography, history, writing, arithmetic, finging, and epistolary correspondence. Here are two inspectors, fifty preceptors, a dispensary, laboratory, museum, printing press, &c. Exclusive of the preceptors, officers, and orphans on the foundation, above a hundred other students and poor scholars are allowed their dinner and supper, informuch that with persons occasionally admired mass cases, how tenoises are support interval maner and upper, innomen that, with perions occasionally admitted, near feven hendred perions eat together in one large hall. Independent of the above, here are four German febools, under the direction of two inspectors, and one hundred and een preceptors. Near the orphan-house is an academy, where oung gentlemen are taught every polite and valuable

branch of erudition at their own expense. Halberfadt is a final province,—or principality; it is bounded on the fouth-east, by the principality of Anhalt; on the west, by the archbishoptic of Hildestein, on the east, by part of the clessorate of Sazony; smd on the north, by Brunswick Wolfenbuttle. It is thirty miles in length, and thirty-five in breadth, has a good foil, yields plenty of corn, and the torests have store of venisson. The north-west part is sull of sens and marshes, through which diles and roads are east up.

north-weit part is full or tens and marines, anough winess dikes and roads are caft up.

Halberstadt, the capital, which gives name to the coantry, was heretofore an imperial city. It flands on the river Motheim, or Hotteim, twenty-five miles fouth-werk of Magdeburg, and twenty-eight fouth east of Brunswick.

It was made a bishoptic by Charlemagne in 786, when the fee was transferred hither from Offerwick. Historians give an account of forty-eight of their bishops, most of them of the House of Brunswick, and more remarkable for being foldiers than fetholats. Their fifteenth bishop Rembard defeated the emperor Henry V. in the woods of Welfo. Their eighteenth, Urrie, was routed by Henry the Lion, duke of Brunswick, who took and burnt the town, with the clitizens and elergy that sted to the exhedral. Henry tempty of them, over his rivals, who were fet up against him by the Popes. Their furty-first was Albert a great philosopher, who being defeated by Gerard the eloquenz, bishop of Hildesheim, it occasioned a jest here, That Rhetoric was too hard for Logie. Their forty-fourth, Henry Julius of Brunswick, was chosen when but with years old, on condition, that the dean and chapter should have the government for twelve years, and paytheir infant-bishop an annuity. In 1591, he introduced Luther's reformation there. He was succeeded by his three soots, one after the other, the last of whom, Christian, sook part with the Proteshants in the civil wars of Germany, and was a great, but unfortunate warrior. Their soot part with the Proteshants in the civil wars of Germany, and was a great, but unfortunate warrior. Their forty-eighth and last bishop was Leopold William of Austria, who, being put in by the Imperialist, restored popery; but the Swedes, retaking the town; restored Lutheranism, and kept possessed, and given to the elector of Brandenburg by the treaty of Westphalia. The streets of this town, which is well-built, are strait and onisom, and many of the buildings sair and stately but the most remarkable is an inn called the Commis, or factory, reckoned the largest in Europe, and to have the best, and greatest accommodation of the fort, for strangers to that in the time of the civil war, Wallenstein the emperor's general kept his coort in it for some months, and

fo that in the time of the civil war, Wallenslein the emperor's general kept his court in it for fome months, and found todgings in it for all his attendants and guards. The trade here is inconfidenable, by reafon of the final-nefs of the river; but as it is the feat of the regency nefs of the river; but as it is the feat of the regency of the principality, and of the courts of judice, it is much frequented. Its cathedral, which is a free-flone pile; adorned with remarkable flatues, and worth feeing, belongs to a chapter wherein the catholics and proadfants are equally admitted, and both are allowed their public worthip. Behind its choir there is an image of the Virgin Mary, with feventry-two titles of honour. The catholics liave feveral convents in the town, of which that of the Recollets is the most beautiful, and their church is very fine a more the whole, it is faild to be a through and non-Recollets is the most beautifus, and then carried and popu-fine: upon the whole, it is faid to be a strong and populous city. It has fix gates and a town house. The houses which are on the hill, or about it, are called the rown; those below it, the suburbs. On the top of an hill, in an esplanade, fland two churches with the canons

houses.

In this province are also the following towns, viz. 1. Gimingen, on the river Folke, ten miles to the east; it was formerly the residence of the hishops of Halberstadt. 2. Aschersteen, on the Enne 3. Wesettingen, ot the Aller. 4. Ermsteen, on the Selke. 5. Dardessen, 6. Zilly. 7. Horrnburg. 8. Reinstein. 9. Ostewick, on the life; where are several wootlen manufacturies.

SECT. II.

Treats of the counties of Glatz and Meriden; olfo of the duchy of Cleves, the principality of Meurs, and county of March, in the du hy of Weltphalia; and of East Frichand, Lippe, Gulick, and Tackinburg, in the circle of Westphalia; their boundaries and extent, sustain, touns, rivers, mountains, produce, vevenues, munifacturies, Ge.

LAT Z is bounded by Silefia, Moravia, and Bohe-unia, and separated from them all by almost juaccesfible mountains, to that it is a country very difficult to be entered. It is about thirty miles in length, and twenty in breadth, and is beautifully divertified with villages, hills, dales, meadows, fields, fireams, &c. and produces, wheat, pasture, wood, quarry stones, jasper, corneliaus, game, fish, pit-coal, marble, topszes, mineral waters, &c. It is exceedingly fertile and populous. There is in it a high mountain, which ferves as a weather glafs to the whole

The diets have been discontinued, fince Glatz became subject to the king of Prussia. It was not conquered by that monarch, but ceded to him in 1742. For the government of Olatz, a regency is appointed; but an appeal,

either in civil or ecclefialitical matters, lies to the court of Berlin; and the offices are fubject to the war and domain chambers at Brellaw. The language is German. The principal manufactures are thread and cotton; but the revolutive employment of the inhabitants are tillage and grazing. The people in general were Roman catholics till the country came into the pofferion of the king of Pruffia; fines which, he has effablished Lutheranifm.

The capital, which bears the name of the country, is fituated near the Neyfs, on the declivity of a bill. It is fituated near the Neyfs, on the declivity of a bill. It is fituated near the Neyfs, on the declivity of a bill. It is fituated near the Neyfs, on the declivity of a bill. It is fituated have listely erefted; the latter is admirably fituated on a hill opposite to the former, with a river between them, Here are commodious barracks for the garrison; and the adjacent country may, be laid under water by means of fluices. The town contains a college, two conveats,

aqueent country may be laid under water by means of fluices. The town contains a college, two convents, Reveral churches, and enjoys a tolerable trade.

The other lefs confiderable towns are, 1. Laudee, on the Biela. 2. Habelfchwardt, on the Neyfs. 3. Refifiers, remarkable for its mineral fpring, and its manufactures of cloth, plufth, and paper. 4. Hunfdorff, which has a copper-mine. 5. Winfelburg, it carries on a great trade in thread and woollens. And Neurode, chiefly noted for cloth, ftuffs, and fnuff.

Metiden is a principality, and was coded to the classes.

Meriden is a principality, and was ceded to the elector of Brandenburg at the treaty of Munfler; it lies between Ofnaburg and Schoumburg, is twenty miles from eaft to went, and twenty-five from north to fouth. The northern parts are full of woods and hills, and have plenty of gause, and the fouthern parts abound with corn, great quantities

and the continuer parts around the farm name, is a near, well-fortified town, on the north fide of the Wefer, thirty miles eafled Ofnaburg. It was made a bithopic by Charlemagne, and continued to as fuffragan to the archbilhop of Cologne till continued to as fuffragan to the archbifhop of Cologne till 1638; when it was lecularized by the treaty of Munfler. In Chrafemagne's time a caftle was built at the foot of its bridge over the Wefer; of which fome termains, with other antiquities, are yet visible. In 1529 the reformation took place here with fuch vehicumene, that the chapter was obliged to leave the city, for which the inhabitants were, in 1538, put under the ban of the empire; and in 1547 they were, in confequence, obliged to furrender their town. were, in confequence, obliged to furrender their town to Charles V. They were almost ever after in continual troubles and revolutions, on account of teligion, during the wars in Germany. The city was taken by the Imperialifis under count Tilly in 1628, and by the duke of Brunfwick Lunenburgh in 1634. It was taken the full time by florm, when Tilly put near three thousand men, foldiers and inhabitants, to the fword. In 1636, the foldiers and inhabitants, to the Word. In 16,56, the Swedes undertook to protect the proteint inhabitants againft the perfection of the chapter, and kept possession of it on that account till 1650, when, in purtuance of the treaty of Weitphalia, this once imperial city, and also one of the Hanfe-towns, was delivered to the elector of Brandenhurg, who keeps a garrifon here. It was again taken by the French in the war in the reign of George II. and retaken by the English and Hanoverian forces, who engaged the French on the 1st of August 1759, and defeated their army.

army.
The majority of the inhabitants are Protestants; but the cathedral, a noble and large, though dark structure, is in the possession of the Roman catholics; as are likewise the churches of St. John and St. Sinteon, with a large monature of the latter. This place is encompassed. tery adjoining to the latter. This place is encompaffed with a wall, and defended with some half moons, but is commanded by a neighbouring hill. It has two chapters, out of canous, and the other of canoneffes, into the latter of which he ladies must make proof their nobility, in order to a admitted. They have here a particular fort of pale bee, much effectment in Germany, and refembles

oat-ale.

oatcaie.

Here are also the following places: 1. The town of Peterstagen, desended by a cattle. 2. Hansberg, made a city in 1722. 3. Lubeck, a fortified town inhabited by Lutheraus. Here are a school, alms-house, logar-house, chapter-house, &c. The trade consists of cattle, yarn,

chapter-houle, &c. The trade confifts of cattle, yarn, woollen, linen, beer, and spirits.

Ravensburg lies south from Osnaburg and Meriden, north-west from Lippe, and north from Rheda. This county has its name from the capital: it is thirty-eight miles long, and forty broad, and belongs to the king of Prussia; but is for the most part rocky and mountainous.

The town of Ravensburg, with its strong fort, are stuated on a hill near the river fielfell, eighteen paics south of Osnaburg. Most of the Servers of the General

The n. The but the flage and catholics king of ifm. princes and nobility are fituated on a hill, which accounts for formany of their counties, &c. terminating in berg, a hill; and their towns in burg, or borch, agnifying a

for for many of their counties, &c. terminating in herg, a town.

The principal places are those which follow? . Bilevell, or Bielfeld, formerly a Hanse town, in the road from Meriden to Munfter, ten miles fouth-east of Ravensburg, as the bottom of a great hilf, and defended by the impregnable fort of Sparenburg. It made a brave refifiance against the French, when they attacked it from a neighbouring hill with granadoes and fie-balls; for the burghers covered their houses with webs of lines (their chief; manufacture) dipped in milk, which prevented their doing much damage. Their liten is bleached, on the adjacent hills, where it is watched by boys, who, on the approach of travellers in the night-time, make a hideous howling.

Twenty-ray miles south-east from Osnaburg is, 2. The town of Bervoden, or Herfurt, pleatintly situated, and famed for the manufacture of lines. It is divided into the Old Town, the New Town, and Radewich, by the invers Elfa, Az, and Wetne. It was formerly an imperial city, but is all built, and chiefly noted for a famous nameery sounded in 523; the abbets of which formerly held this city in subjection, till Anne counters of Limberg, and abbets of this numery, gave up the city to William lake of Juliers, in the year 1424. The king of Prusses and all the huns fre Calvinsts. There is also another manner on a hill rear the town, which is a fort of nursery to the abbet, and where the young ladies are taught needle-work, &c. It was founded in 101, and is governed by a deaconels, a treasureria, and all the officers that belong to collegiate churches; but otherwise subject to the abbets of Hervodep, who, as princes of the empire, has all the hereditary officers common to chestor. The king of Prusses.

a deaconefs, a treasurers, and all the officers that belong to collegiate churches; but otherwise subject to the abbets of therwoody, who, as princess of the empire, has all the hereditary officers common to electors. The king of Prassia, as count of Ravenburg, is protector of the abbey. The places of less note are, i. Engeren. 2. Ulotowe, on the Weser, twenty-miles south-east of Hervoden, and thirty east from Ravenburg. 3. Schldesche, a small liamlet, with a foundation for seventeen Roman catholic, Lutherain, and Calvinis ladies. 4. Versinold, which has a considerable linen trade. 5. Bunde, where is a mineral spring, and also a linen manufactury.

The province of Lingen is situated between the bishoprics of Munster and Ostaburg, is afteen niles long, ten broad, has a fertile soil, and produces pleaty of put-coal and stone. On the death of William III. of England, the whole country was feized by the king of Prussia, and incorporated with Tecklemburg. Calvinsian is the estabilities eligion; but here are many Lutheraus and Roman eatholies. The principal place is Lingen, the metropolia, which stands on the river Ems, ten miles south of Meppen, and forty-five morth of Munster. It came to William III, see that prince of Orange by his lady the heirers. The Enis height very broad, and bears large vessels that get into the sea learned Embden. It once had a castle and other fortifications. The fands about this place keep the air dry, and free from fours. King William ercelted an academy here: hefules The fands about this place keep the air dry, and free from fogs. King William erected an academy, here; besides which, he founded five places in a Latin school for poor which, he rounded nive places in a Latin kinds for poor fehalars, and did every thing he-gould to promore the pro-teffant religion in this country, which was at that time envirely popilly the professor of it were obliged to have their marriages and baptisms in the protessant church; and a priest could not lie here one night without leave from

and a priest could not lie here one night without leave from the magistrates, as a punishment for the revolt they exclude among the people in the year 1674, which was suppressed by the prince of Orange in person. At the academy are a printing house, and a good library.

Here is also the final town of Rheda, with a caste, near the Ems; and that of lobenbukten, near which are several coal-pits and stone quarries.

Cleves is bounded by Juliers, on the south; Zutplien, on the north; Guelderland, on the west; and Munster, on the cast. It is forty miles long, about stores broad, and in general fettile, pleasant, and well watered by the Rhine, Roer, Emser, Lippe, Istel, dec. Dikes are cut as a security against inundations; and the country abounds in corn, fruits, black cattle, game, fish, horse, dec. The inhabitants are found of trade, and the rivers and lakes afford them many commercial advantages.

afford them many commercial advantages.

The metropolis of this duchy, also called Cleves, is fituated fifty-tive miles west from Munter. It has its name from being chiefly among eliffs, and on the declivity of a hill, between the Rhine and the Marke, in one of No. 38

the fine? countries of Germany? Over the fourth gue of the town is an infeription, denoting, that Julius Cafer founded a cafele here, that Augustus garrifoned it; the Ulpius Trajanas made it a colony, and Ælianas Advisanus a city. It is now fendle but pleadant, well-butk, and well-purpled, having feveral fine house belonging to perfore to quality, but those of the ordinary sowne-geople are mean. The caffle is large, and pleafantly fituated on the tep of a nill, but irregular, and not very strong. From an antient Gothic structure, called the Swan Tower, there is a noble prospect of the neighbouring country, and particularly of the Rhine, which lies three miles from it to the north, and, there divides itself into two branches; both commanded by the fort Schenk. There are fastely apartments in the castile, which was the palace of their antient dukes, and where the king of Prusha refides when he comes to this city, which subfits chiefly by the residence of his depaires, who govern the ducity; and by the meeting of the fastes, and where the king of Prusha refides when he comes to this city, which subfits chiefly by the residence of his depaires, who govern the ducity; and by the meeting of the fastes, and where the king of Prusha refides when he comes to this city, which subfits chiefly by the residence of his depaires, who give not be ducity; and by the meeting of the fastes are Calvinsta, and have a large handsome church, besides her chapted of the castile; but the public churches here, and in most parts of the ducky, are in the possession of the papils, by virtue of an agreement with the duke of Newy burg and Juliers, who was thereupon obliged to allow the protestant; a liberty in his dominions. The river Hel, which runs by the foot of the castle is navigable, by final vesses, and a fine of the castle structures are also pleasant ponds, canale, fine weter works, where are also pleasant ponds, canale, fine weter works,

which runs by the soot of the cattern invigance, by many veffels, to the Rhine.

Prince Maurice's parks are on the weft fide of the city, where are also pleasant ponds, canals, fine water works, grottoes, fee. Above them lies the high hill of Sternber e, from whence may be seen Utrecht, though fifty miles off, with near, forty other cities and great towns, twelve of which are seen through so many walks cut in the woods. The prince's house stands in a wood on the saft fide, and, among other ratices, has a noble collection of old. Rosman urns, and divers other monoments of antiquity. Besides the great church, a monastery of Capuchints, and another of Franciscans, are the only public buildings in the city. On the road, two leagues from this city, there is the palace of Moiland, where the king of Prussia resided in 1734, as he returned from the Imperial army on the Rhines, and there is a continued range of walks from hence to Santen, which is sive leagues.

to Santen, which is five leagues.

Gennep is a finall town on the Niers; Udema, a little

to samen, which is we results.

Genney is a final town on the Niers; Udema, a little village pleafantly fituated; and Gock, a town which formerly belonged to Gueldres, but in 1773 was incorporated with Cleves; Craneburg is a small town with a Roman catholic collegiate church.

The town of Eumerick, or Embrick, is large, rich, and heautiful, pleafantly fituated on the eaft fide of the Rhine, four miles cast of Cleves. It is very antient, one of the Hanfe-Lowns, and has a pretty good trade. It was formerly possessed by the Dutch, but, on the empeor's perfusion, they reigned it to the duke of Cleves in 1609, on condition that the Spaniards should restore Rhinberg to the elector of Cologne; which they not performing the Dutch repossessed which they may present the standard span them up to the elector of Brandenburg. This town was taken by the French in 1672; but restored in 1674 to the elector, who had mortgaged it to the Dutch. Over-against it, in the Rhine, there is a large is not, which commanded the river. The governor and magistrater, and many of the river. next to the town, there was a fort, which commanded the river. The governor and magistrates, and many of the hurghers, are Calvinists, and have a church here; but that stift, by agreement, are possessed by the papits.

The town of Rees as situated on the same side of the Rhine, nine miles higher, and eight miles east of Clevess it was a jortified town, and taken and restored by the French in the same manner as Emmerick, but lately dis-

French in the fame manner at Emmerick, but lately dif-

French in the same manner at Emmerick, but lately difmantled. An excellent sculpture in gitt wood, containing
the bistory of the list of Christ, is preserved in a proteitant church here.

Nine mile: we of Wesel, and thirteen from Cleves, is
Stanten: it stands in a valley between hills, half a league
from the Khike; is a large town, and supposed to have
been the Vetera Castra of the antients, in which Julius
Casiar resided. The place is much decayed; but has a
great church, like a cathedral, with thirty sine altars, and
the goige history carved exquisitely in wood; here are also
sine altars, and abundance of relies. This was the place
where the provincial treaty was made in 1614, for the pare
tition of the succession of Juliues, Berg, and Cleves,
between the samilies of Brandenburg and Neuborg. The
tuwn is walled, but has no fortifications.

THE NEW AND UNIVERSAL

The small town of Burich, on the Rhiste, is opposite to the smooth of the Lippe 1 near which are Dinhaken, Orloy, Moit, and Harburg.

Over-against Rees, on the west side of the Rhiste, sands the Calcar, on the river siden, between Santen and Cleves, being five miles fouth east of the lower santen and Cleves, bor a deference against any sudden invasion from Cologne and Guelderland. It foon grew populous and rich, by a wrade in lines; but since one of its dukes built a vast granary here, for the boors to bring their corn to, it has been more considerable for making mait and beer. Its most statefy buildings are, the Town-house, St. Nicholas's, church, and a monastery of Dominican; the latter of which has a good library. It has a strong castle, and a since market place, but the streets are narrow, and it is surrounded with water and morastes. The road from hence to Cleves is through a barren country, but there are fome castles in it.

fome caftes in it.

Marienboon flands between Calcar and Santen: this is a rich monaffer, with a Latin infeription on the wall next the road, exprelling their gratitude to Frederick William, election of Brandenburgh, for accepting their great collection of manuferips in 1650, instead of turning them out, and converting their revenues to the public use.

The town of Wesel, called Neither Wesel, to distinguish it from Upper Wesel, in the electorate of Treves, flands on the east fide of the Rhine, near the mouth of the tiver Lippe, ten miles east of Santen, and eighteen south-east for Cleves. It was formerly a Hanfe-town, and also Imperial, but exempted, by the dukes of Cleves, from the contributions paid by these towns to the military chest of the empire, according to the Matricala.

It is not only the largest and best-built town of the duchy, but populous, and well situated for trade. It grew rich by the concourse of merchants that sed thither from the persecution in the Spanish Netherlands, and was gar-

rich by the concourfe of merchants that fied thither from the perfecution in the Spanish Netherlands, and was garisoned by the Dutch, to whom it was mortgaged by the effector of Brandenburg, but taken and plundered by the French in 1672, they also exacted heavy contributions from the Inhabitants, which forced many of them to refire; but it was restored in 1674 to the elector, after the French had dismanted it. Though the place submits, to the king of Prussa as its sovereign, it, is governed by its own laws. Both the town and it two fuburbs are full of foldiers, and well fortisted after the modern way; in the middle of the courtines are galleries which run into the ditch, and have feparate places for the men and women in minute or the courtines are gaineries which run into the dirch, and have feparate places for the men and women in cafe of a fiege. This may well be reckoned one of the firongest towns in Europe: it has a good citadel towards the Rhine, a small harbour for vessels that trade on that river, an arienal well stored with all necessaries for defence fence, and feveral churches and monafteries. or offence, and feveral churches and monasteries. The porch of the great church is remarkable for the birth of Peregrine Berne (afterwards carl of Lindfey), whose mother, the duched dowager of Suffolk, and Mr. Bertie, her husband, being forced to fly beyond sea from queen Mary's perfecution, were reduced to such difficulties here, because they durit not make themselves known that they could not get any better accommodation. There is an hospital in this town, founded and richly endowed by a chanceller of this duchy and his son, for the aged and decrepted. The country is a plain and gravelly soil from hence to Duisson.

crepid. The country of Lobith, on the Rhine; Duilburg.

Here is also the final! town of Lobith, on the Rhine;

Here is also the final! town of Lobith, on the Rhine;

Here is also the final! town of Lobith, on the Rhine; and Ettenburg, near that river, which has an imperial foundation for ladies. Deuborg, on the Roer, thirty-ene miles from the fouth of Cleves: it is well fortified, has a protestant university, a commander of the Teutonic order, two monasteries, a nunnery, and two parish

churches.

Meurs is a small principality, surrounded by the archbishop of Cologue and the duchies of Cleves, Berg, and
Gueldres. It is watered by the Rhine, and yields pleaty
of corn, cattle, and yenison. The revenue is upwards of
thirty thousand rix-dollari. As prince of Meura, the king
of Prusia has a seat and voice in the college of the princes
of the empire, and the diefs of the circle.

The principal places are, it. Meura, or Mora, a compaid, small, well-fortisted town, where the provincial colleges hold their meetings: here is a cattle, a Calvinist
church, and a Latin felhool. 2. Crefeld, a small town,
containing minusatures of silk, linen, veivet, &c. and defended by a citadel.

Marck is reckoned the largest county in Weshalia, being forty miles in length and breadth. It is structed besween the Lippe and the Roer, divided into sistem balli-

wicks, and subject to the king of Prussa. It lies went from the dechy of Wesphalla, north from that of Berg, and some rast from Cleves; and is thought to have its name from being the antient boundary between Germany and Gallia Belgics. This country is both serils and rich, its it yields grain, pulse, fruit, coals, lead, silves, fair, game, shap, senon, wood, irou, copper, some, cattle, fish, and other necessaries. Iron and steel are the principal adultations. The subject was the grain of the government is invested in the same colleges as that of Cleves.

On the river Lippe is fituated the town of Hamem, the capital of the county! it is fifty-five miles north-east of Cologne, was anticently one of the flants towns; but though the adjacent country abounds with corn, flax and hemp, it is a poor place, that fubfilts chiefly by lodging travellers who pass between Brandenburg and the Nothers-

Inds.

Schwertes, on the Roer; Camen, on the Zefick; and Wethoven, are very inconfiderable towns, though very pleasant. Spberg has a church seated on a rock, where formerly stood a castle belonging to the Saxons.

On the river Arfe, west of Hamem, standa Soest, or Sonst. It is a populous city, feated in the neck of this county, which shoots into Wethphalis. It is fortified with a double wall, whereon are thirty watch towers, and a large deep ditch. It has fourteen parishes, and many churches, besides chapels, one of which is collegiate, and under the jurisdiction of the archbishop of Cologne. It has many privileges, particularly the liberty of hunting and killing venison in any of the neighbouring counties. It has also a court of judicature within itself, from which there lies no appeal, except to the chamber of Wetzlar. It has as many gates as parishes; but it is in so ruinous a state, that very sew of the streets are paved. Here are soveral convents, and a famous numery called Paradise. nace, that very few of the fireets are paved. Here are fo-veral convents, and a famous nunnery called Paradife. The Lutherans poffsh two of the parish churches, and a nunnery, which, like other protestant nunneries in Ger-many, is a fort of free boarding-school, raised on the an-tient popish establishments, where young ladies, generally, of the best families, are educated; and some spend their lives in them; but take neither the yow, nor the habit; a nor are they tied down to improve the

lives in them; but take neither the vow nor the habit; a nor are they tied down to many rules.

In this country are also the following places: 1. Lipattadt, on the river Lippe. 2. Hoken-Limburg, a borough on the Lippe, is a fies of the country of Merck, and under the protection of the regency of Cleves. 2. Hoeste, on the Emscher, where are a Lutheran and Calvinist church; near it is a free secular soundation for an abbest, and offices outless takes are the secular soundation for an abbest, and offices outless takes are the secular soundation for an abbest, on the Emicher, where are a Lutheran and Calvinift church; near it is a free facular foundation for an abbefs, and fifteen other ladies, partly protestants and partly Roman catholicks: the inhabitants are chiefly employed in mail-making. 4. Hagen, on the Volme, contains a Lutheran, Calvinist, and Romish church. The inhabitants manufacture cloth, sword blades, paper, knives, hammers, &c. White alabester with red weins, and black with white veins, are found in the district. 5. Plettenberg, on the Elbe, has stone quarries, and iron and woollen manufactures in its neighbourhood. 6. Schwelm, a trading tow. with a Latin school, a soundation for protestant and Roman catholic ladies, a Lutheran, Calvinist, and popsish church, and a medicinal spring. 7. Hattingen, osi the Roer. 8. Blankenstein, on the same river. 9. Cashioph as in, it a Roman catholick, Lutheran, and Calvinist, church. 10. Nienrade, on the Lippe. 11. Lockuna. 12. Lindenscheid. 13. Herdicke, on the Roer, has a free secular soundation, for Rowm catholic and protestant ladies, and a Lutheran, Calvinist, and Roman catholic church, 14. Iferion, or Lon, has mantschuries of filks, brafs, iron, and wool, and has three Lutheran churches, one Calvinist, and one Roman catholic.

iron, and wool, and has three Lutheran churches, one Calvinift, and one Roman cacholic.

The town of Dattmund is twenty-fix miles welt of Soeff, and thirty-feven notth of Cologne. Though it is a small place, it is rich and populous; having a pretty good trade, and a communication with the Rhine, by its river. Empfer. It has an university, which was crecked in 1543. The chabisinhouses here is Lutheran.

In a large plain, four-teen miles east of Dartmund, tiands Unna, now subject, with the above, to the house of Brandenburg. It is not so large as Hamem, but was formerly reckoned one of the richest cities of Lower Germany.

The town of Altana is large and populous: it has a Lu-freen and Calvinif church, a caffle on a high rock, and forme trade in iron and wire. Being furrounded by mountains on all filles, there is but little arable grown income that the inhabitants are supplied with grain from other

We next proceed to the circle of Wethhalis, containing East Friesland, Lir. a, Gulick, and Tacklenburg.

The first of these, Lainely East Friesland, called also the earldom of Embdo. 4, has the German ocean on the north, the county of Lidenberg on the cast, the bishoprick of Munster on me spoth, and the gulf Dollert, with the mouth of sie river kenn; on the west, which parts it from the province of Groningen. The king of Profits claimed and seized this country, after the death of the emperor, Charles VI. the last count of East-Friesland, who left no structure is the country of the cou

and feized this country, after the death of the emperor, Charles VI. the last count of East-Friesland, who left no liffue.

The chief river is the Ems i the language spoken by the people is High and Low Dutch. The prevailing petfoasion is Lutheran, and the trade is very confiderable in herses, horned cattle, butters, cheese, linen, rape-seed, barley, and wool. The air is thick and mostle, the country low and marshy, the inundations frequent and dangerous; but the passures are rich and fertile. Here are abundance of horses, these, horned cattle, &c. and plenty of butter, cheese, milk, &c. The great number of dikes are fignally ferviceable to the country, which, however, produces but little corn; but, besides what we have already mentioned, here is great plenty of turf provided for such the country, which, however, produces but little corn; but, besides what we have already mentioned, here is great plenty of turf provided for such the country, which was the land by a double ditch, regular bulwarks, and bastions; and on the fourth by a strong wall and the river. It is situated on the north fide of the Ems, and on the bay called Dollart; twenty-four miles distant from Groningen to the north-east, and fifty-five from Bremen to the south-west. The island Nessa, which lies in the Dollart bay, over-against this city, makes the harbour as large and convenient as any on the German coast. They have also artificial canals, by which they can bring large vessels into the heart of the town; and by opening thelf sluices, they can lay the neighbouring country under water, and make the town inaccessible. Their hondes are generally neat and high, and the town-hall very magnificent. They make good provision for their poor, and allow freedom of worship to all but papiss. It is divided into three parts, the Old Town, the Faldern, and the suburbs. The most remarkable buildings are the Town-hoose, library, and cathedral chorch. In 1750, the king of Prussia established an East-India company here.

The other places of less note are. I.

to the eaft.

the north-eaft. 7. Witmund, about five miles from Efens to the eaft.

The county of Lippe, which is narrow, lies between Paderborn on the fouts, and Ravenburg on the north. It is in general mountainous and heatty, but has forme compand. This country hath feveral proprietors, viz. the king of Fruffia, the king of Great Britain, the counts of Lippe Schawenburg, and Lippe Detmold, and the bishop of Paderborn. The inhabitants are Calvinifts.

The chief places are the following, viz. Lemgau, which contains a Lutheran academy, two Lutheran and one Calvinift church, a palace, and a foundation for Isdies. 2. Detmold, on the Warva. 3. Blomberg. 4. Horn. Saba-Uffen. 6. Bandort, y. Swaletberg. 8. Lipftade, already mentioned, which partly belongs to the country of Marck and that of Lippe. 4. Alverdifeer, a borough town. Strinberg is a calle appertaining to a diffrict belonging to the king of Great Britain.

The people who profess Calvinism are remarkably industrious and, as an estecorage cent thereto, the country is extremely feetile.

Gruick or Juliers, fituated between the Mars and the Rhine, has Cleves and Gelderen on the north, Cologne on the cess, the Palatinate on the fouth, and the Netherlands on the west, being fixty miles long and thirty broadients, and an acade last breed of hortes.

lick, the capital city, it is firmed on the river Rost, twenty-five miles welt of Cologne, in fix degrees call longitude, and fifty one gorth latitude. It is a small firmfall town, defended by a calle.

Tacklenburg lies eaft from Lingest, and welt from Ofhaburg, and is about thirty miles long, and ten broad; in 150c, it fall to the counts of Reuthem, and finds to the king of Fruits. It is anient count to diarge dominion, now parcelled out to others. Its capital, which bears the fame nanto, has a firong calle and a fort: this town is ten miles welt of Ofinburg, and twenty-three north of Mundler.

SECT. III.

Containing a description of Golder in the Notherlands, and Nousehated in Switnerland; their fination and boundaries, towns, rivers, foll, produce, manufactures, U.c.

Neufshatet in Switzerland; their finanties and beaudaries, tours, rivers, fell, produce, menufactures, U.C.

THE High Quarter, or Upper Gelderland, has Dutch with part of the duchy of Culick on the fouth, part of the duchy of Gulick on the fouth, part of the duchy of Gulick on the fouth, part of the duchy of Cleves on the north, and part of the same duchy, and of the electrores of Cologne on the east; so that it is entirely divided from Dutch Gelderland. Its busdth is unequal, and about twenty-four miles in the broades part; and its greatest length, from north to fouth, is about thirty five miles.

The Spaniards kept possession of this country after the commonwealth of the unted Provinces was settled; but it was conquered by the allies during the war occasioned by the death of king Charles II. of Spain, about his succession. The king of Prussia, for whom it is very conveniently situated, laid claim to it: and, by the treaty of Utrecht, it was agreed that he should keep the city of Gelder, the præsetorships, towns, boroughs, sees, lands, quit and other rents, in that part of the high quarter of Gelderland, which he was actually in possession of which was yielded to him, his heirs and successors, of either sex, for ever; together with the country of Kessel, and the beiliwick of Krickenbeck.

The town of Gelder, from which the whole province derives its name, is twenty miles distant from Cleves to the south, and eight from Vezlo towards the north. It stands in a plain, on the river Niers, which, dividing least the milds of marshes; and is so well fortified besides, that it is reckoned one of the strongest places in the Netherlands. It receives the Niers into its tropches, lies in the midds of marshes; and is so well fortified besides, that it is reckoned one of the strongest places in the Netherlands. It has an antient castle, formerly the seat of its governors, and is supposed to have been built by Wichard, the first lord of this country, who creded it into a principality after the death of Charles the Bald. The

the house of Austria.

Gelder was taken by the confederates in the beginning of the was in the Low Countries, but betrayed to the Spaniards in 1887. The Dutch besieged it in 1687, 1639, and 1640, but without success. The French sense it is in the beginning of the less continental war; but it was retaken by the Prussians, after a blockade of sifteen months and sources day bombarument. By the treaty of Utrecht, it was ceded to the king of Prussia, in exchange for the principality of Orange, to which he had a right, as her to king William III. and which had been seized upon by the French king.

This country contains, besides the capital, the follows.

the French king.

This country contains, befichs the capital, the following places; viz. t. Keffel, a large berough with a fine cattle: this borough lies on the Macfe, about thirteen miles diffant from Gelder to the footh. It is the capital of a county, or district, which was yielded to the king of Pruffia by the treaty of Ucreah.

a. Straken is about four wider diffant from Gelder towards the feath. It was formerly fortified; but the French having taken it in a 672, demolified its fortifications. It belongs now to the king of Pruffia, and is the capital of a final territory. The village of Sant lies near-it.

3. Five miles above Gelder to the early, on the sister Niers, stends Wachtendenck: it is well fortified; but its chief strength confile in the marthes that furroundit, and in its ditches, filled with the waters of the Niers. In the beginning of the wars in the Low Countries, it was taken by

Louis, count of Naffay, brother to the prince of Orange, in a hard winter, by mistching found troops over the tec, which the garrifon had hegiceted to break. In 1888, it was furiously battered by count Mansfield, general of the Spaniards; and it is observed, that bombs were 'used for the first time at this slege; not withstanding which, the besseed descaded themselves to bravely, that the Spaniards were going to retire, after three months slege; but just as the town was on the point of being relieved, it was betrayed to them by the governor.

Neufchatel is aprincipality, being bounded by the bishopric of Basil, and the territory of Biel, towards the north; by the lake Neufchatel towards the east; by the cannot of Bern on the south; and by Franche Comte, or Burgundy, on the west; being about twelve leagues in length from north to south, and six in breadth from saft to west. The air of this country, near the lake, is temperate, but

The air of this country, near the lake, is temperate, but very flarp in the moon amous parts of it; the foil is frong, but produces the best wine in Switzerland, by the fall whereof to foreigners, great advantages accrue to the na-

tives. The French language is fpoken here, and the inhabitants refemble that nation more in their manners and cultions than the Germans, having more wivacity than the reft of the Switzers; with a great fhare of vanity. They are, in a manner, a free and independent people, notwithstanding they have always had a prince for their head; for northing is determined but by the concurrence of the three estates. They have also the privilege of chusing their own magistrates and standard-bearer, and are subject to no tares but what they lay upon themselves; and the whole country is of the reformed religion, except the two villages of Crerior and Landeron, the inhabitants of which are Romais catholies. Roman catholies:

an' Roman catholies.

Upon the dath of the duchefs of Nemurs, the last countefs of Neufchatel, as heirefs of the house of Longueville, the states of the country were inclined to submit themselves to the late king of Prussia, as heir by his mother to the house of Orange, which derived its title to Not schatel from the marriage of one of its princes with the chiefs of the house of Chalons, the direct fovereign of these two countries. Several competitors also arose at the same time, who claimed as heirs in blood to the house of Competitive hat the states rejected their claim, and ad-Longueville; but the states rejected their claim, and adjudged it to the heirs of the house of Chalons, and the

longurante, it to the heirs of the house of Chaions, and higher of Prussia accordingly took possession of it.

The chief towns in the country of Neuschatel, are, 1. Neuschatel, the capital; and, 2. Landirm. The first of these, called by the Germans Newburg, is situated at the north-east end of the lake, to which it communicates its about eventy miles north-east of Bern, and fifteen north-east end of the lake, to which it communicates its name, about twenty miles north-east of Bern, and fifteen north weft of Friburg. The town is well-built, and adorned with feveral handlome fountains; it is governed adorned with reverse management rountains is a governor by a council of fixty burghers, and enjoys great privileges; among which, the most considerable is, that they are fellow enizens with the canton of Bern, which is not only their protector, but unpire of all the differences between them and their fovereign; and this canton sopported them them and their loveleigh; and this canton topported them in their civil and religious rights, while they were under the dominion of populh princes. The counts of Neufschatel were formerly allied to the cantons of Bern, Lucern, Solcure, and Friburg; but fince the inveftiture of the king of Pruffia, the populh states do not feem found of renewing the alliance. Landeren is remarkable for its

advantageous fituation, and a noble caffle, the refidence of the prince, is fituated near the lake of Biel.

With respect to the duchy of Silesia, as some parts of it have been ceded to the king of Prussia, and others have been feized upon by him at various times, and under dif-ferent pretences, he now possesses the principal places in the whole; it may therefore with great propriety be deemed, and confequently described, as a Prussian province. It extends on both fides of the Oder from the Carpathian mountains, where it rifes, to the borders of Brand It is separated from Bohemia and Moravia to the fout west and forth, by the mountains called Rissenbergen, and bounded by Poisand on the east, Lufairs and part of Bo-hemia on the west, Brandenbury on the north, and Mun-gary on the fouth. From north-west to south-east it is about two hundred and twenty five miles, and about an hundred where broadeft; but it is much contracted at both

There are many barren anountains on the fide next to Bohemla, but the reft of the country is good foil, abound-ing with corn, wine, fweet came or gatengal, madder and flax: and on the mountains which divide this dueby from Moravia, there are mines of filver, the richest in

Germany, which were mortgaged by the late emperor, Charles VI. upon the advance of mothey from Great Britain, &c. by the title of the Silefian loans, at five and feven per cent. There are others of copper, lead, imp, quickfilver, falt, 6 there and chark.

Its four chief mountains are, 1. Zottenberg, or the Silefian Weathercock, because by the top of it the neighbours prognoficate the weather. Here are the ruins of an old caffle, demolifhed by the clitizens of Brellaw, because it was a shelter for robbers. From this hill they dig a fine dark-greenish marble. 2. Grataberg or Gradisberg, on which duke Fraderick built a castle, now a watch-tower. 2. Spitsberg, with a beacon near the former. 4. Georgenberg, in the duchy of Schweidnitz, famous for the Terra Sigillata first discovered by Montanus, an eminent physician and chymns, who wrote a Latin tract of its virtues.

Virtues.

Its chief river is the Oder, which rifes near a town of that name on the borders of Moravis, and traverfes this duchy from fowth to north-west. Many smaller rivers as here, and fall into the Oder, increasing it to a large navigable stream before it passes into Brandenbudg. Its rivers abound with fresh-water sish, as do also its ponds and lakes, especially lamprety, which are taker in vast quantities in the Neishish lake, &c. Its meadows also have cattle, and its forest venion, with all the wild and time beasts and fowl that are in any part of the German smories.

cattle, and its forest venison, with all the wild and tame beafits and flow that are in any part of the German empire.

The number of inhabitants are computed at a million and an half, being a mixture of Germans, Moravians, Poles, &c. The language is in tome pieces German, and in others Sclavonic. Since the country fell under the dominion of the Prussans, no diets have been teeld, but all the other privileges of the inhabitrars have been confirmed to them. The established religion is the protestant but Roman catholice, Jews, Greeks, &c. are tolerated. The principal manufactures are hets, glas, gunpowder, iron wares, woollens, linens, cottons, and thread.

Christianity was planted here, as in Poland, about the end of the ninth, or beginning of the benth century; but at first the Christians worlhipped in private, for fear of their magistrates, till about 95, that the court iself turned Christian, when no lefs than nine bishopricks were erected in this country. Soon after Luther's appearance

turned Christian, when no less than three behopings were erected in this country. Soon after Luther's appearance they embraced the Augibourg confession, for which they had a chaster granted them by the emperor, Rodolph II. in 1609, but Ferditand II. repealed their charter, and very much restrained the exercise of their religion, which, should resident by the treasure of Workshift. very much reftrained the exercife of their religion, which, though reflored by the treaty of Weftphalia, was again invaded by the Auftrian family, till Charles XIII king of Sweden, obliged the emperor Jofeph to allow it them again, with fresh concessions. Since that time there too have been virtually revoked by degrees; bot fine Siefan has fallen into the hands of the king of Prussia, the Calvissis and Lutherans, as well as the Roman casholicke, have had full liberty of confeience.

The whole revenue from Silesia and the county of Glata is very considerable, and is managed by the domain officers of Biresha and Glogau. In this part of Silesia, the excite revenue is only levied in walled towns, and slucituates; but in the rest of the duchy the contributions are fixed, and the same both in peace and war.

tuates; but in the reft of the duchy the contributions are fixed, and the fame both in peace and war.

Geographers divide Silefa into Upper and Lower, and thefe are again subdivided into principalities and lorddippe. The property and jurisdiction of some of these belong immediately to the king, and others to his sobjects.

Lower Silefa is divided into the principalities of Brellau, Bireg, Schweldnitz, Jauer, Lignitz, Wolaw, Glogau, Neyfze, Oels, Shgan, Munsterburg, Trackenberg, Carlatt; and the lorddippe of Wattenburg, Militich, and Gaschietz. Gofchietz.

Gotchietz.

Breflaw principality is a pleasant and fruitful country, in the middle of Silesia, lying on both sides of the Oder, with the duchies of Wolaw and Oels, and the barrony of the Country of of the C with the duclies of Wolaw and Oels, and the barony of Wartenberg on the north; the duchy of Brieg on the cast, part of Brieg and the duchy of Schweidnitz on the fouth, and part of Schweidnitz and the duchy of Limitz on the west. Its first duke was Bolessus, a Polish prince, or created by the emperor, Frederick I. in 2163, but the following princes not being able to defend themselves against the Tartars and Poles, they were forced to put themselves under the proceedings of the king of Bohamis, to whom, Pano says, the emperor Frederick II. gave it as a sief of the empire; but it was subject to the house of Austria before its late cession to the king of Prussia.

Breslau, or Breslaw, the assisted of this principality, is situated on the Oder, which on the north side runs close by the walls, and in that part receives the Ohiau, after its

winding course through Old Breslau. The present old city was formerly encompassed by this last river, as with a moat, all without the Ohlau to the walls of the city being additions made by the emperor Charles IV. The several patts comprehended under the name of Breslau are collectively of great extent; for, including the foburbs, the whole circumference is not less than nine English miles. The fortifications of the city are of no great importance. It has several large and regular squares; the main streets are broad, and, besides many noble edifices, it contains a number of very elegant houses and other private buildings. The part called the Dominstel, though lying without the circuit of the town, is defended by low walls, strengthened with basilions, and in it stands the citadel of St. John, which, in 1759, together with the deanery, was destroyed by fire. In the same part is also the bishop's library, which forms a particular building; the abley of the Holy Cross: three of four small churches; the dwellings of the prebends, some of which have very beautiful gardens; and the electoral hospital for poor chill dren of both seeze.

the dwelling of the prebends, some of which have very beautiful gardens; and the electoral hospital for poor children of both sexes.

Brieg, in Latin, Bregs, the capital of a circle of the same name, and of the whole principality, stands on the river Oder, and is not only well fortified, but is one of the largest, handsomest, and most considerable cities in all Sicias. It has four suburbs, and a very long, lossy, and strong wooden bridge. The castle, which was anciently the residence of the dukes of Brieg, was burnt down during the sege of the city, in 1741. On the south deep singer stands the abbey of St. Hedwigs, which is in the possibility of the church of the Lutherant belongs the parochial church of St. Nicholas, and they have also an academy founded by duke George II. with the church of the Holy Trinity, in which the Polish congregation assemble. In 1643, this city held out a sege against the Swedes, but in 1741, the Prussians made thermselves masters of it in four days.

Schweidnitz principality borders to the cast on those of Brieg and Breslau, to the northward on those of Lignitz and Jauer, to the westward also on Jauer, and to the southward on Bolbemia and the country of Munsterberg. It is one of the largest and most populous principalities in all Silesia, and, in conjunction with the principality of Jauer, is supposed to form one-eighth of the duchy. In this principality are several very high mountains: it, however, affords a sufficiency of grain, timber, and fruit; and abounds in game of all kinds; as also in cattle and pitcoal. Besides these advantages, it has excellent stax and wool; and the inhabitants are remarkable for their industrious improvement of these advantages, it has excellent shar and avericy of manufactures. This is chiefly done in the hilly parts of the principality, where it greatest trade is carried on. It has no large tivers, the principal of them being the Werstitz, Polisitz, and Boker.

The town of Schw

on. It has no large twers, the principal of them being the Werfitz, Polfnitz, and Bober.

The town of Schweidnitz, the capital of the circle of the fame name, and of the whole principality, is strongly fortified, situated on the little river Werfitz, one of the most deligh. It store in all Silesa. Its strength formerly conflitted of a triple wall; but in 1748, Frederic II. caused it to be fortified with regular works of very great strength. The parish church was in the hands of the setting the top of the total properties of the control of t but has been ince rebuilt with much more beauty than before, and all entirely of flone; in particular, the new town house is a most elegant structure. However, in 1757, it was taken by the Austrians, after a siege of fixteen days, during which it was in a great measure destroyed by the bombs, red-hot bullets, and fires occasioned by them; but in 1758, the Prussians recovered it, after a siege of the same continuance.

The town of Reichenbach is situated on the little river.

Pell. In this town is a commandery of the order of St. John, to which belongs the patronage of its parochial church, which is popith; and there is here also a Lutteran oratory. Without the Frankenstichi gate is a pri-

on uscated to St. Barbara, and without the Schweid-nitz gate, an hospital that has a small church. In 1633, this city was pillaged by the Saxons; in 1638, By the Im-perialitis, and in 1643, it fuffered fill greater claimities from the Croats. In 1642, it was facked by the Swedes; and in 1643, its imperial garrien demolished upwards of one hundred and forty houses for suel. In this town are some considerable manufactures of sustain, linen, and

one hundred and forty house for suel. In this town are fome considerable manufactures of sustain, linen, and canvasa.

Striga, one of the towns of the last-mentioned duchy, eight miles north of its capital, stands on the river Possibite, and is noted for exbellent beer, and that remarkable mineral called Terra Sigillars.

The duchy of Jauer contains twelve towns, which came to Chinies IV. king of Bohemia, by merriage. It has Bohemia on the seath, Upper Lusatis on the west, the duchies of Sagan and Glogaw on the north, and those of Lignitz and Schweidnitz on the east. The river Bober, which rifes in it, run, through it from north to south.

Jauer, its capital, lies in a pleasant valley, and a good air, near the rocky mountains which divide Siless from Bohemia, ten miles fouth of Lignitz, and wenty-seven west of Breslau. It is not so big as Schweidnitz, and no river passes through it; but it has strong walls, with high ramparts, and deep ditches. It has a sair passin-church, with a convent of Bernardines, and a great citted, in which resides the bailist of lleutenant of both the duchies of Jauer and Schweidnitz. There is a fine town-house in the middle of a large square of houses, built with galleries for people to walk under. It sufficed much by the civil wars in 1648, when the church was burnt down, but has since been rebuilt in a more stately manner.

The principality of Lignitz is divided into seven districts, denominated from their principal towns, is the best corn country in Silesia, and abounds with a white fort of Terra Sigillata. It lies betwite the Oder and the duchy of Jauer. It had its particulat princes, the last of whom died in 1675, when this, together with the duchies of Brieg and Wolau, which he also possesses, the last of whom died in 1675, when this, together with the duchies of Brieg and Wolau, which he also possesses the emperor, in sovereignty and propriety.

It scapital, of the same name, stands on the Cat, or Katsbach, a small rivulet, two German miles north from Jauer, and six west from B

a flately town-house and hospital, and is famous for a victory obtained near it, over the Imperialists, in 1632.

In this town are many meal, fawing, tan, paper, fulling, and powder-mills, and a considerable trade in linen and madder. It also contains several churches, Lutheran, Roman catholic, &c. a college, millitary academy, and the palace of the antient princes, with the chapel in which they were burned. In this principality are also the towns of Geldberg, Haynaw, Luben, and Parchwitz.

Wolaw principality is in general woody and marshy, yet has a few corn lands: the rivers are the Katsbach and Oder. Its ehief towns are Wolaw, the capital: Winzis, Rautdem, Steinau, on the Oder; Ratzen, on the Baltick, and Henenstadt, on the same river, which was burnt down by the Austrians in 1739.

and Henenstadt, on the same river, which was burnt down by the Austrians in 1739.

Glogaw is the largest principality in Lower Siberia. It is watered by the Oder, Bertch, and Bober, yields abundance of corn, wine, and wood, has several woollen manufactories, and is divided into siz circles.

Its capital, Glogaw, has the epithet of Great, to distinguish it from another rown of the same name in Upper Silesia. It was taken, in 1741, by the Prussians, and its fortifications considerably augmented: here is a lake, the sissence of the same out, and produces a considerable from attnually. It is the feat of several coarts, offices, &c. has a college, a Lutheran, a Calvinish, and several Roman has a college, a Lutheran, a Calvinift, and feveral Roman catholic churches and convents, and is strongly fortified and well garrifoned.

and well garrioned.

In this principality are also the following towns; viz. 7.

Gurau, which was burnt by the Russans in 1759.

Sproltau, at the consux of the Sproite and Bober.

Grunberg. 4. Schuibus, on the Schwemme; and, 5.

Neylze principality is remarkable for its northern dif-tricts, being more festile than the fouthern. It is watered

by the Olaw, the Neyfee, the Billaw, and the Oppar tohacco is cultivated here.

The principal places are, I. Ottmackaw, on the Neyfee,
where the bifthop has a palace and a court of regency.

Neyfee, on the river of its own name, ten miles to the fouth
of Grotkaw, and twenty-fix east of Glatz; it is watered
by the river Billaw, and is the ordinary refidence of the
bifthop of Bredau. Most of its houses are very high, and
built of free-stone, forming fine streets and public squares.

It is encompassed by a good wall, and a which full of water, has several churches and chrovents, and is commanded
by a fort on a neighbouring hill, erected in 1743, by order
of the king of Prussia, and defended by a frong garrison.

It is noted for a great trade in bed-ticking. 3. Grotkaw
is eight miles north-east from Munsterberg, and eighteen
from Oppelen. The houses are mostly built of timber;
but the bishop's palace, the church, and town-hall, are of
stone. It has good gates and walls, with a triple ditch. It
strands in a fine plain, near a foseft, in a good air, and a
feoitful foil, between Brieg on the north, and Munsterberg
on the fouth-west. It has a large parish-church.

Oels principality is fandy and berren; is divided into
four circles, and has the following towns; viz. - Oels,
the capital, which is small. 2. Bernstadt, on the Weyda.

Sacan effectivelity, aboundawith wood and iron a and

tout cherce, at the capital, which is small. 2. Bernstadt, on the Weyna. 3. Constadt.

Sagan principality abounds with wood and iron, and contains, 1. Sagan, near the frontiers of Lusains. 2. Priebus, on the Neysee. 3. Naumberg, on the Bober.

Munsterberg is a very amountainous principality; notwithstanding which, it yields abundance of grain, fax, hemp, wood, hops, cattle, theep, &c. It is watered by the Neysee and Olaw, and contains, 1. Munsterberg, the capital, twenty miles north-east of Glatz, and thirty loutheast of Schweidnitz: is flands in a fruitful plain, at the head of the river Olaw, which falls into the Oder at Breflau, thirty-two miles to the fouth: it takes its name from a monastery built here by the emperor Henry I. who founded the city. 2. Henrichao. 3. Frankenstein, on the Pauso, which contains a palace, a convent, two churches, a Cistercian abbey, several offices, courts, &c. 3. Waria Cittercian abbey, several offices, courts, &c. 3. Warl-ka, a little town on the Neytze: Trachenberg abounds in grain, cattle, and timber, but contains only the two small towns of Trachenberg and

Carolath is tolerably fertile; but contains only the two inconfiderable towns of Carolath and Benthen, on the

Wartenberg contains only a fmall town of the fame ame, a Roman catholic and Lutheran church, a Calvinist meeting-house, and a pelace.

Militth, a lordfhip, is only remarkable for its large forests, belonging to the king, and for one town of the same name, situated on Bartich.

fame name, fituated on Bartieli.

Goschutz lordship contains only two inconsiderable towns: it is surrounded by the principality of Ocls.

In Upper Silesia, the most considerable places are, the principalities of Oppelen, Troppau, Yagerndorf, Ratiber, Teschen, Bilitz, and the lordship of Pless.

Oppelen is a very barren principality, and full of lakes, but contains twelve circles, which receive their names from the following towns; viz. 1. Oppelen, on the north bank of the Oder, over which it has a bridge, thirty-fix miles from the frontier of Poland, forty north of Tropmiles from the frontier of Poland, forty north of Troppau, thirty above Bressu to the south-east, and sixteen south-west of Brieg. It is the capital of the principality, contains a college, several convents, and in the circle to which it gives name, there is a royal soundation for actilizations. 2. Rosenburg. 3. Lublinitz. 4. Great Strelitz. 5. Tost. 6. Gleowitz. 7. Schlawentitz. 8. Kossel, a fortised town, with a palace, Roman catholic church and convent. 9. Little Glogaw. 10. Newstadt, on the Prudnitz. 71. Zulz, in which are many Jews. 5. Estkensein, on the Steira.

on the Prudnitz. 11. Zulz, in which are many Jews.
12. Falkenstein, on the Steira.

Troppau principality is watered by the Opps, is very fertile, and contains, 1. Troppau on the Opps, the capital of Upper Silesia; it is a walled town, and contains everal churches. convented as college. everal churches, convents, a college, a palece, &c. 2. Hildfehim, a fmall, fortified, and walled town.

Hildfehim, a finall, fortified, and wanter town.

Jagerndorf is likewife a fertile principality, and contains feveral mineral (principal. The principal towns are, 1. Jagerndorf, which takes its name from the great number of huntfinen that formerly lived in it, there being plenty of game in the neighbouring woods. The capital of its own game in the neighbouring woods.

a lie was the river Oppa, is a small town, defended by a castle and other fortifications, erected by George, marquis of Brandenburgh, and is southern miles west of Troppau, thirty miles south-east of Munsterberg. The and above thirty miles fouth-east of Mensterberg.

king of Pruffia founded his claim to Silefia on that of the late marquis. 2. Leobichutey, a walled town. 3. Katcher, fmall open town.

a finall open town.

Petibor principality has a foit tolerably fertile in corn and patures, and abounds in lakes, ponds, fitcams, &c. It forms a circle, the inhabitants of which are Poles, or defeendants of Poles; and the only place worth naming is Ratibor on the Oder, which contains feveral convents, a palace, &c.

Tofehen principality is likewife full of lakes, moors, mountains, &c. The only places worth mentioning erg. Tefchen, a welled town with a palace, Lutheran and Roman catholic church, a college; and, a. Skorow, a fmall open town, on the Vidula.

Billes principality is tolerably fertile: Bilits, a little walled sown, on the Bilats, is the only place worthy of otherwation.

In the lordfhip of Plefs, there is only a little city of the fame name, and a saftle near the river Weifel, with the title of a bareny. The Lutherans and Roman catholics have each of them a church here; but the former are the most numerous.

S E C T. IV.

General account of the Pruffian dominions; religion and manu-factures of the inhabitants; titles of the bing of Pruffia; number of inhabitants, troops, revenue, Uc.

UTHERANISM is the eftablished religion in Prussia, but Calvinism is greatly encouraged, and Greeks, lows, Roman catholics, &c. are tolerated. The nobility, in general, are deficended from the antient Germans. but the peafants are a mixed breed, and either vaffals to the king or nobles. The manufactures of Pruffia are daily advancing and improving, particularly those of falk, linen, cloth, camblets, glafs, iron, copper, paper, gunpowder,

Pruffia is by nature well fituated for trade, and the late Pruffia is by nature well fituated for trade, and the late acquisition of maritime territories has greatly increased the revenue, and added to the power of his Pruffian majefty: but it is hard to fay, whether his subjects have been greater gainers by his encouraging and promoting commerce, manufactures, agriculture, population, order, and the regular distribution of justice, or sufferers by the wars in which his ambition hath involved them, and the prodigious flanding army he keeps configntly on foot, to maintain his conquests, and extend them as opportunity offers. The titles of the king of Prussa run thus: "Frederick,

The titles of the king of Prufia run thus: "Frederick, king of Prufia, margrave of Brandenburg, of the holy empire; arch-chamberlain and elector, sovereign and supreme duke of Silefia; sovereign prince of Orange, Newfechatel, and Valengin, of the county of Glatz, Galders, Magdeburg, Cleven, Juliers, Berg, Stetin, Pomerania, the Caltabi and Wends; Mecklenburg and Crossen; duke burgrave of Nurenburg; prince of Halbertadt," &c. &c. As an elector, he possesses the seventh place; as arche-chamberlain, carries the scoper before the emperor at his coronation; and in the college of the princes of the culpire, he possesses with the college of the princes of the culpire, he possesses with the seventh place; as a coronation; and in the college of the princes of the culpire, he possesses with the seventh place in his writing.

The ingenious Mr. Hanway, who has, in his writings, given many interesting particulars concerning the dominions of the king of Prostina tells us, that "Berlin abounds in elegant structures and elegant streets, and is computed near one third as big as London, but has not above one eighth part of the inhabitants; from whence we may eafily account for grafs growing in many of the principal streets. The inhabitants were formerly compoted at eighty thousand, now they are reckoned at one hundred and ten thousand, now they are recessive as one numerous and contourand, including the garrison of ten thousand; all the Prussan dominions, Silesia excepted, hardly contain two millions of people. This acquisition of twenty thousand inhabitants and subjects is imputed to the good conduct of the king, ingranting privileges and lands, sufficient to induce many to establish themselves in this capital; and, confidering this country is fo extremely despotic and military, without any foreign trade, and furrounded by raighbours who want little or nothing of them, manufactures here may be faid to flourish, They make woollen cloth fufficient for the army, and great part of home confump-tion, and Silefa is well known to produce a great fupply of fine linens, which are fent all over Europe, and allo to America. Their export of woollen cloth to Ruffia was once confiderable, but at present is very small; so many thousands of French manufacturers having sound protection in this country, gold and filver lace, and wrought filks, are hardly to be bought in any place to cheap. Aures n cloth fumpfupply also to lia was many rought "The "The king of Pruffia has generally an hundre and twenty thousand troops in his pay; his officers included they amount to an hundred and forty thousand. This prince has a body of eighty squadrous of hussars, each of one hundred and thirty men. I saw many of them (says our author) in the towns through which I passed, and was surprised by what means they could be collected, so youthful, comely, strong, and well-shaped, but the king has his smissaries all over Europe. Whist I was at Dantsick, continues he, a young man, as whom I had sense knowledge, had procured himself a lodging in ption; but, on condition of entering into the Pruffian service, his debt, which was about twenty pounds, was immediately offered to be paid.

condition of entering into the Pruffian fervice, his debt, which was about twenty pounds, was immediately offered to be paid.

"The huffars are arrived with a light mulket and fabre, both which are kept!" a coultable order. Their cleathing is of coarfe red clott, raids clofe to their bodies, and firangthened at the elbows by leather in the fhape of a heart; their breeches are of well-dreffed fheep-fixing; their boots fhort and light, but the folces of them durable; their caps are frengthened in the ordinary way; fo sa'to thand a cut. They are the only denomination of foldiers in the Pruffian fervice who have no chaplain.

Befides the huffars, the king has a finall body of men, whem they call hunters, who are separed the moft faithful couriers in his army, and are often times premoted for their fidelity in hazardous unterprises. The Auftrhus are faid to have employed men under this denomination among their ranks, with pieces loaded with fingle balls, to mark out the officers of the enemy, in which they are very destroos. This, which is confelledly an unwarrant able practice, induced the Pruffians, according to the report of the latter, to take the finns method: but no quareter is granted on either fide, when the hunter are taken riferent.

" In meneral, the Pruffian folders are remarkable for their very fhort cloathing, which is calculated for many wife ends, though at first view it feems to be frugality to

wife ends, though at first view at teems to be nogamy to a ridiculous degree.

"The army has usually new regimentals twice in three years only; but the king's guards, and fome few other regiments, are cloathed annually. The late king required the foldiery to wear white spateathes winter and summers but his present majesty, observing the inconvenience as well as inelegance of it, gives his men hlack for the winter; these are made of sufficient or a thick kind of linen cloth. The foldiers have also breeches of woollen that in this season; whereas in summer they are of white linen cloth. The foldiers have also breeches of woollen cloth in this feason; whereas in fammer they are of white dinnity or linent, which are very light and clean. They observe an uniformity about their heads, by wearing queues, which are easily kept in repair; they are generally powdered, but always so when an duty; and this modern clegance in draft not only ferves to preferve the matural hair or wig, but gives the foldier a respect for hown perfon; and the smallness of his pay is in some fort ompenfated by the rank in which he is taught to consider him-

felf.

"The Pruffian arms are reported incomparably the largeft and most weighty of any in Europe; though some of the fusileers, who are smaller-bodied men, have their arms proportioned to their size. As to the cleanness of them, it is scare excelible how far this is carried; a soldier can hardly find time to be idle or wicked. From this and in the greatest weight of their arms, the tactic ax is carried here to the highest perfection; and nothing can give more pleasure to those who have any idea of the barmony of this tot of motion, than the except of the Pruffian foldiers, which they go through twice a day; when the weather is bad, it is performed under cover, for which proper places are appointed. A foldier in this fervice must apply diligently to his duty, or have will pass his time very ill; inassinuch as the least motion of the head, not according to art, is corrected.

afunch as the leaft motion of the head, not according to art, is corrected.

"According to their establishment, two-thirds of the army should be compased of foreigners; and this method, as well as the similar momber of inhabitants in the Prussan dominions, make it obvious how difficult it must be to recruit an army; for that however form, lable this prince may appear, if we consider his country as little plentiful in resources of weath and abitants, that strength must be deemed artificial. In the safure which has to great connection with foreign a generalises. however has to great connection with foreign and every encion: how-ever, all the world must allow that the to get derived from the acquisition of Silesia, which cor he area a great part of this prince's power, is more tatural, that whether it is more flable, we will not pretend to determ.

"A common foldier's pay, in this course eight

groch (fourteen sence) a week, and of this three penning fupposed to go in washing and materials for cleaning there arms, for which they are to much distinguished: but they have also bread allowed them. Upon this casculation, one hundred and swenty thousand pounds, to that if we recken thrice this sun, in order to include their armaunition bread, the pay of officers, and cloathing, it does not much exceed one million stellag; such is the incredible force of discipline and ecconomy is but this is a lesson which we are not well acquainted with in Great Brimin. One remarkable proof of this ecconomy is, that the Prussian army, as well as the officers of the crown, receive their pay before it is due. Silesia, according to fonce calculations, supports near forty thousand men; from whence we may judge how resultant the house of Austria must have been to part with it. This subbidy which the king, receives from France is faid to be no less an object than three hundred thousand pounds ferling in value.

"It is computed that the revenues of the house of Branadenburg, including the late king's conquies, amount to eight million of dollars (one million, spur hundred thousand pounds ferling in value.

"It her revenues arise from a tag of about half the resit of the lands, and near forty per can, on the value of all catables, soap, candles, see, and yet what must appear unof frange to us in England, is, the advantages arising from the national ecconomy, and the regularity which runs through every branch of the government, and particularly in the parsimony of the court, secures the property of the people enough to animate their should be proper to observe, that the house of Branadenburg, or rather that of Hokenaollern, is so anticularly in the parsimony of the court, secures the property of the people enough to animate their shall steely."

We now proceed to the history of Prassia, previous to which, it will be proper to observe, that the house of Branadenburg, or rather that of Hokenaollern, is so antient, that its origin is l

flouid continue a free province, under the protection of the king, and that the knights should possess the remainder, on condition of acknowledging themselves vasilated to Poland. However, this treaty was soon broken, another feries of bloody wars ensued, and the knights attempted, but in vain, to become independent of the Poles.

Albert, margrave of Brandenburg, and the last master of the Teutonic order, in 1525, concluded a peace, and entered into a treaty at Cracow, in which it was slipulated, that the margrave should be acknowledged dule of the east part of Prussia, which on that account was called In this manner the fovereignty of the Teutonic order ended in Prussia, aftered that substitute of the tendered years. In the year 1637, the elector Frederic William of Brandenburg, surnamed the Great, had Ducal Prussia confirmed to him; and by the conventions of Welau and Bromberg, it was freed from its vassage to Poland; and Cassimr, king of Poland, acknowledged its independency.

The present king of Prussia, in his Memoirs of the House of Brandenburg, says, that this Frederic William began his reign onder the most desperate circumstances:

"He was (fays he) a prince without territories, an elector without power, a succession without inheritance, and just in the shower of his youth; an age which, expect to the boisterous current of his passions, renders mankind almost incapable of direction; yet he gave marks of the most confummate wisdom, and of every virtue that could render him worthy of command: he regulated his snances, proportioned his expences to his. sevenues, and got rid of those ignorant or corrupt ministers who had contributed to the injuries of his people.—Europe, in him, teheld a princes.

THE NEW HISTORY AND DESCRIPTION OF THE EMPIRE OF

M. G E R M A

SECT. I.

Describing the boundaries and extent, fell, produce, rivers, Us. in Germany; with a geographical survey of the country in general, and a topographical account of the circle of Upper Saxony; its towns, rivers, trade, manufactures, inhabitants, animals, Us.

CERMANY is bounded on the north by the German ocean. Denmark, and the Baltie, on the east by Poland and Bohemia, on the fouth by Switzerland and the Alps, which divide it from Italy, and on the west by France and the Low Countries. It is situated between sarty-five and sirty-five degrees north latitude, and sive and

1. July 2

nineteen degrees eaft longitude; is fix hundred miles in length and five hundred in breadth.

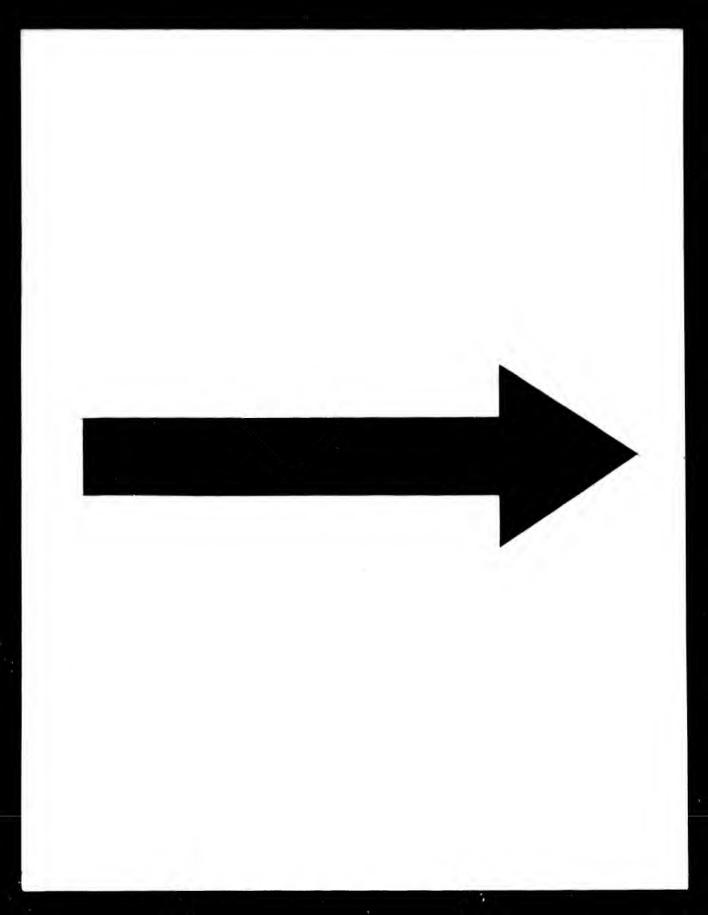

In speaking of the German empire, a judicious writer has, with great justice, observed, that this country, for divers good reasons, must challenge the special notice and study of the curious; it being the feat of a great people, and of many forereignties of different denominations, and under various forms of envernments. under various forms of government; a country of large ex-tent, and the scene of many and great actions; a country whole affairs, and transactions are interwoy. I with those of every nation in Europe, of which it may be termed both day forming alliances of marriage, &c. which pave their way to the principal thrones of Europe, feveral of which, viz. those of Great Britain, Peland, Sweden, and Pruffia,

we ha filled at this day! by four of its princes; a country which; soe the great work of the reformation began there, the good fents, confiderable learning, and therefanty underful ands ingulates, inventions of the natives, highly idefereys as all hes neighbous its all this items; be added, that it is our busined feountry; that from hence age our succitors, whole language, customs, laws, we in good meating fill means, eagether whit, what confirmes the chief glory and happiness of the Bright illes, vis. their form of geverament. "Digital states in Europa have been either peopled from home, is undeed by its amine a foreign to this. I have been either peopled from home, is undeed by its amine a foreign to those glorious people almost all Europe, and part of Affaind Africa, swed their freedom from those chains wherewith the Roman power had to long bound, there i and hourses any of their colonies fettled, they stabilised just and and of freedom stay, but feldom any, where life! fonte call it terra lemmis, because it is also brought from the life government on the ruines of syranny and defiguration. There are good quarries of months ill terra lemmis, because it is also brought from the ide of Lounpazities and cannot all to be an antidete against all form call it terra lemmis, because it is also brought from the ide of Lounpazities, and faid to be an antidete against all form call it terra lemms, because it is also brought from the ide of Lounpazities, and faid to be an antidete against all form a figuration. There are good quarries of months in, daysria, Tand, Liege, and other, prayiness a anti-face precious flones, and an antisy-chambers of the empetor, she alcores, there has a fort, of hard earth, with white, yellow, and the figuration of the mises, and faid to be an antidete against all form a figuration from the ide of home or fait, which, malted and brought at the rivers. A remarkable natural curioties, gentline to Germany, it the felicifier lein, a blacklish, glittering kind of those or fait, which, malted and

The north wind from the Baltick, and the bleak monutains of Sweden, bring frofts and favour the aftern blafts coming over a vaft continent of three or, four thouland miles, from China and Japan, bring dry and anaholo-fome weather: the fouth, in the funner, brings referbing breezes from the Alpa: but the fouth well wind, as with us, is. both, the most frequent and wholefome that blows in Germany. In general, this country, and Poland, are fo like to Great Britain, both in climate and foil, that no countries in Eurone agree better with Euroth's conno countries in Europe agree better with English con-

fliutions.

Befides great plenty of corn, cattle, theep, wool, cloth, borfes, fift, itc., the earth allo affords mines of divers forts of metals and minerals, as irou, bitamen, nitre, oere, copper, tim, lead, and even filver in fome parts a alliem, virtiol, quieksilver, falt, coal, &c. In general the furface is even, and though in fome parts it is hilly, it is no where mountainous, except towards the fouth and fouth welf, where the Alps, and a five mountains in Alface, ferve as houndaries and bulwarks against France and

In their forests and wates are many things, both for the fustenance of the poor, and the delight and luxury of the rich; they yield plenty of wood for fuel and building, and abound with great variety of wild fowl, and all forts of good vention; they allo feed vart numbers of hogs, and fome of them, as the forest of Ardenne, afford good pas-

re for theep.

Fifth abound in the rivers and lakes, in greater variety and perfection, than any other country, pernape, in

Europe.
They have, in their orchards, great numbers of our No. 59.

common fruit-trees; and in the fouthern provinces there in planty, of the thora delicate fort, as pesches, appiects, figs, believe, dec. in good, perfodion. They have stick wines, of which the Rhemith and Mofelle, in particulus, are exported in valt quantities to foreign nations, and see only qualt, but preferable, to fome of the wines in Italy. The very meuntaine of the Alpa, on the German fide, are in many places cultivated to the top, and the valley's abounds with pattures and vines. In thors, no country, pechage, in the world abounds with fo great variety of every shings conducing to the comfert of life, as this is though, othered may exceed it in the goodness of fome particular antices of seeduch: nevertheless, even of these they have enought and good, of every fort; and they might still have therefore, and industry in the inhabitants industrous to rather, did the landed men give encouragement to halo; bandry and juddity; for want of which, it is observed, that the people neither understand, nor talecare/to stanure the foil, or to improve the native strategre of the country), and that to this general neglect it is avelugated to stanure the foil, or to improve the native strategre of the country), and that to this general neglect it is avelugated to the foreign princes in Germany are influence, and incomregement, be hubbandry, on the one hand, and to the exceptive vanity and passion of their great men for, foreign, humps, and the finery, on the other, it may chiefly be attributed, that Germany exports less, and imports more, than, perhape, any confidence in the surprise of the first of these rivers, namely the Daneber, antimity, called the liter, rises in the Black Forth, in Sashi: rans through that country and Ravania to Ratiboh, and thennets.

It is very broad, runs with a very rapid corrent, and hash three great cataracts, which are, it The Saw Ruffel,

channels.

It is very broad, runs with a very rspid corrent, and hash three great-cataracts, which are, 1, The Saw Roffels or Swine's Snout, near Lintz: fo called, from a pointed rock langing over, which hath under it a dangerous whirlpool; it, is innert-twe miles from Vienna, as Der Strudel, near Greinon, in Austria, where the fulling of the water makes a horrid noise. And, 3. Der Wurbels, another very dangerous whirlpool, about a furlong from Der Strudel. The watermen of these parts have a method of passing them without much danger. As soon as this cataract is passed, a fellow comes on board from a chaped dedicated to, st. Nicolas, on the bank of the river, with that faint's picture, and an alma-box for the passengers, to threw in something, as a thank-offering to that saint for their debyerauce from the danger.

On this river are frequently seen market-boats, &c. of, ten or fiscen rous, going every week from Ulmao Vienna,

On this river are frequently feen market-boats, &c. of, ten or fifteen tons, going every week from Ulm to Vienna, which, with the turnings and windings, is a course of about four hundred milet. It receives ten other confiderable rivers, before it comes to Belgrade: it enters Hungary thirty-five miles beyond Vienna; and, before it leaves. Germany, runs about five hundred milet, and about one thousand more through Hungary, and Turky in Europe, before it falls into the Black Sea. Its whole course thither, from its southain, is about twenty-fiven degree; which, reckoning faty, miles to a degree, is one thousand fix hundred and twenty miles, without including its turnings and windings, which mult, make it one thousand fix hundred and twenty miles, without in-cluding its turnings and windings, which must, make it at leaft one shird, more; so that it may well be affirmed to be longer than the Nile in Egypt, which in many par-ticulars it resembles. It has these heads; but which is the true ane, the German geographers themselves are not agreed. Cluverius, whose authority seems the best in matters of this nature, places it in the Black Forch, at the foot of a listle hill, and says, the sountsup is walled in. The waters of the Danube are slwavs mustdy and whitish; and the channel is kept almost as full in the sum-mer, by the meited frow from the hills, as by the shoots in the winter. Its waters have been found by, repeated experiments to be medicinal, though not to the same de-gree as mineral springs; and, it is said, that in those

experiments to be medicinal, though not to the fame degree as mineral springs; and, it is said, that in those places, where there are no natural baths, the people bather with the water of this river warmed: these, with its other victues, are ascribed to its washing so many mines, and to its saline tincluses, which are so strong, that a foer of sait has been actually made of the water, which has supplied the want of better; yet, after it has stood some hours to settle, it is fresh enough for slrinking.

This ecclebrated river abounds with all those sish that are

to be found either in our romning or flanding waters, and they are generally much larger, but not fo fewest as ours. There are feveral fift in it not common clowbers, which found to be of the falts water kind, and are seppond to come from the Estime. Of these, the most remarkables is the limiton, a grifty fift, fomewhat like our dangeoin, almost as big as a crocodile, some being signature or twenty feet long. Shouls of them come above the supermental bases of the flow of the fifthermore bosts at the found of a tranger and stone the supermental bases, the found of a tranger or born. It is restorated a daisay, by the Austrians and Hungarians, and is only to be mer with at the tables of noblemen.

The Rhine rifes in two forings in the Alps, which, althing the Swifferland, unite eight miles from the steps of Coire; and so on the color of Coire, and from after different leftly into a large lake, called the Bodin Sea, of Lake of Configue; where, pathage westward to Basil, it furns up to the north, and rune between Swibia and Alface into the Palardians, receiving the Nectar at Manheim, and the Maine at Meats; thus it rune to Coblents, where it receives the Mosalle 1 it afterwards waters Cologue; and passes on the Mosalle 1 it afterwards waters Cologue; and passes on the Netherlands are schenchenschant, five miles below Cleve, where it is experienced, and its course very fivile; but the navigation of it is interrupted by nine cataracts; the most dangerous thereof ten the Newfalland, one nier-Scaff huvening. broad, and its course very furit; but the navigation of it is interrupted by nine estaracts, the most dangerous beings are two in Swifferland, one near Scaffhuyfen, (where the whole river falls seveny-five seet) and the other near Laussenburg. Here the watermen either halve their bosts athere, and is another mon the other fade, or else let them down by ropes. The direct course of this mobile river is above four hundred miles, and, including surnings, six hundred.

The Elbe rice out of the mountains near Hirchburgh; is sliefa; mon, the confines of Bohemids throwth which

turnings, fix brandred.

The Elbe rifes out of the mountains near Hirchbargh, in Silefia, upon the confines of Bohemia; through which it runs in eleven feveral forings; which, being united, pais northward, between Mirini and Luftitia, into Sazony; receiving, by the way, the Warlits, Oritist, Moldau, and Ægra, paffing by Magdeburg, Lawenburg, and Hamburg; and, a little below Gluckfadt, divides into twe branches, which fall into the German Octari farty miles below Hamburgh. It is very large and deep at that city; fo that thips of fout of five hundred tons ride at angelor in it. The course of this river, which is very winding, is as long at that of the Rhine. It runs above five hundred tons ride at angelor in it. The course of this river, which is very winding, is as long at that of the Rhine. It runs above five hundred onthe offermany; as the Rhine does through the worth of Germany; as the Rhine does through the wief, and the Danube through the middle and foutherly parts. The tide runs about ten miles above five the Hamburgh; and the river is navigable, by finall vellels, a great way to into Germany; which very much promotes with the Spre, in the marquiface of Bandenburg, and the Maldaw in Bohemia. As the course of it is very flow, it abounds with fuch fish as are common in familing withers.

The Oder has its fource in Moravis; and, after a current of three hundred English miles through Silesis and Brandenburg, falls into the Baltick Sea, betwirt Swedish and Brandenburg Pomerania; it runs in a pretty state course through the north east part of Germany; it is navigable by finall wifels a great way above Stetin; canals are ditt betwirt this river said the Elbe, which very much promote the trade of the electionate of Brandenburg. Before cite betwirt this river and the Elbe, which very much promote the trade of the elections of Brandenburg. Before it falls this the fea, it forms feveral islands; and, just at lumouth, there is a great fresh-water lake; called Fresh Hass, from whence it falls into the sea, in three currents, which issue as usiny fash instructure. This river, and the adjoining lakes, are full of fish; the bare customs on the falmon and lampreys, some of which are jof a vast bulk, amountsing to a considerable sum. Not far from the mouth of this river, in the Baltick; there is a herring sishery, which is a great rarity in this country, the Baltick having very few sish of any fort.

The Weser rises in the mountains of Thuringen, runs through Hesse and westphalis, and empties itself into the decan forty miles below Bremen, within twenty miles of the mouth of the Elbe: it runs above two hundred and fifty miles, and is so full of sish of several forts, that here are some in season for every month.

The Aller runs through the country of Lunenburg, and falls into the Weser below Verden.

The Mein rises acar the borders of Bohesnia, passes

The Mein rifes near the borders of Bohemia, pelies through Franconia, the electrons of Menta, the fouth sart of the principality of Naffau, walkes the walls of Frankfort, and other confiderable cities, and falls into the Rhine at Ments.

The Inn is a large river that rifes on the frontiers of Swifferland, runs through Tirol and Bavaria, and falls into

the then elector, established the soilege, to consist of a president, and fix assessment of whom, three are elvillus, and the other three of the city council, with a registring clerk. Its method of proceeding is described in the "Chronleon Lipssens," as well as by Zobelius, it his "Chronleon Lipssens," as well as by Zobelius, it his "Disserting Juris Civilis & Sasonici."

This city is cassed, by some, the sewel of the electorare of Saxouy, not only for its sinc structure, but for the considerable revenue it yields to list sovereign. The town inself is not great, but, it is populous, with regular streets, and stately houses, generally sive or six stories, hut about the market-place eight or nine stories high, and substantially built of free-stone, adorned with great sine windows, but a little too much charged with soutpure, and not duly proportioned; and they are high-rented. The town-bouse is a large noble structure. St. Nicholas's church is very sine, and the best adorned within of any Lutheran church in Germany. The ground-stoors of most of the house are warehouses, where the merchants store their goods for size fairs at New-Year's-tide, Easter, and Michaelmas, to which there is a vast concourse of merchants from the most noted places in Europe, who are exempted from toils. So many rich curiosities are then brought hitter, and there is so great a vent for them, that at the fair

chaelmas, to which there is a vat concourse of merchants from the most noted places in Europe, who are exempted from tolls. So many rich curiosities are then brought histher, and there is a great a went for them, that at the fair of 1737, the goods entered at the custom-house were computed to be worth near five millions. The king and queen of Poland, who were there, together with the dukes of Saze-Gotha, Weissensele. Meriberg, &c. laid out vas summers. The latekings of Poland and Prussia sted often to be at these fairs; and we are told that, at the New-Year's fair in 1700, were counted no less than forty-four princes or princesses of sovereign families. The forman tongue is spoken here with so much purity; that the clitizens boast they herein excel those of Halle. The town is fortified with rampatts and a ditch, but they are not of so much importance at its strong castle of Pleissenburg, on the river Pleise; which, however, when Charles XII. of Sweden marched into Saxony, in 1706, the late elector did not think temple, and ordered the governor to surrender it, without hazarding a singe. There is commonly a good garrison in it, and the suburbs are very large.

Thesety of Leipsek has four magnificent free-stone gates, at each of which is set up a mile-post, after the manner of the Romans; which kind of posts are at the gates of all the towns, and even of the villages of the electorate; and from hence they count the leagues; which are divided at the end of every quarter of a mile by other posts, not so incompany and value themselves upon forcing the products of nature more early than others. Their asparagus is addictious, and extraordinary large. This place is particularly noted for its larks, which are fent all over. Germany, Poland, Holland, and Dennark; insonuch that the very customeduty paid here for larks is faid to amount to twelve thouselend to the summer of the large of the clearner. The great members are taken and kept in cages. There are tolerable good ordinaries here, and a tiperinare, in the wood a lif

lleges, latics, d Po-oured, d Po-ereign ector, MSS.

and a superintendency.

Erzgeburg circle receives its name from its mountains, which are rich in mineral ores. The following are the

which are rich in mineral ores. The following are the most considerable places; viz.

5. Freyberg, which is the principal mine town, on a branch of the Mulde, situated thirteen miles to the fourhwest of Dresden, contains about fixty thousand inhabitants, and is strongly fortified. Near the principal church No. 59.

the then elector, established the sollege, to consist of a prefident, and fix affestors; of whom, three are elviltaris, and
the other three of the city council, with a registring clerk,
Its method of proceeding is described in the "Chronleon
Lipsense," as well as by Zobelius, in his "Differentia"

Juris Civilis & Sasonici."

M. A. N. N.

Is a chapel, in which many of the electors have been hutied. It is the feat of feveral mine-offices, a court of
justice, superintendency, &c. In the piciphousthood are
several validable mines of fiver, copper, titi, lead, fullphur,
Lipsense, as well as by Zobelius, in his "Differentia"
fium, a cannon and bell-foundery, a lace and thread manufficient, and a brewery.

form, a cannon and bell-forndery, a lose and thread manufactury, and a brewery.

The other places of note are, a. Brand, inhabited by miners, 3. Grimthall, where the filver is feparated from the copper.

Schellenberg, which has a feat and voice in the diete; 5, 6, 7. Haynichen, Sayda, and Seiffen, belonging to the lords of Schoneberg.

Schopa.

Oedern, a manufacturing town, with a feat and voice at the diete.

Jo. Chemnitz, a large town, with a fuperintendency.

Let "Tromkenberg, which has a feat and voice in the deet, and gives name to a district.

Je. Granaten.

Je. Traventien, 15. Rechenberg.

Altenberg, which has a feat and voice in which are the final towns of Old Geyfzing, Glafabutte, and sive a manufacturing feat, with feveral tin, filver, and iron-mines, mille, fruelting-house, &c.

houses, &c.
17. The small town of Zoblitz, in the diffrict of Lau-17. The fmall town of Zoblitz, in the diffrift of Lauterstein, has a feat and voice in the diets, an iron-foundery in its vicinity, and celebrated for the great quantities of afbetos, of divers colours, granites, &c. found in its neighbourhood, which likewife abounds with the ferpent-stone, which is of various colours; but the red, being the most valuable, is claimed by the electors, though all the several kinds are worked, by the inhabitants, into various trinkers and utentils. 18. Wolkenstein, on the Zichopa, gives name to a bailiwick, which contains the little towns of Marienberr, Gostaft, Geyer. Thumb. Annaberr, Russel. gives name to a bailiwick, which contains the little towns of Marienberg, Goffadt, Geyer, Thumb, Annaberg, Bucholz, Irberfdorf, Lengefeld, and Drebach; the inhabitants of all which are either employed in the lace manufactury, or in mining, as this bailiwick produces great quantities of iron; tin, filter, allom, cobair, vitriol, fulphur, and arfenic. 19. Stolberg has a cloth manufactory, 20. Grunhayn gives name to a bailiwick. 21, 22. Zwonita and Schlottau are mining towns. 23. Schwargenhere inlabited by miners. &c. eives name to a bailiwick. 20. Grunnayn gwes name to a balliwick. 21, 22. Zwonita and Schlottau sre mining towns. 23. Schwargenberg, inhabited by miners, &c. gives name to a bailiwiek.
24. Schwberg, on the Molde, has a confiderable trade in
gold and filver lace, thread, filk, finalt, &c. 25. Neuffadt,
a finall mining town, has a feat and voice in the diets:
fome of the mines not only produce metals, but various
kinds of jewels. 26. Joharm Georgenfladt, famous for
the mines in its neighbourhood, a lace manufactury, and
for the great quantity of emery made by its inhabitants.
27. Wiefonberg, on the Mulde. 28. Korchberg. 29.
Zchorlaw. 20. Werdaw. 31. Ciminitzichau on the
Pleffe. 22. Zwickau, on the Mulde, which gives name
to a bailiwick and fuperintendency. It carries on a great
trade in wool, cards, deals, coals, matble, cloth, leather,
iron, final-flone, corn, and other commodities.

In the circle of Vogtland are the following places; viz.
1. Oelfnitz, on the Elfter, remarkable for a pearl-fishery,
and giving name to a fuperintendency. 2. Vogtlberg,
which gives name to a bailiwick. 2. Adorf, on the Elffer, which has a feat and voice in the diets.

Neukerchen, celebrated for being inhabited by fome of the
beft inftrument-makers in Germany. 5. Schoneck. 6.

recuserenen, celebrated for being inhabited by some of the best instrument-makers in Germany. 5. Schoneck. 6. Essential of the left of the second the same river, sixty-eight miles from Dresden, is the capital of this circle, the seat of a superintendency, and defended by an old casse. 8. Netzichau. 9. Mylau. 10. Keichenback.

In the circle of Neufladt are the following towns and places; viz. t. Neufladt, on the Ofta; it has a caffle, mine-office, and feat of superintendency. 2. Ranis. 2. Berga, on the Elster. 4. Wordu. 5. Muchenbersdorf. 6. Lubenguma. 7, 8, 9. Triptis, Auma, and Ziegewrucks, each of which has a seat and voice in the diets of

Meriburg circle, or foundation, is fituated betwixt Saze-Meriburg circle, or rouncation, in intuated octaviat obser-Hall and Sake-Naumberg. It was formerly a bishoprick (fuffingan to Magdeburg), but secularized by the treaty of Passaw in favour of the house of Saxony. One of the dukes, who was administrator of it, having introduced Ludukes, who was administrator of it, having introduced Lutheranism here about 1,502, it has been since applied as a portion for one of the younger sons, to whom it gives the title of duke, who is enabled to keep a very genteel court, with the revenues of other bassimicks, as well as of this once noble bishoptick.

The city of Mersburg, where the duke resides, is in a charming stuation, amidst gardens and meadows, on the banks of the Sala, or Saal, sixteen miles north of Naumburg.

burg, and sen fouth-east of Haile, and feventeen northwest of Leipfick. The emperor Othe I, who founded its
fee in 952, made it also an imperial city. It is a pretty
large populous place, and thought to derive its name from
Mars, whom the pagm Saxons worthipped here by the
rame of Irmanseul. The great church, which was the
eathedral founded by the emperor Henry II. a gothick
building, is worth seeing, were it only for the magnificent
tomb of the emperor Rodolph, who died, after the lofs of
a hand, in battle with his competitor Henry IV. and near
it is a library of very antient M35. It may be observed
here, once for all, that part of the revenues of this, and
then, once for all, that part of the revenues of this, and
mad Brandenburg families, is appropriated towards the
maintenance of a number of canons belonging to each
cathedral, and the rest to the administrators of the respective princes.

cathedral, and the reft to the administrators of the respective princes.

The city is well built; though not in the modern taste. Its walls and its seven towers are of free-stone. The wars in the last century did great damage to this place, which was successively the prey of the contending armies. Count Tilly took it in 1631, as the Swedes did afterwards, and the Imperialists and Saxous also mastered it in their turn. It had formarly a very flourishing trade, and a very famous yearly fair from 1047 to the year 1200, when it was almost entirely burnt down, and the merchants removed, with their effects, elsewhere. The baron de Pollnitz sella us, that when he was here, in the time of the late duke, he was carried into a hall hung quite to the top of it, with base viols; and that there was one, in particular, that reached from the stoot to the cicling, so that there was a ladder set for those who wanted to inspect it more minutely.

more minutely.

In this circle are the following place: 1. Zwenkau, on the Elfer. 2. Skeudits, on the fame river; it gives name to a balliwick. 3. Shasffladt. 4. Lauchfladt. 5. Letzen, in the neighbourhood of which was fought the famous hattle between the Imperialits and the Swedes, in which the former were defeated; but the celebrated Guftavus Adolphus was flain.

Saxe Naumburg is a fecularized bithopriek, about twenty-five miles long, and fifteen broad, which lies betweet Saxe-Altenburg on the nerth-eaft, and Saxe-Gothaton the weft, and was feized by the late elector of Saxony, in 1718, on the death of the laft duke of Saxe-Zeits.

The chief city, which was once a bithop's fee, under the archbithop of Magdeburg, and an imperial town, flands on the river Sala, or Saal, where it receives the Unfirut, fifteen miles fouth of Meriburg, twenty-five fouthwest of Leipfick, thirty-four east of Erfairt, fixty fouthwest of Wittenberg, and seventy-five west of Dieden. This town is famous for its fairs, which are the most confiderable in Saxony, next to those of Leipfick. Hubber fays, that in 1714, it was burnt down apon its fair-day, fiderable in Saxony, next to those of Leipfick. Hubner fays, that in 1714, it was burnt down upon its fair-day, which is the twenty-ninth of June, and that here is a large castle built by one of the landgraves of Thuringia. It antient cathedral is yet standing, and the Lutherans have a chapter of canous, who must prove their nobility by sate to the content of canous, who must prove their nobility by sate to the content of this city are almost all vineyards, but the wine find the state of the content of the cont

tuburts of this city are aimort all vineyards, but the wine fo bad, that they give it away.

The bishoprick was founded by the emperor O.fio I, in 951, at Zeits, and transplanted hither in 982. Lutheramin was introduced here in the beginning of the fixeenth century, by its bishop, after whose death the elector took the administration. It was quitted to him by the teenth century, by its bithop, after whole death the elector took the administration. It was quitted to him by the treaty of Pallaw, in 2522, and it gave a title to a branch of the family, which was called administrator; but the fast turning sapist in 1717, by which he was made incapable of enjoying the protestant histoprick, this emperor pleaded, that he should enjoy half the revenue, which amounts in the whole to seventy thousand crowns a year; but the chapter refused it, as contrary to the treaty of Westphslia. He was duke of Saxe-Zeits, recanted before he died, but did not live to be restored to the administration.

The following places are in this bishoprick: 1. Weisfensels, on the Sala, ten miles east of Naumburg. 2. Zeits, on the Esser; is the feat of a regency, and has other colleges. 3. Ofterfeld. 4. Regis, on the Pless. Weismar principality lies on the east fide of the bishoprick of Eusurt, to the west of Naumburg, and between the river Saal and the county of Schwartzbutg, is about forty miles long, and sixteen broad, and contains the balliwicks of Bercka, Jens, Orlamund, Dornsberg, and Tondorf, with the forests of Tanroder and Brembach, the lakes of Ilmensu, Rosta, and the towns of Bustet, Battelstet, Al-

manster, &cc. Besides those we have mentioned, which is properly the duchy of Weimar, the duke's other clares in Upper Basony are these of the bratch of Saxe-Jenn, which was extinct in 691, vis. the balliwicks of Bomberg, Berget, Capolendorf, Apolda, &cc. and the university of Jona, of which the prince is joint-sovereign with the duke of Baze-Eisenach, with whom he enjoys many other things in common, such as the reversion of several clates, archives, tolls, and mines. His revenues are computed at about eighty thousand pounds a year, with which he mainstains a thousand regular troops in the finest order and uniform, and keeps a tolerable coug.

The chief places in this principality are: 1. Megdels.

2. Buttoss, on the Loss, where there is a superintendency. 2. Berks, on the lim; gives name to a baillwick.

4. Tanaoda, on the fame river. 5. Rosenburg, on the Loss.

6. Buttlestadt. 7. Apolda. 8. New-Mark, in the bailiwick of Burgelin, which last place is a valued town, with a superintendency. 10. Oldsishers, near the Unstruck, gives name to a baillwick.

21. Saina, on the lim.

Eisenach principality lies on the frontiers of Hesse. It is mountainous, and the forshee barren; but the hills are replete with mines of iron, copper, allum, virtol, failine forings, &cc. The established religion is Lutheranism.

The principal places are, 1. Eisenach, its capitus, which gave name to the principality. It is situated on the Nesse, where that river receives the Horse lime is a cattle on a neighbouring meantain: a gymnasium, a ducal palace, a feat of high colleges, and a superintendency. Martin Luther sustence alwen monds imprisonment in a castle on a neighbouring meantain: 2. Willhemstal. 2. Rahla. 4. Kreutsburg, on the Werra. 5. Markfula, on the Suhl. 6. Gerstergen, on the Werra. 5. Markfula, on the Suhl. 6. Gerstergen, on the Werra. 6 which contains Mark Uppech, a county town.

5 Markfula, on the Suhl. 6. Gerstergen, on the Werra. 6 Weimar, is pleashantly situated among vineyardh, and well fortified. Here is a university, wi

two miles from Jana.

Coburg duchy is placed in the circle of Upper Saxouy, though the inhabitants call themselves Franconsan; and it is by the matricula decided to be in this circle; it belonged formerly to the counts of Hernieberg, but has been possessed by the dukes of Saxe-Gotha ever since 1674. It extends sixteen miles in the broadest part, and is forty-

three in length.

three in length.

The principal town of this duchy, of the fame name, lies about twenty-one miles north-east from Bamberg. It is one of the most antient towns in Germany, is pretty large, and well-built, and defended by the doke of baze-fooths's firong castle, on a neighbouring hill, where Lutter, who resided here for the most part during the diet of Augsburg, in 1530, to be at hand to instruct his adherents, was feveral times imprisoned for speaking freely of his superiors; and where he composed several hymns and epistles, some of which he dated from the Defart, and where from Grubbes, by a transposition of the letters, as his toperiors, end of which he dated from the Defart, and others from Gruboc, by a transposition of the letters, as it is thought, to conceal his confinement. Here is a celege with eleven professor of several faculties, called Cafimir college, because founded, in 1602, by John Casimir, the elector of Saxony, who had, in 1507, also built he house for the courts of justice. In the citadel are the old archives, whethin are preferved many important memoirs relating to the history of the Reformation. The court or palace where the dukes refided is in the town itself, very near the great church. The Augsburg confess.

court or palace where the dukes refided is in the town itfelf, very near the great church. The Augfburg confelfion is the religion professed in this duchy.

This duchy, according to Hubner, belongs in part to
the duke of Hildburghausen, or Hilpershausen, which is
the name of a town, with a fine castle, where he resides,
a grand building of free-stone, in the modern taste. To
him also belongs Holdburg, another small town, with a
sine castle, and several others.

The rest of the places in this duchy are as follow: f.

S. Esissald, on the Were, has a superintendency, and gives name to a balliwick.

S. Koningsberg contains a superintendency, and gives name to a balliwick.

S. Koningsberg contains a superintendency, and gives name to a balliwick.

The principality of Sane-Gotha bounds with Naumberg on the east; the landgrave of Hesse, and Sane-Eysenach, on the west; the county of Ensure, and Sane-Eysenach, on the west; the county of Ensure, and Sane-Eysenach, on the west; the county of Ensure, and Sane-Eysenach, on the west; the county of Ensure, which list dukes are descended from the elector John Frederick the Magnanianus, who was deprived by the emperor Charles V. in 1374, fince which the slectorate had devolved to the upper branch.

Its sovereign possesses, the west of Getha, which is about thirty miles long, and twelve broad, including the lordships of Tenna, Washsenburg, and lehershusen) the balliwick of Kranickscld, the monastery of Volkenroda; and in the county of Altenburg, Orlanunda, Kala, Leuchenburg, Schmoelle, Sishweighoss, in the principality of Coburg, and the small principality of Essenburg, where are Renneberg, Comburg, and Roda. His titles are the same as those of the Ensettine branch this duke is the most powerful, so of all the courts of Saxony, next to that of Dresdeu, he is the most numerous, and the most magnificent. He has all the officers of flate that are common to sovereign princes. By the prudent management of his publick finances, his subjects are the least burdened with taxes of any state in Germany; yet the revenues of the late duke were computed a poir, with which he kept on foot between two and three thousand pounds a year, with which he kept on foot between two and three thousand pounds.

The e

shoufind men, regular troops. His gaards are well cloathed, his liveries rich, and his tables ferved with more elegance than luxury.

The espirel Gotha is a large walled town, on the river Leins, twelve miles welt of Erfurt, and twenty caft of Eyfenach, and in a fine corn country, about two days journey fouth of Hanover. Here are two churches and an hospital. Its chief trade is in dyers woad, of which they have three crops, whereof the third grows wild. This herb is reckoned fuch a fovereign batiamick, as to cure wounds almost with a touch, if taken in time: it refembles plantains, but has a longer leaf; the roots fatten barren ground exceedingly, and being hrought owe to England, thrives well in feveral places.

Martiniere, who quotes Zeyler's Topography of Saxony, and Hubner'a Geography, for his authorities, writes, that after the year 1530, eight or nine thousand men were employed eleven years in fortifying its old castle; that John Frederick, elector of Saxony, being taken prisoner by Charles V. it was by his order demolished; but that when the elector was fet at liberty, in 1552s, he rebuilt it, and made it larger; but that his son, having resused to deliver up Grumbach, and some others, who had taken resuge there, and were put under the ban, and besinged there by Augstus, elector of Saxony, the executioner of the mandate; and the place, being taken in 1567, was demolished a second time, at the expense of fifty-five thousand, she hundred and fifty-three thousand, she hundred and fifty four, when the duke was carried prifouer to Austria, his chancellor and Grumbach quartered, and the others hanged chancellor and Grumbach quartered, and the others hanged or beheaded; but duke Erneft, furnamed the Pious, rebuilt it, casted both that and the town to be encompaffed with ditches and ramparts, and gave it the name of Friedenstein, or the Caffle of Peace, in opposition to its antient name of Grimmerstein, or the Caffle of Fories. It flands by itself on a hill, from whence there is a vast prospect by itless on a hill, from whence there is a vait prospect over a fertile plain. In one of the chambers there is a library and cabinet of curiofities: it contains also a chapel, a mint, an armoury, a playhouse, and a laboratory, and is embellished with fine garden; as is Fredericsfall, another ducal palace in the suburbs. Here are several churchea, a military and other hospitals, porcelane and other nianusacturies, an academy for cadets, various schools, a college, foundery, riding-house, green-house, water-works. Sec.

Other towns in this principality ste, Hernia, Frederichrode, Waltherhausen, Ichnerfhausen, Ohrdorf, Grafen Tonna, Blaff Zell, Frederickswerth, Herbsteben, and Kratnechfeld.

Ren Tonna, Biam Zeit, Freesrickiwerin, restoneon, and Kramchfeld.

Altenburg principality has Therunge on the north, Vogstand on the east, and Franconia on the fouth and west. It is well watered, has a fruitful foil, and richmines. The inhabitants are Lutherans, and have five superintendants. The principal places are, 1. Elsenberg, which gives name to a district and superintendency. 2. Carnburg, on the Saal. 3. Salas, on the lim. 4. Rods on the Rods. 9. Orlamonide, on the Saal. 6. Ronneburg, which gives name to a superintendency and district.

7. The town of Altenberg, on the Plesse, thirty-seven miles west of Dresden, is the feat of the chief offices for the districts of the principality. This town gives name to a shrirlet, which contains Lucca, Schmollan, Gofsits, and Muselwits. It is a large place, and was once an imperial city; contains a foundation for the education of young labeles of decayed families, a liouse belonging to decayed families, another belonging to the Tautonic order, an orphath-hoose, a hoose of correction, a college, museum, and library.

milles, amother belonging to the Teutonic order, an orphan-house, a house of correction, a college, museum, and library,
Sana-Coburg-Saalfeld principality contains the following places: 1. Saafeld, a handfome town on the Saal, in which are a mint for the circle of Upper Sacony, a ducal palace, a grammar-school, vitried house, smelting-house, several churches, manufacturica of clothe gold and fall fuffs, &c. 2. Fofneek, a small, but populous town, foll of potters, clothiera, and curriers.

3. Lehsten, in whose meighbourhood is an excellent slate-quarry.

4. Graen-thal, near the river Zepten.

5, 6. Blankenhayn and Wandesbeben, are the only towns in the territories belonging to the house of Hatsfeld.

Querfurt is a small principality, containing only the following places worthy of notice: a Querfurt, from which the principality receives its name, is the feat of a superinatendency.

4. Heldrengen gives name to a district and superincendency.

4. Juterback, on the Angerback.

Anhalt principality, situated between the rivers Elbe and Saal, is ninety mies in length, and cattends thirty-sive in the broadest part. It is divided hito the four branches of Dessa, Bernburg, Zerbst, and Cothen; and, when the dominions were divided, it was agreed to submit to the cless of the family; who has the supreme government, and the only power to assemble the rest upon business of importance. They have all but one vote in the dict, in which they generally depute one of their number to represent them. The right of seniority has been established for some years in the branches of Bernburg and Zerbst, which are the most numerous.

The prince of Anhalt-Dessa possibility. Zerbft, which are the most numerous.

bliffied for fome years in the branches of Bernburg and Zerbft, which are the most numerous.

The prince of Anhalt-Dessu possesses the principality, of Dessu, with the town of that name, Worlitz upon the Elbe, Rudegast, Sundersseen, Oranienbaum, a feat on the confines of the electorate of Saxony; Ragun, Jesnitz, &t. The prince of Anhalt Bernburg has the lordships of Bernburg, on the Saal, and Ballensack, Old Anhalt (from whence the family is denominated), Martzgerode, Little Zeitz, where he resides, and the abbey of Gernode, for Indies, of which last the princes of Anhalt have the advowsion. The prince of Anhalt Cothen has the town and territory of that name, between the Saal and Mulda, with Plotzkow, the balliwicks of Nienburg, oa the Saal, hereatofore an abbey; Wossen, the upper country of Warenford, and Gusten. And the prince of Anhalt-Zerbst possesses, which was the town of that name, with the balliwicks of Lindau, Coswitz, Roswick, Rosia, Mulhlingen, of Magdeburg, Water-Nienburg, Domturg, Meckern, and the lordship of Javern, and he has the reversion of the territory of Kniphausen. It is computed, that the revenue of each is about seven thousand pounds a year, except Dessu and Zerbst, which are believed to be worth more.

There is no university in this country, but prince Lewa of Cochen founded a learned fociety, the excelered.

Zerbit, which are believed to be worth more.

There is no univerity in this country, but prince Lewa is, of Cothen founded a learned fociety, the members of which have been chiefly employed in translations of sincert Greek and Latin authors, and the improvement of the German language. Hewas the first president; and in a short time, above twenty princes and fix hundred no-blemen entered into the society, which is called the Fructifying Society, and have very much advanced the learning and improved the language of the German. This titying Society, and have very much advanced the learn-ing, and improved the language of the Germans. This is a good corn country, is watered with the Saal and the Mulda, and its principal trade is in beer. The people of Deliau are partiv Calvinifis, and the reft Lu-therans; but in the town of Zerbst these are of both these

The chief towns are, r. Deffau, on the Elbe, at the

influx of the Mulds, eight miles footh of Zerbst, and twenty east of Bernburg. It lies in a pleasant fruitful country, is well fortified, and adorned with the prime's palace. In one of the chapels there is the tomb of one Rehebeck, an old miller, who having followed Waldsmar, marquia of Brandenburg, to the zars, where the letter was fain the forces performed him for strains. hetter was flain, the former perfonated him fo artfully, that he was respected as the marquis himself. The trade of this town is in excellent beer, which is transported all over the country.

2. The town of Zerbit stands a little east of the Elb 2. Incrown or Zeroit rains a fittle east or the Libe, ten miles north of Deffau, and forty-fix north of Leipfack. It is very antient, and well fortified, according to the import of the name, which, in the Wendish dialect, fightifies fort. It is remarkable for little elle but being the feat of its prince, and having a strong beer brewery, of a more excellent quality than that at Dessau.

3. The fortified town of Bernburg flands in a fruitful territory, on the banks of the Saal, eight miles from the Elbe, eighteen east of Dessau, and twenty south of Magdeburg. The prince has a palace here, separated from the deborg. a month of the riv

4. Barbi flands near the influx of the Saal into the Elbe,

deburg. The prince has a palace here, feparated from the town by the river.

4. Bath flands near the influx of the Saal into the Elbe, between Anhalt and Magdeburg. It belongs to a prince of the Weiffinfels branch of Saxony, who has erected a noble caftle in it, with commodious apartments, and crimion velver furniture, embroidered with gold. Here is a foperb faloon, which, with the clofet and cieling, are finely painted. It has gardens delightfully fituated by the fide of the Elbe. The duxe of Barbi is reckoned to be the only Calvinift prince of the Saxon family.

5. Quedlinborg is a little flate in this circle, betwirt the principalize of Anhalt and Halberfladt, which has the title of an abbacy, from an abbey of great note, that was founded here by Henry I. who was buried in it in o36: and, because he fepent much of his time hera in taking birds, was furnamed, The Fowler. After he had defeated forty thousand Huns, near Merfoung, he began to build the church to fulfil a vow which he had made for the prosperity of his arms; but dying soon after he had dedicated the church to St. Servetus, his widow Matilda carried it on; his son, the emperor Otho, completed, and richly endowed it; and his daughter Matilda was the first abbeis. On the extinction, of the then Imperial family, the protectorship passed into that of Anhalt, and thence into that of Saxony, in which it hath continued till the close of the last century, when the late elector fold the protection fee of the abbey, and of the city of Northausen, to the elector of Brandenburg, for fifty-thousand pounds; when the latter garrisoned the town, and efhabished several courts in it. The abbests being a princess of the empire, and the first of those princesses who only derive their title from their abbeys, complained of this to the diet, (wherein the has her deputy among the prelates of the Rhine) but without effect; so that the has little more than the shadow of power in the city, and the abbey itself has lost much of its antient plendor; for the abbestic have not

and the emperor's confirmation is futneent to render his aledion valid, without need of any from Rome; for that court has had nothing to do with the abbey fince 1539, when Lutheranifm was introduced by its abbefs, the counters of Stolberg. No vows are made here; the canoneffes, who receive and return vifits, know no reftraints; both the abbefs and her nuar may leave the abbey, and marry; and fince the reformation, feveral of the abbeffes have been widows.

been widows.

The revenue of this Lutheran abbey does not exceed five thouland pounds a year; its estate, besides the little city of Quedlinburg, being only the villages of Dissurt and Suderole, which last is claimed by the elector of Brandenourg, belonging to his secularized bishoptick of Halberstadt. The title of the present incumbent is said to be Mary-Elizabeth, by the grace of God, abbess of the Imperial and secular abbey of Quedlinburg, born princes of Hoistein, &c. She gives audiences with all the affected pomp of secular princes, and is seated under a canopy, surrounded by her chaplain and officers: her abbey has more the air of a little court, than of a religious house. the air of a little court, than of a religious house.

The little city of Quedlinburg, where the abbefs refides, is fituated on the river Bode, that was formerly a hanfetown, and afterwards fubject to the abbey; but the citi-aems rebelling against their abbefs in 1745, they were made fubject to the elector of Saxony, though now it is in other hands. It is eight miles fouth east of Halber-

in other hands. It is eight miles fouth-east of Halber-stadt, and forty-nine north-weft of Halle. This town is fo very near the frontiers of Lower Sakony, that fone geographere have placed it in that circle. A famous council was held here in 1085;

The family of Brunswick Wolfenbuttle, possess the free Imperial palace of Walkenreid, by whom it is held as a bailwick; but, on its account, pay an assessment to the empire, and to the chamber of Wetalar. The only places of the least importance in the whole bailwick, are, that town of Walkenried, on the Zorge, and the town of Zorge, where two iron manufacturies are established.

town or w likenized, on the Zorge, and the town of Zorge, where two iron manufacturies are established.

Schwarzburg principality (the south part of which is separated from the north) is surrounded, on the south, by Coburg, Altenburg, Elienach, and Erfort; on the north part, by Thuringia, the electorate of Saxony, the counties of Stolberg, Hohenstein, Eichsfelde, and the territory of the imperial town of Mulhausen.

of the imperial town of Mulhausen.

In this principality are many fertile spots, yielding all kinds of grain, roots, fruirs, &c. The country produces wing, game, venison, falt, timber, silver, alabaster, and copper. The rivers are, the Schwarze, Saale, Helme, Weepper, link, Gera, Elbe, Gera, and Zorgange. The inhabitants amount to about one hundred thousand; the professed religion is Lutheranism.

The principal places are, t. Ehrich, on the Helme.

Kinglen 3, 4. Hafzelben, and Ebeleben. 5. Graessen, on the Helme.

on the Helme.

6. The town of Sonderhausen, on the Wepper, has a palace near it, the apartments of which are fine, and the gardens elegant. In the armoury is an image of Postrich, a Wandish idol, in thining black metal. Its head, on which the right hand refts, is large and disproportionate, with a hole in the top of it, and its belly is prominent and hollow. In lieu of a mouth, a round hole is substituted; the legs are both mutilsted, and the right is bent in a particular manner. The middle of the left arm, which refts on the lap, is broken off. This town gives name to a bailiwick, and is the feat of the public offices.

7. Keula is a small town, which gives name to a baili-

ballwick, and is the feat of the public offices.

7. Keula is a small town, which gives name to a bailtwick, at which a forest begins that is twenty miles in length.

8. Arnstact, on the Gera, has a handsome stone bridge, with fix arches.

9. Planen is a small town on the Gera.

10. Kefurnburg, an old castle, which gives name to a bailtwick.

11. Augustenburg.

12. Geren.

13. Langewiesen, on the lim, is a sief of Mentz.

14. Breituback, on the same river.

territories of Rudolftadt contain the follow The territories of Rudolitadt contain the following places, viz. 1. Rudolitadt, on the Sasle: and in the balliwick to which Rudolitadt gives name, there is a small town called Teichel. 2. Blankenburg, on the Rhine. 3. Konitz. 4. Leutenberg. 5. Ehrenstein. 6. Frankenbauken. 7. Arnsberg. 8. Stransberg. 9. Hermingen, on the Helme. 10. Kalbra.

The county of Stolberg, which lies north of the lower county of Schwartzburg, eaft of Hohenstein, and west of Mansield, is about twenty miles long, and ten broad, and gives name to counts of a very antient, and once a very powerful family, whose domains lie dispossed, but most of them are in the circle of the Upper Rhine; and they powerful family, whole domains lie dispossessed, but most of them are in the circle of the Upper Rhine; and they have right to the succession of the counts of Schwartzburg. They are divided into the two chief branches of Isenberg and Gudern; and the latter into those of Stolberg and Orenberg. They are sovereign counts, of the Lutheran religion; and, besides their large bailwicks in the circle above-mentioned, they have the county of Weingerode, in the principality of Halberstadt, near the borders of which, among the mountains, stands the castle of Stolberg, which, it is faid, was built by Otho Colonna, a Roman rentleman.

Roman gentleman.

The county of Mansfeld is one of the four, called Hyrcynian counties, the other three being Stoiberg, Hohenstein, and Regenstein. It has Stoiberg, and the upper county of Schwartzburg, on the west; the principality of Anhalt, on the north; the duchy of Saxe-Mersburg, and Saxe-Hall, with the river Saale, on the jess. It is above thirty miles from east to west, and eighteen from north to south. It abounds with feveral forts of minerals, very profitable to the inhabitants, particularly that called the Scheiffer-flein, peculiar to this and the neighbouring provinces: it is a blackish, glittering kind of slate, which, melted and

2. The large village of Drubeck has a foundation for fix protefant ladies.

3. Ilfenburg is defended by a frong cafle.

4. Hafferode, which gives name to a bailwick.

The lordships of Reussen are furrounded by Etageburg, Vogtland, Neustadt, Culmback, Bamberg, Saasseld, Leutenberg, Altenberg, and the bailwick of Zeitz.

The plains are fruitful, the hills rich in minerals, and the rivers abound in fifth.

The people employ themselves in woollen, and iron manufactures, and profes the Lutheran religion.

The principal places are, 1. Greitz, on the Esser, encompassed with woods and mountains.

2. Zeulearoda.

Rage, a casse on rock.

A. Trawrenth.

5. Mosch.

3. Borg, a castle on a rock. 4. Trawrenth. 6. Mosch-lita. 6. Gera, in a pleasant vale near the Eister. 7. Schlewitz, gives name to a lordship, in which are three No. 59.

market-towns, viz. Tanna, Gorgwitz, and Market Hobenleuben. S. Lobenfisin, on the Lemnitz. . 9. Hirfelbberg, in the lordflip of Eberfdorf. The lordflips are very rich, which is owns to the great indulty of the inha-

rich, which is owing to the great indufity of the inhabitants.

In the lordbips of Schonberg are feveral flourithing manufacturiers. The greatest part of the inhabitants are Lutherans, and very industrious. The counts of Schonburg have a feat in the diet of the empire, and in that of the circle.

The principal places are, s. Waldenburg, on the Mulde, a. Hartenslain, which gives name to a lordship, 3. Stein, on the Malde. 4. Losnitz, 5. Weehlelburgh form to be manifectedly pious in their deportment, and particularly attensive to their religious duties.

The county of Honstein, though rather hilly, abounds in corn, grait, cattle, deer, game, timber, iron, jasper, and absafter.

The most remarkable, places are, t. Honstein, which gives asses to the county, and to abnitiwish. 2. Islied, on the Behr. 3. Bleickrade, in the lordship of Lora, which, with the town of Kaettenberg, is, now incarporated with the principality of Halberghad; both of which belong to the king of Prussa. 4. Ebrich, on the Zorge, is she feat of a superintendency.

Schola, 6. Great Bodungem, on the Bode. 7. Benneckstein, sameus for its iron mills.

reating of the circle of Lower Saneny, the several cominions belonging to it, their boundaries and extent, tenns, build-inge, inhobitants, manufactures, produce of the different constricts (46.

L OWER SAXONY is bounded, on the north, by the circle of Upper Saxony, and a part of that of the Upper Rhine, on the well, by the circle of Weltphialia and the North Sea, and, on the east, by part of the circle of Upper Saxony. This country, in general, may be deemed very fruirful, though in fome parta it is woosy, fandy, and marfly.

yery fruitful, though in fome parts it is woody, fandy, and marthy.

We shall proceed to a description of those parts of this circle which we have not yet mentioned; beginning with Brunswick-Lunenberg, several districts of which country (though many places abound in heathy, marthy, fandy, and barren foils), are exceedingly fruitful in wheat, out, peas, verches, roots, tobacco, wood, barley, rye, beans, fruit, madder, star, hemp, &c. Here are likewise great quantities of timber, cattle, game, horses, sheep, sist, minerals, turs, honey, wax, pitch, sait springs, &c. There are, in these territories, several manufactures of woollen cloths, stuffs, linen, thread, lace, cotton, carpetr, gold twist, galoous, fringe, swond-knot, tusses, hulberts, combroidery, tobacco-pipes, tobacco, skins, hats, gunpowder, paper, colours, fire-arms, sait, &c.

The established religion here is Lutheranism; but Roman catholics are tolerated in some places, particularly at Hanover and Gottingen; and in all the electoral dominions, Calvinita and Jewa enjoy the free exercise of their religion.

With respect to the ancestors of this illustrious house, it may be proper to mention, that the house of Brunswick being united in the two sons of Henry, duke of Zell, in 1940, the branch of Brunswick Wossenburtle and Beveren, descended from Henry, the eldest of those sons and the electeral branch of Brunswick-Lusenburg from William, the youngest son; and that the ancestress of both branches was Margaret, queen of Scotland, wife of king Malcolm III. and fifter to Edgar Atheling, the Saxon, who was the true lineal lieir of the crown of England, both of the Danish and Saxon race; which Edgar dying without issue, the right of succession to the crown fell to queen Margaret's posterity, in whom centered at once the hereditary titles of the Scottish, Pictish, British, Danish, and Saxon royal families.

In 1692, the creation of the electorate, which is attached to the duchies of Hanover and Zell, was concerted at the congress at the Hague, by our king William III. of glorious memory, and happily effected by in influence, in conjunction with most of the protestant princes of the empire, on purpose to counterbance the accession of the popish branch of the Palatine family in the electorate of the Rhine. It was opposed by several German princes, With respect to the ancestors of this illustrious house,

and particularly by the duke of Brantwick-Workshoute, our of envy, but the then emperor Leopold, in order to staffly his gratitud to the proteinants for their affitness in the wir against France, and confidering not only the parfonal ment of duke Ernest, but the great dignity of the Branthett family, who had the full feet in the college of princes at the diet; and was one of the most confiderable in the empire for ambusiny, weath, and power, ordered it to be put to the question, in the college of electors at Ratishon; wherein it was rejoved, on the 7th of October, 1502, thist the dietleral dignity flouid be conserved on the fluid pipter Ernest and his heirs. The college of princes instinctionable the fluid pipter Ernest and his heirs. The college of princes instinctionable their concurrence I inscribed. The college of princes instinctionable to the law of the empire, because done without their concurrence I inscribed. The college of princes instinctions of the investitute, by delivering the elections are within plenty of the following is faid to be the extent of the particular domination of this delicit, maniety, the principality of Gratemagen, forty miles both in length and breadth, the diethy of Histover, or Calenburg, forty miles long, and reverse broad; the ducthy of Danceburg, eighty affecting, and fifty blood; the ducthy of Sare Lawenburg, thirty miles long, and fifty broad; the ducthy of Breanen, including Verden, faxty miles long, and forty broad; the county of Hoya; which is long, and fifty broad; the ducthy of Breanen, including Verden, faxty miles long, and forty broad; the county of Hoya; which is long, and fifty broad; the ducthy of Breanen, including Verden, faxty miles long, and forty broad; the county of Hoya; which is long, and forty broad; the pretentions of the elector, are only to the fmall

ten in breadth.

The pretentions of the elector are only to the finall county of Eichfeld, (of which the elector of Ments is possedied), as part of the principality of Grubehagen; to the county of Reinstein, as a vicent sief; to the larger half of the hishoprick of Hildesheim; and to the fourtest of half of the hishoprick of Hildesheim; and to the fortuens of Peyna. His revenues arile, i. From the far-just, or forings, within the walls of Lunenburg. 2. From taxes on land, cattle, merchandize, public houses, and inns. But his greatest revenues arile from the rich maines of filter, from; and copper. The mines of Claushast, with those of St. Asidgew and Astena, yield near two hundred thouland pounds a year; but whether this computation is to be understood as clear of all charges, is not specified; to that, upon the whole, this elector's revenue is calculated to amount to, at least, four blundred thouland pounds a

Jear.

In the year 1692, the elector had near fourteen thoufund regular troops on foot. Now that the chates are increated above one half, by the addition of Lunenburg and
Bremet, he may take an army of betwitt thirty and
forty thouland men, without greatly directing his fobjects.

In the year 1726, he reviewed a body of nineteen thoufand eight hundred and ninety near, and in September
1735; that number was sugmented to twenty-two thoufund revolut process.

2735; that number was augmented to twenty-two thoufand regular roots.

In the year 1037 there was an acteditary and perpetual
union made between this electoral family and that of
Sazony, for the murnal guarantee of the peaceable pedicfrom of theft effairs against all disturbers and invaders;
which treaty was renewed in 1731 and 1736.

Bremen duchy his the Weler on the west; the Elbe,
and part of Lunenburg, on the east; the German Sea
on the north, and part of Verden and Oldenburg, on the
foult. It is about farty miles in length, and forty in
breadth, including Verden. It is divided into, r. The
land of Bremen, properly so called, which ise seeme miles
found the city. 2. Wursterland, along the coal from the
Weler to the mouth of the Elbe. 3. Hadeland, the north
part of the duchy at the mouth of the Elbe, where the
people are reckanted ignorant, but so found of gay closely, we get to the mount of the Eige, Transcience, the dothy at the mouth of the Eige, where the people are reckuired ignorant, but fo fond of gay closely, that their heighbours have a proveit, "that there are the peafants in Hadeland." Part of it belongs to Hambong, and part to baye Lawenburg. A. Kedingerland, in which lies Stade. 5. Attland, a pteafant fruitful track, of shock fourteen miles in length. Betwirt Bremen and Stade the country is defart, and either a barren fand, or a movale; but the other parts towards the rivers are very pteafart, and abound with fields, meadows, and orchards. The inhabitants, who forturerly relied to much on their valous, that they forced to build forts, are fill reckoned as good foldiers as any in Germany; and it is faid of the Wurft-Ianders, in particular, that they will light and drink with the best men in Germany. The situation of the country between two such asvigable rivers, has given the people in general a disposition for trade and commerce.

Ludovicus Pius, the emperor, gave this country to Ansgarius, the fift archbishop of Bremen and Hamberg, whom he reade metropolitica of Denmark, and all the

leanown countries to the morth. He died in 865, and his day is as much observed by the common people here, as Christeans. Depressed and Sweden were no longer dependent on this fee, when Lunden was creeked into attachbishoprick; but this country continued fully the situation of the feel of the state of t

factures, and aimoft all our commodities, both domefile and foreign, to the value of many hundred thousand pounds a year, set by those fireams conveyed to innume-rable markets; and that by the fame navigation a great part of our riches flows continually home to us; a wade to precious to have him at the mercy of my foreignes, either to lock it up from us, or to lay what impositions he pleased on it, as might have been the ease, if his late majety had neaged Bremen and Verden out of the hands of the king of Denmark.

In 1717 this country suffered very much by inundations on the Libe, the banks of which are in fome places very low, and would be frequently averliown, were it not for the dikes. In 1720, the drown of Sweden confented in form to the dimemberment of this duchy from its asber dominions, and confirmed it to the Brunfwick

In this, and a very large part of the lower circles of Germany, the common dialect is a fort of Lower-Saxon, neither Dutch nor High-German, but partaking of both, or rather the seet of both; for it feems to have retained more of the antient Anglo-Saxon than of the Dutch or High-German 1 yet every one understands High-German. High German 1 yet every one understands High-German, and it is the language of their printed books, and written letters, and fermons.

This country is wascred by many rivers. The Tech, the Umane, and the Hamma, join together, and fall into the Wefer; as do the Brept, the Lan, the Stosel, and theveral others: the Effs, the Schwingel, and the Ofte, fall

into the Elbe.

inte the Eibe.

We shall describe the places of most note from Harburg to the mouth of the Eibe; which are,

1. Bestudude, on the Eifa, or Est, fifteen miles west of Hamburg, and east of Stade, and forty-eight northeast of Breunen, in a pleasant country, so fruitful, as to be reckneed one of the granaries of Hamburg. It is a proxy large town, with broad firetes, and is incrounded with a ditch and wall, upon which there are old ruinous towers. He river, which comes out of Lunenburg, and is assuciable for boats us to the town, falls into the Eibe at navigable for boats up to the town, falls into the Elbe at Crants, about four miles off, where the latter is about a Crante, about four niles off, where the latter is about a mile over; and from hence there is a fine prospect of Mansharg. The town, which fifth had its rife from a runnery of ladies of a family of that name, was of fucl noise formerly, as to be admitted into the Hanfeatick leogue, and fill retains the privilege of a city, with burgeomatters, and fenators. One of the dukes of Branswick attempted, in vain, to reduce this place in 1424, as did, and bis here, M into an hy, and d taken INE WAFE king of clector, nd fiftyo enable

arining, about the innersance perween the remale heirs and the king of Sweden, the emperor caused it to be taken into fequentration, under which it remains, as it is faid, to this day. The caftle of Ottetudorff, which belongs to Saze-Lawenburg, commands most of the district.

Lawenburg, commands most of the district.

The next that follow are the towns on the Weser, viz.

1. Carestat, or Carisbourg, as Buddrand calls it, is rather a forrose than a town, on the river Geeste, which, having filled its disches, falls into the Weser, thirty-one miles north-west of Bremen. It was founded by Charles X. of Sweden, taken by the dukes of Brunswick in 1676, and reflored by the treaty of Fontainebleau in 1670. The late Charles X. II. in 1698, granted liberty of conficience, with thirty years exemption from taxes, to all protestants that would settle here: but there are but a small number of bashbiture.

2. Bromen, the capital of the duchy, stands in a fruitful play, twenty-three miles east of Oldenburg, fixty fouthwest of Hamburg, fifty-five east of Embden, eighty-three

morth-west of Branswick, aighty-nine west of Lunenburg, fisty-size west of Zell, vinety north of Monster, and about four hundred and fixty north-west of Vienna, It is an antient, large, populous, and showthing town, as free imperial city, and the third in rank among the Hanse, of whose three trunwast free inspectal cities, vis. Hamburg, Labeck, and Bremen, though it is reckoned the least considerable, it is extrainly much the olders, it being noted for hipping when the monks, ean by the pope to convert the Saxons, unbarked here for England, which was two hundred before the building of Lubeck. An archbishoprick was founded here by Charles the Great, who made it the metropolis of the nouth. The archispictopal fee at Hamburg was translated histing, or rather, incorporated with his fee, in 1202 Henry, V. granted the citizens great privileges, in cevard of their valiant petitormances in the holy war. It had several privileges also granted it by the emperor Wencerfaux, for clearing the coast from pirates, and protecting the mechanic trading on the Wese; and no goods were allowed to go down this river, and past this city, without being first landed here. The inhabitants have the privilege, also of fishing from the bridge of Hoye, four German miles above Riemen, down to the fea as likewise in the rivera Hunts, Ochtum, Wemme, and Leefum, which flow into the Wese; The city is well furplied with fish, both from, its rivers, and the sea; and they have every month several forts in fesion. Among others, they cach great quantities of Islmon and lampreys, the former of which, being dreed and smoked, and the latter pickled, are in great effects throughout all Ger many. Ruddylb III, endowned, being dreed and smoked, and the latter pickled, are in great effects throughout all Ger sany. Ruddylb III, endowned, being dreed and finoked, and they have every month several forts in feelow.

On receiving the reformation in 1522, and scaloully desponding it agained noe of their archbishope, the members of whether the propose of the member

ber of Wetslar. If any of the members die, or become incapable, they must chuic another in twenty-four hours; for which end, one elector is chofen out of each class by lot, and then that up in a room, without feeing any one till the election is over. They have their own flature, laws, which were enacted in 1281, but have been finely amended. It has a jurificition of about ten miles round, abounding with patures, well flocked with cattle, and is bordered with territories, helonging to his Britannic majesty. The river Wefer, which is navigable about thirty miles from the fea, runs, through it, and divides the old city from the news but there is, a communication by a bridge of boats, and feveral wooden bridges. The river is

not navigable for thips of burden farther than Fegefack, fix miles below the town, where there is a cuftom-houfer, and where all thips load and unload: fo that all goods are brought up from thence in flat bottomed veffels.

The city of Bremen carries on a confiderable trade with England, particularly in all forts of Wethphalian linens, and fends leveral thips, particularly to London, every year, here being a great conflumption of the English woollen manufactures, which they receive not only from England, but claired by way of Hamburg and Holland, and differed again through the whole circle of Wethphalia. It fends thips likewife to France, Spain, Portugal, and Italy, and a great number to Davia's Straits. It has allo a considerable inland trade, particularly to the great fairs and matrix in Germany, to which, among many other goods, It fends large quantities of callicoes and fugar, printed and refined large ty stuck effectmed in Germany, and therefore exported in large quantities. It other commodities are beer is very stuch escensed in Germany, and therefore exported in large quantities. Its other commodities are minerals, timber, corn, cuttle, and leather; in dressing of which, and cloth they are very expert; so that both are, fent hither, for that purpose, from other countries. Its duties upon importation and exportation are very low, which is a great encouragement to its trade, and gives it an advantage over the Dutch in the countries betwist this city and their republic. It is reckoned, in short, the next port to Hamburg, in the whole empire, for commerce; and, in time of war, it also fits out this of force to convoy their merchantmen. It generally fends twenty-five or and, in time of war, it also his out hips of force to con-voy their merchantmen. It generally fends twenty-five or thirty filips a year to the whale-fiftery in Greenland; and, their harpooners are frequently hired both by the Dutch and Englith, being effected the most expert in all Ger-

The old and new towns are both of them pretty well fortified with high wells, a broad ditch, and a counter-learn: the former has feveral towers on the walls, after the old manner, but the walls of the new town have eight fine bulwarks. It is, however, fironger by nature than art. A garrifon of five hundred user is kept here, befides the guard, day and night, at the town-houle, by two hundred of the citizens. From the city wall, or ramparts, which are planted with rows of trees, there is a most agreeable prospect of the river and adjacent country; and on it there is a road for coaches, as well as soot-passengers. Here is a grand arienal, well stored with artillery, small

arms, and other utenfils and tools of war, both antient and modern. There is also a lesser, which is a fortof armory for the burghers; it being a spacious hall, where their council of trade meets, the walls of which are handformely adorned with small arms. At the entrance of it fomely adorned with imali arms. Art me entrance of it there is the figure of a warrior in complete armoor, who, by fome mechanism under the fleps, as soon as you tread on them, lifts up the bearer of his helmet with his trundcheon to falute you. From the gallary of the grand arternal, which contains the greater part of the small armit, ranged in a very beautiful manner, there is a passe to ranged in a very beautiful manner, there is a passage to the gymnafum, or academy, built after the Reformation, which was at first only a free-school, afterwards advanced to the title of an university; which, by the munificence of several worthy citizens, makes as good a figure as some of the best in Germany; and many great men have been produced by means of this seminary.

The town-house, sensae, or council, is a large gothic structure, built in 1455, and adorned, on the outside, with several status of the emperora and electors, besides those of plate, Aristotle. Cicero, and other antients; and

with feveral flatues of the emperora and electors, bendes those of Plato, Aristotle, Cicero, and other antients; and a picture of the old and new towns. The council-chamber has the pictures of twelve German emperors; down to Leopold. The courts of justice, and other apartments here, are plainer than fuirs with the dignity of the offices they are put to; and the lower part, or hall, in which there are doors that lead to the courts of justice, is filled that a state flore, and in others (like ours are Weigers and in others (like ours are Weigers and in others this cours are Weigers and in others (like ours are Weigers and in others (like ours are Weigers and in others this own are weigers. with toy and print-flops, and in others (like ours at Weit-minster) are fold stationary and haberdasshery wares, &c. At the one end of this building, but separated by a street, there is a public structure, with a piazza and shops under it, which serves for an exchange.

Here are feveral hospitals, particularly, one for superan-nuated or disabled mariners; and another for the fick, nuated or durance mariners; and anomer for the fex, lame, decrepid, and old poor people, of both fexes. It is a plain, but commodious fructure, with a very bandfome chapel. Adjoining to it is a house of correction for vagabonds and criminals, where lunatics are also kept, and such as happen to kill a person inadvertently, the plea of chance-medley not being admitted in this country. Such a first discipline is kept in it, that it is observed, though there are at least an hundred profligate persons in it, not

an indecent word is heard out of their mouth, incy being almost continually obliged to accompany the task-master in finging psalms and hymns.

The new fown on the fouth five of the Wefer, in which stands the university and the arfenal, confilts chiefly of gardens and little pleasure-houses, belonging to the psin-cipal merchants and other inhabitants of the old city, here rger and much more regular fireets then the latter and ey are most of them planted with wild thefour and

Ime-trees.

The old town is faid to have been walted eight hundred years ago. On the largest of its wooden bridges there lay an engine that raises water, and distributes it all over the city; and there is a fort at the head of it; which is walted guarded. The streets of this town, on the north side of the river (in which are the eathedral and senate-heads) center in the market-place, wherein stands an old giganties image, one of those erected in many of the German citical brading; on which is an intent inferipition, denoting its to be a testimonial of the liberty granted by Charles the great to this city. On the opposite side of the rarket is a public-house, which, at the same time, serves as a fort of common hall for the several colleges or assembles of the burghers and the council of trade.

burghers and the council of trade.

There is a spacious wine-cellar under the senate-house, wherein are five huge vessels, each of which contains upwards of an hundred togstheads, whereof four are always kept full of Rhenith whee, and the fifth is left empsy, too grainly such as have the currosity to enter it. There is one vault of choice old hock, the key of which is kept by the presiding burgomatter, and only a number of bottles left in the hands of the master of the cellary to be fold at a short a dollar, or four and fiveners house. about a dollar, or four and fix pence a bottle. The cufe tom, which afterwards became general in the other Hanie towns, of fwearing new-coniers by bread and falt, and towns, or wearing new-conters by breath and fair, and making them free, on paying a fine of good liquor to the company; is faid to have originated here. The city coins a little piece of money of in own, called a groat, which is worth about a halfpenny; an hundred and fisty-three of their yards make one hundred English.

The little town of Ottersburg is fituated about fourseen miles north-east of Bremen; it has a strong castle, or passy, the the backets of the hillpersist and was charged about fourseen.

on the borders of the hilhoprick, and was formerly their hilhop's feat. It was twice taken by the Imperialities and once by the Swedes, in the German civil wars. It It has a pretty large borough on the river Wemme, from whence the read towards Bremen is very bad, landy, and full of the branches of the river, in the middle of which is a fort, with four baftions, that commands a long dike, or causeway, with feveral cuts in it, over which are bridges.

way, with leveral curs in it, over which are orioges.

On the other fide of the town, at the diffance of twelve,
miles, flood the monaftery of Clofterfeven, charmingly,
fituated, which is now a confiderable borough, adorned,
with many fine gardens, and embellished with a handformachurch. This is the place where, in 1757, the convention was concluded between the duke of Cumberland and the duke de Richlieu, the French general.

Befides the above, here is, s. The large village of Scharmbeck, which gives name to a diffrict. 2, 3, Hagen, and Stotel, which give names to bailiwicks. 1 4. Bardel. r. Neuenwalde.

Wildeshausen bailiwick, on the Hemte, has but an indifferent foil." The crown of Sweden, in 1700, mort-gaged this balliwick to the electoral house of Brunswick Lunenburg; and in 1800, which have been supported by Lunenburg; and in 1720, at the peace of Stockholm, made over all right and claim thereto, as well as to Bremen and Verden.

The town of Wildeshausen, from which the whole reabout three hundred dwelling houses, a few churches, and fome other public buildings; about half the inhabitants are Roman catholicks, who are not allowed the use of bells, church-music, or processions: nor are they permit-ted to be baptized, married, or buried by their own priests, but must have those ceremonies performed by a Lutheran

but must have those ceremonies performed by a Lutheran minister. The vestiges of an antient abbey, and the ruins of an old castle, are still to be seen here.

The principality of Lunenburg-Zell is bounded on the north by the ducity of Lawenburg and the Elbe; on the south by Calenberg, Hildersheim, and part of Brunswick; on the east by another part of Brunswick, and the duchy of Mecklenburg, and on the west by Bremen, Verden, and Howe and Hoya.

The foil is in many parts fandy, heathy, and marshy; the banks of the Elbe, Aller, and Jetze, however, are sertile, and abound in wheat, tye, barley, oats, pease, buck-

tergrands nut and hundred. wer the h ie welli h fide of gigantici m citics,

narfhy ; are ferwheat, pulse, hope, alder, pines, beach, oak, firs, birch, stax, hemp, &c. Here are likewise penny of horses, cattle, sheep, bees, vention, falt-tiprings, and lime-shone. The rivers libe. Alter, and limenaw, produce great quantities of fish, and, being all navigable, are of great advantage to the country in a commercial point of view.

This whole principality contains about two hundred Lutheran churches, which are under the direction of two general, and fifteen subordinate superlutendants. The manufactures are linens, ribbons, hats, bleached wax, gold wites, fifter ditto, cottons, stockings, starch, refined sugars, wooden wares, barges ready built, small ships and boats.

The king of Great Britain, on account of this principality, has a seat and voice both in the college of the princes of the empire, and the circle of Lower Saxony. The revenues arise from the demessine, tolls on the Elbe, contributions, duties on cattle, beer, wine, brandy, and other commodities.

The principal places are the following; viz. 1. Lunen-

commodities.

The principal places are the following; viz. 1. Lunenties, the principal places are the following; viz. 1. Lunenties, the principality. This is a large city, steased on the river Elmen, or Elmensus, which is navigable from hence to the Elbe. It is tweaty-feven miles from Hamburg, and fixty-eight, from Hamover. It was formerly a Hanfe town, and an imperial city, and at prefent is supposed to contain about usine thousand inhabitants. Here were formerly several convents, out of the revenues of one of which, viz. the Benedictine, an academy for martial exercises was founded, where the youth of the principality are taught the French language, dancing, sencing, and riding.

A Latin school, consisting of four classes, was likewise founded, and well endowed, out of the same revenues. The superintendency of these, and the estate appropriate to their supports is vested in a landschaff director, and an aufeiter, who are both selected from the Lunenburg nobility. The first of these officers is the head of the flates of the principality, and the president of the provincial col-

of the principality, and the prefident of the provincial col-lege. He afforms the title of excellency, and in public writings filles himfelf. "By the grace of God, landchaff-director, and lord of the manifon of St. Michael, in Lunen-

director, and lord of the manifion of St. Michael, in Lunenburg."

The public edifices are, three parific churches, three hofsitals, a falt magazine, an anatomical theatre, the ducal palace, the town-house, the academy, the harracks for the garrison, and the conventical church of St. Michael, in which the antient dekes lie interred, and where the celebrated sable taken from the Saraceans by the emperothe is deposited: it is eight feet long, and four broad, was plated over with chaefed gold, and had a rim richly emb-lished with precious stones of an immense value; but in 16,8%, a gang of robbers broke into the church, stripped this magnificent table of a large diamond, two hundred emeralds and rubies, and most of the gold.

Here are many rich sait-fprings, a fish of the product of which belongs to the king of Great Britain. The salt is the best in Germany. The other articles, in which the commercial part of the inhabitants deal, are wool, honey, wax, lime-stone, sax, linen, beer, see and warehouses are crested along the borders of the Elmenau, for the reception of goods from all parts of Germany, to be conveyed to Lubeck and Hamburgh.

of goods from all parts of cernany, to be conveyed to Linbeck and Hamburgh.

2. The town of Bogdorf, on the Aw, which gives name, to a Baltiwick and fuperintendency.

3. Aliden, on the Aw, where Sophia Derothes, confort of his Britannic majefly George I. refided, after their feparation, till her death in 1726. It is the feat of a balliwick.

4. Ultzen, which is a neat, little, compact town, at the conflux of the Wiper and two other rivultes, which

4. Ultzen, which is a neat, little, compact town, at the conflux of the Wiper and two other rivulets, which form the river Elmenau: it is twenty fix miles fouth of Lunenburg, and thirty-three north-eaft of Zell. It was formerly called Lawenwald, i.e. Lion Foreft, and had its prefent name from the neighbouring monaftery of Oldenfladt, formerly called Old Ulfen. It is faid that the first Angle-Saxons came to Britain from this place, and those who returned hung up a gift tin ship in the market-place, as a memorial of their fucces, which continued there still 616, when most of the town was burnt down, and never wholly rebuilt since; but the houses are more splendid and regular than before, and the threets larger.

5. Hudemablen, on the Aller. 6. Rethem, on the same river, and gives name to a bailiwick.

7. Garto. 8. Brome, on the Oller. These two last belong to the barons of Bernsdorf. 9. Essel, on the Aller, gives name to a district.

10. Soltau, at the conflux of the Soltau and Bohme, gives name to a bailiwick.

11. 12. 13. Klotze, Fullersheep, and Gifforn, give name each to a bailiwick and superintendency.

14. Wittengen, an old town in the No. 60.

bailiwick of Knesobee.

15. Hosseniele, futuated on a lake.

16. Badenleich, fituated on a lake.

17. Wustre.

28. Blekede, on the Elber.

20. The small town of Hitzacker is situated in a little issue of the later.

20. The small town of Hitzacker is situated in a little issue of the later.

21. The town of Zell is seated on a findy plain, ness the conflox of the Aller and Funds, twenty-four miles north of Hanover, and forty-seven south of Hanburg. The town is antient, having a charter dated in 1203 wherein it is called Thale. It only consists of three streets that run parallel, but is well fortsied, the ramparts being broad and high, well mounted with cannon, but not regular. Here are held the chief courts of judicaure for this duchy; and in 1485, its duke, Henry, built a palace next to that called the Hanover Gate, which is a square building, with four platforms at the four corner; moated round. Several coaches may go in front on the terrace round the town, which is adorned with trees planted all along; and the adjacent fine gardens, orchards, and grottoes, form a very agreeable landscape. There is but one church in the town, and that without a steeple. The French refuges have their claurch in the suburbs, which are very large. Here are still a great many French catholics, as well as Protestants, and the former have a chapel. All the buildings are of timber, except the churches, the castle, and the house of correction, which are of brick. The elector has a regency here, which judges all causes without any appeal to the council of state at Hanover. Betwixt this town and Harborg is a sandy road, with scare any thing but heath. The post stages, which are of four miles, are very ill served, and the inns the worst in Germany. Though there is a good deal of heath betwix this town and Harbore only make turf of the heath for such the regulation though the country is very well cultivated; for the inhabitants not only make turf of the heath for such the reighbourhood of this town: the heires of Lunenburg-Zell, who was

to the late elector, and interward curvotered died in it, a ter, thirty years refidence; which was more a voluntary teticement than any fort of confinement, and where she had the best of usage and respect, and full liberty to go whither she pleased; and here the late queen of Denmark retired, after the unhappy treatment she experienced at the Danish

court.

During the war in 1757, a most barbarous transaction reduced the inhabitants of Zell to great diffres; for, after the convention above-mentioned, the duke de Richlieu, commander of the French forces, by a piece of cruelty fearer to be paralleled in history, ordered not only the suburbs of Zell to be burnt, but even the orphan-house, which contained a great number of children, to be set fire to, when the whole was reduced to ashes, and a great number of the poor innocent instants perished in the sames—the stain of which barbarous act will remain indelible on that positive nation to the latest possenty!

The towns of Bardewic on the Luke, is situated four miles from Lunenburg: it was formerly a strong populous city, but is now a straggling village: it had nine churches, of which the cathedral only is left, wherein there is still a college of eight residentiary canons, and c sew vicers; but

college of eight refidentiary canons, and a few vicers; but the bishopric was transferred to Verden, and the district;

the bifhopric was transferred to Verden, and the didric! about the church transformed into kitchen-gardens. Over the gate, there are some barbarous Latin verses, in an old Gothic character, which shew that the town was built two hundred and thirty-five years before Rome, and destroyed by Henry the Lion, in a 180. They write, that he took by Henry the Lion, in a 180. They write, that he took this revenge on the city because it resused to acknowledge him, after he was proscribed by the emperor Frederic I. In the most castern part of this duchy, thrush the town of Daneburg, on the river Jetze, fix miles from its influx into the Elbe, and thirty-three south east of Lunenburg, lit is the capital of the rich and fruitful county of this name, which was given by its count, in 1642, to Otho, duke of Brunswic. Wolsenburg, each of the pretentions to the city of Brunswic. This country lies along the Elbe, having Mecklenburg on the north, the marquisites of Brandenburg on the east and south, and the duchy of Lunenburg on the west. The Germans write this place Daunenburg agreeable to the etymology of its name, which signifies a Mountain of Fir-trees.

Mountain of Fir-trees.

The other towns in this duchy are, 1. Snackenburg, 2 large trading town at the confluence of the Elbe and Weckt, or Besse, fixty-five miles south-east of Lunenburg, 2. Harburg, 3. Harburg,

Verden.

Grabenbagen arine bally is formended by Calenburg.
Wolfenbaute, Wernegerous, Blackenburg, Bebenbeis,
Klettenburg, de: Some parn of it are fertile, individent
very rich, producing wheat, barley, peafe, bock-wheat,
flate, marble, infper, fulphur, zink, rye, oats, beans, flas,
lime-fleire, alabalter, fand-flone, falt, cobale, gold, filver,
lead, iron, and copper.

Here are feveral quarries, or mines, which are chiefly in
the mountain and forest called the Hanta. The rivets are
the Leine, the Oder, and the Ocker. The states are comsafed of the abbey of Sr. Alexander, and that of the bleffed
Virgin at Einbeck; the noble proprietors of mine ma-

Virgin at Einbeck; the noble proprietors of mine manners, and the cities of Einbeck and Offerode, at which the

ners, and the cities of Embeck and Chettee, a country are diets are alternately held once a year.

The manufactures and commodities of the country are flax, linen, fand-ftone, marble, copper, iron, lead, llate, timber, falt, fulphur, zink, flarels, printed cottons, woolen goods, thread, fire-arms, vitriol, lapis calaminaris, powder

The electors, on account of this principality, have a vote in the college of princes, both in the diet of the empire, and in that of the circle of Lower Saxony. The fevereign's revenue's arise from the produce of the demesses, and of the snines; and appeals lie from the courts here to the chancery of Hanover.

and of the smines; and appeals lie from the courts here to the chancery of Hanover.

The principal places are the following: 1. Einbeck, the capital of the principality: it is fituated at the conflux of the Ilme and the Leine, about forty two miles from Hanover. It is well fortified by towers, bulwarks, rampurts, a double ditch, and outworks; and is furrounded, by a fine country, very ferrile, particularly in corn. It was formerly a free imperial town, and its magiftrates fill enjoy fome valuable privileges. It is large and populous, divided into three parts, called the Muniler, the Neutladt, and the Markt, and base a tolerable trade, particularly inbeer, wooflen manufactures, and printed cottons. It was formerly a bithop's fee, the caniedral and chapter of which fill remain. The latter confills of a Lutheran fenior, nine canons, one vicar, and four vicarii ordinarii, who, not continue the continue canons, who have likewife a reprefentative at the diets. A large diffrict belongs to, and is fabiect to the jurifdiction of Einbeck, which formerly coined gold, filter, and copper money, and was a town to early as the year 1256.

The mine-town of Wildeman is furrounded fides by lofty rogged mountains. 3, 4. Lautenthal and Schulenburg, 5. Collerfeld. 6, St. Andreafberg, a mine-cown, pleafantly fituated. 7. Altenau, a small mine-

8. The large open mine-town of Claufthall contains near a thoufand houses, and above ten thousand inhabitants. Here is a filver smalling-house and a mist, where about five hundred thousand rix-dollars are annually coined. The place is defended by a garrison of invalids, and contains two churches, an orphan-house, a grammar-school; a mine-office, and a forest-balliwick-office. Though end contains two churches, an orphan-house, a grammar-fehool, a mine-office, and a storeth-balliwick office. Though the reft of the country is fo pleafant, the air of the Hantz-Foreft, almost the whole year round, is fo cold, and rain, mall, faow, fogs, forms, &c. are fo frequent, that the cultivation of the land cannot be purfued with any degree of foccefs. On the mountain, which covers part of the foreft, are produced oaks, affi, alder, pines, beech, aspin, birch, and firs; and this amazing plenty of wood is of the utmost importance, as, without it, the mining works could not be carried on. That part of the forest called Brunswick. Lumenburg-Hartz is divided into mine and forest-bailwicks, part of which belong to the king of Great Britain, and part to the prince of Brunswic. The inhabitants of the Hartz are composed of miners, inalters, similters, and schoolmasters.

9. The town of Ofterode is fituated not far from the Hartz, and is divided into Old and New Town: it contains about three bundred boutes, three partification are grammar-school, woollen-manufactury, &c. so. Sala-

der Helden, on the Leine. 11. Herberg. 12. Scharzfele is defended by a cattle fituated on a high rock. The cattle gives name to a bailiwick, which contains flone-quarries, iron-works, chalk pits, copper-mines, a linen manufac-tury, and plenty of flax: in the neighbourhood are fine caverns, called the Scharzest Caves, where the abur, fef-file, and drop-flone are found, 183, Lautenbary, on the wick, that abounds in pine, flate, warm baths, marble.

There is a mill, at the village of Lucasholl, or an marrie, at those of Ludershoff and New Hutter are drig mills; and at Konigmon flood antichts also

the mills: and at konigmon flood anishing the palace of Koniglburg.

Calenberg principality is bounded, on the fouthey Grubenhagon, on the north by Lunenhurg, on the west by Schawenburg and Bransvie Wolfenburtle, and on the acid by the bishoprick of Hildesheim. It is thirty for united in length from north to fouth, and eighteen in breadth from east to west. A considerable part of this principality is mountainous and barren, but other districts are rich and fertile, and thound in corn, polic, to chacco, beach, pine, aspin, flax, frait-treen, oak, alder, birch, turs, coal, free-stone, mill-stone, horses black cattle, sheep, venifon, game, mast, iron ore, fall foring, medicinal springs, die, and the streams abound with all kinds of fish.

In this principality are three protestant aboves and fix by

game, marl, iron ore, full iprings, medicinal iprings, &c. and the fireams abound with all kinds of fish.

In this principality are three protestant abbeys and fix convents, of which three are inhabited by men and fix by women. Lutheranism is the adablished religions, and the Lutherans have two hundred churches; the Calvinists are allowed five, and the Roman catholics fix.

The commodities and manufactures of the country are wood, cotton, tobacco, flax, filk, gold lace, filver ditto, emperi, glass, galoons, fringes, tasses, gronpowder, lines, &c.

The Krench, in 1752, over-ran, this principality, and did great damage, though they were soon dispossessing and did great damage, though they were foon dispossessing the first proprietor of it is antitled to a vote is the college of princes at the diet of the empire, and that of the sircle. To the superment rubunal of Hanover it nominares two affests, and two to the high court of appeal at Zell. The revenues arise from demesses, excite, a military six, frange-duty, card, ditto, duty on corn, cattle, there, magazines, &c.

gazines, &c.

gazines, &cc.

The principal towns and places are the following; viz.

1. Hanger, which is the metropolis and feat of the prefept elegor, as it always was of the dukes, after the removal of their court hither from Calenberg, on the deathof George, the last duke of Brunswick-Calenberg. It is
pleasantly fituated in a fandy foil, on the river Leue,
which is navigable here for small boats. It is twenty-six
miles footh-west from Zell, twenty-six mells footh-west from
Brunswick, and three hundred and inty-six east from
London. It was antiently called Lawenrods, from a
neighbouring casse, sobject to the counts of that title; and
had its present name in Henry the Lion's time, because of
a ferry here; Hanover is the old Saxon dialect, similying as much as Haye-over in English. It is divided by
the river into the New and Old Towns. Most of the
houses are of timber and clay, but there are many of brick
and some. The firect air regular, broad, and well furnished with lanthorm for the winter nights. It is regularly fortified, and-the ravelina before the gates are well
meunted with cannon. Here was quoce a monastery, since
metamorphosed into a palace, at one end of the city, near mounted with cannon. Here was quee a monaftery, fines metamorpholed into a place, at one end of the city, near the ramparts, though they caree deferve that name. It is a large fituative of free-flone, with feveral fquare courts, and fine flaircases; but the whole is rather commodious than magnificent; it is, however, adopted with charming typefity and paintings, and very richly furnished. Here is a close of ratities, with a noble collection of medals, and there is a close of medals, and were reasonable of the collection of medals, and were reasonable of the closes. a clofet of racities, with a stoble collection of medals, antient and modern, and a very fine chapel. When the court is here, there are frequent concerts, balls, and affernablies; and a French comedy used to be acted three times a week, at a pretty theatre in the palace, where all people are admitted gratis, the expence being defrayed by the electer. Here is also an opera-house, visited by all foreigners, the paintings and contrivance being not inferior to any in Europe of the kind.

The most remarkable of its churches are, 1. St. James's, in which there are two cruelfares, with kne playings of the apostles and many faints, though the Lutherana pay no adoration to them. 2. That of the Holy Cross, much mer and neater than the other, having a double rew of galleries round it from the alter, and uson the first the nittery of the gospel in fifty three parts, painted by the ablest masters. Besides these, there are St. George's and

Bt. Giller's churches. Here are four fairs a year, much frequented by foreigners. It was once a free imparial city, and a Han's town, when it had a flourishing sommerce; hut its chief trade now is in that freet, but mudy liquor, called Brawhan, r'h, they fend in great quantities to the neighbouring town is in that freet, but mudy liquor, called Brawhan, r'h, they fend in great quantities to the neighbouring town is villages. This liquor had the same from a fam, or over, one Contade Brawhan, of this neighbourhood is who, having breach his three at Hanburg, came sand fet up here in 12th. Though it is not a large town, it is bigger than Zell. The Romant catholic church here was granted to those of that communion by Erneft, the first sledler; as one of the conditions demanded by the emperor Leopold, who invelled him, and pide engaged him to admit of an apostolical vicar in his dominions, and to petmis him to refide at Hanover. Here is a condiderable number of it oman catholics, but the no-hillity and gentry are almost all Lusherans. The princest Sophia tasted a new church to be built here for the French refugres, to which our king William III. was also a benefactor. Besides a house here for orphans, there is one hospital, within the town, and another without. This city has acquired a new letter lace the accession of the illustrious bout of Hanover to the electoral college in the dyet of the empire; but more especially since its advancement to the throne of Great Britain; and is to spaticular note for the famous treasy concluded here in 1725, to counterbalance that of Vienna, between the Roman catholic powers.

There are feveral pretty feat in the neighbourhood; one particularly called the Fantisty, or the Whim; and another Moutbrillant, or Mount Pleasance; which were built by two filters-in-lew; viz. Madame de Kilmanseck (lare counters of Arlington), and the counters of Platen. These lead to the pleasant palace of Herenhausen (i. e. the House of the form of the mount of the mount of the mount of the mount of the mo

Brunswic. It is fituated in a fine country, on the river Hamel, from which it takes its name. The Hamel dif-Hamel, from which it takes in name. The Hamel dif-embogues itlelf into the Wefer, on which an admirable fluice was finished in 1734, at a great expense. There is hikewife a bridge of nine wooden arches over the Wefer. The other public edifices are an abbey, two Lutheran churches, a Calvinité ditte, harracts, an hofpital, a poor-houfe, a town house, and a free school.

Woollen, filk, linen, and leather manufacturies, are car-

Woollen, filk, linen, and leather manufacturies, are carried on here. The magifrates are allowed to coin money, and have very extensive privileges, and civil and criminal jurifdiction within their liberties, which coutain many villages, forefit, a ferry, &c. The abbot of fulda, who was formerly favoreign of the town, fold it to the bithop of Minden and when the latter came to take possession of it, the citizens opposed him, but were defeated with great staughter, mear Sedemunder.

27. The town of Bodenwerder, which is subject to intundations, 18. Lauennu gives name to a builtwick. 29. Reker, 30. Erweit, on the Humme. 21. Sprunge gives name to a builtwick. 23. Hemmendors, on the Sail. 24. Sail. 25. Polle, on the West, the sail of a builtwick. 25. Hemmendors, on the Sail. 24. Sail. 25. The town of Gottingen is stated on the New Leine, which is a cand drawn from the Old Leine, and about fifty miles from Hanover. It is Brong, well-built, and well-paved. The satient gymnessum was, in 23. converted by his Britannic majetty. King George II. into an university. Its library is the best in Germany and here is also a sine observatory, an anatomical theasty, aphysic-garden, a school for teaching midwifery, an academy of exercises, sciences, and belies lettres, and a Germani society, which are all included under, and belong to, the university. The Latin school has eight maters, and is under very good regulations. Here are an armory, fix Lutheran churches, and one Calvinist ditto, an almanuse with a cluurch belonging to it, and an orphan-house. The fausages made here are in great essem. On a hill, in the territory belonging to the sown, antently stood an imperial bargh and palatine town, called Grone, which was the principal residence of the Saxon emperors after Otho the great. The town's citate and jurisdiction are very considerable, consisting of several vilages, woods, meadows, and pattures. It was formerly one of the Hanse, and had a mint for coining. This town was for some time in the hands of the Franch, namely, in the campaigns of 1757 and 1758.

29. Lauenforde, on the Weser. 30. Norten, on the Leine. 23. Hedemunden, on the Werra, a five-chool, 36. Usiar, divided into the Old and New, the former of which is walled. 37. Dransfield, between Goffingen and Minden. 38. Moringen, on the tiver Mohrage. Mortheim, on the Rhume. 35. Humedesien, in the little below jo

This being the commercial centre for Hesse, Thuringia, Nuremberg, Frankfort, Franconia, Bavaria, and all pasts of Sazony, a great number of factors reside here and none, who are not freemen of Minden, are allowed to trade beyond this town, but must confign their goods to factors here; and whatever is brought in any wester may, according to the stapk weight, be unladen here. On Tuesdays and Fridays a vessel goes up the Fulda from hence to Capel, which none but freemen of Munden have a right to navigate. The French had for some sime possession of this town, in the last war, in the reign of George II.

have a right to navigate. The French had for fome time possession of this town, in the last war, in the reign of George II.

Wolfenbutte principality is part of the duchy of Branswic, being divided into two parts by the diocese of Hildewite, being divided into two parts by the diocese of Hildewite, being divided into two parts by the diocese of Hildewite, and the principality of Halberstadt. The northern part is rather level, and produces considerable quantities of grain, siax, hemp, pulle, fruits, cattle, silk, &c. The fouthern parts contain several mines and falt-works. The states deputies representatives to the diets, which are held as Branswic four times a year. The chief manusactures are stax, wool, silk, tobacce, glass, lead, irou, steel, porcelane, wax, blacking, &c. The high scolleges for this principality are the privy-council, convent-offices, chancery, treatury, high court of justice, and consistory. Luteranism is the established religion. The rivers are the Weser, Leine, Ocker, Schimter, and Aller.

The town of Branswic, which is the metropolis of the country, stands fixty-one miles west from Magdeberg. It had its name from the sounder, Borne, deke of Saxony, who built it in the year 861. It was once a Hanse town, and an Imperial free city. Though at present much decayed from its pristine splendor, it is still rich and populous. It is situated on the Ocker, contains handsome house, it well paved, and very strongly fortified. It is about two miles in circumserence, and divided into the Old and New Town. The principal trade is in leather, butter, bops, and mum.

The chief buildings are the ducal palace, which is capacious, magnificent, splendidly furnished, and contains many

nany fine paintings, an excellent library, and a cablest of cidioficit; an armory, a cavalier-houle, an excellent of cidioficit; an armory, a cavalier-houle, an excellent or surtial surrice, a college, a phys-house, accompanies, a house of correction, a concelleboute in the old of the college, a college of physic, an anatury and furnery-block, lazaretto, a calle, St. Leenard's incipital, a hind of college valled the Templahof, which formerly blockings at the knight's templan; and the following charches; one of the Calvinistic one for the Roman calvilles, and ten or the Lutherane, among which is the eatherat, delicated to St. Blastus, which contains the ducal burying-lace, the records of the electoral family, and two large anomements of duke lienty the Lion and file fectond coapit. in the following year.

Scheppenftadt, on the Altenau, is the feat of a fuperintendency; and in the village of Lucklum there is a commander of the Teuronic order.

The village of Salzdalum gives name to a bailiwick, and takes its own from a confiderable falt-work in the neighbourhood. The ducal pales here has a fine larger gallery, which contains above a thousand pictures, by the most eminent masters; and here is likewise a small galmost ensinent masters; and here is likewise a small gallery, embellished with many beautiful paintings. In the china cabinet are above eight thousand pieces of exquisite beauty, and in another above a thousand enamels of Raphael de Urbino, admirably executed. The great gallery is two lundred feet long, fifty broad, and forty high, and the lefts are an hundred and fixty long and twenty broad, in the latter, besides the above cabinet, are fix smaller ones for curiosities of art and nature. Adjoining to the palled is a convent, which fends representatives to the diets; was founded by duke Antony Uric and his duches, dedicated to the Virgin Mary, and has a provost, adomina, and fisten sisters in the fact of the demonstrated, stands on the river Ocker, seven miles south east of Brunswic, nineteen east of Hildesheim, and twenty-fix north-west of Halberladt. It is the antient seat-of the duker, being strong, by its situation near the

feat of the duker, being strong, by its situation near the marshes, and to well fortified, that it is reckoned one of the frongest towns in Germany; and here is an arenal, the frongest towns in Germany; and here is an arenal, small furnished. It is divided into two parts, one called Arx Guelphica, which is the dusal palace, to named from duke Ecbert, of the family of the Guelphi: the other Henrickstadt, from the founder, duke Henry. The palace, which is the strongest and most stately that belongs the founder of the furnished furnished for the called a support of the furnished furnished. lace, which is the strongest and most matery that belongs to the duke's family, has noble spartments, rich furniture, coulty paintings, and a library reckoned one of the best in Europe, which was founded by the learned duke Augustus. The librarian's catalogue, published in 1604, numbered the volumes at one hundred and fixty-four thousand, another in 1600, mentioned only twenty-feven thousand, fix hundred and fixty-fix volumes, and one thousand, fix hundred and fixty-fix volumes, and one hundred, fifteen thousand, five hundred and four tracis, by fifty-fix thousand, three hundred and minety-three au-thora. There are two thousand MSS particularly four hundred and thirty-eight folios of French emhaffies, tranbunders and unity-eight tones or relate administ, the feribed from the French king's library; forty-one volumes written by the founder hiosfelf, twelve of which are on music, besides his Commentary on Trithemius's Cryptography, and a very learned tract on the antiquity and mystery of the same of chess.

The reat church here is an admirable piece of archi-tecture, and twenty one dukes and duchesses are integred.

under it: here is also an academy and a museum. The town is not half to big as Brunfwic. There is another palace of the duke's at Saltzdahl (about a league from the town, and from Brunfwic), the road to which is lined the a very fine rose of trees. This callie, built by di

with a very fine row of trees. This castle, built by duke Annoy Ulric, is as magnificent a fructure as any that has been milest by fovereign princes; and, besides its immensity rich, farmitues, there is a nomerod, but choice collection of pictures; in a great gallery, which is one of the finest rooms in all Germany; and there are two cabinets, one full of vases and urns, pointed by Raphael, and the other full of the finest porcelane.

Twenty miles east of Brundwic and Westenbertle, and hear the frantiers of Magdeburg, fands the town of Helmstadt, which has its name from the alma about it. Charact the Great built this rown, anno 782: it is chiefly noted for the Academia Julia, or university founded and richly endowed, about 1576, by duke Julius, and his foar Henry Jolius, who also farmitust it with a good library. It has very considerable privileges, particularly one granted by the emperor Maximillan II. that its restor is to have for ever the title and dignity of count palatine. The elector of Hanover, and the duke of Wolfenbuttle, are joint foversigns, and have the displation of its alternately. No university in Germany has made a better figure, or had more learned Lutheren protessor than this. The three finaulties, on account of which it confers degrees, are divinity, law, and physic. Among the manuscripts in its library, there is an antient Henrew pentacuch, in two volumes, for which some Jewish rabbies offered a great fund, The town is encompassed with walls, distone, and amparts; has three churcher, and a sine substep, called Ostendorff. The faculty of divines here was charged with giving their opinion in the case of the marriage of the princess of Brunswic-Wolfenbuttle, with the late emperou Charles VI. that a protessant princess might, with a fase conscience, embrace the Romish religion; but they refuted it in 1708, by a public declaration, at a poolish foregery.

the

futed it in 1708, by a public declaration, as a popular toggery.

The abbey of Gandersheim is situated on the borders of
the bishopric of Hildesheim, eighteen miles south-west of
Goslar, which was founded by aduke of Saxony, in the ninth
century, for ladies of noble families 1 and its first abbesses
were successively the founder's three daughters. It is now
greatly reduced, and depends on the duke of BrunswicWolfenbuttle, who maintains an abbess, four canonesses,
and eight canons. Though this abbey is in Lower Saxony, the abbess takes her feat among the prelates of the
Rhine. It embraced the Refonation in the firsteenth
century, to that the abbess and nuns are Lutherans. Its
balliwick is about two miles in compass, and contains
about twenty villages. There is a castle in the bailiwick,
which is watered by the river Ganda, that runs into the
Leine.

In this principality are also the following towns and places; t. Scheningen, which has a superintendency. 2. Konigstutter, on the rivulet of Lutter. Here is at prefent a Lutheran monastery, governed by an abbot, a prior, and four conventuals. In its church lie butied the emand four conventuals. In its church lie butied the emperor Lotharius, his emperêr Richenza, and duke Henry the Magnanimous. It takes procedence of the other convents in the principality, and fends a reprefentative to the diet and the grand committee, 2. Supplengenbury, a commandery of the order of St. John. 3. Calvorde, on the Ohre. 4. Versfeld, a market-town on the Aller, is the feat of a balliwick and superintendency. 5. Hesen. 6. Marienburg. 7. Mariential. 8. Seefen, the feat of a superintendency and balliwick. 9. Gittel. 10. Julius Halle, ...

The most remarkable places between the Weser and the cine are, a. Holumunden. 2. Stadt-Olendorf, the feat

Leine are, s. Holsmunden. 2. Stadt-Olendorf, the feat of a fuperinteadeury. 3. Amelunaborn. 4. Escherhaufen. 5. Otterstein, which gives name to a balliwick. 6. Tursenberg. 7. Greene, on the Leine. 8. Bevern, a market-town on the Bever. Mecklesburg duchy is bounded by Pomerania on the saft, by the hishopsick of Lubeck, and the territories of Brunswic and Lunenburg, on the west; by the electorate of Brandenburg on the fouth, and by the Baltick on the north. It is farated between fifty-three degrees, ten minutes, and fifty-some degrees degrees forty minutes, north latinutes, and fifty-four degrees, forty minutes, north lati-tude; and between thirty-one and thirty-four degrees, thirty-five minutes well longitude, from the island of Fereing an hundred and thirty-five miles in length, and about nanety at its greatest breadth. It is well watered by feveral fine rivers and lakes, and contequently well supplied with sish. It is likewise extremely fettile and rich, and yields plenty of corn, hemp, timber, patture, theep, game, cattle, horfes, wine, butter, cheele, flax, fruit, In this duchy the peafants are in a state of villainege.

but the nobility only very dendderable privilence, the flates are composed of the nobility and towns, in the dear, which are fearmoned annually, and held simmetry at terraburg and Malchin. The inhabitaries of this desarray are modify Lusherane, under the direction of their super-intendents. There are after force Calvinia and Remain enthelics.

The whole ducity is divided into three circles; with the circle of Storgest; the principal places in which are the following:

Schwering, in the circle of Mecklesburg, is the aspiral of the deathy, and a very pretty town, being Stantad on a great lake of the name, eighteen miles Stantad on a great lake of the name, eighteen miles Stantad on a great lake of the name, eighteen miles Stantad on a stantad of Redeck. It was the fee of a bithey, traifflated hither from Mecklesburg, in 1002, and fuffings no the archibling of Bremen, but converted into a feesing principality by the treaty of Olasburg, and granted to Adolphus Frederic, disks of Mecklesburg, and granted to Adolphus Frederic, disks of Mecklesburg, and an equivalent for Wifmar, which was to remain to the Swebes. Henry the Llon, that of Saxony, who fortified the town, beilf and endowed a sufficient lake, into a piece of the lake of Schwerin, where the then bithen paptised then the men of Schwerin, where the then bithen paptised thems; from whence that part of the lake is fall called the Font. The duke of Mecklesburg has his reddence here at a castle, in which he imprisoned the burgometers of Rostock, in 1716, and, after fix months confinement, fet them at liberty, on renouncing, upon each, their immunities and privileges.

Sernburg, a small town on the lake, is one of the places where the diets are held. Boitzenburg, on the Baitze, has a priory and a toll on the Elba. Panchim is finated on the Elbe, which divides it into Old and New Town. It had once a castle and a mint, and has fall two charches. Rhena is a finall town on the Radegast. Greves Mulen, Kropeliën, Kriewits, Hagens, Newstadt, Boko, Bren, Wittenburg, Grabo, and Lyzas, are all finall towns of little confideration at prefent.

The town of Gadwerin, with the customs, and all towns of little confideration at prefent.

The town of Gadwerin, with the customs, and all the country on both fides the Elbe, for fiven theodism of the dukes of Mecklesburg, who are fill polified of it, together with the customs, which are failed to the notifier of the part of it, returned back to the Brancheburg and the part of it, returned back to t

the administration upon themi till sies demestion fettled, willell was in 1701: Its datts in adermed all most elimint gardens i it in grind office with four fit and it fit is in the first is all the element.

2. Secribe is a first town between the Financia, Chipin leite, g. Explicit is fitted on a fitte of the runnin.

4. Plet is but a labe front which it receive application. g. Dobbertin is a Lethermi conventioning in the convention of the contract of the convention of the c

name. 4. Plee is of a lake front which it receives les appellaises. 5. Dobbertin is a Ludwersen coursest for indices.

6. Reflect, a free imperial city, and one of the Hands towne, flands of the river Warna, which falls eight alled below it into the Baltiek fea, and is feveneum and of Guffrow, and appears by the charter, dead in 1:50, by Burvines, king the Hertil, and, as appears by the charter, daned in rank modelled by the lang of Lubetik. This town being, will the ducty, feined by the Imperialifis to 1629; was realmen by the Swedes in 1:523; and after the treaty of Mundler they built a feet here, and by their garrifon demathed a toll of sil flips, which very much lefened the trade of the town, and induced many of the merchants to remove the Mecklemburg ministers, who denleavoured as have it re-deaffed at the treaty of Nimeguena, has without effect, Mett of the town was burnt in 1677, but is flatter-built with more magnificence. April 2 is was feital by the Swedes, on pretence of its the ming fermished their memies with provisions; and in 1215 the dake of Mecklemburg, not being strong enough to defend it against the Desse, agreed that, on condition of their to interfering with the civil government, they should have a garrifon and magnisine here.

This city is divided into the Old, New, and Middle Towns, consisting of fourteen wide long farms, before smaller, and many thouland fately houses. It beath of feven remarkable things, each feven in number: fiven doors to St. Mary's church; feven large street centering in the market-place; seven gates; seven bridges over the Warma; seven towers on the town-hall; seven great bells belonging to the town-clocks, which they church is feven harge freets centering in the market-place; seven gates; seven bridges over the Warma; seven towers on the town-hall; seven great bells belonging to the town-clocks, which they church is feven town on a year, before the commodity, is beer, the finite common a year, before the proper of the proper of the proper of the proper of the prope

but on matters extraordinary, a lower house of one hundred common councilmen, chosen out of the trades, is summend to give their opinion.

The university, one of the best and largest in Germany, was founded in 1,119. The city, being at half the chapter with the doke, chuses nine of the eighteen professors, and out of them, their Rector Magnisseus, who appoints their meetings, takes care of their treasury, i.e. During these two last conturies, this has been one of the most flourishing universities in Germany. The bishop of Schwerig was, by charter, made perpetual chancellor, who deputed one of the oldest professor vice-chancellor.

7. Tefaien and Laoga are both fituated on the river Reckenits. 8. Schwan, on the Warms. 9. Iwenash, near Stavenhagen. 10. Dargem. 11, 12, 13, 14, 15, 16. Goldberg, Penzilon, Stavenhagen, Testro, Newkalden, and Groyen, are small inconsiderable towns. 17. Wahren, on the lake Calpin. 18. Robel, on the lake Maritz. 19. Malchion, on the borders of Pomerania; it is one of the places where the diets are held. 20. Solta. 21. Ribnits 1 has a numnery for ladies, of the order of Sc. Clere.

Stargard circle contains, 1. New Brandenburg, Stuated on a lake; it sends a deputy to the lefter committee of the States. has a grammar, school. two churches. a furnering.

Stargard circle containt, I New Brangenburg, masted on a lake; it fends a deputy to the leffer committee of the States, has a grammar-ichool, two churches, a fuperintendent, and is celebrated for its hop trade. The neighbourhood is fingularly pleafant, and the infinitenant remarkably healthy.

2. Old Stargard gives name as a lordship and eincle.

3. Friexland is a town on a lake, which gives name to a bailiwic. 4. Eusterbergh, a small town. 3. Wesembergh is the principal place, in a sertile territory called Pomel, 7 O

the ishabitants of which are extremely beneview and carriable. A. Arollas dives mane to a branch of the dead family, and is fluested account marthes. It conflicts I flow and Old, which hands at a finell diffence from no interfect the rimes aclose, which is at the letter, is the martine.

7. Negate, a bailitie. 2. B. Miro.

9. The townsof Wilmer fands among from, on a bay of the Balts, bentam Roftock and Lubeck, swenty five miles well of the former, and ant of the latter, and intyfive likes well of the former, and ant of the latter, and intyfive likes well of the former, and ant of the latter, and intyfive likes well of the latter, and intyfive likes well of the latter, and intyfive likes well of the latter, and interfect likes and the latter, and interfect likes like likes and the latter of the latter. In the standard likes and the half are the plan of Lubeck; the fine is a free from became — of the latter in plan of Lubeck; the thirty for the latter. If the latter is for became — of the latter is on the came — of the latter is on the came — of the latter is the latter. In the been feveral lines taken by the Danes, but quain reflected to the funder. In 1600, its magazine. Were blown up by lightosita, mot of the anciety defined, with one of the menty defined, and the Danes, and houses damaged, thirty people hilled, and two hundred wounded. In 1911 it was beinged by the Danes, ind in 1916 furrendered to the standard wounded. In 1911 it was beinged by the Danes, ind in 1916 furrendered to the allies, Danes, Branishburgers, Honoverians, Saxons, and Ruffing, who found in it three hundred, wannon, a voil quantity of bombs, grenadies, had ammunitien. In 1920 it was agrifted by resety to the Swedes, on condition that the walls and fortifications libraid be deauolifhed, in which flats it now remains.

The house of Mecklenburg is divided into two brenches, namely, Schwerin and Streitts. The latter commenced with dule. Adolphus, Freederie II, younger bother is out most gracious bycereign, Sophia Charlotte, who was born Ma and erected a church, the only one in Hamburgh for above three hundred and fifty years. It was first declared above three hundred and fifty years. It was first declared a five, and independent city in 1220. The emperor faximilian, in the diet of Augsburgh, declared it free and imperial. Since that time, Framburgh has been invested with tovereign power within the first jurisdiction, like other imperial cities; and in the year's ", was accordingly summaned to the diet of the chap, hough, as both Denniark and Holltein protes of area, " the Hamburghers have not yet enjoyed their light, witing and voting there. Great privileges have, not a got their keeping alight-house the Helgoland, alove-nearloned, which is four German miles within the fee; they are also excused paying toll at Stade to our king, as Elector of Hanover; yet the kings of Denniark have fince compelled them several times to pay tolls at the castle of Gluckstadt. They, derived their chief security from the continual jealousies between Sweden and Denmark; but la 1712,

on steaders of the perflore wer, the Danes, Multivious and Language having their similes in the neighbourhead, made their separate demands, with threate in cut of of result in and they were obliged to compound with the fact for tradit in and they were obliged to compound with the fact for two hundred and thirty thoughout defines, and with the factories contested manney from it fines that At the fact from it received one hundred and twenty thoughout course; in though and traditions are the fact from it force, two hundred and twenty thoughout one Danes to by, or the factor and twenty thoughout one Danes to by off the face, two hundred thoughout at another time; one hundred and wighty thoughout in the ser wish Swaders, and two hundred and religible thoughout or wish Swaders, and two hundred and religible thoughout crown of them on fome other presences. In thy if the city was visited by a plague.

It is very advantageously fittated, both for demands and trave, in the face of a communication with Landers the Clerman occas here, they have a channel bean to the Trave, for the false of a communication with Landers the Clerman occas here, they have a channel bean to the Trave, for the false of a communication with Landers the Clerman occas here, they have a channel bean to the Trave, for the false of a communication with Landers the Clerman occas here, they have a channel bean to the Trave are within forty miles of the Baltie, whereas it is upwards of four hundred miles round Jut-land and the Soaw, and without the obfructions if the total of this place exceeds that of any city which has no kingdom or republic annexed to it, and the and

veiles in the Trave are within forty miles of the Baltis, whereas it in upwards of four hundred miles round Jutinut, &c.

The trade of this place exceeds that of any city which has no kingdom as republic annexed to it; and the apports and imports of it fingly exceed those of many freat kingdoms, even in Germany. The Eibe, and many great anygable rivers that fall into it, after a course through some of the largest, richest, and most trading parts of Germany. Furnish it with all the product and manufactures of Austria, Bohessia, and Upper and Dower Saxouy. By the Haval and Spree it has trade with Brandenburg electorate; and by a canal from the Spree to the Oder, its commerce extends into Silesia, Moravia, Poland, almost to Hungary; so that it has meng manufactures. &c., for exportation, than most cities in the world. The principal exports (chiefly to Great Britain) are of various kinds of different countries; particularly Silesia diapers, and the lawns of Mifnia and Lustaia, German linen siem Oftunburg, Lunenburg, &c., Hamburg dowlat, and other strong linens; from Lower Saxouy; carfe linen, harras, crocus, hinderlands, and many other forts from Lower Germany, linen-year from the fame countries) timplates, braft, iron, and steel wire, chiefly steen. Upper Saxouy; clapboards, pipe and loggited these upper Saxouy; clapboards, pipe and loggited these which they import from ahroad, the chief are the woollen manufactures of England. The value of such from Yopshire only is said to be above one hundred thousand pounds. The article of English shekings formerly came to above twenty thousand pounds around its facility have one countries the merchants, having great privileges, make an extraordinary figure here. They appear as a body, hold a court, with particular jurisdiction and powers among themselves 1 and as they are called in London the Hamburg company, so are they here called in London the Hamburg company, so are they here called in English has or society. They have a church and munifer of their cwa.

themsergs; and as easy are caused in London the Hamburg company, so are they bere called the English haus or society. They have a church and minister of their own. The English are numerous, this being still the this on the English trade. They have the same privileges to the English trade.

The English race. They have the same privileges to the English trade. They have the same privileges to the port herrings, as the Dutch are allowed.

The Hamburgers drive great trade to Russia and to make the privileges to the north of the empire, and to Poland they have great returns, not only in sinen, yarn, and sine slaw, but in honey, wax, annifeed, lintseed, drugs, sec. all by the Oder into the Spree, and so into the Elbe, in the marquisate of Brandenburgs and therefore the Dance cannot interrupt this trade, nor obtain any part of sec. Above two hundred English ships slone come into this karbour in a year, though mostly from Spain, Portugal, and Italy, from and to which the Hamburg merchants pay them double the fraight they do for their own ships, because the Arghish being free from the Turks by their Medigeranean passes, they saw more than that by infurance. Indeed they, in 1751, aimed at taking much of this trade into their own hands, on their own bottoms, &c. but happily the king of Spain so deeply resented their Treaty with the piratical States of Barbary, and especially, furnishing them with warlise stores, &c. that he not only inhibited commerce with it inburg, but laid an embargo on

from pay most facts trade with the Battarians, the difference in Model.

Hamburgh has a great flore in the Greenth 4 whale fifters; and the dire and whale borns is a manufacture maininged by its people. It endmonth that fifty or flary fling a year in his twist; to that they export great quantities or old and flow, the depth they begind the Dutch more than their own ships loughty. In war, is fits but these of force to corrowy the merchanterin, and may be find to liftying both at land and flow, being able to arm twelve, or fourteen thousand many, budies having a confiant partition of near two thoulfand. It emporer great quantities of beer breaved here, and hath it with gianthictories, yie, wearing of descaffed, breaches, valvets, therether fifts, and fugations, here being as good loof fugar as is made in London, though isolated they are forced to bey their Mufex valid hagest belong it was forced to bey their Mufex valid hagest belong it was they are forced to bey their Mufex valid hagest belong it was the statement of the flow of the pay to the forced to bey their Mufex valid hagest belong it was the statement of the flow of the pay to the flow of the pay to the force of the great it made in London, though isolated they are forced to bey their Mufex valid hagest belong a free city, and without different city of the statement of the major in the diet of the empire. The has protentions also as have being a free city, as not us be fashed to the empire like other fragerial cities, and on that account always refuse to pay roth it is affaits of Germany in case of a war, but, but the superor, wilely avoiding to embarrate the mid to a flater, because all their taxes and impode are granted by the barghers, without who force on fent to fusion or the surplers, without who force on fent to fusion or the surplers, without who force on fent to force the empire, because the surplers to the fusion of the fusion on penny, and because the managers of the finances and laying taxes. ly farot only land, for the fake of trade, is certainly their greatest focurity.

The fenace castifits of four burgomasters, of whom three
are lawyers, and one a merchant, (two if whom preside
alternately for a war), twenty four fenators, via. eleven
lawyers, and thireen merchants; four fundics, who are
all lawyers, and give their opinions as our judges do in the
house of lords, but have no vote; and four focretaries, of
whom the principal is called protonoutary: all thee are,
upon every vacancy, chosen out of their own bodies.
Here is also a court of Admiralty, consisting of a burgomaster, four fenators, is merchants, and two masters of
ships, assisted by a feeretary, and a water-bailes. Their
law is the civil, or Justinian, and, in criminal causes, the
statutes of the empetor Charles IV, with which they have
likewise their own statutes, but both pozzled and obscured
by numberless comments, and contradictory precedents.
The first or chief of the three colleges is that of the OberAlten (or principal elders), which consists of the city; has
great power, like that of the tribunes at Rome; can degreat power, like that of the tribunes at Rome; can de-mand of the femate to call a convention of the hurghers, mand of the femate to call a convention of the burghers, and even impeach a fenator, and require a conference with the fenace on that or other occasions. When the three colleges, cosissing in the whele of one hundred and eighty members, are affembled, and the fenate at the same time, which is in all extraordinary cases, particularly, for laying taxes, the gates of the city are flux, a strong guard is drawn up before the fenate house, and centinels posted at all its avenues. Each ward debares and votes by it-felf, and, when the question is put by the senate, the majority of the sive determines it. Their ecclessificat government, of which the senate is the head, is managed by a consistion, or convocation of the passers are descenavernment, or which the kende is the nead, is managed by a conflictory, or convocation of the pattors, archdescous, and deacons, of the five principal, and feven finaller charches or chaptels; is all, 20.

The principal religion is the Lutheran, and the Calvinits were obliged to go to worthip at Altena till within

favour net grabate to the Rumen estrette, mental when they want to endiperated in 1719, word a public attempt of their pricets to make practicus in the stry, their a web furinged and demolified a cheed that was beliefing hable by the Imperial widelet, together with the half minister's house; for which the Hamburgers being threatment by the emperor (Charles VI.) with military estention, they were forced to find another house and chool at their ewe capture, and two of the burglers, to Vienna, to hearth emperor's parts, is after which, he rook the citizent in its facet, and two of the burglers, to Vienna, to hearth emperor's parts, is after which, he rook the citizent in its facet, and two of the sense of the Danes. The are obliged, however, so sllow the Roman entholies they call a private confection, previous to the holy communion, though it differs in action from out that is general, and the abilitation the lame; but even the poor of the confection, previous to the holy communion, though it differs in action from out that is general, and the abilitation the lame; but even the poor of the copple here are forced to give a fee to the price for fuch confection, previous to the holy communion, though it differs in mention; rich, and lives great families and the slengy a competent minimenance.

The time of Hamburg is justly great for its care of the poor, here being mean holpitels, in proportion to its bigness, than in any other proctant city in the cape of the price of Hamburg is justly great for its care of the price, then being mean holpitels, in proportion to its bigness, than in any other proctant city in the rope; orn, in particular, for organical pounds. Sometimes they have above three handred infants strond at nurse, who, when able to dreft themselves, are taken into the burge. The boys that are qualified, are put out to trades; and the city, after they can read, spink hit, &c. are sent to service, The building is decent, but not very cothy, and borders on one of the cane in a community to the price. The build

and damage by fire. The houses here are said to be about thirty thousand.

The churches are antient, large, and handsome fabries, but open thoroughfares all day long, and in some there are bookellers shops. Here are size lotty steeples, ome of them covered with copper, which make a grand appearance, though the frames are only of timber. The great pire of St. Peter's is the highest in the city; that of St. Nicholas is supported by large gilt globes; St. Michael's steeple is four hundred feet high; Sr. Catharisis's has a stately front, with abundance of statues in alches; and the steeple is formed of sundry lanterns, diminishing gradually to the last, which supports a spire, like St. Bride's in Fleet-street, but much taller. Round the middle of its steeple is a crown richly gilt. In pulpit is of white supple, curiously carved, and adorned with squres, and other ornaments of gold; and its organ, rectoned one of the best in Europe, has six thousand pipes. That called the Thum, or Dome, was the cathedral while the town remained an archbishopric, and was built about \$30. The spire, and tower that supports it, are near three bundred and sixty seet high. There still belong a dean and chapter to it, though secularized, from whose court there lies no appeal but to the imperial chamber at Wetslar. Many of the counts of Schawenburg and Holstein are boried here, whose names are write in a fire realeous, with their of the counts of Schawenburg and Holftein are buried here, whose names are writ in a fair catalogue, with their other benefactors, and hung up in the body of the church.

This enthedral, with the chapter, and a large number of houses belonging to it, are under the immediate protection of his Britannic stajetty, as histop of Bressen, and independent of the city jurisliction. There are five other very large chartens here, and eight leffic churches of chapter of the stage of the city jurisliction. There are five other very large, thereton here, and sight leffic, or university, here, well endowed, and furnished with his able professor, there were lately the learned Fabricius, and M. Hubster, the geographer.

The senate-house and town-hall is an antient, targe, and noted with the states of concerns.

of whose were lately the learned Fabricius, and M. Hubiter, the geographer.

The fenate-house and town-hall is an antient, targe, and noble fructure, adorned with the statues of emperes, and the Nine Worshies; and a ballding is lately added for their new bank. Their exchange is sine, but inferior to use in London; it is opposite to the feare-house. One of the square is planted with large break, and the other covered with a ball, where the elders, or council of commerce, meet: at the other and of it is the public crane. On the street before the town-house the lawyers have a fest of exchange, as the public ministers have at an emigrant to shoot in the same signbourhood. The emperor, and several princes of Germany, have their own post-house he princes of Germany, have their own post-house here, managed by persons of their own amointment; but the post house for England and Holland is the only one that can properly be said to belong to the public. The British esident and company have a state hall here boiled by themselves; and the resident has a power, of judging fuits and disferences that arise among his countrymen. There is an opera or play bouse here, chiefly for the entertainment of the resident, and other foreign gentry, of whom here are some from most trading kingdoms in Europe.

This city, which is almost as circular form, and five or fix miles in compass, is naturally strong, a great part of it lying open islands. The walls and fortifications that lie open to view, are covered with graft, and slanted with row of treetly so high, that none of the house are to be seen without that side of the walls which is next to Altena. It has sing state, and three entrances by water, viz. two from the Elbes, and one from the Aliter? It is divided into the Old and New city by a canal, and surrounded by a sinc high wall, with twenty-three bulwarks, besides other out-works in the modern way, and a very dam ditch: there is also a noble line, or out-work, with other from the town, towards Altena, about are large streets of poor

The North and South Elbe, into which two channels that river is separated, two or three miles above this city, having, with some smaller ones, formed divers beautiful slands towards Harburg that belong to his Britannic majefty, re-unite in one channel, about fix miles below the city. Towards the east it is washed by the little river Bille, and towards the north by another little river called the Alfter, which forms a very large bason just without the town, and another, though not so large as that, yet of at least one thousand feet square, within the walls of it; after which, it drives the public mills, and, passing by several sluices and canals through the whole city, falls into the Elbe. Here are eighty-four bridges, thirty-eight watermills (beddes fix wind mills), and fix suices; and it has takewife fix large markets. As the tide here slows in canals through most of the chief streets, and runs four lesgues above the city, that is, twenty-two from the mouth of The North and South Elbe, into which two channels above the city, that is, twenty-two from the mouth of the river, the town is freque-tity damaged by fpring-tides, and many houses and families have been ruined by temand many noutes and ramines have been rulned by tempeth, that, especially with a north-west mind, drives the fea up into their channels; of which there were two melancholy instances in 1651, and 1719. Though the harbour is so commodious, and the river so deep, that large merchant-ships come up to the walls, yet those of an extraordinary size anchor at the New Mills, four miles between the contractions of the contraction of the second contractions of low the town, where they unload in smaller veffels. forcets are generally erooked, but pretty wide, and outfirje all Germany for high and flately houses, most of them built of brick. The usual way of reckoning here, is, by what they call flivers and lubs; forty-eight of which make a dollar, or four inillings and fispence. It is the custom that, when a citizen dies, he must leave the tenth of his chate to the city; and foreigners, not naturalized, must pay a certain fum annually for liberty to trade.
Hamburg has a diffrict belonging to its jurifdiction for

twelve miles round, which abounds with excellent perfures, intermined with feveral confiderable villagus, and noblemens feats. It comprises the bailiwicks of Rutsenbuetle (of which more heredter), Bilwerder, Ochfenwerder, and Eppendorf. The four cantons of Alberganes, New game, Legendorf. The four cantons of Alberganes, New game, Kirchwerder, and Rofacke, are enjoyed by the Hamburghers, in common with the city of Lubeck; as Is affe a calle, with a little town and bailweigh called Bergadorf, of which they have been in possessing the four bandred years; and they pot in a bailiff alternately, and garrifon the castle alternately with an equal number of foldiers.

The merchants of this city are affable and civil, but soo nice in ceremony and punctilio, and too tedious and fulfome in their compiliants. They as fall to be very frugal in their own families, but altogather as liberal when they areat strangers. They mightily affect gardens at the city gates, much is the talls of those of Holland. Coaches are so numerous here, though not view necessary nor concentrate or confiderable shopkeeper without one: and it is observed, that here are ten times the number of backney coaches now, that there was an hundred years ago. The common carts here are only a long pulley, like what cannot carts here are only a long pulley, like what cannot, and drawn, not by house but men, of whom a dozen, or more, are founctimes liked to those machines, with sings across their shoulders, drawing a fat of yarn or linen of two tons weight.

m &

more, are fometimes linked to those machines, with sings across their shoulders, drawing a far of yarn or sines of two tons weight.

The graduates in law are very numerous here, though hardly a tenth gare of them can be employed in this sense, or at the bar. The poorer fort of them, that cannot make a figure there, are constant walkers at squeral processions, for which they have a see, is abye, likewise, such of the senators, principal elders, divines, and regular physicisms, as therein assist. For the encouragement of ingenuity in mechanicks, every artificer who can perform a piece of work beyond the skill of his brother artist, is a mide free of his company; a benefit not otherwise to obtained but by servitude, or by marrying a freeman's widow, or daughter, or else at a very great expence. By the care of the magnitusey, as well as of an inserior fort of beadles, who have a reward for what beggars they pick the care of the magnitusey, as well as of an inserior fort of beadles, who have a reward for what beggars they pick on none to be seen in the street; though this is afferibed in great measure to the manufacture of such sockings eracked here, which is sufficient to employ all their poor, were they more numerous than they are. There are parish officers employed to carry wood to be carded and spun, and worsted to be knit by the poor at their own habitations; from whence they also settle their work every Saturday, and pay them what they have earned. The ladies here are generally attended as church, not by a socurian, but by a servant maid with a book, hanging by a filver chain, on one arm, and, if it be cold weather, with a brais stove on the other.

The langman's bouse is the common prison of this place.

other.

The hangman's boule is the common prison of this place for malefactors. After sentence is pronounced on them, which is always on Friday (as the execution is on the Monday following), they are carried, not to a dungeon, but to a bandsome upper room, where they are allowed a good bed, with all reasonable comforts suiting their condigood bed, with all reasonable comforts suiting their condi-tion, and constantly attended by some elergyman that has a living in the city, a duty which they are all obliged to perform by rotation. As by their laws no criminal is punishable here without pleading guilty; they have sive degrees of tortone to extort such consistion, which are ap-plied one after another, in proportion to the strength of the evidence in support as the accusation. The interlocu-tory sentence for this torture is only general, but the de-gree of it is locked up in the breast of the judges, who are always present, with a clerk, to write down the consession, at a table with a curtain drawn round it; so that they can hear and speak to the tortured criminal, without being hear and speak to the tortured criminal, without being eye-witnesses of the cruelty; and can mitigate or extend it, according to the strength or other circumstances of the

There is a famous walk in this city, that runs by the reat bason of the Alster from the play house to the heart f the city: It is called the Maidens Walk, is one thouof the city: It is called the Maidens walk, is one thou-fish feet long, and above twenty broad, railed in and bordered on each fide by a row of large high trees. On one fide is the water, with feveral flairs; and on the other a row of noble houses. Here are several convents, or cloyters, remaining in this city, which, being secularized, are now Lutheran; one, in particular, the tenure of whole foundation is continued to this day by offering a glass of

wine to every malefactor that is carried by it for execution. Both strangers and natives, of the best fashion, carouze at an odd kind of a tavern here, kept in a public bellar, or cave, which has a prodigious stock and vent of old hock, &c. brings in a considerable revenue to the state, and is under the direction of a deputy, kept in it by a scleet number of the magistrates.

To conclude our account of this famous great mart, or petty Republic, Mr. Roberts fays, in his Map of Commerce, that corn is measured here by the Schepel, of which righty-three make ten quarters English; and that one hun-dred Hamburg ells make but forty-eight and an half in London. The cities of Hamburg and Lincoln are ob-ferved to be exactly in the fame degree of latitude, but it is confiderably colder in the winter, and hotter in the funimer, at the former, than at the latter, for a natural teafon, we suppose well enough known.

Hildesheim diocese, which is forty miles long and thirty

broad, is fituated between the rivers Leine and Ocker, and is bounded by Halberstadt, on the north-west. Lunenburg-Zell, on the north; Gruleenhagen, on the fount, and the other parts are circumseribed by the duchy of Brunfwic. The bailiwic of Hundersuch lies separate from it, being inclosed by the principalities of Calenburgh and

Grubenhagen.

On the Guth fide of the Gufe (which ties to the Guth.)

On the fouth fide of the Gofe (which rifes to the foutheast of Cellerfeld, and falls into the Ocker near the conent of Centertus, and tains into the Over near the con-fines of Hilderheim) flands the imperial city of Gollar, which, though independent of the Brunfwie family, is nfually deferibed in this country, because it is furrounded with their dominions. It is a large antient city, twenty-two miles fouth eaft of Hilderheim, twenty-five fouth of Brunfwie, twenty-fix welt of Halberstadt, and forty north-well of Gottingen. It was built in 1201, by the emperor Henry I. who had a palace here, and also fortified it. Gostar enjoys the same privileges as other free imperial cities, befides an exemption from tolls in all markets of the empire, but three: in all the imperial writs, it is called, Nobile Membrum Imperii. The houses are covered with flate. It is fituated in a valley furrounded with mountains, in which are mines both of iron and filver, viz. those of Steinburg, Hertz-berg, Ramelsberg, Klocken-berg, &c. It has been the relidence of the emperors, for the take, it is supposed, of hunting, and its treasures under ground; and because they have often assembled the states here, it has been called a palatinate city. The inhabitants are employed either in digging the mines, or in cleanfing, tempering, and vending the metals and minerals of all forts, that are dug out of them.

In the year 1235, the emperor Frederic II. with confent of the flates of the empire, granted to Otho I. duke of Brunswie, the tenth of its mines. The house of Brunswie has pretentions to this city, and feveral of its princes have endeavoured to effablish them by store of arms, but hitherto in vain. The protectorthip is in the hands of the king of Great Britain, as elector of Hanover, alternately with the duke of Brunfwic-Wolfenbuttle. In this city, Barthold Schwartz is faid to have different the art of

making gunpowder: The Lutheran is the only religion tolerated here.

Schawen is a lordfhip, fituated between the principality of Halbertfladt, and the county of Wernigerode. It is now vefted in the duke of Brunfwic, though it formerly belonged to the abbey of Walkenreid.

Nordhaufen is an imperial city, fituated on the Zorge, about twenty one miles fouth eaft from Goffar. It was formerly one of the Hanfe towns, is celebrated for its curious works in alabatter aid marble, and carries on a great trade in the diffilers branches. In the diet of the great trade in the diffiflery branches. In the diet of the empire, it has the tenth feat on the Rhenish bench of imperial cities, and the fourth among those of Lower Saxony.

The inhabitants and magistracy are Lutherain; to the latter of whont the elector of Brandenburg, in 1717, trans-

ferred all the rights and prerogatives to this city, in confi-deration of being paid the fum of fifty thousand rix dollars, ... Muhlhausen, another imperial city, is futuated on the Unftrut, forty miles caft of Cassel; it contains two Lutheran churches, with a Roman catholic foundation for Augustine nuns. It possesses the ninth place in the bench of imperial cities in the diets of the empire, and the third in those of Lower Saxony. It was formerly one of the Hanfe towns, and has, at present, a tolerable trade. In the sour-teenth century this city purchased of the emperor Lewis, the office of imperial judge within the city and its pre-

Blankenburg and Reinslein counties are usually confidered together as one. They are so called from their towns; and lie in the east part of this duchy, about twentyfour miles from fouth to north, but narrow at both ends; and not above nine miles where broadest. It was much and not above nine miles where broadeft. It was much larger once, when it included the country of Wernigerode on the west. These counties (together with Queidlinburg; Hohenstein, Stolberg, and Schwastzburg, in Upper Saxony, where they are described), were formerly one province, and then called Hartzingow, i.e. the Hercynian country, having been a part of the Hercynian forest, now called Hartz, of which there still remains great woods and waster, they have the west was the state of the second country. parks, that abound with game. Beinstein was claimed by the elector of Hanover as a vacant fief, but feized by the late elector of Brandenburg, as holding of his principality of Halberstadt. These counties are fouth from Brunswic; fouth-west from Magdeburg, west from Halberstadt, north from Thuringia, and east from Hildesheim. It is so cold a country, that though the fnow lies on its mountains till Midfimmer, the lands produce but little corn; but the valleys are filled with cattle. The inhabitants are ftrong and vigorous, and many of them live to one hundred or one hundred and ten years of age.

There are iron mines in their mountains, one of which, called Broeken, or Brockfberg, the Bruélerus of the Latins; is reckoned the higheft in Germany. Betwixt Blankenburg and Elbingerode is a remarkable cave called Buman's Hole, from its difcoverer Buman, which has a narrow entering. but none were found the end of it. entrance, but none ever found the end of it, though fome of the miners have affirmed, they have gone as far in it as Goslar, which is twenty miles. Large bones of strange creatures have been often found in it, which the neighbouring gentry keep for rarities; and, among others, the skele-ton of a giant. There are two great tocks near the con-vent of Michaelstein, and not far from Blankenburg, which represent two monks in their proper habit, as nicely as if they were carved out, and therefore are called the Monks Craigs. Many cattles are found in these countries on the tops of inaccessible rocks, and some actually hewn out of the rocks, but they are not regarded. The most remarkable of them is that near Brockfberg above-mentioned, which the inhabitants fay was built three hundred years before Christ, by the Chauci, a branch of the Saxons, who had an idol and temple of Saturn here, which were destroyed by Charlemagne, who called the place Hartzhurg. A falt fpring being discovered at the bottom of this hill in the time of Julius, duke of Brunswie, he built a finall town for the workmen, called Julius Hall, which is now grown rich, and large, by their trade in falt, copper kettles and pots, wire, &c. The people of this country are faid to be the dulleft dolts in, all Germany, and mere

bigots to the infitutions and customs of their ancestors.

This petry country was left by the late duke Anthony-Ulric, of Wolfenburtle, to his fecond and favourite for prince Lewis, to make him some compensation for the right of primogeniture which he had newly introduced into his family, to that fon's prejudice: for the Brunswic princes had been long used to a partition of lands in their families, till that cullom, so permicious to great ones, was 7 P

SECT. III.

first abolished by the Hanever branch. As this country neither gives its possession the college of princes at the diet of the empire; the then duke of Blankenburg, now duke of Brunswic. Wolfenbritte, in order to procure himself both these privileges, made a treaty with the elector of Hanover, whereby the latter yielded him the vote and seat which he enjoyed in the diet for his duchy of Grubenbagen; and the duke engaged never to vote at the diet, but in conformity to the senting of the elector; but after his decease the vote and session for Grubenbagen reverted to the elector.

elector.

The most noted town here, is Blankenburg, eight miles west of Queidlinburg, and south-west of Halberstadt, and forty south of Wossenbuttle, on the frontier of the principality of Anhalt. It is but a small town, the houses ill-built, and inconvenient. The duke, who has a castle here, has offered the inhabitants materials for building gratis, and done all in his power to inspire them with a safe, and the other arts, but without success.

here, has offered the infinitiants materials for building gratis, and done all in his power to inspire them with a taffe, and the other arts, but without success.

Ranzau, a county, is about ten miles long, and fix broad, and has a foil tolerably fertile. It was formerly a bailiwic, but erected into a county of the empire by Ferdinand III. in confequence of a fettlement made by count Ranzau, stadtholder to his Danish majetty, that it should devolve to the royal family of Denmark, upon sailure of issue materials. Elimshern, on the same river, are the only places of any note here.

any note here.

Ratzeburg principality belongs to the Strelitz family, but does not contain any place worthy of notice, except the town of Ratzeburg, where the regency, treafury, and confiftory, are held, but which belongs to the duchy of Saxe-Lauenburg; and the small town of Sconberg, which

gives name to a bailiwic.

Schwerin principality is furrounded by the duchy of the fame name, and the lordfhips of Wifmar and Roftock. It is twenty miles long, fix broad, and was formerly a bishopic, but secularized at the peace of Westphalia. The only places of any consideration are, 1. Schelffe, a town contiguous to Schwerin. 2. Rhun, which gives name to be seen and the second of the secon

bishopic, but secularized at the peace of Westphalia. The only places of any consideration are, 1. Schelffe, a town contiguous to Schwerin. 2. Rhun, which gives name to a bailwic. 3. Butzo. And, 4. Wahrien. Haldon county lies along the Elbe, is eight miles in length, the same in breadth, and borders on the territory of Hamburg. It is very fertile, abounds in grain, fruit, cattle, and fish; has its own courts, ecclesiastical and civil, and was ceded in 1731 to the elector of Brunswic. The inhabitants are Lutherans; the revenues amount to ten thousand rix-dollars. Offerndorff, a small place on the

river Meden, is the only town.

The duchy of Saxe Lauenburg, is the fartheft province of his Britannic majefty's German dominions: it is watered by the Elbe, which divides it, and is bounded by Holfein, on the weft and north; by Lunenburg, on the fouth; and Mecklenburg, on the east. It is about eighty miles in length, its greatest breadth is near twenty-six miles, and it contains about thirty thousand inhabitants. The duchy is not very fertile in grain, but abounds in passurage, cattle, sheep, fish, stax, wood, &c. The manors, mittling to a vote and feat in the diets, are twenty-three in number, and the states are composed of the nobility and burghers. Lutheranism is the established religion; and the clergy in general of this duchy may be proposed as patterns for those of most other countries, for their attention to their sacred function, their humility, kunnanity, zeal, ar'd benevolence.

humanity, zeal, and benevolute. The privileges of the hobility and commons are derived from an act called the Lauenburg act, which was granted by George I. king of Great Britain, and confirmed in all its articles by his fucerflors. The Lutheran fuperintendent, appointed by the king of Great Britain, is obliged to vifit the feveral parishes annually. The regency is subordinate to that of Hanover, and a high tribunal, the members of which are appointed partly by the king, and partly by the fates, but an appeal lies to Zell. The duelty has a confishery of its own, and the colleges meet at Ratzeburg. Here are but few manufactures, but many commodities are transported from here to other countries, particularly rye, cheefe, butter, wool, timber, &c.

rye, cheefe, batter, wool, timber, &c.

The principal places are, 1. Ratzeburg, twelve miles fouth of Lubeck, fituated on an island in a lake of the same name: it is the seat of a regency, consistory, and chief court of justice. 2. Lauenburg, 'birty-sive miles east of Hamburg, on a hill near the E.oe. 3. Schwartzeubach which gives name to a bailiwic. 4. Mollen, fixteen miles from Lubeck. 5. Grunau. 6. Buchen, a village where djets are held

Containing a description of the circle of Westphalia.

THE circle of Westphalia stretches along the westfide of the Weser, from the German ocean on the
north, to Hessia on the south; and between Lower Saxony on the east, and the Netherlands on the west. The
greatest extent from south to north is about two hundred
niles, and one hundred and fifty from east to west. The
air, especially in the north part, is very cold, and greatpart
of the soil is marshy and barren; however, it has plenty
of corn and passure; but the fruit is very ordinary, and
serves chiefly to feed the hogs, of which this country has
good store of an excellent kind, so that the bacon they send
alroad, is very much esteemed. The chief rivers are the
Weser, the Ems, the Lippe, the Roer, the Aa, &c. The
accommodations a traveller may meet with here, are well
enough expressed in this distich, very common in Germany: thus Englished;

"Who travels in Westphslia, is sure to find
"Long miles, small-beer, coarse bread, and lodging
"vile."

Westphalia is indeed the most wretched part of all Germany; and a modern author, who knew it well, feems to conclude, that the temper of the people is in a good measure influenced by its climate, the generality of them being not more amiable than the country. They are good for enough, but have not talents in common with the other Germans; for they apply themselves much more to breed-ing of horses and hogs than to the cultivation of arts and sciences. Three parts in four of this circle are a prey to the tyranny and avarice of certain petty princes both ritual and temporal, who, having a great deal of vanity, and little revenue to support it, study how to rob their subjects rather than to right them. The Westphalian nobility are perpetually boasting of their noble and antient pedigree, and they famey themselves rich, but are in fact so poor, that a traveller would be glad of falt beef as well as sour been at their tables, and a piece of tapestry for their furniture, of no value but for its antiquity. There are in this country almost as many different religions as princes, there being Jews, Roman catholics, and Proteficiants, with their various fubdivitions; but the major part of the latter are Calviniffs. When Charles the Great had conquered the Saxons, and planted Christianity among them, he etceled feveral bishopricks, to which he gave lands for their fupport. In the part we are fpeaking of, we find three very confiderable ones, who have fovereign princes, and increased their dominions at the general partition that was made of the great dukedom of Saxony, after the profeription of Henry the Lion; and then it was, that the bishop of Munster enlarged his country, and that the archbifhop of Cologne obtained that part of West-phalia which he fill holds, and by that tenure siles him-feif duke of Westphalia. The elector palatine as duke of Juliers, and the king of Prussia as duke of Cleves, are alternately condirectors of this circle, with the bishop of Munster.

This circle contains the following territories; viz. 1. The bishopric of Paderborn, which is surrounded with the dominions of Hanover, Helle, and Munster, has the county of Lippe on the north and west; Hesse-Cassel, and Waldee, on the fouth; and Munster, and the duchy of Westphalia, on the west. It is forty miles from east to west, and, in some places, thirty from north to south. It is not very fruitful in corn, but abounds so much with cattle, that drovers come hither from the neighbouring countries to buy at their fairs; and they have rich falt fprings, and fome iron mines, with plenty of deer and other game. It is fo populous, as to contain twenty-five market-tuwns, fifty-four parishes, sixteen monasteries, and twenty gentlemens seats, all subject to the bishop, who is a prince of the empire. The chapter is composed of enty-four capitular canons, who are all obliged to fludy in some French or Italian university, must be twenty-one years old, and must prove their noble extraction by four degrees upwards. The revenue of this see, which is a suffragan of Mentz, and now enjoyed by the elector of Cologne, is thought to be about twenty-five or thirty thoufand pounds a year, and the bithop is able to raile three thouland men. The famous battle, in which Quintilius Varus, with the Roman army under his command, was routed by the Germans under Arminius, and the latter thereby freed from the Roman yoke, was fought in this the westn on the wer Saxhundred eft. The great part as plenty ary, and antry has they fend s are the

The royal fociety, in their Transactions, poblished in The royal fociety, in their I raniations, positince in December 1605, gives an account of a spring in this tercitory, which loses Itself twice in twenty-four hours; but returns with a great noise, and such force, as to turn three milts not far from its fource; for which reason it is called Bolder Born, i.e. the Boilterous Spring. Morery fays, it lies in Teutburg forest, near Oldenburg. And in the Transactions of January following, there is an account of another remarkable fountain, called Metborn, two miles from Palesbern, which is a treble foring: two whereof. another termaspie foundant, called whether, two lines from Paderborn, which is a treble fpring; two whereof, not a foot and an half from each other, have very different qualities; the one, limpid, blueish, luke-warm, and containing fal-armoniae, ochra, iron, vitriol, alum, fulphur, nitre, and orpiment; the other, cold as ice, turbid, and whitish, with peuch the forme containt, but fromper in whitish, with much the same contents, but stronger in talle, and heavier than the other: it is faid to be a perfect cure for the worms: all fowls that drink it are immediately thrown into convultions, but foon recovered by an infusion of common falt and vinegar: the third spring, which is about twenty paces from the other two, is of a greenish

colour, but very clear, taftes both four and fweet, and is fupposed to be a mixture of the other two. Paderborn, which is one of the Hanse-towns, is a large, well-built, fortified, and populous city, twenty miles east of Lippe, forty north-west of Cassel, thirty-five fouth of Minden, near fifty fourth-eart of Munifer, and about fixty fouth-west from Hanover. This city was once imperial till 1604, that Theodorick, its bishop, became both its spiritual and temporal sovereign. Some of its churches are magnificent. Its cathedral is a grand fabric, inserior to magnificent. Its cathedral is a grand fabric, inferior to few in the empire. Otho 11. gave a golden crucifix to it of fixty pounds weight, to the value of fixty thoufand guilders, or about eight thoufand pounds fletling. The bishop's palace is no contemptible structure; but the bishop's, when they vouchfafe to visit this small benefice, which is not very often, reside seven miles off, at Nienhus, a castle huilt in 1500, by the bishop aforefaid. A university was founded here in 1502, by the bishop of Furstenberg, of which the jesuits have the direction. Thought this city stands not far from the Lippe, which joins with be Uling, near Nienhus, just now mentioned, yet it has the Ulme, near Nienhus, just now mentioned, yet it has its name from the Pader, a rivulet which has its rise just under the high altar of its cathedral, and Born, i. c. a

firing.

Charlemagne, in 777, held a general convention here of the Franks and Saxons, where a great number both of Saxons and Westphalians were baptized. He built a church here that was destroyed by the Saxons, but rebuilt in church here that was destroyed by the Saxons, but rebuilt in 795, by Wittekind the great duke of the Saxons, who then it is faid translated the fee hither from Heristell, five German miles off, where it had been first planted by Charlemagne. In 999, the cathedral, with its library, &c. and the best part of the city was destroyed by fire; and it had the like misfortune in 1038, 1133, 1165, and 1340. This city was first walled round by its bishop in the beginning of the elefirst walled round by its bishop in the beginning of the eleventh century. In 1330, the inhabitants attempted to introduce Lutheranism; but the bishop executed fixteen of the principal citizens who had embraced it, and forced the rest to abjure it. In 1622, the bishop of Halberstadt, who was duke Christian of Brunswick, made a considerable booty here, and sent the gold and filver images of the faints to the mint. In 1633, it was taken by William Landgrave of Hesse, but delivered up to the emperor in 1636. In 1646, it surrendered to the Swedes and Hessians, but Francis William, Bishop of Osnaburg, soon drove them out.

drove them out. drove them out.

The other places worthy of note, are, 1. Saltzkotten, the feat of the land diets. 2. Lichtenau, which has the fame privilege. 3. The borough of Neuhaus. 4. The village of Altenbecken. 5. Wannenburgh, which takes its name from a victory obtained here by Charlemagne over the Saxons. 6. Buren, on the Alure. 7. Lippefping, fo called from the Lippe. The popith inhabitants of these parts assume the saved by their priefty, regain to the woods and and, headed by their priefts, repair to the woods and groves, to vifit images and relies placed there in little chapels, which, except upon these occasions, are never opened. 8. Warberg, one of the Hanse, is the second city in rank in the bishopric, and the feat of a diet : in the neighbourhood are mines of iron and lead; and a strong palatable beer is brewed by the inhabitants. 9. Brakel on the Bruckt. 10. Drinkenberg, a feat of the land diets. 11, 12, 13, 14, 15, 16, 17, 18. Klemenberg, Kalenburg, Borchholz, Borrenrich, Wilbassen, Nelsein, Peckelsheim, and Dryburg, have all feats in the land diets. 19. Beverungen, near the confluence of the Bever with the Weler. 20. Oldenburg, on the Houts. 21. Hurstelle,

Weser. 22. Stoppleberg, gives name to a seignory. 23 Swalenberg belongs to a district. 24. Lade, on the

The bishopric of Munster has Embden and Oldenburg on the north; the county of Marck, and dueby of Westphalia, on the south; the county of Benthem, and the United Provinces, on the west; and the bishopries of Osnabrug and Paderborn, together with the county of Ravensberg, on the east. It is one of the largest and most considerable bishopries, though one of the most disagreeable countries in Germany. It is about eighty miles in length, and from twenty to fixty in breadth, and contains thirteen bailiwicks, or districts, nine of which belong to the upper, or fouth part, and four to the lower, or north part. It is in some places both fruitful and populous: in others, neither. Its bishop, to whom it is subject, is a prince of the empire, though suffragan to the archbishop of Cologne, condirector of the circle of Westphalia with the elector palatine and king of Prussa, and able to maintain eight thoussand men, his revenues having been reck-oned at seventy thousand pounds. He becomes heir to The bishopric of Munster has Embden and Oldenburg oned at feventy thousand pounds. He becomes heir to frangers who die here without children: an unjust custom, strangers who die here without children: an unjust custom, unknown to any other country in the empire. He has right to the sishery in the river Aa, and a pretension to Brockeloe in Guelderland. The inhabitants of this diocese are Roman catholics, though there are among them several utobility and gentry that are protestants. Their chief commerce is in hogs and Westphalia hams. They generally affected a neutrality when their neighbours were at war; and, though there are feveral fortreffes in the dio-cefe, paid twelve thousand crowns per annum for the pro-tection of the states of Holland, who usually have a great

its capital, as well as that of the circle, is Munster, on the river Aa, which falls there into the Ems: it takes its name from a monastery built here by Charles the Great. It stands on a large fruitful plain, fixty miles west of the Weser, and east of the Rhine, and south of Breme: one hundred and twenty north of the Maine; fifty-one east hundred and twenty norm or the manie; mry-one can from Zuphen; thirty-feven fouth-west from Osnaburg; feventy-one north of Cologne; feventy-eight north-west of Cassel; one hundred and five east of Amsterdam; one hundred and thirty-four south-west of Hamburgh; and hundred and thirty-four fourh-west of Hamburgn; and about four hundred and fifty north-west of Vienna. It is a large city, and well fortified by art and nature. The houles are generally fair and well built of free-stone dug from a quarry at Bamberg, or Tamberg, but eight miles off. Its cathedral is a stately fabric; and the dean and chapter eiest the bishop. This city, will always be famous in bishors of where remarkable translations. 1. For the chapter elect the bilhop. I his city will always be famous in hiltory for three remarkable transactions. 1. For the peace concluded here in 1648, between the Swedes, the emperor, and empire; which put an end to the war of thirty years, occasioned by the house of Austrie's tyranny and perfecution; a treaty which established the fortune of many sovereigns, the liberties of the empire, and the free many lovereigns, the liberties of the empire, and the tree exercise of the protectant religion in it; and a treaty, on which those made fince with Germany, and the north parts, have been in great measure founded. 2. For an attempt by fome enthusiant, under a taylor, in 1553, to establish a monarchy level by the name of Anabaptish. This fect, or rather .action, grew fo powerful by the toleration of the magistrates, that they set up this taylor, who was called John of Leyden, from his birth-place, for their fovereign who, pretending to revelation, fent his emifiaries about the freets, commanding all the people his emifiaries about the freets, commanding all the people of the freets of the freets. his emiffaries about the streets, commanding all the people to repent and be baptized, on pain of damnation. They grew to such a head, that at last the taylor, assuming the title of king, they solicated the magazine and town-hall, turned out the magistraces, and, being by their invitation, joined by all their persuasion from the neighbouring countries, they also drove out the other inhabitants, laid the city and country under interpressible calamities, and persuaside country under interpressible calamities, and persuaside country under interpressible calamities, and persuaside country under interpressible calamities. city and country under inexpreffible calamities, and per-petrated the most horrid villamies. In 1524, the bishop belieged the town in vain; but next year being affished by the landgrave of Hesse, and the troops of Cologne, he took it by surprize, together with their leader, who, after being fent about, with two of his favourites, to fome courts for a laughing flock, was executed by the hangman, who tore off his fleth with burning pincers, and hung his bones in a cage on the top of the highest steeple in the city. 3. For the war, and other troubles the inhabitants had with their the war, and other troubles the inhabitants had with their turbulent and bloody-minded bithop Bernard von Galen, who challenging a certain jurifdiction in temporalities, that was never enjoyed by his predeceffors, because it had been always a free imperial city, and being backed by the three spiritual electors, laid siege to the city, which the burghers desended, by help of the Dutch, till the latter

uintilius ind. was he latter end of October, when it was agreed with the bishop, that for the future it should be garrisoned partly by his troops: but the bishop quarrelling with them again before three years were at an end, and the Dutch being distoaded by several of the German princes from re-affishing them, they were obliged, in March 1661, after an obstinate and bloody siege, to surrender to the bishop, who overturned the whole feare of their consenuent, and this city has been

whole frame of their government; and this city has been ever fince fubject to its bishop.

The city is almost circular, having eight gates, and a fine citadel, called the Paulus Berg, or Paul's Mount, in its fine citadel, called the Paulus Berg, or a sure recommendation of the built in 1663, hy the bishop neighbourhood, which was built in 1663, hy the bishop the burghers. The river As above mentioned, to awe the burghers. The river Aa falls into the Ems at the new gate. The houfes are most of them in the antique stile, and the principal in the sour markets, where among other buildings, the sense house, and the hall for the companies of artificers, are the most and the hall for the companies of artneters, are the host remarkable. In the fouth-eaft part of the city is a large place, where the fronts of the houser reft upon pillars, and form a handsome piazza. It has five collegiate, and fix parish churches, besides the jesuits college, a great number of convents, and other religious houses, most of them flately piles, and some of them pleasantly situate in the midst of beautiful gardens.

The other places of chief note in this bishopric, are, 1. Berkhem and Ahkn, on the Werfe. 2. Telget, on the Ems. 3. Warendoff, on the fame river; all of which the Ems. 3. Warendoff, on the fame river; all of which have feats in the land diets. 4. Coesfeld, the largest town in the bishoppie, next to Munster. 5. Coppenburg, independent of the bishop. 6. Warne, near the Lippe, send deputies to the diets. 7. Bocholt, on the Aa. 8. Menmen, at the insitux of the Hase and Ems. 9. Weerds, on the lifel. 10. Cloppenburg. 11. Vechla, on a river

of the fame name.

Liege, also a hishopric, is bounded, on the north by Brabant; on the fouth by Luxemburg and Champagne; on the west by Namur and Hanault; and on the east by Limburg and Juliers. It is about ninety miles long, but very unequal in breadth. The foil is finitful, the air temperate, and the bowels of the earth rich in mines. The manufactures are, beer, ferge, leather, pit coals, lead, arms, nails, iron, marble, mineral waters, &c. The rivers are the Maefe and Sambre.

are the Maele and Sambre.

Three bodies conflitute the flates, namely, r. The chapter of Liege. 2. The nobility of the country. 3.

The deputies of the capital. The bifthop is temporal and fipritual lord of the country, but in the latter capacity is fuffragan to the archbishop of Cologne. The chapter confifts of fixty persons, who must prove their descent to be noble for four generations, from both parents, or have diplomas from fome celebrated university.

The most considerable towns are the following : 1. Liege, the antient Leodium, called Luyck by the prefent inhabi-tants: it is fituated on the river Maefe, twelve miles fouth of Maestricht, thirty miles north-east of Namur, and fifty miles south-east of Brussels, in five degrees thirty-fix minutes east longitude, and fifty degrees forty minutes north latitude, being about four miles in circumference; a populous and wealthy city, two branches of the river Macfe, and other rivulets or canals, running through fe-veral of the firects, and forming little islands.

No city in Germany can equal it in fine churches or convents: there are not less than one hundred churches, and a very numerous clergy belonging to the churches and and a very numerous ceregy beconging to the churches and monafteries, which are fo pleafantly fituated, and have fuch endowments, that the city is fometimes called the paradife of the ecclefiaftics. Here is a univerfity of great fame, and, among other religious houses, one of English

The citadel is capable of making a good defence; but the fortifications of the town are not very firong, and are commanded by the neighbouring hills. Its bishop, who was the elector of Cologne, put the citadel into the hands of the French, at the beginning of queen Anne's war; but the duke of Marlborough took it from them, anno 1702; and the French befieging it again in 1705, the same general, on his return from Moselle, obliged them to raise the

This is pretended to be an imperial city, or fovereign flate, by the magistrates of Liege; but they have suffered very severely for disputing the authority of their bishop, who is, in sach, absolute sovereign of the city, as well as the bishopsie. He is chosen by the fixty major canons, most of whom are of noble extraction. This bishop is one of the most considerable ecclessatical princes in Germany, having within his diocese fifty-two baronies, eighseen walled towns, and four hundred villages sull of people,

with a revenue of three hundred thousand ducats per annum, and is able to maintain a body of eight thuufand men, without oppreffing his fubjects, who are chiefly Roman catholics. Their trade with Holland is the most considerable; great quantities of iron, flone, chalk, &c. are every day carried down thither by the Macfe; for which they bring back in return berrings, cheefe, butter,

and all kinds of grocery.

A proverbial laying of the following tenor prevails here, A proverbial laying of me rollowing tenor prevails here, namely: that "this city is the women" hell, the men's purgatory, and the priefts paradife." And we shall not find this proverb fall short of the tutth, after being told, that the women draw their boats up the river, instead of horse; they dig, saw, carry all kinds of heavy burdens, and are for they aig, saw, carry all kinds of neavy ourdens, and are for the most part naked. The poor laity are without money in their pockets, and their consciences are at the absolute disposal of their priests; which inksome state may justly be deemed a purgatory. But the priests have truly their pa-radise here; for the greatst princes in Europe make in-terest to be of this chapter, because the revenues and power prof. ik profeboth new John enit bes an interness

of it exceed that of any other.

The other places are: 1. Huy, or Hugum, on the east fide of the Macfe, and fifteen miles fourh-west of Liege.
2. Tongres, or Tungri, fituated on the river Jecker, ten miles north-west of Liege, and ten west of Maetricht. 3. Dinant, on the Maese, twelve miles south of Namur. 4. Bouillon, on the river Semoy, thirty miles fouth of Dinant, and about ten from the frontiers of Champain. It is a fortified town, and, with a finall territory annexed to it, gives the title of the duke to the bishop of Liege. 5. St. Tren, famous for its Benedictine abbey. 6. Vifat, a forrified town on the Maefe. 7. Herital. 8. Borchlaen, gives name to a county. 9. Horn. 10. Tranchimon, gives name to a marquifate. 11. Verviers, on the Weze. 12. Cuivin. 13. Thuin, on the Sombre. 14. Haffelt, on the Damer. 15. Lobbes, a Benedictine abbey. 16. The town of Spa, or Spaw, though finall, is a place of forme next, it is clearly a space.

of fome note: it is fituated on the little river Weze, twenty miles distant from Liege towards the fouth-cast, and feven from Linfburg towards the fouth-west. avenues to it are exceeding stony and difficult; and it is fo furrounded by mountains, that you cannot fee it till you approach very near to it. In travelling to Spa, either by Liege or Aix-la-Chapelle, the way lies chiefly through uncultivated deferts, and those almost rocky. There are mountains on every side, which succeed one another, and over which traveliers have made fome imperfect traces of over which travelers have made tome imperient traces of a road. The rains and tempeths, which are frequent there, even make the paffage fometimes dangerous, by caufing great flones to roll down from the precipies. The coachmen of the country are themselves often at a los, because the tracks are defaced between feafon and feafon.

There are four streets in this town, in the form of a crofs: they may contain about four hundred houses, for the conveniency of those who come to drink the waters. It was formerly but a little village, which, through the fame of its mineral waters, has been enlarged, and erected into a borough. Here are five principal wells, which go down with steps, like that at Tunbridge: the chief well, called Pouxhon, or Pahon, in the market-place, is the most reforted to, and has a Latin inscription upon it, which expresses the qualities of the waters, and may be thus translated: "Sacred to health: these waters open obstructions, concoct crudities, dry up excessive maisture, and strengthen weak parts, provided you take them pro-perly." They draw from this spring that prodigious quantity of water, which is conveyed into foreign countries, and especially into England and Holland, scaled up in bottles, with the town feal upon them.

There is a fountain of fresh water, next to the well of Pouxhon, which has its fpring in a meadow half a mile diffant from the town. The bottom of it is of blueflone, and the top of brafs: it fpouts its water out of the mouths of three frogs, whence it is called the toad's fountain by

the people.

. In a wood about two miles diffant from Spaw, towards the fouth-west, is the well called Geronsterre, or Geronfar. It is covered with a dome of blue flone, supported by four pillars of red and white marble: it affords confiderably less water than the somer, and yet is the most frequented. The three other wells, called the Saviniere, the Watroz, and the Tonnelet, or Little Tun, are not much used. These waters have been known many agramation and are faid to have been mentioned by Pliny. The much ufed. These waters have been known many ages ago, and are faid to have been mentioned by Pliny. The feafons for drinking them are in the hot mouths of June, July, and August. The capuchins have a very fine mo-nastery, adurned with large gardens, where all the com-

of their likebality.

This place is governed by a mayor, two burg-matters, feven inferior magnitrates, and a meorder, named by the prince of Liege, and thangod by him every year. The people are very good-natured, and freak the fame Walloen, or batharios's French, as at Liege. They employ themfelves in making bones for ladies toilets, fluin, and other boaes, varnished after the manner of china-ware, which they fell to the coinquity as they go to and from the wells. In the hottest wars, this place has been always allowed a neutrality, on account of the great refort of people for in

The circumpacent teristory is not very fruitful in corn, being chiefly covered with woods, mountains, and heaths; but it abounds with firings of mineral and freet waters, and in feweral forts of game; and there is spenty of trous, and other kinds of fifth, in the little rivers which flow from the mountains.

the mountains.

Oinaburg, or Oinaburg, which is a bishopric, is fituated between the Weier and the Ems, having Minden on the east, Monder, on the west, Diepholt on the north-east, and Ravendourg on the fouth-west. It is about forty-five broad, and products syst, patturage, leastle, herfox, hogs, tark, coats, and marble. The inhabitance, who are partly protestants, and partly Rostan eatholies, care greaty dantities of; and deal confiderably in, hans, become force.

By a reasy concluded here in 16.8, this bishardre was

eatholies, eare greaty another of; and deal confiderably in, hams, become see.

By a treaty concluded here in 1648, this bishepric was to be an alternative between the Roman catholies and Linderans, and the Lutheran bishop was always to be a younger prince of the house of Branswie Lunenburg, or, in case of failure thereof, of Brunswie Lunenburg, or, in case of failure thereof, of Brunswie Lunenburg, or, in case of failure thereof, of Brunswie Lunenburg, or, in case of failure thereof, of Brunswie Lunenburg, or, in case of failure thereof, of Brunswie Lunenburg, or, in case of failure thereof, of Brunswie Lunenburg, or, in case of failure thereof, of Brunswie 16; 1763, is now bishop of Ofnaburg. But though this bishopric is thus alternatively hereditary in this protestant family, it is not so with regard to its Roman catholic bishops; for they are chosen out of different families by a chapter of twenty-five canonis, of whose prebends the revenues of eighteen are enjoyed by the Romith ecclesiatics; those of four by the josture, for the support of their college; and the other three by the Luberan canons, who are capable of electing, but not of being elected bishops, as the Roman catholics are. When they have aposish bishop, be is suffragan to the archbishop of Cologne; but the protestant hishop, who is a temporal prince indews; but flittle to demonstrate him an ecclesiadic, that when there it a protestant bishop, the archbishop of Cologne should suspend to the protestant of the archbishop of Cologne should suspend to the protestant of the archbishop of Cologne should suspend to the protestant of the archbishop of Cologne should suspend to the protestant bishop, the archbishop of Cologne should suspend to the protestant of the archbishop of Cologne should suspend to the protestant bishop, the archbishop of Cologne should suspend to the protestant bishop, the archbishop of Cologne should suspend to the protestant bishop, the archbishop of Cologne should suspend to the protestant bishop, the Dr. Nicholfon observes, that, since the Keformation, intro-duced here in 1634, the bishop, whether papis to protestant, has little more than the name, the Lutherans not allowing the exercise of episcopal jurisdiction, and the papists being not strong enough to obtain it for the bishop of their own opinion. It is observed by historians, that Charles the Great, who founded this fee, and dedicated the cathedral to St. Peter, and the two martys Crispin and Crispinian, exempted its bishop from all manner of homage and fervice, except in an embally, at the emperor's charge, to negotiate any march that lituould be proposed betwist the families of the castern and western emperors. The bishop is able to raise two thousand five hundred

men, though he has only one hereditary officer, viz. a grand maitre, or fleward. When there is a protestant bishop, he keeps a neat little court at Osnaburg; but when he is a Roman catholic, who is generally fome elector, or one who holds feveral other great benefices in commendam, the epifcopal revenue is carried out of the country, and fpont abroad, as it now is, at the count of London, The diets are held at Ofnaburg. The manufactures are coarfe linen, woollen, and yarn. The revenue of this bishopric amounts to between twenty and thirty thousand

pounds. pounds.

The principal places are: 1. Ofnaburg, the capital, which was formerly an imperial city, and one of the Hanfe, but is now fulpieft to the bishep. It has its name from a bridge over the Ofe, which divides it into Old and New Town, and is situated fixty-seven milea westor Hanover, in the middle of a fine plain. It is a neat well-ailt city, and adorned with several handsome public structures. It is encomwith feveral handsome public fructures. It is encom-passed with walls and directes, but commanded by a mountain within cannon-thet, upon which there is an abbey, or facred retirement rather, for men of quality. The biftop's palace, called Petersburg, or St. Peter's castle, is

well fortised, and separated from the town by a bridge. It is a bezagon with a court in the middle, and at each corver a turret. It was in one of the apartments in this palace that king George the first expired, the eleventh of June, 1729, in the arms of his brother Prince Erneth, and, as some say, in the very room where he was born.

The papilit have the cathedral church, and the church and thomastery of the Dominicans in the old city, and the collegiate church of St. John in the new. The Lutherans have the great parochial church of St. Mary in the old city, and have a woice in chusing the magnituates of both, and therefore the government of the city is mixed of both. Hubnir says, leave are three convents for monkey and five for pours.

old ciey, and have a voice in chosing the magnirates of both, and sherefore the government of the city is mixed of both. Hubner says, here are three convents for monks; and five for mans.

The inhabitants, who are very industrious, not only bread abundance of hogs and stee cattle, but have a considerable trade in making lifted stim brewing a paistable; though thick fort of bow, called hale; and in bating the best white bread in Weithhalis. In the exthedral are fill feet some branches of Charles the Grean, among which are his civery of filter; gilt, his could, bettoon, bec. As the exercise of both religiours is equally free, neither papits nor protestants are molected during the government of z bishop of the opposite persons, in the contains afficen parifice. 4. Weidenburg, on the Emas 5 Melle. 6. Vorden. 7. Quackenburg, on the Off.

The county of Hove, one of the elector of Hanovae's domains; has Bremen on the north, Minden on the foulth, Lunchburg on the east, and Diepholt or the west. It formerly belonged to counts of an antient Saxon simily, to whom it was given by the emperor Lisharius; but after the death of the last, in 1 gBz, it was divided beaveren the families of Brunswic and Hesse. Hoye, with Nyenburg, Liebenau, and Bruckhausen, became subject to the date of Lunenburg in the forts of Settemaw, Ezenburg, and five more towns, to the house of Brunswic; and Freudenburg and Ucht to the landgrave of Hesse; the latter of which gave their share to the counts of Renthesin, forthat now it belongs almost wholly to his Britannic majery.

Its chief town, of the fame hame, stands of Breinesi, findined seven, of the fame hame, stands of the state fide of the Wester, twenty-see males forth-east of Breinesi, thirty-six north-east of Minden and Diepholt, and forty-north-west of Zell. It is a small, but well-fortified town, which sinding the reidence of the counts of Horty, which instrained seven, of the fame share, stands of the Wester, which being rained, it is that a fine bridge over the Wester, which, being rained,

3. The borough of Old Bruckhaufen, 4. Liebenzu, 5. Drakenburg, on the Wefer. 6. Harpfiedt, on the Delme. 7. Baffum, a borough belonging to the landgrave of Heffe. 8. Kellingerode. 9. Suhlungen, the refidence

of Heffe. 8. Kellingerode. 9. Summingen, and tentered of a fuperintendent.

Vernethung county appertains partly to the archbishop of Treves, and partly to the count of Lowenftein-Wertheim, both of whom it entitles to a feet and voice in the Weltphalian college, and also in the died of the circle: it is almost surrounded by the archbishoppie of Treves. The little town of Vernenburg is the only place in it

The county of Steinfurt is futrounded by the bishopric The county of Steinfurt is futrounded by the bishopric of Munster. It is fifteen miles long, and ten broad, and belongs partly to the emptre, and partly to the primate of Munster; is watered by the Aa, and gives to its count a cat and voice in the Westphallan college, and in the diets of the circle. The town of Steinsure, which stands on the Aa, is the only town worth mentioning.

The durhy of Verden, which is in length twenty two miles, and in breadth eighteen, it bounded by Hoye on the south, Bremen, on the north, Lunenburg on the east, and the Wester on the west, The inhabitants are Lutherans, and the whole belongs to the king of Great Britain, 7 Q. who,

who, on account of this duchy, has a feet almong the princes at the diets of the empire, and those of the circle. It is well watered, but the foil is poor.

The only places worthy of observation are: 2. Verden, on the Aller, the capital, fifty miles fouth-west from Hamburg.

2. Rotenburg, on the Wumme, fifteen miles from Verden.

The abbey of Corvey is bounded by Pad-rborn, Brunf-wic, and Swalenburg. It is a finall difficit, but is toler-slely fertile, watered by the Wefer, and has a Benedictra abbey, founded by the emperor Lewis I. The abbot is

ably, founded by the emperor Lewis I. The abbot is a prince of the empire, having a feat in the college of princes, and at the diets of the circle, and the empire. It is called Corbie, or Correy abbey, from the first monks having been taken from Corbie in Piccardy.

The abbey of Malmedi conflitutes a small town strusted amoagth high hills, on the little river Recht, twenty-five miles distant from Liege to the south-east, and nine from Limburg to the south. They reckon here about four hundred house, most of them inhabited by leather-designs as weallen-drapers. Here are several springs of mineral hundred houses, most of them inhabited by leather-dresser or woollen-drapers. Here are several springs of mineral waters, which some physicians say are as wholestome and as strong as shose of Spa. The perochial church is dedicated to St. Gerçon the mastyr; and here is a convent of capuchins, and another of muns of St. Sepulchre: but it is chiefly remarkable for its abbey of Benedictine monks; under the same about with that of Suvelo. This town, though within the territory of the prince of Liege, is, nevertheless, respecting spiritual matters, under the jurisdiction of the archbishop of Cologne.

The abbey of Stavelo (by some erroneously called Stablo) stands on the little river Ambleus, which somewhere some shall also the Recht. It is about fix miles distant from Malmedi to the east, and nine from Lienburg towards the south. Here are about four hundred houses, and the inhabitants carry on a pretty good trade, though

and the inhabitants carry on a pretty good trade, though this town, being quite epen, has fuffered very much during the wars. Here is a famous abbey of Benediëtine monks, founded in the year 657, at the fame time with that of

Malmedi.

The abbot of Stavelo, who is stiled a prince of the empire, is spritual and temporal lord of this town, and of its territory, which is very large, including the town of Malmedi; and his yearly income amounts to about twelve thousand crowns. The abbey church, which is at the fame time parochial, is a stately building in the modern taste; under it there is a crypta, or subterraneous church, with fire a large. with five alters

Here are also some mineral springs, said to be very whole-fome. The trade of this town confists in woollen cloth and other stuffs, and chiefly in a great quantity of leather

and other itum, and cheen in a great quantity of curried here.

The abbey of Werden was founded in 778 by St. Ludger, whose chate it was, for monks of the order of St. Benedict. The 'diffrick belonging to it is fituated in the county of Mark. The revenue is twenty thousand riz-dollars. The only remarkable place is Werden, a little walled town upon the Rose. The king of Prussia claims the state of Committee the county of the research to the county of the research th

walled town upon the Roer. The king of Pruffia claims the right of fovereignty here.

The abbey of St. Cornelis Munfter, and its territory, are forrounded by those of Juliers, Limburg, and Aix-la-Chapelle. The abbot bas a feat at the diets of the empire, on the Rhenish bench of prelates; but he sits among the princes at those of the circle.

The abbey of Essen, and its territory, are surrounded by Berg, Clayes, Werden, and the county of Mark. The abbey was founded in the yest 877, by Alfred, bishop of Hildesheim. The king of Prussia is herediary protector:

The sheet fellies heredig nrincessor of the holy Roman empire as the abbess filles herself princess of the holy Roman empire; the chapter consists of none but noble ladies, and the abbey has a feat in the diers of the empire and circle. The hereditary officers are, the marshal, steward, chamberlain, and fewer.

The only place of any confideration in the territory is Essen, which is subject to the abbets as its sovereign, but has very extensive privileges. It contains an academy, a gymnasium, a commandery of the Teutonic order, and

gymnasium, a commandery of the Teutonic order, and several Roman catholic and protestant churches; has some trade, and a cloth manufactury.

The abbey of Thern is situated in the bishopric of Leige, and county of Hoarn. It has a seat in the diets of the empire and citcle, and a cluster which constits of princesses and countesses of the order of 5t. Benedict. It is an imperial free social foundation, erected in the year

The abbey of Herford is fituated in Revensburg; gives title of princess and prelaters of the holy Roman empire

to its abbes, contains none but canonelles, and is a Lutteran foundation. The number of ladies is indeterminate; the abbes is fuperior of the collegiate cherch of St. Mary, of the opposite mountains, and the prepends are in her gift. The canonelles wear a fearlet ribbon, with a fiver border hanging from the right flouder, having a cross at the end with the figures of Jesus Christ and the Virgin Mary, and on the left breat he as flar with the fame figure. This abbey was erected in the eighth century, and has a feat at the diets of the empire and circle. The duchy of Berg is fifty mites long, and twenty broad, and takes its name from being mountainous. It is hounded on the west by the Rhine; on the cast by Westpalia; on the north by the county of Mark, and on the houth by the cledorate of Cologne. Though mountainous in many places, in some parts it produces corn, passurage, fruit, vines, wood, herbs, &c. and is rich in coals, iron, &c. The manufactures are cloth, iron, and steel. The same regency and diet serves for this duchy and that of Juliers. to its abbeis, contains none but canonelles, and is a Tutlieran foundation. The number of ladies is indetermined
