The places most worthy of notice in Rerg, are, 1. Duf-feldorp, at the consuence of the Dussel with the Rhine i it is twenty miles from Colegne, and fifty-seven from Muniter, and stands in the midst of a size froisful plains. The Rhiue runs against it with such violence, that they have been obliged to make great works to break the current. It is large, pleasant, well built, and defended by a citadel, which is separated from it by a small harbour formula built. formed by the Rhine, and confifts of two royal ballions faced with brick; and in the other parts it is fortified by five baltions, and cavaliers on them. The public buildare battors, and cavaners on them. In e-public build-ings towards the river make a fine appearance; particu-larly its flately palace, an old gothic firecture, (with ex-cellent paintings by the beft makers, brais antiques, fatures of marble, portable eabinets, &c.) which was the elector petatine's chief residence during the horrid devastations of the publishes by the Europh towards the and of the lecthe palatinate by the French towards the end of the laft

the plantage by the French towards the the of the lant century.

In the market-place, over against the palace, is an expedition statue in brais, on a pedessal of grey marble, of the elector John William, in armour, with the electoral bonnet on his head. The elector's residence being fixed at Manheim, a regency is established here; for the counties of Berg and Juliers, which bring in a million of crowns per annum to the elector, are governed by states, without whose confers he can lay no make. All religious are here whose confent he can lay no taxes. All religions are here whose content no can lay no mass. All religions are here tolerated; but the eathelics alone are admitted to civil employments. Though the pofferfion be the elector's, yet the title is disputed by those of Saxony and Brandenburg. Here are three weekly markets for corn, which is imported bither from the Low Countries, and exported in great quantities to Cologne, and other parts of Ger-

The other places in this dochy are, 1. Ratingen, which has a feat and voice at the diets. 2. Solingen. 3. Nefuas a teat and voice at the diets. 2. Solingen. 3. Nef-felrode. 4. Blackenberg. 5. Siegberg, on the Sieg. 6. Mulkum, near Cologne. 7. Lenneth, which has the firt place and voice at the diets. 8. Wipperfort, on the Wipper, has a feat and voice at the diets. 8. Revenue. the Wipper, has a feat and voice at the diets. 9. Beyen-berg, gives name to a diffrict. 10. Elverfeld: 11. Lan-genberg, 12. Kornberg. 13. Bentberg has a firong fort and monattery, of the order of the Holy Croft, which was built in 1298, and is the first of its kind in the empire. The eaftle or pelace here was built in a forest on a hill, by the elector John William, and is a noble edifice. It stands three leagues from the Rhine, between Cologno and Duitz. It is built of a very hard stone; and the or-naments, particularly the pillars that support the gallery in

naments, particularly the pillars that support the gallery in the frost, are a kind of grey marble, dug out of the neighbouring quarries. The apartments are large, well decorated with the finest paintings; and they have a very extensive prospect, containing a great variety of beautiful sections and delightful landicapes, and, among others, of the city of Cologne, the Rhine, and all the flat country. The principality of Nassau-grey or Siegen, nearwhich is an iron mine, stands on the river Siega, fifteen miles from Dillemberg, and thirty north-east from Nassau, on the top of a rocky hill, defended by a frone wall. and results of a rocky hill, defended by a strong wall, and regular fortifications; and gives name to a country, of which it is the capital, as well as title to another branch of the Naffau family. It is thought to be Ptolemy's Segodunum. Here is a eastle, in which the elector of Cologn keeps a garrifon, as director of the circle; and not far from hence is a

very good iron mine. In 1550 the prince of Naffau-Siegen's padagogium was brought hither from Herborn; and foon became fo famous, that it was frequented by flu-dents from Germany, Peland, Livonia, Denmark, &c.

The principality of Dillemburg thands on the river Dilla, fixteen miles west from Murperg, and thirty-two northeast from Nassa, and gives name to a county; it has a good trade in cattle, and weollen goods; and two yearly fairs, via. the day after Passan Sunday, and the Monday after St. Margaret's day. The cassie is furrounded by the town, which is built in a semicircle to the west, north, and cast; and there is a since church, where the county of this branch are interred. The counts of the twest, and other embellishments. The counts of that branch, called Nassa-Dillemburg, had their seat in a since strong castle that stands on the top of a neighbouring hill, where is a large arsenal, strainhad with arms and assummitton for several thousand horse and foot; and the jaw-boite of a monstrous whale caught near Catwic, in 1598, which is a great curiosity.

strous whale caught near Catwic, in 1595, which is a great cariotity.

The town of Beilstein, or Beilstein, fifteen miles northeast from Nassay, twenty-seven south-east from Siegen, and twelve miles south of Herborn, gives name to a county which was the initerituace of the Hadamars, a younger branch of the family of Nassay, and was the capital of it. It is an old town among rocky hills, but has a castle, and a church worthy the observation of a traveller; it lies in the mild-way between Marpurg on the east, and Coblemia on the west.

on the weft.

The small town of Hadamar is capital of a territory on the confines of the electorate of Treves, which had the title of a principality before the extinction of this branch of the Nassau samily: it stands on the Lahn, twenty miles north of Menta; and has a good castle for defence.

The county of Sayn belongs respectively to the margrave of Brandenburgh Anspach, the burgrave of Kirchburg, the counts of Witgenshein Hornburg, and the elector of Treves. The two first have a voice in the college, but all together have only one voice in the college,

but all together have only one voice in the college, but all together have only one voice in the diet of the empire. Lutherans, Calvinifts, and Roman catholics, have equally the free exercise of their religions.

mptr. Lutterans, Cavanires, and Roman catholics, have equally the free exercice of their religions.

The only places worth mentioning are, z. Altenkirchen, the capital and the feat of a regency. 2. Hachenburg. 2. Bandorf, on the Rhine, gives name to a diffrict. 4. Free Bourg. on the Sieg, defended by a fortrefs, as is the neighbouring town of Triedwold.

The county of Wied is divided into two parts, viz. New-Wied or Lower County, and Wied Runkel or Upper Cennty. The only places here worth notice are, z. New-Wied, a funall but regular town, on the Rhine. 2. Runkel, on the Lahn. 3. Dierdorf.

Shauenburg county is watered by the Wefer, and furrounded by Calenburg. Minden, Lippe, and Rayenfberg. It produces corn, pafture, falt, alum, cryftals, with gold, filver, wood, free-tione, lime-kone, pit-coal, gipfun, copper, iron, pyrites, cattle, fheep, fifth, &c. It is thirty miles long, twenty bread, and the inhabitants are mostly Lutherans. -mostly Lutherans.

This county belongs partly to the king of Great Britain, the landgrave of Hesse, and the count of Shauenburg Lippe. The two first have a distinct voice in the diets of the circle, and a joint voice in the college of the West-phalian counts of the empire.

The principal places are, 1. Steinhude, on the Steinhuder. 2. Hagenburg. 3. Sadthagen. 4. Shauenburg, from which the county derives its name, but at prefent from which the county derives its name, but at preent exhibits only the ruins of an old cattle. 5. Vilbee on the Wefer. 6. Mollenbeck. 7. Buckburg, which is remarkable for having a ftrong cattle, a beautiful church, a well-andowed orphan-houfe, an elegant town-fchool, a large Calvinift church, and an admirable fountain in the market-place. 8. Rinteln, a fortified town between the Wefer Rec-place. 8. Kinteria, a nottined town octwoen the weler and Exter: here is a regency, a confiltory, fuperintendency, and fome trade is carried on by means of the Weier, 9. Oldendorf, out the Weier, between Hamelen and Rinteln. 10. Soltorf. 11. Obernkirchen, famous for a noble foundation for Lutheran ladies. 12. Roden-

berg.
Delmenhorst county, which is tolerably fertile, is surrounded by the Weser, Oldenburg, Diepholt, and Widhausen. The only place of any consideration in it is Delmenhorst, from which it takes its name. This town is fituated on the river Delme, and has a firong caftle to de-fend it. The government is vested in the regency of Ol-

The county of Oldenberg is forty miles long, thirty broad, and bounded by East Friesland, on the west; Delmenhorst, and the Weser, on the east; Jover and Jode,

on the north; and Munster, on the fouth. It is focured by dikes against inundations, and produces pasturage, castle, horfes, turf, &c. The king of Denmark, to whom this county belongs, is intitled, in right thereof, to a fear and voice both in the Westphalian college of counts of the empire, and in the diets of she circle. The administration is by a regency, subordinate judicationies, a royal consistory, and a superintendency.

The following are the most considerable places in this sounty, viz. Oldenberg, stuated at the conflux of the Hunte and the Hare. a Varel, situated in a wood, called, The Both of Varel.

The county of Bentheim is forty miles long, and fafteen broad, furrounded by Munster and the United Provinces, and abounds in wood, stone quarries, grain, pasturage, house, venison, game, cattle, fruit, and sith. It has linen and woollen-manufacturies. The count has a feat and voice in the college, and in the diets of the circle. The inhabitants are Lutherants, Calvinists, and Roman castabilities.

tholies.

The principal places are, 1. Bentheim, from which the county takes its name: it is a large borough town, thirty miles north-west from Munster. 2. Neinhos, on the Dinkel. 3. Wietmarfen, which has a feat and voice at the land diets. 4. Schuttorf, on the Vechte. 5. North-horn, surrounded by the Vechte. 6. Franswegen, a cloy-fier of regular canons of the order of St. Augustine, has a feat and voice at the land diets.

The impenial city of Dormaund is a large, but ill-built place, fituated thirty-four miles from Munster: it has a feat and voice at the diets of the circle; and also at those of the empire. It is populous, rich, has a communication with the Rhine, by means of the Empfer, and carries on a confiderable trade. This was formerly one of the Hanse towns, has four Lutheran churches, two monasteries; and one numbers.

has four Lutheran churches, two monafteries; and one nunnery.

We shall now give a particular description of one of the most famous imperial cities in Germany, called by the French, Aia la Chapelle. It stands sistem miles northieast of the city of Limburg, and thirteen south west of Juliers; twenty-eight east of Maestricht; twenty-fix east of Liege, twenty eight south-west of Cologne, and about twenty north-east of ties Spa. It lies in a valley furrounded with mountains and woods; yet it enjoys a very wholesome air; and the hills are coverad with vines. It Latin name, Aquis granum, is supposed to be derived from Screnius Granus, lieutenant-general of Gallia Belgica, who, having discovered the springs here, anno 53, adornod them like the Roman baths, and built a palace near them; in confirmation whereof, the natives fill shew, at the end of the town-bouse, a piece of antient srchitescure; which they call Granus's tower, and say it was a part of his palace, though the building does not look so antient. According to Charlemagne's pragmatic sandion, this Granus was brother to Nero and Agrippa; and the Chronicle of Utrecht says, he was banished hither by Nero. Attila the Hunn having plundered and destroyed this city, it lay in ruins till the time of Charlemagne: who, hunting in the neighbouring woods, his horse happened to strike his hoof into one of the springs; which the emperor observing, and finding by the ruins of several great buildings that this must have been the old Aquis, he ordered the baths to be searched out; and rebuilt, sounded, and endowed the collegiate church of St. Mary, in which he employed a great quantity of marble, that he fent for from Rome and Ravenna; and was so charmed with the situation of the place, that he built a palace here, together with all that part of the city which is inclosed by the old wall; and Ravenna; and was to coarmed with the intuation or the place, that he built a palace here, together with all that part of the city which is inclosed by the old wall; and made it the feat of his empire on this file the Alps; ordaining, that the future kings of the Romans should be crown'd here with an iron crown, as at Milan with one

of filver, and at Rome with one of gold; which, though observed for a while, has been long fine disused.

Both the palace and town were bent in 882, by the Rormans; but the church, having so much marble, stood its ground. After the town was rebuilt, it suffered which the other forms. much by other fires in 1146, 1172, 1224, 1236, and par-ticularly in 1656, when twenty churches and chapels, and five thousand houses, were burnt, but soon after rebuilt. five thousand houses, were burns, but soon after rebuilt. In 1668, that famous treaty was made here between France and Spain. This town is called, by the French, Aix la Chapelle, from a chapel in the great church, where are abundance of relics: it was noted for several councils, in the time of Charlemagne, and Lewis the Pious, about the procession of the Holy Ghost, reformation of manners, the regulation of monasteries, and against such as had seized the patrimonies of the church. It suffered much during the

the civil wars of Germeny, when most of the citizens were protestants; but the Merquis de Spinela took the town in 1614, and re-oftabilihed popery; fo that the protestant laws not. fince, been allowed any clean of worthip here, but as even the shoot two miles off, to that part of Limbergh, which is subject to the Datah. It is to the part of Limbergh, which is subject to the Datah. It is not their presence, and to enjarge its privileges; for that it was made free and imperial. They were crowned here also for sive henderd years after Charlemane, as is expressly ordered the control of the control of the control of the crowded dates (secondary) that ceremony has been performed at francfort, which, being in the centre of the frome, it more convenient for the princes, but particularly for the Franciert, which, being in the centre of the sempire, is more convenient for the princes, but particularly for the fpiritual electors, and for the elector Palatine, who may fend for their equipages, and return them back by the navigable rivers, the Rhine, Main, &c. . Neverthelast, the emperors; when crowned at Francfore, protest, it shall be without prejudice to the privileges of this city: for Charlemagne having almself been a canon of its cathedral, and ordered his successors to be so; they take an oath as such; when crowned; at which time the magistrates send Charlemagne in the succession of the succession of the cathedral of the succession of the s when crowned; at which time the magistrates fend Charlemagne's fword, shoulder-helt, and the golpel in golden letters, to the elector of Menta; who gives security for restoring them to this city after the solemnity of the core-

nation.

Dr. Blondel, a physician here, in his description of this city and its baths, pitated in Latin at MacEricht, in 1683, tells us, it recovered the losses in the above mentioned fires, by the bounty of leveral emperors, and the great concourse of people to its baths. Frederic I built the outer walls, towers, and ditches, in 1742. The circuit of the whole city is a league and an halt, and the inner town three quarters. The inner wall hast ten gates, and the outer eleven. The town-house, on senate-house, which was built in 1553, and lately repaired by the citizens, in hopes of having the Congress there, and not at Soisson, is a noble structure of free-stone, and one of the finest in Germany. It is adorned with the fistuces of Soiffons, is a noble firucture of free-fione, and one of the fineft in Germany. It is adorned with the fixues of all the emperors fine Charlemagne, and with curious history-paintings; particularly those by Amilliaga, highly valued; among which are, that of the refurrection, and that of Charlemagne's giving the city their charter: the appermost story of it is one hall, one hundred and fixty-two feet by fixty; in which the emperors, who formerly seccived their first crown of iron here, as above-mentioned, used to entertain the electors, and other princes who affished as the coronation.

ed at the coronation.

In the market-place, over-against the town-house, there is a large stately fountain, with four springs, that run, from above, into a copper eistern thirty seet in diameter, and weighing twelve thousand pounds: round the edges of it there is a Latin inscription, importing the discovery of the hot spring by Granus, as above; as well as the renewing of the baths by Charlemagne; that the cold fountain did formerly run into the bath; and that the senate adorned it, with this cisterus in 1620. From this the water runs, by six pipes, into a stone either below, and from thence it is conveyed through the city. On the stone from thence it is conveyed through the city. On the top of the fountain there is a large brafs flatue of Charlemagne in armour, richly gilt, with his face towards Germany. As the city lies in a valley furrounded with mountains stid woods, there are twenty other public fountains of good clear water, besides many private ones. Here are ten hot mineral fountains, and some cold ones, without St. James's gate, befides feveral in the adjacent fields; and the ftreams that run through the town keep it very clean, and drive feveral mills. Here are thirty parochial or collegiste churches, besides the cathedral, a large old-fashioned gothic pile, which was confectated by pope Leo III. in prefence of the emperor Charleinagne, and three hundred and fixty-The steeple at the west end is adorned with feveral pyramids, and on the top there is a large globe and cross. From this tower, which is raice higher than the body of the church, runs a gallery, supported by a long arch, to a cupola near the middly of the labrie: the linide is beautified with a vaft number of pillars of marble and brafs, git statues, brafs doors, and partitions, and a great deal of motaic work.

Over the place where Charlemagne was first interred hauge a large crown of silver and bras-gilt; adorned with sixten small towers, surrounded with forty-eight statues a foot high; and thirty-two leffer flatues, among which are commonly placed forty eight candlefticks, and at certain grand teffivals no lefs than four hundred and fifty tapers: this crown was the gift of the emperor Fre-

deric I. who, removing Charlemagne's body, inverted by in a filver coffin, under the attar of the choir, and covered to the white marble some bone it had before, with the buft of Profespinsarpon is supposed to have been taken in great many rapides and split agent which the field emperor had got from Asiron king of Perfis, the patriarche of Jerusalem, Confaminople, day. Here is a life the meanument of the emperor Otho 4, in blath the blot. It was a mount of the emperor Otho 4, in blath the blot. It was a comment of the emperor Otho 4, in blath the blot. It was a the judies, once in feven years; the 'four chief reliques shown to the playmen here, try, it. What they call the gown, or flift, faid to be worn by the Vingin Mary at the birth of our Saviour, made of a fort of flax that feem to be retible flient nor callico; but ea it is only exposed from the top of a high tower, 't dis not easy to determine what fort of apparel it is a A courte linest cotth pretended to be girt about our Saviour on the trofam of the blood, as they fay, of the protomartyr St. Stephen, richly inchained in gold and procious stones, on which the emperors are fover at their linauguration. Here is the picture of the Virgin Mary, with our Saviour in her arms, emablood, as they lay, of the protomartyr St. Stephen, richly inshafed in gold and precious flones, on which the emperors are fivorn at their inauguration. Here is the pickury of the Virgin Mary, with our Saviour in her arms, emaboffed on a jasper, about two inches bread, found in the emperor Charlemagne's tomb, and pretended to be the work of St. Luke; also a manufeript copy of the gofpels, in a cover of filter-gilt, found in the fame tomb; and Charlemagne i fword, put on by his fucceffors at their coronation, and used in the dubling of knights, and couplerring other honours. At the east end of the cathedral our Saviour is represented fitting in majethy, with a long fobe, on a throne; round which are the four animals represented in Esekiel's wision; over his head is a circle of golden stars, and underneath it a symbol of the cross which appeared to Constantine when he defeated Maxentius. Here is also a representation of the twenty four elders, mentioned in the Revelation, rising from their feats, laying asside their crowns, and falling down before the throne. The windows are curiously gilt, and the pavement is of chequired marble. An imments treasure is ansassed here, consisting of vessels of gold, and filver gilt, expes embroidered with pearls, and other rich vessels in the control of the choir there is a chest of filver and gold; of antique workmanship, and curiously engraved, in which are kept the four reliques above-mentioned. At the entrance of the choir there is a chest of filver and gold; of antique workmanship, and curiously engraved, in which are kept the four reliques above-mentioned. At the entrance of the choir there is a pulpit covered with plates of gold and filver, and adorned with precious stones, (aspecially a very large sgate) the gift of the emperor Henry II. The altar of the choir is covered with plates of gold slo, representing our Saviour's passion, which, it is faid, was found in Charlemagne's sepulcite. In the upper-part of the church over against the prince's altar, between two pillars, i government by two burgomasters, or joint-confuls, four-teen aldermen, who are also for life, and act as judges, and one hundred and twenty common council, that are elefted, as are likewife the burgemafters, by fifteen trad-ing companies of the burgers; and continue two years in

Pa-

There are three baths within the inner walls of the Old Town, vis. the emperor's, the little bath, and St. Qui-rimus's. Charlemagne was fo much delighted in the first, that he often invited his fons and his nobles to bathe and that he eften invited his fons and his nobles to bathe and frim there with him; for it was the cultom antienty to bathe there, an hundred, perhaps, together; but it is now divided into five bathing-rooms. The little bath joins to it; and the fprings of both are fo hot, that they let them cool ten or twelve hours before they use them. They are impregnated with nitre and sulphur; and sometimes cakes of brimstone and falt-petre, of a considerable thickness, are taken out of them. They are unpleasant to taste at first, and smell like a rotten egg. Near these baths there is a fountain of warm water, much resorted to in summer mornings, and drank for chronical designs. in fummer mornings, and drank for chronical difeases; those in the New Town, which are, the rose bath, the poor's bath, and St. Corneille's, are not so hot and clear as the former, and their finell is somewhat offensive. Near the hot fprings lie many cold ones, by which their hear might be tempered; and, with a little charge, they might be made the most delightful baths in the world.

Dr. Blondel fays, that bathing in these waters is good

ried in covered e, with ar chief only exy to des of the n, richly e picture ma, ems

againt all nervous diforders; such as convulsions, palies, numbness, tremblings, felatices, gout, swellings, diftermpers of the bowels, vertigos, tingling of the éars, nephritte differspers, most and code affections of the womb, barrenness, abortion, seabs, and dregs of mercury. Though they are propared for bathing, they are also drank, in feveral cases, with success, against hot distempers of the liver, fpleen, reins, and bowels, obstructions of the mesentery, pancreas; dec. They cure the yellow jaundice, and its effects, a cacheay and dropsy. They are good against inveterate and subborn fevers, terrian, and quartan ague, and bleeding at the nose. They cure the scurvy, gout, rhematism, and other distempers proceeding from too much ferum in the blood. They kill worms, dry overmoist parts, and help conception. They purge the urinary wesself of all impurities, cure strangures and stoppages, dissolve and expel the stone and gravel. They are excellent against ashmas, and the most investrate choicis, schirrous fevellings, scrophelous dissempers, diarrheas, ulcers of the gums and teeth, and various other disorders. From these virtus may be seen the agreement between the waters of this place, and those of the English baths.

The charming village of Borcet, or Forcet, is situated about a surlong from the south gate: its issue was derived from the wild longs that formerly abounded in the neighbouring woods. Here are also many hot springs on both sides of a small cool rivules, which was strong the men should be a simple of the english baths.

The charming village of Borcet, or Forcet, is situated about a surlong from the fouth gate: its issue was derived from the wild longs that formerly abounded in the neighbouring woods. Here are also many hot springs on both sides of a similar local rivules, which was strong the men should be sure of the surface of the similar strangers of the surface of the surface

Rhine and Maefe.

The circle of Weftphalis, besides the places already described, contains the following less considerable counties, seigniories, &c. namely.

Spiegelberg county, which is held by the prince of Orange of the elector of Hanover; hence the civil and ecclessatical judicatories are subordinate to those of Brunfact. ecclesiatical judicatories are subordinate to those of Brunswic Lunenburg, and the elector has a seat in the college,
and at the diets. The only place in this county, worthy
of observation, is Spiegelberg, an ancient castle in a mountain, in the vicinity of which there is a castle to which
pilgrimages are made, and an hopital for old women.
Rettberg county is surrounded by Ravenberg, Lippe,
Paderborn, and Ofnaburg, its length is seventeen miles,
its breadth fiz. Its only town, called Rittberg, is situated
on the Ems. The county enjoys a feat and voice in the
college, and in the diets of the circle.
Holzapsel county belongs to the prince of Anhalt-Bernburg Hoym. The seigniories of Wittem, Eyis, and
Schlenachen, belong to the count of Platterburgh, and both
No. 62.

intitle their proprietors to a feat in the diets of the circle, and the college of the empire.

The feignforles of Gehmen, Gimborn, and Neuftadt, Wiekerhad, Mylendock, Richtenflein, Kerpen, Lommerfam, Schleinden, and the counties of Blarkenheim, Geroffein, and Hellermund, all intitle their respective proprietors to a feat and voice in the college, and in the diets of the circle. But those privileges are not allowed to the lords of the feigniories of Dyck, Scoriau, Richold, Merschemic, Jever, Koriphausen, Dreyfz, and Wybre.

Anhal: feigniory belongs to the privilege, and in the diets of the circle; as does the colum Metteruic for the feigniories of Bielftein and Wrorienburg.

Diepholt county lies fouth of Delmenhord, is twelve miles long, five broad, and contains a lake called Dummerse, which abounds with filh and wild ducks. The only town, Diepholt, fituated on the Hunre, is a borough. The foil of this country is fierile; the inhabitant trade In black cartle, and coarie linen, and woollen, which they manufactures: they profess the Lutheran religion.

The town of Pyrmont lies on the borders of Hanover, and twenty can of Lemgow. It is the capital of a country, with a very strong fort, formarly subject to its own lords, and now belongs to the prince of Waldec. There is a great refort of German and other nobility hither to drink the waters, which are preferred even to those of Sps., sind exported abroad from Bremen, whither they are carried by the Wefer. In the neighbourhood are one or two fait pits; and the king's iron and filver mines are not far off. This town is particularly famous for its mineral waters.

Gronsfeld is a simall district, erected into a county by the emperor Rodolph II, and intitite its count to a feat in the college, and in the diets of the circle; as does the county of Reckum, which is feparated from the county of Limburg by the Macfe.

S E C T. IV.

Of the circle of the Upper Rhine; giving an as sunt of the various places therein contained, with the trade; manufactures, Gc. of the inhabitants.

THE Upper Rhine is bounded by the Lower, which almost interfects it, and by Westphalia, Franconia, Suabia, Upper Saxony, Lower Saxony, Alface, and Lorain. It was antiently much larger than it is at present, as a great portion has been disnembered from it by France. The diets are held at Frankfort, the archives are kept at Worms, and it presents two affections to the chambers of Wetzlet

Wetzler.

The first division of this circle, we shall describe, is the bishopte of Worms. It is about twelve miles in length, and is eight in breadth where broadest, is interfected by the Khine, and furrounded by the Lower Paletinate. In general, it is barren; mountainous, and woody, though some few parts are fruitful both in corn and wine. The chapter chuses the bishop, whose revenue does not exceed two thousand five hundred pounds, and who, in spirituals, is subject to the archbishop of Mentz. The protestante here are miserably oppressed.

The capital city, Worms, is situated on the west side of the Rhine, at the distance of twenty-six miles south of Franksou on the Maine: while the imperial chamber was kept here, it was one of the most considerable cities in the whole eropire. It is celebrated for the great diet held here in 1521, to which Luther came according to his summons, though his friends would fain have dissuaded him, by putting him in mind of John Hoss, who was burnt by a de-

in 1521; to writes butter cause according to the council of Contance, notwithflanding the paffeort granted him by the emperor Sigifmond: but Luther, far from being terrified, faid, That though he was fure to be engaged with as many devils as there were tiles upon the houles of Worms, he was refolved to go. He came hither accordingly; made fuch a bold answer and defence of his doctrine, that he was proferibed, and obliged to abscond; during which time he wrote that called his Works from the Defart. Misson, who was here in 1687, fays, the Lutherans had only one church for their use, and had their worship by turns with the papits in that of the Dominicans; but the papits had all the rest of the churches; and that the Calvinits had one at Newhatesh, half a league out of the city, where the Lutherans sometimes strupted out of the city, where the Lutherans formetimes ferupied not to have their children baptized, contrary to the custom of Frankfort. The town had no other fortifications but a

618 THE NEW AND UNIVERSA.

doubt well, was as large as Frankfert, but fo ill-peopled, and f. poor, that he faw a house fold for one thousand crowns, which had formerly yielded as much yearly. It was often taken and retaken dering the civil wars in Germany, but fusived most by the French, who in 1689, lid in assess in a few hourst what had been the work of ages. They lest so much as to contain a garrison of three hundred men; who in 1692, being attacked by the landgrave of Hess, intrunched themselves in a church, where they were all forced, and put to the sword. In 1698, the popish clergy, who had not been allowed to make processions, except on the day after Easter, not to carry the host in public, would needs carry it in procession through the streets on Christmas day: The magistrates sent a notary to forbid it; but the priest at the head of the procession fruck him over the head with a confer that he carried in his hand. Most of the burgers, being prestrants, ran to asset the notary, but a great number of popish peasants, brought in for the purpose, sired upon them, which so incensed the protestants, that they drove the procession, the protestants pleased the treaty of well-platia in the treaty of Kysic betwist France and the empire, which restored Worms, and its dependencies, to the bishop. The protestants pleased the treaty of Westphalia in their own defence. Some of the principal authors of the treaty devented and a Palatine regiment quattered in the city to prevent disturbances: at the same time the elector inclosed twith a well. The city is subject to the bishop, but under the protestion of the elector palatines.

The papists, who are very numerous here, have the cathedral; but the magistrates, and most of the inhabitants, are Lutherans. There is so much vecant ground in the town, as, being planted with vinea, yields annually one thousand sive hundred and fifty English gallons; which wine is so much esteemed, that the magistrates make presents of it, with some sish, to prince and other travellers of quali

feems to have been defigned for a fort rather than a

church.

The cathedral is a long, high, and ftrong ftructure, with a tower at each of the four corners: the ornaments are gothic, and over one of the gates there is an hieroglyphic, being a figure of the fize of an ale with four heads, via. those of a man, an ox, an eagle, and a lion; the two first are looking upwards, and the other two downwards: it is supposed to be a representation of the four beats in Exchiel's vision; or, as some think, of the hieroglyphics of the four evangelists: a woman six on its back; which they fay too, represents the softel. At, the entrance of Sc. fay too, represents the gospel. At the entrance of St. Martin's church, over a moveable alta., there is a strange picture well worth a traveller's view: it is about five set picture well worm a traveller's view: It is about are set figurare, and at one corner of the top has a reprefentation of God the Falher speaking to the Virgin on her knees in the middle of the picture, holding an infant reprefenting our Saviour, by the feet, with his head in the hopper of a mill, which the twelve aposities turn by the help of a wheel, and of the four-headed beaft above-mentioned;

whicel, and of the four-headed beaft above-mentioned; and the pope is drawn upon his knees hard by, receiving the hofts which fall from the mill, into a golden cup; one of which he prefeast to a cardinal, who gives it to a bifhop, the bifhop to a prieft, and the prieft to a layman. In this city are two public halls; the magifrates affemble in one of them twice a week for matters of flate, and in the other for the adminifration of juffice. It was in the former that Luther, above-mentioned, being heated with the debate, and the fire that was near him, called for a relafi of wines which being brought; he was fo eager in aglai of wine; which being brought, he was fo eager in his diffourfe, that he forgot to drink it, and soon aften it broke to pieces on the bench without any body's touching, or being near it; whence the Luthersan concluded, that there was poilon mixed with the wine: whereupon they broke the bench, and still keep the pieces as a memorial of his deliverance. A fine church was built here for the Lutherans not many years ago, in which the history of

that great man is very well painted.

The mint here is a noble firucture, with a spacious portico, where a vast number of bones and horns hang between the arches; the former of which, they fay, are those of giants that lived among the antient Vangiones; and the

latter, the horns of even that drew the stones which built the cathedral. The outside of the house is adorned with many pictures, and particularly some of those giants in armor. Misson says, he saw a small piece of parchanens in a frame here, in twelve forts of hands written in divers miniatures, and several draughts curiously done with a pen, by the sees, as the inscription says, of one Thomas Sheevener, who was born willout arms.

This city, since it was laid in ashes by the French in 1693, retains little more than the shadow of its former beauty. The richest traders, considering how much both they and their ancessors had suffered by reason of their lying so open to France, retired to Frankfort and Holland; so that its chief support now is from the bilinop and chapter; the first of whom, however, being always a pluralist, and often an ext. said celector, very seldom resides here. The late bishop, who was also elector of Mentz, boilt a new episcopal palace adjoining to the cachedral. The citizens, as are indeed those of most other imperial towns, are very complaisant to strangers. There is a senate, or spreame council here, composed of wenty-sive members, whereof thirteen are so lists.

There is the finest country in the world from this city to Oncenhaim and Frankenslate. The sine sealous with

is a fenste, or supreme council here, composed of twentyfive members, whereof thirteen are for life.

There is the finest country in the world from this city
to Oppenhaim and Frankenslale. The fine spacious plain
in which it stands, abound: with corn, vineyards, and
full-trees. A wine is produced here which is called
Liobea-Frauen-Milch, i. e. our Lady's milk. The Rhine
is about three or four hundred paces from the town; but
it is faid somerly ran close by its walls. Which way
foever one approaches the town, the four towers of the
cathedral are iten; which are all built of red free-stone.

The other places of most note, in this bishopric, are,
t. Leiningen, a town on a mountain, the citadel of which
was destroyed by the French. a. Stein, which, though
the only fortress on the river Welchnits, gives name to a
bailiwic. 3, 4, 6, 6, 7. Newhausen, Tutbeim, Rhelim,
Hockheim, and Dirmstein, are all boroughs, with protestant churches, in which, however, the Roman catholics, are allowed to perform religious worship.

The bishopric of Spire is interfected by the Rhine: the
other parts of it are surrounded by the territorics of the elector palatine, and the margrave of Baden Durlach. Some
parts are mountainous and woody, and others level; it
produces great quantities of corn, almonds, vines, and
chefinus; extends thirty-two miles lonely, has a feat and
voice in the diets of the circle and of the tolege.

Spire, an imperial city, is stausted on a delightful plain,
on the east fide of the Rhine, twelve miles fouth west from
Heidelburgh. It was eyeded before the time of our Savitour, and the fee, was founded in the fourth century.

The magistrates, and many of the inhabitants, are Lutherans; but the Roman catholics have many churches,
convents, &c. It has a feat, and votes in the diets of the
empire, and the feedochers.

therans; but the Koman catholics have many churches, convents, &c. It has a feat, and votes in the diets of the empire, and those of the circle, paying an affoliment to the empire, and the chamber of Wetslar. The French defluyed this city in the year 1689, and murdered indicriminately men, women, and children, deftroyed feveral valuable with the second of the control of the cont leable merble monuments of emperors and emprefiles, and even ranfacked the graves, and feattered about the bones of illuftrious dead. Previous to this devastation, it was the feat of the imperial chamber; fince that time it has been built with additional beauty, but the imperial chamber ber has been removed.

At the diet held here in 1529, the word "! Protestant" took its rife, fince which time perfons of the reformed re-ligion have been diffinguished by that appellation. It is fingular, that the bishop is not permitted to refide in this city; and when he is chosen, before he is suffered to enser must redress all complaints and then sitting on

it, he must redress all complaints; and then sitting on horseback between the two outermost gates, with one hand on his lest breast, he must give it his benediction: he then makes his public entry, and the citizens pay him homage. The fortifications of this city are but very indifferent. It is under the protection of the selector palatine.

The town of Philipsburg, which is eight miles to the fouth of Spire, was at first but inconsiderable: it was afterwards encompassed by a wall, and at length erected into a city in 1443. It is conveniently situated for commanding the adjacent country, and was therefore fortified with seven royal bashons by Philip, bishop of Spire, (who was also bishop of Tiers) in 1620, before the civil wars in Germany, and called by his own same. The elector palatine Frederic V under, whose sovereignty it was, faspilatine Frederic Vunder, whose sovereignty it was, sufficious of the bishop's designs in fortifying this place during a peace, ordered him to desit; but be nesses, alledging,

rent. es to the : it was that he had the emperor's placert for his warraint. Upon this the elector selled troops, and desnolished the fortifications; for which the emperor furnmoned him and his confiderate before the chamber of Spires, and defigued to proceed sgainfit them with the umon faverity, which was one of the causes of the civil war in Gartmany. It has fuffered fewen memorable flegges in the freet of an hundred years. Spinols, the Spanish general, repaired the fortifications in 1033, and guade it almost impregnable. It was taken the year after by the Swedel, who gave it to Lewie XIII. and was retaken by the Imperialish in 1035. It was taken from them in 1044 by the French under the prince of Condé, who joinest the German protestants. The French kept it till 1676, by virtue of the treaty of Munster; and Louis XIV. In 1066, added to the fortifications, so that they extended to the Rhine, which lies a quarter of a league from the town; and pist over the great gate an infolient Latin infeription, characteristical of the price and ambition of that despote monarch.

The Imperialitis retook this place in 1696: and the emperor ordered the faid Latin infeription to be reased, and another put up In its fleat it and whereas the arrowant infeription placed by the French, ended with the words, "What he (Louis XIV.) shute; no man opens; and what he opens, no man shute;" that placed in its room by the emperor level of colded with, "What the French thut, the Germani open."

Being thus regained by the Germana, after a slegg of four months, it was granted to them by the peace of Nistagues." In 1688, the French took it again; but it was reflored to the empire by the treaty of Ryfwick, in 1697, with the fortifications on the right side, but those on the left were demolished. It was again taken by the French in 1334, after a long and bloody slege, in which the farmous dake of Berwick (natural son of king James II.) was killed by a cannon ball, betwit his two grandsons, as he went to take a view of the trenches; but at the peace that followed in the

and balliwies.

The only place in the bishop's dominions, which belong to this circle, are: 1. Schelingen, a market-town on the Rhine.

2. Laussen, a little town on the Bista.

3. Arleshim, on the same river, is the residence of a chapter, 4. Belletay.

5. Seehof. 6. St. Urista, on the Daux, which contains a provosiship.

7. Desperg, on the Birts.

8. Bumtrut, on the Allen.

Fulda territory, lies fouth of Hessen and north of Uristan.

numerut, on the Allen.

Fulda territory, lies fouth of Hesse, and north of Hanau, Keineck, &c. is about twenty-five miles in length, and twelve in breadth. This abbey belongs to the circle of the Upper Rhine; and is divided into thirteen small bailiwics. Some reckon it a part of Hesse, others of Wettersyia; and some again make it independent, because its

abbot, who is cleded by friend who all be all contested by fixteen defeates, is lord the undecentry, and primate of all the abbets in curmany on the primate of all the abbets in curmany on the primate of the empire, fits at the foot of the country on the primate of the empire, fits at the foot of the country on the protestant flates, and depends immediately on the protestant flates; as Sere-Gothe, Acc. as well as the Castle, there are feveral gentlement here of that relignos. The abbot is moreover perpetual chancellor to the empire, and pots the erown upon her head at the coronation. The revenus of this country is between there of that relignos, and pots the erown upon the head at the coronation. The revenus of this country is between the four or great officers, with rich equipages and livery, 4 company of herfe-guarda, and a regiment of foot guards well-closched and sieunted, to attend him, and is able to raise four or five thouland men. His chapter confirts of eight prevofts; said maind talits a magnificent houthold.

The capital town, Fulda, flatids out a river of the fame name. It is contiguous to the abbey; which is of the Beliedline order, and one of the nobleft in all Europe, it was founded annor 744, by St. Boniface, and artforwed with great privileges by feveral emperors. The great church, dedicated to that faint, is a flately free-flone pile of antient architective. The monks have three manuferipts; one of the Naw Testament complete, the Four Evangelists discinct, and a Treatife on the Trinity, all faid to be written by St. Boniface, in a character much different from any now in use. It is an open town, but dirty, and not very well built. The palace is a stately pile also of free-flores, with apartments richly furnished, and, together with the abby, may be reckoned attoing the nobleft buildings in Germany. An activate writer objeves, that he met with very hard drinkert, serible bad roade, and diffual lodging in this country.

The finall, but neat city of Hirchfeld, on the fame river, is fituated twent

in breadth.

The matterflip of St. John confits only of the town of Hefterfheim, and a few villages belonging to the order of St. John. The grand mafter is a prince of the empire, and has a feat and vose among the princes in the diets of the empire and circle. Heirefham, where the grand mafter refides, is a market town.

The abbey of Prum is fituated in the forest of Ardennes, and was founded in the eighth century by Pepin, king of the Franks, and was, in 1570, incorporated with the archbishoppie of Triers: hence the archbishops became its administrators, and, as such, have a feat and voice in the diets. Prum, from which the abbey takes its name, is a town of little note.

Swinnern duchy was long possession of the same of the sa

town of little note.

Swinnern duchy was long possessing, it devolved to the cleeker, who, on that account, fits and votes in the college of princes, and, joined with the bishop of Worms, are fummoning princes for the circle.

Swinnern, the principal town, which takes its appellation from a river of the fame name, is thirty miles west of Mentz, and has several churches. The duchy contains, besides Swinnern, the following little towns, namely, Laubach, Soberahelm, Argenthal, Monzingen, and Horrich

Lauteren, a little duchy, reverted, in the last century, to the electoral house, which is thereby entitled to a sea and voice in the diets; as did the bailwies of Lauteren and Veldena, bestowing, at the same time, similar privileges. Lauterent is situated on the Glan, and Veldena on the Moselle.

the Moselle.

Frankfort on the Maine is an Imperial and free city: it was antiently called Francosordia, that is "The Ford of the Franks as for the Franks used to cross the river here, in order to make their incursions on the Saxons, on which account the latter at length built this city, to restrain their ravages. Its present name distinguishes it from Frankfort on the Oder. It is eighteen miles cast of Menta, and twenty from the Rhine. It is spacious, populous, and opulent, one of the Hanse-towns, and the feat of the Irangeles.

defiel diet. The river interfects and divides it into two parts, which have a communication by means of an elegant floute bridge, confiding of fourteen archee, with a tower at each end, four hundred poses afunder; but the whole is under the jurification of the fame magifitates. The river is about half as broad as the Themes at London. The town is furreunded by walls, encompatied with deep disches of running water, and forrified with claven bathons, fuitable counterfacerse, outworks, &c. The Maine, Rhine, &c. render its futuation admirable for trade, particularly for bringing great quantities of corn and wine from Franconia and the Palatinate. It has two annual fairs, one beginning fifteen days before Eafter, the other on the fifteenth of September, frequented by merchants with all forts of commodities, particularly books from most parts of Europe, of which they distribute printed catalogy 4; fo that there is greater choice here than in any away in Christendom, during their mart, which isfus three weeks; but at other times the bookfellers have no business hardly as all. There are three marts every year, and the mames of the foreign inerchants are writ over the arch before the doors of their shops, which, when the marts are ended, are shut up. Most of the streets are large, except two or three, which are full of merchants shope. The house are built some of red marble, others of timber plaislersed, and painted or covered with states. On the north side of the city there is a spacious horse-shir or market, where a vast number of good horses are fold to the French king, and the neighbouring princes, particularly the former, who buys some thousands in a year to remount his exalty. The Jewa are the chief jockeys.

The city is voond, and has no suburbs, but is much larger, richer, and more populous than Ments. The chief structures are, a. St. Bertholomew's cathedral, which, though too dark a pile within, is a stately venerable piece of architecture, 'unit by Popin, father to Charlemagne. In a long marrow chapel of this

a cloifer of fron rattened to the balantrades of the choir, looks like a great bird-cage, having no ornament but an ordinary crucifix of brafa. M. Blainville takes notice of a curiofity here of another fort, vis. The tomb and white marble flatue (flanding in a niche of black marble) of John Chaites, biftop of Worms, who, the Infription fays, was defeended of the barons of Frankenflein, who mount Chailes, bishop of Worms, who, the Instription says, was desended of the barons of Frankenstein, who mount up their genealogy from father to son for more than 900 years backwards of uninterrupted nobility. They say that this church was greatly enriched by Charlemagne, but that the emperor Lewis of Bayaria took away the greatest part of its revenues, bocause its chapter had fided with the pope against him. a. The town-house, where the emperor and electors usually meet in council after the election is over; but besides the throne, it has only some benches covered with green cloth, and forme pictures. The great hall where the imperial sast is kept on the coronation-day, is not very regular though large; the shoot is covered with black and yellow cloth, the livery of the house of Austria. On the cicling is painted the story of Ganymede carried away by Jupiter's eigle, and of a raven tearing out the eyes of a person who had fallely accused another of murder. Before the house is a great square, where, at this solution is a second of the chestors comes in person for a slice of bees, which he carries to the emperor, and, after he has dined on it, it is abandoned to the populace. Another of the electors carries him a glass of wine, which on that occasion runs from a sountain in the populace. Another of the electors carries him a glafs of wine, which on that occasion runs from a fountain in the middle of the square. A third carries him a measure of oass from thence: and in this square, after the cornation, another distributes the medals, &c. struck upon the occasion. Here is a vestry, where the electors were shut up during the election; and count Papenheim, marthe empire, stood before the door with his sword shal of the empire, stood before the door with his sword drawn, to prevent the princes from coming out till it was over. 3. Braunfeld, which was formerly the emperor's palace, and how the mansion-house of the Teutonic knights, where debtors have a fanctuary for fourteen days, after which they may be taken up. 4. The port or harbour. 5. The citadel or fortress of Saxe. "when. There are several noble fountains in the city, particularly three in the great market-place; and there are divers mineral springs and baths belonging to the city, in which the women used to bathe when going to be married, and a month after child-birth. month after child-birth.

The principal magistrates of this city are, a pretor,

twelve burgomafters, fearteen aldermen, one of which is always a burgomafter, and forty-two common-council. The fenate, which chafts two burgomafters anneally out of their own number, is divided into three benches; the fifth is that of the Efchevine; the factor is of their own number, is divided into three benches; the fifth is that of the Efchevine; the factor is for life as well as the aldermen, and his offer council, is choic out of the aldermen, and his offer it for life as well as the aldermen. Befields their, there are tyndics, whose power is not very great.

La Foref flys the magistrates are choic from among the nobility, but named by all the corporations of trademen, except the taylors, became one of them was chief in the revolt hereafter mentioned against the magistrates. The government here is quieter than in most of the imperial towns; and their liberties, which they boast of holding from Charlemagne, feam better confirmed to them.

The Lutheran religion is professed to them.

The Edick marthe, a marble pupit, and reading-dess, and tro of the galleries are painted with scriptus histories, and the civiling and the fronts of the galleries are painted with scriptus histories. The Roman establics are permitted to perform their religious duties in the eathedral, and have several chappes, and two convernit, but they are not instruct to make public processors. The Calvinsis have two churches about a league from the city, one for German, and the other for French refugees; but the ordinances of baptism and marriage must be performed in the Lutheran churches. In the council held here in 703, three hundred bishops assisted by French refugees; but the ordinances of baptism and marriage must be performed in his Lutheran churches. In the council hel gate at each end of it, that are flur every evening, and the keys carried to the magistrates. Their houses are generally of timber plaisfered, and four, sive, or fix stories high, but as nasty as a hog-stye; yet in this little quarter it is faid there are three or four thousand fouls. Their chief trade is buying and felling old ware, hawking toys at the inns, &c. and changing such money as is not current here: but they are not suffered to trade either on Samuday or Sanday, the Junish and Choffin felbash.

turday or Sunday, the Jewish and Christian fabbath.

The Jews at Frankfort are obliged, under severe penalties, to setch water, when any sire breaks out in the city, be it ever so distant from their quarter: in recompense, the magistracy permit them so chuse twelve judges out of their own body, to decide their own differences, who are called bawmeesters; and they who will not submit to their decisions, are allowed to appeal to the Lutheran tribunals. They are obliged to wear a piece of yellow cloth, that they may be known from the other inhabitants, though their habit is very diffinguishing; for the men generally wear coarse threadbare cloaks, flat brimmed lists, old greafy ruffles, and thick-pointed beards. The women wear over their cloaths thick cloaks of black crape, bound about their necks by class of oilt copper, and round their the magistracy permit them so chuse twelve judges out of wear over their cloatns thick cloaks of outer chape, count about their necks by class of gilt copper, and round their floudders a sparkling border of tinset, a foot in breadth; their head-dress is only a coarse wrapper, ending at their forehead

forthead in two large horns, about four fingers broad, one wit which is covered with black gause, and the other with a bit of lawn dyed blue. The Jewiffs girls are diffinguithed from the mattried women by their head-dreft, which is nothing but a piece of red tarfets, bordered with a gold gause, with which their hair is gathered and tied. A great number of the Jeweffes here were acatings, which represent the figns of their houses and fhops, be they cat, dog, or any other animal. Their hot and cold baths are nest the fynagogue: the former are in two little recoms, where there are couldronts to heat the water; the cold are in a fubtetratusous place, thirty feet deep, furrounded by an iron rail, where the women peep over, to see that the who bathes plunget over head and cars into the water, according to their old law, which ordains, that every hair be purified. There is a place with ovens for haking viduals on their fabbarb-day, to which each famuly carries their pot, or pan, on the eve, and it it carried home neat day, when the fervice is over. Their timber louise being to close, and apt to catch fire, their quarter has been twice burnt down; because, it feems, for fear of being robbed, they refused the help they might have had to fave their houses.

There are pine-trees planted by the doors at several houses in Frankfut, denoting they are tavernes, and eyphers painted on the door-posts, making the different prices of the wines in the cellars. Sasen-hausen, formerly belonged to the cledror of Menta, but was hartered a little above own hundred years ago, for the town of Hochs, which depended on Frankfort. One of the city council must refide at Saxen-hausen, fince this change took place.

Two of the three originals of the famous golden, buil are preferved at Frague and Naremberg, the third is kept in a black bow, together with two writen copies of a translation of it into the German Impresent with a gold feal of three inches dismeter, weighing twenty due to the nobility, and so binds the emperor and the princes to o

During the government of the empire by the French, the princes were all obliged to appear in person, unless they were excused by the en-peror and electors; but now most of them send their deputies to save charges, which makes their proceedings much flower, because their deputies are often obliged to send for their instructions. To such aboves and bishops who are not deputies, the empire does not write, but only to their directors, that they peror does not write, but only to their directors, that they may give them notice: though, fince Maximilian's time, many of the princes have forborn to fend deputies, yet they are as much obliged to fubmit to the refolves of the diet as if they did. Sometimes, in cafes of great importance, the emperor not only fends letters, but embaffadors, to require their preferice; and, in urgent affairs, those who do not fend, make their embassadors plenipotentiaries. All the princes bear their own charge, or that of their de-

When they arrive, they give notice to the hereditary

marfhal of the empire, under the elector of fazeny, who affigns them lodgings according to their quality. If the cuperor be present, they be guedlence of him, shew him their fumnons, thank him for calling the diet, and promise concurrence for the good of the empire. If the be not there, the princes send gentemen to notify their arrival to the director of Menta; but if they be deputies, tilly send their secretaries with their full powers, as do also the deputies of the towns. When they are all come, the marshal of the empire acquaints them when or where the emperor, or his committery, is to tell them what he has to propose. There is no upper and lower house, but all assembled int one room: it the emperor be there, he goes in his tobes to the throne, which he ascends by three sleps. The electors sit on a bench, which they ascend by two sleps. and the princes on other benches, not raised to high. If the emperor be present, the first thing they do, in, to attend him to church, where prayers are put up for a bledsing on their considerations: when they are returned, the elector of Treves, in the name of the states, thanks the elector of Treves, in the name of the states, thanks the elector of Treves, in the name of the states, thanks the elector of Treves, in the name of the states, thanks the elector of Treves, in the name of the states, thanks the elector of Treves, in the name of the states, thanks the elector of Treves, in the name of the states, thanks the elector of Treves, in the name of the states, thanks the elector of the conditations of the states and the states of t

The point of precedency among the electors, has, in-deed, heen long fince fettled by the golden bull, but the other princes, and the representatives of the cities, have

not agreed on the matter to this day; infomuch that is occaffons perpetual quarrels, and the diet would fometimes break op in confusion; if fome of them did not, for peuce fake, yield to the reft; interling a prough only, that fesh an infance should not be made a presedent. One fourth of a fession is fail to be generally poen in different on this fabled; a second, in drinking-matches; a third, in difputes with the emperor about their privileger; and scarce a fourth upon the business proposed to them from the chearie; the superor about their privileger; and scarce as fourth upon the business proposed to them from the chearie; the superor about their proposed of the different of deputies chosen for that purpose, determine things that have been referred to them by a diet; or when the elector of Menta; in the emperor's name, furnmons the deputies, at the request of the directors or officials of one or more circles, to take orders about their affaire, or to appeale controversies which they are not able to decide themselves.

The lordhip of Britzenheim, on the banks of the Nahe, belongs to the elector of Cologne, who, in confequence of possessing it, erigors a feat and voice at the diet of the circle; and the counts of Wartemburg, for the little county of the fame name, have a seat and voice at the diet of the circle; and the counts of Wartemburg, for the little county of the fame name, have a seat and voice at the diet of the circle. The tordhip of Olbure belongs to the Waldoott Basinian the miles fouth from Westair, and twelve, name of the circle. The rich and imperial ciry of Friedburg, is struggled. The body, and enjoys large privileger granted by the grident miles fouth from Westair, and twelve, name when the first sunday after Trinky, in remembrance of the dedication of their church on that day, which brought pedians thirteen with goods, but at length gree took substantial rade. This town has furfered much by terrible fires, perturbated when feven hundred more had the fame fase. This last a faid to have been ow

the family.

This is a mountainous, barren country, but has fome fertile vallies. It has two small rivers that join near its capital city, from whence it has its name, and run fouth to the Sare. Calvinium was generally profiled in this duchy, till the Swedes became possessed of it, and then

Lutherantics began to flourish, the king of Sweden giving fome of the best livings and preferments to the Lutherant clergy, which created great animosities between the two dominions: hot the late king of Sweden dying without lifue, and the duchy devolving on, or at least being claimed by, a popish family, the protestant subjects, fearing less the applies should make an advantage of their quarrels, thought is a surfice. the papills investigates thought fit to unite

the papilla should make an advantage of their quarrels, thought fit to unite.

The principal place in this duchy is the city of Deux-Ponts, called, in the German, Zweybruggen, and, in the Latin, Bloontium, front its two bridges over the simall rivers Blife and Schwalb, whereon it stands, is thirty-one miles north-west from Landau, and thirty-five south-east from Triers. It is a small, but neat town, and was ence defended by a good castle, since demolshed. It suffered much during the civil wars in Germany; and also in those between France and the empire, when it was taken by the French in 1672, but, by the treaty of Ryiwie, restored to the king of Sweden.

Heste-Landgravate lies on the north side of the river Mainet the whole country is bounded on the north by Westphalia; on the West by the duchy of Berg and electorate of Triers, on the south by the electorate of Menta and Francohia; and on the east by the duchy of Westphalia; on the West by the duchy of Westphalia; on the fame on the safe by the duchy of Westphalia; on the west by the duchy of Westphalia; on the safe by the duchy of Westphalia; on the fame from north to fouth is about one-supered miles, and the fame from east to west. The air is cold, but healthful: the water wholsome, and the foil fruitful, producing much cornamic, towards the banks of the Raine and Lahn, grapes. Here are also large souths, with store of deer, and other game; and assentiate, in which are some mines of copper and lead?

Here are also large soults, with store or over, and outer, game; and mountains, in which are some mines of copper and lead.

The samily we hoate of Hesse, which is one of the most suriests in Geretany, is divided into two principal branches, via. Cassel and Darmstadt. The former comprizes Hesse-Cassel and Hesse Rhimsels: the latter, Hesse-Darmstadt and selfer-Hombourg: though Martiniers says, that Hesse-Rhimsels, as well as Hesse-Hombourg, are branches of Hesse-Darmstadt.

The sovereign princes of this house have very extensive rights and presonatives: they have three votes at the diet of the sumine. They belong to the circle of the Upper Rhims, but Hesse-Cassel has a voice among the counts of the sensive. They belong to the circle of the Upper Rhims, but Hesse-Cassel has a voice among the counts of the bench of Wessehalia for the county of Schaumburg-Captes are exceeding one thouland florina, are determined by the courte of the country without appeal. These princes have several privileges in common, such as the right of protection and imperial presection of the latter of the country without appeal. These princes of Hesse-Cassel are not of age till they are vecury fave, but those of Darmstadt are to ac eighteen.

The landgrave of Hesse-Cassel are not of age till they are vecury fave, but those of Darmstadt are to ac eighteen.

The landgrave of Hesse-Cassel possesses, Laster her lude.

It he lower county of Catsenslebogen. 5. The country of Schaumburg, except Buckeburg, which belongs to she country of Eschaumburg, except Buckeburg, which belongs to she country of Schaumburg, except Buckeburg, which belongs to she country of Hesse-Cassel, in the country of Henne-burg.

The landgrave of Hesse-Cassel parmstadt, who is little inferior The landgrave of Hesse-Cassel parmstadt, who is little inferior.

To their Martiners adds the bailiwics of Ucht and Freadenburg.

The landgrave of Heffe-Darmftadt, who is little inferior
to the former, either in dominion or wealth, having a
revenue of near one hundred thousand pounds a year,
postifier, 1. The greatest past of the Upper Landgraviane,
in which there are Giessen, Butsbach, Aendorf, Battenberg,
Berg, dre. 2. The country of Nidda, which consists of
teveral bailiwics. 3. The lordship of liter. 4. The upper country of Carsenellebogen, in which lies Darmstade
city 1 the land of Epstein, Braubach in lower Catsenellebogen, and Kirnbach in Swabia. The succession also of
the country of Hanau was in 1736, upon the death of ites
count, awarded to the Frince of leftse-Darmstadt, as acceptancy
to the landgrave of Heffe-Darmstadt, as acceptant, on condition of his paying twenty thousand pounds,
by way of compensation to the house of Cassel. The king
of Poland, as elector of Saxony, ought to have lad his
share in the succession; but his majesty gave up his rights
by a treaty, to the landgrave of Heffe-Cassel.

To the branch of Rhinsels belong, 1. The greatest part
of the lower county of Catsenellebogen, viz Rhinteld,
St. Goas, Fort Cats, Schwalbach and Gevernhausen; the
bailiwies of Riechenberg, Florenstein, and Brau. 2. Rottempourg, and its district, Wanssied, Eschwege, and Soutra in Lower Hesse.

To the branch of Hombourg belong, 1. Hombourg
and its servicory. 2. Bischeim. 2. Wevellumben and

o the branch of Hombourg belong, i. Hombourg, its territory. 2. Bingheim, 3. Wevelinghen and and its territory. 2. Bingheim. 3. Wevelinghen and Helinaftadt, with its dependencies. The prince of HomDr. fpler by t righ into lies leve T of w Low rive

Darmiladt.

The two branches of Cassel and Hombourg are Calvinity; that of Darmiladt, Lutheran; and that of Rhinfelds professes the Roman catholic religion, which is, however, not tolerated in the dominions of the other three princes; except in the Imall principality of Hirshfeld. These countries are adorned with several universities and academies. The situation of the country betwint Upper and Lower Sasony, and the neighbourhood of Westphalia, occasions the language of the people to be a mixture of High and Low Dutch. The laws most in force here are the Roman result laws to which they inin municinal laws of their the language of the people to be a mixture of High and Low Dutch. The laws mot in force here are the Roman or civil law, to which they join municipal laws of their own. The people are numerous and wallike, being tailed and difciplined by the younger four of the family, who are made licutenants and captains of feveral diffricts, and receive pay of the regent. In the prince of Heffe-Caffel's military fervice are a general, two licutenant-generals, a major-general, a colonel of the attillery, two commiffaries general of the war, and one chief pay-mafter, two troops of life-guards, one of white, and the other of black horfes, three other regiments of horfe, three of dragoons, and five of foot, one of which is guards, befides the militis, which is commanded by a licutenant general. The landgrave has a privy council, or court, for the game and forefit; a chancery, or fecretary's office, a treating and confiftery, for eccleficalical affairs; and another court, called the French commission, relating particularly to the French in his dominions. All the privy counselors are members afthe confistery, to whom are added a fuperintendent, a metropolitan, one of the court preachers, and a fyndic. Dr. Nicholson has an observation, that the power and fplendor of the family of Hesse was considerably advanced by the Recessus Imperii in 1654, which established the right of primogeniture in it, and prevents their dwindling into petry princer, which has been the fate of many familias in Germany, by dividing the sovereignty among the several branches.

into perty princer, which has been the fate of many families in Germany, by dividing the fovereignty among the feveral branches.

The landgravate of Heffe contains the following places, of which the principal is, s. Caffel, the capital city of the Lower Heffe, is fituated in a rich platfant plain on the river Fulda, near the confines of the dueby of Brunfwie, forty miles fouth-east from Paderborn, and ninety-eight north-east from Mentz. It is a place of good trade for wool and other merchandise; and to the west it is fortified with walls, dirches, and a firong citadel. It is the feat of the landgrave, whose palace shands without the town, furnounded by bulwarks, with apartments contrived. In the very ramparts, to lodge his family desing a first-stone, very fine both within and without, and adorned with custous gardens and fountains. Here is a gymnasium, or asseemy, which has been much eclipsed by the university of Marpurg. In this place is a great arismal of free-shone, with arms for twenty-sive thouland meu; and in the room wader it are two hundred cannon, forms flavy-four pounders. From the palace there is a prospect not to be matched in the empire, except from that of Cloves, is being of no less than firsty towns, the least of which contains three hundred houses. The firetest of this city are spacious, and fall of shops; and, here are feveral fine markets, with good provisions of all forts. The landgrave has a library well familished with books and curiosities.

In the great church are the monuments of the landgraves, in brass, copper, and marble, of very good worth. There is a fine flone bridge over the river that divides the city into two parts, of which that called the New Town is very well built, with uniform houses, and the fireces are pretty even and space, for the working of the court. There is a shearch likewise in the palace, for the working of the court. There is a fine flone bridge over the river that divides the city into two parts, of which that called the New Town is very well built, with unifo

both these hospitals are nobles, which the two princes of field alternately nominate.

10. The town of Rodernburg, on the river Fulda, is pleatantly seased thirty miles south-east from Cassis, and has a collegiste thereby, with a down and twenty causely, nobly endowed? This place shands in a valley between two hills in Upper Hessis, and gives title to a branch of the Hessis, sample, and gives title to a branch of the Hessis, sample, and gives title to a branch of the Hessis, sample, and gives title to a branch of the Hessis, sample, and castle, which was desco-listed in the cold and New Towns: in the old, there is a cassis, which was desco-listed in the grant of Hessis, which was desco-listed in the grant of the sample, but have rear raz 23, by the Imperialists, but rebuilt by William IV. landgrave of Hessis, which was descond it with a sine garden, and a church, built throughout with white marble, day one of a quarry at Morssis, a village on the sample of the sample

it was adjudged in favor of the landgraves of Heffe; who have ever fince enjoyed it.

12. Nineteen miles fouth of Caffel, is Hombourg, a town with a caffe in the Upper Heffe, which fissifs at the saft end of the forest and mountain of Heffe, pretty hide to Frankfort; and is the residence of the branch of the saft in the Upper Heffe, which stands at the saft end of the forest and mountain of Heffe, pretty hide to Frankfort; and is the residence of the branch of the saft in pretty hide to Frankfort; and is the residence of the branch of the saft appenage the basilies to of which this is the chief town.

13. Geylmen, the capital of a balliwic in Lower Heffe, stands twelve miles north fram Caffel.

14. The walled town of Eschwege, twenty-four miles from Cassel, was boilt by Charles the Great, destroyed by the Huns, and rebuilt with great splendor by Henry II, It stands on the bank of the river Warra, by which wood and coals, the principal commodities of these parts, are conveyed down to the Weser, and from thence to the enghboaring countries. It is situated in the Lower Heffe, near the contines of Thuringia.

15. The town of Smaleald stands on a rivulet of the same, name, on the east side of the river Werra, and extends between the dachy of Weimar and that of Saxen Nambarg, but is disjoined from the rest of the lands of the landgrave of Hesse-Cassel. The town is fifty miles south-east from Cassel, and has a good trade for iton ware, many mines of the neighbourhood farnishing the inhabitants with plenty of that metal, which they work, and send to foreign parts. They also make and temper steel, from whence a village near it is called Snahlberg. This place was famous for the alsomblies of the protestiant princes in 1730, 1732, 1733, and 1737, to make a league for the defence of the Aughburg consession against the emperor Charles I. and the popsish princes of Germany, which league grew so powerthy, that they forced the emperor to a treaty held in 1557 at Passw, in consequence of which, several parts of the emperor the

feweral parts of the empire embraced the Lutheran religion.

16. The town of Marpung flands in a pleafant country on the river Lahn, forty-eight miles from Frankfort, and near farty-four fouth-welf from Caffel. It is now the chief town in the Upper Heffe, and the feat of the fupreme court of judicature, 20 which appeals are brought from Caffel and Darmfold. It has a throng caffe on a hill, and is etherwife well-fortified. The great chorch is a flately building, and has many asble monuments. The envertity here, founded in \$256, is one of the mot canfiderable in Germany: the professors are Calvinish. The town is large, and well-built, with spacious streets. It has a very large square, adorned with a tewm-house of curious architecture. The castle is separated from the town by the river. In the other part is a stately, spacious building, the house of the landgrave stands on a sing ground, from whence there is a view over large plains and vallies, watered with rivolets; besides hills and vineyards, of which, from the free-stone bridge over the river, there is also a sine profest.

pect.

17. The small town of Lichtenau, and the antient castle of Spangenburg, give name to bailiwies.

19. Connefeld is a village, with a fine white alabaster rock near it.

20. 21. Melsungen and Friedwald contain two princely seats.

22. Vach, on the Werra, given name to a bailiwies.

23. 24. Waldkappel and Allendorf give name to bailiwies.

25. Grebenstein, on the Est, gives meme to a bailwies.

26. 27, 28, 29, 30, 31, 32. Immehausen, Hermershausen.

Trendelberg, Sabbaburg, Karls Haven, Hof-Giesmar, and

and Welfhagen, all give names to bailtwice. 33. Liebenvu, near Paderborn. 24. Felfburg gives name to abiliwic. 39. Geddenfburg, all gives name to a bailtwic, which is remarkably fertile, and contains, 36. Nidenfburg, and contains, 36. Nidenfburg gives name to a bailtwic, one of the four high hospitals of Heffe. 38. Hornberg, on the Effe, gives name to a bailtwic, which contains, 30. Wabern, a wilkige. 40. Borken gives name te a bailtwic. 41. Treyfa, on the Schwalm. 42. Newkirchen, gives name to a bailtwic. 43. Treffurt, a town on the Verre, belongs jointly to Menta, Sanony, and Heffe. 44. Wanfried; at the conflux of the Werra and Frieds. 45. Sonsagives name to a bailtwic. 40. Wigenhaufen is in the bailtwic of Lugwigftein. 47. Pleffair, a reinated caffle, gives name to a lordfhip.

48. The large towar of Frankenbarg, or Frankenaw, on the river Eder, is twenty-five miles north from Merpurg. It flands fifteen miles fouth-caft of Waldec, in the wefternment bounds of the landgravate of Upper Heffe,

on the fiver authorized the first of walder, in the westernmest bounds of the landgravate of Upper Hesse, towards Westphalia. In 1500, some mines of silver and copper were discovered here, but they turned to little account.

49. Sachsenburg is about fix miles west of Frankenburg: here are the rains of an old fort, built by the

50. The town of Aldsfeld, one of the moft antient in e, is nineteen miles east from Marpurg. The townhouse is a handsome building, and over the doors is a monument in remembrance of the fire, with a Latin infeription; denoting, " that when things are irrecoverably loft, it is the best way to forget them." This was the first town in Hesse that embraced the Reformation by Lu-

The county of Sponheim is fituated between the Rhine and the Mofelle. It was antiently divided into Hither and Farther, the former of which is now commonly called the county of Sponheim, and the other that of Starkenborg.

Three-fifths of the Hither county belong to the elector palatine, and the remaining two-fifths to the prince of Baden-Baden.

The principal places in this county are, 1. Kreutznach, or Creutznach, the capital: it is a well-built town, divided by the river Nabe into the Old and New Towns. The off emperors of the Franks had a palace here, in which the formetimes refided. 2. Spanheim. 3. Kirchberg, wes name to a bailiwie. 4. Naumburg, also gives name

One half of the Farther county belongs to the duke of Deux-ponts Birkenfeld, and the other to the prince of

Baden. Baden.

The meft confiderable places are, 1. Starkenburg, a caffle on the Mofelle. 2. Trarbach, or Tranctbach, a fmall town on the Mofelle. 3. Horstein, which gives name to a bafliwie. 4. Birkenfeld, a fmall town.

Solan, a principality and county, is fituated between Lorrain and Lower Alface; and, to diffinguish it from the county of the same name in the duchy of Luxemburg, it is that she linear County and the same name in the duchy of Luxemburg, it is maked the linear County and the others the Lower China. is called the Upper County, and the other the Lower. The princes of Solm are now divided into two branches, viz. Hoogstrat, or Solm-Zufalm; and Leutz-Loes, or Solm-Kirburg; each of which votes alternately at the diets; and possesses an equal share of the estates belonging to the former counts.

Naffau principality lies mostly in the Wetteras. The length of it is computed at about fifty miles, and the breadth thereof about thirty. Though it is in general woody and mountainous, there are fome fine paffores and corn-lands in it; besides excellent baths and mineral waters, and several mines of iron, lead, copper, and other metals. The principality is divided into feveral counties belonging to the different branches of the family, which is one of the most antient and illustrious in Europe, having produced, befides many other great heroes, Adolphus, emperor of Germany, and king William III. of Great Britain. The Germany, and king William III. of Great Britain. The elder line, or that of Walram, confifts, at prefern, of the branches of Nassau Saarbrue-Usingen, Nassau-Saarbrue-Saarbrue, and Nassau-Weilburg. The representative of the last of these married the late prince of Orange's only sifter. The other line, or that of Otho, which confide formerly of the several branches of Nassau-Siegen, which was popsish, Nassau-Dilehourgh, Dietz, and Hadamar, is now reduced to that of Nassau-Dietz, the representative of which, William V. prince of Orange, enjoys all the territories that belonged to the other branches, and on account of them has feveral votes in the diet of the empire. territories that belonged to the other branches, and on account of them has feveral votes in the diet of the empire, and thate of this circle, and Westphalis. All the branches pay a particular and chamber-taxation; but those of the elder kno have no feat, or votes, in the college of the princes of the empire, being only members of that of the Imperial Wetterau courts. Most of the princes and inhabitants

The chief places in this principality are, s. Dietz, the capital of another county, belonging to another branch of the Naffau family, of which the prince of Orange is the head, is pleafantly fituated on the river Lahn, nine miles eaft from Naffau, and nineteen fouth-eaft from Coblentz it is walled, and has two fine caftles, or towers, standing

upon two hills in the town. It has a bridge over the river, which communicates with Fragen-Dietz. It had a collegize church, fubect to the elector of Treves 1 but fines the reformation, the revenues have been applied to the university of Herborn. The county in which this town lies is about fourteen miles long, and am breed, it is thony and hilly, has plenty of venifon and thesp; but in the vallies there is corn and wise enough for the inhabitants. It is fituated between the lower county of Carzenellebogen, the lordfhipt of lattein and Withaden, and the archbi-thopric of Treves. 2. Kirberg, belonging jointly to Naffau-Dietz and Ufingen, in a walled town, which gives name to a bailwice. 3. Weilmunfare, on the Weilbach, gives name to a bailwice. 4. Lahnberg, which with its bailwic, is held in common by Naffau-Weilburg and Naffau-Dietz. 5. Mchfenberg, with its bailwic, belongs to Naffau-Weilburg, given amen to a bailwice, which belongs to Naffau-Weilburg, and other effects. 7. Kircheim-Poland, with its bailwic, belongs to Naffau-Weilburg. 8. Getheim; q. Hanffetten; to. lattein; tr. Burg; 12. New-Saarwerden; 13. Ufingen; 12. Bleidenfalt; and, 15. Schwalbach, are all inconfiderable towns; but, 16. Wifthbaden is a handfome, populout town, fitraæd on the Rhine, and noted for the arm baths. 17. Bibarich, is a village on the Rhine.

18. Weilburg, a handfome town on the river Lahn, which gives name to a country, and title to the prince thereof, who has a fine palace and gardens in the town. Over the river is a floor bridge, and in the neighbourhood of the town is a large menagerie, and a pleafure houfe. 19. Naffau, a finall town on the Lahn, near which formerly flood Naffau-berg, a very antient caffle, which was the original feat of the family. Pare of the bailwice, named from the town, belong to Naffau-Dietz, and the elector of Triers, are joint proprietors. 20. Schleinfein, 21. Lahn on the Schutter, gives name to a bailwile.

The county of Waldec is bounded, on the fouth, by Heffe 10 on the north, by the died for man ha

The county of Hanau-Munzenberg is forty miles in length, but its greatest breadth is not above twelve. It is fertile in corn, wood, wine, freit, and produc. likewife falt, cobalt, filver, and copper. The rivers are, th. Maine,

Kinney, and Nidde. The enablished religion is Catvir-ifm, but Lutherans and Roman catholics are tolerated it is a populous country, and flourishes in manufacture and competers.

It is a popolous country, and flexibles by meanifictures and commerce.

The chief places are, 1. Hanse, its capital, which gives name to it, fitnated on the river Kinneg, which divides it into the Old and New Town, both of which are forthed. The New Town is regular and hardforme; it was built at first by Flemish and French refugees, who had great privileges granted to them. The castle, in which the counts used to reside, and which stands in the Old Town, is fortified, and has a fine sower-garden, with commodious apartments, but makes no great appearance. A canal runs from the town to the Maine, on which river, near the town, is Philipsrue, i.e. Philip's Repose, a pretty country-house, built by one of the counts of the name of Philip. The magistracy of the New Town, and the disposal of all officers in it, belong to the French and Dutch congregations. Here is an university, with several manufacturies, particularly that of roll-tobacco and a very confiderable traffic. The jews are tolerated here, and dwell in a particular quarter.

confiderable traffic. The Jews are tolerated, here, and dwell in a particular quarter.

The other places are, 2. Hockfladt, in the bailing of Bucherthal. 3. Windeckon, on the river Nieder. 4. Bergen, which gives name to a bailiwic, in which are also the two small towns of Bischossheim and Seckbach. 4. Rodheim, which gives name to a bailiwic, in which is also the small town of Nanheim. 4. Ortenbarg, on the Nidda, which gives name to a bailiwic. 5. Steinau gives name to a bailiwic, and also contains Scluchtern on the river Kinzeg. 9, 10, 11, 12. Lothaupen, Hafalau, Schwarfensels, and Bibenhausen, gives names to bailiwic. 13. Bieber. 14. Affenheim, at the conflux of the Nidda and Wetter. 15. Reinac. 16. Glenhausen, on the Kinzeg, on the Wetter.

fixteen miles north-east from Hansu. 17. Munzenburg, on the Wetter.

With refpect to the family or house of Solms, it may be observed, that it is divided into a great many branches, of which those of Solms-Laubach-Sonnewald, and Solms-Laubach-Baruth, with their collateral branches, have their estates in Lusatia, and the electorate of Saxony. The matricular aftessment of those of this circle is two hundred and fifty-two storins, and to the chamber of Wetzlar, about one hundred and thirty rix-dollars. In the diet of the empire, and the college of the imperial counts of the Wetterau; they have sour votes, and the like number in the diets of this circle. The lines of Braunfels and Hohen Solms are Calvinists, that of Sonnenwald catholic, and all the rest Lutheran.

the eiets of this circle. The lines of Braunfels and Hohen Solms are Calviniffs, that of Sonnenwald catholic, and all the reft Lutheran.

The chief places worth mentioning, in the territory of Solms-Braunfels, are, 1. Braunfels, a town fitnessed on a high-hill; near it is a palace, firongly fortified in the antient manner, and giving name to a bailiwic, which, with the town and castle, belong to the Braunfels branch, and contains, befides other places, Leun, or Lein, a fmall town on the Lahn. Altewhorg, a premonstratensian convent for ladies, near which the highest court in the county is held in the open air, unless in stormy weather; and Burg-Solms, a village, This bailiwic abounds in grain and cattle, and has several iron-mines and woods in it. 2. Greifenstein, which gives name to a bailiwic. 3. Hungen, on the Horlost, in that part of the lordship of Munzenburg which belongs to this family. In the same part of this lordship stands also Arensburgh, a rich abbey of Bernardines, subject to the archibitop of Mentz, the revenue of which is said to amount to thirty thousand sorius. 4, 5, 6. Wolfesheim, Gambac, and Hohen-Solms, all give name to bailiwic, and the latter contains a palace. 7. Utphe, on the Horlost, gives name to a bailiwic. 8, 9. Lech and Laubach, on the Wetter, do the same. Excellent fuller's earth is found in great abundance in the neighbourhood of the latter.

The chief places in the territory of Solms-Rodolheim, are, 1. Rodelheim, on the Nidda, which gives name to a bailiwic.

The county in 442, having been only a lordship before. It contains wood, corn, and wine, is well-watered, and belongs partly to the house of lienburg, on account of the portion of this county, has a feat in the diets of this circle, and also among the Wetteran counts.

The principal places are, 2. Birsheim, 2. Wennings, 3. Langen-Diebach, and Offenbach, on the Maine; all of which belong to the prince of Benburg, Birsheim, 4.

646 THE NEW AND UNIVERSAL SYSTEM OF GEOGRAPHY.

Hayneus-Dreyeichen. 5. New Herburg, belonging to the above mentioned prince. 6. Budingen, which, shough a fmall town, is the capital of the whole country. It gives name to a district, which, with two others, belongs to the count of Henberg Budingen, who has a palace in the count of Henberg Budingen, who has a palace in the count of Henberg Budingen, who has a palace in the count. there is a park for deer, with fome sineyards and fall works in its neighbourhoad. 7. Mercholes, on the river Kinger, gives name to a difficitle. 8. Wesherfbach, gives name to a difficitle, which, with the town and two other diffricts, belong to the counts of Henburg-Wachterfbach.

terfhach.

The county of Konigstein lies in the Wetterau, along a ridge of mountains called the Hohe. The elector of Ments at present possesses the whole of the county, a small part only being held by the counts of Stolberg, who, however, claim the whole; accordingly a process was preferred to the salio council about the title to it. In the mean time both these princes vote, on account of it, in the diet of the Upper Rhine, and both are members of the college of the imperial Wetterau counts. Ments pays eighty florins of the matricular assessment for Konigstein, and Stolberg twenty. and Stolberg twenty.

and Stolberg twenty.

The only places in this county, worth notice, are, t. Soden, a free imperial village. 2. Geudern. 3. Randall. 4. Ordenburg. 5. Konightin. 6. Upper-Urfet. 7. Vilbel, which gives name te a diffrielt.

The territories of the Wild, Wald, or Rau-Graves, were a denominated from their rough and woody appearance: which, as well as those of the Rhine-Graves, he dispersed about the Rhine, between Hafil and Bonn. In the twelfth century, the territories of the former develved to the latter, from whom are formus the counts of Salm, those of Grumeentury, the territories of the former develved to the latter, from whom are forung the counts of Salm, those of Grumbach, the Rhine Graves of Stein, and Wild Graves at Daun and Kirburg. The Wild and Rhine Grave lands are mostly fiefs. Each reigning house fits and votes in the diets of this circle, and in those of the empire, in the college of the impecial counts of the Wetterau, paying each a matricular affeliment, and also to the chamber as

The principal places in the territory of the counts of Grumbach are, I. Grumbach, which gives name to a lordhip and bailwic, near the river Glan, and affording amethy 9s, cornelians, agate, mochas, 6sc. 2. Tronchen, on the Tron, gives name to a lordhip which contains Talfang, a market town, and fourteen little villages befides.

The Rhin Graves of Stein contain only Rhingrafentein and Wildenburg, the large village of Worsfall and Grehemeiler.

In the Wild-Gravate of Daun, there is an elegant feat, called Daun, on a hill near the Swinnern; Puttlingen, which gives name to a lordfhip; Kirn, a town on the Nahe; and Dienringen, a market-town, from which a bailtwice receives its name

receives its name.

The town of Leinengen, or Linage, the capital of its country, fignals eight miles fouth-well of Worms, and north-well from Spire. This country, which borders upon Frankendel, is flared among four branches of the family, who take their name of diffinction from the feveral parts of it in their poffetion. The country of Linege, properly fo called, is a fair of the biflop of Mentz, and therefore it was united so France in 168s, but by the treaty of Ryf-

wie those counts, were re-stablished in their antient state, and they are therein expressly styled the counts of Leiningen. The principal places in it are. New Leiningen. Tweleim-Gruntadt, and Lansheim. The other branches of these counts, who are all Lutherans, are in possession of Hatenburg, in the middle, of the palainate, not far from Worms; Westerbourg, in Wetteravia; Dachstourg, in the Westersch, in Alface; and Broich casse on the Rhine, near Duisbourg.

Falkenstein, county belongs entirely to the emperor, but contains only Winweiler, which gives name to a balliwic, and Falkenstein, a small town defended by a casse.

Reipoltzkirchen lordship belongs to the count of Hille-sheim, which inities him to a feat and voice in the diets of the circle; the lordship of Kirchingen also admits the count of Wied-Runkiel to the same privilege.

The county of Witgenstein, which is about eighteen miles in length, and fourteen in breadth, is environed by the territories of Hesse-Darusstath, Nassa-Dillenburg, and the duchy of Westphalia. It produces little grain, but good pasture, and plenty of wood, with mines of silver, copper, and iron, and is watered by the rivers Lahn and Eder. The counts, who are of the same family as those of Sayn, are divided into the two branches of Sayn. Witgenstein, and Sayn. Witgenstein of Berleburg. The county infiles both branches to a vote in the college of the Wetterau counts, both at the diet of the empire, and those of this circle. The revenue of the county of Witgenstein, and hole of this circle. antities not becames to a vote in the conege or the wet-terau counts, both at the diet of the empire, and those of this circle. The revenue of the county of Witgenstein, including that of the lordship of Homburg, which lies be-tween the duchy of Berg and county of Mark, and belongs to the counts of Witgenstein, is computed at fifty thousand

The only places in this county, deferving notice are, r. Witgenstein, near which stands Laasphe, a small town of the Lahn. 2. Berleburg, a small town ou the little river

SECT V.

Containing a description of the circle of the Lower Rhine, its foural divisions, invans, rivers, produce of the respective countries, trade, manufactures, &c.

THIS divition of Middle Germany is bounded, on the east, by Franconia, and the lower part of the circle of the Upper Rhine; on the west, by the upper part of the circle of the Upper Rhine, Lorrain, and Luxemburg; on the north, by Westphalia; and, on the south, by that of Swabia. Exclusive of the palatinate, this circle contains the three archbishoprics and electorate of Menta; Triers or Treves, and Cologue. The diets are held at Frankfort on the Maine; and the elector of Menta is the fummoning prince and director of it. It is one of those called the anterior circles; and it as generally equalled the Upper Rhine in its contribution to the empire.

Menta, which is both an archbishopric and an electorate,

Mentz, which is both an archbishopric and an electorate, lies on the banks of the river Maine, between the electorate of Triers, on the west; the palatinate on the south; Franconia on the cast; and the Westerau on the north. It is about fixty miles in length, and fifty in breadth. Be-

fides

Here we bag leave to make our most gratuful acknowledgments to our very numerous Subscribers, and to assure that, that it gives us a pleasing satisfaction to find our labours to inform and intercain are received with such universel appropriated both at bome and abraed; many fers of the Numbers, as far as are already published, having been lately sent for from many Bereign Countries; as well as from the most remain parts of England, Scotland, Ireland, and our Colonies. To other works of this kind, (against which the Public have justly and leady complaines, on account of the badinst of the paper, and wretched printing 1-on account of their limits, which are either to enspand, or purpelly run to an extravigant largels to impose on the purchastry—and, on account of their limits, which are either to enspand, or purpelly run to an extravigant largels to impose on the purchastry—and, on account of their copper plates, which were originally shamefully ecarse, and now entirely were out, I sake respecting the different entires have been miserpresented through the travelginst origination of the contrary, we have, by the most faitisful researches, and from communications never made to any other Geographers, expressed the autient and present state of the World at large; and having pleaged curscluss in our original proposits to give the public A New, Complete, and Universal System of Geography, we rest statisfied with the full perfusion of having punctually hitherto fulfilled our engagements. At the same time we can aver, that not a number has been published, but contains, there in the matter or the embellishments, much interesting information, which may with first truth be filled new and entertaining, and which is not to be sound is any work of the like kind hitherto published, or now publishing, by those whose only design in opposition, is to answer pecuniary and self-interested purposes. Hence by much labour and sufficiently, we have established what was our chief amblition, an honest reputation. We have nothing to fear f

fides the Maine, it is watered by three other principal vivers, namely, the Rhinu, the Jams, and the Laha. It is in general, exceeding forcibe, and produces great plenty of corn, cattle, wince, froits, falt, flar, tobacco, and timben Ir hath feveral kinds of manufactures, parsicularly those of woollen and lines aloth, gless mirrows, and porcelare, in which, and in wine, elumonds, chefnuts, flax, and to-bacco, a confiderable trade is carried on with the places consistency to it. contiguous to it.

bacco, a confiderable trade is carried on with the places contiguous to it.

The predominant religion of the electorate is the Roman catholic, but there are still many protessants in several places; however, as this country is under the dominion of an exclessatic of the Roman perfussion, almost the whole property of it belongs to priests, monks, and nuns, and all places and offices are possessed to the carry.

The chapter consists of forty-two cations, twenty-four of whom are capitulars; the elector is chosen by them? He is not only the first archbishop, but also elector of Germany, in consequence of his being arch-chancellor of the empire; and he always fits on the right hand of the emperor is all public conventions. He is visitor of all the courts of the empire, director of its posts, and guardian of the archives and matricula. He crowns the emperor, nominates a vice chancellor of the empire, and holds a chancery at the imperial court: to him also all foreign princes and states direct what propositions they make to the empire, as well as apply for the rodress of grievances. In printuals, he stands immediately under the fee of Rome. The bishoptics still subject to this jurisdiction are those of Worms, Spire, Strasburg, Constance, Augsburg, Coire, Wurteburg, Eichalact, Fulda, Paderborn, and Hildesheim.

The chief colleger, for the government of this country.

The chief colleges, for the government of this country, and the administration of justice, are, the privy conference, the privy-chancery, the aulic council, and the reversion-judicatory. Appeals lie from the inferior judicatories to the last of these.

the last of these.

The elector is able to maintain five or six thousand men at all times; but, to save unnecessary expence, seldom keeps above half that number of regular troeps; so his income, when he is only archbishop of Mente, without commendants, (which is feldom the case) will not allow of any greater state or expences; and his houshold is suited rather to his facred than his temporal character. His rerather to his facred than his temporal character. His resenues are faid to amount annually to about one hundred
shouland pounds, arifing chiefly from the toils on the
Rhine and the Maine, the tax on wine, and that paid by
the Jews, the latter of which is very confiderable.

This electorate contains the following places of note;
viz. 1. Mentz, on the Rhine, near its confluence with
the Maine; it is the capital of the archibfhopric and elecarorate, and is fituated fifteen miles well from Frankfort.

sorate, and is fituated fifteen miles weft from Frankfort, twenty north from Worms, forty-eight from Heidelburg, forty-froe from Spire, one hundred and eighty-fix from Straburg, fixty from Triets, and feventy-four from Cologue. This city was made an archbifthopric in 720, by Pepin and pope Gregory III. It is large and populous; but most of the streets are narrow, and the common buildings very plain and irregular. The elector has several palaces in and about the city, most of which are adorned with beautiful and extensive gardens. The cathedral is a lofty wastled building, sad in it are fome fine monuments erested to the memories of deceased electora. The vestments in which the electors fay mass are extremely rich; and the canopy under which the host is carried in procession, is entirely covered with pearl. The elector's chief palace is built of reddish marble stone, embellished wills ornaments, and is regular and magnificent, though sorate, and is fituated fifteen miles west from Frankfort, chief palace is built of reddish marble stone, embellished with ornaments, and is regular and magnificent, though but two stories high, and built after the old German manner. On the windows of this building, as well as on these of the cathedral, are painted a wheel, which is a part of the elector's coat of arms. Besides the cathedral, here are many collegiate and other churches, with several monasteries, nunneries, and hospitals. Here are likewise, an university sounded in the year 1482, by the elector Diether; a bridge of boats over the Rhine; manuscatries of stockings and stuffs, and two yearly fairs. But the most considerable building in this city is the charter-house, which, for elegance and extent, is said to be one of the sinest in Europe. It has apartments large and commodifinest in Europe. It has apartments large and commodious enough to lodge a sovereign and his retinue, and is beautifully fituated on an eminence fronting the Rhine.

The Favorita, a small but elegant electoral palace, stands at the foot of this house.

There is a sourishing trade in Mente, especially in Rhenish wines, of which the vineyards in this seighbourhood yield the best, particularly those of Hockham, from

whence the finest fort of Rhenish wine has obtained the name of old hock. This elty claims the invention of the are of printing, which, if not invented, was extrainly stack improved by John Guttenberg, about the year rago's though, forme have given account of books printed by Celler so early as 1436, or 143a. This useful ant, however, fireted itself from Morres in a first time, and is supposed to have been brought into England, from Haerlern in 1468, by Lazton.

Aschaffenhurg is the next principal place in the electorate of Ments: it is firstated on the conflux of the rivide Aschaff and the Maine. Here is a fine castle, in which the elector frequently resides during the feason for hunting in the Spatiar, together with a collegiate church, a college, and, a large cloister. The town gives name to a bailtwic, in which are also Olnaburg, a small rown; Dettingen, it willage on the Maine, remarkable for a battle fought near it in 1743; between the English and French; and Seligentiad; a town Stuated on the Maine, with a Benedictine cloister, the aboot of which stiles himself lord of Gesilal bach, Omershach, and Hoftaden.

a. On the well fide of the Rhine is fituated the pleafant, east, and little town of Bingen. It has a caffle, which flands on a hill, and overlooks the town. It is fifteen flands on a hill, and overlooks the town. It is fifteen miles well from Mentz, and was formerly an imporial city; but it is now fubject to the dean and chapter of Mentz. It has a handlome flone bridge over the river Nahe, which runs through the town, and empties little into the Rhine: a toll is levied here for whatever pages up or down the Rhine, which is twice as broad, at this place, as the Thames is at London.

Not far from this town is the celebrated Bingerlock, where the Rhine is confined between two high rocks; which, with the water-fall occasioned by the titve Nahe's emptying itless the water-fall occasioned by the titve Nahe's emptying itless the passage very dangerous. At a small distance from hence, in an island or rock on the Rhine, is the famous Mause thurm, that is, the Mice or Rats tower: forme think this tower.

that is, the Mice or Rate tower: fome think this tower was fo called from the Germans giving the name of rate to the officers that were placed in it to levy the tells.

3. The town of Fritzler, on the river Edos, is pretty throng: it contains two collegiate churches; with an Urfaling anguery. Is

fuline nunnery. It gives name to a territory which lies betwirt Lower Heffe and the county of Waldec, and has

betwire Lower Heffe and the county of Waldee, and has the finall town of Nannberg in it.

4. The finall town of Miltenburg, on the Maine, contains a caffle, a Francifen' cloifter, and gymnafium. It gives name to a diffict, in which is Prodgelm, a finall town on the Maine. 5. Eltvil, or Elfeld, a finall town five miles well from Monta, has a frong caffle, and is the capital of the Rheingao, a track tying along the Rhims; in which are favoral other finall towns and cloiders. 6. in which are feveral other small town and cloisters. 6. Cronberg is a small town situated on a mountain, the inhabitants of which are partly Proceedings, and partly Roman catholics. The district which it gives name to, contains some sine woods, with great numbers of chefinat and other fruit trees. This town once belonged to the landgrave of Hesse.

The archbithopric and ek chorace of Triers, or Treves, is fituated between Cologn, Bern, and Juliers, on the north; Lorrain and the palatinate, on the fouth; Lonean-burg, on the west; and Wetterau on the east. It extends about eighty miles from north to south, and its breadth from east to west is about sixty. It is watered not only by the Rhine and Moselle, but also by the Saar and Kyli. On the banks of the two former the country is populous, and fruitful in own and wines, but elsowhere mountainous and wood, yet abouting in earns and acid fortures, as and fruitful in corn and wine, but elfowhere mountainous and woody, yet abounding in game and acid fprings, as also in metals and minerals of various kinds. The flates confist of the prelates or abbott, with the representatives of the clergy, and of certain towns. The inhabitants are all papists, except in such places as the elector possess in common with other princes, where there are some protesses. Under the archbishop are five archdeacons, and subordinate to those, twenty provincial deans. The antient Treveri, from whom the city of Triers and the electorate take their name, were a very warlike people; their general, Ambiorix, cut off a whole Roman army. They worshipped Mars and Apollo, till Constantine established Christianity among them; but at what time the bishopric and archbishopric were created, is uncertain: the church of Treves, however, is commonly accounted the mestiand archibinoptic were created, is uncertain: the cutred of Treves, however, is commonly accounted the most antient in Germany. The chapter, which cleds the archibinop from among themfelves, and make him fover to a capitulation, confirts of fixteen capitulary canons, all of whom are of a noble desent. At every new election, the pope receives large sums for confirmation, the pallium,

and for annais, or first-fruits. The archiepiscopat title is, " By the grace of God, archbishop of Traves, of the hely Roman empire throughout Gaul, and, the kingdom of Arles, arch-chancellor and elector, and also administrator of Prum." He is the fecond elector in rank, and has the first voice at the election of an emperor. The toils on the Modelle and Rhine, his demesses, and his office of noble guardian of the timors, with the taxes he lays on his subjects, are supposed to bring him in about seventy thousand pounds per announ.

guardian of the uninors, with the takes he lays on his fubjects, we supposed to bring him in about seventy thousand pounds per annum.

Fol the government of this sickerste, and the administration of justice, besides the regency and revision court, there are two selic judicatories, to which appeals lie from the Inferior courts. There are also two spiritual high courts. The hereditary officers are the marihat, the chamberlain, the sewer, and sup-bearer. The regular troops maintained by the chekes, besides a militia, amount to between eleven and twelve hundred, besides a life guard of forty men. Among other perogatives, he has power to banish excommunicated persons out of the empire, if they do not reconcile themselves to the church within a year, and he may take possession of the effects of the diocese, upon failure of heirs, to the domains of his church. His subjects may appeal to the chamber of his church. His subjects may appeal to the chamber of his church. His subjects may appeal to the chamber of his church. His subjects may appeal to the chamber of his church. His subjects may appeal to the chamber of his church. His subjects may appeal to the chamber of his church. His subjects may appeal to the chamber of his church. His subjects may appeal to the chamber of his church, and the reverse the capital of the archibishoptic. This town is ficuated on the Moselle, over which it has a handsome stone bridge. It is fasty miles west of Menta, sity, two fouth of Cologne, and eighty-two north of Strashurgh; and vies with most in Europe for analquity, having been a large and noted town before Augustus settled a colony in it. It was free and subjected by its archbishoptic pames 11b. The private buildings are very mean, and the city is neither well-fornisfied or inhabited. The cathedral is a large Gebbic cline; and in it they pertend to have our Saviour's cost and 5x. Peers's staff, to which they ascribe miracles. Near the cathedral is the elector's palace, which was a sew years ago rebuilt, and is a tolerable handsome palace, which was a few years ago rebuilt, and is a tolera-ble handsome building. Here are three collegiate and five parish churches, thirteen monasteries and numeries, an university founded in 1472, a house of the order of Malta, with some remains of the antient Roman theatre, and also a house of the Teutonic order.

There is, near Treves, a small town on the Moselle, called Pfabael, where, in the time of the Romans, stood

called Plabsel, where, in the time of the Romans, flood a palatium. It gives name to a diffrich, in which is Conz, a borough on the Saar, over which is a bridge.

2. The large town of Coblenes is the next capital place to Triers in this electroate. It is finanted near the conflux of the Mofelle and Rhine, thirty-five miles north-welf from Ments, forty fouth-east from Cologne, and fifty-two north-east from Triers. It is well built, and strongly fortified; and has a bridge of boats over the Rhine, and autother of stone, confishing of fourteen arches over the Mofelle. The Romans had a fort at this own, and the first kings of the Franks frequently resided in it. Here

Mofelle. The Romans had a fort at this own, and the first kings of the Franks frequently resided in it. Here are several collegiate and other churches, besides monasteries and nunneries, a gymnasium, an archiepiscopal seminary; and a castle.

Nearly opposite to Coblents, on the other side of the Rhone, is Hermanstein, or Ebsenbreitein castle; an impregnable fort, well desended by outworks, on the furnmit of a steep rocky hill, which commands the city and the two vivers. It is essented one of the strongest citadels in Germany; and the assented one of the strongest citadels in Germany; and the assented one of which are sour handlown gates. On the outermost gate there is a flatue of fome gates. On the outermost gate there is a statue of brafs, about fifteen feet high, representing the Virgin Mary with the infant Jesus in her arms, and a lily in one Mary with the infant Jefus in her arms, and a lity in one hand: in the middle of the citadel is a fquare, on one fide of which is the governor's houfe; and in the other three are magazines and barracks. Among other surjoities, here is a predigious cannon, faid to be the largest everen. It is eighteen feet and a half long, a foot and a half diameter in the bore, and three feet four inches in the breech. The ball grade for it to carry weight one hundled half and the barree of powder is ninety. breech. The ball trace for it to carry weight one nun-dred and eighty pounds, and its charge of powder is ninety four pounds. The infeription on it only intimates, that it was founded in 1529, by one Simon. In another square, is a very fine fountain, being a large bason of stone, in the centre of which stands a marble villar on a brass pedef-tal, with the elector's arms surrounded with sour dolphine. of the fame metal. On the top of this column is a flatue, of the Virgin Mary bruifing the hand of the ferpent, which is also of brain, about twelve feet in height. Here is a

is alfo of brefs, show twelve feet in height. Here is a well dug out of the rock, two kundred and eighty feet deep, whose water is clear and exceedingly wholsome.

At the feot of the calle is an electral palace, inclosed on one fide by the Rhine, and on the other by a rock. It is bus an indifferent building, and the spartments are low, incommodious, and much exposed to the sun; but they are adorned with beautiful tapeffries and paintings, and the chapel is very elegant. The garden, though small, is embellished with statues, water-works, a charming orangery, and a bower, more than three hundred feet in length, by the side of the Rhine, from whence, through the openings, which are well constrived for the perpose, are seen the Rhine, the Modelle, the city of Coblenta, the bridge across the Modelle, the charter-house, and a very fine country to the distance of three or four leagues. The way to the charter-house, which is a handsome building, beautifully situated about two miles from the castle, is full of chapels, in the manner of oratories, adonced with statues representing the principal actions of our Saviour, from the bash the principal actions of our Saviour, from representing the principal actions of our Saviour, from-his birth to his refurrection. A church, faid to be twelve.

hundred years old, belongs to this town.

The other places in this electorate are, r. St. Maximin, one of the oldest and richest abbies in Germany. The abbot is the first among the provincial states here, as well abbot is the first among the provincial states here, as well as in the duchy of Luxemberg, and arch-chaplain to the reigning Roman empress. 2. Wexheim, a borough, in which, and the bailiwic named from it, as belonging incommon to the elector of Triers, and the prince of Natiau-Usingen, both the Roman catholic and Protestant religionare tolerated. 2. Munster-Moinfeld, which gives name to a bailiwic, which contains Carden, a very antient borough on the Mofelle. 4. Mayen, on the Nette, gives name to a bailiwic, in which also is Montreal, on the Ela, together with Kayferfelch, and the Benedikine abbey of Lock. 5. Boppatd, a small town and castle on the Rhine: it gives name to a bailiwic. 6. Engers, between Coblents and Andernach, which gives name to our prich-Coblents and Andernseli, which gives name to our neighbouring territory. 7. Oberwelel, on the west side of the Raine, at the foot of a bill, twenty-one miles fouth from Coblents, and eighteen west from Mentz. 8. Limburg, Coblests, and eighteen west from Mentz. 8. Limburg, a thriving town on the river Lain: it gives name to a besiliwic, in which is also Lower Brechen, a small town; and Lower Salera, a village on the Emshach. 9. Berncassle, on the Moselle, gives name to a bailiwic, in which is a place called Novionagum, on the Moselle, 50. Withlich, on the Lefer, gives name to a bailiwic, in which is a college of canons regular, where adoration is paid to a celebrated image of the Virgin, and whither many pilgrimages are made. 1s. Welfchbillig, a small town.

The archbishowic and electorate of Cologne lies on the western bank of the Rhine, where it runs near one hundred miles in length, but the breadth is hardly any-where more than seven or eight. It is bounded by the duchy of Cleves, on the north and the electorate of Triers, on the south; the duchy of Juliers on the west; and that of Cleyes, on the cast. It is a pleasint and fruisful country, (especially that part situated on the Rhine), and produces

ially that part fituated on the Rhine), and produces repeatily that part atotate on the knate, and produces excellent wine, com, and most of the accellaries of life. The archbishop is the furreme lord of it, as also of a pretty large country in Westphalia; and is richer and more powerful than either of the other two exclessifical electors. His dominions contain fifty-two towns, and about feven teen boroughs. He has the second vote in the electoral college; and crowns the emperor, when the ceremony is performed in his own diocele, or those of his fuffragans. His see was raised to an archbishopric in the eighth cen-His fee was raised to an archbilhopric in the eightic entry. His fuffragan at present are the bishops of Liege, Munder, and Ofnaburg, and formerly also those of Utrecht and Minden; but he has no authority in spirituals over the protestants of the bishopric of Osnaburg, even when he is himself bishop thereof. The right of electing the emperor; exclusive of the other princes, devolved on him, and the other arch-officers of the empire, about the end of the thirteenth century. The revenues arising from the archibishopric amount to about one hundred and thirty thousand pounds stelling; but the elector is generally possessed of several other great benefices. He has his lereditary officers, his life guards, constituing of halberdiers and yeomen, besides a regiment of foot guards,

halberdiers and yeomen, besides a regiment of toot guards, which made a handsome appearance.

In this electorate are the following principal cities and towns; viz. t. Cologne, the capital, and from which the electorate is named. It is feated on the Rhine, in the same latitude as the side of Wight, 20 miles south-suff from Dusseldorp, 16 east of Juliers, 40 north from Coblentz, 60 east from Macstricht, 68 north of Triers, 70 fouth of Munster.

Minifer, eighty-two north-west of Mentz and Nimeguen, from Brusses and Antwerp, and one handred and twenty from Brusses and Antwerp, and one handred and twenty from Amterdam. This is use of the largest cities in Germany, and very considerable, on account of its buildings, number of inhabitants, and great trade in Rhenish wine, and other commodities of Germany, which, by means of the Rhine, are brought hither, and transported to Holland. It is a free city, being governed by its own senate, which orders and judges all civil matters and causs; but criminal ones are judged by the elector. It is talled, by some, Second Rome, because of its senate, buildings, and estent; and by others the Holy City, because of its many churches and religious houses in it; here being, besides the catheral, which is a very magnificent, though unfinished pile, sen collegiate, and nineteen parochial churches, also thirty-seven monasteries, and great numbers of chapels and hospitals. The wails of the city are stanked with eighty-two towers, and encompassed with three deep dinches, lined with fine rows of trree; and all the churches and houses are covered with states.

thirty-feven monafteries, and great numbers of chapels and hospitals. The walls of the city are flanked with cighty-two towers, and encompassed with three deep diches, lined with fine rows of trees; and sall the churches and houses are covered with flates.

The government of the city is in fix burgomasters, seven aldermen, and one hundred and fifty common-council, who hold their offices during life; only two of the burgomasters are regents, during a year, by turns. The aldermen (or eschevirs) are chosen by the archbishop, and the council by the companies of the city. There are only fifty of the council in power for a year, so that it returns to the same persons onto in three year. When a burgo-master dies, the council are empowed to chuse another. Most of the inhabitants are papists; but there are many protestants, who are the chief traders. The Lutherans have a church in this city, and the Calvinists one on the other side of the Rhine, at Mulheim. Most of the house of the canons and prebends have large gardens and vineyards. In St. Gereon's church, they pretend to shew one thousand heads of martyrs who fussered in the reign of Maximinianus. Some of the heads of the pretended virgin martyrs, and noted for miracles, are kept in cases of silver in the church dedicated to St. Urfula, others covered with stuffs of gold, and some have caps of cloth of gold and velver. Here is also a string, with a glass door, through which they shew, as they pretend three of the thoras of our Saviour's crown; and in a niche, on one side of the altar, there is a base of alabaster, which they pretend was one of those our Saviour caused to be filled with water, at the marriage of Cana, in order to change it into wine. The whole revenue of this church, which must be considerable (exclusive of the offerings and gifts made by plignins and other devoters), is said to kelong wholly to an aboes and fix canonesses, which there should be succeeded with a common of the cathedral are before the same and the content of the cathedral are present.

archbishop Raintold.

Here is a very flourishing university, re-established in 1288 by Urban VI. The town-house is a vast sabric, after the goshic manner, where are several rooms adorned with noble paintings, and others full of bows, arrows, bucklers, and all forts of antique arms a particularly a cross bow of whalebone, 12 feet long, eight inches broad,

and four inches thick. From the tower of this house there is a beautiful prospect of the city and country; ort the front of it there is the figure of a man in basic relievo, negaged with a lord, representing one of their borgo-masters; who, having exasperated their clergy, they put in a lion upon him, which he slew on the spot. In the grand hall are five pictures with inscriptions, to perfectisate the memory of the battle of Hockstet, in which the French were defeated with great flaughter.

Several ecclesissical councils have been held here, the first, anno 346, wherein Euphrates, their bishop, was deposed for arianism. Another was held by Charlemagne's order, in the eighth century; and several in the ninth, for resonation of manners, against incessure manages, and oppression of manners, against incessure manages, and oppression of the poor. The pope generally has a nurcio here, to take care of his interests with the popish electors. Though the elector, by his officers, administers justice in all criminal causes, yet so jealous are the citizens of him, that they will not permit him, in person, to reside above three days at a time in the city, nor to come into it with a great train; for which reason he generally resides at Bonne.

Cologne was made an arthbishousie in very and in

a great train; for which reason he generally resides at Bonne.

Cologne was made an archbishopsic in 755, and in 1250 entered into the Hanseatic league. As a free imperial city, it has a seat and voice at the diets of the empire and circle, in the former of which it has the first feat on the Rhenish height. It has the precedence of all the imperial cities, and is fortified in the antient manner; has upwards of twenty gates, and is squared by the militia, which confiss of four companies of foot; but the streets, in general, are dirty, and badly paved, and the windows composed of small round bits of glass. Though this one of the greatest cities, yet, as a late travellar observes, "it is cond of the most melanctioly in Europe, there being nothing to be seen but priests, firsts, and students; many of whom beg alms with a song, and nothing salutes the ear but the tolling of bells: he also says, that there are as many churches and chapels in it as days in the year; that there are very sew samilies of quality; that the vulgar are extremely clownish; and that the noblemen of the chapter stay no longer in town than their duty obliges them."

tremely clownin; and that the hookened of the chapter, flay no longer in town than their duty obliges them."

As to Duitz, on the other fide of the Rhine, it is in the territory of Newburg, and has no manner of dependence on the city of Cologne, but holds folely of the elector. It is a pitful place, where one fees more fwine than men, its few fireets being extremely filthy, and ill paved; and the houses built of pieces of number intermixed with white clay. The lews there live by fattening herds of fwine for clay. The Jews there live by fattening herds of fwine for fale to the Christians. There are no churches in this little

fale to the Christians. There are no churches in this little town, but a convent of Benedichines, and a parochial church upon the brink of the river.

2. Bonne, in latin Bonns, and Colonia Julia, is the utual place of refidence of the archbishop of Cologne, who has a magnificent palace in the castle. It shade on the west-fide of the Rhine, 12 miles fourth of Cologne, 28 north-east from Colleges, 22 fourth-east from Juliers, 22 north-east from Treves, and 62 north-west from Menez, in a fraist-ful contrary which weather were cored with and the from Treves, and 62 north-west from Menes, in a fruit-ful country, which produces very good wine; and the woods abound with variety of game, as does a ridge of mountains on both fides of the Rhine from hence, as far as Bingen. It is a fmall city, but well inhabited. The churches are stately, especially the collegiate, dedicated to the martyrs Cassus, Florentius, and Malussus, whose bodies, with several others of the samous Theban Legion, are said to be buried in it, being brought hither by St. Helena, who founded this church to their honour. The town house is well built, and adorned with sine maintines. town house is well built, and adorned with fine paintings. This was formerly an imperial city, but is now subject to

the elector.

3. The town of Andermach, on the Rhine, is fituated about 20 miles fouth-east of Bonne, upon the confines of the electorate of Triers, and the duchy of Juliers. It was formerly a free and imperial city, but it is now fubject to the elector of Cologne. After it had lain a long time in ruins, it was rebuilt in 1520. It is fortified with a wall, castle, and bulwarks 1 is the boundary betwist this archbishopric and that of Traves, and has a custom-house belonging to Cologne, but its principal trade is by lodging patiengers. In 1702 it was taken by the prince of Hesse-Castlel, the more to straiten Bonne, which was then blocked up by the confederates. This is mentioned as one of the fortress which Drafus built to awe the Germans; and it is believed that Caligula, his son, was born there. It is the handsomest and largest of a \text{\text{the towns from Bonne to Triers. It has three confiderable monasteries in it and several churches, the chief of which has two tower steeples, not unlike the towers of Not read.

Dame at Paris. Two companies of foldiers are kept here by the chapter of Cologne. In the bailiwic, to which the town gives name, is an abby called 9t. Thomas, and Kens, or Rees, afmall town on the Rhine, near which is a remarkable piece of antiquity, called the Konighthi. It is a large round building of freedone, reling on nine pillars, the afcent to which is by twenty-alght fleps. In this building the sleftors formerly met to confult about the choice of an emperor, and other weighty matters; and here fome emperors have actually been elefted.

The other places of lefs note are, 1. Nuys, a fortified town, near the confux of the Rhine and Erift, 2. Zons, on the Rhine: it gives name to a bailiwic, containing another finall town called Wering, or Wesingan, and a Pramontratentian abby. 3. Kempen. 4. Bruel, or Bruyll. 4. Rufferfelnied, which give name to a county, of Anweder, a frault town on the Aar. 7. Zulpich, or Zulch, which gives name to a bailiwic entirely furrounded by the duchy of Juliers. 8. Konigafeld, which gives name to a diffrict.

The Palatinate of the Rhine is divided by the river of

name to a diffret.

The Palainate of the Rhine is divided by the river of that name into two parts, namely, the Upper and Lower Palatinate. The former lies in the circle of Bavaria, end belongs to the elector thereof, but the latter (in the circle we are now treating of) belongs to the elector Palatine. The Lower Palatinate is bounded, on the east, by the county of Katzenelinbogen, the archbishopric of Mentz, the bishopric of Worms, and part of the territory of the Toutonic order in Franconia; on the west, by liftee, the duchy of Simmern, and certain distribe of the electorate of Mentz, and the county of Katzenellabogen, and on the fouth, by the duchy of Wirtemberg, and the bishopric of Menza, and the county of Katzenellabogen, and on the fouth, by the duchy of Wirtemberg, and the bishopric of Spire. It contains forty-one towns, besides leveral boroughs, and its greatest extent is about eighty miles.

The air is healthful, and the foil fruitful in corn, wine, tobacco, and all forts of pulse and fruits, particularly walnuts, chessurs, and almonds. This country also breeds abundance of castle, and is well watered by the Neckar, the Nahe, and the Rhine. In the last of these, near Germersheim and Schz, is sound gold, the exclusive right of scarching for which, is farmed out by the elector.

The flux of calining hash writed greatly here. Since the The Palatinate of the Rhine is divided by the river of

The fisse of raligion bath varied greatly here fince the reformation, Lutheranism and Calvinism having been uppermost by turns, till the electorate devolved to bee hopish branches of the family, when poperly, with all its superfiction and mommery, was established anew: so that the Protestant religion is now on a very precarious footing in the Palatinate, though most of the natives are still of that in the Palatinate, though mottof the natives are fill of that perfuafion: but the two fects of Protestants, namely, the Lutherans and Calvinists, have greatly contributed to their own ruin, by their mutual jealousies and animosity, being no lets rangarous against one another, than against their common advertaries the Papists. The Lutherans regkon themselves fifty-thousand strong, and are posselled of about eighty-five churches; but not one half of their preachest and school-masters have a competent maintenance. The number of Calvinist clergy here is estimated as five hundred, and of the Roman catholics as four. Besides schools and jesuits colleges in this country, there is one university, namely, that of Heidelberg. Their chief trade consists in wine.

Authors are divided about the origin of the name Palatiaes; or Palagraves, as the Germans call them; but, it feems most likely to he derived from the palatia, or palaces, which the old Frankish and German kings, and Roman emperors, were posselled of in different patts of the country, and over which they appointed supreme sewards.

emperors, were possessed of in different patts of the country, and over which they appointed supreme stewards, or judges, who were called Palatines, or Pfalgraves. The countries where these Palatines kept their courts were, from them, called Palatinates, which name came at last to be appropriated, by way of eminence, to this country, as being the most considerable of them. The antient electoral line failing in 1685, the electorate devolved to Philip. William, duke of Neuberg, and upon the death of his second fon, Charles Philip, to the prince of Sultzbach. This elector has the title of arch-treasurer of the empire, as well as the elector of Brunswic-Lunen, burg, and is the fifth in rank among the secular electors. burg, and is the fifth in rank among the fecular electors. He is also one of the vicars of the empire, alternately with the elector of Bavaria, and enjoys many other preroga-tives. In his own dominions he disposes of all vacant benefices, but allows the ecclesiastical council, composed of two elergymen and two laymen, to prefent two can-didates, of which he chuses one. He is also master of

all the tystes in his dominions; but he sitter grants them to the clergy, or falarise in heu of them, out of the revenues of the church. His title is, "Prilagrave of the Rhine; arch-treature and elector of the holy Roman empire; duke of Bavaria, Juliers, Clevus, and Berg; prince of Mors; marquis of Bergen-op-Zoom; count of Veldens; Spanheim, the Mack, and Raventberg, and lord of Raventlein," In this country is an order of knighthood called St. Hubert, the badge of which is a quadrangular crofs pendant to a red ribbons, with a far on the breatt.

The cultivary establishments confide of fersival recipients.

The military establishment conside of fereial regiments of horse and soot, besides the horse and Swiss life-guards. All the different courts and councils, usual in other countries for the different departments of government, are also to be sound here. The whole of the elector's revenue, arising from the Palatinate, the duchies of Berg and Juliers, the seigniory of Ravenstein, and the duchies of Neuburg and Sultzbach, hath been estimated at about 200,000, per annum.

and Juliers, the (eigniery of Ravenstein, and the duchies of Neuburg and Sultzbach, hath been estimated at about 300.001 per anuum.

In this palatinute are the following remarkable towns and places: 1. Heidelberg, the capital: it is situated to miles from Manheim, 12 stom Spire, 28 from Frankfort, and 25 from Mentz. This city stands near the river Neckar, in a good sir, and encompassed on all sides, except to the west, with hills covered with vinas. It takes its name from Heidel, which signifes a mystle; and Berg, a spountain; there being, or having been, plenty of those trees on the mountains in the neighbourhood. It is an antient city, and has been frequently besieged and taken, plundered and destroyed. Though it is at present sa an antique building, but stands on a hill and commands a fine prospect. As to the famous library here, many books and manuscripts were taken from it in 622 (when general Tilly made himself master of the town), and sent to Rome, Vienna, and Munich. The professors of the university here are partly Cavinits, and partly Roman catholics. The Calvinits have also a gymnasum. Of the churches, some belong to the Calvinits, some to the Lutherans, into some belong to the Calvinits, some to the Lutherans and some to the Roman catholics. Twelve poor stodents are provided with logging and board, in a college called the Sapience, which belongs to the Calvinists.

There is a high mountain opposite to Heidelburg, on which the Roman had a castle, and which, by some, is thought to be the Mons Pyrus, mentioned by Aminianus Marcellinus. It is now called the Holy Mountain, from a cloister erected in it in 1023, to which frequent pilgrimages are made. The sameus tun here, which stood in a cellar under one of the towers of the electors, palace, and contained fix hundred hogtheads of wine, was defertoyed by the French in 1688; but the elector of be some in its stead.

Manheim, where the elector susually resides, is streamed eight miles west of Heidelburg, on the cast side of

2. Manheim, where the elector usually refic 2. Manheim, where the elector usually refides, is fituated eight miles west of Heidelburg, on the cast side of the Rhine. It is one of the finest towns in Germany, and strongly sortified; but it labours under two capital disadvantages, namely, the want of good water and wholome air. The electorate palace is one of the most magnificent in Europe, and contains a grand collection of paintings, brought hither from Dusleidorp, besides andiquities and currenties around which is the correction. paintings, prough hither from Duleidorp, belighes and-quities and curiodities, aniong which is the grown of the unhappy Frederic V. king of Bohemia. The three reli-gious tolerated in the empire have churches in this city, Here is also a Jewish synagogue, with a Capuchin and Carmeline cloither. Some manufacturies are chabilified, here, and a considerable trade, chiefly by Jews, is carried

on in this town.

3. The town of Bacharach, is fituated on the Rhine: here is a flone opposite to it, on the same river, shaped like an altar, and called by the inhabitants the altar-stone, upon which, it is thought, victims were frequently offered to Bacchus, the neighbouring country, yielding Muscadel wine. The town contains a closter, and on a monatain near it stands the calle of Staleck. The inhabitants here, as in all the other towns of the maltinate. habitants here, as in all the other towns of the palatinate, are a medley of Catholics, Lutherans, and Protestants.

4. Oppenheum stands on a hill near the Rhine, and was once an imperial free city. 5. Ingelheim, a borough on the Selz. 6. Frankenthal, a confiderable town. 7. Alzey, a small town on the river Selz. 8. Neufladt, on the Hart. gives name to a bailiwic, which contains feveral fault towns.

o. Germersheim, on the Rhine, aifo gives name to a bailiwic, containing a commandery of the order of St. John, together with feveral small towns on the above river.

10. Mosbach gives name to a bailiwic, in which

are feveral towns, perticularly Singheim, where shere it a large cloither betoming to the Franciscaus. 11. Ladenberg, on the Neckar, fateen miles from Heidelberg. 12. Weithelm, fituated in the fineli part of Bergitras. 12. Weithelm, fituated in the fineli part of Bergitras. 12. Breten, noted for being the birth-place of Philip Melandhot, it gives mane to a bailtiwic, which contains the three finall towns of Eppingan, Weingassen, and Heidelskeim.

The city of Erfort is large and well-fortified, but not very oppulous, and the buildings are molly old-fathoned. It stands fixten miles went of Weymar, fixty of Leipzle, fixty-feven north of Bamberg, and feventy fouth of Halendrafts is reckoned the capital of Thuringia, and was made a bishopsic by St. Boniface, in the cighth century. Both the city and its territory, which is of confide. Extent, are subject to the electorate of Mentr; but the melabitants of both, or at least the greasest part of them, are protestatts, and intitled, by cappes stipulations, to the free exercise and sujoyment of their religion; the civil and criminal court too opnists of an equal number of Roman catholic and Lutheran sselffors; and the members of the town council are partly extholics, and parily protestant, the last having sikewise a econstituty of their own persension. The garrison consists of two battalions of imperial and electoral troops...

There is, in this city, a ball called Sasana.

the last having likewife a consiliory of their own perfusions, the last having likewife a consiliory of their own perfusions. The garifon consilie of two but shier own perfusions. The garifon consilie of two but shiers own perfusions and electoral troops.

There is, in this city, a bell called Sulanna, which is faid to be the biggest in Germany, weighing above twelve sons. Here are also two citacles, with a great many churches; some collegiste, some Roman catholie, and fome Lutheran 1 together with a rich Benedicline monastery, leven clositers, of which one is the Scottist, a Lutheran sympathy and suniversity of sive collegas, the professor of which are partly Lutherans, and payely Roman catholic; the imperial academy of natural surjoities; a riching scademy; a botaoic garden; an afternomical observatory; an anatomical theater; several good libraries, and an academy of the useful sciences. Several diets of the empire have been held here. In 166th the city was bringed and taken by the elector of Menus, with the help of the French and Lorrain troops. But by shipulations with the elector and princes of Saxony, who were protectors of the city, its privileges were in a great measure severed to it. The tentricry belonging to the ricy contains two small towns, and seventy—three villages, among which are sive called the kitchen villages, a being obliged to perform evaluations, is furrounded by Hesse. Thuringia, and the principalities of Grubenhagen and Calenburg. It extends hout theiry miles in length, and twenty in breadth, and is divided into the Upper and Lower Eichafeld, the former mountainous, but besithy and populous; the latter, though not enjoying, perhaps, so pure obliges, and one hundred and ship willages. The diett, which consilied in the Upper, and Rume, have their source. The Thuringian language is solved to the abbies, punneries, and contrain towns, with the nobility, are held, if the weather will permit, in the open air, at a place called Jagebanks. Watte; if not, in the council-house of Heiligenthad. As the council-houte of Heingenittadt. At the latter place are held the inprene temporal querts, and there also redices the licutement, or administrator; but the seat of the archiepiscopal commissery, which has the spiritual jurisdiction ever the whole Eichefold, is at Dudersladt. Here are a few protessants but the prevailing religion is the Roman catholic. With regard to esciclastical matters, the county is divided into ten provincial deareries, and eighty-countries in which are two collegists foundations are

eounty is divided into ten provincial deneries, and eightyone parishes, in which are two collegiate foundations, two
abbies, and fix nuneeries. The right of patronage in
image places belongs to the archbishop; in others, to the
cloisters and foundations, and in others to the nobility.

The two following are the only places of note in this
part of the country, viz. 1. Heiligenstadt, on the river
Leine, in the upper diffrict. 2. Duderstadt, a town on
the Hable, in the lower district, containing an Urfuline
nunery, the superior of which is stilled Worthy Mother,
and is changed every three years.

nunnery, the superior of which is stitled Worthy Mother, and is changed every three years.

The duthy of Wedphalis, which is about forty miles in leagth, and thirty in breacth, is bounded, on the east, by the bishopric of Paderborn, and the territories of Waldec and Islate, on the north, by the bishopric of Munster, and the country of Lippe; and, on the fouth, by the counties of Witgenstein and Naslau, and the duchy of Berg. The

lower division of it is, whenbly fertile in corn and cartia, and in some parts of it are falt springs. The higher part produces inon ore, calasiry, lead, copper, gold and silver, sine woods, earth, cattle, game and fish. There are twenty-eight towns in this duchy, besides boroughs and cloisters: The provincial dieguare held at Arensberg. It is governed at prefent by a bailift, under the archbishop, and is divided into the Heliwoge, she Haarstrank, and the Surland, or otherwise into the Ruden, the Werl, the Billiein, and the Silven quarters. The rivers, that either pass through the destays or along its borders, are, the Rehr, the Lienna, the Biggs, the Dimel, and the Lippe. In the tyear safe, the senerer Frederic made a donation of this duchy to the archbishoprie of Cologne; which was confirmed by fucceeding emperors; and in 108 the late duke of Arensberg cadet to it also the county of Arensberg. The Keden quarter, besides the town which gave name in it, futuated on the siven knon, contains. It. Geleke. Marsten, on the sivulet Weester. 3. Kaldenhart. And also a gapuchin monastery and numery.

The Werl quarter, besides Arensberg, the capital of a country, and a hendsome town, situated on the Rhur, or Roen, forty-seven miles north-east from Cologne, contains the towns of Werl and Beelike, the first containing a capuchin closser, and the other a Benedictine provost flags, together with the small towns of Saloe, Menden, Nishelm, Alleusrop, Grevenstein, and Heraberg. In this querter are also a mineral spring, a commandery of the Tentonic order, with a stud and hunting-seat of the elector, with several abbies, nurtheries, and castles.

The Belstein quarter contains the small towns of Attendonic Olpe, Droishagen, and Fredeburg, with several cloisters and castles.

There are nine small towns in the Bilon quarter, with several cloisters and eastles.

calles and cloiders.

There are nine finall towns in the Brilon quarter, with feveral cloiffers and caftles.

The county of Recklinghaufen is bounded by the bi-fhopric of Munker, the ducby of Cleven, and the county of Maris, 19mg on the east fide of the Rhine, and extending about twenty miles from east to west, and ten from anoth to fouth. It belongs to the fee of Cologne, and is anomally the alienteent. sed by a lieutenant.

governed by a neutrenant.

This county contains only one place that merits any deferiotion; namely, Recklinghaufen, a fmall town, giving
name to the sounty, and containing a firong caffle, with
a nunnery, the abbefs whereof bath power of punishing
capitally. She alone is obliged to make a vow of chaffity;
or the nuns may marry, after having been a number of years in the house.

years in the house.

The circle of Lower Isenburg lies near that of Wied, in the circle of Vestphalia. The greater part of it is possessed by the elector of Triers, who has a seat and voice on account of it at the diets of this circle. The rest of it belongs to the counts of Wied-Runkel, and the barons of Wied-Runkel, and the barons of Wed-Runkel, and the barons of Wed-Runkel, and the barons of Wed-Runkel, and the barons of the lower of the county belonging to the clector.

On the Rhine, between the duchy of Juliers and the archbishoppic of Cologne, is the burgraviate of Reittee. I his little district had formerly burgraves of its own, but now belongs to the counts of Zinzendors, of the Ernest-Brunn line, who, on account of it, have a seat and voice

Brunn line, who, on account of it, have a feat and voice in the diets of the circle. The only place in it is the in-confiderable town of Reinec, from whence it has its

The fmall principality of Aremberg is furrounded by The small principality of Aremberg is forrounded by the archbifunopric of Cologne, the ducky of Joliers, and the county of Blankenheim. The dukes of Aremberg and Archbet are a branch of the house of Ligna. Till 1876 the superior, and, in 1644, dukes. They have a feat and voice both at the diets of the empire and circle, in the college of princes. They take their sitle from Aremberg, the capital of the principality, which is a small town, and has a caffle in it. has a caftle in it.

Though the princes of the Thurn, or Tour and Taxis, have no immediate offate in this circle, yet they have a feat and voice in its diets, as also in those of the empire. The first they obtained in consequence of advancing to the The first they obtained in consequence of advancing to the circle in the year 1724, by way of purchase, eighty thou-sand rix-dollars; and the other in consequence of an imperial decree, sounded upon their having had the office of possimater of the empire erected in their favour into a firco messe class. They took their fast in 1754, for the first time among the princes in the diets of the empire.

The knights of the Teutonic order are possible of the bailiwic of Coblenz, in this circle, so named from that town, which intitles them to a seat and voice among the orelate.

prelates of the empire i and alfo in the diets of the civite.

There are seven commanderies, or both mendants, belonging to this balliwie, which has its flat at Cologne,

SilEnter I as VI to lainer or att

emprifing a particular account of the circle of Pranconia, with a defiription of its boundaries, cities, tolum, countries, Gr. with their inhabitants, their trade and manufattures, and produce of the different difficies comained therein.

THIS circle is bounded by those of the Upper and Lower Rhine, Bavaria, Swabia, Bohemia, and Upper Saxony. The inhabitants are a mixture of Roman cathulica, Lutherans, and Calvinits. The diers are held

Upper Sanny. The inhabitants are a minuture of Roman cathulics, Lutherans, and Calvinits. The diers are held at Noremberg; the archives are kept at Bamberg, the bifnop of which latter place, together with the margares of Brandenburg, Exreite, and Anfpech; ore furnmening princes for the circle, but the bifnop is fole director. The imperial city of Nuremberg, which is fausted thirty-five miles to the fouth of Bamberg, was made Imperial by the emperor Frederic Barbaroffa. It is reckoned one of the Isrgeft, finest, and richest circle in the empire, and, in short, the glory of Germany; and, considering in great distance from the fea, it is the wonder of Europe 69; its trade, and number of people. It is, in every respect, function of the continuous considering in Germany; except Berlin, in the statelliness of its buildings; but exceeds that, as it does all the others, in the wealth, insenuity, and industry of its inhabitants, it is eight miles round, defended with large dischet faced with stone, and high triple shone walls, with three hundred and fixty-five towers on them, of which an hundred and eighty-three are of free-stone, mounted with these hondred cannon. Here are five hundred and fixty five towers on them, of which as hundred and eighty-three are for the hundred and fixty five towers on the most as a summary of the state of the case five hundred and fixty five towers on the most as a summary of the state of the case five hundred and fixty five towers on the most as a summary of the state of the case of the case of the summary of the summa in an hour, and cost near three thousand five hundred on an nour, and cost near three thousand her anumber crowns. The river Pegnitz is let in by Iwelve large arches under the walls; and, after running through the middle of the city, is let out by twelve other arches. It forms feveral pleafant iflands, wherein are most agreeable walks and meadows, where they whiten linen; and tup-plies the ditches and town with water; and open the fiream there is a great number of mills for tanners and braffers, as well-as for corn, paper, iron, and making fword blades, knives, and other iron wares. There are frord-blades, knives, and other from wares. A here are firsty mills within the walls, many of them for givinding corn. There are feven woollen and eleven flone bridges over-this river, whereof one, which has one arch only, of ninety-feven feet from one bafe to the other, like the Rialto at Venice, though not fo high or fo long, is recknowed a wonder in architecture. At one end of it there is a large flesh-marker, built of hewn stone, on whose gate a large fieth-marker, built of hewn flone, on whose gate the butchers have placed a vaft or of flone,) lying on his belly, with gilded horns and hoofs. The inhabitants are about fixty thousand, Here are but two partin churches, properly for called. The first is as stately as any one of its kind in the empire, viz. that built, as they say, in 740, by St. Sebald, a Danish prince of the blood royal, by whom this country was converted. It is a large gothic pile, and has seven gates, a bell weighing an hundred and service with the service of the pile, and has feven gates, a bell weighing an nunured and fifty-fix quintals, and a hafe monument erected to his memory, weighing about an hundred and fifty-feven quintals, with noble sunque figures. The fextons have a rare collection of relicks, which they flew only to travellers of quality. The fecond is St. Laurence's church, another than the conditions of the condit quality. The fecond is St. Laurence's church, another gothic fabric, which is chiefly frequented by the Lutheran nobility and gentry. It has eight gates, two fleepler in the front, and is the largest in the city. Here the shief of the citizens have their tombs and escurcheous, and there is a register of all that have been buried here for five hundred years, specifying the time and manner of their death. Besides these, there are the churches of the Virgin Mary, St. Giles, the Holy Ghost, and of the hospital of St. James, in which are the monuments of marty princes and counts of the empire. Near St. Laurence's charier are three fountains, one of them an octagon belon, with a large brafe pillar in the middle, from whose chapters project fix meaniles of lions, fiperting water out of each by a twifted pipe. On the cornice are the fix cardinal virtues, parting water from their breafts. On this pillar flands a left one fluted, on which are fix infants, every one of them leading on an efcutcheon, bearing the arms of the empire, shole of Nutemberg, 8cd. and they all hive trompets, but of which jets plenty of water, as it does likewife from the breakt of a fine flatne of juffice on the top of this fecond pillar, and from a large offrich which fupports her. The whole is of braft, incided by an iron grate carved and gill.

breafts of a fine farme of inflice on the top of this fecond pillar, and from a large offrich which fupports her. The whole is of braft, incided by an iron grate carved and gitt.

The emperor reides in the cattle, which is well-fortified, and ftands on a high hill, or rock, from whence there is a fair profect of the city. It is built after the old Roman faffilion! fome fly by Drufus, others by Nero! It had many carlous pictures; within the first gate is a small antique chapel, which they fay was formerly a chapel dedicated to Oredo and Hirntenstut; two divinities worshipped by the antient Germans, whose stone states are against the wall on the outside: Here is a well in the rock faid to be one thousand fir hundred weight. The cicling is supported by four Corinthian pillars, each forty-five feet high in the emperors apartment there is the pittute of the homese yaid by the magistrates to the emperor Matthias in 16/2. This castle has four towers, two of which look to the east and north, and the two others toward the town. Their stadt-house is a stately beautiful fabric, of hewn stone, one hundred paces in breadth, much larger than that of Aughourg, and as well adorned within. It has three great portices, with marble pillars i the front is very first, having a noble portal, in the middle of it, adorned with several status. There are two other very grarid gates to it, at shade distances one front another, which are no less splendidly ornamented. There is a long gallery here, on the cicling of which a samous tournament, that was held here above three hundred years ago, is represented with several status. The conditi-brainber, diming-rooton, and other apartments, and well painted and gilt; filled with the arms of all mattons, and adorned with curious pictures; medalty excellents where, both any quantity distributions. The conditions is family, and not successful to the dignity and power of the fenate: the food of huntreds with the arms of all mattons, in terminate which the connects of the chambers is a large distribu

which look roward as many different roads. The public library, composed, at the beginning of the reformation, of all the books, belonging to the converts of this city, and its neighbourhood, consists of four galleties, and twenty-fix thousand volumes; particularly a Greek manuscript of the gospel, and some of bt. Paul's epitles, above one thousand years old, with the prayers and hymns formerly used in the Greek church, and the characters very different from those now its use. Here are, a letter, of Luther's handwriting, to the magifinates of this city; a pccket-book of John Frederic; elector of Sakony; being feraps of fermons he beard him preach; and the figure of Mofes, which, though not a foot high, has the whole Pentateuch writ

upon it. In the public celler, which is a querter of a mile long, are, generally, twenty thousand middle-fixed tuns, full of wite.

Among many other privileges, this city has the cuflody of most of the imperial ornaments made use of at the emperor's coronation: At, r. Charlemagne's crown, said to weigh fourteen pounds, about which there is a mitre, enriched with a east number of diamonds, rubies, emeralds, and pearls; and on the front, a cross of diamonds, of great value. 2. His calmatic robe, or mantle, embroidered with large pearl. 3. The golden apple, or globe. 4. His flowers, and crysfolites. 7. Buskins, covered with plates of gold. 8. The gloves, embroidered with large emeralds, diamonds, sapphires, and crysfolites. 7. Buskins, covered with plates of gold. 8. The gloves, embroidered with curlous stones. They are kept in the church of the hospital, and were all brought from Prague by the emperor Sigismund, by reason of the troubles that were in Bobenia in his time. Here is also a large chest, suspending, they say, are a wast many facred relicks, but they are never shewn, except to sovereign princes, and their attendants.

The council is composed of forty-two persons, whereof twenty are taken out of the antient patrician families, and the rest from among the burgers; so that there are thirteen echevins, or aldermen; as many councellors, or commoncouncilmen; eight other senators, who are all patricians and eight other councilors, ecked out of the councilors of trades and crafts, who are, consequently, plebelans but these acquestes so implicitly in the dection of the particians, that they may be faid to have no vote. There are two borgomasters, one chosen out of the echevins, the other out of the council, who have the superiority, the one of the milltary, the other of the coivil government, and are changed every month.

Levying of troops, taxes, and other matters of great

Levying of troops, taxes, and other matters of great moment, are referred to a felect committee of fevan, named the Septemvirate, who call three or four civilians, for advice; and they have falaries for their attendance on fuch advice; and they have falaries for their attendance on such occasions: but no lawyers are allowed any vote, or share in the administration. In extriordinary cases there is a great council of 400, to see out of all the callings and trades in the city; and they annually chuse the members of the other courts. The magistrates never allow mechanics to meet publickly, except at worship, weddings, and funerals, for test of tumults; and the senators are, in general, so very circumspect, that, "As prudent as a Nuremberg senator," is become a common proverb in the country.

remberg fenator," is become a common proverb in the country.

As the freedom of the city is not allowed to papifts, there being but few here; these are obliged to worthip in a chapel, or small charch, in the house of the Tautonic order. The Calvinista were formerly obliged to go a league out of town to a church, in the marquisate of Anspach; and the Lutheran ministers, in the town, baptized their children: but the late king of Prussia, whom the Nurembergers seared much more than they loved, having demanded that they should be allowed a place for worthip nearer to the city, they now meet two or three musuat-should. ed that they should be allowed a place for worship nearer to the city, they now meet two or three musquet-shot without the gates, in a long hall, which holds about five hundred persons. The Jews, who live in a village without the city, where they have a synagogue, are not allowed to lodge here, nor to come into it, without paying a slorin for every hour they say, as at Cologn, and that on the same pretext: namely, a design to poison the wells and fountains. The religion, as well as quality, of every perfon here, may be known by their habit; which regulation was made by the magistrates, both of this city, and Augfburg, to restrain the suzury of the meaner fort in clothes, and to detect rioters, who are but too common in all free cities.

There are in this cit a great number of eurious work-men, in metal of all fo. s, ivory, wood, &c. and artificial commodities are very chesp. They are particularly famous for clock-work. Monconys fays, there was a coach made here for the king of Denmark, with fprings, to as to go forward or backward, or turn about, and travel a league on forward or backward, or turn about, and travel a league on flones, without horfes, and only managed by two boys within; and that the fame workman made, for the dauphin of France, a reprefentation of a fquadron of horfe, engaged with a battalion of foot, both of them marching, and firing, by fpring-work. The Nutemberg braft, which is made chiefly out of the Tirol copper, is faid to be the maft dustile, the brightest, and the least subject to flaws,

of any in Europe.

Weissenburg, a little imperial city, is twenty-eight miles south of Nuremberg, and situated on the Norgau.

The territory belonging to it is very small, and contains but one inconsiderable village. The ciry has a feat and voice both in the diets of the circle and of the empire. Schweinfurt, another small imperial city, slande on the Maine, and has a good bridge and gymnasium: the inhabitants are protestants. The territory is small, but celebrated for its excellent wine.

Windshelm, also an imperial city, stands on the Aifer, twenty-feven miles from Nuremberg, and is vary anticist. The territory is small, and the lunabitants are Luthersus. The city has a fest and voice at the diets of the emprey, and circle.

The territory is small, and the Inhabitants are Luthers's. The city has a feat and voice at the diets of the empay, and circle.

Rothenberg, an imperial city, is situated near the Tauber. It has a seat and voice in the diets of the circle and empire, a considerable territory, and contains several churches, a gymnasium, Teutonie houte, &c. The inhabitants are Luthersns.

Seinsheim, Reichessberg, and Wiesentheld seigniories, antitle their lords to a seat and voice in the diets of the empire and circle; but those privileges are not enjoyed by the seigniories of Welaheim and Hausen.

Linaburg and Spickfeld, which are combined seigniories, entitle the proprietors to to voice at the diet of the empire 1 and in the college of the counts of Franconia.

Erbach counts is fituated on the south side of the Maine, being twenty seven miles long, and twenty broad is tolerably sertile, and inhabited by Lutherans. The estates of all who die unmarried, in this county, after the age of twenty-sive, are forfeited. It gives a seat and voice in the college of Franconian counts, and at the diets of the empire and circle; and contains Erbach, a small town on the Mumling, with a casse, and Michelstadt, the seat of a regency and superintendercy.

The county of Werther: I lies on both sides the Maine, between the archbishopric of Ments and the bishopric of Wurtaburg, a part of it terminating also on the county of Erbach, it abounds in corn, whoe, pasturage, wild sow, and venicin. The inhabitants are mostly protestants. A part of the county came by marriage to the family of Lowensein, who derive their pedigree from that of the elector Palatine, and are divided into the two branches of Lowensein. Wertheim-Nochefert, the former of which are protestants, and counts; the latter Roman catholies and princes, or princely counts. They take the title of Lowensein from the county of that name, under the jurisdiction of the duke of Wirtemberg, of which they are proprietors, besides other seigniories in the empire, Bohemmia, and the Netherlands. The

The most considerable places in this county are, s. Wertheim, which gives name to it, and is its capital, lying at the confluence of the Malne and Tauber. Here each at the confluence of the Maine and Tauber. Here each of the above-mentioned branches of the Lowenstein family lawe a palace. The inhabitants are partly protestants, and partly papist; but the magistracy is whosy protestant.

The county of Rience, which gives its possessor feat and voice in the diets of the empire and circle, and in the college of Franconian counts; but contains only Rience, a small town, with a castle.

3. Breuberg, a firong castle on the mountain, giving name to a seigniory, which had antiently lords of its own.

4. Little Heubac, on the Maine, which gives name to a balliwic, and contains a castle; it is situated on the Maine, and is a market town. The county of Castlel lies between that of Schwartzen.

cattle; it is fituated on the Maine, and is a market town. The county of Castell lies between that of Schwartzenberg, and the bishopric of Wurtzburg, and west from Bamberg. It is about twenty-seven miles long, and eight where broadest, and belongs to its counts, divided into the two principal lines of Remlingen and Rudenhausen, descended from the antient dukes of Franconia. The county is, for the most part, a see of Wurtzburg, to which county is, for the most part, a net or we unstuding to which the counts are hereditary cup-bearers. They have two voices in the college of the imperial counts of Franconia, both at the diest of the empire, and those of the circle. The oldest of the reigning counts is always administrator of the feudal feigniories of the whole house, and cup-

of the feudal seigniories of the whole nouse, and cup-bearer to the bishop of Wurtzburg.

The places in the county, worth mentioning, are, r.
Casteil, a village, contaming a fine palace, in which one
of the collateral lines of the principal Remilingen line resides, and gives name to a bailiwic belonging to the same
line. 2. Rudenhausen, a village, which gives title to the
other capital line, and contains a palace belonging to them.
7 X

3. Remlingen,

h writ

3. Remlingen, a market-town, which gives title to one of the principal lines.

The bithoptic of Bamberg is bounded, on the north, by the principality of Coburg, and the Volghtland; on the fourli, by the principality of Brandenburgh Bareith, the territory of Nutemberg, and the principality of Schwartsenburg; on the weft, by the biflioptic of Wurtaburg; and, on the east, by the territory of Nuremberg and Brandenburgh-Bareith. The length of it is about firsty miles, and the breadth forty. The foil is very fertile in ceru. denburgh-Bareith. The length of it is about firsty miles, and the breadth forty. The foil is very fertile in corn, wine, faffron, and liquotice, yielding alfo in forme places, laurel, fig, lenion, and orange trees, with woods of forest trees, and fome metals. The country abounds likewife in cattle, and is well watered by the Maine, and feveral other brooks that fall into it. The inhabitants are all sealous Roman catholics. Here are no states.

searous Roman catholics. Here are no flates.

Before the year 1006, this county was called the county of Babenberg, and had counts of its own; bot was then allotted for a bithoprie by the emperor Henry II. which pope Benedict VIII. exempted from all archiepifcopal jurifdiction. The bifhop's privileges and prerogatives are very great. He is the only one in Germany who has the privilege of wearing a cardinal's has together with very great. He is the only one in Cremany who has the provilege of wearing a cardinal's hat, together with the pallium, the last of which, however, costs him four thousand pounds, and there lies no appeal from his decisions, in fecular matters, to the courts of the empire. The king in fecular matters, to the courts of the empre. The king of Bohemia is his cup-bearer, the elector-palatine his fleward, the elector of Saxony his grand-marshal, and the elector of Brandenburg his great chamberlain. Thice, or their proxies, if furnmoned, runk attend, and do the desert of their offices on the day of his inftallation. He is able to bring into the field four thousand men. The revenue arifing from his bishopric, besides his bailiwies in Carinthia, amounts to above fifty thoufand pounds. The chapter, by whom the bishop is elected, confile of twenty capitular canous, and fifteen domicelli, all of noble birth. All his eftates, excepting those in Carinthia, are held imanediately of the empire. At the diet thereof, he has the fourth place, on the spiritual bench in the college of princes, and is a fummoning prince and director of this circle, as we before observed. His matricular affessions, at prefent, is only four hundred and thirty-feven florins; and to the chamber of Wetzler five hundred and feventyfour rix-dollars each term. Here are all the ufual courte, souncils, and offices for the different departments of go-

wernment, as war, foreign affairs, the finances, dec.

The two following are the clief places in this bishopric, via. 1. Bamberg, which gives name to it, and is its capital, pleafantly fituated near the river Rednitz, shout thirty-four miles north of Nuremberg, and in the centre of Germany. It is forrounded with walls and a ditch, and is, in general, well built, and populous. Here ree two epifcopal palaces, or caftles, one called Peterburg, and the other Gayersworth, an university founded in 1648 ; feveral monafferies, nunneries, and churches, besides th eathedral of St. George, in which is the monument of Henry II, who founded the bithopric, and his confort Cunigunda, with a treafure of jewels and selies. Several diets, both of the empire and circle, have been held bess. Not far from the townstands the hishop's fummer-palace, ealled Marquardburg. Among other curiofities in the treasury of the church of St. George is a folio manuscript of the four gospels in latin, upon fine vellum, in a neat Roman character, with some gother interesting the most beautiful miniatures that are to be seen; the binding is wood, covered with curious sculptures in ivory, of our Saviour's passion, and bordered with a gold edging, on which are the heads of our Lord and his Apostles, as are those of the four evangelists at the four corners : the whole is enamelled, and the intervals between the figures are garnished with pearls and precious stones. enother latin manuscript in folio of the four Gospels, with a comparable to the former; and there is a third in Gothic letters, the corners of which are also enriched with pearls and precious flones, much in the fame manner with the first, with a square of ivory in the middle, representing St. John baptizing our Saviour. The faid emperor alto gave a fine large thrine of gold for relicks, which is also set with precious stones. In short, it would take up, by far, too much room in this work, to mention the wast number of antependiums of altars which are extremely rich; the candleflicks, luftres, lamps, censers of gold and filver, and other rich articles of this treasury.

Here is a church for the jefuits; the front of it is adorned with the flatues of several faints in nicles; but the in-fide is very indifferent. The Dominicans have another,

with an alter, at which they give out, that above two thouwith an alter, at which they give out, that above two thoughted maffer are faid every year. The Augustine friam have a monaftery dedicated to St. Stephen; and the Benedictines an abbey dedicated to St. Michael, and flanding on an eminence of the fame name; one of its abbots, who was a great bottanit, crusted the church to be painted, within and without, with all forts of the known plants and fimples. A council was held at this city in 1011, to put an end to the differences among the Garanan hithops a not in the time of Henry IV. Ist bithop Othe converted the Pomeranians to: Christianity. An university was founded here in 1653, by Melehior Otto, one of its bishops. There are feveral public fountains in the town, but no fortifications more than its walls to that in time of war the hishop resides, and has contanously a very throng war the hishop resides, and has contanously a very throng

but no fortifications more than its well; so that in time of war the hishop refides, and has commonly a very frong garrifon, or Forchain.

Forcheim, ten miles south-east from Bamberg, the Lacoritum of the antients, which is strongly and regularly fortified, having walls of free-stone on the conducace of the Wifent, and the Radmins yet the duke Bernard of Weymar, the Swedish general took is in 1933, at the fast onset. The buildings are generally old, and out of repair. Baudrand gives lt the Latin name of Forchanum. Munfler pretends is to be more antient than Bamberg, and Baudrand gives it the Latin name of Forchanum. Mun-fler pretents it to he more antient than Bamberg, and that the old kings of Bavaria held diets and affemblies here; and there is a popular tradition here, that it was the coun-try of Pontius Pilate. The parith church of St. Martin was made collegiate in 1354.

Bamberg has a very agreeable neighbourhood, but as one comes to it from Nuremberg, through a forest of fir-tees, there is an avenue to it for a quarter of a learnering.

trees, there is an avenue to it for a quarter of a league in length, formed of wheels and gibbets, on which are ex-posed the bodies of malefactors, by which this road has been infeffed from all quarters for this bifliopric being contiguous to feven or eight different flates, the city lies is the greatest road of all Germany. There is a good number of noblity fettled here, who drink as hard as they do at Fulda and Wurtsburg; fo that it looks as if drinking was an infeparable fundition of the ecclefistics courts in this part of the world. This city had formerly a wall, but the inhabitants, for their rudeness to the bishop in sut the impassion, for their rudeness to the billion in 1435, were condemned at the council of Bafil to raze the walls, and never to rebuild them. In 1609, the popish boors here attempted to plunder this Jews of this city, and the neighbouring problemate; but were foon suppressed, and their leaders punished for the outrages they had com-

The bishopric of Wurtzburg extends eighty miles in length, and fixty in breadth; is well watered, and fertile length, and fixty in breadth; is well watered, and fertile in core, fruit, herbs, wine, plants, paffures, &c. The eftablished religion is the Roman eatholic, yet there are a few much oppressed and persecuted protestants in the sounty. Christianity was first instroduced here by St. Kilian, a Scotchman, about the end of the seventh century; and St. Burchard, the first bishop, was appointed and confectated by St. Boniface, who is also faid to have been a Scotchman, and was the chief apostle of the Germans, and first archbishop of Menta, to which see the bishop of Wurtabourg is suffragan. The bishop's title runs thus:

** Prince of the holy Roman empire, bishop of Wurtaburg, and duke of east Frankenland." His revenue is faid to amount to first thousand as year, with which he to amount to firsty thouland pounds a year, with which he maintains a confiderable body of troops, even in time of peace, with a fplendid court and hourhold, horfe and foot-guards, &c. being absolute in temporals, and living in all the flate of a fovereign temporal prince; but in fpirituals an appeal lies against him to his metropolitan, or the pope's nuncio. The bishop has the honour of the pall and croft, with a feat and voice in the diets of the empire and circle. His chapter confifts of twenty-two capitular canous, and thirty who are domiciled, who must all be of noble birth, and each has an income of three thousand

German crowns per annum.
The town of Wurtzburg, from whence the bishopric derives its name, and is its capital, fignifies a town of herbs, a great variety of which is found about it. It flands in the very centre of Franconia, on the banks of the Maine, forty miles west of Bamberg, and is well fortified. There is alfo a ftrong fort near the town, containing an episcopal magazine, and a church; but the palace, in which the hishop usually resides, stands in the town, and is a noble firucture, the first stone of which was laid in the year 1720. The cathedral, together with a feminary, are dedicated to St. Kilian, the patron of Wurtzburg and Franconia. As this city is under the dominion of an ecclefiaffical prince, the reader need not be told that it contains a great number of churches, monafteries, numberies, and

Here also is an university, founded in 1403, a house of the Teutonic order, and another of the order of St. John, a foundery for cannon and bells, a haudious enliege, and several inspirate. In the hisper's cellar are faid to be more than to tons of curious workmainthis, full of excellent old wine. At the entrance of the bridge, over the Maine, is a triumphial arch of hewn fione. One of the abbies, which is arge and magnificent, belongs to Scote Benediclines. The cathedral, an antient gothic firudure, is richly! adorned within, with flature, altars, pillars, &c. of, mapble and filvers finely executed, befines paintings, sculptures, gilding, and veffels of gold and filver. Almost, every thing in the church is carved and gilt: the pulpit, the organs, the beaches for the canons, and the altars. Most of the status are also gilt. Saveral diets have been held in this city, which, like most others, has experienced many calambties, and a great variety of fortune. In the castle is a fine train of artillery, with all the implemente needflary for gunners, and vast quantities of mulket bells, bornba, b. lets, and flints, besides a year's provision for Sx theodernal seen at arms, and forsty thousand horfe and foot. The great hospital of St. Julian kere, is one of the richest and most megalificent in Europe, having a greater estate and income than the bishop himiels.

With respect to the principalities of the Margraves of Brandenburg, the foil of them is tolerably settile, and the mountains abound with copper, lead, sluphur, marble, fine clay, gold, filver, iron, vitriol, autimony, crystal, jears figilitats, &c. The country contains many woods; is well watered, and abounds with fish. The manufactures confist of stockings, por elane, woollen clother, leads, which cotton wares, &c... The established religion is Lutheranism, but Calvinists and Roman catholics are tolerated.

The principal places are, s. Bareith, the capital, which

tolerated.

The principal places are, s. Bareith, the capital, which contains a magnificent palace excited fubfequent to the year 1753, two Lutheran and one Calvinid church, a mint, a Roman catholic chapel, &c. The feat of the high colleges is here; and in the neighbourhood, in a wood, is a neat house, called the Hermitage. 2. St. Gorgenam-fee, a town on a lake, contains a noble palace, fine gardene, a percelane and marble manusactury, &c.; Streitburg, gives name to a bailiwic. 4. Hof, on the Saal. 5. Neila. 6. Winfiedel, on the Rofalau.

6. The town of Cullembach is twenty five miles east from Bamberg. It stands on the Maine, no far from Fichtelberg, nor from the fource of the Red Maine, one for the rivulets that form the Maine; fome take this to be the very centre of Germany. In 1430 it was plumbered

the rivulets that form the Maine; fome take this to be the very centre of Germany. In 1430 it was plusdered by the Huffies; in 1533, upon the approximation of the inhabitants of Nuremberg, with the princes their allies, the citizens, finding they were not able to taltain a fiege, faire to the town, and retired, with their belt effects, to the neighbouring castle of Blassenbeurg, or Plassenberg; sheir enemies, however, advanced to the town, extungithed rendered to the town, extungithed the shames as fast as they could, made a great booty, and took the eastle also, in 1534, after a long siege, and demojished it; but the Nurembergers were aftewarded obliged to rebuild it, and it is very well fortified. The antient records of the family of Brandenburg, constituing of till deeds, imperial diplomas, adr, and other important and sundamental pieces, are kept here.

7. Neustadt, on the Assen, is one of the head towns of the principality, containing a margravial palace, and giv-

7. Neutlade, on the Asch, is one of the head towns of the principality, containing a margravial palace, and giving name to a bailivic. 8. Weislenstade, on the Eger, o. Lechtenberg, a market-town, which gives name to a bailivic. 10. Golderonach, a mall town on the river-Croansch. 11. Erland, one of the fix head-towns, as alley are called, of the principality, fituated at the conflux, of the Rednitz with the Schwabach, and diffinguished into the Old and New. The latter, which is also called Clirifican France, having been have been presented. Christian-Errang, having been begun by the margrave Christian-Errang, having been begun by the margrave Christian Ernes, in 1686, is one of the finest towns in Germany. It lies close to Old Irland, being almost environed with a wall of free-stone, and containing a margravial palace, with a fine garden, an university, and teveral churches. Some manufactures, especially those

feweral churches. Some manuractures, especially those of bats and flockings, are allo carried on here.
The bifthopric of Eichflett is bounded by the Upper Palatinate, Upper Bavaria, the Duchy of Neuburg, the the country of Papitheim, and the principality of Anipach. It is a fruitful country, about 40 miles in length; but the breadth is final in proportion, and very unequal. The bithop is a prince of the empire, but fuffragan of Menta, and has a revenue of between nine and ten thousand pounds. The chapter conflits of fourteen capitulars, and fourteen

domicellis, who must be all gentlemen by sixteen descents. Here are no land estates, and the inhabitants are all Roman eatholics. The bishopric was founded by St. Bonisace, who made his sister's fon Wilhald, afterwards canonized by pope Benedick XIII. Srift bishop thereof, in the year 745. Here are the usual herediarry offices, and high colleges. The bishop, is perpetual chancellor of the university of ingel-stedt, and lord of several siefs possessed by princes and counts.

counts.

The most considerable places in this bishopric are, t. Eichstett, or Alchstadt, l. e. the town or city of Oaks, so called from the large oaks that formerly grew near le. Bessee an episcopal palace, and cathedral dedicated to oue lady, here are several cloisters and churches, with a large college. In St. Warborg's church, is a rock or altar, as is is stiled, containing the bread-bones of the faint, from which, what they call its oil, but which in reality is only a vaccour. for it neither burns nor swins upon the surfaces a vapour, for it neither burns nor (wints upon the turface of the water, is faid to flow, and force studif through the floor twice a year. This holy oil is put up in final phials for the use of pligrims, and other devorces, who ere afforce of its miraculous virtues, and for that reason refort hither it east markets. of its miraculous virtues, and for that reason resort hither in great numbers, to purchase some of it, and pay their, devotions to the bones of the sint, It has a curious caihadral, to which one of their bithops presented a sine pyx for the use of the host, which is of pure gold, in form of a sun, weighs sorty marks, and is adorned with three hundred and fifty diamonds, one thousand some hundred sine pearls, two hundred and fifty rubies and several other precious stones, the whole being valued at flaty thousand guilders. It 1704, this town was taken, by a French detachment. It lies in a valley, but the bishop, resides for the most part, at the fortress of Willoboldsburg, commonly called Walpersburg, which is about two miles off, upon a hill. It contains an arsenal and library, and the archives are kept here.

2. The small town and citadel of Abenburg. 3. Hirch-

2. The finall town and citadel of Abenhurg. 3. Hirch-therg, which gives name to a bailiwic, is a cattle on a

The principality of Anipach has Wartzburg on the west, Bamberg on the north and east, and Swabia on the fouth, it yields grain, fruits, wine, tobacco, iron, marble, timber, and there are in it some medicinal springs, &c. Though fome parts are mountainous, yet the others produce good pature, in which abundance of cattle are to be bred and fed. The woods are well flored with game, and the rivers with fish: the chief ivers are the Rednitz, the Altmuhl, the Jaxt, the Wornetz, and the Tauber.

Altmuhl, the Jaxt, the Wornetz, and the Tauber.

The yearly revenue accruing to the fovereign of this principality, exclusive of that of Bareth, is five hundred thouland crowns per annum. Lutherantim is the predominant religion; but at 8chwabach the Calvinith have the free exercile of theirs. There is a military academy at Anspach. The principal manufactures of the country are tapedry, flockings, cloth, floffs, gold and filver lace, wire, needles, porcelane, leather, and looking glasses. The reigning margrave has a feat and voice in the college of princes, and at the diets of the empire and circle. His military chablishment is a hise-pard of horse, and one regiment of foot of seven companies.

ment of foot of feven companies.

The most considerable places in the principality are, 1. Anipach, which gives name to it, and is its capital, flanding on the Under Retzut, and containing a palace, in which the margraves commonly relide. Here the chief courts, councils, and offices are held. A public library is also here, with a collection of medals, a mint, a gymnatium, a poteclane manufactury, barracks for fome com-panies of foot, besidestwo gardens, and a fine orangery and green-houte belonging to the prince, and deveral churches. The town is surrounded with walls, and well-built, 2. Bruckberg, a beautiful pleasure house belonging to the margrave, and standing on an eminence. 4. Schwabach, on a river of the fame name, is populous, and has a great trade in gold, filver, iron, fteel, brafs, hard-wares,

tobacco, cloths, ftuffs, tapeftry, lace, and ftockings.
The Teutonic Order, which we have had frequent occasion to mention, was founded in the year 1190, in Palestine, and the knights were at first called knights of the Virgin Mary, or brothers of the Teutonic-house of our lady of Jerusalem. They must be all Germans, and of true antient nobility. They are to bind themselves by yows to defend the Christian (i. e. Roman catholic) religion, and the Holy Land, and to protect and affift the poor, and the fick. In 1226 and 1228, after they had een obliged to quit Palestine, they obtained a grant of all the lands they should conquer from the Pagan Prussians; whereupon they subdued all Prussia, Courland, Semi-

Semigallia, and Livonia, but afterwards loft them all

Semigallia, and Livonia; but afterwards tott mem as again.

The fuperior of this fpiritual order is filled the grand and Tentonic mafter, administrator of the grand mafterdom in Pruffis, it after of the Tentonic order in Germany and Italy, and lord of Freudenthal, and Eulenbag. He is a prince of the empire, and, as such, has a feat and voice in the diets of the empire, and of this circle. Both Roman catholics and Protestants may be invested with the order, and the Protestant knights are permitted to marry. The chates which they are possibled of in Germany, were obtained, partly by purchase, and partly by donation, and coasts of what is properly called the masterdom of Manyathen, and twelve believies. The grand master is chosen by the chapter, consisting of the counfellors and commanders, or commenders, the latter of whom are administrators and judges of the balliwics and commenders, but, in weighty mastern, an appeal lies from them to the grand master, which are chosen by the chapter, the latter out of the former.

menders, which are chosen by the chapter, the latter out of the former.

The county of Henneberg is about twenty four miles in length, and nearly as much in hreadth. Befides confiderable quantities of grain, it yields alfo tobacco; medicinal and fair fprings, with mines of filver, copper, and iron. The chief river by which it is watered is the Werra, into which feveral fmalter foreams fail. The inhabitates are all Lutherans, except at Schenalkalden, where the Calviniths have a church. The chief manufactors of the country are those of arms. hard-wave, and fufficians. The country are those of arms, hard-ware, and fustians. The country are those of arms, hard-ware, and fuftians. The proprietors of it are, the elector of Saxony, the dake of Saxe-Weimer, Meinungen, Gotha, Cobourg-Sanfield, Hilbarghaufen, and the landgrave of Heffe-Cafet. Sense of these princes are entitled by it to voices in the dieta of the empire and circle, and all of them contribute so the payment of its affessment to the empire and chamber-court.

The principal places in the county are, t. Schleufingen, lying on the little river Schleuz, and belonging, with its bailiwic, and feveral others, to the elector of Saxony. Here is a cattle, in which the princes of Henneburg used fometimes to refide. The town is not large, but has a gyannafum in it, belonging in common to all the takes of Sazony, who have a share in the county, and a commandery of the order of St. Jahn. Not far from it is a medicinal spring, called Wilhelmstorn. 2. Ilmsman, a small town on the lim, belonging to Saxe-Weimar, and containing a mine office on account of the copper and filver mines in the neighbourhood, which were more consideratines in the neighbourhood. containing a mine office on account of the copper and filver mines in the neighbourhood, which were more confidera-ble than at prefent. 3. Meinungen, a town fituated on the river Werra, and giving sitle to a branch of the hone of Saxe-Gotha, who have a palace in it, with a library and en-binets of medals. In this palace also are kept the Hunne-berg archives, belonging in common to the princes of Saxony. In the neighbourhood of the town tobacce is much Swony. In the neighbourhood of the town tobacco le much cultivated. 4. Henneberg. 5. Salzungen a finall town on the Werza. 6. Rombield, a town giving name to a feigniory. 5. Schmalkalden, a pretty large, populous, and thriving town, which, together with feveral balliwica and diffricts, belongs to the landgrave of Heffe-Caffel. A great trade is carried on here in iron and feel wares, there being mines of iron in the neighbourhood, and forges in the which is formus in the feet of the messing the second of the second which is famous in history, on account of the meetings held in it by the Protestant princes, concerning the refor-

mation, and the league concluded by them in 1531.

The county of Hohenloe is about twenty miles in length, and nearly as many broad, tolerably fertile, and well-

watered.

The principal places are, 1. Ochrengen, the capital, fituated on the Ochgen, containing two palaces, a gymnafium, and feveral churches. 2. Barfentein. 3. Ingelfingen, a finall town, which gives title to, and the refidence of a branch of the Neuenstein line. 4. Kirchberg, a finall town on the Jaxx. 5. Sindringen, a town on the
Kocher. 6. Påedebach, a market-town. 7. Waldenburg, a finall village. 8. Frankenau, a market-town. 9. Schilkingfurg a palace on a mountain. 10. Neuenstein lingsfurft, a palace on a mountain. 10. Neuenftein, a town with a cafile. 11. Langenburg, a town with a

The county of Schwarzenburg is about fixteen miles in the county of Schwarzenburg is about fixteen miles in length, but very narrow in proportion. The prince has a feat and voice in the college of princes in the diets of the empire and circle. He is possessed of other estates besides those in the empire, but the only places of note, in the county, are, Schwarzenberg, a castle on a mountain, and Mark-Praiss, a small town on the Maine. Treating of the circle of Anfria; its feveral circles, duchies, archauchies, cities, and towns; together with the inhabitants, their manufactures, religion, 15c. and the grade, produce of the countries comprised in it.

This circle is bounded, on the north, by Moravis, and Bobemia, and the circle of Bavaria seas six fouth, by the Adriatic sea, and the strictory of Venice; on the sail, 56 Hang ray, and, on the said, by Fifferiand. It is the largest circle, and the fifth internal. If The periocipal part of it belongs on the illustriced is the said of the sai

Austria. Aneas Sylvius, who wrote at least two hundred and fifty years ago, says, this city abounded with palaces fit for kings, and churches which vied with those of Italy:

them is to that they are the manuscript carries, but their carriers and beginns and the failt, who left his size file the king of Folkant to shop in, "was, by the grand telephor's order, firangled." A "treaty of peace, was concluded here, April 10, 17, 25, O. S. between the emperor has beain, after fore years had been from, in first but coremony, at the congrets of Cambray. On this 16th of march 1792, the called the feequal Vienna treaty of passes and alliance, was concluded here, between the emperor, and fireth from the former contented to the introduction of the fire thoughout here, between the emperor, and force frame and the first thoughout here, between the emperor. It is also the first thoughout here, between the here gainstide the Prognantic Spacition, and "the former contented to the introduction of the first thought the king of Spain himself, by thus called the third treaty of Vienna, concluded the sale of this fallowing, between the emperor. Great bright in all spain.

The old inner wall was built with the ransform-money of our king Reard I; binders which, distinctly is well ford feet, after the fall was built with the rank and a very deep ditch, into the called the first the land, and a very deep ditch, into the fall of the first the land, and a very deep ditch, into the fall of the first the land, and a very deep ditch, into the fall of the first the land, and a very deep ditch, into the fall of the first the fall of the first being and a very deep ditch, into the fall of the first the fall, and a very deep ditch, into the fall of the first the first way populous, and never without througher, in this hardy populous, and never without througher, as time, from foreign princes and flates, and first thougher the windered and eighty though and the first the first was a fall of the first the first was a first the first of the party little of months of the first had been the first the first the first and off the house have four cellars, one under another, with an tube to the top, the first had been the fir

District through and of Austria, and serious to seeding in Hungary. In the tower there have I call of wooden instances, with which they call the wooden to church from Good I rides to Edda, day because they will not furfar the hells of they had not proved the hells of they had not proved they will not furfar the hells of they had not proved the hells of they had not proved the hells of they had not been a formed they will they will not furfar and proved the hells of they had not been a formed they will they have been by the fuperthicious people, who think they short by the fuperthicious people, who think they short by toothing it. In this charts are many supports the unasted of the stricts of the furfar and they who have been fo long in position of the stricts of the church, whose then fo long is position of the church, who have been fo long in position of the church, whose they been the stricts of the Churchins and other great performed as the most important creamones are performed, is not the court church, though it is near it, there's a passage to it from the passe by slong gallery. Here are many other roble churchs, and rich convents, perticularly, one fer. Southern, in sortice of their countryman St. Colman, who was reculous the patron of Austria; and whose body, long kept here, had mincalous cares aferibed to it, but it was afterwards carried to Alba Rejalls. The church of the Austria friary which is very large, has a chapel rectambling that called the Santa Case, or the Virgin, Hottle, at Loretto in Islay, on the top of which are many columns, standards, and other trophics, taken from the Turks and Tartars. The lefuts have at least two spacious colleges here, and before that which faces the plazzo there is a column of copper, in the centre of the market place, on a peedfall of white slone, bearing the stantar of the Church, which the creament of the church of the representation of the patronage. St. Peter's durith its much effect of the patronage. St. Peter's durith its much effect of the say of the subst many admirable ratities both of art and nature. The theatre is fuperb, and the stables are capacious buildings of a vast length and expence, but no take, being divided into seven pavilions, which appear, at first sight, to be so many different houses; but the inner rooms are ill contrived; and the long one for the horses it so narrow, that they stand all in a row. Indeed a bad taste has prevailed here, which is too prevalent in the buildings in general-lette are, it is true, some house, and even palaces, wherein the roles of architecture have been preserved; but then they are over chanced with sculpture, which is contrary to the noble simplicity of the antient architecture. Here is, however, the best arfenal in the empire; where is shewn to strangers the head of the grand visit, who was 7 X

drangled at Belgrade, after he had milicarried in the lege of Vienna, as we mentioned above. The German foldiers, when they took Belgrade, in their war with the Tusks, opened his tomb there, in hopes of treafure, but found only the body in its thirt; and the governor extension that this faid grand vinir, when he laid fiege to Rush (which he was also obliged to raise), threatened that, if he matered the town, the head of its biftop, then count Coblenitz, thould be cut of, because he took the money out of the convents, to encourage the garrison, he feet the viair's corpete to the count, who gave it to this arfenal. In one of the bashions there is a great magazine of navel flores, for the emperor's gallies, &c., on the Danube.

of navel stores, for the emperor's gallies, &c., on the Danube.

The seven channels, into which the Danube is here divided, contain several islands, which communicate together by seven timber bridges. The high bridge is formed by the intersection of two streets by equal angles, the foundation of one being as high as the tops of the houses, and, in the other, an arch is built is he lowermen street, to let the uppermost pass over it. Here are two remarkable columns, of which one is called the Conception of the Immacolate Virgin; and the other, St. Trinty. The latter is fixty-fix set in height, formed like a pyramid, and has at the top three sigures, of gilt bronse, representing the Trinity. The yarious suburbs of the city almost enabrace it like a bow, and appear like so many different towns, the principal being called Leopolitads, and abounding with handsome houses of the nobles and gentry. Here is an island, named St. Peter's, which is capable of encamping a large army. The Prat, a wood in an island for med by the Danube, is much frequented in fair weather: in its vicinity is a walk called the emperor's garden, and the ruins of a palace which was destroyed by the Turks.

The emperor presides at the cabinet-council; next to him sets the king of the Romanas; and the prime minister is president in the privy-council. These have two secretaries, the principal of whom signs the emperor's letters. The contact of whom signs the emperor's letters. The scalact of war has two generals as presidents, and seven major generals as members, with proper secretaries, dec. The aulic council consists of an equal number—of Roman catholics and Lutherans, nominated by the emperor. It is equal in power to the superior lethems of the council consists of an equal number—of Roman eatholics and papeal from either. The court of Chancery has the business transacted at the Imperial court, whereof the

being no appeal from either. The court of Chancery has the business transacted at the Imperial court, whereof the elector of Mentz is chancellor; but the vice-chancellor prefides in his absence, and has an affistant, an affestor, two secretaries, and a referendary. The writs are either in the German or Latin tongues. 6. The council of the Finances. 7. An Imperial council, where is also a prefident, confitting of many lords and gentlemen; among whom are the governors of the Hungarian cities where the mines lie, with the chief officers for the civil affairs of Hungary, Bohemia, Mosavia, Silesia, &c. who lend directions from hence to the respective governments of these countries. Though other chief courts may exceed the Imperial in pomp, yet, for real grandeur this outstrips them all; most of the officers of state and of the houshold are princes or counts, as are also the captains of the horse elector of Mentz is chancellor; but the vice-chancellor are princes or counts, as are also the captains of the horse and foot-guards: and there are not less than one hundred and foot-guards: and there are not lefs than one hundred gentlemen of the bed-chamber, with golden keys at their breafts, who are all counts and barons; of which quality are also fixty pages; yet ceremonies and the etiquette, a name by which they call antient usages, give this court an air of confirmint that is to be foen no where else; and though it is universally exclaimed against, it is as shifty obferved, as if it was an article of religion.

They are very found in this city as made as a court of

They are very fond in this city, as well as at court, of the days of gala, which is the name they give to those of the days of galz, which is the name they give to those of feltival and ceremony, when there are commonly operas and comedies. There are three classes of them a the court galz, which is universal, both for the Imperial family, and for the nobles and plebeians; at which time, especially on the ame-days, or birth-days of the emperor and empress, the court is extremely gay, and glittering with gold and diamonds. On these days the archduchesses, because it is the custom at Viennz for fifters to dress aske, because it is the custom at Viennz for fifters to dress aske, because it is the custom at Viennz for fifters to dress aske of honour; and they wear robest guest hike childrens vests, with great trains. 2. The grand gals, which is kept in this city, is for the festival of some mainter. 3. The little gala, which is when the ladies are let blood; for, as baron Pollnitz tells us, if any lady of diffindion does but send for a sugroon to breathe a vein, it is enough to put the for a furgeon to breathe a vein, it is enough to put the whole city in gala: nay, fays he, the hufband makes a gala here for his wife, the wife for her hufband, the children

for their garents, and brothers and fifters for one another; fo char, to be fure, two thirds of Vienna are always in gala. He observes it to be a fingular custom at this accept, that the empress downgers can never quit mourning; that there is officers and other domestics were coloured cloathe, their apartitions and concless must be always hung in black; that they cannot be prefer at one play, ball, or concert; and that, by losing their hulbands, they lose the pleasures of life. The emperor's pleasure-houses, he says, are no better than his palace in the tity.

The castle of the Favorita, which is in the soboth of Laopoldsset, is a great strengther gothic building, fall of turnings, and windings, like the street it looks into, and appears more like a great convent of capuchins, than a mansson for an emperor: the givena are pretty large, but otherwise mean enough. Luxenhees, though a near conventiont box, is even much inferior to the Favorita; but the court only slays there a month or fix weeks during the

venient box, is even much inferior so the Favorita; but the court only flays there a month or fix weeks during the featon for heron-husting. The minifers who attend the emperor there, have house which, though not grand, are commodious; but any other person who goes thinher so pay a vist must return to Vienna for a bed.

The court used to spend a great part of the summer at the palace of New Favorits, which gives name to one of the submire; but the princes of Mansfeld have built one there which is much more magnificent. The emperor Joseph, indeed, begun a sine house at Sebonborn, or Schenbrun, about a league from this city, which, if saidhed according to its plan might have been another Verfailles; but his emperis dowager, to whom he left it, suffered the but his empress dawager, to whom he left it, fuffered the works to run to decay

works to run to decay.

The late prisce Eugene's palace is very flately, but fituate in a narrow firest, with a very little court before it. Here is a fpacious faloon, adorned with great pictures representing the chief victories of that prince ever the French and the Turks; and in two rooms next to this, a fait of rich tapeflry, made by the famous Devos at Braffels. In the bedchamber beyond these, there is a lustre of cock crystal, faid to have cost form hundred thousand florins, and rich tapeflry, rolled up in pilasters of green velvet, embroidered with gold, and adorned with figures of needle-work so fire, that they seem to be ministures; and the closet next to it is all over gilt.

needle-work to fine, that they feem to be ministeres; and the closer neat to it is all over gilt.

Lichtenstein palace, which is bigger, and every whit as magnificent, is worth feeing, were it only for its paintings. The palaces of the fuburbs in general, are infinitely more grand than those of the city, and they have both court-yards and gardens. Prince Eugene had one here too, where he oled to pas the fine featon: It is a superb structure, with magnificent gardens, in which are a fine cascade, an orangery, and a menagere, stored with the most uncommon creatures that the four parts of the world can furnish: there is a falcon below-shairs, all lined with mathle of several colours, the cleling of which is adorned with paintings.

can furnish: there is a falcon below-starr, all lined with matchle of feweral colours, the cleling of which is adorned with paintings.

This city is governed by a stadtholder, whose functions are the same with those of the lieutenant of the police, at Paris; but he must always be a person of noble extraction, and a geneleman of the army. He has feldom any other title than colouel of the city, and he has a lieutenant-colonel to command in his absence, who has the direction of the fortifications, the atienal, and the garrison, which never stirs from Vienna, and consists of vectran foldiers, or the burgers and artificers of the city. The employments in this corps are very lucrative, but not being on the road to honour, are not much folicited by persons of extraction. It is maintained at the charge of the city, and thed to mount guard at the emperor's palace, he having no other foot-guards. It is faid this city abounds with coffee-houses, whete the news-readers are not less free with the characters of their generals and statesmen, &c. than they are at Loadon. There being no hospital of invalida here, the church doors are always plied with begging foldiers that have been diabled in the fervice. All round upon the city walls are barracks or huts for the garrison, which are very well built, but not all of them occupied by the foldiers, some being tippling-housers, and others for peasitiuter.

2. Neuthadt contains a military academy.

3. Hamburg profitutes.

2. Neufladt contains a military academy. 3. Hamburg is in the vicinity of the antient Corneates. 4. Klofter-Neuberg is a tich foundation for Auguline canoas. 5. Baden is famous for its hot baths. Beides the above, the Baden is famous for its not patter. Besides me acove, the early town in Lower Aufris, worthy of notice, is, 6. Molk, a market town on the Danube, near which is an exempted cloifter of Banadictiese, which is the guareft and richeft foundation of the kind in all Aufris. Gent of the feats of psciates. In one of the cellstre is kaper form: wine, called St. Colman's wine, which it between there and four hundred years of age. The abbey is dedicated to St. Colman, whose touch is contains. This St. Colman was the apostle of Andria, and of the blood reyal of Scotland; but his fate was fornewhat fingular, for its passing through this cornery in the hebit of a pilgrim, he was taken up, and hanged as a fpy.

The mod judicious geographers divide Upper Austria into four quarters, namely, Handrack, Trant, Michel, and Black.

In the Hambric quarter, the principal places are, as Lissa, the capa. In Upper Austria, it is fatuated on the Danube, one, hundred miles well of Victura, and one hundred said fun fouth of Frague. Here it a wooden bridge over the Danube; and on a hill in the neighbourhood is a cleaded, which is fornetimes the residence of the superor. The town is well-builted while free-shorte, and populous, containing feveral handsome churches, closters, squases, and fountains, and is anich resorted to by the inbility, who have pleasure houses in the neighbourhood. It is also the feat of several courts and colleges for Upper Austria; carries on a considerable trede in gun-betrels, and listen cloth; and has handsome solutions, with two greet yearly fairs, at Easter and Bartholomew tide. There are likewise feveral plantation of hops in the neighbourhood:

2. Frankenburg, on the borders of Bavaria. 3. Efferding, a small town, not far from the Danube. 4. Kaimmer, a titadel, in the Atterice, which is the larget lake in the whole country, and abounds with exquisite fish, of which it yields a new foecies every month. 5. Stropham; a filial commandery of the order of Malta. 6. Schaumberg, a citadel, which gives mame to a county. 7. Wels, a haved-some nown, with a calle, on the river Traun. B. Graunden, a town on the river Vokl; it enjoys the privilege of granting protections to all flaves; and its burgets and merchants, with their wares, are toll-free, thropythes of granting pro

merubants, with their wares, are toll-free, throughout all the Auftrian dominions.

Neuberg is a part of Austria: it is surrounded on all sides by Bavaria, and has several cimdels in it. This county was formerly an immediate county of the empire, but now belongs to the bishop of Passau.

The Traum quarter contains the following remarkable places; viz. 1. Steyer, a considerable town, situated at the constant of the two little steers. Steyer and Ens, and chiesly inhabited by smiths, cutlere, and other artiscers, who transpart their goods on the Danube to various places. 2. Ens is a strong and well-built town, situated on the river of the same name, siten miles east of Linz, and seventy west of Vienna. It was built in the year 900, on the site of Lauiacum, a Roman colony, destroyed by the Hunns, about the year 450, and was the sea of some Roman emperors. Ens was formedly subject to its own count, till the emperor Rodolph purchased it, and sanczed it to the Austrian dominions. Two miles below this town, the river Ens falls into the Danube.

In Michel quarter, the only places worth mentioning

In Michel quarter, the only places worth mentioning are, 1. The Millsc-Bad, a celebrated medicinal bath near the Danube; and, 2. Schlog, a cloifter on the

river.

In Black quarter are, is Grein, which contains a Franciscan college, a Loretto chapel, mount Calvarv and an hernitage. a. Frey Radt, a firong, well-built, royal town, on the north side of the Danube.

The duchy of Stiria is divided into Upper and Lower; and bounded, on the east, by Hungary; on the west, by Saltaburg and Carinthia, on the south, by Carricola; and, on the north, by Austria, property so called. The air is unwholsome; and the inhabitants are greatly troubled with severs and swelled throats, which latter complaint is owing to the great quantity of snow water which they drink. Upper Stiria is very mountainous, and exceedingly cold, but yet tolerably fertile. The mountains contain sliver, lead, copper, and iron, and the summits are covered with forests, which supply wood for smalling those metals. The bost steel in Europe is found in this country.

There are twenty boroughs, near one hundred markettowns, and about five hundred citadels, in the whole duchy.

The common people in general fpeak Wendish, or a very harsh dialect of the German, and the better fort are also mafters of Italian and French. The land-estates of this duchy confift, as in Austria, of the orelates, lords, knights, and royal towns, and their essemblies are held at Grats.

At Grata is an university; and, in four other pieces symmatic, and feveral good colleges. The principal manufactures of the teenthy are iron and field works; of which there is a confiderable exportation. Seria continued a marquiface, till the emperor Frederic Barbároffa crected it into a ducky. It has been contantly fobject to the house of Austria, fance Rockoph I. and to this day retails peculiar implantices. The count: Travenmendorf are fortenthe dereditary flowards, the counts of Wildenfteln chamber-lains; the counts of Sauran marchals; the counts of Wandilla Grats mafters of the house, acc. Settan; a citade, is the fee of a bithop, fobject to the archbishop of Salaburg, whois wicar he is in most part to Stria. The Roman catholic is the only religion allowed here.

The following are the most confiderable plana in this ducky; who at the fee of a bithop, fobject to the archbishop of Salaburg, whois wicar he is in most part to Stria. The Roman catholic is the only religion allowed here.

The following are the most confiderable plana in this ducky; where is the fee of a bithop, fobject to the archbishop of Salaburg, who is the reverse of Hunging. Forty north of Ciley, fifty east of Judenburg, and fare proough the commands a neighbouring country, where is the archduck's palsee, which is finely furnished, and has a good library and muleum. The Jefuics have a college here well and well filled with students. This town is the steelace of the governor of Stria, as it was formerly of the methodolog of Austria, particularly Ferdinand II. afterwards emperor, who called themselves by its name: its vibouts, which as large, riveduct of its own name and its territory very populous.

2. Cilli, or Zilli, somethy the capital of an independent

populous.

2. Cilli, of Zilli, formerly the capital of an independent county, which she emperor Frederic III. took polletion of in 1457, when the last count was killed, after which, it was incorporated with Stirir. In this county stands the high mountain Bacher or Pacher, rich in all forts of ores, as the mineral waters that issue from it evidently shew. The inhabitants of the county are all Sclavonlans, otherwise called Weitlds. The town is very antient, and appears to have been a place of great consideration.

2. Editartz, a considerable town in Upper Stiria, situated forty miles north-west of Grazz, and fashous for mines at a iron-ferges, from whence it has its name.

3. mines and iron-forges, from whence it his its name. 3.
Marburgh, celebrated for its Roman monuments, is twenty-four miles fouth of Gratz and Pettau; thirty miles

twenty-four miles fouth of Gratz and Pethu; thirty miles fauth-east from the same place, and is remarkable for its manusatures. 4. Eggenberg, which gives name to a signiory. 5. Raskesburg, or Raskesburg, fiesated on the river Muchr, and is one or the strongest and best towns to Stiria. 6. Luctonberg, a market-town. 7. Gunnawitz.

In Upper Stiria are also the following places; via. s. Judenburg, the capital, stuated on the banks of the Muchr, in a plain surrounded with high mountains, continually covered with snow, fifty miles west of Gratz, and ninety fouth of Vienna. 2. Leuben, a neat pleasant town, twenty-five miles north-east of Judenburg, and upon the same river. 3. Brack, on the Muchr, eighty-three miles north-west of Gratz.

The duchy of Carinthia, antiently called Carnia, is

The duchy of Carinthia, antiently called Carnia, is The duchy of Carinthia, antiently called Carnia, is bounded, on the eaft, by Stiria; on the west, by Tirot, or Tyrol; on the north, by Stiria and the archbishopric of Salaburg; and, on the south, by the territories of Venice and Carniola. The air is cold, the foil barren; the rivers, brooks, &c. abound with fift; and the mountains yield many minerals.

The principal places are, 1. Clagenfure, the capital of the whole duchy, standing one hundred and forty miles south-west of Vienna, being antiently called Claudia, and the fact of the dukes. It is well built and fortified, and

contains feveral churches and convents, with a large contains feveral churches and convents, with a large college, a gymnafium, and a provincial house, in which the states assemble. Here is also an equestrian status of the emperor Theobald, and two pillars of marble, confectated, the one to the Holy Trinity, and the other to the Virgin. The Lutheran religion was suppressed here in the year 1600. Between this town and St. Veit are some remains of an antient town, supposed to be Tiburnia, where Roman coins, and other antiquities, have been found. 2. Villach, twelve miles west of the laster, near the Drave. over which there is a bridge. It is a populsous Drave, over which there is a bridge. It is a populous town, and a great thoroughtare.

The duchy of Carniola, by the Germans called Krain,

Thas the gulf of Venice to the west, Sclavonia and Croatia to the east. Cariuthia and Stiria to the north, and the Adrianic fea to thef outh It is one hundred and ten miles Adriatic fea to the outh It is one hundred and ten milea long, fifty, broad, rather cold, but at this time tolerably fertile. The lower class of people freak the Sclavoitlan or Wendish language, the better fort, German, but both with a very indifferent dialect. The peasants are a very hardy fet of people; going barefoot in the midst of winter, never covering their breasts from the inclemency of the weather, and seeping on a hard bench, without bed or bosser, and the Upper and Lower Krain the people wear long beards; and such as live by exporting the commodities of the country on pack-horses are called Samera, or, more properly. Saumers.

country on pacture of the clergy, the nobility, knights, and royal towns. Christianicy was first planted in this country about the middle of the eight century, and, in the statement, Lutheranism made a considerable progress in it; but the statement of the Cartestan of Ukokea, who are of the Cartestan, and style themselves Staraverzi, i. e. old believers, all the inhabitants at present are Roman catholics. In the whole duchy are three bishoprics, four catholics. In the whole duchy are three bishoprics, four catholics. In the whole duchy are three bishoprics, four catholics. commanderies, and one hundred and thirty-four parifies; but to the bishopric of Leybach belong also many parishes in Stiria and Carinthia.

The principal commodities exported from hence are iron, steel, quickfilver, white and red wine, oil of olives, eattle, sheep, cheese, linen, and a kind of woollen stuff called Mahalan, Spanish leather, honey, walnuts, and timber, together with all manner of wood-work, as boxes, differs, streethers, forcome forces.

diffice, trencliers, fpoons, feves, &c.

Carniola was long a marquifate or magnavate; but in the year 1231 was erected into a duchy. On the extinction of the margnaves, the inhabitants made choice of Frederic of the margraves, the inhabitants made choice of Frederic II. duke of Austria and Styria for their fovereign. The arms of Carniola are an eagle crowned, on whole breast and expanded wings is to be feen a diced emilent. The counts of Thorn are supreme hereditary sewards in Carniola and the Wendish Mark; the house of Aversberg, chamberlains and marshala; the prince of Lamberg, master of the horse; the count of Cobenzel, cup-bearer; the baron of Eck, flag-bearer; count Sauer of Ankenfkin, carver; and the count of Lanihieri, falconer. The principal officers for the government of the country, are the land-captain, or governor in chief, burgrave of Laubach, land-licutenant, and land-vicar.

There are feveral immaterial sub divisions, such as Upper, Lower, Middle, Inner, &c. but the principal places are, i. Laubach, the capital of this duchy, and in the centre between the upper and lower parts. It thanks on a small river of the same name, which falls into the Save ten miles below it; and is twenty miles east of Bishopslack, and one hundred and forty-four south west of Vienna. The air here is not reckoned wholfome, yet it is a populous well-built city, which the emperor Frederic III. made the fee of a bishop, formerly under the juristification of the patriarch of Aquileia, but now dependent on the pope. It has a cathedral, and a large caffle; but it is comnded by an hill, and the town is not very ftrong, especially towards the river: however, it held out a fiege in 1440, till the emperor Frederic III. came to its relief. The princes of the house of Austria, have the right of appointing the prelates and the chapter here, which only confifts of fix canonis, of whom, indeed, the bifliop nomnates one: Here are feveral convents for both fexes, and the river is noted for breeding the largest cray fish in The flares of the duchy meet in a fine house here, Europe. The flates of the duchy meet in a fin and the prince of Aversburg has also a palace.

2. The town of Zirknitz, or Czirnitz, contains about three hundred houses, but is particularly remarkable for its famons lake, called the Czirnitzer lake, or fea, which is fixteen miles long, and eight broad, encompassed with mountains and forests at fome distance, and on the east side with a forest of pear trees. The water finks under ground every year in June, through many large holes in the bottom, leaving it quite dry till September, when it returns frouting out of those holes with such violence, that it foon rifes to the height of a pike, and covers all the ground again, making that a lea which was before fields of corn, patture, and hunting: for after the retreat of the water, the people fow corn there, which ripens for the fickle before September; and the grafs grows here fo thick, that it affords palture for the cattle and deer that are turned into it from the neighbouring hills and forests, which are taken off before the spring rifes again. The fish that abound here are carp, eels, tench, &c, which none must catch without licence from the prince of Eckenburg, who is lord of the manor till the water retires, and then the pedfants catch

manor till the water retires, and then the prefere actal great numbers by laying their nets over the holes.

3. The town of St. Viet is fituated on a bay of the Adriaule, has a frong caftle, is otherwife well-fortified, and possesses a good trade on account of its excellent harbour, by which large qualitities of goods are experted and imported. The neighbouring territories yield abundance of wine, fruits, particularly figs, &c. The governor of the town is filled captain, and refides in the castle; and on the apposite file of the river there is a chapel dedicated to St. Mary of Loretto. This town was formerly incorporated with the duethy of Carni and bore a thare in its trace, but a prefent it is heither reckoned a part of its territory, not as prefent it is heither reckoned a part of its territory, not is it subject to its imposts. The neighbouring gulf abounds with fish among which it a species called gatta, the skin of which, forming a kind of shagreen, is used for the cases of watches, casters, telescoper, &c.

4. Crainburg, or Krainbourg, on the banks of the Save, over which it has a bridge, is seven miles north of Bishopplack, twenty north, west of Laubach, and twenty fix south-east of Clagenfurt. It stands on the top of a bill, and is fortified with a strong castle. It has three churches, and the charles of the savent of the standard of the churches.

fix fouth-east of Clagenfurt. It ftands on the top of a hill, and is fortified with a ftrong cafile. It has three chuicher, and, in its faborbs, a monaftery of Capuching. 5. Ratf-mondorf, in this neighbourhood, on the north fide of the Save, has in it many Roman antiquities, and gives title to a Roman family in Sitia. 6. Lack, or Bishopslack, on a small river, ten miles south of Crainburg, and thirty from Venice, is a city which was plundered and burntin 1451, but is handsomely rebuilt and dortified, and is subject to the bishop of Freysing, to whom the emperor Henry III. gave it; and the governor of it is his licuterant. Its diffrick is ten German leagues round, and contains two hundred villages.

diffriet is ten German leagues round, and contains two hundred villages.

A division of litria belongs to Austria, and is very fertile. It is divided into the county of Metterberg, and lordship of Castua. The only places worthy of notice are, s. Metterberg, which gives name to the county, and is it capital. It is without walls or ramparts, but has a castle to defend it. 2. Antiguana, a large but dult town: 3. Castua, which gives name to the lordship, and is littuated on the Adristic, 4. Bereketz, a small town, with an harbour on the Adristic.

The town of Lass stands near the Czitnitzer lake: it

harbour on the Adriatic.

The town of Lass finds near the Czirnitzer lake: it has a castle on the river Boick, that runs into it twenty miles fouth-east from Zirchnitz, and is noted for a breed of well-shaped horses, though not near fo good for fervice as those bred in Karstia. The town of Upper Laubach is sixteen miles west from the other already described, and on the fame river, but near the fource of it, is considerable for being a mart for Italian goods, which are fent into all parts of Germany, being brought hither in great quantities over the mountains from Gortz.

Windischmark is in the fourh-east corner of this duchy. Some recton it a Sclavonian province, and fubject to the emperor, and not as part of Carniola, to which it adjoins, le is about fifty-five miles in len th, and thirty where broadest; but it was formerly much larger. broadest; but it was formerly much larger. Though it is a mountanous, barren country, especially towards the fouth, it produces corn, and excellent wine. Its inhabitants are thought to be a branch of the Venedi. Their religion is the Roman catholic, and their language a Though it is

mixture of the Sclavonic and German.

maxture or the occavonic and Jerman.

1. The town of Metling, of Modling, capital of the Windichmark, flands in a pleasant, fruitful country, on the river Culp, and the frontier of Croatia, fifteen miles fouth-ead of Rudolphfworth, and thirty-five fouth-ead of Cilley. The chief trade of its inhabitants is fattening for the country of fwine in two neighbouring woods of chefnuts and oaks. In the year 1431 this rown was surprized by the Turks, and most of the inhabitants massacred; and in 1578 it was again stormed and plundered by those insidels. Here is a loute of the l'eatonic order. This town lies full in the road from Laubach to Croatia. The wood through which it leads is rough and strong, but the rest of the country is pleasant and fruitful.

country is pleatant and fruitful.

2. The town of Rudolphfworth, Rudelfwerd, or Neufadt, stands on the river Gurck, a little below Seifenbourg, twelve miles north-west of Metling, and twenty-two fouth east of Cilley. It is a well-fortified town, and famous for the best wine in those parts. About 1435 it was besieged by Albert of Austria, and Ulric count of Cilley; but the troops of the emperor Sigismond obliged them to raise the opposition. It has an abbey, a convent of Recolletti, and hor baths, at four miles distance, much frequented by foreigners. The town is commonly called Neuftsdt, and the abbey Rudolphsworth.

formerly its persecutar counts, the branch of which, being extinct, the emperor Frederie IV, took position, of it in 1473.

4. Eight miles north-east of Neusladt, is Landstrasse, a strong little town, almost encompassed, by the Greek. It has jurisdiction over the neighbouring hills and vallies, formerly a wilderness for several leagues, but of late ages well-inhabited, and the vallies improved into meadows and passurage, by a sompany of Walachians who fettled here by the name as Ussicken, who are of the Greek church, pays the emperor no tribute, but own him for soverign, and, upon occasion, surnish him with men in proportion to their numbers. S. Reismitz is a noted town on the borders of Carniola, near the Zernicker (e., being the chief of a barony of the same name, belonging to the samily of Trigler, and the place where the imperial trained bands of this country multer. The Turka burnt most of it down in 1480. S. Seissener is a market town of note on the banks of the Gurck, which supplies it, with plenty of fish, particularly the best cray-sish in the country. It is subject to the country of Aversperg.

Karstia, though a province, is reckoned a part of the province of Carniola, it formerly belonged to Frius, betwixt which and Istria it lies. It is a peninssa, almost encompassed with the rivers Alben and Lisonza, about thirty-five miles long, and twenty broad, and remarkable for a breed of good horses, which are bought up by most of the Italian nobility. It was dismembered from Friusi in 1500, and is divided into Upper and Lower.

The famous iver Timavus, mentioned by Virgili in the first Eneid, is in this province. It is thought to rise in the Alps; is called at first Receas, and, after running under ground for about forty miles, is called Timavus, as soon as it breaks out again, and falls by twelve small chancls into the gulf of Trieste.

Trieste, thechief town of this province, stands on the Adriatic sea, at the bottom of a bay, to which it gives name, sourteen miles north of Caho d'Istria, twenty-four miles

miles fouth-east of Aquileia and thirty-feven of Goritz, and fixty-three from Vepice. It was a Roman colony, and built from the ruins of the antient. Tegestum of the and built from the ruins of the antient. Tergellum of the Carnians, the ruins of which are fill to be feen on a neighbouring mountain. It is a small, but strong and populous piace, with 2 large harbour, the only one the hone of Austria has in this country; is a bishop's fee under the partriarch of Aquileia, and is defended by two castles. The Venetians seized it in the beginning of the thirteenth century, by reason of the piracy of the inhabitant; but Maximilian I. took it from the Venetians, h. D., 1507, and his successors have been in possession of, it ever since. Great quantities of fait are made here and exported; and the neighbouring country produces good wine, that the the neighbouring country produces good wine, that the

The aricleus town of Gorsa, or Gorisa, is fatasted out the state town of Gorsa, or Gorisa, is fatasted out the state of the country in Relative to the local control in Gorsa, or Gorisa, is fatasted out the state of the country of Relative to the local control in Gorsa, and the state of the country of Relative to the local control in Gorsa, and the state of the country of the country of Relative to the local control in Gorsa, and the state of the country of diagratic of the country of the country of diagratic of the country of the country of diagratic of the country of the country of the country of diagratic of the country of the co

The great misfortune which the Authrians laboured under for carsying, on the extensive trade proposed from this port, was, that they bad no fund of goods for exportation, either for their produce or manufactures; the chief they could export, of any value, being the wrought iron made. In Carinthia, Stiria, land the adjacent countries; which, indeed, is of great service to the Venetians, because they have no iron works near them. The last mentioned people have also a navigation through Stiria by the river Morta, the Danube, and so to Vienna; and they have the like in Carniola, by the great river Save, which runs into Croatia and Hungary. The Venetians receive, by these countries, a great quantity of large black cattle, which are brought down to the salt-marshes of Venice, and fed there till they are sat. Some also are bought at the several fairs on the frontiers of Carinthia; and they are the best beef that is to be found in any part of the world, when pastured that is to be found in any part of the world, when pastured in the rich lands of Lombardy.

Between Carniola and the county of Gortz, is fituated the Idrian bottom. The name is derived from Idria, a royal market-town, which is immediately subject to the royal market-town, which is immediately subject to the Austrian aulie-chamber at Gratz, and lies in a deep valley, amids high mountains, on the small river Idria. This town is defended by a castle, and celebrated for its quick-filver, mines. The common fort of quicksilver is extracted from the ore by means of fire; but the virgin quicksilver, is found in numerous small drops, that trickle through the veins of the mountains. Malesactors are condemned to work during life in these mines, as this kind of labour, is the most unwholome imaginable.

The two following letters, written by the learned Mr. Everard to a friend, relative to these mines, will afford a fatisfactory account of them. In the first he thus expresses

himself:

4 The pleasure I take in writing to you wherever I am, and whatever doing, contributes to dipel my present uneasiness; an uneasiness caused at once by the disgreeable aspect of every thing around me, and the more disgreeable circumfances of the count Alberti, with whom you were once acquainted. You remember him one of the gayest, the most agreeable persons at the court of Vienna, at once the example of the men, and the favourite of the fair fex. I have often heard you repeat his name with esteem as one of the few that did honour to the present age, as possessed of generosity and pity in the highest degree, as one who made no other use of fortune but to relieve the diffrestes of mankind. That gentleman, Sir, I with I could say is now no more: yet, too unhappily for him, he exists, but in a situation more terrible than the most gloomy imagination can conceive. gloomy imagination can conceive.

After having palled through feveral parts of the Alps, and visited Germany, I thought I could not return home without visiting the quickfilver mines at Idria, and feeing those dreadful subterraneous caverns, where thousands are condemned condemned

condemned to refide, that out from all hopes of ever feeing the chearful light of the fun, and obliged to toil out a miterable life under the whipe of imperious taff-matter. Imagine to yourfelf a hole in the fide of a mountain, about rmagne to yoursels a now in twentow a modelmin; about five yards over, down this you are let, in a kind of bucket; more than one hundred futhom, the probest growing fidd more gloomy, yet fill widening as you delond. At length, after fwinging in terrible fulpence for fome time in this preafter fwinging in terrible Julpence for forme time in this pre-carious fituation, you then reach the bottom, and tread on the ground, which, by its hollowed found under your feet, and the neverberations of the echo, feems thundering at erery fee you take. In this gloomy and frightful folitude, you are enlightened by the feeble gleam of lamps, here and there dispersed, so as that the wretched inhabitants of thefe manfions can go from one place to another without a guide; and yet let me affure you, that though they by custom could fee objects very diffinelly by these lights, I could feace differn for fome time anything, not event the person who came with me to shew me these distant

"Though I suppose, from this description, you have but a differeable idea of the place, yet let me assure you that it is a palace, if we compare the habitation with the inhabitants: such wretches my eyes never yet beheld.
The blackness of their visages only serves to cover an horrid palenels, caused by the noxious qualities of the mineral-they are employed in procuring. As they ingeneral consist of malefactors condemned for life to this they are fed at the public expence; but they feldom confume much provision, as they lose their appetites in a floort time, and being affected with a total contraction of all the joints of the body, commonly expire in about two

45 I walked for fome time in this horrid mansion after "I wanted to fome time in this north mantion after my guide, pondering on the firange tyranny and avarice of mankind, when I was accofted by a voice behind me, calling me by my name, and enquiring after my health with the most cordial affection. I turned, and faw a creature all black and hideous, who approached me, and with a piteous accent demanding, "Ah, Everard, do you not know me.!" Good God! what was my furprife, when through the veil of this wretchedness, I discovered the features of my dear and old friend Alberti! I flew to him with affection; and, after a tear of condoloance, asked how he came there. To this he replied, that having fought a duel with an officer of the Austrian infantry, against the emperor's command, and having left him for dead, he was obliged to fly into the forests of Islivia, where he was first ohliged to fly into the forests of listis, where he was suit taken, and afterwards sheltered by some banditti, who had long insested that quarter. With these he lived nine months, till, by a close investiture of the place, in which they were concealed, and after a very ohthinate resistance, in which the greater part of them were killed, he was taken and carried to Vienna, in order to be broken alive upon the wheel. Ariving, however, at the capital, he was quickly known, and several of the associates of his accusation and danger, witnessing his innocease, his punishment of the rack was changed into that of perpetual banishment and labour in the mines of Idria 1 - a sentence which ment and labour in the mines of Idria 1—a fentence which must appear a thousand times worse than death, to any one who has vifited thefe dreary abodes.

" While the unfortunate Alberti was relating this narrative, a young woman came up to him, who at once I faw to be born for better fortune; the dreadful fituation of this place was not able to destroy her beauty; and even in this icene of wretchedness she feemed to have charms. This lady was, in fact, daughter to one of the first families in Germany; and having tried every means to procure her lover's pardon without effect, was at length resolved to share those it ices she could not relieve. With him she ded into these mansions, from whence te of the return; these depising the spherocordinate, and we all the contains and we all the contains and we are the spherocordinate. accordingly

all the contacts and fatters of the.

The fame gentleman, in his fecond letter, gives fome particulars of a more pleafing nature relative to these two persons: "My last to you, says he, was expressive, and perhaps too much so, of the gloomy situation of my mind. I own, the deplorable situation of the worthy man described I own, the deplorable fituation of the worthy man defcribed in it was enough to add double fever ty to the hideous manfion. At prefent, however, I have the happiness of informing you, that I was a spectator of the most affecting scenes I ever yet beheld. Nine days after I had written my last, a person came post from Vienna, to the little village near the mouth of the great thas; he was soon after followed by a second, and he by a third. The first enquiry was after the unfortuniste count; and it happening to overhear the demand, gave them the best insthibution. Two of their weet the breather and coulin of the lade, the third was an intimate friend and fattow folder of the country. They came with his pardon, which had been fought; and who was perfectly cured of his wounds. I led him, whit all the expedition of joy, down to this defent manion, prefented to him his friends, and informed him of the happy change of his circumfances. The defect of the hopey change of his circumfances. The defect of the hopey change of his circumfances. The defect of the loy that beightened on Albertl's grief-from countersance; nor wise the young lady's emotions left vivid at feeing her friends, and hearing of her hufbadd's libetty. Some hours were employed in mending the apparatue of the finishing leave of the former wretched companions of his toil. To one he left his mattock, to another his working closth, to a third his houthold crasifia, feed as were needfary for him in that fiteation.

· 河下 · 青· 生士

a third his houthold areafils, feet; as were nebellary for him in that fiteation. It all a fine and a constant of the food merged from the mine; where the count once again revisited the light of the fun, that he had totally despaired of ever feeing again. A polt-chaife and four were ready the next morning to take them to Vienna, where, I san fince informed by a letter from himself, they are returned. The emperer has again taken him into favour, his fortune and rank are reflered; and he and his fair partner, having once known what it was to be aniferable, have now the pleasing satisfaction of enjoying happiness, with a double relish. But to proceed:

Tirol is partly 1. level, and partly a mountainous country r the places of the former are fertile, and those of the latter covered with woods, abounding with game, and

he latter covered with woods, abounding with game, and ich in mines. The men are voboft, the women fair pland the latter covera was made are roboth, the women fair; and both, in their characters, have a mixture of the German and Italian. A particular kind of falutation is vied here t When a perfon comes into the houle, he fays, "Hail, Jefus Chrift!" The answer is, "May Chrift be praised, and the holy Virgin his mother." Then the mafter of the house they wifer, he the hand. This falutation is and the holy Virgin his mother." I hen the matter of the house takes the visitor by the hand. This falutation is fixed up in print at all the doors, with an advertisement tacked to it, importing that pope Clement XI. granted one hundred days indulgence, and a plenary absolution, to those who should pronounce the faluation and answer. The emperor has forth and citadels to advantageously fituated on rocks and mountains all over the country, that they command all the relief to the country, that htusted on rocks shd mountains all over the country, that they command all the vellies, avenues, and pafer that lead into it. The inhabitants, however, to keep them in good humour, are more gently treated, and not to highly taxed, as those ofthe other hereditary countries.

The flates are much the fame in this country as in the

other Austrian territories, except that the pealants here fend deputies to the diets. Throl came to the house of Austria in the year 1363, when Margaret, countess thereof, bequeathed it to her uncles the dukes of Austria. The arms of Tirol are an eagle gules, in a field argent. The counts of Trap are heredisary flewards; the lords of Glofs, chamberlains; the princes of Traution, marthals; the counts of Wolkeustein, masters of the herfe and carvers; the house of Spau, cup-bearers; the counts of Kunigh, fewers and rangers; the counts of Brandis, keepers of the jewels; the house of Weiperg, purveyors and farf-bearers, and the counts of Coalto, falconers. Befides the governor, here are three fovereign colleges, which fit at the Infpruc : thefe are furbordinate to the court at Vienna.

The city of Infpruc, on the Inn, the capital of the county, is fituated two hundred and twenty-five miles well of Vienna; and is finall, but elegant; the fuburbs are large, and the whole is pleafant. It contains feveral hand-fome churches, convents, market places, fountains, and palaces; is the refidence of the governor, and feat of the colleges. The caffle is large, but not regular; convenient, but not beautiful. It is adorned with many fine paintings, a cabinet of cutiofities, groves, gardens, and walks that lead from it to five different churches. Adjoinwants that lead from it to five different churches. Adjoining to it is a wooden place, whither the court used to retire
when an earthquake happened, to which the city is frequently subject, by being flut up among so many mountains. The fortifications are notextroordinary; but about
a mile off is the frong castle of Amras, or Ambras, which
communications are notexting the torus.

commands the town.

In the Franciscan church is a noble monument crocked

In the Franciscan church is a noble monument crocked by Ferdinand I. to his grand-father Maximilian; and a chapel, called the Silver Chapel, because there is an image of the Virgin of folid filver, as hig as the life, in the middle of the altar, together with many other images of faints all of the fame metal. In this city, Christina, Pelt all

queen of Sweden, first abjured the Protestant religion in 1055; and in 1710 the princers Sobletki was detained here by the emperors enders, when the was going to leady to be married to the Pretended a however; as the food after made her eccipe; the respicts were celebrated. The other places, whost worthly of notice, in this county, are; t. Hall; which finds a league northwaft of Inforce, on the Inn, and is reckoned the fecond city, in Triol; it is famous flow ins this week the first, when made the fecond city in reighbourhood, a fast mine, out of which large blocks of fait attebug, and thrown out moo plis filled with fresh where from whence the fait, when melted, is conveyed by wooden trought to Hall, and there tooled in huge pane or olderns. A great number of petitions are continually early in the first, when melted, is conveyed by wooden trought to Hall, and there tooled in huge pane or olderns. A great number of petitions are continually early in the first, when when the mountains into the river, are conveyed by it to Inforce and Hall. The mint, last works, mines, fee; in this place, render it very flourithing. 2: Kuffitein and Rattenburg are both fortified towns on the Inn. 12: Kutsbichel is the capital of a feiginioty; and Schwarts, a confiderable market-town.

4. Meran was once the capital of the country, and gave title and feat to its dukes, but is now only a finall city on the river Erfeth, and the borders of Trent, thirty miles fouth of Inforce having fuffered much by a food in 1210, which drowned four hundred people. 5. Tirol from whence this country has its denomination, is a little market-town, and has a fair antient castle, five miles north well of Meran. 6. Pludentz: 7. Monetfort. 8. Feldkirk. 9. Ems, and 10. Someberg, are towns that give mane to five counties in the west part of the Tirolefe, near the Rhine, and between twelve and twenty miles fouth of the lake of Contiance.

17. About a mile and a half east of the city is the pleasnt and stored and a continual cast.

near the Knine, and between tween tween tween the four of the lake of Conflance.

11. About a mile and a half eaft of the city is the pleafant and flrong castle of Ombra; or Anras: the name was derived from the defign of it, which was a shady sommer-house. It is pleasantly situated at the end of a fine park, overlooking the river Inn; but would hardly be visited by ravellers, were it not for its carlostites, the apartments having little more left than the bare wells, though they were sumptuously sitted up formerly for the archdukes of fusfirs, who used to spend their summers here, as they did their winters at Inspue. It is adorned with such a number of statues, and such an insinte quantity of medals, &c. that in 1601 a large book was printed, with an account of them. It would be tedious to enumerate the immense treasure here in gold and precious stones, the several princes ranged on horseback in all their rich old tilting accountements, and a thousand other remarkable things; but we cannot omit the armour of Charles IX. king of France, and the statue of France I. on horseback, in nor we cannot out the armour of chaires IA. King of France, and the flatue of Francis I. on horseback, in plaitler-work, exactly reprefenting bin in his armour, and his horse in his trappings, just as he was taken at the battle of Pavia. Here is likewise the armour of several emperors. of Pavia. Here is likewife the armour of feveral emperors, kings, and princes; with the picture of each pince, drawn to the life, just by it. In short, here are abundance of spoils and trophics taken in some of the most important victories obtained by the shoule of Austria for three or sour hundred years past; particularly the effigles of two Turklish bashas on hosseback, with the costly habits and armesses in which they were riken, embellished with gold, silver, and precious stones.

Only very extraordinary revite among the collection of

filver, and precious stones.

One very extraordinary rarity among the collection of curiosities, is, the trunk of an oak inclosing the entire body of a deer, which the philosophers supposed to have perished in the snow; and that, being brought down, upon a thaw, by a torrent from the neighbouring hills, and covered with mud, it was there first inclosed by the and covered with mud, it was there in included a process, which, as the tree grew, forced it by degrees up into the trunk. Noah's rainbow is so admirably painted on one of the ciclings, that the great duke of Tusany offered one hundred thousand crowns for it. Here is also a good library, and a gallery full of busts. These apartonered one number thousance crowns or it. Free a said a good library, and z gallery foil of bufts. Thefe apartments are shewn to firangers by the chatellan, or keeper of the castle, who is generally forme invalid, and comes from Inspire for that purpose, and expedie a fuitable reward for his trouble: he is always attended with a strong

Not far from the town, on the fouth fide, is the famous monathry of Witheim, where the monks pretend to have the body of their founder Hayman, a gigantic prince, twelve feet and a half high, who, they lay, killed a monitrous dragon, which threw down as much of his monaftery by night, as his men built by day; there is a pillar before its gates with an infeription, importing, that the road from Italy towards Augsburg, lay across the field

where this monastery stande; and that in the time of the emperor Septimius Severus it was repaired for near one hundred miles together;

Codifiance, formerly an imperial city, is stantial oil a celebrated like of the fame mane; but in the year 13-a Feddiand I, anisesed It to the territories of the house of Austria. The city le well fortified, is in, see of a billiog, and has been the feat of several diets. The famous assume was distracted by religious disputes, and by the name of the council of Constance, wise we by order of the emperor Sigsimund, at the time was distracted by religious disputes, and by the feuds raised by three popes, all then living, vis. on see tup by Italy, another by France, and a third by Spain. But this council depoted them all, and elected Marcin V. In their freed, it likewise condemined the docfrines of Wickliff, John Hoss, and Jerom of Frague, ordering the sepucher of the first to be depoiled, and the two laster to be burnt alive. This council continued sitting sour years, during which time above one hundred thousand soregnerar resided in and near Constance. The chief tribunal is held at Altors, a neighbouring market town. A considerable trade is carried on here by means of the lake, and the Rhine, which runs from it.

The county of Kirchbergs belongs to the noble family of Fuggers' but the landgravate of Nellenberg and the county of Hohenberg, together with the margravate of Borgau, between the Danube and Lech, with the city of the same name, all belong to the house of Austria, who also, in 1367, obtained Brisgaw by purchase, which contains the following places; via.

The town of Friburg on the Trelsam, which was formerly very strong, and had stood many sieges; but its fortifications were demolished by the French in 1345. It is large, populous, and wealthy, having a university and several cloiters. The tower of the great church is folicly, in the server of the great church is folicly, for curiously carved and constructed, that there is nothing of that kind in Germany to be compared t

Conflance in spirituals.

Rheinselden, Seckingen, Lausenburg, and Waldshat, are the four forest towns. The first is the capital of a county, and was once a free imperial city, but was mortgaged in 1410, to the dukes of Austria, by the emperor Lewis of Bavaria: hard by is the village of Kaisars-Austria, on the Rhine, where antiently stood the Augusts Rauncorum. The second is a small town, and held in fee of tas abbes. The third is the capital of an antient county, well fortified, and seated on both sides the Rhine. It is held as a sire of the foundation of Seckingen, and came to the house of Austria it 1409, when the line of the counts of Habsburg, and Lausenburg became extinct. The fourth is a small, but strong town, being, as its German name imports, a key to the Black Forest. Several privileges were granted to it by Albert, count of Habsburg, who in 1240 built and fortified it.

1240 built and fortified it.

Ortenan, a land vogty, belongs partly to the immediate imperial knighthood of the circuit of the Ortenan, and partly to the house of Austria.

Briksen-bishoprie is forty-five miles long, thirty broad, and, though stuated among the Alps, is fruitful. The bishop is a prince of the empire, and the chapter confished the property of the same name, is only a post-stage from the registration. of eighteen canons, of which nine are noble. If he capital, of the fame name, is only a post fage from the territories of Venice. It contains an episcopal palace, a castle, two convents, a cathedral, two other churches, several squares, many handsome houses painted on the outside, &cc. Mount Brinner, in the neighbourhood, is cultivated to the very top, where there is a chapel, tavern, and post-

itoufe.

The bifnopric of Trent lies among the Alps, South from Tirol, north and west from the dominions of Venice, and east from those of the Grifons. It is near faxty miles from

from east to west, and sorty, where breadest, from south to north. Some geographers make is a part of Italy, but the Bifflop of Trent, having been a prince, of the sempire fines Ferdinand II, the Germany reskon, it in the strips of Austria, "The river Adile tuns through at from math to should be a proper of the strips of a silicity of the strips of t

barons.

The city of Trent, in Latin Trideatum, its capital, flands on the river Adige, thirry miles weft of the confines of the Valieline, thirry north of Verona, forty-three fouth-weft of Brixen, fixty-five fouth of Inforue, fixty-five weft of Venice, two hundred and fifty-five fouth-weft of Vienas, and two hundred and fifty-five north-weft of Rome. It is encompated with fleep unpaffable hills, except from Tirol on the north, and Verona on the fouth. The fun-beams darted from the flinty rocks, that almost furround it, make the heat as intolerable, in the summer, as the cold reflected from them is in the winter; but in the figure and autumn the air is temperate. The town, which is not large, being not above a mile in compass, but firing and autumn the air is temperate. The town, which is not large, being not above a mile in compass, but pretty populous, is defended by an old caftle, has many stately palaces, and several beautiful churches, and religious houtes, and freets that are broad and well paved. The cathedral, dedicated to St. Vigil, is a fine piece of gothic architecture, but darkith, with marble pillars, extraordinary high and thick; and there is a chapel, in which nothing is to be feen but sculptures and marble, faid to have cost one hundred thousand crowns. The church of St. Mary Major is noted for the famous council of Trent from the 4th of January 1545, till 1563, the representation of which is finely painted on the walls. The town of Reif or Reva, on the lake De Garda, is famous for the excellent oranges and lemons which grow in the neigh-Bourhood, for a celebrated image of the Virgin, and for a

confiderable trade carried on there.

Chur, or Coire, is a bishoppic, and governed by a bishop, who flyles himself a prince of the empire; he is under the archbishop of Menz; and though he is fiimself a Roman catholic, yet most of the inhabitants of the lands, subject to his temporal jurisdiction, are protessants. His clasper consists of twenty-sour canons, of whom some are nobles. Both he and they reside on an entinence near the town of Chur, called Hoss, where is a spacious and welltown of Chur, called Hoff, where is a spacious and well-built castle. He has the right of coinage, and is possessed of several sine estates and field, not only among the Grisons, but in sime foreign countries, as Tirol and Alface. Before the Reformation, he had also some juridiction over the city of Coirc. Its epicopal or spiritual juridiction, catends partly into the hereditary countries of the house of Austria, and partly into Swifferland. The see is very antient; and its power, both temporal and spiritual, before the Refor-

mation, was very great.
There are two balliwies of the Teutonic order in the circle of Aufria, on account of which it ir reckoned a flate thereof, namely, one on the Elick and the Gebirge in Tirol, and another in thearchduchy of Austria.

Trafp, a little feigniory belonging to the prince of Dietrichstein, lies on the borders of Tirol, in the valley of Engedein. The emperor Leopold made a present of it, together with the supreme jurisdiction, to prince Ferdinand. Joseph of Dietrichstein, who, in 1688, obtained a feat and voice in the college of princes, at the diets of the cupite, on that account.

This prelate, who is one of the richest archbishops in This prelate, who is one of the richeft archbifhops in Germany, has a prince of the empire, perpetual legate to the fee of Rome in Germany ever fines 1073, and primate of Germany by the Treaty of Munfter in 1648. He fits in the diet on the firth bench next to the electors, and in the college of princes, he and the archduke of Auftria prefide by turns: he is also condited or, of this circle with the elector of Basaria. When the emperor writes to him, he gives him the title of Your Friendthip, whereas the other prelates have only the title of Your Devotion, or Your Piety: He has, moreover, the first voice in the diet of any of the eccleficatical princes, after the electors. His piritual prerogatives are very great. There lies no appeal fpiritual prerogatives are very great. ... There lies no appeal from this archbishop to the nuncion at Vicnua, Lucerne, and Cologn, as there does from the other bishops of the empire. He moreover nominates to the canonicates yacant in the months of the pope, in which months the pope has in the months of the pope, in which months the pope has right of nomination, by virtue of the German Concordát: he may, as well as the archbifhop of Cologn, drefs in the babit of a cardinal. He has the disposal of the four bifhoprics of Gurck, Chiemsee, Lavant, Seggau, or Seccau 1 only the nomination to the bishoptic of Curck is alternately between this prelate and the archduke of Austria. His fuffragans are the bishops of Ratisbon, Freysingen, Possess and Reisen. His revenue amounts to near righty His fuffragans are the bishops of Ratisbon, Ereysungen, Passaw, and Brixen. His revenue amounts to near cighty thousand pounds. The very falt which is carried into Bavaria and Swabia, brings him in thirty thousand crowns per annum: he has better than fix thousand pounds a year for his private purse; and, for officiating at three folemn fervices, he is paid near two thousand pounds for each; bur, as he is absolute; he is master of, all the revenues of the country. country, and by no means accountable to any body for what he lays out: belides, he commonly holds the deanry in commendam, which brings him in an additional fum of two thousand pounds. He is able to raise eight thousand men; and, under the archiepiscopal mitre, he bears in

men; and, under the archiepilcopal mitre. He bears in his arms the fword on the right, the crofier on the left, denoting both the temporal and fpiritual power.

His chapter is composed of twenty-four canons, who must be all noble by eight descents, and are only obliged to so four months residence in the year. They admit of no princes to be menibers, that they may have a plea for resusing those of Bavaria; of whose power they are jealous, the west hough they are abliged to them, for most of their wealth. though they are obliged to them for most of their wealth. These canons have no vote nor revenue till they have been ordained priests: they have each a house, and some of them palaces: though they do not sing in the choir of the cathedral, they lose a perquisite if they are not present. and, though they have eightmonths vacation in the year, to go where they lift, yet they are so strictly, tied down to one year's constant residence in the city, that if they happen to lie abroad but one night, they must begin the term de novo. Both the provost and dean have the crosser

EUROPE.] C. B. M. and reitre; as have also the prevest and dean of Passaw. At his coming, to this fee, he must, pay one hundred thouland crowns to Rome for the pall; but the country greenally raises it for him, besides making; him a free, gift of, the like sum at the same time. The officers of this paires are a fleward, a great chamberlais; grand marshi, maker cook, pay mester, twenty-four chamberisins, fasteen ferverus called truchifies, guntlemen servera, or talera, sixteen payes, affects others of the chamber, forty-two values de chambee, twenty-sight secures, eightsest cooks, conchamen, and grooms. to look after seven hundred and sifty borfes, sedides these, there are the four great hereditary officers of the archbishopric, via. the grand marshal, sup-hearer, master of the pantry, and great chamberlain. He also confess the order of St. Rupert (whole knights wear a medal with that, faint's efficies, and the red cros of the order on the aswer's which was instituted in 1702, by the archbishop John Ernesh, who has thereto amezed fix commanderes, or prebendes, of a considerable revanue like has two pleasure-house, via. Glessheim, and Heibron, or Hellembron, which ard both magnificent and beautiful structures a and the latter especially, not above a mile from the city of Saltzburg, is worth visiting on account of its face waters and caseades, rich statues, de. and the various prospects, both of the city and country, from two sing prospects, both of the city and country, from two sing prospects, both of the city and country, from two sing prospects, both of the city and country, from two sing prospects, both of the city and country, from two sing prospects, both of the city and country, from two sing prospects, and the rerebishop. The castle here is very strong; and as strongly garrisoned, and well supplied with provisious and was like store. The archbishop is said to be upwards of two hundred. The city, of which one part stands on a steep rock, is well-built, but the streets are narrow, and badly paced. Besides t

altars are of marble of different kinds, and one of the organs has above three thousand two hundred pipes.

2. The town of Plallein flands in a valley croffed by three givers, formed by norrents from the mountains, which help down a vast deal of floating wood that is stopped here, by the piles, which either crofs or shut up the rivers; this wood they lay up in: store for the falt-works. Its falt is carried in great quantities through Bavaria and a corner of Tirol, into Switterland, where it is paid for in French money, which is one reason that there is fearer any coin current its Bavaria but that of France. Here is a great high mountain on the west fide of the town, the earth of which being mixed with a fort of alum, or falt petre, they thow it into large trencher, which they fall with fresh water, and let it stand three or four weeks, till the earthy part is sunk to the bottom; then they let it out, and boil where, and set than director our weeks, in the earning part is funk to the bottom; then they let it out, and boil the faline part in iron pans three feet deep, and ten or twelve in diameter; and when the water is evaporated from the falt which it leaves at the bottom, they take it up, and put it to dry, and harden in fome deal cafes, without any head it to dry, and harden in fome deal cates, without any head or botten. This mountain is pieced in a thousand places, like the t of Potofi in Peru: therefore they who go out of curioficy to feet the works in it, have need of very good guides, for fear of being loft in the great variety of tracks, or crashed by the fall of the earth. Here is no foring

before works without a great deal of ceremony.

Before people enter the mountain, they generally repair to rachurch on the top of it, to perform their devoltors:
this stone, they take a hearty breakfaft at a public house that a the church; and being accommodated with force bastales of rofa felis, they are accounted with a furtout of castle linen cloth, with leathers over their right arm and the bastales of a completion of the castle them. the better to enable them to make their way through

the timber-work; and they pet great bonness on their basels, to keep out the cold, so that but little of the face is feen. Being thus fitted out, every man enters with a lighted candle or torch in his left hand. A great number of guiden and others go before and behind the spectators, left they should be frightened in the diffusal cavarns. The candles sometimes go out hy reason of the predigious rapidity with which they defend from one beam to another; but if none should happen to be left burning to light the rest, the guides quickly strike fire, and rekindle them. After inaving visited all the substrances curiofities, which takes up five or fix hours, they give money to the guides, and then go to the town to dine and make merry. Several German authors affirm, that anno. 1533, in one of the falt pits, fix thousand three hundred feet deep, there was found, in the midst of a hard rock of falt, a human body, with its limbe, hair, and cloaths, uncorrupted, which, by its antique dress, seemed to have fain there some ages. On the opposite side of the river there are forges, where they melt the copper which is dug out of the mines of this archebishoptle. Boots are continually going up and down the river, with the falt made here, for Saltsburg i from whence it is carried to other parts.

fiver, with the falt made here, for Saltabutg, from whence it is carried to other parts.

1.3. At a small distance from Saltaburg stands Helbrun, which is a grand feat of the archbishop, and is added with fine gardens, wherein is a menagerie.

4. Klesheim is another archieriscopal palace.

5. Galtien is a markettown, chiefly noted for its gold, filver, and lead-mines, and for a warm bath.

6. Muldorf is a town on the

The elector a of Bavaria is about one hundred miles in length, and fixty in breadth. It is bounded on the east by Auftia, the bishopric of Saltzburg, and the bishopric of Fastaway, and the duchy of Neural of Burgau, and the duchy of Neural of Fastaway, and the county of Tirol, on the north, by Bohemia, and the Cupter Palatinate. Those parts near the Alps are mountainous, cold, and barren, but produce wood, game, wild fowl, eattle, fast, mineral waters, silver, lead, iron, copper, &c. The parts that are fitnated towards the Daunbe are much more level and fertile, yielding grain, fruits, pasturage, &c. The many rivers which water this country, and the various lakes which it contains, abundantly supply the inhabitants with fish. The manufactures are filk and woolen stuffs, clocks and watches, coarse cloth, velvet, appears, hockings, &c. The only religion tolerated, is the Roman catholic: the convents are numerous, and the clergy rich, but the peasants are miserably poor. The elector is of Bavaria is about one hundred miles

and the clergy rich, but the pealants are milerably poor.

A committee of the flates, confifting of prelates, nobles, and knights, affemble at Munich whenever emergences require. The elector has fine hereditary officers, viz. a mafter of the houshold, a fleward, markhal, cup-bearer, and huntfman. His title is, " By the grace of God, deke of Upper and Lower Bavaria, as also of the Upper Palatinate; paligrave of the Rhine, arch fleward of the Holy Roman empire, elector and landgrave of Leuchtenberg, &c. The order of St. George was revived in 1720 by the elector Albert, the ensign of which is a crost enamelled with a black and worn pendant to a broad fky-blue ribbon, with a black and white border. The elector has the fifth feat in the electoral college, and feveral votes at the diets both of the empire and circle, and in the colleges of the princes and counts. His ordinary revenues, arting chiefly from the unoneoply of form, fait, beer, and tobacco, tolls, mis ss, and contributions, amount to between fix and fevera hundred thousand pounds per annum. With respect to his smilitary efablishment, he maintsins, in time of peace, about twelve thousand regulars, exclusive of ten thousand militia, the empence of which, it is faid, does not amount to quite nine hundred thousand imperial gilders. His court, for magnificence and fplendor, is exceeded by none of Germany. During an interrenum. he is vicar of the t, for magnificence and fplendor, is exceeded by none in Germany." During an interregroum, he is vicar of the empire, alternately with the elector Palatine, in all places belonging to the vicariate of the count palatine of the

Rhine.

Bavaria is divided into Upper and Lower. The principal place in the former are: 1. Munich, the capital of all Bavaria, and the residence of the elector: it is situated on the lifer, at the distance of two hundred and fourteen miles to the west of Vienna. It is one of the most populous and pletfant cities of Germany, and contains about forty shouland inhabitants. It was originally crested on a fipoit of ground belonging to a convent, and had from thence the hame of Munchen; which fignifies Monks-town, and which she has been corrupted into the word Munchen. The

The elector's palses is a resoft magnificent flucture. To was built by Maximilian, the elector, at fuch superce, that all Germany was furprifed to think where he found the money; yet, if we may credit Martiniere, he faid; there if he was fure of living ten years longer, he woold pull it down, and build one fill more fuperior. But the infide is for more beautiful than the outfide, the architecture of which is not very, regular, because built at feveral times. The Marquis Palavicino, who has given a full deferbation of it, fave, it contains eleven courts, twenty exect halls. which is not very regular, because built as several times. The Marquis Palavicino, who has given a full description of it, says, it contains sleven courts, twenty great halis, nineteen galleries, two thoutand fix hundred large cross windows, fix chapels, fixteen great kitchens, twelve large cellars, forty vast spastments, all on a sloor, in which are thrac hundred great rooms richly pointed, paved, cailed, furnished, &c. and there is hardly a counter, niche, or gate, but has a bust or relieves of marble; which are also also ornaments of atmost every chimney-piece. The most remarkable are, 1. The long gallery, adorned with pictures of one hundred illustrious persona, by the greates makera; and another gallery, the ceiling of which represents the principal towns, rivers, and cattles, of Bavaria. In the former are the efficies and names of thirty-six princes, the predecessor of the two last electors. 2. The Antiquarium, or Statuarium, containing a vast number of old and new pieces, in marble, stone, wood, &c. 3. The great hall, esiled the emperor'a, a beautiful spartment, one hundred and eighteen feet long, and fifty-two broad, which Gustavas Adolphus said he was forry be could not get mansported to Stockholm. The flaircase leading to it is, from the bostom to the top, marble and gold. This noble room is adorned with corious pictures of sacred history on one side and profage on the other, with a Latin distich under each t beyond this, there is a fine hall, where the electors give audiences to the foreign ministers; here are eight great compartments, thewing the different manner in which foreign princes give audiences ombassades, besides other pictures, accompanied with here is prouged from Rome. which foreign princes give audience to embessadore, besides other pictures, accompanied with hieroglyphics, &c. 4. The hall filled with fantiquities, brought from Rome, exceeds all the rest, here being three hundred and fisty-four busts, of jasper, porphyry, brass, and marble, representing Grecian capazins, Roman emperors, generals, &c. besides numbers of idols, and vessels of the Pagnas; valuable for workmanship, as well as antiquity. 5. The library, wherein, besides a vast collection of printed books, in most languages, antient and modern, there are a great many valuable MSS, particularly, a Latin Treatise in folio, in an old square character, presended to be written by pope Clement I. to St. James the aposite; and the New Testament, in the Indian, Armenian, and Wendish tongues. 6. A chamber of rarities, containing, befides the figures of Parnathus and the nine Mules, with landskips, &c. in coral, and the Pagan deities, a neat perspective globe, in the circumference of which there he the whole history of our Savioor's passion, which, being inverted, shewa the elevation of the serpent in the wilderness on one side, and envarion or the respent in the what here on one fide, and our Savious' a crucifixion on the other. Here are flowers and plants caft in gold, feveral drawers full of antient and modern coins and medals, and a remarkable picture of Chriftopher Freichammer, fo notorious an affaint, that he is faid to have committed three hundred and forty-five murders with his own hand, and to have been an accom-plice, or privy to four hundred more, committed by others. A little chapel belonging to the electres a partment, where fearce any thing is to be seen but gold and filver, pearl and gems. The very organs are of filver in relievo, and the cabinets of rock crystal, worked in figures. The surniture, in (hort, of the whole palace, is rich beyond ima-gination (and, besides the tapestry in use, there is fald to be as much in the wardrobe as is worth above a million of

In the treasury there are whole fervices of gold, and many other coftly veffels; vast numbers of pearle, diamonds, rubies, and other precious stones; rare pictures, monds, rubies, and other precious noises care, a cherry-curious works, medals, &c. and, among the reft, a cherry-floire with one hundred and forty heads, diffinely engraved. upon it; and a hoat of palintree wood petrified. There is a vast quantity of marble in this palace, which is artificial, but fo well hardened, and polithed, that it looks like matural: and there is fach a producious number of alco-trees in the clector's gardens, that it is thought all Europe cannot files, the like. Befides grottoes and other fine water-works, here is a noble fountain, reprefenting Perfeus with Medefa's head in his hand, and the water guthing out of her head and acck in finall fiream; as blood out of the veins of a body, newly beheaded. M. Pollnitz fays, that the front of this palace has the air of a convent, the rather, because of the Virgin Mary's image over its great gate; and that the larchecker, the emperor Charles VII. embellished she palead with a new apartment, store magnificent than the emperor's, though not so big, and adorned it with noble pictures, antique budit, and vates, placed upon tables of very great value: and there is a ferrer passing from the paleot, through little galaries to all the churches and convents in the city. If at the beginning of the year 17 gg/t this rewe apartment was beent down by a fire which broke out in the might-time, so that scarce any of the flue ferniture was fixed; and the slecter and electres had like to have been burnt in their bed.

fased i and the slecter and electres had like to have been burnt in their bed.

The meanst church to this palace is that of the Theatiner, which, together with their monastery, was built by the wife of Ferdinand. Mary, elector. The friers, who are tweeny-feven, must be all men of quality; they dere not afk alans, though they may receive them; and when they have fuffered axtreme want, at any time, for three days together, they are allowed to ring a bell, as a token of their distres; but the electors are fo good, that they foldons let them want. Round one half of the garden there is a grand piaza, adorned with pictures; refenting the feveral histories of the princate of the historian. family; which pictures, it is faid, were the model for the hangings in the elector's wardrobe. At the end of this piaza, there is a very fine house, the lower part of which is an orangery, and the super parts summer house, where, in that feasion, the elector has a drawing-room: near this there is a kind of menagery, ain which lions, and other wild beefts, are kept. This piaza leade to one of the finest riding house long, and swenty-fix broad; has eighty grear windows, and all round within there runs a fine corridor, or gallery for the spectators, when there are caroufals, or tournaments. Here is a grand box for the elector, which is richly carved, and big enough for all the electors family, there is also a magnifecent opera-room, and a stage fuitable to it, and superbedecorations to each. Upon festival-days, or there, when there is an open here, it is remarked, as a very unaccountable costom, that just as they begin to play the overture, a lustre of extraordinary grandeur and fructure comes down unexpectedly through the exiling, from the top of the stage; and it is drawn up again when the sirth at its orea. There are a great many other sine buildings, both first act is over.

arit acts over.

'There are a great many other fine buildings, both public and private, in this city, particularly the riding-house, town-house, opera-room, a fine college, the large edition for tournaments, the churches, convents, fountaing, sec. Its manufactures are those of filk, velvet, woollen colours, and tapefity; and it has two annual fairs, at which great quantities of fait, wine, &c. are fold. The firects are broad and regular, and most of the houses are well-built, and painted on the outside. The market-place is entremely beautiful. Mr. Keyster fays, "The fervant-maids at the great into here, on holidays, wear a fairer chain round great inns here, on holidays, wear a filver chain round their necks, confifting of three rows; and their breafts are likewife laced with two other chains of the fame metal." He further observes, that "it was a general custom to place green garland, on a bundle of firaw, before every house a containing the corpse of an unmarried person." Not for containing the corpie of an unmarrise person. Not me from Munich are four other palaces, with fine gardens, belonging to the elector, viz. those of Sleisheim, Nym-phenburg, Dachau, and Staremberg. The first and last of these, which are at the greatest distance, are about three

leagues from the capital.

2. Forty-five miles from Munich stands Ingolfadt, a fortified tuwn on the Danube: it contains several convenes fortified tuwn on the Danube: it contains feveral convenies and churches, a college, an excellent arfenal; and an univerfity, which boafts of having produced the learned Bellermine, who was a fremous advocate for the papery. This univerfity, is accommodated with an admirable library, and a cabinet of cutiofities. The caffle where the governor refides is exceeding frong. Over the Danube there is an elegant bridge; and in the great church there is an image of the Holy Virgin, which coft fifty thousand crowns. 3. Rain is a well-fortified final town, where the celebrated count Tilly received his mortal wound. 4. Starenberg. g. Rain is a well-fortisted intall town, where the ceiserasea count Tilly received his mortal wound. . 4. Starenberg, on Lake Wumfee, is a hunting-feat of the elector. g. Reichenhall, on the Sala, is famous for an excellent falt-fpring, fome of the waters of which are conveyed above twelve miles over mountains to Traumfein, and fome are boiled on the spot.

5. The town of Donawert, which is small and ill-built, has its name from the Danube, on the north-fide of which it flands, near the conflux of the Wernitz, within ten English miles north-east of Hochstet. Being near the road from Augiburg, it is pretty much frequented by travellers and all that go up and down the Danube are obliged to

land here, and say a small toil, which brings the event a great deal of money; as dose also the passage of their bridge, over that river (where it receives the Wernita) because of the many great cowar in its aciphbouthood. It is a strong place, which, revolting from the dake of Bavaria in 1420, was made imperial by the emperor Sigismond, and so continued till 1007, when it was put under the han by the emperor Rodolph II. for embracing the protestant religion, and afterwards obliged to submit to the duke of Bavaria, who invested it with twelve thousand foldiers, took it by a apitulation, but, contrary to it, disarmed the citizens, and put the Jesuin in possession of the chief protessant ehurch. The Swedes took it twice in the civil wats of Germany, and by the Munster treasy it was reinstated in its privileges, to the great joy of the Protessant princes and states, though it was restored to Bavaria, by the treaty of Munster, in 1648. It recovered its liberty by the proscription of the elector Meanimilian, when he took part with France, but it was restored to him signin by the treaty of Rasladt. The river Wernita, which falls into the Danube here, after receiving the Eger, sife near a town of the same name in Franconia. 6. Schellemberg, a quarter of a league on the north east side of Donawert, is a fortified mountain, which serves it instead of a castled to see the money of the prospection of the defeat of the French and Bavarians in 1704, when the confederates, cliefly English and Scotch foldiers, forced the treaches, and next day made themselves masters of Donawert. Here is a very sine prospect, from hence, of several hamlets and villages, and a sine country on both fides of the Danubey as likewise of the towns of Donawert, Flochstet, Newburg, and Ingol-Radt.

Landshut, on theriver lifer, in Lower Bavaria, is twenty

towns of Donawer, Hochflet, Newburg, and Ingolfadt.

Landshut, on the river lier, in Lower Bavaria, is twenty
miles north-east of Freifingeu, and thirty-three north-east
of Munich: it is wells fortified, and had the name, which
signifies the belwark of the country, from Otho of Bavaria, who, when Ratison threw off its yoke, and was
nade a free imperial city, built a palace here, which his
son enlarged, and about the year 1204 added a castle to it.
It shads in the riches and most pleasant part of all Bavaria,
and is the feat of the elector's deputy, or lieutenant of
Lower-Bavaria, who has a court here, and several officers
for the government of the country, which consists of its
bailwics, thirty-two market-towns, sourteen monasteries,
and seventy-sour noblemen's seats, with their dependencies. The town is in general well-built, being formerly
much frequented by the nobility, who attended the court,
and now by the elector's officers above-mentioned. Here
is a bridge over the ler; and a suburb on the other side
called Saldental. The new buildings in the duke's palace
are a neat piece of architecture in the Italian taste. The
principal church, St. Martin's, has a tower which is
reckoned the highest in the empire, it having a prospect,
as Baudrand say, of almost all Bavaria; and therefore he
says it is called Landshut, or the Hat of the country.

The other towns of most note in this electorate are, 7.
Erding, on the Sempt. 2. Dingesting and Landau, on
the Leer. 2. Visitoshen, at the consults of the Danabe

The other towns of most note in this electorate are; 1. Erding, on the Sempt. 2. Dingeffing and Landau, on the Her. 3. Vilshofen, at the conflux of the Danube and Vils. 4. Hels, a market-town, that gives name to a county. 5. Stadthamhof, which is eractly opposite to Ratisbon, on the other side of the Danube, both places having a communication by means of a bridge. 6. Abach, a market-town on the Danube. 7. Deckendorf. 8. Straubing. 9. Cham, which gives name to a bailiwic. 10. Killiewin, a town on the island, formed by the Altmuhl and Danube.

and Danube.

The Upper Palarinate is fo called, to diffinguish it from the Lower, belonging to the elector Palarine, to whom this also belonged till about the year 1620, when the elector, assuming the title of the king of Bohemia, in opposition to the emperor, it was transferred to the duke of Bayaria; Maximilian I. with the title of elector: both which were confirmed to his family by the treaty of Munster; but on condition that, in ease of failure thereof, they should revert to the Palarine branch. It is bounded by a part of Franconia and Swabia, on the west; Sxony, on the north; part of Bohemia and Austria, on the east: and the Danube, on the south, excepting a small part of it, which lies on the other side of that river; being about farty miles in length, and forty in breadth; but interfected by the territory of Sulabach, and the district of Visice, belonging to Bamberg. Though it is not unstruitful in grain, its and Danube. At to Bamberg. Though it is not unfruitful in grain, its chief riches arise from its mines of fiver, copper, and iron. Since this country came to the house of Bavaria, the deta have been discontinued.

The places of most note are, 1. Amberg, the capital,

funding on the rivet Vile, twenty-eight miles north of Retifbon. It is the refidence of the governor and regency; contains an electoral pelace; with a college, and is welf fortified.

a. Trefwing, on the Freimb.

3. Waldfaifen, an abbey of Citherian monks.

Treylingen bifthorne is furrounded by the circle of Bavaris, and its bifthop is a prince of the empire. The principal town is Theyring on the Ifer.

Burgkrain and Wefdenfais are two cattles; and Ifmaring is a village, which contains an elegant pelace, &c. The feigiliory of Ehtenfels belongs to the elector palatine, who, on its account, has a feat and voice among the counts of the empire and circle; but the elector of Bavaria poffers the fame privileges for each of the three Protefant feigniories of Sulziurg, Pyrbaum, Brellence, and the Roman catholic feigniory of Hohen-Waldec. The county of Sternfein belongs to the Lobkowitz family, the little Protefant county and town of Ortenberg jointly belong to their own counts; the county of Haog belongs to the elector; and the provok of Berchtologaden is a prince of the empire.

Paffaw, which is a bifhopric, ftands on both fides of the Danube, where it receive the linn on the one fide, and the Itz on the other; it is but ten miles from the borders of Auftris, and one hundred and thirty-four west of Vienna. The rivers above-mentioned divide it into three parts yia. Paffaw, on the fouth side of the Danube, and the west fide of the Inn., and the fouth side of the Danube.

and the banks of the live; and Inflat on the salt fide of the Inn, and the fouth fide of the Derube.

Theodoric III. duke of Bavaria, founded this bishopric in 634; and its diocefe extends twenty miles on the north fide of the Danube, bordering on Audria and Bohemia. It fide of the Danube, bordering on Autria and Bohemia. It was commonly given to the young of on of Aufria, before the late vaft aggrandizement of duat house, and yielded fifteen thousand pounds a year before the endition of the bishoppic of Vienna. The chapter confist of twenty four canons, who are all gentlemen. In 1720 the pope made the bishop independent of the metropolis of Saltaburg, and allowed him the pall, to independ thin in some fort for the loss of fixty-nine partition. Evo abbies, a provostifing, and a priory, which were distrembed from his diocele on the creation of the new archbishopric of Vienna.

The city belanging to this bishopric is noted for many meetings and consultations of the German princes, and particularly for the treaty made in it in 1552, for quieting the troubles of Germany; in the contention between the emperor Charles V. and the Protestant princes, whereby the Lutherans, who were only tolerated before, were now established in the free exercise of their religion. This is a rich, populous, and trading city, naturally strong, being

established in the free exercise of their religion. This is a rich, populous, and trading city, naturally strong, being fenced on all sides with rocks and rivers; and so pent in by a mountain, that it rons in a narrow slip at the bottom of it, from east to west, about a mile in length. It is an imperial, free city, but onder the protection of its archbishop, who is a prince of the empire. The private buildings here are of wood, for which reason it suffered much by a fire in 166t; but it has been rebuilt in the Italian taste; and the churches are fair and stately, especially the cathedral, which is full of sine tombs and other monuments, and descitated to St. Stephen. The bishop's palace, and the chapter-court near it, and the castle on St. Gregory's hill, near that part of this town cailed litestadt, are handsome buildings; the other part, called Instat, is supposed to have been the Boiodurum of the antients; and the buildings, indeed, have more the air of antiquity than those of Passaw. Besides the cathedral, here are three other churches, a monastery, and a handsome college: there is churches, a monaftery, and a handsome college: there is without the town, another church and monastery.

The caftle above mentioned, was erected in 1210; th The caftle above mentioned, was erected in rano; the hill it stands on is an angle formed by the meeting of the Danube with the Itz, which latter feparates the hill from Itzshadt: there is another fort at the bottom of the hill, and they both belong to the hishop. The duke of Bavaria took it in 1704, but foon furrendered it to the Imperialits; and in. 17,41 it was furprifed by the late elector. People dress here fo well, that we are told the meanest of the women wear gowns of black velvet, and fearlet petticoats with gold lace: and that some of them have pearl neck-laces of five or fix rows; and gold chains with diamond rings and car pendants. Dr. Brewn says, this is reckoned one of the ten principal cities on the Danube; and that the river Itta produces pearls, which belong to the emperor. the river lits produces pearls, which belong to the emperor, and the elector of Bavaria, each of whom has an officer

The elector of Bavaria is proprietor of the landgravate of Leuchtenberg, and, on account of it, has a feat and

3. 46 E. 12 A 24

voice in the dieta of the suspire and circle. Loucham-berg, which is a market town, and gives mane to a balli-wic, has a caffe at the conflux of the Preimb and Nab.

The principalities of Neuburg and Sutabach its chiefly in the Upper Palatina family. Philip: William became elector of the Palatine family. Philip: William became elector of the Neuburg branch; but both his foun, dying without liftse, the other branch fucceeded to the Palatinate, the duchy of Neuburg, and electoral digator. Each has a regency of its own, and the inhabitants of both are a mix-tuse of Roman catholics and Lutherans.

The principal places in the duchy of Neuburg, are, a.

regency of its own, and the inhabitants of both are a mixture of Roman catholics and Lutherans.

The principal places in the duchy of Neuburg are, 1. Neaburg, which gives name to, and is the capital of the principality: it thanks on the Danube, forty miles north of Munich, and west of Ratison. It is well-boilt and fortified, contains an electoral palace, with a college, and is the feat of the regency. 2. Hockstade, a small town on the Danube, near which, at the village of Blenheim, the clake of Marlborough and prince Eugene obtained a signal victory over the French and Bayrainas; which famous, battle Mr. Addison has described in elegant verse.

Ratison, which is a bishopric, contains one thousand three handred and eighty-three parishes, the chapter consists of twenty-four canons; and the bishop, though suffragan to Safraburg, is a prince of the empire.

Sixty miles to the north of Munich, is the impe isledity of Ratishon: it is large, populous, and well-fortified. The magistracy and burghers are Lutherans; but the greatest part of the inhabitants are estholics, and have smany churches and convents belonging to them. The shoot of St. Emerau, here, and the abbesses of Upper and Lower Munster, have seats and votes in the diets of the empire and circle, and are affissed in the matriculas. In the first of \$1.56 abbies are two curious manuscripts of the gospel, written in the eighth and anish canturies. In the last abbay. Anollouins. So distinguished for his skill.

In the first of st.ze abbies are two curious manuscripts of the gospel, written in the eighth and ninth centuries. In the same abbey, Apollonius, so diffinguished for his skilt the Greek tongue, was educated. The abbot is exampted from the jurisliction of the bishop, and stands incomediately under the pope. In the semale soundations, the lady-abbesses are elected by the two chapters of ladies, who must be all of noble birth, by fixteen generations; and though the abbesses mentioned above, force is, among other religious boules, a clositer for Scotsmen of the Roman catholic religion. The city carriers on a great trade, exporting by the Danube, Nab, and Regen, large quantities of corn, falt, wood, and all forts of provisions. Overthe first of these rivers is a bridge of fifteen arches. The diets of the empire have been held in the council house of this city, almost without interruption, since the year 1602. There are two islands in the Danube, near this city, called Oberworth and Underworth, i. e. the Upper and Lower islands, which are inhabited by millers, beatmen, and fishermen.

His serene highness Maximillan-Joseph, late elector of Bavaria, died at Munich, of the small-pox, on the thirtieth of December, 1777.

SECT IX.

Comprise a particular description of the circle of Swabia, its bishopries, duchies, and other districts, with the several circle towns, and places therein; allo an account of the produce of the country, the inholicants, their trade, manufactures, religion, customs, Ge.

THIS circle is bounded by Swifferland and Tirol, to the fouth: by the Palatinate and Franconia, to the north; by Bavaria, to the eaft; and by Alface, to the weft. It is feparated from the two last, by the rivers Rhine and Lech; and by the great lake of Constance, from Swifferland. It was once called Allementia, which is now the name of all Germany. The Germans call it Schwaben, and the French Souabe; it had the Latin name Seevis, from fome tribes of the Seevi, the best warriors in Germany, that came from the north parts of is and the from some tribes of the Soevi, the best warriors in Germany, that came from the north parts of it; and the greatest part of Germany was called Swabia by the Romans, because the Suevi were the most confiderable people they knew, and extended their dominions farthed in that country; but it was afterwards appropriated to the Hermanduri, the most confiderable branch of them, who inhabited that now called Swabia, where they eshablished a powerful state in length of time, which contained all the country betwire the Rhine, the Alpa, and the Elbe.

The present inhabitants of this country retain the cou-

system of their ancestors the Suevi, and are capable of all that fangues of war; but, both fexes are charged, not only by frangues, but by their own authers, with being much addicad to venery. Many of them are rather uncivil, hate all foreigners, and are as fuperfitious as the Italians; for though the religion which they profess in general is Luthern, yet here are Calviniffu, Papida, and Jaws, a diversity of religione being; almost unavoidable under such a diversity of fovereigns.

In this country, particularly in the duchy of Wirtemberg, the executioner, or hangman, inflead of being deems del infamous, eats, drinks, and traffics with every body, and is company for the best; and so far he is a man from being abboared for it, that every fresh execution gives him a title of honour; and when he has completed a certain number, he is dignissed with the degree of dofter of physic. At the same time we, must observe, that very profession which is reckoned the most noble, the most antent, and the most innocont, the pastoral life, so celebrated by the antients, and the most ingenious of the European moderns, in not only despised, but abhorred by the Swabiana; that meanest peasants excluding shephered from their company. Swabia is one hundred and thirty miles it length from east to west; and one hundred and ten from north to south. Its air is healthy, and the soil generally fruitful; for though some next are mountainous and woods, we

fouth. Its air is healthy, and the foil generally fruitful s for though fome parts are mountainous and woody, yet the hills afford mines of filver, copper, and other metals s and the foreful much pine and the ritinber, beddes great flore of game, and good breeds of horfes, black cattle, and

and the forein much pine and in-timber, benness greatflore of game, and good breeds of horses, black cattle, and
sheep: and the other parts of the country yield great store
of corp, wine, and flax. Its chief rivers are, the Danube
and the Neckar, the former of which rises in the principairty of Furstemberg, and the latter not far from it; but
great part of it is also watered by the Rhine. The inhabitants are chiefly employed in making of linen cloth, of
which they vend great quantities in other nations.

The government of this country was formerly vested in
the dakes; but the emperor, Henry IV. conferred it on his
fon-in-law Frederic of Hohenstausen, in whose family it
continued till its extinction in 1258. After this period,
the stewards appointed by the emperor, their deputies,
dec. became sobjects of different parts of it, at various
times, and under various presences. The summoning
princes are, the bishop of Constance, and the duke of Wurtemberg: the latter being, however, fels director, the
diets are hald twice a year at Ulm, and the flates are divided
into five benches, viz. 1. Ecclessation princes and
abbots; 2. Temporal princes and abbots; 3. Prelates 1 diets are hald twice a year at Uim, and the fraces are divided into five benches, viz. I. Ecclefiastical princes and abbots; 2. Temporal princes and abbots; 3. Prelates; 4. Counts and barons; 5. Free Imperial cities. The religion is mixed; and on that secount are nominated two affectiors of the Imperial chansber, the one a Lutheran, the other a Roman catholic. The principal rivers are the Danube, Neckar, and the Rhine. In this circle are contained the following countries and states:

We shall first describe the bishoptic of Augsburg, one was of which, lying towards Tirol, is mountainous and

the following countries and flates:

We shall first describe the bishoptic of Augsburg, one part of which, lying rowards Tirol, is mountainous and barren; but the parts on the banks of the Loch are fertile in corn and pattere. The bishop himself is a prince of the empire, and suffragan to the archbishop of Ments.

The principal place in this bishoptic, is the imperial city of Augsburg, peopled by a colony planted fare by Augsburg, peopled by a colony planted fare the distance of twenty-five miles from the Dnube. It is well fortified, has four large, and fix small gates. The cathedral is a magnificent pile, besides which, there are many other elegant churches, as also several monasteries and numeries. Many of the churches belong to the Roman estholics, and saveral to the Lutherana; for both religions are tolerated; and have a share in the government of the city. In this city, concerning his destrine, and about twelve years subsequent to this affair, Luther and Melancthon drew up and presented their consession of saith to the emperor Charles V, whence the Lutherans are said to be of the Augsburg consession, though their present creed differs widely from it.

Besides the public buildings above-mentioned, here is the finest town-house in all Germeny, a great many hospitule well sundowed, a Lutheran gymansium, an scademy for arts and sciences, founded in the year 1755, and called the Imperial Francican academy; two well-furnished armories, a house of correstion, and a work-house, with several beautiful fountnins and reservoirs, from whence the city is well supplied with water, brought by sevendusts from

feveral beautiful fountains and refervoirs, from whence the feveral beautiful fountwins and refervoirs, from whence the city is well supplied with water, brought by squeducts from the Lech to five towers, and from thence, by means of curious water-works, distributed through the whole city, Here are several corn, fawing, flatting, and smelting-mills,

Re fupplies almost all Germainy, it consists chiefly in gold and filver fmith's ware, and those of tin and livery, clocks and toys.

The government of the city is almost entirely in the hands of the particians. The bishop, however, has certain powers and prerogatives in it. The revenue of the city is very confiderable, and, its garrifort, consists of three hundred men. In the countel-living, are some very nable halls, which, with the bither apartments, are adorned with fine pictures, suppressed, attues, gilding, &c. 'Among others, the most beautiful fountains are those of Augustus and Hercules. Betwist the gates of Gorging and Klenker is a very curious wicket, for admitting proper persons in the night time. In the calibedral are fourteen chapels, and the arms of all the countries possessed by the proper persons in the night time. In the calibedral are fourteen chapels, and the arms of all the countries possessed to the convent. The above-mentioned wicket is so curious a contrivance, that certain engineers and arthir the, who were lent by the magistrates of Nuremberg to examine it, will a view to have such another made there, declared, that without pulling down the walls, and all the majoury, it was not in the power of must to find our how it was contrived, or on make one like it in one thousand years. In the library belonging, to the gyntushum are some custom above of the Rhine, and pays the suffer above fifty thousand criminals for three days, but no longer, without the above, permission, it is faid to be a privileged place for debtors and criminals for three days, but no longer, without the above, grantage the hours, and whose hand holds a ceptre, marking the hours, and whose hand holds a ceptre, marking the hours, and whose hand holds a ceptre, marking the hours, and whose head is adorned with rays, stars, and all the figns of the zodiae. The public granties of this city contain great quantities of cons. In one of the afterials is an old battering rain of brast, fith greferved editie.

public granaries of this city contain great quantities of corn. In one of the arterials is an old battering rain of brafs, fill prefer ted entire.

As an imperial city, Augilburg has a feat and voted in the diets of the empire and circle. All orders and degrees of perfons lere are diffinguished by their proper defies, fome of which are very odd and uncommon: prints of them all, done on patteboard, are fold in the town. The holpital of the Holy Glioft is a very noble one, and patients of both religious are admitted into it. The lan, called the Three Klings, is faid to be the most fuperb in Europe. Neither Jews nor Calvinits have a toleration for their worlhip lere. their worship here.

called the Inter King, is alto to the thotal upper in Europe. Neither Jews nor Calvinits have a toleration for their worthip here.

Conflance, which is a bishoppie, takes its name from the city of Conflance, though the bishop himtelf resides is usually on the other side of the lake at Marsburg. The chapter consists of twenty canous, and four expectating, but the Protestant religion prevails in most parts of the chooses. The principal places are, Reichenao, a Beneditine abbey on an island of the fame name, In the Zellerzee: Marsburg, a pretty town; and Ochumgen, containing an opulent abbey.

Ewangen, which is a priory on the borders of Franconia, gives its prior the talle of prince of the empire, and grand marshal to the empres; and there is a market-town called Gronenbach on part of the abbey lands.

The principal dominion of the chrele of Swabia is the duchy of Wurtermberg, which is nearly square, by hig upwards of stay nailes each way. One division of it is into the Unter or Under-land, the Middle-land, and the Upper-land; the last of which makes a part of the mountainous mack called the Alb, and Black Forest. It is also divided into the land above and below the Strig, which is the name of a ridge of mountains hear Stotgard. This ducky is bounded, on the north, by Franconia and the archbishopric of Mentz; on the south, by the principalities of Hohenzollern, Furstenburgh, and the Danube on the work, by the Black Forest, the marquiste of Biden, and part of the palatinate on the Rhine; and, on the east, by Octingen, Burgau, Ulm, &c. It not only aboundary on the south, by the principalities of Hohenzollern, Furstenburgh, and the Danube on the work, by the Black Forest, the marquiste of Biden, and part of the palatinate on the Rhine; and, on the east, by Octingen, Burgau, Ulm, &c. It not only aboundary on the south, by the principalities of Hohenzollern, Furstenburgh, and the Danube on the work, by the Black Forest, the marquiste of Biden, and part of the palatinate on the Rhine; and, on the east, by Octingen, Bur

and froit; woods, of fir, pak, bacch, threl, and pine forte falt-freings; abundance of theep, game, and cattle; cod and turf, cobailt, fulphur, terra, figiliata, time days for porcelain and estriben ware; feveral forta, of, manhe, black simber; abbatten mill-flones, mineral fortugs, and batth. This country is well watered by the Neekar, the Englished wife, and Rems. The number of inhabitants amount to hwo lundred thousand; that of the boroughs, market towns, and villages, to about twelve, hundred, On important occasions, diets are called and held at Studgatd, confisting of the Lutheran prelates and abbots, and the teprefentatives of the towns. The established religion is fundierandim; and the dukes, who are now Roman captholics, may engaged not to attempt any innovations. Apoint of religion, but to suffer every thing to remain on its former footing. Before the Reformation, there were about a dozen very rich convents in this country, whose revenues are now chiefly applied to the maintenance of churches, schools, and the clergy. Befides, Lutheram, here are, former Calvinitis, Waldenfes, and Jews. The Waldenseare afflowed the public exercise of their, religion, but the others only in private. The principal manufactures of the country are porcelain, earthen ware, lineas, woollens, printed cottons, hars, slockings, silks, glas, paper, &c.

The dignity of cake of Wurtemberg was first conferred upon Eberhard I. in the year 1473, the princes had formerly only, the title of counts. There is a byanch of this house fertile of counts. wonder that they multiply faff, as no person, on pain of dwth, dare offer to wound or kill them, unless at the ducks hunting-matches; to that the poor peasants, near the forests, are obliged, in summer, to keep a constant look, out, and be continually watching their stocks and corn fields. The town of Stuigard, the capital of the ducky, is thirty-eight miles east of Badest. Some derive the name from its being auttently a study for breeding horses i and the arms of the city are a colt. It stands in a fruitful plain, has several fine gardens and vineyards all about it, and encompassed with very high hills and vallies. It has three suburbs, five gates, three churches, and is divided into two parts by the Neckar, over which it has a bridge. It is a pretty large city, but most of the house are low, and ill-built of wood; and the streets broad and lightsome, but dirty; yet the town is very gay, it being much frequented, because of its natural hot baths, which are for many diseases. The duck-scasse, or palace, is a noble, old, free-stone fabric, well fortised, composed of four piles of buildings, stanked at each angle by a tower, and adorned with clegant groves and gardens; an orangery which is scarce to be paralleled, curious labyrinith; grotroes, and water-wooks, and as stately a pleasure-house as any in the empire: but the walls of the castle are washed by ditches, which give it the air of a prison. There are, however, several grand cooms in it, one particularly, where the duck's gentlemen sine, and where tabbes are formetimes spread for two or three hundred foreigners, etc. There is a bridge over its most to the duke's gradens, and near it an aviary, with all manner of birds? In the most there is not only plenty of hith, but some sets the most of the castle are walked by divides. Which is day, seeing the gardens, harbour leveral deer. Near the

SYSTEM OF GEOGRAPHY. 600 THE NEW AND UNIVERSAL

gardens there is a theatro, well lighted, and beyond that a large coord, covered with fand, for tilting on horseback, and running off the ring. Before the entrance to the entitle there is a grand boilding alfo, which is the duke's chancery, or feeretary's office. The duke has a tolerable collection of antiques, buts, and as-relieves; but the piece that most defeves attention is the jugiter Dolchemus, brought hither from Marfeilles by the telebrated antiquary Putin; it being a reprefentation of that deity in armor, spriding on the crupper of an ox, just in the lame attitude as he it copied from the original in the antiquities of Monthageon. Here are abundance of wars, lamps, little wafes, and antient coint, both of filver and gold, with finella, petrifactions, fossis, the caprices of nature, both finella, petrifactions, fossis, the caprices and gold, with finella, petrifactions, fossis, the petrifactions of the high state of the most finella down to be seen in any palace it is finely downed, in facto, with representations of warriers and princeffer of his family, in whose time they were performed. There is an artenal, in, which appears a fuccession of the dukes of Warriemberg on barbed hories, righly armed, and accounted hories the fashing of the age in which they lived, as large as the life, and the mame and qualities of every one set forth on the opposite wall, which is graced also with sandards, and other trophice, gained by the dukes in their several actions; particularly ice of their country.

the Sagon and Swabian emperors, lost their lives in the fervice of their country.

About three miles from Stutgard is the city of Ludwigfbourg, which is the feat of a palace built by the duke of Eberhard Lewis, at the perfosion of his miftrefs, in a place remote from any river, great roads, or forests. It is to contrived, that it looks more like an orangery than the palace of a foweriegn, the apartments being too fmall and inconvenient, as well as irregular; yet no cost has been spared to adorn them with carving, gilding, and pointries, though with more prossion than judgment. The formiture also is rich, but as absurd as the fabric. The best thing in the whole palace is the chapel, which would, by the best judges, be reckoned a sine poble structure. The town is as irregular as the palace, and in no respect very agreeable, for the situation of it is upon uneven ground, and most of the houses are of timber, and sightly built, they having been run up, seemingly with an all-will, either out of necessary, or to please the then dukes who, by this change of his residence, almost rained Structifurg one above another, entirely bound the prospect of the palace which is encompassed by butterses that also craimp the apartments.

the palace, which is encompaned by butteries that and cramp the apartments.

The town of Tubingen, which is the fecond of the duchy, lies on the Neckar, and has a caftle near it on a hill. Here is held the high court, in which all causes are determined in this last refort. At this place also is an university, with a noble callege, the students of which must be all princes or counts; here are also a Latin school and a wooller minustature. There is a medicinal bath in the missbookhood. neighbourhood

neighbourhood.

3. On the Neckar is fituated Canfield, which has in its neighbourhood, an excellent mineral, and feveral fakt fprings. Near it also, in a hill, see found great quantities of bones, both of great and small animals. There is a cotton printing house in the town; and, in a sillage hard by, a filk manufactury. Not far from hence is the antient family seat of Wurtemberg, which gave name to the duchy; the antient counts held their courts in the open air in its neighbourhood. neighbourhood.

neighbourhood.

4. The little town of Urach, on the Alb, near the river Erms, cortains a ducal feet, with a linen manufactury, and formerly gave name to a county. In the neighbourhood are mills for lead, fron, and poper, and in the district to which it gives name, are fome fine ituds of horses, abetuutiful white earth, and the Holzrutishe, which is a large-iron pipe, into which the wood felled on the Alb being put, is conveyed, in an instant, from the top of a mountain, into the river Erms, and by that beought into the Neckar, which brings it to Beig, near Stutgard. By this means there are yearly conveyed to that town upwards of nine thouland cords of wood.

New Ravensburg, which is a lordship on the Argen, belongs to the abbey of St. Gall, in Swifferland, though it pays taxes to the circle. The Benedictine abby of Ottobeuren is the richest in all Swabis. The Roman catholic imperial towns of Offenburg, on the river Kenzing, of Gengenbach, on the same river; and of Zell-Am-Hamiacetbach, about four miles from the latter, are in league with each other mutually, to support the privileges they wisher in common.

raeribach, about four miles from the latter, are in league with each other mutually, to fupport the privileges they enjoy in common.

We shall here give an account of those Imperial towns which pay taxes to the empire, though the religion of the inhabitants is different; which are as follow: I. Buchau, stauted on the Festerier river, and is of a mixed religion. 2. Bopfingen, on the Eger, Lutherans. 3. Anlen, on the Rocher, Calvinstins. 4. Buchaur, on the lake Constance, Lutherans. 5. P. Fussendorff, on the Hegau river, Roman catholics. 6. Grengen, on the Brouz, Lutherans. 7. Wimpserm, on the Neckar, mixed. 8. Leukirch, on the Echach, mixed. 9. Hois, Lutherans. 10. Wangen, on the Argen, Roman catholics. 21. Wiel, on the Wwwn, mixed. 12. Kaussendorff, on the Wertach, mixed. 12. Ravensberg, on the Schufs, mixed. 4. 4. Bishnach, mixed. 15. Dinkessbuhl, on the Wernitz, mixed. 16. Lindau, on the lake Coorstance, Lutherans. 17. Heibron, on the lake Coorstance, Lutherans. 18. Heberlingen, on the lake Constance, Lutherans. 29. Nordlingen, on the Eger, Lutherans. ac. Reutlingen, on the Neckar, mixed. 31. Efalingen, on the Neckar, mixed. 32. Minimingen, an imperial town, stands on the Aach, a small river between the lier and the Danube, twenty miles north of Kempten. The rasgistracy is Lutheran; but the inhabitants are pattly Lutherans, and partly Roman catholics. Here are feveral religious house. This was an imperial city so early as the days of Frederick I. and now enjoys great privileges; in particular, se exemptions from the particulation of the triburan, of Rothweil. A good from the particulation of the triburan, of Rothweil.

catholics. Here are leveral religious houses. This was an imperial eky foe carly as the days of Frederick I. and now enjoys great privileges; in pasticular, es exemption from the jurisdiction of the tribunt, of Rothweil. A good trade is also carried on by it with Swifferland, Italy, and other countries adjacent, in hops, Bavarian falt, grain, cotton fuels, and paper. Storks are fald to be common here, on the tops of houses, as in Holland. In its diffrict, which is considerable, are manuscrittered warm bath, a chalybeate foring, and a free hunting-ground, in which the several neighbouring lordships enjoy an unlimited privilega of hunting; but the jurisdiction thereof belongs to the town of Mirmmingen: the terra figillate is found here. The town is pretty well fornised, and almost a large as Uim, but not so populous, os usell built.

The town of Gennund, twenty-fire miles east of Sturgard, and thirty-two north-well of Ulm, stands on the frontiers of the county of Hobenrechberg, and is the capital of the county of Rechberg. It has its name from the conflux of a great many brooks here into the river Rems; and the neighbourhood is called Remthal, or the Valley of Rems. This river falls into the Neckar five miles below Sturgard. The town was of note formerly for tourners, and the best here are the neckard of the name of the county of the county of neckards.

of Rems. This river falls into the Neckar five miles below stuggard. The town, was of nore formerly for townnaments held here by the nobility of Swabia, and was fubjed to its dukes, one of whom caused it to be encompassed
with a wall. Frederick I. made it imperial in 1186, and
the emperors Conrade III. and Frederick Barbaross, enlarged and granted it many privileges. It is a Roman catholic town, with five churches, two chapels, and several
convents; and the principal trade of it is in beads, which
they fend abroad. It was formerly governed by persons
of quality, but now the power is in the burghers. M.
Villars encamped here in 1707, with the French army,
and raised contributions far and near.
The town of Halle stands among steep rocks and moun-

The town of Halle flands among fleep rocks and mountains, on the river Kocher, in the county of Octingen, The town of Halle stands among steep rocks and mountains, on the river Kocher, in the county of Octingen, and on the frontiers of Franconia, fisteen miles south east of Hoheslee, twenty-sieps from Rottenburg, twenty-eight east from Hailbron, and thirty-three north-east of Stutgard. It depended formerly on the dukes of Wurtemberg, but was made imperial by Charles IV. in 1360. This town, which is placed by the matricula in the circle of Franconia, has plenty of fresh water, but owes its rise to its springs of salt, which, though not so white or piquant as other salt, is carried to Nursmberg. There is a bridgo here over the river to its subserb. Though its antient records were lost in a fire that happened here in 1376, yet enough were left to thew that its building was chiefly owing to some series. Mere to some part is still to be seen; particularly, one near St. Michael's church, since turned into a mannery; and that the town was from hence called Sieben Burgen, i. e. Seven Forts. The magistracy consists now of swenty-sour council, and two burgomasters; but the ofter thea duel R mile leng Hou fouch cour 1147 city. refto the l Hege the p haul the ditch light when

the superor has a preteur here, who has almost the whole power, and presides in all their meetings. They are all protestants, as are, for the most part, the inhabitants. This sown, being situated on the frontiers of several counties, in often named in history, because, its territory has been the theatre where the nobility used to decide their quarrels by

often named in history, because, its territory has been the theatre where the nobility used to decide their quartels by duels.

Rotwell is a small imperial city on the same river, ten miles from the head of, it, as many north-east from Villengen, fourteen east of Brisck, nineteen south-west from Hohenzollern, sisteen north from Farsteinburg, and twenty fouth from Tubingen. It is the seat of a chamber, or court of justice, for the whole duchy, sirst erected anno 1147, by Contade III. duke of Swabia, who made it a free city. It was taken by the French in 1643, when they were in alliance with the protestants of the empire, but restored at the treaty of Munster. It was again seized by the French under M. Villars, in 1703, after he had passed the Blrck Forest, at this end of which it stands; but they were soon obliged to quit it. It la in the territory of Hegow, and the head of a county called Hohenberg, under the protestion of the house of Austria: but it is in league with the Switzers, it being hut five miles from Schaffhausen, and not far from the Danube. It is fortised after the antient manner, and encompassed with broad deep ditches. In 1338, this town was almost burnt down by lightning. The neighbouring soil being very fruisful in wheat, the people apply much to agriculture.

The lordships of Eglingen, Eglof, Instringen, Fugger, Adindelheim; the counties of Hohen Geroldsee, Bosadorf, Hohenembs, Eberstein, and Schwabeck; together what the territories of the counts of Konigfegg; the counties and lordships of the noble samily of the Truches; the lordships of the noble samily of the Truches; the lordships of the noble samily of the Truches; the lordships of the noble samily of the Truches of the empire and circle to their respective proprietors.

The imperial city of Ulm, which is supposed to derive its name from the grove of elms near it, is situated sevence miles well of Burgaw, and eighty south of Wurtzburg: it stands on the west side of the Danube, which here begins to be navigable, after having received the u

who prende in their council: here are four burgoniafters, who enter on their offices every year alternately: feven of the oldest members constitute the secret council, and execute the laws. All the magistrates, as well as most of the inhabitants, are Lutherans, the protestant having been the prevailing religion here ever since 1531. The Roman catholics have but two churches, and are excluded from the

catholics have but two churches, and are excluded from the public offices, as well as their prisy-council.

This is a great and very populous city, with regular fortifications, and wide deep ditches, filled by the waters of the Danube and the Blaw; but it is 6 situated, that it would not be able to fusfain a long fegge; it has a bridge of stone of four arches over the Danube, the entrance of which is defended by fortifications, and there is a little fluburb of pleasure-houses, and large gardens. There are more city two squares, in the biggest of which is the town-house, a stately building, where the senate meets. At the end of the town there is an arsenal, from which the French carried off all the arms, &c. that were of any value, before the battle of Hochstet. The Blaw turns mills for sweral occupations, here being a great number of hands feveral occupations, here being a great number of hands amployed in the manufactures of fluffs, linen, cotton, and amployed in the manufactures of stuss, linen, cotton, and fusions; in dressing leather; and in the iron and other manufactures, as well as clock-work, by which this is become one of the richest cities in Germany. In 1702 it was basely surprised by the elector of Bavaria for the French, who kept it till after the battle of Hochstet, when

French, who kept it till after the battle of Hochitet, when is furrendered to the Imperialist. It was a very necessary place for him to secure his dominions on that side, and to sacilitate the passage of the French to join his army.

Here is a noble student, called the Cathedral of our Lady, which now belongs to the Lutherans: it is three hundred and fisty-five seet in length, and is reckoned the highest, longers, and best built in the country: and, by some, the sincest in the empire. This church has sive stately spires, one of them one hundred and two seet high, and supported by thirty-fix large pillars: it has a large square tower, with a watch always at the top of it, to give notice to the city of any approaching danger from the country.

The organ, which was completed in 1990, after a labour of thirty-fix years, is ninety-three feet high, twenty-sight broad, has fixteen pair of bellows, with one hundred and twenty-five pounds of lead an each, and above three thou-fand pipes of pure English tin, the largest above forty luches round, and thirteen in diameter; yet Dr. Nichol-fon thought it inferior to our at Extest. The taberrasele, which formerly contained the holy facratient, is said to have sook one hundred thousand florins to its donor, whole fature is represented kneeting against a pillar on the side of it: it is a very fine, though gothic piece of work, of a very fingular kind of marble, and ornamented with abundance of states. They keep to this day the picture of the last super, which was put the above the great attar before the reformation. The benches in the choir are loaded with historical passages of the bible in sculpture. Besides this, the Lutherans have two other churches.

This place may boast of giving birth to Freinsheim, so much respected for his great learning by the whole world, and particularly by Christina, queen of Sweden, that the made him her librarian and historiographer. In territory is near as large as that of Nuremberg, being six German leagues in length, and four in breadth; it is almost environed with the duchy of Wurtemberg, except on the south and east sides, where it is bounded by the Danube, and is divided into forty balliwise and lordships, of which that of Geislengen comprehends the greatest part of the county of Hellenstein, which, with other counties and towas, were purchased by this city soon after it was made imperial. The garrison lives here in little houses fet apart for it; in time of war it is militained by the empire of the time of war it is militained by the empire and this city furnishes a quota equal to that of Augung. There was a great Franciscan monastery here, the revenue of which were appropriated, at the reformation, to a college, where they have professors, that Ulm is stuated in one of the mo

A judicious French writer observes, that Ulm is fituated in one of the most fertile plains in Swabia, but that it is fearce half as big as Augiburg, though more populous, and that it has been almost ruined by the frequent wars in this country, the Fresch and Bavarians having, at the time above-mentioned, made them pay twenty-thousand German florins a trance-money, besides the sums they squeezed out of them while they staid. The boules are, for most part, of timber and plaister, and have but an indifferent appearance. Their streets are neither handsome, nor wide, and the squares mean and very irregular: it is reckoned near fix miles and an half in circumference: its ditches, which are well fortified, are almost every wherey double; and on one side of the town the Danube, runs through them with great rapidity: the other is kept full of fresh water by fluices. A nurket-boat goes weekly from hence to Vienna, which likewise takes in passengers at the rate of a penny for four miles. This city was once for rich, that it passed for one of the wealthieft in the empire, and the Germans, had a proverb, that the ready cath of rich, that it paffed for one of the wealthieft in the empire, and the Germans had a proverb, that the ready cath of Ulm, the neatness of Augiburg, the industry of Nuremberg, and the arienal of Straiburg, were the foor wonders of Germany. The archives of all the free circles of the circles of Swabia, are kept at Ulm, where their meetings are also held by turns with the city of Spires. Though all the county from hence to Augiburg is even, yet it is tiresome to travellers, because of the pavement of the causeways. M. Pollnitz says, sew of the gentry live here, except the patricians, who are not more sociable than those of Nuremberg; and that the burghers, and the women in particular, go dreffed like those at Augsburg; so that to see them go to, or come from church, be thought was next kin

them go to, or come from chareb, he thought was next kin to feeing a maiquerade.

The principality of Lichenstein and princely landgravate of Kletgau, together with the imperial abbies of Schuffenreid, Weissenau, Roth, Raggerburg, Kaysersheim, Ursperg, Yrsee, Elchingen, Ochsenhaulen, and Salmansweil, intitle their abbots or proprietors to voices and seasa in the diets of the empire and circle.

The fine country of Basden, or Baden, is situated along the castern banks of the Rhine. It is divided between two princes of the same family, who receive titles from their respective capitals, the one being stiled the margrave of Basden-Bailden, and the other of Basden-Dourlach. The share of the former, as lying south of the other, is diffundent to the other, is diffundent. thare of the former, as lying fouth of the other, is difting guifhed by the name of the Upper, and that of the latter by the name of the Lower Margaravate, or Marquilate.

The right of primogenitorihip hath been long introduced into both these branches.

The whole country is said to be near fixty miles long, and twenty broad, and lies between the duchy of Wurtemberg and Brifgan. It is fruitful in corn, wine, hemp,

flax,, and wood, abounding in particular with chefinut trees. There are also many quarries of marble and stree-flone in it, large herds of livine, plenty of fish, fowl, and venison, and the bashs and mineral springs are so common, that the chief towns of both marquilates have their names, from them. Both princes exercise an absolute authority in from them. Both princes exercife an absolute authority in their dominions, excepting so far as it is limited by the laws of the empire, and lay taxes on their subjects without

laws of the empire, and lay taxes on their jubjects without affembling any flates.

The Upper Margravate, or that of Baaden-Badden, is bounded by the khine, the Lower Margravate, the ducly of Wuttemberg, the county of Eberflein, a confiderable part of the county of Sponheim, two manors in the lord-flip of Graffenftein, and one in the ducly of Luxemberg, with feveral batonics in Bohemia. He has a vote in the college of whose word in the district that were and tickcollege of princes, and in the diets of the empire and circle. His annual revenue is faid to amount to four hundred shouland floring. The margrave and his fubjects are Roman carliolics.

Roman catholics.

The princh all clees in the country are the following:

T. Railadt, where the princes reside in a magnificent castle, in which were fettled the preliminaries of the peace concluded at Baden betwirt the emperor and France, in 1714.

The town, which is not large, and belonged formerly to the counts of Eberstein, stands in a fine plain on the river Murg, which is little below falls into the Rhine. 2. Baaden, which is pleasantly fituated among vineyards, and contains a palace of the margrave.

3. Steinbach, which gives name to a district.

4. Swilhoffen, five miles louth west of Baaden, incar the town is a Benedictine abby. 5. Beinheim, in Lower Alster, belongs, with the district, to the margrave.

6. Kehl, a village, which partly belongs to the margrave, gives usane to a district.

Baden Doudrach, or Deutlach, which is the lower marquifate of Baden, for called with regard to the course of the Rhine, is contiguous to the marquifate of Baden, on the morth-east; has the duchy of Wurtemburg, on the east; the Rhine, which sparts is from Alface, on the west, and part of the Lower Palatinate, and the bishopric of Spire, on the

of the Lower Palatinate, and the bishopric of Spire, on the north: the places of note here, are, Durlach, in Latin, Dorlachum, its capital a pretty large town, two leagues eaft from the Rhine, twenty-one miles north-east from Baden, eight miles fouth-east from Philipfburg, and twenty fouth from Heidelburg. The French write it without an h, and the Heidelburg. The French write it without an h, and the Germans leave out the o. It lies on the banks of the Pfintz, or Phints, at the foot of a mountain, on the top of which there is a strong tower, with a constant guard. The marquis has a magnificent palace here, far exceeding that of Baden, and fit for the greatest monarch in Europe, with a good library, and a fine collection of antient coins and medals. The streets are strait and fair, and the houses medals. The fireets are first and fair, and the more flately and uniform: here is also a gymnasium, with professor of the several faculties. The town and palace sufference, who in 1680, fered much, in the late wars, by the French, who in 1689, burnt them; so that the Protestant cantons thought fit to affift its prince, who was a Lutheran, with contributions for repairing the Protestant churches, which the French ruined in this country; and he himself gave large immu-nities to such foreign Protestants as would settle in his

The city of Carlfruhe, with a castle or palace, were both built by the late marquis Charles William, who gave it the name, fignifying Charles's reft; and, indeed, here he was quite retired, and tranquil, bating the entertainments of operas, mufic, parties of hunting, &c. According to the description of it by the baron de Polnitz, nothing is fo prair as the disposition of the whole: "imagine the margrane's house, says he, to be at the entrance of a great foreit, in the centre of a flar, formed by thirty-two walks, the chief of which, behind the palace, is three German leagues in length: two large wings advance from the nain body of the house, which, deviating from each other in proportion as they lengthen, the whole, together, looks like a theatre. Behind the principal building there is a very high octagon tower, which commands all the walks : beyond the court, between the two wings, are the gardens and parterres, at the end of which there is a femiaircle of honies of an equal height, built archwife, between which there run five streets, the middlemost whereof fronts the palace: at the end of the three chief firest opposite to the palace are three churches, one belonging to the Luthe-rant, another to the Calvinits, and a third to the Roman catholies; to which three prevailing religions of the empire the late margrave gave equal liberty of confeience, when he

" The chief part of the town (adds the baron) lies behind the houses that front the palace : this, properly speaking,

founded the new town.

cal pot .

confifts but of one firect, which is of a prodigious length; all these houses, as well as the margrave's, are of timber a yet the contrivance and distribution of the whole, taken

together, is really wonderful.

"The Pheafant-walk, which joins to the calle, it the prettieft thing in the world it is a very large inclosure, disposed in various walks, planted with fir trees, cut, in flape of a fan: there is a great bason in the centra, always full of wild ducks, which is encompassed with fost pavillions, made in the form of Turkish tents; two of diem are lions, made in the form of Turkish tents; two of them are aviaries, and the other two fummer houses, with fofas and couches in them, after the manner of theeastern countries; here, M. Polnitz fays, the late margrave used to divert himself, by playing in concerts with some young ladies, whom he taught music. He had no lefs tina, faxty waiting women to attend him, though but eight waited upon one day; and these, when he went abroad, attended him on horseback, dressed like husses. The generality of these damsels, who had all lodgings in the palace, understood both music and dancing; and not only performed operas at the theatre of the palace, but were musicians of the chapel."

The prince of Hohenzollern's territories are thirty-four The prince of Hohenzolleru's territories are thirty-four miles long, ten broad, and are tolerably fertile, being watered by the Danube, Eyach, Starzell, &c. The prince is hereditary chamberlain of the holy Roman empire. There is not any remarkable town in this place.

The prince of Theugen, the abbefs of Lindau, and the abbefs of Buchau, have feats and voices in the diets of the

empire and circle.

Eaftward of the duchy of Wurtemberg lies the county of Octingen; it is in the north corner of the circle, and extends about eighteen miles in length, and twelve in breadth. tends about eighteen miles in length, and twelve in breadth. The lords of this country are divided into three lines; viz, that of Oethingen-Spielberg, who are princes of the empire, but have no feat or vote in the college of princes thereof; and those of Oethingen-Wallerstein, and Oethingen-Kaizenstein-Baldern. In the diets of the empire, they belong to the college of Swabian counts; but in that of the circle, the princely line has a feat and vote on the bench of lay-princes, and the arbay on the bench of Counts and having. The nd the others on the bench of counts and barons and the others on the bench of counts and barons. The fubjects of these princes are partly Roman catholic, and partly Lutheran, but the princes themselves are all Roman catholics. The only place in the country, worth mentioning, is Octtingen, a town on the Wernitz, whence the country takes its name, and where the prince of Octtingen. Spielberg resides. Here is also a commandery of the Teutonic order, a large college, and a society for the improvement of arts and sciences. The bailing, to which the town gives name, with four others, belong to the same prince. The principal river in this country is the Wernitz. Wernitz.

SECTION X.

Treating of the persons, manners, customs, Gc. of the Germans; their skill in the politic arts, manufactures, commerce, Gc.

THE people inhabiting this extensive continent, are for the most part of a good stature and shape, with fair complexions, and agreeable seatures; but there is a remarkable difference amongst them with respect to their character, temper, and manner of life; which is an evident proof of their consisting of several distinct nations. They are, however, in general; very remarkable for their honesty and fairness in their dealings. Both the ancient and the present Germans have been long distinguished for their holpitality. Julius Caefar observes, that in his time their houses were open to all men, who where welcome to such entertainment as they found provided. That they effected it a piece of injustice to assume a traveller, and shought it a necessary act of religious to protect those who a remarkable difference amongst them with respect to their thought it a necessary set of religion to protect those who came under their roof. The present Germans have not degenerated from their anciflors, and a stranger is sure to be every where well entertained. The courage and hyavery both of the ancient and present Germans was never dis-puted. The Germans have also the honour of having almost all the kingdoms in Europe owe to German blood their crowned heads, particularly, Great Britain and Ireland, Denmark and Norway, Sweden, Polond, Russia, Hungary, Prussia, and Bohemia. In learning, the Germans are not inferior to any other

nations; for not only their natural fonduels for initiation; but the variety of governments, their mutual emulation, and the freedom protestants enjoy of living and writing

secording mproven eading la testants, fex, and books : n great num lities of admired. With though th

tation; writing cording according to their own judgment, have procured the greatest impropument in the faiences. The gleasure they take in reading is so great and general, especially among the prosultants, that it is thought unbecoming, even in the semale fex, and persons of any rank, not to be convertant in books: nor is there any place in the world where more books are written and printed; among which, they have a great number of excellent works; and the genius and abilities of the German authors are at this time very justly admired.

lities of the German authors are at this time very junty admired.

With respect to their vices, we must observe, that though they have been censured for their drankenness yet they do not feem to be more guilty of this than their northests neighbours, or indeed than the English.

They commonly drink beer and wine, but they have the latter upon much easier terms than the English: they have those of Hungary, France, and Italy, which lie contiguous to them, where the best wines are produced; besides Moselle, Rhenith, and other wines of their own rowth.

growth.

The usual diet of the Germans is beef, mutton, fewls, &c. which are generally more boiled and roafted than in England. They have also one dish, which was effected a delicious one by the antient Romans, as it is by them, and this is fualls, which are dressed in various manners, and caten at the tables of the quality as a great rarity. There is fearer a nobleman's garden that has not a place fet apart for breeding and fatteting them; and being fed for eating, they grow to an extraordinary fize.

They not only sleep on a feather bed, as we do, but, instead of blankets, have a light feather bed covering too, which is placed upon the upper sheet, and is covered with a counterpant. Instead of the chearful sire-fiele, which realivets our winter-evenings, they heat their rooms with sloves.

The gentry, in winter, take great pleasure in riding through the streets on the snow, on sledges srawn by horses richly accoutred, and adorned with hells and feathers; and, among the diversions practifed by the great, is hunting wild boars, bears, wolves, tigers, and other ferocious animals.

wild boars, bears, wolves, tigers, and other ferocious animals.

The Germans have particularly diftinguified themfelves by their knowledge in the civil: law, natural history, and the various branches of philosophy. There are in Germany thirty-fix univerfities, seventeen of which belong to the protestants, and the same number to the Roman catholics: with two other mixed ones, those of Erfurth and Heidelberg. They have also a number of academies for the sciences, and many colleges and schools.

The reputation of excelling in the polite arts was formerly given to the French; but at present they are nearly equalled by the Germans, who excel in music, and board the works of Teleman, Handel, Gran, Back, and Hasse. Some of their poets have excelled most of the European nations in the sublimity of their thoughts, and the mingled strength and sweetass of their language. With respect to painting, they claim the first place after the Italians, and sulfly boast their Peter Paul Rubens, John Calker, and several others, in the thirteenth century, Barthod Schwarts discovered as Cologne how gunpowder might be made serviceable in the art of war. The first copper-plate engraving appeared in Germany; Albert Durer also exchange actintos was discovered by Von Sichem, an Hessian lieuteant, in 1648, or, as others say, by prince Ropert: wooden cuts were also the invention of a German; nor can the first discovery of the art of printing be with justice resulted the Germans.

They at present make velvets, beautiful siles, rich study. fused the Germans.

They at prefent make velvets, beautiful filks, rich flurth and half filks, with a variety of woollen fluffs, and all manner of cloths, ribbons, lace, very large quantities of llnen, fuftan, embroidered work, fine hats, and tapeftry; they also print costoo in a beautiful manner; make Spanish rough and fmooth les her; and are well skilled in the art rough and (mooth lesher; and are well fkilled in the art of dyeing. They work all forts of metals for ornaments, wellels, tools, wire, &c. in the best manner; and Augiburg in particular is famous for its performances in filver. They are well-skilled in the working of brass and arans. They make glass, and beautiful mirrors of all fixes; fine works in lacquer, and a variety of porcelane, among which the Milinian is faid to be the finest in the world. Nuremburg is famous for a variety of ingenious works in wood, ivory, metal, stone, glass, &c. which they export to fo-

teign parts,
Cermany enjoys every advantage for commerce; for,

export the fuperfluity in its home detented hies and manufactures, and receive those of foreign sauntines, bettles, it not only borders on the German ocean, the Haltic, and the gulf of Venice, but is watered by many savignole rivers.

factures, and receive those of foreign sountures, besides, it not only borders on the German ocean, the Raltic, aid not only borders on the German ocean, the Raltic, aid the gulf of Yenice, but is watered by many savigable rivers.

Hamburgh is the most respect to by the English and Dirich, of all the towns in Germany. About the middle of the thirteenth century many trading towns in Germany, as yell as in other countries. I ying on the Germany ocean and the Beltic, entered into a mustual league with each other for the promotion of trade and navigation, and were thence called Hanse-towns. Though their trade fall to, decay in the fitsenth century, and the name of the league in that time ceased, yet the Arading, towns of Hamburgs. Luber, and Bremen, are fill called Hanse-towns, and have a league actually fabiliting between them, under the name of which they conclude treates of commerce with foreign powers.

From Germany thay expost into the neighbouring and remote countries the following goods, viz. corn, wine-particularly the Rhenish and Modelle, sebsces, horse, lean caule, butter, cheese, honey, fyrop, linen, woollen study, yan, ribbon, filk and cotton, fust, wool. Nuremberg wares, wood of various, forts, particularly timbar fit for fulp-building, iron plates and floves, cannon, ball, bombs, granades, tin plates, steel work, copper, brais wice, perclane, earthen ware, mirrous, glasses, hogs bridlers, taran, font, or the german colns, we must observe, that the emperor, with the electors, the chief para of the princes of the empire, several, prelates, abbustes, sounts, become and so a larger species, and the imperial cities, as only the privice of coining money; but with this distinction, that some are intitle to coin only small money, others to soin also a larger species, and the imperial cities, as only the privice of coining money; but with this distinction, that some are intitle to coin only small money, others to soin also a larger species, and the tempers, in order to sive expence, scloom make use of the empi

nings; one marien-grofebom tains eight pleanings, which is equal to two mattiers.

Rix-dollars, albufes, and hellers, are used at Cologne on the Rhine; where they also reckon in essential pleanings Flemish: one rix-dollar current makes one imperial florin and a half, four head-pieces and a half, forty-eight Brabant flivers, fifty-eight and a half Cleve flivers, seventy-eight albufes, and one hundred and seventeer semanger. It is observable, that the rix-dollar, which at Hamburg, Altens, Lubec, Fiemen, &c. is worth 4s. 6d. goes for no more than 3s. 6d. In most parts of Germany.

In all the electoral countries of Saxony, as also a halfic, Naumburg, Berlin, Magdeburg, and Francforton the Oder, they reckon by rix-dollar, gut-groschen, and psennings; that is, one rix-dollar, which is there an imaginary coin, contains one imperial florin and a half, or twenty-sour gut-

contains one imperial florin and a half, or twenty-four gut-grochen, and one gut-grochen, twelve pfennings. Six-teen gut-grochen make an imperial florin; eight grochen, a one-third piece; and four gut-grochen, a one fiath-

They reckon by imperial gulders, or florins, kreutsers, and pfennings, at Nuremberg, Augfburg, Vienna, Prague, &cc. one imperial florin, or two-third piece makes fifteen betze, twenty imperial grofches, or two hundred and forty pfennings, or fixty kreutsers.

Rix-dollars, filver grofches, end pfeanings, are used in

Breflag, and all Silena, one rix-dollar contains thirty imperial or filver grotches or bolims, forty five white grotches, ninety kreatzers, one hundred and twenty grotches, one hundred and e ghty dreyers, and three humared and fixty premings, made in the seal house strictly should be all the side of the contrary, and in the close of the contrary, and in the contrary of the

Contain a fuccinit account of the artient and modern Hifter of the Germany, from the congress of their country by the Romans; to the acception of the province resigning monarch!

N the early ages of the world, the Germans were di-livided into many petty nations and princip, lities; foine governed by kings whole power was limited, and others were abfolite; foine of their princes were elective, and others hereditary; and fome arithmetical and democratical governments were also found among them. Many of the fates and kingdoms frequently united under one head of general, both in their offensive and defensive wats. This was the flate of the Germans before they were conquered by the Romans. At that time the children went naked, and the men hung the facin of fome wild heaft upon their flately of the conduction. and the men nung the acts or forme while bear upon their shoulders, suffering it with a thong; and perfons of the best quality were only a little woollen mantle or coat without sleeves. Their food a little straw, or the skins of wolvas to bears. Their food was bread, effest-meat, butter, are fruit, as at present, and their drink water, milk, and beer; for in those early ages they were frangers to the microf wint. In They were usually very merry at their entertainments, fitting in a femi-circle, with the matter of the family in the middle, and the red on the right and left; according to their quelty, but to their fealls no women were admitted, nor a fon, citids had astained his twentieth year. " "

The antient Cermans expressed an extraordinary regard The antient Cermana experies an extraordinary regard for morality, and were very first in divine worth; a col-ling their priefls out of the nobility, who were not haliefly formant of moral philosophy and physics, and were usually called to coupcils of take. Women were lake wife admitted to the priefly office, and both the one and the other were respect within the most proposal priefly by the latter. The to the priefly office, and both the one and the other were treated with the most profound respect by the laity." The doctrine of transingration then prevailed in Germanya they betweed that departed fouls, when they had less these bodies, an intrated other creatures; and, according as they behaved in this life, were happy or micrable. Chusrius observes, that they worthipped the fun with such devotion, that they seemed to acknowledge that planet as the Supreme God, and to it deficated the first day of the week. — They after workinged Woden, or Godan, after when the fourth also worshipped Woden, or Godan, efter whom the fourth day of the week was called Wednesday. It is faid that this word, Godan, becoming afterwards contracted into God; the Germans and English gave that name to the Deity. They also worshipped the god Faranes, the same with the Danish Thor, the thunderer, from when our Thursday has its name. Turico, the same with Mars, gave name to Toessay; and the goddes Freia, or Venus, gave name

They performed their facrifices, like the antient Britone, in groves, the oak being usually chosen for an altar; and, instead of a temple, they erected an arbour made of the initized of a temple, they effected an arroot masse, of the boughs of the oak and beech. The pricite, as well as the facrifice, were always crowned with wreaths of oak, or of fome other facred tree. They facrificed not only beafts, but men; and thefe hu nan facrifices were taken from among their flaves or malefretors. Their belief that their among their flaves or matchefors. I heir benef that their fouls should animate other bodies after death, it is faid, made them scales of danger, and upon extraordinary occasions they made no in uple of dispatching themselves into the other world. They burnt their dead bodies, and laving gathered up the bones and ashes of the funeral pile, buried them together; and at the funerals of the great were tiltings and fongs, fung in memory of the heroic actions

the deceased person, it is the heavy of the neconstant of the Germans before the were fuldued by the Romans, who met with fuch refracte, that they were contented with making the Rings and the Danube the boundaries of their conquests; and accordingly built fortreffes, and planted garrilons on the banks of both those rivers, to prevent the incursions of what they rermed the barbarous nations; but within about a hundred years after Constantine the Great, the Franks, Burgundians, Alemans, and other German nations, broke through those houndaries, passed the Rhine, and dispos-fessed the Romans of all Gaul, Rhætia, and Noricum, which they shared among them; but the Franks, prevailing over the reft, at length established their empire over all Modern Germany, France, and Italy, under the con-duct of Charlemagne, or Charles the Great.

duct of Charlemagne, or Charles the Great.

Antiently the conquered German nations had heredirally oblikes of their own, and were governed by their own laws; that Charles pat an end to the former; and governed the conducted by counts and royal miffionaries. However, the cantient elies were full retained. In the year 800, Charles revived the dignity of the Roman emperor, and conferred it upon himself and family; but his fon Lewis divided the counter among the first it upon which bears could be countered. empire among his fons; upon which great troubles arole, which, in 843, were adjurted by an accommodation; by which Levis the German obtained all Germany as far he which Levis the German obtained all Germany 2s far he the Rhine, with the three towns of Spires, Worthy, and Menta's and thus Germany became an indept indent king-dota. In 1876, Lewis reduced half of the Letharington kingdom under his tubjection, and nine yours effectively the sounger. It is prince, flaring his paternal kingdom with both his bothers, Garlman became king of Bayaria; Lewis of Royal Francolais, and Charles the Fast of Aleman, in the laft, foresistics the hypothese, or may indisting the first marking.

furviving his brothers, not only inhabited their bingdoms, but beauned the imiserial dignity, together with all fully and brance; yet governed in fo weak a manner, that in 887 he was deposed by the German flats, who conflicted Armulyh, Carlman's thattes! fin, king of Germany. This prince beat the Normans, who had made great devafations in Germany, and, by the offinance of the Unity fuddied the Bohemian. But afterwisks, by the death of his for Lewis the Chaid, his family became excludely Germany was, at that time, an hereditary kingdom, but the power of its morarchs was limited by the diet. The reversit personal property is a supersonal control of the territories belonging to it were governed under the king by counte, among whom the margraves defended the borders against the attacks of their enemies.

state, when count Rodolphus of Papinug, was advanced to the imperial diguity, the other electors leaving the choice to the paligrave Lewis; and from him descended the house of Austria.

At this time, count Adolphus of Nassau, was also, by virtue of a compromise, created emperor by the elector of Mentz; but he fo diguisted the electors of the empire, that they made choice of Albert, the son of Rodolphus, for their sovereign, who defeated Adolphus in a pitched chuttle, and sew him with his own hand. Albert's coronicion was confirmed by the pope, but his nephew and three assaurance of the son three assaurance of the more of the death of Albert, in 1308: he was samed for his wisdom, temper, and courage; but was possoned by a Franciscan friar, with the confectated elements. The emperor no sone perceived what was done; than he generously advised the visitain to make his escape; but the, neglecting to perform it, was taken, and flayed alive for the fact.

After an interregunt of some years, Ludowic, or Lewis of Bavaria, was chosen emperor, by a majority of electors, in 1318; hut Frederic, duke of Austria. Son of the late emperor, was fet up by a contrary faction. Frederic's forces were defeated, and Lewis remained sole emperor. After his death, Charles IV. was unanimously elected emperor, was fet up by a contrary faction. Frederic's forces were defeated, and Lewis remained sole emperor, which are full observed. Charles lived to see his son Wenzel, "or Wencessaus, elected king of the Romans." This prince, who was the fourth son of Charles, succeeded to the empire, at his father's demile; but after he had reigned twenty two years, was deposed, for his dissolute and cruel behaviour. Charles was succeeded by three other princes, whose reign were short; and at length, in 1411.

Sigisfimund was unanimously chosen emperor, who, in 1414, proclaimed a general council to be held at Constance, in which three popes were deposed, and a new one fet up. At this council those reformers Jerom of Prague and John Hus, were condemned as

pope and French king primers at the time time, and carried his arms into more, where he conquered the king-dom of Tatis! SECT. XII.

Containing an account of the election and cerenation of the emperor of Germany, his power, and the privileges of the flates of the empire and diet; also of the forces, taxes, courts of justice, lawn, and religion of the Germans.

Table, empire of Germany is elective, and every new king of the Romans is obliged folemnty to renounce all attempts of rendering it hereditary in his family. The laws of the empire make no limitation with respect to religion, nation, state, or age. This, choice is settled by the majority of the electors, and declared, by the elector of Mentz, within a month after an account is received of the former emperor's death, by means of envoys and public restricts to each elector. The ceremony of election is performed at Frankfort on the Maine; where the electors appear, either in person, or fend two or three envoys, who must be provided with sufficient powers. After settling the deliberations, as well relating to the capitulation of election, as to other matters proposed by the states, foreign envoys, and others, all the foreigners who do not belong to the retinue of the electors, or their envoys, are ordered to leave the town before the day of election; a ster which all the electors present, with the first envoys of such as are absent, march in their electoral habits in procession on horseback, the three ecclessifical electors wearing searlet robes, with caps lined with ermine, and the robes of the seath with his hereditary marshal carrying a fword in a scabband before him; but this honour is not paid to the deputies of the absent electors.

In this manner they proceed from the council house to St. Bartholomew's charch, where slighting at the eate.

puties of the ablent electors.

In this manner they proceed from the council-house to St. Bartholomew's charch, where alighting at the gate, they go to their respective seats in the choir, followed by several princes and counts of the empire, the several swoid-bearers standing before their respective electors, with their swords drawn and laid on their shoulders. The service begins with veni creator, and the protestant electors with draw till mass is over; after which they return, and they all tolemnly take an oath before the altar, to elect the fittest person to be emperor, and then thus themselves up in the chapel of election, which is, a small vaulted gallery, to which there is an entrance from the choir. When they have once more from no stand to a plurality of votes, these votes are collected by the elector of Mentz, according to the rank of the cleaver; and then the elector of Menta is asked by the elector of Saxony for his vote. Wheever has above

652 THE NEW AND UNIVERSAL SYSTEM OF GEOGRAPHY,

above half the voices of the college is elected, and an elector may even vote for himfelf.

When the election is over, the person elected, or his proxy, must immediately swear and subscribe to the capitulation of election, which being done; he receives the congratulations of the electors; and the choice is made public in the church. If the elected king of the Romans he not pretent in person, he must give a counter-bond that he will maintain the capitulation of election, and, before his coronation, must swear to it in person; and, till his is done, he cannot assume the government, but must seave it to the vicars of the empire. An authentic copy of the capitulation of election, fulferined by the person elected, or his envoy, and constituted by his feal, is delivered to casch of the electors; and, on the other hand, the elections college carses to be delivered to the person elected an infrument of his election, which, when he is absent, is carried to him by a prince, with a writing of notification. Upon this he appoints a day for his coronation, which ought to be person where the election happens to be.

which ought to be performed at Aix la Chapelle, but at prefent is always held in the town where the election happens to be.

Some of the jewels of the empire are kept at Aix, and the reft at Nuremburg. Most of them belonged to Charlemagne, and are folemnly delivered up at the place of coronation. Exclusive of several kinds of vestments, there are a crown and secptre, with two rings, one imperial monde, two broad swords, one small one, a book of the gospels, and other requisites.

The temporal electors, or their ambassadors, attend the person elected from his palace to the church, in the following order: the elector palatine with the crown, the elector of Brandenburg with the smonde, or globe, and the elector of Brandenburg with the feeptre, march first, abreast; the elector of Saxony carries the fword, and the elector of Brandenburg with the feeptre, march first, abreast; the elector of Saxony carries the fword, and the elector of Hanover the standard. At the door of the church he is received by the three ecclessatical electors in their robes, who attend him to the altar; and having taken a general oath as a ruler, and also promised due veneration to the pope and the church, the archbishop who officiates, anoints his head, and between his shoulders, his neck, breast, and right arms; then being cloathed in the ancient imperial sebes, he is brought to another altar, and once more from; he is then crowned, and afterwards conducted to the throne, where the archbishop hids him receive and keep the pledge which was designed for him by providence. To Deum is then sung, and the trumpets and other music proclaim the general joy. After which he dubs some keep the pledge which was designed for him by providence. To Deum is then sung, and the trumpets and other mise proclaim the general joy. After which he dubs some keep the pledge which was designed for him by providence. To Deum is then sung, and the trumpets and other mise proclaim the general procession, in the respect of the emperor. The sunperor, some fess of the Ame

rope as the first European potentate, and confequently has precedence given him and his ambassadors. With respect to the German empire, he is its supreme head, and as such so the German empire, he is its fupreme head, and as fuch enjoys many privileges; yet his power in the administration of the German empire is similed both by the capturalistion of election, the other laws of the empire, by seratics, and by the customs of the empire. These privileges which he has the right of exercising without the advice of the states, are called his refervata; but his greatest power does not consist in these, which are far from being swengmant to the liberties of the states of Germany.

With respect to ecclessistical affairs, his rights consist in little more than consigning ecclessistical elections, and fending commissions to the elections of archbishops, and abbots, that they may be performed in due

order; but the commissary is never personally present at these electrons.

order; but the commissary is never personally present at these electrons.

Respecting temporal assars, the emperor has the right of bestowing personal dignities; as for instance, the creating of noblemen, as lorde, baroné, and counts, who enjoy the dignity of princes; and of knights and gentry; as also that of rassars of arms, as also these largent; as also there of rassars, as also these larging; moroving, and altering them. He has the power of clashishing universities; and enabling them to confer academical degrees; of granting a right of holding fairs and markets, and of creeting any place into a fanctuary. He has likewise the power of bestowing setters of respite, of securing a detact against his creditor, and of conferring majority on minors. He can put children who are bore out of wedlock upon the footing of such as are legitimate; can doffirm the contracts and stipulations of the members of the empire; and fo far remit the oathi extorted from them, that they may commence an action at law against another, on account of the very thing for which the oath was administered. But the emperor has no right, without the consent of the state of the empire, to option of stops that and the action of the collective state of the empire, to put one of those states and vicie, in its colleges, to interfere in the laws of the empire, to conclude treaties in affairs relating to the empire, to conclude treaties in affairs relating to the empire, to conclude treaties in affairs relating to the empire, to conclude treaties in affairs relating to the empire, to conclude treaties in affairs relating to the empire, to conclude treaties in affairs relating to the empire, to conclude treaties in affairs relating to the empire, to onclude the college, to build forts in the empire, or a determine disputes concerning religion.

The electors frequently chuse the successor has a concerned to appoint taxes in it, to regulate the colnage, to build forts in the empire, or to determine disputes concerning to appoint taxes in it, to regulate

is actually a crowned head, though he has no kingdom: is faluted with the title of majesty, and enjoys the title of perpetual augmenter of the empire, and king of Germany. He takes precedence before all the other kings of Chrittendom, and bears a fpread eagle with one head in his

The empetor has, for his affiliants in the court and chancery, the arcli-officers, who are also electors, of the

The emperor has, for his affiliants in the court and chancery, the arch-officers, who are also electors, of the empire.

There are nine electors, of which three are spiritual, and the rest temporal. Of the former, is the elector of Menia, who is arch-chancellor of the holy Roman empire, and director of the holy Roman empire, and director of the electoral college; this prince, besides the offices he enjoys at the coronation, as already taken notice of, has the general direction, and is not to be controplisd by the emperor; he lays before that body the privancer of the spearate flates. Before huse, or his envoys, all those of the states of the empire, as well as of foreign powers, legitimate themselves. He nominates the vice-chancellor of the capire, who must take an oast to him as well as the emperor. He has the inspection of the states of the empire, appoint all officers for the chancery, and has supreme jurisdiction over them.

The second spiritual elector is that of Treves, who is the arch-chancellor of the holy Roman empire in Gaus and the kingdom of Arles, but this is at present no more than a mere title. He constantly precedes the elector of Cologne, and has the first voice at the election of a king of the Romans.

The third spiritual elector is the archbishop of Cologne, who is arch-chancellor of the holy Romans empire, instant, who is arch-chancellor of the holy Romans empire, instant, he exchanges therein with the latter.

The king of Bohemia, the elector of Bavaria, the elector of Saxony, the elector of Brandenburg, the elector Plantine, and the elector of Hanoucra, are the temporal elector. The former of these is arch cup-bearer of the holy Roman empire, and, as such, presents to the emperor he holy Roman empire, and, as such, presents to the emperor has of the elector of Bavaria, the elector of Saxony, the elector of Hanoucra, are the temporal electors. The former of these is arch cup-bearer of the holy Roman empire, and, as such, presents to the emperor had believe marks, or about ninety-fix ounces

wards, together with his hosfe, becomes the property of his vicar. His other prerogatives are, his preceding all other temporal electors, walking in procession immediate after the emperor, followed by the empress and the cledes of Mentz and Colegne; and he has the third voice in the electoral college.

The office of arch-fewer of the holy Roman empire is verted in the elector of Bavaria. At the coronation, he carries the monce before the emperor, ranks next to Behemia, and at the imperial coronation serves up the first course.

courfe, and places four diffees, weighing twelve marks, on the emperor's table.

The office of arch marfinal of the holy Roman empire belongs to the elector of Sazony, who at the diets, and on other folemu occasions, carries the fword of state before the emperor; and at the coronation rides into a heap of oats, and fills a measure with them. At the diets, he appoints quarters for the electors, or their envoys, and during the holding of the diets, has jurisdiction over all the electoral and other imperial officers.

The office of arch-chamberlain of the empire is vested in the elector of Brandenburg, who carries the sceptre before the emperor, and presents him with water in a filver bason, to wash his hands in.

The office of arch-treasurer belongs to the elector palatine, who can raise nobles and gentlemen to the degree of counts: he is protector of the order of St. John throughout all Germany. When the elector of Brunswis put under the ban of the empire, and the palatine obtained the office of arch-fewer, the elector of Brunswis put under the ban of the empire, and the palatine obtained the office of arch-fewer, the elector of Ginaborg, with some other rites and privileges; and his electoral jurisdiction extends both to the territories of Hanover, on account of the extraordinary fervices both he

The emperor Leopold raifed the illustrious house of Hanover, on account of the extraordinary services both he and the empire had received from it, to the electoral dignity, so early as the year 1602; but it was not till the year 1708 that those electors obtained a feat and voice in the electoral college.

The princes of the empire follow next in rank after those house, manifested it there exists fairling and anyth term.

selectoral college.

The princes of the empire follow next in rank after those above-mentioned: they are partly spiritual, and partly temporal; partly old, and partly eme, or first raised to that dignity since the reign of Ferdinand II. The spiritual princes are either archbishops, bishops, or princely about; and to them likewise belong the Teutonic masters, together with the mastership of the order of St. John. Among the temporal princes is an archduke, and the rest are either dukes, paligraves, margaves, landgraves, burgraves, princes, or princely counts. In the college, or council of the princes of the empire, are three benches: on what is called the spiritual bench, sit the spiritual princes, with the arch-duke of Anstria, and that of Burgundy, but in such a manner, that Austria daily exchanges the first place with Saltaburg; the other temporal princes sit on the temporal bench; and the bishops of Lubec and Ofnsburg, when the latter happens to be a Lutheran, on the cross bench.

The emperor summons the diet, which consists, besides himself, of all the states, or their envoys or plenipotentiaries: after consulting with the electors, his imperial majesty appoints the time and place where it shall meet (which must be in some part of the German dominions); in order to form such relocations, and transact such business as concean the whole empire. The emperor either assists at the diet in person, or has a principal commission, and a person of learning raised to the dignity of a baron. The summons for their meeting consists of printed patents subscribed by the emperor, and is fine tiu the form of a letter to each state of the empire, briefly declaring the occasion of their assembling, and the most important quatters to be laid before them.

The states composing this assembly may either appear

The fates composing this affembly may either appear themselves, or by their envoys, or charge another state, or its envoys, with their voice. On the side of the states, the elector of Menta, or his envoys, has the general direction, and these envoys shew their credentials to the elector of Menta, or his envoys, and to the principal commissary of

Mentz, or his envoys, and to the principal commiliary of the empire.

The refpedive states, in their consultations, divide into three colleges, naniely, the electoral, the princely, and the college of the imperial cities; each of the two first, which are called the higher colleges of the empire, has a principal and by-chamber of sown; but all the three colleges meet to hear the unwent proposals; and in the half of correlatives, or the imaging the conclusions of both the higher colleges against the imperial cities.

It may not be improper to observe here, that the ecclessational and secular princes of the empire, and all prelates who have princely dignities annexed to their sunctions with the master, of the Teutonic order, have each one single voice; but the rest, who have no temporal principality, give their vuices by companies, of which kind are the two benches of the Khine and Swabia. The representatives, or the deputies of the imperial cities, from the last and third rank of members in the diet, and are also No. 66. No. 66.

couffe, and places four diffies, weighing twelve marks, on the emperor's table.

The office of arch marthal of the holy Roman empire belongs to the elector of Saxony, who at the diets, and on other folemu occasions, carries the sword of state before the emperor; and at the coronation ridge into a heap of oats, and fills a measure with them. At the diets, he appoints quarters for the electors, or their envoys, and during the holding of the diets, has jurisdiction over all the elector of Brandenburg, who carries the specific to the elector of Brandenburg, who carries the specific to the elector of Brandenburg, who carries the specific to the elector of Brandenburg, who carries the specific to the clease of the other deputies, which are registered by the two registers of Ulm and Spire, one of the other of Brandenburg, who carries the specific to the elector palatine, who can raise nobles and gentlemen to the degree of counts: he is protector of the order of St. John throughout all Germany. When the elector of Bavaria was put under the ban of the empire, and the palatine obtained the office of arch-fewer, tie elector of Brandenburg also obtained the office of arch-fewer, the elector of Brandenburg also bottland the office of arch-fewer, the elector of Brandenburg also obtained the office of arch-fewer, the elector of Brandenburg also obtained the office of arch-fewer, the elector of Brandenburg also obtained the office of arch-fewer, the elector of Brandenburg and the palatine obtained the office of arch-fewer, the elector of Brandenburg and the palatine obtained the office of arch-fewer, the elector of Brandenburg and the palatine obtained the office of arch-fewer, the elector of Brandenburg archeman and the office of arch-fewer the elector of Brandenburg and the palatine obtained the office of arch-fewer, the elector of Brandenburg archeman and the office of arch-fewer the elector of Brandenburg archeman and the office of arch-fewer the elector of Brandenburg archeman and the office of arch-fewer the elector of a

nobligatory conclusion of the empire riles out of it, and it is immediately put into execution.

With respect to taxes and other imposts, these can no otherwise be laid on the empire in general by the emperor, than with the advice, privity, and consent of the electors, princes, and states, at the general diets. These taxes are partly ordinary, and partly extraordinary: the former, which are styled the chamber-terms, are what each state of the empire is annually to contribute for maintaining the chamber-judicatory of the emperor and empire; and the proportion paid by each state is expressed in the matricula of the chamber. But these chamber terms are so ill paid, that in 1753 the empire was indebted to the chamber-judicature fix hundred and sifty-four thousand and thirteen rix-dollars. Indeed many complaints have been made, rix-dollars. Indeed many complaints have been made, that the matricula is imperfect, and the states rated in an

that the matricula is imperfect, and the states rated in an unequitable proportion.

The taxes, which are of an extraordinary nature, are such as are frequently granted, in case of necessity, by the states, for the support of the emperer or the army of the empire; for the maintenance or building of its forts; and for a war, particularly against the Turks. These are granted according to what is called in Germany Roman months; a denomination which took its rife from this circumsance: in antient times the empire and the state of the st which took its rife from this circumflance; in antient times the emperors, in order to receive the rapal coronation, took a journey to Rome, and the German liares of the empire were bound to effort them with a certain number of horfe and foot for fix months, at their own can be a forten a footman; which money obtained the name of Roman months, computed at fifty-eight thousand two hundred and eighty florins value each. This foot, or flandard, was afterwards retained, and the rate of each flate, either in men or money, is settled in what is termed the matricula of the empire. of the empire.

of the empire.

"The confert of the electors, princes, and states, must be first obtained in an open diet, before the emperor can commence a war. But when the empire resolves upon a war, the generality of the constituents, with the field-marshal at their head, and also the directors and counselmarinal at their head, and allo the directors and countellors of the military council, are to be nominated by the emperor and the whole body of the states; and those to an equal number of both religions, who, together with the whole army, are subject to the empire. The war must also be carried on agreeably to the ordinances of the empire; and the oldest field marshal, without distinctions.

the empire; and the oldest field marshal, without distinction of religion, must command the army. But at present no directors of the military council are any longer called in, and the emperor and his aulic military council generally carry on the war.

The following calculation has been made of the forces which the several princes of the empire are able to maintain and pay, viz. the elector of Mentz can maintain fix thousand; the elector of Triera, fix thousand; the elector of Cologne, fix thousand; the bishops of Munster and Liege, and the archbishop of Saltzburg, eight thousand each; the bishop of Wurtzburg, two thousand; the bishop of Bamburg, five thousand; the bishop of Ofinaburg, two thousand five thousand; the bishop of Ofinaburg, two thousand five bundred; the abbot of Folda, fix thousand; the other bishop of the empire, fix thousand; the abbies and provostiships of the empire, eight thousand; to that the total amount of the forces of the eccelessatical princes, is seventy-four thousand five hundred. feventy-four thousand five hundred. " "

The forces of the fecular princes are as follow: the appropriate angary, thirty thousand; for Rohemia, Sile-

fia, and Morava, thirty thouland; for Autiria and his other dominions, thirty thouland; the king of Pruffia, as elector of Brandenburg, forty thouland; the elector of Saxony, twenty-five thouland; the elector pelatine, fifteen thouland; the duke of Wirtemberg, fifteen thouland; the prince of Baden, ten thouland; the elector of Hanover, thirty thousand; the duke of Holftein, twelve thouland; the duke of Mccklenburg, fifteen thouland; the princes of Mccklenburg, fifteen thouland; the princes of Anhalt, fix thouland; the prince of Lawenburg, fix thouland; the prince of Lawenburg, fix thouland; the clector of Bavaria, thirty the Land; the dukes of Saxony, ten thouland; the prince of Naffia, ten thouland; the other princes and imperial towns, fifty thouland; the whole amount of which is three hundred and fiventy-nine thouland; which added to feventy-four thouland, five hundred, the goors of the ecclefishtical princes, make, the whole of the imperial forces to amount to four hundred and fifty-three thouland five hundred.

hundred, the quots of the ecclefishtical princes, make, the whole of the imperial forces to amount to four hundred and fifty-three thousand five hundred.

Of the body, of men, which the empire unanimo thy agree to fend, and promite to fupply, one half feldom actually appear in the field, in time of war.

The chief of the courts of justice, is the imperial aulie council, which is held at the imperial court, and folely depends on the emperor, who is supreme head and judge, to whom in all matters of importance a judgment is exhibited by the imperial aulic council. This judicatory consists of a predident, the imperial acide vice-chancellor, a vice-prefident, and a number of imperial aulic councillors, fix of whom are always to be Justiceans; befides these are two secretaries, and a fiscal of the empire.

The agents of the imperial colic council, who give in the writings, urge the resolutions, &c. also belong to this class. With respect to the imperial and chamber judicatory of the empire, which is filled by the emperor and states of the empire at the same time, but maintained only by the latter, it is at prefent held in the imperial city of Wetzlar. This judicatory consists of a chamber judge, two presidents of the chamber judicatory, one of whom is a Roman, and the other a Lutheran; as also of seventeen assessment and belonger a content and advectee fiscal with thirty are also belong a content and advectes fiscal with thirty are also belong a content and advectes fiscal with thirty are also belong a content and advectes fiscal with thirty are also as a content and advectes fiscal with thirty are also as a content and advectes fiscal with thirty are also as a content and advectes fiscal with thirty are also as a content and advectes fiscal with thirty are also as a second and advectes fiscal with thirty are also as a content and advectes fiscal with the content and advectes fiscal with thirty are also as a content and advectes fiscal with the content and advectes fiscal with the content and advectes fiscal with thi the other a Lutheran; as alfo of feventeen affeffors, eight of whom are Lutheran, and nine catholic. To this court alfo belong a general and advocate fifcal, with thirty procurators, and a number of advocates. The chamber judicators, and a number of advocates. The chamber judicators, and a number of advocates. The chamber judicator has alfo a chamber-terms of payment. The other judicatories are called peculiar or lower, and to thefe belong the imperial land judicatory in Upper and Lower Swabis, held in the three imperial cities of Ravenfung, Wangen, and Ifuy, and in the borough of Altdorf, together with the imperial land judicatory of the burgraviate of Nuremburg, which belongs to the margrave of Branderiburg, and is held at Anfipach, and many others, particularly the imperial aulic judicatory of Rotweil, which folely depends on the emperor, and is the principal of the lower judicatories. depends on t

judicatories.

In all courts of the empire, the civil law is generally observed, and to this are added some decrees, to which an equal regard is paid; as first, the golden bull, already mentioned, which has only about twenty four leaves, and was published by Charles IV. with the approbation of most of the princes, counts, basons, and other states of the empire, and contains all the fundamental laws relating to the election of the emperor, and the privileges of the electors: the seal annexed to this decree being of gold, it obtained the name of the Golden Bull, or edict, and is effected interocable. Another considerable part of the municipal laws of the empire is the Capitolatio Crefarca, which is a collection of forty or fifty articles between the electors and the emperor; who, at his coronation, swears to maintain the privileges of the electors, princers, and other subjects of the empire; that the will not alienate or diminish the revenues of the crown, or being foreign troops into the revenues of the crown, or bring foreign troops, into the empire, without the confent of the flates. The third kind of laws by which the Germans are governed, are, the acts of their general diets. These laws indeed relate chiefly to of their general diets. These laws indeed relate chiefly to the great, whose privilege, they ascertain and secure; but every distinct state is governed by its prince or sovereign, either at his arhitrary pleafure, or according to a fet of laws

formed by him or his ancestors.

In treating of the state of religion among the modern In treating of the fitte of religion among the modern Germans, it may be necessary to observe, that they became equainted with some principles of the Christian religion towards the close of the seventh century, by the Irith bishop Kilian, Suidbert, and Ewald, who were Englishnen, and Rupretcht of Worme, who fertied at Saltzburg; and in the eighth century, Winisfred of England, preaching among the Thuringians, Hessians, and Saxons, was ordained hilbop of the Germans beyond the Rhine, by the name of Boni-

facius; he was afterwards made archbiftop of Germany, when, under the foecious pretence of propagating the doftrine of Christienity, he exerted himfalf with great seal in promoting obedience to the church of Rome, and even, employed the focular power against such bishops and even, employed the focular power against such bishops and even, employed the focular power against such bishops and even, of worthip. Charlemagne propagated Christianity among the Saxona by fire and tword; and the Christian religion was introduced some time after among the Bohemians and, Moravians.

About the year 1517 the reformation began in Germany; for the archbishop of Menta being unable to pay the large sums the pope expected from him, procured leave of his bolines to fell his pardons and indulgencies in all the great each of Germany. Dr. Martin Luther hearing of the control of Germany. Dr. Martin Luther hearing of the control of Germany. Dr. Martin Luther hearing of the control of Germany, and openly disputed a viteral of an Leipsie against these who afferted the owner of the pope to grant pardons and indulgencies, notwishlanding his being threatened with excommunication, and with being condemned as an heretic; but the election of Saxony approving of his dedrusts, he boldly propagated them in other parts of Germany, where the dukes of Brunswic and Lunenburg, Wittenberg, Mecklenburg, Pomerania, the marquis of Brundenburg, the landgrave of Hesse, and the inhebitants of most of the imperial eities, became his disciples, and the inhebitants of most of the imperial eities, became his disciples, and the inhebitants of most of the imperial eities, became his disciples, and the inhebitants of most of the imperial eities, became his disciples, and the inhebitants of most of the imperial eities, protested against the conclusion of the due at Drive, protested against the conclusion of the due at Drive, protested against the conclusion of the manus of Protestants; and from this protest they received the names of Protestants; and from this protest they received the names of Protestants; and from the protest of the due to the Auglburg Consession.

They took no part in the council of Trent; but the year before, that is in 1537, at an aftembly at Smalkald, they fet forth the fubfiance of their doctrine in certain stricts, in order to deliver them to the stemberd bishops. Alterwards refusing to recode from the opinions they had professed the manus of the protest them to the stemberd bishops.

tet forth the jubitance of their doctrine in certain articles, in order to deliver them to the affembled bishops. Alterevards refusing to recorde from the opinions they had professed, the emperor Charles V. endeavoured to reduce them, by forces, but after a long war, which broke out in the year 1546, he granted them a toleration at Passaw in 1552, which was afterwards confirmed to them at Augsburg in 1555, during the reces of the diet of theempire. By this peace, all the adherents to the Augsburg confession were confirmed in their full religious liberty; till a final agreement concerning both religious fiberty; till a final agreement concerning both religious fiberty; till a final agreement concerning both religious liberty; till a final agreement concerning both religious flouid, be tought about, and in case that should not be effected, see ever. To the maintaining of this important law of the empire, the emperors and popsish powers have frequently howent themselves by new obligations; and the former in particular have always confirmed it by eath in, their capitulation of elections and the doubts that apole upon, it were removed by the treaty of Westphalia, in the year 1648. By virtue of this tenewed and confirmed religious peace, no other religion, but that of the Roman, Lutheras, and Reformed, is to be tolerated in the empire; yet there are fects that adhere to neither of these three religions, and yet in some places empire that church belongen only to the agreement.

The determination whether a person be a member of this or that church, belongs only to that very church; and each sovereign, or lord, is bound to allow his own vasible and subjects who are of another religion, and only the public and private exercise of their; but every thing belonging to it, churcker, schools, spiritualities, incomes, consistories, sec. in the same manner as they shood on the first of January, 10241 but in a country where there are subjects who addre to not religion, which in that year was neither publicly or privately observed, it lies in the sove-reign's breast country that the in the country or not. If , e rs is to a stipulation with them, and or not. If the state of the sta

edly infringed in later times.

Proteflant flates may make what regulations and changes they pleafe within their own jurifdictions in matters relating to the churches or febools. Hence the external forms differ greatly in the Proteflant countries of the empire. The fovereign commonly decides all important affairs, fettles and eliablishes, removes, promotes, cashiers, or otherwise punishes such as ferve either in the church or schools: he forms ecclesiatical regulations, appoints featle

ven; cfts.

and fuffs, and species of the church. Confift ries are also generally appointed by the protestant states, which for the most part confist of lay and excelential counsellors, but in some places store, and in others fewer things fall under their notice. In many places slid poculiar fynods a church council are held. Those that fave the church schools are either appointed by the fewering of the council or held. Those that fave the church schools are either appointed by the fewering of the council or held. Those that fave the church schools are either appointed by the fewering of the council or the configuration of the council are held. The fame power is policified by the Frotestant states over their catholic subjects, as the catholic states exercise over their Protestant subjects. In favour of those who, in the year 1624, enjoyed the public exercise of their religion, it is provided, that the catholic bishops in whose district they belong, shall retain the same spiritual juristiction over them as for as in this period configuration yield where mercily tolerated out of grace or favour, are also wholly left in this particular to the supreme juristiction of the lord of the country, but with this limitation, that he can require nothing of them which is contrary to the principles of

de hal a 110 to 210 25. 1 160

their church. On the other hand, no clottler fitured in the territory of any Presentant superior, or lord, must be converted into any other order, unless the formet order be wholly extinct; and even in that case, the clottler is no be supplied only with such regulars as had a being as an indee, prior to the religious diffensions. In store, the Protestant body has mutually agreed, that when ver for the struce a country hall twith to the reformed church, or obtain a country whose inhabitants are of that communion, and vice versa, he shall lear his subjects the free exercise of their religion, their whole form of clioreth and school discipline, and all their other privileges. But if a church, shall of littell surn to that of the lord of the country, the public exercise of religion shall be permitted the people; but at their own expense, and wi hout prejudice to the other. The religion that prevailed in the country at the conclusion of the treaty of Westphalia, is to be that of the confisherial counsellor and superintendents of divinity and philosophy. What surther temains to be said on this head, our readers will find in the accountry and descriptions already given of the respective countries, and provinces which compose this great simpire.

It is name of this corratery is derived from the Benni, or Bojemi, its antient inhabitants, who were the defendant of he Boil, or Gellie nation, that retired into the Hercynian forely, (which must through this country) in order to avoid the perfections of the Romans. This kingdom once comprehended Lufatia, till the house of Auftria; granted that country to the electorate of Saxony. It is bounded, on the earl, by Poland; on the well, by the palatinate of Bararia; with part of Saxony; in the north, by Lufain 2 and, on the fouth, by Autria. It is about three hundred miles in length from north to fouth, and two hundred and fifty from eaft to well.

This kingdom is divided into two parts; namely, it. The kingdom of Bohemia Proper. 2. The marquifate of Moravia. We shall defertibe these separately, as each of them has something peculiar to itself, either in the produce of the country, or with respect to its inhabitants, occ., Bohemia Proper, is one of the best countries in the Austrian dominions; and is bounded, on the east, by Moravia and Sliesia; on the west, by Bavaria; on the north, by Lufain; and by Austria, on the south. It is almost one hundred and story in breadth, from north to south, it is almost forced in the fouth, it is almost forced and forty in breadth, from north to south, it is almost furnounded with mountains and woods, in the former of which are mines of gold, silver, conner, the internal content and in the fourth, and not the fourth, and not the fourth, and not the fourth of the force of the force of the force of the force of gold, silver, conner, the force of the

to loutage let is amore turrounced with mountains and woods, in the former of which are mines of gold, filter, copper, ting iron, bead, fulphur, and nitted : Here are likewife abundance of carbuncles, emeralds, amethyfts, jacpers, lapphire, cryftals, and other precious flones, most of which are purchased by the Jews, who export them into

of which are purchased by the Jews, who export them into foreign countries.

Though the large thick woods, with which Bohemia abounds, are fupposed to render the climate very unwholfome; yet the foll is, in general, tolerably fartile, being well-watered with rivers, particularly the Eithe, the Moded dau, the Egra, Oder, Vittula, Teyn, and Igla. Comand millet are produced here in great plenty; as also shundance of hops, faffren, ginger, red wines, flax, wood,

unal re Horb 'es . (10, 4)

and timber. They have excellent passurage, and, besides outle and sheep, breed great numbers of size horses, which are chiesly purchased for the use of the French. In the woods are several forts of wild beasts, the most remarkable of which are bears, bynase, wolves, fones, marteris; badgers, beavers, and otters; with verious kinds of game. The rivers afford several kinds of excellent fish; and, infome of them is found gold dust. Here were formerly great numbers of fait pius; but the working of them not answering the expense; they have been some formerly great numbers of fait pius; but the working of them not answering the expense; they have been some time neglected, and the country is supplied with fait from Missian and other shocks. Here are mineral waters such hot baths in this country, which also produces term significant or sealed earth, Moscovy-glase; stone torripic coal, alum, vitriolid water, and marbles; the season of produces the territory of Egra, or Eger. But as the city of Prague is not only the principal place in this division, but also the capital of the whole kingdom of Bohemia, it will be necessary before we take notice of the towns-in the other circles.

kingdom of Bohemia, it will be necessary to give a particular description of thes relebrated city; before we take notice of the towns in the other circles.

When the Bohemias shir settled in Prague, they called it Boilobeim, as being the capital of the kingdom; it was afterwards called, by the Scharonians, Prague, which name hath been given it ever since. It is situated in sources for minutes east longitude, and stifty degrees five minutes north latitude. It stands one hundred said twenty miles north-east of Ratison, one hundred and strength of the set of Nursimberg, sevency four south of Dreiden, one hundred and sity south of Bellin, and one hundred and forty orth-west of Vicana. The city stands in a pleasant and fruitful country, in the midst of gardens and sine fields; and is surrounded with magnificent palaces, belonging to the nobility and consist, for the most part, of three stories, beliefs nine spranging of the south of the side of the south of the side of the constant of the stories and consist, for the most part, of three stories, and about forty cloiders, besides nine synagogues for the Jews. The Christian inhabitants are computed to be seventy thousand, and the Jews about swelve thousand. The city is about welve miles in circumference, and is watered by the river! Moldas, which runs through the principal part of its.

The city of Prague is divided into three parts, by the name of the Old, News and Leffer Town. The Old Town, which is as big as the other two, has fireste that

are carrow and darkfome; but is very populous, and full of fair; though old-fairhioned houfes. Here flands the univerfity, the only one in Bohemia, and one of the moft famous in Europe, founded by the Emperor Charles IV, in the year 1358, where is ftill a great number of fludents, in the year 1358, where is ftill a great number of fludents, including the comparable to the number in 1400, when John Hufs, the then rector, is faid to have last no left than forty-four thoufand. And when the emperor Charles V. would have retrenched their privileges, wenty-four thoufand are faid to have left it in one week, and fixteen thoufand more foon after. Here are allo faveral monafteries and colleges, of which there is a very magnificent one belonging to the jefuit near the bridge; from the beffry of whose church there is the beft view of the city. It was founded by the emperor Ferdinand for a hundred of that order; and it is faid, that in and about this city there are not jefs than two thoufand. Great numbers of Jews live in this quarter, from whence it has the name of of that order; and it is faid, that in and about this city there are not left than two thousand. Great numbers of Jews live in this quarter, from whence it has the name of Judenstadt, or Jews town. Mr. Pollnits was affured, when he was here about 1729, that there were no left than eighty thousand. They have the trade of this city all in their own hands, deal in all forts of commodities, especially in the preclous stenses sound in the Bohemian miner, and by receiving all old-fashioned things in payment, quite ruin the Christian handicrassismen: but on giving intunation that several of them corresponded with the enemy, and helped them in the last reduction of it, they have been ordered by the court of Vlenna to depart both this city and kingdom by a time limited, and must obey it, if the intercession made for them, by the maritime powers of Great Britain and Holland, does not prevail. Dr. Brownsys, the Bohemians still keep models in remembrance of John Huss, and Jerom of Prague; and it is observed by others, that on one of Huss's medals there is engraven his prophecy at the stake, in these words: "Centum revoluties annis, Deo respondebitis et mibi." That is, "A hundred years hence ye shall answer for this to God and me." Which was reckoned to be suffilled upon the church of Rome by Luther's Reformation.

The second division of this tity, called the New Town.

Which was reckoned to be fulfilled upon the church of Rome by Luther's Reformation.

The fecond divition of this city, called the New Town, (which is the best built quarter of the three, with spacious beautiful streets, and takes up more ground than the old one, by reason of its gardens and vineyards,), was formerly separated from the old one by a wall, but now only by a ditch, into which they can let the river. Here are, the ruins of the palace of, their antient kings, the walls of which are so firmerly cemented, that they can scarce be demolished by any engine. The jesuits have builts a church and college bere, much more stately than that in the Old Town; and over its gate there are thirteen states of means big at the life, of a stone which resembles brafe. A citadel has lately been built for desence of this part, which is well furnished with cannon, as are also the other castles, and the ramparts.

and the ramparts.

The Leffer Town is on the west side of the Moldau, and is much pleasanter and better built than the old one, to and is much pleasanter and better built than the old one, to which it is joined by a bridge, one of the longer and most fubfiantial in Europe, it having twenty-four arches, be-ing in all one thousand feven hundred feet long, and thirty-five broad, with two high gases, under two large towers at each end, and the flatues of feveral faints on both fides; at each end, and the statues of several saints on both sides; and a great crucifis of copper gilt, which the Jows were compelled to set up, in this place as an atonement for some crime they had committed. Part of this town lies on a rising ground, and at the top of it, called Rasschin Hill, is Upper Prague, where most of the nobility have house, and the emperor a very magnificent palace, with a summeral house affording one of the most beautiful prospects in the world. Here are several great hall, called resistance a much house affording one of the most beautiful prospects in the world. Here are several great halls, gallerness, and a multitude of other apartments adorned with noble piclures; and adjoining to it is a large stable, where are sixty size led horses, generally belonging to the burgrave of the city, Here is also the cathedral of St. Veit, with many antient monuments, and magnificent tombe for great persons. This metropolitan church was burnt down by the Swedes in 1648, and is only rebuilt in part. Its magnificence and beauty consists in the thickness of its walls and arches; and its architecture feems to be more sorbic than that of the beauty confifts in the thickness of its walls and arches, and its architecture feems to be more gothic than that of the Goths themselves. The roof of this eathernal is adorned with the standards taken from Frederic the elector palatine in the battle above-mentioned. In this cathedral the king and queen of Bohemia are confecrated, when the bishop of Prague performs the unction of both 1 but the abbets of St. George, an abbey upon Ratichin Hill, places the crown upon the lead of the queen, in which function the is affisted by the ladies of the great officers of the crown.

Among other bodies, here are preferred, with great

veneration, those of a couple of faints extremely dees to the Bohemians, vis. 3t. Weneratous (the source of this, shurch, who was king of Johemia), and his wis 'confer, 6t. John de Napon seene, who, because as would-not discover her confess he to her Jeapon bulland, was, by his order, thrown John the bidge into the Modain, where being drawned, he was anadoised at Roste by row Benedic XIII. in 1721, at the brouget and experies of the figures, and of the states of the kingdom. There is vast concourse of people from all parts to his shritten and his tomb, which was adorned by the late emperies with a richt exnopy, is so loaded with precious gifts, that it bids sair, if it continues much longer, to be as rich as the lady's at Loretto: In short, he is the only faint in vague here, there being no church where he has not a chapel, no bridge without his estay, and states any soul without his estay, and there is a smoker large one for comedies, supported by pillars that are pisitetred, its initiation of stable.

Count Coloredo's palece and gerdens are reckoned the neatest here, but Count. Wallenstein's the largest and mode magnificent, above one hundred houses being pulled down to make room for it: the hall is lotly and spacing, and to down to make room for it. the hall is lotly and spacing, which will have a space and gerdens are reckoned the neatest here, but Count. Our fucesflors."

During the last century, it has suffered the greatest cracily which a city can possibly undergo in time of war, having been often befiged and taken in that period, and several times plundered. The archduke Leopold bishop of Passaw plundered the Lesser Town, as he would have done the whole, if it had not been timely relieved by the emperor Matthias, king of Hungary. Nine years after this, it was again plundered by those who were most concerned to preserve it, via. the Imperialists, who entered the city, and carried off an inestimable booty after that famous battle of Weisschnerg, or ste White Hill, near this city, on the eighth of November, 1620, when Fredric V. elector palatine, was totally defeated by tha forces of the emperor. Ferdinand, under Maximilian duke of Bavaria, and thereby lost the Bohemian crown, and his German electorate. Is was no better used in 1621, by the elector of Saxony, after he made himself master of Bohemia, the great Walstein, who recovered this country from the Saxons the next year, took this city by florin. In 1641, the Swedish general Coningsmark, surprised and plundered that part of it called the Lesser Town, with only three shouland foldiers, and took a wast booty; but the inhabitants of the Old Town, affished by the icholars of the university, repulsed him, and escaped being plundered. The twenty-fixth of November, 1741, the French and Saxons, after a very short slege, stormed and took it, with two thousand seven hundred and eighty men in garrison, one hundred and eighty men in garrison, one hundred and shely men in garrison, one hundred and shely men in garrison, one hundred and eighty men in garrison of hundred and eighty thou find feven hundred and eighty men in garifon, one hundred and twelve cannon, befides a great quantity of ammunition and provision; and the neat month the late elector of Baya is was there proclaimed and crowned king of Boltemia. But in 1742, the Austrians having for fome monthe blockaded and befieged it, the marshal Bellens (that very general who was in December, 1744, arrelled, together with the chevalier, his brother, in the electionate of Hanover, and was afterwards prisoner of was at his majethy's castle of Windfor; collected all the provisions, &c. that he could carry with him, marched out of the city the beginning of December, 1743, with several thousand foot and horse, to Egra; and the same month the rest of the garrison capitulated to the Austrian general. Prince Lobkowits, and marched out to the number of four thousand men, leaving two thousand sick behind them, not long after which the queen of Hungary was here crowned queen of Boltemia. In 1744, the king of Prussia came before it with an army, which having with its bombs destroyed almost the Old and New Towns, and the Jews Town, the Austrian garrison surendered prisoners of war in fix daya after the opening of the trenches; the bombs and red-hot bullets liaving set so many house on fire in feveral quarters, that the citizens being to the last degree distressed and discouraged, so lutimidated the militia, that the regular troops could not make them do their duty. But the city was soon again in the hands of its sovereign the queen of Hungary; for in November, 1744, on the approach of Prince Charles with the Austrian army, the Prussian garrison evacuated the town after nailing up the cannon, breaking twenty shousand pieces of all forts of arms, and throwing the powder, and other warlike stores, into the river Moldau. In 757, another attempt was made on it by the king of Prussia, which miscarried, that monarch being repulied by the garrison with great loss.

This city shousand pieces of all forts of arms, and throwing the powder, and other warlike f

into two parts. Asness Sylvius compares it to Florence, though it is certainly much larger and more populous. Martiniere isys, its ituation is much like that of Lyon, being partly on a hill, and partly on a plain; which is, however, inclosed likewise by hills that are on the other side of the Meldeni.

of the Moldau. Egra, or Eger, receives its name from the capital, which is fituated ninety miles west of Prague, and is the only place of note throughout the whole dutrict. The city is

tolershly large, and built on the declivity of a rock, at the foot of the meuntains which inclofe Bohemia on the work, and near the river Eger, from whence both it and the extitory have their names. This place is well-fortfied, with a double wall neat the river, and in other parts with a triple one, befides which, it hash a very frong eather. In 1779, Frederic I. made it an imperial city, for its fidelity to him against the duke of Bavaria. In consequence of this, it has the privilege of colning money; and there lies no appeal, but to the fevereign, from the judicial fentences of its council.

There are feveral antlant and alegant buildings in this city, among which are three cloifters, with courts of judicature, holpitals, baths, and store houses for corn. At fimall diffunce from the city is an acid spring, whose waters are purgative, and remarkable for removing disorders in the eyes, cars, and other parts of the head. Mines of gold and filver are also in its neighbourhood, but they have for feveral years past been entirely neglected.

The Eger is a very broad river; and is deep, as to admit vetiles of vary considerable burden, which is of the utmost utility to the inhabitants of the city, as the great variety of excellent sish contained in it, assords them a plentiful supply of food.

Bohemia Proper, exclusive of Presume and the percentage.

variety of excellent fish contained in it, assords them a plentiful supply of food.

Bohemis Proper, exclusive of Prague and the territory of Egra, contains the twelve following circles or provinces; namely, 1. Peraun-Podbrad; 2. Rakawnita; 3. Leutmerita; 4. Sasa; 5. Pilsen; 6. Prachin; 7. Bechin; 8. Kaurzim; 9. Tchassu; 10. Chrudim; 11. Konigingrata; and, 12. Bunalaw; which we shall now proceed to give a description of.

I. The circle of Beraun-Podbrad comprehends Moldau, which was united to it in 1714, and contains our hundred and fifty telemiories.

which was united to it in 1714, and contains our hundred and fifty teigniories.

The principal places and buildings in this circle, are, t. Beraun, a royal borough on the river Meis, near which in 1744, the Pruffians were defeated by the Austrians. 2. Pezebram, a royal mine-town. 3. Old Knen, a smell town belonging to the order of the cross with a red star. 4. The Holy Berg, a very handsome college. 5. St. John-under the rock, a cloister of Benedictines, whither the inhabitants of Prague make pilgrimages, and the abbut of which belongs to the states of the country. 6. Oftrow, a Benedictine cloister, in an island on the river Moldau. 7. Konigssat or Zrabassaw, a royal soundation, and cloister of Cistercians, the abbot of which has also a member of the starts of the country.

11. The circle of Rakownitz comprehends that of Slan, or Slansko, which was united to it in 1714. It contains

or Slanfko, which was united to it in 1714. It contains one hundred and fix feigniories, effates, and feats. It is in fome parts mountainous and woody, and in others very fruitful, producing a great plenty of corn, and other arti-

cles.

The most remarkable places in this circle are: 1 konite, or Rakowuita, which gives name to the circle is otherwise very inconsiderable. 2. Dozan, a cloif nuns of the order of Pramonstratenies, the provost of is a member of the Bohemian states. 3. Plass, a of Cistercians, whose abbot is also a member of the 4. Raudnice, a small town, where there is a cloister or acquire canons of the order of St. Augustine. 5. Kraiwok-lad. another small town.

lad, another small town.

lad, another small cown.

III. The circle of Leutmerita, so called from its most diffinguished town, which is the capital of the province. It is streated on the Elbe, thirty-five miles north-west of Prague. It is a rich, well-built, and populous town, a royal borough, and bishop's see, the prelate of which is a suffiregan to the archbishop of Prague. Here is a hand-some college, which formerly belonged to the jesuits, and consisted of sleven priests, four masters, and seven co-adjutors. The other remarkable places in this circle are the following, viz.

jutore. The other remarkable places in this circle are the following, vis.

1. The small but pleasant town of Toplvi, remarkable for containing several warm baths, the springs of which were discovered so early as the year 762.

2. Austi, or Austig, a royal borough on the Elbe.

3. Diecsin, Tettaen, a royal borough on the Elbe.

3. Diecsin, Tettaen, or Tirchen, a next town, frusted on the Elbe, and in it is a sine citadel built on a rock.

4. Benessew, Benefich, or sine sine sine sine citadel built on a rock.

5. Lippey, a small town, remarkable for producing sine potters earth, cloth, and polithed glass.

6. Krupka, or Krauppen. In this town is an image of the virgin Mary, to which pilgrimages are made from various parts of the kingdom! there are time works in its neighbourhood, and a college that formerly belonged to the jeluits.

7. Belim, a small town, in which is a fine citadel, and a spring of excellent

Activates in 1756.

The The circle of Sanz is very fertile, being watered by the Moldau, which runs almost through the centre of it. This province is remarkable for producing great quantities of hops, and feveral forts of excellent grain;

The following are the principal places in this circle, viz.

Wary, or Carlibad, that is, Charles's bath, a royal borough, celebrated for its baths and medicinal waters: these baths are of two forts, differing both in heat and firength; the one being boliking hot, and the other little more than lukewarm. The fource of them is in the middle of a river, formed by torrents from the neighbouring mountains, whose waters are exceeding cold, notwith-flanding which, those of the mineral forings, especially of the hottest, are seen to smoke in the river. These waters are beneficial in the cure of various disorders, particularly the gravel; and their virtues have been particularly deferibed by Hoffman, and other physicians. The town stieff is but a dirty place; inhabited chiefly by armourers, and other artificets in iron. B. Elnboxen, or Loket, the capital of a territory which was annexed to this circle in the year 1714, and a royal borough. It is feated on a high

the year 1714, and a royal borough. It is feated on a high fleep rock, near the river Eger, fevenry-two miles from Prague, and, being a frontier town strongly fortified, it is called the Bohemian key to the German dominions. The German language is spoken by the inhabitants. The German language is spoken by the inhabitants. The other places chiefly deferving notice, are, 3. Zotee, or Saas, a royal borough, and the capital of the circle. A. Launy, a royal borough, on the river Eger. 4. Kadan, fituated also on the same river, and noted for producing excellent beer. 6. Pons, or Brux, a royal borough on the little river Bila. It is a weil-built town, and contains three cloiders, with a commandery of the knights of the order of the Cross, with a commandery of the Knights of the order of the Cross, with a red flar. 7. Chomatow, a royal borough, in which is a handlome college that formerly belanged to the jesuin. The neighbourhood of merly belonged to the jefuits. The neighbourhood of this town is famous for producing great quantities of allum. 8. Folkerow stands on the river Eger, and produces vitriol, fulphue, and allum. 9. Dreyheokin is a small neat town, and in its neighbourhood is a mine that produces excellent copper. to. Chlum, or Culm, is a small town belonging to the order of the Holy Cross. It is remarkable for a celebrated image of the Virgin Mary, to which pigrimages from all parts of the circle are frequently made. 11. Joachimottal is also a small town. In the beginning of the fixceenth century several silver mines were first discovered in its neighbourhood. vered in its neighbourhood.

V. The circle of Pilfen abounds in excellent pasturage,

on which account great numbers of theep are bred in it, and this country produces the best cheese in the whole kingdom.

he chief places of note in this circle, are, t. Pilfen, which gives name to the circle, and is a large, well-built town, fituated between the rivers Miza and Radbuza, about forty-four miles fouth-weft of Prague. It has two large churches; and near the centre of it is a fracious marketplace, well fup-plied with most kinds of provisions. The west and south sides of it are defended by a bulwark and a large d'.cu, within which are firong walls, with towers and bastions. This city bath greatly suffered in the respective wars of Boltemia, it having been several times taken, reseases and home. taken, and burnt.

There are contained, besides, in this circle, r. Klatta, a royal borough, well-fortisted with walls and ramparts. The only remarkable building here is a handsome college, which formerly belonged to the jesuits. 2, 3. Domazince and Kokycaany, both royal boroughs, in the latter of which is a cloitter of regular canous of the order of St. Augustine. A Nepomuck, a finall town, and noted only for giving birth to the faint of that name, who is fo much venerated by the Bohemians. Y.

VI. The circle of Prachln contains in it a confiderable

quantity of receious fores, with form filver and gold.

The principal towns are, it. Wadnary, a royal borough, fituated on the river Blanice. 2. Berg-Ruickenstein, a royal mine-town, in the neighbourhood of which is found filver. 3, 4s Pifek and Schuttenhofen, two royal borough-towns, both of them fituated on the river Watawa. 5. Hulyuce, a town fitteded on the river Blanice, remarkable only for giving birth to the famous John Huls, the Reformer, who was burnt alive by the papits, for definding the truth.

6. Wolin, a fmall town on the river Wol nika, belonging to the provoft of the collegiate chorch at Prague. 7. Strahorrice, another finall town, belonging

to the grand prior of the order of Malta in Bollemia, and fituated on the river Wolffik.

VII. The circle of Bechin contains the following places, viz. t. Bedweis, a royal borough, fituated on the river Moldau. It is a finall, but next town, well-built, and flrongly fortified. The thief building in it is a cloiflete belonging to the order of Donlineans. All falt brought out of the Austrian dominions; nut be first exposed to fale here, and par toil. 2. Taber, a royal borough, pleasantly fituated on a mountain, forty-five miles fouth-east of Prague. 3. Wittingen, a good town, having a large fortrefs, and a cloifler of regular canons of St. Augustine.

Neuliaus, a neat town, with a beautiful citadel, and a large manufactory of cloth. 5. Kruimlow, or Cruman, has also a fine citadel, and a handform college.

VIII. The circle of Kaursim contains four royal boroughs namely, Kaurzim, Kolin, Behemian-Brod, and Golow.y; but neither of them contains not churches. The only building, exclusive of the above, in this whole time, it is the first contains from churches.

able, except Kolin, which has leveral partities and churches. The only building, exclusive of the above, in this whole circle, is the Benedictine cloifter of St. Procopius, fituated on the river Safawa, the abbot of which has a feat in the diet. The chief produce of this circle is timber, which is conveyed to Prague by the river Moldau.

1X. The clicle of Tfehasflau contains the following places, viz. 1. Kuttenberg, a royal borough, about thirty miles fouth-cast of Prague. It is noted for its filver mines, which wish also.

miles fouth-eaft of Prague. It is noted for its filver mines, which yield also copper, and were formerly very profitable. Though this town is small, yet it is well built, and has in it many handsome edifices; among which is a large college that formerly belonged to the jesuits. 2. Czalaw; is also a royal borough, in the principal church of which lie the remains of John Ziska, the famous leader of the Hussites, who died in 1424. 2. Lodecz, a small town and seigniory; which the empressqueep purchased in 1753 of baron Kock, for two hundred and forty thousand stories. 4. Goez-Genikow a handsome makes-town, and remark-4. Goez-Genikow, a handforne market-town, and remark-able for having in it an image of the virgin of Loretto. 5. Chotofuce, a small town, where, in 1742, the Prussians obtained a complete victory over the Austrians.

X, The circle of Chrudim contains the towns of Chru-

dim, Alla-Meyta, Poliefka, Cho!tice, Hrochuw, Tey-necz, Kossemberg, and Pardubice. The three first of these are royal jointure-towns. Koffemburg was formerly the property of the jefuits, but fince their extirpation it hath been joined with Hrochuw and Teyneez, and all those now belong to the order of Pramonfratenfes. Choltice has a handfome clindel, as has also Pardubice, the latter of which is remarkable for the manufacture of fwords believe the latter.

of which is remarked.

XI. The circle of Konigingratz contains, 1. The capital town which gives name to it. This is a royal jointure-town and bilinop's fee, fituated forty-five miles northeast of Prague, at the conflux of the rivers Elbe and Entered to Prague, at the conflux of the Teutonic order, and lita. Here is a commandery of the Teutonic order, and a fine college that formerly belonged to the jesuits. 2.

a fine college that formerly belonged to the jefuits. 2. Trautenau is another royal jointure-town, fituated on the river Uppau. 3. Chluemec, near Braunau: at this place the emperor Lotharius was defeated, and taken prifoner by the Bohemians. 4. Kukus, on the Elbe, has a celebrated medicinal firing and bath.

KII. The circle of Bunflaw has Inng-Bunflaw for its capital, which gives name to it. The town was a baron-borough till 1505, when the inhabitants purchased its freedom; and in 1609 it was ranked among the royal boroughs by the emperor Rodolph. 2. Miclinick is a finall royal jointure-town, fitted near the conflux of the Elbe and Moldau, and contains a castle and collegiate church. It is remarkable for producing red wine of a most excellent and Moldau, and contains a cattle and collegiate church. It is remarkable for producing red wine of a most excellent quality.

3. Benatky, is a small town on the river Ifer, and contains a citadel. It is "markable for having been the refidence of Tycho Brahe, the celebrated afternomer.

4. Nyanburg is another fir all town, fituated on a plain at the conflux of the Elbe and Martin. King Wenzell. made it a royal borough, and enlarged it.

In treating of the inhabitants of Bohemia, their persons, the is the conflux of the Martin.

&c. it is necessary to observe, that they are a mixture of Sciavonians and Germans; the former of winds live in Sciavonians and Germans; the former of ward live in villages, and are flaves. The inhabitants of the line sententer fond of arms, arts, or trade, bir prefer an elle, indolent life. They are in general via rade, long, and fubject to few diferies. In their different to they are they are fightle, but courageous, and always made and of fulfilling their engagements. The gentry and middling for of people are open and agreeable in their chawardation; but the peafants are fly and morofe; and fuch archiveliness, that

that there is no trufting them. The people in general are exceedingly illiterate, notwithiffanding there are manyfeminaries of learning in different parts of the country, which is owing to the negligacy of the parents, who are void of literary emulation through their natural indolence.

The Bohemlan language, is a dialect of the Sciavonic, but foracy that the trust of their neighbours, who fleak the fame language, as the latter change the conformants more into your theorem, which is allo intermixed with the language of the common people.

The inhabitants of Bohemia are fuppoled to have received the Christian faith for early as the fixth century, but if not then, it is certain they did in the ninth, and their religion was that of the Greek church, till Boteflaus, furnamed the Good, introduced poperly among them. John Husf and Lerems of Prague were burnt by order of the council of Constance, in the 15th century, for endeavouring to bring about a reformation in religion.

In 1647 the protestiants were deprived of all their rights and privileges; and lind is swould not fubmit to the Roman catholic church, were compelled to quit the country. Since the above period, popery has been diablified in this country. There are, however, a few Lutherans in some parts of it; but they are obliged to be on their guard, and to conceal themselves a numb as possible. The Jewa have an ample toleration of their religion, and are allowed many indulgencies which are denied to the protestians.

It hath always been the office of the archbiflopric of Prague, who is born legate of the loly apposible see of Rome, to crown the kings of Bohemia. He is also a prince of the boly Roman empire, though he has no seat in the diets, primate of the kingdom, and perpetual chancellor of the university of Prague; the bishops of Leurimeritz and Konigingrota are his fusions. The powerment of the church and clergy is vessel on the archiginficopal consistory. From ment of the kingdom of Bohemia was governed, for a considerable time, by dukes, and afterwards

glafs, earthen-ware, and paper, part of which they export to foreign kingdoms.

The flates of the kingdom of Bohemia raife the revenues: they affenble annually at Prague, to provide fuch fums as the for sein demands of them, over and above the cafform and duties to which they are entitled by prerogative. The revenue is faid to amount to near one million flerling a year. The flanding militia of the Auftrian hereditary countries is twenty-four thousand men, towards which Bohemia furnishes nine thousand. These serve to fill up the marching regiments in time of war.

Bohemia is generally considered as a part of Germany, but

Bohemia is generally confidered as a part of Germany, but with very little reason, for it is not in any of the nine circles, nichthri doth it contribute any thing towards the force, or revenues, or is subject to any of the laws of the empire.

techenger endelte Aben. There ere Co. children, n college

Of the marguifate of Moravia, its extent and boundaries, produce of the country, inhabitants, and principal tenuit, with a defeription of Infatia, its fituation, division, floris, towns, inhabitants, manufactures, G.

MORAVIA is about one hondred and twenty miles in length, and one hundred in breath. It is bounded, on the east, by Silefia and Hungary: on the west, by Bohemia Proper; and, on the fouth, by Austria. A great part of it is over-run with woods and mountains, where the air is very cold, but much wholfomer than in the low grounds, which are full of bogs and lakes. The mountains in general are barron; but the more level parts tolerably fertile, yielding corn, hemp, fax, fastron, pasturage, wines, froits, and garden-st-sff. This country also abounds in horses, black cattle, sheep, and goats. In the woods, and about the lakes, are plenty of wild fowl, game; venison, bears, hares, foxes, wolves, and beavers; also a beast of prey called ryslove, about the fisso of a middling dog, having its belly and feet spotted, and leaps suddenly on its prey, from rocks or trees. Here are likewise produced marble, bastard diamonds, amethysis, allum, iron, sulphur, silt petre, vitriol, but falt is imported; here are likewise mineral waters, and warm frings.

March and Morawa or Morau, are the chief rivers they abound wilk a great variety of fish, particularly trous, cray-fish, barbel, jack, perch and eets.

The Moravians are in general onen-hearted, 'not cass, to be provoked or pacified, obedient to their masters, and true to their promises; but credulous of old propheses, and much addicted to drinking. The nobility and citizen speak the German and French languages; but that of the lower class of the inhabitants is the Sclavonic, differing little from that of Bohemia.

The clergy, lords, knights, and borgestes compose the

lower class of the inhabitants is the Sciavonic, differing little from that of Bohemia.

The clergy, lords, knights, and burgeffes compose the states of this country; and the diets when summoned by the regency, are held at Brunn. The marquifate is divided into six circles, each of which has its captain, and contributes to its sovereign about one third of what is exacted from Bohemia. In this marquifate there are usually quartered seven regiments of soot, one of cultraffiers, and one of directors.

quartered feven regiments of foot, one of culraffiers, and one of dragoons.

The Christian religion was planted in this country, in the ninth century, and the inhabitants continued attached to the church of Rome till the 15th, when they espouled the doctrine of John Huls, and threw off popers; but after the defeat of the elector palatine, whom they and the Bohemians had chosen king, the emperor Ferdinand II. re-established popers. However, then are still some protestants in Mo. avia; and, among others, a set of reformers, called Hernhutters, or Moravian brethren, headed by one of the counts of Zinzendorff appeared among them, who, about the year 1740 met with great encouragement in England, but have at present only a certain number of followers, chiefly among the lower fort. The bishop of Olmutz, who stands immediately under the pope, is at the head of the ecclessaftics; and the supreme ecclessaftical jurisdiction is vested in a consistory, under the bishop.

With respect to the commerce of this country, which is not very confiderable, Brunn enjoys the principal part. There are iron-works, and glas-houses in some places; and at Iglau and Trebitz are manufactures of cloth, paper, gunpowder, &c.

The following are the principal places in this marqui-

gunpowder, &c.

The following are the principal places in this marquifate; viz, Holomauc, or Olmutz, the capital, which is a fm:ll, but neat, well-built, and populous city, fituated on the river Morawa, eighty miles north of Vienna. It is divided into the Old and New Town, in which are fome spacious, regular streets, with fine houses, all painted on the outside, two great squares, a cathedral dedicated to Sr. Weiszel (where it is said St. Cyril is interred), several hospitals and coulters of monks and must an anisystific. we case (where it is laid st. Cyrii is interred), leveral hospitals and cloifters of monks and nuns, an univerfuy; riding academy, learned fociety, and twenty-fix churches. In the neighbourhood is a cloifter of canons regular of the order of Præmonstratenses, whose abbot is mitted. Olmurz is a royal borough, and the see of a bishop; and, by means of its river, carries on a considerable trade with Bohemia,

Hungary, Poland, Silefia, and Auftria.

2. The town of Brunn, or Brinn, is fituated twenty-eight miles fouth-welt of Olmatz, fifty north of Vienna, and one hundred and thirteen fouth-east of Prague. well-built, fortified, and inhabited; and a place of the greatest trade in Moravia. Here are held the courts of

Judicature and the diets. There are fix cloisters, a colle giate church, the hishop's palace, and a large college, with an hospital of the knights of Malta in the suburbs. The an holpital of the knights of Malta in the luburbs. The citadel is called Spielburg, or Spielnetga, and flands on a mountain close to the town. The clottler of Augustine hermins, is famous for an image of the Virgin Mary, made, as they pretend, by St. Luke, and a foundation for young ladies.

3. Iglaw, or Gihlawa, is a fitong, well-built, populous towit, and royal borough, in the river Ighlaws, feventy-fix miles fouth-eaft of Prague, and near fifty well of Bilth.

fix miles fouth-east of Frague, and near fifty west of Brinn. The principal buildings are, a large cellege and gyannafum, with two monasteries, one of Dominicans, and another of Franciscans. The trade of the town is chiefly in beer, and a coarse woollen cloth. This was the first place in Moravia that received the Angiburg confession. Being situated on the borders of Bohemia, and in the high road to Hungary, it is much frequented by travellers.

4. The royal borough of Znoyms, is situated on the river Teya, and is in the road from Prague to Vienne, which makes it a confiderable thoroughfare. There is a strong castle; but the town being overlooked by a mountain within cannon-shot, is incapable of holding out long. Here are four cloiffers, and a large college; and in its neighbourhood are sour cloiffers, and a large college; and in its neighbourhood are sour cloiffers, and a large college; and in its neighbourhood are sour cloiffers, and a large college; and in its neighbourhood are sour cloiffers, and a large college and a cloifler of Franciscans. The Ciffercian cloiffer of Welehrad, whose abbot is the fift of the regular prelates at the diet, Randa about a mile from the town.

6. The well-built and walled town of Kromerzia, or Kremfier, is fituated on the river March, or Morave, and belongs to the bithop of Olmuta, whole large and beautiful palace here was deftroyed by fire in 1752, together with the archives, the fuburbs, and fifty-five burgers houses, Here, is also a mint, a collegiate church, and several

Here is also a mint, a collegiate church, and several cloisters.

7. Prostnita; 8. Muglitz; 9. Zwittaway; 10. Listau; 11. Uniczow; are all walled towne. The first is a royal town, and has a considerable manufactury of falt-petre, glass, and gunpowder. The other rowns in this marquistate are too inconsiderable to merit attention.

The province of Luiatia is bounded by Brandenburg on the north, Bohemia on the south, Missia on the west, and Siless on the cast. It is divided into the Upper and Lower Marquistates: the sir of the former, which is a hilly country, is more salubrious than that of the laster, the situation of which is low and feury. The mountainous tracts are barren, the vallies fertile, and both the marquistates produce wood, turs, wheat, re, oats, miller, beans, pess, buck-wheat, lentile, sax, hopp, tobacco, manna, wine, &c. Here are litkwise medicual spring, quarries of stone, earths and clays for tobacco-pipes and earthenware, bastard diamonds, sgates and jaspers, allum, vitriol, &c. Cattle, venison, and sish are plentiful, and the country is well watered. Both marquistes were antiently subject to the king of Böhemia, the archaukes of Austria, or the electors of Brandenburg; but in the year 16 36 they were ceded to the elector of Saxony. The manufactures are woollen and liners stuffis, cape, gloves, stockings, spatter-dashes, hats, leather, paper, iron, glass, gunpowder, bleached wax, &c. many of which articles the inhabitant export. The imports are filk, jarn, wool, spices, wine, and, hops, garden-stuff, fruit, &c. The language of the people is very inarticulate, guttural, and barbarous; and their defs, both singular and mean. Christianity was established here in the seventh century, and at present the Reformed is the clashider deligion.

Upper Lusatia is composed of the following states.

established here in the teventn century, and at present the Reformed is the csablished religion. Upper Lusatia is composed of the following states; viz. state-lords, prelates, gentry, and commonalty; and with-out the concurrence of these, nothing of importance can be transacted. The dieta are either ordinary or extraordinary; the former meet once in three years, the latter only

nary; the ratmer neet once in three years, the latter only on particular or prefing occasions.

This district is subdivided into two great circles, called Budisfen and Gorlitz; the first of which receives its name from the capital of the marquisate. The town of Budisfen, is the seat of the same circles, and of the chief officers and tribunals. It is situated on the Spree, twenty miles north-

well from Gorlitz. It is pretty large, handfomely built, fittongly fortified, and well-inhabited: its caftle is fitoated on a high-rock within the town walls. The Lutherans and Roman catholies perform divine fervice in different parts of the cathedral. Here are feveral other churches, a council house, library, orphan house, lipinning-house, house of correction, two diet-hauses, three holpitals, a cymnatium, &c. A confiderable trade is carried on in hats, stockings, gloves, linen, glazed leather, cloris, futtian, Turkey manufactures, &c.

The other towns and plages are, 1. Carnena on the Elstet, which contains eight churches, three hospitals, a manufactury of linen, and another of woollen cloths, and a Latin fehool. 2. Baruth, a small tower, with 2 citacle, is fituated to pleasantly, that the meadow in which it is creeded is called the Golden Au. 3. Uhysis, a castle! 4-Markliss, a latin school. 5. Lobau, which has a mineral foring.

Markiffia, a Jatin chool. S. Lobau, which has a mineral fpring.

The town of Gerlita, the capital of the circle of the fame name, is twenty miles to the eaft of Budiffen. It was credted in 1130, by Bolefaus king of Poland, but foon after burnt, from whence arifes its name; for Gerlitz, in the Sclavonic tongue, implies "burnt town." It is the feat of juffice for this part, and the refidence of the governor, has feveral near chorches, and many fintely houles, built of stone. It is well fortified with walls, towers, and ditches: and the approach to it in difficult, because it stands in a morats, on the west side of the Neisse, which rifes on the borders of this country, and runs through it into the Oder; its great church, formerly called Sr. Peter and Paul, has hardly its equal in Europe: near a small church, on a mount without the city, there is a model of the holy separated at Jerusalem, built two hundred years ago by the direction of a citizen who had been there sweat times. Zeyler, who says there is a since college in this town, mentions several fires that have happened here, and town, mentions feveral fires that have happened here, and which have been more frequent in this than any part of Germany, or indeed of Europe. The chief trade of this town is in beer, and in drefting and dying woollen and linen cloth.

The other principal places are, t. Great Radmeritz, which colitains a noble temporal foundation for twelve which contains a noble temporal foundation for twelve ladies. 2. Hernhutt is a small place belonging to the count Zinzendorf: it was founded in 1722, by some Moravian brethren, and is now the chief nursery and feat of that set celled Hernhutters. 2. Musta has a great allumwork. 4. Lauban, upon the river Queifi, and the consiste of Silefia, sour leagues east of Gorlitz, which, though but little, is well-fortified, and has a great linem manufactury. 5. Zittow, on the river Neisle, a fine city near the border of Bohemia, eight miles south of Leibau, and twenty-eight east of Dreiden. Wenceslaus, king of Bohemia, encompassed it with walls in 1255. It is well fortified, and the houser are built in the newest style. It has a good trade in beer, a great manufactury of cloth, an hospital, which was once a Franciscan monastery, and the soubers are large and populous.

fuburbs are large and populous.
With respect to the land estates of Lower Lusatia, they are fimilar to those of the Upper. Spiritoal matters belong to a confistory erected in 1668; the chief officers are the president of the upper office, the land captain, and the land judge. The tribunals are the upper office and the land

The whole is divided into five little circles, viz. t. Luckau, containing no place worth notice but the town of the fame name, which is walked, has a lacin febool, a poor house, a house of correction, two hospitals, and several churches. 2. Guben, containing a town of the fame name, to which belong fix villages. In this circle are also the following places: Neuzell, with the appendage of thirty-fix villages: Potten having the jurisdiction of twenty villages, and the town of Sorau, which has a castle, school, hospital, and manufacturies of yarn, linen, and woolien.

3. Kalau contains a town of the fame name, the town of Friedland, and a few small villages.

5. Spremberg contains a town of the fame name, the town of Friedland, and a few small villages. The whole is divided into five little circles, viz. t. Lucly built,

SECT

Name, fituation, extent, and natural history of the country: also of the person, desir, seed, manacers, customs, religion, arts, manusactures, i.s.c. of the French

EDITERRANEAN

THIS extensive and populous kingdom obtained its prefent name from the Franks, who in the fifth century paffed out of Germany into Gaul, and made themfelves malters of the whole country from the Rhine to the British channel, and the Netherlands, towards the north ion the east by Germany. Swifferland, and Italy, on the fourth by the Mediterranean sea, and Spain, from which it is separated by the Pyrenean mouthains i, and on the well by the Atlantic occan; extending from the forty-third to the fifty-first degrees of north latitude, and from the fourth degree well to the seventh degree east langitude. Did not the province of Bretagne extend itself above an hondred miles farther into the occan, than any other part of the kingdom, it would be nearly of a fiqure form, and the breadth and length almost equal, that is, about five hundred and forty miles; but allowing for the hills and valleys, with the winding of the roads, it would, in a traveller's account, be above fix hundred miles over.

In the interior parts of the kingdom, the sin is mild and wholesome. The winters, however, in the northern provinces are cold, and last four or five months. Indeed the road, is in that sealon generally much severe refere them in England:

wholesome. I we inters, lowever, in the northern provinces are cold, and last four or five morphis. Indeed the rold is in that feafor generally much fererer there than in England; for we being furrounded by the fea; sate lefs fubject to continued frofits, and are befides better provided against the cold from our function advantages in being futoished with firing. They have, however, the advantage of clear featled weather, and are bet little troubled with fogs, which are so disgreeable in Great Britain and other countries. The fummers in France are hotter than ours.

With respect to its situation, France has the advantage of every kingdom in Europe, the seas which border upon of every kingdom in Europe, the feas which border upon it affording the inhabitants an easy communication with the reft of the world; the northern thores being washed by the British channel, the western coast by the Atlantic ocean, and the footh by the Medicerranean. Hence no country can be better figurated for the advancement of trade and navigation, than this.

The 'At.' toward italy; the Pyrenees, which border on Spain; and those of the Cevennes and Auvergne, are its chief mountains.

As to minerals, Languedoc is faid to have veras of gold and filver. In Alface these metals have been found in the fand of the Rhine; and the mountain of Wasyan, in that province, yields a filver ore, which is worked, and farther

fand of the Rhiner and the mountain of Wafaan, in that province, yields a filver ore, which is worked, and farther discoveries are making after it. Plenty of iron ore is found in various parts of the kingdom, and in Alface are mines of lead. Pitcoal is principally found in Henneyau, and all parts of the kingdom make fall parts. Here is also no want of marble; for fince Colbert's time, quarries, particularly in Languedoe. Provance, and Bourbonnois, are kept continually open. France, however, produces few germs; but has a mine of excellent turquoiles in Languedoe.

France is expectedly well-watered with navisable rivers. gema; but has a mine of excellent turquoiles in Languedoc.
France is extremely well-watered with navigable rivers,
the chief of which are the Loire; the Phone, the Caronne,
and the Sciue. Of these the Loire is the largest. It files
in the mountains of the Cevennes, and taking its courb
north and north-well, runs so Orleans; and from thence
directly well by Tours, Angers, and hantes, falling into
the western occan forty miles below the last city; baving
received in its course the Allier, Cher, Indra, Creuse,
No. 67. Na. 67.

Vienna, and the Maine; and has a communication with the Saine, by means of the canals of Sriare and Orleans. Its whole course is computed to be about five handred miles, including all its windings. The Rhone sides in the mountain of La Fourche, in the province of Uri in Swilltrland, and running wellward through the country of the Valeis, paties through the like of Geneva; and having sitted that city, flows fouth well to Lyons, where is joine the Soan, and then runs fouth till it falls by three feveral chaingels into the Mediterranean. The Garonne, receives its course in the mountains of Aure, in the county of Cominges. It becomes ravigable at Muset, and after being joined by leveral rivers, changes its mame, into the Gironde; and at length difcharges ittelf by two outlets into the Atlantic occan. This river has a calcirated canal, by which the western ocean is joined to the Mediterranean. The Seine rifes agen Dijon, in Burgundy, and gunning to the north-west visits Troyes, Paris, and Kouen, in its way, and at length falls into the British channel near Havre de Grace.

Grace.

France, though in general a fartile country, has neverthelessensity burner tracks and mountains. In some parts it produces plenty, and irrail of them a lighteney of the necessaries of life. In plentful years it yields more corn than in need fary for the subfiftence of the inhabitants of the a bad harvest is generally (acceeded by a fedireity, and in time of war there has been offere a great dearth of grain, which is the more felt by the inhabitants of this country, as bread in their principal food.

Some of their roots differ much from ours; for here are no found turning; theirs are long and finall, but well tasked, and being not so firting as ours, are more proper for their soups. They have sew postoces; but plenty of Jerusalem artichoaks. They abound in vast quantities of large red ontons and garlie; and also in shallots, rockambole, and leeks. These state are simpler than ours; but three simes as long in the white part. Lettuces are the great and universal fallad. In April and May the markets are fevred with vast quantities of white beets. Asparagus is here very plentiful; and they are so fond of fortel, that large fields are planted with it. They are also particularly fond of moultnesses.

recularly fond of multhrooms, of which they have several different species.

Great plenty of wine is produced in all the provinces of this kingdom. Among the several French wines, that of Champagne is reakoned the best, it being a good stomachic, reacy, and in taste and shower exquisite, with an agreeable tartuess. That of Burgundy, the best of which is produced about Beaume, here a fine colour, and a pleasant rafte. The wines of Angers and Orleans are also delicate, but a little heady. In Poictou is produced a white wifes that resembles khenish. The neighbourhood of Bourdeaux, end the lower parts of Gascony, produce excellent wincs. Pontac grows in Guienne. Mustadel and Frantinisc are the delicious products of Languedoc. Between Valence and St. Valliere, along the baukand the Rhone, is produced a very agreeable, but roughish red wine, that has a taste not unlike that of bilberries; it is named herminge, and for its wholsomeness, is much esteemed.

has a take not unlike that of properties, it is manuac hermitage, and for its wholfomenels, is much effected.

Frovence and Languedoc are the principal territories for the oil of olives. These and other provinces produce isoffice, and the northern parts in particular have large or chards, and take great quantities of oyder, which is there the common drink of the inhabitants. Bourdenux exports great quantities of princes, and capers are principally produced in the country about Toulon. Flax and hemp thrive in feveral parts of the kingdom; but limited is procured only in the north. Most of the provinces abound

In wool, and filk is cultivated with great industry, espe-eially in Languedoc, Provence, Lionnois, and Dauphing; during all the time which the inhabitants attend on the filk worms, public prayers are offered up for their prof-

The horned cattle, theep, and hogs of France, though very numerous, are, in general, far inferior to those of Great Britain. Good horses are also produced here, as well as asses, and agreat number of moles. The French wolf is the largest and ferered animal of the dog species, and martakes somewhat of the nature of a dog. He has a woil is the largest and nervest animal of the dog species, and partakes formewhat of the nature of a dog. He has a wild look, fhining eyes, sharp teeth, short neck, and is of a blackish colour: he has a howling voice, an obleng blunt muzzle, short ears, and a thick tail. Game and wild fowl are in the greatest plenty, and extremely good. The Pyrenesn mountains furnish timber for ship-building.

The Pyrenean mountains furnifs tember for this-buildings great quantities of which are also procured from Alface, Buryundy, and Lorrain; but in the other provinces the fearcity of timber and wood begins to be more and more felt. Here is also plenty iof fea and foring fake. The people on the fea-conft employ, themselves in fishing.

The nativas of France are generally stender, namble, active, and well-proportioned, their hair land eyes are, for the most part, black; their complexions brown; and the ladies are fond of giving a bright colour to their checks. The people in general are merry, forightly, and feldom out of temper; they are familiar, and acquainted with a stranger at fast fight; but many are extremely vain, and most of them remarkably talkatives. The common people are, in general, very extravagant in their dreft, though they fubsit on the most sincher citet imaginable.

The French eat but little folly-meat, and drefa it in a very different manner from the English: fricasses, ragoutt, hathes, 1 soups, diffusided with onions, herbs, goots, manch, a loups, arguited with onlone, nerts, and spices, are reached before joints boiled or routled; and what they do soil of roaft, has fearcely a drop of gravy left in it. As they are francers to the fine fat firloin and rump of beef, and other eggs joints which in Great Britain grace the tables of people even in middling circumstanters, they are unacquainted with the many English diffice stances, they are unacquainted with the many English dishes called by the name of puddings. The wealthy, however, supply this deficiency with sweetmeats, and a number of little delicacies; but the poor mechanics, and all the labouring part of the ration, live almost entirely on soops and wegetables. The common people, in Lent, feed on a variety of fallads, some of which grow wild in the fields; and on the feed of white kidney-beans boiled; they also say white larging a feet of pulls not much known in Engage. eat white lentils, a fort of pulse not much known in England.

in These people are so far from being addicted to jealoufy, that it is good manners to commend the beauty of a woman, and to extol her charms even before ther hufband's face: The women, too, behave, in general, without referre. The French are much commended for their obe-dience to their governors, and pride themselves on their profound veneration for their prince; but while the people had any thing to contend for, rebellions and civil wars

were as frequent in France as in any other country.

Their lands are so highly taxed, that small estates will hardly afford the proprietors a substituence, if they do not enjoy some post under the government; indeed, there is fearcely a confiderable family in the kingdom, that has not

icarcery a confiderable family in the kingdom, that has not fome preferement in the church, the army, or the court.

The ufual divertions of the French are gaming, walking, or taking the air in coaches, and attending plays and operas. With respect to their execution, there are few French gentlement who do not learn to dance, fonce, and with the many local. ride the great horfe. The nobility and gentry never apply themselves to trade; they seem indeed naturally designed for the coart or the army; and if they happen to be of a melancholy disposition, here are always convents, and numerous preferments to be met with in the church. As to their military virtues, it must be acknowledged, that to their military virtues, it must be acknowledged, that they do not want to rearry, and have brought the art of war to great perfection, there being no people upon earth more capable of attacking or defending a place than they, or that are better fkilled in the art of fortification.

The French language is formed out of that of the Gauls, Romans, and Franks, and is pretty generally understood throughout Europe; particularly by genteel people, whose education is deemed defective without it; it is not, however, to strong expertition and accounts.

ever, so strong, expetsive, and energetic, as the English. The great Dryden observer, that the French language has all the swiftness of a greyhound; but the English all the strength of a massis. There are two great difficulties which an unpractised person is under here in common fpeech; the one is, from the rapid pronunciation of the

natives, which always appears to be the case when the language is not familiar to us, but is chiefly owing to the shortness of the words in general. There is no effectuat cure for either, except frequent conversation with the French people of all classes upon their own ground. Some of our countrymen go armed with a dictionary, and make their French as they want it; but such French is generally an authority translation of the English forms of speech, not intelligible to French people. An English gentleman of this class was at dinner in a public company, and his business translating him to be sone as form as decrease would this class was at dinner in a public company, and his busifinest requiring him to be gone as foon as decency would
permit, he wanted to rell the French fervant, that " every
body had done," in order that the things might be taken
away: hereupon he confoits his book, and sinds, that
" every body" is " tout le monde," and " done" is
" sind, " which, with his narrow English pronunciation,
was, " tout le monde et sin!." The water, who happened to be a lad of humour, cried out, " misericorde?
que ferons nous! Monseur dit que tout le monde ets sini,
—Mercy on us! what shall we do? The gentleman saya
the world is at an-end."

Since the repeal of the edict of Nantes in 1685, the RoThe service of the se

the world is at an end."

Since the repeal of the edict of Nantes in 1685, the Roman catholic is the established religion in France; yet in Lauphine, Languedoe, and other provinces, there are such a number of feeret protestants, that they have been computed to amount to no lefs than three millions; but these, on account of their religious assemblies, at which fossetimes great numbers have been presents, have been cruelly harrassed and persecuted; and in 1745 some protestant preachers were hanged, laymer, were tent to the gallies, women to the convents, and children formed away from the arms of their parents. The French protestants (or Hugonots, as the Romanitts called them by way of reproteb) were always persecuted by the popish party, and even malfacred in the most barbarous manner several times, particularly on St. Bartholomew's day in the year 1572, when cularly on Si: Bartholomew's day in the year 1574, which in the middle of the night the famous admitsil de Coligny, twenty other great men; twelve hundred gentlement, and above one hundred denoted thousand protestants of all forts; wet murdered at Paris, and in other parts of the kingdom, without murdered at Paris, and in other parts of the kingdom, without refpect to age, flex, correlation; though a peace had been very lately concluded with them; to confirm which, the king of Navarre, the head of the proteflant party, was that day married to the French king's fifter. "After the death of Henry IV! who granted to his reformed fubjects feveral places, towns; and college, the fuecefloy Lewis XIII, abridged them of their privileges, took the cautionary towns from them, and even Rochelle, after a long and famous flege: and Lewis XIV, that despote and tyranties prince, carried the perfection grainft them to the highest decrease carried the perfecution egainst them to the highest degree of cruelty, and permitted their enemies to vez them a thousand different ways. They stript them of all their thouland different ways. "I'll hey stript them of all their privileges and liberty; aid-after thaving in vain tried vari-eus methods to conquer their confiancy, tent amongst them a vast number of dragoons, who practifed the most horrid barbartries to force them to renounce their religion. The edict of Ivantea being repealed October 1685, breat numbers of them; to avoid the cruelty of their internal perfecutors, endeavoured to take fanctuary in foreign countries, which liberty was denied to many; however, about one hundred thouland of them made their ecape, most of them leaving their effates behind them. Multitudes camb to fettle in Great Britain and Ireland, and especially la London, bringing with them feveral kinds of manufactures, which have proved very profitable to these kingdoms, while it tended to impoverish that of their bigotted persecutors. These transactions are chroniced among many other sun-lar events which contributed to grace the reign of that priest-ridden monarch, preposterously siled Lewis the Great! The provessant are, however, openly tolerated in Afface by virtue of a treaty, and in many places even the Jews. Indeed the freedom of writing, which may be faid to have been first introduced into France by M. de Volto have been first introduced into France by M. de Voltaire, and for the last twenty years has remarkably prevailed in that arbitrary government, has tended very much to
soften the rage of religious bigotry; and has, in a good
measure, delivered conscientious Christians from the
securge of intolerant zeal, by having made desim the
solution of the constant of the constant property considerable privileges; the principal of which are

EURIOPE, A confidered as envoys from the court of Rome to that of France, and cannot, in virtue of any papal mandate, inverfere in affairs of justice, unlefs fuch mandate has previously viscoved the king's function, and has been in due form registered in parliament. He The casting and holding all cecleficities assembles, with the constraint on of their decrees, depends on the civil power, without requiring the knowledge and consent of the pope. IV. The string is empowered to enset laws that merely concern the vecteficatical constitution, and to limit the exercise of the power of the clergy; and without the king's permission and ratisfication, no law of the charch, either by the hilliops of the pope, can fabled any one to outward penalties or panishments, or even to church discipline. V. The pope was levy no money in France, on any pretence whatever, except the sees and imposts allowed him by the concordat; though the king can tax the clergy without standing in need of a papal mandate, a privilege which other princes and purchase by paying a quota of such tax to the see of Rome. Not long since the king enjoined the clergy to pay the twentieth penny, and for that purpose to deliver in an inventory of their eftates and incomes. This indeed occasioned a great ferment, till in 1753 the clergy consented to pay the king the annual sum of weeke millions of ivres, (sive hundred and twenty-five thoustand pounds stering) under the name of a free gift, without being exempted from the usual free gift which they bring to the throne every sive years. VI. No exclessifical foundations, not any new order of monks and hunts, are to be introduced without warrant from the king; and the riles of such order are Tubice to the cognitance and amendment of the civil power. of which consists of an archbishopric, besides the subordinate bishops.

This polite nation have ally distinguished themselves by their skill in the arts and sciences. Painting was first brought to great perfection among them under francis. It when Roux and Francisco Bolognesse instoduced all the beauty of that art into France, towards the beginning of the facteenth century; and fines that time this kingdom has produced several eminent masters. In 1648 was instituted at Paris the soyal scadeny of painting and sculpture but it is faid that the ingenious art of painting is now on the decline in France, and is succeeded by a frivolous taste, which is far from tending to the improvement of the liberal arts. Engraving has been brought to a perfection unequalled in any other part of Europe, until of late years Great Britain has availted as great a degree of eminence in that art. France has also made great advances in statury. It has likewise been famous for its architects; and the great Colbert, in 1671, sounded a royal scademy of suching the cuture, who now hold their uncerings in the Lowre. The French learned the art of fug-building from the English. Their reputation in military architecture is well known, and they also excel most nations in gunnery and fire works. At Parss, besides the antient university and royal college, are four academics, inmely, the French learned the deciment, with three others for the deciment, of inferiptions and belles lettres, that of surgery, and the academy of inferiptions and belles lettres, that of surgery, and the academy of inferiptions and belles lettres, that of surgery, and the academy of inferiptions and belles lettres, that of surgery, and the academy of vicences, with three others for the decimes, point arts, &c. feiences, polite arts, &c.

The manufactures and productions of France are supported and improved with the greatest diligence. By the advice of the above-mentioned Colbert, that enlightened and public spirited minister, Louis XIV. crected the manufacture of the Gobelins, at Paris, which is so called from two brothers, Glies and John Gobelin, who under Francis. Sound out the method of dying a most beautiful scales, which was afterwards called by their name. The house of the Gobelins, at Paris, is full of the works of the most excellent masters in tapestry, fillegree, and sculpture; and in the article of tapestry alone, no less than two hundred persons are constantly employed. There are also considerable manufacturies of tapestry in several other parts of the kingdom. The French instorian informs us, that silk manufactures were first fet up in France in the reign of Louis IX. yet in the time of Henry II. silk was so scarce, that the king was the first who had ever been seen to wear a pair of silk stockings, which were a part of his dress at the marriage of his fifter. The succeeding kings made good regulations with respect to the culture of silk, and the planting of white mulberry-trees; but it was not till the time of Louis XIV. that this was brought to any considerable degree of prospecty; and under his government the quantity of raw silk produced in the provinces of Dauphine, Languedoc, and Provence alone, annually amounted to one million eight hundred thousand pounds weight.

The revocation of the edict of Nantes has been of the greatest detriment to the filk track, by compelling the manufacturers, as was hinted above, to sy from France, to

The revocation of the edict of Nantes has been of the greated detriment to the filt trade, by compelling the manufacturers, as was hinted above, to fly from France, to feet that protection, and to enjoy that religious, liberty, which they were not allowed to polifie at home. Hence the art of weaving filt is become almost univertially known, and England has been enabled to furpals, in the elegance and beauty of their patterns, the French themselves. Within their last hundred years the French have considerably improved their woollen manufactures, in which they have been affilled by the clanded his exportation of wool from Great Britain and Ireland. Hence the cloths and other woollen stuffs made at Abbeville, are little inferior either in finencia or goodness to the English. Several provinces abound in manufactures of linen, thread, and failedth; and at Cambray is made the fine and beautiful linen called cambray linen, or cambric; and St. Quintin excels as

vinces abound in manufactures of linen, thread, and fail-cloth; and at Cambray is made the fine and beautiful linen called cambray linen, or cambric; and St. Quintin excels in its lawns. The glafs manufacture is also of great advantage for France. In 1688, one Abraham Thevert contrived a method for casting better and larger plates of looking glafs than had been before known; but very lately a manufactury has been established in the north of England, which produces plate glafs equal in dimensions to the largest that are cast in France. There is a manufactury of vary hand-some poptelain at Vincennes.

The French carry on a very confiderable trade, which consists of gold and filver brocades, gold and filver embroideries, silk stuffs, fattins, sewing silks, crapes, esmbric, lawn, fine linen, laces, toys, and millinery-goods, tapestires of various kinds, fine clottle, plush, woodlen stuffs, fail-cloth, looking-glasse, drinking-glasse, paper, parchment, fope, knives, and other hardware; wines of many forts, vinegar, brandy, corn, hemp, fax, washnutree wood, pot-ash, pitch, turpentine, oil of turpentine, lints feed oil, and oil of olives, almonds, raisins, chefinuts, figs, prunes, capers, nuts, honey, saffron, salt, mules, and other articles.

They find great advantage to their juland trade

prunes, capers, nuts, honey, faffron, falt, mules, and otliearticles.

They find great advantage to their inland trade, from
the navigable rivers: and these have been joined at a vast
expence by canals, the most famous of which is the royal
canal in Languedoc. The coast trade is very considerable; for by this the maritime provinces reciprocally supply each other with their own produce. The land trade
is carried on with Swifferland, by the way of Lyons; to
Germany, through Metz and Strassurg; to Holland, by th
way of Lisse; and to Spain, by the way of Perpiguan and
Bayonne. The French ports on the channel and the western
ocean are frequented by all the trading nations of Europt.

The trade with England, the United Provinces, and
Italy, is of great advantage to France. However, but sew
French ships are seen in the ports of the northern nations.

Their trade on the Mediterranean with Asia and Afrina,
has, for some years, been very considerable; and the rir
greatest part of it is carried on by the city of Marseilles
alone. They also carry on a considerable traffic to Guiney
for gold, ivory, and slaves for their American colonies.

The Enst India trade is in the hands of a company at Port
L'Orient, in Brittany. To all which may be now added
a commetce, by treaty, with the British North American
colonier, which, by having involved her in a rainous war
with Great Britain, has hitherto brought no accession of

1 . 1 . 1

wealth to France. A peace being now concluded between the feveral powers at war, we shall, in our history this country, give some account of the commercial articles of the reasy, as they respect her trade with America. In France, the gold coins are the louis d'or, of one pound value; there are also doubte and half louis; and a pistole is eight shillings and sour pence. With respect to the filter coin, one louis blane is five shillings. The ecu, or crown, is equal to three livres; fixty sous, or seven hundred and twenty deniers, equal to our half crown.

They keep accounts in France in livres, fous, and deniers. One livre contains twenty fous, and one feu twelve deniers. The French livre is of the value of ten pence halfpenny, one fou is worth a liaff-penny, and confequently the denier is the fixth part of a farthing. The liard is a small piece of copper, of the value of three deniers.

:13 SECT. II.

Describing the stuation, boundaries and extent, climate, produce, rivers, and principal cities in Prevence; tegether with an account of the town of Avignon, formerly labyed to the ecclessifical state; and of the province of Dauphine, its cities, towns, rivers, springs, isc.

T is necessary to premise, that France is now divided into thirty fix generalities, or general governments; we that therefore, in our furvey of this extensive country, begin at the fouth east, and, first of all take notice of That district of France called Provence, fo called from the latin Provincia, it is about onte hundred and forty miles in length; and about ninety in breadth, from the ifter of Hieres to the village of Sauze. It is bounded, on the fouth, by the Mediterranean; on the east, by the Alps and the river Var, which divident from the ternitories belonging to the king of Sardinia; and on the west is separated from Languedoe by the Rhone.

It is divided into Upper and Lower Provence: Upper

It is divided into Upper and Lower Provence: Upper Provence enjoys a pretty temperate air, and has a great deal of meadow ground, well flocked with cattle: it also produces corn, apples, and pears, though but little wine. Lower Provence, on the contrary, is extremely hot; and near the fear-coast would be much more 60, were not the air refreshed by a breeze, which of ally lasts from nine or ten in the morning till the evening. The north-west wind also cools the country, and sometimes, particularly after rain, blows fresh. In this lower part there is not half corn enough produced for the substitute of its inhabitants; but the soil being dry and saidy, oranges, lemons, pomegranates, and olives, with mastick, eppers, palm, and the African cacia-trees, thrive cattemely; as do allo shrubs of all kinds, such as brue, which resembles box, only the leaves are longer and more pointed, bearing a red fruit, It is divided into Upper and Lower Provence: Upper of all kinds, inch as brue, which retemples box, only the leaves are longer and more pointed, bearing a red fruit, which continues on all the year round, and by a particular fingularity, proceeds out of the middle of the leaf. The fea-cherry-tree has a leaf like the alkermes, and its fruit refembles a cherry. The wine in Lower Provence is thick, lufcious, and heady; but mufeadel is the fort most admired.

There are some quarries of black agate in this province. Here is a small delicious bird, called the beccango, that seeds only on grapes and figs; and, among the sea fish, a remarkable kind called the date, so named from the resemble kind called the date, so named from the resemble the seasons. blance of its shape to that fruit, and is found within hollow flones in the road and harbour of Toulon: in order to get them out, the flone must be broke; they also abound along the coast of the marquisate of Ancona, on the

Adriatic.

There are no confiderable rivers in this part of the country: the chief are, the Durance, the Soarge, the Largons, and the Var, the laft divides France from Italy. The principal port is Toulon; besides which, there are

feveral capes, bays, and harbours.

feveral capes, bays, and harbours.

The principal places in Lower Provence are: I. Aix, in Latin Aquæ Sextiæ, called Aquæ pomits baths, and Sextiæ pomits being enlarged and beautified by Sextua Calvinus. This city, which is the capital of Provence, flands in a valley of confiderable extent, planted chiefly with olives, in the latitude of forty-five degrees fifty-four minutes, and in fix degrees ten minutes eathlongitude twenty miles to the northward of Marfeilles, and thirty-five to the fouth east of Avig-110n. It is rather populous than large; the fireets are well-paved, and the houses handsome, and most of them built of

free-stone; there is a beautiful spacious walk within the city called Orbitelle, consisting of three rows of trees a mile long, interspersed with sountains, and on each side are cagant uniform buildings; this is the usual walk of the citiaens. This city is the see of an archbishop, who enjoys a revenue of thirty-two thousand lives (sources hundred pounds sterling) out of which he pays to the court of Romes we thousand lives as sources hundred pounds ferling) out of which he pays to the court of Romes we thousand sive thousand lives a sourcest lives to count Raymond Berenger. In this city, are also two colleges, with an university sounded in 1400, an academy of the polite arts erected in 1668, a public library in the residence of the counts of Provence, and now of the high bailiff. Here is also a mint; and this city is the seat of a parliament, of a chamber of accounts, a court of taxes, and many other public offices. The nobility of Provence reside here, especially in winter; so that this city is faid to have the most agreeable company, next to Paris, of any place in the whole kingdoms. In its suburbs the warm mineral spring, opec to, celebrated, was found a front time in 1704; but its autient virtues are much decayed. The principal trade of this country consists in its sine oil; forme stuffs he as the mode lette, and excellent wine is produced in its neighbourhood.

The city of Arles the antient Arelias, Arelats, and

from fluffs he also made liere, and excellent wine is produced in its neighbourhood.

The city of Arles (the antient Arellas, Arelata, and Arelatum) is large and well-built, feated on the east bank of the Rhone, in forty-three deg. thirty-two min, north lat, and in four deg. forty-five min, eatl leng, upon very uneven, ground, and almost furrounded by a morally, which renders the air thick and unhealthful. Over the Rhone is a wooden bridge, to preferve the communication with Languedoc. The cathedral is a vast Gottlic structure, charged with an infinite number of figures, and the light late is adorned with a tabernacle of filver, an admirable piece representing the marrytdom of St. Stephen, to whom the church is dedicated. The archbishop files himself prince of Mentaragon, has 'province of fifty-one parishes, and an annual revenue of the ty-three thoughand livres; (one thou-land four hundred as d forty-four pounds sterling) out of which his taxasion to the court of Rome is two thousand and eight florins. Besides the cathedral it contains one colleeight florins., Beside, the cathedral it contains one collegiate and feven parish churches, with an abbey, fourteen convents, an hospital, and a royal academy of sciences sounded in 1688. The town-house is an elegant regular fructure, finely fituated. It is of a fquare form, adoined with three orders of architecture, one above another; the portico (the roof of which is supported by twenty columns) is magnificent, and embellished with the busts of the counts of Provence.

Several councils have been held here, the most antient

Several councils have been held here, the most antients and diffinguished of which was in 1314. This town was antiently the capital of the kingdom of Burgundy, which was also called the kingdom of Arles, and the district belonging to this city is still very extensive.

Many Roman antiquities have been found at Arles; among which is a large obelish of porphyry, which was adug up here in 1675, and in 1676 fet up again and dedicated to Louls XIV. It is of one entire stone, fifty-two feet high, and seven feet diameter at the base. On the top is placed an azure globe, stread with golden lilies; and a fun, which was that prince's device; but the valuable monument above is far from being graced by its new plain pedeflal of fand-stone.

pedeftal of fand-stone.

pedefial of fand-flone.

The roins of an amphitheatre, supposed to have been built by Julius Czsar, are also to be seen here: the building was of an oval form, one hundred and ninety-four fathoms in circumsterence, the longest diameter of the are seventy-one fathoms, and the shortest sity-two. The porticoes are three stories high, built of free-stone of a prodigious fize; each flory contains fixty arches, which fill remain; and the walls are of a furprising thickness, but very much decayed. However, this fine monument of wery much a scayed. However, this little indiminent of antiquity is almost entirely concealed by the private houses built about it. Here is also the fragment of a circus, with two columns of marble of the Corinthian order; the remains two contains of matter of the containing of a Roman capitol erected here, and a large collection of Roman epulchral monuments, urns, and the like, kept in the archbithop's palace; an urn of a very extraordinary dimension, containing above twenty gallons, is found among the rest.

among the reit.

There is a place called the Elyfian Fields, near the city, where the Romans used to bury the after of their dead. Accordingly, here are feen an incredible number of stone and marble farcophagi, some standing half, and some entirely out of the ground. The spot on which they sland

ns of became a Christian comercy. In a data on the company of the Richard sides intoff, mean she city, into two large branches, formaling the stands of Camargua, saled in Lathi Camarla, which, being interfected with the company of the beat and most fruitful engls in this

canals, wo one on the our one does relieve the series of the district of the d

glued; twenty miles to the fouth of Air, and thirty to the north-west of Toulon. It is clvided into the Old and New Town's the former stands on an emineral, and considered narrow crooked streets with mean house; are an the latter the streets are first and broad, and adorned with banddone edifices. The Walk is very five street, which forms is she will street, which forms is she with and adorned with banddone edifices. The Walk is a very five street, which forms is she with a mid let were sows of lostly trees, which forms is she with a mid let were fivered to be sufficient to the west of the street galfies, which is roofed over, and has a communication with the harbour, which is in the form of a parallelogram, and has public and private buildings in the two long fider, and on one of the thorter. The other, which opens into the Mediterranean, its defended on each point by a fine firong fort. The entrance into the harbour has not depth of water fufficient for men of war, and a rendered difficult

by a rocky cape near iv.

There is a most delightful plain on the land fide: there are faid to be on it no left than eight hendred country feats of the citizens, with their gardens and vineyards, whither they retire from the noise of the town, which is very diffegreeable from the multitude of flaves in the firees rattling their chains, forme of whom have little thope and hots. where they are allowed to work at their trades, and others orters.

The inhabitants make gold and filver fluffs, "To tealy they export cloths, "ferges, 'honey, figs, 'primes,' olives, capers,' fresh' cels, a species of shall 'fardines,' oil, fail-cleth,' brandy, 'cotton' waifecoats, stockings, &c. and the returns are made in filk, honey, fulphur, mannes, antic, corn, and rice: 'To Spain, they expore all kinds of lines, filk, wool, gold and filver stuffs, gold, alver, and thread lace, with feveral home and Levant commedities; and their trade in filk to Confantinople, Sanynia, Atlans, Cindia, the Archipelago, Tripoli, and Alexandria, is very confiderable. Almost all the trade of Fraire with Spain and Italy is carried on by Marfeilles, which is also the centre of the commerce with the Lavant. This city was visited, in 1720; by a most dreadful pestilence, which

raced for near two years.

The next confiderable city is that of Toulon, which is pretty large. It is fluated in a bottom, alunoft encompaffed with hills on the land-fide, and on a bay of the Mediterrancan, which forms a fecure and commedicus harbout, rancan, which forms a fecure and commed-was harbour, in the latitude of ferty-three degrees five minutes, and in the lath degree two minutes off longitude; near four hundred miles fouth eaft of Paris. It is defended by very firong fortifications towards the land-fide, and the new part of the town is very handforme. The bishop of this city is subject to the archbishop of Arles, under whom he has a diocede of twenty-five partifies, with an arread revenue of fifteen thousand livres, (for hundred suit fifty-five pounds sterling) out of which his taxation at the court of Rome is four hundred florins. Befides the catheral, it has nine convents, a feminary, and a college, under the direction of the fathers of the oratory, and the jesuits had

here'z very fine houfe.

The old and new harbour lie contiguous, and by means No. 67.

of a canal y we pele front one is, the other, both having an outlet into he specious outer havbeen; which is furthunded with hills, and formed by nature simple, treular. of which he is taxed one thousand floring at the court of Rome. This city contains four convents. Among the remains of Romen antiquities, here are an amphitheatre, and an aquedude of confiderable length.

Trucky of Sifterion is the principal place in Upper Provence in his a final citydel, (cated at the foot of a rock on the Durance, thirty miles to the fourth well of Emberry, and is the fee of a bithop, (offragan to the architecture). biftop of Aix, who has fixty four parifices, and a revenue of one thouland sive hundred livres (fix hundred and fifty-feven pounds fierling) per annum, and his taxation at the court of Rome is eight thouland florius. Here is a cathering drai en! five convents, and on the other fide of the river is a press, targe fuburb called La Baune, which contains one parish church, and one convent.

Avignon; shough facity taken from the pope, is neventheles for the most past furrounded by Provence; and the natives of Avignon enjoy the privileger of those of France. This country is very delightful, and particularly abounds in cc. n, wine, and faffrom. While subject to the rope, it paid few taxes, and only the tenth of its produce a tax the ar nual expense of the vice-legate, and the

ida, exceeded the income arising from it to the court of The terrench farmers general, by means of a furniferoney, obtained the monopoly of falt and tobacco in the coursey, though that trade was carried on in the nanto o the pope.

The interest of Avignon, in latin Avenis, is fituated

fituated on the river Rhone, about twenty miles to the north of Arise, and is furrounded with a wall of fine free-flowe, but has little trade, especially fince the manuscatury of printed linen, which associately fince the manuscatury of printed linen, which associately fines the manuscatury of the inhabitants, was suppressed in favour of the French East-india company, who purchased this preshibition of the pope by paying him a confidenable fum. The vice-legate, as governor, usually resided in the pepal palace, which is a targe firedence of free-flowe, encoupsafied with mosts; but is far from being a regular edifice. The arienal is a long lofty boilding, but without any other fire-arms than what are jast necessary to be difficultied on public rejoicings. The upper court of the vice-legate is called shi Rota, and has a right of appear to Rome. The cathedral, which shade on the same eminence with the palace, is not very large. In two chapels, nence with the palace, is not very large. In two chapels, are to be feen the monuments of pope Benedict XII. and John XXII. and also the chair or throne of the entient jonn XXII. and also the chair or throne of the antient popes, during their residence here. In the church of the Celetines are sine paintings of the presented miracles performed by Cardinal Peter of Loxemburg, to whom the church is dedicated. In this church is also a spendid chapel, and a monument in it crested in homour of some shepherds, who are faid to have built the stone-bridge here over the Rone. In the church of the Franciscan. fhepherds, who are faid to have built the flore-bridge here over the Rhone. In the church of the Franciscans, is the temb of the beautiful and learned Laura, immortalized by the poetry and paffion of the celebrated Petrarels. In this town were two focieties of jeduts, to one of which belongs a fine college, with an university founded in 1303. In this city the Jews enjoy the free exercise of their religion. The popes resided here from the year 1305 to

We now proceed to a defeription of the province of Dauphine, which is bounded, on the north, by the county of Breffe and the river Rhone; on the set it is separated

Dauphine, which is bounded, on the norms, by the country of Breffe and the river Rhone; on the east it is feparated from Piedment by the Alps and Savey; on the fouth it borders on Provence; and on the week by the Rhone. It is nearly of a triangular form, each fide of the triangle being about a hundred English miles in length. It is divided into Upper and Lower Dauphine.

The latter produces corn, wine, olives, filk, hemp, falt, wood, vitriol, crystal, iron, copper, and lead; but Upper Dauphine, and indeed, above two-thirds of the whole province, being very meantainons, are so barren, that great numbers of the natives feek for subdiffence in other parts; yet these insumation have some useful predocks, and contain many curiostites. In those of Acabasan and Die, are sound marcastites. The golden annouses on, no it is called, yields a species of crystal. Sevend incommons are covered with larch-trees, on the sizes of which is gathered manna, Benjamin of a delightful insurance, and agaric, which is used in physic and scatet dyes. These mountains have on them many bests that are not sound any other, part of France, particularly the chamois, bear, and marmot, and also hawks, eagles, and other birds.

Several remarkable phanomena are to be feen in this birds.

Several remarkable phanomena are to be feen in this province. The first is the burning spring, on a hill nine miles from Grenoble: it is a little brook, which issues from a soil emitting smoke, and even small stames have been sometimes perceived in it, which communicated heat to the water; but for these two centuries past, this rivulet has altered its course to the distance of twelve feet from that igneous foil, and is now as cold as common water.
The fecond wonder is the Tower without Vernon, about The fecond wonder is the Tower without Vernon, about a league from Grenoble, it being pretended that no venomous creature will flay in it; but this is a notorious miffake, it being known to foverm with adders and fpiders. The third is called the inacceffible mountain; which is a freep, craggy rock, fituated on a very high mountain, about two leagues from Die: but though it is extremely difficult to climb up to the top of it, this has been frequently done. The fourth is, the caves of Saffanage, which are done. The fourth is, the caves of Salfanage, which are two excavated flones, that lie in a grotto near a village of that name. The country people relate, that annually on the fixth of January, they become full of water; and that the quantity of it, in one of these flones, foretells whether they flall have a good or bad winter; and the other prognoficates whether they shall have a good or bad harvest of corn. But there is a great deal of artifice used to support the credit of these wonders; of which there are se others in this province, and, among the reft, a water-fall in a grotto near the above caves, and the floating meadow in the lake of Palhotiers, but this fopposed meadow confifts mostly of grafs and rushes, which the time of the water eements together.
The valley of La Mothe, about five leagues from Gre-

noble, runs between two high mountaine, and enjoys no other profpect but that of bare and steep rocks. Use waters are highly esteemed, as a certain remedy against aid disorders of the steemeth, stusse, and even lameness; they being much better stant the water at Ais, in Savey. The only dwellings here are wretched buts of straw, so that the country is in every respect disgresable. The Dras, a very rapid river, proceeding from the high part of the district of Gap, is, as it were, squeened in at La Mothe, between two high rocks. 1 On its shore, at the foreign every steep rock, is the mineral spring, which, if the river rise but half a foot, is covered with its turbid water. To come at the spring, a person must clamber half a French league over steep rocks and dreadful precipiess, which seem to threaten the passenger with immediate destructions and therefore it is no wonder that these excellent waters are but little referred to. In this province are also saveral other mis-

there they focks and areases precess, with teens to threaten the passenger with immediate destruction; and therefore it is no wonder that these excellent waters are but little reforted to. In this province are alto several other mineral springs. The paincipal rivers are the Rhone, the Durance, the litere, and the Drome.

Here are two archbishoprics and five bishoprics. The governor and licuteoant-general of the province sit in the pathisment, and take place above the chief president. The civil law takes place here; the inhabitants have also particular customs of their own, and likuwise a parliament, which is also a court of suze, with one provincial court of justice, seven presecturates, three balliwics, sour royal jurisdictions, and as many private lordshipe.

The city or town of Grenoble, called in latin, Gratianopolis, is the capital of the province it it is pleasantly situeted at the sect of a mountain on the river liere, hear the place where the river Drue discharges itself into it. Here the parliament meets. This city has also an intendency, a chamber of accompter, a court of taxes, a mint, and a court of the lord treasurer of France. It is a pleasant populous city, and, besides enter fortifications, is defended by a citadle, called the Raftile. The bishop of this place is suffragan to the archbishop of Vienne, and has a revenue of twenty-sight thousand livres, or one thousand two hundred and twenty-sight thousand livres, or one thousand two hundred and twenty-sight thousand livres, or one thousand two hundred and twenty-sight thousand livres, or one thousand two hundred and twenty-sight thousand livres, or one thousand two hundred and twenty-sight thousand livres, or one thousand two hundred and twenty-sight thousand livres, or one thousand two hundred and twenty-sight thousand livres, or one thousand two hundred and twenty-sight thousand livres, or one of thousand two hundred and twenty-sight thousand livres, or one thousand two hundred and twenty-sight thousand livres, or one of thousand two hundred an

feent public buildings, as, the billop's palace, the cathedral, the arfenal, a general hospital, and the palace in which are held the courts of justice.

The most celebrated of all the convents belonging to the

order of Carthufians, is the Grand Chartreufe, fituated on order of Carthuñana, is the Grand Chartreule, fituated on the Alps, at the diffance of three leagues from Grenoble. There are two ways leading to it, but both are carried over fleep rocks and precipiese of a dreadful height, the terror of which is increased by the roaring of the river Guyer la Mort, during its precipitate course among them. The convent, which flands on an eminence, is environed with rocks and mountains covered with wood, that rife to a much greater height. This convent forms a spacious ob-long square walled in, and on the outside are a few inns and stables. In the large hall of this convent is annually held flables. In the large half of this convent is annually held the general chapter of the order of the Carthufians, where the German priors take the precedence of all others; and, at their arrival, may ride into the court of the convens, which none of the reft are permitted to de; but, like the others, mut alight at the gate. In the half are fine paintings, reprefenting the life of St. Bruno, and likewife the pidtures of the generals of the order. The former are pictures of the generals of the order. The former are copies of the admirable paintings in the Chritreuse at Paris. In a large gallery may be seen views of all the Carthusan convents in Christendom, most of which are executed by convent in Ciritencom, mot or winter are executed by eminent hands. The church is not large, but very mag-nificent; and, among other relies, it is faid to contain the arm of St. Bruno, his body being interred in Calabria. The first fettlement of Bruno and his disciples was half a a ne nrx settlement of Bruno and his disciples was half a league from this place, and it having no particular name, was so celled from Carthreuse, a village fill in being, situated near it is a valley. This convent is the head of the order, and chuffes the general, who is obliged to reside here during life. From the kitchen of this mountley above one hundred persons are daily fed, and, among them, thirty monks and forty lay-brothers; and all strangers are entertained here gratis. The wine-cellar consists of two large lines lines with easter of an extraordinate size which him entertained here gratis. The wine-cellar confifts of two lanes lined with calks of an extraordinary fize, which being immoveable, are filled through the roof by means of leather

being, end of refide above them, of two being eather Bri.

on the fide of a fleep rock, which has a castle on the top of it: the two little rivers Dure are à Ance, by uniting their fleenes, form the tiver Durenes, near this town.

About twenty miles to the footh of Briançon, is Ambrus, or Embrun, the aspital of the the territory of Ambrus, or Embrun, the aspital of the the territory of Ambrus, or Embrun, the aspital of the the territory of Ambrus, or Embrun, the aspital of the the territory of Ambrus, and is the fee of an archbistop, who filles himself prince and count of Ambrun, and baron of Guillestre and Beaufort: he has also one half of the leadship and juristidition of the city. His annual returnes amounts to twenty-two thousand livres, out of which he pays to the court of Rome two thousand four hundred stories. The episcopa palace is the final building in the city, and had lately a college of jessite: besides the cathedral, it centains sive perith churches, with a capuchin convent.

The antient city of Vienne, in latin, Vienna Allobrogum, is situated on the Rhone, seventeen miles to the south of Lyons, and is the capital of a district in Lower Dauphine, called Viennois. This place is pretty extansive; but the streets are narrow and ill-paved. Anchorn and swed-blades are made here, with other manufactures in Iron and steel; there are also paper-mills. Here is a priory, nine convents, and a seminery. The cathedral is a beautiful structure, and in it are three chapters. The archbishop of this place enjoys the title of opper primate of Gaul, and his annual revenue amounts to twenty-two thousand livres, (nine hundred and fixty-three pounds sterling.) out of which the court of Rome receives one thousand eight hundred and stry-four florins.

The last town we shall mention, in this province, is Palene, in latin Valentis, the capital of a district called Valentinois, is seated on the Rhone, forty-eight miles to the fouth of Lyons, and is pretty well built; it is large, and one of the most ancient etites in France, it having been formerly a Roman colony. The bishop is subj

SECT. III.

Containing a description of the bounda ior and setuction, entent, produce, towns, mountains, revers of Franche Camté, Assaus, the dubies of Lorrain and Hars, the Massin, or government of Mota: and the counties of Verdus and Toulois; with an account of the inhabitants, their manners, customs, manufactures, trade, Co.

RANCHE Counté, called also the earldom of Burgundy, is bounded, on the north, by Lorrain: on the east, by the earldom of Muopplegard and Swifferland; and on the fouth and west by the government of Burgundy and Champagne. Its extent from fouth to north is about ninety miles, and from the fouth-east to the north-west faxty. Almost one-half of it is a level country, abounding in corn, wine, pastures, hemp, see, and the other half is mountainous, but produces some corn and wine, and a good breed of cattle.

good breed of castle.

Here are mines of copper, iron, lead, and filver. Near
the village of Touillon is a fpring that runs and ceafes at
flated times, and the town of Salines has profitable faltforings and marthes. In this difficit are likewise quarries
of alabafter and marble; and also near the river Doux is a
large grotto, in which nature has formed pillars, and a furpring variety of figures; and near Leugne is a natural
cavern of ice, which freezes in fummer and thaws in
winter.

The Saone, Ougnon, Dour, Louve, and Dain, are the

The Saone, Ougnon, Dour, Louve, and Dain, are the principal rivers.

This province has a parliament of its own: it is subject to a governor, lieutenant-general, and sub-governor, and is divided into four large districts, the principal places in which are the following: namely,

1. Besançon, in latin Vesontio, and Besontium, the capital of the country, is a hundred and fixty miles to the fouth-east of Paris, and is the seat of an archbishop, a parliament, an intendency, a bailiwic, a county and a maint-court, &c. It is divided by the river Dour into the Upper or Old Town, and the Lower or New Town, and is forrounded by a wall and other fortifications: it is also defended by a citadel that stands on a steep rock, and is an obfended by a citadel that stands on a sleep rock, and is an ob-

long figuare, fianked with four irregular bashions, the ground being too uneven to admit of regular works. Until the peace of Westphalia it was an imperial city, but at that time was transferred to Spain: it was afterwards taken by Frince, and its fortifications were greatly strengthened by Lewis KIV. The eathedral, which is delicated to St. John, stands at the foot of mount St. Stephene and the archbishop, who stiles himself a prince of the snapice, has three fustragans under him, with a revenue of thirty-siz through the strength of the snapice, has three fustragans under him, with a revenue of thirty-siz through the snap of the snap

latin Saline, fo called from an excellent violds the crown a great revenue, is pleatively in a valley between two mounties the fouth of Belançon, and two fouth-east of Paris. It is a long town, of one street, and has four chapters, four en convents, one college, and one hospetal. The two, in which the inhabitants have their magasine of fait, and where the courts of judice are held, is a magnificent building. The town is defended by a wall, and near it stands fort Belin, which is feated on a hill, and on another is fort Brecon, and a casse. The city contains five or six thousand inhabitants, and in its neighbourhood are quarries of black marble, jasper, and beautiful alabasses.

are quarries or back marole, Juper, and ceastful alabater.

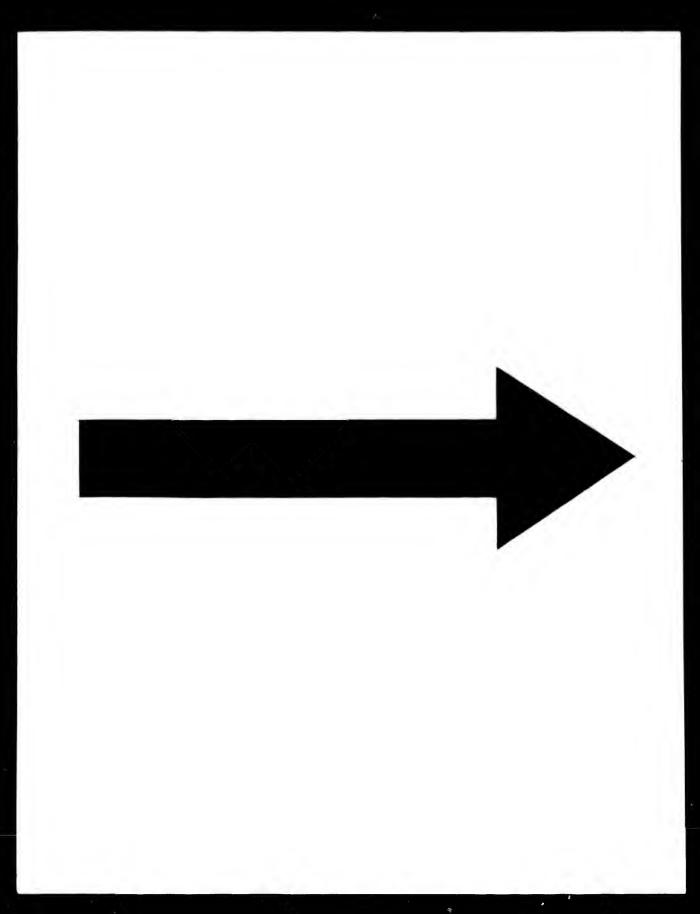

3. Dole is feated on the river. Doux, eighteen miles to the fouth-weft of Befançon, in a diffrict of the fame name, which, from its beauty and fertility, is filied Val d'Amour, or, the Vale of Love. Dole was formerly, while Befançon continued a free imperial city, the capital of the country, the feat of a parliament, of a chamber of accountry, and of an univerfity. On its being taken by Lewis XIV, in 1668, he caused the fortifications to be demolished; it was afterwards taken by the Spaniards, who fortified it again; but the French retaking it in 1674, it was a second time difmantled, and the parliament and university afterwards removed to Besançon; but the chamber of accounts faill remain here. It is faill a pretty town, the streets are spacious, and the hones tolerably well built. The public edifices most worthy of notice are the church of our Lady, the jesuits college, and the palace where the parliament was held. It has also one chapter, eleven convents of both sexes, and an hospital. The inhabitants are said to amount to between four and sive thousand. Here are still the remains of the antient aquedot, and several other Roman antiquities.

antiquities.

4. Gray, in latin Gradicum, is a pretty trading town fested on the Saone, about ten miles to the north-weft of Befançon, and was well fortified, till taken by Lewis XIV. in 1658, who demolished the works. It contains but one that the sales are allesiate church, five convents, and had in to's, who demonined the works. It contains not one parish-church, a college is church, five convents, and had a college of jesuits. The inhabitants are computed to amount to about four thousand. Here they embark great quantities of corn, iron, and other merchandize, which

mount to about rour insurance, quantities of corn, iron, and other merchandise, which they transport to Lyons.

The delightful and fertile country of Alface is bounded, on the fouth by Swifferland and the Franche Comté; on the east, by the Rhine; on the north, by the palatinans; and on the west, by Lorrain; extending from north to fouth about eighty-five miles. The country in general is very pleasant, and abounds in all kinds of grain, fruit, esculent vegetables, slax, tobacco, and wood i its wine is very palatable, and its passures are also rich. The country between the rivers III, the Haardt, and the Rhine, is marrow, and but indifferently fertile; but has some vineyards and a few passures: here rye, baley, and oats, are the only grain, but that part which lies between the mountains, the III, and the plain of Soults, in Upper Alface, to the distance of fix miles beyond Hagenau, yields an experance of grain, wine, and passures. The mountains abound in wood, and, though they produce but little corn, they seed large herds of cattle. The country from mount Sayerne, and the levels from about Strasburg to the Rhine,

SIM STATE OF THE S

are incomparably fertile and delightful, the lands being rich in all kinds of grain, tobacco, laffron, hemp, and kitchen

The Walges, called in French the Voige, is the chief chain of mountains in this country. It begins in the neighbourhood of Langues, and extending at first from well to east separate the country of Burginity from Lorrsin. After this, winding towards the north, it separates Lorrsin from Albee, and forms another corre towards the electorate of Affice, and forms another curve towards the electorate of Triers. The formints and valley's of his chain, as well's we the prairs for hister, according to Rufching, produce a limited and fifty kinds of trees and throts, and fifteen hundred and fifty feeles of herbs, which all grow wild. This chain has also some excellent pattures, and the eminetices, where the foil is favoured with a summy exposure, produce very agricable red and white wine, of which a great deal of brandy, vinegar, and tartar is made. This chain of mountains has also for these feveral centuries patheen sandes for its mines of fively, copper, and lead;

chain of mountains has also for these teveral centuries patheen famous for its mines of filver, copper, and lead; several parts also abound in iron, anomony, cobah, fulphur, and other millerals. A great mamber of churches, chairels, and convene, are also built upon them.

That exhibited river, called the Rhine; which ferves as a security to this country, frequently causes terrible devalutions, not only in winter, but in the midd of fammer, when the snow melts on the Alps. It idundations then greatly injure the fields, by covering then with faild. The violent torrents of the Rhine, which generally happen every year, frequently after the fituation of the illands within it. It is remarkable of this river, that in its find are found particles of gold, which the torrents in their fall. in it. It is remarkable of this river, that in its fand are folion by parcicle of gold, which the torients in their fall walls from the Alps, and bring into it; so that it is only below Basis that the fand contains this precious mixture; which in autumn and winter, when the river is at the lowest, is drawn out with the sand, and, after passing through teveral waters, the gold is extracted. The particles of this metal are feldom to large as a grain of millet; the gold is indeed very fine and beaufail; but it to foarce, that the city of Strasburg, which has the privilece of grain of the particles of the same particles. the goin is more very ane and beaufur; but he for carce, that the city of Straburg, which, has the privilege of general gold for the length of four thouland paces, fearer collects five duncts in a year. In the Rhine are also found a particular kind of pebbles, that receive a beaufulfal polith, and are much used in France; this river also contains many

From the above chain of mountains iffue the following rivers, which run into Lower Alface; pamely, the Leber, the Cher, the Andlau, the Ergers, and the Breuch ; the three last run into the Ill. The Serr, Monter, Seltzbach, Lauter, and Queich, run into the Rhine; into which river also run the Berre and Ill, in Upper Alface.

It is computed that there are about half a million of in-

habitants in Alface. Their common language is the Ger-man, and they are parity Lutherans, and party Roman catholics. In Upper Alface and Sundgau are thirty-two large and finall towns; in Lower Alface, thirty-fine; and in both are upwards of one thoughind finall towns and vil-

in both are upwards of one thougaid finall towns and villages.

This country has been subject to several German famifies, and particularly to the house of Austria; but at the peace of Munster the emperor ceded to the crown of France all right to the town of Briface, the landgrayate of Upper and Lower Alface, Sundgau, and the district of the ten united imperial cities in Alface, with the whole sovereignry belonging to them. On the other hand, France engaged that the inhabitants should continue unmotested in the enjoyment of their freedom; and printifed to be fishified with the power which the house of Austria has enjoyed over them, and had transferred to France by that treaty. In the succeeding wars, France took the ten imperial cities in Alface; and as, by the peace of Ninteguen, no express sipulation was made for their restriction, the king treated from as a part of his acquiritosis, and directed a chamber of appeals at Brifac, to which not only those cities, but the inobility of the empire, and all others holding imperial ands in Alface, were to bring their procedies, and not to the linperial chamber of the empire. The emperor and the empire ceded to France the perpetual Soveregory by the city of Straiburg, and of all its dependencies by the late of the Rhine, by the treaty of Rytwic. In 1097.

Strasburg, in latin Argentot atum, in the principal place in Upper Alface, and capital of the whole country. It is not very well fortified, but by means of a flace in the effect of the familiar are extremely pleasant, and planted round with trees, and towards the Rhine it has a regular citied. This is a royal, free, incorral to the dependencies of the desired pleasant, and planted round with trees, and towards the Rhine it has a regular citied. This is a royal, free, incorral city, and the feat of a mint court. It flands in forty-oight degrees thirty fix minutes north latitude, and in fever

differes forty one minutes eat longitude, near two miles diffuse from the Rhine, and is farrounded by the tweet it and Breufch, which also run through it; besides which, and my both the Rhine is conveyed to the city, which is farge and populous, containing about thirty-two thousand, boutles, four thousand three hundred families, and thirty thousand inhabitants. The firects are all of them narrow, except two, and are adorned with few handsome houses. The public buildings are, the town-house, the episcopal parace, that of the 1 tendant, the arfensa, and the playbouse. The French hospital is a fine building, it being erected by Louis XIV. For the teceptor of his folders, in the city hospital is kept corn of a great age, and they are faild to have whoe that is fome hundred years old.

The most antient structure in these parts is the rathedral, which being fintshed in the year 1420, the protestants are

The most antent tructure in these parts is the cathedral, which being similard in the year \$4.50, the procedures are consequently not chargeable with the statical superiors, which a few years ago were to be seen on the cornices and pedestals, representing monkles, assa, long, and other animals in monkish labits; and, amongst the rest, a month in an independent posters of the secalar clergy, to be revenged on the monks for the ill offices they were always doing them. The steeple of the cathedral is justly reckared one of the highest in Europe, it being five it indred and seventy-four feet in height. The clock belonging to this structure has been greatly admired; so it in not only shewed the hours of the day, but the motion of the son, mon, and stars; among other things, there was an arget which tarmed are the day, but the motion of the fon, moon, and flars; smong other things, there was an arget which turned with hour-glafe every bour, and the welve apolitic proclatified noon by each of them striking a blow with a handlase on a bell; there was likewife a cock, which, stepped out, and the troved every hour: but this couries eleck has been long out of repair. Here are a triple set of missal vestments and alter furniture, fix large sliver chandeliers, each se heavy that it requires a strong into the carry sit, and a cruciffs of doubt the weight. These sevent pieces of plate weigh, together; one thousand and sixty six pounds right otheres, and the curiofities within this thoreh are also the forniture and ornaments which. Lewis KLV intelement of related are extremely sich and magnificent; sifty persons, it is fald, were employed on them studies eleven years; and they cost that prince six hundred thousand dollars: the principal of these is a splendid altar cloth.

Here are also three collegiate churches, two of which are

Here are also three collegiate churches, two of which are arochial, together with four others belonging to the Romish community; but the Lutherans are in possession of rice of Saxony was interred in the year 1751; yet the pro-tellants do not perform their worthip in the city; but at Wolfisheim: here are also fix convents. The university and gymnatium are Lutherans; and here are also an ana-tomical theatre, a physic garden, aroyal society founded in 1752, and particularly infittuted for the natural history of Afface.

The grand council confifts of thirty members, ten of whom are noblemen, and twenty burghers. It has also an inferior council, for the determination of affairs of lefs an Inferior council, for the datermination of affairs of tefs importance. The city council is half Lutheran and half Roman catholics, but most of the burghers are Lutherans. The supreme magistrate here, since the city has become subject to France, is the royal prator, who taker care of the king's rights, and that nothing be done in the college of magistrates, contrary to his majestly's pleasure. The inhabitants, however, pay nothing to the king; but all the imports levited here are expended in the support of the city. The college of imagistrates consists of three chambers; to the first belong thirteen persons, who presde over mattern of justice; the second is composed of fisteen persons, under whose care are the rights and privileges of the city, the hospitals, boltes, and snance; the other chamber is composed of twenty-one, in whom is lodged the ordinary government of, the city.

poied of wenty-one, in whom is lodged the ordinary goyenment of the city.

There are five difficults or lordings belonging to this
city. The bishopsic of Straßburg also comprehends a

able.

Upon an island in the Rhine, twenty miles to the northeast of Stratburg stands Fort Louis, which is a very strong and handsome fortification. It was ereded in the year 1686, and consists of a spacious and regular quadrangle, with four large bastions, and the same number of halfmoons. Near it is a small town, formed of strait fireets, and the whole siland is fortified in every part.

The small town of Zabern is feated on the river Sor, fifteen miles to the north-west of Straburg. It was the usual residence of the bishop of Straburg, until the inhabitants embraced the Lutheran religion; and his palace and gardens here are delightful. Here is a collegiate church.

and gardens here are delightful. Here is a collegiate church, an hofpital, and two convents; but what is particularly remarkable is the beaten brdad foad, carried, behind the city, to the top of a high mountain, the affent to which is rendered fo eafy by fuch a number of windings, that a person may either ascend or descend without the least diffi-

cuity.

The town of Colmar, the capital of Upper Alface is situated near the river III, thirty-five miles fouth by well of Strachurg, and had drong walls, which Lewis XIV. caufed to be demclified in the year 1673; but after the treaty of Ryfwic he encompassed it with new walls. The inhabitance are faid to entow all their orivileges, and though most tants are faid to enjoy all their privileges, and though most of them are Lutherans, have liberty of confesence. It con-tains about eight hundred houses, and seven thousand one hundred and forty inhabitants.

With respect to the duchies of Lorrain and Bar, which come next under our confideration; the former of these derives its name from Lotharius II. grandson to the emperor Lewis I. and was formerly of much greater extent. It is at present bounded on the east by the Lower Palatinate and Alface, from the latter of which it is separated by

nate and Alface, from the latter of which it is separated by the Vogean mountains, on the south by Franche Comte, on the west by Champagne, and on the north by Metz. Its greatest breadth from north to south is about a hundred miles, and from east to west, nearly 22 much.

This duchy enjoys a very temperate climate, and has a fruitful foil, which particularly abounds in grain, though it has many woods and mountains; but in these are good game, and also excellent passure. The country has also salt springs, with some mines of siron, copper, tin, and silver. In the mountains of Wisgau are sound agates, chalcodonies, and other gems. Its lakes too abound in sisth, particularly the lake of Lindre, the profits of which are said to amount to fixteen thousand lives per annum, (seven hundred peands sterlings.)

(seven hundred pounds sterling.)
The Macle, the Mofelle, and the Saar, are the chief rivers. Here are also the rivers Voloy, Mortaire, and Meurte, which are not so considerable.

Mearte, which are not fo confiderable.

The modern drikes have confiantly kept on foot a particular army, which have performed fignal fervice. But the French have frequently had the policy to turn the power of Lorrain to their own advantage, and to the prejudice of the duke. The Lorrainers are also laborious; but have little trade with frangers, they having no navigable rivers, and all necessaries within themselves; but what little trade they have consists of corn and linen. The little trade they have confifts of corn and linen. The language fpoken here is French, except in the German diffricts, where that language is fpoken. The Romith religion prevails all over this province.

The flate after the decease of Lotharius II. its first foun-

der, was divided among his relations, and was afterwards fometimes possessed by the Germans, and sometimes by fometimes possession of the Germans, and sometimes by the French, and continual disputes arose between the emperors of Germany and the kings of France. At length, in 1733, France took possession of this duchy 1 and in the preliminaries of peace in 1735 it was concluded, that not only the duchy of Bar; but likewise that of Lorrain, the earldom of Falkenstein excepted, should be ceded to Stanislaus, king of Poland, and father-in-law to Lewis XV. and after his decease both duchies, together with the absolute sovereignty of them, should for ever belong to the rown of France. On the other hand, the emperor Charles VI. engaged in return to sede the great duchy of Tuseny to his son in-law Francis Steplien, the late emperor, to atone for his soning Lorrain. This was fettled in 1736, and the following year Stanislaus took actual possession of the duchies of Lorrain and Bar, and Tuseny fell to the duck of Lorrain. duke of Lorrain.

guee of Lorrain.

The tiles of the dukes of Lorrain are these: S, by the grace of God, duke of Lorrain and Mercœur; king of Jerusalem and Marchis; duke of Calabria, Bar, and Guelders; margrave of Pont a Mousson and Nomeny;

and count of Provence, Vaudemont, Blamont, Zutphen, Saarwerden, and Salem. From these titles may be seen not only the countries the duke actually possess, but likewise their pretensions. The eldest son, during the lifetime of his father, is stiled count of Vaudemont, and also writes himself, while unmarried, margave of Pont a Mousson; but after his marriage he assumes the title of atkee of Bar. The antient house of Lorrain, by vitude of a treaty concluded in 1736, retains all the titles, arms, and privileges, with the rank and quality of sovereign princes, which it formerly enjoyed, yet without any claim to the countries ceded by the peace.

The most remarkable places in the duchy of Lorrain are the following: i. Nancy, the capital of the duchy, and the antient residence of the dukes, is feated in a delightful plain near the river Mourte, seventy-sive miles to the weet of Strasburg, and is divided into the Old and New Town. The former is both the smallest, and makes the meanest appearance, it being huilt with narrow streets; but in it stands the palace, which was begun by duke Leopold Joseph; yet only the main body is sinished. The spacious long squar;, or wide street before, has a sine appearance,

In the palace are eighteen very exquisite pieces of

pearance,
In the palace are eighteen very exquifite pieces of tapefity, reprefenting the atchievements of Charles IV. duke of Lorrain. Here are also shewn the fabres of two Burgundians, who were killed with Charles the Bold; and likewife that duke's helmet, lined with red velvet, and a yellow crest on the top. This helmet used to be carried every year in procession by the captain of the Swifs, while two other Swifs carried the sabres. Near the palace is a beautiful garden upon one of the battions, from which there is a very sine prospess. Adjacent to this garden stands the opera-house, which was built by Biblena, an Italian architect, who also built the theatre at Vienna. This house is not remarkable for its size, but is extremely well contrived, and on each side of it is a good tribuna, which is a great ornament to it.

and on each fide of it is a good tribuna, which is a great ornament to it.

In the New Town, which is larger, and contains broad and first firects, are feveral beautiful houses; but, according to the fashion of this country, they are generally low. In this city are three parish and three collegiate churches, with two abbies, seventeen convents, one college, one hospital, an academy of sciences, and one commandery of the knights of Malta. Among the collegiate churches is the new stately cathedral, which is immediately subject to the pope. This is a magnificent building, it being adorted with two towers and a cupola after the Italian taste.

The chapter consists of a primate and sisteen canons. The duke nominates the primate without consulting the

The chapter conflits of a primate and invecen canons. The duke nominates the primate without confulting the canons. In the collegiate church of St. George stands not only the monument of Charles the Bold, duke of Burgundy, who was slain in 1476, but also the tombs of the antient dukes of Lorrain. The latter dukes are interred in the church of the Capuchins. The city was heretofore fortified, but the works of the Old Town now only remain, the reft of the city having been dismantled by the peace of Rvivie.

Ryfwic.

The fmall, but very antient town of Luneville, flands on the river Verouze, in a low marfhy country, twelve miles to the fouth-east of Nancy. It was once a fortified town; is at present the capital of a provosthip, and has a fine palace, in which not only the two last dukes of Lorrain chiefly resided, but was the residence of king Stanislaus, until the year 1755, when the right wing of the palace was entirely burnt down. The gymnessum in this place is altered to a soundation for cadets, one half Lorrainers, and the other Poles. In this town there is also an abbey, with a commandery of the knights of Malta, and three convents.

At a few miles distance from Luneville Is Beaupre, abbey of protestant Benedictines, but they follow the Cif-tercian rule of St. Benedict. It is feated in a delightful country, and has an abbot, nine priests, mineteen religi-ous, and twenty-three lay-brothers, with eighty thousand Lorrain livres annual revenue.

Lorrain livres annual revenue.

Bar, or Barrois, was antiently an earldom, so called from the castle of Bar, crecked in the year 964 by Frederic I, whom the emperor Otho espected earl of Bar.

The principal place in this district is, Bar-le-Duo, the capital of the country, seated on a rising ground on the banks of the river Ornain, about forty miles to the west of Nancy. It is a handlome well-built city, and contains a ducal palace, two chapters, one parish-church, one priory, some converse, and an hossial.

feven convents, and an holpital.

Meta confifts of the countries of Metan, French Barrois, La Saare, and French Luxenberg. The principal

rivers in this government are, 1. the Maese; the 2. Moselle, which rises in one of the Wassau mountains, and is configurity, mayigable from Metz, discharging itself into, the Raint, 2. The Gaone, which falls into the same river, 4. The Mounts, which rises in the Wassau chain, and rans into the Moselle. 5. The Saare, which runs into the lame itvers, 5. The Orney to Ornain.

The country, round the city of Meta, called the Methis, is but indifferently fettile, and produces little wheta. It was antiently a part of the kingdom of Austraria, of which Mets was for a long time the capital, and the ulual residence of the king. When the children of Charlet the Great, and Lewis the Pious, divided the dominions of that crown, the kingdom of Lorrain rose out of the remains of that of Australia; and towards thered of the second royal, line of Erance. Mets, Toul, and Verdun, three principal cities, shoot of the yake, and, to secure their recording put themselves under the protection of the emperor. The power was divided between the bishop and the magniferates part whe latter, by the affinance of the country of Messau, than a share in the section of the emperor. The power was divided between the bishop and the taker power in the city of Mets, and the country of Messau than a share in the section of the magniferates, but we latter, by the affinance of the magniferates, enjoyed an unliented authority in the country of Messau, than a share in the section of the magniferates, and in the adminishment of the casts of affice. The magniferates enjoyed an unliented authority in the city and country of Messau, the messaus and in stream cales appeals lay to the importal chamber, which they are handsome fire under the name of the proceded district, which the proceded district, which he had country of Messaus and the section of the share cities under the name of the proceded district, which he cannot be surfaced in the souther section. The New Town is like wife large, and much index souther beautiful than the former. Messaus and is fituate

into the bishop's magazine by order of the duke, or the Franch king.

The new town and fortification of Sare-Lewis, was begun on the river Sare in 1628 by Lewis XIV, and finished about four or five years after. This sown, with a diffrict belonging to it, has been ceded by the duke of Lorrain to France. It is flusted about thirty-two miles to the north-east of Metz. Tis streets are regular, and the fortifications form a regular hexagon. It is the feat of the county court, and contains one parish-church with two convents.

The territory of Verdun, which extends along the Macle, has only one city of the fame name, but there are in it many large towns and villages.

in it many large towns and villages.

Verdun, the capital of the country, is fituated about thifty-eight miles to the north weft of Nancy; it is the fee of a bithop, and has a provincial and a manor court. It consists of three parts, namely, the Upper, Lower, and New Town; and, beliefs its other fortifications, is defended by a fine citadel. This was formerly an imperial city, but in the year 1552 the inhabitants put themselves under the protection of France, and in 1648 fell entirely under the power of that monarchy. The bithop, before the cuty and diffrid were annexed to the crown of France, was a prince of the empire, and still ssumes that ritle, as also count of Verdun: the trebbshop of Treves is his

metropolitan. His diocose confifts of one hundred and illnety-two particles, his revenue is fifty thousand livree (two thousand one hundred and eighty-eight powned ferring), and he is taxed to the court of Rome four thousand four hundred and fixty-fix florins. Buildes the eathedral, there are in this city one collegative and unine partification, in the mined in by Lorrain , and, together wish the city of Toul, and the other biflopries of Mets and Verdun, put itself, in 1522, under the protection of France, which in 1648 obtained entire profession of the country.

The principal town in this earldom is Toul, the fee of a biflop: it is feated on the Moselle, over which is a fine from bridge, with a regular fortification. It is firtuated ten miles to the well of Nancy, has a provincial and diffrict count, and was formerly an imperial city. Its bifliop was a prince of the empire, which title, together with that of Toulois, he full affundes: he is furnisan to the archive, and his diocole contains one thousand four hundred parifical, but his diocole contains one thousand four hundred parifical, but his diocole contains one thousand four hundred parifical, but his diocole contains one thousand four hundred parifical, but his nevenue is little more than feverateen thousand livres feven bundred and torty-four pounds arting? and he may two throating five bundred floring to the control, one content, one Rundred in the cables, one contents, one familiary, precommandery of the anights of Malta, and was former, precommandery of the anights of Malta, and was former, precommandery of the anights of Malta, and was hopings.

Containing descriptions of the previous of Pleardy, also of the generalization (Dhampagna and Brie, Burgaind) and Lyamais, their fituation, extent, produce, rivers, com-merce, principal cities, inhabitants, Go.

Lymnois, their fituation, extent, product, river; commerce, principal cities, inhabitants, CSc.

The province of Picardy is long and narrow, it being usually compared to a best arts, and in this figure is nearly one hundred and fifty willed will length, but not above forcy in breach, and in this prove to above forcy in breach, and in this province is nearly one hundred and fifty willed will length, but not above forcy in breach, and in the spitific channel; on the case, by Champagney and on the morth, by Hainauh, Artori, and the Straits of Chang. This is for the most part a plain country, and produces wine, first of all linds, plenty of core, and great quantities of hay it they have foure picecall, but is in not to good as that of England; wood busy there, most of the inhabitants buffar art infless of in.

The following are the brincipal rivers in this province; with it. The Oife, which has its found in Picardy, on the combine of Haisault, and, after receiving feveral friver, by avigable at Ea Fers, and falls into the Seins at Canada, which are afterwards united, when the sein it is to the falls into the Seins at the country of the hand, and interest which falls into the Sheld. 4. The Canche, which falls into the British channel. 5. The Lys, which falls into the Sheld. 6. The Deale, which was formerly no better than a province has a flourishing trade, owing to its fituation on the feat, the many, navigable rivers and canals it contains, and the industry of the inhabitants, when make below Ettaples. 7. The As, which is shade navigable at St. Outers, by sacans of fluices, and at laft difficulties of the many navigable rivers and canals it contains, and the industry of the inhabitants, when make beautiful fills thatis, coarle linen, woollen falls, lawn, and foap; they affo carry on a large trade in corn and pit coal. In the government of Calais and Boulogne are annually brought up five or fix thouland colts, which being afterwards turned loole in the pature of Normandy, are fold for Norman horfes. Here are four bi

This province is divided into Upper, Middle, and Lower Picardy, and is again fubdivided into four deputy-governments, the principal places in which are the following: viz.

The town of Amiens, in latin Ambianum, the capit of Picardy, and of the earldom of Amienes; it is feated on the Somme, fixty-five miles to the fouch of Calais, and eighty to the north of Paris. It appears very delightful from the largeness of the firests, the beauty of the house,

y, and twelve ille into one the British ils into o better is is beach falls into o better is is beach falls into infinity in frustraint if waste n, and it coal, anually after-ire fold o prominately, and eputy-ollow-capital feated, and shrully in the coal, and in the coal in the coal, and in the coal, and in the coal in the coal, and in the coal in the

and the exteht of the fquares, in two of which feven fine and the extent of the tampers are planted two rows of trees, which form a very agreeable walk. The river Somme enters the city in three different channels, through the fame number of bridges; to that these unite again, after water-

ing feveral parts of the town.

In this city is one of the finest and best embellished ca-thedrals in all France: it is dedicated to the virgin Mary; thedrais in all France: it is dedicated to the virgin Mary; the pillars, eiboir, chapels, tomble, and paintilege are particularly adorned, and more especially the principal entrance, which is flanked with two lody towers, on which are placed feveral statues. Among other relicts; they pretend to have the heart of John the Baptist. Here is also a collegiate church, a chapter of St. Nicholas, sources parish churches, several abbies, fifty five priories, seven hundred and fifty rectories, one hundred and three chapels of case, and foreversebbeevinsmission. The annual colleges of the chapes of the serversebbeevinsmission.

pariti churches, feveral abbies, fifty-five priories, feven hundred and fifty rectories, one hundred and three chapels of cafe, and derry suppresentantics. The animal revenue is thirst thousand forins; (one thousand there have deed and thirteen pounds furfilled) out of which four thousand nine hundred thorins are paid to the enert of Ream. Here are the fest of a peckelal court, as hadependent built-wie and prevofflip), in affice for the fitting the provofflip; in affice for the fitting the major. The inhabitants of this city and the multiphedring willages make a confidentible questity of black and great frap, and allo carry on a manufacture of ferress.

The town of Abbeville, or Abbot's Town, is the captal of Pontileo, it districts of Fleatdy, and it fasted twenty miles to the north-well of A miens, and diffy my to the footh of Calair, in a very delightful plant on the Somma, which disides itelf rate feveral branches, and increase which disides itelf rate feveral branches, and increase the cow Countries, and the other towards Normandy. The tick here flows up the Somme, to the height of about firefect, by which means, and its fituation, is at verdered a commonious port it being but fifteen miles from the Bugliff channel, This town, beddes the Somme, is affe writted by the rivuless of Beardon, Sottins, and Carneille, or Taniere.

channel. In the twen, coated the souther, is twee vertex, by the rivuless of Seardon, Sotting, and Carmeille, or Taniere, and the place is at prefent, it was originally no more than a farm or manae belonging as the above of St. Requier, from which it that its name it afrawards became a borough, from the discount of people who came and fettled in it. It is now well fortified, and encompafied with wells, which are flanked with believes, and large deep diches. The boofes are molly of timber, old, and meanly built; it is likewife extremely dirty, for want of a good pavement; bur, next to Amisens, its the most pepulous place in all fietrady.

As the town of Abbeville is conveniently fituated for commerce, it earlies on a great trade in corn, oil, hemp, flax, cordage, and fiap. The woollen manufactury, clabilithed here in 1665 by Mr. I believe a Dustimum, has fucceeded fo well, that at prefent its electus are little inferior in finences and goodness to those of England. Here are also made very beautiful barragons, together with mocades, a kind of carpets, dimitry, ploth, coarfe lines, from conjunct, and fire-arms. There is in this town a collegiate church, dedicated to St. Ulfrane, which is a lofty flowe building, fourteen parish-churches, fifteen convents, a commandery of the order of Malta, and a college; here are also a provincial court, builge, forest-court, court of commerce, court of Admiralry, and a fast work.

Mentreuil, on the Couch, extends three lergues on the British channel; it contains about five thousand inhabitants, and has a pretty brift trade. The penafric round this spot, feem to suffer great poverty. We connect determine how proper the land may be for cultivation, but its certainly an prefent very little improved thereby, for all feems a defaut.—No soute does a carriage top, than the cottages, powr forth warms to erve charry? young and old all join in the chorus, "Charite, pour l'amour de Dieu." That is, "For God's sake bestow your charty," The celebrated Mr. Sterne, in his Sentimental Journey, te The celebrated Mr. Sterne, in his Sentimental Journey, tells us, That he vifited this place; and at his departure, displayed much generofity in relieving a number of beggars, who, furrounding him, folicited his charity with the most clamorous importunity. Children are here very early taught the art of getting money without labour; and young girls of lixteen years and upwards employ intreaties as well as finiles to draw a fou from the pockets of paffengers.

Calais, in latin Caletum, is teated in a marthy plain on the coast of the British narrow fea, called from thence the flieight of Calais, and in French le Pas de Calais, the pais or paffage, because it is the paffage into England. It is three leagues diffant from Gravelines, and the confines of Flanders to the wett, feven from Boulogne to the north, and about as many from Dover and the nearest thore of

England to the fouth-west. It is reported, that Baldwin IV. furnamed title Besrded; count of Flanders, first built the port, and that Philip count of Boulogite, caused the town to be surrounded with walls; which before was only a simple borough. However, it is at present a considerable marr, and a place of strength. Its figure, including the citadel, it an oblang squate, the two long sides of which ard cetal about two hundred and twenty perches long, and the two shortest about the hundred and twenty perches long, and the two shortest about an interpretation of the largest sides is towards the san, and very well fortified, the other is towards the san, and its fortified, with haltions lined with stones, covered with half-moons; and deep ditches nine of ten perches bread, and which can be filled sither with seawater, or with fresh-water, according as it is proper. The water, or with fresh-water, according as it is proper. The short side, which is opposite to the fort of Nieylai, is de-

water, or with fresh-water, according as it is proper. The short side, which is opposite to the sort of Niculai, is defended by heing laid under water. The other side, which is capled the analytic Crawlings, as better fortised fill. This whole sity is encoupsified by a good covered way. Fort Niculai is a piece of trutheation yetsless in it is side; it has four the short sime lay all the country about Calais to the four theating and from thence one can in less than four and treesty houte time lay all the country about Calais to the south of the street water, and prevent a circumvallation. And the short the pull is not the street water of the greatest ever built it is has fill; it is antient, creati and ditches; but the charatier do Ville has furneunded it with a new including fortified with three irregular basicons; that citade is so advantageously situated, that a commands not only the city, and port of Calais; but also all the adjacent country. There is only one passing to the town over a cansey, commonly called the bridge of Niculai. Ships enter into the port by a long tamal, made by order of Lewis XIV. Servent voy modes, at the head of which there are two horst works, defended each by an half-moon, and encompassed with a wall, a deep ditch, and a covered way, after the mannor of marshal de Vanban. This port is very happily fituated, that yet it has several inconveniencies; for no welfel care mure into it without running a great danger, whether it comes along the east, or along the welf ancie. There is here no road for the sinps to ride at anthors. The canal of Calais is a wark very useful to the inhabitants if for by that means one can go very easily by water from Calais to St. Omer, Gravellines, Duckirk, Bergues, and Ypers. Notwithstanding the convenient fination of Calais as with regard to England and Holland, yet it is not to populous as might be expected, for it is secknowed to contain but five thousand inhabitants: Here reckoned to contain but five thouland inhabitants. is but one parish church, the alter of which is all wrought marble, and its dome extremely magnificent; there are also

is but one parifi church, the altar of which is all wrought marble, and its dome extremely magnificent; there are also four convents. A packet-boat fails regularly twice a week from Dover to Calais, and back again.

Edward III. king of England, took Calais from the French in the year 2247, and after the English had possefted it above two, bundred and ton years, the dake of Guise retook it in January. 2248. By the treaty of Careau-Cambress, it was agreed that Calais should continue in the bands of the French during eight years, after which let was to be reftored to the English that term being expired, queen Elizabeth demanded it; but the chancellor de l'Hopital refused, to restore it, under pretence that during the first religious war in France, which began three years after the peace of Cateau Cambress, the English had feizad Havre-de-Grace, by which means they had violated the meany, and forfeited their right to Calais, which the French kept accordingly, though the English did not keep Havre-de-Grace, which was retaken by the French. Albert, arch-duke of Austria, and governor of the Low Countries, made himself master of Calais in the year 1506, and it was restored two years after to the French king Henry IV. by the articles of the peace at Vervins.

The near remarkable town it that of Boulogne, the ancient Geforiacum or Giforacum, and fince Bononia: it is the capital of a district called the Boulounois, a particular government entirely independent of the governor general of Picardy. This city stands upon a hill, fixteen miles to

government entirely independent of the governor general of Picardy. This city flands upon a hill, fixteen miles to the fouth-west of Paris. It is divided into the Upper and Lower Town; the former is well fortified with a strong citadel, and adorned with feveral public places and founcathedral church is dedicated to the virgin Mary, a paro-chial church of St. Joseph, an abbey of St. Vilemar, and four other monasteries; a seminary for the education of those who design to take orders, and a magnificent hospital, built by the care and at the expence of the family of Au-mont. The Lower Town is not inhabited by fo many persons of quality as the other, but it is larger and more confiderable for its trade; it extends along the port at the mouth of the river Liane. The harbour is very incom-

modious, and the road before Boulogne extremely bad, no vellels being able to keep there, unless the wind blows from forme point between the north and the foult-cast. With all other winds the sea is excessively rough and boil-With all other winds the ica is excensely rough and out-terous. Here flood formerly a watch-tower, called La Tour d'Ordre, the Tower of Order; and by the English, the Old Man, said to have been built by Julius Casar, and repaired by the emperor Charles the Great; but being neglected, it is fallen down, and they have built in the soom of its small fort for the defence of the harbour. The epifecpal fee, under the metropolitan of Rheims, was effa-blished here by pope Paul IV. after the destruction of Te-rouenne. The diocese comprehends not only the governments of Boulonois, Calais, and Ardres, but also part of Astois, and has within its district two hundred and seventyments of Boulonois, Calais, and Ardres, but allo part of Artois, and has within its diffrict two hundred and feventy-fix parishes, and an hundred and forty-fix chapels of eafe. The livings strusted in Artois pay ito tenths. Easies XI, idd, in the year 1478, surrender this county to the virgin Mary, declaring that, for the future, he and his successors should hold it from her immediately, as her vasses, paying her for homage a golden heart at their accession to the crown; in consequence of which, Lewis XIV, paid twelve thousand livres for himself and for his father Lewis XIII. The city of Boulogne, together with the adjacent territories, was formerly subject to the dominion of its own counts, of great reputation, from whom were descended Godfrey of Boulogne, and his brother Baldwin, kings of Jerusalems; but it was united to the crown of France by king Philip Augustus, in the year 1200. Boulogne was taken by Henry VIII. king of England, in the year 1344, and alterwards reflored for a fum of money to the Prench king Henry II. by a treaty of peace in 2500. This city has a scheichallish, composed of a sensebal, a president, a licutenant-general, a licutenant criminal, an aliesfor, three counsellors, a king's advocate, and a king's attorney, a deputy-attorney, and a recorder of the court, to the parliament of Paris. Paris.

... Champegne is bounded, on the north, by Hainsult and part of the bilhopric of Liege; on the east, by Luxern-burg and Lorrain; on the fouth, by Burgundy; and, on the week, by the ille of France; and Picardy; it being one of the most considerable provinces in the whole kingdom. This province extends from the west to the fouth-cast; or from Lagny to Boutbon, forty fix leagues in length, and from fouth to north, or from Ravieres to Roctoss, about fifty-four. It derives its name from the large plains in its centre, but its borders are full of forests, hills, and mountains.

This country is particularly famous for its wine, which

This country is particularly famous for its wine, which is exported in great quantities; it also produces plenty of grain; and the natural commodities in which the inhabitants trade are corn, wine, Iron, wood, and cattle, with hay, woollen and filk stuffs, linen, &c.

The Meuse or Macfe, which receives its fource near the village of Meuse; the Seine; the Maine, which rises in Baffgny; the Aube, which has its source on the frontiers; and the Aifne or Aine, are its principal rivers.

Here are two archbishoprics and four bishoprics. The country is governed by the parliament, the chamber of accompts, and exchequer of Faris, except the territory of Sedan, which belongs to the parliament of Metz. It has ten provincial and distinct courts, several forest-courts, two courts of mintage, and a generalite. The military governcourts of mintage, and a generalite. The military govern-ment of this province is lodged in a governor, and four general-lieutenants, under whom are four hereditary sub-

The principal cities are the following, vis. 1. Troyer, the ancient Augustomana, or Augustobons, the capital of the province, is feated in Lower Champagne, on the river scine, about seventy miles to the fouth-east of Paris, and is pretty large, but far from being fo flourifhing and popu-lous as formerly. It has fourteen parish-churches, includ-ing the cathedral, and two collegiate churches, with four abbies, ten convents, one college, one feminary, and one hospital. The cathedral, which is dedicated to St. Peter, is a very noble frudure; its portico is in a fine taffe, but the tower on the left-fide of it has been left unfinished. The city is furrounded with walls, but they are not kept in good repair; and formerly it had three castles, from which it is supposed to have obtained its present name; but there are now sew remains of them lest. The bishop of Troyes is fuffragan to the archbisnop of Sens; his diocese contains three hundred and seventy-two parishes, ninety-eight chapels of case, with seventeen abbies; his yearly revenue is fourteen thousand livres, (fix hundred and thirteen pounds flerling) and his taxation at the court

of Rome is two thousand florins. This city fail carries on a tolerable trade, especially in linen, flax, hemp, and cotton fusions, canvat, wax and tallow candles, needles, segerty, &co.

2. Chalons is a large city, sested on the Maine, in a small territory called the Chalonois, minety-five miles to the east of Paris. Here are a cathedral, two chapters, eleves parish churches, three abbies, ains convents, and there was till lastly a college of jesusts. The bishop, who is also a count and peer, is suffragan to the archbishop of Rheims, and in his dioesse are comprehended three hundred and four parishes, ainety-three chapels of ease, with mineteen abbies. His yearly revenue is twenty-four thousand livres, (one thousand and fifty pounds sterling) and his taxation at Rome three thousand florins. The inhabitants carry on a considerable trade in woollen stuffs and bitants carry on a confiderable trade in woollen fluffe and thalloons, the letter of which took their name from this

place.

3. Rhelms, the smeient Durocortorum, and Civitas Remorum; the capital of a diffrict called Rheimois, is fituated fixty-two miles to the north of Troyes, and eighty-five to the north-east of Petrs, and is one of the moft ancient and celebrated civites in the whole kingdom. It is about four builes in circumference, and contains feveral fine fquares, large firects, well buils houses, and magnificent churches. Among there is the cathedral of our Lady, which is a fine frudure, though of Gothic architecture; the principal door is remarkable for its workmanship, and the great altar, at which the coronation of the kings of France is performed, is placed with gold. The treasury of this cathedral must be very great, as every king, at his coronation, insket an offering here. The book of the gospel upon which the king takes the coronation oath, is faid to be written in the Sclavonic tongue, and the cover is of gold fet with gents.

upon which the king takes the coronation oath, is faid to be written in the Sclavenic tongue, and the cover is of gold fet with gems.

The arthbifine of this place is the first duke and peer of France, perpetual legate of the fee of Rome, and primate of all Gallis Belgica. He also crowns the king; he has an annual revenue of fifty theofand livres, (two thousand one hundred and eighty-eight pounds sterling) and his taxation as the court of Rome is four thousand seven hundred and fifty floring. Here are, before the cathedral, three cellegiate churches, five abbies, nine convents, a commandery belonging to the order of 184; Anthony, a commandery of the knights of Malta, and, till the jeults were expelled, they had here a large seminary, and a fine college. The abbey of Beredichines of St. Remy in this city is one of the noblest belonging to that order in all France; and on the altar of its church is kept the hely phial, which at the baptim of Clovis, in 496, by bishop Remigius, they pretend was brought from lieaven by adove, at the prayer of that faint, the crowd being so great that he was unable to get to the fent with the usual oil. This phial is of a dara, ted glass, about the length of one's little singer, and nearly refembles in these a small fungary water bottle. It has a gold stopper, and is fixed in a perforated square casket, fallened on a sliver silver, it being seen only through a crystall cover phone over the easket. The oil is said to be grown dry, but in every unclion of a king of France is a constant of the tables out, and mixed with the oil. tal cover placed over the calket. I he oil is laid to be grown dry, but in every undion of a king of France a finall quantity of it is taken out, and mixed with the oil prepared for the unclion. Among the other public buildings, are three fpacious nofpitals. Here are feveral remarkable remains of Roman antiquities, particularly three gates of the city, which to this day best the names of formany pagen deities, namely, of Mars, the Sun, and Ceres. The university here was founded in the years 1542 and

The university here was founded in the years 1947 and 1949. This city carries on a considerable trade in wine, woollen and filk stuffs, and gingerbread.

4. The town of Sens, seated on the Youne, is large, but not very populous, though well situated for trade: it is the agendium of the antients, and the capital of a district called the Senonois. This city is the see of an archbishop, whose revenue amounts to fifty thousand livres, (two thousand one hundred and eighty-eight pounds sterling) and its taxation to the court of Rome is fix thousand one hundred and fixty-fix florins. Here are fixteen parish-churches, five abbies, and nine convents. The cathedral, which is dedicated to St. Stephen, is admired for its stately front, being adorned with various figures, and lofty towers; front, being adorted with various figures, and loty towers; as also an account of its rich chapels, antient tombs, and the magnificence of the high altar, where is a table of gold enriched with precious stones, on which are represented in relievo the four evangelists, together with St. Stephen. Here is a provincial district and forest cours, together with a falt office. Several councils have been held in this city, one of the most famous of which is that in the year

5. The team of Meauk, capital of a diffrict called Brie Champonoile, is fested on the river Marne, twenty-five miles to the north-east of Feris, and contains a provincial and diffrict court, a falt-office, &c. It has also a general licutement, and a particular governor. Befides the cathedral, there are in this city one chapter, five abbies, feveral convents, one alms-house, and an hospital. The bishop is fuffragan to the archbishop of Paris, his dioces is divided by the river Marne into two large archdesconties, to each of which belong three rural dearries; under these are nime abbies, seven chapters, and two hundred and twenty-feven patishes. The bishop's annual revenue amounts to twenty-two thousand livrer, (nine hundred and fixty-three pounds ferting) and he pays two thousand flowns to the court of Rome.

The government of Burgundy, called by the French Bourgogne, derives its name from the Burgundians, who, towards the beginning of the fifth century, fettled in Swifferland and Franche Comté, whence spreading themselves towards the river Soane and Rhone, they erected a kingdom of their own, which was gradually reduced by the kings of the French. This country actends from east to well above thirty French leagues, and from north to fouth about forty-five; being bounded, on the north, by Champagne; on the west, by the Borbonnois and Nivernois; on the fouth, by Lymnois; and, on the east, by Franche Comté. It produces excellent wine, and is very fertile in corn and fruit.

The chief rivers in this country are the Seine; the Dehune, which truns into the Soane; the Reshince or Rouse.

The chief rivers in this country are the Seine; the Dehune, which runs into the Soane; the Brebines, or Bourbines, which iffues out of the lake of Longeendu; also the Armançon, the Ouche, and Tille, with feveral springs of a mineral quality.

or a mineral quality.

The flates of the country, conflifting of the representatives of the nobility, clergy, and commons, meet regularly every three years, by west from the king, in order to raise the funm required of them. The district and provincial courts are subordinate to the parliament of Dijon, which was erected in 1476; except the provincial courts of Magon and Auxerre, and the district of Bar-fur Seine, which are subject to the parliament of Paris. There are four bi-hoaries in this sowerment.

The city of Dijon, in latin Divio, capital of the country and government of Burgundy, is finisted in the Dijonois, about one hundred and forty miles to the fouth-eaft

try and government of Burgundy, is finasted in the Dijonois, about one hundred and forty miles to the fouth-eaft of Paris. It is a pretty large city; the streets are well-paved, broad, and strait; the houses are handsome, and the churches and squares beautiful. Here are seven parish-churches, sour abbies, three large hospitals or alma-houses, several convents, with a chapel, in which is kept a supposed miraculous host; they have likewise an academy of kiences, and in 1723 a college of law was erected here.

This city is the residence of the governor, the parliament, an intendancy, a taillege-office, is provincial, supreme, and particular court, a fait-office, itc. It is the residence of Lyons, and enjo. 2 revenue of eighteen thousand livres, (seven hundred and eighty-eight pounds sterling) and his taxation to the court of Rome is one thousand livres, (seven hundred and eighty-eight pounds sterling) and his taxation to the court of Rome is one thousand livres, (seven hundred and wastered by the rivers Suson and Ouche; the first of which is but a rivulet, and, after running through the city intelf, where it falls into the Dijon. The walks before the city are aquarter of a league in length, planted with three rows of Linden-trees, and terminated by a delightful grove.

On an eninence, near three hills on the river Arux, stands Autun, the Augustedunum of the ant ents. It is about a mile in length, and as much in weatch: and con-

On an eminence, near three hills on the river Arux, flands Autun, the Augustedunum of the ant ents. It is about a mile in length, and as much in breadth; and confists of the Upper City, which is commanded by mount Cenist and the Lower City, in which is the citadel, and where are held the provincial tribunal, a forest court, a falt-office, and several other courts. The bishop of this place is suffragan to the archibishop of Lyons, though he is place is suffragan to the archibishop of Lyons, though he is place is suffragan to the archibishop of Lyons, though he is place in the suffragan to the archibishop of Lyons, though he is place in full suffragan to the archibishop of the surguisty, and has a diocese of fix hundred and eleven parishes, and four-teen abbies under him. His revenue amounts to seventeen thousand livres, (seven hundred and forty-four pounds sterling) and he pays four thousand eight hundred storins to the court of Rome. In the midst of this city is an open place called the Field of Mars, and there are fill the remains of three pagan temples, one of them dedicated to mains of three pagan temples, one of them dedicated to lanus, and another to Diana. Here are likewife two anjames, and another to Diana. Here are likewife two anticut gates of excellent workmanship, which fome have taken for triumplial arches, with a circus, and the remains of a pyramid; which last, to all appearance, has been a tomb. In this city, besides a cathedral, are five abbies, No. 68.

12 10 10 10 10

two feminaries, two priories, one collegists, and twelve parish-churches; here are also fix convents, particularly a fine chartcuse, firmated in the subarbs, in the church of which lie the last dukes of Burgandy; and two hospitals.

The city of Auxerre, called in 1stin Antisidorum, la the capital of the earldom of Auxerrols, stands one hill near the river Youne, ninety-two miles to the fouth of Paris. It has a provincial and forest court, a chamber of tithes, a salt-collee, &cc. and is the see of a bishop, suffragan to the highlight perishes, and he has a yearly revenue of thirty-sight perishes, and he has a yearly revenue of thirty-sive thousand livres, (one thousand five hundred and thirty-sive hounded sterling) and he is taxed to the court of Rome four thousand four hundred floring thundred and thirty-two pounds sterling) and he is taxed to the court of Rome four thousand four hundred storing this city, two hospitals, a collegiate and eight parish-churches, sive abbies, six convents, and one commandery of the knights of Malta. A good trade is carried on here, by means of the Yonne.

The last city we shall describe, in this government, in Trevoux, the antient Trivortium, the capital of the principality of Dombes, and of the castellany of Trevoux: it is seated on a hill by the Saone, one hundred and alghty miles to the fouth by west of Paris, and is the residence of a governor, a parliament, a district-court, and a mint. It has one chapter, three convents, and an hospital. It is said to have derived its name from its fituation on one of the highways which Agripps made into Gaul, and which here divides into three ornaches.

Trevoux, with the little principality of Dombes, belong to the doke of Maine, and were declared by Lewis XIV. an absolute principality. Hence the 'prince of Dombes has the power of life and death, can confer nobiflity, coin money, and impose what traxs he please on his subjects, though he has his own parliament. His certain, revenue is about one hundred and fasty-three pounds starling and th

Befides the governor and general-licutenant, here are two fub-governors, one over Lyonnois and Beaujolois, the other over Fores. The courts of this government proceed according to the civil law, and appeals from them lie to the parliament of Paris.

lie to the parliament of Paris.

Lyonnois is about twelve French leagues in length, and feven in breadth. The capital city, Lyons, in latin Lugdunom, which is also the capital of the whole government, stands fifteen miles to the north of Vienne, in Dauphine, at the conflux of the Soane and the Rhone; the former runs through a part of the city, and has two bridges of wood, and a narrow one of stone; but the stone bridges over the Rhone is a noble structure. The city is about a fourth part as large as Paris, and is very populous; but most of the streets are narrow. The houses, which are faid to amount to four thousand, are generally high and well-built, but difgraced by the raggedness and mean appearance of their paper windows; and they are faid to contain above ninety thousand people.

Here are several fine squares, in one of which is the town-house, the most elegant in Europe, which was begun in 1647, and finished in 1655. It is a large building in the form of an oblong square, and on each side of the

gui in 1047, and animed in 1055. It a large outling in the form of an oblong funer, and on each fide of the front is a wing four hundred and twenty feet in length. In the middle of the front is a tower, with a cupola on the top, and in the angles project two large pavillions. The great gate is adorned with two columns of the Ionic order, great gate is aderned with two columns of the lonic order, and leads into a large hall arched over, where are to be feen the bufts of Philip the Fair, Charles VIII. and Henry IV. with the pictures of all the kings of France of the name of Lewis: the roof is also finely painted. Here are likewise the consular chamber, where the provost and the four echevins, or aldermen, usually fit; the hall where the merchants hold their meetings; and in another hall are the pictures of the echevins. Before the house is a handform square, in which is a large soundin. The cathedral of I wone in delicated on St. lebs. and the clusters consider fome square, in which is a large fountain. The cathedral of Lyons is dedicated to St. John, and the chapter confists 8 I of gentlemen of the bolt families. They boast of their having formerly had several kings and princes, who were members of it; particularly in the thirteenth century, when at one time they had the son of an emperor, nine sons of kings, fourteen sons of dukes, thirty of counts, and twenty of barons. To this chapter belong not only the cathedral, but the churches of St. Stephen and the Holy Cross.

The cathedral is a large furthers, and maximisely.

but the churches of St. Stephen and the Holy Cros.

"The cathedral is a large firucture, and particularly famous for its clock, which, like that at Strafburg, is celebrated for the variety of its motions, most of which have ceafed; for at every hour a cock at the top clapped his wings thrice, and crowed twice, after which an single coming out of a door, faluted the virgin Mary, and at the fame time the Holy Choft descended, and an image of God the Father gave the benediction. The minute motion had an oval circle, and yet the hand always touched the circumference. Besides the cathedral, are three chapters or collegist churches, thirteen parish-churches, and till lately there were two colleges of jesuits, the largest of which was the most stately in all the kingdom." This structure is a regular quisdrangle, curiously painted in fresco, though some the mioutains beat upon it. Over the front door, and over part of the church of that college is an observatory, one of the boldest pieces of srchitesture in Europe. Their chapel has a fine altar piece of lapis-lazuli, and an excellent piece of painting by Blanchard. Their library is a spacious and handsome apartment, in which are about forty thousand yolumes; among which are some manuscripts of the bible, but not very antiens manuscript of Pliny's Natural History.

There is a large substitution the gate of St. Justus,

where the bare footed Carmelites have a delightful convent, with spatious gardens, from which there is a fine prospect of the city: in their church is an altar of sgate and lapis-lazull. The capuchins have also the pretended miracles of their faint painted on the walls of their cloifter, among which is one of his paying, his apothecury with prayers, instead of money. The nunnery of St. Peter is a fine structure, and the parish-church of St. Niege is adorned with several sine pieces of painting by Le Brun. In one of the squares stands an equestrian state in brass of Lewis XIV. La Belle Cour is a spacious area, and near it are a mall and a delightful walk. The monument of the two lovers stands on the other side of the Soane, and seems to have been some Roman building, constructed with very large stones. The friars in Lyons are very importunate beggars, coming into the chambers of strangers for charity.

rity.

Here is a fine arfenal, well flored with military implements; also three forts, but one of them is only garrifored, and that serves for the prison of the city. In this city are still to be seen some remains of Roman antiquities, as

baths, aqueducts, part of an amphithcatte, &c.

In this place are an archbifhoptic, an intendency, a mint, with a provincial and other courts. Its archbifhop is primate over the archbifhoppies of Rouen, Tours, Sens, and Paris: fo that appeals lie from them to him. He has alfo fix bifhops for his fuffragars, with a diocete of feven hundred and fixty-four patifhes, and a revenue of forty-eight through divers, (two thousand one hundred pounds thering) out of which he is taxed by the court of Rome three thousand florins; and he has the title of count of Lyons, befides that of archbifhon.

Some mountains lie round the city, on which there being feveral convents, feats, gardens, and vineyards, form

a very delightfol prospect.

The inlabitants are, for the most part, makers of filk, gold, and filyer laces. Formerly the looms tim and about this city amounted to eighteen thousand; but in 1698, this number was found reduced to four thousand. It is fill, however, in great repute for the above manufactures, particularly for its bombazines, which are admired for their beautiful luftre; and its trade extends not only over all France; but even to Spain, Italy, Swifferland, Germany, and the Low countries.

The district of Forez, the next division of this province, is equal in extent to Lyonnois and Beaujolois put together; but has only several small towns. Its capital is Montbrison, situated on the little river Veziza, seventeen miles to the south-west of Lyons, and has several courts of justice and public offices: a collegiate church, with some other churches and convents are also contained in it.

The diffrict of Beaujolois is ten French leagues in length, and eight in breadth. This is a very fruitful country. Its capital is Ville Franche, which is feated on the little

river Morgon, near the Soane; and has a cofferante church and an academy of the polite arts, with soveral public offices and buildings.

. . . . S E C T. to V. to and (x)

Of the fituation, extent and boundaries, climate, mountains, rivers, minerals, produce, trade, government, inhabitants, principal cities and tenuns, Use. of the governments and provinces of Languedee, Ruufilon and Faix, Lover Navarre and Boarne, Guienne and Gafeny, Awergne, Linufin; and La Marche.

THE government of Languedoe is bounded, on the caft, by the Rhone, which feparates it from Provence and Dauphine; on the north, by Lyonnois, Auvergne, and Guienne; on the fouth, it terminates on the counties of Rouffillon and Foix, and also on the Mediserranean; on the west, a part of it is divided by the Garoune from a part of Gascony. The eastern coast, from Agde, as far as the Rhone, is remarkably increased, those having retired from it considerably, as evidently appears on consulting the accounts of antient geographers with respect to the situation of several of its maritime places, and comparing them with the present.

The form of this country is very irregular: however, its extent, from eaft to weft, may be computed at above feventy leagues; but from north to fouth, in the narroweft part, it is between ten and twelve: in the broadett-part, weftward, it is slmoft thirty, and to the eaftward near thirty-two. Along the fourhern coaft, which is properly a long valley, extending from Touloufe to the fea, it generally blows a weft wind; though it is fometimes north, sud fometimes fouth-weft. This wind gradually increases, and, being cool, sefreshes the country in tunimer. The sinkentiants call it Cirs, in conformity to its antient wame Circius: opposite to this blows another from the east or fouth-east, which is called Autum. This is first perceived near Narbonne, and at Castlenaudari it is very violent: this, wind, being hot, causes head ache, with loss of appetite, and stems to (well the whole body. In the eastern part of Languedoc is frequently selt a cold and very strong north wind, which follows the course of the Rhone, in the valley through which it runs, from north to fouth, and is called Bife, or Black. Sometimes, in direct opposition to the latter, shows a sea wind, which is usually accompanied with a drizaling rain; but, when dry, has the same morbid effects as the Autum in Upper Languedoc: besides, in the heat of summer, from the coast of Leucate to the Rhone, sea-breezes constantly set in, at nine or ten o'clock in the morning, and, to the great refreshment of the air, last till about five in the evening. It is also observable, that at the foot of the Pyrenees, near the village of Blaud, in a narrow valley wholly environed with mountains, except towards the north west, and this contains openings two or three hundred paces wide, blows a very cool west or north-west gale, which chiefly prevails in summer, and then only in the night. In clear and warm weather this gale is much stronger than in a kick and cold air. In summer, to colo the whole valley, and in winter revents white frost; and the inhabitants of the valley of

This is a very mountainous country, particularly the Cevennes, which are very high and steep: yet these being, as it were, the head-quarters of the protestants, abound in people. Here are lead and iron-mines; some very beautiful marble is also dug out of the quarriers, and in several places in Lower Languedoc are found turquoites.

Languedoc is very fertile in corn, fruit, and fine wine; it also contains large plantatious of olive and mulberrytrees, the latter for filk worms, and the former for oil; though this last is inferior to that of Provence. They here tread out the corn in the manner practifed in the east, by causing a number of mules and horses to turn round a circle upon the grain, which is strewed under them, and afterwards also tread the straw into small pieces, to save the trouble of chopping it. In Upper Languedoc grows a plant called woad; its root is usually an inch thick, and a soot or a foot and a half in length, with five or fix leaves growing from it, that are a foot long, and fix inches broad. The shower represents a cross, and bears an oblong seed, which is sometimes of a violet, and sometimes of a yellow colour; but the former is the best. It is usually seen in February, and requires a good soil, with great care after it begins to shoot. When the herb is ripe it is cut off close

The Allies which rices in the fame country. Here are all the wife toward growth official and medicinal forings.

prince in the fame country. Here are likewife feveral perisionical and medicinal forings. In and and the country of the roblest works that any country has ever produced, is the royal canal, formed in order to make a communication between the ocean and the Mediceranean, far, that veilefic might past from one fea into the other, without going round by Spain, Riquet, after employing twenty years in a minute confideration of every pattienlar, during which he had not other counfideration than his gardeners, completed his plan, which he executed between the years of 606 and 1060/ invite reign of it. Douls XIV. 1. This canallacing a the harbour of Lette on the Mediterranean, and traveries the lake of Thau, and a quarter of a mile below. There are in it firsty-fear large fluices, many of which confit of two, three, and four finaller ones, by means, of which the water is obstroyed into the ring grounds, a The whole's forty French lesgues in lought, and every where opinitals may be forwarded to any place upon it; and its breadth, from one bank to the other, is one hundred and forty-four feet. forty-four feet.

There is a large refervoir at St. Ferreal, a quarter of at mile below Revel; between two rocky hills, that are in the form of a half moon; it is ione thousand two handred fathoms in dength, five hundred in breadth; and twinty deep, the whole ferface being fix hundred, eighty-fevent thousand four hundred and thirty-eight feet. Into this bason of water the rivolet of Laudoe, which cans down the hills, is received, and inclosed by a wall two thousand four hundred feet long, one hundred and thirty-two in height, and twenty-four thick, having a firing dame runs an arched passage reaching to the main well, where three large cocks, of east brisk, are turned and shut by means of iron bars; and these cocks discharge the water through stirce large cocks, of caft brafs, are turned and thut by means of iron bars; and these cocks discharge the water through mouths as large as a man's body into an arched aqueduct, where it runs through the outer wall, and, when got beyond it, goes under the name of the river Laudot; containing its coarse to the canal called Rigole de la Plaining From theme it is conveyed to another fine reservoir near Naurouse, two hundred fathoms in length, one hundred and fifty in breadth, and even fret, in depth; and out of this, bason it is conveyed by means of sluices, as well to the Mediterrapean sears to the ocean a according as the canal Mediterranean fea as to the ocean; according as the canal requires it. Though the above cocks, remain open for fome months fucceffively, yet there is no vifible diminution, of the water in the great refervoir.

Near Bezieres are eight fluices, which form a regular, end grand cafeade nine hundred and thirty-fix feet long, and lixty-fix high, by means of which veffels may pais across the river Oth, and continue their voyage on the canal. Above it, between Bezieres and Capeffan, is the Mal Pas; where the canal is conveyed for the length of a hardred and twenty fathoms, under a mountain cut into a very lofty areade, the greatest part of which is lined with free-flone, except towards the end, where it is only hewn through the rock, which is of a fost sulphyreous sub-

At Agde is a round fluice, with three openings, three different depths of the water meeting there; and the gates are to ingeniously contrived, that vessels may pass through by opening which the matter pleases; an invention that firek the great Vaoban himself with admiration. The lesser rivers and streams that might have prejudiced the canal have been carried under it by water courses, of which there are forty-four, besides eight bridges. The whole

.

work cost thirteen millions of livres, (femething more than half a million scriping) part of which monay was formitted by the king, each part by the share of Languadoca of the control of the king generally granted to Riquet, the invantor of this capal, and his pash heirs, all the jurisdiction and revenues belonging to it: If that the grown does not come into pole-fitons will the variation of that line. Ships passing to the forey hundred weight pay then the fores, (ten pence, English) and even the king himself pays the same toll for military stores, &c. sant by way of this capal; so that the revenue, especially in time of a brills rade, is very consinderable. It lowever, the charges attending it are also very great for, the stating of the several director, receivers, complyrollers, leuvehauta, clerks, and watchmen, annually amount to one hundred thouland livris, (sour thousand pounds iterting) besides the great expence of repairs. The counts of Caraman, descendance of the above-meantoned Riquet, are also obliged to keep passage, boats, which are drawit by mules or horses; and though there are no pai-sangers, they mult go and come at shared time. This is a daugerous coast, and also in ware of good and focuse harbours.

With refeet to trade, the city of Montrollier, by means

ingers, they must go and come at flated times. This is a dangerous coast, and also in want of good and focus, hatbours.

With terpect to trade, the city of Montpellier, by means of the river Les, and the lakes near it, carries on, at the hatbour of Cetts, the greatest maritime trade in all Languedoc; but the whole is not very confiderable. The computers of this province principelly consists of manufactures and other goods. Wine is exported hence to the coasts of listy, oil. 10. Switzerland and Germany, and, when, the larvest, is, uncommenty good, corn to Italy and Spain a dried chesinuts and raisins are sent to Tunis and Algiers; and cloth to the Levant, Switzerland, and Germany.

About the middle of the fixteenth centery, the Reformation made an extraordinary progress in this province, but was short followed by civil broils, and all the rage of perfectation, which was carried, but here with greater suy than in other parts of France; and Languedoc was the seque of continual communions and cruelties for above an nundred yeasts. But notwithstanding the torrents of blood that were poured out, here, in order to exterminate the Hugonost (and the, whole kingdom of France did not exhibit more feenes of cruelty than were institled on this single province); yet these still continue to tested in these parts many secrets protestants. So inessectual are fire and bigotry, and the surpers of populacity, who are also

bigotry that he beard of popular clerry, who are allower wealthy, there being in Languedoc no lefs than three archibifiops and twenty bilhops, and the whole ecclefiaftical recupies, amount to twenty-five millions forty-one thousand such thundred and fity-two livres are annum, (or, one million one thousand fix hundred and eventy-four coneds desiring). It has also a gent number of inferior (or, one million one thousand fix hundred and sevency-four population of the courts, shubest to the superme ones, which are the parliament of Toulouse, and the chamber of accompts and taxes at Montpellier. The governors of districts here resemble the salisfis in the other provinces, and are eight in number. Every district has a court of justice, to which lie appeals from the Viguerier or royal courts. In it is also superior forest court, with seven dependent on it. The parliament consists of the clergy, the nobility, and the commons, who are called together by the king every October. Under the governor of Languedoc are three general seutenants, namely, one over Upper Languedoc, the scoon over Lower Languedoc, and the third over the dioceses of Nismes, Alais, Mende, Puy, Viviers, and Uses. It has also nine inferior governors, to each of which a distinct department is affigned.

affigned.
The following are the principal places in this province; viz. t. Touloufe, or Thouloufe, the capital of Languedoc, and one of the most antient cities in the kingdom, is fituated in latitude forty-three degrees thirty-five minutes fituated in latitude forty-three degrees thirty-five minutes forty feconds, and in one degree ten minutes east longitude, in a diffret, called the Toulousain, in a most delightful plain on the Garonne, and, next to Paris, is said to be the largest city in all France. The streets are mostly broad, and the houses built of brick; it is not, however, very populous, and though so finely situated, its trade is inconsiderable, its staple article being Spanish wool. This is chiefly imputed to the vanity of the merchants, who no coner acquire a considerable fortune than, laying assessing the commerce, they make it their chief aim to obtain a seat in the city-council.

In this city are the seat of an intendency and receiver's

the city-council.

In this city are the feat of an intendency and receiver's office, of a governor, a provincial court, a royal tribunal, an admiralry, a forest-court, a mint, and other public offices;

CONTRACTOR OF THE

offices; here also is the refidence of an archbishop, and the second parliament of the kingdom. The discret of the archbishop consists two presided and first partition, his revenue amounts to finty theories of the first partition. The discret of the archbishop consists two presided and first partition, his revenue amounts to finty theories of livine a year (two thousand four hundred posside faciling), had be pays five thousand four hundred posside faciling), and he pays five thousand forthe to the court of Rome.

Though the cathedrial is an attent handforce firedure, yet it contains nothing remarkable in the space are before it in a formain, over which is an obtain, or St. Saturnin, are find to lie thirty bottles of faints, and among these fever of the apostles, owned whom they pettend to to St. James the Younger, though St. Jago to Compositis, in Spain, also bottle of being positived of the body of that speaks. Near this city shards a focularistic aboly. The church of the Virgit Mary, which simulates in the great later, and in any time of calimity is the confirm refuge of the inhabitants. The hame of the sharen was used black image of the Virgit Mary, which simulates the common people imagine that the image was carved by St. Luke. The church of the Carmelites has a large and magnificent chapet; that of the Dominicans it arto large and foreidd. Under the choir of the Franciscan church is a vauit, where bodies dry without mouldering or pairsfaction; he become extremely light.

Under the choir of the Franciscan church is a vauit, where bodies dry without mouldering or putrefaction, to but become extremely light.

The fociety of the Blue Franceau in this city, is one of the most renowned fracernities in the wisels kinesdom, having in its registers kines, princes of the blood, and aminent exclessible. The university of Toulouse is reputred the focond in France, and conditis of several colleges. The four faculties, namely, divinity, isw, philosophy, and physic, with the liberal arts, are raught here. Here is also an academy of polite Herature, founded by royal patent in September 10.94; it is composed of a chancellor, and forty two members or follows, who employ their ralents chiefly in Poetry. This is in the room of a fociety called the Ploral Garner; and fill every year, on the third day of May, they give away four prises, one gold and three fiver flowers, to those who diffinguish themselves by writing the best copy of verses. The above fociety meets in the room in which there is a white marble flates of Clementia, who is falled to have instituted the above smentioned Floral prises in the year eggs. The hall of this structure is adversed with the busis of the illustrious and celebrated natives of Toulouse, as also of two gothic kings, some sociatives of Toulouse, as also for two gothic kings, fonis a sectionists of Toulouse, heim the animals of the city front the year large

Touloufe, as also of two gothic kines, fome accounts of Touloufe, and feveral delinquished civilians. Here are preferred five large parchment folios, finely written and illuminated, being the annuals of the city front the year 1282 at the preferst time; Here is also an academy of the feiences and liberal arts.

The flone bridge over the Garconne, which is a hundred and thirty-five fathous long, and twelve broad, refts on feven arches of different magnitudes; but, except the camons, which are of flone, is wholly built of brick. In this city are made bergamo carpets, but of little value, together with fome flight filk and woollen fluffs.

2. The city of Narbonne, the antient Narbo, is fixty-four miles to the west of Montpellier, feated on a canal which passes through it, and joins the river Aude. It is a fortified place, and the residence of an archbishop, whose prevince contains one hundred and forty-four purishes, and its revenue amounts to ninety thousand hivres per annum (three thousand fix hundred pounds sterling), and he is axed nine thousand fix hundred source of the came of the court of Rome. The cathedral, called St. Justus and St. Patfor, it remarkable for its fine organ, and curious paintings, in which are cathedral, called St. Juitus and St. rattor, is remarkable for its fine organ, and curious paintings, in which are reprefented the raifing of Lazarus from the dead, the last judgment, and other pieces. Here are also five other parish-churches, the principal of which is the collegiate church of St. Paul, with a college of the fathers of the church of M. rau, with a contege of the fathers of the christian doctrine, and several convents for persons of both sexes. Among the antiquities still to be seen here, Is a beautiful sepulchic of white marble, in the garden of the grothisting's palace; and in the walls of the court of it,

archolings palace; and in the waits or me court or it, feveral flones and inferiptions are placed.

3. The city of Montpellier, in latin Mons Peffalanus, it leated on a hill by the river Lez, fifty miles to the northeast of Narbonne, and, next to Touloufe, is the most confiderable city in all Languedoc. Here are many fine houses, but the streets are very narrow, which is attended with this convenience, that in hot weather they have linen awnings drawn over them, under which a perion may walk without being incommoded by the fun. In this city, is a chamber of taxes and accompts, with an intendency, a treaturer's office, a provincial court of judice, a theriff's court; an independent court, a forest court, a maint, de.
The air here to fo pleasant and healthy, ther numbers of

foreigners, and especially of the English, refort hither for the recovery of their health, particularly when labouring under hestic disheders.

The city to advanced with feweral shatty editions, as, the healt of judice, the ghrechest of fit. Peter and the Virgin Mary; and offering citedet, finalsed with feer royal ballions, which commands the town and neighbouring country. The biffeen of this pater is subject to the archithop of Narbonne; het disects contains one hundred and feven parishes; his reverses is theiry; very thousand fivers (one thousand two hundred and feven parishes; his reverses is theiry; the thousand fivers (one thousand two hundred and feven parishes; his pleasance of Louis the Great, which is with my the city, is the pleasance of Louis the Great, which is with my the city, is the pleasance of Louis the Great, which is with my the city, is the pleasance of their monarch in bronne, upon a pededial of a greyish white marble. This the fitars of Languedee arched in honour of him. The city gate, leading to this figure, is built in the form of a triumphal arch.

In 1700 a royal academy of ficiences was faveaded here, and they have an escallent physic garden, in which public lectures on bounty are read. The university here is particularly faviacies for physic, is being founded by physicians, who were duplied Spain in the years a tho. The celebrated fewelst gown of Kabrisis, with which all declors of physicare invested at taking their degrees, has long finos cased ten be an original, the fudence having, from time to thise, even of hittle flips; fo there the robe new used is fald to be at least the third of boards favored in woot brought from the Mediterment with the hidden were supplied of the making vooters in the first of the robe much employed in making vooters in the first were formerly periods of this city, and wooter farmer the and in manufacturing dimities, filts, and wooter from the in the an other places, the form them in these, at the first of the lasts of Thus, feventeen miles to the fourthm

garrifon and inhabitaints.

4. The small town of Frontigniae, or Frantignan, is faned out the lake of Thau, Seenteen miles to the fouth-west of Montgeleier. The above take, which is also called Magalacine, it twolve leagues in length, and separated from the due only by a narrow tract of land; but in one piace, has a communication with the gulf of Lyons, which, we are told, does not take its name from the city of Lyone, which is seared at a great diffence from the fea, but rather from the violent florans to frequent in this shallow part of the Mediturranemi, and which destroy the ships as a surjection of the decide of the seare. This glass is remarkable for its ex-

the Mediurraneani, and which destroy the ships as a surious lion doce in grey. This place is remarkable for its excellent? what, 'jar-raissing, 'and lier 'hatissime town-house; the wine is called, by the English, 'Frontiniae.

3. The large city of Nistnes, in latin Neumanius, stands thirty miles to the north of Montpellier, in a pleasant fituation, having on one side hills covered with vines, and on the other a very fertile plain. The fit rets are in general narrow, but kept patty clean, and the houses are hand-somely butlet with stone. Here is a collector's office, an immunatery, and a provincial cover of justice. Its bishop is suffragan to the archissing of Narbonne, and his dioceso contains two hundred and sitteen parishes: he has an annual revenue of twenty fix thousand lives, (one thoushuld and sorty pounds farling) out of which bis taustion at the court of Rome is one thousand two hundred slosins. Here are feweral convents in this city; an academy of polite literature, founded in 1682; and it is defended by a citadel confifting of four basilions. Here are fuch a multitude of manufacturies, that its cloth and filk trade alone exceeds that of the whole province. One third of the inhabitants are fecret protestants.

Several illustrious monuments of antiquity are to be feen Several illuttrous monuments or anaquity are to co seen in this city and its neighbourhood: one of the principal of thefe is an amphitheatre, faid to be the leaft damaged of any in Europe. It is built of free-flone, the outside of which it very entire: the flones are in many places of an amazing length and thickness: it is two flories high, and has fixty arches and celumns in each flory; on these and their contracts on the flow of the Roman earlies, with figures of cornices are to be feen the Roman eagles, with figures of Romulus and Remus fucking a wolf. The fteps or feats are ruined, and the area filled with houses. Over the large entrance is a triple and winged priapus, the figure of a woman holding by a bridle, and two half holls cut in

It appears, from feveral remains, that this was a public bath. Here is also an oftangular tower fifteen fathous high, the whole being a folid freeture from the bettern to the top. The allo an oftangular tower fifteen fathous high, the whole being a folid freeture from the Bornari engles Gouted later are flucts off which is impared to the Gootie, who on their redection of this country, are fuppled to have done this by way of linds to the inegaty enemy key had thudeed.

About a mile and a half from the market-town of Remonition, and not far from Nifmes, is a bridge called the Pant di Garde. This is a most valuable plees of Roman antiquity, being part of the great aqueode. By which the specific of the readers of the strength of nine hours diffused to the viver Gardon, and thus connecting the high rocks on both fides the river, fo as to afford a free paffige to the water of the foring above-mentioned from one mountain to the other. The lower part confists of fix arches, four hundred and thirty-eight for in lought, don't fix a few in diameter, and there the lower part confists of fix arches, four hundred and thirty-eight for in lought, the diplot, and is of fix he was of the fixe and the connecting the high rocks on both fides the river, fo as to afford a free paffige to the water of the foring above-mentioned from one mountain to the other. The lower part confists of fix arches, four hundred and thirty-eight feet in lought, and spring the fire and foot way leading through it, fecured by a free and foot way leading through it, fecured by a free and foot way leading through it, fecured by a free and foot way leading through it is decided to the five fire and f

Jefeite was added as availlander to it. The quantity of uno wrought filk annually earthd out of this city, is did the amount to one million two hundred thouland, pounds weight, at the lowest computation.

Housillon is separated to the north from Languedoe by the Lesse Pyrenean mountains from Catalonia and Cerdagne. The length of this country, from east to with a shout sifty entire, and it is twenty-five in breadth. Its name of Rousillon is derived from its antient capital Russino. Among the feveral mountains here, the highest are those of Madines and Canigou a the laster of which is faid to be footness hundred fathoms in height.

This country is on all fides environed with mountains as and the furnmer beats are to intense, that the inhabitants are almost universally swarth and surger. If he follie very fruitful in corns, wine, and forage and in some parts so uncommonally fertile, that, after the corn flavors is of uncommonally fertile, that, after the corn flavors is of uncommonally for the corn favor in oliver and canness, which are almost as common here as apples and pears in Normandy. They have very little wood, and that only of shrubs, and the only way of being supplies with goods from other countries is by means of males, from their want of marigable rivers.

With respect to animals, they have very little wood, and that only of shrubs, and the only way of being supplies with goods from other countries is by means of males, from their want of marigable rivers.

With respect to animals, they have the uncommon 'deli-eacy of their fiells. "Ozen are also fattened here, for the gratification of the wealthy; but the breeding of sows is neglected, their milk being bad, however, the pigeons, quals, and partridges of Roussisson fattened here, for the gratification of the wealthy; but the breeding of sows is neglected, their milk being bad, however, the pigeons, quals, and partridges of Roussisson sterile thousand lives; (one thousand feven hundred and fitty pounds steriles. At Perignan is a superior court, to counci

with baftions: and has also a citadel, which is a fine work, and the solutions are likewise defended by a fort. It is, however, a place of no great extent; but is very populous, there being here a superior royal council, or high court of judice, an intendency, whethere is royal council, or high court of judice, an intendency, whethere is altroffice, and a mint. Its bishop is suffragan to the archbishop of Narbonnie, and has a diocese of a hundred and eighty parishes. His revenue is about eighteen thousand livres, (feven hundred and eighty parishes. His revenue is about eighteen thousand livres, (feven hundred and eighty parishes. His revenue is about eighteen thousand livres, (feven hundred and eighty parishes. His revenue of Rome fifteen hundred should be seen that the court of Rome fifteen hundred should be seen as the cashedral is has store parish churches, as seminary, twelve convents of Jeduits. It has likewise and hospitals. A mong the other public buildings is a large cannon foundery. The greatest disadvantage of this city is the want of good warer.

The government of Folx contains the district and county of Folx, with the territories of Andorie and Donesan. As the bounded on the north and cast by Languedoc, on the fourth by the Pyrenean mountains and Roussillon, and on the west by Gascony. The principal rivers are the Auviege and the Rize. This country is a dependency on the parliament of Touloofe, and constitutes part of the lands of the states who are annually called together by the king. Its trade consists of carile, assay, turnentine, pitch, cork, jasper, and particularly iron; and has a licutemant general, besides the governor.

Among the mountains is situated Upper Foix, is produces as wood, iron, mineral waters, with some passayer. In this country are several caverns, in which are very singular sigues to med by the petrifying waters. Lower Foix produces

sections from grain and wine. In this government are four principal towns; but their one very family, and too inconfidence on require particular gapetion.

Denousement he finite diffrit or foversigney just manufactor, is nine miles in length, and the fame in breakth; it is dispussed fines the country of Fois, by a chair of anotherism, and contains nine market-towns and villages; and the terrisory or valley of Andorro has also feveral villages.

and the territory or valley of Andorre has also several cillings, in it.

We shall describe that part of Navarre which belongs to Spaint, in treating of that kingden; and now come to French; or Lower Navarre, which is united under the fame government with the principality of Baurne. These four and typesom generalized hounded on the north and east by Gascony; on the fouth by the Pyrousen mountains; and by another part of Gascony on the well.

The little government of Lower Navarre is one of the fix buildwice which formenty composed the kingdom of Navarre, but in 532 Fordmand, sing of Avagon and Gastin, having under frivoluse pretentes, possible himself of the hingdom of Navarre, all the Cotheries, the lawful beintie, and her harband John of Albrett, could presume to be restored to them, was this little spot. They were also possible of Bearne. John, their, for, had not be rectored to them, was this little spot. They were also possible of Bearne. John, their, for, had not be rectored to them, and the first retinant of Navarre, which was called a kingdom. Johnne, his daughter, in 254, married Anthony of Bearmen, to whom the brought, the above-mentioned countries a devery. Their for Henry IV. became king of Frame, and Lower Navarre and Bearne were anneated to that crown by his for and function Lower Salaries. Marries and Bearne, but the found and sucretic Louis Kill.

Lower Navarre, confident as a separate kingdom or paorlines, is beended, on the well, business on Labourd, additrict of Gascony; its estent is only twenty four miles in length; and sitted in the bounded past.

The part of Gascony and Bearne, it is specially intended to the Redoule, which has its source here; and beath full into the Adour. The country is mountained, and braids in length, and sitted in his principal vives. As Salal ; these are the Nive, which has its fource here; and beath full into the Adour. The country is mountained, and positions in the found in his heart with that of Risky.

They is a pather above, millegate thurch, no evenwers, in

The inhabitants speak the Basque diated, which is the fame with that of Bistop, it makes the fame with that of Bistop, it makes the fame of the whole country; the easy-scale failed buildings remaining here being four perceital priorites. The Reformation took place here under the reign of Hanry II. hing of Navarre; but in 1604 there was, at least in appearance, a general return to the Romith church. In Beame are two bithoptics. They allow to the governon favon thousand fevern hundred and forty to the deputy-governor. The whole government is subject to the jurisdiction of the parliaments of Pau; yet both Lower Navarre and Bearre have states of their own, each paying the king, annually fews thousand eight hundred and fixty livres (two hundred and thirteen younds derling) as an ordinary contingent, with two-thous

their own, each paying the king samually few thousand eight handred and firsty livres (two hundred and thirteen pounds farling) as an ordinary contingent, with smochousiand more towards the maintenance of the troops.

There are five difficits in Lower Navarre, and is seminable towards the Basic State of the Gate, which is fituated at the entrance of the pass that leads through the Pyrenean mountains into Spain. It shads on the river Nive, twenty miles to the Southeast of Bayonne, and has a citadel placed on an eminence. Before the above towar, there are only four other small ones; and some inconfidently eight miles in length, and thirty-for in breadth; but is mountainous, and, except the plains, is in general harren. However, fome of the mountains contain mines of copper, iron, and lead, and are covered with pinceds for masts and planks. In this country are produced great quantities of maillae, which is a kind of Indian corn, and also fias. In some places the inhabitants make excellent wine, the very rocks being planted, with vines; but very little wheat or rya is preduced here.

The capital town in this principality, namely, Peu, in hatin Palum, flands on an eminence, at the foot of which runs the river Gave Bespois. It is ninety-fiven miles to the south of Bourdeaux, and is the feat of a parliament and a balliwic. This is a small, but pretty town, and he manufactures of cloth. It has a calle, in which king Henry LV. of France was born: here are also sive convents, and are of the finall, but populous city of Oleron is seated on the

The imall, but populous city of Oleron is feated on the

basks of the river Gave, which, from this city, is called the Gave of Oleron miles to the footh-wat of Peas. It has a bailiwic court, and is the fac of a biflion, who is dusting two bandred and favoury thises pacifism; with any revenue of thirseen thouland living, (five hundred and flavy, nine pounds farking) had they fine hundred farting to the fire of Rome. In trade is not, as prefately for confidenable as farmerly.

The town of Navarreline, built by Henry d'Albert, king of Navarre, and prince of Bearine, is also fireased on the Gave of Oleyon, fastem tailed to the fouth-east of Bearing of Navarre, which middle of a fertile pain, and is a figure city, pretty will built. This place is farreunded with walls; but line eges to an attack from the neighbouring hills. It is the first of a governoer, and we king a keep to sain.

square city, preny, well built. This place is furreemoled with wells; but like epot to an attack from the neighbouring hills. It is her fast of a generous, and a ling's bleus tooms.

Guilenne and Gafcony are bounded, on the eaft, by Auvergan and Languedoc; on the well, by the Bay of Bifesy; on the north, by Saintonge, Augoumois, Limofin, and Auvergan; and, on the feuth, by the Pyreneas motomatics. This government extends, from north to fouth, shows eighty leagues, and from eaft to well, about minety. It was formerly part of the antient kingdom of Aquitaine. sevenue is fairy-fee thousand livres per annum (two morfand size thundred and fix pounds flerling) and his taxation
at the capert of Rome four thousand floring. The cathedrai is a large gothle five thrile of reites on the give
liter.

The church and convertt of the Dominicans are new
and esquing frudtures, but those belonging to the Carthufans they a filendor feelom feen in any convents of that
order. In this city is likewise an abbey of Bestedicities,
of the order of St. Masr. The Josius had, till their exposition in 1441, and in 1712 the king erected fiere in
acasemy of the feisences and polite arth, the library to which
does not contean a great number of books, but confide ensurely of select sinces, placed in a most degant hall.

Here are fill four wishle remains of Roman antiquities,
particularly an amphitheure built by the emperor Gallienus, whose place it is called; only form parts of the
fide write are families, with the two principal gates of the
heilding.

That they carries on a very confiderable trade, and for
its improvements kind of toleration is granted to the English, Dutch, Danes, Hamburghers, and Lubeckers, and
even to the Portugues Jewrs; but their laft have no fyragogue, nor are any protefants indulged in the public exercise of their religious worthin, only the English are connived
at, and have a minister in a lay habit, and the other foreign
protefants are site prohibited reading a formion privately to
their families. The factor, on account of the fervices they
formerly performed for the French, have confiderable priviegas allowed them in this city, and a gate of Bourdeaux
bears the enfigue of one of the name of Douglas; even to
this day, Scottift welfels have peculiar imprunities allowed
them in trade, and from this port they generally this their
fire years, and his fon, afterwards Richard II, king of
England, was born during his flay here.

The city of Frigueux is the capital of a very large difired years, the bifory his four convents, one
hospital, and had a college o

both the fight fight a genries is confinently large. There is also a size as described in the confinence of the control of the

trance to it forsewhat difficult, it is notwithstanding much frequented.

There is no other place in France that has, like this, the advantage of being finated on two rivers, into which the tide flows; the Nive rents through it, and the Adour-clefe to its walls; flow after which they unite; and divide the city into three parts; that called the Greet Town, lies on the ide of the Nive; the Little Town is between the Nive and the Adour; and the fabouth of St. Esprit, in which great numbers of Jews suide, lies on the other fide of the river. That we first parts, besides their other works, have each a small fort; the fabouth has good fortifications, and a regular square citadel, which, finaling or an eminence, commands the three feveral parts of the city, the harbour, and the adjecent country. Most of these works have been required and improved by Vausan, the orienned and improved by Vausan, the orienned fits.

is, being one of the toys to it made by the fide of denie, it is not the stumpt, importance.

There are injthic sity a cathedral and collegate shutch, five spatents, and one college; the fisherbhas allo a collegate which he has neighbore to be continued in the cathedral, which is dedicated, which he has neverage of one thousand man, hundred livres, or, eighty-three pounds firstling, our of subich he pays one hundred forms to the course of subich he pays one hundred forms to the course of Rome; the discost contains feventy-two parifs, churches.

Auvergnes, which is the next government to be defiribled, taken to be subjected to the course of Rome; the discost contains feventy-two parifs, churches the pays one hundred from to the course, and househed, and see hundred miles in leggle, and foresty, five in breath; and is bounded, on the north, by Sewboard nois, on the west, by Limosia, she diffinite of Query in Guienne and the Cevennes, on the east, by Fores, a large difficit in the government of Liosanois; and on the feath, by Guienne and the Cevennes.

This government is divided into Upper, and Lowershaveng, abounding in corn, wine, fruit, forage, and hempy it far excels Upper, Auvergne, which is sold, and full of mountains that are covered with from the govern of the inhabitants deal largely in cattle. The fituation of the mountains contions the rinds blowing in fuch eddies, that the windmilds leve are of no fertice.

There are feveral monatains in this country, the highest child in the first in the largely in cattle. The fituation of the fresh he windmilds leve are of no fertice.

The government as of no fertice, and the inhabitants deal largely in cattle. The fituation of the fresh hundred and eighty four; and, 3. Moster of which are 1, i.e. Pais do Dome, this tere are no lefa famous for the curious plants that grow on them. At Pontabaud is a filver mine, but the produce not above. The most confidenable rivers are, s. the Aliagnon, which tries in mount Gantal, and, after a rapid courie, falls into how river all

bourhood of dirities.

The most confidential rivers are, a the Alliegnon, which nifes in mount Cantal, and, after a rapid course, falls into the river Allier; a the Dordogne, which farings, from Mont d'Or; and, a the Allier; which river in the Gevandan, and falls into the Loice.

dan, and falls into the Loice.

This country produces corn, wine, cattle, cheefe, soals, befide, other useful articles, and carries on many manufactures, as all kinds of filts, fluffs, clothes, very beautiful baces, and paper, which is effected the beft in all Europe. Some thousands of labourers go every year from hence to Spain, to gather in the harvest, and return here with the

greatest part of the money they have earnt, the hard of This province is intirely subject to the parliament of Paris, but is governed by different laws; Lower Auvergno having a pericular code of its own, while in Upper Au-vergne, the civil law takes its place. The whole country, is divided into five large difficults, and two bailiwics. There e two lieutenents-general and two fub-governors under the chief governor.

The town of St. Flour, capital of Upper Auvergne, flands on a mountain of difficult access. It is the fee of a hithop; whose diocese consits of two hundred and seventy parifice: the has a revenue of twelve thouland livres; (about five hundred and twenty-five pounds farling) and his taxation to the court of Rome is mine hundred florins. Befides its cathedral, it has a collegiste church. The cloth, ampett, and knives, manufactured here, are greatly efteenech. The inhabitants carry on a good trade in grain, this city being, as it were, the general magazine of the neigh-bouring country, swhich produce a great deal of yee. "" The town of Aurillac, which disputes the title of capi-

tal with St. Flour, is feated in a valley on the banks of the giver Jordane, two hundred and fifty miles to the touth of Paris, and thirty to the fourth well of St. Flour. This town is populous, and pretty well built; it also confers the title of count; and here are some manufactures of tapestry and lace, There is a diffrict and bailiwic court f it has like wife a calle feated on a high reck, and a collegiste chatch, which is properly a fecularised abbey, the abbot of which is load of the town, and holds; immediately of the popus here are alfo amabbey, and four convents,

of Che city of Clemont, the antiont Augustonemetum, afterwards Auvergne, the capital of the whole country, stands on a finall enumence its Lower Auvergne, between the rivers Artier and Bedate of the firess are marrow, and the houses are dark. place is remarkable for its excellent while and brandy; here is a calle, in which Francis I. was born, and three convents.

Niverbour is bounded, on the west, by Berri; on the south, by Bourbouncer; on the east, by Bourgundy; and on the north, by Bourgundy and the Catinois. This government is pretty nearly of a circular form, and is about swenty, leagues over either way. It produces corn, wine, and frait; except in the diffrict of Morvant, which is a mountainois country, that produces fearcely corn enough for the substitutes of the inhabitants. It has large woods, some pit-coal, and mines of iron.

Among the many rivers which water Nivernois, three of them are navigable; these are, it, the Loite, which runs from fouth to north, along the western borders of this country. 2. The Allire, which runs into the Loire; and 3. The Yoone, which rise on the south-east part of this province, and, running northward, falls into the sea: the other streams serve to render the country fruitful and pleasant; here are also some miseral springs. This country, which is divided into eight districts, is subject to the parliament of Paris, and has its own particular laws: over it is a governor, a licutenant-general, and a deputy-governor. The most considerable places in this government are, 1. Nevers, the antient Noviodunum, and afterwards Nivurnum, the capital of the country, situated in the district called Le Vaux de Nevers. It is built in the form of an amphitheatre, on the banks of the Loire, which is here joined by the little river Nievre, thirty leagues to the south-east of Orleans. It has a handlome short bridge of twenty arches; but the streets are narrow, and the ground uneven. The cathedral, dedicated to St. Cyr, is a sine structure, besides which, there are eleven parish-churches, two abbies, and several convents. Among the other buildings is an old castle, which fronts large square, consists of handlowe court, with a fast-office. The bishop is suffragan to

the archibithop of Sein, and his diocele confinition two hundred and feventy-one partities. His revenue amounts to award and feventy-one partities. His revenue amounts to award the pays one thousehed and feventy-five pounds fiscing) and he pays one thousehed and five desirable the pays one thousehed we hundred and five desirable to the court of Rome. This place is cleared to, its porcelain and glafs-houses, and for its works in ensured. The inhabitants allo carry on a great rade in corn, heatip, wood, pit-coal, iron, and the waret. The fields about the town are extremely pleasant, particularly the gubble waits in the adjoining pack. It is computed that the inhabitants amount to about eight thousand.

2. The town of Clamecy is feated in a diffrict cased the Vale of Youne, and upon the banks of that river, which is here joined by the Burron, and reinfered navigable requency, one of its influring, sinds on the other side of the Youne, and in the year 1180 was the infidence of the hithop of Bethleheta, who had been conspelled to leave Faletina. The bishop of the city, who to this day fly is himfelf bishop of Bethleheta, in his does not the count de Nevers, and enjoys all the privileges of the other French bishops, though his revenue amounts to no smore than one thordand livres. Iforty-four phands ferting, and this town is his whole diocele. Here are a cafellany, and is false-office.

Bourbonnels is bounded, on the well, by Opper Marche is on the fouth, by Asvergne; on the eart, by the duchy of Burgandy; and, on the north, by Niverhois and Berris, It is about theirs French langues in length, and twenty in breadth.

The fell is pretty fertife, and produces coin, fruit, and

breadth.

The fell is pretty fertile, and produces corn, fruit, and forage: here is allo good wine, but not in a fufficient quantity for exportation. It has likewife a few coal-pits, and a great number of mineral forings and warm baths.

In chief rivers are the Loire, the Allira, and the Cher; befides which, it has feveral other fmall ones. In July, when the fnew melts on the mountains of Awergne, guest damages are done by the inundations of the Allire.

The whole country contains twenty-two fittall reserve. It is fubject so the parliament of Paris; though the duke of Bourbon, to whom it belongs, has the homination of all civil officers, yet their proper scatter is the large. Bufides the governor and lieutenant-general, here are also two fub-governors. feb-governors.

ndes the governor and neutranni-gasera, here are allo two fab-governors.

The principal places are, i. Moulins, in latin Mollins, the capital of the country: it is feated on the Allie, in a pleafant fertile plain, almost in the middle of Fisines, thirty miles to the fouth of Nevers, and fifty-fave to the hottle of Clermont. It is well-built, and is one of the most agreeable places in the kingdom. It contains an intendency, a chamber of domains, a castellany, and feveral courts. It has likewife a collegiate church, five convenits, a college which formerly belonged to the jefuies, and an hospital.

The finall sown of Bourbon F Aschambased, fands fifteen miles by the well, of Moulins, and is environce by four mills, on one of which is an old castle that contains three chapels, among which, that called The Holy is very fylendid. Here are also one parish, and one collegiate church, a priory, a convent, and two hospitals. This town is famous for its hot baths and cold mineral forings. It contains a royal chilellany and a district court.

Berri extends, from each to well, between twenty-fevers

Berri extends, from east to welk, between twenty and twenty-eight French leagues, and between thirty-five and thirty-fix from north to fouth. "This government is bounded, on the north, by the Orthannoife; on the well, by La Masche and Tomaine; on the earl, by the Niver-

It enjoys a temperate elimate; and the foil produces at emptys a temperate circular; and the foil produces wheat, rye, and wine, which in fome places it equal to that of Burgundy. Its other products are also good, particularly its hemp and flaw, in which it abounds; and its such partures feed great numbers of cattle, effectility fleep, which are valued for the finence of their wool. Other, which is feldom met with in other parts of France, is found

in this country.

Befides the lake of Villiers, which is between fever and eight leagues in circuit, here are the following principal rivers, viz. the Loire, the Creufe, and the Cher; the Large and Leffer Sandre, the Letre, and the Indre; thefe two laft have their fautres in this country: the Orron, the Aurette, the Meulon, and the Evre.

This country is divided into Upper and Lower Berri: the whole is under the juridication of the parliament of Paris, and is governed by laws of its own. Subordinate to the governor, are one lieutenant, and two fub-governors.

The following are the two principal places in this government, viz. r. Bourges, the capital of Upper Berri, and

of the whole country; it is sliened on a bill between the river Evre and Orron, to the banks of which is gradually different, thirty-five leagues to the fouth of Paris, and registers almost feathward of Ochasts. Their two ciden endotapits it on every flaticatory in the seem the grad all Bonnbonnous. It is to large factors dry, committing a critical of four collegians cheecines, bridges two annived as the flatinisty four abbies; and finters perifichencies, which a beautiful and large college, which a beautiful and large college, which a beautiful and large college, which is their beautiful for the many coefficiency with a beautiful and large college, which have been fitted by flower the dry in the first many of them the city effects which for the college of the jeture. You meet here with anny of them the tradefiners the face leaving no other students of them the city of the following for the following the inhabitants. It is the few of an activity of the following on the highest erric of the city: the actibilities, which is dedicated to St. Stephen, is a fire gothic stratture, flanding on the highest erric of the city: the actibilities, who is filted partnesses and primate of Aquittine, has lave full square, white a deorete of nine bridged partilles; and a reversor of their thousand facility or of which the pays flow thousand therepays the thousand of the rich fact of Rains. The pakes beaut by private small in the letter, which has no pillars to fundame the grant of the inch and largest colors is the large and almost of the free and largest colors is the largest and the malls are bruth almined, and the great number of religious house, and the factors hould; every for the covers in the largest and the malls are bruth almined, and the great number of religious house, and the factors in the pays for the rest of the pays of the rest of the fact and largest colors is the largest and the malls are bruth almined, and the great number of religious house, and the factors in the pays of the rest of the kingle in the pays o

Toursine derives its name from the Turones. It is bounded, on the north, by the river Mains, on the east by the Orleanois; on the fouth, by Berri and Poiton; and, on the west, by Anjon. "It greatest extent, from east to west, it wenty-two French largest, and twenty-four from north to fouth."

This government enjoys a temperate his; and the country is fo delightful, that it is called The Garden of France; but but it is not every where alike. The tract called the Va-rennes, which lies along the Loire, has a fandy foil, that rennes, which lies along the Loire, have sandy ion, that produces rye, barley, insilet, garden-plants, and an herbwhith insilet a good yellow dye. That called the Verron is riches; and yields corn, wine, very fine fruit, and particularly large pluns. La Champagne is a finall furp of land between the rivers Cher and Indie, abounding in grain, and particularly wheat. La Beenne is a fewampy grain, and particularly wheat. La Beenne is a swampy country, but the eminences along the Loire and Cher are covered with vineyards. La Gastine is a stiff land, very difficult to plow; and the country of Nevers is distinguished by its having feveral how, and one copper mine.

This province is governed by its own laws; but the imhabitants have a right of speak to the partiament of Paris. It has a governor, a lieutenant general, and a foh-governor. There are twenty-seven towns or boroughs in the

The principal places are the following, viz. 1. Tours, the Calabdanian, or Turoni of the ancients, and the capitat of the country, lies in a plain extending between the river Loire and the Cher, and is fifty-two miles to the north-east of Foitlers, and a hundred and twenty fevers to

the head. This was also the place where the civil war in 1501 first broke out, and where the name of Hugbenot was first given to the French providents; the province into an earldom. Bleanor, daughter to the last duke of Aquitaine, braught it to her spoule, Henry II. king of England, to which it continued subject, with some interruptions, till the anoformate reign of Henry VI. when it was taken in 1450, fince which time it is as continued annexed to the crown of France.

This province is subject to the parliament of Paris, and This province is subject to the parliament of Paris, and has but one provincial court: there are under the governor a licutenant general, and two deputy-governors. The whole government is divided into two parts. Upper Poitou, which conflitutes the eaftern part of the dountry, is larger, more fruitfol, pleafant, and healthy, than the Lower.

The principal places in Upper Poitou, are, t. Poitiers, or Poitiers, in 1stin Augustoritum, the capital of the country. This circuit hands more a bill an the left hand of the

country. This city stands upon a hill on the left bank of the little river Clain, into which falls another rivulet; it is

finanted about eighton leagues to the end of the fee could, and faventy miles to the north-self of Rochella. Were its direct to be only confidered, it would, perhaps, be offeren, at the first me kingdom, heart to fars, but it is fee from being peopled in propertien so its extremt, there being comfided and meadows within the walls i for the city and been fo reduced by the civil ways, that it is almost because a defect, and is a mean, inoky place. It is the frog a bilipp, who is fufficiant to the archbilipp of Bourleaus, and have diouse of fewen hundred and twenty-two phylips, with a revenue of recently events inoutand hivres. (nine hundred and feyenty three pounds decling) out, of which he pays, to the ceut; of it ment two thousand eight hundred flowing. The cathedral is of an uncommon free, and hall in the gettic Alls. In this city are also four colleginal charabes, four convents, two feminaries, and three hospitals, an university, founded here in 1432. In 1682, the inharbitants erected, in the royal square, a pedestrian statue of Louis XIM. The manufactures of this town are given and comba; and woollen caps and stockings are imported from hence, it is the first of a fencelchalthip, a pression sourts, and office of the same remains of Roman antiquities a among which is an amphitheatre, which lies among gardena, and simil house, a striumphal arch, or rather gate, creded at the beginning of a military way, of which nothing at present remains but the arch, with the two pillars which support it. The palace, and this round ower close by it, bear evident marks of their being of gottic structure, shough supposed pear this city, a me-

works.

Edward the Black Prince obtained, near this city, a memorable victory, over the Franch, in the year 3356, when he took prifeners John their king, with his fon Philip.

a. The town of Nicet, which has she most flourithing trade of any in the province i it is fested on the niver Sours, and has a balliwic, a royal prifeiction; and a forest-court. Here are forme manufactures of wood; and the place continue a castle, two parish-churches; nine convents, and a general hospital.

The city of Lucon, in Lower Poiton, is feared in a most

Hers are some manufactures as wood; and it pe place, continue a cattle, two parish-churches, nine couvents, and a general hospital.

The city of Lucon, in Lower Poiton, is seared in a morals, awenty-three leagues to the louth-west of Poistiers, and enjoys the ritle of a barroys. It is the fee of a bishop, who is lead and baron of the town, but suffingen to the archibility of Bourdeaux. His sloceste condits of upp hundered and shirty parishes, and he has a revenue of twenty thousand hirres, (eight hundred and, fetenty-five pounds sterling,) out of which he is taxed one thousand floring to the court of Rome. Besides the cathedral, this place contains only one parish-church, one ferminary, and two contains only one parish-church, one ferminary, and the court, by Saintonge. It is watered by the Source, which rifes in Poitou, and there are good barbours along the coast. This little province is subject to the parliament of Paris, but is parly governed by its own common law, founded on custom. Under the governor is a icutenant-general, and a depaty-governor. The country is somewhat bairen, but produces some corn, and a great deal of wine; and there is good pathorage in the market.

Roct afort, is latin Rapistorium, is situated on the river Charante, at a league and a half distance from its mouth, three from Brousge to the west, and fix from Rochelle to the found, and the said and six were contained and the banks, very even and folid; whereupon it was resolved to build here a city, which was done accordingly, from whom Lewis Kilv. bought it in the year 1664, to build a city here. It had been observed, that from this place, to the fea,

there is a long fuscade across the river, which is defended by a fort, on which are forty-four gons. On the twenty-first of September, 1757, the life of Aix, with the fort upon it, was taken by the brave espain. Howe, in the Magnanime, after about in hour's resistance, when the whole garrifon, which confided of near fix hundred men, when made prisoners of wax.

whole garrifon, which continue or near an acceptance of water made prifoners of water and a standard or near the standard of t oficii/valiantly defended, and long policified by that party, till at length. Lewis XIII. after a long and famous fiege, num a sengur Lewis XIII. after a long and famous fiege, gade himfelf mafter of it in the year 1028, chiefly by the steam of an admirable ramper or bank of aarth which cardinal de Richelieu caufed to be raifed against it on the fide of the ocean. After it was taken the king caufed the walls and fortifications to be demaitfud. and fortifications to be demolished, except only two towers, which defend the port : but Lewis XIV, has caused new

and firing fortifications to be raifed about it. The season of the port is almost round, and about fifteen bunded paces in compast; it is defended by two towers, the one is a prison for flate-criminals, and the other is called the Tower of the Chain. No veffel can enter into the harbour without the leave of the governor or captain of this last willout the teat of the confiderable trade into the mands of America; and the English, the Dutch, the Swedes, and the Danes, fend here yearly a valt number of Sweder, and the Danes, tend here yearly a vait number or hips to load wine, brandy, fait, paper, linen cloths, and forger. The merchants here faind all the necessaries of life into America; and bring back from it the product of those countries. Their chief manufacture here is the refining of fugar; they have also set up of late a manufacture of earthen-ware, which succeeds very well. This city is well-built; the streets are broad and strait; and the houses manufacture of earthen-ware, which succeeds with him and the succeeds with nave as and necessary under which and fine, supported with plazzas and portices, under which one is sheltered from the sain and sun. In the year 1649; the epifcopal see of Maillerais was removed hither, and the ide of R4, together with many other neighbouring places; to the number of about an hundred towns and villages, were taken from the diocele of Saintes, and added to this. The bishop is suffragan to the archbishop of Bourdeaux. re was formerly in this town a college of jefuits, wh There was formerly in this town a college of jeftits, where all the forms were taught to philosophy inclusively. Here is a college of physic, and a chool of anatomy and botany for the instruction of young surgeons and apothecaries. Here is likewise a presidist, a foreteign cours for the fast-marshes in the west, and a coart of the mint.

The islands of Oleron and Rie are fituated on the coast belonging to this government; the former of these is sive leggies long, two broad, and about three from the main land, having a town; castle, and light-house on it. The inhibitiants were entently famed for their skill in navigation, and whatever relates to the first: they are fill band.

inhiabitants were entiently hamos for their tall good tion,; and whatever relates to the fea: they are fill good to the fea: they are fill good to the fea: feamen, and have always enjoyed very confiderable privi-leges both under the dukes of Aquitaine, and the kings of France. The other ifte (namely Ré) is about four miles in length, and two broad, and betwirt two and three from the continent. It is populous, abounds in wine and falt, and this feveral pits in it, with a little fortified town called St. Martin. Both their illands were taken, in the fixteenth century, by the citizens of Rochelle; and at the inhabitants were very well affected to them on account of the referred religion, which most of them professed, the Rochellers continued masters of till the year 1625; at which time they were retaken by Louis XIII.

Anjou received its name from the entient Andes, or Andegavi. This government is bounded, on the north, by the river Maine; on the east, by Touraine; on the fouth, by Pointu; and, on the west, by Brittany. In greatest length from east to west is twonty-siz Franch leagues, and ty-four from north to fouth

twenty-tour room north to touth.
Here is a pleafant (ucoffion of hills and vallies, producing corn, wine, peafe, beans, flax, hemp, and fruit trees.
Its fine pattures also furnish great herds of cattle. It has
likewise mines of coal, iron, and falt-petre; together wish
quantities of marble, stone, and flate.

Some have reckoned no less than forty nine great and finall rivers in this country; but only fix of these are navigable. These are the Loise, the Vienne, the Toue, the

Magainess the Loir, and the Sarre. This country is united the parliament of Parist, but has law of its own! Substitution to the parliament of Parist, but has law of its own! Substitution to the parliament of Parist, but has law of its own! Substitution to the principal city in this government is Ampare, and this fobogovernment of Ampare, and the later Andegavam, the capital of the dountry, lies a little above the place where the rivers Loirs and fairs that line, the Mayermen; which divides the city into two equal parts; The first walls, were raised by John, furnament familiam, hims of England and duke of Anjou i but prince Lois, afterwards king Louis VIII. for to Philip Angastat; caused those walls to be demolished; however, St. Louis his fon and fucction, rebuilt them as they now and it Taird a large and populous city, containing nine theirfund benefit, and about thirty thousand incoming the said fifteen parishes, twelve of which are within the town, and four in the substitute of convents both of meri end women. It has also is the see of a history, who is suffragan to the archibithop of Fourna His dioces domain such bundred and survey in the survey one thousand one hundred and thirty-cight pounds sterling), and his revenue amounts to twenty-fix thousand sterling), and his taxation in the court of Rome is one thousand fevan hundred store them this discrete which discrete which discrete which discrete which discrete the survey him discrete which discrete when the survey him discrete which discrete the which discrete which discrete which discrete which discrete which discrete which disc dred floring,

The cathedral is remarkable for three very high fleeples built on its portice, of which that in the middle refletupon bott en its portion of the two others. It is not is reply, light, large, and bold; it is not supported by any pillars a table whole fructure is in general elegant. Part of this town flands very low, to that it is proverbally faild in the neight. tends very low to make it is provided by the baschight tender, rich firampets, and poor febolars, it is that a firong cattle built on a rock, and encompated with ditches cut into it, though very fleep on the fide of the river, which runs at its foot. This cattle is fenked with feveral cut into it, though very fleep on the fide of the river, which runs at its foot. This cardle is flenked with feveral large etwers, and has a half-moon at the gast which leads to the fuburber. It was built by St. Louis-during the wars with the English, and it now ferver, as a prifon, for flate criminals. The university, which is one of the melt famous in France, was founded by St. Louis, Here the civil and canon law, divinity, physic, and the liberal arts, are taught. A chair for a professor of the mathematics has been lately eveded here, in the college of the fathers of the crastres.

the oratory's correlated in the care of the same of th intelly celebrated at a bettiver caused in rest on Lines, which is on Corpes Christicates, and numbers of Alpangers, with the principal inhabitance, and numbers of Alpangers, carry lighted torches in their shade, and representations of feripture histories engraved, to atome for the pretended crimes of their archdesion Berenguites, who opposed, transludibustion about the year 1019, when that deckine was first preached here.

hrit presence nere.

A mayer and four iddermen, are annually choice govermors of this town, I febordinate to whom are twelve, counfellors, eight affelfors, a city attorney, a committary, and a
meaorder. I have justified on extends over the manufactures recorder. These jurisdiction extends over the manufactures for up in the town, subarbs, and liberty. These manufactures confid of fine weellen stuffs, striped with filk and gold ... They also bleach wax and linen cloth. There are likewife fome fugar bakers in the town.

The government of Saumur, or the Saumarvis, contains a part of Anjou and Upper Poitou; it is und. the direction of a governor, a figuresuant-general, and a subgovernor. 161 mad m mules !

The principal place it contains, is Saumur, in latin Sal-murus, the capital, and the feat of the public courts and es, flands twenty-two miles to the fouth-eaft of Angers, and a hundred and fixty to the fouth-west of Paris. It contains a fite caffle, three parish-churches, nine convents, and one royal college. Here is an important passage over the Loir, spon which there is a famous bridge. This city was much more opulent while in the possession of the protestarius; but has fill an university. Near it is the e Benedictines of the congregation of St. Maur;

which is a magnificent structure.

Orleanois conside of several small countries, and is bounded, on the north, by Normandy and the size of France; on the east, by the sile of France, Champagne, and Burgandy; on the fouth, by Nivernois and Berri; and on the well, by Touraine and Maine; including Or-leanois Proper, Sologne, Besuffe Proper, or Chartraine, Dunois, Vendomois, Blaifois, the greatest part of Gatimois.

ries, and is Champagne, and Berri chiding Or-Chartiaine, art of Gati-

hoir, and Peicha Gouet. The whole government extends about thirty-two leagues in length from east to west, and twenty-eight from north to fouth in the briddest part.

Several rivers turn through this government, we have their founce in it, riamely, the Laire, the Loiret, which rifers lengthe from Orleans, and sits into the Loire; the Citer, match also reasons been that Loire; the Loiret, which rifes in the wood of Orleans, and have tided in the fame river; the Aigle, which rifes in this government, and also temples with the Loire; the Hyers, which tides in the fame river. Here are likewise fome tunnarisable annuls. That of Briaret which receives its stem from, a small town that joins the river Loire to the Loine, which falls into the Siene, and confiquently opens a communication success. The countries lying on the Loire and the chy of Paris. The ranal of Orleans also joins the above-mentioned: this cannal is near eighteen leagues in length, and contains this values a it was begund an toba; and findled in 1692.

The trade carried on bere, by means of the Loire, is the most extensive in the whole kingdom, comprehending not only all that comes from the southers. The principal stage is a Orleans. Under the governor are three licutenant generals, and three sub-governors. The whole country, which contains four larger and three small jurifications, is depotedant on the parliament of Paris.

The government of Orleans unterly called Genabum, or Cenabum, and afterwards Aurelianum, and Aureliana, the capital of the government; is feated on the Loire, over which it has a not fone bridge of fixeen arches, leading to a sub-ord which stands a pelican with its brood pecking to the first and abounds in cattle, game, and film.

The city of Orleans, antendry called Genabum, or Cenabum, and afterwards Aurelianum, and Aureliana, the capital of the government; is feated on the Loire, over which it has a not fone bridge of fixeen arches, leading to a sub-orlean and accellent froit, and abounds the cross, and on the left fide the famo

moration of the deliverance of the city by the Maid of Orleans.

This city, which is about four miles in circuit, flands
in a most sgreeable plain, and is built. In the form of a
bow: it makes, however, but a mean appearance, the
streets being in general narrow, though a few of them are
broad and strait; and, except some of the tradesmen, the
inhabitants are poor. It is the see of a bishop, and contains an intendancy, a castellany, a country-court, a forestcourt, a falt-office, and other courts and offices. It has a
sine cathedral, built in the gothic site, an abbey, three
collegiate churches, twenty-two parish-churches, an university consisting only of civilians, which was formerly very
famous, though it is at present in no great repute; one
seminary in which divinity is raught, and a public library.
The public walk is properly a part of the city ramparts,
levelled and planted with beautiful rows of trees. This
city, on account of its situation in the middle of the Loire,
is the magazine of the whole trade of the kingdom, especially in corn, wine, brandy, and spices; it also carries
on a considerable trade in sheep-skins and stocking, of
which great quantities are made here. The suburbs on the
farther side of the river makes a tolerable appearance, and
has a Carthusian romastery. The boshop, who is subordinate to the archbishop of Paris, has a diocese of two hundred and seventy-two parishes, and a revenue of twentyfour thought and sirves.

dinate to the archbishop of Paris, has a diocese of two hundred and seventy two parishes, and a revenue of twenty-four thousand livres, out of which he is taxed two thousand florins to the see of Rome.

The city of Orleans was raised to a dukedom and pocrage in the year 1344; and Louis KiV. gave it to his brother Philip, in which house it continues. It was besieged by the English at 448, and so stratement, that the inhabitants resolved to surrender to the duke of Burgundy, then in the English array, and their ally. But the English not being willing that the city should be given up to him, he was disjusted at it; and Joan of Arc heading the soldiers, No. 60.

railed the field in sany; from which the obtained the name of the Maid of Orleans;

To the north of the city said of the river Loire, lies the foceth of Orleans, which is the largest in the whole kingdom. It is the shout footbarn thousand acres planted with wood I but is intersperfied with feveral plains and villages. It is twenty leagues, or fasty miles, in longth, and in fome places feven or eight largues, and in other only two or other in breadth. It contains high and lofty trees, as oaks, clims, &c. They fell timber in this forast, every year, to the value of one hundred thousand livres, the profits of which belong to the duke of Orleans. The Freuch integrage is spoken here in the greatest purity.

The city of Chartres, the Autricum of the antients, is the capital of the roomitry of Chartrein; it is steated on the banks of the river Eure, about fourteen leagues to the found, world of Paris, and is divided into two parts by the above river, the largest of which stands on an eminence. It is the see of a hishop, who is fuffrigan to the archbishop of Paris, and has a diocete of eight hundrided and ten partifices; his annuar revenue amounts to twenty-five thousand livres, out of which the court of Rome is paid four thousand sirres, out of which the court of Rome is paid four thousand sirres, out of which the court of Rome is paid four thousand sirres, out of which the court of Rome is paid four thousand sirres, out of which the court of Rome is paid four thousand sirres, out of which the court of Rome is paid four thousand sirres, out of which the court of Rome is paid four thousand sirres, out of which the court of Rome is paid four thousand sirres, one priory, fix parish-churches (without including those in the suburbs); nine tonvents, one seminary, and two hospitals. In the city are alles held a provincial and balilwic court, together nine convents, one feminary, and two holpitals. In the city are also held a provincial and bailiwic court, together with a falt-office.

etv are alle held a provincial and bailivic court, together with a fait-office.

The city of Blois, in latin Blefæ, the capital of the district of Blaifois, stands partly on an emissence and partly in a plain on the river Loire, over which it has a well-built stone bridge. It is situated ten leagues to the fouthward of Orleans, in a pute air, and in the midst of one of the finest countries in France. It is a large, land-fome city; but the greatest beauty of it is the palace, or calle, the residence of feveral of their kings, with gardens adorned with sountains and other water-works, and a park suitable to the magnificence of the buildings. The stair-case of the palace is much admired, as well as the gallery, which is faid to be six hundred feet long; and there is a statue of Louis XII. over the great gate. In the grand court before the palace stands one of the largest collegiate churches in France. It is remarkable, that there is an image of the virgin Mary over every gate of the city; these were set up la rogs, when, after having suffered much by the plague, they imagine on its ceasing, that they were miraculously delivered by the queen of heaven, as they still ber.

"The parish church of St. Solenne, the largest in Blois, having been destroyed by a tempest, was magnificently rebuilt by Louis XIV. and converted into a cathedral: here are also several other churches, and a considerable number are also several other churchers, and a confiderable number of convents. The jesuits had also a beautiful college here, the front of which is adorned with the doric, the ionic, and the corinthian orders of architecture. The other public edifices, as the town-house, and the building where the courts of justice are held, are well worth viewing. Their fountains are also large, and well supplied by a noble aquedet, supposed to be the work of the antient Romans. The history who is suffragan to the architecture. The hishop, who is suffragan to the archbishop of Paris, has in his diocese about two hundred parishes, and his annual revenue amounts to twenty thousand livres, out of which he pays two thousand five hundred and thirty-three florins to the court of Rome.

The inhabitants of Blois are faid to be remarkable for

The inhabitants of Biois are laid to be remarkable for their good fenfe and genteel behaviour, as well as their speaking French in perfection, which is supposed to pro-ceed from the frequent residence of the sourt in this city, which is also distinguished for making the best watches in the kingdom; but their principal trade is in wine and brandy, which are fent to Orleans, Paris, Tours, Laval, and even into Holland.

In a wood on the river Cosson stands the royal palace In a wood on the river Collon stands the royal palace of Chambord, which is a magnificent edifice of tree-stone, built by Francis I. It is said to exceed any gothic edifice in France, and to have such various beauties, that the greatest masters may learn something from it. The body of the building is composed of four-large pavilions, and the whole is furrounded with a wall of hewn-stone, stanked with towers, which give it a magnificent appearance as a distance. The tower over the centre-looks very grand, and the restricted winding fair-case is much admired. This the principal winding flair-cafe is much admired. halls, anti-chambers, chambers, wardrobes, cabinets, and galleries, are of exquisite architecture, and the garden and park aniwerable to the beauty of the building. In this palace Statusfaus, the dethroacd king of Poland, refided

nine yeared. Is was afterwards conferred, on the criefward general count Maurice of Sage, who died, here in the year 1750, when the king gave it to his hear the count of Frife, who in the year 1755 died in fills place.

The town of Montaria, the sapital of the Gathad's Oreleanness, in fituated on the river Leing, agar the place white count of Frife, in the count of the carlot of Frife, in the count of Frife, in the count of the count of Frife, in the count of the carlot of Frife, in the count of the count of Frife, in the Frife, in the Frife, and fifty and its principal civers are the Mayenne, or Maine; the Huifne, which rice in Frife, and after greeiving the Orne, the Huifne, the Enferre, and the Little Love falls into the Mayenne in its palage.

This country was formerly an earldon, but has been Mayenne in its paffage.

All This country was formerly an earldom, but has been

at This country was formerly, an earldom, but has been united to the crown ever fuce the year 1584. It is gey, verned by its own lawr; but is inheelt to the parliaments of Paris, and has a particular fub-governor.

The following are, the principal places in this government; namely, it. Mans, in latin Cenomanum; the espital of the province of Maine; it is fituated on a hill, as the foot of, which tuns the river, Sarte, which here unites its water, with the river. Huifue, thirteen leagues to the north-well of Tours, and tharty, two to the fourth-well of Tours, and that office, and the same than the form of the same than the same anoth-well of Tours, and thirty two to the fouth-well of Paris. It is the fee of a brillop, and has a fult office, a provincial and forest court, see, Its bithop, who is sufficient to the archbishop of Tours, has a diocele of fix hundred and ninety six pasilines, and a revenue of thirty-sive thouland livres, out, of, which he pays, two thouland two hundred and fixteen floring to the court of Rome. Brillos the cathedral and lower collegiste churches, are four abbies, thirteen parish-churches, eight convents, one college, and one feminary, in this city.

2. Laval, which is the capital of an earldom, flands on the Mann, eight feasures to the welvered of Mann, and is

2. Laval, which is the capital of an earloom, thanks on the Maine, eight leagues to the wellward of Mans, and is encompaded by a wall and other fortifications in the antique tafte; it has also as ancient calle of the fame kinds but it is incapable of making any great defence, fince the improvement of the art of war. It has a falt-office; a country and forest-court, &c. and contains two collegiate

country and forest-count, etc. and contains two congrate churches, two parish, churches, one priory, and eight convents. This town was taken by scalede in 1446, by the English, headed by the brave Talbot earl of Shrewsbury, for The althrich of Perche is bounded by Normandy on the north; by the life of France and Orleanuois on the east, by the river Maine on the south; and by Normandy, on the west; it not being above fifteen leagues in length, and sue were; it not being above anyeen reagues in length, and twelve in breadth. It is a hilly country, and the eminences produce only grafe for cattle, but the valleys and plains bear all kinds of grain and hemp, they also abound in ap-ples, of which they make cyder, the usual drink of the

bear all kinds of grain and hemp, they also abound in apiers, of which they make cyder, the usual drink of the gountry; they have indeed a few vineyards, but the wine is to poor, that eyder is generally preferred before it. They have here also some iron mines, and mineral waters.

This province is subject to the parliament of Paris, enjoys, its own laws, and is governed by a particular subject to the parliament of Paris, enjoys, its own laws, and is governed by a particular subject to that of Oylean-nois, and Timerais to that, of the side of France. The principal places in this country are the sollowing: Mortagne, the capital of Percha, intusted eighty-site miles to the west of Paris a is the fast of a salt-office, a viscounty, a district-court, a social sourt, fice. It has one collegiate and three partitle chareless, four convents, with one hedical there are some considerable manufatures of coarse since the source of the sour

mill aimit; but the aftual entinguishing of the firs is committed, to the says of the four mendicant orders, who on such occasions are to expend part of the stock they have acquired by longing, for the benefit of the solid; the town, which lies on the north of the Seines the city, which is cayloned by that sive; and the university, which lies to the fourh of that, items a good the surversity, which lies to the fourh of that, items; which lies to the fourh of that, items; and the university which lies to the fourh of the time; and is the unit scandy and wealthy it consists of three illands formed by the Seines there are the file of u. Palais; the life of Notre, Denn, and the life Louwists. The left is simal, seed contains only flore-house for wood; it stooms the arfanel, and, by means of a wooden bridge, has appropriate and, by means of a wooden bridge, has appropriate for the life of Notre, Tille de Notre Dome, or the illand of our Lady, is for the life of Notre Dome, or the illand of our Lady, is for the life of Notre Dome, or the illand of our Lady, is for the life of Notre Dome, or the illand of our Lady, is for the life of Notre Dome, or the illand of our Lady, is for the life of Notre Dome, or the illand of our Lady, is for the life of Notre Dome, or the illand of our Lady, is for the life of Notre Dome, or the illand of our Lady, in the life of Notre Dome, or the illand of our Lady, in the life of Notre Dome, or the illand of our Lady, in the life of Notre Dome, or the illand of our Lady, in the life of Notre Dome, or the illand of our Lady, in the life of Notre Dome, or the illand of our Lady, in the life of Notre Dome, or the illand of our Lady, in the life of Notre Dome, or the illand of our Lady, in the life of Notre, Dome, or the illand of our Lady, in the life of Notre, Dome, or the illand of our Lady, in the life of Notre Dome, or the illand of our Lady, in the life of Notre, Dome, or the illand of our Lady, in the life of Notre, Dome, or the illand of our Lady, in the life of Notre, Dome, or the i

the ille du Palaia, the ille of Norre, Jerra, are use in Lousiers. The left is ferally, and sontains only flore-house for woods, it from the arfanel, and, by means of a wooden bridge, has a accompanication, with the quarter of St. Paul.

Little de Norre Deme, or the illand of ous Lady, at se called from the cathedral of that mene, here the first any very fitait; by means of a flore-bridge, it has a communication with the quarter of St. Paul; by another, with that of Mashert; and it is also joined by recans of a wooden bridge, to the 19c du Palaia; here is a patifu shurch of St. Louis, with fome five hotels.

Little de Palais, or the illand of the Palaca, properly confids of Old Paris, and is fo called from the place in which the parliament meet, and which takes up, a great part of it. The metupolitan church flands at one and of this idand, where are also several little patifu-churches, the hospital called Lifleres. Dies, or the House of God, which extends to the other size of the river, nowards the fourth, and a walt number of small crooked firects or lanes, bullt with very high house, inhabited by feveral families. Besides the above wooden bridge, which joins this island to that of Norre Dame, this quarter has a communication with other parts of the city by means of fever stone-bridges. The principal of these is, the Point-Neas, or New Bridge, which is, this can fiss of twelve stokes, and is twenty-two feet broad, recknoing the parapets. There is a sootway missed on such fide of the middle of carriage-way, which is thisty feet broad. Over the piles, on each fide, are also semicircular lodgments, in which are one hundred and seventy-sight small shope beneging to the king's footmen, which only serve to different one parts of the city with water. It is thus seened seems the principal of these five of the first, and so the first of the paraphies form parts of the city, with water. It is thus seemed from there being, in the front, a group of figures experienting the flory of Christ and the woman of Sanaria.

The ca

one hundred and two in height : on the infide are four sews of pillars, thirty in a row, with forty-five chapels, built between the outermost rows and the wall. The pil-lars in the nave of the church are adorned with large and beautiful pictures; and the chair was fplendidly repaired and beautified by Louis XIV.: It has a small spire in the middle, and at the west end two square towers three huns middle, and at the well end two fquare towers three hun-dred and eighty fless high; a thefe are flat at the top, with a baluftrate of free-flowe, where you have a noble profpect of the rity and the neighbouring country. In one of the towers are two large bells, one of which weights forty thou-fand pounds, and the other thirty-size thou fund. Near this dructure flands the palace of the archbiflop, in one of the halls of which is the library of the advocates, found-ed for the gabile use. There are also a great number of partin-churcher in the flandard.

THE PUR W.

of eight large believes and included the proposition of the company of foldiers in this place, which is also a prifor for detaceiminals.

Alse Louvers is one of the most confiderable places in Paris, and a second of the company of foldiers in this place, which is also a prifor for detaceiminals.

Alse Louvers is one of the most confiderable places in Paris, and is cheemed the priporpal ornament of the city it is commanly divided one the Old and New. Theold part of this poyal palace, was begun to be built with stone by Francia i. In 1528, and was findfied by Henry II. in 1528. Succeeding kings improved and enlarged is, till Louis XAV. ordered it to be rebuilt on a new plan, which if completed, would have rendered it a most magnificent structure. The whole building is three stories high in the inew part, the first of the corinthian order, the freeze of the composite, and the third of the attic. The plan of the whole forms an equilateral quadrangle, containing a court in the centre three hundred and feventy-fix seet quare. The principal of the four main wings was built by Louis XIV. as allo the greatest part of the two sthers which form the fides, together with a new front to that part which sies next the Scine. The four inner fronts, according to the plan, were to have consisted of eight parlilions, and each to a kind of gallery. (upported by four eigenties.)

the plan, were to have conflitted of eight pavilions, and eight corps de logis.

There is a kind of gallery, supported by four gigantic figures, but the hall of the Hundred Swifts. Great enterstainments have been given in this ball: the queen Catherine de Medicie saufed plays and interludes to be exhibited there for the anusement of the court. Henry IV, built a gallery along the river-fide, quite to the Tullleries, which is reckned the first further to the first furt oufe is under it.

honfe is under it.

The palace called the Tuilleries, or Thuilleries, flands at fome diffusive behind the Louvre: it was built in 1564 by order of queen Catherine de Medicis, in a place where they formerly made tiles, (in French tuilles) from whence the palace takes its name i and this flructure was also improved by Lewis XIV. It is one range of building, with a dome in the middle, and a pavilion at each end. Hefore it is a hundlone large space, divided into three courts; the whole adoned with columns, nilagers, and other crosswhole adorned with columns, pilafers, and other ornawhole agorned with columns, pianters, and other ornangents. Beling this palace are pleasth gardens, adorned
with fine walks planted with ever-greens, and other trees,
with beautiful pasterees, where may be feen all the year
zound every flower in feafons. It has also three beautiful
foontsine, and a large oftagonal canal. Towards the river
is the taxons above a hundred arches long and also beis a line terrace above a hundred perches long and eighty-four broad, planted with three rows of trees, and from this terrace is a most beautiful prospect over the adjacent country. These gardens are public, and great numbers country. These gardens are public, and great numbers of well dressed people in summer evenings resort thisher. All who wear a black bag, and a sword are permitted to walk here, though all their other cloaths are not worth swe

The palace called Le Cours stands on the bank of the river beyond the Tuilleries, it is composed of four rows of elms, eight hundred paces in length, forming three avenues that are altogether a hundred and twenty feet in breadth a

that are altogether a hundred and twenty feet in breadth a that in the middle is the broades, and has room for fix coughes to pass a-breast. In the midst of the Cours is a large xing, encompassed with trees at the same distance from each other as in the other pasts of the walks.

Luxemberg passes was built by queen Mary de Medicia, on the ruins of the old hotel of Luxemburg, which name it has retained. It is one of the most perfect and regular pieces of architecture in all France. Here is a gallery of fine paintings done by the celebrated Rubens, who spent two years in that work. It conside of the history of the life of Mary the Medicia, represented allegarically in these transfer. two years, in that work, a It confills of the hiftory of the life of Mary de Medicis, represented allegorically in twenty-four large pictures, nine, seet, broad, and ten feet high, placed in the pieral between the windows. The other apartments are also richly furnished, and adorned with a fine collection of valuable paintings. The gardens of this palace are elegantly laid out, and ornamented with sometimes. They are daily wisted in summer time by the nobility and others, like those of the Tuilleries, but more especially on Sundays, when several thousands of all ranks make their appearance there. It is here the colton for the make their appearance there. It is here the coftom for the gentlement and ladies of the first quality, though richly dreffed, to fit down to discourse on the graft.

All the plais reyal, or royal palace, was built by cardinal Richelleu, who made a prefent of it to Lewis XIII. It confifts of several fets of buildings separated by large courts, and is advanted with fine gardens. Several new apartments have been added to it fines the cardinal's time, and here queen Anne, of Austria, mother to Lewis XIV. resided of the allest partient of the during

during the minority of het lost.

beld the courts of juffices of which he he he nobleft.

With respect to the coyal observatory, it is a very stand-odifice, buils in 1667 upon the highest ground in Paris and as neither iron nor timber has been employed in the confirmation, except fees the flash case, it has coth great from: Several attronomers, minimalized by the hing, have apartments in it. The French make their first, meridian peris through this observatory, which is two degree thirty nutes more sait than London, according to Street's ability of the hing, have a construction of the hing of the hing of the hings of a coording to those of the hings of the hing

The Gobelins is a house thus called from one Gobelin The Goldelini is a house thus called from one Gobelini, an eminent dyer, who removed from Rheime to Paris In the reign of Francis I, and bought that house. The had discovered the feeret of dying the beautiful fearlet, called from him the fearlet of the Gobelins. Lewis XIV. bought that and fome of the neighbouring houses, where he established a manufacture of the finest tapetries, and also feeted a great number of gold and filter-smiths, embroiderers, names a reverse and whose settlesses in casers beauty have the settlesses. tied a great number of gold and filver-fmiths, embreiderers, painters, carvars, and other artificers in every branch tending to filendor and magnificence. They are all under the direction of the (uperintendent of the buildings, arts, and manufactures of France. There have been above eight handered workmen employed here are a time; and though their number be fince confiderably decreafed, yet there are fill to be freen many things of the most curious workman-

fhip.

The most remarkable church, after that of Notra Dame, already described, are, 1. The church and nunnery of Val de Grace, sounded by queen Anne of Austria, upon the supposed miraculous birtls of Lewis XIV. after the had fappofed miraculous birth of Lewis XIV. after the had been married twenty-two yeers without having any offfpring. Her heart and that of Henrietta Maria of England, duchefs of Orleans, lie entombed here. The after and cupola are exceeding fine. The none of this convent sunt all be of noble extraction, and choose a lady abbest once in three years. Madame la Valiere, one of Lewis the XIVth's mittreffes, retired to this manafery foon after her leaving the court. To it is a handfome alcent by feveral from tteps, which lead into the portice in the front of the church

the teps, which lately belonged to the jefuits, and which flands in St. Anthony's firest, where they have the heart of Lewis XIII. inclosed in a gold case, supported by two angels of filver. Here is also a fine altar with several brass flatues, and the monuments of the princes of Condé.

This church is neat and elegant, and built in the modern

4. The Theatines have a large church and clotter by the fide of the river, fome diffance below the college of the Four Nations. Cardinal Mazarine left a legacy for erecting this edifice.

Here is a figure and lofty building, called Clermont col-Here is a square and lofty building, called Clermont college, which, till lately, belonged to the jefuits, who taught here in feveral schools about two thousand boys, many of whom were gentlemen's sons; these boarded here, and had several halls to dine in. "Many of the scholars wear coloured gowns, with large round velvet caps, when they learn logic, and square caps when they read philosophy."

4. The General hodisal le in the fuburbs of St. Midori
is also goes by the name of lie Sal Peteria; full peter having been formerly made heet. In it is a nobbe found attenfor the famale fax, are fiven thousand of whom are here
provided for, and live under the infpedient of fixty filters,
fubordinates to whom are eighty governesses, and a coniderable number of maid-fervants. Into this place are received founditing, who take up the waid; girls and young
women, who few and kind; a great number of had women,
who are here compelled to fpin woollen; fome hundred
of firmale ideats; who live is little houses bellf in the form
of a fract; many other poor women, forme of whom are
kept here grain, and others pay a finall matter; delinquentes are also confined, but not put to work; in this
hospital.

3. The castle of Bicorfer also belongs to this castlein foundation; it is feated on an eminence, it is finall diffuncfrom the above-mentioned hospital; and is an if dies defended by a wall, which is of very confiderable compass,
containing within it many large buildings, and feveral open
squates. In this castle are nearly four thousand persons of
the other fex; particularly poor men, who are entertained
here gratis, and some who pay for their reception into the
house; persons disordered in their finely, whose ward refembles a village, its being built in requiar fivers: open
figures. Common prisoners are kept-here in a particular
house, walled in, and every one in a cell by himself. But
the most remarkable thing here is a large well, which is a
modern work at it is a a circular form, and lined with
free-Roni from top to bottom it is one hundred and
twenty-eight feet in depth to the furshee of the water, and
twenty-eight feet in depth to the furshee of the owner,

The third gate that of St. Anthony, ercelled in the veign of Heary II. but repaired and embellished by the city, with fome inferiptions in honour of Lewis the fourteeths.

The fair of St. Germain, which begins on the third of February, and holds all Lent, is, among other things, warthy of notice. The place where it is kept is a large quare building; which has fix or feven rows of thops, wherein the cultomers play at dice when they come to buy goods; for they are first cheapened and bought, and then the people play who fhall pay for them. The greateft gaming is after candle-light, and fometimes the king him-felf comes hither to play. Here is a celebrated picture of our Saviour's afcension, with St. Peter, St. Pasi, and two our Saviour's afcension, with St. Peter, St. Pasi, and two and rably gille. and richly gilter

and nohly gilt.

There are a great manber of pleafure-boats on the river Seine, belonging to the king and perfons of quality, in which they fometiment take the amufement of failing on the water, for the fake of the air. The water of this river generally looks green and dirty, which is not to be won-dered at, as it is commonly filled with covered barges full of wather-women cleaning their linen in yet it is carried in London. It is a common observation, that the French women are the worst laundresses in Europe: they wash their slinen in cold water in the river; and as to ironing and plaiting, they have not the least notion of it. These are level and edd some English women who will finish them pretty neatly, but not so white as in England, which may in

and goldiniths: behoss which there are the book fellers, the vinther, and wine-merchants, the wool merchants and timber-merchants: but though these are eftermed inferior to the others, they are capable of being clefted confals, and enjoy the same privileges.

In the neighbourhood of this capital the land is in general flat and even, intermixed, however, with a few emisences. Towards the north of Paris the foil is fat, and

produces a great quantity of very good corn. On the other fide it is fandy, marthy, and wet. The whole is, however, cultivated with great oars and industry; and the people have carried the art of gardening to fush perfection, that in the midt of winter they raife all those forts of hitchen stuff that feem to be the produce of fumaner only. Within the election of Paris, they make one year with section, above fitness designed leagues of sides, which all arms in Paris, or in the places continuous to it.

The line undergoes the fits of most other sities, it has been been greated times beinged, train to the country of the line of most other sities, it has been been greated times beinged, train to butter, and orne confinence, the property of the property of

of a dome.

The fine feat of Coafians is thus called from its being, near the confluence of the Saine and the Maine... It owes its beauty both to nature and the elegant tafts of Francis de Harlay, archbifthop of Paris: it belongs to that metropolizan ics, and is the country feat of the archbifthops. The rooms within are extremely magnificent, especially the gallery, which is adomed with pictures executed by the belt mafters. The gardent six way beautifully laid, out, and adomed with groves, wales, flatnes, water wedge, &c. About two lengues to the earl of Paris flaude the town of St. Maur de Fesse, on the banks of the river Maine, over which is a frome bridge. Here is a very face feat, with beautiful gardens, belonging to the dake of Hourbony, allown, antient abbey of St. Maur, which was secularized in 1535, and afterwards changed into a collegiant aburch of camens.

in antent abovy of St. Mans, which was fecularized in 1525, and afterwards changed into a collegiate shurch of canons.

The finall town of Ruel is fituated on the banks of the Scine, see suche from Paris, where is a handfome church and fome elegant gentlemen's boufes; but it is principally noted for a fest bailt by cardinal Richelies, which, though not magnificent, is admired for its neatness; it being adorned with very beautiful gardens in the Italian cafes, which has fome curious water-works belonging be them.

Within the wood of Vincepace, at the differes of three miles to the caft of Faris, is a royal palace, or caffle, which was confiderably improved and beautified by Francis I. Henry II. Lows KIII. and KIV. It is an obless fourth was confiderably improved and beautified by Francis II. Henry II. Lows KIII. and KIV. It is an obless fourth the was confiderably improved and beautified by Francis II. Henry II. Lows KIII. and KIV. It is an obless fourth with the highest of which is called the Donjon, and is furrounded with a particular ditch, over which there is a drawbridge. The chapel, though in the gestic take, is not without beauty, it being adorned with faveral pyramids, and other embellishments; and the palintings on the windows are highly valued. The rooms within the palace are beautiful and stately, and the ceiling adorned with paintings. The wood above mentioned reaches almost tende gives of Paris, and is inclosed within a wall.

Here is also a sine park; and the gate through which you enter is a nobla piece of archinecture, in the form of a tramphal arch, addrawd with columns and statues, and standa in the middle of a large court, on each side of which is an open gallery supported by rustic arches, besides a sine sinte of bouldings.

There is a palace, at the entrance of this park, where they used formerly the keep wild beast, as lions, typers, and leopards. This park takes up one thousand four hundred and fixty-steven acrea. The overnes leading to the palace has four sows of elime planted, on a feet

Here are pictures of the had own the sciling for inhance, the hait of severa has a colling a channer from the ceiling for inhements and particular and the pr

The bed chamber of the king is more magnificent than

pedefials.

The bed-chamber of the king is more magnificent than any of the either rooms; the carvings are all gilt, on a white grounds. The bed is placed in an alcove, where two figures of Fenns, who are reperiented fitting, from to watch for the prafersations of the king. The chamber is adorned with feveral fifte pictures, and the furniture of the bed is of crimton velvet, embroidered with gold.

No left magnificence appears in the gardens, than in the palace, Is defeending from the terrace, you fee two batons which contain feveral water-spouts, and in the midft of each, a collection of spouts in the form of a wheat-theaf, that rices twenty-nine feet high. The borders of the fancions are each adorned with eight groups of brazen figures, from an each adorned with eight groups of brazen figures, from an each adorned with eight groups of brazen figures, in two angles of the parterin are two other bations of marble, where the water is thrown into two theers, that have a fine effect, and on the borders of the bations are groupes of animals in briffs. From this pattern you fee in a kind of crefcent which is below it, the baton of Latona, round which are reprefered a groupe of three figures. Latona, Apolla,

Apolle, and Diana. Latons here seems to complain to Jupiter of the cruelty of the penfants of Lyeia, who are reprefented as metamorphofed into frogs, which throw a west quantity of water upon the groups. There are feveral other befone with jets, and other curious water-works, perticular defeription of which would carry in too fat.

Here is a famous canal, at one end of which is a ballon of an ottagenal figure, four hundred and twenty feet in dismeter; four of its fides are circular, three is, farsight lines and the other joins the canal. In two of the angles of this basion is a fea-horse with a Triton on his back. The great canal is thirty-two fathoms broad, and eight hundred long, including the basons at each end. In the middle it is crossed by another canal about five hundred and twenty fathoms in length. The court sometimes divert themselves in yachts and galleys upon these canals.

The green house, or orangery, is a master-piece of its kind. It has a southern exposer; and contains, first, alreg gallery, sour hundred and eight feet long, with twelve arched windows in the front; and on each fide are two others, each three hundred and faxty feet long. These galleries are adorned on the outside with fine rows of columns. Before this green-hoose is a beautiful parterre, with a sinc bason in the middle, from which a spoure of water rises sorty feet high. It is embellished with four rows of columns, of the Tustan order, goupes of stone figures beautifully carved, vales, statues of white marble, dec. This parterre feems a forest of oranger and temmor trees, myrtles, &c. in the fummer feason.

Another releases the above in the laboration, which is a pour columns to the fummer feason.

This parterre feered a forest of orange and temon trees, myrtles, &c. in the summer feason.

Another celebrated curiosty is the labyrinth, which is a fine grove, the several walks of which are so interwoven with each other; that it is very difficult for a person without a guide, riot to lose himsels. At the entrance are two statues, the one of Æsop, the other of Cupid holding a clue of thread in his hand. At every turning of the alleys you meet with a beautiful seontain, in a basin of sine shell-work, where one of Æsop's fables is very naturally represented; the subject of which is expressed in four lines, engraved in gold letters on a brass platewish a black ground. Here are a great number of other groves, all beautifully adorned, and at one end of the garden is the place where a variety of foreign beafts and birds are bred.

There is another palace, in the park of Versailles, called

There is another palace, in the park of Verfailles, called Trianon, fituated at one end of the canal which croffes the Trianon, fituated at one end of the canal which crofts the large one. This is both genteel and magnificent; the architecture and ornaments are in an expedite take, and the front about fixty-four fathons broad. The court before it is adorned with a fine perifitie, fupported by marble columns and pilafters. The two wings are terminated by two pavilions, and over the whole building is a ballstrade adorned with flatnes, urns, &c. In the apartments are fine pictures, and the furniture is very fumptuous. The gardens are here also embellished with fine balons, cascades, and groupes of figures. extremely well executed.

gardens are here also embellished with fine basons, calcudes, and groupes of figures. extremely well executed.

"There is another royal feat, in a park contiguous to Verfailles, called Marly, delightfully fituated in a little valley, with a very fine prospect of the castle of St. Germain, and of the neighbouring country. On coming from St. Germain to this palace, you enter first a round court, three hundred feet in diameters, where stands the guardroom, and where terminate the several courts for stables, casch, houses, &c..." The nalace consists of a large requirement. coach-houses, &c." The palace confists of a large pavilion, ftanding detached from any other, as also of twelve finaller ones, fix on each fide: the outlide of the great one is adorned with paintings in fresco. The steps are embel-lished with figures of sphinxes, groupes of children,

vales, &c.

vales, &c. In the great hall there are fixteen pilatters, and it is adorned with fine looking-glaffer and pictures. In the king's apartments, and in those of the royal family, there are feveral beautiful pieces of painting, representing the fieges which Lewis XIV. carried on in person. The small pavilions are joined to one another by arches, through each of which you go into a little arbour made with lath-work. In which you go into a little and the and the and the and all those pavilions there are apartments for people of quality. They have nothing very remarkable; but in each of the two Jaff there is a globe, of which cardinal d'Etrées made Lewis XIV. a present. They are claven seet, eleven inches, and one half diameter, and were invented and made by father Coronelli.

There is a large cafcade in the gardens; it is properly a river, which falling from a very high place, forms very beau-tiful theets of water. At the bottom there are feveral basons,

thut incers or water. At the bottom there are leveral balons, adorned with groups, flatues, &c. a late of the area of the major of Marly, for railing the water, flands on the river Seine. It is composed of fourteen wheels, which are turned by horses, and set two hundred and twenty-five

pumpe a going ; by which shame the water is carried up into a tower fix hundred and un fathious diffant; from the river. From thome the water runs into an appendix three hundred and thirry futboins long, and from theme; it is conveyed through lever since of eighteen incluse hore, into the reference of Mariy, which are three hundred and fifty fathious further. These reference furnish all the water-works of Mariy and Verfailles; all their works hive cost inaments funns; the water being conveyed over faveral hills.

lamense fums; the water being conveyed over fiveral hills.

From the fide of the parterre which faces the large pavilion, there is a most extensive and sine protect. From this parterre you go down into another, which is adorned with marble statues, and has a sine basen in the middle, where there are several water spoots in the forms of a wheat small parter. Going still farther down, you meet with two other basons adorned with field work, and groups of white marble, representing rivers and nymbhs. The water failing out of these basons form several sheets, and fall into another basin below.

The town of Fontainbleau is mean, though it has a particular sub-governor, a royal prevote, and a forest court. It is thirty-five miles to the south-east of Paris, and is solely remarkable for its royal pelace, in which the French kings have taken geat delight, it being well structed for a hunting feat. It consists of everal sets of buildings, added to one another addifferent times, without any order or symmetry, which constitute a consisted mass of various kinds of architecture; yet this very confusion has an air of grandeur which strikes the type. Its situation is in a bottom, and surrounded by a large forest; and the neighbouring hills are crowned with bare rocks. The court requently take the diversion of hunting in the forest, as it abounds with game.

inds with game. d In this pale In this palece there is one room larger than the reft, where plays are performed when the court is here. There is, in this room, a chimney-piece twenty-three feet high and twenty wide; built by Henry IV. it is adorned with four lofty corintian columns of fpotted marble, with the bases and capitals of white marble, on which fland the equestrian statue of the last mentioned prince; underneath are two basis-relievos; one representing the battle of Ivry; and the other the furrender of the city of Mante. Two marble statues, representing loyalty and peace, stand on each side of this figure, and facing the size is a noble theatre for the acting of plays. All the rooms are adorned with paintings. That in which the king dines in public theatre for the acting of plays. All the rooms are adorned with paintings. That in which the king dines in public shas a very sine eciling, and noble pictures representing fortitude, temperance, justice, and prudence, with several other subjects.

This palace has also very sine galkeries belonging to it.

This palace has also very fine galleries belonging to it. Among the rest, the stage and prudence, with several other subjects.

This palace has also very fine galleries belonging to it. Among the rest, the stage gallery, along the orangery, is particularly worthy of notice, it being adorned with paintings of all the royal palaces, between which are stage heads fet off with branches of a very encommon size. Under each sag's head is an inscription, shewing in what wood, and by what king, the stage was killed. Thus many of them are represented as saying, very positely, king Charles, or king Lewis did me the honour of taking me.

In the gallery of Diana is the picture of Henry the Great in a hunting-dreft, and the different kinds of hunting, in which he delighted; are represented in several paintings where feet high, and twenty broad. Near this gallery is the aviary, which is extremely large and beautiful, it being ninety feet in length, and nine in breadth. In the middle is a large dome, under which its an artificial rock, made of shell-work, from which life several springs, the water of which runs along the whole aviary through many little channels made in the stone pavement.

There are several states: and sountains in the gardens, the largest of which stands in the middle of the garden, and is called the fountain of the Tiber, from that river being represented in brais. Beyond it are one grotto and several calcades; and at the entrance of the park is a fine cannal fix hundred fathoms long, and twenty broad; it is all inted with stone, and has a fountain at each end. The alleys of this park beling of a vast length, make a very rural and delightful spearance.

Meudon is a large open town, two leagues below Paris. There is here a sine palace built in the reign of Henry II. for the cardinal of Lorraine; it came afterwards successificates; who each adorned it in their turns. Each and Louveis, who each adorned it in their turns.

for the cardina or Corrant; it came anterware the cardinated it in their turns. Lewis XIV, bought it of Monfieur de Louvois's widow, and gave it to his fon the dawphin, grand-father to the prefers French king. The dawphin added feveral buildings and ornaments to it. This

The house is adorted with rich formiture, mabble flatuers and fine psintings of Roman emperors, and sneient philosophers.

At the entraine of the court of the palace is a large pile of buildings, on the right, and another on the left, which open in the form of a femicirele, but are disjoined from the body of the house. In the middle of the from is a lefty bedy of the house. In the middle of the front is a lofty advanced building, entered by three doors: above them runs an order of architecture, confisting of arches and co-lumns finely designed; over them is another order accompanied with pilasters; and over all is a fountain containing two fatures in a recumbent pollure, admirably well finished. The wings signpt to high as the principal building, and each of them is terminated by a square payillion. The infule of this palace was adorned with the riches furniture, and a fine collection of statues, paintings, medsh, and other antiquities. The front towards the garden also consists of a lotty advanced building, with wings considerably lower, which terminate on the right and left in two payilions of the same height at the body of the building. The gardens are much admired for their fine walks, parterres, &c... There are some excellent stone quarries near Meudon. quarries near Meudon.

St. Cloud, in latin Fanum Sancti Clodosidi, was for-merly called Nogent ; it is fituated on the river Seind, two agues below Paris; and stands on an hill, the foot of which is watered by the river, over, which there is a flone bridge. There is in this town a noble palace be-longing to the duke of Orleans; it is adorned with fine paintings and feulptures; and the garden is extremely magnificent, abounding with water-works, as fountains, calcades, fleets of water: allo with pleafant walks, chaim-ing parterres, and all shat can pleafe the eye, and fatisfy a speciator of the nicest talless but a particular description all thefe beauties would carry us too far. The manor

of St. Cloud was erected into a duchy pecrdom in favor of the alchbishops of Paris to whom it belongs.

This town, is much reforted to, on account of its extraordinary, pleasantners. It has a manufactury of porcelain, and a fine bridge of stone over the Seine. In 1589, Henry III. was murdered in this place. Befides the pa-lace above-mentioned, here are a collegiate church, and a convent

convent.

The town of Senlis, in latin Augustomagus, is feated on an entinence on the banks of the little river called Nomette, twenty miles to the north-west of Paris, in a district called Valois. It is the refidence of a governor, a district court, and a slat-office. In this city, and its three subsets, are fix parish-churches; among which is the cathedral, which has a steeple that is one of the highest in France, and the figures that adorn the frost of the right wing of this church are very curious. Here are also a collegiate church, and a royal chapel. Its bishop is subject one hundred and seventy-seven parishes, forty-sour chapels, three abbies, nine priories, with nineteen infirmaries, and his annual revenue amounts to eighteen thousand and his annual revenue amounts to eighteen thousand livres, out of which he pays to the court of Rome one shouland two hundred and fifty four florins. The city is defended by a wall, a dry most; s A bastions, and has its

The town of Soiffons, which is the capital of a diffrict called the Soiffonnois, and of the whole government, is feated in a pleafant and fruitful valley, on the river Aifne, fixty milea to the north-east of Paris. It is a pretty large faxty miles to the north-east of Paris. It is a petry large well-built town, and gives the title of count. Several councils have been held here. It is the refidence of a governor-general, and the feat of a generalité, an inten-dency, a board of the finances, a falt-office, a court of juftice, a forest-yourt, &c. In this city, befides the cathe-dral, which has one of the most considerable chapters in the kingdom, are three collegiate churches, one college of the fathers of the orstory, fix abbies, feveral convents, a French scademy, and an ancient caffle. Its billiop is fub-ject to the archbiflop of Rheims, in whose abtence he performs the ceremony of the king's coronation: he has three hundred and ninety-seven parishes, and twenty-three abbies within his diocese, which produces a revenue of eighteen thousand the produces a revenue of eighteen thousand livres, out of which he pays the court of Rome's taxarion of two thousand four hundred forms. The town of St. Denis is feated in a fruitful plain, in the ifle of France Proper, five miles to the north-west of

Paris, owes its origin to a celebrated abbey of Benedictines, founded there by king Clotaire, in honour of St. Denis, fo early as the year 600, but greatly improved by

his fon Dagobert. The abby, is now rebuils with the finest free-stone, and has a garden laid, out in, a most elegant issise. The church, though guthic, in a handsome structure, and not only contains a very rich treasury, in which are kept the crown jewels, but is likewise the place of interments for the kings of France and their families; but no tomba have been exceled here, for Henry IV. on any of the fucceeding kings. The famous marshal de Turrenne, has, a noble measurement here exceled by the king's order, in a marble chapel built on purpose, where his efficy lies at full length, furrounded with laurels and trophies, and a Roman cagle ratreating backward at the fight of for formidable an enemy. Immortality, with a radiant crowing the head, holds in one hand a crown of laurel, while the supports with the other the dying hero. Wisdom and valour are also represented in their proper stitutudes: the former seems associated at the fixoke which deprives Erance of that great man, and the latter appears in construction. former feems aftonished at the stroke which deprives Eranco of that great man, and the latter appears in consternation. On the altar in this abbey is a cross, fail to be of massive gold, seven feet high, fet with diamonds and rich pearls, and by it a table of gold; the altar is plated over with filver. After the death of cardinal de Reta, its last abbot, its income, amounting to one hundred thousand livres, was given to the house of St. Cyr. Its present revenue is sixty thousand livres. Besides this church here are thirteen others, among which is the collegiate church of St. Paul, and sive convents and the convents of the collegiate church of St. Paul, and sive convents on the collegiate church of St. Paul, and sive convents on the collegiate church of St. Paul, and sive convents on the collegiate church of St. Paul, and sive convents on the collegiate church of St. Paul, and sive convents on the collegiate church of St. Paul, and sive convents on the collegiate church of St. Paul, and sive convents on the collegiate church of St. Paul, and sive convents on the collegiate church of St. Paul, and sive convents on the collegiate church of St. Paul, and sive convents on the collegiate church of St. Paul, and sive convents on the collegiate church of St. Paul, and sive convents on the collegiate church of St. Paul, and sive convents on the collegiate church of St. Paul, and sive church of and five convents.

and five convents.

The ancient city of Novoo is pretty large, and well-huilt; it flands in the didtrict called. Novonois, on the little river Verfe, twenty two miles to the north-west of Soissons. It is the residence of a governor, and has a falter office, a forest court, &c. Besides its cathedral and a royal chapel, it has ten parish-churches, two abbies, two convents, one community, one seminary, and two hospitals. Its bithop, who is also suffice and two hospitals. Its bithop, who is also suffice and the serbbishop of Rheims, is a count and peer of France: his diocese confists of four hundred and fifty parishes, and seventeen abbies, and his revenue amounts to twenty-five thousand lives, out of which he pays three thousand florins to the court of Rome. The principal trade of this city confists in corn. It has been several times destroyed by fire. Calvin, the celebrated Reformer, was born here.

The city of Laon, in the district called the Laonnois, stands on a steep eminence in the midst of a large plain.

flands on a steep eminence in the midst of a large plain, twenty miles to the north-east of Soissons. It has well-built, and has an old castle, and beautiful streets. It has a gover-not, a falt-office, a forest manor, and a court of justice. Besides its cathedral, it has three collegiate churches, five abbies, two convents, a college maintained at the expence of the city, one general hospital, and an alum-house. Its biflop, who is subject to the archbiflop of Rhelms, is the second duke and peer of France. Within his diocese are three hundred parishes, and twenty-four abbies. His 1evenue amounts to thirty thousand livres, out of which he pays four thousand floring to the court of Rome. Excel-

pays four thousand florins to the court of Kome. Excellent wine is produced in the neighbouring country.

The city of Beauvais, in the district of Beauvaisis, is
feated on the river-Teraine, fixteen leagues to the north of
Paris, and is almost furrounded with hills: 'Cefar having
beiteged and taken this town, is faid to have given it the
name of Cæfaromagaus.' It is fortified, but is of no great
strength, it being commanded by the neighbouring mountains. Its cathedral, dedicated to St. Peter, is a magniflown building it has a less fix no legistare churches; thirteen ta'na. Its cathedral, dedicated to St. Peter, is a magnificent building hit has allo far collegiate churches, three abbies, a general hofpital, and an alms-house. It has likewise a manor-court, which, together with the forest-court, are dependent on the bishop it has likewise a province-court, and a falt-house. The bishop, who is suffragan to the srchbishop of Rheims, is a count and peer of France, and has a diocete constituing of twelve chapters, fourneen abbies, forty-eight priories, four hundred and forty-two parishes, and three hundred chaptles, with an annual revenue amounting to fifty-five shonpels, with an annual revenue amounting to fifty-five thoufand livres, out of which he pays a taxation of four thou-fand fix hundred floring to the court of Rome. In this city is a confiderable manufactury of tapefiry, and great quantities of ferge and woollen cloths are also made here.

This city was befigged in vain by the English in 1443, and in 1472 it made a brave defence against Charles duke of Burgundy, when the women fignalized their courage under the conduct of a brave heroine named Joan Hatcher, whose picture they preserve in the town-house; and in memory of this action the women are sllowed to march first in a procession annually observed on the tenth of July. The adjacent country abounds in corn, palluie, and fruit, and affords fome of the best mutton in France.

The town of St. Germain's, or St. Germain en Laye,

is well inhabited, it is feated on an eminence along the Seine, ten miles to the north-well of Paris, and has very good air and water. The English deftroyed a palace which flood here in 1240; but a new building being raifed by Fraricis I. it afterwards received the name of the Old Palace, to diffinguish it from one built there by Henry IV. which was called the new. Lewis KHI. added fome confiderable embellishment to it, and Lewis KHV. entarged it by the addition of five flately pavilions, whence, though it is no regular building, it makes a grand appearance.

The New Palace, so, it is called, fronts the Old, and flands on the brow of a bill, with a garden of six beds of earth fupported by arches stoping into the valley. This building is a true image, of the transitoriness of all fublusary things, the galleries in it being turned into granaries, and the paintings stores distinguishable for filth. The very alcoye in which Lewis KIV. was born is now a dust-hole, and the grand stair-case leading into the garden is wholly in ruins, while the arches for the beds in the garden are in many places sunk into the ground. The Old Palace was the refidence of James II. after his flight from England, and here too he died. The firets of the town are well gaved, the house are losty and handsome, which seems featers and heates though not one and the reas feater though and one or which we well gaved, the house are losty and handsome, which seems featers are the heate though not one are in the case featers and heate the part of the trees of the trees featers are desired, the whole of the trees featers are desired to the town are well gaved. nom angains, and acre too ne dec.—The treets of the town are well paved, the houses are lofty and handlone, with fome large (quares and hotels, though only one parish-church, three convents, and an hospital, are contained in

it.

The convent of St. Cyr, for nuns of the order of St. Augustine, was founded in 1686 by madame de Maintenon, miltrefs, if not the fecter confort of Lewis XIV. of which the herfelf was abbe till the fifteenth of April, 1710, when the died. It contains fifty ladies of quality, thirty-fix lay-fifters, and two hundred and fifty pupils, who must be between the age of feven and twelve; but must prove their poblites for four generations, and have no defet in hody. between she ago of feven and twelve; but must prove their nobility. for four generations, and have no defect in body or mind. Here they continue till they are twenty years of age, when such of them as are disposed to he nuns are distributed emong the royal abbies, where they are admitted gratis: the editers are married to gentlemen, with a portion of four handred pistoles, besides a certainty of preferment to the bridegroup; or essentially affect they are fent back to their parents. On the ideath of any one of the fifty ladies, her place is filled up by election from among the young ladies. The thirty-fix lay fisters andruck them in every branch of education becoming their fex. The convent is a very spacious and splendid structure; and the foundation has an animal revenue of one hundred and eighty thoughand livres, one hundred thoughand of which eighty thousand livres, one hundred thousand of which artie from the extinction of the abbey of St. Dennis, exclusive of its lands and immoveables.

SAEACAT. VIII.

Treating of the government of Britteny and Normandy, their fitsat on and extent, biffery of the country, its produce, principal cities and towns, trads and manufactures of the inhabitants, U.S.

BRITTANY, called by the French Bretagne, is a kind of peninsals, furrounded, on the fouth and well, by the atlantic ocean; on the north, by the British channel; and joint Normandy, Maine, Anjou, and Poitou to-wards the east. Its greatest length, from east to west, is fixty leagues; and its greatest breadth forty-five, but in many places it is very narrow. It received its name from the old Britons, who being driven out of Britain about the middle of the fifth century, by the Angles and Saxons, croffed the channel into Gaul, and, after wandering about for fome time, fettled in this province, to which they at length/gave their name. In fucceeding times the Britons were obliged to submit to the kings of the Francs.

Charles the Great had a fleet here, to act against the Normans, and under his successors, Numenius, a chief of the Britons, created himfelf king; but his fecond fucceffor was taken off by fome conspirators, who made themselves masters of the country, under the title of counts. The Nor-tonia afterwards reduced the country, but were unable to keep the quiet polletion effit; till at length Conan, count of Brittany, married his only daughter Constantia to Gottfried, count of Anjou, the fan of Henry II. of England, stied, count of Anjon, times and of Fenry 11. of England, and duke of Normandy; and the doughter and heirefs of shis Couflantia marrying Beter of Dream, Brittany fell to the royal family of France, Peter being a prince of the blood. It was then governed by the dukes of Brittany; and at length, by marrying their daughters to the kings of France, in 1532, it became united to that crown. France, in 1532, it became united to that crown.
This province is intermined with plains and mountains,

of which there are more in Lower Brittany, which is croffed by a chain of mountains, called mount Ares. There are several fruitful plaith, and also many fandy and bareet heaths. The air is every where pretty temperate, but thick and moift towards the sea-coast. The foil here yields pasture, herip, wood, minerale, corn, and but very little wine. The meadows feed abundance of cattle, especially horses, of which a very good race is bred here. Hemp and stax grow in great plenty, so thet abundance of canvaa and linen is made in this province. The forests are many and large, and contain great variety of game. There are also here fome mines of iron, lead, copper, and tin. This prevince is happy in havens, having more good sea-ports than any other parts of France. The inhabitants are good sistement, being encouraged by the great variety of delicate fish taken on their coast, particularly salmon, herrings, sardines, and a certain sist of a most delicious taste, called imperator or empereur, at Marseilles, and gracicux signeur, or gracious lord, in Brittany; besides tunnies, porpuss, dolphinis, &cc.

They have their own parliament, which is held at Rennes; as also thely own laws, and particular states, the latter of which cances is the cances of the chase of the chase of the chase. fed by a chain of mountains, called mount Arré. are several fruitful plaints, and also many fandy and b

nes ; as alfo their own laws, and particular flates, the latter of which confit of the clergy, nobility, burghers, and peafants. They afed to meet formerly every year, but ince 1630 they meet once in two years. Their chief bofines is, to confent to the free-gitt demanded of the pronefs is, to confers to the free-gift demanded of the province by the king. The governor is likewife admiral will-Britany; and under him are two lieutenant generaly, one of whom has the fuperintendency of eight diocefes, and the other only of the cattlom and biftopric of Nantes: befides thefe, there are three fub-governors. In the meeting of the flates, and affelfiment of taxes, the country is divided according to its nine biftoprics, tive of which belong to Upper, and four to Lower Britany.

The principal places in this government are, r. Kennes, the antient Condate, the capital of the province being feated on the river Vilaine, about fifty-five miles to the north of Nantes, and forty-five to the fouth of St. Malo's-

feated on the river Vilaine, about fifty-five miles to the north of Nantes, and forty-five to the fouth of St. Malo's-It is divided by the river into two parts, which have a communication by three bridges. It is pretty large, populous, and the fee of a bifnop; hero is also held the parliament of the whole country, an intendency, a country-court, a forest-court, and a confulate. The bishop, which is fuffragan to the archbishop of Tours, has a diocele confising of two hundred and thirty-fix parishes, with an income of fourteen thousand livres, out of which his taxation to the fee of Rome is one thousand storius. This cower contains many reall-while houses, but the streets we never tion to the fee of Rome is one thousand florius. This rows contains many well-built house; but the fireets are narrow, dark, and dirty. Besides the cathedral, it has eight parish-churches, and seventeen convents; the jesuits had here a fine college, and the states of the prevince have ereded in this city a noble state of Louis XV.

2. Nantes, in latin Nannette, was called by the succent Romans Condividum: it is the second city of Brittany,

and the capital of a county of the fame name, fituated on the northern bank of the river Loire, near the confluence the northern bank of the river Lotte, near the confluence of the river Ardre, about eight leagues from the sea to the east, and eightsen from Rennes to the south. It was the seat, and eightsen from Rennes to the south. It was the seat of the late duken of Britanny, and gave the title of count to their eldest fons. It is a pretty large city, surrounded with ramparts, and very deep ditches, with some fortifications; it liss an old castle slanked with large round towers towards the city, and with some half-moons towards the substitute of which is sufficient to the seath of the past which is sufficient to the seath of the past which is sufficient to the seath of the past which is sufficient to the seath of the past which is sufficient to the seath of the past which is sufficient to the seath of the past which is sufficient to the seath of the past of the seath fee, the bithop of which is fuffragan to the archbishop of Tours, and, by virtue of his dignity, a counfellor in the perliament of Rennes. There is also here a chamber of accounts, an office of the finences, a prefidial, and an university. The public buildings are the cathedral, edicated to St. Peter, a fair ancient structure, beautified with two high towers; there are to be feen in this church the tombs of feveral dukes of Brittany; the collegiate church of the virgin Mary; feveral parochial churches; divers monafteries; the town-house, built after the modern architecture; the palace of the chamber of accounts; that of the presidial court, with a beautiful tower and clock; and a stately liospital. This city is a great mart for trade, vast quantities of all forts of merchandises are brought in by the river Loire, which slows up to its walls, and brings up yery large boats, and ships of small butthen; and from thence, by the same river, foreign goods are sent to Anjou. Blois, Orleans, &c and native commodities brought down, An excellent fort of brandy is exported hence into foreign high towers; there are to be feen in this church the tombs An excellent fort of brandy is exported hence into foreign countries. By reason of this convenience for trade, the city has been, from time to time, confiderably increased; and there are now four fuburbs round it, which are much larger than the city itfelf, and very well filled with inhabitants,

bleants. One of the suberbs, salled in Foss, is meat the hatbour, and inhabited by rich merchants. There is here a large key, along which are very fine houses, and large weethouses. There is a very particular kind of society or partnership established above a century, ago, between the menchants of Nantes and those of Bilbon in Spalm. This feelety is called the Contractation, and has in each of these cities a redepencal tribunal, after the manner of a confular jurisdiction, a merchants of Nantes, who happens to be the Bilbon, has a right to fit in this tribunal, and has a deliberate voice; and the merchants of Bilbon are used after the same manner when they are at Nantes. It is because of this fociety, that the Spanish wool pays but a very small duty at Nantes, and that in return the linear of Bairdany is upon the same sposing at Bilbon. These two cities had even formerly slips in common, which traded for the profit of the partnership that this is now no longer practice. They have established this is now no longer practice. They have established of late at Nantes a manusastury of coston-linens, which succeeds as well as that which has been long since fee up at Roben, and may even exceed it in time, because conton and indigo are here much cheaper than at Rouen.

The simens cide in favour of the protestants, was made at Nantes by king Henry IV. in the year 1535, which was registered in the preliament of Paris, and confirmed and sworn by his successors leaves the year of the provention of the protestants, was made at Nantes by king Henry IV. in the year 1535, which was registered in the preliament of Paris, and confirmed and sworn by his successors leaves the year of the provention of the protestants, was made at Nantes by king Henry IV. in the year 1535, which was registered in the preliament of Paris, and confirmed and sworn by his successors their swiss has a sum of the protestants, was made at Nantes by and cruelty persecuted his protestant such the such press a 585, and cruelty persecuted his protestant such a

Can enter it.

On the neighbouring rocks are ten different forts, and the town, which is furrounded with walls, and deep ditches, is always guarded by a fufficient garrifon. As foon as the gates are flut, they let look upon the rampares twelve or thirteen very fisice bull-dogs, which would infallibly tear in pieces any perfort that ventured to come near them, whence it is commonly faid that \$1.4 Malo is guarded by dogs, though these are only defigned to prevent the garrifon from being surprised. This city is also fecured towards the fea by a shool of sand that encompasses, and, besides the rocks, by small islands; to that the harbour is effected one of the keys of France.

This city is very considerable, not only for its streight, but also for its trade. The inhabitants, who are fea-faring people, are famous for their skill in maritime affairs, on

people, are famous for their skill in maritime affairs, on which account a great humber of privateers are fitted out from hence in time of war, which very much disturb the trade of the channel, and accordingly made many English captures doring the reign of king Williams, which brought a bombardment; upon the town, though it keedwed but little damage. But in 1758, a felect body of above twenty thousand British troops, under the command of the late duke of Mariborough, and a powerful squadron under commodore Howe, having landed at Cancalle bay between the fixth and seventh of June, they burne all the ships in the harbour, to the number of a hundred; great and small, after which, finding the town imprassicable, they re-embarked, and arrived soon after at Spithead, with little or no loss. It is the see of a bishop, suffragan to the arche people, are famous for their skill in maritime affairs, on no lofs. It is the fee of a bishop, suffragan to the arch-bishop of Tours; his diocese consists of one hundred and fixty parishes; he is lord of the city, and his income amounts to thirty-five thousand lives per annum, out of which he pays one thousand florins to the court of Rome. The cathedral of St. Vincent is one of the most ancient in all France: feveral line monasteries, and other confi-

Breft, in latin Brefcia, a famous fee-port in the bishop-ric of St. Pol da Leon, is fituated on the north fide of a large and commodious harbour, which opens to the ocean in the western part of the continent of France, about fifty se the western part of the continent of a rance, about hity miles to the north-west of Belleife, the four-eight degrees twenty-five minutes north initiate, and in four-degrees that windows well longitude. It is a feath fortified city; the treets are narrow, and it is defended by a frong caffle which flands on a rock, very fleep towards the fear and

likewife by a tower opposite to the castle, which guards the entrance in a the port on that fide. It is encompassed on the land and with a broad ditch, and some other works. It has a spacious sine road and harbour, and the laster is surrounded with very good quays; 'upon which are built warehouse silled with naval stores of all kinds. The harbour lies between the city and the subort of Recourance, which, is hasf as hig as the city. The road of a ketterney spacious, and might contain five hundred men of way but the entrance to it, on account of its partweets, is exceeding difficult, and particularly from the blind rocks which lie under wave as high tide.

This post is the most sepure settent for the French ships of was, and is the best possessed by that nation on this fisse of the Mediterrancem; whence that city is one of the grand magasines of the admiratly of France, the other being at Toulon, in the Mediterranem; and therefore in this harbour the greatest number of the French pavy is sitted out it is faid that naval stores and necessary provisions for seventy sails of men of war are constantly laid up at Brest, and single particularly or minety guas are built here, which readers, the place rich and populous. There is always a strong garrison in the eastle, commanded by staff-officers. Lewis KIV. caused an arsenal to be built here, and erected an academy for the marine. Here are a court of admirate with only meth parishe-shunders.

Lewis XIV. caused an arfenal to be built here, and erected an academy for the marine. Here are a court of admiralty and bailiwic, with only two parish-chutches, and a
convent. The jesuits had also a seminary here, before
their expulsion from France.

The English, in 1694, made an attempt upon Brest,
but the design transpired, so that the avenues being defended by a numerous train of artillery, and an army superrior to that of the invaders, general Talmash, who commanded the English, was mortally wounded in making the
descent, and the sorces were obliged to retire with loss from
the place.

detects, and the sorces were obliged to retire with lots from the place.

It be idland of Belleide is about fix legges from the coaft of Brittany, in the forty-fifth degree twenty minutes north intitude, and in the third degree five minutes weft longitude. The antients called it Colonefus, or the Beautiful idland, which is the fignification of its prefent name. It is about fix leagues long, two broad, and confers the title of marquis. It is furrounded on all fides with rocks, and has only three lainding-places, Palais, Sauzon, and Gonleard; avery one of which labours under fome capital defect; either in being exposed, fhallow, or 'dangerous at the entrance. It contains only one little city, called Palais, three, country towns, a financed and three villages; and there are about five thousand inhabitiant in the illand.

The capital town, Palais, takes its name from a castle in its neighbourhood belonging to the duke of Belleifle; afterwards converted into a citade. This fortification is strong and regular; it fromts the feal and its composed principally of horn-works, and provided with two dry ditches, the one next the counterfeary, and the other so contrived into a citade in the feal and its defeated it and the fortification is the feal of the counterfeary and the other so contrived into a citade in the feal and its defeated in the feat of the decrease of the feat of the decrease of the decrease of the feat of t

the one next the counterfearp, and the other fo contrived see to secure the interior rotatications. The citade! is di-vided from the largest part of the town by an inlet of the fea, over which is a bridge of communication. In the year 1750 admiral Hawke, with a fquadron of English ships, off the fouth coast of this island, burnt, funk, and destroyed, most of the French seet from Brest under Condans, who was himself either morally wounded, or lost in making his escape in his boat to shore. Two of the enemy's ships suik to the bottom with all the men, and the shattered remains of his fleet, to the number of seven fail, ran up for fieler, after throwing their guns over-board, into the river Vilsine in Brittany, and there continued difabled on account of the fiellowness of the water. The Euglish indeed loft two of their men of war by too eager a purfuit of the enemy; but though they ran aground, all the crew were faved, and streir lofs was inconfiderable in other re-

This ifland was strucked in 1761, by an English fleet under the command of commodore Keppel, and the land forces under general Hodgion. The English fleet after forces under general Hodgion. The English fleet after landing their troops and their canhon, which was accomplished with the greatest difficulty, by dragging them up the rocks, laid slege to the city; and the garrifon, commanded by the chevalier de St. Croix, a brave and experienced officer, threatening a long and obtinate desence. The enemy made some fallies, which only animated the English troops by the difficulties with which they had to contend; but at length, a furious attack being made upon the enemy! lines which covered the town, they were carried with no great less; this was principally owing to the uncommon intrepidity of a body of new-raised marines. No action of greater spirit and gallanty had been performed during the whole war. However, the garrifon held out till the seventh of of June, when they capitulated, and marched out with the honours of war. This island was restored to the French by the late peace, until which time it was kept by the English.

The government of Normandy, which derives its name from the antient Normans; his bounded on the east by

Picardy and the 1st of France; on the fouth, by Beausie, Perche, and Maine; on the west, by Brittany; and, on the north by the British channel; from north to fouth, the extent is thirty leagues, and upwards of fixty from ealt to weft.

This province is one of the most fruitful in the whole This province is one of the most fruitful in the whole kingdom, and one of the most profitable to the king. It abounds in corn flax, hemp, and regetables for dying, but the little wine it produces its very indifferent. It, however, yields great quantities of apples and pears, of which the natives make cyder and perry for their usual drink. It is also a fine country for cattle, it being full of excellent pattures. The sea supplies it with plenty of fish, and great countries of other re-versed of fish and great applies it with plenty of fish, and great quantities of falt are extracted from its waters.

Here are some mineral waters. The many from works are of no small advantage to the country, in which are also

fome mines of copper.

This province is watered by feveral rivers, the principal of which are, t. The Leaon, which rich here, and being joined by the Orbiquet, is afterwards called the neing joined by the Orbiquet, is afterward cained the Tonques, and, becoming navigable, lofes iffelf in the channel. 2. The Carentone, which has also its fource in this province, falls into the Rille. 3. The Orne, which rifes here, and, after receiving feveral finaller rivers, falls into the British channel. 4. The Eure. 5. The Andelle, which rifes in this province, and, falling into the Scine, it of great advantage in conveying to Patis wood for firing. 6. The Rille, or Rille, which rifes here, and also falls into the Seine. 7. The Dive, which also rifes here, and, after receiving the Vic, becomes ravigable, and discharges itself into the British channel. 17. The Diverse of the Riller of Seines and discharges itself into the British channel.

With respect to the history of this province, it is ne-cessary to observe, that the autient dukes of it rose to great ceffary to observe, that the autient dukes of it rofe to great power, both here, and in foreign countries; and William, in the year 1066, became king of England by conquest. In 1135 the male line of this king became extinct in the person of Henry I. and his daughter Matida. marrying Godfrey, count of Anjou, the fruit of this marriage was Henry II. king of England, duke of Normandy, lord of Guienne, Poitou, and Saintonge: He leaving three sons; Richard, Godfrey, and Islan. the 18th. of them. Giand or Richard, Godfrey, and Join, the laft of them feized on the dominious of both his brothers, and even caufed Arthur, the son of Godfrey, to be taken off, for which he was deprived of most of his territories in France, and in 1203 Normandy was annexed to that crown. Henry III. of England ceded to Louis the Pious and his successors all his claim to this province; which afterwards, to the end of the fourteenth century, fonce kings bestowed on their eldest fons, with the title of duke of Normandy, till that of Dauphine was initituted. At length the animofi-ties between the houses of Orleans and Burgundy afforded the English an opportunity of conquering not only Normandy, but a great part of France. This province was subject to England about thirty years, till at last, during the minority of that unhappy prince Henry VI. the English were driven out by Charles VII.

Normandy is governed by its own law, which is called, "the wife," and on this account the country is filed, Le Pais de la Sapiecne, or, The Landof Wifdom. Rouen has a parliament, on which all the other courts of the province parliament, which are once once in an acces, it has three generalities, namely, at Rouen, Caen, and Alençon, from which the king is faid to have drawn twenty millions of hivres, (eighty-feven thousand five hundred pounds fter-ling) a year. Hence the government of Normandy is one of the most considerable in the whole kingdom. Under the governor, are two lieutenants-general, one for Upper, and the other for Lower Normandy; and each of the feven great districts, into which the country is divided, has a deputy-governor of its own. Under the archbishop of Rouen are the fix bishopries of Normandy; and their feven dioceses contain eighty abbies, and four thousand

two hundred and ninety-nine parithes.

The principal places in this province, beginning with Upper Normandy, are the following, viz. 1. Caudebee, in latin Calidum Beccum, that is, the Mot Bec. This is a small, but populous town, Casted on the river Seine, into which, near this place, falls a rivulet which runs through the town, and gives name to it. It is closely built, and has walls stanked with towers, and furrounded with deep ditches. It has three fuburbs; and the finall river Caudebec, being divided into feveral canals in the rown, turns a confiderable number of mills; that are very ferviceable to the tanners and leather dreffere fertical here. In this town is a faft and treafery office, with a provinciely, an admiraty, and a forest courts. It couptains two convents; one parish-church, and an hospital? This place is a confiderable thoroughfare for fech as go from Rouen to Havre de Grace, and other parts of the country of Caux, of which it is the capital. Among other manufactures. The inhabitants make hets, which were formerly factures, the inhabitants make hats, which were formerly

in great repute, on account of their not larting in the rain, but this branch of trade has greatly declined. At \$10 10016. It The fea-port town of Dieppe is fituated on the floor of the British channel, opposite to Brighthelmstone in England, and is much reforted to, particularly by vessels from Scotland. It shands thirty miles to the north of Rouen, on a level foot. level foot, between two rocks, or nountains; and the mouth of the river Betune, "Called at this town the river of Arques, which, falling inter the fea; forms the harbour. It is fortified with bullwarks next the fea, with "oftriefs at the suburb called Pollet; and a cafile, which, together with the craggy rocks that lie on the fouth, render it a place of confiderable firength, though its fortifications are very irregular, its natural firength induced Henry the Great to chule it for his liead quariers, when opposed by the league, at his accession to the throne.

at his accellion to the throne.

This town is pretty large, and well-built: It has a good harbour, which is long, but narrow, and on this account difficult of accels. In time of war, it is generally a flatloh of privateers, but has not a fufficent quantity of water for large thips. It is chiefly lithabited by feafaring men, who are eftermed very expert in maritime affairs; as also by are effectively expert in maritime affairs; as allo by merchanics, who make curious works in ivory; as allo by merchanic, who carry on a confiderable trade to foreign pates. The inhabitants were chiefly protefanns, until the perfecution which enfued upon the revocation of the edict of Nantes. The parifin-church of St. James is a very fine flucture; and his a tower, from which, in fine weather, the coaft of England may be feen. It contains two folunts, and has known of the coars.

and has both a falt-office and a court of admiralty. During the wars between England and France, this town was frequently taken and retaken. It was almost totally destroyed; in 1694, by bombs fired into it from the English steet commanded by lord Berkely; and in the wars of queen Anne it was allo roughly treated, after which the in a regular manner : this indeed gives the town an exterin a tegular manner: this indeed gives the town an external air of beauty, but in attended with very great inconvenience to the inhabitant. The chief trade of Dieppe conflik in herrings, with which they furnish Paris and the province of Normandy 4: they all of fifth for whitings, mackarel, and oyfters, whilch they fell in the neighbouring provinces; together with their ivory works and laces made here. The fea compaffes made in this town were once much effecuned; but its trade has of late years very much descentifed. decreased.

The town of Rouen, the capital of Normandy, called hy the antients Rothomagus, and afterwards Rothomum, is feated in a diffrict called Le Vexin Normand and is environed on three fides by high hills covered with trees, and, on the fourth, is feated on the north bank of the Seine in forty-nine degrees thirty-fix minutes north latitude, and in one degree ten minutes east longitude. It is also watered by two little rivers called Aubette and Robec. The tide flows to high up the Seine, that veffels of above two hun-ored tons burthen can come up hither, and load and un-load at a large quay, which is built along the city. Its fituation is fo very commodious for trade, that Rouen is confidered as the centre of the northern trade of France. It had formerly a stately stone bridge over the Seine, of thirteen arches, but it is now ruined; and there is another of boats of a very artificial structure built near it, and extending two hundred and feventy paces in length; it rifes and falls with the tide, and is paved like the streets. This bridge, however, cons a great deal of money to keep it in repair; and they are obliged in winter to take it in pieces, left the ice should damage or carry some part of it away. The city has no other sortifications than a wall, with round towers in the antique tafte, and irregular baffions to defend the gates on the land-fide, except an old caftle which was begun in the year 1419, as foon as king Henry V. of England made himself master of Rouen, and was finished in the reign of Henry VI. in 1443. It is an antique building of little firength, flanked with five large round rowers is that a draw-bridge, the whole being encompassed with a wet ditch.

In this city there is no garrifou, though it has a particu-

cets. This o keep it in it in pieces, of it away. wall, with lar baftions an old caftle king Henry n, and was . It is an in five large le being ena particular governor. It is, however, very populous, for it contains seven thousand, two hundred houses, in which are fixty thousand persons; but is not very specious. The streets in general are very close and narrow, and the houses mostly of wood and plaister; it has, however, fix lerge suburbs, in which are five parishes, and thirty in the city; it has also fifty convents, and four abbies; the jesuits had also a college here. Its archisshop has fix suffragans, and a province of thirteen stunded and eighty-eight parish-churches, besides chapels, and his annual revenue amounts to eighty thousand livres, (three thousand five hundred pounds sterling) out of which he pays twelve thousand florins to the court of Rome. He stries himself primate of Normandy, though he lias no archissishop in his province suffragan to him; but for this title he has no superior in France, and he depends immediately on the hoty fee.

The city is adorned with many stately pites of building, among which is the cathedral dedicated to the Virgin Mary, the choir of which is lined round with copper. It has three very losty towers, particularly that of the pyramid, the spire of which is only made of wood, and covered with lead gill. It has two hundred steps, and the whole edifice upwards of fix hundred to the top. In this cathedral are to be feen the monuments of several kings, lords, and prelates; and likewise the, monment of John duke of Bedford, who was regent of France under our Henry VI. In the butter tower, as it is called, which is that just mentioned, its a great hell, ten feet in height, the same in dia-

prelates, and likewise the monament of John duke of Redford, who was regent of France under our Henry VI. In the butter tower, as it is called, which is that just mentioned, is a great hell, ten feet in height, the fame in diameter, and weight thirty-fix thousand pounds. On the great gate is a triumphal arch in houser of king Henry the Great, with emblems of his conquest over the holy league. The body of the church is supported by twenty pillars; and, upon the whole, this church exceeds in beauty and regularity that of Notre Dame at Paris.

The other remarkable structures are the church of St. Toin, a very losty building, chiefly famous for its great hell; the convent of the Cordeliers; the church which lately belonged to the jetuits; the church and abbey of St. Owen, and the parliament-house; which are all beautyful structures. The archbishop's palace is also a sine building, adorned with clegant paintings and pleasant gardens. In the veal-market stands the image of the celebrated maid of Otleans, whom the English had the cruelty to hurn as a witch, and is here represented kneeling before Charler VII. and in the new market is the statue of Louis XV. creeked in 1721; but the workmanship is very ordinary.

There is a very extensive trade carried on in the city and district of Rouen, consisting of woollen and lines cloths.

There is a very extensive trade carried on in the city and district of Rousen, consisting of woodlen and linen cloths, leather, hats, paper, and many other merchandizes. The woodlen manufacturies, which employ several thousand workmen, are particularly advantageous to the whole province; but they are only fo far profitable to the nation in general, as they prevent the money from being sent abroad; but the then manufactures of wacion forts exported to Spain are highly beneficial, and the returns generally made in the coin of that country.

This place has ondergone various calamities and vieiffi-

This place has endergone various calamities and viciffi-tudes of fortune: it has been almost entirely burnt thirteen or fourteen different times. In 84s it was taken by the Normans; the English made themselves masters of it in recurrence to English made themselves matters of it in 1418; and in 1449 it was furrendered to Charles VII, the French king. It was afterwards flormed and taken by the French protestants, and re-taken and plundered in 1562 ander Charles IX. Anthony of Bourbon, king of Navare, received a mortal wound before it; but his fon Henry IV. took it in 1592. William I, king of England, commonly

furnamed the Conqueror, died in this city.

The town of Caen, in latin Cadomus, is fituated in a diffrict of the fame name, thirty miles to the fouth of Havre de Grace, fixty-five to the west by south of Ronen, and a hundred and twenty-five to the west of Paris. It stands in a valley between two large meadows; at the confluence of the rive's Orne and Odon, by the united stream fluence of the rive's Orne and Odon, by the united ftream of which it is divided into the Upper and Lower Towns, that have a communication by means of the bridges of St. James and St. Peter; on the latter of which is erected a flately town-houle, adorned with four large towers. The Upper town is defended by a caffle built upon a rock and very well fortified, and the Lower is entirely furrounded with water. It is a place of good trade, veifels of fome burthen being able to come up from the fea to St. James'a bridge, and its inhabitants are fupposed to amount to forty thouland fouls.

"This is the feeond tewn in Normandy, and contains an intendency, an admiralty, a provincial and forest-court, with a fair-office. It has twelve parish-churches, one collegiate church, two abbies, fourteen convents, with a

house which till lately belonged to the jefuits, and two hofpitals. King Charles VIII. Sended in university here
about the year 1430, and likewise a mine. An academy
of stlences and belies lettres was allo stablished in this city
by Louis XIV. and in the royal square, which is both
spacious and requier, with sine houses on three sides of it,
stands a marble equestrian statue of that prince, surrounded
with an iron ballesade. The principal trade of this town
and its district consists in sine linen and cloth;

"The city of Bayeux, the capital of the country of Befsin, is feated on the river Aure, fifteen miles to the northwest of Caen, and contains an admiralty, a salt-office, a
forest and district court, dec. It has seventer parishchurches, nine convents, two hospitals, and a college and
seminary, which larely belonged to the jesuits. The
sistem of first housed and sistem parishes, with a revenue
of sixty thousand inverse, (two thousand seven hundred and
twenty-sive pounds sterling) out of which he pays four
thousand four: hundred and thirty-three florins to the
court of Rome. The cathedral, dedicated to the Virgin,
Mary, is a very stately structure, beautissed with a tower
and two losty spires. The city is divided into Upper and
Lower, and manusceturies of cloths, serges, and stockings,
were set up here, which succeeded very well a but the high
taxes imposed on them, which the merchants were forced
to pay, obliged them not only to abandon those manusceturies, but likewise the city idels.

The sea port town of Cherburg, in Latin Castaria Burgus, struated in the English channel opposite to Hampshire,
is sifty miles to the north-west of Caen, in a district called
the Coutantin, and lies between Cape La Hogue and
Bartseur. It contains an admiralty, a bailtwic, and a viscountry-court : it has also one abbey, and a general hospointal. Here they formerly made very sine glass, which, for
clearness and beauty, even excelled that of Venice; but,
for certain political reasons, the work has been remewed to

the English in the year \$758. In poor is timest out they good, for vessels of three hundred tons can come into it, and some merchant ships are built here. Off this place the confederate sheet under admiral Russel, obtained a fignal victory over that of the French, commanded by M. de victory over that of the French, commanded by M. de Tourville, in 1692, and afterwards burnt, took, or such about fifteen of their ships of war, near Cape La Hogue; among which was le Soleil Royal, or the Royal Sun, the French Admiral's ship. In the last war with France, in the reign of George II. the British forces, under the command of the late duke of Mathborough and tord George Sackville, landed here and took the town without the least opposition in August 1758, together with the ships in the halon; demolished the fortifications, and ruined the other works, particularly the bason and harbour, with the sluice and all the forts, carrying away to England twenty-one pieces of brass cannon and two mortars.

The town of Havre-de-Grace is situated at Le mouth of the river Seine, forty five miles to the west of Rouen;

The town of Havre-de-Grace is fituated at Lie mouth of the river Seine, forty-five miles to the weft of Rouen; it was built by Francis I. who also called it, after his own name, Ville François; whence it has been also called Franciscopolis; but this name is now superfeded by the other. This is the capital and seat of its little government, and contains a naval intendant, a viscounty, an admiralty, a royal court of judice; and a falt-office; with one parish-church, one seminary, and two convents. It has a good harbour between the town and citadel, which has a good harbour between the town and citadel, which is fmell but regularly fortified, and an arienal. It is a pleasant, well-built town, and a place of good trade, many

erchants residing here.
In the reign of Charles IX, this town was seized by the protestants, who in 1552 delivered it to queen Eliza-beth, in consideration of the assistance that princes had given them; but the following year it was vigorously be-fieged by the French, and with equal courage defended by the English, under the earl of Warwick; but a pessilence, which raged in the town, forced them to furrender in July, 1553. Afterwards, in 1694, the English destroyed this city by a bombardment.

The fea port town of Barffeur is fituated forty miles to the north-well of Rouen, and about five to the west of Havre-de-Grace: ir stands between two hills, the one on the east, and the other on the west. It contains an admiralty-court, and a falt-office : it is the feat of a royal juffice, and contains a finall magazine; but has only one parifficheresh and one-convent. This place was twice taken by the English, viz. in the years 1915 and 1440.

No. 71.

It was formerly a confiderable port of but that, of Havre, being found more convenient, it has been neglected, and is now only capable of receiving finall veffels.

The main SEC.T. IX. metable na

Containing a geographical description of French Flanders, to-gether with the causey of Actors, and the team thereuns belongings, their fination and boundaries, lystery, trade, manufactures, inhabitants, Mr.

OUIS XIV. having, in 1669, over-run French-Flanders, then a part of the earldom of Flanders, it obtained its name from thence. This country allo includes the Cambreijs, the country of Hainault, and a finall part of the earldon of Namur; and is bounded, on the north, by the Seine and German ocean; on the fouth, by Artois, on the weft, by the German Ocean, and, on the east, by the Austrian Netherlands. Its passurers are excelent, and confequently produce fine cattle, but for want of wood, or east, the inhabitants are obliged to make use of turf for their fuel; it abounds also in corn and vege-

bles of all kinds, as alfo lo flax.
In French Flanders are the following confiderable places, In French Flanders are the following confiderable places, viz. 1. Gravelines, or Gravelingen, a famil but firong town feared near the mouth of the Aa, or the English channel, fifteen miles to the feath, well of Dunkirk, and, be fides its outer fortifications, is defended on the landside by a good citadel, and to the fea by a fort. It was taken and burnt by the English in the year 1383, but afterwards rebuilt to hetter advantage, and walled round. In 1528 it was taken by the emperor Charles V. but in 1544, it was taken by the French, and in 1652 by the archduke Leopolov. In 1658 it was again taken by the French, and was at last yielded to them by the treaty of the Pyrences, but is 1694 the English fleet laid it entirely in affies, but it was rebuilt, and its fortifications have fince been greatly improved by marshal de Vaubaut, so that it is now a place of (tength. of fliength.

The town of L'iffe, Liffe, or Ryffel, the capital of French Flanders, and of all the French conquelts in the Netherlands, is finased on the Deule, thirty-free miles avenerament in musece on the frequency entry-leven mices to the fourth-earth of bunkirk. It is beautifully built, and is large, handsome, and populous; it is the refidence of the governor-general; and has an intendency, a mult, a castellany, a bailtwis, and forest court. It has a collegiste church; and about thirty other churches, seven of which are prochial, a great number of coverns, and a noble hospital called L'hospital Comtess. Several of the build-

ings are very fine, particularly the exchange, which is a

fquare firecture, furrounded with piazzas.
This city is ftrongly fortified, which the English and their allies experienced in the reign, of queen Anne, when prince Eugene, after the battle of Oudenarde, fat down prince Eugene. after the buttle of Agreement though he at left took it, it was with the loss of a great number of men; but it was reflored to the French by the treaty of Utrecht, in 1713... Both the ancient and new fortifications are very by marshal de Vauban. The citadel, which was proved by marthal de Vauban. The citadel, which was the fift built by that great engineer, is a pentagon, composed of five regular bassions, defended by several works. poied of twe regular barrons, determine any freeze way, and glacis. To the fortrefs are two gates, one towards, the city, and the other towards the country. The efplanade, or space between the city and citadel, is planted with four rows of trees, which form very pleasant walks.

The general governor of French Flanders is also goverthe king's lieutenant. The citadel has also a governor, and a lieutenant of the king. The governor prefides at the meeting of the flates, which is commonly beld about the close of the year. The other members of this afternbly are the magistrates of L'sse, who have always the first rank, the lords who have fovereign jurisdiction, and the deputies from Douty and Orchis. The sum demanded by the king from the flates generally amounts to two hus-dred and fifty thousand livres, (ten thousand nine hun-dred and thirty-eight pounds flerling) which is always granted and raifed from the twentieth part of the revenue of oftates; and from duties on taxes. Befides which the of edites; and from duese or taxes, beneas when the city of L'ide samually pays thirty-feven thouland five hundred and forty-one pounds (ternog) towards the repairs of the fortifications.

The clergy and nobility pay no fubfidy, and do not affilt. at the meeting of the flates; but three or four days after

they break up, these are called together by the governor, etc. and a sum demanded in the king's name; and their thefe two, bodies commondy grant a twentieth part and a half of the income of their chates. The body of the ma-giftrey, of L/Ide and its diffirst is composed of a mayor, filled revert, and twelve cehevine, all of whom are annu-ally changed. There are here confiderable manufactures of fille complete for them. any changed. A nergative here confidence in manuscratics of fills, cambrier, fine lipens, and other fluffs; and their camblete are highly effectived. The trade of L 'lile through France by land carriage, or by the way of Danklik, is pretty confidenable. The most profitable commerce is that to Spain and the West Indies, either by commission, or

to Spain and the West-Indies, either by commission, or on their own account.

The city of Doney is pretty large and well-fortised; it stands on the river Scarpe, twelve rules to the east of Arress, and is of an oval form, larger than L'ille, but less populous by one-third. It, is defended by lear Scarpe, which stands about a mile below the city, and the whole country may be laid under water by means of suices. Here is an university sounded in the year 1559, one collegiate church, and seven that are parochial, with a famous English seminary. The principal trade of this city consists in the making and selling of worsted camblets, which are brought up by all the neighbouring people, elepocially at the annual fair kept here in September. The magistracy consists of twelve echevins, the first of whom is stiled the chief. In 1710 the consederates made themselves masters of the city; but in the year 1712 they lost it again.

The territory, called the Cambrells, is about to leagues in length, and from five to fix broad, though in some places not above two or three. It is fruitful and well inhabited.

The city of Cambray, in Jatin Cameracum, and Camaracum, the capital of the Cambrells is fituated on the Scheld, fifteen miles to the south-call of Dousy, on the beheld, hiteen injies to the fouth-calt of Lousy, and is a pretty large wall-fortified city, defended by a citadel and fort... Is is the ice of an archbifthop, and, befides its cathedral, comains two chapters, ten parth-churches, two abbies, and two hofpitals. The archbithop tiles himfelf prince of the holy Roman empire, as indeed he formerly was, and count of Cambrelis. He is, however, loid of the city. His diocele confills of eight bundred parifhes, and his revenue is a hundred thousand livres. (four thou-fand three hundred and seventy-five pounds sterling) out of which he is annually obliged to pay fix thousand floring to the court of Rome. I has eny has been subject to France ever fince the year 1667 : it is famous for its Cam-

brie, which took its name from it.

The town of Chateau Cambrelis, capital of the earldom of Cambrelis, lies thirteen miles to the fouth-east of Cambray, and was once fortified; but at pretent lies open, and contains one abbay. The archbithop, who has here a very magnificent palace, and fine gardens, is lord of this place. In the year 1559, the famous treaty of Chaccan-Cambrefis was concluded here, between Henry II. king of France, and Philip II. king of Spain, by which the Frenchigave one lundred and uniety-eight towns for Ham.

Helicingave one interest and the Opinitin.

Hainault is a part of the carldom of Henegau, and its principal city, is the following: viz. Valenciennes, a large and populous city, leveliters miles to the north-east of Cambray, is feated on the view Scheld, which not only civious stimto two parts, but almost runa tound it. The fortifications are after the manner of Vanban; it has a good citadel on the Scheld, and very fine fluices. That part on the right of that right of that the right of that river belongs to the diocele of Cambray, and has one collegiate church, and one abbey; the other and has one collegiate cliurch, and one abory; the other filed belongs to the diocefe of Arras... This city was taken by the French in 1027. The inhabitants have manufacturies of woollen fluff, and very fine linen.

In the government of Dunkirk there is only the town of the fame name, and fome neighbouring villages.

The town of Dunkirk, called by the French, Dunquerque, is feated on the Coine, which here falls into the British of the second of t

tish channel, in fifty-one degrees two minutes north latitude, and in two degrees twenty-feven minutes cast longisude; twenty-fix miles to the east of Calais. It derives its name from a church built there on the Duns, or fandbanks, erected, as it is faid, by St. Eloi, who first preached Christianity among the Flemings. Some houses were gradually built near it, so as to form a little town, which gradually built near it, 10 as to ionar a much below the Baldwin, earl of Flanders, in the tenth century, encompaffed with a wall; and it enjoying a harbour commodious for trade, the inhabitants engaged its commerce, by which its grew large and wealthy, and had even force thips of war; fo that in the twelfth century the inhabitants fitted out a fmall fleet against the Norman pirates, and performed fuch and then part and a of a mayor anufacturies and their Dunklik, merce is that million, or

In the thirteenth century, this town was fold to the bishop of Cambray, who enlarged the fame, and improved the harbour. It was afterwards in the prifetion of feveral different families, and in 1538 the emperor Charles V. oracled a called here, a list in 1534 is wes afterwards; policied by Spain, and, though the town recovered the fingent, the similabitants had a great that it is the diffurbances which and to the Franch, and in the last mentioned year coded a English for affiling Frances kapsing by paining five intermediate for a fifting Frances kapsing to paining for affiling Frances kapsing to paining for affiling Frances kapsing to paining for affiling frances kapsing to paining for a fifting frances kapsing to paining for affiling frances kapsing to paining for affiling frances kapsing to paining for a fifting frances kapsing to paining the last means Louis Kilv. allo acquired Mandyles, and the other villages which had beet built from the day had beet been and of hergan libouits mile and a half from the town. The harbour was still protein and the fourth on the fearable of plent for himself on the first the control made to the fourth on the fearable was a for to the first the control of the secolemu conditions who modes of plent for himself capture in the fearable for a case first the secolemu conditions who modes of plent for himself capture for years the castle of the secolemu conditions who modes of plent for himself capture for years the secolemu conditions who modes of plent for himself capture for years the readity and as each grade the secolemus the form the capture of the secolemus on the secolemus for the hard the secolemus on the first the for the layer of Gailland on the early and a first for the layer.

was a fort, together with the battery of Revers; the caffle of Gaillard on the east, and a little farther Fort Blanc. He-

of Gaillard on the eaft, and a little father Fort Blanc. Between all these forts this were able to pass in their way so the harbour, and there was also a latge befon contiguous to it.

In 1706, shis city onjoyed a fourishing teade, and contained one thouland fix humored and thirty-nine house, in which were fourteen thousand and thirty-nine house, in which were fourteen thousand and twenty four inhabitants. The English, for the security of their commerce, which had suffered frames to grown for the privateers of Dunkirk, compelled Francetto promise at the privateers of Dunkirk, compelled Francetto promise at the passe of Utrecht to defined the dams and shuies; and never to easie both, to demolish the dams and shuies; and never to repair them. This was at sally begun; but it was foinil, or at least pretended, thus, ny filling up the harbour, the country round, for about ten France leaguest, would be in danger of being overflowed. To remody this indonvenience, leveral fruitless needs to the passe of the land and such as a submit of the country round, for about ten France leaguest, would be in danger of being overflowed. To remody this indonvenience, leveral fruitless needs to have a land and such as the same and lang and in the mean while a few and was thad at Mardyke.

and England, and in the mean white a new canna was made at Mardyke. It is not were that land, here he hap to be.

By a treaty concluded at the Hague between France, England, and Holland, in 17 17; it was agreed, that the large entrance of the new furder! at Mardyke, which was forty-four feet broad, fhould be entirely demolifhed; and that no harbour, fluice, or basion, fhould ever be made either at Dunkirk or! Mardyke, or within two Franch leagues round; and that the demolition of the works of Dunkirk challed be maintefferentiated of her France making me needs. fhould be entirely completed "but France making no great hafte in this work, it was, in 1748, made in arricle of the peace at Aix is Chapelle." After which France, infleed of fulfilling these engagements, began some new works, which gave fresh umbrage to the court of England, who reserved certain intelligence that the city was again fortified on the land-fide, the balon widened, and rendered as commo-dious for the reception of flips as ever the harhour had been. The French court replied, that these works had no other view than to free the inhabitants from the exist. other view than to free the inhabitants from the existing-tions of the flagnating water, a pretence as falle as it was ridiculous, fince the French made the greatent advastage of this place during the war in the reign of Louis XV. hur at the conclusion of it, again agreed to demolish the works, and fill up the bar, which was the more necessary to be infilted upon, as the Franch have no other harbour

to be infilted upon, as the French have no other harbour in the channel, but that of St. Maloes, which is only expalled of receiving flips of between thirty and forty gons. By the late treaty, ebiclided in 1783, the French are permitted to fortify the liarbour of Dunkirk, from which the unerthapts apprehend the most dreadful confequences; as the next time we are at war with the French, they will be able to fend, in a few hours, from that port, ten fail of the line, which can freep the Downs, by capturing the whole fleet, which often booms, by capturing the whole fleet, which often confilts of two hundred fail, and upwards, of merchantmen, with three or four men of war; the hips to taken can easily be conveyed in a few hours to Dunkirk, before any fleet at Portimouth can hear of it, and the fortifications will prevent any fleet from retaking them.

from retaking them.

The village of Mardyke is about four miles to the caft. of Dunkirk, and was formerly confiderable only on account of its fort, built on the leasthore, which has often been befored and taken and the state demonstrated for its gibble canal, which has been befored and taken and the canal, which

Louis XIV. caviedita he formed under the direction of Lo Riesc, it hoing there shouland three hundred and thirty-eight fathoms and twee feet in length. It began at the canal of hergen, near Dankeits and quending, with the breadth of lettween twenty-five, and thirty-fishnome, no. lefe than one shouland the hundred feet han the hand of the hundred feet han one shouland the hundred feet han the hand the hundred feet han the hundred feet han the hundred feet home. Letter is had an incomperable fuice with two bardens, open few high was forty-four feet broad, it being contrived for the reception of large vessile; the other twenty-fix in breadth, and intended for those that were similar. Attois, which forma part of the Netherlands, is bounded on the worth, by Flanders, on the cast, by Hainaut, and on the fouth and west, by Picardy. This county is twenty-fix in fouth and west, by Picardy. The county is twenty-fix in feet and the Standers on the cast, by Hainaut, and on the letter the house hind and west, by Picardy. The county is twenty-fix is feet to an of the best and finely provinces in knew hole kingdom, and, besides its great sertility, has in its faveral linest manufacturies, and carries on a cansiderable under it fax, hope, wood, and oil of, turng-feed. The Scarpet the Aa, and the Canche, areats principal rivers, for the souriety of Arrois, stogesher with Picardy, are subject to one governor's reported, and two deputy-governors: one fee Arras and Bipsums, and the other loss shire and Sa. Crmer's, Hennish a provincial county, before to a fixer of the sparse of the faster, which consist of the beingy, a great manber of abbots, and the deputies from every chapter a besides these these gift required in in forme monuter, settled as four hundred shouland livres, (sewness the country). Ne cuttoms are paid here: the fire gift required in in forme monuter, settled as four hundred shouland livres, (sewness of thousand five hundred pounds sterling) but as the number of cavalry in the country is not always alike, the charges of

of caying in the country is not array analysis and a pro-forage way accordingly to the interest of the province; which is the origination of Ptolemy, and the atrobation of Canage; it is infittanted in a diffrict of the fame mane, and flands on the Scarpe, twelve miles to the fouth-teeft of Dounts'. Think is a very antient and large place, divided into two parts, the ione called the city, and the ether the town, which is the more modern of the two; each of shele is farrounded with old walls, which have round towers, built after the antient manner, and a gate, over which was antiofcription in French. "That when the French shall take Arras, the mice shall eat the cats;" but the event showed that it was not impossible, for in

but the event shewed that it was not impossible, for in 1640, it was taken by the French. In the control of the All these works are surrounded with a ditch, with which the Scarpe, or at least a canal drawn from that river, com municates, trita v.l

There are several handsome broad ftreets, and is inhablied by wealthy traders and artificers, who make failcloth and tapefiry, effectially the latter, which was invent-ed here, and therefore that manufacture obtained the name ed hier, and therefore that manufacture obtained the name of Arras: this is, indeed, very beautiful, though inferior to the tapeftry made at Paris, Bruffels, and Antwerp. The large market-place here is furrounded with fine buildings, among which is the governor's house. There are elevent parish-chirelies, several convents; one seminary, and there was lately a college of jesuits. The cathedral, which is dedicated to the virgin Mary, is a fine structure, in which are preserved some samous relice. The abbey of St. Vast has a magnificent church belonging to it; and among the changes here its one called the charel of the St. Vaft has a magnificent church belonging to it; and among the chapele here, is one called the chapel of the Holy Candle, in which was kept a candle, which it is pre-tended was given by the bleffed Virgin to the inhabitants, to cure them of an inward heat, which burnt and confumed them. "The billion, who is lord of the city, and prefident in the affembly of the flates, is fuffragan to the archbiflup of Cambray, and has a diocele of four hundred parithes, with the second control of the city of the flates.

with a revenue of twenty-two thousand livres a year, (nine hundred and fisty-times pounds therling), and is taxed at the cowt of Rome four stronfand floring.

The fitting city of Airs, in latin Auria, and Aria, is fituated on the viver Lys, near the confines of Finders, and is about ten initie to the fourth-earl of \$\frac{1}{2}\$. Omer's: This is a well-fortified plice; having, befices the walls, befilons, hulf-moons, horn-works, redustles, countercarps, and ditches, with a morafs, which encompafts it on three fides. On that fide which is acceptible, at the difance of a cannon-hot/fron the city, and the river Lys, flands fort \$\frac{1}{2}\$. This fort is a finall; but regular pentagon; composed of five baffions, encompaffed by a ditch, a covert-way, and glecis. The Lys divides the city into two unequal peru, which contains a callegiate church, with feveral convents; and had till fately, a college of jeftim, with two hofpitals, one of which is infittuated for foldlers. But, notwithflanding the firength of this place, the French, end was confirmed to them at the jeasor of Nimeguen. In November 1710; it ferrendered to the alies, after a very vigorous fiege, and the trenches had here open for fix weary but it was reflored signit to the French, by the Irrestone are

Orecht.

The roins of the once confiderable city of Terowenne are between Aire and St. Omer's. This city formerly flood on the river Lysi and was famous on ecount of its being inverted by Henry VIII. Aing of England, fin perfor, in the year 1303, efficted by the emperor Manimillan, who on this occasion work a St. George's croft. "At this feet he Franch, attenuis not throw provisions upon the twenty. on this occasion wore a St. Geo.ge's croth. "At this fege the French, attempting to throw provisions into the town, were defeated by the Englith, with great flaughter, and from the hurry with which they fled, this was called the Battle of the Spurs, intimating that these were the principal weapons they made use of to escape in fastry. "A fortaight after this battle, the city was taken; but diffusnitled and quitted." The French afterwards repaired is, but the emperor Charles V. taking it in \$5.53, lavelled it with this ground, and it has never been rebuilt fince that time. "The city of St. Omer, capital of if ballivine, is called in latin Andomaropolis, and was formerly-called Sithie. It is a confiderable city, feated on the Aa, eight miles northwest of Alre, partly on an eminetee; and partly on a mediate of the state of the s

west of Aire, partly on an eminence; and partly on a mo-rals, and is one of the best fertifications in the Netherrafi, and is one of the best fortifications in the Nether-lands; it being defended not only by a cassle, but by large bassions, between which are last-moons surrouter. I with large ditches, which are indeed too high to have any water in them; but are so deep, that it would so very dissionly to mount from them to the walls of the ramparts. It is the see of a bishep, suffragan to the archibishep of Cambray, who has a revenue of sorty thousand livres, (one thousand seven hundred and fifty pounds theriting) and is taxed one thousand floring to the feets Romeral by the surface of the second

thousand florins to the focas Rome and the control of the control has discovered no danger.

In this city are feveral convents and nunneries, two in that city are tween an annuaries, two hopitals for maideus, a general hospital for the fielt, an orphan-house for poor hops, another for girls, and a house for twelve poor old men, in memory of the twelve apostes, befides several other (oundations, particularly one for annually giving a fun of money to poor girls in marriage. Here is also an English seminary. The city is populous, and has some trade, a number of small vessels coming up here from the sea by means of the river Aa. The government of St. Omer a is under a mayor, who is annually changed, and twelve scheving; and there are above an hundred villages under its jorisdiction.

hundred villages under its prisidetion.

Several floating islands are feen to the north-east of Se.

Omer's: they move backwards and forwards, according to whatever motion is imparted to them. Upon these islands are feen gash always growing, and the people draw them wish ropes to the shore in order, to drive, their cattle, into them: they have also some trees growing here, but shell they keep very low, for fear the wind should have too

much hold of them, and drive the illands with too much impetuolity. We are the state of the stat lieble berit beite eineren ber ber bei ber ift in ber fi

a ger. annent ille

The antient and modern hiftery of Prance, giving an account of their nomerchs, from the excitate times to the profest reign, the hing's litter, his foreasson to the throne, arms, coronation, ensigns of regulty, U.E. the forered orders of ne-bility and halpsthood; parliaments, great officers, great councils of fate and courts of justices leaves, tanes, land forces, and many of this hingdom.

The Celts were the most antient inhabitants of the france the Romans first conferred on them the name of Gaules and Julius Cefar reduced the country into a Roman province, calling it Translapine Gaul, or Gaul beyond the Appt, to diftinguish it from Cisapine Gaul, or Gaul on the Italian side of the Appt.

Join the fish century, the Eurgundians, Visgoths, and Jertone, settled in several parts of Gaul, and under Merovic and Children conquered a part of Gaul, and under Clovic and Children conquered a part of Gaul, and under Clovic and Children conquered a part of Gaul, and under Clovic and the decidence of the Rougandians, Visgoths, and inhabitants of the Loire t for king Clovic, who began his reign in 408, quelled the Burgandians, Visgoths, and inhabitants of Srittany, and because the first Christian monarch of the Franks, whose kingdom was then divided into Austrarie, on the east part; and Neufria, on the west; and the sour sons of Clovic, on the decase of their father, divided his kingdom among them.

fone of Clovis, on the decade of their father, divided his kingdom among them. It is a supported the lands of Chail; diffributed them among their, officers; and their, with the lergy, formed the first great councils or parliaments. Abus the government appears to have been a mixed and arrively, in which nothing of moment was translated without the grand council of the nation, confishing of the thinipal officers; who held their lands by military tenures, while the conquered Gauls, who manured the lands for the Franks, were reduced to a fate of fervitude.

The government of France continued under this confishing the confishing the confishing the confishing the former of the palace, and had long exercifed the fovereign power in the mante of Childeric; a weak and indolent prince. The Saracens, who had made themselves mafter of the fouth of France, penetrating into the heart, of the kingdom, he entirely defeated them, and, diving them out, was confidered as the deliveer of Christendom: he tere became so spopular, that with the configure of the people,

was confidered as the deliverer of Christendom: he there became for popular, that with the confent of the people, and swen of the spope, he assumed the domainon of France; and having a victorious army at his command, not only deposed the king, but deprived the nobility and clergy of their finer in the government, and thereby rendered himsfulf an absolute prince.

Pepin, the son of Charles, succeeded his father in the throne; but restored, the privileges of the nobility and clergy, on their agreeing to exclude the former race of sings. The also divided the province among his principal nobility, allowing them to exercise fovereign authority in their, respective, governments; till at length, assuming a sind of independency, they only acknowledged the king as their head; and this gave rife to the numerous principalities, and their several parliaments, every province retaining the same form of government that had been exercised in the whole; and no, laws were made, or taxes raised, unless the poblity and gentry gave their assent and concurrence thereto.

left the poblity and gentry gave their affent and concurrence thereto.

Their next, monarch was Charlemagne, or Charles the Great, the fon of Pepin 1 he conquered Italy, Germany, and part, of Spain, and was crowned emperor, of the Romans by pope Leo, in the year 800, and from him forang the race of kings called the Carlovingian line. About eighty years after the death of Charlemagne, the empire was feparated from France, and the Nonnans greatly diffressed that country by their invasions.

The race of kings, of the Carlovingian line, continued fovereigns of France till the reign of Louis Y, when, in 987, Hugh Capet, a popular nobleman, began the Capetine line of monarcha. Crutadoes, or expeditions to the Holy Land, for the recovery of Jenusalem from the Saracest, being preached up by order of the pope, the princes of over; kingdom in Europe engaged in those fallely called holy wars, in which Christianity, was to be propagated by for and fword, and in which several hundred thouland deduced zealots perithed; but, though they at length took luded zealots perithed; but though they at length took.

Lopin KV. the first of rember, 1715, and was crowned at RI. Lopin KV. the first of rember, 1715, and was crowned at RI. Lopin KV. the first of rember, 1715, and was crowned at RI. Lopin KV. the first of the memory of the thing of France and France and Navarre, was born in 1734, such marriage, was born October 29, 1781, and named Louis Kavler Benedich.

The king of France and Navarre. The title of fire, or lord, is given him by his fubicles, as a mark of his unlimited power; and foreigness title him the most Christian king, or his most Christian majesty; but the king's subjects are not to make use of it.

The French writers affirm, that their king never dies, but as foon as his segas are closed, the next prince of the blood succeeds to the throne, and is inflantly invested with the supreme authority; but where ahe king is, aminor, that is, before he has entered the fourteenth year of his age, the administration of the government is entrusted to a regent, thiully the queen mother, or a prince of the blood, seconding to the determination of the pullament at Paris, in which the rest of the kingdom generally acquisites. But that is feldom disputed, if the decaded king has appointed a agent by his will.

A new king, on entering into his fourteenth year, goes in great state to the parliament of Paris, attended by the princes, of the blood, the peers, and general officers of fate. This affeably, is generally called the bed of justice, and here he is declared to be of age; yet the regent frequently procures himself to be constituted prime minister, and under that title fill continues to govern the kingdom cill his majesty thinks fit to assume the law, or, in a field

cill his majelty. thinks at to allume the seins of government.

The French arms are, three flaws de lys, or, in a field agure, supported by two angels, in the diabit of Leviues, each holding in his hand a banner with the same arms: the crest is an open crown: the whole under a grand azure payilion strewed with fleurs de lys, or, and cristine, and over it a colleg ground with a glouble stear de lys, or, on the fides of which are slying streamers, on which are written the words used in battle, MON - 12 s. DENNIS, and above them on the royal banner or on ame. LILLA ZION LABORANT MAQUE NENT; that is, lilies neither toil nor finn; which is supposed to be an allusion to the fallique law, that excludes semales from the sovering power.

In France, the nobility are divided into four classes: the first includes only the princes of the boale of Orleans, and the two brancher of the family of Boutbop, those of Condé and Conti. Next to their immediately follow the king's natural children who have been legitimated, and these precede all the nobility of the kingdom.

ments.

There are three orders of knighthood in France: fiff, that of St. Michael, inflirated in 1469, and though originally composed of only thirty-fix knights, was afterwards enlarged to one hundred. A perion must be a knight of this order, before he can enter into that of, secondly, the this order, before he can enter into that of, secondly, the Holy Ghost, which was founded in 1578, by Henry III. and is composed of one hundred persons befides the lowerign, and conferred only on princes of the blood, and persons of the highest rank. Thirdly, the order of St. Louis which was instituted in the year 1503, by Louis XIV, merely as a distinction for military merit, and is worn by almost every officer, and even by subaltens.

The three flaws of the kingdom formerly confided of the repreferentives of the clergy, the nobility, and the repreferentives of the fitter, was decreed or enabled, without their confent, but there albumbles are now entirely aboulfued, and have never been converted fince the year 1014.

The coarts in which juffice is now ultailly administered, are, first, the parliaments, which are the last refort when the court does not interpole. There are, at prefers, twelve, manely, those of Paris, Toulouse, Rouen, Granoble, Bourdeaux, Dijon, Aix, Rennes, Pau, Mats, Befançon, and Douey. They principally consist of a cettain number of presidents and inferior judges, who purchase their places either of the crown, or of these who are in possition of them t for all magistrates and editors by fulles in Prance, openly purchase their places, and the government makes a considerable revenue by these fales. They enjoy their post for life, succept they have been gulty of some crims in the exercise of their office.

The parliament of Paris is the most considerable in the kingdom, for hither the king frequently comes in person, and here the royal edits are recorded and personalized, "this when they have not the force of laws." It is composed of the princes of the blood, duken, and peers of France, besides the ordinary judges, and takes cogniance of all bi-senses committed by peers, where the court does not interfere. This parliament consists of eur chief settlements, some honorary counsellors, or judges, four massive of the counted and thirty-two other counsellors or judges; and of two bindred and thirty-two other counsellors or judges; and of two bindred and thirty-two other counsellors or judges; and of two bindred and thirty-two other counsellors or judges in the changes of the personal of the counsellors, who presides in all

and thirty-two other, countellors or judges; an attorney-general, advocates, foliciton-general, registers, months fecretaries, &c.

The principal officer of the crown is the chancillor, who prefides in all courts and councils of star in the king's absence; the others are, the keeper of the seats, four screwins of the norse, the marshals of France, the coloriel-general of the norse, the great master of the artillery. Use admiral of France, two vice-admirals, the general of the gallery, the four great officers of the order of the littly Office, namely, the chancellor, the master of the certamonies, the great treasurer, and the forestary; the chief presidents of the sewer application, when the governor and the little treat treasurer, and the forestary; the chief presidents of the feveral periaments, with the governor and the little cers of the houshold are the great master of the houshold, the great master of the horse, the great almoner, the great butter, the great huntiman, the four captains of the great butter, the great huntiman, the four captains of the great butter, the great huntiman, the four captains of the great butter, the great huntiman, the four forms of the great butter, when there's wite, it is composed of the comptroller-general of the singuistic of the search of the financial of the singuistic of the search of the comptroller general of the singuistic three forces are of the provinces and the singuistic the four forces of state, and the comptroller general of the sinances, the four forces are transferred to commissions, letters, and orders sent transferred commissions, letters, and orders sent to the governors and other officers of the several provinces are transferred to commissions, letters, and orders sent to the governors and other officers of the several provinces are transferred to commissions, letters, and orders sent to the governors and other officers of the several provinces are transferred to commissions of state.

The fecretaries of state make the motion, and every one appoints the ref

expedites the refolution taken on the articles of his department; and the members divide among them the foreign and domeftic affairs of flate.

The third council is that of the finances, which befides the king and chancellor, confifts of a prefident, one of the fix intendents of the finances, a member of the council of flate, and the comprobler-general of the finances. The royal revenues are under the direction of this council.

The fourth is the privy-council, which is convened by the chancellor of such days as he pleafes. On the kings abfence, there is always a chair fet for him. This council are prefent confists of the chancellor, or keeper of the great teal, twenty-one ordinary counfellors of flate, the free taries of flate, the compirater-general of the finances, the intendants of the finances, who are all ordinary members, and twelve flate-counfellors, who officiate only half-yearly. The ordinary flate-counfellors have each a falary of five thousand five hundred livres, (two hundred end forty-one pounds flerling) the half yearly, three thousand threa hundred livres, (one hundred and forty-five pounds thering). In this council allo safet wavery-wo mashers of request, who belong also to the parliament, and lay before it any affairs they are entrusted with.

The 6th is the grand council, when has the decision of all tweeth teleshing to metholythopicles, becomes, and allbest a other taleshing to metholythopicles, becomes and allbest a other the power of determining all disputes of
the other foregreth tribunals, in matters of juridiction and
other control. The chancellor of France prelides in this
septical; he is affided by feveral presidents, councillors, ker.

The fant is the high touter of chancery; which confifs
of the heaper of the great feed, who is frequently the fastewhich the chancellor of France) of four grand audienters,
who power papers fort from the fecretary of faster' alice
when head, and make report to the chancellor; of four
comparedies of the audients, who give the papers of our
comparedies to an officer called chauf-cire, or chaff wat,
and receive them back from him; and four hexpers of the
rolls of the offices of France, who keep the registers of all
the officers that audients.

The feventh and laft office is that pertaining re-commerce, the members of which, hasdes the king and prime
minifer; are the chancellor, the comparedies and
other officers and affidients.

The feventh and laft office is that pertaining re-commerce, the members of which, hasdes the king and prime
minifer, are the chancellor, the compared by resemmerce, the members of which, hasdes the king and prime
minifer, are the chancellor, the compared by
the franches, and two kerteries of faste.

presention of the liberties of the Guillean church, canfilties the since condensate part of the exclafishical law of France.

The French line's revenues are both ordinary and excreditable? The ordinary revenues comprehend the domains, which the since it is ordinary revenues comprehend the domains, which the since it is ordinary in the comprehend the domains, which are the twentieth part of the wine field by wholefule, and the sighth or tenth of that remained: the gabelle, or field dury, which is here extremely high. The other duties are the tailet, or land-tas, the cultom of all kinds, the duty on flapped paper, and other intport.

The cunforms, fuch as wise thereof, last and flamoduty, cobect, posts, &c. are fittined out to the larmers-general, who have their under farmers and reviewers. The great officer for levying the taste in the competcalier-general, who keeps a deplicate of all sections and efficiances relative to the royal revenue.

It is reckored that the ordinary revenues of the crown, arising from the above taxes, amount to about the millions flerings! "An amazing fuch, confidering the lands belonging to the charch, and what is payed to fupport the clergy, and the miny thousand, diones who, flut up in convents, are fupported by the labout of the industrious.

In time of peace, the labout of the industrious.

In time of war they are frequently augmented to four hundred theothed.

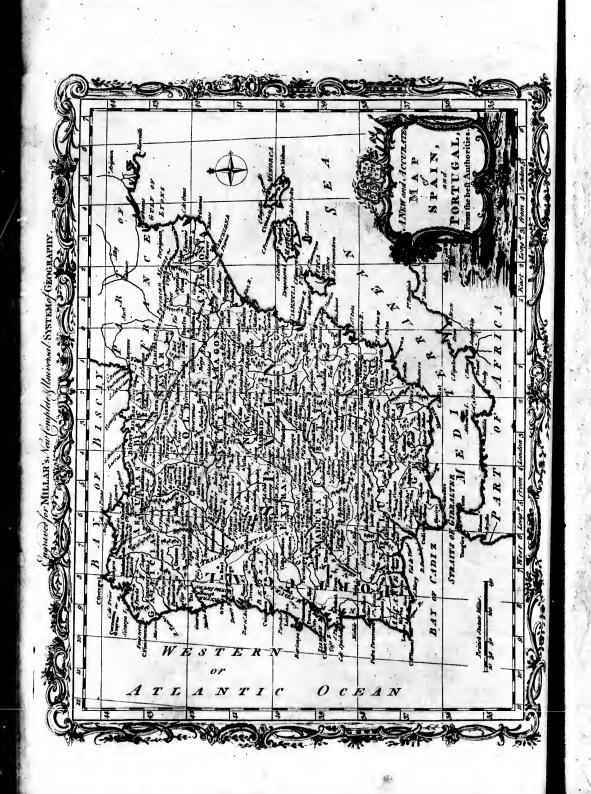

shootend.

The French have also a very confiderable may. Classes are instituted through all the maritime provinces, where the fea officers and failors, and others belonging to the savy, reside. Each class serves three or four years alexantly, and those who are not in actual service on board the king's ships, may enter on board those of the marchants. In the beginning of the war in the last king's reign, France had sparades of a hundred and cleven men of wer.

with the existence of it is the

ining a general description of Opini, its mame, sumation, out, and dominaries, also an account of the country, with past to its mountainty reports, climate, produce, cattle,

S P A I N was antiently called liberia, from the river liberiu; and Hesperia, from its western froation; but Hispania, from which its modern name is derived, is supposed to have been formed from the Phenician word Separa, implying a subbet, with which animal this country hath always abounded. It is fituated between three and forty-four degrees north-fattude, and between three and ten degrees west longitude, being the most western part of the continent of Europe. Its length is seven hundred, and its breadth five hundred miles; it is bounded to the east and fouth, by the Mediterranean, the freights of Gibraliar, and part of the Atlantic ocean; towards the west, by Portugal; and on the north, by the bay of Bisay and the Pyrenean mountaints, which separate it from France. It was formerly conquered by the Romasa; afterwards overrish by the Gettas then subdued by the Moore, from whom the Christians recovered it.

There are feetral remarkably high mountains in Spein, the principal of which are the Pareness, which stretch from the Mediterranean to the Atlantic ocean, but not in a direct line, for near two hundred titles; it their breadth is, in fore places, not lefs than eighty. That called the France, and those allowers marke gibry and the recovery and those allowers narrow: even the valles hetween the mountains are covered with thick and lofty woods. The other ridget of hills in Spain are the Sierra Novada, or the factor and the selbrated mountains capen. New Gibralar, opposite to mountains; yield great quantities of timber for shipping, which are conveyed by the Ebte, and other rivers, to the Mediterranean:

According to antient and modern writers, the mountains abound with gold, silver, iros, lead, tin, cinnaber,

Mediterrenean:

According to entient and modern writers, the mountains abound with gold, filver, irogs, kad, tin, cinnabar, quickfilver, allem, vittlol, copperas, hoje calaminaris, &c. befides germs, and mineral waters both hot and cold. The gold and filver mines are not worked at prefent, but those of iron are. The neglect of the former is awing partly to the idolence of the Spaniards, and partly to the gold and filver imported from America.

or iron are. The neglect of the former is owing partly to the blolence of the Spaniards, and partly to the gold and filver imported from America.

Befides theriver Maho, Douro, Tagus, Menda, Lima, and Guadians, which run through Portugal, but have their fewrers in Spain, the most confiderable are the Ebro, Olim Iberus, Gnadalavier or Turio, Guadalguivir, olim Perus Rotis, and Tartelles, Segues, and Zuear. From the falle notion of the Guadiana losing itielf under ground, it is fupposed to have had the name of Anas, or the Duck. The air, during the months of Juris, July, and Augas, is excessively not in the day time a but the rely of the year it is pleasant and temperate. Even during the above meather, it is very cool in the flade; and so cold in the night, that it makes a traveller shiver; and in the day-time the violent best continues only for about four or five hours. In the north, on the mountains and near the fear-coal, the air is much less fultry in fourmer than in his footh, especially in the lower parts of the country, and at a distance from the fear-coal from the fields are very gentle towards the feuth; but on the mountains in the north and north cast, the air but on the mountains in the north and north cast, the air

is very sharp in winter. Both in the fouth and north, the air is generally clear and serine; and, as in the northesh countries, distempers for the most part proceed from colds; to, in Spain, they are commonly the effects of hear. Its some parts of Spain there are sandy defarts, and in others barren mountains; the greater part of the country, however, has a good soil, and is very fertile, producing a great variety of rich wines, oils and fruits, particularly oranges, lemons, prines, citrons, shandle, raishs, date, sags, thefauts, capers, peaches, pomegratusts, &c. Greats, however, is searce, which is owing to the almost general neglect of tillage; and but very small quantities of har, hay, and heaps are produced, some parts produced rice and sugar-caries; shed in others, honey, fair, fills, corton, and wool abound.

Good horses are produced here, but mules are more numerous, and in assessed where heads and the same recommendes.

ood horfes are produced here, but mules are more

rice and fugarecaner; and in others, boney, lair, filk, corton, and wool abound.

Good horfes are produced here, but mules are more numerous, and in general march admired, which makes the fine breed of sides particularly valuable. Deer, wild fowl, and other game, are very numerous. Here are many goats, particularly die bahmos, or Shamoy goats, and wolves are almos the only wide beats in the country.

The herb kali; which is afed in making fair, lost, and glafe, grown in great pleasty about the fea-couft. The locust-tree, an ever green, is common in Valencia; the trusk is about two feet in dismeter, the leaves green, ten on a twig, vize five on bath fale; the fruit is an inch broad, relembles kidney-beams; and grows in clusters from the branches and body of the tire in a singular manner a given to horfes hid cattle as provender.

The beautiful bird avelueos, or bee-eater, is found in no part of Europe but Gransda and Andalufia. It is of the fiase of a black-bird, and has a black bill, thick at the bafe, bending downward, then mers two inches long. The legs and seet are like those of a king's fither it the eyes are of a fine red, and there is a black firesk on each fide of the head, which begins at the corner of the mouth, and runts beyind the eyes. The base of the and bis of a duffy yellow, as well as the back and wings, only the laft are linaded pretty firongly with green. The tips of the quill feathers are brown, the breast and belly green, and under the chin, are covered with hight pale and blue Rathers a but the upper part of the back of the head is of a duffy yellow, as well as the beach and blue and blue Rathers are brown, the breast and belly green, and under the chin, are covered with green. The tips of the quill feathers are brown, the breast and belly green, and the under the chin, are covered with green. The stop of the quill feathers are brown, the breast and belly green, and the bree in a black freek on each fide of he had white the control of the back of the head is of a duffy yellow, as well as a

Glving a geographical description of the soveral grand divi-first or provinces of Spain; together with an account of their principal cities; towns, and places, and the trade; manu-fastures, manners, suffeque, Go. of the inhabitants.

THERE see fourteen divisions or provinces in this country, anamely, 1. Galicia, 2. Afterbas, 2. Bif-cay, 4. Navarie; 5. Arragon: 6. Catalonia, 7. Leon, 8. Edra-

8. Eftramadura; q. Old Caftile; 10. New Caftile; 11. Valentia; 12. Andalufia; 13. Granada; and, 14. Murcia, which we fhall treat of in the order here laid down.

1. The province of Galicia, which was antently a

kingdom, has the ocean on the west; Asturias and Leon on the east; Portugal on the south; and the bay of Biscay on the north. It is of a square figure, one hundred

cay on the north. It is of a fquare figure, one hundred and twenty miles each way, very mountainous, had formerly mines of gold and filver, but is at prefent the poarest and coldest part of Späin.

The principal places are, r. St. Jago de Compostella, the capital of the whole province, is fituated in forty-two degrees fifty minutes north latitude, and in eight degrees twenty minutes well longitude, between the rives I ambra and Ulla, in a most fertile plain, surrounded with hills of a moderate height, which shelter it from the nipping-winds that hlow from the mountains. The public squares and the churches are very magnificent; it has also a great number of mountaineries for both sexes, and about two thought houses. The cathedral is particularly worthy of nor fand houses. The cathedral is particularly worthy of no number of monatteries for both fexes, and about two thou-fand houses. The cathedral is particularly worthy of no-tice, and in it is kept the presented body of the spotle lames the Younger, the totelar, faint and patron of all Spain. The order of Sa. Ingo uses is name, from the city, which also maintains a certain number of knights. The university was rected in 132s, according to hispor Dalrymple it has but sew students. Here is also a tribunal of the inquisition.

of the inquisition.

a. Orenic, a city feated forty-fower miles to the foulkard of Sc. Jago de Compositile, on the humbs, of the
Minho, in a delightful country, and abounding in smelllent wine and fine fruit. One part of it fands at the foot
of a mountain, on which is felt a frape-gold shat is of long
continuance; while the other part of the city, which lies
on the fide of the plain, enjoys all the pleasures of spring,
and the fruits of assume.

continuance; while the other part of the case, which lies on the fide of the plain, enjoys all the pleafures of fpring, and the fruits of satuants.

3. The fea port town of Cornuns, called by our feature the Groyne, is fitnested on the bay of Bideson. This is a place of confiderable hands, baving a flection authorizant walls and forty, feyeral chapels, character, and heditary with walls and forty, feyeral chapels, character, and heditary the feet of the governor, and toyal audience of Gillicia. There is a quarry of juiper in its neighbourhood.

(4. The final town of Lugo, antiently called Lucus Augusti, is about feventy miles east of Compostella. It is the fee of a bishop, who is fuffragan to the archishop of St. Jago, and has a revenue of eighteen thousand duesti. This town is inclosed with a strong wall, so broad, that two coaches many go abreast upon it; and its neighbourhood produces turneps of fifty pounds weight, and very well safted. Here are many warm baths, some of which are only lukewarm, and others boiling hot.

5. Toi is a walled city on the river Minho, about forty miles fouth of Compostella, and not far from Vallenge in Portugal. It enjoys a good any being delegates they were, in 1702, the English and Dirtch burnt the Spanish platefilest.

6. The town of Vigo is fitured on a small bay, where, in 1702, the English and Dirtch burnt the Spanish platefilest.

This town, with a fire large of the first of a small bay, where, in 1702, the English and Dirtch burnt the Spanish sum.

in 1702; the English and Dutch burnt the Spanish plate-specta. 7. Ferrol, two leagues from Coranne, is an agree-able town, with a fine, harbour, where foreral b panish stem of war are usually at anchor. 8. Finisher is an inconsiderable town near the cape of that name. 9. Monsforte la Lemos, is a town belonging to the count of Lemos, selio has a stately palace here. On the top of a neighbouring mountain is a spring that ebbs and slows as the fea does, and is alternately but and cold. 2. 20. Mondonnedo, fixteen leagues from the fea-coast, in the fee of a hishop. 22. Betanos, on the Mandee, has a good harbour.

11. Afturias, which is a principality, and gives still to the hereditary prince of Spain, has Galicia, on the west, the buy of Biscay, on the east; the sea on the north, sayd, Old. Caltie and Leon, on the south. It is one hundred and ten miles long, fifty-four broad, fertile, but thinly inhabited. The people, who are very poor and proud, plume themselves upon being the genuine desendants of the ancient Goths.

cient Goths

The principal places are, s. Oviedo, the capital, fituated twenty miles from the bay of Bifcay, between the little Ove and Duva, from the former of which it is supposed to Ove and Dura, from the tormer of which it is supposed to take its name. Here its an university; founded in 1580, feveral convents, chapels, churcher, and hospitals; and here Pelayo, and the fifth Christian kings, after the conquest of Spain by the Moors, twided. The twent has from walls, and is the fest of the royal audience for the prominer. It is also the fee of a bishop, what is inventigately subject to the pope, and has an income of twelve thousand.

ducats. The neighbouring country is very mountainous, but abounds in grain, cattle, and chefnus trees.

2. The finall town of Gyon, near the fea, has a good wall, cattle, and port. It was called by the Romans Ares Sextigs, or Sethings, and was once the capital of Afturias, and the refidence of Pelayo, whose fuecessors filled themselves kings of Gyon, for some time.

3. St. Andero, in latin Portus Sanchi Emederi, is a small town, but has a large, secare, and well-fortified harbour, which, however, has a dangerous rock at the entrance of it.

4. Santillana is a finall town on the bay of Bifeay, be-longing to the duke del Infantado, to whom it gives the title of marcuis. It is supposed to be the Caulana, or Caucana, of the Greeks and Romans.

Liebana an excision, belonging to the dokes del' Infantado. The Moors could never get footing in this province, which is one of the most craggy and mountain-ous parts of Spain.

has Arragen on the fouth; the Pyrenean mountains of the north and east; and Old Cashila and Ballay to the west; being inlecty miles long, and feventy broad; By a particular compact, no part of the revenues of this province is permitted to go into the royal treasury, but all are obliged to be appropriated to the public service. This country abounds with horned cattle, sheep, game, horses; honey, oil, wine, some grain, a sew medicinal waters, and some minerals.

minerals.

The principal places are, t. Pampeluna, the capital, fituated at the foot of the Pyrenees, and walled. It is the fee of a bishop, who is subject to the archbishop of Burgos, and has a revenue of twenty-eight thousand ducats. In 1608 an university was founded in this city, where are also two castles, several chorthes, and a great many contents. Two high roads lead from hence over the Pyrenees, to France, one to Bayonne, through the valley of Batan; and the other; which is the best, to St. Jaen pied de Port, by the way of Tarasa. This city is said to have been built by Pomiery the Great, and thence called Pompeiopolis.

periopolis;

2. The city of Tafana, on the Cadaço, is large and handfome, contains an univerfity, and is defended by a caftle; and Olets, on the fame river, was formerly the refidence of the kings of Navarre, though it is now an in-

handforme, contains an univerfity, and is defended by a saftle; and Obets, on the fame river, was formerly the refidence of the kings of Navarre, though it is now an inconfiderable place.

3. Fifty-eight miles fouth of Pampeluna stands the city of Sudela, pleasantly situated on the banks of the Ebro, It is walled, has a starely bridge over the Ebro, and contains several churches and convents.

4. Estella is a handsome towns on the river Ega. Its same signifies a star, having been built to guide and cheer, like a star, the weary pilgrims passing through these wild mountains, in their way to Compostella. 5. Viana, on the Ebro, formerly gave title of prince to the eldest son of the king of Navarre. 6. Songuessa is a small town on the river Arragon. Castante, et small city on the banks of the river Quelles, in the district of Tudela. Its Roman name was Castantum; and some coins of Tiberius, inferthed Municeps Castantum, et still extant.

V. The province of Arragon, which was antiently a kingdom, has the Pyreness on the north, Valencia on the south. Caratonia on the east, and Castile and Navarre on the west, being one hundred and ten broad. It is barren, though well-watered. The principal places are.

1. Saragosia, or Saragoza, the capital, situated on the banks of the Ebro, and almost in the heart of the propince. It was antiently a Roman-colony, and called Castaia, or Castar Augusta, of which its present name is a manifest corruption. It is a large, magnificent, and populous city, standaing in a pleasant sertite plain, watered by four rivers, and containing a great many spendid convents and churches; but the castiedral is an old irregular building. The archibilitop has a revenue of fifty thousand dueats. The university here was founded in 1744. Of the churches, that of our Lady of the Pillar; and of the convents, that of St. Francis, are the most remarkable. Here are two stately bridges over the Ebro and the walls of the city, though old, are strong and lofty. A great many persons of quality reads in this city, wh

trade, and is the feat of the court of royal audience for Arragon, of the governor and captain-general, and an office of Inquifition.

2. Thirty-fix miles north-weft from Saragoza, a confiderable town on the little river Quelles: it is mentioned by Pliny, Ptolemy, and Strabo, under the name of Turiaffo. Near it is Men Cayo, antiently Mons Caci, which name the Spaniards pretend it had from the tyrant Cacus, who was killed by Hercules. This town is the fee of a hishop, who is fuffragan to the archbishop of Saragoza, and has a revenue of twenty-thousand ducats per annum. It is well-built, and walled, and drives a good trade.

3. Forty-eight miles from Saragoza, flands Daroca, a considerable town on the banks of the river Kiloca. It is walled, and situated on an eminence, amidit a fertile and delicious plain. Here are several convents, chapels, squares, and fountains; tend in the neighbourhood is a large cave, of which they relate many wonders. They pretend also have in one of their churches fix linen cloths, stained with the blood that came from so many consecrated wasers, which, upon an alarm of the approach of the Moors, were varapped up in them.

4. About eighty miles south of Saragoza, stands Turine, a city on the banks of the Turias or Guadalaviar, where it is joined by the Alhambria. The river is called by Ptolemy Turiolus, and much extelled by Claudian for the No. 71.

No. 71.

MADRID, the fantal of New Calille, and of the Kingdom o

brated in Gil Blas and ether romances, the antient receptacle of fitte prifesers. There is a sancher large prifes in the middle of the cay, but that it only for common malefactors.

Here is a funcian university in this city, which is the fee of a bithopy, who has a revenue of twenty-four thousand ducats per assum.

Though the torm house is a good modern structure, yet the city, upon the whole, has a strange appearance: the buildings look wild and odd, fometimes being raised upon the auteent and craggy parts of the rock, and confissing of all the sides of stehist-sture, Roman, Gothic, Spanish, Moorish, and Saxon.

The most semakushic curiosity among the buildings of this city, is the Sections aqueduct, which extends to a small tiver, called side Frio, which rifes in the sitic was a would fill a duct that would contain a human body.

The principal mint of all Spain is in this city; when at work, they can coin thirty thousand ducats in a day. Here they make good apper; but the woollen transificture of this city is the best and most confiderable in all Spain; the blankets of Segwin are, perhaps, the finest in the world; for they have a vast quantity of the sinest wool, produced from the numberless spaces are in the neighbouring plains. Here are also several other manufactures, particularly of linen, which is carried on very successfully.

The city of Valladolid, antiently called Pindia, is large, beautiful, and populous, eighty-fix miles to the north west of Madrid. It is stuated in a spacious and delightful plain, watered by the Pisusary, over which it has a stately bridge the fides which, it has about nineteen small ones over the Equera, a small river that runs through several of the streets, and thence through a delightful landscape of gardens, orchards, meadows, and fields, which it waters in its course. The city is walled round, and has sing gates; but it is a place of no great strength. It has long broad streets, and thence through a doubt nineteen success in the city is walled round, and has sing gates; but

Near the Dominican convent, is a royal palace; here is Near the Dominican convent, is a royal palacor, here is also an university, founded in 1346; a geographical academy, lately erected; a court of inquisition; and a tribunal of justice, composed of one president, fifteen countellors, four criminal judges, one supreme judge for Bifeay, four judges of nobility, two fiscals; and an alguazit mayor yet the revenue of its bishop, who is suffragan to the aschbishop of Toledo; does not exacted swelve thousand ducate per anneum. The inhabitant of this town not only certy, on a considerable trade abroad, but are employed in several manufactures, at home, in which they are very ingestious and corport, and are as politic and well-bred people; as any in Spain.

manufactures at nome, in which use are very negressia, and expert, and are as politic and well-bred people as any in Spain.

3. The city of Burgos, capital of the province, is futuated on an eminence by the little river. Atlancon, one fundeed and twenty miles north of Madrid. It has a bridge over the river, and is a large, but not a fine city; though it had fome handforme [quares, public beildings, and palaces!" It is faid to live nine menths of winter, and three of fire, on account of their exceffive hear. Among other convents, the revenue of which is faid to be eighty thousand ducats personaum. The subefis, who is generally a lady of oute of the remainies in Spain, has feventeen other convents, fourteen atways, and fifty villages fublect to ber.

This city, which was built in the ninth or tenth century, on the ruins of Auca, claima the precedence of all others in the cortes or parliaments of Caffile. The walls are antient, but firing. On the north fide, on an almost inacceffile rock, flands the citadel. The cathedral here is one of the sphied and richeft in Spain. The archibithop has a revenue of forty thousand ducats per annum; and the king is alwaye the first of the canous. There are a great many clegant fountains to supply the city with water.

alwaye the first of the canons. There are a great many clegant fountains to supply the city with water,

X. The province of New Castile; which was formerly a kingdom, has Old Castile on the north, from which it is parted by ridges of mountains; Estremadura, on the west; Andalusis, on the fouth; and Valencia and Arragon, on the east. It is two hundred miles long, and in the midest place one hundred and ninety broad, well watered, ifertile, and has a good air. The inhabitants speak the parest

Spanish.

4. The city of Madrid, which is the metropolis of all Spain, and the refidence of the court, stands in the centre of a large plain, furrounded with mountains, and in the very heart of the kingdom, on the banks of the little river, Manaamers, which is always very low and shallow, except when it is swelled by the melting of the show on the mountains. The streets are wide, strait, and handsome, and adorned with feveral fine fountains; the house are, sair and lofty; but built of brick, with lattice-windows, excepting those of the rich, who have glass in their windows. and forty; but built of brick, with lattice-windows, ex-cepting thole of the rich, who have glafs in their windows. There are two flately bridges here over the Manzanares, feveral beautiful. fiquates, feveral magnificent churches, convents, palaces, and hospitals. The compais of the whole city is composed at about nine miles, and the num-ber of its inhabitants at about one hundred and fifty.

ber of its inhabitants at about one hundred and fifty thousand.

This was formerly a very difagreeable place, but has been greatly improved of late, and is now one of the neatest in Europe. It is well supplied with provisions of all kinds at resignable rates 1 and the court, with the refort and resigned one of the quality, and the high colleges and offices that are kept here, occasion a brisk trade and circulation of money. There are three royal academies here, one for medicine, another for history, and the third for the improvement of the Spanish language.

The most magnificent palace, not only in this country, but perhaps in the whole world, is the Escurial, which takes its name from a small village, near which it shands about wenty-two miles north-west from Madrid. It was abuit wenty-two miles north-west from Madrid. It was abuit wenty-two miles north-west from Madrid. It was

about twenty-two miles norm-west from Maarid. It was built by Philip II. and is a vast spacious strateure, all of curious white speckled stones, with ornaments of various forts of maible, jasper, &c. It, was twenty-two years in building, and has the appearance of a town, having, it is said, about cleven thousand windows, and containing, besides the royal apartments and offices, a most splendid beddes the royal apartments and offices, a molt fplendid church, in which are forty chapels, and as many altars, rich beyond imagination; a convent of jeremites, a college, feveral holpitals or infirmaries, and a noble library, containing a large and choice collection of books in all languages and faculties. Here is also the burial-places of the kings and queens of Spain, called the Pantheon, which, amidft all its riches and fiplendors, is an affecting monument of the vanity and transformers of human grandeur. In fine, it is faid, that it would take up shove four whole days to go through all the rooms and apartments of this palace. palace, whileli exceeds all that can be imagined for tarlety of jafper, marble, and curious stones, painting, sculpture, place, tapestry, guis, &c.

5. The rown of Aranjuez, which is about thirty miles south of Madrid; is stronged on the banks of the Tagus, and

fouth of Madrid, in frented on the banks of the Tagus, and was chiefly built within these twelve years; whoever chases to build houses here; may have a free gift of the ground from the king, on condition of sanforming to the general plan. The freets are broad and parallel, and interfect sach other at right angles. The houses are of two flories in height; and are all painted white, with green doors and flutters. There are at prefent about five thousand inhabitants, who live by letting their houses to persons who come with the count; and who redde here annually from the middle of April to the end of July; during which time the number of inhabitants is increased to fifteen thousand.

"The royal palace of Aranjuez is a fquare, and has twenty-one windows in front, and a turret at each end; but there is nothing remarkable either in its exterior or interior parts.

is nothing remarkable either in its exterior or interior parts. Before the phlice are three very large wilks, each planted with four rows of tall elius. Similal canals run between each row, which keep the roets comfaintly fupplied with water, and make the trees give to a very givent fize.

The antient fortified city of Toledo is fituated in fifty-nine degrees forty-fix minutes north latitude, and in four degrees twenty frintites well longitude, and fands on a fitep and craggy rock, encompaffed by the Tagus, in the form of a horfe-thoe, over which it has two fately bridges. The laud-fide is fortified by a double wall, in which are one hundred and fifty towers, and five large gates, befiels pofterns. It was formerly effected a place of ftrength; but in the laft wars about the fucceffion, it always fubmitted to those who were mafters of the field. The city is divided into twenty-three wards, and has The city is divided into twenty-three wards, and has twenty-feven parishes, about twenty chapels, thirty-eight monafteries and numerics, four grand houses of retirement for women, two large colleges, and twenty fire haspitals, one of them for lunatics. The fireets are narrow and fleep; but there are no lefs than feven fquares or market-places. There are liere a magnificent and spacious old palace taken from the Moors, the stables of which ean hold at least five hundred horses. The plain around the city is spacious, sertile, "pleasant, and so well watered by the Tagus, that it produces corn, wine, oil, fruit, and in short every thing that can contribute to the convenience and de-

every thing that can contribute to the eduvenience and delight of man. The air is particularly ferene and healthy,
and there is plenty of provisions, which are very cheap.

In this civi is a large cathedral of gothic fracture, rich
in arving, but the building is nicitive light, nor in a good
fine. It is three hundred and eighty four feet long, one
high, all of white stone. The roof is supported by eightyeight lofty pillars, which divide it into five leffer, the middleinoft of which is very handsome, it being divided into
two choirs neatly carved and inlaid. This is one of the
richest cathedrals in the universe; and the archbishopric,
both in power and revenue, the greatest next to that of
Rome; so that the late queen of Spain obtained it from the
sope for one of her sons, though a minor. The lands
for the repairs of the church are said to bring in annually
thirty thousand ducats, and for the dignitaries and canons thirty thousand ducats, and for the dignitaries and canona two hundred thousand more. The whole number of perfons belonging to the cathedral, is faid to amount to

The remains of the alcassar, or altar built by Charles V. or according to others, by the archduke Charles, appear

very inoble; but it was burnt by the allies and Authran party in the partition or fuccession war, left it should fall into the hands of Philip V.

One of the greatest inconveniences of this city is, the inhabitants having no water but what is brought from the Tagus, or fived from the caves of their houses, when it rains. There is here a remarkable common sewer, which rains. There is here a temarkable common fewer, which is faid to run under every house, to carry off all the foil into the river. Befides the above krucknies, there is an university, founded in the year 1475, and a court of inquifition. The city is populous, and carries on a great trade in wool, filk, stuffs, and fine fword-blades.

Besides the above, here are, 1. The town of Alcala de Beneet the above, nete are, i. I he town of richard et Henares, on the river Henares. 2. Guadhara, on the fame river, about thirty miles to the north-east of Madrid. 3. Talayera la Reyna, on the Tagus, about thirty-fix miles west from Toledo. 4. Cuença, about fifty miles from Madrid, towards the east.

XI. The province of Valentia, which was formerly confidered as a kingdom, has the Mediterranean fea to the

fouth and east; Murcia and New Callife to the west; an

fouth and east: Murcia and New Castile to the west; and Arragon and Cataloaia, to the north. It is two hundred miles long, eighty broad, is well watered, has a semperate ferene air, and a foil remarkably fertile.

The most confiderable places in this diffrielt are, s. Vanlentia, the capital, one hundred and eighty miles foutheast from Madrid: it is fituated on, and has five bridges, over, the Gandalquiver: This is a large, handforme, operators, the Gandalquiver: This is a large, handforme, operators, the first of the inquisition, a fovereign court of judicature, an university, and a floorishing manufactury. Almost avery house has a deep wall, and here is a grand common fewer, field to be the work of one of the Sciplos, by which the field of avery house is barried off under ground.

2. The antient city of Segorye, or. Seigorbe, in detin Segobriga, is pleasantly fituated on the banks of the Morvicetro, about one hundred and fifty miles saft from Madrid, thirty from his fea, and as many north from Valenatia. It is the fee of a bishop, who is fulfriggen to the surchabishop of Valentia, and his a revenue of ten thousand ducats per annum: it asso gives the tide of duke.

3. The city of Orificula, in latin Orselite, is the capital of a particular district, firtuated on the banks of the rivet Section, about one hundred and ninety-four miles foutheast from Madrid, and eighty south from Valentia. Its present rune is thought to be corruption of Auriella, i.e., the Pot of Gold, at it was called by the Romana, on account of the gold mires that were formerly about it. This place is the lee of a bishop, who is fulfragan to Valentia, and has a revenue of ten thousand livres; here is now an university.

4. The famous city and sea-port of Alicant is situated

and has a revenue of ten thousand livres? more university.

4. The famous city and fea-port of Alicane is fituated on the Meditefrancan, about two hundred and ten shifes to the fouth-east of Madrid, and about fikty fouth of Valentia. It has a commodious barbour, from whence a great quantity of deli-tious fruits, with viscolibra red and white wine, foap, and anife, are exported. It has a castle, strong walls, and a few bafflore, for its defence.

5. The town of St. Derils, flands at the foot of a high hill, called Mongon, about thirty-four miles morth-east from Alicant, on the fea-coaft, where it has a convenient from Alicant, on the fea-coaft, where it has a convenient harbour, with a castle, and watch-tower of an exemodiancy height. It is allo well-fortified. This place is fopposed to have been smilently called Diana, from a terriple dedicated to that goddeft.

6. The finall town of Morviedro is situated on the famo

fpot where the antient Sagunhun flood, on the banks of the river formerly called Palantia, but which now bears the fame name as the town, independent of the walls which mark the limits of the antient Sagunhun. The remains of an amphitheatre and palacears fill to be feen in this rown; they are fronted about three miles from the fee, we therefore of a hill, on the faramie of which is a fore, twelve miles north of Valenia.

7. Cape Artenues is the antient Artemyfium. 8. Gaudia, on the Alcay, gives the title of dake to the noble-fa-mily of Borgia, contains an university, and is defended by a caffe. 9. La Mara contains the most considerable fair-work in Spain. 10. Uche is a handlome town, very plea-fantly structed their Alicant.

fantly stuated bear Alicant.

XII. The province of hadalusis is efterned the best in all Spain, it abounding in exquisite fruits of all kinds, honey, excellent wine, grain, silk, sugar, fine oil, numerous herds of cattle, particularly horses, with metals, einsabar, and a certain species of quickssiver. The heat in summer is indeed very great; but the inhabitants generally sleep by day, travelling and following their other employments in the night. The air is, however, in other respects, good, and is sometimes refreshed with ecoling breaks. This province is properly composed of three ancient kingdoms, which, in the king stile, instead of the common names, are expressed by that of Andalusia. These are the kingdoms of Seville, Cordova, and Jead.

The river Guedalquiver, by the autients called Bests and Tartessus, traverses the whole country, and the Guadiana separates it to the west from the Portuguess Algarva.

computed at three hundred thousand.

There is, in this city, a very celebrated cathedral church built in the gothle file: it was begun in 1401, and finished in 1520; it is immensely rich in treature; the filver altar, which is exhibited on particular festivals; is most magnifecent. The Giralda, built by the Moors in the year 1000, is a square tower, which serves as believe to the chorch, from the top of which is an extensive and beautiful prospect. This is an archbithop's see, which is equal to fifty thousand fix hundred and twenty-one pounds sterling, which belong forty canons, whose incomes are very to massible. co marable.

The city of Cadiz flands on an ifland, which is fepa

The city of Cadiz stands on an island, which is separated from the continent by a narrow channel, or arm of the sea, over which there is a bridge well-fortified, on the Atlantic ocean, being about three hundred miles to the south west, and fifty-eight from Gibraltar. The island is about fixteen or seventeen miles long, and about the in broaden pittle grain, but some good wine and pasture. This celebrated city is of pretty large circumstrence; most of the streets are narrow, crooked, ill paved, and ditty; but a sew of them are broad, straight, and well paved. The houses are generally three or four stories high, and many of them are broad, straight, and well paved. The houses are generally three or four stories high, and many of them are broaden the substitute of them are broad, straight, and well paved. The houses are generally three or four stories high, and many of them are broaden the substitute of the substitute o

The harbour and tay of Cadiz are spacious and secure, the cutrance being defended by fort Matagorda, which covers the harbour and bay; and by fort Puntal, which stands apposite to it, on a point of that neck of land on which the city is boilt. The Spaniards commonly call both these Los Puntales.

As the fortress of Gibraltar is of the utmost importance to Great Britain, it has been celebrated upon many occa-fions in the annals of hiftory, and, during the late fiege by the Spaniards, has attracted the attention, and engroffed the conversation of all Europe, we shall therefore give an ample description and account of it from the latest, best,

and most authentic information.

and mon authentic information.

Gibraliar 'a a large promonitory in the province of Andalufia, in Spain, joined by a narrow neck of land, only three thouland and ninety feet in its narroweft, and four thouland five hundred and fifty feet in the wideft part; in length it is four thouland four hundred feet from the northern part of the mountain to where the neck widens on the continent. The extreme length of the peninfula on the continent. The extreme length of the penintula from the porthern plain to the fouthermost point, is two miles, two thouland nine hundred and forty feet; the extreme breadth of its bafe line is four thouland two hundred and ninety-fix feet. The town is on the well fide of the mountain, occupying a small inclined plain of five thouland eight hundred and twenty feet long, and one thouland fand eight hundred and twenty feet long, and one thousand one hundred feet broad, which fize cannot possibly be increased, as it is bounded on the west and north by the bay, and on the east and south by the rifing of the mountain. The funnit of the rock is about one thousand foor hundred feet perpendicular above the sea, it rises not with a fudden elevation, but by hill placed upon hill. It was also that the sea of the large and about fix hundred men were always on guardat a time: the discipline observed here is very strict. There are three hundred and forty guns mounted on the fortifications, and there is room for one hundred more: those of the grand battery are of for one, the rest of some. No person is altered and so for bone, the rest of some.

battery are of bronze, the reft of iron. No perfort is allowed to quit the English territory, either by fea or land, without a pass from the governor. Gibraltar has undergone no fewer than twelve fieges, besides the late one, and No. 71.

June.

The fourth fiege was begun by Don Alonzo XI. in the end of the fame mounth, he faving been within four days march of the place on its furrender. This investment was attended with uncommon circumstances of hardship, both to the besieged and befregers. The latter were blocked up in the neck of Gibralias by the king of Grenada and Abamelique, who marched with an army to the relief of the garrison. At last, on the twentieth of August, a peace was concluded, and the fiere was misch. concluded, and the fiege was raifed.

melique, who marched with an army to the relief of the garrison. At last, on the twentieth of August, a peace was concluded, and the sege was raised.

Don Alonzo again far down before it in the summer 1340, and during this, which was the sight, sea the fish, sege, and which continued for other months; the garrison was reduced to great strains. But don Alonzo was earlied off by the plague in March 1350.

The emperor of Fez neglecting their Spanish territories, Juzas, third king of, Granada, took it in 1410. This was the first siege, but the inhabitants drove out the conquerora, and put themselves under the protession of Muley Bueld, emperor of Fez.

Juzas besieged it in form the January following, with a seet and army, and the garrison was starved into a surrender. This was the seventh siege.

The eighth siege was in 1438, when Don Emique de Cluzman attacked it with a strong force, but was deseated by the Moors, and drowned, bis son, however, brought off the remains of his army.

In 1402 the son returned with a greater force, and took the place, which ever since has remained in the possession of the Christiane. This was the ninth siege.

The tenth was in 1704, when it was torn from the Spaniards by the English, ender the command of Sir George Rooke. Upon this occasion the conquest was particularly ascribed to the seamen, whose irregular enterprize hurried them to several possession the sonsequence, and, added to the value conserved by its strength and situation, the circumfance of giving to an antient enemy such a sporticular of the Spaniards could not bear. An expedition was immediately formed, and the eleventh siege commenced under the marquia de Villadarias. The siege safted sour months; and finding all their efforts, though vigorous, were vain, it was abandoned in 1705.

Great Britain, sully sensible of its importance, half maintained it at an immense cost, and hath taken such advantage of its natural powers in disposing the works that have been raised, as to make it indubitably the strongest fortification i

The late fiege, which was the thirteenth, continued inceffantly for four years, it having been invested by sea and land in the month of July 1779; by sea under the command of don Barcelo, and by land under don Jun de command of don Barcelo, and by land under don Juan de Mendoza: and the garrifone preferred to Europe a picture of the most gallant defence. They refifled the efforts of the most numerous and best equipped hand of beingers that, pethaps, ever best any forters. They Spaniards bent every endeavour to this lingle object. They flarved their marine, and neglected their power in every other quarter of the globe, that they might employ all their refources, and direct all their attention to this great end. Their works were immense, their industry indefatigable. They endeavoured to accomplish its reduction by the constancy of their attack; by their numbers they were able to make their operations incessare, no opportunity for repose. make their operations incettaint, that the garrion might have no relaxation from fatigue, no opportunity for report. All their struggles, however, were rendered abortise. Our steets have annually relieved the garrison, and on the only occasion when they were opposed, had the glory to gain a figual viscory over the Spanish squadron, commanded by don Juan de Langara. The English steet, was command. doit Juan de Langara. In enginh necet was command, ed by the gallant Admiral Rodney, who took from the engmy the Phoenix, don Juan de Langara, admiral, commander, eighty guns, and ieven handre men; the Minorca, Princeffa, and Diligente; feventy, as, and is hundred men each: the San Julian and San Jugenia were allo Taken; the former went on thore, the latter was driven on the breakers, and loft: the San Justi and San Lorenzo efcaped, very much damaged: the San Donningo of feventy guns and fix hundred men, blew up in the action, and all on board perifited. The loft, upon this occasion, on the side of the English, was one hundred and thirty-two men killed, and one hundred and two wounded. The happy consequences of this victory was, the effectual relief and security of the partition.

Gibrishar, however, continued to be invested by the

fecentry of the partition.

Gibrater, however, continued to be invested by the combined forces of France and Spain, till the month of September, 1781, when the enemy made their grand but ineffectual strack on the place, both by fea and land, and which the following account was published by authority, on the flateenth of November, in the same year i in a letter from the right honourable General Elliot, the brave governor, to the secretary of state; dated

Gibraltar, September 15, 1782.

" My Lord,

"THE enemy having collected his whole force by fea and land; forty-four fail of the line, befides three inferior two-deckers; ten battering thips, five bomb-ketches, feveral frigates and zebecques, a great number of gun and mortar boats, a large floating battery, many aimed veficis, and near three hundred boats, purposely constructed for

carrying troops:
Their land batteries mounted with above one hundred pieces of cannon, and an equal number of mortars

and howitzers :

and howitzers 1

"An army of near forty thousand men:
"On the thirteenth instant, at eight in the morning, all the battering ships, commanded by don Buenventura Moreno, rear admitral, were put in motion, and came forward to the several stanons previously determined they should take up: the admiral being placed upon the capital of the king's bassion, the other ships extending three to the fouthward of the flag, as far as the church battery, sive to the northward, about the height of the Old Mole; and one a very little to the wellward of the admiral; by a quarter before ten they were anchored in line, at the distance of a thousand to twelve hundred yards; immediately a heavy cannonade began from all the ships, supported by the cannon and mortals in the enemy's lines and approaches: a the same instant our batteries opened with hot and cold the same instant our batteries opened with hot and cold shot from the guns; and shells from the howitzers and This firing convinued, without intermission, on both fides, until noon, when that of the enemy from their ships seemed to slacken, although but little. About two o'clock the admiral's fluip was observed to smoke, as if on fire, and a few men buty on the roof, searching for the cause. Our batteries never discontinued: the enemy's fire caufe. Our batteries never ditcontinued: the enemy's fre from the flips gradually decreafed. About feven in the evening they fired from a few gons, and that only at intervals. At midnight the admiral's flip was plainly discovered beginning to burn; an hour after it was complectly in flames: eight more of the 'hips took fire in fueceffion. Signals of diftrefs being now made, the launches, feluceas, and boats of the whole fleet, began to take out the men from on beauth the huming flips. Many flosts. the men from on board the burning thips. Many shots were still fired from those in which the stames had yet made no confiderable progress; and the fire from the enemy's batteries on fhore did not in the leaft diminith. Brigadier Curtis, who, with his fquadron of gun-boats lay ready to take advantage of any favourable circumstance, left the New Mole at two o'clock, and about three formed a line upon the enemy's flank, advancing and firing with 'great order and expedition; which fo attonithed and disconcerted the enemy, they fied precipitately with all their boats, 'aban-doning the thips, in which some officers, and numbers of their men, including many wounded, were left to perifh. This unavoidably must have been their wretched sale, had they not been dragged from a midst the stames by the perforal intrepidity of brigadier Curtis, at the utmost hazard of his own life, a life invaluable to his Majesty's service. For some time I selt the utmost anguish, seeing his pinnace close to one of the largest ships at the instant she blew up, and spread her wreck to a vast extent all round. The black cloud of smoke being dispersed, I was again revived by the sight of the pinnace, little apprehending that the Brigadier was in the utmost danger of sinking, some pieces of timber having falling into, and pierced the boat, (killing the cockfwain, and wounding others of the men) scarce any bope left of reaching the thore: providentially he was saved by stopping the hole with the seamens jackets, until boats arrived to their relief. One of our gun-boats was such as the same rooment. This unavoidably must have been their wretched fate, had funk at the fame moment.

" In the course of the day the remaining eight ships feve-"In the course of the day the remaining signt maps rever-rally blew up with 'violent exploitus 1 one only eleaped the effect of our fire, which it was thought proper to burn, there being no possibility of preferving her.

"The admiral's flag remained flying on board his ship, till she was totally confurmed."

"The of their of the confurmed."

till she was totally confumed."

"Extract of a letter, from Captain Curtis, dated Gibraltar, September 15, 1781.

"At eight o'clock in the morning of the 18th, the ten battering ships of the enemy lying at the head of the bay, under the command of admital Moreno, began to get under fail, in order to come against the garrison; every thing was in readiness for their reception. At ten the admital's ship was placed about one thousand yards from the king's Bastion, and commenced his fire. The others were very shortly asservard possed to the north and south of him, at small distances afunder, and began their cannonade. They were all fixed to the stations allotted them in a masterly manner. Our batteries opened as the enemy came before manner. Our batteries opened as the enemy came before them: the fire was very heavy on both fides: the red-hot floot were fent with fuch precision from the garrifon, that in the afternoon the finoke was seen to issue from the upper part of the Admiral, and one other, and men were per-ceived to be using fire-engines and pouring water into the holes, endeavouring to extinguish the fire. Their efforts proved ineffectual; by one o'clock in the morning the two before-mentioned were in flames, and several others acqualbefore mentioned were in manies, and reversa others actually on fire, though as yet not in fog great a degree. Confusion was now plainly observed among them, and the numerous rockets thrown up from each of the flips, was a clear demonstration of their great diffres: their fignals were answered from the enemy's fleet, and they immediate were answered from the enemy's fleet, and they immediately began to take away the men, it being impossible to remove the ships. I thought this a sit opportunity to employ my gun-boats, and I alvanced with the whole (twelve in number, each catrying a twenty-four or eighteen-pounder) and drew them up so as to stank the line of the enemy's bettering ships, while they were annoyed extremely by an excessive heavy and well-directed fire from the garriton. The fire from the gun-boats was kept up with great vigoue and effect. The boats of the enemy durft not approach; they abandoned their fhips, and the mon left, in them to our mercy, or to the flames. The day-light now appeared, and two feluces, which had not yet escaped, endeavoured and two feluceas, which had not yet efcaped, endeavoured to get away; but a first from a gun-boat killing five men in one of them, they fubnitted. The feene at this time before me was dreadful to a high degree, numbers of men crying from amidft the flames, fome upon pieces of wood in the water, others appearing in the thips where the fire had as yet made but little progrefs, all expressing afficience, and geture the deepest differs, and all imploring afficience, formed a further to the deepest differs, and all imploring afficience, formed a further to the deepest differs, and all imploring afficience. formed a spectacle of horror not easily to be described.

Every exertion was made to relieve them; and I have inexpressible happiness in informing my Lords, that the number faved amounts to thirteen officers, and three hundred and forty-four men. One officer and twenty-nine wounded (fome of them dreadfully) taken from among the flain in the holds, are in our hospital, and many of them in a fair way. The blowing up of the ships around us, as the fire got to the magazines, and the firing of the can-non of others, as the metal became heated by the slames; rendered this a very perilous employment; but we felt it as much a duty to make every effort to relieve our enemies as much a duty & make every effort to relieve our enemies from to shocking a fituation, as an hour before we did to affift in conquering them. The loss of the enemy must have been very confiderable, forivate accounts make it two thousands]. Great numbers were killed ori board, and in boats. Several launches were funk. In one of them were fourscore men, who were all drowned, except an officer and twelve men, who were floated under our walls upon the wreck. 'It was impossible that greater exertions could have been made to prevent it, but there is every reafon to believe that a great many wounded perifhed in the flames. All the battering flips were fet on fire by our h. thot, except one, which we afterwards burnt. The admiral left his flag flying, and it was confumed with the flip."

By the late treaty of peace between England, Spain, and the other belligerent powers, which was concluded in the

the other belligerent powers, which was concluded in the beginning of the prefent year 1783, this important place, so gallantly defended, is allowed ftill to remain in the hands of the English, no slipulation having been made concerning it. The town of Algezina is at present but a mean, old place in the Streights, and has a decayed harbour, with only a few shattered houses. The Moors sirst landed here, and held the place almost seven hundred years. The word Algezira, in Arabic, signifies an island; and the harbour being formed by two islands, it has been called in the plual.

The neat kingdom included in the province of Andalufia, is Cordova, which though much finaller than that of Seville, is squal to it in fertility.

Cordova, the city, antiently called Cordubii and Colonia Patricia, lies in thirty-feven degrees, fifty minutes north latitude, and in four degrees fifty-three minutes weth longitude. It is a very antient city, fituated in a beautiful and very spacious plain on the banks of the river Guadalquiver, over which there is a stone bridge of fixteen arches. On the north side of the town rous the Siera Morein, a remarkable chain of mountains that streets themselves from the sea above two hundred miles inland. The walls are in many places entire, partly Roman, partly Moorlift, it is at present a considerable city, but badly boilt, the streets narrow and irregular the houses are chiefly stone, constrocted in the Moorlift taste, on each side of a square court-yard. The bishop, who is suffragan to the archbishop of Toledo, has an annual tevenue of forty thousand ducats. The cathedral is a large autique and magnificent square building. The epictopal palace is a large structure. The Alcazar, or Moorlih palace, is now made use of for the Inquistion. In 1856 Cordwa suffered very much by an earthquake. This town has been famous for its leather; whence the English word cordwain, from Cordovan. There is alto a considerable filk manufactury carried on in this place.

The neighbouring mountains are covered with designt-tule gateen and plantations of olives, oranges, lemons,

factury carried on in this place.

The neighbouring mountains are covered with delightMr gardens and plantations of olives, oranges; lemons, and figs. They are also interspersed with pleasant valleys, refreshed by springs of good water. When the abovementioned trees are in Bossom, which will be a fargaratey all over the country. Besides the callence of the wine, and the plenty of fruits and vegetables, there is the snort bread of Spanish horses in this country.

The town of Andujor, one hundred and fifty miles fouth of Madrid, is situated in a service situation of Madrid, is situated in a fertile foil, and has a bridge over the Guadalquiver. Lucens, forty-five miles south.

over the Guadalquiver; Lucena, forty-five miles fouth-west from Seville, is a considerable city, very pleasantly fituated; and Vacna is a large pleasant town belonging to the town of Sexi.

Inducted; and verna is a large present town belonging to the town of Sexi.

Jean is the (malleft of the three kingdoms comprehended in the province of Andalufia. The firincipal city it contains is Jean, which stands at the foot of a mountain, and is defended by a castle. It is populous, and has forme fine churches and monasteries; but the greatest devotion is paid here to St. Veronica. Its bishop, who is under the archbishop of Toledo, has a yearly income of twenty thousand ducats. It was once the capital of a Moorith kingdom; and the country particularly abounds in filk, besides producing great plenty of corn, wine, oil, and fruit. The other towns of less note, are, 1. Ubeda, the Ubea, or Vetals of the Romans, a small city, one hundred and fifty miles south from Madrid, and fifty-seven north from Granada. 2. Baeza, antiently Vatia, Beathia, and Heatia, a considerable city, three miles from the Guadalquiver, and about sistem fouth-west from Ubeda.

Besides the above-mentioned, there are several other

ver, and about fifteen fouth-west from Ubeda.

Besides the above-mentioned, there are several other places of some note in the province of Andalusia i namely, a. Alcantara, between Seville and St. Lucar, which has a sine Roman bridge over the Morasur. 2. Ossura. 3. Medina Sid-mia, twenty-seven miles east of Cadiz. 4. Traigueros, about thirty miles north of Palos. 5. San Lucar de Ba ameda, at the mouth of the Guadalquiver, forty-five miles below Seville. 6. Port St. Mary's, a walled town, at the mouth of the river Guadalete. 7. Palos, at the mouth of the Trino, about thirty miles north of St. Lucar. Chistocher Columbus set out from hence, of St. Lucar. Christopher Columbus set out from hence, in the year 1492, on the discovery of America. 8. Xeres de la Frontera, a pretty confiderable town on the river Guadalete; about fix miles from the fea; and fifty fouth of Seville. The horses bred here are reckoned the best in all

Spain.

XIII. The province or kingdom of Granada, which is fometimes called Upper Andalufia, is bounded to the fouth and east by the Mediterranean; to the west and north by Lower Andalusia; and to the north-east by Murcia. Its

Lower Andalufia; and to the north-east by Murcia. Its extent, from west to east, is two hundred and ten miles; but its greatest breadth is about eighty.

The air is temperate and healthy; and though there are many mountains in the province, and some of them very high, yet they are almost every where covered with vines and fruit trees; together with saurel, myrtle, sweet basil; thyme, lavender, marjoram, and other aromatic herbs, which give an exquisite taste to the flesh of their cattle

and theep. The vallies are extremely beautiful, and the whole is well watered. This was the last of the Spanish kingdoma possessed by the Moora, who did not reduce it till the year 1492. The principal placeaure the following, viz. 1. Granada, the capital, which is situated at the conflux of the Zeguland Daro, one hundred and eighty miles south of Madrid. It stands in the midst of a fruitful country, has a sine air, is capacious and populous, being one of the largest cities in Spain, and containing upwards of alnexy thousand simbalisants. It is of a circular form; and the sinewy tops of the Sierra Nevada mountains, which was the middle of the verdure of the circumjacent scene. The cathedral is very large; and the inside, within these fifteen years, has been incrusted with the sinest marble highly polithed, and enriched with ornaments of bronze; but though the whole is expressive and costly, the workmanpointed, and entrened with ornaments of pronze; but though the whole is experifive and coflly, the workman-thip is executed in a defpicable manner. In the adjoining chapel royal feveral crowned heads, and other great per-fonges, he buried. The church of St. John of God has a handfome flone front, and elegant clotters, which, in

ioninges, he buried. The church of St. John of God has a handfome flone front, and elegant cloitlers, which, in 7,49, were paluted in fretco.

The royal palace of the Alhumbra is one of the most entire, as well as most magnificent of any of the edificre which the Moora crecked in Spain. It is fituated on a bill, which is afcended by a road bordered with hedges of double or imperial myrtles, and rows of elms. On this bill, within the walls of the Alhumbra, the emperor Charles V. begen a new palace in to58, but which was never finished; the shell of it remains; it is built of yellow stone; the outside forms a square of one hundred and tinety feet. The inside is a grand circular court, with a portice of the tustan, and a gallery of the doric order, each supported by thirty two columns, made of as many pieces of marble. The Alhumbra is a mass of many houses and towers walled round, and built of large stones of different diagnifions. Almost all the rooms have succowalls and ceilings, some carved, some painted, and some gilt all the stoors see either marbled or titled.

The filk manufactury in Granada is very confiderable, and the arfenal is the best furnished of any in Spain. There

Is likewife a theatre, which is but mean and dark; a cir-lar amphitheatre for bull-feafts, huilt of brick, with wooden feats, and confifting of two rows of boxes, fixty. right in each row; the inner area being one hundred and eighty-five feet in diameter; a court of inquifinion, a royal tribunal, &c. There is a large plain without the city, called La Vega de Granada, which is full of hamlets, villages, and other finall buildings.

called La Vega de Granada, which is full of hamlets, villages, and other finall buildings.

2. The antient city of Malaga is large, well built, ftrongly fortified, and populous: it has a fine harbour on the Mediterranean, two hundred and fixymiles fouth of Madrid, and feventy-five fouth-well from Granada. The city is encompaffed with a double wall, and defended by two caffles. So great is the exportation from hence of wines, raifins, almonds, figs, lemons, oranges, and other fruits, befides wool and oil, that the duties on them are faid to yield to the king eight hundred thousand ducats per annum. The harbour runs up into the town five hundred and thirty common paces, with a good breadth, and four stairs to take water at, and twenty-four pillars of jasper stone to fasten the ships to. The bishop is subject to the archbishop of Seville, and has a revenue of twenty thousand ducats per annum.

3. Seventy miles south-west from Granada stands Antiquera, which is a pretty large and handsome rown, with a casse. Near it is a samed salpst, which supplies the whole territory with that commodity; with a spring, which is said to be an excellent lithoutriptic, or dissolvent for the stone in the urinary passages: here are also a parcel for cask. "Called El Torcal." which at a distance represent

for the flone in the urinary paffiges: here are also a parcel of rocks, called El Torcal, which at a distance represent men, beafts, buildings, &c. and some caverns, that are faid formerly to have contained gold. This place is supposed to be the fingilium of Pliny, and the antiquaria of the billions.

4. The fmall city of Almeria, on the Mediterranean, is fituated two hundred and ten miles fouth-east from drid, and fixty-four fouth-east from Granada. It is the fee of a bishop, who is fuffragan to Granada, and has a revenue of four thousand ducats: this place has a safe

and commodious harbour.

5. Guadis, twenty-four miles east of Granada, is the fee of a bifhop. 6. Albama, twenty-eight miles fouth-east of Granada, has fome admir ble worm baths. 7. Guefast, between the Guadadar and Lravate. belongs to the duke of Alva, and has a great trade in wool. Loxa Santa

Fé, Baza, Velez Malaga, and Ronda, are tea inconfi-

derable to merit particular attent on.

XIV. The last province we have to describe is Murcia,

country abounds in mulberry trees, olives, fugar caura, and fine fruits.

and fine fruits.

2. The town of Carthagena has a noted fee port on the Mediterranean, at the mouth of the river, foundstaining not far from Cape Palos, one hundred and eighty miles fouth-fouth-east from Madrid, and forty-two fouth-was from Maries. It is faid to have been bust by Afdroba's, the Carthaginian general, two hundred and twenty-five years before Christ, and called Carthage News, or New Carthage.

The air here is temperate in fummer, and fo mild in winter, that the roles blow as fair and fresh at Christman as in England in June. Both city and harbour are well fortified. The bay on which it stands abounds in fish, especially mackarel, and the neighbouring country afored diamonds, rubbes, aniethysis, garnetic gastes, and mines of

especially mackare 1 and the neighbouring evoluty anotes diamonds, rubies, amethyfts, garnets agates, and mines of allum. The city is pretty large, and its hasbour one of the beft in Spain. The biftop is fuffragan to the archbiftop of Toledo. Under the Romans and Carthaginism, this was one of the most flourishing eities in all Spain 1 for, from hence they shipped off those was quantities of gold and the chart when the surface and other neutralized.

from hence they imposed on those war appropriate so guidance filters which they dug in the Pyrenees and other mountains,

3. Almacafon, a little fea-port at the mount of the Guadalantin, is celebrated for the mines of allum int its neighbourhood.

4. Lorea, forty-two miles fouth-well from Murcial is pretty populous : it is fitoated on the Guadalantin., Worlden and

S E C, T ... III. y a day to tilan

Describing the manners and customs of the Spaniards; their language, religion, diversions, bull-feaths, plays, &c.

HE inhabitants of Spain are grave and folemn in their behaviour; they are renariable for frugality, love of pomp, fidelity, valour, intrepidity, and abhorrence of drunkennes: they are, very jealous of their honour, when once engaged; and a celebrated author observes, that, "the Spaniards have been, in all ages, famous for their honesty." Justinian mentions their fidelity in keeping their nonety; whatever was intrufted to their care: they have frequently fulfered death, rather than reveal a fecret, and have fill the fame fidelity for which they were formerly diffinguifhed.

The Spaniards, however, on the other hand, are univerfilly too much given to women; and their isalouly, where either their wife, daughter, lifter, or even miftress is con-cerned, feldom fails to end in bloodfied; for they think no means too cruel, base, or unjust, to, wipe off any stain no means no cruet, care, or unjust, to wipe or any stain that is cast upon their honour, or to gratify their revenue, Pride of birth is no where carried to a greater height; and the infinuation, that a man is descended from the Moors, is sofficient to make him stab the sanderers, or procure his being privately affaitinated. In short, they have a mixture of the most amiable virtues and the most shocking vices; and while they affect a haughty air to ftrangers, no people in the world are more courteous to

They are very moderate in their diet, and can make a meal of olives, a fallad, a little garlie, or a few roots ; but persons of fortune have several expensive dishes. The men dine by themselves, and their wives and children at

feparate tables.

l'ire Spanish women are for the most part very lean, and very amordus: they have black eyes, that bofoms, finall feet, and long garments. They at erofi-legged on carpets, a cufform which they derived from the Moors. They are much addicted to painting, though their hulbinds, through jesionity, keep them yers much at home. It is computed, that the kingdom of Spain contains

about feven millions and a half of inhabitants, but it would fupport more than twice, that number, were it properly cultivated. In the time of the Goths and Moore, it was supposed to contain between neventy and thirty millions of people; and might yet he very goverful, if it had no positions in America, but now it is thinly inhabited.

"The number of inhabitants is but small, set their poyerty, it remarkable, for they not only live sig a country capable of supporting many millions more than it does, in the greatest plenty, but have producious sums, poured, in from America. Swala computes that, from the year 1497, when America was discovered, so 1792, above fix thousand millions of pieces of eight in regulated gold and silver have been imported into, Spain, excludive of far greater sums unregistered, before those received by foreign merchanty from the Spannish dominyons in America, at even appears that one year, whis subther, Spain receives from their American golonies above swenty-six millions of peeces, eight; yet Utheriz computes, that all the coined and, wrought gold, and filver in Spain, including that belonging to chutches and private, persons, succeive and sepence, each.

two causes; the first of which is their want of industry in agriculture, handicrafts, and manufacturies, which occasion the country to be annually drained, of many millions for corn and foreign goods: and, secondly, to the infatiable avarice of the clergy, who practise a thousand arts to obtain the most fiften of the wealth of the country.

Most of the provinces use what they call the Catellane, and Espannol, or Spanish, which has the nearest affinity to the latin, both in the words and composition, of any language in Europe; but in Catelonia and Valencia the common people use a dialect of the old French, or rather Gascon; but so mixed and corrupt, that none of the other provinces understand it.

An Spain the ponsit religion is practiced with the greater

provinces understand it.

In Spain the popish religion is practifed with the greatest ferupelosity and pomp. In no country is there more praying and coemony, and lefs real Christianity. The Vurgin Mary is more respected and adored among the Spaniards than God himfell, as appears even from their compliments. The Spaniards are mere slaves to the clergy, pliments. The Spaniard are more flaves to the clergy, who fo artfully hoodwink them; that they do not perceive the chains of their flavery, or, if they do perceive them, beet ahem, willingly; and when they gall them, dere not for much as vent a figh after freedom. Under any difappointment, either, in views of avarice or ambitton, the clergy have their gleadful inquistion at hand, which feizes both the control of the profit inflorted. on honour and life; to that persons of the most unsported innocence effects, it a particular favour to come off, only with alte, lofe, of, these, fortunes. This infernal court was first, introduced in \$478, by king Ferdinand the Catholic, and queen liabella, at the siggellious of, John de Torquentada, a deminion, who was the first inquisitor. At Madrid, it consists of an inquisitor-general and fix counsellors, one of whom is always a dominican, two judges, one fical, and several other officers and affisfants. The number of the samilies, who are disperted all over Spain, as spice, and informers, are computed at about twenty thousand. Under this supreme court are others in the principal cities in the kingdom, and even in the Canary islands, Mexico. Cartiagenal and Lima. But according to the latest accounts the power of this tribunal is now declining very visibly and leems hastening to its fall.

It is necessary, however, to observe, that, amids the great decrease of the inhabitants in Spain, the body of the on honour and life; to that perfons of the most unip

declining very vifibly and feems haftening to its fall.

It is necessary, however, to observe, that, amids the great decrease of the inhabitants in. Spain, the body of the olergy have suffered no diminution; but has rather been gradually, increasing, infonuch that Ottariz computes the number, of esceledalists and their servants at two hundred and fifty, thousand. The king nominates all histopy and archbishops, who are afterwards confirmed by the pope.

A stranger findy-many inconveniencies in this country, from the miserable accommodations to be met with on the public roads; for, it feems, you must absolutely earry your provisions and bedding along with you? and even then, unless you can best fatigue well; lie down in your

The fort their go is the notice of the beal-left cashibited in the Plaja Mayor at Madrid as related by Carlion;

The port their go is fat three days, on the first, all the gentry of the place, and the neighbouring country in their riched habit, reformed to the great jears, and took their place in the Kuffolte, while the jopulace, having provided intrinciples with figure and darts, flood ready for the effect cities) but which the whole multitude, who three their cities had not noten as they have opportunity. As foom at the door of the field is opened, and the bull perceives the light, he cames out, forfing the wind, and holding his cloak in one hand, and a tword in the other, enters the lift i on whom, when the brute has fet his eyes, he move at firl ganty towards him; then gradually mending his looks in one had, and a tword in the other, enters the lift i on whom, when the brute has fet his eyes, he move at firl ganty towards him; then gradually mending his looks in one had, and a tword in the other, enters the lift is on whom, when the brute has fet his eyes, which if he had, he dolly brings him to the ground. Carlion also fays, he faw a bull to flumed with one ground cover the neck if he can, there being one particular place, which if he had, he dolly brings him to the ground bearing the wound, after a violent trembling, the creature fell down dead, But this resety tappens, for he dutully receives a great number of wounds by frowers and darts before he dies; I and whenever he feels a fresh wound, he redoor bless his forty against the thursto, who having avoided him again, feldom fails to give him another wound, he redoor bless his forty against the thurston, who having swoided he

There entertainments, however, are of late insuch loss frequent than they were formerly.

The court never shibit the bull-foult in the Plage Mayor but upon forme extraordistery occasion, as the securion or marriage of their kings, and is attended with very great expense, both to hir mejefty and the city. But there is a theatre built writide the walls, where there are built-feafure every fortnight, which to connoisibure are greatly preferable to the others, the bulls being more furlous, and the danger greater to those who fight them; but their manner of engaging them is pretty much slike.

The theatrical exhibitions in Spain are generally abfurd. The prontipter's head appears through a trap door above the level of the stage, and he reads the play loud enough to be heard by the audience. There are two theatres in Madrid for the performance of Spanish plays. Rope daucing is exhibited in one of them, which was called El Theatre de al. Croz (the theatre of the Cros), where there are three rows of boxes, fifteen in each row. Part of the pit has benchee; with arms dividing them into diffine feats. The Spanish tragedles are for the most part ridiculous bombast, yet contain some shvated sentiments: and their consections are a jumble of religion and buffoonery mingled together in a most whinsel and incomfiltent manner, though much humour and many strokes of wit are discernible through their manifest abturdaties.

The Spaniards seem to give a military turn to many of their diversions, and even in the very terms and humans.

their manifelt abfurdaties.

The Spaniards ferm to give a military turn to many of their diversions, and even in the very terms and lenguage they life at cards: hombre in Spanish figuides a man, and from thence we derive our gauge at ombre; the four principal cards are called metadores, or murderers, because, they win all others. Spadisic is the land forword, or as we call it, the ace of spades ; for spado, in Spanish, significa a foured, and their cards are painted with a figure of that

weapon.

The Spaniards usually breakfaft and top in bed; their breakfaft is frequently chocolate, tea being feidom drank by them. Their dinner is generally a pocieto, or beef, veal, mutton, pork, bacon and greens, occ. all boiled together. If it be a 'richer or more expensive' unknive of means and delicacies, it is then termed an olla podrida, or what we call an ollo. They are fond of gartic, and tells a prevent among them, that olives, falled, and radifies, are food for gentlethen. After dinner they commonly flees.

Men and women all wear the farme drefs in the firests and stanals; but on other occasions; and in their private visits, the ladies were as great a variety of drefs, and of a much richer fort than their of England. The print of jean louty is fo far worn out; that the married ladies of Madrid have each their professed lover, sike the cicibeo of the stalian

indies, the sales of it was been excitated on its status and extremely aring, it is to the fall degree infigide type fee nothing but a firing of coaches following one another, filled with people of fallion: there adults and his confessor; there a couple of finant young abbes there a whole family grouped together, hubband, wife, and children. When they take their airing on gala or court days; all their footment wear plumes of feather; in their hats, and are derified in laced liveries. In the grandees, and people of the first fashion, keep a great number of fervants. Some of them have, three or four hundred domestics, and the English rembassador, in compliance with the taste of the country, keeps near a hundred. As their coaches are usually drove with four mules, they have two possibilions; with generally four and sometimes fix footmen behind their, coaches. They take out the side of the air, in hot weather and seas of their coaches, for the fake of the air, in hot weather and the coaches.

the fides and backs of their esselles, loy the fake of the air, in hot weighter statuted, in the last of the same of the Spaniards feldom use fedans, and when they do they have always two foorten who go on-each fide the hind-most chairman, in order to hold him up let the should fall: there are two on each fide-of the fedan, and two who follow behind with lanterns, though it be in the middle of the day. Thus, exclusive of those who go before, they have generally nine fervants with a ceach, and ten with a fedan.

I adr a li t & mE, C T. T. IV. di l'amediament

Of the genius, karning, religion, trade, and commerce, coine, weights, and maglures, confisurion, orders of knighthood, revenue, fortes, 46, of the Spaniards.

THOUGH the inhabitants of Spain are not wanting in capacity for the Gienes, yet little progress, as be expected from them while they are debarred the use of their

natural telement. The clergy not heing varydearned themfolver, it is a point of policy with shem, to suppress all felentifical knowledge among the large, and in order to keep them to ignorance, and (high clong, they brand all literary refearches with the name; at length and, to see that a large present than orbit duty consider much as it formerly dish; in the tudy of the father, we make and decrees of the popes and their cantonsy, and in fystems of fillionatic and Augustine, theology. The knowledge of the pleaned inguages, and explication of the text of the facred writings, have little to do with it. To this tradt of children they are almost user francers, showeb they are well-verfed. they are slmost utter drangers, though they are well verfed in cashistry, which makes a constant pair of the spaties preparatory, to the office of a clergyman. Agent act to lead to lead the Price Spanished bave had many valuable, writery in hife

tory; but it is dangerous to defeend too near to the pre-fent times, befides, his prefent majefly has abfolutely for-bid, any of his fubjects to write the history of Charles V.

of Spain.

A They are faid to be at leaft two centuries, belind the English, in physic and turgery, but where the people are periusded that faints, miracles, and charms, can be propertied. sured to sure the most inveterate difeafes, there muft little indination to have recourfe to art. However, they full practife copious bleeding in must difeases, and botany is much fludied among them.

much fludied among them.

They have many writers in poetry, befides the celebrated Lopes de Vega, who wrote the Jerufalem Conquifuda, tragedies, comedies, dec., Their longs have a wonderful air of fimplicity, and in fouse of them are much fentiment, as well as digmy; those upon love are extremely challe; and fouse have a pleasing air of romance, but like the people of the property of the people of the property of the people of the p

of humour in profe: the most famous work of the latter. of humour in prote; the most remous work or university in the El Diablo Church(e), which he is Sage modernized into a romanes, known in English by the title of the Devil on two Sticks; and Diable Boltenas, in French 1.1.

Here is a want even of the most necessary trades; and of the few they have, the greatest part are in the hands of the

French, who are very numerous in this country : for the natives; belides their averlion to work, difdain to floop to haborious employments. They are not, however, entirely without manufacturers, especially of filk and, wood; but these fall far short of that Bourishing condition to which they might be brought: and me tradesimen and merchants are looked upon with contempt, they have no fooner amaffimpetent fortune; than they leave off trade, procure

a title, and fet up for persons of quality.

1 This kingdom is extremely well structed for trade and navigation; they might be their own carriers; but this advantage they negled, and leave it to other maritime manifesting. tions, who turn it to a very good account. The Spaniards indeed deny them all access to their possessions in America; and arefo jealous of having that trade confined, only to themfelves, that no foreign thips must even approach their coast; yet of this commerce, which is carried on in their own thips, they have the least profit, they being little more than factors for the French, English, Dutch, and Italians, who fend their goods to America by them, and have the greatest share in their returns of gold, silver, and other valuable merchandize.

by the flota and galleons, but fince the years 1735 and 4737, the flota and galleons have been discontinued, and the trade to America carried on the continued. 4737, the total state of the trade to America carried on in regifter thips, which any merchants may ferid, on obtaining permission from the council of the Indies. There sail from Cadiz directly to

Connect of the Indian Arracaibo, Carthagena, Henduras, Campeche, Vera Cruss ac. a messel windows of The Spaniards affecting on a vecy confidenable trade to the coalts on the South fea, between the town of Manilla. in the island of Luconia, and the harbour of Acapulco on the coaft of Mexico.

The Spanish money is not easily understood; for the Spaniards make up most of their accounts, and form their calculations, chiefly in these two species, the real de vellon, and the marevedi. The latter is the lowest of the denoand the marevent. The state is the lowest of the cenominations of their copper money, and in this the king's accounts are kept; confequently the revenues of Spain, and the wealth brought from Peru and Mexico, are annually computed by an integer of copper, that is three times lefs than our farthing. The real de tellon is the finaled piece of their filver money, and equals our two-pence half-penny, and two thirds of a farthing.

That the reader may form a store parcet; idea of the Spanifa coin, we have reduced it to the English weights and value, as follows: The old English aidele, four penny weights, eight grains; feventeen faillings and four pence. The old double doubloon, feventeen faillings and four pence. The old double doubloon, feventeen penny weights, sight grains; the opposite the pence with a sight grains and the sight penny weights, fixteen grains; one pound fourteen faillings and eight penny. In the old seather pittole, eight penny weights, fixteen grains; one pound fourteen faillings and eights pence. The two, bestills double pittole, eight penny weights, fixteen grains; one pound fourteen faillings and eights, pence. And the half and quartee of the few pence, and eights, four faillings and fare pence. The pittole, pence of eight, four faillings and fare pence. The pittole, pence of eight, four faillings and fare pence. The pittole, pence of eight, four faillings, and fare pence. The pittole pence of eight, four faillings, and fare pence. The pittole, the seafely wenty-five pounds English weight, four of, which make a quintal or hundred: but as the pound of Cadiz and Seville, are much larger than thole of Caffie, confequently the arrobe is not the fam throughour all Spain.

Almost every thing in Spain, whether dry or liquid, as

Spain.

Almost every thing in Spain, whether dry or liquid, is fold by the averdupoide pound of fixteen ounces, and confeduently by the arrobe a thus wood, coals, corn, wine, oil, bread, and falt, are fold by the pound, and by the arrobe

bread, and fait, are told by the pound, and by the arrobe in large quantities:

The weights used by the gold and fifter-fmiths are, to the quiste, or carat, of sour grains. 2. A tomin, equal to three carats, twelve grains. 2. A castillan, equal to eight tomins. 4. The nunce, equal to fix assistant two tomins. 5. The mark is equal to eight ounces.

The Spanish liquid measures ere, 1. Dos scentibres, or a gallon. 2. An acumbre, or two quarts, 3. Half an acumbre, one quart. 4. A quartillo, equal so a pint.

a pint.

Spain is, at prefent, with respect to its constitution, an absolute hereditary monarchy, where the female, inherit in default of the male, line. The king, in his title, enumerates most of the provinces, and particular parts of the dominions he has been, or is possessed. In speaking of him, he is commonly called his Catholic majesty, or the Catholic king. The hereditary prince is commonly stilled prince of Asturias, and the other royal children infants. In The kings of Spain are never crowned, they seem to have a power to dispote of the crown to what branch of the royal family they please, of which we have an instance, when Charles 11. gave his dominions to the duke of Anjou. of Anjou.

Flere are feveral councils and tribunals for the admini-Trace are two as contain and trouble; as, the junta of abinet council, the privy council, the council of war, the council of Caffle, the council of the inquifition, the council of the finances, the council of the lindies, the feven courts of royal audiences, the great court of the civil law, &cc. Since the beginning of the feventeenth century, the cortes, or parliaments of this kingdom, have been difcon-

The higher nobility of Spain confids of counts, mar-quifits, and dukes. The granders, who have peccedence of all ethers, next the king and princes of the blood, are named out of these. Like those of Portugel, they have the privilege of being covered in the king's prefence, who files them, in his letters, Illustrious; and in speaking to them, or of them, their Eminences: but there are others, them, of or them, their Eminence: I but there are others, besides the grandees, who are covered before the king, namely, cardinals, nuncios, archbishops, the grand prior of Cartike, and the grand prior of Malta; the generals of the order of St. Dominic and St. Francis, ambassadors of crowned heats, the knights of the golden sleece, and of the three military orders of St. James, Calatraya, and Alcantars, when the king assists at their sespective chapters, in onlike of grand master. The inferior publishing the thorus tars, when the king assists at their selective chapters, in quality of grand markers. The infector quolity fuller themselves cavalleros and hidalgos. No grandee can be apprehended for any crime, but by expects order of the king; and they have many other privileges sheldes thefe.

Containing the natural history and geographical description of the country, its towns, rivers, climate, folly produce. Ge-als of the inhabitants, their trade, manufactures, religion, forms, within the laws, cuflems, Gt.

Laws, coffems, Gr.

THIS is the most western kingdom in Europe; it is bounded, on the north, by the province of Leon, Estramadura, and Andalusia; and on the fouth and west by the Athatic ocean; extending from the thirty-fath degree they the Athatic ocean; extending from the thirty-fath degree of west software to the forty-second degree three minutes north fathers, no the forty-second degree three minutes north fathers, and between the seventa and tenth degrees of west software for London. Its length from Valença, the most northern town in it, to Sagrea, the most southern, near cape St. Vincent, is about three hundred and tenth miles; and its greatest breadth, from Peniche, a sea port in Estramadura, to Salvaterra, on the frontitiers of Spain, is one hundred and twelve miles.

Here the climate is much more temperate than in Spain, though it is a listle different in the several provinces. The northern parts feel a kind of painful cold in winter, though this is chiefly owing to the rains which fall at that season, and in the southern the summer hears are very great. However, both winter and summer are very supportable; for cooling sea-breezes during the laster refresh the country, which is extremely delightful in the spring season.

Portugal is, in many parts, a mountainous country, and these mountains contain the ores of silves, copper, tin, and iron, but the Portuguese being supplied with metals from their possession of the lapiday kind, as sturquoises and hyacinths, are also sound in the mountains; and particularly a beautiful variegated marble, with many other curious soffils of the lapiday kind, of which several sous of work are made; here are also very good mill-stones,

and here is a remarkable falt-petre mine on the hill of Al-

Managar i so i I s'

cantara, not far from Lifbon.

The foil is very fruitful, but as agriculture is much neglicited, above half the country lies wafte, and the inhabitants are supplied with a great part of their corn. by the English and Dutch; and have also Indian corn from Africa; Portugal, however, abounds in excellent wife and oil; the greatest part of the latter is made in the province of Alentejo, for the olive-trees thrive better here, near the

Alentejo, for the olive-trees thrive better here, near the fea, than we in the country. Here are also abundance of oranges, lentons, figs. pomegranates, raisins, almonds, chesinut, and other, fruit. Great plenty of fine honey, and confequently of way, is likewise produced here.

The principal rivers in Portugal have their sources, in Spain, there, are the Minho, the Luna, or Lethe, the Douro, the Tajo or Tagus, the largest in the kingdom; the Guadians and Cavado; which last rifes in the mountains of Tragos, and discharges sight into the fig. between

Douro, the Tajo or Tagus, the largeft in the kingdom; the Guadiasa and Cavado; which laft rifes in the mountains of Trazes, and dicharges; stelf into the fea below Barcelos. The three principal, namely, the Tagus, the Douro, and Guadians, divide the kingdom into three parts. All these rivers abound in fish.

Portugal contains the fis. following provinces, viz. L. Entre Douro E Minho. II. Tralos Montes. III. Beira, IV. Alentejo. V. Alguve. VI. Estremadura.

I. The province of Entre Douro E Minho is fo called from its situation, which is hetween the rivers. Douro and Minho; having Galicia on the fouth; and the ocean on the west, it is seventy miles long, fifty broad where widelt, and it, remarkable for its fertility.

The principal places are, 1. Broga, between the rivers Cavado and Deste: here is the see of an archbishop who is primate, of Portugal, and spiritual and temporal lord of the city and neighbouring country. In this town are, a strately cathedral and archiepsiscopal palace, a great many convents, several parish-churches, about twelve thousand inhabitants, a noble hospital, a large college, and a house of mercy, which is a charitable foundation for the relief of good fami-

Secural, a Roong well-fortified town, twenty miles fouring of Lifton. 3. Sintra, fituated by the cape that bears the same name, is supposed to have the most fallubrious air of any place in Portugal. 4: Santerem, on the Tagus, is a place of good trade.

By the decretals of the church, found learning and liberal feience are banished Portugal: there are, indeed univerfities at Coinbia and Evora, and Sifton is a royal scademy for the Portugueschistory; at Santarem is an academy of history, antiquities, and languages; and att. Thomas an academy of sciences, on the same footing as that of Paris; but all attempts to diffuse useful knowledge are deseated by the tyrannical sway of superfittion, the parent of ignorance.

ledge are deteated by the tyrannical way or inperation, the parent of ignorance.

They pay little attention to the cultivation of their lands, and to manufactures: but carry on a very extensive foreign trade, yet from this they reap little profit. The chief commodities of the Portuguele confift of imports from their own colonies, particularly from Brazil, as to-bacco, cocoa-nuts, fugars, fpices, drugs, ivory, ebony, brazil-wood, hides, gold, pearls, diamonds, and other reliable services.

valuable gems.

Thair ships seldom frequent the other countries of Eu-Thair thips feldom frequent the other countries of Europe or the Levant, their voyages rather lying to the coafts of Africa, particularly the Gold Coaft, whence they carry, negroes to Brazil, and also purchase some gold and ivory. They likewise trade to their East-India colonies of Gos. Diu, and Macao, bot this traffic, though once very important, is now greatly declined. Brazil, however, is still a plentiful treasury to Portugal, and foreigners are entirely excluded from all commerce with that country.

The Portuguese long measure consists of barros and cavidos; an hundred barros make one hundred and fixty-four cavidos, or one hundred ninety-five and an half

four cavidos, or one hundred ninety-five and an half Hamburg ells; but an hundred cavidos are only equal to fixty-one barros, or about one hundred and ninety Ham-

fixty-one barros, or about one hundred and ninety Hamburg ells.

Sums of money are reckoned in Portugal by reis and crofadoes, which are not real, but only imaginary coins. The gold coins of Portugal are the double moedas of one pound feven fhillings, walve, the quarter of which is called a millrei, or a thouland reis, and has therefore the number of one thouland marked upon it; and the Johns, worth three pounds twelve fhillings, which are fubdivided into halves, quarters, eighths, and fixteenths. The filver coins are the vintain of twenty reis; the half teefloon of fifty, and the whole teefloon of one hundred reis. With respect to the weights in Portugal, an anoba is thirty-two pounds, and four anobas make a quintal.

The popth is the only religion tolerated in Portugal; yet there are many concealed Jews, and those too even among the nobility, bishops, prebends, monks, and nuns; and the very inquisitors themselves. The inquisition, besides putishing Jews and reputed hereticks, who broach or maintenance as the elligion of the country.

and the very inquisitors themselves. The inquisition, befides punishing Jews and reputed hereticks, who broach or maintain any doctrines contrary to the religion of the country, takes cognizance of all pretenders to forcery and the black art, apostates, blasphemers, perjured persons, impostors, the hypocrites, &c. The burning of those condemned by the inquisition is called an auto de se, or act of faith. There are feveral tribugals of the inquisition one of There are feveral tribonals of the inquifition, one of which is at Goa in the East Indies; but there are none at which is at Goa in the East moles; but there are only as Brazil. The reader may fee a particular account of the popith inquisition, and the various punishments inflicted by it, together with the dangerous tenets of popery, &c. in. a work lately published, entitled, The Protestant Alarm, or Popith Cruelty fully displayed; written by Mr. Alarm, or Popila Crucity sully displayed; written by Mr. Fellows, and fold in a neat volume, price three fhillings bound, by the publisher of this work, and other book-fellers. Though the power of the inquistion was exercised with internal sury and barbarities for many years in this kingdom and Spain, we are happy to inform our readers, that its authority has of late been greatly circum-

In Portugal, the being an antient christian, or, in other words, of an antient christian race, is effected a very high degree of pre-eminence, and far superior to what they call a new converted christian, or a half new converted christian; by which last they mean those whose new converted ancestors have married christians of the antient

Portugal is faid to have in it nine hondred convents, rortugal is laid to have in it mine mondes convents, and most of them are very rich; but the jequits, who, in multitude and opulence, furpassed all the other orders, have lately been banished that country.

Among their ecclesiastics, there is a patriarch of Lifbon, who must always be a cardinal, and of the royal family. Next to him are three archbishops, who rank

with marquiffes, and the first of them is the archbishop of Braga, who is primate of the kingdom, and lord spiritual and temporal of his city and neighbouring country. The bishops hold the rask of counts. The Portiguese have archbishoprics and bishoprics in the other three parts of the world, besides those in Europe.

Besides the nomination of all bishops, the king of Portugal receives a fourth of their revenue. The pope confirms the bishops, publishes his bulls in the kingdom without the king's previous consent, and, by his legate, governs the clergy, who, with respect to taxes and contributions, depend on him. He has also the gift of many strain of the property of the pope of the of flate, and several tecretaries; for military arrairs, a council of war; for the finances, a treafury-court; and, for the distribution of justice, several high tribunals, with others subordinate to them, in the several districts into which the kingdom is divided. The proceedings of the courts are regulated by the Roman law, the royal edids, the canon law, and the mandates of the pope. The

courts are regulated by the Roman law, the 'royal edick, the canon law, and the mandates of the pope. The cities have their particular magifracy.

The cutloms and other taxes run excellively high. Befoles the royal demelines, the hereditary effates of the House of Braganza, the monopoly of Brazil finus, the coinage, the money arising from the fale of indulgencies granted by the pope, the fifth of the gold brought from Brazil, the farm of the Brazildiamonda, the masterships of the orders of knatishood, and other fources, yield very large funnt. The forces, however, of this nation, both by let and land, are very inconfiderable: their land forces are accounted the worst militia in Europe, and their may far from being respectable.

The titles of the king are, "King of Portogal and the Algarves, on this side and the other side the sea of Africa ord of Guiney, and of the navigation, conquests, and commerce in Ethiopia, Arabia, Persa, Indis, &c." The king's eldest son is stilled prince of Brazil. The king of Portugal was dignisted, in the year 1749, with the title of his Most Faithful Majesty, by pope Benedick XIV.

Here are several orders of knighthood, which are, s. The order of Christ, the badge of which is a red cross within a white one, and the number of commanderies of four hundred and fifty-four. 2. The order of St. James, the badge of which is a red fword, in the shape of a cross there are a great number of towns and commanderies of this order. 3. The order of Aviz, whose badge is a green this order. 3. The order of St. james,

11.17

there are a great number of towns and commanderies of there are a great number or towns and commanderies of this order. 3. The order of Aviz, whole badge is a green erofs, in form of a lily, and the number of its comman-deries forty-nine. Though these three orders are religious, yet the kinghts are at liberty to marry. 4. The order of St. John; to which also several commanderies belong.

SECT.

Containing an account of the first peopling of Spain : together with the antient and modern history of Spain and Partugal, to the division of the two monarchies.

ISTORIANS tell us, that Spain was first peopled either from Gaul, to which it is contiguous, or from Africa, from which it is only separated by the narrow strait of Gibratar. The Phoenicians sent colonies thinber, and built Cadiz and Malaga. Afterwards, upon the rise of Rome and Carthage, the possession of this kingdom transmean object of contention between those powerful republics; but at length the Roman arms prevailed, and Spain remained under their power until the fall of that empire, when the Goths possession the first power until the fall of that empire, when the Goths possession was supplied the supplied to the supplied the supplied to the supplied to the supplied t

in their turn, were invaded by the Saracens, who, about the end of the feventh century, had made themselves masters of the sheeft kingdoms of Asia and Africa; and, not content with the immense regions that formerly composed great part of the Affyrian, Greek, and Roman empires, they crossed the Mediterranean, and, ravaging Spain, established themselves in the southerly provinces.

Don Pelago was the first Spanish prince mentioned in the history of this country; he distinguished himself against these insides, (afterwards known by the name of Moora,) and, about the year 720, took upon himself the title of king of Austria. His secosies summated other christian princes to take arms likewise, and the two kingdoms of Spain were for many ages perpetually embroiled in bloody wars. In the mean time every adventure was entitled to the conquests he made upon the Moora, till Spain was at last divided into twelve kingdoms; and about the year 1095, Henry of Burgundy was declared, by the king of Leon, count of Portugal; but his son Alphonto threw off his dependence on Leon, and declared himself king. A series of brave princes gave the Moors repeated overthrown in Spain, till about the year 1475, when all the Spanish kingdoms, Portugal excepted, were united by the marriage of Ferdinand, king of Aragon, and Isabells, the heiresh, and afterwards queen of Castile, who took Granada; and expelled the Moora and Jews, to the number of one hundred and seventy thousand families, out of Spain. This expulsion tended greatly to depopulate the country of artists, labourers, and manuschurers; and the discovery of America (which happened a few years after) not only added to that calamity, but rendered the remaining Spaniards most deplorably indolent. To complete their minfortunes, Ferdinand and Isbella introduced the popish indusificion, with all its horrors, into their dominions, in order to prevent the return of the Moora and Jews, into the country.

Charles V. of the house of Austria, afterwards emperor of Germany, shown he in vain attempt

and still retains fome of them.

Philip's defectedants proved to be very weak princes; but Philip and his father had so totally ruined the antient liberties of Spain, that they reigned almost unmolested in their own dominions. Their voiceorys, however, were at once so tyrannical and insolent over the Portuguese, that, in the year 1640, the nobility of that nation, by a well-conducted conspiracy, expelled their tyrants, and placed the duke of Braganza on the throne by the title of John 1V, ever since which, Portugal and Spain have been dif-tinc kingdoms. Charles II. who left no issue, being the

laft king of spain of the Austrian line, Philip, duke of Anjou, second fon to the dauphin of France, and grandfon to Louis XIV. mounted the throne, by virtue of his predecessor's will, in the name of Philip V. anno 1701 and after a long and bloody strugele with the German branch of the house of Austria, supported by England, he was confirmed in his dignity at the conclusion of the peace of Utrecht in the year 1712. And thus Lewis XIV. through a masterly train of politics, accomplished his favourite project of transferring the kingdom of Spain, with all lits rich possession in the second former of General Britain; especially in the American fear, where a glaring partiality has been shewn to the French nation ever since, and renders the English being possessed of aport in the south seas of equal importance to that of Gibraltar, which serves as a curb on the united strength of France and Spain. Philip, after a long and turbulent relgn, died in 1746, and was succeeded by his son Ferdinand VI. who died in 1759 without issue. Ferdinand was succeeded by his brother Charles III, the present reigning monarch of Spain, by whom he hath issue, Maria Arnelia of Savanu. Maria his brother Charles III, the prefent reigning monarch of Spain, by whom he hath iffue, by his late queen Maria Amelia of Saxony, r. Maria Josepha Infanta; 2: Maria Louis; and, 3. Charles, prince of Asturias; prefumptive akeit to the crowin, born November 11, 1748, and married to princesi Louisa of Parma.

It would have been impossible for the Portuguese to support themselves under their revolt from Spain, had not the latter powers been engaged in wars with England and Holland; and upon the restoration of Charles II. of England; that pulped having maried a princess of Portugal, pressiled

land; and upon the refforation of Charles II. of England; that prince having married a prince of Portugal, prevailed with the crown of Spain, in 1668, to give up all preatentions to that kingdom. Apphonfo, fon to John IV. was then king of Portugal. He had the misfortune to difagree with his wife, and this brother Peter, and they, uniting their interefts, not only forced Alphonfo to refign his crown, but obtained a difpensation from the pope for their marriage, which was actually confurmated. They had a daughter: but Peter, by a second marriage, had sons, the eldest of whom was John, his successor, and father to his late Portugues Majesty. John, like his father, joined the grand confederacy formed by William king of England; but neither of them were of much service in humbling the power of France. On the contrary, they humbling the power of France. On the contrary, they had almost ruined the allies, at the great battle of Almanza in 1707, the loss of which was owing to their misconduct.

John IV. dying in 1750, was succeeded by his sun Joseph, who in 1760 was attacked by affassins, and narrowly escaped with his life. From this conspiracy is dated the expulsion of the jesuits (who were supposed to have been the authors of it) from all parts of the Portuguese dominions. Joseph, having no son, his eldest daughter, Maria Frances Isabella, was married, by dispensation from the pope, to her uncle. Pedro Clement, brother to the late king Joseph. This marriage was persectly consistent with the Levitical law, though contrary to the canons of the Christian church; however, several children have sprince of Seira, (born August 21, 1761; and married February 21, 1777; to his aunt Maria Francisca Benedicta); he bore the above title till his mother ascended the throne, and then eassumed that of prince of Brazil, peculiar to the heir he affumed that of prince of Brazil, peculiar to the heir apparent. The queen immediately conferred the title of king on her hufband, as did our Mary the first on her hufband king Philip, but retained the fovereignty in her own hands.

In the year 1762, when the war broke out between England and Spain, the Spaniards and their allies the French, pretended to force Joseph into their alliance, and to garrifon his fea-towns againft the English with their troops. The king of Portugal rejected this propofal, and declared war against the Spaniards, who, without refitance, entered Portugal with a confiderable army, white a large body of French threatened it from another quarter:

large body of French threatened it from another quarter; but, by the mediation of the English, an effectual flow was put to the invasion; and in 1763 a peace was concluded at Fontainbleau between the contending powers.

On the usenty-third of February, 1777, Joseph died, and was succeeded by his daughter Marla Frances liabella, princes of Brazil. She was born in 1734, and married her uncle don Pedro in 1760; and the Portuguese dominions at present remain in the hands of these joint soveraigns.

ie in a la mainement

General description of that part of Flandert, which is included in the Brahami quarter; with its boundaries and situation, extent, towns, places, inhabitants, their trade, manufactures, customs, &c.

THE country of which we now propose to treat, is a province of the Netherlands, using bounded by the German ocean and United Provinces, on the north; by Brabant, on the east; by Hainault and Artois, on the south; and by another part of Artois, and the German ocean, on the west. It is sinty miles long, fifty broad, is level, sertile, has a good air, and contains thirty walled towns, one thousand one hundred and fifty-eight villages; forty-eight abbies, &c. The men are heavy and laborious, but love good living; the women are industrious and handsome; the inhabitants are papis in all parts, except those belonging to the Dutch; and the manusactures are linen, lace, and tapestry.

The feveral diftinct diftricts contained in this part of Flanders, are, 1. Brabant, which is bounded, on the north, by the United Provinces; on the fouth, by Hennegan and Namur; on the west, by Flanders, properly so called, and, on the east, by Liege. The air is good, and the soil froitful. It is watered by several rivers, the chief of which is the Demer, or Rupel. There are two since canals in it, one of which joins the Senne and the Rupel, and cost eight hundred thousand storins; the other runs from Louvain to the Rupel. Between Louvain and Brussel is a since stories after the causeway, and another reaching from Thieren and Liege. The southern part, called Walloon Brabant, is mountainous, but not unstruitful.

In Auftrian Brabant are reckoned nineteen walled towns, befides a great many boroughs and villages. The states of the province consist of the clergy, nobility, and reprefentatives of the chief towns. These states meet four times a year at Brussels. In them, and the viceroy, the legislative power, and that of levying money, is vested, but the whole assembly must be unanimous in passing an act. They appoint a kind of committee of two clergymen and two noblemen, to meet daily during their recess.

There are four hereditary officers of flate for this province, viz. the fenefehal, the chamberlain, the marthal, and the guidon: befides which, there is also a great huntman, a great falconer, a great forester, and a master of the wolf-lunters. The high councit of Brabant, which is divided into two chambers, or coarts, is chiefly held at Mechlin, where most of the provincial causes are tried. The Roman catholic is the only religion of this country: and the number and opulence of the ecclessatics is very great. At Mechlin is the see of an archbithop, to whom are subject the prelates of Antwerp, Ghent, Boisledu, Bruges, Ypres, and Ruremon se. There are sources collegiate churches, and two hundred and three closters in the archbishoptic.

This country, with many others, came to the house of Austria, by the marriage of Maria, daughter of Charles the Bold, duke of Burgundy, with Maximilian, archduke of Austria. The principal manufactures are, lawns, cambricks, lace, and tapefiry. The Walloon language, which is flooken here, is a mixture of German, French, and Spanith. The arms of the duchy are a lion, or; in a field,

Austrian Brabant is divided into several quarters. In

the quarter of Louvain, the principal places are as follow!

1. Louvain on the Dyle; thirteen miles east of Bruffels.

It was formerly the capital of the duchy; but at prefent
Bruffels is confidered as fuch. Louvain is a place of great
antiquity, having been founded by the emperor Afiniphus,
as a check against the Normans. The emperor Charles
V. was educated in the casses, which long continued the
residence of the dukes of Brabant. Many affemblies of the
states have been kept in it.

The churches and cloiders are very numerous and fine, both within and without the town, which is very large, but not populous: for there are many meadows, vineyards, gardens, and orchards, within the walls. The Stedthouse and the church of St. Peter are very beautiful. The stedthouse of Louvain hall long fince been upon the decline, and at present is inconsiderable, consisting chiefly in the excellent beer which they brew, a great quantity wheteof is sent to the neighbouring cities, especially to Brossels.

With a view to restore this city to its former lustre, are mixed to the former lustre, are

With a view to reftore this city to its former lufte, an university was founded in it, in 1426, by John IV. duke of Brabant, which enjoys great privileges, granted to it both by the popes and dukes. There are above forty colleges; and in the hall, where the public exercises are performed, are three spacious rooms, where lectures are read every morning in divinity, law, and physic, to which the scholars, in every college, may refort. The Hollanders have a college here for their Roman catholic sellow-subjects: the English, one of Augustine monks; and the Irish, one of Dominicans, and another of Recollects. To give encouragement to learning, pope Sixtus IV. granted to the university, A. D. 1483, the privilege of presentation to all the livings in the Netherlands.

The church which belonged to the jefuit's convent is admired for the elegance of its architecture; and the pispit, made of oak, is supposed to be the most beautiful in the universe. The convent for English ladles is very capacious and elegant, and more richly-endowed than any other in the Low Countries. The burghers of Louvain boat, that their city was never taken by force. It is 1710, indeed, the French entered it by firatagem, but were soon repulled with great loss by the citizens. To reward their fidelity and bravery, Charles, then slied king of Spain, and afterwards emperor, presented them with a golden key, which is still preserved in the town-house, to commemorate the event.

2. The town of Tienen, on the Ghete, is feven miles east of Louvain... It was formerly a very confiderable city, but is now greatly decayed. Here are two collegiate churches, the canous of one of which are permitted to marry; but if they become widowers, they are not allowed to have a fecond wife, unlefs they refign their prebends.

3. The town of Gemblours is feated on the rivet Orne,

3. The town of Gemblours is teated on the rivet Orne, fix miles ditant from Namur to the north-well, and twenty-one from Louvain to the fouth. It flands upon a fleep hill, encoupsified on all fides with precipiees, except towards the eaft, where a little hill hangs over it. It confiderable only by its abbey of St. Hubert, of the lenedictine order: the abbot is the fift nobleman of Brahant.

Gemblours is famous in history by the victory which don John of Austria gained near it, January 31, 1578, over the army of the States-General, commanded by Antony de Coignies, who lost all his cannon, and was himfelf taken prioner: this deleat was imputed to the absence of the chief officers of the state, who were then at Bruffels, and to the jealoufy some others had conceived against the prince of Orange. King Wulliam, during a great part of

his wars with France, took up his head quarters in this pi is well worth feeing, on account of the carious autique

his wars with France, took up his head quarters in this town.

Towards the north-well, and as the diffance of about five miles from this city, flands an abbay of the Ciffarcian order, called the abbay of Villere, in a wood of the 6. us name; and the abbay of Argenton or Ciffarcian mans, infituated at about here miles diffacte, towards Namur.

4. The to Montaigno, in Flemith Scherpe-Heavel, or I and mount in him Mona Audus, is thus called from its flustion on the top of an hill: it flands between Dieft and Sichems and, though finall, is very regularly built, of an hortgoon figures.

5. Seven miles from Tienan, on the Ghese, flands Leeuwe, a throng town: a is in a snarthy flustation, which renders it sharolf inacefible. The fower-signs of the country used formerly to benish hither those whom they had a mind to punish, as the air is extremely bad.

6. The little city of Dieft stands upon the banks of the river Demer, thirteen miles diffant from Louvain to the morth-self, and about forty from Boles hadout to the fouth. The town is not large, but noted for the woollen cleths, hofe, and other manufactures; as also by the excellent beer brewed here, which is fold in all the neighbouring towns. This city, with its territory, has the nite of a barony, which belonged to him William; and is claimed at grafent by feveral of his helive. There are at Dieft two collegiate churches, and several crivents of friars and nuns. They keep a fair here for linets, to every Aft. Wednefday. They which belonged to they between the confederates under the command of king William; and the French commanded by the daker of Luxemburg, Villeroy, and Berwick, in which the latter were visitorious.

8. The little town of Sichem, which belongs to the barony of Dieft, flands between Aloft and Dieft. There is in that town a convent of regular canonifies of the order of St. Augustin. 9. Heverle, is a town with a frong castle belonging to the dake of Arember and with a frong castle belonging to the dake of Arember and Argentic.

barotty of Dieft, fisheds between Aloft and Dieft. There is in that town a convent of regular caronesses of the order. of St. Augustin. 9. Heverle, is a town with a strong castle belonging to the doke of Aremberg and Arichot. 20. Limale, is a fine borough town. 21. Ramilles is a small village, there elevers miles from Namur, where, in the year 1706, the doke of Marborough obtained a signal victory over the French. 12. Arsenot, on the Demer, capital of the duchy of the same name, situated seven miles from Louvain, is a small, but strongly-fortified town. The principal places in the Brussles quarter of Brabant, are, r. Brussles, which gives name to the territory. This city, though but second in rank, is not only the capital of Brabant, but of the Netherlands in general. It is intriteen miles welt of Louvain, and one hundred and seventy-two cast of London, situated on the brow of a hill, and water-dby the little river Senne, latitude sity degrees sity-one minutes north; longitude two degrees thirty minutes welt. The prospect of it, sit a distance, is admirable; but, on entering it, the irregularity of it is rather disjussful to a stranger. It is seven miles in circumstence, has seven strong stream, and surrounded by a double brick wall, and deep ditches. It is acceedingly populous, and the houses are very handsome. Here are seven beautiful squares; in particular, the great square or market-place is one of the most mobile in Europe; around it are the halls of the different trading companies, and the town-house. The most in ble in Europe; around it are the halls of the different trading companies, and the town house. "The latter occupies one quatter, and the fronts of the whole are embellished with sculptures, gilding, latin inscriptions, &c. The town-house, which is an elegant structure, contains the apartments for the alsombly of the state of Brabant. They are spacious and superb, finely adorned with tapestry in gilt frames, and many original paintings. On the top of the stepel, which is three hundred and say-four seet high, is the statue of St. Michael killing the dragon, of gilt copper, seventeen seet high, which serves for a weather-cook. a weather-cock

a weather-cock.

The public buildings in general, particularly the palaces and courts of the feveral princes, counts, and other perfons of diffinction, together with the churches and cloiffers, are large and magnificent. Behind the Imperial palace, that stood in the highest part of the city, but was burnt down several years ago, is a park well stocked with deer, and planted with trees like that of St. James's in London, for the inhabitants to walk in. At the farther end of it is a fine pleasure-house, built by the emperor Charles V. after his abdication. Of the other palaces, those of the prince do is Tour and Taxis, and of the English earl of Aylesbury, are very fine; and of the gardens, those of the Aylefbury, are very fine; and of the gardens, those of the duke of Bournouville are the most delightful. In all the palaces are collections of original paintings, by the most eminent masters, both Italian and Flemish. The arsenal

No. 73.

The opera-house was built in the year 1700, by the duke of Bavaria: This is one of the noblett and largest in the world, it being creeted in the Italian manner, with rows of loges; or closes, most of them with chimneys in them, which the nobility generally take by the winter, for the conveniency of their families and friends, and keep the

keys.

There are, in this city, twenty public fountains, adorned with fixtaces, at the corners of the most public firrests;
and a famous canal that was cut from Willibrook, a village
on the Scheld, fifteen miles distant from Brussels; it was
finished in 1661, by the celebrated archived George Rinaldi,
and cost the city one million eight hundred thousand florings.
The churches of this city are very magnificent; seven of
these aparechias, and among them the church of St.

and coft the city one million eight hundred thou and floring the city are very magnificent i seem of these are parochial, and among them the church of St. Gedula, which is also collegiate, is the largest and finest, Besides the college of jestis, which has a very fine church, here are sleven moustlerles, and twenty-one nunneries; among which are two English, one of Dominican ladies, founded by cardinal Howard in the reign of Charles II. king of England, of which one of the house of Norfolk is always about the total of Benedicline nuns.

The foundation of pious maids, called the begulange, resembles a little town, and is furrouaded by a wall and itch, and divided into pretty little streets, where every beguine has her own apartment. Their number generally amounts to seven or eight hundred, and fometimes more. They are governed by four elderly women, whom they choose out of their own, body, and, have, a consessor, and the church lately built is a into piece of architecture.

In this city is the mount of Piety, which is a public office for lending money upon, pledges at a moderate intends, and was established by the archduke Albert, and fabella his wife, in the year (s). It is a vast building, like a monastery; and there are private passages for going in, without being sen from the public freets.

The inhabitants of Brusses, learn to have had a singular fondness for the number seven; for here are seven principal surfaces, in which

fondness for the number seven ; for here are seven principal streets that enter into the great market-place, in which are seven stately houses; seven parish churches; seven no-ble samilies, eminent for their antiquity and great privi-leges; seven midwives, sworn and licensed by the senate to visit the poor as well as the rich, whenever called; seven to vint the poor as well as the rich, whenever called; leven public gates of, the doric oyder, remarkable for leading to fo many places of pleafure or different exercites, namely, one for hunting, a lecond for fifthing, a third for fowling, a fourth leads to pleafant fields, a fifth to pallure grounds, a fixth to forings and vineyards, and a feventh to pleafant gardons. This city is faid to have entertsined at one time feven crowned heads, befides the dukes of Savoy and Lorcraits, with nine, thoufand horfs belonging to their retinues.

The inns, or eating-houses, at Bruffels, are equal to any in the world; and a stranger has the advantage of dining any time between twolve and three, on seven or eight dishet of verse, for left than an English shilling. The wines here are also very good and cheap; and for an English seven are the seven and the seven are th carry you when ver you please to order.

This city is the feat of the council of state, the privy

council, the council of finances, the war-councils, and the chamber of accompts of the chancery and feedal cours of Brabant, the court of the grand forefler, and a particular chamber of accompts for the province of Brabant. Here is a flatue of gilt marble erected by the company of brewere to prince Charles of Loriain, governor-general of the Au-

is a fixtue of git marbis exercis by the company of the Aufirian. Netherlands. In the year, 1695 this city fuffered
much by a French bombardment; in 1796, the allier made
therafelves matters of it; and the French in 1796. Its
trade confists in camblety, bone-lace, laces, and tapeftries
manufactured here, and feat all over Europe.

2. The city of Nivelle is filteen miles diffant from Bruffels to the fouth, and twelve from Charleroy to the north,
it contains two collegiste, and five parochial churches, and
feveral convents and numerics; also a chapter of canoneffes,
who must all be the daughters of princes or counts, or at
least of noblemen, by four defenses both of the father and
mother's fide. The ablefa is filled princes of Nivella,
and is appointed by the fovereign, who must choose one
out of three canoneffes named to him by the chapter. The
abbas is fourius and temporal lady of the city, and its
diffrich, in the latter, of, which are feveniers, willages. A
great quantity of fine linen is made here, equal to that of
Cambray, and the place enjoys large privileges.

This place was famous for a buttle fought rewrit in 1674, between the Dutch under the prince of Orange, and the French commanded by the prince of Condd; in which the French claimed the victory, but the Dutch kept the field: above fourtoen thousand men were Billed on both fides.

The most remarkable places in the Brabant quarter of

Condé; in which the French claimed the victory, but the Detert height above fourteen theafand men were lilled on both fides.

The most remarkable places in the Brabart quarter of Antwerpen, by the French Anvers, and in latin Antwerpen or Andoverpum. It is the capital of a marquifure of the fame anne, and in feated on the Schold, twenty-five miles nouth of Bruffeis. It is the third in rank in Brabant, extensive, cleantly built, contains two hundred wide firests, and swenty-two capacious squares. The bouses are lostly, built of free-stone, and have courts before, and gardent bubild shem. At one can of a noble firest, and Moon-Rwet, there is a branch cracking their three-thedral, dedicated to the virgin Mary, and the Stadehouse, are dery magnifishers fractures.

The exchange for overchants has four spaceous gates opposite to exact other, and always open. The walks round it are supported by forty-three pillan of blue marble, all carved with different figures, not two of them being alike. This fiftenture is alid to be one hundred and eighty feet long, and one thendred madronsy broad. Underneath are vaulus, or magnishes, well stored with the returns goods; and she thendred, and sone, and lately a support of the winder the support of the surface the support of the surface that the surface that the surface that of the kind in Europe, Sir Thomas Griefman took, the hint of building of the surface of Antiferedant that of erecting theirs, which drove the marchanter comments of Antiferedant that of erecting theirs, which shows as about of St. Bernard, is the second psetate in Brabant. The building printing, surface of Antiferedant that of erecting theirs, which shows a abbot of St. Bernard, is the second psetate in Brabant. The building rich we greated perfection.

This city is the fee of a blishop, who, as abbot of St. Bernard, is the second psetate in Brabant. The building rich wells fr

fold by auction.

Here are four collegiate churches, three other parish-churches, foor abbeys, and about fixty cloifters of the first rank. The cathedral of our Ludy, which is also a perorank. The cathedral of our Ludy, which is also a pero-chial church, is a very grand pile, upwards of fine hun-dred feet long, two bundred and thirty broad, smal three hundred and fixty high. Its file is four hundred and fixty-six feet its height, the cross at the top- one hundred and fixty-one, the diameter of the clock thirty feet, and the sircumference ninety. In its belfry are thirty three guest bells, and two fers of chimes.

On the banks of the river near the ramparts flat

bells, and two few of chimes.

On the banks of the river near the rampures stands the noble and rich abovy of St. Michael, where all-severoim princes lodge on their coming to this city. There are all sancteen numeries in this city, among which is an English one of the order of St. Therein; but the mans wear so linen, ext no fleth, and he upon staw; seven the graves have fuch a diffinal speciation, that they give the place the refemblance of a priton.

In the Carmiellie church is a large fitive status of the right May. As to the fortification of this city, it is environed with a sine wall, planted with rows of rees on each fide, with walks between, broad enough for two each fide, with walks between, broad enough for two each fide, with walks between, broad enough for two each fide, with walks between, broad enough for two each fide, with walks between, broad enough for two each fide, of Alva in 1569, which commands the towns and the neighbouring country. The magistacy of this city is chosen only our of the sever partician standard; and constitute the two burge-inaders, and eighteen celevine, befoles inferior magistrates. Among the privileges grasted to it by its princes; there we one, by which were partician there is a city, though both his presents were foreigness.

the river Senne, is nine miles distant from Mone to the north-east. Near this ciry is the little wood called the means of Sociation. Here is a meanager, of Sensitidine, monke, furrounded with walls, and now changed into a focular chopter, composed at prefent of a provost, a dean, a treasurer, and thirty canons I they are spiritual and remporal lords of the city, and appoint the besilist of it. There are also in this city a convent, a nanuery, an hodpital, and an house of the fathers of the oratory, egabilished in 1620.

5. The town of Braine-LeLous, and Wanter-Braine, two horoughs in Brabants I is fituated on the paved road, whilt was arised in 1904 and it well from Mone to the house of Aremberg, in eachange for the manor of Sevenbergen; so that the duke of Aremberg is now lord of this city, and of the castleward, which contains eleven villages. There was formerly a fortress on the spot where the parochial church now flands, and over-against it an antient tower, but nothing now reassing of them bee the ruins.

the parochial church now flands, and over-against it an antient tower, but nothing now resisting of them but the ruins.

The other places of inferior note are, 6. Recun, a finall neat town, eight miles from Moni. 7. Malplaquer, village about the fame diffance from the above city. In 1709 the French army, commanded by the marfhale Villars and Boufflers, were attacked here in their triple enternehments, and endiesly defeated with great flaughter. 2. Ath, of Acth, on the Dender, fourteen miles from Mons, in a strong, but handlone town. 9. Lecois, a finall town. 10. Lefflines, on the banks of the little tiver Dender, four the borders of Finalders, feventeen miles distant from Mons towards the north-west, and four from Acth to the fouth. It is a fortified town, finious for its finen manufactury, it. Chievres in a finall open city, and a lordfhip, about nine miles distant from Mons towards the north-west, and four from Acth to the fouth. It, Hall, or Halle, on the Senne, faver miles from Brufflik, is famous for an image of the virgin Mary, endanced in gold, with a crown of the fame of the head. In one hand is an isage of our Saviour, and I shall the saviety of Bonne Eporance or Good Hope, et a mile and a last distance from Blank is is inhabited by monks of the order of the presmonstraemses and in this neighbourhood theirs is afto an abbry of Clivarian risans, called the abbry de l'olivie, or of the olive. 14. Braine-le-Chateau is a village, which, in 1637, was raised to a principality, under the mane of Tour and Tasis. 13. Ligne is a confiderable village, which give name to a principality, under the mane of Tour and Tasis. 13. Ligne is a confiderable village, which give name to a principality. The cheff for of the prince of Condition of the north, the start is famous for the buttle commanded by king William, and by Maximillian Emanuel, elector of Bavaria, greener of the Netherlands, and the French under marthal starte grained at victory, though they loft more men than the alice.

HII. The district of Namer is furroun

shield.

The principal places are, 2. Namur, the capital, at the conflux of the Maefe and Sambre, over which there is a bridge. It is fituated thirty miles from Brussels, and is one of the strongest towns in Europe, being defended by a formidable castle, more than a dozen forts, and other important fortifications. Besides the provincial council and town magistracy, a seudal court, called baillage, is held here, from which an appeal lies to the grand council at Mechlin. It is the see of a bishop, suffragan to the arch-

bishop of Mechlin: the diocsse contains eight cities, three hundred villeges, and isnumerable abbies, churches, relicious boofes, tes.

a. Charleroy, in latin Caroloreglum, is a sinall, but frong eight and fortrass, fifteen miles diffant from Namur toy the well, eighteen from Mons to the east, and twenty-sia from Brussels to the fouth. It stands on an hill, near the constant of the Sambre and the little river Pieton. It was formesty but a fine village, and sovereign lordship, called Charley, belonging it the prince of Isanghein. The marquis of Castel-Rodrigo, governor general of the Natherlands, made a city of it in 1666, fortified it, and called it Charledy, after the name of his master Charles III, hing of Spain. In the ineighbourhood of tills city stands the abbey of Soleilmont, consisting of nuns of the Cifererian order, founded in the year 1088 by Philip, count of Namur.

the abbey of Soleilmont, confilting of nuns of the Ciftereian order, founded in the year 1088 by Philip, count
of Namer.

S. Charlemont, in latin Carolomontium, is eighteen
miles diffant from Charlaroy to the fouth-eaft, and fixteen
from Namer, to the fouth. It flands on the top of a
mountain, at the foot of which runs the river Moefe. It
was yielded to the French by the treery of Nimeguen in
1678; but by the treety of Urselt the French were
obliged to furrender it to the late emperor.

4. Flewrut, Flerus, or Fleurs, in tarin Fleurus, is about
fix miles diffant from Charleroy to the north-eaft, and
eleven from Namur to the west. It is but a borough, but
partity confiderable, flee is fleet deputies to the states,
Here is also an abbey. But this place is chiefly fishous for
two battles fought in its neighbourhood; the first happened
on August 90, 1828; between the Spaniards and the Germans and Frencht.

S. Bouvines, Bovines, or Bovignes, in latin Bovines, or
Boviniacum, is a finall city on the left bank of the river
Phoefe, over-against Dirient, twolve miles distant from Naturer to the fouth. This is no strong place, and is conficustols only for being a pass but one perceisal church
in this city, and two convents; the one of Augustine
monta, in set, the they taken philosophy, and another of
nuns of St. Sepulches.

Near Baavines are to be four the rains of an antient city
called Chevressiont, which was very strong, the inhabicalled the Hevre.

In addition to the feveral historical facts already taken

tante of which made unamental to the final town of Walcourt is fituated on the The final town of Walcourt is fituated on the Called the Herre.

In addition to the feveral historical facts already taken notice of in describing the various diffricts, cities, and towns, in the Auftrian Netherlands, it may be neceffiry also to observe, that formerly that part of Germany, which has well of the Raine; with the feventeen provinces, went under the general name of Gallis Belgica among the Romans. Upon the decline of these provinces, and divided made themselves masters of final governments, till at length made themselves masters of these provinces, and divided them into a number of small governments, till at length they came into the possession of the house of Burgundy. Afterwards the emperor Charles V. as heir of the house of Burgundy, classed them as part of the smpire under the title of eitce of Burgundy; but the tyranny of his son Philip occasioned the inhabitants to throw off the yoke. The prince of Orange, and the counts Hoorn and Egmont, appeared at the head of the confederacy; the two latter, however, were taken and beheaded, but the former being eleded stadtholder, retired into Holland, when that and the adiacent provinces entered into a treaty at Utrecht. being eleded fladtholder, retired into Holland, when that and the adjacent provinces entered into a treaty at Urrecht, for their mutual defence; in 179; and, by the affiftance of England, compalled Spain to acknowledge their independency; and about the year 1609, were deemed independent fates by all Europe, under the title of the United Provinces; The Spaniards, however, remained possessed of the other ten provinces; till the great duke of Mariborough gained the bettle of Ramilies in the year 1706; after which, Bruffais; the capital, and most of the other provinces; acknowledged the emperor of Germany. These still continue in the possificion of the house of Austria, except such parts as were conquered by the French in the cope fisch parts as were conquered by the French in the continental war before laft, and are ufually comprehended under the general title of French Flanders, already described in our accounts of France.

4

The exclessifical government of Holland is divided into-two parts, each of which has its particular fynod. The fynod of South Holland is composed of eleven elasses, under which are three Eundred and thirty-one ministers: the fynad of North Holland has only fix classifies, in which are two hondred and twatty-one ministers. Before their ministers of the cfablished, there are assemblies of English preflyterians at Amsterdam, Rotterdam, Dors, Leyden, and Harlem, and at Amsterdam is an English spitopal miniters of the enablishes, there are automists of angirms preflyterians at Amsterdam, Rotterdam, Poers, Leydem, and Idarlem; and at Amsterdam is an English epitopal church. The semonstrates amount to thirty congregations, and thirty-eight ministers. The Lutherane conspose nineteen congregations, and have twenty-seven pusculars. Here is the motropolium church of the Meralinas, and cilo a Quaker's meeting. The Roman cathelies have about two hundred and fifty churches, and two hundred and thirty-five priests of jansenist principles. The following are the most confiderable cities and places in Holland, viz. 1. Dort, or Dordreckt, in latin Dordracum; feated on an island in the Morwe, that was formed in 1421 by a turible inundation, which destroyed no left than seventy-two villages, and about one hundred though destinate of fortifications, it has never yet been taken. The number of house in 1732 amounted to three makes. The number of house in 1732 amounted to three

shough detisions of fortineations, it has never yet been taken. The number of house in 1792 amounted to three thousand nine hundred and fifty-four. The herbour is very commodious, and its trade confiderable, especially in grain, Rhenish, and other wines; as also in simber, which, in furnmer-time, is brought from Germany down the Rhine and the Wanl, and here sawed in mills, of which there are great numbers about the city. This is the feat of the mintage for South Holland, and has a feminary.

2. The city of Harlem flands on the river Spaaren, wh 2.. a ne cay of staticin stand on uncriver Sparers, which runs through it, and is the only parling for the many this and other veffels coming from Friefland and others parts, in their way to the towns of Holland and Zealand. Harten stands fourteen railes to the work of Amsterdam, and enjoys a communication with that city and Leyden, by means of two spacious canals. The houses, which are means of two placeds estates. The notice, which are near brick buildings, in 1732 amounted to feves thouland nine hundred and fixty-three; but very few of them are built in the modern table, or make an elegian appearance. There are, in this city, four Duch Calvinit churches, one of Franch, one of Lutheran, and feveral mafs-houses, the papifts being here much more numerous than the pro-tellants. Its manufactures of filk and linen, though fill confiderable, aragreatly declined. The bleaching of thread and linen, for which this city is famous, employs a great number of hands.

number of hands.

The incention of printing is attributed by the inhabitants to Lawrence Cofter, of this city; on whofe house, which stood in about the middle of the town, was a latin infeription, that he invented it about the year 1440: a flatue was also erected to him on the fame account; and in the town-house is kept, in a filter case, wrapped up in silk, the first book that Coffee printed. Here is an acade-

silk, the first book that Colles printed. Here is an academy of sciences, founded in 1755.

Several beautiful featur, and a wood cut out into delightful walks and wistes, lie to the fouth of the town.

The city of Leyden, in latin Lugdenum Batavorum, is feated on the Rhine, in the fifty-fecond degree fifteen minutes north latitude, and in the fourth degree ten minutes aft longitude, and, ment to Amsterdam, is the largest and finest city in all Holland. The streets are lengthered that the first service in the control of the first are founding to the Dutch Calvinsits, with a Lutheran, an English, a French, and a Mennonite meeting: as also feveral mass-houses, the papists constituting the misjority of the inhabitants. The university sounded in 1575 by William I. prince of Orange, is the largest and unon ancient in all the United Netherlands, and has a waluable library.

The celebrated city of Amilerdam, or Amileldam, is The celebrared city of Amsterdam, or Amsteldam, is fituated in the fifty-fecond degree twenty minutes north lattude, and in the fourth degree ninety minutes calt longitude, at the influx of the Y and the Amstel, where is a fluice, by means of which that river continues its coorfe through the town. This is one of the greatest trading towns in Europe, and the harbour is one of the largest and fasel; and has this advantage, that the other towns of the province can easily fend their goods thither, and recurrents; and with a fair wind it is but a few hours passage to or from all the ports of North Holland, Friesland, Overysel, and Gelderland. The ground heresbouts is naturally smarfly, and the buildings founded on oaken piles, which occasioned the facetious Erafanus to fay, that is his country wast multitudes of people lived on the tops of trees. The middle of the town is interfeded by a great number of navigable cases, which while they conduct to the pleasantness and cleanliness of the piece; are at the fame time as great convenience to read. venience to trade

cleanlines of the piscs; are at the fence time as grown conrectioned to trade.

The city of Anaflerdam forms a functions on the Y,
and is forthind on the land fide with rampants and twentys

the Portnarwie Jews is a faccious and flately building, of a quadrangular form, and the infide is currenely must the other Jews have also their diffried fynagogus. The number of yop boules is conside able; that incomes, and their especial consideration that there is an holpital for aged men and women, confiding of fayers buildings, a new chifes for aged poor yet of both faces, the discount for old women, which is the most direct, thrudway of them all, and in, which do men also receive a comprehensive superior of the man the receive a comprehensive superior with a seconacidar humates; and forgot have been the superior with a seconacidary house, between the property of the superior with a seconacidary house, between the property of the superior with a seconacidary house, between the history of the superior with a second of the conditionable cities in Halland, a public cables, where all paor, travellers, that give any fausticity account of themselves, may go and take a load, a penny, and a publicate, may go and take a load, a penny, and a public cables, where slows they from the superior security of the superior with the superior w

change; but, as queliers, a must not omit to men-

tion the great bridge across the Morwe, in the middle of which is a time brais statue of the celebrared Erasmus, who was a native of this city. The first admiratry college of the United Provintes, under the direction of twelve commissioners, has to best born.

In this city are four churches belonging to the Durch, one of Frience, and one of English pretty greats, with as English epiteopal church, whole spinisher has one hundred pounds firstling per annum from the king of Great Britain, besides 'inspice less, said be amount to two hundred pounds move; there are also a Scots and Lutheran church, the latter of which is new and handlome. The synagogue of the Portuguese Jewa is a very sine structure, though not to magnificent as that in Amsterdam.

The Hague, or Grayenhage, is a most beautiful place.

betides furplies less, tail to smooth to two hundres pounds mores there are also a Soots and Lutheran church, the latter of which is new and handfome. The fynagogue of the Portugues of ewa is a very fine firedare, though not it magnificant as that in Amsterdam?

The Hagus, or Gravenhage, is a mod beautiful place, fituated in a very delightful country, ten miles north west of Roterdam; but, from its having neither gates nor walls, is called a village. It is, however, futurounded by a roast, bordered with a walk of lofty and shady trees, and at the avenues of the rowe is passed by means of daw-portiges. The streets are broad, feveral of them are whinout canalis, and the houses are, for the most past, extremely well-build. The haumber of coates belonging to the noblemen and gentlimmen, and the gay appearance in point of dress, sive a very different idea of life sheet from that in the trading cities. The people herd are more points and casy in their behaviour, then in other past of Holland a the most confiderable persons in Europea secting here, as well as the assembly of the states general, which also draws lither the greatest part of the people of the first dissillation is the United Provinces.

The enviroum of the Hagus are extremely delightful; and in its neighbourhood is a sine pleasure-graden, in imitation of that of Vauxhall; on the cast side the town is bounded by beautiful measures is the South by folendiffeats; on the west by fand-hills along the North Sea, on which side is asserting, which is at two miles distance; and on the north is a delightful wood, in which the stadtholder has a sket hooven by the name of the House is distance; and on the north is a delightful wood, in which the stadtholder has a fact hooven by the name of the House is distance; and on the north is a delightful wood, in which the stadtholder has a fact hooven by the mans of the House is distance; and on the north-west, and seven the mouth of the listle river Ling, which runs through the state of the manuscript of the stands of the s

Spain, after the taking the Briel by the confederates. 6. Medenblick, or the Dayder tee, feven miles from Enchuy-

fon I the neighbouring country abounds in excellent paffures, where are bred a prodigious number of cattle, 7. Schagen, fourteen suites to the west of Medenblick, 8. Egmond, six miles from Alkmast to the west. Q. Beverwick, seven miles farther to the fouth of Egmont.

10. Brock is a large and handforne village of North Holland. The houses we all built of boards it they selden exceed one story, and the roofs are tiled. The village is watered by canals, which are kept with the greatest care, and all the freets paved with bricks, which in some places are disposed in the form of flowers, and are frequently washed. That these ornaments may not be defaced, or their clearling the interrupted, the freets are designedly made their cleanlines interrupted, the firects are designedly made too. narrow he carriages to pass through. The cattle, their cleanlines interrupted, the streets are designedly made too narrow is carriages to pass through. The cattle, inflead and an addition the visinge, are kept by the meaner fort a product, who dwell among the pastures, and aid oas he are must put up at the intus without the visinge. Not only the wooden furniture in the housel, but the very broomsticks are painted, as are also the gates and rails in the meadows. The inhabitants either trade, or subsist on their estates, and among the latter are frequently many merchants, and tradesnein of Amsterdam, who retire hither to enjoy in traingulity the fortubes they have acquired by their industry.

A row of illands lie acres the control of the street of the the first of which, named the Textl, is disiolated from the first of which, named the Textl, is disiolated from the

A row of flands lie acre "I'e" the first of which, named the Text, is disjoined from the north cape of North Holland, by a very narrow channel, nor are the distances between the fest much larger.

on the cast fide, called Bunk, which enjoys the privi on the cast inde, called Bunk, which enjoys the privileges of a city. The inhabitants apply themfeves to agriculture, and herring-fifthing; and the flates, because of the importance of this place, which lies at the mouth of the Zuyder sea, have built a strong fortest here, where they keep always a good garrison. Most of the foil is applied to set of the power of the

The island of Flieland, or Viteland, lies towards the north-east of the Texel, and is about nine miles long, and

but two broad: it has only two finall villages.

North-eaft of Flieland lies Schelling, or Der Schelling, which is about ten miles long, and three broad. It has two villages with churches, and three wifnout: the chief of them, containing above one thousand houses, was of them, containing above one thousand houses, was burnt, with one hundred merchant thips, by Sir Robert

burnt, with one hundred merchant Thips, by Sir Robert Holmes, with an English fiquadron, in 1666.

These silands lying along the incourh of the Zuyder sea, do, with several large banks of faind, break the rage of the ocean, and form two good harboons at the Texet and Vlie; the first being a noted station for ships bound to the fouth, and the other for those bound morthward.

A number of intie silands, "atted the Wherengen," from the great quantity of sea weed called Wier," he more to the forth, on the cost of North Holland; the chief of them is five nuited long, and two proads have several conditions.

for the on the coeff of North Holland: the chief of them is five nites long and two broad, has feveral good villages, a rich foil, and their flocks of fleep are very numerous.

II. The province of Zealand has Holland to the north, Planders to the fouth, Brabam to the eaff, and the German ocean to the wieft. It confifts of itlands, is guarded against the fea by dyies; has a fruith! foil, but is without fuel, except what England and Scotland fupply. The affembly of the flates confifts of feven Members, is held a flate of the flates of the flate Middleburgh, and has the prince of Orange for its prefident. To the affentile of the dater-general, Zealand fends four deputies, who hold then office for life. Two high courts of juffice to ge of admiralty, and a chamber dates-general, Zealand ge of admiralty, and a chamber all the unals. The clergy are and one together fixty-three high course of juntary of accompiss, are the all the unals. The clergy are divided into four chairs, and one together first, three ministers. The province is populs and wealthy, but the air is not wholfone. Sheep are tunnerous, and the wool fine, and fifth may be had in great plenty. The principal places in Zealand are,

1. Middleburg, the capital of Walcheren, and of the

whole province, is a large, handfome, rich, and frong town, which flands hearly in the centre of the island, to which fituation it owes its name. A canal a mile and a half in length, affords this city a communication with the West Scheld, and is capable of receiving the largest ships. Middleburg is fortified with a wall, strengthened with thitteen basslons, Heré the states of the province hold their meetings, as also the deputies who alternible in St. Nicholas's abbey. It is likewife the feat of the admiralty college, the mint, and the chamber of accompts.

Several fine squares and flately public buildings adorn this city, particularly the town-house, which is a noble pile, with a very lifen tower and clock, which last cost and hundred and fifty thoughd guilders. It contains fevent Calvinis thurches, with an eademy, an English, French, Lutheran, Mennonite, and Popish church, and a Jewish synagogue. It is a place of great trade, particularly in wines.

a. Fluthing, in Dutch Vilifinger, is a well-fortified town at the month of the Hondt, or Western Scield, and defends not only the passage into whether Scield, and defends not only the passage into the other lides of Zasland, and even into Fluthers by fea. It lies eight miles to the steat with Middleburg. Its harbour, which is bright the Market, he's between two unoles, or dyken, and on the found that the fell to of Walcherd, and two canals. The fast turns only to the low other, and two canals. The fast turns only to the lower two other, and two canals. The houses are in general well built, and, bedies other fine structures, the town-hoof is a magnificent and regular pile. In the town are three churches of Dutch Calvinitts, one of French, one of English, and one of Mennonites.

3. West Chaelle, lies on the western coast of the island, and is simply from Middleburg, about fix miles to the north-west of Middleburg, it enjoys large privileges. 5. Rammekens, four miles distant from Fluthing to the cast, and as mairy from Middleburg to the found, is a strong fort, built by Mary queen of Hungary, and governess of the Low Countries, for Charles Vin This was also one of the canton, to other given to governesses.

The Americandon's torignally strong and the Middleburg.

S. Ver, or Teer Véer, four miles from Middleburg, is well-fortified, and has a good trade-of-pecially 'Scot-land, the natives of which enjoy particular privile es here. The arfeual is the best furnified in the province, and the harbour a verty-good one. '12'to Calvinites sloke are allowed the public extresse bittheir religion in this town a whence the Veres, antifectly earls of Oxford, are faid to have derived both their origin and name. Assettle Besteland is the pleasantest of all the Zealand

South-Beveland is the pleafantest of all the Zealand islands, taild contains the town of Ter-Goes, out the notethern part of the siltent, not for from East-Schold: The siltent in the district death desputes to the flates to it is fmall, but nearly built, frongly fortuned,

and carrier on a good trade.

The town of Monter, or felen, belong to the Borfelen family, and is built near a place where a town of the fame name formerly flood, which was defroyed by an

the fame name formerly flood, which was deftroyed by an inundation in the year 1732.

11 Korigene, a finall-vallage in North-Leveland, is the only place worth mentioning there, the standard of Schowen is feventeen miles long, about eight broad, tolerably fertile, has many rich farms and gentlemens feats, and contains the town of Zirklee, thirteen miles from Middleburg, which fends deputies to the fatter; and Broniverthaven, a finall fea port town, but the long of the contains the send of Though the fatter of the send of the contains the great number of duives, or pigeons, which formerly abounded in it: there are only a few villages in it. 1 151 (1911), then The illand of Tholen is eight miles long, and four broad,

The island of Tholen is eight miles long, and four broad, but does not contain any place worth naming, except Tholen, which stands on the Earldracht, is well fortified,

Theifland of St. Philip has only one village of the faues are.

Theifland of St. Philip has only one village of the faue name, whileh is not very confiderable, the first hard by the Flic to the well, by Groningen and Overyfel to the eath, by the German overs the next hand by the Flic the German ocean to the north, and by the Znyder fea to the fouth. It is thirty-two miles long, twonty-seven broad, has a foil and air refembling those of Holland, rich pattures that feed large quantities of cattle, theep, hories, e.c. and in the higher grounds are good corn lands. It produces turf and wood, has many lakes, and is guarded from the fea by confiderable dykes. Here are many causis which facilitate commerce; the inhabitants are chiefly Amabaptifts: their language approaches the nearest to the old English of any other in Europe. Several courts and chambers: belong to this province, and the Calvinust minitlers are two hundred and seven in number; divided into fix classes, and holding synods annually and alter-stately, wiThe affembly of the states here consists of about eighty-two persons, who fend five deputies to the assembly of the states general, The linen manufactured here is much eftermed

ramparts, a broad deep datch, five bulwarks of earth, with a ditch each. It flands in a fruitful foil; and by its navigable canals, the largest of which runs to the ocean, they have a good trade with Hamburg. Bremen, Embedin, and Holland; and are plentifully supplied with necessaries from the neighbouring countries. They have two hospitals; and the city is governed by good laws under three burgomasters, and nine aldermen.

2. The town of Francker, which is about ten miles from Leuwarden, and four from the Zwyder sea, is neither large nor fortified, but has an university, which was opened in the year 1585, and a physic-garden. The salaries of the professors are paid our of the revenues of the old monasteries; and the students, neither in this, nor the other universities of the provinces, pay any tax for their wine and beer. They make here, great numbers of sine blue glazed tiles and bricks.

3. Harlingen, which is the largest town in the province next to Leuwarden, stands in the coast of the Zuyder sea at the mouth of a large canal. The town is pretty well furtified towards the land, and the adjacent country may be easily laid under water. Its manusactures are falt, bricks, and tiles, The admiralty college of Friedland has the town, and about sour or sive from the north sea.

bricks, and tiles. The admiralty college of Frielland has its feat hee.

4. The town of Dokkum, about eleven miles from Leuwarden, and about four or five from the north fea, with which it has a communication by a canal called Dokkum Diep, through which the largest ships may pass at high water. A great deal of salt, is made in this town, which stands in a fruitful country, abounding in corn, passure, villages, and gentlemens seats.

5. The small town of Staveren, which stands on the banks of the Zuyder fea, within three leagues of West Friesland, was formerly a place of great trade, which hath much dwindled of late years. 6. Sneck, situated on a lake of the same name, which supplies it with plenty of sish, both for consumption and sale. 7. Stoten, a small town, almost surrounded with lakes. 8. Workum, a small town near the Zuyder sea. 9. Yist, which sends deputies to the states. 10. Makkum. 11. Kinlopen, which has a harbour on the Zuyder sea.

12. The village of Molkweren, which is situated in a marshy ground. They speak here a particular language, which none of the other inhabitants of the country understand. It is a remainder, or dialect of the anticut Saxon; so that the people of the village, and the English, understand each other nexts well. The house here should be supposed the surrounders and the English, understand each other nexts well. The house here a particular language, and the English, understand each other nexts well.

Saxon; to that the people of the village, and the English, understand each other pretty well. The house, here are placed so irregularly, that when a stranger comes into this village, he must have a guide to shew him the right

On the coast of Friesland are two little islands, called Ameland and Schiermounigkoog, the former of which belongs to the prince of Orange, as a free, independent lordship. At Wykeb village, in the quarter of the Seven Forests, are interred the remains of the celebrated general

SECT. III.

Of the provinces of Groningen, Overysel, Gelderland, and Unecht, with the country of Dreanthe, the Generalité lands, &c. with a particular description of their respective cities, towns, and river; a lo of the trade, manufactures, U. of the inhabitants.

IV. THE province of Groningen is bounded, on the cast, by Munster; on the west, by Friesland; on the fouth, by Dreambe; and on the north, by the German ocean. It is forty-seven miles long, and the greatest breadth is about thirty-three miles. The number of canals and dykes are very confiderable; and the principal river is the Hunfe. The states confist of the deputies; of the town of Groningen, and of the neighbouring country fix deputies are fent to the flates general: the number of

established elergy are one hundred and fixty ministers, divided into feven classes. The air and foil resemble those of Frichand.

na 191 an

divided into feven elasses. The air and foil resumble those of Fricland.

The principal places are, 1. Groningen, the capital, twenty-feven miles from Leuwarden, hity-eight from Deventer, twenty-four from Enabden, eighty from Ameterdam, and twelve from the nearest fluore of the German ocean, at the conflux of several rivulets, which form the Hunse and Fivel. Ships of considerable burden can come up to the city, in consequence of, which it enjoys a pretty good trade. It was formerly very strong, but its fortifications are now much, neglected. The university, here was sounded in 1615, and is well endowed out of the revenues of the antient monasteries. The town, which was formerly one of the Hanse, and has still great privileges, is large and populous, being the feat of the high colleges, and containing three fractions market-places, and twenty-seven streets, in which are many, tine houses, besides churches, and other public structures. By the rives Fivel, and the Eems, it has a communication with Westphalia. In 1672 it made such a gallant resistance against the bishop of Munster, that he is said to have lost ten thousand men before it. A considerable district, called the Gorech, is under the jurisdiction of this city. Ro-dolphus Agricola, and Veselius, two of the most learned men of the age in which they lived, were born here.

2. The town of Dam, or Damue, stands on the river, or channel, called Damsterdies, about three miles from the month of the Eema to the fouth, and thirteen from Groningen to the south-west. Though this is an open place, it has all the privileges of a city, and sends deputies to the states of the province. It has suffered very much of late by inundations. The Imperialities, it is said, took this city by storm in 1536, when those of Gelderland were lost of it; and that it was agreed, that the walls should never be re-built, nor the town fortified.

3. The strong southers of Winschoten stands near the Dollert, fixteen aniles distant from Groningen to the south-act. It was taken and plundered b

eaff. It was taken and plundered by the troops of Munfler in 1674.

4. The town of Delfzyl flands on the Damfler-Diep,
otherwife called Fivel, three miles from Dam to the northeaft, at the mouth of the river Eems. It has a very good
liarbour, which, for fituation, and other advantages, exceeds that of Embden. It is a place of fuch importance,
that it was always well fortified by those who were in poffeffion of it. The duke of Alva designed to have built a
good city here, but was prevented by the wars, to which
hit bloody government gave rife. It is a frong place,
furrounded with good ramparts, and seven bastions, and
defended by a citadel encompassed by broad and deep
ditches.

oriches.

5. Twenty-eight miles from Groningen to the fouth-east stands Bortanger fort, in the middle of a large marsh, which is almost impassible, on the borders of the bi-shopric of Munster, and the country of Embden.

V. The province of Overyssel is bounded, on the east, but the country of Bastheim and the histhograp of Munster.

by the county of Bentheim, and the bishopric of Mun-fler; on the west by the Zuyder sea; on the south by Zutphen, and on the north by Friesland and Dreanthe. It Latiner, and on the norm by richand and Dreanthe. It has the name of Overyssel from its situation in respect of Holland, Utrecht, and part of Gelderland. Its greatest extent from north to south, including the territory of Dreanthe, is about firty-seven miles, and from east to west about forty-three. The soil is in general far inserior to that of the other provinces, being full of sand, heaths, that of the other provinces, being full of fand, heaths, and marshes; yet in some places they have good corn lands and pasture. The states consist of the nobility, and the towns of Deventer, Campen, and Zwol, in which their annual assemblies are alternately held. Here are high tribunals and colleges, answering to those of the other provinces; and five deputies are commonly fent from hence to the assembly of the states general. The elegy of the established religion, who are divided into four classes, making it all eighty-four ministers, hold their annual synods atternately in the chief towns. This province was long subject to the bishops of Utrecht, till bishop Henry of Bavaria transferred it to Charles V. and in 1580 it accreded to the union of Utrecht.

The principal places are, 1. Deventer, in the operator

The principal places are, 1. Deventer, in the quarter of Salland, on the Yifel, over which it has a bridge of boats, eight miles from Zutphen, forty-four from Utrecht, and about eighteen from the Zuyder fea. This was formerly an imperial and Hanfe town, and alfo, for a fhort time, a bilhop's fee. It is now a neat, populous, well built, and well fortified city, containing feveral churches belonging to different fects, a magnificent gymnafium, a mint.

732 THE NEW AND UNIVERSAL SYSTEM OF GEOGRAPHY.

and an iron foundery i five annual fairs are held here. They have a good trade, and along the river fide is a fine quay, adorned with rows of trees.

2. The town of Campen, on the Yfiel, is firong from its fituation, and may be easily laid ender water. This place was once a free imperial cry, has fill a mint, but its trade is greatly decayed. The wooden bridge is a curious fructure, standing upon vast piles. 3. Zwel, though not chief in dignity, is the handforment and most wealthy town in the province, stateen miles north of Deventer. It is strongly servised, contains several clustence and hofpitals, an arienal, a college, and granary. The provincial states meet here, at Deventer, and Campen alternately, and the celebrated Thomas à Kennjis was piles of a monaftery near this town.

4. Woollenhoven, on the Zuyder fea.

5. Hosselt, a fortissed town on the Blackwater.

6. Geneminaden.

7. Amela, famed for its manufactures of sine linen.

fine linen.

VI. The province of Gelderland is called North-Gelderland, to diftinguish it from Upper Gelderland, or Gesderland, to diftinguish it from Upper Gelderland, or Gesders, belonging to the king of Prussa. It is bounded, on the east, by Monther and Cleves; on the north by Overgiell and the Zuyder sea; on the fouth by the Maese, which separates it from Brabant; and, on the west, by Utrecht and Holland. It is forty-seven miles from north to south, and upwards of forty from east to west. The land lies higher, and the set is much clearer than in the maritime provinces, and the soil in most perts is fruitful. Gelderland is divided into three districts, via. Nimequen, Zutphen, and Arnheim, each of which has its diets and states. Those for the province are held twice a year, and nineteen deputies are sent to the states, general. Here are two hundred and eighty-sive calvinist ministers, four lutheran, sourteen roman catholic, and three anabaptist contheran, fourteen roman catholic, and three anabaptificon-gregations. This province is watered by the Rhine, and its time branches, the Yfel, Leck, and Waal, feveral

The most remarkable places in the district of Nimegoen are, 1. Nimegoen, which stands on the Waal, nine miles from Cleves, and fifty-two from Amsterdam, and is the country of the quarter to which it gives usme. It is a large are, 1. Nitneguen, which trands on the Wall, him miles from Cleves, and fifty-two from Amflerdsm, and is the capital of the quarter to which it gives usme. It is a large antient city, firongly fortified, and pleafantly fituated, where the Oppidum Batavorum is supposed by fome to have stood. It was formerly an Imperial or Hanse town. On the east side of it stands an old castle, called the Falkenhof, where are pleafant walks of lime-trees, and it contains several churches belonging to different sects. The provincial states, and those of the district, assemble in the stadthouse. This city carries on a good trade with the duchy of Cleves, and makes great profit by its white beer, which is much esteemed throughout the provinces. In the town-house is kept the sword with which the counts beginned and Hoom were beheaded by the duke of Alva's order. The turgrave, who resides in the castle, is one of site chief nobles of the provinces, and presides in its dieta. In the higher part of the city there are three large ponds, cof from hidden springs; and through the whole there are many deep wells, which are observed to rise and fall, as does the Masse, six miles distant from this city; whereas the Wazi runs close by it, but in a valley, towards which the descent is considerable. the descent is considerable.

2. The town of Bomme! (the capital and only confiderable place of an island of the same name, otherwise called Bommel-waert) stands on the river Waal, ten miles distant from Cuylenburg to the south, and eight from Boldiffant from Cuylenburg to the fouth, and eight from Bol-duc to the north. It is a pleafant watered city, with broad and regular firects. It is very firong, being fortified with good curtains, baftions and towers, a double will and double ditches. It flands low in a marfly ground, which can be overflowed from the Wsal and Maele. The town chuse their own magistrates, under whose jurisdiction is the whole island of Bommel, in which are many good villages, and which is about thirteen miles long, and four miles broad, between the Waal and the Macfe. This place furrendered to the French in 1672, who spent sour-teen days in destroying its fortifications, carried off the artillery and ammunition, and obliged the town to pay

thirty-fix thouland guilders to prevent its being burnt.

3. The finall city of Batenburg is fituated on the northern bank of the Macfe, twelve miles diffant from Nimeguen towards the fouth-west. It is the chief place of a little country or district, called Mass and Wast, becaute it lies between thefe two rivers near their conflux, The town has the title of barony; and two brothers, lords of Barenburg, were beheaded at Bruileis, in the year 1569, by the duke of Alva's orders. From that family the counts of Hoorn were also deceeded.

4. In this difftlet is also the town of Tiel on the Waal, seventeen miles west of Nimequen; it is still populous, and have a colerable trade, but is much decayed from its prishing following. That yillage of Panderen is in the baillings of Upper Berries, where begins the new canal, through which the win as content passes. In the same baillings stood former yith schenken-Schanze, a very strong and spacious fort, built in 1816 by general Martin Schenk; and the Tolhaus, a castle where the dukes of Gelderland frequently resided, and where vessels still pay toll, as they formerly did. The Betrewe is that trad of land lying between the Rhiew erid the Waal. It is called the Upper and Lower, or Eastern and Western Betrewe, and divided into two bailtages.

or Eastern and Western Betrewe, and divided into two beilinger.

In the second district is the town of Zutphen, on the right bank of the Yste, giving name to a country, which constitutes another of the three quarters into which the province is divided. This place is large, and strongly fortised, and has a bridge over the Ystel, which divides the town into two parts. Here are several churches belonging to different sects, with hospitals see the sged, sick, orphrats, and strangers, and a symnshum. There are pessant walks about the town, especially on the ramparst. The citizens are noted for their courtefy and politeness, to which the many gentlemen who live here greatly contribute. The great Sir Philip Sidney died of the wounds he received at the seep of this city; and Gerard van Zutphen; matter to the samou Thomas a Kempis, was born here. The whole neighbouring country may be laid under water by means of Borkel, a river which here joins the Ystel.

Yfiel.

In this diffrict are also, Breedevoort on the borders of Muhfer and Heerenburg, a town which gives name to a lordfhip; Doetburg, a fortified town, at the conflex of the Old and New Yfiel; Deutichen on the Old Yfiel, Lochem on the Borkel, Grol on the Slink, and Borkelo on the Borkelo.

on the Borkelo. The third diffrict of this province, called Arnheim, contains a town of the fame name, which is not only the capital of this diffrict, but of the whole province. It flands on the Rhine, at the foot of the Veliuwe hills, fix miles from Nunequen, and forty-eight from Amflerdam, and is flrongly fortified. There is an anylent palace, in which the dukes of Gelderland, and after them the fladholders of the province, used to keep their court. The walls, being delightfelly planted with lime-trees, make a pleasant walk. In the great church are the monuments of several counts and dukes of Gelderland; and near the city is the village of Gosterbeck, where the emperor Henry III. was born in 102y. This town has a commodious harboar, and is the feat of the supreme council of Gel-III. was born in roay. This town has a commodious harboar, and is the feat of the fopreme council of Gelderland, and the chamber of accounts. In that track of land, called the Veluwe, is the lerdfhip of Loo, belonging to the prince of Orange, and has a beautiful feat on it.

on it.

The other places of note in this diffrict are, t. Harder-wyk, fituated on the Zuyder fea, twenty-fix miles from Arnheim, and thirty from Amflerdam. Here is an university, which, till 1648, was only a famous fetool. The trade of the town is confiderable, especially in fifth, of which its red herrings are much admired. The sleeple of St. Mary's church, a most stately structure, is 66 high, that it serves for a land-mark, being seen at a great distance, both by sea and land. The provincial mint is in the city, the sortifications of which are in the antient. The ecclerated lawyer Gerardus Voetius is faid the city, the fortunctions of which are in the antient manner. The celebrated lawyer Gerardus Voetius is faid to have been a native of this place. Prodigious quantities of blue-berries are gathered in the neighbouring woods, and carried to Amflerdam, and other towns. a. Elburga, a finall town on the Zuyder sea, whose ramparts, planted with lime-trees, form a delightful walk. Its inhabitsats subfift chiefly by fishing, and catching wild ducks. 3. Wageningen, a small town on the Rhine, with a commodious harbour: tobacco is much cultivated in the

modious harbour: totacco is much curivaced in the neighbourhood.

VII. The province of Utrecht is wholly furrounded by Holland and Gelderland, except a small part which borders on the Zuyder sea. The length is about thirty-two miles, the breadth about twenty. This country enjoys a good air, and in most parts the soil is fruitful. The rivers are, the Rhine, Lrck, Vecht, and some smaller streams. This province is divided into sour quarters.

There are five cities in the province of Utrecht, and satu-five towns and villages. Its states are composed of

fixty-five towns and villages. Its flates are composed of the clergy, the nobility, and the towns: indeed the former are merely nominal, and conflit of nobles and citizens of

Brabant and Limburg, of the upper quarter of Generalson, and part of Flanders.

The principal places is Brabant, belonging to the flates, are the following: a. Bois is Duc, called in latin Silva No. 74.

Decivit it if finated at the conductors of the tivers Dommet and As, which, after their junction, are called the Doch. As book an hour's distance from hence, this river toles itself in the Mixely. The city is pestly legge, and insertected by many canals; it has the abunches beginning to the Dutch Calvinitts, with old of France, one of Lunberans, and ten mass-houses, the smelority of the people being of the Roy and drabels.

2. Twenty milles to 'in web'! I find a Bergett op-norm, or Bergen upon the bill. The town the rivule of a there most of Zoom. The fourth these of the town stands on a small emispane. It has been long calebrated at a strong forersh, had its wall, which is about an hour's walk to circuit, it destrated by five basilons on the narribide.

a throng line was drawn there is 1727, that the a communication with Moermant, Finsen, and Royer forts, and the South or Water fort of sive basilons commande the entrances of the old and new harbour. The adjacent country may also be laid under water 1 and as long as Zeland continues clear of enedice, supplies and 'sinforgeneous may be thrown into it by means of this Schold. It contains about eleven hundred honses, with an old palace, called the Hof, that is at present the chamber of accounts in it. Here is a Dutch Calvinish chared, and another dievided into two partitions, which is assigned to the French Calvinish and the Lutherans. The spulies have likewish a chapt. This town was fift walled in 1287. The flates general keep a good garrifot here, and the governor is always a petion of dislinguished reputation.

3. Breds, the capital of the barony of the fame name, is leaved on the river Merk, which at this place receives the As. The latter of these two streams being a little before increased by the Byloop is here rendered havigable, and has a communication with the German ocean. Its fortifications, without very great improvements, are unside to final a long siege, though the city itself is partly covered by a morals, and, by means of the forecan. Its fortificat

there are 55, and 1700. In the commerce are of this town are greatly decorated to the commerce are of this town are greatly decorated to the commerce are of this town are greatly decorated to the rights of the fovereigns of it, jointly with the fovereigns of it, jointly with the fovereigns of it, jointly with the dates of firshent. Here are many popific convents, and churches belonging to different fefts, and a firong garrifon is maintained by the flates; the magiftacy consists partly of Calvinifts, and partly of Roman catholics, and the latter must be natives of the bishoppic of Liege; in a hill in the neighbourhood is a horizontal quarry full of long winding passages, in which, in time of war, the country people scene their cattle and valuable effects; forty thousing men, it is faid, might lodge in it with great convenience. The town contains about three thousand houses, and thirteen thousand inhabitants, besides the garrison. Here is a Calvinift gymnashum and grammar-school, the masters and professors of which are paid by the states; and, besides other buildings, here is also a large college, a commandery of the teutonic order, a stately town-house, and governot's house.

That part of the duchy of Linsburg, which belongs to the states general, contains, it. Valkenburg, the Falcon's mountain, or castle, which stands on the river, Geul, and though but a small open place, is the capital of a country 2. Dalem, otherwise called St. Gravendal, a small town on the tiver Berwine. The former of these places is more of the places; and collection of the states general have the following places in the upperpart of Gelderland, viz.

3. Venlo has its name from its situation among low meadows, which is the meaning of its name in Dutch. It 9 A. Small sucre.

3. Venlo has its name from its intuation among meadows, which is the meaning of its name in Dutch. It flands

flands on the right bank of the Maefe, feven miles diffant from Geldre to the fouth, and feventeen from Rutemonde to the north. It is not well enough fortified to be able to hold oute long fiege. Its rampart is about three miles in compass, and on the fide of the Maefe it confide a well, formorfly flanked with fevenal towers, unds of which have been demolified.

The city of Venlo it of a footer figure, and pretty large, having two foures: the town-house flands in one, where they also keep a market three lines a week; the other is the parade, and place of arms. There are between eight and nine hundred houses here, and about four thouland inhabitants, most of whom are Roman calindica, who enjoy the free and public esercife of their religion. The imagelfracy is composed of a foliast, a being mader, fiven Rheppen, three countellors, and two ferrestries. The burgo-mastler is changed annually by the flates general, and choseful among the fekerpen from a nomination of three prefented to them by the countellors.

A Sevenswerr is a throng fortress with feven bastions. It flands, in an illusted of the Maese, near the condens of the duchy of Caves and the bilinopries of Liego, three miles below Maesiyes, and nine above Rutemonde.

The following we also the principal places, of which the states general are possessed with the West Scheld. The formal plain, which may be laid under water. The commodity it chiefly deals as is corn, having a canal, or harbour, which consumnates with the West Scheld. The formal dilines by which it is furnounded, reader the approaches to it very difficult; but the air is none of the best, and most of the inhabitants are papilists. It gives name to a baillinge of conderable extent. 2 Sluys, on the German occan, the hanbour of which is now almost choaked up. The fortifications are restarkably strong; but the air is so bad, that the garrifon mult be changed every year. All the other Duck; everyernors in Piranders are subordinate to the governor of this rows. 3. Sas van Ghent is a small but strong to

SECT.

Of the persons, dispositione, dress, genius, enclans, manners, Sc. of the Dutch; obeir religion, constitution, stade and commerce, revenues, sources, Et.

THESE people are, in general, tall and ungain, have good complexions, and are ftrong but sukward. The boors are heave, but flow of understanding. Their feamen are a plain, blunt, rough, furly, and ill-mannered fort of people. Their tradefinen are somewhat sharper, and make use of all their skill to circumyent those they deal with. Every class of men are extremely stogal: all appetites and prisons (avarice excepts) run lower and cooler here than in other countries. Their referement is usually unganly and Grange. They are however, rations usually unmanly and favage. There are, however, patient, fleady, wary, calm, and have feldom any difference with each other; but when they are initated to quartel, they grow exceedingly brutish.

grow exceedingly brutills.

Their dreft is plain, and they change fathions as rarely as the Spaniards. The men wear coats without thap of plaits, with long pockets placed as high as the ribs. The womens dreft is fill more fingular, for their coats react, only to the middle of their legs. They are not exceed in their houles and furniture, and the fireen, there was are kept amezingly clean. Mr. Henway, in Two of the women, lays, that the dirtieft thing in a Do. Sman's leave the companies of the women, lays, that the dirtieft thing in a Do. Sman's leave the content of the content of the women, lays, that the dirtieft thing in a Do. Sman's leave the content of t

hopfe is his wife. The patement of the chambers is gisterally of marble.

The people of this country are divided into five claffes; namely, boors or hufbandmen, feasiers and warmens; marchaires and tradfasen at their who have a competency; and, diffully, gentlemen and officers. The poorer fort live upon four milk, polfe, and herbs; but people of a fuserior finition instrate their neighbours, and aim at the most luxurious mode of living. They are addicted to drinking; and, when they frest their friends, do it funntuarily, though they pinch themselves for its month aftriwards. Their principal enjoyment is good esting and hard drinking. Only of their winter similarments is fisting, in which they exact, fo that in a head fast it is aftending to fee the crowds of both frest that pain from place to place upon the low, and dart along with amazing rebelly. Many of the Durch exact in painting and entraving, form have been good flatuaries, and a few have been temperable for their wit and ingenuity, as Erafmus, Grotiva, fee.

The common mode of travelling in the United Provinces, and indeed throughout the Apstrian and French Netherlands, it in trackicous, or draw-boarts, which are ange covered boast drawn by a horse at the rate of three miles an hour, the fare of which does not amount to more than a penny a mile. The rate of these boart, and also of the post waggons, is fixed; and you are posmitted to carry a portmantasu and provisions, to that you are not under the necessity of expending any thing at public house. The carriage of the baggage is not fested by law, therefore an agreement ought to be made, otherwise the driver four an agreement ought to be made, otherwise the driver four an agreement ought to be made, otherwise the driver four an agreement ought to be made, otherwise the driver four an agreement ought to be made, otherwise the driver four an agreement ought to be made, otherwise the driver will charge according to, the distalete of his in avarice; and the money must be paid him, if a previous bargain is not

will charge according to the dictates of his avaries; and the money must be paid him, if a previous bargain is not minde.

At the inns and public houses on the road, a person is fure to meet with clean linen and soft bods; but their bed-steads, or rather cabine, in the sides of the walls, are placed so high, that a man may beak his neck if he happens to fall out of them. Besides, as there is no disputing with a Dutch lim-keeper, either about the seckoning or any other particular, therefore a traveller small be content to lie in the same room with half a decay resple, or more, and be disturbed all night long by some ody or other, if the cloud of a landsord pleases to have it so.

In the United Provinces, their coefficial concerns are governed by a prohytery, where all the ministers are equal. The prohytery, or consistency, as they call it, is composed of all the ministers of the town, and of the lay-siders, who are chosen amongs the magistrates. They take care of all the affairs of the town, and of the lay-siders, who are chosen amongs the magistrates. They take care of all the affairs of the toke, according to the discipance etablished by the national good hald at Dort in the year 16.18. The decreons, who are laying the same such a state of the soot, and the disposal of all the money designed for charitable uses.

They have acclessifical attempties called classes, completed of the deputies of two or first meighbouring churcher, money of left, who fend each a maintifer and an older. Another ecclessatical attempty is the provincial synod, of which there are two in Hedsand, one for South Holland, and the other for North Holland. The whole province being divided into a great many classes, each class fends four departed to their respective support, two ministers, and sawe elders. All the more important affairs of the chitch, all the regards the supportant affairs of the chitch, all the regards the supportant affairs of the chitch, all the regards the supportant affairs of the chitch, all the regards the manuface by

excused from most traces at Amireram, &c. I nee are feveral other feets that have no fettled congregations.

The principal cities, as also the nooles, fend deputies to the States General. Thus the number of the representatives is very confiderable, and all are maintained at the exsives is very confiderable, and all are maintained at the expense of their respective provinces; the deputtes of Holland being allowed four fiorins a day, and those of the bther states siz. But whatever be the number of the deputtes from each province, be they nobles or commoners, they have altogether but one voice; and therefore in the affentably of the States General there are but seven voices. Before this, being properly the affemble of the have altogether but one voice; and therefore in the effentive by of the States General there are but feven voices. Bedides this, bring properly the affembly of the repreferentives of the feven lovereignies which coupofe the flates of the United Provinces, their, power, is limited either expressly or tacitly by this infituation: "Not to fuffer the leaft wound to be given to the fovereignty of that province which deputes them?". The States General, however, not only make peace or war in their own name, but fend and receive imbified on and other public ministers. The commander in chief, and all other military officers, take an oath of fidelity to them; and, during a war, fome of their members, or of the council of state, follow the army, fit in the council of war, and without their consent nothing of importance can be undertaken. In time of war the States General appear at first view to be the fovereigns of the country: but most of these deputies are appointed only for a few years, and thought they have she power of debating on the most important affair, that may tend to fecure or promote the prefervation and happiness of the face, yet they have not power to conclude viry point of graft consequence, without previously communicating it to their respective provinces, and receiving their expressions. This renders the resolutions of the republic very rectious and distory.

confent. This renders the resolutions of the republic very tedious and dilatory.

The provinces prefide weedly in their turn, in the assembly of the States General, beginning with Gulderland, who had the precedency before the whiten the Holland, Zealand, Utrecht, Friesland, Overystel, and Groningen. He who is first named in the deputation of his province prefider, and is from theme called the President of the Week. He proposes the subject to be debated, and collects the totes of the assembly, upon which he forms his concention, dislater to the resolution. Their meetings are always held at the Hague; and they fit throughout the whole tear without adjournment.

The fladtholder is the principal officer in this country, for he is at the fame time governor-general of the Seven United Provinces, captain-general, and grand-admiral:

but his power is extremely limited.

The States assume the title of High and Mighty Lords, of the Lords the States General of the United Netherhands, and in public addicties they are filled their High

lands, and in public addicties they are fitted their High Mightineffes. Their arms are, gules, a lion rampant, holding in one raws a fword, and in the other a bindle of feven arrows; beneath the fhield, which is furmounted with a ducal coronet, the motto concordia Ares fare verseum; is inferibed.

The Dutch council of thate confifts of twelve deputies of the friends provinces; and their office is either triental, or during the pleasure of their principals. In this council the deputies of Holland have the graceff weight, that province being possessed in the troops, while none of the others have more than two, and fome of their noily one. The presidentially indeed is held alternately by the twelve members, each in their week. The evenuel of state rembles every day in the same court with the States General. bles every day in the fame court with the States General. The principal affairs which come under the deliberation of this council, are, those of the army and revenue; and in

conjunctions with the aspirites of the Select Central, also provide every thing receiving for the definity of country, both in time of page and their. The rists of country is most and lighty Lords, in The tentral of the country is most and lighty Lords. In The tentral is also honoured with this this thick is being in the light in the country in the country of the light in the country of the light in the country of the light in the

The mentioner of this decounts of the feveral provinces. The mentioner of this decounts of the feveral provinces. The mentioner of this decounts chamber of finances is subordinate to the former, and confide on finances is subordinate to the former, and confide confists of three countellors, a shifted by a mint-master general, a general assay maker, and an under secretary. All these several colleges meet at the Hague.

The proceedings of the several courts, for the administration of justice, are regulated by the particular I was of the respective towns, and provinces where they are tried, the edicts of the states, and the civil law.

The inhabitants of the United Provinces, and those of the conquered lande, have been rendered liable to many

The innabrants of the United Fronnecs, and those of the conquered lands, have been rendered liable to many taxes, by the long and fevere ware which this republic has fulfained, and the number of them, especially in Holland, where they are always the heaviest, is so great, that a certain great writer affects, that the only thing which has escaped taxation is the air they breathe. The which has escaped taxation is the air they breathe. The principal ordinary taxes are the duties on exports and imports, levied by the admirally offices, and appropriated to defray the expenses of the navy. The taxes on houses, lands, hotned extile, &c. and on the purchase-money of all immoveables, under which are comprehended vessels all immoveables, under which are comprehended vessels paid, and this alone in Holland, annually brings in above seven hundred shouland golden florins. The twentieth penny levied, on inheritances in the collateral and ascending line. A poll-tax, which obtains only in fome provinces. The axesse on all kinds of provisions, nacessaries, and liquors; and here the money levied on bread and heer is estimated at above one-third, that on wine at somewhat is estimated at above one-third, that on wine at forcewhat less, and that on turf for firing also at one thirds. There leis, and that on turk for firing allo at one third; I have is likewife a duty on horfes, coaches, and ferrants. The duty on the flampt paper, ufed in all their feyral influments, coatracts and bonds, is faid to produce annually above four hundred thousand golden florins; Their land-forces, in time of peace, feidom exceed forty thousand, and very often fall flort of that number. They

campley a great many foreigners, especially Swifs and Scots, in their service; and, in time of year, hire whole regiments of Germans. The chief command of the army is yested of Germans. The chief command of the army is vefted in the fladsholder, under whom is the field-marshal geneial. In 1756 the expenses of the army amounted only to nine millions feven, hundred and fixty-five thouland and four guilders. No nation in the world can fit out a more formidable feet than the Durch, having always vaft quannumbers of ship-carpenters and maniers; however, in times of peace, they usually have no more than thirty in commission, for the protection of their trade in the Mediterranean, and to convey their honeward-bound East in-

damen, and other licets.

The monopoly of the frice tride has been in the hands of the Dutch East India company much above a century; bence it is, perhaps, the mod opulent trading company in the waiverfe. . I hough the United Provinces of themin the vitterle. I hough the United Provinces of them-felves products very few things, yet all the commodities and products of the globe, may be precured here. The Dutch also acquire great riches by their herring, cod, and whale-filheries: by their manufacture of laren, paper, earthen-ware, &c., and by fing-building. The filters in the feve-ral streams, rivers, and lakes of this country, though very confiderable, ferves only for home confiamption; but that of the Night fee is of after province, and divides into the confiderable, ferves only for home confiamption; but that of the North fea is of vall produce, and divided into the leffer and greater, "The former is that carried on along the confi, especially of the Doggerforth, between England and Juttent, on which are caught cod, haddock, turbour, whitings, feals, and other fea-fifth. The cod caught here is either sarried fresh and slive to market to the nearest towns of the Netherlands, or is falted at fes, and thus ferms a branch both of domettic and foreign commerce. The great fishery is that of herrings, from which the Durch teap immers profits i for though it cannot, as fo, merly, bettermed the golden mine of fioliand, yet is ftill afforded a comfortable fublificance to at least thirty thoughed fig. hundred families. hundred families. The feafour for catching the herrings along die coafts of

THE NEW AND UNIVERSAL SYSTEM OF GEOGRAPHY.

Sections and England, is from the twenty-fourth of June to the twenty-fifth of November. The veffels employed in this fifthery are treased, buffer, and carry from twenty-five to thirty lath; which one with another fell for above one hundred and twenty guilders.

Every province has the right of coinage, but all the pieces must be of, a fignilar intrinsic values the following is an exact account of the Dutch gold and filver coin: their gold cain are, the syder, valued at the pound five fillings and fix-pence. The half ryder, twelve fallings and nine pency. The deutet, nine fhillings and fix pence half-penny. The durat, nine fhillings and fix pence half-

THE NEW HISTORY AND DESCRIPTION OF

SECT. I.

Of the boundaries and fituation, natural history, and geogra-phical description of the country, with an account of the closes, rount, and remarkable places; the inhabitants, their reade, manufactures, manners, customs; government, laws, religion, Ge.

HIS country is bounded by Burgundy, Sandgace, and the county of Gooe, west; Savoy, the Mila-nelo, and Venetian territories, south; Swabia, north; and neis, and Venetian territories, soum; Swapia, north; and Tyrol and Austria, east; and lies between the first and cleventh degree of east longitude, and the forty-fisth and forty-eighth degree of north latitude, being two hundred and fixty miles long, and one hundred broad. It contains many supendous mountains, whose inaccessible and craggy summits are continually covered with stow, and the values of the contains the continual of the contains and the salies and the salies are continually covered with stow, and the values are followed to the contains and the salies are continually covered with stows and the values. nummits are continually covered with mow, and the vallets are filled with lakes, or rivers and fireams that are replenished by waters from the rocks. The weather is fornetimes wintry on the orie fac of a mountain, and refembles the funmer on the other. Prodigious quantities of ice and flow fall down and diffolve in the winter, and dread-

the tenumer on the other. Provagous quanters of the and flow fall down and disfolve in the winter, and dreadful inondations are frequent. There are, indeed, fome fertile foots, bur the principal part is dreary. The country is well watered, produces fome minerals, and abounds in cattle, sheep, chamoir and other gratt, horfes, Alphne mice, wild-fowl, see, it is not very populous; and the populous are no lefs fo than the parachant.

Switzerland is divided into thirteen cantons, or republics; which are, I. Bern. II. Zurich. III. Lucern. IV. Uri. V. Schweitz. VI. Underwald. VII. Zug. VIII. Glacti. IX. Safil. X. Friburg. XII. Solothurn. XIII. Schaffhausen. XIII. Appenzel.

I. The canton of Bern, which is the richest, larger, and most freutful, is one hundred and eighty miles long, and thirty broad. It is well watered by rivers, and contains several lakes. The principal of these is that of Ceneva, the length of which is about eighteen leagues, and the greatest breadth between three and four. The depth in fome places is near four hundred fathom, in others not above forty. The Rhone enters it a Lie east end, near in some places is near four hundred fathom, in others not above forty. The Rhone enters it a Lie east end, near Bouveret, and iffues out again at the west, cless by Geneva. In summer its waters are much welled by the melting of the snow on the mountains. The prevailing religion is Calvinsian, and ministers are here kept in greater dependence on the civil power, than in any other of the cantons. The prevailing language here is the German; though people of condition speak French and Italian. The capital city, of the same name, is almost surround-

The capital city, of the fame name, is almost furrounded by the river Aar. The houses are mostly built of white free-stone, and, in the principal streets, have piazzas, or arches, under them, for the conveniency of walking dry in wet weather. Most of the fireets of Bern are payed with flints, and traversed by a canal lined with free-flone, which is brought from a confiderable diffance, and is very

P. 141

which is brought from a confiderable diffance, and is very useful in carrying off the filth of the city, extinguithing fire, and other purpofes.

The city is large, flanding almost in the middle of the canton, and containing feveral churches, of which one is called the Great church; and the first minister thereof is the dean, who is the head of the city clergy. Here are likewife a college, public library, muleum, granaries, guildhall, arfenal, feveral hospitals, a handlome stone-bridge, a platform with a fine profuect, &c.

The great council, in which also the Govereignty of the cantons is vested, consists, when full, of two hundred and twenty-rine, but is generally much thost of that number, eighty or more often dying before their places are filled up. The lesser council sense, or, as it is called, the daily council, (because it tneets every day. Sandays and holi-

ane sener council fenare, or, as it is called, the daily council, (because it tneets every day, Sondays and holidays excepted) confists of twenty-seven members, including the two prators, or advoyers, the four tribunes of the people, the two treasurers, and the two hein-lichers, or secrety-men, fo called, because to them all secretics. ferrefy-men, so called, because to them all serets relative to the state are discovered. The vecancies that happen in these two colleges are mutually filled up by the members of the great and little councils.

or me great and little councils.

The village of Hafsli given name to a territory or valley of confiderable extent, in which are fine woods of beech and pine, excellent roots, wild fowl of all kinds, chamois and other mountain animals; together with mines, particularly of lead and iron, and fine crystals. The inhabitants of this district put themselves under the sovereignty

bitants of this diffrict put themselves under the fovereignty of Betn in 2323, but with a referve of their antient rights and ufages. They have a particular dialect of their own.

The country called the Pais de Vaud, is twenty-four leagues in length from Geneva to Morat, being bounded, on the week, by the county of Gex and Franche-Compte; and, on the fouth, hy the Valais and Savoy. Its capital, Laufaine, which is the fecond city of the whole canton, and to make the lake.

Lauraine, which is the lection city of it whole canton, flands one nile from the lake.

Here is a college, founded in 1537, for the infraction of youth intended for the ministry. The cognitance of criminal traits belongs entirely to one quarter of the town, called St. Francic, and in that is one firest, of which we are told, that if any of the inhabitants are guilty of a capital crime, the others have the fole power of condemning or acquitting them. The whole town confifts of fleep afcents and defcents, and takes its name from its fituation betwixt the brooks Laws and Anna. In the college here, Theodore Beza translated the plains into French verse, and the first professor of law retablished in it, was the late learned Barteyrac, who died a professor in one of the Durch universities. This place gives name to a bailiwic, the baissif of which resides in the castle, which was formerly the bishop's palace, and has some jurisdiction in

the town.

II. The canron of Zurich, though it ranks as the first, is inferior to that of Bern in extent, power, and wealth, It is fituated to the east of the free balliwies, and extends

Switz miles in length, and forty-eight in breach. With respect to its face and appearance, this canton is an epitome of, and represents all the others. Of the balliwice into which it is divided, eighteen are called the inward, and eighteen the outward. Over each of the former there are used barding, who hold their employments during life, of ficials by turns, and refide in the city, vishing their bailiwice only are the holding of courts. In the faties the balliffs sende contlantly, and hold their office only for fix, nine, or at most twelve years. Here are also twenty security of fix, nine, or at most twelve years. Here are also twenty security of fix, nine, or at most twelve years. Here are also twenty security of fix, nine, or at most twelve years. Here are also twenty security of the caption of an ecclesiastical council and synder the fundamental and the fix of the caption of the fix of the caption contains ten dealeries, with one fluindied and firty ministers. To quota, for the national delence, is one thousand four hundred aren, it nominates one of the two commanders in chief, and has a revenue of about one hundred and fifty thousand crowns per annum.

The expital city, Zurich, gives name to the canton; it trands in a pleasant country, near where the river Ast, fifties from the late that deriver its name from the town, twenty three miles from Schitthausen. After having been ruined by Artisla the Hunin, it was reflered by Thoricus, fon of Theodoric, king of the Gooths, from whom it took the name of the Thuricum, corrupted afterwards into that of Zurich. The river divides it into two parts, and has two bridges over it. It's fortified in the modern way, and has wide ditches, faced with free frone, There are five affends in it, well flored with arms; and artillety; an acidemy or college, having fifteen prorefifors; a maleum, by chamber of rarities; a flately town-house, the pillars in the front of which are of black marble, fireaked with white; here is also a town inbard, the greater and lefter co

The fireets of Zurich are neat, and the houses well

built, but not magnificent. The college here high ro-built, but not magnificent. The college here high ro-duced form learned men, particularly Zuinglius who began the retornation here in 1517) and Bullinger. The holpitals, are very next, and well endowed. The cathedral is large and collegiate, and the minifels here all preach covered. The neighbouring lake is about twenty-four

covered. The helphbouring lake is about twenty-four miles in length, and near three in breadth.

No perions, whitever their rank or office may be, are exempted from the fumptuary laws. The burgo-mafters, who are the fame at the advoyers at Berri, have the title of Excellence. If a burgher; goes out of town, or a perfame enters it, without a fword, they are liable to be fined. The unmarried women here are diffinguished from the married by a particular knot of yibbands on their heads, and the men are generally drefted in black; for the young only are allowed to wear coloured future, and busing sold, filver, and jewels being prohibited, and luxury and vanity of every sind carefully guarded against. When they go to church, the men all wear bands, and, when in mourning, bonnets made of pathe board covered with crape. Both men and women are fo fond of music, that most of them can play you fone infirument.

crape: Both men and women and forment, from the play on fome inftrument.

Hil. The cinton of Lucern, the most powerful of the

"HI. The cinton of Lucern, the most powerful of the popish cantons, is about forty-eight miles long, and thirty-two broad." The mountainpus parts abound with sheep and cattle," and he level districts are fruitfol in corn. Pitale's 5ill, in this country, is one of the highest in Switzerland, and has a lake on the top. Lucern acceded to the Helvetic alliance in the year 1322. Its government is articoloratical, and its chief revenue arises from the estates, of the extinct noblitity.

The chief place is Lucern, from which it has its name, sanding on a branch of the Four Forest towns take, called also the lake of Lucern, where the Ruz 'influe from' it, twinty-two miles, from' Zurich, 'It is a considerable thoroughtare to 'Itsty', and contains an arfenal, a magnificent college and town house, 'Geveral convents, with a cathedral or collegiate church, in 'which is an organ so large, that an ordinary man may creep into the greater pieze. The town is supposed to have had its name from Lucerna, or or collegiate charth, in which is an organ fo large, that an ordinary man may creep into the greater pipes. The term is fopposed to have had its name from Lucerna, or a lantern, fet up here to direct passengers on the lake in the night. The government of the town and canton is vested in a great and state council, chosen out of the burghers. The cathostic cantons usually have their particular disc, large. Hotel town and canton are in the directs of Constance. A nuncio from the pope utually resides here.

17. The fourth canton is Url, which is fixty miles long, and twenty broad, abounds with mountains, the chief of which, called St. Gotthardiberg, is the highest in Switzerland, it not in Europe. A road rus through it to Itsly: it axtends twenty-four miles, and is practicable not only to hoifes, but cartiages. In one part of this mountain, near the highway, is a capuchin coawent, in which two fathers confantly artend, and, for a fmall canfideration, accommodate travellers with whatever they want. Many thouland head of cattle grass on this and the other mountains here in funmer, and great quantities of cheefe are made on them. The vales between these mountains are exceedingly hot in funmer, and yield great crops of graft; and among them most beautiful crystals are found. The inhabitants are a hardy, vigorous, and brave people, but noted for their blind zeal and bigotry. Most part of the income of this state arises from the imposts on goods cerviced between Italy and Germany, and the annual pentions they receive from the kings of France and Spain. They have no wine, little corn, and sew or no manufactures, but plenty of wood, sisth, black cattle, butter and cheese, with which they purchase what need-faries they want.

The number of people in this canton is computed at about twenty thousand in number, of whick those of better rashion live by the stocks and herds they keep in their grounds, and the meaner fort by tending these herds, of hawking and pedling German and Italian wares. The government here is democratical, as in all other intelocrations, where they have hardly any towns, but the different of the bishops of Constance, Coire, or Como. The landse gemeine, or general assembly of the canton, is held annually on the first Suday in May, where every male, above sixteen, has a vote.

The two following are the only remarkable places in this canton, viz. Altors, I. c. the old village, which is a well built town, being the feat of the government, and the place where most of the gentry triple. It contains an arfanal,

common council. Both are of the popularengion, and in the diocefe of Confance.

VII. The canton of Zug, is finall, reaching about twelve miles either way; but it is very populous and fruitful, yielding wine, what, chefinuts, and other finits, and its mountains produce excellent patture. It lies in the diocefe of Confance, and its government is democratical. There are two lakes in it, abounding with fifth, particularly

arge carp, pike, and a species of troot called rotels; and the woods produce great plenty of game. The inhabitants are all flaunch Roman catholics.

The only place in this canton worth mentioning is Zug, which gives name to it, and is its capital. It is a ftroing, near town, containing a priory and two convents, and flands on the east fide of a lake of the same mane, the street when the same mane.

about feven miles long.

VIII. The canton of Glaris, or Glarus, is furrounded about feven miles long.

VIII. The caution of Glaris, or Glarus, is furrounded on all fides, except towards the north, with lofty mountains, one of which, called Todiberg, is almost impalfable. The principal valley extends from north to footh above twenty miles, and is fald to be very Jubject to carthouses: The other vales yield good patterage, but little corn, or puffe. Vall numbers of horfes, black cattle, goais, and theep, graze both on the mountains and in the vallies, and great quantities of butter and chefe are made in both. The mountains yield allo wood, flate, crystal, mineral waters, and baths, and the rivers and lakes abound with fish. The government, like that of the preceding petty cantons, is democratical; but, the greater part of the inhabitants are proteflants. Befides the general diet of both religions, held annually in a field without the town, called Schumden, and that of the papific in a field between Netstall and Nassels. Here, as in the other democratical cantons, befides the diets, is a coding of regency, with febral courts of justice for civil, crimingly, and ecclesindical affairs. The towns in this canton are very inconsiderable.

IX. The canton of Bassi, which is twenty nules, in

very meonifiderable.

IX. The canton of Baffi, which is twenty nuics, in length, and about eighteen in breadth, contains twenty-feven parifies, and feven balliwies; and its inhabitants are all proteftsfifs. The lower parts of it are frontful to are all protestains. The lower parts of it are fruitful an patture, corn and wine, but the mountains are very barren. There are many medicinal forning and baths in it, and the air is wholtonic and temperate. Its government is arithocratical, and its revenues arise chiefly from lecularized abbies, and imposts on goods carried through the country to and from France, Italy and Germany. Both men and women, for the most part, wear the French defs; but the language commonly poken is High Dutch, though the French alfo is much uled.

Basil, which gives name to the canton, is the canital.

language commonly ipoxen is riight ductor, mough the French alfo is much used.

Bafil, which gives name to the canton, is the capital city. It is the largeft in all Switzerland, having two hundred and toyenty freets, and fix market places, or squares. Its environs are exceedingly beautiful, confishing of a fine level track of fields and meadows. The city is divided into two parts by the Rhine, over which there is a hand-some bridge. It is sortified with walls, moats, towers, and bassions, and contains several churches, besides the cathedras, which is an old gothic flucture; a commander, of the order of St. John, and another of the teutonic order; a public granary and artenal, a stately nown-house, and university, which was sounded in 1459, and has a curious physic-garden, library and museum, a granasum, a stately palace belonging to the margrave of Baden-Doursch, besides a chamber of curiodines, several subgitates, see.

a flately judice belonging to the margrave of Baden-Dourlach, befides a chamber of curiofities, feveral hospitals, &c.

St. Peter's square, planted with elm, and sime-trees, makes a pleasant walk; but a spot reg, airly planted with trees, close by the river, and rear the aninter, makes full a finer, it commanding a most beautiful and extensive prospect. Trade still sourches here, especially in filk, ribbands, and wines; and the police is under excellent regulations. The two Euxtouse, father and son, and the samous painter Holbein, were natives of this place. The celebrated Erasmus died here in 1536, in the seventieth year of his age, and was buried in the great church.

X. The canton of Friburg, which is near forty miles in length, and twenty in breadth; is partly mountainous, and partly level; and, belides some mines, yields plenty of pastivage, grain, froit, cattle, and cheefe. It is divided into three inner bailiwies, and fixteen outer, besides the territory of the city. The inhabitants are chiefly applied, and the language principally German.

The only place of note in this canton is Friburg, which gives name to it, and stands among rocks, in a valley, on the river Soone, fix leagues southward from Bern. Here are several churcher, convents, and hospitals, with a hand-some college, a mint, a granary, an arfensl, a commandery of St. John, and a council-house, which slands on a rock, and commands a grand prospect. The government resembles that of Bern, except that here it is confined to seventy families of patricians, exclusive of all others. The town is tolerably fortified.

XI. The canton of Solothwrn is situated on the river town is tolerably fortified,

XI. The canton of Solothurn is fituated on the river

called and the

Age, is about twelve miles long, and ten broad; and is tolerably fettile, yielding corn, wine, and finite, and contains fine woods and pattures. The government is sirflocational, and the religion professed in it is the Roman catholic, exceptin one baillwie.

The principal place in this canton is Solothum, which gives hame to it, and is fauared in a pleasant, fertile country. The government is, much the fame as that of Bern and Friburg, and the language chiefly spoken is French. Here are a collegiate church, a large college, a well furnished arsens, and two convents.

XII. The canton of Schaffhausen, which lies entirely not the German fide of the Rhime, is the most northern of all the Swift cautona. It is about twenty miles long, and twelve broad; and is in general fertile, yielding corn, fruit, bastdie, plenty of fish, mineral springs, and good red wine. The inhabitants are Calvinnis, and the government shiftocratical.

The only fown in this canton, that metits description.

ruit, patture, jeenty of fifth, mineral prings, and beogreed wine. The inhabitants are Calvinitis, and the government afrifocratical.

The only town in this canton, that mette defeription, is. Schaffhaulen, which is plealantly fluated in a plan-on the Rejue, and is very handlome, the threets being broad, and the floutes magnificent. Here are feveral handlome churches, an arienal, an academy, a apple cabinet of fastities, and a good fostrels. The city carries on a confiderable trade by the Rhine, over which at has, a handlower flour bridge.

XIII. The canton of Appenzel is about thirty miles long, and twenty, broad. It yields good patherses, and confequently, is not defitute of gastle, milk, butter, or cheefe. Confiderable quantities allo of wheat, rye, barley, outs, beans, peas, fax, and wheat, are produced in its before a great deal of fruit, wood, and turk, with mineral waters, and warm baths. Their are mountains in the canton, the highest of which is that called the Hoberfairls, or the Hobermetames, which commands a propect of produgious extent. There are also feveral lates, and ivers. Of the twenty-three parishes an the canton, four we popills, and mineren proteffants. In fairirual, the papills are labled to the bihop of Constance, but the page testints to their own confiliory. The inhabitants highly their manufacturies of, linen, grape, fullam, and thread, or by bleaching, and the lale of their gastle, butter, cheefe bories, wood, and coale to the control are properly bearing the only members of the Fleivett, body.

We shall now procced to describe the leggral balliums that belong in common to certain cantons to river Thur

I. Thergau, whose name is derived from the river Thur that runs through it. It is very large and populous, and,

I. Thereau, whose name is derived from the river Thur that tunr through it. It is very large and populous, and, though fomewhat meantainous, is, in, general; jolerably, feriule. About one third of its inhabitants are papills, and therefit calvinists. The eight old cautous, who are loverigns of it, alternately appoint a bailiff every two years.

The chief places of note in it are, it, Francasceld, they capital, which shads on the civer Mark, eleven miles west of Constance. The bailiff resides here in a castle, on a rock, at one end of the town, and here the, deputies of the eight cautons meet to audit the annual accounts of their consmon bailwies. 2, Dissendoren, a conderable, town on the Rhine, over which it has a bridge. It enjoys great privileges i for the bailiffs have no authority in it, or, its precinct i but appeals, in civil caules, he from it to the cantons, or their deputies. Both papists and protestants compose the magistracy of this bailing.

II. Rheinthal is about twenty miles long, and five where broadest, and is fruistly both in corp and winc, especially the latter. Here is a citystal pit, in which a wast deal of yellow, brown, and white transparent crystal, is found. Most of the inhabitant, as protestants, and their minusters are always taken from the academy at Zurich. The soverenty of this bailing belongs to nime, cantons, viz, Bern. Zurich, Lucern, Schwetz, Glazis, Uri. Underwald, Zug, and Appenzel, who alternately appoint a bailiff every two years; but the abott of St. Gall, has not only a share of the jurisdiction, but a great revenue, from it. It is divided into sive communities, each of which has two chiefs or ammons, of whom the canton nominates one, and the abbott be other. The towns are too inconsiderable to merit particular description.

III. Sagasas is about twenty-four miles in length, and

fiderable to merit particular description. III. Sargans is about twenty-four miles in length, and, about fix in breadth. Its mountains feed great numbers of eattle, and its vallies produce corn and fruit. This bathwic, which is divided into the Upper and Lower Sargana, belong to the eight old cantons, who fend a bailing to it is their turns. The inhabitants are partly

and wonttance. O the probability of the state of the stat

Bell, at wwn fitnated on the lake to which it gives name, se under the foveteignty of the billiop of Bafil, who, on his accession, to the regency, figns an instrument by which be engages to maintain the inhabitante in all their rights and liberties. This town has a vote in all the general diets of the cantons.

The Grifon Leagues territory is divided into three parts, 1712. 1. The Grifon on Grey League. 2. The League of the Houle of God. And, 3. the Ten Jurisdictions. I had length of the whole is about feventy miles, and the headth form. Let a green the season of the season breadth fixty. It is in general a mountainous country, but produces most of the necessaries of life. Each of the Leagues is sub-divided into several lesser communities, which are fo many democracies, every male above fixteen, having a fhare in the government of the community, and avorteant the cledion of magifitates. Deputies from the devotal communities conflicted the General Diet of the Onfonite age of which moets amustly and attendate, at the capital of cacle League, but they can conclude nothing is inductible localism of their conflittents. About two shirlds location that inhabitants are calvinite, and the reft papills. Let the think of the calvinite, and the reft

That called the Grison or Grey League is divided into alpht diffrield, called councils, and twenty-three communities, of which eighteen are popular. These diffrield contain Several small yillages, which are too inconfiderable to merit particular attention.

n.su. The most confiderable of the three is the League of the Honse of God, which contains some very high moun-tains. The chief of this district has the title of president, and is elected annually. Is is divided into two great com-monities, and those again into twenty-one smaller, called

individual and there again mot wenty-one maner, care jubildidizione; and the transfer of the place of chief note here is Coire, or Chur, the capital not only of the League, but of the whole republic. It is tolerably large and populous, and its neighbourhood is beautifully diverfited with hills, plains, vineyards, corners to the control of the contro helds, and orchards. Here are feveral churches, an arfe-nal, a college, a grammar-fehool, a gramary, and a town-houfe, in which is held, once in three years, the general hould; in which is held, once in three ears, the general diet, and also the extraordinary diets; and the congresses. The bishes is a printer of the early in a printer of one therein pounds fidrling perlanum.

(a) The beager of the Ten Jurisdictions, which is the smallest of the whee; is divided into tween communities,

finallet of the three; is divided into seven communities, out of which the chief annually chosen by turns. To make up the Ten juridid ions; three of the great communications are sub-divided sact into two! The greater part of the inhabitants are protestants; and the fainguage spoken in generals the Germann. The country conflits, for the most spart, of rogged mountains, yielding neither com nor full except on the banks of the klime, and affew other praces, but abounding in tooles; cattle, fish, milk, butter, and cheefe, of all which there is a confi levable exportation. portation of the control of the cont

noto terretories of countries which are subject to the three Carlisis Lagues lie at the froit of the Alps; may the entrance of may, and consist of the Waterine, and the countries of Bointo and Chiavenna, all of which are very fertile. The language is a corrupt Italian; and the religion popers, in their places do not contain any thing; remarkable.

Haldenstein barony is under the protection of the Grison League, and takes its name from the village of bastenstein, which has a passes in figure a male only. The Calvinite religion prevails throughout this baronyme to the one of the Value another ally of the Siria cantons, its available

country is exceedingly fortile; producing most bride of grain, and a great variety of the choloset fracts. It abouted also in cattle, game, and venifon. It is divided, into the Upper and Lower; but the inhabitanty of the latter are valuat to the former. The government is much the fame as that of the Grifons, and the religion popery. Not only the German, French, and Italiati, but also the Letin is spoken here, and that too by the commen possible.

Letti is special here, and the too by the common people.

Muhihausen is a large, well-built, and populous town; and is adorned with several churches and other good firectures. The inhabitants are Calvinitts. This were finde no deputy to the general diet; though it is in allians with the proteinst cantons.

Geneve, which is a famous republic, comfists of the city and a small territory. The former is stuesed on an issand on the Rhone, fixty-five miles from Bern, feventy-five from Lyons, and one hundred and fix from Terin. It is a large, handsome, and well-fortified city. The Treille is a most beautiful place; it is planted with lindentrees, and commands a fine prospect of several range of mountains and rocks rising behind each other, some of mountains and rocks rising behind each other, some of which are covered with vineyards and herbage, Immediately below the city the Rhone is joined by the Arva. Over the former of these rivers are sour bridges. Of the fix churches, the 'cathedral of St. Peter is the principal, in which is a monument to the memory of Henry duke of Roham. The service in some of these churches is in strench, in others Italian, and in others German. In all the streets are fountains and canals to supply the inhabitant contents of the churches in the supplemental and the streets are fountains and canals to supply the inhabitant contents. the fireets are fountains and canals to supply the inhabi-tants with water, which is raised by engines from the

Rhone.

The town-hall is a flately free-flone edifice, fituated on an eminence, the afcent to which is without any fleps, fo that a person may not only walk, but side from the top to the bottom. Here is an arsenal, which is said to contain arms for twelve thousand men; and an university, which has twelve professore belonging to it, with a very valuable library. The lib ary belonging to the city is well furnished with excellent books; besides a curious collection of medals and petrifaction; and some antient and valuable manuscripts. manuscripts.

manuferipts.

The trade of the city is very confiderable, it being a great thoroughfare, and having a variety of manufacturies, with a number of industrious and ingenious artificers, particularly in the watch-making branch. At the general hospital, befides the city poor, indigent travellers are maintained for one day, and then diffmissed, with some money in their pockets, to proceed on their journey. The government is much like that of Zurich and Bern. The number of burghers is about one thousand sive hundred, and the minerical marginates are the four fradient, Heier number of Durghers is about one thouland five hundred, and the principal magistrates are the four syndies. Here are no left than four councils, viz. the general council of the citizens and burghers, the council of two hundred, that of fixty, and that of twenty-five. Of the left, two persons of the same family cannot be members at the fame time. The religion of most of the inhabitants is Calvinitt.

No marriages are permitted here, unless both parties are of the protestant religion. A woman of forty years of age must not marry a man of less than thirty, if the exceeds forty, her hulband must be at least thirty-five; nor must a norry, her hulband must be at least thirty-five; nor must a man above fixty marry a woman who is not at least thirty. A widow must not alter her condition in lefa than fix months after her hulband's decease. A very fingular cultum prevails in Geneva, and is peculiar to it: the parents form focieties for their children at a very early pariod of sheri lives. These focieties consist of ten er a dozen, or mare children of the firm fer. and nearly of the form more children of the fame fex, and nearly of the fa and fituation in life. They affemble once a week in the and mustion in me. I ney memoic once n week in the boules of the different parents, who entertain the company by turns with tea, coffee, bifcuits, and fruit, and the leave the young affembly to the freedom of their own converfation. This connection is flrielly kept up through life, whatever alterations may take place in the finations or citeumstances of the individuals; and although they life, whatever alterations may take place in the fituations or circumftances of the individuals; and although they should afterwards form new or preferable inconacies, they never entirely abandon their fociety: to the latest periods of their lives, they contrive to pass a few evenings every wear with the companions of their youthful and earliest friendship.

The lake, to which the city gives name, refembles a half-mosp, whose convex side lies towards Switzerland. The territories of five flates botter upon it; viz. the kingdom of France, the duchy of Savey, the sepublic of Geneva, the canton of Bern, and the bishopric of Sion.

of keveral forts, gold and filves brocades, a suriety of trooldermanufacture

rican and Afiatis goods, the balance of trade is probably stuch on their fide.

In general, the public revenues are very inconfiderable, and arise chiefly from the usual regalia appropriated every-where to the fovereign, the danesses and public granaries, voluntary contributions, the sale of falt, and a land tax: in the protestant castons, from the clurch lands also that were diseased at the reformation; except in Zurich, Bern, Bazil, and Schaffhausen, where the people are more industrious, have a greater trade, and are richer than in the others, they only defray the ordinary charges.

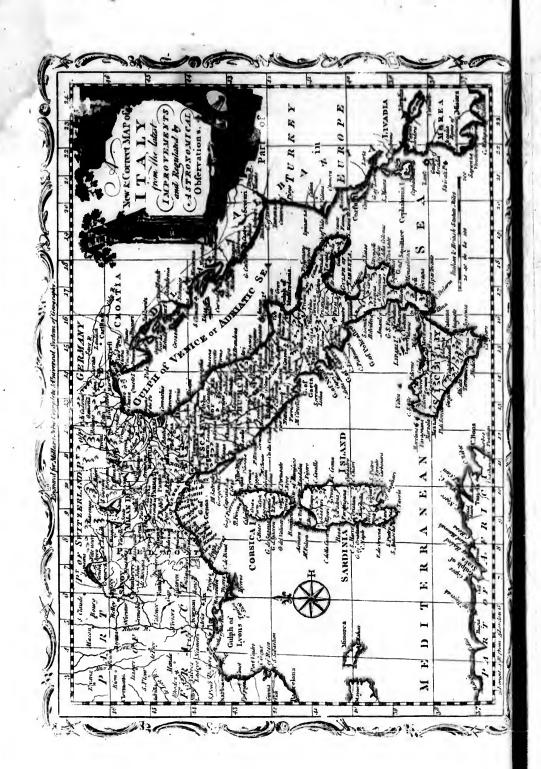

The people of this country were antiently called Helweiii. After they were defeated by Marius, they retired into their own country, where they lived peaceably till the time of Julius Ceniar, who obliged them again to submit to the Roman yoke, under which they continued till the declention of that empire, when they became a part of the kingdom of Burguady. After that, they fell under the dominion of the Franks; then of the Germans; but, being oppressed by the latter, they three off the yoke, and credict leveral states or republics, which were reorgaized as free and independent at the treaty of Westphalia, in 1648, at the same time as the United Provinces were delated andependent by Spais. The five popish cantons of Lucarn, Switz, Zug, and Underwald, have never had a good understanding with the cantons of Zurich and Bern, since their yielding up these terrisories. On the contrary, they seem ready to call in the French, or any other power to asset them, to be revenged of their enemies, without they feem ready to call in the French, or any other power to asset them, to be revenged of their enemies, without regarding what the confequences may be to their own country. This proved to be the cale with respect to Geneva, where, in April 1782, the citizens took up arms, overpowered the republic guard, and, having taken possessing of the arsenal and magazines, carried off and imprisoned the magistrates. But this insurerestion, which at first appeared very formidable, was in the following June suppressed very formidable, was in the following June suppressed and Sardinia and the canton of Bern, who assembled a body of swelve thousand men, and obliged the appressed and Sardinia and the canton of Bern, who assembled in the following June suppressed to furnered the suppressed that the provided the appressed to furnered the suppressed that the provided the suppressed that the republic was reftored. ar first prog CHAP

Situation and ! biftery and defe ith the natural and geographical ally; also a particular account of the and the several cities,

TALY

antitude of the world, the chief of the world, the nurfery of aru, and the centre of opulence; but at prefent retains only the shadow and remnants of its prilline power and grandeur. This country is fituated between the feventh and tenth degree, of cast longitude, and thirty-feventh and forty-fixth degrees of north latitude, being about fix hundred miles in length, and in some places near four hundred biood; but in other parts the breakth does not exceed twenty-five miles. Its form refembles that of a boot. It is bounded, on the north, by France, Switzerland, and Germany; on the cash, by the Adriatic; and on the fouth and west, by the Mediterranean sea.

The dominions in Italy, subject to several princes and fovereigns, are as follow: I. The Popedem; II. Naples; III. Piedmont; IV. Milan; V. Montserrat; VI. Modens; VII. Parna and Placentia; VIII. Mantua; IX. Genoa; X. Venlee; which we shall treat of in the order here laid down, after giving the natural history of the

here laid down, after giving the natural history of the country.

Italy well merits the appellation which it has obtained, viz. the Garden of Europe. The air is very different, according to the different fituations of the feveral countries contained in it. In those on the north of the Apennines it is more temperate, but in those on the fouth generally warm. The air of the Campania of Rome and of the Fernarce, is unhealthful, which is owing to the lands not being duly cultivated, nor the marshes drained: that of the

being duly cultivated, nor the marfines drained: that of the other parts is generally pure, dry, and healtly. In fummer, the hear is generally very great in the kingdom of Naples, and would be almost intolerable, were it not fomewhat alleviated by the fea-breezer.

The foil is, in general, very fettile, being watered by a great number of rivers, the principal of which are the Po, which rifes in Piedmonts, and difembogues itself into the Adraite; the Tyber, which has its fource in the Apennines, waters Rome, and difeharges itself into the Tufean fea; the Adiga, Arno, Adda, &c. befides which, and fome other rivers, great numbers of lakes are forcad Tufcan fea 1 the Adiga, Arno, Adda, &c. besides which, and some other rivers, great numbers of lakes are spread throughout the whole country, which produces a variety of wines, and the best oil in Europe, excellent sisk in abundance, corn of all sorte, but not in such plenty as in some other parts, oranges, lemons, citrons, ponnegranates, almonds, raisins, sugar, mulberry-trees without number, sigs, peaches, nectarines, apricott, pears, apples, siberda, chefinuts, &c. Most of these fruits were as first imported by the Romans from Asia Minor, Greece, Africa, and Syria, and were not the natural products of the foil. The tender plants are covered in winter on the north side of the tender plants are covered in winter on the north fide of the Apennines, but on the fouth fide they have no need of it. This country also yields good patture, and abounds with cattle, theep, geats, buffaloes, wild boars, nules, and borses. The foresta are well stored with game of various kinds.

The Aperinines and Alps are the principal mountains; the former run the whole length of the country from northwest to south east; the latter extend from the river Var, near Nice, to the Adriane. The mountains yield not 'No. 75.

is cholen pope most be an Italian, and ar least fifty-five years of age: the cardinals consider themselves as on a footing with crowned beads, and have the citie of Fininentissimi. The pope bolds a consistory of them on eccessivilg government. The pope's chief minister is the cardinal patron, who amask an immense estate, if the reign be of long duration.

be of long duration.

The pope's revenue, as a temporal prince, is, one mitlion of pounds sterling, arising principally from the monpoly of corn and duties on wine: bt. independent of this,
he receives considerable fums for in ulgences, dispensations, canonizations, &c. He has a considerable body of
regular torops tolerably well cloathed and paid; his lifeguards are torty Swift, seventy-five cuiralizers, and the
same number of light horse: his steet, however, is but
despicable, consisting only of a few gallies. It is computed
that the monks and regular clergy-featered through the that the monks and regular clergy feattered through pope's and other countries, who are at his absolute devo-votion, amount to two millions, and the revenues which

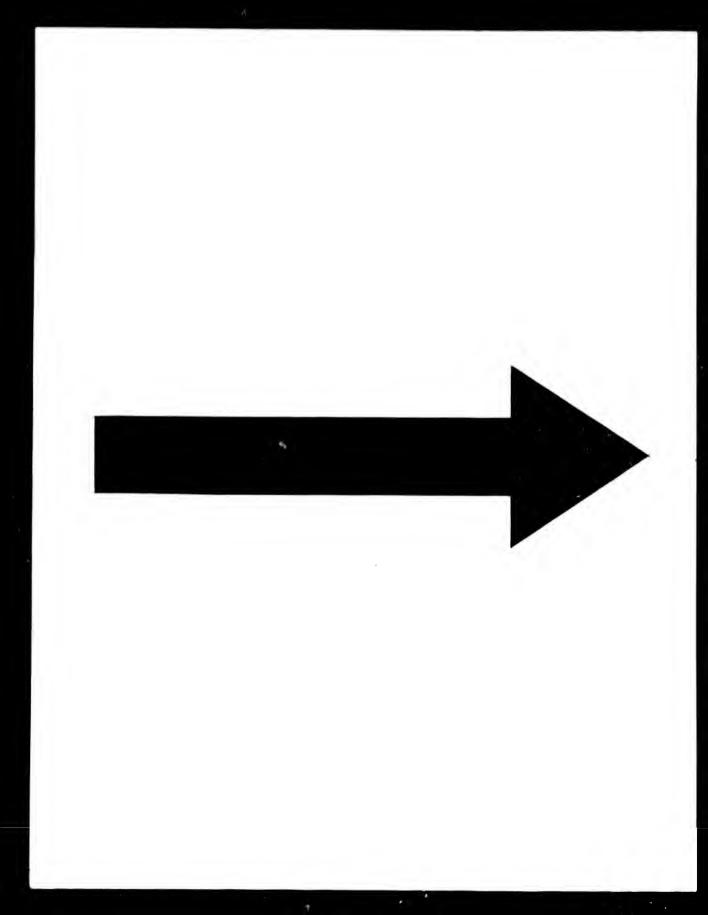

votion, amount to two millions, and the revenues which fupport them are effinated at twenty millions of pounds flerling.

Bologna was once a republic, and afterwards annexed to the papal dominions. This territory contains only one place worthy of defeription; namely, Bologna, its capital, the scool city in the ecclesiaftical state, and the see of an archbishop.

archbishop.

The city of Bologua is washed by the river Savona, and interfected by the river Reno. The latter has a canal which communicates with the Po, and is useful for the conveyance of various commodities. A brick wall adorned with towers defends it, and the people carry on a few manufacturies. All kinds of provisions are in great plenty, and the inns the best in Italy. The women enjoy as much liberty here as in any city of Italy; those of the highest rank dress entirely after the French mode.

In the centre of this city, like a mast in a ship, stands a very high tower, called Degli Afinelli, from Gerardo Afinellis, who built it in 1109; the height is three hundred and seventy-one feet. Near it is a leaning tower, called Garisenda, but not so high as the other. The page of the second server of the carried as the other. print, and the other facts, preclaims, assignition, if they their cities, remer habe places, freedome, assignition, if they.

APLES is the largef kingsiom or flats in Italy.

It was formerly called Sicily on this fide of harco of Meffins, whence the king, who likewife possess Ecity, is called King of the Two Sicilies. Towards the northeast it is bounded by the ecclesistical flate, and in all other parts by the Mediterranean and Adristic fess. Its length is two sundred and ciptry niles, but its breakly not above one hundred and twenty when breaked. The air is hot, and the foil fertile; but the dumber of infects, reptiles, e.e. and the frequent warthquakes, render the country unpleasant and aven dangerous to the inhabitants. This is an hereditary monarchy. The high colleges are, the council of flate, the privy-council, the treasury, the Sicily council, the council of war, too. This king-dom is a papel foil; and the king, in acknowledgment of the pope's feedel right, fend him every year a white pilfry, and a surfe of fist thousand docum. The title of the king's elded for is prince of Calabria. The higher noblest consist of princes, sulcor, manyulfine, and barons. The general affentily are the fitten, consisted of the noblity and commons, is frantoneed every two, years, to meet at the capital, in deliberate on the customing five gift to this fovereign.

Naples, the anatom Campania r clins or the singer has been anterno Campania r clins or the stream and the number of the inhabitants four hundred thousand. The house are of stone, flat recofed, and in general lofty and house are of stone, flat recofed, and in general lofty and

houses are of stone, flat roofed, and in general lofty and

windows. The firests are well pased, but they are not lighted at night, and, in the day-time are disfigured in many places by fiells, on which provisions are exposed to fale.

There are, in this city, several magnificent churches, convents, containing and paleoss of the nobility, many of which containing the provision are and paleoss of the nobility, many of which is a very grand, plandid edifice. It is used to wait on the team of the hoodes in the evenings, and to breather the frees, coal are such as the part of the hoodes in the evenings, and to breather the frees, coal are such as the part of the frees. The are there are frees, and there are desired of a few the third desired the frees. The cathedral the hand and whole of all form as the hand and whole of a few the third desired and first of the cathedral the hand and whole of 3c. Januarius, the breather find of Naples, are kept, the laster in two glade or crystal vials. The tunnery for bales of quality is faid to be the largest in the whole weekl, containing no left han three bonds and fifty nunes, bridde forvans.

The eliment here is fo mild and warm, even in winter, that plenty of green peas, articholers, ofgaragus, and other vegetables, may be had fo early as the beginning of the new year, and dren all the winter. The fortifications of the city are very strong both by fex and land. The bay is one of the finds in the world, bying of a round figure, and thirty miles in diameter. The walls of the city are very strong both by fex and land. The bay is one of the finds in the world, bying of a round figure, and thirty miles in diameter. The walls of the city are very strong both by fex and land. The bay is one of the finds in the world, bying of a round figure, and there will be such as the such as th

thrown out.

Not far from this mountain is the village of Portici, where is a royal pelace, with an amasing collection of antiquities, mostly dug out of the rains of the antient city of Heracles, or Herculanaum, which flood near the foot, and was defroyed partly by an earlydon of mount Vetuvius. Several volumes, giving accounts of these santiquities, have been published, and the people fill continue to dig for more.

The grotto of Pausilippo is a broad, straight, subservanceus road, hewn through a mountain. Two holes on each fide admit air and light. This cave is one hundred feet high at the entreace, but diminishes afterwards; and the whose, which is paved with broad stones, is about half a mile long. At coming out, the road leads to the lake Agane,

THE NEW AND UNIVERSAL SYSTEM OF GEOGRAPHY

Agano, which is circular, and a mile in circumference. In the midft are the fudaturies of St. Germano, being ftone apartments, where the hot ftreams which arise produce a profuse perspiration; hence they are much frequented in various disorders.

The town of Puzzuolo, or Puteoli, the formerly a flourifiting city, is now reduced only to an inconfiderable place. It is, however, the fee of a bithon; and the eathedral, which was formerly a pigan temple, is built of large blocks of marble. Puteoli glories in being the place where the first Christian community in Italy was formed; for we are told that St. Paul, in his lourney to Rome, found brattern in Ri. Here is a very commodique harbeur, in which are fourners piers, or pillars, tiling above the furface of the wasse. The earth of Peteoli that this peculiar property, that it bardens in the water, and, after lying in it fome time, looks more like stone than earth. In the neighbourhood are what the antients called the Elysian Fields, from the fweetness of the climate, the verdure and The town of Puzzuolo, or Puteoli, the' formerly a flou-Fields, from the sweetness of the climate, the verdure and fertility of the foil, &c. But its former beauties are all defaced, as the whole place is now covered with bushes,

degrees, as the manufacture of the principality on this fide the Apennines, is fituated on the guiph to which it gives name, about wenty fix miles fouth-east from Naples. It is well fortified, has a pretty good harbour and cattle, it is well fortified, has a pretty good harbour and cattle,

It is well fortified, has a pretty good harbour and calle, but little trade: here, however, is the fee of an archbishop, with an university, and several annual fairs, which are much resorted to, and very profitable to it.

"About twenty milea to the south of Salerno lies Campaccio, near which are the ruins of the autient city of Possium, or Possium." Here are the remains of a theatre, amphisheatre, and three temples. The walls of this place still remain: they are composed of very large cubical stones, and are in some parts no less than eighteen feet thick.

feet thick.

The city of Otranto, antiently called Hydruntum, is well fortified, and the see of an archbilhop: it stands on an Mand at the mouth of the Adriatic, which is joined by a bridge to another island, and that by a bridge to the continent. It gives name to, and is the capital of a province, which with those of Bari and Capitanata, conflictute the country of Apulla, a track in general flat, dry, and fandy.

Predmont, which is part of the antient Lombardy. has

its name from its fituation at the foot of the Alps, being about one bundred and fifty miles long, and ninety-four broad. There is a most extensive and romantic prospect from the mountain Rochemelon, which takes a whole day to sicend. Annually, on the 5th of August, vast crowds go to hear mass said before a statue of the virgin Mary on the fummit. The inhabitants, and even horses and dogs, are subject to the same kind of wens in the throat as the This is a very fruitful country, and the people in Savoy. This is a very fruitful country, and the Picamontele filk is deemed the best in Italy.

At the conflux of the Po and Doria stenda Turin, the

At the conflux of the Po and Doria funda Turin, the capital of Piedmont. It is small, but strong and very popolous. Within the city are forty-eight churches and convents, and some very fine streets, particularly Rue Neuve and Rue de Po, which are deemed the most elegant in Europe. Here are likewise many fine squares, several magnificent palaces, besides that of the king, a superstropera-house, an arineal, royal printing-house, an university which is a quadrangle, and one of the sinest buildings in the city. The king a palar, for the beauty of its apartments, the richness of the sumiture, the elegant painting, tabinet of curiostics, and library, is fearcely to be paralleled. The chapel of the Holy Sunday, built of blackith marble, is particularly admired.

marble, is particularly admired.

The city confifts of the Old and New. In the Old the fireets are crooked and narrow, but have some handsome houses in them, and, in both the Old and New, are exceedingly clean and neat. From a canal cut from the river Dorla, water is conveyed by an aqueduct into the city, and Doria, water is conveyed by an aqueduct into the city, and afterwards diffributed at pleafure, through every fireet. Here is a fine citadel, an university, library, and a great many charitable foundations. There are many beautiful villar, convents, and other buildings in the neighbourhood of Turin. Of the villar, those belonging to the royal family are, Valentine, now neglected; Monteajer, Rivoli, and Stupmice; La Vigne de la Reine, and La Venerie, which has a very fine chapel and gardens, with a little removement. little town near it.

The town near it.

The town of Sofs, on the Doria, contains a triumphal arch, erected in honour of Augustus Casar. This place is furrounded by a wall, and has a liteog garrion a and about a quarter of a legue from it fands for Brunette, which perhaps cannot be paralleled in the whole world,

having been hewn out of a rock with all its out-works. The patiges in the rock are fo large, that waggons and heavy cannon, drawn by feveral horses, may pass over it from place to place.

The finall sea-port town of Nice is fituated near the Mediterranean, at the mouth of the Paulon. The fortifications were entirely destroyed by the French in 1:08. It gives name to a district, called the county of Nice, in which is also Villa Franca, a final fortified town, two or three miles to the gast of Nice, with a harbour on the sea, and two casses; and Capo de S. Ospitio, a very strong town on the sea, and a free-port. Nice has an indistress harbour, is a firse port, and the see of bishop, who is suffragan to the archbishop of Ambrun in Dauphine.

plaine.

The duchy of Montferrat, or Montferrat, is a duchy fituated well of Milan. It is fixty-two miles long, forty-elght broad, and very fertile. It contains a few fortifications, not in the least remarkable; the principal of them, Cafal on the Po, forty-two miles and of Turin, is the fee of a bishop, who is fuffragen to Milan. Montferrat and Piedmont both belong to the king of Sardinia,

ferrat and Piedment both belong to the king of Sardinia; as does

The duchy of Sayoy, Stuated between France, Piedmont, and the lake of Geneva, being near ninety miles long, and feventy broad. It lies among the Alps, and confequently is mountainous and flerile. The roads over the Alps are diffarceable and dangerous, especially as luge maffer of fnow, called by the Italians avalanches, and fragments of rocks, frequently roll down into them from the impending precipiees. The way of travelling is either in fledges, chairs, or on the backs of mules in fome places the path on the brink of the precipiees is fo narrow, that there is but joff room for a fingle perfort to pafs. It begins to finow on these mountains comments shout the beginning of October. In the meants of July, August and September, many of them yield very fine, grass, with a great variety of slowers and herbs; and others boxwood, walnuts, chesnuts, and pines. This ais here, even in July and August, is exceeding cold. The heir apparent to the crown of Sardinia has always the title of duke of Savoy, and prince of Piedmont.

A corrupt French is spoken by the lower class of people in Savoy; but the Inhabitants, in their dispositions, refemble the Germans more than the French. Great numbers of the mountaineers of both seres, are deformed, and particularly dissigned with wens in the throat, which, as they are not painful, is the only liconvenience that attends them.

The town of Chamberry, the capital of the duchy, is

particularly disfigured with wens in the throat, which, as they are not painful, is the only inconvenience that attends them.

The town of Chamberry, the capital of the duchy, is fituated on the river Leife, in a pleafant valley in Savoy Proper, twenty-feven miles north-east of Granoble. It is walled, and the feat of the high court of Savoy, but not very large, nor of any great antiquity. Here are feveral handfome fquares, a great number of monasteries, a flately ducal palace, or caste, feveral palaces of the nobility, and a collegiate church, the head of which is stilled dean of Savoy; but fines the dukes removed their residence to Turin, the town has lost much of its antient splendor.

The fmall, town of Aix is fituated about two leagues from Chamberry. The hot baths here are free to all, paying only the attendant, or rubber, a trifle: the water of them is clear, and of a greenist colour me fish or any animal will liver in them. Some remains of a Roman triumphil arch are to be seen here.

The province of Milan, which is one of the finest in Italy, lies to the north of the Apennine mountains, being near one thundred and ten mise long, and about one hundred to the morth of the Apennine mountains, being near one thundred and ten mise long, and about one hundred to the morth of the Apennine mountains, being near one thundred and ten mise long, and about one hundred and ten mise long, and one thus districts and of a greenish colour, and about switch contains the Baromean islands, via. Itolo Bella and Itolo Madre, the beauty of which almost exaceds imagination: are and nature feem to have vied with each other in embellishing them. In each of them is a palace with beautiful gardens, belonging to the Baruscon Family. The water of the lake is clear, and of a greenish colour, and about swith fish. hours every day in the choir.

3. The town of Cremons on the Po is the fea of a binton, and frontly fortified. It has a bridge of boats, over the river, an 'mirenity, a superb cathedral, many other chircles, convents, chapets, and other buildings.

The duchles of Parma and Placentia, which are united, lie to the north of Genos, and belong to the crown of Spaim. They are fertile and well watered, contain various minerals, and lave some manufactures in them.

The city of Parma, which gives name to one of the difficks, is large and populous; it is situated on the river Parma, from which it derives its name, and by which it is divided into two bath, connected together by several buildes. It is feu miles in circumference, and contain between forty and sitty thousaid inhabitants, with many fine streets and house. The ducal palace consists of three courts, two of which are new. Here is an university, sounded in 1509, and an academy, in 1601. The large founded in 1509; and an academy, in 1601. The large theatre here, built by Renatus I. in 1618, is famous throughout Europe: It will contain upwards of feven thousand speciators. The other duchy, namely, Placentia, confifts of a large

city near the Po. It contains many churches and conventes and and twenty-aight thousand inhabitants. The citedel is strong, but the other fortifications are inconsiderable. It had its name from its delightful situation in the midst of a spation fortile plain, where the passures are extremely rich. Here is the university, a ducal palage, and a stately cathedral, with a fine church, called St. Maria in Campagna. The main street, stiled Stradone, is a very sine one. The bishop of this city is suffragan to the archbishop of Milan. The Via Zanilla beglin here, and extends as far as Rimini, on the Adriatic. There are some falt forings in the neighbourhood of this city. Qualitalla, which is a sinall study, likewise belongs to Spain, is twelve sailes long, and sive broad, but contains no place worth mentioning, except Quastalla, which gives name to it, and is a small fortified town on the river Crostolo. This ducty likewise belongs to Spain.

The duchy of Modena is situated cast of Parma, extended fity. It miles in length, and is from twenty-four to threy-six broad. The duck is a vassal of the empire. This country is well watered, and abounds with many necessary of life, has in it many minerals, petrifictions, exc.

The city of Modena, the capital, is large, populous, and well fortified, but not handlone. It, is the see of, a hillop, and has a large, unwieldy cathedral. The ducal palace is a very noble edifice, in which, among the other ince pictures, the birth of Christ by Correggio, celled is Notte Felice, is much eclebrated. The only manufacture, for which this city is noted, in this of malks, of which great numbers are exported. The turclary faint of it is named Germinanus.

The city of Mirandola stands about twenty four miles north east from Modena: this is a strong, but not very

named Geminianus.

The city of Mirandola stands about twenty four miles north east from Modena: this is a strong, but not very large place, with a citadel. It is the sec of a bishop, and the capital of the principality to which it gives name, and which to a tiong time belonged to the noble family of Pico. On instantily and dity was the tamed Picus de Mirandola, whose works are well known among the learned; and being printed in a large and sittal character, give name to the two sizes of letter called double and single pica used by printers.

printer.

Massand Carrara, two little principalities, are contiguous to one another, and very fruitful. They both have their names from their capitals, and ile on the Tuscap sea. Massa, situated on the river Frigido, about these mises from the fes, is the see of a bishop, suffragan to the archibishop of Pisa, and has a ducal palace. Carrara is a small, neat town on the little river Lavenza, four miles, from Maffa, and as many from the fea, at the foot of fome high mountains, which yield a fine fort of marble, from which

mountains, which yield a fine fort of marble, from which the duke derives a confiderable income;

The diffrict of Mantua, which belongs to the house of Austria, is turrounded by the popedom, Venice, Milan, and Modena. It is about fixty miles long, but not above feven broad; is fertile, and well watered.

The capital city, Mantua, is very antient, having been founded prior to Rome. It is fituated in a marsh, which renders it naturally strong, but at the fame time renders the air unwholfome. The bridges are guarded by forts. The walls are four miles in circuit, and the number of the inhabitants (exclusive of the imperial gardion, and about fire thousand, Jews, who live in a diffice quarter, and have several synagogues) about fixteen thousand. Here are a great many convents and churches, with some fine squares, streets, and houses; but the city is much declined from what it was when it had dukes of its own. The riding lehool has not its equal; and the course is also well. rrom what it was when it had duxes of its own. The riding-fehool has not its equal; and the course is also contrived. The ducal palace is old, and how much heglested, but the church belonging to it has a vast collection of riches, gold and filver crucifixes, statues, and some good pictures. Mantua is an epilopal see, dependant on the pope. The cathedral, of which Julio Romano was the archived, contains fome fine paintings, particularly a night-piece by Paul Veronete.

We are now come to the complete.

My are now come to the republic of Venice, which role from a very finall beginning to great confequence. That clufter of illands, where the city of Venice now stands, was originally inhabited only by fifteemen; but, when Italy was invaded fift by Alaric the Goth, and afterwards was originally inhabited only by hinermen; out, when Italy was invaded first by Alaxie the Goth, and afterwards by Attila the Hunn, great numbers of the people fled thither for the free weath. From that time a city gradually rofe, grew powerful from its fituation, and opportent from commerce. A republic was formed, trade furnished the people with riches, riches gave birth to ambition; ambition urged them to conquete, and conquet procured them additional territories both in Europe and

Afia. Thus by rapid strides they rose to great importance; but arriving at the zenith of their glory, they with almost equal velocity began to decline.

equal velocity began to decline.

After many revolutions, an ariflocratical form of government was at length established in Venice. The nobles, who assumed the supreme authority, are about two thousand in number, have each the title of Excellency, and wear as a mark of distinction black furred gowns reaching. to their heels, with long caps and perriwigs. Some of the nobles, however, are so extremely poor, as to be obliged to beg of those who are more opulent.

nobies, nowever, are to extremely poor, as to be obliged to beg of those who are more opulent.

At the liead of the government is the doge, whose office was once hereditary, and power absolute; but the former is now elective, and the latter very much circumscribed; in short, this governor has little more than the shadow of greatuels, and has been justly defined to be in habit and state a king, in authority a counsellor, in the city a prisoner, and out of it a private person; he is as much subject to the laws as the meanest person; and when he dies, there is no public mourning. But though the power of the doge is very finall, his state and retinue are very splendid; his title is that of Serenity, and his office is for life. The yearly revenue of his office is about four thousand pounds, and though he may be deposed, he cannot refign his dignity.

thousand pounds, and undergreefigh his dignity.

The principal Venetian order of knighthood is that of St. Mark, the badge of which is a large golden medal dependent from the breath. The order of Confirmine knight parts across hanging from a gold chain. The Inquisition wear a cross hanging from a gold chain.

as under great retrictions nere.

The naval power of the Vehetians is the greatest in Italy, as they can equip a formidable steet. The army confilts of between twenty and thirty thousand men, principally Swifs and Dalmatians; and the commander in chief, siled Capitano, is always a foreigner of diffinedion. The ordinary revenues of the state, artifung chiefly from the ordinary revenues of the flate, arising chiefly from the customs and duties on falt, amount annually to about one

million two hundred thouland pounds fterling.
Several islands, and a finall part of the continent, compose the duchy (or degado) of Venice; which contain the capital city of Venice, which is also the seat of the republic. It is fituated four miles from any part of the Terra Firma, betwirt the city and which are many shallows, when, at low water, the bottom may be touched with a pole; but all possible care is taken to prevent their becoming dry land. The city is divided into many canals, on which the gendeliers, or beatmen, ply in their black gendelas, or beatmen.

The most remarkable places in the city are the ducal palace, the square, and church of St. Mark, who is the autelar faint of Venice, the mint, public library, grand arfenal, several of the palaces of the nobles, churches, con-vents, and hospitals. In these last is a predigious collecariena, jeverai or use palaces or the nobles, churches, convents, and hofpitals. In these last is a prodigious collection of the fusest paintings; Venice, in this respect, surpassing even Rome itself. In the doge's palace, all the high colleges hold their assemblies. In this palace is a small arienal, furnish d with arms against any sudden insurrections. anfenal, furnifit d with arms against any sudden insurrec-tion of the people, together with a state prison, a great many exqisite paintings, and several curiosities. One side of it is towards St. Mark's square; and the lower gallery on that side, with the hall under the new procuratic facing it, are called the Broglio, where the nobility, and none else, at least while they are present, are allowed to walk. St. Mark's square is the zecea or mint; from zecea, the

St. Mark's iquare is the acces or mint; from acces, the golden coin called accelinio takes its name. One of the finallest pieces of money at Venice is called gazetta; and the first news-papers were from thence thyled Gazettes.

The grand arienal, rope walk, foundery, and falt-petre works here, deferve a traveller's notice. Close to the Rialto is the bank. There are two academies for painting at Venice, where the disciples draw from the life.

The German factory contains about five hundred rooms, and is the general magazine for all goods that either rooms, and is the general magazine for all goods that either come from, or are to be fent to Germany. The Venetian rade, though on the decline, is till loonfiderable, particularly that of plate and other kinds of glass. Independent of what is called the city, many feattered and circumjacent illands are covered wirth buildings; among thefe is Murano, which contains the celebrated glass manufactury: here is also a place, adorned with a gallery of admirable paintings, belonging to the Cornaro family.

The diversions of the Venetians are chiefly machine.

The divertions of the Venetians are chiefly malquerading, especially during the carnival, and other reftivals; ridottos, operas, plays, which are generally wretched per-formances, and concerts of vocal and infrumental mulic.

During their festivals, debauchery, riot, and licentiousnels, are carried to the greatest height. The grand focus
of all the shows and follies of the festivals, is the square
of St. Mark, in which bulls are sometimes baited.

The marriage of the doge to the sea, on Ascanson-day,
being one of their greatest solemnities, we shall here present
our readers with a particular description of it: On Ascanson-day, the doge, or in case of his illness, the vice-doge,
who is always one of the fix consigliers, performs, the
annual ceremony of marrying the Adriatic sea in a barge
called the bucentaur, which is pompoully git and carved.
At shout ten in the morning, the signal being given by
the firing of great guns, and ringing of bells, he goes on
board this vessel, and accompanied by several thousand
barks and gondolas, a great number of gallies finely ornamented, and the splendid yachts of soreign ambassadors,
is rowed dut to sea, about two hundred paces towards the
dignified elergy come on board the bucentaur, and present
the doge and signora, as they pass, with noseasy or artificial flowers, which, at their return, they make presents
of to their acquaintance. The doge, at his putting off
and return, is falued by the cannon of a fort on the Lido,
and by those on the island Erasmo, and with the small
arms of the foldiers, who are drawn up along the Lido
shore. These islands lie about two Italian miles from the
city i and an eminence on the island of Lide affords a
diffinit view of this ponnous procession, and of the valshore. I here minence on the island of Lido affords a diffinit view of this pompous procession, and of the vast number of boats, &c. which cover the surface of the water, and make a beautiful appearance. In the mean time several hymns are performed on board the bucentaur, by the band of music belonging to St. Mark's church, and several prayers appointed for the occasion are read or fung, till the doge has passed to the two forts of Lido and St. Erasmo; and then he proceeds a little farther towards the Lido thore, the stern of his barge being turned towards the doge has passed the two sorts of Lido and St. Erasmo; and then, he proceeds a little farther towards the Lido shore, the stern of his barge being turned towards, the main sea. Here the partriarch pours into the sea some holy water, which is faid to have the virtue of prevening, and allaying storms. After this the doge, through an aperture near his seat, drops into the sea gold ring of a sew dollars value, saying, in latin, "We espouse thee, O sea, in token "of our real and perpetual dominion over thee." After this all return, and the doge with his company is set ashore near the church, of St. Nicholas, in the island of Lido, where the partriarch in person celebrates a solemn mais. In the evening the principal members of the council, and all who waited upon the doge in the bucentaur, are entertained at the ducal palace.

Padua territory is thirty-five miles long, twenty-eight broad, and exceeding fettile. The capital, of the same name, is one of the richest and most source, it is structed on the Brenta, thirty-four miles east of Venice, and has many churches, hospitals, and convents; but the streets are narrow and dirty. The university, which was formerly in great repute for some time, has been on the decline, but the physic garden is still confiderable. The desired in the physic garden is still confiderable. The struction church and chapel of St. Antony are spelendid beyond imagination. This city is the see of a bishop, in the podesta's pa'zee is the library, and in the old castle, an afrenal and granary. The territory is subject to violent storms; but the air is healthful.

The territory of Veroncse is very fertile, but contains only one place worth mentioning; viz. Verona on the

ftorms; but the air is healthful.

The territory of Veronce is very fertile, but contains only one place worth mentioning; via. Verona on the Adige, a large, firong city, in a fine fituation. Over the river are four bridges, of which that one which leads to the caffle is much admired. The caffles are three in number, the fireits narrow and dirty, the houses mean. The best firett in the city is that called the Corfo, where horse and foot races are sometimes run. The largest square is that called Piazza d'Armi, where the annual fairs were formerly kept, in Aoril and Auturn. Here are several academies kept, in April and Auturan. Here are several academies for the improvement of music, polite exercises, &c. an elegant theatre, and a Roman amphitheatre in fine prefer-

eregant theatre, and a kontan amplitudeate in the prefer-vation. The wine of this country is admirable, and the territory well watered, fertile, and healthy. The city of Vleenza, which is "rge, contains about thirty thousand inhabitants. Over the principal river are several bridges; without the city is a triumphal arc; built by Palladio; but the city walls are gone to decay. There are a great many elegant buildings within it, particularly in the piazza before the council-house; for, besides the cathedral and other churches, and the convents, which are numerous, there are feveral hospitals, and some fine palaces. The council-house is a stately fabric, and so is the Monte della Pieta; in the latter of which is a fine library. Here

are fill to be feen fome remains of a Roman amphitheatre, of a noble aqueduct, and feveral magnificent hot baths. The circumjacent territory is eatremely fertile.

Brecfanto, which is also a tolerably fertile and well watered territory, contains no place worth observing but Brefeia, which gives name to it, and is its capital, fanding in a pleasant plain near the lettle river Garza. The eastle stands on a rock, and commands the whole town, and the arsenal is well furnished with warlike stores. This town is not above three miles in circuit, but is very populous, and drives a considerable trade in fire-arms, swords, knives, and other cutterty wares.

drives a confiderable trade in fire-arms, fwords, knives, and other cuttery wares.

Bergamafeo is in general barren, though well watered, and the inhabitsnts are fubject to the fame kinds of wens in the throat as the Savoyards. Bergama, a firoingly fortied town at the foot of the Alps, is the only place in it.

The town of Crema, in the territory of Cremano, which is fruitful and pleafair, is fituated on the Serio, being strong, handfome, the fee of a birhop, and famed for a linen manufactury. Rovigo, a finall fertile district, contains a cown of the fame name that is thinly inhabited; such Adria, which formerly gave name to the Adriatic, is a bishop's fee.

The district of Marca Trevignians is fo fertile, as to have obtained the name of a Continental Garden. Trevifo, the capital, stands on the river Site, where it joins.

vifo, the capital, flands on the river Site, where it joins the Peavefella. This is a bishop's see, has given birth to

viso. the capital, flands on the river Site, where it joins the Peavefella. This is a bishop's see, has given birth to many great personages, and contains at present some noble families. It is an antient, bur strong; a neat, but not populous place.

The territory called Patria del Friuli is the northern verge of Italy, and belongs partly to the Venetisins, and partly to the Austrians. It is very fertile, but does not contain any considerable place, except the city of Udino, on the river or canal La Roia. It hath a fine castle, with several hano. ... ac churches, palaces, and convents : bedies a college for law, and an academy for martial exercises.

The peninsula of Istria, on the Adriatic, belongs partly to the Venetians, and partly to the Austrians. The air is wnwholsome; but the territory, though hilly, is fruitful.

The strong town of Capo de stria is stroated on an island in this gulf, so near the continent as to be joined by a bridge. It is the see of a bishop, contains many convents, and its trade in falt is very considerable.

The little republic of Lucca, on the coast of the Mediterranean, is a ministure portrait of Venice. It is not talltry miles in circumference, but is fertile and populous. The inhabitants, who are said to amount to upwards of one hundred and twenty thousand, are very industrious, but extremely icalous of the Tuscans, by whom they are almost furrounded. The forces of the republic amount, in time of peace, to about fix hundred men, including the doge or gonslatoniers guard of Switzers, which consists of seventy-six men; but there are above thirty thousand in the territory of Lucca capable of bearing arms. The government is vested in two councils, of which one is called the council fix men; but there are above thirty thouland in the terri-tory of Lucca capable of bearing arms. The government is vefted in two councils, of which one is called the council of flate, and the other the great council, the executive being in the former, confifting of nine members befides the doge, who continue in office only two months, and, during that time, have apartments in the palace of the re-public, and are maintained at the public espence. The annual revenue amounts to about eighty thousand pounds fterling.

Lucca, the capital, and the only place in this territory worth deferibing, is about three Italian miles in circumference, and well fortified. The walls afford very pleafant walks, being planted with rows of trees. The number of inhabitants is about forty thousand. The houses are for the most part well built, and the fireets broad and well cand, but irregular. Several manufolluries, particularly paved, but irregular. Several manufacturies, particularly of filk, are carried on, and the fineft oil in Italy is made here. This is the fee of a bifhop. The cathedral is a large gottile fructure, dedicated to St. Martin.

The republic of Gennes is revealed described.

The republic of Genoa is greatly degenerated from its former splendor; but, among other misfortunes, the revolt of Corfica feems to have been the greatest. The government is aristocratical. The dogs or duke is chosen only ment is ariftocratical. The doge or duke is chosen only for two years, and mult be fifty years of age at the time of his election. The legislative power is lodged in the great council, confitting of four lundred members, of which four parts in five mult be unanimous. The administration is vested in a doge and a proper council. The doge has a guard of two hundred men. The great council make laws and raise money, the selfer declare war, proclaim peace; and form alliances. The military is inconfidently and the recognition of the doge has a guard of two lines. rable, the navy despicable, and the revenue at present small.

The territories belonging to the Genoese are one hundred and fixty miles in length, and about twenty-five in

breadth. They extend along that part of the Mediterranean called the gulf of Genoa. They are tolerably fertile, pretty well watered, and divided into two districts, visit the eastern and western confts.

The eastern toost contains Genoa, the capital, which stands near the Mediterranean set. As it is partly stuated on a declivity, it appears to great advantage from the sea. It is defended on the land-side by a double wall. The new and Balbi streets consist each of a double row of magnificent palaces; the other streets are crooked and narrow; bit the suburb of San Pietra d'Arena contains many noble buildings. Here are several palaces, churches, convenus, hospitals, &c. many of which are superiorized and St. Martha. In the cathedtal is a dist made of a single emerald. All the lahabitants here, except the principal ladies who are carried in chairs, walk on soot, on account of the narrowness or steepness of the streets. The fortifications of the city towards the sea are remarkably strong. There ere two sine stone, bridges over the rivers Bonzevera and Bisgno, the first whereof washes the west, and the other the east side of the city, within which there is also a surprising stone bridge, joining two hills. The harbour, though large, is far from being safe, but no care or expence have been sprated to resider it as safe and commodious as possible.

The principal places on the western coast are as follow, viz. 1. Savona, which next to Genoa.

dious as possible.

The principal places on the western coast are as follow; viz. 1. Savona, which next to Genoa, is the most confiderable city of the states. It is the see of a bishop, suffragan to the archbishop of Milan; has a strong castle, is well-fortsied, and famed for the finest swettmeats. Fiere also is a considerable filk manufactury; and there was once a good harbour, until it was partly choaked up, by order of the republic, that it might not hurt the trade of Genoa. 2. St. Remo, a small town on the sea, with a good harbour, sevenee miles east of Nice: The town in latin is called Fanum Romoli. There are many plantations of palm-trees about it, with olives, lemons, pomegrahates, and other fine struit.

palm-trees about it, with olives, lemons, pomegranaus, and other fine fruits.

The fimall principality of Monaco lies between the Genoese territories and the county of Nice. The only place worth mentioning here, is that which gives name to the principality, viz. Monaco, antiently called Herculis Monaco! Portus, from a temple of Hercules, that stood here. It is eight ailes east of Nice, and fix west of Vinitamiglia, and, though small, is strong both by nature and art, laving a good harbour, with a cassle and garrison, and officered by the king of France; and in this town the prince usually resides. The income amounts to near five hundred thousand French livres.

The duchy of Tuscany is encompassed by that part of

five hundred thousand French livres.

The duchy of Tuscany is encompassed by that part of the Mediterranean called the Tuscan sea, Modena, Lucca, and the popedom. It is one hundred and fixteen miles long, eighty bread, well-watered, mountainous in some parts, but sertile in others. The only order of knighthood here is that of St. Stephen, instituted in 1554; the duke is always grand master, and the badge of the order is an octangular red crofs, with a golden border worn on the breaft. The great duke is an absolute prince. His forces, however, feldom confift of more than three regiments of

llowever, feldom conflit of more than three regiments of foot and two of dragoons, and his navy is made up of only a few gallies and galleasses.

The city of Florence, the capital of the duchy, is sinuated on the Arno, twenty-fix miles fouth of Venice. It gives name to a populous and settile district. Here are four sone-bridges over the Arno; the number of clurches, palaces, hospitals, and convents, is great, but the streets are crooked and narrow. The palates here are inferior to those of Rome, and most of the windows are only made of nace. The changle for the interment of the years dukes. those of Rome, and most of the windows are only made of paper. The chapel for the interment of the great dukes in the church of St. Loxenzo, is hardly to be paralleled. Here is an academy for the improvement of the Tuscan language, called Della Crusca; another for agriculture, and another for riding. The principal trade, besides oil, wine, fruits, and other produce of the country, confists in wrought filks, and gold and filver fusfis. The nobility and gentry do not think it below them to trade; they even fell their wine by retail out of doors, but not in their houses; at the same time they deem it a great disparagement to educate their children in the profession of physic. They write the Italian here very well; but their pronunciation is guttural, and disagreeable.

Florence is adorned with seven fountains, fix columns,

Florence is adorned with feven fountains, fix columns, two pyramids, and about one hundred and fixty flatues. Most of the Plorentines are flore-fighted; and bence the Fiorentini ciechi, or blind Florentines, has passed into

proverbial jest. The great, piasaza or square is very spacious and stiagnisseer, with a noble sountain in the midst of it. The arsenal is a starcy building, and well furnished with all forts of weapons of war, kept in very good order. The cathedral is a very magnificent estince, the whole outside being of polished marble, and suriched with the most exquiste architecture and sculpture. The celebrated Campanile, or square steeper, which is one hundred and eighty seet high, all of sine marble, of several handsom ferrests and louser, but grafs grows in many of the latter. The city of Pis, on the Arno, has several handsom freets and louser, but grafs grows in many of the latter. The university is in a slowishing condition, and the exchange is magnishent, but little frequented. The great diske a gallies are built, and commonly stationed here. This city is the principal residence of the order of St. Stephen, and the see of an archbishop. The cathedral, a large gothic pile, contains a great number of excellent paintings, and other curiosities. The cohe of the hapility exceeds, that near Milan, though the repetitions are not quite so distinct.

This city has, for its desence, a most, walls, a castle, fort, and citadel, the last of which is a modern work. Hard by the cathedral is the city burying ground, called II Campo Santo, and in that the famous leaning tower, the inclination of which is so great, that a plumb line let down from the top touches the ground at the distance of near fifteen feet from the top touches the ground at the distance of near fifteen feet from the bottom. The physic garden is very spacious, contains a great number of plants, and is

down from the top touches the ground at the dittance of mear fifteen, feet from the, bottom. The physic garden is very spacious, contains a great number of, plants, and is decorated with water-works: over the door leading into it are, these words, "He Argus, fed non Briarcus, efto," i. e. "Employ the eyes of Argus, but not the hands of Briarcus," A necessary caution in many places. The Arno is of a considerable breadth, and has three bridges over it, one of them of matble: it falls into the fea two leagues below the town.

leagues below the town.

The city of Leghorn, thirty miles fouth-well from Flo rence, in the territory of Pris, makes a handlome appearance. The harbour is too shallow for large ships. At is fortified, but wants good water, which mult, be brought from Pris. The port, consisting of two lavens, one for the duke's gallies, and the other for merchant ships, is surrounded with a double mole above a mile and a balf in furrounded with a double mole above a mile and a half in length, and defended, together with the town, by a good citadel and twelve forts. The walks on the ramparts are very agreeable. There is good anchorage in the road, but thips, rding there are much exposed to the weather, and the Barbary, corfairs. The light-house stands on a rock in the sea, near which is the Lazaretto, where quarantine is personned. The number of the inhabitants is about forty thousand, and one half of these Jews, who like in a particular quarter, but without any mark of diffusi-tion, and have a fine fynagogue. The Turks, who are not flaves, also live in a particular quarter, as do the licensed protestants. Roman catholics, Jews, Greeks, Armenians, Mahometans, and even the English factory are indulged in the public exercise of their religion; but other protestants must be fatisfied with the private. Leghorn is the sec of a bishop, and residence of a governor, last a fine ducal polace, and a noble cathedral. The power of the inquisition is limited to ecclesiastical matters, and Roman ca-

tholics.

The large and antient city of Sionna stands thirty eight miles south of Florence. It has a sertile pleasant territory of near fixty-five miles square. The city is clean, near, and healthy, but not populous. The inhabitants are politic, and speak the Italian language in its utmost purity. The walls are adorned with many high towers of brick, and the streets paved with bricks set edge ways. Here is the see of an archbishop, and the cathedral is a very magnificent gothic pile. Fronting the cathedral is a very magnificent gothic pile. Fronting the cathedral is a sery magnificent gothic pile. Fronting the cathedral is a sery magnificent gothic pile. Over the state of the standard in the church, and, as a reward for his liberality, hath been canonized. Over the statue erested to his memory is this apposite inscription, "Store ultra crepidant," The thoemaker went beyond his last." The arms of this city are Romulus and Kemus sucking a wolf, for it pretends to have been a colony founded by these two brothers.

1 , 500 1 3 10 13755 90 SEC,T. III. Min- d.

Of the persons, character and disposition, manners, customs, Sc. of the Italians, with the antient and medern history of

HAVING, in our descriptions of the various states of Italy, also mentioned many particulars relative to the customs, manners, religion, soices, revenues, &c.

of the Italians, we need only, add the following remarks to the complexions are note of the belt. As no defens, though their complexions are note of the belt. As no defens, they follow the fathions of the countries on which they border, or to which they, are fubied, namely, thase of France, Spain, and Germany. With respect to their genius and tafte in agchitecture, painting, carving, and mufic, they excel greatly, and leave the other nations of Europe are behind them; but their mufic forms too foft and effeminate to deferve all the praise bestowed on it; and their house are far inferior to those of England, in respect of convenience. No country hath produced better politicians, historians, poets, painters, and sculptors, fance the relivant of the arts and foences, exclusive of shoke of antient, times. They are affable, contreous, ingenious, fober, and ready-witted; but at the fame, time jealous, vindictive, lascivious, ceremonious, and superfictious. The Italians, in their tempers, seem to be agood medium between the Friench and Spaniards, neither so gay and volatile as the one, nor so grave and folemn as the other. With respect to their dien, boiled shalls, served up with oil and papers, or fried in oil, and the hinder parts of frogs, are reokoned dainty differs. Kites, jackdaws, hawks, and megples, are also eaten, not only by the common people, but the better fort. Wine, is drank here both in summer and winter, cooled by jee or show. The women admired pellow hair, as the Roman ladies and courtefans formerly did. They also up and and washes, both for their hands and faces.

The Roman catholic religion predominates here. They

cooled by jee or inow. The women admire yellow hair, as the Roman ladies and courtefans formerly did. They also use paint and washes, both for their hands and faces. The Roman catholic religion predominates here. They recken the day from fun-rite to fun-set, as the Athenians idid of old. The Italian language is corrupted latin; but much the theoretical their strength of arts in tally, it hath been so much refused, that it is now deemed elegant, soft, and smooth. The puref. Italian is spoken in Tuscany. The exports are chiefly wine, oil, perfumes, fraits, and tilks. Travellers also expend lage lums of money in Italy, in purchasing pictures, currofities, antiquities, relica, dec.

In these early ages, when the Romans first began to extend their territories, Italy, like most other countries, was parcelled out into a great number of small states, who were all gradually subdued by the Romans. On the declension of the Roman empire, the Hunns, Goths, Vandals, Heruli, and other northern nations, passed the Alps, and cized on the greatest part of it, which was overtuning by Charlemagne, who founded a new empire in the west. The functions of Charlemagne claimed, and for some time possessions are the correspondent of their governors either effects of the coverage of the strength of their governors either the officers of the coverage of the countries of their civil was: at home some successions of the countries of the coverage of the countries of the countries of the coverage of the countries of the countries of the coverage of the countries of the countri home foon gave an opportunity to their governors either to assume or purchase the sovereignty of the several states they governed.

In process of time, Savoy and Piedmont fell to the lot counts of Maurienne, the ancestors of his protent Sardinian majetly, whose father became king of Sardinia, by virtue, of the quadruple alliance concluded in 1718. Victor Amadeus, the present king, was born in 1796; and in 1773 succeeded his father Charles Emanuel.

After going through foveral hands, the Milanes was as length possessing through foveral hands, the Milanes was as length possessing the emperor Charles V. about the year 1325, who gave it to his ion Philip II, king of Spain. It remained with that crown till the French were driven out of Italy, by the Imperialits, in 1706. These were difpossessing to the Interest of the emperor's cession of Apples and Sicily to the present king of Spain, it reverted to the house of Austria, who has appointed a viceroy to govern it. govern it.

Mainta was formerly governed by the family of GonZaga, who adhering to France, the territory was fortified,
as a fief of the empire to the house of Austria, which now
posselfes it, the last duke dying without male liftie; but
Guastella was separated from it in 1748, and made part of
the duchy of Parma. The first duke of Parma was natural
son to pope Paul III. the duchy having been annexed to
the holy see in 1545, by pope Julius II. The descendants
of the house of Farnele terminated in the late queen dowager
of Spain, whole son, his present catholic majesty, obtained that duchy, which, with that of Placentia, is now held
by his nephew.

by his nephew.

In autient times, the Venetians were the most formidable power in Europe. They conquered Constantinopla itself in 1193, and held it for some time, together with great part of the continent of Europe and Asia. The discovery of a passage to India, by the Cape of Good Hope, gave the first blow to their greatness, as it lost them this Indian trade. The Turks, by degrees, took from them their most valuable possessions on the continent; and they lost the Morea fol late as the year 121.

loft the Morea so late as the year 1715.

were feldom or never able to maintain their own Independency by land, being generally protected, and fointilmes subjected, by the French and Imperialists. They are, at present, possession of a revenue barely sufficient to maintain their dignity.

Tuscany belonged to the emperors of Germany, who governed it by deputies till the year 1240, when the famous distinction of the Gwelphs, particans of the ope, and the Gibellines, in the emperor's interest, took place. The popes then who added the Imperial governments in Tuscany to put thematives under the protection of the church; but the Florentines, to a flort time, formed themselves into a free commonwealth, and bravely defended their liberties against both parties by turns. Faction at last shook their freedom, and the family, of Medici, long before they were declared princes or dukes, in fact governed Florence, though the rights and privileges of the people seemed still to exist. The Medici, particularly Cosmo, who was deservedly called the father of his country, being in the secret, shared with the Venetians in the immense, profits of the East India trade, before the discoveries made by the Portuguese. His revenue, in ready money, which exceeded that of any sovereign prince in Europe, enabled his successors or rise to sovereign prince in Europe, enabled his successors or rise to sovereign prince in Europe, enabled his successors or rise to sovereign prince in Europe, enabled his successors or rise to sovereign prince in Europe, enabled his successors or rise to sovereign prince in Europe, enabled his successors or rise to sovereign prince in Europe, enabled his successors or rise to sovereign prince in Europe, enabled his successors or rise to sovereign prince in Europe, enabled his successors or rise to sovereign prince in Europe, enabled his successors or rise to sovereign prince in Europe, enabled his successors or rise to sovereign prince in Europe, enabled his successors or rise to sovereign prince in Europe, enabled his successors or rise to sovereign prince

dels, feveral inips of communication for the many vicifitudes of government, chiefly owing to the inconftancy of the natives. Christians and Saracens conquered it by turns. The Normans under Tanered drove out the Saracens, and, by their connections with the Greeks established there, while the rest of Eu-Long Agents of these configuration in the

rope was plunged in monkish ignorance, a most respectable mostarchy shourished in arts and arms. About the year 1166, the popes being then all-powerful in Europe, their intrigues broke into the fuccession of Tancred's line, and Naples and Sicily at last came into the possession of the French; and the house of Anjou, with some interruptions and tragical revolutions, held it till the Spaniards drove them out in 304s, when they annexed if to the dominions of that monarchy.

By virtue of various treaties, which had introduced don Carlos, the king of Spain's son, to the possession of Parma and Placentia, a new war broke out in 1733, between the houses of Austrla and Bourbon, about the possession of Naples; and don Carlos was received into the capital, where he was proclaimed king of the Two Sicilies. This was followed by a very bloody cam, aign; but the farther estudion of human blood was supposed by a peace between France and the Emperor, to which the sourts of Madrid and Naples at first demurred, but afterwards second in 1736, and don Carlos remained king of Naples. Upon his zecosion to the crown of Naples to his third son Ferdinand III, who is now the reigning king of the Two Sicilies.

The power of the papacy, is now evidently at a lowebb. The order of jestius, who are not improperly slied his janisfaries, has been exterminated out of France, Spain, Naples, and Portugal; and is but just tolerated in other popish countries. The pontiff himself is treated by Roman catholic princes with little more ceremony than is due to him as bishop of Rome, and possessing the suppose of the papacy is now evidently at a lowebb. The populity himself is treated by Roman catholic princes with little more ceremony than is due to him as bishop of Rome, and possessing the reasonable to believe, will steminate in a total separation from the holy see of all its foreign emoluments, which even, since the beginning of the present century, were immense, and to the reducing his holines to the exercise of his excelessatical functions as first affuned the name of rise value to the pontifical chair in 1775. dilipor is nimb . 1 25 17 110 100 THE NEW HISTORY AND DESCRIPTION OF

e Mila

THIS country includes feveral provinces, which are incorporated with it; namely, Transylvania, Sclavonia, Croatia, and Dalmatia. Hongary, (which received its name from the Hunns, a Scythian nation, who possessed themselves of it in the ninth century) lies between the eighteenth and twenty-second degree east longitude, and the forty-fifth and forty-ninth degree north latitude, is three hundred miles long, and two hundred broad; has Servia south; the Carpathian mountains, north: Walachia and Transylvania, east; Moravia, Stria, and Austria, west. The northern parts are mountain. mountains, north: Walachia and Transylvania, east; Moravia, Stiria, and Austria, west. The northern parts are mountainous and barren, but wholsome; the southern districts are level, and sertile, but unwholsome. The mountains contain a great variety of minerals, and even dismonds. Com is very plentiful; and the Hungarian wines, particularly Tokay, exacceds all others in Europe. Horses, cattle, fish, and all kinds of vegetables abound, as do wild beaths and various kinds of game. The low lands, exclusive of rivers, are watered by several lakes. We have already taken notice of the principal mountains and rivers, in our account of Germany and Poland.

land.

The province of Hungary is divided into Upper and Lower.

The former contains, 1. Zemplin, on the Bodrogh, which
gives name to a county that contains feveral inconfiderable
towns, and many vineyards that yield excellent wine, particularly that which takes its name from Tokay, a confiderable
town, pleafantly fituated near the conflux of the Theis and Bodrogh. The wine called Tokay grows only on one mountain;
but that of the neighbourhood, which usually passes under the
fame name, is little inferior to it. same name, is little inferior to it.

No. 76.

2. The castle of Skepus gives name to a county of great extent, abounding in some parts with fruitful corn fields, rich patures, pulse, and flax, and in others with woods and mountains, some of which are among the loftlet of the Carpathian chain. The county of Skepus affords no wine, but there are

fome iron and copper mines in it.

3. The city of Erlau is also a bishop's see, forty-five miles north-east of Buda, has a castle and warm bath, and in the neighbourhood are vineyards.

**A. The city of Great Varadin, or Waradin, is fituated on the river Koros, in the county of Bihar, one hundred and ten miles eaft of Buda: it is well fortifled, and the fee of a bifnop. It has a fitting eaftle on the eaft fide. The royal free town of Debretzen, which is large and populous, is also in the county of Ribarting and the county.

or Binar.

5. On the river Beg, flands the firong town of Temes-Var,
which is the capital of the Bannat, or territory to which it
gives name, and which (one finall diffrid excepted, which was
ceded to the Turks, at the treaty of Belgrade, in 1739) belongs
entirely to the emperor. Belides others of lefs note, there is a
firong town in the Bannat, called Lugos, fituated among moun-

The principal places in Lower Hungary are; 1. Nitra, on a river of the fame name; it is a well-peopled, but mean-built town, with a bishop, whose palace and cathedral are in the

2. Leopoldstadt, a strongly fortified place on the Wag, and the only town in these parts which could make head against an enemy, in case of a siege. 3. The

ood Hope, from them , and they d the emtians, but

3. The town of Prefours, the capital of the kingdom, called by the inhabitants Polony and Preforen, is fixuated on the Danube, about forty-fix miles east from Vienna. The castle, in which the regalia are kept, stands on a hill above the town. Here the states assemble, and in the cathedral, dedicated to St. Martin, the sovereign is crowned. The town is not very large, nor well built, but is very antent, pleasantly fituated, and calleys a good air. In fortifications are only a double wall and ditch. Besides the cathedral, there are several other popish and one Lutheras church, with a jesuite college, three convents, and two holpitals. It gives same to a county, and it the residence of the archbishop of Gran, who is legams natured the property of the paper separate of the separate separate of the separate separate of the separate separate of the separate s

arifing from them.

The royal free town of Gran, thirty-five miles from Pref-burg, and ninety-two from Vienna, is fittated on the Danabe, where it is joined by the river Gran. The town is well for-tified, gives name to a county, and lias a caffe on a high rold; in which is the cathedral. Here are fome natural warm, battis. The neighbouring country is very pleasant and fruitful, and yields excellent wine.

yields excellent wine.

In this difftief are two towns of the harm of Buda, the Old and the New. Old Buda is but a poor, mean place, but the New is a royal free town, flanding on the Danube, feventy-five miles from Pielburg, and ohe hundred and fix from Vienna. It is well fortified, and was the capital of the kingdom and refidence of the king, until it was feized by the Turks in z520, In whose hands it continued till 1689.

Theneighbouring country yields a good red wine, and excellent melons. Hard by the town is the island of St. Andrew, in the Danube, eight miles long, and eight hond; and rear it, on the banks of the river, is the town of St. Andrew, which makes a better figure than Buds itself. A few miles also below Buds is another island, called Espel, which formerly belonged to prince Eugene, who had a seat in the neighbourhood, where he often refided.

The principal miles town in Hungary is Schemnitz, chiefly

The principal mine town in Hungary is Schemnitz, chiefly inhabited by protefants. The gold and filver mires fill produce a confiderable quantity of ore (though thort of what they did formerly) and alout one thousand workmen are employed

The town of Cremnitz, the capital of the county of Beps,

in them.

The town of Cremnitz, the capital of the county of Reps, contains a mint; but the mines are almoft exhausted.

The inhabitants of Hungary are fierce, cruel, proud, and revengeful; better foldiers than merchants, and huntimen than febolars. The nobility affect pomp, gluttony, and drunkennefs. The men are firong and well made; they shave their beards, leave whiskers on the upper lip, wear fure on the head, a close-bodied coat girt with a fash, and a short cloak buckled under the arm, in order to leave the right-hand at liberty. The horse, who earry a broad-sword and battle-axe, are called Husfars, and the foot are named Heydakes. Here are five languages spoken, viz. the Hungarian, Sclavonian, Walachian, German, and Latino. The trade of the country is in the hands of the Jews and Greeks. Though not above a fourth part of the people are Roman catholies, yet that religion is the established one; but protestants, and particularly those of the Greek church, are tolerated, and Jews are doubly taxed.

The erown of Hungary has been in possession of the Asastrians ever since 1527, and is was finally settled on the heirsmale of the house of Austria in 1687; and, in 1723, in case of their failure, upon the female heir. The ordinary revenue of the kingdom acceeds a million sterling, arising from the mines, duties on cattle, royal demesines, salt-works, constitutions, cottoms, &c. The fortifications and sparisons, constantly maintained on the frontiera against the Turks, are a great expense to the government. Hungary can salily bring into the field one fluudred thousand men, regulars and militins for there are fifty thousand on an emergency.

The province of Transylvania, situated to the south of Hungary, being about one hundred and fisty miles long, and one hundred and fisty broad. Its mountains yield filver, iron, lead, copper, quickfiver, rock-falt, cinnabar, sulphar, vitriol, falte-

gary, being about one hundred and fixty miles long, and one hundred and fifty broad. Its mountains yield filter, iron, lead, copper, quickfilver, rock-falt, cinnabar, fulphur, vitriol, faltpetre, antimeny, red ochre, ifinglafs, and other minerals, and feveral of them are cloathed with vines. Many petrifying, fair, and medicinal fprings, cold and hot, with a great variety Solar ge afer to

of plants, are alfo found among them. The fields and vallies are rich and ferrite, yielding corn, pulle, and fruits; and the forests abound with business, elks, Rags, wild goats, bears, foxes, martins, lynnes, ermines, beavers, wild affes, wolves, bees, dec. Vast numbers also of black eattle and horses are bred here. Of the latter there is a wild fort, with manes hanging down to the ground. The principal rivers are, the Szamos, the Marco, and the Alva. As to the inhabitants, they are of several forts, of Hungarians, Saxons, Walachians, Armeniani, Bulgarians, Greeks, Raictans' or Servians, and a people of Tarant orbital. Here are all Digws and Zigduns, or gypries, as in Hungary. The proteinant are swell more numerous than the Roman catholics. The flasts, like those of Hungary, confit of the prelates or clergy, nobility, gentry, and royal towns.

towns.

The province of Scievons extends from the Adriale to the spice. Sex. This country has Carniols on the west, the Dainbite on the sast, 'the Save on the feath,' and the Drave on the north; it extends about three hundred miles from east to west, and feveral from its to foult, "see to select. It takes its name from the Scievi, a Scythian nation, who, about the time of the trajecte Justinian, peticled themselves of this and the segmenting countries. The inhabitants are a mitrure of Sciavohians, Cross, Walschians, Germans, Venetians, Turks, Jevians, or Rafelsins, and Yungarians. The only religion publicly tolerated if the Roman eatholic; 'yet there's re many of the Greak churchs. The king try sen, thousand pounds fability to the emperor. The air is pleafant and temperate, the face of the country level, and the foil fruitful in corn, wine and pattors.

The principal place is Effek, a confidensible town on the The principal place is Effek, a confidensible town on the second of the country level, and the foil fruitful in corn, wine and pattors.

fiebfly to the emperor. The air is pleafant and temperate, the face of the country level, and the foil fruitful in corn, wine and pastore.

The principal place is Effek, a confiderable town on the Drave, eighty-feven miles north-west from Belgnade. It was particularly remarkable once for a wooden bridge, crested by the Turks over the Danoth and found morasses, which was near eight miles in length, and thirry yards in breadth, with rails on each fide, watch-towers at every quarter of a mile's distance, and stalts leading down to the marshes: but in the late wars between the Imperialists and Turks, who used to invade Hungary, this bridge was destroyed by the former.

The province of Creatia, statact west of Sclavonia, is eighty miles long and seventy broad. The Groats, who inhabit this country, derive their origin from the Sclavoi, and speak the Sclavonian language. Here is one bishopric, but not any university, or seminary; and the towns are not worthy of description. The foil, where cultivated, is fruitful in wine and oil, and many other products. Both horse and foot are good foldiers, especially the former, serving for much the same purpose as the hosses, and the three other powers the rest. The language is Sclavonian, the religions Romish, it the mountains are clad with oliver, vince, myrder, and sheep, and lined with gold, silver, and other eres, and the plains are fertile. Here and in Carniola is a people called Usocoks, whos language is walachian, and their religion resembles that of the Greeks: they are a rough, savage race, much addicted to rapine, and moted for their agility, skipping like goats among the mountains from rock to rock.

The capital of Venetian Dalmatia is Lara, the see of an archbishop. It stands one bandred and stifty miles from Venetic and contents one to the content of the mountains of the capital of Venetian Dalmatia seems that of the Greeks:

with which is profit to be to the

noted for their agility, skipping like goats among the mountains from rock to rock.

The capital of Venetlan Dalmatia is Lara, the fee of an archbishop. It stands one hundred and fifty miles from Venice, or a small peninfula or listand; for it is separated from the land only by a deep ditch, into which the fea flows at high water under a draw-bridge. Here is a capacious harbour, and also a citadel, in which the proveditor or governor of Dalmatia resides, and the town is otherwise so well fortified, that it is doesned impregnable.

The small republic of Ragusa much resembles Venice in its constitution, the government being almost entirely in the hands of the nobles. The chief imagistrate is stilled rector, answering to the Venetian doge, except that he is changed every month. Here also are several councils, of which that of the pregadi has the chief direction of assam. To guard the city against considerapers, here is a board of health, confishing of five nobles. They are so jealous of their neighbours, that the gates of the city are allowed to be open only a few hours in the day. Their chief protector is the grand signor, to whom they pay an annual tribute of twenty thousand zequins. The only place of any race in their territory is that from which the republic tabas its issue, which was antiently called Epidaurus. At present it is a small, but well built town; shanding on the feat coast, in a wholesome air, but barren foil, and having a good harbour, with several manufactures, and a considerable trade. It is also the fee of an archbishop, and some small fertile islands in the Adriatic belong to it. in the Adriatic belong to it. Kindling in

the fire regret three makes in length, through the richest and best inhabited streety, on a front fometimes a mile broad, and sementimes less, seconding to the regular hilly student of the city. In some places it extended is different directions; so that at one there appeared no less than eleven distinct configurations, there appeared no less than eleven distinct configurations, and there appeared no less than eleven distinct configurations, and the ready wherfs. It is impossible to estimate the losses of all kinds occasioned by this calamity; but it is extain, that numbers of people, perished in the stames, and that many were driven by them into the sea, and unfortunately drowned. Amongs other public edifices, all the chambers of the janishates, appeared of sty mosses, three hendred corn mills, and two hundred public evens, surve been destroyed."

The Atmician, where horse-races were antiently ron, is still put to the sums set as it was formerly, for here the Turks throw the soft of eart riching full peed at the mark. The square is as the state dimensions it was formerly, viz. sour hundred pacea long, and one hundred broad; but most of the sine state was an obsilite which were in it are destroyed: one grand obelific, confishing of one piece of grantle merble, still remains entire, being fifty feet high, and ending in a point.

At the south end of the city is the castle of seven, or rather eight towers, for an eighth hath been lately added, the whole serving as a state prison. In the markets for live castle, flaves of all ages and seven are fold, and these are generally called Christians; but where any of the girls have a good share of beauty that may recommend them to men of figure, they are

of all ages and lexes are fold, and these are generally called Christians; but where any of the girls have a good share of beauty that may recommend them to men of figure, they are kept in handsome lodgings by their masters, and provided with good cloaths, and whatever else may recommend them to the purchasers, and procure a good price.

This city, including gardena, luburbs, &c. is very extensive in circumstrence, and the inhabitants exceeding numcous, consisting not only of Turks, but of a great number of Greeks and other Christians, Armenians, Jewe, &c. but the plague often makes dreadful havock amongs them. The environs are pleasant; and greater liberty is experienced in the suburbs of Galata than any other part of the Ottoman empire, as even taverns six tolerated. Pera is another suburb near Galata, where ambassadors and ministers of foreign princes reside; and the best buildings belonging to Constantinople are hereabout.

Scutari is a large populous town, to which the merchants of Persa and other eastern countries refort, and supply the city of Constantinople with whatever the east afterds.

The city of Adrianople, the second in this empire, is about eight miles in circumference; the antient name was Orestee, but it received its modern name from the emperor Adrian, who rebuilt it after it had been entroyed by an earthquake. Here are several grand mosques; but the private houses are meanly built. built.

built.

The town of Philippopoli received its name from king Philip, the fasher of Alexander the Great. There is an old wall about the town, which is at prefent nots place of any great strength. It is fituated in an extensive plain near the river Mariea, two hundred miles north-west of Constantinoples, is inhabited chiefly by Christians of the Greek communion, and is the see of one of their archbishops:

On the Thracian Cheroness tands the port town of Gallipoli, being one hundred miles scuth-west of Constantinople. This was the first town the Turks made themselves masters of in Europe, anno 1358: there are in it about ten thousand Turks, sour thousand Christians, and great numbers of sews.

There is an old castle in Romania on the European fide of the Hellespont, usually called Sessos: it lies in twenty-seven degrees of east longitude, and forty north latitude. Al: ships bound to Constantinople are taken account of by the Turks at this castle, and the opossite one in Asia.

this caffe, and the opposite one in Asia.

The once great city of Heracles, which formerly stood in the

mid-way between Cerefactinopie and Gallipoli, exhibit at prefent little more than the rains of it.

The presence of Bulgaria, which is feperated from Romania by mount Hamas, is two hundred and eighty miles long, and one hundred and eighty broad. It is governed by the beglerbeg of Rumelië, with four fubordinate fangiscs. The inhabitants are a mixture of Turks, Greeks, and Jews, who fisak a dialect of the Sclavonian language. The country is well swatered, and though in general mountainous, has fome fertile spots, abounds in eatile, contains a few iron mines, and some medicinal springs. The principal place is Sophia, a populeus town on the Bojane, two hundred and feventy miles north well of Conflantinople. It has an unwholfome air, is a great thoroughfare, without fortifications.

the sen numbelome air, is a great theroughfars, without fortifications.

The province of Servia, antiently called Myfia Superior, from its lying higher up the Danube, has the rivers Save and Danube on the north-it is two heating and thy selles it length, and upwards of one hundred in breadth from north in fouth. Beigrade, the capital city, is finished at the cordina of the Danube and Save, three hundred and forty miles fouth-and of Vienna. This was lately a large, bassipidal, city, froncity fortified, defended by one of the fireagen cedies in Europe, and inhabited by Chriffians.

The laft mentioned province, namely, Bothia, save of the antient Hilyricum, is bounded by the river lates, which divides the firm of the fourth, and by Croatia on the sail, by Dalimaria on the fouth, and by Croatia on the sail, by Dalimaria on the fouth, and by Croatia on the sail, by Dalimaria on the fouth are described in the river Unna running through it from north to beath, and dividing the Imperial from the Turkifit territories. The chief town is Bofnia Seraio, one hundred and twenty miles well of Balardo, on the frontiers of Turkey, in discrete degrees of and tought ude, and fifty-four degrees of north latitude.

The province of Moldavia takes its name from the Moldau which runs through it. It, is flusted to the earl of Transilvania, is about two hundred and forty sailes long, but the breadth varies confiderably. This is in general a barron loot, and the inhabitants are a mixture of various anaighbouring harious. The principal places are Jaffy, the capital and referenth.

We have already, in the former part of this work, deferibed.

near the borders of Fogolas, this seems, the frength.

We have already, in the former part of this work, deferibed the principal parts of Tartary in Afia, and the different tribes among them. There see, however, a final number, in proportion to the others, in Europe, whose places of residence, when they think proper to fix, are as follow:

1. The town of Bessen or Budziack, which borders on the Black Sea. The inhabitants are called White Hordes: they rove from place to place, live on the field of horse, oxen, cheese, milks, particularly that of mares, &c. The chief place is Bender, which, in the Turkish larguage, signifies a strong pass. Untries XII. of Sweden, after his defeat at Pultowa, resided here. pais. Char.

refided here.

2. The town of Oczakow, which is inhabited only near the fea, and along the banks of the rivers, and the country between the Don and Nieper is posteded by the Nogay Tartars, who are dependent partly on the khan of the Crim Tartars, and partly on Russia. Their food is norse fieth, and their religion Mahometanism; but they are faid greatly to exceed the most civilized Christians in hospitality.

The reader will find a particular account of the Crim, Lefegee, Ubeck Tartars, &c. in pp. 112, 113, 114, of this work, to which he is referred.

hich he is referred

which he is referred.

Greece is stuated to the north of the Mediterranean, being four hundred miles in length, and two hundred and forty in breadth. The air is temperate, but stactuating; the foil fruitful, but uncultivated, and the religion Christianity, but debased by the ignorance of its professors. The head of the Greek church is the partiarch of Constantinople, who is chosen by the neighbouring archbishop and metropolitans, and construed by the grand seignior; and the other patriarchs are those of Jerusalem, Antioch, and Alexandria.

There are four distinct provinces in Greece, namely, I. Macedonia. II. Albania. 111. Thessay. IV. Lividia, or Achaia.

The province of Macedonia is fituated to the west of the The province of Macedonia is fituated to the west of the Archipelago, has a sharp, clear, and wholsome air, and produces corn, wine, and oil. It is well watered, but mountainous: mount Athes, in particular, is covered with hermitages, and upwards of twenty convents. The only considerable place is the town called Karais, which is forrounded by walls, stanked with towers, and planted with artillery: this is the residence of the Tukish aga.

The populous town of Salonici, or Thessalonica, is situated at the bottom of a bay of the Egean ses, to which it gives trame, lying in twenty-four degrees cast longitude, and forty-one

degrees north latitude. Here St. Paul przeched, and we have faill two of his epidles, written to the Thefficientame.

The province of Albania, which comprehends flyricem and Epires. Is dituated to the east of the gulf of Venice, bring one hundred and ninety miles long, and ninety-fax broad. The foil is fertile, but little collisized, the inhabitants robust hat ignorant, and they are of the Greek perfusion, but fuperthinous. The principal places are, Seuari, a place of conflictable trade, eighteen miles north-east of the gulf of Vanice; and Durasses, hitty sive miles fouth of Seuari.

Lower Albania, or Epirus, is exceedingly fruitful, and the inhabitants are well adapted for a military life. The towns are inconfidenable, their almost toully decayed.

The province of Theffishy, new Jama, is bourded by Epirus, that was the Jy Maccoom, on the north, by Achaia, on the fouth and by the Archipolage, on the east. The chieftown he Learth, exilted Affishers by the Trutus, about fifty miles and of the island of Reckers, ar. Negropesal it is fituated on the ever frames, bering about 10 years on the morth, or do the ever frames, bering about 10 years on the morth, or do the plains of Theffishy on the fouth; a most dilightful abode. It is a large, appraisant city, and the series of the island of Reckers, for the series of the se

curions of invaders.

The town of Patree, eight miles well of Corinth, is the fee of an archbishop. It is at present a place of some trade. Chiatenas, thirty-two miles south-well of Patras, is thought to have been the antient Cylleni 1 and Lacedemon, or Sparts, now, named Mistra, antiently the capital of Laconia, is situated on the banks of the river Eurotas forty miles south of Napoli di Romania.

The town of Napoli di Romania, is fituated thirty-fix miles fouth of Corinth: it is a flong place with a good harbour, and has a confiderable trade.

Hage alkling who come lay to district the

astaining a general geographical survey of the island of Great Britain; with a particular account of the meuntains, forosite labes, vivers, medicinal spirings, mineral, vigsabiles; qua-drapeds, birds, sisses, inselts, and regists therein contained; and assessment of the contained of the contained of the Sc. with a distription of the inhabitiones, their manners, customs, voligion, trade, manusatures, Ge.

THE island of Great Britain, which on many accounts is the most respectable in Europe, is situated in the western ocean, between sity and sitty-nine degrees north latitude, and between one degree forty-two minutes and fix degrees songitude, being six hundred and twenty-six, nailes long, and three hundred and thirty-eight broad, where widest. The whole island consists of two grand divisions, viz. South Britain, or England and Waler; and North Britain, er Scotland. The former of these, namely, South Britain, which we shall first treat of, is bounded, on the north, by the river Tweed, which separates it from Scotland; on the west, by the British cas, which divides it from Ireland; on the west, by the British channel, which separates it from France; and, on the east, by the German ocean.

The air is in general healthy, the soil sertile, the face of the country beautifully diversified, the prospects admirable, and the lands well cultivated. The shores, by nature, form innuferable bays, creeks, harbours, &c. The circumjacent sea and intersecting rivers farnish a great plenty of various kinds of sish.

filh.

In many parts of England, the eye is delighted with an enchanting variety of gently swelling hills, level plains, corn fields, meadow grounds, wood and water, intermingled in the most agreeable manner. The champain country is parcelled out into beautiful inclosures, surrounded with quickfer hedges, intermixed with stately oaks and class. The farm-bouses, scattered about in great numbers all over the face of the kingdom, and convenient in the midd of the officer. tered about in great, numbers all over the face of the kingdom, appear large, neat, and convenient, in the midft of their offices or outhouses. The uncultivated part of the ground is cloathed with a continual green; and the lands in general display the perfection of agriculture. The seats of noblemen and gentlemen exhibit on every side a most delightful scene; shortishing cities, populous villages, and thriving towns, abound in every part of the kingdom, which is beauty, epulence, and cultivation, excels all the states in Europe.

We shall now proceed to describe the face of the country, and its various animal, vegetable, mineral, and medicinal productions.

ductions.

ductions.

The chief mountains in England are, as follow: The Peak, in Derbyshire; Endle, in Lancashire; Wolds, in Yorkshire; Cheviot, on the Scots borders; Chiltern hills, in Buckinghamhire; Malvern, in Worcestershire; Cotswold, in Gloucestershire; Wreken, in Shropshire; Skiddow, in Cumberland; and Penlumnon and Snowden in Wales. The most celebrate of these mountains is the Peak in Derbyshire, which is rather a cluster of mountains than a single one; the principal of these is Mann. Tor.

There are above three score forests in England; the principal of which are Windsor, Epping, Dean, Sherwood, New Forest, and Exmoor; the whole kin some into throughout shaded by trees and plantations, appears like one extensive forest.

The lakes in this country are, Soham, Whittlefea, and Ram-The lakes in this country are, Soham, Whittlefea, and Ramfey Merc, in the ille of Ely and county of Cambridge; Winander Merc, in Westmorland; Derwent Waters, in Lancashire; and Hull's Water, on the borders of Cumberland. The lakes Soham, Whittlefea, and Ramfey, in rainy weather, overflow the fens, and, joining, become one lake of vast extent.

The rivers in England (which, considering the extent of the country, are very numerous) not only fertilize the ground, but No. 26.

conduce to the improvement and prosperity of commerce. They are as follow; viz. The Thames, which is the chief river in the kingdom, being formed by the junction of the Thame and the lift. The others are, the Medway, Severn, Terat, Tyns. Tess, Eden, Avon, Ribble, Merfey, Oufs, Humber, Loddon, Celne, Lea, Dee, Dove, Tweed, and Churn. The Thames rifes on the confines of Glouceftershire, receives the Churn, and runs north-east to Lechlace, in Whitehire, where it unites with the Colne, and becomes assignable. Thence continuing its course north-easterly, it is swelled by the Windrush; enters Oxford, where it receives the Charwell, then turning south to Absingdon, proceeds to Dorchester, where it is joined by the Thame. Thus increased, it takes an east-ward direction, passes by Wallingsord, Eding, Marlow, Windson, Kingston, and Richmond, in its way to London, which having washed, divides the county of Kent from Essex, and widening as it approaches the Ocean, falls into the sea at the Nore, being navigable from its mouth to London-Bridge, for large ships.

for large fhips.

Few countries abound more with medicinal fprings, than England, which will appear by the following alphabetical lift of them:

The minerals are, tin, lead, copper, iron, free-stone, marble, coal, fullers earth, black lead, allum, and falt. The most considerable mineral is tin; and Cornwall, for producing it, has been samous ever since the Phoenicians traded to Great Britain. Northumberland and Cheshire produce a great deal of alum and falt; and the kingdom abounds with fuller's earth, which is of great use in the cloth manufactury. Free-stone is

plentiful in Derbythire, and marble in the neighbourhood of Plymouth. Immenfe quantities of coals are dug out of the pits in Northumberland, Cumberland, Westmorland, and the

Plymouth, Immenie quantities of coals are ugo out of the pin Northumberland, Cumberland, Wedmorland, and the bishoptic of Durling.

With respect to the foil in England, it is in general a rich lear, though in many places it consists of gracel and shind, and there is a variety of mouths and mark in different parts of the country. Its vectable produce is, comic tye, oats, peas, brans, vetches, hope brief beam, flax, clover, hemp, einquest il, utfoil, fainstoin, hearn, grafs, stricholees, asparagus, cautiflowers, cabings, collegors, baccoli, kidney-beans, spinachi, bests, sullest, endless, surness, carrott, potroces leeks, onions, chalcon, falliding of all tinde, affers and apples, pears, cherries, princes, neclatines, grapes, plura of various species, ratheries, as a sweeries, gootherites, musticries, blackberries, cuffanes, suits of various (erts, and mushrooms. The com which grows in England excels/that of all the countries in Europea. The arable lands are computed to produce thirty five artificus of buncles of wheat annually, sonfiderable part of which, after favourable feafons, is exported. The Englith wheat-far is, by the bott judges, preferred to the foreign ortoan for flavour and delicacy. Near as much barlet is made into malt, party for beerund the foreign ortoan for flavour and delicacy. Near as much barletia manuamerable. Englith old like in the best in the universe; walnut tree, which, here is plenty of afts, clm, beech, poplar, walnut-tree, where

innumerable. English oak is the best in the universe, beddee which, here is plenty of ash, clm, beech, poplar, walnut-tree, naple, sycamore, addrs, hornbeam, fallow, willow, hasle, and birch. The gardeners of this country, who are the most expert in the whole world, can, by means of hot-beds and fire-walls, raises exotic plant, and produce the most delicate fruits that grow within the Tropics.

The English quadrupeds are black cattle, theep, swine, horses, also, dogs, foxes, squirrels, ferren, weazles, lizards, newts, otters, badgers, hedge hogs, pole-cais, tats, mice, moles, rabbete, hares, deer, slags, sec. Their ozen are large and fat, and the beef her a deficient shavour. The sheep are large, and even more valuable for their sleece than their sides, as above twelve millions of sleeces are annually shorm and

large, and even more valuable for their fleece than their fielts, as above twelve millions of fleeces are annually florm shown an actual and in the strength of the flores of the faddle and chace are finely proportioned and full of mettle; those for the defalls and chace are finely proportioned and full of mettle; those for the draught are amazingly strong; and the war horse have abundance of spirit. Among the animals speculiar to England, we must not equit to mention the malifis and bull-dogs, whose spirit is so great, that they will singly attack any animal whatever; but when they are transposted to any other country; this furprising spirit degenerates greatly.

The feathered stips in England is very numerous, having great quantities of poultry, wild fowls, and birds; such sturkeys, peacocks, geefe, wans, ducks, tame pigeons, wood pigeons, wild docks, wild geefe, buffards, teals, wigeons, plovers, phessants, partidges, woodcocks, growse, qualit, andrails, snipes, hawks, kites, owls, herons, chows, rooks, ravens, magpies, jackdaws, jays, blackbirds, thrushes, nightingales, goldinches, weens, immetr, larks, and a great variety of smaller birds common to other countries.

The English game cock is remarkable for his courage; but,

The English game cock is remarkable for his courage; but, like the matriff and bull-dog, lose, it, if carried to any other

like the mariff and bull-rog, some is, it country.

In the feas furrounding this island, there is great plenty of cod, mackerely haddoc, whiting, herrings, pilchards, skiit, foals, shrimps, eysters, lobsters, and crabs. And the rivers afford abondance of falmon, trout, cels, pike, perch, smelts, carp, tench, bables, gudgeons, reach, dace, mullet, bream, plaice, sounders, crsy-fish, and chan. The last-mentioned is a very delicate fish, found in the fresh water lakes of Wales and Cumberland. The coast is feldom visited by whales, but there are great numbers of porposites tumbling about in the channel; and upon the rocks at the extremity of the island there are many feals.

Among the infects and reptiles in this country may be reckoned adders, vipers, frakes, worms, bees, wafps, ants, crickets, gnats, flies of various kinds, grafs hoppers, and many other species of infects and vermin common to other European countries. Many infects are of the transmigrating kind, chang-ing from one species to another; examples of which are found in the enterpillar, moth, and butterfly.

England is at prefent divided into fix circuits, namely, the

home circuit, the Norfolk circuit, the Oxford circuit, the midland circuit, the western circuit, and the northern circuit, Each of these comprises a certain number of counties. beam circuit includes Effex, Hertford, Kent, Surrey and Soffex. In the Norfolk circuit, we reckon Buckinghamhire, Bedford-hire, Huntingdomhire, Cambridgethire, Suffolk, and Norfolk. The Oxford circuit comprehends Oxford, Berkfhire, Goucestershire, Worcestershire, Monmouthshire, Herefordshire, Salop, and Staffordshire. In the midland circuit, we find Warwickshire, Leicestershire, Derbyshire, Nottinghamshire, Lincolnshire, Rutlandshire, and Northamptonshire. The west-m circuit includes Hampshire, Witthire, Dorfetshire, Someticchire, Dayonshire, and Cornwall. The northern circuit comprehends Yorkshire, the bishoptic of Durham, Northumbriants Leader and Comband. Middless being the fact of the tuprent cours of justice, and Cheathire a county palaulue, they are a the forest the hele apparent derives his title, in division has been circuit, and the fourth-east circuit, the advisor has forest the hele apparent derives his title, in division has forest the fourth-east circuit, the advisor has forest centained the searches of First, Dealth, and Montgrossey: in the fourth-east, are the counties of Radnors Brecon and Glamorgan: in the fasth-west, Funkersashire, Cardiganshire, and Carrmartenshire.

In England, we number forty sounder, containing twenty-

Carmarthenshire.

Ja England, we number forty sounder, containing twenty-five cities, due hundred and feventy-two beroughs, and eight cinque ports, which, arc, Dover, Haftings, Hythe, Romney, Rye, Sandwich, Seaford, and Winchellen.

In deferibing the fituation of, and the principal places in each county in England, we shall begin with the most westerly, namely, Contwall, which in stape refembles what it implies, that is, a thorn. It abounds in it in and lead, produces anudic, which affords copper as good as the Swedish; is famous for the best kind of date tiles, and furnishes the builder with moora stone, which resembles Kayptian granite, when it is sufficiently bolifhed.

none, which recembles Kayptian granite, when it is sufficiently polished.

The town of Lauguellon is the most antient and chief in the country. Launceston child was formerly a very strong place, and thence obtained the same of Cassle-Terrible; the round hill on which it stands being environed with a triple wall. It was built by William de Merton, carl of Cornwall, foon after the conquest. It is so much decayed, that no part of it, except that which serves for the country goal, is used at present.

The town of Falmouth, where the river Fall rous into the English channel, is two hundred and fixty three mises from London. This is the richest and best trading town in the country. The harbour is so commodious, that this of the greatest burden come up to its quay. It is guarded by the cassles of St. Mawes and Pendennia; the latter of which, standing on a peninfula, is large, and well-fortified, and was built by Henry VIII. for the desence of Falmouth harbour. There is sufficient shelter in many creeks for the whole royal navy to is fufficient fletter in many creeks for the whole royal navy to ride fecure from any winds. The town is well-built, and its trads of late greatly increased.

tride of lete greatly increased.

The town of Penzance, which is the farthest place in the west of England, is well-built and populous, and has many ships belonging to it; veins of lead, in, and copper, to the utmost extremity of low-water mark, are seen here.

The county of Devon, which joins Cornwall to the eastward, is naturally sterile, but rendered fertile in many parts by art. The following six the principal places contained in it; viz.

The city of Extert, capital of the county, and one of the principal cities in the kingdom. It is fituated on a rising ground watered by the river Ex, has fix gates, and, with the suburbs, is two miles in circumference. The catherful, called St. Peter's is a magnificent and curious fabric, vaulted throughout, three-hundred and ninety feet in length, and eventy-four in breadth, and has a ring of ten bella, reckoned the largest in England. Its bridge over the Ex is of great length, and has hooses on both sides towards the ends. It has four principal streets, the chief of which is called High-street, all centering in the middle of the city, which is well supplied with water.

The town of Totness stands on the river Dart. Here is a spacious church with a fine tower, a town-hall, and a school-

spacious church with a fine tower, a town-hall, and a school-house, Its chief trade is the woollen manufacture; but it has more gentlemen than tradefinen of note. There is a fine bridge over the river, which absends with delicate treut and other good fish. It is diverting to see them catch falmon-peels here, with a spaniel trained to drive them into a shore-net: formetimes a man-will take up twenty salmon at a time, from sources to twenty inches long, for which they ask only two-

The town of Plymouth is fituate two hundred and fixteen miles from London, at the influx of the rivers Plym and Tamar into the channel: It was antiently no more than a fifthing-town, but is now the largest in the shire, contains near as many in-tabliants as Exeter, and is one of the chief magazines in the kingdom, owing to its port, which is one of the largest and safest in England. It confishes two hatbours, capable of con-taining one thousand sail of ships; defended by several forts, particularly a strong citadel of large extent, containing a grand spagazine full of stores, and five regular bassions. It is very

convenient for homeward-bound flips to provide themselves with pilots up the channel, and is allo the general rendexyous of flips outward bound.

There is also a royal doch-yard, for building and repairing flips, shout two miles up the meanth of the river Tanar, which is an inlet of the fea, diffitiguished from Catwater by the name of Hamoase, and commanded by the castle on St. Nicholess fland. Here is a cherity-school, four hospitals, and a work-house. Off the entrance of the key lies the edy-flone rook, which is covered at high water, and anywhich there is a light house.

-

1123

which is covered at high water, and an which there is a light house.

The sown of Dartmouth includes in it what was formerly called three sowns. Cithon, Dartmouth, and Hardness. It flands on the fide of a creety bill, it shout a mile long, the freets very strengths, and the housing spentally high, fo that it freems crowded. The harbour is effected good, and five hundred fall of thips may ride fat in the bason, which is not only defended by three cables, but upon occasion, the entrance of it may be that up wide a chain. Dartmouth easilis is vary antient. The mether-church is called Townstall, and is fituated on a hill three quarters of a mile diffant from the town. The tower of the church is fixty-nine feet high, and is of good use as fea-mark.

The county of Dorfet, fituated on the fouth-east of Devonshire, is, like the two last, a maritime county. It abounds in corn, cattle, theep, &c. and is one of the pleasantest and most fertile counties in the kingdom.

The chief or filtre town is Dorchester, which was the most confiderable station of the Romans in those parts; they had a camp near it with five trenches, inclosing ten acres, the vehices of which are fally visible at a place sailed Maiden castle, about a mile from the town. It is fituated on an ascent, on the banks of the river Frome. The Ikaning street of the Romans is plainly theed here; and the foundations of the old Roman wall appear quite round the town, except toward the east, where the disch is filled up, and a street built upon it; yet the place is still called the Walls. St. Peter', Trinity, and All-Saints churches, and the shire hall, are it principal buildings in the town.

The town of Portland, opposite to Weymouth, was formerly

titil called, the Walls. S. Feter, I rinity, and All-Saint churches, and the fine hall, are y i principal buildings in the town.

The town of Portland, opposite to Weymouth, was fermerly an island, and fill retains that name, though now only a peninsula. It is fiancely seven miles in circumstence, and but thinly lobabited. In a last in this island is a swannery, containing seven or eight thousand swans. The land here is high, and by means of dangerous rocks, is accessible only on the north side, where is is defended by a strong castle built by Henry VIII. and by another since erested on the opposite shore, called Sandsfoot castle. The inland parts are famous for quarries of the finest and most durable free-slone, with which were crecked St. Paul's church, Westminster bridge, &cc. The best tobacco-pipe clay in England is found in Purbock, which, like Portland, is improperly called an island.

The county of Somerfet, finasted to the north-east of Devonshire, is a vary fertile country, and more celebrated for its mineral waters than any other county in England. It gives the title of earl, and sends eighteen members to parliament.

The city of Brissol, twelve miles from Bath, is the second city in the British dominions, for trade, wealth, and number of inhabitants. Though it lay in two countres, before it was made a county of itself, which was in the reign of Edward III. it was by the parliament rolls reckoned in Somerfethire. The cathedral was formerly the collegiate church of St. Augustine's monastery, which, when dissolved by Henry VIII. and erected into the see of a bishop, dean, presendaries, and other ecclessatics. There are in this city eighten churches; the chief in St. Mary Redelist's, without the walls, built in the reign of Henry VI. by William Cannings, alderman of this city. This is a magnificent structure in the gothic table; the workmanship socaquiste, the roes fo artificially vaulted with stone, and the rower so high, as to render it the finest parish church in the kingdom. Here in this city eighten a council, a tholley, or exchange, which is the completed in Europe, two fine quays, feveral docks, a corn market, and three gates, which are the only ones remaining out of fourteen, the antient number: befides the above, here are a flately bridge

the antient number: befides the above, here are a fately bridge over the Avon, a fquare (larger than any one in London, Lincoln's-inn-iquare excepted), and a cuttom-house. According to a late furvey, this city, which with the fuburbs lies compact, being almost as broad as long, is about fix miles in circumference, on the Glouester fide, and three miles on the Somerfet fide, which in the whole makes nine miles in circumference. The houses are close-and crouded, especially towards the bridge, and the heart of the city, where many of them are five or fix stories high. The ascent to St. Michael's

thill is fo steep, that upwards of one hundred skeps are laid in the way to the functiof it.

This city has amaningly increased of lite years in the extent and elegance of its buildings. The arth happrovenent was the credition of Queen-Spears, buggin in 1749, in the centre of which is a garden, and an obelist seventy feet high, in henous of his late royal highnest Frederic prince of Wales.

The territory of Cheddar is suand for the finest there in the world, except the Parmesin, and is twenty-ture miles in compass, absending with pasture. There are feel plantations of cyder, have been made in one fealon. It is common for fires or four daires here to join their milk, and to make what they call a Cheddar-cheese.

Ten miles from Bath is strated Fronte Selwood, which though a town longer than some cities, has only one church.

or four dairies here to join their milk, and to make what they caff a Cheddar-cheefe.

Ten miles from Bath is fituated Fronte Selwood, which though a town longer than fome cities, has only one church, More wire-carde are made here than in an only other town in Britain, and the woollen manufacture is reckoned more confiderable here than in any other part of England.

To the north-eaf of the county of Somerfer is situated Wilthisie; this is rather an unfertile county, but abounds in fheep. The principal place is Salisbury, or New Sarum, an epifcopal fee, and a large well-bulk pleafant city, near which four rivers join their streams, and sow through every street. The cathedral is considered as the mooft elegant and regular in the kingdom, particularly for its losty stone-spire.

The county of Hants, or Hampshire, is situated to the northeast of Dorfetthire, and is famous for hogs, sheep and timber. It sends twenty-fix members to parliament.

The principal places are, t. Winchesself, on the Itching; it resembles an amphitheatre, and is famous for hogs, sheep and timber. It sends twenty-fix members to parliament.

The principal places are, t. Winchesself, on the Itching; it resembles an amphitheatre, and is furrounded by chalk-hills. The cathedral is venerable and large, but not elegant. Here are fix other churches, two hospitals, a college, several public schools, &c. On St. Catherine's hill, near the city, are the remains of a camps and on the west was a castle, where the West Sason kings kept their court.

2. The town of Southsmpton, twelve miles from Winchesselfer, shads between two large vivers, the itching and the Tese, that fall here into that called Southsmpton water. The approach to this town, from the London road, is extremely pleasant. It has a wall almost round it of a hard kind of stone, henry Winchesselfer, shad and shade at the entrance of a creek, on the island of Portsea. It is also defended by South-sea castle, Blockhcuse castle, and Anades at the entrance of a creek, on the island of Portsea. It i

officers of the dock, but at this time has more houses and inhabitants than the town itself.

To the north of Hampshire is fituated Berkshire, which has
a fertile foil, and contains as follows;

1. The antient and pleasant town of Windfor, fituated near
the Thames, twenty miles from London. It has a fine castle
built by the Conqueror. Edward III. who was born here, enlarged and beautised it; built the royal palace and chapel, together with St. George's hall and its chapel, and instituted here
the order of the garter. Queen Elizabeth added the noble terrace, faced with free-stone ramparts, like those of a fortified
city, which is scarcely to be equalled in Europe. St. George's
hall is esteemed one of the sinest in Europe. The royal chapel
is beautifully adorned with curious paintings. The roundtower is built like an amphitheatre, very high, with elegant
apartments. On the north fide is St. George'a, or the chapel
of the Garter, one of the most elegant gothic structures in the
universe.

miverie.

Near the town are two parks, the greatest about fourteen miles, and the lesser about three miles in circumference, stocked with all kinds of game, and lavishly embellished by the hand of nature. In the forest, which is thirty miles round, are several seats; particularly Cranbourn lodge, which it ands on the top of a hill, and has a view not only of Windfor and the adjacent parks, have of London and income marks, have of London and income marks. adjacent parks, but of London and its environs.

2. The town of Reading, which is the principal in the county, flands on the banks of the river Thames, near the influx of the Kennet, and has three parith churches, built of fiint and square stone: an hospital was sounded here, and liberally endowed, by archbishop Laud.

The county of Surrey, situated to the south of Middlesex,

is a pleafant, healthy, fertile country. The principal place (exclusive of the borough of Southwark) is Guildford, a large well-built town, on the river Wey, which is navigable from hence to the Thames. Not far from the river are the ruinous walls of an old calle, this place having in the Saxon times been a royal villa, where many of our kings kept the ir follivals. Here are three parish churches, of which that belonging to the upper parish has been lately rebuilt in a magnificent manner. Here are alms houses liberally endowed, and the remains of a once famous manufactury of cloth. In the neighbourhood are the walls of what was formerly called St. Catherina's chapted built with a fort of tile, which, when broken, has the appearance of iron, and the ecment of them is in a manner impenetrable.

The other town, namely Richmond, is remarkable for its

The other town, namely Richmond, is remarkable for its beautiful fituation and royal palace, in which are many curious paintings by the most eminent masters. Queen Caroline took great delight here; and his prefent majesty has made great improvements in the gardens of this delightful place. The town runs up the hill a full mile to the parts, with finall gardens declining all the way to the Thames, over which a very nest bridge has been larely erecked.

The county of Suffex, lying near the fes, is fituated to the fouth of Surrey, and abounds in thesp, wool, &c. It fends twenty-eight members to Patliament. The chief place is Chichester, built on a plain near an arm of the fea. It is a very nest, finall city, walled about in a circular form; with four gates opening to the four principal firests, which meet in the certice, where is a beautiful crofs. All the space or quarter between the west and firsth gates is taken up with the cathedral, the bishop's palace, the dean's, prebendarier, and vicars' hooses, The church itself is not very large, but very neat, with a high sons spire of an octagonal form, which for the beauty of its architecture is greatly eltermed.

architecture is greatly eftermed.

The county of Kent is fituated to the fouth-east of Middle-fex, and abounds in hops, wood, and fruit. It fends eighteen

members to parliament.

members to parliament.

The principal places are, s. Canterbury, the chief city in the county, and the metropolitun fee of all England. The cathedral is a noble pile of gothic architecture, and had, before the Reformation; thirty-feven altras. Seven kings have been interred in this church; and St. Augustine, with the feven archibishops that fueceeded him, lie in one vault. Here was the firine of Thomas à Becket, fo famous for its riches prefented by votaries and pilgrims from most parts of the universe. There are fix wards, denominated from its fix gates; afteen parishedurches, and feven hospitals in this city.

2. The town of Rochester lies in a valley on the cut fide of the river Medway, and, except Canterbury, is the oldest fee in

the river Medway, and, except Canterbury, is the oldest see in England. Its cathedral is said to have been built by Ethelbert England. Its cathedral is faid to have been built by Ethelbert king of Kent. Here is a fone bridge, confiling of twenty-five arches, which is eftermed one of the fineft in England. Rochefter appears to have been a Roman flation, from the Roman

Wating-firet running through the town.

3. Tunbridge, or the town of Bridge: so called from the river Ton, and four other fireams of the Medway, which rise in the Weald, run hither, over each of which is a fine-bridge. Tunbridge Wells, much frequented on account of their mineral waters, are five miles from the town, up to which the river

Medway is made navigable.

4. The town of Margate, or St. John's, is fituated on the north fide of the ifle of Thanet, and is a member of the town and port of Dover, to which it is subject in all matters of civil jurifdictions. The principal firest is near a mile in length, and built on an easy ascent, by which means the upper part is and built on an easy accent, by whiten incense to upper part is clean and dry, but the lower end much otherwife. The pier is maintained and preferved by certain payments for all goods and commodities hipped or landed. The bathing rooms are not large, but convenient. Three of thefe rooms employ eleven machines till near the time of high water, which, at the ebb of the tide, fometimes runs two or three hundred yards into the bay.

The county of Middlesex, which takes its name from its

The county of Middlefex, which takes its name from its fituation between the kingdoms of the antient Earl, Welf, and South Saxons, is exceedingly fertile, fends eighteen members to parliament, and contains the following places, viz.

The city of London, the metropolis of Great Britain; it is supposed to have been founded about the time of Claudins, in the year 42. It had formerly seven gates by land, namely, Ludgate, Aldgate, Cripplegate, Newgate, Aldersate, Moorgate, and Bithopsgate; all of which have been some time taken down. On the side of the Thames there were Dowgare and Billing. On the fide of the Thames there were Dowgate and Billingf-On the lide of the I hames there were Dowgate and Billing; gate, long fince demolified, as well as the Postern-gate near the Tower, and the greatest part of the walls. In the year-1670 there was a gate erected called Temple-bar, which is fill-standing, and determines the bounds of the city westward.

This celebrated city has undergone great calamities of va-

rious kinds, but the two last were most remarkable, namely, the plague in 1665, which fwept away fixty-eight thousand five hundred and ninety-fix persons (and the fire in 1666, which

hundred and ninety fix persons; and the fire in 1000, which burnt down thieteen thousand two hundred dwelling houses; in stemeny of this list diese is an obelife creded, called the Monament, near the place where it began, which is one of the most remarkable structuras in the city. To the two above calemities, we may add the high wind it 1709, which did incredible mischies to the city and its environs, and affo to the shipping in the Fluxies.

The Tower of Loutdon is formounded by a wall, and partly by a cheep disch, which includes fivered firster, hereon the Tower, properly fo called this contains the great attiliery, a magualus of finall arms for flaty shouther sten, and the large horfes-armony, among which see fifteen figure of kings of the shout of the commend of a constable and licutement. In this fortress are kept the javes and ornaments of the whom, a wall are the other feedales, the shirt for coining money, and the menageist for full-levels and beafts.

reign birds and beafts.

The custom-house stands in Tharnes-tirect near the Tower: it is a large stately structure, where the king's custome are received for all goods imported and exported. There is a deligibiful prospect of a grove of ships, laden with commodities of various kinds opposite this place, as well as a great way down the river. London bridge is ersetted a little to the well of the custom isome:

cuftom house.

The Excise office, in Broadfreet, has been lately eracted on the fact where Greftsam college formerly flood, the latter of which was provided with goteffore, appointed to read lectures there in the different faculties, which is now done in a convenient apartment over the Royal Exchange. Greinam college was formerly the gruteum of the Royal Society, and had a fine library helpstights to:

library belonging to it.

In 17 32 the Bank of England began to be erected, and was finished in two years; iton after which a marble figure of William III. was fet up in the hall. This is a noble and commo-

is an III. was fet up it the hall. This is a noble and commodious flone building.

On the north fide of Cornhill flands the Royal Exchange, which is generally allowed to be the finest firacture of the kind in Europe. It was first built by Sir Thomas Gresham in the years 1366 and 1567; but being burnt down in 1666, it was finished in 1669, and cost flaty-fix thousand pounds. The quadrangle within is one hundred and forty-four feet long, and one hundred and feventeen broad; on the outside of the walls are plazzas, and over them twenty-four niches, twenty of which are tilled with the statues of the kings and queens of, England. In the middle of the area is the statue of Charles II. in a Roman habit. The tower and turret of the lantern is one hundred and seventy-eight feet high, and makes a good appearance. The Mansion-hock, in which the lord mayor resides, standed to the fouth-west of the Royal Exchange; it was founded in the year 1739. It is a magnificent structure, but its face, weight, and confined situation greatly diminish in dignity.

The cheech of St. Mary le Bow in Cheapside is admired for ts steeple, and has a fine ring of bells; and that of Walbrook, behind the Mansion, for its architecture, which is extremely curious and masterly.

behind the Manflom, for its architecture, which is extremely curious and masterly.

On the north fide of Cheapfide, at the top of King-street, stands Guildhall, the town-house of the city. The great hall is one hundred and sifty-three feet long, fifty broad, and sifty-eight high, and will hold near seven thousand people. It is embellished with the pictures of several English anonarchs, particularly those of their present majesties, and several other distinguished personages; a statue has lately been crecked there to the memory of the late earl of Chatham. And nearly adjoining to the before-mentioned building stands Blackwell-hall, samous for being the greatest market in the world for woollen cloth.

Sion college flands near London-wall : here is a library aprepriated to the use of the London clergy. There are alma-iouses belonging to it for ten poor men, and as many women,

to each of whom fix pounds per annum is allowed.

The eathedral of St. Paul, near Cheapfide, is allowed to be the finest protestant church in the world, and was built after a the meet proteinst church in the world, and was built after a model invented by Sir Christopher Wren. Its length, from east to welt, is four hundred and fixty-three feet, and including the portico, five hundred, and its height three hundred and forty-four feet from the ground to the top of the croft.

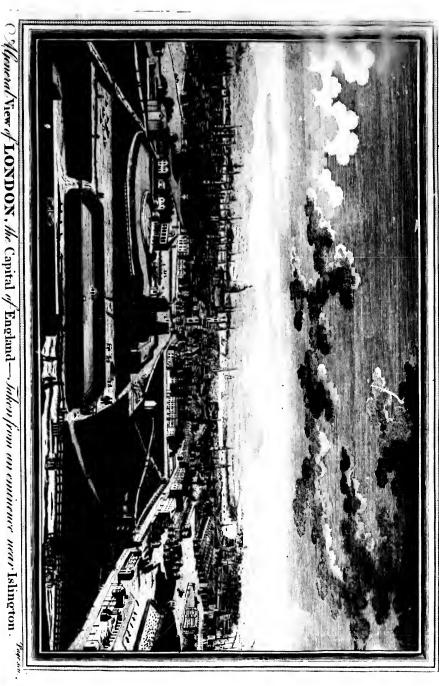

The College of Physicians, though obscurely fituated on the welt side of Warwick hure, is nevertheless handsome fructure.

In the Old Bailey flands Surgeons-hall, which is a handfome building, adjoining to which are the fessions-liouse, and New-

gate, the county gaol.

The noble building, called Christ's hospital, behind the

north fide of Newgato-fireet, was formerly a house of the Grey Friara, and was founded by Edward VI, for the entertainment and education of the poor children of citizents of both fexes. A merhanasical fishoot was founded here in 107 y, and a writing choot in 1094, and by means of a great thany noble benefabout in 1094, and by means of a great thany noble benefabout in 1094, and by means of a great thany noble benefabout in 1094, and by means of a great thany noble benefabout in 1094, and by means of the found fide of fire Fault's are Dochers Commons, continting of faveral handsome courts, where the judges of admiralty, court of delegated, court of inches) fit; meet. Near tele Herald's college, to which belongs three kings at arms, namely, Clerter, Clatesteleus, and Norroy, with fix tertale, four purfulvants, and eight proflors. It is a fuscious building with convenions agarments, a good ilbrary relating to heraldry, and the cents of arms o fall the families of note in England are kept here.

The Inner and Middle Tamale, near Tamale, here in the contract of the contract

with convenions spartments, a good library relating to heraidry, and the cents of arms o fall the families of note in England are kept here.

The laner and Middle Temple, near Temple bar, are both
inas of court for the fludy of the law. The Temple cherch
was founded at first by the Knights Templars in 118, and it
is now one of the most beautiful gothic structures in England. There are twive other inns of court in the city, which
are adapted to the like purposes.

There is a handsome stone bridge over the Thames ar Blackfiliers; in the road near to which it Bridewell, used as an hofpital, manufactury, and house of correction; and on the east
side of Fleet-market is a prison for debtore, called the Fleet,
There is alto another prison for the like purpose in St. George's
fields, called the King's Bench a near to which is New Bridewell, a large building adapted for the punishment of vegrants,
fcc. In June, 1780, the King's Bench and Fleet Prisons, great
part of Newgate, the toil house on Black-friars bridge, &c.
were burnt by the rivers.

There are several excellent foundations in London and its
environs. Among these are, St. Bartholomew's hospital, near
West Smithfield, the small pox hospitals, in Cold-bath fields
and near Battle-bridge Wells, the lying-in hospital in Brownlow-frast, Long-acre, another in the City Road, and a third
near Westminster-bridge, St. Thomas's and Goy's hospitals in
Southwark, St. George's and the Lock near Hyde Park Corner,
the Middless hospital in Tottenlam-court road, the London
hospital at Mile-End, and the Magdalen, for the reformation
of profitutes, in St. George's fields. To these must be added,
Bedlam or Bethlein hospital for infane people in Lower Moorfields (united with Bridewell) and St. Luke's for the same
purpose in Upper Moorfields a also the magnificent structure,
called the Foundling hospital, in Lamb's-conduit fields.

The city of Westminster, contiguous to London, are by
some reskoted part of it, though under a distinct government,
has long been famous fo

The city of Westminster, contiguous to London, are by fome reckoned part of it, though under a distinct government; has long been famous for the palaces of the English monarchs; the feat of the law tribunals, and the high court of parliament. The nathe is derived from its abbey, formerly called a minster; and its situation west of St. Paul's cathedral. The abbey is a truly venerable pile of building, in the gothlic taste, where most of the English monarchs have been crowned and buried. It was founded before the year \$50, but the prefent sabrie was received by Henry III. It is four hundred and eighty-nine feet in length, and fixty-six in hreadth at the west end, but the cross aids is one hundred and eighty-nine feet broad, and the height of the middle roof nintey-two feet. At the cast end is the ails is one hundred and eighty-nine feet broad, and the height of the middle roof ninety-two feet. At the east end is the chapel of Henry VII. which is so ingeniously wrought, that Leland calls it the miracle of the world. The screen, or fence, is entirely brass, and within are the figures of Henry VII. and his queen of folid brass, gilt. The abbey abounds with magnificent monuments, many of which are erected to the memory of noble and royal personages; of such as have distinguisherms themselves for their military or naval atchievements, their knowthemselves for their military or naval atchievements, their knowledge in the various fciences, or other excellent qualifications

weither in a public or private capacity.

Westminster-hall, near the abbey, is one of the largest rooms in Europe: but its roof is not supported by pillars. Here the law-courts are kept, and adjoining are the two houses of lords and commons.

Westminster-bridge, univerfally acknowledged to be a ma-fter-piece of art, is situated at a small distance from the hall.

There are several magnificent squares in Westminster, as those of Hanover, Berkeley, Grosvenor, Cavendish, and a new one called Portman-square. To the east of this last is Portlandone called Portman-figure. To the east of this last is Portland-place, a new street, the buildings in which are said to be super-rior in grandeur to any in Europe. Besides the above squares, there are St. James's, Soho, Leicester, Golden, and Biooms-bury; to which may be added the magniscent square called Lincoln's inn-fields, and several others of less note; both in

and out of the city.
There are, in London, ninety-feven parithes within he walls, fixteen without, nineteen in the out parifies of Middle-iex, and eleven in the city and liberties of Wellminster. The

number of meeting-houses, for protestant dissenters, of all de-No. 77.

hominations, is apriards of one hundred; buildes which, there are three fews synagogues. The public schools are, that of St. Paul, Merchant Taylors in Suffolk-larie, near Cannon-direct, and the Charter-houle in London; the toyal school; and St. Martin's school, user the King's Mava, in Westminder. With respect to the trading part of the city of London, it is commonly divided into sighty-nine companies; but some can hardly be called for because they have noither charters, helle, nor liveries. Of these there are twolve principal, of one of which the lord mayor is usually from they are as follow; the mercers, grocers, dispers, fishmongers, goldfruithe, skinners, merchant-taylors, haberdashers, falters, isonmongers, vintners, and cloth-workers. The lord mayor; twanty-siz sidermen, two hundred and thirty-siz common countellmen, a recorder; two theriffs, a chamberlain, a common seriesne; and a town-elerk, are the city magistrates:

two sheriffs, a chamberlain, a common ferjeant; and a townclerk, are the city magistrates.

A high staward, a head bailiff, a high constable, and fourteen burgestes, are the principal magistrates and officers for the
government of the city and liberty of Westminster.

Yaushall, Rarielagh, the Pantheon, two play-hooses, the
opera-house, and the theatra royal in the hay-market, are the
principal places of public amusement.

Besides the clergy, the most learned bodies of men are, this
Royal Society, the College of Physicians, the Society for the Emcouragement of Arts, &c. and the Society of Antiquariest
The finest repository of rarities is that called Sir Hans Sloans's
Musum, kept in Great Russel-veet, Bloombory, and purchased by the parliament for the inspection and use of the
public.

London, Westminster, and Southwark, are seated on the banks of the Thames; and from Radchis-cross in the east to Northumberland house in the west there is a gradual ascens to reornamoerand nouse in the west there is a gradual secus, to the principal firects. The common such is pit-coal, usually called sea-coal, of which there are confumed upwards of fix hundred thousand chaldrons every year. The number of backney coaches is one thousand, but the sedan chairs are not fo numerous.

It is computed that London is fix hundred and ninety mea-fured miles north by west of Madrid, seven hundred and fifty north-west of Rome, fix hundred and fixty west-north-west ore hundred and twenty-five north west of Paris; one hundred and ninety west-fouth-west of Amsterdam, four hundred fouth-east of Edinburgh, and three hundred and thirtyfour fouth-east of Dublin.

The county of Effex, situated to the east of Middle The county of Elicx, ituated to the east of Middlefer, is extremely fertile, and abounds in cattle, corn, pastures; faffron, &c. Its chief town is Colchecler, a large and populous place on the river Coln, which pales through it, and is made navigable for small craft up to the Hithe, a long street, which may be called the Wapping of Colchester, where there is a convenient quay; and at Wivenhoe, within three miles of it, is a good custom-house. This, and all the towns round it, are noted for making of hairs of which great quantities are convenient. cuttom-nouse. I mis, and all the towns round it, are noted for making of baize, of which great quantities are exported. For the support of this trade, there is a corporation, called governors of the Dutch bay-hall: this town is also noted for excellent oysters. It is reckoned to be about three miles in circles. cumference, has ten parifi churches, and five meeting hoofes.

It had antiently a wall and a firong caftle, built by Edward, fon to king Alfred, about the year 912.

The town of Chelmsford stands in a beautiful pisin, having

the little river Chelmer running through it, over which there is a bridge. This is called the thire or county town, and is a large, populous place, almost in the centre of the county, and its fituation renders it the most frequenced.

The county of Hertford (or Hartfordshire, which received its

A ne county of Herttord (or Hartfordhire, which received its name from the great number of harts with which it formerly abounded) is fituated wellward of Effex, is particularly fertile in corn and wood. The thire town is Hertford, which, however, is inferior in opulence to either Ware or St. Albans. The town was in fome note in the time of the Romans, who called it Durocobriva, or Red Ford, from the red gravel at the Ford. The Eaft Saxon kings formerly kept their courts here. Its churches are All Saints and St. Andrew's.

The country of Redford lies are the model of March 1999.

The county of Bedford lies north-west of Hertfordshire, is fruitful in corn and patture. The principal town of the fame name is a clean, well built, populous place. Here are five churches, of which the chief, and indeed the principal ornaenurenes, or which the chief, and indeed the principal orma-ment of the town, is St. Paul's, which had once a college of prebendaries. The priory, now belonging to the earl of Afth-burnham, was founded before the Norman conqueft for fecular canons. The buildings of this town are pretty good, and the firets broad. The north and fouth parts are joined by a fione bridge over the Oufe.

The county of Buckingham, or Buckinghamshire. Is book

e county of Buckingham, or Buckinghamshire, is both pleafaut and fruitful, abounds particularly in physical plants. The county town, Buckingham, stands in a low ground, en-

compassed on all sides, except the north, with the river Out

The castle, now in ruins, was built in the middle of is, and divides it into two parts. In the north part stands the town-hall, a very handsome, convenient strockure. It is a populous sown, and has three stone bridges over the Oufe. Its church, which is in the west part of the town, is very large, and, when which is in the west part of the town, is very large, and, when the spire was standing, might be reckoned the best in the county. In 1608 it was in part blown down, and never fince to built. Earl Temple has lately made a new road from this town to his celebrated feat at Stowe : it runs in a strait line about two miles up to the Corinthian arch, which; however, some times disappears, owing to the rising and falling of the ground. The lace manufacture is the principal business here,

ground. I he lace manufacture is the principal business here, as well as in other parts of the county.

The county of Oxford, which is pleasant, healthful, and fertile, is fausted to the west of Buckinghanthire. The city, which bears the same tamen, stands on the conflux of the Charwell and Isia: the name feems to be derived from a Saxon word, which fignifies a food for the pallage of ozen. It enjoys fweet air, in a plentiful country, on a fine plain, and has every way a delightful prospect. The private buildings are neat, the public enes sumptuous; and the river navigable for barges: but that ones (umptuous, and the river navigable for barges; but that which gives it a confequence above all other places in this kingdom, is the oldeft and most noble university in Europe, having been a seminary for learning upwards of eight hundred years. It is governed by a chancellor, vice-chancellor, and other officers, and contains twenty colleges, five halls, a stately pile called the schools, wherein exercises for the several degrees are called the ichools, wherein deersiles for the leveral degrees are performed; the thestre, the most magnificent building of the kind in the world; the Clarendon printing-house, which likewife surjected every thing of a similar nature; the museum, containing a chemical laboratory, a repository of natural and artificial certificities and antiquities, a library, physic garden, acc.

The county of Gloncester, or Gloucestershire, lies to the westward of Oxfordshire, is tolerably pleasant, but indifferently fertile. The city of Gloucester is well built, clean, and heal-

fertile. The city of Gloucester is well built, clean, and heal thy, fecured by the river on the one fide, a branch of which brings up vellels of a confiderable burden to its walls. It has a beautiful calledral, five churches, and is well provided with hospitals. There is an elegant ftone bridge over the river, with a quay or what, and a cuflom-house; abundance of croffes and statues of the kings of England are dispersed in different parts of the city, and large remains of monarchies. Under the bridge is a curious machine, which raifes water to supply the town, which they also procure from Robin Hood's Well, a mile or two out of the town. The cathedral is an antient but magnieat fabric, and has a tower, which is one of the neatest a groft curious pieces of architecture in England; and a whif-pering place, as in the cupola of St. Paul's. It has beautiful doifters, and twelve chapels in it, with the arms and asson-ments of great perions. Its town-hall for the affizes is called the Booth-hall.

The county of Monmouth, which was formerly part of Wales, is the most western English county towards fouth Wales. The town of Monmouth, twelves miles from Hereford, and The town of Monmouth, twelves miles from Hereford, and one bundred and twenty-five from London, has its name from the mouth of the river Minway, on which it is fituated, flanding on a pleafant fpot between that river and the Wye, over each of which it has a bridge. The place carries on a confiderable traffic with Briflol by means of the Wye. It has a flasely church, the east end of which is curiously built. The nown is in a manner issrounded by water, there being another siver, the Trothy, over which it has also a bridge.

The county of Hereford is one of the most fertile in the kingdom, and particularly celebrated for its cyder. The only city while county, called after its name, has a good flone bridge of

mingoom, and particularly electerated for its eyest. Labours with this county, called after its name, has a good flone bridge of eight arches over the Wye, and is encompassed with rivers on all fides but the west. Its name tignifies the ford of an array, lawing been for several hundred years the best quarters of the Saxons before the conquest, and of the English afterwards; who were flationed here, to keep the Welth in awe. Before the eivil wars, it had fix, but now only four chorenes. The ca-thedral is a magnificent flructure; and contains monuments of its anient prelates. The bifthey's caftle, the clofe with the dignitaries houses, and the college of the vicars and choristers, are pleasantly situated. It is a harge, but not very populous city. The country of Worcester, north-east of Herefordshire, is well watered, and very fluitful. The capital city, Worsester, Schweizel, and very fluitful.

well watered, and very fluitful. The capital city, Worcester, is situated near the Severn, over which it has a fine flone bridge. The chief manufactures of the place are broad cloth, gloves, and porcelain, which is a composition of a middle nature between sine earth and giass. The public buildings make a grand appearance, especially the guildhall and the workhouse. It had formerly a castle and walts, with three gates, and five watch towers, all long since destroyed. The castnedral (the model of that at Brussels) is a large edifice, but not very elegant, except the choir of the chapel, on the fouth-side, which is of curious workmanship. A handsome library belongs to the cathedral, supported by one single pillas in the middle. Here are the mo-The chief manufactures of the place are broad cloth, gloves,

numents of king John, prince Arthur, brother to Hanry VIII, the counters of Salisbury, and other iduatious persons. Besides the counten of Shifbury, and other illushicous persona. Besides the cathedral, there are eleven parish churches. The streets are broad and well pased; the foregate firect is regular and beautiful; the hospitals deserve notice, especially that neble one erected by Robert Berkley, of Spetchy, who said out two thousand pounds in the building, and four thousand pounds in the duilding, and four thousand pounds in endowing it for twelve poor men: there are, besides this, fix or seven others. Here is a good water-house and quay. The Severen, though generally rapid elsewhere, glides by Worcestee very gently. The remarkable battle in 1051; when Charles II. were though the remarkable battle in 1651; when Charles avery gently. The remarkable battle in 1651; when Charles avery desired by Cromwell, was fought near the fouth gate of the city, where benes of the flain are frequently due up.

The country of Warwick to the east of Worcellerthire, is

particularly famous for its iron works, and very fertile.

The city of Coventry is united with Litethfield, in Stafford-fise, as a bishoptick. It is large and populous, but the buildings are old; and some of them which are built with timeber, project out formuch, that in the narrow freets, the tops of the opposite houses almost touch. The chief churches are St. Michael's and Trinity. The protestant difference are a conof Michael's and I rinky. The protections dimensers are a considerable body here. The town-hoafe is worth feeing, the windows being of painted glafs, reprefenting found of the old kings, &c. who have been benefactors to the city. Its chief manufactures are tummies, and the weaving of ribbands.

The county town is Warwick, fituated on the banks of the

Avon, on a fpot remarkably rocky. It is a very antient place, and may be approached four ways, answering to the points of the compass, and cut through rocks. These lead to four fireets which meet in the centre of the town. The walls and cellars are made in the rock. It is fupplied with water by pipes from the prince of the prince for and has a noble flone bridge of twelve ments of the place, flrong both by art and nature; the rock on, which it flands is forty feet from the river; but on the north fide it is even with the town. From its terrace, which is al afry feet perpendicular from the Avon, there is a prospect of the river, and a beautiful country beyond it. The apartments are well contrived, and many of them adorned with original pictures by Van Dyke, not inferior to fome of the royal palaces.

The town of Birmingham is very large and populous; the upper part of it flauds dry on the fide of a hill, but the lower is watery, and inhabited by the meaner fort of people. They are employed here in the iron works, in which they are fach inare employed here in the iron works, in which they are tech insertion and fleel are admired both at home and abroad. It is much improved of lite years, both in public and private buildings. Near this town is a fest belonging to Sir Lifter Holt, Bart. but converted into public gardens, with an organ and other music, in imitation of Vaushall, which appellation it

bears at prefent.

The county of Northampton, east of Warwickshite, has left wafte ground than any other county, and confequently is ex-seedingly rich and ferrile. It give the title of earl, and fends nine members to parliament. The town of the fame flands upon the Nen, over which it has two bridges. The town of the fame name, beildings were handfome, and the place large, (liaving fevera parish churches within the walls, and two without) when it was parifi churches within the walls, and two without) when it was reduced to after by a dreadful fire in 1675. Liberal contributions from all perts of the kingdom reflored it in a great meafure to its original fize; and for neatnefs, beauty, and fituation, few towns equal it. It has four churches, of which the great ene, vis. Althallows, is a handfome edifice, with a handfome portico of twelve lofty ionic columns, and a flatue of king. Charles II. on the baluftrade. It flands may the center of the Charles II. on the baluftrade. It flands war the center of the town, and at the meeting of four fpacious flarets. The market is thought to exceed any other of the kind in England. Its most confiderable manufacture is floses, of which great numbers are exported; the next to that flockings. The walls are two thousand one hundred and twenty paces in compais. Among the public buildings, which all make a grand appearance, the George into looks more like a palace, and as foon as it was finished at the expense of two thousand pounds, the owner. Labor Drivides, essentially easier it to the goog. A county hold. John Dryden, generously gave it to the poor. A county hol-pital is built here after the manner of the infirmaries of London, Briffol, Bath, &c. and the river Nen, has lately been made navigable up to the town. The feffions and affise houfe, is a very beautiful building of the Corinthian order.
The city of Peterborough, which is of great antiquity, is also feated on the river Nen, over which there is a bridge, which

leads into Huntingdowfnire, and is in the sellern angle of North-amptenthire, feventy-fix miles north by west of London. It has many good houles, the streets are handsome and well built, and the market place is pretty facious. The cathedral is the finest gothick building in England.

banks of the fame siver, fixty-five miles from London, la litge, well huilt, and populous, with a handfome thurth; aind field feld feldool i i has a pretty good trade.

The county of Huntingdon, to the east of Northsemptoning, is a great corn and patture, county, and abounds in fift and wild fowl. The town of Huntingdon, near the Outs, over which there is a ftone bridge, is the confiant place for the affize, as well as the county gool, and is a populous trading plate, confifting chirfly of one large firest well built; with a finand-fome market place, and a good grammar school. There are feweral beausiful meadows on the banks of the river. The bridge or rather bridges, with the caoseway, are ornaments an well as benefits to the town; near the west fide is Hinchlabroke, which give the title of viscount to the carl of Sandwich's eldest from The town of St. Neott, in this county, is well built, and fity-fix miles north north west of London, it is seated on the Outs, has a handsome church, and a considerable market.

Oute, has a handfome church, and a confiderable market.

The town of St. Ives, fifty-feven miles north-west of London, is a large and handfome place. It has one large church, and the difficulty meeting, a popish chapel, with about five handred dwelling-houses. The streets are pretty wide and tolera-

wed dwelling-house. The fireers are pretty wide and tolerably well paved.

The principal rivers in this county are the Nen, and the Ouse.

The principal rivers in this county are the Nen, and the Ouse.

The county of Cambridge, including the life of Ely, is fituated to the west of Suffolk, and in general is very fertiles and produces great quantities of corn, particularly harley. The principal river is the Ouse, which runs from the cast to the netth-west, and receives the Cam, near Thetford.

The town of Cambridge, the capital of the county, is so called from its situation on the banks of the Cam, which form several islands on the west fisle, and divides the town into two parts, which are joined by a large stone bridge. It is very ancient, being well known in the time of the Romans, by the name of Camboritum. William the Conqueror, built a castle here, of which the gate-house is still standing, and used for the sounty gool. The town is divided into ten wards, has four-teen parist churcher, contains upwards of twelve hundred houses, for the most part irregularly built, and about fix thoussand inhabitants. The university, which is a corporation of itself, contains twelve colleges and four halls; it is governed by a chancellor, vice-chancellor, a commissary, high steward, and twe produces; there is also a liberaina, register, &c.

The antient city of Ely, is situated in the senny country, called the isle of Ely, and being surrounded by the Ouse and other streams, is unhealthy, though it stands on a rising ground. It was made an episcopal see by Henry I. The eathedral, and the bishop's palace are its chief ornaments; the former has a remarkable dome and lanteru, supposed to be the only work of its kind in Europe, and was a monastery in the Saxons time. Here are about fix hundredgood houses, and one good street well paved. The affizes are alternately held here and at Wishech.

The town of Newmarket, which is handsome and well boilt, consists of note long street, the north side of which is in Suffolk, is summer to ho

confifts of one long freet, the north fide of which is in Suffolk, confift of one long fireet, the north fide of which is in Suffolk, is famous for horfe races, and prodigioudly frequented by perfons of all ranks. The town is not modern, as the name imports: for it was of note in the time of Edward III, but being burnt down in 1683, was afterwards rebuilt. Befides the parific church of St. Mary, there is also a finall church, All-faints, which is properly fpeaking only a chapel of eafe to Wood-Dieton, in Cambridgeshire. It is a healthy place, and on a fpacious heath, which is the finest course in England. Here are feveral very wide, steep, and long ditches, which were cut by the East Angles, to keep out the Merciana; one of which runs many miles over the heath, and being a stupendous work, much seperior to the rest, has obtained the name of the Devil's Ditch.

The county of Suffolk, fituated on the fea coaft, weft of the German ocean, has but an indifferent foll, that near the shore

German ocean, has but an indifferent foil, that near the shore being sandy and full of heaths, yet abounds in rye, peas, and hemp, with numerous stocks of sheep. The principal rivers are the Waveney, the Debent, the Orwell, by some called the Gipping, and the Stour. The chief town is lowich, fixty-cight miles to the north-east of London. It was antiently in a shourishing state, as appears from the great number of ships that belonged to it, when its harbour was more commedium, and treater one churches of which now only number of imps time to fonged to it, when its harbour was more commodious, and twenty one churches, of which now only twelve remain. The tide rifes here twelve, fornetimes fourteen feet. The town is populous, about a mile long, and fornething more in breadth, forming a fort of half-moon on the bank of the river, over which it has a good bridge of fone. It is a corporation; and its chief manufactures are linen and woollen. Here is a convenient quay and custom-house, and no place in Britain is thought to be so well qualified for the Greenland fiftery, fince the fame wind which carries a finip out of the har-bour is quite fair to the Greenland feas. The town, which contains about four thousand houses, contains twelve parish churches, a town-hall, a county-hall, two hospitals, a frec-ichool, &c. is governed by a bailiff, twelve aldermen, and twenty-four common council-men.

The county of Norfolk, which is also a maritime place, to the north of Suffolk, is exceedingly fruitful, and deemed any opitions of the whole kingdom. The principal twers are the Ouse, Waveriey and Yare.

The city of Norwick, one hundred miles north-east by north of London, is large, and situated near the consum of the rivere Vensser and Yare. It stands on the fide of a hill, and is near two miles in leigth, and one in breadth. Though the place is irregular, yet all the buildings are neat and handsome. It has twelve gates, and so bridges over the Yare; thirty-fix churches; besides the eathedral, and chaptes and meeting-houses of all demoninations. The roof of the cathedral, a large venerable, and handsome structure, is adorned with the history of the bible. The choir is large and specious, and the sleeple higher than that at Granthem, but lower than that at Salisbury. Here are two churches for the Dutch and Flemings; who enjoy singular privileges. It is governed by a mayor, recorder, twelve aldermen, two shariffs, and twenty-one common control? men.

The sea-port town of Yarmtouth, one hendred miles northact of clondon, and feated on the river Yare, is well build, and very populous, as the mouth of the Ouse.

and very populous, at the mouth of the Outer by a well and a Lynn Regis, or King's Lynn; one hundred and two miles north-east of London, is a handsome, large, and well-built town; the mouth of the Oufe.

at the mouth of the Oufe.

The county of Lincoln, a large and plentiful maritime place, it fituated to the weft of the German ocean; and divided into three parts, via. Holland, Kefteven, and Lindfey. This laft division, which is the largest, contains.

The city of Lincoln, one hundred and thirty-five miles from London, built on the fide of a hill, at the bottom of which are feveral bridges. The cathedral was eftermed the glory of Lincoln; for its magnificence and elevation is such, that the month, concluded it would mortily the devit to look at it; and hence an envious looks by a troveschist expression. and hence an envious look; by a proverbian expension, is compared to the devil looking over-Lincoln. In the centre of the old caftle, which was built by the Romans, and repaired by the Saxons, is a modern frudure where the affaces are held. The city is a county of itlelf, and has extensive power and privilege. vileges. On the Down of Lincoln is fometimes feen, that sare bird called the buftard; the circumjacent country is very rich and agreeable; the noble tract of Lincoln heath extending like and agreeable; the noble tract of Lincoln heatr extending like Salifbury plain; above fifty mifer. The exthedral was focced; effively brought to perfection by feveral of its bifhops. Here is the finest and largest bell in England, called Tom of Lincolns, near five ton weight, containing four hundred and twenty four gallons, ale mealure, and is near twenty-three feet in circoms ference. This city is governed by a mayor, twelve alderment, two theriffs, &c. whose jurisdiction extends twenty miles round in

The town of Boston, on the river Witham, which is navi-able to Lincoln, and one hundred and twenty miles north of The town or Botton, on the river withing, where a gable to Lincoln, and one hundred and twenty miles north of London. It was formerly made a flaple for wool, and the merchantu of Hans towns fixed their guild here; it is a pleafant, well built town, and has a good foreign and inland trade. He church is reckoned the largest parish church without crofs sifet in all the world: it is three hundred feet long within the walls, one hundred feet wide, handformely ceiled with frish oak, flapported by tall and slender pillars; it has three hundred and fixty five steps, fifty-two windows, and twelve pillars, answerable to the days, weeks, and months of the year. The tower or steeled; is famous for its height and workmansing, being two hostered and eighty-two feet high. It has a beautiful octagon fantern on the top, which is feen near forty miles every way, but of dred and eighty-two feet high. It has a beautiful octagon fantern on the top, which is feet near forty miles every way, but effect all of the feet as far as the entrance of the dangerous bannels called Lynn-deeps and Bofton-deeps, fo that it is the guide to mariners, as well as the wonder of ravellers, and is a magnificent foetimen of a fine gothic tafte. The town has a commodious haves, and is plentifully supplied with fresh water by pipes from a pond, inclosed in the great common called the West Fen. It is governed by a mayor, recorder, twelve aldermen, eighteen common council-men, &c.

In the division of Kesteven is the town of Stamford, on the Western which is majorable for harden.

Welland, which is navigable for barges. It is finely fituated on the declivity of a hill, and has a flone-bridge of five arches. Here is a handlome town hall, and fix parifi churches, with feveral good fireets and fine structures. The trade is very confiderable in malt, coals, and free stone. The inhabitants are

numerous and rich.

numerous and rich.

The borough town of Grantham, one hundred and ten miles from London, fittate on the river Witham, has abundance of good inns of great refort. It is well-built r here is a fine large church, with a handfome foire of frome two hundred and eighty feet high; which, by a deception of the fight, feems to fixed swry. A good free-fehool was built and endowed here by Dr. Richard Fox, bihop of Winchefter, and a native of this town; and here the celebrated Sir Mac Newton received his

first education. It is governed by an alderman, twalve justices

of the peace, a recorder, coroner, &c.

The county of Rutland, to the fouth-west of Lincoinshire, is the smallest county in England, but contains more parks than any other; and it is as sertile as pleasant. The county town is Oakham, where the affize is held it is situated in the little but rich vale of Catmos, ninety-four miles from London; le but rich vale of Catinos, ninety-four miles from London; indifferently well-built, but famous for its market, fairs, castle, hospitals, and free-schools. This town is remarkable for an antient custom, still observed, that every peer of the realm, the first time he comes through this town, shall give a horseshoe to nail upon the castle-gate; and if he refuses, the bailiff of the manor has power to stop his coach, and take the shoe. This is now called the order of the horse shoe; and it is common for the donor to have a large one made with his name stamped on it, and often gilt. One over the judges feat, in the affiae hall, is of curious workmanship. Here is a church dedi-cated to All Saints, which is a handiome structure with a losty spire; also a free-school, and an hospital.

in the village of Uppingham is a pretty compact well-built place; has a very good free-fehool, and an hofpital; it is feated on an eminence, eighty-feven miles from London.

The county of Leiceller, fituated to the welt of Rutlandshire,

is a plentiful and extensive place. Its chief rivers are the Avon. Anker, and Welland. It gives the title of earl, and

fends four members to Parliament.

The principal and county town, Leicester, and the only one fending members to Parliament, is the largest, best built, and most populous in the shire, having fix parishes and five chutches. The freemen are exempt from toil in all markets in England.

St. Margaret's church is a noble and elegant fructure, and famous for a ring of fix of the most tuneable bells in the kingdom.

In St. Martin's church is an epitaph on one Heyric, who died in 1589, aged (eventy-fix, lived in one house with his wife for the contract of the fifty-two years, though fometimes twenty in a family; and the widow, who lived to be ninety-leven, faw, before her death, in December 1611, of her children, grand children, and great grand children, to the number of one hundred and forty-three. There is an exquisite piece of workmanship in the high three. There is an exquisite piece of workmanship in the high street, in form of our Saviour's cross. The hospital built by Henry Plantagenet, duke of Lancaster, is supported by some revenues of the duchy of Lancaster, so as to be capable of maintaining one hundred aged persons decently; it was rebuilt in 1776, at his Majefty's expense. Here is another near the ab-bey, for fix widows. The inhabitants have greatly improved in the manufacture of flockings wove in frames, and are thought to return in that article firsty thousand pounds per

The county of Derby, fituated to the west of Nottinghamfhire, is barren on its furface, owing to the great number of hills, mountains, &c. but rich within the bowels of those eminences. The peak is in the north-west part. It gives the title of earl, and sends four members to Parliament;

of earl, and sends four members to raritament.

The feven wonders of the peak are, t. Poole's hole; 2.

Mam-Tor, or the Mother Rock; 3. The Devil's arfe; 4.

Tides Well, or Weeden-Well; 5. Buxton-Wells; 6. Eldenhole. 7. Chatfworth-house and gardens. One of the most extraordinary of which is Poole's hole, a supendous cavern; at the foot of a great mountain. The entrance is so low and narrow, that you must stoop to get in ; but it soon opens into a wide and lofty concavity, that has some refemblance to a gothic cathedral, which reaches above a quarter of a mile in length. Water drops every where from the roof and sides, and being of a petrifying quality, it encrufts all the frones with long crystals, a petrifying quality, it energits all the mones with long crystals, in various forms, which, by the help of a strong imagination, are shewn you as lions, lanthorns, organs, a slitch of bacon, &cc. At length you come to the queen of Scots pillar, which is the boundary of most people's curiosity, and was so named by that unhappy princess, when she visited this place. It is composed of a clear bright stone, like alabaster, or rather like that kind of spar which is found about lead. A stream of water runs along the middle of this cavern among the fallen rocks, with an hideous noise. On the left hand is a fort of chamber, where they fay Poole, a famous robber, lived, and whose kit-chen and bed-chamber they shew you, after you have crept ten yards on your hands and knees. What appears most extrayards on your manus and strees. What appears not excession ordinary is, the furptifing height of the arch, which Dr. Leigh compares to fret-work, organ, and choir-work, befpangled with flars, which dazzle the eyes, and look extremely beautiful from the reflection of the lights.

The town of Derby, which is the capital, is so called from having been a park or shalter for deer: it stands on the west side of the river Derwent, over which it has a neat stone-bridge of five arches. The fouth-fide is watered by a little rivulet called Mostin-brook, which has nine bridges over it. The most remarkable church in Derby is All-faints, or All-hallows, having a beautiful gothic square tower fixty yards high, with four pin-

macles. This town depends chiefly on a retail trade; also in buying and felling corn, in making malt, and brewing ale, of both which great quantities are fent to London. The town is governed by a mayor, inine aldermen, and other officers, The rebels came as far as this town in 1745, and then returned back into Scotland.

The county of York, which is the largest in the kingdom, contains a variety of soils; gives the title of duke, sends thirty members to parliament, and is divided into the east, west, and

memors to parameter, an is divided into the eart, west, and north ridings; on account of their fituation.

The city of York, is the fectord in the kingdom: its chief magistrate has the title of lord-mayor. The cathedral is built in the gothic file, and by fome thought to be the finest in England, if not to excel any in Italy. It is dedicated to St. Peter. The windows are adorned with glass, exquisitely painted with surprise ture history, and other most curious sigures, in one hundred and systems nativings. In the fourth tower there is a few and seventeen partitions. In the south tower there is a fine peal of twelve hells. The nave of this church, which is bigger than any except St. Peter's at Rome, is sour seet and a half wider, and eleven feet higher than that of St. Paul's. afcent from it through the choir to the altar is by fix steps. The entrance of the middle nave of the church, at the west door, is under the largeft gothic arch in Europe, which binds and supports the two towers. At the fouth end of the cross alle is a circular window, called the marigold window, from its glass being stained of that colour; and a large one at the north end, consisting of five lights reaching almost from bottom to too, and terefled as there far at the two too.

north end, confilling of five lights reaching almost from bottom to top, and erected, as they fay, at the charge of five maiden fifters. The painting represents embroidery.

The city is in a pleatant fituation, and divided into four wards, containing twenty-eight parishes, and walled, but not fortified with artillery. The river Oute from the north passes through it, and divides it into two parts, joined together by a stone-bridge of five-arches, of which the middlemost is reckonded for heights, breadth, and architecture, to be complete the tone-orange of necessaries, or which the industries a sequel to the Rialfo at Venice, though not to that at Blenheim... The great council-chamber, the exchequer, the fheriff's court, and the two city prifons, are kept upon this bridge. The river brings large vessels to the quay, though at fixty miles distance from the ocean. It has four large well-built gates, and five posterns.
The other most remarkable structures are the guildhall, which is longer, and in some respects superior to that of London. Near it is the state of king Edgar, who rebuilt the city and St. Antony's hall, in which there is one room big enough to hold most of the inferior tradesmen of the city. The market house in the street called the Pavement, is a curious piece of architecture, supported by twelve pillars of the Tusean order; and there is another still larger in a square, called Thursday market. In this city are feventeen churches; of which All-hallows has the finest gothic steeple perhaps in England. The city belongs to neither of the ridings, but enjoys its own liberty, and has a jurifdiction over thirty-fix villages, and hamlets in the neighbourhood.

The town of Hull, or Kingston upon Hull, is large, close built, and exceeding populous. It has two churches, one called Trinity or High-Church; the other St. Mary's, or Low Church; the former is a spacious, beautiful building, the pil-lars of which are remarkably small, and had, before the Reformation, twelve chantries, in one of which is now a neat library. Here are feveral meeting-houses, an exchange built in 1621, a custom-house, and an engine for making salt-water fresh. Here is a free-school, with a hall over it belonging to the merchants, who have sounded an hospital called Trinity-house, in which are maintained many distressed seamen and their widows. rigid discipline beggars meet with here, makes Hull tremendous to them: all foreign poor are whipped out, and the poor of the town are fet to work. They have a cant hany among them, viz. from Bell, Hull, and Halifax, good Lord deliver us.

The town of Scarborough is large, built in the form of a crefcent, on the fide of a freep hill. It has a commodious quay, but little trade. The pier is maintained by a duty upon coals; and the mariners have erected an hospital for widows and poor feamen, which is maintained by a rate on veffels, and deductions out of feamen's wages. From the middle of Nodeductions out of feamen's wages. From the middle of No-vember herrings are taken here in great numbers. Befides herrings, they catch ling, cod-fifth, haddock, turbot, and other fifth in great plenty, and fometimes whiting and mackerel. The figa-well is at the foot of an exceeding high cliff, rifing perpen-dicularly out of the carth like a boiling-pot, near the level of high-water-mark in fpring-tides, with which it is often over-flowed. It is never dry, and in an hour yields twenty-four gallons of water, which is purgative and diverse. Here is good accommodation, befice afferabiles and public balls. accommodation, befides aftemblies and public balls. The re-fort of company is prodigious to this place of gaiety, where, with numbers, health is the pretence, but the end diffipation. It fends two members to parliament, and is two hundred and four miles north of London.

The capital town, of the fame name, is fituated on an hill, has a cathedral, which is an old, but magnificent pile. Befiete the cathedral, here are fix parifi churches. Southward of the cathedral, is the college. Above the college-gate is the exchequer; and at the west, the guest-hall, for the catertainment of strangers. On the north-side of the college school is a house for the master, and between the church-yard and castle an open area, called the palace-green; to the west of which is the shire-hall, where the affizes and sessions are held for the county; and near it a library. On the east is an hospital built and endowed by bishop Cosin; on the north side is a castle, now the bishop's palace, built by William the Conqueror, the outward gate-house of which is at present the county-gaol. The other principal public buildings are, the toll-booth near St. Nicholas's church, the cross and conduit in the market-place, and the two bridges over the Wear.

port town of Sunderland.

port town of Sunderland.

The county of Cumberland, fouth-west of Northumberland, has a piercing, yet wholsome air, but is not very fertile: the land is for the most part hilly.

The capital city, Carlille, is situated at the conflux of the rivers Eden, Peterill, and Cauda; it is a sea port, but without ships, merchants, or trade; has but two parish-churches, St. Cuthbert's and St. Mary's; the latter stands differently from any parish, church in England, viz. in the body of the eather. Cuthbert's and St. Mary's; the latter stands differently from any parish church in England, viz. in the body of the cathedral, which is in the middle of the city, inclosed by a wall; the east part of the cathedral, which is newest, is a fine piece of workmanship; the lower or west part suffered much in the civil wars, when this city was befieged. The choir of the cathedral is an exact piece of architecture, has a stately east window forty feet high, and thirty broad, adorned with pillars of curious workmanship. The roof is elegantly vausted with wood, and embellished with the arms of France and England; the Percy's Lucy's, Warren's, &c. This town is the key of England on the west sea, as Berwick upon Tweed is on, the east sea: it has a bridge over the Eden, which is but a little way from Scotland, the south part of which indents into England, at least, fifty miles further than it does at Berwick. Sity miles further than it does at Berwick.

that are near it, and shelter the harbour from tempests : it is populous, and has been greatly improved by Sir James Low-ther, who was at a vast expense to make the harbour more commodious, and to beautify the town, the trade of which chiefly confifts in falt and coal. Some of the coal-mines here are funk

conflits in fait and coal. Some of the coal-mines here are funk to the depth of one hundred and thirty fathoms, and are extended under the fea to places where there is above them fufficient depth of water for thing of large burden. They carry on a good trade to Ireland, Scotland, Chefter, &c.

The town of Penrith, or Perith, two hundred and eighty-two miles from London, has a very good market for all forts of commodities and cattle: the church is a large and handfome fructure.

The county of Westmorland is situated to the south-east of Cumberland, has a healthy, but sharp air, is very mountainous, and has many barren parts in it. The principal rivers are the Eden, the Lone, and the Ken. It gives the title of earl, and sends four members to parliament.

fends four members to parliament.

The chief town is Appleby, which though neither rich nor beautiful, is, by its fituation in the middt of pleafant fields, and on the banks of the river Eden, which almost encompasses it, rendered very agreeable. Here is an hospital for a governess, and twelve other widows, called the mother and twelve fifters. This place has, of late years, gone greatly to decay, confisting at present of only one broad street of mean houses: however, it still keeps the affizes and sellions, and at the upper part is the castle. The church stands at the lower end of the

however, it fill keeps the affizes and fellions, and at the upper part is the caftle. The church flands at the lower end of the town; and they have likewife erected a town-house.

The town of Kendal, two hundred and hity-fix miles north west of London, is feated in a valley, among hills, on the west fide of the river Can or Ken, over which there are two stone-bridges, and one of wood, which leads to the castle, now in ruins. The church is a spacious structure, supported by five rows of pillars, and twelve chapels of case belong to it. The free school stands on the side of the church-yard, and is well-endowed, having exhibitions to Queen's college in Oxford. It is not of for its manufactures of cottons, druggets, hats, and stocking.

flocking?

Here is also the town of Lonsdale, or Kirby-Lonsdale, feated on the Lone.

The maritime county of Lancaster is situated to the sastward

of the Trifft fea ; Is famous for its manufactures. It gives the

of the Irish feat, is famous for its manufactures. It gives the title of duke, and sends twelve members to parliament.

The filtre town, Lancaster, has its name from the river Lone, on the side of which it is streated near its mouth, and gives name to the whole country! it is the snitient Longovicus mentioned in the itinetary. Here are frequently found the coint of Roman emperors, especially where the Henedictine filter had a cloider, which they fay was the area of en antient, city burnt to the ground in \$322 by the Scots. This town has lately much improved in commetce, being a populous, thriving corporation, with a telerable harbour and custom-house. The county-affises are held in the castle, which is one of the fairest monuments of antiquity in England.

The town of Liverpoot, though not very antient, is neat

monuments of antiquity in England.

The town of Liverpool, though not very antient, is neat and populous; and the most flourishing fea-port in these parts, nearly equal to the city of Bristol. The inhabitants carry on an insteadible trade, with very large stocks, to all the northern and southern parts of the world. They import almost all kinds of foreign goods, have a large inland trade; and, with Bristol, share in that to Ireland and Wales. It is also the most convenient and most frequented passage to Ireland, standing at the mouth of the Mersey tiver, or Liverpool water. Here are four churches, many spacious clean streets, an elegant town-house, an admirable wet dock with iron flood-gates, a stately customshouse, a near play-house, &c. The harbour is defended, on the fouth-fide, by a castle, and, on the west, by a tower, on the Mersey.

hou.e, a near play-house, &c. The harbour is defended, on the fourth-fide, by a castle, and, on the west, by a tower, on the Mersey.

Manchester is a very large and populous town, seated between the lik and Irwell, is one hundred and eighty-one miles north-north-west of London. This is a place of great antiquity; and carries on a very extensive trade in cottons, tlekings, velvets, &c. It has a collegiate church, and two modern ones. This town has also a space of the modern ones. This town has also a space of the modern ones. This town has also a space of the moon. The choir of the collegiate church, is remarkable for its curious carved work, and a farmods clock that shews the age of the moon. The chief magistrate is a constable, or headborough. The town gives the title of duke to the noble and antient semily of Montague.

Other towns of inferior note in this country are, Warrington, on the river Mersey; Preston, on the sorth side of the Ribble; and Wigan, on the river Douglas.

To the fouth of Lancsshire lies Chessire, which has a ferent air and good soil, and is samous sovits cheese: the land being siter far passare, than corn. The principal rivers are the Mersey, the Wever, and the Dee.

The city of Chester, called also West Chester, is large and well built, full of wealthy inhabitants, who, by its proximity to the Severn and Ireland, drive a considerable trade; it has several same leading, on the several same, hops, drapery, and Manchester goods. It is a place of great antiquity, and of a quadrangular form: the walls are near two miles in circumserence; and there are four gates, towards the sour cardinal points. It has a strong castle, in which is the

great antiquity, and of a quadrangular form; the walls are near two miles intricircumference; and there are four gates, towards the four cardinal points. It has a ftrong caftle, in which is the finite-hall, where all the canes belonging to the county palatine are determined. By the bridge is a handform water-houle; and the principal firests are adorned with plazzas, under which are the tradelinen's shops. It contains ten parific churches beddes the cathedral; is governed by a mayor, two fheriffs, and twentry-four aldermen; sends two members to parliament, and is a bishop's fee.

In this county are likewise the towns of Namptwich, Middle+ wich, Northwich, and Macclesfield.

The county of Stafford, tying to the fouth-east of Chefhire, is a rich, though not fertile place.

The thire town, Stafford, where the affises, and also the

quarter fessions are held, is one hundred and thirty-two miles quarter tentions are head, is one nundered and thirty-two miles from London. It flands low on the river Sow, over which it has a good bridge. Here are two handfome churches, a free-fehool, and a fpacious market-place, in which flands the fhire-hall: it is well built and paved: and much increased of late, both in wealth and inhabitants, by its manufacturies of cloth. The old custom of Borough English is fill kept up here. The buildings are for the most part of stone and state, and some of them in the mostern taste.

them in the modern tafte.

The town of Litchfield is large and nest, and, when joined to Coventry, is a bishopric. The cathedral, which stands in the close, was begun in 1148; and is now a noble structure, being walked like a cassle, and, standing on an emissence; is seen

at the distance of ten miles.

The town of Wolverhampton stands upon a high ground, and is a populous well built town, and the freets are well paved. It has an antient collegiste charch, artnexed to the desnery of Windfor; and a very bardfome chapel, with a prebyterism and a quakers meeting-houfe. It is chiefly noted for its iron manufactury, confifting of locks, hinges, buckles, cork-ferews, &c. The rown is chiefly supplied with water from four weak prings called Pudding-well, Horse-well, Washing-well, and 9 H

and dry fituation.

Shrophire lies fouth of Cheshire, and is tolerably fertile. It contains the following places; viz.

The town of Shrewsbury on the Severn; it has two sine bridges over that river, which furrounds it, except on the north side, in the form of a horse shoe, and renders it a peninsula. It has a free grammar-school; and contains five perish churches, besides a chapel, two of which are handsome structures, adorned with large spire sheeples; here are good streets, and handsome houses well inhabited: it is surrounded with a strong wall, through which there are three gates, and on the east and west

4 45 113

two good ftone bridges. This place is the common mark between England and Wales, to which all forts of Welfth com-modities are brought. It is a corporation with the title of an earldom, fends two members to parliament, and is governed by a mayor, an alderman, a recorder, twenty-four common-councilmen, and a town-clerk. The town is nearly two miles

long, and mostly broad.

The following Table will exhibit at one view many curious and necessary particulars respecting the several counties in England, the frequent repetition of which might have proved

gor no est er oug the aut fron oil

A TABLE, containing the Modern and Antient Names of the Counties or Shires in England; the Titles they give; their Length, Breadth, Circumference, Cities and Towns, Distances from London, Market Towns, the Number of Members they fend to Parliament; and the Number of Parlishes and Acres contained in each.

The other part of South Britain called Wales, or the principality of Wales, was, in the year 870, divided by Roderic, king of Wales. into three parts, that his three fons might equally fucceed him. These divisions were called South Wales, North fucceed him. These divisions were called South Wales, North Wales, and Powis Land; but the latter division was soon swallowed up by the two former. Wales formerly confissed of soutcen counties, including Monmouthshire and Herefordshire; but these having been fince annexed to England, the principality new confists of only twelve counties, each of which has the privilege of fending to parliament a knight, and every finite town a burgefs.

This principality is bounded on all fides by the fea and the Severn, except on the east, where it joins to the counties of Chester, Salop, Hereford, and Monmouth, being one hundred

the principa-which has the ery fhire town

he fea and the e counties of one hundred and thirteen miles long, and ninety broad, where wideft. The country, though for the must part mountainous, is not altogether unfruitful, as the vallies abound in corn, the sea and rivers with fifth, and the hills, exclusive of the metals and minerals they contain, feed great quantities of black cattle, sheep, deer, goaits, and other animals.

theep, deer, goats, and other animals.

There are twelve counties or fhires in Wales; namely, I. Radnorshire; II. Breeknockshire; III. Glamorganshire; IV. Carmarthenshire; V. Pembrokeshire; VI. Cardiganshire; VI. Montgomeryshire; VIII. Merionetshire; IX. Carnarvonshire; X. Denblgshire; XI. Flintshire; XI. Carnarvonshire; X. Denblgshire; XI. Flintshire; XI. Anglesa; this last we shall give an account of, when we come to describe the islands belonging to Great Britain.

The county of Radnor, to the fouth-west of Shropshire, is tolerably settile. The chief commodities are sheep and horses: the principal place is New Radnor, one hundred and fifty-sevan miles som London, is a very antient borough, well built for these parts; but chiefly thatched houses. It was called Radnor by the English, from Rhaiadr Gwy, or the cataract of the river Wye, near the town of Rhaiadt. It stands in a fruitful valley, at the bottom of a hill, where abundance of sheep are sed. It is twenty miles in length, eighteen in breadth, has five parishes, and sends two members to parliament.

fed. It is twenty miles in length, eightean in breadth, has five parifiles, and fends two members to parliament.

The county of Breeknock, to the fouth of Radnorshire, has a sharp but wholsome air, is very mountainous, and abounds with black cattle, renison, goats, wild sowls, &c.

The town of Brecknock, or Breeon, one hundred and sitynine miles from London, is the capital, and almost the centre of the county. It is a compact, well-built town, in which the affizes are held: it stands at the confluence of the rivers Hondby and Usk, over which it has a good stone bridge; is well inhabited, and has some share in the woollen manufacture. The ruins of its castle, built by Bernard de Newmarch, in the reign of William Rufus, remain; its markets are well supplied The ruins of its callle, built by Bernard de Newmarch, in the reign of William Rufus, remain; its markets are well supplied with cattle, corn, and other provisions. Brecknock priory was founded in the reign of Henry I. by Bernard de Newmarch. It is now a parith-church, and ftill a most magnificent building, situated on an eminence, and built in the form of a cross. In the centre of the cross an embattled tower rifes about ninety feet,

the centre of the croft an embattled tower rifes about ninety feet, and lies open to the church above the goof. There is ftil remaining, in the priory-house, the resectory or dining-room. The county of Glamorgan, situated north of the Bristol channel, is tolerably fertile towards the southern parts. It is forty-five miles long, and twenty-one broad, has eighteen parishes, and sends, two members to parliament.

The town of Cardist, one hundred and stry-one miles from London, is the capital, where the affizes are also held. It has a bridge over the Taff, in which small vessels may come up, and lade or unlade there. This is a large, well built town, consisting of two parishes, and reckoned the most beautiful in all South Wales; it has a good trade with Bristol, and plentiful markets and fairs for corn, cattle, theep, horses, swine, &c.

ful markets and fairs for corn, cattle, theep, horfes, fwine, &c.

The antient town of Swanfea, two hundred and two miles
from London, is large, clean, and well built; crives the greateft trade of any in the county, especially in coals: holds a correspondence with Bristol; and has a good harbour, where some times one hundred ships at a time come in for coals and culm, The town flands on the river Twy, and its markets are well furnished with all necessaries. Here are the remains of an antient castle, built about the year 1113 by Henry Beaumont, earl of Warwick.

The county of Carmarthen, fituated north-west of Glamorganshire, has a milder air, and is more fruitful than most of the Welsh counties. It is forty-seven miles long, and twenty-seven broad, has eight parishes, and sends two members to parlia-

The capital town, Carmarthen, two hundred and four miles from London, is fituated on the river Twy, over which It has from London, is fituated on the river Twy, over which it has a ftone bridge, and is a place venerable for its antiquity. It is a very polite, industrious, thriving, and populous town, of great refort, and drives a very confiderable made. This place was antiently reckoned the capital of Wales.

The county of Pembroke is encompassed around by St. George's channel, except on the east side, where it joins to Carmarthenshire, and on the north-east to Cardiganshire. It

is a fruitful country, being thirty-three miles in length, and twenty-eight in breadth, contains one hundred and forty-five

parishes, and lends three members to parliament.

The county town is l'embroke, two hundred and thirty-four The county town is reinfroke, two hundred and thirty-four miles from London, and flands at the innermoft eaftern creek of Milford-haven. It has two handsome bridges over the two points of it. Here are the remains of an antient cassle on a rock, in which Henry VII. was born, and under it is a vault noted for a strange echo, called the Wogan, and supposed to have been originally a store room for the garrison. It was built by Armulph de Mourgomery, in the reign of Henry I. It has two patishes, and a custom-house: it is well frequented, not

only by gentlemen, but likewife by feveral merchants and tradef-men, some of whom have well built houses here.

The town of Haverford well, two hundred and thirty-fix miles from London, flands on the north fide of a hill, but is a very neat well built, flrosig, populous, and trading town; having a fine flone bridge, plentiful mistkett, a commodious quay for flips of burden, and a cuttom-house. There are three parific churches in the town, besides one; called Prengest, in the out parts. in the out parts.

The harbour called Milford-haven has fixteen creeks, five bays, and thirteen roads in which one thousand fail of ships may ride securely. It is the best harbour in the three kingdoms; there being no manner of danger in failing in or out of it with the tide, and almost any wind, by night as well as by day; and a ship in diffress may run ashore on soft ooze, and there lie safe: The spring tide rises in the harbour thirty-six seet, and the near

The figring tide rifes in the harbour thirty-fix feet, and the near about twenty-fix.

The county of Cardigan, fituated north-east of St. George's channel, is for the most part barren, but contains some valuable usines. It is forty miles long, and eighteen broad, contains fixty-four parishes, and send two members to parliament.

The principal town, of the same name, two hundred and twenty-two miles from London, is pleasantly situated at the mouth of the Twy, over which it has a good stone bridge leading into Pembrokeshire. It is a large, antient, and populous borough, and carries on a considerable trade, especially to Ireland, the side slowing up to the town. The church is a handsome structure, and the castle, though in a ruinous condition, is fill in being.

handlome tructure, and the caute, though in a tumous constition, is fill in being.

The county of Montgomery, one hundred and fixty-one miles from London, is fituated in a very healthy air, on the casy afcent of a rocky bill, having beneath it a pleafant valley, through which the Severn winds its course. The town is large, though the buildings, except a few belonging to wealthy familiary.

lies, are but indifferent.

Six mlles from Montgomery stands the corporate town of Welfu-potl), which is large and well-built, fituated on a lake in a fruitful valley, where is a good manufactury of flannel. There is a caftle, belonging to the earl of Powls, on the fouth

To the east of St. George's channel is Merionethshire, which is a mountainous, barren; bleak, unhealthy country, and the inhabitants are more remarkable for idleness and incontinency inhabitants are more remarkable for identis and meantmency than any other of the Welfh people. It is thirty-five miles in length, twenty-five in breadth, has forty-feven parishes, and fends two members to parliament.

The town of Harleth, in this county, is one hundred and thirty-nine miles from London, fituated on a rock near the fea,

where there is a harbour for fhips. It is a mean town, thinly inliabited, but has a garrifon for the fecurity of the coaft, and an old, decayed, and useless castle, originally a strong fort of the antient Britans. In the year 1601 the country about Harlech was annoyed above eight months with a fiery exhalation, of a curd colour, which arose from the fea, and was seen only in the

right.

The town of Dolgelly, thirty-fix miles from Welfh-pool, is fituated in a woody valley by the Avon, at the foot of the great mountain fdris, which is computed to be near three miles high, and one of the loftiest mountains in Britain. Here is a good market for Welfh cottois, and a tolerable int for travellers.

The county of Carnarvon, fituated fouth-east of the isle of Anglefea, is very mountainous, but abounds in cattle, fheep, goats, and other animals. It is forty miles long, and twenty broad, has fixty eight parishes, and fends two members to parliament.

Carnavon, the principal town, two hundred and fifty-one miles from London, is fituated on the channel that feparates this thire from the ifle of Anglesea, and was built by the command

inter from the lile of Angierea, and was built by the command of Edward I. out of the ruins of the city Sagontium, which shood a little below it. The town has a beautiful prospect of the isle of Angierea, and is pretty strong both by nature and art. The county of Denbigh, the south-west of Flintshire, is for the most part mountainous and barren, though there are a few fertile spots in it. Its length is thirty-one miles, and breadth seventeen, contains fifty-seven parishes, and returns two members to the British parliament.

The town of Denbigh, two hundred and ten miles from London, on the banks of the Istrio, is a handsome, large, and populous place; was at first built on a steep rock, but in populous place; was at first built on a steep rock, but in process of time has been removed to the bottom of it. It stands on a branch of the Clwyd, has a good trade, and is by some esteemed the best town in North Wales. It has a good market for corn, Weif of Cheffire, is the county of Flint, which contains fome mines, but the foil is in many places barren.

The shire town, Flint, one hundred and ninety-five miles

from London, stands on an arm of the river Dee; it had for-

SECT. II.

Of the characters, customs, manners, constitution, government, laws, religion, &c. of the English.

THE inhabitants of South Britain are in general of a good If he innabitants of South Britain are in general of a good fine, and well made; they have regular features, fair thins, and florid complexions. The women, in particular, are deemed the most beautiful in Europe. The fathionable drefs of the English is utually copied from the French, but the former generally add decency and cleanlines to the decorations of the latter. A feorbutic humour being common to the country, decayed teeth is on that account a very common perional defect.

With respect to their manners, the English people vary in the different classes of which they are composed, according to the difference of education and intercourse. Persons of fashion, the difference of education and intercourfe. Perfons of fathion, after having studied at the university, commonly travel for improvement. They are magnificent in their dress, equipage, dwelling, and manner of living; generally polite, hospitable, good-natured, humane, charitable, and forgiving; but not very remarkable for their liberality to the professor of the polished arts, even to those who have exhibited proofs of excellence and ingenuity. Respecting the unsavourable part of their characteristics. racter, there is observed in them a disposition to gaming, riot, an excellive infolence of pride, and a ftrong propenfity to con-temptuous ridicule, diffused through the whole nation, from the highest peet to the very dregs of the people. Perhaps this is the peculiar characteristic of the English: for it strikes every

the peculiar characteristic of the English: for it strikes every foreigner at his first arrival in England, and appears remarkably conspicuous in the writings of the English authors.

The English merchants are, beyond all others, esteemed for their honourable dealings, as well as for their knowledge of trade, and their extensive commerce. The people in general are masters of the different professions they exercise; their workmanship is neatly and elegantly sinished, far above any thing of the same fort in other countries; and though they are not the most remarkable for their discoveries in the arts of

not the most remarkable for their discoveries in the arts of handicrastsmen, they never fail to make improvements on the inventions of their neighbours. They have been always equally famed for ingenuity and courage. Their soldiers are fearless in the dey of battle, and have obtained a great number of fignal victories over the most powerful and warlike nations on the continent, and in point of activity, skill, and intrepidity, their failors are confessedly superior to all the mariners upon earth. We may divide the diversions and pastimes of the English into those of the town and those of the country, and sgain subdivide these into such as are peculiar to the higher ranks of life, such as are practised by the lower class of people, and such as are common to both. The diversions of the town are operas, ridottos, masquerades, concerts of music, theatrical performances, and care assentiates for persons of fathion. The pastimes of the country, peculiar to the same degree, are horse-aces, slag, sox, and hare hunting. A spirit of gaming prevails with such excess at a horse-race, tat one would imagine all the spectators were actually possessed. Hunting is the all the spectators were actually possessed. Hunting is the sport of country gentlemen, and those whom the world diftinguish by the appellation of fox-hunters, feem to be infa-tuated with the diversion. The common people delight in cock-fighting, codgelling, wreftling, duck hunting, bowls, kittles, or nine-pins, archery, prilon-bars, cricket, shuffle-board, quoits, divers games of chance, and spectacles of various kinds, fuels as tumbling, balancing, vaulting, feats of le-gerdenian, bear and bull-baiting, afs-races, collections of wild beafts, music, dancing, drolls, puppet-shows, ringingbells, &c.

Persons of fashion have large and magnificent houses, many Persons of sashion have large and magnificent hours, many of which are built of stone, and well provided with offices. The apartments are spacious, adorned with eavings and paintings, and the surniture rich and splendid. The middling fort of people live in brick-houses, roomy, convenient, well simisfied, and neath surnished. The habitations of the lower fort are built of brick, though not so large and well finished. Many of the dwellings in the country are covered with thatch, indeed of the instead of tiles.

The English in general are fond of good cheer; and it is

merly a castle, the rules of which are still remaining? Henry II. began, and Edward I. sinished it.

The city of St. Asaph, two hundred and twelve miles from London, is a bishop's see, situated in the vale of Clwyd, at the constant of the Elwy with the Clwyd; but the buildings are not remarkable for beauty, nor the church for elegance. The cuircopal see was sounded in the year 500, by Kentigern, bishop of Glasgow, in Scotland, who tesigned it to his disciple Asaph, from whence its name is derived.

In England the nobility are numerous and wealthy; and no country can produce such a number of noblemen living in all the pomp of affluence, and all the joys of sudependence; they are distinguished by the different titles of duke, marquis, earl, viscount, and baron. The sons of nobility enjoy certain titles by courtefy, according to the rank of their fathers; but the law ranks them among the coramons of England. Thus the eldest son of a duke is denominated marquis, or earl, and the younger sons are fatured by the appellation of My Lord. The first son of a marquis or earl is denominated lotd of some barony belonging to his father, and his brothers are likewise addressed by the ritle of Lord John or Lord William, &c. the fifters enjoy the honourable title of Lady in the same manner. But the younger children of viscounts and barons are not entitled to this courtefy.

The baronets of England, so called as an inferior kind of barons, are the sext clais or order of persons after the barons. The title of harottet is conferred by patent under the great seal, In England the nobility are numerous and wealthy and no

The title of haronet is conferred by patent under the great feat, and defeends to the elder male heir. In speaking and writing, he is diffinguished, like other knights, by the appellative Sir prefixed to his christian name.

prefixed to his christian name.

There are three orders of knighthood, exclusive of baronets; hamely, Gatter, Bath and Thisse. The order of the Garter, dedicated to St. George, is one of the most antient and honourable orders in the universe. The seat of the order is in the castle of Windsor, consisting of the chapter house, the hall, and chapel of St. George. A knight of this order is distinguished by a blue garter with a gold buckle, worn on the left leg, and inscribed "Honi foit qui mal y pense;" signifying, "Shame to him who puts a bad construction on this order;" by an embroidered silver shar on the left breast, and the picture of St. George enamelled upon rold, and beset with diamonds, of St. George enamelled upon gold, and befet with diamonds, hanging at the end of a broad blue ribband, that from the left oulder crosses the body. Henry IV. instituted the order of the Bath, which took its

denomination from their bathing on the eve of their admission. The order, which had grown obsolete, was revived by George I. in the year 1725, when eighteen noblemen and as many commoners were installed knights of the Bath with great coremony Their number is limited to forty-fix, ar at Westminfter. they are diffinguished by a star on the breast, and over the less shoulder they were a broad red ribband like a belt.

Peculiar to Scotland is the order of the Thistle, confishing of

Peculiar to Scotland is the order of the Thiftle, confifting of the fovereign and twelve knights, who wear a green ribband over the fhoulder, and on the breaft an embroidered flar, representing St. Andrew with rays of glory.

The general denomination of efquires is given to all the gentlemen of South Britain not diffinguished by nobility or knighthood. The highest order of plebeians are freeholders or yeomen; then follow copyholders, merchants, traders, mechanics, hired fervants, and day-labourers: but it is to be observed, that opulent merchants are to be considered as of greater importance than the degree wherein they are placed in the above portance than the degree wherein they are placed in the above icale, and frequently wed their daughters to nobility by means

of large portions.

As foon as a woman in England is married, the, with all her movembles, is at the will and disposal of her husband; nor can the alienate any thing without his confent : her necessary apparel is not her own property; nay, at the death of her huf-band, all the personal chatters she possessed at marriage descend to his executor or administrator. She can make no contract without her husband's confent, nor reply without him, in matters of law. On the other hand, he must pay the debt which she has contracted, and be obliged to make fatisfaction to the party, should she injure any person by her tongue, or

Fathers have an uncontrouled authority in England respecting their property; so that they may give away their unentailed estates from their own children, or bequeath their fortunes to any one child in preference to all the reit. A youth of fourteen may chule his guardian, and consent to marriege; at twentyone he is at age to make any contract, deed, or will, and to fit in parliament. The eldelt fon Inherits to the landed entailed effate, and the younger children are portioned from the goods and chattels; but in Kent, and fome other places, the lands are equally divided among all the fons.

The inhabitants of Wales are in general brave, hardy, and hospitable, jealous of affronts, hally, malicious, conceited,

proud, and litigious. The nobility and gentry speak the English language, affect the English sashions, and endeavour to civilize the lower orders of their countrymen; in particular, they have done their turnost to break them of the savage and inhurture custom of plethedring weeks, and have, in same measure, fuceceeded. The Welst language is chiested of the Celeic) is chiesty used by the common people, though some of them speak English indifferently.

With respect to the English constitution, which is a similar monarchy, it may, with all its deseat, be considered as the best that ever was formed in any part of the world, whether we consider the dignity of the crown, or the happiness of the community. The legislative power is vessed in the law can be made without the consurerence of all three. The house of lords is composed of all the peers of the realm, spiritual and temporal; the house of commons, including the Scots members, amount to five hundred and fifty-eight. They are chasen every new parliament by the counties and boroughs, and, in their collective body, are supposed to reprise in the people of England. A new parliament is chosen once in seven years, in consequence of writs issued by the crown: the king likewise has power to prorogue and distolve this assembly at his pleasitier, as well as to refuse assembly as the people of the civil law, the umon law, or Saxon law, the forest law, the flature law, marshal law, and franchises, or peculiar laws sounded upon reyal grants and charters, confirmed by acts of the parliament of England.

The king has the appointment of the judges, who are twelve in number, dispesd in different courts of judicature, and the duchy chamber of Lashcaiter, are held at Westminster, and the duchy chamber of Lashcaiter, are held at Westminster, and the duchy chamber of Lashcaiter, are held at Westminster, and the duchy chamber of Lashcaiter, are field at the courts of king a bench, common please, chancery, exchequer, and the duchy chamber of Lashcaiter, are held at Westmins

head of the church, and chief, magistrate of the kingdom: he has the supreme right of patronage, paramount over all the coelessaftical benefices in England: he is the supreme civil judge, and the sountain from which all justice is derived.

With respect to their arms, the royal atchievement, borne by the present royal smily, is thus marshalled quarterly: In the first grand quarter Mars, three lions passant guardant in pale; Sol, the imperial ensigns of England: these, are impassed, with the royal arms of Scotland, consisting of Sol, a lion rampant within a double tressure flowered and counter-flowered with scurs de lis, Mars. The second quarter contains the arms of France, namely, Jupiter, three scurs de lis, Sol. The third for Ireland, exhibits Jupiter, an harp, Sol, fringed, Luna. In the fourth grand quarter is represented his present majesty's own coat of arms, being Mars, two lions passant guardant, Sol, for Brunswick, impaled with Lunenburg, giving Sol, sense of hearts, proper, a lion rampant, Jupiter: laving, for antient Saxony, Mars, an horic current, Luna, grafted in bale, and in a shield surtout, Mars, the diadem, or, a crown of Charlemagne, the whole furrounded with a garter, as fovereign of that order. Above the helmet, as the emblem of fovereign jurisdiction, is an imperial crown; the creft, a lion passant-guardant crowned with the like; the supporters a lion rampant guardant, Sol, crowned as the former, and an unicorn, Luna, gorged, with a crown, and chained. The royal motto is, "Dieu et nion droit," implying, that the king of England holds his crown of

God only. As the emblem of the union of England and Scot-land, the table of the compartment is adorned with the role and thille intermixed.

God only. As the emblem of the union of England and Scotland, the table of the compartment is adorned with the role and liftle intermixed.

The heir apparent, or eldelt fon of the king of England, is borit doke of Cornwall, and afterwards created prince of Wiles, with letters patents, by which the faid principality and a certain revenue are granted to him. He bears the king at atms, with the addition of a hale of there points, charged eith nine terteaux; his device being a coronet beautified with three offrich feathers, inderibed it left dien, which fignifies, "I ferve," in the German language.

A protestant episcopal church in the ethalished religion of England; but liberty of confelence being allowed, a great variety of facts hath forung us fince the Reformation, the latest of which are the methodists, who form a very inductous body; molf of them are also menthers of the church of England, and profess to adhere more closely, than the other members of that church, to the thirty-nine articles, and the greatest part of them are high Calvinists. All fects of religion are either compived at or tolerated; and though many authors have exclaimed with great heat against the handy fects in England, yet is should be considered, that civil and religious liberty are closely coinceted, and that it does not become any church, who makes no pretensions to infallibility, to erect the standard of perfectution.

The archibithop fee are those of Canterbury and York, to which all the other diocess of England and Wales are subject. The archibithop of Canterbury, filled the primate of all dukes and great officers of the kingdom, the precedes all dukes and great officers of the crown, next the royal family, and performs the ceremony of the cornation. The diocesed all dukes and great officers of the crown, next the royal family, and performs the ceremony of the cornation. The diocesed all dukes and great officers of the kingdom, the precedes all dukes and great officers of the crown, next the royal family, and performs the ceremony of

preiends the bishoprics of Sodor and Man, Durham, Carissie, and Chester.

The English language is compounded of several others, but more particularly the Saxon, Celtic, French, and Latin; but the former predominates. This, instead of rendering it defective, gives it innumerable graces, fistee it has incorporated most of the beauties, and rejected the defects, of the languages of which it is composed. Hence, it is more elegant than the German, more copious than the Spahish, more energetic than the French, and more maily than the Italian.

This favoured island may be deemed the seat of the Muses. Alfred the Great cultivated literature, at a period when all the rest of Europe was immersed in ignorance and barbarism; fince his time, a continual succession of learned men have been distinguished by their masterly writings, and done credit to the British name; and at prosent literature in England scens to have arrived at its utmost senith. Indeed, we have mea of genius and talents, who exceed those of any other nation in almost every art, science, manufactury, and profession.

The illand of Great Britain, being plentifully supplied with all the conveniencies of life, could subsist without supplier from any other country whatsoever. But as foreign commerce is advantageous, employs abundance of artists, as well as a great number of poor, and is a manifest improvement to all manufactures in general; i, on it is the furest and most effectual means not only to enrich, but to strengthen the nation, and render it a terror to its enemies. The English mechants traffic largely with Restlas, Sweden, Denmark, Norway, Hamburgh, Bremen, both sides of the Baltic, all the northern parts of Germany, Holland, Flanders, Portugal, Sicily, Italy, the Levant, the coals of Africa, the East and Wett Indies, and (the late unbappy disputes being now terminated by treaty) to the North American colonies.

The commodities exported from England are comprehended The commodities exported from England are comprehended in the different articles of corn, cattle, this provision, butter, cheefe, beef, pork, and bifcuit, iron, lead, hin, copper manufactured and unmanufactured, leather, copperas, allum, pit coal, faffron, hops, flax, bats, floes, herrings, pilchards, cod, falmon, oyfters, liquorice, watches, ribbands, toys; also the different manufactures of wool, such as broad cloth, bys, kerfies, ruthes, ferges, fays, frizes, fluffs, flanuels, sugs, esps, and flockings. The products of wool are the principal articles of the English traffic, the exports of them exceeding two millions yearly. The imports from various parts of the globe are immense.

Many

Many branches of foreign commerce are monopolized and managed by incorporated or chairered companies, via. East India company, Levant or Torkey company, Merchant Taylore, Ruffia company, Reyal African company, Hadfon's Bay company, South Saa company, Hamburgh company, Greenland company, &c.

The fifthery is very confiderable, and, if properly cultivated, would equal, if not easel, any other branch of commerce. It confitts of pickled navings, cod, ling, and tufk from Sectland, and the Scottifih coalf: red herrings from Yarmouth, and pilchards from the woftern coast of England; betides which, a confiderable number of thips are annually employed in the whate fifthery of Spitzbergen.

confiderable number of thiss are annually employed in the whale fifthery of Spitzbergen.

In time of peace, the land forces of Great Britain and Ireland do not exceed forty mouland, the, twelve thousand in the latter, and the reft in Great Britain, and various garrifons beyond the feas; but in time of war, during hoffillities, the number has, according to exigencies, been greatly augmented; the troops in pay being fometimes very namerous. The havy of Great Britain is more powerful than that of any other country in the univerfe. In the late war, the number of featuren amounted to upwards of forty thousand, but in peaceable times only about fixteen thousand are retained by government.

ment.

The revenues of England are Immenie, though of so complicated a nature as not to be easily afterrained; and the funds are perfectly secure, though the national debt is enormous. Accounts are kept in pounds, shillings, pence, and farthings, the former being only a nominal sum. Besides farthings, hattpence, sixpences, thillings, half-crowns, crowns, half guiness, and guiness, which are the common current coins, there are and guiness, which are the common current coins, here are forme filter pieces, fuch as pennies, two-pennies, three-pennies, and groats, and forme gold ones, fuch as two and five guines pieces. There are two forts of weights, fach as troy and avoir-dupois; all goods, fubject to wafts, are weighted by the latter, and others by the former. Twictve ounces of the first, and fixteen of the fatter, conflicture a pound. Meafures of length are the inch, foot, yard, fathom, perch or pole, acre, furlorig, and mile. Dry meafers are chaldron, last, quarter, comb, buffel, peck, gallon, quart, pint. Liquid measures are, tun, butt, pipe, hogshead, barrel, kilderkiu, fitkin, gallon, quart, pint, half pint, gill.

SECT.

Containing a description of that part of Great Britain, called Scot-

THIS part of the isand of Great Britain is bounded on all fides by the ocean, except the fouth, where it is feparated from England by the river Tweed; towards the east by the Chevicchills, and the river Effs, and Solway Firth towards the west. It is generally reckoned three hundred and eighty miles in length from Aldermouth head, near the isle of Mult, to Buchanell, and one hondred and ninety in breadth where breades. The principal part of the country is meantained. to Buchanefs, and one hondred and ninety in breadth where broadeft. The principal part of the country is mountainous and hilly, the air fharp, but wholfome, and the foil in general inferior to that of England. It was formerly divided into an heptarchy, like England, but is now diffinguished by two differentiat, viz. Highlands and Lovilands; the people of the former are rude and uncivilized; those of the latter insitate the English cultoms and manuers. The whole country is admirably well watered with rivers aird lakes. There are a few forests of fir; timber in general, however, is very featnee. The quarries contain free-fone; and, indeed, Scotland in general, in every part of its natural history, resembles England, except that most of its productions are rather inferior to those of South Britain, from the mere unfavourable fituation of the country. from the mere unfavourable fituation of the country.

The Scots are brave, paffionate, and vindidive, and the High-The Scots are brave, parsonate, and vindistive, and the High-landers in particular are accused of infincerity, cruelty, sapa-city, avarice, pride, and nastinets. In general the Scots are tinctured with learning, but it is of a superficial nature. They are good foldiers, and obsequious servants; their clouchs are after the English fashion, excep that their peasants wear bue-bonnets, and the Highlanders plaids, the only remains of the antient Roman dress. They have long visages, bigh cheek bones, and sand sand in. In diet they are abstemious, and their houses are hadly accommodated. Most of the North Britona are uncommonly sond of staffice, and their tonce are extremely west, expressive, and affecting their common informats. fweet, expreffive, and affecting; their common inftrament is the bagpipe. The religion is Calvinism or the Presbyterlan, and the kirk of the kingdom is divided into thirteen provincial dred and thirty-eight parithes. Seotland fends to the English parliament fiateen peers and forty-five commoners.

This northern part of the kingdom is divided into the fol-

lowing counties, viz.

SC

The county of Caithness, the most northern in Scotland, as very rocky, contains many roys and promontories, abounds in cattle, these, geets, pre-bucks, red deer, and produces coper, and iron a but the idhabitants principally live by fifting and grazing. It is thirty-five miles long, and twenty broad, The principal place is Weick, though Thurfo, a town on the other stide of the tounty, is supposed to better inhabited.

The county of Sutherland, south-west of Caithness, is mountain as and barren, but well supplied with fish and wild sowly by reason that it is not only watered a several rivers, but contains above fitty lakes, including various limital, stands. It is eighty miles long, and foiry broad. The principal place is the royal borough of Dorno & which consists of nine pacifics; contains a cathedral, and is the toy of a presolvier.

The county of Kods, includes Teyne and Cromatrie: It is mountains the greatest set of the year. The valies, however, are fertile, the air good, and the hills produce, forests of fire game, &c. It is what miles long, and feventy eight broad. The chief place, Channerie, is but an inconsiderable markets town, though the feat of a presbytery.

The county of Inversels, to the fouth of Rossinire, is in grainal barren, but produces wood, iron, and game. It is finaly miles long, and fifty sive broad. At the mount of the Aber, in the centre between the west and north bighlands, stands the downs of Maryborough and Fort William, buile to check the depredations of some of the clans. Inversis, from which the though there is a bridge of seven attends. It is the feat of a presbytery, contains thirteen parishes, and may be justly deemed the key and capital of the islands. The inhabitants maguine their town to be a model of nestucies, and may be justly deemed the key and capital of the islands. The inhabitants maguine their town to be a model of nestucies, and make the feat of a presbytery, contains thirteen parishes, and that English is fooken by them in its atmost parish, but this is not triedl

synod, confitting of twe prefayeries, and forty-nine parishes, and gives the tiple of duke and east to the abole smily of Campbell. the most powerful of all the Scorch nobility. This shire is divided into several districts, viz. Argyle, properly to, Cowal, Kintyre, Knaptale, and Lorne.

The county of Perth, is fituated about the centre of Scotland, and may be deemed one of its most services; because of the state of the county of Perth, is fituated about the centre of Scotland, and may be deemed one of its most services; because of the state of the kingdom. The thire is divided into several districts, viz. Ferth Proper, Scotie, Monteith, Braidalbin, Athol. Stratherse, and Goward.

The town of Perth, capital of the province, is an agreeable, propulous place, fituated twenty miles within land, on the south bank of the river Tay. It was otherwise called St. Johnston's, from a church dedicared to St. John, as the patron of the place. It is stroyal borough, second in dignity to the metropolis, gave the title of ear to the samily of Drummond, which is now forfeited, and is the feat of a large prefixery.

The royal pasace of Scone, or Scaan, supposed to be the centre of the kingdom, stands on the north bank of the Tay. Scane gives the title of baron to the viscount Scarnont, a branch of the family of Muray. He is also hereditary keeper of this palace, which is large, spacious and magnificent, though bealt in the antient manner; some of the pannels are adorned with pointings, performed above two lundred years ago; and here is a bed of tue needle work, sewed of Aberdeenshire, is very critical and pleasant, inhabited chiefly by lowinaders. 'is white.

The county of Banif, to the west of Aberdeenshire, is very fertile and pleasant, inhabited chiefly by lowlanders: is thirty-two miles long, and shirteen broad. The town of Baniff is fituated on the coaft of the Murray Firth, is a ro al borough, of very fittle confideration. It was of old fecured by a cafite, which is now in ruins; this is likewife the cafe with the abbey in the neighbourhood which belonged to the monks of the Ciftercian order.

The county of Aberdeen, has a wholesome sir, is well watered, finely diversified with hills and dales, and pretty feitile: is fifty miles long, and thirty-fix broad. It comprehends the

e natural history, geographical survey of the cities and or observing contained y also an account of the inhabitants, the manners, customs, religion, honguings, lames government, com-

TRELAND is fituated between the fifth and tenth degree of well longitude and the fifty first and stry-first degree north liaitede, being bounded on the east by St. George's chainful and the fifth sea, which separates it from England and Walea; on the north-east by a channet about fifteen miles broad, which separates it from Scotland; and on all other fides by the occanite is about two hundred and seventy-eight miles in leright, and one hundred and fifty-five in breadth; its superficial concents are estimated at cleven million fixty-seven thousand seven hundred and stry-four English series; the number of houses were computed, in 1923, to be five bardeed and ninety-five thousand sour hundred and thirty-four English series; the number of houses were computed, in 1923, to be five bardeed and ninety-five thousand sour hundred and thirty-five parishes, two buildeed and sixty baronies, and one hundred and

nine; there are also two thousand two hundred and ninety-three parifles, two hundred and fixty baronies, and one hundred and eighteen boroughs.

With respect to its natural history, this country differs vary little from England. The air, is, in general, clear and wholeness hat most in those parts where there are bogs and fenny grounds; of these, however, sew now remain; the greater part having within the present century; been drained, and the ground cultivated. "The foil is not the most part way fruitful both in corn, and grass, especially the latters for which reason they breed a prodigious number of sheep and black cause. The productions of the marsh parts are various. Some are covered with grass, some with reeds and rushes, and others with little shears interspersed with water. Some yield abundance of expellentering and others, called bed bogs, produce large firs and other trees.

cellens err ; and others, called bed bogs, produce large firs and other trees.

There are in Ireland much the fame animals and vegetables as in England; but they have a greater plenty of game, informedit that haves, phessants, etc. are fold in the public markets.

This country is well-watered with rivers; a mong which the most remarkable are, she Shatrion, Barrow, Neor, Suir, Barin, Lee, Liffy, and Boyne. The Shamon is a much larger river than any in England, but not navigable above fifty miles. It ruth from north to fouth upwards of three hundred English miles, and, like the reft, abbonds with excellent fish, particularly falmon sind pike. There are likewise a great number of lakes, or loughs, many of which also produce large quantities of fish; and the great lake, called Neagh, is remarkable for its petifying, quality. But the bays, harbours, and creeks, which every where indent ne coast, forth the chief glory of Ireland, and render the country the best fitted for foreign commerce beyond any other in Europe.

The principal richer and commodutes of Ireland are cattle, hides, tallow, fuet, butter, cheefe, wood, fast, honey, wax, furs, hemp, and more especially fine lines cloth, which they have brought to great perfection, and their trade in it is vasily increased. They are also, by a late act of parliament, permitted to find shelt wood into England. It is failed by fome, there are mines of aron, fitter, and lead to but if there are, they are not worked.

Here are several losty chains, as well as fingle mountains, some of which contain in their bowels beds of ruins, minerals, coals, of when contain in their owers need or unit, minerals, coals, quarries of fone, like, and marble. Some of the foreft produce excellent timber, particularly oak, which is efterned as good in every respect as any in England.

Geographers usually divide Ireland into four large provinces; namely, 1. Uller! II. Muniter; III. Leinster; IV. Con-

The province of Ulfter, the most northern of Ireland, is in fome parts mountainous, but in general fertile and well-water-ed: the principal rivers are, the Banne, Loughfoyle, Swilly, Newsywager, and Braine. To allo abounds with large lakes, and the foll in general is fruitful in com- and grafs; and there are stency of horfes, theep, and beeves. The waters yield abun-

"Uffer, contains the following countries; was t. Donegal, which is in most parts very fertile, and the air clear and wholfonic. The toward Donegal, which gives hame to it, it poor, mean falce; and the only thing in the waste country weathy of notice, is the falc water lake, or rather arm of the first, and have been beilly, which extends algebraic miles in the falc water look of the mount was those to the falc water for the first water water water water water the property of the falc water for the falc water falc water for the falc water for the falc water f Londonderry,

Londonderry, or Colerain, is also a tolerable fertile country, being well-watered by the river Bann. It sends eight member to parliament. Londonderry, or Derry, the capital in the of a bishop, stands at the bottom of Lough-Feyle. It is set of a bishop, stands at the bottom of Lough-Feyle. It is compared to the considerable trade. Great quantiles of all the compared to the considerable trade. Great quantiles of all the compared to the considerable trade. Great quantiles of all the compared to the considerable trade and the considerable and service and service

additions, and has a good depth of water.

The town of Carrickfreus is populous, walled, and fortiers, as an excellent harbour, and is defended by a calle on a limbook. Here the affizes and quarter fellous are lettle took for

has an execute narrour, also is occasion by a control both for the county and town.

One of the greatest natural curofities to be met with an Europe, in in the county. It is called the Giant's Cayleway, and is fituated by the sea side, about eight miles from Colerain; it is composed of pillars all of angular thapes, from three sides to eight. The eastern point, which joins to a rock, terminates in a perpendicular clift, formed by the apright sides of the pillars, some often of which are upwards of thirty-three feet in beight Each pillar consists of several joints or stones, lying one open another, from six inches to about a soot in thickness; and what is very surprising, some of these joints are for cowers, the their prominences are nearly quarters of spheres, round such as which is a ledge, which holds them together was the same fitting, in the exactest manner, the convexity of the upper past of that beneath it. The pillars generally consist of boutsiery joints, and are from one to two seet in dismeter.

4. The county of Tyrone contains many mountains, which are very barren; but the valles and low grounds are fractal both in corn and pasture. Omagh is the principal town in this county; but it does not contain any thing worthy of particular description.

C. I see county of Fermanach is one of the most anywhole.

county; but it does not contain any thing worthy of sandealar deficiption.

5. The county of Fermanach is one of the most anyholome in this province, the greatest part of it being taken up with born, and a large lake called Lough-Earne. Intillilling, the capital of the county, is fituated on an island, and, being an important pass, it is well-fortified and garrisoned. It is chaeffy remarkable for producing a regiment of its name in Iraluse, in the war between king William III: and James II.

5. The county of Cavan is very boggy; netwitest and which gives name to it is very small and infignificant. But Kilmore, situated in this county, though a mean place, is a bishop's see, and one of the scheet in Iraland.

7. The county of Monaghan is very mountainesse, woody, and marshy; and the principal town, which give same to it, does not contain any thing worthy of particular natice.

8. The county of Armagh is, in general, very critis, the foil being effective the restriction of the ficheth in Iraland; only these is a sertain-hilly and barren track in it called the Fews.

The town of Armagh, which gives name to the county, is

hilly and barren track in it called the Fews.

The town of Armagh, which gives name to the county, is the fee of the primate of all Ireland, and is faid to have been founded by St. Patrick in the fifth century. Here was antienty, a famous monaftery, built about the year o.to by St. Columba, or Columbanus.

The town of Charlemant, which received its name from a fort or mount built by Charles Blount, lord Mountjoy, is a finall neat place, fituated on the giver Buckwalet.

fort or mount month by Chains Stockwaser.

(mail neat place, fituated on the river Blackwaser.

Logarin, the pretrict fown in the county, is pleasantly fituated on a gentle eminence, in a fertile and populous country, about two miles from, and commission appropriate of Lough. Neagh, one of the largest takes in the kingdom. This town

hath for many years acquired the tiame of Little England, from the similarity of its general figure, of the language, manners, and difficulties of the inhabitants, to those of the English, a.c. Down, the last county in this province, is very populous, he a seed six, and is exceeding fertile.

6. The descript of East Meads is very fertile, about thing in com, patters and hards of cattle. Antiently it has petty kings, by whom it was governed. Thin, the sounty town, is fituated on the Boyder, but, except barracks for a troop of horfe, does not contain any thing reimadatable.

7. The county of Well Meath contains a great many rivers, lakes, and bogs, but is is very fertile, where the land is free from the fe. Mullir get, the chief town, is finall, but very compact, and ecutains barracks for a troop of horfe. Athibne is a tolerable good town, interest on the Shannon, and has a garrifor and cattle.

garrifon and cafte.

8. King's County is not fo rich as some of the other counts, nor for well inhabited: it was formerly full of bogs, but is now well drained and cultivated. Philip's Town, or King's Town, is the capital of the counsy; here are barrecks for a company of foot, but nothing elfo that me, its notice.

9. Queen's County, antiently full of bogs and woods, is now tolerably well incloied, cultivated, and inhabited. Maryborough, or Queen's Town, the capital, received its name from queen Mary, wife of Philip king of Spain: it hattle barracks for a company of foot foldiers.

10. The county of Kilkenny is one of the best and most populous in Ireland, abounds in towns and castles, and lastly plenty of all things. It is divided, as it were, into two parts, by the river Neor, or Nuna, which has its fource from those lofty mountains, called the Slieu-bloom, or Blandine-hills,

The cipital town, Killishay, took its name from the call or ciparts of Chaile, who was an eminent bernat in this coupty. It is the face of a billion, and is divided into the English and Indianated. The former is by fact the interf and another than the calling of the largest made the total the fact the interf another than the calling of the largest made the call that is the call that the call that is the call that it is the call that the call that is the call that the call t

is, The county of Limerick contains feveral lefty mountains, one of which, called Knockpatrick, affords a very fine profect of the adjacent country, the fea and the Shannon. The town of Limerick, whence the county takes it name, is the fee of a bifnop, and a very fittong, handfome town. It flands upon the Shannon, which is navigable for thips of burden almost up to the city, though fituated about fixty miles from its mouth. Here is a fine cashedral, and barracks for twenty-two companies of foot. The city is divided into two parts, both of which are fittongly fortified with wells, eafliers ballions, and bulwarks, with draw-bridges upon the river.

4. The country of Tipperary is in general very fertile, but the northern part of it is mountainous, and the air bleak and unwholfbrne. Clonmell, the capital, is fituated on the banks of the Suir. The town is walled, neat, and populous, has a frong god, and a count-house. Here are barracks for two troops of horfe, and a good market.

troops of horfe, and a good market, or a telephone of a least the second of the control of the c

ig. The county of Waterford is chiefly lovely notwithstanding which a great part of it is barren, and the air unwhollows and thick.

and thick.

Waterford, the county town, was first built by certain pirities of Norway, and has been a histop's fee ever since the year ago. Till eclipsed by Cork, it was accounted the second-city in the kingdom for trade, wealth, and populosincia complication in the kingdom for trade, wealth, and populosincia complication for the sabour, defended on the east fall by Duncannon fort. Here is a fine cathedral, but the houses are in general built of timber, and make but a mean appearance. If he haven extends near eight miles almost in a lirait line, and is but little encumbered with rocks or fand. There is a citadel on the west side, and on the cast a block-house and first on the west fide, and on the east a block-house and first on a great trade, particularly, with England, and ships of burden come up close to its quay. The city and its libertees make a dinch country.

The province of Connaught is the most mountainous of the four into which Ireland is divided. It is the least cultivated and inclosed, the thinnest of inhabitants, and those the most

sour into which Ireland is divided. It is the least cultivated and inclofed, the thinnest of inhabitants, and those the most ignorant and unpolished. Grazing is the chief employment, of the perfants. Immense numbers of these and Galwey, it has do not in the counties of Clare and Galwey. It also abounds in horses, game, venison, honey, and hawkes, and is well supplied with fish, having many convenient, bays and creeks on the coast, and several rivers, particularly the Shannon, Moy, Suck, Drofos, and Gyll. In this province are the following counties, vis.

following counties, viz. ..., the spins are sed, and to a refer to the county of Galway, which, next to Cork, is the largeft, in the whole kingdom, and in general has in it plenty of cattle,

in the whole kingdom, and in general has in it plenty of cattle, and is very fertile in corn and patture. It is a red of the country is manned, fands on a noble bay, having many harbours and roads on every fide, it is a very neat, firong, and flourithing city; and is admirably fituated for a trade not only to France and Spain, but allo to the West-Indies. The buildings, both public and private, are mostly of stone, and hardfome, The city is walled, and was once the see of a bishop, but is now within the archbishops of Tuam. It carries on a very confiderable herring fishery, and is almost the only place upon this coast that has any foreign grade. The harbour is about two miles from the city, to which the goods are brought in lighters. Here are, haracks for two companies of soot.

the goods are brought in lighters. Here are, barracks for twocompanies of foot.

The town of Tuam was once a famous city, has been the
fee of an archbishop ever since the beginning of the fixish century,
but is now a considerable place.

2. The county of Clase has a good air and foil, but contains
very few towns; the most remarkable is Clare, loc called from
Richard and Thomas de Clare, younger sons, of the, earl, as
Gloucester, to whom Edward I, gave the county. Barracks for
two companies of foot are exceed here.

The principal and best town in the county is Ennis, fituated.

The principal and best town in the county is Ennis, fituated about two miles from Duhlin, It flands on a lake formed by

the Shannon, has a good market, and is a near place, in the
The town of Killalo, a bishop's see, with the privilege of a
fair and market, stands on the Shannon, and was, one, much,
more considerable than at present. The diocele is very large,
containing one hundred parish churches, besides chapels. A
little to the south of this town is a ridge of rocks, which run, quite across the river Shannon, and stop up all farther navigation to it.

13. The county of Sligo is very mountainous; and a rice plains and valleys the air is unwhollome, owing to their being; full of hogs. The foil, where it is free from lakes and fens, to clerably good, and fit either for grazing or tillege. Sligo, the capital, flands on a bay, to which it gives name, as well as the country. Though not large, it is pretty populous, and has an old castie; but its trade is inconsiderable, notwishstanding its harbour is so deep, that ships of two hundred tons burden

can come up to the quay.

The county of Mayo abounds in lakes, and is inclosed on one fide by the fea. The air is moift and cold, especially upon the mountains, where the foil is also poor and coarse, but there is good pasturage, with herds of cattle and deer, in the

In this county are feveral lakes and rivers abounding with is that of Lough-Mass, a lake eleven miles long, and five broad, affords plenty of salmon. The Gallo glasses, a people descended from the Scorch of the western isses, who used to fight in coats of mail with two-edged battle-axes, formerly

lived on the banks of this lake.

The town of Mayo, capital of this county, stands on the borders of Sligo, at the mouth of the river Moy. It was once a bifnoy's fee; but the bifnopric hath been fome time annexed to Tuam. Castlebar, the only parliamentary borough in the county, flands on a little river which falls into Lough-County.

bere are barracks for a troop of horfe.

5. The county of Roscommon is in general very healthy.
The air is clear, and the soil yields plenty of grafs, with some

som lit is isolofed, on the north, by the Carley mountains, which are very feep and high. Rofsommon, the county town is a very inconfiderable place. Halling Sloe, a finall town in this acquarty, is remarkable for baving the largest beaft or flock fair, in the king a dominions. It continues each time a week, send is kept twice, a year.

6. The county, of Lettrin is, very mountainous, but noted for grazing wast hered an of earthe. The town, which gives name to the county, is fituated near the Shannon. It was formerly a tolerable good town, but is now greatly decayed, and contains nothing remarkable.

The following table will exhibit, at one view, the names of the respective counties, their length, breadth, chief towns, and the numbers they fend to Parliament,

a ft ong caftle built by Edward I. the ruins of which are still to be seen.

The town of Holy-head, twenty-eight miles from Beaumaris, and two hundred and forty-four from London, is the station for the packet-boat to Ireland, being the nearest land to Dublin. It is the most western point of Anglesea, but is a little island of itself, and has a small village, called in Welsh Caer Gybi, consisting of 'heap of straggling house built on rocks, but several of them have very comfortable accommodations for passengers, both with regard to lodging and diet. The church was formerly collegiste, and sounded by one Keelus, a hermit, about the year 650. The walls of the church are the remains of a British fortification, built by Caswallon Lawhire, lord of Anglesea, about the year 450.

Wight, though an stand situated near fix miles from the main land, is nevertheles reckoned a part of Hamphline. It is twenty-two miles long, twelve broad; and is divided into thirty parishes. The air is pure and healthful; and the foil for rich, as to produce corn cough in one year to ferre it seven. A ridge of losty hills runs through the middle of the island, which not only afford plentiful passures, it as despited prospect of the sea. The vales below consist of meadow and corn fields; nor is the coast destitute of natural curiosities; here are excellent fish of mathem this coast on the south and

In evales below conint of meadow and corn fields; not is the coaft defittee of natural curiofities; here are excellent fish of various kinds. The extremities of the coaft on the fouth and well fides are very rocky; and wellward, not far from the shore, are those rocks called the Needles, from their sharpners. Farther to the fouthward are the Shingles: at both which places the island is inaccessible; and it is fortified by art towards

places the island is inaccessible; and it is fortified by art towards the fouth-east, where it is almost level.

The town of Newport, the principal in the island, is a very antient borough, and a large populous place, greatly enriched by its plenty and commerce. Cower river is navigable by larges to Newport quay, which extends lifely round great part of the town, and renders their shipping goods from the store-houser very commodious; the streets are regular and uniform,

meeting at right angles. The covn, beath, and butter markets are kept in diffined fquares, very large and commodition. The buildings are greatly improved, but neither grand nor regular. The church is a large building, with a fquare tower; and the inhabitants have lately crefted an organ, and otherwise greatly decorated it; yet this church is but a chapel of sefe or Carif-brook, a finall village about a mile from Newport, and fatnous for a caftle, built about the time of the Norman conquest, which was the refidence of the artists lords of the island; king Charles I, was confined here, until removed to Hurst castle, Cowes, a remarkable port and harboor, is at the mouth of Newport river; here is a castle built by Fienry Vill, and also a fine faitern. St. Helens lies as the sast end of the island; which is large enough to contain the whole British mavy.

The town of Peel, fituated on the western could, it is a place of considerable trade; Upon a simali island close to the town is Peel castle, one of the strongest in the world, and has a garrifon in it. The island on which it stands in a superdous rock, inspections of the strong strongest in the town, from which it is separated by a narrow stright, fordable in low tides. Within one of the charges a charle amount and the last on the sast on the sast on the sast of the property in the sast of the sast of the sast on the sast of the

in feparated by a narrow firsight, fordable in low tides. Within one of the churches is a chapel appropriated to the ofe of the bifthop; and underneath the chapel is a dangeon or prifon for offenders, one of the most dreadful places of confinement imaginable. The nignificance of the cattle itself is faid to exceed ginable. The augnificence of the cattle itself is said to exceed that of any modern structure in the world; the largeness and lostiness of the rooms, the fine echoes resounding through them, the many winding galleries; the prospect of the sea and slips, which, by reason of the wat height, appearing like buoys floating on the waves, affect the mind of the spectator with equal afternations.

The ifle of Man, though held by the British crown, was, till of late, no part of the kingdom of Great Britain ; but was governed by its own laws and customs under the hereditary dominion of a lord, who formerly had the title of king, and who, though he long ago waved that title, was to the laft invested with regal rights and precognitives. But in the year 1765, for the further and more effectually preventing the mischiefa arising to the revenue and commerce of Great Britain and Ireland, from the Itlesia was the standard on to supplement the Itlesia. illicit and clandestine trade carried on to and from the Isle of it was thought expedient to vest in the crown all rights, jurisdictions, and interests in and over the faid island, and all its dependencies holden by the proprietors the duke and duchels of Athol; who then furrendered the fame, excepting only their landed property, and the patronage of the bishoptic of Sodor and Man, the temporalities of the same when vacant, and all patronages and ecclesialical benefices. Upon this annaxation of the signal, the sum of saventy that the contract of the signal the sum of saventy that the saventy and the saventy that patronages and ecclefiaflical benefices. Upon this annaxation of the isand, the sum of seventy thousand pounds was paid as full compensation to the proprietors, according to their own proposals to the commissioners of the treasury. The inducement for giving so large a sum was, probably, the clear revenue of the isle for ten years, from 1754 to 1763, which, having been laid before parliament, appeared, at the medium, to be seven thousand two hundred and ninety-three pounds and superice halfpenny per annum. The contract was accordingly executed by both parties, under the authority of parliament April 20, 176c.

April 19, 1765.

The Western Isles, or Hebrides, are scattered in the Deucaledonian sea, to the north-west of Scotland, of which kingdom they constitute a part. They are situated between the fifty-fifth and fifty-ninth degree porth latitude, are computed to exceed three hundred in number, and contain about forty-eight thousand inhabitants. No country abounds more with the necessaries of life, and at less labour or charge than the Hebrides.

They have steff and sish in prodigious plenty. Their cattle of all forts as cows, theep, hogs, and goats, are exceeding numerous and prolific, small indeed, (as are their horses) but of a delicious taste: so are their deer, which freely tange in herds on their mountains. No place can compare with them for tame and wild fowl, there being of the latter no where in the world a greater diversity, many forts of them extremely beautiful, and rare, or utterly unknown elsewhere. The like may be said of their various amphibious animals. Numberless are their fountains and springs, rivers, rivulets, and lakes very wholfome in their waters, and superabounding with fish, especially trout and salmon; and no seas in Europe are better stored, not only with literings, but all other kinds of fish from the shrimp to the whale. No harbours or bays are superior to theirs, either for number or conveniency: add to this, their variety of excellent roots and plants, particularly shose of marine growth, all of them ferving for food or physic. Their pastures are so kindly, that they might live on milk alone, with that inconceivable quantity of eggs which they yearly gather off the desart rocks and illets. and wild fowl. there being of the latter no where in the world of eggs which they yearly gather off the defart rocks and illett. Bread is plentiful enough among them, and the ground is generally allowed to be much richer than on the Scottish continent; some parts of which are often supplied with corn from The inhabitants are of the same race with those who

live in the Highlands of Scotland, fleak the fame beiguage, were the fame hebit, and observe the fame customs with this difference, that they are incerefible, indefrious, and factere, than their neighbours of the main land. They are in general frong, vigorous, and healthy, their conflictation being steeled by labour of preserved by telisparate in their dier. The Highlanders of superior bandition live their their helphobours, but the common people are wresthedly ledged in patry cottages or cabbins built of loofe stones and study and that their dier, but the common people are wresthedly ledged in patry plassers or cabbins built of loofe stones and study and that their wind fraw; their partitions are no other shan a kind of hurdle, plassers with clay; they have neither glass in their windows; nor any other chimney shan a hole in the middle of the roofs through which the sineke sinds he ways. These people are title drangers to clean lines; they are extremely should in their house, and nasty in their person; and this impurity is, in all likelihood; one great eatife of that insections the which insection.

St. Kilds, one of the Hebrides, is only sive miles in circum-

the greatest part of them.

St. Kilds, one of the Hebrides, is only sive silles in circumstrence, and situated in fifty-sight degrees of north latitude. The whole thand in one herd rack, divided into feer high meantains, thinly covered with black metald, except on the tops; where the foil is three feet deep. The hills are clouthed with thort grafs, which yields good pastwage to the horses, cattle, and sheep; and their vallies of arable land produce high crops of excellent harley. St. Kilde is one of the strengest natural fortresses in the known world, being inaccessible in every place but at that rock, which might be defended against any force by loofe stones haded from the imperialing mountain of Otervasul. On the well side of the island there is a small fourth, or blows from the morth-cast: but the sea is generally for impercoust all round, that it frequently removes fregments of rocks and stones of a producious weight.

rocks and stones of a predigious weight.

Here are great numbers of sea fowl, which may be distinguished into several different species: among which are the

guer fowl, and the folan goofe. The people of this island, amounting to about two hundred fouls, are originally defeended from the inhabitants of the fouls, are originally defeended from the inhabitants of the Haines and the adjacent ifles: like thefe, they fpeak the Etfe language in great parky, and have for fome time been protefants of the church of Scotland, from whence a minister by fent to them. They live together in a finall village, fituated in a bottom among hills, and composed of low wretched cottages, the thatch and roof being fecured by firaw-ropes, with flones hanging at the end of them. The number of thesp on this and the neighbouring ideals may among the content of the positions of the protein of the pr this and the neighbouring illands may amount to two thou-fand; and their cows, which are very imall; do not exceed one hundred. All the animals on the main land, including dogs,

cats, and even wild fowl, are spotted.

The arable land of this illand is divided into ten equal parts, and these sgain are subdivided, according to the number of families. They manure the land with a compost of turf-after, mixed with firaw and urine; and add to this the bones and enmixed with staw and string; and sout our sine concerning entire trails of the fear fowl. They plow with a finall crooked inftrument; fow their barley very thick; and reap an harvest twenty-fold. The fear-coast, furnishes them with plenty of cod, ling, mackarel, turbot, herring, and all the other species of fish common to the fear; here are likewise otters and feals; but their chief dependence for food and gain, is upon the fea-fowl, which they catch many different ways; but their employment subjects them to the most imminent dangers; for they are obliged to climb rocks, the very sight of which fills with horror the mind

ewis, or Long island, is fixty miles to the westward of St. Kilda: it extends one hundred miles in length from north to fouth, and from thirteen to fourteen in breadth, confifting of a great number of ifles and rocks, and parted by the fea into two divitions, called Lewis and Harries; the former of which lies

westward of the latter.

Harries is an itland separated by a channel from Lewis: it extends about twenty-four miles in length, and in fome places about fix miles in breadth. The air and climate are the fame with those of Lewis: the face of the ground is rocky and mountainous, covered with graft and heath: on the west fide, however, the land is more flat and arable, producing naturally abundance of clover and daily, which in the luminer perfume abundance of clover and daily, which in the luminer pertune the air with an agreeable fragrance. There are divers field water lakes in this illand, abounding with trout, eels, and falmon. The foil is in general dry and fandy; but, when manured with fea ware, yields very great harvefts of oats, rye,

and bailey.

The ifle of Sky may be ranked among the largest islands of the Hebrides: it was so called from Skianach, which, in the Erse dialect, fignifies winged, because the two promontories of Eric dialect, inginies winged, desque the two pronouncries of Valernefs and Trotternefs, by which it is bounded on the north-west and north-east, are supposed to resemble wings. The island lies between the shire of Ross and the western part

In breadth, the circumference of the whole amounting to about one hundred. This island is also composed of many different islands and rockes; and in divided between proprietors; the fouthern part belongs to the laid Muelcod, said to be lineally desended from Leod, fon to the black prince of Main; the northern diffrict, or become of Trotternsis, is the property of a Macdonald, whose ancestor was Donald, king or lord of the isles, and chief of the numerous clan of Macdonalds, who are counted the most war-like of all the Highlanders. Sky is part of the shire of Javaness, and formerly belonged to the dicesse of the files to as the South, it is parted from the main land by a channel three lengues in breadth; though at the sery of Glenelly it is so harrow, that a man may be heard calling for the boat, from one side to the other. This island is well provided with a variety of excellent bays and harbours, and is surrounded by inferior isles, among which are Soa-Brettil, Oronia, Pabbay, Scalpe, Surah, Gigay, Islay and Bute,

But the most celebrated of all the western islands, is Jones likewife called St. Columb-bill, from St. Columba, who came. littler; from Ireland, and lies buried here. The illand firetches two miles in length, from fouth to north, in the neighbourhood of Mull, and is about a mile broad from saft to weft. One end of it is rocky and barren: the other plain, arable, and

In the Caledonian fea lie the Orcades, or Orkney ifles, which In the Caledonian fea lie the Occades, or Othney ifles, which are about thirty in numer, but not all inhabited, the greatest part being finall holius that produce nothing but padurage for theep and goats. They are stuated eighteen leagues from Scotland, between the fifty-eighth and finiteth degree of latitude, and in longitude from London between one degree thirty minutes and two degrees fifty minutes, and are divided on the fourth from Caithnefe, the most northern point of Scotland, by the Pentland or Pictland Firth, from twelve to fixteen inlies in breadth. The principal of them are known by the denominations of South Konatha, Swinna, Hoy, Burra, Lambholm, Fastra, Faira, Cava, Gramfey, Mainland, Copinsha, Stupensha, Dismey, inhallo, Stroufa, Papa-Stroufa, Sanda, north Konaldsha, Ede, Roufa, Wyre, Garfa, Egletha, north Faira, Westra, Papa-Westra.

The chief of the Shetland islands are, Mainland, Brussa, the Sherries, Burray, Whalfey, Vuft, Vell, Festar, dec.

Mainland, extending fixty miles in length, and twenty in breadth, is indented by a great number of bays, and abounds with Mossis, bogs, and mountains, so that it is more adapted. for pathrage than corn : nevertheless the low-grounds near the thore, produce cats and barley. On the call-side of the island fands Lerwick, the principal rown, coinfiling of shout three hundred families. Fowards the west is situated Scalloway, which, though very finall, is the feat of judicature; and here likewife the prefbytery of Scotland affemble. The island of Braffs, fituated to the eastward of Mainland, is about five miles long, and two in breadth; has fome arable ground, and two churches; but is chiefly remarkable for its found, in which the cherches; but is chiefly remarkable for its found, in which the great herring-fiftery is carried on. The landlerds here are confiderable gainers, by letting out their ground and houses to the Dutch and Hamburghers. The Skerner, Barray, Whalfey, and Vork, are inconfiderable if ands, the largest and last not exceeding eight miles in length: but all of them are provided with churches, and in Vust there are three good harbours.
Yell is fixteen miles in length, is indented like the figure of 8, has three churches, and feveral chapels, but the country is received and haven.

moorish and barren.

Beffar, or Fetlor, five miles in length, is remarkable only for the rains of fome watch-towers which the natives call Picts houses: they are from twenty to thirty feet high, twelve broad, and tapering to the top. .. The natural history of these islands, with the character, customs, &c. resembling those of the Or-cades and Hebrides already described, it is unnecessary to repeat them here. :

The iflands in the British channel, fituated near the French

The islands in the British channel, situated near the French coast, are Jersey, Guernsey, Alderney, and Sark.

The island of Jersey, known to the antient Romans, is situated eighteen miles west of Normandy. The north side is inaccessible by reason of losty clists, but the south is almost level with the water. The higher midland parts are well planted, particularly with apple-trees, from which great quantities of cycler are made. The vallies are fertile, and well cultivated, and the passures feed great quantities of cattle, sheep, &c. The inhabitants apply themselves, in time of peace, to the improvement of commerce, and more particularly to the manufacture of stockings, sale of honey, &c. which is here very exquisite. In war time they have in general a concern in war defeated by the garrifon, and made priferers of war. Jerfey was defeated by the garrifon, and made priferers of war.

is about twelve miles in length, hath a healthy sir, and contains about twenty thousand inhabitants. The governor is appointed by the British crown, but the civil jurisdiction is invested in a bailisf and twelve jurass. The capital town, St. Heiler, is handsome, and contains about four hundred houses. The language is french, corrupted by, an internisture of English. The island of Guerniey, in length thirteen miles and mell, and nearly of the same breadth, contains ten parishes, which, however, have only eight ministers, four of the parishes being united; and Atterney and Sark, which are appearities being united; and Atterney and Sark, which are appearities being united; and Atterney and Sark, which are appearities being united; and Atterney and Sark, which are appearities being united; and Atterney and fruitful in corn and pasture, than jersey, is neither so populous, nor so well cultivated. It is, however, a healthful place, and fruitful in corn and pasture, but hat only one church. The people in war time, as in Jersey, see lond of privateering; the only hatbour is S. Peter. It people in war time, as in Jersey, see lond of privateering; the only hatbour is S. Peter. Le Port, which is guarded by two forts, one called the Old Castle, the other Castle Cornet. The inhabitants speak Franch; it having been a part of Normandy, and is full governed by Normant laws.

man laws.

The illand of Alderney is a very healthful place, fruitful in even and patture, and remarkable for a fine breed of finall cows. It is only feparated from the coast of Normandy by a narrow firstlt, called the Race of Alderney: it has only one shurels. The inhabitants live together in a town of the fame name, the island being but eight miles in circuit.

The little life of Sark, lies between the islands of Guernsey and Jersey on the coast of Normandy in France; it is less than the former, has a fine air, and is tertile. The three last of these islands are computed to contain about twenty thousand people, and all the four are part of the Norman patrimony, being the only remains of that part of France formerly conquered by the British arms.

ICELAND, MEDITERRANEAN and ADRIATIC

I S L A N D S

Containing a description of the above islands, their boundaries, extent, situation, natural history, inhabitants, laws, castomi, es.

CELAND is about four hundred miles long, and one hundred and fifty broad: it is fituated in the Atlantic cosan, between finty-three and fixty-eight degrees hornh latitude, and between ten and twenty-fix, degrees well longitude. The greater part of the island is mountsinous; flory, sind barren, but in some places there are excellent partures, and the grafs has a fine smell. The ice, which gets loose from the more northern country in May, brings with it a large quaintity of wood, and several animals, such as foxes, wolves, and bears. For two mounts together the sin never sets, and in the winter it never rises for the same space, at least not entirely.

The island is well watered with large and small rivers that show from the mountains, besides rivulets and large lakes, all of which abound with excellent fish. There are no forests in any part of the island, but this defect in a great measure compensated by large quantities of fine timber that come floating on shore on different parts of the sea coast. The islatural productions of lecland, such as quantypeds, birds, infests, and sish, resemble those of Norway, Greenland, &c. already deferibed.

There are some exceeding softy mountains, which are always covered with lee and fish. The instalts live in the vallice between them and in those mear the coast are plains covered with verdure: but nowithstanding the intense coldness of this island, earthquakes and volcanoe lave been more known here than in much warmer climates. The former have several times laid the country desortes posticularly in 1724, 1732 and 3755, when shory cruptions broke out of the earth. Many of the shown more known here than in much warmer climates. The former have several times laid the country desortes broke out of the earth. Many of the shown in the part of the listed, not far from the feet in the fouthernmost part of the listed, not far from the feet in the fouthernmost part of the listed, and torrests to the content of the content of the content of the other content of the mountain to its fumm and on the forth-well is a large chaim, reaching from the top almost to the bottom.

almost to the bottom.

Eruptions from other mountains have broke out fince those of Heela have been flooped. The huge mountains of Crabia on the 17th of May, 1724, began to eject in a terrible mannet finesk, fire, cinders and flones, which were followed by a fiery Arcam, like melted metal. The lava continued to move flowly

on or about cight or nine miles as far as the take of Mynist, litto which it discharged itself, but did not ease till the end of September, 1729, when the graptions of the meantains subsided. They were, however, foot followed by the suptions of three of the adjacent mountains:

In this country are found fonce of various colours, but no matthe. It likewise produces a kind of crystal, a large quantity of pumice stone, and, near the volcano, two forts of agate. It is afficertainly rich in minerals, though there are no mines worked in the country. The people find, even above ground, large lumps of silver, copper, and iron ore, so rich, that they are nielted by a common wood sire; and the metal of this island, great quantities of which were formerly exported to Copenhagen and other countries, but that brench of trade has entirely caused for some time.

The inhabitants of iceland are well made, and matter.

Coveningen and other countries, but that breach of trade has entirely easied for fome time.

The inhabitants of Iceland are well made, and posses a confiderable share of hodily strength, though they fulcom live to a very old age. In general they are sober, honest, declie, and industrious; but, like all others, who dwell in cold countrier, they have fond of drinking spiritous liquers; though ferry are so are subject to various disorders, particularly the rhe ametism; seven, ashmas, and consumption; but the leptody, or rather a kind of hereditary feurry, is the prevailing disase. The dreshoth of the men and women resembles that worn by the Norwegians. The men in fishing wear a garment of sheep-skin over their closuries; and this they frequently forten by rubbing it ever with fish liver. Their chief employment is fishing, to which they bring up their children as soon as they have strength to row, about,

Their houses nearly resemble those in Norway, with this difference, that as they are not so well supplied with timber, they make more use of stones, turf, and mud walls. The better fort possess to the better fort possess to the walls well furnished. The walls better fort possess tolerable houses, well furnished. The walls are comfortably thick and warm, and the roofs either boarded

or thatched.

These people having been originally a colony from Norway, they still speak the old Norwegian dislect, though they have adopted a great number of terms from the Scots, with whom they herefore maintained a considerable traffic. The Lutheran doctrine is the only religion here tolerated. The country is givided into two bishopricks; namely, the see of Skalholt for the fouth; and that of Hoalum for the north. The revenue of each bishop amounts to about two thousand rix dollars; from which, however, he must maintain the rector and corrector, the minister of the cathrdral church, and a certain number of scholars. At the time of the Reformation, great pair of the church revenues was secularized, and now belong to the king of Demark. The churches see in general low, and but indifferently decorated; nevertheless they are clean, decent, and commodious.

modious.

The inhabitants of this island are ruled by a governor called Staffiampermand, or rather by his deputy the Ampermand; the former is generally chosen by the king from the Danish nobility, and resides at Copenhagen; but the latter always lives in Iceland, at the king's palace of Ressessing on a falary of sour hundred rix dollars. His Majesty likewise appoints a teceiver, who collects all the taxes and revenues, and transmits them to the transmit Resides the steament, there are Sussemen, who the treasury. Besides the sleward, there are Sysselmen, who farm the king's taxes in certain districts, and act as justices of

farm the king's taxes in certain districts, and act as justices of the peace, each within his own province.

The king's revenues arife from taxes and dues, an annual fum paid by the company of merchants, secularized abbey lands, and other royal demesnes farmed out to the natives. Law-fuits, in spiritual matters, or concerning freehold property, are determined by the Norwegian laws; but in every dispuse relative to meum and tuum, the old Iceland laws take place. There are two judges, called langmand, who preside over the southern and northern divisions, and sometimes deputies are allowed. There is no other legal method of punishing men with death than beheafing or banging; the women, condemned to die, are sewed up in a sack, and drowned. In spiritual cases, the deputy governor sits as judge, with the deans and clergy as his assessment is shaud, with respect to its exports.

The commerce of this ifland, with respect to its exports, confilts of dried fith, falted meat, butter, train bil, coarfe woollen cloth, flockings, gloves, eider-down feathers, raw wool, fleep-fkins, lamb-fkins, and fox-fklins. The imports are, timber, fifting lines and hooks, tobseco, bread, horfe-fhoes, brandy, wine, falt, linen, and a few other necessaries and super-

fluities for perfons of higher rank.

fluities for persons of higher rank.

The Danet, by an exclusive charter, monopolize the whole trade of Iceland. This company maintains factories at all the harbours in the island, where they exchange the foreign goods for the merchandize of the country; and as the bisince is in favour of the Icelanders, they pay the overplus in Danish money,

which is the only current coin in this island. The weights

which is the only current cain in this island. The weights and measures nearly resemble the Danish.

In treating of the islands in the Mediterranean, we shall be give with a description of lvice and Fermentora, which were called Fithyuse by the Greeks, from the vast quantities of pines they produced. The former separately was called Ebusius, and the other Ophius's and Collubratia, Fermentora, six miles north of Ivies, is small, and at present uninhabited. These islands its about forty miles long, and twenty-two broad, and very meuntainous, but not unfruisful, where it is cultivated. The commodities are fait and sign; the principal place is lyica, a small town, with a fort and barbour, and the relience of the governor, who is subordinate to the vicency of Majorca. It takes its name from the multitude of goats found upon it it is a receptacle for banished persons, and has a small garrison and eastle to defend the entrance of the harbous. The island of Majorca is the nearest to the Spanish coast of any of these islands it is faxty miles in length, and forty in breadth, abounds in corn, cattle, horse, wine, oil, hacey, fastering, and the wind of the sum of the su

round it. Towards the north and west it is mountainess, but has several good harbours, with plenty of water. The air. Jis wholsone, but very hot and dry in summer. A nonfiderable body of horse and foot is kept liere for the desence of the island. The language of the better fort is Spenish, but that of the common people is a medley of Spanish, Latin, Greek, and drable. The principal town, Majores, antiently Palma, which stands on the South-west side of the island, on a bay between the capes, and is a large and well fortified town, the residence of the vicercy, the feat of a court of inquisition and other details, and has a revenue of twenty though ducate or annum. This

wenue of twenty thousand ducats per annum. AT inhabitants are computed at ten thousand, Here are a great many churches, a flately cathedral, an university, feveral hospitale, handlome freets and quares r of the laft, there is use called Born, where the bull-rights and other shows lare wall-

bited."

The ifland of Minorca lies thitty-three miles cath-north-east of Majorca. Its greatest length from east to wish is thirty-leght miles, and its breadth fifteen. The air is moid, but never and credingly cold or hot. Here are lead mines, plensy of ash, falt, sine marble, rabbers, theep, honey, wan, respect, oil, cottom, wine, fome of which is excellent, sine account, opuntial, palm reces, which, however, bear no fruit, mystles, with a yait variety of petrified shells, and a great deal of cattle. The water is faid to be of an indifferent quality. The inhabitants, like the Sanniards, are too noul and lays to callives the ground in a Spaniards, are too proud and lazy to cultivate the ground in a proper manner, and confequently have but little corn. They are computed at about twenty thousand, have a natural turn to poetry, love music and dancing, and, like their ancestors, are

The capital, Ciradella, lies on the west coast, where one governor resides. It is a small place, but well fortified, and chiefly inhabited by the English. The harbour of Port Mahon is one constitutions and fecurity of the finet in Europe (both for its capacioufnefs and fecurity from wind and enemies) being four miles long, and above half a mile in breadth: The town is small, but has a brisk trade. Near it is St. Phillip's calle (which, with the town and harbour, lie at the fourh-east end of this island) is a square fort, and has

always a good garrifon.

In 1756 the French got possession of this island, the English prison in Fort St. Philip's not having been duly supported, reinforced, and supplied by Admiral Byng, who was fent to its relief. The combined forces of France and Spain again took it in 1782, and, by the treaty concluded in 1783 it was orded to his

catholic majefty. island of Sardinia, extends from forty-one to forty-three degrees of north latitude, and from nine to ten degrees of east longitude. Hence its greatest length from Cape Corfo, which is its utmost northern point, to Cape Bonifacio, its utmost fou-thern extremity is about one hundred English miles, and its thern extremity is about one hundred English miles, and its greatest breath about fifty. It is computed to be one hundred miles distant from the city of Genoa to the fouth, and is divided into the country on this side and beyond the mountains, which are again subdivided into thirty-eight cantons, called pieves by the matives. Being for the most part mountainous, woody, dry and stony, it has little aiable land. Some of the low grounds and vallies, however, yield corn, wine, figs, almonds, chefnuts, olives, and other fruit trees. Here are some faltworks, and hot baths on the island, with crystals, iron and allum i here is also a good breed of cattle authlories, and she allum i here is also a good breed of cattle and horses, and the woods and forests abound with deer and other game, together with honey and wax, 1

Corfica

Coffice is but thinly inhabited, but the elergy are very minerous, compared to the reft of the people, as the Francificars, Capuchins and Servetee, have not lefe than feventy-five contrents. It belonged to the Genocle, but the natives, or account of, their tyranny, having for many years taken up erus against them, that state surrendered its right to the Franci king, under whole dominion it now remains. General Paoli, who long commanded, them in their struggles for freedom, now resides in England, and has a pension from the British court.

The principal places are, 1. Bassia, the capital, structed on the north-east coast of the island, twenty-two miles south of Cape Corfe, and seventy-fix north of Cape Bonisacio. It is the see of a hishop, has a good harbour and castle, and is pretty well to tisticd.

well fortified.

2. The town of San Fiorenzo, fituated also on the northern fide of the island, on a gulf to which it gives name, has a good bayen, with some fortifications, and is the residence of a billion; but its inhistiants are sew, on account of the unwhollomeness of the air.

wholfomeness of the air.

3. The town of Honifacio, which is finall, but well peopled, flands on the fouthern coaft of the illand.

4. Porto Veccio, a little lea port town on the eastern coaft.

5. Ajeazo, by Onne esteemed the capital of the island, stands on the western coast by the river Gravone, and on the South ide of a gulf, to which it gives name. It is an episcopal see, a place, of good trade, and well peopled. 6. Corto, on the Golo, is also an episcopal see, and is desended by a strong castle and well.

The island of Sauticia and well peopled.

The illand of, Sardinia, one hundred and fifty miles weft of Leghorn, one hundred and fixty in length, and eighty in breatth, has but an indifferent air, yet the foil is fruitful, and abounds in corn, wine, oil, and fruit i here are also plenty of cattle, game, buffaloes, beare, and deer, some of which have fine spotted skins; gold, sliver, lead, iron, sulphur, all.—, &c. The commodities, exclusive of the productions already mentioned, are coral, linen, sik, wool, hides, and cheefe; and the whole is enjoyed under the title of king, by a prince of the Sayoy family. The inhabitants are indolent, and dissolute in their manners a confequently the country, is not so will cultivated as it might be. The religion is Roman catholine, and the language Spanish. The only venomous creature is a kind of fuider. The illand of Sardinia, one hundred and fifty miles west of

finder.

The chief town, Cagliari, is fituated on the fouth fide of the island, and on the declivity of a hill; it is divided into high the island, and on the declivity of a hill; it is divided into high the island, and well built, but the and low; the former being handfome and well built, but the latter, poor and unhealthy. The town contains feveral converts: the cadledral is magnificent; the archithop and viceroy zefide here; the port is fpacious, and defended by a battery and cafile.

By an opposite course of the rivers Sacro and Tirso, this island is nearly out into two equal parts or provinces; the one called Il Capo de Cassiani, and the other Il Capo de Saffari, or Lugedori. There are a great many ports, guiss, and hays in it, with several strong towns, a great number of villages, three archbithoprics, and dour bishopries. The clergy, both steelar and regular, have great privileges, incomes, and immunities. The only university is that of Cagliari. The revenues of the signal are faid to exceed the charge of its government and support. A great many smaller allands lie about Sardinia.

The island of Capri, or Caprea, a much taken notice of for the noble ruins on it. It is about four miles long, and one broad, and is situated at the entrance of the gulf of Naples, about three miles from the continent. This side was the refidence of the emperor Augustus for some time, and afterwards of Tiberius for many years. The principal ruins and remains of antiquity are at the extremity of the eathern promontory. It contains about one thousand five hundred inhabitants, who are By an opposite course of the rivers Sacro and Tirso, this

contains about one thousand five hundred inhabitants, who are exempt from all taxes, and belongs to the province of Lovoro, in the kingdom of Naples. There are feveral fprings of fresh water in it, and in a delightful valley between the mountains, at the two extremities, stands a city of the fame name with the island, which is the sec of a bishop, whose revenue arises chiefly from the producious slights of quals that come thither at certain

from the produces nights of qualistinat come thither at certain featons, particularly in March.

The island of lichia is a small but pleasant place, lying on the Nespolitan coalt, about two miles from the cape of Mellins, and twenty-five from Naples. Most of it is furrounded, with high, craggy, and inaccess like rocks, which thelter it from the bight, craggy, and defend it from invaders. Some parts of it are rich and delightful, yielding all manner of delicious fruits, and excellent wines, but others are difinal and barren. It was aniently called linarime, and was very fubject to carthquakes. There are a number of pleasant towns and villages in it, and

alio feveral hot baths and mmeral waters.

The itland of Sicily, the most confiderable in the Meditergancan, is divided from Italy by a narrow Arascht, called the Faro No. 79.

The rock, antiently called Scylla, and now Cape Seligilo, is on the Calabrian fide, and the whirlpool, formerly called Charyb-dis, lies not far from Muffina, and is now denominated Ca-

The fock, antiently called Scylla, and now Caps Saiglid, is on the Calabrian side, and the whitspool, formetly called Charybdis, lies not far from Massian, and is now denominated Calosars.

This isfand enjoys a salubrious air, and the folt is fo fertile, that it is stiled the granary of Judy. It produces abundance of corst, who, oil, fruits, subar, honiey, fastron, was, silk, ôte, fome gold, fliver, iron, allum, vitriol, saltpetra, and mineral silt. The mountains yield emeralds, jasper, agate, porphyty, lapis lavull, and a stone called carochits, of a greenish spectical colour, which grows fost by the warmth of one's hand, stleking to it like glue, and is an excellent antidote against the sting of scorpions, and some other possonous infects. Here are plenty of excellent sith, among which are the pesse speak, or swordship, and unnies, and a good deal of coral is found also in the coast. Great quantities of raw or manusactured silk are exported from Mcsina, where a consul from almost every nation in Europe resides, to manage and protect the trade of the tratfort to which is mount Ætna, now called Monte Gibello, or Mongibello, a volcano, whose eruptions have often proved fatal to the neighbouring country. The eruptions of mount Ætna, are generally preceded by an earthquake, which often does most damage than the eruptions, which will appear from the follow' and gualtentic account transmitted hither from Florence, dated Fob. 25, 1783; "On the 5th of this month there happened a tremendous and dreadful earthquake at Mcsina, which has energy the center of commerce of Sicily, the superb editively destroyed that beautiful city, together with most of its inhabitants, amounting, it is faid, to near forty thousand solling are tremendous and dreadful earthquake at Mcsina, which has energy the center of commerce of Sicily, the superb editively destroyed that beautiful city, together with most of its inhabitants, amounting, it is faid, to near forty thousand solling of high transk, and agreat unimber of samiles of distinction is seventy miles in circult, and so high, that it harbours many, wild bealts: at the bottom are corn fields, and plantations of

is feventy miles in circult, and so high, that it harbours many wild beafts: at the bottom are corts sields, and plantations of fugar canes. Among the other mountains, one of the most considerable is Mount St. Julian, near Palermo, antiently called Eryx, and yulgarly Trepani.

The nobility are so numerous in this island, that a late writer says it is paved with noblemen, there being no less than fixty dukedoms, fifty-fix marquisates, and upwards of one hundred carldoms. The people in general, with respect to their character, are reckoned a perverse race, being a mixture of Italiana and Spaniards: they speak chiefly Spanish, and sollow the Spanish fashions, particularly in wearing black. The established religion of the island is the Roman casholic. The number of churches, convents, and religious foundations is very great and they are well endowed. There is a sovereign tribunal, which judges, in all ecclessical affairs, and admits of no appeal to the pope. The Jows are now allowed to settle here, and make open prosession of their religion, which was not the case while the island was immediately subject to Spain.

Geographers commonly divide this island into three parts or provinces, viz. Val di Donnino, Val di Noto, and Val di Mazara. The principal places are as sollow:

1. The city of Palermo, capital of Sicily, antiently Panorannes, a large, rich, and, well built city, situated at the very bottom of a gulph, to which it gives name. It is faid to have been built by the Pheenicians at their fift coming into Sicily, and it is now an archiepiscopal see, being one hundred and twenty miles distant from Messina ot the west. The viceroy's palace is a magnificent structure, adorned with sine seulprures, gardens, &c. and serves inflead of a castle, standing high, and being standard with some lofty towers, and other works. There are many other sine public edifices, as the cathedral, and the other churches, several sounts into the sea, the cathedral, and the other churches, several sounts ins, the city gate, which leads to

the other chuteres, leveral rountains, the city gate, which leads to the fea lide, the quay, the mole, forts, convents, town-house, lambard-house, and university. The quay is one of the sinest walks about the city, being wide and of a great length, and planted with trees. The port is fafe and commodious every where, except on the fouth-west tide, which is full of rocks, that appear no higher than the surface of the fea. This city carries on a confiderable trade, is computed to contain one hundred and twenty, thousand inhabitants, and the two streets, which cross each other, are very fine.

which crofs each other, are very fine.

2. The city of Mellina, before the late calamity, was pretty large and well built, had a specious barbour near the straight to which it gives name, and not above fix miles from the coaft of Calabria. It was one of the greatest market towns in the Me-

diterranean.

discreamen, contained many noble edifices, was the fee of an sighbifloop, and consended with Palerme for being the capital of the illand. The eathedral was a large spacious building, very rich in plate, and finisely adorned in the infide.

3. The city of Sysacule, greatly celebrated among the antiques, and formerly the capital of the island, is faid to have been built by Archias a Cerinthian, and to have extended upwards of twenty-two miles, or one hundred and eighty flading, in compast. It flands forty fix miles from Cannia, leventy-five from Meefins to the fouth, and thirty-eight north from cape Passaro, the Promontorium Pachynum of the Romans, on that spot untiently called Insua, or the Island. This city is a bishop's see, has a fine large harbour supplied with plenty of water by the famed southant of Arethula, and is defended by an fortified casse. It was almost ruined by an earthquake in 1693, yet the number of its inhabitants are now faid to be fourteen thousand.

teen thousand.

The town of Cartelamara is fituated on a bay, to the fouth of Monte Reale; it is a bishop's see, and has a good harbour.

Near is shoot the town antiently called Egests, and estebrated for its warm baths. The other towns of this province are too inconfiderable to merit sarticular description.

No country has undergone greater vicissitudes of government than Naples or Sicily, chiefly owing to the inconfiancy of the natives, which seems to be incorporated with their air. Christians and Stategers by turns conquered it. The Norman unthan Naples or Sicily, chiefly owing to the incommuney of the natives, which feems to be incorporated with their air. Christians and Saracens by turns conquered it. The Normans under Tanered drove out the Saracens; and, by their connexions with the Greeks established there a most respectable monarchy flourishing in arts and arms, while the rest of Europe was plunged in monkish ignorance. About the year 1166, the popes being then all powerful in Europe, their intrigues broke into the succession of Tanered's line, and Naples and Sicily at last came into the possession of the French; and the house of Anjou, with some interruptions and tragical revolutions, held it till the Spaniards drove them out in 1504, it was then annexed to the crown of Spain.

nexed to the crown of Spain.

Off the no. h coasts of Sicily, in the Tufean fea, lie feveral fmall islands, called at prefent the Lipari islands, from the chief of them, which is faid to have had he name from Liparus, the founder of its receival.

of them, which is faid to have had he name from Lipatus, the founder of its capital.

Lipati, which lies about twenty-fix miles north from the nearest coast of. Sicily, and is about eighteen miles in circumference, including the windings of the shore, enjoys a wholform air, and rint, especially figs and raisins, in great plenty, together with sulphur, allum, and bitument. It hath also some excellent hot springs, and on the coasts are caught a great variety of sine siste, with which it drives a considerable commerce. The capital, called also Lipati, is strong both by nature and art, well inhabited, and an episcopal sea, under that of Mcsina. The small islands of Levanzo, Maritima, and Favagnana, (which with the Lipati essentially singles are subject to the king of the two Sicilies) lie at the west end of Sicily. end of Sicil

end of Sicily.

We shall here mention the isle of Maira, though it is not properly ranked with the Italian islands. It was formerly called Melitz, is situated in sistent degrees east longitude, and forty-sive degrees north latitude, firsty miles south of cape Passion of Sicily, and is of an eval figure, twenty miles long, and twelve broad. Its air is clear, but excessively hot: the whole island seems to be a white rock covered with a thin sarince of earth, which is however amazingly productive of cotton, indigo, and a variety of fruits, roots, herbs, &c. but corn and falt are the principal commodities. It contains about fixty thousand inhabitants, who speak Italian in the towns, and a corrupt Arabic in the country.

The knights confift of eight tongues or nations, the chief of which are French, Italians, Spaniards, English, and Germans. They are faid to amount to about three thousand, have confiderable possessions in the Roman catholic countries on the condendate of the confiderable possessions are under the government of a grand master, who derable potternous in the Koman canonic countries on the con-tinent, and are under the government of a grand mafer, who is elected for life. They ought all to be of antient noble fami-lies; but formetimes nobility is disperfied with on account of personal merit, and soch are called cavalier di grants. The grand mafter and kinghts are equally capable of being advanced to a cardinal's hat. According to the statutes, no natural chilto a cardinal's hat. According to the flatutes, no natural children, those of great princes excepted, nor persons under eighten years of age, can be admitted into the order; but the poperary dispense with these qualifications, and the grand master has an unlimited privilege to grant this favour to fix persons. The knights are under vows of cessees and chastity; but they keep the former much better than the latter. They were reroses of a particular form, and never have degenerated from the military glory of their producessor; being still considered as the balwark of Christendom against the Turks on that fide. The chief town, Valetta, had its name from the grad master Fred. Joh. de Valetta, who built it anno 1566. It is a handsome town, with an excellent harbour, and strongly for-

tified. Here is an elegant palace for the grand mafter, feveral convents, numeries, and churches, the principal of which is dedicated to St. John; a college of jefuits, a large hospital, and a building where Turkith flaves are kept.

The most confiderable of the other towns are, Citta Vittoriofa, or Il Borgo Sengles, Malta called alfo Medicil; and Citta Vacchia where the bifthop refides; Bormola, Forte all S. Thomasto, Forte Rosto, Citta Nuovo; and Cottonera.

There are, befides Malta, two other fmall illands lying near the that helper to the order, purpless, Googa satisfacts.

There are, befides Malta, two other final lidands lying near it, that belong to the order, namely, Gozo, is very fruitful, and has about three thousand inhabitants, with feveral good harbours, and frong forts. Cornino, though very finall, is pratty fertile, and has about three thousand inhabitants, with feveral good harbours, and firong forts. Cornino, though very finall, is pratty fertile, and has a fort and harbour.

The islands in the Adriatic are eight in number, viz. I. Lusiona, or Lesina. II. Corfu, or Coreyra. III. Cephalonia, IV. Zante, V. Leucadia, or St. Maura. VI. Candia, foremetly Crete. VII. The Cyclades. VIII. The Sporades.

The first of these, namely, Lusiona, or Lesina, fituated eventy-five miles north-east of Maples, its about seventy miles long, and fatteen broad. The fibore is low, has two castles, and a Mosfaic kind of decayed causeway. The reft is inhabited by hulbandmen, who cultivate the most fertile part of the country, which, though mountainous and rocky, produces plenty of corn, wine, olives, faffron, honey, and fruits. These live in towns and large villages, fome of one bundred, some of sive hundred families: and here is considerable gain from good is fine in the country of the families and here is considerable gain from good fifteries. The capital of the fame mane, is well-built, and populous. Here are many fine churches, monasteries, &c.

hundred families; and here is confiderable gain from good fiftheries. The capital of the fame marke, is well-built, and populous. Here are many fine churches, monafteries, &c.

The island of Corfu, or Coreyra, mear the mouth of the Adriatic, is about one hundred and twenty miles in circumference, and a very important place to the Venetians, who have generally about fifter gallies, and other veffels. The place is famous for falt, wine, olives, lemons, cyder, &c. The principal city, Corfu, has a noble metropolitan church of the Greeks. The town is handsome, and well defended by the castle of St. Ange, which is deemed impregnable.

The island of Cephalonia, which is rather larger than Corfu. The capital, of the same hame, is a bishop's fee. Argolisto is the principal port, and the residence of the governor; and also is a strong fortress. It is further in oil, excellent Muscadine wine, and grapes not unlike currants, which are a very profitable commodity. The climate is very bot, and there are biossome on the trees throughout the winter. It is subject to the Venetians.

The stand of Zante, seventeen miles from Cephalonia, is one hundred and fifty miles in circumference, mountainous, and subject to earthquakes. It has, however, plenty of wines, oil, corn, currants, excellent peaches, figs, and cacumbers. &c. but a facrity of wood. The English and Dutcir have fastories here. The capital, of the same name, is rolerably population.

ries here. The capital, of the faue name, is rolerably populous. This ifland, which slio belongs to the Venetians, has no fortifications; bet there is a fortrefs upon an eminence planted with cannon. In one part of this ifland is a foring, which throws out a great deal of bitumen, effectally at the time of an earthousite.

earthquake.

Cerigo, formerly Cerhera, is a rocky, berren island, fisty miles in circumference, between 'Candia and the Mare, and contains a town of the same name.' South from Zante, on the Merea coast, lie two small clusters of islands, the one called Strephades, the other Strivals. The island of Leucadia, or St. Maura, lies in the Ionian sea, and individed from the continent by a straight notabove fifty passes over, or more than four feet deep. The whole island is fruitful, and near forty miles in circumference. The Carthaginians settled a colony here, and formed the straight, for Leucadia was formerly a peninfula.

was formerly a peninfula.

The ifland of Candia' (formerly Crete) lies to the fouth of the Archicelago, is about two hundred miles in length, fifty in breadth, and five hundred in circumference. Candia, anthe Archipelago, is about two hundred mice in length, my in breadth, and five hundred in circumference. Candia, antiently the capital, is now in reins, and the harbour fo fpoiled as to admit only boats. The walls of the town, which are fill flanding, are pretty firong, and it is the fee of a Greek srch-bifnop. Here are fome Greeks, who bear a very good character, a few Jews, and fome Armenians, befices three or four French families, with a vice-conful. It was atken by the Turks in 1669, after above three years fiege. It was attempted to be retaken by the Venetians in 1692, but without effect. The product of this life is corn, wine, oil, wood, filk and excellent honey. The air is good, as well as the water. It is divided into three parts, the principal of which is Candia, where the begleveleg reides; the fecond is Canea, where there is a baffaw; and the third is that of Retino, where there is a baffaw; and the third is that of Retino, where there is a baffaw; and the third is that of Retino, where there is a baffaw; and is only a barren, singrecable, first pointed eminence, with not the leaft fladow of a landcape; no delightful grotto, public foring, or puring rivalet, are to be feen thereon.

The famed illands called the Cyclades lie in the Archipelage, being

being disposed in the form of a circle, as their name imports. The principal of these is Pelicandro, which contains only one village, but from its castle may be feen all the islands of the Archipelago. 2. Naxia, the most fertile of these islands. 3. Archipelago. 2. Naxis, the most fertile of these islands. Archipelago. 2. Naxis, the most fertile of these islands. 3. Milo, fixty miles in compess, and consisting chiefly of a spongy rock, but well inhabited and cultivated, with an excellent harbour. 4. Sephanto, thirty-fix miles in compass, contains several villages. 5. Paros, one of the least, but best cultivated of the Cyclades, and its marble har for many ages been famous under the name of Parian stone. 6. Antipuros, fixteen miles in circuit, contains sonly one village. 7. Nio, nine miles four of Naxis, contains Home's tomb. 8. Armongo, thirty-fix miles in compass, yields corn, wine, and oil. 9. Delos, only about eight miles in compass, in the centre of the Cyclades. 10. Argentiere: its name is taken from the silver mines in it: the place is barren, and water scarce. 11. Zia is fruitful, and contains, some antiquities. 12. Thermia is populous, well-cultivated, produces much silk, and has in it plenty of partridges. 13. Joara is defolate. 14. Mycene has a town of the same name, and its inhabitants are the hest sailors in the Archipelago. This place contains about three thousand geople; the fame name, and its inhabitants are the heft failors in the Archipelago. This place contains about three thouland people; but for one man there are four women, who are often feen lying among the hogs in the open firets: here are plenty of partridges, qualls, woodcocks, turtle doves, rabbets, and wheatears; befides which, it produces excellent giapes, and delicious figs. Almost all the inhabitants are Greeks, who have fifty churches in all. 15. Time, thirty-five miles in circumference, produces abundance of fruit, wine and filk. 16. Andros, one hundred and twenty miles in compass, is fertile, and well watered.

Those called the Spreades, of featered illauds, are as follow:

Those called the Sperades, or scattered islands, are as follow; Those called the sperades, or leatered hailds, are as following.

1. English, thirty miles in circumference, and is very fruitful.

2. Colouri, antiently Salamis, fifty miles in circumference, contains three villages, one of which is called Colouri, and gives name to the island.

3. Negropont, antiently Eubeca, is menty miles long, twenty-five broad, and ivery fruitful.

5. Seyro, twenty-five miles north-east of Negropont, is fixty miles in circumference, and has a town of the same name.

5. Serphanto, which abounds in iron and loadstone: this was the place whereto the Romans banished their malefactors.

6. Staplace whereto the Romans banilhed their malefactors. 6. Stalimene, or Lemnos, is of a square form, being about twentythe miles on each fide. 7. Samondrachi, or Samothrace, near the coast of Romania, is twenty-five miles in circuit. 8. Embro, which contains four villages, one bearing the name of the island. 9. Thesius, famous for wine and marble. 10. Macronisi is barren and uninhabited. 11. Syro has a town of the fame name, with a good harbour. 12. Sikino, which produces plenty of figs, and the best wheat in the Archipelago.

We shall conclude our account of the European islands with a description of the Azores, or Western islands, which have,

but we apprehend they may with more propriety be confidered as belonging to the latter. They are a group of islands, fituaged in the Atlantic ocean, between twenty-five and thirty-two degrees of west longitude, and between thirty-feven and forty north latitude, nine lundred miles west of Portugal, and as many cast of Newfoundland. They are nine in number, viz. St. Maria, St. Miguel or St. Michael, Terceita, St. George, Graciosa, Fayal, Pico, Flores, and Corvo.

These islands were first discovered by some Flemish ships in 1439, and afterwards by the Portuguese in 1447, to whom

Their illands were first discovered by some Flemish ships in 439, and afterwards by the Portuguese in 1447, to whom they now belong. The two westernmost were named Flores and Corvo, from the abundance of slowers on the one, and crows on the other. They are all fertile, and subject to a governor-general, who resides at Angra in Terceira, which is also the seat of the bishop, whose diocese extends over all the Azores. The income of the latter, which is paid in wheat, amounts to about two hundred counts of the seat of the seat of the state of the seat of Azores. The income of the latter, which is paid in wheat, amounts to about two hundred pounds sterling a year. On every island there is a deputy-governor, who directs the police, milnia, and revenue; and a juiz, or judge, is at the head of the law department, from whom lies an appeal to a higher court at Terceira, and from thence to the supreme court at Lisbon. The natives of these islands are said to be very litigious.

St. Miguel, the largest, is one hundred miles in circumference, contains about twenty-nine thousand inhabitants, and is very sertile in wheat and flax. Its chief town is Panta del Gado. This island was twice savered by the English in the

This island was twice ravaged by the English in the time of queen Elizabeth.

Terceira is reckoned the chief island, on account of its having the best harbour; and its chief town, named Angra, being the refidence of the governor general and the bishop. The town contains a cathedral, five other churches, eight convents,

reversite courts of offices, &c. and is defended by two forts.

The island of Pleo, so called from a mountain of vast height, produces excellent wine, cedar, and a valuable wood called teixos. On the fouth of the island is the principal harbour, called Villa das Lagens.

The inhabitants of Flores having been many years ago inferded with the veneral disease by the case of a Sanith man.

fected with the venereal difease by the crew of a Spanish man of war, that was wrecked upon their coast, the evil, it is said; still maintains its ground there, none of the inhabitants being free from it, as in Peru, and some parts of Siberia.

Travellers relate, that no poisonous or venomous animal is to be found in the Azores, and that if carried thither, it will expire in a few hours. One tenth of all their productions belong to the king, and the article of tobacco brings in a confiderable furm. The wine, called Fayal wine, is chiefly raifed in the illand of Pico, which lies opposite to Fayal. From eighteen to twenty thousand pipes of that wine are made there yearly. The other islands have nothing that merit particular notice. by different geographers, been variously deemed parts of America, Africa, and Europe, as they are almost in a central point; | All of them enjuy a falubrious air, but are exposed to violent reach quarkes, from which they have frequently suffered.

THE NEW AND UNIVERSAL

SYSTEM of GEOGRAPHY.

THE NEW AND COMPLETE HISTORY AND DESCRIPTION OF

SOUTH AND NORTH AMERICA.

CHAP. I.

OF AMERICA IN GENERAL.

SECT.

MERICUS VESPUCIO, a Florentine by birth, A being, in 1497, sent to improve the discoveries made in 1491, by Columbus, gave to this division of the globe the name of America. This vast continent (at least what has been hitherto discovered) reaches from latitude seventy-eight degrees north to diffeovered) reaches from latitude feventy-eight degrees north to latitude fitty-fixth fouth, that is, one hundred and thirty-four degrees; which taken in a first line, amount to upwards of eight thousand and forty miles in length. Its breacht is very irregular, being in fome places three thousand fix hundred and ninety miles, and in others, as at the dislance of Darien or Pamma, not above fixty or feventy. The boundaries ascribed to it are the land about the pole on the north; the Atlantic ocean,

The state of

which separates it from Europe and Asia on the east; another vast ocean on the fouth, and the Pacific ocean usually called the South Sea, which divides it from Asia on the west. How or when America was first peopled, cannot be ascertained; but if the north of Asia is joined to America, it is most likely to have been from thence, especially as the natives of these parts still bear a great resemblance to one another in many respects.

The native Americans, who are distinguished into various The native Americans, who are distinguished into various ribes, are found, as far as we are yet acquainted with them, to bear a wonderful likenefs, both in their including an amount of their bedies, but none on any other parts of their bodies, not even on their faces, except those in the country called Labrador, in North America, who have not only thick luity beards, and hair on other parts of their bodies, but also eat raw flesh, and go cloathed both in fummer and winter, in all which respects they differ from the others, and are therefore supporal to have a different origin.

The New World may properly be divided into four parts, viz. I. South America. II. American and West India illands. 1?! North America. IV. Countries lately discovered by captule Cook and other navigators; most of which latter we have

Alrea le diferibed.

Sova America comprises the following grand divisions; viz. Tears Firma, belonging to Spain; in length fourteen hundred, breadth feven hundred miles, chief city Panama. 2. Peru, dred, breadth feven hundred miles, chief city Panams. 2. Peru, belonging to Spain; length eighteen hundred, breadth five, hundred miles, chief city Lirus. 3. Paragua; belonging to the Spaniards and Jeluits; length fiften hundred, breadth one thouland miles, chief city Buenor Ayres. 4. Chili, belonging to Spain; length twelve hundred, breadth five hundred miles, chief city St. Jayo. 5. Terra Magellanica, or Patagoniu, belonging to its matives; length feven hundred, breadth three hundred miles. 6. Brazil; belonging to Portugal; length two thousand five hundred, breadth feven hundred miles. chief city St. Sehafian. 2. Amazonia, belonging to its natives; in city 5t. Sebaftian. 7. Amazonia, belonging to its natives; in length twelve hundred, breadth nine hundred and fixty miles. 8. Guiana, peffelfed by the Dutch and French silvengh ich hundred and eighty miles, breadth four hundred and eighty miles, chief places, Surinam and Cayenne.

extent of the valt peninfula of South America, is computed to be from the ifthmus of Darian to Cape Horn, it the form of a triangle, zoes by the general name of Peruviana, although the countries included within it do not acknowledge the authority of the crown of Spain. The heart of the country hath not not been subdied; the Portuguese are in possession of a large trail, and for eather nations have found means to establish themselves a the coast. Those dominions in South ettablish theinteres is the coast. Indic dominions in John America, which belong to the Spaniards, are under two governors, filled vice by: and captains-general, fubordinate to whom are feveral adhences, as those of Panama, Tera Firma, Clas Charcas, and Chili, confifting of a prefident, and a certain number of counfellors, with the

inferior officers, appointed by the king.

S. E C T. H.

Of Terra Firma, Peru, Paraguay, and Chili, their boundaries retra surma, setu, saraguoy, and Chili, their boundaries and extent, climate, rivers, mountains, produce, animals, Ge. with the feveral dijbrish, cities, and teams therein contained; and also a description of the inhabitants, their persons, manners, customs, dress, diet, Ge.

THE boundaries of Terra Firma, called also New or Golden Castile, are, the Atlantic ocean on the north; Peru and Amazonia on the fouth; the Pacific ocean and New Spain on the west, and Surinam on the east. It is sourteen hundred miles long, seven hundred broad, and had the name of Golden Cassile, from the great quantity of gold found in it.

of Golden Cattite, from the great quantity of gold found in it.
The climate is neither pleafant nor healthy; the inliabitants, one part of the year, being almost drowned with perpetual floods of rain, and in the other scorched by the most intense heat.
The foil, in some parts, is a barren land, or drowned mangroveland, that will scarcely produce any kind of grain; in others, it yields Indian corn, balms, gums and drugs, almost all manner of fruits, as well of Old as of New Spain, sugar, where a Paris word and sugar kinds of during words. tobacco, Brafil wood, and feveral kinds of dyeing wood; a variety of precious flones, particularly emeralds and sapphires; venison, and other game. The plantations of cacao, or chovention, and other game. The plantations of caces, or chocolate nuts, in the diffrift of Caraccas, are effected the best
in America. The tivers, feas, and lakes teem with fish, and
also with alligators; and the biwels of the carth were once furnished with the richest treatures, now almost exhausted. The same may be said of the pearl sisteries on the coast. The mountains abound with tygers, and, according to fome, with lions, and great numbers of other wild beafts.

The diffrict of Terra Firma is very mountainous. According to Dampier, the mountains of Carthagena and St. Martha

are the highest in the world, being seen two hundred miles off at sea; from the analysis a chain of hills, of almost equal he are through the area as far as the straight of Many and the district of the Carraccas, are likewise we will be a supplied the configuration of the Carraccas, are likewise we will be a supplied to the carraccas, are likewise we will be a supplied to the carraccas, are likewise we will be a supplied to the carraccas, are likewise we will be a supplied to the carraccas, are likewise we will be a supplied to the carraccas. nexuella, and the diffrict of the Carraccas, are likewis. ** or mountainous. Some of the mountains in the provinces (** Popayan contain volcanos; but towards the shore of the Parks. ocean, the country is low and marshy. The whole is wate, ed by a great number of rivers, the principal of which is that of Oroonoko; and here are many gulfs, bays, capes, &c.

The provinces are, 1. Terra Firma Proper, which this in the form of a crescent about the bay of Panama, being the isthmus which leins South and North America, it is three hundred.

which joins South and North America: it is three hundred miles in length, but in breadth only fixty, where the isthmus is narrowest. This country consists of prodigious high mountains and deep vallies, flooded more than half the year. It is, however, tolerably fruitful, and abounds in gold and pearls.

The principal places are, 7. Panama, which is firongly fortified and garrifoned, and the walls mounted with large common. Here is the refidence of the governor of the province, and the feat of a royal audience, with a convenient harbour, well fecured against storms by a number of furrounding illands. well fecured against storms by a number of surrounding illands.
At the bottom of the fea are found numbers of pessis, and the
ovilers in which they are found are extremely delicious. This kind
of fifthery is of great advantage to the inhabitants of all the illands
in the bay; and there are few persons of substance about Panama, who do not employ at least a part of their slaves in it,
The town of Porto-bello is situated close to the sea, on the

declivity of a tocumain which farrounds the harbour. The governor is always a midnary officer, subordinate to the president of Paugust. The town is but thouly is habited, owing to its noxious air, and contains about two hundred wooden houses, which mole of the inhabitants let, when the galloons are here, and make any temporary thift for there below. In the year 1739 the galloon admirst V snow cost this pick with only fix thips, demolified the form, and the married C. fortifications.

Carthagean is neither tich, fertile, for populous: here is no great quarting of corn nor cattle; fone valuable gums, balms, and drugs, are found here, but no mines of gold or filver.

The metropolis, of the fame name, is not only a fine, ppus

lent city, but a strong fortress, firnated on a fandy island, called a peninfula by most writers. The Ly hour hea between the island and the main, and the engrance is now at the fouth-west end. The city and fuburbs are well laid out , the fireets firaight, bread, uniform and well-paved. The houles are built of flone

bread, uniform and west-press. In houses are dust of arone for brick, with balcon. In lattices of wood.

Carthagene was an independent government till the year 1739, when the vicetoy of New Granads was appointed. It extends about fity-three leagues from west to east, and eighty-five from south to north, containing several fruitful vallies; called by the natives Savannahs, in which are many futlement of Europeane. Smailt Creoles, and Indians. The climate is called by the natives Savannaha, in which are many fettlements of Europeans, Spanish Creoles, sond Indians. The climate is hot and unhealthy; and, among other difeafes, the black vomit, and leprofy are fatal to Europeans. The Guiney worm and pigue are very troublefome infects. The bay of Carthagena is the first place in America at which the galleons touch.

Santa Martha is two hunded miles long, one hundred and forty broad, very mountainous, but produces gold, jewels, martle, fait, &c. The capital of the fame name, on a branch

of the Rio Grande, is the residence of a governor, and the see

of a bithop.

On the north fea lies Venezuels, which includes the district of Carraccas. It is a populous and fertile province, but rather labours under a fearcity of water. The capital of the fame name. is the refidence of a governor, and the fee of a bithop: the inland town of Carraccas is large and populous.

The province of Rio de la Hacha is pleafant and fertile. The capital, of the fame name, contains nothing remarkable. Here are mines of jasper and chalcedony, and also a pearl-fishery.

The province of New Andalusa (including the districts of Commona and Parie) is fertile, and rich in gums, drugs, medicinal plants, sugar, tohacto, and several sorts of valuable timber. Comana, or New Cordulia, is the capital, but is not so handsome a town as St. Thomas.

The inland province of New Granada, called fometimes Santa Fe, and Caftelle del Oro, is very extensive, and beadtifully diversified with mountains and vallies. The mountains contain gold, filver, and emeralds; and the vallies produce corn, cattle, roots, and fruits, with great quantities of guaiacum, balms, drugs of various kinds, gums, with other rich articles of commerce. Santa Fé de Bagota, the capital not only of this province, but of all Terra Firma, is a large, populoue, opulent, and well-built city, fituated on a lake, with altars at flated differences higher than houses, and richly adorned.

Frita, a lea-port town, was facked by the late lord Amen.

of the fame name.

in respect to the natives of Terra Firma, they are bold arlike; and as they have almost impregnable and inacjule fortreffes, and bear an inveterate hatred to the Spaards, they never have, and it is probable never will be jub-wed. The Spanish general Pedro Rias and his successors, deered. dved. I he Spanin general rector sharping in the accessors, de-freyed in Terra Firma no left that, eight hundred thoufand people, and plundered the country of feveral millions of gold, to sktain which, they exercifed the moft shocking barbarities on the natives. The people have lank, coarfe, long, black hair. Their natural complexion is a copper colour. The im-Their natural complexion is a copper colour. diftinctions are fingular, in wearing a kind of trowfers of white cotton, which defcends from the waift to the middle of the

The barbers here are diffinguished by the finencis of their

The barbers here are diffinguished by the fineness of their linen and elegance of their dress in general. They have shirts without steves: about the neck they have a kind of black collar, with a lace of four singers breadth, which forms a fort of singe that falls on the stomach and shoulders. They wear no stockings, but have shoes with gold or silver buckles.

The dress of the ladies consists of the faldelin, a species of says, or rather jumps; a thist which descends only to the waist; a bay mantle which encolose the upper part of the body, consisting of an ell and a half of that stuff; and their whole dress is ornamented with rich laces. The dress of the labouring women is not diffinguishable from that of the ladies, but by its inferior quality, the fashion being the same. The Indian peasants wear a bay mantle; and the commont native Indians a piece of sackclosin saftened over the shoulders by two pins. A piece of fackcloth fastened over the shoulders by two pins. inongrel, or Creole, is known by the superiority of his habit, and his ingenuity.

The great empire of Peru extends from fixty to eighty-one degrees of west longitude, and from the equator to twenty-five degrees of fouth latitude, being about one thousand eight hundred miles in length, but its greatest breadth does not exceed three hundred and ninety. It is bounded, on the north, by Popayan; on the cast, by the Cordilleras des Andes; on the south by Chili and La Plata; and, on the west, by the Pacific ocean. It is governed by a viceroy, whose jurisdiction likewise extends over Paraguay. Chili, and Jucatan.

The coast of Peru is high towards the Pacific ocean. Thirty miles from thence, within land, a chain of mountains extends a considerable way, and about eighty miles farther are the Cordil-

a confiderable way, and about eighty miles farther are the Cordillessa des Andea, the upper parts of which are continually covered with fnow, and the air is fo fubtle, as to be unfit for sefpiration. The whole country is well watered, the low grounds are fertile, and this is the only country between the tropics that produces wine. The natives call the Peruvian therp, pacos or huanew: they are of the bignels of a flag, and sefeuble a camel. The body is covered with a coarfe kind of wool: they are very trackable, and were formerly the only beafts of burden among the Indians. Their flesh is very good meat, and effected as innocent as a chicken. Their height is from four feet to four and a half. They generally carry a hundred weight; and walk, holding their heads up, with wonderful gravity and majesty; and for regular a pace, that no beating will make them alter it. At night it is impossible to make them move with their burden; they lie down till it is taken off, and then go to graze. Their common food is a fort of grafs, formea confiderable way, and about eighty miles farther are the Corditmove with their burden; they he down in its tasken on, auch then go to graze. Their continon food is a fort of grass, somewhat like a finall rush, with which all the mountains are covered. These sheep eat little, and never drink, so that they are very easily kept. The Spaniards use them in the mines, to carry the ore to the mills. The vicunas are shaped much like the pacas, only they are smaller and lighter. The Spaniards are very caffly kept. The Spaniards use therm, to that they are very caffly kept. The Spaniards use them in the mines, to carry the ore to the mills. The vicunas are thaped much like the pacas, only they are findler and lighter. The Spaniards call them Indian goats, because they refemble that animal. Their wool is very fine, and much valued; befides, the becoar stone, which is faid to expel poison, and to perform many notable cures, is found in them. Their deer are much less than ours. They have not many wild beatls; and such as they have are not very fierce nor dangerous. The cattle imported from Europe are vally increased; and most of them run wild, and are hunted like other game. The Peruvians have no rame fowl but the muana, which is much larger than the duck, and not unlike it.

The most valuable of their forest trees is the quinquina, of jesuits hark, which grows in the mountains of Potos, and is also found in the province of Quito. It is about the fize of a cherry-tree, the leaves round and indented, and bears a long, reddish slower. The most useful tree here is called maguey, which at once supplies a delicious drink, lioney, vinegar, timber, hemp, and thread; these last being made from the leaves, stalks, &c. Needles are made of the prickles, and the fruit is converted into a kind of foap. Rhubath, tamarinds, fatfaparilla, dragon's blood, storax, guaiacum, bananas, melons, &c. are also among the vegetable productions of Peru. Here is European corn, and plenty of fruits; the principal part of the bread is made of cassai root; hutmost of that balsan which bears the name of Pern, comes in fact from Mexico. Gold is found in every province of Peru, and there are abundance of filver mines. of which the richest are those of Potofi, discovered The quickfilver mines near Luna were discovered in in 1545. The quickfilver innes near Lima were discovered in 1567; and the Spaniards first began to refine their filver with

mercury in 1571.
The natives of this empire now in general acknowledge the dominion of Spars, and appear (at least outwardly) to profess the Roman catholic studion, "ey are, however, greatly oppieffed by the Spania is in general. The inhabitants are of a middling flatare, h. olive cour bestions, and black hair. No. 79.

When they were first conquered, their manusattures were woollen and cotton cloths, which they wove, and dyed with all manner of colours, but none were permitted to wear a variegated garment, except those of the blood royal. Their carpets were made of the wool of their sheep, or fine goats hair, and their hammocks of cotton or use work. Their carpenters tools we a principally hatchets, made of copper or films. Their sene cutters tools were sharp flints and pebbles; pullies and other engines were entirely unknown to them; yet, under all these disadvantages, they raifed strong and magniscent edifices. Their needles were thorns, or sine bones; and their threads the sinews of animals, or the sibres of plants, or of the back of a certain tree; sciilors they had none; and their knives were the finews of animals, or the fibres of plants, or of the bark of a certain tree: feiffors they had none; and their knives were flint or copper; their combs were made of long thorns, f.t on each fide of a piece of cane, which ferved for the back of the comb; and the rafors they shaved their heads with were no better than fharp flints; in which operation the person suffered fo much, that there was nothing the Spaniards carried over more acceptable to them, than the rafors and feiffors: they had no looking glasses, but, instead of them, the Peruvian ladies made the of a round plate of polished brass or copper; and in this the natives of the East Indies agree with them, having no other mirrors at this day than what they get of the Europeans. other mirrors at this day than what they get of the Europeans. The feveral nations were diftinguilhed by their head dreffes t fome wearing a kind of turban of conton-linen, others a fingle piece; fome a kind of hats, and others caps in the form of a

piece; Joine a kind or new, and figar-loaf.

Thefe people were exceedingly flruck on feeing the blackness of the negro flaves which the Spaniards brought with them; they could not believe it to be natural, having never feen a black in America, they defined the Spaniards, therefore, to let them make experiments if they could not wash off what they deemed to be the black paint.

In quickues of wit, and strength of judgment, the Peru-vians exceed most nations in the world. Such of them as have vians exceed most nations in the world. Grant of the Spaniards, had the advantage of masters, fince the arrival of the Spaniards, have centrally made an extraordinary proficiency. When the had the advantage of matters, inner the arrival or the Spaniards, have generally made an extraordinary proficiency. When the Spaniards first appeared among them, they acknowledged one almighty Being, maker of heaven and earth, whom they called Pacha-camac, i. e. The Soul of the Universe. The next object of their advanton was the Sun; the priests of which, who officiated at Cusco, were of the blood royal. Besides their festivals, celebrated every month, they had four other grand ones; the principal of which was celebrated in June, in honout of Manca Capac, their first inca.

of Manca Capac, their faith inca.

The inhabitants of this country are much addicted to effention and floth; for it is observed, that those who have been used both; for it is print, grow idle here in a short time, like the Crodiaus.

They are sobre as to wine, but eat a great deal, and after an indecent manner, without forks, and sometimes

out of the same dith.

The Creoles, in matters of love, yield to no nation, freely facificing to that paffort most of what they have; though covetous upon all other occasions, they are a serately generous to women. The Creolian females, though a under the referrictions of the Spanish women, foldom go abroad in the referrictions of the Spanish women, the calculations with the control of the spanish women. day time; but at night they purfue their pleasures with great freedom, and are mighty found of intriguing, though they usually conduct their gallanties under the shade of vails. Bastards are as much regarded as the lawfully begotten, provided they are owned by the sather; and there is no disgrace affixed to that

They construct some of their barks, or vessels, like double being covered with a lkin, ferve the boatmen to fit upon. are made in the form of rafts, with a large fail made of matting, and a rudder at one end, near which there is a fire-place or hearth, and a fire always burning: between the two masts there is a kind of cabbin on the deck, and the masts themselves join &

13 a kind of caphin on the deck, and the mans memicives join to the top, and fupport a little pendant and the fail.

They fupply the place of bridges in many parts of Peru, by contrivances which they call trarbites; thefe are ropes or thonga of feather, extended from one fide of the river to the other, and fatened to piles of wood fixed in the earth; a hammock with two large loops hangs to thefe, in which a man may lie at his case; those who attend on the side from whence he sets off, gives him a push, which carries him to the middle with great velocity; from the middle; those on the opposite side pull the hammock by ropes fastened to it, and the person thus gets over in a few monutes. For the palfage of horfes or mules, there are two ropes at a small distance from each other; the animal, being girded tight, is offeended upon a star piece of wood, between the two ropes it which he is falkened by grooves, and drawn over by topes. Some beasts will go over very quietly, but others are series to have their legatind. In many places, the torables are made of fkins spread all the way over the river, the people to walk upon, who hold by a rope

on each fide, which secures them in the manner of tailing, and enables them safely to past the unsteady bridge.

Before a viceroy was appointed at Santa F6 in New Granada, Pertu contained the three audiences of Lina, Low Charcos of La Piata, and Quito; but now the two former are

Chaicos of L. Piata, and Quilo, but now the two former are only contained in it.

The capital of this audience (called alfo Lima) is fitualed in a fine valley near the fea, in the latitude of twelve degrees, two minutes fouth. A river of the fame name washes, the walls, over which was a handlome stone-bridge; but on October 28, 1746, a dreadful shock of an earthquake almost entirely degrees, the charteness of the control of the charteness o

people perithed.

The tupicant tribunal at Lima, called Audiença, it held in the viverov's palace, and confifts of eight auditors, and a fifcal, for civil affairs. Here is also a chamber of accompts, a board of treasury, a court for the effects of persons, dying intellate and without lawful heirs, a council of comissive, and a tribuyal of the inquisition, inany conventis, charles, and hospitals, with an university, in which are professor of the hospitals, with an university, in which are professor of the hospitals.

and three subordinate colleges.

The inhabitants of Lima, as of all the other cities in Spanish America, consist of Spanish, Melizoes, Mulattoes, Indians, and Negroes. The Spanish families were very numerous: there having been no lefs, at a moderate computation, before the carthquake, than eighteen thousand whites in this capital, a third or fourth part of whom confilled of the chief nobility of

The harbour of Lima, named Callao, is fituated fix miles west of the city. It is the best port in the south, being screened from the winds by the island of St. Lawrence.

The town of Cusco, capital of the empire of Peru, and the feat of the incas, before the arrival of the Spaniards, stands above three bundled and twenty fix miles from Lima towards the It was then very large, magnificent, and populous. flood the famous temple of the fun. The incas refided in a part of the citadel, the walls of which were incrusted with gold and filver; and the whole fortrefs was built of thones, fo long, that feveral oxen could hardly draw one of them. The air is very pure and whollome, and the neighbouring country very pleafant and trutful.

Los Charcos or La Plata audience is bounded, on the north, Los Charcos of La Plata audience is bounded, on the norm, by that of Lima, being five hundred and feventy miles in a strait line, and four hundred wide, where broadest. The churate is various, the foil in general fertile, and the principal commodities, filver, gold, and pimento.

The chief places are the following, viz. La Plata, the capital, which had its nature from the mines in its neighbourhood, is

which mad its native from the mines in its neighbourhood, is feven hundred and eighty miles from Lima, towards the fourheast. The inhabitants, including Indiants, exceed fourteen thousand. Here is great fearcity of water. This is the fact of the givernor of "to province, of the archbiflop, has an university, and court of inquisition subordinate to that of the archbiflop. Lima.

The town of Potofi, famous on account of the rich filver mines in its neighbou 'cood, flands about fixty miles from La Plata, to the fouth-call. There are also some gold mines, and many others of filver, in the audience, besides those near

The extensive province of Tucuman is entirely under the dominion of the Spaniards, though the coffes only a few geographers, it does not degree of fouth latitude, d fout i of the river Plata. eities in it. According to the late extend beyond the twenty-fever Iving to the westward of Parage w The cities possessed by the Spar and are, to fo called from a river on which it a fituated, 'ago del Effero, ocaries formation to fertilize the adjacent la ...; St. Miguel del Tucuman, Neuftra Sennora de Talavera, Cordova de la Nueva, Andalufia, Rioja, and the large village of San Salvador. The two fift of these are the most confiderable; the two last are finall, and built without order or fymmetry.

Quito is reckoned to be about four hundred miles in length, and two lumded in breadth; and is fituated between two chains of the high mountain called Cordillera de los Andes. The lands of this province are for the most part well cultivated; and there are a great number of towns and villages inhabited by the Spaniards or native Americans, Every village is adorned with a large square, and the church stands on one side of it.
All the roads are laid out in a line, crossing each other, infomuch that the afpect of the country has the appearance of a large garden. It might be imagined that this country is very hot; but it lies to high, and to near the mountains covered with fnow, that the air is very temperate. They might have plenty of wine here, if Lima had not an exclusive privilege of making it them elvet. They have no vicunas or guanscoes here; but they have an suims of the fame kind, called by the natives lamas, which is like a final 'canich, and can carry filly jounds

lanias, which is like a fluid! caniel, and carreary fity younds, weight. They have all forts of inactials proper for dying, and feveral forts of fruits and plants which have been brought from Spain, befides those that naturally grow here. They have also imported beeves and theep. A great deal of gold la set in the north parts of this province.

The natives in general are very fond of drefs; the perfons of diffinition of both fexes wear long garments, and a kind of loofe manule over their floudders. The drefs of the Spaniards is plainer than that of the Indians, the latter uffully being of looked cotton; both are fond of wearing ear-rings, and rows of beads, round their necks, and the Indians will fometimes adorn even their aneles with breefet; An Indian barber has a long looke garment, and carries his bason and other utensity. adorn even their ancles with bricelett. An Indian harber has a long look garment, and carries his baton and other utenflis with him. The peafants are near, but adorn themfelves with beads or fhells; and a common Indian only wears a plain loofe parlment, which the women fo contrive as to carry their children on their backs. The dreft of a mechanic retembles that of the bather, above deferibed, with this difference, that he walks about with all his tools packed up in a bundle behind

him.

The capital city, Quito, is feated in a pleafant valley between two chains of high mountains. It is about a mile in length, and three quarters of a mile in breadth, is a bithop's fee, and the refidence of the treaturer of the kingdom, as well as of the other officers. It contains about thirty-five thousand inhabitants, of which one third are officially Spaniards. Here are a contained to the contains about the contains a well as of the other officers. feveral religious communities, and two colleges, which are a lort of univertifies, under the direction of the jeftits and Do-

minicans.

The third division of South America, which comes under our notice, is Paraguay, hounded on the north by Ama onla, east by Brazil, well by Peru and Chill, and on the fouth by Patagonia. It is one thousand five hundred miles long, one thou-fand bload, and extremely feitile. Independent of hories, mules, theep, goats, liogs, poultry, game, grain, fruits, &c. it produces an admirable drug, called by the name of the country Paraguay: this is an excellent emetic, and of iteff might form a confiderable atticle of commerce. The furefis abouted with wild beafts, and the rivers and lakes, befules various kinds of wild beafts, and the rivers and the fifth, with a codiles, alligators, &c. The mines contain goin, fifth, with a codiles, alligators, &c. To the west of the great filver, copper, iron, amethyfis, &c. To the west of the great river Paraguay the country is barrer but to the rast, where the jefuits have erected temporal and trual monarchy, it is fertile. The next confiderable alver is that of Plate, or La Plata, which rifes in Peru, and falls into the Atlantic ocean.

The climate of Paraguay differs but little in that of Spain,

and the diffinctions between the feafons are much the fame. In winter, indeed, violent tempests of wind and rain are very frequent, accompanied with fuch dreadful claps of thund tended with lightning, as fill the inhabitants, thought and to them, with terror and conflernation. In fummer, the exceptive heats are mitigated by gentle breezes, which conflantly begin at

eight or nine in the moining.

The cotton tice is a native of this country. The Spaniards fow and use hemp in pretty large quantities; tobacco and some fugar are also produced here. Venomous herbs are also sound in many places; with these the Indians posson their arrows; but the antidotes are equally common; and, among others, the herb called sparrows herb, which forms pretty large hushes, and was d'Covered, and obtained its name in the following manner: Among the different kinds of sparrows found in these provinces, most of which are of the fize of our black-birds, there is a very pretty one called macagua. This little creature is very fond of the flesh of vipers, against whom, for this reason, he wages a continual war : here are also vast numbers of all kinds of ferpents. The rattle-inake of Paraguay is a very formidable creature; the effects of its hite are indden, and the confequences dicadful, unitifs antidotes are speedily applied. chief antidote is a flone, to which they have given the name of Sr. Paul Bezoard, and a poultice of chewed garlick. There are bees of ten different foccies in the forests of this country, When the Spanianla and Portuguese first invaded this country,

they had but very trilling loccels against its inhabitants; but the jesoits effected by art what the others had failed in by force, They began by fixing about fifty Indian families into a townthip, and then by learning their language, conforming to their manners, cultivating their minds, and inculcating their doctrines as were most likely to promote their vices, foon acquired great authority among them, and made numerous converts, till at lait, by fleadily purfuing the fame artful measures, they arrived at that degree of power and influence they now or lately possessed, as being in a manner the absolute fovereigns of a great

part of this extensive country.

For the government of the country, here are parochial- and provincial

One of the grand objects of the members of this council was to prevent strangers from being thorow by acquainted with their strength, riches, and policy: hence enatives were restrained from learning the Spanith language.

anith language.

The feveral provinces, into which Paraguay is divided, take their names from the rivers that pass through them. The principal are, Paraguay and La Plata, properly, io called. The town of Assumption is situated at the conflox of the rivers Panama and Paraguay, and is a large, well built, and populous city, erected by the Spaniards in 1531, in the midt of a very-rich and fruitful territory, producing all forts of corn and fruit. The air is wholfome and temperate, and the treet always

Tanger.

La Plata takes its appellation from the river of the fame mame. It is a fine, fertile, plentiful province: provitions of all kinds abound, the principal wants being those of falt and fuel. The great river of Plate, or La Plata, rises in Peru, and, among other rivers, receives the Paraguay in its course. The water is clear, abounds in fish, is full of delightful tisnuts, and may be navigated for the greatest part of its course. Along its banks are seen the most beautiful birds of all kinds, but it fometimes overflows the adjacent country to a great extent, and formetimes overflows the adjacent country to a great extent, and is infeficed by ferpents of a prodigious bigness. We may form fome judgment of its largeness by the width of its intouth, which is about feventy leagues. Before it falls into the Paraguay, it is called Panama. From its junction with the Paraguay to its mouth is above two hundred leagues.

The capital of the province, called Nueltra Sennors de Buenos Ayres, and which takes its name from the pleasantness of the climate, was founded in \$535, under the direction of Pedrode Mandaga, at this time governor. It stands our a point called

Mendoza, at that time governor. It flands on a point, called Cape Blanco, on the fouth fide of the Plata, fronting a finall siver, in thirty-four degrees thirty-four minutes fourh latitude, in a fine plain, rifing by a gentle afcent from the river. The town has fit sight broad fiteets, and is of a confiderable extent, containing no lefs than three thousand house, built mostly of chalk or brick. Here is a very handforne fquare, with a magnichalk or brick. Here is a very handfome fquare, with a magnificent cathedral, and a caftle, in which the governor holds his court, with a garrifon of three thoufand men. The more civilized part of the natives are of a moderate flature, and well made. They have flat round faces, olive complexions, and long black hair. Their garments were formerly the fkins of beafts, but now in most things they conform in dress to the Spanish fathion. The wives of the petty princes or lords wear a kind of triple crown made of straw, and their lords hang doe-skins over their shoulders. The boys and girls gonite naked. They wrap their infants as soon as born in a quite naked. They wrap their infants as foon as born in a tyger's firin, and give them the breaft for a little while, and then a piece of half raw meat to fuck. Their beds are the then a piece of hair raw meat to luck. Their beds are the hides of oxen or tygers fpread on the ground, but the people of rank use lammocks of net-work. Previous to their embracing Christianity, they worshipped the sun, moon, stars, thunder, lightning, groves, rivers, animals, &c.

The bad qualities common to all of them are serocity, inconstancy, perfidy, and drunkenness. Their favourire liquer is chica... They affemble to drink ir, and to dance and sing, and in these exercises they useful with they are all doubt.

and in these exercises they perfift till they are all drunk. They then quarrel, and from words soon proceed to blows, so that their merry-makings feldom terminate without bloodfled, if

not in the death of fonce of the guefts.

There is, properly speaking, no form of government among them; every town, indeed, has its cacique; but these chiefs have no authority, but in proportion to the electric fleet hely have acquired. Several do nothing but rove from place to place with their furniture, which confifts of nothing but a mat, a ham-mock, and a calabath. Those who live nearest to Tucuman are better cloathed and lodged; but the cabins of fuch as live in most of the towns are no better than wretched hovels made with branches of trees, and covered with straw, or rather

grafs.

They are admirable horfemen, and tame and manage the wild horfes with great address, which has made the Spaniards repent ever having stocked the country with those useful animals. Their arms are bows, arrows, and lances, which they use with great dexterity and strength. They fasten a rope to the latter, by which they can, as the end is bearded, draw the wounded perion to them. Befides fawing the necks of their priloners with the jaw-bone of a fish, they fealp them, and pre-ferve their (calps as tokens of victory.

It is customary with the women of Chaco to prick their faces, breaths and arms, in order to mark them. They are frong, robutt, have easy labours, and bathe themselves and children immediately after the delivery. They are very jealous of their hulbands, yet entertain very little affection for their offspring. They usually bury their dead on the spot where they expire, plant a javelin, and the scull of an enemy (if they can get one) over the grave, and then remove to a tissance

The kingdom of Chili, comprehended in the viceroyalty of Peru, feaches from the frontiers of Peru to the fraights of Ma-Peru, feaches from the frontiers of Peru to the firaights of Magellan. This country was first discovered by Don Diego de Alamagro about the year 1 535. The k lingdoms are separated by the district of Atacama, which extends eighty leagues between the province of the same name, being the last of Peeu, and the valley of Copayapu, the first in Chilis. Esstward, some parts of this kingdom terminate on the frontiers of Paraguay, properly so called, though some uninhabited defarts intervene, and fo called, though fome uninhabited defarts intervene, and others on the government of Buenoi Ayres, or La Plata, properly fo called, though between thefe are the Pampas, or wide-extended plains. Its western boundary is the fouth-saft, extending nearly from swenty-leven degrees, the latitude of Copayapu, to fifty-three degrees their minutes south. But shat part of this kingdom, which is inhabited by the Spaniards, bagins at Copayapu, and terminates as the large illaid of Chillor, the southern extremity of which is in the twenty-south degree of fouth latitude, and its extent from west to east, is the distance between the coast of the South-Sea and the Cordilleras, which are here of a functional below. which are here of a stupendous height. The state of the state of the kingdom of Chill lies fouth of the equator, the sea-

As the kingdom of Chill lies fouth of the equator, the sea-fons are almost opposite to those in the northern hemisphere; but the face of the country, except on the fea coast, is beau-tiful, and the climate wholfome. On the east, the country is fereened by the Andes, while from the west the air is cooked by the most refershing sea breeze. Along the costs of the Pacific Ocean they enjoy not only a fine temperate air, but a clear ferenc sky most part of the year. Sometimes, indeed, the winds that blow from the mountains are exceedingly sharp in winter; but, in seneral, this is one of the most comfortable climates in the world, being a medium between the intense heats of the

turrid 20ne and the piercing colds of the frigid.

The Chilefians are of a middle flature, ftrong, built, of a sawny complexion, and have long black hair on their heads, but pluck off that on their chins, or other parts of their badies. They are tall, robust, active, and courageous, enduring fatigue, heat and cold to admiration. Their aims are pikes, bows, arrows and fwords, and their dicipline much more regular than that of the other Indians. Their mariners are very They have no gold nor filver, though these metals are fimple. They have no gold nor filver, though thefe metals are to common in their country. All their bedding in fome fkina hid on the ground, and they ear on the ground, or elfe on a little bench, and wipe their hands on a broom, inflead of a napkin. Their food confilts of maiz, fruits, herbs, and what they catch by hunning and fithing. Their drink also is made of maiz toutled, fleeped and boiled, or of fruits. Their furniture confifts of four or five dilhes, and fome wooden spoons or shells, a calabath or gourd to drink out of, and a leaf of a tree or maiz for a falt-fellar.

The martial genius of the natives continually retarded the The martial genius of the institute continually retarded the progress of foreigners, and has always been the cause why the Spanish settlements here are so disproportionate to the extent, settlily, and riches of the country. The free Indians are much more numerous than the Spaniards, who are computed at no more than twenty thousand. All the inhabitants of Chili, including Europeans, Mestizoes, mulattoes and negroes, are recknoned at one hundred and sifty thousand only. Even the free Indians, it seems, now acknowledge the dominion of the king of Spania, and new tribute to his covernor's but the subjected size. Spain, and pay irribute to his governor; but the fullicted in-dians belong entirely to the Spaniards living among them, and ferving them in the fame manner as the natives of Perusand The greater part of Chili is still possessed by the free Indians, who are rather allies than fublects of Spain, having fas we before hinted) acknowledged the fupremacy of the king of Spain, but are to be fublect to their own laws and government : an engagement which it will be bazardous for the Spaniards to break.

Earthquakes have often done a great deal of damage at St. Jago, that of 1647 was fo vident, that it almost overturned whole town, and left fech unwholesome vapours in the sir, that all the inhabitants died, except about three or four hun-dred: and the dreadful thock in 1730 laid the city in ruins. In the neighbourhood are the gold mines of Tiltill, and the Lavaderoes, by their concerns in which many of the citizens amals valt fortunes.

South of St. Jago is the prevince of Conception: the town of the fame name is the oldest European establishment in Chili, and the fecond city in point of dignity. The harbour is good, the fortifications indifferent, but the garrifon ftrong. The pealants in the neighbourhood of Conception have great address in the use of the noose and lance; with these they will combat the fiercest bull, throwing the needs to artfully, as to

by certain hold of fome part of the body. When a bull is baltered, they draw the knot, at the fame time giving fours to their borfes, and hamftinging him with their lances, so that the animal is taken and disabled at the fame inflam.

The province of Chinciton is bounded by La Plata, on the moun-east, and by Chill on the west. The original inhabitants

noth-eat, and by Caut on the west. I be original manufacture me very collections and warlike. They are also very super-flictors, and change their wives as often as they pleafe. They maintenined bloody were with the Spaniards till 1640, fince which time some of them law become Christians. Its chief riches confift of honey and wax.

SECT. III.

Consuming deferiptions of Torra Magellenica, or Patagonia, Brauil, Accounts, and Galona , their first discovery, boundaries and ex-tent, feil, climate, produce, inhabitants, animals, Us.

TERRA Morehanica received its name from Ferdinand Magelian, a Portuguele officer; who likewife gave name to those thraights which lead from the fouth to the north fea, he being the furt who failed through them. The appellation of Patagonia was delived from a principal tribe of its inhabitants, called Patagonia. The whole country, which goes under the name of Patagonia, extends from Chili and Paraguay to the utmost extremity of South America, that is, from thirty-five utmoß extremity of South America, that is, from thirty-fire almoß to fiky-feur degrees of fourth latitude, being feven hundred miles long, and three hundred-broad where wides. The northern parts contain an almost inexhaushible slock of large timber, but in the southern districts there is seasely a tree to tensiver, our in the lowers that the transfer is a server a tree to be feen fit for any mechanical purpose. The lofty mountains, called the Andes, traverse the whole country from north to

Here are incredible numbers of wild horned castle and horfes. stere are incredible numbers of wild homed cattle and horfes, which were first brought hither by the Spaniards, and have increased annasingly; the patturage also is good. Some writers sell us that fresh water is fearer; but were that the case, we cannot see how the present inhabitance, and such multitudes of cattle, could subside. The east coast is chiefly low-land, with sew or no good harbours; that called St. Julian is one of the

The inhabitants of Patagonia confist of several Indian tribes, The inhabitants of Patagonia confift of leveral Indian teibes, ber Patagonia, Pampas, Coffares, &c.. They are a favage, barbarous people, of a copper colour, like the relt of the Americans, with coarse black hair, and no beards. They are mightily addicted to painting themselves, and make streaks on their faces and bodies. They go almost stake naked, having only a square garneat, in the form of a blanket, made of the skins of several animals, and sewed together, which they some times wrap round them in extreme cold weather; a have also a cap of the fkins of fowls on their heads. Forme voyagers represented them as monstrous giants of eleven feet high, whereas they are no taller than the other Americans. The women, as in other places, are very fond of necklaces and bracelets, which they make of fea shells. The natives chiefly live on fish and game, and what the earth produces spontane-ously. This country abounds with an animal called cameltheep by fome authors, but their true name is guanacoes. They nartake of the nature of a camel, though they have no bunch the back, and they were formerly made use of to carry bur-lens. They have also a bird called an offrich, but not so large, and they differ from the African offriches in having the toes, whereas those have but two. A great number of islands, or clusters of islands, lie on the coasts of Patagonia.

The island of Terra del Fuego, or the Land of Fires, as it was called by the first discoverers, on account of their having observed some great fires upon it (supposed to be volcanoes) as shey passed it in the night, is separated from the continent by the Magellanic straights; has a rough appearance, being very mountainous, but is intersected with deep narrow vallies, and is well-watered. The narives of this country are short in their is well-watered. The narives of an country are more in their heads berefons, not exceeding five feet fix inches at most, their heads large, their faces broad, their cheek-bones very prominent, and their noses very flat. They have little brown eyes, without life; their hair is black and lank, hanging about their heads in disorder, and befineared with train oil. On the chin they have a few straggling short hairs instead of a beard, and from their nose there is a constant discharge of mucus into their ugly open mouth. The whole assemblage of their features forms the most loathsome picture of misery and wretchedness to make most loaniome picture or intery and wretchedness to which human nature can possibly be reduced. They had no other eloathing than a small piece of seal-skin, which hung from their shoulders to the middle of the back, being sastened round the neck with a string. The rest of their body was perfectly naked, not the least regard being paid to decency. Their natural colour scens to be an olive-brown, with a kind

of glofs refembling that of copper; but many of them discuis themselves with dreaks of red point, and functimes, though feldom, with white. Their whole character is the strongest themselves with means of the property of the frongest feldom, with white. Their whole character is the frongest compound of depictive, indifference, and inactivity. They have no other a me then bows and arrows, and their influences of his age kind of fillingage. They live chiefly on feals fieth, and like the fit oil part most. There is no appearance to the chiefle of the part has not here mode of his incompare them and here mode of his incompare them. ance of any subordination among them, and their mode of living approaches nearer to that of brutes, than that of any other na-The children go naked, and the only weapon of the men is a long flick generally hooked, and pointed at the end like a lance. They live in huse made of bought, and covered with mud, branches, &c. One fide is open, and the tire place is in the middle; and a whole family herd together in one of these miferable hovels.

The above-mentioned iflands are all very barren and mountainous; but from what Mr. Forfter fays, in his vayage to the South fee, the climate would not appear to be for ignorous and resuperhous as it is repreferred in Antion's vayage. Upon the lower grounds and iflands, that were theltered by the high mountains, feveral forts of trees and plants, and a variety of birds, were found. Among the trees, was Winter's bark-tree, and a species of arbulus, loaded with sed fruit of the fire of small cherries, which were very well tafted. In some places there is also plenty of celeri. Among the hirds was a species of duck of the fire of a goofe, which ran along the fea with amazing velocity, beating the water with its wings and feet: it had a grey plumage, with a yellow bill and feet, and a few white quill-feathers t at the Falkland illands it is called a log-gerhead duck. Among the birds are also plenty of geefe and talgons. The rocks of some of the illands are covered with large muscle-shells, the fish of which is faid to be more delicate than oyfers.

Brazil was first discovered by Americus Vespucius, When measured along the sea-coast, from the mouth of the river La Plata, in the thirty-fifth degree of south latitude to the river of Amazon, under the equator, it is two thousand five hundred miles in length, and seven hundred in breadth where widest. The aspect of the country, from the set, is not inviting, as a appears mountainous and rough; but, when entered, nothing can be more delightful, as the mountains are covered with woods. of ever-greens, and the vallies are cloathed with verdure; and, among the inland mountains are various fprings and lakes, which difembogue themselves into the great river Paraguay, and

the river of Amazons

The climate of this valt country varies in different parts. In the northern provinces, towards the equator, great rains and are frequent; and the former fumetimes overflow the country, and occasion the air to be very unwholfome. But as to the touthern provinces, there is no country between the tropics where the air is more falubrious, or the heats more tolerable.

The wild beafts of Brazil are, ant-bears, tygers or madilloes, The wild beafts of Brazil are, ant-bears, tygers or madilloes, porcupines, janouversa, a very fercer eavenous animal, forne-what like a greyhound, armadilloes, various forts of monkies, forme of which are very large; that called by Europeans the floth, or lazy beaft, and the toperalion, a creature between a hull and an afs, but without horns, and very harmlefs. The fleth of the toperation is good, and tafles like beef. They have great plenty of deer, hares, and other game, and a variety of other tame and wild animals.

Scrpents and venomous creatures are very numerous here a among which are, the Indian falamander, a kind of four-legged infect, whose sting is mortal; the ibibaboka, a kind of serpent, about feven yards long, and half a yard in circumference, whose poison is inflantaneously fatal to the human kind; the rattle fnake, which grows here to an enormous fize; the liboya, or roe-buck fnake, which is able to (wallow a roe-buck whole, with its horns, being between twenty and thirty feet in length, and two or three yards in circumference; scorpious, one which are between four and five feet long; lizards of three or four feet long; millipedes, both venomous and dangerous, and many others. The pilmires here are very numerous, dellructive, and large.

There are a prodigious number of birds in this country fome of which are remarkable for their beauty, and others for their tafte. Of the first fort is the humming-bird, fo called from the noise he makes with his wings, when he sucks the inices of flowers. The anhims bath a horn two or three inches ong growing out of his forehead, and is therefore called by the Europeans the unicorn bird. The toucan is of the higness of a wood-pigeon, and of a perfect jet-black all over, except under the break and belly, which is of a fine yellow, and a small circle of red about the neck : but what is most extraordinary in this bird, is, that its bill is bigger than its body, yellow without and red within, and about a fpan long. The goirs, called by the Europeans the fra-curiew, and the same with the numor disprise though rongest living influence appearant living ther matthe mere dike a red with the fe these is in of these

Their catable fowls are turkies, very large and delections; a fort of white heus, and other poultry; ducks, and other fuch water-

Great plenty and variety of fifth are on the fea-coafts, and in the lakes and rivers; among others, is the globe-fifth, called by the latins orbis minor, from its orbicular form, which is to the latins orbis minor, from its orbicular form, which is for befer all round with theap (pikes, that the for a hedge-long, that it bids defiance to all fifthes of pixy. But the most remarkable of all the living creatures in the fea is the fea-bladder, fo called because it greatly refembles one, and (wins on the furface of the waves. The infide is only filled with air, except about a spooning of water that ferves to posic it. The skin is thin and transparent, and reflects a great variety of colours, like a bubble raised in the water.

Timber is very plentiful in this country, but that which is termed Brazil-wood is the principal species. The palm-trees of Brazil are of five different kinds; besides which, here are woods

Brazil are of five different kinds; besides which, here are woods of ebony, mastic, cotton trees, citron, &c. and many others, which diffuse around a most delicious fragrancy from the admitable study and balfams they produce.

Some of the principal commodities of this country are, ambergris, balfams, sugar, sweetneats, tobacco, rosin, indigo, gold, pebbles, diamonds, jasper, emeralds, &c. The gold and diamond mines were first opened in 1681, and have ever fince been computed to yield five inillions of pounds skerling, a sistence of which belongs to the king. The diamond unious are farmed at much inserior value to what they really produce. The Brazil sugar is remarkably sine and white, and the tobacco admirable. Of the last article, great exports are made to Africa. mirable. Of the last article, great exports are made to Africa, where they not only dispote of it to the natives, but even supply the velles of other nations, who are ob iged to purchase for the convenience of carrying on the gold-dust and save trade with any tolerable advantage. The north and fouth parts of Brazil abound with horned cattle, which are hunred for their hides, of which no less than twenty thousand are exported to

There has of late years been so great an increase of the Por-tuguese trade hitter, that instead of twelve thips formerly em-ployed in the Brazil commerce, there are never less than one hundred fail of large vessels going to and returning from shase

colonies. With respect to the government of Brazil, it is divided into fifteen provinces, called capitanear or captainries, the whole being a principality, which gives title to the prefumptive heir of the crown of Portugal: of these captainries, eight only are annexed to the crown. Some late writers have computed that the royal revenue artsing from this colony amounts to two hundred thousand pounds therling in gold, besides the duties and customs on metchandize imported from thence.

The principal city is St. Salvador, asso called the city of Bahia, which is in the province of the same name, and was thus called from the commodioushes of its harbour. It is seated on a hill, and is populous, magnificent, and the most eave

feated on a hill, and is populous, mignificent, and the moft gay and opulent city in all Brazil. The trade rired on here is prodigious: the gentry are polite; but the vulgar, who have ac-quired wealth, are intolerably infolent and brutal. In this city are no less than twelve or fourteen thousand Portuguese, with three times that number of negroes. The harbour is capable of receiving this sof the greatest hurthen, and its entrance is guarded by a strong for called St. Antony's. There are other small forts that command the harbour, one of which is built upon a rock about half a mile from the shore.

In this city are about two thouland houses, which are handfamely built, mostly of brick or stone. The churches, contomely built, mottly of brick or from. The churches, convents, and hospitals, are not only built in the most funpuncus manner, but adorned with every thing rich and coffly, particularly with fine paintings. The upper town has many folendid fructures, particularly the cathedral of St. Salvador. The church, which lately belonged to the jefuits college, is every magnificent, and built of markle brought from Parago. very magnificent, and built of marble brought from Europe; and that college is a fine editice. The viceroy's palace is a most fomptuous building, as is also the palace of the arciblinop, the courts of judicature, the hospitals, &c.

The principal freets are large, and all of them paved; there

are also several squares, and many gardens, both within the city and its neighbourhood, in which are a great variety of fruit-trees and slowers, fallading, and plants for the kitchen. Most of the streets are, however, so steep, as to be impassable for

cosclus or chairs; to supply which desce, the rich casse themselves to be carried out in a kind of cotton hammock, called ferpentines, which are borne on the hegrees shoulders by the help of a bathbon, about twelve or sources feet long. The lower class of people here are infolent, and the foldiers given to all manner of vice; and some of them are dangerous assaults. The women are more strictly watched than in Portugal, yet functines sind means to clude the vigilance of their keepers. However, the hullands make no scrope to stab or pool on their vives, if they find them falle. The chief mechanic trades in this city are hatters, finish, snoe-makers, sayers, carpenters, coopers, taylors, and butchers. All these buy negroes, whom they train up to their several employments.

The town of Fernambuco, capital of the province to which it gives name, is a very considerable place. It is also called Reviet, or Artarile, from a neighbouring harbour of that name, which is now the strongest in all Brazil, a number of forta

It is also called Revies, or Artarife, from a neighbouring barbour of that name, which is now the strongest in all Brazil, a number of forts being received all round, and the access naturally for intricate and dangerous, by reason of the concealed rocks, fands, and little issues of the concealed rocks, fands, and little issues are not a round to the concealed rocks. The name Fernambuco, supposed to be a contraction of Inserno Boco, or the Moath of Hell, seems to have been given it from this circumstance.

The rich and populous city of Rio de Janeiro, is situated on a river of the same name, about two leagues from the main ocean. It has a most admirable port, well guarded; which is very much refortedge by the Portuguese, on account of the cold and diamonds found in the neighbourhood.

The little republic of St. Paul lies about thirty miles north of the province of St. Vincent, which is the most southerly of Brazil. This state is surrounded by losty mountains and thick forests; it was originally composed of outlaws from all the neighbouring colonies, Spaniards, Portuguese, Creoles, Mesticoes, Mulatroes, and Negroes, who took refuse on this spot, and lived at first without order, society, faith, honour, or religion; preying upon each other, and substiling by mutual rapine, and she plunder of their neighbours; but the inconveniences attending this way of life, and, the daiger to which it expected them to add these. niences attending this way of life, and the danger to which it's exposed them, soon drove them into confederacies, and these,

at laft, produced a regular democracy.

The island of St. Catherine's is fituated in twenty-feven degrees thirty five minutes fourly latitude, and is one of the most delightful spots imaginable, being about twenty-seven miles tong, and six broad. The convicts from Brazil are transported hither.

The most considerable tribes of the native Brazilians are the Tapuyers and Topinamboys; of whom the former inhabit the northern, and the other the fouthern parts. The former are men of good stature, of a dark copper colour, their hair black, and hanging over their shoulders, but they suffer no hair on their bodies or faces, and go almost naked. Their har on their bonies or races, and go another lips or nof-ornaments are, glittering stones, hung upon their lips or nof-trils, and bracelets of feathers upon their arms: the men have also a cap or coronet of feathers. The complexions of the also a cap or coronet of feathers. The complexions of the Topinamboys are not so dark as that of their northern neighbours, who live nearer the line; and neither the one nor the other, as those of the Africans, who lie under the same parallels,

The native Brazilians are partly freemen, and partly flaves; but the negro flaves are much more valuable, being of a mote robul condition, and fitter for labour. Some writers have repreferted the Brazilians as a favage people, devoid of all principles of religion, cruel in war, and canibals or devourers of canibals or devourers of copies of religion, cluef in war, and canination devourers of thuman fleth, but these stoices are generally looked upon as sistings of the Portuguese, to justify their cruel and inhuman treatment of them. They believe in certain invisible beings, the dispensers of good and evil, the rewarders and punishers of virtue and vice; and their notion with respect to a suture state, is, that after death they shall visit their ancestors, dwelling beyond the Andes; but they have no temples. Their priests make them believe, that if they bring them offerings, those invisible beings, who give them food and all the good things they enjoy, will prosper their affairs; but if they neglect this, some terrible misfortune will befal them. Their towns are without walls. Their mode of carrying on war is by ambufeades; and their weapons are bows. arrows, thields, and wooden clubs. They have eaciques, who rule them in peace, and lead them in war.

The country of Annazonia was first diffcovered by Gonzola Pizerro, brother to the marquis Pizarro, who conquered Peru.

Pizerro, brother to the marquis viscous the fourth, by Terra Firma; on the fourth, by La Plata; on the east, by Brazil and the Atlantic ocean; and, on the west, by Peru. It is one thousand two hundred and, on the west, by Peru. It is one thousand two hundred miles in length, and nine hundred and fixty in breadth; but this valt extent of country is but little known, except along hanks of the great river Amazons, and towards the Brazilian frontiers. The river of Amazons and towards the the world; feveral other rivers, particularly the Negre, Xauxa, and Maranhon, fall into it. It riles in the Cordillers, 22d increases 9 O

17

in a most aniazing manner as it proceeds towards the Atlantic, into which it difembogues itself by cighty-four channels. It will define thousand miles, is several miles broad, and near forty

None of the Europeans have planted colonies in this country, though they have often vinted it. The air is cooler here than could be well expected in near the equator; which proceeds from the fieary rains that occasion the rivers to overflow their banks one half of the year; and from the cloudy wearher, and shortone half of the year; and from the cloudy weather, and thort-ness of the days, which never exceed twelve hours. A brilk cafferly, wind also cools the air, which blows from the Atlantic occan quite through the country, fo ftrong, that veffels are thereby enabled to fail against the stream, and perform a voyage up the river of Λmazons almost as foon as down it, which requires eight or ten months. During the time of the rains here are terrible storms of thunder and lightning. The foil is fertile, producing cocoa nuts, ananas or pine-

apples, guavas, bananas, and other tropical fruits; cedar, iron-wood, fo called from its weight and denfity, red-wood, oak, logwood, and many other forts of dying woods and drugs; caffava root. faifaparilla, canala or fpuious cinnanon, tobacco, cotton, fugar, maiz, yams, and potatoes,

Here are great numbers of tigers, wild boars, buffaloes, &c. and in the woods are wild fowl and venifon. They have also flore of excellent honey and balm. The honey is exquifite, and the halm good against all wounds. Parrots are as numerous here as pigeons in England. They have vast numbers of fish of all forts in the rivers and lakes; and, among others, manatecs or fea cows, that are amphibious and feed on the banks; and tortoiles of a large fize and delicate tafte; but the fifters must be upon their guard against erocodiles, alligators, and water-ferpents, which insest the coasts.

With respect to the natives, they are, like almost all the Americans, of a good flature, have handfome features, long black hair, and copper complexions. They have a tafte for the imitative arts, elpecially leulpture and painting, and are good mechanics. Their cordage is made of the barks of trees, their fails of corton, their hatchets of tortoile-fhells or hard-flones; their chiffels, planes, and wimbles, of the teeth and horns of wild heafts, and their canoes are hollowed trees. They fpin and weave theinfelves cotton garments; and their houses or huts are of wood, thatch, and ciay. Their arms, in general, are darts and javelins bows and arrows, with targets of cane and fish-They are fuch good archers, that they kill fifh in the water with their arrows, which they cat without bread or falt. The feveral nations are governed by their chiefs or caciques; for it is observable, that the monarchical form of government hath prevailed almost universally both among the antient and modern barbarians, as requiring a lefs refined policy than the republican fyshem. The regalia by which the chiefs are diftinguished are, a crown of parrots feathers, a chain of lions teeth or claws about their middle, and a wooden fword in their hand.

All these nations allow of polygamy, or a plurality of wives and concubines; and the women here, as in the other American nations, do the most laborious work. They worship the images of their antient heroes, or subordinate deities; but have no temples, or orders of priests among them. Both sexes sometimes wear mantles of the fkins of beatls, or cotton, but generally go naked. In fome districts the men thrust pieces of cane through their ears and under-lips, and hang glass beads at the griftles of their nofes, which bob to and fro when they speak; but in others, they wear plates of gold at their ears and nostrils.

Guiana, or Canbeana, which has Amazonia on the fouth;

Terra Firms on the well; and the Atlantic occan on the north and east; its length is seven hundred and eighty miles, and its hreadth four hundred and eighty. It is usually divided into two parts, that is, the sea-coasts and adjacent districts denominated Caribeana Proper, and the interior country called Guiana

Proper.

The Portuguefe, French, and Dutch, have all fettlements and fundamental forward marshy, and subject to inalong this coaft, which is low and marthy, and fubject to in-undations in the rainy feafons. The principal French fettlements in Guiana are in the ifte of Cayenne, which lies one hundred miles weft of cape Orange, at the mouth of the river of the fame name. It is feventeen leagues in compass, well woodthe fame name. It is feventeen reagues to ed and watered, and excellently cultivated. At the eaftern part ed and watered, and fort of St. Lewis. The town contains ed and watered, and extenently con-of it is the town and fort of St. Lewis. The town contains upwards of two hundred houses; the fort has a good garrion, and near it is a tolerable harbour. The French first established The place was afterwards alternately themselves here in 1635. The place was afterwards alternately possessed by the English, then by the French again, to whom succeeded the Durch, but the French smally prevailing, full keep it in their possession.

The diffriet called Dutch Guiana was formerly the property of the English, who made settlements at Surinam, where a kind of corrupt English is still spoken by the negroes. The Dutch took it in the reign of Charles II. and it was ceded to them by The Dutch

treaty in 1674, in exchange for what they had possessed in the ptovince now called New York, in North America.

There is a perpetual spring in this country, which produces large quantities of sugar-canes; also the simarnba-tree, effectued a specific in dysenteries; and the carunce, a possesson out. Here are great numbers of monkies and ferpents, and a remarkable amphibious creature called the laubba, about the fize of a fmall pig. They have also a vast variety of birds of different plumage. Aniong their fishes, here is the torpedo; and infests are innumerable. re innumerable.

The inhabitants of Guiana are in general either natives, who The inhabitants of Guiana are in general accordance of a reddish brown, or negroes and Europeans, or a mixed program of these in various combinations. The natives are progeny of these in various combinations. The natives are divided into different tribes, more or less enlightened and polished, as they are more or less remote from the settlements of the Europeans: they have no division of lands. Polygamy is allowed among them. Continence before marriage is not confidered as a virtue; a man carea not whether the woman he maries is a vingin or not; but no injury is fo turely revenged as the infidelity of a wife. The men go to war, hunt, and filh; the women look after domestic affairs. The arms are hows, arrows, clubs, and poiloned darts blown through a reed. Dows, arrows, cruss, and postoned darts blown through a reed. They go almost naked, excepting upon particular occasions, when they adorn their heads with feathers. They are chearful, humane, and friendly, but timid, and addicted to drinking. Their houses are quadrangular, confisting of four stakes with cross poles, and are covered with leaves. They set them up, pull them down, and carry the whole with them at pleasure, as their dwellings are light and their lives amplituder. Their pull them down, and carry the whole with them at pleafure, as their dwellings are light, and their lives ambulatory. Their wants, which are but few, are easily supplied. They believe in a supreme God, a mischievous spirit or devil, and have some notions of a future state. They bury their dead naked, and get drunk at the suneral so bury their for ows. When the body has been interestal full similar transfer the section. body has been interred a sufficient time for the flesh to be rotten, they take up the bones, diffribute them among the relations and friends of the deceafed, and again get drunk to tellify their respect to the memory of the defunct. The natives cultivate nothing but plantains, callava, and yams, and one month's cultivation is sufficient for all these. The men are all hunters, cultivation is fulficient for all titele. In men are all funters, and they can always find game or fith, if they prefer it, without danger or toil. They live together, as a blamelefs and happy people, upon terms of perfect equality, having no diffinction but of age or perfonal merit; neuther have they any divition of property, each ameably participates the ample bleffings of a delightful and extensive country; envy, fraud, and violence are precluded; natural defires are immediately and innocently dulged, and government rendered wholly unnecessary. In all their traffic with each other, or with Europeans, they estimate every thing by their present want of it; they will at one time demand a hatchet for what they will exchange for a fifth-hook at another.

The colony of Surinam is the joint property of the West India cempany, the city of Antiferdam, and the lord of Som-melfdyk, but the fovereignty is invefted in the fix-rs general. Accordingly five directors of this colony are chosen by the city of Amsterdam, four by the West India company, and one by the lord of Sommel'dyk, but the governor must be approved by the flates general, as well as by the directors. The whole colony is at prefert in a very flourithing condition, and carries on a confiderable trade in fugar, cotton, gums, tobacco, coffee,

flax, fkins, wood fer dying, &c.

The principal town, called also Surinam, gives name to the adjacent diffrictione hundred miles round. It flands on a river of the fame name, which is navigable for near one he added miles up the country, and commanded by leveral forts, particularly Zelandria, about fix miles from the entrance, near which fortiefs the finall town of Paramairambo now stands, which contains about four hundred houses. There are no lefs than seven or eight inland towns, all of which are sich, populous,

and commercial.

Before we conclude our description of South America, it will be necessary to add, that the explence of a fouthern continent was firmly believed, until the contrary was indifputably proved in the years 1772, 1773 and 1774 by that most con-funimate seaman captain James Cock, whose extraordinary merits, his country, and the whole world, unite in celebrating. In the Refolution, a thin fitted out for the purpose of making discoveries, he three times penetrated within the autarchic circle, a region which till then had been impervious to all navigators. He proceeded amidst iloating ice islands of vast height, many of which were two or three nules in circumference, the thip, and all on board perpetually exposed to defiruttion, whith appalling scenes of horror and defolation presented themselves to the fixty-feventh degree five minutes fouth latitude, being then in the thirty minth degree thirty-five minutes cast longitude from London. The next year, approaching the pore the westward, he reached seventy-one degrees ten minutes fouth AM latitude

latitude, in longitude one handred and fix degrees fifty-four minutes well from London. A folid field of the which entirely filled the expanie to the-cast, well, and fouthy and case it is apposible to make any further advances. Duringhis. Say in the Figid Zone in the months of Decembers and Justacy, no night intervence; to that within a few minutes of midsight the light of the fun was fufficient to read or write by, and the fun's stay below the horizon was for very short, make a way strong twilight continued all the time of his disppeasing.

The result of these attempts to penetrate towards the fouth pole is, that either the ice extends quite to the pole, or elfosions fome land to which it has been fixed from the very earliest times. To determine whether it is land or ice that encirclies the pole, is beyond the power of human exertion, and has no tendency to gratify hay rational curlosty.

In July 1776, the sate indefiningable navigator for fail in the Resolution, accompanied by another ship named the Discovery, on his third voyage round the world; the principal object of which voyage was to explore the nonthern parts of the South Sea towards Kamchatka; in which attempt this truly great man lost his life on a newly discovered island, galled Owhy-hee, near Kamchatka, in February 1779, being stain in a fixtumish with the natives, as the reader will find in the following account.

why nee, nee Anneatane, in rectain 1775, each than the following account.

The difcoveries made in this voyage are lefs brilliant than those made in the preceding ones. The impossibility of communicating with Europe, by proceeding from the South Sea to the northward, which has been pretty generally supposed, in mow proved, so as to render all future attempts unnecessary, and indeed removes every motive for such undertakings. The coasts of that immense country, known by the name of New Holland, which, although an island, is equal in extent to Europe, have now been fully traced: on the south-eastward of this valt, but almost useless additive of the globe, have been sound islands abounding with spices, which anight by attention be soon rendered equal in value to those which the Dutch possess in the Moluccas. The spirit for discovery, which has lately prevailed, particularly in this country, under the auspices of his present majess, has brought us acquainted with many large, sich, sertile, and delightful islands, fituated in the South Sea, which the reader will find a copious description of, from p. 201 to 229 of this work, beginning with that of New Holland above-seantioned.

saentioned.

It may not be improper in this place to fubjoin, agreeable to our promife, a particular account of the events and citcumfances immediately previous to and attending the unfortunate death of that celebrated and able navigator captain Cook, which happened on the 12th of February, 1779, at the idland of O-why-hee, when on their return to flurope.

On January 17, 1779, with great difficulty they found and sachored in a converient harbour at O-why-hee, after beating about the ceast near two months. The ships were immediately instead by the young rings (four to the Orono or great kine).

suchored in a convenient harbour at O-why-hee, after beating about the ceaft near two months. The fhips were immediately wisfited by the young princa (fon to the Orono or great kings) who was abfent at a neighbouring island. The visit was resurred, and no strangers were ever more hospitubly received. Land was epiropriated to their use, the fick were ledged, trade was carried on, the ships repaired, &c... The king, on his atrival, treated captain Cook with great submission and respect, and paid him the same honours that are paid to the great E-a-thu-should-him the same honours that are paid to the great E-a-thu-should-him the same honours that are paid to the great E-a-thu-should-him. A very high mountain of snow, was fo use a sight between the tropics, that sive of the gratienten, with a guide, stower the tropics, that sive of the gratienten, with a guide, fet out, to explore it, but after two days said nights satigue, they were obliged to return without reaching it. After a heive, or play, had been performed by most of the royal samily, and some sire-weiks had been exhibited by the English, the ships failed on the 3th of February, stored with longs, for sits, or, but the Resolution having unfortunately sprung her foremast, and being very leaky, they were obliged on the 1 th to return to their cld birth, to repair. The king visited them as before, but the naives assembling, gathering stones, and rolling them from the hills, in order, as was supposed, to annoy the ships, the captains, on the 13th, ordered the guns to be fired among them, (furely with too much precipitancy) by which two of them were called, and of which the king near day justive combained- initial control of the captains, or the 13th, ordered the guns to be fired among them, (furely with too much precipitancy) by which two of them were captains, on the 13th, ordered the guns to be fired among them, (furely with too much precipitancy) by which two of them were killed, and of which the king near day judity complained, intimating that they had no hoffle intentions. From this time they became very on dy and michievous, and firing only engaged them. The prince, before very friendly, affumed another countenance, and the temper of the Indiana was totally changed.

enangen.

On the 14th the great cutter was milling from its moorings, and the hoat's painter was found cut two fathoms from the buoy, these audacious rogues having contrived to carry it off in the course of the night without being perceived. This was at these which could not be overlooked on any account, as the lofs of to capital a boat might prove of great confequence to them in

the remaining part of their voyage. Captain Clevias whited upon captain Gook and, informed him of what had happened. After forme deliberation, the best method that could be chought of (a melbod which, in other islands, had often been tried, and always mat with (access), was to fecture the king; and the othy way to do this was to invite him on board, and then piles centrals over him, after which they could make their own terms with him. It was alfothought advisable to find boats to different parts of the bay, to prevent any of the natives from making their escape in their cances.

"I lings being thus far fettled, the Refeation's great and small cutter, attended by the Diffeovery's small cutter and jolly boat, all well manned and arned, were dispatched to the various parts of the bay, with orders to stop all cances that should attempt to make their escape, and if they proved refractory to fire as and kill some of them, as captain Cook was determined to let them see he was not to be trifled with any longer. In the interim the captain, with the licutenant of marines, went in his pinnace, attended by the launch (in which were the marines and some of the officers, all well armed) to the north-well point of the bay, captain, with the lieutenant of marines, went in his pinnace, attended by the launch (in which were the marines and lowe of the officers, all well armed) to the north-west point of the bay, where the king resided. The natives, suspecting possibly that found inquiry would be made relative to the boat, had afferabled there in greater numbers than usual. The marines upon landing were drawn up in a line upon the beach, with the series at their head, and esptain Cook, with Mr. Philips, proceeded to the king's house; but not finding him there, enquired of the natives where he was, who fold them he was, of a house not far distant. They wasked on, and found him, and after some little time the captain invited him to go on board, which he were readily was going to do, but some women, and others of his attendants, who probably were apprehensive of some design, carnetly begged and entreated that he would not. Almost at this instant three Indians in-a canoe-arrived from the other side of the hay, with an account of one of their principal arces this initiant three Indians in a canoe-arrived from the other fide of the hap, with an account of one of their principal arees being fhot by our people. They had been to both fhips, where they told their flory in very lamentable terms; but not meeting with that pity and redrefs which they probably thought they had a right to expect, they proceeded to the shore, where their tale was received in a very different manner.

A general murmur of discontent was heard to prevail, and A general murmur of discontent was heard to prevail, and may of them began to arm themselves with spears and daggers. This circumstance was observed by Mr. Philips, and he communicated his apprehensions to captain Cook, who was at this time in the middle of a crowd, and of course was not able to watch their motions. The series of marines also, who was at some distance, saw them arming; and as the turnalt rather increased, called several times to the captain to warn hist of bis danger; but there seemed to be a degree of infatoation at-tending him, which rendered him deaf to every thing. The tending him, which rendered him deaf to every thing... The mob now pressed upon him, and he was seen to push them back, exclaiming at the same time, get away—get away." At length one of them behaved very infolently, and threw stones at him a the captain, having his double barrieled gun, fired, but missed him, and thot the next man to him. The matines, hearing the seport of the gun, imagined that some mischief had been done, and without orders began to fire also: this rendered matters still worse; and captain Cook, now seeing his danger, was making to the boats as said as the crowd would permit him, but received a stab between his shoulders from a chief who was behind him; the man was going to repeat his blow, but was shot by the serient of marines.

who was behind him; the man was going to repeat his blow, but was shot by the serjeant of marines.

The maxines had no somet fired, than the people in the launch from the same reason fired likewise, and now the uproard became general: the captain did not fall in consequence of the would, but still traffed forwards towards the boats; the Indians, however, rushed upon him, and, with clube and fronce, soon put superiod to his existence. The commanding officer of the Rescussion (which was at least half a mile nearer the spot than the Discovery) alarmed at the report of the guns, gave the Refclution (which was at leaft half a mile nearer the floot than the Difcovery) alarmed at the report of the guns, gave orders for the great guns to be pointed and fired at them, which appeared to create much flaughter and confusion. Mr. Phillips and his party of marines were obliged to jump into the water: hut fome of them not being able to fwim, were dragged on shote by the natives, who foon dispatched them. The remaining number with difficulty reached the boats: the ferjeant of manumber with difficulty reached the hoats: the ferjeant of marines was wounded in the neck, and received a fevere blow upon the head from a stone; one of the private men, had the point of a spear, which broke off, fixed under his lest eye; Mr. Philips was wounded in the shoulder, and a corporal and three private men were killed. The Indians behaved with great resolution and intrepidity, and notwithstanding a severe fire was kept up for some time afterwards, they maintained their ground, and as soon at one sell, another supplied his place. Finding it impossible to recover the captain's body, the boats cassed firing, and made the best of their way on board; and soon after Mr. Williamson, the third lieutenant of the Resolution, waited upon captain Clerke with the above melaneholy news.

Thus

Thus ended the life of the greatest navigator that this or any ner country could ever boast, after having successfully led his live of Benish feamen thrice round the world; who bad recedus a certainty the non-ensistence of a fouthern continent, see which the learned of all nations were in deabt; had that the boundaries of the earth and fea, and shown the institution of a north-west passage from the Atlantic to the set fouthern occase, for which our ablest navigators had consided, and in pursua of which vast same had been spent in, and many valuable mariners had miserably persisted. The tives certainly had no intention at sirst of destroying captain solt or any of his party. The cause first originated in the of the area who was shot by our people; it was this cirminance which alarmed these, and in consequence of this its that they arimed themselves. At this period captain Cook gift have returned on board with fastey; but he was unforture in maissing the man who behaved insolent to him, and

desorting snother—he was unfortunate in the firing of the mariane—and equally fo in the firing of the people in the launch; all which happened in the firece of a minute. In short, the whole freme to have been canled by a chain of events which could neither be foreign no prevented. His death was, however, universally regretted, not only in Great Britain, but in other parts of Europe, by these to whom his merits and public fervices were known.

Capterin Gook in his last voyage, had explored the coast of America, from forty-two degrees twenty-feven minutes to feventy degrees forty shautes fifty fiven seconds north. The command, after his death, devolved on captain Clerke, who willed at fea our his return to the fouthward on the 22d day of Augost, 2779. The two ships, samely, the Resolution and Discovery, returned home by the Cape of Good Hope, and anchored at the Note on the 5th of October, 2780.

C HA P. II.

THE NEW HISTORY AND DESCRIPTION OF

NORTH HEAR MERINE CA.

SECT. I.

Of North and South Carolina, Georgia, Virginia, Maryland, Penn-filmania, the Jerfeys, and New York; their extent and fittation, principal towns, full, produce, inhabitants (both natives and co-langh) their trade, manufathers, manusco, cuffam, droft, re-

ORTH America, which conflitutes a grand division of this walk continent, is feparated from the fouthern part by the ishness of Darien, and extends from that ishness to within a few degrees of the north pole; but geographers have not yet been able to afcertain the limits of this northern ex-

The provinces of North and South Caroline, and Georgie, extend feven hundred miles in length, and three hundred and eighty in breadth. The two Carolinas are bounded by Virginia on the north, Georgia on the fouth, the Aplachian mountains on the well, and the Atlantic ocean on the serf. mountains on the wett, and the Atlante ocean on the ent. The sies of the country is level, the climate temperate, and the foil fertile. It produces most kinds of vegetables, but abounds more particularly in honey and siec. Besides the latter, the Carolinians cultivate some tobacco, but their chief trade lies in provisions, for they supply Jamaica, Barbadoes, and the Leeward islands with beef, pork, grain, peas, butter, sue, raw hides, and leather. They likewife fend to the fame islands tur, tur-pentine, timber, mails, and fure; but the last are of an inferior kind.

kind.

Maiz, or Indian corn, thrives here exceedingly; but, in fome other refpects, the product has not been and crable to the expectation from the foil and climate. Though hamy parts of Carolina, especially on the fea coast, abound with vines, yet no progress worth mentioning has been made in producing wine. Cochineal is found here; but the inhabitants feem to neglect the profits spiting from that infect, their attention haveing for fome tears been chiefly turned towards making indigo. Their manufactures of filk, notwithstanding, the great quantities of mulberry-trees they have, are not yet confiderable, but, from some samples that have been brought over, it appears anual in quantity to any we purchase from foreigners. Here are but, from some samples that have been prought over, it appears equal in quantity to any 've purchase from foreigners. Here are great quantities of cattle, wild and tame, and many fine rivers. The chief capes are, Cape Hatteras, Cape Carteret, and Cape Fear. In South Carolina are the harbours Winyaw, or George

Fear. In South Carolina are the harbours Winyaw, or George Town, and Port Royal.

The inhabitants of Carolina import all kinds of wooden and lines drapery, hard ware, firong beet, cyder, rsifina, pottersarth, subsecto pipes, paper, beoverlids, matraffes, hats, stockings, gloves, tin 'ware,' powder and shot, gun flints, cordage, looking glaffer and glafs ware, thread, haberdashery, and small wares. From Jamaica, Barbadose and the Leeward islands, they have sugar, rum, molasses, cotton, chocolate, negroes, and silver. From New England, New York, and Pennsylvania, wheat sour (wheat being very backward in the Carolinas) and hard wares and wine from Madeira, and the other islands in

berd wares and wine from Madeira, and the other iffands in the western ocean.

For fettling in this pleasant country, the methed has hitherto been to pitch upon a void piece of ground, and either to purchase it at the rate of twenty possals for one thousand acres, or else pay a penny at sere quit-rent yearly to the proprietors without purchase an area of the former method is the most common, and the tenure a freehold. The land being laid out, the purchaser builds upon it, raises stock, plants orchards, and makes such contactions as, when fold, procure him slaves, houthold-grads, and other conveniencies; and after this is dence, he may yearly increase his capital, and become rich by instruction and good occonomy.

There are its. North Carolina the counties of Albemarle, Bath, and part of Chrendon country, but not any town of consequence. They chee to live separately on their plantations and farms, as in Virginia, and, like that colony, chiefly cultivate tobaccoy, but the fee coast being exceeding shallow, and not a good sport; in it, they are forced to fend their produce either to Virginia as South Carolina to be chipped for Europe.

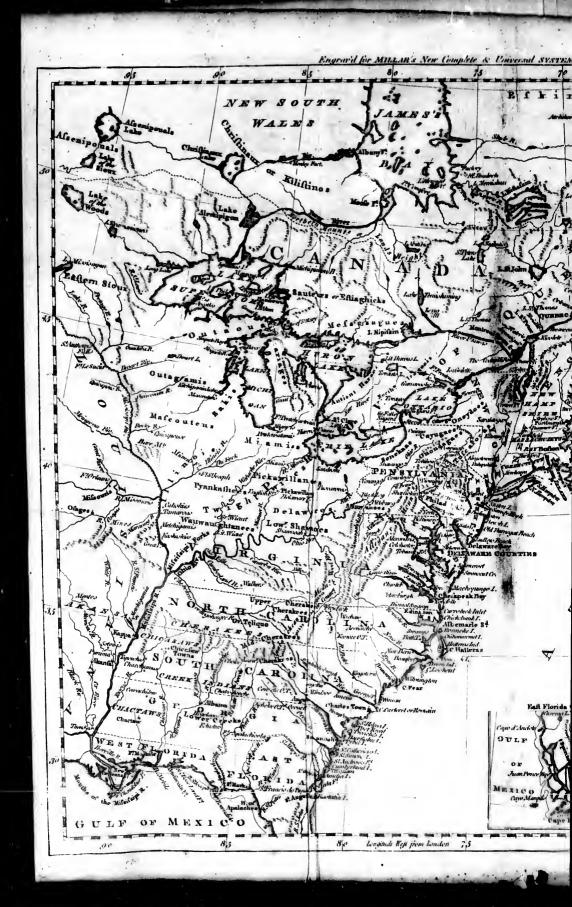

South Carolina is divided from Newta Carolina by an in-aginary line drawn from Cape Fear, at the mouth of Cisrendon river, to the westward, as far as the British plantations extended, in which division is the country of Cisrendon in part; Craven country, Berkeley country, and Colleton country the chief towns bring Charles-town is fluxed-in seventy-nine degrees west longitude, and in thirty two degrees north latitude on a peninfula.

of feveral months.

Befides the animals transported from Europe, such as horses, dows, sheep, and hogs, which are now extremely multiplied, those natural to the country are elka; red deer in great plenty, a fort of panther or tyger, bears, wolver, fozes, bearers, and second. Here is likewife that fingular animal called the oposam, which feture to be the weed rat mentioned by Chatevoirs, in his history of Canada. It is about the fine of a cat; addibefides the belly common to it with other animals, it has another becaular to incles, and which beings beneath the former. As for reptiles, they have lisards, with feveral kinds of finakes, particularly the rattle finake.

cutarty the rattic finake.

"Of birds, they have feveral forts of eagles, hawks, and owfs."

The white owl is very beautifel, all the feathers of the back and breaft being white as filver, except a black fpor immediately below the throat: their turkeys are very large, fome of them weighing forty pounds: they lave also abandance of other fowls, geefe, ducks, etc. "Their partridges are smaller than ownstout very well tasted. They have likewise the Virginia nighting gale; whose plumage is crimson and blue: the mocking bird, or was forts, errey and red, is thought to eacel; all others in his gue, whose prumage is crimion and blue! the mocking bird, of the force, grey and red, is thought to excell all others in his own note; and imitates that of all others; they have here allo the humming bird, the smallest of all the winged creation, and by far the most beautiful, being all arrayed in scatter; green, and

We learn from the accounts of those who have lived among the Americans on the frontiers of Virginia, that they are of a middling flature, flraight, and well proportioned, with the fineft limbs in the world; nor let there a dwarf of mil-flageriperion among them. Their colour, is that of copper endered darket by greating themfelves, and being expoded to the weather. They have black eyes, and their hair is coal-black, which the men cut into feveral flager, and both men and women grateful it; that it shines: Their closths are a large mantle, closefully wrapped round their bodies, and fometimes girt closely with a girdle. The common fort only pais a piece of cloth or flring round their middles, and put a piece of cloth or flin between their thighs, which turns over the firing at each end: Their floses, when they were any, are made of an entire piece of buckthe Americans on the frontiers of Virginia, that they are of a those, when they wear any, are made of an entire piece of buck-fkin. The drefs of the women differ little from that of the men y only the richer fort have more beads and bracelets. They commonly go naked as far as the navel downwards, and upwards to the middle of the thigh (their breafts are round and small, and never hang down, as those of the black women on the coast of Guinea. The better fort wear a kind of coronet four or five inches broad and open at top, composed of a fort of beads, and some a weeath of dyed furs; they have also bracelets on their necks and ame; but the common people go bareheaded, only they stick have slining feathers in their hair.

Their food is Indian corn, foaked and boiled in water, beavers, surtle, several kinds of snakes, broth made of deer-

beavers, sprite, teveral kinds of inaces, broth made of deer-humbles, peas, beans, &c. Infead of keeping their children-warm; they dip them over head and ears in cold water. When the English first came among them, they had, no iron tools; their knives were sharpened reeds or shells, and their axes sharp shoees, "They felled tress by laying fire to their roets; and by fire they also hollowed them, and made causes of them." Their

ivay of producing freewes, by ribbing due flick against another, they retken their years by winters v and divide them: into five feefouts, the budding-time, the caring of the corn, the summer, the harvest, and the winter. The months they count by the moon. They divide the days into three parts; the irife, power, and lowering of the fund. They keep their accompate by knots on a string, or note her on a stick. Will they count by the moon of Maryland was alsowered in the year 1600 when: Winginia was first planted to the forefore time was effectived at a part of Virginia, tilk king Challesis. In act yay granted all that part of Virginia, tilk king Challesis. In act yay granted all that part of Virginia which lay morth, of Patowana river, to the dord Baltimore, of the hingdom of Ireland, land has heirs. The Baltimore simily were deprived of the poventionent, of this previous during the sight-burner of the increase of the land of the was deferred to be for so they aftabilified a perfect to lession with religious matters; the colony increased and shourthholy was different of all denominations, allured by the prospect of gain; flocked into Maryland.

religious matters; the colony increased and stourished; and distincters of all denominations, allured by the prospect of gain; stocked into Maryland. The tyrannical government of James II, again deprived this noble family of their possession; acquired by reyal boanty, and improved by much care and expense. At the Revolution, however, lord Baltimore was again restored to all the profits of the government, though not to the right of governing, which could not considerably be conserted on a Roman esthelic. But after the family changed their aligion, they obtained the power as well as the interest. The government is country exactly resimbled that its. Virginia, except that the governor was appointed by the proprietors, and only continued by the crown. The sustoma too were reserved to the crown, and the officers beinging to them were independent of the province. So far is Maryland as prefents from being apopish government, that the protestants, by far more numerous, have excluded them from all offices of trust and power. They even adopted the penal alway of England, against them. The church of England was hylaw established here; and churches have not only been bulley but parishes, allotted to them with annual flipteds to the ministers! every chillian male fixten years old, and agreed male and female, above that age, paying forty pounds of tabacco, which is levied, by the sheriffy among other public burdens, and yields to each about one hundred pounds strained at a medium,

. Maryland; lies between thirty-fiven degrees fifty minutes, and forty degrees, north latitude, extends in length one hundred and forty, and in breadth one hundred and thirty-five miles; has the Apalachian mountains to the west; Delaware bay to the north; Patowmac river, to the fouth; and the northern ocean to the cast.

The parts next the fea are very low, but the interior districts the hilly. The air is excessive hot in the furnmer, and intensely cold in the winter; but the latter is not of above three month cost in the winter; but the latter is not of above, three months, and duration. The principal bays are those of Chefspeak and Delaware, and the most noted caps that of Henlopen, at the entrance of Delaware bays. The bay of Chefspeak divides the province into two parts, of which one lies ou the east, and the other on the west. It is watered by innumerable springs, forming a great many sine rivers, of which the chief are Patownac.

ing a great many fine rivers, of which the chief are Patowanac, Pocomoac, Patuzhant, Severn, Cheptouk, Saffafras, and Wicomoca rivers, and that of St. George. These and other rivers, capable of receiving large ships, with the numerous beys and crecks that indent the land, on every side, give, the seamen an opportunity of bringing their vessels up to the planters doors. It of the commodity here, of which the provisce exported annually, many years ago, upwards of thirty thousand hogheads, each hoghead seven hundred pounds weight, if this article forms the medium of cutrency of Maryland, being received in debts and taxe; and the inspectors notes for tobacco, delivered to him, are transferrable. An industrious man can delivered to him, ere transferrable. An industrious man can manage fix thouland plants of tabacco, and four acres of Indian corn. The tobacco of this province, called Oromoko, is dif-ferent from that of Virginia; and, though not much liked in England, yet, in the eaftern and northern parts of Europe it is preferred before the fweet fcented tobacco of James and York is preferred before the fweet fcented tobacco of James and York rivers in Virginia. Another confiderable commodity of Maryland is port, of which large quantities are experted, faited and barrelled; the woods containing vaft droves of wild fwine, which are generally of a finall fize. Great quantities of hemp and flax are raifed, in this province, and the mountains yield abundance of iron ore, which is run into plgs, and sefined into iron. Maryland oak is not greatly effected for building large hips, but is very proper for finall craft and flaves. Good land here yields about fifteen bushels of wheat an acre, or thirty bushels of sindian court, but the grain is very subject to the weavil.

There are but few towns in the province as yet, the English.

There are but few towns in the province as yet, the English living at large in their feveral plantations. Indeed each plantation is a little town in infeit, and can febfic itself, with provisions and necessaries, every confiderable plantar's washouse

the one called Longuis. It has an early communication with False the river beloware, it has an early communication with False the river below and the occasion.

The city, of New York was formerly called Amflerdam. It is financed in Mahamattan if and, which is revely emiles long, and between two and three broad, lying as the mouth of Hudfer's an the Iroque can vie with it in regularity and nessueds. The irrade of the inhabitants is carried on by water carriage, and flaps of five hundred tons may come up to the wharfs of the city, and be aimoft affort. Hudfoy's river, where it runs by New York, is above three miles broad, and proves a noble conveyance for the goods of the counties of Albany, Ullet, Duckiefs, Orange, and Kings, to that city. This place is governed by a mayor and alderman, and duch other officers as our corporation. It commans ix markets, feat to be better (upplied with all kinds of provisions han any in Europe. The town and history are defended by forts and bettaries. Twelve years ago the bosfes kept, tere, were computed, at five thoughed. The principal editions are the former of the counties where they hold editions are the town-house, the council-house, where they hold editions are the council-house, where they hold editions are the first the principal and the counties are the town-house, the council-house, where they hold editions are the council-house, where they hold editions are the counties are the town-house, the council-house, where they hold editions are the council and the counties.

provisions than any in Europe. The newn and introduction of defended by form and bettaties. Twelve years ago the borkes kept here, were computed at five, thouland. The principal edifices are the town-house, the council house, where they hold their general demblies and courts of judice, the English church, the meeting houses, of all forts, the free-febrod, and the public library. More is also a printing-office.

The town of Albary is one bunded and forty three miles up the river, and but five below the place where it is parted into two branches. It counsits of between three and four hundred smallies, who are mostly of Dutch extraction, and has a strong fest and garrien for its defence, as being fituated on the frontier of the province. It is not however, the most diffant fettlement, for there is a place called Schenestady, fixteen miles above, on arrive that awas, into Hudon's. Kingiton is a pretty populous, well-built sown, sinety miles up the river, where the Elopus falls into it from New Jerky.

The Irequois, or Five Indian nations, inhabit the north-west part of the province of New, Lork., Ogo of these nations, or trabes, are called mobility and province of New, Lork. Ogo of these nations, or trabes, are called mobility. The Irequois, or Five Indian nations, the five National are of the province of New, Lork. Ogo of these nations, or trabes, are called mobility.

HE endeferi

America, and as the fame time as polite and judicious, as can well be conceived; which appears not only from the management of their affairs with the French and English, but with almost all the Indian nations of this vast continent. An English historian observes, that notwithstanding the iroquois live under the darket ignorance, yet a beight and noble genius thines through those black clouds. The mest celebrated Roman heroes have not discovered a greater love for their country, or a greater contempt of doath in the cause of liberty. "I think, says he, they have outdone the Romana, especially those who murdered themselves to avoid shace or termest; for our indians have not only refused to die manly by their own hands, when they thought their country's honour at stake; but have more only refused to die manly by their own hands, when they thought their country's honour at stake; but have more only refused to die manly by their own hands, when they thought their country's honour at stake; but have more only refused to die manly by their own hands, when they thought their country's honour at stake; but have more only refused to die manly by their own hands, when they thought their country's honour at stake; but have made of men whose courage and resolution could not be shaken. They fully, however, their noble virtues by that cruel passion or revenge, which they think not only lawful, but bonourable, to extert without mercy on their country's enemies; and in this only they deserve the name of Barbariane." Another gentleman, of English establishin, but a native of this country, and resident, on their passion of the like only they deserve they are druk; and the inflances that have been given of it are no evidence of a vindicitive temper; for the cruelies they institute and passion of the like cruelies sift exercised by the French on their people." It is observed, that the French, in the sirk was which they had with the Iroquois, when they inside the name of the same of the same of importance, without sift consulting th

The buffneft of the men is hunting, going to war, building their huts, felling of timber, tilling the ground, and the like. They commonly fow a field with beans one year, and the next with ludian wheat. The women are commonly fo prolific, with ludian wheat. The women are commonly so prolific, that it is a wouder to see one from fiateen to fifty, who is not either pregnant or suckling 1 yet they do most of the drudgery, as grinding the wheat, fetching of wood, water, and the like. The children are often so study they are sound faolt with, the boys will dispatch themselves with a gun, and the girls with some possense weed. They commonly make a seast over the grave of a dead person, and pot into it wheat, tobacco, and every thing they think the decased may want in the other world.

140

world.

In this country is that great water fall, or cotoos, called the Fall of Niagara. This furprising cataract, faid to be the greatest in the world, is a quarter of a mile broad, and seventy feet deep. The water, precipitating itself from several rocks, which project from the rest, falls down on every fide in torrents, and being broken near the bottom by many separate crags, rises in a white froth. From the whole arises a milty cloud, that descends like sinall rain, and exhibits, when the sun finnes, a beautiful rainbow, that moves as the spectator moves, according to the angle of vision. As the waters fall from rocks one hundred and forty feet high, a noise is produced like thunder heard at a great distance.

SECT.

Of New England, Nova Scotia, and Canada, their fitzation, beam-daries and extent principal towns, climate, foil, productions, trade, manufactures, government, lews, Gr. together with an ac-count of the rife and progrefs of the ware between Great Britan and the Colonies, which terminated in the independency of the American States.

HE extensive and powerful country we are now about to describe, namely, New England, comprehends Masia-No.

chafit's bay, Connecticut, Rhode Iffand, and Providence Plantation. It is fituated between fixty-feven and foreity-three degrees of weft longitude, and between fixty one and forty-live degrees of north latitudes, is five hundred and fifty miles long, and two hundred broad, and has the province of Naw York on the weft; Nova Scotja or Arasdia, on the north-seft; Canada, on the north-weft; and the Atlantic occup, on the enft and fouth.

fouth.

The furnmer-feafon here is warmer than ours, but of fhort duration. For the speec of two months the sky is perfestly clear, which renders the country so healthy, that it is reported to agree better with British constitutions than any other of the American provinces. The winters here are long and severe, the wind often beisserous, and the sir extremely sharp, but not intolerable. Naturalists aferibe the early approach, length, and severity of the winters, to the large fresh-water lakes lying to the north-west of New England, which being constantly frozen over from the beginning of November to Jene or July, occasion those piercing winds which prove so fatal to mariners on this coast.

The land sowards the sea in fact the mariners on the coast.

fion those piercing winds which prove so state to mariners on this coast.

The land sewards the sea is, for the most part, low, and frequently marshy; but in the country it rises into hills, and on the north-east becomes altogether rocky and mountainous. The foil about Massachies's bay is black, and the grafe rank; but the uplands are fruitful. The fruits of Old England come to great perfection here; and the country in general produces corn, pulle, esculent plants, Indian corn, and all kinds of timber. The easts here are inferior to those of Old England; but the size are of a prodigious bulk; and they draw from these, and other trees, pitch, tar, rosin, turpentine, gums, and balm; the soil also presiscing hemp and sax, a ship may be built and rigad out with the produce thereof; and in this country ship-building is a considerable employment.

In New England there is a great abundance and variety of sowl; as geose, ducks; turkies, here, partridges, wigeons, swans, herons, hesthocota, pigeons, &c. Quadrupods are also very numerous here, and European cattle thrive and multiply exceedingly. The horses of the province are hardy, mettlesome, and services of the province are hardy, the services of the p feet high, with four horns, and broad palms, fome difant near twelve rest from the top of one horn to the other. His body is about the fize of a built, his neck refembles a ftag's, his tail is fomewhat longer; and his fleft extremely grateful. The light-coloured mooie, called wampoon by the Indians, is of a smeller flature, and nuch more common than the black. The rattle-smake is another natural curiosity of New England, though not peculiar to it. The furrounding seas, and intersecting rivers, afford abmalance of sist, confequently there are many stheries, particularly, for cod and mackarel. The fast-works are improveable, and the iron-mines considerable.

They suport from hence bissuit, meal, falt previsions, sometimes cattle and horses, planks, hoops, thingles, pipe-slaves, butter, cheefe, grain, oil, tallow, turpentine, bark, calf-skins, tobacce, applet, cyder, and onlong they bring in return sugar, cotton, ginger, and various other commodities. From Europe they import wine, silks, woollen cith, toys, hardware, linen, ribbands, stuffs, laces, paper, houshold furniture, husbandry tools of all kinds, cordage, hats, stockings, shoes, and India goods. In ther, there is no British manufacture, that ferves the purpose of luxury or ornament, which the people of New Entered the purpose of luxury or ornament, which the people of New Entered the purpose of luxury or ornament, which the people of New Entered the purpose of luxury or ornament, which the people of New Entered the purpose of the property of the purpose of luxury or ornament, which the people of New Entered the purpose of the property of the purpose of the pu

goods. In thort, there is no British manusature, that ferves the purpose of luxury or ernament, which the people of New England do not import. They also send ships to the bay of Honduras for log-wood, which they transport to Europe; as they do sugar from the West Indies, and sish from Newsoundland. Their inland trade, besides unasts, yards, and provisions of all kinds, consists chiefly of furs, and the skins of beavers and martins. The furs, and kins are brought in by the Indians, especially those on the rivers Penobscot and St. John. Their money is for the most part paper-currency, which has been attended with many inconveniencies in the circulation of it.

It.

The established religion in New England is that of the Independents. The cherch government admits of spriods, but the synoid have no power to enforce their own acts. The miniferers of Boston depend entirely on the generosity of their hearers for support; a voluntary contribution being made for them, by the congregation, every time divine service is celebrated. Tho the pursans of various feets, who first transported themselves hitcher, rather than conform to the church of England, complained of their not being allowed toleration, yet they were see far from granting it to those who differed from them; that they put to death several quakers, and would not permit people of any other seed to denomination of Christians but themselves to have any share in the governments they erecked here. have any share in the governments they erected here.

Great care is taken of the education of children. Every town of fifteen families is obliged to maintain a febool for reading and of fifteen families, and, of one hundred families, a grammar-febool, for whiting; and, of one hundred families, a grammar-febool, for the instruction of youth; befides which, there are four colleges, the instruction of youth; befides which, there are four colleges, magistrates of Boston, and the commensurate at Cambridge, magistrates of Boston, and the commensurate at Cambridge. New England, that by the new charter granted to the Massachew England, that by the new charter granted to the Massachew England, that by the new charter granted to the Massachew England, that by the appointment of a governor, chustes by king William III; the appointment of a governor, clusters by king William III; the appointment of a governor is when the same of the same whill was welled in the crown; that the power of the admirately was vessed in the crown; that the power of the militial was whill the same of the governor, with the advice of the council; and that the governor has a peremptory and unlimited negative on the choice of counsellors for that he and the power of the same of is not obliged to give a reason for what no does in the particu-lar, or restrained to any number; that authorite copies of the several sole passed by this colony, as well as others, ought to be transmitted to the court of England for the royal approbation: transmitted to the court of England for the royal approbation; but if the laws of this colony are not repealed within three years after they are presented, they are not repealed by the crown after that time; and that no laws, ordinances, elections of magistrates, or acts of government whatfoever, are valid, without the governor's confent in writing. Notwinstanding this, previous to the late unhappy differenance, the people had faill the greatest start of the power in this colony; for they not only related there of the power in this colony; for they not only related the silembly, but this aftembly choic the council (equivalent to dur house of chords) with the governor's concurrence. Three forts of government, were originally established by the English on the continent of America, vis. regal governments.

valent to our house or sorus, where originally eftablished by the Three forts of government, were originally eftablished by the English on the continent of America, vis. reval governments, and proprietary governments. A royal government is properly fo called, because the colony is immediately dependent on the erown, and the king remains fovereign diately dependent on the erown, and the king remains fovereign of the colony. A charter government is to called, because a company, incorporated by the king charter, is in a manner company, incorporated by the king charter, is in a manner to the colony, and the colony of the colony, and the colony of the colony, incorporated by the king charter, is in a manner to the colony, incorporated by the king charter, is a kind of regal authority, either by purchase or gift.

Every town in New England, if it contains thirty-two bursels, can fend two representatives to parliament; if twenty gesses, can fend two representatives to parliament; if twenty gesses, can fend two representatives four. The general assembly, in one; but Boston hominates four.

gefies, can fend two representatives to parameter, it wenty, one; but Boston nominates four. The general assembly, in concurrence, imposed taxes, made grants, enacked laws, and redrested public grievances of every kind. rectence public grievances of every kind. The connited of the magifitates, and a certain number of representatives, who serming the chambers, fo nearly refembling our lords and commons, that the concurrence of the majority of both was necessary, before any bill could be presented to the governor for his

affent.

No person can be arrested here, if there are any means of satisfaction pitched upon; nor imprisoned, and est there be a conceiment of effects. Adultery is panished with death to both parties. The laws were always very severe against Quakers, To bring one in, is a forseiture of one handered pounds; to conceal one, sorty fullings an hour; to get to a quaker's meeting; ten shillings it to preach there, sive thistings. If a quaker, be not an inhabitant, he is subject to handments and if he conceal one, forty failings an hour; to go to a quaker's meeting, ten failings y to preach there, five failings. If a quaker,

fouth; the viver St. Lawrence, north; and conday on the
fouth; the viver St. Lawrence, north; and conday
dred and fifty bload. It had its name of Nova Scotia from Six
William Alexander, a Scotsman, and ferretary to king James
Li who had the first grant of Innda In t. By the treaty of
Utrecht, it was edded to Great Britain, and a regiment was sent
over to take possension of Annapolis, the capital i but no provision was made to plant the rest of Nova Scotia, vill the year
1749, when about three thousand English families, ander the
command of povernor Cornwallis, were sent thinker, and crested
the town of Haliska, in Chebusto bay, and several other cmbarkations have been made since that time.

This is in general a sinc country, the climate being tolerably
temperate, though pretty severe in winter, when the cold is
sharp and the snow lies deep on the ground; but this is in generally clear, with a bright funthing and agains sky! the fusion
er is, however; hoster than in England.

The foil is various, in some places between, and in others ex-

mer is, however, hotter than in England.

The foil is various, in four places betten, and in others exceedingly pleafant and fertile; particularly round the Bay of Fundy, and on the rivers which fall into it? there are large tracts of ground on both fides of thefe rivers, for fifty or firry miles into the country, and feveral miles from the bay, which were once marfay, but, by being dyked, are improved to great advantage. The eminence in this province are affectively pleatient and frontful producing wheat rye, Indian corn, pear, bears, hency, fax, and form kinds of fruit in great perfection, as goofe-berries, rafberries, and firm bettiner, and particularly excellent oak fit for building of thips, with fir, fpruce, birch, &c. It abounds with all the necessaries of life, particularly a great nomber of deer and other game, with planty of wild fowl, as teals, herom, woodcocks, pigeons, buffards, participes, wild ducks, side a great number of beavers and otters. The rivers abound with falmon and other kinds of river-sifth. There are also feveral fiftheries erected in the different hatbours, and carried on with great fueces.

On the coaft are minny commodious bays, harbours, and

fuccels,! On the coast are many commodious bays, harbours, and erecks; and the land is enriched by many rivers, some of which are navigated for a long course by the navive Indians. The harbour of Chebecto, upon which is feated Hillfax the metropolis, may be juttly esteemed one of the finest in the world, both for fafety and convenience, it having good anehoring-ground, and water sufficient for the largest men of wat. This is therefore made the ulare of rhadeavons for the rowal navy it? America. fore made the place of rendezvous for the royal navy in America, it having a royal dock, and conveniences for the largest littles to heave down and eareen. The entrance into it is from it fouth, with a large illand of an irregular form, lying on the

north-eift fide, named Cornwellia tiland, from the first governor of Halifar. This tiland, as well as a finaller one that lies higher pathe hathour, ramed George island, is very commodically fituated for a filterry, and his conveniencies of all forth proper for developing and curing its filt.

The few of Halifar is feated on the west fide of this himbour. Though founded to lately as the year 1745, it is now a confidence standard for the west of the filter of the whole province, he whole province, he was a confidence it region of the hadden it region and is the capital of the whole province.

Annepolic is fituated on a fine blay, a little fouth of Fundy bay, in thely-four degrees odd minutes well longitude, and forty hay in thely-four degrees odd minutes well longitude, and forty hay in thely-four degrees odd minutes well longitude, and forty hay in thely-four degrees odd minutes well longitude, and forty hay in thely-four degrees odd minutes well longitude, and forty and partyl inhibition but the most considerable fettlements are upon the flay of Fundy; and the tiver that fall into it.

Therefore also feveral other towns laid out round the bay, and partyl inhibition but the most considerable fettlements are upon the flay of Fundy; and the tiver that fall into it.

About two miles by the first fettlers of Halifar, Sandwichriver, is at the most habout as wide and deep at the Thames at London-bridge, and is fall-water for about four of five miles to the oppose fide of the harbour, is about two miles by when it reminates, whereas finall first had on both fide in the fide in the fide in the fide in the fide of the poor fide of the harbour, is about two miles in circumference, and has faveral eveds at the bottom of it, and both of the continuous standard the fide is the land on both fide in the fide, into Bedford-bay, which is about twelve miles in circumference, and has faveral eveds at the bottom of it, a bounding with the finds find in the greatest plent; there are about and sandwich-river divide the peninfula fro

There are feveral large vivers on the opposite shere, among which ties of Si. john is the most considerable. It is an leagues distant stock the set the most considerable. It is an leagues distant stock the set of the set

being pent up between two fleep mountains. The inhabitants may be sempated at about twesty thousand, who export to other parts lumber, as planks, staves, hoops, joile, together with office. The latter is, indeed, the staple commodity, and employe a confiderable number of hands.

hTid king of Great Britain, who is sovereign of the foil, ap-

joide, together with afthe "The latter is, indeed, the staple commodity, and employe acconsiderable number of hands. hThe latter is, and to make the continuency and considerable number of hands. hThe latter is foreign of the foil, appoints the governot, the lieutenant-governot, and council, who form the upper-house; and the lower-house is formed of the representatives of the people, who are chosen by the section of the representatives of the people, who are chosen by the freeholders. The people is the people who are chosen by the freeholders. The people is the people of the latter is the largest upon the continuent, is bounded to the worth-that, by the guil of St. Law-sence and St. Johnile rivel prob the southward, by the province of New York, New England, aid Nova Scotia; and, on the westward, by the Indians. It is deemed five health of the latter is the largest, and two hundred in breadth. The climate and foil vary; the parts best known; which lie towards are great tive St. Lawrence, are cold to an excels in winter, though states in winter, the furnity of the country, as far as it is known, is full of large woods, marshes, lakes, incurrains, and rivers; which riches it still colder. The land, however, especially lastine interfor parts; and about the lakes and rivers, are generally structured and the richest and liver, are generally startine, and capable of producing wheat, backy, vrey with submy forts of grain, fruits and 'vogetables'; colored, and the still river exceedingly, and is much entitivated. Accordingly, the boars, forteen martins, ferrets, wealts, squared, shares, about, to the submitted and other animals. The wild-case are plenty of the pole-day about he had not been animals. The wild-case are plenty of the pole-day about her had not been animals. The wild-case are plenty of the pole-day about her had not been animals. The wild-case are plenty of the pole-day about her had not been animals. The wild-case are plenty of the pole-day about her had not been animals. The wild-case are plenty of the pol

five or fix pounds. During the fummer feafon the male and female keet together, but typarate at the approach of winers, and each feeks a fibelter in forme hollow trees, without laying up any provisions. The foxes here are of various colours, as black, grey, red, and white, who, by their craft and cusning, make great haveck among the water-fowl in the lakes and rivers. Here are three forts of fquirrels, that called the flying fquirrel will leap upwards of forty feet from one tree to another. The hares and rabbets differ hitle from those in Europe, easy they turn grey in winter. The mountains abound with mines of coal, and forme metals.

The lakes are large and numerous a the chief are, Lake Superiot, which is one hundred leagues in leugth, feventy broad, and contains feveral idands, the lakes Michiganor Illinois, Harons, Ontario, Frontenac, Champlain, &c. Of the rivers, which are very numerous, the three stinepal are, the great river St. Lawrence, St. John's, Trois Kiviseres. The bay of St. Lawrence is entered between Cape Rets, in Newfoundland, and Cape Breton, and, after doubling Cape Rofe, you fleer into the river of the fame name. Towards the fouth lie the bay and Point of Gafpey; below this bay is a Steep, called the Pierced Island, from an aperture in its middle, through which has an excellent barbour, and is eight leagues in circumference. A first of fresh water spout up to a sondersable lieight in the offing, not far from this island.

The next object that prefents itself in the river St. Lawrence is the island Anticodi, and the current fetting strongly in upon its renders the navigation becomes more alterable, but fill great precaution must be used. The mounts Notre Dame and Louis lie on the larboard fide; near the latter are fome plantations. The next opint is Trinity Point, which must be avoided with great care. A little higher are the Pape of Montanion, fo called from the appearance of the mountain, fituated about two leagues from the shore. The land in the neighbourhood is not only unprofitable, but

with rocks, ands, and impenetrable thickets: It contains however plenty of game.

On the other fide the river, and advancing two leagues into its bed, lies the shoal of Manicosqu, which is the most dangerous in the river: it is asmed from a river that falls from the mountains of Labrador, and otherwise called the river of St. Barnabas, and the Black River. From this to Green Island the navigation is slow and uncertain, and the shores uncom-

the navigation is flow and uncertain, and the shores uncomfortable and uninhabited.

Som: what higher lies the siver Saguenay, which carries ships twenty-sive leagues above its mouth, where is an excellent harbour, called Tadousse; in sailing from which; great care must be taken to avoid the Rad-Illand, or Cape Rouge, which is a dangerous rock of that colour, whose surface is equal to the water, and often proves state to shipping.

Besides a great variety of other fish in the lakes and rivers, particularly that of St. Lawrence, are sea wolves, fea cows, porposites, the lencornet, the goberque, the sea place, slamon trout, turtles, lobsters, the chaourasou, slungeon, the achigan, and git head. The sea wolf, so called from its howling, is an amphibious creature. His head resembles that of a dog: he has four very short legs, the fore ones of which have nails, but the hind ones terminate in fins. The largest weigh two thousand pounds, and are of different colours. Their sess weight we thousand pounds, and are of different colours. Their sess is good eating, but the profit of it lies in its oil, which is proper for huming and currying of leather. They stake make excellent coverings for trunks, and, though not so since as Morocco leather, they preferve their freshpess better, and are less liable to cracks. The shoes and hoots made of those sinis let is to water, and, when properly teaned, make excellent covers for seast. The Canadian sea cow is larger, than the sea wolf, but resembles it in figure, it has two teeth of the thickness and length of a man's arm, that, when gowen, look like horns, and are very sine ivory, as well as is other teeth. Some of the rivers breed crocodiles, which differ but listle from those of the Nile in Egypt.

There are not so many of tock valence of birds in the spreat.

rivers breed crocodiles, which differ but listle from those of the Nile in Egypt.

There are not so many or such various of birds in the forest of Canada, as there are sinhes in the rivers and lakes. They contain, however, a great aumber of trees of different kinds, whose appearance is both beautiful and awful.

When the French had possessing of Canada Proper, it was inhabited by one numerical and eighty shootand people of that nation, who lived in assuence, being free from all taxes, and having full liberty to hunt, sish, fell timber for fuel or building, and to sow and plant as much land as they could cultivate. Their greatest hardship was the cold, which is there so excessive

from December to April, that the greatest rivers are frozen over, and the snow commonly lies two or three feet deep on the ground in the winter scalon.

from December, to April, that the greatest rivers are frozen over, and the snow commonly lies two or three seet deep on the ground in the winter season.

Montreal and Trois Rivieres are the principal places in this province. The former stands on an island in the river St. Lawrence, which is ten legues in length, and almost four in breadth, at the foot of a mountain which gives name to it, about half a league from the south share. The French improved it for well, that the whole island was become a most deligated spee, and produced every thing that could administr to the convenience of life. When the rown was reduced by general Amborth is was of an objoing form, well peopled, and surrounded by a wall, with cleven reduced. Which served instead of ballons. The street are require, the heuter good, the disch eight for deep, and the batterine of the fort command the streets of thereon.

The inland trade is with the Indian reduced, and there is a species of trades, called Coureurs des being the deep on a trade with nations unknown to all the world besides. A fair is held in June at Montreal, to which ladians reduce for the distance of one hundred miles with petry, and the other Indian commodities. The fair sometimes last, for three mouths. The refort of savage nations to it is incredible; and green distances of one hundred miles with petry, and the other Indian commodities. The fair sometimes last, for three mouths. The refort of savage nations to it is incredible; and green distances and tomatts often hopem, the Indians being so stands they share in the world.

In the, neighbouched of the island, on which the town hands, is a greet number of other, particularly that called the life of Jesus, which is about eight begues in lieuch, and two in breacht. There are also seen give the Country about in the other places of other seasons of the last of these sivers likewis, not ar from Montreal, are two villages of Islands about they for Desource, the chief of which are, Gasse, Jean life, Midon like, Richelieu Heart, and the su

lites, life Comp. St. François. Notre Dame des Anges, St. Alexis, St. Micheel, St. Jojeph, Forte Frontenec, Detroit, Michilachimenac and Nisgare, near which is the famous cattract above deferibed.

Between Quebec and Montreal, in failing up the river St.

Lawrence: the eye is entertained with beautiful landscapes, the
banks being in usuary places beld and steep, and shaded with lofty
trees; and nothers crowded with villages, of which there are
also many on the standard, wherewith the channel of the river is
interspreted. After passing the it is this is the air becomes
fo mild and temperate, that the traveller thinks himself transfo mild and temperate, that the ported into a different climate.

ported into a different climate.

The most considerable of the Canadian tribes of Indians at prefent are, the Iroqueit, the Hurons, Miamis, Nokee, Ounamis, Outagamis, Sakis, Illinols, Oubaches, Otters of Loutres, Savanneis, Sonra; Affiniboils, and Christinaoz. The feven last line towards the north-west; about the rivers Missour and Oubache, and about Lake Superior and Affiniboil. To the north of the island of Montreal the country is thinly propled; but a few villages belonging to the inhabitants are to be met with, among which are those belonging to the Nepiffings, to called from a lake of that name; thele are the true defendance of the Affarcants and the profileration of the men with, among which are those belonging to the Nephings, so called from a lake of that asme; these are the true descendants of the Algonquins, and fill preferre the purity of that language. The French stabilined some ports on the banks of Lake Superior, where they traded with the Christianus and Affinibolis." In short, a traveller can know very little more of this country than a man may learn by an inspection of the map. He may wander one shouland miles on the banks of the finest lakes and rivers in the world, without meeting with a human creature, and those he does meet with are generally so studie, is call, barbarous, or shy, that they scarcely deserve that denomination. Most of them though they shall make the same of New Britain, or the country of the Equimatur, comprehending Labrador, New North and South Wales, &c. It is bounded on the footh by the hay and twee of St. Lawrence and Canada; on the well by unknown lands, on the east by the Atlantic occan and Bassin's bay, and on the north by unknown lands towards the worth pole.

In this country the mountains are very high towards the north, which being perpetually covered with saw, and the winds hlowing from thence three quarters of the year, are the chief occasion of that excessive cold which is sound on this continent under the same parallels of latitude. The winter generally commences in September, and continues this June; during most of that time the snow lies very deep upon the ground, and the rivers are stropen eight or nine feet thick. The country about for Nelson is a low marshy soil, producing juniper, brich, poplar, a similar wood of the spruce, and no doubt would produce corn; if cultivated.

Terra de Labrador is a samed on the southern coast of Hudon's straights: the foil here is much of the Gauen nature as the on the western side of the bey. This country is of straingular.

fon's straights: the foil here is much of the same nature as that on the weltern fide of the bay. This country is of a triangular form, extends from the fiftieth to the fixty-third degree of north latitude, and from the fifty-first to the feventy-ninth degree of west longitude, and is inhabited by some tribes of Esquimana weft longitude, and is inhabited by some ribbes of Essolimans' Indians, who have neither towns, villages, or settled habitations, but are numerous, mischievous, treacherous, and cowardly. They exchange sure for kettles, pots, knives, and other kinds of hard-ware: They subside chiefly by hunting and sishing, as their country abounds in a great variety of wild and tame quadrupeds, sowle, &c. and the seas and rivers associated that the subside sure and the sum of the country about Hudson's bay, lead a wandering life, feldom remaining more than a week or two in a place.

The English Hudson's bay company have several forts and statements on this coath, the principal of which at prefer are, and the sum of the su

fettements on this coast, the principal or which at pretent are, fosts Churchill, Nelfon, New Severn and Albany, on the weff side of the bay; and they had formerly Forts Charles and Repert at the bottom of the bay. The English; in these factories, sail beef, pork, mutton, and venifon at the beginning of the minter, and these are preserved by the frost six or seven months

five from putterfaction; geofa alfo, partridges, and other fown, killed at the fame time, are hang up with their feithers and citrain, yet hold good all the winter. In lakes the fanding waters, which are not ten feet deep, the state is fluxed in the bottom, and the fifth killed; but in waters of geater deprin, and in tivers near the fee, the fifth are caught all the winter by with time hole in the teo, to which they come for air. We thom as they are linked out of the water, they are intendately frogen and fifth, but may be thawed again by being intimerfed in cold water; and thus the fall provinces are thawed and fifth the meat is let down through a hole in the ter into 'the water, and thus the fall provinces are thawed and fifth never had been frozen, and eats very well; whereas routhed been frozen, and eats very well; whereas routhed the water, and in a little time it becomes fifth and plaible, in It's never had been frozen, and eats very well; whereas routhed the boiled, while frozen, it will be fpoiled, ind eat as if it was totten. There has want as they pleafe. About the fame time they take great in many as they pleafe. About the fame time they had great in many as they pleafe. About the fame time they nake great in many as they pleafe. About the fame time they nake great in many as they pleafe. About the fame time they nake great in many as they find all marked on the routh till. July or August. In faithmer they walf fow it return again in the beginning of winter.

There have been fometimes at thousand Iridian men, and fome women, who have come down to Port Nelfor in fir highling cances we trade with the English: many of them come from far diffant countries. There Indians are of a tawny complexion, and not for fair as those in Labrador, nor of such large robult bodies, but much more gentle and trastable.

In summer they were fearcely any cloath, but anoint themfelves with bears greafe, or the oil of feals, which, it is fair, prevents their being stung by mulguetces, or bit by bong to other infect y but tho

besver fkins, which they oil and greafe in the fame manner ; they do their own fkins in furmer, which presents the co

beaver fkins, which they oil and greafe in the fame manner six they do their own fkins in furmmer, which prevents the cold penetrating them, and have a kind of builkins on their legi; and shoes of deer fkins: they we also beaver fkins and furs for their beds and coverings in the right.

We shall now give forms account of the rife and progress of the distensions which unhappitly subfitted between England and America. These originated in New England, but the British parliament imposing stamp duties on all papers and parchments made use of in law proceedings, and in money transactions between man and man in the year 1765. This act being repealed the following year, caused the general ferment to fulfide but in the year 1760 it revived with accumulated force, on fresh internal taxes being laid, particularly a duty of three-pence per pound on all teas.

pound on all teas

pound on air teas.

The provincial affembly had for fome years been on ill terms
with Mr. Barnard, the governor of the province, and he being
now recalled, was succeeded by general Gage, and a body of forces, amounting to about two thousand men, which failed from Ireland and Halifak, arrived foon after. But neither the from Ireland and Halifax, arrived foon after. But neither the new governor, who was known and respected in the province, was capable of allaying the ferment, nor the appearance of the troops could overswe that spirit of epposition which was gond forth. A general confederacy of all the eld colonies, from New England to South Carolina, took place, and associations were every where entered into, for the purpose of breaking off all commercial intercours with the mother country.

A general congress, composed of deputies from each independent country, met at Philadelphia, which the authority of the governors of the respective colonies was not able to controul. The right of Great Britain to levy internal taxes on that continent was denied, and the security of every man's property was considered as lost by the British parliament claiming such a power. Petitions, remonstrances, and addresses were trans-

was confidered as loft by the British parliament claiming such a power. Positions, remonstrances, and addresses were transmitted to England, couched in the most respectful terms of allegiance, expressive of their earnest wishes to be allowed to levy money for the uses of government by their respective provincial assemblies, and not by taxes levied in an affembly to which they feat no representatives, and in which they had no

which they feat no representances, and in which they had no weight of interest.

About the middle of Desember, 1773, some ships laden with tea being at Boston (as a duty was to be paid) the people would not fuffer it to be landed. The ships being refused a clearance by the governor, unless the cargoes were landed, and properly disposed of, a mab, dressed like Mohawk Indians, entered the three ships which contained the tea, and emptied their cargoes, consisting of three hundred and forty-two chests of tea, into the water. This and other outrages occasioned the Boston port bill, passed April 4.1774, by which the rown of Boston was professived and blocked up.

Much time was afterwards spent in fruitless negotiation; but in 1774 open hostilities commenced: the American congress

in 1775 open hostilities commenced: the American congress declared the British settlements independent state, and the province of Georgia, acceding to the alliance, they assumed the title of the Thirteen United Colonies of America. They for

se time made head agains a powerful semy fent out from the Britain, which was firangtheried by a large body of Hef-ps, the whole under the command of general Howe, whilst ween sighty and ninew, frigates of different faces were, sta-and along the coast, and force ships of the line rendezioused

Grass, Reissin, which was firangthered by a large body of Heffans, the whole under the command of general. Howe, whilst between sighty and ninew frigues of descent, face were that himsel along dayon the coast, and four faige of the line rendest/coast at Naw X ort.

The first blood shat, was drawn in his anhappe, quarrel was in it, (firmish at Lexington, phout these miles from the town of Lambridge, in, the year 1735, when the king's, roops were degreen heat to deform with condicatable lots. The next extion year that of Bunker, attill, in the same year, when the British troops that gywards of one thousand men Killed and wounded a among the former was more than a proportionable, numbers of Grant, 1726, Sir, William Howe made a descent on Long Band, which he shudded, and which the king's, woore, remined potentian, amouning to three thousand five hundred men, furrendered pritours of, was to the Americans under general Gates at Samboga, a finall fort, stuated about hity miles never of Albany, on the east fide of, Huddon a siver red with a react of commerce, and another of defentive allience with the French king, who thereby acknowledged their claims of indomndence.

The was was profecued with various fucers till October, 2732, when the British army, under lord, Coramellies, being in want of necessaries, much hareafied by fatigue, weakened even by victories, and reduced to the final number of threat thousand five hundred, effective men that were fie for duty, were obliged to sprender on the goth of the same months to the arms of France and America. It his proved a fatal freke to the British arms and interest in America, and cast such a gloom over the flate of effairs in that quarter of the world, as to occasion an address, petition and remonstrance from the city of London, requesting his majedy. To reliaquish entirely, and for ever, the plan of reducing their American benther by force. This was inceeded by a vote of the house of commons on February 27, 2782, for, any address to his majedy was empayered by parliamens

tween all the belligerent powers. By, the treaty, of peace proposed to be concluded between the crown of Great Britain an ween an the engelette weeks. Syn the steaty, to beaute however, when the concluded between the crown of Great Britain and America, ". his Britanaic, majedy, acknowledges the United States, viz. New Hampfhire, Mallachufet's Bay, Rhode Mand, and Providence Platations, Connecticut, New York, New Jesfey, Pennfylvania, Delaware, Maryland, Virginia, North Carolina, South Carolina, and Georgia, to be free, fooverign, and independent states; treats with them as such a and for himself, his heirs, and successors, relinquishes all claim to the going memory, propriety, and territonial rights of the same, and every part thereof. The United States are also by the faid treaty allowed to take fish on the Banks of Newfoundland, the gulf of St. Lawrence, &c., as heretofore. Though America rejected the idea of a separate peace, sheaceeded to the terms which admitted her independency, whereby the antient and valuable colonies were differenced from Britain for ever, Such was the everto-be-regretted conclusion of this unfortunate contest, that cost of much blood and treasure to these kingdoms. A judicious writer observes, that the American debt makes forsy millions of writer observes, that the American debt makes forty millions of dollars, at four thillings and fixpence cath, being nine millions four hundred and fifty thouland pounds a the annual interest of which, at fix percent, is ave hundred forty-three thouland fix hundred pounds t fo that the Americans have obtained their purpose of independence, and gone through the whole seven years war for about one half the sum of money that one year of the fame war coft England. bright

Containing descriptions of Old and New Mexics, Colifornia, Loui-fana, and Left and Wift Florida; their fituation, boundaries, and extent, chmate, produce, inhabitants, U.C.

IE rich and extensive country of Old Mexico, or New Spain, was once a mighty empire, ruled by its own mo-1598, afterwards conquered it under the command of F Cortez. It lies between feven degrees thirty minutes, and thirty degrees forty minutes north latitude, as two khoufand-miles long, fix hundred broad where wideft, has the ifthmus:

of Daries on the foulti, New Mexico on the north, the guil of Musico on the cast, and the ocean on the west. It is divided into the audiences of Guedelajara, Mexico and Guatimala, and is governed by a vicetoy.

Mexico, cansidering its situation in the terrid sone, enjoys a temperate, air. The rainy, sason begins at the latter end of Aprill, and constitues till Sepanment, being precided by terrible flooms, which are so variegated, that the wind blows from almost avery point of the heavens, increasing daily in sury till the menth of June, at which time the raise falls as is a scenario delicious fraits, roots, and vegetables; many of which are peculiar to is, or at least to America. Of these the most remarkable are, bambook, mangroves, and logwood, which grow on the costis; and and white catton area, casars, blood wead, and make, of which the natives make roops and cables; light wood, of which they make shoats, being as light as cork; whitewood, the cabbage tree, the calabash, caseo, and venella, which the Spaniards call befuce or baiotills; planniars, because, pine-apples, single dillo, avogate peas, mammae, mammae spotts, grape, prickle, babby, and other carious strait tree; besides which the Spaniards have introduced most of the European fruite. This country also produces the positionous manchined upple, goarde of a prodigious sine, melons, filk graft, tamarinds, and locust trees, the little black, white, and borachité spotes trees, the listle of which takes its mane from the interiating quality of the fruit. Here are also the grenadiled de chine, creeping plant, and the may-bey, which su aisson the internation of strong laquer, not unlike brandy, is as pleasant and strong as wiree is differed from the.

There is also sound in Mexico balfam of Pern, gusiacum, china-roor, fariaptrilla, and the root mechoacan, which are well known to druggits and spothecaries, and of excellent tips in a

There is also found in Mexico ballam of Pers, guincum, china-root, farfapatilla, and the root mechoacan, which are well known to druggills and spothecaties, and of excellent use in a variety of differences. Other, valuable, productions of News Spain are, copal, anine, teatemakes, caraidas, liquid amber, and oil of amber. Befides the mais or native grain-of-Mexico, the Spainards have introduced; the use of barley, wheat, pers,

The beafts, birds, infects, reptiles, &c. are much the fame as in Pern.

as in Pern.

On the western soult of New Spain, near the Pacific Ocean, are some high mountains, and of of which are faild to be volcaness. Several rivers rise in these mountains, and fall, some anto the gulf of Mexico, and some into the South Sea, on both to the gulf of Mexico, and some into the South Sea, on both to which there are several capes and bays. The bays of Campeachy, and Hondaras are among those on the gulph.

In the rocky, betten parts of the country are the gold and solver mines. There are, it is faid, several of the former, and no sewer than one thousand of rivers and torrents. Whoever discovers a mine of gold or silver, is at liberty to work it, physing the king a tenth of the product, and limiting himself within, fifty, yards retund the place upon which he has fixed. All the filver and gold dog, or found in grains, is entered in the royal exchapter, and it is reported, that notwithstanding great-quantities are run and concealed, no lefs than two millions of filver marks, [weighing eight ounces each, are entered yearly. quantities are run, and conceases, no test data or entered yearly, out of which they coin feven hundred theofand marks, into pieces of sight (quarter pieces, ryals, and half-pieces, the latter of the control of the c paing about three-pence sterling value. when they judge that goods must be wanted at any particular ports in the West-Indies. Their way is, to petition the council of the Indies for a licence to fend a ship of these hundred toms burden or under, to that port: they pay for this licence feety or fifty dollars, besides presents to the officers, in proportion to the countvance necessary for the design; for though the licence runs only to three hundred toms at most, the vessel sitted out is feldom left than fix hundred. This ship and cargo are registered at the presented burden; it is required too, that a certificate he brought from the king's officer at the port to which she is bound, that she does not exceed the size at which she is registered. The trade of Spanish America has been carried on for some years past by these vessels, called register ships.

The inhabitants of this country are at present a mixed people, confisting of Indians, Spaniards, and other Europeans; and the Creoles, Meltichoes, or issue of the Spaniards by Americans; the Mestiches, or the issue of the shift since a slowed the fame privileges as true Spaniards. The negroes are likewise pretty numerous, being imported from the coast of Africa for various purpose, and many of them edmitted to their freedom. The lifue of an European and a negro consistures another distinction, called Molatto; besides which, there is a mixed breed of negroes and Indians, which is generally deemed the lower trank. Some tribes of Indians, both in the open country and the mountains, still preserve their firedom, but most of them are subject to the Spaniards, and have embraced the popsish religion. Among the free Indians are those on the Musquito shore, where the English have fome fettlements, and a governor; these Indians being implacable enternies to the Spaniards, but sim

Among the free Indians are those on the Musquito shore, where the English have some settlements, and a governor; these Indians being implacable enemies to the Spaniards, but firm friends and allies to the English.

The native Indians are in general tall, clean, well proportioned, and handsome: their complexion is a deep olive, and both sexes have long, black, lank, coarfe hair on their heads; but they suffer none on the other parts of their bodies; some tribes esteem flat noses as a great beauty. Almost all the Mexicans paint their bodies with the figures of various birds and beasts, and among them with oil or fat. Some tribes are clearled. paint their bodies with the figures of various birds and beafls, and anoint them with oil or far. Some tribes are cloathed; but the men of others to almost naked. The Mexicans, in general, have their nofes, lips, cars, necks, and arms, adoined with pearls, and other jewels or trinketts, made of gold, filver, or form other metal. The free Indians are faid to be a brave, generous, humane people, except in the article of human factifices; but the others are become cruel, treacherous, cowardly, mean, thievish, and altogether vicious. Befides all the domestic offices, the women spin, weave, and drefs cotton and linen cloths, for their own and their husbands apparel. Though the free Indians discover a great veneration for the fun and moon, they have no image of them, but a great many of human form. They cultivate but little soil, and live chiefly by hunting and fishing.

They cultivate but little foil, and live chiefly by hunting and fishing.

With respect to the Spaniards of Mexico, we are told, that the clergy, both secular and regular, rival the quality in their drefs and luxurious way of living; they drink, game, swench, and make a jet of their vows of poverty, many of them getting money enough to return to Old Spain, and purchase bithopries. A priest, who has but an ordinary cure in Mexico, frequently lays up ten or twelve thousand crowns in ten years; is able to live plentifully all the time, while he is highly reverenced by the common people. The laity are represented to be an extremely bigotted and lewd people; a prefent to the church wipes off the odium of the greatest crimes; and the people are instructed in their religion here by plays and theatrical entertainments in the churches, as in old Spain.

The principal places are, r. Mexico, which stands in the

tainments in the churches, as in old Spain.

The principal places are, r. Mexico, which flands in the middle of a great lake of its own name, in latitude nineteen degrees forty minutes; about one hundred and feventy miles weft of the gulf of Mexico. This city, in point of regularity, exceeds all others in the univerfe; the fireets being fo firsit, and exactly disposed, that from any part, the whole is visible. The want of gates, walls, and artillery, together with the sive great cause-ways leading to the city, renders Mexico extremely remarkable. All the buildings are convenients, but the making remarkable. All the buildings are convenient; but the public remarkable. All the outdoings are convenient; out the public chickes, efpecially the churches and convents, are magnificent. The income of the grand cathedral amounts to near eighty thousand pounds fterling per announ, out of which the archbifhop has fifteen thousand pounds, befides vaft fums arising from perquistres. The number of the inhabitants is computed at three hundred thousand, who are said to draw annually from the mines above ten millions of money, without reckoning the vaft fums feereted, in order to defraud the king of his rights; yet, with thefe almost incredible treasures, the people may be reckoned poor, as most of them live beyond their fortunes, and terminate a life of profusion in the most wretched indigence. A prodigious quantity of jewels, gold and filver plate, and toys, together with the most valuable commodities of Europe and Afia, are exposed to fale in the fireets.

2. The town of Acapuico is fituated about two hundred and ten miles fouth-east from Mexico, in feventren degrees north latitude or a bay of the South Sea. The haven is large and commodious, and the entrance fecured by a flat ifland running across, at each end of which is a deep channel, furficiently broad for the greatest vessels. The only inconventience is, that ships must enter by the sea wind, and go out by the land-breeze, which foldom fail to succeed each other alternately, so that they are frequently blown off to sea, after repeated attempts to make the harbour. The town is large, but ill built; a part of it consists of warehouses. During the fair, after the arrival of the Lina and Manilla ships, the town is so excessively crowded, that great numbers are obliged to pitch tents in the neighbourhood for their accommodation. It is supposed that the Manil a galleon carries off from Acapulco at tens ten millions of dollars, in return for the goods she brings thinker, and for the payment of the Spanish garrisons in the Philippine sites. The climate here is unleasibly, and the earthquakes very common.

The town of Vera Cruz, or Ulvs, stands near the gulf of Mexico, about stventy leagues from the capital. It is very strong, both by nature and art, being the great mart of all the Spanish trade in the north sea, and has a fase commodious harbour. Few Spaniards of distinction reside here, on account of the infalubrity of the air.

The province of New Mexico, including California, is two

of the infalubrity of the air.

of the infalubrity of the sir.

The province of New Mexico, including California, is two thousand miles long, and one thousand fix hundred broad; it is bounded on the east by Louisiana, on the fouth by New Spain, on the west by the gulf of California, and on the north by high mountains. This country, though pleasant and healthy, is but little cultivated, and thinly inhabited. It has several rivers, many ports and creeks; and the Indian tribes, who inhabit it, live distinct from each other. Many of the navives are Christians. the natives are Christians.

The town of Santa Fe flands near the fource of Rio del Norte, in thirty-fix degrees north latitude, and about one hundred and thirty leagues from the gulf : it is a well built, hand-fome, rich town, and the feat of a bishop, suffragan of Mexico. as well as of the governor of the province, who is suboidinate to the viceroy of Mexico.

to the viceroy of Mexico.

The peninfula of California, the most northern of all the Spanish dominions on the continent of America, extends from the north coasts of America into the Pacific occan eight hundred miles from cape Sebastian, in forty-three degrees there minotes north latitude, towards the South-east as far as cape St. Lucar, in twenty-two degrees thirty-two minutes north latitude. The eastern coast lies nearly parallel with that of Mexico, opposite to it; and the sea between is called the lake or gulf of California. Its heastly have you mornal, towards the coast in contrast. to it; and the lea between is called the lake or guir of Califor-nia. Its breadth is very unequal; towards the north it is near two hundred miles, but at the fouth extremity it tapers away, and is fearcely fifty miles over. The more fouthern part was known to the Spaniards foon after the difcovery of Mexico for Cortez difcovered it in 1535; but they did not till lately penetrate far into it, contenting themselves with the pearl fishery

Several kinds of fruit are produced here; there are two fpecies of deer peculiar to this country; allo a particular breed of fheep, buffaloes, beavers, or animals much refembling them; a prequiar foecies of wild dogs, lions, wild cats, and many other wild beafts. The horfes, mules, affes, ozer, theep, hogs, goats, and other quadrupeds that have been imported hither from Spain and Mexico, multiply exceedingly. Of the two fpecies of deer peculiar to California, that called taye by the natives is greatly effected; and its fieth as well tafted as venifon. The coast is plentifully flocked with peacocks, buftards, geefe, cranes, vultures, gulls, cormorants, mews, quails, linnets, larks, nightingales, and many other species of birds. There is also a great multitude and variety of fifth in the gulf of California, the Pacific ocean, and the rivers. Though infects swarm here, as in most hot countries, yet on account of the dryness of the foil and climate, they are neither noxious nor troublesome. There is one of the richest pearl fisheries in the world on the coast of California, and there are supposed to be mines in the

tountry.
In California are two confiderable rivers, namely, Rio Collorado, and Rio du Carmel, with several smaller streams, and fine ports, bays, creeks, and roads, both on the raft and well fide, which is the reason of its having been so much frequented

fide, which is the reason of its naving been to inner requented by the English privateers. There are, in the heart of the country, plains of falt quite firm, and clear as crystal. A great variety of favage tribes inhabit California. Those that live on the east fide of the peninfula are great enemies to the Spaniards; but, in the other parts, they feem to be very hospitable to all strangers. The inland country, especially towards the north, is populous. The Indians resemble those described in other parts of America. Their hoats are only rafts, &c. Their arms are, bows, arrows, and jagged clubs. They have a great many abfurd, ridiculous customs, opinions, and superstitions. They go almost naked, and pay great defe-

rence to their pricits, who pretend to be magicians and physicians. All their houshold furnituse and property confids of the implements and in fishing, butting, or war, in which most

of their time is front.

The province of Louisians is bounded by the Mississippi on the west, and by East Florids, Georgia and Caraca on the east, and extends from the lake of the Illinois, or refrom the fource of the Mississippi on the north, to the gull of a zico

on the fouth. This is a very pleasant fruitful country, being watered by a number of rivers; the free at overflowings of which contrinumber of rivers, the free art overflowings of which contri-bute not a little to its and. Nothing is more delightful than the Meadows, which are fit for feed of all kinds. In fome perts the foil yields three or four crops in the year; for the winter confifts only in heavy rate, without any nipping frolls. Almost all forts of the trees of Europe are to be found here, besider a variety of others unknown to m, and some of them of great value, as lofty ceders, that diffil a gum, which is faid to excel all the nobleft European perfumes; and cotton trees, which are of a prodigious height. The whole country abounds with a great variety of game, fowl, eattle, and other ufeful ereatures and productions.

The rown of New Orleans is fituated between the eaftern

fhore of the Miffifippi and the Fith river, near the lakes Pontflore of the Williftppi and the Filh river, near the rakes Font-chaftrin and Maurepas, and about eighteen leagues from the fea. It is a pretty large handfome town, but fubject to most suinous insundations; besides, the navigation between it and the fea is fo very difficult, that none but small vessels at shall flat-bottomed boats can get up to it, there being a shelf that lies between the mouth of the river, where there is not above ten feet water. It is faid that the channel of it is twice as large as that of the Seine, keeping the fame breadth all along, and that the state of the state is an id-

the fiream is rapid.

Louisana was ceded to the English in 1763, but as it con-fitures the greatest part of the government of West Florida, which, by the treaty of 1783, the Spaniards are to retain, this country is confequently now subject to the crown of Spain.

The laft countries we are to describe on this continent are East and West Florida, which are five hundred miles in length,

Esst and West Florida, which are five hundred miles in length, four hundred and forty in breadth; having the gulf of Meako to the fouth, the Apalachian mountains and great lakes to the noith, Georgia to the east, and the Atlantic ocean to the writ. Florida was first discovered by Cabot, a Venetian mariner in the service of England. The had its mame from its verdure, being certainly a very fine country.

The air is wholesome, as evidently appears from the size, vigour, and longevity of the Floridan Indians, in all which respects they far execed the Mexicans. The feel, except on the sex coast, is rich and service, producing frequently two or three crops of Indian corn in the year; and might, with proper cultivation, be brought to bear every fort of grain. Here are all kinds of timber and fruit trees, especially pines, laurely, palms, eccar, express, and chefmut trees, which grow to an extraordinary length and size, and, with the oaks, afford palms, cedar, eypress, and chessus trees, which grow to an extraordinary length and size, and, with the oaks, afford nourishment to swine; but the wood most prized, and in greatest plenty, is the sassance, of which considerable quantities are exported. Excellent limes and prunes also grow here in great abundance, with viner of various forts, and cotton trees, hemp, slax, pulle, roots, and herbs; game, fowl, and slih, ate also very plentiful. The root mendiboos, of which the

esssays flout and bread are made, is very common; and there is a kind of grain, like our oats, that shoots up spontaneously in marshy places, and by the sides of rivers: Here is a fruit casted unia; so exquisite and wholsome when ripet, that among the Europeans it goes by the natis of the ardial julep. Eactleast beef, veal, and mutton, are the produce of the country, together with horses sit for draught and carriage, so cheap, that they may be purchased for the value of a crown in European in Europeans. The other products of Florida are ambergist; cochineal, indigo, silk grass, amethysts, turquoises, lapislasuli, and other precious shone; copper, quickfliver, pit coal, iron ore, and a kind of stone pitch casted copas, which the Spaniards used as tar for their shipping; on the coast pearls are also sound. The most considerable mountains are the Apalischian, which divide Carolina and the other American plantation from Florida: A vast number of noble rivers interfect this country, most of which risk in the momentains above-mentioned, and fall into the gulf of Mexico, or the Atlantic becan r the chief are the Missilippi, Ohio, Coza, or Cousse, and the river St. John, The Missilippi, which the French call St. Louis, is in many respects the sheet river in the world. It runs a very long course, in next and catanasta.

The principal European settlement in East Florida is St. American contract and he can set the mounts of the country of the principal European settlement in East Florida is St.

The principal European fettlement in East Florida is St. Augustine, standing on the eastern coast of the peninsula, about seventy leagues from the gulf of Florida and channel of Bahama, thirty fouth of the river Alatameta, or Alatameta, and forty-seven from the town and tiver of Savannah. It is fituated forty-feven from the town and river of bavannan. It is fituated in latitude thirty north, and lies along the fhore at the bottom of a hill, in the form of a parallelogram, the firests cutting each other at right angles. The port is formed by an ifland and a long point of land, almust divided from the continent by a river; which falls into the fea two miles fouth of the town. The entrance into the port lies between the island and the point of land, and is about one mile and a quarter over, but very shallow, as is indeed most part of the coast of Florida. About a mile to the northward of the town stands the easile, desended

mile to the northward or the town stands the cattle, defended by four baltions, and is pretty frong.

Sr. Matthio is the next place to St. Augustine, being fitnated fifteen leggues to the north of it towards Georgia. Mr. Roller, a member of the British parliament, had a fettlement on the river St. John; and at Mosquito harbour, not far from the channel of Bahama, snother fettlement was formerly established

here by one Dr. Trummel.

Mobile and Penfacola were the chief places belonging to the English in East Florida and Penfacola. The first is but a finall place, lying on the tiver of that name, about one hundred miles place, tying on the river of that name, about one mindred miles from is mouth, and feventy from the Miffiffippi. Penfacola flands on the weft fide of the bay to which it gives name, about ten leagues from Dauphin ifle, at the mouth of the river Mobille.

The harbour is the best upon all this coast of the gulf, being The harbour is the best upon all this coast of the guilf, being large, fafe from all winds, with four fathom water at the entrance, and seven or eight farther in. A fine river enters the bay on the east side of the harbour, which comes about one hundred miles out of the country, after being formed by the junction of two other rivers. The town is not considerable at present; but it is probable, that from the commodiousness of its situation and harbour, it will soon make a better figure, if the Spaniards, to whom both the Floridas were given up by the peace of 1783, are not too indolent to improve them.

C H A P. III.

THE NEW HISTORY AND DESCRIPTION OF THE ISLANDS IN THE

WEST INDIES AND AMERICA.

SECT.

General description of the West Indian islands, with an account of their situation, climate, produce, and commodities, plantations, negroes, trade, Gc.

THESE islands, which are fituated between the two continents of America, now belong to Great Britain, Spain, France, Holland, and Denmark. They lie in the form of a bow, or femicircle, ftretching almost from the coast of Florida porth, to the river Oroonoko, in the main continent of South America. Some call them the Caribbees from the first inhahitants, though this term is generally confined to the Leeward islands. The geographical maps and tables distinguish them

by the names of Great and Little Antilles; and failors he by the names of Great and Little Antilles; and failors by those of the Windward and Leeward, with regard to the usual courses of ships from Old Spain, or the Canaries, to Carthagena or New Spain, and Porto Bello.

The West India islands in general have nearly the same climate, allowing for those accidental differences which the

feveral fituations and qualities of the lands themselves produce. As they lie within the Tropier, and that the fun goes quite over their heads, passing beyond them to the north, and never returning further from any of them than about thirty degrees to the fouth, they are continually subjected to the extreme of an heat, which would be intolerable, if the trade wind, rifing gradually as the fun gathers ftrength, did not blow in upon

nd there aneoutly a fruit t among Enerly country, esp, that turopean mergrit, iron ore, and which m Florida, most of d fall into fare the St. John, in many on goutle, free from

them from the fest, and refrash the air in such a mainst ; as to enable them to follow their necessary occupations even under the meridian sun. On the other hand, as the night advances, a bredze begins to be perceived, which blows frautly from the land, said were from its centre, toward the fest, to all points.

and, said were from its centre, toward the fea, to all points of the compais at once.

By the fame ratinarhable providence in the disposal of things it is, that when the fun has insee a great progress towards the tropic of Cancer, and becomes in a manner vertical, he draws after him fuch a valt body of clouds as shield them from his direct beams; and, disfolving into rain, coel the air, and refresh the country, thinky with the long drought, which generally continues from the beginning of January till rear the month of June. But though these rains conduce to moderate the excessive heat, yet they produce great inconveniences owing to the amazing violence with which they fall. They are rather stoods of water poured from the clouds with a prodigious imperiuosity; the rivers refe in a moment; new rivers and lakes are formed, and in a short time all the low country is under water. Hence the rivers, which have their source within the tropics, swell and overflow their banks at a cerain feason.

When forms of that kind happen, they are very violent, and the hail-stones are exceedingly large and heavy. The rains make the only distinction of seasons in the West-Indies; the trees are continually green; they have no cold, frost, or frow, of source with such as the produce of the are exceedingly and the produce of the said the said the said the west-Indies; the trees are continually green; they have no cold, frost, or frow, if the said the west-Indies; the trees are continually green; they have no cold, frost, or frow, if the said the said

make the only diffinction of feafons in the West-Indies; the trees are continually green; they have no cold, frost, of show; and feldom any hail. But in the rainy feafon they are exposed to hurricanes, the most terrible calamity by which the inhabitants of these islands are assured. One of these destroys at a froke the labours of many years, and extinguishes the most exalted hopes of the planter. It is a sudden and violent from of wind, rain, thunder, and lightning, attended with a furious swelling of the sea, and sometimes with an earthquake; in short, with every circomstance which the elements can assume that is trivible and destructive. A hurricane comes on either in the quarters, or at the full change of the moon.

in the quarters, or at the full change of the moon.

Sugar is the grand flaple commodity here; this useful article
was not at all known to the Grecks and Romans; though it was not at an arown to the Orecas and Romans, mough it was made in China in very early times, from whence we had the first knowledge of it: but the Portoguese were the sirst who cultivated it in America, and brought it into request; as one of the materials of a very universal luxury in Europe. It is not fettled whether the cane, from which this substance is extracted,

fettled whether the cane, from which this substance is extracted, be a native of America, or brought hither by the Portuguese, from India and the coast of Africa; but be that as it may, in the beginning they made the most, as they fill do the best, so the comment of the most, as they fill do the best, so the price within the fugar cane is the most lively, elegant, and least-cloying sweet in nature; and which, sucked raw, has proved extremely nutritive and wholsome. Rum is distilled from the molastes; and a meaner spirit is procured from the semmings of the sugar. Rum sinds its marker in North America (where it is consumed by the English inhabitants, or employed in the Indian trade, or distributed from thence to the sistery in Newsoundland, and the African commerce); besides what comes to Great Britain and Ireland. However, a very great quantity of molasses is taken off raw, and carried to New great quantity of molaffes is taken off raw, and carried to New England, to be diffilled there. No part of this excellent plant is without its use, for the tops of the cane, and the leaves which grow upon the joints, make very good provender for their cattle;

and the refuse of the cano, after grinding, serves for fire.

The expenses of a plantation in the West Indies are very great; and the profits, at the first view, precarious; for the chargeable articles of the wind-mill, the boiling, cooling, and diffilling-houses, and the buying and subfisting a suitable number of flaves and cattle will not fuffer any man to begin a fugar plantation of any confequence; not to mention the purchase of the land, which is very high, under a capital of at least five thousand pounds. Neither is the life of a planter, if he means to acquire a fortune, a life of idleness and luxury : he must at to acquire a fortune, a life of sidencis and luxury: he mute at all times keep a watchful eye upon his overfeers, and himself must even overfee occasionally. But, at the boiling season, it is properly attentive to his affairs, no way of life can be more laborious, and more dangerous to the health, from a constant attendance day and night, in the extreme united heats of the climate, and so many fierce furnaces, add to this, the losses by hurricanes, earthquakes, and bad season; and then consider, when the suears are in the cases, that he quits the luxurd of a when the fugars are in the casks, that he quits the hazard of a planter, to engage in the hazards of a merchant, and ships his broduce at his own risk. These considerations might make one believe that it could never answer to engage in this business; but notwithstanding all this, there are no parts of the world, in which great estates are made in so short a time, as in the West-Indies. The produce of a few good seasons generally enougher action that it was a superior that it was a superior that the same of the same o when the fugars are in the casks, that he quits the hazard of a Well-Indies. The produce of a few good feefons generally provides against the ill effects of the worst, as the planter is sure of a speedy and profitable market for his produce, which has a readier fale than perhaps any other commodity in the world. It has been computed, that, under good management, the rum No. 80.

and mobiles pay the charges of the plantation, and the fugars are clear gain.

re clear gain.

Planters support their negroes at a very easy rate: They geterally allow to each family of them a small portion of land; and permit them, two days in the week. Saturday and Sunday, so cultivate is: Some are substituted in this manner; but others provide their degrees with a certain portion of Guinea and Indian cern, and us foome a falt-herring, or a small portion of Succeeding state ports aday. All the reft of the charge consists in a cap, a shirt, a pair of breeches; stockings, and shoes, the whole not exceeding forty shillings a year, and the profit of their labor yields ten or twelve pounds. The price of men negroes, upout their fast arrival, is from thirty-three to thirty-far pounds; women and grown boys about shirty shillings lets; but theth negroe samilles as are acquainted with the business of the islands; generally bring about forty pounds upon an average one with another; and there have been instances of a single negro-man, expert in business, bringing one hundred and fifty guiness; and the number of staves a planter possess.

wealth.

Though the traders in general make a very large profit upon all they fell, yet from the numerous filipping conflantly arriving from Europe, and a continual focceffion of new adventurers, the Wett India market is frequently overflocked; fo that good are fometimes fold at prime coft or under: but they who can afford to flore their goods, and wait for a better market, acquire fortunes equal to any of the planters. Physiciana and furgeous even outdo the planter and merchant in accumulating riches. All kinds of handicraftimen, effecially carpenters, bricklayers, brafters, and coopers, also meet with great encounbricklayers, brafiers, and coopers, also meet with great encouragement.

8 E C T.

Giving a particular description of the islands of Jamaica and Bar-badoes, their extent, climate, foil, preduce, inhabitants, Go-

DREVIOUS to an account at large of the West Indian and American Islands, we shall prefent our readers with the following table, exhibiting, at one view, the chief of them, with their names, length, breadth, principal towns, and the nations to whom they respectively appearance.

The island of america was discovered by Columbus, anno, 1494, in his second voyage to the West Indies; he changed the name Jameica to St. Jago. The Spaniards possessed it till the time of Oliver-Cromwell, who, being sensible of the advantages that nation obtained by their possession in America, fent a considerable squadron of men of was, commanded by the generals Penn and Venables, in 1654, to take the sine island of Hispaniola. But being repulled in that attempt, they bent their forces against Jamaica, which they made themselves masters of with lade losa. Since this time it has been in the hands of the English and recovered its cld appellation.

This is the largest of all the British island colonies, and even of any of the rest, except Cuba and Hispaniola. It extends from seventy-fire degrees firty-seven minutes, to seventy-eight degrees thry-seven minutes, and from seventeen degrees forty-eight nainutes to eighteen degrees fifty minutes north latitude. It is about one hundred and forty miles in length, and fixty in breadth, where broadest; but being of an event form the minutes are each end. It is figured about thirty fix leagues to the south of Cuba, and thirty-nine leagues to the west of St. Domingo: these two large islands defend it from the winds which desidate the Atlantic, whilst the number and disposition of its harbours put it into a condition to carry and diffosition of its harbours put it into a condition to carry on a great trade with either these and the other islands of the West Indian sea, or with the continent. Though this struction may expose it to the insults of its two powerful neighbours, it at the fame time facilitates the entrance of the fuecours frequently afforded it from the mother-country. There are about finteen principal harbours, besides thirty bays, roads, or good

Jamaica enjoys a pretty favourable climate, fince there is no country between the tropics where the heat is more moderate, being conflantly cooled, with refreshing brezzes, frequent rains, and nightly dews: it is, however, particularly unwholfome on the fea-coast, and excessively hot in the mornings all the year round, till about eight o'clock, when the fea-brezze begins, inanchoring-places. creating gradually till about twelve, when it is commonly firongest, and lasts till two or three, when it begins to die away till about five o'clock, at which time it is quite fpent, and re-turns no more till the next morning. About eight in the evening begins a land-breeze, which blows four leagues into the fea, and continues increasing till twelve at night, after which it decreafes till four in the morning, when it ccases, and returns again at night. The sea-breeze is stronger at some times than at others, and more fo near the coast than within land ; whereas it is just the reverse with the land-breeze. Sometimes the fea-breeze blows day and night for a week or two. In December, January, and February, the north wind blows furi-outly, checking the growth of the canes, and all other vege-tables, on the north fide of the island; but the mountains cover the fouth fide from them. Though it often rains at other times, yet the months of May and October bring the heaviest and most yet the months of May and October oring the neavest and most failing rains; and the east and well parts of the island, containing large tracts of inclosed ground, are more subject to ftorms of wind and rain, and more unwholfome, than the fouth and north. The south wind brings the most rain; no rains are Issting on the south side of the island, that come from the land. Frost and fnow are never feen here ; but sometimes large hail, especially on the mountains, where the air is always cooler than especially on the mountains, where the air is aways cooler than in the low lands. The land-wind blowing in the night, and the fea-breeze in the day-time, no thip can come into port but in the day-time, nor go out but foon after day-break. The dews here are so great within land, that the water drops from the leaves of the trees in the morning as if it rained, but in the plain or fandy places near the fea, there are feldom any

There is a ridge of hills, called the Blue Mountains, that run through it from east to west; the tops of which are covered with different kinds of trees, patieularly cedar, lignum vite, and mahogany, which render them equally pleasant and profitable to the inhabitants. Several fine rivers, well flored with fish, and navigable by canoes, take their rise from these moun-rains. A lower ridge runs parallel to the greater; and the vallies, or favannalis, are exceedingly level, without stones, sit for passure, and fruitful, when cleared of wood, especially on the fouth side of the island. After the rains, or feafons as they are ealled, the favannalis are very pleafant, and produce such quantities of grass, that the inhabitants are fometimes forced to burn it; but they are quite parched and burnt up, after long

droughts. Water is very scarce in some parts of this island, notwithstanding the many rivers and lakes with which it abounds; and in others, it is to mixed with fand and fediment, as not to be fit for use, till purified for some days in earthen jars; and much caule, in some years, perish for want of water. Near the sea, as at Port Royal, the well water is brackish and unwholsome.

There are feveral fait springs in the island, which form a fakt river, and several lakes. Though the foil is in general exceedingly service, yet it is thought not one fourth of the segar-ground is colivated, even the grounds lying near the rivers and the ses being for the most part over-run with woods. Sugar takes the precedence of the various productions in this island. The cane from whence it is extracted in a kind of reed, which rise commonly about eight or nine feet, including the leaves growing out of the tops the most common thickness is from two to four inches. It requires a light, porous, and deep foil, and is usfully out at the end of eighteen months. Within twenty-sour hours after the cases are cut down, they break from two to four inches... It requires a light, porous, and deep foil, and is aftailly cut at the end of eighteen months. Within twenty-four hours after the canes are cut down, they break them between two rollers of iron and copper, which are put in motion by a horizontal wheel turned by ozen or, liorfes. The juice, with which the inner part of the canes are filled, is received into a refervoir, from whene it is facesfively carried to feweral boilers, to reduce it into cryftala. La foon as it is cold, they gour it into earthen welks made in the finpe of a cone; the base of the cone, is open, it is apax is pierced with a hole, through which they let the liquor run, which will not afford any cryflair; this liquor is called treacle or molaifes. After the distance, they have malcowade, or rough fugar, which is greafy, brown, and foft. This fugar does not become white, finning, and hard, till it is refined, which is generally done in Europe, though there are two refining houses at Kington. The molaifes re usually the twelfith part of the value of the fugar 1 as great deal of this article is confumed in the morth of Europe and of America, where they fupply the place of butter and fugar to the common people: the Americans afe thest to produce a fermentation, and they give an agreeable tafte to a drink called pruis, which is nothing more than the infusion of the bark of a free. A ferret has likewife been dictoyred, to convert these molasses, by distillation, into a spirituous liquor called rum. The operation is performed by mixing one third of fyrap with two thirds of water: when these two substances have sefficiently fermented, at the end of twelve or fifteen days they are put into a full, where the distillation is varied on with year selection. rmented, at the end of twelve or fifteen days they are put into a fall, where the distillation is carried on with great facility. About one hundred thousand hogsheads of sugar, thirty thou-fand puncheous of rum, and three hundred thousand gallons of molaster, are the ai nual exports of Jamaica, from the produce

Pimento is the next most considerable production of Jamaica, Finence is the next most considerable production of jamacca, finee above three millions of pounds weight of it are experted every year. There are several kinds more or less strong, and more or less seried. The tree which produces the kind of pamento known by the name of Jamacca pepper was not cultivated in regular plantations till s66g. It commonly grows on the mountains, and rifes above thirty feet high; it is very straight, and covered with a grey close shrining bark; the leaves are in all respects like the laurel, and at the end of the branches grow the sowers. On which succeed berries a little laurer than juniper: respects like the laurel, and at the end of the branches grow the flowers, to which succeed berries a little larger than juniper: they are gathered green, and laid to dry in the sun, when they grow brown, and get that spicy finell which has given to pimento the name of all-spice. It is of excellent use for removing cradities, and strengthening the slomach.

Ginger is allo one of the productions of this island. This

the root of a small plant about eighteen or twenty inches high. It was greatly in vogee about the middle of the last century; but it is now only a secondary article of trade, especially since the consumption of it in Germany and Russia has of late years greatly diminished. But this circumstance, however prejudicial, is not fo feverely felt as the almost total annihilation of two cial, is not to reverely reit as the almost total annihilation of two branches of culture of the first kind, namely, indigo and cacao. In 1672 Jamaica had fixty indigo plantations, which produced yearly fifty thousand pounds worth of indigo: they are now reduced to eight, and an injudicious parliamentary duty has nearly ruined this branch, which the French have almost entirely wrested from us. At the time above-mentioned, there were in this island fixty cacso walks in produce, and many new ones under cultivation; but having been fune years afterwards all defiroyed by a blaft, they have never been funce renewed, and there is hardly one left, though chocolate is in general use

The productions which promise to increase are cotton and coffee. The French, however, have maintained their superiority in the manner of shipping coffee for Europe, so as to preferve all its qualities and virtues. Jamaica exports annually eight hundred casks of coffee of three hundred pounds each; and one thouland bags of cotton, each weighing one hundred and eighty pounds.

Jamaica produces, besides the articles already specified, a number of trees, flirubs, and ufeful plants, fome of them na-tives of its foil, others brought from the other islands or the continent : among these we may diffinguish the following : r. The mahogany, which is of great use in Europe; there was formerly a prodigious abundance on the shores, but now they m a falk eral exe fugare rivers

must go ten or twelve miles within fand, and get nearer to the mountains, to find any; this distance rendering it more incon-venient and expensive to transport, the Jemaicans get a great venient and expensive to transport, the Jamaicans get a great deal from the coasts of Spanish America, not quite so good, but much chesper than their own, which they send to Great Britains, in the year 1770 they exported to the value of fifty thousand pounds sterling. 2. The silk-cotton-tree, whole trunk is often eighty feet high to its branches, and twelve or sources feet in circumserence; they make of it canoss or periagas of twenty-five tons burden. 3. The dogwood, which does not yield to the Englith oak for hardness. 4. The bitterwood, much used by carpenters. 5. The bastard mammea, or wood of St. Mary, whole height and quality make it fit for building ships and houses, as well as the cedar, odoriferous and incorputable; this, besides, serves to cover and wantstot houses, as suptible: this, besides, serves to cover and wainfoot houses, to make pencils, &c. and is much used by cabinet makers. 6. The lignum-vitæ, excellent for joiners and turners; its gum, called guaiacum, is of excellent service in medicine.

They have also feveral trees that are useful in domestic occo-nomy; among which are, t. The oil-tree, or Palma Christi, fifteen or fixteen feet high, and lades with nuts affording plenty of an oil which is of great ufe, as well as that of the palm-tree; this last is much efteemed by the negroes. 2. The cacao-tree and date-tree produce fruits both cooling and nutritive. 3. The cabbage-tree, a beautiful tree whole stem grows to a prodigious height, some having been seen one hundred seet high; and neight, some naving been seen one hundred seet high; and produces at the top a substance which has the appearance and taste of a cabbage. 4. The tamarind-tree, whole fruit is well known; they procure a valuable varnish by incision from the tree; and might extract an useful oil from the nuts. 5. The alve or soap-tree, which afford an excellent soap. 6. I he red mangrove, and the black olive-tree, used in tanning of hides, and their bank is infinitely preserable to that of the oak for this purpose. 7. The machioreal; a remarkable tree: all the parts of it, leaves, juice and fruit, (the latter of which much refem-bles a crab tree) are more or less possonous. Here are likewise various forts of dying woods, gums, and medicinal drugs; among the latter are guaiacum, clima-root, taraparilla, caffia, venetlas, alocs, and the wild cinnamon-tree, which is effected of fovereign ufe for promoting digefi

Tehacco is also produced here; but, being of a coarse kind, is cultivated only for the fake of the negroes, who are fond of it: they have also Indian and Guiney corn, with peas of various kinds, but none resembling those of Great Britain, except such as are reared with great care and tenderness in gardens; likewife yains and potatoes, together with cabbages and a variety of roots, particularly callava, of which they make bread.

There are various kinds of berries in the woods; but apples, and those fruits that are more peculiar to cold countries, thrive but badly here. Their principal fruits are oranges, lemons, citrons, palins, pomegranates, shaddocks, momres, sour-sops, papao, inclons, planiain, tamarinds, guavas, pine-apples, cus-

tard apples, flar-apples, prickly pears, and alicado pears.

There are but lew eattle in this island, being chirsly supplied with beef from the British colonies on the continent; what they have are very small, and the flesh tough and lean. Their sheep, however; are large and fat, and their fleth very good, but the however; are laige and fat, and their fielh very good, but the wool, which is long and full of hairs, is of little use. They have great plenty of hogz, and their fielh is exceeding sweet and delicious. Hories, asses, and mules, are very numerous: the former are small, methesome, and hardy; and generally sell for thirty or torty pounds sterling, when well made.

Fowls, both wild and tame, are sound here in great variety, and particularly more parrots than in any of the other islands; besides parroquets, pelicans, snipes, teal, Guiney hens, geefe, ducks and turkies; the humning-bird, &c.

There's abundance of excellent tith in the bays and rivers:

There is abundance of excellent fith in the bays and rivers; but the tortoile is by much the most valuable, both for its shell and fish, the latter being accounted the most delicious, and, at the fame time, the most wholesome in all the Indies. The manatu, or fea-cow, which is often taken in calm bays, is reckoned extraordinary good eating by the Indians. The mountains breed numberless adders and other noxious animals. as the fens and marthes do the guana and gallewafp; but the latter are not poisonous.

In this island are many noxious infects, such as the cirer, or chegue, which cats into the nervous and membranous parts of the field of the negroes; and the white people are fometimes placed with them. These insects get into any part of the played with them. These insects get into any part of the body, but chiefly the legs and sect, where they breed in great numbers, and that themselves up in a bag: they fometimes get into the toes, and eat the fielt to the bones. As Joun as the person seeks them, which is not, perhaps, till a week after they have been in the body, they pick them out with a needle, or the point of a pen-knile, taking care to destroy the bag entirely, that none of the breed, which are like nits, may be left

theind.

The feveral forts of inhabitants in Jamsica confit of English, or those of English extraction; Indians, negroes, mulattoes, or metices, or the descendants of them. The better fort of the English wear wigs on Sundays, or particular days, and appear very gay in coats of filk, and vefts trimmed with filver. At other times they generally wear only thread stockings, linest dwawers, a vest, a Holland cap, and a hat upon it. Men ferwants wear a coarse linen frock, with buttons at the neck and hands, long trowsers of the same, and a check shirt. The negroes (except those that attend gentlemen, who dress them in their own livery) have once a year osnaburghs and a blanket for cloathing, with a cap or handkerchies for the head. The morning liabit of the ladies is a loose night-gown carelessly wrapped about them; and appear in a rich and becoming dress in the above town, when they put off their dishabile.

Persons in affluent circumstances commonly drink Madeirs wine mixed with water. Ale and cliret are extravagantly dear;

wine mixed with water. Ale and claret are extravagantly dear; and London porter fells for one shilling per bottle; but the general drink, especially among those of inferior rank, is rum punch, which they call kill-devil, because, being frequently, drunk to excess, it heats the blood, and brings on severs, which is they can be severed to the severe severe the severe severe the severe severes. in a short time fend them to their graves, especially thuse who are just come to the island.

Snakes and ferpents, and coffi, a fort of worms, are eaten by the Indians and negroes. Hefides the ordinary provisions, rata are fold here by the dozen, and, when they have bred among the fugar-canes, are thought, by some people, very delicious

The current coin here is entirely Spanish, English money being seldom seen. There is hardly any place where silver is more plentiful, or has a quicker circulation. The common rate of boarding is three pounds per week, notwithstanding proisions in general are tolerably reasonable; and a person cannot

wisons in general are tolerably reasonable; and a person cannot dine decently for lefs than a piece of eight.

Little regard is paid to learning here; and though some gentlemen, who are versed in literature, send their children to Great Britain, to acquire a polite and liberal education, yet the bulk of the people, being engaged in trade, or immersed in riotous diffipation, take little care to improve their minds.

In Jamsica, and in all the British filands, the established religions in that of the church of England; but there are yet not

ligion is that of the church of England; but there are yet no bithops: the principal ecclefialtic in these islands is the bishop.

of London's commillary.

The negroes in general are subject to great misery and hardships; and though the utmost care is taken to make them propagate, the ill-treatment they receive fo shortens their lives, that, instead of increasing by the course of nature, many thou-fands are annually imported, to supply the place of those who pine and die by the hardships they receive. Many of them are indeed subborn and untractable, and must be kept under strick indeed tudoorn and untractable, and must be kept under firited discipline; but they ought not to be cruthed with the iron rod of tyranny, or be thought a fort of beafts without fouls, as many of their overfeers think them at prefent; though fome of these tyrants are themselves the dregs of England, and the refuse of the jails of Europe. Many of the negroes, however, who fall into the hands of gentlemen of humanity, find their fituations easy and comfortable; and it has been observed, that in North America, where in general these wretches are better used, there is a less waste of negroes, who live longer, and increase by pro-

pagation.

On the first arrival of the slaves from the coast of Guiney, they are exposed to fale; are then generally very fimple and inthey are exposed to sate; are then generally very impression incent creatures; but they foon become reguish; and when they come to be punished for their faults, excuse themselves by the examples of the whites. They believe every negro returns to his native country after death. This thought is so agreeable, that it chears their spirits, and renders the burden of life easy, which would otherwife to many be quite intolerable. When a negro is about to expire, his tellow-flaves kifs him, wish him a good journey, and fend their hearty good wifnes to their re-lations in Guiney. They make no lamentations; but, believ-ing he is gone home and happy, inter his body with a great deal

of joy.

The island of Jamaica is divided into three counties; vig.

These contain nineteers Surry, Middlefex, and Cornwall. These contain nineteers parithes, over each of which prelides a magistrate called a cuftos.
The greater part of the inhabitants are dispersed on their plantations, which form fo many villages or liamlets, fo that there are but few towns in the island.

The capital of this illand is St. Jago de la Vega, commonly called Spanish Town, in Middlesex. It is small, but pleasantifituated, and contains about four thousand inhabitants; is the refidence of the governor, of the courts of justice, and the place where the assembly is held. The principal building is the governor's house, one of the handsomest in America : here are ulfo a handlome church, a chapel, and a Jewith fynagogue. The greater part of the inhabitants are persons of fashion and rank,

greater part of the inhabitants are perfons of fathion and rank, which gives it an air of splendor and magnificence. Between this town and that of Kingston, is Fort Passage, a little village of sisten houses, so called, because persons land or embark here, who go from one town to the other land.

Kingston, in the county of Surry, is the most considerable town in the whole island, being the residence of the merchants, and the chief place for trade. It is a mile and a half long, and half a mile broad; all the streets, which are broad and regular, cross each other at right angles; they contain near one thourand seven hundred houses, exclusive of the habitations of the negicos, and the storehouses. Its inhabitants are estimated at eleven thousand, among whom are about sive thousand whites, and one thousand two hundred free negroes or mulattoes; the rest consist of saves. The Jews, who are very numerous here, and confid of flaves. The Jews, who are very numerous here, have a fine fynagogue. The houses are much more elegant than those of St. Jago de la Vega, but the sir is not so licality. The harbour of Kingslon, feated at the bottom of a deep bay on the southern coast, will admit one thousand thips at a time, and

The final town of Port Royal is fituated upon the dry and fandy neck of land about three leagues long, that separates the harbour of Kingston from the sea: this was the sichest and most considerable place in the island at the time of the Buccaneers, whose disorders it cherished. Port Royal contained then two thousand houses, of which one thousand six hundred were overthousand houses, of which one thousand six hundred were over-turned or swallowed up by a remarkable earthquake that happen-ed in 1602; they had rebuilt a great part of them, which were consumed by a fire in 1702. The excellence of the situation, engaged the people to rebuild them a fecond time, when a hurri-cane, in 1722, mide them a heap of ruins; these were again raised, but afterwards destroyed, in 1744, by another hurrican-and on the third of October, 1780, another dreadful hurricane almost overwhelmed the little sea-port sown of Savannah-la-Mar in Jamaica, and part of the adjacent country. Very sew houses were left standing, and a great number of lives were lost: much damage was allo done, and many people destroyed, in other parts of the island.

parts of the stand.

The last hour joining to the hay of Kingfton is very large and deep. On the extremity of the neck of land is Fort Charles, thounted with one hundred and twenty-fix pieces of cannon, which, with the croffed fire of feveral other batteries, defend the

entrance of the barbour.

Public affairs in Jamaics are administered by a governor, who represents the king, a council of twelve, which form the upper house, and the forty-three representatives of the people who compose the lower house, and are chosen by the parishes. The whole income of the governor, in time of peace, amounts to five thousand pounds a year; the annual supply required from the colony may be about thirty thousand pounds, besides eight thousand pounds the amount of its ravence; and the total of all the taxes, both public and parochial, is never above fixty

thousand pounds per annum.

The number of plantations and inhabitants of Jamaiea is at ne number of plantations and inhabitatis of Jamaies is at prefent elimated as follows, viz. fis hundred and eight plantations of fugar, one hundred and ten cotton-works, one hundred pittento walks, thirty plantations of ginger, fifty breeding penns, fix hundred polink and provision places, one hundred and fifty plantations of coffee, and eight indigo works; all which take up and employ fix hundred thousand acres, eighteen thousand whites, one hundred and seventy thousand blacks, and one hundred and thirty-fix thousand horses, mules, or horned The above number of negroes requires a recruit of fix

thousand every year.

Among the whites, who are all enrolled, and form a national aight or usine bounded Jews: these committee, are reckoned eight or nine houdred Jews : thefe people may be faid to have a country here, this being the only one where they have a right to bear arms in its defence; and they justified the confidence of the legislature in an invasion made by the French, when they behaved with a great deal of courage. They also possess several estates, and carry on an ex-tensive trade, especially with the Spaniards. Their sobilety and manner of living make them live to a greater age in Ja-

maica than the other whites.

maica than the other whites. It is computed that liere are three thousand six hundred free mulattoes and negroes, who are incorporated in the national militia. Among the blacks are likewise included about nine buildied Maron negroes: these form a savage republic divided into six villages in the mountains: they are the descendants of runaway slaves, who have forced the government to acknowledge their independence. Their chiefs, diftinguished by a white, called the superintendant, without whose permission not one of the Marons can go out of his district. By the treaty admiraded with them in 1739, they posses some lands, with

their products; and they are obliged to march for a fixed falary, in case of an invasion; and also to restore sugistive slaves for a

The whole of the sinual exports from Jamaica is reckoned; by a mean proportion, at one million three hundred and tent thousand pounds, while the total of the imports amount to one million and fifty four thousand pounds. It carries on a confiderable commerce, not only with Great Britain and Ireland, but likewife with Africa. North and South America; the West

but likewise with Arnea, North and south America, the view India islands, and the Spanish main.

There are three small islands, dependent on this, called the Caymans, which lay to the north-west of Jamaica. The most foutherly is distinguished by the name of Great Cayman; the other two, which are distant from it about twenty leagues, are called Little Cayman, and Cayman Brack: Great Cayman, the only one that is confiantly inhabited, is very low, and covered with high trees. It has not any harbour for fhips of burden; only a tolerable anchoring-place on the fouth-west. The inhabitants, who amount to about one hundred and fixty are defeended from the old Buccaneers: they have given them-felves a fet of laws, and chuse a chief to fee them executed, in con-junction with the juffices of the peace appointed by commission from the governor of Jamaics. As they lawe no clergyman among them, they go to Jamaica to be married.

among them, they go to Jamaica to be married.

This little colony is, undoubtedly, the happiest in the West Indies; the climate and the kind of food, which are extremely salubrious, render the people healthy and vigorous, and cause them to live to a very advanced age. Their little fils and produces plenty of corn and vegetables, hogs and poultry, much beyond what they consume: they have, besides, sugar canes, and some springs of pretty good water. Being quite mured to the fea, they are excellent pilots for the neighbouring coasts; and their island, as well as their activity and humanity, have been many times a relief to ships which were distressed in this part of the sea: their principal employment is sishing for turble part of the sea: their principal employment is sishing for turble. part of the sea; their principal employment is fishing for turtle, which come to these islands, to deposit their eggs in the sands; a female lays about nine hundred. The inhabitants of Great Cayman carry on a great traffic with Port Royal in this article of wholefome and delicious food,

II. Barbadoes, the easternmost of the Windward islands, is fituated in fifty-nine degrees west longitude, and thirteen de-grees north latitude. It is twenty-five miles from north to south, and sitteen from east to west. Its superficial content is fouth, and fitteen from east to west. Its superficial content is about one hundred and feventy thousand acres. This island was first resorted to by the English in the teign of James I. but the earl of Carifide obtained the first grant of it in 1625, when he parcelled it out to fevers adventurers that transported themselves hither. They found no inhabitants, but a good breed of hogs, supposed to have been left here by the Spaniards and Portuguele, in their voyages to the continent of America. The adventurers applied themselves at first to the planting of tobacco, adventurers applied themselves at first to the planting of tobacco, which not thriving as expected, they planted cotton and indigo, which yielded a considerable profit: but they made little sugar till 1647, when the colonels Modosford, Drax, and Walrond, with other cavaliers, living uneasy under the surpration, converted their estates into money, and transported themselves to Barbadoes, where they erecked sugar-works, and acquired very great possessions. In the year 1650 the white inhabitants of the island were increased to upwards of thirty thousand, with whice that number of negarors, who constantly represent their twice that number of negroes, who constantly perplexed their mafters with conspiracies, in hopes of recovering their liberty; but not fucceeding, they were feverely punified. King Charles II. purchafed the property of the island in 1661, ever fince which time it has been a royal government; and for the purpose of maintaining the forces and fortifications of the island, the colony granted a duty of four one-half per cent on their fugars.

During eight months in the year, the climate is hot, but not unwholforme; for though there are no land-breeze, others arife from the fea, which increase as the sun advances to, and abate as he declines from, the meridian. A temperate regimen renders it as safe to live in as any climate in Europe fouth of Britain; and, according to the opinion of many, as Britain itself. The days are nearly equal, the sun rising and setting about fix all the year round. The rains fall here as in other parts of the torrid zone, chiefly when the sun is vertical. The damps or devis are fo great in the night, that every bit of iron will foon be caten up with ruft, if it be not in constant use. The twilights are very thort, it being dark three quarters of an hour after fun-fet. They have fometimes violent hurricanes in autumn. On the tenth of October, 1780, a dreadful one occafioned vast devastation here, great numbers of the houses were destroyed, not one in the island being wholly free from damage, many persons were buried in the ruins of the houses and buildings, and great numbers were driven into the fea, and there perifhed.

fugars. is hot, but not from for the plantations of fugar canes, which now take up the greatest part of this valuable island. The foil varies, being in some places sandy and light, in others rich, and in others spongy. The most valuable productions are, sugar, rum, molasses, ginger, indigo and cotton. This principal froits are, pine-apples, guavas, plaintains, oranges, lemons, citrons, limes, tamarinds, mangroves, prickled apples, figs, cacao and cocos nats, bullier, custard apples, papays, pomegranates, &c. Here are few orchards or gardens; and they can procure Indian corn from Notth America cheaper than it could be fold for if of their own growth.

than those of England; oxen, cows, horses, spes, goats, mon-kies and raccous, with a few sheep and rabbets; but the mutton

Tame pigeons, pullets, ducks, and poultry of all kinds, bred in Barbadoes, have a fine flavour, and are accounted more delicious than those of Europe. Here are also teals, curleus, plovers, snipes, wild pigeons, wild ducks, and a kind of bird called a man of war. Their snakes and scorpions never sting, and their infects, though numerous, have no poifon.'

and their intects, though numerous, have no poifon.

Among other fish common here, they have the parrot fish, snapers, grey cavelloes, tarbums, coney-fish, and the green turtle, which is a great delicacy.

In the centre of this issand there is faid to be a bituminous spring, which enits a liquor like tar, and serves for the same uses a pitch or lamp oil. There are also two streams, occivers, on each side of it, wells of good water all over it, besides large referyoirs for rain water.

refervoirs for rain water.

Here are three classes of inhabitants, viz. the masters, the white fervants, and negroes. The white fervants lead more easy lives here than the day labourers in England; but the planter is generally more careful of his black fervants than of the white, as the former, if not made free, are, with all their posterity, his perpetual property. Most of the negroes are employed in the field, but some of them work in the sugar mills and store-houses, which those of both fexes, who are nowless the store of both fexes, who are nowless the sugar mills and store-houses, which we nowless the sugar mills and store-houses, which we nowless the sugar mills and store-houses, who are nowless the sugar mills and store-houses, which we nowless the sugar mills and store-houses, which we nowless the sugar mills and store-houses, which we now the sugar mills and store-houses, which we now the sugar mills and store-houses, who are now the sugar mills and store-houses, who are now the sugar mills and store-houses. likely and hardy, are employed as menial fervants and house-

The negroes subfift chiefly on plantains; but they have every week, at flated times, an allowance of Indian corn, bread, falt fish, or falt pork. Every negro family has a cabbin, and adjoining to it a finall piece of ground for a garden; the more in-Johning to it a man piece or ground to a garden; the more indufficus plant potatores, yams, and other roots; they also rear live flock, which they are at liberty to eat, or convert into morey. They are fond of turn and tobacco, and generally lay ont their earnings and favings in fine cloats and ornaments. The whites are computed at twenty thousand, but the negroes, mulattoes, and meflices flaves, at one hundred thousand.

mulattoes, and incluces flaves, at one hundred thoufand.

A falary of two thousand pounds fterling is allowed to the governor, payable out of the four and half per cent. befides a third of all feizures. The council confits of twelve members, and the assembly of twenty-two, chosen yearly out of the feveral parithes, viz. two for each, by a majority of votes. Most of the civil officers are appointed by the governor, who also collates rectors to the parithes of the islands. The perquisites of them are very confiderable, and their stated falary about one hundred and fifty or two hundred pounds a year; but the rectory of St. Michael's in Bridge-town is supposed to be worth about eight hundred pounds a year. Here are some lews and about eight hundred pounds a ear. Here are fone Jews and quakers, but very few other diffenters. A furrogate of the bi-thop's appointment governs the church affairs.

The military establishment of Barbadoes is very respectable,

confissing of fix regiments of foot, two of horse, and a troop called the troop of horse guards: they have also a good train of artillery, and several forts. The whole island is divided into artillery, and leveral fores. The whole thand is divided included included

Bridge-town, the capital or the manue, and the supplies on the in it, is fituated in Carlifle bay, in the fouth-well part, the only harbour in it. This is and has the best or rather the only harbour in it. This is reckoned the finest and largest town in all the Caribbee islands, if not in all the English West India colonies, taking its name from a bridge in the east part of it, creefed over the waters that come from the neighbouring marthes after rains: it is the fast of the governor, council and affembly, and affo of the court of chancery. The governor's house is about a mile out of the town, which is not teckoned very healthy on account of the neighbouring marthes. There are feveral forts and batteries about the town and bay, the latter of which is large enough to contain five hundred fail, and has twenty fathom anchorage in very clear water, but it is extremely rocky. Here is a college, founded and liberally endowed by colonel Codennaton for profeffors in the feveral ferences. It is the only inflitution of the No. 85.

kind in the West Indies, but it does not appear to be in a very soursishing faste.

A considerable trade is carried on from hence with Great Britain, North America and Africa, which is supposed to employ four hundred vessels of all burdens. The principal articles of exportation are, aloes, cotton, ginger, fugar, rum and molasses: it amounted, in 1770, to three hundred eleven thousand pounds to Great Britain, one hundred and the system of the worth America, and eleven thousand nounds to North America, and eleven thousand nounds to North America, and eleven thousand. In distort the other islands, the whole being upwards of four nundred and thirty thousand pounds stelling.

They import timber of various kinds, bread, flour, Indian corn, rice, tobacco, some salt beef and pork, fish, pulse, and other provisions from the northern colonies, slaves from the coalt of Africa, wine from Madeira, Tercera and Fyal, as also some brandy, beef and pork from Ireland, salt from Curasso, ofnaburghs, linen of all forts, broad cloth and kerseys, siks and stuffs, red caps, flockings and thoes of all forts, gloves and hists, millinery ware and perukes, laces, peas, beans, and oats, flrong beer, pale beer, pickler, candles, butter and cheese, ison ware for their sugar-works, leaden, buts and copper wares, powder and shot, and other articles. der and fhot, and other articles.

SECT.

Containing a survey of the islands of St. Christopher, Antiquas Nevis, Montserrat, Barbuda, Anguilla, D minica. St. Vincent, and Granada and the Granadines, with an account of their si-tuation and extent, climate, feel, productions, inhabitants, commo-

THE island of St. Christopher, called also St. Kitt's, is fruated about fifteen leagues to the west of Antigua, and is about twenty m' is in length, seven in breadth, and sorty in compass. It was issovered by Columbus in his fift voyage to America, and has given birth to all the English and French colonies in the West Indies. The two nations as well there on the same day (in 1625) when they divided the island between them, agreeing, however, that hunting, shihing, as well as the mines and forests, should be in common. Three years after their fettling, the Spaniards drove them away, but they sort their fettling, the Spaniards drove them away, but they foom returned, and continued to live in good understanding till 1666, when war being declared between England and France, St. Christopher's became at different intervals the theatre of bloodheld for half a century. The contest was however, at length chimopher's Sociale at direction intervals the theate of blood-fleed for half a century. The contest was, however, at length closed by the repulsion of the French in 1702, and the country being yielded to the crown of Great Britain by the treaty of Utrecht, all the French territory was fold for the public emolument.

The centre of this island is occupied by a great number of The centre of this thand is occupied by a great number of high and barren mountains, interfected by rocky precipies almost impassable, from many of which iffue hat springs. Mount Misery, which seems to be a decayed volcano, whose head is hid in the clouds, is the highest of all these mountains, its perpendicular height being three thousand cleven hundred seet: at a certain distance it bears some resemblance to a man who carries another upon his back. The assemblage of these two mountains makes St. Kitt's appear to those who approach by fea like an huge mountain covered with wood, but as

they come nearer, the coast and ascent grow easier, and they are cultivated as high as the declivity will permit. Considering the height of the country, the climate is not so hot as might be expected: the air is pure and healthy, but the issued is subject to frequent storms, hurricanes and carthquakes. The foil is in general light and sandy, but very fruitful, and well watered by several rivulets, which run down both sides of well watered by invested in the mountains. It produces plenty of manioc root, vegetables, fruits, timber, &c. The whole island is covered with plantations, whose owners (noted for the softness of their manners) tions, whose owners (noted for the fottness of their manners) live in agreeable, clean, and convenient habitations, adorned with fountains and groves. Most of their houses are built of cedar, and the lands hedged with orange and lemon trees. The calification of fugar takes up only twenty-four thousand acres, but the whole of their plantations amount to forty-four thousand.

The most considerable town is Basseterre, formerly the capital of the French part, the other is called Sandy point, and always be-longed to the English. There is no harbour, nor even the appearance of one; on the contrary, the furf is continually beating on the andy flore at the few places fit to land, which not only pre-vents the building any quay or whatf, but renders the landing or thipping of goods always inconvenient, and very often dan-gerous: they have been therefore obliged to adopt a particular method to thip the heavy goods, such as hogfheads of fugar or rum. For this purpose they use a small boat of a peculiar con-

ount y, with fome

fruction, called a Mofes; this hounfets off from the fulp with fome very active and expert rowers: when they se what they call a lull, that is, an abatement in the violence of the furge, they puth to land, and lay the fides of the mofes on the firand,

they push to land, and lay the sides of the moses on the strain, the hogshead is rolled into it, and the same precautions are used to carry it to the ship. Rum, cotton, and other goods that will bear the water, are generally floated to and from the ship.

This island is divided into nine parlines; esch of which has a handsome church. Public affairs are administered by a governor, a council, and an assembly chosen from the parlines. In 1770 the exportations of this island amounted to above four hundred nineteen thousand pounds for cotten. The inhabitants amount to about eight, thousand bounds of cotten.

twenty thousand blacks.

The island of Antigua, the most considerable of the Leeward Carifibees, is of a circular form, about twenty miles each way, and near fixty in circumference. It is more noted for good har-Caribbees, is of a circular form, about twenty miles each way, and near fixty in circumference. It is more noted for good harbours than all the English islands in these seas, yet so encompassed with rocks, that it is of dangerous access in many parts. The climate is hotter than Barbadoes, and very subject to husericanes. The foil is fandy, and much of it overgrown with wood. Here are but sew iprings, and not so much as a brook in the whole island, so that the inhabitants depend on the casual

rains for most of the water they are supplied with.

St. John is the capital of Antigua: it is a regular well built town on the welf thore, with a good harbout of the fame name, whose entrance is desended by Fort James. It is the residence of the governor general of the Caribbee Leeward Islands, the place where the assembly for this island is held, and the port where the greatest trade is carried on. The best port in the island is English harbour on the fouth side: it has, with much rouble and expense, been made fit to receive the greatest thing. trouble and expence, been made fit to receive the greatest ships of war, who find there a dock-yard with flores, and all the ma terials and conveniences necessary to repair and careen. English Harbour is at a small distance from the town and harbour of Falmouth: there are befides, Willoughby bay to the windward of English Harbour, Nonfuch Harbour on the east point, and the town and harbour of Parham on the north fide, and a great number of creeks and fmaller bays; but the shore being in general rocky, wherever the landing would be practicable, it is defended by forts and batteries; and for the delence of the island there is generally one regiment of regular troops quartered

Antigua has a governor general, a lieutenant governor, a council, and its own affembly of twenty four members; befides which, the governor general can, when he thinks proper, call a general affembly of the reprefentatives of the other illands. It is divided into fix parifies and eleven diffries, of which ten for a divided into an partines and eleven districts, or which ten fend each two reprefentatives, and that of St. John four. In 1770 their exports amounted to four hundred forty-fix thou-fand pounds fterling to Great Britain, Ireland and America, which furn five hundred pounds is only for cotton, all the reft is the produce of fugar, moiaffes and rum. The number of vessels that enter yearly into the harbour is reckoned at three hundred, but that of the inhabitants of the island is not cer-

tainly known

The small island of Nevis confists of one vast mountain rising to a very considerable height in the middle: it is situated about sour miles to the east of St. Christopher's. The soil is about four miles to the east of St. Christopher's. The foil is fruitful, and the staple commodity sugar, which serves all the purpofes of money. Here are formetimes violent rains and tor-nadoes, as in the other islands, and the air is even hotter than than that of Barbadoes. Here are many remarkable infects and repties, particularly the flying tyger, the horn fly, and a kind of fnail, called the foldier. The fea abounds with a variety of excellent fifth, as groupers, rock fifth, old wives, coxiles, welfmen, mud-fifth, wilks, cockles, lobflers, &c. land crabs are very common here; they are fmaller than fea crabs, and male this little bureauties that the conditions are the conditions. and make little burrows, like rabbets, in the woods, towards the tops of the mountains. The only venomous creatures are feorpions and centipedes. Here are fprings of fresh water and a hot bath, much of the same nature as those of Bath in Eng-

Their sheep have no horns nor wool, but are cloathed with fmooth liair, and generally full of fmall red or black fpots re-fembling those of a fine spaniel. They breed twice a year, if not oftener, and generally bring two, three, or four lambs at a time, and, what is more extraordinary, suckle them all. The rams are of a red pale colour, with a thick row of long strait red hair hanging down from the lower jaw to their breaft as far as the fore-legs. The logs, being fed with Indian corn, Spanish potatoes, and fugar cane juice, are exceeding sweet food, white and sat, and so are the turkies, which are fed with the same diet. The ground doves here are about the size of a lark, of a chocolate colour, spotted with dark blue, their heads like that Montserrat. It is the prof a robin-red-breast, and their eyes and legs of a most pure appoint the governor.

red. Here are excellent game-cocks and fine bull-dogs, which tetain thejr fpirit, besides large cur-dogs, but no spaniels or

litere are great quantities of afparagus : likewife a tree called diddle-doo, which bears a lovely bloffom of the finest yellow and scarte colours, and is effected a fovereign remedy against the green fickness. The liquoriec runs wild along the flone walls of common fields, like the vine; but here is no lignum vite or iron wood. The butter of this island is not good, and new cheefe far worfe.

Charles-town, the capital, has a fort, called Great Fort, that defends the anchoring place, when the governor, covneil and affembly meet; the latt is composed of five members for each of the three parishes into which the island is divided. Here are three tolerable roads or bays, on which are as many little towns, viz. Newcastle, Littleborough on Moreton bay, and

Charles town above mentioned.

The king gives twenty; pounds out of the exchequer to the clergy, who are fent hither by the biftop of London to vacant parlines to defray the charges of their voyage. The fees for every christening, marriage, and burial, are one shilling and fix-pence, and for a funeral fermon three pounds, or five hundred pounds weight of fugar.

They have three public annual fasts to implore the divine protection against hurricanes; and if none happen in July, August or September, they have in Ostober a public thanklgiving. If a negro in this island strikes a white man, he is punished with the loft of his hand, and if he should draw blood with death, a negro daugot be evidence again to white man.

death; a negro cannot be evidence against a white man; but if a white man kills a negro, he cannot be tried for his life for the murder; all that he fuffers is, a fine of thirty pounds currency to the mafter for the loss of his flave. Before the revolution Nevis contained thirty thousand inha-

but the invasion of the French about that time, and forme epidemical diforders have greatly diminished the number, fince they only reckon at prefent two or three thousand whites, and fix or seven thousand negroes. In 1770 their exportations to Great Britain, in cotton and sugar, amounted to near forty-four thousand pounds; these to North America, where they fend a great deal of molaffes, rom, and a prodigious number of lemons, exceeded fourteen thousand pounds. About twenty

vessels are employed annually in trade to and from this island.

The island of Montferrat is situated twenty sive miles almost The illand of Montferrat is fituated twenty-five miles almost fourth-east from Nevis, wenty west-fourth-west from Antigua, forty north-west from Guadaloupe, and two hyncred and forty from Barhadoes. It is of an oval figure, about three leagues in length, the same in breadth, and eighteen in circumference. Columbus first discovered this island in 1433. It was fettled in 1632 by Sir Thomas Warner, and taken in the beginning of the reign of Charles II. by the French, who reftored it to the English at the peace of Breda. The first settlers were frishmen, and the present inhabitants are principally composed either of their desendants or of natives of Ireland; so that the use of the Irish language is preserved in this island, even among the negroes. The Spaniards gave it the name of Montferrat from a fancied refemblance it bore to a mountain of that name near fancied resemblance it bore to a mountain of that name near Barcelona in Old Spain, where is a famous chapel dedicated to the Virgin Mary.

This island is well watered, and fruitful: its foil, climate,

and produce refemble those of the other English Caribbees. and produce refemble thole of the other English Caribbees, The mountains yield cedars, the cypress tree, the iron tree, with other woods, and some odoriferous thrubs; the planters formerly raised a great deal of indigo. The camanture, by some called the sea cow, is sound near this island, and generally at the entrance of firsh water rivers. It is said to be an amphibious animal, and to live mostly on herbage. Its tleth is reckoned very whossem food when salted, and they are so them lead a canner. The surroundaries the restriction of them lead a canner. The surroundaries that the or three of them lead a canner. large, that two or three of them load a cance. The furrounding feas produce feveral hideous monflers, particularly two, which, from their remarkable ugliness, as well as the positionous

quality of their fieth, are called sea devils.

There is no harbour in this island, only three roads, namely, Plymouth (which is the chief town in the island) Old Harbour,

and Ker's Bay, where the shipping and landing of goods is at-tended with the before-mentioned inconveniences.

The government of Montferrat is composed of a lieutenantgovernor, a council, and an affembly of eight representatives, two for each of the four districts which divide the island. The annual exports from hence to Great Britain and Ireland are effimated at ninety thousand pounds, and to North America twelve thousand. The number of inhabitants here is about sourteen thousand, among whom are about one thousand five hundred

The island of Barbuda is only about twenty miles in length, and twelve in breadth, and is fituated fifteen miles north east of Montferrat. It is the property of the Codrington family, who appoint the governor. Part of the effate arifing from it

(amounting, as is fild, to two thousand pounds a year, with two plantations in Barbadoes) was bequeathed, in 1710, by Christopher Codrington, Elqi governor of Barbadoes, to the fociety for propagating the goffel, towards the infraction of the negroes in the Caribbee illands in the Christian religion, and the erection of a coilege at Barbadoes for teaching the liberal arts.

This is a fertile illand, though the land lies tow 1 on the welf fide of it is a good well sheltered road, clear from rocks and fands. The inhabitants apply themselves chiefly to the breeding of cattle, and raising provisions, with which they supply the neighbouring islands. Many of the commodities produced in the other Well India illands may also be raised here. There are some large serpents on the island, but they are neither poisonous nor noxious, and will destroy rats, toads and frogs, though the sing or bits of others is mental, onless an antidote is quickly applied.

bollohous nor nostous, await early say, though the ding or bite of others is mortal, onlefs an antidote is quickly applied.

Anguilla lies shout feventy-five hilles morth-weft of Barbeds, and about forty to the north of & Christopher's. It is very long and narrow, which induced the Spaniards to give it the asset of Anguilla for Eel. Aff is to low and flat, that the French, who nist fettled there, did not think it worth cultivating, or even keeping the English adopted the fane opinion when they took postelling of it, and the island was a long time in their hands before they perceived the contrary. Within a few year, industry and the indefatigable labours of the planters of Anguilla have convinced them, that their island produces not only at the necessaries of life, but, besides, many provisions which they fell to their neighbours, as well as fugar and cotton. Before the late war, their exportations, which promise an increase, amounted, in fugar, rum and cotton, to near fix thousand eight hundred of which were for Great Britain, the rest for North America. The climate is

fand pounds, three thouland eight hundred of which were for Great Britain, the reft for North America. The climate is very healthy, and the inhabitants flrong and vigorous. There are feveral fmall uninhabited islands to the north of Barbuda, and dependant on it: the most remarkable of them (called Sombrero by the Spaniards from its refemblance to a

(called Sombrero by the Spaniards from its refemblance to a hut) lies at fix leagues distance, and is about a league long.

The Archipeiago of the Virgin listeds lie to the west of Barbuda and Sombrero, after having crossed a channel of eight leagues: these were so denominated in memory of the eleven thousand virgins of the legend. They take up a space from call to west of about twenty-four leagues long, quite to the eastern coast of Porto Rico, with a breadth of about finiteen leagues. They are composed of a great number of isses, whose coasts, rent throughout, and sprinkled with rocks, every where dangerous to navigators, are samous for ship-wrecks, and parcoatts, refit infougatous, and sprinted with rocas, every where dangerons to navigators, are famous for finp-wrecks, and par-ticularly of feveral galleons. Happily for the trade and navi-gation of these islands, nature has placed in the middle of them a large bason of three or four leagues broad, and fix or seven long, the finest that can be imagined, and in which ships may anchor land-locked, and theltered from all winds. Sir Francis Drake first entered it in 1580 in his expedition against St. Do-mingo: hence it is called the Bay of Sir Francis Drake,

Thefe islands are all of them exceedingly finall, and the greatest part uninhabited. One of them is called the Tropic Keys, from the prodigious quantity of Tropic birds which breed there, and are about the fize of a pigeon, but round and plump like a partridge, and very good to eat: their plumage is quite except two or three feathers in each wing of a clear white, white, except two or three leathers in each wing of grey; their beaks are short, thick, and of a pale yellow; they have a feather, or quill, about feven inches long, which have a feather, to rumo, and is all the tail they have. These comes out of their rump, and is all the tail they have. These birds have never been seen but between the Tropics, from which

circumstance they derive their name,

Dominica is fituated about half way between Martinico and Dominica is fituated about half way between Martinico and Guadaloupe, in fixteen degrees north latitude, and fixty-two well longitude. It is about twenty-eight miles in length, and thirteen in breadth, and received its name from being different by Columbus on a Sunday. The foil of this illand thin, and better adapted to the rearing of coffee than fugar; but the fides of the hills bear the finest trees in the West Indies. and the whole island is well supplied with rivulets of fine water. and the whole island is well supplied with rivule's of sine water. At the north-west end there is a spacious sandy bay, called St. Rupert's, which is well secured from the winds by mountains on all sides. Here, as in some other of the Caribbees, is a sub-phur mountain, and hot spring, equal in salubrity to those of Bath in England; and the sine fruits, particularly the pine apples, are superior to any that grow on the French islands. The town of Roseau, which is situated on a spacious harbour, is the most dislinguished place in this island. The houses are low, and irregularly placed, and the town is sheltered by the circumiscent mountains, some of which rise to a consi-

the circumjacent mountains, fome of which rife to a confidetable height. Ships of a confiderable fize ride at anchor with the greatest fafety in the bay or harbour, from whence there is a most advantageous view of the town.

St. Vincent is fituated about fifty miles north-west of Barbadoes, is about twenty-four miles in length, and eighteen in

breadth. It is generally allowed to be one of the best of all the breadth. It is generally allowed to be one of the best of all the Antilles. Out of the ridge of mountains, which crestles it from four he north, rife a great number of rivers well stored with sith. These mountains are in general of an easy ascent, someof the valles and plains are of a large extent, exceedingly fertile, and produce mout of the necessaries of site, particularly fugar, costee, case, and anaste. When this island was code to Great Britain by the treaty of Versilles in 1963, there was a great number of a mixed breed of the anicint Cariba, and of site of the site of

main.

Kingflown is the most remarkable place here it is firtuated on a hay of the lame name at the fouth well end of the liland. It is the refidence of the governor, and the place where the affembly meet. The town of Cellingua, whose harbour is the most confidenable in the whole itland, flands about three miles

most considerable in the whole siland, slands about three miles from Kingtown towards the south-east.

The illand of Granada is fituated in twelve degrees north latitude, and fixty-two degrees west longitude, about thirty leagues fouth-west of Barbadora, and almost the some distance morth of New Andalusia, or the Spanish maint. The island is about thirty miles long, and fifteen broad. The foil is very rich and ferrile, and particularly adapted for producing sugar, coffee, tobacco, and indigo. A lake on the top of a hill, in the middle of an island, supplies is plentifully with sine rivers, which adorn and ferrilize it. Several bays and harbust is round the island; some of these may be fortified with great advantage, which renders it very convenient for thipping; and it has the happiness of not being subject to thurricanes. St. George's Baylas a fandy bottom, and is extremely capacious, but op in an hundred vessels may be moored with perfect fastey, in its larabour, or careening place. bour, or careening place.
The Grenadines are a small cluster of islands near Granada

they produce very fine timber, fugar, indigo, tobacco, peas and miller, but the cocoa tree does not thrive fo well in them as in

The island of Granada was long the theatre of bloody wars between the native Indians and the French, during which the Caribbees defended themelyes with the most resolute heavery. In the war of 1756, when Granada was attacked by the English, the French inhabitants, who were not very unmerous, were so amazed at the reduction of Guadalupe and Mattinico. that they loft all fpirit, and furrendered without making the leaft. opposition; and the full property of this island, together with the Grenadines, was confirmed to the crown of Great Britain. by the treaty of peace in 1763, and again by the late one in

SECT. IV.

Containing a description of the Spanish West India islands, with an account of their extent, situation, elimate, produce, principal towns, inhabitants, trade, commodities, Gc.

UBA is about feven hundred miles in length from east to west, but very harrow in proportion, not being above seventy in breadth t it lies fixty miles to the west of Hispaniola, twenty-five leagues to the north of Jamsica, one hundred miles to the cast of Jucatan, and as many to the south of Cape Florida, and extends in latitude from twenty degrees twenty minutes to the Tropic of Cancer, and from faventy-four degrees to eighty-five degrees fifteen minute. well longitude. It commands the entrance of both the gulis of Mexico and Florida, and the Windward Paffage.

In the months of July and August, when the sun is vertical, the rains and storms are great, otherwise the climate would be intolerably hot. The fairest season is, when the sun is farthest intolerably hot. off, and then it is notteft in the morning; for towards noon a fea breeze springs up, which blows pretty brisk till the evening. The trade winds in these seas blow from the north-east. At the the trade winage of the moon, from October to April, those are brilk winds at north and north well, which in December and January often turn to florms, though this is called the fair feason. The whole illand is well watered, and agreeably diver-

fified with woods, lawns and vallies.

The foil is capable of producing, in the greatest plenty, every thing that grows in the other American islands; but the Cuba (commonly called the Havannah) tobacco is thought to excel that of all the world, and their fugar would equal their tobacco in goodness, had they hands to cultivate the canes. They have two forts of fruit, called camilor and guanavana, the first like a china orange, and the other shaped like a heart, with a ju between fweet and seid. The other products are plantains, bananas, scianss, guavas, temons, cocoas, ginger, long pepper, and other spices; cassa, makie, aloes, large cedars, and other odoriferous trees; oaks, pines, palm trees, plenty of large vines and fine cotton trees.

Gold dust is found in the fands of the rivers; but it is un-certain whether there are any gold or filver mines, the hopes of which occasioned the butchery of all the antient inhabitants, who were either unable or unwilling to discover them: if there are any, they are not worked. The copper mines here furnish the Spanish plantations with a sufficiency of that metal for all their brass guns. A chain of hills runs through the middle of the ifland; but the land near the coast is generally a level, champaign country. The interior parts lie quite uncultivated and uninfishited. Here are many good harbours; but there are feare; any navigable rivers. Both the coasts and rivers abound with ifth, and also with alligators. There are great conveniences for making falt; but the inhabitants avail themfolium you fall to get the fall of the convenience. felves very little of them

The cattle brought hither by the Spaniards have multiplied The cattle brought interer by the Spaniards have multiplied exceedingly, vast numbers now running wild in the woods, of which many are killed, chiefly for their hides and tallow, that are sent to Spain. Their slesh also, being cut in pieces, and dried in the sun, serves to vistual ships. These caute are often so fat, that they die through the burden of their greate, Here are likewise abundance of mules, horses, sheep, wild boars, and have reaches with wild and tame soul. and liogs, together with wild and tame fowl, parrots, partridges, blue heads, large tortoifes; feveral fountains of bitumen, which is used instead of pitch, as well as for medicinal purposes; hereare also quarries of tint.

Cuba is pleasant, and in its present state flourishing, as the Spaniards are now continually improving it. Formerly its exportations never equalled those of the small British island of Antigua. The reason of this, next to the indolence of the Spaniards, was the great facility with which the inhabitants got their money by means of the galleons and flota, and the very great contraband trade carried on here in defiance of their laws, by connivance of the government.

This island is divided into seven provinces, the civil govern-ment of which is dependant on that of St. Domingo, or Hispament of which is dependant on that of St. Domingo, or Hipa-niola: its biflop, whose fee is at St. Jago, though he com-monly refides at the Havannah, is fuffragan to the archbiflop of St. Domingo. The east part of the ifland is under the governor of St. Jago, and the west of the governor of the Havannah. There are several large towns in the illand; but the two above-

mentioned are the most considerable

On the north-west coast of the island stands the Havannah, the capital, in twenty-three degrees twelve minutes north latitude, and in the eighty fecond degree thirteen minutes west longitude. The town itself, distinct from the fortifications, is about two miles in circuit, and contains about twenty-fix thouland touls. Its port is faid to be the most frequented, as well as the best in all the itlands, and one of the finest in the world; it being fo large, that a thou and fail of thips may commodiously ride in it with the utmost facety, without either anchor or cable, no wind being able to hurt them 1 and is so deep, that the largest vessels anchor at a small distance from the shore. entrance, which has no bar to obstruct it, is by a channel about three quarters of a mile in length, but fo narrow, that only one thin can go in at a time. The harbour into which it one thip can go in at a time. The hatbout into which it leads at the north-west corner, is a long square lying north and, fouth; the other three corners forming three creeks or bays.

This city flands in the most fertile part of the island, on the west fide of the harbour, in a delightful plain that extends along the thore, and backwards it is washed by two branches of the The city is of an oval form, and begins about a river Lagida. quarter of a mile from the inputh of the harbour. The buildings, which are of flone, are very handfome, but not lofty, and the flreess are narrow, but clean. Here are cleven churches and monafteries, two handsome hospitals, and a fine square in the middle of the town, encompassed with uniform buildings.

The city on the land fide is encompassed with a wall defended by bestions, and a castle on the side towards the harbour; at the harbour's mouth are also two other firong castles to defend its entrares: the flrongest of these has lines, which extend to the castle first mentioned, and is called the Moro fort: it is built en a reck at the foot of two hills, in which is cut a deep ditch, fill I with fea water. The fecond caffle is called the Puntal, and is fortified with four battons well planted with cannon. The third is called El l'eerto, or the Fort, and has fixty large heavy brais eingen belonging to it; there are also two other small forte, called Coxemer and Bariavans. These forts, all together, have one hundred and twenty guns.

This city is of more importance to the Spaniards than any other in America, it being the place of senderyous for all their flort, in their return from that quarter of the world to Spain , and from its lying at the mouth of the guif of Florida, Span, and the king of Spain; and here meet in September the nasy of the king of Spain; and here meet in September the merchants thips from leveral Spanish ports, both of the confi-nent and mands, to the number of fifty or fixty fail, to take in provisions and water, in order to return to Spain in a body. Within the city is a continual fair till their departure, which is generally before the end of the month, when proclamation is inade, forbidding any that belong to the fleet to stay in the town on pain of death, and upon firing a warning gun, they all go on board.

go on board.

St. Jago is feated in the twentieth degree two minutes north latitude, and in the feventy-fifth degree forty-feven minutes west longitude, at the bottom of a spacious bay, on the southeast side of the island, about fix miles from the sea. The entrance to the bay is narrow, and within it are finall islands, which shelter it from storms, and form a commodious harbour. It is a bishop's fee, and has a cathedral; it had once also a good trade, which is now removed to the Havannah, and though the city has jurildictions over half the island, it has dwindled almost to nothing.

The other principal towns in the island are Santa Cruz, which is feated fixty-three miles to the east of the Havannah, on the fame coast, and has a very good harbour. Porto del Principe, on the fame coast, stands about three hundred miles fouth-east of the Havannah; it was formerly a rich town, and was taken by the Buccaneers, after a flout refistance i near it are springs of bitumen. Baracoa, is situated on the north-east part

The illand of Hispaniola, or St. Domingo, is fituated about thirteen leagues to the eastward of Cuba, and was alled Aitti by the antient inhabitants. It is about four hundred miles in length, one hundred and fifty in breadth; and the coast, including the circumference of all the bays and creeks, near five hundred leagues.

The climate, though hot, is not reckoned unwholfome, being refreshed by breezes and rains. This island is agreeably diversified with hills and vallies, woods and rivers, producing ananas, bananas, grapes, oranges, lemons, citrons, toronias, limes, dates, and apricots, fairer and better talked than those of the other islands, together with whole forests of cabbagetrees, elms, oaks, pines, acajou, and other trees, large and lofty. The other commodities are fugar, hides, indigo cotton, cocoa, coffee, ginger, tobacco, falt, wax, honey, ambergris, and various kinds of drugi and dyeing woods. There are plenty of tortoiles on its coasts and in the rivers, which are also infested

with crocodiles and alligators.

The Spaniards and French possess this island in common,

Columbus difthough the latter formerly occupied the whole. Columbus dis-covered it in 1492, and called it the Spanith Island: a denomination it has preserved under the name of Hispaniola, along with that of St. Domingo They sound here some exceeding rich gold mines. The greater part of the male Indians perished in these inines; and almost all the semales, by the excessive labour of cultivating the fields of maiz for the use of the conquerors; the others were massacred either in cold blood, or in ranged battles, for fo they called those kinds of favage chaces which the Spaniards, covered with iron, and followed by bulldogs, made to a multitude of these unhappy wretches, quite traked, and flying with all their might: we are told, that no lefs than three millions of men, women, and children, were murdered in cold blood by these inhuman hutchers. quick extermination of the natives, and confequently the difficulty of working the mines t the bloody quarrels of the conquerors among one another; the discovery of Mexico, soon after that of St. Domingo, drawing thither all the invaders; laftly, the pillaging of the capital by Drake, in 1586; all these things made the new colony fall to decay a few years after its ellablifi-ment. The Spaniards, scattered about this large island, having become unable to hinder the Buccaneers from feizing the western parts, and settling themselves there, retired on the eastern side, which they have occupied ever since. Their part hoth for culture and commerce, is much the best; it has large fruitful plains; and the situation of its coast is much more favourable to navigation than that of the French.

The foil is but little cultivated by the Spaniards, who are no lefs indolent here than at Cuba: their chief employ is, to breed cattle, or to hunt those which have multiplied in the woods. They get from their neighbours flockings, hats, linen, guns, iron ware, and fome cloaths; and give them horfes, horned cattle, hogs, hides, and fmoaked beef, in return.

The most considerable town belonging to the Spaniards is

San Domingo, the capital; this is a large and well built city, fituated on a spacious harbour on the fouth fide of the itland, containing about thirty thousand inhabitants, and defended by a calle and other works. Here is an univerfity and a college, with a revenue of four thousand ducats, a Latin school, several convents, a magnificent cathedral, an hospital, having a revenue of twenty thousand ducars, and a fine market-place in the centre of the city; which is also the residence of the governorgeneral of the Spanish Indies, and of an archbishop, and court of 103 audience. The archbishop's fuffragans are the bishops

Il built city. f the itland. defended by und a college, hool, feveral aving a reve--place in the he governorop, and court of Conception in this island, St. John's in Porto Rico. St. Jago in Cube, Venzuela in New Castile, and of the city of Honduras. The jurislictions of the court of royal audience extends to all the Spanish West-Indian Islands. A fine navigable river falls into the sea a little to the west of the city, which owes its present support to the lawyers and ecclesiafticks whose professions oblige them to reside in it.

The town of Conception sands twenty leagues north of San Domingo. It is a large place, and the see of a bishop. Porto la Plata, or the Haven of Silver, stands on an arm of the sea, thirty-five leagues north of St. Domingo. Monte Christo is at the mouth of the river Yaguey, ten miles west of Porto de la Plata, and sorty north-west from St. Domingo. St. Jago de les Cavalieros lies ten leagues north-west of Conception, and employ a fine air.

The chief towns belonging to the French are, 1. Cape St. François, fittate on the north fide of the filand: it is in a flourishing condition, having a fine harbour, a brift, trade, and about eight thousand inhabitants. 2. St. Liouis, or Port Loois; which stands on a small island on the fouth-west coast, Loois, which flands on a small island on the south-west coast, and has a good ha bour with a fort, but labours under a scarcity of fresh water. 3. Port Paix, a place of considerable strength, lying opposite the island of Torruga, on the north-west coast of the island. Port Guavea and Leogane, on Donna Maria bay near the strength of the strength of

the other as the oldest French fettlement in the island, and a place of confiderable trade. Two other small places, viz. La Petite Riviere, and L'Esterre, the latter of which stands a little within land, also belong to

the Freich.

Tortuga, the island above-mentioned, had its name from the turtles with which it formerly abounded. It is about fix leagues long from east to west, and three where broadest. The French have a populous flourishing settlement, called Cayona, with a harbour, in the south part of this island: it yields all the commodities south in the other West Indian islands, together with wild boars 1 but has little or no fresh water. Saveita and Mena are the other most considerable islands on this coast:

and Mena are the other most considerable islands on this coast: these belong to the Spaniards.

The island of Porto Rico, is structed between fixty-four and fixty-feven degrees west longitude, and in eighteen degrees north latitude, lying between Hispaniola and St. Christopher's. It is about one hundred miles in length, and forty in breadth. Most of the country is diversified with woods, vallies, and plains, is extremely fertile, and produces the same fruits as the other islands. It is well watered with springs and rivers, but the air is excessive hot, and very unwholfome during the rainy feasons. In the north part of the island, which is the most barren, there were formerly several rich gold and silver mines; but there is not any considerable quantity found in it at present. prefent.

present.

A breed of dogs, which the Spaniards brought over to hont and tear in pieces the desenceles natives, are faid to run wild in the woods near the sea-shore, and subsist upon land crabs that burrow in the ground. The woods are stored with parrots, wild pigeons, and other sow. European poultry is found here in plenty, and the coast abounds with fish. Their potk is excellent, as is likewise the selff of their kids; but their mutton is very indifferent. They have good ship-timber and fruit trees, with rice and Indian corn. The principal commodities here are, sugar, ginger, hides, cotton, thread, cassia, massic, &c.

Great pains have been taken by the Spanish government, to

Great pains have been taken by the Spanish government, to prevent an illicit trade being carried on at this place; but all the several edicts issued against it have been inessection; owing

the neveral colors much against it have been interectual; owing to the convenience of its situation for that traffic.

The capital town, Porto Rico, is fituated on a small island on the north coast. This siland forms a capacious harbour, and is joined to the chief island by a causeway. It is defended by forts and batteries, which render the place almost inacesfible. This town is well built and populous; is a bishop's fee, and the estimate of a covered.

the refidence of a governor.

Befides the capital, here is a place called Boraba d'Infernes remarkable for having an excellent turtle fishery; and Port del Agnada, where the flota provide themselves with water, and

Agnada, where the flota provide themselves with water, and other necessaries, in their voyage to Spain.

There is a small place on the coast of Porto Rico, called Crabs Island, from the great number of crabs sound there.

Sir Francis Drake took Porto Rico from the Spaniards. It was afterwards conquered by the earl of Cumberland, in the reign of queen Elizabeth; but he was obliged to abandon it, having lost most of his men by sickness in the latter-end of the summer, which is a very unhealthy season in all places in these hatroides.

The island of Trinidad lies between Tobago and the Spanish main, from which it is separated by the straights of Paris. It is about ninety miles long, and fixty broad; and is an unhealthy, but fruitful country. Its principal productions are, sugar, fine tobacco, indigo, ginger, variety of fruit, some indian corn, and cotton-trees.

This island was taken by Sir Walter Raleigh in 1505 f and by the French in 1676, who plundered it, and laid the inhabitants under contribution.

Margarieta, two hundred miles west of Trinidad, is about

Margarieta, two hundred miles west of Trinidad, is about forty miles in length, and fifteen in breadth. The continual verdure renders it very pleasant; but it has not been considerable since the Spaniards retired from thence to Terra Firma. The inhabitants now are Mulattoes, and the original natives it was taken by the Dutch in 1626, who pillaged and demultihed it.

SECT. V.

Treating of the French and Danish West-India islands, their fitua-tion and extent, climate, foil, produce, animals, inhabitants, commedities, grade, Gc.

ARTINICO is the most considerable. West-India Martinico is the French, being about fixty miles in length, and thirty in breadth. It is situated about one hundred and twenty miles north-west of Barbadoes, between the southeenth and sifteenth desice of north latitude. A ridge of mountains runs through its whole length; they are passable in several places, though their centre is only a heap of craggy rocks. This ridge is such, that it makes the island appear to the navigators like three dissinct mountains; from hence run above forty rivers, and a great many lesser streams, which create a humidity very noxious to the constitution. The coasts abound with turdes; but the French are not so expert as the English in sisting for them.

The foil is very unequal; some grounds alternately suffer by dryness and rain; there are some marshy, and almost entirely drowned by the see : others are so stoney, as to basse all stempts of the planters, but the greatest quantity of, land between the shore and the mountains is capable of being succeisfully cultivated, and rendered as fruitful as possible, if proper measures were used by the inhabitants. The chief productions are sugar, tobacco, cotton, ginger, indigo, cacao, aloes, pimento, cocoas, plantains, and other tropical fruits.

Before this island was subdued by the English in the war of 1756, it could raiss ten thousand white inhabitants fit to carry arms, and above sorty thousand agroes or slaves; he dides which some companies of regulars were always quartered in the island.

The governor-general and intendant, as likewise a sovereign

The governor-general and intendant, as likewife a fovereign council, which superintends all their other islands, and even their settlements of St. Domingo and Tortuga, reside in Martinico. The governor-general and intendant, and lieutenant governor, are paid out of the sinauces of Old France. The governor of Martinico, as well as Guadalupe, is paid in sugar, as indeed are all the other officers of the island, except some inconsiderable sums that issue from the treasury of Old France. The governors are allowed sixty thousand pounds weight of inconfiderable fums that iffue from the treasury of Old France. The governors are allowed fixty, thousand pounds weight of fugar, with a pension of one thousand crowns paid in Old France. The lieutenant-governors have twenty thousand pounds weight, and five thousand livres falary. The king's judges, attornies, and other officers, have each an allowance of fix thousand weight; but the counsellors of the fovereign's conneil have no more than twelve thousand weight, or twelve of their negroes exempted from the capitation tax; which have is paid by the white men and free negroes who are hired fervains, and conflits of one hundred weight of coarse sugar a year, for each domestic or negro who is employed in manufacturing it; and of fix livres for every other. The hundred weight of fugar is rated at four livres ten fols.

The issuad owes its flourishing state to the French government having transforted thither, by way of punishment, great

ment having transported thither, by way of punishment, great numbers of its protestant subjects, some of whom voluntarily settled there. All provisions imported into it are subject to a duty of one per cent in specie; and the third of all forfeitures

d fines goes to the crown.

There are in Martinico twenty-eight parishes or districts, which contain about the fame number of towns or villages, and two principal towns, Fort Royal and St. Pierre or St. Peter's. The first is the fest of government, it. Streets are regular, the houses agreeable, and the inhabitants very much given to all kinds of luxury; they stee the Parisians of the West-Indies. To the call of the town, on a neck of land, is an irregular fort, badly built, and worfe defigned, which gives name to the town it poorly defends. The French have fince built a citadel upon Monte Carnicel, an eminence higher than the most elevated points of Monte Patate, Tartanson, and Cartfuche,

which all command Fort Royal: this citadel has coft upwards of three hundred and twenty five thousand pounds sterling.

Fort Royal, as well as the rest of the island, fell under the power of the English in the war of 1756; but they restored it at the peace. The harbour of Fort Royal, where the men of yar anchor in winter, is one of the best of the Windward isless, and its secority against the hurst-canes generally acknowledged it is supposed that the inner part has been spolled by sinking the hulks of several ships as a sence against the English.

St. Pierre, or St. Peter's, is sive leagues to the leeward of Fort Royal, in a round bay of the western coast: This town, the strip the basis is the sinking in the suit in the sland, is the place of communication between the colony and mother country, it is the residence of merchants,

the colony and mother country; it is the refidence of merchants, and the centre of business. Notwithstanding the fires which have reduced it four times to affect, it fish contains upwards of one thouland feven hundred boules; a part, fituated along the fea-fide on the frand itself, is called Le Monillage (the anchor-

fra-fide on the firand itfelf, he alled Le Monillage (the anchoring-place) a very unhealthy place of abode the other part, feparated from this by a river, is built upon a low hill; they call it the Fort, from a finall fortress which defends the road. This road it very convenient for the loading and unloading the chips, and the facility of coming in or going out : but they are obliged to take shelter at Fort Royal in the winter scason.

At present, the productor of this island amount to twenty-eight million weight of fugger, three million weight of coffee, fix hundred thousand pounds of cotton, and forty thousand pounds of caseo. Foreigners earry off privately about a twesser hard of the goods of the island; the rest goes to the mother country. In 1766, the merchants of France sitted out for this exportation, one hondred and forty-three wessels, of which one hundred and one landed at the rown of St. Pierre, thirty-five at Fort Royal, sive at La Trinita, and two at Cul de Saes, or the gulf of the island.

gulf of the island."

gulf of the island.

The island of Guadalupe is situated about thirty leagues north-west of Martinico, in fixteen degrees north latitude. It is about forty-five miles in length, and thirty-eight in breadth; and is cut in two by a channel called the Salt River; also by a deep gulf, or bay on each side. The air of Guadalupe is more falubrious and less fultry than that of Martinico.

The products of this island are sugar, coffee, cotton, bastaf and the sugar and many other vegetables, parti-

cinnamon, indigo, ginger, and many other vegetables, parti-cularly the capau-tree, from which is extracted anoft excellent balfan; the milk furney, fo called from its yielding a fubstance like milk when prefied, which falls little thort of the capau and must were preued, which falls little thort of the capau balfam: the moubane-tree, which bears a yellow plum, with which the natives fatten their hogs; and the corbany-tree, the gum of which, when hardened in the fun, becomes fo transparent, that it is formed into beads and bracelets by the Caribs.

Caribs.

Guadalupe abounds with mountains, many of which are covered with wood; and nothing can be more verdant, or more beautifully variegated, that the large fruitful plains which lie beneath them. One of the mountains is faid to emit a continual smoke, and to communicate a sulphuseous tafte to the neighbouring streams. However, such is the fertility of Guadalupe, that it hath been efferted, that if it was as well peopled and cultivated as Barbadoes, it would yield sugar enough for all Europe. Before the war of 1756, when it was reduced by the English, we are told that one hundred thouland hogsheads were exported verly from it.

English, we ere told that one hundred thousand hogheads were exported yearly from it.

On this island is a very remarkable bird called the devil, which is found only here and at Dominica; it is a bird of passage, of the size of a pullet, and all its plumage coal black; it lives on sist, which it eatthes in the fea at night, being unable to bear the light in the day-time, when slying; so that they often run against interposing objects, and fall down. After their sist-hunting in the night, they repair to a mountain, called the Devil's mountain, where they lodge by pairs in holes; like rabbets. Their sless, though of a sisty taste, is good nourishing food.

They have a troublesome insect here called a ravet, shaped

good nourishing food.

They have a troublesome insect here called a ravet, shaped like a cock-chafer, of a stinking smell, and preying upon books and surniture, and whatever they do not gnaw, is discoloured by their ordure, but great numbers of them are destroyed by a kind of spiders, some of which are as big.as a man's fift. The hees of Guadalupe are very different from those of Europe, being black, smaller, and without stings. Instead of making combs, they lay their honey in bladders of wax, about the form and size of a pigeon's egg. The honey is of a thicker confishence then oliveoil; and the only use made of their wax, which is of a dark purple colour, is to secure the corks of bottles.

About the island are several gulfs, called by the French Culs de Saes, which abound with various kinds of fish, and also with

turtle, thacks, and land crabs.

Grand-terre is one of the two divisions of this island; the other confists of Capes-terre or Cabes-terre, and Basse-terre.

which last is also the name of the capital, a large, well fortified town, fituated on both sides of Ballist river.

The island of Tobago lies forty leagues fouth by west from Barbadoes, about thirty-five south-east from St. Vincent, forty east from Granads, and between thirty and forty from the Spanish main. It is thirty two miles in length, about nine in breadth, and seventy in circumference; so that it is rather larger than Barbadoes; or indeed any of our Leeward islands; a shall island, two miles in length and one in breadth, lies near, the morth-east extremity.

breadth, and feventy in cincumference, to that it is ather larger than Barbdocs, or indeed any of our Leeward illands; a finall island, two miles in length and one in breadth, lies near, the morth-east extremity.

With refect to the climate, Tobago is far more temperate than could be expected in an island that is but eleven degrees ten minutes north from the Equator, for the force of the sun is diminished by the sea breeze. The spice and gum trees, with which it abounds, contribute to its falubrity. This island has another favourable circumstance to recommend it; namely, its lying out of the track of the hurricanes. The north-west extremity is mountainous, but the rest of the island agreeably diversified with risings and fallings. Here are many spirings together with commodious bays and creeks.

The foll, in general, is a rich black mould proper for producing, in the steatest plenty, whatever is raised in other parts of the West Indies. But the valuable trees which grow here are, perhaps, its greatest riches; so, besides the best of the west Indies. But the valuable trees which grow here are, perhaps, its greatest riches; so, besides the best of the west Indies. But the valuable trees which grow here are, perhaps, its greatest riches; so, besides the best of the west Indies of wood that are found in the other West Indies, it is add that the true nuture gand cinnamon trees, the high produces the real gum-copal, are found on the far and of the parts of the greatest states of the surface and produces the real gum-copal, are found on the far and of the parts of the instance of peas, the custom apple, that is both meat and drink, and yields an excellent lamp oil; the prickle apple, the banana; pomegranate, pine apple, spectanes and bieter orange, lemous, sugar, tobacco, sindigo ginger, faraparilla, sempervisum, cittons, vancines, inness, guaras, plantains, tamarinds, grapes, cutfard apple, the four apple, the papeu apple, mammine apple, the surface of the papeu apple, mammine apple, the surface of the papeu apple, t

cularly mullets and turtle, of a most delicious talle. Here is also a great variety of the feathered species.

The expensive and formidable armaments which have been fent to this island by European powers, in support of their differnt claims, denote the value and importance of it. Iswas heretofore chiefly pollefied by the Dutch, who defended their pretentions againft both England and France with the most obtinate perfeverance. By the treaty of Aix-la-chapelle, in 1748, it was declated heartal t, but by that in 1763 it was yielded up to Great Britain, who formed this island, St. Vincent, and Gradenic and Caracteristics. nada, into one government. Tobago was ceded by Great Britain to France by the late treaty of 1783. The Danish West Indian islands consist of those of St. Tho-

mas and St. Croix, or Santa Cruz.

The island of St. Thomas is situated to the east of Porto

Rico, and is the chief of those called the Virgin Islands. It is about fifteen miles in circumference, and has a fafe, firong and commodious harbour, which, by being open to traders of all nations, enriches the inhabitants.

The foil is in general very fandy, notwithstanding which it oduces most of the West Indian commodities, but it is greatly infested with musquetoes. The principal advantage of this island confists in a very good hasbour on the fouth fide, where fifty ships may lie in fafety. It is defended by a fort, whose batteries at the same time protect the small town built round the flore. This halbour is much frequented by merchant fluips: when they are chaced in time of war, they find here a flags: when they are charce in time of war, they min here a fate protection, and in time of peace a vent for their goods, by the chandeftine trade which is continually carried on with the Spanish coasts by the boats of St. Thomas.

The island of St. John is fituated two leagues to the fouth of

St. Thomas, and is about the fame fize. This is the best watered among the Virgins, and its harbour has not only the reputation of being better than that of St. Thomas, but passes also for the best to the leeward of Antigua: the English give it the name of Crawl Bay." But notwithstanding these advantages. name of Crawl Bay." But notwithstanding these advantages, there is so little good land in the island, that its planting and exportations are very inconsiderable.

The island of St. Croix, or Santa Cruz, is the most considerable West India island belonging to Denmark. 'It is situated out of the group of the Virgins, sive leagues to the south of St. John's, being about thirty miles in length, and ten' in breadth. 'It is tolerably settlie, producing most of the necessaries of life; together with oranges, eltrone, granates, lemon, the manioc root, and the papeu tree, the fruit of, which makes a most excellent (west meat. Here are also a variety of dying woods, and those used for building houses and ships.'

Most of the inhabitants of Santa Cruz consist of English from the island of tlev! and Antigua, of Irish papishs; a small number of Danes, and German Moravians.

SHE C.T.

Gontaining a description of the American islands, viz. Newsaundland, Cope Breton, 8s. John, the Bermudae, the Bahamas, Falkland stee, and Fernanders, Faoria or Massa-Fayre, and Collegy their studies, estants, climate, produce, animals, inhabitants, commodities, trade, Us.

NEWFOUNDLAND is of a triangular form, about three hundred and fifty miles long, and two hundred broad, is fituated between forty-fix degrees fetty minutes, and forty-tree fever minutes north lattude, and between forty fix the fifty two minutes, and fifty-fever degrees longitude, and has many excellent harbours and the coaft, being bounded to the entward and fouther a Atlantic ocean, on the north by the fraights of Bellems, which divide it from New Britain, and on the well by the gulf of St. Lawrez.ce. The coafts are extremely fubject to fogs, occasioned by the vapours exhaled from the lakes and fivan ph with which the illand abounds, yet the sir is falsabitious, and agreeable to most constitutions. The winters are severe, attended with almost continual florms of snow and sleet, the key being effailly overcast.

attended with almost continual florms of fnow and fleet, the fky being whally overcast.

The foll is generally supposed to be barren, except only the banks of the rivers, which are tolerably fertile. There are however woods of different kinde throughout almost all the country for several miles from the coast, which contain abundance of timber fit for ship and boat huilding, as well as for eredling stages for curing and drying fish; and beyond these woods, where the lands are cleared, are in many places good patturage. The inland parts of the country rise into high hills, and sink into bogs and swamps; where such parts as are not covered with water, afford only shrubs, spruce, and white moss. This Island however contains many sine rivers, lakes and rivulets, which abound with beavers, otters, and the like, and afford great plenty of salmon, and other sish. The forests are shored with deer, moose, bears, wolvei, and loxes in great plenty; but here are few cattle, sheep, or horses; instead of the latter, the inhabitants make use of dogs for drawing of wood and other necessaries. These they manage with great desterity, fixing inhabitants make use of dogs for drawing of wood and other necessaries. These they manage with great desterity, saing them in leather collars, and yoking together what number they please. Here are great plenty of wild fowl, but the staple commodity of the island is cod sith, which are larger and in greater abundance than in any other part of the world yet discovered; and a considerable part of Europe is chiefly supplied with this article. From hence upwards of three thousand sail are anyally employed by Great Britain and America in this sisser, on board of which, and on thore, to core and pack the fish, are not lefs than ten thousand hands; so that it is at the same time not only a very profitable branch of trade to the merchant; but a source of ligelihood to so many thousands of poor people, and a most excellent nurstry to the royal navy, which is hence supplied with a great number of able seamen: it might still be much enlarged; for notwithstanding the great trade carried on by the English here, the Frencharefaid to have aconsiderable share.

There are also taken on these costs a great number of whales.

There are also taken on these coasts a great number of whales, feals, proposes, &c. whence above five thousand bartels of oil, befules a great quantity of whale-bone, feal fkins, &c. are annually exported from hence to different parts of the world, all which fufficiently shew the importance of the island, nowithstanding the roughness and barrenness of the foil, and severity of

the climate.

the climate.

The number of English inhabitants on the island is uncertain and slockuating. They are indeed very inconsiderable, if compared with its extent, but there are not half the number in winter that there are in summer. Placentia, the capital of the island, which is feated on the southern point, contains no more

than between three and toutscore houses.

The vessels employed in the fishery are finall shallops, which come to shore every day, where the fishermen throw the cod they have taken upon a fige prepared for that purpose. One of them, who is called the cut-throat, opens the fish with a two-edged knife, and cuts off his head, a second hands the fish to the carver, who stands opposite to him at a table creeked upon

the stage, who with a single-edged kalis, six or eight inches long, and very strick on the back, to encrease its weight, splits the sis sources of the six weight, splits the six of the si

heats.

The principal towns are Placentia, Bonavista, and St. John.
The Indians of this island are said to be a gentic, mild, tractable people, easily gained by civility and good usige. They paint their bodies, and are clad in skins and surs in winter.
The island of Cape Breton is situated between forty five and situy-sween degrees north latitude, and between fixty-one and fixty-two degrees well longitude; being one hundred miles long, and sinkers haves the state of such a fixty-sween leagues fouthnaty-two degrees wen longitude, being one hundred miles long, and eighty broad. It is fituated about twenty leagues fouth-well from Newfoundland, and is feparated by the ftraight of Canfo from Nova Scotia. The north coaft is high, and almost macceffible; but the fouth coaft contains feveral excellent harbours, particularly that of Louisbourg, which is very spacious

bours, particularly that of Louisbourg, which is very spacious and commedious.

In this filand, the climate is much the same with that of Quebec, only more subject to fogs; the air, however, seems to be pretty wholsome. Here are many lakes and rivers, and great quantities of coal and lime-stone; and though there are many barren spots in it, apples, pulse, wheat and other corn, six and hemp, are or may be raised in it. The most common of the timber-trees are oaks of a prodigious bigness, pice sit for maste, ash, maple, plane, and sipin trees. The coal is procured here, without digging deep, or draining the waters.

Here are great numbers of horses, oxen, hogs, sheep, goats, and poultry, but game is scarce. The partridges are almost as big as pheafants, and not unlike them in the colour of their feathers. On the coast are many whales, see-wolves, porpoiles,

feathers. On the coast are many whales, fea-wolves, porpoiles, and feals, befides great quantities of cod and other fills.

The English took this island from the Prench, in 1745; but

The English took this mand from the rench, in 1745; but reflored it by the treaty of Air. la-Chapelle, in 1748. They again took it in the beginning of the war of 1756; Louilbourg, its fortrefs, with the siliand of St. John, and its other appearance, having been furrendered by capitulation on July 26, 2768. All the fortifications of the town have been fince demonstrated by the control of the co ed, in order to avoid expence, and prevent the French from again fettling there. It's a Harby Add a vector and a The island of St. John hea very near to Cape Breton: it is

firsty miles long, thirty broad, and the produce is nearly the same as that of Cape Breton, but the soil is much better. The left is now a feparate government, in which Charlotte town hath been lately built.

The cluster of islands called the Bermudas are about four hundred in number, but most of them are fmall, barren, and hundred in number, but most of them are mass, barren, and uninhabited. They are tituated in the Atlantic occan, in thirty-two degrees twenty minutes north latitude. They obtained their name, Bermuda, from John Bermudez, a Spaniard, who first discovered them; but they took that of Summer islands from Sir George Sommers, who was shipwrecked here in 1700,

turtles are caught on the coaft. "Here is a breed of black hogs which are much valued; white chalk stones and tobacco are exported; oranges, and palmettoes abound, and here is plenty of many other things; but the inhabitants have no water

ut what drops from the clouds.

The chief island is that of St. George; which name it takes from George town; and is a pleasans place fixteen miles long, and three broad. Sir Edmund Waller, besides his fine of ten thousand pounde, being banished, chose his retreat hister, where he continued till Oliver Cromweil prevailed over the long parliament.

The Bahamse are fituated in the Atlantic ocean, to the north of the island of Cuba, and not far from the coast of Florida, arctehing from the north-west to the fourth-west, between twenty-one and twenty-feven degrees of fouth latitude. They are your pumerous, and twelve of them pretty large; and belong to Great

The largest, called Bahama, is about fifty miles in length, though very narrow, and gives name to the rest; it lies twenty-five leagues from the continent of Florida, is every-where well watered with fprings and rivulets, and enjoys a ferene temperate air, with a fruitful foil.

These islands were the first places discovered by Column Their islands were the first places discovered by Columbus in America, yet the Spaniards never thought of settling in them. The English knew nothing of them, till 1667, when captain William Sayle, being bound to Carolina, was forced among them by a florm, which gave him an opportunity of examining them carefully, particularly that which is at present known by the name of Providence. At his return, he represented the benefit they might be of to the state; which upon grants of them we made out to proprietors; but the government was referved in the hands of the crown. None of them, however, are yet fettled, except Providence, Lucays, and Harbour island; which settied, except Providence, Lucays, and Harbour tiland; which feems furpriling, as fome of them would certainly prove of the greateft advantage to Great Britain, if properly cultivated. They are fupposed to amount, altogether, to about five hundred. The straights of Bahama, which the British sleets so happily cleared in their last successful expedition against the Havannals, are, by reason of the dangers and difficulties that attend the

paffing of them, well known to navigators.

The Bahama islands, lie near to Hispaniola, and to the noted part of the Havannah, in the island of Cuba, where the Spanish part of the Havannah, in the island of Cuba, where the Spanish galleons and flota always rendezvous before they return to Europe, shaving the gulf of Florida to the west, and the windward passage to the east of them. In time of peace, they are capable of great improvement with respect to trade; and have always been a goad retreat for disabled ships, blown from different parts of the continent of America. In times of war, the British crusters and privateers, stationed at these islands, are more able to obstruct and armoy the Spanish trade homeward-bound, than any that are stationed at the rest of the British colonies in America. Accordingly, New Providence, which is a very thirving colony, was of great Benefit to the British trade in the late war. Nassau is the chief town of the island.
Falkland's islands were first discovered in 1594, by Sir Richard Hawkins, who named the principal of them Hawkins' Maidenland, in honour of queen Elizabeth. The present name Falkland was probably given them by captain Strong, in 1689,

Maidenland, in honour of queen Elizabeth. The prefent name Falkland was probably given them by captain Strong, in 1680, and afterwards adopted by Halley.

The late lord Egmont, first lord of the Admiralty in 1764, then revived the scheme of a settlement in the South sea; and commodore Byron was sent to take possession of Falkland's islands in the name of his Britannic majesty, and in his journal represents them as a Valuable acquisition. On the other hand, situates in the name of his Britannic majefty, and in his journal reprefents them as a valuable acquisition. On the other hand, they are reprefented by captain M'Bride, who in 1766 fucceeded that gentleman, as the outcafts of nature: "We found (fays he) a map of illands and broken lands, of which the foil cu usar genueman, as the outcalts of nature: "We found (fays he) a map of illands and broken lands, of which the foil was nothing but a bog, with no better profpect than that of barren mountains, beaten by florms almost perpetual. Yet this is fummer; and if the winds of winter hold their natural proportion, those who lie but two cables length from the stime, must pass yeeks without any communication with it." The herbs and vegetables which were planted by Mr. Byron's people; and the fir-tree, a native of rugged and cold climates, had withered. In the summer-months, wild celeri and forrel are the natural luxuries of the sistands. Goats, theep, and hoga that were carried hither, were found to increase and thrive as in other places. Geese of a fishy taste, snipes, penguins, soxes, and sea lions, are also found here, and plenty of good water.

Though the soil be barren, and the sea tempessous, and English settlement was made here; of which we were disposified by the Spaniards in 1770. That violeste was, however, disavowed by the Spanish ambassador, and some concessions were made to the court of Great Britain about in order to avoid giving unforage to the court of Spain, the settlement was afterwards abandoned.

The ideade of Luth Exprendent of Spain, the settlement was afterwards abandoned.

ards abandoned.

The islands of Juan Fernandez and Fuera or Maso Fuero are diftant from each other about thirty-one leagues they were first discovered in 1575 by Juan Fernandez a Spanised, from whom they take their name. The Spaniard dilitingsift them by the greater and lefs Juan Fernandes, but the smaller island is more generally known by the name of Masa Foero.

The greater Juan Fernandez lies to the eastward, in latitude thirty-three degrees forty minutes fouth, and fiventy-eight de-grees thirty minutes well longitude from Isondon. It is unfulla-bited, but has good harbours, and was formerly a place of great refort for the buccaneers who annoyed the western coast of the Spanish continent. It is also found extremely convenient for the Eng ish cruizers to touch at and water; and here they are in no danger of being discovered, unless when, as is generally the case, their arrival in the South seas, and their motions, have been made known to the Spaniards by our good friends in Brazil. This island is samous for having given rife to the celerated romance of Robinson Crusco. The ingenieus author, Daniel Detoe, derived many hints for writing his history from the papers of one Alexander, Selkink, a Scotchman, who was left ashore in this foliatry place by his captain, where he lived some years, till he was discovered by captain Woodes Rogers, in 1700; when taken up, he had forgotten his native language, and could scarcely be understood, sceming to speak his worda by halves. He was dressed in goats skins, would drink nothing but water, and it was some time before he would relish the ship's victuals. During his abode in this island, he had killed five hundred goats, which he caught by running them down; and he marked as many mora on the ear, which he let go. Some of these were caught thirty years after, by lord Anson's people. of thefe were caught thirty years after, by Jord Anfon's people. But the Spaniards, in order to deprive the English of the nourishment they formesly produced from the indultitude of goats here, have transported thinter a confiderable number of dogs; which have almost exterminated the species.

This is find its not only to files no milks have a find its notation of the second of

have almost exterminated the species.

This island is not quite fifteen miles long, and all fix broad; its only fase harbour is on the north side. It is the have plenty of excellent water, and to abound with escupient. Vegetables highly anticorbutic; before modore Anton sowed avariety of garden seeds, and the story of the story lefs furnish a very valuable addition to the natural productions of this spot. There are but few birds here, and those few are cies well known and common; but vast shoals of fifts representations among an extension of the coath, particularly cod of a prodiction fize, and it is faid in not less abundance than on the aniks of Newfoundland.

The issued of Fuers, or Masa Fuero, lies in thirty-three de-rees forty-five minutes south longitude, and eighty degrees orty-fix minutes west from Greenwich. It is of a triangular form, and feven or eight leagues in circumference; is very high and mountainous, and at a distance appears as one hill or rock. In this island there are such plenty of fish, that a boat, with

a few hooks and lines, may catch as much as will ferve one hundred people. Here are coal-fifth, cavilliers, cod, hallibut, and cray-fifth. Captain Carteret's crew caught a king's fifther that weighed eighty-feven pounds, and was five feet and a half long. The flarks here were fo ravenous, that in taking founding one of them (weighed eighty-fiven) and we have highly the fact that it is the flarks that the start is the start of the flarks that the start is the start of the flarks that the start is the start of the start o ings one of them swallowed the lead, by which they hauled him above water, but he regained his liberty by discharging his prey. Seals are so numerous here, that if many thousands of them were killed in a night, they would not be miffed the next morn-ing. These animals yield excellent train oil and their bearts and plucks are very good food, having a tafte fomewhat like those of a hog: their fkins are covered with very fine fur. Here are many birds, and some very large hawks. The crew of the Swallow caught in one night seven hundred of the pintado

The island of Chilo, on the coast of Chili, in the district of Imperial, lies in fouth latitude forty-four, or from forty-two to forty-four, being about one hundred and fifty miles long, and twenty-one broad. The fouth part of it is divided from the continent by a narrow fea, and the continent there makes a hay.

This coast is subject to tempessum weather, especially in March, when winter begins. The Spaniards have but one little fort in this island, called Chacao, always ill provided with warlike trees. Excepting wine, this island produces all need-fary refreshments and provisions; and much ambergits is found here. Castro is the principal town. About this island are forty more, all taking name from it. Ovalle tells us these islands are reputed barren; but their soil is not really so, only the excessive rains choak the feed, and prevent the growth of corn; to that they are without wheat, wine, or oil, and other plants which need much fun. The nature of the climate of this cluster of islands is such, that it rains almost all the year; so that only maiz, or other such grains, can ripen, that want not so much fun. The diet of the natives is mostly of a root called papahs, which grows bigger here than in any other place. The manufactures are cloathing for the Indiana, who have a kind of yest which they call macun, without fleeves; over which they wear a garment called choni, that ferves for a cloak, and is like that which painters give to the apostles in their pictures. raife another manufacture from their woods, particularly planks of cedar, of which they have vast woods of prodigious large trees, fo as hardly to be incompassed by a rope of fix yards long.

Cast.

To the PUBLIC.

The great and increasing Sale of this universally Approved Work, (in confequence of its being more Complite than any other Work of the Kind whatever, and the continued Recommendations of the Subscribers to their Friends and Acquaintance) having occasioned a fresh Impression of the beginning Numbers on new Types, &c. the Public are hereby respectfully informed, that Persons may new begin with Number 1, and be supplied with One or more Numbers at a Time, price only Sixpence each, including the elegant Copper-Plates, Made, Chorts. Plans, &c. Those Persons who are inclined to purchase MILLAR's NEW, COMPLETE, and UNIVERSAL SYSTEM of GEOGRAPHY, complete at once, may be supplied with it, bandsomely bound in Cals, and Lettered, in One Lage Handsone Volume, Price only 21. 8s, or in Two Volumes, Price 21, 12s.

N. B. This Work being exceeded the Junnity proposed, our numerous Subscribers will observe, that we have (agreeable to our Propietion our Propietion) delivered the Overplan, Eight Sheets,) Grans, although it has occasioned an Expence to the Proprietor of upwards of One Hundred and Fitty Guineas; in order that we might be sufficiently full in our Account of America, in which we have totally rejected all those vain conjectures, ridiculous suppositions, subulous stories, and palpable safisties, which have so long the public in former Works of this kind; contenting ourselves with giving our Subscribers such intensifying information respecting that Part of the Globe, which is stilled the New World, as we have deduced from the most authentic and undeniable Evidences of Truth. Indeed the late Revolution in the Northern Distributes are unquestionably the most complete the Historical Part less circumstantial than we wished; but still our History and Description are unquestionably the most complete undeniable Evidences of Fruit, indeed the face Recondition in the Northern District has rather impeded our referrches, and tendered the Hillorical Part lefs circumstantial than we wished; but still our Hillory and Deferription are unquestionably the most complete and authentie now extant; and certain it is, that many years must elapse (owing to the unfettled fituation of Affairs in that Quarter) before a more full account of North America can be collected from documents supported by authenticity.

DIRECTIONS to the BOOKBINDERS for placing the CUTS to MILLAR'S NOW, COMPLETE and UNIVERSAL SYSTEM OF GEOGRAPHY.

Though we would recommend this work in general to be bound in one volume, yet, to accommodate those who prefer it in two, the binder is defired to divide the volumes between the fignatures y and z Z: He is defired also to place the leaf (given in No. 80 with the second volume title) with the pages 401 and 402 with a *, containing the conclusion of our description of Russia, between the fignatures of H and 6 I. Also place the Introduction at this end of the Profess.

N. B. This work must be best before the copper plates are placed, in order to prevent the letter prefs from fetting off, and thereby spoiling the engravings, which are to be placed as follow:
